5) HB 55 will prove of notable benefit to the Alaska car owner. This bill will save the average motorist fifty-five to seventy-five dollars a year.

6) On a broader scale, HB 55 will serve to leave more money in the resident-consumer's pocket, and will stimulate the state economy in both the public and private sector.

7) HB 55 will offset the five cents per gallon increase in the Federal gas tax and significantly help balance the cost of living in Alaska compared to living in the other 49 states.

Thanks for the opportunity to share further my thoughts relative to reducing the state motor fuel tax. Best personal regards.

Sincerely,

Terry

RE: CS for Sponsor Substitute for HB 55

DATE: March 25, 1983

On Monday March 21, 1983, you requested a fiscal note regarding the proposed CS for Sponsor Substitute HB 55.

The Department has not received a formal request for a fiscal note since the bill apparently has not been introduced for first reading. However, we anticipate eventually to have about 100 qualified dealers. The average monthly commission would be about $40 per dealer. The revenue impact then would be $40 x 100 x 12 or about $48,000 revenue loss per year.

At this point, I would be comfortable with an estimate in the range of $48,000 to $65,000 per year.

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 55 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act amending motor fuel tax provisions; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.40.010(c) is amended to read:

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. <u>If the monthly tax return is timely filed, one percent of the total monthly tax due, limited to a maximum of $100, can be deducted and retained to cover the expense of accounting and filing the monthly tax return.</u> At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all [MOTOR] fuel which he has distributed or used during the month.

* Sec. 2. AS 43.40.010(1) is amended to read:

(1) If a dealer has a reasonable belief at the time of sale or transfer that fuel that is sold or transferred is not to be used as motor fuel, the dealer need not collect the motor fuel tax. If the tax is not collected, the dealer shall obtain a certificate of use from the buyer or transferee stating that the fuel that has been or will be purchased or received is not intended for use as motor fuel. The <u>Department of Revenue</u> [DEPARTMENT] may not collect the motor fuel

tax from a dealer for fuel for which a certificate of use has been properly obtained under this subsection. A certificate of use is not required for fuel used to heat a private residence or for fuel which is at least 10 percent alcohol by volume. An annual certificate of use is required for all other exemptions, as listed under AS 43.40.100(2), except subparagraph (K) where certificate of use needs will be determined by the Department of Revenue. The dealer shall retain a copy of each certificate of use obtained under this subsection for examination or audit on request by the Department of Revenue [DEPARTMENT]. The form of a certificate of use may be prescribed by regulation adopted by the department.

* Sec. 3. AS 43.40.035(a) is amended to read:

(a) A person who resells fuel on which the tax under AS 43.40.010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements prescribed by AS 43.40.010(1) have been fulfilled [A CERTIFICATE OF USE IS ACQUIRED UNDER AS 43.40.010(1)]; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

* Sec. 4. This Act takes effect April 1, 1983.

RE: Motor Fuel Special Tax Accounts -
Your Request of Mr. Robert Kessel

Dear Representative Cato:

You requested certain information from Mr. Kessel during the March 2, 1983 hearing relating to various motor fuel bills. The information has been somewhat difficult to compile but I hope what I present herein is adequate. If not, please feel free to call me and we will make additional efforts.

Our qualified conclusion is that even though specific accounts are provided for in the motor fuel statutes (AS 43.40.010), the legislature does not, in fact, correlate appropriations to the amount in the accounts. In other words, appropriations for water and harbor facilities, maintenance of highways, etc. are not limited to the amounts accumulated in the special accounts. As will be demonstrated, monies appropriated come partly from the special accounts and partly from other General Fund monies.

Our contacts during this mini-project have been the Finance Section of the Department of Administration and the Finance Section of the Department of Transportation.

REVENUES - FUEL TAX ACCOUNTS

Gross receipts deposited as unrestricted revenues in the General Fund, and designated as unreserved special accounts in the General Fund (thousands of dollars) are as follows:

	Actual FY 81	Actual FY 82	Estimated FY 83	Three Year Total
Fuel Taxes - Aviation	$ 4,100	$ 6,300	$ 5,100	$15,500
Fuel Taxes - Highway	15,600	20,300	21,000	56.900
Fuel Taxes - Marine	3,600	3,700	3,800	11,100

04-D2LH

APPROPRIATIONS - FUEL TAX ACCOUNTS

Included within the General Fund appropriations for the operating and capital expenses of the state government were the following amounts from the above unreserved special accounts (thousands of dollars):

	Actual FY 81	Actual FY 82	Actual FY 83	Three Yr Total
Aviation Fuel Tax Acct.	$ 3,700	$ 4,300	$ 4,500	$13,500
Highway Fuel Tax Acct.	19,000	20,200	18,500	57,700
Watercraft Fuel Tax Acct.	3,200	3,300	3,800	10,300

The amounts shown for the highway fuel tax and the aviation fuel tax accounts were included in the appropriations from the General Fund for the Operating Budget. The amounts shown for the watercraft fuel tax account were included in the appropriations from the General Fund for the capital budget for water and harbor facilities. The original capital budget for FY 1983 for ports and harbors appropriated from the General Fund was $4,707,000. Included in this is the $3,800,000 from the watercraft fuel tax account.

EXPENDITURES FROM FUEL TAX ACCOUNTS

The General Fund summary of expenditures and encumbrances compared with appropriations for the operating programs of the Department of Tranportation and Public Facilities supports the previous statement made in this memo regarding lack of correlation. Example: The line item amount for Highway Design & Construction expenditures and encumbrances for FY 1982 was $39,577,000. Included in this would be the $20,200,000 appropriated from the highway fuel tax account in the General Fund. The balance of this line item expenditure apparently came from other General Fund monies.

The General Fund summary of expenditures and encumbrances compared with appropriations for the capital outlay projects of the Department of Transportation & Public Facilities further supports our statement. Example: The total expenditures for capital outlay projects for the Department of Transportation & Public Facilities for FY 1982 was $46,742,000. Included in this was the $3,300,000 appropriated from the watercraft fuel tax account. The balance of the expenditure came from other General Fund monies.

CONCLUSION

It would require many hours of work to match the actual expenditures for highway, airport, and port & harbor facilities against the appropriations from the unreserved highway, aviation and watercraft fuel tax accounts in the General Fund. Since these funds are not restricted in the General Fund or

set aside in a Special Revenue Fund, they are always included in the general appropriations made from the General Fund for airports, highways, and port & harbors operating and capital budgets.

QUALIFICATION

Please bear in mind that the above is from the limited perspective of this Department. If the Committee has more specific questions pertaining to federal matching funds, the Department of Revenue would defer to the Department of Transportation, or the Office of Management and Budget for a more comprehensive explanation of the funding formulas.

Sincerely,

Robert D. Heath
Commissioner of Revenue

STATE OF ALASKA
DEPARTMENT OF REVENUE

M E M O R A N D U M

TO: The Honorable Representative Robert Bettisworth

FROM: Robert R. Kessel
Director, Audit Division
Department of Revenue

RE: Amendments to Motor Fuel Law

DATE: February 16, 1983

The Department of Revenue has conducted public meetings with motor fuel dealers and other interested parties in Fairbanks, Anchorage and Juneau. In the opinion of the Department of Revenue, if the following changes could be made to Chapter 40, Title 43 of the Alaska Statutes, the motor fuel dealers would feel satisfied with the existing law.

1. Eliminate the certificate of use requirement, in total, for fuel used exclusively for heating a private residence.

2. Eliminate the certificate of use requirement, in total, for fuel which is at least 10% alcohol by volume.

3. Require <u>only</u> an <u>annual</u> certificate of use for almost all other exempt sales, reserving some discretionary judgement for exempt sales handled on an individual basis under sub-paragraph (K) of Section 43.40.100(2).

In addition we believe that motor fuel dealers should be granted a 1% commission, limited to $100, to compensate them for collecting the tax and for the demands required in maintaining records. Alaska currently allows a commission for cigarette taxes and most other states have similar provisions. I believe the motor fuel dealers would, obviously, like this change. For example, application would be as follows:

Tax To Be Remitted	Commission
$ 600	6 (1%)
5,000	50 (1%)
10,000	100 (1%)
20,000	100 (1%-limited to $100)

The maximum amount of $100 would provide remuneration for the dealers extra work and yet would not be costly to the state. There are a limited number of dealers.

The recommended change to AS 43.40, per attached Exhibit 1, would provide for the above recommendations; the changes could very well be incorporated into Senate Bill 117 (By the Rules Committee by Request of the Governor) which is "An Act making technical amendments relating to state taxation."

AS 43.40.010(c) is amended to read:

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. <u>If the monthly tax return is timely filed, one percent of the total monthly tax due, limited to a maximum of $100, can be deducted and retained to cover the expense of accounting and filing the monthly tax return.</u> At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all [MOTOR] fuel which he has distributed or used during the month.

AS 43.40.010(1) is amended to read:

(1) If a dealer has a reasonable belief at the time of sale or transfer that fuel that is sold or transferred is not to be used as motor fuel, the dealer need not collect the motor fuel tax. If the tax is not collected, the dealer shall obtain a certificate of use from the buyer or transferee stating that the fuel that has been or will be purchased or received is not intended for use as motor fuel. The Department of Revenue may not collect the motor fuel tax from a dealer for fuel for which a certificate of

use has been properly obtained under this subsection. A Certificate of use is not required for fuel used to heat a private residence or for fuel which is at least 10% alcohol by volume. An annual certificate of use is required for all other exemptions, as listed under AS 43.40.100(2), except sub-paragraph (K) where certificate of use needs will be determined by the Department of Revenue. The dealer shall retain a copy of each certificate of use obtained under this subsection for examination or audit on request by the Department of Revenue. The form of a certificate of use may be prescribed by regulation adopted by the Department of Revenue.

AS 43.40.035(a) is amended to read:

(a) A person who resells fuel on which the tax under AS 43.40.010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements prescribed by AS 43.40-.010(L) have been fulfilled [A CERTIFICATE OF USE IS ACQUIRED UNDER AS 43.40.010(1)]; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

ALASKA STATE LEGISLATURE
HOUSE OF REPRESENTATIVES
RESEARCH AGENCY

Pouch Y, State Capitol
Juneau, Alaska 99811
(907) 465-3991

March 2, 1983

MEMORANDUM

TO: Representative Dick Shultz

FROM: David Teal
Research Staff

RE: Motor Fuel Taxes
Research Request Number 83-75

Jack Goddard, of your staff, asked the House Research Agency to determine the amount of motor fuel tax received by the State and the amount it costs the State to collect motor fuel taxes. The attached fiscal note for SSHB40 shows that the State could eliminate two positions (at a savings of about $65,000 per year) if the fuel tax were repealed. Information on tax receipts is contained in the Department of Revenue's Revenue Source Book, which was published in January of 1983. A copy of a table from that book is also attached to this memorandum. That table shows total net motor fuel tax receipts of $23.2 million and $30.3 million in FY 1981 and FY 1982, respectively.

Because Mr. Goddard wanted an accounting of tax receipts by type of fuel as well as by type of use, an additional table was created from information available from the Department of Revenue. The following (full page) table provides more specific information on tax receipts than is available in the Revenue Source Book. The figures in the table show that net receipts from motor fuel taxes were $23 million in FY 1981 and $32 million in FY 1982. In both years, the tax on highway fuel was about two-thirds of total motor fuel tax receipts.

The figures in the table prepared by the House Research Agency are not identical to those reported in the Department of Revenue's Revenue Source Book. The figures in the agency's table were computed by multiplying the applicable tax rate by the number of gallons reported in the attached reports of motor fuel sold in Alaska. Deductions for refunds were made according to information supplied by the Department of Revenue. These computations produce net receipts that are $800,000 and $1 million greater (for aviation and highway fuel taxes, respectively) than are reported for FY 1982 in the Revenue Source Book. For FY 1981, the Revenue Source Book reports aviation fuel tax receipts that are about $200,000 greater than the figure computed by the House Research Agency. Bob Kessel, of the Department of Revenue, said the differences are probably due to timing of payments and/or refunds.

Motor Fuel Taxes
State of Alaska
FY 1981 and FY 1982

	Tax Rate (¢ per gal.)	FY 1981 Amount	FY 1981 Percent of Unrestricted Revenue	FY 1982 Amount	FY 1982 Percent of Unrestricted Revenue
Jet Fuel	2.5	$ 3,234,951	.087 %	$ 6,461,218	.157 %
Aviation Gasoline	4.0	709,618	.019	678,551	.017
Aviation Subtotal		3,944,569	.106	7,139,769	.174
less Revenue Sharing		135,038	.004	122,441	.003
Net Receipts		3,809,531	.102	7,017,328	.171
Highway Diesel	8.0	6,712,771	.181	17,142,893	.417
Highway Gasoline	8.0	13,807,751	.371	15,022,047	.366
Other Highway	8.0	9,203,816	.248	1,708	.000
Highway Subtotal		29,724,338	.799	32,166,648	.783
less Refunds		*	*	10,835,303	.264
Net Receipts		15,600,000*	.420	21,331,345	.519
Marine Diesel	5.0	3,206,815	.086	3,380,558	.082
Marine Gasoline	5.0	395,351	.011	368,884	.009
Marine Subtotal		3,602,166	.097	3,749,402	.091
Total Net Tax Collected		$23,011,697	.619 %	$32,098,075	.781 %

*The cumulative amount of highway fuel tax refunded during FY 1981 was not compiled by the Department of Revenue; the 1983 Revenue Source Book is the source of the $15.6 million listed as net highway fuel tax receipts for FY 1981.

House Research Agency 3/83

Mr. Goddard asked that I report any items of interest that I discovered in my research of this topic. The following paragraphs contain information which you may find interesting.

- Motor fuel taxes accounted for less than one percent of Alaska's total unrestricted revenues in FY 1981 and FY 1982. Ten years ago, motor fuel taxes comprised just over five percent of unrestricted revenues. During the period from 1972 to 1982, motor fuel tax revenues increased by 166 percent, while total unrestricted revenues increased by 1,775 percent. During the same period, non-oil-related revenues increased by about 209 percent.

- Although AS 43.40.010(e) states that 60 percent of the proceeds (less collection costs) from taxes on aviation fuel sold at airports operated by municipalities shall be refunded to the municipality that collected the tax, the amount of revenue distributed to municipalities was less than two percent of the total aviation fuel tax collected in 1982.

- Mr. Kessel is currently compiling information on appropriations for port and harbor facilities in order to compare the figures to income from the marine fuel tax. The comparison should aid in drawing conclusions about the probability that repeal of the marine fuel tax would adversely affect State appropriations (and perhaps federal matching funds) for construction and improvement of ports and harbors.

- Of the $15 million in highway gasoline tax collected in 1982, $308,481 (two percent) was refunded. Of the $17 million in highway diesel tax collected in 1982, over $10 million, or 60 percent, was refunded.

- Mr. Kessel voiced concern that wide differences in tax rates could cause enforcement problems since there would be incentive to switch fuel from "low tax uses" to "high tax uses" without paying the tax. The concept applies to repeal of a tax on diesel fuel as well as to repeal of the marine fuel tax.

- Repeal of motor fuel taxes may not substantially reduce record-keeping chores of industry. The federal government also requires that certain records be maintained; those requirements would be unaffected by changes in State law.

- There is no State highway tax on gasohol and the federal tax is 5¢ per gallon rather than the 9¢ that applies (after April 1, 1983) to gasoline. If alcohol can be produced and delivered for less than $2.20 per gallon, there is some possibility that barley could be used to produce alcohol for highway fuel.

I hope you find this information useful. Please call if you have additional questions.

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: SS HB 40 Date on Bill: 2/11/83
Title: An act repealing motor fuel tax.
Sponsor: Hayes
Requestor: House Transportation

1. Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital								
Operating			-0-	(65)	(65)			
Total			-0-	(65)	(65)			

b. Revenues:

Revenue			-0-	(48,000)	(33,000)			

2. Source of funds to offset fiscal impact of bill:

3. Assumptions:
Since the bill would eliminate the Motor Fuel Tax, positions currently allocated to those sources could eventually be eliminated. The elimination of those positions could not occur until sometime in FY 84 because there would be substantial clean up work between now and the several months succeeding the effective date of the bill. The task of refunding the numerous fuel users could be monumental.

The loss in revenues to the state are as a result of repealing highway, marine, and aviation taxes.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

Motor Fuel Tax (decreasing & repealing refund provis.)

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 55, by Reps. Martin and Grussendorf. Lowers motor fuel tax to three cents per gallon, as did original (see p. 46), and repeals motor fuel tax refund provisions contained in the following statutes:

--AS 43.40.030, "Refund for Nonhighway Use," allows six-cent-per-gallon refund of any tax paid for fuel used for a vehicle which is not operated on highways in the state (does not apply to aviation fuel and watercraft fuel). Allows total refund on that part of the fuel sold for non-highway use in a foreign country.

--AS 43.40.035, "Other Refunds and Credits," which allows a person who resells fuel on which the motor fuel tax was previously paid to receive a refund of the tax.

--AS 43.40.050, "Refund Claim by Affidavit," containing procedure for claiming refund of motor fuel tax by filing an affidavit with the Dept. of Revenue.

--AS 43.40.060, "Separate Invoices," which allows the Dept. of Revenue to require separate invoices for fuel sold, distributed, or transferred whe. the invoices will be the basis for a refund claim.

--AS 43.40.070, "Refund Warrants," directs the Dept. of Revenue, upon approval of a refund claim, to issue a warrant drawn on the Highway Fuel Tax Account in favor of the applicant in the amount of the claim.

--AS 43.40.080, "Examination of Books and Records," allows the Dept. of Revenue to examine a claimant's books and records to determine the validity of a claim for a refund.

Note: bill also includes repealer for AS 43.40.040, "Applications and Permits for Refund," however this section was repealed in 1980 by Sec. 45 of Ch. 113, SLA 1980. (Required person seeking refund to obtain a permit from the Dept. of Revenue.)

Effective April 1, 1983.

Introduced February 4 and referred to Transportation and Finance.

Appropriation (special) (Tununak seawall)

HOUSE BILL NO. 149, by Rep. Vaska. Would appropriate $905,000 for a grant to the City of Tununak to construct a seawall for the prevention of soil erosion. Tununak is on the western side of Nelson Island on the Bering Sea. Provides appropriation be disbursed in accordance with laws governing state grants (AS 37.05.315 - 319). Effective immediately.

Introduced January 31 and referred to Community & Regional Affairs and Finance.

Motor Fuel Tax/Water-Craft (repealing)

HOUSE BILL NO. 150, by Zharoff, Grussendorf and McBride. Would repeal the five cent per gallon tax on motor fuel used in or on watercraft (AS 43.40.010(a)(2) and (b)(2)). Effective July 1, 1983.

Motor Fuel Tax (decreasing)

HOUSE BILL NO. 55, by Martin and Grussendorf. Decreases the motor fuel tax to three cents a gallon (currently eight cents) to offset the tax increase imposed by the federal government. Decrease would apply to all motor fuel sold or otherwise transferred in the state (AS 43.40.010(a)) and motor fuel consumed by a user (AS 43.40.010(b)) except aviation gas, motor fuel used in and on watercraft and all aviation fuel other than gasoline. Provides Act takes effect April 1,1983.

Introduced January 18 and referred to Transportation, then to Finance.

Student Loans (amount of & interest)

HOUSE BILL NO. 56, by Lindauer. Would change the amount and interest rate of undergraduate and graduate student loans providing eligible undergrads and grad students may receive a loan for each school year not to exceed an amount equal to the actual costs of tuition, room, and board (currently undergrads may receive up to $6,000 per year, and grad students may receive up to $7,000 per year). Increases the interest rate on student loans to seven percent a year (currently five percent). Does not provide for an effective date (takes effect 90 days after being signed by the Governor).

Introduced January 18 and referred to Health, Education & Social Services, then to Finance.

ASHA Home Loan Program (creation)

HOUSE BILL NO. 57, by Lindauer. Establishes the Alaska State Housing Authority Home Mortgage Program. The bill states that its purpose is ". . .to assist state residents who might not otherwise be able to buy homes at realistic interest rates." Provides the Home Loan Program be financed through bond sales to the Alaska Permanent Fund, and the proceeds of the bond sales be used to make loans or purchase mortgages. Amends section of the Alaska Permanent Fund relating to the investment responsibilities of the Board of Trustees (AS 37.13.120) by stating the Board shall purchase all of the ASHA bonds that bear interest of 10 percent, are guaranteed by ASHA, and are secured by first mortgages under the ASHA Home Mortgage Program, until 40 percent of the assets of the Corporation are invested in the bonds.

Loans are to be made at an interest rate of 10 percent, may not exceed $160,000, may not exceed 80 percent of the appraised value of the home, shall be secured by a first mortgage, and may be assumed after a period of four years. Provides for the purchase of loans from banks and financial institutions if certain requirements are met. Sets out eligibility requirements for borrowers, stating the Authority may not require the borrower have a specified level of income as a condition for a loan is it is demonstrated that he can meet monthly rental payments comparable to loan payments. Also states that the willingness of a bank or other financial institution to take a second mortgage to secure a retained interest establishes the financial eligibility of a borrower. Does not provide for an effective date (effective 90 days after Governor's signature).

Introduced January 18 and referred to Labor & Commerce, then to Finance.

Representative Terry Martin
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Representative Martin,

During my last trip to Juneau we discussed Sponsor Substitute for House Bill No. 55. The Alaska Trucking Association is in full support of this legislation and we commend you for your efforts to offset tax increases by the federal government.

Whatever assistance we can offer in support of this legislation is available. I discussed our position in support of SSHB55 with your Aide, Elmer Lindstrom and he indicated that he would contact me at a later date.

Again, we appreciate your desire to create a better business environment for the transportation industry as well as provide relief to the general public in the motor fuel tax area.

Sincerely,

T. J. Thrasher
Managing Director

3/31/83

Bette -

For your review and the record with regard to HB 55.

Terry

Bette: Why are you passing this out if no body supports it?

Martin insists.

- Should we send a letter for the Committee bill so that it is referred to Finance because the Committee sponsored it.
You may want to ask the Committee.

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act amending motor fuel tax provisions; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.40.010(c) is amended to read:

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him (the user) during each month. If the monthly tax return is timely filed, one percent of the total monthly tax due, limited to a maximum of $100, can be deducted and retained to cover the expense of accounting and filing the monthly tax return. At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all [MOTOR] fuel which he (each) has distributed or used during the month.

* Sec. 2. AS 43.40.010(1) is amended to read:

(1) If a dealer has a reasonable belief at the time of sale or transfer that fuel that is sold or transferred is not to be used as motor fuel, the dealer need not collect the motor fuel tax. If the tax is not collected, the dealer shall obtain a certificate of use from the buyer or transferee stating that the fuel that has been or will be purchased or received is not intended for use as motor fuel. The Department of Revenue [DEPARTMENT] may not collect the motor fuel

tax from a dealer for fuel for which a certificate of use has been properly obtained under this subsection. A certificate of use is not required for fuel used to heat a private residence or for fuel which is at least 10 percent alcohol by volume. An annual certificate of use is required for all other exemptions, as listed under AS 43.40.-100(2), except subparagraph (K) where certificate of use needs will be determined by the Department of Revenue. The dealer shall retain a copy of each certificate of use obtained under this subsection for examination or audit on request by the Department of Revenue [DEPARTMENT]. The form of a certificate of use may be prescribed by regulation adopted by the department.

* Sec. 3. AS 43.40.035(a) is amended to read:

(a) A person who resells fuel on which the tax under AS 43.40.-010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements prescribed by AS 43.40.010(1) have been fulfilled [A CERTIFICATE OF USE IS ACQUIRED UNDER AS 43.40.010(1)]; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

* Sec. 4. This Act is retroactive to April 1, 1983.

* Sec. 5. This Act takes effect immediately in accordance with AS 01.-10.070(c).

BILL COMPARISON

Hayes, Martin, Lindauer, Tischer, Barnes SSHB 40	Martin & Grussendorf SSHB 55	Zharoff & Grussendorf HB 150
An Act repealing the motor fuel tax (AS 43.40); and providing for an effective date.	An Act decreasing the motor fuel tax to offset tax increase by federal government, repealing motor fuel tax refund provisions; and providing for an effective date	An Act repealing the tax on motor fuel used in or on watercraft; and providing for an effective date.
Would only repeal the state motor fuel tax (AS 43.40), retroactive to January 1, 1983, and applying to tax years beginning after December 31, 1982 Directs the Dept. of Revenue to adopt regulations providing for refunds of motor fuel taxes collected after December 31, 1982. Effective immediately.	Lowers motor fuel tax to 3¢ per gallon, and repeals motor fuel tax refund provisions contained in the following statutes: --AS 43.40.030 "Refund for Nonhighway Use," allows six-cent-per-gallon refund on any tax paid for fuel used for a vehicle which is not operated on highways in the state (does not apply to aviation fuel and watercraft fuel). Allows total refund on that part of the fuel sold for non-highway use in a foreign country. --AS 43.40.035 "Other Refunds and Credits," which allows a person who resells fuel on which the motor fuel tax was previously paid to receive a refund of the tax. --AS 43.40.050 "Refund Claim by Affidavit," containing procedure for claiming refund of motor fuel tax by filing an affidavit with the Dept. of Revenue. --AS 43.40.060 "Separate Invoices," which allows the Dept. of Revenue to require separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim. -continued-	Would repeal the 5¢ per gallon tax on motor fuel tax used in or on watercraft.

SSHB 40	SSHB 55	HB 150
	--AS43.40.070, "Refund Warrants," directs the Dept. of Revenue, upon approval of a refund claim, to issue a warrant drawn on the Highway Fuel Tax Account in favor of the applicant in the amount of the claim. --AS 43.40.080, "Examination of Books and Records," allows the Dept. of Revenue to examine a claimant's books and records to determine validity of a claim for refund. Note: bill also includes repealer for AS 43.40.040, "Applications and Permits for Refund," however this section was repealed in 1980 by Sec. 45 of Ch. 113, SLA 1980. (Required person seeking refund to obtain a permit from the Dept. of Revenue.) Fiscal Note Info.: The proposed bill reduces the tax on motor fuel, thus reducing General Fund revenues - FY 83 - 2.0 mill. FY 84 - 17.0 mill. FY 85 - 10.0 mill. Only AS 43.40.030(a) needs to be repealed	Fiscal Note Info.: Shows a loss of revenues in the General Fund as follows: FY 83 - 0 FY 84 - 3.2 mill. FY 85 - 4.2 mill.

Representative Bette Cato, Chair
House Transportation Committee
House of Representatives
Capitol Building
Juneau, Alaska

Dear Bette,

I'm writing in follow-up to yesterday's meeting of your committee to furnish "on paper" supporting information relative to HB 55, a bill to lower the state motor fuel tax by five cents to three cents a gallon.

There are, I submit, seven major advantages which this bill offers which, as a result of yesterday's deliberations in committee, I feel compelled to re-emphasize at this time:

1) HB 55 represents significant savings to state and local governments in physical plant heating costs.

2) Major savings in automotive fuel charges to state trooper and city police vehicles, as well as to state and municipal non-law enforcement vehicles and mobile equipment, will result through passage of this bill. HB 55 will mean reduced costs for school transportation services, as well.

3) HB 55 will result in reduced costs in mass transportation for public carriers in Alaska, on land, in the air or over water -- savings in the competetive market will be passed on to Alaskans.

4) Reductions in motor fuel costs through enactment of HB 55 will be of direct benefit to the trucking industry in Alaska and particularly helpful to high overhead, small-scale independent trucking operations.

5) HB 55 will prove of notable benefit to the Alaska car owner. This bill will save the average motorist fifty-five to seventy-five dollars a year.

6) On a broader scale, HB 55 will serve to leave more money in the resident-consumer's pocket, and will stimulate the state economy in both the public and private sector.

7) HB 55 will offset the five cents per gallon increase in the Federal gas tax and significantly help balance the cost of living in Alaska compared to living in the other 49 states.

Thanks for the opportunity to share further my thoughts relative to reducing the state motor fuel tax. Best personal regards.

Sincerely,

Terry

III. ANALYSIS

There are administrative and organizational topics not specifically addressed in House Bill No. 68, "An Act relating to ferries and ferry terminals and establishing the Alaska Marine Highway Authority". Since the proposed legislation is similar in each of these bills, we are making the following assumptions in preparation of fiscal notes for each bill.

1. There is no offsetting credit taken for the expenditure of earned revenue to support the cost of operation of "Alaska Marine Highway Authority". In actuality, the initial cost would be the same if funding came from a direct appropriation for the full cost of operations from the legislature with earned revenue returned to the General Fund, or if earned revenue was expended with an appropriation to support the shortfall.
2. It is assumed the "Alaska Marine Highway Authority's" Payroll, Personnel, and Accounting systems would feed into the existing State systems to insure checks and balances, and would eliminate the necessity of creating a duplicate system.
3. We have assumed that initial start-up costs will be fully funded by the Legislature.
4. It is assumed the "Authority's" funding would be at the Division level and allocated to operating components as set out in its budget.
5. We have assumed a General Fund Subsidy for the difference between the total operating cost and the expected revenue for each fiscal year. We have further assumed that the total amount authorized would be available at the beginning of each fiscal year to allow the "Authority" to plan operations for each year.

6. The same inflation factor would apply to the "Authority's" budget request as followed by State agencies. We have assumed it to be seven percent (7%) for the fiscal note.

7. Initially the "Authority" would continue direct involvement with the State in the following:

   A. Occupancy of a State owned office building.

   B. Continued support from the State mail system.

   C. Access to the State equipment fleet.

   D. Access to the Statewide purchasing contract (i.e. fuel).

   E. Continued use of "shared" communications lines through Department of Administration, Division of Communications.

   F. Continued insurance, bonding, etc., as now supplied through Department of Administration, Division of Risk Management.

   G. Legal service from the Attorney General's office.

8. We have assumed that Department of Transportation and Public Facilities transferred employees would bring their own equipment and that equipment for the proposed twenty-four (24) new hire employees would be $81.0.

9. We have assumed the "Authority" would require its own computer services for reservations, cost accounting, dispatching vessels crews, and payroll input; and that one time costs would be $577.0 for hardware and $265.0 for software.

10. Assuming expansion, the first year shows one time start-up funds for Contractual $576.2; (Software $265.0; Legal Services $212.0; Additional Space Rental [illegible].2); and $53.0 Commodities (primarily office supplies).

Summary - 200 - 500 Accounts: Of $1620.8 shown for the first year, $1287.2 is a first time start-up cost. Yearly maintenance of all 200 through 500 Accounts would be around $333.6 per year.

11. Of the $2174.1 increase in Personal Services, $1268.4 is assumed to be positions already within the Department of Transportation and Public Facilities performing similar services in Finance, Supply, Payroll, Design and Construction, and Personnel for the Division of Marine Highway Systems. The actual increase then would be $905.6 for Personal Services to fund eight (8) upgraded positions and twenty-four (24) new positions.

MHS EXISTING	DOT TRANSFERS	NEW POSITIONS	TOTAL POSITIONS
PFT 36	PFT 32	PFT 24	PFT 92
PPT 4			PPT 4

This is a total of ninety-two (92) Permanent Full Time and four (4) Permanent Part Time Administrative positions, with a total of thirty-one (31) Supervisors (Range 18 and above) and sixty-five (65) support positions to operate and supervise nine vessels (725 employees) and twenty-six Shore Facilities (twenty-eight (28) Permanent and twenty-three (23) Permanent Part Time employees). No increase has been made in Vessel or Shore Facility Personnel.

Approximately $238,500 of CIP funded positions are proposed to be general funded because they would be considered more operational.

Dear Representative Cats,

I recently tried to make state-room reservations for the Sea-ICTN route on the Alaska Marine System. This request was made in January for either June or July. All state-rooms were reserved – both ways.

It has come to my attention that travel agencies reserve these rooms as soon as the computer is ready to go for the upcoming season. If the agencies cannot 'resell' these tickets, their reservations are canceled, they are no money out, and we residents who ~~stand~~ happen to be standing on the dock may get a 'stand-by'. Reminds me of when I was in the army, trying to fly home on stand-by.

After residing in this state for ten years, I figured it was about time for my family to come up and visit. I wanted them to travel comfortable and -, being a fisherman, wanted them to take a little boat ride - first class.

I realize that the more tickets get sold the more hotel rooms, food and alcohol gets sold and our economy needs all of this very much.... but, couldn't a few of us locals be given a chance to reserve a state-room? I tried, six months in advance - No go.

Could this policy please be reviewed and ammended?

Thank you,

Garry Couch

RECEIVED
NOV 2 1982
BUDGET AND MANAGEMENT

.. Revised 02/15/83

D U P L I C A T I O N

M E M O R A N D U M April 6, 1978

SUBJECT: Federal highway funds and proposed Marine Highway Authority (SSSB 371)

TO: Senator Bill Ray

FROM: Kenneth M. Rosenstein, Legislative Counsel

I am enclosing the material that expresses the foundation for the conslusion by the federal highway people that under current federal law an independent marine highway authority would make the state ineligible for federal highway funds for ferries.

The Federal-Aid Highway Act requires that in order for a state to receive federal funds for the construction of ferries the operating authority and amount of fares charged on them be under the control of the state. The intent of SSB 371 is to create an agency for the operation of Alaska's ferry system that has an independent legal existence from the state. Despite the fact that the governor would appoint and could remove directors of the authority and that the legislature would control the authority's purse, the view of the Federal Highway Administration (FHWA) is that the state would not retain the control necessary to comply with the Federal-Aid Highway Act (see attached correspondence).

Additionally, in the opinion of the FHWA's chief counsel, the intent of the federal act is that federal funds would be provided only to one agency that is repsonsible for all phases of a state's highway program which in Alaska includes the ferry system (see attached correspondence).

I have researched the position expressed by the FWHA's lawyers and have concluded that, unless the federal law is changed, it seems unlikely that the state would be eilgible for federal funds for ferry construction if the ferry system was operated under the scheme set forth in SSB 371.

If there are any other avenues or approaches that I can explore for you, do not hestitate to contact me or call me at 465-4996.

MEMORANDUM

LEGISLATIVE AFFAIRS AGENCY
STATE OF ALASKA

POUCH Y — STATE CAPITOL
JUNEAU, ALASKA 99811

TO: W.I. (Bob) Palmer, Executive Assistant
Office of the Governor

DATE: 15 July 1975

FROM: Stuart C. Hall, Legislative Counsel

SUBJECT: Dept. of Transportation

The U.S. Advisory Commission on Intergovernmental Relations has developed a "package" of materials dealing with, and including a model, state Department of Transportation. One of the Commission's senior staff members discussed this at the NCSL Seminar on Public Transportation Issues, Wed., June 25, in Seattle. I have written ACIR for a copy of the material which was supposed to have been forwarded to all seminar participants in any event, but which I have not received to date. Hopefully the letter will expedite matters.

Will keep in touch and advise you of what I find.

MEMORANDUM

LEGISLATIVE AFFAIRS AGENCY
STATE OF ALASKA

POUCH Y — STATE CAPITOL
JUNEAU, ALASKA 99811

TO: W.I. (Bob) Palmer
Executive Assistant to the Governor

DATE: 15 September 1975

FROM: Stuart C. Hall
Senior Legislative Counsel

SUBJECT: Model DOT Legislation

Per your request of several weeks (months?) ago, I am attaching a copy of the Third Draft of the U.S. Advisory Commission on Intergovernmental Relations' Model State Department of Transportation legislation. I also have on my desk a document entitled "Transportation Departments in the Several States" (Informational Bulletin No. 74-10-?) published in February, 1974, by the Legislative Reference Bureau of the State of Wisconsin. If you'd like a copy of that, I'll have one made for you. I'm sorry for the delay, but I think we've survived the "interregnum" down here, and are back "on track" -- or at least I hope so.

Lon McDermott
President

Lon R. McDermott

Testimony on State of Alaska Senate C.S. for House Bill No. 63
Presented to the Senate Commerce Committee March 22, 1976

Subject: An Act relating to the organization of transportation related functions; creating the Department of Transportation and providing for an effective date.

Mr. Chairman and members of the Senate Commerce Committee:

My name is Lon McDermott. I am a citizen of the State of Alaska and reside at 390 Hamilton Avenue, Fairbanks, Alaska. I am employed as President of Alaska International Construction Co., which is a wholly owned subsidiary of Alaska International Industries. Our offices are located in Fairbanks, Alaska and our firm is licensed and does perform construction contracts throughout the State of Alaska, both as a prime contractor and in joint ventures with other Alaskan corporations. In the performance of projects I have become familiar with the present organizational structure of the State of Alaska departments that are responsible for the various phases of transportation related construction.

A.I.C. is a member firm of the Alaska Chapter of the Associated General Contractors of America and I am priviledged to serve as a member of the Alaska Chapter Board of Directors and as a Vice President of the chapter. I am also an A.G.C. national committee member of the American Association of State Highway Officials-A.G.C. National Joint Cooperative Committee.

My career encompasses twenty-four years of active engagement in the construction industry, the last five of which have been in Alaska.

My purpose in appearing before this committee today is to present testimony on the proposed legislation creating a Department of Transportation for the State of Alaska.

I have thoroughly read Senate Committee substitute for House Bill No. 63 and I am of the firm opinion that its adoption by the Alaskan Legislature would be a positive action beneficial to the people of the State of Alaska and to the construction industry.

The legislation as written should provide for a more efficient, better planned and more economical utilization of State and Federal transportation funds.

U.S. DEPARTMENT OF TRANSPORTATION
FEDERAL HIGHWAY ADMINISTRATION
WASHINGTON, D.C. 20590

OFFICE OF THE ADMINISTRATOR

IN REPLY REFER TO:
HCC-50.2

Stuart C. Hall, Esquire
Senior Legislative Counsel
State Capitol - Pouch Y
Juneau, Alaska 99801

Dear Mr. Hall:

Your letter of November 21 to Secretary of Transportation William T. Coleman, Jr., relative to proposed State legislation which would place the present State highway department responsibilities in a newly created State Department of Transportation has been referred to the Federal Highway Administration (FHWA) for reply.

The bill passed by the House of Representatives which was enclosed with your letter places the responsibility for the planning, operations, and construction of State highways in a proposed Department of Transportation, and if enacted, this bill would satisfy the requirements of Title 23, United States Code, with regard to the unity of the State entity with which the FHWA should deal in all matters pertaining to Federal-aid highways.

You indicate that there is a possibility that an attempt will be made to amend this bill, in line with a proposal by the Commissioner of Public Works, to retain all construction of transportation systems in the Department of Public Works, with planning, design, operation, and maintenance of such systems assigned to the Department of Transportation. This proposal, as we understand it, was in the original House Bill No. 63, and Division Administrator Hanna's memorandum to Commissioner Parker dated February 28, 1975, correctly reflected informal advice at that time from the FHWA Office of Chief Counsel to our Assistant Regional Counsel in Portland, Oregon. This informal advice was confirmed by a memorandum dated March 28, 1975, a copy of which is enclosed. It is our conclusion that the placing of the construction of highways in one State department and the placing of planning, operation, and maintenance thereof in another State department would be inconsistent with the long-standing administrative interpretation of the purpose of 23 U.S.C. 302(a).

Please let me know if FHWA can be of further assistance to you in this matter.

Sincerely yours,

Norbert T. Tiemann
Federal Highway Administrator

REFER TO FILE

TESTIMONY OF ALASKA CARRIERS ASSOCIATION REGARDING PROPOSALS FOR A STATE DEPARTMENT OF TRANSPORTATION

The Alaska Carriers Association has carefully reviewed the proposals for a state Department of Transportation from the following aspects:

1. Improvement of present coordination of transportation planning and development.
2. Governmental efficiency and staffing without excess duplication of personnel.
3. Operations of other states who have established DOT's.
4. Impact on the basic highway needs of the state.
5. Concentration of power in a bureaucracy and subsequent erosion of the legislative control which is more responsive to the people.

On Item 1 it is conceded that better coordination is needed than at present. One of the chief arguments for a state DOT are the many stories about airports or docks being built while a highway is constructed a mile or two away with no connections to the facility.

This is a communications problem and does not require a super agency to solve it. The concept of a governor appointing his own department heads is designed so that he can also see that they do

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF TRANSPORTATION
FEDERAL HIGHWAY ADMINISTRATION
Washington, D.C. 20590

DATE: March 28, 1975

IN REPLY REFER TO: HCC-50

SUBJECT: Alaska DOT Bill

FROM: Assistant Chief Counsel
For General Law

TO: Mr. James F. Zotter
10-00 Assistant Regional Counsel
Portland, Oregon

This is in response to your memorandum of March 18, 1975, requesting our opinion as to the effect of 23 U.S.C. 302 upon the proposed Alaska Department of Transportation Bill (House Bill No. 63, section 3). It is our view that the proposed bill will not meet the requirement of 23 U.S.C. 302(a) that a State have a suitably equipped and organized highway department with adequate powers to discharge the duties required by title 23, United States Code.

The proposed bill would authorize the Department of Public Works to assume the duties and powers over (1) State highway design and construction; (2) acquisitions of rights-of-way; and (3) the relocation assistance program. The bill would vest with State Department of Transportation the duties and powers over (1) highway planning; (2) highway maintenance and operation; and (3) all other duties not specifically given to the Department of Public Works. In Section 2 the bill states that the State DOT will "work cooperatively with the Department of Public Works to assure that design and construction of transportation facilities by the Department of Public Works are consistent with plans and operational requirements." (Section 44.42.020(7)) It appears that the State DOT will be equal in status with the State Department of Public Works. That is, in the functional area of governmental action that FHWA oversees, there would be two co-equal State agencies, the State DOT and the State Department of Public Works. For different parts of the highway program, FHWA, according to this proposed bill, would have to deal with two State agencies independent of one another.

23 U.S.C. § 302(a) speaks of "a State highway department" which will be adequate to perform the duties required of it by Title 23. "State highway department" is defined in 23 U.S.C. § 101(a) as "that department,

commission, board, or official of any State charged by its laws with the responsibility for highway construction." The term "construction" is defined in § 101(a) as "the supervising, inspecting, actual building, and all expenses incidental to the construction or reconstruction of a highway, including locating, surveying, and mapping . . . acquisition of rights-of-way, relocation assistance . . . ." In all of above mentioned sections, there is only one State agency mentioned--not two. Furthermore, in §§105, 106, 109 which deal with planning of a highway project there is only one State agency mentioned--the State highway department--and this is the same agency as mentioned in §110 which concerns the actual project agreement for the highway construction.

From the language of the code it is clear that Congress intended that one State agency should be responsible for all facets of the highway program from the original planning stage through to the construction phase. The proposal to split the functions of highway construction and planning between co-equal State agencies runs counter to the terms of the statute. In our opinion Congress intended that there be one State agency, by whatever name it is designated, which handles all phases of the Federal-aid highway program.

Alaska DOT Bill 10RC

Assistant Regional Counsel, Region 10

Mr. David E. Wells, Chief Counsel
Washington, D.C.
HCC-50 ATTENTION: Mr. Brian Williford
Assistant Chief Counsel

Alaska State Representative Bill Parker has requested a formal legal opinion from the Federal Highway Administration regarding Alaska House Committee Substitute 63 which would create an Alaska Department of Transportation (copies attached). Mr. Parker is specifically interested in knowing whether Section 3 of this bill which vests all powers and duties relating to planning, maintenance, and operation of State highways in the Department of Transportation and all powers and duties relating to design and construction in the Department of Public Works complies with Title 23, U.S.C., particularly the definition of "State Highway Department" in §101, and the requirements of §302(a).

We previously discussed this matter over the phone with Mr. Norm McPhee at the urgent request of Deputy Highway Commissioner Charles Matlock. During those discussions, Mr. McPhee informally indicated that he did not believe that section 3 of the proposed bill complied with 23 U.S.C. §101 and §302(a). It was his opinion that those sections required a single state entity to discharge all of the duties called for by Title 23, U.S.C., including planning, design, construction, operations and maintenance. Mr. McPhee's informal opinion was provided to Deputy Commissioner Matlock.

Could you please provide us with a formal legal opinion in response to Mr. Parker's request. If your formal opinion concludes that the proposed bill would comply with Title 23,U.S.C., Division Engineer Hanna has requested comments on any problem areas which might result from the bifurcation of the present duties of the Department of Highways into two separate and distinct departments. Mr. Hanna has expressed to us over the phone

his personal concern over the effects of this bill on Division's operations if they are required to coordinate and work with two separate departments regarding different aspects of the federal-aid highway program.

We would appreciate your response as soon as possible as the present legislative sessions should be ending shortly.

James F. Zotter

SB 213 SENATE BILL NO. 213 was referred to the Rules Committee.

SS SB 371 The State Affairs Committee has had SPONSOR SUBSTITUTE FOR SENATE BILL NO. 371 (creating the Alaska Marine Highway Authority) under consideration and reports it back with the following amendments:

Amendment No. 1
Page 1, lines 20 - 23 delete
line 24 : delete the word "system." and insert: "two directors appointed by the governor from communities in southeast Alaska and two directors from the remainder of the state, at least one of whom shall be from an area not served by the marine highway system."

Amendment No. 2:
Page 3, lines 13 and 14: delete "income, revenues, funds and money;" and insert: "own appropriations"

Amendment No. 3:
Page 1, line 19: after "facilities" insert: "or his designee"

The report was signed as follows: Senator Willis, Co-Chairman, signed "no recommendation, must be amended"; Senator Bradley signed "no recommendation, should be amended", Senator Kerttula signed "no recommendation, amend". Senator Ray signed "do pass if amended" and Senator Huber signed "do not pass unless amended". The committee also reported the bill back with a letter of intent to the Finance Committee.

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 371 was referred to the Finance Committee.

Letter of intent on the above bill follows:

MEMORANDUM

To: Finance Committee Date: March 22, 1978

From: Senate State Affairs Subject: SB 371

The Department of Transportation and Public Facilities and the appropriate federal officials are currently working on a change in wording in SB 371 that would ensure the continued access to certain federal funds.

The Senate State Affairs Committee has reported out SB 371 with the understanding that this important wording would be presented to the Finance Committee by the DOT.

The Judiciary Committee has had SPONSOR SUBSTITUTE FOR SENATE BILL NO. 509 (modification of sentences) under consideration and the committee recommends it be replaced with COMMITTEE SUBSTITUTE FOR SPONSOR SUBSTITUTE FOR SENATE BILL NO. 509 and that it do pass. The report was signed by Senator Hohman, Chairman, and concurred in by Senators Kerttula and Tillion. SS SB 509

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 509 was referred to the Rules Committee.

The State Affairs Committee has had SENATE BILL NO. 530 (special appropriation to the New Capital Site Planning Commission) under consideration and reports it back with the following amendment: SB 530

Page 1, line 10: delete "$1,221,200" insert: "$1,778,000"

lines 12 - 20: delete. Insert "Complete data collection necessary for the environmental impact assessment."

The report was signed as follows: Senator Willis, Co-Chairman signed "do pass if amended". Senators Huber and Ray signed "do not pass". Senators Bradley and Kerttula signed "no recommendation".

SENATE BILL NO. 530 was referred to the Finance Committee.

The Finance Committee has had COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 773 (Finance) (special appropriation to the Department of Fish and Game division of commercial fisheries) under consideration and the committee recommends it do pass. The report was signed by Senator Sackett, Chairman, and concurred in by Senators Croft, Meland, Tillion, Orsini and Hohman. CS HB 773 (Fin)

COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 773 (Finance) was referred to the Rules Committee.

The Rules Committee has had the following under consideration and recommend they be placed on the March 23 calendar:

SENATE CONCURRENT RESOLUTION NO. 87 (annulling a regulation relating to drinking water) SCR 87

SENATE BILL NO. 311 (authorizing the Alcoholic Beverage Control Board to issue club permits) SB 311

Our views:

The DOT debate

Current debate over the proposed state Department of Transportation (DOT) is not so much about whether a cabinet-level agency is needed as it is how the new department should be structured.

One plan, supported by Gov. Jay S. Hammond, calls for the DOT to be a planning agency, divorced from building functions but in command of them.

The governor is convinced that the separation of functions into two agencies — the departments of Public Works and Transportation — is the best way to strengthen planning and closely examine policy questions surrounding construction.

As envisioned by the governor's bill, the Department of Public Works would be in charge of building everything the state constructs, from highways to hiking trails, from airstrips to ferry terminals. The DOT, however, would control all planning, design and funding.

In short, the Department of Public Works couldn't build any transportation facility unless directed to do so by the Department of Transportation.

Highway Administration sought clarification about just who would hold final accountability for federal dollars granted to transportation programs here. That led to revisions, and the amended governor's bill apparently satisfies federal authorities: complete accountability would be shouldered by the DOT, with construction authority delegated to the Department of Public Works.

Criticism of the governor's plan comes from within his administration as well as from powerful legislative leaders and transportation industry representatives in Juneau. One of the key participants is Mr. Hammond's commissioner of Highways, Walt Parker, who is lukewarm to the plan because of its divided function.

Commissioner Parker has vowed to support the administration's plan "as long as I am a part of it." But he and others have quietly opposed the concept because they believe the split-function DOT is not comprehensive enough. Splitting the functions will make the process even less coordinated than now, they argue.

Opponents of the governor's DOT plan envision a single, integrated department, spanning all transportation needs from start to finish — from planning to construction.

The outcome of the debate, which has been both educational and lively, will have much to do with the public process in Alaska. Fewer needs are more pressing than transportation across our vast state, and few areas of government account for so much of the public money.

Despite unfortunate personality differences which have entered the debate, it promises to be the kind of discussion which important public policy demands. Both administratively, in the departments and agencies involved, and in the public hearing process of legislative committees, the subject will be widely discussed. There is opportunity for citizens, either in writing or by appearance, to make their position known; there will also be a clear chance for us all to watch the process and learn the arguments.

We join numerous other concerned Alaskans in promising just that. We will all be watching the process and result closely.

8) Domestic production will continue to decline until 1985 and then increase gradually. Despite price increases and increased conservation, demand will far exceed domestic supply, and, prior to 1990, demand will be met through increased imports.

9) By the year 2000, 40 percent of domestic crude will be from Alaska.

10) Coal will play an increasingly important role in meeting not only national energy needs, but also energy needs of the transport sector. By the final decade of this century, synthetic crude oil will represent 20 percent of the crude oil available to refineries from all sources. Of the synthetic crude about 78 percent will be from coal.

11) In the future coal will move twice its current average distance, and at three times the volume, for a six-fold increase in ton-miles. Thus, the BTU efficiency of coal as an energy resource will actually decline.

12) Sufficient petroleum based fuels can be made available for transportation only if all domestic energy resources are exploited (e.g. solar, nuclear, oil shale, tar sands, coal liquification and bio-mass) to meet total national energy needs.

Safety

13) Projections show that although the amount of vehicle miles traveled in the year 2000 will increase, improved safety features will result in a lower fatality rate. Because of increased travel, the total number of fatalities will most likely rise to 66,900 annually by the year 2000 but may range as high as 75,600.

NATIONAL TRANSPORTATION POLICY STUDY COMMISSION
2000 M Street, NW., Suite 3000
Washington, D.C. 20036
202-254-7453

Hon. Bud Shuster, M.C.
Chairman

Dear Reader: June 25, 1979

This report sounds an alarm!

The world's best transportation system is in danger. It may not be able to meet the needs of a growing America.

* The present levels of public and private investment will not preserve the existing system.

* The demand for transportation will grow dramatically, outdistancing the rate of population growth by 9 times for freight and 4 times for people.

* The capital investment required to meet the growing demand by the year 2000 exceeds $4 trillion, over $1 trillion from the public sector.

* Government over-regulation is inhibiting the return on investment necessary to attract capital for future growth.

* A maze of federal agencies, congressional committees and conflicting policies is driving up costs and retarding innovation.

* Highway fatalities could increase 45 percent, exceeding 66,000 annually by the year 2000.

* A lackluster energy policy, impeding production of oil, coal and other forms of energy, is endangering transportation's ability to keep up with demand.

The NATIONAL TRANSPORTATION POLICY STUDY COMMISSION in its final report to Congress and the President includes over 80 specific recommendations to improve America's transportation system. This summary describes 33 of those recommendations. It is significant that the final report was unanimously adopted by a vote of 18 to 0, although, obviously, not every Commissioner agrees with every recommendation.

The world's best transportation system need not decline. Implementation of the COMMISSION'S recommendations will contribute to the revitalization of transportation in America and help provide one of the critical prerequisites for economic growth and prosperity in the future.

America's transportation system must be designed to meet the requirements of the people, not to dictate what those requirements should be. The American people and their leaders in both public and private sectors must squarely face the developing deficiencies in transportation and adopt new policies for the future.

Bud Shuster

STATE OF ALASKA
THE LEGISLATURE
LEGISLATIVE AFFAIRS AGENCY

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99801
(907) 465-3800

November 21, 1975

Honorable William T. Coleman, Secretary
Department of Transportation
400 Seventh Street, N.W.
Washington, D.C. 20590

Dear Secretary Coleman:

The Alaska State Legislature has under consideration legislation establishing a state Department of Transportation. Committee Substitute for House Bill number 63 (Finance), amended, has passed the state House of Representatives and the bill presently is pending before the Senate Commerce Committee for consideration during the 1976 Session convening January 12, 1976. The bill also is being studied by the Legislative Council's Interim Subcommittee on Transportation.

For some months considerable controversy has surrounded the deliberations on this legislation. The principal point in contention has been a proposal by the Commissioner of Public Works (the majority of whose divisions would be absorbed along with the existing Department of Highways into a state DOT) that all construction of transportation systems be retained in the Department of Public Works, but that planning, design, operation and maintenance of the systems would be assigned to the Department of Transportation. (The bill as passed by the House, a copy of which is enclosed, does not expressly reflect the Commissioner of Public Works' philosophy, but it is responsibly believed that the separation of construction from the state DOT will be proposed either as an amendment to, or as a substitute for, CSHB 63 (Finance), amended.)

The attached correspondence from Mr. Gene A. Hanna, Division Engineer, Alaska Division, Federal Highway Administration, indicates that separation of highway construction from the department responsible for highway planning, design, operation and maintenance would not comply with existing federal highway legislation and thus would disqualify the State of Alaska for substantial federal highway construction funds.

ANCHORAGE, ALASKA 99503

October 16, 1975

Senator J.M. Kerttula, Chairman
Legislative Council Sub-Committee
on Transportation
310 "K" Street Suite 701
Anchorage, Alaska 99501

Dear Senator Kerttula,

The Highway Users Federation of Alaska has made a thorough study of the proposals now before the legislature for the creation of a State Department of Transportation. Both our Board and our entire membership were polled on this issue and the response was 80% in opposition to a State Department of Transportation.

It will not be possible for a representative of our organization to appear before your committee on Octobe 20th, but we would like our position to be known on this issue and so noted in your proceedings.

Our position can perhaps best be stated by the enclosed fact sheet and news release based on the response of our members.

We do appreciate the opportunity to state our position on this matter and assure you that we share the concern of you and your committee in finding ways to improve all aspects of Alaska transportation for the greater good of the state.

Sincerely,

Vern Smith

Highways ⇨10(11).
C.J.S. Highways § 102 et seq.

1. Purpose

Purpose of this section providing that any highway department which submits plans for a federal-aid highway project shall certify to Secretary that it has held public hearings or has afforded opportunity for such hearings and has considered economic effects of such a location was to insure wise and fair use of federal funds, and under Pennsylvania law, 36 P.S. § 2301 ff. and policy, almost federal aid, such hearings are not required to be held. Hoffman v. Stevens, D.C.Pa.1959, 177 F.Supp. 898.

2. Nature and form of hearing

This section relating to public hearings by State Highway Department planning a federal aid highway project which bypasses or goes through city does not contemplate that Department shall conduct quasi judicial hearing but merely that Department will hold public hearing to inform residents of area of location under consideration so that such residents can express their views, including their views as to economic effects of such locations. Lisnecke v. Department of Highways, 1960, 348 P.2d 235, 76 Nev. 24.

3. Opportunity to be heard

Where a highway is to be built under this chapter, statutes and regulations, when read together require state officers to afford an opportunity for but not necessarily to hold public hearings to give consideration to the economic effects of the proposed road location, file with the Commissioner of Public Roads a transcript of the hearings and a certify to the Commissioner that such opportunity to be heard has been afforded and such economic effects considered. Binghamton Citizens Penn-Can-Route 17 Highway Committee v. Federick, 1958, 180 N.Y.S.2d 913, 7 A.D.2d 170.

The spirit of this section and regulations of New York statutory acceptance and implementation with respect to location of a federal aid highway is that a fair opportunity should be given to the citizens to express their views on the proposed road location. Id.

4. Failure to grant hearing

Under this section providing that when any State Highway Department submits plans for a federal aid highway project it shall certify to the Secretary that it has held public hearings or has afforded opportunity for such hearings and has considered economic effects of such a location, the affording of a hearing is a preliminary step, but failure to grant hearing may be raised subsequently in a state court proceeding. Hoffman v. Stevens, D.C.Pa.1959, 177 F.Supp. 898.

5. Sufficiency of notices

Where notices were published in newspapers that State Highway Department would hold public hearing regarding proposed federal aid highway through city and there was nationwide local newspaper, radio and television coverage preceding the hearing and a week prior thereto detailed descriptions of proposed routes were distributed to utility users in the area and economic effects of such routes were discussed at hearing, there was sufficient compliance with requirement of this section that Department shall hold public hearing and consider the economic effects of location of such highway, notwithstanding that notice did not state that economic effects would be considered at hearing. Lisnecke v. Department of Highways, 1960, 348 P.2d 235, 76 Nev. 24.

6. Persons conducting hearing

That public hearings conducted under this section with respect to a freeway through a municipality were presided over by private citizen other than by an officer of the department did not violate the constitutional rights of objecting property owners. Piekarski v. Smith, 1953, 107 A.2d 176, 37 Del.Ch. 501, affirmed 113 A.2d 567, 38 Del.Ch. 402.

7. Questions of fact

Affidavits of citizens seeking injunction against State Highway Commission and others in connection with designating, laying out, opening and constructing an interstate highway through city were insufficient to raise fact issues as to holding of public hearing on locating and planning highway, laying out and constructing it, presenting schematic design, making of economic survey, and complying with federal and state laws. Futch v. Greer, Tex.Civ.App. 1962, 353 S.W.2d 896, ref. n. r. e., certiorari denied 83 S.Ct. 729, 372 U.S. 913, 9 L.Ed.2d 721.

8. Judicial action

In proceeding for an order annulling public hearings concerning the location of a federal aid highway by officers of the State Department of Public Works, pleading legal generalizations such as that the hearings were conducted in a manner contrary to law and in disregard of the rights of the petitioners, presented no ground for judicial action where nowhere in the pleading was there any demonstrative factual allegation in context. Binghamton Citizens Penn-Can-Route 17 Highway Committee v. Federick, 1958, 180 N.Y.S.2d 913, 7 A.D.2d 170.

9. Location, construction, and maintenance, state power

Federal regulations with respect to interstate highway must be complied with in order for state to receive federal funds, but such requirements do not limit or affect authority of State Highway Commission to select location, construct and maintain highways in the state. Futch v. Greer, Tex.Civ.App.1962, 353 S.W.2d 896, ref. n. r. e., certiorari denied 83 S.Ct. 729, 372 U.S. 913, 9 L.Ed.2d 721.

§ 129. Toll roads, bridges, tunnels, and ferries

(a) Notwithstanding the provisions of section 301 of this title, the Secretary may permit Federal participation, on the same basis and in the same manner as in the construction of free highways under this chapter, in the construction of any toll bridge, toll tunnel, or approach thereto, upon compliance with the conditions contained in this section. Such bridge, tunnel, or approach thereto, must be publicly owned and operated. Federal funds may participate in the approaches to a toll bridge or toll tunnel whether such bridge or tunnel is to be or has been constructed, or acquired, by the State or other public authority. The State highway department or departments must be a party or parties to an agreement with the Secretary whereby it or they undertake performance of the following obligations:

(1) all tolls received from the operation of the bridge or tunnel, less the actual cost of such operation and maintenance, shall be applied to the repayment to the State or other public authority of all of the costs of construction or acquisition of such bridge or tunnel, except that part which was contributed by the United States;

(2) no tolls shall be charged for the use of such bridge or tunnel after the State or other public authority shall have been so repaid; and

(3) after the date of final repayment, the bridge or tunnel shall be maintained and operated as a free bridge or free tunnel.

(b) Upon a finding by the Secretary that such action will promote the development of an integrated Interstate System, the Secretary is authorized to approve as part of the Interstate System any toll road, bridge or tunnel, now or hereafter constructed which meets the standards adopted for the improvement of projects located on the Interstate System, when such toll road, bridge or tunnel is located on a route heretofore or hereafter designated as a part of the Interstate System. No Federal-aid highway funds shall be expended for the construction, reconstruction or improvement of any such toll road, except to the extent permitted by law after June 29, 1956. No Federal-aid highway funds shall be expended for the construction, reconstruction or improvement of any such toll bridge or tunnel, except to the extent permitted by law on or after June 29, 1956.

(c) Funds authorized for expenditure on any of the Federal-aid systems, including the Interstate System, shall be available for expenditure on projects approaching any toll road, bridge or tunnel at any point where such project will have some use irrespective of its use for such toll road, bridge or tunnel.

(d) Funds authorized for the Interstate System shall be available for expenditure on Interstate System projects approaching any toll road on the Interstate System, although the project may be no more than an approach to such toll road, if an agreement satisfactory to the Secretary has been reached with the State prior to the approval of such project —

(1) that the section of toll road will become free to the public upon the collection of tolls sufficient to liquidate the cost of the toll road or any bonds outstanding at the time constituting a valid lien against such section of toll road covered in the agreement and their maintenance and operation and debt service during the period of toll collections, and

(2) that there is one or more reasonably satisfactory alternate free routes available to traffic by which the toll section of the system may be bypassed.

(e) Notwithstanding the provisions of section 301 of this title, the Secretary may permit Federal participation under this title in the construction of a project constituting an approach to a ferry, whether toll or free, the route of which has been approved under section 103(b) or (c) of this title as a part of one of the Federal-aid systems and has not been designated as a route on the Interstate System.

Such ferry may be either publicly or privately owned and operated, but the operating authority and the amount of fares charged for passage shall be under the control of a State agency or official, and all revenues derived from publicly owned or operated ferries shall be applied to payment of the cost of construction or acquisition thereof, including debt service, and to actual and necessary costs of operation, maintenance, repair, and replacement. Pub.L. 85-767, Aug. 27, 1958, 72 Stat. 902; Pub.L. 86-657, §§ 5, 8(a), July 14, 1960, 74 Stat. 523, 524.

Historical Note

Time to amortize cost 1

Library references
Bridges ⇐111.
Ferries ⇐3.
Turnpikes and Toll Roads ⇐4.
C.J.S. Bridges § 15.
C.J.S. Ferries § 5.
C.J.S. Turnpikes and Toll Roads § 9.

1. Time to amortize cost

Express Commission's contract to issue toll bridge revenue refunding bonds was not violative of act of Congress authorizing commission to operate interstate toll bridges provided that tolls were so adjusted as to amortize cost of bridges within 20 years, notwithstanding that issue of refunding bonds extended period 20 years, since act did not purport to limit time which bonds should run. State Highway Commission of Kansas v. King, Ky.1935, 82 S.W.2d 443, 267 Ky. 124.

Act of Congress, authorizing highway commission to operate interstate toll bridges provided that tolls were so adjusted as to amortize cost of bridge as soon as possible within 20 years, made it duty of commission to so operate bridges as to free them from tolls at earliest possible date, but did not hamper commission in financing their costs, and would not prohibit collection of tolls after 10 year period if revenue had not been sufficient to pay bonds issued in financing costs of bridge. Id.

3. Ferries

The establishment of ferries across streams and on navigable waters, for normal transportation purposes as distinguished from sightseeing, amusement and the like, is not a matter of purely private right and function, but is a public function permitted only by the consent, express or implied, of sovereign authority. U. S. v. Washington Toll Bridge Authority, D.C.Wash.1960, 190 F.Supp. 95, reversed on other grounds 307 F.2d 339, certiorari denied 83 S.Ct. 324, 372 U.S. 911, 9 L.Ed.2d 719.

Where a ferry serves as an essential link in a highway, it is as much an integral part of the highway system as a bridge. Id.

§ 130. Railway-highway crossings

(a) Except as provided in subsection (d) of section 120 of this title and subsection (b) of this section, the entire cost of construction of projects for the elimination of hazards of railway-highway cross-

THE PRECEDING DOCUMENT(S) MAY NOT FILM LEGIBLY BECAUSE OF POOR QUALITY OF THE ORIGINAL.

ALASKA MARINE HIGHWAY AUTHORITY

HB 651

At the present time, the Alaska Marine Highway is included in the Federal Highway System and is eligible for participation in primary and secondary federal-aid highway funding.

Generally, the south-eastern routes are on the primary system, and the south-central routes are on the secondary system.

It is very important to note that only construction expenditures may qualify for inclusion in the federal-aid program. It is also important to note that there are no funds designated for the sole purpose of expanding the Marine Highway System. The funds spent on the Marine System come directly from the yearly appropriation.

The State of Alaska receives funds for new construction on the primary, secondary, and urban systems. The state receives the funds on the basis of a formula that includes system mileage, postal routes, area of federal lands, and other minor factors. Funding comes in several categories such as primary, secondary, urban, safety, railroad crossings, junk yard control, planning, beautification, etc.

The federal funding varies from year to year as appropriated in the federal budget. In recent years, the funds made available to the state have exceeded $120 million yearly. By special legislation, Alaska receives the primary and secondary funds and may redesignate

according to the long-range plan. Thus, the Marine Highway System may utilize the federal highway funding without regard to any federal allocation limits.

The same stipulations apply to the Marine Highway System - funds are for construction only. Maintenance and operations costs do not qualify. On the average, approximately 95% of the project cost is federal-aid, and the remaining 5% is provided by the state. In addition, the state may be responsible for costs that the feds do not allow.

The Marine Highway System originated when it became obvious that the panhandle cities may never be connected by roads. The fleet was acquired at a typical cost of several million dollars per ship. The smaller cities were serviced with boats such as the Chilkat, designed to carry a few passengers, vehicles, and vans on short trips. Most of the fleet is designed for the inland passage, with only the Tustamena rated for crossing the Gulf of Alaska and other open waters.

It is possible that the creation of the Marine Highway Authority will cause problems in utilization of the federal-aid highway trust fund monies. The question is, does this matter?

Consider that the State of Alaska has thousands of miles of substandard roads on its limited system. Reviews by a national users group revealed that the state was losing ground with the highway system deteriorating faster than it was being rebuilt.

A recent project was awarded on a section of the Seward Highway south of Anchorage. The ten-mile long project will

cost almost thirty million dollars. Each region has several major projects scheduled and the overall program could easily use twice the federal funds ($120 million plus) available each year. The Marine Highway System has similar needs. The recent repowering and rehabilitation of the Taku cost over $15 million. The replacement of the aging Tustamena is estimated to cost $55 million. The entire highway allocation to the central region, including Anchorage, Kenai Peninsula, Matanuska-Susitna, Kodiak Island, the Aleutians, and south-west Alaska totals less than $50 million yearly.

The need for replacement and expansion of the Marine Highway System is documented by the studies conducted by the Department of Transportation and Public Facilities. The creation of the Authority and the ability of that Authority to finance improvements should stabilize the long-range program for the ferry system. Since no portion of the federal highway funds are reserved for the Marine Highway System, there will be no effect other than a possible minor reduction due to a system mileage reduction. This reduction could be zeroed out by adding resource development routes to the system.

Anchorage Times

Heavy seas

IN ALL the operations of the state government, there must be nothing more difficult than running the Alaska marine highway system. Things have not been going well with the ferry service. As a matter of fact, the situation hasn't been good for a long time.

Granted, it's proper to expect high performance from all those who draw state pay for providing public services. True, it's disappointing when things don't seem to function properly. Admittedly, it's all too easy to be critical when that happens.

A new legislative report makes the marine highway operation a matter of timely concern. A $16.5 million refurbishing job on the ferry Taku, it was reported, has left the vessel listing, with serious mechanical and structural deficiencies.

Who's to blame?

ACCORDING TO Sen. Bill Ray, the Juneau Democrat who heads the Senate Transportation Committee, the fault lies with the Alaska Department of Transportation and Public Facilities, the agency that directs the ferry system.

Department officials deny the allegation. They say the legislative investigation, conducted by Sens. Ray and Ed Dankworth, the Anchorage Republican who is co-chairman of the Senate Finance Committee, was inadequate and deficient itself.

Indisputably, there is concern over the way the ferry system is being run. Complaints are common about the mishandling of passenger bookings. Hardly anyone can be certain that schedules will be met because frequent mechanical breakdowns result in cancellation of sailings. Indifference seems to be the by-word for customer relations. There has been a running battle over the propriety of having Alaska ferries manned mainly by crewmen who live in Seattle. The ships seem to spend more time tied up in Seattle for repairs and servicing than they do in plying their routes. Things are so bad financially that Gov. Jay Hammond has canceled service to and from Seattle for three months early next year.

Rather than emphasizing the negative, however, Alaska's goal should be to find a positive approach to correct the problems and make the system sail smoothly. Surely there must be a way — or is the situation so hopeless than the only alternative would be to abandon the whole operation?

NOBODY WANTS THAT to happen. The ferries were conceived primarily to provide surface transportation between the island cities of Alaska's scenic Southeastern panhandle, where it is impossible to build highways in the traditional sense.

The task of operating the system is one of the many responsibilities of the Department of Transportation. Maybe that's one of the problems. It could be that the duties and responsibilities of the department and its people are so wide-ranging that, bureaucratically speaking, effective management is impossible.

The first step may be to provide the department with effective assistance to examine its structure and procedures — not in an atmosphere of accusation and condemnation but with a positive approach aimed at corrections that will make the ferry system work.

Clearly, something must be done.

A real puzzler

THE OPERATION of Alaska's ferry system has always been something of a mystery to those who live in this part of the state. It appears that it likewise is pretty much a mystery to those who live in Southeastern Alaska, where the ferries are an important slice of the social and economic life.

Who could make much sense out of spending millions of dollars to build and staff vessels, only to assign the three largest ships in the fleet to be tied up and left idle at the Port of Seattle for one quarter of the year?

THAT'S THE WORD this week from the state's Marine Highway office, which announced that budget cuts imposed by the 1981 legislature will force cancellation of all service between Seattle and Alaska next March, April and May. During that period, the largest ships will be tied up at dockside and smaller ferries will make runs between Prince Rupert, B.C., and Southeastern Alaska ports.

Service will be continued to and from Seattle through the winter months of December, January and February — a time when it would seem that traffic would be light. But the other side of that coin is that winter driving conditions are such that ferry business might be lost because people would be reluctant to undertake the 900-mile drive from Seattle to Prince Rupert.

GOV. JAY HAMMOND has said on previous occasions that the best way to save money on ferry operations is to keep the vessels tied up and out of operation. This latest move indicates that the experts managing the system agree.

But it's a funny way to way to run a ferry system — or so it seems from a distance, at any rate.

If the demand isn't great enough to support the system, or if the rates can't be set high enough to bring in reasonable revenues measured against operating expenses, this move is nothing more than a stopgap remedy.

The situation calls for a long-term solution. That doesn't appear to be forthcoming from Juneau.

As it is, docking the ferries is good business for the Port of Seattle. But how it helps Alaska is — as we said at the beginning — a real mystery.

Q: Dec 10/15/81

JUNEAU EMPIRE, MONDAY, MARCH 9, 1981 3

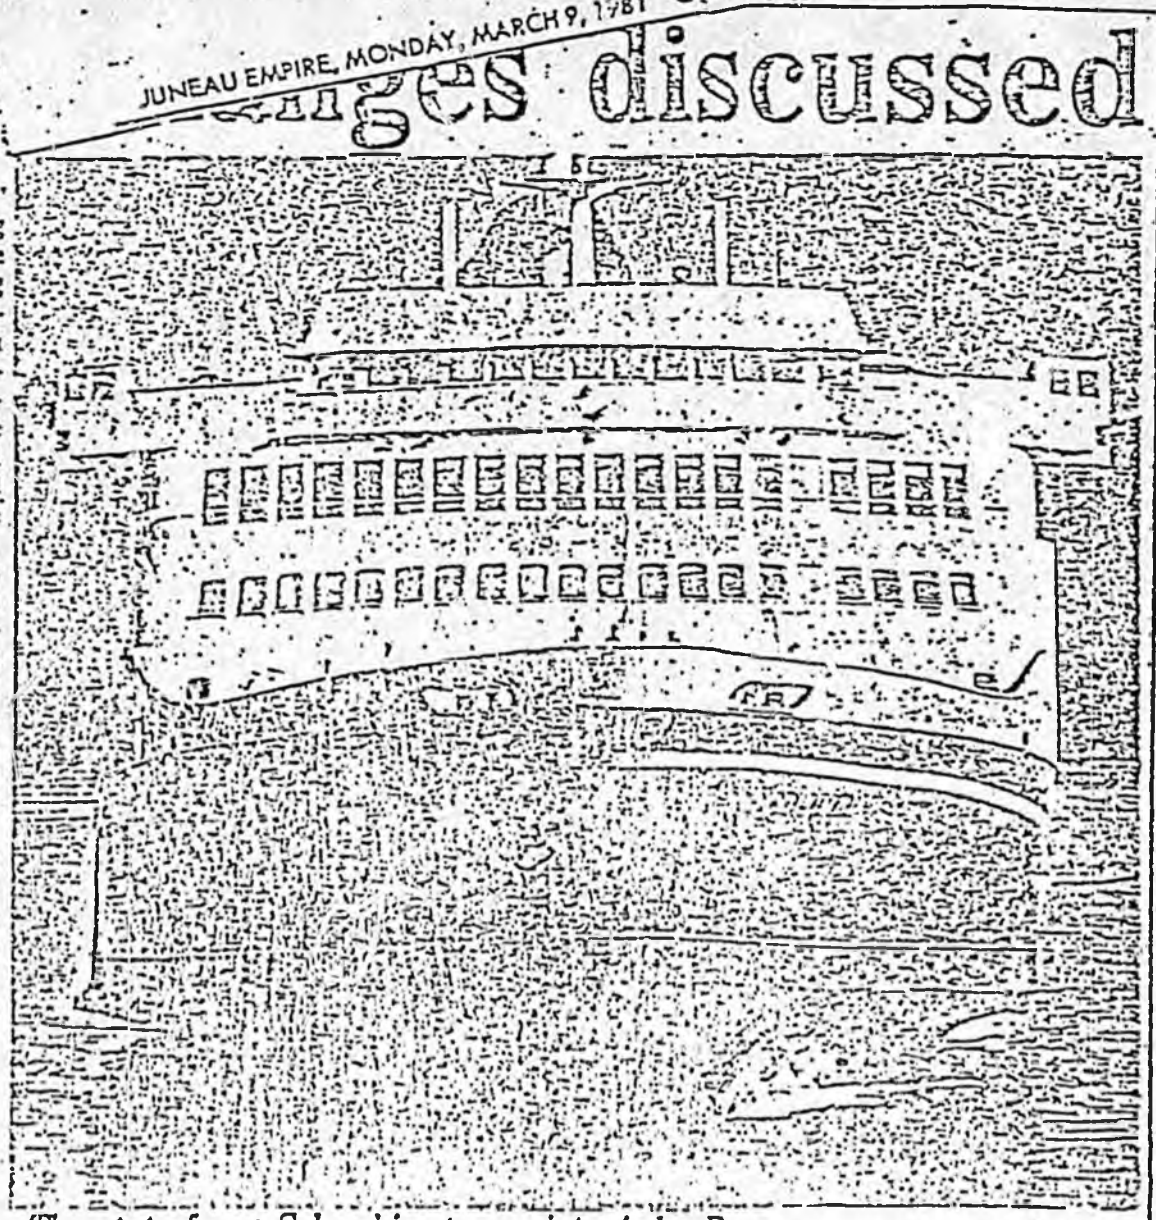
Ferry ...ges discussed

By LORI EVANS
Empire Staff Reporter

Everything from selling the ferry fleet to a private corporation to establishing wages that reflect the cost-of-living between Alaska and Seattle are being considered as alternatives to induce ferry workers to move to Alaska, according to a list released by Juneau Sen. Bill Ray, chairman of the Senate Transportation Committee.

Ray and three members of his committee, along with House Transportation Committee Chairwoman Bette Cato, D-Valdez, presented the list of 15 alternatives to ferry workers — about 34 percent which live outside Alaska — during meetings this weekend in Seattle.

In addition to selling the fleet and favoring Alaskan ferry workers with higher wages, other alternatives in the list include:



•Paying a cost-of-living allowance to Alaska residents;

•Discontinuing Seattle service and establishing Prince Rupert, British Columbia, as the southern terminus;

•Placing a Malaspina or Columbia class vessel on the Seattle run for twice weekly service between Seattle and Ketchikan with all other vessels on intra-state routes only;

•Minimizing lay-up time in Seattle by using Ketchikan and Juneau as lie-up terminals. Seattle would only be used for dry dock for a maximum of two weeks per year;

•Giving preference to Alaskans in hiring;

The state ferry Columbia steams into Auke Bay

•Reclassifying ferry workers to eliminate the right to strike;

•Mandating a state stance on hiring practices, eliminating Seattle-based union hiring halls;

•Replacing mainline vessels with a fleet of hydrofoils with smaller crews. (five to seven compared to 25 to 50) and completely automated engine rooms with independent wheel house control;

•Contracting with a private management firm to operate and manage the ferry system;

•Placing ferry workers in a partially exempt or exempt service;

•Encouraging ferry workers to decertify Seattle based unions in favor of Alaska-based organizations.

Ray said the purpose of the weekend meetings was to present union officials with ideas being considered to entice ferry workers to live in the state.

While Ray said the meeting, which lasted about four hours, was "positive," he added it is too early to say what — if anything — came of it.

Of the approximate 645 people employed on the ferries about 220 live outside of Alaska.

A new ferry story

THE STATE FERRY system is apparently going to be asking for big money from the legislature next year. The director says the ferry Tustumena, which was built for $2.82 million in the 1960s, should be retired because operating costs are too high. He plans to replace it with a new ferry that would cost $48 million.

That will be a financial jolt for the legislators who apparently will be facing new financial crunches. Forecasts are being made that state revenues will fall short of expectations because of the intricacies of the world oil markets and resultant effects on state oil revenues. Gov. Jay Hammond has said he will apply the proposed spending limit on budget operations.

And that could mean that money for the new ferry will become an issue to be put up to the voters in a referendum

THE FERRY SYSTEM has always been subsidized by the general fund of the state. The Alaska Marine Highway System has been designated by the federal government as eligible for highway funds, so much of its support comes out of Alaska's share of the national road program money.

The idea of building a new ferry might be seen as an oblique approach to adding another vessel to the fleet. This is implied in the comment of the director that he has not determined whether or not the Tustumena would remain in service after it is replaced.

That brings up the question of why a replacement is needed if the old ship can still be operated after the new one is on line.

The Tustumena carries 325 passengers in inland waters, 220 in open waters and 54 standard-sized autos. Its length is 296 feet and its speed 14 knots. The so-called replacement would accommodate 450 passengers, 80 vehicles, length, 350 feet, speed 16 knots. It would also introduce berths for 150 passengers — something that has not been enjoyed on the runs from Homer to Kodiak and Prince William Sound ports in the past.

THE FERRY SYSTEM has been controversial throughout its history. Residents of Southeastern Alaska communities love the ferry boats and respond violently to any criticism of them or their operating costs. But the system has less support in other parts of Alaska.

The proposal to spend $50 million on a new boat will inevitably stir up a big fuss in the next session. Enthusiasm among Southeastern legislators for spending this big bundle of money will be quite a contrast to the same legislators' claim that the state cannot afford to move its capital to Willow, which when originally proposed was only a $110-million project.

Anch. T 11/25/81

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

DEPUTY COMMISSIONER – ADMINISTRATION

(907) 465-3900

POUCH Z
JUNEAU, ALASKA 99811

February 22, 1982

Honorable Bette M. Cato, Chairman
House Transportation Committee
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Representative Cato:

Your assistant requested that we answer the question "would an authority as proposed in House Bill 651, be eligible to receive federal highway construction funds as a pass through from the designated State agency"? The simple answer is "we assume that they would be eligible to receive pass through funding." The authority would need to have an organization and financial system which met all of the requirements of the federal program.

Since there is not a category of federal funding set aside for marine construction, the use of funds for their purpose reduces the amounts available for other projects. We do not believe it would be in the State of Alaska's best interest to require the authority to meet all of the federal requirements. In the projected future, there should be a sufficient level of state funds available to provide State project funds if the legislature and the governor agree.

Sincerely,

Ron Lind

Ron B. Lind
Deputy Commissioner

Recently, news reports have referred to possible legislative action to restructure the Department of Transportation and Public Facilities, or to establish a separate operating agency for the Division of Marine Highways which operates the Alaska Ferry System.

Last summer, our family had the distinct displeasure of traveling from Seattle to Juneau aboard the ferry system vessel MV Matanuska. I was embarrassed for all Alaskans to hear the comments about the voyage by visitors from out of state, and I was tremendously disappointed in the functioning of a group of state employees who are the first Alaskans many of our visitors encounter. So disappointed, in fact, that I wrote the attached letter to the System Director, Jim Eide.

Mr. Eide responded to my letter, but in the ensuing months, I have misplaced that letter. His response was polite, but only apologetic, not giving any indication that serious effort would be taken to improve the situation which ruined our trip.

I hope that when the matter of restructuring the DOT/PF arises, you will take some of the information in my letter to Eide as a basis for considering the problem. The present DOT simply is too massive and unwieldy for any single person to control, and long-entrenched employees have made plain that they have no interest in improving their performance or the system's operation. If the ferry system is to continue as a viable substitute for highways in Southeast, some action must be taken to bring the organization back under control of properly constituted authority. At the moment, it appears that only union membership carries authority within the ferry system.

You may use my letters in whatever fashion you deem appropriate.

Sincerely

Sam Akin

Sam C. Akin

1740 Patterson Ct.
Anchorage, AK 99504
Sept. 11, 1981

Mr. James Eide
Director, Division of Marine
Highway Systems
Alaska Department of Transportation
and Public Facilities
Pouch R
Juneau, AK 99811

Dear Mr. Eide

This letter is one of complaint. I am writing it one month after beginning the ferry trip concerned, hoping that my comments will not be too colored by the intense disgust and anger aroused by the events of the trip.

On August 11, my wife, daughter, mother-in-law and I embarked from Seattle aboard the MV Matanuska, bound for Haines/Skagway, with a layover in Juneau. We had made reservations for the voyage during the preceding May, and had paid our fare the required 45 days in advance. At the time we made reservations we were unable to obtain stateroom reservations, and so made plans to have our names placed on the waiting list upon our arrival at the Ferry System office in Seattle. We did so, and subsequently obtained a room after departure from Seattle. That, and the pleasant treatment received from the Seattle office staff were about the only favorable aspects of the trip.

As we were traveling with a large camper, our tickets were written in such a manner that the Matanuska purser would not allow us to board except as a group in the camper. Inasmuch as foot passengers were boarded before passenger vehicles, we were among the last passengers to board the vessel. By the time we reached the passenger facilities aboard, the only remaining seats were located in the forward observation lounge. All deck seats and recliner seats were occupied by passengers, back packs, sleeping bags and other impedimenta. There was no effort by the purser staff to determine which seats were being used as seating and which were being used as convenient luggage storage. During the first several hours of the voyage, while stateroom vacancies were being checked, we occupied seats in the forward lounge. Throughout that time, over the public address system, the staff continually announced that all luggage would have to be removed from the lounge area, and placed in lockers. All lockers, unfortunately, were in use. Needless to say, we remained where we were, sitting with sleeping bags and toilet kits on our laps.

When we lodged a complaint with the purser about the boarding system used, he responded that "This is the way we've been doing it for twenty years, and we don't intend to change." That was the moment when I realized that the Ferry System was no longer under control of the State government, but under control of the crew.

I am convinced that passengers who are required to pay fares in advance should at least have equal opportunity for deck seating with those foot passengers who pay their fares on the date of sailing. As a matter of fact, I cannot see why the Ferry System cannot devise a means of assuring that those who pay in advance are allowed to board in advance. When a party is ticketed with a vehicle, only the driver needs to board with that vehicle. Why cannot your people adjust their system to allow others of the party to board with pre-ticketed foot passengers ?

all vehicles were lined up in an apparent effort to load them in reverse order of their destinations. In other words, vehicles going to Ketchikan were loaded after those destined for Wrangell. This makes sense, doesn't it ? But yet at Ketchikan, Wrangell and Petersburg, about a dozen vehicles were off-loaded, then re-loaded after cargo was discharged. The excuse given us, and th other inconvenienced passengers, was that "Safety rules" required this process. Then why go through the exercise of pretending to load cargo in reverse order of destination? To me, and to the other passengers who played "on and off the ferry" it seemed apparent that the first officer simply did not wish to be bothered with the extra effort required to load in sensible fashion.

There was sufficient time in Ketchikan for most passengers to do some sight-seeing. However, those of us who were waiting on the dock to reload our vehicles were told to remain with the vehicles, as we would be reloaded as soon as all cargo was removed. About a half hour after all passengers had returned to the vessel, our vehicles were reloaded. Again, it seems to me to be more inconsiderate handling of passengers. There was no reason for us to remain dockside with our vehicles. It simply was easier for the person responsible for cargo loading to do it that way.

Incidentally, the first officer, whose name I failed to get, very coldly informed me after a similar botchup in Wrangell, that I "should stop chipping teeth", and let him get on with his very important job. Frankly, the urge to chip a couple of his teeth was almost overpowering. To think that I've paid taxes for over 20 years to support a clod of this type!

On reboarding after the scheduled stop at Sitka, we were informed by an assistant purser that our ticket was improperly prepared, and that we might not be able to reboard. This was our fourth boarding of the vessel, and only now was our ticket unacceptable. The young lady was polite, and when she realized that I was at the extreme limit of my patience with the ferry crew, she allowed us to board, and subsequently corrected our ticket, blaming the problem on an error by inexperienced clerks at the Anchorage office. I don't care whose error it was, it should have been detected at our first boarding, not our fourth !

After stopping over in Juneau, we boarded the "Columbia" on Aug. 1 to continue our trip to Haines. Thankfully, we had no problem boarding, and met a young man who seemed to know what he was doing. Probably one of your lower-paid employees, he was responsible for lining vehicles up prior to loading. He knew his job, and was able to communicate very effectively and politely. Frankly, you might want to groom him as a purser or first officer. At least he wasn't alienating passengers!

Once aboard the "Columbia", however, we again found that seating was at a premium. Boarding had been at about 2:00 AM, and most seats and sheltered areas already had been claimed. However, in the recliner lounge area, we found that people were sleeping on the floor between the seat rows, having the effect of occupying three seats for one passenger.

The watchman didn't seem too concerned about that. Not nearly so concerned as he was about my wife sleeping on the floor in front of his time clock. When he needed to punch in on the clock, he simply prodded her with his foot and told he she'd have to move.

Our plans had been to go by ferry to Skagway from Haines, but after the experiences detailed in this now over-long letter, we elected discretion as the better move, and left the vessel in Haines to return to Anchorage.

The events I've detailed completely spoiled a trip we had contemplated for several years. Very honestly, I have no intention of ever boarding an Alaska ferry again, and I certainly will do my best to discourage others from doing so.

While I understand the basic need for the ferries as transport for residents of Southeast, and concur fully in the validity of the concept, I have found nowhere in your travel promotional materials a warning that such inconveniences should be expected, or that the system hires surly officers so as to discourage pleasure passengers.

We found most of the deck and dining crew to be pleasant, cooperative and interested in assuring that we enjoyed the voyage. The pursers (there were two plus assistants on the voyage to Juneau) and the first officer we encountered have left a bad taste we'll be a long time forgetting. Other passengers commented to us from time to time, also, about the apparent lack of interest in passenger care exhibited by these officers.

I have taken time to write this letter because I am deeply disturbed that the State of Alaska will tolerate attitudes of the kind we encountered among its employees, and particularly so in a group which represents much of the first impression visitors from outside will have of our State.

I am sending copies of this letter to my area legislators, and to the editors of the various newspapers in the Southeast ports touched by the ferries. Copies also are going to the various tourism promotional groups in the State.

In the future, I will recommend to friends and acquaintances planning a trip aboard the ferry system that they think twice before making reservations.

I believe that you and your administrative staff should take a careful look at the procedures used to ticket passengers, at the methods used to determine loading/offloading procedures, and that you should make a very careful examination of the public relations attitudes of ships' crews and officers, particularly those who are in daily contact with passengers.

Sincerely

Samuel C. Akin

Alaska State Legislature

House of Representatives

Committee on Transportation

Rep. Bette Cato, Chairman

RE : HB 651 Marine Highway Authority
(Advisory Board)

DATE February 17, 1982

Based on the committee discussions today and from the previous hearings on the HB 651, I have prepared this information for Legal Services to draft a committee substitute bill. Legal services work schedule is such that they will not be able to prepare a draft until next Thursday, February 25. I will put in this memo the issues that need to be addressed in the draft for the committee's consideration. I want to stress at this point, that I am not an attorney and therefore not qualified to write statutory language. However, this should serve for committee discussion and for Legal Services to prepare a bill.

The draft should follow the HB 665 from 1978. The intent language in Chapter 1 of this bill, is current and appropriate.

"It is the purpose of this chapter to provide users of the state ferry system and the taxpayers of the state with a ferry service operated and managed as a public service for their benefit under a fair and reasonable tariff schedule, and to ensure that the Marine Highway System will be rendered equitably, economically and efficiently to all users. It is also the purpose of this chapter to make certain that the state ferry system is properly developed and operated, in coordination with other transportation modes and services, to assure the traveling public complete and dependable marine transportation services, and that the state ferry system is operated in the public interest."

Alaska Marine Highway Advisory Board.
There is created within the Department of Transportation and Public Facilities the Alaska Marine Highway Advisory Board.

Membership and Vacancies
The board consists of five members appointed by the governor. Members should be chosen from communities served by the Marine Highway System. Two of the members should be from South East, one member from South Central, one member from Western, and one member from the public at large. Members serve at the pleasure of the governor for five year terms. They must be residents of the state and qualified voters at the time of their appointment and shall comply with the requirements of AS 39.50 (conflict of interest). The members first appointed shall have terms of one, two, three, four and five years respectively. Each member shall hold office for the term of his/her appointment and until his/her successor has been appointed and qualified. A member is qualified for reappointment. A vacancy in a membership occurring other than by expiration of term shall be filled in the same manner as the original appointment but only for the unexpired term. Each member, before entering upon his duties, shall take and subscribe to an oath to perform the duties of his office faithfully, impartially and justly to the best of his ability. A record of the oath shall be filed with the Office of the Governor.

Compensation
The members of the board serve without compensation, but are entitled to travel and per diem expenses as provided in AS 39.20.180.

Officers, Meetings, Rules, and Quorum
The members shall elect one of their number as chairman.
The board shall prescribe its own rules of procedure. It shall meet at a time and place determined by the chairman, and at other times and places as the chairman, or a majority of the board members, consider necessary.
The powers of the board are vested in the members, and three members of the board constitute a quorum. Action may be taken and motions and resolutions adopted by the board at any meeting by the affirmative vote of at least three members. A vacancy in the membership of the board does not impair the right of a quorum to exercise all the powers and perform all the duties of the authority.

Director
The board shall appoint a director whose salary range shall be below a range 20 (or whatever range you'd want put in here).

Duties
The board shall make recommendations to the Department regarding the operation, including schedules and tariffs, management, and planning and construction of facilities, of the marine highway system. The department shall submit written comments on these recommendations. In addition to the comments, the department shall develop a plan of implementation of the recommendations. Should the department not plan to adopt a recommendation made by the board they shall provide options or

reasons why they would not plan to adopt the board's recommendation. The department, in the commissioner, shall respond within thirty days of receiving the board's recommendations. Before the convening of the Legislative session each year, the board shall submit to the governor and the legislature a comprehensive report describing the operations, recommendations made, and expenditures for the previous year.

The board shall hold public hearings to access the public's reactions to the operations of the marine highway system, including employee/customer relations, schedules. The board may make recommendations to include but not limited to the previously mentioned items regarding the operations, schedules, tariffs, management, planning and construction of facilities of the marine highway system. The board may also give recommendations as to labor relations and agreements with the appropriate marine unions.

Bill Analysis by Rep. Bette Cato's office

HB 651

"An Act relating to ferries and ferry terminals and establishing the Alaska Marine Highway Authority"

Sec. 1 Purpose : The purpose of this act is to establish an authority for the operation, management, and planning and construction of facilities for the marine highway system that is independent of state government. The authority shall be the exclusive state agency directly associated with the operation, management, planning and construction of facilities for the marine highway system.

Sec. 2 Adds a new chapter 70 to title 19; AS 19.70.010, ALASKA MARINE HIGHWAY AUTHORITY.
This section creates the Marine Highway Authority as a public corporation of the state. The corporation is an instrumentality of the state in the Department of Transportation and Public Facilities but has a legal existence independent of and separate from the state and continues until its existence is terminated by law.

Sec. 19.70.020. DIRECTORS Directors, consists of seven directors, the commissioner of DOT/PF, ex-officio, (non-voting), and six directors appointed by the governor with the following qualifications; a representative of commercial carriers, representative of the maritime industry, a representative of the tourism industry, and three members of the public representing regions, Region 1, southeast Alaska, Kodiak, Region 2, and Region 3, southcentral (Prince William Sound).

Most language in this section is boilerplate "board" language pertaining to qualifications, conflict of interest... Directors serve without compensation, but are entitled to travel and per diem expenses.

Sec. 19.70.030 OFFICERS AND QUORUM The directors elect a chairman from their number. The directors shall elect a secretary that need not be one of the directors. Four directors constitute a quorum. Majority motions or action may be taken.

Sec. 19.70.040 STAFF The authority may employ staff, may contract for services in exercising it's powers.

Sec. 19.70.050 POWERS OF THE AUTHORITY Sets out powers and obligations of the authority.

Sec. 19.70.060 authorizes the name for the system; "ALASKA MARINE HIGHWAY SYSTEM."

Sec. 19.70.070 COMPREHENSIVE LONG RANGE PLAN, mandates a comprehensive long range plan for the marine highway system that shall be updated at least every five years.

Sec. 19.70.080 ACQUISITION OF LAND AND EASEMENTS, sets out procedures that the authority utilizes to acquire property.

Sec. 19.70.090 AUTHORITY TO PURCHASE PROPERTY FOR THE PURPOSE OF EXCHANGE allows the authority to purchase property for exchange.

Sec. 19.70.100 VACATING OF LAND OR RIGHTS IN LAND, This section allows the authority to vacate land or use rights by filing a deed in the appropriate recording district. Upon vacating, title reverts to persons, heirs, successors, or assigns in whom it was vested at the time of the taking. The authority may transfer land tot he Department of Natural Resources for disposal, proceeds of which go to the General Fund.

Sec. 19.70.110. ANNUAL REPORT. By March 1 of each year, the authority shall submit to the governor and the legislature a comprehensive report describing the operations, income, and expenditures for the preceding calendar year.

Jan 15

Sec. 19.70.120 ANNUAL AUDIT Also by March 1, records shall be checked by a CPA. Allows a legislative auditor access to these records at any time.

Sec. 19.70.130 BUDGET AND APPROPRIATIONS The authority is funded by the legislature through the governor by the Executive Budget Act (AS 37.07) Money is directly appropriated and may be spent as authorized.

Sec. 19.70.140 PUBLIC RECORDS;OPEN MEETINGS. Subject the authority to open meetings and public records.

Sec. 19.70.150 NAMING OF VESSEL OR FACILITY sets guidelines for naming

Sec. 19.70.160 DEFINITIONS should be self explanatory.

Sec. 3 AS 19.60.010 and following sections of the bill are amended to read "authority" instead of "Department" giving the authority jurisdiction in law where the department had been specified.

No other substantive changes have been made in this bill

TESTIMONY ON CS HB 648, CS HB 649, CS HB 651, CS HB 652 and CS HB 654

My name is Walter B. Parker. I am a resident of Anchorage, Alaska residing at 3724 Campbell Airstrip Road. I have been active in Alaskan transportation operations and planning since 1946.

CS HB 651

I support the concept of the Marine Highway Authority and believe it could work well with a restructured DOT. I believe the Authority could have financing options available that would be more difficult to achieve as a regular state agency.

If the legislature elects to establish this Authority I would urge to allow for a reasonable break in period. It will not be possible for the Authority to impress itself overnight on the old operation and the real gains make take five years or longer to achieve.

In passing, it would seem that board members of the Authority should receive the same compensation as other major state boards.

III. ANALYSIS (See Fiscal Note Preparation Instruction, Section III)

This fiscal note shows the net expected cost to the State under the attached assumptions. Costs for FY 84 reflect the deletion of one time items and addition of inflation at 7%.

The assumptions used in this fiscal note do not have the authority utilizing its full powers for separation and therefore have reduced the costs. If additional authority is desired, the costs would increase.

Before accurate costs can be determined for this bill, a substantial amount of time should be devoted to determining the requirements for separation of duties from the State system as well as estimating the amount of autonomy the authority would desire.

III. ANALYSIS

There are administrative and organizational topics not specifically addressed in either House Bill No. 651, "An Act relating to ferry and ferry terminals and establishing the Alaska Marine Highway Authority", or House Bill No. 661, "An Act establishing the Alaska Marine Highway Authority". Since the proposed legislation is similar in each of these bills, we are making the following assumptions in preparation of fiscal notes for each bill.

1. There is no offsetting credit taken for the expenditure of earned revenue to support the cost of operation of "Alaska Marine Highway Authority". In actuality, the initial cost would be the same if funding came from a direct appropriation for the full cost of operations from the legislature with earned revenue returned to the General Fund, or if earned revenue was expended with an appropriation to support the shortfall.
2. It is assumed the "Alaska Marine Highway Authority's" Payroll, Personnel, and Accounting systems would feed into the existing State systems to insure checks and balances, and would eliminate the necessity of creating a duplicate system.
3. We have assumed that initial start-up costs will be fully funded by the Legislature.
4. It is assumed the "Authority's" funding would be at the Division level and allocated to operating components as set out in its budget.
5. We have assumed a General Fund Subsidy for the difference between the total operating cost and the expected revenue for each fiscal year. We have further assumed that the total amount authorized would be available at the beginning of each fiscal year to allow the "Authority" to plan operations for each year.

6. The same inflation factor would apply to the "Authority's" budget request as followed by State agencies. We have assumed it to be seven percent (7%) for the fiscal note.

7. Initially the "Authority" would continue direct involvement with the State in the following:

   A. Occupancy of a State owned office building.

   B. Continued support from the State mail system.

   C. Access to the State equipment fleet.

   D. Access to the Statewide purchasing contract (i.e., fuel).

   E. Continued use of "shared" communications lines through Department of Administration, Division of Communications.

   F. Continued insurance, bonding, etc., as now supplied through Department of Administration, Division of Risk Management.

   G. Legal service from the Attorney Generals' office.

8. We have assumed that Department of Transportation and Public Facilit transferred employees would bring their own equipment and that equipment for the proposed thirty (30) new hire employees would be $76.5.

9. We have assumed the "Authority" would require its own computer services for reservations, cost accounting, dispatching vessels crews, and payroll input; and that one time costs would be $545.0 for hardware and $250.0 for software.

10. Assuming expansion, the first year shows one time start-up funds fo Contractual $543.6; (Software $250.0; Legal Services $200.0; Additional Space Rental $93.6); and $50.0 Commodities (primarily office supplies).

Summary - 200 - 500 Accounts: Of $1623.0 shown for the first year, $1145.6 is a first time start-up cost. Yearly maintenance of all 200 through 500 Accounts would be around $475.0 per year.

CSHB 15

11. Of the $2086.5 increase in Personal Services, $1172.4 is assumed to be positions already within the Department of Transportation and Public Facilities performing similar services in Finance, Supply, Payroll, Design and Construction, and Personnel for the Division of Marine Highway Systems The actual increase then would be $914.1 for Personal Services to fund eight (8) upgraded positions and twenty-four (24) new positions.

MHS EXISTING	DOT TRANSFERS	NEW POSITIONS	TOTAL POSITIONS
PFT 36	PFT 32	PFT 24	PFT 92
PPT 4			PPT 4

This is a total of ninety-two (92) Permanent Full Time and four (4) Permanent Part Time Administrative positions, with a total of thirty-one (31) Supervisors (Range 18 and above) and sixty-five (65) support position to operate and supervise nine vessels (725 employees) and twenty-six Shore Facilities (twenty-eight (28) Permanent and twenty-three (23) Permanent Part Time employees). No increase has been made in Vessel or Shore Facili Personnel.

Approximately $225,000 of CIP funded positions are proposed to be general funded because they would be considered more operationa

STATE OF ALASKA

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

OFFICE OF THE COMMISSIONER

BILL SHEFFIELD, GOVERNOR

(907) 465-3900

POUCH Z
JUNEAU, ALASKA 99811
(TELEX 45-328)

The Honorable Bette Cato
Chairman
House Transportation Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Cato:

As requested by a member of your staff, we are providing the attached position paper on HB 68, "An Act relating to ferries and ferry terminals and establishing the Alaska Marine Highway Authority."

Sincerely,

Daniel A. Casey
Commissioner

Enclosure

A-T1LH

HB 68: An Act relating to ferries and ferry terminals and establishing the Alaska Marine Highway Authority.

The Department of Transportation and Public Facilities is opposed to the creation of an authority to operate the Alaska Marine Highway System. Given the lack of attention to the System over the past many years and user's concerns in this regard, it is understandable why the establishment of an authority may be considered. However, the concept of an authority to harness private sector self-sufficient, motivation for efficiency, with certain powers of the State that private industry does not have, such as the rights of eminent domain and access to government bond markets. In this instance, the system falls way short of being fiscally able to cover its own bonding, thus, the general fund obligations would be necessary, with no increase in debt capacity gained. In the case of the Marine Highway System revenues, only 50% of operating costs are covered, not to mention capital requirements. Such an Authority creates an additional administrative layer, insulated from the Executive Branch, is not responsive to the electorate's mandates as resulted by the Exectutive and yet draws a significant amount of its operating monies directly from the General Fund. In short, accountability is deminished.

The Marine Highway System is a marine highway and qualifies for substantial Federal highway funding. The administration of the construction projects associated with the Marine Highway System, to qualify for Federal funds, needs to follow strict design and financial audit guidelines. The amount of construction entailed in the Marine Highway System does not necessitate the full design and construction discipline capacity for a stand-alone department. The continued support from the Department of Transportation and Public Facilities in this regard insures that we execute these projects in a way that complies with the Federal Highway Administrative Guidelines without burdening the system with the requirement, otherwise, of establishing self-sufficiency for part-time requirements. Operations staff input into the design process needs improving and will be.

The performance problems associated with the Marine Highway System are well understood by the existing Governor and his Commissioner of the Department of Transportation and Public Facilities and the addressing of these problems are not necessarily solved through establishment of an authority. Both the public and the Legislature can have a significant influence on the attentiveness to the ferry system. Their recent concerns, as well as the personal commitments of the Governor and the incumbent Commissioner, will go farthest in insuring a rebalance of system service, strategy and resources.

Some organization changes envisioned within the Department of Transportation and Public Facilities will insure 1) greater visibility of the system, 2) more control of the system management over the configuration of its capital assets without necessarily having to execute the programs directly, and 3) a freer hand to initiate operating improvements. In the latter instance, we plan to modify the Marine Highway BRU format, so that businesslike trade offs between revenue and costs are highlighted and encouraged. This will provide simila financial visibility as well as authority.

ATTACHMENT FOR FISCAL NOTE - HB 70

Estimated Additional Design and Construction functions:

Central Region - Director's Office	457.3
Buildings & Harbors	555.1
Southeast Region - Right of Way	324.0
Technical Services	410.6
Highway and Aviation	746.8
Subtotal:	2,493.8
Southcentral Residency	(122.5)
Western Residency	(115.6)
Total	2,255.7
Estimated COLA 20%	451.1
Total	2,706.8

Estimated Additional Planning and Programming functions:

Interior Region - Transportation Planning	1,596.3
Facility Planning	345.6
Subtotal	1,941.9
Estimated COLA 10%	194.2
Total	2,136.1

Subtotal D & C and P & P:	4,842.9
X Two additional regions	x 2
	9,685.8
Less estimate of 11 Directors (5 M&O, 3 D&C, 3 P&P) and 4 Deputies which exist in current regions	(1,500.0)
Total	8,185.8
Plus estimate of 5 Directors (one for each region) and 1 Deputy	600.0
Total	8,785.8

T O T A L	$8,785.8

IV. ANALYSIS

The operating costs to duplicate the regional organizations for Design and Construction Unit and the Planning Programming Unit in two additional regions would approximate $8.8 million in general funds. This estimate does not attempt to cover any cost which would be required for space and other capital costs. Without further detailed study, we estimate that space costs could range from $500,000 to $3,000,000. Additional facilities will be needed in both new regions, and Nome has little to no space currently available.

The actual costs would vary greatly based upon the level of autonomy desired in the regions and refinement of possible reduction in the existing regions. Reductions for duplication of effort would be minimal compared to the total cost. The estimate provided here is based upon the assumption that only the Design and Construction (D&C) and Planning and Programming (P&P) Units would be expanded into the two additional regions. No specific estimates have been made for costs of increased administrative services required in the regions. Each region could operate with relative autonomy in the three major components, D&C, P&P, and Maintenance and Operations (M&O).

Beyond these assumptions, the estimated changes are conservative. Economies are identified in reductions on possibly duplicative management staff in all regions, and yet cost reductions are minimal compared to the total cost.

In order to estimate five full regions, we removed the functions in the Western Maintenance and Operations (M&O) Region and the Southcentral Region, which are Design and Construction (D&C) positions known as "Residencies". These positions formerly served limited reconnaissance and coordination functions in Nome and Valdez. This leaves three full regions, with all three components, and two with the M&O component only. Each component, however, currently has a director, and the proposal in HB 70 speaks of only five directors, one for each region. We therefore estimate conservatively that eleven directors (five for M&O, three for Planning and Programming (P&P), and three for D&C) and four deputy directors be removed from the cost estimate.

We then estimated the cost of adding a D&C and P&P component to both the Western and Southcentral Regions. These estimates were derived from the component in existing full regions we thought most realistically appropriate. The proxies were selected for D&C functions from either Central or Southeastern Region, whichever was lower. Interior Region's P&P functions were used as proxies for the P&P component.

With D&C and P&P components added in, we then had five full regions with all three components in each, but without management. Accordingly, we added back in the cost of five directors (one for each region as specified in the bill) and one deputy director.

The direct costs for capital projects were not included because it is assumed they would be transferred from the regional offices now handling those projects.

STATE OF ALASKA / BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES
Deputy Commissioner - Standards and Statewide Programs

Pouch Z
Juneau, Alaska 99811
(907)465-3900

March 30, 1983

The Honorable Bette Cato
Representative
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Cato:

In response to your recent questions regarding the Department of Transportation and Public Facilities (DOT&PF), the following information is provided:

1) The Department currently employs a total of 85 planners, Transportation Planners and Facility Planners as follows:

Central Region	34
Interior Region	19
Southeast Region	28
Headquarters	4

2) There is nothing formal in the State's personnel system which states the minimum qualifications for Deputy Commissioners. For your information, however, the Department's new appointments have the following experience in positions related to their current functions:

Fred Seeger, Deputy Commissioner for Standards and Statewide Programs-15 years
David Haugen, Deputy Commissioner for Central Region-16 years
H. "Glen" Glenzer, Deputy Commissioner for Interior Region-19 years
Jonathan W. Scribner, Acting Deputy Commissioner for Southeast Region-15 years

3) Enclosed please find a 24" X 36" Organization Chart of DOT&PF, which is identical to the one distributed to Department employees.

4) The Executive Budget, Book II is the most recent official version of the FY 84 Capital Budget which is available. A copy is enclosed.

5) Although I have not yet received a transcript or tape of the meeting on March 28th, I will attempt to summarize my comments. I cautioned the

committee to be very careful of any expansion which would be occasioned by the creation of additional regional offices in the DOT&PF. The costs, in particular, to be concerned about are administrative overhead costs, such as Administrative Officers and other personnel. The proposal to expand to five regions would increase these costs for both Planning and Programming and Design and Construction functions. Enclosed, please find a copy of the fiscal note prepared for CSHB 649 introduced last year. It will provide some idea of how costly such a decision might be--as much as $9.7 million for staff and as much as $500,000 to $3 million for space cost.

6) A list of the locations of DOT&PF Maintenance Stations follows. Some of these serve for both road and airport maintenance. There are additional maintenance stations - not listed here - which are entirely, or almost entirely for airport maintenance.

Maintenance Stations (Road Camps)

Bear Creek	Girdwood	Birch Lake
Cottonwood	Silver Tip	Eagle
Nome	Moose Pass	O'Brien Creek

III. ANALYSIS (See Fiscal Note Preparation Instruction, Section III)
The operating costs to duplicate the regional organizations for the Design and Construction Unit and the Planning and Programming Unit in two additional regions would approximate $9.7 million in general funds. This estimate does not attempt to cover any costs which would be required for space and other capital costs.

The actual costs would vary greatly based upon the level of autonomy desired in the regions and the refinement of possible reduction in the existing regions. Reductions for duplication of effort would be minimal compared to the total cost.

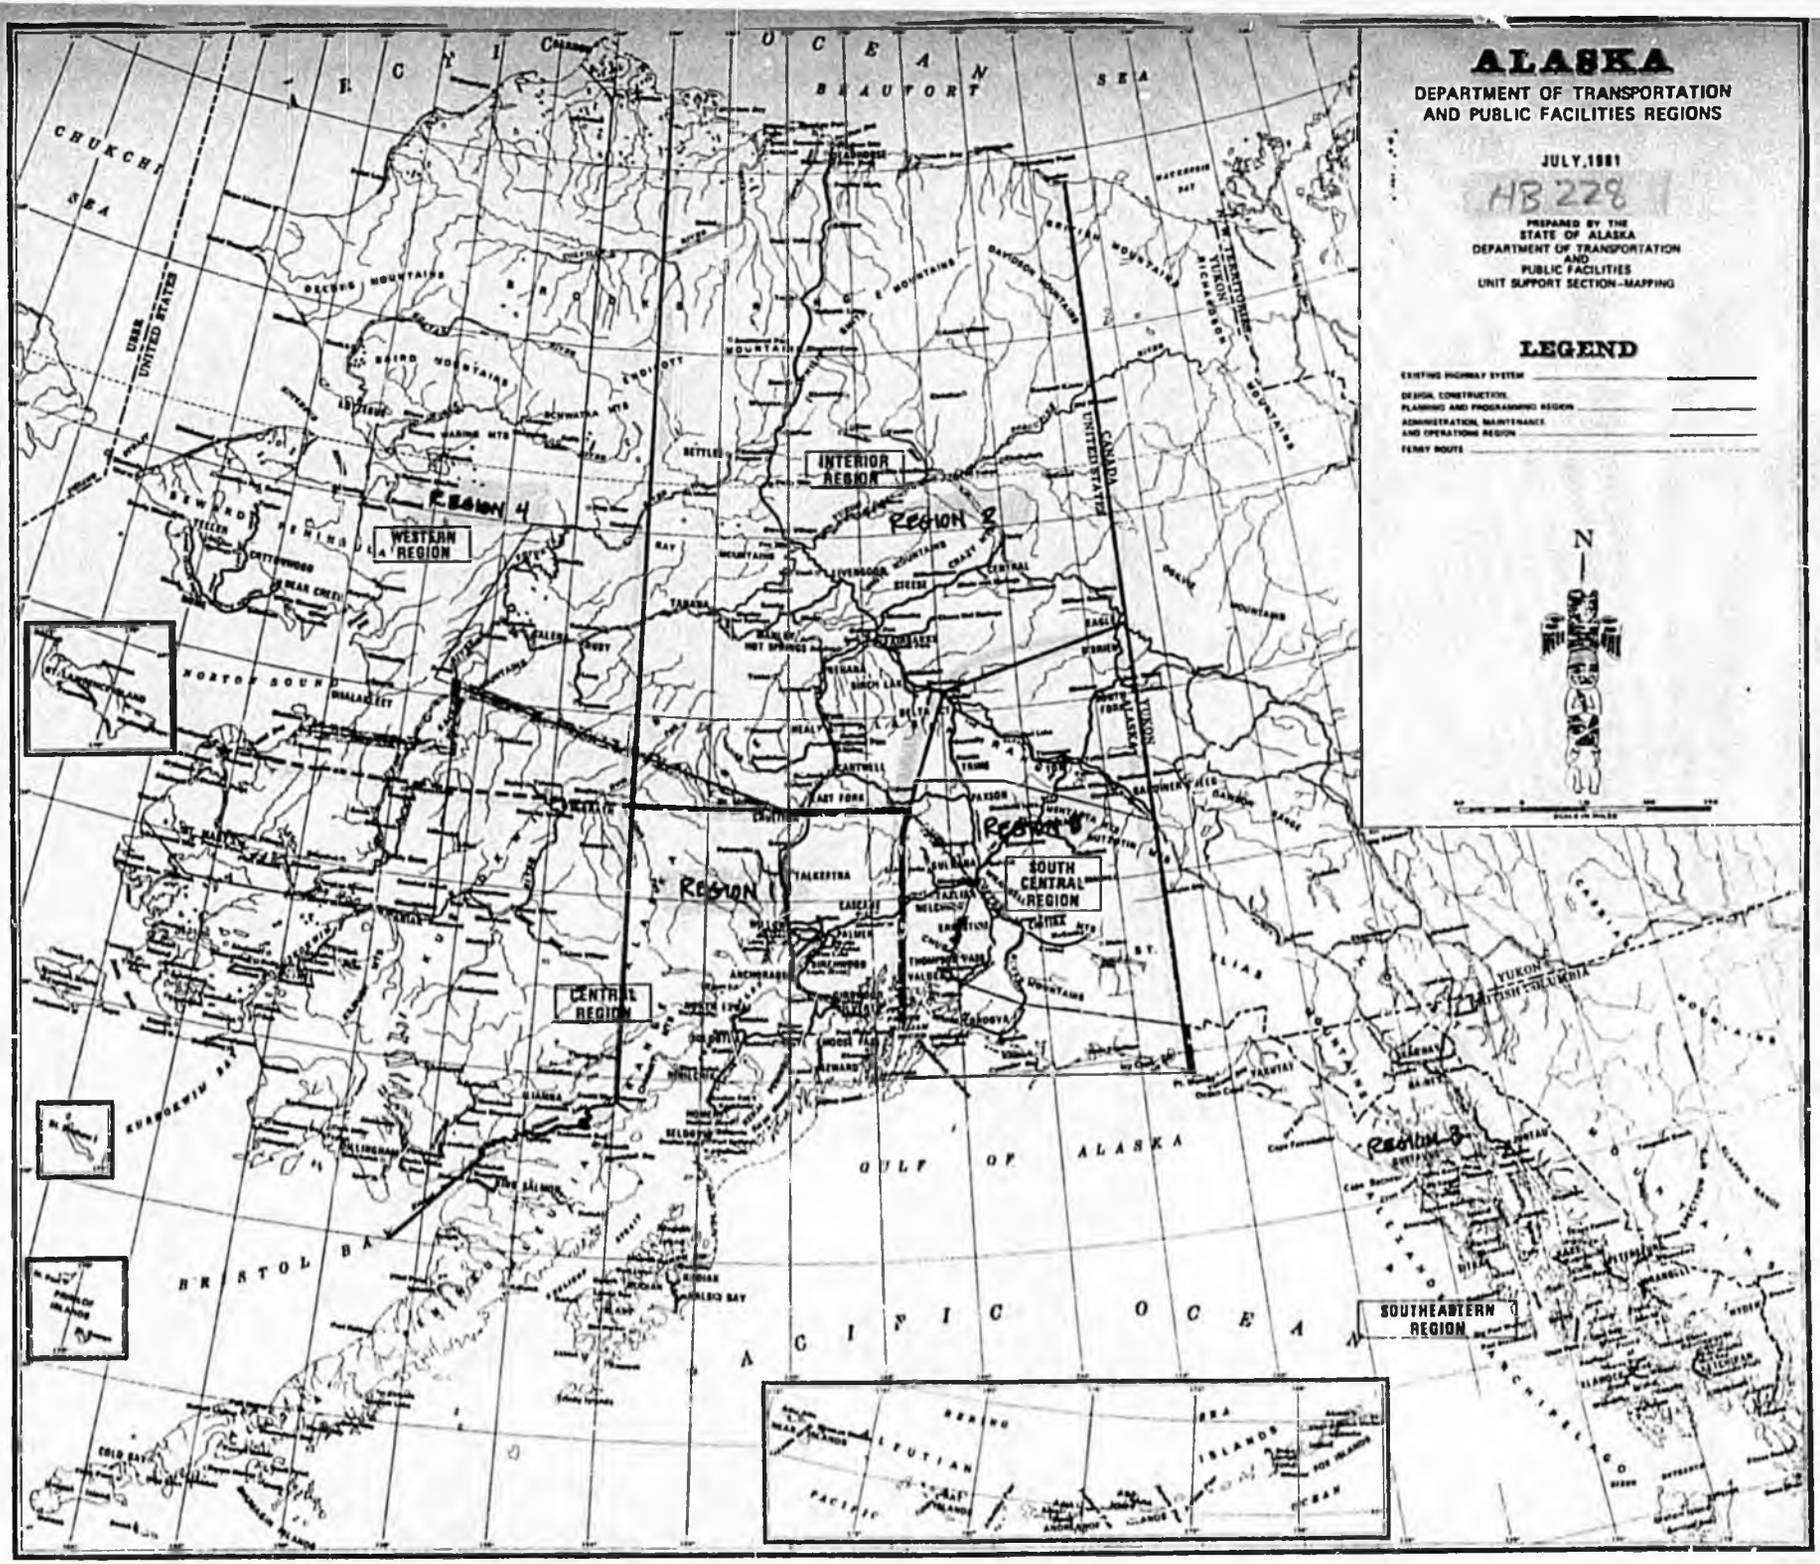
Reductions to the existing regions have been limited to those now used for the Nome and Valdez Residencies and the three existing director positions which would be deleted.

IV. DATE March 30, 1982 PREPARED BY Ronald Lind
AGENCY DOT/PF
PHONE 465-3900

Original: Legislative Finance
cc: Budget and Management
Prime Sponsor (First Legislator Named)

33-001 (Rev. 12/81)

The cost estimates are based upon the assumptions that only the Design and Construction and Planning and Programming Units would be expanded into the two additional regions. No specific estimates have been made for costs of increased administrative services required in the regions.



The costs were calculated as follows:

For the Design and Construction activities, the lower general fund amount in the Southeast or Central Division in the 1983 budget for each component was used. The general fund costs for the two residencies were then deleted. The estimate for the Planning and Programming activities is based upon costs for the Transportation and Facility components for the Interior Region. The direct costs for capital projects were not included because it is assumed that they would be transfers.

IN THE HOUSE

BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE BILL NO. 70 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to regions in the Department of Transportation and Public Facilities and prescribing the duties of regional transportation and public facilities directors."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 44.42.040 is amended to read:

Sec. 44.42.040. REGIONAL [DEPARTMENTAL] ORGANIZATION OF DEPARTMENT. (a) The commissioner shall establish five regions within the state in accordance with (b) of this section. The functions of the department within each region shall be performed, to the maximum extent feasible, through a regional office. Each regional office shall be directed by a regional transportation and public facilities director appointed by the commissioner. Each regional transportation and public facilities director shall have at least six years experience in transportation construction or engineering.

* Sec. 2. AS 44.42.040 is amended by adding a new subsection to read:

(b) The five regions are:

(1) Region one begins in Bristol Bay on latitude 58°00'N and travels east along that line to longitude line 158°00'W; then north along longitude line 158°00'W to the mouth of Kvichak Bay; then travels northeasterly along the southern bank of the Kvichak River to Iliamna Lake; then northeasterly along the southern shore of Iliamna Lake to longitude line 154°00'W, and travels north along longitude line 154°00'W to a point due west of the community of Cantwell; then

east to the community of Cantwell; then southwesterly to the junction of the Glenn Highway and the Fishhook-Willow Road (approximately one mile northeast of Palmer); then southeasterly to Prince William Sound at Fairmount Point 60°53'45"N, 147°27'W and inclusive of Kodiak, Afognak, Barren, Trinity, Chirikof, and Pribilof Islands.

(2) Region two begins at the Arctic Ocean on latitude 141° 00'W; then southerly along that line to a point due east of the community of Eagle; then southwest to the community of Cantwell; then west to longitude 154°00'W; thence north along longitude 154°00'W; to the Arctic Ocean.

(3) Region three begins in the Gulf of Alaska on longitude line 141°00'W; then north along longitude 141°00'W to Boundary Point 187; then southeasterly along the Canadian-United States border bounding Southeastern Alaska in its entirety.

(4) Region four begins in the Arctic Ocean at Smith Bay on longitude line 154°00'W; travels south along longitude 154°00'W to a point where longitude line 154°00'W crosses the southern shore of Iliamna Lake; then southwesterly along the southern shore of Iliamna Lake to the Kvichak River; then southwesterly along the southern bank of the Kvichak River to Kvichak Bay; then south along longitude line 158°00'W to latitude line 58°00'N, then west along that line into Bristol Bay, and inclusive of St. Matthew, St. Lawrence, and Nunivak Islands.

(5) Region five begins at the Gulf of Alaska on longitude line 141°00'W and travels northerly along that line to a point due east of the community of Eagle; then southwest to the community of Cantwell; then southwesterly to the junction of the Glenn Highway and the Fishhook-Willow Road (approximately one mile northeast of Palmer); then southeasterly to Prince William Sound at Fairmount Point

60°53'45"N, 147°27'W.

* Sec. 3. AS 44.42 is amended by adding a new section to read:

Sec. 44.42.045. DUTIES OF REGIONAL TRANSPORTATION AND PUBLIC FACILITIES DIRECTORS. (a) Each regional transportation and public facilities director is responsible for planning, design, and construction within the region consistent with the state transportation plan established under AS 44.42.050 and the state public facilities plan established under AS 44.42.055.

(b) Each regional transportation and public facilities director shall submit to the commissioner proposed program plans, agency budget requests, and reports of program performance at a time directed by the director of the division of budget and management, Office of the Governor. The commissioner may comment on the program and financial plans submitted by a regional transportation and public facilities director under AS 37.07 but shall forward the program and financial plans submitted by a regional transportation and public facilities director to the division of budget and management without change.

(c) Each regional transportation and public facilities director shall submit to the commissioner a plan implementing the state transportation plan and the state public facilities plan 90 days before the end of a fiscal year for implementation in the succeeding fiscal year. A revision of the plan implementing either the state transportation plan or the state public facilities plan may be submitted at any time. A regional implementation plan or a revision of a regional implementation plan is final unless disapproved by the commissioner within 30 days of its receipt by the commissioner.

TESTIMONY ON CS HB 648, CS HB 649, CS HB 651, CS HB 652 and CS HB 654

My name is Walter B. Parker. I am a resident of Anchorage, Alaska residing at 3724 Campbell Airstrip Road. I have been active in Alaskan transportation operations and planning since 1946.

CS HB 649

I strongly support the primary concepts contained in this bill. The original idea of a state DOT envisioned regional transportation directors who would be responsible for coordinating planning, programming, operations and maintenance in their regions and who would report directly to the Commissioner. The director for each region could be selected for a background that most suited the problems of that region.

Normally, it is bad practice to place administrative boundaries in the statutes as this bill does. However, it is not a major problem and if other regions were created it could be accomplished at the next legislative session.

I would hope that we would soon have another region for Kodiak, the Aleutians, the Alaska Peninsual and Bristol Bay. I believe that the unique transportation requirements of western Alaska can best be met by having two regions which are devoted soley to those problems and staffed to handle those problems.

I also believe that the AMATS and FMATS structures could be separated out from their regions and handled as independent entities with liaison and coordination staff from DOT. This would leave Central Region and Interior free to handle the state concerns and the intent of AMATS and FMATS for maximum municipal control would be further enhanced. In the same manner, there is no particular reason why the Anchorage and Fairbanks International Airports could not be independent entitites for administrative purposes. This would ensure that the regional director would focus most of his energies on regional concerns rather than on the major units for which he has responsibility. Obviously, planning would relate to all of the above both at the regional and statewide level but it would be planning for systems and not for day to day operations and maintenance.

Finally, the structure proposed in this bill would enable the Commissioner's office to become a lean planning, auditing and evaluating function. This would leave the Commissioner free for interaction with the regional directors, other state and federal agencies, the Governor and the legislature to maintain overall policy direction. The main point is that the relationship between regional directors and the Commissioner would be uninterrupted by other staff levels. Overall system direction for highways, aviation, marine, transit and other systems could be maintained through assignments in the Commissioner's office.

Steve Soenksen
Administrative Assistant
House Transportation Committee
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr. Soenken:

I want to thank you for the opportunity of reviewing the seven pieces of legislation recently introduced to the House of Representatives concerning reorganization of the Department of Transportation and Public Facilities.

I found the proposals interesting and it is heartening to know that there are concerns in Juneau for the efficient administration of the transportation segment of the state government.

I cannot agree with all proposed changes but they definitely are a starting point for discussion.

There are attached my comments on the bills submitted in numerical sequence.

Sincerely,

Woodrow Johansen

Attachments

House Bill 649

This bill establishes five Department of Transportation and Public Facilities Regions within the state and further places a director in charge of each region. I have no comment on the number of regions established. I do believe, however, that the boundaries of the regions should be studied. Consideration should be given to the transportation and communication facilities within the regions and between the regions. I heartily agree with the concept of placing one indiviudal in charge of a region, that individual to be completely responsible for the functioning of the department within that region. I also believe, however, that there must be an organization existing within the state exercising control over all the regions by establishing policy and procedures on a statewide basis. Without this statewide organization to establish uniformity in policy and procedure, the department would function as a group of independent entities.

ESTABLISHING FIVE REGIONS WITHIN THE
DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

HB 649

The Department of Transportation and Public Facilities (DOTPF) was created for several good reasons, one of which was to place the authority and responsibility for designing, constructing and maintaining public transportation facilities in the hands of those people closest to those facilities. The philosophy that prompted that decision was, "those people closest to the transportation problem are most intimate with the problem and left to their own devices, they are in the most knowledgeable position to selve that problem at the lowest possible cost to the taxpayer while providing the safest and most convenient transportation facility to the traveling public."

Unfortunately the DOTPF did not turn out as planned. The administration advocatd a strong emphasis on planning, which resulted in the creation of a completely independent section headed by a director who had more authority than the regional engineer. The planning section duplicated the work that the design section had been doing but they did it with many more people and in reality the planning and the construction estimates were still being done by the design section. The planning section's primary function was to send the paperwork into headquarters which would allocate federal or state money to the individual projects so that the design and construction section could begin the project development which would ultimately lead to construction.

The creation of the planning section added one more layer of paper shufflers to the growing bureaucracy and the end result was higher preliminary engineering costs due to the many new highly paid planners that charged their time to these projects, and most severe, was the fact that the projects were delayed because each Project Development Authorization PDA form had to be signed by five to seven different level planners before the project could be funded.

The old Department of Highways operated fairly efficiently because there was one person in charge who could resolve internal disputes. The DOTPF created a many headed monster that was only controlled by the commissioner. The general organization is shown below:

Your reorganization of the DOTPF, to be effective, should establish one leader in each region.

This one leader or director in each region would report directly to a chief engineer at headquarters.

The Chief Engineer would report to a board of commissioners appointed from each region and representing all of the required sciences as outlined in 12-1989 "Bradley". The preferred organizational chart is shown below:

Section 44.42.040 (a) spells out the requirement for six years of experience. This is good but you should add the word "civil" prior to "engineering". Civil engineering encompasses all phases of transportation engineering. It is very important that the Regional Director have a good academic education and practical experience in civil engineering so that he can effectively direct those working under him to accomplish the goals set by the Commission and/or Legislature.

The regional boundaries that you have set up are generally good. However, Region I (Anchorage) is primarily an urban region and the boundaries should be moved from Mile 118 on the Glenn Highway to Mile 66. This would put the Cascade Maintenance station in Region V and it would allow Region V, which is a rural region, to upgrade the road access between Valdez and Palmer. The section of the Glenn Highway from Palmer to the existing regional boundary at Mile 118 has not had a single mile of reconstruction since 1961 and there is nothing planned in this section within the next six year program.

The Longitude line used for the East Boundary of Region I should be 148° 42' W, South to Latitude 61° N., thence East along Latitude 61° to Prince William Sound, as shown on the attached map.

The new region that represents the greater Anchorage Bowl should not have jurisdiction over the Glenn Highway North of Palmer since they have exhibited no interest in upgrading that section of highway since Statehood. The Glenn Highway is the main thoroughfare for travelers driving into the State of Alaska and it is in deplorable condition from Palmer out to the existing regional boundary at Mile 118.

Section 44.42.045 (a) - The creation of the DOTPF was intended to streamline the department and make it more efficient and productive. The opposite has occurred because of one major blunder. Someone determined that one person should not be in charge of each region because he had too much power, or the job was too complicated, or because there were too many disciplines under his command. The solution to this problem was to create several equal directors in each region who would report directly to one of the four deputy commissioners in headquarters. The result is that the following sections:

1. Maintenance and Operations
2. Design and Construction
3. Planning
4. Administration

are controlled by a different deputy commissioner at headquarters and each section is protective of its authorities and is almost totally uncooperative with the other sections.

The solution to this problem is obvious to anyone working in any of the regions. They need one person in charge who can coordinate the work of the region and who can resolve disputes between the sections. Woody Johansen and his leadership in the Interior Region (Fairbanks) is a good example of how the regions should be run. The Interior Region is the only region that has developed a good land transportation system in the state. Mr. Johansen could not accomplish what he did under the current DOT segmented authority.

This section should be revised to place the authority of all sections in the region under the authority of one person.

HB 70, by Cato. Would organize the Department of Transportation & Public Facilities into five regions within the state (currently organized in regions--no number specified.) Sets out specific location of each region. Provides each regional director shall have six years experience in transportation construction or engineering. Outlines duties of the directors, stating each is responsible for planning, design, and construction within the region, as well as for submission of plans, budget requests, and reports of program performance to the Commissioner of DOTPF. Does not provide for an effective date (effective 90 days after Governor's signature)

Sec. 3 AS 44.42 Adds a new section for duties of the directors.

(a) Each director is responsible for planning, design, and construction within the region consistent with the state transportation plan and the public facilities plan.

(b) directors shall submit to the commissioner proposed program plans, program budget requests, and reports of program performance at a time directed by the director of the division of budget and management. The commissioner may comment on the plan but shall forward it to budget and management without change.

(c) The directors shall submit to the commissioner a plan for their region implementing the statewide plan 90 days prior to the end of the fiscal year, for the following year. A change in plan can be submitted at any time but the commissioner has 90 days to disapprove of the plan.

OFFICE OF ADMINISTRATION

Representative Bette Cato
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Re: House Bill No. 649
Valdez Backup Information

Dear Representative Cato:

Due to perceived inefficiencies within the Department of Transportation and Public Facilities (DOT/PF), the Commissioner decided, during the spring of 1981, to reorganize the DOT/PF design section into three regions. Historically, there have been five regions administered from Valdez, Nome, Anchorage, Fairbanks and Juneau. However, not all functions of the department were necessarily represented in each region.

The reorganization plan is reducing the number of regions responsible for design functions to three, eliminating the design component in Valdez (Nome not currently having a design component) by transferring Valdez construction employees to Anchorage and Fairbanks. In conjunction with this transfer will be the expansion of the three regional offices' authority and responsibilities so that disputes can be settled on the regional level and need not be mediated by the Juneau Headquarters. This reorganization is supposably being accomplished in order to increase the efficiency of the department by:

- facilitating the integration of department functions and eliminating duplicative efforts by maximizing the utilization of available design personnel; and

- decentralizing headquarters authority into strong regional organizations that can more adequately fulfill the myriad types of projects required of the department.

However, from the outset there has been strong opposition to this reorganization from the Valdez community and the DOT/PF employees effected by the plan. Four points keep surfacing when considering the organizational changes and the affect it will and has had upon Valdez.

1) A major concern of the opponents of the move/reorganization is that the removal of the highway design function in the Southcentral Region, served by Valdez, may result in a reduced interest in the rural highway systems. There is legitimate and strong fear that the design component for those highway projects will have to compete for attention and funding with urban projects.

   This concern has already been proven justified due to the change in the five-year capital improvement priorities plan that has occurred since the reorganization of the Southcentral District Headquarters. The new capital improvement plan for this area now includes projects for the Whittier area, which had never previously been considered a part of the Southcentral District, and the overall budgets have been cut considerably for each year.

2) There was also considerable pride in Valdez that the Valdez design contingent has proven itself to be one of the most efficient design units in the State. Valdez residents have contended that if the DOT/PF Commissioner wants to increase the efficiency of the department, he should not integrate one of the most efficient units into a design unit that has a high concentration of problems.

3) Of major concern in and for Valdez are the adverse social and economic impacts on the community of Valdez. The loss of these state jobs will and is having an impact on retail businesses, the schools (the Growden-Harrison Grade School already under consideration for shutting down) and to some extent, the regional economy. Also, the Valdez DOT/PF design personnel are totally integrated within the community and are therefore actively involved in community affairs, serving on the many boards and commissions and providing many significant "professional" contributions to the growth and potential of the City.

4) The original reorganization plan stated that of the thirty-five positions in the design and construction unit in Valdez, twenty-five positions would move by October 01, 198., leaving only construction employees in the design and construction unit in Valdez. As a result of these transfers, there would be two promotions and five demotions for the Valdez employees. In addition to the permanent employees in the design and construction unit in Valdez, there were fifty seasonal employees. After the transfer there would be fifty-two seasonal employees in design and construction in Valdez.

   The original strength of the entire Valdez DOT/PF contingent was 110 full-time positions and 100 seasonal.

positions. About 25% of the entire contingent will be or has been effected by the move.

Although we are unable to assertain if this original plan has been precisely activated, I do feel sure that these are fairly accurate numbers when estimating the DOT/PF employees already relocated out of Valdez. Additionally, there is valid concern among Valdez residents that more transfers will follow. The construction unit (eight employees) will remain in Valdez through the 1982 construction season because of the large number of projects on-line in the Southcentral Region, but there is a great deal of uneasiness that some support personnel will be moved to Anchorage and Fairbanks subsequent to this transfer of the design unit.

Additionally, the housing impact is and will continue to be large, due to several houses going on the market at the same time in a town the size of Valdez. This affects the price of existing housing as well as new construction.

4) A final point of concern, one voiced by both employees of Valdez DOT/PF and by other members of the community, is that the DOT/PF design contingent works within a relatively compact DOT/PF unit in Valdez. There is justifiable concern that this move to the much larger structures in Fairbanks and Anchorage will contribute to inter-division disputes being sent to headquarters for resolution, thus delaying and diluting decisions. Currently, disputes and/or differences between different sections can be resolved easily in-house because of the smallness of the operation in Valdez.

Therefore, due to our concerns mentioned above, it is the City of Valdez' opinion that a five-region DOT/PF system is preferable to a three region system. A persuasive case can and has been made for preserving a "rural-oriented" highway design and construction unit in Valdez. If the existing unit in Valdez is meshed into the larger more urban-oriented Anchorage and Fairbanks regions, the rural highway needs of a vast section of Alaska will most likely suffer. A design unit located in a region where sensativities are attuned to rural highway requirements will undoubtedly be more affective in dealing with those requirements.

One of the basics that cannot be overlooked is that the Department of Transportation and Public Facilities was created for several good reasons, one of which was to place the authority and responsibility for designing, constructing and maintaining public transportation facilities in the hands of those people closest to those facilities. The philosophy that prompted that decision was, "those people closest to the transportation problem are most intimate with the problem and left to their own

devices, they are in the most knowledgeable position to solve that problem at the lowest possible cost to the taxpayer while providing the safest and most convenient transportation facility to the traveling public".

This then forms the basis for proceeding with House Bill 649 and our belief in a "rural-oriented" system, which is what a five-region program provides.

Much of Alaska's road system, covering less than one-fourth of the State, can be easily served out of Valdez. Consequently, Valdez' current role should be at least maintained if not expanded . Rather than abolishing the rural highway emphasis, serious consideration should be given to expanding the Valdez region's jurisdictional area to cover more highway miles, both north towards Fairbanks and north and west towards Anchorage. Approximately two years ago the DOT/PF even considered expanding the Valdez region's reach and we feel this consideration was valid.

Additionally, the Prince William Sound area represents a major target area for expansion of the State's transportation system. The DOT/PF unit in Valdez should become the focal point for that expansion. Given the transportation benefits of making the area more accessible for recreation and visitor use as well as general economic development, an expanded DOT/PF presence in Valdez seems called for.

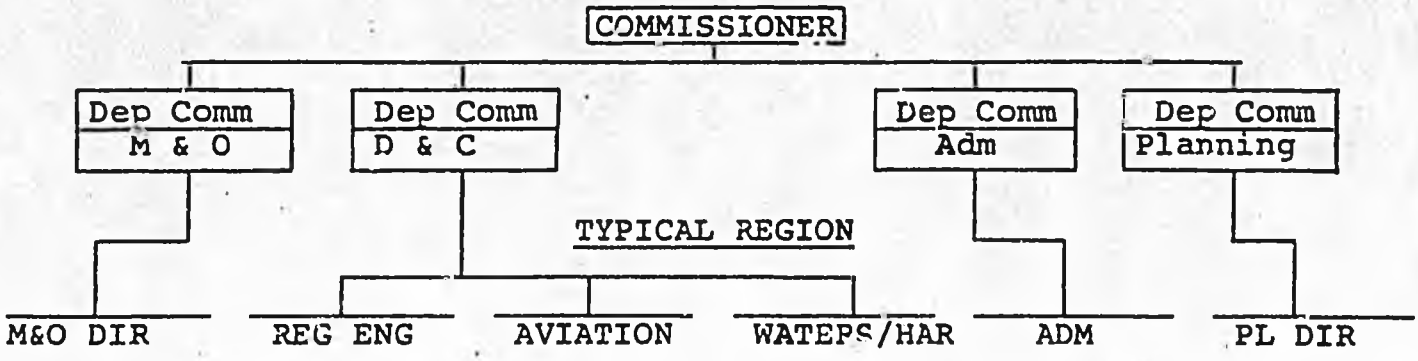
In closing I wish to reiterate that the City of Valdez heartily supports House Bill No. 649 and will assist its approval in any manner we possibly can.

If you require any additional information, please let me know.

Re: 12-1988
Bradley

BY CATO

The Department of Transportation and Public Facilities was created for several good reasons, one of which was to place the authority and responsibility for designing, constructing and maintaining public transportation facilities in the hands of those people closest to those facilities. The philosophy that prompted that decision was, "those people closest to the transportation problem are most intimate with the problem and left to their own devices, they are in the most knowledgeable position to solve that problem at the lowest possible cost to the taxpayer while providing the safest and most convenient transportation facility to the traveling public."



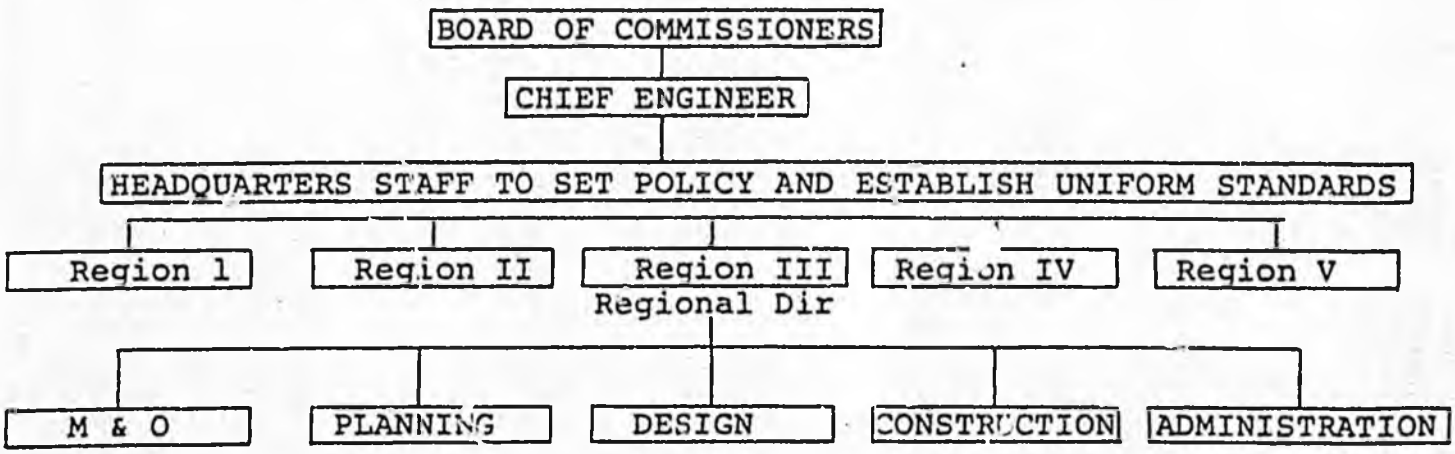
Unfortunately the DOT/PF did not turn out as planned. The administration advocated a strong emphasis on planning, whichresulted in the creation of a completely independent section headed by a director who had more authority than the regional engineer. The planning section duplicated the work that the design section had been doing but they did it with many more people and in reality the planning and the construction estimates were still being done by the design section. The planning section's primary function was to send the paperwork into headquarters which would allocate federal or state money to the individual projects so that the design and construction section could begin the project development which would ultimately lead to construction.

The creation of the planning section added one more layer of paper shufflers to the growing bureaucracy and the end result was higher preliminary engineering costs due to the many new highly paid planners that charged their time to these projects, and most severe was the fact that the projects were delayed because each Project Development Authorization PDA form had to be signed by five to seven

different level planners before the project could be funded.

The old Department of Highways operated fairly efficiently because there was one person in charge who could resolve internal disputes. The DOT/PF created a many headed monster that was only controlled by the commissioner. The general organization is shown below:

TYPICAL ORGANIZATION CHART



Your reorganization of the DOT/PF, to be effective should establish one leader in each region.

This one leader or director in each region would report directly to a chief engineer at headquarters.

The Chief Engineer would report to a board of commissioners appointed from each region and representing all of the required sciences as outlined in 12-1989 "Bradley".

The preferred organizational chart is shown below:

Section 44.42.040 (a)

The requirement for six years of experience is good but you should add the word "civil" prior to "engineering". Civil engineering cncompasses all phases of transportation engineering. It is very important that the Regional Director have a good academic education and practical experience in civil engineering so that he can effectively direct those working under him to accomplish the goals set by the Commission and/or Legislature.

The regional boundaries that you have set up are generally good. However, Region I (Anchorage) is primarily an urban region and the boundaries should be moved from Mile 118 on the Glenn Highway to Mile 66. This would put the Cascade Maintenance station in Region V and it would allow Region V, which is a rural region, to upgrade the road access between Valdez and Palmer. The section of the Glenn Highway from Palmer to the existing regional boundary at Mile 118 has not had a single mile of reconstruction since 1961 and there is nothing planned in this section within the next six year program.

The Longitude line used for the East Boundary of Region I should be 148° 42' W, South to Latitude 61° N., thence East along Latitude 61° to Prince William Sound, as shown on the attached map.

The new region that represents the greater Anchorage Bowl should not have jurisdiction over the Glenn Highway North of Palmer since they have exhibited no interest in upgrading that section of highway since Statehood. The Glenn Highway is the main thoroughfare for travelers driving into the State of Alaska and it is in deplorable condition from Palmer out to the existing regional boundary at Mile 118.

Sec. 44.42.045 (a)

The creation of the DOT was intended to streamline the department and make it more efficient and productive. The opposite has occurred because of one major blunder. Someone determined that one man should not be in charge of each region because he had too much power, or the job was too complicated, or because there were too many disciplines under his command. The solution to this problem was to create several equal directors in each region who would report directly to one of the four deputy commissioners in headquarters. The result is that the following sections:

1. Maintenance and Operations
2. Design and Construction
3. Planning
4. Adminstration

are controlled by a different deputy commissioner at headquarters and each section is protective of its authorities and is almost totally uncooperative with the other sections.

The solution to this problem is obvious to anyone working in any of the regions. They need one man in charge who can orchestrate the work of the region and who can resolve disputes between the sections. Woody Johansen and his leadership in the Interior Region (Fairbanks) is a good example of how the regions should be run. The Interior Region is the only region that has developed a good land transportation system in the state. Mr. Johansen could not accomplish what he did under the current DOT segmented authority.

This section should be revised to place the authority of all sections in the region under the authority of one person.

Sec. 44.39.040. Vacancy. If a vacancy occurs in the office of the commissioner of fish and game, the governor shall appoint a successor for the unexpired term in the manner provided for the regular appointment. (§ 17 ch 64 SLA 1959)

Sec. 44.39.050. Removal of commissioner. The Board of Fisheries or the Board of Game may submit a resolution to the governor requesting the removal of the commissioner. The resolution shall set out the grounds for the request and the governor shall give the commissioner and both boards an opportunity to be heard. The final decision to remove or retain the commissioner shall be made by the governor. (§ 17 ch 64 SLA 1959; am § 38 ch 206 SLA 1975)

80. Capital projects funds
900. Definitions

Editor's note. — Section 1, Executive Order No. 39 (1977) provides: "FINDINGS AND PURPOSE. As governor, I find that the diverse transportation needs of the state would best be served by the creation of a single department for the planning, study, development, management and operation of integrated, intermodal transportation systems. The purpose of this department is to evaluate, plan, design, construct, manage, operate and maintain all state transportation modes and systems, relying on analysis of the relative advantages of different modes and systems and considering their social, economic, and environmental consequences."

Section 8, Executive Order No. 39 (1977) provides: "All litigation, hearings, investigations and other proceedings pending under a law amended or repealed by this Order, or in connection with functions transferred by this Order, continue in effect and may be continued and completed notwithstanding a transfer or amendment or repeal provided for in this Order. Certificates, orders, and regulations issued or adopted under authority of a law amended or repealed by this Order remain in effect for the term issued, until revoked, vacated, or otherwise modified under the provisions of this Order. All contracts, rights, liabilities, and obligations created by or under a law amended or repealed by this Order, and in effect on the effective date of this Order, remain in effect notwithstanding this Order's taking effect. Records, equipment, and other property or agencies of the state whose functions are transferred under this Order shall be transferred commensurate with the provisions of this Order."

Section 9, Executive Order No. 39 (1977) provides: "(a) The Department of Transportation and Public Facilities is vested with the duties and powers formerly held by the Department of Public Works relating to planning, construction, maintenance and operation of transportation facilities, including state ferries, airports and water and harbor facilities, and for design and construction of buildings and appurtenant structures, and specifically including all powers and duties formerly held by the Department of Public Works under AS 02, AS 30.05, AS 30.15, AS 35, AS 41.20 and AS 44.65.

"(b) The Department of Transportation and Public Facilities is vested with the duties and powers formerly held by the Department of Highways relating to planning, construction, maintenance and operation of state transportation facilities including state highways, roads, bridges, traffic signs and signals, the supervision and maintenance of state automotive and mechanical equipment, the control of outdoor advertising visible from state highways and all other duties and powers of the Department of Highways, and specifically including powers and duties formerly held by the Department of Highways under AS 19, AS 28.01, AS 28.05, and AS 44.57."

Section 10, Executive Order No. 39 (1977) provides: "The commissioner of transportation and public facilities shall replace the commissioner of highways on the state Geographic Board, the Alaska Toll Bridge Authority, and all other boards and commissions."

Section 12, Executive Order No. 39 (1977) provides: "During Fiscal Year 1978, all appropriation items made for that fiscal year and prior years for the Department of Highways and the Department of Public Works may, upon approval of the governor, be appropriately transferred to implement the purposes of this Order."

Am. Jur. 2d and C.J.S. references. — 39 Am. Jur. 2d, Highways, Streets, and Bridges, § 1 et seq.

39A C.J.S. Highways § 1 et seq.

Sec. 44.42.010. Commissioner of transportation and public facilities. The principal executive officer of the Department of Transportation and Public Facilities is the commissioner of transportation and public facilities. (Executive Order No. 39 § 2 (1977))

Sec. 44.42.020. Powers and duties. (a) The department shall

(1) plan, design, construct and maintain all state modes of transportation and transportation facilities, communication facilities, and all docks, floats, breakwaters, buildings and similar facilities;

(2) study existing transportation modes and facilities and communication facilities in the state to determine how they might be improved or whether they should continue to be maintained;

(3) study alternative means of improving transportation and communication in the state with regard to the economic costs of each alternative and its environmental and social effects;

(4) develop a comprehensive, long-range intermodal transportation plan for the state;

(5) study alternatives to existing modes of transportation in urban areas and develop plans to improve urban transportation;

(6) cooperate and coordinate with and enter into agreements with federal, state and local government agencies and private organizations and persons in exercising its powers and duties;

(7) manage, operate, and maintain state transportation facilities, communication facilities, and all docks, floats, breakwaters and buildings, including all state highways, vessels, railroads, pipelines, airports, and aviation facilities;

(8) study alternative means of transportation in the state, considering the economic, social, and environmental impacts of each alternative;

(9) coordinate and develop state and regional transportation systems, considering deletions, additions, and the absence of alterations;

(10) develop facility program plans for transportation and communication facilities and state buildings, docks and breakwaters required to implement the duties set out in this section, including but not limited to (A) functional performance criteria; and (B) schedules for completion;

(11) supervise and maintain all state automotive and mechanical equipment, aircraft, and vessels, except vessels and aircraft used by the Department of Fish and Game or the Department of Public Safety; and

(12) supervise aeronautics and communications inside the state, under AS 02.10.

(13) complete and maintain a current inventory of public facilities, including a projection of the serviceability of the facilities and projections of replacements and additions to facilities needed to provide the level of services programmed by the various user agencies, for municipalities with populations of less than 12,000 and for unincorporated communities, and perform those duties on a cooperative basis with larger municipalities.

(14) adopt energy performance standards for public facilities of the state, the construction of which begins after July 1, 1980; the standards shall be based on thermal and lighting energy standards established by

the American Society of Heating, Refrigeration and Air Conditioning Engineers as adapted for application in high latitude, cold climate environs;

(15) provide planning assistance, including but not limited to energy audits and related technical services, to school districts and regional educational attendance areas to develop and implement

(A) standards for the design, construction and operation of rural educational facilities; and

(B) energy conservation measures for rural educational facilities.

(b) The department may

(1) engage in experimental projects relating to available or future modes of transportation and any means of improving existing transportation facilities and service and communication;

(2) exercise the power of eminent domain, including the declaration of taking as provided in AS 09.55. (Executive Order No. 39 § 2 (1977); am § 13 ch 168 SLA 1978; am § 12 ch 83 SLA 1980)

Effect of amendments. — The 1978 amendment added paragraph (13) to subsection (a).

Cross reference. — For the responsibility and authority of the supreme court over state court facilities, see AS 22.05.025.

The 1980 amendment added paragraphs (14) and (15) to subsection (a).

Sec. 44.42.030. Regulations. The department may adopt regulations under the Administrative Procedure Act (AS 44.62) to implement, interpret, or make more specific its powers and duties. (Executive Order No. 39 § 2 (1977))

Sec. 44.42.040. Departmental organization. The commissioner shall establish regions within the state. The functions of the department within each region shall be performed, to the maximum extent feasible, through a regional office. Each regional office shall be directed by a regional transportation and public facilities director appointed by the commissioner. (Executive Order No. 39 § 2 (1977))

Sec. 44.42.050. State transportation plan. (a) The commissioner shall develop annually a comprehensive, intermodal, long-range transportation plan for the state. In developing and revising the state plan, the commissioner shall consider means and costs of improving existing modes and facilities, state and federal subsidies, and the costs and benefits of new transportation modes and facilities. The commissioner shall also consider the recommendation of the Alaska Transportation Planning Council. The plan shall be submitted to the governor for his review and approval and submitted by the governor to the legislature.

(b) In developing and revising the plan, the commissioner shall seek public review and evaluation by any reasonable means and may

(1) consult and cooperate with officials and representatives of the federal government, other governments, interstate commissions and

authorities, local agencies and authorities, interested corporations and other organizations concerning problems affecting transportation in the state; and

(2) request from an agency or other unit of the state government or of a political subdivision of it, or from a public authority, the assistance and data that may be necessary to enable the commissioner to carry out his responsibilities under this section; every such entity shall provide the assistance and data requested.

(c) Copies of the plan, as revised, shall be kept on file as a public document in the office of the commissioner and at each regional office of the department.

(d) The plan shall include a description of projects planned for design and construction for the following [illegible] years. The description is in addition to the long-range plan required by (a) of this section and by AS 19.10.140. The description shall include an itemization of the estimated cost for each project and the total cost of all projects. The commissioner shall propose and forward to the governor for his review and approval and inclusion, as approved, in the capital budget a construction program which includes the projects to be undertaken during the following two years, including recommended project priorities. Funds for transportation construction projects and necessary contingencies shall be itemized as allocations within the bill for the General Appropriations Act. (Executive Order No. 39 § 2 (1977))

Sec. 44.42.055. State public facilities plan. (a) The commissioner shall develop and annually revise a statewide comprehensive facility procurement plan for public facilities of the state and its municipalities.

(b) In developing and annually revising the facility procurement plan, the commissioner shall

(1) request and receive on an annual basis from all state agencies a projection of the anticipated facility needs of the agency for the next annual capital improvement program;

(2) consult with officials and representatives of municipalities, the federal government, interested corporations and other organizations concerning public facility needs in the state;

(3) develop specific facility procurement plans for projects in each of the following categories:

(A) sewage transmission and treatment systems;

(B) water transmission and treatment systems;

(C) electrical generation and distribution systems;

(D) health care and social services facilities;

(E) educational facilities;

(F) communications facilities and transportation facilities;

(G) public safety and justice facilities;

(H) recreational facilities;

(I) sanitation facilities; and

(J) cultural facilities;

(4) prepare recommendations to accommodate the various levels of service identified by state agencies and other parties with respect to the services described in (3) of this subsection, to include

(A) current and future facility needs;

(B) space standards and design guidelines for the appropriate facility types;

(C) maintenance and operations standards for the appropriate facility types;

(D) construction techniques and contracting methods;

(E) facility project budget requirements; and

(F) relative costs of identified alternatives (life cycle cost analysis) including but not limited to the installation and operation of energy systems which are not dependent on oil or gas for water heating, space heating and cooling requirements, and for the generation of electrical or mechanical power;

(5) identify common public facility needs among the various user agencies; and

(6) submit its findings, plans and recommendations to the governor and to the appropriate state agency to facilitate the development of agency capital improvement budget requests.

(c) In the preparation and revision of the facility procurement plan, the commissioner may

(1) develop and adopt regulations for use in carrying out the purpose of (b) of this section; regulations may not be adopted under this section unless approval is received from appropriate program agencies;

(2) make recommendations on the total capital improvement program to affected state agencies, local governments, and other interested parties and organizations, and to the divisions of budget and management and policy development and planning.

(d) In this section, "public facility"

(1) means a capital improvement within one of the categories described in (b) of this section which is constructed

(A) for subsequent occupancy or operation by the state, a public corporation of the state, the University of Alaska, a political subdivision, or a regional educational attendance area;

(B) by a political subdivision or any private party with the assistance of financial support provided by the state if funds appropriated or paid by way of a grant or loan in advance of construction of the facility, or any part of it, are 50 per cent or more of the estimated costs of construction of the facility;

(2) does not include projects constructed with the proceeds of one or more loans issued by a loan program administered by the Department of Commerce and Economic Development. (§ 14 ch 168 SLA 1978; am § 6 ch 62 SLA 1979; am § 13 ch 83 SLA 1980)

Revisor's note. — The word "recommended" in subsection (b)(4) was deleted by the revisor under AS 01.10.036 to clarify the meaning of the section.

Cross reference. — For the responsibility and authority of the supreme court over state court facilities, see AS 22.05.025.

Effect of amendments. — The 1979 amendment, in subsection (b), added subparagraph (J) to paragraph (3).

The 1980 amendment rewrote subparagraph (4)(F) in subsection (b).

Sec. 44.42.060. Grants to the department. The commissioner may apply for and accept, on behalf of the state, grants from the federal government or an agency of it, or from another state, a foundation, or any person, for any of the functions or purposes of the department. (Executive Order No. 39 § 2 (1977))

Sec. 44.42.065. Conservation of energy in public buildings. (a) The department shall, as soon as practicable after July 1, 1980, and at least once every seven years thereafter, perform an energy audit of each public building. A report of the results of the energy audits performed during the preceding year shall be submitted to the legislature not later than February 1 of each year.

(b) The department shall include in the report required in (a) of this section recommendations for corrective measures to improve the energy efficiency and to minimize the life-cycle cost of the public buildings surveyed. These measures may include (1) energy conservation measures, (2) measures involving solar technology and other alternative energy systems, (3) energy management, and (4) maintenance and operating procedures and energy-related modifications. In recommending the corrective measures, the department shall give priority to changes in maintenance and operating procedures over measures requiring substantial structural modification or installation of equipment.

(c) In this section, "energy audit" means a determination of

(1) the energy consumption characteristics of a building, including the size, type, and rate of energy consumption of major energy-consuming systems of the building and the climate characterizing the region where the building is located; and

(2) a determination of the energy conservation and cost savings likely to result from appropriate energy-conserving maintenance and operating procedures and modifications, including the purchase and installation of energy-related fixtures. (§ 14 ch 83 SLA 1980)

Editor's note. — For declaration of legislative policy on energy conservation, see sec. 1, ch. 83, SLA 1980, in the 1980 Temporary and Special Acts and Resolves.

Section 46, ch. 83, SLA 1980 provides: "A report of the results of the first energy audit completed by the Department of Transportation and Public Facilities under AS 44.42.065, added by sec. 14 of this Act, shall be submitted to the legislature not later than January 31, 1982."

Sec. 44.42.070. Limitation on transportation facilities. The department shall consult with the appropriate officials of other departments regarding environmental risks and economic and social considerations that may arise by reason of the location, design, construction or reconstruction of a transportation facility. (Executive Order No. 39 § 2 (1977))

Sec. 44.42.080. Capital projects funds. There is created within the department the following capital projects funds:

(1) educational, cultural, and related facilities;
(2) transportation and related facilities;
(3) public institutions and related facilities;
(4) public safety, justice, and related facilities;
(5) health, and related facilities;
(6) natural resource development facilities;
(7) general purpose facilities. (§ 15 ch 168 SLA 1978)

Sec. 44.42.900. Definitions. In this chapter, unless the context requires otherwise,

(1) "commissioner" means the commissioner of the Department of Transportation and Public Facilities;

(2) "department" means the Department of Transportation and Public Facilities;

(3) "transportation" or "transportation mode" includes, but is not limited to, the following means of conveyance or travel, including their related or auxiliary structures, facilities or services: air, rail, water, highway and pipeline. (Executive Order No. 39 § 2 (1977))

1. Organization (§§ 44.46.010—44.46.020)
2. Environmental Advisory Board (§§ 44.46.030—44.46.050)
3. Alaska Council on Science and Technology (§§ 44.46.070 — 44.46.110)

Editor's note. — Section 5, ch. 120, SLA 1971 provides: "All litigation, hearings, investigations and other proceedings pending under any law amended or functions which may be transferred by this Act, continue in effect and may be continued and completed notwithstanding any such transfer or amendment provided for in this Act. Certificates, orders, rules or regulations issued or filed under authority of a law amended by this Act or functions which may be transferred by this Act, remain in effect for the term issued, unless or until revoked, vacated, or otherwise modified under the provisions of this Act. All contracts or other obligations created by any law amended by this Act or by virtue of functions which may be transferred by this Act, and in effect on July 1, 1971, remain in effect unless or until revoked, or modified under the provisions of this Act."

Legislative history report. — For report on ch. 120, SLA 1971 (SB 75 am H), see 1971 House Journal, p. 1016.

Repealed by § 99 ch 59 SLA 1982, effective May 28, 1982.

Editor's notes. — The repealed article derived from § 1, ch. 152, SLA 1966.

Chapter 42. Department of Transportation and Public Facilities.

Section

20. Powers and duties
55. State public facilities plan

Sec. 44.42.020. Powers and duties. (a) The department shall

(1) plan, design, construct and maintain all state modes of transportation and transportation facilities and all docks, floats, breakwaters, buildings and similar facilities;

(2) study existing transportation modes and facilities in the state to determine how they might be improved or whether they should continue to be maintained;

(3) study alternative means of improving transportation in the state with regard to the economic costs of each alternative and its environmental and social effects;

(4) develop a comprehensive, long-range intermodal transportation plan for the state;

(5) study alternatives to existing modes of transportation in urban areas and develop plans to improve urban transportation;

(6) cooperate and coordinate with and enter into agreements with federal, state and local government agencies and private organizations and persons in exercising its powers and duties;

(7) manage, operate, and maintain state transportation facilities and all docks, floats, breakwaters and buildings, including all state highways, vessels, railroads, pipelines, airports, and aviation facilities;

(8) study alternative means of transportation in the state, considering the economic, social, and environmental impacts of each alternative;

(9) coordinate and develop state and regional transportation systems, considering deletions, additions, and the absence of alterations;

(10) develop facility program plans for transportation and state buildings, docks and breakwaters required to implement the duties set out in this section, including but not limited to (A) functional performance criteria; and (B) schedules for completion;

(11) supervise and maintain all state automotive and mechanical equipment, aircraft, and vessels, except vessels and aircraft used by the Department of Fish and Game or the Department of Public Safety;

(12) supervise aeronautics inside the state, under AS 02.10;

(13) complete and maintain a current inventory of public facilities, including a projection of the serviceability of the facilities and projections of replacements and additions to facilities needed to provide the level of services programmed by the various user agencies, for municipalities with populations of less than 12,000 and for unincorporated communities, and perform those duties on a cooperative basis with larger municipalities;

(14) adopt energy performance standards for public facilities of the state, the construction of which begins after July 1, 1980; the standards shall be based on thermal and lighting energy standards established by the American Society of Heating, Refrigeration and Air Conditioning Engineers as adapted for application in high latitude, cold climate environs;

(15) provide planning assistance, including but not limited to energy audits and related technical services, to school districts and regional educational attendance areas to develop and implement

(A) standards for the design, construction and operation of rural educational facilities; and

(B) energy conservation measures for rural educational facilities.

(b) The department may

(1) engage in experimental projects relating to available or future modes of transportation and any means of improving existing transportation facilities and service;

(2) exercise the power of eminent domain, including the declaration of taking as provided in AS 09.55.010 — 09.55.640. (Executive Order No. 39 § 2 (1977); am § 13 ch 168 SLA 1978; am § 12 ch 83 SLA 1980; am Executive Order No. 50, § 10 (1981))

Effect of amendments. — The 1981 amendment, in subsection (a), deleted "communication facilities" following "transportation facilities" in paragraph (1), deleted "and communication facilities" following "modes and facilities" in paragraph (2), deleted "and communication" following "improving transportation" in paragraph (3), deleted "communication facilities" following "transportation facilities" in paragraph (7), deleted "and communication facilities" following "plans for transportation" in paragraph (10), deleted "and" at the end of paragraph (11), deleted "and communications" following "aeronautics" and substituted a semicolon for a period near the end of paragraphs (12) and (13). The amendment also deleted "and communication" following "facilities and service" in paragraph (1) of subsection (b).

Sec. 44.42.055. State public facilities plan. (a) The commissioner shall develop and annually revise a statewide comprehensive facility procurement plan for public facilities of the state and its municipalities.

(b) In developing and annually revising the facility procurement plan, the commissioner shall

(1) request and receive on an annual basis from all state agencies a projection of the anticipated facility needs of the agency for the next annual capital improvement program;

(2) consult with officials and representatives of municipalities, the federal government, interest corporations and other organizations concerning public facility needs in the state;

(3) develop specific facility procurement plans for projects in each of the following categories:

(A) sewage transmission and treatment systems;

(B) water transmission and treatment systems;

(C) electrical generation and distribution systems;

(D) health care and social services facilities;

(E) educational facilities;

(F) transportation facilities;

(G) public safety and justice facilities;

(H) recreational facilities;

(I) sanitation facilities; and

(J) cultural facilities;

(4) prepare recommendations to accommodate the various levels of service identified by state agencies and other parties with respect to the services described in (3) of this subsection, to include

(A) current and future facility needs;

(B) space standards and design guidelines for the appropriate facility types;

(C) maintenance and operations standards for the appropriate facility types;

(D) construction techniques and contracting methods;

(E) facility project budget requirements; and

(F) relative costs of identified alternatives (life cycle cost analysis) including but not limited to the installation and operation of energy systems which are not dependent on oil or gas for water heating, space heating and cooling requirements, and for the generation of electrical or mechanical power;

(5) identify common public facility needs among the various user agencies; and

(6) submit its findings, plans and recommendations to the governor and to the appropriate state agency to facilitate the development of agency capital improvement budget requests.

(c) In the preparation and revision of the facility procurement plan, the commissioner may

(1) develop and adopt regulations for use in carrying out the purpose of (b) of this section; regulations may not be adopted under this section unless approval is received from appropriate program agencies;

(2) make recommendations on the total capital improvement program to affected state agencies, local governments, and other interested parties and organizations, and to the divisions of budget and management and policy development and planning.

(d) In this section, "public facility"

(1) means a capital improvement within one of the categories described in (b) of this section which is constructed

(A) for subsequent occupancy or operation by the state, a public corporation of the state, the University of Alaska, a political subdivision, or a regional educational attendance area;

(B) by a political subdivision or any private party with the assistance of financial support provided by the state if funds appropriated or paid by way of a grant or loan in advance of construction of the facility, or any part of it, are 50 per cent or more of the estimated costs of construction of the facility;

(2) does not include projects constructed with the proceeds of one or more loans issued by a loan program administered by the Department of Commerce and Economic Development. (§ 14 ch 168 SLA 1978; am § 6 ch 62 SLA 1979; am § 13 ch 83 SLA 1980; am Executive Order No. 50, § 11 (1981)."

Effect of amendments. — The 1981 amendment deleted "communication facilities and" near the beginning of subsection (b)(3)(F).

Article 1. Organization.

Section
20. Duties of department

Sec. 44.46.020. Duties of department. The Department of Environmental Conservation shall

(1) have primary responsibility for coordination and development of policies, programs and planning related to the environment of the state and of the various regions of the state;

(2) have primary responsibility for the promulgation and enforcement of regulations setting standards for the prevention and abatement of all water, land, subsurface land and air pollution, and other sources or potential sources of pollution of the environment, including by way of example only, petroleum and natural gas pipelines;

(3) promote and develop programs for the protection and control of the environment of the state;

(4) take such actions as are necessary and proper to further the policy declared in AS 46.03.010.

(5) adopt regulations for

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: CSHB 72 Date on Bill: February 17, 1983
Title: Special Appropriation to DOT/PF for Various Construction Projects
Sponsor: Shultz
Requestor: House Transportation (Rhonda)

1: Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital				17,100.0				
Operating				-0-	-0-	-0-		
Total				17,100.0	-0-	-0-		

b. Revenues:

Revenue								

2. Source of funds to offset fiscal impact of bill:

Not identified by the Sponsor.

3. Assumptions: As the Nenana River bridge will have to be constructed before the other work is begun, the appropriation for FY 84 could be reduced to $3,800,000. The Department concurs with the $17,100,000 price. We would transfer the funds to Nenana after funding is approved. As this project is assumed to be ready for bid this year, all costs are based on 1983 dollars. If not ready until later years, the amount would increase by 10% per year.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. not represent the policy of the Sheffield Administration or the final estimate o impact.

ANALYSIS ATTACHMENT TO CSHB 72 FISCAL NOTE

ROADS

22.8 miles of 28' wide gravel road consisting of 2.5' of borrow on usable excavation, 6" subbase grading "C" with drainage as required.

BRIDGES

Consist of one bridge across the Nenana River at 381' in length and 28' wide and three bridges across the Little Nenena River, two of which would be 140' in length, for each, and one bridge at 101' in length. All three would be 28' wide.

TRIPLE PHASE POWER

Provide 22.8 miles of power line along roadside referenced under "roads" above.

NOTE:

As this project is assumed to be ready for bid this year, all capital costs are based on 1983 dollars. If not ready until 1984, amounts would need to be increased by 10%.

OPERATING COSTS

M&O cost estimate based on 1980 cost provided in draft Interior Region Transportation Study, inflated to FY84 dollars, then inflated for each fiscal year thereafter by 1.1.

FROM: GVEA Engineering DATE: Sept. 27, 1982

TO: Joe Killion

COST ESTIMATE for one typical mile of distribution line to serve the Nenana Ag. Project

	14.4/24.9kV 3Ø	14.4kV 1Ø
Construction Labor & Material	$52,644.87	$37,096.50
R.O.W. Clearing	$ 5,723.00	$ 5,723.00
Engineering and Design	$12,180.00	$11,680.00
Total	$70,547.87	$54,499.50
Contingencies @ 10%	$ 7,054.79	$ 5,449.95
Total	$77,602.66	$59,949.45

This estimate based on construction being completed within one year.

*Engineering and design includes: staking, design, R.O.W. Aquisition, contracting, administrative labor, inspection, room & board, travel and applicable overheads.

The mainline portion located along the road should be 3Ø 14.4/24.9kV to provide the nescessary power for the distances required. The installation of 1Ø 14.4kV lines should be limited to short taps designated to serve small single phase loads.

The assumption that each tract will receive power at the center of the tract may not be valid. A large cost savings would be realized by requiring service to be received from the mainline and deleting the individual taps.

38.0 MILES OF 30 MAINLINE.
21.5 MILES OF TAPS
59.5 TOTAL MILES

NENANA — TOTCHAKET

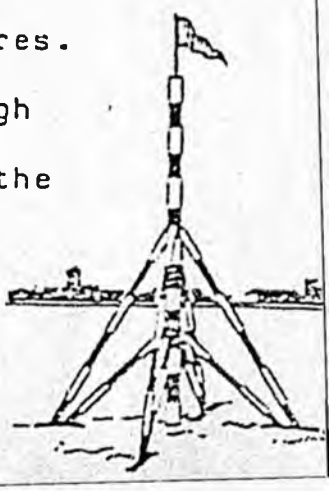
UNLOCKING THE AGRICULTURAL POTENTIAL OF WESTERN ALASKA

A Report on A Seminar and Workshop on Agricultural Development.
Sponsored by THE CITY OF NENANA
December 20, 1980

JANUARY, 1981

Office of the City Clerk
332-5441
Incorporated November 17,

City of Nenana



State of Alaska

OVERVIEW OF THE NENANA-TOTCHAKET PROJECT

Date: March 2, 1981
From: John B. Coghill, Mayor

In 1968, during route survey and soil testing work associated with the North Commission west of Nenana, Alaska, field crews found relatively deep top soil covering a broad plateau lying between the Tanana and Nenana rivers to the east and the Kantishna river on the west. More extensive analysis of these soils showed that they possessed excellent agricultural potential. A more extensive and detailed soil survey conducted between 1975 and 1977 by the Soil Conservation Service of the U.S. Department of Agriculture defined the extent of the agricultural soils in what SCS has called the "Totchaket Area", at least 175,000 acres of Class II and Class III soils...soils which, for Alaska, show the highest potential for agricultural productivity. Thousands of acres of Class IV soils with lesser potential are also extensive on the plateau, and preliminary reconnaisance of areas west of the Kantishna show lands with agricultural potential numbering in the millions of acres.

That these lands are capable of producing both High quantity and high quality yields has been accepted by the

State's agricultural community for several years. The more important discussion in recent years has not been whether Totchaket should be developed for agriculture, but what kind of agricultural development would better satisfy the multiple and diverse needs of individual Alaskans and Alaskan families on the one hand, and on the other, what kind of agriculture can best meet the State's urgent need to invest its' short term oil wealth in long term renewable resource industries which can sustain themselves economically far into the future.

Even in view of these urgent concerns, however, planning for eventual development of Totchaket by City, State, University and Federal agricultural interests proceeded slowly during the 1970s as Native Claims in the area were resolved according to the provisions of the Alaska Native Claims Settlement Act of 1971. With final conveyance of land title to Native corporations in the area in late 1979 the last of the major concerns affecting the future of Totchaket were resolved, and the City of Nenana initiated the necessary financing and studies required for the design and long term development of what we are now calling Nenana-Totchaket.

With the support of our delegation to the legislature and the encouragement and assistance of many people around the State, these reports are now either complete or nearly complete and are being presented to the legislature for consideration. It

is important to emphasize again that these studies were not designed by the City to figure out whether or not to develop agriculture. They were designed to determine what kind of agriculture will respond to the real needs of Alaska's people for food, access to land, and increased self-sufficiency; what kind of agriculture can be developed in Nenana-Totchaket which will help the State's new agricultural industry become economically self-sustaining in a reasonably short period of time; and, finally, what will it all cost.

We are pleased with the reports, and we believe they offer a well thought out and detailed plan for initial development of Nenana-Totchaket. The transportation proposal includes both the initial design, and cost estimates for overland access from Nenana to the first two townships which the City and the Department of Natural Resources have scheduled for disposal in February 1982...less than one year from today. The livestock report lays out a detailed and comprehensive plan for the development of a red meat industry that will involve all the State's farming regions. The composite Planning, Development, and Production Schedule from 1980 through 1990 shows our best estimates of the annual financing required and the annual production and employment associated with development in the area. Clearly the amounts of money involved are not insignificant even when compared with the multi-billion annual revenues of the State of Alaska. More importantly, financing decisions this

year will be followed by financing decisions as large, or larger, in subsequent years throughout the decade.

The transportation system should fall into our highest priority for without that access, the proposed clearing, wood fiber harvest, and land disposal programs are meaningless.

result of a formally advertised or negotiated contract. The determination of the commissioner shall be supported by findings of fact which shall set out enough facts and circumstances to clearly justify the determination. The determinations and findings shall be maintained as a permanent record of the department.

(c) In this section, "professional services" means architectural, engineering, or land surveying services. (§ 1 art III title IV ch 152 SLA 1957; am § 5 ch 277 SLA 1976; am § 1 ch 143 SLA 1977; am § 4 ch 104 SLA 1978; am § 2 ch 144 SLA 1982)

Effect of amendments. — The 1982 amendment, effective July 22, 1982, inserted "AS 36.98 and" in the first sentence of subsection (a).

Editor's notes. — This section was redrafted by the revisor of statutes to remove personal pronouns in conformity with AS 01.05.031(c) and § 4, Chapter 58, SLA 1982.

Sec. 35.15.080. Local control of state public works projects. (a) A municipality may, by resolution of its governing body, request the assumption of all or part of the department's responsibilities relating to the planning, design, and construction of a public works project of the state that is to be located within the boundaries of the municipality and that would otherwise be constructed in the manner provided in AS 35.15.010. After receipt of the request, the department may provide by agreement for transfer to and assumption by the municipality of the department's responsibilities relating to the project, unless the commissioner determines that assumption of responsibilities by the municipality is not practicable or not in the best interests of the state.

(b) If the commissioner of transportation and public facilities determines that assumption of responsibilities by a municipality under (a) of this section is not practicable or not in the best interests of the state, he shall notify the governing body of the municipality of his finding and specify reasons for it. If the governing body requests reconsideration of the decision, he shall hold a hearing in the municipality within 30 days following mailing of the request. Following the hearing, he may affirm, modify or reverse his initial decision and shall specify in writing the reasons.

(c) A municipality may request joint assumption of responsibilities with the department relating to the planning, design, and construction of a public works project. Two or more municipalities may by agreement provide for cooperative assumption of responsibilities relating to the planning, design, and construction of a public works project. If two or more municipalities request assumption of responsibilities for a project and meet the standard of practicability set out in (a) of this section, the commissioner shall determine which municipality is best able to direct planning, design, and construction of the project and enter into an agreement with that municipality or provide for joint or cooperative administration, as the parties may

agree or the commissioner may determine. Decisions of the commissioner under this subsection are final.

(d) Provisions of this title governing planning, design, and construction of public works by the department, and regulations adopted under the provisions, govern the administration of projects assumed by a municipality or regional educational attendance area under this section. For that purpose the provisions supersede any conflicting provisions of ordinance or charter of a municipality.

(e) An organized borough may plan and construct public works under this section and make an agreement with the department for that purpose irrespective of restrictions of other provisions of law on the acquisition and exercise of borough powers. Borough exercise of the power conferred under this subsection does not preclude exercise by a city of the borough of the same power within the city.

(f) To carry out the purpose of this section, the commissioner of transportation and public facilities shall adopt regulations relating to the application for and the making and the conditions of agreements and the local assumption of responsibilities for the planning, design and construction of public works under this section. He shall include in grant contracts terms and conditions requiring a regional school board and its contractors to adhere to the provisions of AS 36.05.010 with respect to the payment of wage rates on construction projects, and AS 36.10.010 with respect to employment preference, and may require different terms in agreements for different projects to meet local conditions and unique requirements and to assure compliance with the public facilities procurement policies developed by the department under AS 35.10.160 — 35.10.200. If necessary, the commissioner may require as a condition of an agreement approval of the agreement by the federal government. Regulations adopted, amended or repealed by the department under this section which relate to educational facilities shall be developed in conjunction with the Alaska Association of School Boards and the Alaska Association of School Administrators and reviewed by those associations before final action on the regulations is taken by the department. (§ 1 ch 57 SLA 1976; am §§ 6, 7 ch 147 SLA 1978; am §§ 5, 6 ch 92 SLA 1982)

Effect of amendments. — The 1982 amendment, effective July 1, 1982, in the first sentence of subsection (a), deleted "or, if the public work is an educational facility, a regional educational attendance area established under AS 14.08" following "A municipality," "or operating area" following "located within the boundaries," and "or regional educational attendance area" following "of the municipality," inserted "or part" and "design," and substituted "that" for "which" in two places. In the second sentence of that subsection, the amendment deleted the paragraph designations, deleted the provisions of former paragraph (1), which read "shall provide for the assumption by the municipality or regional education attendance area of all of the department's responsibilities relating to the planning, design and construction of an educational facility" and deleted "planning, design, and construction of a public works" preceding "project, unless the commissioner determines." In subsection (c), the amendment deleted the former second sentence, which read "A regional educational attendance

area may request joint assumption of responsibilities with the department relating to the planning, design and construction of an educational facility," substituted "municipalities may by agreement" for "municipalities or regional educational attendance areas may by mutual agreement" and inserted "design" in the present second sentence, deleted "or regional educational attendance areas" following "municipalities" in one place and "or regional educational attendance area" following "municipality" in two places in the next-to-last sentence, and substituted "in (a) of this section" for "in (a)(2) of this section" in the next-to-last sentence.

Sec. 35.15.090. Use of appropriated funds. Upon execution of an agreement under AS 35.15.080(a), state funds appropriated for a public works project which is the subject of the agreement shall be transferred to a special account in the state treasury. A municipality administering the project under the agreement may draw on the account for costs of the project, under fiscal control of the department. If an agreement provides for joint or cooperative administration of the project, payment of costs shall be made to the party incurring the costs. (§ 1 ch 57 SLA 1976; am § 8 ch 147 SLA 1978; am § 7 ch 92 SLA 1982)

Effect of amendments. — The 1982 amendment, effective July 1, 1982, deleted "assumption by a municipality or regional educational attendance area of the department's responsibilities under AS 35.15.080(a)(1), or upon" preceding "execution of an agreement" and "assumption or the" preceding "agreement shall be transferred" and substituted "AS 35.15.080(a)" for "AS 35.15.080(a)(2)" in the first sentence and deleted "or regional educational attendance area" preceding "administering the project" and "assumption or" preceding "agreement may draw" in the second sentence.

Chapter 25. General Provisions.

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Transportation and Public Facilities for development of the Totchaket Resource area; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $17,100,000 is appropriated from the general fund to the Department of Transportation and Public Facilities for the following construction projects in the Totchaket resource area:

Nenana River bridge	$ 3,800,000
bridges across the Little Nenana River	1,900,000
22.8 miles of roadway	10,100,000
three phase electrical power	1,300,000

* Sec. 2. The appropriation made by this Act shall be disbursed in accordance with AS 35.15.080 and 35.15.090.

* Sec. 3. The appropriation made by this Act is for capital projects and is subject to AS 37.25.020.

* Sec. 4. This Act takes effect July 1, 1983.

CHAPTER I
INTRODUCTION

Transportation is an important aspect in rural development. To quote current research:

> "If rural development is to proceed in an orderly and efficient manner, adequate performance of the transportation infrastructure and regulatory structure is mandatory. Highway, water, rail, and air transportation investments should be closely coordinated with those state and federal agencies directing the various rural development programs."[1]

Efficient and competitive routing of goods to and from a rural center is the key in providing social and economic benefits to that area. A well designed and constructed farm to market road network is essential in any agricultural development as it will be servicing the aggregation of grain, machinery, fertilizer, feed, seed and chemical hauling.

This report provides a proposed roadway network in the Nenana agricultural area starting with an initial phase of two townships expanding to several townships in future phases. Commodity routing systems in the Nenana area were examined to maintain a flexible, multi-modal system in the area. Alternative processing site locations are compared in relation to the City of Nenana, the initial phase of the project, and existing commodity routing systems. Cost analyses were done on alternate access routes to the initial area and the farm to market transport system.

Roadway development and construction includes an examination of soils, land ownership, parcelization and climatic conditions. Alternative roadway section designs are based upon the location of gravel, and wet or permafrost areas. A roadway layout is proposed that takes advantage of section line easements and allows for flexibility in final parcelization. Estimated costs for construction and maintenance of this layout are also presented.

---

[1] Richard K. Hart, Transportation and Rural Development: Some Policy Considerations.

It is our understanding that the project development schedule is for land disposal in 1981 or early 1982 at the latest. In order for the transportation system to be in place, construction must occur in the 1981 construction season. For this to happen, the project planning and design must be fast tracked. Because of this, the consultant team has initiated permit procedure for field work this winter and early spring. This includes bridge-borings, site surveys and borings, plus material site investigations.

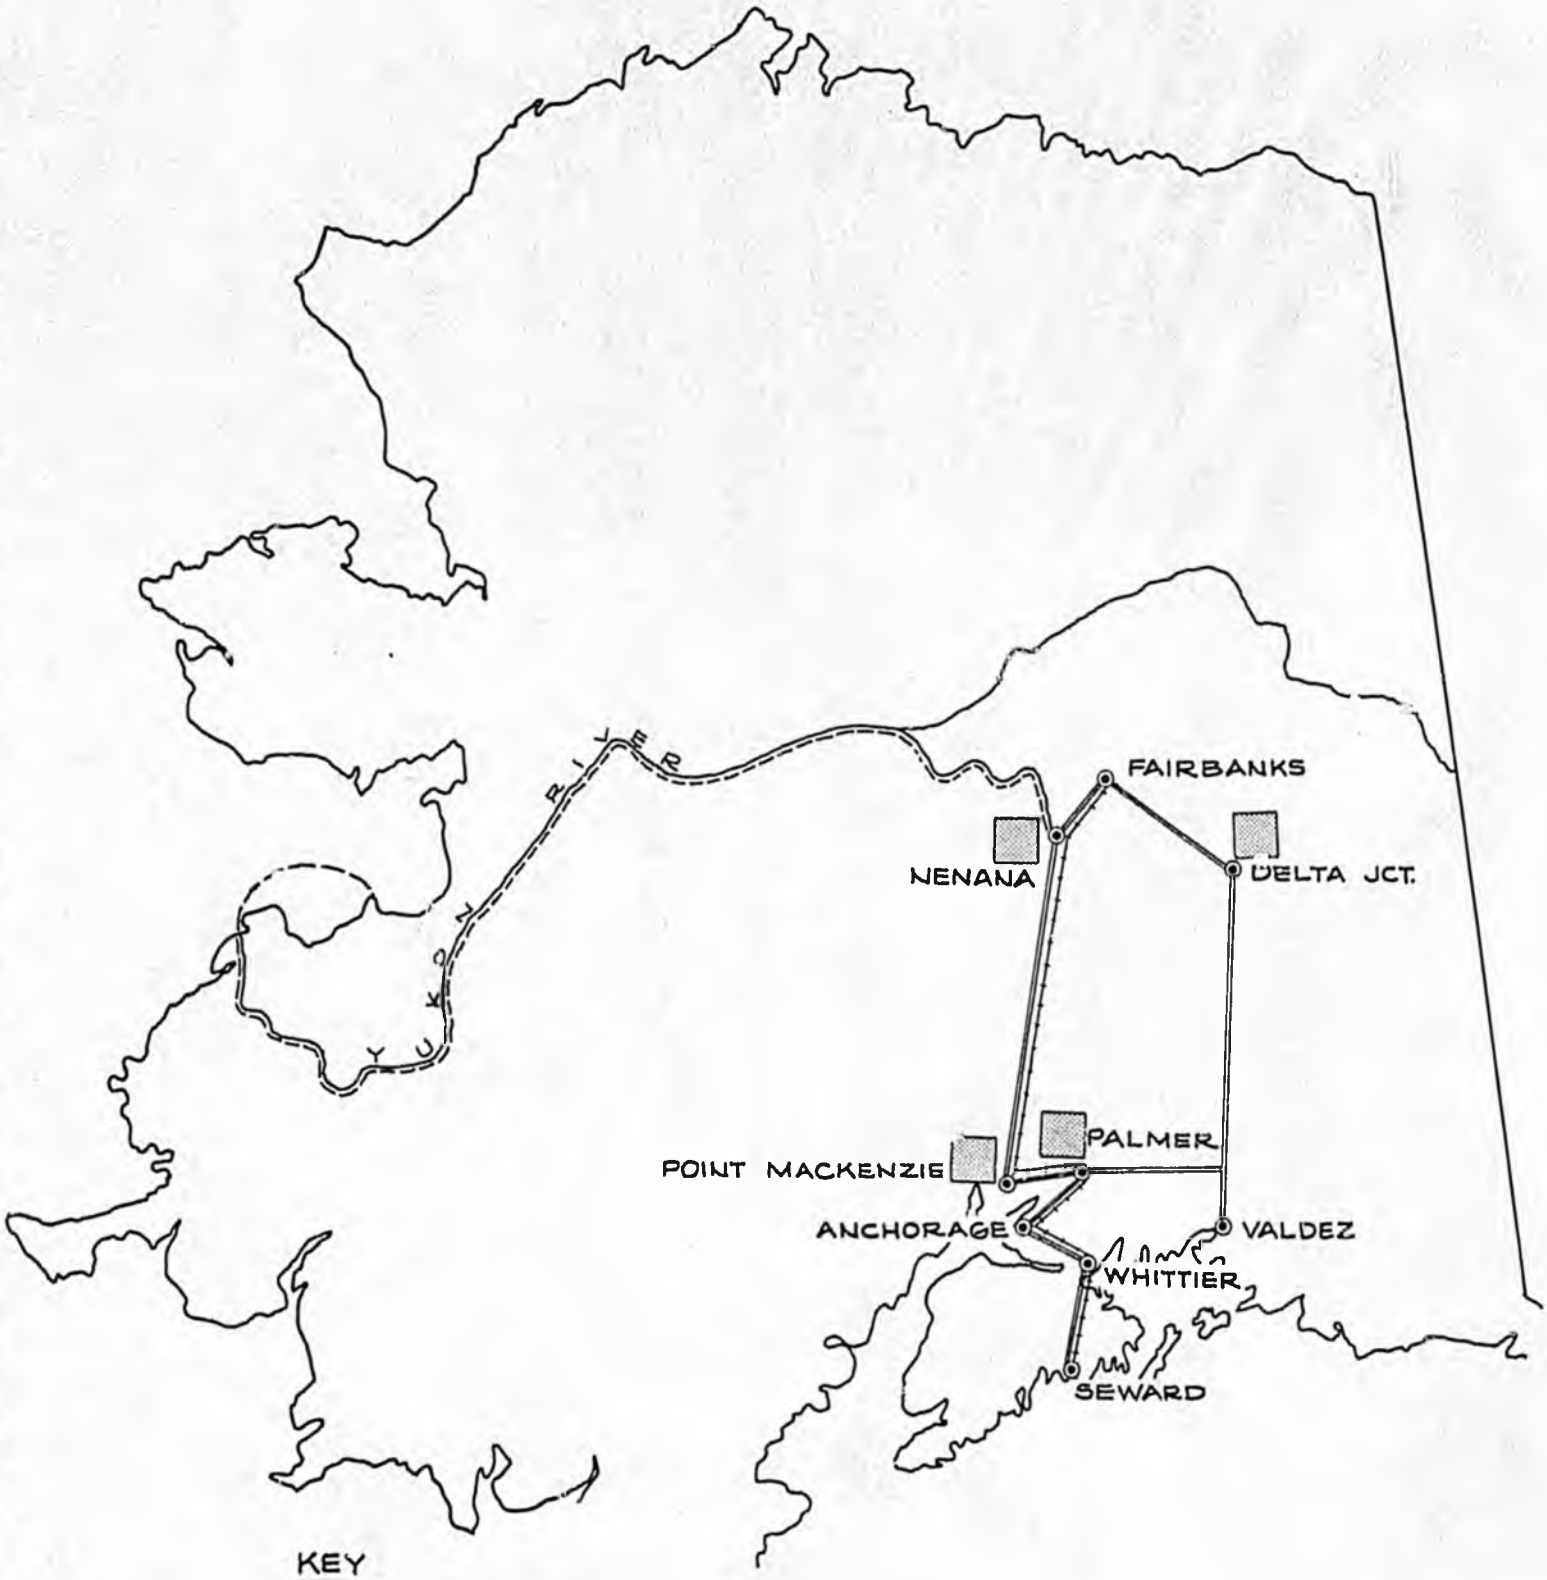
Below is a list of total costs for the Nenana Phase I access road. These costs include engineering and construction costs, and are reasonable order-of-magnitude costs for work as of Spring 1981. When more thorough soil testing is complete, costs may be actually lower.

**Three (3) bridges, 23 miles of primary access road (secondary standards) and 14 miles of secondary and tertiary roads connecting farm lots:	$ 15,319,700.00
**Right-of-way Aquisition:	$ 30,300.00
**Contingency:	$ 1,840,000.00
**First Year Maintenance:	$ 115,255.00
T O T A L	$ 17,305,255.00

CHAPTER II
OVERVIEW OF COMMODITY ROUTING SYSTEMS

There are three potential commodities being considered for the Nenana Agricultural Area. Studies to determine the viability of livestock raising and vegetable production are presently being undertaken. However, with the imminent success of the Delta Barley Project in mind, grain production must be given the major consideration. Thus, of the three (3) alternatives, grain production will be considered in this report as the primary user of any routing system established. This is due in part to the information available concerning grain production in Alaska (Delta Junction); the predominance of Class III soils in the project area, which are well suited to grain production; and the present lack of information regarding vegetable and livestock production.

This section will provide an overview of the routing systems that exist in the Nenana area. To remain within the scope of the overall report, no analysis of routing economics will be undertaken here. Rather, the focus will be on how the roadway network and processing area within the project might impact the various routing systems. It should be noted however, that the agricultural industry relies on economically competitive transportation modes. Thus, every effort should be made to maintain maximum flexibility of the routing systems available to various agricultural areas in Alaska. Figure 1 illustrates the commodity routing systems available to various agricultural areas in Alaska. Nenana has a distinct advantage in being on all four modes of routing. This, coupled with its central location within the state, makes it a focal point for the distribution of agricultural goods both within the state and for export.



Though there are four systems available for use (air, truck, rail, and barge), raw agricultural goods generally move using the bulk facilities, low operating costs, and proximity to markets available on truck and rail modes.

1. Truck Routing

Routing agricultural commodities by truck is most efficient over short hauls and when backhaul possibilities are definite. Thus, truck routing

FIGURE 1

COMMODITY ROUTING SYSTEMS

would most likely be used in local/intra-state distribution of vegetables grown in Nenana and livestock processed there, having Fairbanks and Anchorage as the two major points of transfer. The hauling of grain by truck, while possible, is not likely due to the large number of trucks needed to haul the grain and the more economical use of rail in hauling such bulk quantities.

Starter herds for livestock would be most effectively transported by truck up the Alaskan highway. Ultimately, red meat for export would be transported by truck to Fairbanks International Airport and flown to foreign markets.

2. Rail Routing

Routing of agricultural commodities by rail is most efficient in bulk handling and long hauls due to its low operating costs and established routes. Currently, problems exist in the availability of equipment to handle grain. As agriculture continues to develop in Alaska basic routing necessities such as these will become economically viable and therefore these are seen as only initial or short term problems.

If fertilizer is to be brought to Nenana from plants on the Kenai, the use of truck routing is most efficient. There is only one transfer required in this mode while there would be three in the rail mode. Rail would be most effective in bringing fertilizer produced in the Lower 48 to Nenana as there is a direct rail link between most ports and Nenana.

Due to high construction costs involved in establishing new rail lines, ($1.4 million/mile) no additional routes are seen in the immediate future and short spurs into the agricultural area seem unlikely at this time.

3. Barge Routing

Though barge routing has low operating costs and relatively large bulk handling capacities, certain restrictions make the use of this mode unlikely in the routing of grain for export. There is potential local

routing of fresh and processed vegetables, processed red meat, and some grain.

Three restrictions to barge routing of export grain are the short season available to both barge operation and agriculture, which often times are not compatible, the more feasible routing of grain by rail, and the difficulty in establishing a scheduled shipping route into the St. Michaels area.

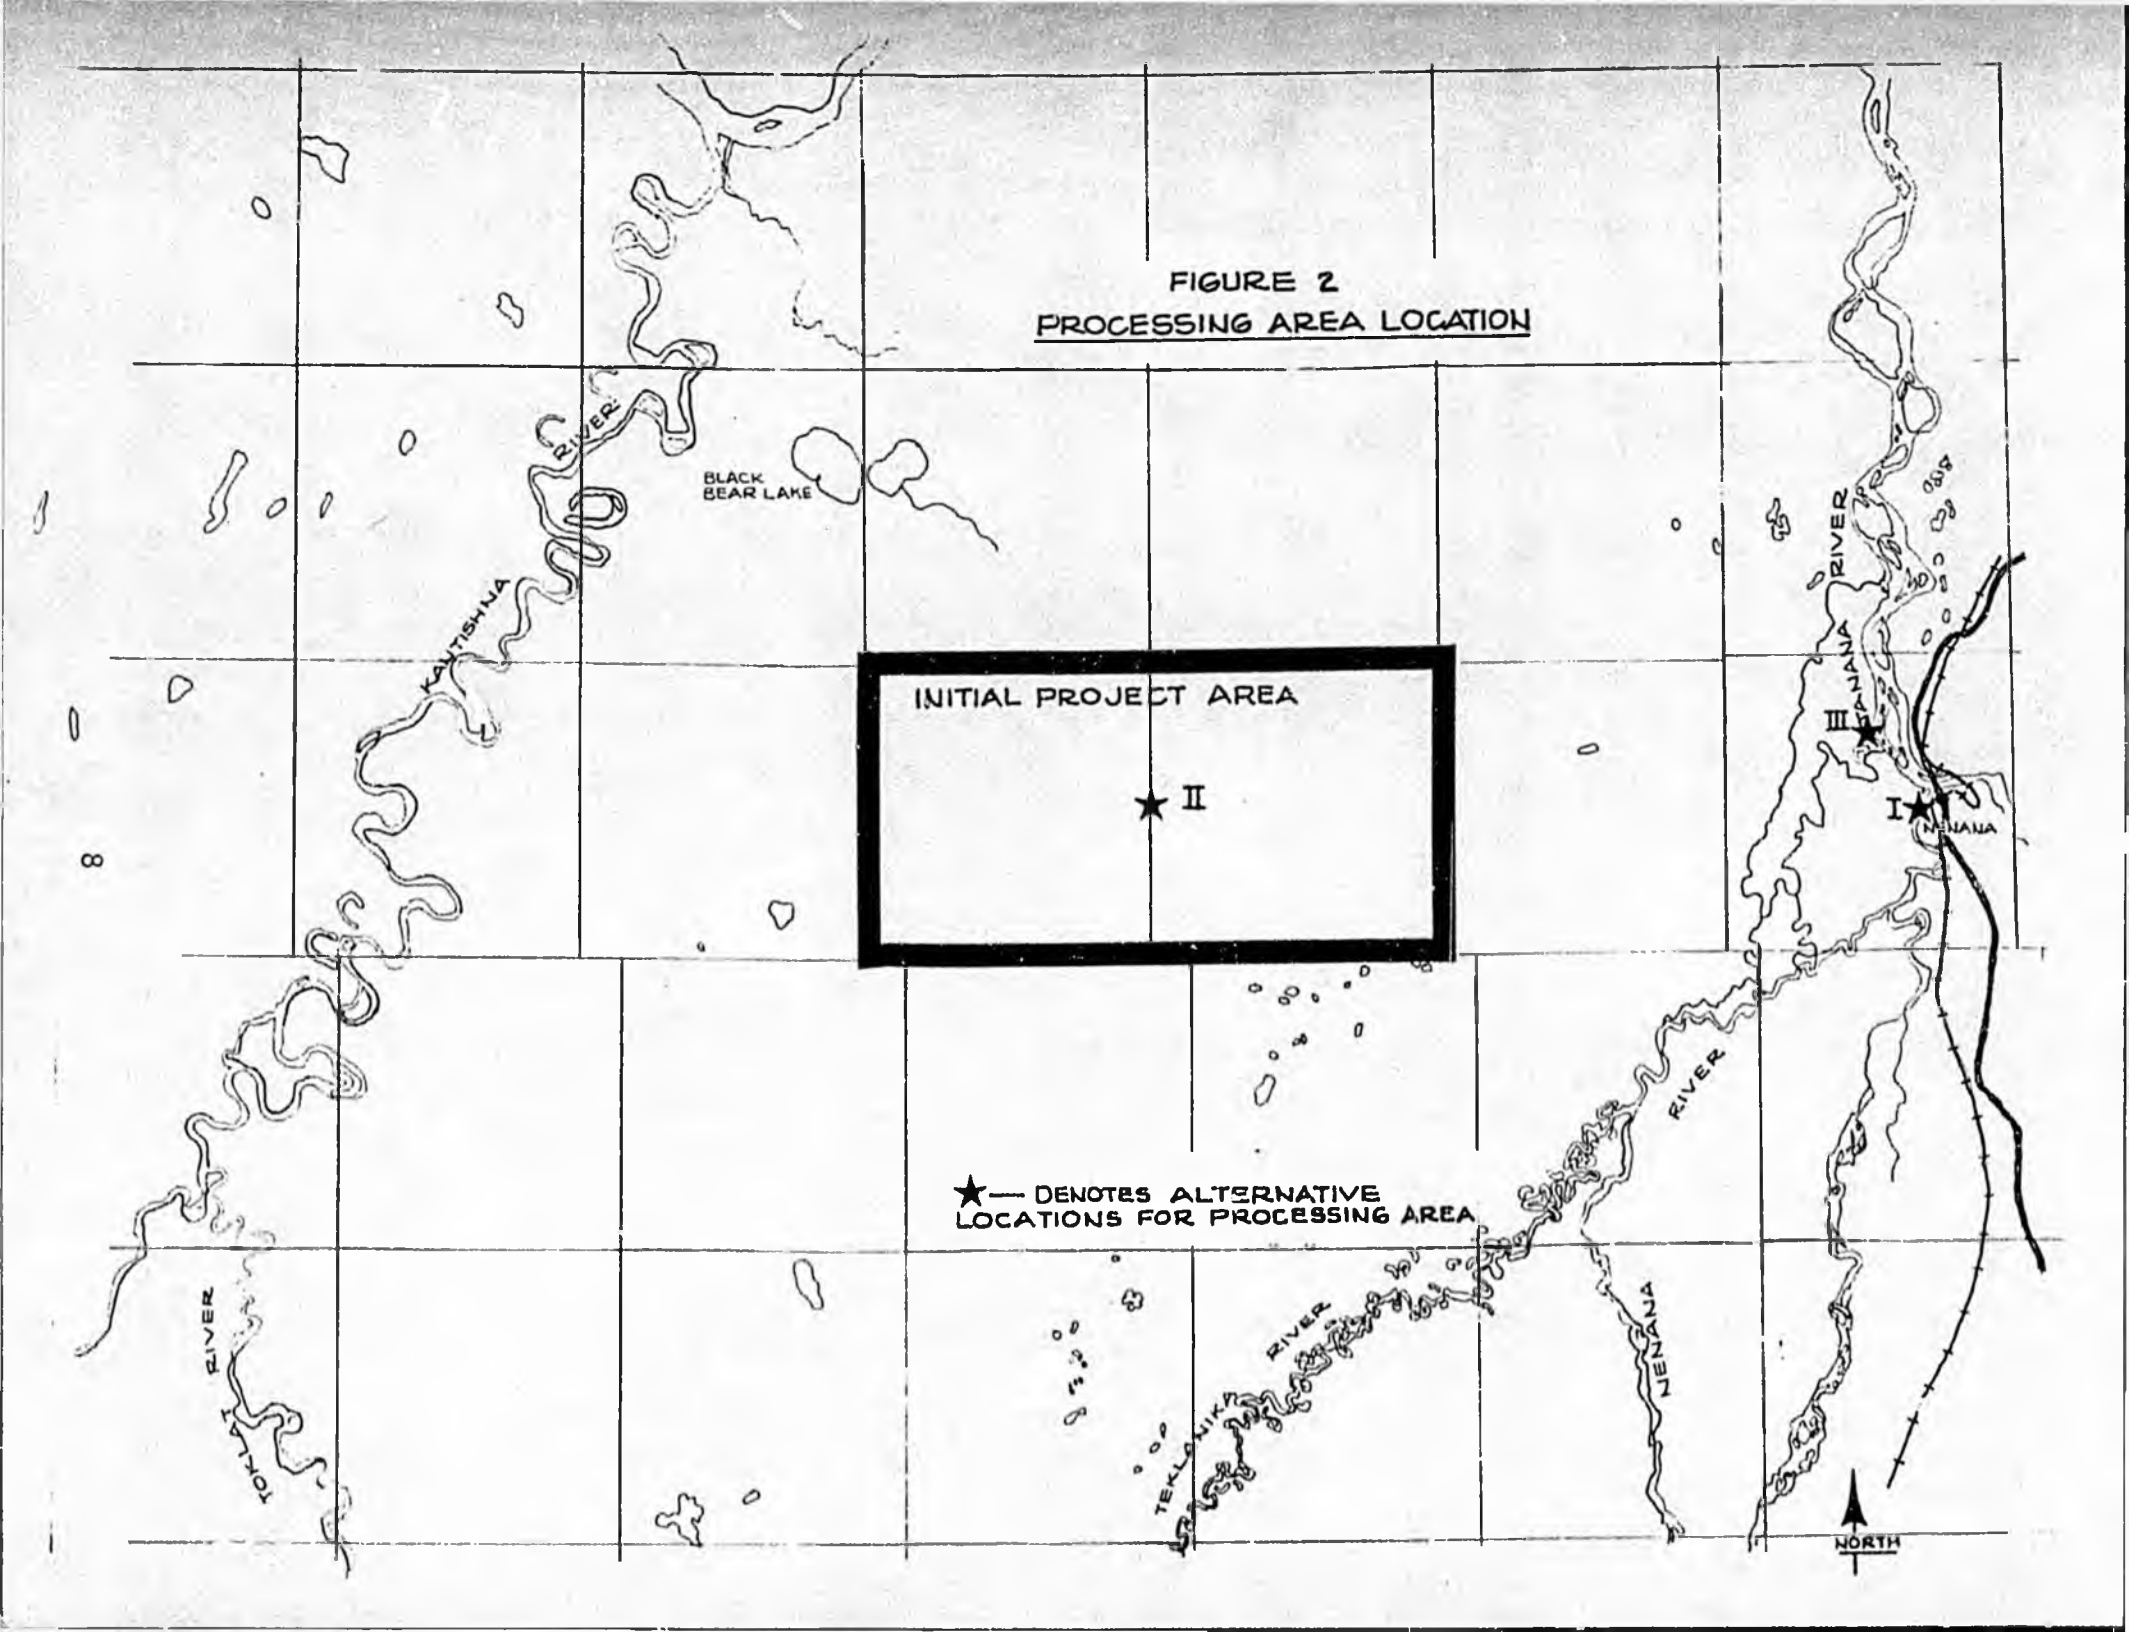
4. Local Air Routing

At the present time, Nenana Air Service, Inc., is the only scheduled air service based in Nenana. They fly supplies to Tanana, and offer charter services to other communities in the bush. Alaska Central Airways, Inc., uses Nenana as a flag stop on flights to Galena and Tanana. It is possible that air service could provide various bush communities with the agricultural commodities grown and processed in the Nenana area (primarily vegetable and red meat).

5. Port Facilities

Currently, the Alaska Agricultural Action Council has Requests for Proposal out to various ports in Alaska with the intention of establishing a permanent facility for the exploration of Alaskan produced grains. Appendix 1 is a copy of the RFP sent to Anchorage, Palmer, Seward, Valdez, and Whittier. Seward was to be utilized for the 1980 barley crop from Delta Junction, though due to a shortened harvest season, no grain was exported this year.

CHAPTER III
PROCESSING AREA LOCATION



Any project area impacts on the routing systems center on the location of a processing area as this is where the major unloading, loading and any processing and packing would take place. To maintain the flexibility desired, this processing area should be located where all routing systems are readily available, or to somehow allow for efficient routing of commodities. The end three locational concepts were developed for the processing area and presented below. Advantages and disadvantages for each concept are identified and impacts on existing routing systems discussed. These should be addressed in making a decision on the location of the area.

1. Concept 1 - Processing Area in City

Figure 2 illustrates a possible processing area in, or adjacent to, Nenana. This location is ideal from a transportation standpoint as all modes of routing are available within a corridor, meaning virtually no capital improvements to reach the area, the area is close to the residences of people who would be working in the processing area; and a source of water is close at hand for processing purposes. Impact from possible noise, smell, and air output could pollute the surrounding area and cause ice fog problems for the airport, though wind data indicates that the direction of prevailing winds might mitigate any air pollution problems within the community boundaries. A potential flood hazard exists due to the areas' proximity to the rivers; and soils maps indicate heavy permafrost in some areas.

2. Concept II - Processing Area Centered in Project Area

In this concept, the processing area would be located along a rail spur in the center of the project (Figure 2). This would cut down the distance between the field and the processing area; reduce the area's impact on the community of Nenana; and, if the spur were to connect Nenana and Tanana, it would create another access to the Tanana area and reduce travel time for

commodities traveling by barge. However, this concept would entail considerable capital expense in terms of a transportation corridor linking the processing area with the existing modes; water would not be as readily available for industrial use; commodities, if shipped by barge to the final destination, would have to be handled twice (load rail/load barge); and locating the area in the center of the project would take up a considerable amount of valuable agricultural land. Workers driving to the area pose potential traffic congestion problems on the bridge and main roads, and the commuting cost is the largest as this location is the furthest from Nenana.

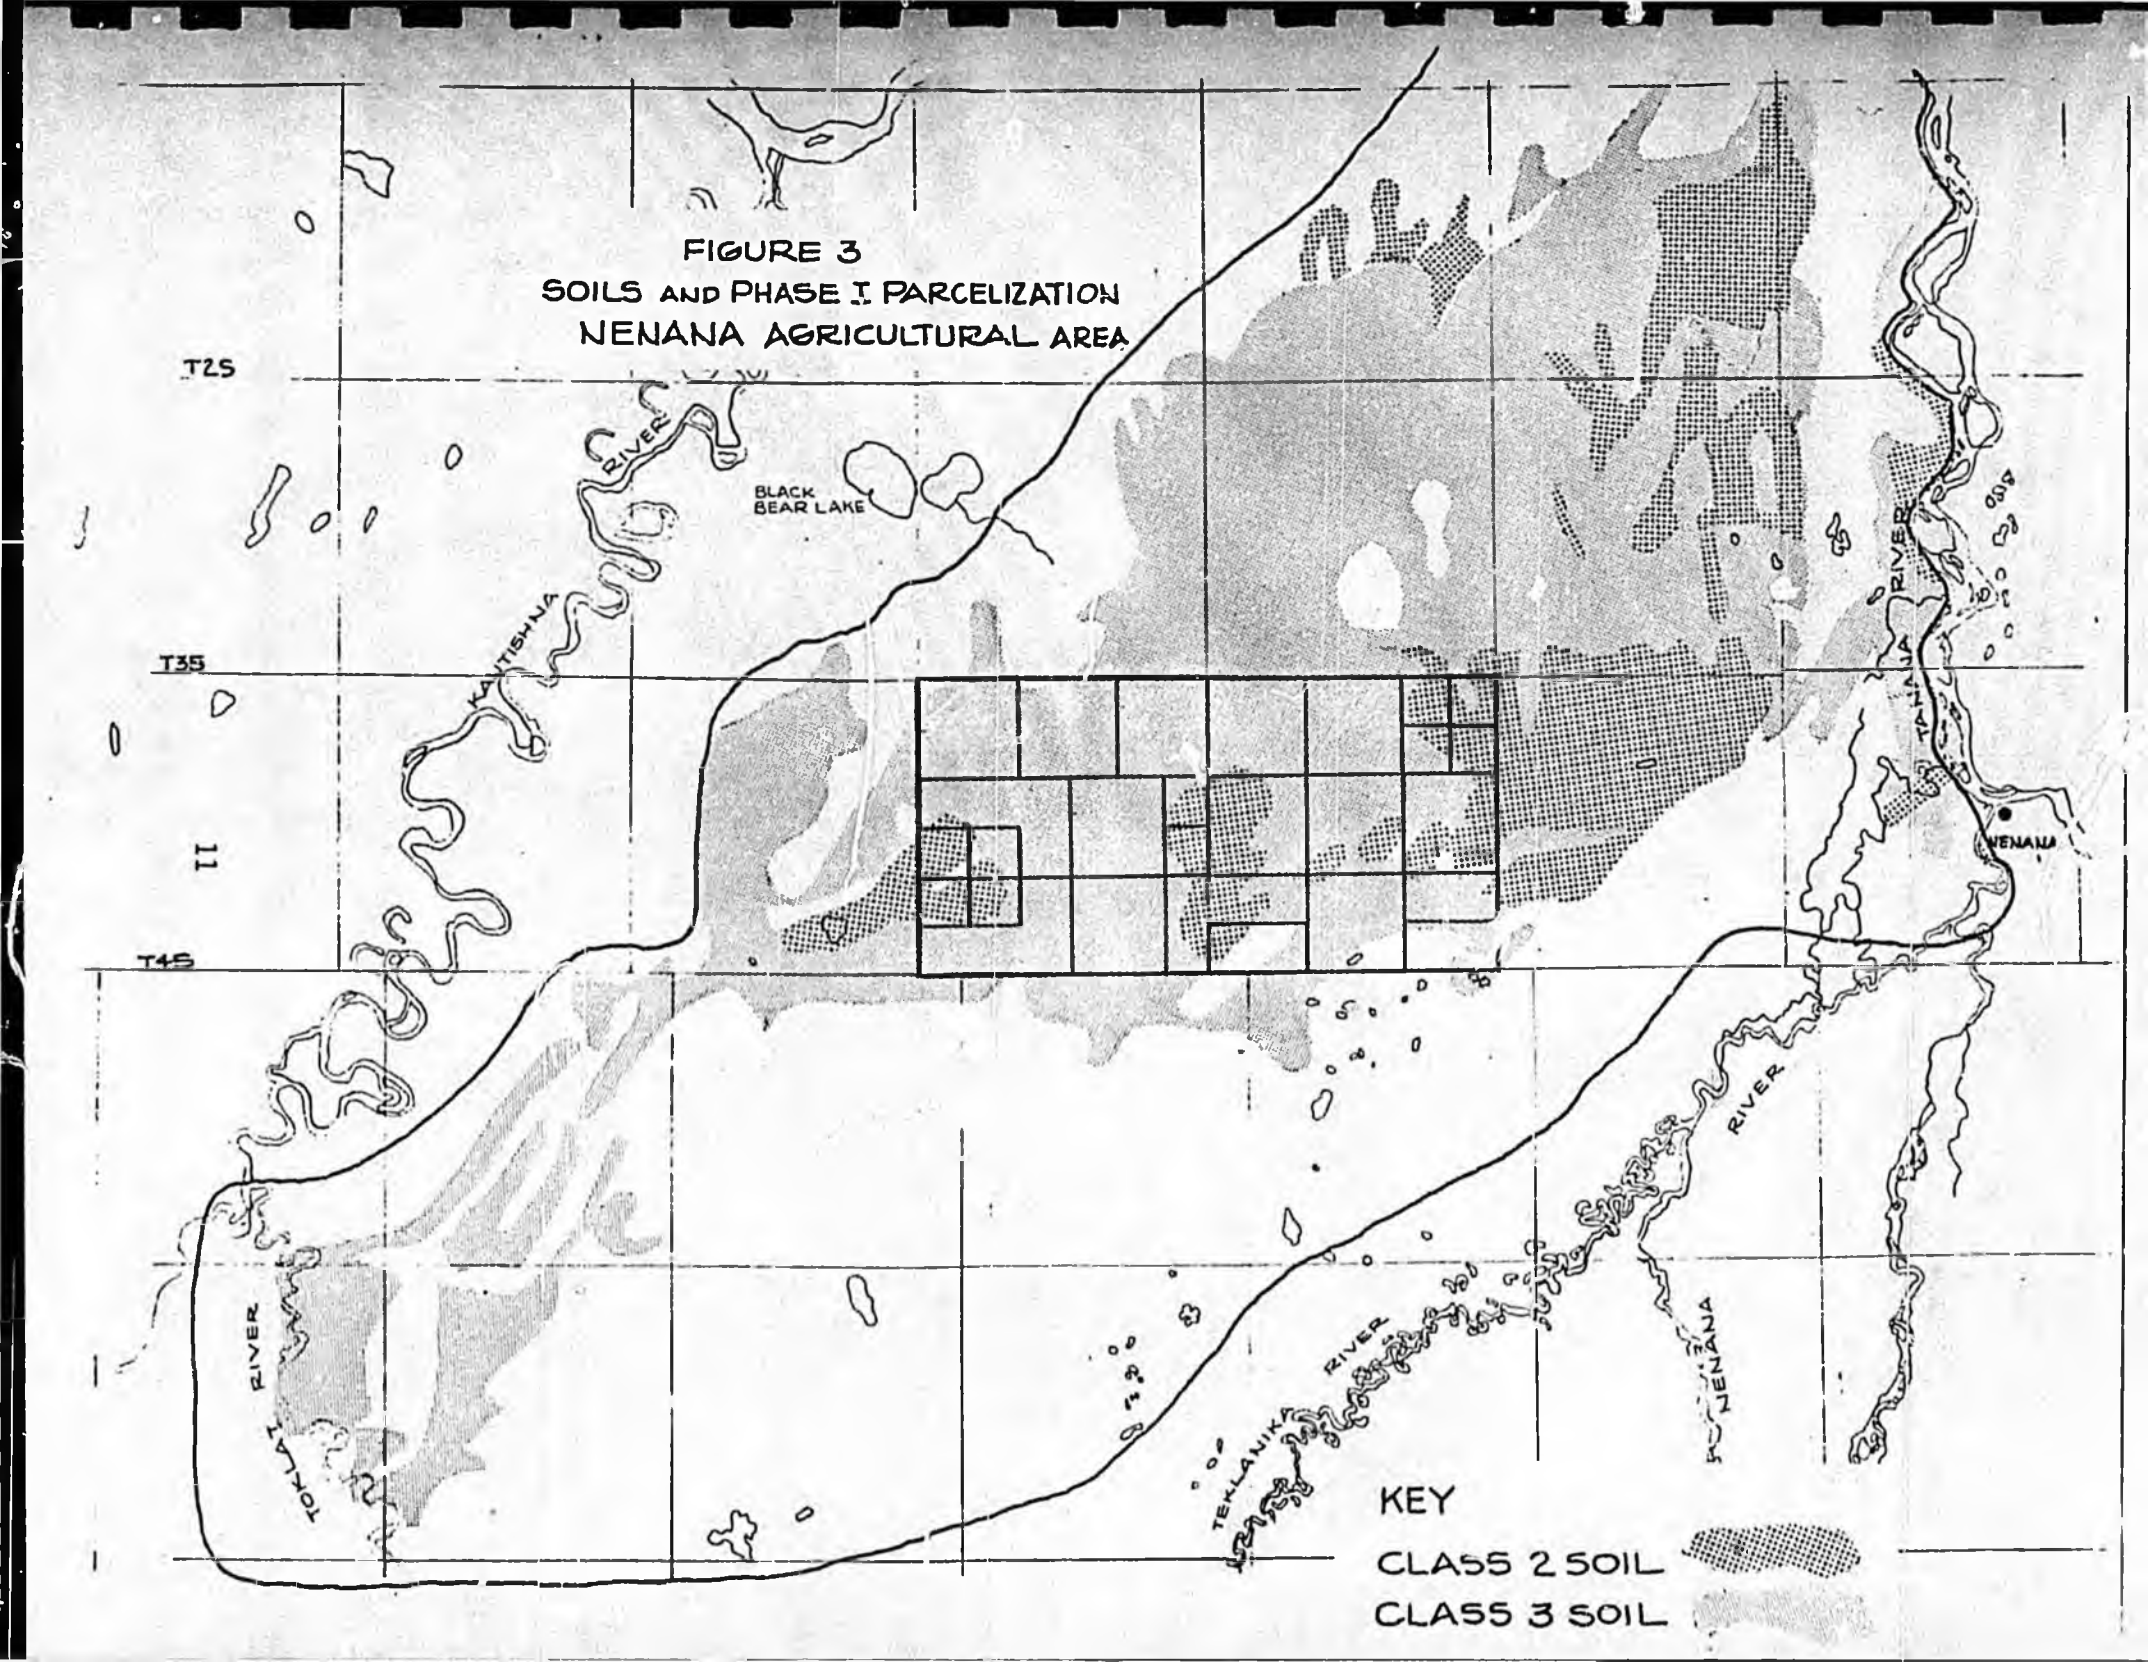
3. Concept III - Processing Area Downstream from Nenana (Figure 2)

In this concept the processing area would be located approximately a mile down the Tanana River from Nenana. Being a distance from the community would alleviate possible incompatability and pollution problems associated with being near other activities. Locating the area here would allow for only a moderate capital investment in terms of a transportation corridor. All modes of routing could still be available; though, as the major expense in linking the areas with the main rail system would be a railroad bridge across the Nenana River, an expenditure of this magnitude is unwarranted unless the spur continued on to the community of Tanana.

CHAPTER IV
PRELIMINARY ROADWAY NETWORK

Before establishing a roadway network for the project area, several factors were reviewed which affect its layout. Soil in the area was reviewed for its agricultural capability and the location of permafrost and bogs. Land ownership was reviewed to determine location of state-patent lands and boundaries of other ownership which might affect roadway layout, (easements and rights-of-way are discussed in Chapter VII). A parcelization scheme was put together based on agricultural capability of the soil and present land ownership.

Various phases of road development are proposed linking the project area with Nenana and the Parks Highway at Rex. The initial phase would provide access from the project area to a central processing point and loading point in Nenana (as discussed in Chapter III). Other phases would continue expansion into areas adjacent to Phase I and would include the development of a road to Rex. Layout, design and estimated costs of this development are discussed in this section.



1. Soils and Parcelization

Figure 3 indicates the soil characteristics in the project area. Class II and III soils are highlighted and are the only soils considered adequate for agricultural production. Class IV and below are being considered for grazing purposes. Areas of permafrost and bog are also identified, as these areas must be avoided both in agricultural activities and roadway construction.

It has been recommended that Class II soils be put into parcels of 640 acres and under for purposes of vegetable production and Class III soils into parcels of 2,560 acres and over for purposes of grain production.[1]

---

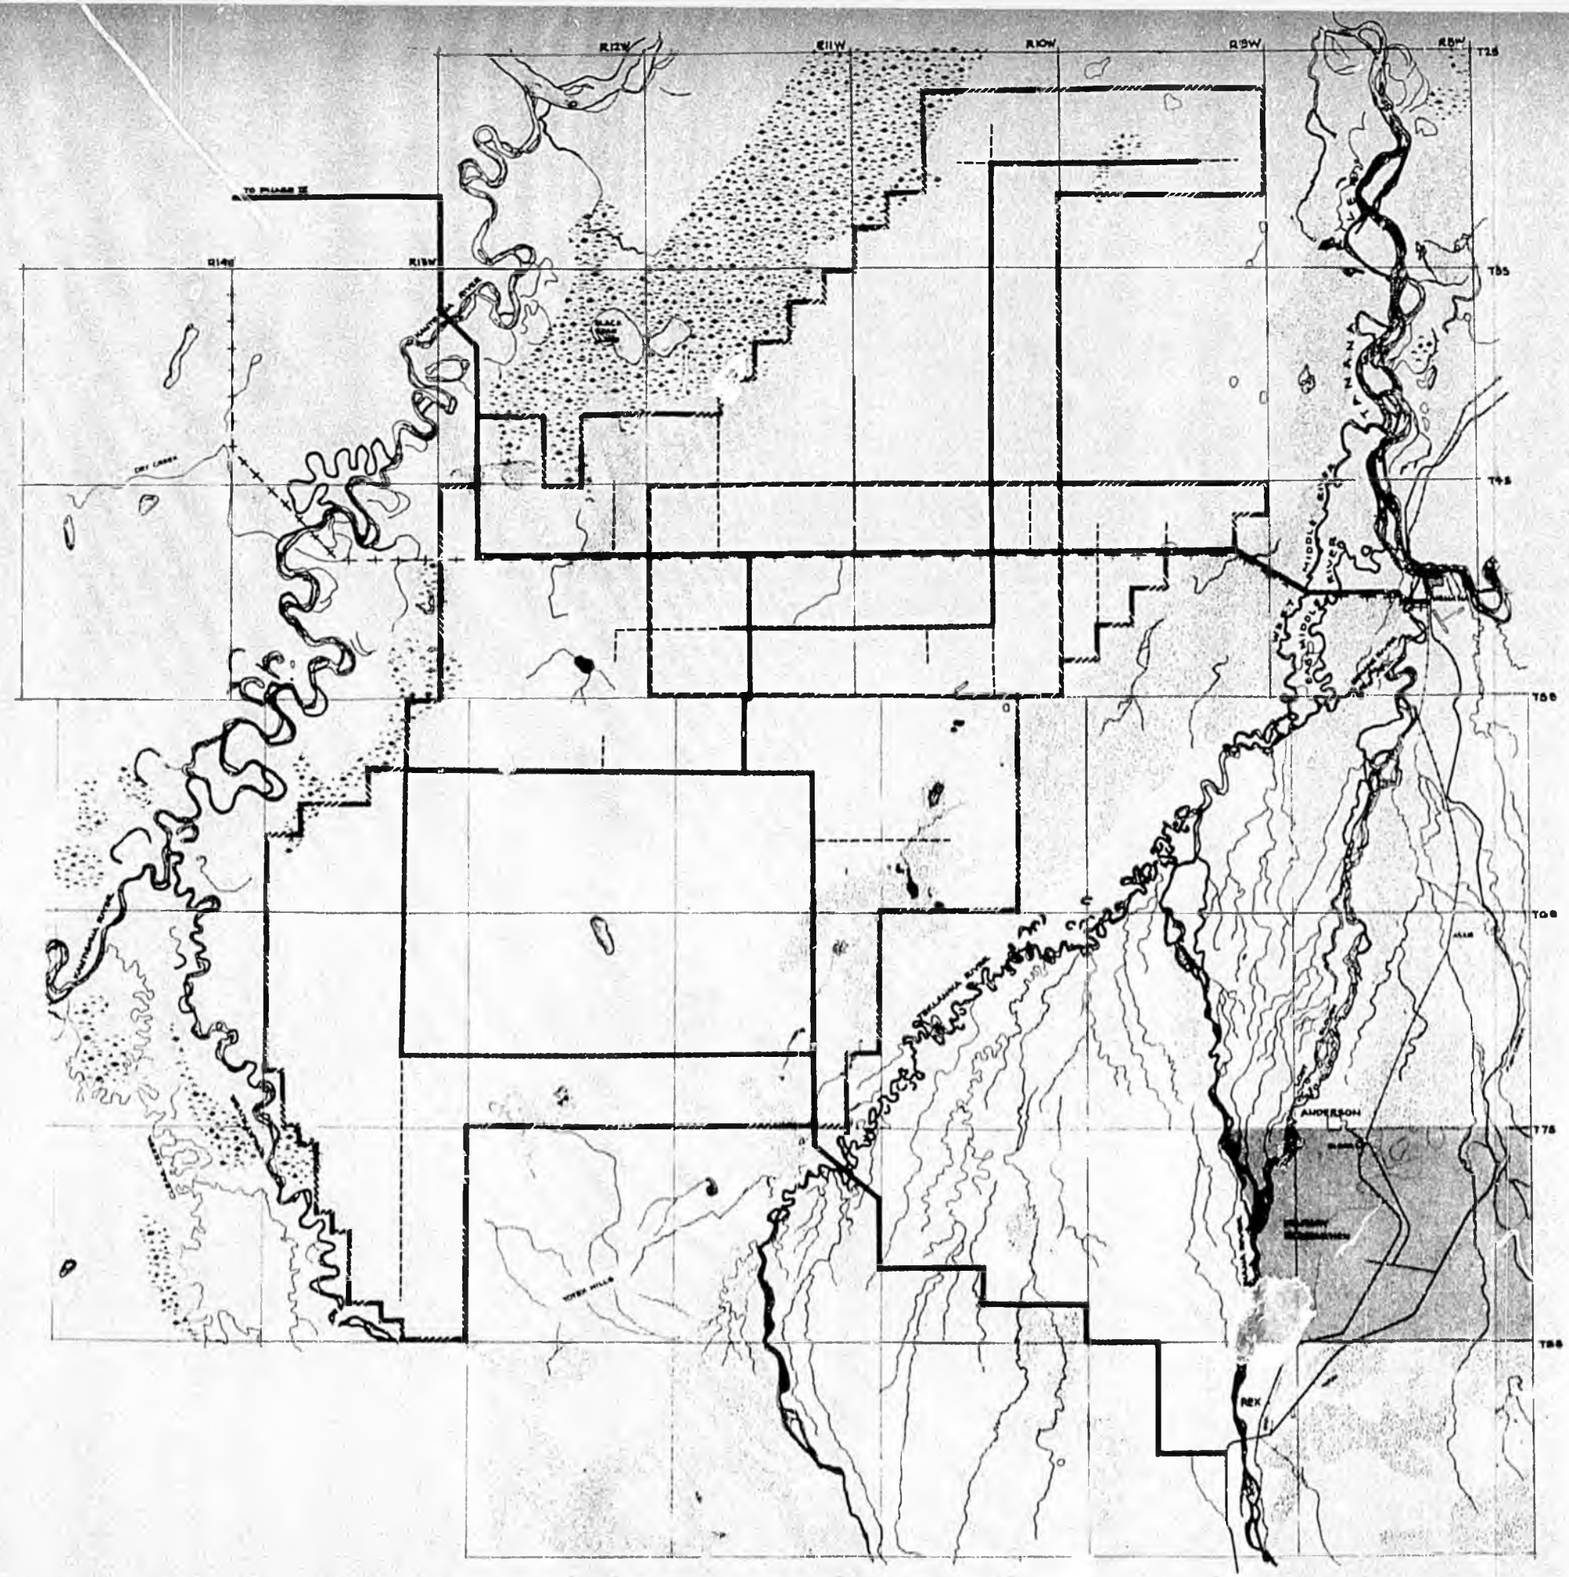
CLASS 3 SOIL



It was also assumed that several small lots (5-10 acres) would be made available to increase the population base and reduce utility costs. Figure 3 illustrates a possible parcelization of the initial project area based on the above information.

2. Layout

Figures 4 and 5 illustrate the proposed roadway network providing access to the initial phase of the project. This network attempted to follow section lines for two reasons: First, to take advantage of section line easements; and second, parcelization will most likely be in aliquot parts. This roadway layout is flexible in that it can be modified fairly easily once the final parcelization is made. This network also lends itself to future branching out from the initial phase in a wheel and spoke manner. Collector and feeder roads were laid out to provide access to parcels and where traffic was estimated to be primarily local.

3. Roadway Design and Estimated Costs

Preliminary soils studies indicate a more economical alternative than the standard pit borrow method of building roads may be utilized for the Nenana Agricultural Project. The combination of minimal overburden with suitable structural material directly beneath lends itself to the roadside borrow concept of construction. This method utilizes the structural material from within the right-of-way to build the road, eliminating the more expensive remote borrow-haul method. The organic overburden is stripped and stockpiled at the edge of the right-of-way for use as backfill to bring the sideslopes and ditches to grade. This method of construction will require rights-of-way in excess of the 100 foot section line easements that may be available. In areas where adequate right-of-way is not available or where pockets of unsuitable structural material exist, the pit borrow method will have to be utilized as an alternate construction method. Tables A and B show estimated 1981 cost comparisons indicating that approximately $35,000.00 per mile may be saved by utilizing the roadside borrow method of construction. Figure 6 illustrates typical roadway sections for all types of roads in the project using both alternatives

as well as a typical section for roadway through unstable areas or permafrost. The proposed gravel road system within the Nenana Agricultural Project will be quite similar to the existing gravel roads that service the Delta Barley Project with respect to usage and climatic influences. State Department of Transportation figures indicate that the Fiscal Year of 1979-1980 average maintenance cost per mile per year for 41.36 miles of gravel road near Delta was $2,490.00. Assuming a 25% inflation factor from 1980 to 1982, surface maintenance and snow removal costs for gravel roads in the Nenana Agricultural Project should average approximately $3,115.00 per mile for the Fiscal Year of 1982.

CHAPTER V
STREAM CROSSINGS

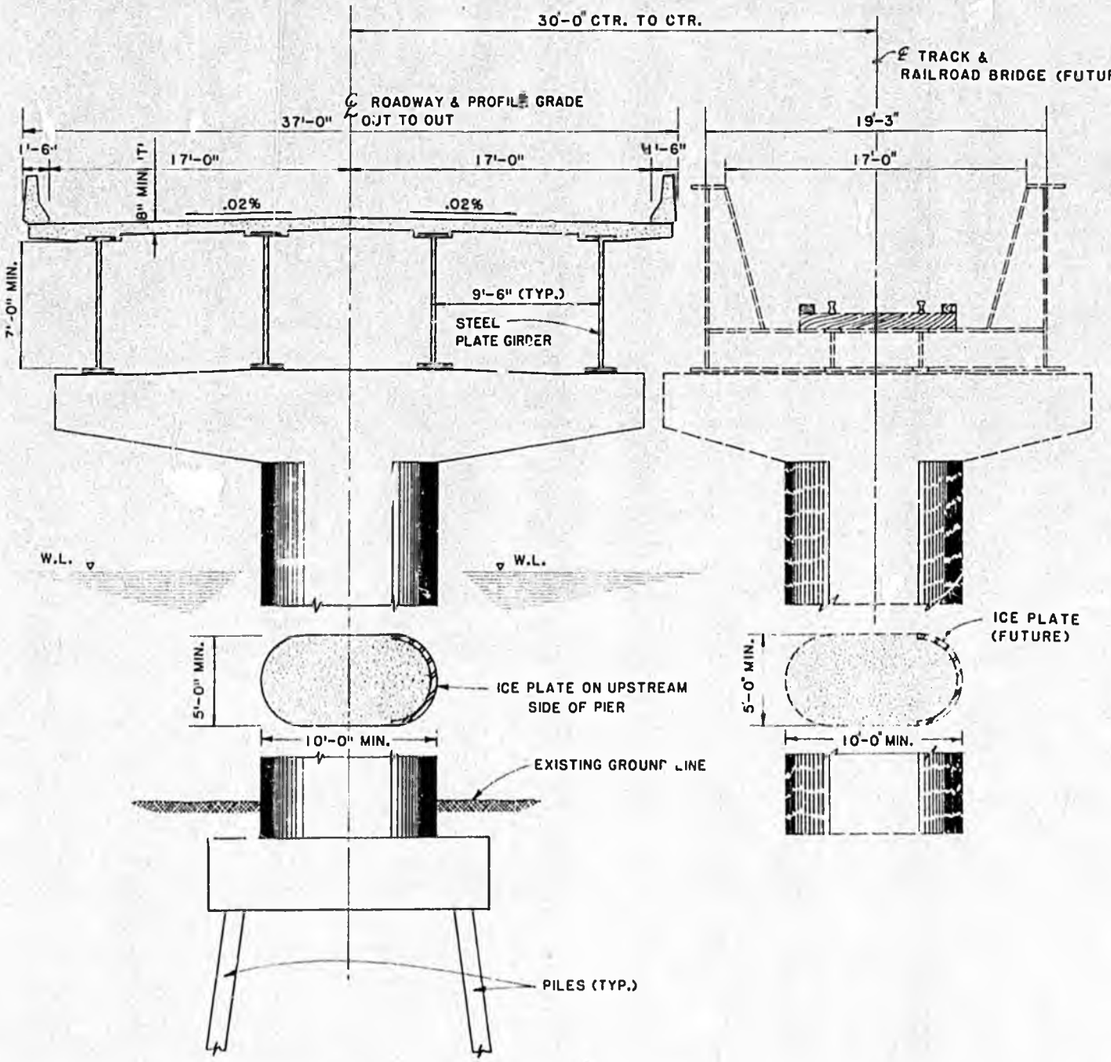
The roadway network which will serve the agricultural development in the Tanana Valley will originate in Nenana. Nenana has rail, highway, and river transportation facilities, and is the logical focal point for this transportation link.

Direct access to Nenana does require a major river crossing structure over the Nenana River, as well as several other smaller structures for the West Middle and East Middle Rivers and for the Little Nenana River. Since Nenana will be the origin and destination for much of the traffic generated in this valley, the optimum cost benefit ratio for users would dictate that the river crossing be placed in close proximity to Nenana.

A reconnaissance of the Nenana River Valley upstream from its junction with the Tanana River was made by air. The general mapping of the region was reviewed and using the air reconnaissance and the mapping, it is possible to determine the general characteristics of the river in this area. For an extended distance upstream from the river junction, the Nenana River flows through a broad, flat flood plain. Generally, the stream is highly braided, with evidence of a shifting stream occuring through the years. There is evidence that the erodable nature of the river valley, coupled with periods of high stream flow, due to the source of the stream in mountainous terrain, results in frequent shifts in the river course and in general instability of the river channel.

Although it is not clear cut, there appears to be some higher degree of stability of the river in the vicinity of its junction with the Tanana River. Because of the general development in this region, some minor bank control has been done in the past. Future development of this area would warrant additional stabilization measures in the vicinity of Nenana, and these measures would not only benefit the community, but could also serve to protect the roadway link to the Tanana Valley.

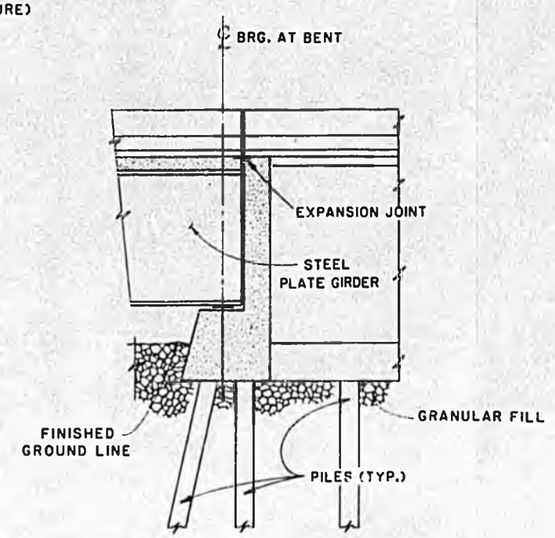
Limited geological information is available for the area. It is assumed that the river is of sufficient size for a thaw bulb to exit in the



general vicinity of the river. Generally, it is understood that unconsolidated gravels and sands which are an outwash from the mountains prevail through the area. Since these underlying materials are unconsolidated, it is anticipated that piles will be required for the foundation support. In accordance with local practice and also as a general appropriate application, it is anticipated that steel H piles will be used for all foundations. Soil borings will be required at the location of the substructure units along with a geotechnical report to more accurately identify actual insitu conditions.

At the West Middle and East Middle River and at the Little Nenana River, it appears that the stream flow is minimal. Thus, there is a possibility that permafrost does exist in these locations. The presence of permafrost would be determined by future soil borings.

There is not a gaging station in the vicinity of Nenana on the Nenana River and as a result, there is limited hydrological information available. Generally, the approximate ground elevation of Nenana is 351.0 feet. A high water elevation on the Tanana River at the railroad bridge is 358 feet for a 50 year flood. The proximity of the bridge crossing to the railroad bridge justifies the use of this elevation for the high water elevation in the development of the bridge concept plan.



A tentative location for the river crossing has been set at a location approximately 3,000 feet upstream from the Tanana River. This location will permit the roadway to connect with Tenth Street, which has been extended by the City across the railroad. At this location, the river channel is relatively well defined and a crossing can be made without skewing the structure, which will optimize the structural length and result in minimum costs.

The proposed structure is a three span stucture with a length of 560 feet having spans of 172'-6". 215"-0". 172'-6". (Figure 7,8) The superstructure consists of four steel girders using composite action with a concrete deck. The concrete deck has a clear roadway width of 34'-0" with concrete barrier curbs.

1 OF 3

Using a high water elevation of 358 feet, a minimum clearance of 8'-0" is indicated above high water to low steel, which exceeds the suggested 6'-0" clearance by AASHTO Bridge Specifications. The necessary clearance over high water, and the depth of the superstructure will elevate the roadway above the approach roadways. The roadway elevation will be achieved by using a gradient on the approach roadways from each direction, and with a vertical curve on the structure with its apex near the center of the structure. The vertical curve will be designed for a speed of 60 mph.

A three span bridge will require the placement of two piers in the stream flow. The velocity of the stream, heavy water volumes, and thick ice will require large massive piers. Presently, it is contemplated that these will be single shaft concrete piers with steel ice plates. Footings will be located below the stream bed sufficiently to be below anticipated scour depths, and will be supported on steel H piles.

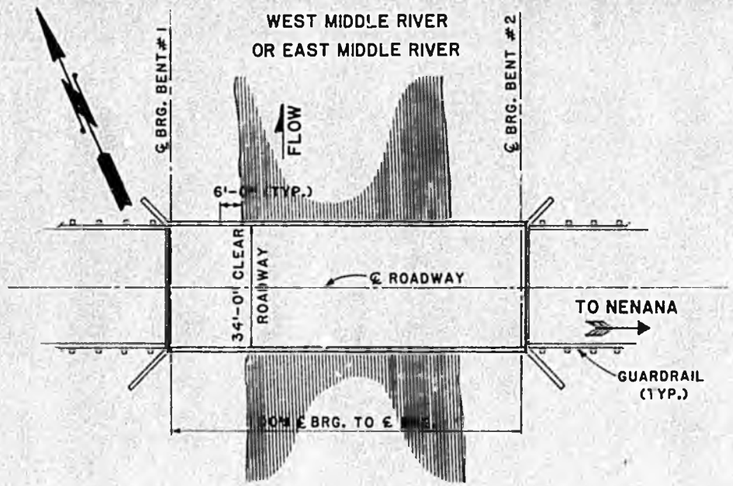
The abutments would be concrete stub abutments supported on steel H piles. These abutments will be located on embankment and the material for the embankment in the vicinity of these abutments should be non-frost susceptible soils to prevent frost heave.

Without specific information on water volumes, it has not been ascertained that the indicated waterway opening is sufficient to accomodate the flows. However, with low profile approach roadways, the approach roadways would be inundated during periods of flooding with flow crossing over the roadway.

Initially, it was contemplated that rail service to the area was a consideration. There presently does not exist justification for rail service to the study region based on cost-benefit ratios. However, should the ultimate development of the area occur with the addition of agri-processing plants, there may well be the economic need and demand for rail service to the area. This rail link would logically tie to the existing rail line at Nenana. To avoid the establishment of an additional and independent transportation corridor, the future rail line would closely parallel the roadway corridor. As a result, the river crossing of the Nenana would be

parallel and adjacent to the highway crossing.

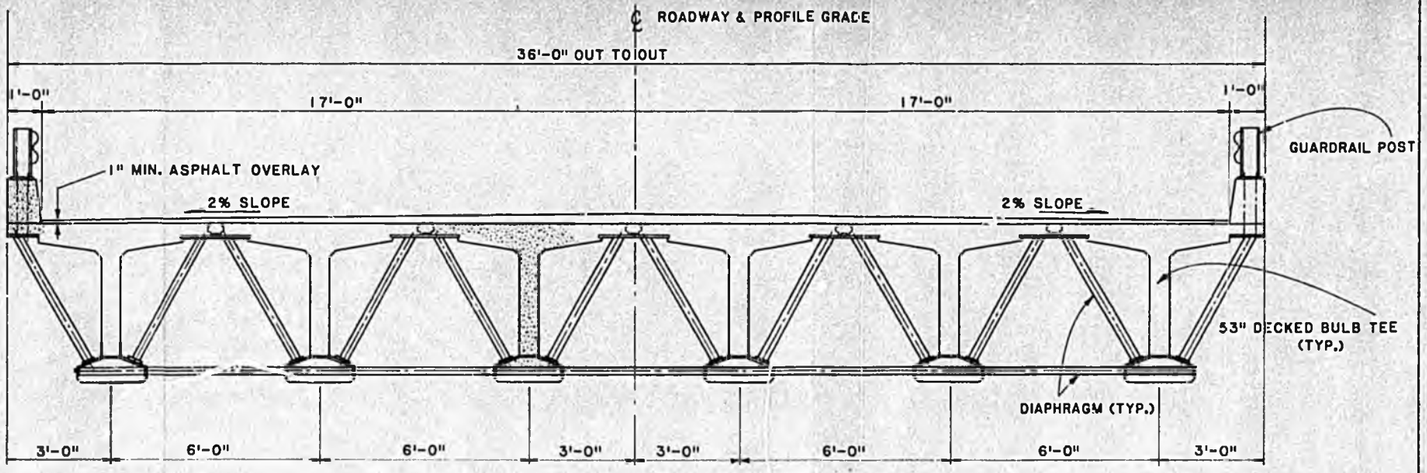
The railroad bridge would preferably be a through girder steel bridge structure on the upstream side of the highway bridge. The superstructure and substructure would be independent of the highway bridge. Some overall cost savings would be achieved if the substructure for the railroad bridge was constructed with that of the highway bridge, but this would require a substantial investment for a structure which may not be constructed at any time in the near future.



In recognition of the severe lateral forces imposed on the substructure, the railroad would have an identical span arrangement with that of the highway bridge. This is also necessary to avoid impeding the flow of water and ice which would occur if non-aligned piers for the two structures were used. The superstructure would be designed for a Cooper's E-80 loading. It is assumed that the rail line would be a low speed operation and that the structure could be a non-ballasted deck.

The approach grades to the railroad structure would have gradients not exceeding 2% and would be somewhat longer than the roadway approaches.

With some inherent instability of the stream, stabilization of the river banks may be required upstream from the structure. It is not expected to be a major undertaking, but it will be necessary to inspect the upstream banks in the vicinity of the proposed structure to ascertain if any revetments are required.



For purposes of development of a concept, a clear span of 100 feet was assumed for the West Middle and East Middle River. (Figure 9) These structures would consist of concrete bulb T superstructures, supported on concrete stub abutment with steel H piles. For the Little Menana River Bridge, it was assumed that a large culvert could be used to contain the flow in this stream.

No site specific information was available in the form of surveys, geological information, or hydrological data, and these concepts for the

structures were developed using aerial photographs and other undocumented data. As more specific knowledge is gained, the proposed structures may change in concept and size.

Other minor structures will be required to provide flow for drainage areas lying in the path of the proposed roadway. Presently, it is contemplated that round culverts will be adequate for this purpose.

The following is a list of total costs, including soil exploration, engineering, construction inspection, and construction cost for each of the bridges over Nenana River and its tributaries. Costs related to various items such as right-of-way, utilities, bridge embankments and inflation factors are not included in the estimate. Costs presented are to be reasonable order-of-magnitude costs for work as of Spring 1981.

	NAME	TOTAL COST
A.	Nenana River Bridge	$ 4,040,400
B.	Little Nenana River Bridge	$ 97,500
C.	East Middle River Bridge	$ 608,400
D.	West Middle River Bridge	$ 608,400
	TOTAL	$ 5,354,700

CHAPTER VI
PERMITS

Permits are required from both state and federal agencies. Use of land and environmental concerns will involve the state in all stages of the project; construction stages will also require federal permits. The application process has been divided into four (4) stages, based on anticipated work progress. A separate application for state permits will be made for each of the four (4) stages, which are:

1. Survey and Boring-Bridges
2. Survey and Boring-Road (Phase I)
3. Bridge Construction
4. Road Construction

For state permits, Master Applications will be used (as detailed below); and, the staged application procedure will more effectively identify required state permits. Federal agencies are easier to identify, as fewer are directly involved; however processing time is six (6) months or longer. The federal government is now in the process of making a wetlands determination, the outcome of which would identify the need for any federal permits.

State Permits

A Master Application has been made to the Alaska Permit Information Center in Fairbanks. The Master Application serves as a notice of intent to the state of a proposed project. The Center notifies state agencies (about 200), and they have fifteen (15) days to respond. All responses including necessary individual department permit applications are returned to the center. The process is outlined in the attached Master Application Information Sheet, (See Appendix 2). The applicant is responsible for completion of all applications and payment of fees.

Key state departments are Fish & Game, and the Department of Environmental Conservation (DEC). State Division of Lands will be concerned about right-of-way. Fish & Game is primarily concerned with stream crossing and will issue a Title 16 Permit; first stage boring work will be

subject to Fish & Game requirements. DEC requires Water Qaulity Certification under Section 401 of Public Law 92500. The Master Application process will identify all state agencies requiring permits for the individual stages. Agencies not responding to the Master Application within fifteen (15) days, may not later require a permit.[1]

With the state agencies, as with federal departments, preliminary review of the application prior to submission will expedite approval.

Federal Permits

Application to the Corps of Engineers is the principle step in the federal process. The Corps assures public notice of a proposed project; other agencies then respond to the Corps. Statutes that apply are:

1. "River and Harbor Act of 1899", Section 10.
2. "Clean Water Act", Section 404, covers use of fill material.
3. Permits required for use of areas defined as Wetlands and Floodplains.

A key agency that should review applications prior to filing is the U.S. Department of Fish & Wildlife Service. The Fairbanks office will work closely with the applicant; recommendations will be made so that proposed project will be within Fish & Wildlife guidelines. An important part of the review will be definition of Wetlands, if any in the project area. Time frame for the review will be 3-4 weeks and is now in progress.

The Environmental Protection Agency (EPA) and National Marine Fisheries Service will be concerned; but, individual contact at present does not appear to be needed prior to Corps application. Their reaction and progress concerning the Corps application, should be monitored however.

The Coast Guard grants permits to cross navigable rivers under Section 9 of the "River and Harbor Act of 1899".[2]

---

[1] Section 46.35.030, Water, Etc., Conservation (See Appendix 3).

[2] Interview with Mark Millea, Aids to Navigation Section, U.S. Coast Guard, Juneau, Alaska.

The Nenana River is classified in the Advanced Approval Category and requires no permit. The East and West Middle Rivers were determined to be distributaries of the Nenana River, thus being classified in the Advance Approval category as well, (Appendix 4).

No federal permits are required for preliminary survey and geotechnical work along the proposed roadway routing.

Additionally, a permit is needed to cross Alaska Railroad Terminal Reserve on the east bank of the Nenana River. The process to obtain this permit has been initiated though final results are still pending.

CHAPTER VII

LAND ACQUISITION FOR RIGHTS-OF-WAY

There are various methods available to acquire land for the roadway and utility rights-of-way in this project. The most straightforward of these methods is the use of section line easements granted through both state and federal statutes.[1] For the most part, the proposed roadway network follows section lines to take advantage of this easement. Other methods of acquiring land are included in the power of eminent domain. The use of eminent domain and section line easements, project rights-of-way requirements, and recommendations pursuant to the acquisition of those rights-of-way are detailed below.

1. Eminent Domain

According to Title 9, Article 4, Section 9.55.240, the power of eminent domain is available for use in acquiring land for the building of the roads, telephone lines, and power lines in this project. Proceedings instituted under the power of eminent domain are accompanied by a declaration of taking. This declaration must contain items describing the authority under which the property is taken, the public use for which it is taken, a description of the property, an estimate of just compensation, etc.[2] It has been stressed that the most important item to be contained in the declaration of taking is "a statement that the property is taken by necessity for a project located in a manner which is most compatible with the greatest public good and the least private injury."[3]

---

[1] Basis for section line easements: Act of July 26, 1866, (RS 2477), (43 CFR 2822, 43 USC 932); Chapter 19 SLA, April 6, 1923; Chapter 123 SLA, March 26, 1951; Chapter 35 SLA, March 21, 1953; Taken from workbook on Section Line Easements put together by Bill Newman, Fairbanks North Star Borough, Planning Department, 1978.

[2] A.S. 09.55.430.

[3] Ibid; Interview with Bill Satterberg, Department of Law, Highways Section, October 28, 1980.

The power of eminent domain could be utilized where section line easements are not already established and in the acquisition of land required beyond that granted in section line easements. This power is granted to both the state and first class cities such as Nenana.[1]

2. Section Line Easements

As detailed in Chapter IV, the roadway network has been laid out to take full advantage of section line easements. Following is a brief outline of the federal and state laws concerning section line easements and a method for determining which laws might apply to a certain piece of property.

(A) History[2]

The Mining Law of 1866 made an offer of free right-of-way over unreserved public land for highway purposes. This offer became effective on April 6, 1923, when the territorial legislature passed Chapter 19. Any lands in Alaska appropriated and patented after April 6, 1923 were subject to an easement along all sections, 4 rods (66 feet) wide.

The section line easements law remained in effect until January 18, 1949. On this date, the legislature accepted the compilation of Alaska law which also repealed all laws not included. The section line easement law was repealed.

On March 26, 1951, the legislature passed an easement law which dedicated a section line easement 100 feet wide along all section lines on land owned by or acquired from the territory. This was modified on March 21, 1953, to include an easement 4 rods wide along all other section lines in the territory.

To have an easement on a section line means that the section line must be surveyed under the normal rectangular system. On large areas such as State or Native selections, only the exterior boundaries are surveyed

---

[1]A.S. 09.55.420 (a).

[2]Taken from Workbook on Section Line Easements put together by Bill Newman, 1978.

hence, there are no section line easements in these areas (until further subdivisional surveys are carried out).

Since all federal land is reserved in Alaska at this time and since the section line easement will have any applicability on any finalized D-2 land since the land will be reserved at the time of any survey.

Land surveyed by special survey or mineral survey are not affected by section line easements since such surveys are not a part of the rectangular net.

Section line easements relate solely to highway or road use by the public. They cannot be used for powerlines or restricted private access. The date of survey and appropriation of the land must be considered in determining the presence of a section line easement.

(B) Methodology[1]

Using the date of entry and the date of survey plat approval, an analysis of section line easements would proceed as follows:

A. If date of entry predated survey plat approval there is no easement.

B. If entry predated April 6, 1923 (date of enabling lagislation for section line easements) there is no section line easement.

C. If survey plat approval predated April 6, 1923, but date of entry is after April 6, 1923, but before January 18, 1949, there is a section line easement.

D. If survey plat approval is during the period of January 18, 1949 and March 21, 1953, and date of entry falls within this period, there is no section line easement.

E. If survey plat approval is during the period of January 18, 1949 and March 21, 1953, and date of entry falls after March 21, 1953, there is a section line easement.

F. If the land is in state ownership, there is a section line easement.

G. If the land was disposed of by the state or territory during the period of January 18, 1949 and March 26, 1951, there is no section line easement.

H. United States Surveys (U.S.S. and Number) and Mineral Surveys (M.S. and Number) are not a part of the rectangular new of survey. If the rectangular new is later extended, it is established around these surveys. There are no section lines through a U.S.S. or M.S., therefore, no section line easements can exist on such areas.

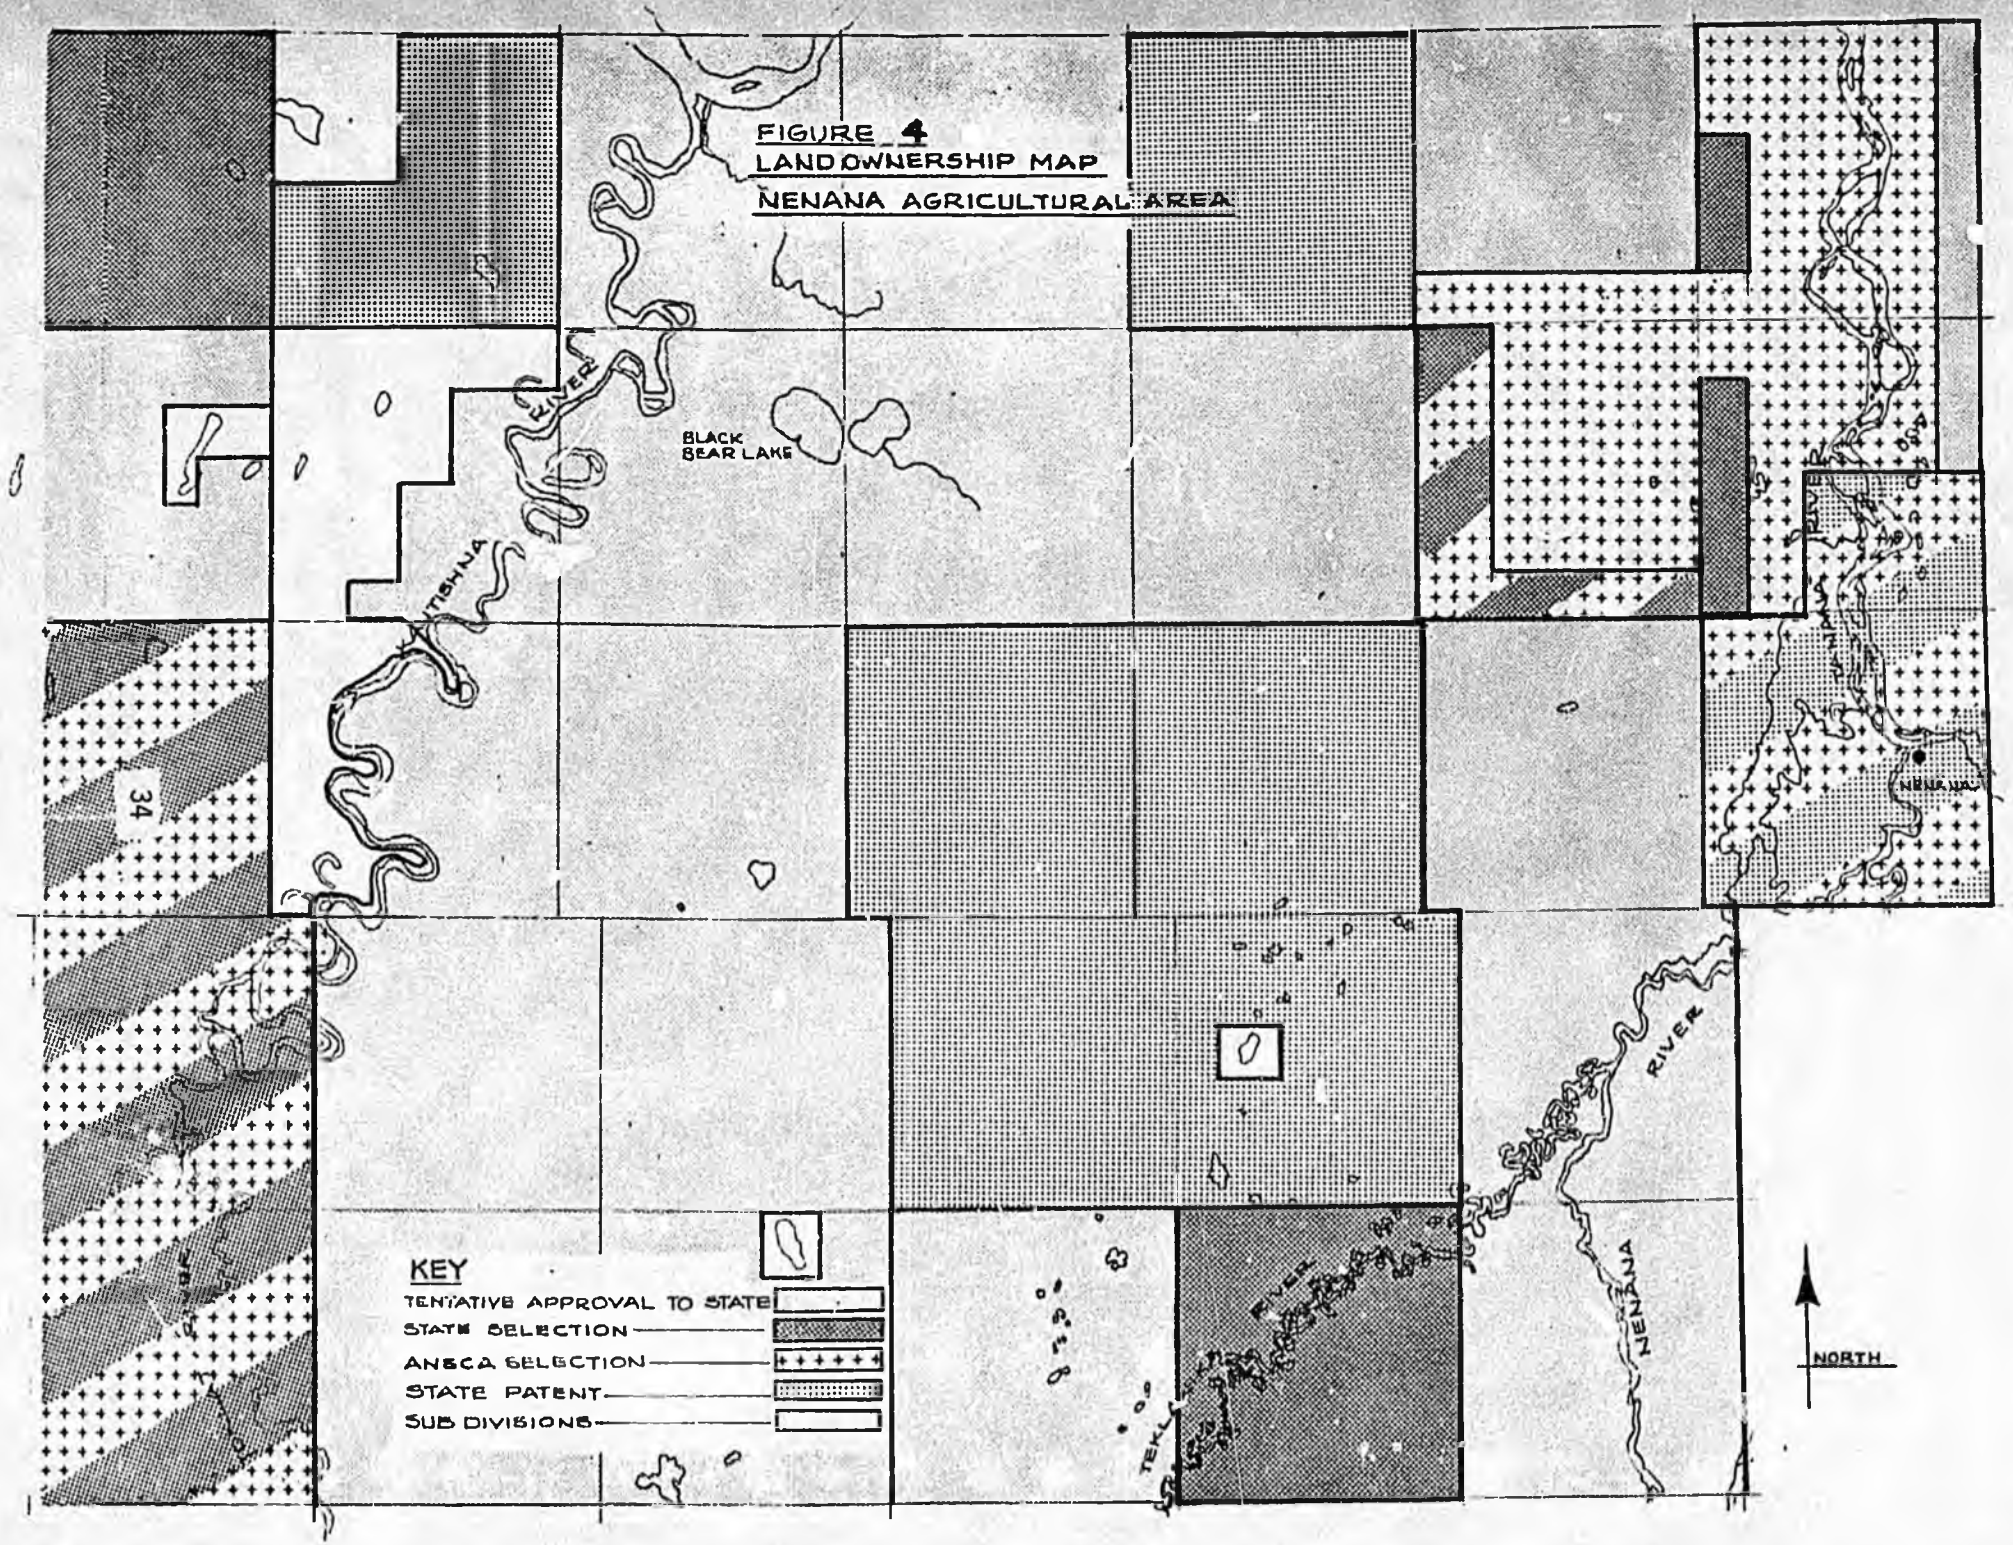
---

[1]Taken from "Section Line Easement Research Technique" put together by the Fairbanks North Star Borough, Planning Department, 1979.

There may be many other situations which would require evaluation and decision on a case by case basis.

3. Project Right-of-Way Requirements

Figure 4 presents existing land ownership in the project area. Land in the initial phase of the project was chosen because it is state patented. The proposed roadway traverses a township which has been tentatively approved for state patent and a township including both state patent land and private property. The bridge crossing the Nenana River crosses private land along the river's west bank. Property along the east bank is currently classified as railroad terminal reserve. The entire township in which Nenana lies is being claimed for private use under the Alaska Native Claims Act. Thus, rights-of-way will have to be acquired from state, federal, and private ownership.



As discussed in Chapter IV, a right-of-way 200 feet wide is required for the main and collector roads in addition to a 30 foot utility easement on either side of the roadway easement. Within the roadway easement are 32' and 28' of traffic lanes for the main and collector roads respectively; 52-54 feet of ditch on either side of the traffic lanes; and 30-34 feet of space for storage of organic to be used in the building of slopes. Feeder roads require 150 feet of roadway easement with a 30 foot utility easement on either side. (See Figure 6).

4. Conclusions and Recommendations

Acquiring rights-of-way can become a complex issue with the potential to slow-up or even stop a project. In the foregoing sections it was found that the proposed roadway would traverse state, federal and private property. It was also found that required rights-of-way were greater than easements available along section lines. It has been recommended that use of "blanket condemnation" for necessary right-of-way might be a way of avoiding many problems.[1]

Though this is an area which definitely requires legal expertise, current Judicial practice is that an Engineers' expertise will not be substituted for Judiciary opinion if it is clear that the Engineer has exercised his or her judgement in roadway layout.[1] This expertise and many other resources could be made available should the road be built under the umbrella of the Local Service Roads and Trails Act (LSR&T).

Development and construction of the roadway network under LSR&T appears to be the most expedient approach to the acquisition of rights-of-way and many other developmental requirements discussed in this section. Under LSR&T the state can use its mechanisms and powers to acquire necessary right-of-way in accordance with AS 19.05.080-.9.05.120.[2] The current revision of the act would provide funds for purchase of rights-of-way and gravel. However, this revision is yet unsigned by the governor and there remains some controversy in the legislature regarding the specific provisions for the purchase of right-of-way.[3] Until the issue is resolved however, funding for the purchase of right-of-way will have to come through some other legislative vehicle.

Construction of the roads under LSR&T would also guarantee maintenance either through the Department of Transportation and Public Facilities or local government by way of revenue sharing.[4]

CHAPTER VIII

Cost-Benefit Study of Phase I Access Routes

Two options are availalbe for the access road to Phase I of the Nenana Agricultural Project. Option One is a 22.2 mile route from Nenana to the Center of Phase One that requires four bridges to be built. Option Two is a 34.7 mile route from near the Rex siding that requires one bridge across the Teklanika River. A cost analysis, reduced to a per-year basis, indicates that the Nenana route will cost $1,472,913.12 per year while the Rex route will cost $1,517,365.48 (Tables C - G). User costs are estimated to be $3,218,713.50 for the Nenana route and $9,167,753.50 for the Rex route. These figures indicate that the Nenana route will result in a net savings to the general tax payer of approximately $44,500.00 per year and a net savings to the user of approximately $5,949.000.00 per year for a total savings of $5,993,500.00 per year.

A cursory review indicated that freight costs per metric ton from the center of Phase I to the siding will be $3.66 per ton (utilizing rail from Nenana) for the Nenana route and $4.15 per ton for the Rex route resulting in a net savings of $0.49 per metric ton from the Nenana route.

Table C

Capital Costs Projected to 1981

Estimated project center: 1/4 corner common to sections 13 and 14, T4S, R11W, F.M.

Planned road life - 20 years, structures - 40 years, Right-of-Way - 60 years

Estimated Right-of-Way Costs - $5,000/Acre

Estimated Road Costs - $275,000/mile - Type "RB", $310,000/mile - Type "PB"

Estimated Maintenance Costs - $3,115/mile

Estimated Bridge Costs - Nenana Route - $5,354,700, Rex Route - $608,400

Estimated Interest Rate - 10%

	Nenana Route	Rex Route
	22.2 Miles Gravel 0 Miles Paved	34.7 Miles Gravel 28.9 Miles Paved
Right-of-Way Costs	$1,345,454.55	$2,254,545.46 0
Capital Recovery Cost	134,989.45	226,198.55 0
Construction Costs	$6,140,000.00	$9,542,500.00 0
Capital Recovery Cost	721,204.40	1,120,862.05 0
Bridge Costs	$5,354,700.00	$ 608,400.00 0
Capital Recovery Cost	547,566.27	62,214.38 0
Maintenance Cost/Year	$ 69,153.00	$ 108,090.50[1]
Total Costs/Year	$1,472,913.12	$1,517,365.48 0

[1] Traffic from the Nenana Agricultural Project would approximately double the average daily traffic on the paved section of the George Parks Highway from Rex to Nen-ana. Current maintenance costs are primarily climate-related with negligible traffic-related costs. For this reason it is assumed that project-related traffic would not appreciably affect maintenance costs for this section of highway.

Table D

User Cost: Dollars-Per-Year

CHAPTER IX

COMMERCIAL VIABILITY OF THE AGRICULTURAL TRANSPORTATION SYSTEM

Commercial viability of a roadway network can be defined as how the system lends itself to an increase in benefits to the primary commercial user. In this case the grain producers will be considered the primary users initially; and it is assumed that, while the other agricultural industries may have different transportation needs, costs and analytical approach would be similar.

As stated in the introduction to this report, transportation is an important aspect in rural development. A commercially viable transport system is a major cog in the success of agricultural development in Alaska. The Final Report of the Rural Transportation Advisory Task Force states that it is vital to assure the efficient movement of agricultural products and farm inputs, "both because of the geographic dispersion of farming, and because of export of agricultural products has become essential to the nation's balance of payments."[1] This statement holds true in Alaska especially when considering the present marketing plans for Alaskan barley and the transportation problems unique to Alaska's emerging agricultural industry.

This section presents an analysis of alternative methods for the transport of grain between the initial project area and Nenana. The purpose of this analysis is to provide a flexible range of options by which the transportation system can be made commercially viable.

A roadway is commercially viable if commercial user costs are low enough to provide for a competitive profit margin. This is accomplished through the design of a system which most effectively reduces costs essential to the transport of a commodity from farm to market.

---

[1] "Agricultural Transportation Services: Needs, Problems, Opportunities", The Final Report of the Rural Transportation Advisory Task Force, January, 1980., p. 11.

Four transport schemes were evaluated for transportation of grain from farm to market:

I. Home Storage, farmer hauls to Nenana
II. Home Storage, transfer point other entity transports to Nenana
III. No Home Storage, transfer point
IV. No Home Storage, no transfer point

To analyze the various alternatives for transferring the grain from farm to market, several assumptions of conditions and calculations of costs were made for the initial project area. The following is a brief description of estimated project area activity along with an outline of assumptions used to determine costs of the transportation system.

Project Area Activity

The initial project area is two townships in size lying 13 miles west of the City of Nenana. There are seventeen (17) grain farms and ten (10) smaller farms within the project under proposed parcelization. Additional 5 acre home sites are being recommended to increase the population base in the area. An estimate of grain production is based on a 1/3 fallow system and 42 bushels/acre, average harvest of barley. There are 39, 680 acres within the 17 grain farms. This would put 26,450 acres into barley at any one time. At 42 bushels/acre there would be approximately 1,111,000 bushels per harvest. This grain would be transferred to the railhead in Nenana and shipped from there to port. Additional transportation would be required by commodities originating on the smaller farms.

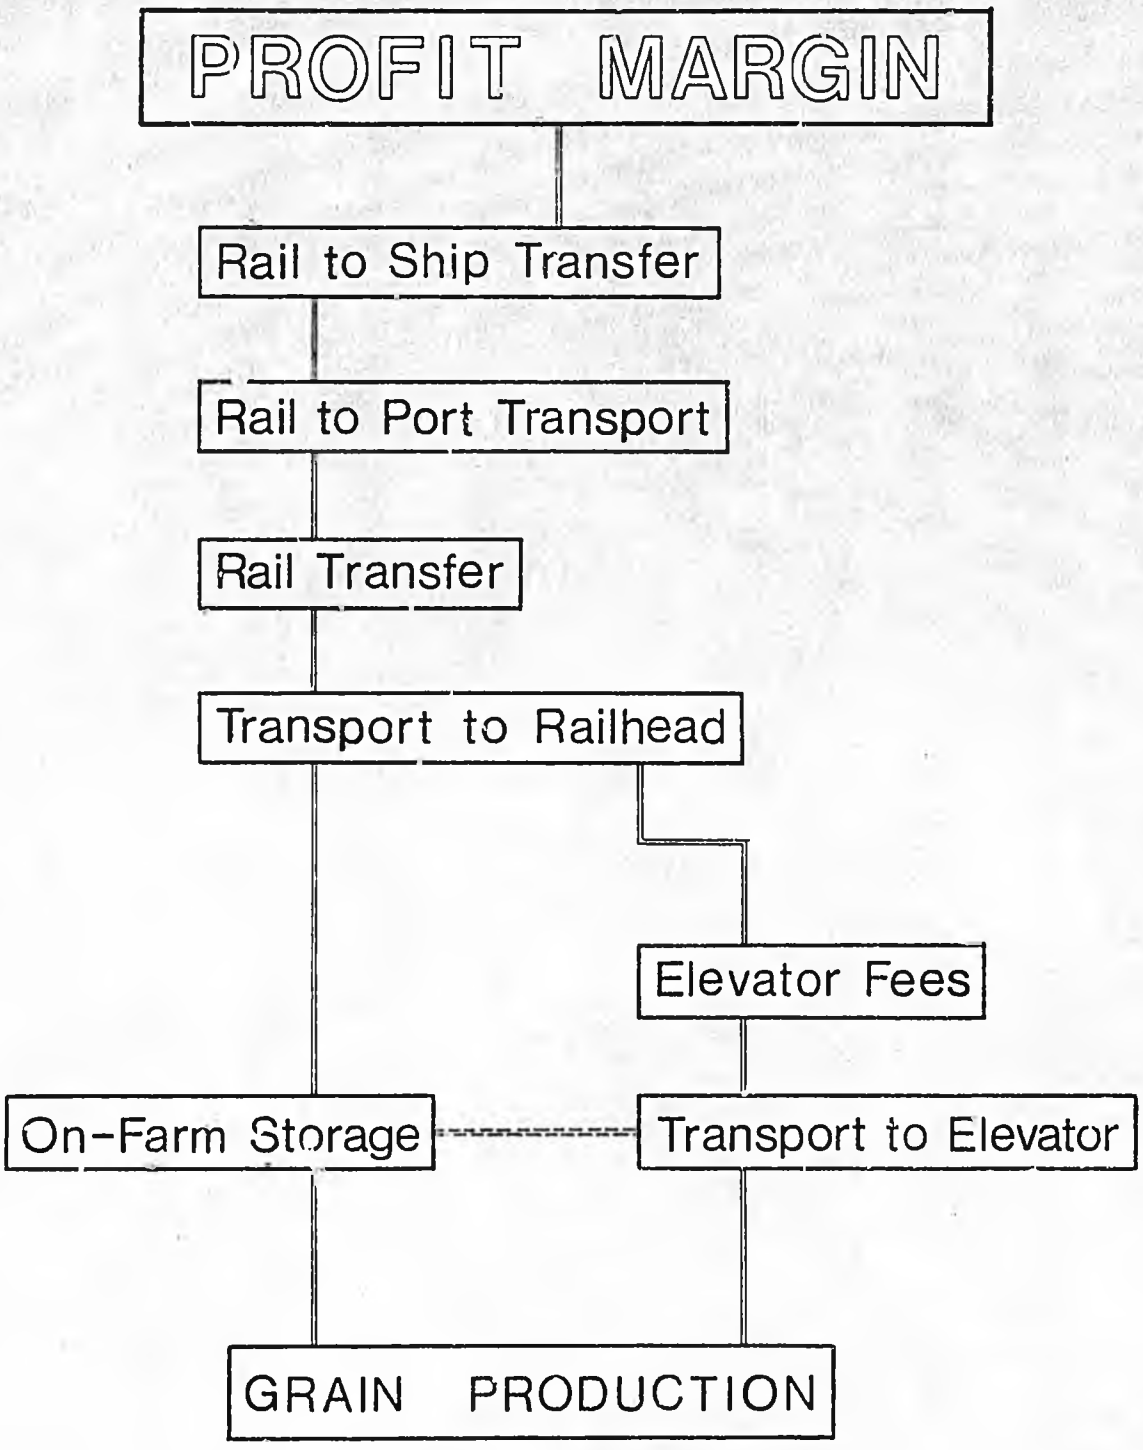
Assumptions

Several assumptions were applied to the analysis of the grain transport system. These assumptions, which should be modified to fit individual farm situations, were:

1. Average Farm Size: 2560 acre
2. Combine Capacity: 2,000 bushels/day
3. Combine bin capacity: 65 bushels requiring unloading every twenty (20) minutes
4. Truck capacities: 250 bushels, 700 bushels, 1,050 bushels
5. Average Speed of Trucks: 35 mph

6. Ten (10) hour workday
7. Average Harvest on 2560 acres = 71,680 bushels

Following the conclusion of Chapter VIII, it was also assumed that the proposed roadway between the initial project and Nenana would be the road used by the farmers in the initial project area.



Essential costs for Nenana grain transport were determined to center in the areas outlined in Figure 11. This report focuses on costs involved in transporting grain from on-farm storage to railhead. Roadway quality, location of possible transfer facilities, choice in method of transport are factors which affect essential costs. An examination of the relationship between these factors and essential costs is used in determining a framework for a commercially viable road. These will be discussed following an analysis of the essential cost components.

Essential Cost Components

On-farm storage offers flexibility to the grain producers in a number of ways. First, it allows them to hold their crops until they can sell at the best price. Second, storing the grain on the farm allows the farmer to transfer the grain to the railhead using the mode most economical to him. Third, on-farm storage reduces or eliminates storage costs elsewhere.

It was estimated from experiences in Delta Junction that grain storage in Alaska costs about $0.25/bushel/year.[1] While agriculture is in its developmental stages in Alaska grain receives certain price supports which nullify the advantages of on-farm storage. As Alaskan grain becomes subject to world market prices the advantages of on-farm storage will increase considerably. As a result, it is assumed that the majority of the farmers in the Nenana area will have on-farm storage for a large portion, if not all of their harvest. Costs involved in on-farm storage are made up in

[1]Agricultural Action Council, December 1, 1980.

ESSENTIAL COST COMPONENTS-GRAIN MARKETING

Figure 11

savings resulting from increased flexibility; though the rate of savings depends on distance between farm and elevator, labor costs, elevator fees, etc.

If the farmer does not have on-farm storage, or if the time is right to market the harvest; it is possible that a transfer site could be located between 1 and 7 miles of his farm. One such transfer site would be adequate for the initial project area, though others might be necessary as agriculture expands outward from there. Once the grain is transported to this site it would be loaded onto larger trucks and taken to the railhead in Nenana.

Grain would be transported either from a centralized transfer site or directly from on-farm storage to the railhead in Nenana. Once the grain reached the main elevator there would be additional handling and storage fees.

Evaluation of Alternatives

The alternative transport schemes were analyzed in terms of the costs of their essential components. Thus, Scheme I - home storage of grain, hauled directly to the elevator in Nenana; was evaluated on a cost per bushel basis using the following formula:

H + A + E = Scheme I Costs

H + B + E = Scheme I Costs

H + C + E = Scheme I Costs

where:

H = Home Storage Costs

A = Costs of 300 bushel truck hauling direct to Nenana (Calculated with and without labor)

B = Costs of 700 bushel truck hauling direct to Nenana (Calculated with and without labor)

C = Costs of tractor/semi-trailer (Both commercial costs and with/without labor)

E = Costs of storage and handling at elevator.

Scheme II was evaluated using the following formula:

H + A + T + C + E = II

H + B + T + C + E = II

Where 'T' equals costs of handling at transfer point. Scheme II also compares 2.5 ton truck and 5 ton truck haul costs to transfer point.

Scheme III was evaluated using the following formula:

A + T + C + E = III

B + T + C + E = III

Scheme IV was evaluated using the following formula:

A + E = IV

B + E = IV

C + E = IV

Operating Costs

Costs involved owning and operating the three alternative trucks were obtained from local sources and are presented in Table H. For the 2.5 ton and 5 ton trucks, 25% of the annual fixed costs were assigned to the hauling of grain. As the larger 10 ton truck is not as versatile as the 2 smaller trucks might be, 69% of its fixed costs were assigned to grain hauling. Home storage costs were utilized from a recent study in Washington state.[1] These costs were adjusted for inflation and higher costs in Alaska and were approximated at 13¢/bushel. Elevator handling costs are currently 12¢/bushel in the Delta project the elevator costs and costs at the possible transfer site in the initial project area.

Formulas listed in Figure 12 were utilized in determining the various transport costs of the four alternative schemes. These formulas were obtained from a similar study done in Washington state.[2]

Findings

It was found that while Scheme IV had the lowest costs of all the alternatives, Scheme I offered the most flexibility at the least costs to the

Formulas Used to Determine Grain Transport Costs

Fixed Costs/Per Bushel:

$$\frac{\text{Fixed Costs} \times \text{Number of Trucks}}{\text{Total Harvest}}$$

Variable Costs/Per Bushel:

$$\frac{\text{Variable Costs} \times \text{Trip Miles}}{\text{Bushels Per One Trip}}$$

Trips Possible:

$$\text{Hours in Workday} \div \left(\frac{\text{Trip Miles}}{\text{Avg. Speed}} + 20 \text{ Minutes (Loading and Unloading)}\right)$$

Labor Costs/Per Bushel:

$$\frac{12.50 \times \text{Hours in Workday}}{\text{Bushels Hauled/Per Day}}$$

Home storage costs were adjusted for inflation in the following manner:

Cost in 1976 (Washington State) = 8¢/Bu

x1.61 (rate of inflation 1976 - 1980)

12.88¢/Bu or approximately 13¢/Bu in 1980

farmer. It was also determined that use of the 5 ton truck under Scheme I was the most cost effective vehicle, particularly when the farmers' labor replaced hired labor.

Scheme I examined the costs involved in hauling grain direct, farm to elevator. Costs were determined for distances of 14, 18, 22 and 26 miles. Costs of commercial trucking were found to be competitive and were much lower than costs involved in hiring a driver. With the flexibility of home storage and the options of commercial hauling, farmers labor, or hired labor; this scheme offers the most economical and cost effective method in transporting grain from the farm to the mark Table I presents the results of analysis under Scheme I.

Scheme II included a transfer point in the middle of the project. In this instance, costs were determined for the 2.5 and 5 ton trucks for distances of 1, 3, 5 and 7 miles from the transfer point. From that point, the grain would have to be transported 19 miles to the railhead in Nenana. It was determined that, at least initially, commercial trucking would be more cost effective for the 19 mile haul. If, in the future, cooperatively owned trucks could be utilized for activities other than grain hauling; fixed costs assigned to that purpose could be significantly reduced. Overall, Scheme II had drawbacks causing its higher costs. The transfer point offers no real advantage to a farmer with home storage as transportation costs direct to Nenana are still less after paying the additional transport costs and main elevator handling fees. Table J presents the results of analysis under Scheme II.

Scheme III was basically the same as Scheme II but in this instance, there was no home storage. Without home storage several constraints are placed on the farmer. Assuming a combine operating 10 hours per day, 4,000 bushels of grain could be made available for transport. This grain would have to be transported to either the transfer site or the main elevator in Nenana. The farmer would not be able to take advantage of any price fluctuations and would most likely have to hire labor. The results of analysis under Scheme III are presented in Table K.

Scheme IV assumed no home storage and no transfer site. Under these conditions two 2.5 ton trucks would be required to handle the daily harvest.

This would increase both fixed and labor costs if those vehicles were used. At distances of 22 miles for 2.5 ton trucks and 26 miles for one ton trucks, the daily harvest would have to be limited to the trucks daily hauling capacity. Again, while this is the least costly of the alternatives analyzed, it offers no long term economic advantages or flexibility and severely constrains the farmers harvest operations in ways similar to those outlined in Scheme III. The results of analysis under Scheme IV are presented in Table L.

Summary and Conclusions

The analysis of alternative transportation schemes indicated a wide range of methods and equipment handling grain between the field and main elevator in Nenana. It was determined that a 5 ton truck hauling from home storage directly to Nenana, using the farmers own labor most effectively reduced transport costs, while offering the greatest long term economic benefits and flexibility to the farmer. A transfer point in the initial project area was found to be uneconomical and direct haul with home storage was still more cost effective at distances up to 50 miles from the main elevator.

It should be noted that road quality is significant in its affect on vehicle operating costs. AASHTO studies indicate that there is a 30% savings between vehicle operation on pavement and crushed gravel and up to 60% savings between pavement and unsurfaced roads.[1] It is imperative therefore, based on user economics, that a good quality access road be built and maintained in the project area.

APPENDIX I

REQUEST FOR PROPOSAL SENT TO VARIOUS ALASKAN PORTS

REQUEST FOR PROPOSAL

FOR

GRAIN EXPORT TERMINAL

The State of Alaska, Special Projects Office, is submitting this request for proposal. Our intention is to construct a permanent facility for the exportation of Alaskan produced grains.

The following information will be required in the proposal for our analysis:

1. Financial committment possibilities
   a. development incentive on real estate taxes
   b. direct complete or partial financing of the facility
   c. bond issuing authority for construction costs
   d. moratorium on interest and other payments until facility becomes economically viable
2. Location
   a. acreage of proposed site
   b. availability
   c. site development cost
   d. expansion area
   e. site accessability
   f. proximity to available dock space
3. Water depth
   a. at dock
   b. in approach channel
4. Wharfage charges

APPENDIX II

MASTER APPLICATION-ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION

ALASKA DEPARTMENT OF ENVIRONMENTAL CONSERVATION
MASTER APPLICATION - INFORMATION SHEET
Environmental Procedures Act, AS 46.35

GENERAL INFORMATION

The master application serves as a notice of intent to the State of a proposed project by an applicant. This form was designed to include a broad range of State and local government interests, therefore, many of the questions may not apply to your proposed project. Please read this application before completing it. Answer all questions pertaining to your proposed project. Any missing or misleading answers may delay the processing of your application. Complete a site diagram of the project and submit it with your signed application to one of the Permit Information Centers listed below.

Alaska Permit Information Center
Department of Environmental Conservation
437 "E" Street, Second Floor
Anchorage, Alaska 99501
Telephone: (907) 279-0254

Alaska Permit Information Center
Department of Environmental Conservation
675 7th Avenue, P.O. Box 1601
Fairbanks, Alaska 99707
Telephone: (907) 452-2340

Alaska Permit Information Center
Department of Environmental Conservation
Pouch O, 3220 Hospital Drive
Juneau, Alaska 99811
Telephone: (907) 465-2615

GENERAL PROCEDURES FOR PROCESSING APPLICATIONS UNDER AS 46.35

Upon receipt of the master application in a permit center, the following steps are taken:

Master Application

1. Copies of the master application and the site diagram are sent for review to all State departments and any municipality where the project is located. A statement is requested regarding agency jurisdiction and any permits that may be required for the proposed project.

2. These agencies must respond to the permit center within 15 days. If the agencies have any jurisdiction over the project and require a permit, they will submit their individual applications to the permit center with a statement of whether a hearing is required.

Individual State & Local Permit Applications

1. The permit center will send the individual applications to the applicant for completion. Completed applications and required fees should be returned to the permit center.

2. The returned applications and fees will be sent to the proper agencies. The permit center will make the arrangements for a public hearing on the project, if a hearing is required. Within 30 days receipt of the last applications, the permit center will have a notice published once a week for three consecutive weeks. The applicant will be required to pay for the publication of these notices.

3. The public hearing will be held in or near the municipality where the major part of the proposed project is located. This hearing will be held within 20 to 30 days of the last publication of the notice. Members of the public and the applicant may be present. Any State agency that requires a permit for the project shall be represented at the hearing.

4. At the close of the hearing, the chairman will establish a date (within 90 days from the hearing date) for the final decisions on all applications on the project. The final decisions will be submitted to the Department of Environmental Conservation. They will be incorporated into one document and submitted to the applicant personally or by certified mail.

INTERIM MASTER APPLICATION

MASTER APPLICATION

NO. _____

CERTIFICATION

(to be completed by local government)

I hereby certify the project described herein is in compliance with all zoning ordinances and associated comprehensive plans administered by

CITY OF NENANA, ALASKA

_____
(Local Government Official's Signature)

Mayor, City of Nenana
(Title)

_____
(Date)

I hereby certify the property described in Section II is not under the jurisdiction of any zoning ordinance or associated comprehensive plan administered by _____.

_____
(Local Government Official's Signature)

Mayor
(Title)

11-13-80
(Date)

I. Applicant Information

A. Name of Applicant: CITY OF NENANA, ALASKA

Address: _____ _____ _____ _____
(Street Number or R.F.D.) (City) (State) (Zip Code)

Phone Number: 832-5441

B. Consultant or Contact Person: ALASKA TRANSPORTATION CONSULTANTS, INC.

Address: 212 C Wedgewood Drive, Fairbanks, Alaska 99701
(Street Number or R.F.D.) (City) (State) (Zip Code)

Phone Number: 456-1967

II. Activity Location

A. Location of Work (smallest legal subdivision): West of the City of Nenana at the Nenana River, East Middle River, and West Middle River bridge sites.

Within Section 15-23, Township 4 S, Range 8 W.

B. Distance and direction from nearest incorporated town or city:

Four and one-half (4½) W. of City of Nenana

Right-of-way, 200 feet wide to the West Middle River bridge site per project diagram.

III. General Activity Description

A. Beginning Construction Date: January 1, 1981 Completion Date: February 15, 1981

B. Description of Project (describe the project objectives, purpose and need):

Determine alignment of bridges across the three (3) above rivers; also alignment of road between bridge sites.

C. Description of Work (describe the project construction and operation):

Drilling test holes 10-20 feet deep, each one-fourth (¼) mile, along road alignment. Drilling test holes at bridge piling sites, one of which will be at least one hundred (100) feet deep. Survey alignment of road with bridge.

IV. SPECIFIC ACTIVITY DESCRIPTION

A. The construction or operation of this project involves: (check all appropriate boxes).

[ ] Commercial development
[ ] Industrial development
[ ] Institution
[ ] Residential development

Above checked development includes:
[ ] Electrical
[ ] Plumbing
[ ] Elevator
[ ] Mechanical equipment in structures
[ ] Boiler
[ ] Pressure vessels
[ ] Pressure piping
[ ] Prefabricated structures

Sewage disposal:
[ ] Septic tank and drainfield installation or alternative disposal system
[ ] Connection to municipal sewer system
[ ] Develop or connection to nonmunicipal sewer system

[ ] Connection to municipal water system
[ ] Develop or connection to nonmunicipal water system
[ ] School water supply
[ ] Surface mining (including rock quarry, material borrow site, sand and gravel, etc.)
[ ] Underground mining
[ ] Dredging
[ ] Oil and gas drilling and exploration
[ ] Geothermal drilling and exploration
[ ] Well injection
[ ] Well construction
[ ] Firewworks
[ ] Marine facility (access, dock, float, etc.)
[ ] Explosives
[ ] Disposal of surplus mineral resources

Food service facilities:
[ ] Restaurant
[ ] Temporary
[ ] Limited service restaurant
[ ] Commissary
[ ] Food vending machine
[ ] Vending machine
[ ] Mobile unit(s)
[ ] Shellfish distributors
[ ] Shucker packers
[ ] Harvesters

[ ] Swimming pool
[ ] Health facility (hospital, inpatient care, nursing home, etc.)
[ ] Home for aged
[ ] Group care home
[ ] Child care agency
[ ] Day care facility
[ ] Post secondary education facility at a new location
[ ] Junkyard
[ ] Alcohol or alcoholic beverages (industrial, manufacture, wholesale, retail)
[ ] Hydraulic structure
[ ] Irrigation, drainage
[ ] Hydroelectric facilities
[ ] Mobile home park
[ ] Airfield construction or modification
[ ] Advertising signs
[ ] Cultural site development
[ ] Pneumatic conveyance facilities
[ ] Liquid petroleum gas
[ ] Flammable and/or combustible liquids
[ ] Shoreline handling devices
[ ] Excavation
[ ] Land leveling
[ ] Stream bed alteration, movement of material within banks
[ ] Flood control project (stream channelization)
[ ] Agriculture
[ ] Aquaculture
[ ] Bulkhead
[ ] Burning
[ ] Dam construction
[ ] Forest management
[ ] Tree cutting
[ ] Right of way clearing
[ ] Gravel operation
[ ] Road construction
[ ] Solid waste disposal
[ ] Utilities
[ ] Port Development
[ ] Propagation of fish or wildlife
[ ] Landfill
[ ] Tourist facilities (hotel, motel, recreational park, organization camp, picnic park, mass gathering)
[X] Other Preliminary geotechnical and survey.

	Yes	No

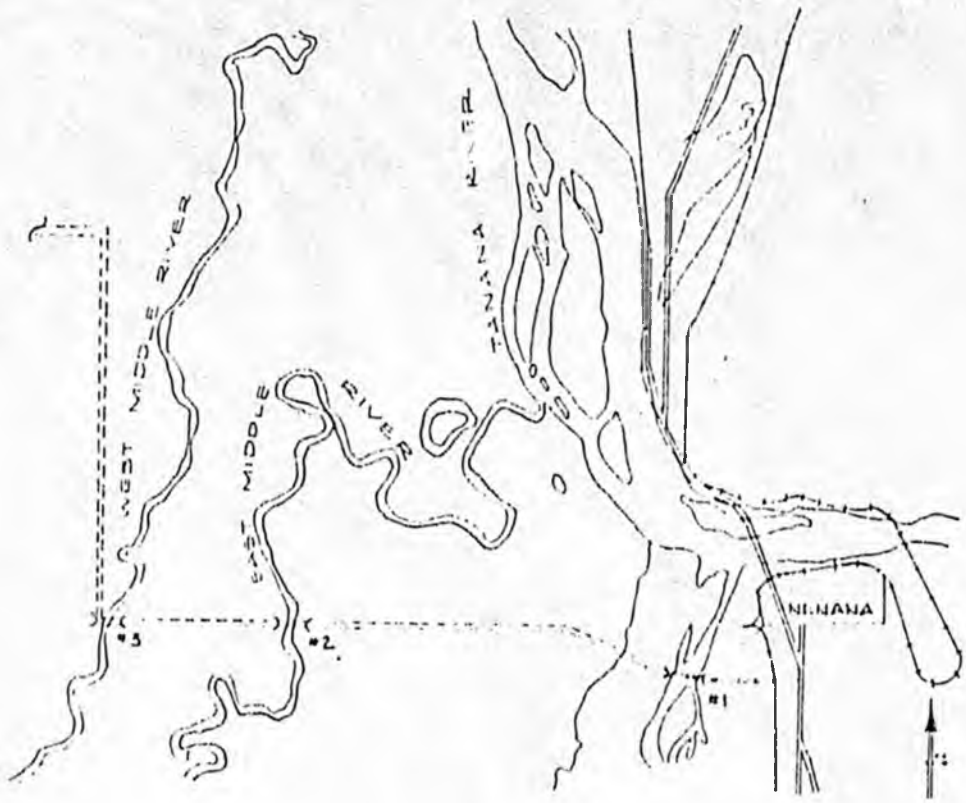
D.	[ ]	[X]	The proposed work will be vented or will release materials into the air. (explain)
E.	[ ]	[X]	Will the construction or use of the final facility result in the discharge of a pollutant? Into: [ ] Ground water [ ] Surface water [ ] Sewer system Explain (pollutant):
F.	[ ]	[X]	Will your proposal include facilities for the disposal of sewage? [ ] Septic Tank and Drainfield Installation [ ] Connection to Municipal sewer system [ ] Develop a Nonmunicipal (individual) treatment facility
G.	[ ]	[X]	Will construction or operations of the final facility involve the use of ground or surface water?

SOURCE
[ ] Ground water
[ ] Surface water

USE
[ ] Domestic Use
[ ] Commercial/Industrial Use
[ ] Other

Quantity of water use: _____ cfs, or _____ gpm.



If surface water, name of source: _____, (stream or body of water)

a tributary of _____. (name of stream or body of water)

	Yes	No	
H.	[ ]	[X]	Will your proposal include facilities for public water supply? [ ] Connection to Municipal supply system [ ] Develop a Nonmunicipal (individual) supply system
I.	[ ]	[X]	Will your proposal require the construction or modification of a dam for the storage of water? Height of dam: _____ feet. Quantity of water to be stored: _____ acre feet.
J.	[ ]	[X]	Do you plan to dispose of material by burning? [ ] Natural material (organic) [ ] Man-made material (processed)
K.	[ ]	[X]	Do you plan to dump any mill waste or forest debris?
L.	[ ]	[X]	Do you plan to conduct a commercial operation with power driven machinery in dead or down timber?
M.	[ ]	[X]	Do you propose to remove more than 10,000 tons or disturb more than two acres of land in order to remove gravel, clay, coal, stone, sand, metallic ore, or any other similar solid material or substance to be excavated from natural deposits on or in the earth for commercial, industrial, or construction uses?
N.	[ ]	[X]	Do you plan to conduct any activity on or directly pertaining to forest land and related to growing, harvesting or processing timber including: road and travel construction; timber harvest; precommercial thinning; reforestation; fertilization; prevention and suppression of diseases and insects; salvage of trees; right-of-way clearing; or brush control?
O.	[ ]	[X]	Do you plan to recover stray logs, other than logs owned by you, from waters of the State?
P.	[ ]	[X]	Does your proposal involve work within, adjacent to, or near a state park?
Q.	[ ]	[X]	Do you have control of the land on which the project is located? Who does? [ ] I own/control the land. [ ] I control the land through a license from a private individual/company. [X] The State owns the land. [ ] Federal land. [X] Locally owned land.

APPENDIX III

SECTION 46.35.030-46.35.210 ALASKA STATUTES

Sec. 46.35.030. Master application. (a) A person proposing a project which requires the issuance of one or more permits may submit a master application to the department requesting the issuance of all permits and documents necessary before the construction and operation of the project in the state. The master application shall be on a form established by the department and shall contain sufficient information as to the location and the nature of the project, including discharge of wastes and use of or interference with natural resources of the state.

(b) Upon receipt of a properly completed master application, the department shall immediately forward a copy of the application to all heads of executive departments of the state and the chief elected official of all municipalities in which a portion of the project is proposed to be constructed, together with the date by which the agency shall respond to the master application.

(c) Each agency notified shall respond in writing to the department by the specified date, not exceeding 15 days from receipt, as determined by the department, advising

(1) whether the agency has an interest in the master application;

(2) if the response to (1) of this subsection is affirmative, the permit program under the agency's jurisdiction to which the project described in the master application is pertinent; and

(3) whether, in relation to the master application, a public hearing as provided in §§ 50 and 60 of this chapter would be in the public interest.

(d) Each notified agency which (1) responds within the specified date that it does not have an interest in the master application; or (2) does not respond as required within the specified date may not subsequently require a permit of the applicant for the project described in the master application unless the master application contained false, misleading, or deceptive information, or other information or lack of information which would reasonably lead an agency to misjudge its interest in the master application.

(e) The department shall submit application forms relating to permit programs identified in affirmative responses under (c) of this section to the applicant with a direction to complete and return them to the department within a reasonable time as specified by the department.

(f) When the applications, properly completed, have been returned to the department, each of the applications shall be transmitted to the appropriate state agency for the performance of its responsibilities of decision making in accordance with the procedures of this chapter. (§ 1 ch 60 SLA 1977)

Sec. 46.35.040. Withholding final permit. When it appears that the applicant does not own or control the land or water necessary for the siting of the project in the master application, the department shall continue the proceedings under this chapter but may withhold the final permit until the applicant has obtained ownership or control of the land or water necessary for the site of the project. If the applicant has applied

for land or water necessary for the siting of the project from the state or a municipality of the state, the state agency or municipality shall promptly adjudicate the application for the land or water filed by applicant. (§ 1 ch 60 SLA 1977)

Sec. 46.35.050. Notice of proposed project. (a) The department, within 30 days after transmittal under § 30(f) of this chapter, shall cause a notice to be published at the applicant's expense once each week for three consecutive weeks in a newspaper of general circulation within each municipality in which the project is proposed to be constructed or operated. The notice shall describe the nature of the master application, including, with reasonable specificity, the project proposed, its location, the various permits or documents applied for, and the state agency having jurisdiction over each permit or document. Except as provided in (c) of this section, the notice shall also state the time and place of the public hearing which shall be scheduled not less than 20 or more than 30 days after the date of last publication of the notice. It shall further state that a copy of the master application and a copy of all applications for the project are available for public inspection in the regional office of the department nearest to where the project is proposed to be constructed or operated, as well as at the department office in the capital and any other locations the department may designate in the notice.

(b) If no part of the project is to be constructed or operated in a municipality, or if there is no regularly published newspaper of frequency at least weekly, the public notice shall be published in a newspaper in the judicial district in which the project is proposed.

(c) If the responses received by the department from state agencies under § 30(f) of this chapter unanimously state the position that a public hearing concerning a master application is not necessary in the public interest, and the department, after a careful evaluation, taking into consideration all interests involved, including the opportunity for members of the public to present views, agrees, the provisions of (a) of this section pertaining to the time and place of a public hearing shall not be included in the notice. In that case the notice shall state that members of the public may present their views and supporting materials in writing to the department regarding any of the permits applied for within 30 days after the last date of publication of the notice in a newspaper. (§ 1 ch 60 SLA 1977)

Revisor's note (1977). — AS 46.35.050(a), as it appeared in § 1, ch. 60, SLA 1977 (HCS CSSB 227), contained reference to "(b) of this section." This citation originally appeared in SB 227; however, the subsection (b) referred to in that version became (c) of the final version of the bill as enacted. Consequently, the reference in (a) has been corrected to read "(c) of this section."

Sec. 46.35.060. Public hearing. (a) Except as provided in § 50(c) of this chapter, before a final decision is made on a permit application relating to a project subject to the procedures of this chapter, a public

hearing shall be held in or near the municipality in which all or a major part of the proposed project is to be constructed or operated, or, if the project is not to be constructed or operated in a municipality, the hearing shall be held at a location reasonably convenient to the site of the proposed project. The hearing shall be held in accordance with the notice given under § 50(a) of this chapter. At the hearing the applicant may submit any relevant information and material in support of his applications, and members of the public may present relevant views and supporting materials relating to any or all of the applications being considered.

(b) Each state agency having an application for a permit before it under § 50(a) of this chapter shall be represented at the public hearing by its commissioner or his designee. The commissioner of the department, his designee, or a hearing officer appointed by the governor, shall chair the hearing; however, the representative of any state agency other than the department within whose jurisdiction a specific application lies shall conduct the portion of the hearing pertaining to submission of information, views, and supporting materials which concern that application. The chairman may continue a hearing from time to time and place to place.

(c) No provisions of AS 44.62 apply to the hearing conducted under this section, and the hearing shall be conducted for the purpose of obtaining information for the assistance of state agencies and not as a trial or adversary proceeding.

(d) Federal and local government agencies may be represented at the hearings, at their option, by their chief executive officer or his designee.

(e) The hearing shall be electronically recorded, and copies of the recording shall be made available to state, federal and local agencies upon request. (§ 1 ch 60 SLA 1977)

Cross reference. — See revisor's note to AS 46.35.050.

Sec. 46.35.070. Final decision. (a) Upon completion of the public hearing the chairman, after consultation with the state agency representatives, shall establish the date by which all state agencies shall forward their final decisions on applications before them to the department. The date established shall be within the following 90-day period after the public hearing.

(b) In a situation where a notice is provided under § 50(c) of this chapter, the department shall, 30 days after the last notice publication in the newspaper, submit a copy of all views and supporting material received by it to each agency as described in the notice as having an application before it. At the same time, the department shall notify each state agency, in writing, of the date by which final decisions on applications shall be forwarded to the department. That date shall be

no later than 90 days after the date of last publication of the notice, but may be extended by the department for reasonable cause.

(c) Each final decision shall state the basis for the conclusion together with a final order denying the application for a permit or granting it, subject to a condition of approval as the deciding agency may have the power to impose. An agency which denies an application shall, with its final decision denying the application, provide a written summary suggesting alternate means of completing the project, or, if no alternative is feasible, the agency shall provide a written summary of its reasons for that conclusion.

(d) As soon as all final decisions are received by the department under (b) and (c) of this section, the department shall incorporate them, without modification, into one document and transmit it to the applicant either personally or by registered mail.

(e) Each state agency having jurisdiction to approve or deny an application for a permit shall have the power vested in it before October 1, 1977 to make such determinations. Nothing in §§ 30 — 70 of this chapter lessens or reduces these powers, and §§ 30 — 70 of this chapter modify only the procedures to be followed in the carrying out of the powers.

(f) A state agency, in the performance of its responsibilities of decision making under this chapter, may request or receive additional information from an applicant and others before or after the public hearing. (§ 1 ch 60 SLA 1977)

Cross reference. — See revisor's note to AS 46.35.050.

Sec. 46.35.080. Withdrawal of agency from participation. (a) A state agency responding affirmatively under § 30(b) of this chapter may withdraw from participation in the processing provided in §§ 30 — 70 of this chapter at any time, by written notification to the department, if it subsequently appears to the state agency that it has no permit programs under its jurisdiction applicable to the project.

(b) A decision by a state agency to withdraw from the proceeding is irreversible, and the state agency may not subsequently require a permit of the applicant for the project described in the master application unless the master application contained false, misleading, or deceptive information, or other information or lack of information which would reasonably lead an agency to misjudge its interest in the master application. (§ 1 ch 60 SLA 1977)

Sec. 46.35.090. Administrative and judicial review. (a) A person aggrieved by a final decision issued under § 70(d) of this chapter may file a notice of appeal with the commissioner requesting an adjudicatory hearing within 30 days of transmittal of the final decision to the person. A failure to file a timely notice of appeal constitutes a waiver of the

person's right to review the final decision, unless the failure was due to circumstances beyond the applicant's control.

(b) The commissioner shall grant a request for an adjudicatory hearing within 20 days of filing of the notice of appeal if he determines that the notice raises a reasonable issue of fact or law material to the final decision.

(c) A hearing officer appointed under AS 44.62.350 shall preside at hearings under this section, rule on the admission and exclusion of evidence, advise the deciding officers on matters of law, and participate in posthearing deliberations.

(d) Appeals shall be heard jointly by the commissioner, or his designee, of each agency which rendered a final decision under § 70 of this chapter for which the person requesting the hearing is aggrieved. The commissioner, or his designee, of each agency shall decide only that portion of the appeal which involves his agency.

(e) The commissioner, after consultation with other state agencies and local governments, shall adopt regulations governing the conduct of adjudicatory hearings under this section. The commissioner may enter into cooperative agreements with local governments and federal agencies for the joint holding of adjudicatory hearings. To the extent feasible, regulations adopted under this section shall conform to adjudicatory hearing procedures for the review of permit decisions under AS 30.25 and AS 46.03. Notwithstanding AS 44.62.330(a)(11), adjudicatory hearing procedures to review permit decisions under this chapter, or under AS 30.25 or AS 46.03, need not conform to the Administrative Procedure Act (AS 44.62.330 et seq).

(f) A person aggrieved by a final decision of the commissioner under this section may appeal the decision to the superior court in the manner provided by AS 44.62.560 — 44.62.570. (§ 1 ch 60 SLA 1977)

Sec. 46.35.100. Time. It is the sense of the legislature that time is of the essence in the processing of applications under this chapter. Whenever a section in this chapter states a time within which an act or a review is to be completed, the legislature has determined that the time allotted is adequate for a responsive state agency or municipality to complete the act or review. If unusual conditions prevent this from happening, it is the sense of the legislature that minimum extensions of the period established in this chapter may be granted upon a determination that the delay occurred beyond the control of the reviewing agency or municipality. (§ 1 ch 60 SLA 1977)

Sec. 46.35.110. Application. Notwithstanding any other provisions of regulation or statute relating to the processing of application for permits, the procedures set out in this chapter are exclusive for applications filed under § 30 of this chapter. The procedures of this chapter are in lieu of any procedures otherwise provided by law or

regulations, and are to be followed by a state agency in ruling upon those applications. (§ 1 ch 60 SLA 1977)

Sec. 46.35.120. Fee schedules. Fee schedules previously established or authorized by law for an application for a permit continue to apply. The department shall collect the fees and forward them to the appropriate state agency. (§ 1 ch 60 SLA 1977)

Sec. 46.35.130. Compliance with local zoning ordinances and plans. (a) No permit for a project filed under § 30 of this chapter may be issued unless the application has provided a certification from the appropriate local government that the project is in compliance with the zoning ordinances and associated comprehensive plans administered by the local government regarding the project. If the local government has no such ordinances or plans, the local government shall certify that fact. A local government may accept applications for certification under this section and shall rule upon them within 30 days. A local government may impose stipulations of performance in its approval, but, upon certification, the local government may not change the zoning ordinances as to the proposed project until the procedures of this chapter, including an appeal, are completed.

(b) Approval of an application for certification as provided in this section shall not eliminate any requirements of ordinances administered by a local government. A ruling by local government denying an application for certification is not appealable under this chapter, except that the denial of an application for certification under (a) of this section does not preclude the applicant from filing an application under a different statute or procedure. (§ 1 ch 60 SLA 1977)

Sec. 46.35.140. Applicability of other laws. Nothing in this chapter modifies in any manner the applicability of a land use law or regulation or local zoning ordinances to land of a state agency. (§ 1 ch 60 SLA 1977)

Sec. 46.35.150. Regulations and authorities. The department may adopt regulations to implement the provisions of this chapter. (§ 1 ch 60 SLA 1977)

Sec. 46.35.160. Permit requirement information centers. (a) The department shall establish permit requirement information centers at the commissioner's office and in all of its regional offices and may enter into an agreement with the governing body of any municipality having a population of more than 1,000 persons to establish and maintain local information centers to provide information to the public, in readily understandable form, regarding the requirements of federal, state, and local governments for permits which must be acquired before initiating projects in this state and to provide assistance in the completion of permit applications.

(b) Each regional office of the department and other offices as the department may establish shall provide a master application to any

person requesting it. The department shall provide informa rms, instructions, and assistance in the completion of a master application under this chapter to a person requesting assistance. (§ 1 ch 60 SLA 1977)

Sec. 46.35.170. Conflicts and compliance with federal requirements. (a) If any part of this chapter is found in conflict with federal requirements regarding the allocation of federal funds to the state, that part of this chapter is inoperative to the extent of the conflict regarding the agencies affected, and the determination shall not affect the operation of the remainder of this chapter.

(b) The department, to the extent necessary to comply with procedural requirements of federal law relating to permit systems operated by the state, may modify the notice, timing, hearing and related procedural matters provided in this chapter. (§ 1 ch 60 SLA 1977)

Sec. 46.35.200. Definitions. In this chapter

(1) "commissioner" means the commissioner of environmental conservation;

(2) "department" means the Department of Environmental Conservation;

(3) "local government" means a city or borough including a municipality unified under AS 29.68.240 — 29.68.110;

(4) "permit" means each of the following licenses, permits or authorizations required to be obtained from a state agency before constructing or operating a project in the state, or any other license, permit or authorization which may be designated by the commissioner:

(A) waste water disposal permit — AS 46.03.100, 18 AAC 72;

(B) solid waste disposal permit — AS 46.03.100, 18 AAC 60;

(C) air emissions permit — AS 46.03.150, 18 AAC 50.120;

(D) pesticides permit — AS 46.03.320, 18 AAC 90;

(E) surface oiling permit — AS 46.03.740, 18 AAC 75;

(F) open burning permit — AS 46.03.020, 18 AAC 50.120;

(G) anadromous fish protection permit — AS 16.05.870, 5 AAC 95.100;

(H) critical habitat area permit — AS 16.20.250 — 16.20.260;

(I) state game refuge land permit — AS 16.20.050 — 16.20.060;

(J) encroachment permit — AS 19.25.200;

(K) utility permit — AS 19.25.010;

(L) driveway permit — AS 19.05.020, 17 AAC 10.020;

(M) state park incompatible use permit — AS 41.20.020, 11 AAC 18.010;

(N) access roads permit — AS 41.20.020, 11 AAC 18.020;

(O) water well permit — AS 31.05.030, 11 AAC 22.140;

(P) brine or other salt water waste disposal permit — AS 31.05.070 [AS 31.05.030], 11 AAC 22.250;

(Q) coal development permit — AS 27.20.010, 11 AAC 46.010;

(R) right-of-way and easement permits — AS 38.05.330, 11 AAC 58.200;

(S) special land use permit — AS 38.05.035, 11 AAC 58.210;

(T) tidelands permit — AS 38.05.320, 11 AAC 62.710;

(U) tidelands right-of-way or easement permit — AS 38.05.320, 11 AAC 62.810;

(V) limited personal use permit — AS 38.05.320, 11 AAC 62.820;

(W) permit to appropriate water — AS 46.15.040, 11 AAC 72.050;

(X) dam construction permit — AS 46.15.040, 11 AAC 72.060;

(Y) preferred use permit — AS 46.15.040, 11 AAC 72.160;

(Z) permit for use of timber or materials — AS 38.05.110, 11 AAC 76.185;

(AA) authorization for tidelands transportation — AS 38.05.110, 11 AAC 76.205;

(BB) special material use permit — AS 38.05.115, 11 AAC 75.510;

(CC) mineral and geothermal prospecting permits — AS 38.05.[illegible];

(DD) tide and submerged lands prospecting permit — AS 38.05.250;

(EE) surface use permit — AS 38.05.255, 11 AAC 86.600;

(FF) burning permit during fire season — AS 41.15.050, 11 AAC 92.010;

(GG) miscellaneous state land use permit — AS 38.05.035, 11 AAC 96.010;

(HH) right-of-way permit — AS 38.05.330;

(5) "person" means an individual, municipal, public, or private corporation, or other entity, and includes a state agency and a local government;

(6) "processing" and "processing of applications" means the entire process followed in relation to the making of decisions on an application for a permit and review of it as provided in §§ 30 — 80 of this chapter;

(7) "project" means any new activity or expansion of or addition to an existing activity, fixed in location, for which permits are required before construction or operation;

(8) "state agency" means a state department, commission, board or other agency of the state; for the purposes of this chapter "state agency" also means a local or regional air pollution control authority established under AS 46.03.210. (§ 1 ch 60 SLA 1977)

Sec. 46.35.210. Short title. This Act may be cited as the Environmental Procedures Coordination Act. (§ 1 ch 60 SLA 1977)

Chapter 40. The Alaska Coastal Management Program.

Article

1. Development of Alaska Coastal Management Program (§§ 46.40.010 — 46.40.090)
2. Coastal Management Programs in the Unorganized Borough (§§ 46.40.110 — 46.40.180)
3. General Provisions (§§ 46.40.190 — 46.40.210)

APPENDIX IV

DATA REQUIRED TO DETERMINE NAVIGABILITY OF A WATERWAY, CORRESPONDENCE RELATING TO U.S. COAST GUARD CLASSIFICATION OF EAST AND WEST MIDDLE RIVERS

DATA REQUIRED TO DETERMINE NAVIGABILITY OF A WATERWAY

1. Name

2. Tributary to

3. Physical characteristics

   (a) Type of waterway (river, bay, slough, estuary)
   (b) Length
   (c) Width
   (d) Depth at Mean High Water
   (e) Drainage area
   (f) Discharge volumes (maximum, minimum, mean)
   (g) Cross-section or profile at proposed crossing
   (h) Fall per mile
   (i) Velocity of flow (maximum, minimum)
   (j) Elevation of water surface at:
       Design High Water (~~25 or 50~~ 100 year flood)
       Mean High Water (mean annual flood)
       Mean Low Water (average low observed during navigation season)
   (k) Extent of tidal influence

4. Past or present use of the waterway by boats, vessels, barges, rafts, canoes, etc.

5. Past or present use of the waterway for interstate commerce

   (a) General types, extent and period of time
   (b) Documentation, if necessary

6. Nature and location of significant obstruction to navigation

7. Length of time the waterway is open for navigation:

   (a) Time of spring break-up
   (b) Time of fall freeze-up

8. Description of any known proposed or completed projects to improve the condition of the waterway for navigation.

9. Pictures of the waterway in the vicinity of the proposed crossing at periods of high and low flow.

10. Pictures of any obstructions to navigation.

Alaska Transportation Consultants
Attn: Mr. Edward Peebles
212C Wedgewood Manor
Fairbanks, AK 99701

12/3/80

Dear Mr. Peebles

Thank you for your letter of 18 November 1980, with information on the East Middle River and West Middle River.

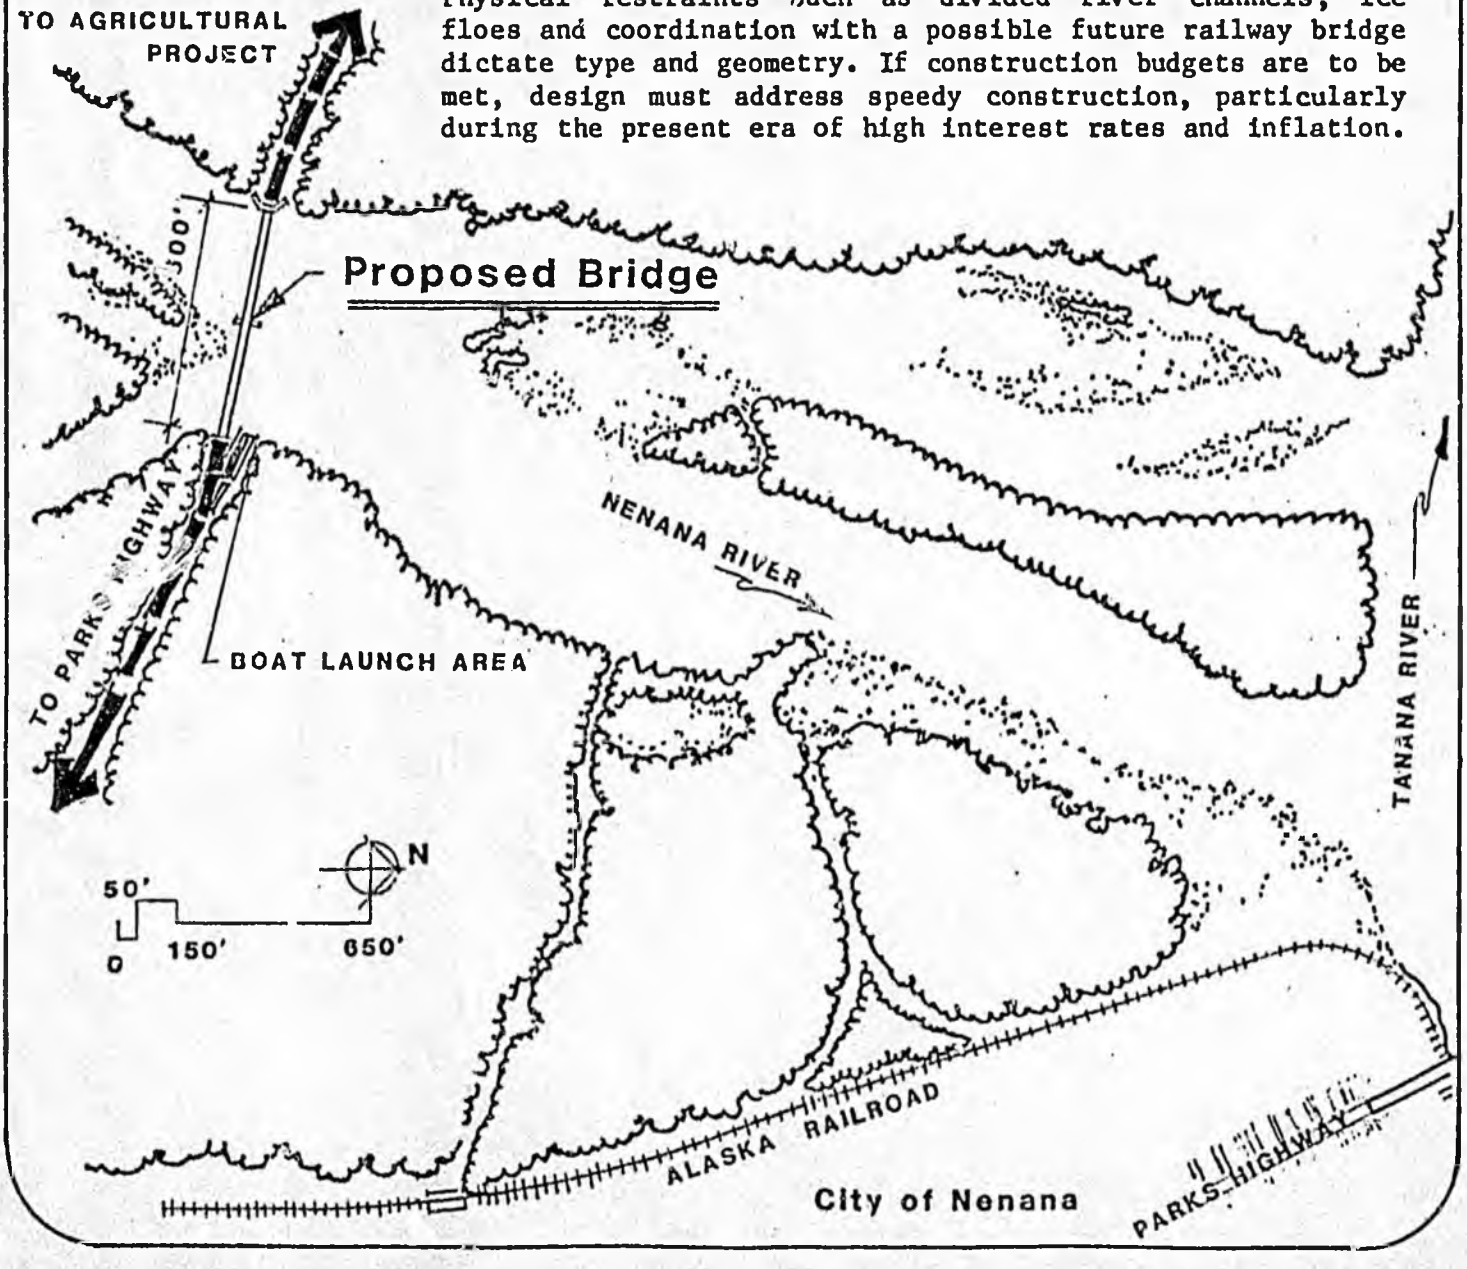
A further review of the information available shows that both the East Middle River and West Middle River are distributaries of the Nenana River, rather than independent streams. As such, they are also in the category of "Advanced Approval", and no bridge permits are required for these two waterways.

Sincerely,

W. M. MONCRIEF Jr.
Commander, U.S. Coast Guard
Chief, Aids to Navigation Branch
By direction of the District Commander

FUNDING REQUEST: NENANA RIVER BRIDGE

CITY OF NENANA, ALASKA
RESOURCE DEVELOPMENT PROJECT



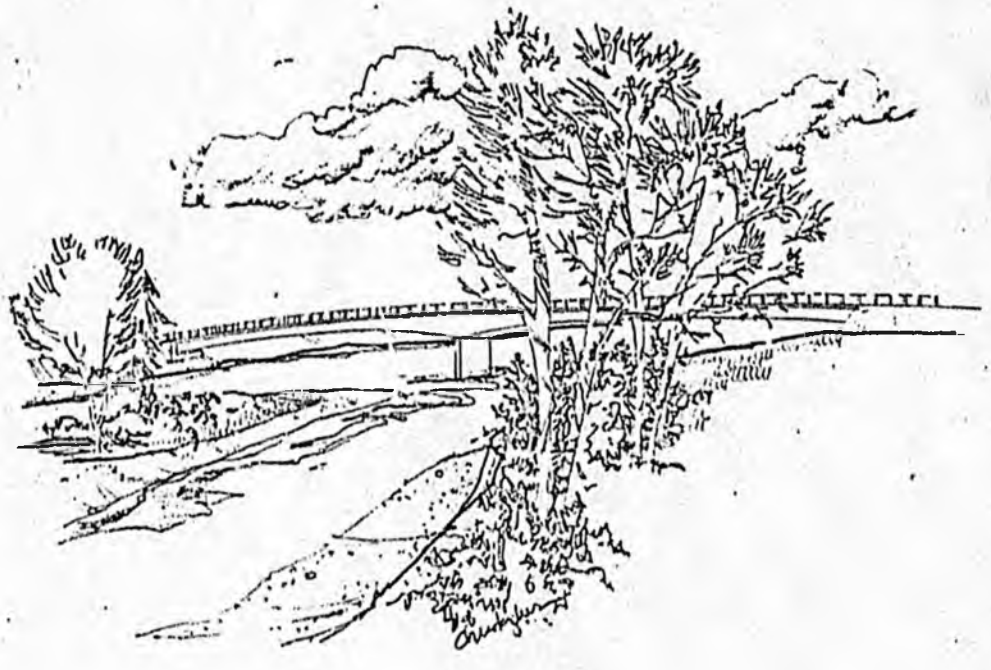
Peratrovich, Nottingham & Drage, Inc.
Engineering Consultants

Funding Request: Nenana River Bridge Crossing

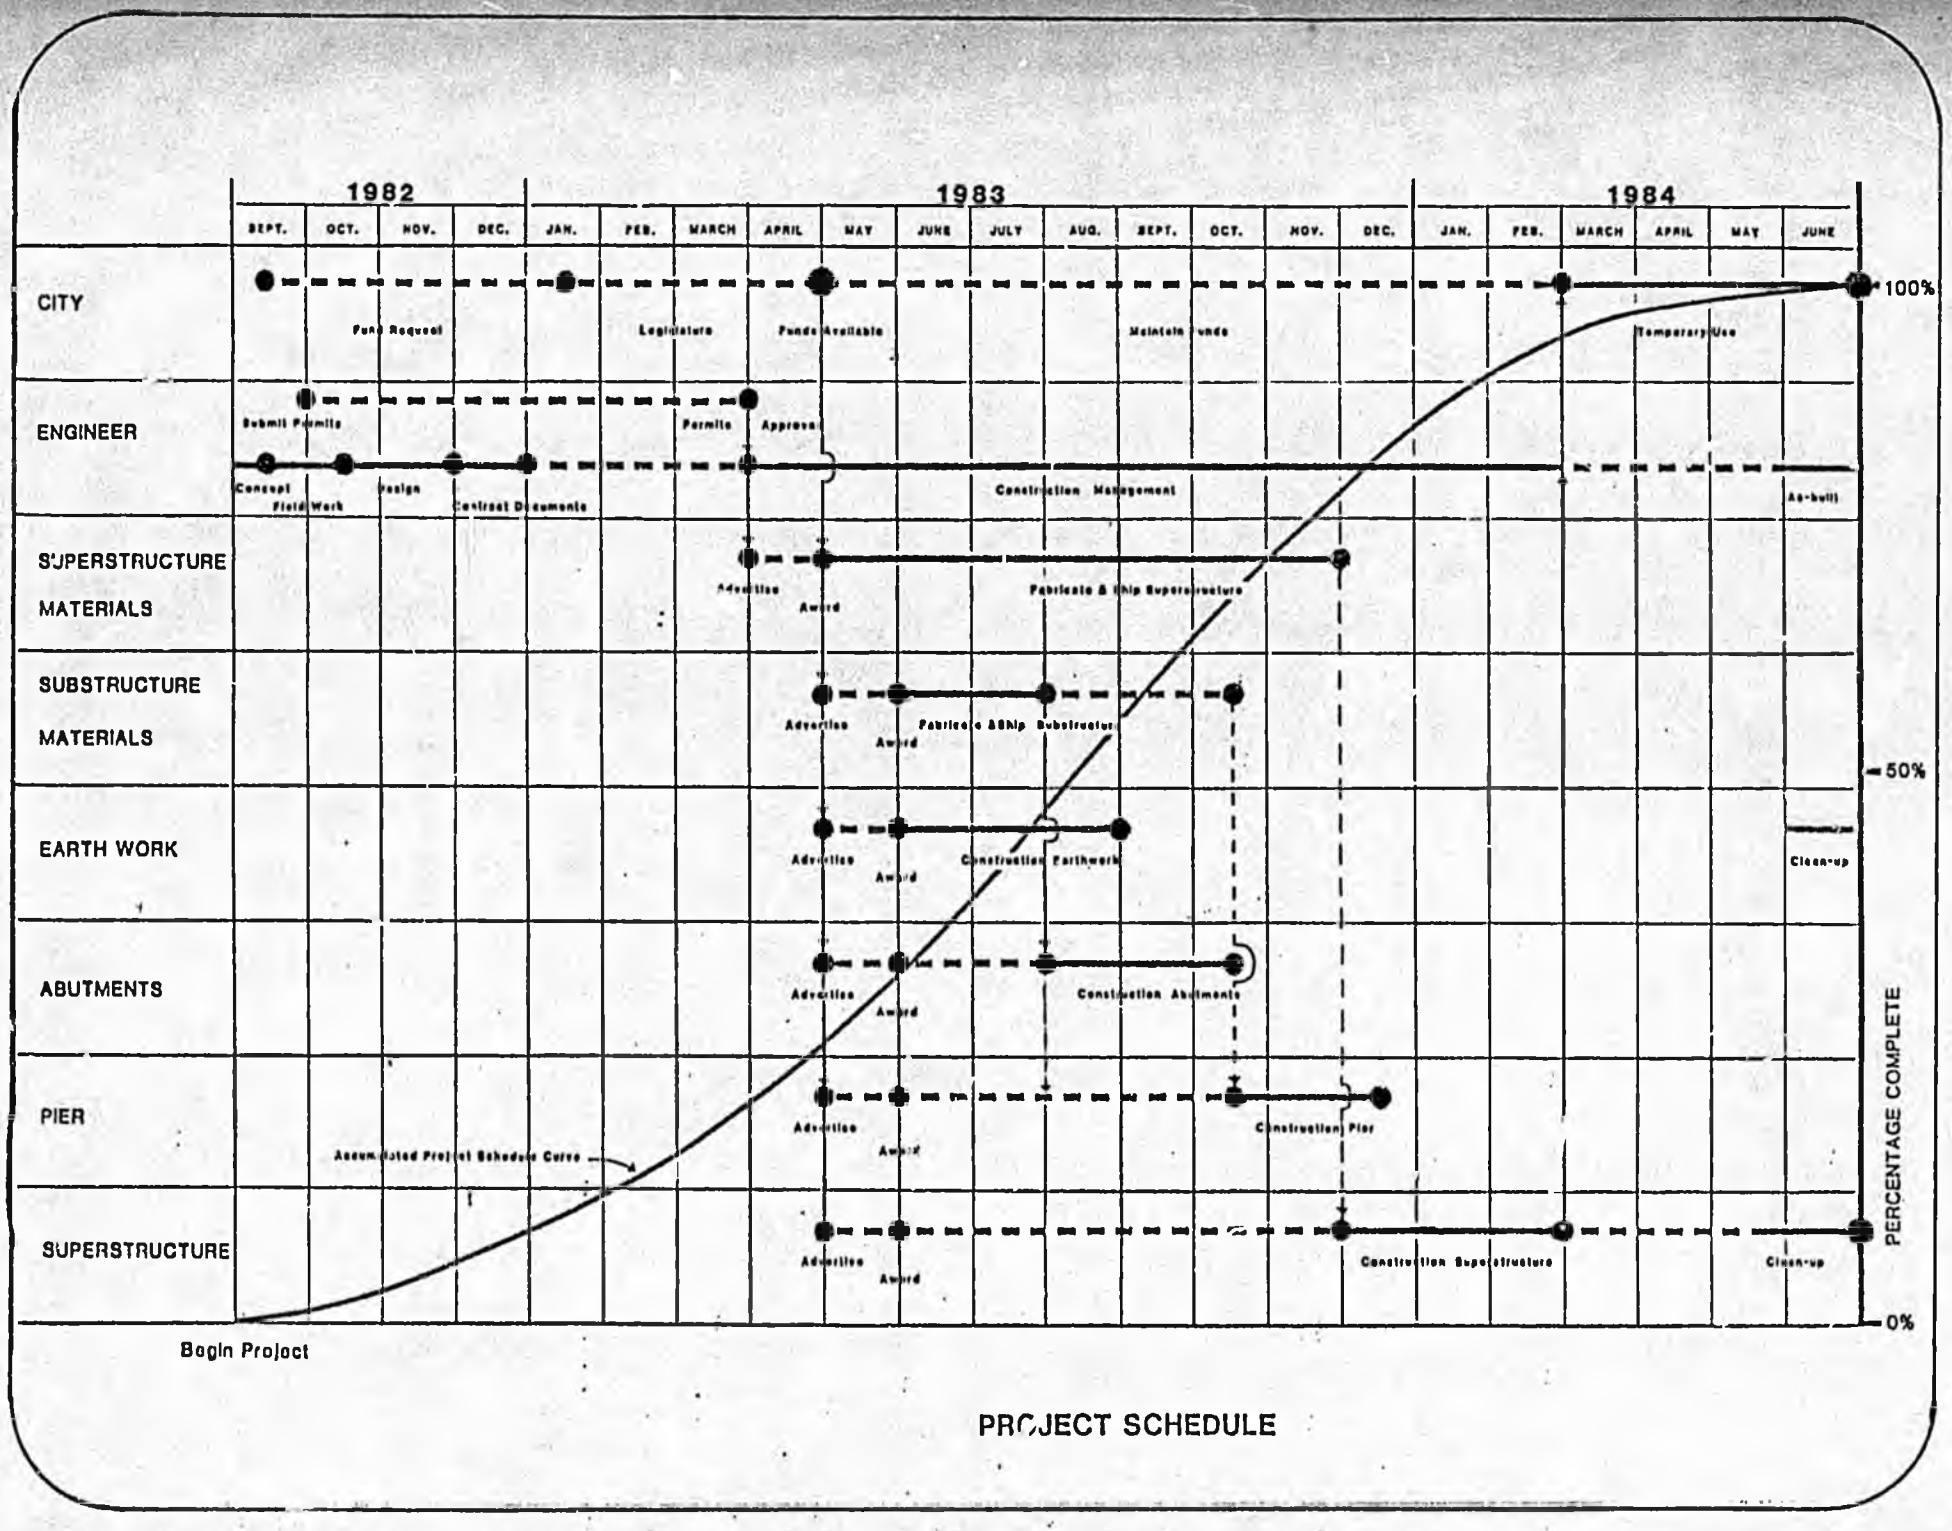
CITY OF NENANA RESOURCE DEVELOPMENT PROJECT

INTRODUCTION

Present access to Nenana Agricultural Development is limited by a bridge crossing required over the Nenana River near Nenana. The Nenana River is over 500 ft. wide at its narrowest point, posing a significant obstacle requiring a coordinated effort to economically bridge. It is at this point that the proposed bridge is to be located. Physical restraints such as divided river channels, ice floes and coordination with a possible future railway bridge dictate type and geometry. If construction budgets are to be met, design must address speedy construction, particularly during the present era of high interest rates and inflation.

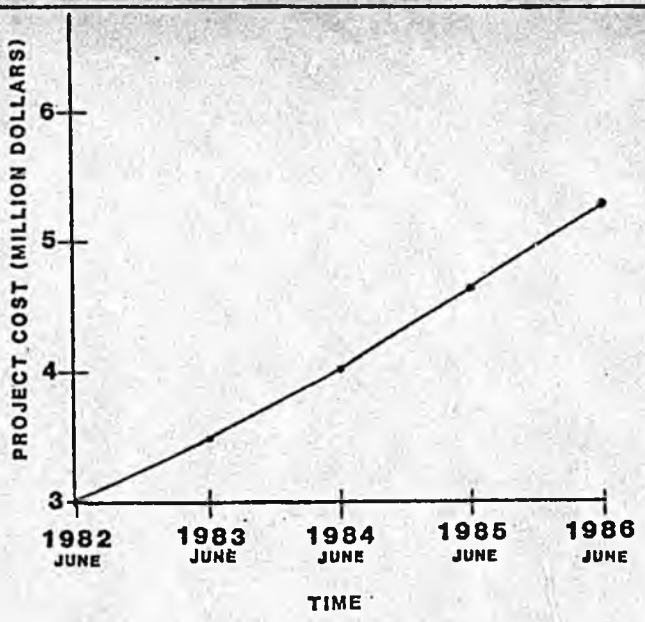


In order to achieve this goal a bridge type was chosen that allows the piers and abutments to be located out of the main river channels. Substructure design also allows the use of readily available materials which will further expedite the project and allow early construction during the winter when river flow is low and over ice access to piers and abutments is more convenient.



The more expensive superstructure steel must be erected before spring breakup as shown on the construction schedule. If this deadline is to be met and construction costs minimized, the superstructure steel must be ordered as soon as possible.

ECONOMICS AND TIMING



Once started, construction should be completed quickly so that capital outlay time is minimized. This can only be done by using a suitable design and providing the contractor with a proper schedule such as illustrated. A chart has been included to point out the devastating effect of time on a budget, assuming present inflation rates. As indicated, the estimated mid-1982 cost of $3,200,000 for this project can rapidly reach much higher values with time. In view of this, it would be desirable if funds could be made available by April 1983. With construction starting at this time a budget of $3,800,000 is required assuming construction will be completed by mid-1984.

Proposed Nenana River Bridge

PROJECT SCHEDULE

PROJECTED PROJECT COST ESCALATION

COST ESTIMATE

The following cost estimate is for a two span continuous steel box girder bridge with a precast concrete deck for a 30-foot roadway. Substructure units have been minimized as discussed previously. Steel would be unpainted ASTM A588 to eliminate future maintenance. A heavy concrete deck will eliminate a present highway bridge problem whereby weak deck components limit heavy overloads common to developing areas.

ITEM	ESTIMATED COST
Superstructure	$1,400,000
Substructure	500,000
Approach and Riprap	600,000
Contingencies	300,000
Construction Engineering	200,000
Administration	200,000
Mid-1982 COST (If constructed this year)	$3,200,000
Recommended Mid-1984 Completion Project Budget*	$3,800,000

* Assumes administration of construction project by the City of Nenana under Transfer of Responsibilities Agreement "TORA" with DOT/PF and a 20% per year inflation factor.

HOUSE BILL NO. 72

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Transportation and Public Facilities for various construction projects; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $17,100,000 is appropriated from the general fund to the Department of Transportation and Public Facilities for the following construction projects in the Totchaket resource area:

Nenana River bridge	$ 3,800,000
bridges across the Little Nenana River	1,900,000
22.8 miles of roadway	10,100,000
triple phase electrical power	1,300,000

Strike from Bill

* Sec. 2. The sum of $1,400,000 is appropriated from the general fund to the Department of Transportation and Public Facilities for construction of a fire fighting center near Nenana to serve the Interior Region of the state.

* Sec. 3. The appropriations made by this Act are for capital projects and are subject to AS 37.25.020.

* Sec. 4. This Act takes effect July 1, 1983.

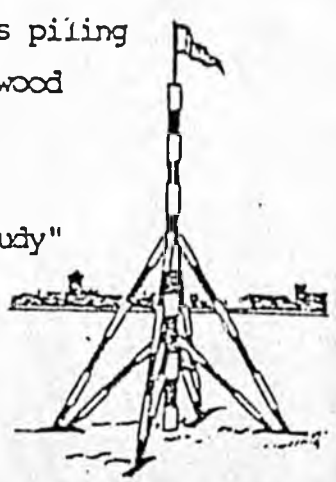
City of Nenana

State of Alaska

January 18, 1983

Mark Lewis, Commissioner
Department of Community & Regional Affairs
Pouch B
Juneau, Alaska 99811



Ref: Correspondence of January 13, 1983

Dear Mr. Lewis,

For the past several years, the City of Nenana has been promoting the development of two major projects which have an impact on the economic development of a large portion of the State. These projects are:

1) Rehabilitation of the dock facilities at Nenana that provide service to the river freight transportation system for the Yukon River and its tributaries. Design and permitting for these improvements was performed in 1981 and 1982. The project was funded during the second session of the 12th Legislature, as part of the "bond bill" which Governor Hammond eventually vetoed.

Reconstruction of the dock is vitally important-especially the replacement of that wood piling installed by the Alaska Railroad circa 1937. this piling is rotted and falling in the river. The City plans on replacing the wood piling with 1,000 l.f. of steel sheetpile bulkhead.

Attached is a copy of the "Port of Nenana-Bulkhead Expansion Study" done by Peratrovich and Nottingham in 1981. A project budget of $2.5 million is recommended.

RESOLUTION C 82-2

A RESOLUTION AUTHORIZING THE MAYOR OF THE CITY OF NENANA OR HIS DESIGNATED REPRESENTATIVE TO PURSUE FUNDING REQUESTS AND ENTER INTO AGREEMENTS WITH THE STATE OF ALASKA FOR PURPOSES OF ACCOMPLISHING THE FOLLOWING CAPITAL IMPROVEMENT PROJECTS;

ON A STATEWIDE BASIS:

1. REHABILITATION OF THE TANANA RIVER DOCK AND WATER FRONT FACILITIES AT NENANA THAT PROVIDE SERVICES FOR DELIVERY OF FREIGHT TO ALL VILLAGES ALONG THE YUKON RIVER — 2.5 MILLION

2. DEVELOPMENT OF THE TOTCHAKET RESOURCE AREA, INCLUDING AGRICULTURE, MINERALS, AND TIMBER
   a. NENANA RIVER BRIDGE — 3.8 MILLION
   b. BRIDGES ACROSS LITTLE NENANA RIVER, EAST AND WEST MIDDLE RIVERS — 1.9 MILLION
   c. 22.8 MILES OF ROADWAY — 10.1 MILLION
   d. THREE PHASE ELECTRICAL POWER — 1.3 MILLION

3. CONSTRUCTION OF THE INTERIOR STATE FIRE FIGHTING CENTER — 1.4 MILLION

Adopted by the Municipal Assembly of the City of Nenana, Alaska on this 11th day of November, 1982, by a vote of 5 for and 0 against.

By: _____
John B. Coghill, Mayor
City of Nenana

Mr. Steve Bainbridge, City Engineer
City of Nenana
P.O. Box 177
Nenana, Alaska 99760

Re: Port of Nenana Bulkhead Expansion

Dear Mr. Bainbridge:

In accordance with your request, we have updated the 1981 preliminary study for the above referenced project. Included in this report are our initial findings and an updated projected budget.

Parts of the original study included a site visit to Nenana, contact with the USGS in Fairbanks regarding river parameters, inspection of Alaska Railroad-owned salvaged sheetpile material in Anchorage, and research of Alaska Railroad files and documents. The cost for the salvaged Railroad-owned sheet piling is no longer competitive.

From this effort, we concluded the following:

1. A 1,000-foot bulkhead extension, as shown on the attached drawing is possible.

2. This extension, properly placed, would create a longer usable dock and avoid riverbed deposition.

3. About 2.5 acres of additional improved marine use uplands would be created, and at least 800 linear feet of usable dock frontage would result.

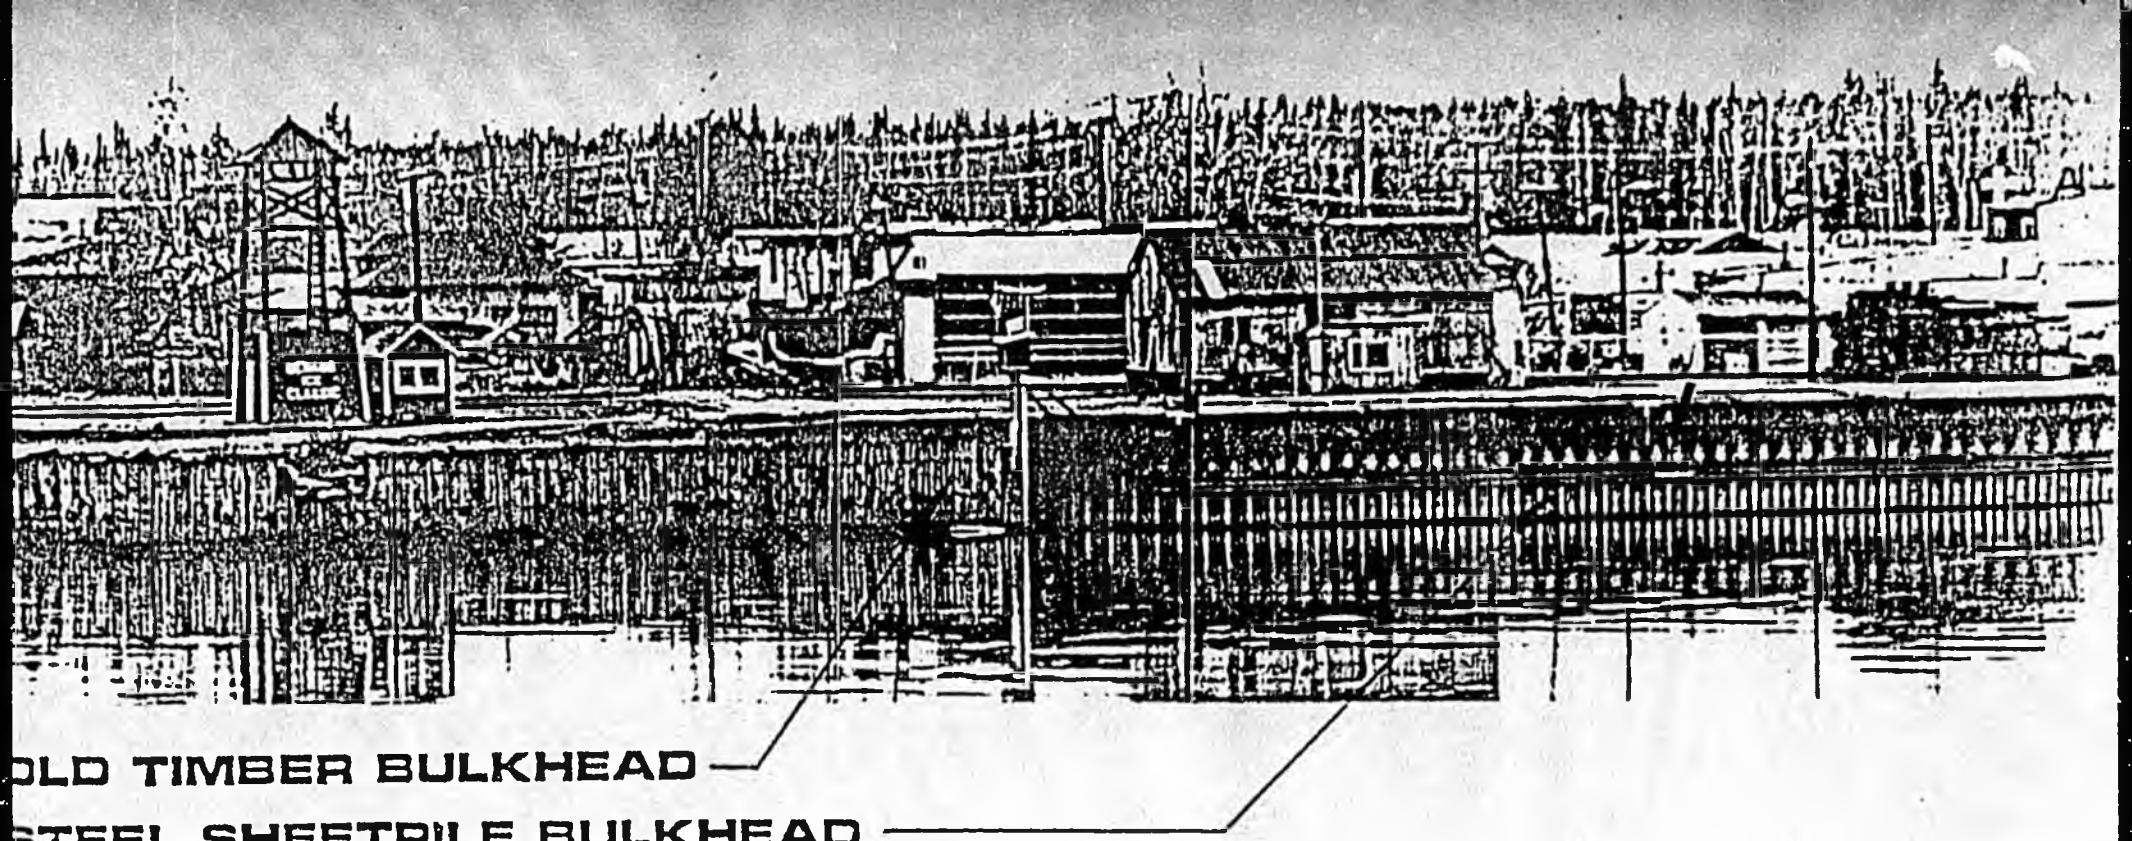
4. Flood elevations are not expected to be significantly impacted, although this needs to be accurately established through more engineering work.

5. Suitable fill and riprap material is available near Nenana.

6. Riverbed materials are suitable for the type of construction envisioned.

As we noted before, due to an apparent constriction and the potential to raise flood levels, the Corps of Engineers will probably require an accurate analysis to show that flood levels will not increase significantly (usually less than one foot).

We hope this report addresses your needs; and should you have any questions, please contact us at any time.



Sincerely,

PERATROVICH, NOTTINGHAM & DRAGE, INC.

Nenana City Port Authority

P.O. Box 177
Nenana, Alaska 99760
(907) 832-5564

NENANA CITY PORT DEVELOPMENT-August 1980 thru February 1982

In July of 1980, the Division of Transportation-Federal Railroad Administration (DOT-FRA) finalized their decision to have the Alaska Railroad (ARR) dispose of their fleet of vessels that provides barge transportation on the Tanana and Yukon Rivers. Department of Transportation indicated that the Alaska Railroad should begin immediately, working thru the General Services Administration (GSA), to consummate the sale and disposal of all government property related to the Yukon-Tanana barge operation.

The City had to intercede quickly to alter the proposed surplusing and GSA sale of the barge and tug fleet. Most any group engaged in "year-round" freight shipping activities could afford to pay a much greater price than a company that would be restricted to recovering their investment with a barge operation that functioned only four months a year-so there was a very real threat that the Railroad's tug and barge fleet could easily be purchased by an outside group if put on the open-bid market.

On the 30th of August, 1980, the City Council of Nenana unanimously approved Resolution 80-10, authorizing the Mayor of Nenana, or his designated representative, to negotiate the purchase and transfer of all the floating stock, related equipment and adjoining lands from the Alaska Railroad to the City of Nenana. A copy of this authorization was delivered to the Alaska Railroad to initiate a proposal for a negotiated sale from the Alaska Railroad to the City of Nenana.

To arrive at a fair market value of the property involved, appraisals of this property were completed. Having arrived at a price for the transaction, a "Letter of Intent to Purchase" between the City of Nenana and the Alaska Railroad was taken to the Alaska Municipal Bond Bank, where a sequence of events was arrived at which would provide for the securing of 2.5 million dollars financed by primary source (general obligation) bonds. Revenue bonds had been considered, but with the prevailing high interest rates. revenue issues were expected to approximate the 30 Utility Index (10.84%), while general obligation bond interest rates would approximate the 20 Bond Index (9.90%). A one percent interest differential applied to 2.5 million dollars could mean the difference between an economically feasible project and one that wouldn't show a positive cash flow.

So structured, the City of Nenana began the proceedures necessary to obtain local voter approval of the issuance of 2.5 million dollars in general obligation bonds. The ordinance authorizing this issuance of general obligation bonds was introduced on January 23, 1981. A public Hearing and adoption of the ordinance was held on February 2, 1981, and on February 24, 1981, the voters approved the bond issuance.

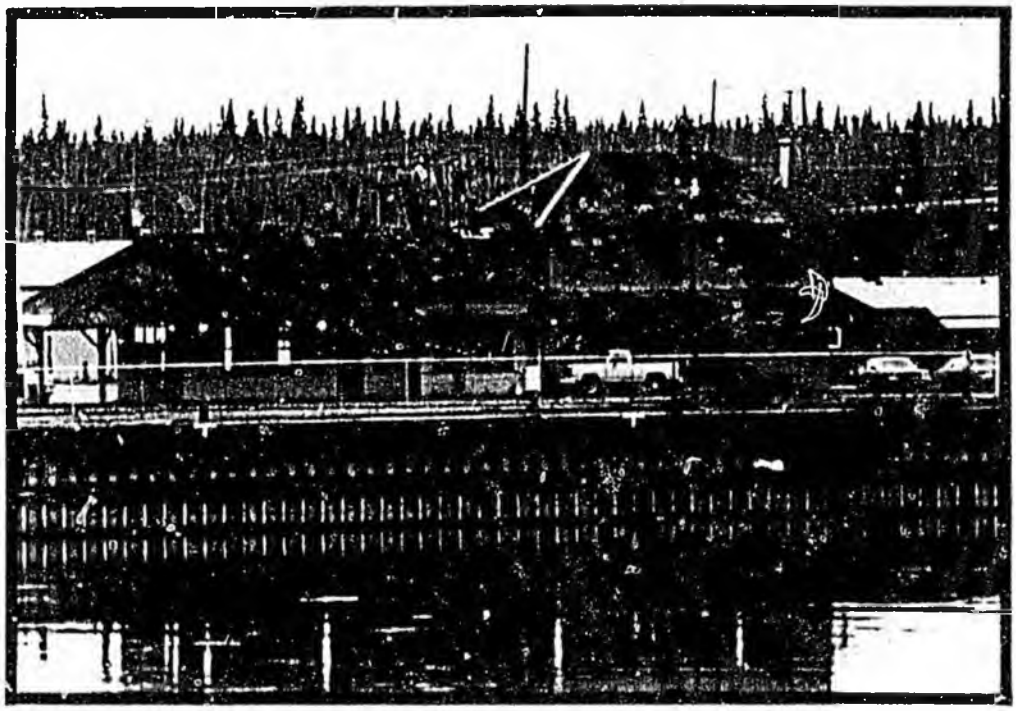
The actual sale of the barges and tug owned by the Alaska Railroad was finalized on June 11, 1981. This transaction included a comprehensive lease of real property owned by the Alaska Railroad, and situated within the City limits of Nenana, that was considered to be vital to the operation of the port facilities.

This included:

197.3 Acres of land within U.S.S. 1138;
27.0 Acres of improved land adjacent to the marine ways;
8.03 Acres of land comprising the main dock area;
1,500 l.f. of steel sheet piling; and
10 smaller parcels of property consisting of approximately 6.42 acres of land.

TOTAL ACREAGE: 238.75 ACRES

With the sale and lease transactions in place, the City of Nenana formed a Port Authority which was charged with administering a charter of the vessels and leases of individual parcels of property, along with establishing a franchise for the operation of the dock facilities. During the 1981 shipping season, river freight service was provided to those communities located along the Yukon River and its tributaries without interuption - This was the main intent behind the City of Nenana's efforts to keep the existing Alaska Railroad river transportation infrastructure in place at Nenana.



As the Nenana Port Authority embarks on its second season of operation, the most urgent need is to provide more usable dock space. To this need, the Port Authority has moved two older shop buildings off of the dock. The next logical area to develop more usable dock space is along that river bank now shored with wood piling. This wood piling was installed by the Alaska Railroad in approximately 1937. Most of this piling is rotted and highly susceptable to failure and collapse, but the area is still utilized for loading and off loading of heavy equipment and miscellaneous cargo. Given the increased volume of freight across the dock each year, it will not be long before an accident occurs in this area.

Realizing this, the Port Authority retained the engineering design firm of Peratrovich and Nottingham to develop a bulkhead expansion project in this area. Based on this design work, the City of Nenana proposes to provide for an additional 1,000 l.f. of steel sheetpile bulkhead to the east of that existing sheetpile bulkhead installed along the Tanana River by the Alaska Railroad in approximately 1952 (the existing steel sheetpile and tieback system is in excellent condition). The existing wood piling would be left in place, and an estimated 60,000 cubic yards of fill material would be placed in the river, thereby creating an additional 2.5 acres of dock space. MP 101 sheetpile sections would be utilized to provide a steel facing and tieback system for the new dock area. (A supply of surplus MP 101 sections have been located by the City and are available for immediate shipment upon securing of the funding for this project). The total recommended funding for this project is $1.8 Million (see Port of Nenana-Proposed Bulkhead Expansion-

Estimate and Recommended Budget-by Peratrovich & Nottingham, Inc., January 6, 1982)

The City of Nenana is working very closely with the Alaska Railroad during the various phases of this project. Both the City and the Alaska Railroad are assuming a great liability, given the increased utilization of the wooden dock area in its present condition. Furthermore, with the tonnage of river freight increasing every year, current dock facilities in Nenana are, and will continue to be, inadequate for the handling of freight destined for those communities along the Tanana River and Yukon River which depend upon the Nenana port facilities and river transportation system for delivery of freight and petroleum products.

Re: Port of Nenana Bulkhead Expansion

Dear Mr. Bainbridge:

In accordance with your authorization, we have completed a preliminary study for the above-referenced project. Included in this report are our initial findings and a projected budget that contains certain cost assumptions, as will be discussed.

Parts of this study included a site visit to Nenana, contact with the USGS in Fairbanks regarding river parameters, inspection of Alaska Railroad-owned salvaged sheetpile material in Anchorage, and research of Alaska Railroad files and documents.

From this effort, we have concluded the following:

1. A 1,000-foot bulkhead extension, as shown on the attached drawing appears possible.

2. This extension, properly placed, would create a longer usable dock and avoid riverbed deposition.

3. Sufficient suitable salvaged sheetpile material exists in Alaska to accomplish the project.

4. About 2.5 acres of additional improved marine use uplands would be created, and at least 800 linear feet of usable dock frontage would result.

5. Flood elevations are not expected to be significantly impacted, although this needs to be accurately established through more engineering work.

6. Suitable fill and riprap is available near Nenana.

7. Riverbed materials are suitable for the type of construction envisioned.

Immediate additional work required, which may impact fall 1982 completion, is permit preparation. Due to an apparent constriction and the potential to raise flood levels, the Corps of Engineers will probably require an accurate analysis to show that flood levels will not increase significantly, usually less than one foot.

The attached cost estimate has been prepared by using some cost assumptions connected with used sheetpiles. However, we feel that it will be an accurate starting point upon which future decisions can be made.

We hope this report addresses your needs; and should you have any questions, please contact us at any time.

Sincerely,

PERATROVICH & NOTTINGHAM, INC.

FROM: Bette Cato, Chairman
House Transportation Committee

RE: HB 98

In reference to the above mentioned bill, please provide for the House Transportation Committee alternatives available to the Legislature for the funding of this project.

I understand from conservations with my staff that there are several ways to fund this project. Some of the alternatives that have been suggested are: appropriating the authority to expend and receive federal funds at 95% of the total cost and use 5% match money of the general fund; assigning this project as a high priority and provide matching funds, etc.

Also it may be in the State's best interest to phase fund this project, what would be your estimate of the amount of funding for the first phase of this project.

I understand that your staff doesn't think $39 million would cover the cost of this project, but rather $60 million would be a closer figure. Would you please clarify this matter.

We would appreciate your reply on this matter by Thursday, February 22 for our 8:30 a.m. committee meeting, and invite someone from your staff to be attendance to answer any of the questions the committee may have.

Thank you for your prompt response.

ACTION NARRATIVE

TAPE#7, Side 2
Recording
Number 0005

Chairman Cato called the meeting to order. Staff present were Steve Soenksen and Rhonda Cargill. Chairman Cato was quite ill and turned the meeting over to Vice-Chairman M. W. Miller expressing her intent was not to move the bill today since there was no

fiscal note.

Number 0023 — Rep. Lacher expressed that it was impossible to deal with a project of this magnitude with a zero fiscal note even as important as it is to her. She asked if anyone was present from DOT who could answer some questions.

Number 0047 — John Bates, Deputy Commissioner, DOT took the stand.

Number 0050 — Rep. Lacher began her question by explaining that 3 weeks ago her staff had met with DOT's staff and asked if 39 million dollar figure is very close to actual cost and staff said yes. Why do we have a zero fiscal note?

Number 0065 — Mr. Bates explained that at the time the fiscal note was prepared, the instructions were they add and show the additional cost over and above the capital cost request for a particular feature being constructed. In this case, building would take 3 years so there would be no maintenance and operation cost for 3 years. It would be built no earlier than 1987, so no maintenance and operation cost. We were told not to put additional capital cost to construct facility, but to explain this in the back up (which was done).

Discussion by committee on fiscal note procedures.

Number 0187 — Rep. Lacher requested the committee to omit discussion of the fiscal note at this time and consider the merits of constructing the highway.

Number 0214 — Mr. Bates pointed out that at this particular time, since this project is not in the Governor's budget officially, the department does not support the bill; because the department is looking at that type of construction, and when it is stacked up against all the other needs with the State, it's time has not arrived yet. DOT has identified almost 5.2 billion dollars worth of work on existing facilities to be brought back to some relatively modern standard. This project is probably 4-5 years down the road before going to

construction or would request a Professional Engineer on it. Without even state money it would take 3 years to build. It would qualify for federal funds. Even if State funds would design to federal standards and make sure the federal government agreed with procedures and still have other two lanes on federal and highway system. It would be appropriate to take a portion of the Glenn Highway off federal highway system on a major road like that.

Re: Construction cost - when there is an official fiscal note, (it will be the only one recognized by the department). Can do construction cost both ways, if we're looking at a 4-5 year construction time scale. Probably the first year not do whole project; looking at dollars in different years - that's the problem. It's time is not ready yet compared to other projects.

Number 0251 Rep. Phillips asked if DOT would suggest the use of federal funds?

Number 0253 Mr. Bates said that if the department were to program it, they would do so using federal funds. This project has lots of hazards, so would go with federal funds - the federal government rebuilds. A major highway system should remain under federal highway system.

Number 0270 Rep. Phillips asked what the process is for the legislature to get plugged into federal aid?

Number 0281 Mr. Bates explained that two things were needed, but since he had never seen a bill that he can remember he doesn't know how it would be stated. They would need to appropriate the authority to expend and receive at 95% of total cost of fiscal note and 5% match money of general fund, but how you say that in a bill he didn't know. He added that the Legislature would also need to consider if it takes 4 years to build it. If you want to [illegible] DOT looking at it, the figures and ability to appropriate the construction funds, might not be too unrealistic to appropriate professional engineer funds and construction funds at a later date.

PHASE Funding

Number 0294

Rep. Lacher: If programming, would you do in federal funds even if you got x million appropriated, could you then go to work and program for federal funds if the need be and available?

Mr. Bates: Not for federal funds because we have no authority from the Legislature. If appropriate general funds, need not appropriate in federal receipts (authority to ask feds to reimburse) appropriated general funds can't go to the federal.

Number 0313

Rep. Lacher: So, in addition to appropriated x million dollars, we would use language that would allow you to use federal funds or receive federal funds.

Number 0317

Mr. Bates: Or you could just appropriate x million dollar federal receipts and x million in general funds.

Number 0319

Rep. Lacher: Appropriation plus federal funds more quicker?

Number 0326

Mr. Bates: To a clerical person doing the actual work (design, ads, construction, etc.,) he doesn't know what kind of funds it is. If you see federal procedures, no matter if it takes state or federal money, federal probably takes longer than state funds, wouldn't speed up construction. Federal procedures tougher to build to then state procedures.

Number 0337

Rep. Lacher: Reason appropriated for full amount (in this bill) was not only to get the work done sooner, but not to pull federal funds from other needed projects. We were led to believe to give them that option. Never told this would restrict you from applying for federal funds.

Number 0368

Rep. Szymanski: In your presentation you made indication this would be 5-6 years down the road from current scheme of planning.

Number 0370

Mr. Bates: Doesn't appear in 6 year program in Governor's budget, so looking at 5-6 years in budget for design. Three years before construction so 8 years on-line design/construction.

Number 0378

Mr. Bates: That's assuming some sort of

capital outlay for the next 5 years which we have assumed (don't know if oil revenues go up or down). So we assumed constant based on what we had last year on Governor's 6 year program. Since that time we have received 40 million dollars a year more federal funds from Federal Highway Administration from which will be taken into account for next 6 year program and we're receiving a fairly good amount of money in Governor's budget for transportation. So 5-6 years was our planning horizon. Alaska Department of Transportation only 12,000, that road could have had 20,000 easily without a problem. Problem more with intersections 2/4 run into capital problems on main route.

Number 0404

Rep. Szymanski: How do you get into prioritizing what's the criteria?

Number 0409

Mr. Bates: Probably the selection of highway projects is the most sophisticated system.

Start out with general goals the Administration wants and this year starting under Hammond Administration, there was a goal to basically fix and repair existing major highway systems, if not to the modern day standards at least back to the standard they were designed to do and some designed 20 years ago with minor safety work; guard rail work, and maybe flattening out curves and bad corners. That was the priority, basically finishing rehabing the system. We indicated that if any job was in our program for reconstruction within 3 years from when doing our original budget we would not consider for rehab. We would wait for program to re-build it. That was the major criteria we used in selection of projects. That probably was the leading criteria for projects of this type not being in there . There were a number of projects statewide that received very little funding that in previous years had been getting funds right along, because it didn't fit into criteria of rehabing.

We did have a portion of that set aside for construction of program facilities to meet today's and future needs. Because of rehab program it was not funded to magnitude it

has been in last three years.

From that particular place, when you set aside those goals and priorities we have a fairly sophisticated system (which takes into account); we go and look at ruts in roads, cracks, potholes, patching, night ability safety and Alaska Department of Transportation can come up with a number which rules all paved roads statewide. That number is in a percentile of roads that are better. Program doesn't crank in cost.

Number 0456 — Rep. M. W. Miller: The Governor has 5 or 6 years plan out? Could we get a copy? Governor's 5-6 yr. plan?

Number 0461 — Mr. Bates: Usually in budget documents you receive, we have a copy available.

Staff explained documents are different this year than last.

Number 0468 — Rep. Phillips: Do you have needs assessment which sets criteria and identifies needs statewide. needs assessment

Number 0476 — Mr. Bates: That's $5.2 billion - 6 year program tries to take capital projection which would be used for transportation and take those needs and spread over 6 years.

Further discussion of condition of roads.

Number 0524 — Rep. Davis: Is there federal money for rehab?

Discussion continued.

Number 0531 — Discussion of federal aid fund categories safety criteria, what we could possibly get.

Number 0589 — Advised staff to get together with DOT and prepare a Committee Substitute for House Bill No. 98.

Further discussion on how to ask for money for roads.

Number 0661 — Adjourned.

- Parks Hwy - Wasilla Junction

CS FOR HOUSE BILL NO. 98 (Transportation)

Please make the following changes in the above referenced bill:

Funding Information

General Fund	$ 240,000
Other Funds	$2,760,000
	3,000,0000

Line 7: Delete "as"

Line 8: Delete "matching funds"

Line 9: Delete: "Palmer-" add "-" after "Wasilla"

Line 10: Insert: "Parks Highway"

Thus the title would read:

"An Act making a special appropriation to the Department of Transportation and Public Facilities for design of a four-lane highway from the south end of Eklutna Flats to the Wasilla-Parks Highway junction; and providing for an effective date."

Line 12: Delete: "$ 240,000" "from the general fund"

Insert: "$3,000,000"

Line 13: Delete: "as matching funds"

Insert: "of which $240,000 is from the general fund and $2,760,000 is from federal receipts"

Line 15 Delete: "Palmer-"

Insert: "-Parks Highway"

Thus section 1 of the bill now reads:

*Section 1. The sum of $3,000,000 is appropriated to the Department of Transportation and Public Facilities of which $240,000 is from the general fund and $2,760,000 is from federal receipts for design of a four-lane highway extending from the south end of Eklutna Flats to the Wasilla-Parks Highway junction.

Copy to Requestor (if different from Sponsor)

IV. Analysis

This analysis includes the construction of: (1) a new south bound 2-lane roadway from Eklutna Flats to the junction of the Parks Highway (8.5 miles); (2) bridges (4500 feet); (3) an interchange at the intersection with the Old Glenn Highway; and (4) an overlay of the existing highway. Estimated construction cost in FY '83 dollars is $38,479,000, including a 10% contingency. This fiscal note assumes: (1) an annual inflation rate of 10%; (2) preliminary engineering (P.E.) contracted out to a consultant; (3) P.E. funding available by July 1983; and (4) the construction contract advertised for bid by February 1987. The estimated P.E. cost in FY '83 dollars is $946,000, which is 3% of the estimated construction cost. The analysis assumes the P.E. costs are spread over 3 years.

A. Impact on Existing Program: Would add additional positions (2) and equipment to maintenance operation.

B. Impact on New Programs and Activities: Unknown.

C. How figures were derived: Based on '83 information inflated at 10% per year for the life of the project.

D. Additional Information: Todate $250.0 is being used from the funding appropriated in chapter 107, SLA 83, (107/83/74/10), Federal Aid Highway Preliminary Engineering authorization for design and environmental studies to initiate this project.

The Department developed a cost estimate for this project of $39,425,000 in constant FY'83 dollars. To adjust this figure over the anticipated life of the project, assumptions were made regarding the amount of time and money needed to complete the preliminary engineering and the actual construction of the project as well as the future inflation rate. These assumptions were as follows:

(1) The project costs were assumed to inflate at 10% per year through the life of the project.

(2) The preliminary engineering was assumed to take approximately three years to complete. Funding would be required in each of these years. The preliminary engineering work was assumed to be contracted out to a consultant. The initial preliminary engineering funding was assumed to be available in FY '84 (October 1983). The original FY '83 constant cost estimate for the preliminary engineering was $946,000 which was 3% of the total construction cost. Inflating this cost at 10% per year, the cost of this phase was assumed to be as follows:

FY'84	$250,000
FY'85	$515,000
FY'86	$334,000

(3) The construction phase of the project was assumed to last two years and to be advertised for bid by February 1987. The FY '83 constant dollar construction cost was estimated at $38,479,000. Assuming an annual inflation rate of 10% per year, the cost of the construction phase was assumed to be as follows:

FY '87	$30,000,000
FY '88	$28,971,000

The total of the above budget estimates from FY'84 through FY'88 is $60,150,000 in dollars adjusted for a 10% annual inflation rate.

The dollar figures given in part one of the fiscal note constitute the total dollars needed for preliminary engineering (State and Federal funds). If 95% of the total cost is federally funded then the State would only need to provide 5% of the total funds needed for preliminary engineering. The cost estimates in this fiscal note are conceptual and have an accuracy range of -25% to +75%. More accurate cost estimates will be available once the preliminary engineering work has been completed.

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No.: CSHB 98 Date on Bill: 2/25/83

2/15/83

The Department developed a cost estimate for this project of $39,425,000 in constant FY'83 dollars. To adjust this figure over the anticipated life of the project, assumptions where made regarding the amount of time and money needed to complete the preliminary engineering and the actual construction of the project as well as the future inflation rate. These assumptions were as follows:

(1) The project costs were assumed to inflate at 10% per year through the life of the project.

(2) The preliminary engineering was assumed to take approximately three years to complete. Funding would be required in each of these years. The preliminary engineering work was assumed to be contracted out to a consultant. The initial preliminary engineering funding was assumed to be available in FY'84 (July 1983). The original FY'83 constant cost estimate for the preliminary engineering was $3,000,000. Inflating this cost at 10% per year, the cost of this phase was assumed to be as follows:

FY'84	$1,000,000
FY'85	$1,000,000
FY'86	$1,000,000

(3) The construction phase of the project was assumed to last two years and to be advertised for bid by February 1987. The FY'83 constant dollar construction cost was estimated at $38,479,000. Assuming an annual inflation rate of 10% per year, the cost of the construction phase was assumed to be as follows:

FY'87	$30,000,000
FY'88	$28,971,000

The total of the above budget estimates from FY'84 through FY'88 is $60,105,000 in dollars adjusted for a 10% annual inflation rate.

The dollar figures given in part one of the fiscal note constitute the total dollars need for preliminary engineering (State and Federal funds). If 95% of the total cost is federally funded then the state, naturally, would only need to provide 5% of the total funds needed for preliminary engineering.

Back to Appropriation

POSITION PAPER

Fiscal propriety demands that the State maintain project monitoring capability to ensure that the grant funds are spent for the project, and are managed according to Borough or Municipal fiscal procedures. Accordingly, a minimal State operating budget impact will be felt with the passage of each special appropriation under AS 37.05.315-37.05.319, such as this specific bill proposes. I should point out at this time that local governments have recognized their similar responsibilities when awarding grants to local social service providers, etc. Municipalities charge an administrative overhead fee of one to three point eight percent per grant. The Department of Administration requests that the specific grant appropriation language acknowledge a State agency overhead factor of up to .5% (one half of one percent) as Department of Administration operating costs for all special appropriations awarded under AS 37.05.315.

The Department questions the historical practice promoted under AS 37.05.315 and wonders if the Department of Community and Regional Affairs might be of better assistance to local governments through its Local Government Assistance program. Whereas the Department of Administration functions as a centralized control agency for all other Executive Branch agencies, the Department of Community and Regional Affairs is specifically charged with the responsibility of assisting local government in maximizing services to citizens.

MAR 8 1983

The Honorable Bette Cato
Representative
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

RE: HB 98

Dear Representative Cato:

This letter is in response to your request for information regarding the funding of HB 98. This bill would provide for expansion of the Glenn Highway to four lanes between Eklutna and the junction of the Parks Highway with the Glenn Highway. I anticipate this project could qualify for federal funding, since the Glenn Highway is on the Federal Interstate System and the improvements identified under this bill would be constructed to federal standards. The current minimum State/Federal match is 5% State and 95% Federal.

Your letter requested a clarification of the difference between the $39,000,000 estimate included in HB 98 and the Department's adjusted estimate of $60,105,000. The Department developed a cost estimate for this project of $39,425,000 in constant FY'83 dollars. To adjust this figure over the anticipated life of the project, assumptions where made regarding the amount of time and money needed to complete the preliminary engineering and the actual construction of the project as well as the future inflation rate. The following assumptions were made:

1. The project costs were assumed to inflate at 10% per year through the life of the project.

2. The preliminary engineering was assumed to take approximately three years to complete. Funding would be required in each of these years. The preliminary engineering work was assumed to be contracted out to a consultant. The initial preliminary engineering funding was assumed to be available in FY'84 (July 1983). The original FY'83 constant cost estimate for the preliminary engineering was $946,000 which was 3% of the total construction cost. Inflating this cost at 10% per year, the cost of the preliminary engineering phase was assumed to be as follows:

FY'84	$400,000
FY'85	$400,000
FY'86	$334,000

3. The construction phase of the project was assumed to last two years and to be advertised for bid by February 1987. The FY'83 constant dollar construction cost was estimated at $38,479,000. Assuming an annual inflation rate of 10% per year, the cost of the construction phase was assumed to be as follows:

FY'87	$30,000,000
FY'88	$28,971,000

The total of the above budget estimates from FY'84 through FY'88 is $60,105,000 in dollars adjusted for a 10% annual inflation rate. During each of the above years, the Department anticipates it will need 8% State funding of the respective fiscal year cost to match the expected 92% federal contribution.

The Department has recently completed a capacity analysis of this road segment. This analysis indicates the traffic volume on this road segment is approaching the existing design capacity of the road and is increasing at a high annual percentage rate. Based on this analysis, the Department is initiating a request to the Federal Highway Administration for approval to include this project as an eligible federal expenditure. Once this approval has been received, the Department will initiate the preliminary engineering work on the project. The Department currently has the budgetary capability to initiate the FY'84 portion of the preliminary engineering work.

In conclusion, please note that adequate funding will be needed to complete the remaining work in future budgets. If you have additional questions on this matter, please contact me.

Sincerely,

John C. Bates
Deputy Commissioner

House Transportation Committee

RE: HB 98

In reference to the above mentioned bill, please provide for the House Transportation Committee alternatives available to the Legislature for the funding of this project.

I understand from conservations with my staff that there are several ways to fund this project. Some of the alternatives that have been suggested are: appropriating the authority to expend and receive federal funds at 95% of the total cost and use 5% match money of the general fund; assigning this project as a high priority and provide matching funds, etc.

Also it may be in the State's best interest to phase fund this project, what would be your estimate of the amount of funding for the first phase of this project.

I understand that your staff doesn't think $39 million would cover the cost of this project, but rather $60 million would be a closer figure. Would you please clarify this matter.

We would appreciate your reply on this matter by Thursday, February 22 for our 8:30 a.m. committee meeting, and invite someone from your staff to be attendance to answer any of the questions the committee may have.

Thank you for your prompt response.

CS HOUSE BILL NO. 98

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Transportation and Public Facilities for design of a four-lane highway from the south end of Eklutna Flats to the Palmer-Wasilla junction; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $3,000,000 is appropriated to the Department of Transportation and Public Facilities of which $240,000 is from the general fund and $2,760,000 is from federal receipts for design of a four-lane highway extending from Eklutna Flats to the Palmer-Wasilla Junction.

* Sec. 2. The appropriation made by this Act is for a capital project and is subject to AS 37.25.020.

* Sec. 3. This Act takes effect July 1, 1983.

1. Op funds
2. Plan + Eng

1987 Constitution

There were over 100 accidents on this road from 1979-1981

HOUSE BILL 98

Background:

The four-lane Glenn Highway, heading north out of Anchorage/Eagle River, narrows to two lanes at Eklutna Bridge.

Going south toward Anchorage/Eagle River, two major highways, the Glenn and the Parks, merge into the two-lane Glenn Highway. The effect is the same--four lanes of major highway narrow into an older, two-lane paved road.

The resulting doubly-bottlenecked stretch of road (see sketch, Attachment A) carries traffic across some of the most exposed, wind-buffetted area in the Matanuska Valley: the Eklutna Flats. Winds gusting across the flats have literally blown vehicles off the road. In the very recent past, a trailer being pulled by a semi was blown across the guard rail over the Matanuska River.

This section of highway also spans three major bridges across the Matanuska and Knik Rivers. Condensation produces heavy fog throughout this area almost daily. Another effect of the moisture present there is a large amount of road ice.

The area also supports a large moose population. The perimeters of the road are unfenced, allowing these animals to cross the roadway at random. The high banks necessary to keep the road from flooding inhibit the driver's ability to spot moose crossing this highly trafficked road.

Add to this already hazardous drive the fact that the Glenn Highway is the primary artery of the substantial commuter population traveling from the Mat-Su Borough to jobs in Anchorage/Eagle River. Forty percent of the Borough's working population is employed outside the Borough.

In addition, many residents shop and do business in the Municipality of Anchorage.

The Mat-Su Valley offers a variety of recreational and tourist pastimes, drawing large numbers from the Anchorage bowl to its lakes, streams, ski trails, and other facilities.

Finally, the Glenn Highway is the only road leading north out of Anchorage, and south into Anchorage, Eagle River, and the Kenai Peninsula.

Statistics and Projections:

According to a 1982 Mat-Su Borough census, the borough has 26,000 residents. From 1970-1982, the Borough has experienced an average annual growth rate of 13.4%. There is solid reason to believe that this growth will continue, and could accelerate, in the future. The population will probably increase if planned construction projects, such as the Healy-Willow Intertie and the Beluga-Anchorage gas pipeline, go forward as scheduled. (See Attachment B.)

Of the 9,000 employed Borough residents, 3,600 work outside the Borough, largely in Anchorage/Eagle River. Although most of these people drive, alone or in car pools, three commuter buses daily accommodate approximately 70 people.

Average daily traffic on the Glenn Highway at the Eklutna Bridge is over 14,000 vehicles (see Attachment C). According to DOT/PF Deputy Commissioner John Bates, traffic is already above average for a two-lane highway.

During peak tourist traffic times, the highway usage more than doubles. On Labor Day, 1982, the Glenn Highway was traveled by 35,560 vehicles (traffic count at Scale House south of Eagle River; no data available for this date at Eklutna Bridge).

Accidents and road repairs which block one or both lanes further complicate smooth traffic flow. Emergency medical services personnel have expressed concern that traffic tangles may one day block passage of ambulances en route to Anchorage.

The Glenn Highway was constructed in 1965-66, when the Borough's population was 6,350, and the population of the Anchorage area was 102,337. The road was upgraded to four lanes from Anchorage to Peters Creek in 1972. The four lane highway was expanded to Eklutna Bridge in 1980.

Conclusions:

The Glenn Highway was adequate to meet traffic demands when it was constructed nearly twenty years ago. However, population in the Mat-Su area has more than quadrupled since that time, and Anchorage population has doubled. Tourism and recreation have become attractive industries for the economies of the Mat-Su and Anchorage areas. The existing road is no longer adequate for the increased demands being put upon it. As population, commuting workforce, and tourism increase, this strain will worsen.

According to John Scribner of DOT/PF, Anchorage, the project to widen the Glenn from Eklutna Bridge to the Parks Highway Junction, if funded this session, would be completed in approximately 1987, when, according to moderate population estimates, the population of the Matanuska Susitna Borough will be over 34,000. (Reference Attachment B.)

Therefore, it is vital to the economic well-being of the Matanuska-Susitna Borough and the Municipality of Anchorage, both its commuter and recreational/tourist travelers, and to the safety of all users of the Glenn Highway to begin construction of a four-lane highway from the south end of Eklutna Flats to the Junction of the Parks Highway.

AGENCY DOTPF - Planning & Programming
PHONE 465-4060

Original: Legislative Finance
cc: Budget and Management
Prime Sponsor (First Legislator Named)

III. ANALYSIS (cont'd)

This analysis includes the construction of: (1) a new south bound 2 lane roadway from Eklutna Flats to the junction of the Parks Highway (8.5 miles); (2) bridges (4500 feet); (3) an interchange at the intersection with the Old Glenn Highway; and (4) an overlay of the existing highway. Estimated construction cost in FY 83 dollars is $38,479,000., including a 10% contingency. This fiscal note assumes: (1) an annual inflation rate of 10%; (2) preliminary engineering (P.E.) contracted out to a consultant; (3) P.E. funding available by July 1983; and (4) the construction contract advertising for bid by February 1987. The estimated P.E. cost in FY 83 dollars is $946,000., which is 3% of the estimated construction cost. The analysis assumes the P.E. costs are spread over 3 years. On completion of construction, it is estimated that maintenance and operating costs will approximate $7,000 per lane mile. This translates to $119,000 per year. Total construction costs through completion are estimated at $60,105,000 rather than the $39,000,000 contained in HB 98.

New Gov program ?

QUESTIONS TO ASK DOTPF REPRESENTATIVE:

In a conversation staff had with DOT staff ~~in Anchorage~~, DOT was asked if projection of $39-million would be enough money to fund the project. DOT's response at that time (about 3 weeks ago), was that yes this figure would be very close to the actual cost. How does it happen that the original estimate has almost doubled in such a short time?

I believe I was told this by Jon Scribner of Design & Construction in ~~Anchorage~~. (not sure it was Scribner)

Wouldn't this project qualify for approximately 95.9% federal funding?

Why is this not brought out in the fiscal note?

What are DOTPF's priorities for use of the federal funds available to this state? Approximately $147-million will be available for FY84, approximately $155-million will be available the following year, and about $158-million the year after that.

Do DOT's priorities for use of federal funds agree with the legislature's priorities for road construction?

Tom Newnabor, field operations engineer for Federal Highway Administration, projected the following costs for the project:

$500,000 for environmental assessment and location studies

$3-400,000 for design

$35 to 40-million for construction

for a maximum estimated cost of $41 million

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE BILL NO. 150 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to motor fuel tax provisions and repeal of the tax on motor fuel used in or on watercraft; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.40.010(a) is amended to read:

(a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon, and

[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 2. AS 43.40.010(b) is amended to read:

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon, and

[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 3. AS 43.40.010(c) is amended to read:

(c) Every dealer who sells or otherwise transfers motor fuel in

the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. If the monthly tax return is timely filed, one percent of the total monthly tax due, limited to a maximum of $100, can be deducted and retained to cover the expense of accounting and filing the monthly tax return. At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all [MOTOR] fuel which the user [HE] has distributed or used during the month.

* Sec. 4. AS 43.40.010(g) is amended to read:

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e)[, (f)] and (j) of this section, shall be deposited in a special highway fuel tax account in the state general fund. The legislature may appropriate money [FUNDS] from it for expenditure by the Department of Transportation and Public Facilities [PUBLIC WORKS] directly or as matched with available federal-aid highway money for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.-10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend money [FUNDS] collected from taxes imposed by AS 43.40 shall perform, when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not

(a) A person who resells fuel on which the tax under AS 43.40.-010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements prescribed by AS 43.40.010(1) have been fulfilled [A CERTIFICATE OF USE IS ACQUIRED UNDER AS 43.40.010(1)]; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

* Sec. 8. AS 43.40.100(2) is amended to read:

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used [IN AND ON WATERCRAFT FOR ANY PURPOSE, OR] in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries;

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries;

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public;

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale;

(E) fuel used by charitable institutions;

(F) fuel which is at least 10 percent alcohol by volume;

(G) fuel sold or transferred between qualified dealers;

(H) fuel sold to federal, state, and local government

agencies for official use;

(I) fuel used in stationary power plants that generate electrical energy for private residential consumption;

(J) fuel used to heat private or commercial buildings or facilities [, OR];

(K) fuel used for other nontaxable purposes as prescribed by regulations adopted by the department; or

(L) fuel used in and on watercraft for any purpose;

* Sec. 9. AS 43.40.010(f) is repealed.

* Sec. 10. This Act takes effect July 1, 1983.

Introduced: 2/4/83

March 31, 1983

RE: H BILL-150

Bette M. Cato
Pouch V
Juneau, Alaska 99811

Dear Ms:

I would like to comment on H Bill-150 concerning repeal of the 5 cent per gallon watercraft fuel tax.

The proceeds of the watercraft fuel tax should be used to assure proper maintenance of State boat harbors. Additionally any remaining funds should be used to improve and upgrade existing boat harbors.

Though I understand that the Alaska Constitution prohibits designating revenues, the watercraft fuel tax (WCFT) has traditionally been used to fund small boat harbor improvements statewide. With the advent of large oil tax revenues the purpose and legislative intent of this "users tax" has been lost in translation.

Current CIP funding legislation does not adequately distribute this revenue to the regions in which it is collected.

I petition you to continue to collect this tax and also to adequately fund harbor maintenance and improvement projects.

Sincerely,

Harold Moeser

KODIAK AREA CHAMBER OF COMMERCE

KACC

March 1, 1981

Representative Fred Zharoff
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Fred,

At its meeting on February 23, 1981, the Board of Directors of the Kodiak Area Chamber of Commerce passed a motion unanimously supporting House Bill 101 repealing the tax on motor fuel used in or on watercraft.

We are pleased that you are a co-sponsor of this bill and trust that you will see that our support is passed on to appropriate legislators.

As you know, the Chamber represents the vast majority of Kodiak businesses thereby reflecting the position of the Kodiak economic community.

Sincerely,

KODIAK AREA CHAMBER OF COMMERCE

HOUSE BILL NO. 150

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act repealing the tax on motor fuel used in or on watercraft; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.40.010(a) is amended to read:

(a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon, added and

deleted
[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 2. AS 43.40.010(b) is amended to read:

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon, and added

deleted
[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 3. AS 43.40.010(g) is amended to read:

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e)[, (f)] and (j) of this section, shall be

deposited in a special highway fuel tax account in the state general fund. The legislature may appropriate money [FUNDS] from it for expenditure by the Department of Transportation and Public Facilities [PUBLIC WORKS] directly or as matched with available federal-aid highway money for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.-10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend money [FUNDS] collected from taxes imposed by AS 43.40 shall perform, when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of Transportation and Public Facilities [PUBLIC WORKS] may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

* Sec. 4. AS 43.40.030(a)(2) is amended to read:

(2) the motor fuel is not aviation fuel [, OR MOTOR FUEL USED IN OR ON WATERCRAFT]; and

* Sec. 5. AS 43.40.100(2) is amended to read:

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used [IN AND ON WATERCRAFT FOR ANY PURPOSE, OR] in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor;

"motor fuel" does not include

(A) fuel consigned to foreign countries;

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries;

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public;

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale;

(E) fuel used by charitable institutions;

(F) fuel which is at least 10 percent alcohol by volume;

(G) fuel sold or transferred between qualified dealers;

(H) fuel sold to federal, state, and local government agencies for official use;

(I) fuel used in stationary power plants that generate electrical energy for private residential consumption;

(J) fuel used to heat private or commercial buildings or facilities [, OR];

(K) fuel used for other nontaxable purposes as prescribed by regulations adopted by the department; or

(L) fuel used in and on watercraft for any purpose;

* Sec. 6. AS 43.40.010(f) is repealed.

* Sec. 7. This Act takes effect July 1, 1983.

Motor Fuel Tax (decreasing & repealing refund provis.)

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 55, by Reps. Martin and Grussendorf. Lowers motor fuel tax to three cents per gallon, as did original (see p. 46), and repeals motor fuel tax refund provisions contained in the following statutes:

--AS 43.40.030, "Refund for Nonhighway Use," allows six-cent-per-gallon refund of any tax paid for fuel used for a vehicle which is not operated on highways in the state (does not apply to aviation fuel and watercraft fuel). Allows total refund on that part of the fuel sold for non-highway use in a foreign country.

--AS 43.40.035, "Other Refunds and Credits," which allows a person who resells fuel on which the motor fuel tax was previously paid to receive a refund of the tax.

--AS 43.40.050, "Refund Claim by Affidavit," containing procedure for claiming refund of motor fuel tax by filing an affidavit with the Dept. of Revenue.

--AS 43.40.060, "Separate Invoices," which allows the Dept. of Revenue to require separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim.

--AS 43.40.070, "Refund Warrants," directs the Dept. of Revenue, upon approval of a refund claim, to issue a warrant drawn on the Highway Fuel Tax Account in favor of the applicant in the amount of the claim.

--AS 43.40.080, "Examination of Books and Records," allows the Dept. of Revenue to examine a claimant's books and records to determine the validity of a claim for a refund.

Note: bill also includes repealer for AS 43.40.040, "Applications and Permits for Refund," however this section was repealed in 1980 by Sec. 45 of Ch. 113, SLA 1980. (Required person seeking refund to obtain a permit from the Dept. of Revenue.)

Effective April 1, 1983.

Introduced February 4 and referred to Transportation and Finance.

Appropriation (special) (Tununak seawall)

HOUSE BILL NO. 149, by Rep. Vaska. Would appropriate $905,000 for a grant to the City of Tununak to construct a seawall for the prevention of soil erosion. Tununak is on the western side of Nelson Island on the Bering Sea. Provides appropriation be disbursed in accordance with laws governing state grants (AS 37.05.315 - 319). Effective immediately.

Introduced January 31 and referred to Community & Regional Affairs and Finance.

Motor Fuel Tax/Water-Craft (repealing)

HOUSE BILL NO. 150, by Zharoff, Grussendorf and McBride. Would repeal the five cent per gallon tax on motor fuel used in or on watercraft (AS 43.40.010(a)(2) and (b)(2)). Effective July 1, 1983.

HB 150 (cont'd)

Introduced January 31 and referred to Transportation, Resources and Finance.

Appropriation (special) (House of Wickersham)

HOUSE BILL NO. 151, by Reps. Hayes, M.M. Miller, Duncan, Cowdery, Fritz, Bettisworth, Cato, Clocksin, Davis, Flood, Furnace, Goll, Kohonen, Larson, Liska, Martin, McBride, M.W. Miller, Pestinger, Szymanski, Tischer, Uehling, Wendte and Zharoff. Would appropriate $1 million to the Dept. of Natural Resources, Division of Parks, for the acquisition of the House of Wickersham in Juneau and the historical collections and artifacts contained in the house and for the development of the acquisition as an historic site. Appropriation lapses on June 30, 1984. Effective July 1, 1983. Identical to SB 31, page 10.

Introduced January 31 and referred to State Affairs and Finance.

Appropriation (supplemental) (revenue sharing)

HOUSE BILL NO. 152, by the Community & Regional Affairs Committee. Would make a $3.5 million supplemental appropriation to the miscellaneous services account (AS 29.89.080) for AS 29.89 (Misc. State Aid to Municipalities) for distribution to local governments and other recipients for the fiscal year ending June 30, 1983. AS 29.89 provides for state aid for roads, health facilities and hospitals, volunteer fire departments in the unorganized borough, and aid to Native Village governments. Appropriation lapses June 30, 1984. Effective immediately.

Introduced February 2 and referred to Community & Regional Affairs and Finance.

Appropriation (supplemental) (Municipal Assistance Fund)

HOUSE BILL NO. 153, by the Community & Regional Affairs Committee. Would make a $25.1 million supplemental appropriation to the Dept. of Revenue for the Municipal Assistance Fund (AS 43.20.016(a)) for distribution to municipalities for the fiscal year ending June 30, 1983. Lapses on June 30, 1984. Effective immediately.

Identical to SB 17, as amended by Senate CRRA Committee, and identical to HB 136 p. 99, except for lapse date.

Introduced February 2 and referred to Community & Regional Affairs and Finance.

Minimum Train Crews (repealing law)

HOUSE BILL NO. 154, by the Rules Committee by request of the Governor. Would repeal law establishing minimum train crews in Alaska (AS 23.10.420). See Governor's letter, below.

Does not provide for an effective date (effective 90 days after Governor's signature).

Introduced February 2 and referred to Labor & Commerce and Transportation.

In his message transmitting the bill to the House for consideration, Governor Sheffield stated:

(2) $4 for each 1,000 holes or fraction in each board with more than 2,000 holes. (§ 1 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.110. Power to issue regulations. The department may issue orders and regulations necessary to carry out §§ 100—150 of this chapter. (§ 3 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.120. Manner of paying tax. The tax shall be paid by purchasing stamps from the office of the Department of Revenue. The stamps shall be affixed to the punchboard before it is placed in use, and the operator of the punchboard shall endorse upon the stamp the serial number of the punchboard. (§ 2 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.130. Refund to local governments. The department shall refund 75 per cent of the tax collected from sales of punchboards in an organized borough or city of the first, second, or third class to the local government. The balance shall be deposited in the general fund. (§ 6 ch 116 SLA 1949; am § 1 ch 53 SLA 1951; am § 3 ch 155 SLA 1962)

Sec. 43.35.140. Gambling not legalized. Sections 100—150 of this chapter do not legalize gambling. (§ 4 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Cross reference. — As to limitations on authorized gaming activities, see AS 05.15.180.

Sec. 43.35.150. Violations and penalties. (a) It is unlawful for a person to (1) distribute in the state a punchboard for which the license tax provided in §§ 100—150 of this chapter is not paid; or (2) maintain for use, or permit the use of, in a place or premises occupied by the person a punchboard upon which the license stamp is not affixed.

(b) A person violating a provision of §§ 100—150 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $500. (§ 5 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Chapter 40. Motor Fuel Tax.

Article
1. General Tax Levy on Transfers or Consumption of Motor Fuel (§§ 43.40.010 — 43.40.100)
2. Additional Tax Levy on Transfers or Consumption of Motor Fuel (Repealed)

Article 1. General Tax Levy on Transfers or Consumption of Motor Fuel.

Section
10. Tax on transfers or consumption of motor fuel and expenditure of proceeds
20. Penalty for violation
30. Refund for nonhighway use
40. Applications and permits for refund

Section
50. Refund claim by affidavit
60. Separate invoices
70. Refund warrants
80. Examination of books and records
85. Preservation of books and records
90. Criminal violation
100. Definitions

Sec. 43.40.010. Tax on transfers or consumption of motor fuel and expenditure of proceeds. (a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all motor fuel which he has distributed or used during the month.

(d) Repealed by § 3 ch 166 SLA 1976.

(e) Sixty per cent of the proceeds of the revenue from the taxes on aviation fuel, excluding the amount determined to have been spent by the state in its collection, shall be refunded to a municipality owning and operating or leasing and operating an airport in the proportion that the revenue was collected at the municipal airport. All other proceeds of the taxes on aviation fuel shall be paid into a special aviation fuel tax account in the state general fund. The legislature may appropriate funds from this account for aviation facilities.

(f) The proceeds from the revenue from the tax on motor fuel used in boats and watercraft of all descriptions shall be deposited in a special watercraft fuel tax account in the general fund. The legislature may appropriate from this account for water and harbor facilities.

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e), (f), and (i) of this section, shall be deposited in a special highway fuel tax account in the state general fund. The legislature may appropriate funds from it for expenditure by the Department of Public Works directly or as matched with available federal-aid highway money

for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration and related matters. All departments of the state government authorized to spend funds collected from taxes imposed by §§ 10—100 of this chapter shall perform, when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of public works may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

(h) All motor fuel tax receipts shall be paid into the general fund and distributed to the proper accounts in the general fund. Valid motor fuel tax refund claims shall be paid from the highway fuel tax account in the general fund.

(i) Within 30 days after the legislature convenes the Department of Public Works shall submit an annual budget covering anticipated revenues and their expenditure, for the consideration and approval by the legislature. The budget shall cover all money collected or anticipated to be collected under §§ 10—100 of this chapter for the year following the adjournment of each regular session of the legislature.

(j) The proceeds from the tax on motor fuel used in snow vehicles and, unless a tax refund is applied for under § 40 of this chapter, other internal combustion engines not used in or in conjunction with a motor vehicle licensed to be operated on public ways shall be deposited in a special nonpublic highway use account in the general fund. The legislature may appropriate from this account to the Department of Highways for trail staking and shelter construction and maintenance.

(k) The tax on the transfer or consumption of motor fuel provided for in this section does not apply to liquified petroleum gas. (§ 48-5-2 ACLA 1949; am § 1 ch 80 SLA 1951; am § 1 ch 47 SLA 1955; am §§ 1, 2 ch 27 SLA 1957; am § 1 ch 134 SLA 1957; am § 1 art VI title II ch 152 SLA 1957; am § 2 art V title III ch 152 SLA 1957; am § 2 ch 124 SLA 1959; am §§ 1, 2 ch 20 SLA 1960; am § 1 ch 150 SLA 1960; am § 1 ch 110 SLA 1961; am § 1 ch 136 SLA 1961; am §§ 1—3 ch 131 SLA 1962; am § 1 ch 130 SLA 1968; am § 10 ch 143 SLA 1968; am §§ 1, 2 ch 216 SLA 1968; am §§ 1—3 ch 158 SLA 1970; am § 3 ch 58 SLA 1971; am §§ 1, 2 ch 124 SLA 1971; am §§ 2, 3 ch 125 SLA 1971; am §§ 1—3 ch 153 SLA 1972; am § 3 ch 166 SLA 1976; am §§ 1, 2 ch 116 SLA 1977)

Cross reference. — For civil penalty imposed for failure to file a return or report, or pay the full amount of a tax, or a portion or a deficiency of the tax, see AS 43.05.220.

Effect of amendments. — The 1976 amendment repealed subsection (d), which provided for an additional amount to be added to the tax for failure to file a return and remit the tax within the time prescribed by law or prescribed by the department pursuant to law, due to wilful neglect.

The 1977 amendment rewrote paragraph (2) of subsection (a) and paragraph (2) of subsection (b).

Editor's note. — Section 1, ch. 125, SLA 1971, provides: "Intent. The intent of this Act is to provide funds for trail stak[e]s and shelter construction and mai[n]t[enance] projects in sparsely populated ar[eas] [w]here the interests of safety requir[e] establishment for the protection of traveling citizens of the state."

Purpose of subsection (g). — The purpose of the dedication of the taxes on motor fuels contained in subsection (g) of this section is public highways. 1959 Op. Att'y Gen., No. 9.

A proposed alteration going to the geographical area of expenditure rather than to the special purpose of a dedication, does not contravene the constitution. 1959 Op. Att'y Gen., No. 9.

Amendment of 1957 effected no change in dedication. — The 1957 amendment to this section, which reduced the tax on motor fuel used in commercial fishing crafts for purposes of commercial fishing from five cents to two cents per gallon, effected no change in the dedication inasmuch as the reduction in the tax was coupled with an exemption from the refund of three cents per gallon formerly allowed to users of fuel in commercial fishing craft for commercial purposes. Nothing has been done which increased or decreased the dedication. 1959 Op. Att'y Gen., No. 14.

Civil Air Patrol exempt. — The Civil Air Patrol is exempt from taxation under the Alaska Motor Fuel Oil Tax Act because it is an instrumentality of the federal government. 1961 Op. Att'y Gen., No. 26.

But volunteer members of Civil Air Patrol are not exempt. 1961 Op. Att'y Gen., No. 26.

Am. Jur. and C.J.S. references. — 51 Am. Jur., Taxation, §§ 1260 to 1279.

53 C.J.S. Licenses § 30.

Sec. 43.40.020. Penalty for violation. (a) A person who violates a provision of §§ 10—100 of this chapter upon conviction is punishable for each violation by a fine of not less than $50 nor more than $5,000, or by imprisonment for not more than one year, or by both. Each day's violation is a separate offense.

(b) Repealed by § 3 ch 116 SLA 1977. (§ 48-5-3 ACLA 1949; am § 4 ch 153 SLA 1972; am § 3 ch 116 SLA 1977)

Effect of amendment. — The 1977 amendment repealed subsection (b), which read "A person who claims the nonpropulsion use fuel tax exemption under § 10 (a) (2) or § 10 (b) (2) of this chapter and who uses a portion of the amount of the exempted fuel for another purpose is guilty of a misdemeanor, and is punishable by a fine of not more than $5,000."

C.J.S. reference. — 53 C.J.S. Licenses § 62.

Sec. 43.40.030. Refund for nonhighway use. (a) Except as specified in § 10 (j) of this chapter, a person who uses motor fuel to operate an internal combustion engine is entitled to a refund of six cents a gallon if

(1) the tax on the motor fuel has been paid;

(2) the motor fuel is not aviation fuel, or motor fuel used in or on watercraft; and

(3) the internal combustion engine is not used in or in conjunction with a motor vehicle licensed to be operated on public ways.

(b) The entire tax levied by §§ 10—100 of this chapter shall be refunded to the purchaser on that part of the motor fuel used in a foreign country on which duty is paid when the fuel is sold and delivered in the state for nonhighway use in a foreign country.

(c) The Department of Revenue shall establish the necessary regulations and prescribe the appropriate forms to prove that the motor fuel is taken to and used in foreign countries. (§ 2 ch 47 SLA 1955; am § 3 ch 27 SLA 1957; am § 2 ch 136 SLA 1961; am § 4 ch 158 SLA 1970; am § 3 ch 124 SLA 1971; am § 4 ch 125 SLA 1971; am § 4 ch 116 SLA 1977)

Effect of amendment. — The 1977 amendment substituted "or on watercraft" for "an engine to propel a boat or watercraft, including motor fuel which may be used for heating and cooking aboard boats and watercraft" in paragraph (2) of subsection (a).

Editor's note. — Section 1, ch. 125, SLA 1971, provides: "**Intent.** The intent of this Act is to provide funds for trail staking and shelter construction and maintenance projects in sparsely populated areas where the interests of safety require their establishment for the projection of traveling citizens of the state."

Sec. 43.40.040. Applications and permits for refund. A person who desires to claim a refund shall obtain an annual permit from the Department of Revenue by application on a form prescribed by the department. The application shall contain the name, address, and occupation of the applicant, the nature of the business, and a sufficient description for identification of the machines or equipment in which the motor fuel is to be used for which refund may be claimed under the permit. The permit shall be obtained no later than the time that the first application for refund is made under §§ 10—100 of this chapter. The permit expires at midnight of June 30 following the date it is issued. (§ 3 ch 47 SLA 1955; am § 4 ch 131 SLA 1962)

Sec. 43.40.050. Refund claim by affidavit. (a) A person who claims a refund as provided in §§ 10—100 of this chapter shall present his claim to the commissioner of revenue by affidavit upon a form provided by the commissioner with the information the commissioner requires. The claim shall be accompanied by each invoice issued to the claimant at the time the motor fuel is purchased. The commissioner may require any additional information which he considers necessary for the administration of §§ 10—100 of this chapter.

(b) A claim for refund shall be filed within one year from the date of the purchase of the motor fuel as indicated on the invoice, and failure to file within the one year period is a waiver of the right to the refund. A claim is considered to be filed when the claim is mailed or personally presented to an office of the Department of Revenue. (§ 4 ch 47 SLA 1955; am § 1 ch 139 SLA 1960)

Sec. 43.40.060. Separate invoices. The Department of Revenue may require the issuance of separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim. (§ 6 ch 47 SLA 1955)

Sec. 43.40.070. Refund warrants. Upon approval of a refund claim by the Department of Revenue, a warrant shall be drawn on the highway fuel tax [illegible] in the general fund in favor of the applicant in the amount of the claim. (§ 7 ch 47 SLA 1955; am § 5 ch 131 SLA 1962)

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the Department of Revenue may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The Department of Revenue may cancel the refund permit of the claimant relying upon a fraudulent invoice for a period of not more than one year.

(b) If an invoice relied upon for a refund claim is fraudulent, the claimant is guilty of a misdemeanor and is punishable by a fine of not more than $500. (§ 5 ch 47 SLA 1955)

Sec. 43.40.085. Preservation of books and records. Dealers and users shall preserve for three years all books and records pertaining to sales, transfers, and uses of motor fuel which are taxed under this chapter. (§ 5 ch 158 SLA 1970)

Sec. 43.40.090. Criminal violation. A person who uses motor fuel with knowledge that the tax has not been paid is guilty of a misdemeanor, and is punishable by a fine of not more than $500, or by imprisonment for not more than one year, or by both. (§ 11 ch 47 SLA 1955; am § 4 ch 27 SLA 1957)

C.J.S. reference. — 53 C.J.S. Licenses § 66.

Sec. 43.40.100. Definitions. In §§ 10—100 of this chapter

(1) "dealer" means a person who sells or otherwise transfers in this state motor fuel upon which the taxes imposed by this chapter have not been paid;

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries,

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries,

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public,

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale, or

(E) fuel used by charitable institutions;

(3) "user" means a person consuming or using motor fuel, who either purchases the fuel out of the state and ships it into the state for his own use within the state or manufactures the fuel in the state. (§ 48-5-1 ACLA 1949; am § 1 ch 56 SLA 1949; am § 9 ch 47 SLA 1955; am § 26 ch 70 SLA 1964; am §§ 6, 7 ch 158 SLA 1970; am § 1 ch 74 SLA 1972; am § 5 ch 116 SLA 1977)

Cross reference. — See editor's note to AS 08.04.380.

Effect of amendment. — The 1977 amendment in paragraph (2), added the subparagraph designations, substituted "or aircraft, and fuel used in and on watercraft for any purpose" for "aircraft, boat or watercraft", "run" for "propelled", and "motor fuel does not include" for "except on consignments of motor" in the introductory paragraph, substituted "consigned" for "oil" in present subparagraph (A), substituted "fuel sold" for "except motor fuel oil sold" in present subparagraph (B), deleted "and except" preceding "fuel used" and "or" following "general public" in present subparagraph (C), and inserted "fuel used" at the beginning of present subparagraphs (D) and (E).

Article 2. Additional Tax Levy on Transfers or Consumption of Motor Fuel.

HB 107

STATE OF ALASKA

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER

JAY S. HAMMOND, GOVERNOR

POUCH S
JUNEAU, ALASKA 99811
PHONE: (907) 465-2300

January 28, 1982

THE HONORABLE
FRED F ZHARCFF
ALASKA STATE HCUSE
OF REPRESENTATIVES
PCUCH V
JUNEAU AK 99811

I am enclosing a copy of a monthly report prepared by the Alaska Department of Revenue concerning tax collections and interest income.

The statement entitled "Cumulative Summary of Revenue Collected July 1, 1981 through December 30, 1981" discloses gross receipts, refunds, net receipts, estimated total year collections, and percent of estimate realized. It covers receipts of all taxes and licenses administered by the Department of Revenue and interest income accounted for on a cash basis. It does not cover all items of state revenue.

The estimated total year collections have been adjusted to coincide with FY 1982 revenue estimate appearing in the publication entitled "Revenue Sources FY 1981-1984 - January 1982.

The net collections of taxes and license fees, exclusive of interest income, collected by the Department of Revenue for December, 1981, was $284,124,783.39. This is an increase of 2.85 percent as compared to $292,226,315.70 collected in December, 1980.

For the first six months of the current fiscal year, total collections of net taxes and license fees, exclusive of interest income, amounted to $1,207,183,497.34, compared to $934,629,065.01 collected during the first six months of the previous year, an increase of 29.16 percent.

Sincerely,

Thomas K. Williams
Commissioner

STATE OF ALASKA
DEPARTMENT OF REVENUE

M E M O R A N D U M

TO: The Honorable Representative Robert Bettisworth

FROM: Robert R. Kessel
Director, Audit Division
Department of Revenue

RE: Amendments to Motor Fuel Law

DATE: February 16, 1983

The Department of Revenue has conducted public meetings with motor fuel dealers and other interested parties in Fairbanks, Anchorage and Juneau. In the opinion of the Department of Revenue, if the following changes could be made to Chapter 40, Title 43 of the Alaska Statutes, the motor fuel dealers would feel satisfied with the existing law.

1. Eliminate the certificate of use requirement, in total, for fuel used exclusively for heating a private residence.

2. Eliminate the certificate of use requirement, in total, for fuel which is at least 10% alcohol by volume.

3. Require only an annual certificate of use for almost all other exempt sales, reserving some discretionary judgement for exempt sales handled on an individual basis under sub-paragraph (K) of Section 43.40.100(2).

In addition we believe that motor fuel dealers should be granted a 1% commission, limited to $100, to compensate them for collecting the tax and for the demands required in maintaining records. Alaska currently allows a commission for cigarette taxes and most other states have similar provisions. I believe the motor fuel dealers would, obviously, like this change. For example, application would be as follows:

Tax To Be Remitted	Commission
$ 600	6 (1%)
5,000	50 (1%)
10,000	100 (1%)
20,000	100 (1%-limited to $100)

The maximum amount of $100 would provide remuneration for the dealers extra work and yet would not be costly to the state. There are a limited number of dealers.

The recommended change to AS 43.40, per attached Exhibit 1, would provide for the above recommendations; the changes could very well be incorporated into Senate Bill 117 (By the Rules Committee by Request of the Governor) which is "An Act making technical amendments relating to state taxation."

AS 43.40.010(c) is amended to read:

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. <u>If the monthly tax return is timely filed, one percent of the total monthly tax due, limited to a maximum of $100, can be deducted and retained to cover the expense of accounting and filing the monthly tax return.</u> At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all [MOTOR] fuel which he has distributed or used during the month.

AS 43.40.010(l) is amended to read:

(l) If a dealer has a reasonable belief at the time of sale or transfer that fuel that is sold or transferred is not to be used as motor fuel, the dealer need not collect the motor fuel tax. If the tax is not collected, the dealer shall obtain a certificate of use from the buyer or transferee stating that the fuel that has been or will be purchased or received is not intended for use as motor fuel. The Department of Revenue may not collect the motor fuel tax from a dealer for fuel for which a certificate of

use has been properly obtained under this subsection. A Certificate of use is not required for fuel used to heat a private residence or for fuel which is at least 10% alcohol by volume. An annual certificate of use is required for all other exemptions, as listed under AS 43.40.100(2), except sub-paragraph (K) where certificate of use needs will be determined by the Department of Revenue. The dealer shall retain a copy of each certificate of use obtained under this subsection for examination or audit on request by the Department of Revenue. The form of a certificate of use may be prescribed by regulation adopted by the Department of Revenue.

AS 43.40.035(a) is amended to read:

(a) A person who resells fuel on which the tax under AS 43.40.010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements prescribed by AS 43.40-.010(L) have been fulfilled [A CERTIFICATE OF USE IS ACQUIRED UNDER AS 43.40.010(1)]; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

AS 43.40.100 IS AMENDED TO INCLUDE:

(L) fuel used in stationary power plants that generate electrical energy for commercial enterprises;

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER

POUCH S
JUNEAU, ALASKA 99811
PHONE: (907) 465-2300

March 4, 1983

The Honorable Bette Cato
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

RE: Motor Fuel Special Tax Accounts -
Your Request of Mr. Robert Kessel

Dear Representative Cato:

You requested certain information from Mr. Kessel during the March 2, 1983 hearing relating to various motor fuel bills. The information has been somewhat difficult to compile but I hope what I present herein is adequate. If not, please feel free to call me and we will make additional efforts.

Our qualified conclusion is that even though specific accounts are provided for in the motor fuel statutes (AS 43.40.010), the legislature does not, in fact, correlate appropriations to the amount in the accounts. In other words, appropriations for water and harbor facilities, maintenance of highways, etc. are not limited to the amounts accumulated in the special accounts. As will be demonstrated, monies appropriated come partly from the special accounts and partly from other General Fund monies.

Our contacts during this mini-project have been the Finance Section of the Department of Administration and the Finance Section of the Department of Transportation.

REVENUES - FUEL TAX ACCOUNTS

Gross receipts deposited as unrestricted revenues in the General Fund, and designated as unreserved special accounts in the General Fund (thousands of dollars) are as follows:

	Actual FY 81	Actual FY 82	Estimated FY 83	Three Year Total
Fuel Taxes - Aviation	$ 4,100	$ 6,300	$ 5,100	$15,500
Fuel Taxes - Highway	15,600	20,300	21,000	56.900
Fuel Taxes - Marine	3,600	3,700	3,800	11,100

04-D2LH

APPROPRIATIONS - FUEL TAX ACCOUNTS

Included within the General Fund appropriations for the operating and capital expenses of the state government were the following amounts from the above unreserved special accounts (thousands of dollars):

	Actual FY 81	Actual FY 82	Actual FY 83	Three Yr Total
Aviation Fuel Tax Acct.	$ 3,700	$ 4,300	$ 4,500	$13,500
Highway Fuel Tax Acct.	19,000	20,200	18,500	57,700
Watercraft Fuel Tax Acct.	3,200	3,300	3,800	10,300

The amounts shown for the highway fuel tax and the aviation fuel tax accounts were included in the appropriations from the General Fund for the Operating Budget. The amounts shown for the watercraft fuel tax account were included in the appropriations from the General Fund for the capital budget for water and harbor facilities. The original capital budget for FY 1983 for ports and harbors appropriated from the General Fund was $4,707,000. Included in this is the $3,800,000 from the watercraft fuel tax account.

EXPENDITURES FROM FUEL TAX ACCOUNTS

The General Fund summary of expenditures and encumbrances compared with appropriations for the operating programs of the Department of Tranportation and Public Facilities supports the previous statement made in this memo regarding lack of correlation. Example: The line item amount for Highway Design & Construction expenditures and encumbrances for FY 1982 was $39,577,000. Included in this would be the $20,200,000 appropriated from the highway fuel tax account in the General Fund. The balance of this line item expenditure apparently came from other General Fund monies.

The General Fund summary of expenditures and encumbrances compared with appropriations for the capital outlay projects of the Department of Transportation & Public Facilities further supports our statement. Example: The total expenditures for capital outlay projects for the Department of Transportation & Public Facilities for FY 1982 was $46,742,000. Included in this was the $3,300,000 appropriated from the watercraft fuel tax account. The balance of the expenditure came from other General Fund monies.

CONCLUSION

It would require many hours of work to match the actual expenditures for highway, airport, and port & harbor facilities against the appropriations from the unreserved highway, aviation and watercraft fuel tax accounts in the General Fund. Since these funds are not restricted in the General Fund or

set aside in a Special Revenue Fund, they are always included in the general appropriations made from the General Fund for airports, highways, and port & harbors operating and capital budgets.

QUALIFICATION

Please bear in mind that the above is from the limited perspective of this Department. If the Committee has more specific questions pertaining to federal matching funds, the Department of Revenue would defer to the Departments of Transportation, or the Office of Management and Budget for a more comprehensive explanation of the funding formulas.

Sincerely,

Robert D. Heath
Commissioner of Revenue

RDH/RRK/gb

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: HB 150 Date on Bill: 1/31/83
Title: An act repealing the tax on motor fuel used in or on watercraft
Sponsor: Zharoff and Grussendorf
Requestor: House Transportation

1. Estimated fiscal impacts on:

a. Expenditures:

(Thousands of Dollars)

			FY 83	FY 84	FY 85	FY 86		
Capital								
Operating								
Total								

b. Revenues:

Revenue			-0-	(3.2 mill.)	(4.2 mill.)			

2. Source of funds to offset fiscal impact of bill:

3. Assumptions:

The above figures are a loss of revenues in the General Fund.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

Motor Fuel Tax (decreasing & repealing refund provis.)

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 55, by Reps. Martin and Grussendorf. Lowers motor fuel tax to three cents per gallon, as did original (see p. 46), and repeals motor fuel tax refund provisions contained in the following statutes:

--AS 43.40.030, "Refund for Nonhighway Use," allows six-cent-per-gallon refund of any tax paid for fuel used for a vehicle which is not operated on highways in the state (does not apply to aviation fuel and watercraft fuel). Allows total refund on that part of the fuel sold for non-highway use in a foreign country.

--AS 43.40.035, "Other Refunds and Credits," which allows a person who resells fuel on which the motor fuel tax was previously paid to receive a refund of the tax.

--AS 43.40.050, "Refund Claim by Affidavit," containing procedure for claiming refund of motor fuel tax by filing an affidavit with the Dept. of Revenue.

--AS 43.40.060, "Separate Invoices," which allows the Dept. of Revenue to require separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim.

--AS 43.40.070, "Refund Warrants," directs the Dept. of Revenue, upon approval of a refund claim, to issue a warrant drawn on the Highway Fuel Tax Account in favor of the applicant in the amount of the claim.

--AS 43.40.080, "Examination of Books and Records," allows the Dept. of Revenue to examine a claimant's books and records to determine the validity of a claim for a refund.

Note: bill also includes repealer for AS 43.40.040, "Applications and Permits for Refund," however this section was repealed in 1980 by Sec. 45 of Ch. 113, SLA 1980. (Required person seeking refund to obtain a permit from the Dept. of Revenue.)

Effective April 1, 1983.

Introduced February 4 and referred to Transportation and Finance.

Appropriation (special) (Tununak seawall)

HOUSE BILL NO. 149, by Rep. Vaska. Would appropriate $905,000 for a grant to the City of Tununak to construct a seawall for the prevention of soil erosion. Tununak is on the western side of Nelson Island on the Bering Sea. Provides appropriation be disbursed in accordance with laws governing state grants (AS 37.05.315 - 319). Effective immediately.

Introduced January 31 and referred to Community & Regional Affairs and Finance.

Motor Fuel Tax/Water-Craft (repealing)

HOUSE BILL NO. 150, by Zharoff, Grussendorf and McBride. Would repeal the five cent per gallon tax on motor fuel used in or on watercraft (AS 43.40.010(a)(2) and (b)(2)). Effective July 1, 1983.

HB 150 (cont'd)

Introduced January 31 and referred to Transportation, Resources and Finance.

Appropriation (special) (House of Wickersham)

HOUSE BILL NO. 151, by Reps. Hayes, M.M. Miller, Duncan, Cowdery, Fritz, Bettisworth, Cato, Clocksin, Davis, Flood, Furnace, Goll, Koponen, Larson, Liska, Martin, McBride, M.W. Miller, Pestinger, Szymanski, Tischer, Uehling, Wendte and Zharoff. Would appropriate $1 million to the Dept. of Natural Resources, Division of Parks, for the acquisition of the House of Wickersham in Juneau and the historical collections and artifacts contained in the house and for the development of the acquisition as an historic site. Appropriation lapses on June 30, 1984. Effective July 1, 1983. Identical to SB 31, page 10.

Introduced January 31 and referred to State Affairs and Finance.

Appropriation (supplemental) (revenue sharing)

HOUSE BILL NO. 152, by the Community & Regional Affairs Committee. Would make a $3.5 million supplemental appropriation to the miscellaneous services account (AS 29.89.080) for AS 29.89 (Misc. State Aid to Municipalities) for distribution to local governments and other recipients for the fiscal year ending June 30, 1983. AS 29.89 provides for state aid for roads, health facilities and hospitals, volunteer fire departments in the unorganized borough, and aid to Native Village governments. Appropriation lapses June 30, 1984. Effective immediately.

Introduced February 2 and referred to Community & Regional Affairs and Finance.

Appropriation (supplemental) (Municipal Assistance Fund)

HOUSE BILL NO. 153, by the Community & Regional Affairs Committee. Would make a $25.1 million supplemental appropriation to the Dept. of Revenue for the Municipal Assistance Fund (AS 43.20.016(a)) for distribution to municipalities for the fiscal year ending June 30, 1983. Lapses on June 30, 1984. Effective immediately.

Identical to SB 17, as amended by Senate C&RA Committee, and identical to HB 136 p. 99, except for lapse date.

Introduced February 2 and referred to Community & Regional Affairs and Finance.

Minimum Train Crews (repealing law)

HOUSE BILL NO. 154, by the Rules Committee by request of the Governor. Would repeal law establishing minimum train crews in Alaska (AS 23.10.420). See Governor's letter, below.

Does not provide for an effective date (effective 90 days after Governor's signature).

Introduced February 2 and referred to Labor & Commerce and Transportation.

In his message transmitting the bill to the House for consideration, Governor Sheffield stated:

(2) $4 for each 1,000 holes or fraction in each board with more than 2,000 holes. (§ 1 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.110. Power to issue regulations. The department may issue orders and regulations necessary to carry out §§ 100—150 of this chapter. (§ 3 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.120. Manner of paying tax. The tax shall be paid by purchasing stamps from the office of the Department of Revenue. The stamps shall be affixed to the punchboard before it is placed in use, and the operator of the punchboard shall endorse upon the stamp the serial number of the punchboard. (§ 2 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.130. Refund to local governments. The department shall refund 75 per cent of the tax collected from sales of punchboards in an organized borough or city of the first, second, or third class to the local government. The balance shall be deposited in the general fund. (§ 6 ch 116 SLA 1949; am § 1 ch 53 SLA 1951; am § 3 ch 155 SLA 1962)

Sec. 43.35.140. Gambling not legalized. Sections 100—150 of this chapter do not legalize gambling. (§ 4 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Cross reference. — As to limitations on authorized gaming activities, see AS 05.15.180.

Sec. 43.35.150. Violations and penalties. (a) It is unlawful for a person to (1) distribute in the state a punchboard for which the license tax provided in §§ 100—150 of this chapter is not paid; or (2) maintain for use, or permit the use of, in a place or premises occupied by the person a punchboard upon which the license stamp is not affixed.

(b) A person violating a provision of §§ 100—150 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $500. (§ 5 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Chapter 40. Motor Fuel Tax.

Article
1. General Tax Levy on Transfers or Consumption of Motor Fuel (§§ 43.40.010 — 43.40.100)
2. Additional Tax Levy on Transfers or Consumption of Motor Fuel (Repealed)

Article 1. General Tax Levy on Transfers or Consumption of Motor Fuel.

Section
10. Tax on transfers or consumption of motor fuel and expenditure of proceeds
20. Penalty for violation
30. Refund for nonhighway use
40. Applications and permits for refund

Section
50. Refund claim by affidavit
60. Separate invoices
70. Refund warrants
80. Examination of books and records
85. Preservation of books and records
90. Criminal violation
100. Definitions

Sec. 43.40.010. Tax on transfers or consumption of motor fuel and expenditure of proceeds. (a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all motor fuel which he has distributed or used during the month.

(d) Repealed by § 3 ch 166 SLA 1976.

(e) Sixty per cent of the proceeds of the revenue from the taxes on aviation fuel, excluding the amount determined to have been spent by the state in its collection, shall be refunded to a municipality owning and operating or leasing and operating an airport in the proportion that the revenue was collected at the municipal airport. All other proceeds of the taxes on aviation fuel shall be paid into a special aviation fuel tax account in the state general fund. The legislature may appropriate funds from this account for aviation facilities.

(f) The proceeds from the revenue from the tax on motor fuel used in boats and watercraft of all descriptions shall be deposited in a special watercraft fuel tax account in the general fund. The legislature may appropriate from this account for water and harbor facilities.

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e), (f), and (j) of this section, shall be deposited in a special highway fuel tax account in the state general fund. The legislature may appropriate funds from it for expenditure by the Department of Public Works directly or as matched with available federal-aid highway money

for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend funds collected from taxes imposed by §§ 10—100 of this chapter shall perform, when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of public works may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

(h) All motor fuel tax receipts shall be paid into the general fund and distributed to the proper accounts in the general fund. Valid motor fuel tax refund claims shall be paid from the highway fuel tax account in the general fund.

(i) Within 30 days after the legislature convenes the Department of Public Works shall submit an annual budget covering anticipated revenues and their expenditure, for the consideration and approval by the legislature. The budget shall cover all money collected or anticipated to be collected under §§ 10—100 of this chapter for the year following the adjournment of each regular session of the legislature.

(j) The proceeds from the tax on motor fuel used in snow vehicles and, unless a tax refund is applied for under § 40 of this chapter, other internal combustion engines not used in or in conjunction with a motor vehicle licensed to be operated on public ways shall be deposited in a special nonpublic highway use account in the general fund. The legislature may appropriate from this account to the Department of Highways for trail staking and shelter construction and maintenance.

(k) The tax on the transfer or consumption of motor fuel provided for in this section does not apply to liquified petroleum gas. (§ 48-5-2 ACLA 1949; am § 1 ch 80 SLA 1951; am § 1 ch 47 SLA 1955; am §§ 1, 2 ch 27 SLA 1957; am § 1 ch 134 SLA 1957; am § 1 art VI title II ch 152 SLA 1957; am § 2 art V title III ch 152 SLA 1957; am § 2 ch 124 SLA 1959; am §§ 1, 2 ch 20 SLA 1960; am § 1 ch 150 SLA 1960; am § 1 ch 110 SLA 1961; am § 1 ch 136 SLA 1961; am §§ 1—3 ch 131 SLA 1962; am § 1 ch 130 SLA 1968; am § 10 ch 143 SLA 1968; am §§ 1, 2 ch 216 SLA 1968; am §§ 1—3 ch 158 SLA 1970; am § 3 ch 58 SLA 1971; am §§ 1, 2 ch 124 SLA 1971; am §§ 2, 3 ch 125 SLA 1971; am §§ 1—3 ch 153 SLA 1972; am § 3 ch 166 SLA 1976; am §§ 1, 2 ch 116 SLA 1977)

Cross reference. — For civil penalty imposed for failure to file a return or report, or pay the full amount of a tax, or a portion or a deficiency of the tax, see AS 43.05.220.

Effect of amendments. — The 1976 amendment repealed subsection (d), which provided for an additional amount to be added to the tax for failure to file a return and remit the tax within the time prescribed by law or prescribed by the department pursuant to law, due to wilful neglect.

The 1977 amendment rewrote paragraph (2) of subsection (a) and paragraph (2) of subsection (b).

Editor's note. — Section 1, ch. 125, SLA 1971, provides: "Intent. The intent of this Act is to provide funds for trail staking and shelter construction and maintenance projects in sparsely populated areas where the interests of safety require their establishment for the protection of traveling citizens of the state."

Purpose of subsection (g). — The purpose of the dedication of the taxes on motor fuels contained in subsection (g) of this section is public highways. 1959 Op. Att'y Gen., No. 9.

A proposed alteration going to the geographical area of expenditure rather than to the special purpose of a dedication, does not contravene the constitution. 1959 Op. Att'y Gen., No. 9.

Amendment of 1957 effected no change in dedication. — The 1957 amendment to this section, which reduced the tax on motor fuel used in commercial fishing crafts for purposes of commercial fishing from five cents to two cents per gallon, effected no change in the dedication inasmuch as the reduction in the tax was coupled with an exemption from the refund of three cents per gallon formerly allowed to users of fuel in commercial fishing craft for commercial purposes. Nothing has been done which increased or decreased the dedication. 1959 Op. Att'y Gen., No. 14.

Civil Air Patrol exempt. — The Civil Air Patrol is exempt from taxation under the Alaska Motor Fuel Oil Tax Act because it is an instrumentality of the federal government. 1961 Op. Att'y Gen., No. 26.

But volunteer members of Civil Air Patrol are not exempt. 1961 Op. Att'y Gen., No. 26.

Am. Jur. and C.J.S. references. — 51 Am. Jur., Taxation, §§ 1260 to 1270.

53 C.J.S. Licenses § 30.

Sec. 43.40.020. Penalty for violation. (a) A person who violates a provision of §§ 10—100 of this chapter upon conviction is punishable for each violation by a fine of not less than $50 nor more than $5,000, or by imprisonment for not more than one year, or by both. Each day's violation is a separate offense.

(b) Repealed by § 3 ch 116 SLA 1977. (§ 48-5-3 ACLA 1949, am § 4 ch 153 SLA 1972; am § 3 ch 116 SLA 1977)

Effect of amendment. — The 1977 amendment repealed subsection (b), which read "A person who claims the nonpropulsion use fuel tax exemption under § 10 (a) (2) or § 10 (b) (2) of this chapter and who uses a portion of the amount of the exempted fuel for another purpose is guilty of a misdemeanor, and is punishable by a fine of not more than $5,000."

C.J.S. reference. — 53 C.J.S. Licenses § 62.

Sec. 43.40.030. Refund for nonhighway use. (a) Except as specified in § 10 (j) of this chapter, a person who uses motor fuel to operate an internal combustion engine is entitled to a refund of six cents a gallon if

(1) the tax on the motor fuel has been paid;

(2) the motor fuel is not aviation fuel, or motor fuel used in or on watercraft; and

(3) the internal combustion engine is not used in or in conjunction with a motor vehicle licensed to be operated on public ways.

(b) The entire tax levied by §§ 10—100 of this chapter shall be refunded to the purchaser on that part of the motor fuel used in a foreign country on which duty is paid when the fuel is sold and delivered in the state for nonhighway use in a foreign country.

(c) The Department of Revenue shall establish the necessary regulations and prescribe the appropriate forms to prove that the motor fuel is taken to and used in foreign countries. (§ 2 ch 47 SLA 1955; am § 3 ch 27 SLA 1957; am § 2 ch 136 SLA 1961; am § 4 ch 158 SLA 1970; am § 3 ch 124 SLA 1971; am § 4 ch 125 SLA 1971; am § 4 ch 116 SLA 1977)

Effect of amendment. — The 1977 amendment substituted "or on watercraft" for "an engine to propel a boat or watercraft, including motor fuel which may be used for heating and cooking aboard boats and watercraft" in paragraph (2) of subsection (a).

Editor's note. — Section 1, ch. 125, SLA 1971, provides: "Intent. The intent of this Act is to provide funds for trail staking and shelter construction and maintenance projects in sparsely populated areas where the interests of safety require their establishment for the projection of traveling citizens of the state."

Sec. 43.40.040. Applications and permits for refund. A person who desires to claim a refund shall obtain an annual permit from the Department of Revenue by application on a form prescribed by the department. The application shall contain the name, address, and occupation of the applicant, the nature of the business, and a sufficient description for identification of the machines or equipment in which the motor fuel is to be used for which refund may be claimed under the permit. The permit shall be obtained no later than the time that the first application for refund is made under §§ 10—100 of this chapter. The permit expires at midnight of June 30 following the date it is issued. (§ 3 ch 47 SLA 1955; am § 4 ch 131 SLA 1962)

Sec. 43.40.050. Refund claim by affidavit. (a) A person who claims a refund as provided in §§ 10—100 of this chapter shall present his claim to the commissioner of revenue by affidavit upon a form provided by the commissioner with the information the commissioner requires. The claim shall be accompanied by each invoice issued to the claimant at the time the motor fuel is purchased. The commissioner may require any additional information which he considers necessary for the administration of §§ 10—100 of this chapter.

(b) A claim for refund shall be filed within one year from the date of the purchase of the motor fuel as indicated on the invoice, and failure to file within the one year period is a waiver of the right to the refund. A claim is considered to be filed when the claim is mailed or personally presented to an office of the Department of Revenue. (§ 4 ch 47 SLA 1955; am § 1 ch 139 SLA 1960)

Sec. 43.40.060. Separate invoices. The Department of Revenue may require the issuance of separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim. (§ 6 ch 47 SLA 1955)

Sec. 43.40.070. Refund warrants. Upon approval of a refund claim by the Department of Revenue, a warrant shall be drawn on the highway fuel tax account in the general fund in favor of the applicant in the amount of the claim. (§ 7 ch 47 SLA 1955; am § 5 ch 131 SLA 1962)

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the Department of Revenue may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The Department of Revenue may cancel the refund permit of the claimant relying upon a fraudulent invoice for a period of not more than one year.

(b) If an invoice relied upon for a refund claim is fraudulent, the claimant is guilty of a misdemeanor and is punishable by a fine of not more than $500. (§ 5 ch 47 SLA 1955)

Sec. 43.40.085. Preservation of books and records. Dealers and users shall preserve for three years all books and records pertaining to sales, transfers, and uses of motor fuel which are taxed under this chapter. (§ 5 ch 158 SLA 1970)

Sec. 43.40.090. Criminal violation. A person who uses motor fuel with knowledge that the tax has not been paid is guilty of a misdemeanor, and is punishable by a fine of not more than $500, or by imprisonment for not more than one year, or by both. (§ 11 ch 47 SLA 1955; am § 4 ch 27 SLA 1957)

C.J.S. reference. — 53 C.J.S. Licenses § 66.

Sec. 43.40.100. Definitions. In §§ 10—100 of this chapter

(1) "dealer" means a person who sells or otherwise transfers in this state motor fuel upon which the taxes imposed by this chapter have not been paid;

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries,

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries,

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public,

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale, or

(E) fuel used by charitable institutions;

(3) "user" means a person consuming or using motor fuel, who either purchases the fuel out of the state and ships it into the state for his own use within the state or manufactures the fuel in the state. (§ 48-5-1 ACLA 1949; am § 1 ch 56 SLA 1949; am § 9 ch 47 SLA 1955; am § 26 ch 70 SLA 1964; am §§ 6, 7 ch 158 SLA 1970; am § 1 ch 74 SLA 1972; am § 5 ch 116 SLA 1977)

Cross reference.—See editor's note to AS 08.04.380.

Effect of amendment. — The 1977 amendment in paragraph (2), added the subparagraph designations, substituted "or aircraft, and fuel used in and on watercraft for any purpose" for "aircraft, boat or watercraft", "run" for "propelled", and "motor fuel does not include" for "except on consignments of motor" in the introductory paragraph, substituted "consigned" for "oil" in present subparagraph (A), substituted "fuel sold" for "except motor fuel oil sold" in present subparagraph (B), deleted "and except" preceding "fuel used" and "or" following "general public" in present subparagraph (C), and inserted "fuel used" at the beginning of present subparagraphs (D) and (E).

Article 2. Additional Tax Levy on Transfers or Consumption of Motor Fuel.

Section
110—120. [Repealed]

Secs. 43.40.110—43.40.120.

Repealed by § 8 ch 158 SLA 1970.

Editor's note. — The repealed sections derived from chs. 62, 63, SLA 1960; ch. 52, SLA 1961; ch. 131, SLA 1962.

Chapter 43. Disaster Taxes.

Article
1. Disaster Relief Tax (Repealed)
2. Disaster Severance Tax (Repealed)

Article 1. Disaster Relief Tax.

Section
10—60. [Repealed]

Secs. 43.43.010 —43.43.060.

Repealed by § 1 ch 48 SLA 1969.

Editor's note. — The repealed article derived from § 1, ch. 27, FSSLA 1967.

HB 101 - Repeal Marine Fuel Tax

Sec. 1. Repeals tax on dealer who sells or transfers marine fuel

Sec. 2. Repeals tax on consumer

Sec. 3. Technical amendments

Sec. 4. Technical amendments

Sec. 5. This excludes fuel used by watercraft from the defination of "motor fuel".

Sec. 6. Repeals watercraft fuel tax account from the general fund.

Sec. 7. Effentive date clause of July 1, 1981

Introduced: 2/4/81
Referred: Resources and Finance

IN THE HOUSE

BY ZHAROFF, GRUSSENDORF AND BETTISWORTH

HOUSE BILL NO. 101

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWELFTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act repealing the tax on motor fuel used in or on watercraft; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.40.010(a) is amended to read:

(a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon, and

[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 2. AS 43.40.010(b) is amended to read:

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon, and

[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 3. AS 43.40.010(g) is amended to read:

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e) [, (f),] and (j) of this section, shall be deposited in a special highway fuel tax account in the state general

fund. The legislature may appropriate funds from it for expenditure by the Department of Transportation and Public Facilities [PUBLIC WORKS] directly or as matched with available federal-aid-highway money for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend funds collected from taxes imposed by this chapter [AS 43.40.010 - 43.40.100] shall perform, when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of Transportation and Public Facilities [PUBLIC WORKS] may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

* Sec. 4. AS 43.40.030(a)(2) is amended to read:

(2) the motor fuel is not aviation fuel [, OR MOTOR FUEL USED IN OR ON WATERCRAFT]; and

* Sec. 5. AS 43.40.100(2) is amended to read:

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used [IN AND ON WATERCRAFT FOR ANY PURPOSE, OR] in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries,

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries,

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public,

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale,

(E) fuel used by charitable institutions, [OR]

(F) fuel which is at least 10 percent alcohol by volume, or

(G) fuel used in and on watercraft for any purpose; [.]

* Sec. 6. AS 43.40.010(f) is repealed.

* Sec. 7. This Act takes effect July 1, 1981.

BELLSFLATS
CHINIAK
KODIAK
OUZINKIE

A recap of the following pages from the Department of Revenue's Source Book publications shows the amount of Marine Fuel Tax collected for the past few years and the estimated tax for FY 81 and FY 82.

Fiscal Year	Actual	Estimate
1977	1,400	
1978	2,100	
1979	2,600	
1980	3,200	
1981		3,400
1982		3,600

The proceeds from the Marine Fuel Tax are deposited in the Watercraft Fuel Tax Account in the general fund and may be appropriated for water and harbor facilities. However, this account is not tracked by municipalities, so it is impossible to compare the amount paid into the account by a municipality to what that municipality receives back for their water and harbor facilities.

General Fund Unrestricted Revenues

In Thousands of Current Dollars

	FY 1980 Actual	FY 1981 Revised Estimate	FY 1982 Estimate
Taxes			
Income

(2) $4 for each 1,000 holes or fraction in each board with more than 2,000 holes. (§ 1 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.110. Power to issue regulations. The department may issue orders and regulations necessary to carry out §§ 100—150 of this chapter. (§ 3 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.120. Manner of paying tax. The tax shall be paid by purchasing stamps from the office of the Department of Revenue. The stamps shall be affixed to the punchboard before it is placed in use, and the operator of the punchboard shall endorse upon the stamp the serial number of the punchboard. (§ 2 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Sec. 43.35.130. Refund to local governments. The department shall refund 75 per cent of the tax collected from sales of punchboards in an organized borough or city of the first, second, or third class to the local government. The balance shall be deposited in the general fund. (§ 6 ch 116 SLA 1949; am § 1 ch 53 SLA 1951; am § 3 ch 155 SLA 1962)

Sec. 43.35.140. Gambling not legalized. Sections 100—150 of this chapter do not legalize gambling. (§ 4 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Cross reference. — As to limitations on authorized gaming activities, see AS 05.15.180.

Sec. 43.35.150. Violations and penalties. (a) It is unlawful for a person to (1) distribute in the state a punchboard for which the license tax provided in §§ 100—150 of this chapter is not paid; or (2) maintain for use, or permit the use of, in a place or premises occupied by the person a punchboard upon which the license stamp is not affixed.

(b) A person violating a provision of §§ 100—150 of this chapter is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $500. (§ 5 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Chapter 40. Motor Fuel Tax.

Article
1. General Tax Levy on Transfers or Consumption of Motor Fuel (§§ 43.40.010 — 43.40.100)
2. Additional Tax Levy on Transfers or Consumption of Motor Fuel (Repealed)

Article 1. General Tax Levy on Transfers or Consumption of Motor Fuel.

Section
10. Tax on transfers or consumption of motor fuel and expenditure of proceeds
20. Penalty for violation
30. Refund for nonhighway use
40. Applications and permits for refund

Section
50. Refund claim by affidavit
60. Separate invoices
70. Refund warrants
80. Examination of books and records
85. Preservation of books and records
90. Criminal violation
100. Definitions

Sec. 43.40.010. Tax on transfers or consumption of motor fuel and expenditure of proceeds. (a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all motor fuel which he has distributed or used during the month.

(d) Repealed by § 3 ch 166 SLA 1976.

(e) Sixty per cent of the proceeds of the revenue from the taxes on aviation fuel, excluding the amount determined to have been spent by the state in its collection, shall be refunded to a municipality owning and operating or leasing and operating an airport in the proportion that the revenue was collected at the municipal airport. All other proceeds of the taxes on aviation fuel shall be paid into a special aviation fuel tax account in the state general fund. The legislature may appropriate funds from this account for aviation facilities.

(f) The proceeds from the revenue from the tax on motor fuel used in boats and watercraft of all descriptions shall be deposited in a special watercraft fuel tax account in the general fund. The legislature may appropriate from this account for water and harbor facilities.

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e), (f), and (j) of this section, shall be deposited in a special highway fuel tax account in the state general fund. The legislature may appropriate funds from it for expenditure by the Department of Public Works directly or as matched with available federal-aid highway money

for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend funds collected from taxes imposed by §§ 10—100 of this chapter shall perform, when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of public works may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

(h) All motor fuel tax receipts shall be paid into the general fund and distributed to the proper accounts in the general fund. Valid motor fuel tax refund claims shall be paid from the highway fuel tax account in the general fund.

(i) Within 30 days after the legislature convenes the Department of Public Works shall submit an annual budget covering anticipated revenues and their expenditure, for the consideration and approval by the legislature. The budget shall cover all money collected or anticipated to be collected under §§ 10—100 of this chapter for the year following the adjournment of each regular session of the legislature.

(j) The proceeds from the tax on motor fuel used in snow vehicles and, unless a tax refund is applied for under § 40 of this chapter, other internal combustion engines not used in or in conjunction with a motor vehicle licensed to be operated on public ways shall be deposited in a special nonpublic highway use account in the general fund. The legislature may appropriate from this account to the Department of Highways for trail staking and shelter construction and maintenance.

(k) The tax on the transfer or consumption of motor fuel provided for in this section does not apply to liquified petroleum gas. (§ 48-5-2 ACLA 1949; am § 1 ch 80 SLA 1951; am § 1 ch 47 SLA 1955; am §§ 1, 2 ch 27 SLA 1957; am § 1 ch 134 SLA 1957; am § 1 art VI title II ch 152 SLA 1957; am § 2 art V title III ch 152 SLA 1957; am § 2 ch 124 SLA 1959; am §§ 1, 2 ch 20 SLA 1960; am § 1 ch 150 SLA 1960; am § 1 ch 110 SLA 1961; am § 1 ch 136 SLA 1961; am §§ 1—3 ch 131 SLA 1962; am § 1 ch 130 SLA 1968; am § 10 ch 143 SLA 1968; am §§ 1, 2 ch 216 SLA 1968; am §§ 1—3 ch 158 SLA 1970; am § 3 ch 58 SLA 1971; am §§ 1, 2 ch 124 SLA 1971; am §§ 2, 3 ch 125 SLA 1971; am §§ 1—3 ch 153 SLA 1972; am § 3 ch 166 SLA 1976; am §§ 1, 2 ch 116 SLA 1977)

Cross reference. — For civil penalty imposed for failure to file a return or report, or pay the full amount of a tax, or a portion or a deficiency of the tax, see AS 43.05.220.

Effect of amendments. — The 1976 amendment repealed subsection (d), which provided for an additional amount to be added to the tax for failure to file a return and remit the tax within the time prescribed by law or prescribed by the department pursuant to law, due to wilful neglect.

The 1977 amendment rewrote paragraph (2) of subsection (a) and paragraph (2) of subsection (b).

Editor's note. — Section 1, ch. 125, SLA 1971, provides: "Intent. The intent of this Act is to provide funds for trail staking and shelter construction and maintenance projects in sparsely populated areas where the interests of safety require their establishment for the protection of traveling citizens of the state."

Purpose of subsection (g). — The purpose of the dedication of the taxes on motor fuels contained in subsection (g) of this section is public highways. 1959 Op. Att'y Gen., No. 9.

A proposed alteration going to the geographical area of expenditure rather than to the special purpose of a dedication, does not contravene the constitution. 1959 Op. Att'y Gen., No. 9.

Amendment of 1957 effected no change in dedication. — The 1957 amendment to this section, which reduced the tax on motor fuel used in commercial fishing crafts for purposes of commercial fishing from five cents to two cents per gallon, effected no change in the dedication inasmuch as the reduction in the tax was coupled with an exemption from the refund of three cents per gallon formerly allowed to users of fuel in commercial fishing craft for commercial purposes. Nothing has been done which increased or decreased the dedication. 1959 Op. Att'y Gen., No. 14.

Civil Air Patrol exempt. — The Civil Air Patrol is exempt from taxation under the Alaska Motor Fuel Oil Tax Act because it is an instrumentality of the federal government. 1961 Op. Att'y Gen., No. 26.

but volunteer members of Civil Air Patrol are not exempt. 1961 Op. Att'y Gen. No. 26.

Am. Jur. and C.J.S. references. — 51 Am. Jur., Taxation, §§ 1260 to 1279.

53 C.J.S. Licenses § 30.

Sec. 43.40.020. Penalty for violation. (a) A person who violates a provision of §§ 10—100 of this chapter upon conviction is punishable for each violation by a fine of not less than $50 nor more than $5,000, or by imprisonment for not more than one year, or by both. Each day's violation is a separate offense.

(b) Repealed by § 3 ch 116 SLA 1977. (§ 48-5-3 ACLA 1949; am § 4 ch 153 SLA 1972; am § 3 ch 116 SLA 1977)

Effect of amendment. — The 1977 amendment repealed subsection (b), which read "A person who claims the nonpropulsion use fuel tax exemption under § 10 (a) (2) or § 10 (b) (2) of this chapter and who uses a portion of the amount of the exempted fuel for another purpose is guilty of a misdemeanor, and is punishable by a fine of not more than $5,000."

C.J.S. reference. — 53 C.J.S. Licenses § 62.

Sec. 43.40.030. Refund for nonhighway use. (a) Except as specified in § 10 (j) of this chapter, a person who uses motor fuel to operate an internal combustion engine is entitled to a refund of six cents a gallon if

(1) the tax on the motor fuel has been paid;

(2) the motor fuel is not aviation fuel, or motor fuel used in or on watercraft; and

(3) the internal combustion engine is not used in or in conjunction with a motor vehicle licensed to be operated on public ways.

(b) The entire tax levied by §§ 10—100 of this chapter shall be refunded to the purchaser on that part of the motor fuel used in a foreign country on which duty is paid when the fuel is sold and delivered in the state for nonhighway use in a foreign country.

(c) The Department of Revenue shall establish the necessary regulations and prescribe the appropriate forms to prove that the motor fuel is taken to and used in foreign countries. (§ 2 ch 47 SLA 1955; am § 3 ch 27 SLA 1957; am § 2 ch 136 SLA 1961; am § 4 ch 158 SLA 1970; am § 3 ch 124 SLA 1971; am § 4 ch 125 SLA 1971; am § 4 ch 116 SLA 1977)

Effect of amendment. — The 1977 amendment substituted "or on watercraft" for "an engine to propel a boat or watercraft, including motor fuel which may be used for heating and cooking aboard boats and watercraft" in paragraph (2) of subsection (a).

Editor's note. — Section 1, ch. 125, SLA 1971, provides: "Intent. The intent of this Act is to provide funds for trail staking and shelter construction and maintenance projects in sparsely populated areas where the interests of safety require their establishment for the projection of traveling citizens of the state."

Sec. 43.40.040. Applications and permits for refund. A person who desires to claim a refund shall obtain an annual permit from the Department of Revenue by application on a form prescribed by the department. The application shall contain the name, address, and occupation of the applicant, the nature of the business, and a sufficient description for identification of the machines or equipment in which the motor fuel is to be used for which refund may be claimed under the permit. The permit shall be obtained no later than the time that the first application for refund is made under §§ 10—100 of this chapter. The permit expires at midnight of June 30 following the date it is issued. (§ 3 ch 47 SLA 1955; am § 4 ch 131 SLA 1962)

Sec. 43.40.050. Refund claim by affidavit. (a) A person who claims a refund as provided in §§ 10—100 of this chapter shall present his claim to the commissioner of revenue by affidavit upon a form provided by the commissioner with the information the commissioner requires. The claim shall be accompanied by each invoice issued to the claimant at the time the motor fuel is purchased. The commissioner may require any additional information which he considers necessary for the administration of §§ 10—100 of this chapter.

(b) A claim for refund shall be filed within one year from the date of the purchase of the motor fuel as indicated on the invoice, and failure to file within the one year period is a waiver of the right to the refund. A claim is considered to be filed when the claim is mailed or personally presented to an office of the Department of Revenue. (§ 4 ch 47 SLA 1955; am § 1 ch 139 SLA 1960)

Sec. 43.40.060. Separate invoices. The Department of Revenue may require the issuance of separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim. (§ 6 ch 47 SLA 1955)

Sec. 43.40.070. Refund warrants. Upon approval of a refund claim by the Department of Revenue, a warrant shall be drawn on the highway fuel tax account in the general fund in favor of the applicant in the amount of the claim. (§ 7 ch 47 SLA 1955; am § 5 ch 131 SLA 1962)

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the Department of Revenue may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The Department of Revenue may cancel the refund permit of the claimant relying upon a fraudulent invoice for a period of not more than one year.

(b) If an invoice relied upon for a refund claim is fraudulent, the claimant is guilty of a misdemeanor and is punishable by a fine of not more than $500. (§ 5 ch 47 SLA 1955)

Sec. 43.40.085. Preservation of books and records. Dealers and users shall preserve for three years all books and records pertaining to sales, transfers, and uses of motor fuel which are taxed under this chapter. (§ 5 ch 158 SLA 1970)

Sec. 43.40.090. Criminal violation. A person who uses motor fuel with knowledge that the tax has not been paid is guilty of a misdemeanor, and is punishable by a fine of not more than $500, or by imprisonment for not more than one year, or by both. (§ 11 ch 47 SLA 1955; am § 4 ch 27 SLA 1957)

C.J.S. reference. — 53 C.J.S. Licenses § 66.

Sec. 43.40.100. Definitions. In §§ 10—100 of this chapter

(1) "dealer" means a person who sells or otherwise transfers in this state motor fuel upon which the taxes imposed by this chapter have not been paid;

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries,

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries,

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public,

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale, or

(E) fuel used by charitable institutions;

(3) "user" means a person consuming or using motor fuel, who either purchases the fuel out of the state and ships it into the state for his own use within the state or manufactures the fuel in the state. (§ 48-5-1 ACLA 1949; am § 1 ch 56 SLA 1949; am § 9 ch 47 SLA 1955; am § 26 ch 70 SLA 1964; am §§ 6, 7 ch 158 SLA 1970; am § 1 ch 74 SLA 1972; am § 5 ch 116 SLA 1977)

Cross reference. — See editor's note to AS 08.04.380.

Effect of amendment. — The 1977 amendment in paragraph (2), added the subparagraph designations, substituted "or aircraft, and fuel used in and on watercraft for any purpose" for "aircraft, boat or watercraft", "run" for "propelled", and "motor fuel does not include" for "except on consignments of motor" in the introductory paragraph, substituted "consigned" for "oil" in present subparagraph (A), substituted "fuel sold" for "except motor fuel oil sold" in present subparagraph (B), deleted "and except" preceding "fuel used" and "or" following "general public" in present subparagraph (C), and inserted "fuel used" at the beginning of present subparagraphs (D) and (E).

Article 2. Additional Tax Levy on Transfers or Consumption of Motor Fuel.

Section
110—120. [Repealed]

Secs. 43.40.110—43.40.120.

Repealed by § 8 ch 158 SLA 1970.

Editor's note. — The repealed sections derived from chs. 62, 63, SLA 1960; ch. 52, SLA 1961; ch. 131, SLA 1962.

Chapter 43. Disaster Taxes.

Article
1. Disaster Relief Tax (Repealed)
2. Disaster Severance Tax (Repealed)

Article 1. Disaster Relief Tax.

Section
10—60. [Repealed]

Secs. 43.43.010 —43.43.060.

Repealed by § 1 ch 48 SLA 1969.

Editor's note. — The repealed article derived from § 1, ch. 27, FSSLA 1967.

Secs. 43.31.360 — 43.31.390.

Repealed by § 46 ch 113 SLA 1980.

Cross reference. — For present provisions concerning criminal penalties, see AS 43.05.290.

Editor's note. — The repealed sections derived from § 3, ch. 24, SLA 1970.

Chapter 35. Coin-Operated Devices and Punchboards.

Article 1. Coin-Operated Amusement and Gaming Devices.

Section
80. [Repealed]

Sec. 43.35.080. Penalties.

Repealed by § 46 ch 113 SLA 1980.

Cross references. — For present provisions concerning civil penalties, see AS 43.05.220. For present provisions concerning criminal penalties, see AS 43.05.290.

Editor's note. — The repealed section derived from § 48-3-3 ACLA 1949; § 3, ch. 142, SLA 1960; § 2, ch. 58, SLA 1971.

Chapter 40. Motor Fuel Tax.

Article 1. General Tax Levy on Transfers or Consumption of Motor Fuel.

Section
20. [Repealed]
30. Refund for nonhighway use
40. [Repealed]
50. Refund claim by affidavit
80. Examination of books and records
90. [Repealed]
100. Definitions

Sec. 43.40.020. Penalty for violation.

Repealed by § 46 ch 113 SLA 1980.

Cross reference. — For present provisions concerning criminal penalties, see AS 43.05.290.

Editor's note. — The repealed section derived from § 48-5-3, ACLA 1949; § 4, ch. 153, SLA 1972; § 3, ch. 116, SLA 1977.

Sec. 43.40.030. Refund for nonhighway use.

(b) The entire tax levied by this chapter shall be refunded to the purchaser on that part of the motor fuel used in a foreign country on which duty is paid when the fuel is sold and delivered in the state for nonhighway use in a foreign country.

(d) If a person obtains motor fuel on which the tax levied by this chapter has been paid and the motor fuel is exempt from the tax, the person is entitled to a refund of the tax paid.

(am §§ 35, 36 ch 113 SLA 1980)

Effect of amendment.

The 1980 amendment, effective June 21, 1980, and retroactive to January 1, 1980, substituted "this chapter" for "AS 43.40.010 — 43.40.100" in subsection (b), and added subsection (d).

As the rest of the section was not affected by the amendment, it is not set out.

Editor's note. — Section 52, ch. 113, SLA 1980, effective June 21, 1980, makes this section applicable to tax years beginning after December 31, 1979.

Sec. 43.40.040. Applications and permits for refund.

Repealed by § 35 ch 113 SLA 1980.

Cross reference. — For present provisions concerning contents of applications for refunds, see AS 43.40.050(a).

Editor's note. — The repealed section derived from § 3, ch. 87, SLA 1955; § 4, ch. 131, SLA 1962.

Section 52, ch. 113, SLA 1980, effective June 21, 1980, makes the repeal of this section applicable to tax years beginning after December 31, 1979.

Sec. 43.40.050. Refund claim by affidavit. (a) A person who claims a refund as provided in this chapter shall present his claim to the commissioner of revenue by affidavit upon a form provided by the commissioner. The claim shall include the name, address and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the machinery or equipment in which the motor fuel for which the refund is claimed was used. The claim shall be accompanied by each invoice issued to the claimant at the time the motor fuel was purchased. The commissioner may require any additional information which he considers necessary for the administration of this chapter.

(am § 37 ch 113 SLA 1980)

Effect of amendment. — The 1980 amendment, effective June 21, 1980, and retroactive to January 1, 1980, in subsection (a), substituted "this chapter" for "AS 43.40.010 — 43.40.100" at the beginning and at the end of the subsection, substituted the present second sentence for the former material, which read: "with the information the commissioner requires", and substituted "was" for "is" preceding "purchase" at the end of the present third sentence.

As the rest of the section was not affected by the amendment, it is not set out.

Editor's note. Section 52, ch. 113, SLA 1980, effective June 21, 1980, makes this section applicable to tax years beginning after December 31, 1979.

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the Department of Revenue may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The Department of Revenue may cancel the refund permit of the claimant relying upon a fraudulent invoice for a period of not more than one year.

(b) Repealed by § 46 ch 113 SLA 1980. (§ 5 ch 47 SLA 1955; am § 46 ch 113 SLA 1980)

Effect of amendment. — The 1980 amendment, effective June 21, 1980, repealed subsection (b).

Sec. 43.40.090. Criminal violation.

Repealed by § 46 ch 113 SLA 1980.

Cross reference. — For present provisions concerning criminal penalties, see AS 43.05.290.

Editor's note. — The repealed section derived from § 11, ch. 47, SLA 1955; § 4, ch. 27, SLA 1957.

Sec. 43.40.100. Definitions. In AS 43.40.010 — 43.40.100

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries,

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries,

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public,

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale,

(E) fuel used by charitable institutions, or

(F) [Effective January 1, 1981] fuel which is at least 10 percent alcohol by volume.

(am § 10 ch 83 SLA 1980)

Effect of amendment. — The 1980 amendment, effective January 1, 1981, added subparagraph (F) in paragraph (2).

As the rest of the section was not affected by the amendment, it is not set out.

Chapter 45. School Tax.

Section

10—60. [Repealed]

Editor's note. — The repealed chapter derived from §§ 37-4-3 — 37-4-6, ACLA 1949; § 1, ch. 41, SLA 1957; § 1, ch. 175, SLA 1957; § 1, ch. 149, SLA 1959; §§ 1—5, ch. 179, SLA 1960; § 111, ch. 127, SLA 1974.

Section 3, ch. 64, SLA 1980, effective June 13, 1980, makes the repeal of this chapter applicable to tax years beginning after December 31, 1979.

Section 4, ch. 64, SLA 1980, effective June 13, 1980, provides: "The Department

State Capitol
Juneau, Alaska 99811

SYNOPSIS OF TELECONFERENCED TESTIMONY GIVEN ON H.B. 101
FEBRUARY 20, 1981

Kodiak: Alvin Burch of the Alaska Drag Net Association testified in favor of the bill. He felt the legislation would mainly benefit local alaskan boats which use from 12,000 - 25,000 gallons of fuel a year. The larger outside boats use up to 100,000 gallons of fuel a year and usually fuel up in outside waters. Mr. Burch stated that repeal of the tax would mean a savings of about $5,100 on the two boats that he and his brother operate together.

Jeff Stephan of the United Fishermen's Marketing Association also testified in favor of the legislation. He pointed out that one of the reasons tanner crab fishermen have been on strike for the past month is because of rising operating costs due in part to fuel. Fuel prices have gone from 51¢ a gallon in 1977 to the present $1.10 a gallon.

Blake Kinnear, a year around vessel operator, felt that the revenues saved by the tax repeal would be a help toward making up some of the money lost to foreign fleets fishing on alaskan grounds.

Paul Soper testified that his vessel the Tidings used about 30,000 gallons of fuel a year and that saving 5¢ a gallon would be very helpful.

Dillingham: Joe McGill, representing the Western Alaska Cooperative Marketing Association, stated that his organization represented 360 resident fishermen who were in favor of the bill. He felt that the state has plenty of oil revenues at present and that repealing the motor fuel tax would help ease the financial burden Bristol Bay fishermen are under at this time.

Kay Larsen spoke for the Bristol Bay Native Association. She testified that the decrease in fish prices and the rise in operating expenses were putting a real hardship on people in her area. She favored the legislation.

Represenative Fred F. Zharoff
Pouch V
Juneau, Alaska 99811

February 26, 1981

Dear Represenative Zharoff,

This letter is to let you know Western Alaska Fisheries and myself, support the total repeal of the Moter Marine Fuel Tax, and we support the Terror Lake Hyro-electric Project.

We feel that even this might not be enough. The rate that fuel and electric costs are increasing is scary. If this trend continues we may find that our Fisheries Industry may be on - should be on the Endandgered Species List. We only have to look back a few decades to when Alaska had many cod fish salters, whaling stations and salmon canneries. Economic conditions changed and these processing sites today are only remembered because some rotting piling is still visible. In the short term these rising costs will directly affect crewshares on the boats and wages in the plants.

In our own case during the 1980 King Crab season the electricity and fuel bills combined were higher than our direct wages. At least in King Crab we have a chance to pass these costs on. In the fledgling Bottom Fish industry where world markets are firm, we are really in trouble. We are inexperienced in the processing techniques.Our labor costs are high, and our foriegn competition is subsidized.

In summary, all fisheries market prices are pretty well established. As these utility costs increase, labor and fish prices will have to decrease if the industry is to survive. But our workers and fishermen are faced with the same increasing costs. We all have to survive together, if one segment fails we all fail.

We support solid long term investments of our States' Oil wealth. Such examples are Terror Lake Hydro-electric, Dog Bay Boatharbor, Shelikof Avenue paving. Tax reductions, or elimination are good but are small by comparision. If we are not careful now, the state may find its oil revenue supply dried up, an ocean full of fish being processed by foriegn fleets, and no domestic fisheries industry to tax.

Thank you

Kenneth M. Allread

MARINE FUEL TAX

The following points were made in discussion with Don Statter 3/19/80:

The revenue accumulated from the Marine Fuel Tax this past year will not be indicated as such in this years' budget because the small budget items which were requested under this funding source, were lost in Budget and Management while they were working on the over-all Harbor Design and Construction budget. This money will not have a label, but will be included in the general fund.

The Marine Fuel Tax revenue estimated for 1980 was made this last September in the amount of $2,800,000.

The Marine Fuel Tax revenue estimated for 1981 is $3,200,000.

Last year was the first time any of the Marine Fuel Tax was used for projects other than docks and harbors. A portion was used for dams and other non-harbor type projects.

In the past the D.O.T. has contained their requests within the boundaries of the anticipated revenue, and the legislature would appropriate additional monies as they saw fit. This year is the first year D.O.T Div. of Harbor Design and Construction (actually the whole Dept.) has not had to budget within the boundaries of the estimated revenue in planning their budget request.

Marine Fuel Tax is used not only for the actual capital improvements, but also for administrative costs and office rent, etc.

In regards to House Bill 745, Statter commented that back when prices for fuel were 35¢ a gallon, the 5¢ tax was significan. In this day and age, he says that it not quite so significant because the fuel prices are escallating at 10¢ or so every time they are raised. He says that if the budget remains at the current inflated level, repealing the Marine Fuel Tax would not hurt, but if we are to return to the previous limitation, the tax should not be repealed.

MEMORANDUM

State of Alaska
Department of Revenue

TO: R. D. Stevenson
Special Assistant
Department of Revenue

DATE: February 8, 1982

FILE NO:

TELEPHONE NO:

FROM: Robert R. Kessel RK
Director, Audit Division

SUBJECT: CSHB 101 (Finance)

CSHB 101 would restructure the motor fuel law to remove fuel used in a watercraft from the definition of motor fuel.

HB 101, along with SB 182, was introduced during the 1981 session and provided substantially the same changes as CSHB 101. Gary Jenkins, previous Audit Director, determined that there would be no fiscal impact for either HB 101 or SB 182. The Division now believes that there would be a fiscal impact.

If the motor fuel tax is removed from water craft, an enforcement problem could develop for the remaining motor fuel tax law. That is simply because the various fuels used in watercraft, i.e. diesel, kerosene and gasoline, can be used in other taxable manners. The elimination of fuel tax from watercraft would then provide another possible avenue for avoidance of the fuel tax unless the Revenue Department were able to provide stringent enforcement policies via additional manpower.

The proceeds from the revenue from the tax on motor fuel used in boats and watercraft of all descriptions are deposited in a special watercraft fuel tax account in the general fund and may be appropriated for water and harbor facilities. Therefore, there would apparently be some impact on such facilities if this bill became law. The extent of that impact cannot be ventured by the Audit Division.

IN THE HOUSE BY THE FINANCE COMMITTEE

CS FOR HOUSE BILL NO. 101 (Finance)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWELFTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act repealing the tax on motor fuel used in or on watercraft; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.40.010(a) is amended to read:

(a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon, and

[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 2. AS 43.40.010(b) is amended to read:

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon, and

[(2) THE TAX ON MOTOR FUEL USED IN AND ON WATERCRAFT OF ALL DESCRIPTIONS IS FIVE CENTS A GALLON, AND]

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

* Sec. 3. AS 43.40.010(g) is amended to read:

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e) [, (f),] and (j) of this section, shall be deposited in a special highway fuel tax account in the state general

fund. The legislature may appropriate funds from it for expenditure by the Department of Transportation and Public Facilities [PUBLIC WORKS] directly or as matched with available federal-aid-highway money for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend funds collected from taxes imposed by this chapter [AS 43.40.010 - 43.40.100] shall perform, when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of Transportation and Public Facilities [PUBLIC WORKS] may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

* Sec. 4. AS 43.40.030(a)(2) is amended to read:

(2) the motor fuel is not aviation fuel [, OR MOTOR FUEL USED IN OR ON WATERCRAFT]; and

* Sec. 5. AS 43.40.100(2) is amended to read:

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used [IN AND ON WATERCRAFT FOR ANY PURPOSE, OR] in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries,

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries,

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public,

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale,

(E) fuel used by charitable institutions, [OR]

(F) fuel which is at least 10 percent alcohol by volume, or

(G) fuel used in and on watercraft for any purpose; [.]

* Sec. 6. AS 43.40.010(f) is repealed.

* Sec. 7. This Act takes effect July 1, 1982.

KODIAK AREA CHAMBER OF COMMERCE

March 1, 1981

Representative Fred Zharoff
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Fred,

At its meeting on February 23, 1981, the Board of Directors of the Kodiak Area Chamber of Commerce passed a motion unanimously supporting House Bill 101 repealing the tax on motor fuel used in or on watercraft.

We are pleased that you are a co-sponsor of this bill and trust that you will see that our support is passed on to appropriate legislators.

As you know, the Chamber represents the vast majority of Kodiak businesses thereby reflecting the position of the Kodiak economic community.

Sincerely,

KODIAK AREA CHAMBER OF COMMERCE

Hazel E. Hogan
President

"	BARBARA LACHER	R
"	ALDERHEID HERRMANN	D
"	MIKE SZYMANSKI	D
"	JACK McBRIDE	D
"	MIKE DAVIS	D

I am M. P. Taylor, Manager, Rail & Alaska Operations, resident of Skagway, for the 20 mile narrow gauge. RR

After 85 years - Now in a non-competitive position

73 " - of successful operation without this legislation.

Only railroad in the 50 states - should not apply to international RR.

Applies to only 20 miles - ARR not effected, Law stems back to turn of the century steam days. ARR only 3-Person Crews

Top speed on grades in the 20 miles this law regulates, is 15 MPH, with all bridges, walls etc, reduced to 10 MPH

Belongs on bargaining table. Law does not allow free flexibility in union-management negotiations.

This law was not born out of safety. The F.L.R.A. ADM Governs Safety It was thoroughly studied by two federal governments, namely:

3 Three United States Presidential Commissions

1 One Canadian Royal Commission

(Alaska Human Rights Commission - Cantrell)

Today the RR industry on the Eastern seaboard is making a remarkable comeback because they are permitted to be competitive. Such consist rules are freely negotiated between management and labor. Two men, No caboose, 15 Cars.

(DISPLAY & QUOTE "MODERN RAILROADS

We are inspected and regulated by the US Federal Railroad Administration, and the Canadian Transport Commission. We must comply with the same safety and operating regulations as any standard gauge transcontinental RR. The only difference being, we only, still have to comply with the law under discussion. I hasten to point out that the FRA & CTC regulations now reflect reduced consist crew size is left strictly to management-labor negotiations.

Our RR is 110 miles long. In this 110 miles we are regulated by eight jurisdictional bodies - one for each 14 miles. In Alaska it is one for each 5 miles. A very difficult task to say the least.

We have management-labor negotiated crew consist on the Canadian portion of the RR. It is working successfully and is now a fact of life.

We have hauled passengers for 85 years without a fatality. In recent years in excess of 50 thousand annually and they still want to come - in fact they are calling every day expressing disappointment that the trip is not available for '83.

(Last fatality to a T&E was in 1947)

(F.E.L.A.)

Our earnings, except for most of our passenger business, are all in Canadian dollars. With the exchange rate we must earn $1.23 Canadian for every dollar paid out in Alaska. This in itself is burden enough.

When a management-labor issue is regarded as a State issue, questions are inevitable. Crew consist should be a management-labor issue. We have a drain here with no ultimate plug. We need jointly (management-labor) to return to a competitive position and at the same time put a stopper in the drain. It just won't work any other way.

Last year the law was amended to permit a 3 man yard crew. Nothing has changed on the property because there has been no management-labor negotiation.

A short while ago I recall one of our State airlines asked the State for assistance in determining crew consist. They were turned down and that is the way it should be.

With today's technology the continental RR's all, without exception, operate without STATE laws governing crew consist. Look at the changes taking place daily on the flight decks of our largest aircrafts in respect crew consist.

Frankly, we are no longer competitive. We have been a good Corporate citizen in Skagway - our objective is to get our 156 furloughed Skagway employees back to work at the earliest possible time. But we need your help.

*

We must have a window - a window of Hope - if we are to return to a competitive position. Our employees need the same window.

Honorable members of the Committee, I ask you to help provide a small portion of this window of Hope by lifting this unnecessary burden from our shoulders by repealing this law.

I would be pleased to answer any questions to the best of my ability.

* Simply put, The RR will not re-open until a number of things happen, and Repeal of this Law is one of those things. The RR has been losing money for years — 4 in Black in '79 We're just not competitive under the present structure

Financial status of 3 Corporate no longer has a position to help

*...Financing conditions of our 3 operating companies; Railroad goes through 3 jurisdictions. Are all in trouble and that's not to say that the corporate wouldn't permit the rail to operate at some loss or at break even point, cause it is a link in all the rest of our corporate operations. But the corporate is no longer in a position to finance the losses of the rail operation.

I think we are a progressive company; we've proven that through the years.

Reason for shutdown is basically because of mining operations are shutdown? (asked by Rep. Miller).

Mr. Taylor: That is one of several reasons

HOUSE FLOOR SESSION
HB 154
4/12/83

Hayes — HB 154 before us in 2nd reading

Goll — Move this amendment and ask unanimous consent.

Hayes — There is objection.

Goll — This bill that addresses 5 man crew law has been considered by committees of this body. During that time been approached by numerous representatives of the community of Skagway, notably those employed by the White Pass RR requesting some modifications be made to protect the health and safety of those employees. Historically, these laws of this kind have received some criticism and rightly so, in mandating the labor-mgmt relations between railroads and for this reason I support the intent of the legislation, specifically, the AK legislature may find itself in possession of AK RR and this RR is exempt from the 5 man crew law because it is a federal RR , but upon transfer to AK, it becomes subject to that restriction, which I don't feel is appropriate and would urge passage of this bill. However, in Skagway, we have a different situation, a narrow gauge RR there which traverses some difficult mountain passes there and presents threat and danger to health and safety because of nature of the track. The tressels are dilapidated but more important, they don't have walkways between them, and on the RR it is sometimes difficult or impossible for the crews to move freely between the cars to deal with certain instances with passengers or operations of the train itself. The union has stated most emphatically, and it should be noted that the union is protected by contract with regard to the crew and there would not be any change in relations between labor and mgmt at this time of the White Pass RR. Nonetheless, what the people who work on the trains are looking for are increased modification of the track to provide for access in case of emergency across or along the edges of these tressels and barring that, some sort of protection which will provide for crew members in various parts of the train in case of emergency. I have been assured by the unions involved and the individual employees on variety of occaisons that at such time as health and safety needs are met, by improvement of the track or walkway adjacent there to, that the union itself would take action to see that the rest of this law was repealed. With regards to the amendment specifically, it seems rather wordy, all it really is is a reproduction of the existing statute, with the addition of the word narrow gauge. This would provide

for all RR in AK to have absolutely free reign in determining their crew size with the exception of the narrow gauge RR which in my opinion and opinions of the employees and many residents of Skagway, require special treatment at this time. I hope you will support this amendment for the sake of the life and safety concerns of the people who operate the White Pass and upon doing so I would then urge your passage of the entire bill. Thank you very much.

Furnace — As this party is aware of, the Labor and Commerce Committee did hold hearings on this particular piece of legislation and we did invite mgmt and labor to come in and they did support passage of the legislation as presented here today for discussion. One of the central reasons for that is strongly felt that this is indeed a labor relation matter- one that should be solved at the table and it appears to me reading through the amendment, although there may be some merit here, it has a tendency to defeat the purpose of the bill as it has been discussed to the committee, and that is to put this responsibility back in the hands of labor and mgmt and let them collectively resolve the issue. Support of this amendment would again defeat the purpose of the bill as we have it today. I'm sure that there are additional members on this floor that have more information than I have on it. I would simply urge the body not to support the amendment however.

Duncan — As I interpret the amendment, I may be wrong, it does not defeat the intent of the bill. The amendment speaks only to narrow gauge RR. It does, as the Rep from Haines explained, does allow the AK RR or any other RR to have whatever size crew determined at the bargaining table. This amendment would say that for narrow gauge RR there shall be 5 member crew and as far as I know that is only one RR and that is in the Skagway area. So, I don't think it defeats the intent of the legislation at all.

Phillips — Really didn't want to get into the debate here but I'll try to give a summation of our meeting with White Pass and the Yukon RR officials in Whitehorse. We had met with Tom King and other man from Skagway, counterpart-on American side, and they were in opinion that they must have, one of their bottom lines for survival of the RR, was to have this law changed from a 5 man crew to 3 man crew and as I understand it, the 5 man crew also applies in the yards itself and not just along the track. But this was one of their bottom line recommendations in order for the survival of the RR as a whole in the near future. Of course, we have the Cyprus Anvil mine being closed there and if that reopens that will solve quite a bit of the problem with the RR but that's just only one of the problems, this other

thing the crew size is another problem that needs to be solved in order for RR to reopen. Now it was reemphasized that this alone, the crew size will not save the RR but it will help and we have asked numerous questions and this was one of their bottom lines in order to fulfill the reopening of the RR.

Uehling — Question through the chair to the sponsor of the amendment. Basically, why are we giving this particular group, the narrow gauge RR a special exemption over other RR in the state?

Goll — Let me answer the questions raised in reverse order. First, with regards to the appearance of special exemption, we are not exempting this particular company or anything of that sort, it is my belief and belief of those who work the RR that what we have here is very winding tracks that go around the mountain passes and is very treacherous. The conditions of the tressels and facilities have not been upgraded for many years and there have been alot of near misses and the last thing I would like to do is contribute to creating fewer personnel on a RR where emergency situations are not unheard of. If you drove on flat ground, all have to do is stop train, but you have a situation on these tracks it is considered to be very dangerous by the people involved. This law would provide a professional person on the train for such emergencies. To try to stress the point would like to refer to comments of first speaker from Anchorage, it is important to recognize that it is very valid to free up the ability of surface transport industry to make its own contract determinations, this particular case is that of life and safety protection, at least that is my view of the matter, and for that reason, I support this amendment, not in order to hamstring mgmt or labor in its negotiating process, but to insure that where necessary ,we have adequate safety standards on these railroads. With the regards to comments from Rep from Eagle River, its all very well for Canadian mgmt to state that they can not operate under these circumstances, not withstanding that, they have been successfully operating under these circumstances for many years, reason that the White Pass RR is closed is because mines in Yukon Territory are closed. 85% White Pass's business is based on transport of mineral materials. It's not appropriate and not correct to imply that by reducing the crews by 2 men that the RR will somehow overcome an 85% loss of revenue nor is it correct to assert that if they were to overcome those revenues they would be unable to operate with this crew size. I have great respect for the needs of mgmt and owners of RR, or trucks or property of any sort, but here we have the safety of the workers in question and a long history of successful operation under the existing law and don't think its correct to assert that this will create such difficulties for the

White Pass and I'd like to refer you to line 3 of the amendment which states specifically that this only deals with operation outside of the yards, in the case of the RR, impacted is essentially on these mountains outside of town and that's the rationale behind this amendment.

Hurlbert — Support the amendment. Urge the body to give courtesy to the member from area that deals with that.

Szymanski — I raise in support of the amendment also and I think that the knowledge that the Rep from Southeastern has concerning The White Pass RR is evident. The amendment does narrowly define the application of the law to the narrow gauge RR and there is only one in existence and possibly the only one in the future. I think public safety is one of the charges that we have here as the body to protect and I don't see any harm to continue the language and supporting the language of the narrow gauge RR service protection as outlined in the amendment and would urge all members to consider it before they dismiss it out of hand. Haven't heard any testimony in committee indicating that there would be any significant advantage at all to repeal the language.

Uehling — Basically, I oppose the amendment and I believe that the Rep from Haines did answer some of my questions. I think that by adding this amendment we will be giving certain exemption to this particular Railway and basically, don't think its fair to put a crew size of 5 people in that particular situation and not allow other situations through out the state. And considering the fact that it goes into Canada and it a Canadian RR.

Barnes — Discuss a moment the relevancy of this amendment to the bill. My understanding and discussion of White Pass RR was that one of the reasons the RR was not running was exactly what is encompassed in the amendment that is presently before us. And it is my feeling that if the amendment is adopted, we simply have no reason to pass the bill because we are back at the starting point, where we were when we initially began and it would be my opinion then that since we would have no need for the bill, that we would at that point return it to rules.

Goll — Did discuss amendment with office of the sponsor and it was understood that was of particular concern was that the AK RR not be impacted by this sort of restriction. That it be free to set its crew sizes appropriate to its needs. The way the law is written in so far as there are not any other operating RR in the state, that would now occur with the transfer of the AK RR to the state. It was my hope to protect the health and safety of the employees and and the passengers and believe this particular RR or any RR

of its type requires these sorts of safeguards and that was the sole intent of the amendment. My feeling is that due to the circumstances upcoming with the AK RR it still is very valid that we pass this bill amended.

McBride — I was at the Whitehorse conference and heard the gentlemen that runs the RR. We need to understand that he is a very good manager and does his job well and he would like to accomplish as much as he can while the RR is shut down. Foolish to think that because there is 2 people that he thinks may or may not need to be on that RR to think that is the reason it isn't operating. There was quite a bit of discussion on that earlier when RR was talking about shutting down and when they did shut down and it just absolutely doesn't have anything to do with it; what matters is that the mines are not running and while they are not operating and he is going to get as much as he can in every segment of that, including negotiating with the mine etc also. It is in the matter of labor negotiation as this just sets a minimum crew size and the labor and mgmt could very well decide to have 10 men run that crew. Our interest here is just to protect the public safety and we have to realize that the most treacherous part of the trip on that RR is on the AK side and therefore that is the thing that we should be considering today, if the public safety is well addressed w/o a minimum crew law on that particular RR and I believe it should.

Duncan — Speak in support of amendment introduced by Rep from Haines. Been some statements made that this amendment is going to cause the RR to be closed down indefinitely and the reason it did close down and one of the reasons as because of the requirement of 5 crew members. That is not true and I think that the Rep from Haines indicated very clearly that that wasn't the case. The real reason why the White Pass is not running now is because 85% of its revenues are gone because of the closure of the mines, not because of the size of the crew they are required to operate with on passenger service. That full crew law did not force the closure of the White Pass RR. That law only applies to passenger service. There are only 2 crews that operate on the passenger end of that operation. What we are really talking about is 4 jobs, difference between the 5 member crew and 3 member crew on 2 crews - that's 4 positions. The requirement that they put those 4 people on or 2 members on each crew in order to maintain safety is not going to cause the RR to stay closed down. The real point is the safety of the passengers and the crew and not the normal RR operation that you are running across miles of prairie. You are running up in the mountains of some winding passes, tressels and if something happened on that train, it is very important to have crew men there who can handle it. Seems to me we should rely on the information that the individual

from Haines has. He has worked very diligently over past few weeks with White Pass trying to resolve the problem there and I am confident that if he felt that reduction to a 3 member crew was going to get that RR going again, then he would support that. On the other hand, he does feel that safety is a very high requirement on the RR. And a 5 member crew meets that. Again, the reason for that closure was not because of the full crew law but because of the fact that 85% of the revenues are gone. Also remind some of the members that have been here for some years, at least for the past 5 or 6 years we have fought this same battle. This proposal has been before us for the past 5-6 years. There has been attempts to reduce the size of the crews on the passenger service for White Pass and Yukon. And they didn't close down because they didn't get that reduction. White Pass-Yukon continued to operate.They only closed this past year when the mines closed and the revenues dropped considerably. All we are talking about are 4 positions, 4 members of the crew. That difference will not cause the White Pass-Yukon to close down. I think we should rely on information from Rep from Haines has and has worked closely with them, most knowledgable on this floor as far as White Pass-Yukon RR goes and we should accept his advice and support his amendment.

Miller — Correct one statement. Mentioned that full crew law applied even in the yard. The amendment of Rep. of Haines specifically lowers the 5 crew down to 3 person crew while in the yard (sec 2). Another indication of the correctness of this amendment. Urge my colleagues to vote yes.

Grussendorf — Some concern in relation to negotiation between mgmt and labor on the operation of the RR. I would like to remind this body that we are talking about a foreign owned RR that is doing commerce in the US with AK. It is not uncommon for the US or a state to demand a certain level of standards that the mgmt would have to comply with for the safety and general commerce actions that are going to occur. And this says something that I think we are overlooking, we have been comparing it to the other RR throughout the state of AK which we don't have that many, but its a different thing, we don't have the handle on it as much as we don't have a handle on Panamanian ships and how they handle crews and passengers. You can see that if there was an emergency on the RR (for those who have ridden it or driven alongside it) , it would be nice to have 5 crew members because you would want someone at both ends as well as in the middle to tell the passengers to stay on or where to get off. Would be important from a safety point of view and therefore I support the amendment.

Bettisworth — Rarely do I have a chance to agree with my colleague in Juneau, but basically, everything he said is correct.

But there is another approach to this situation: This amendment is not necessary primarily because it is not the prerogative of the State of AK or any other state to dictate by law to any organization how many people they should or should not use to perform a function. That is the prerogative of negotiations between labor and mgmt if those negotiation exist. Certainly, safety is a factor and should be a factor. All you are quite familiar with the Teamsters Union 959 in the State of AK who is the rep. bargaining agent for that RR. And in bargaining sessions, it is established between labor and mgmt that they need 10 people to operate that train, certainly it will be in their agreement. However, if they determine it takes 3-4 people they cannot do it because the State of AK has interfered with their right as mgmt and labor to negotiate an agreement. Therein is the problem with this amendment. It doesn't necessarily have anything to do with whether the RR will or will not operate that's correct, if this amendent should pass and certainly we should all vote against the bill, because the object of this whole legislation is to remove an archaic law that was put on the books over 40yrs ago when RR were converting to coal fire to oil fire engines and was a move to preserve jobs by organized labor and nothing else. This is the last state in the union to fail to remove that archaic law from books. This is our opportunity to do it and we ought to do it. The amendment completely defeats the purpose of the bill.

Goll — Repeat once again. Agree completely with previous speaker that in most cases and particularly in the case of the AK RR we do not wish to have these sort of constraints. This law is devoted to this particular RR. This narrow gauge RR has a real need for this size crew, simply for the life and safety reasons that have stated. It is important that the law, the original bill do pass, in order that the AK RR be free from unnecessary regulations. I am not a supporter of unnecessary regulation and I do feel that in this case, just as in other life and safety issues, the State of AK has obligation to protect its citizens and would like to see this amendment passed on the White Pass RR.

Abood — For the edification of this body, there is only one operating narrow gauge RR. They have many crew members on it and that's in Disney Land. Very peculiar, you've got 15% of the narrow gauge RR when it's operating again will be devoted to passenger service. Right now the RR isn't running and its costing them a great deal of money to keep the things sitting the way it is. I don't think this amendment is good because it doesn't do a thing. All the rest of the US have elected the 5 man crew is not in the best interests of the state. I have to agree with the Rep from Fairbanks, we are trying to pull it down, make it less costly. I would urge the body against the amendment and if the amendment passes I personally vote against the bill.

Wendte — Agree with the gold miner from Flat lands to the extent that we are not talking about labor-mgmt issue, not talking the existence of the RR for financial reasons, but point out that the 40's was probably when the same cars, track and whole same set up has changed very little on that RR. Wonder how many of you on this floor has ridden that RR as I have and would hope that before you leave SE you would do that and in doing that I would hope that there be 5 crew members so that you would be back next year. The concern is one of safety and I don't think...I don't care to leave it up to labor to tell me that we can get by with one person for a crew of a 747 for example. I think in areas of public safety the record is very clear to the extent that we have a responsibility to provide safety for our citizens. I think the arguments on this floor clearly revolve around the issue of safety for the operation of one particular RR. That has been one that has been there, it is archaic, it needs additional concern for safety than do other RR or "the" RR in this state and I would support the amendment and think it is our responsibility to provide for the safety of travelers on that RR and hope we would adopt that today.

Hayes — Further debate? Are you ready for the question? The question is Shall the House adopt amendment number 1 to HB 154?

Clerk — Roll: 17 yeas, 20 nays

Hayes — House has failed to adopt amendment number 1. Does the Clerk have further amendments?

Clerk — No

Hayes — HB 154 before us in 2nd reading. Any amendments?

Clerk — No

Barnes — Move and ask unanimous consent that HB 154 be considered engrossed, advanced to 3rd reading and placed on final passage.

Hayes — No objections, so ordered. Clerk please read bill for 3rd time

Clerk — Reads bill

Haye — Debate? Ready for the question? Question is Shall HB 154...

Ducan — Just a couple points more based on discussion during second reading when amendment offered. A couple points made by members who voted against the amendment that they didn't feel we should become involved in a labor-mgmt dispute, the legislature should stay out of that, something

that should be done at the table, point out that by not adopting the amendment, we did get the legislature involved in a labor-mgmt dispute only we took mgmt's side. It's mgmt that didn't want the 5 crew, full crew law; labor supports that, so contrary to the arguments that we should stay out of it and therefore not adopt the amendment, we involved ourselves directly in it, however the Legislature took mgmt's side. Which of course, I don't think is any better than taking labor's side. We should have left it as was. It was also mentioned that this law has been on books for 40 yrs. That is incorrect. The information I have is that it was probably about 12 yrs ago that this law was actually adopted by legislature. Wanted to make those points and urge the legislature to defeat the bill at this time.

Hayes — Further debate? Ready with question? Question is Shall HB 154 pass the House? Rep Lindauer changed vote from yes to no

Clerk — Roll: 24 yeas 12 nays

Hayes — HB 154 has passed the House

Goll — Would like to give notice of reconsideration on vote for HB 154

Hayes — Notice has been given

HOUSE FLOOR SESSION
HB 154
4/18/84

Hayes	Unfinished business before body
Goll	Bring up reconsideration of HB 154
Hayes	Rep Goll has brought up reconsideration of HB 154. Clerk please read bill.
Clerk	HB 154 by Rules Committe by request of the Governor. An Act relating to train crew size
Hayes	HB 154 before us in 3rd reading under reconsideration. Is there debate?
Goll	Like to return it to 2nd reading for purposes of introducing a specific amendment.
Hayes	There is objection. Clerk please read amendment.
Clerk	I don't have amendment.
Goll	Same amendment introduced last week. Exempts narrow gauge RR from repeal of crew law in order to provide adequate health and safety for the crew and passengers on narrow gauge RR.
Hayes	We have motion to return HB 154 to 2nd reading for purpose of specific amendment. The amendment has been previously submitted. Clerk please give page reference. There was objection to your motion Rep Goll to return to 2nd reading. Is there debate?
Goll	No, Mr. Speaker we have probably covered the arguments pretty well and I would be ready for the question.
Wendte	Urge body to recall my statements in bringing their conscience back to consistency last week when discussing deregulating the TV's and urge you develop that consistency as in our discussion that time of public convenience and you chose to regulate partially, deregulate at that time and to continue partial regulation. I would note in regard of the specific amendment being requested, that in this instance and I remind you we are talking safety and I consider in terms of the partial deregulation which is the effect of the amendment that safety is a much more justifiable reason to do it than just public convenience as you chose to do last week. I urge passage of the motion and adoption of amendment when it is before us. Remind us, as those of us involved in business since this did get a mgmt

versus labor, I hope the body would keep in mind that they would not consider it more important for the mgmt of a foreign corporation as opposed to Alaska w[illegible]rs, in this instance; particularly among those who ma[illegible] visited Skagway-a community of 80% unemployed wh[illegible]ry job counts. Primarily, I urge your adoption o[illegible] because of the safety factor.

Bettisworth — Fail to see the parallel between TV and RR. Certainly, there is no worry that someone will put a parallel RR along the White Pass and Yukon. I would remind members and strongly urge you to vote against the amendment that under current law if determined by labor and management that they need 10 people on the RR they can do it. But if determined only need 4 people on it, they cannot. Decision needs to be worked out. Safety factor has been overworked on this subject and certainly we are all concerned, but we should also be concerned whether the train will be able to operate or not. Strongly urge you to vote against this amendment.

Pestinger — Understand the train is not operating now and there are no plans to operate it because of economics of mining in the region. If that is so, safety is not a factor, it's a moot factor. I respectfully submit that economics of mining in the territory may have a bigger issue than what we are debating.

Hurlburt — Rise in support of amendment and going back to 2nd reading. Safety is a factor. Think they are trying to get the most they can out of the White Pass RR being closed now. I support going back to 2nd reading.

Hayes — Further debate? Ready for the question? Question is Shall HB 154 before us on reconsideration be returned to 2nd reading for purpose of a specific amendment. Proceed to vote.

Clerk — Roll: 18 Yeas 21 Nays

Hayes — Motion to return to 2nd reading failed. Is there debate? Question is Shall HB 154 before us on reconsideration pass the House?

Clerk — Roll: 26 Yeas 13 Nays

Hayes — HB 154 has passed the House on reconsideration

this chapter committed within a period of two years after a previous conviction for a violation of §§ 405—415 of this chapter. Other convictions are first convictions. Each day's violation of the provisions of §§ 405—415 of this chapter is a separate offense. (§ 43-2-3 ACLA 1949)

Sec. 23.10.420. Train crews. (a) No person operating an Interstate Commerce Commission-regulated railroad offering passenger service in this state may operate a train or engine, outside of yard limits, regardless of the form of energy used for propulsion, unless it meets the following requirements:

(1) a passenger train shall have at least a minimum passenger crew, which shall consist of one locomotive engineer, one locomotive fireman (or helper), one conductor, one brakeman, and one flagman;

(2) a freight train shall have at least a minimum freight crew, which shall consist of one locomotive engineer, one locomotive fireman (or helper), one conductor, and two brakemen;

(3) a light engine without cars shall have at least a minimum light engine crew, which shall consist of one locomotive engineer, one locomotive fireman (or helper), and one conductor.

(b) Except for hostling movements and duties as negotiated for each railroad company, no person operating an Interstate Commerce Commission-regulated railroad offering passenger service in this state may operate an engine or locomotive, regardless of the form of energy used for propulsion, for switching cars or in transfer movements, unless every engine or locomotive is manned by a minimum crew consisting of one locomotive engineer, one locomotive fireman (or helper), one conductor, and two helpers.

(c) In this section "engine" includes connected, multiple units under single control.

(d) A person who violates a provision of this section may be fined up to $500 upon conviction. Each violation constitutes a separate offense. (§ 1 ch. 150 SLA 1970)

Alaska State Legislature

House of Representatives

Rep. Bette Cato, Chairman

Committee on Transportation

Pouch V
State Capitol
Juneau, Alaska 99811
(907) 465-4858

February 24, 1984

Maurice Byblow
Yukon Legislative Assembly
PO Box 2[illegible]
Whitehorse, Yukon Y1A 2C6

Dear Mr. Byblow:

Enclosed please find the information you requested on the White Pass-Yukon Railroad when visiting Juneau. In addition to the bill HB 154, "An Act relating to train crew size", the following information is contained in this packet:

- The Alaska Statute on Train Crews
- A letter from Governor Sheffield to the Speaker of the House concerning his position on the bill
- The minutes for the House Floor Sessions on the bill and the minutes of the Committees that heard the bills
- Copies of all Committee tapes and House and Senate Floor Session tapes on HB 154
- Senate Bill 849,"An Act relating to minimum crew requirements for the operation of railroad trains and engines; and providing for an effective date".
- The United Transportation Union's position on on SB 849
- Committee minutes on SB 849

I hope this information will be sufficient for your needs. Please let me know if I can offer you any other assistance.

I truly enjoyed meeting with you and you delegation from the Yukon Territory and hope we may have the chance to do so again.

Sincerely,

Bette

Representative Bette Cato
Chairman, House Transportation Committee

Representative Bette Cato
Box 775
Valdez, Alaska 99686

Dear Representative Cato:

Enclosed are copies of various articles from the Whitehorse Star, as well as Senator Stevens' entry into the Congressional Record January 26, 1984, and also an article from the Seattle Post Intelligencer, August 7, 1977. This organization strongly asks for similar type of action or statements from your respective position in the Legislature.

At this time this organization still stands opposed to the year around opening of the Klondike Highway that would impact the White Pass Railroad as well as the tourist industry. You are well aware of the constant bleating of these foreign corporations putting all their woes on labor in general, and American labor here in Skagway in particular.

Sincerely,

Larry Jacquot

Congressional Record

PROCEEDINGS AND DEBATES OF THE 98th CONGRESS, SECOND SESSION

Vol. 130 WASHINGTON, THURSDAY, JANUARY 26, 1984 No. 4

Senate

THURSDAY, JANUARY 26, 1984

(Legislative day of Monday, January 23, 1984)

ALASKANS ARE UNITED TO SAVE SKAGWAY

Mr. STEVENS. Mr. President, on December 15, 1983, the Canadian Transport Commission (CTC) completed an exhaustive inquiry into the transportation requirements of the Yukon and issued a draft report for comment by affected Canadian and Alaska interests. The formal comment period does not conclude until February 15. But public comment on certain findings and recommendations of the Commission is necessary and appropriate at this time.

It is possible that certain major shippers in the private sector will make fundamental transport decisions—perhaps as early as next week—which will profoundly affect Alaska. Those decisions should not be made without a full understanding of the probable consequences.

BACKGROUND

Mr. President, the city of Skagway is the closest year-round tidewater port for the Yukon Territory. For the past 84 years, the principal transportation system serving the Yukon has been the White Pass & Yukon Railway, providing passenger and freight service between Skagway and the territorial capital of Whitehorse. Of the total railway length, 59.1 miles are located in Yukon, 30.9 miles in the Province of British Columbia, and 20.4 miles in the State of Alaska.

As a private sector business enterprise, the railway, to say the least, is unique. It is owned and operated by the White Pass & Yukon Corp. Ltd., and the railway business in Alaska is carried on by a U.S. subsidiary, the Pacific & Arctic Railway & Navigation Co. (PARN). The PARN operates under a certificate of public convenience and necessity issued by the ICC. The Canadian operations are certificated by the CTC. Operations in Canada, of course, are governed by Canadian transport law.

The conflicting regulatory requirements of the United States and Canadian Governments have never been a serious problem. The challenges have been overcome by good-faith negotiations, and relations between the United States and Canada remain most harmonious in respect to the international railway system which serves vital interests in both countries.

Although owned by Canadian interests, the railroad's principal employment base is in Skagway. The maintenance shops are located in Skagway. The majority of the operating personnel are Alaskans. Alaskans for four generations have served the transport requirements of Yukon through the facilities at Skagway.

Unfortunately, Mr. President, railway operations between Whitehorse and Skagway were suspended following the closure of the Cyprus Anvil Mining Corp.'s (CAMC) open pit lead/zinc/silver mine and mill near Faro, Yukon Territory, in June 1982.

As noted in the CTC draft report—

(T)he main difficulty faced by the WPY Rail Division is that it is essentially a captive railway—captive to CAMC. Without CAMC traffic, it does not have the economic power to operate. Some believe it should op-

erate even without the high volume bulk freight but that would be impractical, for the fair rate to cover costs would be astronomical. (CTC draft report, p. 81).

Under controlling Canadian law, according to the CTC, the—

WPY Rail Division is a regulated mainline rail carrier and as such * * * it cannot set rates which are less than the compensatory rate (that is the rate must cover the long run variable cost of operation). (Id.)

In the last full year of operations prior to the closing of CAMC—

More than 29,800 tons of freight, 44,500 tons of petroleum products, 416,000 tons of (CAMC) mineral concentrate and approximately 55,000 passengers were carried by the railway. (Id., p. 26).

The Skagway employees, for the most part, have been without jobs since June 1982. The situation these employees now face is quite simple: if the CAMC resumes operations and converts to trucking rather than rail service for its ore concentrate transportation requirements, the White Pass & Yukon Railway, after all these years, will probably be abandoned under controlling Canadian law. Of course, PARN cannot operate a viable railroad from Skagway to a point on the Canadian border—so PARN will be abandoned as well.

The city of Skagway, under those circumstances, will have had a glorious past—but no future.

THE ALASKAN PUBLIC INTEREST

Mr. President, I am pleased and gratified to note that the Alaskan public interest was considered by the CTC inquiry officers in the preparation of their report. The CTC met with State and local officials, and made the following observation:

The Alaskan Government realizes the historic role which the port of Skagway has played in the development of Yukon. A commonality is viewed between the region about Skagway and Yukon in terms of remoteness and reliance on the transportation industry. If the WPY railway is abandoned, there is serious concern about the continued existence of Skagway. *There is also doubt that Skagway could survive solely on the basis of seasonal tourism.* Even if the WPY railway was abandoned and trucking was permitted on the Alaskan portion of the South Klondike highway, the railway jobs would not be replaced in number by jobs in trucking—*most trucking jobs would go to Canadians.* As well, if major trucking to Haines or elsewhere was adopted and the WPY railway was abandoned and there was no trucking on the South Klondike Highway, *that would be the beginning of the end for Skagway.* (Emphasis supplied). Id., p. 47.

The American employees of the railway, rail and longshore units are represented by General Teamsters Local 959, State of Alaska. Railway trainmen and engineers in Alaska are represented by the United Transportation Union (UTU) Local 1757. And Teamsters Local 213 represents all Canadian employees of the White Pass and Yukon.

According to the draft report, "every attempt was made to meet with the Union representatives and spokesmen for the employees" of the railroad. In addition the CTC met with the United for Skagway Committee, a group composed of municipal officers and community leaders, as well as the Teamsters Union and the UTU.

The Alaskan public interest, therefore, was taken into consideration in the development of the CTC report, along with, obviously, the interests of Canada in general, and the Yukon in particular.

THE CAMC POSITION

The CAMC is not only the dominant and controlling shipper on the White Pass and Yukon, it is also the dominant industrial enterprise in the Yukon Territory. Accordingly, in order to facilitate the reopening of mining operations on the initial target date of June 1983, the Canadian Federal Government and the Yukon Territorial government extended approximately $25 million in aid to CAMC. The mine and mill, however, remain closed. According to the draft CTC Report.—

CAMC requires 6 months lead time, after a decision to reopen the mill is made, in order to finalize marketing, to staff operations, to make capital expenditures and to secure supply contracts. CAMC will not start up the mill during the winter due to the harsh Yukon climate. Consequently, the earliest time for mill start up would be late 1984, and the decision to do so would have to be made in or before April 1984 * * *. *In this context all transportation arrangements including trucking approvals (if necessary) must be in place by mid-March 1984 or it will be unlikely that the mill would reopen and that shipments would resume prior to the fall of 1985.*" (Italic supplied). (Id., p. 7).

Mr. President, CAMC informed the CTC that—

Trucking either to Skagway or Haines results in CAMC costs being reduced, and that the preferred route for trucking will be Faro to Skagway. In the event the Skagway road is not open to traffic, CAMC would pursue trucking to Haines. (Id., p.14)

With respect to the prospective Faro-Skagway trucking operation, CAMC stated that there are no physical restrictions which would require limiting the gross vehicle weight to levels below 134,500 lbs, and that operations would be based on—

70 foot, 7-axle B-train trucks with facility to handle loaded and empty ore containers and loaded bac[illegible]inaul containers for such items as coal, in combination with lime, soda ash, fuel, rods and balls, and general freight * * *.

And with respect to the alternative Faro-Haines route, CAMC stated:

The Haines route is not restricted * * * and appears capable of facilitating 134,500 lb. loads. (Id., p. 14).

The final CAMC position was characterized by CTC as follows:

If the 134,500 lb. load is not permitted on the Alaska sections of either the Skagway or the Haines alternative, a shuttle operation (i.e., the splitting of B-train configurations to a single trailer operation in order to meet Alaskan road weight limits) was recognized by CAMC to be a possible requirement. (Id., p. 15.)

Mr. President, the best evidence available to me indicates that CAMC will reopen its mining and mill operations at Faro later this year. Thus, CAMC must decide in the immediate future whether to pursue its trucking option. I am informed that meetings will be held in Whitehorse next week, involving railroad management, CAMC, the Canadian Federal Government, and the Yukon Territorial government. Alaskan interests, I am further informed, will not participate in those meetings.

I wish to stress, therefore, the intolerable burdens that Alaska and the United States will bear if the decision is made by CAMC, for whatever reason, to pursue the trucking option for transportation from the Faro mining facility to tidewater Alaskan ports.

THE ALASKA BURDENS OF CAMC'S TRUCKING OPTION

First, the conversion to trucking—if successfully implemented—will mean the forced abandonment of the White Pass & Yukon Railway in the United States and Canada.

Second, the conversion to trucking will mean the elimination of the Skagway employment base, and the export of most of the available jobs from Alaska to Canada.

Third, the tourism industry in southeastern Alaska will suffer irreparable harm. Not only will the scenic railway trip be eliminated permanently as an attraction for up to 55,000 visitors annually, but if the South Klondike Highway is used for ore concentrate trucking and backhaul, the scenic value of that highway system will be lost to virtually uninterrupted movements of B-train trucks 7 days a week, 24-hours per day. One estimate is that these trucks would pass a point on the highway every 15 minutes, round the clock. If B-train trucks were split at the border, every 7½ minutes, around the clock.

Fourth, the Federal-aid primary route from Skagway to the U.S. border, now closed between October 15 and May 1, will require upgrading to meet the transportation requirments of the mine. These costs, of course, will be borne by U.S. Federal and Alaska State taxpayers. After upgrading, according to the CTC draft report, the increased annual maintenance cost for the Alaska section of the highway will be $375,000.

Fifth, if the alternative Faro-Haines route is selected by CAMC, in addition to upgrading of the highway, the incremental increased maintenance cost in Alaska, on an annual basis, will be at least $420,000.

Sixth, U.S. Customs apparently will be required to man a post at the border, 7 days per week, 24-hours per day, in order to accommodate the traffic orginating at the Canadian mine. This extraordinary cost will be borne entirely by U.S. Federal taxpayers.

Seventh, the U.S. Federal Government and the State government will be required to bear the social costs of

massive long-term unemployment in southeastern Alaska caused by the elimination of the railroad as a viable trasnportation component and the destruction of the underlying economic base of Skagway.

Mr. President, Alaskans have the capability, as a practical matter, to protect themselves against these massive losses as a result of an inappropriate decision by one major private sector shipper. Alaskans, after all, control the configurations of the vehicles that travel on their Federal-aid primary highways. That is part of the police power inherent in every State and nation.

CONCLUSION

Mr. President, the CTC draft report recognizes that CAMC has grossly understated the actual costs, and the indirect social costs, of converting to highway transportation operations when the mine is reopened later this year.

The CTC recognizes, as Alaskans do, that the White Pass & Yukon Railway is a national treasure which Canada and the United States cannot afford to lose. I have met with representatives of railway management; they are determined to reopen the railroad and serve all shippers at rates that are fair and compensatory. I have discussed the problems with representatives of the railroad's employees; they are committed to reopening the railroad, as are the community leaders of Skagway and other vitally affected interests in southeastern Alaska.

There have been differences between labor and management on the railroad in the past—now those differences must be resolved in good-faith negotiations. I believe they will be resolved.

Mr. President, in view of these facts, I believe that the citizens of Alaska have every right to resist the abandonment of the White Pass & Yukon Railway. I believe they have every right to resist the use of their roads—at massive Federal and State cost—by an endless stream of B-train combination trucks from the mining operations in Yukon. I shall join them in this effort. The financial costs to the U.S. Treasury, to the Alaska State treasury, and to the community of Skagway are too great if the trucking option is pursued by CAMC when mining operations resume.

Most important of all, Mr. President, the human and social costs of the trucking option are intolerable to Alaska and to the U.S. interests.

If a decision is made in the coming days or weeks by CAMC regarding its future transportation requirements, I hope that my views, which are shared by virtually all affected Alaskan citizens, are taken into consideration.

Thank you, Mr. President.

Move rail shops, coun. Toews asks

By MASSEY PADGHAM
Staff Reporter

The White Pass railway should be paid to move its maintenance and repair yards from Skagway to Whitehorse, a Whitehorse councilor says.

Coun. Vern Toews was successful in getting council approval Monday for that position and several others as the city's response to the draft report on transportation by a Canadian Transport Commission study group.

While the novelty of the proposal (no one else has made it to the commission) raised a few eyebrows, council appeared to agree with the "what-have-we-got-to-lose" comment from city chief administrator Ron Gourley.

"It's a different approach," he admitted. "I just wanted to shake people up."

He also says train crews should run all the way from Whitehorse to Skagway rather than having Canadian and Americans switch at Bennett, B.C.

"This council has committed itself to economic development," Toews said. He said he analyzed the commission report to see what would bring the most jobs to Whitehorse. The answer, he said, was re-opening the railway and bringing more of its operations to Whitehorse.

VERN TOEWS
Shake em up.

"It will cause a lot of screams by our friends in Skagway," Toews admitted. "They'll still have the longshoremen, they'll still have the train engineers and they will still have the required inspectors."

He said the railway has a problem getting Canadian government help because most of its employees are American. If the federal government agreed to pay the estimated $10-million cost of the move, it would mean a major Canadian rail operation and 40 to 70 news jobs in Whitehorse, he said.

"Why not relocate, so we have the economic development in the Yukon and Canada," he said.

But the idea simply isn't economic, White Pass president Tom King responded yesterday. He said White Pass needs 10 of the 13 locomotives in Skagway to haul trains up the tortuous hill to the White Pass.

"We need the majority of the power at the other end because that's where the hill is."

By law, locomotives have to be inspected daily, so having the yards in Whitehorse would simply mean an extra 200 kilometres or more of dead running on the engines, he said in an interview yesterday. Even if, as Toews suggested, inspectors were left in Skagway, having the yards in Whitehorse would mean extra running for regular maintenance purposes.

Toews said one advantage of moving the maintenance facilities was that Canadian wages are lower on the railway than for the American rail workers.

Toews said the White Pass shops in Skagway are getting old and would need major work soon anyway.

King did say some maintenance could be done here. He said White Pass believes it might be a good idea to extend its rail lines in the Marwell Industrial area over to its truck maintenance complex to allow maintenance of some rail equipment here.

But King liked other parts of Toews suggestions and said he is pleased the city had publicly recognized the railway's importance to the city.

King said White Pass hopes to run crews the entire length of the track, rather than having Canadians and Americans switch off in Bennett. Closing the Bennett yards would save about $500,000 a year, Toews said.

TOM KING
Needed in Skagway.

Toews also said any money the government might consider using to upgrade the highway for trucks should be spent on the railway, thus cutting rail costs.

He said a better road is, in effect, a subsidy to the truckers, while the railway gets no such help.

"I recommend a (rail) subsidy equivalent to what the trucking industry gets," Toews said. White Pass has taken a similar position.

For example, upgrading the South Klondike Highway would cost about $20 million, he said. If it was given to White Pass for improvements, such as lowering steep hills, it would put White Pass in a position to compete with trucks, he said.

9,000 Commute Across Border To U.S. Jobs

BUFFALO — (AP) — United States unemployment is above 7 per cent, but some 9,000 Canadians are crossing the border each day to work in jobs ranging from skilled laborer to management specialist.

The total is more than 20 times the number of Americans allowed to go to work in Canada, where the jobless rate is 8 per cent, and some labor leaders here object to the presence of the Canadian commuters.

"I think maybe we are too lax. We've been the nice guy. There's too many out of work now," said George Wessel, president of the Buffalo Council of the AFL-CIO.

Buffalo, with an 8 per cent jobless rate, is described by a U.S. Immigration and Naturalization Service (INS) officer as the area along the northern border most affected by foreign commuters.

About 9,000 Canadians hold permits to work south of the border, according to the INS. The Department of Manpower and Immigration in Ottawa reports 408 U.S. citizens hold permits to commute to work in Canada.

Other economic observers here are not so upset over the 1,033 Canadians who come to work in this area every day.

THE WHITEHORSE STAR, Monday, January 30, 1984

U.S. Senator blasts Anvil trucking

By MASSEY PADGHAM
Staff Reporter

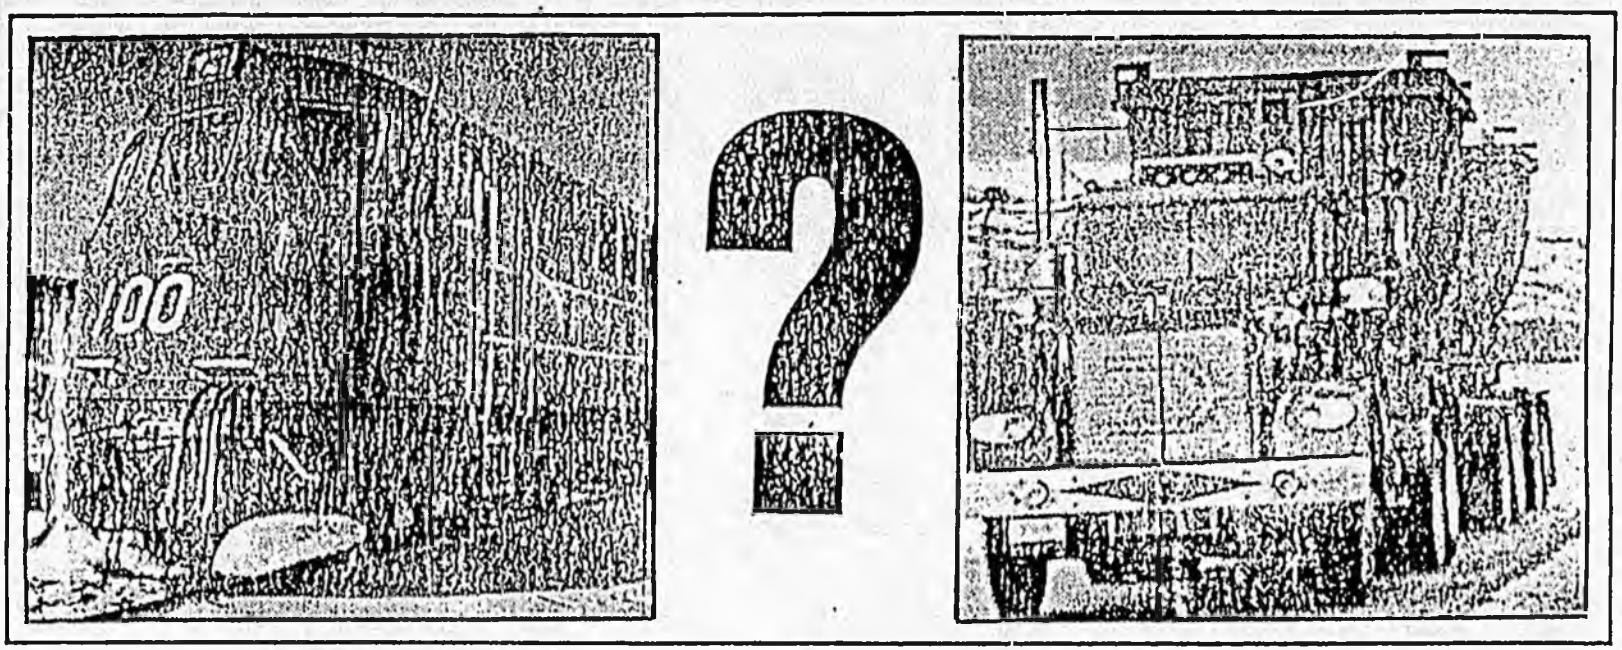
A senior American senator says Cyprus Anvil Mining Corporation will place an intolerable strain on employment and finances in Alaska if it is allowed to go ahead with its plan to truck ore concentrates to Skagway or Haines.

Thursday, Alaska Senator Ted Stevens unleashed a strong attack in the U.S. Senate in Washington on Anvil's plans, on the grounds it would lead to the permanent closure of the White Pass and Yukon railway, which has its key operating base in Skagway.

"The city of Skagway, under these circumstances, will have had a glorious past — but no future."

Stevens, who is the influential assistant majority leader in the Senate, described the railway as a national treasure that neither Canada nor the United States can afford to lose.

It was a strong message that Alaskan interests are not prepared to allow streams of over-weight ore trucks to run to Alaskan port regardless of how much money Cyprus Anvil believes trucking will save. Anvil has told a Canadian Transport Commission study group that trucking will save $10 million to $15 million a year.



"The human and social costs of the trucking option are intolerable to Alaska and to the U.S. interests," he said. "If the White Pass and Yukon railway is abandoned, there is serious concern about the continued existence of Skagway."

The Anvil lead-zinc-silver mine in Faro closed 19 months ago. Stevens said he was responding to the commission's draft report, which said the rail line is dependent on the large mining company.

The report noted Alaska's concern, saying abandonment of the railway "would be the beginning of the end for Skagway."

"The railway jobs would not be replaced in number by jobs in

Cont'd on P. 3

Stevens

Cont'd from front

trucking — all trucking jobs would go to Canadians."

In effect, he said the loss of the railway through continued closure of the Anvil mine is the same thing to Alaskans as the loss of the railway by an opened mine trucking ore. He urged Alaskans to fight the trucking option.

Quoting liberally from the Commission report, Stevens told the Senate that Anvil assumes it would be able to operate in Alaska with seven-axle two-trailer units weighing a total of 134,500 pounds (61,000 kilograms). If not, a more expensive shuttle service between the U.S.-Canada border and a port hauling one trailer at time would be needed.

Stevens said if trucking was allowed the route between Skagway and the U.S. border, a federal aid route, would have to be upgraded and would still cost another $375,000 a year to maintain. That would be borne by U.S. federal and Alaska state taxpayers, he said. Extra maintenance costs on the Haines road would be $420,000, he said.

Another cost to the U.S. federal government, an expenditure Stevens could use his influence to stop, would be 24-hour-a-day, seven-day-a-week customs operations.

In addition, "the U.S. federal government and the state government will be required to bear the social costs of massive long-term employment in southeastern Alaska caused by the elimination of the railroad as a viable transportation component and the destruction of the underlying economic base of Skagway," he said.

"Mr. President, Alaskans have the capability, as a practical matter, to protect themselves against these massive losses as the result of an inappropriate decision by one major private sector shipper," he added. "Alaskans, after all, control the configurations of the vehicles that travel on their Federal-aid primary highway. That is part of the police power inherent in every State and nation."

Stevens said he believes the differences between the railway and its unions will soon be resolved.

Stevens also said the closure of the railway would mean the loss of the 55,000 tourists who travelled on it each year and opening of the South Klondike highway to truck traffic would drive away other tourists having to compete with trucks.

"I believe the citizens of Alaska have every right to resist the abandonment of the White Pass and Yukon railway," Stevens said.

"I believe they have every right to resist the use of their roads — at massive federal and state cost — by an endless stream of trucks from the mining operations in the Yukon. I shall join them in the effort."

U.T.U. Brief on Senate Bill Number AS 23.10.420(a)

Background Information

The White Pass & Yukon Route Railroad, a Canadian-owned corporation with home offices in White Horse, Yukon Territory, is the last operating common carrier three-foot wide narrow gauge railroad in North America. Built at the height of the Klondike Gold Rush in 1898, it runs 110 miles from tidewater at Skagway, Alaska, to Whitehorse in the Yukon Territory. Since 1970, American crews (who used to operate all trains on the railroad) run the 41 miles to Lake Bennett, B.C., the division point, and Canadian crews take the trains the balance of the distance to Whitehorse.

Though "modern" in some respects, such as diesel locomotives and a containerized freight handling system, the WP&YR contends with some of the worst terrain and climate conditions in the world. The Canadian side from Bennett to Whitehorse is flat with only a few grades; the U.S. division is the "trickiest part of the road".

Alaskan crews must drag their trains up 21 miles of 3.9% grade to reach the summit, and then contend with another pass and two short (but equally steep) grades before reaching Bennett. The return to Skagway presents the problem of controlling 60-car trains of lead-zinc ore concentrates on the steepest railroad grade in America.

The railroad is interspaced with high wooden trestles and cliff-like retaining walls which perch the track a thousand feet above the canyon floor for miles. Blizzards have dumped over four hundred inches on the summit of White Pass, and though there are "good" years, the railroad has been blockaded sometimes for weeks on end. The worst storm shut down the road for 21 days.

The geography and weather create more than just management problems; they compound the dangers of railroading to the highest extent. Even on a well-maintained railroad, pursing safe operational standards is critical. Here it is very literally a matter of life and death. Avalanches and rock slides periodically wipe cars over the side, and derailments (which occur very frequently) could mean disaster at many locations. Such a disaster would even be environmental in its scope, since the prospect of tons of lead and zinc dumped into the Skagway River would certainly affect life in the water, and down to the sea.

Train crews have learned to take safety as more than just the title page in the rule book. After all, we're the ones out there in the middle of it. Five-man crews on the WP&YR exist primarily for safety, in spite of management's stand on this bill. Here are a few examples:

1. Ice building up between the wheels and the brake shoes can cause winter brake failures. The Company has refused to upgrade their equipment, and this leaves the crew to deal with problems out on the road.

2. Bridges and trestles on the road are not equipped with walkways. A train which is stretched across a bridge leaves no walking (or climbing) room at the edge. Therefore, a brakeman cannot walk from one end of the train to the other, and a second brakeman is needed to walk the other end in emergencies. This can be critical.

3. In winter months it often takes the combined strength of two men to set a good safe handbrake on a car, and the same force of two men to "knock-down" or remove the brake. On older cars with faulty handbrakes this applies all year, even with brake clubs.

4. The "sophisticated communications systems" (two-way radios) in use are continually in for repair and are prone to failure. The crews do not rely on them because of this safety hazard, and hand signals are regularly used in switching moves.

5. The primary job of the crew while underway is to watch for any hint of trouble on or around the train. The railroad is twisted like a piece of spaghetti with 16 to 24° curves, and there are documented cases of the fireman, riding on the left-hand side of the locomotive, spotting danger which was out of the engineer's line of sight and stopping the train. Similarly, brakemen ride at both ends and watch over the train for hotboxes, loads shifting or breaking loose, broken axles or wheels, downed brake rigging, derailed cars, broken rails, fires, washouts, etc. Thus, the manning positions at the head-end with the engineer and fireman watching the track from the lead unit, a brakeman riding the "rear" or trailing unit watching over the train behind, and a conductor and rear-brakeman overseeing the train ahead of the caboose (and the track behind for signs of dragging brake rigging or derailed equipment) have been established for the safe opera-

tion of the train while underway. Dozens of documented cases exist of crew men at their positions spotting trouble which would have gone unseen by other crew members, and thus saving the Company thousands of dollars in repairs and wreck clean-up operations.

6. Most important to the crew members in the light of safety on the road is the grim fact that besides dealing with faulty locomotives, antiquated equipment, and track and bridge maintenance which barely meets the job at hand, employees have to deal with snowslides and cliffs over which a train's plunge would mean certain injury or death. The spector of a passenger train loaded with 400 tourists going through a rotten trestle, or derailing high above "Dead Horse Gulch", or being hit by a rock slide (on top of the 1900-era wood-roofed parlor cars with their old oil stoves) brings shudders to the men who actually are on board as well as to management. Crew members to deal with such accidents are essential. Even more frightening in the winter season are the snowslides. There has been an increase in winter passenger traffic over the last few years, and thus the crew is faced with the added burden of protecting travelers as well as themselves.

[illegible]

1. White Pass and Yukon Ltd. of Vancouver is owned by Federal Industries, Ltd. of Winnepeg. The Canadian management is on an over-all cost-cutting spree at this time, and are trying to tighten up their operation. Part of this has included the postponement of track repairs--a major rail replacement program was knocked out to save money--and an attitude of "beat it 'til it dies" toward their locomotives, some of which are now 28 years old and in critical need of replacement or complete long-term overhaul. Because traffic is so heavy at this time, the Company can't take their engines out of service much more than stop-gap, repairs on the worst problems. Engine failures or malfunctions are a common occurance on the railroad. It is also worth noting that the average train length in 1969 was 30 cars, operated by five men. Today the same five men have to run trains that can be 100 cars long out of White Pass. This is actually more work for each man involved, with more weight to contend with, more cars to watch (and to walk when checking the train, or in emergencies), and definitely more hazardous.

2. Remarkable but true in light of the terrain and operational hazards on the WP&YR is the fact that White Pass does not legally have to comply with Federal laws concerning safety and operation. The reason: White Pass is "narrow gauge" instead of "standard gauge" (4' 8½" wide track), and as such the Company can usually sneak by under requirements and regulations which would close down a standard gauge road "outside". This appears to be an oversight by the Federal Railroad Administration, but is understandable since the little known and obscure White Pass is the last narrow gauge common carrier left in the U.S. Also, it is generally viewed as a Canadian company. The 21 miles within Alaska under jurisdiction of American law, usually slide by unnoticed.

3. Much of the freight equipment, passenger equipment and airbrake equipment is antiquated and of museum vintage. Crews must deal with this as well as other problems, adding to operational hazards.

4. Because of all the previous factors, it is little wonder that the White Pass accident and safety record is atrocious. Summer travel has increased each year, and with it the number of accident reports. Employees must be extra alert at all times to prevent injury or death from faulty equipment, dangerous operational procedures, or management decisions affecting train movement. White Pass enjoys saying that they have "never lost a passenger's life" in their 80-year history. The men who ride the trains can only count the number of dead employees over the years, and knock on wood. The Company is playing Russian Roulette with human lives, and their own odds get worse by reducing the number of men on board a train who are available to deal with the expected--and unexpected--hazards of mountain railroading under the most extreme conditions.

Statement of Position by the United Transportation Union

We of the United Transportation Union, Local 1787 in Skagway, are adamently opposed to Senate Bill 849, a bill which will aid a non-resident Canadian corporation by eliminating Alaskan jobs on U.S. soil. This is by itself a dangerous international precedent, worthy of close attention--particularly in light of the proposed Alcan gasoline project.

Few people even know that there is a railroad in Southeast Alaska. Instead of repealing the present law, we propose a rider should be added that would exempt state owned Railroads.

Lastly, very few individuals are aware of the delicate balance that exists in Skagway between labor and management. We feel that the introduction of this bill is an attempt by the Company to further drain our union treasury attending a battery of hearings in Juneau. The last time we had to testify it involved long hours and much expense--somthing which the Company can easily afford.

Given this situation, our membership has nothing except the present State law to protect us from the whims of a foreign corporation. Our only defense at present lies in "An Act relating to train crews" as set forth in State law. It would thus seem beyond comprehension for our own lawmakers--our own elected representatives--to vote to repeal the only security which we in Skagway have in these difficult days.

BILL SHEFFIELD
GOVERNOR

cc

HB 154

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

February 1, 1983

The Honorable Joe L. Hayes
Speaker of the House
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill repealing the existing law requiring train crews of certain minimum sizes. The existing law requires that passenger and freight trains have crews of no less than five persons, that a light engine without cars have a crew of at least three persons, and that a switch engine have a crew of at least three persons.

The repeal may allow railroads within the state to determine crew size based on economic and operational concerns. However, this repeal does not relieve a railroad of its existing obligation to operate with customary due care and high regard for the safety of its passengers, freight, and employees. The repeal is not intended to make any pronouncement on what is or is not an appropriate subject for collective bargaining.

I urge you to approve this bill.

Sincerely,

Bill Sheffield

the board to fill out the term to which the member was appointed, regardless of new sections added by this bill. Provides Act takes effect immediately.

Sections of the Senate-passed version are taken out by House L&C, and they include 1) an amendment to current law that would have allowed for one public member on the board; 2) a registrant requesting renewal of a certificate to give evidence of the registrant's continued competence as a professional architect, engineer, or land surveyor; and 3) section allowing existing board members to serve out their term, regardless of appointment of a public member.

Appropriation (local service rds. & trls.)

HOUSE BILL NO. 169, (see pages 150;189, 1983 report). Reported back to the House April 6 by Finance recommending it be replaced with a Finance substitute and as follows: Bettisworth (V-Chair), Grussendorf, Zharoff, Hurlbert, Ward and Fritz recommend it do pass. Martin, Furnace and Duncan had no recommendation. A letter of intent was attached. To Rules. The letter states:

> "It is the intent of the House Finance Committee that the Local Service Roads and Trails (LSR&T), program not be discontinued as recommended by the previous Commissioner of the Department of Transportation and Public Facilities, (DOT/PF).
>
> The LSR&T program is vital to local governments and provides very important benefits to communities in the rural and urban areas of Alaska.
>
> The House Finance Committee intends that the Department of Transportation and Public Facilities support continued operation of this vital program and request continued funding for its operations in subsequent fiscal years."

The Finance substitute appropriates $6.5 million to the Dept. of Transportation and Public Facilities for allocations for local service roads and trails. Provides Act takes effect immediately.

History: Introduced 2/7/83 by Reps. Herrmann, Koponen, Zharoff, Cato and McBride, and appropriated $10 million to the Dept. of Transportation and Public Facilities for the local service roads and trails program (identical to SB 7). Reported out of Transportation 2/14 with a do pass recommendation and a letter of intent:

> It is the intent of the House Transportation Committee that the Local Service Roads and Trails (LSR&T), program not be discontinued as recommended by the previous Commissioner of the Department of Transportation and Public Facilities, (DOT/PF).
>
> The LSR&T program is vital to local governments and provides very important benefits to communities in the rural and urban areas of Alaska.
>
> The House Transportation Committee intends the DOT/PF support continued operation of this vital program and request continued funding for it's operations in subsequent fiscal years.

TESTIMONY OF

SENATOR FRANK R. FERGUSON

ON SENATE BILL 7 BEFORE THE

SENATE TRANSPORTATION COMMITTEE

SENATE BILL 7 PROVIDES FOR A SUPPLEMENTAL APPROPRIATION TO THE DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES FOR $10 MILLION FOR THE LOCAL SERVICE ROADS AND TRAILS (LSR&T) PROGRAM.

THE LSR & T PROGRAM IS A PROGRAM OF VITAL IMPORTANCE TO BOTH URBAN AND RURAL COMMUNITIES. THE PROGRAM OFFERS FUNDING FOR CONSTRUCTION OF LOCAL ROADS AND TRAILS THAT ARE NOT ELIGIBLE TO RECEIVE FEDERAL HIGHWAY FUNDING.

LAST YEAR, THE HAMMOND ADMINISTRATION BEGAN A PHASE-OUT OF THE LSR & T PROGRAM. THE DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES HAS STATED PUBLICLY THE REASONS FOR THE LSR & T PHASE-OUT IS DUE TO THE MUNICIPAL GRANT PROGRAM AND LINE ITEM APPROPRIATIONS. THIS EXPLANATION IS LACKING IN SUBSTANCE.

FIRST, LINE ITEM APPROPRIATIONS AND MUNICIPAL GRANTS ARE, IN

MOST CASES, THE SAME THING. WHEN MAKING A LINE ITEM APPROPRIATION TO A COMMUNITY, THE LEGISLATURE DESIGNATES IT AS A MUNICIPAL GRANT. THE MUNICIPAL GRANT PROGRAM IS NOT A PROGRAM FUNDED BY THE LEGISLATURE BUT RATHER A PROCEDURE ALLOWING THE STATE TO CONTRACT WITH LOCAL COMMUNITIES.

SECOND, APPROPRIATIONS TO LOCAL COMMUNITIES BY THE LEGISLATURE HAVE NEVER BEEN SUFFICIENT TO MEET THE EXISTING TRANSPORTATION NEEDS. THE LSR & T PROGRAM HAS ALWAYS BEEN LOOKED UPON BY THE LEGISLATURE AS A WAY TO FUND PROJECTS THE ADMINISTRATION AND LEGISLATURE WERE NOT ABLE TO CONSIDER DUE TO TIME CONSTRAINTS BUT WERE IN NEED OF CONSTRUCTION OR REPAIR IMMEDIATELY.

THE $10 MILLION SUPPLEMENTAL WILL ALLOW THE DEPARTMENT TO ENTER INTO AGREEMENTS WITH LOCAL COMMUNITIES FOR PROJECTS THAT HAVE BEEN IDENTIFIED AS IN NEED OF FUNDING. BECAUSE OF THE PHASE-OUT, THE DEPARTMENT HAS BEEN TRYING TO CLOSE OUT PROJECTS AND NOT ENTERING INTO CONTRACTS FOR PROJECTS THEY KNOW NEED FUNDING. THE MEMORANDUM IN YOUR PACKETS FROM

SENATOR MOSS INDICATES THAT APPROXIMATELY $2,818,000 IS AVAILABLE FOR FUNDING THROUGH THE END OF THE FISCAL YEAR. ACTUALLY, THE $2,818,000 IS COMMITTED BUT NOT UNDER AGREEMENT.

IN THE PAST, DOT HAS RECEIVED $10 MILLION DOLLARS TO COVER A TWO-YEAR PERIOD FOR THE LSR & T PROGRAM. SINCE THE LSR & T PROGRAM DID NOT RECEIVE FUNDING THIS FISCAL YEAR, THE $10 MILLION WILL ALLOW THE DEPARTMENT TO ENTER INTO AGREEMENTS FOR NEW PROJECTS THIS CONSTRUCTION SEASON, AND CONTINUE OPERATIONS INTO THE NEXT FISCAL YEAR.

LETTER OF INTENT
TO ACCOMPANY
HOUSE BILL 169

It is the intent of the House Transportation Committee that the Local Service Roads and Trails (LSR&T), program not be discontinued as recommended by the previous Commissioner of the Department of Transportation and Public Facilities, (DOT/PF).

The LSR&T program is vital to local governments and provides very important benefits to communities in the rural and urban areas of Alaska.

The House Transportation Committee intends the DOT/PF support continued operation of this vital program and request continued funding for it's operations in subsequent fiscal years.

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: C.D. Karella
State LSR&T Engineer
Juneau

DATE: November 15, 1982

FILE NO:

TELEPHONE NO:

FROM: D.S. Ronken
LSR&T Engineer
Fairbanks

SUBJECT: LSR&T Program

In response to our telephone conversation of 11/5/82, I have informed J. Chandler at Nome to supply you with the information you requested regarding the LSR&T Program in the bush communities.

I have been in contact with the local governments and the comments received from them regarding the LSR&T Program are as follows:

Since local roads and streets are always in need of improvement the local governments would like all the funds they can possibly obtain for roadway construction.

The local governments without road powers feel that the DOT/PF has too much control over the funds. They object to some of the conditions stated in Section "C" of the project agreement.

The local governments however, do like the flexibility of the Program, i.e.:

1) Various types of construction that can be funded

2) Project funding can be changed to cover overruns, providing funds remain in their allocations

3) LSR&T Construction Program submitted (priority list) can be changed, if for some reason the local needs change

Some local governments in the Fairbanks area feel that the manner in which funds are allocated based on population by the latest federal census should be changed. With the population in the Fairbanks area increasing every year and the allocation based on the latest census of 1980 which has been questioned by the local government, they feel the present system leaves much to be desired.

In summary, the local governments like the program and would like to see it refunded. The funds obtained through the LSR&T Program are not sufficient to cover the road improvement needs, but all funds that can be obtained to improve the local transportation system will be accepted by the local governments providing the conditions for its acceptance do not change.

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: John J. Simpson, Director
Standards and Technical Services
Division

DATE: March 14, 1984

FILE NO: 2519

TELEPHONE NO: 789-6237

FROM: Charles D. Karella
Statewide LSR&T Engineer
DC & M Standards

SUBJECT: LSR&T Allocation
F.Y. 1985

The LSR&T Program was allocated $7 million to re-establish the program. I was assured by the LBRC last spring, that this funding reflected on on-going program and that future funding would not be a problem.

During the House Transportation Committee hearing on SB 332, March 7, 1984, I suggested that it was not necessary to seek other sources of funding beyond the CIP, such as, SB 332. It would be simpler to manage the program at a solid level of funding. I told the Committee that the Governor's office assured me that they would not cut the LSR&T Program from the CIP budget and the Department would continue to have an adequately funded program in the future.

Since we are involved with all local governments and the legislature, I believe in all fairness, that the $6 million annual funding level is bare bones and to drop below that will only jeopardize the integrity of the program but increase the cost of management per project constructed.

I feel if the DOT&PF does not want to chance the loss of the little rapport it now has with the legislature, we should leave the five million intact or even increase it.

I believe we will not only lose face with the legislature but also with the local governments who have been going in circles since January 1982 because of the following:

1. We began to phase out the program.
2. Then we established the LSR&T Program as a viable continuous program at a funding level of $7 million per year.
3. Then we reduced the funds to bare bones level of $6 million per year.
4. Now we have reduced the funding an additional 30%.

The attached comments from the Regions reflect an additional $6 million that could be used in unorganized boroughs alone. A like amount could easily be utilized for additional local government projects which were requested, but were beyond our funding level of $6 million per year.

If requested during the hearing tomorrow on HB 558, I will give the Committee a copy of this memo. (With your concurrence of course).

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: C. D. Karella
Statewide LSR&T Engineer

DATE: March 13, 1984

FILE NO:

TELEPHONE NO: 364-4222

FROM: Ole Bartness
LSR&T Manager
Southeast Region

SUBJECT: Funding LSR&T Projects
FY 85 and Future

In regard to your question regarding the effect on the Southeast Region LSR&T Program with funding in the amount of 3.5 million dollars statewide, I offer the following:

Historically, the Southeast Region has received approximately 10 percent of the statewide appropriation. Based on that percentage, this would amount to $350,000 for this region. Of this amount, approximately $150,000 would be for the unorganized borough and could fund three to six projects, depending upon how tight we pull the drawstrings.

At the present time, there is an unencumbered balance of $100,000 remaining for the unorganized borough in Southeast, and there would have been a zero balance long ago if the home rule cities were still included in the unorganized borough.

In what remains in the unorganized borough of the Southeast Region, some immediate future project priorities have been identified as follows:

Location	Description	Estimated Cost
Metlakatla	Roads & Parking	140,000
Elfin Cove	Boardwalk Repair	50,000
Kupreanof	Trail & Boardwalk	30,000
Angoon	Road to Emergency Helipad	90,000
Clark Bay	Road or Boardwalk	Unknown
Port Protection	Boardwalk/Trail	Unknown
Hyder	Roads	30,000
Edna Bay	Trails/Boardwalks	30,000
Tenakee	Trails, Bridges	Unknown
Hollis	Road Renovation	Unknown

Although there are some unknowns, it would not be out of line to estimate the above projects at a total cost of $500,000.

Communities we have never heard from before are now contacting us for assistance. This appears to be a result of the State Land Lotteries which designated road and trail easements, but no access or minimal access was provided. In any event, these communities have needs, but we could furnish very little support with a $3.5 million LSR&T appropriation.

MEMORANDUM State of Alaska

TO: Charles Karella
Design Construction & Maintenance
Standards - Juneau

DATE: March 13, 1984

FILE NO:

TELEPHONE NO:

SUBJECT: Project Funding Requests, LSR&T Program

FROM: Robert L. Haneline RLH
Central Regional
LSR&T Engineer

This memo will iterate information on project requests presently in abeyance, awaiting a source of funding approval which was relayed to your office by telephone last week.

UNORGANIZED BOROUGH IV (South)

1. Chignik Bay - $600,000

   Construction of 4,500 l.f. of 14 foot-wide gravel roadway and a single lane, single span, 50 foot-long vehicle bridge. Provide access to proposed new HUD houses. Road to serve dual purpose as a protective dike (seawall).

2. Egegik - $60,000

   Construction of 600 l.f. of 16 foot-wide gravel roadway and approximately 3,000 l.f. of four foot-wide gravel path. Provide roadway access to existing HUD houses and replacement of existing boardwalks with a gravel pathway.

3. Eek - $410,000

   Construction of 2,700 l.f. of 14 foot-wide gravel roadway between the village proper and the airplane landing strip and 2,700 l.f. of eight foot-wide boardwalk needed to provide access between the village and the cemetary.

4. Manokotak - $3,000,000

   Construction of eleven miles of 14 foot-wide gravel roadway. The road is needed to provide City access to a proposed new garbage dump site, HUD housing site and the proposed Snake River Port Access Site. Funding needs are beyond the scope of the LSR&T program. This is a community planned development with a high community priority.

UNORGANIZED BOROUGH I

1. Whittier - $1,000,000

   Construction of 1.4 miles of 26' to 36' wide paved streets, including 5,250 l.f. of sidewalk, 10,000 l.f. of curb and gutter and miscellaneous storm drains ($700,000). The project also is to include the paving of the boat harbor parking area ($300,000).

This office has also received verbal requests for LSR&T funding involvement from the communities of Mekoryuk and St. Paul. The information received is sketchy, at best. We lack the information needed to properly determine the project scope, cost, or feasibility; only know that the monies needed are anticipated to exceed $1,000,000 per project.

For what it's worth:

A common sense approach to the functionability of any State funded, intelligently planned program requires that the certainty of future funding availability be known, as the ordinary business of any program centers around a fixed budget. Provisions for limited program adjustments to the seasonal ebb and flow of available funds exists to a small degree in the form of project deletion or construction delay.

To promulgate a five-year LSR&T construction program based on the anticipated availability of six million dollars per year and then to cut back the amount of funds available to the extent being proposed is controversial to say the least.

If nothing else, we have a main purpose at this time of convincing the money appropriating bodies of the importance of maintaining the State's credibility.

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: Charles D. Karella
State LSR&T Engineer
Standards & Technical Services
Juneau

DATE: March 8, 1984

FILE NO:

TELEPHONE NO: 443-5266

FROM: Jeffrey S. Chandler JSC
LSR&T Manager
Northern Region, Western District
Nome

SUBJECT: LSR&T Funding Allocations, Unorganized Borough/Western

Per your request, here is a brief description of our fiscal outlook for the LSR&T Program in the Western District unorganized borough.

Generally, under present law, the proposed funding level of $6.0 million for the Statewide annual LSR&T program should be adequate to meet the Western District's 5 Year Plan for the unorganized borough. The major exception is the need for a one time infusion of $500,000 which would be used as follows :

St. Michael Local Roads		300,000
Western LSR&T Equipment		200,000
	Total	$500,000

The St. Michael project is presently programmed for FY86, however there will be insufficient funding to plan and complete the entire project as requested unless LSR&T or the village can provide the additional funding by 1985.

The Western District LSR&T equipment fleets were substantially reduced during the period we were in phase-out status. We presently have one small fleet in reasonably good shape capable of handling typical LSR&T local hire projects, but one old bulldozer and two old trucks are in need of replacement. This would assure that the fleet will remain operationally effective for the next several years.

Upgrading the existing fleet would result in a level of reliability that would allow us to split it between two projects in seasons when we are administering supplemental grant projects in villages which have a limited assortment of equipment on site. This approach reduces mobilization costs and improves the effective utilization of locally available municipal equipment.

In the event that the present proposed funding level were further increased either Statewide or for the unorganized borough, then we would advance the schedule of projects in our 5 Year Plan accordingly.

	$10,000,000

BY HERRMANN, KOPONEN, ZHAROFF, CATO AND MCBRIDE

IN THE HOUSE

HOUSE BILL NO. 169

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making an appropriation to the Department of Transportation and Public Facilities for allocations for local service roads and trails; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $10,000,000 is appropriated from the general fund to the Department of Transportation and Public Facilities for allocations for local service roads and trails authorized by AS 19.30.111 - 19.30.251.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.-10.070(c).

Bette:

This bill is identical to Sen. Ferguson's bill. As this is an appropriations bill, it is not possible to amend the Statute (AS 19.30.111) in it.

The transportation Committee may wish to offer a committee bill after hearing this bill to change the formula to allow a greater porportion of L.S.R.& T. funds to go to the rural areas, (non-Anchorage-Fairbanks-Juneau) The problem would be in gathering the support necessary for passage. Mike Scott in Senator Ferguson's office thought that it would be more possible to accomplish this originating in the House, specifically, the transportation committee. So.. would you like to pursue this or bring it up in committee and discuss possibilities with DOT? Personally, that would be my suggestion. This way the committee would hear the discussion and possibly support such a change in the L.S.R.&T. program.

I await further direction.

Steve

PROGRAM PHASE OUT

Phase out of the LSR&T Program began Jan 5, 1982

EQUIPMENT FLEETS

Upgrade of the two construction fleets is necessary to retain the programs mobility in remote areas.

The LSR&T Program, initiated in 1971, has been used to fund a variety of projects in almost every community in the Panhandle. Cost has ranged from a drainage project in Haines, costing $1,300, to major street construction in Ketchikan, costing $245,000.

Types of projects constructed include footbridges in Kasaan; housing access roads in Yakutat, Hydaburg and Klawock; trails in Metlakatla, Hoonah, Tenakee, Kasaan and Elfin Cove; road construction and reconstruction in just about every town; sidewalks, parking areas, boardwalks, drainage projects, paving, signing, stairways, and a boat launching ramp.

The LSR&T program has been flexible enough to answer the needs of the people in regard to getting them out of the mud, which was the original concept of LSR&T. Costs were kept down and the dollar stretched to the extent possible by using local labor, material and equipment whenever possible. Money was brought into the economy of the towns, jobs were created where none existed, and the people involved developed a sense of pride in their accomplishments.

Some of the projects constructed which have meant a great deal to the communities and the traveling public are listed below:

1. Kasaan Bridges and Boardwalk. Reconstructed to provide access from the harbor to town. Existing structures were completely rotten and the community had no funds.

2. Pelican Landfill Access. A road constructed by the city to meet EPA requirements.

3. Kake Totem Park. A road and parking area to the site of the world's tallest totem pole.

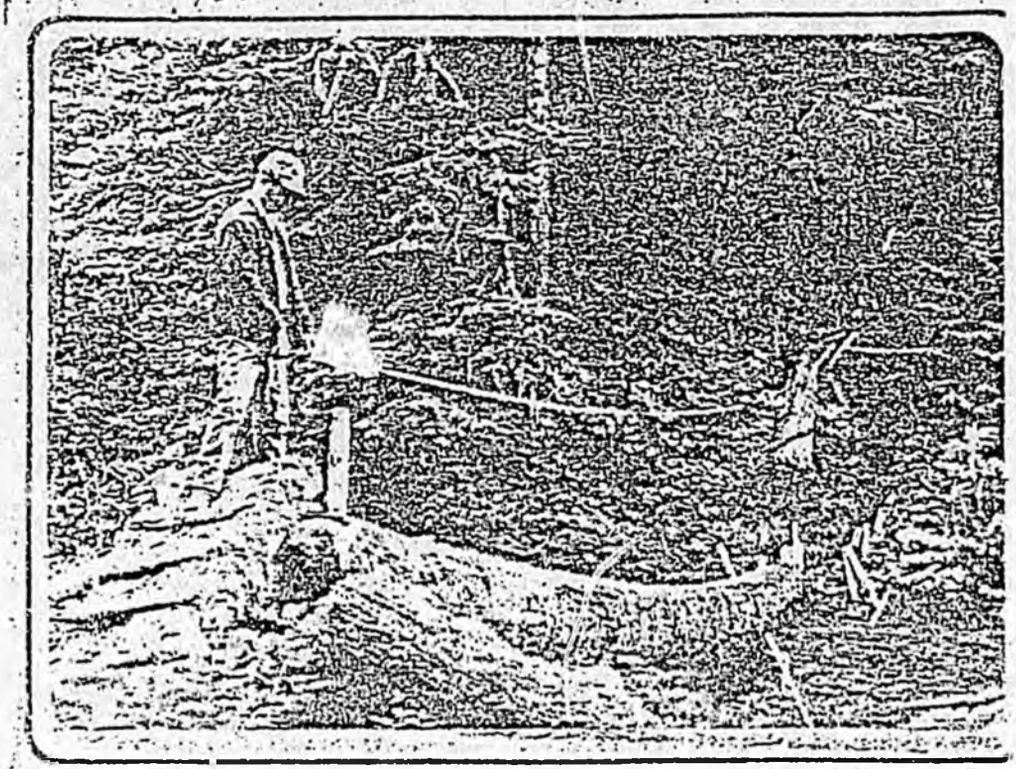
4. Hydaburg Townsite Road. A new road to provide access to a new municipal building and housing for senior citizens.

5. Elfin Cove Boardwalk and Trail. Replacement and reconstruction of the boardwalk and trail around the cove, including material for future maintenance.

6. Port Alexander. A boardwalk to replace a washed out trail connecting the inner and outer harbors.

7. Craig Cold Storage Road. A 30' roadway to provide access to a new city shop and site of proposed highway maintenance shop.

8. Haines Trail. A year-round trail for hiking, skiing, horseback riding, snowshoeing, etc.



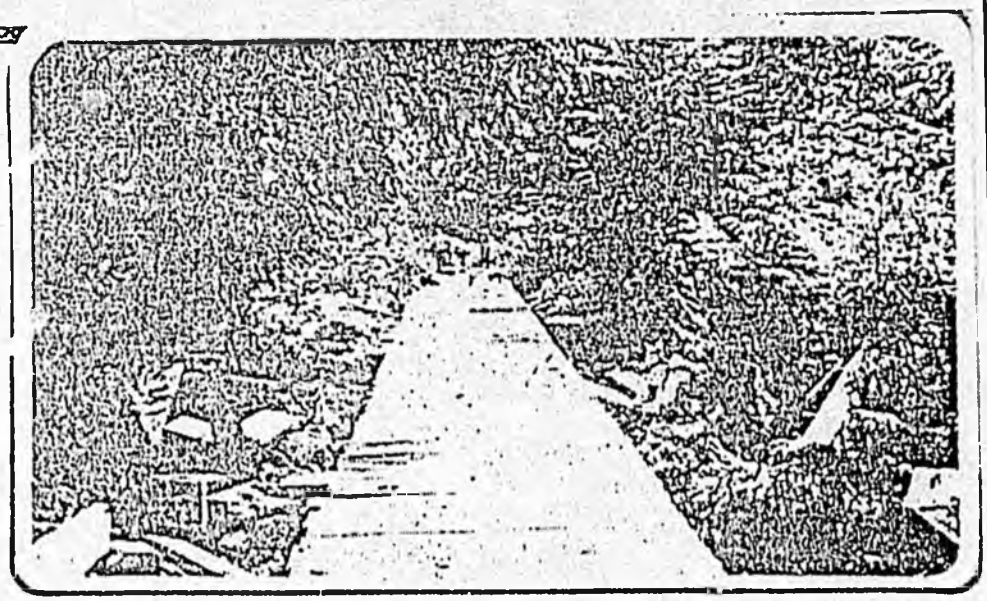
9. Wrangell - Outer Drive. Construction of roadway embankment, drainage and sidewalks which access new municipal building to downtown.

10. Petersburg. Replaced Birch Street Trestle along Hammar Slough, and constructed several new access roads.

11. Juneau. Sidewalks, drainage, paving of local streets, including Evergreen Bowl Access, Trinity Drive, Memorial Drive and Riverside Drive.

These are only a few of the projects constructed under the program in the past ten years. As can be expected, each project is unique and in the villages sometimes innovation is the key to success.

Attached are excerpts from the April 1976 issue of The New Alaskan which had several interesting LSR&T projects featured.



TENAKEE-INDIAN RIVER BRIDGE

The log spanning the Indian River, about one mile east of Tenakee collapsed in the spring of 1975. This crossing provided access to hunting and fishing areas for residents and outdoorsmen from southeast, and also access for home owners at Sunny Cove, Columbia, Superior, Harley Creek and Coffee Cove. Old bridge was placed by Loyal H. Clark in the spring of 1957. The tree came from the east side of Kadashan Bay, about 1/2 mile back from the beach in an area Bill Torsgard logged. He used a TD-14 International Tractor to yard the log out and towed it across the inlet. The job was done by Mr. Clark alone, and took about 10 days. He rafted the tractor across the inlet and back, which he says was very time consuming.

The Department agreed to assist Tenakee in replacing this bridge, and arrangements were made to begin work directly after the Thanksgiving weekend last fall. Supplies were delivered to the site by Channel Flying of Juneau on November 28, 1975. The following day the temperature dropped sharply and it began to snow. It was decided to delay the project until the weather improved. Plans were made recently to begin work March 1, but once again the weather didn't coop erate.

The replacement bridge will be placed several hundred feet downstream and will consist of 2 logs placed side by side, cabled together and planked to provide a walking surface. The east Tenakee trail will also be improved at the same time. The forman for construction of the bridge will be Thomas Jack, of Hoonah, who resided in Tenakee previousiy. Don McGee will be forman for the remaining work. All work will be done using local labor. Mayor of Tenakee, Bob Pegues, initiated the project.

Kasaan Boardwalk

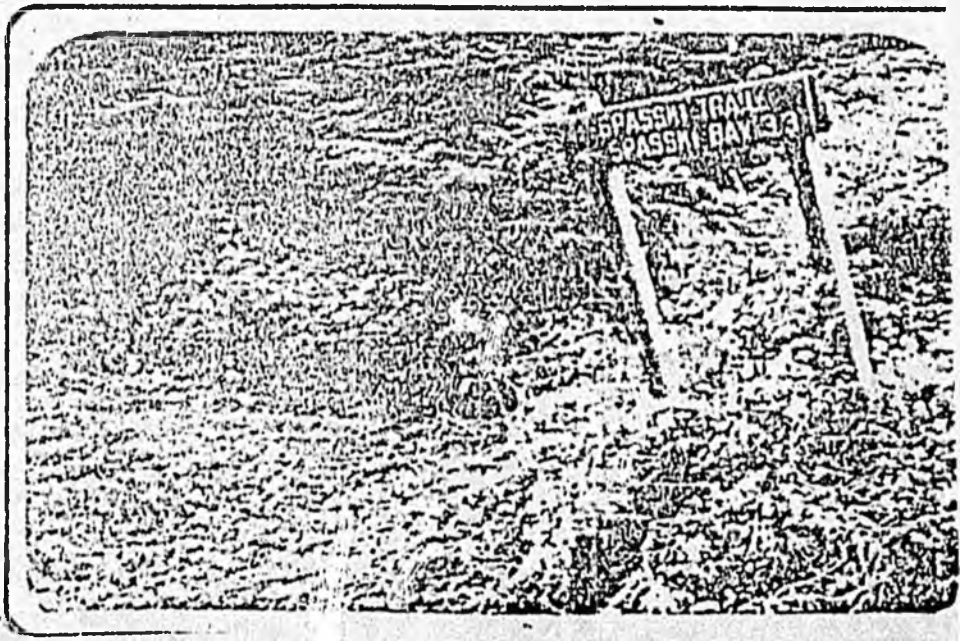
The purpose of this project was to connect the Village of Kasaan to the boat harbor and airplane float, a distance of approximately 1,000 feet. The existing boardwalk was completely rotten, and injuries had been caused due to people falling through the walk.

It was agreed that the lumber would be purchased from Mr. B.G. Morrison who has a small sawmill on the beach at Kasaan, and that the labor would be performed by local residents.

Work was started August 5th and proceeded by fits and starts until November, when a lack of material halted the project. A lack of lumber halted the project several times, as the mill had a habit of eating up its engines and Mr. Morrison was kept busy looking for replacements. The project lacks about 300 feet of being completed. The remaining material is being acquired from Ketchikan, and the project should be completed soon.

A unique aspect of this project is that the village had no monies available, and the project could not be set up on a reimbursement basis. A bank account was established for the project by the Department so weekly payroll could be handled, and materials purchased. The checks require the signature of a village representative and the Local Service Roads and Trails Engineer. This arrangement has been used several times with satisfactory results.

Hoonah — Spasski Trail



The Spasski Trail was originally upgraded by the Forest Service 1938 and 1939, and probably maintained by the Forest Service u some time in the 1960's. The trail connects Hoonah to Spasski Bay distance of approximately 3½ miles. The trail was heavily overgro and several gullys and muskeg areas required crossings. The trail w usable, but just barely.

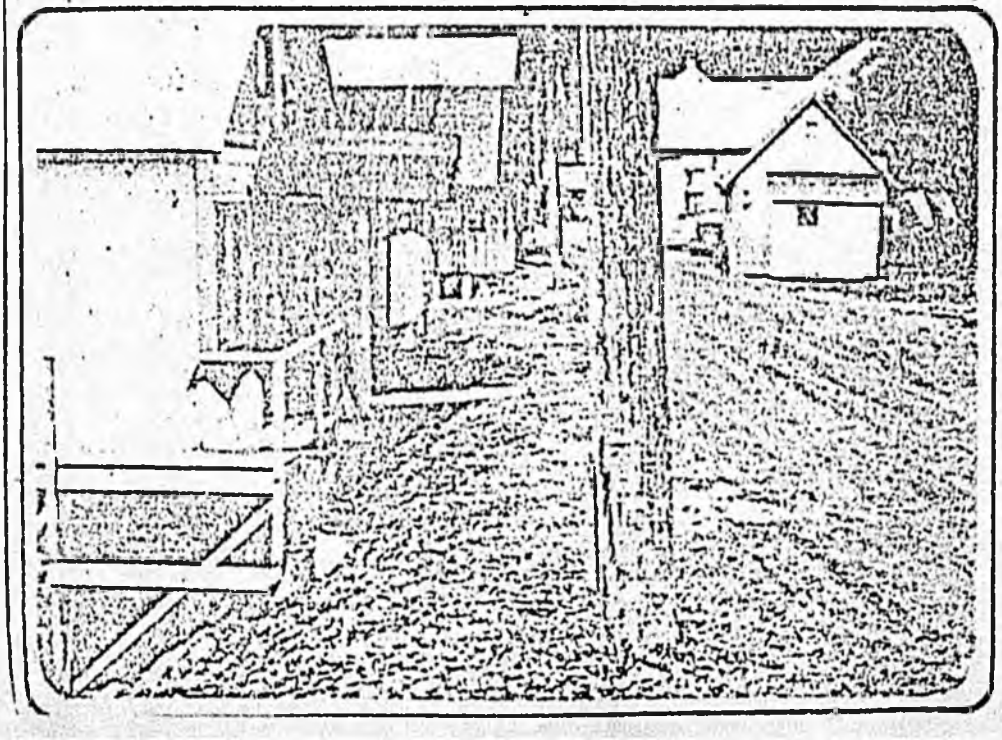
It was agreed to upgrade the trail to make it usable for recreatio purposes such as hiking, hunting, snowshoeing, etc. Work was beg on September 8, 1975, with Thomas Jack as foreman. The size of t crew was usually about eight men, all la[illegible] was local.

One of the cost items in the project was ri[illegible] shells, as the brown bea in the area also liked to use ths trail. Dogs were usually kept with t crews to help keep the bears away.

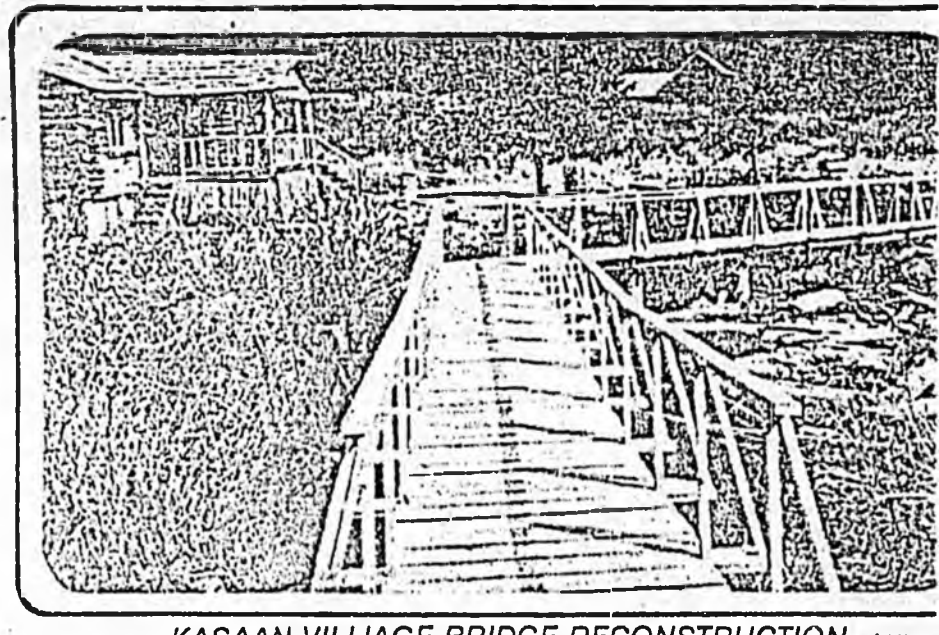
Thee trail was completed to Spasski Bay the first week in Octobe

Also, as part of the project, it was agreed to construct a stairw down "Jackass Pass" which is a portion of undeveloped roadw between Hill Street and Hemlock Avenue. This is a very steep ar which was utilized by a number of people, including older residents a shortcut to town. According to Mayor Miles Murphy, it wasn't rea any shorter, but people seemed to use it anyway. The same crew did t work on this project and it was completed in early November.

HOONAH BULKHEAD
Project G-30182



The purpose of this project was twofold. First to reinforce the log bulkhead along Front Street in Hoonah, and secondly to afford a measure of shore protection in areas where there was no bulkhead.

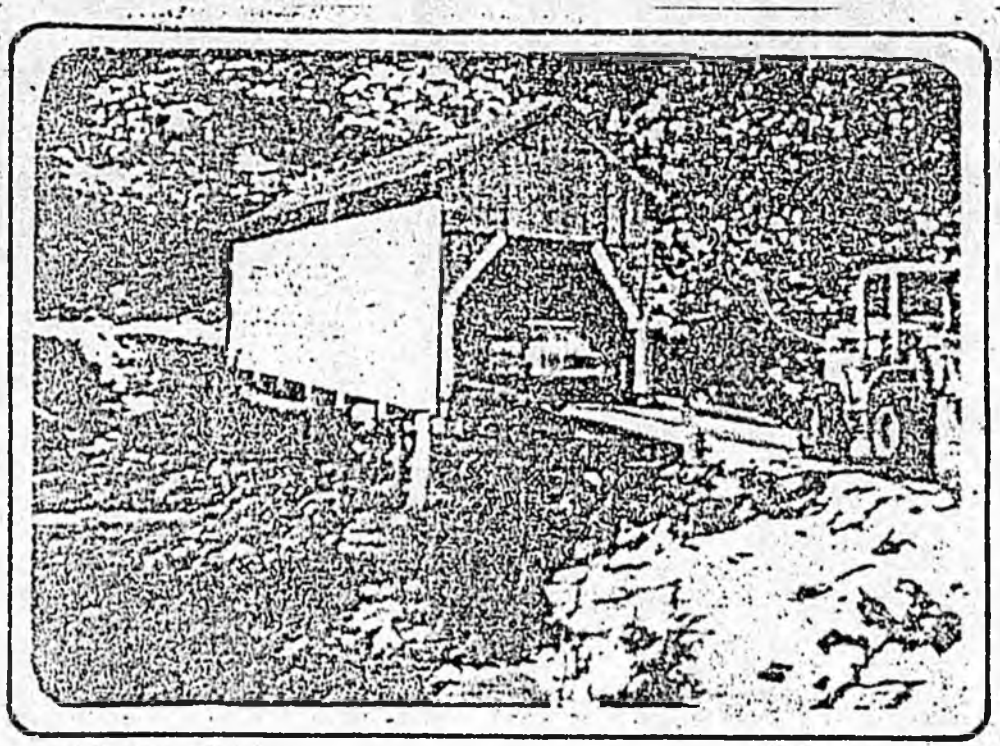


The project was initially designed and advertised by the Department of Highways, but the bids received were considerably over the engineers estimate, and were rejected. It was subsequently agreed between the Department and the City of Hoonah that the City would provide the labor and equipment on a reimbursable basis, and highways would supervise the work.

The work force consisted of Millard Carteetl, Charles Bennett and Frank Wright, St. The LSR&T Superintendent was Roger Polley.

Work started in November, 1972, and consisted of building demolition and carpentry work until winter shutdown. Work commenced on the project in April, under supervision of Kelly St. Clair, of Hoonah. He was appointed by Mayor Frank See and approved and hired by the Department.

Rock was obtained from the Bureau of Indian Affairs quarry and the project was completed on May 22, 1973.



KASAAN VILLIAGE-BRIDGE RECONSTRUCTION

The objective of this project was to reconstruct the Tinkum Cr Bridge, and to redeck the Linkum Creek Bridge. The Tinkum Cr Bridge was constructed under L.S.R. & T. Project C-30019, and v completed on the 29th of September at a cost of $2,237.23.

The above referenced bridge was destroyed on January 19, 1 when attacked by drifting logs carried by storm sea wave's genera by 70 mile per hour winds during an 18.5 foot high tide.

A field inspection indicated that the bridge would require reloca above the tidal area, to prevent a reoccurring damage. This was ap rent by the presents of log strewn beaches adjacent to the bridge s Most of the existing bridge lumber could be salvaged and reused in new structure. The new bridge was relocated 45 feet up stream a paralleling the preceding site.

The grant of right of way easement and petition was signed on 23rd of February. Construction began on March 25, with the arriva Dale Henkins, project supervisor, in Kasaan. Alton McAllister, Da Peele and Dan Wallace were hired and work began on the proj The lumber was picked up and delivered to Ketchikan Transporta Company, by Ketchikan maintenance forces. The lumber was inadv tantly loaded and shipped to Klawock by the Ketchikan Transporta Company. Klawock Maintenance Forman, Louis Seltzer transpor the lumber to Hollis, placing the lumber on the beach. Dale Henk chartered the seine boat, Glenda Joe, to pick up the lumber in Hollis a delivered it to the Kasaan project. The project was completed on the of April at a cost of $4,820.00

HYDER — TEXAS CREEK BRIDGE

The Texas Creek Bridge, located 7½ miles north of Hyder, is said to be the last remaining covered bridge in Alaska, and is sought by tourists utilizing the Stewart, B.C. road connection.

The bridge was constructed by the Territorial Road Commission in 1928, and provides the only access to the west bank of the creek.

The winters of 1970 and 1971 badly damaged the main support members of the bridge, and without repairs it was doubtful the bridge could hold up under heavy wind and snow loads of another winter.

At a public meeting held in Hyder in September of 1972, it was agreed to make repairs to the bridge utilizing LSR&T funds. The various companies in Hyder having suitable equipment to perform the work were contacted and requested to furnish rental prices on equipment. Mr. Glen Wilkes of G.W. Logging submitted acceptable prices and was awarded the work.

Temporary repairs took eight days to accomplish. The repairs consisted of placing a 60 foot stringer under the damaged chord and installing three bents. These were reinforced with large boulders and river run from the creek, which also cleared the channel area to allow freer flow. Four sets of cross braces were installed inside the bridge, completing the job.

According to a report from Lawrence Marx, Highway Maintenance Foreman in Hyder, this strengthened the bridge to a point where traffic could utilize the bridge once again.

MEMORANDUM

Date: February 9, 1983

Subject: Some DOT/PF Correspondence Concerning the Local Service Roads and Trails Program

To: Committee Members
Senate Transportation Committee

From: Senator H. Pappy Moss, Chairman,
Senate Transportation Committee

HPM

Please find attached three pieces of correspondence included to provide some documentation on the position of DOT/PF regarding the LSRT program.

The first letter, dated November 24, 1982, is included to illustrate the response given by DOT/PF to local communities requesting funding under the LSRT program. The bracketed portion is highlighted as the relevant text concerning DOT/PF's philosophy toward the program.

The second letter, dated April 16, 1982, is included to provide an example of a local community's response to DOT/PF's attitude toward the LSRT program.

The third piece of correspondence is included to show the positive attitude of DOT/PF field managers toward the program.

Robert L. Brean
Executive Director
Upper Tanana Development Corporation
P.O. Box 459
Tok, AK 99780

Dear Mr. Brean:

RE: Tok Homesite Tract Road

We are responding to your letter of November 1, 1982 to Mr. Don Ronken, Regional Local Service Roads and Trails Engineer, regarding an access road to Homesite Tract ASL Survey #77-164.

The Department has not requested funding for continuance of the Local Service Roads and Trails Program in recent budget requests, since the functions of this program have been largely supplanted in recent years by the Municipal Grant Program and by line item appropriations added by the legislature to our Departmental request. Determination of projects to be added as grants or line item insertions is a prerogative of the legislature.

This policy has enabled the Department to concentrate its resources on the urgent needs of the regional transportation system, from reconstruction and rehabilitation of the existing major roads and bridges to upgrading essential rural airport runways and lighting systems.

Our statewide transportation needs assessment already includes in excess of four billion dollars worth of needed improvements to the existing system. This tremendous backlog of identified projects coupled with the reduced state revenues now being projected makes it increasingly difficult to include in our budget our priorities for the facility improvements required for inter-community transportation, and certainly precludes us from budgeting for new facilities to service strictly local needs.

While your request is relatively small and for good purposes, there are far too many local needs of this type in our region for us to make an exception to our policies for your particular request.

We would be happy to provide technical assistance, in terms of engineering expertise and cost estimates, but are unable to include an actual funding request in our annual Capital Improvement Program.

Given these situations in relationship to your immediate need, it is suggested that you contact your local legislative contingent to ascertain if they might be willing to include a grant or appropriation for the access road during the coming session. We will be forwarding a copy of your letter to Senator Moss with a cost estimate.

Sincerely,

Robert R. Venusti
Director

Commissioner Bob Ward
State of Alaska
Department of Transportation
Pouch Z
Juneau AK 99811

Dear Commissioner Ward:

I am responding to your March 12 letter in which you expressed your plans to phase out the Local Service Roads and Trails program.

I regret that you feel the need for this action, since the LSR&T Program provides a real and an essential service to people in this area. I do understand the impact of this program on your department and the problems which can arise--and have done so--in this regard. I would ask, however, that we first attempt to safeguard these services to the public and attempt to prevent the negative consequences which an abrupt elimination of the program would generate.

Your letter makes several statements with which I cannot concur, at least in regard to the comments on local government.

I think we are all aware that the state capital projects funding to local governments, as well as to state agencies, is being drastically reduced this year because of declining revenues to the State of Alaska. The special capital project funds we have received in the last two years have been for one-time activities and were specifically designed not to involve the Borough in expanded program operations.

Consequently, I can assure you that we do not have special funds in reserve which could be called upon to fund phased-out LSR&T activities. I would ask that, in view of the serious consequences which could flow from the elimination of this program, that DOT officials contact

their appropriate Borough counterparts to discuss ways and means by which a mutually beneficial arrangement might be reached, without first taking action that might later result in some harm to the public at large.

Sincerely,

JOHN A. CARLSON
Borough Mayor

SUBJECT: LSR&T Program In Rural Communities

In response to your enquiry regarding the involvement of the Local Service Roads and Trails Program in rural communities of Western Alaska, and the attitudes held by the rural communities towards the Program, I offer the following information.

The LSR&T Program generally has been highly regarded and supported by the bush communities. The underlying reasons for this are as follows:

I. LOCAL PRIORITIES

The City Council of each community sets the priorities for local service projects needed in that community.

This process insures the Program's responsiveness to local needs. Within the limits of available funding, a community may designate access roads, local streets, bridges, boardwalks, or trail repairs for inclusion under the Program. Since LSR&T is primarily a reimbursement program, the local governing body may start construction as soon as a Project Agreement is approved and materials or equipment available, and is then reimbursed periodically for expenses. For larger heavy construction projects utilizing State equipment or a private contractor, costs are generally paid directly by the State.

II. LOCAL INVOLVEMENT

The local community has direct input into all phases of each project, from planning through construction.

The scope of the project selected is determined by the City Council, within the limits of sound engineering principles. For locally constructed projects, flexibility is preserved through the construction phase, allowing alterations to accommodate local concerns which may not have been anticipated initially. Although LSR&T administers the project, it is basically a community enterprise in which the community shares responsibility. Through cooperative effort the State provides a helping hand rather than a hand-out. A completed project becomes a source of pride for residents of a rural community because they were integrally involved in creating the end product.

III. LOCAL HIRE

Locally hired crews are employed to construct most rural LSR&T projects.

With labor intensive projects such as boardwalks and trail construction, the crew is hired locally by the local governing body which also appoints a local foreman.

Day to day operations of small scale heavy construction projects involving local equipment are also handled by a local foreman. On larger heavy construction projects involving State equipment, LSR&T may provide a foreman and/or a heavy-duty mechanic, while the construction crew is hired locally. In the event the local labor pool is exhausted, workers are generally sought from neighboring villages. The primary exception to this procedure occurs when a project has been let to contract, where hiring is done by a contractor whose policies generally tend to be more restrictive than those of local managers.

IV. LOCAL TRAINING

Training of local residents in new skills is necessary for most remote LSR&T road projects.

It is unusual to find the required number of qualified equipment operators and truck drivers locally available for the typical local road construction project. Training is therefore provided by an LSR&T representative or designated foreman and mechanic. Emphasis is placed on proper equipment care and usage, not only for safety reasons, but also to avoid unnecessary downtime. Safety awareness is encouraged through the life of a project in order to reduce the chances for injury or accident. This policy of training employees allows a greater proportion of local residents to obtain jobs than is the case with contractors, who generally require skilled workers for available positions. It also results in an added benefit outlasting the life of the project: a pool of trained workers who may be able to later obtain jobs for which they were previously unqualified.

V. LOCAL EQUIPMENT

Local equipment, public or private, is utilized for heavy construction projects whenever available.

For local road projects, LSR&T encourages the use of locally available equipment: from the local governing body, from DOT/PF, or from other public or private sources, in any combination necessary to perform the work. This practice results in substantial cost savings and production increases for the project, by avoiding the extra costs of mobilizing equipment from outside the community. LSR&T also has its own construction fleet, which is generally moved from project to project on an annual basis to supplement local equipment. In the event that adequate equipment is not available either locally or from LSR&T, and when private enterprize is available, then a project is generally put to contract with a contractor who is preferably already mobilized on site. It should be noted here that due to age and the phase-out of the LSR&T Program, most of the LSR&T equipment fleet will have been excessed by the end of the year.

VI. REGION WIDE PROJECTS

All local communities in the Nome Residency area are eligible for participation in LSR&T's region-wide projects.

Winter Trail Staking and Shelter Cabins are two projects in which most rural communities participate annually. Although a limited amount of funds are available, these are distributed among local communities to help defray the costs of marking trails each winter, and the costs of putting up shelter cabins on the most heavily used trails for the use of the traveling public. A limited number of permanent trail markers are installed each year during Trail Staking. Permanent trail markers could be installed on the 1,400 miles of primary overland

trails in the Nome Residency area within two years, if current funding levels were doubled.

VII. PROFESSIONAL SUPPORT

Technical support services are provided to each project in proportion to the demands of the project and the needs of the community.

Engineering, supervisory, mechanical expertise, and expediting services are available for each LSR&T administered project. Where sufficient local initiative, labor, and expertise is available, periodic visits of the LSR&T Engineer is all that is required, resulting in lower administrative charges to the project. For small scale heavy construction projects, LSR&T provides a highly qualified roving heavy-duty mechanic, who periodically visits each project as needed to assist the local foreman in handling complex emergency mechanical repairs. For larger scale projects, the LSR&T Engineer or designated representative may direct the project and provide experienced foreman and qualified heavy-duty mechanic for the duration of the work. The key to this approach is flexibility: the fewer the resources of a local community, and/or the more complex the nature of the project, the greater the level of direct assistance provided, and vice-versa.

VIII. ADMINISTRATIVE SUPPORT

Most rural communities need some administrative support to keep their projects from bogging down.

This applies to a majority of local development projects involving local administration, whether funded through LSR&T, special legislative appropriations expended through LSR&T, or direct legislative grants to the villages. This need can be met by consulting engineering firms and contractors where funds are sufficient. However, for smaller projects a little common sense advice and direction is frequently all that is required, rather than a costly and lengthy study which doesn't help the local governing body with the day to day problems associated with doing its own construction projects. Although not mandated to do so, LSR&T has been providing technical information, quantity and cost estimates, and alternative recommendations to villages seeking guidance for the application of their direct grants for new construction equipment, new equipment storage buildings, and local transportation-related construction projects. The Nome office has handled seventeen such calls from different villages in the last five months.

IX. SUMMARY

Given the limits of available funding for rural areas, the LSR&T Program has made some substantial contributions in helping local communities to meet their own transportation needs. By and large, remote communities have not requested advanced development projects. Basic projects have been the rule, providing boardwalks, access roads, or streets for the community, frequently for the first time. Additionally, the Program has received strong support from the Bering Straits and NANA Regional Native Corporations, in the form of streamlined permit procedures, free use materials, and expedited right-of-way reconveyance agreements. Finally, the LSR&T Program has retained the flexibility to fund those projects requested by villages which have not been addressed through the legislative process under line-item appropriations or specific grants. Hopefully this information will assist in the evaluation of the LSR&T Program as it has functioned in the Nome Residency, and contribute to the formation of a policy or program through which rural communities may continue to receive State support in alleviating their transportation problems.

Bristol Bay Borough
BOX 189 • NAKNEK, ALASKA 99633

JIM D. CLARK
MAYOR

TELEPHONE
(907) 246-4224

February 10, 1983

Representative Cato, Chairman
House Transportation Committee
Pouch V
Juneau, AK 99811

Dear Representative Cato:

I am writing in support of HB 169 which provides funds for the continuation of the Local Service Roads and Trails Program.

This program has been of great benefit to our borough. Utilizing local labor and construction equipment already in the area, the program gets more out of the state's money than other grant programs. The personnel at Local Serv[illegible] Roads and Trails are accustomed to working with [illegible]dents from rural Alaska, understand the conditions [illegible]ich exist there, and work closely to see that all funds are accounted for and used efficiently. Many projects of varying size have been funded in this way, improving conditions in Alaska and contributing to a sense of accomplishment by local residents.

I hope your committee will consider this legislation favorably so the LSR&T program can continue to exist.

Sincerely,

Don Penner
Administrative Assistant

Bristol Bay Native Association
Resoultion in Support of the
Department of Transportation and
Public Facilities Local Service -
Roads and Trails (LSR&T) Program

Resolution No. 83 - 03

WHEREAS, the LSR&T program has been very effective in developing village roads in the Bristol Bay Area; and

WHEREAS, the LSR&T program has schedule projects to provide access roads in support of the Bristol Bay Housing Authority (BBHA) Low Income HUD Housing construction in several villages in the Bristol Bay Region; and

WHEREAS, the Bristol Bay Housing Authority has awarded contracts for the construction of houses at Aleknagik, Egegik, Levelock and Port Heiden; and

WHEREAS, the Bristol Bay Housing Authority has scheduled a housing program for 1984 and 1985 at the villages of Iliamna, Igiugig, Kokhanok, Newhalen, and Nondalton and will require access road construction in each village; and

WHEREAS, additional road construction is needed to improve or provide access to townsite lots within village townsites; and

WHEREAS, each village is in need of a Dump Site with access road.

NOW THEREFORE BE IT RESOLVED, that the Department of Transportation and Public Facilities reactivate there very successful Local Service Roads and Trails program which is the very foundation of municipal sewer, water and sanitary waste disposal systems; and

BE IT FURTHER RESOLVED, that all of the projects scheduled herein be incorporated within the reactivited Local Service Roads and Trails program.

SIGNED William P. Johns
PRESIDENT

CERTIFICATION:

I, the undersigned secretary of said Association, do hereby certify that the Executive Committee is composed of ten (10) members, of whom 8 were present at a meeting this 20 day of January, 1983, and that the foregoing resolution was adopted by the affirmative vote of 8 members.

SIGNED Ida Apokedak
SECRETARY

TWIN HILLS VILLAGE COUNCIL

GENERAL DELIVERY
TWIN HILLS, ALASKA 99576-2
(907) 972-8001

December 7,1982

Adelheid Herrmann
P.O. Box 63
Naknek, AK 99633

Dear Adelheid:

On behalf of the Village Council and Community of Twin Hills, I would like to congratulate you to represent our district. With all our prayers and best wishes to your success at work.

I would like to know whether or not the legislator is planning on dissolving the DOT programs for villages that need state assistance in building their roads? I was told that these road construction firm companies are pushing to end state appropriation monies be contracted out to DOT.

We the Village Council of Twin Hills oppose the idea of having another private owned companies bringing in their own workers and build our roads. I think the program that DOT provides should not be dissolved. Because they hire local residents and at the same time the people who work, get experience in operating heavy equipments.

We also have two(2) new council members and all the council members terms will end October 1984. They are as follow:

Arthur W. Sharp.....President
Roger Wassillie.....Vice President
John W. Sharp.....Sec./Treasure
John C. Mark.....Member
Christopher Sharp, Sr....Member

Thank you and congratulations again.

Sincerely,

Arthur W. Sharp

Arthur W. Sharp
President

City of Akutan

Coastal Resource Service Area

There has been some thought given to forming a Coastal Resource Service Area in the Aleutians west of Unimak Pass. I am enclosing a copy of a letter I recently received from Murray Walsh to Mayor Bill Fisher of Unalaska. In the letter, Mr. Walsh refers to a meeting that was held in Anchorage on November 16, 1982. In addition to the representatives from the Aleutians there were also people there from St. Paul and St. George. A resolution was passed by the participants at that meeting that the Alaska Coastal Management Act needs to be amended to provide for participation by all the communities of the region. We would appreciate it if you could look at the issue and work on the drafting of such legislation or taking other steps necessary. As things stand now, if a district were to be formed in the western Aleutians, at least five of the six seats would go to Unalaska, with the villages having one seat among the three communities, if we were lucky. The present law does not allow for the inclusion of the Pribilofs in an Aleutian district because of the link between the CRSA boundaries and the REAA boundaries. We are not sure if the Pribilofs would even be interested in being included in an Aleutian district, but one of the attractive features of that configuration would be the dispersal of power among more than one large community. It is a relatively complex issue and one that looks as if it will come to a head in the coming months. We would appreciate any help you can give us.

Local Service Roads and Trails

A second issue is that of the elimination of the Local Service Roads and Trails program by the Alaska Department of Transportation. This program is relatively small, but it does good things for rural communites. DOT/PF thinks that it will be able to meet the diverse needs of rural communities through its regular program. We in Akutan have dealt with both parts of DOT and truly feel that the LSR & T program more adequately meets the rural need. Our LSR & T project is almost completed so it wouldn't really make that much difference to Akutan, but it is a program that has done good things for us. We would like to see other communities have the same opportunity.

Service Delivery in Rural Alaska

I am also enclosing a copy of a plan I have for coordination of service delivery by state agencies in rural Alaska. I mentioned it to you when we met. I have also sent a copy to Representative Jack McBride but he and I have not discussed it

KOLIGANEK VILLAGE COUNCIL
KOLIGANEK, ALASKA 99576 - VILLAGE TELEPHONE (907) 596-8001

De ber 28, 1982

Senator Nels Anderson, Jr.
Dillingham, Alaska 99576

Dear Nels:

I am now in receipt of your letter dated December 7th, requesting our list of five capitol project priorities. Before I list them, let me say that it would be appreciated if you would request that Rep. Herman, and Sen Mulcahy, have their offices insure that mail addressed to the village council is addressed as follows, in order to facilitate prompt responses on our part.

Koliganek Village Council
attn: C.T. Seidl, Admin.
Koliganek, Alaska 99576

As to our priorities we held a meeting this afternoon, and developed the following list:

1) It is imperitive that we have the airport moved away from the village. This is far and above any other priority. You may recall the problem we have been having in the orderly expansion and growth of Koliganek, due to the Airport cutting us off. Representive Herman should also be aware of this situation as I went over it in detail during her campaign. Jack Moore's of BBNA, and Tom Hawkins are both very knowledgable in the mechanics of such a land trade off and indicate that there are precedents for such action: we have already discussed it.

2) Additional funding for our LSR&T project. The equipment is here in Koliganek, and we are awaiting spring for the continuation of our project, but could really use more funding to increase the length of our local roads.

3) The upgrading of water and sewer. Realizing that funding may not be available for such a large project as the excavating of ground and laying of pipe mains, it might be that two wells could be dug, with insulated pump houses that are equipped with self-draining, freeze proof water outlets. One each placed on either end of the village, so that we can pack cleaner water that is in the river, and the chore would be safer, than treading out on the ice, particuarily for the younger children.

LSR & T . . . this is a road?

Some Facts About The LSR & T Program

Local Service Roads and Trails, as enacted by the legislature of the State of Alaska, is for the purpose of providing for the construction of roads and trails which are not included in the approved federal - aid primary or secondary systems which are eligible for federal-state matching funds.

The system is 100% state funded through bond issues approved by the people of Alaska. The State is divided into five allocation districts, by a formula which is based on area and population. The funds are then further allocated to the boroughs and home rule Cities. Any funds not allocated to a local government are allocated to the unorganized borough and administered by the Department of Highways.

The program first went into effect in July of 1971 with total funding in the amount of $5,000,000.00 of which $629,000.00 was allocated to southeastern. A subsequent bond issue provided an additional $838,000.00 for southeastern.

Boroughs and home-rule Cities with the capability of engineering and supervising roadway and/or trail construction enter into agreement with the Department of Highways regarding the scope of a project. The Department approves design plans, authorizes advertising and award of contracts, and approves the completed project.

Within the unorganized borough the projects are handled in a variety of ways to realize the most out of the funds and to serve the best public interest. This could be by preparation of plans and advertising by the Department, by use of the local labor force, through a reimbursable agreement with another agency or a combination of the above.

Since this program was initiated in 1971, 42 projects have been completed, 11 projects are under construction, and 7 additional projects are in the planning stages, for southeastern Alaska.

Active projects include a boardwalk between the inner and outer harbors at Port Alexander, clearing of Anchorage Street in Klawock, a complete year around trail facility in Haines, reconstruction of the boardwalk in Elfin Cove, street surfacing in Yakutat and construction of 4th Street in Craig.

A few of the major projects completed within the organized boroughs and home rule Cities include the Carlanna Lake Road extension in Ketchikan, Outer Drive in Wrangell, and paving and grading of Davis Avenue in Juneau.

In the planning stages are projects in Sitka, Petersburg, Wrangell, Skagway, Angoon, Pelican and others.

In the scheme of road building things, there are roads that are Federal Aid Primary and their are roads that are Federal Aid Secondary. Both types are eligible for federal-state matching funds.

And then there are those roads that aren't funded at all, or at least they weren't until the Alaska State Legislature some years ago came up with approval for a bonding issue on a periodic basis to create wanted roads where no funding sources were available.

The result was LSR&T, otherwise known as Local Service Roads and Trails, and it works in this manner:

—Bond funds are allocated among the five districts under an area/population formula.

—Home rule cities and organized boroughs within the districts are given their pro-rated share.

—Unorganized boroughs have funds earmarked for their use, to be administered by the Department of Highways.

—Home rule cities and organized boroughs select their own projects with Highways acting only as an approval agency.

—Unorganized borough funds are handled in several ways, but the local village has project selection power.

Planned expenditures in 1976 for the LSR&T program total slightly over $5 million, with nearly a half a million dollars of that amount to be spent in Southeast Alaska. Fifteen projects will be undertaken in Southeast, while the statewide total is 75.

LSR&T is road building in its basic form. There is a minimum of red tape, a maximum of local involvement, and for every dollar spent there is a visible result.

On January 19, 1973, a storm with 70 mile-an-hour winds pushed logs along on an 18.5 foot high tide and destroyed the Tinkum Creek bridge at Kasaan Village. The structure was a bridge in the sense that it crossed water, but not a bridge in the sense of a span carrying cars, trucks or trains. It carried people, and perhaps bikes. But no cars. It was a boardwalk, and certainly not eligible for federal-state matching funds.

Enter LSR&T.

On March 25 three local men were signed up to work, a project supervisor was on hand and needed materials were ordered from Ketchikan to augment the salvaged bridge lumber from the old structure. As the initial stages were underway onsite, the Ketchikan materials were inadvertently sent to Klawock. The Highway Department Maintenance Foreman there took the timbers to Hollis and placed them on the beach. The Kasaan project supervisor chartered a boat, got the lumber off the beach, and delivered it to Kasaan. On April 4 the new Tinkum Creek Bridge was finished....and relocated some 45 feet upstream where it would be safer from big storms.

Total cost.....$4,820.00.

In the spring of 1975, a huge log serving as a bridge across Indian River near Tenakee collapsed. It had been placed there in 1957 by Loyal Clark during a ten-day period that required the use of a raft, of an International tractor and of much musclepower. The log bridge was used by residents and outdoorsmen throughout the Indian river-Sunny Cove - Columbia - Superior - Harley Creek - Coffee Cove area. It was sorely needed.

LSR&T again to the rescue.

Immediately following the Thanksgiving weekend in 1975, a

crew was hired and supplies were brought in by a Juneau flight service. Unhappily, the weather changed and snow delayed the project. It was rescheduled for March 1, 1976, but the winter's accumulation of snow forced another postponement.

But the work will be done under the terms of LSR&T, and when it is completed, Tenakee residents will have a double-log bridge, cabled together, and a planked walking surface. The trail which the bridge serves will also be improved.

Kasaan came in for another unique project that started in 1975 when an old boardwalk, connecting the village to the boat harbor and airplane float finally gave up the fight and surrendered to rot. When it came to the point that residents were falling through the rotting wood and being injured, a call for LSR&T was made.

Local labor was signed up, and lumber was to be supplied by the local sawmill. Work was started on August 5, but because the small mill kept chewing up engines...and the owner/operator was forced to scurry about Southeast in search of replacements...the project moved in fits and starts rather than leaps and bounds. When winter shut things down, about 300 feet of boardwalk remained to be completed after spring startup.

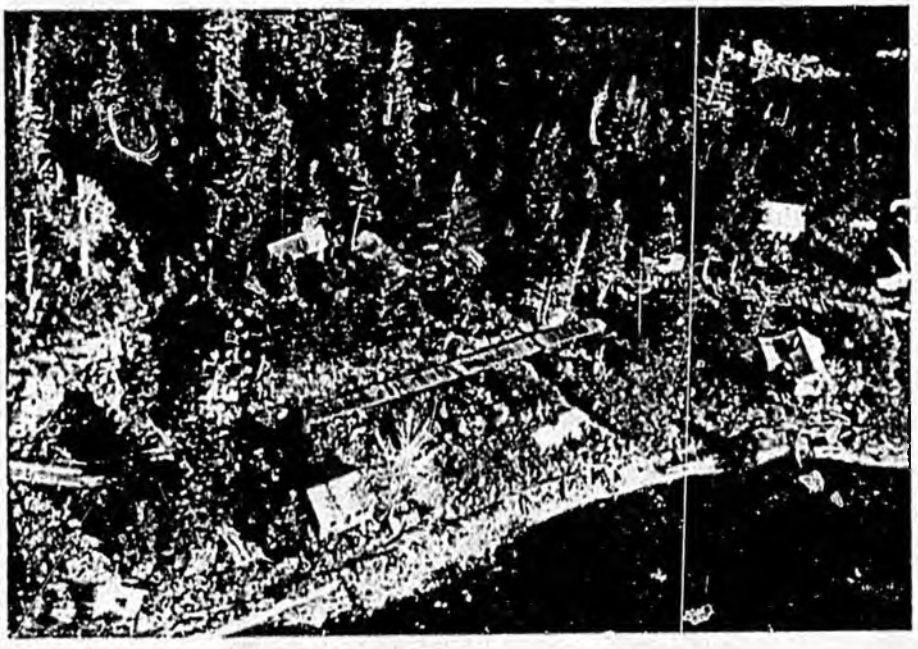
This project was unique in that Kasaan had no money available, so no reimbursable services agreement could be entered into. To solve this problem, the Department of Highways set up a bank account so the weekly payroll could be handled and materials purchased. Checks were counter-signed by a village representative and by the LSR&T engineer. This arrangement has been used satisfactorily several times during the life of the LSR&T program.

Strange things do happen on LSR&T projects. One Hoonah job invoice included the cost of rifle shells...certainly no ordinary item for a highway project. But in this case, the project was the clearing of a trail and the rifle shells were needed to keep the bears at bay! And even the dogs sometimes get into the act, as was the case with that same Hoonah job. They, like the rifle sheels, were used to help convince the bears that this was to be a people trail, not a bear trail.

Local labor, local material and even local dogs, all are a part of LSR&T. Money is brought into the closed loop of a village economy....jobs are created where none exist...and roads are built where they are most needed, and least affordable. LSR&T is basic people-to-people roadwork.

In defining "road", Webster says nothing about cars, trucks and trains. Those terms have been added in our minds through usage. Webster merely says that a road is "a public way for traveling upon". If your village is 1,500 feet of muck and mire away from the village boat harbor, a boardwalk is just as surely a road as is the finest stretch of eight lane superhighway in the world .... and a planked log spanning a 20 feet wide stream can be just as important as is the Golden Gate Bridge.

And that's what LSR&T is all about.



Port Alexander Boardwalk
Project G-30399

Port Alexander is a small fishing community located on the southern tip of Baranof Island. Facilities for docking are located on what is known as the Inner Harbor and the Outer Harbor, located about 1/4 mile apart. The trail between harbors is along the edge of the inlet connecting the harbors. Due to storms, tidal action and other factors, the bulkhead along the trail, and the trail itself are almost obliterated in some areas.

It was requested that LSR & T fund a trail and/or boardwalk between harbors to provide public access. As the Division of Harbors and Waters was active in the area, and helped initiate the project, it was agreed they would supervise the project and a reimburseable agreement was prepared in November, 1973 in the amount of $34,000.00

Work commenced in the spring of 1974 under the supervision of Richard Cleaver, a local resident. Due to unavailability of gravel, the trail portion was converted to a boardwalk and an additional $10,000.00 authorized for the project.

Completion was in June, 1976.

H 60

(b) The commissioner shall, upon request of a local government, transfer funds allocated under AS 19.30.131 to any local government which has assumed local road powers for project cost amounts and contract award amounts submitted to the commissioner.

(c) Nothing in AS 19.30.111 — 19.30.241 prohibits a local government from participating financially in the acquisition and construction of a local service road or trail. (§ 2 ch 84 SLA 1971; am Executive Order No. 39, § 11 (1977); am §§ 2, 3 ch 158 SLA 1980; am § 4 ch 38 SLA 1981)

Effect of amendments. — The 1977 amendment substituted a reference to the Department of Transportation and Public Facilities for a reference to the Department of Highways in the first sentence of subsection (a).

The 1980 amendment deleted the former second sentence in subsection (a), which read: "A local government which has assumed road powers before May 20, 1971, may not be required to hold an election as provided by this section", and rewrote subsection (b).

The 1981 amendment, effective July 1, 1981, added "acquisition and" preceding "construction" in subsection (c).

Sec. 19.30.161. Design standards, rights-of-way and widths. Design standards, rights-of-way and widths for each local service road and trail project shall have the prior approval of the commissioner, unless the project is under the supervision of a local government that has assumed local road powers. If the project is under the supervision of a local government that has assumed road powers, design standards, rights-of-way and widths shall be established by the local government. (§ 2 ch 84 SLA 1971; am § 4 ch 158 SLA 1980)

Effect of amendments. — The 1980 amendment inserted "rights-of-way and widths" at the beginning of the section, and added the material at the end of the section following, "approval of the commissioner" and beginning, "unless the project is."

Sec. 19.30.171. Acquisition and conveyance of rights-of-way. (a) The local government shall acquire all rights-of-way required for local service road and trail construction. However, if the local government is unable to acquire the necessary right-of-way, the commissioner is authorized to acquire it in accordance with AS 19.05.080 — 19.05.120. The commissioner may convey to the local government, by appropriate instrument executed in the name of the state, any land or interest in land which has been acquired by the state for the construction of local service roads or trails.

(b) The costs incurred by the commissioner in acquiring this land or interest in land includes all costs and any fees incidental to acquisition. All costs incurred in connection with the acquisition of the land or interest in land for local governments that have assumed local road powers shall be charged to the project allocation for which the land or interest in land is acquired. Right-of-way acquisition costs incurred by the commissioner for local governments without local road powers

under AS 19.30.151(a) shall be charged to the project allocation for the local government for which the land or interest in land is acquired.

(c) When rights-of-way for local service roads are acquired over land or interest in land owned by the state, the commissioner may make such arrangements with the department having jurisdiction over the land as may be necessary to give the local government adequate rights-of-way, and any such department is directed to transfer the jurisdiction of the land to the commissioner. (§ 2 ch 84 SLA 1971; am § 17 ch 71 SLA 1972; am § 5 ch 158 SLA 1980; am § 5 ch 38 SLA 1981)

Effect of amendments. — The 1980 amendment deleted "including relocation assistance and payments in accordance with AS 34.60" following "to acquisition" at the end of the first sentence of subsection (b), deleted "by the commissioner" following "All costs incurred" near the beginning of the second sentence of subsection (b), inserted "for local governments that have assumed local road powers" near the middle of the second sentence of subsection (b), and added the present third sentence of subsection (b).

The 1981 amendment, effective July 1, 1981, substituted "charged to the project allocation" for "paid by the local government" in the second sentence of subsection (b).

Sec. 19.30.181. Project agreements. A local government which has assumed local road powers may enter into a formal project agreement with the commissioner for the acquisition and construction of a specific project. (§ 2 ch 84 SLA 1971; am § 6 ch 158 SLA 1980; am § 6 ch 38 SLA 1981)

Effect of amendments. — The 1980 amendment rewrote the section.

The 1981 amendment, effective July 1, 1981, added "acquisition and" preceding "construction of."

Sec. 19.30.191. Letting of contracts. (a) Repealed by § 15 ch 158 SLA 1980.

(b) Contracts entered into by a local government that has assumed local road powers for the construction of each project shall be awarded only on the basis of the lowest responsible bid submitted by a bidder meeting established criteria of responsibility.

(c) All contracts by a local government that has not assumed local road powers must have the prior concurrence of the commissioner. The commissioner may delegate the power to approve contracts to a local government that has assumed local road powers for the acquisition and construction of local service roads and trails.

(d) Except as provided in (b) and (c) of this section and in AS 44.33.300, construction of each project shall be administered by the department in accordance with guidelines established by the commissioner by regulation. (§ 2 ch 84 SLA 1971; am § 4 ch 277 SLA 1976; am §§ 7 — 9, 15 ch 158 SLA 1980; §§ 7, 8 ch 38 SLA 1981)

portation and Public Facilities if constructed outside local government units which have zoning ordinances. If these roads are constructed within the boundaries of local government units which have zoning ordinances, the width shall conform to subdivision control ordinances of the local government units. Contracts for the work shall be awarded to the lowest responsible bidder qualified to contract with the state. (§ 1 ch 122 SLA 1961; am § 3 ch 7 SLA 1964; am Executive Order No. 39, § 11 (1977))

Effect of amendments. — The 1977 amendment substituted the reference to the Department of Transportation and Public Facilities in the third sentence for a reference to the Department of Highways.

Article 3. Local Service Roads and Trails.

Section
111. Purpose
131. Allocation of funds
141. Acquisition and construction programs
151. Local government participation
161. Design standards, rights-of-way and widths
171. Acquisition and conveyance of rights-of-way
181. Project agreements
191. Letting of contracts
201. Construction
211. Maintenance
221. Availability of allocated sums
231. [Repealed]
233. Reports
241. Definitions

Sec. 19.30.111. Purpose. It is the purpose of AS 19.30.111 — 19.30.251 to provide for the acquisition and construction of local service roads and trails which are not included in the approved federal-aid primary highway systems eligible for federal-state matching funds. (§ 2 ch 84 SLA 1971; am § 1 ch 38 SLA 1981)

Effect of amendments. — The 1981 amendment, effective July 1, 1981, added "acquisition and" preceding "construction of local service roads" and deleted "or secondary" preceding "highway systems."

Sec. 19.30.131. Allocation of funds. (a) During each fiscal year the commissioner shall allocate sums appropriated or otherwise designated for expenditure upon local service roads for that fiscal year among the five allocation districts in the following manner: one-half in the ratio which the area of each allocation district bears to the total area of the state and one-half in the ratio which the population of each allocation district bears to the total population of the state as shown by the latest available federal census.

(b) The commissioner shall also further allocate the sums in each allocation district to the boroughs within each allocation district in the following manner: one-half in the ratio which the area of each organized borough (excluding salt water areas) within that district bears to the total area of the allocation district and one-half in the ratio

trict bears to the total population of the allocation district as shown by the latest available federal census.

(c) The commissioner shall also further allocate portions of the sum allocated to any borough, either organized or unorganized, and to any home rule or first class city within the borough in the following manner:

(1) one-half in the ratio which the area of each home rule or first class city bears to the total area of the borough excluding salt water areas; and

(2) one-half in the ratio which the population of each home rule or first class city bears to the total population of the borough as shown by the latest available federal census.

(d) The sums not allocated within each district to a local government under (b) and (c) of this section shall be allocated to the unorganized borough and administered by the department. (§ 2 ch 84 SLA 1971; am § 2 ch 38 SLA 1981)

Effect of amendments. — The 1981 amendment, effective July 1, 1981, added "or first class" following "home rule" in three places in subsection (c). Also in subsection (c), the amendment added the paragraph designations (1) and (2).

Sec. 19.30.141. Acquisition and construction programs. Before October 1 of each fiscal year each local government eligible for allocation of funds under AS 19.30.131 shall submit to the commissioner for approval a five-year plan for the acquisition and construction of local service roads and trails. Before December 1 of each fiscal year the commissioner shall submit to the governor a five-year plan for the acquisition and construction of local service roads and trails, including the approved local government programs. An organized borough shall include in its five-year plan local service road acquisition and construction programs for all cities other than home rule and first class cities within the boundaries of the borough. The commissioner shall include in his five-year plan local service road and trail acquisition and construction within the unorganized borough. (§ 2 ch 84 SLA 1971; am § 3 ch 38 SLA 1981)

Effect of amendments. — The 1981 amendment, effective July 1, 1981, substituted "five-year plan" for "long-range program" in four places, added "acquisition and" preceding "construction" in four places and added "and first class" preceding "cities within the boundaries" in the next to the last sentence.

Sec. 19.30.151. Local government participation. (a) Upon application by a local government, local service roads and trails constructed under the provisions of AS 19.30.111 — 19.30.241 and located within the jurisdictional boundaries of a local government, as defined in AS 19.30.241(3), may be transferred to that local government upon

MEMORANDUM State of Alaska

TO: Charles Karella
State LSR&T Engineer
Highways Design and Construction

DATE: November 23, 1982

FILE NO: 245C-2519

TELEPHONE NO: 266-1542

FROM: Robert L. Haneline RLH
Central Regional
LSR&T Engineer

SUBJECT: LSR&T Program Justification & Impacts

In presenting an overview of the existing LSR&T program and its possible future direction the following is offered for consideration.

There is a subtle but potentially significant change underway in the thinking regarding the pending phase-out of the LSR&T program. Many people are increasingly considering as realistic the possibility that the proposed phase-out of the LSR&T program might take place. This was apparent at a number of meetings just completed in Anchorage (State Planners Meeting), Fairbanks (Municipal Leagues Meeting), Kotzebue (Traditional Council Presidents Meeting) and Bethel (Traditional Council Presidents Meeting) where the attitude was one of apprehension and concern.

As the realities of the program possibly being abandoned come closer, it is apparent there is a need to address some of the significant impacts of the program not being available.

It has become increasingly apparent, and properly so, that a lot of the "bush" needs cannot be addressed by the State C.I.P. program. Smaller projects are required to compete with larger projects for available funding resources on a regional basis, severely limiting their chances for funding. The mechanisums of a lot of the smaller communities to supply the necessary expertise are limited due to isolated conditions and communication problems. Most "bush" communities do not have the internal resources to help themselves, and often lack the technical background to effectively determine if they are getting what they pay for. Even if given direct grants, use of the monies may not be maximized due to the lack of knowledge on how to best utilize existing resources to efficiently accomplish set goals. This is nourishing doubt as to the direction being taken and is evident to the obvious appeal the LSR&T Program has to a broad popular support.

As the State has a sizable responsibility to "bush" communities, it seems appropriate that the State give some attention to identifying ways in which this commitment to smaller communities will reap the highest return.

A productive example of effective channeling of State funds into "bush" communities is the LSR&T Program. There are many ways in which the State and "bush" communities, alike, have benefited from the creation of the LSR&T Program, where the attitude toward community improvements is that of participation and self-help rather than that of being subsidized at someone else's expense, something not to be considered as the primary purpose or intent of the program, but only mentioned here as it serves to reflect on another positive factor to be contemplated when evaluating the importance of the LSR&T program.

The LSR&T Program may not represent the total solution to providing for the needs of the "bush" communities, but it is certainly a step that provides economics of scale where other programs cannot provide the same end results for the dollars available. Admittedly, there are some problems with the program, but no one can deny the great benefits of the program. What the LSR&T Program expresses and provides is a sensitivity to "bush" needs, an opportunity for "bush" communities to recognize and fulfill the responsibilities of their communities and to directly contribute to the construction of their transportation needs. This direct involvement instills a sense of community pride in the work accomplished, which normally results in greater care being exercised in the general treatment of the finished construction product. The LSR&T Program provides the necessary link between the State's investment in terms of monies spent and in terms of meeting "bush" transportation needs that might not otherwise be met.

It is felt the LSR&T Program, being the small State Section that it is, accomplishes positive results for the State for a minimal investment compared to larger programs with higher overhead costs.

The present portfolio of the LSR&T Section of the Department of Transportation and Public Facilities consists of hundreds of projects totaling millions of dollars. These projects vary in scope from simple boardwalk and footbridge projects to massive, multilane, arterial highway systems. This project versitility is a reflection of the flexibility developed by members of the LSR&T staff which, balanced against the "bush" needs, succeeds in effectively accomplishing set goals.

None of this is to suggest the LSR&T Program is beyond reproach. But only to say that a great deal of energy and money have been invested in the development of the LSR&T Program, resulting in the efficient workable program it is today. To abandon a program that fills needs that otherwise may not be met seems contrary to the best interest of the State. It is plain that awareness and open minds are required in the final decision making process.

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: C.D. Karella
State LSR&T Engineer
Juneau

DATE: November 15, 1982

FILE NO:

TELEPHONE NO:

FROM: D.S. Ronken
LSR&T Engineer
Fairbanks

SUBJECT: LSR&T Program

In response to our telephone conversation of 11/5/82, I have informed J. Chandler at Nome to supply you with the information you requested regarding the LSR&T Program in the bush communities.

I have been in contact with the local governments and the comments received from them regarding the LSR&T Program are as follows:

Since local roads and streets are always in need of improvement the local governments would like all the funds they can possibly obtain for roadway construction.

The local governments without road powers feel that the DOT/PF has too much control over the funds. They object to some of the conditions stated in Section "C" of the project agreement.

The local governments however, do like the flexibility of the Program, i.e.:

1) Various types of construction that can be funded

2) Project funding can be changed to cover overrun, providing funds remain in their allocations

3) LSR&T Construction Program submitted (priority list) can be changed, if for some reason the local needs change

Some local governments in the Fairbanks area feel that the manner in which funds are allocated based on population by the latest federal census should be changed. With the population in the Fairbanks area increasing every year and the allocation based on the latest census of 1980 which has been questioned by the local government, they feel the present system leaves much to be desired.

In summary, the local governments like the program and would like to see it refunded. The funds obtained through the LSR&T Program are not sufficient to cover the road improvement needs, but all funds that can be obtained to improve the local transportation system will be accepted by the local governments providing the conditions for its acceptance do not change.

SUBJECT: LSR&T Program In Rural Communities

In response to your enquiry regarding the involvement of the Local Service Roads and Trails Program in rural communities of Western Alaska, and the attitudes held by the rural communities towards the Program, I offer the following information.

The LSR&T Program generally has been highly regarded and supported by the bush communities. The underlying reasons for this are as follows:

I. LOCAL PRIORITIES

The City Council of each community sets the priorities for local service projects needed in that community.

This process insures the Program's responsiveness to local needs. Within the limits of available funding, a community may designate access roads, local streets, bridges, boardwalks, or trail repairs for inclusion under the Program. Since LSR&T is primarily a reimbursement program, the local governing body may start construction as soon as a Project Agreement is approved and materials or equipment available, and is then reimbursed periodically for expenses. For larger heavy construction projects utilizing State equipment or a private contractor, costs are generally paid directly by the State.

II. LOCAL INVOLVEMENT

The local community has direct input into all phases of each project, from planning through construction.

The scope of the project selected is determined by the City Council, within the limits of sound engineering principles. For locally constructed projects, flexibility is preserved through the construction phase, allowing alterations to accommodate local concerns which may not have been anticipated initially. Although LSR&T administers the project, it is basically a community enterprise in which the community shares responsibility. Through cooperative effort the State provides a helping hand rather than a hand-out. A completed project becomes a source of pride for residents of a rural community because they were integrally involved in creating the end product.

III. LOCAL HIRE

Locally hired crews are employed to construct most rural LSR&T projects.

With labor intensive projects such as boardwalks and trail construction, the crew is hired locally by the local governing body which also appoints a local foreman.

Day to day operations of small scale heavy construction projects involving local equipment are also handled by a local foreman. On larger heavy construction projects involving State equipment, LSR&T may provide a foreman and/or a heavy-duty mechanic, while the construction crew is hired locally. In the event the local labor pool is exhausted, workers are generally sought from neighboring villages. The primary exception to this procedure occurs when a project has been let to contract, where hiring is done by a contractor whose policies generally tend to be more restrictive than those of local managers.

IV. LOCAL TRAINING

Training of local residents in new skills is necessary for most remote LSR&T road projects.

It is unusual to find the required number of qualified equipment operators and truck drivers locally available for the typical local road construction project. Training is therefore provided by an LSR&T representative or designated foreman and mechanic. Emphasis is placed on proper equipment care and usage, not only for safety reasons, but also to avoid unnecessary downtime. Safety awareness is encouraged through the life of a project in order to reduce the chances for injury or accident. This policy of training employees allows a greater proportion of local residents to obtain jobs than is the case with contractors, who generally require skilled workers for available positions. It also results in an added benefit outlasting the life of the project: a pool of trained workers who may be able to later obtain jobs for which they were previously unqualified.

V. LOCAL EQUIPMENT

Local equipment, public or private, is utilized for heavy construction projects whenever available.

For local road projects, LSR&T encourages the use of locally available equipment: from the local governing body, from DOT/PF, or from other public or private sources, in any combination necessary to perform the work. This practice results in substantial cost savings and production increases for the project, by avoiding the extra costs of mobilizing equipment from outside the community. LSR&T also has its own construction fleet, which is generally moved from project to project on an annual basis to supplement local equipment. In the event that adequate equipment is not available either locally or from LSR&T, and when private enterprize is available, then a project is generally put to contract with a contractor who is preferably already mobilized on site. It should be noted here that due to age and the phase-out of the LSR&T Program, most of the LSR&T equipment fleet will have been excessed by the end of the year.

VI. REGION WIDE PROJECTS

All local communities in the Nome Residency area are eligible for participation in LSR&T's region-wide projects.

Winter Trail Staking and Shelter Cabins are two projects in which most rural communities participate annually. Although a limited amount of funds are available, these are distributed among local communities to help defray the costs of marking trails each winter, and the costs of putting up shelter cabins on the most heavily used trails for the use of the traveling public. A limited number of permanent trail markers are installed each year during Trail Staking. Permanent trail markers could be installed on the 1,400 miles of primary overland

trails in the Nome Residency area within two years, if current funding levels were doubled.

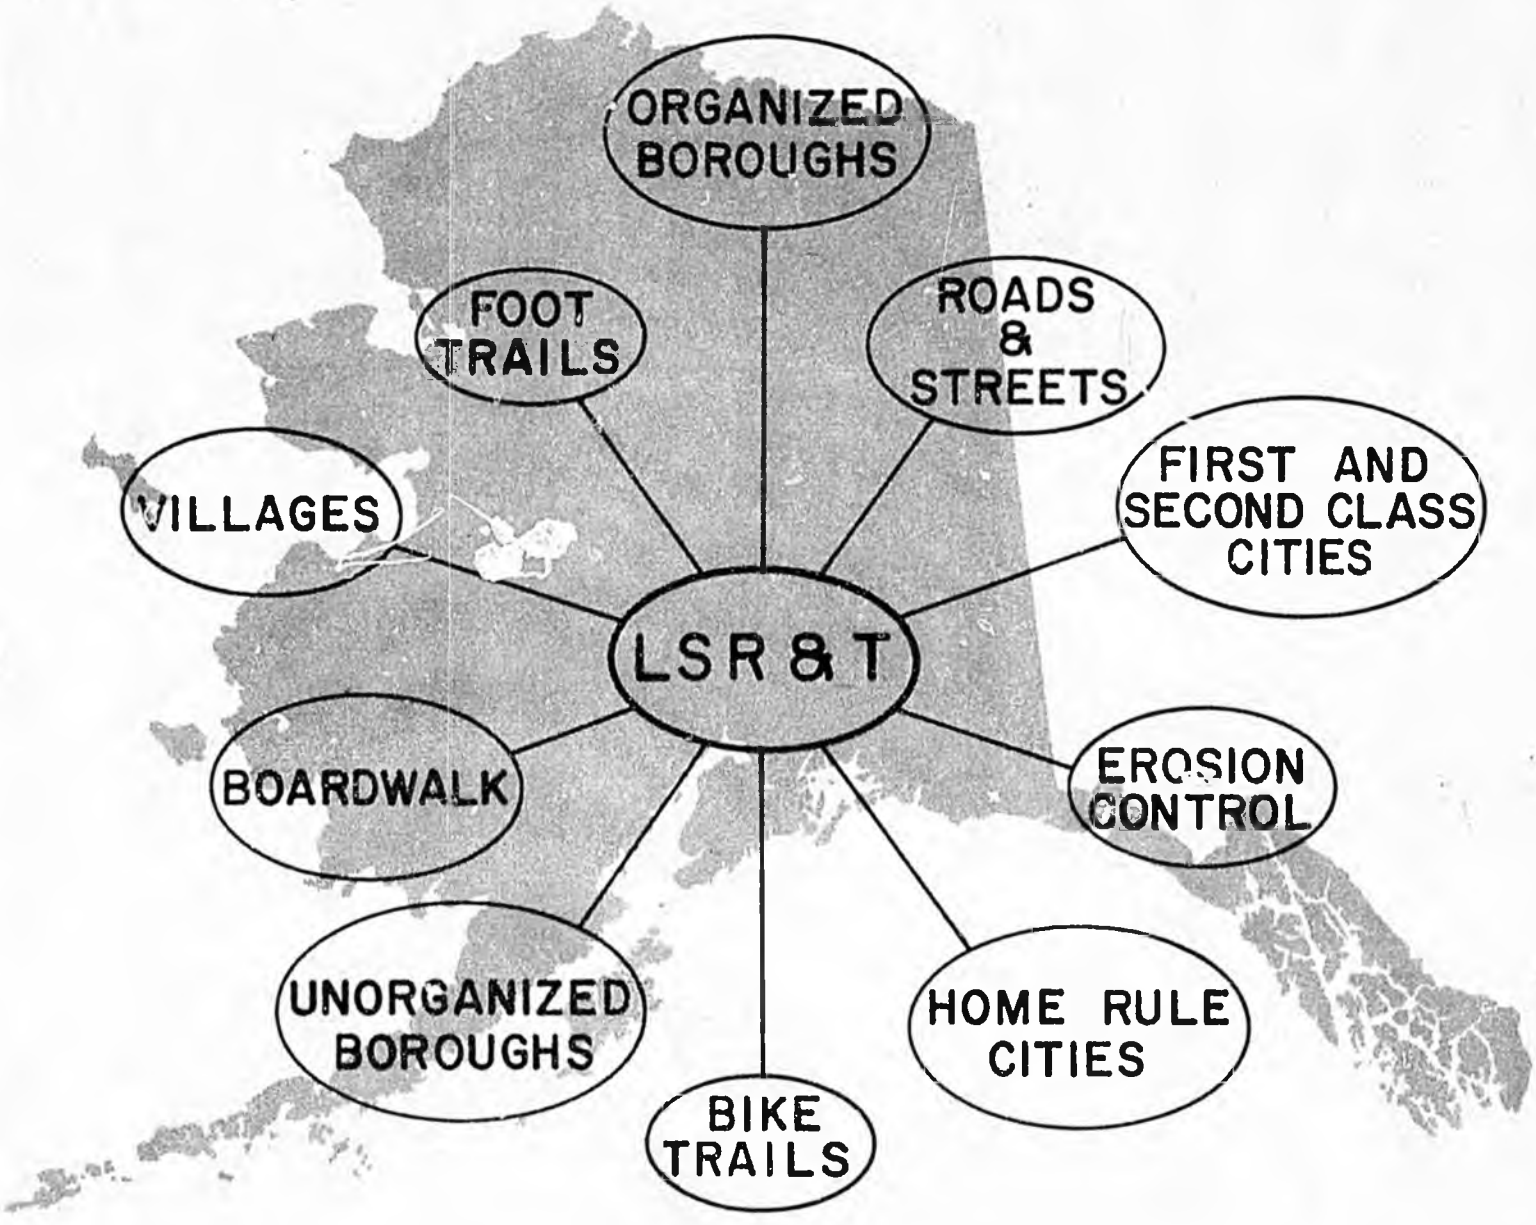
VII. PROFESSIONAL SUPPORT

Technical support services are provided to each project in proportion to the demands of the project and the needs of the community.

Engineering, supervisory, mechanical expertise, and expediting services are available for each LSR&T administered project. Where sufficient local initiative, labor, and expertise is available, periodic visits of the LSR&T Engineer is all that is required, resulting in lower administrative charges to the project. For small scale heavy construction projects, LSR&T provides a highly qualified roving heavy-duty mechanic, who periodically visits each project as needed to assist the local foreman in handling complex emergency mechanical repairs. For larger scale projects, the LSR&T Engineer or designated representative may direct the project and provide experienced foreman and qualified heavy-duty mechanic for the duration of the work. The key to this approach is flexibility: the fewer the resources of a local community, and/or the more complex the nature of the project, the greater the level of direct assistance provided, and vice-versa.

VIII. ADMINISTRATIVE SUPPORT

Most rural communities need some administrative support to keep their projects from bogging down.



This applies to a majority of local development projects involving local administration, whether funded through LSR&T, special legislative appropriations expended through LSR&T, or direct legislative grants to the villages. This need can be met by consulting engineering firms and contractors where funds are sufficient. However, for smaller projects a little common sense advice and direction is frequently all that is required, rather than a costly and lengthy study which doesn't help the local governing body with the day to day problems associated with doing its own construction projects. Although not mandated to do so, LSR&T has been providing technical information, quantity and cost estimates, and alternative recommendations to villages seeking guidance for the application of their direct grants for new construction equipment, new equipment storage buildings, and local transportation-related construction projects. The Nome office has handled seventeen such calls from different villages in the last five months.

IX. SUMMARY

Given the limits of available funding for rural areas, the LSR&T Program has made some substantial contributions in helping local communities to meet their own transportation needs. By and large, remote communities have not requested advanced development projects. Basic projects have been the rule, providing boardwalks, access roads, or streets for the community, frequently for the first time. Additionally, the Program has received strong support from the Bering Straits and NANA Regional Native Corporations, in the form of streamlined permit procedures, free use materials, and expedited right-of-way reconveyance agreements. Finally, the LSR&T Program has retained the flexibility to fund those projects requested by villages which have not been addressed through the legislative process under line-item appropriations or specific grants. Hopefully this information will assist in the evaluation of the LSR&T Program as it has functioned in the Nome Residency, and contribute to the formation of a policy or program through which rural communities may continue to receive State support in alleviating their transportation problems.

THREE YEAR LOCAL SERVICE ROADS AND TRAILS PROGRAM

1981 1982 1983

STATE OF ALASKA
DEPARTMENT OF TRANSPORTATION
AND PUBLIC FACILITIES

JAY S. HAMMOND
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 1, 1981

Fellow Alaskans:

This document outlines the 1981, 1982 and 1983 Local Service Roads and Trails Program. Included are project locations, descriptions and estimated costs.

It should be noted this is a planning document of the Department of Transportation and Public Facilities and as with all plans, changing conditions may require modification of the plans in the later years.

All of these projects are in conformance with requests by local governments. Nearly all projects in last year's program for 1980 are complete.

Your extraordinary support of local service roads and trails gives me great pleasure as I submit this, your Three Year Local Service Roads and Trails Progam.

Sincerely,

Jay S. Hammond
Governor

NARRATIVE

LOCAL SERVICE ROADS & TRAILS PROGRAM

The Local Service Roads and Trails Program provides for construction of local roads and trails which are not included in the federal-aid highway system.

Under the Local Service Roads & Trails Act, funds for home rule cities, municipalities and organized boroughs are allocated by strict formula. These local governments then establish their own project scheduling; therefore, this publication is merely a listing of their individual programs as submitted. Project priorities and scheduling in the unorganized boroughs are based primarily on requests and recommendations of village councils and residents. Personal contact with the villages is established by LSR&T representatives from the Department's regional offices. Village needs are thus determined first-hand, along with approximate costs. Since the cost of requested projects usually exceeds the funds available, the priorities must be established based on need. Local governments often participate in projects costs with their own funds.

Local residents and equipment are utilized wherever practical in the construction of these projects. Not only is this beneficial to the economy of the villages, but it normally reduces the overall cost of the project. A side benefit is the training of local residents who will, in many cases, be maintaining the completed project.

This three years LSR&T Program is based on remaining funds from previous allocations and the 1980 Transportation Facilities bond issue of $10,000,000 for fiscal years 1981 and 1982.

Funding shown in this program anticipates using all of these funds by the end of calendar year 1982. Therefore, projects shown for calendar year 1983 only can proceed if additional funds are made available.

TO: Barbara

FROM: Staff

Subject: HB 169

DOTPF is "supposedly" phasing out the LSR & T program because there is a large share of the monies in this program going directly to grants to communities (see their CIP brown book) and they indicate that they do not need the program for this.

This bill essentially puts $10 million more into the L S R & T pool and it appears that it is the intent to continue the program.

Steve (committee staff) suggests that the Legislature should draft a letter of intent or somewhere state their intent with regard to this program; either it should keep going and be funded and not in bits and pieces but wholly or phased out.

JUNE 1978

NO. _____

INTRODUCTION

This manual became a necessity since the Local Service Roads and Trails program is no longer a pilot program but an integral part of the Alaska Department of Transportation and Public Facilities. This self-sustaining program is designed to accomplish the most with the least amount of State dollars under the rules and regulations of the Alaska State Statutes. Therefore, these guidelines must remain flexible in order that the program can be properly administered.

This manual should be considered a guide for LSR&T Engineers and their subordinates. This guide is not intended to take the place of good engineering judgement nor is it an answer to all situations.

All necessary revisions will be made to this handbook to guarantee the efficiency of the LSR&T Program.

History 1-1

LSR&T Act. 1-2

LOCAL SERVICE ROADS AND TRAILS PROGRAM

Primary Functions:

The Local Service Roads and Trails (LSR&T) program was established by the State Legislature in 1971 to provide for special needs to "bush" communities, rural communities and communities both within and outside of organized boroughs.

Local Service Roads and Trails was designed to aid communities in accomplishing projects that do not have the financial means nor the technical expertise to achieve alone. These projects were to be in the nature of roads, trails, bridges and boardwalks specifically. Special exceptions are considered and granted if justification is sufficient.

The LSR&T Program is wholly State funded. Wherever costs are not prohibitive, generally within organized boroughs, projects are awarded by bid contract. In the remote areas where, because of location and size of the project bid contracts cost are prohibitive, LSR&T maintains its own small fleets of equipment or rents equipment, if available, and directs the operation of the projects.

The scope of LSR&T is basically three-fold. This is particularly true for "bush" projects. It provides:

1. Needed projects to communities that have not the capabilities of accomplishing alone.

2. A source of training for construction work by employing local residents as laborers and equipment operators.

3. Provides supplemental income to communities that are single-income or subsistence oriented.

Project Limitation

Local Service projects are confined to roads which are not part of the federal-aid system and are not, the responsibility of corporate units, or private individuals but are dedicated to public use. These projects cover wide ranging road needs. They include State recreation routes, connections between outlying villages and airports, villages and canneries, villages and port facilities, short routes needed to better integrate subdivision roads and State highways, and improvements to existing roads.

Article 3. Local Service Roads and Trails.

---

Repeal of former article.—Section 1, ch. 84, SLA 1971, repealed former Article 3, entitled "Local Service Roads." The former article consisted of §§ 19.30.110—19.30.270 and derived from § 5, ch. 129, SLA 1968.

Sec. 19.30.111. Purpose. It is the purpose of §§ 111—251 of this chapter to provide for the construction of local service roads and trails which are not included in the approved federal-aid primary or secondary highway systems eligible for federal-state matching funds. (§ 2 ch 84 SLA 1971)

Sec. 19.30.121. Regulations. The commissioner may make regulations necessary to carry out §§ 111—241 of this chapter. (§ 2 ch 84 SLA 1971)

Sec. 19.30.127. Allocation districts. The state is divided into five allocation districts as follows:

(1) The boundary of allocation district one begins in Kamishak Bay at 59°15′ N, 154°00′W; and travels north along longitude line 154°00′W to latitude 63°00′N; thence east along latitude line 63°00′N to a point common with the boundaries of allocations districts two and five; southerly of the Denali Highway at Corkscrew Creek (Milepost 59.1); thence southerly to Prince William Sound at Fairmount Point 60°53′45″N, 147°27′W and inclusive of Kodiak, Afognak, Barren, Trinity and Chirjkof Islands.

(2) The boundary of allocation district two begins at and includes the point at which the Alaska Highway intersects the Alaska-Yukon border; travels northwesterly to the west abutment of the Little Tok River Bridge on Tok Cutoff Highway (Milepost 91.2); thence west to the northerly abutment of the McCallum Creek Bridge on the Richardson Highway (Milestone 202.4); thence west to a point directly north of the Denali Highway at Corkscrew Creek (Milepost 59.1); thence southwesterly to the Glenn Highway at Summit (Milepost 118) and continuing along that line to latitude 63°00'N; thence west along latitude 63°00'N to longitude 154°00'W; thence north along longitude 154°00'W to the Arctic Ocean.

(3) The boundary of allocation district three begins in the Gulf of Alaska on longitude line 141°00'W; thence north along longitude 141°00'W to Boundary Point 187; thence southeasterly along the Canadian-United States border bounding Southeastern Alaska in its entirety.

(4) The boundary of allocation district four begins in the Arctic Ocean at Smith Bay 70°54'N, 154°19'W; on longitude line 154°-00'W; travels south along longitude 154°00'W to latitude 59°15'N in Kamishak Bay; thence east along latitude 59°15'N to longitude 152°15'W; thence southwesterly through Shelikof Strait and bounds of the entire Aleutian Chain.

(5) The boundary of allocation district five begins at the Gulf of Alaska on longitude line 141°00'W and travels northerly along that line to the point (but not including the point) at which Alaska Highway intersects the Alaska-Yukon border; thence northwesterly to the west abutment of the Little Tok River Bridge on the Tok Cutoff Highway (Milepost 91.2); thence west to the northerly abutment of McCallum Creek Bridge on the Richardson Highway (Milepost 202.4); thence west to the point directly north of Denali Highway at Corkscrew Creek (Milepost 59.1); thence southwesterly to the Glenn Highway at Summit (Milepost 118); thence southerly to Prince William Sound at Fairmount Point 60°53'45"N, 144°37'W. (§ 2 ch 84 SLA 1971)

Sec. 19.30.131. Allocation of funds. (a) During each fiscal year the commissioner shall allocate sums appropriated or otherwise designated for expenditure upon local service roads for that fiscal year among the five allocation districts in the following manner: one-half in the ratio which the area of each allocation district bears to the total area of the state and one-half in the ratio which the population of each allocation district bears to the total population of the state as shown by the latest available federal census.

(b) The commissioner shall also further allocate the sums in each allocation district to the boroughs within each allocation dis-

trict in the following manner: one-half in the ratio which the area of each organized borough (excluding salt water areas) within that district bears to the total area of the allocation district and one-half in the ratio which the population of each organized borough area within that district bears to the total population of the allocation district as shown by the latest available federal census.

(c) The commissioner shall also further allocate portions of the sum allocated to any borough, either organized or unorganized, and to any home rule city within the borough in the following manner: one-half in the ratio which the area of each home rule city bears to the total area of the borough (excluding salt water areas) and one-half in the ratio which the population of each home rule city bears to the total population of the borough as shown by the latest available federal census.

(d) The sums not allocated within each district to a local government under (b) and (c) of this section shall be allocated to the unorganized borough and administered by the department. (§ 2 ch 84 SLA 1971)

Sec. 19.30.141. Construction programs. Before October 1 of each fiscal year each local government eligible for allocation of funds under § 131 of this chapter shall submit to the commissioner for approval a long-range program for the construction of local service roads and trails. Before December 1 of each fiscal year the commissioner shall submit to the governor a long-range program for the construction of local service roads and trails, including the approved local government programs. An organized borough shall include in its long-range program local service road construction programs for all cities other than home rule cities within the boundaries of the borough. The commissioner shall include in his long-range program local service road and trail construction within the unorganized borough. (§ 2 ch 84 SLA 1971)

Sec. 19.30.151. Local government participation. (a) Upon application by a local government, local service roads and trails constructed under the provisions of §§ 111—241 of this chapter and located within the jurisdictional boundaries of a local government, as defined in § 241(3) of this chapter, may be transferred to that local government upon approval by the Department of Highways and after a vote of the people in the area. A local government which has assumed road powers before May 20, 1971 may not be required to hold an election as provided by this section.

(b) The commissioner is authorized to transfer funds to any local government which he determines to be qualified to construct local service roads or trails.

(c) Nothing in §§ 111—241 of this chapter prohibits a local government from participating financially in the construction of a local service road or trail. (§ 2 ch 84 SLA 1971)

Sec. 19.30.161. Design standards. Design standards for each local service road and trail project shall have the prior approval of the commissioner. (§ 2 ch 84 SLA 1971)

Sec. 19.30.171. Acquisition and conveyance of rights-of-way. (a) The local government shall acquire all rights-of-way required for local service road and trail construction. However, if the local government is unable to acquire the necessary right-of-way, the commissioner is authorized to acquire it in accordance with AS 19.05.080—19.05.120. The commissioner may convey to the local government, by appropriate instrument executed in the name of the state, any land or interest in land which has been acquired by the state for the construction of local service roads or trails.

(b) The costs incurred by the commissioner in acquiring this land or interest in land includes all costs and any fees incidental to acquisition, including relocation assistance and payments in accordance with AS 34.60. All costs incurred by the commissioner in connection with the acquisition of the land or interest in land shall be paid by the local government for which the land or interest in land is acquired.

(c) When rights-of-way for local service roads are acquired over land or interest in land owned by the state, the commissioner may make such arrangements with the department having jurisdiction over the land as may be necessary to give the local government adequate rights-of-way, and any such department is directed to transfer the jurisdiction of the land to the commissioner. (§ 2 ch 84 SLA 1971; am § 17 ch 71 SLA 1972)

Effect of amendment. — The 1972 amendment substituted "AS 34.60" for "ch. 35 of this title" at the end of the first sentence in subsection (b).

Legislative committee report.—For report on ch. 71, SLA 1972 (HCSSB 383 am H), see 1972 House Journal, p. 898.

Sec. 19.30.181. Project agreements. As soon as practicable after a specific project has been approved by the commissioner, the commissioner shall enter into a formal project agreement with a qualified local government concerning the construction of the project. (§ 2 ch 84 SLA 1971)

Sec. 19.30.191. Letting of contracts. (a) If the construction is to be performed by the local government, or under its supervision, a request for submission of bids shall be made by advertisement unless some other method is approved by the commissioner. The commissioner shall require plans and specifications and methods of bidding which will be effective in securing competition.

(b) Construction of each project subject to the provisions of this section shall be performed by contract awarded by competitive bidding, unless the commissioner finds that, under the circumstances relating to the project, some other method is in the public interest. Contracts for the construction of each project shall be awarded only on the basis of the lowest responsible bid submitted by a bidder meeting established criteria of responsibility. No requirement or obligation may be imposed upon a bidder as a condition precedent to the award of a contract to a bidder unless the requirement or obligation is otherwise lawful and specifically set out in the advertised specifications.

(c) All contracts by a local government awarded by competitive bidding under (b) of this section must comply with the provisions of this section, and have the prior concurrence of the commissioner. (§ 2 ch 84 SLA 1971)

Sec. 19.30.201. Construction. The construction of a local service road or trail undertaken by a local government or under its direct supervision under the provisions of §§ 111—241 of this chapter, shall be performed according to approved design standards and are subject to the inspection and approval of the commissioner. All construction work done and labor performed by or under the direct supervision of the local government shall be in accordance with the laws of that local government and applicable state law. (§ 2 ch 84 SLA 1971)

Sec. 19.30.211. Maintenance. The department shall maintain, or cause to be maintained, any project constructed under the provisions of §§ 111—241 of this chapter, except that upon mutual agreement of the commissioner and the local government the responsibility for maintenance may be transferred to the local government if it is authorized to assume road maintenance powers. (§ 2 ch 84 SLA 1971)

Sec. 19.30.221. Availability of allocated sums. (a) On and after the date that the commissioner has certified the sums allocated to each local government, the sums shall be available for expenditure by the local government under the provisions of this chapter.

(b) These sums shall continue available for expenditure by that local government for a period of five years after the close of the fiscal year for which the sums are authorized and any amounts so obligated remaining unexpended at the end of that period shall lapse and shall be available for other local service road or trail construction within that allocation district in accordance with §§ 111—241 of this chapter. (§ 2 ch 84 SLA 1971)

Sec. 19.30.231. Payment for construction. (a) The commissioner may from time to time as the work progresses, make payments to

a local government for the total cost of completed construction incurred by it on a project.

(b) After completion of a project and approval of the final voucher by the commissioner, a local government is entitled to payment of the unpaid balance for the project from the sums allocated to it.

(c) No payment under this section may be made except for a project covered by a project agreement. No final payment may be made to a local government for its costs of construction of a project until the completion of the construction has been approved by the commissioner following inspections under § 201 of this chapter.

(d) The payments shall be made to the official or depository as may be designated by the local government and authorized under the laws of the local government to receive public funds of the local government. (§ 2 ch 84 SLA 1971)

Sec. 19.30.241. Definitions. In §§ 111—241 of this chapter

(1) "construction" means the building of a new road, street or trail or the improvement of existing roads, streets or trails and includes the necessary preliminary engineering, construction engineering and utility relocation;

(2) "home rule city" means a city defined in AS 29.05.010;

(3) "local government" means an organized borough of any class or a home rule city;

(4) "local service road" means a public road which is not designated as a route on the approved federal-aid highway system;

(5) "project" means an undertaking to construct a particular portion of a local service road or trail, or, if the context so implies, the particular portion of a local service road or trail so constructed;

(6) "trail" means a footpath or way on land or water that is open to public use as a matter of right whether or not a thoroughfare, particularly for dog sleds and mechanized snow vehicles. (§ 2 ch 84 SLA 1971)

Revisor's note (1972). — AS 29.05.010 referred to in paragraph (2) has been repealed by § 1, ch. 118, SLA 1972; however, see AS 29.08.010 enacted by § 2, ch. 118, SLA 1972 for a re-definition of "home rule city."

Sec. 19.30.251. Local government powers. Road construction and maintenance authority is granted to local governments, as defined in § 241(3) of this chapter, which do not otherwise have that authority; however, the authority granted is limited to participation in the construction and maintenance of local service roads under §§ 111—241 of this chapter. (§ 2 ch 84 SLA 1971)

Article 3. Local Service Roads and Trails.

Section
151. Local government participation
191. Letting of contracts
241. Definitions

Sec. 19.30.151. Local government participation. (a) Upon application by a local government, local service roads and trails constructed under the provisions of §§ 111 — 241 of this chapter and located within the jurisdictional boundaries of a local government, as defined in § 241 (3) of this chapter, may be transferred to that local government upon approval by the Department of Transportation and Public Facilities and after a vote of the people in the area. A local government which has assumed road powers before May 20, 1971 may not be required to hold an election as provided by this section.
(am Executive Order No. 39, § 11 (1977))

Effect of amendment. — Pursuant to Executive Order No. 39 (1977), a reference to the Department of Transportation and Public Facilities has been substituted for a reference to the Department of Highways in the first sentence of subsection (a).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 19.30.191. Letting of contracts.
(b) Except as provided in AS 44.33.300, construction of each project subject to the provisions of this section shall be performed by contract awarded by competitive bidding, unless the commissioner finds that, under the circumstances relating to the project, some other method is in the public interest. Contracts for the construction of each project shall be awarded only on the basis of the lowest responsible bid submitted by a bidder meeting established criteria of responsibility. No requirement or obligation may be imposed upon a bidder as a condition precedent to the award of a contract to a bidder unless the requirement or obligation is otherwise lawful and specifically set out in the advertised specifications.
(am § 4 ch 277 SLA 1976)

Effect of amendment. — The 1976 amendment, effective July 1, 1976, added "Except as provided in AS 44.33.300" to the beginning of the first sentence of subsection (b).

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 19.30.241. Definitions. In §§ 111 — 241 of this chapter
(2) "home rule city" means a city as defined in AS 29.08.010;
(am § 30 ch 53 SLA 1973)

Effect of amendment. — The 1973 amendment inserted "as" and substituted "29.08.010" for "29.05.010" in paragraph (2).

As the rest of the section was not affected by the amendment, it is not set out.

Legislative committee report. — For report on ch. 53, SLA 1973 (CSHB 382), see 1973 House Journal, pp. 793, 885.

LOCAL GOVERNMENTS AND LOCAL GOVERNING BODIES 2-0

Definitions 2-1

Allocation of Funds 2-2

Allocation Flow Chart 2-3

Typical Local Government Project Flow Chart 2-4

Typical Rural Community Project Flow Chart 2-5

Applicant Guidelines 2-6

DEFINITIONS

Local Government:

A local government is an organized borough of any class, a home rule municipality or a home rule city.

The local government controls its own LSR&T program. Priority of projects is flexible but changes must be approved by the assembly before a project can be approved by the Department.

Local Governing Body:

A local governing body is the classification of authority in a village or city in the unorganized borough.

Right-of-way and gravel rights must be furnished without reimbursement by the State.

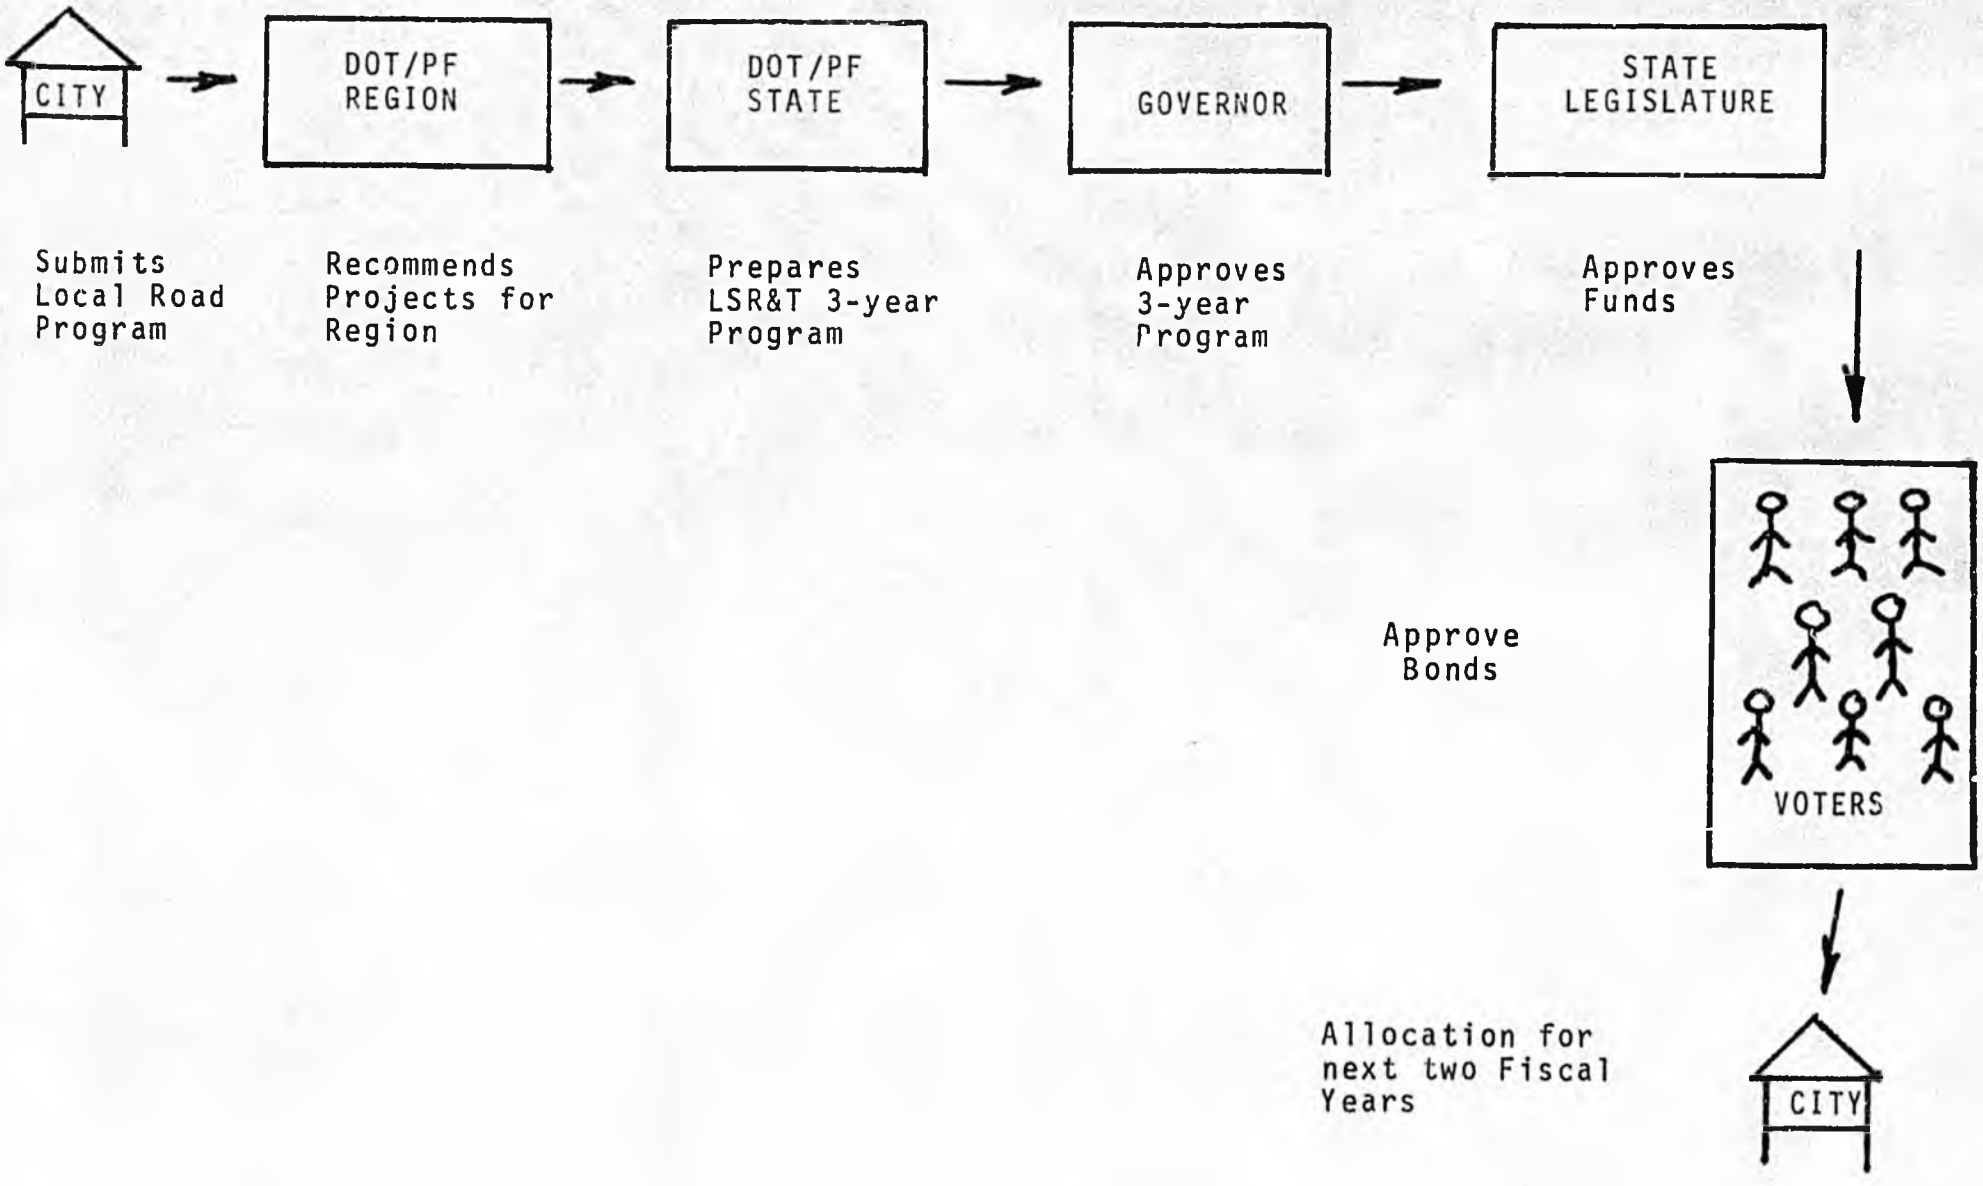
Maintenance responsibility is denoted in the project agreement.

ALLOCATION OF FUNDS

The allocation formula is clearly defined in the Article 3. Local Service Roads and Trails, Section 19.30.111 to 19.30.251 of the Alaska Statutes, but a brief description is included herein for explanatory purposes.

The distribution follows a sequential breakdown and is based on area and population factors. Half the funds are allocated on the basis of area and half on the basis of population. Salt water areas are excluded from allocation areas and the latest Federal Census is used for population figures.

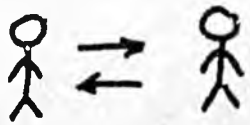
The first stage distribution is made to allocation districts, which correspond to the highway districts existing on June 30, 1971.



Each allocation district's distribution is then broken down and allocated to the boroughs within that allocation district, each organized borough figuring for a share and all areas outside organized boroughs combining together for a share. The important distinction here is that the "borough" is considered an area within an allocation district.

The third and final breakdown allocates to the local government. If a home rule city exists within an organized borough, the borough government and the city government share the "borough" (second stage) allocation in proportion to their area-population factors. If no home rule city exists within the organized borough, the entire allocation is to that borough's government. If a home rule city exists in an unorganized borough, the home rule city's allocation is their area-population proportion of the unorganized borough's allocation.

Using the highway district boundaries existing on June 30, 1971, the allocation is as follows:



Allocation District	Corresponding Highway District	Allocation Factor
I	Central Region	.306486
II	Interior Region	.249049
III	Southeastern Region	.104827
IV	Western Region	.296550
V	Southcentral Region	.043088
		1.000000

ALLOCATION OF LSR&T FUND TO LOCAL GOVERNMENT

TYPICAL LOCAL GOVERNMENT LSR&T PROJECT

IN AN ORGANIZED BOROUGH OR HOME RULE CITY

LSR&T Guy from Region

Mayor or his Representative

All phases of the project such as Consultant Engineering, Design Advertising and Letting of a Contract requires approval by DOT/PF. Coordination between the City and the LSR&T man from the Region makes the procedure fast and effecient.

1. Local government submits a construction program to the Region by September 15 of each year.
2. The Regional LSR&T Engineer reviews the program and coordinates with the city in listing projects within funds available and proposed.
3. The local government and the State sign an agreement for reimbursement for each project according to priority.
4. The agreement reflects whether the work is by contract or by local government forces.
5. Maintenance responsibility is included in the agreement.

APPLICANT GUIDELINES

Nature and Purpose of Program:

To provide State assistance in the development of roads and trails on routes that are not eligible for federal-aid matching funds.

Who May Apply:

Each organized borough and home rule city is eligible for a direct allocation, based on their population and area. All other areas are considered unorganized boroughs and are eligible for projects administered by the Department, subject to priority scheduling within the respective allocation districts.

Authorizing Legislation:

AS 19.30.111-251

Administrative Agency:

Department of Transportation and Public Facilities, State of Alaska.

Type of Assistance:

Financial and Engineering.

How Program is Financed:

100% State. Organized boroughs and home rule cities may supplement their allocation with local funding in any amount. Unorganized borough areas will be encouraged to provide local participation whenever possible. Federal and State grants can be used in conjunction with LSR&T funds.

How To Apply:

Each organized borough and home rule city may receive their allocation by submitting a three-year project program for the construction of such roads to their Regional Highway Engineer by October 1 of each year, indicating the priorities for construction on the program. When a project is approved, a project agreement will be drafted, and development of the project may proceed. No payment can be made for work done prior to execution of the project agreement.

Unorganized borough communities should provide input data for road needs in their areas to their Regional Highway Engineer, who will compile a three-year program and establish priorities for the unorganized borough projects within his jurisdiction. When a project is approved, the Department will proceed with development of the project.

PLANNING 3-0

Three Year Program 3-1

Programming Guidelines 3-3

Region Outline for Program 3-4

Contacting Local Authorities 3-5

Project Coordination 3-5

Annual Report 3-6

PLANNING

Three Year Program

The allocation districts are the boundaries of the Highway Department established in 1970. The larger of the five districts being the Western District, engulfing nearly half of the land mass of Alaska, is administered by the Western, Central and Interior Regions. This split jurisdiction is strictly an economic measure.

Although the North Slope Borough area is half in the Western Region, to focus administration to one locale, Interior Region has full jurisdiction. Other organized boroughs whose boundaries partially overlap allocation districts, the responsibility lies with the primary region.

A construction program utilizing LSR&T construction equipment, State employees, village labor, equipment rental, when available, is the primary mode of operation in the unorganized boroughs of the Central, Interior and Western Regions. Programming the projects in the unorganized boroughs depends on requests from local governing bodies (both submitted and solicited), available road building materials, right-of-way access, and coordination of other projects in the area.

In the unorganized borough of Southcentral and Southeast, State WCF equipment and maintenance personnel are utilized when a contract for the work is not feasible.

The Local Service Roads and Trails Program is a vital link in the State road network. It is the only State program established for solving local transportation needs. Reflecting a typical construction season, several miles of new road, new and reconstructed boardwalk, year around foot trails, winter trail staking, foot bridges, paved bike paths and vehicle bridges are constructed with LSR&T funds.

These and other special projects are completed each year in answer to what the LSR&T is all about, "Get the people out of the mud". This program does a lot for all the people of Alaska and is presently performing a service the people of Alaska could not do without.

Local governments throughout the State share 52.8% of each LSR&T bond issue. The unorganized boroughs share in the remaining 47.2%. Annual expenditures average this percentage.

Summary

I. Definition

A. Purpose

a. To get people out of the mud
b. Flexibility of Program
c. To aid communities with no revenue
d. Economy of operation

B. Type of Projects

a. Local Service Roads
b. Year around foot trails
c. Winter trail staking
d. Bicycle paths
e. Erosion control
f. Foot bridges
g. Boardwalks

C. Type of Funding

a. LSR&T
b. Local Government Participation
c. EDA (Public Works Act and individual grants)

II. Allocation

A. Two Year Legislation (Amounts vary)
B. Five Year duration
C. 50-50 Factor, Area - Population
D. Operating Budget - Program Support

a. Bridge Design Headquarters
b. Road Design and Adv. (Headquarters and Region)
c. R/W Certification Region
d. Construction Review Headquarters and Region
e. Administration Headquarters and Region

E. FY 77-78 Allocation

Organized Boroughs and Home Rule Cities	3,695,721
Unorganized Boroughs	3,304,279
	7,000,000

III. Administration

A. Allocation District - Regional Control
B. Organized Boroughs and Home Rule Cities

a. Construction contract by Local Government
b. Local Government Labor and Equipment

C. Unorganized Boroughs

a. Construction Contract by Local Government or State
b. Village or City Labor and Equipment
c. State Equipment and Village Labor
d. State Equipment and State Employees
e. State Equipment and Village State Employees

IV. Three Year Program

A. Project Selection

a. Organized Boroughs and Home Rule Cities

1. Select their own projects
2. Able to change program at will

b. Unorganized Boroughs

1. Cities and Villages select their own projects.
2. Region sets priorities within funds available.
3. Regions may subfill projects with funds available on non-federal routes.

Programming Guidelines

1. Programming of projects in the Matanuska-Susitna Borough and the Kenai Borough are made through the Central Region Office, regardless of the limits of their respective borough boundaries. Programming of projects in the North Slope Borough are made through the Interior Region Office. The administration of construction and maintenance will be performed by the region in which the project is located.

2. Each project (i.e., completed improvement) must provide a usable facility with the expenditure of available funding.

3. Each local service road project submitted for inclusion in the program shall indicate the standards of design for the improvement. This information shall include the following:

   a. Minimum AASHTO design load for structures.
   b. A brief narrative description.
   c. Type and character of traffic.
   d. Typical section(s) of the proposed improvement(s), and
   e. Length of project to the nearest tenth of a mile.

4. The program should show priority scheduling for construction, estimated total project construction costs and utilization of allocated funds.

5. The time limit for expending allocated funds is within five years after the close of the year in which the funds were authorized. Local governments may thus broaden the scope of a project and provide for adequate funding by permitting their allocations to accumulate. Program submissions should note this intention, if applicable.

6. Estimated project construction costs must include all costs, including administration, preliminary design engineering and construction engineering.

7. Any portion of the project construction costs may be funded by the local government. For all projects constructed with participated funding by the local government, the determination of the responsibility for maintenance will be made on a project by project basis.

8. The Department may assist the local government in the acquisition of right-of-way, but that all costs for right-of-way, including administrative costs, must be borne by the local government.

9. Roads presently on the State maintenance system may be improved under the Local Service Roads and Trails Program.

10. The highway regions will assist the local governments, if requested, in the preparation of the three-year program, and offer guidance for programming projects within the scope of available funding. All local government programs will be assimilated by their respective highway regions.

11. Preliminary engineering considerations for larger projects shall include studies of possible alternates.

12. A determination will be made on a project by project basis as to whether the local government will administer the construction of the project with reimbursements for costs from available allocated funding, or whether the Department will administer the construction of the project.

13. An executed project agreement is required prior to the expenditure of any sums which are to be included in reimbursement for the costs of the road or trail improvements. All project agreements will stipulate maintenance responsibilities for the completed improvement.

14. Any supplemental information which may assist the local government in the formulation of their three-year Local Service Road and Trail Program will be provided by the Department of Transportation & Public Facilities.

15. The three-year programs, including the priority scheduling, submitted by each local government shall bear a certification of approval by their respective governing body.

Region Outline for Annual LSR&T Program

To better formulate the regions annual three-year program, the ensuing guidelines should be followed:

1. Retain an ongoing program of assimilating information from all local entities throughout the year to eliminate last minute delays.

2. Follow previous program projections insofar as possible and reasonable.

3. Keep the overall allocation within the projected level of funding.

4. Keep the number, size, and type of projects (boardwalks vs. roadwork) within the equipment, manpower, and fiscal capabilities.

5. Schedule projects which complement other transportation facility construction.

6. Schedule projects which take advantage of contractors mobilized in remote locations.

7. Spread the work as evenly as possible and avoid concentration of work in one area.

8. Provide a logical and logistical sequence of work to make full use of the equipment.

9. Take advantage of federal programs providing additional transportation funding whenever possible (this increases the effectiveness of the LSR&T Program exponentially).

10. Consider inflation and unforseen cost increases.

11. Provide timely reaction to local requests.

12. Leave room for flexibility.

Contacting Local Authorities

Local Governments:

Road needs are requested by the State LSR&T Engineer for the Deputy Commissioner of Design and Construction.

Local Governments are notified of their allocation from Bond Issues by the Deputy Commissioner of Design and Construction.

Unorganized Boroughs:

Road needs are solicited by the Region LSR&T Engineer.

The Region should make periodic verbal or written contact with local governments and cities and villages in the unorganized borough pertaining to their road needs. During these contacts, it should be made clear that the services of the Region and State LSR&T Engineers are at their disposal.

This action will assure a prompt transmittal for the annual three-year program.

Project Coordination

In the initial phase of a bush project request, the Region LSR&T Engineer should inquire, at the village level, if other work is being performed or contemplated by other State or Federal agencies. If none is known, the other agencies should be contacted directly.

Assembling information of mutual concern to the LSR&T Program and other State and Federal agencies should be an obligation of the Region LSR&T Engineer.

Annual Report

The annual report of LSR&T activities is prepared each year by the State LSR&T Engineer and submitted to the Director of Transportation Planning by November 15. This report is then incorporated into the Department of Transportation and Public Facilities' annual report.

The LSR&T annual report is based on activities for the calendar year.

The regions are asked to submit certain information that will enhance the program, such as special projects, methods of cost savings, training, etc.

CHAPTER 4

PROCEDURES 4-0

Project Coding 4-1

Road Design 4-1

Maintenance and Operations 4-1

Recreation Facilities 4-2

Reimbursable Service Agreement 4-3

Overhead Account 4-4

Federal Grants 4-5

Negotiations Prior to Award 4-6

PROCEDURES

LSR&T Project Coding Procedures

Project numbers are assigned by the State LSR&T Engineer.

An example is as follows:

G	-	2	7	0	0	2
(a)		(b)	(c)		(d)	

(a) LSR&T Program
(b) Region
(c) Allocation Area
(d) Project Number in Sequence

When work is required on a project prior to project approval, charges are to be made to region reconnaissance.

See Chapter 5 for reconnaissance numbers.

Road Design

Any LSR&T project that is designated to be designed by the Department will be submitted by the Region LSR&T Engineer using the following procedures:

1. A request for the design work should be sent to Region Road Design by memorandum.

2. All pertinent information relative to the project, including project charge numbers must accompany the request.

3. Proposed advertising date and amount authorized for design and construction.

4. Request an early cost estimate to accomplish the design and construction.

Maintenance and Operations

LSR&T Projects to be maintained by the State.

All LSR&T construction contracts to be administered by the Department or local government, which are wholly or part of another contract, funded with LSR&T money and maintenance to be performed by the Department, must be coordinated with the Region Director for Maintenance and Operations during the design phase.

Construction Projects:

A list of all LSR&T projects to be maintained by the Department and constructed by one of the following methods will be submitted by the Region LSR&T Engineer to the Regional Director for Maintenance and Operations prior to each construction season with a copy to the State LSR&T Engineer:

1. Department of Transportation & Public Facilities Contract

2. Local Government Contract

3. State Equipment and LSR&T Employees

4. State Equipment and Maintenance & Operations Employees

5. State Equipment and Village Employees

6. Local Government Equipment and Employees

The description of each project shall include the project name, location, length and width of surfacing, type of construction and projected beginning and ending dates. Additional information is to be given upon request.

This report is essential in order that a liaison can be established between the local maintenance foreman and the Regional LSR&T Engineer and for better planning of maintenance responsibilities.

Unless agreed to before hand, comments made directly to the local government representative or contractor by the local maintenance foreman are prohibited.

Final Acceptance:

Final acceptance of the project shall not be given without the concurrence of the Regional Director for Maintenance and Operations or his representative.

Final inspection and completion report of all LSR&T projects shall be submitted to the State LSR&T Engineer.

Completion reports for all road projects will be transmitted to the State Maintenance and Operations Engineer by the State LSR&T Engineer.

See Chapter 5 for minimum right-of-way requirements.

See Chapter 6 for completion report requirements.

See Chapter 9 for routine maintenance scheduling.

Recreation Facilities

LSR&T funds are not valid for the construction of a facility whereby the right of entry is not open to the public at all times.

The LSR&T program was established to fund projects that aid the surface transportation of people, equipment and supplies from one point to another over public right-of-way.

As defined in Section 19.30.241 of the Alaska Statutes, the following definitions pertain to the Local Service Roads and Trails Program:

"(4) 'local service road' means a public road which is not designated as a route on the approved federal-aid highway system;

(5) 'project' means an undertaking to construct a particular portion of a local service road or trail, or, if the context so implies, the particular portion of a local service road or trail so constructed;

(6) 'trail' means a footpath or way on land or water that is open to public use as a matter of right whether or not a thoroughfare, particularly for dog sleds and mechanized snow vehicles."

LSR&T funds are not available for construction of recreational facilities such as rifle range pads, race tracks or similar proposals that limit the right of entry to the public.

Roads or trails to recreational facilities and parking areas for such facilities are eligible for funding under the program providing the following criteria is met:

1. Adequate public right-of-way.

2. Sufficient funds available.

3. Approval of local residents.

Reimburseable Service Agreement

Intradepartmental RSA Procedures:

In an effort to reduce administrative and fiscal paper flow, the following procedures will govern requests for services between elements of the Department of Transportation and Public Facilities.

The requesting agency will initiate a memorandum setting forth the type and level of service required of the servicing agency and citing the specific collocation charge code to which charges may be incurred. The memorandum will also reflect the total funds available for the service which will not be exceeded by the servicing agency. The servicing agency will acknowledge receipt and acceptance of the agreement to perform the service by so indicating on a copy of the memorandum and return to the requesting agency. A completed copy of the agreement memorandum will also be provided to the State LSR&T Engineer who will forward the document to Budget Finance.

This then becomes a valid agreement between the two agencies and is authority for the servicing agency to incur charges directly to the collocation charge code indicated. Where it is desired by either the requesting or servicing agency, a separate collocation code may be established.

The servicing agency may elect to use its own project reporting system for collecting costs for reimbursement when personnel services are involved. However, when charging an expense to the requesting office collocation code, the requesting office project ledgers must be used if applicable.

Formal Reimbursable Services Agreements and their associated documents will no longer be required on intradepartmental service requests.

Normal RSA procedures will be followed between other departments of State government and the Department of Transportation and Public Facilities.

Overhead Account

The use of the LSR&T overhead account number N00407 must be closely scrutinized to insure proper practice. All eligible costs must be charged to their respective project numbers. The use of this overhead number is limited to LSR&T assigned personnel. When your people are temporarily assigned to another section for one month or longer, a personnel action must follow.

Federal Grants

It is Legislative Audit's policy to consider all requests for federal grant audits. All requests should be in writing and the following information be included:

1. Number of grants to be audited.

2. Amount of the grant.

3. Whether grant funds were sub-granted to other organizations, and if so, the number of sub-grants and amounts.

4. The grant period and/or periods.

5. Who Legislative Audit should contact to discuss requests, and

6. Since these audits are performed on a reimbursable basis, the amount of funds available for audit.

If after reviewing any request, Legislative Audit is unable to perform the audits requested, they will send you a letter stating that fact. If you have any questions concerning this policy, please contact:

Legislative Auditor
Pouch W
Division of Legislative Audit
Juneau, Alaska 99811

Economic Development Administration (EDA) grants are sometimes utilized to supplement LSR&T funds, in areas where requests for roads exceed funds available.

Negotiations Prior to Bid Award

When a LSR&T construction contract is being advertised for bid, negotiations with the Contractor prior to award is prohibited.

Negotiations with a Contractor by a Department employee may be cause for dismissal.

CHAPTER 5

PRECONSTRUCTION 5-0
- Reconnaissance 5-1
- Project Agreements 5-1
- Force Account 5-2
- R/W Certification 5-2
- Survey 5-3
- Structures
  - Requirements 5-3
  - Navigation Permits 5-4
  - Bridge Design 5-6
- Materials 5-8
- Traffic Safety Responsibilities
  - Construction 5-8
  - Traffic Design 5-9
  - Typical Sections 5-10
  - Utility Relocation 5-16
  - Alaska Historical Preservatio Act 5-16

PRECONSTRUCTION

Reconnaissance

This phase should determine how the project will be constructed; such as by contract, force account or in-house forces. Sufficient information should be obtained so plans and specifications can be prepared. Under this article a requirement for a meeting with the local community to inform them on the progress of the project and construction timetable may be necessary.

Procedure:

1. Select Typical Section
2. Determine method of construction
   a) Local government contract
   b) State contract
   c) State forces (LSR&T or Maintenance)
   d) Local government equipment and labor
   e) Local government labor only
   f) A combination of two or more
3. Determine if cost of project is within funds available
4. Charges to the region reconnaissance project is permitted only when it is impractical to obtain a project agreement and then only to establish the validity of such a project.

   Reconnaissance charge numbers are as follows:

Central Unorganized Borough I	G-00011
Interior Unorganized Borough II	G-00021
Southeastern Unorganized Borough III	G-00031
Western Unorganized Borough IV	G-00041
Southcentral Unorganized Borough V	G-00051

See Chapter 11 for the reconnaissance check list.

Project Agreements

Projects submitted to Headquarters for approval must include the following information:

1. Project Agreement
2. Project description of work including typical section, length of project and a map of the location with scale shown. (See Management Forms 14 and 15).

3. Resolution for Local Entity

4. Funds authorization request

5. Engineering Consultant Agreement, if applicable

For unorganized borough projects to be constructed by LSR&T equipment no transportation of equipment shall be made to the project site until the following has been secured:

1. Right-of-way certification (Refer to this chapter)

2. Material source approved and free use of the material for construction

3. Wage agreement with the local governing body (Approved at the Region level)

4. Historical clearance (Refer to Chapter 5)

5. Structure permit, if applicable

Construction on any LSR&T project is prohibited until all above requirements are met.

See Chapter 11 for agreement forms.

Force Account

PS&E assembly of a force account (in-house) construction project submitted for approval must include the following:

1. Estimated Costs of Construction Engineering

2. Estimated Costs of Equipment and Labor

3. Estimated Costs of Materials

4. Estimated Costs of Closing out Project after Construction is Completed

5. Department of Fish and Game permit, if applicable

6. Coast Guard or Corps of Engineers permit, if applicable

Right-of-way Certification

When right-of-way has been cleared, the Regional Right-of-way Agent will certify in a memorandum that all necessary right-of-way has been acquired for each parcel and list the type of possession gained for each. In the event that the project will be constructed within a platted subdivision or townsite survey within the dedicated right-of-way, a letter of certification from the city will be adequate.

Roads to be maintained by the Department require a minimum of 100 feet right-of-way. The Department may waive this requirement when mitigating circumstances warrant.

Minimum right-of-way width required for subdivision streets must be sufficient to contain the slope limits as designed. Authority to proceed with construction will not be given until the Department is assured that this requirement is met.

Preliminary Engineering

Survey

Local Government

1) Determine right-of-way width is sufficient to construct proposed facility

2) Line and grade

3) Typical Section

LSR&T Forces

1) Utilize survey practice as determined by the Region LSR&T Engineer.

2) The survey must be complete enough to estimate construction costs and provide enough information to construct the facility proposed.

Structures

Requirements:

1. Stream crossings exceeding 5 cfs refer to U.S. Coast Guard Permit Requirements

2. AASHTO Specifications

3. ADT to determine design loading

4. When utilizing an existing structure at a different location the following data must be reviewed:

   a) ADT
   b) intended use
   c) modification required

5. All structures require the State LSR&T Engineer approval.

Navigation Permits:

During the reconnaissance of a proposed LSR&T project, if spanning of a stream or work is required in a body of water, site information shall be submitted to the State LSR&T Engineer. To verify the need for a permit, the hydraulic unit of the bridge section will review the information and the State LSR&T Engineer will inform the Region LSR&T Engineer of the results.

The Corps of Engineers exercises permit authority for stream encroachments, tidal encroachments, and wet land encroachments under various sections of the River and Harbor Act of 1899, Section 404 of the Federal Water Pollution Control Act Amendments of 1972, and other federal codes. Coordination of permit requirements and processing of applications is handled by the hydraulics unit of the Bridge Design Section. Part of the permit requirements is a "Certification of Reasonable Assurance" from the Alaska Department of Environmental Conservation under Section 401 of the Federal Water Pollution Control Act Amendments of 1972. This process is also handled by the hydraulics unit. The processing of these permits usually requires approximately 120 days.

U.S.C.G. navigation permits are required under Section 9 of the River and Harbor Act of 1899 and other federal codes for all "navigable waters" crossings. The hydraulics unit of the Bridge Design Section coordinates with the Coast Guard to determine if a particular crossing is non-navigable, has "prior approval", or requires a navigation permit. On those crossings where marginal navigability may exist, the hydraulics unit submits a "Request for Declaration of Non-navigability" to the Coast Guard for review by their legal section. If the crossing is declared navigable, the hydraulics unit submits a Navigation Permit Application for processing. Part of the navigation permit requirements is a "Certification of Reasonable Assurance" from the Alaska Department of Environmental Conservation under Section 401 of the Federal Water Pollution Control Act Amendments of 1972. This process is also handled by the hydraulics unit. The processing of these permits usually requires approximately 180 days.

Corps of Engineers U.S. Coast Guard Permit Applications:

In reference to the Corps of Engineers' permits under Section 404 of the amended Federal Water Pollution Control Act of 1972 the following information is to help anticipate the information and time needs in obtaining necessary COE and USCG permits:

Phase III of Section 404, effective July 1, 1977, requires application for permit if there is any placement of dredged or fill material in wetlands or bodies of waters to their headwaters where the flow is 5 cfs or less. The quantity of fill material that the Corps considers is that amount below the ordinary highwater elevation (OHW) or below MHHW for tidal influenced areas.

At the present time the Corps of Engineers is forming a general permit for fills less than 100 c.y. Investigation of the special conditions required for

a general permit has indicated that more paper work and possibly a longer delay in getting a general permit will be required than applying for a regular permit. Except in unusual cases, applications will be made for regular permits.

Section 10 of the Rivers and Harbors Act of 1899 requires permit application for the excavation from or depositing of material below OHW or MHHW (Pacific Coast) in the navigable waters of the U.S. The Coast Guard through its navigation permit process exercises authority under Section 10 for projects that have bridges, culverts, causeways and overhead pipelines. Projects that require a Corps of Engineers permit under Section 10 include but are not limited to wharfs, docks, dolphins, excavation, dredging, filling disposal of dredged material, riprap, retaining walls, breakwaters, wires and cables over navigable waters.

Jurisdictions of these two agencies obviously overlap in some cases. In most cases only one agency will exercise its authority and it is sometimes difficult to determine which agency will be the one to do so. In those cases where jurisdictional authority is in question it is necessary to ask the Coast Guard for a declaration of non-navigability. The U.S. Coast Guard is getting more stringent on the determination of navigable waters. The data required on their standard form for navigability is quite extensive. Determination of navigability has taken up to four months. The time required for processing and issuing a navigation permit is about six months after the application is received by the Coast Guard.

The processing of Corps permits takes approximately 90 to 120 days after they are received by the Corps. The time will be longer if problems occur due to objections by reviewing agencies.

In order to advertise projects as scheduled it is necessary that the following material be received by this office four months in advance for Corps of Army Engineers permits and seven months in advance for Coast Guard permits.

Corps of Engineers Permits

1. Location of project on USGS guad sheets.

2. Location of stream crossings where the flow is over 5 cfs. This could be done by station numbers for small streams.

3. Amount of fill in cubic yards below OHW (MHHW for tidal influence) in the natural channel.

4. Amount of excavation in cubic yards below OHW (MHHW for tidal influence) in the natural channel.

5. Location of disposal site for and method of transporting the excavated material.

6. OHW (MHHW) elevation near culvert and elevation of stream bed at that location.

7. Drainage areas.

Determination of OHW (MHHW) elevation can be as follows:

1. On streams that have USGS gaging records the enclosed definitions of terms by the COE is helpful. Also is a list and map of USGS gages. Records on any specific stream are available upon request.

2. Preliminary studies indicate that the flow for OHW = 10% of a 50 year flood as a State wide constant with the exception of the Interior Region where studies indicate an 8% conversion factor. It should be noted that these conversion factors should be used with caution. As more data is collected, adjustments will be made for the conversion factors.

U.S. Coast Guard Permits

1. Location of project on USGS quad sheets

2. Location of stream crossings where the flow is over 5 cfs. This could be done by station numbers for small streams.

3. Drainage areas

4. Length of stream and fall per mile

5. History of navigation

6. Pictures of stream crossings if available

Bridge Design:

The assistance available from Bridge Design on LSR&T projects can be greatly improved by more complete and timely communications. This will also avoid inadequate designs which might prove hazardous while keeping within budgeted funds.

When a project involves a bridge a completed DH45 form (applicable portions) should be provided along with the following:

Construction schedule
Amount budgeted for structure
Number and type of vehicles in community
Anticipated live load during life of structure
Recommended structure type
Materials available (if any)
Equipment available
Transportation limitations
Experience of labor for erection (when to be done by local labor)
Site survey, marked aerial photo or sketch drawn

In case a design is done or partly done by a region, other agencies or individuals, this section will review the work in keeping with the considerations listed above.

EXAMPLE

BRIDGE SITE SURVEY

Form DH 45

STATE OF ALASKA
DEPARTMENT OF HIGHWAYS

Project No. S-0481(9) BRIDGE SITE SURVEY (To Accompany Contour Map) Bridge No. 1162

Name of Stream: Sheep Creek Date of Survey: June 17, 1963

Location: 5 mi. E. of Mantilla Rt. No. FAS-481 Sta. No. 1027+30

Bench Mark TBM#5 Sta 1027+00 Do fish use stream for spawning? Yes

Drainage Area: 96 sq. mi. How Determined: U.S.G.S. Topo. Map

General Description of Drainage Area: 40% Rocky mountainous, 60% rolling brush covered country

Any Storage Basins Upstream? Yes, Cascade Lake - 5 sq. mi. - 2 mi. upstream

Elev. of High water 340.0 High Ice 333.5 Date of High Ice 3/2/61

Location of High Water Mark 20 ft. Left Sta. 1027+30.

What caused H.W. Heavy rain in spring with snow melt during warm weather (70°).

To what elevation can water be backed up without local flood damage? 350.0

Slope or gradient of stream: 500 ft. upstream 1.7% 500 ft. downstream 1.6%

In dry stream bed, give water table elev. Stream never dry.

Describe ice and drift conditions Sheet ice - rots in place. Brush and small trees (15' max. length) during flooding.

Scour conditions: None existing. Stream may scour at piers.

In general, is stream cutting or filling? Stable

Should structure be skewed? No

Should channel change be made? Not necessary

Any special treatment for approach fills? Riprap abutment slopes.

Sidewalks and Utilities No sidewalk or utilities in area.

SUBMITTED BY William Jones BKAIII

APPROVED BY _____
(District Engineer)

Date _____

Materials

1. Royalities are to be paid by the recipient with no reimbursement from the State except under extreme conditions such as, the competitive bidding procedure.

2. Inspection:

   Local Government - responsible for inspection and acceptance of materials.

   DOT/PF Contract - Construction Manual, Section 1.03.09

3. Determine that adequate materials exist to construct the project.

Traffic Safety Responsibilities

I Construction

Road Construction Traffic and Pedestrian Safety Requirements
(Type of Protection must fit nature of work)

Short term day light construction operations

a) Minor traffic and pedestrian interuptions -Notes: 1,6

b) Major interuptions (moderate to high volumes) -Notes: 1,2,6

c) Lane closures, Flagman operation -Notes: 1,2,5,6

d) Street closed during construction period -Notes: 1,2,4

2. Long term day light with overnight protection

a) Minor traffic and pedestrian interuptions -Notes: 1,3,6

b) Major interuptions (Moderate to high volumes) -Notes: 1,3,5,6

c) Lane closures, Flagman operation -Notes: 1,3,5,6

d) Road or Street closed overnight -Notes: 1,3,4

3. Night Construction operation

a) Minor traffic and pedestrian interuptions -Notes: 1,3,5,6

b) Major interuptions (Moderate to high volumes) -Notes: 1,3,5,6

c) Lane closures, Flagman operation -Notes: 1,3,4,5,6

d) Road or Street closed during night construction -Notes: 1,3,4,5,6

Note:

Notification of road disruption (closed or restricted) should be given to news media and local Police, Fire and Emergency Agencies.

Worksite Protection Notes

1. One advance warning sign approximately *700 feet before each direction of approach to construction area, such as ROAD CONSTRUCTION AHEAD, ROAD WORK AHEAD, etc. One additional specific warning sign approximately *300 feet before jobsite, such as, ONE LANE ROAD AHEAD, SHOULDER WORK AHEAD, MEN WORKING, SURVEY CREW, etc.

2. Traffic cones and temporary barricades placed to direct traffic through the work area and to protect worksite.

3. More permanent barricades and barriers with steady burning or flashing battery or electric lights installed for visability and delineation.

4. ROAD CLOSED signs and barricades sufficiently placed to safely close traveled way. A DETOUR plan shall be submitted to the Engineer for approval prior to commencement of closing roadway. DETOUR signs directing motorists to alternate routes around closed roadway.

5. Flagman required for directing traffic with FLAGMAN AHEAD signs installed 300 to 500 feet in advance of station.

6. Flagman required to protect worksite area with FLAGMAN AHEAD signs installed 300 to 500 feet in advance of worksite.

* Verify distance using approach speed data and A.T.M.

II Traffic Design

Permanent Traffic Control Devices Requirements

1. Warning Signs

a) Curve warnings with speed plates -Notes: 1,2

b) School and Pedestrian warnings -Notes: 1

c) Hazards, such as loose gravel, slides, etc. -Notes: 1,5

d) Intersections, street ends, stop ahead, etc. -Notes: 1,3,5,6

2. Regulatory Signs

   a) Stop, Yield -Notes: 1,4,6

   b) Speed limit -Notes: 1,3,6

   c) One Way, Do Not Enter -Notes: 1,6

   d) Load restrictions and closures -Notes: 1,2,5

3. Guide Signs

   a) Street name signs -Notes: 1,2,6

   b) Directional and mileage signs -Notes: 1,2

   c) Service signs (Hospital, police, etc.) -Notes: 1,2,6,7

4. Delineation and Object Markers

   a) Roadside delineation - hazard areas -Notes: 1,2,8

   b) Bridge end and Object markers -Notes: 1,2,9

Permanent Control Device Notes

1. Determine location, and type of sign needed during P.S. & E. preparation.

2. Additional field conditions may warrant further protection devices.

3. Has a speed study been completed or is one warranted?

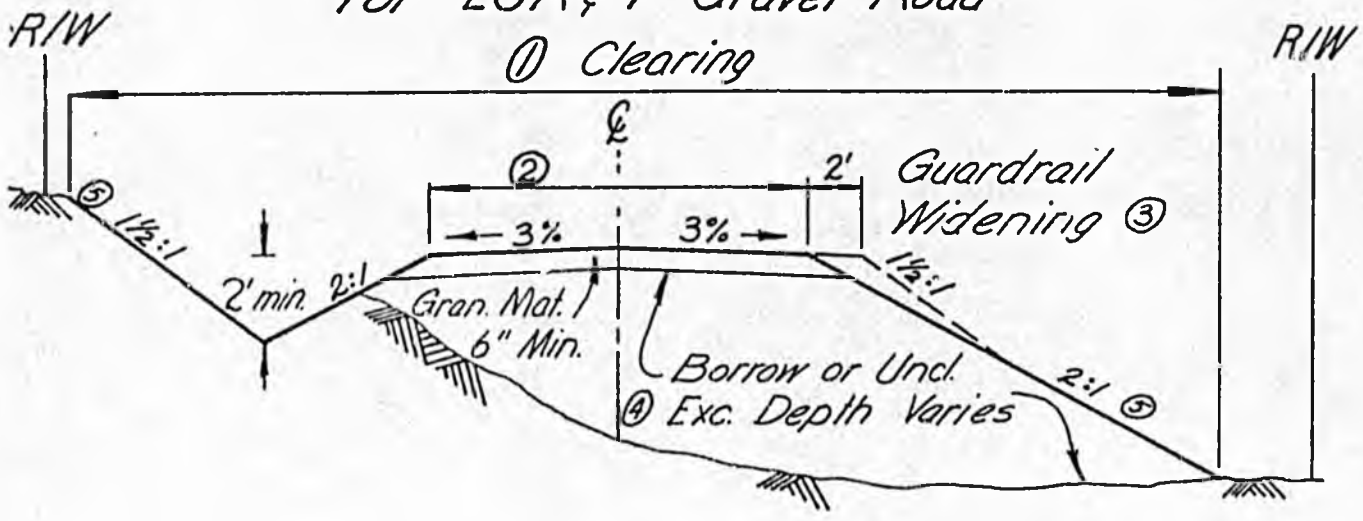
4. Have STOP or YIELD warrants been met?

5. Have construction or permanent conditions warranted restrictive signs?

6. Are existing nonstandard signs being replaced?

7. What services signs needed and if so what type?

8. Areas where road sides and objects need delineation.



9. Bridge ends, guardrail ends and objects requiring type III object markers.

Typical Sections

The Typical Section will be determined by the intended use and should be adequate to provide the desired service.

TYPICAL SECTION

For LSR & T Gravel Road

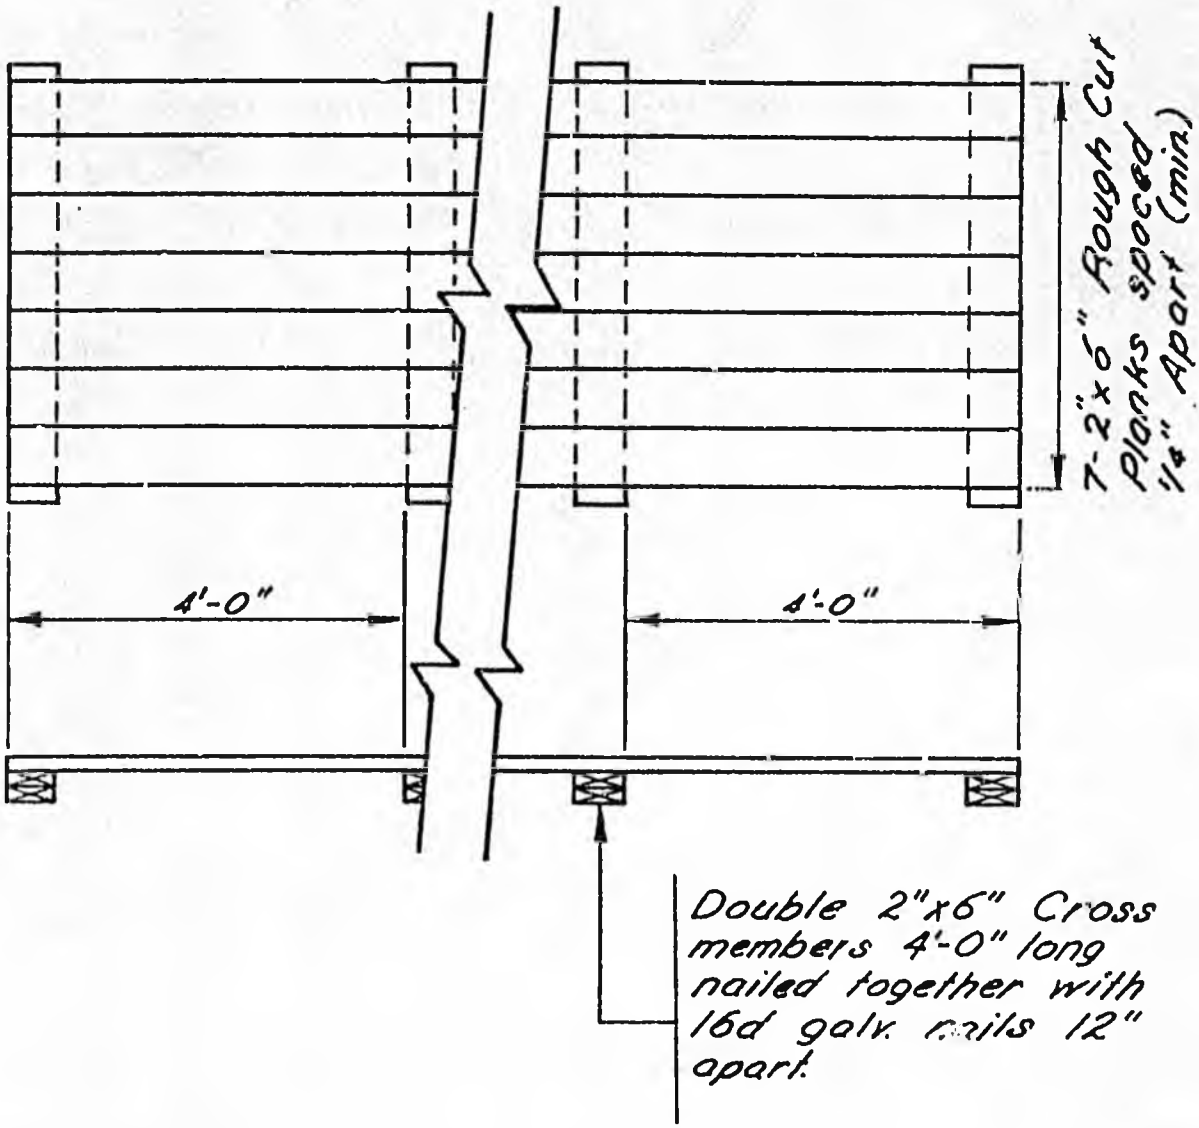
(1) Minimum Clearing & Slopes kept within existing Right-of-Way.

(2) 14′ Min. Single Lane with turnouts @ Inter-visible locations.
20′ Min. Two Lane

(3) Minimum requirements for guardrail:
a) Outside of horizontal curves less than 600′ radius
b) Ponding of water at toe of fill exceeds 3 feet in depth.
c) Approaches to structures.

(4) Overlay embankment durable enough to withstand intended loads.

(5) Slopes will vary depending on material (2:1 F.S. to 5′ Min.)

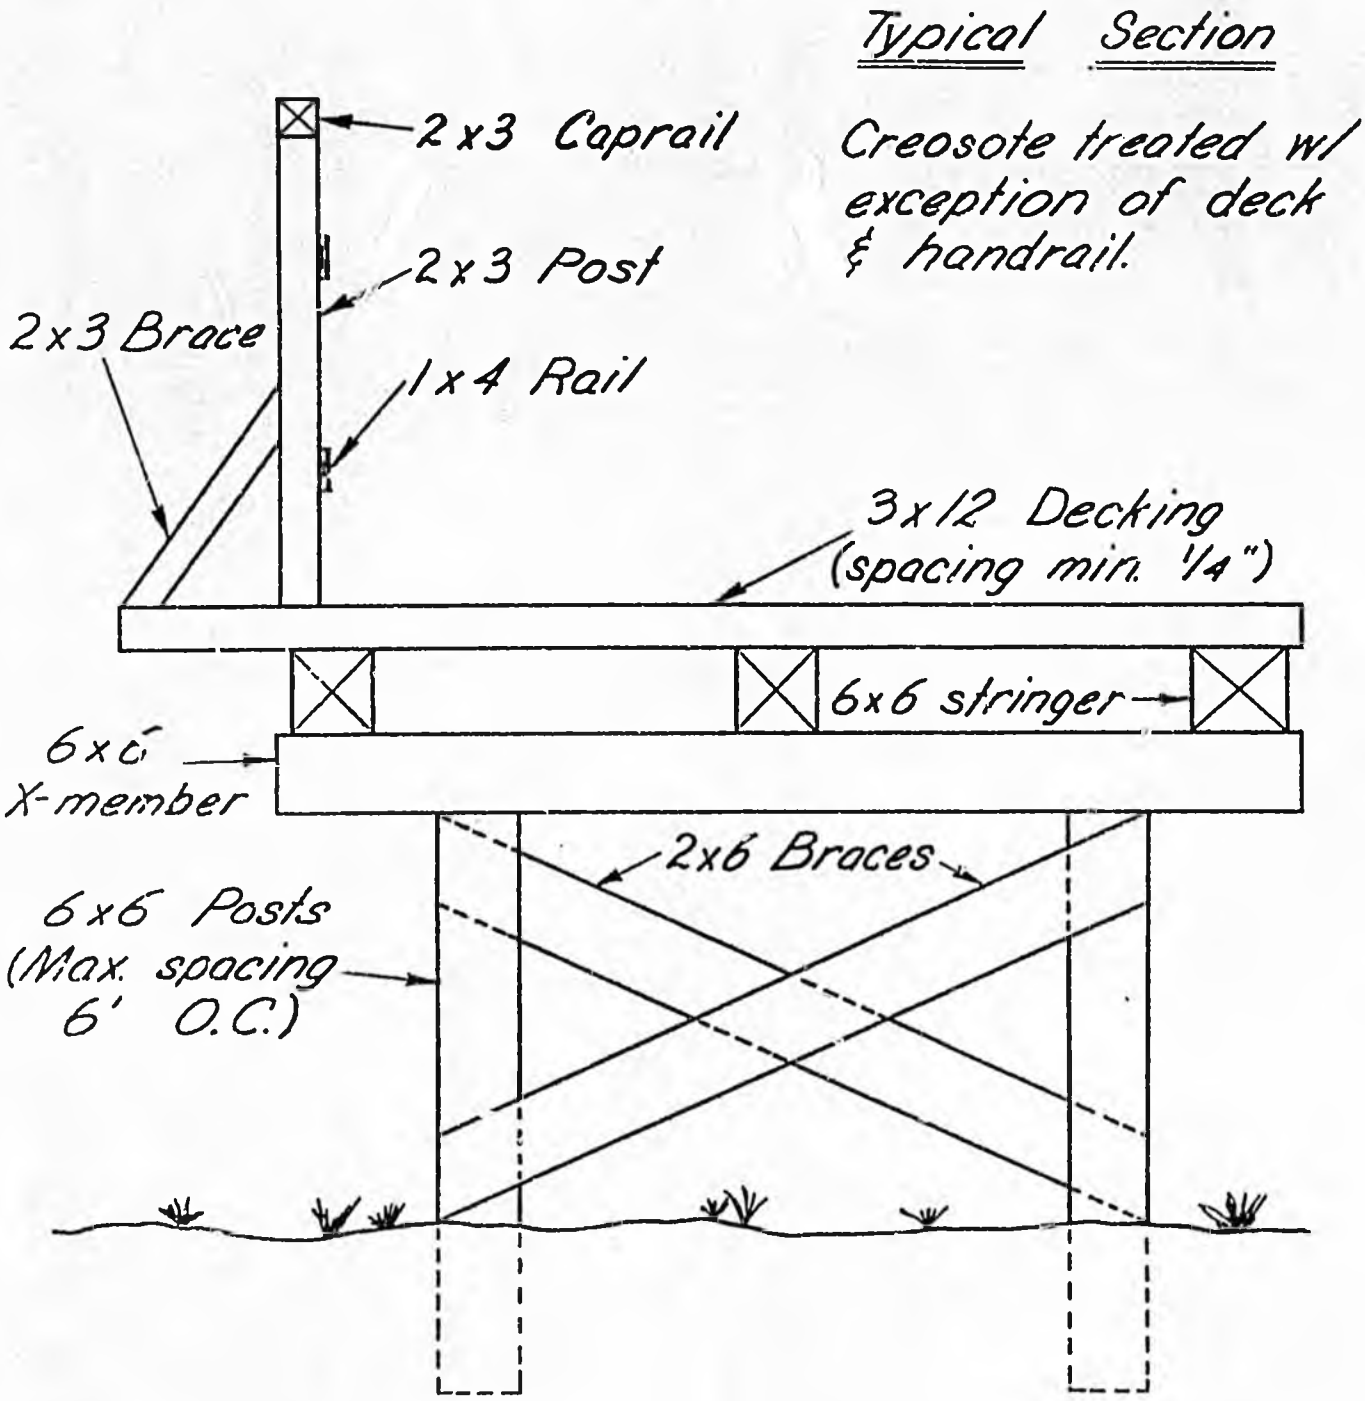


Alignment is not normally a problem since LSR & T goal is to get people out of the mud and connect two points with a vehicle trail. The project should be routed to eliminate safety hazards.

All Local Government projects will be scrutenized as to good engineering practices and AASHTO design of Structures.

Widen 2 feet inside of curve when radius is less than 600 feet.

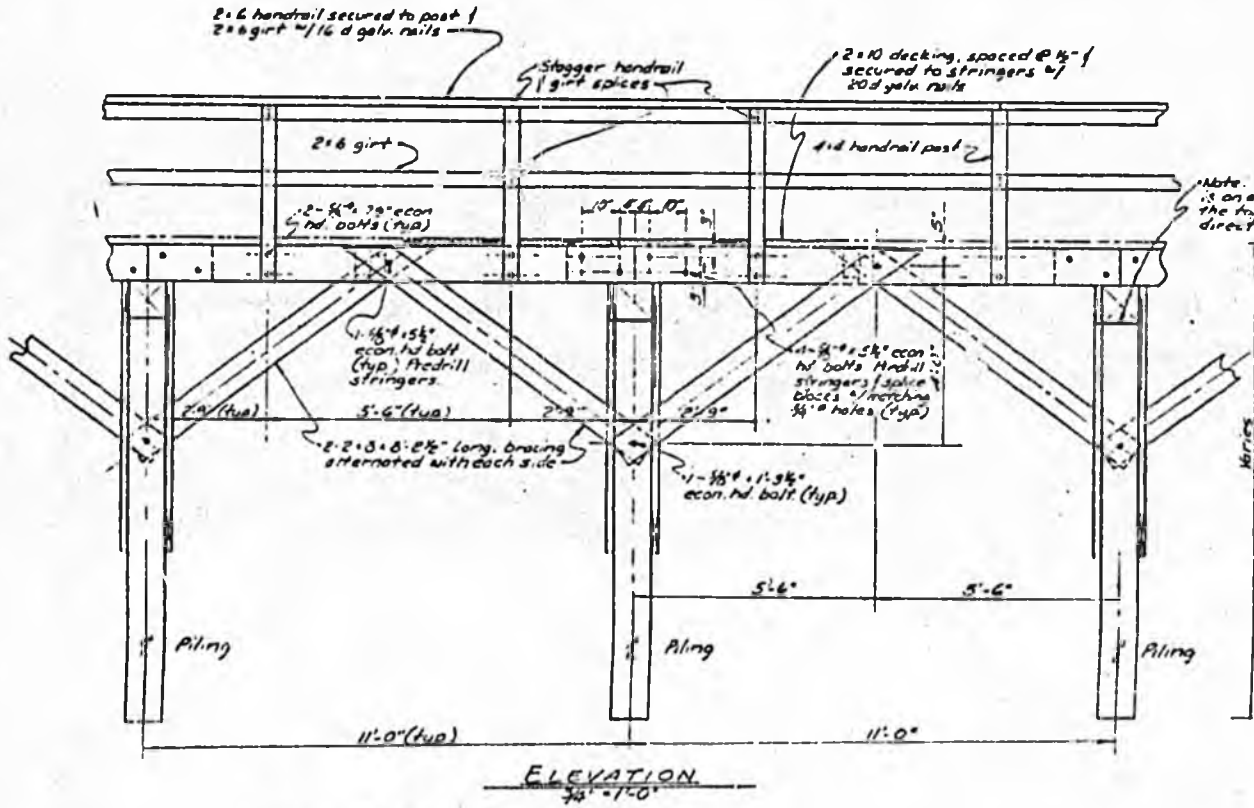
4/15/77



TYPICAL BOARDWALK LAYOUT

NOTES:

1. Stagger butt end joints at cross members.
2. Minimum plank length should be 8'.
3. Use 3-16d galvanized nails for each plank at each cross member.



TYPICAL

Utility Relocation

Utility move costs are fundable under the LSR&T Program and must be considered when necessary to construct a proposed project.

Alaska Historic Preservation Act

In compliance with Section 41.35.070 of the Alaska State Statutes, a list of all LSR&T projects scheduled for construction and not previously submitted shall be sent each year by the region directly to:

Director and State Historic Officer
Division of Parks
619 Warehouse Drive, Suite 210
Anchorage, Alaska 99501

The list of projects must include the project name, type of construction and a location sketch with scale shown. This information should be submitted as soon as construction activities are planned in order that adequate time for review is allowed prior to construction.

A copy of this report must be submitted to the State LSR&T Engineer.

CONSTRUCTION

Management

This will be determined by how the project is to be constructed. Contract or force account projects will require a fulltime project engineer/inspector. If constructed by in-house forces, a local individual may be appointed project foreman and will be under the control of the Regional LSR&T Engineer or roving foreman.

Construction Procedures (Project Engineers)

Projects are administered by two distinctly different contractual methods; by construction contract and by village forces and Department equipment. LSR&T projects, both methods are 100% State funded. It is noteworthy that no Federal Highway Funds are involved on these projects. Federal grants, special allocations and local participation funds are sometimes used in conjunction with LSR&T funds. If other funds are included in your project, a separate set of instructions will accompany your project assembly.

METHOD A (by contract):

When LSR&T projects are under contract, a Project Engineer is assigned and the LSR&T Engineer serves as Assistant Construction Engineer. Some of the instructions given to the Project Engineer include:

1. Type of funding and funds available for project including engineering.
2. Coding on stock requests and time sheets.
3. Materials summary requirements.
4. Approvals for change orders, etc.
5. Records required - use Construction Manual.

Administration of the contract will be in accordance with the Construction Manual.

METHOD B (with local labor and State equipment):

Prior to your assignment to the job site, certain agreements shall have been entered between the Department and the local governing body. These are a "Project Agreement" and a "Reimbursement Agreement" for labor. The "Reimbursement Agreement" will state that the local governing body will hire laborers at a stipulated rate to work under the direct supervision of the Project Engineer. Your ring-bound book will contain:

EXAMPLE:

1. DAILY EXPENDITURE ACCOUNT: This form will record the daily and cumulative costs of the project. We will be given a

figure to enter on the first day's sheet for the "Total Cost Brought Forward" line near the bottom of this form. Make the subsequent daily entries and submit a copy weekly to the Region LSR&T office.

2. WEEKLY LABOR EXPENDITURE ACCOUNT: This form serves a dual purpose. Make the entries daily and total them weekly. The daily totals are entered on the "Daily Report of Contract Costs" and the completed form is the backup for payment to the local governing body for labor.

3. PAYMENT FORM: This is the form that is used to make periodic payments to the local governing body for labor. Complete it and transmit it to the Region LSR&T Engineer with the "Daily Labor Expenditure Account" for backup.

4. EEO REPORT: This form is to be submitted at the end of each quarter.

A complete Project Diary must also be kept in a suitable bound book.

We anticipate that the ring-bound books will serve a dual purpose. First, it is your initial supply of forms; and second, your carbon copy of the completed day-to-day or week-to-week forms, retained in the book, becomes your initial file of project records.

Instruction to Local Foreman:

1. Limits of Authority.

2. Inform him of what is to be constructed and ask for suggestions on how this can be accomplished, since he may be more familiar with the area and local individuals hired to do the actual work.

3. Discuss with him the priorities and sequence of construction.

4. Emphasize safety and the necessity to hold regular safety meetings.

5. Emphasize preventive maintenance for equipment.

6. Establish a routine for servicing equipment at regular intervals.

7. Inform of the requirement of keeping daily load count of material hauled.

8. Emphasize submitting time sheets in timely manner.

As an aid in filling out the remarks column on the daily expenditure account sheet, you will find below a list of the minimal information required:

Contractors Work Schedule

1. Shifts/day
2. Hours/shift
3. Days/week

Construction Status

1. % completed this day
2. % completed to date

Culverts

1. Placement (Location)
2. Length

Borrow

1. Placement (Location Station to Station)
2. Quantity (Yd3).

Travel

1. Departure
2. Destination

Equipment Being Used

1. Type (identify)
2. Approximate number of hours each piece of equipment is being used.

Project Budget

Each project is budgeted (estimated) to include design, construction and administration.

It is the Region LSR&T Engineer's responsibility to submit a cost estimate that is reasonable.

No construction equipment is to be moved to a project site until the R/W certification and royalties for material is secured.

No construction equipment is to be moved from a project site that is not complete without the prior approval of the State LSR&T Engineer.

No project is to be terminated, typical section reduced or length of project shortened without the prior approval of the State LSR&T Engineer.

Reimbursement to a local government exceeding the authorized amount requires prior approval of the local government authority (usually the assembly).

Overruns for State administered projects over 10% require prior approval of the State LSR&T Engineer.

Equipment Costs

Cost of operation exceeds the value to the fleet:

1. Evaluate

   a) down time
   b) parts and labor
   c) availability of parts

2. Reasons

   a) too old
   b) lemon

3. Determine action

   a) keep the equipment on line
   b) replace

Transportation

Evaluate moving costs of construction equipment.

1. Air
2. Barge
3. Truck

Safety

Pursuant to Part 1926 of the U. S. Department of Labor OSHA Act, the following basic safety specification shall apply to all LSR&T projects and to the personnel working on them:

Proper safety equipment shall be provided by the employer for the work conditions. It shall be the employee's responsibility to properly use all equipment or devices when appropriate and conditions warrant.

The Regional LSR&T Engineer or his designee, shall sideline or discard defective machinery and equipment. This equipment will not be used on the project until it has been restored to a safe condition.

All equipment to be used on any LSR&T project shall first be inspected and approved by the Region LSR&T Engineer, or his authorized representative.

In matters concerning the safety of a work site or conditions, the project site supervisor shall obtain the Regional LSR&T Engineer's permission before proceeding with the work.

A basic safety/first-aid plan shall be drawn up and presented at a meeting prior to construction and a plan for the implementation shall be formulated at this time.

Before the start of any work, project personnel shall attend a safety orientation meeting. It is mandatory that safety meetings be held at least once per month. All new or late hires shall be oriented to all existing safety programs and policies and procedures that apply to the project.

Should there be any questions concerning safety by the project representative, contractor or employees, they may contact the Region Safety Officer through the Regional LSR&T Engineer.

All State contracts shall adhere to the safety rules and procedures outlined in Section 1.07 of the Construction Manual.

All personal injuries on the job shall be reported on form ADL 210 Workman's Compensation form, within twenty four hours.

Supply

Purchases.

Purchases of equipment chargable to an equipment project number in excess of $500 shall have prior approval from the State LSR&T Engineer. This can be accomplished by phone.

Bills:

Freight bills are to be paid up on receipt of billing. All other bills are to be paid upon receipt of the merchandise.

Bid Waivers:

Planning ahead should eliminate all bid waviers.

Bookkeeping

LSR&T Project Construction by LSR&T Forces:

1. A system must be maintained to insure an audit trail.

2. To eliminate time-consuming review costs, the following procedure is necessary:

   a) Attach invoices to disbursements

   b) Show documentation for all materials

   c) Checks paid out with wage agreements attached

   d) Signed employment cards for each employee listed (unless they are State employees)

   e) On LSR&T administered projects, Chapter VIII of the Construction Manual may be used for routine record keeping practices.

DOT/PF Contract LSR&T Projects:

When projects are being constructed by State contract, including force account, the Construction Manual will be followed for record keeping.

When projects are constructed with in-house forces a bookkeeping system must be set up and kept current of all costs charged to the project to provide an accumulative total of all expenditures.

Inspection

Local Government Projects:

Periodic inspections are required (minimum);

1) reconnaissance
2) during construction
3) when construction is completed.

LSR&T Administered Projects:

Same as for Local Government.

Completion Report

All LSR&T completion reports shall include the following:

1) Location Map with Scale
2) Type of Facility
3) Length and Width of Facility
4) Final Inspection Report
5) Report of Deficiencies Rectified
6) Acceptance by Maintenance and Operations when applicable
7) Project History
8) Certification by Local Government (See Example, Chapter 11, Management Form No. 5).

Regional Construction Review

Purpose:

To establish procedures for review of LSR&T records to assure that such records adequately document costs incurred; that all measurements and computations are in accordance with the project specifications, and that all amounts due on estimates are properly separated into fund categories according to the project estimate, or that reimbursement to a governing body is in accordance with the project agreement and that records are adequately documented.

Procedures:

1. Until otherwise notified by the State LSR&T Engineer, review shall begin at the time the project is completed. The Regional Engineer may require an interim review when he believes such action is warranted. The number of LSR&T projects to be reviewed will be determined by the Regional Engineer. The status report will reflect projects available for review.

2. The Review Engineer, appointed by and under the direct supervision of the Regional Engineer should check the basic documentation of the project as necessary to assure himself that quantities were determined as prescribed by the plans and specifications or that reimbursement to the governing body (municipality, borough, village, etc.) has been made in accordance with the project agreement.

   A. Department of Transportation and Public Facilities/Contract project:

      Upon project completion, the final estimate and project records shall be reviewed. This review must be accomplished within 30 days after final estimate. The review should determine the following:

      a) Documentation and records support the quantities being paid.

      b) Measurement was made in accordance with plans and specifications, appropriate change documents, and properly documented force account records.

      c) Quantity computations were properly performed and independently checked.

      d) All work orders, change orders and extra work orders are accounted for.

      e) Plans and field records indicate work was performed within the project limits.

      f) Final acceptance has been made.

      g) Liquidated damages have been assessed when due.

      h) Project charges on the final estimate have been separated as per project agreement estimate, and properly distributed.

      i) LSR&T funds have not participated in right-of-way work.

      j) Costs are correctly classified and all participating costs are properly supported in accordance with the project agreement.

   B. LSR&T projects performed by a governing body, either by force account, contract, or utilization of local labor. This review must be accomplished within 30 days after the records are submitted to the Review Engineer. Review charges to this type of project cannot exceed one man workday unless prior approval is received from the Region Engineer.

The review should include the following:

a) Audit trail readily documents and supports quantities being paid and supports labor, equipment and material/ freight costs. The Wage Deductions Agreement, LSR&T Form No. 80 to be utilized when necessary.

b) Governing body receives authority to advertise and authority to award a contract, for work to be performed by contract construction.

c) LSR&T funds have not participated in costs incurred prior to execution of the project agreement or in costs attributed to right-of-way.

d) Change orders, etc. have had LSR&T Engineer's concurrence in accordance with the project agreement.

e) Increase in costs over the amount originally authorized are documented and properly authorized.

f) Final acceptance has been made.

C. If the project records fail the above review(s) they should be returned to the Regional Construction Engineer or LSR&T Engineer for corrective action. The Region Construction Section or LSR&T Engineer should document the disposition of all discrepancies. Within thirty days a report of such disposition will be forwarded to the Review Engineer, who will then prepare a final review report for submission to the Regional Engineer, with copies to the State LSR&T Engineer and Construction Engineer, outlining the review procedure, findings, and subsequent disposition of any discrepancies.

D. Final review reports will be retained by the region for a minimum of three years.

Status Report

The Status Report of projects is to be submitted annually by November 1. This report shall reflect the project status through September 30 on only those projects that were active on January 1, of that year. The State LSR&T Engineer may request interim reports.

Finance

Disbursements:

All requests for disbursement shall include the proper coding and region approval. Payment requests for payroll will receive special handling by the Headquarters' Finance Section.

Bank Accounts:

Joint Account for LSR&T Projects

In the event a village or small community has no money on which it can draw for procurement of material or payment of wages, it may be advantageous to advance the community the funds to initiate a project.

This can be done by including in the agreement a clause pertaining to establishing a joint account for purchase of material and payroll purposes, and a clause to the effect that the account may be closed by the Departmental signatory at any time.

After the agreement is approved, or at the time the agreement is submitted for approval, an advance may be requested and the account opened. Two reliable village employees, preferably the bookkeeper and foreman should be village signers, one of whom must sign with a Departmental signer in order for the check to be valid. If you have a State inspector or Project Engineer on site, they can co-sign and verify the checks against the daily and weekly reports prior to issuing the checks on the site.

If a Departmental co-signer is not on the site, the checks can be mailed in with the reports, material billings, etc., for verification and signing of the checks. Income tax and other deductions may be made prior to issuing the checks, or the employees can sign the wage deduction LSR&T Form No. 80.

Upon receipt of cancelled checks and bank statements (mailed to the Region LSR&T Engineer) the appropriate checks, or copies, should be attached to the weekly reports and material billings or invoices for ease of review.

CHAPTER 7
EQUIPMENT 7-0
Purchase 7-1
Rental 7-1
Operation 7-1
Repair and Maintenance 7-1
Disposal 7-1
Inventory 7-2

EQUIPMENT

LSR&T Construction Equipment Purchase

To insure the LSR&T construction fleet remains operational, new or used equipment may be purchased to replace existing equipment.

The request for funds to purchase equipment must be accompanied with adequate proof as to necessity, intended use and cost savings. Each request will be adjudicated on its own merit.

Equipment purchases to expand the existing LSR&T construction fleet will not be approved except where a cost savings to purchase rather than rent is justified.

Equipment Rental

A. Private Source

Before approving an equipment rental contract, the equipment to be used should be examined by the Region LSR&T Engineer or his representative (knowledgeable of machinery) as to its operational capabilities. The equipment must meet state safety standards.

For equipment rental agreements see Chapter 11, LSR&T Form 70.

B. WCF Region and Headquarters Levels

WCF equipment should only be used if absolutely necessary.

A check of the rental rates before using is necessary and establishing if rental will be wet or dry. When using WCF equipment (wet rental) it is necessary to make sure that all fuel and repair costs are charged to the vehicle and not the project. Establishing a system for recording daily usage is necessary.

Operation

Proper training of operators before they mount the piece of equipment is essential. Safety of the operator and by-standers must be considered the main factor during this orientation.

Repair and Maintenance

Prior to beginning work on a project instructions should be provided on preventative maintenance procedures and establishing a system for recording the daily equipment usage and a time frame for servicing equipment.

Disposal of LSR&T Equipment

Refer to Chapter 6, Construction, Equipment Costs.

Inventory In-house operation

A record should be kept of all equipment assigned to LSR&T and should include the type, model, location, condition and accumulated maintenance costs.

Jeffrey S. Chandler - Project Engineer

Southcentral Region V

Bernard Murphy - Region LSR&T Engineer
P.O. Box 507
Valdez, Alaska 99686 Phone: 835-4322

Due to the multiple duties performed by the Southcentral Region LSR&T Engineer, his position is retained in the Region's engineering budget for Design and Construction.

Temporary Reassignment:

To insure that LSR&T retains program oriented personnel for the construction season all personnel assigned to LSR&T must be given temporary reassignment to other sections of DOT/PF when the workload dictates. Concurrence of the accepting sections must be obtained. Any deviation from this procedure must have the approval of the State LSR&T Engineer.

If the RSA method of finance is utilized, a memorandum must be sent to the affected employee with a copy to the LSR&T Engineer. If a PA is used, a memorandum is not necessary.

Outside Employment:

Any Department of Transportation and Public Facilities' employee who is in violation of S.O.P. 0900-11 policy on outside employment, will be subject to immediate dismissal for cause. Supervisors who condone these violations will be subject to the same action.

Village Employees

Local Hire - Local residents receive priority hire.

Local Control - As stipulated in project agreement.

State Control - When the Department administers the project, the control of the project is by the Department utilizing an initial hire list from the village.

Local Government Employees

The local government has control of the local government employees.

Training of Local Community Residents

State Employee Local 71 Status.

In hiring of Local 71's in the LSR&T program, the following pay schedules will be in effect in our training programs and hiring policies.

Our laborers will be hired at a WG 58, the normal pay schedule. Much of our work for them is in land clearing (ax work), and they need no training there, other training necessary is minimal. All operators, that is, truck drivers, load operators, and dozer operators, will start at the WG 57, Step A. At the end of two (2) pay periods they will progress to WG 56, at the end of four (4) additional pay periods, they will go to WG 55, at the end of four (4) more pay periods, they will go to WG 54. At that point, the truck drivers will receive no more increases. They will be considered trained. Four pay periods after the loader or dozer operators receive their WG 54 pay, those operators will move to a WG 53.

In the event this schedule goes into two (2) seasons, all the time in the previous season will count toward grade increase upon returning to work the succeeding season.

The employees will be in temporary status as they complete the progression through the training period. At the time they finish their training, and achieve full pay, they will enter normal employee status, i.e. either permanent status or no more than eight (8) continuous pay periods of temporary status.

An agreement to the effect must be obtained between the employee and the supervisor at the time or hire.

Community Employee

Construction projects in communities utilizing locally hired crews are sometimes plagued with high rates of absenteeism. In an effort to induce crew members to show up regularly the following training scale is established, subject to certain stipulations noted below, for drivers and operators hired without previous experience:

Step 1	First two weeks	*$ 6.00/hr
Step 2	Second two weeks	*$ 8.00/hr
Step 3	Third two weeks	*$10.00/hr
Step 4	After six weeks	*$11.00/hr

* or prevailing wage

The principal stipulation is this: An employee must be at work punctually and every day of a continuous two week period to be eligible for a raise to the next step in the scale. In the event that he is not regularly punctual or misses a portion of a day in any week, he forfeits the opportunity to apply that week towards fulfillment of the two-week requirement.

Operators and drivers hired with previous experience may be started at a higher step depending on qualifications. Operators and drivers who are current union A card holders are paid prevailing union, provided they are never absent without cause. Mechanics, clerks and secretaries wages are commensurate with experience or union background.

The crew should be advised that absenteeism could be cause for applying the scale in reverse after an employee has reached steps 3 and 4.

CHAPTER 9

PROJECT MAINTENANCE 9-0
Road Powers 9-1
Maintenance Responsibility 9-1
Revenue Sharing 9-2
Routine Maintenance 9-2

PROJECT MAINTENANCE

Road Powers

Local Government as defined in the LSR&T Act:

Article 3. Local Service Roads and Trails

Sec. 19.30.151. Local government participation. (A) Upon application by a local government, local service roads and trails constructed under the provisions of Sections 111-241 of this chapter and located within the jurisdictional boundaries of a local government, as defined in Section 241(3) of this chapter, may be transferred to that local government upon approval by the Department of Transportation and Public Facilities and after a vote of the people in the area. A local government which has assumed road powers before May 20, 1971 may not be required to hold an election as provided by this section.

(b) The commissioner is authorized to transfer funds to any local government which he determines to be qualified to construct local service roads or trails.

(c) Nothing in Sections 111-241 of this chapter prohibits a local government from participating financially in the construction of a local service road or trail.

Sec. 19.30.211. Maintenance. The department shall maintain, or cause to be maintained, any project constructed under the provisions of Sections 111-241 of this chapter, except that upon mutual agreement of the commissioner and the local government the responsibility for maintenance may be transferred to the local government if it is authorized to assume road maintenance powers.

Sec. 19.30.241. Definitions. In Sections 111-241 of this chapter (2) "home rule city" means a city defined in AS 29.08.010;

(3) "local government" means an organized borough of any class or a home rule city; (also home rule municipality).

Sec. 19.30.251. Local government powers. Road construction and maintenance authority is granted to local government, as defined in Section 241(3) of this chapter, which do not otherwise have that authority; however, the authority granted is limited to participation in the construction and maintenance of local service roads under Sections 111-241 of this chapter. (Section 2 ch 84 SLA 1971)

Maintenance Responsibility

Maintenance responsibility of projects constructed with LSR&T funds may be accepted by all local entities. Revenue sharing is available to all cities and boroughs incorporated under the laws of Alaska. Local governing bodies not incorporated may enter into road maintenance agreements with the Department of Transportation and Public Facilities. It is mandatory for home rule cities and home rule municipalities to maintain LSR&T funded projects.

Revenue Sharing

The Regional LSR&T Engineer should make every effort to explain the advantage of revenue sharing to all incorporated cities and organized boroughs.

For a local government to seek revenue sharing, the appropriate official must submit a release of maintenance responsibility to the Regional Highway Engineer for all roads constructed with LSR&T funds.

This document is to be sent to the State LSR&T Engineer who in turn will submit it with all supporting information to the Deputy Commissioner for Maintenance and Operations. When the request is approved, the mileage requested by the local government will be submitted by Maintenance and Operations to the Director of Transportation Planning to be deleted from the State Maintenance System.

The State LSR&T Engineer will be informed when the transaction is complete.

Routine Maintenance

Local service roads constructed by LSR&T funds and maintained by the Department shall be maintained as scheduled by the Regional Maintenance and Operations Division.

Reference is made to P & P No. 50-1000.

See Chapter 4 for projects maintained by State forces.

CHAPTER 10
CONTRACTS 10-0
Local Government Construction 10-1
DOT/PF Construction 10-2
Consultant Engineers 10-2
Negotiated Construction 10-2

CONTRACTS

Local Government Construction

All contracts with construction or engineering firms funded wholly or partially with LSR&T funds must be approved by the Deputy Commissioner for Design and Construction. No reimbursement of funds will be made for work performed prior to this approval.

All addendums, change orders, extra work orders must be approved by the Regional Engineer for Design and Construction.

Advertising and award of contract requires the approval of the Deputy Commissioner for Design and Construction.

Authority to Proceed will be issued by the Regional Engineer for Design and Construction upon receipt of the Department's concurrence in award.

The plan assembly submitted by a local government for approval must include the following information:

1. Plans
2. Specifications
   a. Table of Contents
   b. Notice to Bidders
   c. Information to Bidders
   d. Invitation for Bids
   e. Contractor's Questionnaire
   f. Proposal
   g. Corporate Acknowledgement
   h. Contract Bond (Payment)
   i. Contract Bond (Performance)
   j. Resident Agent's Affidavit
   k. Non-Collusion Affidavit
   l. Bid Schedule
   m. Contract
   n. Certification with Regard to the Performance of Previous Contracts or Subcontracts subject to the Equal Opportunity Clause and the filing of required reports.
   o. Certification with Regard to Increased Participation by Minority Business Enterprise in Highway Construction.
   p. Special Provisions. Specific Equal Employment Opportunity Responsibilities for all non-exempt State and State-Assisted Construction Contracts awarded in the State of Alaska.
   q. Notice of Workmen's Compensation Insurance
   r. Special Provisions
   s. Current Alaska Minimum Wage Rates
3. Engineer's Cost Estimate
4. Department of Fish and Game permit, if applicable
5. Coast Guard or Corps of Engineers permit, if applicable
6. Assurance that a Bid Bond will be required

Documents may vary from the above, but results must be conformable.

Department of Transportation and Public Facilities Construction

All contracts require the approval of the Commissioner.

Authority to Proceed will be issued by the Deputy Commissioner for Design and Construction.

Consultant Engineers

Consultant Agreements with local governments and subsequent changes to the agreements require approval by the Deputy Commissioner for Design and Construction.

A minimum of three Consultants shall be contacted to perform the services or justify why it is not feasible.

Negotiated Construction Contracts

The following facts are necessary to consider a negotiated contract for construction of an LSR&T funded project:

1. Project less than $100,000 may be negotiated at the discretion of the Department.

2. Projects exceeding $50,000 require bonding.

3. Legal bonding required for a contract is bonding of 50% payment and 50% performance.

4. Difference between the low bidder and the negotiated price must result in substantial savings to the State.

LOCAL SERVICE ROADS & TRAILS

PROJECT:

Under the provisions of AS 19.30. 111 et. seq. this Project Agreement is entered into on this_____day of_____, 19___, by and between the State of Alaska, Department of Transportation and Public Facilities (hereinafter the Department), and_____ ___ _____, (hereinafter the Local Government) for the purpose of constructing the following described project:

(A) OBLIGATIONS OF THE LOCAL GOVERNMENT

To further accomplish the construction of the project, it is agreed that the Local Government shall:

1. construct the above-described project, which is more fully described by Appendices "A" and "B" attached hereto and made a part hereof consisting of a location plat (Appendix "A") and a typical cross-section (Appendix "B");

2. provide all funds necessary to construct the project;

3. acquire and certify to the satisfaction of the Department that all necessary right-of-way, easements, permits and utility agreements have been obtained prior to commencement of construction;

4. award a contract for construction of the project to the lowest responsible bidder through the competitive bidding process unless the Commissioner of the Department expressly approves an alternate method;

5. execute a written contract with a contractor for the project;

6. maintain accurate daily written records of all costs for which reimbursement is requested, which records shall be made available for inspection by the Department upon request, and preserve such records for a period of three years following final acceptance of this project by the Department or termination of this agreement, after which they may be destroyed except for the project history, project engineer's diary, photos and the correspondence folder.

7. promptly pay in full all legitimate claims for services or material provided for construction of this project and hold the Department harmless f m any claims or costs arising from the Local Government's failure or refusal to pay claims, whether or not those claims are legitimate;

8. indemnify, defend and hold harmless the Department from all liability, claims and demands arising from the work undertaken by the Local Government, its employees, agents or representatives, or arising out of any operation, no matter by whom performed or on whose behalf, whether or not in conjunction with work to be -ordinated by the Department;

(B) OBLIGATIONS OF THE DEPARTMENT

1. If the Local Government has fulfilled its obligations, the Department shall reimburse the Local Government for the cost of materials and labor used in construction of the project in an amount which may not exceed the sum of $_____, the maximum amount of Local Service Roads and Trails funds allocated to this project.

2. The Department further agrees to provide assistance upon request of the Local Government in the form of advice and consultation for all phases of the project, including further design refinement and advice during construction. However, managment of the project is the full responsibility of the Local Government.

(C) F RTHER CONDITIONS

1. Local Service Roads and Trails funds are obligated for this project in an amount as shown on the attached funds authorization which is made a part of this agreement. Maximum reimbursement for pre-construction engineering is limited to 15% of the Local Service Roads and Trails funds for this project.

2. Expenses incurred by the Local Government prior to the date of execution of this agreement will not be reimbursed by the Department.

3. The Department will not be obligated to reimburse the Local Government for costs which can not be adequately verifed as a necessary cost of construction.

4. The following stages of this project are subject to the prior written approval of the Department;

a. Plans, specifications and estimate prior to advertising

b. Award of the construction contract.

c. Any proposed contract for consulting engineering services.

d. Any changes in plans or specifications occurring during the construction of the project.

5. The Department has the right to make periodic inspections during the course of work and a final inspection upon completion of construction for the purpose of certifying that the funds expended by the Local Government on this project qualify for reimbursement under this agreement.

6. When the construction of this project has been completed and duly accepted, the responsibility for maintaining the facility shall be borne by the_____.

If the Department agrees to perform the maintenance, the Department reserves the right to issue utility, driveway and encroachment permits. If the Local Government is to bear the maintenance responsibility, the Local Government agrees to indemnify, defend and hold harmless the Department and the State of Alaska from any and all claims arising in connection with or related to the maintenance function.

7. This agreement may not be modified except by written agreement between the Commissioner of the Department and an authorized agent of the Local Government.

8. The parties to this agreement shall obey all federal, state, and local laws and regulations.

9. This supersedes any and all other agreements expressed or implied between the Department and the Local Government with respect to this project and this agreement contains the entire agreement between said parties.

Project Agreement
Local Service Roads and Trails
Local Hire

Under the authority granted by Chapter 84 Sessions Laws of Alaska 1971 this project agreement is entered into by and between the State of Alaska, Department of Transportation and Public Facilities; hereinafter called the Department, and _____, hereinafter called the Local Governing Body, that:

1/ The Department will upgrade local streets, access roads or trails, as shown on the attached plat with the typical section of improvement.

2/ A. In the event existing streets and platted street right-of-way do not agree, the platted right-of-way will govern.

B. Work will not begin until certification for the necessary right-of-way for this project is assured.

3/ A. The Department shall utilize local hire for on site project personnel excluding engineering personnel and project foreman.

B. Engineering personnel or project foreman may be hired locally at the discretion of the Department.

C. The Department will obtain initial local hire through the local governing body. Subsequent hiring is at the discretion of the Department.

4/ The cost of this project to the Department will not exceed _____.

5/ The Local Governing Body shall indemnify, defend and hold harmless the Department from all liability, claims and demands arising from the work undertaken by the Local Governing Body, its employees, agents, or representatives, or arising out of any operation, no matter by whom performed, or on whose behalf, whether or not in conjunction with work to be coordinated by the Department;

6/ The local Governing Body retains the right to provide additional unencumbered funds if they so desire.

7/ Project termination or work stoppage is dependent upon exhaustion of funds or completion of project, whichever occurs first.

8/ Following construction, maintenance will be provided by the _____.

9/ Any modification of this agreement are subject to mutual approval of both parties.

To witness the agreement, the Department and the Local Governing Body have affixed hereto the signatures of the Deputy Commissioner for Design and Construction and Village Council President, or duly authorized signatory of said Local Governing Body.

PROJECT REIMBURSEMENT AGREEMENT

This Agreement made and entered into this_____day of _____, 19___, by and between

Party of the First Part: State of Alaska, acting by and through its Department of Transportation and Public Facilities, hereinafter called the Department

Party of the Second Part: The _____, hereinafter called the Local Governing Body.

WITNESSETH:

Whereas, the local governing body desires to participate in the Local Service Roads and Trails program and,

Whereas, the local governing body has been allocated funds for the purpose of constructing a Local Service Road, and

Whereas, the local governing body desires that the Department administer the project in their behalf

THEREFORE, it is mutually agreed that:

A. The local governing body agrees to employ people for the purpose of constructing a Local Service Road Project.

B. The local governing body agrees to pay employees utilized in constructing the Local Service Road Project the following hourly rates:

Title	Hourly Rate

C. The local governing body agrees that pay will be for the actual hours worked on the project.

D. The local governing body agrees that:

1. The Department will supervise the people working on the project, or will assign a local foreman to supervise the project.

2. The Department will determine the days, shifts, hours and number of people to be used on the project.

3. The Department reserves the right to judge the ability of any locally hired person on the project and, if found unacceptable by the Department, the local governing body will provide an immediate replacement.

4. The local governing body requests that adequate Workman's Compensation and Liability Insurance be arranged by or on behalf of the local governing body for the duration of the project and that the Department pay the premiums for the local governing body.

E. The local governing body agrees that under no circumstances does this agreement bind the Department to any expenses in excess of the amount specified in the project agreement.

F. The local governing body specifically agrees to indemnify, defend and save harmless and exonerate the Department of and from all liability, claims and demands arising out of the work undertaken by the local governing body its employees, agents, representatives; or arising out of any operation, no matter by whom performed, or on behalf, or in conjunction with work to be coordinated by the Department.

G. The Department agrees to reimburse the local governing body for the wages of employees utilized on the Local Service Roads project and pay the premium, on behalf of the Local Governing Body, for Workmen's Compensation and Insurance Liability from the project funds.

H. It is mutually agreed that this agreement may be terminated by either party upon written notice in forty-eight (48) hours.

I. This agreement shall become effective on the date of its approval by the Department.

STATE OF ALASKA
DEPARTMENT OF HIGHWAYS
AGREEMENT FOR RENTAL OF EQUIPMENT

Project Name: _____ Date: _____

Project No.: _____ Activity: _____ M.P. _____ To _____

The State of Alaska hereby enters into an agreement with:

Owner-Lessor: _____ Phone No.: _____

Address: _____ Alaska Business License No.: _____

City, State: _____ Zip Code: _____

The Department of Highways, in order to augment equipment pool operations, requires the rental of the equipment described herein:

1. The Lessee, the State of Alaska, agrees to pay for all damages caused by the negligence of its employees. The Lessor shall assume liability for damages caused by the negligence of other parties or acts of God.

2. The State of Alaska, will make all normal operating repairs to the equipment except those repairs required due to usage prior to this contract. The Lessor further warrants that he will pay for all major repairs to the said equipment.

3. The owner-lessor agrees to deliver the specified equipment to _____ and the equipment shall be picked up at _____.

   The owner-lessor warrants that the equipment is in good working order, and available for the full time specified in this contract.

   The owner-lessor further certifies he holds an Alaska business license, and has submitted his bid using the name appearing on that current Alaska business license.

   He further certifies he shall comply with all applicable State and Federal Laws and Regulations.

4. Payment of Taxes: As a condition of performance of this contract, the contractor shall pay all Federal, State and local taxes incurred by the contractor, sub-contractor or other person or persons in the performance of this contract, and proof of payment of these taxes is a condition precedent to payment by the State under this contract.

   Failure to comply with this provision releases the lessee from the rental and transportation costs.

5. The lessee will assume the responsibility for Workmans Compensation Insurance, when the leased equipment is under the operation and control, by an employee of the State of Alaska.

6. Description of Equipment: _____ With: _____. Without: fuels, oils & operator.

7. Rental Fee: $_____ Shall be per _____.

8. Specified time: _____ To _____.

EQUIPMENT

Type of Equipment	Started Work	Stopped Work	* Down or Standby Time	Work Performed	Hours Worked

* Down or standby time shall be explained in detail.
Note: If additional room for remarks is needed use back of this sheet.

Foreman's Signature:_____ Date:_____

FOREMAN'S DAILY REPORT INSTPUCTIONS

GENERAL:

The Foreman's Daily Report in the course of a normal day's operation should list the work being performed and by who and what equipment is involved. The report,in the event men and or equipment changed type of work,should note hours spent oneach item for the day. (e.g.) If a laborer was involved with culvert installation at the begining of the shift then worked atdrilling, his operation as noted on the "Daily Report" would show, say, 2 hrs.culvert,6hrs.drilling. The same would hold true for equipment changing basic jobs. In the event that for several days running,(e.g.) clearing and grubbing, a laborer would be noted on the first full day of this operation that he set chokers, operated chainsaw or whatever. As long as this operation contued the Foreman could note each day that "Men & Equipment the same" The first day of each week should be detailed. In all cases the remarks area on the "Daily Report" shall be filled out showing what work was accomplished for the day. The instructions for the equipment are the same as for the men. This report should contain enough information so that the job could be followed through on a day by day basis. This will be necessary for writing up the project history after completion of the work and might possibly show pitfalls that could be avoided in future operations.

SPECIAL:

(1) Materials should be noted as to when ordered,expected arrival date and actual arrival date. If a delay is encountered it should be noted and what action was required if any.

(2) The same holds true for Equipment.

(3) Unforeseen problems encountered should be described in detail. (e.g.) Inclement weather, major equipment breakdowns, anything that might slow down or stop the work for an appreciable length of time.

(4) State or Federal visitors,or legislatures or any one of note that might visit the project. If possible get their name, organization represented and any comments pertaining to the work.

(5) Anything related to the project that might be of interest that might not be normally noted.

IV. ANALYSIS

St. Paul's total two-phase harbor development will cost $28,900.0. Recommend Phase I funding at $12,000.0 and Phase II funding at $16,900.0.

St. George's harbor development cannot be phased. The latest cost estimate is $12,000.0 to $14,000.0. There is an existing construction fund of $3,660.0. A maximum of $10,340.0 is needed in addition to the existing construction fund. This increase is due to a reevaluation of available on-island armor rock sources. Design modifications have occurred as a result of available armor rock having a lower specific gravity than originally estimated.

The FY'84 Capital Expenditure column reflects the additional $10,340.0 needed to fund the St. George harbor development plus the cost needed for Phase I of the St. Paul Project.

Gentlemen:

Report of Additional Rock Testing
Surface Boulder Samples
St. George Island, Alaska

This letter summarizes the results of Los Angeles abrasion (ASTM C-131) and California durability index (plastic fines and aggregate) tests performed on samples of rock from St. George Island. Durability index tests were in accordance with AASTHO T-210-72 procedures.

The samples were obtained from "large rock" areas delineated on Figure 2 of our November 24, 1982 geotechnical report. The samples were obtained by St. George residents acting on our telephone instructions with respect to sample size, location, etc. Earlier, specific gravity and absorption testing was completed for these samples; the results of those tests were presented in our letter dated February 17, 1983. At this writing, accelerated expansion tests (Corps of Engineers CRD-C148-69) and freeze-thaw loss testing (AASHTO 103-78, 50 cycle) are still in progress. Those results will be presented later. At this time, however, the accelerated expansion testing has been in progress beyond the nominal two-week time limit. Casual observation indicates no change in the samples. Also, the freeze-thaw loss tests have progressed through about 20 cycles. Thus far there is no visible change.

The results of the LA abrasion and durability index tests may be summarized as follows:

LABORATORY TEST RESULTS

Sample Identification	LA Abrasion Loss (percent)	Durability Index
Sample A+E (combined)	24(a)	-
Sample B+F (combined)	56(a)	-
Sample D	-	83.5(b)
Sample Z	-	85

(a) LA abrasion tests utilized gradation "A" (1-1/2 minus to 3/8 plus material).
(b) Two trials were run; results were 82 and 85, the average, 83.5, is reported above.

In addition to this testing, we have completed an examination under high magnification of these rock samples and have compared them side-by-side with the surface boulder samples obtained by ADC earlier this year. On the basis of this examination, all of the "new" samples have a less "open appearing" fabric than the ADC samples. There are no significant lithological differences, however; all the rocks can be classified as felsite or felsophyre as reported in our January 6, 1983 letter. Texturally, all of these rock samples appeared quite similar to those rocks obtained from the core borings and exposed in the cliff face. The fabric was perhaps somewhat more "open" than the cores, but only slightly more so. It was definitely tighter than the previous surface samples. Of course, this appearance difference is reinforced by the results of the specific gravity testing (as reported in our letter of February 17, 1983). Those test results were in the same range as the specific gravity data obtained by our earlier testing on the cores; they were considerably higher than the previous surface sample tests.

We have no complete, certain explanation for these differences in rock character. We understand that the initial surface boulder samples were broken from the edges of large rock blocks with heavy

hammers. Although close examination revealed no obvious signs of advanced chemical weathering (i.e., discoloration, deterioration of felospars, presence of clay minerals, etc.), we must speculate that some changes nevertheless had occurred. Perhaps years of frost action had opened up the fabric in some subtle way. As indicated, the only discernible difference between all the rock samples, based on examination under fairly high magnification, was the apparent "openness" of fabric. Since there is no reason to expect major lithologic or fabric differences on the basis of the rock origin, and since careful examination disclosed no litholcgical differences, we can only conclude that some process has operated to reduce the density of the boulder surfaces. The weight of evidence now suggests that a bulk specific gravity in the 2.6 area, or perhaps slightly higher, should be utilized for stability calculations.

Most of the additional testing (absoprtion, accelerated expansion, durability index, Los Angeles abrasion, and freeze-thaw loss) suggest that the rock is of reasonably good quality for armor rock purposes. The only exception is the LA abrasion test on combined Sample B and F, which produced a loss of 56 percent. Examination of the other test results, as well as the rock performance to date in the accelerated expansion and freeze-thaw testing, provides no clue as to why this particular sample should have performed so poorly in the abrasion testing. It is true that all of the samples for abrasion and durability index testing had to be crushed and screened from larger rock particles. Our review of case history data has established that crushed rock (as opposed to rounded gravel or crushed gravel) produces significantly higher losses under LA abrasion testing. This is particularly true of brittle rocks (such as these) which tend to break in ways that produce many relatively thin particles with sharp edges. We speculate that this may be the reason for the anomalously high abrasion losses for combined Sample B and F.

We have completed additional research in an attempt to better understand the implications of the various tests that we have completed. Our research did not produce any significant body of data comparing armor rock performance with results of these tests. As you know, the Los

Angeles abrasion and durability index tests were designed primarily for evaluation of concrete aggregate and crushed base or surfacing material for roads. The best information we obtained was included in a letter from Mr. James Paxton, Director of the Northern Pacific Division Corps of Engineers Materials Laboratory in Troutdale, Oregon. He transmitted to us a summary of typical riprap specifications that he had compiled for the various Corps regions within the North Pacific District and other (undefined) sources. We have reproduced that table in an attachment to this letter. It was interesting to learn that there is no district-wide policy within the Corps of Engineers with respect to riprap or armor rock specifications. During telephone conversations, Mr. Paxton explained that the specification provisions in this table are typical but all of them are not necessarily applied to each project. Also, he emphasized that the Corps tends to rely first on a record of satisfactory performance from a quarry; they "fall back" to specific specification provisions and extensive testing only if a quarry does not have such a record. (In earlier conversations with geotechnical engineers within the Seattle District, we were informed that they had numerous experiences with quarries that performed well in service where specification provisions indicated they should not and vice versa.)

- o O o -

We will report the results of the LA abrasion and durability index tests in a subsequent letter. In the meantime if you have any questions, feel free to call us. The budgetary reserve in our geotechnical study contract has been exhausted, no further testing or study can be undertaken without further authorization.

Yours very truly,

Attention: Mr. Jeff Gilman

Gentlemen:

Preliminary Report
Additional Laboratory Testing
Surface Boulder Samples
St. George Island, Alaska

This letter summarizes the results of specific gravity and absorption testing on rock samples from the various identified surface source area near Zapadni Bay on St. George Island. Samples were obtained from the "large rock" areas delineated on Figure 2 in our November 24, 1982 geotechnical report. The samples were obtained by St. George residents acting on our telephone instructions with respect to sample size, location, etc.

Specific gravity and absorption testing has been completed for all of these "new" samples. Additional tests, including Los Angeles abrasion, durability index, freeze-thaw loss, and accelerated expansion are now in progress and will be reported later.

In accordance with your request, specific gravity and absorption testing was completed in accordance with two different ASTM standard methods for comparison. Also, the specific gravity was computed in three ways - bulk, bulk SSD (saturated surface dried), and apparent. The results of these tests are summarized in the attached table.

All of these samples, irrespective of the test method, have higher specific gravities than the first surface boulder samples. The values, however, are lower than for the initial test results which were obtained from cores and samples broken from inplace rock in the sea cliff. A detailed examination of the lithology, texture, and fabric of these latest rock samples has not yet been completed. However, a brief hand lens examination indicates some variation. Some of the samples appear very similar to the initial batch of surface boulder samples that were obtained by ADC. A few pieces of rock appeared to have the "tighter" fabric and slightly darker color that characterized the bulk of the sound rock in the cores. Others were of

intermediate appearance. A more detailed examination will be made at the conclusion of the testing program and our final report will include that information together with all of the test results.

- o O o -

We trust that this information will be of value to you in the ongoing design development. If you have any questions, feel free to call us at any time. The LA abrasion and durability index tests should be completed in the latter portion of February. The other tests are quite time consuming and will be completed later.

Yours very truly,

DAMES & MOORE

St. George Village Corporation Forms Tanaq Fisheries Company

by Charles W. Smythe, Ph.D.

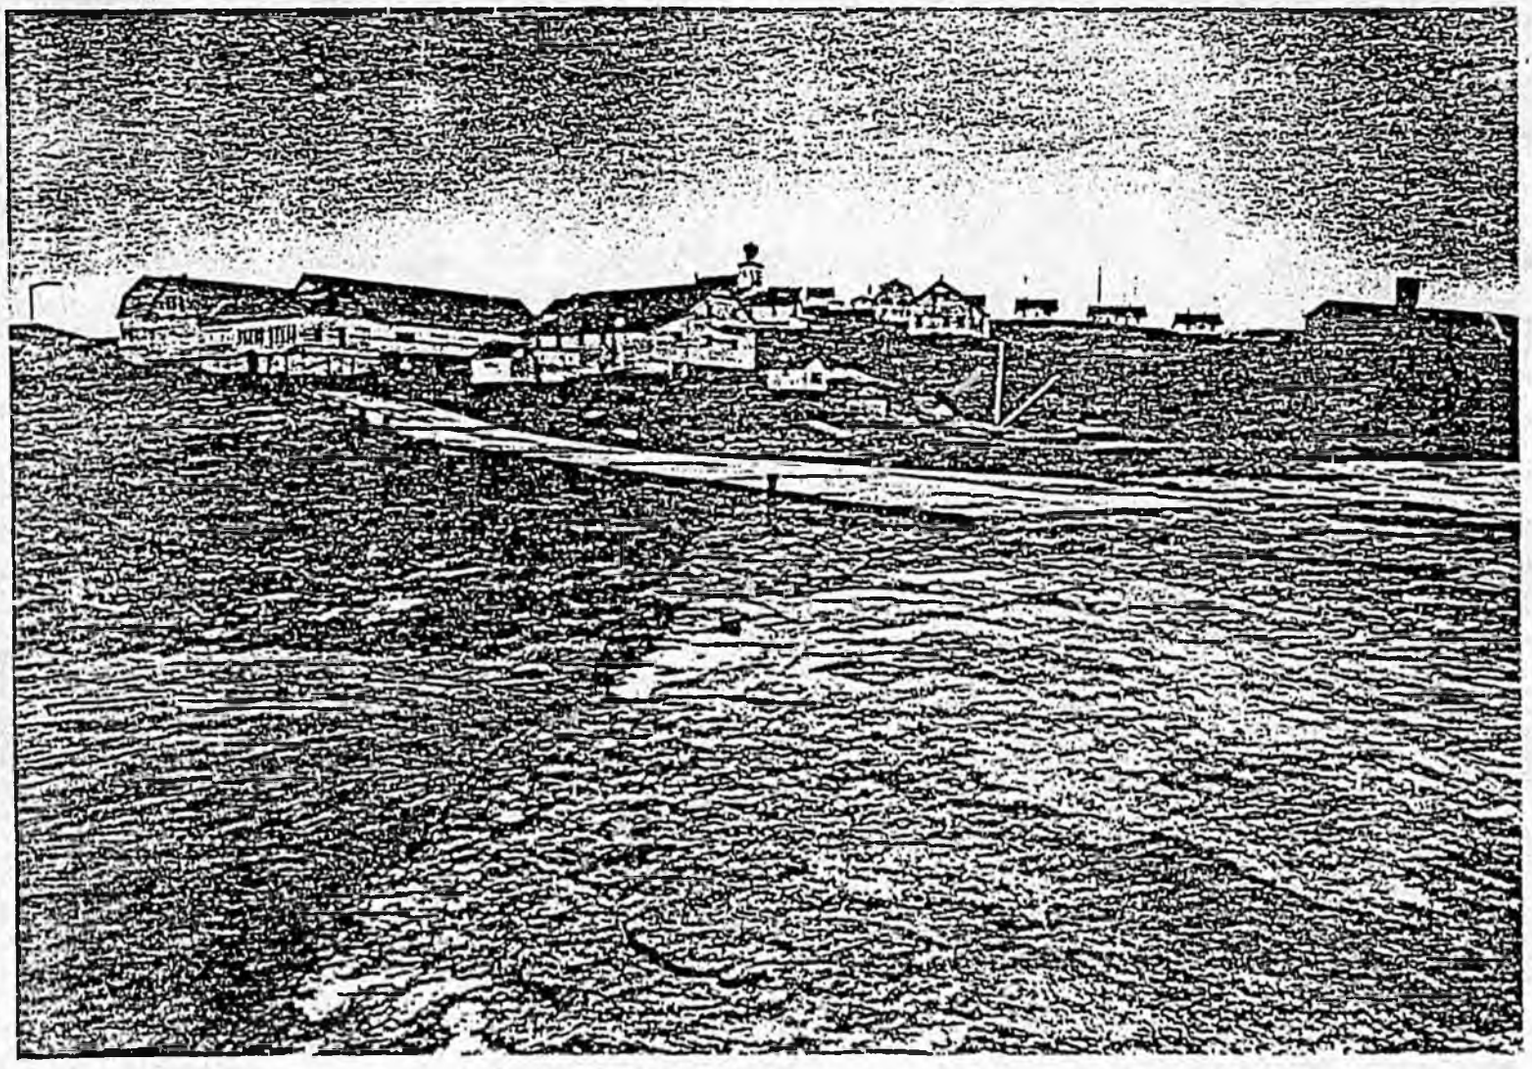

Photo courtesy of Aleutian-Pribilof Island Association, Inc. Photo by Stapleton/Klamser Photographers

Faced with the imminent withdrawal of the National Marine Fisheries Service's administrative support to the village of St. George later this year, the St. George Tanaq Corporation and the Village Council are developing plans for economic alternatives to government employment and administration. Because NMFS provides at least 80 percent of the earned income on the island, the need for immediate viable alternatives is critical. Tanaq is focusing its development efforts on the fisheries potential of the surrounding Bering Sea.

Last summer, Tanaq started a commercial fishing and fish processing operation which produced 14,000 pounds of frozen halibut during the two-week commercial season. Building upon the subsistence halibut fishing practices of the villagers, Tanaq bought fish from local fishermen who caught halibut hand-jigging in the Bering Sea from outboard-powered aluminum skiffs. The corporation sold the fish to the Hokuten Trawlers Association in Japan, which has agreed to buy all the fish that will be produced in the 1983 season.

The purchase agreement is part of a joint venture formed last month between the St. Gearge Tanaq Corporation and the Hokuten Trawlers Association, known as the Tanaq Fisheries Company. This business will take the lead in developing a primary interest in fishing on St. George. For the 1983 season, the Japanese group will give St. George a 26-foot vessel, including gear and equipment for halibut and crab. They will also send to St. George four experts in boat and equipment operation and fish processing. The Tanaq Corporation has two

Photo courtesy of Aleutian-Pribilof Island Association, Inc. Photo by Stapleton/Kiemser Photographers

Orca boats which will become part of the operation. Tanaq has agreed to sell 500,000 pounds of halibut to the Hokuten Trawlers Association, which will be caught and processed by the Islanders. In order to help ensure their access to the fish resource, St. George is joining with communities on St. Paul, Nunivak and Nelson Islands to request from the North Pacific Fisheries Management Council a longer season and a twelve-mile exclusive fishing zone around the respective islands.

During the last fishing season, the Tanaq Corporation started a fish processing operation in St. George. Villagers were required to process the fish in three different buildings due to the lack of facilities in the community. Flash freezing was done in the freezer at the village store owned by the corporation.

Next season, the corporation expects the operation to be in a single location. In the fall, workers began the conversion of an unused NMFS building into a processing and freezing plant. NMFS had used the building to store transformers, which had leaked oil. A soils test revealed no traces of PCB, which saved the corporation from having to remove 6 feet of ground from under the building.

As a contribution to the fishing operation, the Community Council installed a hydraulic boom near the village suitable for handling the small boats used in the fishery. Also, Tanaq is investigating the potential for providing loans for the purchase of boats. Several men wish to purchase slightly larger boats, 20-24 feet, for their fishing.

A subsidiary of Tanaq, the Pribilof-Highly Company, is another joint venture into the Bering Sea fishing business. This company was formed with a Taiwanese fishing organization. The company is planning to expand their operation with the purchase an American bottom-fishing boat.

Discussing their immediate development plans, Chairman of the Board Anthony Merculief said "We feel pressed to do something right away, in light of the pull-out of NMFS." The Tanaq Corporation and the Community Council are united in their position that the federal government should not pull out until a viable economy is established on St. George. Although their plans appear to be feasible, the fishery development is not definite.

A critical factor in the success of the fishing industry on St. George is the installation of a harbor. The State Department of Transportation is nearing completion of a harbor development plan, but there is no guarantee of state funding for the construction.

Representatives from the corporation and the Council recently signed an agreement with the Department of Commerce which provides for a trust fund to improve the economic viability of the islands (St. Paul and St. George). The Department of Commerce stopped work on refurbishing the NMFS building to be used in fish processing until an agreement was developed, in effect holding the building in hostage.

The Tanaq Corporation and the Community Council are united in their position that the federal govenment should not pull out untill a viable economy is established on St. George.

The community representatives are concerned that there be no stoppage in supplies and equipment to maintain the island, and they sought unsuccessfully to have provisions included in the agreement which would allow them to request assistance from the Department of Commerce if the need arises. They believe this provision is necessary until the island can develop an economic base, or at least until the completion of the harbor facilities. They have requested the Alaskan congressional delegation to obtain the necessary federal appropriations.

If funding is approved by the state, the harbor construction will require three years. After that time the Tanaq Corporation would like to have an onshore fish processing plant located near the harbor, so all of the St. George residents can have the opportunity to work. ■

ALEUT

COMMUNITY COUNCIL

ST. PAUL ISLAND
ALASKA 99660

March 23, 1983

The Honorable Bill Sheffield
Governor of Alaska
Office of the Governor
Pouch "A"
Juneau, Alaska 99811

Dear Governor Sheffield:

The St. Paul IRA Council requests your support funding the St. Paul Harbor Project.

With the National Marine Fisheries Service withdrawal this fall, viable economic alternatives must be found that provide economic development, allow St. Paul Island to become self supporting, and provide a positive outlook for growth in the future.

One of the world's richest fishing grounds surrounds the Pribilof Islands. The people of St. Paul are hard working and industrious but lack the facilities to support commercial fisheries development. We feel harbor development will create a positive impact to the state and local economy, and provide us the means to support ourselves gainfully, independently of government. Hand outs or subsidies.

Locally, the St. Paul IRA is providing $500,000 in fishing vessel loan guarantees to support local fishing development, operating in small boats off the beach - weather permitting. The Tanadgusix Corporation is constructing a small seafood processing plant to handle the catch. The City is providing materials and equipment for construction of limited boat launching facilities. All of this work and support is a start, however, without larger vessels and a protected all weather harbor, fishing seasons are limited to three months of fair weather in the summer.

Please support the St. Paul Harbor Project and our goal to develop a sound economic base for the community, provide future

growth and development commercial fisheries, and become the logistical support base for all marine and offshore related activities in the Bering Sea.

Respectfully,

Adrian Melovidov

Adrian Melovidov
President
IRA Council of St. Paul

ST. PAUL HARBOR
PROJECT DESCRIPTION

JANUARY 1983

The proposed St. Paul Boat Harbor project is planned to fulfill a long-standing need for a port facility in the central Bering Sea. Such a facility will serve to establish an onshore commercial fishing industry near the vast fishery resources of the area, thus making a tremendous contribution in developing a renewable resource industry for the State. Presently, a large percentage of the commercial fish harvested in the region is taken by fishermen and processors from outside of Alaska due to lack of adequate landing and service facilities.

Detailed resource and fishing industry assessments have concluded that development of an onshore commercial fishing industry at St. Paul is, by no means, resource limited. Indeed, demand for such a facility is so great that a development of this type could soon fill to capacity, even at a large scale.

Several development scenarios were analyzed to balance the needs of the fishing industry, the goals of the residents of St. Paul, and likely available construction funds. The result of this analysis was a scenario based on a moderate level of development. Due to anticipated levels of funding, the development plan was divided into phases. Tables 1a and 1b illustrate, in general terms, the minimum expected volume and wholesale value of landings and processed product corresponding to Phase I development. Tables 2a and 2b illustrate similar estimates for Phase II.

In Phase I, dock space will be limited to the extent that priority must be given to vessels offloading fish, or cargo vessels which cannot afford lengthy waits. This facility will primarily be dedicated to establishing an onshore processing and cold storage operation. Limited services, such as fuel and ice will also be available.

The additional harbor area and port facilities planned for Phase II will provide additional berths for fishing vessels and a protected area sufficiently large to accomodate processing ships. Services to fishermen can be expanded to include repair facilities including electronics, gear, and engines.

Table 1a. ANNUAL VOLUME AND VALUE OF LANDINGS AT ST. PAUL HARBOR: PHASE I

Species	Volume (lb.)	Exvessel Price ($ per lb.)	Value ($)
Halibut	640,000	0.85	544,000.
Pacific Cod	300,000	0.21	63,000.
King Crab	600,000	1.00	600,000.
Hair Crab	750,000	0.70	525,000.
Tanner Crab	400,000	0.70	280,000.
TOTAL	2,690,000		2,012,000.

Table 1b. ANNUAL VOLUME AND VALUE OF PROCESSED PRODUCT AT ST. PAUL HARBOR: PHASE II

Species (product form)	Volume (lb.)	Wholesale Price ($ per lb.)	Value ($)
Halibut (frozen H&G)	480,000	2.50	1,200,000.
Pacific Cod (frozen H&G)	75,600	1.00	75,600.
Pacific Cod (salted)	86,400	0.75	64,800.
King Crab (frozen sections)	300,000	3.50	1,050,000.
Hair Crab (frozen whole)	650,000	4.00	2,600,000.
Tanner Crab (frozen sections)	200,000	2.10	420,000.
TOTAL	1,792,000		5,410,000.

Table 2a. ANNUAL VOLUME AND VALUE OF LANDINGS AT ST. PAUL HARBOR: PHASE II

Species	Volume (lb.)	Exvessel Price ($ per lb.)	Value ($)
Halibut	800,000	0.85	680,000.
Pacific Cod	1,000,000	0.21	210,000.
King Crab	1,200,000	1.00	1,200,000.
Bair Crab	1,500,000	0.70	1,050,000.
Tanner Crab	1,000,000	0.70	700,000.
TOTAL	5,500,000		3,840,000.

Table 2b. ANNUAL VOLUME AND VALUE OF PROCESSED PRODUCT AT ST. PAUL HARBOR: PHASE II

Species	Volume (lb.)	Wholesale Price ($ per lb.)	Value ($)
Halibut (frozen H&G)	600,000	2.50	1,500,000.
Pacific Cod (frozen H&G)	252,000	1.00	252,000.
Pacific Cod (salted)	288,000	0.75	216,000.
King Crab (frozen sections)	600,000	3.50	2,100,000.
Bair Crab (frozen whole)	1,300,000	4.00	5,200,000.
Tanner Crab (frozen sections)	500,000	2.10	1,050,000.
TOTAL	3,540,000		10,318,000.

The principal component of the proposed St. Paul Harbor project is a breakwater/wharf structure which will create an artificial harbor at Village Cove. This harbor will contain a fishing port as well as facilities to handle cargo vessels and fish processing ships.

The completed breakwater/wharf will be 1,770 feet in length and will provide approximately 17 acres of protected basin with a depth of 18 feet or greater at mean lower low water, with no dredging required. Since the cost of this facility is estimated to exceed the amount of funding which can be reasonably expected to be available in the initial stage of development, the project is planned to be developed in phases.

Phase 1 development will consist of the excavation of a portion of Village Hill at the harbor site and the creation of a protected harbor by constructing a one thousand foot long breakwater/wharf projecting out from the headland.

The excavation of the headland will create a three acre site for future fish processing plants and other facilities needed for the fishing industry.

The breakwater/wharf will comprise a breakwater and a wharf built back-to-back to form an integrated structure. No dredging of the Cove will be required. The 650 foot long wharf will provide berthing for any of the following combinations:

a. Two 140-foot long fishing vessels each moored alongside the wharf.

b. A floating fish processing ship and two 140-foot long fishing vessels moored side by side.

c. A cargo vessel and two 140-foot long fishing vessels moored side by side.

d. A moored ocean-going barge and two 140-foot fishing vessels moored side by side.

In addition to the above combination of vessels, the wharf will provide moorings for up to ten smaller fishing vessels. The capacity can be further increased by the addition of floats in the inner harbor as well

A roll-on/roll-off ramp will be provided to facilitate the unloading of barges and a bilge and processor wastewater collection and disposal system will be installed along the length of the wharf.

Phase II development comprises the extension of the breakwater/wharf to 1770 feet in order to provide additional berthing and improved shelter. The development will include the provision of service and maintenance buildings, lighting, and utilities.

The engineering and construction costs of Phase I development with the facilities proposed are estimated at $12 million. The costs for Phase II (the full development plan) are estimated at $25.8 million if the complete development is awarded in one contract. If the full development plan is constructed in two phases, the total cost is increased by $3.1 million due to the need to remove and reconstruct the breakwater head from Phase I.

In addition to its contribution to the State of Alaska in general, the St. Paul Harbor project will provide employment opportunities for local residents. These opportunities will occur at two levels. Short term jobs will be available during construction of the boat harbor and port facilities. Long term employment will be made available in fishing, fish processing, cargo handling, and other marine oriented activities.

The construction is scheduled in stages which will provide maximum opportunities for local participation. The initial stage will include haul road construction, demolition of structures and pipeline relocation, opening quarries, and preparation of contractor's housing. Most of these activities could be performed by local forces and would provide an excellent opportunity for local workers to expand their experience into the competitive marketplace. This will make those workers a more attractive labor pool for the main breakwater contractor in later construction contracts.

The main breakwater contract will be awarded to a contractor specially qualified for this work. Some of the jobs will, of necessity, be filled by the contractor's own experienced workers. However, there will also be substantial opportunities for local residents, particularly due to the high cost of transporting and housing outside workers at St. Paul.

Table 1 illustrates an estimate of the type and number of personnel who will be required to construct the Phase 1 facilities.

Even as the harbor is being constructed, long term commercial activity will begin to emerge. Negotiations between local groups and fish companies will establish the basis for onshore processing activities. Ancillary commercial activities such as electronic sales and repair, ship chandlery, fuel sales, ice plant, cold storage, etc. will also provide new business and employment opportunities for local residents.

TABLE 1: Construction Personnel Summary

Transformation of the St. Paul Economy

Photo courtesy of Aleutian-Pribilof Island Association, Inc. Photo by Stephen Klamser Photographers

The Pribilof communities of St. George and St. Paul are the homes of the largest Aleut population living in a single area. Ninety-eight percent of the population are descendents of Aleuts who were brought to the Pribilof as slaves. The Russians transported the Aleuts to these islands in 1786 to harvest seals. The 1867 Treaty of Cession transferred the jurisdiction of Alaska from Russia to the United States. From 1867 until 1969, Aleuts were a captive labor force for private U.S. commercial companies harvesting fur seals.

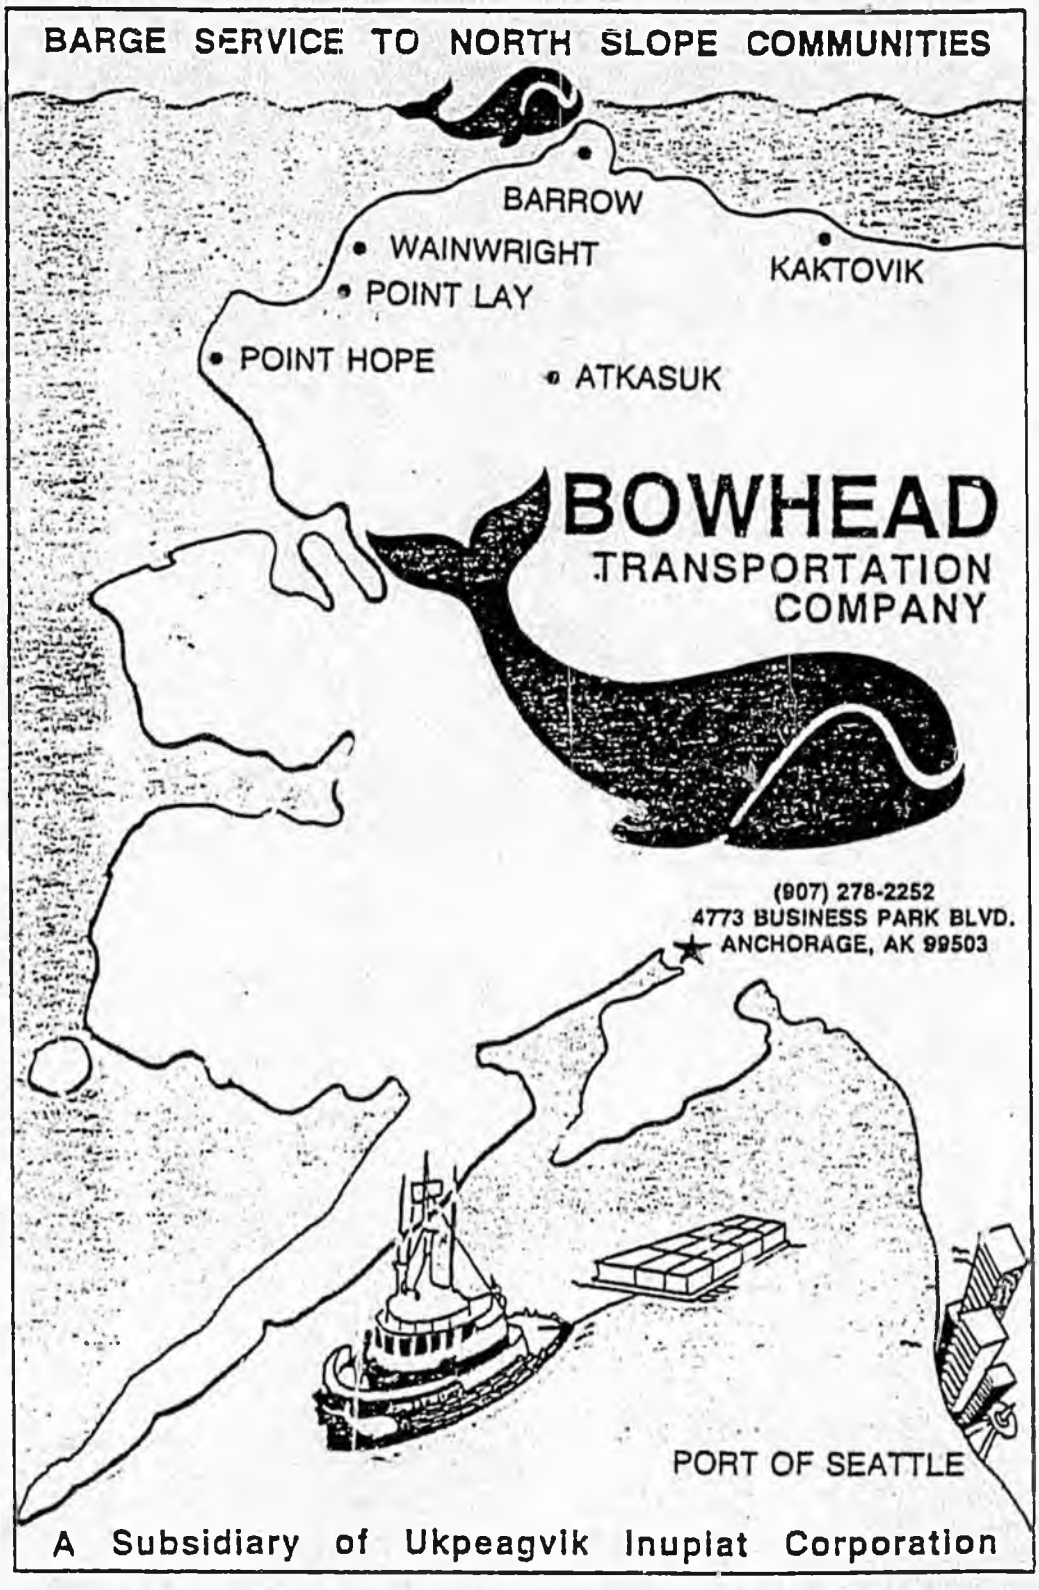
The U.S. government assumed direct control of the Pribilofs in 1910. The U.S. Indian Claims Commission documented the federal administrators' treatment of the Aleuts.. The Commission reported the treatment of the Aleut as abhorrent and the human suffering as beyond

description.

It was only after the collective intervention of the United Nations in 1958, the State Human Rights Commission in 1964 and a special congressional investigation that the Aleuts' conditions of servitude changed. The passage of the 1966 Fur Seal Act provided a means for Pribilof Aleuts to attain political self-determination. Foremost was the right of the Aleuts to create a city government and receive land under the laws of Alaska.

The lack of knowledge and experience with outside institutions delayed the establishment of a city government in St. Paul until 1971. Prior to this time, contact with the outside had been virtually nonexistent. The federal government had exercised rigid control to maintain its Aleut captive labor force.

With the assistance of two Aleuts who were attending college, a city government was created in 1971. At the same time, the Alaska Native Claims Settlement Act (ANCSA) was passed in December 1971. For the first time since the Russians enslaved the Aleuts, the Pribilofs had the political and economic vehicles to attain self-determination. A serious drawback was still the lack of a trained human resource pool. The city and the ANCSA village corporations of St. George and St. Paul devoted the first four years of their existence to learning their basic functions, understanding relevant laws, establishing institutional contacts and training their people.



Since then, the Tanaq Corporation of St. George and the Tanadgusix Corporation of St. Paul assumed ownership of all village homes which were previously held by the federal government. In addition, the Tanaq Corporation took over operation of the local grocery store, and together with volunteers built a small airstrip on St. George.

The St. George Council took over police protection. The St. Paul city council assumed sanitation, water, police, and fire protection, road and airport maintenance and established a local magistrate system. Both villages created a school district and assumed direct responsibility for elementary and secondary education.

The Tanadgusix Corporation of St. Paul developed business enterprises which include marketing seal by-products, tourism, restaurants, two commercial fishing boats, a halibut processing plant and a training course for commercial boat operations. In addition, the Tanadgusix Corporation concentrated on obtaining funds for community economic development and training. The Tanadgusix Corporation also took the leadership role in forming an umbrella organization to guide economic diversification plans. The communities' accomplishments were made in a relatively short period despite the overwhelming handicaps of remoteness, high cost of transportation and operations, and untrained personnel.

In 1979, both communities began to plan the gradual phase-out of the federal operations in the Pribilofs. The government still provides 73 percent of the wage base and funds to operate all services in the villages. To date, only two Aleut individuals have been trained to manage the Pribilof federal operations. With a strong desire to seek political self-determination and economic self-sufficiency, the leadership felt it mandatory to plan the gradual federal phase-out.

The plans for a gradual federal phase-out were abruptly changed in 1980 under the new federal administration. Commerce Secretary Baldridge issued a directive to execute a one-year phase-out of government operations on the Pribilofs

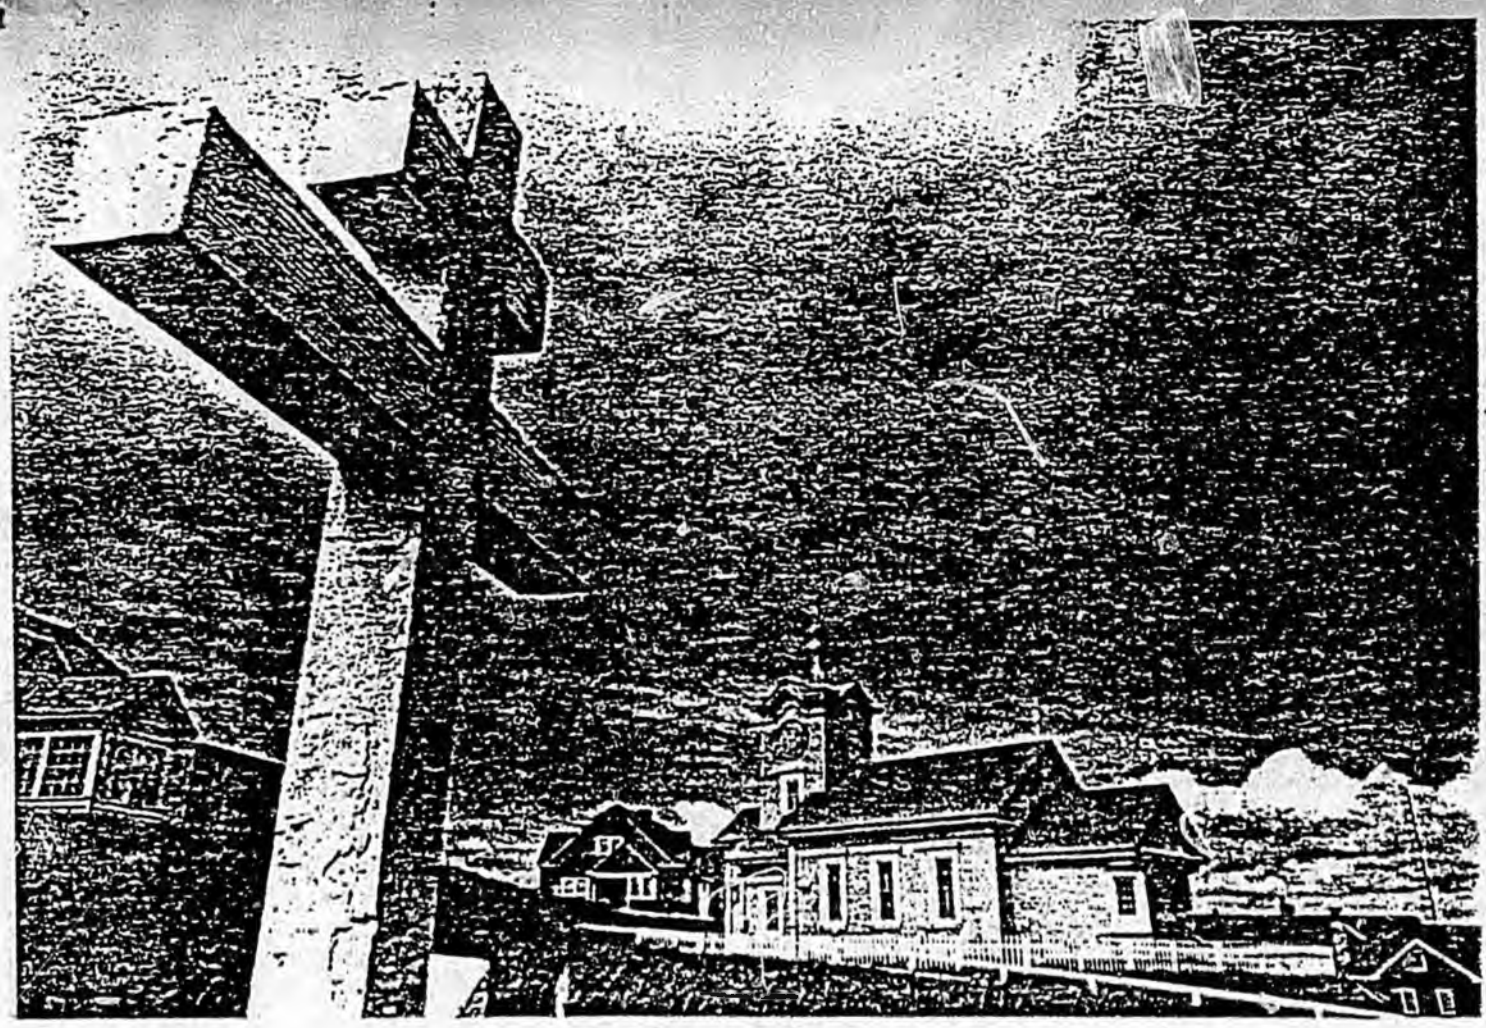


Photo courtesy of Aleutian-Pribilof Island Association, Inc. Photo by Stapleton/Klamser Photographers

Church on Saint Paul

which would cease by September 30, 1983.

The orgainzations on both islands mobilized in September, 1981, under an umbrella organization now called the St. Paul Interorganizational Council. The Council is coordinating the massive planning efforts to take over existing government services and develop new economic bases.

Economic Mobilization Projects

The impending federal withdrawal will require replacement of 73 percent of the total Pribilof wage base and assumption of the following services:

1. Marine transportation for transport of groceries and other major island supplies;

2. Operation, maintenance and funding of island power plants;

3. Purchase, supply and delivery of bulk home fuel and gasoline;

4. Purchase and maintenance of necessary heavy equipment;

5. Maintenance and operation of carpentry, plumbing and electrical shops;

6. Operation and maintenance of all water, sewer and electrical lines;

7. Maintenance of roads and buildings;

8. Funding and operation of the fur seal harvest and related buildings and equipment.

The federal withdrawal and the communities' assumption of these services and alternative economies will undoubtedly result in transformation of the Pribilof lifestyles essentially overnight. The Tanadgusix Corporation's and the St. Paul Inter-Organizational Council are initiating and conducting one of the most aggressive and comprehensive economic mobilization projects in the State.

The Tanadgusix Corporation has already expended nearly $1 million of its own capital in a variety of projects to assist in the economic transformation. The projects range from legal research, community planning and training to fisheries and harbor construction. Many projects are in progress and are coordinated with many federal, state and private organizations

An extensive planning effort is required for the government withdrawal and the development of a new economic base. The leadership has been severely burdened with the demands to coordinate these activities. At the same time, they must continue to conduct the usual governmental and corporate functions.

The leadership reports that a harbor is an essential requisite for the community's economic survival. They maintain that the largest Aleut community in the world will cease to exist without a harbor. The experts who are involved with the economic transformation efforts uniformly agree that the community *cannot* be viable without construction of the boat harbor.

The success of the local economy will benefit the national and state economies according to the St. Paul organizations. Construction of a port on St. Paul will aid to decrease the U.S. balance of trade deficit, increase the viability of a domestic bottomfishery, increase State revenues, provide local employment and the infrastructure necessary for the survival of an Aleut cultural stronghold. ■

Tanadgusix Corporation Enters Bering Sea Fisheries

An agreement between the Tanadgusix Corporation (TDX) and the National Federation of Medium Trawlers was signed in early December, 1982. The joint venture between TDX and the Hokuten Trawlers Association of Japan (sponsored by the National Federation of Medium Trawlers) is the beginning of a new commercial fishing industry on St. Paul. Hokuten and TDX have been exploring possibilities of joint efforts during the last twelve months. The agreement comes after reciprocal visits between Japan and the Pribilofs and several exploratory meetings. It is anticipated that the agreement will be ratified by the Board of Directors of each of the respective organizations.

Japanese experts will come to St. Paul in 1983

The National Federation of Medium Trawlers is an organization which represents Japan's medium trawlers. The Hokuten Trawlers Association is a group of small Japanese fishing companies headquartered in Tokyo, which owns or controls 97 boats.

The Tanadgusix Corporation, the ANCSA corporation of St. Paul village, has been involved in extensive studies of the Bering Sea fisheries for the past four years. Larry Merculieff, President of the village corporation, reports that TDX is now ready to become an active participant.

TDX owns and operates the King Eider Hotel on St. Paul Island. They also own the Anchorage International Airport Inn which is operated by International Inn, Inc., a subsidiary of TDX. In addition, TDX exports fur seal by-products to the Far East, leases out a production plant to a company which processes seal meat for dog food and crab bait, and operates two small *baby-longliners* as training boats for local Aleuts who wish to acquire commercial fishing experience.

TDX's agreement with the National Federation of Medium Trawlers is the first of many steps that it intends to take to ensure that its stockholders and the corporation will have the maximum opportunity to participate meaningfully in the vast Bering Sea fishery. The agreement calls for the Japanese to provide technical assistance to TDX and its stockholders in all areas involving day fishing boats, commercial fishing techniques, processing, quality control and marketing. Japanese experts will come to St. Paul in 1983. Provisions also exist to send St. Paul trainees to Japan for on-the-job training in fishery-related fields. The agreement also calls for the importation of a Japanese day boat under 5 net tons and gear from Japan to St. Paul to aid in local training.

The agreement calls for the Japanese to provide technical assistance to TDX and its stockholders

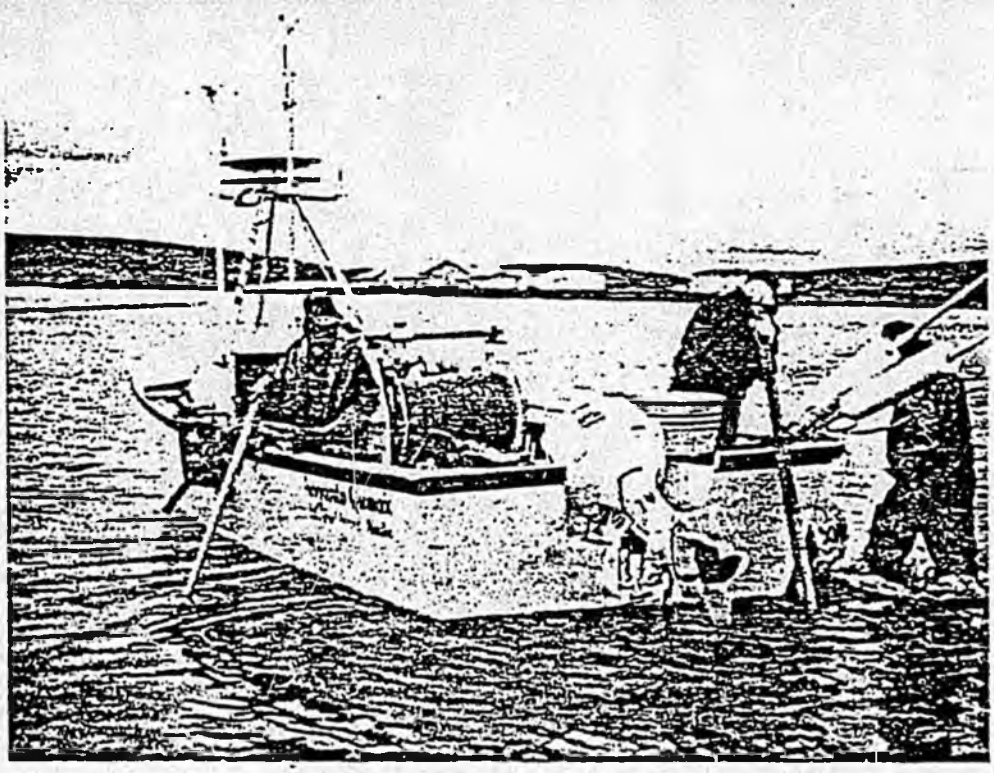
Merculieff noted that the agreement is essential to their economic viability. He stressed,

> *"We must prepare our people for the boat harbor which should be fully operational within four years. Without training, otherwise qualified Aleuts will not be able to participate in the fishery which will be headquartered on our land, nor will they have meaningful jobs."*

Merculieff cited the Japanese' extensive experience in fisheries as the reason for the business partnership.

Day boats will be used by the Aleuts in the fishery operation. Merculieff notes that they are familiar with them. Furthermore, day boats do not require an extensive knowledge of fishery technology. More importantly, they do not require a capital investment that is out of the reach of the corporation shareholders.

The agreement signed by TDX calls for short term obligations with minimal expenditures by TDX. Merculief stressed,



> *"We are going to keep our options open as far as any long term commitments are concerned, at least until we gain the requisite experience and more understanding of the business. We will not forego long term benefits for short term gains."*

A boat harbor is essential to TDX's participation in the Bering Sea fishery development. The corporation has campaigned extensively to obtain State funding for a major boat harbor on St. Paul. The harbor would serve the domestic Bering Sea fleet. Strategically located in the midst of one of the world's richest bottomfishery, St. Paul will be critical to fishermen and processors alike.

TDX's fishery plans also call for the development of a port in Chernofski Harbor on south Unalaska Island. According to Merculief,

> *"Chernofski Harbor is a natural deep water harbor, sheltered from most prevailing winds, with prime land suitable for large onshore facilities. TDX has been planning for the development of Chernofski as the major bottomfish port in Alaska for the past seven years. The domestic Bering Sea bottomfishery fleet will need a port. Dutch Harbor will have its hands full with the crab fleet, floating processor and the oil industry. We intend to provide a place for our American fishermen to our mutual benefit."*

Merculieff reports that TDX has been negotiating with a consotium of several large investors who are interested in developing Chernofski. He believes that negotiations may lead to development during 1983. ■

A boat harbor is essential to TDX's participation in the Bering Sea Fishery development

Marsh & McLennan

CIRCLE OF PROTECTION. It surrounds you, your business, your assets, your employees with the security of knowledgeable, comprehensive insurance. March & McLennan is the world's leading insurance broker and we've worked with several of Alaska's Native corporations. We know the special needs, the risks, the problems, the right ways to surround these organizations with the circle of protection. We know your business, whether it's administrative, manufacturing, sales or distribution. Give it the circle of protection from Marsh & McLennan.

Representative Adelheid Herrman
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Herrman:

We received your letter requesting priorities for St. Paul. We appreciate the opportunity to make input.

The obvious number one priority designated by all organizations on St. Paul is the first phase funding of the boat harbor. We hired Bechtel to do the design engineering and cost evaluations and their final report was submitted to DOT in December. During our last meeting in Anchorage, I gave you an executive summary of the project. If you need the complete Bechtel report, please let me know so I can get you a copy immediately. The first phase will cost twelve million dollars and would enable boat and processing operations to begin within a year of construction start-up. Needless to say, this project is essential for economic independence for St. Paul as well as St. George.

I understand that you will be in a meeting with us in Juneau when we talk with the Governor's staff. I look forward to providing more information to you prior to that meeting.

Our Corporation's second priority is funding for dock rehabilitation in Chernofski Harbor on South Unalaska Harbor. If I have not done so already, I am enclosing an executive summary of this project. Governor Hammond placed this in his capital budget at $600,000. I look forward to discussing this matter with you further when in Juneau.

Charlotte Kirkwood, planner for the IOC had developed other items which I am sure she will discuss with you if she has not already.

Goodluck this session.

Sincerely,

Larry Merculieff, Chairman

LM/mz

ST. PAUL BOAT HARBOR

Status Report (August 25, 1982)

Status Report Update (November 16, 1982)

INTRODUCTION:

With the withdrawal of Federal support from St. Paul Island, the provision of alternative employment and a renewed economic base is of great urgency.

The State of Alaska, through the Department of Transportation and Public Facilities, has recognized this need and during 1981 commissioned the consulting firms of Dames & Moore, and Norgaard (USA) Inc. to prepare a feasibility report and a harbor development plan.

The consultants investigated the fisheries resource, studied the socio-economic and cultural impacts, and undertook extensive environmental and physical investigations, including wave studies. The report concluded in the recommendation to construct a boat harbor at an estimated cost of $19,686,000.00. The harbor layout is shown as Figure 1.

ONGOING PLANNING:

Assisted by a grant from the State of Alaska, the City of St. Paul is proceeding with engineering design of the harbor facility to meet the urgent deadlines imposed by the withdrawal of Federal economic support. In this regard, the City has retained Norgaard Consultants as project managers and design consultants are now being selected for engineering design.

The previous environmental investigations have provided sufficient information to allow the consultants to proceed with preliminary engineering according to a 'fast track' design procedure shown in Figure 3. With this approach, some of the expensive and time consuming site investigations will be carried out concurrent with the construction contract and utilizing some of the contractors' equipment. With this approach, construction can commence by mid-1983 and allow for the first berthing of fishing vessels in the second half of 1984.

It is the intent of the design to propose a phased development of the harbor which will fit available funding. In this phased development, the initial phase of construction would consist of a length of breakwater and minimal berthing facilities and may amount to $12-14 million. Also, full cost estimates for this phase, together with preliminary engineering drawings, will be available by the first of December, 1982; in time to be presented to the new legislature.

With the 'fast track' design approach, reliable cost estimates can be provided within the present design budget of the City of St. Paul. If a standard design procedure was being followed, as shown in Figure 4, final cost estimates would require an expenditure of some $1.4 million and would not be available until late 1984.

Therefore, it appears that this 'fast track' design procedure will more realistically fit the needs of the people of St. Paul in providing for the fishing industry to begin operations approximately one year sooner.

ST. PAUL BOAT HARBOR
Status Report Update; November 16, 1982

Since the preparation of the original status report in August, Bechtel Civil & Minerals of San Francisco has been awarded a contract for preliminary engineering of the St. Paul Boat Harbor. This work has progressed well within schedule and we anticipate no problem in meeting the December 1 deadline for submission of cost estimates.

The preliminary plans developed by Bechtel have taken into account the need to provide a complete facility as soon as possible. The new layout is such that no dredging will be required, thus reducing any potential environmental impact. The new layout also provides an expanded harbor area which will allow for progressive growth of the port in the future.

Originally, the planned facility was to be divided into two basic development phases, since the estimate for construction at that time was on the order of $20 million and it seemed unlikely that that amount would be available in a single appropriation. Therefore, a maximum of $12 million was targetted as a reasonable limit for Phase 1 construction costs. By revising the layout, however, preliminary estimates indicate that the entire facility can be built for a cost of between $13 and $15 million thus allowing for a more efficient construction schedule, and earlier completion, at a much reduced cost.

Further details of the preliminary engineering design as well as final cost estimates will be available by December 1.

ST. PAUL BOAT HARBOR DEVELOPMENT SCHEDULE

FAST TRACK PROCEDURE

ST. PAUL BOAT HARBOR DEVELOPMENT SCHEDULE
STANDARD DESIGN PROCEDURE

NOTE: DOES NOT INCLUDE SEASONAL OR WEATHER DELAYS

APPENDIX.....

The following memorandum was previously prepared for the City of St. Paul to describe anticipated short-term employment and revenues generated by development of the St. Paul Boat Harbor.

ANTICIPATED SHORT-TERM
EMPLOYMENT AND REVENUE PROFILE
RELATED TO DEVELOPMENT OF ST. PAUL BOAT HARBOR

The purpose of this narrative is to briefly summarize the anticipated economic profile of employment and revenues directly related to harbor development at St. Paul Island as the role of National Marine Fisheries Service is phased out and is replaced by an economy based on commercial fisheries and related industries. (Unrelated activities, such as tourism, will also contribute, but are not included herein.)

Employment opportunities will vary as development progresses, but may be divided into several recognizeable components:

Harbor design and construction
Fishermen
Processing
Service industries
Other

In each of these areas, the skills and training of residents is a key factor in what percentage of the labor demand they will be able to meet. In general, it is to a business' advantage to hire locally and this is especially true at St. Paul. Initially, there will be a need for companies to bring in non-resident workers to perform some of the tasks until such time as residents are able to acquire the necessary skills and experience to take over those jobs.

For the design and construction of the boat harbor, design consultants and construction contractors will be hired to perform the work. While much of the work requires qualified specialists with extensive experience, many jobs can be performed by the local labor force. In the design phase, this would generally be in the form of technical assistants to the design consultants. The construction phase will provide the first opportunity for a significant amount of local employment. Also, since there will continue to be increased construction at St. Paul for some time to come, this initial work will provide valuable experience for local workers. Even

at this early stage, it may be possible for a local construction company to be formed to serve as a subcontractor in construction of the boat harbor. At this time the level of initial development remains uncertain. However, the following jobs could likely be filled by St. Paul residents in the design and construction phase, based on existing skills and experience:

Technical assistants	4
Equipment operators	10
Marine construction	4
Concrete workers	3
Carpenters	2
Laborers	6
Office assistance	4
TOTAL	33

The design and construction work will also generate indirect employment and business opportunities in providing food, lodging, maintenance and other services to the construction contractors. Following completion of the major construction activities, many of these workers can transfer their skills into maintenance or other construction activities on the Island.

St. Paul and Tanadgusix Corporation are involved in a training program aimed at providing residents with the necessary skills in fishing, navigation, vessel operation and maintenance, which will enable them to purchase and operate their own fishing vessels. Since loan capital is a limiting factor, many of these fishermen will initially serve as crewmen on other vessels operating out of St. Paul. Upon completion of the initial construction of the boat harbor, it is likely that up to 12 residents will be actively employed as commercial fishermen with a gradual increase to approximately 40 persons in 6-10 years.

Processing activities are initially envisaged as consisting of one floating processor in the harbor and one small to medium onshore processing plant. The number of resident workers in the processing plants is estimated at approximately 30 persons in the actual processing operations and 4-6 in administrative jobs.

This figure will increase as residents replace transient workers and as overall employment increases with development. The growth in processing employment is largely dependent upon the emphasis given to different species and product forms as development progresses.

There is likely to be a great demand for services at the St. Paul boat harbor. Fishing vessels and floating processors can remain on the nearby fishing grounds for longer periods if they are able to offload fish, take on provisions, and make repairs at St. Paul. Given time for sufficient training and experience, nearly all jobs in the service sector can be filled by St. Paul residents. A likely description of resident service industry jobs during early development is as follows:

Harbormaster and administrative	3
Fuel and ice	2
Cold storage	3
Stevedores	3
Electronics repair	1
Mechanic	1
TOTAL	13

With operations underway at the boat harbor, increased demands will be placed on other areas of the community. Expanded power plants, water and wastewater systems, and solid waste collection will require additional personnel for operation and maintenance. There will also be increased business for local merchants and restaurants which will likely result in new businesses and increased employment of residents.

Table 1 briefly describes an employment and wage profile for the sectors mentioned above, covering the period August, 1982 through December, 1987. The estimated wages are based on the wage factors indicated below the table. These factors are oversimplified approximations, but do give a general idea of what can be expected. It should be emphasized that the employment and wage figures in Table 1 are for St. Paul residents and do not include transient workers in construction, fisheries or related services.

There are several ways to consider the revenues generated by development of the boat harbor. In the broadest sense, this can be done by examining the value of

fish handled by the port. Tables 2 and 3 illustrate the annual value of fish landed (exvessel price) and the processed product (wholesale price) for St. Paul. Although this information is difficult to quickly translate in terms of local revenue, it does give an indication of the anticipated level of onshore commercial fisheries activities during early development. A significant increase results if the volume and value of fish transhipped via St. Paul is taken into account.

February 14, 1983

The Honorable Mike Davis
Representative
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Davis:

Re: Waller School Turning Lanes and Signalization

I would like to take this opportunity to respond to your request for a cost estimate for providing turning lanes and signalization at Waller School, located off Chena Hot Springs Road.

The road work involved would consist of widening the road as necessary in order to taper it for approximately 600' on either side of the school zone to provide for left and right turning lanes.

As current traffic levels do not warrant use of a signal type device, it is not included in this project. However, street lights and advance warning flashers for the school zone are included.

The total estimated cost for the entire project is $180,400.00 (1984 dollars).

If we can be of any further assistance, please contact us.

Sincerely,

John C. Bates
Deputy Commissioner

Dear Representative Davis:

I saw the article concerning the appropriations bill you sponsored for funding for the Rosamund Weller School's entry improvements. (FDNM 2-9-83).

On behalf of the Weller Task Force, I want to thank you for your concern and effort on behalf of the school and its students. We deeply appreciate your responsiveness to this serious concern, and hope we can be of assistance when and if needed.

Sincerely yours,

Judy Rae Smith

RE: Weller Elementary School Approach

Dear Mike:

This is to assure you that we are very concerned about the subject matter. Donald Moore, Director of Public Facilities and Services, is on top of this situation and we are working very closely with the Department of Transportation & Public Facilities.

If you have any comments regarding same, please contact either Don Moore or me.

Personal regards.

Sincerely,

B.B. ALLEN
Borough Mayor

RE: Weller Elementary
School Approach

Mr. Bill Allen
Borough Mayor
Fairbanks North Star Borough
P. O. Box 1267
520 Fifth Avenue
Fairbanks, AK 99701

Dear Mr. Allen:

Your letter concerning vehicle access to the Weller Elementary School and bicycle access to the Ballaine Road School has been reviewed.

The approach to the Weller Elementary School has been the subject of several hopefully productive discussions between your engineering staff and the Department's Regional Traffic/Safety Section. It is recognized that the access location does present problems, most of which might have been avoided in the original site selection process.

Most of these have been addressed either verbally or in the November 15, 1982 letter to the Borough Engineer from the Department's Regional Director for Maintenance and Operations. The letter (copy attached) addresses some minimum recommendations for traffic control at the school access. A preliminary estimate prepared for the construction of turn lanes at the access is also attached which totals $95,740.00, but in order to cover all costs approximately $150,000.00 should be requested.

The suggested Auburn Drive bicycle path between Farmer's Loop Road and the Ballaine Road School should be constructed in accordance with the AASHTO Guide for Bicycle Routes. Since bicycle paths separated from the roadway are not cleared of snow during the winter these would have limited use unless the objective is to provide a path for bicyclists, walkers, skiers, snow machines, etc. as the seasons change.

Your request for a policy statement concerning bicycle path maintenance is referred to the Regional Director of Maintenance and Operations by copy of this letter.

I hope this answers most of your questions and I encourage your engineering staff to maintain contact with the Regional Traffic/Safety Section to resolve specific problems.

Sincerely,

Stephen C. Sisk
Director
Design & Construction

January 12, 1983

Fairbanks Area Delegation
13th Legislature - 1983

Dear Legislators:

The Fairbanks North Star Borough Mayor, the School District, and the Weller Elementary School Task Force have identified a traffic hazard at the entrance to the new Weller Elementary School on Chena Hot Springs Road.

The Task Force has suggested the following measures:

1. two turn lanes -
2. decreased speed limit
3. additional lighting -
4. frequent sanding in winter months
5. a non slick highway surface -
6. adequate signs -

This school will house 600 elementary students and will demand more bus traffic due to the rural location. This plus staff and parent vehicles will cause a substancial increase and change in traffic patterns at this site.

The funds needed to make this entrance safe could be significant and must be appropriated immediately so work will be complete before the school opens in August 1983.

This problem has been a major concern of the Fox P.T.O. and we would ask for your help in obtaining funds needed to upgrade this proposed entrance.

Thank you for your time and concern in this matter.

Sincerely,

Evelyn Trabant

Attn: Bob Shefchik

RE: Entrance way to Steese/Fox Elementary School
1 mile Chena Hot Springs Road

The entrance to the New Steese Fox Elementary School is in a very dangerous location. I understand, the Engineer Spec's for distance is 550 feet, the sight distance according to the Engineers is 535 feet which they claim is within the safety factor for distance this is fine for dry ideal weather conditions. But due to our ice and snow conditions seven months out of the School Year, this distance is unsatisfactory. Especially going East, at 55 MPH under ideal dry conditions a car takes 208 feet to stop, this exceeds the distance by 74 feet. The School Buses turning East on Chena Hot Springs Road acceleration rate is slow, there for placing them in a vulnerable situation. Automobiles entering or leaving entrance way can not be seen by East bound traffic.

Solution:

1) Move the entrance roadway.
2) Decrease speed limit to 30 MPH and install flashing lights.
3) Widen Chena Hot Springs Road, the same as Farmers Loop & McGrath Road and install Flashing Lights.

Sincerely,

John Eldridge
Supervisor
Safety, Training and Personnel

November 15, 1982

Mr. Larry Crouder
Borough Engineer
Fairbanks North Star Borough
P.O. Box 1267
Fairbanks, AK 99707

Re: Steese - Fox Elementary

Dear Mr. Crouder:

In response to your request concerning traffic control at the Steese - Fox Elementary School access road, we suggest the following:

1. Since reconstruction of the previously existing driveway was involved, a new driveway permit is required. A driveway regulation booklet and application are enclosed for this purpose. This is strictly a formality and no permit fees are involved.

2. Normally, one luminaire would be required at this intersection. Note C.5 on page 12. This requirement has been waived upon request in the outlying areas with the stipulation that should illumination become necessary due to traffic volumes generated by the permittee's facility, the permittee will be responsible for the installation at his expense. Since this is a school, pressure for lighting from the school district, PTA, etc. is a real possibility. If you want to pursue the waiver, your application should be accompanied by a written request.

3. Signing required includes the following:

   (a) "STOP", (R1-1), 30" x 30".
   (b) Street name signs (D3-1), mounted on top of the stop sign naming the side street and the main line.
   (c) Side road intersection signs (W2-2), 36" x 36", installed 725 feet each side of the intersection on Chena Hot Springs Road.
   (d) Auxillary street name signs (modified D3-1A, black on yellow) installed below each W2-2.

   Signs (c) and (d) should be of high intensity sheeting and installed in accordance with attached standard drawing S-05.00. All sign posts should be 2½" x 2½" perforated steel tube installed in a 3" x 3" x 3' sleeve.

   Once the signs are installed, all future maintenance becomes the responsibility of the State.

4. If required, State forces will change the striping the next time the road is striped.

5. Please keep in mind the State has no current plans to widen Chena Hot Springs Road in that location. Until such a project is implemented, the Borough would be responsible for any such work that may become necessary as a result of traffic generated by the school facility.

Questions regarding the driveway permit process can be directed to Dick Royal at 452-1911 ext. 307.

Sincerely,

John D. Horn
Director, Maintenance and Operations
Interior Region

Lake Otis Extension/Upgrade

FY'84	$300,000	ROW
FY'84	$581,000	Design
FY'84-85	$2,909,000	Construction

Would be a grant to the Municipality of Anchorage and would have no fiscal impact on the DOT&PF.

Was recommended for construction funding in FY'83 in the AMATS TIP.

POSITION PAPER

HB 189

Fiscal propriety demands that the State maintain project monitoring capability to ensure that the grant funds are spent for the project, and are managed according to Borough or Municipal fiscal procedures. Accordingly, a minimal State operating budget impact will be felt with the passage of each special appropriation under AS 37.05.315-37.05.319, such as this specific bill proposes. I should point out at this time that local governments have recognized their similar responsibilities when awarding grants to local social service providers, etc. Municipalities charge an administrative overhead fee of one to three point eight percent per grant. The Department of Administration requests that the specific grant appropriation language acknowledge a State agency overhead factor of up to .5% (one half of one percent) as Department of Administration operating costs for all special appropriations awarded under AS 37.05.315.

The Department questions the historical practice promoted under AS 37.05.315 and wonders if the Department of Community and Regional Affairs might be of better assistance to local governments through its Local Government Assistance program. Whereas the Department of Administration functions as a centralized control agency for all other Executive Branch agencies, the Department of Community and Regional Affairs is specifically charged with the responsibility of assisting local government in maximizing services to citizens.

Project Cost: $3,790,000

Description/Justification:

This project consists of the construction of Lake Otis Parkway south to O'Malley Road. The proposed improvements will consist of a 45 foot wide street with barrier curbs. A 5 foot separated sidewalk is planned for the west side and an 8 foot separated bike trail on the east. The project would also include storm drain improvements, street lighting and necessary traffic control devices. This road will be the primary access to the new Junior High School now under design. It will also provide access to the proposed Section 16 Recreation Development and the rapidly developing hillside area. Construction of these improvements is expected to be complete by the end of 1984 and will provide 65 man years of work. The Municipality anticipates annual maintenance costs of approximately $26,000. This would be paid for through revenue sharing funds and local taxes. Construction of these improvements will significantly reduce existing safety and environmental hazards. Heavy truck traffic has caused high dust concentrations and severe erosion has damaged water quality in adjacent streams and wetlands. Acquisition of additional right-of-way for this project is anticipated. A funding request for this project has been included in the Municipality's 1983 Capital Improvement Budget.

POSITION PAPER

Fiscal propriety demands that the State maintain project monitoring capability to ensure that the grant funds are spent for the project, and are managed according to Borough or Municipal fiscal procedures. Accordingly, a minimal State operating budget impact will be felt with the passage of each special appropriation under AS 37.05.315-37.05.319, such as this specific bill proposes. I should point out at this time that local governments have recognized their similar responsibilities when awarding grants to local social service providers, etc. Municipalities charge an administrative overhead fee of one to three point eight percent per grant. The Department of Administration requests that the specific grant appropriation language acknowledge a State agency overhead factor of up to .5% (one half of one percent) as Department of Administration operating costs for all special appropriations awarded under AS 37.05.315.

The Department questions the historical practice promoted under AS 37.05.315 and wonders if the Department of Community and Regional Affairs might be of better assistance to local governments through its Local Government Assistance program. Whereas the Department of Administration functions as a centralized control agency for all other Executive Branch agencies, the Department of Community and Regional Affairs is specifically charged with the responsibility of assisting local government in maximizing services to citizens.

LETTER OF INTENT
TO ACCOMPANY
House Bill 190

It is the intent of the House Transportation Committee that a special appropriation be made to the cities of Newhalen and Nondalton for road construction between Illiamna and Nondalton as a special grant to the Department of Transportation and Public Facilities.

The House Transportation Committee requests the Department of Transportation and Public Facilities to work cooperatively with the cities of Newhalen and Nondalton and to manage and administer this project pursuant to AS 35.15.80.

The House Transportation Committee amendment to House Bill 190 is done with the intent that the Department of Transportation and Public Facilities will work cooperatively with the communities to ensure this project is completed on the existing time frame and will not be delayed.

HOUSE BILL NO. 190

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation for payment as ~~a grant~~ to the ~~cities of Nondalton and Newhalen~~ for road construction; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $9,000,000 is appropriated from the general fund for payment ~~as a grant~~ to ~~the cities of Nondalton and Newhalen~~ DOT/PF for road construction between Illiamna and Nondalton. = 26 miles

* Sec. 2. The appropriation made by this Act shall be disbursed in accordance with AS 37.05.315 - 37.05.319. and A.S. 37.15.980(a)

* Sec. 3. This Act takes effect July 1, 1983.

Newhalen to Iliamna

Judge Hornaday not alone in Alaskan peremptory challenges

District Court James Hornaday is apparently not the only judge in the state who is regularly bumped off the bench by attorneys looking for another judge.

Five other jurists share that distinction, court records reveal: Juneau District Court Judge Gerald Williams, Fairbanks District Court Judge Stephen R. Cline, Anchorage Superior Court Judge Karl Johnstone, Juneau Superior Court Judge Roger Pegues, and Wrangell Superior Court Judge Henry Keene.

Mr. Hornaday has been disqualified from hearing 80 percent of the criminal cases brought before him — which are only about eight percent of his total workload, according to his own records. According to an Associated Press report, Messrs. Cline, Williams, and Johnstone are removed from about half of the criminal cases assigned to them, and Mr. Johnstone is bumped from more civil cases than all Anchorage Superior Court judges combined.

Disqualification of judges is made easy by a state law which allows attorneys to remove a judge by peremptory challenge, or without giving a reason. This can only be done once by either side in any case. But it can be done case, after case, after case.

These challenges not only disrupt the court system, said Court Administrator Art Snowden, it adds about $30,000 a year to court expenses.

When a judge is bumped another judge must be assigned to hear the case. That is a fairly simple matter in large courts such as Anchorage.

But it can be an administrative nightmare when it happens in single judge locations such as Homer. Judges must be shipped back and forth, delaying trials and increasing the cost of justice.

To solve the dilemma, some people have suggested that peremptory challenges be barred. Rep. Milo Fritz (R-Anchor Point) has cosponsored a bill which would repeal the law which allows this type of disqualification.

That bill is now before the House Judiciary Committee.

HB 190 from Pendleton
Don Anderson will
be testifying.

Gentlemen:

Ref: Month 1, Executive Summary Report

Attached for your review is the first month's summary of items on the Start-up Punchlist that have been accomplished to date. As outlined in the report's Budget and Schedule Status sections, it is vitally important that additional funds be secured for this project if you are to meet your commitments for these items.

While it is possible to continue work and maintain administrative continuity, with limited funds, on a project that is already mobilized and in progress, this is virtually impossible during the start-up phase. In our opinion, a minimum of $1,500,000 is required to carry the project through to the next funding period, which you have indicated to be July, 1984. This lesser amount, compared to the initial target funding of $4,500,000, would allow work to continue through the next legislative session by rescheduling portions of the work and by increasing manloading during the last half of the '84 construction season. The impact on schedule and budget would be minimal, however, you should anticipate a 2% to 3% decrease in the manhour ratio provided by local labor forces.

Your time and consideration concerning this matter is appreciated and if you have questions or need additional information, please do not hesitate to contact me.

Sincerely yours,

Don Anderson
Project Director

LTRS, ROAD1

ILIAMNA-NONDALTON INTER-TIE

Month 1, Executive Summary Report

Period: Start-up to June 10, 1983
Project Phase: 1

Work Completed This Period:

1. Nondalton and Newhalen City Councils met, and formed and appointed members to the Executive Management Committee (EMC). Members are the mayor from each city and the President of the Iliamna Development Corporation (DCRA non-profit) with the Vice-Mayor/President's to act as alternates and attend all meetings of EMC. Official project name: Iliamna-Nondalton Inter-Tie (INI%).

2. Executive Management Committee (EMC) met and selected officers, mainly: Jerry Armstrong, President; Gregory Anelon, Vice-President; James D. Wilson, Secretary. Alaska Mutual Bank chosen for project funds using money market and instant asset accounts. Checks require two (2) signatures, one of which, by policy, shall be that of the President, except in an emergency when any two (2) signatures shall suffice but so noted at the next EMC meeting. JEVAD, Inc. selected to provide project management services. Officers noted all known and possible "Conflict of Interest" situations and directed project director to develop plan to handle same.

3. Project equipment mobilization begun. Fourteen (14) local personnel on board. Equipment mobilization 92% completed.

4. Grant contract with DOT/PF finalized and signed. Phase 1 payment received. DOT/PF contract negotiations for bridge design and permits opened. Gulkana Bridge inspected. Portions of Lowe River Bridge located. Transportation price quotes received and evaluated.

5. Management Manual started and 80% completed. Administrative Manual started and 15% completed.

Work Anticipated Next Period:

1. Final determination of funding available for FY'83/84. Develop and implement construction season work plan and methodology. Identify baseline performances for frontier road. Inventory, transport and store bridges. Select project manager, on-site superintendent, project engineer. Establish on-site adminsitrative controls.

2. Construction of maintenance facility. Locate acquire and transport needed camp facilities. Inventory equipment and parts. Select additional equipment needs.

Project Status With Respect To Budget:

Based on effective work load ratios requirements, (overhead/production) it is anticipated that current funds will be exhausted by October, 1983, necessitating project "shutdown." This will result in additional project "re-start" cost of approximately $268,000 for 1984 construction season and increase total project costs by $1,608,000. ($1,340,000 inflation cost due to schedule impacting shown below and $268,000 "re-start" costs.) Currently the project is proceeding within existing budget.

Project Status With Respect To Schedule:

Project is proceeding on the most cost effective schedule available considering current funding. Failure to receive additional funds prior to October, 1983 will result in shutdown. Based on additional funds being available in July, 1984, it is anticipated that 65% of the '84 construction season will be lost with a corresponding schedule completion impact of 1 year.

Exceptions:

1. Lowe River Bridge, originally shown to be in DOT/PF's Valdez Storage yard has been moved to Chitna. Bridge structural members have received considerable abuse and portions of the structural members have been used for other projects. Structural inventory is scheduled for June 20th with DOT/PF engineers and some redesign and remake of structural pieces is anticipated to make this unit functional.

2. Permitting process originally intended to be contracted with DOT/PF Bridge Design group in Juneau has been reassigned to Anchorage office.

3. Exceptionally strong, coordinated, single-point interface has been developed with DOT/PF.

Permit Status:

To date no final permits have been applied for, however it is the intent that original approvals will be resubmitted within 120 days for review, comment and updated approvals.

and (2) the original obligation date is not more than two years from the requested date of disbursement. (§ 1 ch 113 SLA 1962)

Sec. 37.25.020. Unexpended balances of appropriation for capital projects. An appropriation made for a capital project is valid for the life of the project and the unexpended balance shall be carried forward to subsequent fiscal years. Between July 1 and August 31 of each fiscal year, a statement supporting the amount of the unexpended balance required to complete the projects for which the initial appropriation was made and the amount that may be lapsed shall be recorded with the Department of Administration. (§ 2 ch 113 SLA 1962)

Chapter 30. Local Government Bonding.

Article
1. Anticipatory Borrowing (Repealed)
2. Restrictions on Sale of Bonds and Bond Anticipation Notes (§ 37.30.100)

Article 1. Anticipat. y Borrowing.

Section
10—90. [Repealed]

Secs. 37.30.010 — 37.30.090.
Repealed by § 1 ch 118 SLA 1972.

Editor's note. — The repealed article derived from § 1, ch. 117, SLA 1964; § 1, ch. 189, SLA 1970.

Article 2. Restrictions on Sale of Bonds and Bond Anticipation Notes.

Section
100. Prohibited bidding on bonds

Sec. 37.30.100. Prohibited bidding on bonds. (a) No person who provides financial programming or marketing assistance to a political subdivision of the state, whether home rule or otherwise, in connection with the issuance or sale of general obligation bonds, revenue bonds or bond anticipation notes of the political subdivision may bid on the bonds or notes if offered at public sale, or negotiate for their purchase if sold at private sale.

(b) The sale of general obligation, revenue bonds or bond anticipation notes of a political subdivision to a person prohibited from bidding on, or negotiating for the sale of bonds or notes under (a) of this section is against public policy and the sale is void.

(c) In this section "person" means an individual, firm, agent, factor, intermediary, partnership, corporation, association, bond house, stockbroker or bond broker. (§ 2 ch 102 SLA 1974)

Originality this statute in all

Revisor's notes. — The reference to AS 14.09.010 in paragraph (4) was originally a reference to AS 14.10.070. Chapter 98, SLA 1966 revised Title 14 and the substance of AS 14.10.070 became AS 14.09.010.

NOTES TO DECISIONS

Notice requirements. — This section makes no requirement for notice by special delivery, registered or certified mail. State ex rel. Department of Administration v. Bowers Office Prods., Inc., Sup. Ct. Op. No. 2244 (File No. 4792), 621 P.2d 11 (1980).

Amendments to bid invitations. — Using regular mail to send an amendment to an invitation for bids is a proper procedure for notifying knew bidders. State ex rel. Department of Administration v. Bowers Office Prods., Inc., Sup. Ct. Op. No. 2244 (File No. 4792), 621 P.2d 11 (1980).

Judicial review of agency actions of rejecting a bid for failing to return an amendment should extend only to whether there was a reasonable basis for the agency to decide that the bid in question was nonresponsive. State ex rel. Department of Administration v. Bowers Office Prods., Inc., Sup. Ct. Op. No. 2244 (File No. 4792), 621 P.2d 11 (1980).

The department had a reasonable basis to determine that a defect in a bid was material and that the bid was nonresponsive when the bidder failed to acknowledge receipt of amendments. State ex rel. Department of Administration v. Bowers Office Prods., Inc., Sup. Ct. Op. No. 2244 (File No. 4792), 621 P.2d 11 (1980).

Article 5. General Provisions.

Section
315. State grants

Sec. 37.05.300. Interpretation of AS 37.05.010 – 37.05.330.

Opinions of attorney general. — As to applicability of the chapter to the University of Alaska, see notes under this catchline following chapter heading.

Sec. 37.05.315. State grants. (a) When an appropriation is made as a grant to a municipality, the Department of Administration shall promptly notify the municipality of the availability of the grant. When the Department of Administration receives an agreement executed by the municipality which provides that the municipality (1) will spend the grant for the purposes specified in the appropriation; (2) will allow, on request, an audit by the state of the uses made of the grant; and (3) assures that, to the extent consistent with the purpose of the appropriation, the facilities and services provided with the grant will be available for the use of the general public, the Department of Administration shall pay the grant directly to the municipality. The agreement executed by a municipality under this section shall be on a form furnished by the Department of Administration.

Not less than 20 percent of the grant shall be paid to the municipality within 10 days of the effective date of the agreement. The remainder of the grant shall be paid either in monthly installments equal to the amount of grant money the municipality expended in the previous month or in a lump sum as determined by the Department of Administration.

(b) An appropriation for a grant to a municipality for construction of a public facility lapses if substantial, ongoing work on the project has not begun within five years after the effective date of the appropriation.

(c) In accepting a grant of money for construction of a public facility, each municipality covenants with the state that it will operate and maintain the facility for its practical life and that it will not look to the state to operate or maintain the facility or pay for its operation or maintenance.

(d) When an appropriation is made to a department as a grant for a named recipient which is not a municipality, the department to which the appropriation is made shall promptly notify the named recipient of the availability of the grant and request the named recipient to submit a proposal to provide the goods or services, or both, for which the appropriation is made. At the same time, the department shall issue a request for proposals from other qualified persons to provide the same goods or services, or both, in the same area. The department shall contract with the named recipient unless the Office of the Governor, with due regard for any local expertise or experience among those making proposals, determines that an award of the contract to a different party would better serve the public interest. If the contract is awarded to another party than that named by the legislature, the basis of that action shall be stated in writing at the time the grant is issued. The purchase of the goods or services, or both, shall be in accordance with AS 37.05.230(1)(C).

(e) A grant to a municipality must be made within 60 days after the effective date of the appropriation. A contract under (d) of this section must be executed within 60 days after the effective date of the appropriation.

(f) A grant to an unincorporated community made under this section shall be disbursed as follows:

(1) Within 45 days after the effective date of the appropriation, the Department of Community and Regional Affairs shall notify the governing body of the unincorporated community, if any, that a grant is available.

(2) The Department of Community and Regional Affairs shall determine whether there is a qualified incorporated entity in the community area which will agree to receive the grant and administer it, subject to terms generally applicable to private grantees. If there is more than one such entity, the Department of Community and Regional Affairs shall select the most qualified and the grant shall be awarded to that incorporated entity for the purposes of the appropriation; however, the Department of Community and Regional Affairs shall give preference to a nonprofit corporation organized by a community for receipt of the grant.

(3) If there is no incorporated entity qualified to receive the grant, the Department of Community and Regional Affairs shall administer the program directly or through agents or contractors with whom it may contract in the community area.

(g) Notwithstanding the Administrative Procedure Act (AS 44.62.010 — 44.62.650), the Fiscal Procedures Act (AS 37.05.010 — 37.05.330), and the Executive Budget Act (AS 37.07.010 — 37.07.130), a department may not adopt regulations or impose additional requirements or procedures to implement, interpret, make specific or otherwise carry out the provisions of this section unless required by the federal government for participation in federal programs. (§ 1 ch 156 SLA 1980)

Revisor's notes. — As enacted by ch. 156, SLA 1980, the last two sentences of subsection (a) and subsections (d), (e) and (f) were designated subsections (d), (e), (f) and (h), respectively, but were redesignated by the revisor of statutes pursuant to AS 01.05.031(b).

60. Governor's recommendation
80. Program execution

NOTES TO DECISIONS

The University of Alaska is subject to the provisions of AS 37.07.010 — 37.07.090. February 28, 1977, Op. Att'y Gen.

There is no constitutional obstacle to making the University of Alaska subject to the provisions contained in AS 37.05.010 — 37.35.090. February 28, 1977, Op. Att'y Gen.

Sec. 37.07.020. Responsibilities of the governor. (a) The governor shall prepare and submit to the legislature before the fourth legislative day a budget for the succeeding fiscal year which shall cover all estimated receipts, including all grants, loans, and money received from the federal government, and all proposed expenditures of the state government. The budget shall be accompanied by a general appropriation bill to authorize the proposed expenditures, and a bill or bills covering recommendations in the budget for new or additional revenues.

(b) In addition to the budget and general appropriation bill, the governor shall submit a capital improvements program and financial plan covering the succeeding six fiscal years.

Without following the Administrative Procedure Act. — The department would not be required to follow the Administrative Procedure Act (AS 44.62) in adopting regulations to implement a program of prequalification of contractors. 1959 Op. Atty. Gen., No. 27.

Publication of regulations concerning bidding and letting of contracts in Administrative Code. — A policy of publishing regulations concerning bidding and letting of contracts in the Administrative Code is consistent with the Alaska Administrative Procedure Act, since these regulations are regulations in which an important portion of the public has a vital interest and since they are of great use to the portion of the public interested in dealing and contracting with the state. 1959 Op. Atty. Gen., No. 27.

Am. Jur. 2d, ALR and C.J.S. references. — 64 Am. Jur. 2d, Public Works and Contracts, §§ 63-81.

Delays caused by change in plan or specifications of a public construction contract as coming within "no damage" clause with respect to delay appearing in the contract, 10 ALR2d 810.

Differences in character or quality of materials, articles, or work as affecting acceptance of bid for public contract, 27 ALR2d 917.

Right of public authorities to reject all bids for public work or contract, 31 ALR2d 469.

Rights and remedies of bidder for a public contract who has not entered into a contract, where bid was based on his own mistake of fact or that of his employee, 52 ALR2d 792.

"Changed conditions" clause in a public works or construction contract, construction and effect of, 85 ALR2d 211.

Effect of stipulation, in public building or construction contract, that alterations or extras must be ordered in writing, 1 ALR3d 1273.

Revocation, prior to execution of formal written contract, of vote or decision of public body awarding contract to bidder, 3 ALR3d 864.

The validity and construction of "no damage" clause with respect to delay in building or construction contract, 74 ALR3d 187.

Construction contract provision excusing delay caused by "severe weather", 85 ALR3d 1085.

72 C.J.S. Supplement, Public Contracts, §§ 15-17.

Sec. 35.15.060. Prior contracts unaffected [Obsolete].

Revisor's note. — This section is obsolete. It read as follows: "Sections 10-60 of this chapter do not apply to contracts entered into before April 1, 1957."

Editor's note. — The obsolete section derived from § 8 art. III title IV ch. 152 SLA 1957.

Letter of intent

Sec. 35.15.080. Local control of state public works projects.

(a) A municipality or, if the public work is an educational facility, a regional educational attendance area established under AS 14.08 may, by resolution of its governing body, request the assumption of all of the department's responsibilities relating to the planning and construction of a public works project of the state which is to be located within the boundaries or operating area of the municipality or regional educational attendance area and which would otherwise be constructed in the manner provided in AS 35.15.010. After receipt of the request, the department

(1) shall provide for the assumption by the municipality or regional educational attendance area of all of the department's responsibilities relating to the planning, design and construction of an educational facility;

(2) may provide by agreement for transfer to and assumption by the municipality of the department's responsibilities relating to the

planning, design, and construction of a public works project, unless the commissioner determines that assumption of responsibilities by the municipality is not practicable or not in the best interests of the state.

(b) If the commissioner of transportation and public facilities determines that assumption of responsibilities by a municipality under (a)(2) of this section is not practicable or not in the best interests of the state, he shall notify the governing body of the municipality of his finding and specify reasons for it. If the governing body requests reconsideration of the decision, he shall hold a hearing in the municipality within 30 days following mailing of the request. Following the hearing, he may affirm, modify or reverse his initial decision and shall specify in writing the reasons.

(c) A municipality may request joint assumption of responsibilities with the department relating to the planning, design and construction of a public works project. A regional educational attendance area may request joint assumption of responsibilities with the department relating to the planning, design and construction of an educational facility. Two or more municipalities or regional educational attendance areas may by mutual agreement provide for cooperative assumption of responsibilities relating to the planning and construction of a public works project. If two or more municipalities or regional educational attendance areas request assumption of responsibilities for a project and meet the standard of practicability set out in (a)(2) of this section, the commissioner shall determine which municipality or regional educational attendance area is best able to direct planning, design, and construction of the project and enter into an agreement with that municipality or regional educational attendance area, or provide for joint or cooperative administration, as the parties may agree or the commissioner may determine. Decisions of the commissioner under this subsection are final.

(d) Provisions of this title governing planning, design, and construction of public works by the department, and regulations adopted under the provisions, govern the administration of projects assumed by a municipality or regional educational attendance area under this section. For that purpose the provisions supersede any conflicting provisions of ordinance or charter of a municipality.

(e) An organized borough may plan and construct public works under this section and make an agreement with the department for that purpose irrespective of restrictions of other provisions of law on the acquisition and exercise of borough powers. Borough exercise of the power conferred under this subsection does not preclude exercise by a city of the borough of the same power within the city.

(f) To carry out the purpose of this section, the commissioner of transportation and public facilities shall adopt regulations relating to the application for and the making and the conditions of agreements and the local assumption of responsibilities for the planning, design

and construction of public works under this section. He shall include in grant contracts terms and conditions requiring a regional school board and its contractors to adhere to the provisions of AS 36.05.010 with respect to the payment of wage rates on construction projects, and AS 36.10.010 with respect to employment preference, and may require different terms in agreements for different projects to meet local conditions and unique requirements and to assure compliance with the public facilities procurement policies developed by the department under AS 35.10.160 — 35.10.200. If necessary, the commissioner may require as a condition of an agreement approval of the agreement by the federal government. Regulations adopted, amended or repealed by the department under this section which relate to educational facilities shall be developed in conjunction with the Alaska Association of School Boards and the Alaska Association of School Administrators and reviewed by those associations before final action on the regulations is taken by the department. (§ 1 ch 57 SLA 1976; am §§ 6, 7 ch 147 SLA 1978)

Effect of amendment. — The 1978 amendment, in subsection (a), inserted "all of" near the middle of the first sentence and in the second sentence, inserted the item (2) designation, added item (1), and inserted "transfer to and," deleted "or regional educational attendance area" following "assumption by the municipality" and "or area" following "of responsibilities by the municipalities," and substituted "a public works project" for "the public works project," all in item (2). The amendment also deleted the former third sentence of subsection (a), which read "The parties may by mutual agreement provide for joint or cooperative assumption of responsibilities by the department and the municipality or regional educational attendance area," and in the first sentence of subsection (b), substituted "commissioner of transportation and public facilities" for "commissioner of public works" and "under (a)(2) of this section" for "or regional educational attendance area under this section" and deleted "or area" following "body of the municipality." In subsection (c), the amendment added the present first through third sentences, inserted "(a)(2) of" in the present fourth sentence, and substituted "municipality or regional educational attendance area" for "subdivision or area" in the present fourth sentence. In subsection (f), the amendment substituted "commissioner of transportation and public facilities" for "commissioner of public works" in the first sentence, inserted "for the planning, design and construction of public works" in the first sentence, inserted the language beginning "shall include in grant contracts" and ending "with respect to employment preference, and" in the second sentence, and added the fourth sentence.

Sec. 35.15.090. Use of appropriated funds. Upon assumption by a municipality or regional educational attendance area of the department's responsibilities under AS 35.15.080(a)(1), or upon execution of an agreement under AS 35.15.080(a)(2), state funds appropriated for a public works project which is the subject of the assumption or the agreement shall be transferred to a special account in the state treasury. A municipality or regional educational attendance area administering the project under the assumption or agreement may draw on the account for costs of the project, under fiscal control of the department. If an agreement provides for joint or

HB 190 Fiscal Note (cont'd)

IV. Analysis

a. Assumption. This fiscal note assumes that there will be the same initial capital investment need for maintenance equipment and storage for the 14' road as for the 20' concept. Annual operating costs would also be similar.

b. Project Analysis. This project is a priority of the communities of Newhalen and Nondalton. The project would possible increase the tourist trade which is the area's largest industry.

DOT&PF has been approached by community representatives about receiving $1,000.0 to $2,000.0 as a grant to construct a pioneer road and to move bridge materials to the crossing sites. Once the pioneer route is established, records of traffic could be kept. Upon reaching certain Average Daily Traffic levels, this project would become eligible for Federal Aid Highway funds. This option seemed very attractive to the local representatives. The pioneer road alternative would be an inexpersive means of providing the requested service. It would probably meet the needs of the communities for several years.

Juneau, AK 99811

Ref: NONDALTON/NEWHALEN ROAD PROJECT
Private Property Ownership

Dear Representative SYMANSKI:

Pursuant to your question concerning the status and ownership of land along the right-of-way that was granted to the State of Alaska for the Nondalton/Newhalen Road Project, we would like to offer the following information.

As outlined in the attached report from Robert Jenks, Land Manager, the vast majority of the property along the right-of-way of the road belongs to three parties. Mainly, Nondalton Native Corporation, Iliamna Natives Ltd, and the U.S. Park Service. There are approximately ten other private land holders with land directly on the right-of-way and we have also identified 13 other private landholders that would benefit through access to private inland holdings. Additionally, there are 37 families that hold small land parcels, less than five (5) acres, that would benefit directly from access provided by the road.

These would be the primary direct beneficiaries of any development. In reference to the benefits that would be derived by the local Village Corporations, you may be interested to note that their policy concerning participation in development is:

"It shall be the policy of the corporation to assist in the development of the region in the fields of energy distribution and transportation systems.

The corporation will provide assistance in financing, management and operations for major development projects which are too large to be handled by the local 'small' corporations and/or partnerships and/or sole proprietorships.

The corporation will not become involved, except in an advisory position, in the numerous small businesses that are common to an economically independent region. This policy is based on the philosophy that most private enterprizes are more effective for these type of operations and that each individual should participate in the economy."

It may also be of interest to note that the IRS has concurred that lands held by village corporations, received through ANCSA legislation, are to be treated as "investment holdings." Thus any disposal of these lands, which is anticipated, does not result in "profits" to the corporations, but rather in the conversion of "long term hard assets" to "liquid assets." These will in turn be invested within the region and our ultimate resource, our people.

As a matter of record, Mr. Balluta would also like to clarify his position of this morning concerning the impact that the road would have on our people. Firstly, our surveys have shown that there is no one in our communities who want to be on welfare. As a people, we have been, in a first hand sense, economically independent for centuries. As a part of the culturual impact of the white civilization, we have to learn to adjust and change our direction and goals. Our past experience, in the construction of the electrical generation system, school projects, tanks, farms etc., has proven that our people are ready and willing to work and participate in this new life style as they were in the old "survival environment." With proper direction and leadership, their production has equaled or exceeded that of personnel who were "shipped in" for these projects. The key to this success has been the personnel and management procedures that were developed and implemented on the projects.

We sincerely hope that this will provide the information you requested on this subject. If you hve any questions, please do not hesitate to contact us.

Sincerely yours,

James Diamond Wilson

Ref: Management Plan for Nondalton/Newhalen Road Project

Dear Representative Phillips:

Pursuant to your request for additional information on the intended management procedures for the Nondalton/Newhalen road, we would like to supply the attached information. Please be advised that this is a summary of the "Project Management and Procedures Manual" which is approximately 80% completed at this time.

This manual outlines the entire management system for our project and will be completed prior to the start of work on the road.

As a Contract Administrator, we certainly appreciate your interest in how we intend to manage this project. From our prospective, project administration will the overall success and/or failure of this or any project. The communities of this region have been involved in numerous projects which have been performed by Project Management approach and have found this method to be extremely effective because:

1. It provides the flexibility to increase employment of local personnel.

2. It provides the communities the opportunity to determine which pieces of equipment will remain within the community after project completion. This is usually equipment that a general contractor would have a 100% write-off on during the course of a project.

3. It provides a methodology where the community government and administrative personnel can learn, through hands on participation, from professional personnel, the proper procedures and methods for administering contracts and perform the tasks for which they are qualified.

4. It teaches management and fiscal responsibility to members of the Project Management Committee.

We sincerely hope that this will properly address your concerns on this project. If you require additional information, please do not hesitate to contact us.

Sincerely yours,

Gregory Anelon, Sr.

Gregory Anelon, Mayor
City of Newhalen
Representing the Iliamna/Lake Clark Region

cc: Trans. Comm. Members

PROJECT MANAGEMENT & PROCEDURES MANUAL (abridged) ABSTRACTED

NONDALTON/NEWHALEN ROAD PROJECT

FUNDING

Funding will be requested in the name of the cities of Nondalton and Newhalen through the Department of Administration.

FUND MANAGEMENT

Project funds will be managed by the "Two Cities Project Committee" whose representatives will be responsible to their respective assemblies and/or councils. The project committee consists of two representatives from each of the municipalities of Nondalton and Newhalen and a like number from the community of Iliamna. A seventh member will be chosen at large by a 5/6th majority of these appointees. Appointees shall be made by the Mayor of the respective bodies and shall serve at his pleasure.

Project funds shall be accounted for in a manner such as to meet and/or exceed state requirements for project accounting and all procedures shall be approved by an in-house registered CPA. Expenditures shall be reviewed quarterly by a registered CPA and the project shall be audited annually by an independent auditor and at the end of the project.

Each community shall be responsible to provide proper insurances to the other members of the committee to protect against misuse and/or misappropriation of funds.

All disbursements shall require a minimum of two (2) signatures, one of which shall be that of the selected contracting officer, except in cases of emergency.

MANAGEMENT COMMITTEE

The Management Committee shall be responsible for the overall management and administration of the project. This committee shall be responsible that the appropriate statutes and regulations promugulated thereunder by the State of Alaska, Department of Administration are adhered too. In the absence of regulations directly relating to the procedures and/or decisions required of the committee, regulations of the Department of Transportation and Public Facilities shall apply.

The Management Committee shall meet not less than once monthly for the purposes of conducting the business of the project and at which meeting they shall cause to be provided a project status report and project budget report which shall accurately reflect the status of the project relative to schedule, quantities and budget.

Compensation of the Manageme[illegible]ittee shall be set by the Committee and subject to the approval of all of the respec[illegible]nicipal assemblies and/or councils

The Management Committee shall be the final administrative remedy for any contact and/or contractor disputes.

All contract awards shall be approved by the Management Committee, who cause a letter of review by legal counsel to be attached to said contract prior to presentation to the Committee, and which approval shall be by Roll Call Vote.

ENGINEERING CONSULTANTS

The selection of any engineering consultants, man[illegible]gement consultants and/or inspection personnel shall be in accordance with State of Al[illegible]ska procedures, which procedures shall be a part of the permanent records of the Committ[illegible]e.

ADMINISTRATION

Day-to-day administration of the project shall be handled by a Facility Coordinator with the duties and authority and responsibility as outlined in the job description of same as published by DOT/PF. Said coordinator shall utilize the staff as authorized by the Management Committee, which shall, in principal, consist of admin[illegible]strative staff of the City of Newhalen and the City of Nondalton.

In the addition of any staff members to the existing staff, first priority shall be given to staff members of the Iliamna Development Corporation.

Functions of this staff shall include such items as telephone answering, project accounting, coordination of work pools, secretarial services, account code distribution, preparation of reports and statements, preparation of contracts, scheduling of air transportation and such other tasks as the staff may be qualified for as determined by a quarterly evaluation procedure set by the Management Committee.

PROJECT METHODOLOGY

This project will utilize multiple contracts for the various portions of the roads. The following contracts are anticipated:

1. Inspections: A contract with DOT/PF to utilize their personnel to monitor the project and provide on-site inspection services to insure proper procedures and that construction meets their minimum standards. In lieu of such a contract, DOT/PF would be requested to provide the guidelines, procedures, record requirements and minimum qualifications for a professional inpection team to provide these services.

2. Engineering: An engineering consultant, selected by appropriate State procedures, to provide "as required" engineering services that will need to be addressed as on-site problems arise and to reconfirm structural analysis of the intended bridge structure.

3. Bridge Acquisition: A contract with the State of Alaska, DOT/PF for the transfer of the bridge to the Newhalen bridge site.

4. Bridge Construction: A contract for the construction of the bridge across the Newhalen River.

5. Subbase & Borrow Materials: A contract with the Bristol Bay Regional Corporation setting price, quality and quantities for gravel and other "minerals."

6. Construction: A general construction contract with private contractors for specialized portions of the project that can not be provided and/or implemented by local work forces that are not currently a part of the work forces of the cities.

SCHEDULING

Project scheduling shall be done by the Critical Path Method using an "activity on node" methodology equal to GE Project 2 flexibility. Scheduling program shall be the responsibility of the Facility Coordinator.

Level of scheduling detail shall be such that coordinator can track progress on a maximum 5 working day basis with quantity tracking progress on a one day basis.

All nodal activities shall contain budgeted costs which shall be cross correlated to actual cost activities not less than weekly.

"THIS ABRIDGED SUMMARY ABSTRACTED BY DON ANDERSON, 2/15/83 AT JUNEAU, ALASKA FROM DISC CNEW, 2: MGTPLAN2."

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: CSHB 190 (Transportation) Date on Bill: February 17, 1983
Title: Approp. to DOT&PF for road construction
Sponsor: Herrmann
Requestor: OMB

1. Estimate fiscal impact on:

a. Expenditures:

(Thousands of Dollars)

			FY 84	FY 85	FY 86	FY 87		
Capital			9,000.0	6,300.0	-0-			
Operating			-0-	150.0	165.0			
Total			-0-	-0-	-0-			

b. Revenues:

Revenue			-0-	-0-	-0-			

2. Source of funds to offset fiscal impact of bill:

This information was not provided by the sponsor.

3. Assumptions:

The current cost estimate for road construction only is $13,525.0 in FY'84 dollars. Capital expenditure for maintenance equipment and building is $1,185.0 in FY'84 dollars. The FY'85 capital expenditure represents the difference between the proposed $9,000.0 and the actual project cost plus the cost of the maintenance building and equipment inflated by 10%.

Capital expenditures for maintenance building and equipment are include in the FY'85.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

NONDALTON/NEWHALEN ROAD
PROJECT SUMMARY

HOUSE TRANSPORTATION COMMITTEE

FEBRUARY 15, 1983

EXECUTIVE OVERVIEW

LAKE ILIAMNA/LAKE CLARK REGION

This document outlines the major capital project requirements for local self sufficiency for the cities of Nondalton and Newhalen and the communities of Iliamna, Pedro Bay, and Kokhanok as outlined and agreed by these communities at the Regional Planning and Development Conference held November 17-20, 1982 at Iliamna, Alaska.

The philosophy developed and adopted by the members at the conference for our growth into a self sustaining and economically independent region is based on a thorough understanding of infrastructure which must exist for:

RESOURCE DEVELOPMENT & UTILIZATION: Our ultimate resource is the people we represent and the work which we perform to set the goals, develop the plans, and implement tasks. For our region, we are fortunately supplemented by the availability of various resources which can be developed and utilized, and which are renewable. These include: (a) hydro electric potential for electrification of Bristol Bay; (b) tourism trade through the Lake Clark Park & Preserve; (c) fresh water fishery potential; (d) timber; and (e) world class trophy fishing.

ENERGY DISTRIBUTION SYSTEMS: Through a joint effort of the communities, we now have on-line an electrical generation system capable of meeting the demands through 2010 and a distribution system which ties the three largest communities together. Financing for over 50% of this system was provided by the local communities through long term loan obligations. We also have in place a fuel distribution system capable of serving the communities, which was 93% funded by private parties.

TRANSPORTATION SYSTEMS: Only one portion of the critical transportation system has been satisfactorily accomplished to date. The Iliamna Airport with its NDB approach meets the minimum requirements for year round reliable transportation to and from the region. There is currently no viable means to connect the three largest population areas so that reasonable commerce and trade between them can develop. Thus, the population base necessary for economic independence cannot be accomplished. This problem is further compounded by the fact that summer heavy freight traffic (barge) cannot be properly distributed, nor do we have a means for handling the ever increasing tourism flow.

Thus, we believe that the fundamentals for ECONOMIC INDEPENDENCE are: RESOURCE DEVELOPMENT, ENERGY, and TRANSPORTATION. This document addresses a specific portion of these needs, which when

accomplished and implemented will provide the basis for region wide economic independence.

In summary we:

- Want to develop and utilize our renewable resources.
- Currently have the basis of a viable energy distribution system.
- Have already participated in over 64% of the total financing of major projects to date.
- Must complete our transportation systems.
- Have the private industry sector commitments to assist.
- Have developed long term goals and plans for our needs.
- Desire to be economically independent.

EXECUTIVE PROJECT SUMMARY

Nondalton/Newhalen Road Project

For the past three years the cities of Nondalton and Newhalen and the community of Iliamna have been working jointly and cooperatively for the development of this region into economically self-sufficiency. We, the 1,000 residents of this area, feel that the top priority for the success of our development is the road connecting the communities.

The Nondalton/Newhalen Road is the major portion of the basic resource, energy and transportation triangle that must be completed to provide the proper intra structure for successful economic development of these three communities. This is the second of three parts of our overall transportation system. Basically, its timely completion effects the implementation and effectiveness of numerous projects, both private and governmental, which will lead to our economic independence. The effected projects include:

- LAKE CLARK PARK & PRESERVE development for tourist trade and location of the park gateway at Nondalton.
- NONDALTON POLYSTYRENE manufacturing facility and transportation of the manufactured goods, raw materials, and labor pool.
- INNEC LINE MAINTENANCE costs for the electrical distribution system.
- BRISTOL BAY ELECTRIFICATION project costs for either of the top three alternatives.
- RECREATIONAL PROPERTY DEVELOPMENT through the private sector.
- CENTRALIZED FIRE PROTECTION cost decrease, with a resulting drop in insurance cost for both the governmental and private sectors.
- PROVIDE COMMUNICATIONS corridor for telephone interconnect between the communities and the rest of the world.
- DECREASE EDUCATIONAL COSTS for travel functions between the communities.
- DECREASE PROTECTION & MANAGEMENT COSTS for the Alaska State Troopers and Fish & Game and for National Park Service by relieving the need for 100% air transport.

- o INCREASE LIFE SAFETY PROTECTION by providing year round transportation method for injured patients to MEDIVAK flights.

- o PROVIDE EQUIPMENT BASE FOR FUTURE MAINTENANCE of the road through the intended management procedures.

- o DEVELOP ADMINISTRATIVE SKILLS of local government personnel to the level required for proper administration of an economically independent region.

- o DECREASE COSTS for services such as postal delivery, fuel, food supplies, etc.

Work to Date

The project is scheduled to have the first bid package ready within 30 days of notice of funding.

In 1971, we received a "use required" restricted right-of-way from the Iliamna Airport to Nondalton. Paper plot surveys were completed, the right-of-way was selected, and numerous public meetings were conducted to insure that each sector of the local communities had their input on the project. The right-of-way from BLM specifies that substantial work must begin on the project prior to 1984 or the property will revert to BLM. Failure to meet this requirement would place the land back into the national park/preserve area and would eliminate future use of this routing.

In 1980 the communities jointly requested and received $150,000 and contributed another $82,000 to have the centerline survey of the road completed. As of December 1982, this work was completed, including complete soils analysis, location of borrow sites, and updating of engineering design. This work was managed and coordinated by a joint committee established by the two cities working for the most effective management of the project. To our knowledge, this is the first such coordinated effort between rural communities of such a project as allowable under Alaska statute.

An easement along the right-of-way has also been issued to the Iliamna-Newhalen-Nondalton Electric Cooperative, Inc. for the purpose of burial of the power distribution line to Nondalton. The installation of this line has already been completed and electrical service is now available to the City of Nondalton. A

repossession of this property by BLM would also necessitate INNEC's loss of this easement.

Management

It is anticipated that project management will be provided by the management committee, appointed from the three communities with additional assistance provided by DOT/PF. However, it is not anticipated that DOT/PF will be the prime project administrators. One of the keys to economic independence is the development of local administrative personnel, and both of the cities already have a proven track record in handling of state funds.

The local administration of this project will also decrease the cost of fill material through negotiations with the local village corporations and will insure that a minimum of 6% of the total project funds are expended within the local community. This last point may seem insignificant to many, but when you consider that, on the average, a major bush construction project injects less than 3% of project funds, including local labor wages, into the local economy, it is easy to understand why the numerous capital projects have had very little impact on rural Alaska.

Schedule

A summary of the project schedule shows work beginning within thirty days of funding approval, with project completion in August of 1985. Earlier completion is possible pending weather conditions and actual date of funding.

Outdoor Recreational Facilities (creation of)

SENATE BILL NO. 9, by Senators Vic Fischer and Josephson. Amends law governing the state's system of wilderness trails and campsites (AS 41.20.070 - 120). Expands the system to include "historical, recreational, and wilderness trails, waterways, and campsites." The Division of Parks in the Dept. of Natural Resources would continue to administer the expanded program. Lands to be included in the system would be those designated by the state (DNR in consultation with Depts. of Fish & Game and Transportation & Public Facilities) or those nominated by local governments and approved by the Commissioner of Natural Resources.

Adds several paragraphs to AS 41.20.080 (selection of land) which list the requirements for land included in the system (e.g., must serve the recreational needs of a substantial number of people, must provide access to areas of historical, natural, or recreational interest, etc.). Requires that, when practicable, a trail in the system must follow historic routes.

Adds clause which states that nothing in the law requires the transfer of title to land within an existing or proposed unit of the system from a municipality to the state or the transfer of maintenance or management responsibilities except as may be contained in an agreement between the parties. Would allow the Dept. of Natural Resources to enter into cooperative management agreements with federal agencies, municipal governments, and private landowners. Adds requirement that trails, waterways, or campsites designated or acquired under the law contain sufficient reservations of land to provide for the purposes for which the unit is established.

Provides that money appropriated by the legislature may be spent on any units within the system, including portions of the system owned by municipalities, and may be spent on management, maintenance, and administration of existing units and planning or acquisition of proposed units, including payments to municipalities for these purposes.

Adds new section 41.20.105 which allows the Dept. of Natural Resources to enter into a cooperative agreement with a municipality of the state for the acquisition, development, and marking of trails within the municipality. Amends section on Regulations (41.20.100) to direct the Commissioner of Natural Resources to adopt regulations for the inclusion of local government trails within the system and regulations relating to payments to municipalities for the program.

Amends Sec. 41.20.110 (construction & maintenance of campsites) to require the Dept. of Transportation & Public Facilities to development and construct trail heads for the trail system and to development and provide for safe and adequate public access to waterways. A trail head must provide public parking and must mark the existence of the trail.

Directs the Div. of Tourism to prepare informational material for state and national distribution promoting the use of the system.

SB 9 (cont'd)

Requires the Division of Parks to file a yearly report with the Governor and Legislature which shows areas included in the system, arrangements made or entered into for use, development, maintenance, or marking of units, and money spent or committed. Also requires the Division of Parks to prepare and maintain a five-year development plan for the system. See SB 23, p. 7, similar.

Provides Act effective July 1, 1983.

Introduced January 18 and referred to Resources and Finance.

Alaska Railroad Authority (creation of)

SENATE BILL NO. 10, by Senator Kerttula. Would establish an Alaska Railroad Authority (AS 42.40.010 - 42.40.880) as an instrumentality of the state within the Department of Transportation and Public Facilities, with a legal existence separate from the state. Legislative findings indicate that the United States government determines to discontinue federal operation of the Alaska Railroad and the continued operation is possible only if the state acquires the railroad. Does not provide for an effective date (effective 90 days after Governor's signature).

Introduced January 18 and referred to Transportation and Finance.

Appropriation (Alaska Power Authority)

SENATE BILL NO. 11, by Senators Kerttula and Ziegler. Would appropriate $221,180,000 from the General Fund to the Alaska Power Authority for the construction of various power projects around the state. Subject to AS 37.25.020, which relates to the funds being available only for the life of the project. Effective July 1, 1983.

Introduced January 18 and referred to Resources and Finance.

Salmon Seine Vessels (max. length)

SENATE BILL NO. 12, by Senator Ziegler by request. Repeals AS 16.05.835, which limits vessel length to 50 feet (or 58 feet overall) unless the vessel was used in seine fishing in the state before 1962. Effective immediately.

Introduced January 18 and referred to Resources.

Arson (definition)

SENATE BILL NO. 13, by Senator Ziegler by request. Amends the definition of first degree arson contained in AS 11.46.400. A person commits the crime if person "intentionally damages any property by starting a fire or causing an explosion and by that act recklessly places another person in danger of serious physical injury." The definition is clarified by the addition of the following language: "For purposes of this section, 'another person' includes but is not limited to a fire protection officer, peace officer or public employee who responds to the fire or explosion." Does not provide for an effective date (effective 90 days after Governor's signature).

Introduced January 18 and referred to Judiciary.

DEPARTMENT OF ADMINISTRATION

March 24, 1983

MAR 28 1983

The Honorable Barbara Lacher
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Barbara:

Subject: HB 199 AND SB 23 - TRAILS AND RECREATIONAL PROJECTS

You had asked about the Assembly's position on HB 199 on trails and SB 23 on outdoor recreation and historic projects.

The Assembly, at its March 23, 1983 meeting, unanimously endorsed the above bills.

See the attached:

AM 13-99 - House Bill 199 and Senate Bill 23 Relating to Recreational Projects.

Letter of Alaska Association for Historic Preservation and Alaska Recreation and Park Association to Governor Sheffield.

Sincerely,

Gary Thurlow
Borough Manager

Matanuska - Susitna Borough

assembly memorandum

no. A.M. 83-99

from: Rodney Schulling, Asst. Planning Director date: March 17, 1983

subject: House Bill 199 and Senate Bill 23 Relating to Recreational Projects

The Planning Commission has reviewed House Bill 199 (copy attached) amending current legislation relating to development of State trails and other recreational facilities. The Planning Commission agrees in principle with this legislation and has so stated in Resolution 83-18; however, they have some concerns which, if the Assembly agrees, should be conveyed with any endorsement of subject legislation. These concerns include a suggestion that the Borough be more specifically involved in planning and designation of elements which would be incorporated in a State recreational system within the Borough. The Planning Commission is also concerned that provisions be made to identify local control of local projects and that funding be provided to support their development.

A companion Senate bill - SB 23 - was not reviewed by the Planning Commission but does seem to address some of the funding concerns of the Commission. A copy of this bill is also attached for Assembly review.

A proposed Assembly resolution supporting HB 199 and SB 23 in principle is attached for your consideration. Administration recommends approval and suggests that the Planning Commission concerns expressed above be conveyed in an accompanying letter to sponsor legislators along with any other concerns the Assembly may have.

Respectfully submitted,

Claudio Arenas

Honorable Bill Sheffield
Governor of Alaska
Pouch A
Juneau, Alaska 99811

Dear Governor Sheffield:

At this time of year you and your administration are beseiged by requests for capital funds for various local projects. Certainly, this type of pressure is being applied to members of the Legislature. These requests are difficult to compare and evaluate on a statewide basis.

Our two statewide organizations, the Alaska Recreation and Park Association and the Alaska Association for Historic Preservation would like to propose an approach towards capital budgeting for local recreation facilities and historic preservation projects that would fit in with your efforts to provide a well considered and controlled capital budget.

Senate Bill No. 23 was drafted several years ago with the assistance of the Alaska Division of Parks. It establishes a program by which the State, through the Alaska Division of Parks, would fund local recreation and historic preservation projects on the basis of competitive applications received annually from localities throughout the state. The bill also authorizes the Division to provide technical assistance to communities in identifying projects and preparing applications. This assistance puts small communities on a more equitable basis with larger places in the annual competition for funds.

The program embodied in this bill has had substantial testing and precedent. It is based on the Land and Water Conservation Fund Program and the Historic Preservation Grant Program that were much used throughout Alaska in the decade preceding 1981 when federal funds were eliminated. These two highly successful programs combined federal funding with State administration to achieve an equitable distribution of dollars for local recreational and historic preservation projects. The requirement for local matching funds and an annual competition of applicants ensured that only those projects that had solid public benefit and local support received public funds. Unfortunately, recent federal cutbacks have eliminated both programs, except for a small amount appropriated for recreational projects during the current fiscal year. Senate Bill No. 23 would reinstitute these programs using State funding to match local dollars for locally initiated projects.

We believe that Senate Bill No. 23 deserves administrative support. For minimal statewide implementation, the FY 1984 fiscal note should be at least $4 million. Since the bill establishes a process of statewide

distribution of funding, it needs the support of the Administration. With your help the bill could establish a rational and cost effective system for distribution of funding for local recreation and historic preservation, a system which could provide an alternative to the ad hoc approach which has prevailed in recent years.

We look forward to discussing this proposal with you in further detail.

Sincerely,

Robert Goldberg, President
Alaska Association for
Historic Preservation

SB 9 - An Act relating to outdoor recreational facilities; providing for a state historical, recreational, and wilderness trails, waterways and campsite system.

SB 128 - An Act establishing certain areas as marine park units of the Alaska state park system.

CSHB 151 - An Act making a special appropriation to the Department of Natural Resources, Division of Parks, for acquisition and development of the House of Wickersham in Juneau.

SB 9 - Neil Johannsen, Director, State Division of Parks testified that the administration supports SB 9. He would recommend that the fiscal note be stricken to zero. Discussion followed as to implementation of the bill if it was not funded. Regarding the Iditarod Trail, he stated that BLM will not act on the trail management plan until a joint understanding by the State of Alaska and the Department of Interior has been reached on management strategies. At that time a plan will be submitted to the Alaskan delegation in Washington, D. C. and funds requested.

Senator Vic Fischer listed amendments he wished to see included in SB 9. Senator Fahrenkamp suggested that Sen. Fischer work closely with Citizen's Advisory Commission which has worked on the Iditarod plan.

Senator Fischer moved a zero fiscal note on SB 9. There were no objections.

Jim Wilson representing himself expressed concern over the lack of safeguards in the bill permitting continued historic use of trails for mining, etc.

Mary Lou King representing herself supports SB 9.

SB 128 - Neil Johannsen, Director of Alaska State Parks, gave background information and the history of the acquisition of land for marine parks. Discussion followed regarding amount of state land selected from national forests allocated to prime recreation use, similar projects in other areas, the law suit over land selections with the Forest Service, the support of various groups including Alaska Visitor's Association and communities in the Prince William Sound area. He suggested various amendments to improve upon the bill; i.e. special purpose sites, the inclusion of Board of Game,

permission to construct aquaculture facilities, cooperative agreements with other owners in management and access across marine sites. He recommended a zero fiscal note.

Senator Fischer moved the committee fiscal note. There were no objections.

Jay Nelson, Representative of Alaska Environmental Lobby, testified that SB 128 would assure good conservation of land and supports the bill. He supports zero fiscal note on SB 128. He also supports CSHB 151 and SB 9.

Carl Yanagawa, Department of Fish and Game testified that his department supports SB 128.

Senator Vic Fischer moved that a committee substitute be prepared to incorporate proposed changes. There were no objections.

Senator Fahrenkamp stated that the Committee would consider SB 128 on Monday, March 28.

CSHB 151 - Ned Farquhar, Special Assistant to DNR Commissioner Wunnicke requested permission to delay the Administration's comments on CSHB 151 one week.

Senator Fahrenkamp concurred in the request.

Kitty Gaer, a private citizen testified in support of CSHB 151.

Perry Lovett, Mayor of Cordova and a member of Alaska Parks and Recreation testified in support of SB 9 and SB 128. He also supports amendments offered by State Division of Parks. However, he expressed concern regarding a zero fiscal note.

Meeting adjourned at 4:15 p.m.

after the close of the fiscal year for which the sums are authorized, unless they are obligated for expenditure, in which case they shall remain available until spent. Any amounts not obligated remaining unexpended at the end of the three-year period lapse.

(c) The amount expended by a city or borough under § 355(a) of this chapter or by the Department of Highways under § 355(b) and § 360 of this chapter, shall never in any one fiscal year be less than 10 per cent of the total amount of the funds it receives in that year for the purposes authorized in §§ 355 — 360 of this chapter. (§ 1 ch 107 SLA 1972; am § 3 ch 75 SLA 1974)

Effect of amendment. — The 1974 amendment, in subsection (a), substituted "of not less than three-eighths of one per cent nor more than" for "up to" near the beginning and "shall be appropriated" for "may be appropriated" and "footpaths and shelter construction and maintenance" for "and footpath" near the middle.

Sec. 41.20.370. Use and marking of trails and footpaths. Trails established under § 355(a) of this chapter may be used for more than one type of transportation, motorized or nonmotorized, as considered appropriate by the commissioner of natural resources. Except along highways within the jurisdiction of the Department of Highways, the Department of Natural Resources shall provide a uniform system of marking trails and footpaths. (§ 1 ch 107 SLA 1972)

Sec. 41.20.375. Reports. Cities and boroughs receiving grants under §§ 355 — 375 of this chapter shall submit to the commissioner of natural resources complete reports covering its expenditures relating to the establishment of trails and footpaths. Reports shall be submitted annually, on projects extending over 12 months. Reports on shorter projects shall be submitted at the completion of the project. (§ 1 ch 107 SLA 1972)

Article 11. Alaska Conservation Action Corps.

Section
385. Declaration of purpose
390. Corps
395. Activities of corps
400. Compensation
405. Restrictions

Editor's note. — Section 2, ch. 168, SLA 1972, provides: "This Act takes effect upon certification by the commissioner of natural resources to the governor that appropriated federal funds are available under P.L. 91-378, on other federal law, to pay compensation to corps members."

Sec. 41.20.385. Declaration of purpose. The purpose of §§ 385 — 405 of this chapter is to provide avenues of action for youth in the state

(d) Upon approval of the plan, funds shall be utilized and disbursed to cities and boroughs and to the Department of Highways according to regulations established by the commissioner of natural resources.

(e) Before the distribution of funds by the commissioner, consideration shall be given to the extent of funding available under other federal, local and state aid programs.

(f) Nothing in §§ 355 — 375 of this chapter prohibits a city or borough for which a grant is authorized from entering into an agreement with the Department of Natural Resources for the establishment and maintenance of trails and footpaths outside cities and boroughs. (§ 1 ch 107 SLA 1972; am § 1 ch 75 SLA 1974)

Effect of amendment. — The 1974 amendment, in subsection (c), substituted "paths" for "foothpaths" in the first sentence and added the second sentence.

Sec. 41.20.360. Paths and trails along highways. The commissioner of highways shall administer the plan and program providing for the establishment and maintenance of footpaths, bridle paths, bicycle paths, ski trails, dog sled trails, motorized vehicle trails and other paths and trails along certain designated existing highways, or when a highway, road or street is being constructed, reconstructed or relocated after June 7, 1972. Trails established under an approved plan submitted by the Department of Highways may be used for those types of uses written into the plan. A uniform system of marking the paths and trails established under this section shall be established by the commissioner of highways. (§ 1 ch 107 SLA 1972; am § 2 ch 75 SLA 1974)

Effect of amendment. — The 1974 amendment inserted "bridle paths, bicycle paths, ski trails, dog sled trails, motorized vehicle trails and other paths" in the first sentence, substituted "those types of uses written into the plan" for "more than one type of transportation, motorized or nonmotorized, as determined by the commissioner of highways" in the second sentence, and substituted "paths" for "footpaths" in the third sentence.

Sec. 41.20.365. Authorization of funds. (a) An amount of not less than three-eights of one per cent nor more than one per cent of the total yearly state and federal matching sum combined, under the federal-aid highways program (23 U.S.C., secs. 101 — 511), shall be appropriated annually from the general fund to the Department of Natural Resources for the purposes of providing grants to eligible cities and boroughs for trails, footpaths and shelter construction and maintenance in appropriate areas, including but not limited to existing park and recreation areas and for the purpose of providing grants to the Department of Highways for developing the program specified in § 355(b) and § 360 of this chapter.

(b) Except as provided in (c) of this section, the sums appropriated under this section shall continue to be available for expenditure by the departments or by eligible cities and boroughs for a period of three years

T2S, R1W, Seward Meridian. (§ 1 ch 66 SLA 1971; am § 1 ch 73 SLA 1975)

Effect of amendment. — The 1975 amendment divided the former third sentence into the present third and fifth sentences by substituting the language beginning "Lands covered by §§ 330 — 345" and ending "described parcels" for "and is described as follows," substituted "(1) — (4) of this section" for "§§ 330 — 340 of this chapter" in the third sentence, added the present fourth sentence, and added paragraph (5).

Sec. 41.20.340. Incompatible use prohibited. The commissioner of natural resources shall designate by regulation incompatible uses within the boundaries of the Caines Head State Recreation Area in accordance with § 335 of this chapter, and those incompatible uses designated are prohibited or restricted, as provided by regulation. (§ 1 ch 66 SLA 1971)

Sec. 41.20.345. Purchase authorized. The commissioner of natural resources may acquire, by purchase in the name of the state, title to or interest in real property lying within the boundaries of the Caines Head State Recreation Area. The state may not acquire by eminent domain privately owned land for inclusion in the Caines Head State Recreation Area. (§ 1 ch 66 SLA 1971)

Article 10. Trails and Footpaths.

Section
355. Grants for the establishment of trails and footpaths
360. Paths and trails along highways
365. Authorization of funds
370. Use and marking of trails and footpaths
375. Reports

Sec. 41.20.355. Grants for the establishment of trails and footpaths. (a) Within the limits of available appropriations, a city or borough of any class is entitled to state grants for the purpose of acquiring land or rights-of-way over land and establishing and maintaining trails and footpaths on that land or those rights-of-way.

(b) Within the limits of available appropriations, the Department of Highways is entitled to state grants for the establishment and maintenance of footpaths and trails along certain designated existing highways or when a highway, road or street is being constructed, reconstructed or relocated after June 7, 1972.

(c) Before a grant is awarded under this section, application shall be submitted to the commissioner of natural resources, accompanied by a comprehensive plan for the establishment of trails and paths. The plan may provide for ski trails, dog sled trails, motorized vehicle trails, bicycle paths, bridle paths, footpaths and other trails and paths, and designate separate and incompatible uses of these trails and paths.

STATE OF ALASKA
PRELIMINARY STATEMENT OF FISCAL IMPACT

Bill No: HB 203 Date on Bill: February 16, 1983
Title: Appropriation to DOT/PF for Phase I of the Nome Port Facility
Sponsor: Fuller and Bussell
Requestor:

1. Estimate fiscal impact on:

a. Expenditures:

(Thousands of Dollars)

			FY 84	FY 85	FY 86	FY 87		
Capital			12,000.0					
Operating			-0-					
Total			12,000.0					

b. Revenues:

Revenue								

2. Source of funds to offset fiscal impact of bill:

Not identified by sponsor.

3. Assumptions:

This project is already designed. $12 million is sufficient to construct the full 3600' causeway, plus the required bridge.

4. Disclaimer:
This statement has not been reviewed by the OMB in the Office of the Governor. It therefore does not represent the final estimate of fiscal impact.

Prepared By: Robert R. Venusti Phone: 479-4281
Division: Planning and Programming Date 2/24/83

Approved by Commissioner: [signature] Date: 2/25/83
Department: Department of Transportation and Public Facilities

5. Distribution:
Original to Legislative Finance
Copy to OMB
Copy to Sponsor
Copy to Requestor

NOME PORT FACILITIES

PHASE I

TECHNICAL INFORMATION BULLETIN

TAMS
TIPPETTS-ABBETT-McCARTHY-STRATTON ENGINEERS
A PROFESSIONAL CORPORATION
ALASKA

PROJECT:	Port of Nome Causeway and Onshore Facilities
OWNER:	The City of Nome, Alaska
FUNDING	State of Alaska (DOT/PF)
DESIGN ENGINEERS:	Tippetts-Abbett-McCarthy-Stratton (TAMS)
DESIGN COMPLETION:	Estimated for February 1983
CONSTRUCTION BID DATE:	Unknown, depends on the City of Nome obtaining funding from the State of Alaska Legislature. Possibly in mid-summer 1983.
AVAILABILITY OF PLANS:	Plans will not be made available until the City is prepared to go ahead with construction. Incomplete preliminary plans and study materials may be viewed at TAMS offices by arrangement.

PROJECT DESCRIPTION: The City of Nome, situated on the north shore of Norton Sound (Figure 1) has a shallow harbor which precludes the docking of vessels drawing more than 6 feet of water. Consequently all cargo is lightered from barges anchored up to 1 mile offshore.

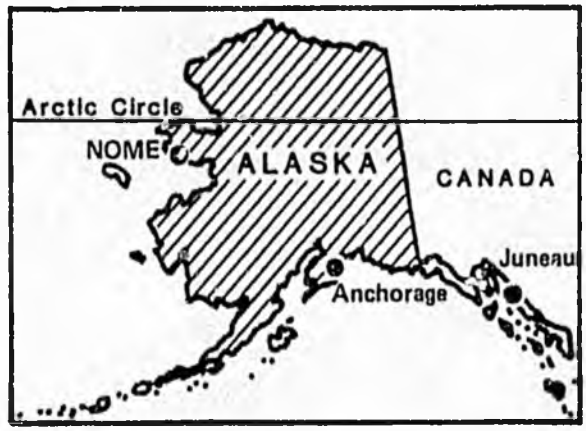

Fig. 1 Location Plan

The City proposes to build the new port in three phases. The first level of development, shown in Figure 2 will provide two 400 foot barge berths at an offshore terminal connected to the shore by a 3500 foot causeway. Later phases of development will include two additional piers for oil rig service vessels and a bulk ore load out facility.

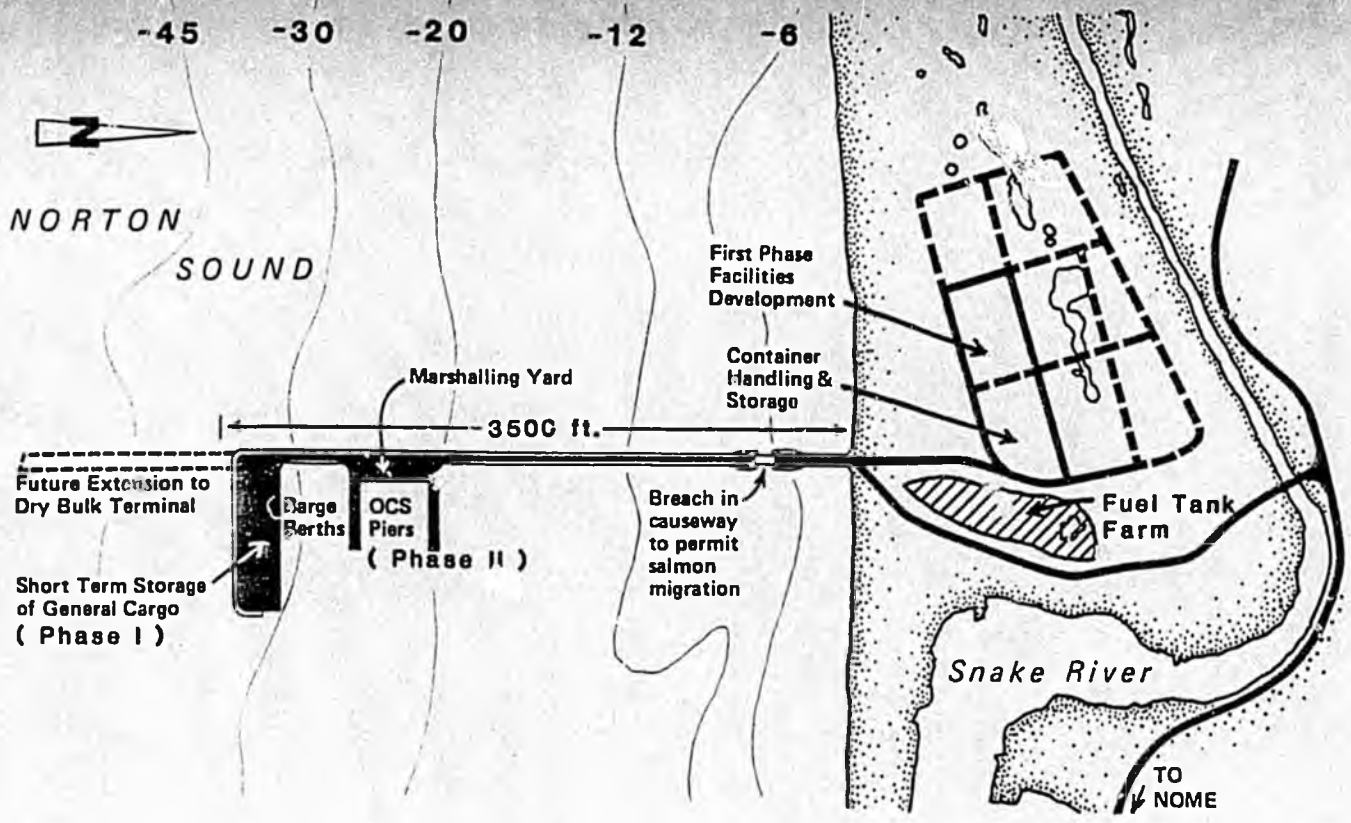

Fig. 2 Layout of Port

STRUCTURAL DETAILS:

Causeway

The causeway, shown in Figures 3 and 4, will be a rubble mound structure with 15-20 ton armor protection to the south and west faces and 8-12 ton armor on the east face. Utility lines will be direct buried in two utility corridors. The causeway roadway and offshore terminal area will be paved with asphalt; axle loads on the facility are expected to be 120,000 pounds.

Causeway Breach

Approximately 400 feet from shore the causeway will be breached and the opening crossed with a 98 foot bridge of prestressed concrete girders.

Offshore Terminal

The offshore terminal will provide 4.6 acres of short term open storage area (no buildings).

Dock Structure

The main dock structure to the offshore terminal will be constructed from 30 foot diameter by 33 foot high circular concrete caissons, as shown in Figure 5. Wall thickness is 12 inches with an 18 inch base giving a weight of 315 tons per

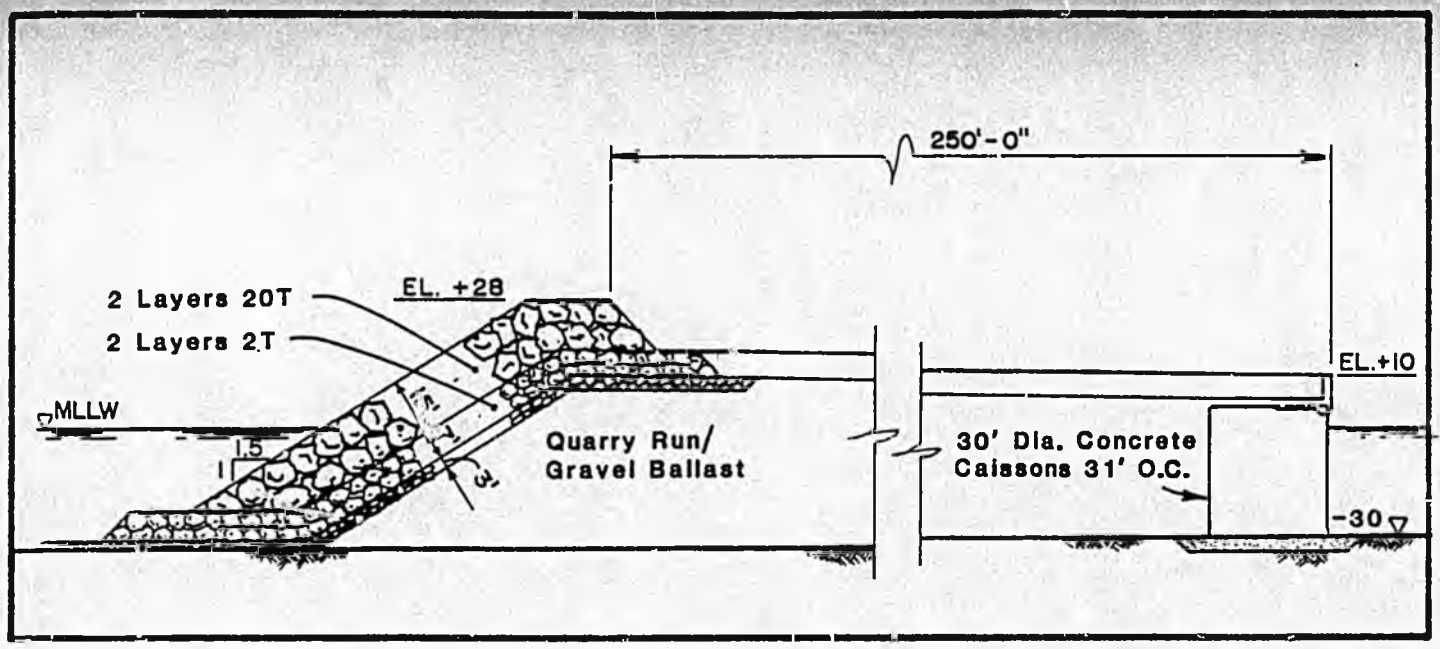

Fig. 3 Typical Section - Offshore Terminal

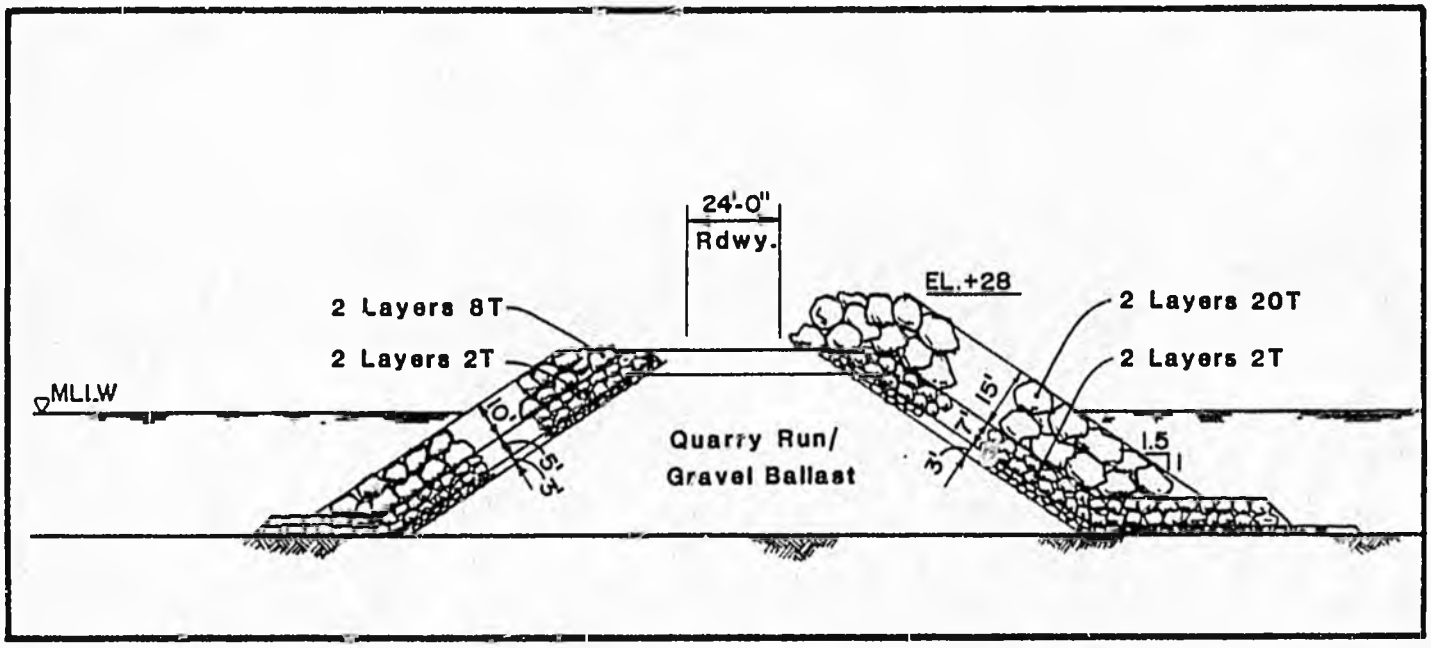

Fig. 4 Typical Section - Causeway

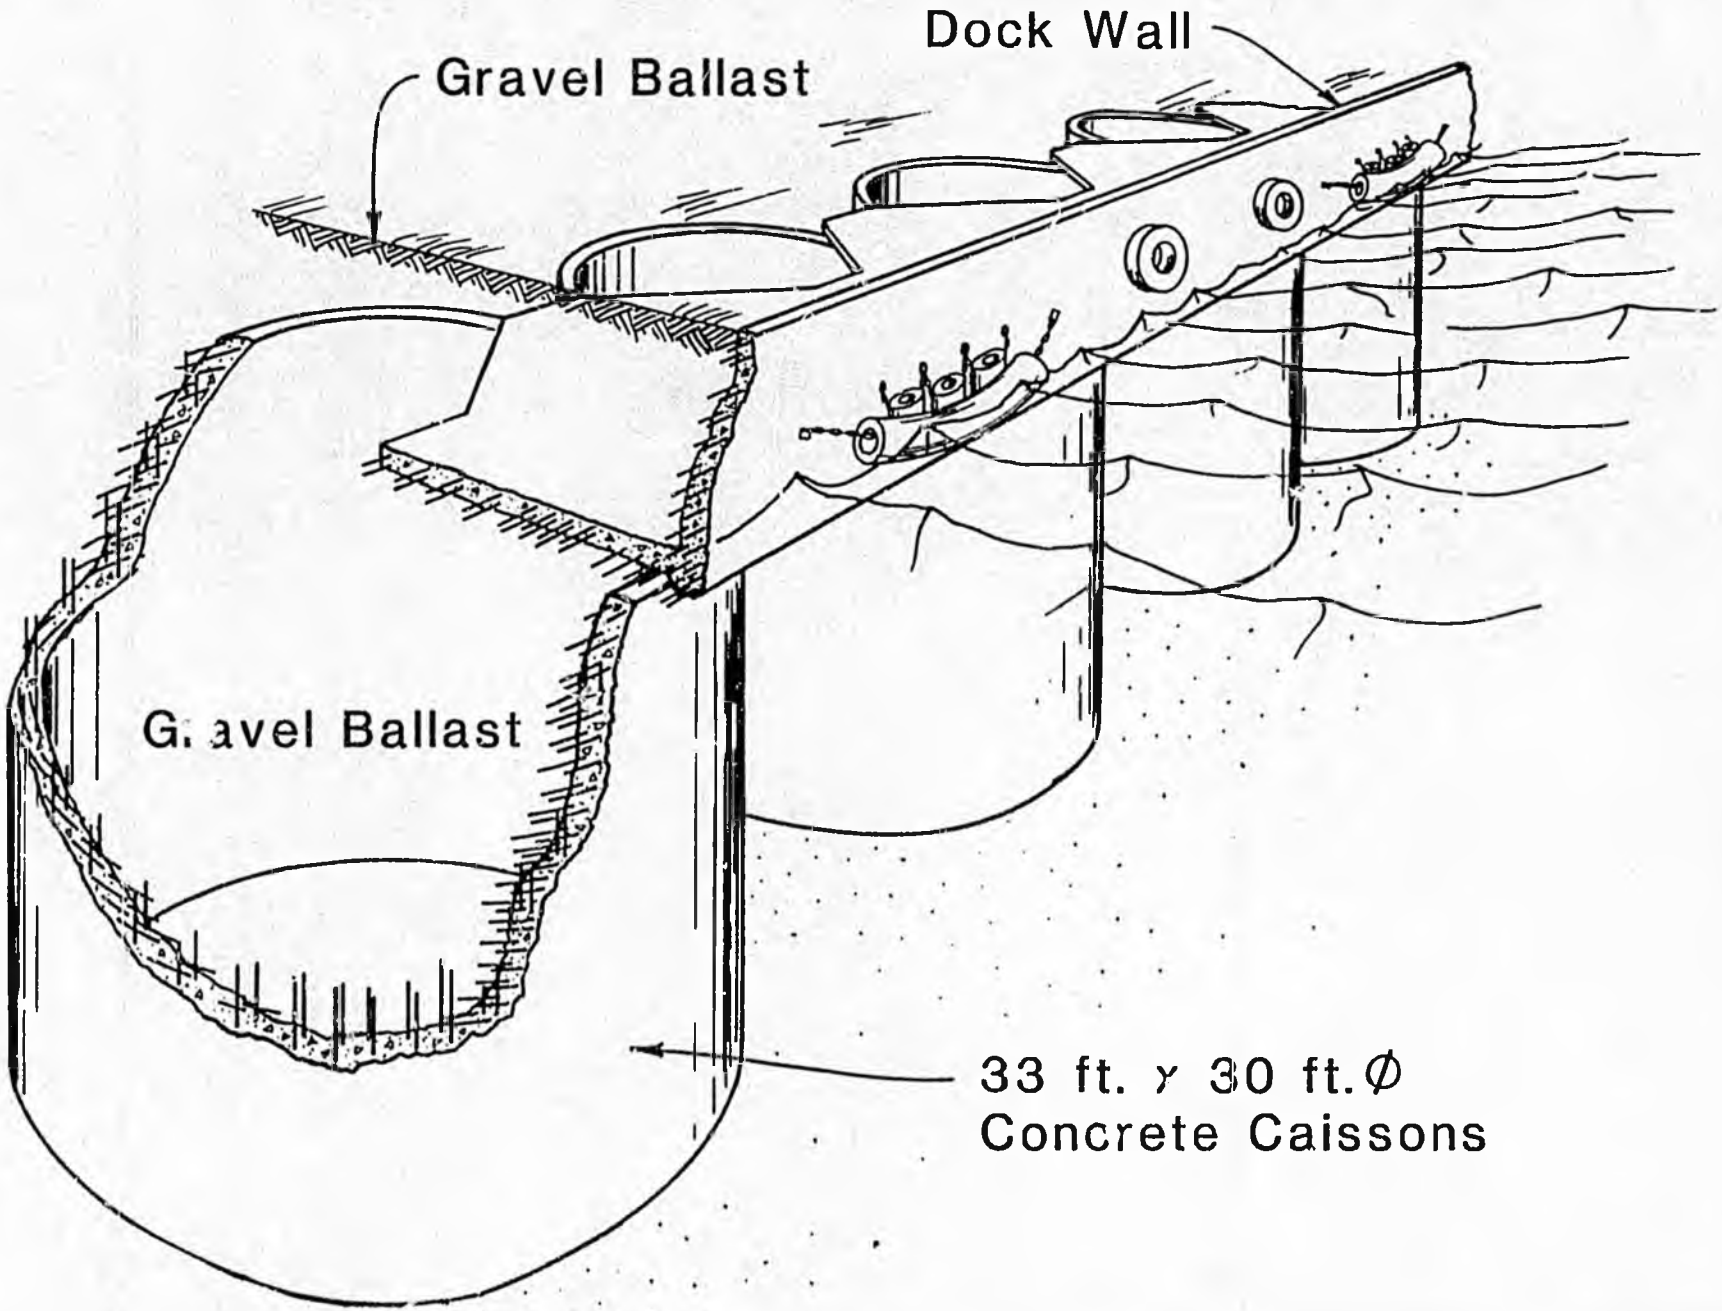

Fig. 5 Dock Structure and Caissons

caisson. Epoxy coated reinforcement is expected and an epoxy outer coating may be required over the area of the caisson likely to be subjected to ice abrasion.

Onshore Facilities

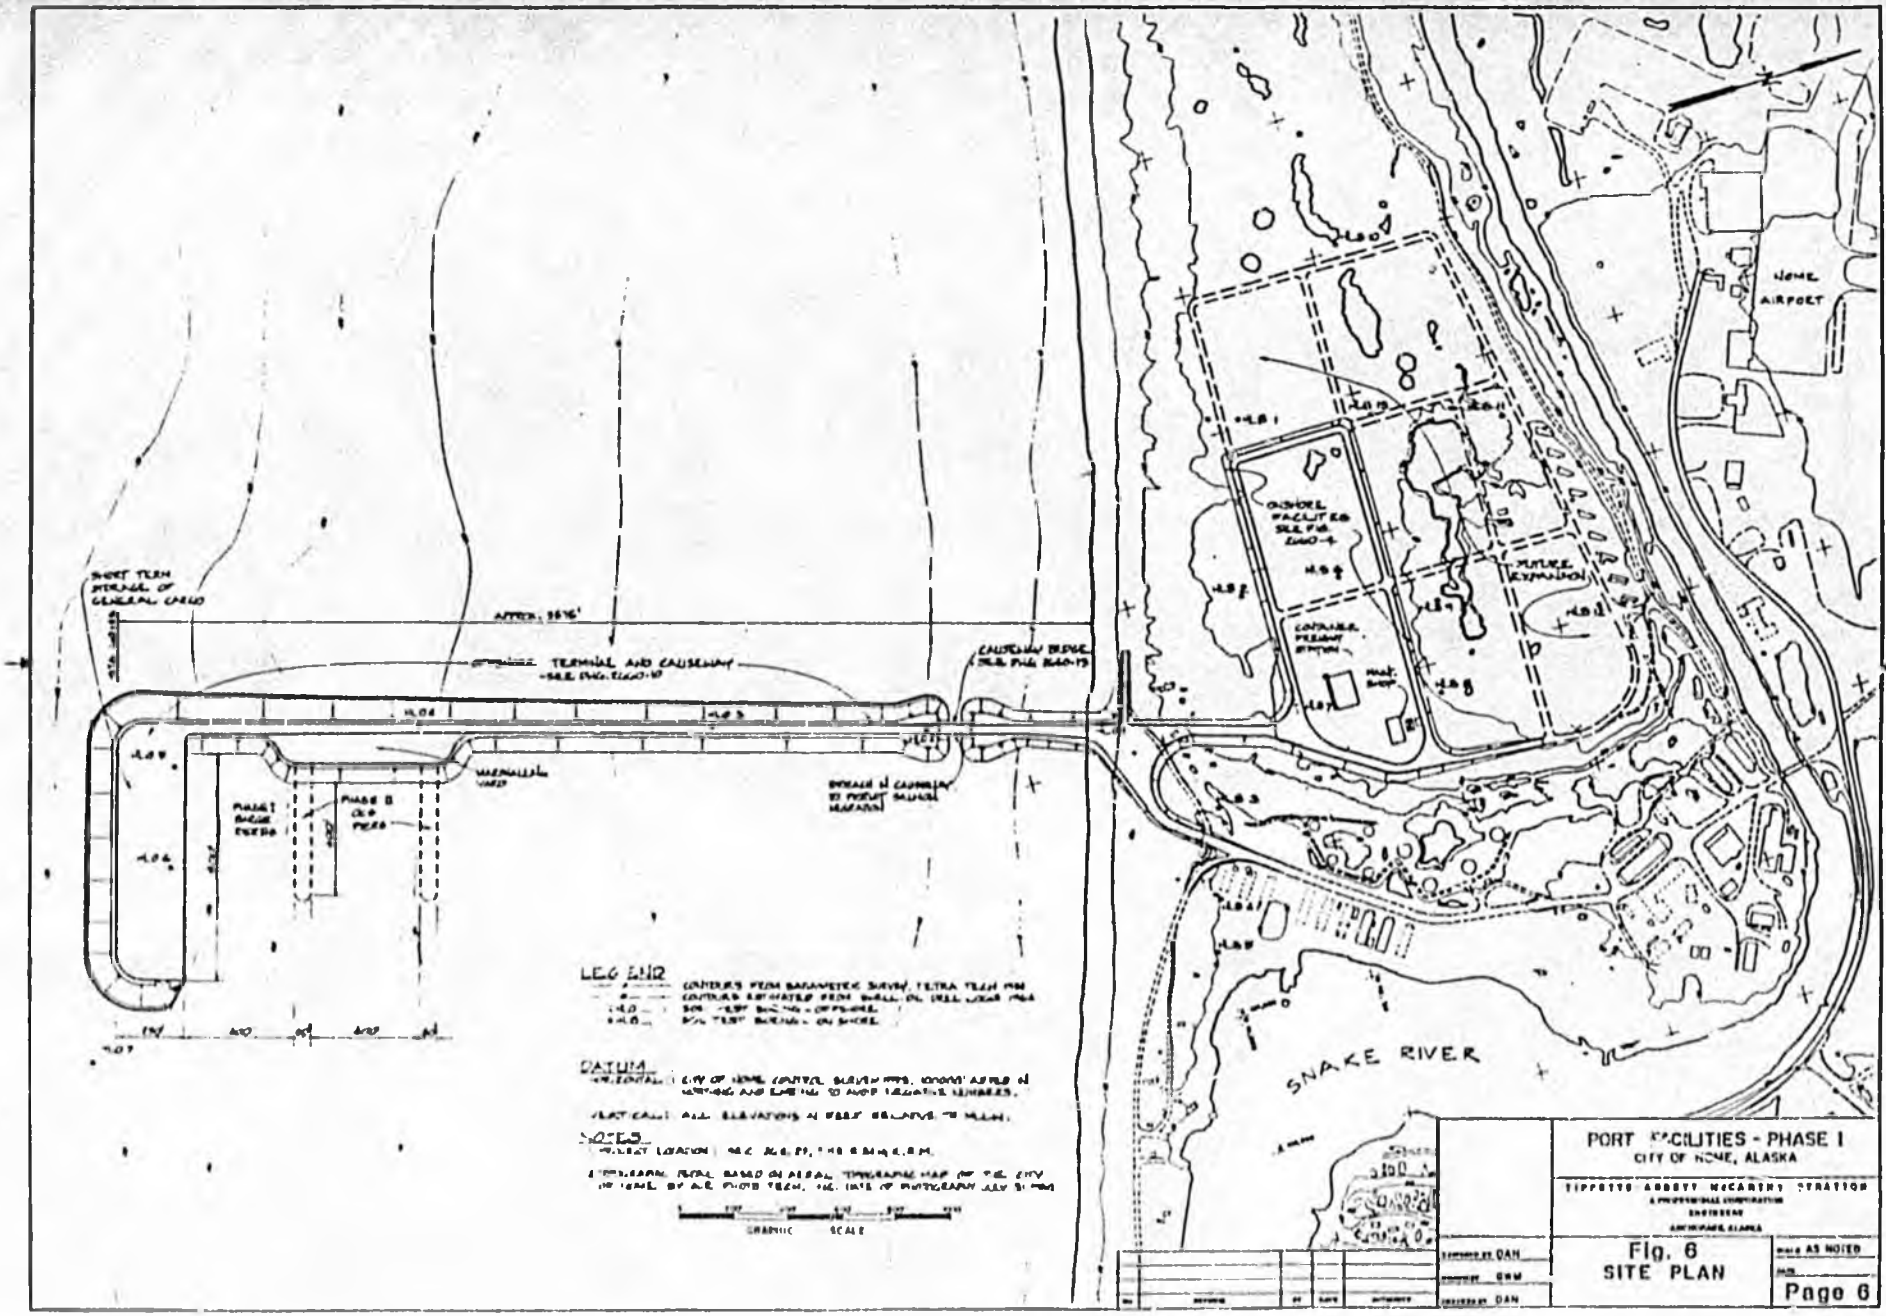
1. 10 acres of open storage on a 9 foot thick gravel pad.

2. Container Freight Station: 8000 square feet of container handling area plus 1600 square feet of office space using pre-engineered metal buildings.

3. Vehicle Maintenance Shop: 3200 square feet of work area with a 5 ton crane.

Fuel System

Since 75% of all cargoes imported to the region are bulk petroleum products, a comprehensive fuel unloading, distribution and storage system is required. The main offloading point will comprise 4 product unloading arms and pipework to the tank farm area shown in Figure 6. New tanks will be constructed within the existing fuel storage area.



Mechanical and Electrical

The utilities corridor along the causeway will carry high and low voltage electrical service, telephone, lines for a variety of types of fuel, and water lines for fire fighting. At the terminals and berths there will be navigation lighting and illumination for work areas.

CLIMATE:

Norton Sound is open to navigation from mid or late June to late October or mid-November when sea ice from the Bering Sea collects along the shoreline. Shorefast and floating ice cover is normally established by January and remains to a distance of approximately 1 mile from the shoreline until break up (Figure 7). Winter temperature minimum averages -10° F and rarely falls below -40° F. Summer temperatures rarely exceed 55° F.

The predominant storm direction is from the southwest. A 100 year significant wave height of 16.5 feet is projected for the offshore terminal area, accompanied by a storm tide which in 1974 caused a 10 foot set up at the City dock in the Snake River.

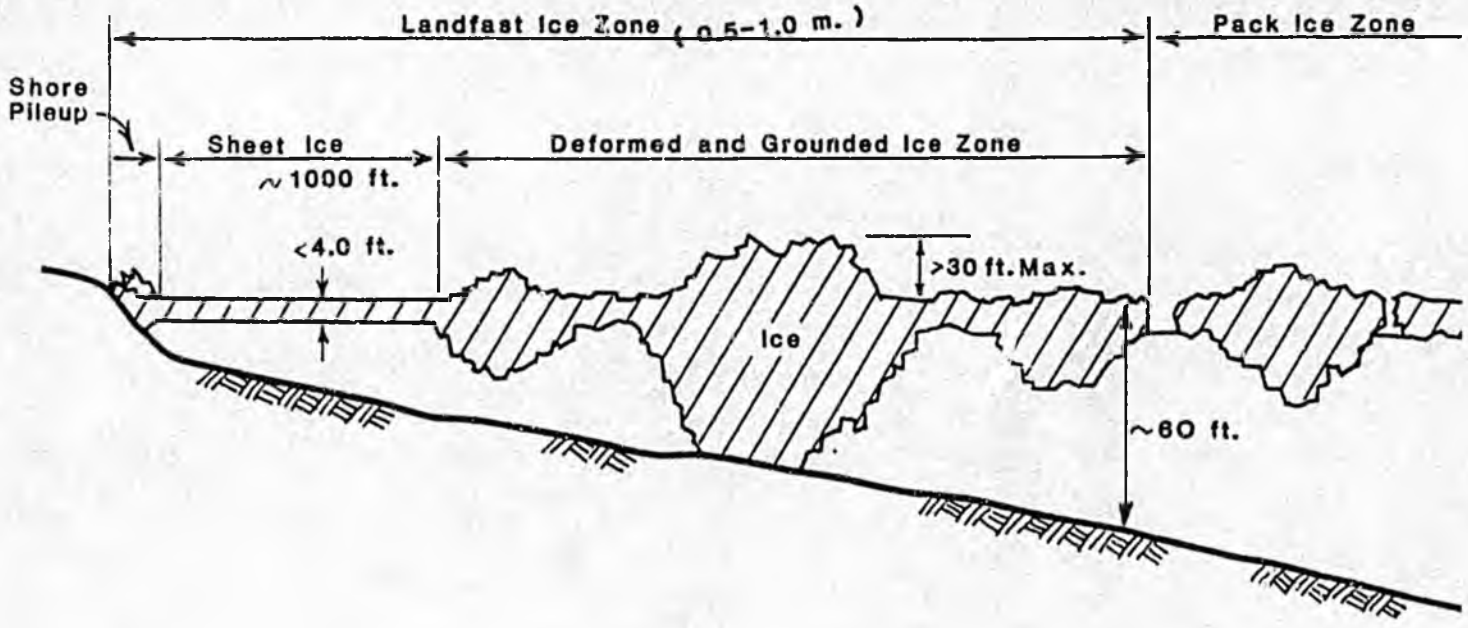

Fig. 7 Shorefast Ice Cover

MATERIALS:

The primary source of core material for the causeway and offshore terminal is expected to be one of a number of gold dredge tailing dumps located at 2-5 mile radii from the project site.

Rock armor for protection against wave and ice attack is expected to be obtained from the Cape Nome quarry, approximately 13 miles east of the project site as shown in Figure 8. Highway access to the quarry site is maintained in the summer months only.

GROUND CONDITIONS:

All onshore facilities are located in a permafrost area which must be protected by a gravel blanket. The permafrost is patchy towards the shoreline and the sand spit to the east of the causeway which has been worked for gold extraction exhibits very low bearing capacity.

SITE INVESTIGATIONS:

During a borehole program carried out in February 1982, 7 offshore and 13 onshore holes were drilled. Bedrock was encountered under the causeway location at depths varying from 40-60 feet below the seabed. Overlying materials sampled comprised glacial silts, tills and sands.

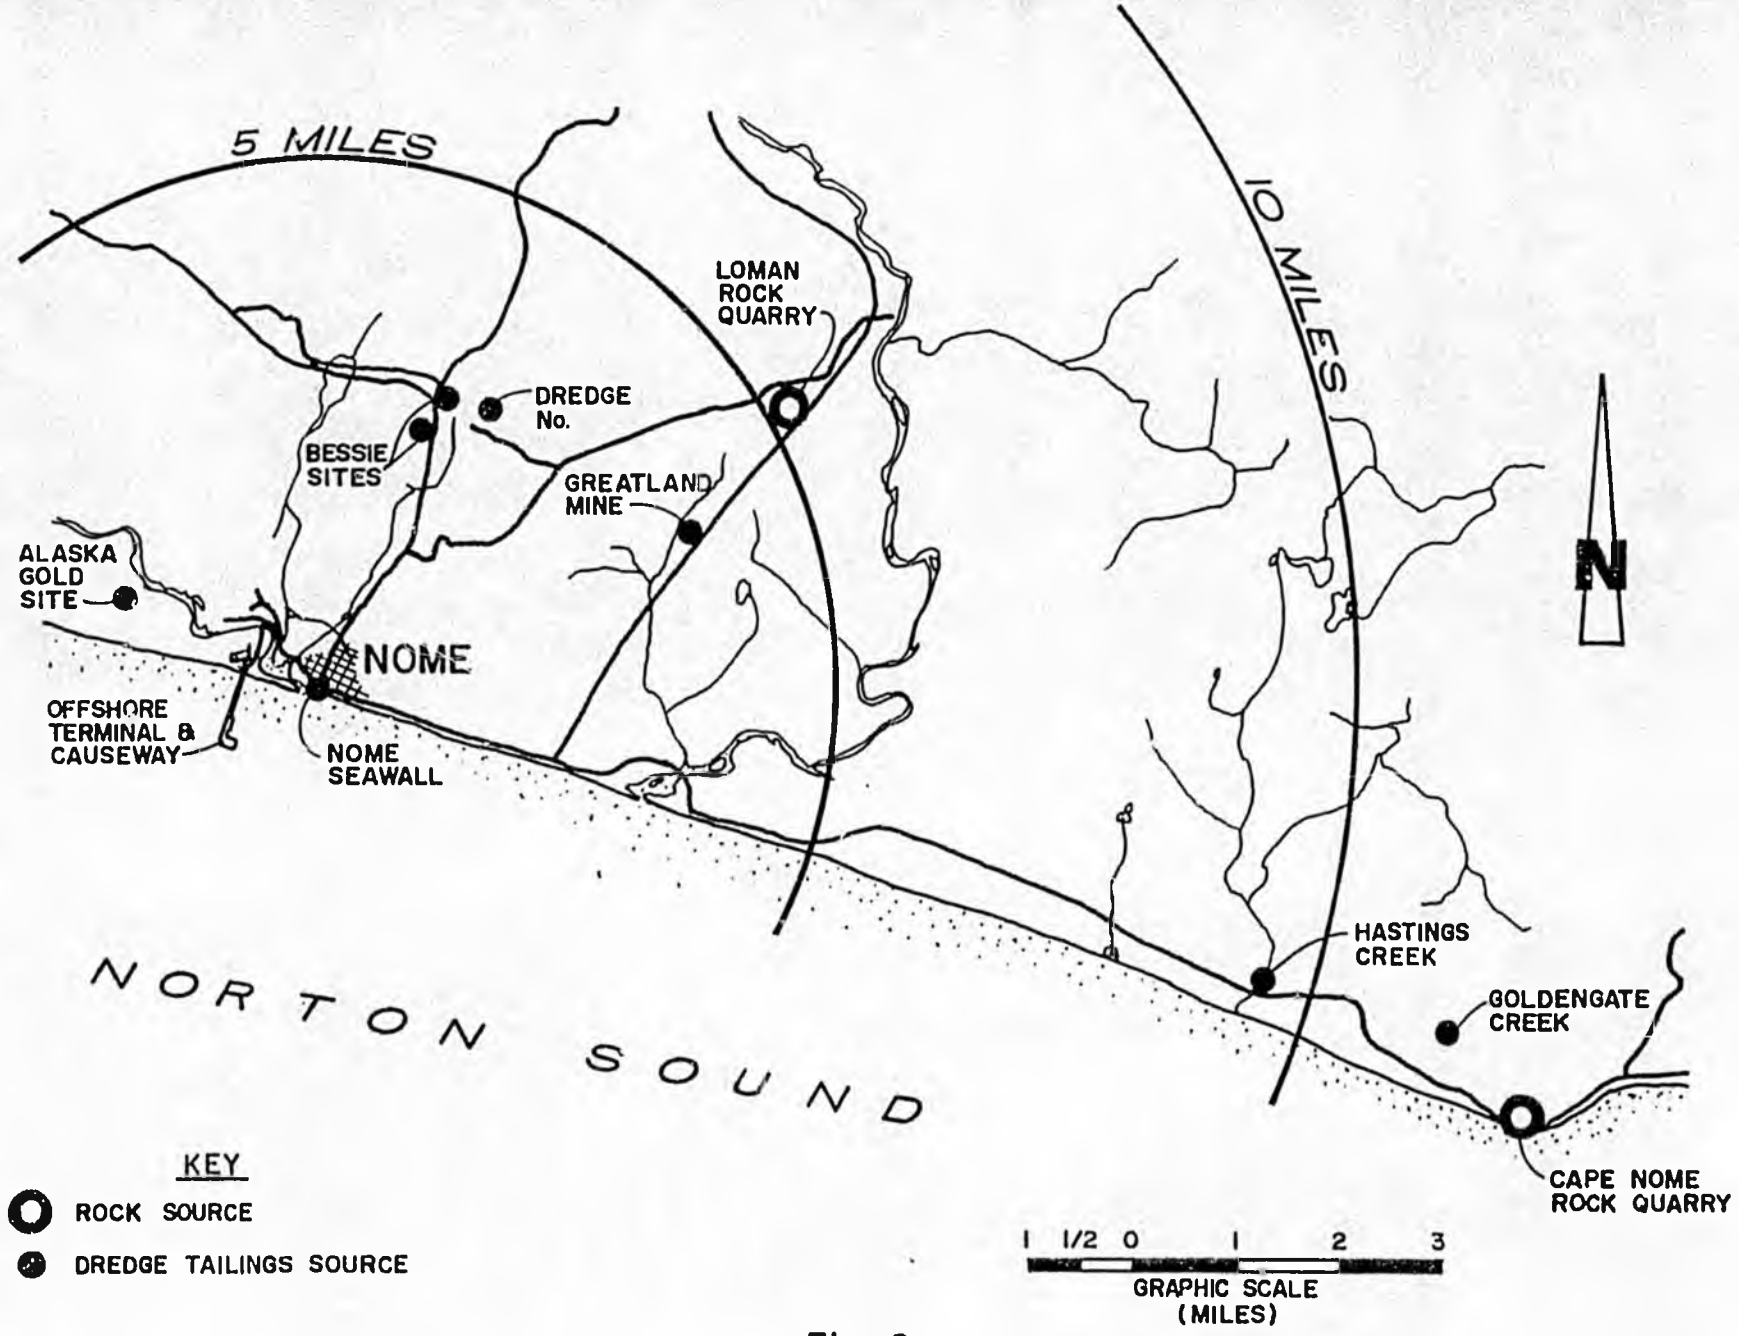

Fig. 8

LOCATION MAP - SOIL AND ROCK BORROW SITES

Materials source investigations carried out in June 1982 were followed by a test blast at the Cape Nome quarry. The results of these and all other site investigations will be made available to contractors at bid time and may be reviewed by arrangement with TAMS.

PERMIT STATUS:

An application for a Corps of Engineers construction permit was submitted in August 1982. Prior to the application extensive discussions with interested state and federal agencies were carried out to resolve concerns and incorporate mitigation measures where necessary.

MATERIALS QUANTITIES:

A preliminary, abbreviated list of materials quantities for the Phase I construction contract is attached.

Further information on the project may be obtained from the following:

HB 228, by Shultz. Would organize the Department of Transportation & Public Facilities into five regions within the state (currently organized in regions--no specific number). Sets out specific location of each region. Provides each regional director shall have at least six years experience in transportation construction and engineering, and is responsible for planning, design, construction, administration, and maintenance within the region. Provides that the director of region two is responsible for planning, design, and construction within regions two, five and a portion of region four. The director of region one is responsible for planning, design and construction within region one and a portion of region four.

DATE: MAY 16, 1983

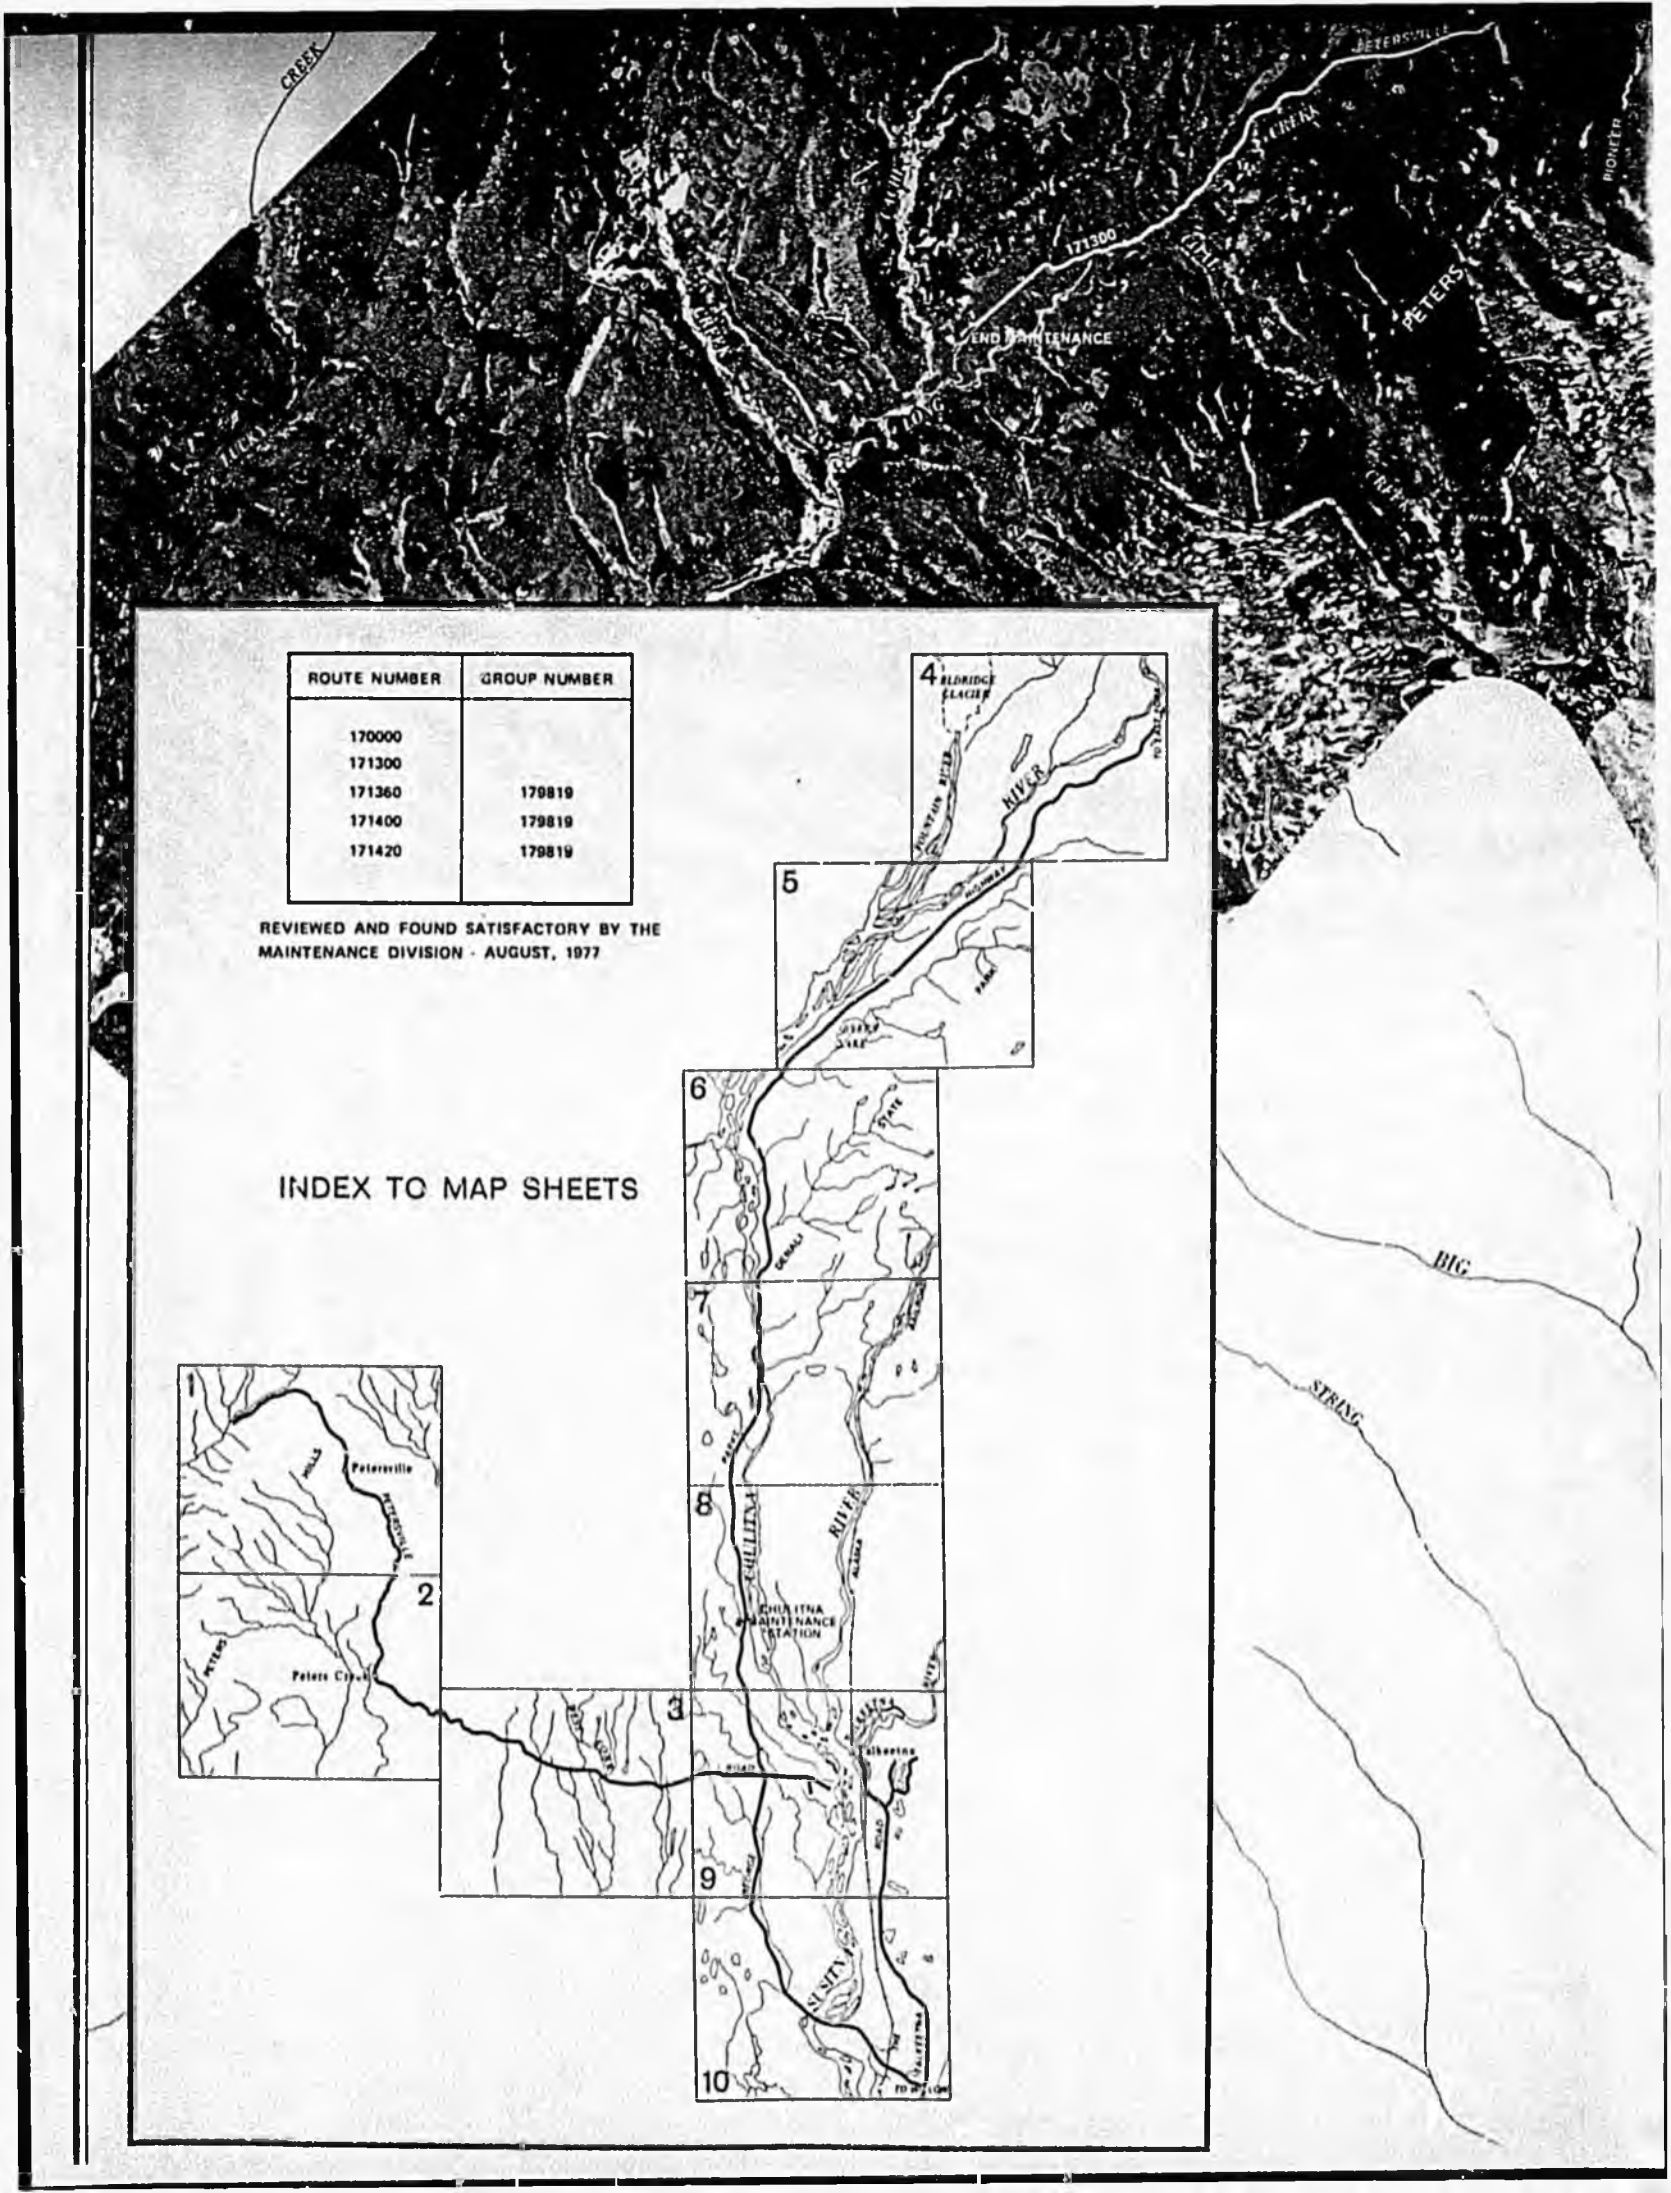
RE: HB 237: BARTLETT HILLS ACCESS ROADS

PROJECT OVERVIEW:
The Bartlett Hills area is located to the North of Willow and South of Talkeetna, in the Matanuska-Susitna Borough, just East of the Parks Highway and the Susitna River. Maps 1a-1b-1c are taken from the State Highway System Maintenance Maps, Chulitna Maintenance Station. Map 1a indicates the general area within which the Bartlett Hills subdivisions and agricultural parcels are located. Maps 1b-1c locate the general roads proposed for the project to provide access into the area. Map 2 locates the roads included in HB 237 in more detail in relation to the existing and proposed subdivisions and agricultural units. Map 3 indicates the Tract D subdivision in Bartlett Hills, and the roads that are proposed for access, as well as the roads already constructed by the residents of the area. Map 4 is taken from the Mat-Su Borough Priority List for 1983 CIP's. This map indicates the location of all of the proposed access roads in the Bartlett Hills area.

It is the position of the Mat-Su Borough, and the sponsor of this legislation, that the State should not engage in the business of subdivisions and agricultural land disposals without first building access roads into those projects. While the Department of Natural Resources has been operating under a policy of exempting themselves from the obligation of building access roads into land disposals such as Bartlett Hills, with the good intentions of"getting the land to the people," this policy has been a failure. The effect has been that the Borough has had to turn around and pick up the responsibility of building those access roads. I could cite several examples of the same order as the Bartlett Hills project before you. In the past two years no more than 220 acres have been cleared in the 8,000 acre State of Alaska Bartlett Hills Agricultural Project. At this rate, Gary Thurlow, Mat-Su Borough Manager points out, it would take 70 years to bring this 8,000 acre project into production.

The Department of Natural Resources has several other proposed subdivisions in the area. HB 237 would provide the proper access to these subdivisions before further land disposals. This bill would also provide needed access to existing subdivisions and agricultural units.

EXISTING AND PROJECTED POPULATION:
Twenty-three existing agricultural parcels in the area currently have 52 dwelling units and 164 residents. Existing subdivisions, (See Map 2, and Tract D as detailed example of one of the subdivisions), number 192 parcels which are private lots, and 425 which are State subdivision parcels. This totals 617 total lots in the Bartlett Hills Agricultural boundary.

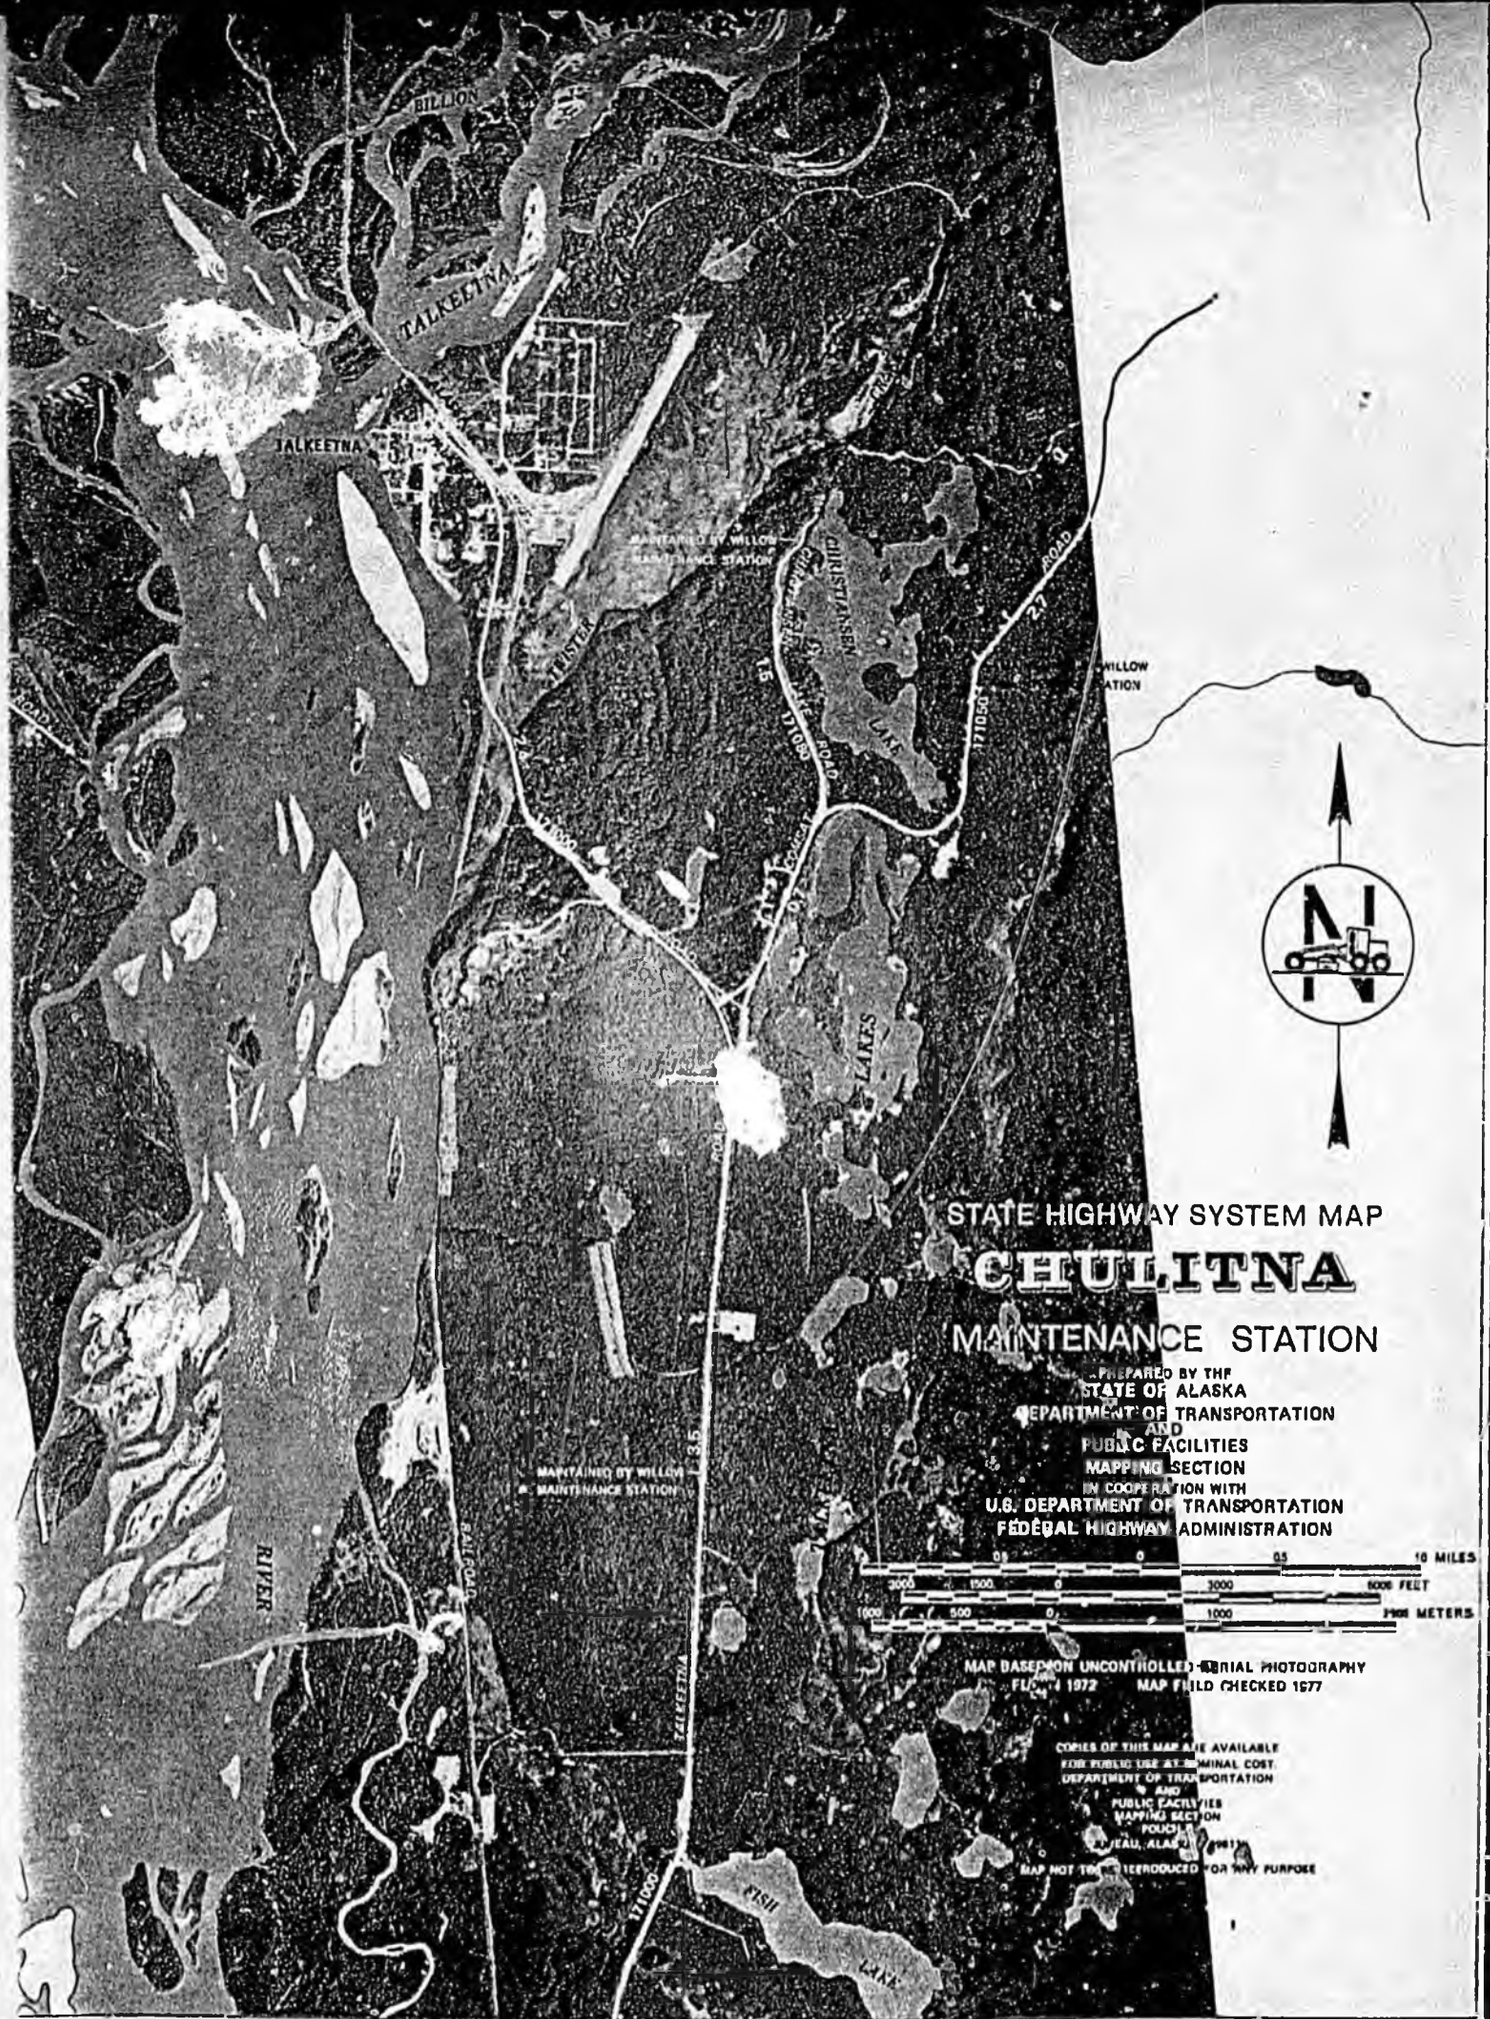


The State and the Borough have plans for further subdivisions in the area. It is the position of the Borough that the access roads should be constructed before any further subdivision takes place. Population growth is being experienced throughout the Mat-Su Borough and is expected to continue over the next several years. We can expect on the order of five times the current population in the Bartlett Hills area over the next decade.

Planned roadwork within existing parcels and planned construction on these lands suggest that the traffic count on these roads will increase. The Mat-Su Borough engineers calculate that the current traffic count along existing roads is 468 average daily traffic (ADT), and project that next year it will be as high as 756 ADT.

HAZARDS:
Many of the existing roads are not up to Borough standards, and bridge work is needed on both Barge and Yoder Roads. The daily use of these sub-standard roads is a constant threat to the lives of the residents of the area. Yoder Road Bridge washed out last year, and without proper construction work it will certainly do so again this year. The threat of school bus, as well as daily traffic, accidents is constant.

RIGHT-OF-WAYS & FEASIBILITY STUDIES:
The right-of-ways are established for the proposed road projects. The Borough has conducted a feasibility project and their estimates are contained in your committee packets. No DOT/PF estimates have, as yet, been conducted.



COST:
The appropriation for HB 237 adds to the Borough's Priority List estimate of $761,000.00 to total $1,246,080.00. The cost increase is due to the proposed construction of needed access roads, bridge work, and the upgrade of existing roads.

NORTH BARTLETT HILLS AGRICULTURAL PROJECT

AT THE PRESENT, THIS IS THE SECOND LARGEST AGRICULTURAL PROJECT IN TH MAT*SU BOROUGH. THE 1979 STATE SALE CONSISTED OF 26 FARM PARCELS TOTALING 7,859 acres. AVERAGE PARCEL SIZE WAS 302 ACRES EACH. THE SALE CONSISTED OF TWO SEPARATE AND DISTINCT AREAS. BOTH AREAS WERE CALLED BARTLETT HILLS. THE SOUTH AREA WAS SOLD WITH EXISTING ROAD ACCESS FROM YODER ROAD. THE NORTH AREA WAS SOLD WITHOUT EXISITING ACCESS. THE NORTHERN FARMS WERE ONE TO EIGHT MILES FROM ANY EXISITING ROADS. THIS REQUEST DEALS ONLY WITH THE NEEDS OF THE NORTHERN AREA OF BARTLETT HILLS AGRICULTURAL PROJECT. IT IS OUR HOPE THAT THE CONCERNS FOR THESE DIFFERANT AREAS WILL BE CONSIDERED AND FUNDED SEPARATELY.

PRIVATELY FINANCED ROAD CONSTRUCTION:

IN THE FALL OF 1980 THE FARMERS TOGETHER WITH A FEW OF THE RECREATIONAL OWNERS COLLECTED VOLUNTARY CONTRIBUTIONS AND CONSTRUCTED 6.5 MILES OF ONE LANE DIRT FARM ACCESS ROADS. AGAIN IN 1982 MORE VOLUNTARY CONTRIBUTIONS WERE COLLECTED AND ALONG WITH ONLY $9,000 (nine thousand dollars) PUBLIC FUNDS We WID THE FIRST TWO MILES TO FORTY FEET PLUS AND IMPROVED OVER THREE MILES OF THE REMAINING ROAD TO ONE LANE GRAVEL. THIS ROAD IS MAINTAINED AND THE SNOW HAS BEEN REMOVED THRU DECEMBER BY THE FARMERS WITHOUT ANY PUBLIC FUNDING. THIS GROUP HAS SHOWN AN INTEREST AND WILLINGNESS TO WORK TOGETHER TO DO WHAT THEY CAN TO HELP THEMSELVES AS MUCH AS THEY ABLE TO.

NORTH BARTLETT HILLS AGRICULTURAL PROJECT

ADDED TRAFFIC AND MAINTAINANCE:

SINCE THE FARMERS PURCHASED THEIR LAND FROM THE STATE IN 1979, THE STATE HAS SOLD THE FOLLOWING TRACTS OF RECREATIONAL LAND ON THIS PRIVATELY CONSTRUCTED AND MAINTAINED ROAD BEING THE NEAREST VEHICLE ACCESS TO THESE TRACTS:

BARTLETT HILLS TRACT A	56 lots
BARTLETT HILLS TRACT B	65 lots
BARTLETT HILLS TRACT C	60 lots
TALKEETNA BLUFFS	80 lots
TALKEETNA BLUFFS ADDITION	59 lots
BALD MOUNTAINS I	218 lots
BALD MOUNTAINS II	103 lots
BALD MOUNTAINS REMOTE (18 sq. mi. of unlimited staking)	
TOTAL OF ADDED OCCASIONAL ROAD USERS	641 lots plus 18 sq miles of remote parcels offered

BARTLETT HILLS TRACTS B AND C ARE IMMEDIATELY ADJACENT TO THIS ROAD AND HAVE BUILT SOME ROADS WITHIN THOSE SUBDIVISIONS. TRACT A AND TALKEETNA BLUFFS ARE SOME DISTANCE FROM THIS ROAD AND MOST ACESS TO THESE TRACTS IS B BY FLOATPLANE OR RIVERBOAT. THE BALD MOUNTAIN OFFERINGS LIE TWO TO THREE MILES EAST OF THE ROAD WITH THIS ROAD BEING THE ONLY PRACTICAL MEANS OF ACCESS.

WITH THIS RECENTLY ESTABLISHED ROAD ACCESS AND THE CHANGE OF LAND OWNERSHIP TO PRIVATE RECREATION , THIS AREA HAS BECOME A POPULAR RECREATIONAL AREA. FISHERMAN ARE ATTRACTED TO LARSON LAKE, BALDY LAKE, BIRCH CREEK, AND ANSWER CREEK. HUNTERS HAVE FOUND THIS AREA TO BE PRODUCTIVE (WAS OPENED TO ANTLERLESS MOOSE THIS SEASON). THIS WINTER A NUMBER OF WEEKEND CROSS COUNTRY SKIERS AND SNOWMOBILERS HAVE ENJOYED WEEKEND GROUP EXCURSIONS INTO THIS SECLUDED BACKCOUNTRY WITH IT'S DEEP ALPINE SNOW, ABUNDANT WILDLIFE, AND SPECTACULAR VIEWS OF MT. MCKINLEY.

NORTH BARTLETT HILLS AGRICULTURAL PROJECT

ESTIMATED ROAD CONSTRUCTION COSTS:

AN AERIAL RECONASANCE ENGINEERING STUDY PREPARED FOR THE MAT-SU BOROUGH IN OCTOBER 1981 BY THE ENGINEERING FIRM OF DOLLERHIDE-DECAMP & BROWN ESTIMATES THE COST OF UPGRADING THIS EXISTING ROAD TO PUBLIC COLLECTOR ROAD STANDARDS AS FOLLOWS:

2.5 miles Question Lake Road (Barge Road) upgrading	$135,600
1.25 miles South Birch Creek Road Upgrading	95,700
4.25 miles Mastadon road upgrading	325,380
Engineering, design, and supervision	205,000
TOTAL COST OF UPGRADING EXISTING ROAD	761,000

Note: Portions of this area lie outside the existing road service area boundaries. Appropriations for those portions must be an line item appropriation.

NOTE: $500,000 has been requested for upgrading of one mile of Yoder Road and three bridge crossings across Montana Creek and its sloughs. This is listed under Local Service Roads.

October 29, 1982

John W. Katz, Commissioner
Department of Natural Resources
Pouch M
Juneau, Alaska 99811

Dear Commissioner Katz:

Re: CHASE AGRICULTURAL SALES

The Matanuska-Susitna Borough objects to any scheme for disposing of agricltural lands in the Matanuska-Susitna Borough where there is no road access or, where the State of Alaska assumes no responsibility for creating access or where there is no substitute for road access.

The State's proposed sale of 6,600 acres of agricultural land north of the Talkeetna River, east of the Alaska Railroad in the Talkeetna area would not make any sense at all unless there was some assurance that the Alaska Railroad could be used as a means of getting clearing and farm equipment to the lands to be developed as farms, materials for operation of farms by means of the railroad such as seed, fertilizer and animals, and a means of loading agricultural crops at a siding off of the Alaska Railroad or through use of the Alaska Railroad to get such crops to the south side of the Talkeetna River.

If you can work out adequate arrangements with the Alaska Railroad, in writing, that would secure the rights of farmers north of the Talkeetna River to access, we would withdraw our objections to a Chase Creek Agricultural Project.

Without provision being made for either road access or arrangements for alternate access through the Alaska Railroad, we believe that any sale of agricultural lands in Chase should be deferred.

We are concerned that a sale of land without access may create the impression that the State of Alaska is accomplishing something in the area of agriculture, when it isn't, and that it will relieve pressure to do something constructive to promote agriculture, such as providing access to agricultural lands.

Bartlett Hills Agriculture Project

To date the State Bartlett Hills Agricultural Project has been a a failure, which can be retrieved only through the State or the Borough seeking and obtaining sufficient funds to provide road access to and through that project. In the past two years no more than 220 acres have

Bartlett Hills Ag Project

been cleared in the 8,000 acre State of Alaska Bartlett Hills Agricultural Project. At this rate it would take 70 years to bring this 8,000 acre project into production. Persons buying farms in that area do not have to begin their farm plan until road access is provided. This type of provision is an open invitation for speculators to bid up the prices of farm land, because they know that they will be under no obligation to engage in farming in the foreseeable future. On Bartlett Hills, a requirement of any agricultural sale should have been that 70% of the Class II and III soils and land to be offered will be in production with say six years from the date of sale.

We believe that the provision of road access to agricultural areas is well within the financial means of the State and that a comparison of costs compared to acreage opened up indicates that the cost benefit relationship is very good.

For example, an investment of approximately a million dollars in Bartlett Hills Agricultural projects, including Yoder Road to the southwest corner of the Bartlett Hills Agricultural Project, a road along the east shore of Montana Creek to the southern end of the Bartlett Hills Agricultural Project and construction of Barge Drive along the middle of the Bartlett Hills Agricultural Project would trigger many farm plans and get a great deal of farm land in production at an early date.

Similarly, construction of a bridge across Moose Creek south of the Petersville Road at an approximate cost of $400,000 would open up about six to eight thousand acres of Class II and III soils between Moose Creek and Kroto Creek and would also provide vehicular access to the recent State subdivision on Amber Lake just south of Moose Creek. As you will recall, the road design within Amber Lake is premised upon vehicular access.

I am enclosing a table which will show how the State of Alaska could increase the agricultural lands in production in this Valley seven fold with a fairly minor investment in agricultural roads, assuming that access is provided to Fish Creek.

We do think that the State has done a very good job in opening up the Point MacKenzie Agricultural Project and providing funds to that project through the funding of a portion of the Point MacKenzie Road and through funding construction of 16.5 miles of farm-to-market roads within the project. We are very proud of having the opportunity to be associated with that project.

And, we are all delighted with newspaper reports that you and Commissioner Ward are proposing that road access into the Fish Creek Agricultural Project be given high priority.

We believe that the Point MacKenzie and Fish Creek Projects are sound precedents for the State to follow and would hope that the planning

BARTLETT HILLS AGRICULTURE
ROAD SYSTEM

AIR PHOTO RECONNAISSANCE

I. PROJECT BACKGROUND

The Bartlett Hills Agriculture project was undertaken by the State of Alaska as a land disposal program designed to promote agricultural development of certain lands. This project comprises several thousand acres of land and is spread in basically a north-south direction for a distance of approximately ten miles. The agriculture parcels are located from the Bartlett Hills on the north to the Montana Creek area on the south; all of which is roughly parallel to and four miles east of the Talkeetna Highway.

In addition to the agricultural land, the State has also developed several small tract (five acres) subdivisions in which parcels have been disposed to the public. These subdivisions are interspersed with the larger agricultural parcels.

None of the above disposal programs provided funds for road construction either within the project areas or for access roads. We are thus beginning to see a demand for roads in this area for both commercial and private uses. The State has platted rights-of-way and road corridors throughout this area and a few property owners are beginning to construct minimal roads for their own access.

II. PROJECT SCOPE

At this time there exists quite a variety of roads and rights-of-way in the project area. There are some access roads that will meet Borough Subdivision Requirements, some that are barely driveable as a one-lane cat trail, and most have no construction at all. There are rights-of-way connecting the agricultural tracts, rights-of-way within the small parcel subdivision and a road corridor three hundred feet wide through which a final right-of-way will be selected. These rights-of-way have various stages of road construction as noted above.

The scope of this project is threefold:

1. Catalog the existing rights-of-way, road construction, and parcels needing access.

2. Analysis of existing conditions and recommendation of routes for road construction after examining alternate routes.
3. Provide cost estimates for the road construction alternatives.

III. EXISTING ROADS AND RIGHTS-OF-WAY

Several roads have been constructed at various locations that provide access to the agriculture and subdivision projects. These roads have mostly been privately constructed and vary considerably as to their quality. The attached map entitled "Bartlett Hills Agriculture Project Road System" shows in detail the road construction and rights-of-way that exist in the area.

The following roads have been constructed:

A. Montana Creek Road. This road begins at the Montana Creek Lodge and generally parallels Montana Creek on the south and ends at the section corner common to Sections 33, 34, 27 and 28, T.24N., R.4W., S.M.. The road length is approximately 3.6 miles. The last 1.5 miles is built to Collector Standards and the initial 2.1 miles almost meets residential standards. This road could be extended 2 miles to the east and would then connect to a State Subdivision, A.S.L.S. 79-143. Part of the Montana Creek Road goes south to access land in Section 3, T.23N., R.4W., S.M.

B. Yoder Road. This road begins at the Parks Highway near the northwest corner of Section 16, T.24N., R.4W., S.M. and continues east across Montana Creek. After crossing Montana Creek, the road continues along the south bank of the south fork of Montana Creek for several miles up into the foothills where it disintegrates into an ATV trail. The first mile of road would meet Access Standards and thereafter it is well below Access Standards. A bridge has been constructed over Montana Creek, but this structure is not adequate in that it washes out periodically. It is built of logs and timber planks and is a minimal structure in terms of a bridge. There are two side channel crossings Yoder Road makes just prior to the bridge and these could be accomplished with adequate culverts. After crossing Montana Creek, Yoder Road provides access to an agriculture tract and the north portion of the State Subdivision, A.S.L.S. 79-143.

C. Moose Meadows Access. This road begins on the ~~Parks~~ TALKEETNA Highway a half mile north of Yoder Road and provides access to Moose Meadows Subdivision. At its terminus it connects to the South Answer Creek Road (not constructed) which provides access to several agriculture tracts. This access to Moose Meadows could provide a loop access to the ~~Parks~~ TALKEETNA Highway near Talkeetna through the South Answer Creek Road, the Mastadon Road Corridor, and the Comsat Road. Road grades here will require some special consideration in there are two 12% to 15% grades. These generally exist over 300 feet in length such that any upgrading would necessitate some substantial cuts and fills.

D. Question Lake Road. This road begins in Section 30, T.25N., R.4W., S.M. at the ~~Parks~~ TALKEETNA Highway and runs 2.5 miles east just north of Question Lake. Question Lake Road exists to Access Standards but does have some serious grade problems that would have to be dealt with in any upgrading work. There are three places with grades in the 10% to 12% range and these grades extend through at least 200 feet of road length. One additional area contains grades in the range of 20% to 25% and this is over a 400 foot length of road. These excessive grades will present some problems in any upgrading, but will not be insurmountable. The Question Lake Road could provide a loop access with the ~~Parks~~ TALKEETNA Highway via the South Birch Creek Road, the Mastadon Road Corridor and the Comsat Road.

E. Mastadon Road Corridor. This 300 foot wide road corridor begins at the Comsat Road near Christianson Lake, on the north, and extends through the Bartlett Hills area to connect to the South Answer Creek Road at its southern terminus. Much of this road has not been constructed. That portion which has been built begins at the South Birch Creek Road and extends some 4.5 miles north to Section 2, T.25N., R.4W., S.M.. This section is generally a one-lane trail that would not meet Access Standards. This corridor provides the main part of any loop system connecting the Talkeetna area with the agriculture tracts to the south.

F. Proposed Anchorage-Fairbanks Power Intertie. The proposed Anchorage-Fairbanks Power Intertie right-of-way is currently planned to traverse this general area. Because this project is still in the planning and design stages, it would be premature to predict the impact of this project on proposed road construction in this area. In our opinion, construction of quality roads into this area could only aid in the future construction of public improvements of any kind.

IV. SOILS AND BORROW SOURCES

The main source of soils information is the Susitna Valley Area Soil Survey published by the Soil Conservation Service and the University of Alaska Institute of Agricultural Sciences. This report contains maps showing the soil types over the entire study area and is therefore an important tool in evaluating the soil conditions.

Generally, the soils in this area are excellent for road construction. About 90% of the existing and proposed road is in the rabideaux (Ra) soils series, which is a gravelly material. Past experience has shown this gravel will meet Borough standards for road material. There will be a few places where less than adequate materials will be encountered but these are relatively insignificant and do not pose any construction problems.

The good quality of materials is further confirmed by examination of cut banks along the existing roadways and by talking with the builder of the few miles of Mastadon Road that was recently constructed. There will be few restrictions on borrow sources as good gravel can be expected along most of the routes. It is anticipated that a good part of the borrow for the roads can be achieved through the balancing of cuts and fills of the road construction. Any additional sources should be readily available.

V. BRIDGE REQUIREMENTS

There are two stream crossings in the study area that require bridge structures. The first and most significant is the crossing of Montana Creek by Yoder Road. A timber structure exists here now but it has had recent problems of washing out and needs to be replaced with a concrete structure. The estimated cost of a bridge structure at this location is $800,000 and this cost has been included in the cost estimates for Yoder Road shown later in this study. It is anticipated a concrete structure would be utilized that would span 75 feet with upstream riprap being required. There are presently two smaller structures just prior to the main channel of Montana Creek and these could be culverted. The second crossing occurs where Mastadon Road crosses Answer Creek. This would be a significantly smaller structure and its estimated cost is $300,000.

It is anticipated that all other water crossings can be made with culverts at relatively minor costs. When considering the various road systems in the study area, it is fortunate there are only two stream crossings involved and their costs are not significant compared to the overall road development.

VI. LOGICAL LOOP ROAD SYSTEMS

As the objective of this reconnaissance has been to consider primary collector access for the Bartlett Hills Agriculture Project, we are only considering major existing access roads and platted rights-of-way that would provide general thoroughfare to the bulk of the agricultural parcels and connection points to the small tract subdivisions in the area. Along with this, evaluation of other factors such

as topography, existing acces road construction, potential major stream crossing structures, Larson Lake access plans and priority based on need have yielded several possible loop road systems into and through the general area. To simplify discussion of these alternatives, the following are the general names and descriptions of the alternates:

"A" ALTERNATIVE

North Mastadon Road - South Birch Creek - Question Lake Loop

Begins on the north at the Bartlett Hills Earth Station Road near Christianson Lake and runs generally east to a point some two miles westerly of Larson Lake along an existing platted right-of-way. The route then runs southerly along a platted right-of-way to South Birch Creek Road, then turns westerly and runs out to the Talkeetna Highway. The southerly portion of this route is constructed to low Access Standards from Section 2, T.15N., R.4W., S.M. back out to the Talkeetna Highway. Total length is approximately 13.5 miles with 8.25 miles of existing constructed access and 5.25 miles without construction.

"B" ALTERNATIVE

Question Lake - South Birch Creek - Mastadon Road - South Answer Creek - Moose Meadows - Benka Lake Loop

Begins on the north at the Talkeetna Highway near Question Lake and runs generally easterly to the Mastadon Road right-of-way; then turns southerly through the Mastadon Road, South Answer Creek Road, and Moose Meadows rights-of-way to a point just northerly of Benka Lake; then runs generally west and south to the Talkeetna Highway near the Sunshine Lakes. The Question Lake, South Birch Creek Road, Moose Meadows and Benka Lake portions of this loop are presently constructed to minimal Access Standards. Total length is approximately 8.75 miles including 6.25 miles to minimal Access Standards and 2.5 miles without construction. Approximately 4.25 miles are included in the "A" Alternative.

"C" ALTERNATIVE

Yoder Road - West Montana Creek Road Right-of-Way - Existing Montana Creek Road Loop

Begins on the north at the Talkeetna Highway near Sunshine Lakes and runs generally east to West Montana Creek Road

Right-of-Way in Tract D of A.S.L.S. 79-143; then turns southerly and runs to the south end of Tract D; then runs generally south and west to the Parks Highway near the Montana Creek Bridge. The Yoder Road portion is constructed to minimal Access Standards and has a major crossing of Montana Creek. The existing Montana Creek Road portion is constructed to varying standards, including some portions that exist to Collector Standards. Total length of this loop is approximately 11.75 miles including 6.75 miles of existing construction and 5 miles without construction. The West Montana Creek Road portion appears to have some clearing in progress.

The two northerly Alternates ("A" and "B"), once completed, would connect in that Question Lake Road and South Birch Creek Road are common to both loops. The southerly Alternate "C" would be an independent loop unless a connection was made between Moose Meadows Subdivision and Yoder Road in the vicinity of Section 10, T.24N., R.4W., S.M.. This connection, at this point in time, does not appear to serve as necessary access to the agricultural or subdivision parcels, thus is considered extraneous to this discussion except to say it is a future alternate if the need arises to connect all three alternate loop systems.

VII. RECOMMENDATIONS

In summary, our recommendations would be as follows:

Phase I - Alternate "A" - Priority 1

Construct Mastadon Road Corridor from the Comsat Road to link up existing access construction from the south to Collector Standard. Improve the existing access road construction to Collector Standard in its entirety out to the Talkeetna Highway. This would accomplish two basic goals:

1. Provide a basic collector that accesses the bulk of the agricultural parcels in the Bartlett Hills Project as well as a connection point for residential systems that will be associated with the small tract subdivisions in the area.

2. Provide a logical "jumping-off" point for access to Matanuska-Susitna Borough land on Larson Lake which would require less construction than a separate road from Talkeetna to Larson Lake.

Phase II - Alternate "B" - Priority 2

Construct Mastadon Road and a portion of South Answer Creek Road southerly from South Birch Creek Road to Moose Meadows Subdivision to Collector Standards. Improve existing construction from Moose Meadows through Benka Lake Subdivision out to the Talkeetna Highway to collector standards.

Phase III - Alternate "C" - Priority 3

Improve existing Yoder Road out to West Montana Creek Road to Collector Standards. This would require a major stream crossing structure and culverts over Montana Creek and its branches.

Phase IV - Alternate "C" - Priority 4

Construct West Montana Creek Road through Tract B, A.S.L.S. 79-145 and westerly to connect with the existing Montana Creek Road to Collector Standard.

Phase V - Alternate "C" - Priority 5

Improve some portions of the existing Montana Creek Road such that its entire length is to Collector Standard.

VIII. COST ESTIMATES

Estimates for the recommended alternatives are shown below. The costs include all construction necessary to bring each alternative to Collector Standards. Note there are some common roads in Loop Alternates "A" and "B" and each loop is estimated as if it were constructed separately. This is done since there is no way of knowing which loop will be built first. Estimates are made for 1982 construction so that construction in later years will require some increases.

Construction Costs:

Alternate Loop "A"

5.25 miles Mastadon (new)	$ 471,240.00
4.25 miles Mastadon (upgrade)	325,380.00
1.25 miles South Birch Creek Rd. (upgrade)	95,700.00
2.5 miles Question Lake Rd. (upgrade)	155,600.00
Engineering Design & Supervision	205,000.00
TOTAL COST	$1,252,920.00

Alternate Loop "B"

2.5 miles Question Lake Rd. (upgrade)	135,600.00
1.25 miles South Birch Creek Rd. (upgrade)	95,700.00
1.5 miles Mastadon Road (new)	154,640.00
1.0 miles South Answer Creek Rd. (new)	89,760.00
2.5 miles Moose Meadows Access	132,000.00
Engineering Design & Supervision	118,000.00
TOTAL ROAD COST	705,700.00
Bridge Structure - Answer Creek	300,000.00
TOTAL COST	$1,005,700.00

Alternate "C"

3 miles [illegible]der Road (upgrade)	138,400.00
2.75 mi. [illegible] W. Montana Creek Rd. (new)	246,840.00
3.75 miles Montana Creek Rd. (upgrade)	82,240.00
2.25 miles Montana Creek Rd. (new)	201,960.00
Engineering Design & Supervision	130,000.00
TOTAL ROAD COST	$779,440.00
Bridge Structure - Montana Creek	300,000.00
TOTAL COST	$1,079,440.00

X. SUMMARY

A reconnaissance project of this scope presents a multitude of variables and possible alternatives. There are some twenty miles of existing roads in the study area that are considered in the various alternatives. These roads have been constructed to varying standards from one-lane trails to Collector Standards.

In examining the existing and potential demand for roads here, it is likely that over a period of, say 15 years, virtually all the rights-of-way in the area will see some road construction. The value in this study will then be the evaluation and recommendation of a priority system that will provide the best access for a given expenditure as funds for construction become available. As noted in our recommendations, we feel the loop system approach is more beneficial than dividing funds between various individual roads on a piecemeal basis. Alternate Loop "A" is recommended because of the large number of parcels it will access and because it will also provide much of the access to Larson Lake (which is the subject of another reconnaissance study). The succeeding order of our recommendations are based on providing access to the greatest number of parcels. It is certainly reasonable to consider other

alternatives and/or priorities depending on the political evaluation of need and changing development patterns.

IV. ANALYSIS

The cost estimates for this project in FY'83 dollars were:

Preliminary engineering	$45,430
Right-of-Way	70,000
Construction	946,463

These costs were assumed to increase at 10% per year through the life of the project.

The preliminary engineering was assumed to take 3 years and was allocated as follows:

FY'84	$20,000
FY'85	20,000
FY'86	14,267

The Right-of-Way acquisition was assumed to be completed in FY'86 for $93,170.

The construction phase was assumed to be initiated and completed in FY'87 for $1,385,716.20.

This project is on a federally designated interstate highway and is assumed to qualify for approximately 90% federal funding. Since this project is a reconstruction of an existing curve, it was assumed that no change would occur in maintenance and operations costs after the project was completed.

The Honorable John Liska
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Liska:

In response to your request regarding the Eagle River Loop Road extension project, the cost for preliminary engineering is estimated to be approximately $750,000.

It is assumed that the preliminary engineering will be accomplished by a consultant. The consultant will be responsible for 1) conducting an environmental study which includes mapping of the site, 2) soils and foundation investigations, and 3) design work.

If our office can be of further assistance please call.

Sincerely,

David W. Haugen
Deputy Commissioner
Central Region

See double school enrollment by 1993

School enrollment in Chugiak - Eagle River will double during the next decade, school superintendent E. E. "Gene" Davis told his audience at Monday's Chamber of Commerce luncheon. To meet that increase, he said the district will need to build a new senior high school in addition to a 20-room addition to Chugiak High School which already is on the drawing boards, a second junior high, and four to seven new elementary schools.

Where those schools will go has not been determined, the superintendent stated. He expects locations to become more definite this fall when a committee completes work on a study of site acquisitions and a list of municipal lands which might be traded for surplus school property. Money is already available for one new elementary site somewhere in this area, he said.

Chugiak - Eagle River will continue as the fastest-growing portion of the Anchorage district, Davis advised. Since 1979, the area's population has grown at a pace four times greater than that of the Anchorage bowl -- a fact he said was not recognized until the middle of 1980.

Since his appointment in June of 1981, the superintendent said the district has recognized the growth here, and "I think we're doing a good job of keeping up."

The new Gruening Junior High will open in the fall, Davis said, even though "we may still have to do some painting at night after classes."

He announced that bids for the new Ravenwood elementary school in Eagle River Valley had just been opened and came in at $1 million below the engineer's estimates.

An addition at Chugiak Elementary has begun and will help that school handle its enrollment next year. It experienced the greatest growth of any school in the district over the past two years, the superintendent noted.

Several smaller projects at individual schools are also scheduled, although Davis said some may have to be cut back because of fund shortages unless the legislature eases its plans for a 30 percent reduction in construction rebates. Action by the municipal assembly to cover part of the shortfall avoided some severe problems, it was pointed out. Although the district expects to receive about $2.2 million less than it had budgeted for.

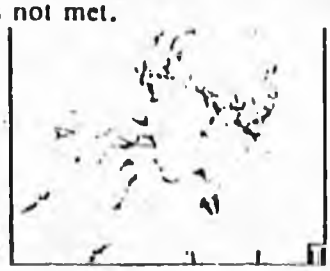
Of significance to his audience was the superintendent's statement that the design used for the new Ravenwood school here, and for the Oceanview and Klatt Road schools, is to be "a prototype for future elementary schools. It's not practical economic sense to redesign each school, only to make it fit the land. (Adopting one standard design means) we don't have to start from ground zero on each school."

Also of specific interest were enrollment projections which show an increase of 7.1 percent expected in Chugiak - Eagle River next year when 600 more students show up than now attend classes here.

Districtwide, he expects a net gain of 5,000 students in a two-year period.

Projections are made, Davis cautioned, "on the best planning information available." They could be on the mark — or vary considerably in either direction depending on conditions. Some people, he said, predict economic factors which will subtract from the population. Still others see growth rates even larger than at present.

Despite the projections, the district does not plan to build new schools "until we see the students. You probably will see the use of more relocatables" to hold the load until schools are built.



"There are no plans to doubleshift at Homestead," Davis replied in response to a question about overcrowding at that school. Now, he said, 62 percent of families with children in school have two parents working. Doubleshifting would cause problems for families with age spreads from kinde garten to high school which could mean several different daily schedules. "I don't think there are that many babysitters out there," he said, adding that the district "should be responsive to the community" in taking actions with significant social impacts.

Alternatives to doubleshifting, according to Davis, are relocatables or "boundary changes. He indicated he prefers the former.

In answer to a related question, the superintendent said sending sixth grade students to the new junior high in order to ease overcrowding at elementary schools "is not proposed. But I don't think it's a bad option." He said he, too, had heard the idea "as a rumor," but indicated that it was not a specific proposal actually under review at this time.

Davis said the district, under his direction for two years, views Chugiak - Eagle River "as a unique part of the school district," noting that residents take an active interest and have supported local schools.

"We're pleased with the schools, but we intend to do better. Our goal is to improve every year." He invited residents to "tell us" when they feel the goal is not met.

Valley council views subdivision plans

The rapid multiplying of subdivisions in throughout Eagle River is causing log jams not only within l.ni al departments but in local comm.unity councils as well.

Eagle River Valley Community Council members have been swamped with subdivision requests which they've been asked to consider. Several will be up for review when the council holds its May meeting and elects new officers next Thursday at 7:30 p.m. at Joy Lutheran Church.

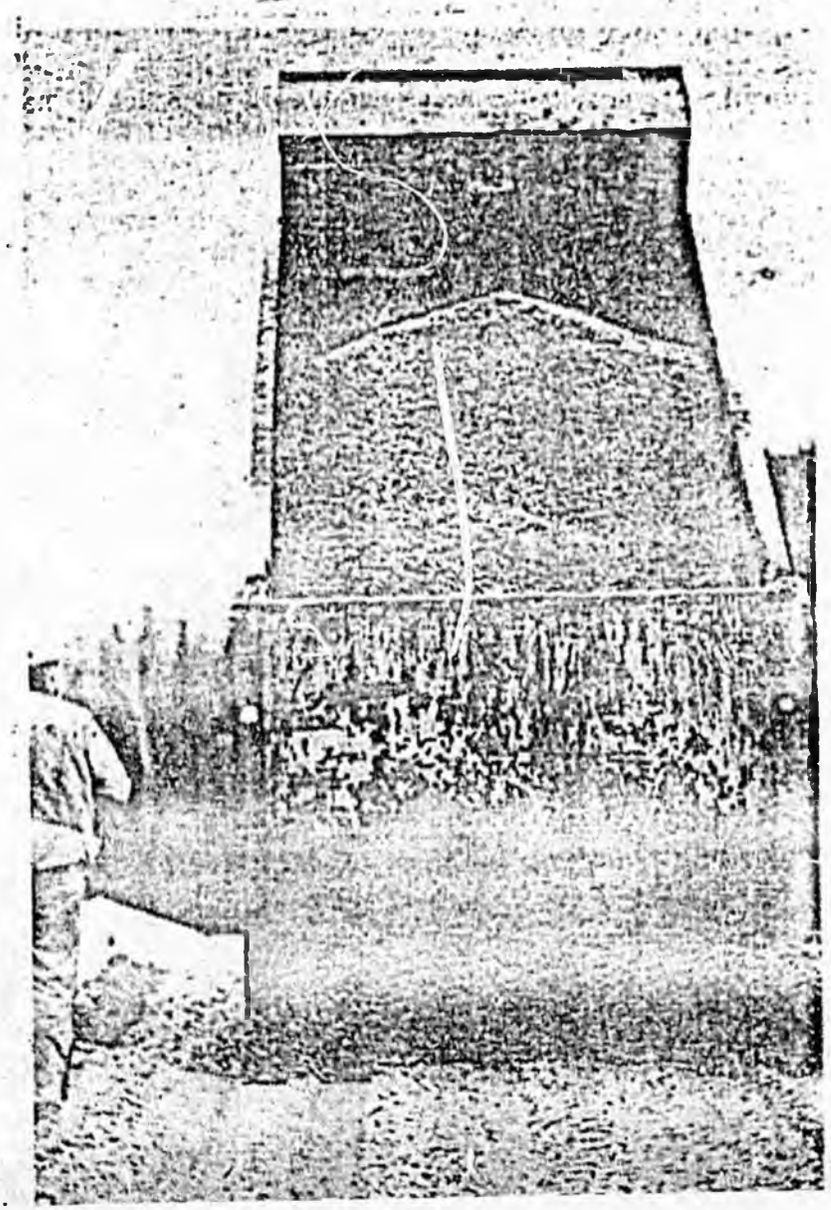
Dave Wachsmuth, council president, said that council representatives were to make their third attempt last night (Wednesday) to testify before Planning and Zoning on the proposed Snowbird Hill development. Wachsmuth noted that the development is 19th on 26 cases which were on the commission's agenda three meetings ago. They've only been able to discuss five a night, but council members have been on hand for all, waiting for the Snowbird Hill consideration.

The council is recommending that the 80-acre subdivision of 140 lots on the hillside above Pruess subdivision be redesigned to limit lot sizes to no less than half an acre. Currently, Wachsmuth said, a number of the lots are considerably smaller. Council members met with developer Hugh rt of Anchorage to re e change, but were tol ld not be financially fe

"We are not opposed to development," Wachsmuth emphasized, "but we want to see it done in an orderly fashion, and in conformance with the development that already exists in an area."

Wachsmuth said that it was the consensus of members at the April meeting that "some kind of controls are needed to slow down the amount of development that is taking place."

For example, he said, Eagle River Development was granted a variance which will permit it to develop 140 lots for zero lot line construction. The Brendlewood tract approved last week by the Assembly will create 125 lots, to be developed in three phases.



Council members feel the concentrated development of Snowbird Hill is not in keeping with the larger lot construction of the adjoining subdivisions.

They are supportive, however, of another subdivision called Overlook which is proposed for a 60 acre tract at Mile 7. Wachsmuth called it "a nice subdivision", planned by JJJ and K, with 30 lots spread over a 60 acre tract.

Two weeks ago Wachsmuth attended a meeting of the Federation of Community Councils with representatives of the mayor's office, the platting commission and planning and zoning.

"A lot came out of the meeting," Wachsmuth said. "My belief is that the mayor has already taken steps to improve communication between the municipality and community councils. I hope it will continue.

Subdivision proposals will be reviewed at next week's meeting. Nominated for office are Wachsmuth, president; Jay Davies and Marilyn Hill, vice president; Kathy Boetmann, secretary; and Tom Stewart, treasurer.

P&Z turns down plan 5-acre tract rezoning

A controversial request for rezoning a five acre tract on Eagle River Loop Road was denied by the Municipality's Planning and Zoning Commission Saturday by a unanimous vote.

Commission members turned down the request by Joseph Lecorchik to rezone 5.37 acres

FROM: Senator Rick Halford
Senator Tim Kelly

RE: HB 248, construction of a bridge in Eagle River

DATE: May 10, 1983

After careful study of the ongoing problems of traffic congestion in the downtown Eagle River area, I have concluded that there are two projects that can be undertaken at this time to alleviate some of the traffic hazards.

The first and immediate project, for which I have requested funding, is engineering and physical correction of the intersection of Eagle River Road and the Old Glenn Highway.

The second, more long-range project, which I feel should be started as soon as possible, is a bridge over Eagle River to funnel the traffic out of Eagle River Valley over to Hiland Road and out the Hiland Road overpass onto the four lanes to Anchorage.

This bridge seems to be the only feasible solution to the long-range problem of getting the existing traffic out of Eagle River Valley, without going into downtown Eagle River. I feel the sooner we fund and build this bridge, the more money we will save the State. As first designed and considered in 1982, the fiscal note was $12,995,000 and in 1983 it is $15,723,950; each year we wait, the price will be higher.

In conclusion, I strongly recommend your support for HB 248.

TONY NOWLES,
MAYOR

OFFICE OF PUBLIC SERVICES

April 13, 1983

Rep. John J. Liska
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear John:

You have requested additional back-up information concerning one alternative for improving access to the Eagle River area, that being the construction of a bridge linking Eagle River with Highland Road. The purpose of this letter is to provide you with the basic information to date. In accordance with funds previously provided by the Legislature, the Municipality has been conducting a study of alternatives to improve access to Eagle River. During this past year, the Eagle River area has been brought within the scope of AMATS planning and the study, when finally completed, will receive review by both the AMATS TEchnical Committee and Policy Committee. The access study is in the final phases of staff analysis and computer modeling. There has not been any review by the Technical and Policy Committees. Moreover, detailed engineering has not been done for several of the system alternatives, including the bridge proposal which you favor. I point this out merely so you understand clearly that a decision to favor one alternative over another at this point simply represents best estimate and judgment of the staff prior to final analysis.

All this considered, the construction of a bridge connecting Eagle River Loop Road with Highland Drive does appear to be the forerunner among other alternatives at this time. The bridge would accomplish a major objective of relieving the pressure and demand on the existing Eagle River interchange. The bridge also appears to make sense from an overall traffic grid perspective in that it links the Eagle River community and fits in well with road systems in both the north and south side of the River. Finally, the bridge avoids the future necessity to expand the Glenn Highway between Eagle River and Highland Drive to a six-lane facility. As you can see, such an expansion might also require expensive bridge reconstruction.

While the bridge appears to be the best alternative at present, it is a high capital solution, and full construction funding is probably premature. Preliminary estimates put the facility at 15 million dollars (estimates provided by DOT/PF). This, however, is a ballpark estimate, and some significant preliminary engineering work needs to be done. I have already requested the State to provide me with an estimate on all costs for design and right-of-way acquisition. It is not premature to provide

engineering monies. In addition to the lack of detailed engineering data, the project would involve right-of-way acquisition, environmental assessments, and detailed engineering work regarding any improvements which might need to be made to Highland Road. With respect to federal funds which might be available, the proposed bridge is not on the federal aid highway system. It could certainly be added to this system. The addition would logically occur as a result of highway classification studies which are being undertaken this year through the AMATS process.

There is a need to make some immediate improvements to relieve pressure on the Eagle River interchange. As you know, last year, Anchorage experienced an extremely active building season. Nearly 48% of the housing starts occurred in the Eagle River area. State DOT/PF estimates that more than one-third of the traffic traveling the Glenn Highway to Anchorage enters the Highway at the one location of the Eagle River interchange. The bridge, even if it is the best alternative for a long-range solution, is a high-cost solution which will take several years to construct. In the interim, I suggest that you and the Municipality get together with the State Department of Transportation to decide whether certain improvements can be made to the Eagle River interchange, such as the construction of an additional off lane and through lane. These options, by the way, also are being considered in our Eagle River access study.

Lastly, you asked whether there were substantial federal funds dedicated to the north Eagle River access which could be reallocated to the proposed bridge project. In addition to the fact that the proposed bridge is currently not a part of the federal aid highway system, the State informs me that federal funds for the north Eagle River access are limited to several hundred thousand dollars at this time for the purpose of continuing preliminary engineering on that project.

In summary, while detailed engineering and research is not complete and while the results of the study have not been reviewed by Technical and Policy Committees in the AMATS process, the bridge does appear to be the most favorable alternative for improving access to Eagle River at this time. In addition, certain interim improvements may need to be made at the existing interchange. Depending upon available funds, it would seem most appropriate to provide funds for improvements to the existing interchange and engineering funds for the bridge should you choose to pursue construction of this facility.

Sincerely,

Chip Dennerlein
Executive Manager, Public Services

EAGLEWOOD HOMEOWNERS ASSOCIATION
EAGLE RIVER, ALASKA 99577

MAY 9 1983

May 3, 1983

TO: Mayor Tony Knowles, Municipality of Anchorage
Mr. John Liska
Mr. Randy Phillips
Mr. Rick Halford
Mr. Tim Kelly

We, the undersigned, the Board of Directors of Eaglewood Subdivision, representing the membership of the Homeowners' Association of 411 families, in accordance with a unanimous vote of approval at the April 21, 1983 Homeowners' meeting, do hereby express our complete support to the construction of a bridge across Eagle River connecting Hiland Road and Eagle River Loop South.

Please take this letter of support in consideration during meetings concerning construction of same bridge. It is our feeling that with the expected continued growth of Eagle River toward Chugach State Park (Eagle River Road continues eight miles beyond Eaglewood Subdivision before it reaches the entrance to Chugach State Park) an alternative route will become a necessity to alleviate congestion and thereby keep the area in a less hazardous condition. It is our fear that with the combination of a new Grammar School and a new Jr. High School, the traffic situation will become virtually impossible on Eagle River Road and that eventually an alternative route will become an absolute necessity. Again, please consider this request, and hopefully give it a positive response.

Sincerely,

James L. Harpring

Dear Representative Liska:

In response to your request regarding the Eagle River Loop Road extension project, the cost for preliminary engineering is estimated to be approximately $750,000.

It is assumed that the preliminary engineering will be accomplished by a consultant. The consultant will be responsible for 1) conducting an environmental study which includes mapping of the site, 2) soils and foundation investigations, and 3) design work.
? all design? - ready for Construction?

If our office can be of further assistance please call.

FISCAL NOTE FOR HB 248

1. Fiscal Impact on Existing Programs

FY'84 funds were appropriated in Ch 107 SLA 83 page 75 line 16. Funds for FY'85 and FY'86 were not identified in bill. Preliminary Engineering is now underway. The $400,000 shown in FY'85 will be needed to complete preliminary engineering. This amount is now contained in the draft FY'85 CIP.

The Eagle River loop extension is not currently programmed for construction in the FY'84 AMATS TIP or in DOT&PF's draft FY'85 or FY'86 CIP. Construction of this project in FY'86 may delay construction of high priority projects unless additional funding can be secured. DOT&PF will work with the Municipality through the AMATS process to establish the priority of this project relative to other Anchorage projects in the AMATS TIP. DOT&PF's future budget requests will be developed in accordance with this priority ranking.

2. Fiscal Impact on New Programs

Construction of this project in FY'86 may also delay construction of high priority project programmed in the AMATS TIP and DOT&PF FY'86 CIP.

3. Analysis of Cost Estimate

The following cost breakdown was prepared by Central Region Design and Construction. The project includes modification of the Hiland/Glenn Highway Interchange, 2 miles of 40' wide roadway, and a 850' x 50' bridge at Eagle River. This cost estimate updates the January 20, 1982, estimate which underestimated construction and right of way costs. The updated cost estimate is a conceptual estimate and may be 25% higher or 75% lower than the actual construction cost. Further preliminary engineering will yield a more accurate estimate.

Estimated Costs (83 Dollars):

Construction Estimate:		$14,600,000
Construction Administration (12% of 1):		$ 1,752,000
	Subtotal:	$16,352,000
Contingencies (10% of 1):		$ 1,460,000
Construction Total:		$17,812,000
Preliminary Engineering (6% of 1):		$ 876,000
Right of Way		$ 5,070,000
Utilities:	(Assume)	$ 2,000,000
	Project Total	$25,758,000

Project Total (1986 Dollars): $34,283,898
(10% Inflation Factor)

*29 Developed lots at $150,000 each =	$4,350,000
Add 36 Acres undeveloped at $20,000/acre =	720,000
Total	$5,070,000

Previous estimate assumed all necessary right of way was undeveloped and underestimated cost of bridge.

Ongoing operating costs would be $42,000/year. One additional maintenance and Operations position would be added.

ROADWAY

BRIDGE

2 MILES ROADWAY AT 2,000,000/MILE = 4,000,000

850' LONG * 50' WIDE BRIDGE AT 150/FT² = 6,375,000

CONSTRUCTION ESTIMATE = 10,375,000

RIGHT OF WAY, 2 MILES * 200' WIDE * 5280/43,560 = 50 AC * 10,000/AC = 500,000

UTILITIES ASSUME 250,000

GENERAL NOTES

1. ROADWAY LENGTHS BASED ON SHORT ROUTE BETWEEN BEGIN AND END OF PROJECT.

2. BRIDGE SITE AT NARROW CANYON DUE SOUTH OF EXISTING EAGLE RIVER LOOP ROAD.

3. OTHER ROUTES AND ALTERNATIVES WILL BE CONSIDERED.

4. IT IS ASSUMED THAT SUFFICIENT TRAFFIC TO JUSTIFY THE PROJECT, WILL REQUIRE A 40' WIDE ROADWAY.

DEMOGRAPHIC BACKGROUND
(House Bill 248 - Eagle River Bridge)

Eagle River/Chugiak is one of the fastest growing areas in the entire State of Alaska. The population of this area has nearly doubled since 1981. With this dramatic increase in population, an alternate access to Glenn Hiway is mandatory to ease the drastic traffic problems which are now occuring. What follows are some statistics which illustrate our District's growth and the urgency with which we need a solution to our traffic problems.

1. Population and Dwelling Unit Forecasts by Community Council (See Attached) prepared for the Municipality of Anchorage, by Alaska Transportation Consultants, Inc., Dated August 1982.

   This table shows the projected increases in population and in dwelling units from 1981 to 1988.

   Note: Of the 27,999 population projected for 1988, 39% (or 10,973) will be in Eagle River Valley.

2. New Construction/Building Permits

   a. "Alaska Economic Report", May 1983:

      This issue reports "A residential building glut" in the Anchorage area with 2,315 buidling permits issued by the end of March this year.

   b. John C. Bishop, Municipal Building Official, Municipality of Anchorage:

      It is estimated that approximately 60% of these permits (or 1,389) were for the Eagle River Area.

3. Traffic Counts - Pete Eckland, Department of Transportation (on Loan to the Municipality of Anchorage)

   a. 10,798 cars enter the Glenn Highway Southbound to go on into Anchorage each day.

      While this has recently been made into a 5 lane highway, it narrows to 2 lanes at the intersection where the heavy traffic flow junctions with Eagle River Road.

b. Officer Jim Meehan, Anchorage Police Department, Commuter Watch:

Meehan in May issue of Anchorage Times reports that Eagle River Road merging into Glenn Highway is a traffic hot spot.

In morning rush hour there are up to 50 cars at one time backed up trying to merge onto Glenn Highway.

4. Additional Responses to Horrendous Growth of Eagle River Area

a. Tom Brigham, Director, People Mover indicates that service to Eagle River has had to double to 24 buses a day to handle the growth, and that additional expansion will be required on Eagle River Loop Road and is planned for this fall.

b. Increased population has required an additional person to be moved in to the Health Department Office in Eagle River to help meet the local demand for increased environmental health services.

TABLE 3-4

POPULATION AND DWELLING UNIT FORECASTS BY COMMUNITY COUNCIL

Council	1981 Population	1981 Dwelling Units	1981 Persons/ D.U.	Platted D.U.'s	1988 Add'l D.U.'s	1988 Total Est. D.U.'s	Pct. of Total D.U.'s	1988 Total Est. Populatn

Police put 'eye' in air to watch commuters

by Mary Kaye Ritz
Times Writer

During those hectic morning rush hours, Anchorage drivers are turning to Commuter Watch, KTNX's 60-minute guide of how to get to work without getting buried in a traffic jam.

The program, which began in March, features officer Jim Meehan of the Anchorage Police Department's community relations division.

It is Meehan who pulls out his radio and earphones, props a phone to dispatchers on his shoulder and lets the show go on.

Reports of traffic from the downstairs office of the police department are made from "traffic central," Meehan said. When he is grounded, he calls both Alaska State Trooper and Anchorage Police Department dispatches to check for traffic hazards and tie-ups.

Reports made from the street are called "mobile" reports.

During mobile reports, the officer drives to some of the most notorious intersections and checks congestion. If everyone in line for a certain traffic light can make it through, or if there is a stalled car blocking any a path, he relays that back to the disc jockey.

He also calls dispatchers of both troopers and police as well as other patrollers to check on hazards and accidents.

Occasionally Meehan gets all the way to Merrill Field for take-off before the decision not to fly is made. The report goes on, with the officer on the phone to dispatchers.

Meehan mentioned these examples of traffic hot spots:

- Eagle River Road merging onto the Glenn Highway.
- Dimond Boulevard between Victor Street and Minnesota Drive.
- Tudor Road and Lake Otis Parkway.

The Eagle River Road merge is horrendous in the mornings, Meehan said, with up to 50 cars trying to enter the highway. When the kind Glenn Highway commuter waves you on in front of him, he said, you take a chance should you accept.

Legally, if you are struck by the courteous driver the ticket goes to you for failing to yield the right of way.

Meehan's cohorts, Officer Jim Reimann and Lt. George Novaky, also do the Commuter Watch spots.

Michael Dinneen of The Times

Officer Jim Meehan does a traffic Commuter Watch from 'traffic central'

City eases enforcement of Eagle River land rule

by Ralph Nichols
Times Writer

Municipal officials have backed away from strict enforcement of the comprehensive plan for property development from Eagle River north to Chugiak and Peters Creek, area residents were told at a "town meeting" Monday night.

Only two questions will now be asked about the development of land with unrestricted zoning, public works director Paul Diener told some 50 persons crowded into the Chugiak Senior Citizens Center:

- Does it create a public health or safety hazard?
- Is it compatible with surrounding land uses?

Area residents last month protested the strict enforcement of the comprehensive plan by municipal officials. They complained that persons seeking land-use permits were being restricted to the requirements of the comprehensive plan, despite the fact they were planning to develop land zoned unrestricted.

Their pleas seemed to fall on deaf ears. They were told by building officer John Bishop that the municipality intended only to toughen its enforcement of the comprehensive plan in issuing land-use permits.

But municipal officials decided late last week, at a subsequent meeting with area residents, to back away from strict adherence to the land use plan in the absence of area-wide zoning.

Diener said after Monday's meeting that the problem occurred largely because "we just recently have begun a systematic zoning review here. We're still working the bugs out."

Mayor Tony Knowles said the municipality is negotiating to retain planner Paul Carr as a consultant to help iron out the Eagle River-Chugiak zoning and development problems. Carr, who worked last year with the New Capital Site Planning Commission, helped draft the area's land use plan.

Diener said he thinks these actions "will resolve the immediate problems on land use."

For example, he continued, under the muncipality's new approach to development, "if you want to build an auto shop in a single-family residential development (zoned unrestricted), you'll be turned down.

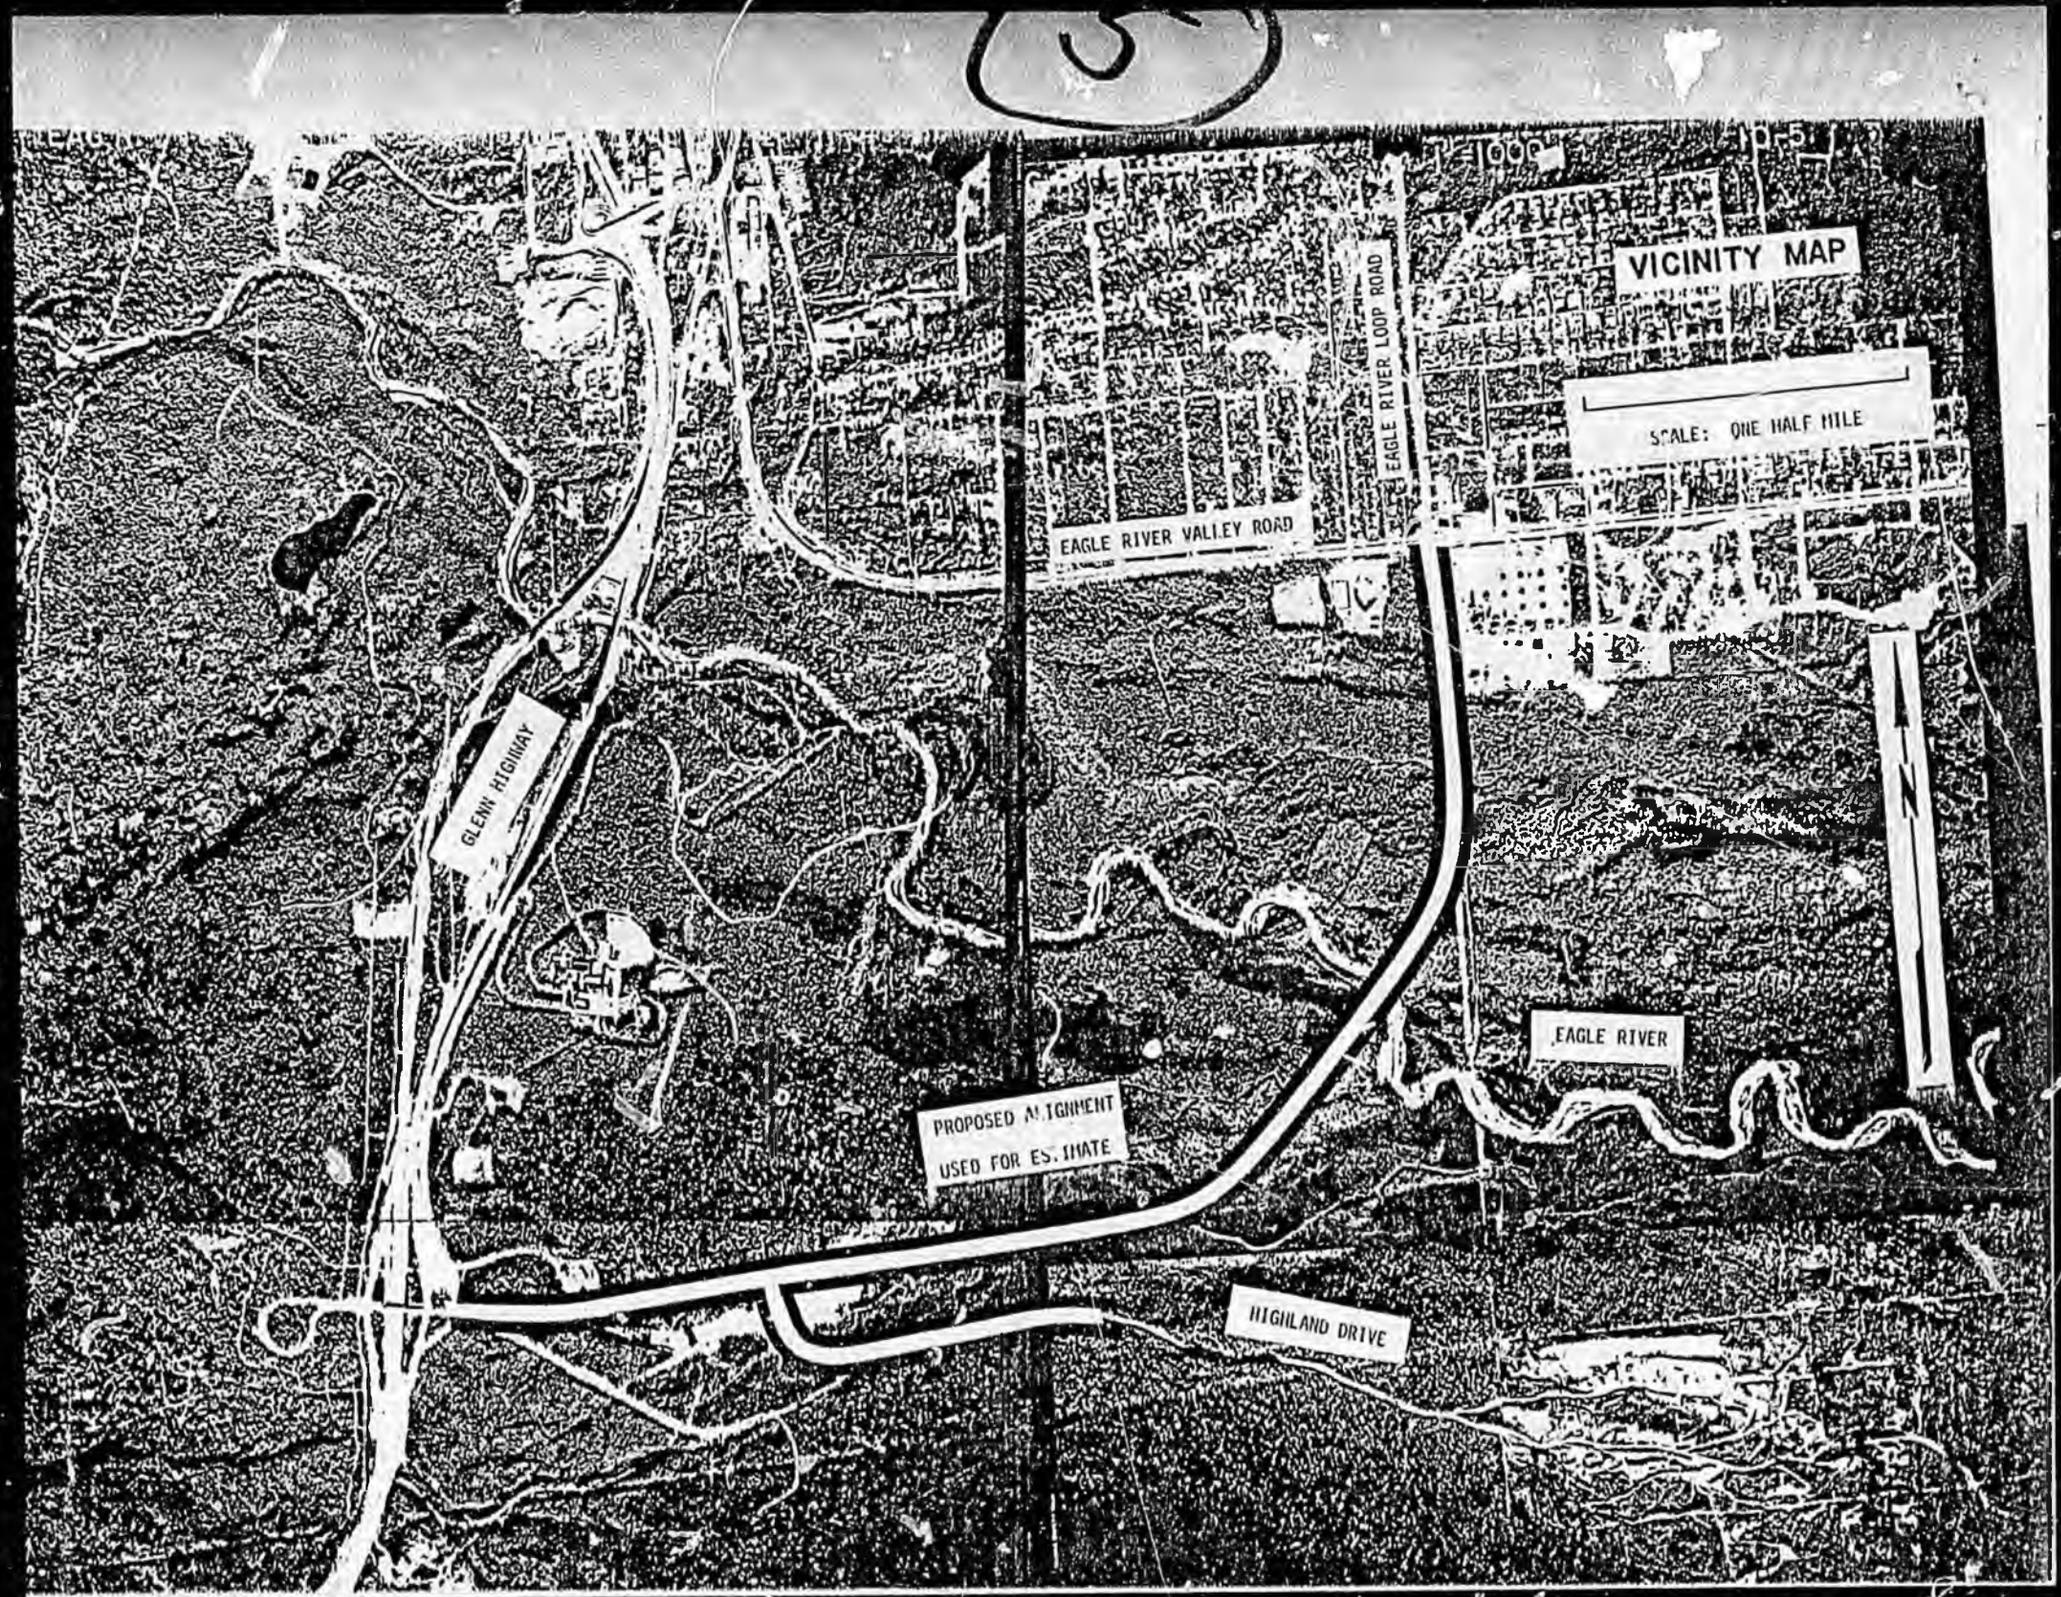
"But if you want to build a duplex, and there are other multi-family dwellings there, then you'll probably be aproved."

Eagle River-Chuglak residents have scheduled another meeting to clarify their concerns on this issue for 7:30 p.m. Thursday at the CBA Building in Chugiak. These views will be susbmitted to municipal officials at a May 16 meeting.

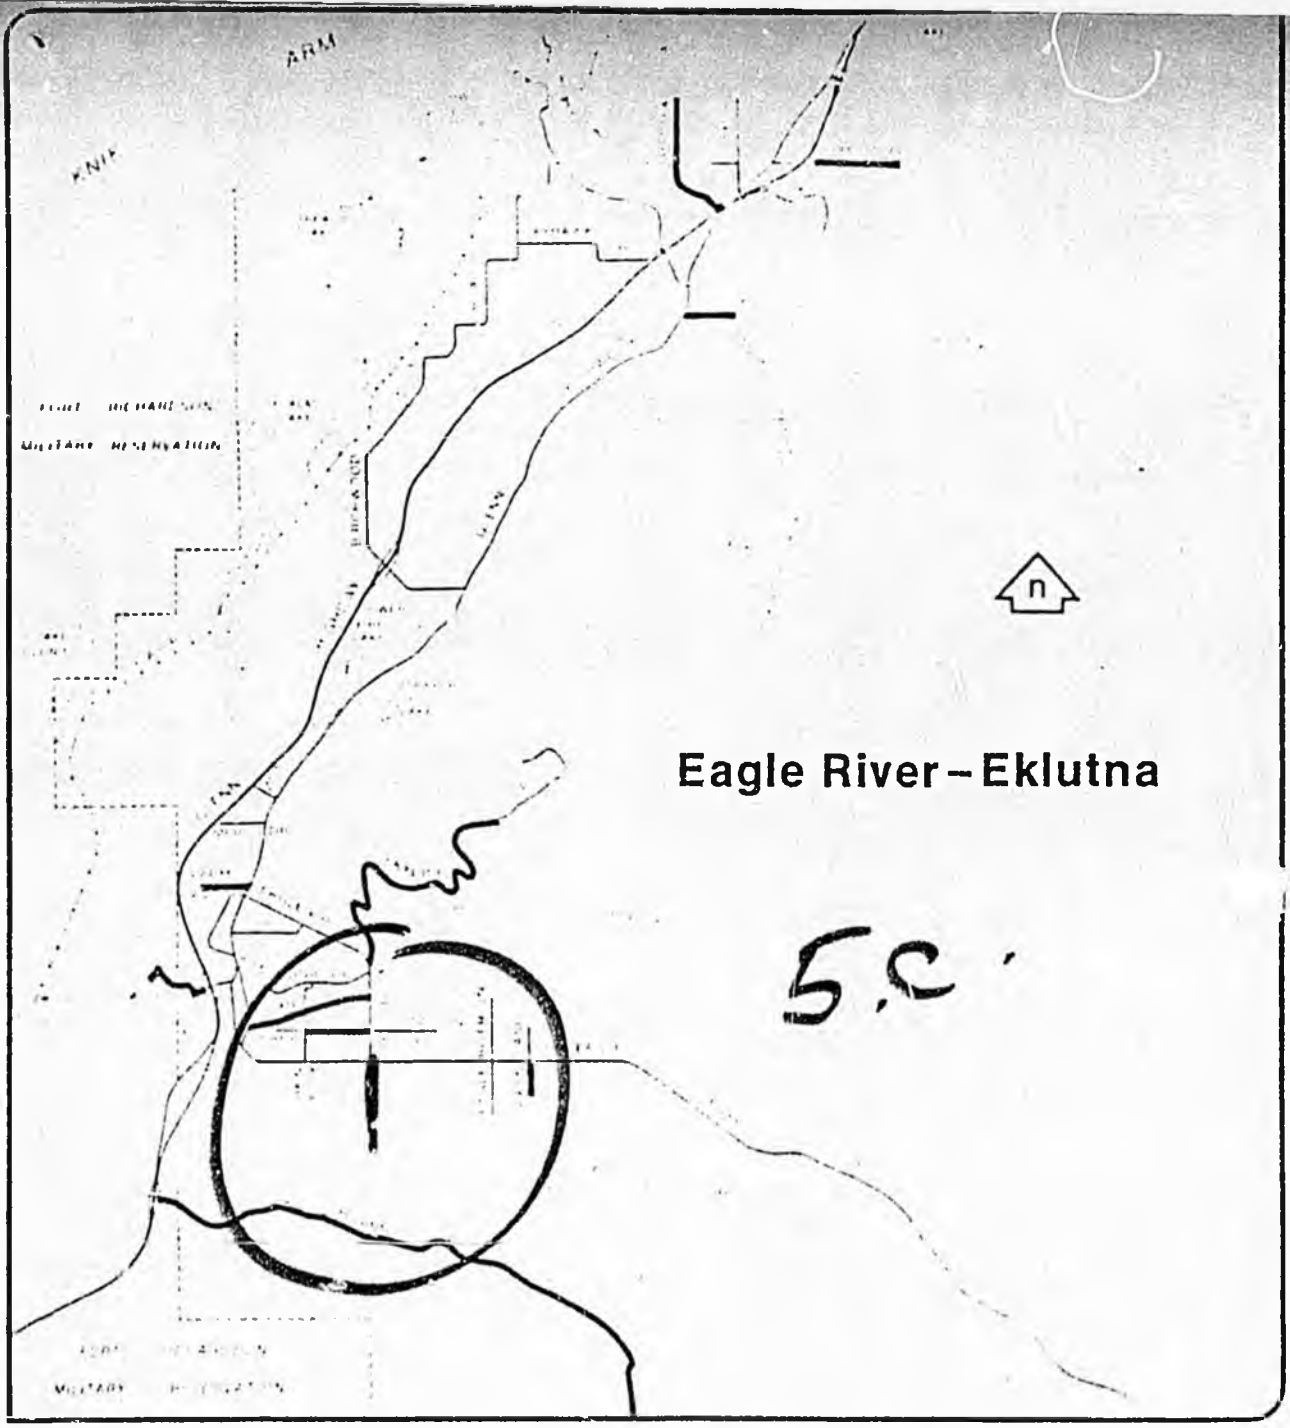
Knowles told the gathering that the outer limits of the municipality, with both original homesteading and sophisticated zoning, "is trying to do in a few years what it has taken some communities a generation to do."

As declining oil prices impact municipal revenues, he continued, "we have to rely more on ourselves to provide those services we need . . . you are the ones who must decide which services we should have."

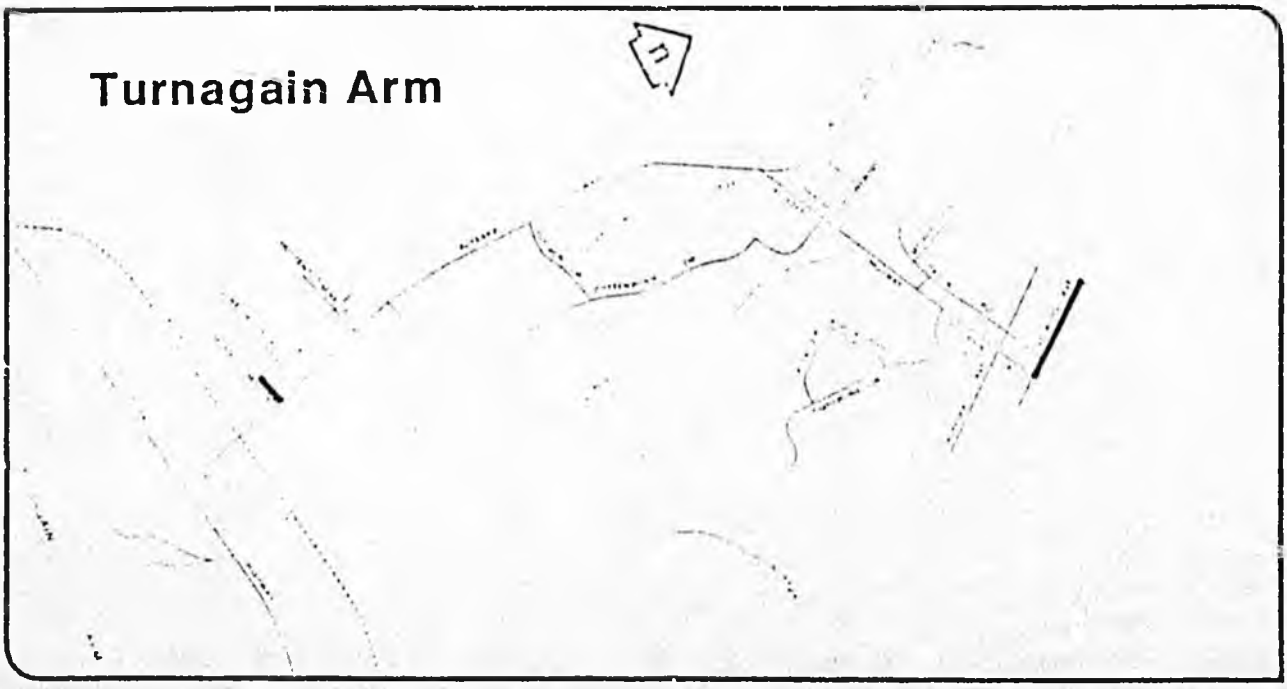
Other issues discussed at the meeting included:



- Improvement of the Eagle River Loop. Assemblyman Gerry O'Connor said that actual expansion of the roadway where it narrows into a bottleneck is probably five to eight years away, and will cost $15-16 million, most of which will come from federal funds.



One man suggested that in the meantime, the municipality should lower the speed limit to 35 mph, "and enforce it."



- People Mover director Tom Brigham said service to Eagle River was doubled to 24 buses daily on April 4, and that expanded service on Eagle Loop Road is planned for this fall. 4.a.

There is "no question" that service will eventually be added to Thunderbird Heights and Eklutna Heights, Brigham added. "It's just a matter of when."

- Public health officer Les Buckholz has moved into the municipality's Eagle River health department office (telephone 694-2131) to help meet the local demand for increased environmental health services created by the rapid growth of the area, it was also announced. 4.b.

V. ANALYSIS:

1) Analysis of the fiscal impact on existing programs:

No fiscal impact on existing program is anticipated. The project would be operated and maintained by the community when completed.

2) Analysis of the fiscal impact on new programs or activities:

The expansion of Dog Bay Harbor will facilitate and encourage the increased development of the renewable marine resources throughout the region. Kodiak, the third largest commercial fishing port in the United States, is a world leader in king crab production and ranks among the top four national ports in halibut production. Some 2,000 commercial fishing vessels annually use the small boat basin that has protected moorage for about 200 vessels. Kodiak is also an important cargo port and transshipment center and the channel allows unrestricted access for coastal vessels. This basin and the samll basin at nearby Old Harbor are the only protected basins between Cook Inlet and the Shumagin Islands, so they are important harbors of refuge.

3) Analysis of how the figures in the fiscal note were derived:

The figures are provided by the Buildings and Harbors Section, Design and Construction Division of DOT&PF based on an analysis of March 16, 1983. The Corps of Engineers' Kodiak Harbor Study was a primary source of information. The estimates reflect a $750,000 reduction as a result of a FY'84 appropriation for design.

The cost figures are based on conceptual considerations within an accuracy range of -25% to +75%. A conceptual estimate is based on a design engineer work using existing information without the advantage of a field investigation or a detailed design study. This accounts for the wide range in the degree of accuracy. A detailed design study would be required to increase the accuracy of the project cost estimate and reduce the accuracy range.

Current status of the design project: The present appropriation of $750,000 is being used for preliminary engineering efforts to gather and analyze bathymetric and subsurface soils data. No design work has been undertaken yet. Unused funds from the preliminary engineering effort will be directed toward the design element.

4) Additional information necessary to explain the fiscal note:
Note: $750.0 in design funds was provided in SLA 83 Chapter 107. The original request was for $2,500.0 in design funds. An additional $1,750.0 is needed for adequate design and preliminary engineering work before construction can be effectively employed.

A. Assumptions

The design of the subject project is being viewed as a potential in-house design with the utilization of State materials and geology sections in coordination with outside consultants. Initial estimates propose construction of a 1,900 foot rubble mound breakwater with an entrance channel crossing from Near Island to Grass Island and finally to Gull Island, entirely enclosing Dog Bay. The breakwater would provide year-round protection to Dog Bay from wave and swell action. The following is the design cost breakdown prepared March 16, 1983 by Central Region's Design/Buildings and Harbors.

1.	Aerial photography, mapping and half-tone positive enlargements	$ 35,000.00
2.	Field and office reconnaissance of breakwater and material sites	100,000.00
3.	Geophysical and seismic surveying of material sites	85,000.00
4.	Geotechnical exploration, lab work, core drilling	285,000.00
5.	Bathymetric sounding and bottom contours	86,000.00
6.	Deep water coring, samples and consolidation testing	250,000.00
7.	Model testing and circulation studies, wave hindcasting	206,000.00
8.	Preparation of environmental document	200,000.00
9.	Design: all phases	350,000.00
		$1,597,000.00

The construction scenario could be coupled with the stabilization of Pillar Mountain thus effecting a tremendous cost saving. However, it would not be economically feasible for the same contractor to set up the stabilization effort and the construction of the breakwater at the same time. The production of inner core filler material will occur at Near Island. This condition gives us the best condition scenario and would greatly reduce the cost of the project. Likewise, obtaining the rip-rap material at Near Island will also greatly reduce the cost of the project. Worst case condition scenario would be having to bring the inner core material from Pillar Mountain and the rip-rap material from Anton Larsen Bay Quarry.

The first construction cost estimate is based on the worst condition scenario because the development of material sites on Near Island are unknown with regard to availability, quantity, and quality of the rock. Established sources have known conditions and very likely will be used as alternate site if Near Island proves inadequate.

The following ranges are provided so that all concerned are aware of the great difference in obtaining the material locally on Near Island as compared to alternate sources as indicated above.

1. Near Island, Pillar Mountain and Anton Larsen Bay Material Sources (worst condition scenario)

Material	Quantities (cu.yds.)	Cost/cu.yd.	Total
Armor rock	155,000	$100.00	$15,500,000.00
Inner core	415,000	$50.00	20,750,000.00
		Sub-total	$36,250,000.00
		Mobilization	1,000,000.00
		Design	1,597,000.00
		Contingency 10%	3,625,000.00
		Total	$42,472,000.00

2. Near Island and Pillar Mountain Material Sources
(best condition scenario)

Material	Quantities (cu.yds.)	Cost/cu.yd.	Total
Armor rock	155,000	$50.00	$ 7,750,000.00
Inner core	415,000	$20.00	8,300,000.00
		Sub-total	$16,050,000.00
		Mobilization	1,000,000.00
		Design	1,597,000.00
		Contingency 10%	1,605,000.00
		Total	$20,252,000.00

The design costs are in 1983 dollars and the construction cost estimates are in spring 1984 dollars. No commitment of maintenance or operating funds would be necessary.

5) Program Summary

No new positions are anticipated, nor can any other major expenditure items be identified at this time.

6) Computations

Not applicable.

IV. ANALYSIS (HB 286)

A. Assumptions

The design of the subject project is being viewed as a potential in-house design with the utilization of State materials and geology sections in coordination with outside consultants. Initial estimates propose construction of a 1,900 foot rubble mound breakwater with an entrance channel crossing from Near Island to Grass Island and finally to Gull Island, entirely enclosing Dog Bay. The breakwater would provide year-round protection to Dog Bay from wave and swell action. The following is the design cost breakdown prepared March 16, 1983 by Central Region's Design/Buildings and Harbors.

1.	Aerial photograpy, mapping and half-tone positive enlargements	$ 35,000.00
2.	Field and office reconnaissance of breakwater and material sites	100,000.00
3.	Geophysical and seismic surveying of material sites	85,000.00
4.	Geotechnical exploration, lab work, core drilling	285,000.00
5.	Bathymetric sounding and bottom contours	86,000.00
6.	Deep water coring, samples and consolidation testing	250,000.00
7.	Model testing and circulation studies, wave hindcasting	206,000.00
8.	Preparation of environmental document	200,000.00
9.	Design: all phases	350,000.00
		$1,597,000.00

The construction scenario could be coupled with the stabilization of Pillar Mountain thus effecting a tremendous cost saving. However, it would not be economically feasible for the same contractor to set up the stabilization effort and the construction of the breakwater at the same time. The production of inner core filler material will occur at Near Island. This condition gives us the best condition scenario and would greatly reduce the cost of the project. Likewise, obtaining the rip-rap material at Near Island will also greatly reduce the cost of the project. Worst case condition scenario would be having to bring the inner core material from Pillar Mountain and the rip-rap material from Anton Larsen Bay Quarry.

The first construction cost estimate is based on the worst condition scenario because the development of material sites on Near Island are unknown with regard to availability, quantity, and quality of the rock. Establised sources have known conditions and very likely will be used as alternate site if Near Island proves inadequate.

The following ranges are provided so that all concerned are aware of the great difference in obtaining the material locally on Near Island as compared to alternate sources as indicated above.

1. Near Island, Pillar Mountain and Anton Larsen Bay Material Sources (worst condition scenario)

Material	Quantities (cu.yds.)	Cost/cu.yd.	Total
Armor rock	155,000	$100.00	$15,500,000.00
Inner core	415,000	$50.00	20,750,000.00
		Sub-total	$36,250,000.00
		Mobilization	1,000,000.00
		Design	1,597,000.00
		Contingency 10%	3,625,000.00
		Total	$42,472,000.00

2. Near Island and Pillar Mountain Material Sources (best condition scenario)

Material	Quantities (cu.yds.)	Cost/cu.yd.	Total
Armor rock	155,000	$50.00	$ 7,750,000.00
Inner core	415,000	$20.00	8,300,000.00
		Sub-total	$16,050,000.00
		Mobilization	1,000,000.00
		Design	1,597,000.00
		Contingency 10%	1,605,000.00
		Total	$20,252,000.00

The design costs are in 1983 dollars and the construction cost estimates are in spring 1984 dollars. No commitment of maintenance or operating funds would be necessary.

B. PROGRAM SUMMARY

No new positions are anticipated, nor can any other major expenditure items be identified at this time.

C. COMPUTATIONS

Not applicable.

D. Economic Impact

Kodiak Island is located in one of the State's best natural fishing grounds. Currently, 15 shore-based commercial processing plants process crab, salmon, shrimp and halibut. Further Development of the bottomfish industry is being explored and the commercial fishing fleet continues to grow.

E. Impact on Local Governments

No information at this time.

F. Attachments

None.

ANALYSIS

1) Analysis of the fiscal impact on existing programs:

No fiscal impact on existing programs is anticipated.

2) Analysis of the fiscal impact on new programs or activities:

The size of the financial cost of this project would postpone the development of several smaller, higher priority projects in the State identified through the capital budget development process.

The City of Kodiak has completed Port Development Plan. The Plan identifies Pillar Mountain stablization as a priority project because of its potential impact on other related port development activities (i.e., permanent breakwater and upland staging areas).

3) Analysis of how the figures in the fiscal note were derived:

The figures in the fiscal note are based on the Port of Kodiak Development Plan, 1982. The design costs are in 1984 dollars and the construction cost estimates are in 1985 dollars.

The degree of accuracy in the funding figures is based on conceptual considerations within a range of -25% to +75% accuracy. A conceptual estimate is based on a design engineer's work using existing information without the advantage of a field investigation or a detailed design study. This accounts for the wide range in the degree of accuracy. A detailed design study would be required to increase the accuracy of the project cost estimate and reduce the accuracy range.

4) Additional information necessary to explain the fiscal note:

A. Assumptions

The Stabilization of Pillar Mountain includes three phases: 1) The preparatory accumulation of data identified by the Pillar Mountain Geotechnical Study Committee for the identification of remedial measures for stabilization; 2) Preliminary engineering and design for the stabilization project; and 3) The stabilization project. Preliminary engineer's estimates contained in the Port of Kodiak Development Plan estimates a project cost of approximately $29,600,000. Specifically, this project would produce an estimated 5,400,000 cubic yards of material through excavation and create 35 acres of critical port upland between piers 2 and 3. Estimating engineering design to require ten percent of the project budget, approximately $2.9 million would be required for the data collection and design. No maintenance or operating funds would be involved once the stabilization was complete.

B. Program Summary

No new positions are anticipated, nor can any other major expenditure items be identified at this time. No commitment or operating funds would be necessary.

C. Computations

See Assumptions.

D. Economic Impact

Rock excavated from the slope during the stabilization can be used to improve the commercial rocking areas along Kodiak waterfront, to create additional developable uplands, and to provide a stockpile of fill for future use.

E. Impact on Local Government

No information at this time.

Pillar Mountain

Located southeast of the City of Kodiak, Pillar Mountain presents substantial limitations and hazards to present and future development. Proximity of the mountain's steep slopes to the waterfront has restricted utilization of important coastal lands and has reduced available staging area for the existing marine facilities. Additionally, the presently active slide area adjacent to City Piers 2 and 3 poses a significant threat to the area. A slope failure and slide involving approximately 4,000,000 cubic yards of rock could produce an extremely damaging splash wave. The resulting damage to persons and property is inestimable.

Fortunately, this potentially hazardous condition can be removed and transformed into the basis for a series of projects which would benefit the entire community. Stabilizing Pillar Mountain is feasible, and the rock excavated from the slope during that work can be used to improve the commercial docking areas along Kodiak's waterfront, to create additional developable uplands, and to provide a stockpile of fill for future use. This project is the recommended first priority of this planning study.

Specifically, the stabilization project would produce an estimated 5,400,000 cubic yards of material through excavation. As part of the stabilization project, 35 acres of critical port upland area can be created by filling between Piers 2 and 3 and along the coast to the entrance of Gibson Cove. This approach allows for disposal of part of the excavated material at no additional cost and provides land adjacent to the port area for container van storage and future construction of an additional cargo dock. Additional projects which may also use Pillar Mountain as a source of inexpensive fill material are the Gull Island breakwater, the Dog Bay waterfront area on Near Island, and Gibson Cove improvements. Each of these projects is discussed later in this chapter.

The stabilization of Pillar Mountain must begin with a staged plan that combines sound engineering and design principles with appropriate construction methods. This work could be accomplished in three years, beginning in 1985 with completion in 1987. Funding for this project should come from the State of Alaska through a Special Emergency Funding Request, a type of funding which can be designated by the state governor in situations where human life is threatened. The Pillar Mountain situation should qualify for special emergency funding due to the present situation which threatens life and property and the fact that slide activity is thought to have been renewed due to construction of the Abbert Highway, a state road.

Much of the potential development recommended in this study would be accomplished most easily and inexpensively by using fill material from Pillar Mountain. Table 27 compares the costs of land and harbor improvements with and without fill from Pillar Mountain to demonstrate the substantial benefits that could be gained from the stabilization project in addition to the advantage of removing a hazard that threatens property and lives. How much the fill will cost depends upon whether Pillar Mountain fill material is available and the distance which fill must be transported for each specific project. Applying the different incremental costs affects the yield and cost/benefit analyses of each project. These analyses are discussed along with the individual project descriptions.

Although Pillar Mountain offers Kodiak a relatively inexpensive souce of fill, it is not so inexpensive as to make those projects requiring fill viable on a cost/benefit basis if the cost of the stabilization project is included. When the cost of stabilizing Pillar Mountain is borne by the state as recommended, the economic

HB287
DEC.02.'93 11:02 STATE OF ALASKA DOT ANCHORAGE AK P.05

viability of some projects is greatly increased. Pillar Mountain stabilization cannot be justified on a strictly economic basis; however, eliminating the present hazard to life and property would be an important public benefit. Using projections about the effects of a Pillar Mountain failure as a measure, the potential damages from that hazard greatly exceed the cost of stabilization.

Table 27 Pillar Mountain Stabilization and Related Projects Comparative Costs

Project	Fill Produced (cubic yards)	Cost
Pillar Mountain stabilization	5,400,000	$29,600,000

Project	Fill Required (cubic yards)	Cost: With Pillar Mountain Fill	Cost: Without Pillar Mountain Fill
Kodiak development Port fill area (state funding)	4,300,000	$ -0- (included in cost of stabilization project)	$60,200,000
Gull Island breakwater (federal funding)	118,000	12,000,000	20,800,000
Gibson Cove fill area* (private funding)	360,000	1,420,000	1,824,000
Near Island development Dog Bay waterfront area (state funding)	770,000	3,080,000	10,700,000
Total Cost of stabilization	5,548,000**	$16,500,000 +29,600,000 $46,100,000	$93,524,000

*Construction of the Gibson Cove fill area and breakwater need not occur at the time of stabilization.
**The 148,000 cubic yards needed in addition to the fill produced by the stabilization project can be obtained from a stockpile area created on Pillar Mountain.

Central Region Planning & Programming

PILLAR MOUNTAIN STABILIZATION

Status Report

February, 1983

Purpose: The Pillar Mountain Stabilization/Status Report was prepared in response to a request from State Senator Mulcahy.

Background: Pillar Mountain is a 1,300 foot mountain at the southern edge of the city limits of Kodiak, directly above the highway between the city and the airport. The unstable slope of the mountain presents a serious hazard to St. Paul Harbor. The presently active slide area, approximately 1,200 feet high by 1,700 feet long, threatens the Abbert Highway and two city docks with rockfall. A major rock slide in April 1971 followed excavation activities at the toe of the slope and resulted in highway closure for approximately six weeks. Since that time, numerous studies have been conducted by the various governmental units to determine the landslide danger. This report summarizes the available information sources and identifies the various alternatives which have been discussed regarding the mountain. Much of the information is taken from material prepared for the Pillar Mountain Geotechnical Study Committee. The committee was organized by the Borough and City in 1978 to review the problem and recommend an action program.

Issues: Certain issues have been identified relating to the Pillar Mountain stabilization problem. The recently drafted Port of Kodiak Development Plan identifies Pillar Mountain as a serious hazard to St. Paul Harbor, threatening the Abbert Highway and two city docks with rockfall. Specific issues include:

1. Due to the proximity of Pillar Mountain and its steep slopes, coastal development occurring within St. Paul Harbor has been limited to a narrow band of waterfront land.

2. Ground movement has been identified as one cause of cargo dock slippage at City Pier 3. Continued slippage could cause permanent damage to the city docks.

3. Rockfall continues on the Abbert Highway.

4. Massive slope failure could result in a tsunami-like 600-foot splash wave at the base. It is projected the wave would move across the harbor at 100 mi/hour. The height of the landslide-induced wave could reach 87 feet at Near Island and 35 feet approaching the City of Kodiak with run-up approximately equal to the 1964 tsunami.

5. The possibility exists that movement could increase as a result of an earthquake, water saturation of the landslide mass, or other cause.

6. Kodiak's seismic potential is very great given that it sits atop the tectonic plate system where the Continental Plate and the Pacific Plate meet.

Information Sources: Local units of government have invested in numerous studies to determine the landslide danger. A brief chronological history of the list of reports and activities which have occurred follows:

1. Report of Foundation Investigation of Proposed Container Shipping Facility, Kodiak, Dames & Moore, report for the City of Kodiak, December 1971. This report summarizes the results of sub-bottom exploration by seismic surveys and borings which provided information for the siting and design of the container wharf.

2. Consultation & Geotechnical Investigation of Pillar Mountain Slide, Dames & Moore, for Alaska Department of Highways, April 1973.

3. Kodiak Harbor, Alaska, Feasibility Report, Small Boat Harbor Improvement, Corps of Engineers, USAE District, Alaska, May 1975.

4. RM Consultants reoccupy survey points, Spring 1976.

5. Report of Stability Investigation Container Wharf Bulkhead, Converse-Ward-Davis-Dixon Associates, Inc., April 1976. This report contains an epicenter location map, graph of expected recurrence rate versus magnitude, graph of expected number of occurrences versus peak ground acceleration, and a list of instrumentally recorded earthquakes in the area.

5. Aerial photographs dated 30 April 1977, scale 1:100, sheet numbers 30, 36, and 37.

7. Drawing titled: "City of Kodiak Container Shipping Facility," November 1977 (revised November 1978). Identifies new cargo dock slippage to sea at rate of one-inch per year.

8. Map of Mountain, Corps of Engineers, USAE District, Alaska, March 1978.

9. Pillar Mountain Landslide, Kodiak, Alaska, U.S. Geological Survey, "Open File Report" No. 78-217, April 1978. Report evaluated the physical appearance of the mountain, the geology of the slide area and data from a slope indicator. The concern which generated the classification study was that fast moving landslides on oversteepened slopes (about 45°) such as Pillar Mountain have been devastating elsewhere. The report expressed the concern that major ground failure is a distinct possibility. The report recommended a thorough monitoring investigation be initiated over a two to three year period to gauge slippage. USGS estimated the study would cost $900,000. No action was taken.

10. Letter to Reuben Kachadoorian, U.S. Geological Survey, Menlo Park, California, from W.E. Strohm, Jr., USAE Waterways Experiment Station, April 1978.

11. Press release from U.S. Geological Survey, "Landslide Could Endanger Kodiak, Alaska," by Don Kelley, May 1978.

12. Letter to Department of Public Works, Engineering Division, Kodiak, Alaska from Edwin Wald, California, July 1978.

13. Report of Geotechnical Studies Container Wharf Bulkhead, by Converse-Ward-Davis-Dixon, Inc., August 1978. The information in this report consisted of logs of the borings per placement of inclinometer casings in the rockfill and subjacent materials of the container wharf, the records of slope indicator readings, and the surface surveys of movements of the collars of the inclinometer casings.

14. Proposed Geotechnical Investigation Pillar Mountain Slide, Dames & Moore, to the City of Kodiak, October 1978.

15. Memo titled, "Pillar Mountain Instability Problem, Kodiak," Lee McAnerney, Commissioner, Department of Community and Regional Affairs to Jessie Dodson, Special Assistant, Office of the Governor, September 1978. Recommends desirability of inter-departmental discussion of the Pillar Mountain instability problem with participation by the Office of the Governor.

16. Memo titled, "Pillar Mountain Instability Problem, Kodiak," Dennis Dooley, Director, Transportation Planning, DOT/PF, to Lee McAnerney, Commissioner, Department of Community and Regional Affairs, October 1978. Supports legislative action to fund a $60,000 study to determine Pillar Mountain stability.

17. Drawing titled, "Pillar Mountain Slide Area Contour Map, Kodiak, Alaska," by Ron A. Ecklund, November 1978 (revised December 1978). Horizontal location of 35 sectional points.

18. "A Resolution of the Kodiak Island Borough Assembly Creating a Geotechnical Study Committee for the Purpose of Furthering Geotechnical Investigations and Recommendations of the Pillar Mountain Slide Area Problem," Resolution No. 78-76-R, December 1978.

19. Preliminary Report of Pillar Mountain Geotechnical Committee, Pillar Mountain Geotechnical Study Committee, June 1979.

20. Appropriation of $479,000 from State of Alaska through the State Division of Geological and Geotechnical Surveys, monitored by Pillar Mountain Geotechnical Study Committee, June 1979.

21. Evaluation of Ground Survey Program and Surface Movement on Pillar Mountain Slide for City of Kodiak, Kam W. Wong, August 1979.

22. "Offshore Survey," U.S. Geological Survey requested by Geotechnical Study Committee, October 1980. Seafloor deformation was found and interpreted as being related to Pillar Mountain movement.

23. Interim Report on Slope Stability and Possible Remedial Measures, RM Consultants, September 1981.

24. Pillar Mountain Stabilization Bill, introduced by State Representative Zharoff in the amount of $1,000,000, January 1982. Bill died in Finance Committee, February 1982.

Alternatives: The Geotechnical Study Committee, in 1979, considered four possible courses of action regarding the mountain's stabilization. Those alternatives included:

1. Minimal Additional Action

In this approach a minimal slide movement monitoring program would be established, but no additional studies would be undertaken. This type of monitoring program may provide advance warning of additional significant slide movements. However, its ability to predict advance warning of significant slide movements would be limited by the frequency of the observation and by its inability to provide rapid measurements following a rapid slide triggering action such as could conceivably occur as a result of an earthquake. The degree of the hazard presented by a slide would not be significantly altered by the monitoring. This limited monitoring program would not improve the behavior of the slide mass. The actual current hazard level would continue. However, with monitoring, the risk to the people in the community would be somewhat less as warning might be provided for some types of slides. Should remedial action be deemed desirable, then only minimal additional insight into the slide behavior or possible remedial action will have been obtained under this course of action.

2. Remedial Measures Without Additional Studies

In this course of action, remedial measures such as excavation, drainage, or placing buttressing fill could be undertaken without benefit of the results of additional studies. The chief advantages of taking this course of action are that if the work is correctly done, then: 1) it would save the cost of an investigation and, 2) it would eliminate the hazard in the shortest time. However, it is quite possible that a "remedial" excavation in the wrong place could trigger the very slide that is was supposed to prevent. Furthermore, without additional information one cannot judge whether or not enough remedial measures would be either insufficient, overdone, or would increase the hazard.

3. Systematic and Comprehensive Data Collection and Evaluation

A third course of action would be to institute a data collection program and systematically increase information from previous studies to a more comprehensive level. The objective would be to obtain a better understanding of the dynamics of the slide area as well as the reactive behavior of the bay. It is conceivable, although unlikely, that such studies could indicate that the possible development of a rapid deep-seated slide is too remote to be considered a hazard.

The danger of this approach is that the study can become an academic exercise which eventually would lead to a more complete understanding of the slide, but in the meantime, would provide little relief to the community in terms of alleviating the socioeconomic realities now confronting development. Such studies can also lead to the conclusion that further studies would be required to fully understand the slide.

Many of these studies are desirable, but the Geotechnical Committee cautioned that although the outcome of the studies may lead to better understanding, they have the potential of indefinitely maintaining a socioeconomic status quo. Therefore, remedial action is concurrently recommended.

4. Combined Data Collection and a Remedial Program

In this approach it is acknowledged that a potential hazard exists and that the consequences of the possible hazard are such that it may well be necessary to consider remedial measures to minimize or eliminate the hazard. Possible remedial measures include: 1) unloading the top of the slide area; 2) buttressing the base of the slide area; and, 3) improving the surface and sub-surface drainage and thereby reducing the water pressures within the slide mass. It seems possible that the most cost-effective remedial measure would be a combination of unloading the top and buttressing the base in the present slide area and improving drainage within the slide and within adjacent slopes of Pillar Mountain where this measure was found to be desirable.

Preliminary cost estimates and plans are required to determine if these or other remedial measures are viable. Some field data should be obtained to ensure that the plans are reasonable and that the initial cost estimates will not be greatly exceeded during the course of the remedial work. The information required would likely consist of knowledge of the depth of the slide, the shape of the base of the slide, and the hydrologic and structural geologic relationship of the slide mass and the adjacent areas. The data collection investigation in this approach would be limited to those aspects of the slide needed to plan and monitor the remedial measures.

As new data on the slide are obtained, the nature of the hazard and the necessity for remedial measures should continue to be reviewed.

Conclusions: The Pillar Mountain Geotechnical Committee concluded that there was sufficient information available to state that the mountain continues to fail. The data base, however, was insufficient to allow prediction of the magnitude or frequency of failure. Interpretations of the data as it now exists continues to generate a variety of possible consequences and, hence, uncertainty.

The Geotechnical Study Committee concurred that a combined data collection and remedial program was the best course of action and recommended that such a program be implemented as soon as funding could be made available.

The Committee concluded that a major question concerning the shape, and depth of failure must be answered prior to attempts to take remedial steps. The Committee recommended, therefore, that the following studies be initiated to fill data gaps prior to the initiation of remedial action.

1. Preparation of an accurate, large-scale topographic map based on new aerial photography.

2. Preparation of an accurate, large-scale geologic map.

3. Review of existing offshore data not now available to the Committee.

4. a. Continuation and expansion of the Division of Geological and Geophysical Surveys' monitoring system.

   b. Obtain subsurface data and installation of drill hole monitoring devices.

5. Laboratory tests of rocks and other materials.

6. Collection and analysis of existing, and possibly additional seismic data.

7. Collection and analysis of hydrologic data.

The recently completed Port of Kodiak Development Plan has identified the stabilization of Pillar Mountain as a priority project because of the present limitation it poses to port development. Proximity of the mountain's steep slopes to the waterfront has restricted utilization of important coastal lands and has reduced available staging areas for the existing marine facilities. Additionally, the presently active slide area adjacent to City Piers 2 and 3 poses a significant threat to the piers.

The proposed stabilization project would produce an estimated 5,400,000 cubic yards of material through excavation. As part of the stablization project, 35 acres of critical port upland area might be created by filling between Piers 2 and 3 and along the coast to the entrance of Gibson Cove. This approach allows for disposal of part of the excavated material at no additional cost and provides land adjacent to the port area for container van storage and future construction of an additional cargo dock. Additional projects which may also use Pillar Mountain as a source of inexpensive fill material are the Gull Island breakwater, the Dog Bay waterfront area on Near Island, and Gibson Cove improvements.

The advantages of the Pillar Mountain stabilization project include:

1. A hazard which prevents construction of improvements in the immediate port area and threatens human life and property would be removed.

2. Space for over 2,000 linear feet of additional deepwater dock frontage would be created between Piers 2 and 3.

3. Approximately 35 acres of critical port upland area for marine commercial and industrial expansion would be created.

4. Breakwaters to reduce the roll and surge of waves on port facilities could be built.

5. Land to properly access and service the Dog Bay small boat harbor could be created.

6. A reserve stockpile of excess fill material for future use could be made available.

Recommendations: The staff recommendation is to proceed with efforts to stabilize Pillar Mountain. The exact focus of the first phase of this project will be determined by available resources, but should include: 1) the preparatory accumulation of data identified by the Pillar Mountain Geotechnical Study Committee as necessary for the identification of the remedial measures for stabilization, 2) a funding assessment, and 3) securing of funds for the data collection and engineering design phase.

Preliminary engineering projections estimate the Pillar mountain stabilization project will cost approximately $29,600,000. In March, 1981 a state appropriation allocated $1,276,000 for repairs to the Kodiak Highway. The appropriation was authorized to fund emergency repairs for the highway in the area of Pillar Mountain. The project was to use part of the funds to provide an emergency solution to the most critical problem areas ($276,000) and set aside part of the funds until a long range solution could be identified ($1,000,000.) The $1,000,000 set aside for the long-range highway repair project could conceivably be used for the stabilization project. Estimating engineering design to require ten percent of a total budget, approximately $2.9 million would be required for the data collection and design. Consequently, an additional $1.9 million must be secured before initiating the project.

The City of Kodiak is one of ~~Alaska's~~ the Nation's most productive fishing ports and one of Alaska's most important transhipment ports for cargo. Recognizing the significance of the port, it is reasonable that the State of Alaska contribute to the development of the stabilization project. Funds in the amount of $1.9 million should be sought by the City to supplement the currently available $1 million.

Committee on Resources

April 6, 1983

Memo

To: Senator Bennett, Co-Chairman Finance Committee
Senator Sackett, Co-Chairman Finance Committee

From: Senator Bettye Fahrenkamp

Subject: CSSB 151, Regional Resource Development Authorities

As you know, the Finance Committee has recently received the above bill for consideration from the Resources Committee. This bill would authorize the establishment of authorities in the unorganized borough for the purpose of developing infrastructures for resource development projects. Funding for the developments would primarily come from the issuance of tax-exempt revenue bonds by the authority to be repaid with user fees from the developments.

In testimony and discussion before the Resources Committee several criticisms of the bill as originally drafted surfaced: 1) lack of guarantees of equal access to facilities which may be developed; 2) the possibility of proliferation of authorities throughout the unorganized borough; 3) the encouragement of less-than-sound economic projects by authorities; 4) the possibility that bonds issued by authorities may in some way create a liability to the state or add to the state's overall bond indebtedness; and 5) the possibility that the issuance of bonds by authorities might in some way affect the ability of the state or its political subdivisions to market their revenue bonds.

In response to these criticisms the Resources Committee adopted several major changes and additions to the bill including:

1) Page 2, lines 19-29, the Governor must make a positive finding that an authority's goals and projects would be economically advantageous to the region and state and that the authority is an appropriate and desireable method of accomplishing the goals and projects prior to establishment of an authority.

2) Page 2, lines 8-11, the ability to petition for establishment of an authority expires on July 1, 1986.

3) Page 2, lines 13-14, a petition to call for an election to establish an authority must be signed by 100 persons of a district.

In addition, several technical changes should be made in the bill. The following should be made to correct changes which were made by the Legal Division in the CS:

1) On page 5, lines 12-13, delete the phrase "at a meeting at which a quorum is present". This simply clarifies that a quorum constitutes a majority of the members of the board of governors.

2) On page 6, lines 16-17 delete the phrase "in accordance with the Administrative Procedure Act (AS 44.62)". This phrase was not contained in the CS which passed out of the Resources Committee and could be construed as evidence that authorities are somehow to be viewed as quasi-agencies of the state.

3) On page 8, line 25 delete "AS 30.13.060(f)(1)" and insert in lieu thereof "this subsection". There is no subsection (f)(1).

4) On page 15, line 18, add a comma after the words "rolling stock".

Finally, I would call your attention to the Letter of Intent which was passed out with the bill. This further clarifies that it is the intent that the bonds issued by the authorities not constitute any liability to the state or local governments or taxpayers in a successor government.

I would be happy to appear before your Committee to further explain this legislation and the actions of the Resource Committee. In addition, I have asked my staff to provide whatever assistance you may need on the bill. I remain convinced that this legislation could be of tremendous value in facilitating the development of resource projects in our state which would have tremendous economic and social benefits to regions as well as the state. I would hope the Finance Committee could expedite its consideration of this important legislation.

4) Page 4, lines 26-29, the Board of Governors of an authority shall consist of eight members, five elected locally and three Department heads appointed by the Governor.

5) Page 8, subsection (f), Prior to issuance of bonds an authority must submit an independent economic analysis of a project and its revenues to the state bond committee. The committee must find that project revenues are adequate for payment of the bonds and that the issuance of bonds would not adversely affect the ability of the state or localities to market their bonds.

6) Page 11, subsection (b), bonds issued by an authority do not constitute any liability or indebtedness to the state or political subdivision, nor can an authority pledge the faith or credit of the state or local government.

7) Page 13, subsection (a), ensures fair and equal access and fee assessements for users of facilities.

8) Page 13-14, subsection (b), an authority must find that prior to issuance of bonds that a project would be economically advantageous to the state and general public welfare and that the project is economically viable.

9) Page 14, section 30.13.150 provides that an authority would be integrated into a local government should it be established, but that an indebtedness of an authority does not constitute an obligation of the new government.

I think that these provisions adequately address the concerns that were raised. However, several other possible amendments were suggested that might further clarify the intent of this legislation which were suggested too late to be properly integrated into the committee substitute. I would urge the Finance Committeeto consider the following possible changes:

1) Changing the number of petitioners calling for an election to establish an authority from an absolute number of 100 to a percentage formula similar to other regional elections. (Attached is a possible formula suggested by the Division of Elections).

2) Any monies received by the state may not be used to satisfy bond obligations or collateral by an authority (attached are draft suggestions from the Department of Law).

3) Change a quorum of the Board from a majority to a majority plus one. (Suggested by the Alaska Environmental Lobby; see attached comments).

4) Ensure that proposed projects get fair and equal consideration within a district by an authority. (See attached language submitted by the Alaska Miners Association).

AMENDMENT

OFFERED IN THE HOUSE: Transportation BY: Rep. Jerry Ward

TO: _____ HOUSE BILL No. HB 294

SENATE BILL No. _____

PAGE: 1 LINE: 21

Amend to read:

Sec. 44.57.031 Membership of Authority. The authority shall consist of the Governor, the President of the Senate, the Speaker of the House, and the Mayor of each borough where the toll bridge or causeway is located. Each member of the authority may assign the duties, powers and privileges of membership to a designee. A delegation of membership must be in writing and is effective until the principal executive member revokes the delegation or is no longer qualified to be a member.

AMENDMENT

OFFERED IN THE HOUSE: BY: Rep. Jerry Ward

To: _____ HOUSE BILL No. HB 294

SENATE BILL No. _____

PAGE: 2 LINE: 2

Amend to read:

The authority by the affirmative vote of (AT LEAST FOUR) a majority of the members.

IN THE HOUSE

HOUSE BILL NO. 294

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act establishing an Alaska Toll Bridge and Causeway Authority."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 44 is amended by adding a new chapter to read:

CHAPTER 57. ALASKA TOLL BRIDGE AND CAUSEWAY AUTHORITY.

ARTICLE 1. ESTABLISHMENT AND ORGANIZATION.

Sec. 44.57.011. PURPOSE. The purpose of this chapter is to develop, stimulate, and advance the economic welfare of the state and further the development of public transportation systems in the vicinity of toll bridges and causeways.

Sec. 44.57.021. ESTABLISHMENT OF AUTHORITY. There is established the Alaska Toll Bridge and Causeway Authority. The authority is a public corporation of the state in the Department of Transportation and Public Facilities but with separate and independent legal existence.

Sec. 44.57.031. MEMBERSHIP OF AUTHORITY. The authority shall consist of the governor, the commissioners of transportation and public facilities, commerce and economic development, labor, and revenue; the president of the senate and the speaker of the house of representatives, or their designees and ~~one~~ 3 public member ~~of each borough where the toll bridge or causeway is located.~~ selected from the state at large

Sec. 44.57.041. OFFICERS AND QUORUM. The members shall elect officers they determine desirable. The powers of the authority are vested in the members, and ~~four~~ three members of the authority constitute a

quorum. Action may be taken and motions and resolutions adopted by the authority at a meeting by the affirmative vote of at least four members. The members of the authority serve without compensation, but they are entitled to per diem and travel expenses authorized by law under AS 39.20.180.

Sec. 44.57.051. STAFF. The authority shall employ an executive director who may, with the approval of the authority, employ additional staff as necessary. In addition to its staff of regular employees, the authority may contract for and engage the services of legal and bond counsel, consultants, experts, and financial and technical advisors the authority considers necessary for the purpose of conducting studies, investigations, hearings, or other proceedings. The members of the authority shall establish the compensation of the executive director, who is subject to the provisions of AS 39.25.

ARTICLE 2. POWERS AND DUTIES.

Sec. 44.57.111. POWERS AND DUTIES OF THE AUTHORITY. In furtherance of its corporate purposes, the authority has the following powers in addition to its other powers;

(1) to sue and be sued;

(2) to have a seal and alter it at pleasure;

(3) to make and alter bylaws for its organization and internal management;

(4) to acquire, whether by construction, purchase, gift or lease, and to improve, equip, operate, and maintain toll bridge and causeway projects;

(5) to make regulations governing the exercise of its corporate powers;

(6) to issue bonds to carry out any of its corporate purposes and powers, including the acquisition, design or construction of

a project to be owned or leased, as lessor or lessee, by the authority, or the acquisition of any interest in a project or the establishment or increase of reserves to secure or to pay the bonds or interest on them, and the payment of all other costs or expenses of the authority incident to and necessary or convenient to carry out its corporate purposes and powers;

(7) to sell, lease as lessor or lessee, exchange, donate, convey or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, when, in the judgment of the authority, the action is in furtherance of its corporate purposes;

(8) to accept gifts, grants or loans from, and enter into contracts or other transactions regarding them, with any person;

(9) to deposit or invest its funds, subject to agreements with bondholders;

(10) to enter into contracts with the United States or any person and, subject to the laws of the United States and subject to concurrence of the legislature, with a foreign country or its agencies, for the financing, design, construction, acquisition, operation, and maintenance of all or any part of a toll bridge or causeway, either inside or outside the state, and for the security of any bonds of the authority issued or to be issued for the project;

(11) to apply to the appropriate agencies of the state, the United States, and to a foreign country and any other proper agency for the permits, licenses, or approvals as may be necessary, and to design, construct, maintain and operate toll bridges and causeways in accordance with licenses and permits, and to obtain, hold and use the licenses and permits in the same manner as any other person;

(12) to perform reconnaissance studies, feasibility studies,

and engineering, survey and design with respect to toll bridges and causeways;

(13) to enter into contracts or agreements with respect to the exercise of any of its powers, and do all things necessary or convenient to carry out its corporate purposes and exercise the powers granted in this chapter;

(14) to exercise the power of eminent domain in accordance with AS 09.55.240 - 09.55.460;

(15) to maintain complete and separate financial account of each toll bridge and causeway;

(16) to utilize a design and construction contract for projects over $100,000,000;

(17) to establish, levy, and collect tolls and other charges it considers necessary for a project sufficient to pay costs of operation, maintenance, rehabilitation and improvement; to pay the cost of acquisition, design or construction, including the payment, amortization and retirement of bonds or other securities or obligations assumed, issued or incurred by the authority, together with interest; and to provide reserves for those purposes;

(18) to pledge the tolls and other revenues, subject to prior pledges, as security for the repayment with interest of money borrowed by it or advanced to it for its authorized purposes and as security for the satisfaction of any other obligations assumed by it in regard to loans or advances;

(19) to receive and accept funds from the state or the federal government or a municipality upon a cooperative or other basis for the design and construction of a toll bridge or causeway authorized under AS 44.57.011 - 44.57.331.

ARTICLE 3. FINANCIAL PROVISIONS.

(20) New Acquire - Real property

Sec. 44.57.211. BONDS FOR THE AUTHORITY. The authority may borrow money and may issue its bonds on which the principal and interest are payable from money derived from the tolls, fees, charges and other revenue from projects financed under AS 44.57.011 - 44.57.331 if

(1) appropriations are insufficient to cover the cost of acquiring, designing, or constructing the project; and

(2) the amount of interest the authority will pay on its bonds is not more than alternative costs of securing money to pay for the acquisition, design, or construction of the project.

Sec. 44.57.221. TRUST INDENTURES AND TRUST AGREEMENTS. (a) In the discretion of the authority, an issue of bonds may be secured by a trust indenture or trust agreement between the authority and a corporate trustee (which may be a trust company, bank, or national banking association, with corporate trust powers, located inside or outside the state) or by a secured loan agreement or other instrument or under a resolution giving powers to a corporate trustee by means of which the authority may

(1) make and enter into any and all the covenants and agreements with the trustee or the holders of the bonds which the authority may determine to be necessary or desirable, including, without limitation, covenants, provisions, limitations and agreements as to

(A) the application, investment, deposit, use and disposition of the proceeds of bonds of the authority or of money or other property of the authority or in which it has an interest;

(B) the fixing and collection of tolls, charges, fees or other consideration for, and the other terms to be incorporated in, contracts with respect to a project;

(C) the assignment by the authority of its rights in contracts with respect to a project or in a mortgage or other security interest created with respect to a project to a trustee for the benefit of bondholders;

(D) the terms and conditions upon which additional bonds of the authority may be issued;

(E) the vesting in a trustee of rights, powers, duties, funds or property in trust for the benefit of bondholders, including, without limitation, the right to enforce payment, performance, and all other rights of the authority or of the bondholders, under a lease, power of contract, contract of sale, mortgage, security agreement, or trust agreement with respect to a project by injunction or other proceeding or by taking possession of by agent or otherwise and operating a project and collecting rents or other consideration and applying the same in accordance with the trust agreement;

(2) pledge, mortgage or assign money, leases, agreements, property or other rights or assets of the authority either presently in hand or to be received in the future, or both; and

(3) provide for any other matters of like or different character which in any way affect the security or protection of the bonds.

(b) Notwithstanding any other provisions of this chapter, the trust agreement shall contain a covenant by the authority that it will at all times maintain rates, tolls, fees or charges sufficient to pay, and that a contract entered into by the authority shall contain rates, tolls, fees or charges sufficient to pay the costs of operation and maintenance of the project, the principal of and interest on bonds issued under the trust agreement as the same severally become due and

payable, to provide for debt service coverage as considered necessary by the authority for the marketing of its bonds and to provide for renewals, replacements and improvements of the project, and to maintain reserves required by the terms of the trust agreement.

(c) For the purpose of securing any one or more issues of its bonds, the authority may establish one or more special funds, called "capital reserve funds", and shall pay into those capital reserve funds the proceeds of the sale of its bonds and any other money which may be made available to the authority for the purposes of those funds from any other source. The funds shall be established only if the authority determines that the establishment would enhance the marketability of the bonds. All money held in a capital reserve fund, except as provided in this section, shall be used as required, solely for (1) the payment of the principal of, and interest on, bonds or of the sinking fund payments with respect to those bonds, (2) the purchase or redemption of bonds, or (3) the payment of a redemption premium required to be paid when those bonds are redeemed before maturity; however, money in a fund may not be withdrawn from it at any time in an amount which would reduce the amount of that fund to less than the capital reserve requirement set out in (2) of this subsection, except for the purpose of making, with respect to those bonds, payment, when due, of principal, interest, redemption premiums and the sinking fund payments for the payment of which other money of the authority is not available. Income or interest earned by, or increment to, a capital reserve fund, due to the investment of the fund or any other amounts in it, may be transferred by the authority to other funds or accounts of the authority to the extent that the transfer does not reduce the amount of the capital reserve fund below the capital reserve fund requirement.

(d) If the authority decides to issue bonds secured by a capital reserve fund, the bonds may not be issued if the amount in the capital reserve fund is less than the amount that may be established by resolution of the authority (called the "capital reserve fund requirement"), unless the authority, at the time of issuance of the obligations, deposits in the capital reserve fund from the proceeds of the obligations to be issued or from other sources, an amount which, together with the amount then in the fund, will not be less than the capital reserve fund requirement.

(e) In computing the amount of a capital reserve fund for the purpose of this section, securities in which all or a portion of the funds are invested shall be valued by some reasonable method established by the authority by resolution. Valuation on a particular date shall include the amount of any interest earned or accrued to that date.

Std. Valuation

(f) The chairman of the authority shall annually, no later than January 2, make and deliver to the governor and the legislature a certificate stating the sum, if any, required to restore any capital reserve fund to the capital reserve fund requirement. The legislature may appropriate a sum, and all sums appropriated during the then current fiscal year by the legislature for restoration shall be deposited by the authority in the proper capital reserve fund. Nothing in this section creates a debt or liability of the state.

(g) When the authority has created and established a capital reserve fund, the commissioner of revenue may lend surplus money in the general fund to the authority for deposit in a capital reserve fund in an amount equal to the capital reserve fund requirement. The loans shall be made on the terms and conditions that may be agreed upon by the commissioner of revenue and the authority, including

$31M to CFAB

Commissioner of Revenue is on the Authority

Pay contributions as-incurred not funded

without limitation terms and conditions providing that the loans need not be repaid until the obligations of the authority secured and to be secured by the capital reserve fund are no longer outstanding.

(h) If the authority decides to covenant to issue or to issue bonds secured by a capital reserve fund, the bonds may not be issued until 10 days after the authority has mailed notification to the State Bond Committee and the Legislative Budget and Audit Committee by certified mail of its intention to establish a capital reserve fund to secure the bond issue. The notification shall include the amount of the capital reserve fund to be established, the amount of bonds proposed to be issued, and the total cost of the project for which the bonds are to be issued. The notification shall be accompanied by an estimate by the authority of the need to withdraw money from the capital reserve fund during the term of the bond issue, the amount that it may be necessary to withdraw, and the time at which withdrawals are estimated to be needed. The authority shall annually prepare a revised estimate, considering the same factors, and a statement of all withdrawals that have occurred from the date of issuance of the bonds to the end of the calendar year. The revised estimate and statement shall be submitted to the State Bond Committee and the Legislative Budget and Audit Committee by January 30 of the succeeding year.

ARTICLE 4. GENERAL PROVISIONS.

Sec. 44.57.311. DEFINITIONS. In this chapter

(1) "authority" means the Alaska Toll Bridge and Causeway Authority;

(2) "design and construction contract" means one contract for both design and construction of a toll bridge or causeway;

(3) "toll bridge or causeway" or "project" means a bridge

or causeway constructed or acquired under this chapter on which tolls are charged, together with all appurtenances, additions, alterations, improvements, and replacements, and approaches, and lands and interests therein used, and buildings and improvements as may be determined by the authority.

Sec. 44.57.321. STATE APPROPRIATIONS FOR TOLL BRIDGES AND CAUSEWAYS NOT AFFECTED. This chapter does not prevent the state from making appropriations from time to time in aid of the acquisition, design, or construction under this chapter of a toll bridge or causeway or property, franchise, or right appurtenant to it, or the transportation facilities of it, or for the purpose of making preliminary surveys, plans, and estimates of the cost of it, and meeting other preliminary expenses the legislature considers proper.

Sec. 44.57.331. CITATION OF CHAPTER. This chapter may be cited as the Alaska Toll Bridge and Causeway Authority Act.

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE BILL NO. 294 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act establishing an Alaska Toll Bridge and Causeway Authority; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 44 is amended by adding a new chapter to read:

CHAPTER 57. ALASKA TOLL BRIDGE AND CAUSEWAY AUTHORITY.

ARTICLE 1. ESTABLISHMENT AND ORGANIZATION.

Sec. 44.57.011. PURPOSE. The purpose of this chapter is to develop, stimulate, and advance the economic welfare of the state and further the development of public transportation systems in the vicinity of toll bridges and causeways.

Sec. 44.57.021. ESTABLISHMENT OF AUTHORITY. There is established the Alaska Toll Bridge and Causeway Authority. The authority is a public corporation of the state in the Department of Transportation and Public Facilities but with separate and independent legal existence.

Sec. 44.57.031. MEMBERSHIP OF AUTHORITY. The authority shall consist of the commissioners of transportation and public facilities, commerce and economic development, and revenue, or their designees and ~~three~~ 4 state residents appointed by the governor.

Sec. 44.57.041. OFFICERS AND QUORUM. The members shall elect officers they determine desirable. The powers of the authority are vested in the members, and ~~three~~ four members of the authority constitute a quorum. Action may be taken and motions and resolutions adopted by the authority at a meeting by the affirmative vote of at least four

members. The members of the authority serve without compensation, but they are entitled to per diem and travel expenses authorized by law under AS 39.20.180.

Sec. 44.57.051. STAFF. The authority shall employ an executive director who may, with the approval of the authority, employ additional staff as necessary. In addition to its staff of regular employees, the authority may contract for and engage the services of legal and bond counsel, consultants, experts, and financial and technical advisors the authority considers necessary for the purpose of conducting studies, investigations, hearings, or other proceedings. The members of the authority shall establish the compensation of the executive director, who is subject to the provisions of AS 39.25.

ARTICLE 2. POWERS AND DUTIES.

Sec. 44.57.111. POWERS AND DUTIES OF THE AUTHORITY. In furtherance of its corporate purposes, the authority has the following powers in addition to its other powers

(1) to sue and be sued;

(2) to have a seal and alter it at pleasure;

(3) to make and alter bylaws for its organization and internal management;

(4) to acquire real or personal property whether by purchase, gift, lease or exchange where in the judgement of the authority the action is in furtherance of its corporate purposes;

(5) to adopt regulations governing the exercise of its corporate powers;

(6) to issue bonds to carry out any of its corporate purposes and powers, including the acquisition, design or construction of a project to be owned or leased, as lessor or lessee, by the authority, or the acquisition of an interest in a project or the

establishment or increase of reserves to secure or to pay the bonds or interest on them, and the payment of all other costs or expenses of the authority incident to and necessary or convenient to carry out its corporate purposes and powers;

(7) to sell, lease as lessor or lessee, exchange, donate, convey or encumber in any manner by mortgage or by creation of any other security interest, real or personal property owned by it, or in which it has an interest, when, in the judgment of the authority, the action is in furtherance of its corporate purposes;

(8) to accept gifts or grants and enter into contracts or other transactions regarding them with any person;

(9) to deposit or invest its funds, subject to agreements with bondholders;

(10) to enter into contracts with the United States or a person and, subject to the laws of the United States, with a foreign country or its agencies, for the financing, design, construction, acquisition, operation, and maintenance of all or any part of a toll bridge or causeway, either inside or outside the state, and for the security of any bonds of the authority issued or to be issued for the project;

(11) to apply to the appropriate agencies of the state, the United States, and to a foreign country and any other proper agency for the permits, licenses, or approvals as may be necessary, and to design, construct, maintain and operate toll bridges and causeways in accordance with licenses and permits, and to obtain, hold and use the licenses and permits in the same manner as any other person;

(12) to perform reconnaissance studies, feasibility studies, and engineering, survey and design with respect to toll bridges and causeways;

Deleted Ernest Sloman

(13) to enter into contracts or agreements with respect to the exercise of any of its powers, and do all things necessary or convenient to carry out its corporate purposes and exercise the powers granted in this chapter;

(14) to maintain complete and separate financial account of each toll bridge and causeway;

(15) to utilize a design and construction contract for projects over $100,000,000;

(16) to establish, levy, and collect tolls and other charges it considers necessary for a project sufficient to pay costs of operation, maintenance, rehabilitation and improvement; to pay the cost of acquisition, design or construction, including the payment, amortization and retirement of bonds or other securities or obligations assumed, issued or incurred by the authority, together with interest; and to provide reserves for those purposes;

(17) to pledge the tolls and other revenues, subject to prior pledges, as security for the repayment with interest of money borrowed by it or advanced to it for its authorized purposes and as security for the satisfaction of any other obligations assumed by it in regard to loans or advances;

(18) to receive and accept funds from the state or the federal government or a municipality upon a cooperative or other basis for the design and construction of a toll bridge or causeway authorized under AS 44.57.011 - 44.57.331.

New Sec. 44.57.121. LIMITATION ON POWERS. An authority has only those powers expressly granted in this chapter, reasonably implied from this chapter, or reasonably necessary or convenient to carry out its corporate purposes and to exercise the powers expressly granted in or reasonably implied from this chapter. An authority does not have

powers of eminent domain, taxation, land use planning, zoning, permitting, or other similar governmental powers.

ARTICLE 3. FINANCIAL PROVISIONS.

Sec. 44.57.211. BONDS FOR THE AUTHORITY. The authority may borrow money and may issue its bonds on which the principal and interest are payable from money derived from the tolls, fees, charges and other revenue from projects financed under AS 44.57.011 - 44.57.331. Before issuing bonds for a project under this chapter an authority shall submit to the state bond committee a description of the bond issue and an independent economic feasibility analysis of the project and expected revenues. This information may be contained in a preliminary prospectus, offering circular or official statement relating to the bond issue. Bonds may not be issued unless the state bond committee finds, based upon the information submitted by the authority under this subsection and other information that is reasonably available to it, that the project revenues can be reasonably expected to be adequate for payment of the principal and interest on the bonds to be issued, and that issuance of the bonds by the authority would not be expected to adversely affect the ability of the state or its political subdivisions to market bonds.

Sec. 44.57.221. TRUST INDENTURES AND TRUST AGREEMENTS. (a) In the discretion of the authority, an issue of bonds may be secured by a trust indenture or trust agreement between the authority and a corporate trustee (which may be a trust company, bank, or national banking association, with corporate trust powers, located inside or outside the state) or by a secured loan agreement or other instrument or under a resolution giving powers to a corporate trustee by means of which the authority may

(1) make and enter into any and all the covenants and

agreements with the trustee or the holders of the bonds which the authority may determine to be necessary or desirable, including, without limitation, covenants, provisions, limitations and agreements as to

(A) the application, investment, deposit, use and disposition of the proceeds of bonds of the authority or of money or other property of the authority or in which it has an interest;

(B) the fixing and collection of tolls, charges, fees or other consideration for, and the other terms to be incorporated in, contracts with respect to a project;

(C) the assignment by the authority of its rights in contracts with respect to a project or in a mortgage or other security interest created with respect to a project to a trustee for the benefit of bondholders;

(D) the terms and conditions upon which additional bonds of the authority may be issued;

(E) the vesting in a trustee of rights, powers, duties, funds or property in trust for the benefit of bondholders, including, without limitation, the right to enforce payment, performance, and all other rights of the authority or of the bondholders, under a lease, power of contract, contract of sale, mortgage, security agreement, or trust agreement with respect to a project by injunction or other proceeding or by taking possession of by agent or otherwise and operating a project and collecting rents or other consideration and applying the same in accordance with the trust agreement;

(2) pledge, mortgage or assign money, leases, agreements, property or other rights or assets of the authority either presently

in hand or to be received in the future, or both; and

(3) provide for any other matters of like or different character which in any way affect the security or protection of the bonds.

(b) Notwithstanding any other provisions of this chapter, the trust agreement shall contain a covenant by the authority that it will at all times maintain rates, tolls, fees or charges sufficient to pay, and that a contract entered into by the authority shall contain rates, tolls, fees or charges sufficient to pay the costs of operation and maintenance of the project, the principal of and interest on bonds issued under the trust agreement as the same severally become due and payable, to provide for debt service coverage as considered necessary by the authority for the marketing of its bonds and to provide for renewals, replacements and improvements of the project, and to maintain reserves required by the terms of the trust agreement.

(c) For the purpose of securing any one or more issues of its bonds, the authority may establish one or more special funds, called "capital reserve funds", and shall pay into those capital reserve funds the proceeds of the sale of its bonds and any other money which may be made available to the authority for the purposes of those funds from any other source. The funds shall be established only if the authority determines that the establishment would enhance the marketability of the bonds. All money held in a capital reserve fund, except as provided in this section, shall be used as required, solely for (1) the payment of the principal of, and interest on, bonds or of the sinking fund payments with respect to those bonds, (2) the purchase or redemption of bonds, or (3) the payment of a redemption premium required to be paid when those bonds are redeemed before maturity; however, money in a fund may not be withdrawn from it at any

time in an amount which would reduce the amount of that fund to less than the capital reserve requirement set out in (2) of this subsection, except for the purpose of making, with respect to those bonds, payment, when due, of principal, interest, redemption premiums and the sinking fund payments for the payment of which other money of the authority is not available. Income or interest earned by, or increment to, a capital reserve fund, due to the investment of the fund or any other amounts in it, may be transferred by the authority to other funds or accounts of the authority to the extent that the transfer does not reduce the amount of the capital reserve fund below the capital reserve fund requirement.

(d) If the authority decides to issue bonds secured by a capital reserve fund, the bonds may not be issued if the amount in the capital reserve fund is less than the amount that may be established by resolution of the authority (called the "capital reserve fund requirement"), unless the authority, at the time of issuance of the obligations, deposits in the capital reserve fund from the proceeds of the obligations to be issued or from other sources, an amount which, together with the amount then in the fund, will not be less than the capital reserve fund requirement.

(e) In computing the amount of a capital reserve fund for the purpose of this section, securities in which all or a portion of the funds are invested shall be valued by some reasonable method established by the authority by resolution. Valuation on a particular date shall include the amount of any interest earned or accrued to that date.

(f) The chairman of the authority shall annually, no later than January 2, make and deliver to the governor and the legislature a certificate stating the sum, if any, required to restore any capital

reserve fund to the capital reserve fund requirement. The legislature may appropriate a sum, and all sums appropriated during the then current fiscal year by the legislature for restoration shall be deposited by the authority in the proper capital reserve fund. Nothing in this section creates a debt or liability of the state.

(g) If the authority decides to covenant to issue or to issue bonds secured by a capital reserve fund, the bonds may not be issued until 30 days after the authority has mailed notification to the State Bond Committee and the Legislative Budget and Audit Committee by certified mail of its intention to establish a capital reserve fund to secure the bond issue. The notification shall include the amount of the capital reserve fund to be established, the amount of bonds proposed to be issued, and the total cost of the project for which the bonds are to be issued. The notification shall be accompanied by an estimate by the authority of the need to withdraw money from the capital reserve fund during the term of the bond issue, the amount that it may be necessary to withdraw, and the time at which withdrawals are estimated to be needed. The authority shall annually prepare a revised estimate, considering the same factors, and a statement of all withdrawals that have occurred from the date of issuance of the bonds to the end of the calendar year. The revised estimate and statement shall be submitted to the State Bond Committee and the Legislative Budget and Audit Committee by January 30 of the succeeding year.

New Sec. 44.57.231. VALIDITY OF PLEDGE. It is the intention of the legislature that a pledge made in respect of bonds shall be perfected and shall be valid and binding from the time the pledge is made; that the money or property so pledged and thereafter received by the authority shall immediately be subject to the lien of the pledge

without physical delivery or further act; and that the lien of the pledge shall be valid and binding against all parties having claims of any kind in tort, contract, or otherwise against the authority irrespective of whether the parties have notice. Neither the resolution, trust agreement or any other instrument by which a pledge is created need be recorded or filed under the provisions of the Uniform Commercial Code to be perfected or to be valid, binding, or effective against the parties. This section does not affect title to or conveyances of real property, and does not limit the applicability of AS 34.15.290.

New Sec. 44.57.241. NONLIABILITY ON BONDS. (a) Neither the members of the authority nor a person executing the bonds are liable personally on the bonds or are subject to personal liability or accountability by reason of the issuance of the bonds.

(b) The bonds issued by the authority do not constitute an indebtedness or other liability of the state or of a political subdivision of the state, but shall be payable solely from the income and receipts or other funds or property of the authority. The authority may not pledge the faith or credit of the state or of a political subdivision of the state, except the authority, to the payment of a bond, and the issuance of a bond by the authority does not directly or indirectly or contingently obligate the state or a political subdivision of the state to apply money from, levy or pledge any form of taxation to the payment of the bond.

New Sec. 44.57.251. PLEDGE OF THE STATE. The state pledges to and agrees with the holders of bonds issued under this chapter and with the federal agency which loans or contributes funds in respect to a project, that the state will not limit or alter the rights and powers vested in the authority by this chapter to fulfill the terms of a

contract made by the authority with the holders or federal agency, or in any way impair the rights and remedies of the holders until the bonds, together with the interest on them with interest on unpaid installments of interest, and all costs and expenses in connection with an action or proceeding by or on behalf of the holders, are fully met and discharged. The authority is authorized to include this pledge and agreement of the state, insofar as it refers to holders of bonds of the authority, in a contract with the holders, and insofar as it relates to a federal agency, in a contract with the federal agency.

New Sec. 44.57.261. EXEMPTION FROM TAXATION. The real and personal property of the authority and its assets, income and receipts are declared to be the property of a political subdivision of the state and, together with any project financed under this chapter are exempt from all taxes and special assessments of the state or a political subdivision of the state. All bonds of the authority are declared to be issued by a political subdivision of the state and for an essential public and governmental purpose and to be a public instrumentality, and the bonds, and the interest on them, the income from them and the transfer of the bonds, and all assets, income and receipts pledged to pay or secure the payment of the bonds, or interest on them, shall at all times be exempt from taxation by or under the authority of the state, except for inheritance and estate taxes and taxes on transfers by or in contemplation of death. Nothing in this section affects or limits an exemption from license fees, property taxes, or excise, income, or other taxes, provided under any other law, nor does it create a tax exemption with respect to the interest of any business enterprise or other person, other than the authority, in any property, assets, income, receipts, project or lease whether or not financed under this chapter.

New Sec. 44.57.271. BONDS LEGAL INVESTMENTS FOR FIDUCIARIES. The bonds of the authority are securities in which all public officers and bodies of the state and all municipalities and municipal subdivisions, all insurance companies and associations and other persons carrying on an insurance business, all banks, bankers, trust companies, savings banks, savings associations, including without limitation savings and loan associations and building and loan associations, investment companies and other persons carrying on banking business, all administrators, guardians, executors, trustees and other fiduciaries, and all other persons who are now or may afterward be authorized to invest in bonds or other obligations of the state, may properly and legally invest money including capital in their control or belonging to them. Notwithstanding any other provisions of law, the bonds of the authority are also securities that may be deposited with and may be received by all public officers and bodies of the state and all municipalities and municipal subdivisions for any purpose for which the deposit of bonds or other obligations of the state is now or may afterward be authorized.

New Sec. 44.57.281. AUDIT. The legislative auditor shall audit or shall cause to have audited annually the financial records of the authority. The legislative auditor may prescribe the form and content of the financial records of the authority and shall have access to these records at any reasonable time.

ARTICLE 4. GENERAL PROVISIONS.

Sec. 44.57.311. DEFINITIONS. In this chapter

(1) "authority" means the Alaska Toll Bridge and Causeway Authority;

(2) "design and construction contract" means one contract for both design and construction of a toll bridge or causeway;

(3) "toll bridge or causeway" or "project" means a bridge or causeway constructed or acquired under this chapter on which tolls are charged, together with all appurtenances, additions, alterations, improvements, and replacements, and approaches, and lands and interests therein used, and buildings and improvements as may be determined by the authority.

Sec. 44.57.321. STATE APPROPRIATIONS FOR TOLL BRIDGES AND CAUSEWAYS NOT AFFECTED. This chapter does not prevent the state from making appropriations from time to time in aid of the acquisition, design, or construction under this chapter of a toll bridge or causeway or property, franchise, or right appurtenant to it, or the transportation facilities of it, or for the purpose of making preliminary surveys, plans, and estimates of the cost of it, and meeting other preliminary expenses the legislature considers proper.

Sec. 44.57.331. CITATION OF CHAPTER. This chapter may be cited as the Alaska Toll Bridge and Causeway Authority Act.

New * Sec. 2. This Act takes effect immediately in accordance with AS 01.-10.070(c).

MEMORANDUM

DATE: March 30, 1983

TO: All Legislators

FROM: Representative Jerry Ward

RE: HB 294 and HB 295, prime sponsor Rep. Hayes
SB 211 and SB 212, prime sponsor Sen. Kerttula

A teleconference has been scheduled to discuss HB 294 and HB 295 with members of the Knik Arm boosters. The teleconference will be held on Wednesday, April 13, 1983 at 9:00p in the House Finance Committee Room, C-519.

Knik Arm crossing

IN A PERIOD when state revenues are decreasing and the byword is conserve rather than spend, the Knik Arm crossing could easily be one of those forgotten dreams of yesteryear, not to see the light of day again for decades. State officials several years ago pronounced the project dead.

The fact is that the crossing makes more sense now than it ever has. So it was encouraging to hear that the president of the Senate and the speaker of the House were offering it once again for consideration in the legislature.

A causeway from Anchorage across Knik Arm to the Matanuska Valley has been talked about since the 1950s. Two years ago, the legislature appropriated $5 million to finance a preliminary study. That study is still under way.

THERE ARE obvious reasons that make a crossing desirable. More and more people who work in the Anchorage area are making their homes in the valley. The weekend exodus to Palmer and beyond is heavy in the summertime, when the city folks go that direction to enjoy the natural wonders the valleys offer. Anchorage is running out of space, and the Point MacKenzie area across the arm is the logical area to accommodate future growth both in population and industry. A bridge across the arm would drastically reduce travel time between the two points.

But there are many grounds other than recreational and living opportunities across the arm that make the bridge attractive. There are rich coal deposits at Beluga and there is significant farming at Point MacKenzie, which also has been discussed as the tidewater terminus for an all-Alaska natural gas pipeline.

THE TWO LAWMAKERS who introduced the Knik Arm crossing bills this year would create an Alaska Toll Bridge and Causeway Authority with a $50 million budget. The legislation would have the authority oversee the construction of the Knik span as well as one later across Turnagain Arm southward to the Kenai Peninsula.

If nothing else, the bills introduced in the 1983 session are keeping the matter alive.

seek Knik bridge funds

by Bill Walte
Times Juneau Bureau

Juneau — The top two legislative leaders today proposed spending $50 million as seed money to build the long-awaited bridges across Knik and Turnagain arms near Anchorage.

"The projects have been studied for years. We have the resources to go forward with these projects now which will benefit all of Southcentral Alaska," said Senate President Jay Kerttula, D-Palmer, and House Speaker Joe Hayes, R-Anchorage, in a statement released jointly.

"The major emphasis would be, first, on the Knik Arm crossing, with the Turnagain crossing to follow as soon as possible," they said.

Two bills were introduced in each house on the crossings.

One bill would create an eight-member Alaska Toll Bridge and Causeway Authority. This agency would fund and oversee construction of the crossings.

The other bill would give the authority $50 million once it's created.

The bills will overcome formidable obstacles if they pass before the end of next year's session.

Lawmakers are wary of creating any independent "authorities" that might start projects they can't afford, and then require a state bailout.

And dwindling oil revenue is putting a squeeze on the money available for state spending. Bush lawmakers especially are uneasy about funding huge projects for the Anchorage area because of the hundreds of millions of dollars already spent or proposed for the Project 80s development effort and the Susitna dams energy project.

Under the proposal, the causeway authority would be empowered to sell bonds, which would be paid off from tolls placed on vehicles using the bridges.

Proposals for the 2.9 mile Knik Arm crossing that would link Anchorage and the Susitna and Matanuska valleys have been debated by lawmakers for two decades.

Anchorage-area leaders look to Point MacKenzie area as the logical site to handle the booming growth in Anchorage.

Kerttula this week compared the Knik Arm crossing with the bridges in San Francisco that link bay-area communities.

This crossing would provide access to the Beluga coal fields, the MacKenzie farm development and residential areas, the two legislators said. The Turnagain crossing would provide a shortcut to popular recreation areas.

Lawmakers appropriated $1.2 million two years ago for preliminary design and environmental studies for the Knik Arm crossing. Those studies should be done next year.

"The completion of these projects would be one of the greatest economic factors for the future of all Southcentral Alaska," Kerttula and Hayes said in their statement.

"The entire state would benefit as well from the resources which would be developed by improving access to these areas. The likely acquisition of the Alaska Railroad by the state gives the projects even greater urgency than previously, as does the continuing effort to build the Susitna hydro project."

Judge says Exxon must repay public

Associated Press

Washington — A federal judge ruled today that Exxon Corp. overcharged the public $395.5 million for crude oil produced from a Texas field and ordered the company to reimburse the public through state-run energy conservation programs.

U.S. District Judge Thomas Flannery ordered the money put into an escrow account in the Treasury Department. From there it will be distributed to the governments of all 50 states.

"Each state must then use the funds under one or m... existing federal ener... vation programs," Fla... in the 90-page ruling.

Arm bridge funds asked

Turnagain, Knik Arm causeways proposed

JUNEAU (AP) + House Speaker Joe Hayes and Senate President Jay Kerttula on Friday introduced legislation to create an Alaska Toll Bridge and Causeway Authority and appropriate $50 million for design and construction of the Knik and Turnagain Arm causeways.

"The projects have been studied for years," said Hayes, R-Anchorage. "We have the resources to go forward with these projects now which will benefit all of southcentral Alaska," he said.

"The major emphasis would be, first, on the Knik Arm Crossing with the Turnagain crossing to follow as soon as possible," Hayes said.

The legislation is HB294-295 in the House and SB211-212 in the Senate.

According to a press release from Hayes' office, the legislation aims "to develop, stimulate and advance the economic welfare of the state and to further development of public transportation systems.

The authority would be a public corporation of the state within the Department of Transportation. It would have the power to acquire, construct, improve, operate and maintain toll bridge and causeway projects.

The authority would be empowered to collect levies on projects and to pledge them as security or hold them as reserves.

The authority, according the the legislation, also would have the power to borrow money and issue bonds and to establish capital reserve funds.

The Knik Arm Crossing, now undergoing engineering studies, would reach into the Mantanuska-Susitna Borough from Anchorage, and provide access to the Beluga coal fields, the MacKenzie agricultural reserve, and land for recreation, industrial and recreational development, the two lawmakers said.

The Turnagain Crossing would reach the northern Kenai Peninsula and would improve access to the communities of Kenai, oil and gas fields of western Kenai, ports that circle the peninsula and popular recreation areas, the sponsors said.

The measures were sent to the Finance and Transportation committees of each house.

Intertie contract ruling told

ANCHORAGE (AP) — An administrative hearing officer says the contract to provide towers for a power line linking Anchorage and Fairbanks electrical grids should be broken into two parts and awarded to two previously unsuccessful bidders.

Julian Mason recommended Thursday that the Alaska Power Authority give part of the work to International Telephone & Telegraph and part to Combustion Engineering of Houston.

Mason was appointed by the APA to review the contract after questions were raised about the apparent low bidder, Hyundai USA, Inc. He ruled Wednesday that the Korean firm made mistakes on its bid and lacked the experience required by bid specifications.

Federal cost of living pay will rise in Alaska

Knik Arm crossing study may fall with revenues

By STEVE SEPLOCHA
Daily News business editor

Declining oil revenues will mean that most of the projects on municipal priority lists won't be fully funded by the state, says Dan Casey, commissioner of the Alaska Department of Transportation and Public Facilities.

Early casualties could include environmental studies of the proposed Knik Arm crossing in Anchorage.

Casey, in an interview Monday, said legislators and municipal officials in the state must come to grips with the economic realities that face the state and start thinking of other ways to finance needed projects.

Casey said a recent "wish list" prepared by state and municipal officials totalled $6 billion. That, he said, illustrates the gap between what projected state needs and projected state revenues.

"The question is how do we optimize what we have left," he said. "The first thing we have to do is team up with the legislature and municipal officials so that our perceptions of the situation are the same."

He suggested that alternative financing methods, such as a gasoline tax and tolls for road projects, are under consideration. Though the administration is not prepared to recommend such alternatives immediately, Casey said they probably will play a role in projects in the future.

The bright spots in the financing picture include road projects that qualify for federal funding, Casey said. Such projects are primarily funded with federal money with the state kicking in a small percentage.

The A-C couplet, which will make A and C Streets one-way, is fully funded and work will begin this summer, he said. Cost to the state will be $2.3 million and the U.S. Department of Transportation will provide the remaining $27 million.

Casey said the department has stopped a $5 million environmental impact study on the proposed Knik Arm crossing until it is determined how much the project would cost

See Back Page, REVENUES

Revenues

Continued from Page A-1

and whether the state can afford it.

He said cost estimates should be available by the end of April and his department plans to meet with legislative leaders to determine whether to go ahead with the study.

Cost alone should not be the determining factor, he said, because there are benefits that would accrue by opening the west side of Cook Inlet that may justify such a major project.

Bill to fund arm crossings proposed

The Associated Press

JUNEAU — House Speaker Joe Hayes and Senate President Jay Kerttula on Friday introduced legislation to create an Alaska Toll Bridge and Causeway Authority and appropriate $50 million for design and construction of the Knik and Turnagain Arm causeways.

"The projects have been studied for years," said Hayes, R-Anchorage. "We have the resources to go forward with these projects now which will benefit all of southcentral Alaska.

"The major emphasis would be, first, on the Knik Arm Crossing, with the Turnagain crossing to follow as soon as possible," Hayes said.

The legislation is HB294-295 in the House and SB211-212 in the Senate.

According to a press release from Hayes' office, the legislation aims "to develop, stimulate and advance the economic welfare of the state and to further development of public transportation systems."

The authority would be a public corporation of the state within the Department of Transportation. It would have the power to acquire, construct, improve, operate and maintain toll bridge and causeway projects.

The authority would be empowered to collect levies on projects and to pledge them as security or hold them as reserves.

The authority, according to the legislation, also would have the power to borrow money and issue bonds and to establish capital reserve funds.

The Knik Arm Crossing, now undergoing engineering studies, would reach into the Matanuska-Susitna Borough from Anchorage, and provide access to the Beluga coal fields, the MacKenzie agricultural reserve, and land for recreation, industrial and recreational development, the two lawmakers said.

The Turnagain Crossing would reach the northern Kenai Peninsula and would improve access to the communities of Kenai, oil and gas fields of western Kenai, ports that circle the peninsula and popular recreation areas.

Lawmaker pushes for action on Knik, Turnagain crossings

By BETSY BRENNEMAN
Daily News reporter

JUNEAU — Anchorage needs Knik Arm and Turnagain Arm crossings to avoid urban congestion and air pollution, Rep. Jerry Ward, R-Anchorage, told a bipartisan gathering of Southcentral representatives late Friday.

Ward, in calling for immediate construction of the crossings, said time has run out for more studies on the best way to shorten the distances between Anchorage and the surrounding area.

Ward told the caucus that it's time to use unspent planning money to begin building the crossings that he said would cost about $600 million.

For the first time, Ward said, the Southcentral delegation has enough clout in the legislature to force action on the crossings. He said each member should be willing to give up some smaller projects for their district to fund the construction.

"I personally would be proud to forego all projects in my area for the sake of this one," Ward said in his written proposal.

He encouraged the delegation to act agressively to secure at least $300 million this year that he calculated would be less than 40 percent of the Southcentral share of the $1.5 billion dollar capital budget for 1984.

Ward also said Commissioner of Transportation Dan Casey had agreed to freeze about $3.5 million in unspent planning funds and was waiting for legislative direction before deciding how that money would be spent.

Ward said Casey is willing to renegotiate the planning contract and use the money for construction.

Casey could not be reached Friday for comment.

Ward's proposal includes constructing:

- Causeways from Isle to Cape across Turnagain Arm and from Eagle Bay to Goose Bay across Knik Arm;
- Two freshwater lakes above the causeways, one of which, the 100 square mile Knik lake, could eliminate the need for the municipality's Eklutun water project;
- Fish ladders for migrating salmon installed in spillways from the lake and spanned by conventional bridges; and
- Toll booths that would charge less than it currently costs to drive around each arm, but would help pay off the construction costs.

Ward said suitable bases for causeways are already in place and additional rock and sand is readily available.

Although bridges have been included in most past proposals for the crossings, Ward said it is cheaper to run railroad tracks over causeways. The tracks also would last longer and are better able to withstand earthquakes, he said.

The Anchorage freshman said both projects should be paid for now with cash, but he said he will go along with House Speaker Joe Hayes' preference for using bonds to pay off the balance of the project costs.

Ward said he has the support of 60 percent of the caucus. He wasn't sure about the Senate, but said President Jay Kerttula, D-Palmer, favors the idea.

The Southcentral caucus will debate Ward's proposal at a second meeting this afternoon.

Kenai Peninsula Clarion Feb. 14, 83

Turnagain Arm causeway idea taken up in House

An idea spawned by Rep. Milo Fritz, R-Anchor Point, 17 years ago and which has been talked about a number of times since has resurfaced in the state Legislature: A Turnagain Arm causeway.

Freshman representative Jerry Ward, R-Anchorage, informed a bipartisan meeting of Southcentral Alaska representatives Saturday of his intentions to introduce legislation for the construction of crossings of Turnagain and Knik Arms.

Ward said Anchorage needs the crossings to reduce congestion and pollution in the Anchorage bowl, according to a story in the Anchorage Daily News. Fritz, who introduced legislation for studying the crossings in 1968 and 1972, endorses Ward's proposal.

"Both are feasible and extremely useful," said Fritz Sunday. Construction of both crossings is estimated at $600 million.

Ward said he would prefer the state build the crossings with cash, but Fritz said it would be better if voters approved the sale of revenue bonds to be paid off with tolls charged at the crossings.

In the Daily News story, Ward said Commissioner of Transportation Dan Casey had agreed to freeze $3.5 million in unspent planning funds until the Legislature directed how the money should be spent.

"Starting them simultaneously makes sense," said Fritz. In that way, construction equipment would not have to be moved very far from project to project.

Both projects would consist of extending the land on both sides of the arms with elevated causeways but leaving open areas to be spanned with bridges to allow for fish migration.

Fritz said the Turnagain crossing would be from the Potter area on the Anchorage side and would parallel the gas pipeline across the Kenai National Wildlife Refuge. Such a route would cut the drive to Anchorage by about 75 miles.

"We would preserve the moose range, of course," said Fritz. "There wouldn't be a bedroom community sprawled out between the peninsula and Anchorage because it would cross federal lands."

He said the Knik Arm crossing would allow the Anchorage population "to spill over into the Pt. MacKenzie area."

Fritz said he expects there would be opposition from Anchorage realtors because "it wouldn't allow the value of property to increase meteorically."

He also said there would be opposition from people in the Kenai-Soldotna area who wouldn't like to see it because it could encourage further industrial development.

"It would be very practical for the peninsula," he said. "The development of a causeway would help us if we want to see a gas pipeline to Nikiski."

He said supplies could be transported more easily to Nikiski with the new route "rather than that goat trail we have now with snow slides in the winter, mud slides in the summer and construction going on all the time."

The Alaska Railroad could be easily extended to the west side of the peninsula along the Turnagain Arm crossing, he said, as well as additional pipelines and a coal slurry line from the Beluga coal field.

"This is something I've been dreaming about for a long time," said Fritz. "It wasn't cockeyed then and it isn't now."

...State
Continued from Page 1

Studies would indicate that causeways across both Turnagain Arm from Isle to Cape and Knik Arm from Eagle Bay to Goose Bay can be constructed to serve both highway and railroad traffic.

The continued growth of the Mat-Su, Anchorage, Kenai area as the economic hub of Alaska makes the crossings not only desirable but necessary.

The oil, gas, and coal fields and related petro-chemical industries would be drawn together to form a much stronger financial and supply center for Alaska.

The growing population in this area and the increased needs and desire for recreational areas would be best served by causeways which would create an 85 square mile lake above the Turnagain causeway and a 100 square mile lake above the Knik causeway.

Also, the dollare and time savings to Alaskans by cutting 50 miles off a trip to the Mat-Su Valley and over 100 miles off a trip to Kenai for over 10,000 vehicles per day cannot be over emphasized.

For the safety and health of future generations of Alaskans, the Anchorage municipal area must be allowed to expand to the west side of Knik Arm. Pollution and over-crowding cannot be compacted much beyond the present point.

All reports indicate that railroad crossings can be added to the causeways at a fraction of the cost of adding them to bridges. Causeways provide greater stability and safety against earthquakes than a bridge.

The studies indicate that suitable bases are in place for causeways and that rock and sand are readily available. Through the use of barges, end dumps, and cables, these materials could be put in place and a spillway would allow for the over flow of fresh water from the man-made lakes above the causeways. The spillways would be spanned by conventional steel and concrete bridges with fish ladders installed to permit migration of salmon. This type of construction has been carried out in Holland, Canada, Russia, New Zealand, Australia, France and Egypt in the past 50 years. With the advent of larger and more powerful equipment and the experience of Alaskan construction companies gained by building the north slope haul road, we should be able to complete the causeways in 3 years at a cost of 6 to 800 million.

From discussing this with the Department of Transportation I understand that Turnkey projects have been issued in the past to private enterprise in which the concept, architectural design, construction and completion of projects such as this are the total responsibility of the contractor, who is paid only upon successful completion of the project. I believe that there are construction companies who would be willing to build these causeways at a breakeven point for the recognition and enhanced worldwide reputation of successfully building such a showpiece project.

We could finance the project by funding 1/3 or up to 300 million with less than 40% of our share of the Capital Improvement Fund of 1.5 billion of which 53%

or 795 million rightfully belongs to the people of the Mat-Su, Anchorage, and Kenai boroughs. This coalition represents those people and I suggest that we should not agree to fund any projects in our separate districts unless agreed upon by a majority of this coalition. Object being to keep the money for this project. I personally would be proud to forego all projects in my area for the sake of this one. The balance could be funded by General Obligation Bonds. These bonds could be paid off in 20-25 years by tolls charges for the use of the causeway which would amount to less than half the cost of driving around the Knik and Turnagain Arms.

$631 million Knik crossing plan unveiled

by Bill White
Times Juneau Bureau

Juneau — Gov. Bill Sheffield Friday unveiled a $631 million proposal for a 3-mi bridge across Knik Arm linki Anchorage to the Matanuska and Susitna valleys.

Sheffield gave the go-ahead for the state to explore building the long-awaited crossing with a blend of state and federal money.

Dan Casey, commissioner of transportation, said the state will use a $5.5 million appropriation made two years ago to conduct engineering — including final route selection — and environmental studies for the project over the next year.

If the project is found to be viable, bids could be let as early as next year with actual construction between 1986 and 1989, Casey said.

The proposal drew the tentative endorsements of Senate President Jay Kerttula, D-Palmer, and House Speaker Joe Hayes, R-Anchorage. The two lawmakers have backed the crossing for decades. This year they sponsored identical legislation that would take a different approach to building the crossing.

But, as Kerttula said, "If there's a better mousetrap, I will support it."

The proposal is contained in a 73-page report by EMPS-Sverdrur on the economic feasibility of the project.

The engineering firm looked at 11 crossings of Knik Arm — with accesses to the bridge ranging from downtown Anchorage to Eagle River — to come up with the $631 million proposal that appears to be the best "concept."

The preferred route for the bridge calls for a 43.7-mile highway to be built starting at the junction of the Glenn Highway and Boniface Parkway, and connecting north to the Parks Highway near Houston.

A four-lane, double-deck bridge would cross Knik Arm five miles north of downtown Anchorage.

See Governor, page A-4

Governor reveals bridge plan

Continued from page A-1

The bridge itself would cost about $339 million and would be built by a private firm, Casey said. That firm would make back its construction cost by charging a toll of about $2 per car, he said. Once the builder has recovered its investment, the state would own the bridge, under the proposal.

The state would provide the financing for the highway and bridge approaches, estimated at $180 million. Another $64 million would be needed to relocate facilities at Elmendorf Air Force Base, including an ammunition dump. Inflation would bring the project cost up to about $631 million.

"This approach is very simple," Casey said, "and it's the most cost effective." The options examined included tunneling under the arm, building a causeway and building a suspension bridge.

The bridge should be able to withstand intense pressure from tremendous tidal actions, siltation and ice buildup, Casey said.

EMPS-Sverdrur estimated the Point Mackenzie area would have about 9,000 households 11 years after the crossing is completed. That figure would double within 30 years, the study said.

About 29,000 vehicles would cross the bridge daily in the year 2001 and an estimated 46,000 a day would cross by 2030.

The bridge would cut driving time from Point Mackenzie to downtown Anchorage from about two hours to about 30 minutes, according to the study.

Crossing Knik Arm

THERE ARE some events and some projects which seem to develop a momentum all their own. The Knik Arm crossing may be one of those projects.

It has been a matter of discussion for decades, along with a similar proposal for a crossing over Turnagain Arm. Over the years, both of the proposals have blown hot and cold — seemingly almost ready to move ahead, only to be shifted to the back burner.

Now up front and bubbling again is the Knik Arm crossing concept, and this time it appears to have a chance. It would be a good sized project, of course, both from a financial and an engineering standpoint.

But the time now appears ripe. The population has grown to the point where the economics seem feasible, the need to open new land across the Inlet is apparent, and the opportunity looks to be at hand.

The project seems inevitable. The question is simply when.

LETS BUILD IT!

Jerry

State Public Corporations
A guide for decision making

Table of Contents

Introduction 5

1. The characteristics of public corporations 6
2. Selecting the corporate form 6
   - The advantages sought
   - The pitfalls to be avoided
   - The alternatives
3. Designing the public corporation 8
   - Legislative intent and oversight
   - The relationship of the corporation to state government
   - Impact on state budgets
   - Impact on capital finance and debt
   - The management capabilities of the corporation
   - Exercising legislative oversight

Public corporations are bodies authorized by legislative action to function outside of the regular structure of state government in order to finance, construct and usually to operate revenue-producing public enterprises. Public corporations have proliferated in the United States; by the late 1970s, at least 6,000 local and regional authorities and 1,000 state and interstate corporations were operating. By 1981 the total was estimated to be close to 10,000, and the revenue bond market, which lends primarily to public corporations, was raising almost twice as much capital as all general obligation state and local bonds in the nation. Expanding from traditional public service toll facilities into increasingly complex lending, investment and enterprise functions, public corporations are consuming larger portions of total public borrowing and having greater impact on regional economies.

As the growth in the use of the public corporation demonstrates, the arguments for their use have been convincing. The single purpose public corporation seems a simple and clear cut solution to many complex government problems. The advantages are relatively easy to list; the disadvantages appear only over time and with experience.

The Institute of Public Administration (IPA) has pioneered research on government corporations and bond markets. In recent years IPA has been asked to apply its research methodologies and findings to public corporations, joint action agencies, and federal, state and local governments operating in many different settings. Our research and our client experience have convinced us that each state must be prepared to take a close look at the implications of its corporations for state government, for state political priorities, and for state finances.

In many states expansion in the number, the activities and the outstanding debt of government corporations or public authorities is reaching a critical threshold at which these implications warrant serious review and continuing attention. Several responses are called for:

- Legislators need better information and assessment of the benefits and risks when judging proposals to create new corporations or to alter the mandates or financial resources of existing corporations;
- Budget officers and financial planners should develop means of monitoring investment and debt transactions, of compiling profiles of revenue backed debt, of tracking contingent liabilities and potential budget impacts and of providing early warning of impending problems emerging from the public corporations;
- State governments need to devise methods for increasing the responsiveness of public corporations to government priorities—including finance for maintenance and replacement of infrastructure—without losing the advantages of flexible management and revenue bonding;
- Public corporations should be subject periodically to management and financial audits. The resources of the boards of directors must be strengthened so that they can provide policy leadership and oversee corporate performance.

The measures described above require special consideration of the context and objectives of corporate activity, which vary from state to state and from corporation to corporation. This Guide provides a checklist of some of the common issues and questions that need to be addressed when decisions are made concerning public corporations. We believe it will be a valuable tool when proposals for new public corporations are being considered. We hope it will be equally useful to those responsible for reviewing and overseeing existing corporations.

The Guide is organized in three sections. Section 1 describes the characteristics of public corporations and authorities. Section 2, 'Selecting the Corporate Form', discusses the advantages that are sought from the corporate form and the potential pitfalls to be avoided. Some alternatives to the corporation are also described. Section 3, 'Designing the Public Corporation', examines specific components of corporations and their relationship to state government.

1. The Characteristics of Public Corporations

Public corporations are government instrumentalities established by legislative statute or charter to operate to some extent outside the regular structure of executive departments, usually to finance, construct or operate revenue producing enterprises. As corporations, they have separate legal existence (to sue, to be sued, and to assume credit obligations in their own name). They are variously called corporations, public authorities, commissions, banks, services or agencies.

Public corporations differ from government itself in these ways:

- Public corporations do not have general government police or reserve powers or powers to tax;
- Public corporations can exercise only those powers and conduct only those activities specifically authorized in their charters or statutes.

Public corporations differ from line agencies of the executive branch of government in the following ways:

- They have separate legal identity (corporate personality);
- They may be exempt from many of the administrative procedures and regulations that apply to line agences, such as civil service and other personnel regulations, procurement and other administrative procedures, rules and controls by central executive staff agencies;
- Their powers and structure can usually be changed only by statutory amendment (not by executive order), and such changes may be limited by legal covenants entered into by the corporation for borrowing and other contracts;
- They are generally permitted business-type budgets without line item or expenditure period limitations, and may be permitted to retain their own earnings, rather than channeling them through Treasury and appropriations processes;
- Public corporations usually have independent borrowing capacities and credit ratings.

2. Selecting the Corporate Form

The advantages sought

The advantages sought from public corporations include the following:

- Managerial and budgetary flexibility for enterprise-type activities that need to be continually adapted to changes in consumer demand, construction contingencies, and other market factors;
- Speed and efficiency of large scale construction using planned funding schedules, flexible contract administration, and non-controlling, multi-year construction budgets;
- Increased access to bond markets;
- Protected, earmarked funding for priority projects and long term debt service, subject to dedicated fund prohibitions;
- Business-like and self supporting management, particularly where the benefits produced go primarily to the persons or organizations who use and can pay for the service;
- Insulation from political influence, for philosophical or other reasons;
- Use of an agency with mixed ownership, with the potential for transfer to the private sector, or with a jurisdiction that spans several government units.

None of the advantages described above can be achieved only through use of public corporations, and none of them are automatically achieved by use of public corporations. The record of public corporations throughout the nation includes examples of political corruption, financial debacle, and construction failure as well as numerous success stories. It is important therefore to keep in mind some of the potential disadvantages when making the initial decision.

The pitfalls to be avoided

Potential disadvantages include the following:

- The accumulation of independent debt burden and other financial obligations and potential claims against future taxes and taxpayers without control, financial planning or early warning. Two facts affect this potential problem. First, high volumes of borrowing through corporate revenue bonds do tend to tighten the market for general obligation borrowing by state and local governments, particularly from the same state. Second, even when the state clearly has no legal obligation for the

debt of its corporations, if those corporations get into financial difficulty the state or units within it will be under severe pressure to help them—by channeling appropriations into corporate reserve funds, by offsetting their operating deficits through subsidies or rate increases, by helping to refinance debt or otherwise avoid default. The credit standing of the state and participating local governments is affected by the credit record of the corporations. Unforeseen changes in interest rates, in economic conditions or in revenues have caused problems with even the seemingly strongest corporations in some states.

- The separation of important development decisions (such as distribution and pricing of transportation, energy, industrial investment and housing) from legitimate political institutions based upon voter support and executive leadership. Conflicts over social, environmental and economic impacts may arise too late, after the corporation has made decisions to which the people's representatives did not have access, even when there are public hearing requirements. Similarly, lack of consistency between corporate programs and departmental programs and plans can increase the costs and reduce the effectiveness of government as a whole.
- Undermining government procedures established for desirable purposes of accountability and legitimacy, including appropriations and budgeting, equitable job classification and salary scales, merit recruitment and promotion, standardized accounting and auditing procedures, and contracting and procurement controls. There is often a temptation to bypass regular government agencies when these procedures seem too rigid and cumbersome for good management. However, reform of procedures is preferable to progressively cutting chunks of government activity out of them altogether.
- Creating pockets of public activity susceptible to narrow special interest control.
- The potential for "creaming", or removing revenue producing activities from government budgets, leaving deficit operations to fall more heavily on taxpayers or appropriations. Many states have tried unsuccessfully, for example, to tap the revenues from successful corporation toll facilities to help finance public roads or transit.

The alternatives

Not all of the differences between public corporations and line agencies are necessary. Indeed, some of the characteristics of public corporations can be given to line agencies in order to allow them to undertake enterprise-type activities efficiently without giving up executive and legislative controls. For example, some of the legislative alternatives to the full blown corporation are the following:

- A separate executive agency or administration, headed by an administrator reporting to the governor (or mayor), with special powers designated by statute but without independent corporate status. This arrangement has been used for enterprises that are funded by appropriations and state bond issues (e.g., transportation bond issues).
- A revolving fund or corporate loan fund within an executive department. This is used for loan and subsidy programs that require protected financial integrity, revenue bonding powers and separate credit obligations, but which do not require separate administrative bureaucracies and which benefit by policy coordination with related programs. Such arrangements have provided revenue streams which are identifiable and protected, allowing for accounting separate from the general agency budget in order to maintain credit ratings for revenue bonds.
- Regional or local enterprises run by representative commissions or intergovernmental boards

In summary, the selection of the corporate form should be based upon consideration of four basic questions:

- What characteristics for financing and management are implied by the mission of the proposed agency?
- What alternative forms of organization can provide these characteristics with minimal loss of democratic control?
- How important is it to relate these activities to political representation? To community preferences? To departmental policies?
- How can a corporation be effectively monitored in terms of financial and administrative impacts on state and local government?

3. Designing the Public Corporation

Careful design of each public corporation to meet the needs of the particular mission, financing situation, and desired patterns of leadership and oversight is crucial if the agency is to live up to the expectations for it, and not prove to be a source of future problems. There are many different ways to organize a public corporation, and the form appropriate for a loan fund may not be appropriate for a power authority, transit system or a local port. This section of the Guide provides a check list of questions and legislative issues to be considered when drafting or amending corporate charters.

Legislative intent and oversight

The corporate mission should be stated clearly enough to provide policy guidelines to the corporation and to provide standards for subsequent legislative oversight. Goals, priorities and performance targets should be expressed clearly so that performance can be judged against them. (For example, are services to be self supporting from revenues? Is the aim to increase production of some unit such as ship maintenance, passenger trips, or kilowatt capacity? To aid or subsidize certain groups?)

The most effective way to hold an enterprise accountable is to measure its performance against targets for that performance. Without targets or priorities, oversight tends to consist of random interchanges between legislators and corporate managers that are frustrating to both sides. If legislative statements of corporate mission are ambiguous or shift from year to year, there is little that the supervising executive officials can do except try to assure that the corporation is acting prudently. It is always difficult to express clear goals and priorities for public programs because the nature of the democratic process is such that they are often the product of shifting compromise. Nevertheless, the exercise of trying to develop coherent statements of mission for each corporation and related departmental programs—however imperfect—can clarify the issues that are relevant to audit and to budget review, and can provide a framework within which requests for statutory amendment can be judged.

- What are the goals and the policy guidelines that the legislature intends for the corporation?
- Are goals and guidelines sufficiently clear and consistent to judge the performance of the corporation in the future?
- Should legislative authorization be required for each major capital project or program expansion? For major project planning efforts? For administrative and public affairs budgets? For salary scales? For fare and rate structures?

The relationship of the corporation to state government

Coordination calls for clarification of the relationship between corporations and the departments of state government.

- What role should the related department play?
- How should departmental programs and policy plans relate to corporate activities?

The use of a governing board for public corporations is derived from the structure developed to represent stockholders in investor owned companies. But experience in federal and state government generally has shown that the ability of part-time boards to provide policy leadership to public corporations is limited, and ex-officio appointment of busy government officials does little to overcome those limitations. Experience has shown that it is difficult for cabinet members to serve both as supervisors of the corporation from general perspectives and be part of corporate management on the board of directors. Problems are compounded if board meetings must cope with managerial detail, or if board members lack timely information on policy and performance.

Other alternatives should be examined. One is to have the corporation headed by a single administrator who reports to a departmental commissioner and who is aided, not by a governing board but by an advisory board that draws primarily from the private sector. This is particularly appropriate for enterprises closely linked to other state services (transit agencies, equipment maintenance agencies, revolving loan funds related to specific economic programs). Advisory boards without direct responsibility for management can be larger and draw on a broader range of expertise and objective opinion. By reporting their assessment of the corporation to the related state department and to the legislature, they can often provide for better accountability than can governing boards that get bogged down in details.

Another alternative, one suitable for regional enterprises, uses a policy council representing local groups or

elected officials together with a strong executive director (see, for example, the public utility districts of the Pacific Northwest).

- If a governing board is to be used, who shall appoint the members? The governor or mayor? The head of an executive department when the corporation is subsidiary to one department? Local representatives? Should the board be representative? Should it be large enough to use special committees (e.g., audit and finance committees typical of the private sector)? If it is large, will it have problems scheduling meetings or assembling a quorum to conduct business?
- Should terms of members be staggered (giving the board added stability and some political insulation, but making it somewhat less responsive to elected leaders in the short run)? Or should their terms coincide with those of the appointing authorities, making them political executives like department heads?
- Has provision been made for removing board members for conflict of interest violations, for non attendence, or for malfeasance?
- Who shall appoint the executive director? The board? The governor? The department head (corporation subsidiary of one department)? Will the executive director serve by contract, or at the pleasure of the appointing authorities? What provision has been made for removal?
- Have means of improving the effectiveness of boards been explored? (e.g., use of working and advisory committees or staff to the board.)

In addition to careful design of the corporate governing structure, three other considerations are important to produce good corporate management with state government leadership.

First, the powers and responsibilities of the general manager, the board or council (if there is one) and of the appropriate government officials must be sorted out clearly and sensibly. The manager should have full responsibility to manage, and can then be held responsible for corporate performance. (See below) The board should not be burdened with detailed decisions and personnel choices below that of the manager. The board should focus on continuing evaluation of what is going on in the corporation. And state officials should have a clear role in decisions that have substantial impact on the public interest.

Second, state officials (including the legislature) need timely information concerning the corporation's programs and plans. Multi-year program and financial plans should be required. So should annual reports showing actual results. Statutes should specify the kinds of information and factors that should be included in plans and reports. They should also specify who is to review those documents and approve them.

Third, statutes should specify key policy decisions by the corporation that will affect public welfare and costs. Shall the governor or a commissioner have certain veto powers, prior approval powers or power to give the corporation certain directions?

Impact on state budgets

There should be provided ongoing means of assessing and controlling the extent to which the corporation may burden the state with direct or indirect financial costs.

- Are the corporation's services likely to be self supporting out of operating revenues? At what price levels? Are services to be provided at below market prices? What interests will be served?
- If operating subsidies are to be provided by appropriations, should there be a ceiling imposed in statute? Absolute or percentage ceiling? What factors will effect the level of subsidies: interest rates, user charges, volume of use, costs? Should prices be regulated? By whom? By what formula?
- Should specific cost controls be imposed (e.g., salary ceilings; executive scale; administrative expense limitations; interest rate ceilings)? How can cost control and efficiency incentives by management be encouraged if deficits are to be absorbed by appropriations?

Impact on capital finance and debt

Corporate financial plans, debt burden, security arrangements and borrowing volume should be continuously monitored together with those of other state corporations and state and local government. Some orderly process should be established to analyse information on current and planned borrowing, lending, investments, and potential demands on capital appropriations, including impacts on the economy and on state credit given varying market trends.

- What security will underlie corporate borrowing? Is the estimated revenue stream adequate to secure the borrowing necessary to complete planned projects?
- What will borrowing costs do to revenue requirements (for example, costs of retail or wholesale electricity, railroad freight and passenger fares, costs of ship maintenance, home mortgage rates, etc.)? What are the fall back resources for debt repayment if the revenue stream diminishes?
- Does the state have a moral obligation (legislative option to keep corporate reserves up to specified levels)? Are earmarked taxes to be pledged to back up debt? Can the corporation's finances be leveraged by federal grants, by state loans or grants, or by other sources? Are lease payments by state or local government agencies pledged to back up debt?
- Where will the liability or risk fall in case of extraordinary circumstances (e.g., impacts of power plant failure, of earthquake or bankruptcies on mortgage and loan obligations, etc.?)
- How will the authorized debt and debt security affect the ratios of debt of and in the state, and the ratings and indices used by the financial community to assess and cost out state and local government borrowings?
- What arrangements have been made for payback of state capital appropriations or loans (interest, time period, enforcement and forgiveness provisions)?
- Regarding nonguaranteed borrowing authority, what ceiling shall be established by statute? What agency of state government shall approve issues after reviewing timing, volume, interest costs, and terms of bond resolutions or official statements?

The management capabilities of the corporation

To do its job well the corporation needs stable financing, concentrated management authority, marketing expertise, high quality labor force, and flexible procurement and contracting capabilities. Sometimes these require exemption from some of the provisions of state administrative law. If such exemptions are applied when they are not needed, however, the public purposes for which the corporations were established are undermined.

- Should the agency's personnel be part of the civil service? Should it have its own, merit-based personnel system? Should it have salary comparability? Should it offer no job security but provide full management prerogatives to hire and fire? If so, what protection from abuses should be provided? Will the agency assume labor agreements from predecessor organizations? Do collective bargaining provisions make civil service regulation unnecessary?
- Should regular provisions for equity, public participation and public information apply (freedom of information, sunshine laws, equal employment opportunity, community reviews, environmental impact statements, zoning approvals, and public notice and hearings, etc.)? In general these should not be waived without strong justification.
- Should regular procurement and contracting procedures be waived for the agency? Rigid competitive bidding requirements may slow down and raise the costs of large scale or repetitive construction projects, and slow procurement procedures are a problem in high technology activities.
- Should the corporation be permitted to promulgate regulations? If so, should all administrative procedures acts apply to it?
- Does the structure of top leadership for the agency assure strong management together with coordination with the executive branch? The full-time executive director is the key to corporate management. Will that position be clearly responsible (e.g., appoint other personnel, have duties clearly distinguished from the chairman of the board, be answerable for the performance of the agency, be subject to incentives and to dismissal by the board, the governor or department head, be expected to testify regularly before the legislature)?
- Should the corporation be required to have organization and management surveys at least once every five years? To have full engineering and economic feasibility studies of its major projects before their authorization? Receive financial advice independent of underwriters and project consultants?
- Should the corporation be required to have approved accounting systems, multi-year financial plans and capital budgets, and annual outside audit of its books? Conflict of interest restrictions should be applied by statute to corporate personnel.
- What kind of budget should the corporation be required to submit annually? Does the nature of its activity require more flexibility that a normal government line item budget? If so, should a business type budget be

specified? Budget estimates with freedom for the corporation to shift funds from category to category? Should Management by Objectives or Zero Based Budget documentation be required? What special provisions are needed for capital and construction budgets?

- Should its entire budget be subject to annual approval, or only the appropriations requested by it? (If only the appropriations, what evidence of cost control and efficiency will be required in the documentation?) Should full budget review be required of all authorities with outstanding loans from the state?
- Who should review corporate budgets? Executive budget office? Legislative auditor? Comptroller? Legislative budget review or appropriations committees?
- What format and time span should be required for the capital budget of the corporation? What provision for depreciation (maintenance or sinking fund) should be made? How should the impact of interest obligations on operating budgets be reported and monitored? How should the borrowing requirements generated by short term debt be reported and monitored? Are there adequate provisions for coordination with other capital programs?

Exercising legislative oversight

- What procedures should the legislature use to monitor the agency's performance with respect to goals? Legislative performance audit? Periodic public hearings or committee investigations (special circumstances only)? Legislative veto of financial plans or budgets which will exceed debt or spending ceilings?

Legislative oversight should not involve intervention in specific management applications of policy (e.g., approval of specific loan applications, personnel actions, contractor selections, detailed budget lines.) If legislative judgment dominates these types of administrative action, the advantages sought from using the corporate form in the first place are lost.

In order for legislative oversight to be effective, legislative staff reviewing and dealing with the corporations must be adequate to keep up with the material coming to it, to analyse, to summarize, and to help distill out the policy implications. Investment in the capacity to continue to evaluate the public corporations would be small in comparison to the state appropriations supporting them.

Legislative oversight tools that have been used recently include public authority control boards, special investigations, assignment of a full-time performance auditor to individual corporations, and codified corporation control acts. In many states, recent initiatives concerning public corporations have been part of broader efforts to strengthen debt management policies generally.

In many cases, however, the initiatives have not provided timely information and in-depth analysis to those responsible for oversight. The future contributions of public corporations to public policy (and avoidance of unanticipated problems) depend in many cities and states on fresh review of the goals and design of these management tools of government.

About the authors

Annmarie Walsh is President of the Institute of Public Administration. She is a leading expert on government organization and public corporations. Dr. Walsh prepared a major study of public corporations in the mid-1970s, published as *The Public's Business: The Politics and Practices of Government Corporations* (MIT Press). She directed the Institute's reorganization study for the Washington Public Power Supply System in 1979—80, co-authored the report *Alaska's Public Corporations: A Framework for Assessment* in 1981, and served on a National Academy of Public Administration panel which studied federal government corporations for the U.S. Office of Management and Budget.

David Mammen is a senior staff member of the Institute. From 1979—1981 he was deputy director of a task force appointed to study and recommend improvements in regional planning for the New York metropolitan area. He conducted the field research for IPA's study of Alaska's public corporations in 1981, and co-authored the report. He recently conducted a three state conference on planning issues.

The Institute of Public Administration (IPA) is a private, nonprofit, educational organization that has provided research and low cost consulting services to governments for over seventy-five years. IPA is chartered under the education laws of New York State. All gifts and grants to IPA are tax deductible by rulings of federal, state and city tax authorities.

Founded in 1906 as the Bureau of Municipal Research, the activities of the Institute of Public Administration are directed toward the solution of emergi problems of government at home and abroad, and emphasize innovation, demonstration of new techniques and communication among governments and between the public and private sectors.

IPA's professional staff includes specialists in public and business administration, finance, political science, law, planning, engineering, library science and economics. Offices are located in New York City, Washington, D.C. and San Juan, Puerto Rico.

Brochures describing IPA's programs and recent publications are available upon request.

SUBJECT: Legislators serving on the Alaska Toll Bridge and Causeway Authority

TO: Representative Bette Cato
Chairman. House Transportation Committee

FROM: Billy G. Berrier BGB
Director
Division of Legal Services

You have asked whether legislators are constitutionally prohibited from serving on the Alaska Toll Bridge and Causeway Authority under HB 295. In my opinion they would be prohibited from so serving.

Two questions arise relating to the constitutionality of that provision. The first is whether the position is an office or position of profit which a legislator is prohibited from holding under section 5 of Article II of the Constitution of the State of Alaska. The second is whether the Authority exercises functions which are of such an executive nature that appointment would constitute a violation of the constitutional doctrine of separation of powers.

Section 5 of Article II reads:

> Section 5. No legislator may hold any other office or position of profit under the United States or the State. During the term for which elected and for one year thereafter, no legislator may be nominated, elected, or appointed to any other office or position of profit which has been created, or the salary or emoluments of which have been increased, while he was a member. This section shall not prevent any person from seeking or holding the office of governor, secretary of state, or member of Congress. This section shall not apply to employment by or election to a constitutional convention.

This provision has been considered by our Supreme Court in Begich v. Jefferson, 441 P.2d 27 (Alaska 1968) where the issue was whether legislators were prohibited from holding positions as school teachers under the State of Alaska while serving as legislators, and Warwick v. State ex rel Chance, 548 P.2d 384 (Alaska 1976) concerning the appointment as Commissioner of Administration when less than one year from the end of his term had elapsed.

The purpose of the prohibition was stated in Warwick to be:

> The terms of art. II, sec. 5 of the Alaska Constitution are clear and unambiguous. The purpose sought to be accomplished by that section is not merely to prevent an individual legislator from profiting by an action taken by him with bad motives, but to prevent all legislators from being influenced by either conscious or unconscious selfish motives.

Section 6 of Article III of the Constitution provides:

> Section 6. The governor shall not hold any other office or position of profit under the United States, the State, or its political subdivisions.

The Court in Begich examined the intended meaning of the term "position of profit" in context of similar prohibitions on the governor and the judiciary saying:

> "We have concluded that the trial court correctly determined that the provisions of article II, section 5 of the Alaska constitution are unambiguous. Upon a reading of the constitution as a whole, we deem it of paramount significance that the phrase 'position of profit,' in addition to restricting members of the legislature, has also been employed as a restriction upon members of the judicial council, justices of this court, superior court judges, and the chief executive officer of the State of Alaska. Use of the term 'position of profit' in these articles of Alaska's constitution illuminates the reach the framers of our constitution intended to impart to this term in article II, section 5. This usage, considered with the fact that the constitution itself provides only two exceptions to the scope of 'position of profit,' namely, Article II, section 5's proviso that the section itself be inapplicable 'to employment or

> election to a constitutional convention,' and article XII, section 3's provision that 'service in the armed forces of the United States or of the State is not an office or position of profit as the term is used in this constitution,' indicates to us that the framers intended to prohibit members of the legislature, judiciary, judicial council, and the state's chief executive officer from holding any other salaried non-temporary employment under the United States or the State of Alaska.
>
> * * *
>
> "Our study has convinced us that the framer's choice of 'position of profit' in the various sections of the constitution to which we have referred reflects their intent to adopt a term which was broad in scope. This same analysis results in the conclusion that the phrase 'position of profit' was intended to bar members of the legislature, justices of this court, superior court judges, members of the judicial council, and the governor of the State of Alaska from concurrently holding any other salaried, non-temporary employment under the State of Alaska."

In my opinion membership on the authority by legislators or the governor constitutes dual office holding prohibited by the constitution.

Although the doctrine of separation of powers does not explicitly appear in our constitution, our Court has consistently held the doctrine as applicable in Alaska (e.g., Public Defender Agency v. Super. Ct. 3rd Jud. Dist., 534 P.2d 947 (Alaska 1975); and Bradner v. Hammond, 553 P.2d 1 (Alaska 1976).

There is a substantial body of case law holding that legislators may not serve on bodies performing executive functions because of the doctrine of separation of powers. Our Court has held that appointment of executive officers is an executive function saying in Bradner v. Hammond, 553 P.2d 1 (Alaska 1976):

> Appellee [Hammond] contends that the appointment of executive officers is an executive function. We find appellee's contention most persuasive. In addition to vesting the executive power of the state in the

> governor, Section 16 of Article III provides that "[t]he governor shall be responsible for the faithful execution of the laws." In view of the responsibilities imposed by Section 16, and the authority granted by Section 1, the governor is necessarily clothed with the power to appoint subordinate executive officers to aid him in carrying out the laws of Alaska. Thus we conclude that the appointment of executive officers is an executive function; for without such a power, the responsibility for executing executive duties would be diffused and the goal of separation of branches of government, avoiding too great a concentration of power in one branch, would be defeated.

The United States Supreme Court dealt with the separation of powers question in Buckley v. Valeo, 424 U.S. 1 (1976) which concerned the regulations and the constitutional status of the Federal Election Campaign Act's regulation of federal election campaigns. Among the questions considered was the constitutionality of the appointment of the members of the Federal Election Commission. The committee consisted of six members, four of whom were appointed by Congress.

The Court examined the powers of the commission and found the commission, in addition to record keeping, disclosure and investigative functions, had extensive rule-making and adjudication powers. It also found the commission's enforcement power is "both direct and wide ranging."

The Court stated:

> Congress viewed these broad powers as essential to effective and impartial administration of the entire substantive framework of the Act. Yet each of these functions also represents the performance of a significant governmental duty exercised pursuant to a public law. While the President may not insist that such functions be delegated to an appointee of his removable at will, Humphrey's Executor v. United States, supra, none of them operates merely in aid of congressional authority to legislate or is sufficiently removed from the administration and enforcement of public law to allow it to be performed by the present Commission. These administrative functions may therefore be exercised only by persons who are "Officers of the Untied States".

The Court quoted from Myers v. United States, 272 U.S. 52 (1926). In that case the Court upheld the authority of the President to remove an officer he was initially authorized to appoint. The Court said:

> The vesting of the executive power in the President was essentially a grant of power to execute the laws. But the President alone and unaided could not execute the laws. He must execute them under a system of subordinate . . . As he is charged specifically to take care that they be faithfully executed, the reasonable implication, even in the absence of express words, was that as part of executive power he should select those who were to act for him under his direction in the execution of laws.

The Court held the appointment requirement to be a violation of the doctrine of separation of powers.

The test to determine whether appointment of legislators to serve on a commission is a violation of the doctrine of separation of powers is whether the powers of the commission are executive or judicial in nature. This requires in each case examination of the powers granted to the commission.

Very broad executive authority is granted under Sec. 44.57.111.

In my opinion legislators are clearly prohibited from serving as officers of the authority as contemplated by this bill under the separation of powers doctrine and both legislators and the governor are prohibited from serving under the respective dual office holding provisions of the constitution.

KNIK AND TURNAGAIN ARM CROSSING TELECONFERENCE
April 13, 1983
9:00 p.m.

Legislators Present:

Representative Jerry Ward
Representative Mae Tischer
Representative Ron Larson

Teleconference Agenda

The purpose of this teleconference was to discuss the proposed Knik and Turnagain Arm Crossings. HB 294 and HB 295.

Action Narrative

The Knik and Turnagain Arm Crossing Teleconference was called to order at 9:00 p.m. and Representative Ward introduced Representatives Mae Tischer and Ron Larson. The following is a verbatim transcript. (Tape begins here.)

Number 001

Representative Ward: I'm Representative Jerry Ward, I'm from Anchorage also here is Representative Mae Tischer from Spenard, AK and also Representative Ron Larson and we will be taking testimony concerning HB 294 and also 295 which are companion bills and the purpose of these bills are to establish a Alaska Toll Bridge and Causeway Authority for the purpose of building the Knik Arm Crossing. And at this time if the first person who would like to give testimony and ask questions, please step forward. The person I have on my list is Harold Galliett.

Number 027

Harold Galliett: My name is Harold Galliett, I live at 1616 Garden Street in Anchorage and I'd like to state that I favor the construction of the Knik Arm Crossing as far down Knik Arm as is feasible from an economic standpoint, because of the need to simplify traffic to and from Fairbanks and particularly to and from the large areas that can be developed in the Matanuska Valley. The present road and railroad, for that matter, pass along the base of the mountains and the area rapidly pinches out to the point where the amount of developable land is greatly limited. Whereas immediately across the inlet are thousands of acres that would serve for the expansion of Anchorage. It is not a bit to early to think about expanding the area in which Anchorage and its neighbors

can grow. We're becoming a sizable city that doesn't seem to be any signs of a decrease in our growth. Thank you.

Number 054

Representative Ward: Harold, thank you for your testimony, we will make that part of the testimony for tonight and it certainly was a pleasure hearing from you. Would the next person that would like to testify please come forward. I have Dave Ring down here.

Number 069

Dave Ring: This is Dave Ring in Anchorage and I appreciate the opportunity to talk to you folks on the other end about the Knik Arm Bridge. My particular interest has been for some time somewhat the same to get a crossing and I think that a couple of points that have been overlooked in plans that I've had access to and thats the development in Western Alaska. Most of the plans I've looked at have pretty adequately covered the need and the benefit for access to Fairbanks and points in between Anchorage and Fairbanks for the shorter distance that the studies I've had access to they don't emphasize Western Alaska, some don't even mention it. I think I'd like to suggest that we have a realistic possibility of coal development at Beluga that would be extremely enhanced with an access from Anchorage and that in itself might generate enough revenue to pay for a bridge by itself. Second way that this thing might advertise itself, as many people have discussed is a toll bridge. A third way that it might pay for itself and that's the sale of land within a half hours radius from Anchorage. In other words, a half hours driving time. Most of that land in under State ownership and some belongs to the University. Third way that I haven't heard anyone else expound on and thats the idea that gravel in the Anchorage area is becoming a pretty expensive commodity. The pits in the Sand Lake area have been closed, the only thing thats happening there now is a little moonlight and bootleg operation, extended permits perhaps, but the gravel thats in the Elmendorf Marain, which has the nature of some four or five thousand acres to it and its a pretty high quality gravel according to my testing, some of that would almost meet military specks without further processing. But be that as it may, the sand and gravel in that area with the markets that

Anchorage presents in the next 30 years would be one means and by itself would very likely pay for any structure. Thats about four ways to pay for a bridge, I don't know if we need to go a hole lot further that that, I'm sure that there are more ways but we have quite a few possibilities of where to put a crossing and some of them as much as 15 miles north from Anchorage up the Knik Arm. I think that crossings further up would be of less value to Western Alaska, they might have the same value in access to Fairbanks, Talkeetna and points along the existing route, but I think to give the best benefit to Western Alaska it must be as close to Anchorage as possible and if I had to suggest a location it would be in the immediate vicinity of the city docks, say a couple thousand feet north of the city docks but south of Point Karen, that would also keep it outside of the radar range for the military. I want to thank you for your time and your consideration and this is Dave Ring.

Number 158

Representative Larson: Yes, hi Dave, this is Representative Larson and I just wanted to mention one or two little things in relation to your comments. I think you are correct in your site location, the only concern that I have and I think that probably you and I have discussed this before that as we talk about the Knik Arm Crossing we also have to talk about a reason to make it economically feasible and some of the major reasons would be a port development at the Point McKensie area not to compete with the Anchorage port but to facilitate it. One being of course an importing area and the other a potential exporting area and therefore we would have to keep the bridge far enough north so that it would not interfere with the various shipping lanes that would be necessary to utilize both ports at Point McKensie and Anchorage. Do you have any comments on that.

Number 177

Dave Ring: Yes, I have. I've had access the studies conducted by the Mat-Su Borough groups on a location for a port site at Point McKensie. I've also been involved in hydrology work in Knik Arm for roughly six years, I've been involved occasionally in type flow and selenity content of the waters there, I've also been involved in soil sampling of the bottom in Knik Arm and based

on my study of the, or my exposure to these studies, I've haven't really done any formal study of my own, but I've been exposed to these studies as conducted by other people, I think that the choice of port locations has I know them to be by the Mat-Su Borough group is really a little to north for convenient landing of vessels in the winter months in the extreme ice flow conditions that develop there, plus that location has the possibility of continual necessity, like the port of Anchorage for dredging. I think a more southern point for a port site on the far side of the inlet could be located where no dredging would be necessary its more or less a self scouring area of 60 feet drop minus tide water. Over.

Number 205

Representative Larson: Thank you for your comments.

Number 207

Representative Ward: Yes, and the next person that I have on my list, this is Representative Ward, is Kristie Keele.

Number 212

Kristie Keele: This is Kristie Keele. I have a question. A lot has been said about the economic feasibility and affects of a crossing and what I'd like to know something about some of the aesthetic value as far as the pollution problems that any growing community will have and at the rate that Anchorage is growing and what this might do to alleviate or at least help those problems.

Number 221

Representative Ward: Yes, this is Representative Ward and before I start, I'd like to make notice that Neil Phelps-Munson, the Professional Assistant to Speaker Joe Hayes is here and he is also taking testimony with us at this time. But one of the things I think that people of Anchorage are acutely aware of is that we have pollution that has been growing at a alarming amount. There is a report that was just done and issued to the Anchorage Chamber of Commerce approximately six weeks ago, that report stated that there was going to be if the pollution, if an negotiated agreement between the Federal Government and the State and the City of Anchorage as far as the pollution level was not reached that there could be the possibly of a Federal ban on construction in the Anchorage area. This means that there would

be no more construction allowed because of the emissions of carbon monoxide. What we have is a situation where you have 200 people crammed into a little area. Its also been just computed out by the EPA on the State level that in 33 years what we're going to have with the growth of population if it continues at the same level in Anchorage, Alaska in 33 years from today anybody in that town will only live for approximately 30 minutes and then they will die. This sounds a little harsh but if you just look out of your windows tomorrow morning on a nice clear beautiful Alaska day you'll see this kind of a bluish blackish haze and this will continue to be there and I think that this is one of the things that needs to be addressed. Everybody is crowded in their neighborhoods, they're crowed at the 4 and 5 o'clock traffic jam. We can plan ourselves to death but until there is a release valve that lets the people go out of Anchorage and live outside of Anchorage, all we can do is stack up on top of each other and this is one of the major concerns because its the feeling of the body down here and the members I've talked to its time to plan farther ahead that just one budget to the next budget. We want to plan for not only our future but our chi'drens future and this seems like to reasonable way of doing it.

Number 261

Representative Larson: Yes, if I can just add a comment too. Southcentral Alaska is really the fastest growing area and the fastest growing state in the United States. One of the major benefits that I would see for the Knik Arm Crossing is that this would help us to have planned growth which would be very necessary and up realize that when you're in downtown Anchorage, you're less that 3 miles away from the Point McKensie area which basically at this time is uninhabited. We know that the potentials are there because with the Dahl-Shell Petrochemical Industry study we had to do samples for waste disposal, water supply, power potential and so forth. In other words, its just an area within 3 miles of downtown Anchorage thats really itching. And one of the methods of paying that we haven't really mentioned yet but I'm going to suggest to Representative Ward is something that we've used in many occasions in relation to capital

relocation. Once you establish the bridge there across the Knik Arm you have tremendous value added to the land prices on the other side. Most of those lands at this time are owned by the State of Alaska, and with the increased value of those lands, it could go a very long way in helping to offset the cost of the crossing itself. So those are just a couple of philosophical thoughts I had, but I do think they are worth bringing out at this time.

Number 290

Kristie Keele: Well, I would just like to say I am in favor of it and one of the reasons is expanded growth out of the Anchorage area and I do appreciate your comments. Thank you.

Number 293

Representative Ward: Yes, and the next person we have to testify is Jorge Hernandez.

Number 296

Jorge Hernandez: My name is Jorge Hernandez, I'm from Anchorage and one of the things that I would like to know is what is the approximate cost estimations at this point for the Knik Arm Crossing and what is approximately the growing cost of it or the percentage, 10, 15 or 20% eventually its going to have to built (undes.).

Number 308

Neil Phelps-Munson: This is Neil Phelps-Munson from the Speaker's office Mr. Hernandez. At the present time we don't have any current cost figures however, they are being produced by the Department of Transportation. You might recall a couple of years ago, Mr. Hayes was successful in getting 5½ million dollars put in the budget for preliminary work on the Knik Arm project and the Department is presently using part of that money for the purpose of preparing some cost estimates. We expect them very shortly. Now there doubtless are going to be higher prices than any of the previous estimates that have been done. We are encouraged to believe, however, that improvements in technology for this kind of work that have occurred in recent years will tend to hold down the cost more than the escalation that might normally be expected over estimates we've had in previous years. We do expect to have those figures in a fairly short period of time. I don't know precisely what we mean by short but hopefully before this summer.

Number 324

Jorge Hernandez: Another thing is what will be the estimated mileage saved by building the bridge or the approximate amount of time saved in driving distances.

Number 327

Neil Phelps-Munson: If I understand, first you are asking about the length of the crossing. There are, in previous studies that have been done, the most exhaustive study which was done slightly more than 10 years ago if I recall correctly, the block to block distance of the various crossings ranged from 8,500 feet in the shortest case to 25,800 in the longest case. The most likely probability, the one that seems most attractive for all of the reasons involved of these six studies is 12,900 feet long.

Number 339

Jorge Hernandez: I see. Thank you for your time.

Number 342

Representative Ward: Yes, Inez, this is Representative Jerry Ward would you put the next person on that would like to give testimony or ask questions.

Number 346

Ron Windeler: I'm Ron Windeler, I've lived in Alaska for 33 years. I'm very much in favor of the Knik Arm Crossing. My first question is what is the status of the Department of Transportation study that you just mentioned. I had heard recently that the Governor had cut off funding for that or in some way was slowing down that study.

Number 352

Neil Phelps-Munson: Mr. Windeler, what the Governor did instead of using the money to go ahead with the Environmental Impact Statement was make a decision with the concurrence of the leadership of the legislature to go ahead with a portion of that money for estimate work to determine if the project was fiscally feasible before spending the rather larger amount of money to go ahead with the EIS, that is the Environmental Impact Statement. And as I say, preliminary indications on that are that the project will be financially feasible, we don't have definite figures. Therefore, the EIS work will proceed. Now some of that has already been done, some of it is recoverable from previous years and the like. But that would be the next step and no, we don't have any indication that the

Administration is deliberately slowed the project, they have rather changed the direction for that short period of time for the purpose of being sure that we could confidently go ahead with it.

Number 367

Ron Windeler: So we actually just changed the order in which he was spending the money that was appropriated. Okay, my next question is what are the chances of passage of the new bills, I believe its Senate Bill 211 and 212, one of which establishes some kind of a authority to run a bridge and the other one appropriates a really substantial chunk of money to begin construction.

Number 374

Representative Ward: Yes, this is Representative Jerry Ward and it looks like, as they go through the committee process that it should be the Senate Bills, I don't believe, I can't really speak for the other body but I've talked to President Kerttula and he seems to feel very confident that it would go through. We have had a House Concurrent Resolution introduced by the bush delegation on the Senate side endorsing the concept of the Knik Arm Crossing and encouraging it. On the House side, we do have 27 signatures which it takes 21 to pass so we do have the support on the House side but we're still not rushing through the procedure because we want to make sure that the Toll Bridge Authority is set up properly so that has to go through the Committee process but we do have every intention of moving the bills through both bodies and to the desk of the Governor this session.

Number 388

Ron Windeler: Last of all, I have a suggestion, we talked a little bit earlier about paying for this bridge by the sale of State land across the inlet and somebody mentioned that land would increase in value tremendously if the bridge were completed. Unfortunately, it seems like its necessary to have money in advance to pay for the bridge rather that build it first and then realize its value and I was wondering if it would be possible for the State to dispose of some of the State land in the McKensie area in advance of the actual construction but after having announced an exact path and a timetable so that many people would be aware of the potential increased value and would be

willing to bid a great amount of money for land over there, nearly as great as they would be willing to pay at a later date when the bridge was complete. That sort of an approach might be able to raise many millions of dollars in advance to offset the cost of constructing the bridge.

Number 405

Representative Ward: Yes, this is Representative Ward. I have written in your comment and I certainly will put this into the consideration. One of the things that we have done since the Speaker and the President have filed a joint bill as the leadership of the House and the Senate, there have been several proposals come forward which I found, if I can just run those by you very quickly, the land one that Representative Larson and yourself have just brought up is an intriguing idea, the coal and gravel has been brought up several times, not to leave out the fact that it is a toll bridge so just paying from actual passenger traffic can be done in about 10 years, but besides that we also have got phone calls from the electrical utilities, Chugach Electric and Matanuska Electric both are going to be writing letters of support so they can take their underground cables and put those on the bridges. We understand that there is a figure floating around for replacement of 3 of the cables of some $100 million which would go for offsetting the cost of the bridge. We also have had a proposal that has been introduced, at least for discussion purposes by Representative Cowdery for transporting water across the way for the Anchorage area which will be in need of water in about 3-3½ years if the population continues at its present rate. Everything I see says that this bridge should have been built about 10 years ago and the land idea that you have in very intriguing and I think that if my numbers worked in my head as I just added up the amount of State land available, I think we could build about 3 of these.

Number 437

Ron Windeler: Thank you very much, that's all I have to say.

Number 440

Ken Wardwell: Yes, my name is Ken Wardwell and I live at 1444 Hillcrest Drive, Anchorage, and I've lived here since about '66 and I'm also in favor of the Knik Arm

Crossing and I'd like to start with a question. What negative things have you encountered that would hold up the completion or even the beginning of building the bridge?

Number 446

Representative Ward: Yes, this is Representative Ward and I sure hate to be the one to give bad tidings, but the negative things seems to be at this point is I think people when we have been able to get response, it seems to be one way or the other, we should build it or we should not build this bridge because it hurts a program which is they have a feeling that there is a competition for money and that seems to be the overriding thing at this point. And there is a competition for money and thats why we are going on a usery type of basis and I think that this body, and the leadership is decided that if a project cannot stand upon its own, then we really don't want to get behind it and thats why we have gone on the Toll Bridge Authority and we're trying to find creative forms of financing and creative forms to pay for the project so that we can go forward, but the only thing that we have found, or that I have found on a negative note is the fact that people have felt that State government may not be giving out quite as many dollars and they did not want another, did not want any projects if it was going to affect their own personal project that they might have an interest in, so there has been a lot of comparing type of things. I'll turn it over to the other Representatives for there comments on negative.

Number 465

Representative Larson: Yes, this is Representative Larson. I guess I'm going to speak frankly here that the biggest negative isn't that I have seen over the years is been that we've had too many politicians and not enough statesmen. For example, in relation to the Point McKensie road, everyone always says to me why build a road there's nothing at Point McKensie. I say when you build a road there's going to be something at Point McKensie. When you build the bridge there's going to be a lot more.

Number 474

Ken Wardwell: Okay, I guess a comment I'd like to make is there's been some recent proposals to bring natural gas from the north slope to, well there's been several

proposals, one of them is to bring it to Kenai. Has anybody considered bringing it to the Point which would also have a deep water port and it would also be able to service potential users of the population of Southcentral Alaska?

Number 481

Neil Phelps-Munson: Yeah, Ken, this is Neil, good to see you, I haven't talked to you in a long time. The biggest negative as I think two members have expressed here is peoples lack of faith in the capability of the State to tackle a project of this magnitude and serve other needs of so many people or other wishes and needs so many people have at the present time. As far as gas is concerned, Jerry has just added that to his list of ways in which the crossing can be paid for. I've been wrestling with this thing myself for about a dozen years having worked in the Department of Highway some years ago. I've heard it said that if everyone studying the crossing had taken a rock with him, we'd have one by now. That may be a slight exaggeration, but probably not far from the truth. I think the introduction of this legislation is probably most important single step that has been taken in recent years. I think its more important than the $5½ million that the Speaker managed to get into the budget 2 years ago, simply because it will test the public confidence and I think reassure the public confidence that this thing can be done. And of course people who are heartily in favor of the project like those of you there in the room can help a great deal too.

Number 496

Ken Wardwell: Yeah, it seems interesting that in public testimony like this and for several years it seems like everything that comes out seems to positive in favor of it to include newspaper articles and through those years we always see steady groups and little bits of money being put out in some kind of serious or semi-serious study one or another. And then, you know, in a place like LaTouche, where all public testimony comes out negative to building a facility there for boats, and you know, thats trying to go through, trying to put it through. I sell real estate here, have been a broker for several years and we're rapidly running out of property to service the needs of the community and I

think its probable that the bridge will have to be built, or a means to get to the other side to open up that land for the needs of the population of Southcentral Alaska. I think that should be a serious consideration rather than at the last moment say okay, and to just throw money at it, we ought to be prepared with good serious studies and good serious cost amounts and timetables to be able to do that.

Number 517.

Representative Mae Tischer: This is Representative Mae Tischer and I've got to throw my two cents worth in here. While you were talking, something just kind of flashed on me and I'd like to share a kind of correlation, a comparison. It has to with when my kids and I were building our homestead in the Susitna Valley area and we were planning on building x number of square feet and so forth and so on and buying our logs instead of pealing them ourselves. One of the things that was told me, because neither I or my children ever really built a whole house by ourselves, which we ended up doing. What happened was the fellow that was telling me this gave me good advice, he said,"you know, the actual structure won't cost you that much but", he said "you can nickel and dime yourself right down into debt if you don't look out when you start on the interior of your home". And I compare that with what I see as a freshman here in the legislature in looking back in the previous budgets where the State has really nickeled and dimed themselves to death and placed themselves in a real funny position where they have funded little bits and pieces here and there and never really come up with anything really constructive as far as a viable long-range plan for development of the State. Instead, it kind of chips away the bulk of the money and pretty soon you're down to not enough to fund something that is really very important for our development and our progress to prepare for the massive amount of things the State can do for ourselves, in other words, if we build a road as Representative Larson says, there's going to be some productivity coming out of it, its not just for traffic running back and forth for recreation, there's resources to be developed, there's lands to be claimed and there are new horizons out there. This is the only State

in the union, yet, that offers that sort of opportunity and its a terrible, terrible problem in trying to convince people that once you put something out there that will give us a corridor to advance your economic base and broaden our economic base we will back a saddle in square one again like we were six to eight years ago. And this I see as probably the best thing that will happen out of the Knik Arm Crossing outside of saving the Anchorage area from pollution and such things as that, diminish our crime rate and all the things that go with overcrowding. Thank you.

Number 550

Ken Wardwell: Yes, thank you very much.

Number 557

Alfred Mangus: My name is Alfred Mangus and I live at 4805 Mills Drive. I've lived in Anchorage since 1962. I'm an unemployed civil engineer. I'm in favor of the project, certain it will have a great impact on the community, such as many famous bridges have. Brooklyn bridge will be 100 years old here in another month, the Golden Gate Bridge and the Oakland Bay Bridge were both built during the great American depression. They are both toll bridges. The Golden Gate Bridge has been paid off by the Toll Bridge Authority. I feel that if the State doesn't have the capital to directly fund the bridge the Toll Bridge Authority option should be looked at. It would be a means of funding the bridge, I think, and giving them a possibility of raising capital from outside sources. I think that the bridge will come about eventually, I hope that it will have a positive impact on the community and I'd just like to say again that I'm in favor of it.

Number 578

Representative Ward: Well, Alfred, thank you very much for your testimony. This is your Representative Jerry Ward and its sure a pleasure to hear from you. We do have the means to finance it and have it on the form of usery, whether it be people that own coal, gravel, land, gas or water or else the people that actually drive across it, we do have the opportunity to finance the bridge at this time and that's the way we are proceeding and we certainly appreciate your comments. Something that I'd like to make note of right now for any of you in the room and I sure want the next person to testify, but if you

could possibly, there's a phone number that's with the person that's the monitor there at the thing at your end of it and there's a system called public opinion messages. You'll be able to get that phone number and just pick up your telephone, call that phone number and give it to all legislators and state your opinions and this will move more mountains, I've seen it happen on three different issues down here and if 100 of these public opinion messages come in then the project goes. So I hope everybody in the room understands clearly what I'm saying. This is the way the public speaks, there is no charge to you, it is picked by the State, it is a telegram that is paid for through your tax dollars, although we don't pay taxes right now unless we're a corporation, but its paid for by the State, and it is a public opinion message up to 50 words and I would encourage everybody there to please send those to all the Representatives and Senators so that we can compile those into the public input and I'll take the next speaker at this time and then I'll look around for the phone number in case it isn't there.

Number 608:

Jack Spake: My name is Jack Spake and I feel sure that all you people down there on this board know me quite well. I started out working on this Knik study when I was a young man and I've reached the age, soon to be 73 this April and I see that we're not very much farther away from the first stage that we had initiated in 1972. This was quite a comprehensive study and I was also worked on the Chamber of Commerce Highways Board getting the $5 million to continue this study. I think that the study of '72 would just merely have to be updated a little bit and I feel that we studied this thing to death. We have had all kinds of proposals. This first study we had gave you a location, gave you a design that was practical but needs updating a little bit but it just don't seem to be going forward like it should. I think we should make every effort to get the Knik Crossing going, if we don't it going to price us right out of the ball park. Had an estimate of $125 million in '72, I think this wholely approaching estimate and the estimate of time given by this consultant thats being employed now, talking waggle about 1990-1992 before the thing could even

be under construction. You take the inflation rate at the present rate it is, maybe 10% you're talking about a billion dollars or more for the time of '88, '89 and '90, I think its going to price us right out of the ball park if we don't get on the ball and get this thing going. I think that it could be done by this bridge commission you're talking about and I think it could expedite the project as much as 3 or 4 years if the proper people were put on it. And another thing I think is that your legislators there have should assist the Mat-Su Borough, Mr. Larson especially has been a strong advocate of this project for many years getting the $7 or 8 million he needs to complete the road out to Point McKensie, maybe this will stir a little more action on. But this is something it seems to me I spend all my 7 or 8 years when I was Division Engineer for the Department of Highways from '70 to '77 on this project and I just got myself so interested again I come out of the woods and I'm back working on it again and I just feel that every effort should be made by you legislators. Most of the legislators, especially the new ones, on their campaigns promises said more roads, Knik Crossing, Susitna Dam and so forth through the legislature I haven't seen anything in the papers or anything where any effort has made to get some supplemental funding for these projects and I think that it would behoove you and the rest of your legislators to get something going. I feel that you may have a couple of questions, I'll stop now because when I get started on highways, its pretty hard to shut me up.

Number 642

Representative Larson: Yes, this is Representative Larson and I'd like to thank you for your kind words but I'd also like to give due where due is given, Representative Ward has been very, very active on this and is doing a very fine job.

Number 645

Representative Tischer: Amen to that and amen to your comments. This is Mae Tischer speaking. I can't tell you how much I enjoyed listening to what you said about your involvement in the studying of Susitna or the Knik Arm Crossing. I remember when I first came up to Alaska 23 years ago, that's one of the first things I heard talk about and that

was 23 years ago and I agree with you that it has been studied to death and I believe that right now we've got stacks and stacks of actually parked right in front of us here and I agree that its time to move forward. One of the things I think that I recognize at least this year which is different from the last, oh say, 8 years is that we have a new administration and a Governor who is for development and is for this project, its one of his priorities at least to see to it that it is looked into to the point where it can be done or not done. I think he is taking steps to do that and I think he is right and I think the legislature as a whole especially on the House side with 27 sponsors of HB 294 and accompanying bill gives you an indication of how much support it really does have. When people down here put their name on a bill as a sponsor they're committed to that project or to that bill, provided the doggone bill doesn't get changed to a divert or the intent of the legislation remains the same. But anyway, I see this, I'm very excited about the probability of this being accomplished within a very short period of time. The fact that the State has had money in the past 4 years should have made that thing go a long time ago, and we've got a group of new legislators this year that really aren't afraid to step forward and take a stand on something like this and I for one did campaign on the Knik Arm Crossing and the Susitna Dam and roads and so forth and as far as I can see, things are moving along as well as can be expected at this point in time and I think that by the end of the session you'll see some real good action.

Number 673

Jack Spake: We are going through a new era where people are somewhat in favor of highway construction and projects of this size, where back in the 70's the favorite expression that they were given me at all the public hearings that I participated in were quite a few from the first one where we had a 1,000 people and 996 of them were against anything that we were proposing back in the 70's. I think this attitude is changing now toward these types of projects. I think everybody that I've talked to and I think that they are all in favor of this project and I think it would do a great benefit to the Beluga expansion, the coal, the lumber everything over there

and also get some of this traffic congestion out of Anchorage. It won't be too long before you're going to be walking on top of cars to and from work instead of driving them. Its just getting to be ridiculous, we're not doing any advance planning for large construction projects in Anchorage. We're all still working on a program that was conceived back from the (undes.) back in '74, '75 and '76 and they're just merely increasing their present widening the streets and things like this, some interchanges but we've got to come up with some large plans of highways above and highways below or we're certainly going to be in a position where we are going to have to eliminate a few automobiles. I have noticed since 1974 and 75 we had 94% one car occupancy and we still got 94 and maybe 95% one car occupancies and the administration of the city and the state have both tried to get more than one person in a car, and I don't know just what to do. Buses are not going to be the complete answer, we're going to have a system, a monorail, maybe go back to electric cars, something that people really call me a dreamer, but you're going dream up something for Anchorage, you've got to help us. Thank you very much for listening to me, you'll probably here more from me now that I'm back in the saddle again.

Number 695

Representative Larson: You're going to have to listen to one of the things that I've been advocating as a possibility for years, but before I mention that, I do want to mention one more positive step here, and maybe it sounds strange coming from a member of the minority, but I think a positive step here is that the bills that are before us are sponsored by majority, excuse me, the Speaker of the House, Joe Hayes and its also supported, of course, on the Senate side by the President Jay Kerttula, so it does lead me to think that everyones serious down here about these bills this year. But I'll tell you about the monorail some other time.

Number 704

Representative Ward: Thank you very much, this is Representative Jerry Ward and for that phone number for you that were waiting there with the pencils in hand, its 278-3668 and all you need to do is call that number and you can send a 50 word telegram to all

legislators to legislative affairs and that's at no cost to yourself, that is picked up by the State and they are very, very influencial to the decision process down here. Its 278-3668 and we would be glad to take the next person that would like to testify at this time.

Number 711

Pam Schlegel: Hi, my name is Pam Schlegel and I (undes.) believe in that. I think that Alaska been caught in a time where we believed in a boom and bust. We had a boom economy and then we bust and everybody (undes.) I believe I'm one of the first or about the second generation Alaskans other than the traditional Alaska native and I believe that there is a strong pull in this country, Alaska that we all are starting to settle, we're going to stay here, boom or bust, we're going to live here and I believe that the Crossing is a good thing, I think Alaska, Anchorage is a perfect example of boom and bust, it has been built, its design of the city is traditionally not well planned and we're constantly now having to redo things because we're outgrowing the area. I think the bridge is a wonderful idea to open up an area that is fresh and new and that we could maybe better plan for a good living for our families and have land to live on and that and as well as the economical basises for industry and growth. The only real true point I want to state is that I believe that the future you are going to see is that people are going to stick around and that they are going to believe in Alaska and possibly be more active politically and whatever in the growth of our state versus well just staying at home and you've got your cabin and as long as somebody doesn't intrude your land it doesn't bother you. As far as the crossing goes, I really hate to see that we've had 10 years to study and thats it. And we keep studying, and we keep studying and we keep studying and thats all that it goes to and I just think like its been pointed out that the cost keeps getting larger and all we do is study how much its going to cost one more time and I'd sure like to see something more positive go toward this move. And I hope that what I've been reading in the paper, that its not going to be funded is not true.

Number 764

Neil Phelps-Munson: Thanks Pam, this is Neil. We're glad you're in Alaska to stay. As you heard Jack Spake say a few minutes ago we do seem to be coming into an era when development of the kind we're talking about tonight is gathering more favor that it might have in the previous decade, that people are realizing that we can do things like this without destroying the entire countryside, and that we do need them badly. What we need right now, of course is a lot of public support from people like yourself among friends and neighbors to get things like this going because the people down here are required to vote for it and pony up the money for it we'll do what their constituency's tell them they want and we know its possible but requires the public support to do it and I think any member of the legislature would agree with that opinion.

Number 780

Pam Schlegel: I concur too. Thank you.

Number 784

Representative Ward: Yes, if we could have the next speaker at this time. And Pam, thank you very much and also letters to the editor would help quite a bit to both newspapers.

Number 791

Scott Svendsen: My name is Scott Svendsen and I was born and raised in Anchorage. I'm 34 years old now, Jerry I know you know me down there. As I look around the people in this room, I notice that many people here are quite a bit older than I am, I'm 34 at the present time and I would venture to guess that many of the people sitting here who are older than I am have attended many such meeting as this and I would imagine that they have quite a few meetings left in them, but what I want to know is how many more meetings are we going to have to have before we can really get the ball rolling? Like I say, many people have attended a lot of meetings, but I'd really like to see something happen besides just the consultant studies that have been done. You know, I think that the Knik Arm Crossing is an expensive project, it has always been an expensive project and it will continue to be an expensive project but the way that the real estate is developing in Anchorage is that there really is a dwindling amount of land available and it seems to me only logical that we may have some up front

expense in getting that bridge across but for the welfare and the benefit of Alaska residents as well as Anchorage and Mat-Su area residents that this would be a good thing to do. I'm hoping that this is not just another bunch of lip service, that there will be an attempt a serious stride forward and I certainly would lend a hand on a volunteer basis to help this thing become more of a reality. I also have to state at this time that I am not a land owner in the Point McKensie area or anywhere need abouts, but I just feel so strongly that we need to go in this direction that I'm speaking to you today because of that. Jerry, goll darn it, lets get to work.

Number 840

Representative Ward: Well Scott, I sure thank you very much for the other people there, they might as well know my age too, its 34. I was born in Anchorage and grew up with Scott Svendsen and its been about 20 years since I've seen you. I guess our thoughts are running along the same ways from when you used to play down at the trestle and look across there and wonder when they were going to build that bridge. Now we're both 34 years old and I'm down here doing everything I can to get it built and so is the Speaker of the House and the other members that are here, the freshmen members and the other ones and we are going to get it built. We are here to do a job, we want it built we can only do it with public support and the volunteer work that you mentioned Scott, its good to hear your voice again and like I say the phone number is 278-3668 and I don't know other to emphasize that, I've seen it work on Student Loans, I saw it work on Displaced Homemakers, I've seen it work on almost everything and I'm asking anybody that wants that bridge built to get on, get off, get on the stick and send those things down here, I almost said something wrong there didn't I? Its all public opinion at this point. We need your public opinion in the form of some tangible pieces of paper through telegram system that the State has and we will build it. I hate to be, no I don't hate to be optimistic, but I look at this program and I turn key operation and we can not remove it from the Department of Transportation but maybe let them watch over it with a careful eye. I foresee that from

today 3 years from today, I think that we could be driving across there, I really do believe that.

Number 875

Representative Larson: Yes, Scott as long as we are all confessing our age, I might just, this is Representative Larson, I might just as well tell you that I'm 29. I've been stuck on that number for 19 years now.

Number 881

Scott Svendson: Thats too mauy more meetings to go on this. Anyway, Jerry thank you very much and the rest of you down there thanks very much and I appreciate your efforts as well as everyones there.

Number 885

Representative Larson: Scott, in relation to the number of meetings that we are going to have to attend, I guess my answer will be, we'll attend as many as it takes to get the job done soon.

Number 888

Scott Svendson: Okay, great I appreciate that, thanks. I'll be there too.

Number 889

Neil Phelps-Munson: Scott, this is Neil. I'm not going to tell you guys how old I am but I was born in New York and I've been in Alaska darn near as long as you have. Further on Jerry's remarks, public pressure and opinion can get things done. You'll recall three years ago you were paying personal income taxes to the State and today you're not, and it was strictly, believe me, the public outcry that brought that about. There was resistance in the legislature and the administration to the repeal of the personal income tax, but it got done and it was people like you that got it done.

Number 900

Representative Ward: Yes, if we could have the next speaker now.

Number 904

Ron Windeler: Ron Windeler again, we don't seem to have anybody else ready to speak at this time and while I was sitting there listening I was doing a little thinking and developing on the idea that I proposed to help finance this project. My new thought is that if it becomes very difficult or impossible to get the legislature to appropriate $50 million at this time perhaps because our projections for income may slide even further and people may get desperate and

decide that they can't afford this project, would it be possible instead to have the state cede to this bridge authority title to a substantial section of the state land over there and allow the bridge authority to sell the land as they see fit to raise the money to pay for the bridge.

Number 922

Representative Jerry Ward: I have written that right next to your first proposal. I think that it is entirely possible, I don't see why not. The State, the people own the land anyway, its already theirs. I might as well make one thing clear, along with House Bill 295 and 294, there is a letter of intent that is accompanying it at this time and it does appropriate $25 million from FY '83 and the additional $25 million in FY '84. Which would mean $25 million this year and $25 million the following year. This has been proposed by the people that are in the bonding business that would be enough to get the program off the ground and to start the rolling, generatings of the revenue bonds to make it work. But your proposal does sound very interesting and all of these proposals are going to get consideration as this bill passes through the committees.

Number 937

Ron Windeler: Thank you.

Number 940

Representative Ward: Is there anybody else that would like to testify there.

Number 945

Dave Ring: I'm always good at afterthoughts. I don't think I covered this before and thats a matter of establishing priority on State spending. I'm pretty well aware and I'm sure everybody else is that we've got about 100 projects for every dollar laying around. I think it comes down to mentioning a few projects where I would willing put this project first. For one, I'd like to see this project undertaken and completed before we spend $5 billion on a hydro project anywhere or Susitna. I would rather see this job undertaken and funded and built before I see the people of the State of Alaska take over an already operating railroad, and I don't really think that the State has demonstrated the ability to operate that much better than the people that are there. That would dry up a billion dollars worth of state money to buy the railroad. The third idea, I've heard a

couple of our former Governors kick around the idea of spending $25 billion to build a gas line to somewhere. There is some merit in building a gas line all right, I don't deny that at all but I think for the State of Alaska to involve any money in that thing I'd vote for that just right after a Knik Arm Bridge. I don't think I'd want to put that project first. I wouldn't recommend that you put it first either. I think there's good many projects throughout the state that while they do have some merit, they do have some worth, and they'll have a long term benefit I don't think there's any of them that's going to exceed this project. I would willing put education in this state ahead of the Knik Arm Bridge. I would willing see our schools and our colleges come first. I would willing see the health and welfare measures come first. I would like to see construction of a Knik Arm Bridge come right behind them. I wouldn't want to see any major projects in the state come ahead of the Knik Arm Bridge, if they did, I'd sure want to look at it quite a while to see if it really had the merit to give a dollar per dollar return that a Knik Arm Bridge might possess. Thank you.

Number 987

Representative Tischer: This is Representative Mae Tischer and I'd like to add to your comments by saying that its abhorable that the state of Alaska with just a little under 420,000 people have to spend $1.7 billion just to operate state government. That's the first thing I think that surprised the heck right out of me. That's approximately, with state employees running something like 15,000 in total and right now nobody's been able to give us an exact figure of what number the state has in employees, thats about 1 employee for every 23 people in this state. Thats almost like a classroom teacher ratio. And to me, we're spending a lot of money on bureaucracy where we should be taking it and doing something like the Knik Arm Crossing. I believe that that should be looked at too.

Number 001

Dave Ring: Thanks a whole lot.

Number 005

Representative Larson: If I may, maybe I just found the $50 million for us. I agree with Representative Tischer that the population of the State of Alaska is

somewhere in the neighborhood of 415 to 420,000. Yet we're paying out 471,000 dividend checks that means $51 million in fraud. There we go.

Number 012

Representative Ward: Yes, Dave, I'd like to add this to you since you did bring up two things that I basically hold in high esteem because I think that they are worthwhile projects although I haven't had the opportunity to have that legislation in front of me and that is the Susitna and also the railroad, and when I look at those I also want the Knik Arm Crossing. As I look at the bill on the Knik Arm Crossing if it does not stand on its merits, meaning that it will not pay for itself, I will not vote for it, I will not allow it to pass, I'll do everything I can to stop it. I intend to do the same thing on Susitna Dam, I intend to do the same thing on the Alaska Railroad, and I think that is the general error of the peoples thinking down here and I'm sure that this has not always been the case. But the people that are in this room and the sponsors of this bill I would say at least have this fundamental basis philosophy and that is if the project is worthwhile and it will stand on its own merit, then we are going to support. If it isn't then we are going to call it what it is, an idea that its time has not and will come. But I intend to look at all of those things, the railroad, the Susitna and the Knik with that in mind and I do believe that the Knik Arm Crossing absolutely stands upon its own merits and it will pay for itself and it will be one of the generating, income producers for the city of Anchorage and for the State of Alaska much, much longer after I'm gone. I hope that the Alaska Railroad and Susitna Dam will also fit into that category although I do not have the proper numbers for it at this time.

Number 043

Dave Ring: I appreciate your comments. I think I could be more enthusiastic about a Susitna hydro development if it were scaled down, if it were say a billion dollar project I would probably be more enthusiastic about it. I look at a billion dollar project as needing to return about $100 million a year in benefits. I look at a $5 million project as needing to return $500 million a year in benefits. So far, from what I can see it

doesn't make that promise. On the other hand the Knik Arm Bridge promises to return 4 times its cost in a 30 year period from about 4 different ways and if I messed up somewhere along the line there, excuse me for letting a little of my enthusiasm get in there. But I appreciate what you're doing and I appreciate the opportunity for everybody to have a whack at this. Theres quite a few people in the crowd that d[illegible] want to speak and I don't want to take mor[illegible] hoping that somebody else has shown up that will. Thank you again for the opportunity and I hope that we can do this again in the future sometime and maybe involve a few more of the legislators at the same time. Thank you.

Number 067

Representative Ward: Thank you very much Dave, and just for clarification, your arithmetic is exactly the same as mine and I'm hoping that those are the numbers that I've been given and if those numbers retain and the projections retain on Susitna and the railroad, then yes they are in jeopardy at this time but being one thats an optimistic person I always see that the good things have a habit of turning out fine. May we have the next speaker now.

Number 078

Walt Corey: Yeah, this is Walt Corey here and I've been Alaska around 25-26 years and it seems like year after I got here somebody was talking about building a dam thing or some[illegible]hing across the inlet but I wasn't too enthused about it then because I didn't know anything about it. However, the past few years last 10 or 12, 15, I have been quite enthused about it. I think it should have been just like you people said a few minutes ago, it should have been built 10 years ago. The rate things are going, it doesn't look like its going to get built for another 10 years. I'd like to see it finished in 3 but thats well, neither here or there. With the pollution, with the crowded conditions, with everything else thats been brought up here tonight, I am wondering if we have any choice but to build that thing as quickly as we can and thats about all I have to say.

Number 092

Representative Ward: We thank you very much and everybody in this room is shaking their heads, Walt and that is our feeling right now that we feel that it must be built for these

reasons and each person here has a separate reason as far as the economics of why its justifiable and also because of the crime and because of the pollution that you've mentioned and I'm glad that you spoke and you finally said it. Yes, we must build it and we'll be glad to take the next person at this time and we hope that people that are observing would gladly come forward. We work for you. At this time I will say my sign off and turn it over to the other Representatives and my name is Representative Jerry Ward and my sign off will be 278-3668 to send in the free public opinion message, 50 words or less 278-3668 or you can write letters to the editors of the Anchorage Times or News and if anybody wants to get on the 6:00 news and say that they want to build a bridge, that would be fine too. And we will do the work on this end, we're working for you and we're gonna get the project done and good night to you and I'll turn it over to Representative Larson at this time.

Number 115

Representative Larson: Yes, I just want to thank Representative Ward for the opportunity of taking part in this teleconference tonight and I guess if I had any words of wisdom I would say that probably one of our problems at this point is that we've been preaching to the Christians, its time we go out now and make a few converts.

Number 120

Representative Tischer: Thank you Ron, thats an excellent idea and that just spurred a little spark in my head also. Mae Tischer speaking, you know one of the things that I learned over a good number of years when I worked for the Muscular Distrophy Association was that enthusiasm breeds enthusiasm and one of the ways to do that is that you kind of carry the flag and then I learned that while campaigning in this last election myself that visibility has a great deal to do with the success of a job to get done and the visibility can be done in many ways, in a campaign you put yard signs up and bumper stickers out and put flyers out and so forth, some people parade up and down the street, some people have rally's and some people demonstrations. Well I've seen demonstrations down here on the capital steps for various and sundry causes and they're very effective. I've seen demonstrations

down at City Hall in Anchorage, I've seen them on the federal building steps, I've seen car rally's with signs all over them running up and down the street, up and down the highway and so forth and I'm so terribly enthusiastic about the support that so far we've heard and we haven't heard any negativeness coming out and of course, as Ron has said you know there are some converts out there that need some attention. The group that we are speaking to tonight and those that for this project and will favor it have now the opportunity with the enthusiasm that we have down here in the legislature, outside especially the support from the communities is a vital vital portion of getting this job done and any means by which you can foster this project, by means of demonstrations, by the telephone calls and the letters and the public opinion messages and the bumper stickers and whatever else you can think to rally around the flag if you will, I encourage you to do that. It may sound rather light if you will but it has a tremendous impact and it certainly does get in the news and the news has a way of spreading, it has a way of influencing people. The more they hear about it the more they think and the more encouraged we will be than to feel that going ahead is the positiveness and the feeling of and concurrence with the constituents that we represent. So with that I would like very much to thank all of you for coming out tonight and to Jerry for getting this teleconference together and as Ron said earlier, as many meetings and as many things that we need to do we will be there to do it. Thank you and good night.

Number 163

Neil Phelps-Munson: And finally, this is Neil one more time for Speaker Joe Hayes and he asked me this evening to give each of you listening his word that he is certainly four square behind the project and has been for some years and as I mentioned earlier was instrumental in the most recent increment of money to be put forward for the project. I also know that he very clearly recognizes the value as the three members here have said, all public demonstrations behalf of something like this whether it be an actual demonstration in terms of marching on the legislative information office or as Mae,

Jerry and Mr. Larson have said, letters to the editor and practically any way you think of to attract public attention to the project in Juneau, there's no reason it can't be done, there's no reason the legislature cannot be encouraged to go for it this year and as I said the Speaker is certainly four square behind it. After all he is prime sponsor of the two bills before us right now. Again, on his behalf, thanks a lot for participating tonight, we hope you will continue to participate until you can drive across that cotton-pickin bridge.

PHONE: 266-1440

May 3, 1983

The Honorable Bette Cato
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

MAY 11 1983

Dear Representative Cato:

The following analysis gives a breakdown of the costs associated with the Knik Arm Crossing project. The Department anticipates that all of appropriated funds ($5.5 million) will be required to complete the project. The amount of funding actually spent or from the project account as of March 23, 1983 was $931,445.

	Total	Item Allocation	Amount spent as of 3/23/81
Amount Appropriated	$5,500,000		
Funding Allocation	$5,500,000		
1. Overhead, RSA & Contingency	$ 600,000		
a) DOT&PF Overhead		$ 86,575	$ 86,575
b) RSA with University of Alaska for Geotechnical Analysis		70,000	-0-
c) Contingency		443,425	-0-
Sub-Total	$ 600,000	$ 600,000	$ 86,575
2. Design & Construction Division			
Authorization	$4,900,000		
a) Consultant Work Plan		$ 30,000	$ 30,000
b) Consultant Contract for EIS and Preliminary Design (thru Invoice #5)		4,200,000	330,763
c) Department Personnel, Expenses and Other Contracts		670,000	484,107*
Sub-Total	$4,900,000	$4,900,000	$844,870
Total	$5,500,000	$5,500,000	$931,445

* Of this amount approximately $208,431 was for contractual services to provide aerial photography.

Our current consultant contract with Engineering Manpower Services/Sverdrup and Parcel may be summarized as follows:

	Cost Allowance
Cycle 1 - Corridor Identification	$ 1,300,000.00
Cycle 2 - Environmental Investigation	2,400,000.00
Cycle 3 - Preliminary Design	500,000.00
	$ 4,200,000.00

Cycles 1 and 2 involve determining specific location and alignments for the crossing and highway approaches; and obtaining an approved Environmental Impact Statement which is necessary for obtaining required construction permits.

In February, the consultant was directed to temporarily suspend the project work plan, and to focus all efforts on an evaluation of the economics of the crossing. The consultant has completed that evaluation, and its results are included in a report titled, "Economic Feasibility" (April 15, 1983), in which costs, benefits, and environmental impacts are estimated based on conceptual design of a representative alignment. The report concludes that building the Knik Arm Crossing and approach roads is economically feasible.

In light of the report, the Department has directed the consultant to proceed with Cycles 1 and 2 (Corridor Identification and Environmental Investigation) of the original work program. Cycle 3 (Preliminary Design) will be modified to include bid documents for private financing, design, construction and operation. Negotiations for the contract changes are underway and will take several months to complete.

Although some Cycle 3 tasks may be deleted, the requirements for bid documents are essentially an increase in work effort. Additional costs which cannot be absorbed through changes to the current contract will be funded from the contingency allocation of $443,425.00.

If you have additional questions on this matter, please contact me.

Sincerely,

David W. Haugen
Deputy Commissioner
Central Region

$631 million Knik crossing plan unveiled

4-16-83

by Bill White
Times Juneau Bureau

Juneau — Gov. Bill Sheffield Friday unveiled a $631 million proposal for a 3-mile bridge across Knik Arm linking Anchorage to the Matanuska and Susitna valleys.

Sheffield gave the go-ahead for the state to explore building the long-awaited crossing with a blend of state and federal money.

Dan Casey, commissioner of transportation, said the state will use a $5.5 million appropriation made two years ago to conduct engineering — including final route selection — and environmental studies for the project over the next year.

If the project is found to be viable, bids could be let as early as next year with actual construction between 1986 and 1989, Casey said.

The proposal drew the tentative endorsements of Senate President Jay Kerttula, D-Palmer, and House Speaker Joe Hayes, R-Anchorage. The two lawmakers have backed the crossing for decades. This year they sponsored identical legislation that would take a different approach to building the crossing.

But, as Kerttula said, "If there's a better mousetrap, I will support it."

The proposal is contained in a 73-page report by EMPS-Sverdrur on the economic feasibility of the project.

The engineering firm looked at 11 crossings of Knik Arm — with accesses to the bridge ranging from downtown Anchorage to Eagle River — to come up with the $631 million proposal that appears to be the best "concept."

The preferred route for the bridge calls for a 43.7-mile highway to be built starting at the junction of the Glenn Highway and Boniface Parkway, and connecting north to the Parks Highway near Houston.

A four-lane, double-deck bridge would cross Knik Arm five miles north of downtown Anchorage.

See Governor, page A-4

Governor reveals bridge plan

Continued from page A-1

The bridge itself would cost about $339 million and would be built by a private firm, Casey said. That firm would make back its construction cost by charging a toll of about $2 per car, he said. Once the builder has recovered its investment, the state would own the bridge, under the proposal.

The state would provide the financing for the highway and bridge approaches, estimated at $180 million. Another $64 million would be needed to relocate facilities at Elmendorf Air Force Base, including an ammunition dump. Inflation would bring the project cost up to about $631 million.

"This approach is very simple," Casey said, "and it's the most cost effective." The options examined included tunneling under the arm, building a causeway and building a suspension bridge.

The bridge should be able to withstand intense pressure from tremendous tidal actions, siltation and ice buildup, Casey said.

EMPS-Sverdrur estimated the Point Mackenzie area would have about 9,000 households 11 years after the crossing is completed. The figure would double within 30 years, the study said.

About 29,000 vehicles would cross the bridge daily in the year 2001 and an estimated 46,000 a day would cross by 2030.

The bridge would cut driving time from Point Mackenzie to downtown Anchorage from about two hours to about 30 minutes, according to the study.

HB 303 Analysis:

A. Impact on Existing Programs: Pittman Road is currently maintained by DOT&PF.

B. Impact of New Programs or Activities: Will compete against other priorities and needs identified in the capital budget development process.

C. Figures in Cost Estimate: Developed from information from the consultant location report by DOT&PF Project Development staff. This preliminary cost estimate range of reliability is -10% to +10%.

D. Additional information: This project was not included in the Department's FY 85 CIP budget request but it is anticipated to be included in the Department's FY 86 CIP budget request. The project preliminary engineering is expected to be completed in FY 84. The road design recommends a 34 foot width ro surface with paving.

Pittman Road preliminary engineering is currently under consultant contract.

The cost estimate in FY 84 dollars for the development of this project is:

Engineering:	550,000
Utilities:	913,000
Right of way:	1,100,000
Construction:	5,600,000
	8,163,000

Cost estimated provided for fiscal not have been inflated to FY86 dollars for a total project cost of $9,135,500 (excluding engineering).

PITTMAN ROAD

Analysis

A cost estimate for this project was prepared in 1981 to upgrade Pittman Road to 26 feet in width and pave it. The following cost estimate was made in FY'81 dollars:

Preliminary Engineering	$ 131,040
Right-of-Way Acquisition	75,000
Utilities	10,000
Construction	4,892,160
	$5,619,000

The initial phase of the preliminary engineering on the project is anticipated to be completed under consultant contract by July 1983. One of the tasks to be conducted under this preliminary engineering contract is to develop detailed, reliable cost estimates for the right-of-way acquisition, utililty relocation and construction phases of the project. The Design and Construction Division recommends the funding of this project be based upon these detailed cost estimates.

To obtain a rough idea of what the estimated cost could be in current and future dollars, without the benefit of a detailed cost estimate, the 1981 cost estimate was assumed to increase at 10% per year through the life of the project. The following assumptions were made:

1. The additional preliminary engineering was assumed to be done under consultant contract in FY'84 at a cost of $150,000.

2. The right-of-way acquisition was assumed to be completed in FY'84 for $99,825. The utility phase was also assumed to be completed in FY'84 for $13,310.

3. The construction phase was assumed to be carried out in FY'85 and FY'86 under the following funding:

FY'85	$4,000,000
FY'85	3,478,900

4. Since this project includes the widening of an existing road by approximately one-half lane, maintenance and operations costs are assumed to increase as follows:

FY'87	31,149
FY'88	34,258

The Design and Construction Divison emphasizes they consider the above cost estimates to be unreliable until the detailed cost estimate is completed.

RE: House Bill 303

I. HISTORY

In 1980, the State contracted with M & B Construction Company to upgrade Pittman Road which at that time was little more than a wagon trail. The State had conducted a land disposal program in the area and the population was rapidly increasing.

Portions of the road upgrade work was performed with substandard silt materials that becomes a mire when wet and raises long lasting dust clouds when dry. Since the M & B contract work, the state maintenance workers have continued to use immediately available substandard material to make temporary repairs.

In 1981 the residents along Pittman Road petitioned Representative Pat Carney for assistance in obtaining increased road maintenance. The road use was continuing to increase and the road condition continued to deteriorate. Representative Carney introduced legislation which resulted in paving Pittman Road from Church Road to Fishhook Road. Since 1981 the population and road usage along the unpaved portion has continued to increase and the road has further deteriorated.

II. NEED

The average daily traffic count is highest in the summer months, as sections of the road are impossible to travel along in the winter months. In February 1983 a citizen traffic count was taken along Pittman Road, just north of the Parks Highway Intersection, for a 16 hour period. This is the area of heaviest use along the 15.8 mile length of road. The actual count for this period was 848 vehicles. Traffic counts were taken by the use of a counter by DOT/PF for the years 1977 - 1981. DOT/PF discontinued traffic counts along the road in 1982 and have not been conducting them since.

The area directly impacted by House Bill 303 has 373 permanent dwellings, and a total of 1073 residents who live along the road. This does not include seasonal residents. These figures do not take into account the continued growth due to state imposed requirements for the building of permanent structures, within a specified time limit, according to the provisions of State land lotteries.

Safety hazards along the road are numerous and have every indication of worsening over the next year should this project be delayed. The road is so narrow along many sections that two vehicles cannot pass. Numerous blind curves, and the absence of stop signs at intersections threaten life loss in accidents. Potholes, and dust, and peat quagmires have made sections of the road impassable. School Bus accidents have already occurred on the road this last winter, and it is only a matter of time before a serious accident happens.

DOT/PF maintenance of the road is dependent upon the weather conditions. Grading is impossible unless it follows a rain storm, and when done only lasts for a few days to a week due to the heavy use patterns. From July 1 to September 7, 1982 the road was graded 12 times in the 9 week period. For dust control calcium chloride was placed on the road 3 times during the 1982 summer, and 4,000 gallons of dust oil was spread along the road in the same period. In the winter months, from November 1982 to April 1982 the road was plowed 22 times by the state and 4 times by contract plows. These figures are averages, and DOT informed us that they do not have exact counts for maintenance on this road. Constituent P.O.M. s and letters strongly suggest that: (1) the current maintenance is inadequate and (2) that the need for paving and upgrading is urgent for the Safety of the residents of the area.

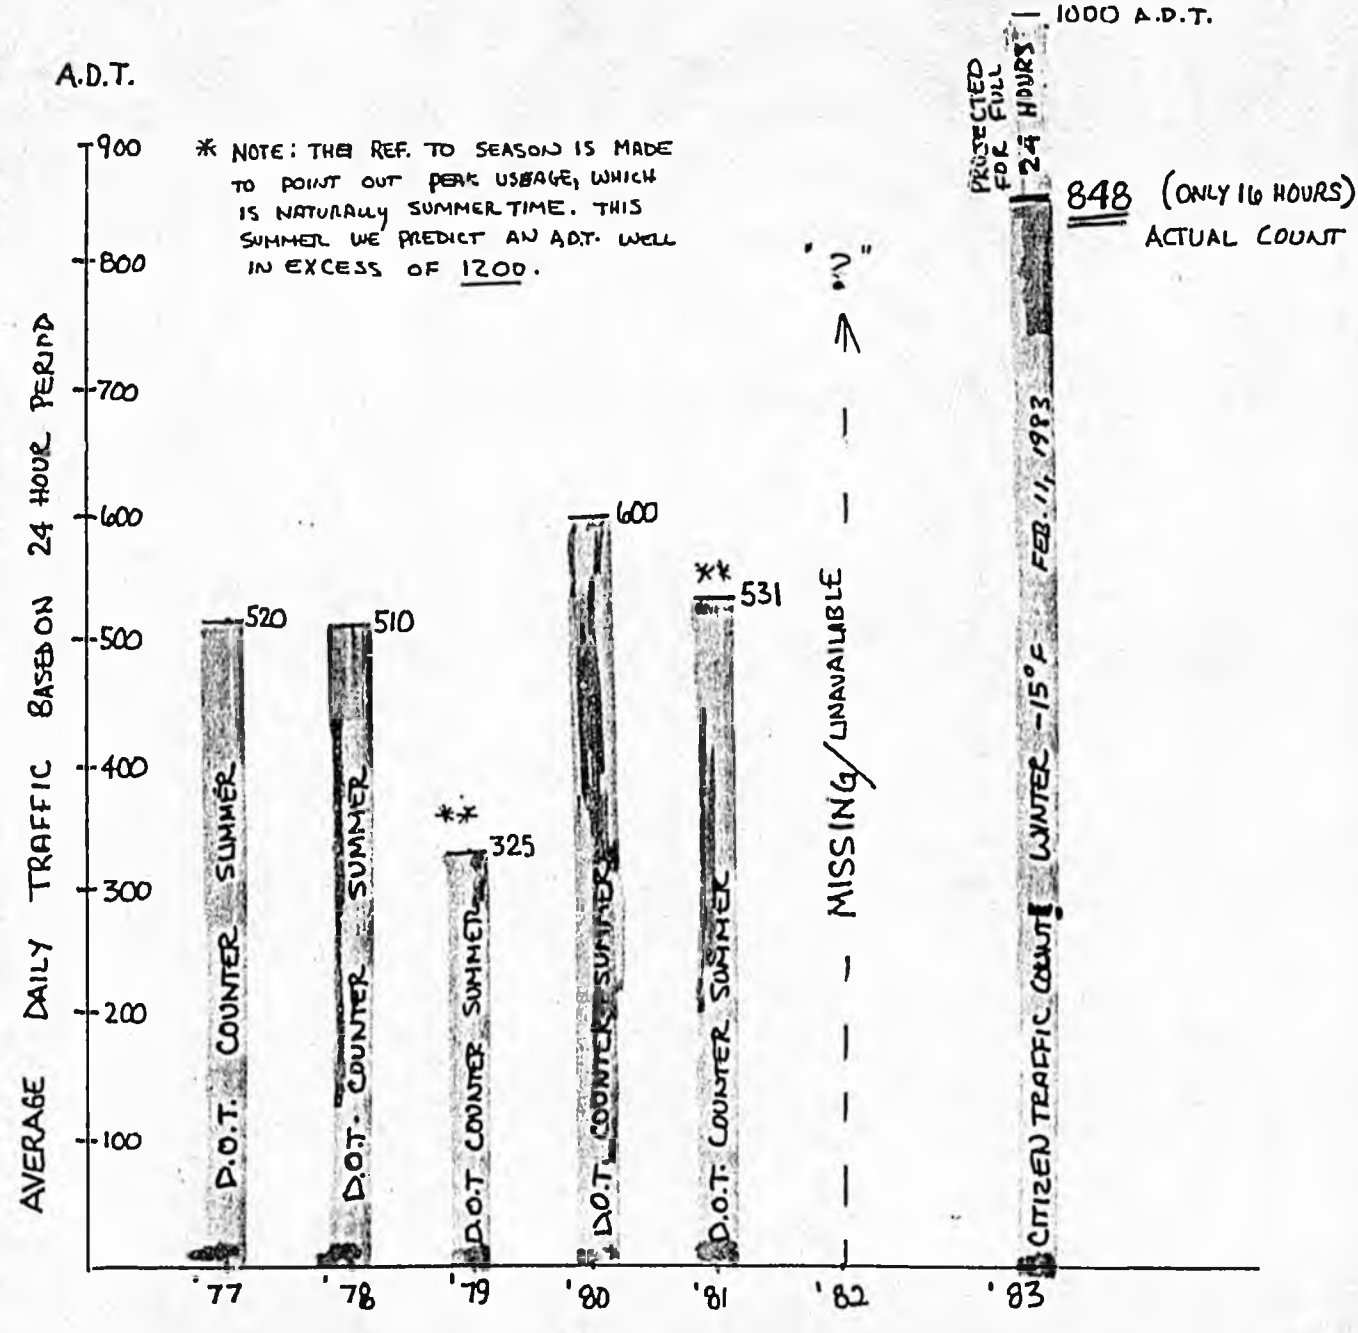
III. STATUS

The Pittman road project is on the current Mat-Su Borough priority list. It was included in the DOT/PF TIP recommendations to the Governor, and and is included on the DOT/PF 6-year Transportation Plan prepared this year. Funding for the project is not included in the Governor's FY '84 Budget.

IV. FUTURE

Scheduled land disposals in the area, as well as new construction this year as a result of earlier disposals attest to continued population increase in the area. Traffic counts can only be expected to increase as well. With already unsafe conditions, we can only expect the situation to become more critical.

V. MAPS



Attached are Borough and DOT/PF Maps of the Pittman Road and surrounding area.

VI. POM'S AND LETTERS

PITTMAN ROAD TRAFFIC DATA

Compiled by Rod Ewing
Feb. 12, 1983

ALL COUNT DATA IS REFERENCED "mp 0". THIS POINT IS JUST NORTH OF THE RAILROAD CROSSING ON PITTMAN ROAD AND APPROXIMATELY ONE HUNDRED YARDS FROM THE INTERSECTION WITH THE PARKS HIGHWAY. THE D.O.T. PROVIDED MECHANICAL COUNTER FIGURES THROUGH 1981, HOWEVER DATA FOR 1982 WAS UNAVAILABLE . THE FIGURE FOR THE 1983 WINTER COUNT WAS OBTAINED THROUGH A VOLUNTEER CITIZEN COUNT WHICH ENCOMPASSED ONLY 16 HOURS ON FEB. 11, 1983.

** THE ACCURACY OF THE '79 & '81 COUNTER TOTALS IS SUSPECT TO BE GROSSLY IN ERROR!

PITTMAN PETITION SPRING 1981

WE, THE UNDERSIGNED, LIVE EITHER ON SCHROCK-PITTMAN ROAD OR USE IT TO ACCESS OUR HOMES DIRECTLY OFF SCHROCK-PITTMAN. WE ARE PETITIONING OUR STATE, THE STATE OF ALASKA, THROUGH OUR ELECTED REPRESENTATIVE, PAT CARNEY — WE ARE FACED WITH A DIRE HEALTH AND SAFETY EMERGENCY, BROUGHT ON BY A MAJOR INCREASE IN ROAD USE OVER THE PAST FEW YEARS. COINCIDENT WITH NEW HOUSE CONSTRUCTION, THE CURRENT AND EVER GROWING ROAD USE HAS EXCEEDED THE DESIGN CAPABILITY OF THE ROAD. A MAJOR HEALTH HAZARD EXISTS AS A DIRECT RESULT OF THE HIGH DUST LEVELS. THESE SUSPENDED FINE PARTICLES ARE THE LEADING CAUSE OF EYE IRRITATION AND INFECTIONS, AND, MAY CONTRIBUTE TO RESPIRATORY DISTRESS. THE DUST ALSO POSES A SERIOUS PUBLIC SAFETY HAZARD RESULTING IN REDUCED VISIBILITY DURING PEAK USE PERIODS. IT IS NOT SAFE TO ALLOW CHILDREN TO RIDE BICYCLES/HORSEBACK OR EVEN WALK TO THE NEIGHBOR'S HOUSE. COINCIDENT WITH THE HEALTH/SAFETY DILEMMA, THE ROAD SURFACE IS RAPIDLY DETERIORATING. PRESENT METHODS OF STATE MAINTENCE ARE ADEQUATE FOR ONLY A FEW HOURS OF USE. WE NEED THE ROAD TO BE WATERED THROUGHOUT THE DAY ON A DAILY BASIS AND GRADED MUCH MORE FREQUENTLY. THANK YOU.

THE DUST ALSO POSES A SERIOUS PUBLIC SAFETY HAZARD RESULTING IN REDUCED VISIBILITY DURING PEAK USE PERIODS. IT IS NOT SAFE TO ALLOW CHILDREN TO RIDE BICYCLES/HORSEBACK OR EVEN WALK TO THE NEIGHBOR'S HOUSE. COINCIDENT WITH THE HEALTH/SAFETY DILEMMA, THE ROAD SURFACE IS RAPIDLY DETERIORATING. PRESENT METHODS OF STATE MAINTENCE ARE ADEQUATE FOR ONLY A FEW HOURS OF USE. WE NEED THE ROAD TO BE WATERED THROUGHOUT THE DAY ON A DAILY BASIS AND GRADED MUCH MORE FREQUENTLY. THANK YOU.

Dear Commissioner Casey

I support House Bill 303 concerning paving of the Pittman-Schrock Road.

It has been in serious need for quite a few years. Use of the road has exceeded its capacity. It is now a very serious hazard to drive the three miles that I have to use. There is so much dust that it is almost impossible to breathe. Numerous potholes cause control and front-end problems.

There are three subdivision roads where people do not stop when coming out on the Pittman-Schrock Road. Many do this at 30 or 40 MPH. There are no stop signs. On one blind corner with mailboxes on a curve, people park at the mail boxes. As you drive around the curve, you are confronted with a car in the road with no way of knowing whether you can pass safely. It's a wonder no really serious accidents have occurred at this location yet.

We have one curve that has a steep bank on one side. A trail is worn on the bank where cars are always driving on the bank because of improper banking when the road was built. I hope it won't be the school bus one of these days.

There was a time when the school bus went off the road on a causeway (through a lake) which is almost too narrow for two cars to pass, let alone a bus and truck. Luckily, the lake was frozen at the time.

Many reasons exist why the road should be improved (paved). A large population (because of subdividing mostly) is now using the road.

Sincerely,

Sharon J. Hess

RE: UPGRADING OF PITTMAN ROAD

THE ROAD FROM THE PARKS HIGHWAY TO PIG LAKE SAND & GRAVEL (PHILLIPS CORNER), ABOUT 3 MILES IN LENGTH, IS IN VERY ROUGH CONDITION DUE TO THE GRAVEL TRUCKS. IT IS GRADED ONE DAY AND FULL OF HOLES THE NEXT. ON TOP OF THE HILL THERE IS NO ROAD BASE, JUST PEAT. I HAVE HAD A BUS DROOP TO THE AXLES IN THE SPRING TIME. YOU CANNOT PASS TOW BUSES SIDE BY SIDE ON MOST OF THE ROAD. THE ROAD IS TEARING THE BUSES APART.

Ronald L. Larson
Box 53
Palmer, AK 99645

Dear Mr. Larson:

Sometime around 1961, the state improved our Homestead Road from Schrock Road to the highway at Pittman (now called Pittman Road). If my memory serves me right, it was done at a cost of only $40,000. It wasn't much of a road, but it was an improvement for several years, until the very thin layer of gravel disappeared and the road wore out. After that it became a nightmare. I remember one time when I had to get a neighbor with a D-8 cat to pull me out at break-up time.

About four years ago, the state upgraded the first five miles of the Pittman end of the road. That section is now fairly stable and does not go out at break-up time. They completely ignored the last four miles that now connects with the church road.

When the state maintenance section grades Pittman Road in the summer, most of the time they do not even put the blade down until they get to the West end of the road that was upgraded. When we ask them why, they tell us that they can do no good on our end because there is nothing but dirt or mud for surfacing.

I believe that in the next two years, approximately thirty-five families are going to have to build and move onto their lots in the state sub-division 'Greensword' or loose them. They must be living on their lots to comply with state lottery regulations. This will again increase the amount of traffic on a road that is not passable in the spring without severe damage to our vehicles.

If we have a bad break-up again this year, the road can become impassable. One of the two school busses that travel the entire length of this road was off the road and in the ditch this winter because of unsafe road conditions. Some curves are banked the wrong way, some not banked at all, and the road is rough and narrow in places.

I would suggest that to get a true picture of the last four miles of this road (East end), you contact the State Division of Highway Maintenance section at Palmer.

We think it is deplorable and a disgrace that with all the money the state has had, and still does this year, to ignore the needs of all the families, and allow a twenty-four year old road to remain in this condition. We don't think it is necessary to wait until some of our school children are killed or injured on

our school busses, to get this road upgraded to a safe driving condition.

Any help we can get on this matter will be appreciated and expected.

Sincerely,

Peter E. & Shirley D. Dreith

A PERFORMANCE REVIEW OF THE DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT ALASKA TRANSPORTATION COMMISSION

April 1, 1982

Audit Control Number

08-092-0069-R

Commissioner, Department of Commerce and Economic Development	Charles R. Webber
Deputy Commissioner, Department of Commerce and Economic Development	Edward Eboch

Members of the Alaska Transportation Commission

Chairman	Keith Miller
Commissioner	Walter Kubley
Commissioner	H.D. Scougal

STATE OF ALASKA

DIVISION OF LEGISLATIVE AUDIT

Rep Cato
Room 108
Rec'd Act. 3/26 pm.

STATEMENT OF POSITION

offered by

ALASKA TRUCKING ASSOCIATION, INC.

SUPPORTING THE CONTINUATION OF THE
ALASKA TRANSPORTATION COMMISSION

STATEMENT OF POSITION

The Alaska Trucking Association, Inc. (Association) is a non-profit trade organization representing 325 trucking firms and allied industry firms throughout the State of Alaska. Our membership consists generally of two major groups, the For-Hire Carrier and the Private Carrier. The for-hire carrier group includes common carriers, contract carriers and exempt carriers as well as the water carriers. Our membership stretches from the northernmost tip of Alaska (Barrow) to the extreme south and west (Dutch Harbor and Ketchikan), to the Nome/Kotzebue area and to the Canadian border on the west. The largest concentration of membership is in the Southcentral, Southeast and Interior regions.

The Association's purpose is to foster and promote an economically sound transportation system in Alaska.

The regulated motor carrier industry is composed overwhelmingly of small firms with the vast majority grossing less than $500,000 a year. At the other end of the spectrum are the large well-established carriers and included in the group are some of the industry's publicly held firms.

The importance of a regulated motor carriage system, and the trucking industry as a whole to our State's vital transportation system cannot be overstated. Our motto, "If you got it, it came by truck," is not an attempt to overrate our industry. It is simply a fact that goods, supplies and materials are shipped to Alaska by outside manufacturing markets and that shipment always begins and ends with truck movement.

There are approximately 13,281 commercial trucks registered with the State of Alaska and approximately 9,178 commercial trailers. Most of these trucks and trailers are involved with freight movement and these numbers give some indication of the number of jobs offered to Alaskans within the trucking industry. The trucking industry is one of the largest private industry employers in the state.

Recently, Senate Bill 35 was introduced. Senate Bill 35 is an act "relating to transportation merging the Alaska Transportation Commission with the Alaska Public Utilities Commission; and providing for an effective date." Inherent in this bill are some changes in the manner in which motor transportation is regulated in the State of Alaska.

Senate Bill 35 contains a number of items. First, it increases certain weight and application fees for aircraft and motor vehicles. While the state trucking association is cognizant of the need to keep fees in line with inflation, the Association is partially opposing a fee increase at this time because of the recent federal increase in taxes which, in part, are directed exclusively against the motor transportation industry. The association will provide a separate statement dealing with the increased fees portion of the bill.

I. Merger of the Alaska Transportation Commission (ATC) with the Alaska Public Utilities Commission. The Alaska Trucking Association has considered the findings and recommendations of the Division of Legislative Audit in this regard but believes that the merger of the two commissions is not warranted at this time. The Association's reasons for opposing the merger are as follows:

1. The Public Utilities Commission, at the present time, is still assimilating the Alaska Pipeline Commission. It already has an overcrowded docket and the assimilation of another 500 to 600 cases annually would, of necessity, dilute the time spent on transportation matters by the state regulatory commission. The Association believes that the Commission should be directed to refocus its attention on the proper administration of the state Transportation Act. The Association believes that this will best serve the public interest.

2. The saving in space and personnel would, at best, be illusory. Commissioner Miller, in his testimony before this committee, indicated that the Commission was underfunded by over $100,000 in its last budget. The legislative audit report suggests that the change be a reorganization of policies, procedures and staffing. However, based on a review of the recommendations put forth by the report, it would appear that more staff and commission work is needed rather than less; hence, the Association does not believe any real cost savings will result from a merger.

3. Alaska's unique needs and isolation from the contiguous 48 states makes it totally dependent upon motor and air transportation. The previous Governor and the Legislature have already recognized the importance of transportation to the state in forming the Department of Transportation. The same recognition should be given to the regulatory phases of transportation. In fact, it might be noted that the federal government has two agencies dealing with motor and air transportation, to wit, the Interstate Commerce Commission and the Civil Aeronautics Board.

4. Regulatory policies that are necessary in dealing with transportation, i.e., a greater degree of competition in the marketplace, a greater number of carriers, a greater number of diverse needs to be met, are not consistent with the regulatory policies that might be applied for public utility regulation which deal with companies with high fixed assets and, generally, a monopoly or quasi-monopoly service area. This difference was one of the original justifications for splitting the Alaska Transportation Commission from the original Public Services Commission. This difference was true in 1967 when the split occurred and is even more true today in light of Alaska's diverse transportation needs.

II. The Legislature Should Direct the Commission to Undertake Regulatory Initiatives in Three Major Areas, (1) Certificates of Authority, (2) Tariffs, and (3) Safety Inspections.

1. Certificates of Authority. The Association recommends two initiatives in this area.

(A) The legislative audit report, in its Recommendation No. 2, advised the Legislature that temporary authority to motor and air carriers should be granted in accordance with statutes. Discussion of the Commission practices in this regard is already contained in the legislative audit report and will not be further discussed herein. The audit report also directed the Commission to strengthen its review of a carrier's financial fitness. Financial fitness is critical in determining the suitability of a given carrier to provide transportation. If a carrier is in financial trouble, often the first items to go are maintenance and safety procedures. If a carrier's financial capability is more closely examined to begin with, there will be greater assurance that the carrier will have sufficient assets to pay its expenses as they become due. While there is no guarantee in the transportation business that a company will make money, at least a closer financial analysis will insure a greater probability of a financially solvent carrier and will thus enable the carrier to operate properly and safely.

(B) The second aspect of authority certification that is of great concern to the association is dealing with carriers who operate either beyond their authority or who have no authority at all. The legislative audit committee, in its Recommendation No. 4, recommended that the Commission Staff take a stronger position and a stronger enforcement posture. Alaska Transportation Commission Chairman Miller, in testifying before the committee last week, noted that the Commission was aware of 50 unauthorized operations. The committee should realize that the failure to take an efficient enforcement posture ultimately costs every consumer who deals with an authorized carrier more in shipping charges. A carrier's revenue must come through its tariff charges. If the total pool of common carrier traffic is being diverted to non-authorized operations, the authorized carrier, in order to cover its costs, must, of necessity, raise rates. A strong enforcement posture will reduce this illegal siphoning off of carrier traffic revenue and will reduce the pressure to increase transportation charges.

2. Tariffs. Again, the Association recommends two initiatives in this area.

(A) First, the Commission must perform field surveys of regulated motor carriers. The legislative audit report noted that of 630 regulated carriers in 1981, 38 field surveys were performed, all on air carriers. None were performed on any motor carriers. Illegal operations can also include illegal applications of tariffs. Carriers provide services usually below their tariffs, again illegally siphoning off traffic and having the same financial effect on authorized carriers as illegal operations.

The Association would note that some of the smaller carriers may not have experienced tariff personnel. The ATC, in performing its field surveys, can assist the carriers' personnel in the proper application of the carriers' tariffs. The Association is not recommending that a Commission enforcement agent be placed in every trucking concern's office, but rather that the Commission use its best judgment in insuring tariff compliance. Obviously, if a carrier repeatedly violates its tariff or misuses its authority, it should be prosecuted to the full extent of the law.

(B) The second area in tariff regulation is the need by the Commission to propose appropriate cost and accounting regulations in order that it will be able to properly review tariff filings by carriers. Again, the legislative audit report, in its Recommendation 3(B) recommended that the Commission require the carriers to submit appropriate financial data for rate changes. To this, the Association has no objection, per se; however, the Commission must adopt suitable accounting and rate regulations and perform proper cost studies since the filing of raw financial data alone is not enough to review the appropriateness of tariff filings in motor transportation. The Association supports the need for such accounting and cost justification regulations, but the initiative must come from the Commission. Obviously, with 630 motor and air carriers and the recognition that not all of these companies are large companies, the type of information that the Commission will need must be tailored to the competitive needs of the industry and the geographical location. However, something must be done because already there is evidence of predatory pricing which will only further exacerbate the weak financial condition of the motor transportation industry in Alaska. Also, it might be noted that such regulations would give shippers and other members of the public an opportunity to have their input in the regulatory process. The Commission already has powers to prevent predatory pricing by using its minimum rate order powers.

3. Safety Inspections. The Association understands that as of March 11, 1983, money for the safety inspection function of the Commission has run out. It is unthinkable to the Association that Alaskans can think of multi-million dollar capital projects being funded while this important element of public safety is neglected. The Commission is urged to institute and the Legislature is urged to appropriate sufficient funds for safety inspections. Under Recommendation No. 5 of the legislative audit report, it was noted that field surveys should include safety inspections. The Association concurs with inspections because of the obvious benefit of inspections and surveys to both the public and to the motor carrier, i.e., less probability of accidents occurring. Also, such inspections have a more positive effect in that if the number of accidents occurring are reduced, presumably insurance rates would go down and the pressure to raise transportation rates would decrease. Again, the initiative must come from the Commission along with the assistance of both the Legislature and the Alaska transportation industry.

4. Other Matters. In regard to the de-regulation of dump truck operators, the Association believes that this should be a separate subject matter in separate legislation and not in the bill. The Dump Truck Industry has its own association. This Association does perform some services for them such as providing the casualty insurance trust; however, it is believed that the best interests of the public are served by severing this provision from the bill and dealing with it separately and allowing the affected industry to speak for itself.

III. CONCLUSION

THE LEGISLATURE SHOULD EXTEND THE ALASKA TRANSPORTATION COMMISSION FOR FOUR (4) YEARS AND SUPPORT THE COMMISSION WITH ADEQUATE FUNDING.

The Alaska Trucking Association generally endorses the results of the legislative audit. However, it believes that a merger of the Alaska Transportation Commission with the Alaska Public Utilities Commission will only exacerbate the problems set forth in the legislative audit report rather than solve them. For example, the legislative audit Recommendation No. 6 suggests that commissioners and hearing examiners write all of the formal orders of the Commission. Obviously, the suggestion of transferring only one commissioner who has a background in transportation to the Public Utilities Commission if merger is approved and attempting to comply with this recommendation is inconsistent. What the Alaska Transportation Commission needs is more help and not less.

Generally, the suggestions made by the legislative audit and endorsed by the Alaska Trucking Association all require time to implement. Tariff regulations are needed on costs and accounting. The legislative auditors noted several areas in which the Commission must improve its internal procedures. The Association believes that what is needed is suitable financial support for the Commission and not merger of the Commission with the Public Utilities Commission.

It is, therefore, the recommendation of the Alaska Trucking Association that the Alaska Transportation Commission's term be extended under the Sunset Law for four (4) years. Coupled with that should be a legislative committee report urging the Commission to comply with the recommendations of the legislative audit. Legislative direction should be given with adequate and sufficient financial support, both from manpower and budgetary standpoints, to enable the Commission to effectively do its job. The Association does not think it is necessary to have a Commission enforcement agent threatening civil penalties to insure compliance with the Commission's regulations. For the most part, most air and motor operators try diligently to comply with the law. However, because transportation regulations, as in any other regulated field, are often complicated, Commission guidance is needed to assure that operators comply with the law. However, where appropriate, the full enforcement capability of the Commission should be brought to bear on those operators who refuse to comply with the law.

Good regulation should be continued in the public interest. It assists the public, which, after all, involves each of us as consumers; it assists shippers; and it assists those connected with the motor carrier industry.

Thank you for the opportunity to provide this statement of position.

ALASKA TRUCKING ASSOCIATION, INC.

By H. L. Brasher
Its Managing Director

ALASKA STATE LEGISLATURE - SENATE

COMMITTEE ON LABOR AND COMMERCE

SENATOR RICHARD I. ELIASON
CHAIRMAN

POUCH V • JUNEAU, ALASKA 99811
(907) 465-3844

OFFICIAL BUSINESS

4/12/83

LETTER OF INTENT
FOR
CSSB 184

During the scheduled hearings in which the Alaska Transportation Commission (A.T.C.) was discussed and reviewed, many problem areas were identified. The Performance Review of the Alaska Transportation Commission conducted by the Division of Legislative Audit, April 1, 1982, concluded that the functions of A.T.C. could be better performed if A.T.C. were to merge with the Alaska Public Utilities Commission.

However, several questions were raised which remain unanswered:

1) Is State involvement in the Essential Air Service Program required?

2) Does the State want to deregulate surface and air transportation within Alaska?

3) What method does the State wish to employ to assure the public that air and motor carriers have sufficient insurance coverage to protect the public's interest?

4) What is the role of the Alaska Transportation Commission in regard to a commercial vehicle safety program?

5) Would a citizen's board be an appropriate mechanism to perform the oversight functions which are currently the responsiblity of the Commissioners of the Alaska Transportation Commission.

With the passage of this legislation, it is the intent of the Senate Labor and Commerce Committee that the Office of Management and Budget conduct a thorough performance review of the functions of A.T.C. The review will include, but will not be limited to, the scope of areas previously outlined.

The Office of Management and Budget will report back to the Thirteenth Legislature within ten days after the second session convenes in 1984. The report shall outline the findings of the audit as well as specific actions to implement any changes recommended.

Respectfully submitted,

Sen. Dick Eliason, Chair

MAR 2 1983

ATC

NOTICE OF PROPOSED CHANGES IN THE REGULATIONS
OF THE ALASKA TRANSPORTATION COMMISSION

Notice is hereby given that the Alaska Transportation Commission, under authority vested by AS 42.10, proposes to repeal regulations in Title 3, Part 6 of the Alaska Administrative Code, dealing with forwarders, to implement AS 42.10.070, .080 as follows:

> 3 AAC 64.340 is repealed. This section is replaced by 3 AAC 69.020(c) and is therefore no longer necessary.

Notice is also given that any person interested may present written statements or arguments relevant to the action proposed by delivering a copy of his comments to the Alaska Transportation Commission, Frontier Building, 3601 C Street, Suite 778, Anchorage, AK 99503, before April 1, 1983.

Any person who believes that oral hearing is necessary to resolve this matter shall in writing set out the reasons why they believe oral hearing is necessary and submit them to this Commission on or before March 20, 1983. If no requests for oral hearing are received, the Commission shall proceed on written submission.

This action is not expected to require an increased appropriation.

The Alaska Transportation Commission upon its own motion or at the instance of any interested person, may after April 6, 1983 adopt the proposals substantially as described above without further notice or may decide to take no action on them.

DATED at ANCHORAGE, ALASKA, this 24th day of February 1983.

Keith H. Miller
Commissioner

All correspondence refer to Docket 82-630-RR/O

ALASKA TRANSPORTATION COMMISSION

Carolyn J. Homme

Carolyn J. Homme, AST

Alaska State Legislature

House of Representatives

Committee on Transportation

Rep. Bette Cato, Chairman

Pouch V
State Capitol
Juneau, Alaska 99811
(907) 465-4858

DATE: 20 April 1983

TO: REP. WALTER FURFACE, CHAIRMAN
Labor and Commerce Committee

REP. AL ADAMS, CHAIRMAN
Finance Committee

FROM: Rep. M. W. Miller, Acting Chairman
House Transportation Committee

RE: HB 313

It is the recommendation of the House Transportation Committee that it is in the State's best interest to continue the Alaska Transportation Commission (ATC) because of the importance of the ATC in order to provide for the enforcement of surface and air transportation regulations. Alaska has seen a substantial increase in the surface and air transportation in recent years.

In testimony before the House Transportation Committee, several witnesses said that the reason the Alaska Transportation Commission has not been able to implement recommendations from previous audits, is that they have not received sufficient funding from the legislature to hire personnel necessary to accomplish the recommendations.

In testimony, several witnesses also said that the ATC has been neglectful in following practices to ensure an efficient operation. This was supported by the findings in the legislative audit.

It is further suggested that the qualifications of the Commissioners and the number of Commissioners setting on the ATC should be reviewed to ensure a more efficient operation both for the benefit of the carriers and the public in the area of safety.

The Alaska Transportation Commission is a most important link or buffer between the Federal government, the State and the industries, therefore, the ATC should be continued after having been fully reviewed.

M.W. Miller Vice Chairman
CHAIRMAN

H 60

Sec. 42.07.021. Term of office; vacancy. (a) The commissioners first appointed under AS 42.07.011 — 42.07.191 shall continue in office for terms of two, four and six years, respectively, but their successors shall each be appointed for a term of six years unless appointed to fill an unexpired term. A commissioner, upon the expiration of his term, shall continue to hold office until his successor is appointed and qualified. The term of a member begins on February 1.

(b) A vacancy arising in the office of commissioner shall be filled by appointment by the governor and confirmed by the legislature in joint session and an appointee selected to fill a vacancy shall hold office for the balance of the full term for which his predecessor on the commission was appointed.

(c) A vacancy in the commission does not impair the authority of a quorum of commissioners to exercise all the powers and perform all the duties of the commission.

(d) The governor may remove a commissioner from office for cause including but not limited to incompetence, neglect of duty or misconduct in office. A commissioner, to be removed for cause, shall be given a copy of the charges against him and afforded an opportunity to be publicly heard in person or by counsel in his own defense upon not less than 10 days notice. If a commissioner is removed for cause, the governor shall file with the lieutenant governor a complete statement of all charges made against the commissioner and his finding based on the charges, together with a complete record of the proceedings. (§ 2 ch 104 SLA 1969; am § 1 ch 218 SLA 1970)

Revisor's notes. — In this section "secretary of state" has been changed to "lieutenant governor" in conformity with the 1970 Alaska constitutional amendment (SJR 2) changing the designation of that office.

Sec. 42.07.031. Quorum. Two members of the commission constitute a quorum for the transaction of business, for the performance of a duty, or for the exercise of a power of the commission, except as provided in AS 42.07.181(d). (§ 2 ch 104 SLA 1969; am § 19 ch 115 SLA 1980)

Effect of amendments. — The 1980 amendment added "except as provided in AS 42.07.181(d)" to the end of the section.

Sec. 42.07.041. Qualifications. (a) Each commissioner shall be a citizen of the United States and a resident of the state.

(b) Each commissioner shall be appointed with regard to his fitness and ability to exercise the powers and duties of the commission, based upon his experience and familiarity with the principles of public utility regulation or his educational and experience background in the fields of engineering or transportation or law or business administration, finance and accounting.

(c) Members of the commission shall be qualified as follows:

(1) one member shall be a graduate of an accredited university with a major or degree in economics and have experience in the economics of public transportation;

(2) one member shall have substantial experience in transportation and

(A) be a graduate of an accredited university with a major or a degree in financial management or business administration; or

(B) have six years of experience in business or financial affairs;

(3) one member shall have 10 years management experience in a field of transportation. (§ 2 ch 104 SLA 1969; am § 20 ch 115 SLA 1980)

Effect of amendments. — The 1980 amendment added subsection (c).

Editor's notes. — Section 30, ch. 115, SLA 1980 provides: "Notwithstanding the provisions of AS 42.07.041(c), enacted in sec. 20 of this Act, the members of the Alaska Transportation Commission may continue in office for the remainder of their terms."

Sec. 42.07.061. Restrictions. A commissioner, employee or agent of the commission may not have an official or professional relation or connection with, or hold stock or securities or have a pecuniary interest in, any business or agency subject to regulation under AS 42.07.011 — 42.07.191, 02.05.010 — 02.05.260, or 42.10.010 — 42.10.430. Membership in a cooperative association is not a "pecuniary interest" within the meaning of this section. If a commissioner or employee becomes the owner of such stocks or securities or becomes pecuniarily interested in such a business or agency otherwise than voluntarily, his office or employment shall become vacant unless within a reasonable time he divests himself of the ownership or interest. A commissioner may not, for two years after leaving his position as a commissioner, act as a representative of a business or agency in a matter before the commission. (§ 2 ch 104 SLA 1969; am § 21 ch 115 SLA 1980)

Effect of amendments. — The 1980 amendment in the first sentence, substituted "A commissioner" for "No commissioner" at the beginning of the sentence, inserted "not" preceding "have an official" and added "02.05.010 — 02.05.260, or 42.10.010 — 42.10.430" to the end of the sentence. The amendment also added the last sentence.

Sec. 42.07.071. Compensation. Members of the commission are in the exempt service and are entitled to a monthly salary equal to Step C, Range 26 of the salary schedule in AS 39.27.011(a) for Juneau, Alaska. (§ 2 ch 104 SLA 1969; am § 8 ch 47 SLA 1974; am § 16 ch 148 SLA 1976; am § 16 ch 263 SLA 1976; am § 11 ch 80 SLA 1978; am §§ 12, 27 ch 3 SLA 1980)

Effect of amendments. — The second 1976 amendment substituted "as established under AS 39.23" for "equal to that of a district court judge payable in equal monthly installments."

The 1978 amendment substituted "set by AS 39.27.011(a) for Range 27, Step C of the state pay plan" for "as established under AS 39.23."

Section 12, ch. 3, SLA 1980, retroactive to January 1, 1979, and applicable to calendar year 1979, substituted "and are entitled to an annual salary of $49,000, payable monthly in 12 equal installments" for "under AS 39.25 and shall receive an annual salary set by AS 39.27.011(a) for Range 27, Step C of the state pay plan." Section 27 of ch. 3, retroactive to January 1, 1980, substituted "and are entitled to a monthly salary equal to Step C, Range 26 of the salary schedule in AS 39.27.011(a) for Juneau, Alaska" for the language substituted by § 12.

Sec. 42.07.101. Employment of commission personnel. (a) The commission may employ an executive director who shall have at least five years of experience in public transportation management or regulation, law, accounting, or an allied field. A member of the commission may act as executive director for no longer than 90 days. The commission may employ engineers, hearing officers, staff legal counsel, experts, clerks, accountants, and other agents and assistants it considers necessary. The executive director, his deputy, and staff legal counsel, and hearing officers to the commission are in the partially exempt service under AS 39.25.120. All other employees and agents of the commission are in the classified service under AS 39.25.100.

(b) In addition to its staff of regular employees, the commission may contract for and engage the services of consultants and experts the commission considers necessary. (§ 2 ch 104 SLA 1969; am § 2 ch 218 SLA 1970; am § 22 ch 115 SLA 1980)

Effect of amendments. — The 1980 amendment rewrote the section.

NOTES TO DECISIONS

The legislature intended the use of hearing officers without commissioners. Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Such use held lawful. — The Alaska transportation commission's use of a hearing officer, without the presence of the individual commissioners, violated neither the applicable state statutes nor constitutional due process. Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Article 2. Powers and Duties of Commission.

Section
121. General powers and duties
126. Exempt transportation carriers
131. Authority limited by federal law
136. Requirements for exempt carriers
171. Enforcement authority
181. Stop orders
191. Definition

Sec. 42.07.121. General powers and duties. The commission shall supervise and regulate transportation in the state as provided in AS 42.07.011 — 42.07.191 and in AS 02.05.010 — 02.05.260 and

42.10.010 — 42.10.430, and may do all things, whether specifically designated in AS 42.07.011 — 42.07.191 or in AS 02.05.010 — 02.05.260 or 42.10.010 — 42.10.430, which are necessary or convenient in the exercise of this power and jurisdiction. (§ 2 ch 104 SLA 1969; am § 1 ch 120 SLA 1972; am § 23 ch 115 SLA 1980)

Effect of amendments. — The 1980 amendment substituted "commission" for "Alaska Transportation Commission" and deleted "AS 42.15 and AS 42.25" following "AS 02.05.010 — 02.05.260 and 42.10.010 — 42.10.430" and "AS 42.15 or AS 42.25, or in addition thereto" following "AS 02.05.010 — 02.05.260 or 42.10.010 — 42.10.430."

Sec. 42.07.126. Exempt transportation carriers. Except as provided in AS 42.07.136, the jurisdiction of the commission does not extend to the regulation of ferry or bus transportation. (§ 24 ch 115 SLA 1980)

Sec. 42.07.131. Authority limited by federal law. The provisions of AS 42.07.011 — 42.07.191 and 02.05.010 — 02.05.260 and 42.10.010 — 42.10.430 apply to transportation carriers engaged in foreign commerce and interstate commerce to the extent permitted by the constitution and laws of the United States. (§ 2 ch 104 SLA 1969; am § 25 ch 115 SLA 1980)

Effect of amendments. — The 1980 amendment deleted "and AS 42.15" following "AS 42.10.010 — 43.10.430."

Sec. 42.07.136. Requirements for exempt carriers. The commission shall require carriers exempted under AS 42.07.126 and AS 42.10.020(5) to file information necessary to carry out AS 42.07.011 — 42.07.191 and to procure and maintain appropriate bodily injury and property damage liability insurance and cargo insurance from a company licensed to write insurance in the state or deposit security for the limits of liability and upon the terms and conditions the commission determines necessary for the reasonable protection of the public against damage and injury for which the carrier may be liable by reason of its operation. Evidence of the required insurance shall be filed with the commission. (§ 26 ch 115 SLA 1980)

Sec. 42.07.141. Administrative authority, regulations and hearing procedures.

NOTES TO DECISIONS

Effect of exemption, etc.

In accord with original. See Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Use of hearing officer without commissioners. — The Alaska Transportation Commission's use of a hearing officer, without the presence of the individual commissioners, violates neither the

applicable state statutes nor constitutional due process. Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Sec. 42.07.151. Application of Administrative Procedure Act.

NOTES TO DECISIONS

Effect of subsection (a), etc.

In accord with original. See Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Subsection (a) of this section specifically exempts the Alaska transportation commission from the requirements of both AS 44.62.340, forbidding the delegation of the hearing power absent express statutory authorization, and AS 44.62.500, requiring the hearing officer to prepare a proposed decision and forbidding members of the applicable government agency from voting on the decision if they have not heard the evidence. Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Use of hearing officer without commissioners. — The Alaska transportation commission's use of a hearing officer, without the presence of the individual commissioners, violates neither the applicable state statutes nor constitutional due process. Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Cited in Keystone Servs., Inc. v. Alaska Transp. Comm'n, Sup. Ct. Op. No. 1485 (File No. 3151), 568 P.2d 952 (1977).

Sec. 42.07.161. Investigations and hearing.

NOTES TO DECISIONS

Use of hearing officer without commissioners. — The Alaska transportation commission's use of a hearing officer, without the presence of the individual commissioners, violates neither the applicable state statutes nor constitutional due process. Alaska Transp. Comm'n v. Gandia, Sup. Ct. Op. No. 1964 (File No. 3469), 602 P.2d 402 (1979).

Sec. 42.07.171. Enforcement authority. An enforcement officer authorized and designated by the commission or by the Department of Public Safety has the authority set out in this section to enforce regulations and orders of the commission and to enforce the statutes that the commission administers. The commission may authorize the enforcement officer to

(1) require the operator of a surface or air vehicle which may be subject to the authority of the commission to present documents of vehicle registration, ownership, or other documents required by regulation to be in the possession of the operator;

(2) stop a surface or air vehicle which may be subject to the authority of the commission and request the right to inspect cargo within the vehicle to determine whether the operation of the vehicle violates a regulation or order of the commission or a statute which the commission administers; if the operator of that vehicle refuses to permit inspection of the vehicle or its cargo, the enforcement officer may, by

placing a seal on or around the cargo, prohibit the discharge of the cargo except at a point of destination and in the presence of an authorized enforcement officer of the commission;

(3) detain or remove from service a surface vehicle which may be subject to the authority of the commission when it reasonably appears to an enforcement officer of the commission that the continued operation of the vehicle would jeopardize the public safety; if an enforcement officer discovers a safety violation which in his opinion will not cause an accident or breakdown, he may order the vehicle to proceed to a designated repair area where the violation shall be corrected before the vehicle departs the area;

(4) issue citations for a violation of a regulation, order, or statute administered by the commission; and

(5) apply to a court for an appropriate order. (§ 26 ch 115 SLA 1980)

Sec. 42.07.181. Stop orders. (a) The commission may, following a hearing under its regulations, issue a stop order directed to a person violating or aiding or abetting a violation of a regulation, order, or statute administered by the commission.

(b) The commission may issue a stop order on its own motion before a hearing if it finds that immediate and irreparable harm is likely to occur to the public if the order is not issued. In addition, the commission may issue a stop order on its own motion if it finds that the party to whom the order is directed

(1) has failed to file required insurance or surety bonds;

(2) is no longer fit, willing and able to operate properly;

(3) is operating without an appropriate certificate or permit allowing him to conduct the transportation in question; or

(4) is operating a surface vehicle in a manner that will jeopardize the public safety if such an order is not issued.

(c) A stop order issued by the commission on its own motion and without a hearing is effective for 10 days and the order shall provide the respondent a hearing within 10 days. If requested by the respondent, the hearing shall be held in the judicial district in which the principal place of business of the respondent is located. If a hearing has been provided within 10 days, the commission may extend the stop order an additional 10 days in order that the commission may decide the matter.

(d) A single commissioner may issue a stop order without a hearing if he finds that a person engaging in surface transportation regulated under AS 42.10.010 — 42.10.430 does so in a manner that jeopardizes the public safety if a stop order is not issued. A stop order issued by a single commissioner is effective for 48 hours or until a stop order is issued by the commission under (c) of this section.

(e) A respondent subject to a stop order shall be given the opportunity to have the stop order rescinded because he has complied with its requirements.

(f) If, after a hearing, the commission finds that a respondent violated the stop order, the commission may fine that person not more than $1,000 for each day the violation of the stop order continues or an amount equal to revenue that person earned as a result of violating the stop order, whichever is greater.

(g) A person who refuses to allow an enforcement officer of the commission to examine his vehicle or cargo within the vehicle upon request under AS 42.07.171(2) and who is subsequently determined to have been in violation of a regulation, order, or statute under the jurisdiction of the commission may be fined $1,000 a day for each day of the violation or fined an amount equal to the gross revenue earned by the violator in that particular operation, whichever is greater.

(h) In this section, "respondent" means a person against whom a stop order or citation is directed. (§ 26 ch 115 SLA 1980)

Sec. 42.07.191. Definition. In AS 42.07.011 — 42.07.191, "commission" means the Alaska Transportation Commission. (§ 26 ch 115 SLA 1980)

Chapter 10. Alaska Motor Freight Carrier Act.

Article 1. Scope and Application.

Section
20. Exempt vehicles

Sec. 42.10.020. Exempt vehicles. AS 42.10.010 — 42.10.430 shall apply to all vehicles unless specifically exempted by this section. AS 42.10.010 — 42.10.430, except when specifically otherwise provided, does not apply to

(1) motor vehicles operated exclusively in the transportation of United States mail or in the transportation of newspapers or periodicals alone or in conjunction with an express service delivering packages not to exceed 100 pounds to any one receiver;

(2) motor vehicles owned and operated by the United States, the state, or a borough, city, town, or municipality in the state, or by a department of any of them, except when the vehicles are used to transport property of the general public for compensation in competition with other common carriers subject to this chapter, and to the extent regulation of vehicles operated by the United States is permitted by the laws of the United States;

(3) motor vehicles not exceeding an unladen total gross weight of 16,000 pounds, owned by a person deriving his primary source of livelihood from the operation of a ranch, farm, or dairy and which vehicle is used exclusively to transport his own ranch, farm, or dairy products to and from the market or to transport supplies, commodities, or equipment to be used on his ranch, farm, or dairy; motor vehicles driven under this classification shall be identified as farm vehicles in

Dec. '76 Statute

or necessary for an integral line of pipe to effectuate the transportation from point to point, excluding, however, gas processing plants, treaters and separators;

(10) "pipeline carrier" means the owner, including corporations organized under the laws of the United States or of other states, of any pipeline, as the term is defined in this section, or any interest in it;

(11) "regulation" includes rules;

(12) "tariff" means a rate, charge, toll, rule or regulation of an oil or gas pipeline facility relating to services furnished by the facility to the general public or other users for compensation. (§ 1 ch 139 SLA 1972; am §§ 7, 8 ch 6 FSSLA 1973)

Effect of amendment. — The 1973 amendment rewrote paragraphs (4) and (8).

Sec. 42.06.640. Short title. This chapter may be cited as the Alaska Pipeline Commission Act. (§ 1 ch 139 SLA 1972)

Chapter 07. Alaska Transportation Commission Act.

Article
1. Establishment of Transportation Commission (§§ 42.07.011 — 42.07.111)
2. Powers and Duties of Commission (§§ 42.07.121 — 42.07.161)

Repeal of former chapter. — Section 1, ch. 104, SLA 1969, repealed former Chapter 07, entitled "Alaska Transportation Commission." The former chapter consisted of §§ 42.07.010 — 42.07.150, and derived from § 1, ch. 139, SLA 1966.

Article 1. Establishment of Transportation Commission.

Section
11. Creation and composition
21. Term of office: vacancy
31. Quorum
41. Qualifications
51. Oath of office
61. Restrictions
71. Compensation of members of the Alaska Transportation Commission
81. Principal office and seal
91. Legal counsel
101. Employment and compensation of personnel
111. Annual report

Sec. 42.07.011. Creation and composition. (a) There is created the Alaska Transportation Commission within the Department of Commerce and Economic Development. The commission consists of three members appointed by the governor and confirmed by the legislature in joint session.

(b) The governor shall designate one member of the commission as chairman of the commission. This member shall serve as chairman for

a term of two years, but may be appointed for successive terms. (§ 2 ch 104 SLA 1969; am § 86 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "Department of Commerce and Economic Development" for "Department of Commerce" at the end of the first sentence of subsection (a).

Sec. 42.07.021. Term of office; vacancy. (a) The commissioners first appointed under this chapter shall continue in office for terms of two, four and six years, respectively, but their successors shall each be appointed for a term of six years unless appointed to fill an unexpired term. A commissioner, upon the expiration of his term, shall continue to hold office until his successor is appointed and qualified. The term of a member begins on February 1.

(b) A vacancy arising in the office of commissioner shall be filled by appointment by the governor and confirmed by the legislature in joint session and an appointee selected to fill a vacancy shall hold office for the balance of the full term for which his predecessor on the commission was appointed.

(c) A vacancy in the commission does not impair the authority of a quorum of commissioners to exercise all the powers and perform all the duties of the commission.

(d) The governor may remove a commissioner from office for cause including but not limited to incompetence, neglect of duty or misconduct in office. A commissioner, to be removed for cause, shall be given a copy of the charges against him and afforded an opportunity to be publicly heard in person or by counsel in his own defense upon not less than 10 days notice. If a commissioner is removed for cause, the governor shall file with the secretary of state a complete statement of all charges made against the commissioner and his finding based on the charges, together with a complete record of the proceedings. (§ 2 ch 104 SLA 1969; am § 1 ch 218 SLA 1970)

Legislative committee report. — For report on ch. 218, SLA 1970 (HCSSB 543), see 1970 House Journal, p. 1244.

Sec. 42.07.031. Quorum. Two members of the commission constitute a quorum for the transaction of business, for the performance of a duty, or for the exercise of a power of the commission. (§ 2 ch 104 SLA 1969)

Sec. 42.07.041. Qualifications. (a) Each commissioner shall be a citizen of the United States and a resident of the state.

(b) Each commissioner shall be appointed with regard to his fitness and ability to exercise the powers and duties of the commission, based upon his experience and familiarity with the principles of public utility regulation or his educational and experience background in the fields of engineering or transportation or law or business administration, finance and accounting. (§ 2 ch 104 SLA 1969)

Sec. 42.07.051. Oath of office. Each commissioner, before entering upon the duties of his office, shall take the oath prescribed for principal officers of the state. (§ 2 ch 104 SLA 1969)

Cross reference. — For further provisions as to oaths of office, see AS 39.05.040 and AS 39.05.130.

Sec. 42.07.061. Restrictions. No commissioner, employee or agent of the commission may have an official or professional relation or connection with, or hold stock or securities or have a pecuniary interest in, any business or agency subject to regulation under this chapter. Membership in a cooperative association is not a "pecuniary interest" within the meaning of this section. If a commissioner or employee becomes the owner of such stocks or securities or becomes pecuniarily interested in such a business or agency otherwise than voluntarily, his office or employment shall become vacant unless within a reasonable time he divests himself of the ownership or interest. (§ 2 ch 104 SLA 1969)

Sec. 42.07.071. Compensation of members of the Alaska Transportation Commission. The commissioners are in the exempt service under AS 39.25 and shall receive an annual salary equal to that of a district court judge. (§ 2 ch 104 SLA 1969; am § 8 ch 47 SLA 1974; am § 16 ch 148 SLA 1976)

Effect of amendments. — The 1974 amendment rewrote this section.

The 1976 amendment deleted "payable in equal monthly installments" from the end of the section.

Editor's note. — Section 16, ch. 263, SLA 1976, amends this section to read as follows: "Sec. 42.07.071. Compensation of members of the Alaska Transportation Commission. The commissioners are in the exempt service under AS 39.25 and shall receive an annual salary as established under AS 39.23."

Section 21, ch. 263, SLA 1976, provides that this section takes effect "on the effective date of the first recommendations submitted to the legislature under AS 39.23.080(c)."

Sec. 42.07.081. Principal office and seal. (a) The commission shall establish a principal office. For the convenience of the public or of parties to a proceeding the commission may hold hearings or other proceedings at another location.

(b) The commission shall have an official seal. (§ 2 ch 104 SLA 1969)

Sec. 42.07.091. Legal counsel. (a) The attorney general is the legal counsel for the commission. He shall advise the commission in legal matters arising in the discharge of its duties and represent the commission in suits to which it is a party. The attorney general may represent the public interest in any proceeding before the commission.

(b) The commission may employ temporary legal counsel in proceedings before the commission in which the attorney general is representing the public interest or a party before the commission. (§ 2 ch 104 SLA 1969)

Sec. 42.07.101. Employment and compensation of personnel. (a) The commission may employ engineers, hearing officers, experts, clerks, accountants, and other agents and assistants it considers necessary. Employees and agents of the commission, other than legal counsel, are in the classified service under AS 39.25.

(b) In addition to its staff of regular employees the commission may contract for and engage the services of the consultants, experts and hearing officers the commission considers necessary for the purpose of developing information or conducting studies, investigations, hearings or other proceedings. (§ 2 ch 104 SLA 1969; am § 2 ch 218 SLA 1970)

Legislative committee report. — For report on ch. 218, SLA 1970 (HCSSB 543), see 1970 House Journal, p. 1244.

Sec. 42.07.111. Annual report. The commission shall publish an annual report reviewing its work and submit it to the legislature by February 15 of each year. In addition, the report shall contain information and data which bear a significant relationship to the development and regulation of transportation in the state. (§ 2 ch 104 SLA 1969)

Article 2. Powers and Duties of Commission.

Section
121. General powers and duties
131. Authority limited by federal law
141. Administrative authority, regulations and hearing procedures
151. Application of Administrative Procedure Act
161. Investigations and hearing

Sec. 42.07.121. General powers and duties. The Alaska Transportation Commission shall supervise and regulate transportation in the state as provided in this chapter and in AS 02.05 and chs. 10, 15 and 25 of this title, and may do all things, whether specifically designated in this chapter or in AS 02.05 or chs. 10, 15 or 25 of this title, or in addition thereto, which are necessary or convenient in the exercise of this power and jurisdiction. (§ 2 ch 104 SLA 1969; am § 1 ch 120 SLA 1972)

Effect of amendment. — The 1972 amendment substituted "chs. 10, 15 and 25" for "chs. 10 and 15" and substituted "chs. 10, 15 or 25" for "chs. 10 or 15."

Editor's note. — Section 4, ch. 104, SLA 1969, provides: "All litigations, hearings, investigations and other proceedings whatsoever, pending under any law repealed by this Act, shall continue in full effect, and may be continued and completed under the provisions of this Act. All certificates, orders, rules, regulations, or tariffs made, issued, or filed under any law repealed by this Act, and in full effect upon May 21, 1969, shall remain in full effect for the term issued, or until revoked, terminated, or modified under the provisions of this Act. All existing contracts and obligations of the commission, entered into or created under any law repealed by this Act, and in effect upon May 21, 1969, shall remain in full effect and shall continue to be performed by the commission."

Sec. 42.07.131. Authority limited by federal law. The provisions of this chapter and AS 02.05 and chs. 10 and 15 of this title apply to transportation carriers engaged in foreign commerce and interstate commerce to the extent permitted by the constitution and laws of the United States. (§ 2 ch 104 SLA 1969)

Sec. 42.07.141. Administrative authority, regulations and hearing procedures. (a) The commission may adopt regulations, not inconsistent with the law, necessary or proper in the exercise of its powers or for the performance of its duties under this chapter.

(b) The commission shall adopt regulations, consistent with due process of law, which govern practice and procedure and the conduct of all investigations, hearings and proceedings which it holds.

(c) Common law and statutory rules of evidence apply to investigations, hearings and proceedings before the commission, except when the commission determines that their application is not required in order to assure fair treatment of all parties and that the evidence is relevant and of the sort on which responsible persons are accustomed to rely in the conduct of serious matters.

(d) The commission, each commissioner or an employee authorized by the commission may administer oaths, certify to all official acts, and issue subpoenas and other process to compel the attendance of witnesses and the production of testimony, records, papers, accounts and documents in an inquiry, investigation, hearing, or proceeding before the commission in any part of the state. The commission may petition a court of this state to enforce its subpoenas or other process. (§ 2 ch 104 SLA 1969)

Cross reference. — See Editor's note to AS 42.07.121.

Legislative policy behind subsection (b). — See Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

The legislature has in subsection (b) explicitly expressed a policy requiring compliance with due process guarantees. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Commission cannot conduct procedures on ad hoc basis. — The legislative policy behind subsection (b) clearly suggests that the commission should not conduct its procedures on an ad hoc basis. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

A consistent application of regulations giving parties adequate notice of internal policies and procedures would preclude ad hoc considerations and create standards that could be judicially reviewed in accordance with the due process guarantees anticipated in subsection (b). Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Section imposes mandatory obligation to adopt procedural regulations. — Although the adoption of regulations is under subsection (a) discretionary, subsection (b), on the other hand, deals specifically with regulations governing practice and procedure. Hence, this section imposes a mandatory obligation on the commission to adopt procedural regulations. Mukluk Freight Lines v. Nabors Alas Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Subsection (b) requires the commission to adopt rules of procedure as a prerequisite to the use of a modified procedure. The ad hoc application of the modified procedure to an application for transfer of operating authority is improper. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Effect of exemption in AS 42.07.151(a) on obligation. — It is significant that AS 42.07.161(a) exempted the commission's adjudications from nearly all of the standard procedural safeguards of the Alaska Administrative Procedure Act (AS 44.62). However, this exemption should not be interpreted as giving the commission an unlimited discretion to avoid all procedural safeguards, since subsection (b) requires the promulgation of procedural regulations consistent with due process. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Rather AS 42.07.151 and this section should be read in conjunction as giving the commission considerable flexibility in choosing its own procedures, but all the while requiring the procedures to meet due process of law. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Sec. 42.07.151. Application of Administrative Procedure Act. (a) The administrative adjudication procedures of the Administrative Procedure Act (AS 44.62) do not apply to adjudicatory proceedings of the commission except that final administrative determinations by the commission are subject to judicial review as provided in AS 44.62.560 — 44.62.570.

(b) AS 44.62.10 — 320, 44.62.640 and 44.62.650 apply to regulations adopted by the commission. (§ 2 ch 104 SLA 1969)

Rules for transfer of permits must be consistent with Administrative Procedure Act. — It is incumbent upon the commission to adopt rules for the transfer of permits consistent with the requirements of the Administrative Procedure Act (AS 44.62). Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Effect of subsection (a) on commission's obligation to promulgate procedural regulations. — It is significant that subsection (a) exempted the commission's adjudications from nearly all of the standard procedural safeguards of the Alaska Administrative Procedure Act (AS 44.62). However, this exemption should not be interpreted as giving the commission an unlimited discretion to avoid all procedural safeguards, since AS 42.07.141(b) requires the promulgation of procedural regulations consistent with due process. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Rather, this section and 42.07.141 should be read in conjunction as giving the commission considerable flexibility in choosing its own procedures, but all the while requiring the procedures to meet due process of law. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Sec. 42.07.161. Investigations and hearing. An investigation or hearing which the commission has power to undertake or to hold may be undertaken or held by or before any one or more commissioners designated for the purpose by the commission. The testimony and evidence in an investigation or hearing may be taken by the commissioner to whom the investigation or hearing has been assigned. All investigations or hearings before or by commissioners are considered to be the investigations and hearings of the commission. A determination or order of commissioners upon such an investigation or hearing, so undertaken, is not effective until approved and confirmed by the commission. Upon confirmation, the determination or order is the determination or order of the commission. (§ 2 ch 104 SLA 1969)

Chapter 66. Review of the Activities of Agencies, Boards and Commissions.

Section

10. Termination of state boards and commissions

Sec. 44.66.010. Termination of state boards and commissions. (a) Boards and commissions listed in this subsection expire on the date set out after each:

(1) Alcoholic Beverage Control Board (AS 04.06.010) — June 30, 1983;

(2) Alaska Transportation Commission (AS 42.07.011) — June 30, 1983;

(3) State Board of Parole (AS 33.15.010) — June 30, 1982;

(4) Alaska Public Utilities Commission (AS 42.05.010) — June 30, 1985;

(5) Repealed by § 20 ch 110 SLA 1981.

(6) Alaska Council on Science and Technology (AS 44.21.241) — June 30, 1983;

(7) Alaska Resources Corporation (AS 37.12.010) — June 30, 1992;

(8) Alaska Code Revision Commission (AS 24.20.075) — June 30, 1985;

(9) Rural Development Council (AS 44.47.160 — 44.47.190) — June 30, 1987;

(10) Older Alaskans Commission (AS 44.21.200) — June 30, 1985;

(11) Council on Domestic Violence and Sexual Assault — June 30, 1985.

(b) Upon termination, a commission listed in (a) of this section shall continue in existence until June 30 of the next succeeding year for the purpose of concluding its affairs.

(c) A commission scheduled for termination under AS 44.66.010 — 44.66.060 may be continued or reestablished by the legislature for a period not to exceed four years. (§ 3 ch 149 SLA 1977; am § 3 ch 101 SLA 1978; am § 10 ch 179 SLA 1978; am § 3 ch 44 SLA 1980; am § 1 ch 115 SLA 1980; am § 11 ch 131 SLA 1980; am § 11 ch 136 SLA 1980; am § 3 ch 172 SLA 1980; am § 1 ch 32 SLA 1981; am § 1 ch 64 SLA 1981; am § 4 ch 79 SLA 1981; am § 3 ch 101 SLA 1981; § 20 ch 110 SLA 1981; am Executive Order No. 48, § 5 (1981); am § 1 ch 65 SLA 1982; am § 31 ch 142 SLA 1982)

Revisor's notes. — In subsection (a)(6), the reference "AS 44.21.241" was substituted for "AS 44.21.200" to reflect the renumbering of that section by the revisor of statutes under AS 01.05.031.

Effect of amendments. — The first 1981 amendment substituted "1982" for "1980" in paragraph (3) of subsection (a).

The second 1981 amendment substituted "1983" for "1981" in subsection (a)(1).

The third 1981 amendment added paragraph (10) of subsection (a).

The fourth 1981 amendment added paragraph (11) of subsection (a).

The fifth 1981 amendment repealed

paragraph (5) of subsection (a) which provided a termination date for the Alaska Pipeline Commission.

The sixth 1981 amendment substituted "AS 44.21.241" for "AS 44.19.181" in paragraph (6) of subsection (a).

The first 1982 amendment substituted "1985" for "1982" in paragraph (8) of subsection (a).

The second 1982 amendment, effective July 1, 1982, deleted "Renewable" preceding "Resources Corporation" and substituted "June 30, 1992" for "June 30, 1982" in paragraph (7) of subsection (a).

Chapter

68. State-Owned Vehicles (§ 44.68.020)
74. Management and Disposition (§§ 44.74.010, 44.74.040, 44.74.070)

Chapter 68. State-Owned Vehicles.

Article

1. Use of State-Owned Vehicles (§ 44.68.020)

Article 1. Use of State-Owned Vehicles.

Section

20. Rules regarding the use of state-owned vehicles

Sec. 44.68.020. Rules regarding the use of state-owned vehicles. The Department of Transportation and Public Facilities shall prescribe rules which

(1) define what is the use of state-owned automotive and mechanical vehicles in the conduct of state business and distinguish this use from misappropriation for private use;

(2) prescribe use governing the storage of state-owned vehicles in those locations where storage space, under the jurisdiction of the Department of Highways, is available for storage of state-owned vehicles;

(3) provide for the marking of state-owned vehicles as property of the state and for the use of distinctive license tags for state-owned vehicles. (§ 2 ch 178 SLA 1959; am § 1 ch 12 SLA 1960; am § 50 ch 127 SLA 1974; am Executive Order No. 39, § 11 (1977))

Effect of amendments. — The 1977 amendment substituted "Department of Transportation and Public Facilities" for "Department of Highways."

Oct. 80 Statutes

The fourth 1980 amendment added paragraph (8) of subsection (a).

The fifth 1980 amendment added paragraph (9) of subsection (a).

Sec. 44.66.020. Agency programs. (a) Agency programs and activities listed in this subsection which are specifically designated as provided in AS 44.66.030 are subject to termination during the regular legislative session convening in the month and year set out after each:

(1) programs in the budget categories of general government, public protection, and administration of justice — January, 1980;

(2) programs in the budget categories of education and the University of Alaska — January, 1981;

(3) programs in the budget categories of health and social services — January, 1982;

(4) programs in the budget categories of natural resources management, development and transportation — January, 1983.

(b) An agency program or activity designated in (a) of this section shall be subject to termination during the regular legislative session convening four years after the preceding review and may be subject to termination at any time upon the recommendation of the Legislative Budget and Audit Committee and the concurrence of the legislature as if under AS 44.66.030. (§ 3 ch 149 SLA 1977)

Sec. 44.66.030. Program identification. During the legislative session preceding each of the years set out in AS 44.66.020, the Legislative Budget and Audit Committee shall designate, not later than March 1 of those years, the programs and activities within each program category which shall be subject to termination in the next fiscal year. The recommendations of the Legislative Budget and Audit Committee shall be submitted to the respective houses of the legislature in the form of a bill which, if enacted into law, would terminate those designated programs and activities on or before July 1 of the following year. (§ 3 ch 149 SLA 1977)

Sec. 44.66.050. Legislative oversight. (a) Before the termination, dissolution, continuation or reestablishment of a board or commission under AS 08.03.010 or AS 44.66.010, or of an agency program under AS 44.66.020 and 44.66.030, a committee of reference of each house, which shall be the standing committee of legislative jurisdiction as provided in the Uniform Rules of the Legislature, shall hold one or more hearings to receive testimony from the public, the commissioner of the department having administrative responsibility for each named board, commission, or agency program, and the members of the board or commission involved. The hearings may be joint hearings. The committee shall also consider the proposed budget of the board, commission, or agency program, prepared in accordance with AS 37.07.050(f), and the performance audit of the activities of the board, commission, or agency program, prepared by the legislative audit division as prescribed in AS 24.20.271(1). The committee may consider

any other report of the activities of the board, commission or program, including but not limited to annual reports, summaries prepared by the Legislative Affairs Agency, and any evaluation or general report of the manner of conduct of activities of the board, commission, or agency program prepared by the office of the ombudsman.

(b) During a public hearing, the board, commission or agency shall have the burden of demonstrating a public need for its continued existence or the continuation of the program, and the extent to which any change in the manner of exercise of its functions or activities may increase efficiency of administration or operation consistent with the public interest.

(c) A determination as to whether a board or commission or agency program has demonstrated a public need for its continued existence shall take into consideration the following factors:

(1) the extent to which the board, commission or program has operated in the public interest;

(2) the extent to which the operation of the board, commission, or agency program has been impeded or enhanced by existing statutes, procedures, and practices which it has adopted, and any other matter, including budgetary, resource, and personnel matters;

(3) the extent to which the board, commission or agency has recommended statutory changes which are generally of benefit to the public interest;

(4) the extent to which the board, commission or agency has encouraged interested persons to report to it concerning the effect of its regulations and decisions on the effectiveness of service, economy of service, and availability of service which it has provided;

(5) the extent to which the board, commission or agency has encouraged public participation in the making of its regulations and decisions;

(6) the efficiency with which public inquiries or complaints regarding the activities of the board, commission or agency filed with it, with the department to which a board or commission is administratively assigned, or with the office of the ombudsman have been processed and resolved;

(7) the extent to which a board or commission which regulates entry into an occupation or profession has presented qualified applicants to serve the public;

(8) the extent to which state personnel practices, including affirmative action requirements, have been complied with by the board, commission or agency to its own activities and the area of activity or interest; and

(9) the extent to which statutory, regulatory, budgeting or other changes are necessary to enable the agency, board or commission to better serve the interests of the public and to comply with the factors enumerated in this subsection.

(d) As to each board, commission, or agency program assigned to it for purposes of review, the committee of reference shall, not later than the 60th day of the legislative session, submit a report to the presiding officer of the house. The report shall contain a summary of the findings of the committee as to the compliance of the board, commission or program with the factors enumerated in (c) of this section, together with a summary or recommendations of the committee as to each of the following:

(1) an identification of the problems or the needs that the programs and activities of the board, commission or agency are intended to address;

(2) a statement, to the extent practicable, of the objectives of the program of the board, commission, or agency program, and its anticipated accomplishments;

(3) an identification of any other programs having similar, conflicting or duplicate objectives;

(4) an assessment of alternative methods of achieving the purposes of the program;

(5) an assessment of the consequences of eliminating the board, commission or program and consolidating its activities with another program, or of funding it at a lower level;

(6) a justification for the recommended continuation or extension of the board, commission or program, and an explanation of the manner in which it avoids duplication of or conflict with other efforts; and

(7) any other information which, in the opinion of the committee, would improve the performance of the board, commission or agency with respect to its representation of and responsiveness to the public interest.

(e) The committee of reference may introduce a bill providing for the reorganization or continuation of the board, commission or agency program. No more than one board, commission, or agency program shall be continued or reestablished in any legislative bill, and the board, commission, or agency program shall be mentioned in the title of the bill. (§ 3 ch 149 SLA 1977)

Sec. 44.66.060. Existing claims. This chapter shall not cause the termination or dismissal of a claim or right of a citizen against a board, commission or program of an agency terminated under this chapter which is subject to litigation. Claims and rights shall be assumed by the department to which the board or commission terminated under this chapter was attached for administrative purposes. (§ 3 ch 149 SLA 1977)

Dec. '76 Statute

or necessary for an integral line of pipe to effectuate the transportation from point to point, excluding, however, gas processing plants, treaters and separators;

(10) "pipeline carrier" means the owner, including corporations organized under the laws of the United States or of other states, of any pipeline, as the term is defined in this section, or any interest in it;

(11) "regulation" includes rules;

(12) "tariff" means a rate, charge, toll, rule or regulation of an oil or gas pipeline facility relating to services furnished by the facility to the general public or other users for compensation. (§ 1 ch 139 SLA 1972; am §§ 7, 8 ch 6 FSSLA 1973)

Effect of amendment. — The 1973 amendment rewrote paragraphs (4) and (8).

Sec. 42.06.640. Short title. This chapter may be cited as the Alaska Pipeline Commission Act. (§ 1 ch 139 SLA 1972)

Chapter 07. Alaska Transportation Commission Act.

Article

1. Establishment of Transportation Commission (§§ 42.07.011 — 42.07.111)
2. Powers and Duties of Commission (§§ 42.07.121 — 42.07.161)

Repeal of former chapter. — Section 1, ch. 104, SLA 1969, repealed former Chapter 07, entitled "Alaska Transportation Commission." The former chapter consisted of §§ 42.07.010 — 42.07.150, and derived from § 1, ch. 139, SLA 1966.

Article 1. Establishment of Transportation Commission.

Section

11. Creation and composition
21. Term of office; vacancy
31. Quorum
41. Qualifications
51. Oath of office
61. Restrictions
71. Compensation of members of the Alaska Transportation Commission
81. Principal office and seal
91. Legal counsel
101. Employment and compensation of personnel
111. Annual report

Sec. 42.07.011. Creation and composition. (a) There is created the Alaska Transportation Commission within the Department of Commerce and Economic Development. The commission consists of three members appointed by the governor and confirmed by the legislature in joint session.

(b) The governor shall designate one member of the commission as chairman of the commission. This member shall serve as chairman for

a term of two years, but may be appointed for successive terms. (§ 2 ch 104 SLA 1969; am § 86 ch 218 SLA 1976)

Effect of amendment. — The 1976 amendment substituted "Department of Commerce and Economic Development" for "Department of Commerce" at the end of the first sentence of subsection (a).

Sec. 42.07.021. Term of office; vacancy. (a) The commissioners first appointed under this chapter shall continue in office for terms of two, four and six years, respectively. All their successors shall each be appointed for a term of six years unless appointed to fill an unexpired term. A commissioner, upon the expiration of his term, shall continue to hold office until his successor is appointed and qualified. The term of a member begins on February 1.

(b) A vacancy arising in the office of commissioner shall be filled by appointment by the governor and confirmed by the legislature in joint session and an appointee selected to fill a vacancy shall hold office for the balance of the full term for which his predecessor on the commission was appointed.

(c) A vacancy in the commission does not impair the authority of a quorum of commissioners to exercise all the powers and perform all the duties of the commission.

(d) The governor may remove a commissioner from office for cause including but not limited to incompetence, neglect of duty or misconduct in office. A commissioner, to be removed for cause, shall be given a copy of the charges against him and afforded an opportunity to be publicly heard in person or by counsel in his own defense upon not less than 10 days notice. If a commissioner is removed for cause, the governor shall file with the secretary of state a complete statement of all charges made against the commissioner and his finding based on the charges, together with a complete record of the proceedings. (§ 2 ch 104 SLA 1969; am § 1 ch 218 SLA 1970)

Legislative committee report. — For report on ch. 218, SLA 1970 (HCSSB 543), see 1970 House Journal, p. 1244.

~~**Sec. 42.07.031. Quorum.** Two members of the commission constitute a quorum for the transaction of business, for the performance of a duty, or for the exercise of a power of the commission. (§ 2 ch 104 SLA 1969)~~

Sec. 42.07.041. Qualifications. (a) Each commissioner shall be a citizen of the United States and a resident of the state.

(b) Each commissioner shall be appointed with regard to his fitness and ability to exercise the powers and duties of the commission, based upon his experience and familiarity with the principles of public utility regulation or his educational and experience background in the fields of engineering or transportation or law or business administration, finance and accounting. (§ 2 ch 104 SLA 1969)

Sec. 42.07.051. Oath of office. Each commissioner, before entering upon the duties of his office, shall take the oath prescribed for principal officers of the state. (§ 2 ch 104 SLA 1969)

Cross reference. — For further provisions as to oaths of office, see AS 39.05.040 and AS 39.05.130.

Sec. 42.07.061. Restrictions. No commissioner, employee or agent of the commission may have an official or professional relation or connection with, or hold stock or securities or have a pecuniary interest in, any business or agency subject to regulation under this chapter. Membership in a cooperative association is not a "pecuniary interest" within the meaning of this section. If a commissioner or employee becomes the owner of such stocks or securities or becomes pecuniarily interested in such a business or agency otherwise than voluntarily, his office or employment shall become vacant unless within a reasonable time he divests himself of the ownership or interest. (§ 2 ch 104 SLA 1969)

Sec. 42.07.071. Compensation of members of the Alaska Transportation Commission. The commissioners are in the exempt service under AS 39.25 and shall receive an annual salary equal to that of a district court judge. (§ 2 ch 104 SLA 1969; am § 8 ch 47 SLA 1974; am § 16 ch 148 SLA 1976)

Effect of amendments. — The 1974 amendment rewrote this section.

The 1976 amendment deleted "payable in equal monthly installments" from the end of the section.

Editor's note. — Section 16, ch. 263, SLA 1976, amends this section to read as follows: "Sec. 42.07.071. Compensation of members of the Alaska Transportation Commission. The commissioners are in the exempt service under AS 39.25 and shall receive an annual salary as established under AS 39.23."

Section 21, ch. 263, SLA 1976, provides that this section takes effect "on the effective date of the first recommendations submitted to the legislature under AS 39.23.080(c)."

Sec. 42.07.081. Principal office and seal. (a) The commission shall establish a principal office. For the convenience of the public or of parties to a proceeding the commission may hold hearings or other proceedings at another location.

(b) The commission shall have an official seal. (§ 2 ch 104 SLA 1969)

Sec. 42.07.091. Legal counsel. (a) The attorney general is the legal counsel for the commission. He shall advise the commission in legal matters arising in the discharge of its duties and represent the commission in suits to which it is a party. The attorney general may represent the public interest in any proceeding before the commission.

(b) The commission may employ temporary legal counsel in proceedings before the commission in which the attorney general is representing the public interest or a party before the commission. (§ 2 ch 104 SLA 1969)

Sec. 42.07.101. Employment and compensation of personnel. (a) The commission may employ engineers, hearing officers, experts, clerks, accountants, and other agents and assistants it considers necessary. Employees and agents of the commission, other than legal counsel, are in the classified service under AS 39.25.

(b) In addition to its staff of regular employees the commission may contract for and engage the services of the consultants, experts and hearing officers the commission considers necessary for the purpose of developing information or conducting studies, investigations, hearings or other proceedings. (§ 2 ch 104 SLA 1969; am § 2 ch 218 SLA 1970)

Legislative committee report. — For report on ch. 218, SLA 1970 (HCSSB 543), see 1970 House Journal, p. 1244.

Sec. 42.07.111. Annual report. The commission shall publish an annual report reviewing its work and submit it to the legislature by February 15 of each year. In addition, the report shall contain information and data which bear a significant relationship to the development and regulation of transportation in the state. (§ 2 ch 104 SLA 1969)

Article 2. Powers and Duties of Commission.

Section	Section
121. General powers and duties	151. Application of Administrative Procedure Act
131. Authority limited by federal law	161. Investigations and hearing
141. Administrative authority, regulations and hearing procedures	

Sec. 42.07.121. General powers and duties. The Alaska Transportation Commission shall supervise and regulate transportation in the state as provided in this chapter and in AS 02.05 and chs. 10, 15 and 25 of this title, and may do all things, whether specifically designated in this chapter or in AS 02.05 or chs. 10, 15 or 25 of this title, or in addition thereto, which are necessary or convenient in the exercise of this power and jurisdiction. (§ 2 ch 104 SLA 1969; am § 1 ch 120 SLA 1972)

Effect of amendment. — The 1972 amendment substituted "chs. 10, 15 and 25" for "chs. 10 and 15" and substituted "chs. 10, 15 or 25" for "chs. 10 or 15."

Editor's note. — Section 4, ch. 104, SLA 1969, provides: "All litigations, hearings, investigations and other proceedings whatsoever, pending under any law repealed by this Act, shall continue in full effect, and may be continued and completed under the provisions of this Act. All certificates, orders, rules, regulations, or tariffs made, issued, or filed under any law repealed by this Act, and in full effect upon May 21, 1969, shall remain in full effect for the term issued, or until revoked, vacated, or modified under the provisions of this Act. All existing contracts and obligations of the commission, entered into or created under any law repealed by this Act, and in effect upon May 21, 1969, shall remain in full effect and shall continue to be performed by the commission."

Sec. 42.07.131. Authority limited by federal law. The provisions of this chapter and AS 02.05 and chs. 10 and 15 of this title apply to transportation carriers engaged in foreign commerce and interstate commerce to the extent permitted by the constitution and laws of the United States. (§ 2 ch 104 SLA 1969)

Sec. 42.07.141. Administrative authority, regulations and hearing procedures. (a) The commission may adopt regulations, not inconsistent with the law, necessary or proper in the exercise of its powers or for the performance of its duties under this chapter.

(b) The commission shall adopt regulations, consistent with due process of law, which govern practice and procedure and the conduct of all investigations, hearings and proceedings which it holds.

(c) Common law and statutory rules of evidence apply to investigations, hearings and proceedings before the commission, except when the commission determines that their application is not required in order to assure fair treatment of all parties and that the evidence is relevant and of the sort on which responsible persons are accustomed to rely in the conduct of serious matters.

(d) The commission, each commissioner or an employee authorized by the commission may administer oaths, certify to all official acts, and issue subpoenas and other process to compel the attendance of witnesses and the production of testimony, records, papers, accounts and documents in an inquiry, investigation, hearing, or proceeding before the commission in any part of the state. The commission may petition a court of this state to enforce its subpoenas or other process. (§ 2 ch 104 SLA 1969)

Cross reference. — See Editor's note to AS 42.07.121.

Legislative policy behind subsection (b). — See Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

The legislature has in subsection (b) explicitly expressed a policy requiring compliance with due process guarantees. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Commission cannot conduct procedures on ad hoc basis. — The legislative policy behind subsection (b) clearly suggests that the commission should not conduct its procedures on an ad hoc basis. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

A consistent application of regulations giving parties adequate notice of internal policies and procedures would preclude ad hoc considerations and create standards that could be judicially reviewed in accordance with the due process guarantees anticipated in subsection (b). Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Section imposes mandatory obligation to adopt procedural regulations. — Although the adoption of regulations is under subsection (a) discretionary, subsection (b), on the other hand, deals specifically with regulations governing practice and procedure. Hence, this section imposes a mandatory obligation on the commission to adopt procedural regulations. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 416 P.2d 408 (1973).

Subsection (b) requires the commission to adopt rules of procedure as a prerequisite to the use of a modified procedure. The ad hoc application of the modified procedure to an application for transfer of operating authority is improper. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Effect of exemption in AS 42.07.151(a) on obligation. — It is significant that AS 42.07.151(a) exempted the commission's adjudications from nearly all of the standard procedural safeguards of the Alaska Administrative Procedure Act (AS 44.62). However, this exemption should not be interpreted as giving the commission an unlimited discretion to avoid all procedural safeguards, since subsection (b) requires the promulgation of procedural regulations consistent with due process. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Rather, AS 42.07.151 and this section should be read in conjunction as giving the commission considerable flexibility in choosing its own procedures, but all the while requiring the procedures to meet due process of law. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Sec. 42.07.151. Application of Administrative Procedure Act. (a) The administrative adjudication procedures of the Administrative Procedure Act (AS 44.62) do not apply to adjudicatory proceedings of the commission except that final administrative determinations by the commission are subject to judicial review as provided in AS 44.62.560 — 44.62.570.

(b) AS 44.62.10 — 320, 44.62.640 and 44.62.650 apply to regulations adopted by the commission. (§ 2 ch 104 SLA 1969)

Rules for transfer of permits must be consistent with Administrative Procedure Act. — It is incumbent upon the commission to adopt rules for the transfer of permits consistent with the requirements of the Administrative Procedure Act (AS 44.62). Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Effect of subsection (a) on commission's obligation to promulgate procedural regulations. — It is significant that subsection (a) exempted the commission's adjudications from nearly all of the standard procedural safeguards of the Alaska Administrative Procedure Act (AS 44.62). However, this exemption should not be interpreted as giving the commission an unlimited discretion to avoid all procedural safeguards, since AS 42.07.141(b) requires the promulgation of procedural regulations consistent with due process. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Rather, this section and 42.07.141 should be read in conjunction as giving the commission considerable flexibility in choosing its own procedures, but all the while requiring the procedures to meet due process of law. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

Sec. 42.07.161. Investigations and hearing. An investigation or hearing which the commission has power to undertake or to hold may be undertaken or held by or before any one or more commissioners designated for the purpose by the commission. The testimony and evidence in an investigation or hearing may be taken by the commissioner to whom the investigation or hearing has been assigned. All investigations or hearings before or by commissioners are considered to be the investigations and hearings of the commission. A determination or order of commissioners upon such an investigation or hearing, so undertaken, is not effective until approved and confirmed by the commission. Upon confirmation, the determination or order is the determination or order of the commission. (§ 2 ch 104 SLA 1969)

HB 321 and
HB 322

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

March 31, 1983

The Honorable Joe L. Hayes
Speaker of the House
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting two bills to accomplish the first phase of a comprehensive remodeling and expansion program for the domestic terminal at the Anchorage International Airport. This program is consistent with the comprehensive analysis of air traffic trends and corresponding facility needs for our traveling public.

The first bill will increase the revenue bond authorization contained in AS 37.15.410 by $28,000,000. The second bill will appropriate the proceeds of the sale of this additional amount of bonds. The appropriation is to the Department of Transportation and Public Facilities for the purpose of making the improvements at the Anchorage International Airport and other expenses required to accomplish the sale of the bonds.

The need for this project is well recognized and I request that you work with me so that these improvements may begin this spring.

Sincerely,

Bill Sheffield
Governor

Re: Anchorage International
Airport Ramp Congestion

Representative Bette Cato, Chairman
House of Representatives
House Transportation Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Cato:

During the House Transportation Committee Hearing on HB 321 and 322, several committee members expressed concern about congestion on arrival and departure ramps at Anchorage International Airport (AIA). As stated at the hearings, the major cause of the congestion is insufficient curb space on both ramps. AIA curently has 420 feet of curb space on the upper level and 430 feet at the lower level. Based on forecast aviation activity we estimate a need for 555 feet on the upper level and 805 feet on the lower level by 1985. The curb space on the lower ramp does not even meet the 1981 demand and with traffic increasing every year the facilities are becoming more and more inadequate.

Given the fact that the facilities are not adequate to meet the demand for curb space, the airport management is faced with making the best of a poor situation. Representative Abood mentioned the need for striping to delineate the lanes on each ramp. This is imperative. The lanes are re-striped every year as a part of routine maintenance. The cross-walks were repainted two weeks ago. The lane striping has been completed on the lower ramp and will be completed within the next couple of days on the upper ramp.

The local People Mover buses do not utilize either the arrival or departure ramp area. Instead, their stop is located west of the approach ramps in front of the old terminal building. Tour buses are a different matter. After much negotiation with the tourism industry and the Anchorage Convention/Visitor's Bureau, a specified area for the buses was designated on the far south portion of the arrival ramp. This space is beyond terminal doors and out of the main traffic lanes. The buses are permitted to utilize this space only after their passengers have claimed their luggage and can stay only for the time taken to load the baggage and passengers.

The Servair buses have apparently caused some problems in the past by utilizing the arrival ramp, however, Servair does not operate at the Domestic Terminal now that the new International Terminal is open.

Taxiis queue north of the terminal and no more than two are allowed on the ramp area simultaneously. I am told that airport security policy monitor this closely to prevent abuse. I will request that they pay special attention in the future.

Rental car agencies do have prime parking spaces directly in front of the terminal. The Department of Transportation and Public Facilities (DOT&PF) has notified the agencies that their ready-car parking will have to be relocated. That relocation has been delayed pending the recommendations of a Surface Transportation Study for the airport area. Those study recommendations will be available in July of this year. The decision to move rental cars has been made. The only question remaining is a selection of the new site. DOT&PF is evaluating a couple of options for utilizing the existing rental car area for an additional loading area once the rental agencies are relocated.

Another concern expressed by the Committee was the poor attitude and lack of courtesy on the part of the airport police and security guards. I have notified the Airport Manager of this problem. The Airport Manager has spoken to the airport security force requesting strict adherence to polite and courteous interaction with the public. I would encourage the public to call the Airport Manager (William Chambers) if specific officers are being discourteous. The officers are posted on the ramps in order to assure curb service for all who need it. Their attitude should be one of public service at all times -- most especially when it is necessary to ask a traveller to move his car so someone else can use the space.

I realize the airport's attempts to keep cars from parking too long at the curb is an unpopular action. However, as the Committee pointed out, some times their are so many cars double and triple parked that there isn't even on through lane. In the absence of adequate curb space, assuring timely turnover of cars is DOT&PF's only recourse to assure that no one monopolizes the curb.

Thank you very much for your interest in the airport and for suggestions for improving facility operations. If you need additional information or have additional suggestions for improving airport operations, please let me know.

Sincerely,

William L. Snell

April 20, 1983

Honorable Betty Cato
Chairman, House Transportation Committee
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Representative Cato:

Before your committee are House Bills 321 and 322 relating to appropriations and authorization for bond sale for improvements at Anchorage International Airport. Reeve Aleutian Airways urges the committee's favorable consideration of both bills.

We have had the opportunity to review the plans for renovation and new construction at Anchorage International. Contemplated improvements at the terminal will benefit the entire state by enhancing traffic capability, passenger convenience, and freight handling in Anchorage.

Our transport system is by-in-large intra-state. The Aleutians and Western Alaska rely heavily on the commerce that Anchorage provides. Passage of HB321 and 322 will favorably affect development needs of fisheries, agriculture, and oil/minerals extraction industries; all of which are active in Western Alaska and the Aleutians.

Sincerely,

David A. Jensen
Vice-President

Anchorage International Airport
Domestic Terminal Expansion & Renovation

The proposed project involves construction of approximately 65,000 square feet of new terminal area and remodeling and renovation of approximately 96,000 square feet of existing terminal area. The estimated cost is $23.1 million calculated at 1983 construction costs and includes the following:

Extend existing terminal 100 feet to the east (both levels). The first level will house additional baggage claim and make-up areas, and mechanical room. The second level will provide additional counter space, snack bar, storage, elevator and gate lobbies.

Construct a new two-level commuter concourse providing passenger waiting space, equipment storage, crew lounge area, restroom facilities, snack bar, baggage makeup, baggage claim, and 8 gates.

Preliminary engineering and construction for remodeling Concourse B to accommodate domestic carrier operations. Remodeling includes electrical system upgrades, installation of a fire suppression system and conversion of customs area to office lease space.

Purchase and installation of a backup emergency power system.

Preliminary engineering and construction of apron utility work required with the terminal remodeling such as construction of hardstands, relocation of fire hydrants, water supply, air start and guidance systems.

III. SOURCE OF FUNDS TO OFFSET FISCAL IMPACT OF BILL:

This project will be paid for through revenue generated at the Anchorage Inernational Airport. The revenue projection does not assume any change in rates and fees, but does include anticipated revenue from the expansion, calculated at present terminal rental rates.

IV. ANALYSIS: Attached.

Prepared By: William R. Snell
Phone: 266-1440
Division: Acting Deputy Commissioner
Date: 3/30/83

Approved by Commissioner: [signature]
Date: 3/31/83
Department: Transportation and Public Facilities

PROJECT NEED:

Existing facilities in the passenger terminal complex are undersized. Facilities are not adequate for present domestic aviation traffic needs. Continued growth in aviation activity is anticipated, therefore, pressure for expanded facilities will increase. Existing international facilities have been relocated to the new international terminal, thus freeing space for domestic aviation needs. The west concourse must be remodeled before use by the domestic air carriers. Additional landside facilities, airport ticket offices, baggage claim and public areas are needed to accommodate domestic flight traffic. Air commuter facilities are minimal. New facilities are essential to provide adequate service to this growing segment of the aviation market. Construction of a new concourse off the east terminal expansion will accommodate commuters. Utility work airside is required in order to make the terminal expansion usable for the air carriers and commuter planes.

PROJECT DESCRIPTION:

Funding requested is for the first phase of a comprehensive remodeling and expansion program, at an estimated cost of $23.1 million. The project includes the following:

Extension of existing terminal 100-feet to the east (both levels). First level to house additional baggage claim and makeup areas and mechanical room. Second level to provide additional counter space, snack bar, storage, elevator and gate lobbies.

Construction of a commuter concourse providing passenger waiting space, equipment storage, crew lounge area, restroom facilities, snack bar, baggage makeup and baggage claim.

Preliminary engineering and construction to remodel west concourse to accommodate domestic carrier operations.

Preliminary engineering and construction of apron utility work required with the terminal remodeling.

PROJECT COST:

Bond sale costs at 3% to take care of closing costs, audit costs, fees to rating agencies, financial advisor, etc.

$28,000,000 x 3% = $840,000

In addition, an estimated $3 million was assumed for immediate deposit into the bond reserve fund. This is approximately 1 year's principal and interest on the bonds.

The estimated cash available after obligations is $24,160,000:

$28,000,000 - ($840,000 + $3,000,000) = $24,160,000

Capitalized interest during project construction has not been estimated. Depending on investment yield, interest earned on the cash could roughly equal or exceed interest obligations on the bonds. If, however, capitalized interest payments are required, DOT&PF will utilize International Airport Revenue Fund (IARF) cash for such payments. This is consistent with how capitalized interest was treated in earlier revenue bond issues.

OPERATING COSTS:

Costs identified are based upon our current costs for maintenance and custodial. which approximate $11 per square foot.

Added 66,000 sq. ft. x $11 = $726,000

1983 cost $726.0

1986 cost $810.0. Inflation is estimated at 6% per year.

No estimate is provided for the debt service since the yearly cost would vary so greatly based upon the interest rate and term of bonds.

Chapter 40. Motor Fuel Tax.

Article 1. General Tax Levy on Transfers or Consumption of Motor Fuel.

Section

10. Tax on transfers or consumption of motor fuel and expenditure of proceeds
20. [Repealed]
30. Refund for nonhighway use
35. Other refunds and credits
40. [Repealed]
50. Refund claim by affidavit
80. Examination of books and records
90. [Repealed]
100. Definitions

Sec. 43.40.010. Tax on transfers or consumption of motor fuel and expenditure of proceeds.

(a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all motor fuel which he has distributed or used during the month.

(d) Repealed by § 3 ch 166 SLA 1976.

(e) Sixty per cent of the proceeds of the revenue from the taxes on aviation fuel, excluding the amount determined to have been spent by the state in its collection, shall be refunded to a municipality owning and operating or leasing and operating an airport in the proportion that the revenue was collected at the municipal airport. All other proceeds of the taxes on aviation fuel shall be paid into a special aviation fuel tax account in the state general fund. The legislature may appropriate funds from this account for aviation facilities.

(f) The proceeds from the revenue from the tax on motor fuel used in boats and watercraft of all descriptions shall be deposited in a special watercraft fuel tax account in the general fund. The legislature may appropriate from this account for water and harbor facilities.

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e), (f) and (j) of this section, shall be deposited in a special highway fuel tax account in the state general fund. The legislature may appropriate funds from it for expenditure by the Department of Public Works directly or as matched with available federal-aid highway money for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend funds collected from taxes imposed by §§ 10 -- 100 of this chapter shall perform, when feasible, all construction or reconstruction projects by

contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of public works may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

(h) All motor fuel tax receipts shall be paid into the general fund and distributed to the proper accounts in the general fund. Valid motor fuel tax refund claims shall be paid from the highway fuel tax account in the general fund.

(i) Within 30 days after the legislature convenes the Department of Public Works shall submit an annual budget covering anticipated revenues and their expenditure, for the consideration and approval by the legislature. The budget shall cover all money collected or anticipated to be collected under §§ 10 — 100 of this chapter for the year following the adjournment of each regular session of the legislature.

(j) The proceeds from the tax on motor fuel used in snow vehicles and, unless a tax refund is applied for under § 40 of this chapter, other internal combustion engines not used in or in conjunction with a motor vehicle licensed to be operated on public ways shall be deposited in a special nonpublic highway use account in the general fund. The legislature may appropriate from this account to the Department of Highways for trail staking and shelter construction and maintenance.

(k) The tax on the transfer or consumption of motor fuel provided for in this section does not apply to liquified petroleum gas.

(*l*) If a dealer has a reasonable belief at the time of sale or transfer that fuel that is sold or transferred is not to be used as motor fuel, the dealer need not collect the motor fuel tax. If the tax is not collected, the dealer shall obtain a certificate of use from the buyer or transferee stating that the fuel that has been or will be purchased or received is not intended for use as motor fuel, The department may not collect the motor fuel tax from a dealer for fuel for which a certificate of use has been properly obtained under this subsection. The dealer shall retain a copy of each certificate of use obtained under this subsection for examination or audit on request by the department. The form of a certificate of use may be prescribed by regulation adopted by the department. (§ 48-5-2 ACLA 1949; am § 1 ch 80 SLA 1951; am § 1 ch 47 SLA 1955; am §§ 1, 2 ch 27 SLA 1957; am § 1 ch 134 SLA 1957; am § 1 art VI title II ch 152 SLA 1957; am § 2 art V title III ch 152 SLA 1957; am § 2 ch 124 SLA 1959; am §§ 1, 2 ch 20 SLA 1960; am § 1 ch 150 SLA 1960; am § 1 ch 110 SLA 1961; am § 1 ch 136 SLA 1961; am §§ 1 — 3 ch 131 SLA 1962; am § 1 ch 130 SLA 1968; am § 10 ch 143 SLA 1968; am §§ 1, 2 ch 216 SLA 1968; am §§ 1 — 3 ch 158 SLA 1970;

am § 3 ch 58 SLA 1971; am §§ 1, 2 ch 124 SLA 1971; am §§ 2, 3 ch 125 SLA 1971; am §§ 1 — 3 ch 153 SLA 1972; am § 3 ch 166 SLA 1976; am §§ 1, 2 ch 116 SLA 1977; am § 4 ch 82 SLA 1982)

Effect of amendments. — The 1982 amendment, effective June 4, 1982, added subsection (*l*).

Editor's notes. — Section 15, ch. 82, SLA 1982, provides: "The Department of Revenue may not collect the motor fuel tax from a dealer, as defined in AS 43.40.100(1), on a sale or transfer of motor fuel that occurs before the effective date of this Act [June 4, 1982] if the dealer did not collect the tax from a purchaser or transferee because of a reasonable belief that the fuel was not to be used as motor fuel, as that term is defined in AS 43.40.100(2), or if the dealer relied upon the purchaser's representation that the fuel would not be used as motor fuel. This section is intended to clarify ambiguities in the existing language of AS 43.40 concerning the party responsible for collecting the tax and to resolve an administrative dispute between certain fuel dealers and the Department of Revenue. For this reason, this section serves the general public interest in the fair and equitable administration of AS 43.40."

Sec. 43.40.020. Penalty for violation.

Repealed by § 46 ch 113 SLA 1980.

Cross references. — For present provisions concerning criminal penalties, see AS 43.05.290.

Editor's notes. — The repealed section derived from § 48-5-3, ACLA 1949; § 4, ch. 153, SLA 1972; § 3, ch. 116, SLA 1977.

Sec. 43.40.030. Refund for nonhighway use.

(a) Except as specified in AS 43.40.010(j), a person who uses motor fuel to operate an internal combustion engine is entitled to a refund of six cents a gallon if —

(1) the tax on the motor fuel has been paid;

(2) the motor fuel is not aviation fuel, or motor fuel used in or on watercraft; and

(3) the internal combustion engine is not used in or in conjunction with a motor vehicle licensed to be operated on public ways.

(b) The entire tax levied by this chapter shall be refunded to the purchaser on that part of the motor fuel used in a foreign country on which the tax has been paid when the fuel is sold and delivered in the state for non-highway use in a foreign country.

(c) The department shall establish the necessary regulations and prescribe the appropriate forms to prove that the motor fuel is taken to and used in foreign countries.

(d) If a person obtains motor fuel on which the tax levied by this chapter has been paid and the motor fuel is exempt from the tax, the person is entitled to a refund of the tax paid. (§ 2 ch 47 SLA 1955; am § 3 ch 27 SLA 1957; am § 2 ch 136 SLA 1961; am § 4 ch 158 SLA 1970; am § 3 ch 124 SLA 1971; am § 4 ch 125 SLA 1971; am § 4 ch 116 SLA 1977; am §§ 35, 36 ch 113 SLA 1980; am § 5 ch 82 SLA 1982)

Effect of amendments. — The 1980 amendment substituted a reference to this chapter in subsection (b), and added subsection (d).

The 1982 amendment, effective June 4, 1982, substituted "the tax has been" for "duty is" in subsection (b).

Editor's notes. — Section 52, ch. 113, SLA 1980 makes this section applicable to tax years beginning after December 31, 1979.

Sec. 43.40.035. Other refunds and credits. (a) A person who resells fuel on which the tax under AS 43.40.010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and a certificate of use is acquired under AS 43.40.010(1); or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

(b) A reseller may elect, with the express written consent of the supplier of the resaler, to receive the credit or refund under this section directly from the supplier rather than by filing a claim for the credit or refund with the department. When an election is properly made under this subsection, the supplier may claim the credit or refund from the department. To be effective an election under this subsection must be signed in quadruplicate by the reseller and by the supplier. The reseller and the supplier shall each file one copy of the election, with original signatures, with the department. The reseller and supplier shall each retain a copy of the election with original signatures for audit review by the department. If an election is made under this subsection, it may not be revoked without the express written consent of the supplier. (§ 6 ch 82 SLA 1982)

Effective dates. — Section 19, ch. 82, SLA 1982, makes this section effective June 4, 1982, in accordance with AS 01.10.070(c).

Sec. 43.40.040. Applications and permits for refund.

Repealed by § 45 ch 113 SLA 1980.

Cross references. — For present provisions concerning contents of applications for refunds, see AS 43.40.050(a).

Editor's notes. — The repealed section derived from § 3, ch. 47, SLA 1955; § 4, ch. 131, SLA 1962.

Section 52, ch. 113, SLA 1980 makes the repeal of this section applicable to tax years beginning after December 31, 1979.

Sec. 43.40.050. Refund claim by affidavit. (a) A person who claims a refund under AS 43.40.030 shall present the claim for the refund to the commissioner of revenue by affidavit upon a form provided by the commissioner. The claim shall include the name, address and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the machinery or equipment in which the motor fuel for which the refund is claimed was used.

The claim shall be accompanied by each invoice issued to the claimant at the time the motor fuel was purchased. The commissioner may require any additional information which the commissioner considers necessary for the administration of this subsection.

(b) A claim for refund under AS 43.40.030 or 43.40.035 shall be filed within one year from the date of the purchase of the motor fuel as indicated on the invoice, and failure to file within the one-year period is a waiver of the right to the refund. A claim is considered to be filed when the claim is mailed or personally presented to an office of the department.

(c) A reseller who claims a refund or credit under AS 43.40.035 shall present the refund claim to the department or to the supplier of that reseller by affidavit on a form provided by the department. The claim shall include the name, address, and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the reason for the refund or credit. The claim shall be supported by documentation required by the department. (§ 4 ch 47 SLA 1955; am § 1 ch 139 SLA 1960; am § 37 ch 113 SLA 1980; am §§ 7—9 ch 92 SLA 1982)

Effect of amendments. — The 1980 amendment in subsection (a), changed a reference to this chapter at the beginning and at the end of the subsection, substituted the present second sentence for the former material, which read: "with the information the commissioner requires", and substituted "was" for "is" preceding "purchase" at the end of the present third sentence.

The 1982 amendment, effective June 4, 1982, substituted "under AS 43.40.030" for "as provided in AS 43.40.010 — 43.40.100" and "the claim for the refund" for "his claim" in the first sentence of subsection (a), substituted "the commissioner" for "he" and "this subsection" for "AS 43.40.010 — 43.40.100" in the last sentence of subsection (a), inserted "under AS 43.40.030 or 43.40.035" in the first sentence of subsection (b), and added subsection (c).

Editor's notes. — Section 52, ch. 113, SLA 1980 makes this section applicable to tax years beginning after December 31, 1979.

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the Department of Revenue may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The Department of Revenue may cancel the refund permit of the claimant relying upon a fraudulent invoice for a period of not more than one year.

(b) Repealed by § 46 ch 113 SLA 1980. (§ 5 ch 47 SLA 1955; am § 46 ch 113 SLA 1980)

Effect of amendments. — The 1980 amendment repealed subsection (b).

Sec. 43.40.090. Criminal violation.

Repealed by § 46 ch 113 SLA 1980.

Cross references. — For present provisions concerning criminal penalties, see AS 43.05.290.

Editor's notes. — The repealed section derived from § 11, ch. 47, SLA 1955; § 4, ch. 27, SLA 1957.

Sec. 43.40.100. Definitions. In AS 43.40.010 — 43.40.100

(1) "dealer" means a person who sells or otherwise transfers in this state motor fuel upon which the taxes imposed by AS 43.40.010 — 43.40.100 have not been paid;

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries;

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries;

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public;

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale;

(E) fuel used by charitable institutions;

(F) fuel which is at least 10 percent alcohol by volume;

(G) fuel sold or transferred between qualified dealers;

(H) fuel sold to federal, state, and local government agencies for official use;

(I) fuel used in stationary power plants that generate electrical energy for private residential consumption;

(J) fuel used to heat private or commercial buildings or facilities, or;

(K) fuel used for other nontaxable purposes as prescribed by regulations adopted by the department;

(3) "user" means a person consuming or using motor fuel, who either

(A) purchases the fuel out of the state and ships it into the state for personal use in the state;

(B) manufactures the fuel in the state; or

(C) purchases or receives fuel in the state that is not taxed at the time of purchase or receipt or is taxed at a rate that is less than the rate prescribed by AS 43.40.010.

(4) "qualified dealer" means a person who (A) refines, (B) imports, (C) manufactures, (D) produces, (E) compounds, or (F) wholesales motor fuel, who satisfies criteria for qualified dealers established by the department by regulation and who obtains a qualified dealer's license from the department. (§ 48-5-1 ACLA 1949; am § 1 ch 56 SLA 1949; am § 9 ch 47 SLA 1955; am § 26 ch 70 SLA 1964; am §§ 6, 7 ch 158 SLA 1970; am § 1 ch 74 SLA 1972; am § 5 ch 116 SLA 1977; am § 10 ch 83 SLA 1980; am §§ 10—12 ch 82 SLA 1982)

Effect of amen — The 1980 amendment adde agraph (F) in paragraph (2).

The 1982 amendment, effective June 4, 1982, in paragraph (2), added subparagraphs (G)-(K); in paragraph (3) added the subparagraphs (A) and (B) designations, substituted "personal use" for "his own use" and deleted "or" from the end, in subparagraph (A), added "or" to the end of subparagraph (B), and added subparagraph (C); and added paragraph (4).

Chapter 45. School Tax.

Section
10—60. [Repealed]

Secs. 43.45.010 — 43.45.060. Tax imposed; persons exempt; record of withholding; overpayment, credit and refund; failure to file return; penalties.

Repealed by § 3 ch 166 SLA 1976; § 2 ch 64 SLA 1980; § 46 ch 113 SLA 1980.

Editor's notes. — The repealed chapter derived from §§ 37-4-3 — 37-4-6, ACLA 1949; § 1, ch. 41, SLA 1957; § 1, ch. 175, SLA 1957; § 1, ch. 149, SLA 1959; §§ 1—5, ch. 179, SLA 1960; § 111, ch. 127, SLA 1974.

Section 3, ch. 64, SLA 1980 makes the repeal of this chapter applicable to tax years beginning after December 31, 1979.

Section 4, ch. 64, SLA 1980 provides: "The Department of Revenue shall establish procedures for refunding to a taxpayer amounts received in payment of the school tax levied under AS 43.45 for the 1980 tax year and shall refund to the taxpayer the tax which was withheld for the 1980 tax year by an employer and paid to the department under AS 43.45.010(c). Other tax money paid to the Department of Revenue under AS 43.45 for the 1980 tax year shall be refunded to the taxpayer who made the payment."

Chapter 50. Tobacco Tax.

Article 1. Cigarette Tax Act.

Section
10. License
100. Civil penalties
150. Administration
160. [Repealed]

Sec. 43.50.010. License. (a) No person may sell, purchase, possess, or acquire cigarettes as a manufacturer, distributor, direct-buying retailer, vending machine operator, or buyer without a license.

(b) The department, upon application and payment of the fee, shall issue a license to each manufacturer, distributor, direct-buying retailer, vending machine operator, or buyer. The department shall make reasonable regulations which it considers necessary in respect to the application for and the issuance of licenses.

(c) The department may refuse to issue a license if there is reasonable cause to believe that the applicant has wilfully withheld information requested of him to determine his eligibility to receive a license, or if there is reasonable cause to believe that information submitted in the application is false or misleading and is not made in good faith.

Sec. 43.40.060. Separate invoices. The Department of Revenue may require the issuance of separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim. (§ 6 ch 47 SLA 1955)

Sec. 43.40.070. Refund warrants. Upon approval of a refund claim by the Department of Revenue, a warrant shall be drawn on the highway fuel tax account in the general fund in favor of the applicant in the amount of the claim. (§ 7 ch 47 SLA 1955; am § 5 ch 131 SLA 1962)

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the Department of Revenue may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The Department of Revenue may cancel the refund permit of the claimant relying upon a fraudulent invoice for a period of not more than one year.

(b) If an invoice relied upon for a refund claim is fraudulent, the claimant is guilty of a misdemeanor and is punishable by a fine of not more than $500. (§ 5 ch 47 SLA 1955)

Sec. 43.40.085. Preservation of books and records. Dealers and users shall preserve for three years all books and records pertaining to sales, transfers, and uses of motor fuel which are taxed under this chapter. (§ 5 ch 158 SLA 1970)

Sec. 43.40.090. Criminal violation. A person who uses motor fuel with knowledge that the tax has not been paid is guilty of a misdemeanor, and is punishable by a fine of not more than $500, or by imprisonment for not more than one year, or by both. (§ 11 ch 47 SLA 1955; am § 4 ch 27 SLA 1957)

C.J.S. reference. — 53 C.J.S. Licenses § 66.

Sec. 43.40.100. Definitions. In §§ 10—100 of this chapter

(1) "dealer" means a person who sells or otherwise transfers in this state motor fuel upon which the taxes imposed by this chapter have not been paid;

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries,

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries,

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public,

Dear Bette:

The House Transportation Committee is the prime sponsor of the following legislation, which is currently in the House Finance Committee:

HB 335 - Amend state motor fuel tax statute

As you know, many bills are carried over into the second session that have already been dealt with in other vehicles, or for other reasons, are no longer priorities of the prime sponsor. This is especially true of bills that come to Finance (particularly single subject appropriation bills) since so much legislation is referred to us. Therefore, please let me know which legislation you consider "active" for the upcoming session by responding to my Anchorage office no later than December 10th.

I appreciate your attention to this matter.

Sincerely,

Al Adams, Chairman
House Finance Committee

STATE OF ALASKA
DEPARTMENT OF REVENUE

M E M O R A N D U M

TO: The Honorable Representative Robert Bettisworth

FROM: Robert R. Kessel
Director, Audit Division
Department of Revenue

RE: Amendments to Motor Fuel Law

DATE: February 16, 1983

The Department of Revenue has conducted public meetings with motor fuel dealers and other interested parties in Fairbanks, Anchorage and Juneau. In the opinion of the Department of Revenue, if the following changes could be made to Chapter 40, Title 43 of the Alaska Statutes, the motor fuel dealers would feel satisfied with the existing law.

1. Eliminate the certificate of use requirement, in total, for fuel used exclusively for heating a private residence.

2. Eliminate the certificate of use requirement, in total, for fuel which is at least 10% alcohol by volume.

3. Require only an annual certificate of use for almost all other exempt sales, reserving some discretionary judgement for exempt sales handled on an individual basis under sub-paragraph (A) of Section 43.40.100(2).

In addition we believe that motor fuel dealers should be granted a 1% commission, limited to $100, to compensate them for collecting the tax and for the demands required in maintaining records. Alaska currently allows a commission for cigarette taxes and most other states have similar provisions. I believe the motor fuel dealers would, obviously, like this change. For example, application would be as follows:

Tax To Be Remitted	Commission
$ 600	6 (1%)
5,000	50 (1%)
10,000	100 (1%)
20,000	100 (1%-limited to $100)

dealers extra work and yet would not be costly to the state. There are a limited number of dealers.

The recommended change to AS 43.40, per attached Exhibit 1, would provide for the above recommendations; the changes could very well be incorporated into Senate Bill 117 (By the Rules Committee by Request of the Governor) which is "An Act making technical amendments relating to state taxation."

AS 43.40.010(c) is amended to read:

(c) Every dealer who sells or otherwise transfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the Department of Revenue by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by him during each month. If the monthly tax return is timely filed, one percent of the total monthly tax due, limited to a maximum of $100, can be deducted and retained to cover the expense of accounting and filing the monthly tax return. At the time the remittance is made, each dealer or user shall submit a statement to the Department of Revenue showing all [MOTOR] fuel which he has distributed or used during the month.

AS 43.40.010(l) is amended to read:

(l) If a dealer has a reasonable belief at the time of sale or transfer that fuel that is sold or transferred is not to be used as motor fuel, the dealer need not collect the motor fuel tax. If the tax is not collected, the dealer shall obtain a certificate of use from the buyer or transferee stating that the fuel that has been or will be purchased or received is not intended for use as motor fuel. The Department of Revenue may not collect the motor fuel tax from a dealer for fuel for which a certificate of

use has been properly obtained under this subsection. A Certificate of use is not required for fuel used to heat a private residence or for fuel which is at least 10% alcohol by volume. An annual certificate of use is required for all other exemptions, as listed under AS 43.40.100(2), except sub-paragraph (K) where certificate of use needs will be determined by the Department of Revenue. The dealer shall retain a copy of each certificate of use obtained under this subsection for examination or audit on request by the Department of Revenue. The form of a certificate of use may be prescribed by regulation adopted by the Department of Revenue.

AS 43.40.035(a) is amended to read:

(a) A person who resells fuel on which the tax under AS 43.40.010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements prescribed by AS 43.40-.010(L) have been fulfilled [A CERTIFICATE OF USE IS ACQUIRED UNDER AS 43.40.010(1)]; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

AS 43.40.100 IS AMENDED TO INCLUDE:

(L) fuel used in stationary power plants that generate electrical energy for commercial enterprises;

SUBJECT: Motor fuel tax provisions
(HB 335)

TO: Representative Bette Cato
Chairman, House Transportation Committee

FROM: Richard C. Folta
Legislative Counsel

In response to your request on the above referenced bill, I would suggest the following:

(1) On page 2, line 3, "a private residence" could be deleted and the words "a residential housing accommodation, defined in AS 34.06.050(3)" could be inserted. I believe this change would clarify what is meant.

(2) AS 43.40.010(a) and (b) could be amended by adding a new paragraph (4) as follows:

> (a)(4) The tax on diesel fuel used in vehicles defined in AS 28.10.011(1) and (7) is two cents a gallon.
>
> (b)(4) The tax on diesel fuel used in vehicles defined in AS 28.10.011(1) and (7) is two cents a gallon.

(3) AS 43.40.100 could be amended by adding a new section to read:

> (L) fuel used in stationary power plants of 100 KW or less that generate electrical power for commercial enterprises not for resale.

HB 335
Statutes Affected

(1) **(AS 34.06.050 (3)"residential housing accommodations" means a single or multiple unit private dwelling, including mobile homes, or a structure on the land that may be leased for any term of one week or longer, other condition of tenancy, that is used for dwelling purposes.)

(2) **(AS 28.100.011. Vehicles subject to registration. Every vehicle in the state shall be registered under this chapter except when the vehicle is

(1) driven or moved on a highway only for the purpose of crossing the highway from one private property to another, including an implement of husbandry as defined by regulation;

(7) driven or parked only on private property;)

**existing statute

HB 335
CONCEPTUAL AMENDMENTS

Amendment 1

AS. 43.40.100 is amended to read:
(L) fuel used in stationary power plants that generate electrical energy which is not for resale.

Amendment 2

AS 43.40.010 is amended by adding after (a) and (b), a new subsection (4)

(4) the tax on diesel fuel used in vehicles as specified in AS 28.100.011 (1) and (7) is two cents a gallon

**(AS 28.100.011. Vehicles subject to registration. Every vehicle in the state shall be registered under this chapter except when the vehicle is
(1) driven or moved on a highway only for the purpose of crossing the highway from one private property to another, including an implement of husbandry as defined by regulation;
(7) driven or parked only on private property;)

Amendment 3

Page 2, Line 3 delete "private residence" and insert residential housing accommodations as defined in AS 34.06.050(3).

**(AS 34.06.050 (3)"residential housing accommodations" means a single or multiple unit private dwelling, including mobile homes, or a structure on the land that may be leased for any term of one week or longer, other condition of tenancy, that is used for dwelling purposes.)

**existing statute

Amendment 1

AS. 43.40.100 is amended to read:
(L) fuel used in stationary power plants that generate electrical energy for commercial enterprises.

Amendment 2

AS.. 43.40.010 is amended by adding after (a) and (b), a new subsection (4)

(4) the tax on diesel fuel used in unlicensed or farm equipment is two cents a gallon

Amendment 3

Page 2, Line 3 delete "private residence" and insert <u>"all residential units"</u>

IV. ANALYSIS: Attach a separate page for any Analysis.

Prepared By: Robert R. Kessel
Phone: 465-2320
Division: Audit Division
Date: April 11, 1983

Approved by Commissioner: Ralf O Hoot
Date: 4/11/83
Department: Revenue

Distribution:
Original to Legislative Finance
Copy to Office of Management and Budget (for Legislature introduced bills)
Copy to Department (for Governor introduced bills)
Copy to Sponsor
Copy to Requestor (if different from Sponsor)

IV. Analysis

It is assumed in this fiscal note that about 100 dealers per month would take advantage of the 1% deductible allowance to cover the accounting expense of filing timely monthly tax returns.

It is also assumed that the average monthly deduction would be about $40.00 per month.

Although the bill is retroactive to April 1, 1983, we assume that the refunding for the period April 1 through June 30, 1983 would not occur until FY84 and that is why the FY84 impact is greater than subsequent years.

SMALL BOAT HARBOR CONCEPTUAL ALTERNATIVES

CITY OF KENAI
SMALL BOAT HARBOR

ALTERNATE NO. 2

FIGURE 4-3

TAMS ENGINEERS
A PROFESSIONAL CORPORATION

SPEACH BEFORE
THE
HOUSE TRANSPORTATION COMMITTEE
MARCH 14th. 1984

CHAIRMAN CATO AND MEMBERS OF THE HOUSE TRANSPORTATION COMMITTEE. THANK YOU FOR ASKING ME HERE TO DAY TO SPEAK TO YOU ON MATTERS CONCERNING THE FUNDING OF WORK RELATING TO THE CONSTRUCTION OF HARBOR FACILITIES IN THE KENAI RIVER FOR THE CITY OF KENAI.

THE LOWER KENAI RIVER HAS SERVED AS A SHELTERED HARBOR AND PROCESSING BASE FOR ONE OF THE LARGEST COMMERCIAL FISHERIES IN THE STATE OF ALASKA FOR NEARLY 80 YEARS. CURRENTLY NEARLY 700 LICENSED BOATS LIST KENAI AS THEIR HOME PORT, AND AT THE PEAK OF THE SALMON SEASON SEVERAL HUNDRED LOCAL AND NON-RESIDENT VESSELS ARE MOORED IN THE MAIN CHANNEL OF THE LOWER RIVER WAITING FOR FISHERIES OPENINGS.

IN SPITE OF THE INTENSE BOATING ACTIVITY THERE ARE CURRENTLY NO HARBOR FACILITIES IN THE LOWER RIVER AVAILABLE FOR USE BY THE BOATING PUBLIC. ALTHOUGH SOME OF THE MAJOR PROCESSORS PROVIDE SERVICES FOR THE FISHERMAN SELLING THEIR CATCHES TO THEM, THEPE ARE NO PUBLICLY ACCESSIBLE FACILITIES FOR MOORAGE, FUELING, REPAIRS OR OTHER SERVICES THAT ONE WOULD EXPECT IN A COMMUNITY WHERE THE COMERCIAL FISHERY IS A MAJOR SOURCE OF JOBS AND INCOMES.

A NUMBER OF STUDIES BY THE CORP OF ENGINEERS, THE STATE OF ALASKA, AND OTHERS HAVE BEEN UNDERTAKEN IN THE PAST SEVERAL YEARS TO REVIEW THE FEASIBILITY OF PROVIDING A SMALL BOAT HARBOR FOR KENAI. A RECURRING THEME RESULTING FROM THESE STUDIES IS THAT A HARBOR IS NEEDED TO SERVE THE COMMERCIAL AND RECREATIONAL BOATERS IN THE UPPER COOK INLET AND KENAI RIVER. MAJOR REASONS ADVANCED FOR DEVELOPING THE HARBOR INCLUDED; EXCESSIVE CONGESTION AND NAVIGATIONAL DELAYS AND HAZZARDS IN THE RIVER, LIMITED ACESS TO PRIVATE DOCKS RESULTINC IN LONG DELAYS PREVENTING RAPID OFF-LOADING OF FISH, DAMAGE TO VESSELS NESTED IN THE RIVER DUE TO STRONG TIDAL AND WIND INFLUNCE, DANGER IN LITERING SUPPLIES AND PERSONEL BACK AND FORTH BETWEEN BOATS AND SHORE, THE LACK OF A PROTECTED AND COAST GUARD APPROVED MARINE FUELING TERMINAL, AND THE POTENTIAL FOR GROWTH OF A LOCAL MARINE SERVICE AND SUPPLY INDUSTRY RESULTING IN A POSITIVE ECONOMIC STIMULUS TO THE REAGON.

EACH OF THE PREVIOUS STUDIES HAS CONCLUDED THAT THERE IA A NEED FOR A PROTECTED HARBOR, AND HAS INDICATED THAT A HARBOR COULD BE DESIGNED AND BUILT USEING EXISTING TECHNOLOGY. THE MAJOR OBSTACLE TO CONSTRUCTION AND OPERATION OF A FACILITY HAS BEEN THE CONCLUSION THAT HEAVY SILT LOAD IN THE ESTUARY WOULD NECESSITATE AN EXCESSIVELY BURDENSOME MAINTENANCE DREDGING PROGRAM. AS A RESULT VERY LTTTLE HAS BEEN ACCOMPLISHED IN THE PAST TO OBTAIN FUNDING AND CONSTRUCT A HARBOR.

THERE HAVE BEEN MANY OPINIONS VOICED AS TO THE CORRECTNESS OF PAST STUDIES AND MANY ASPECTS OF THE STUDIES HAVE BEEN QUESTIONED BECAUSE OF THE NON SIENTIFIC APPROACH THAT HAD BEEN

USED. FOR EXAMPLE THE UNITED STATES CORP OF ENGINEERS ONCE PRODUCED A STUDY INDICATING TWICE AS MUCH SILTING IN THE RIVER AS WE HAVE RECENTLY CONCLUDED ACTUALLY TAKES PLACE. OUR CONCLUSION IS BASED UPON LENGTHLY PHYSICAL SAMPLING AND PROFESSIONAL COMPUTER MODELING BY A LEADING COMPUTER MODELING LABRATORY. BEACUSE OF THESE MANY DESCREPENCYS IN REPORTING AND THE VARITY OF DIFFERENT OPINIONS AS TO THE POSSIBILITIES, FORMER MAYOR VINCENT O'RILEY, WHO HAS BEEN APPOINTED S MOST OF YOU KNOW, TO A POSITION IN JUNEAU BY GOVERNOR SHEFFIELD, APPOINTED THE PRESENT HARBOR COMMISSION TO FULLY INVESTIGATE THE ENTIRE MATTER OF A HARBOR FACILITY FOR THE CITY OF KENAI.

THE HARBOR COMMISSION FIRST CONVEINED UNDER CHAIRMAN ROBERT PETERKIN ON MARCH 21ST. 1979. I WAS ELECTED VICE CHAIRMAN OF THE COMMISSION AND SERVED UNDER CHAIRMAN PETERKIN UNTILL FEBRUARY 1982 WHEN MR PETERKIN RESIGNED BECAUSE OF PERSONEL REASONS AND AT THAT TIME I ASSUMED THE CHAIRMANSHIP AND HAVE

SERVED EVERY SINCE.

DURING A RECENT SENATE SUB COMMITTEE HEARING ON SB417, A BILL TO CREATE A CONSERVATION CORRIDOR 1/4 MILE WIDE ON EACH SIDE OF THE KENAI RIVER ALL THE WAY TO THE MOUTH OF THE RIVER, IT WAS STATED THAT ONE REALLY KNEW MUCH ABOUT THE KENAI RIVER. MEMBERS OF THE COMMITTEE, I CAN ASSURE YOU THAT THE CITY OF KENAI KNOWS MORE ABOUT OUR PORTION OF THE KENAI RIVER THAN ANY OTHER AGENCY OR GOVERNMENT GROUP IN THE ENTIRE UNITED STATES OF AMERICA. IN ORDER TO INSURE THAT ANY HARBOR BUILT WOULD MEET ALL REQUIREMENTS OF GOOD ENGINEERING, SOUND FISCAL MANAGEMENT AND LONG RANGE PLANNING THE CITY OF KENAI UNDERTOOK A LONG SERIES OF STUDIES THAT WERE FUNDED BY THE STATE OF ALASKA. WE HAVE WORKED FOR FIVE YEARS TO PRODUCE THE MOST COMPREHENSIVE STUDIES EVER COMPLETED ON OUR PORTION OF THE KENAI RIVER.

IT IS OUR BELIEF THAT THE CONSTRUCTION OF A HARBOR FACILITY WILL RELIEVE THE CONGISTION WITHIN THE RIVER THAT IS CREATED EACH SEASON WITH HUNDREDS OF BOATS MOORED EVERY WAY POSSIBLE IN THE MAIN CHANNEL. IN ADDITION THE CONSTRUCTION OF A COAST GUARD APPROVED FUELING FACILITY WILL PREVENT COSTLY DAMAGE TO THE RIVER ENVIRONMENT IN THE EVENT OF FUEL SPILLS.

FOR ALL OF YOU WHO HAVE LIVED WITH THE HIGH COST OF FREIGHT AS LONG AS I HAVE IN ALASKA YOU WILL RECOGNIZE THE BENIFIT OF DIRECT BARGE SHIPMENT TO ANY POINT IN ALASKA ACCESSABLE BY WATER. BY CONSTRUCTING A HARBOR WE WILL RID THE RIVER OF DANGEROUS HAZZARDS TO NAVAGATION. AFTER HAVING ACCOMPLISHED THIS TASKTHE CITY CAN PROCEED TO PARTICIPATE IN THE DEVELOPEMENT OF BARGE OFFLOADING FACILITIES THAT WILL BE USED BY COMPANIES NOW HESITTANT TO CALL AT THE PORT OF KENAI BECAUSE OF THE HAZZARDS OF ATTEMPTING TO DOCK A BARGE IN AMONGST A SWARM OF SMALL FISHING CRAFT. ADDITIONAL FREIGHT FACILITIES WILL CONTRIBUTE TO THE GROWTH OF THE AREA IN A VERY POSITIVE MANNER AND WILL BE A MAJOR BENIFIT TO ALL THE CITIZENS OF THE AREA AND THUS THE PROJECT BECOMES BENIFICAL TO ALL AND NOT JUST TO A SELECT GROUP.

DURING THE LEGISLATIVE SESSION OF 1980, THE HARBOR COMMISSION

WORKED WITH OUR LEGISLATIVE DELEGATION AND OBTAINED A GRANT OF $500,000.00 TO DO A COMPLETE STUDY OF THE KENAI RIVER AREA WITHIN THE CITY AND TO DEVELOPE A PLAN FOR A HARBOR. WE WERE ALSO CHARGED WITH THE RESPONSIBILITY OF COMPLETING A STUDY OF THE BLUFF ERROSION PROBLEM ALONG THE RIVER BANK IN THE OLDER PART OF KENAI. THIS SUDY WAS COMPLETED AND COPIES OF THE REPORT ARE AVAILABLE FROM THE CITY HALL.

IN FEBRUARY 1981 WE ENTERED INTO A CONTRACT WITH THE ENGINEERING FIRM OF CH2M HILL THE CONTRACT CALLED FOR SITE DETERMINATION STUDIES AND SOILS INVESTAGATIONS. THESE STUDIES WERE COMPLETED IN FEBRUARY OF 1982.

LATER THAT YEAR WE BEGAN A SERIES OF CONTRACTED WITH OUR PRESENT ENGINEERING FIRM, TIBBITS, ABBOTT, MC CARTHY, AND STRATTON WHO CAME WELL RECOMMENDED AND ARE A WORLD WIDE FIRM WITH SPECIALTYS IN HARBOR DESIGN. THE CONTRACTS ENTERED INTO INCLUDED A COMPLETE SILT AND SEDIMENTATION STUDY, THE BLUFF ERROSION STUDY, THE DESIGN OF ALTERNATIVE MARINE FACILITIES INCLUDING THE NEW BOAT RAMP,AND MOST RECENTLY THE FINANCIAL ANALYSIS AND CONCEPTUAL DESIGN STUDY.

DURING THE INTERVINING YEARS THE HARBOR COMMISSION HAS SECURED ADDITIONAL FUNDS FROM THE STATE TO CONTINUE THE ENGINEERING AND TO CONSTRUCT SOME INTERM FACILITIES. WE WERE SUCCESSUFUL IN OBTAINING $700,000.00 FROM THE 1974 PORT FACILITIES GRANT THAT WAS BONDED BY THE PEOPLE OF THE STATE OF ALASKA, AND LATER DUE TO EFFORTS BY OUR LEGISLATIVE DELEGATION AND CITY ADMINISTRATION, WE ALSO RECEIVED AN ADDITIONAL $300,000.00 FOR CONSTRUCTION OF THE BOAT RAMP. IN TOTAL WE HAVE RECEIVED SOME $1,515,000.00 OF THAT AMMOUNT WE HAVE SPENT APROXIMITLY $830,200.00 DOLLARS AND HAVE REMAINING IN OUR ACCOUNTS SOME $684,790.00

THE STUDIES ARE NOW COMPLETE AND WE HAVE OBTAINED A CONSIDERABLE AMOUNT OF INFORMATION FROM THEM. FOR EXAMPLE WE HAVE LEARNED THAT THERE ARE 1346 REGISTERED UNITS IN THE GILLNET FISHERY IN COOK INLET.THE COMERCIAL FISHING FLEET BASED IN THE LOWER KENAI RIVER INCLUDED SOME 680 VESSELS REGISTERED IN KENAI AND ANOTHER 255 REGISTERED IN SOLDOTNA INCLUDING 335 BOATS IN EXCESS OF 26 FEET LONG.

THESE BOATS ARE ENGAGED IN FISHERIES OTHER THAN SALOMON AND INCLUDE HALIBUT, BOTTOM FISH AND THE SPORT FISHERY.

THE STUDY FURTHER INDICATED THAT AT PRESENT THE USERS OF THE HARBOR FACILITY WOULD FOLLOW A MIX OF 257 PERMANANT AND 187 TRANSIENT MOORINGS. HISTORY OF ALL SMALL BOAT HARBORS INDICATE THAT WHERE SPACE IS AVAILABLE, BOATS WILL BE MOORED. PRESENTLY THERE WAITING LISTS AT ALL OF THE SMALL BOAT HARBORS IN SOUTH CENTRAL AND SOUTH EASTERN ALASKA. BOATS REGISTERED TO KENAI RESIDENTS ARE NOW MOORED AS FAR AWAY AS SELDOVIA.

THESE FIGUERS ALONG WITH THE TRANSIEANT FIGUERS INDICATE A NEED FOR A HARBOR LARGE ENOUGH TO HANDLE UP TO 440 VESSELS. AND THAT THE HARBOR SHOULD HAVE AVAILABLE FOR THE VESSEL OPERATORS RESTROOMS AND SHOWERS, BILGE AND SANITARY FACILITIES

FOR BOATS, DOCKSIDE UTILITIES, AND NET AND GEAR STORAGE YARD. WE MAY EXPECT TO SEE PRIVATE ENTERPRISE BE INVOLVED IN BOAT REPAIR FACILITIES, MARINE SUPPLY RETAILERS, RESTRAUNTS, LOUNGE AND SNACK BAR, LAUNDRAMAT, AND OVERNIGHT AND LONGER TERM RECREATIONAL VEHICLE AND TRAILER CAMPING.

IN ADDITION TO THESE FACILITIES THAT WOULD DEVELOPE IF A HARBOR WERE AVAILABLE IT WAS ALSO FOUND THAT THERE IS A GROWING MOVEMENT BY FISHERMEN TO OPERATE AS INDEPENDAT OPERATORS OR TO FORM CO-OPERATIVES WHICH IS A BREAK IN THE TRADITIONAL LINK BETWEEN PROCESSOR AND THE FISHERMAN. WHERE ALTERNATIVE FACILITIES ARE PROVIDED FISHERMEN CAN SELL DIRECTLY TO CASH BUYERS AND MAKE ARRAINGMENTS FOR THEIR OWN MOORAGE AND SUPPORT SERVICES THUS ELIMINATING THAT BURDEN FROM BEING THE RESPONSIBILITY OF THE PROCESSOR.

CONSIDERATIONS WITHIN THE STUDY CONCLUDE THAT A HARBOR DESIGN OF THE TYPE MOST SUITABLE FOR OUR PURPOSES WOULD REQUIRE THE AQUSITATION OF SOME ADJOINING PROPERTY. IN ADDITION THE DESIGN ALSO PRECLUDES THE NEED TO MOVE A HIGH PRESSURE GAS MAIN PRESENTLY LOCATED ON CITY PROPERTY. THE SAVINGS IN NOT MOVING THE GAS LINE MORE THAN OFFSET THE COST OF THE PROPERTY NEEDED TO BE AQUIRED.

THE STUDY ALSO INDICATED THAT THE DESIGN MUST INCLUDE A CLOSURE TYPE ENTRANCE TO THE HARBOR. THIS CLOSURE SYSTEM WILL PREVENT UP TO 50% OF THE SILT FROM ENTERING THE HARBOR. SINCE AS MUCH AS $190,000.00 IS EXPECTED TO BE SPENT ON AN ANNUAL BASIS FOR DREDGING, THE CLOSURE SYSTEM IS ALMOST A MANDATORY FEATURE. THE CLOSURE WOULD BE IN PLACE FROM LATE OCTOBER UNTILL SOME TIME IN APRIL GIVE OR TAKE A WEEK OR TWO.WITH THIS DESIGN INCORPORATED THE HARBOR CAN EXPECT TO GENERATE IN THE NEIGHBORHOOD OF $391,000.00 PER YEAR IN INCOME TO THE CITY AND IS EXPECTED TO COST THE CITY APROXIMITLY $365,000.00 TO OPERATE OF WHICH $115,000.00 WILL BE IN PAYROLL TO DIRECT EMPLOYEES OF THE HARBOR. THE REST WILL BE FOR DREDGING, REPAIRS AND MAINTENANCE WHICH WILL ALSO BE VERY LABOR INTENSIVE. THE PRIMARY OBJECTIVE OF THE DESIGN IS THAT THE HARBOR BE ABLE TO SUPPORT ITS SELF AFTER IT IS CONSTRUCTED.

UP TILL NOW I HAVE ATTEMPTED TO BRING YOU UP TO DATE ON WHAT WE HAVE DONE WITH PAST FUNDING AND WHERE WE ARE IN THE OVERAL PLAN OF THE HARBOR FACILITIES. I WILL NOW FILL YOU IN ON THE DETAILS OF OUR PRESENT REQUEST FOR FUNDING. I WOULD LIKE TO POINT OUT THE FACT THAT ALL OF THE FUNDS THAT HAVE THUS FAR BEEN SPENT WERE SPENT IN SUCH A MANNER AS TO GAIN THE MAXIMUM AMOUNT OF INFORMATION POSSIBLE FOR THE CITY OF KENAI. NONE OF THE FUNDS WERE RELAGATED TO ANY OTHER PROJECT AND ALL CONTRACTS ENTERED INTO ARE NOW COMPLETE.

RECOGNIZING THAT A HARBOR IS A COSTLY ITEM AND ALSO RECOGNIZING THAT THERE ARE A GREAT MANY NEEDS TO BE FILLED IN THE STATE WE ARE NOT YET PREPAIRED TO REQUEST FULL FUNDING FOR THE MAIN HARBOR PROJECT. WE ARE HERE TODAY TO ASK THAT THE LEGISLATURE CONTINUE FUNDING IN INCREMENTAL STEPS AS IT HAS IN THE PAST THREE SESSIONS. OUR REQUEST BEFORE YOU IS IN THE AMOUNT OF 1.9 MILLION DOLLARS. IT IS THE INTENTION OF THE CITY

OF KENAI TO USE THE 1.9 MILLION DOLLARS TO FUND THE CONSTRUCTION OF SOME INTERIUM FACILITIES THAT WILL CONSIST OF A TURNING BASIN, FUEL FACILITIES, REPAIR GRID AND OFF LOADING FACILITIES. ALL OF THE FAILIITIES TO BE CONSTRUCTED WILL BE ENGINEERED IN SUCH A MANNER AS TO BE USABLE IN THE FUTURE AS PART OF THE OVERALL HARBOR FACILITIES. OUR PRIMARY OBJECTIVE IN REQUESTING THIS FUNDING NOW IS TO ALLOW CONSTRUCTION INITALLY A FACILITY THAT WILL TEST ALL OF THE THEORIES THAT HAVE BEEN PROPOUNDED BY THE ENGINEERING FIRMS AND CONSULTANTS. BY CONSTRUCTING A MINI FACILITY WE CAN TEST THE SILTATION LOADS, TRAFFIC PATTERNS, USE FACTORS AND EQUIPTMENT TO INSURE THAT ALL WILL FUNCTION AS PREDICTED BY THE MATHMATICAL MODEL AND COMPUTER PREDICTIONS. BY APROACHING THE PROBLEM IN THIS MANNER WE HOPE TO SAVE MANY MILLIONS OF DOLLARS IN THE FUTURE.

THE FUNDING REQUESTED TODAY WILL BE USED FOR THE CONSTRUCTION OF THE FACILITIES DETAILED ABOVE. BASIC ENGINEERING AND SITE PLANNING HAVE ALREADY BEEN COMPLETED. SOILS ANALYSIS HAVE TAKEN PLACE AND THE GROUND WORK FOR IMPLIMENTING THE PROGRAM HAS BEEN PREPAIRED WE ONLY AWAIT THE ACTUAL FUNDING AND ACTUAL CONSTRUCTION COULD BEGIN THIS SEASON.

EARLIER I MENTIONED THAT IT IS THE INTENTION OF THE CITY TO PURCHACE ADDITIONAL LANDS TO ACCOMODATE THE FUTURE CONSTRUCTION OF THE MAJOR HARBOR FACILITY. I WOULD LIKE AT THIS TIME TO OFFER FOR YOUR CONSIDERATION AN ADDITIONAL REQUEST IN THE AMOUNT OF $600,000.00 TO FUND THAT LAND AQUSITION. WHILE THIS AMOUNT HAS NOT PREVIOUSLY BEEN REQUESTED I AM SURE THAT YOU WILL AGREE THE REQUEST IS CONSISTANT WITH GOOD PLANNING AND WILL IN THE FUTURE BE A MAJOR ASSET TO THE CITY OF KENAI. tHE ADDITIONAL FUNDING WILL BRING THE AMOUNT REQUESTED TO 2.5 MILLION. I AM SURE YOU WILL ALL AGREE THAT LAND INVESTMENT IS A PRUDENT USE OF MONEY IN LIGHT OF THE ASTRONOMICAL PRICESES RECENTLY PAID FOR VARIOUS PARCELS PURCHACED IN SEVERAL LOCATIONS THROUGHOUT THE STATE. THE PARCEL IN QUESTION IS 37 ACRES IN SIZE AND CONSISTS OF PRIME COMERCIAL AND INDUSTRIAL LANDS IN THE HEART OF THE HARBOR AREA.

ONE OTHER VERY IMPORTANT POINT TO MAKE IS THAT THE HARBOR IS CONSIDERED A REGIONAL PROJECT BY THE CITY IN THAT IS IS EXPECTED TO SERVE A WIDE DEMOGRAFIC AND GEOGRAPHIC AREA. SINCE THE LOCATION IS SO IDEALY SITUATED , BOAT OPERATORS FROM STERLING TO NORTH KENAI AND FROM SOLDOTNA TO KASELOFF ARE EXPECTED TO BE ITS ULTIMATE USERS. BECAUSE OF THE REGIONAL ASPECT OF THE PROJECT, THE CITY HAS ASKED THAT IT BE CONSIDERED UNDER A SPECIAL CATAGORY OF PUBLIC WORKS PROJECTS AND THAT ANY FUNDS CONSIDERED FOR THE CITY OF KENAI NOT BE CONSIDERED IN THE SAME CATAGORY BUT SHOULD BE CONSIDERED SEPERATELY FOR FUNDING PURPOSES.

THANK YOU MEMBERS OF THE COMMITTEE FOR BEING SO PATIENT DURING MY PRESENTATION. I WOULD LIKE TO TAKE JUST A FEW MOMENTS TO RECAP WHAT HAS BEEN SAID AND THEN ALLOW OTHERS TO BRING THEIR THOUGHTS ON THE SUBJECT TO YOU.

IN RECAPING I WOULD SAY;

#1....THE HARBOR FACILITIES OF THE CITY OF KENAI ARE REGIONAL IN NATURE IN THAT THEY SERVE ALL AREAS OF THE CENTRAL PENINSULA.

#2....FUNDING IN THE AMOUNT OF 2.5 MILLION WILL ENABLE THE CITY TO PUCHASE THE NEEDED ADDITIONAL LAND TO PROCEED WITH A COMPLETE HARBOR FACILITY AT A LATER DATE.

#3....ENGINEERING HAS BEEN COMPLETED FOR THE CONSTRUCTION OF THE INTERIUM HARBOR FACILITIES AND CONSTRUCTION CAN START AS SOON AS FUNDING IS COMPLETED AND BIDS ARE LET.

#4....THE STATE OF ALASKA HAS FUNDED THE PROJECT IN THE AMOUNT OF 1.25 MILLION DOLLARS SO FAR AND RECOGNIZES THE NEED FOR IMPROVED TRANSPORTATION FACILITIES IN THE AREA.

#5....THESE FACILITIES WHEN COMPLETED WILL BENIFIT THE ENTIRE CROSS SECTIONAL GROUP OF CITIZENS IN THE CENTRAL PENINSULA AREA BY ALLOWING ADDITIONAL TRANSPORTATION FACILITIES TO BE DEVELOPED THUS ADDING TO A MORE STABLE FUTURE ECONOMY.

MEMBERS OF THE COMMITTEE, I THANK YOU FOR YOUR TIME AND I WISH TO EXPRESS MY APPRICIATION ON BEHALF OF THE CITY OF KENAI FOR HAVING BEEN ALLOWED THE OPORTUNITY TO BRING THIS IMPORTANT PROJECT TO YOUR ATTENTION. I RESPECTFULLY URGE YOUR SUPPORT IN FUNDING THE AMOUNT REQUESTED.

THANK YOU;

February 28, 1984

The Honorable Bette Cato, Chairman
House Transportation Committee
Pouch V
Juneau, Alaska 99811

Dear Chairman Cato,

You have in your committee House Bill No. 349 sponsored by Representative Hugh Malone and introduced during the last session of the Alaska General Assembly. House Bill No. 349 carries a price tag of $1.9 million dollars and is for constructing a harbor bulkhead, a docking facility, fueling facilities and public restroom facilities on the Kenai River to service the fishing fleet in Cook Inlet.

This facility will service 500 - 600 commercial fishing vessels providing fish to 14 area processing plants. At the present time there are no public facilities for loading or unloading either fish or freight in the Kenai River or in the mouth of the Kenai River in Cook Inlet.

To give you a little background, Kenai has been trying to build a small boat harbor for 25 years. Kenai is probably the largest fishing and fish processing area in the State of Alaska that has no harbor facilities. As a consequence, there are no public docking facilities and no fueling facilities. Therefore, the fisherman must establish ties with one of the local processing plants in order to have fuel made available for themselves and to permit them to off-load their fish.

The City has expended several hundred thousand dollars in doing studies, engineering, and/or design in trying to accomplish a small boat harbor primarily for the fishing fleet in northern Cook Inlet. House Bill No. 349 is a measure that will permit reasonable access to the fishing and/or pleasure boating public in the Kenai area. It is a project that can stand alone or will be compatible and represents the initial stages of a small boat harbor for Kenai.

The public, at a special election in the City of Kenai, voted overwhelmingly to support the efforts of the City to acquire funding for a small boat harbor on the Kenai River. We are not at this time requesting funds for a small boat harbor, only funds to accommodate the harbor bulkhead, the dock and fueling facilities for our fishing fleet.

If there is any way possible that you feel you could hold a public hearing on House Bill No. 349, the City Council and the fisherman from this area would be extremely appreciative. If you could hold a public hearing and there was enough time between the announcement and the public hearing to permit several people from Kenai to come to Juneau to testify on House Bill No. 349, I can guarantee you there will be representatives from municipal government, the fishing industry, the processing industry and the Harbor Commission from the City of Kenai.

This facility is important not only to the City of Kenai but to the State of Alaska in that it would be an amenity encouraging and helping the commerce of this State.

Sincerely,

Wm. J. Brighton
City Manager

POSITION PAPER

HB 349

"An Act making a special appropriation for payment as a grant to the City of Kenai for construction of a harbor bulkhead and boat ramp; and providing for effective date."

This bill provides for payment of $1,750,000 General Funds under A.S. 37.05.315, by the Department of Administration. Historically, the Department has not "held back" any portion of any grant under A.S. 37.05.315 for administrative costs, including the legislated audit function. We have found efficiency measures in other areas that permit us to devote some operating staff resources to the administrative tasks of the Municipal grants program. One more grant, such as proposed by this bill, will not over-burden our resources, but one hundred will. If the number of grants under A.S. 37.05.315 becomes significant, additional operating costs by the Department will need to be budgeted by the Legislature to ensure that the full value of the grant reaches the intended recipient.

Fiscal Note for HB 361 (cont'd)

Analysis

The funding at Akutan will be sufficient to locate and develop a preliminary design of an Akutan dock.

Nelson Lagoon, Pilot Point, and Port Heiden all experience shallow water and strong tides. The proposed feasibility study will determine location and preliminary design parameters and conceptual dock layouts would be provided, as well as firm design costs and construction cost estimates. A more detailed design effort would be the next appropriate step if the projects prove feasible.

The funding for Levelock dock expansion and the design and construction of Newhalen/Iliamna dock facilities will be grants to communities through DCR&A. These projects will have no fiscal impact on DOT&PF's capital or operating budgets.

HB

390

STATE OF ALASKA
BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

POUCH M
JUNEAU, ALASKA 99811
PHONE:

May 23, 1983

Ms. Sarah Robinson
Representative Lacher's Office
Pouch V
Juneau, Alaska 99811

Dear Ms. Robinson:

Several important questions need to be addressed in legislation to create a scenic highway system, as proposed in HB 390 and 391.

What qualities define a scenic highway (definition of purpose)?

Does a scenic highway incorporate adjacent lands?

What are management standards for scenic highways and adjacent lands?

Which agency will manage the system?

Other questions pertain to the discussion leading up to legislation. Will designation affect road maintenance or federal highway funding? Should the Legislature designate scenic highways? What are the experiences of other states in creating and managing scenic highways?

At this point it would be difficult for the Administration to evaluate the proposed system. I suggest that Legislative staff and members of the Administration work together to provide more definition. This cooperation could best be accomplished during the interim, as we have discussed. Perhaps it would be appropriate to hold the bills in Committee while we work on them.

House of Representatives

M E M O R A N D U M

TO: House Transportation Committee Members

FROM: Representative Barbara Lacher

DATE: May 17, 1983

SUBJECT: HB 390, HB 391

House Bill 390 is the enabling legislation for the designation of State scenic highways. House Bill 391 makes a special appropriation to the Department of Transportation and Public Facilities to study the Glenn Highway between Palmer and Glenallen for scenic highway designation.

HISTORY:
The Sheep Mountain Coalition, a group of local citizens who live in the Glenn Highway area, organized two years ago and contacted the Department of Natural Resources with a concern over the effect of the land disposal program in the area. The Department of Natural Resource's intention to realign the Highway was also a concern voiced by the Sheep Mountain Coalition at that time. The Coalition requested that the State develop a land use plan for the area. Talk emerged at this time for a scenic highway plan.

The State's response to this request emerged in the form of the Susitna Basin Plan. This plan was, in part, cooperative with the Matanuska-Susitna Borough. The Susitna Basin Plan is not as yet adopted, although it has been approved by the Mat-Su Borough. Public hearings are still being held on this plan which addresses a wider regional plan than the Genn Highway area. The plan addresses issues including tourism, year-round recreational use, land disposals, timber and mineral use, scenic preservation, and a trail system.

The Sheep Mountain Coalition then approached Representative Pat Carney, last Session, with the request that he introduce legislation to establish a recreation area along the Gelnn Highway, in the Sheep Mountain area. Carney sponsored this legislation but it died in committee, as the political climate was not good for the creation of another state park. In particular there was serious objection to the restrictions on land use that the proposed park would mandate.

The Coalition then reassessed its position and shifted towards the current legislation which proposes a public use area in the scenic highway bill. The current proposal would not disallow timber or mining use of designated areas. In fact the designation of a scenic highway does not mandate restrictions of any of the other categories of land use, it simply restricts their location in relation to the valued visual resource of the area so designated. This current legislation would also require less active management than a state park.

The Division of Parks of the Department of Natural Resources supports this current plan and do not foresee any major conflict between the proposed legislation and the final form of the Susitna Basin Plan.

SUSITNA BASIN PLAN:
The four alternatives proposed in the Susitna Basin Plan are germane to a discussion of this legislation. The first alternative proposes a higher density land disposal with more lands in private ownership. This alternative plan provides for a protective corridor along the Glenn Highway. The second alternative is a moderation of the first, with fewer land disposals, fewer areas designated for woodlots, and generally more protected trails and lakes. The third, or the "green" alternative places a greater emphasis on forestry, mining, recreation, scenic protection, an increase in the number of trails, and wider trail corridors. The fourth alternative plan is similar to the third except that a stronger emphasis on economic development, especially in the area of tourism and its support industries is included. This alternative plan places tourism as a first priority, but also permits restricted loging and mining. Emphasis is placed in this proposal for both winter and summer recreation, with a number of cross-country ski trails designated in addition to the more familiar summer recreational uses.

LOCAL SUPPORT:
Petitions have been circulated, and a recent public meeting at the Glacier Elementary School demonstrated very strong support for the Susitna Basin Plan, especially alternatives three and four. The Sheep Mountain Coalition also holds this view, as well as the Mat-Su Borough. Strong local opinion centers on the need for both visual resources and protected trails. The scenic highway legislation proposed is in keeping with the interests of the residents of the area, as well as the Borough as a whole.

SCENIC HIGHWAY STUDIES:
The Department of Natural Resources has conducted two studies for scenic highway feasibility. These are the Parks Scenic Highway study completed four years ago, and the Denali Scenic Highway study completed this year. The DNR has informed the sponsor of this legislation that the Glenn Highway is a prime candidate for a designated scenic highway in Alaska. Passage of this legislation would permit the State to designate all three of these highways as scenic highways, if the Administration so desired.

IV. ANALYSIS

Designation and maintenance of scenic highways will have a fiscal impact on the DOT&PF beyond the figures given in Section I. Accordingly, the present fiscal note should be regarded as an underestimate, including only the minimal costs which we can predict -- primarily, the costs for the Scenic Resources Expert.

The DOT&PF suggests however, that the bill not require the Department to hire the Scenic Resources staff person. In our projection of ongoing need for such expertise, we do not anticipate that the program will require a full time permanent staff member. The Department could more efficiently contract with one or more consultants and train current DOT&PF employees for both the design and planning, and maintenance and operations functions necessary for the program.

We also suggest that the bill specify particular coordinative actions to insure fulfilling the intent of the legislation. First, the Department of Natural Resources (DNR) should be explicitly involved in establishing regulations for the development of state lands adjoining scenic highways, consistent with the intent of the scenic highways program. Second, the DNR should be required to send to all pertinent federal agencies an official notification of highways designated as state scenic highways. The notification should also request that such federal agencies as the Bureau of Land Management, Department of Agriculture, and National Park Service adopt procedures which would conform to the general guidelines established for state scenic highways. Moreover, if the scenic highways bill is passed by the legislature, the DOT&PF would request a delay in implementing the program until the U.S. Congress has acted on the Denali Scenic Highway Study.

In further consideration of the fiscal impact of this bill, it should be understood that the cost of constructing highways will increase over time, such that the amount of construction which can be done with the same money will decrease. It should also be understood that the regulations we develop will have to conform to Federal Highway Administration (FHWA) Standards to the extent that will allow us to continue leveraging the maximum amount of FHWA funds for highway construction.

The cost estimates in Section I reflect only the following:

		FY 85
Personal Services		
(Scenic Resources Expert)		74,000
Travel		
(for Scenic Resources Staff)	12,000	
(for 15 public meetings on regs at $300 air fare & per diem each, for 2 staff and 1 secretary)	13,500	
Subtotal		$ 25,500

Contractual

Minimal costs for signing, and Maintenance and Operations		Unknown*
Secretarial transcription for 18 public meetings at $500 each	9,000	
Dept. Law Review of regs establishing standards	5,000	
Subtotal		14,000
TOTAL FY 85		$113,500 PLUS

FY 84 estimates represent six months of personnel and supporting costs. Personal services cost for a Scenic Resources Expert, and that employee's estimated travel for inspection and design purposes are inflated at 5% per annum. The second part of the estimated travel cost is for regional staff to travel to the sites of the public hearings required for adoption of regulations as mandated in the bill.

The estimate of twelve public meetings statewide is provided as a conservative estimate, based on a review of the minimal number of hub communities located on the highways most likely to be designated as scenic.

The estimated contractual cost for secretarial services to transcribe meeting tapes was derived by scaling down the average cost for this service following hearings on the proposed time zone changes. We assumed eighteen total public hearings. Travel costs for the public meetings assume two Department staff and one contract secretary traveling at an average air fare of $220 round-trip and one day's per diem at $80.

The final contractual cost, for the Department of Law to review regulations proposed by the Department, is also a rough estimate. This figure could be as low as $3,000 or could be much higher.

It is anticipated that much of the work involved in establishing standards and adopting regulations can be accomplished within the normal functions of the Department. Additional costs would arise in conducting studies for determining scenic highways; however, those costs are anticipated to be funded by the legislation that would also request the scenic studies be done (e.g. HB 391).

* "Uknown" means that the substantial fiscal impact this bill will have on DOT&PF for maintenance and operations to meet scenic standards cannot be predicted.

Analysis - CSHB 399

Naming "A" Street Eisenhower Blvd.

1. Analysis of the fiscal impact on existing programs.

   The Department of Transportation of Public Facilities has completed the design work for the A-C Couplet and the project is ready to bid.

   The fiscal impact would be accommodated through a construction charge order.

2. Analysis of fiscal impact of new programs or activites.

   No impact.

3. Analysis of cost estimate:

   The cost of street signs is dependent upon the square footage of the signs. There are three types of signs that will be used as part of the A-C Couplet project: Street name signs, overhead signs, and advanced notice street signs. The square footage of the total signs for "A" Street were pulled from the project plans. The square footage for similar signs for the name "Eisenhower Boulevard" was estimated. The difference in square footage for the two names was multipled by the cost per square foot (approximately $40).

   Cost Estimate: $15,000.00

The Department can absorb this cost; however, the Commissioner is review y the cost per square foot for the signs.

Department of Transportation & Public Facilities

CS HB 399

An Act naming "A" Street in Anchorage
to Eisenhower Boulevard and designating
the Eisenhower Corridor

Background

Names of many north-south aligned roads in Anchorage conform to an alphabetical sequence, for example, roads west of "A" Street are known as "B" Street, "C" Street, "D" Street, etc. Roads east of "A" Street use proper names in alphabetical sequence such as Barrow, Cordova, Denali, Eagle, etc. These names, in combination with the numerical names (3rd, 4th, 5th Avenues, etc.) used for east-west streets, have been helpful for the public in finding the physical location of a specific address.

Legislative Authority

Alaska Statute 19.10.085 gives the Legislature the authority to name highways constructed by the Department of Transportation and Public Facilities (DOT&PF).

Analysis

Portions of "A" Street (such as 4th to 9th Avenues) were built by the Municipality of Anchorage. Because the statutes give the Legislature the power to name highways constructed by the DOT&PF, there may be a question on the Legislature's authority to rename the street.

The Municipality of Anchorage (MOA) prefers not to rename the street. The Zoning and Platting Manager for the MOA stated that the assembly voted not to approve a resolution renaming the streets; however, the assembly did pass a resolution encouraging the naming of the Eisenhower Corridor. The Zoning and Platting Manager also stated that the name Wickersham would duplicate an existing street name and that the U.S. Post Office would not deliver mail to a Wickersham address if there were two streets of the same name.

There would be a cost increase of approximately $15,000 to the A-C Couplet project as a result of a name change. Street name sign costs are based on the square footage of the signs - the larger the name, the greater the square footage.

Conclusion/Recommendations

1. Because the MOA and the State have constructed different sections of "A" Street, there may be a question of Legislative authority in renaming the street. A legal review may be appropriate.

2. The MOA prefers not to rename the street. Even though the A-C Couplet will be a part of the State Highway System, the DOT&PF recommends local concurrance before legislative action.

3. The Department concurs with the MOA's support in naming the Eisenhower Corridor.

FROM Rep. Joe Hayes
Speaker

RE: HB 399/ Eisenhower Blvd.

It's my understanding that this bill was held in committee for further direction from my office.

After talking with proponents of this legislation, I stll desire legislation to name A street Eisenhower Boulevard.

At this time, I do not desire the renaming of a street to Wickersham because of potential confusion with Wickersham subdivision in Anchorage. However, the renaming of A street to Eisenhower Boulevard, in my opinion, would not disrupt the addressing system to a major degree, nor would it be a severe inconvenience on businesses and residents along the street. There are significantly fewer businesses along A street than there are along C street.

I would appreciate the committee considering this bill for movement out of committee as soon as convenient.

Thanks.

Re: HB 399/ Substitute

Following discussions with the backers of HB 399, we would like to propose a committee substitute which would be in keeping withthe Anchorage Assembly's desires.

CSHB 399 (Transportation)

For an Act entitled: An Act naming A Street in Anchorage Eisenhower Boulevard and designating the Eisenhower Corridor.

Section1. AS 35.40 is amended by adding a new section to read:

Sec. 35.40.020 EISENHOWER BOULEVARD AND CORRIDOR. In Anchorage, from its northern end to the 36th Avenue intersection, A Street is named Eisenhower Boulevard and the system of parks, trails and buffering between and along Eisenhower Boulevard and C Street is named the Eisenhower Corridor.

APPROVED
Date: 10-25-83

Submitted by: Assemblywomen Flynn and Angvik
Prepared by: Clerk's Office
For Reading: October 11, 1983

ANCHORAGE, ALASKA

RESOLUTION NO. AR 83-248(S)

A RESOLUTION OF THE ANCHORAGE MUNICIPAL ASSEMBLY ESTABLISHING THE EISENHOWER CORRIDOR CONSISTING OF THE PARK, TRAILS AND BUFFERING BETWEEN AND ALONG THE A/C COUPLET AS WELL AS SUPPORTING NAMING THE PARK AT THE NORTHERN TERMINUS OF THE COUPLET, EISENHOWER PARK.

THE ANCHORAGE MUNICIPAL ASSEMBLY RESOLVES:

WHEREAS, the Municipality of Anchorage and the State of Alaska are planning road improvements to A and C Street, located within the Municipality; and

WHEREAS, said improvements will create a major north/south transportation corridor spanning the city of Anchorage; and

WHEREAS, this is an appropriate time to consider naming the corridor because the project will alter the complexion of businesses and residences along its route; and

WHEREAS, it is fitting to name the corridor in honor of those who have contributed substantially to the history of the Municipality of Anchorage and the State of Alaska.

NOW, THEREFORE BE IT RESOLVED:

1. The Eisenhower Corridor is estabilshed. The corridor shall consist of the park, trails and buffering between and along the A/C Couplet.

2. The Anchorage Assembly supports naming the park at the northern terminus of the couplet, Eisenhower Park.

3. The Municipal Clerk forward copies of this resolution to Governor Sheffield, the Anchorage Legislative delegation, Commissioner of the State Department of Transportation and Public Facilities, AMATS Policy Committee, and the Chairman of the Municipal Parks and Recreation Commission.

AR 83-248(S)

PASSED AND APPROVED by the Anchorage Assembly this 25th day of October, 1983.

Chairman

ATTEST:

Fiscal Note for HB 399 (Cont.)

Analysis:

The Department has no objection since the change would cause only a minimal increase in maintenance costs. However, we recommend assessing public sentiment first.

*Capital costs for sign material could be incorporated into the scheduled federal-aid project.

Sec. 19.10.060. Regulation of weight and load of vehicles and use of highways during certain seasons. The department, with respect to highways under its jurisdiction, may

(2) Repealed by § 25 ch 144 SLA 1977.

(am § 25 ch 144 SLA 1977)

Effect of amendments. — The 1977 amendment repealed paragraph (2), which read "issue special written permits authorizing the operation of overweight vehicles."

As the rest of the section was not affected by the amendment, it is not set out.

Sec. 19.10.085. Naming of a highway. (a) A highway constructed by the department under AS 19.05.010 — 19.40.210 may be given a name only by law.

(b) This section does not apply to

(1) a road constructed by a municipality under a grant authorized by AS 19.05.010 — 19.40.210;

(2) local service roads and trails. (AS 19.05.150; § 1 ch 4 SLA 1981)

Effective dates. — Section 3, ch. 4, SLA 1981, makes this section effective March 24, 1981, in accordance with AS 01.10.070(c).

Editor's notes. — As enacted, this section was designated AS 19.05.150 and was renumbered by the revisor of statutes pursuant to AS 01.05.031(b).

Article 3. Construction.

Section
170. Construction by department
190. Advertisement, bids, contracts, and informal bids
280. Local control of state transportation corridors

Sec. 19.10.170. Construction by department. (a) Except as provided in AS 44.33.300, it shall be the general policy of the department to require the construction of all highways under bid contract. However, subject to the provisions of (b) of this section, when the estimated cost of a construction project is less than $100,000 or when it appears to be in the best interests of the state, the department may perform the work notwithstanding any other provisions of law.

(b) Construction or professional services in connection with the construction of highways performed by the department under (a) of this section which have an estimated cost exceeding $5,000 may not be performed by the department unless the commissioner determines, in writing, that the cost to the state will be less than that incurred as a result of a formally advertised or negotiated contract. The determination of the commissioner shall be supported by findings of fact which shall set out enough facts and circumstances to clearly justify the determination. The determinations and findings shall be maintained as a permanent record of the department.

HB 400

"An Act making a special appropriation for payment as a grant to the Kenai Peninsula Borough for construction of the Greer Road phase II project; and providing for an effective date."

This bill provides for payment of $200,000 General Funds under A.S. 37.05. 315, by the Department of Administration. Historically, the Department has not "held back" any portion of any grant under A.S. 37.05.315 for administrative costs, including the legislated audit function. We have found efficiency measures in other areas that permit us to devote some operating staff resources to the administrative tasks of the Municipal Grants program. One more grant, such as proposed by this bill, will not over-burden our resources, but one hundred will. If the number of grants under A.S. 37.05.315 becomes significant, additional operating costs by the Department will need to be budgeted by the Legislature to ensure that the full value of the grant reaches the intended recipient.

District: CENTRAL Name of Route: Greer Road, Phase II

Termini: From Greer Road, Phase I To Hulter Road Length of Project .6 mile
(INCLUDE MAP SHOWING PROJECT LIMITS)

Type of service to be provided: Construct an extension of Greer Road, currently maintained by the Department to connect with Hulter Road

Describe Existing Facility: non existant

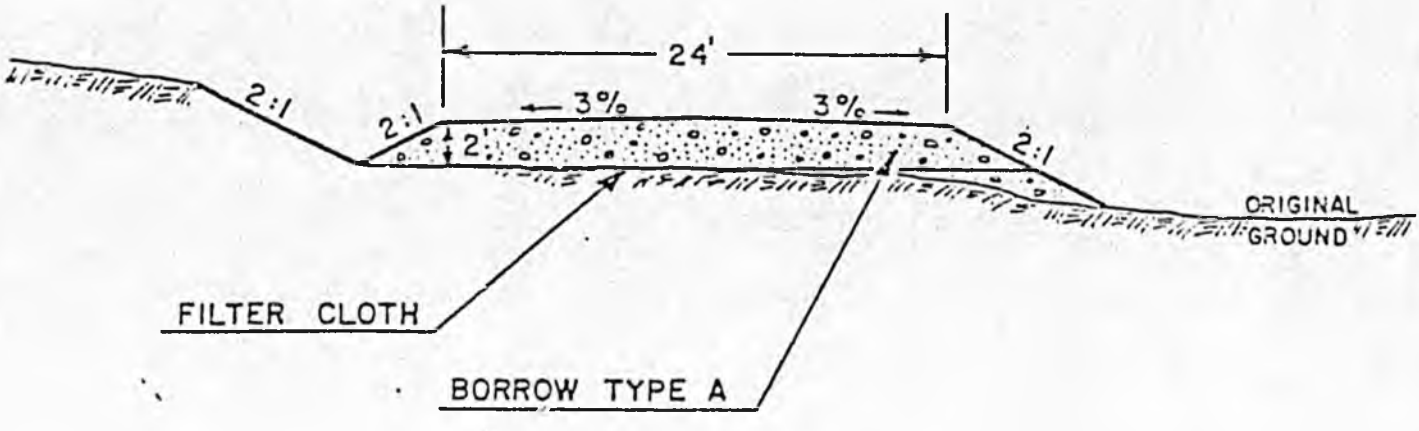
Proposed Facility: 24 foot wide gravel road

Present System: non existant No. of persons served: 25

Location of materials sources: Anchor Point

Estimated Costs

P.E.	R/W	Construction	Constr. Engineering	Total
25,000	0	250,000	25,000	300,000



Type of R/W to be acquired: 100 foot wide right-of-way

Name of Head of Local Government: Mayor Stan Thompson

Remarks (possible causes of delay, e.g. R/W, land claims, materials, etc.)
additional funding required for construction

KENAI PENINSULA BOROUGH

RESOLUTION 83-95 (SUBSTITUTE)

AUTHORIZING THE EXPENDITURE OF $106,121 OF L.S.R.T. FUNDS FOR THE PURPOSE OF DESIGNING AND CONSTRUCTING THE ~~REMAINDER OF GREER ROAD~~

WHEREAS, the Borough Administration has received a petition to upgrade the Greer-Hutler Loop Road; and

WHEREAS, access to the affected residents during the winter and spring is difficult; and

NOW THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF THE KENAI PENINSULA BOROUGH:

Section 1. That the amount of ~~$106,121~~ be transferred from the Contingency Account No. 07-21001-9007 to the Greer-Hutler Loop Road Project Account No. 07-21052-9007.

Section 2. That the Borough Administration is authorized to proceed with soliciting proposals for the design and construction of the ~~Remainder of Greer Road to the intersection with Hutler Road~~ including a turnaround adequate for a school bus.

ADOPTED BY THE ASSEMBLY OF THE KENAI PENINSULA BOROUGH ON THIS 19TH DAY OF APRIL, 1983.

Dear Mr. Rice:

This office has reviewed the proposal to construct Greer Drive, as per your letter of 20 June 1978. The proposed action will have no effect on any property listed on, or determined eligible for listing on, the National Register of Historic Places. There is no objection to the project on these grounds provided that you contact this office should any cultural materials be discovered during the course of the work.

Sincerely,

Douglas Reger Deputy SHPO

Phone 262-4441

Project Agreement
Local Service Roads and Trails
Contract/Force Account
Local Governing Body

Under the authority granted by Chapter 84, Sessions Laws of Alaska 1971, this project agreement is entered into by and between the State of Alaska, Department of Transportation and Public Facilities; hereinafter called the Department, and Kenai Peninsula Borough, hereinafter called the Local Governing Body, for the purpose of constructing the following described project:

A. OBLIGATIONS OF THE LOCAL GOVERNING BODY

To further accomplish the construction of the project, it is agreed that the Local Governing Body shall:

1. construct the above-described project, which is more fully described by Appendixes "A" and "B" attached hereto and made a part hereof, consisting of a location plat (Appendix "A") and a typical cross-section (Appendix "B");

2. provide all funds necessary to construct the project;

3. cause the project to be constructed by one of the following methods unless the Department expressly approves an alternate method: (a) award of a contract by the Department or the Local Governing Body for construction of the project to the lowest responsible bidder through the competitive bidding process, or (b) through the use of local or state equipment and employees.

B. IF THE PROJECT IS ADMINISTERED BY THE LOCAL GOVERNING BODY, THE LOCAL GOVERNING BODY SHALL:

1. execute a written contract with a contractor for the project if a contract is awarded.

2. maintain accurate, daily written records of all costs for which reimbursement is requested, which records shall be made available for inspection by the Department upon request, and preserve such records for a period of three years following

final acceptance of this project by the Department or termination of this agreement, after which they may be destroyed except for the project history, project engineer's diary, photos and the correspondence folder;

3. promptly pay in full all legitimate claims for services or material provided for construction of this project and hold the Department harmless from any claims or costs arising from the Local Governing Body's failure or refusal to pay claims, whether or not those claims are legitimate;

4. the Local Governing Body agrees to pay all federal, state and local taxes and social security (FICA) withdrawals for wages paid on this project.

C. FURTHER CONDITIONS

1. Local Service Roads and Trails funds are obligated for this project in an amount as shown on the attached funds authorization, which is made a part of this agreement.

2. Expenses incurred by the Local Governing Body prior to the date of execution of this agreement will not be reimbursed by the Department.

3. The determination must be made prior to beginning construction that adequate right-of-way and material are available for the project.

4. The Department will not be obligated to reimburse the Local Governing Body for costs which cannot be adequately verified as a necessary cost of construction.

5. Prior written Departmental approval of the following is required:

CONTRACT CONSTRUCTION ADMINISTERED BY THE LOCAL GOVERNING BODY

a. Plans, specifications and estimate prior to advertising.

b. Award of the construction contract.

c. Any changes which reflect a change increasing the total contract by more than 10%.

CONSTRUCTION BY THE LOCAL GOVERNING BODY

a. Estimated costs, including engineering, equipment, labor and closing costs after construction is complete.

b. Plans or typical section of improvement.

6. The Department has the right to make periodic inspections during the course of work, and a final inspection upon completion of construction, for the purpose of certifying that the funds expended by the Local Governing Body on this project qualify for reimbursement under this agreement.

7. When the construction of this project has been completed and duly accepted, the responsibility for maintaining the facility shall be borne by the Department of Transportation .

   If the Local Governing Body is to bear the maintenance responsibility, the Local Governing Body agrees to indemnify, defend, and hold harmless the Department and the State of Alaska from any and all claims arising in connection with or related to the maintenance function. If the Department agrees to perform the maintenance, the Department reserves the right to issue utility, driveway and encroachment permits.

8. The Local Governing Body agrees to indemnify, defend, and hold harmless the Department from all liability, claims and demands arising from the work undertaken by the Local Governing Body, its employees, agents or representatives, or arising out of any operation, no matter by whom performed or on whose behalf, whether or not in conjunction with work to be coordinated by the Department.

9. This agreement may not be modified except by written agreement between the Department and an authorized agent of the Local Governing Body.

10. The parties to this agreement shall obey all federal, state, and local laws and regulations.

11. This supersedes any and all other agreements expressed or implied between the Department and the Local Governing Body with respect to this project and this agreement contains the entire agreement between said parties.

Project No. _____
Project Name Greer Road, Phase I

To witness this agreement, the Department and the Local Governing Body have affixed hereto the signatures of the Deputy Commissioner, Design and Construction, and Mayor Stan Thompson, the duly authorized signatory for said Local Governing Body.

GREER-HUTLER ROAD PROSPECTUS

Proposal: To extend Greer Road up the 100' wide right of way on the section line between sections 21,22 to Hutler Road, then easterly along the dedicated right of way for Hutler Road out to East End Road.

Engineering: Hutler Road is an extremely well-drained road with a very low grade (0-2%). The proposed Greer Road extension could be built to a maximum grade of 9% with some cut and fill (see attached grade sheet). There are no right of way problems.

Supporting Reasons:

Increased accessibility to the slaughterhouse on Beaver Creek Road. This is the only slaughterhouse on the southern Kenai Peninsula. Ranchers efforts are hindered now because of poor road conditions. A loop road would provide a means for increased local slaughter, would facilitate agriculture in Alaska, would lower operating costs, would increase tax revenues, would provide more local jobs, and would set a positive tone between government and farmers.

There are at least 120 small parcels of land in the area that would benefit. Many of these already have dwellings and children on them. Large tracts in the area could be better utilized with a loop.

Presently, the school buses have limited access to Greer Road due to the fact that there is no turnaround or exit. A loop road would substantially improve the bus service offered to these children as well as provide bus service to children living on Hutler Road. One child on Hutler presently has to travel 3 miles to catch the bus.

It would also provide a 'loop' for service vehicles. At present, these vehicles have difficulty going up improved Greer Road due to the lack of an exit. Power, phone, and emergency agencies must use track vehicles during much of the year to enter areas on the unimproved sections of Greer and Hutler Roads.

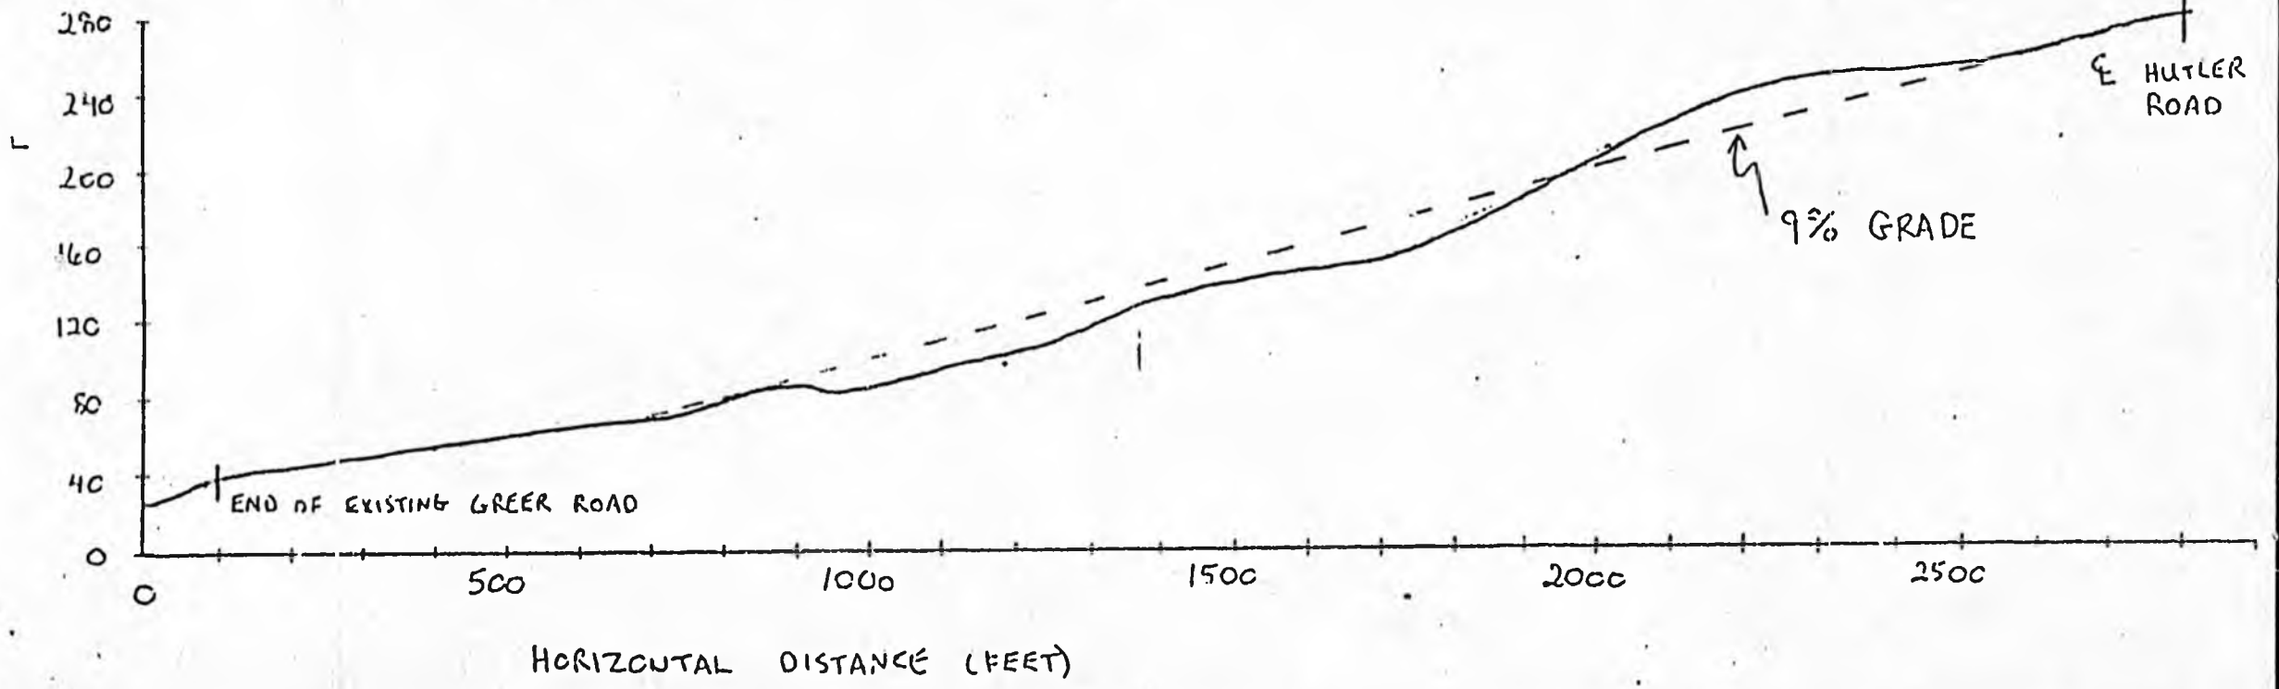
Borough land in the area would become accessible for use. There are approximately 1260 borough acres that could be utilized with a Greer-Hutler loop.

Increased access to renewable resources such as timber, beef production, and hay fields.

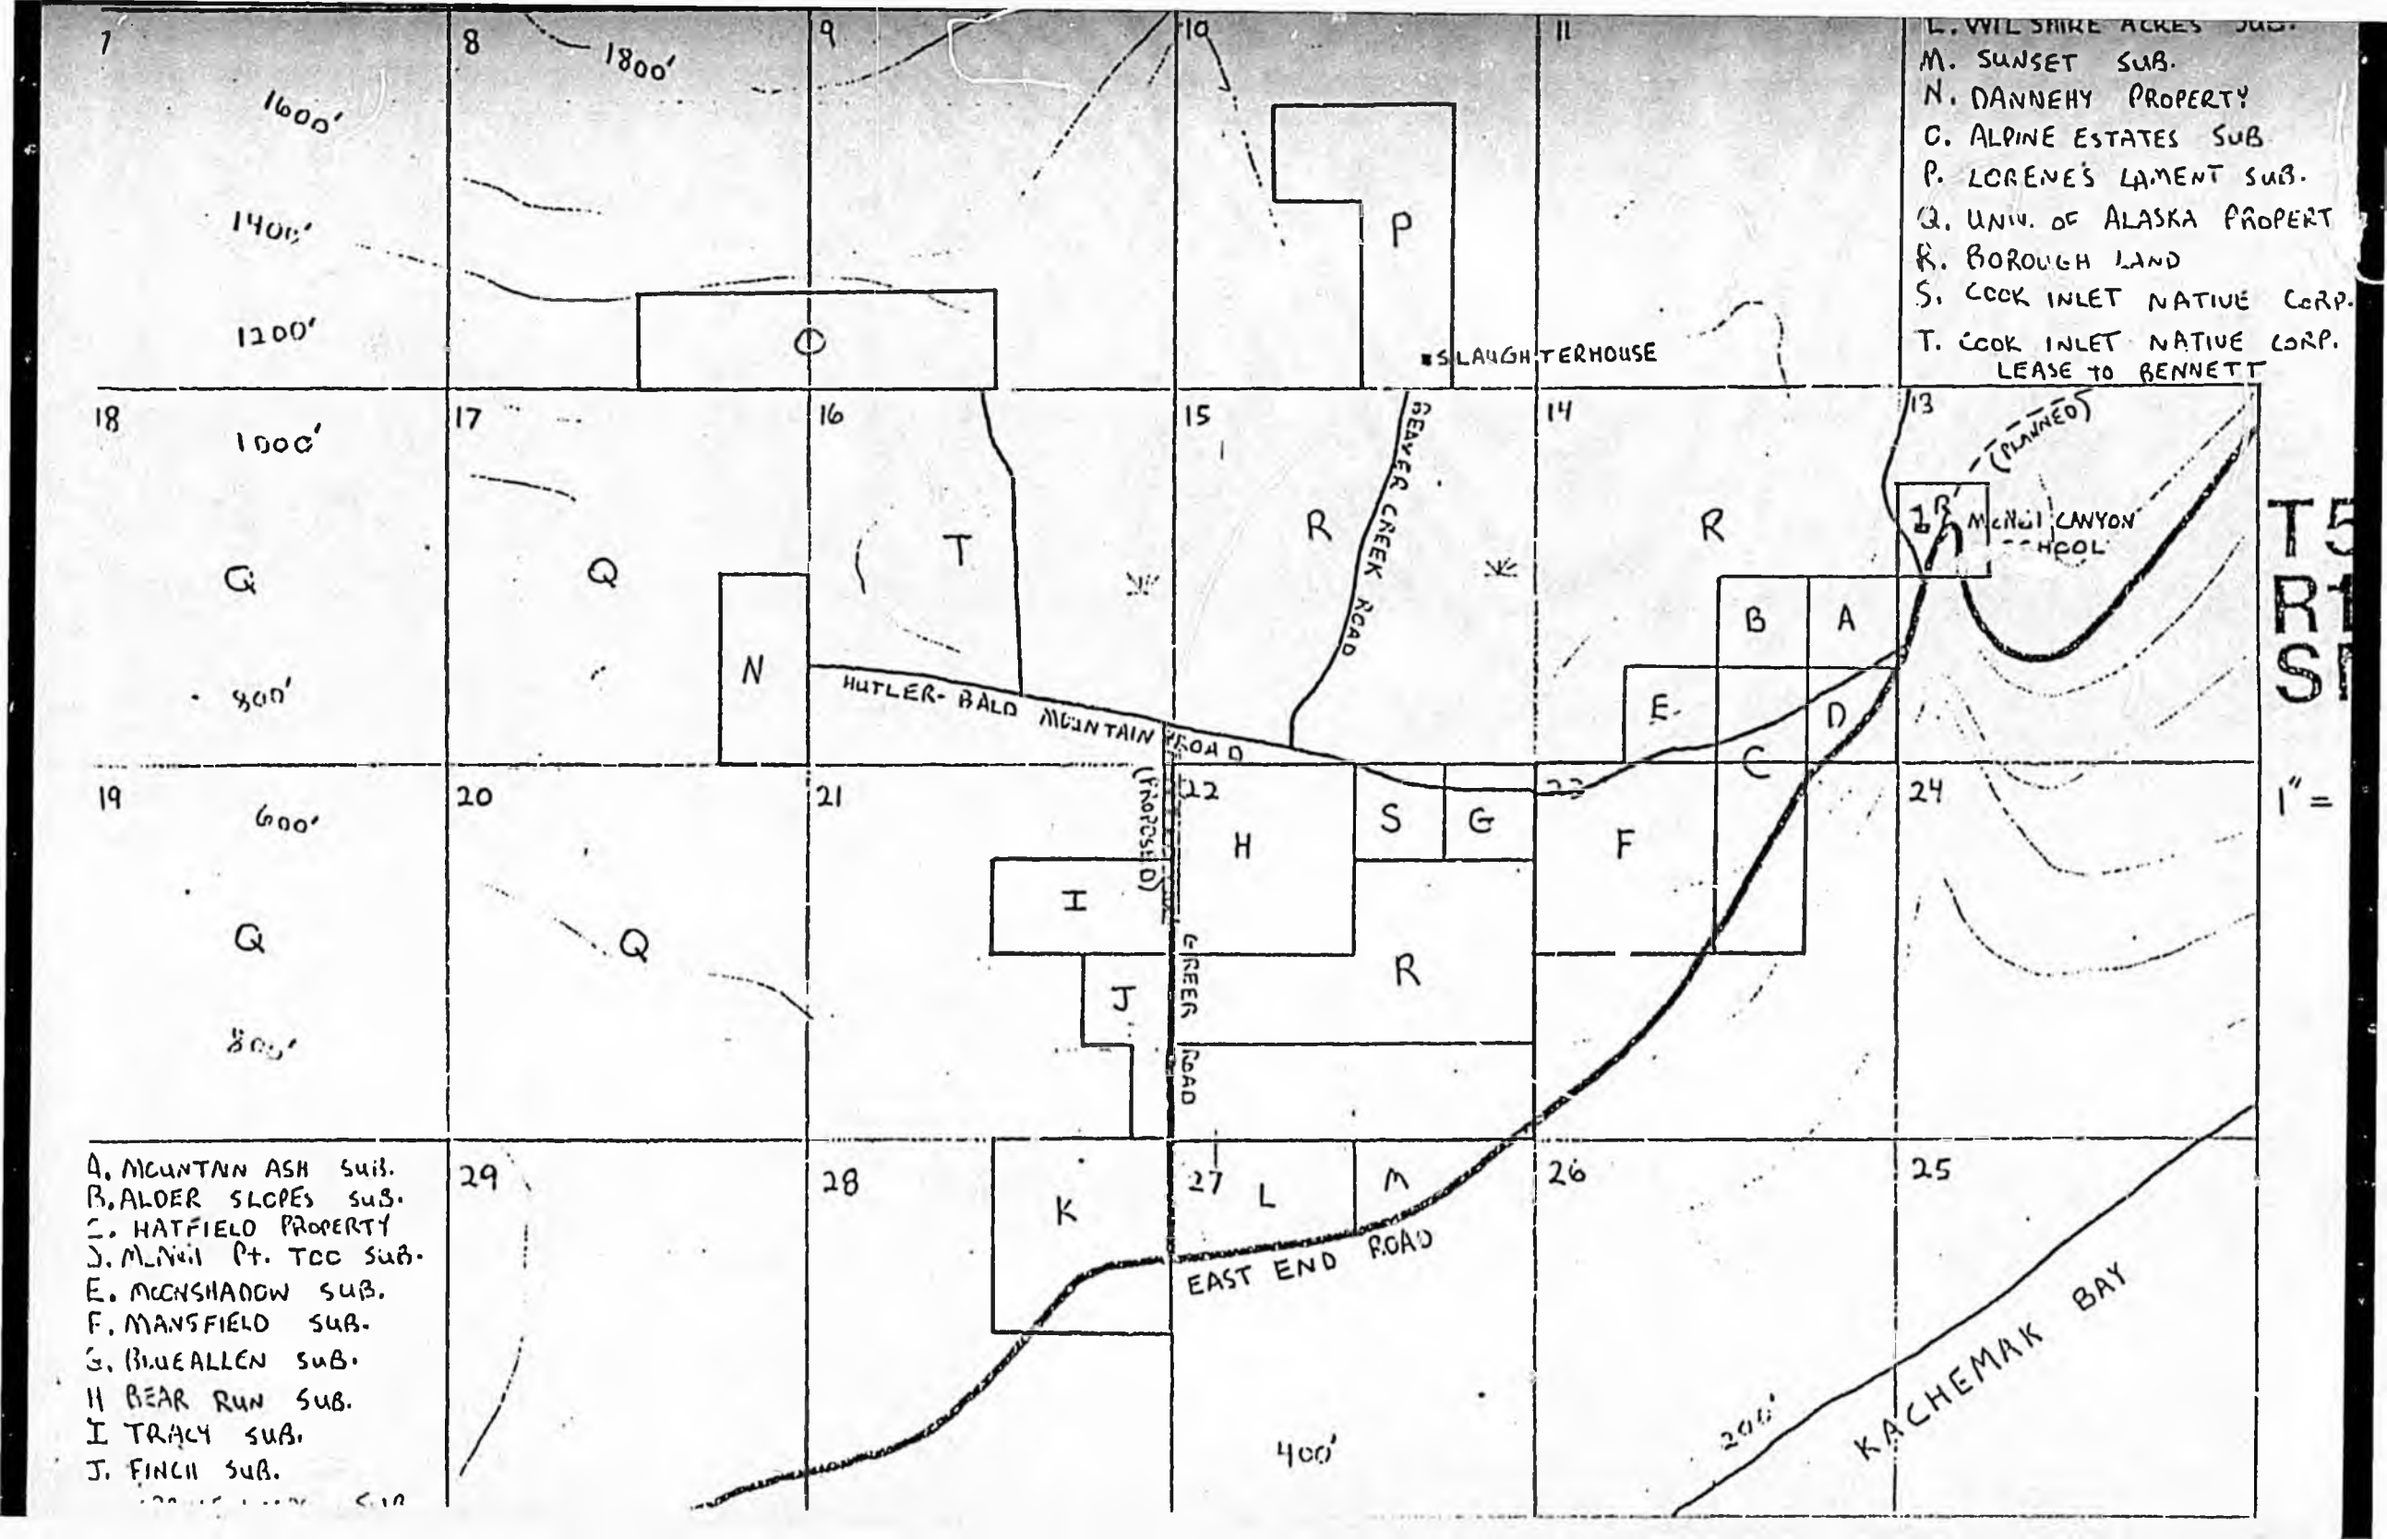
Increased access to University of Alaska lands which they plan to use for grazing within the next two years.

Significant reduction of travel time to Homer. The distance to Homer would be reduced by three and four miles from most locations along Hutler Road.

Increased access to the new Elementary School at McNeil Canyon. The eastern end of the Greer-Hutler Loop would be only .2 mile from the school.



Increased access to snowmachine, ski, and hunting areas.



The demand for this project will grow yearly. The cost of building this loop will also grow yearly.

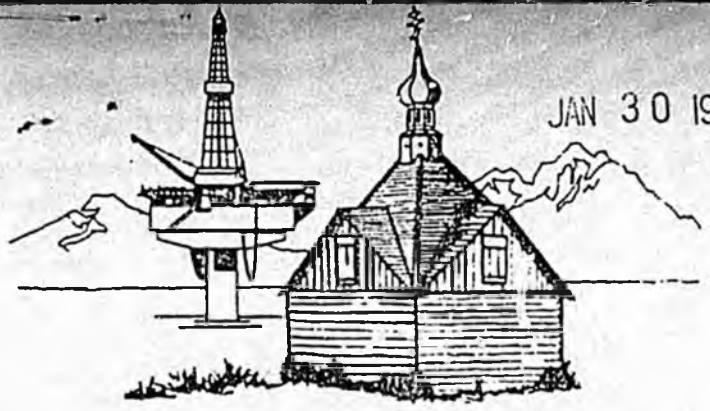
HOUSE BILL NO. 401

IN THE LEGISLATURE OF THE STATE OF ALASKA

THIRTEENTH LEGISLATURE - FIRST SESSION

A BILL



For an Act entitled: "An Act making a special appropriation for payment as a grant to the City of Kenai for extension of the municipal airport main apron; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $2,500,000 is appropriated from the general fund for payment as a grant to the City of Kenai for extension of the municipal airport main apron.

* Sec. 2. The appropriation made by this Act shall be disbursed in accordance with AS 37.05.315 - 37.05.319.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070(c).

JAN 30 1984

CITY OF KENAI

January 25, 1984

Honorable Bette Cato
Chairman, House Transportation Committee
Pouch V
Juneau, Alaska 99811

Dear Chairman Cato:

It is our understanding that your committee will be holding hearings on HB 401 sponsored by Representative Malone requesting $2.75 million for ramp/apron extension at the Kenai Airport. As per your request to provide back-up material justifying the request, please refer to the following:

1. Kenai Airport is a municipally owned and operated airport.

2. State contributes nothing to the operation or maintenance.

3. Fourth busiest airport in Alaska. 209,000 passengers were processed through the Kenai Airport during fiscal 1983. At the present time there are 56 passenger flights to and from Anchorage per day and eight (8) to and from Homer for a total of 128 commercial flights per day. During the summer months there are 70 flights a day to and from Anchorage which increases the daily total to 156 daily commercial flights. During calendar year 1983 there were 84,363 landings and takeoffs at the Kenai Airport.

In addition, over the past three years the fish processors in the Kenai area (there are 14) are dramatically increasing the amount of fresh fish being flown in from Bristol Bay and other areas for processing. During the 1983 fishing season 15 million pounds of fish were brought in and the processors anticipate future increases. This has resulted in locating as many as 24 aircraft varying in type and size from C-130 Hercules, C-119's, DC-6's, DC-7's, DC-3's and Electra's on the airport ramp/apron. The increase in these activities have resulted in congestion of major proportions. Consider for just a moment the magnitude of the traffic problem complicated by semi-trucks (fuel and freight), front end loaders, fork lifts and all sorts of trucks running around and through moving and parked aircraft on the apron/ramp.

It is in effect a catastrophe waiting to happen. All of the aforementioned commerce is beneficial not only to Kenai, but also to the State of Alaska. I'm sure you are aware Kenai over the last four years has been growing at the rate of 10% per year and we can't keep up with the growth without State help.

It should be noted that the Kenai Municipal Airport acts as an alternate for Anchorage International when Anchorage is closed down. In such cases, it is not unusual to find 2-4 Wien, 2-4 Alaska, and perhaps Western airlines planes sitting on our airport awaiting clearance from Anchorage.

The resolution of this problem will be extremely beneficial to the commerce of the State of Alaska.

The City has already done the engineering on this project, therefore, if the legislature approves HB 401, the City can immediately go to bid and construction.

If additional information is needed, please do not hesitate to call.

Sincerely,

Wm. J. Brighton
City Manager

HB 401 Analysis

"An Act making a special appropriation for payment as a grant to the City of Kenai for extension of the municipal airport main apron; and providing for an effective date."

This bill provides for payment of $2,500,000 General Funds under A.S. 37.05.315, by the Department of Administration. Historically, the Department has not "held back" any portion of any grant under A.S. 37.05.315 for administrative costs, including the legislated audit function. We have found efficiency measures in other areas that permit us to devote some operating staff resources to the administrative tasks of the Municipal Grants program. One more grant, such as proposed by this bill, will not over-burden our resources, but one hundred will. If the number of grants under A.S. 37.05.315 becomes significant, additional operating costs by the Department will need to be budgeted by the Legislature to ensure that the full value of the grant reaches the intended recipient.

HB 203

HB 203 - AN ACT MAKING A SPECIAL APPROPRIATION TO THE DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES FOR PHASE I OF THE NOME PORT FACILITY.

CHAIRMAN ADAMS INDICATED THAT CSHB 203 (FINANCE) WOULD MAKE A SUPPLEMENTAL APPROPRIATION TO THE DEPARTMENT OF HEALTH AND SOCIAL SERVICES FOR EXPENSES RESULTING FROM AN INCREASE IN PRISON POPULATION.

ROGER LANGE, DIVISION OF ADULT CORRECTIONS, DEPARTMENT OF HEALTH AND SOCIAL SERVICES, PROVIDED AN OVERVIEW OF THE COMPONENTS OF THE SUPPLEMENTAL REQUEST TOTALING $1,972.7 (SEE ATTACHMENT #1). REPRESENTATIVE WARD QUESTIONED THE AMOUNT NEEDED FOR ONE MONTH TO MEET REQUIREMENTS OF THE CLEARY SETTLEMENT. MR. LANGE RESPONDED THAT THERE WAS A PARTIAL SETTLEMENT AGREEMENT MADE IN JANUARY WHICH COVERED "NON-LARGE COST ITEMS". HE SAID THERE ARE 10 POSITIONS INCLUDED OF WHICH SEVEN WOULD BE FOR MONITORING TO REPORT BACK TO THE COURT WITH REGARD TO THE PERFORMANCE BY THE DIVISION IN MEETING THE PARTIAL SETTLEMENT AGREEMENT. THERE WAS DISCUSSION CONCERNING THE AGREEMENT AND PARTIES WHICH SIGNED THE AGREEMENT. REPRESENTATIVE WARD ASKED IF THE AMOUNT INCLUDED IN

THE SUPPLEMENTAL WOULD SATISFY THE PARTIAL AGREEMENT. MR. LANGE SAID IT WOULD AND THAT THE DEPARTMENT'S FY 84 REQUEST INCLUDES PART OF THE ASSOCIATED COSTS REQUIRED UNDER THE PARTIAL SETTLEMENT. HE SAID PERSONNEL COSTS WILL BE ANNUALIZED. MR. LANGE SAID THE NUMBER WHICH WOULD BE ANNUALIZED WOULD BE $57.5.

(REPRESENTATIVE PESTINGER ARRIVED AT THIS TIME.)

CHAIRMAN ADAMS NOTED PROBLEMS WITH INCLUDING WITHIN THE SUPPLEMENTAL $161,476 TO FUND SALARIES AND RELATED COSTS FOR THE ANTICIPATED DEPARTMENTALIZATION OF THE DIVISION OF ADULT CORRECTIONS TO FUND 10 NEW POSITIONS AND INCREASES FOR SIX EXISTING POSITIONS. HE NOTED THAT POSITIONS HAVE BEEN INCLUDED WITHIN HB 103 AS WELL AS THE ADDITION OF 18 POSITIONS WITHIN THE HOUSE BUDGET FOR FY 84. MR. LANGE SAID THE POSITIONS ARE COVERED IN THE FY 84 BUDGET; HOWEVER, THE DEPARTMENT IS TRYING TO COMPLETE THE PAPERWORK ON NEW POSITIONS DURING THE CURRENT FISCAL YEAR TO AVOID AN INUNDATION OF WORK ASSOCIATED WITH ESTABLISHING NEW POSITIONS. CHAIRMAN ADAMS SAID HE ALSO HAD A PROBLEM WITH THE CAPITAL ACCOUNTS CHARGEBACK REQUEST FOR $312,086. HE ASKED WHY THE DEPARTMENT COULD NOT UTILIZE HB 309 AND REAPPROPRIATE CAPITAL FUNDS TO THE OPERATING SECTION. CHAIRMAN ADAMS FELT THE

SUPPLEMENT IS NEEDED BUT DID NOT FEEL THAT THESE TWO ITEMS SHOULD BE INCLUDED.

CHAIRMAN ADAMS SAID IT WOULD BE HIS SUGGESTION TO THE COMMITTEE THAT THE SUPPLEMENTAL BE REDUCED TO $1,499,140 REPRESENTING A DECREASE OF $312,088 FOR CAPITAL ACCOUNTS CHARGEBACKS AND $161,476 FOR THE DIRECTOR'S OFFICE DEPARTMENTALIZATION.

REPRESENTATIVE BETTISWORTH MOVED TO REPORT OUT OF COMMITTEE CSHB 203 (FINANCE) IN THE AMOUNT OF $1,499,140. THERE BEING NO OBJECTION, IT WAS SO ORDERED. CSHB 203 (FINANCE) WAS REPORTED OUT OF COMMITTEE WITH A "DO PASS" RECOMMENDATION.

SSHB 346

SSHB 346 - AN ACT EXEMPTING PUBLIC UTILITY INCOME FROM THE NET INCOME TAX.

CHAIRMAN ADAMS READ A STATEMENT PREPARED BY THE SPONSOR OF THE LEGISLATION, REPRESENTATIVE BETTE CATO (SEE ATTACHMENT #2).

COMMISSIONER BOB HEATH, DEPARTMENT OF REVENUE, STATED THAT THE DEPARTMENT IS OPPOSED TO THE BILL. HE SAID THEY OBJECT TO A SPECIFIC SUBSIDY WHICH WILL NOT EFFECT ALL COMMUNITIES WITH ANY DEGREE OF SIMILARITY. COMMISSIONER HEATH SAID THIS WOULD BE A WINDFALL FOR CABLE T.V. SYSTEMS IN AS MUCH AS THEY ARE NOT

The Honorable Bette Cato
House Transportation Committee
Pouch V
Juneau, Alaska 99811

Dear Bette:

Attached for your review and information is a copy of the preliminary statement of fiscal impact on House Bill 203 - Phase I of the Nome Port Facility, a color coded map of the area determined to be the best location for the causeway and bridge, and a brochure which outlines the proposed Nome Port Facility.

On March 4 at 8:30 a.m., I have arranged to show a video-tape of the proposed Nome Port Facility. The tape is 10-1/2 minutes long.

Thank you for taking the time to review the packets of information I have sent to you.

Sincerely,

Rep. Jack Fuller

PORT OF NOME

Unlocking the resource wealth of the northwest region for all Alaskans to share.

ECONOMICS and TRANSPORTATION

Nome is the regional distribution center for most of the Seward Peninsula and the southern coast of Norton Sound. This area is rich in natural resources such as offshore oil and gas, hardrock minerals and fisheries. A modern, medium draft port at Nome will offer lower shipping costs to and from the area, thus helping to make development of these resources more economically feasible.

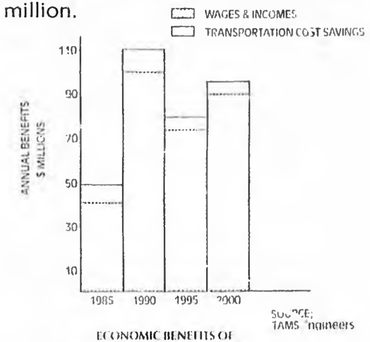
The port will be a transshipment center for materials and equipment used in offshore development. Increased activity in the area will require incoming shipments of fuels, supplies and equipment, and by the turn of the century the mines are projected to generate large volumes of bulk ore shipments. The proposed port will also encourage the development of a more efficient regional fishing operation.

MAJOR IDENTIFIED MINERAL PROSPECTS AND DEPOSITS, NORTHWEST ALASKA

Today the port at Nome serves as the distribution center for supplies to villages throughout the region — an estimated population of over 11,200. By the year 2000, that service area will include more than 15,000 people. This population will rely more and more on a cash economy and larger volumes of incoming and transshipped cargoes.

Economic development in northwest Alaska has been hindered by the high cost of transportation. Access is available only by sea and air.

Today, ocean-going vessels must anchor one mile off the shore at Nome. From there, cargoes are "lightered" ashore: transported to the Snake River harbor and then to coastal villages. The current harbor is subject to considerable siltation and must be dredged each year to a depth of 8 feet by the U.S. Army Corps of Engineers.



Northwest Alaska has no link to the railbelt. Any plan to extend the Alaska Railroad into the region would take considerable time and money, since right-of-ways would be needed across federal, state, and native lands. The cost alone makes rail construction questionable in the foreseeable future.

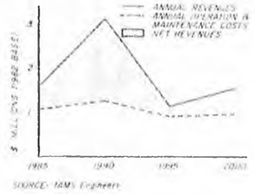
Therefore, a medium draft port at Nome is the most economical alternative to bring low cost, viable transportation to an area of the state on the verge of very significant economic development.

STATEWIDE BENEFITS

The statewide economic benefits of the proposed project are measured in terms of wages and salaries. As the port helps to spur development of the area's vast natural resources, these activities will expand the employment base in the region and throughout the state. When the total employment in offshore oil and gas, minerals and fisheries development is combined, more than 1,400 jobs will be created by the Nome port within its first decade. This will generate more than $101.5 million statewide in direct, indirect and induced incomes by 1990.

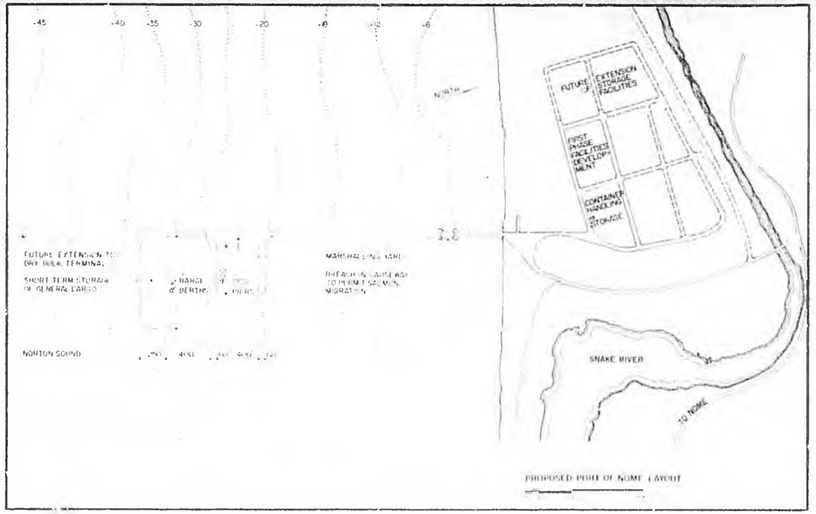
The port will also reduce the cost of living and doing business in the northwest by lowering shipping costs to Nome. A summary of the total economic benefits for selected years ranges from a low in 1985 of $48.3 million to a high in 1990 of $115 million.

ECONOMIC BENEFITS OF THE PROPOSED NOME PORT



OPERATION and MAINTENANCE

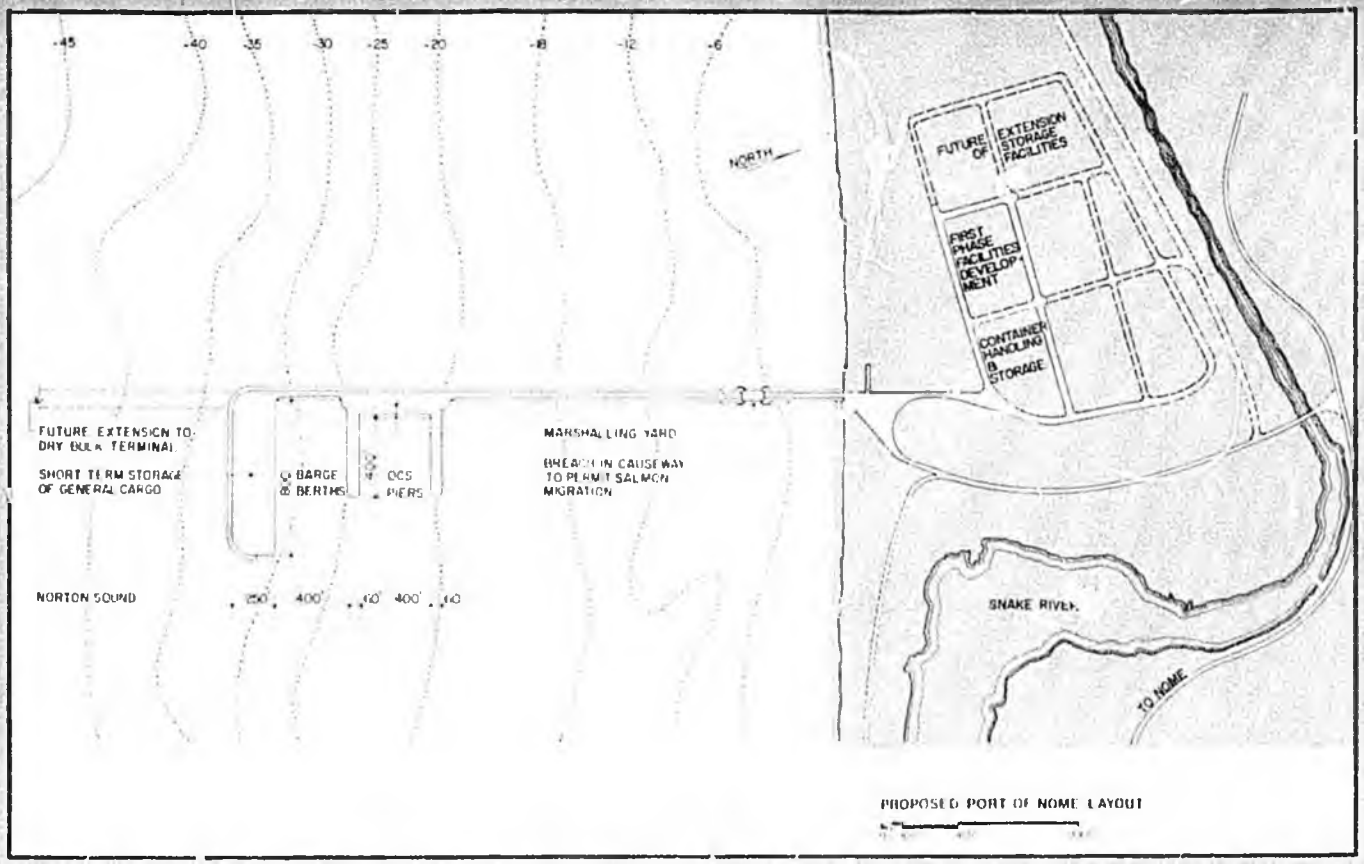
The proposal calls for the port facility to be owned and operated by the City of Nome, in order that a break-even price structure to minimize transportation costs can be established.



Using a schedule of tariffs similar to rates at other Alaskan ports, the Nome facility will generate 75 percent of its total revenues from wharfage and handling tariffs. Equipment rentals, storage and dockage fees will provide the balance, for a total estimated revenue each year that will exceed the annual operation and maintenance costs.

Operational costs include salaries for a harbormaster and longshoremen, equipment for cargo handling and utilities. Maintenance costs include repair to buildings and yards, periodic resurfacing and repair of the causeway, etc..

Assuming the state provides capital funds for construction, the Nome port will be a self-supporting facility from the very first year of service.



PROPOSED NOME PORT ANNUAL REVENUES AND EXPENSES

The layout of Nome's port features a 3,600 ft. causeway with a bridge near shore to permit fish migration. At the seaward end, in water 30 feet deep, the causeway design shows barge berths and a short term cargo storage area. The design allows for later construction of piers for work boats servicing Outer Continental Shelf oil platforms, and the causeway can also be extended 1,000 to 1,500 feet to provide a dry bulk terminal for deeper draft vessels. Onshore facilities will include container handling and storage facilities on 10 acres of land, with an additional 50 acres available for future storage expansion.

HOW YOU CAN HELP SUPPORT THE PROJECT

As the State Department of Transportation and Public Facilities' number one marine construction priority for the northern half of Alaska, funds for the Nome port will be included in the 1983 budget proposal sent to the governor. You can help make sure those funds are not cut from the budget by contacting legislators and the governor. Tell them you support the project because a modern port at Nome will benefit all Alaskans.

The layout of Nome's port features a 3,600 ft. causeway with a breach near shore to permit fish migration. At the seaward end, in water 30 feet deep, the causeway design shows barge berths and a short term cargo storage area. The design allows for later construction of piers for work boats servicing Outer Continental Shelf oil platforms, and the causeway can also be extended 1,000 to 1,500 feet to provide a dry bulk terminal for deeper draft vessels. Onshore facilities will include container handling and storage facilities on 10 acres of land, with an additional 50 acres available for future storage expansion.

HOW YOU CAN HELP SUPPORT THE PROJECT

As the State Department of Transportation and Public Facilities' number one marine construction priority for the northern half of Alaska, funds for the Nome port will be included in the 1983 budget proposal sent to the governor. You can help make sure those funds are not cut from the budget by contacting legislators and the governor. Tell them you support the project because a modern port at Nome will benefit all Alaskans.

The City of Nome produced this brochure to outline its plans for a modern port that could serve as the key to economic development in Alaska's northwest. By allocating a small portion of its oil revenues to construct the port, the state of Alaska can take the vital first step toward development of the vast natural resources in the region. This development will benefit all Alaskans for many years to come.

ALASKANS SUPPORT NOME PORT PROJECT

Grass roots support for the Nome port project is growing across the state. The Bering Straits Regional Corporation endorses the plan, as does the local Chamber of Commerce. Miners and business people are eager to see the project complete because of the economic development it will bring to the state. Voters have put their initial stamp of approval on the project in two separate statewide bond votes. Recognizing the potential impact of a modern facility at Nome, the state Department of Transportation and Public Facilities has included construction funds for the project as northern Alaska's number one marine construction priority in its 1983 budget for the governor's consideration.

HB 202 (cont'd)

other beverages of 21 percent alcohol by volume or less from 60 cents a gallon to $1 a gallon; other beverages having a content of more than 21 percent alcohol by volume from $4 a gallon to $5.75 a gallon. Changes wording in AS 43.60 from "intoxicating liquors" to "alcoholic beverages". Provides the increase takes effect on the first day of the month after the month in which the law takes effect. Provides Act takes effect immediately.

Introduced February 15 and referred to State Affairs, then to Finance.

Appropriation (special) (Nome Port Facility)

HOUSE BILL NO. 203, by Reps. Fuller and Bussell. Makes a special appropriation in the amount of $12,000,000 to the Dept. of Transportation and Public Facilities for Phase I of the Nome Port Facility. Provides appropriation is for a capital project and does not lapse. Provides Act takes effect July 1, 1983.

Introduced February 16 and referred to Transportation, then to Finance.

Fish & Game Licenses/Tags (compensation for sale of)

HOUSE BILL NO. 204, by Rep. Duncan. Amends section of the Fish & Game Code relating to compensation and fees for the issuance of fish and game licenses and tags (AS 16.05.390), by stating that the provisions relating to payment of fee for the sale of licenses and tags does not apply to ". . . the sale of a license or tag by a person during the course of and within the scope of the person's employment with the state . . . ." (current law states the payment of fees does not apply to ". . .a state employee appointed by the commissioner of revenue under AS 16.05.380 to sell licenses and tags."). Does not provide for an effective date (becomes law 90 days after approval by the Governor).

Introduced February 16 and referred to Resources, then to Finance.

State Agencies (interest payments by)

HOUSE BILL NO. 205, by Rep. Duncan. Relates to interest payments by state agencies on obligations not timely paid. Provides: "A state agency that, without reasonable cause, fails to make payment for goods or services acquired by that agency within 30 days of the invoice date of a properly completed invoice and the receipt of the goods or services, shall pay interest on the balance due in the amount of one and one-half percent a month or portion of a month, computed from the later of the date of the invoice or the date of receipt of the goods or services." Would apply to goods or services acquired by a state agency, but does not apply to services performed by an individual. Defines "reasonable cause." Provides Act takes effect immediately.

Introduced February 16 and referred to State Affairs, then to Finance.

HB 49, (cont'd)

within the second degree of kindred . . . ."

State Employees (limitation)

HOUSE BILL NO. 93, (see page 57). Reported back to the House on February 28 by Labor & Commerce with a majority of the committee recommending it do pass. Concurring: Furnace (Chmn.), Koponen, Ringstad, Uehling and Cowdery. Not concurring: Malone had no recommendation. To State Affairs.

Child Prostitution (raising penalties)

HOUSE BILL NO. 128, (see page 97). Reported back to the House on March 2 by Health, Education & Social Services with the committee recommending it do pass. Concurring: Fritz (Co-Chmn.), Tischer (Co-Chmn.), M. W. Miller, Davis, Cato, Koponen and Goll. To Judiciary.

Appropriation (supplemental) (school construction debts)

HOUSE BILL NO. 137, (see page 99). Reported back to the House on March 4 by Health, Education & Social Services with the committee recommending it do pass. Concurring: Tischer (Co-Chmn.), Fritz (Co-Chmn.), Koponen, Cato, Davis, M. W. Miller and Goll. To Finance.

State Grain Reserve Program

HOUSE BILL NO. 156, (see page 125). Reported back to the House on March 2 by Resources with the committee having no recommendation. Concurring: Goll, Bussell, Liska, Cowdery, Uehling and Larson. Not concurring: Ringstad (Co-Chmn.) and Shultz (Co-Chmn.) who signed "do pass." To the House Special Committee on State Loans.

Appropriation (special) (AK Aviation Training Program)

HOUSE BILL NO. 160, (see page 127). Reported back to the House on March 4 by Health, Education & Social Services with the committee recommending it do pass. Concurring: Tischer (Co-Chmn.), Fritz (Co-Chmn.), M. W. Miller, Davis, Cato, Koponen and Goll. To Finance.

Forfeited Aircraft (transfer of)

HOUSE BILL NO. 195, (see page 179). Reported back to the House on March 4 by Resources with the committee recommending it do pass. Concurring: Shultz (Co-Chmn.), Ringstad (Co-Chmn.), Bussell, Liska, Uehling and Cowdery. To Judiciary.

Note: On March 2, Rep. Abood was added as a co-sponsor on HB 195.

Appropriation (special) (Nome port facility)

HOUSE BILL NO. 203, (see page 181). Reported back to the House on March 4 by Transportation with the committee recommending it do pass. Concurring: Cato (Chmn.), Phillips, Szymanski, Lacher, Herrmann, McBride and Davis. To Finance.

Sport Fish/ Hunting & Trapping Licenses (sr. citizens)

HOUSE BILL NO. 206, (see page 182). Reported back to the House on March 4 by Resources with a majority of the committee recommending it be replaced with Resources Committee Substitute and that it do pass. Concurring: Ringstad (Co-Chmn.), Larson, Bussell, Liska, Uehling and Cowdery. Not concurring: Shultz (Co-Chmn.) who had no recommendation. To Rules.

Resources CS would provide free sport fishing, hunting or trapping licenses to Alaskans who are over 60 years of age and have lived in

SB 303, (cont'd)

Within 30 days after the effective date of this Act the Governor is required to appoint the initial members to the Board of Social Workers. Provides Act takes effect July 1, 1983.

Introduced May 27 and referred to Health, Education & Social Services, Finance.

INTRODUCTION OF RESOLUTIONS (Senate)

Small Business Development

SPONSOR SUBSTITUTE FOR SENATE CONCURRENT RESOLUTION NO. 18, by Senator V. Fischer (see page 562, original version). Requests the Governor to appoint a task force to assess state policy in contracting, local hire, and small business advocacy, and to recommend measures that will emphasize and promote small business development and maintenance in Alaska; assist in securing adequate sources of bonding, credit, and loans for small, Alaska-owned businesses; assure, wherever possible, that state-funded construction projects are specified, modified, and contracted in a manner to assure a reasonable proportion of state-funded construction projects are performed by small, Alaska-owned businesses.

Further requests the Governor to direct the Attorney General to investigate and recommend measures available to the state to assure that a reasonable portion of state-funded construction and procurement dollars be contracted through small Alaska-owned businesses, consistent with provisions of the constitutions of the United States and the state of Alaska.

Introduced May 26 and referred to Labor & Commerce.

HOUSE BILLS RECEIVED IN THE SENATE

Auto Liab. Insurance (req'd under state law)

CS FOR SS FOR HOUSE BILL NO. 7 (FINANCE), (see pages 27;105; 415;496;610;655;758;818). Received in the Senate on May 23 and referred to Labor & Commerce and Finance.

AK Marine Highway Auth. (establishing)

CS FOR HOUSE BILL NO. 68 (FINANCE)(AMENDED), (see pages 49; 387;541;868). Received in the Senate May 27 and referred to Transportation, Finance.

Appropriation (supplemental) (increased prison pop.)

CS FOR HOUSE BILL NO. 203 (FINANCE), (see pages 181;258; 870). Received in the Senate on May 25 and referred to Health, Education and Social Services and Finance. On May 26, at the request of Senator Josephson, the HESS referral was waived. To Finance.

CSSSHB 105 (Fin) (cont'd)

By transferring these hatcheries to the perspective non-profits the fisheries enhancement program remains on-going, while alleviating F.R.E.D. Division. Our intent is to enhance Alaskan fisheries, transferring hatchery facilities is the most viable and expedient option we have.

In addition to transferring hatchery facilities, a southeastern regional pathology lab should be setup within F.R.E.D. This is a service which the private hatchery operators cannot provide nor afford. It's also a beneficial service for the state facilities, but must be provided in a timely and expedient fashion to eliminate the possibility of loosing large numbers of eggs.

There are still a number of incomplete hatcheries. The F.R.E.D. Division has been in place for a number of years, with a number of engineers working for the division. The Legislature would strongly suggest that these plans be finished by the end of calendar year '83.

The Yukon River King salmon run has the potential to greatly enhance our King salmon fishery. It is the Legislature's suggestion that the F.R.E.D. Division work with officials in the Yukon Territory to determine how the State of Alaska might assist the enhancement of the Yukon King salmon specie, and designated streams for rehabilitation.

The Finance CS represents the House version of the budget and appropriates $2,295,959,600 for fiscal year 1984 operating expenses and $347,968,800 for FY 84 capital expenses, for a total budget of $2,643,928,400.

Before the House on May 27. The Finance CS was adopted by unanimous consent. Passed the House on May 27, 28-11-1-0, after a series of minority amendments (1 - 19) were all defeated. Nays: Clocksin, Davis, Duncan, Goll, Koponen, Larson, Malone, McBride, M. M. Miller, Vaska, Zharoff. Excused: Wendte. The effective date was adopted.

Appropriation (supplemental) (increased prison population)

CS FOR HOUSE BILL NO. 203 (FINANCE), (see pages 181;258; 834). Reported back to the House on May 24 by Finance with the committee recommending it be replaced with a Finance CS and that it do pass. Concurring: Adams (Chairman), Pestinger, Duncan, Ward, Zharoff, Lindauer and Bettisworth.

The Finance CS is a completely new bill (original contained a $12 million appropriation to the Dept. of Transportation & Public Facilities for the Nome Port Facility). Makes a $1,499,140 supplemental appropriation to the Dept. of Health & Social Services to pay expenses resulting from an increase in prison population for fiscal year 1983. Effective immedintely.

Before the House on May 24. The Finance CS was adopted and the bill passed, 35-0-4-1. Excused: Bettisworth, Grussendorf, Szymanski, Vaska. Absent: Cowdery. The effective date was adopted.

Fuller: John Fuller, Representative for District 23, thanked the Chairman and members of committee for prompt scheduling of this bill, ~~appreciate it.~~

House Bill 452 makes a special appropriation to the Department of Transportation and Public Facilities for Phase I of the Nome Port Facility in the amount of $12 million. This project has been the city's of Nome's number one priority for a number

of years. There has been alot of money spent on engineering and study.

As you may recall, I introduced House Bill 203 last session, which passed this committee and went to the House Finance Committee for consideration. However, after meeting with the Governor and being assured that the Nome Port Facility would be included in the Governor's capital budget, I allowed House Bill 203 to be used as a vehicle for a supplemental appropriation to the Department of Health and Social Services to pay expenses resulting from an increase in the prison population. Until near the end of that last session, the port project was included in the Governor's capital budget, but was removed before the budget was finalized.

A great deal of time, money and effort was put into planning, engineering and economic analysis of the port facility. Copies of this information have been placed in your packet.

Today, as Chairman Cato introduced several of the people that are here who are really the expertise on all the phases of the study and so forth are here to answer any questions you may have. Probably when I'm through here I would like to ask Commissioner Glenzer to be the lead-off man and he's been in on this thing all the way along the line and understands all the phases of it; also Jim Holder, Acting City Manager of Nome; Jay Lyman is here from the engineering firm TAMS.

The Nome Port Facility would have a significant impact on the freight cost savings in Northwest Alaska and also bring economic stability to the region. I recognize that probably most of us sitting around the table today might not be around when the real impact of a port facility in Nome takes place; and that is the development of the minerals of the most highly mineralized individual area in the State of Alaska and that's the Seward Peninsula. I think that alot of it depends on the oil company and the gas which I think we can get, ~~better it'll get better, maybe it'll get worse.~~ But I think that we've got to get started if we're going to think about the future of this state on the development of the mineral indu. ry. This certainly would be a real forward step in prior planning as far as the development of the State goes.

If you have any questions, I'd be happy to answer them, if you don't I would like to pass the ball to Commissioner Glenzer.

#108 Rep. Abood: How does this differ from HB 203?

#110 Rep. Fuller: There isn't alot of difference, we're just talking about dollars, but the new plan basically is that the City of Nome is going to be involved in revenue bonds.

116 Rep. Abood: There isn't any distinguishable difference in the design or the cost factors as we once looked at them. Probably a little bit more I would assume.

120 Rep. Fuller: There's been some changes, and if you read this last night you would understand that, but I'll leave that up to ....

125 Commissioner Glenzer: I guess it's probably appropriate that I do this because starting way back in 1946 I came up there and landed in front of the then Federal Bldg. in Nome and made a telephone call to my wife in San Diego and left a helicopter running while I was sitting there and wondered why we couldn't get in closer to the city of Nome. The day the budget came out I was in Nome, it wasn't much better to have been in Valdez that day.....

At the time we started this and when I became involved, Commissioner Casey directed that we really be the point people in the Northern Region on the concept of getting private participation on major projects.

We started with trying to pump up the city of Nome for the rest of that year and right to where we are now, as far as that project is concerned.

Initially TAMS did an excellent job and I was in on some of the technical reviews later, in designing a port that I suspect would have cost about $38-$42 million. In the technical reviews and with some of the highly specialized people sitting there, it was pretty obvious that many of those that we could build something and keep it that would still do the job and function for at least in the initial phases to supply what Nome needed.

So we went to work in two directions. One we really rung up the economic aspects of this. We do this in the Northern REgion. We went at it very conservatively and did not include any future mineral development and/or off-shore oil development. We did go to the oil company to find out and they sure, if there is a port they'll use it. As far as mineral development, we didn't even explore that too much, we left it in the realm of future and possibilities.

We developed a package and we scaled down the existing design from TAMS to a very austere facility which could be built considerably less.

We then went into about seven or eight alternatives; proposals that could be included in a package for anyway you wanted to bid it; and we further were going to let the industry, that is to say contractors, who had already expressed interest from foreign countries and within the United States, to come up with innovations that were done.

We then were ready for a package where we are right now, we can put out on the street literally like tomorrow, to let private industry participate.

Now ~~that's~~ there's one option that can be done. We are concerned with the economic viability at this stage in the game and the price of money. Can a contractor get money cheaper than the city? We also want to make a couple unequivocal clear. The department has also felt, or had the marching orders that the Governor was for a port in Nome. We also felt that Nome should own the Port or run it the way they want; it was Nome's port. And as much as they wanted it, they would have it. To that degree they would go forward and do it. We were there to help them and we did in many working sessions. Now,

there's the option of revenue bonds, it looks good. I'll let the consultant from TAMS ~~if you want to get into that further~~.

~~As far as the design is concerned, it's a rubble mount~~ you have a packet; ~~the original design. Excellent facility. Let's look at it from the perspective of~~ when they started to do it, it was alot of money, people were getting ports, and roads and facilities, they designed one that was literally maintenance free, provided everything immediately. There's room to develop. We even came up with some more austere ones with, for instance, would provide for liquid cargo off-loading, but we felt and you should be aware of this, that we felt that the economic benefit generally to the citizens in the area, not just Nome, but the whole area up there, and if you blind-side them with nothing but liquid facility, you could conceivably could create a ~~alicopuly~~ or monopoly, or staging for dry cargo which would hurt some citizens perhaps, so we felt that in our proposals we should make provisions for all of them so that nobody suffers, and everybody got the benefits....

Open for questions

For getting into all the figures I've got people here that have been working on it for a year ...., if you have any questions I'm willing to answer them, we can bring anyone on that you want for economic studies, design studies; and I would suggest don't forget the city of Nome, they're are here, and he should he should really be the point on this thing, but I suggested to him that I'd get on and give the history of it cause at that time he was at NOme, but not in the same capacity.

233 Rep. Herrmann: Would the OCS benefits come in Phase II or would they come into Phase I?

235 Commissioner Glenzer: It would depend on, and you'd have to look at the whole thing to see (and of course, that's an unknown) how much are they going to use it, but I'm sure they would. ~~Any,~~ To be real candid, an oil company isn't going to build something if the State or local government will, however on the other hand if it's there they are certainly going to use it, it's about that simple.

245 Tim Holder: Tim Holder, Acting City Manager for the city of Nome. I've been in Nome for a couple of years and have been keeping track of the project in

my previous position with Coastal Management Planning for the city. I haven't been intimately involved as my predecessor, I've been with him; I'm really here to represent the City council, they're the body that has to take the official action to make this project come together. They have been behind this project for several years and this really says something because in the past five years the city council membership has almost completely changed the seven position have been completely refilled by new people, and I think that's one measure of support that comes form throughout the community.

Another measure of this port was a survey was done about three years ago throughout the city of Nome asking people if they supported the project and there was an 80% favorable response to support.

Another measure of support that really comes from throughout the region, the Northwest Mayor's Conference passed a resolution supporting the project and it's pretty obvious as to why ~~they're~~ their interest is there. If we have lower freight cost to Nome, Nome serves as the

distribution point for the region, for the villages of the region and stand to benefit.

It was the kind of thing that there really wasn't pressure at all, in fact it was initiated by people from the villages that are in the region, as Nome serves as the center port, so you should know that there is alot of political support from the area, ~~and it's a matter of cause~~ it takes 3 days and $1000 to get down here and back and that kind of thing it's too much to bring a whole delegation down, there is definitely the support.

Another item I wanted to touch on, is the project has been one of coordination between the city and the State. The city has taken the lead all along, the city has initiated it from the beginning but we've had considerable support from the State and of course the funding for doing the engineering comes through the State. Given the fact that people are kind of widespread I'd say that the people that have been involved with working on the project getting engineering and economic analysis done have worked out quite well.

The project has been scaled down as Commissioner Glenzer pointed out. We've gone from a $35-40 million project to a $16 million approximately. The way this number was derived was not simply a arbitrary scaling down but ~~was~~ we tried to cut back on the total project realizing that the ideal amount of funds might not be available from the state. Analysis has shown that about $8 million could be provided ~~d~~ other through a revenue bond or a through private financing with a private contractor building and then operating the port. This means that there's $12 million left that we need from the State to build the port. And that leads into what is the interest of the State in providing this money? There are several reasons. One I've touched on is that it will reduce transportation cost for people in Nome as well as the surrounding villages. This will not be realized immediately with the scaled down, if it had been funded more fully from the State, $35 million came through we'd have more facilities that could provide deeper draft, more ~~pipels~~ to bring in fuel and that kind of thing. With the scaled down version those lower transportation costs would not be realized immediately but would come later on.

Beyond that is the fact that this facility would be a step for providing long term job creation, and that is really the long range interest of building the port facility.

As you well know in the bush, the job creation is an important element in stabilizing society and keeping people employed and this port facility would be an important step toward that.

If there are any questions I'd be happy to answer them.

326 Rep. Flood: Would you explain lightering services for people who are not from areas like Nome.

328 Mr. Holder: The best way to visualize this and understand is in the handout that was given to you yesterday. This is the city of Nome right now and when barges come in and during the barging season they have to anchor about ½-1 mile out from shore depending on how much draft they have. The reason for this is that the shore off of Nome is shallow and they can't get in any closer. They do lightering which means they put the goods onto a lighter and smaller barge and bring it in through the mouth of the Knik River and anchor at our small dock which is mainly ...the shore of the river and then put it on the shore. A considerable amount of the transportation

cost are bringing goods from ~~the~~ Seattle which is where most of our barging comes from is in this last step. ~~Jay can be more specific about that.~~ The considerable amount is in this last step, in this last mouth because there has to be a transfer. The idea of the port whether's it's the $35 million version could go out about 3600 feet where the shortened version $20 million version is that this step would be eliminated and that cost of lightering would be ...

350 Rep. Flood: This would be eliminated by $76 a ton?

Mr. Holder: Jay to explain

~~357 Mr. Holder: I'll let Jay get into that.~~

352 Rep. Davis: With this scaled down version, how far out would you go?

354 Mr. Holder: 3000feet.

361 Rep. Davis: The newer version would be ?

362 Mr. Holder: 3600. The difference there is in the depth that you can get to, I think it's 30 foot depth, but the long version 3600 foot would get you to a 30 foot depth, the shorter version depth would be about 25.

Brief discussion of comparison of two versions in relations to depth.

365 Rep. Davis: But this one is designed so that it could be added on ?

Mr. Holder: Yes

368 Rep. Davis: There would be reduced transportation cost and savings, but I was wondering how that would be passed on to the consumer? What guarantee is there that the consumer is actually going to benefit from that.

Mr. Holder: I'll let Jay get into the economics into that.

374 Commissioner GLenzer: In our initial packages with private participation one of the very trojant factors was in fact how are you going to pass this on to the consumers. And of course in there we had provisions for guaranteed lightering cost. There's where the rub comes as to how much you get for rate of return for somebody who's participating as opposed to how much they can help assistance. If you're going to get 50¢ improvements maybe what's the use. If you're going to get 27-35-47 dollars now you're talking big bucks which is the last part of the rough part of Nome, I guarantee you our director up there just built a house and he spent as much to get ...from the barge as it did from Seattle. That is a big cost. You can't, I guess, how much is a project such as that for citizens that are there and how much are you going to allow somebody else to get a drag on say the return. Now granted there is a consideration of a barge company that is there...we did run those costs on what we really thought it cost....

394 Jay ~~Liheman~~ Lyman: Jay ~~Liheman~~ Lyman, Economist and Engineer with TAMS Engineering and I've been working on the Nome Port project with the city and the State for the past 2½ years. What I want to talk about was the financing and how that would effect the transportation cost in the area.

As you're aware their lighterage cost right now based on published tariffs averages about $76 a ton for cargo going into Nome. The dry cargo costs are much higher than that, they're up around $130-140 a ton on average, so there's a very substantial cost currently to the people living there for the last half a mile, on the 2000 mile trip from Seattle to Nome. The lighterage represents about 25% of the overall transportation cost from Seattle to Nome.

On this scale down version, we have estimated that operating and maintaining it will cost the equivalent of a lighterage charge of around $35-40 a ton. If that's all the city had to pay for, that would represent a transportation cost savings for that lightering of about $40 a ton, or in other words roughly $1½ million per year of direct benefits to the city of Nome. With city participation in financing the capital cost, what we've looked at is things; the maximum upper acceptable limit for a port tariff equivalent to a lighterage cost, would be the same as what they're currently paying now, which is $76 a ton on average. Using that difference between the O&M cost of $35-$40 a ton and the $76 a ton that is currently cost of lightering, you come up with a revenue base of about $1½-$2 million a year, which can be used to amortize some capital

construction cost. Using conservative assumptions about bond coverage and interest rates and what not, we've estimated that depending on whether it was private financing or municipal bond, it should be between $6-$8 million. The assumption then with that is that the initial use of the facility will result in a transportation cost very similar to the community with what they have now. So, what you have to look at is that by putting in a port facility and having a capital amortization program, you've guaranteed a fixed price for 20 years for a large portion of your lighterage cost and it's not going to escalate. However, you can assume that lighterage over that same 20 years are going to escalate at least with inflation. Year by year, the benefit to the community will get larger and larger. Beyond that at the end of the 20 year period you've got the capital paid off and the lighterage cost for the port tariff could drop substantially if they felt they needed to do that.

The second benefit, of course if that putting the facility in provides the start of the ~~transportation~~ transportation infrastructure for economic development in the region.

434 Rep. Flood: Right now it's about $76 per ton? (right?)
You say this will reduce the cost by roughly 25-30% correct?

436 Mr. Lyman ~~MR. LINEMAN~~: No, the lighterage costs represents 25% of the overall transportation cost to Nome. If you just look at what it costs to

operate and maintain the cut down facility, it would reduce the equivalent lighterage charge by about 50%, but with a local contribution toward the capital cost of the facility, the assumption has been made that initially tariff would be set past the current lighterage rate or equivalent to it.

442 Rep. Abood: How many years is it going to take for the guy that lives in Nome that's building a house and he's been paying a $1 a nail if you wish to use some kind of figure, by putting in this port facility, he thinks he's going to get a good break on that $1 a nail and bring it down to 50¢ a nail, if that be the case though the numbers not quite clear, how many years is it going to take for that individual or those people of Nome to buy things, lumber, nails, anything you want to call it, cheaper than he's buying now, because the reason ....

Side 2
450 Mr. ~~Lineman~~ Lymon: He'll continue to pay a dollar, but in the real world, you know that that lighterage cost will go up maybe a $1.05,...he's guaranteed a fixed price for 20 years or whatever the term of the bond is, or the financing arrangement and that will become a larger and larger benefit every single year that goes by. At the end of that financing period then the only thing that they will have to fund is the operating and maintaining that facility and that capital cost will significantly lower the transportation cost.

467 Rep. Abood: So the savings in the lightering, if you knock out the lightering because you don't have the lighter at any more you can just

drive it right on, that savings will still be charged and be that the case, then who gets that money the city? to offset what, operation?

474 Mr. ~~Lineman~~ Lyman: The city uses that $76 a ton for operations and capital repayment of their portion of the project which we're saying is $6-8 million. So the emphasis then is in long term transportion cost benefits will be very substantial and real and the initial year or ~~two~~ two you won't see a transportation cost savings, but what you've got is a facility that is much more efficient and can bring in more cargo, heavier equipment and than what they're doing now, so there are sided benefits besides just the transportion cost.

Rep. Abood: So every body in the likeness would pay that $1 nail, no one will get a different savings than the people that are still paying the $1 nail. Is anybody going to get a break on that lighterage.

Mr. ~~Lineman~~ Lyman: Not initially.

Rep. Abood: And probably at the same rate as the guy who bought the nail.

Mr. ~~Lineman~~ Lyman: The premise is you can't go above what transportation cost are now because there'd be a disbenefit now, but if you keep it the same you still have the long range benefits as a major factor for wanting to develop the facility.

500 Rep. Davis: If I had a lighterage service and this port was built, than I think I'd cut my cost about $10 below you and try to stay in business, instead of going out of business; I don't know what guarantee you have on that, maybe you have competition from the current lighterage services. My second question, you talk about the economic benefit to the area and I think they are real, but is there a possibility then, if there is a economic benefit to the area, that actually, that the cost of this facility would go down because it would be more used by more than just freight.

515 Mr. Lyman: Absolutely, we've used very, very, conservative numbers for cargo just based on existing cargo rates that are going through now and the very real possibility is as soon as you get in a more efficient facility the cargo volumes are going to increase. As soon as you do that, you can adjust your tariff rate down to reflect your actual revenues. So we're using the most pessimistic alternative right now that there will be no additional cargos, they'll be paying exactly what they are paying now, and this is how much they can come up with. In reality, the city is going to grow, there is going to be additional development resulting from the port, there will be other cargoes, so that rate would be also another way of in 5 years when they are looking at 10% additional cargo they might be able to reduce the transportation, the port tariffs by that much.

As far as your question about would the lightering firm undercut the port, we've had 2 separate analysis of people who are in the

lightering business, in the cargo handling business, that have come in independently ~~and~~ looked at what they're charging now. and there isn't alot of room to undercut what they are charging now, so if they want to cut their throats, they might do that, but I don't think on a long term that would economically viable for private firm to do t.

541 Rep. Fuller: Jay, in this design, we will no longer have to suffer the barges staying out on the roadsbed for 1-2-3 or a week at a time waiting to unload. This we also pay for this right? I mean their freight charges go up the next year, and this happens quite often, that they can not unload those barges all the time. This design ~~will design~~ will allow them to safe water and continue their operations, is that correct?

Mr. Lyman: Both dry and liquid cargo unloading will go much faster than the lightering operations now.

555 Rep. Abood: Will this enable the port to continue operations longer, more months of operation, or will it be about the same because of the conditions of ice, etc.

560 Mr. Lyman: Realistically it probably won't increase the shipping season, because what the major factor is, is not the shore ice as much as the floating ice out in Norton Sound that stops people from trying to come through. We have looked at that, and if the development warrants, you can go in there with ice breaker barges, that's a feasible

proposition it's just more expensive and there's no need for it until oil or some other kind of development occurs. But by going out 3000' you have increased the opportunity for year round service if economic justifies.

572 Rep. Cato: Not only the immediate necessity or immediate benefits, but as Rep. Fuller said, we have to become a little bit more visionary, as to the future that Alaska holds, and one thing that I think is a definite factor, and I'd like all of you to be aware of my position on it, is that with the Seward Peninsula being as highly mineralized as it is and as many things that are in the works to produce up there, I think it's very, very, lies heavily upon us at the present time to be visionary so that some infrastructure, the infrastructure is in place when the time actually comes to need it and not build the cart 25 miles behind the horse, sort of speak. I'm sure all of you are as aware of it as I am.

593 Rep. Davis: I've only been in Nome during the winter, I'm curious how far up the shore ice goes.

Rep. Fuller: Goes all the way to Siberia sometimes, Russian coast line.

Mr Lyman 600 Year around, there's flow ice out in the middle of Norton Sound where the oil development would take place, and that's a scenario we had for year round shipping, if they had oil producing rigs out there they'd

need to have the shore support service, and with the ice reinforced hull you couldn't get in the average of 1000'-1500' from the shore ice, some years it's worse than that, but you could still break through and keep a path open.

611 Rep. Miller: I would like to make a motion that we move HB 452 out of ~~Transportation~~ Transportation with individual recommendations.

614 Rep. Cato: No objections, so ordered.

~~Thanked for time on Nome POrt facility, we're~~ enthused about it, ~~make sure~~ everyone signs the report before we leave

630 Rep. Herrmann: Gave brief overview on some discussions she had on the Marine Authority Task Force, overview of some conversations.

Read memo she distributed to the committee; had staff check into what the Governor's Task force on the Marine Highway and what they are up to; ~~the members are as follows; Frank Chapados-Fairbanks; Valley Deder-Seward; Gordon Harang-Sitka; Joe Bushman-San Fransciso, not sure of rest; Wor ?-Fairbanks.~~

~~REad memo~~

658 Rep. Davis: Commented on talking with Frank Chapados on weekend, he's really excited about the whole task force and has lots of ideas and really looking forward to talking with members of the committee; trying to come up with long range plan with the Marine highway system; you don't normally talk to people from Fairbanks that are so excited about the marine highway system and have lots of ideas but Frank is definitely one of those individuals.

670 Rep. Cato: Been excited about the Marine Hwy task and is going to make our job more easily workable, and they will come up with some of the recommendations; glad the Governor appointed the task force, I think our marine hwy is one of the most important things that we really need to get into the nitty gritty of, and I think this task force is going to be able to aid us in that situation.

680 Rep. Flood: Can I take this as some sort of indication from you that your excited or interested in making sure that the infrastructures in place before we get on with other forms of transportation and advancement; be it light industries, etc.

684 Rep. Cato: Along with; I have long been a ardent devotee of getting infrastructure in place throughout the entire state and am hoping that that is one thing this committee will be able to do this year, is to focus on a plan; will be doing alot more than just hearing bills.

Rep. Flood: That means that my legislation will stand a chance of being heard in this committee

694 Rep. Cato: I want all of you to know that ~~House~~ Senate Transportation still has the bill to take the Marine Hwy out of DOT, and until such time as the agency can show us that they can stand alone and work within the confines of that agency for the betterment of the citizens of the State of Alaska that bill will still be active; it passed the House last year and is now sitting in Senate Transportation;

~~Any business to come before the committee"~~

~~Announced next committee meeting.~~

PROJECT DESCRIPTION

Construction of a 3600' rubble mound causeway or acceptable alternative, to provide either full or partial service accommodating a baseline tonnage of 36,000 tons in both liquid and dry cargo. Project is ready to advertise.

PROJECT NEED STATEMENT

The consumers of the Seward Peninsula pay approximately 25% more for bulk cargo and petroleum products because of the lightering costs from ocean-going barges to the existing dock facility.

At present, barges calling at Nome are anchored 1/2 to 3/4 miles offshore for unloading and reloading of cargo and freight. Cranes on board the ocean-going barges are used to offload containers and other cargo to lighters. These shallow draft lighters are towed through the surf and the shallow 8-foot deep entrance channel for unloading at the lighterage company's transfer facility. The lighters are unloaded over the entrance channel retaining wall by portable cranes. Empty containers and outgoing shipments are reloaded to lighters inside the harbor area for return to the oceangoing barges anchored offshore. This is an extremely costly operation.

PROJECT NEED STATEMENT (cont.)

The average waterborne freight growth rate since 1969 according to Corps of Engineers' publications, has been approximately 12%. With the beginning of oil exploration already occurring offshore from Nome in 1985, (Navarin Basin, Norton Sound), the potential development of the bottomfish industry, plus the potential for Seward Peninsula area mining interests to expand dramatically, action should be implemented now to get a minimal marine terminal infrastructure in place.

Development of this project strongly supports several goal areas of this administration:

(1) Using prior appropriations, the project has been thoroughly studied, analyzed, and designed to provide the best configuration and site location, as well as to tie into and make the best use of the existing Seward Peninsula highway system. The adjacent location of the Nome regional center airport allows excellent air logistical support.

(2) The port development both serves a basic public service function (reducing freight lightering costs) and has the potential to stimulate ecoromic development (mining, oil) and provide financial returns to the State.

(3) Maintenance and operational costs have:
   a. been minimized as much as possible through the design selected, and
   b. will be borne by the user through the use of port tariffs.

(4) The Nome port is being implemented as a joint venture with the private sector contributing financing and/or investment to a maximum extent and the State providing initial seed capital.

DOCUMENTATION OF ESTIMATED CAPITAL COSTS

Engineering estimates were developed by the design contractor. Figures were based on recent costs of similar construction in the Nome area and for expected construction market conditions at the time of contract award. Estimates were also based on historical costs of marine facility construction in other areas of Alaska, adjusted for the remote location of Nome, and on similar construction in other areas of the world.

FY85

HOUSE JOURNAL SUPPLEMENT January 14, 1985 HB 452 No. 82

ANALYSIS OF ESTIMATE OF OPERATIONAL EXPENSE

*NOTE: Operational and maintenance costs together will approach a maximum annual figure of $700,000. This cost will be borne by the user via an approximate $9 per ton tariff, which is substantially lower than present and projected lighterage fees. At the same time, the dredging costs of the present Nome harbor, which are projected to approach $1 million annually and which are financed entirely by governmental appropriations, will be substantially reduced.

IDENTIFICATION OF ALTERNATIVES CONSIDERED

1. Postpone action at this time. Failure to go forward with this project will result in continuing high lighterage costs and act as a retardant to future development in oil exploration, the bottomfish industry, and regional area mining extraction.

2. Scale down the scope of the overall project. This approach has been adopted. The project as now developed is a minimal level facility designed to meet current traffic and expandable to meet increased traffic as demand warrants. In order to arrive at and agree on the present design, seven basic alternatives, plus minor variations, all of which were technically feasible, were evaluated in depth.

3. Reduce or eliminate state funding insofar as possible. This has also been done. Private investment has been sought and secured to the maximum extent.

HOUSE JOURNAL SUPPLEMENT January 18, 1984 No. 82

Appropriation (special) (Nome port facility--phase I)

HOUSE BILL NO. 452, by Rep. Fuller and Bussell. Makes a $12 million dollar special appropriation to the Department of Transportation & Public Facilities for phase I of the Nome port facility. Provides appropriation is for a capital project and is subject to competitive bidding requirements. Provides Act takes effect July 1, 1984.

Introduced January 9 and referred to Transportation, Finance.

Appropriation (special) (Nome port facility--phase I)

HOUSE BILL NO. 452, (see pages 29;98). Reported back to the House January 24 by Finance recommending it do pass. Concurring: Reps. Adams (Chairman), Bettisworth, Furnace, Ward, Hurlbert, Fritz, and Martin. Not concurring: Reps. Lindauer, Duncan and Zharoff had no recommendation. To Rules.

Appropriation (special) (Nome port facility--Phase I)

HOUSE BILL NO. 452, (see page 29). Reported back to the House on January 18 by Transportation with the committee recommending it do pass. Concurring: Cato (Chmn.), Abood, M. W. Miller, Flood, Davis and Herrmann. To Finance.

HB 452

HOUSE BILL NO. 452 (special appropriation to the Department of Transportation and Public Facilities for Phase I of the Home Port Facility; effective date) was read the second time with the Transportation Committee report (page 2283 of the journal) and the Finance Committee report (page 2349 of the journal).

HB 452

Representative Barnes moved and asked unanimous consent that HB 452 be considered engrossed, advanced to third reading and placed on final passage. There being no objection, it was so ordered.

HB 452 was read the third time.

The question being: "Shall HB 452 pass the House?" The roll was taken with the following result:

HB 452

Yeas:	38	Abood, Adams, Barnes, Bettisworth, Bussell, Cato, Clocksin, Cowdery, Davis, Duncan, Flood, Fritz, Fuller, Furnace, Goll, Grussendorf, Hayes, Herrmann, Hurlbert, Koponen, Larson, Lindauer, Liska, Malone, Martin, McBride, Miller,M.M., Miller,M.W., Pestinger, Phillips, Ringstad, Szymanski, Tischer, Uehling, Vaska, Ward, Wendte, Zharoff
Nays:	1	Lacher
Excused:	1	Shultz
Absent:	0	

Koponen changed from "nay" to "yea."

And so, HB 452 passed the House.

Representative Barnes moved and asked unanimous consent that the roll call on the passage of the bill be considered the roll call on the effective date clause. There being no objection, it was so ordered.

HB 452 was referred to the Chief Clerk for engrossment.

Leg Digest 1/20/84

Nome Port Clears House Finance

HB-452, appropriating $12 million for Phase 1 of the Nome Port Facility has passed out of House Finance. The project involves a fill causeway leading offshore from Nome to waters deep enough to handle deep-sea barges. The bill is now in Rules, ready for calendaring.

Legislative Digest
Feb 11, 1984

Nome Port "Moving"

A $12 million appropriation for the development of the Nome Port has passed the House. HB-452 will fund phase I of the project, including a 3100 foot rubble mound causeway and onshore storage areas for cargo. The total project costs are estimated at $20 million.

Clyde Dodson
Mimmi Gregg
Gordon Harang
Norman Holm
Joe Hushion
William Wood
Ivan Gamble
George Davidson

The establishment of the Task Force was at the direction of Governor Sheffield for the purpose of reviewing the services that the Marine Highway provides to the residents of the communities it serves and the public in general. It is to report back to the Governor within 120 days, its findings and recommendations as to improvements that could be made within the system to provide better service to its users.

The organizational meeting was held on September 30th, and it is the hope of the Task Force that they will complete their meetings, vessel visitations, etc. by the end of January. It is their intent to have their report in final form by mid-February.

They have travelled extensively through most of the communities served by the Marine Highway System and the purpose of the teleconference scheduled for January 21, is to make contact in those ~~other~~ areas where they have not visited.

Right now, there is no agenda for the teleconference on the 21st. It will be completely open for participant's comments/suggestions.

My contact was Ted Vadman, who is acting as coordinator between the Marine Highway System officials and the Task Force Members.

HOUSE TRANSPORTATION COMMITTEE MEETING

After House Bill 452, Rep. Herrmann will give a brief report on the Marine Highway Task Force.

6) Annouce first bill before committee: HOUSE BILL 452

PROCESSION OF MEETING

7) Announce next committee meeting:

Wednesday, January 18, 1984 at 8:30a.m. the House Transportation Comittee staff will begin a brief overview of the DOT budget

8) Announce time of adjournment

- How bill by committee?
- Present RR letter to members - sign up w/Rhonda if will be participating

CITY OF NOME PORT DEVELOPMENT PROJECT

PHASE I BARGE DOCK

PROJECT SUMMARY

Project Description

The City of Nome and Alaska Department of Transportation and Public Facilities (DOT/PF) have worked together the past four years to develop a design for port facility in Nome. As a result of a detailed investigation of harbor development alternatives, and in-depth engineering analyses of potential ice, storm and other design considerations, a design has been completed for a modern, two-berth offshore barge terminal.

As shown in Figure 1, the proposed harbor will provide the moorage, offloading area, and cargo handling facilities needed to meet the long term needs of the approximately 12,000 resi-

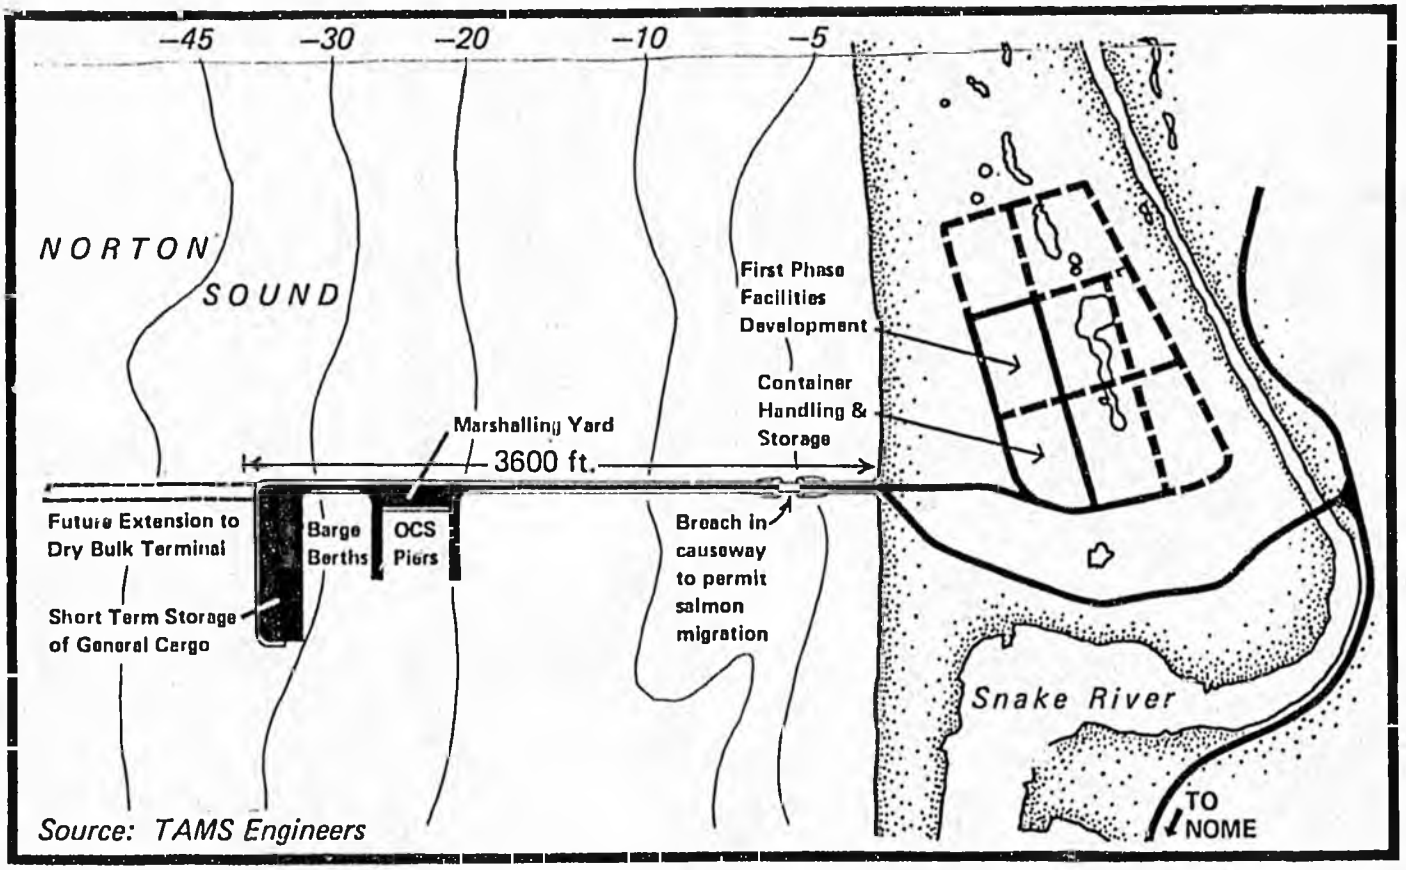

Figure 1

NOME PORT FACILITY - LONG RANGE DEVELOPMENT PLAN

dents of Nome and the surrounding villages, and will also encourage the development of resource-extraction industries to spur the economic growth of the Norton Sound and Seward Peninsula region.

Recognizing that capital funding for the entire project may not be initially available, the City of Nome and DOT/PF have prepared a cut-down version of the project to serve as the initial construction phase. Shown in Figure 2, the proposed Phase I construction will include a 3,000 foot rubble-mound causeway connecting an open onshore storage area to a floating dock moored in 20-25 feet of water. Ocean-going barges up to 400 feet long will berth alongside the floating dock (constructed from a conventional 200 foot barge); while containers and other dry cargo will be transferred to the causeway and be trucked to shore, as shown in Figure 3. A single buried pipeline will be used to offload jet fuel and diesel, which comprise about three-fourths of the bulk petroleum products delivered to Nome.

As planned, the Phase I development will serve the immediate marine transportation needs of the region. Although some operational shortcomings (such as limited draft and berthing space) may need to be corrected in future phases of construction, in the interim the facility represents a vast improvement over the current system of lightering cargoes from barges anchored up to a mile offshore.

Construction Funding

Construction costs for the Phase I facility are projected to be approximately $19.1 million. Of that total, it is estimated that a maximum of about $6-8 million can be generated by local funding (through revenue bonds) or by private sector participation in the project. Federal funding sources (such as the U.S. Economic Development Administration) are currently being investigated for funding assistance. However, the City has

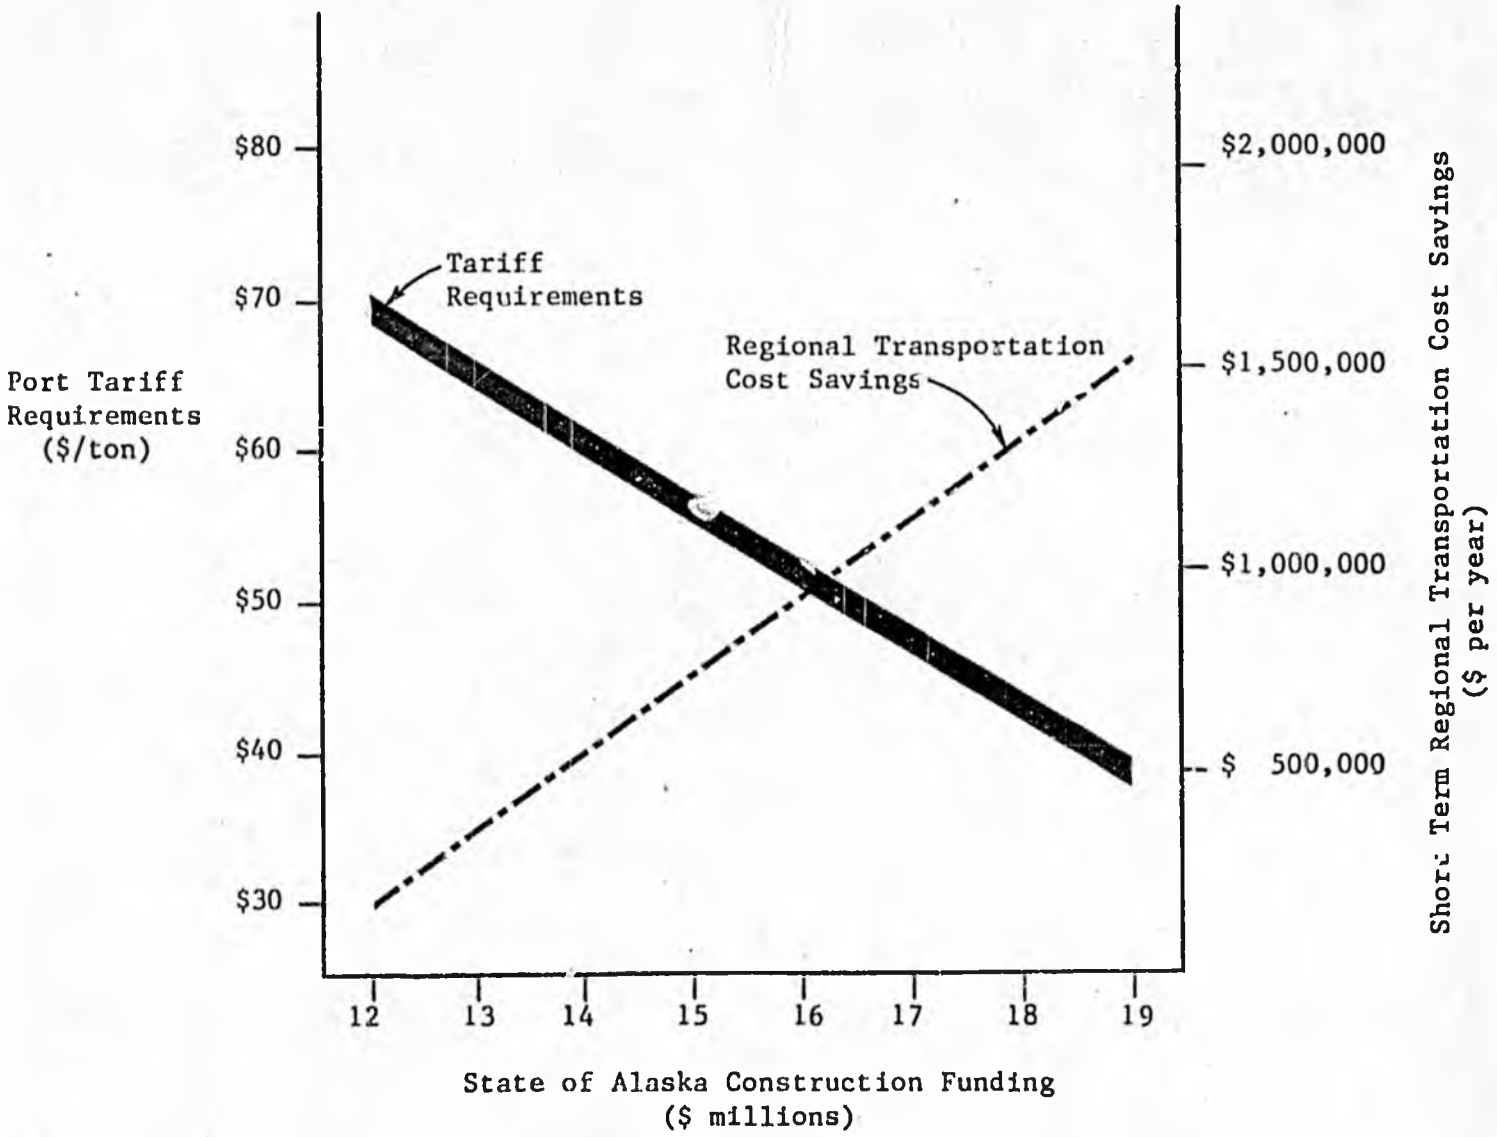
received little encouragement to date from the agencies contacted that funds would be available in 1984 or 1985. Consequently, grant support by the State of Alaska is therefore requested for approximately $12 million.

Economic Benefits

Transportation Costs. A major benefit resulting from construction of the port facility will be the elimination of the costly and inefficient lighterage service currently used. At an average charge of about $76 per ton of cargo lightered into Nome, the cost to the local community and region is on the order of $3 million annually.

As shown in Figure 4, the transportation cost savings realized by the area residents will depend directly on the level of grant funding contributed by the State of Alaska. With total state funding for the project, port tariffs would need to be



set at approximately $35-40 per ton, which would result in an annual savings to area residents of up to $1.6 million. On the other hand, with a state contribution of approximately $12 million and the remainder of the cost financed privately or by the City of Nome, port tariffs would approximate current lighterage charges and little short-term transportation cost savings would result. (Over the long-term, of course, port tariffs to recover capital investment would remain essentially stable, while lightering costs could be expected to keep pace with inflation. Thus, even with no initial cost advantage the port over the long term would result in lower transportation costs for the residents of the region.)

Regional Economic Development. Phase I of the Nome port will serve as an important first step in providing for the long term economic growth of Northwest Alaska. As described in the Port of Nome Economic Development Analysis, construction of the facility will be a major stimulus for the development and extraction of identified, recoverable tin, fluorite, and other mineral resources. It will function as a service basis for oil exploration (and possibly development) in Norton Sound, and as a corollary benefit will focus the OCS activity in the immediate Nome area, thus relieving fears of unwanted development by many of the coastal villages in the region.

Development of the port facility will play a central role in providing for stable, long-term growth in the region and will provide benefits statewide through job creation and encouraging the creation of a significant mining industry on the Seward Peninsula.

PROJECT DESCRIPTION

Construction of a 3600' rubble mound causeway or acceptable alternative, to proovide either full or partial service accommodating a baseline tonnage of 36,000 tons in both liquid and dry cargo. Project is ready to advertise.

PROJECT NEED STATEMENT

The consumers of the Seward Peninsula pay approximately 25% more for bulk cargo and petroleum products because of the lightering costs from ocean-going barges to the existing dock facility.

At present, barges calling at Nome are anchored 1/2 to 3/4 miles offshore for unloading and reloading of cargo and freight. Cranes on board the ocean-going barges are used to offload containers and other cargo to lighters. These shallow draft lighters are towed through the surf and the shallow 8-foot deep entrance channel for unloading at the lighterage company's transfer facility. The lighters are unloaded over the entrance channel retaining wall by portable cranes. Empty containers and outgoing shipments are reloaded to lighters inside the harbor area for return to the oceangoing barges anchored offshore. This is an extremely costly operation.

FY85

PROJECT NEED STATEMENT (Cont.)

The average waterborne freight growth ra. since 1969 according to Corps of Engineers' publications, has been approximately 12%. With the beginning of oil exploration already occurring offshore from Nome in 1983, (Navarin Basin, Norton Sound), the potential development of the bottomfish industry, plus the potential for Seward Peninsula area mining interests to expand dramatically, action should be implemented now to get a minimal marine terminal infrastructure in place.

Development of this project strongly supports several goal areas of this administration:

(1) Using prior appropriations, the project has been thoroughly studied, analyzed, and designed to provide the best configuration and site location, as well as to tie into and make the best use of the existing Seward Peninsula highway system. The adjacent location of the Nome regional center airport allows excellent air logistical support.

(2) The port development both serves a basic public service function (reducing freight lightering costs) and has the potential to stimulate economic development (mining, oil) and provide financial returns to the State.

(3) Maintenance and operational costs have:
   a. been minimized as much as possible through the design selected, and
   b. will be borne by the user through the use of port tariffs.

(4) The Nome port is being implemented as a joint venture with the private sector contributing financing and/or investment to a maximum extent and the State providing initial seed capital.

DOCUMENTATION OF ESTIMATED CAPITAL COSTS

Engineering estimates were developed by the design contractor. Figures were based on recent costs of similar construction in the Nome area and for expected construction market conditions at the time of contract award. Estimates were also based on historical costs of marine facility construction in other areas of Alaska, adjusted for the remote location of Nome, and on similar construction in other areas of the world.

ANALYSIS OF ESTIMATE OF OPERATIONAL EXPENSE

*NOTE: Operational and maintenance costs together will approach a maximum annual figure of $700,000. This cost will be borne by the user via an approximate $9 per ton tariff, which is substantially lower than present and projected lighterage fees. At the same time, the dredging costs of the present Nome harbor, which are projected to approach $1 million annually and which are financed entirely by governmental appropriations, will be substantially reduced.

IDENTIFICATION OF ALTERNATIVES CONSIDERED

1. Postpone action at this time. Failure to go forward with this project will result in continuing high lighterage costs and act as a retardant to future development in oil exploration, the bottomfish industry, and regional area mining extraction.

2. Scale down the scope of the overall project. This approach has been adopted. The project as now developed is a minimal level facility designed to meet current traffic and expandable to meet increased traffic as demand warrants. In order to arrive at and agree on the present design, seven basic alternatives, plus minor variations, all of which were technically feasible, were evaluated in depth.

3. Reduce or eliminate state funding insofar as possible. This has also been done. Private investment has been sought and secured to the maximum extent.

TECHNICAL INFORMATION BULLETIN

TAMS
THE PETTS-ABBETT-McCARTHY-STRATTON ENGINEERS
A PROFESSIONAL CORPORATION
ALASKA

PROJECT:	Port of Nome Causeway and Onshor Facilities
OWNER:	The City of Nome, Alaska
FUNDING	State of Alaska (DOT/PF)
DESIGN ENGINEERS:	Tippetts-Abbett-McCarthy-Stratton (TAMS)
DESIGN COMPLETION:	Estimated for February 1983
CONSTRUCTION BID DATE:	Unknown, depends on the City of Nome obtaining funding from the State of Alaska Legislature. Possibly in mid-summer 1983.
AVAILABILITY OF PLANS:	Plans will not be made available until the City is prepared to go ahead with construction. Incomplete preliminary plans and study materials may be viewed at TAMS offices by arrangement.

PROJECT DESCRIPTION: The City of Nome, situated on the north shore of Norton Sound (Figure 1) has a shallow harbor which precludes the docking of vessels drawing more than 6 feet of water. Consequently all cargo is lightered from barges anchored up to 1 mile offshore.

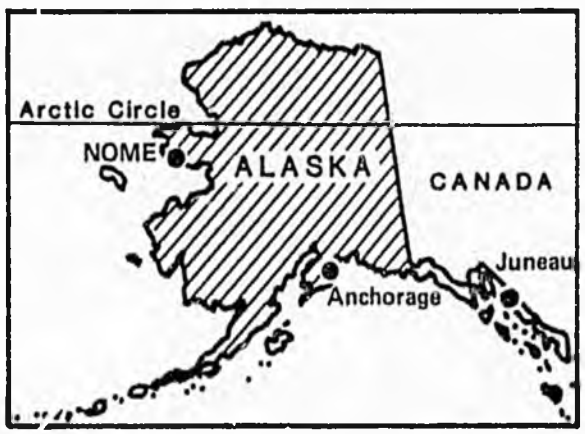

Fig. 1 Location Plan

The City proposes to build the new port in three phases. The first level of development, shown in Figure 2 will provide two 400 foot barge berths at an offshore terminal connected to the shore by a 3500 foot causeway. Later phases of development will include two additional piers for oil rig service vessels and a bulk ore load out facility.

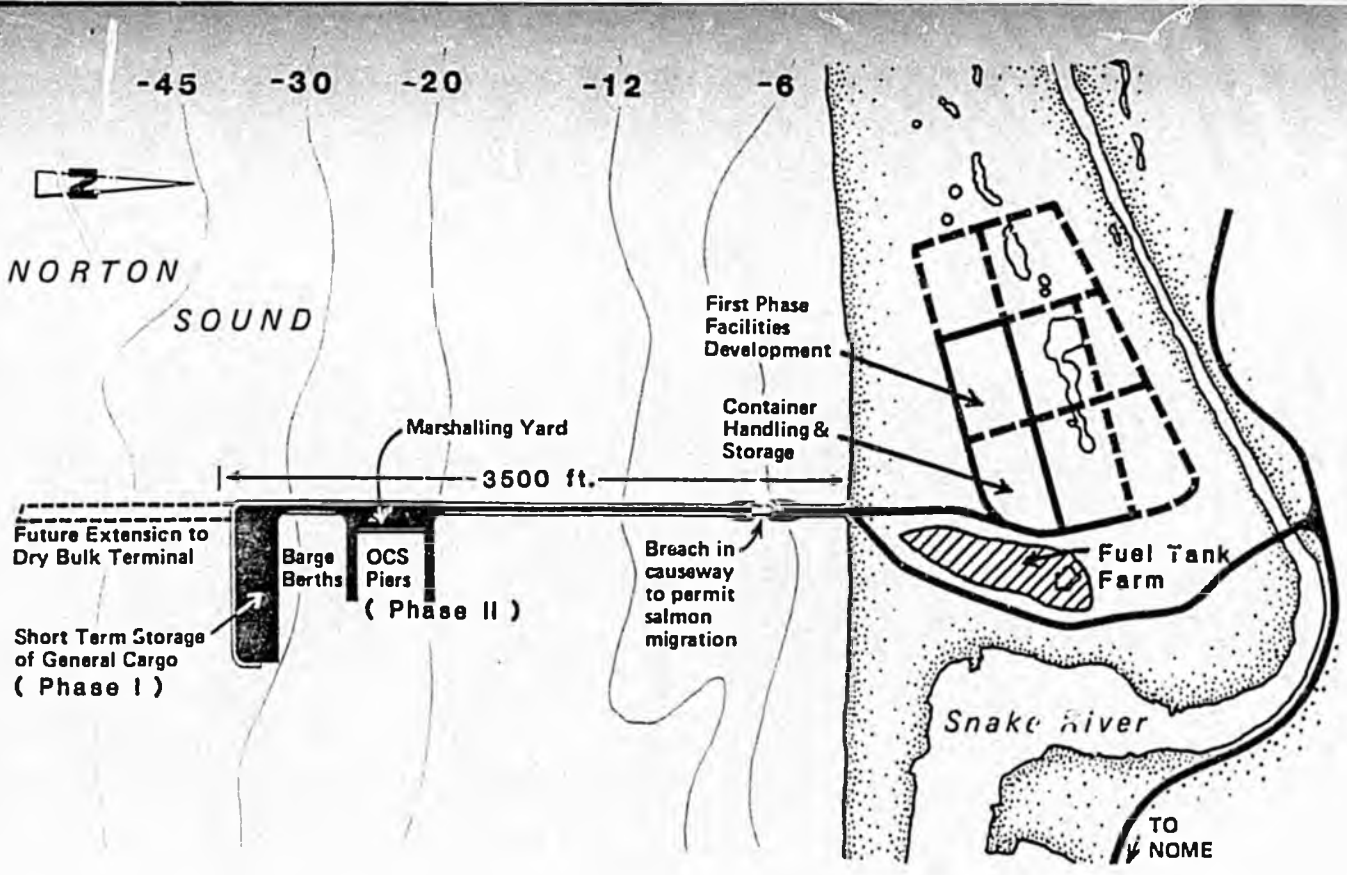

Fig. 2 Layout of Port

STRUCTURAL DETAILS:

Causeway

The causeway, shown in Figures 3 and 4, will be a rubble mound structure with 15-20 ton armor protection to the south and west faces and 8-12 ton armor on the east face. Utility lines will be direct buried in two utility corridors. The causeway roadway and offshore terminal area will be paved with asphalt; axle loads on the facility are expected to be 120,000 pounds.

Causeway Breach

Approximately 400 feet from shore the causeway will be breached and the opening crossed with a 98 foot bridge of prestressed concrete girders.

Offshore Terminal

The offshore terminal will provide 4.6 acres of short term open storage area (no buildings).

Dock Structure

The main dock structure to the offshore terminal will be constructed from 30 foot diameter by 33 foot high circular concrete caissons, as shown in Figure 5. Wall thickness is 12 inches with an 18 inch base giving a weight of 315 tons per

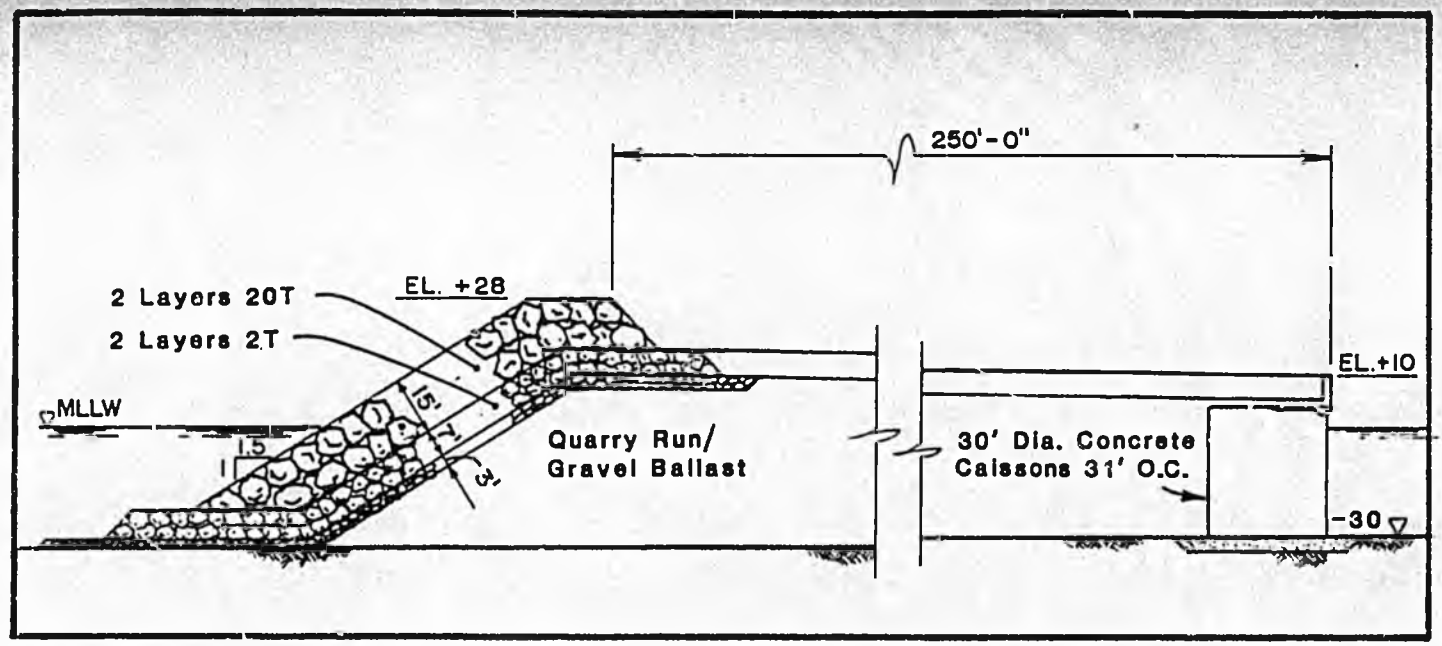

Fig. 3 Typical Section - Offshore Terminal

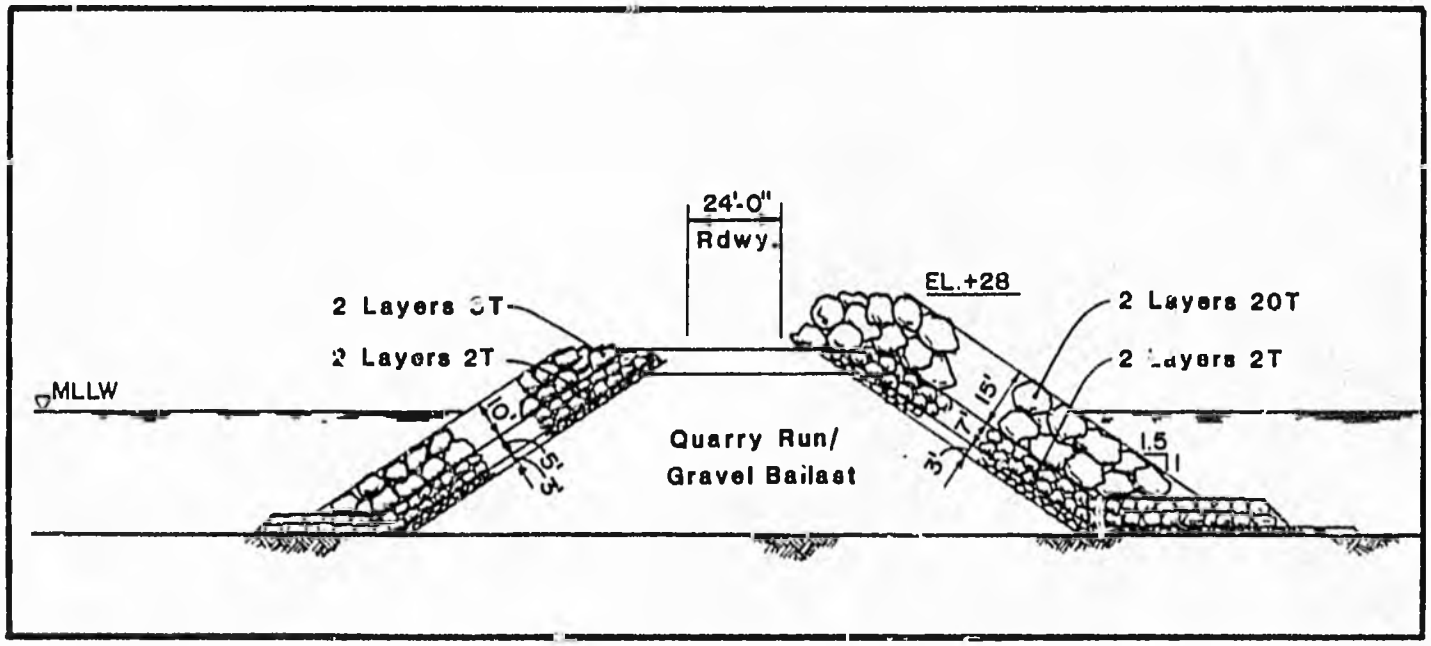

Fig. 4 Typical Section - Causeway

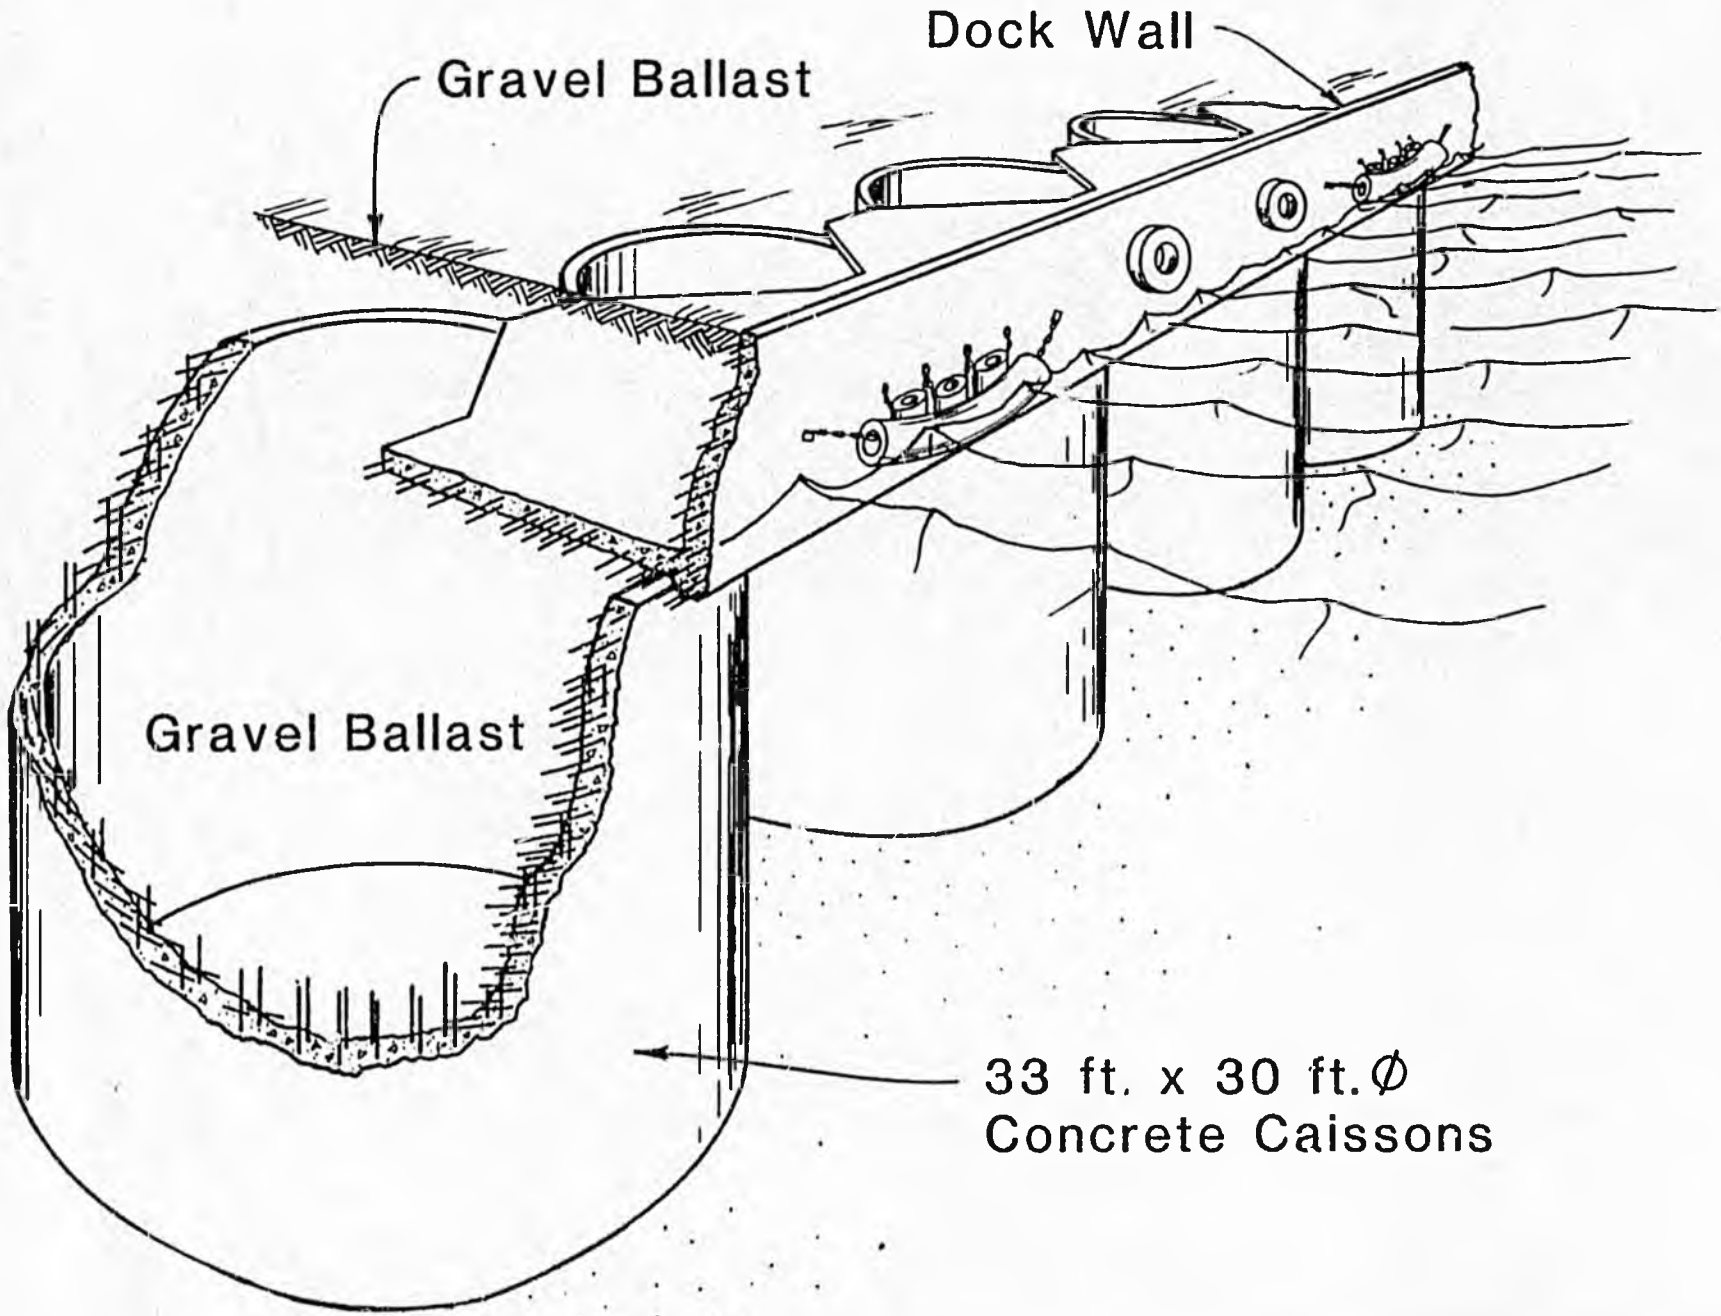

Fig. 5 Dock Structure and Caissons

caisson. Epoxy coated reinforcement is expected and an epoxy outer coating may be required over the area of the caisson likely to be subjected to ice abrasion.

Onshore Facilities

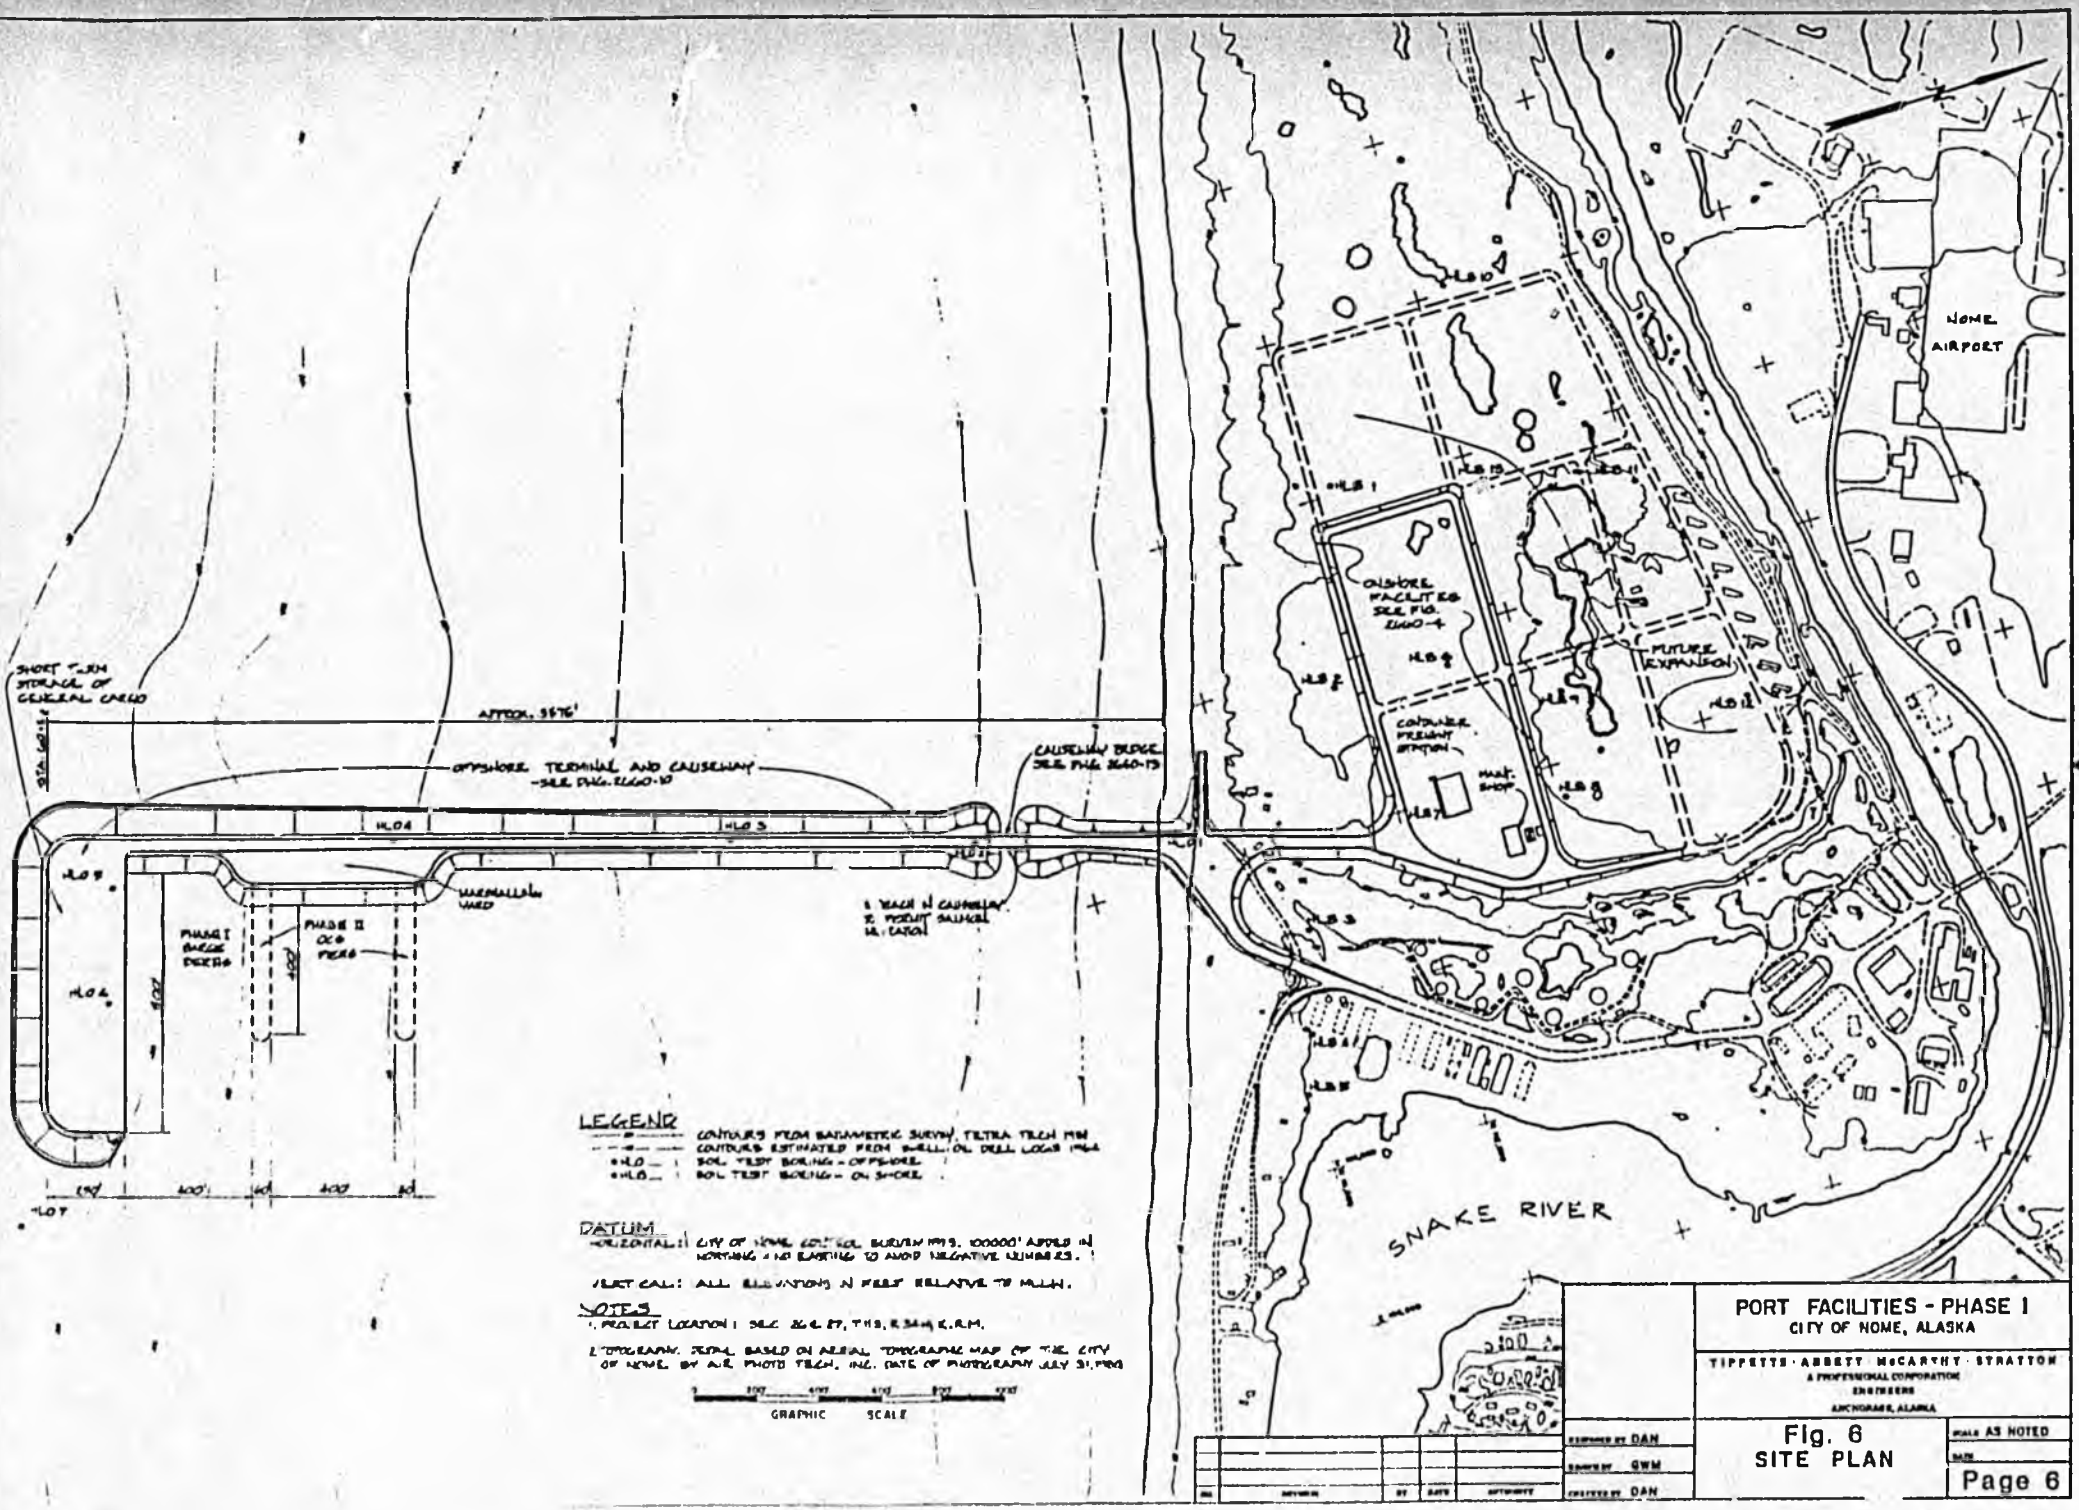
1. 10 acres of open storage on a 9 foot thick gravel pad.

2. Container Freight Station: 8000 square feet of container handling area plus 1600 square feet of office space using pre-engineered metal buildings.

3. Vehicle Maintenance Shop: 3200 square feet of work area with a 5 ton crane.

Fuel System

Since 75% of all cargoes imported to the region are bulk petroleum products, a comprehensive fuel unloading, distribution and storage system is required. The main offloading point will comprise 4 product unloading arms and pipework to the tank farm area shown in Figure 6. New tanks will be constructed within the existing fuel storage area.



Mechanical and Electrical

The utilities corridor along the causeway will carry high and low voltage electrical service, telephone, lines for a variety of types of fuel, and water lines for fire fighting. At the terminals and berths there will be navigation lighting and illumination for work areas.

CLIMATE:

Norton Sound is open to navigation from mid or late June to late October or mid-November when sea ice from the Bering Sea collects along the shoreline. Shorefast and floating ice cover is normally established by January and remains to a distance of approximately 1 mile from the shoreline until break up (Figure 7). Winter temperature minimum averages -10° F and rarely falls below -40° F. Summer temperatures rarely exceed 55° F.

The predominant storm direction is from the southwest. A 100 year significant wave height of 16.5 feet is projected for the offshore terminal area, accompanied by a storm tide which in 1974 caused a 10 foot set up at the City dock in the Snake River.

MATERIALS:

The primary source of core material for the causeway and offshore terminal is expected to be one of a number of gold dredge tailing dumps located at 2-5 mile radii from the project site.

Rock armor for protection against wave and ice attack is expected to be obtained from the Cape Nome quarry, approximately 13 miles east of the project site as shown in Figure 8. Highway access to the quarry site is maintained in the summer months only.

GROUND CONDITIONS:

All onshore facilities are located in a permafrost area which must be protected by a gravel blanket. The permafrost is patchy towards the shoreline and the sand spit to the east of the causeway which has been worked for gold extraction exhibits very low bearing capacity.

SITE INVESTIGATIONS:

During a borehole program carried out in February 1982, 7 offshore and 13 onshore holes were drilled. Bedrock was encountered under the causeway location at depths varying from 40-60 feet below the seabed. Overlying materials sampled comprised glacial silts, tills and sands.

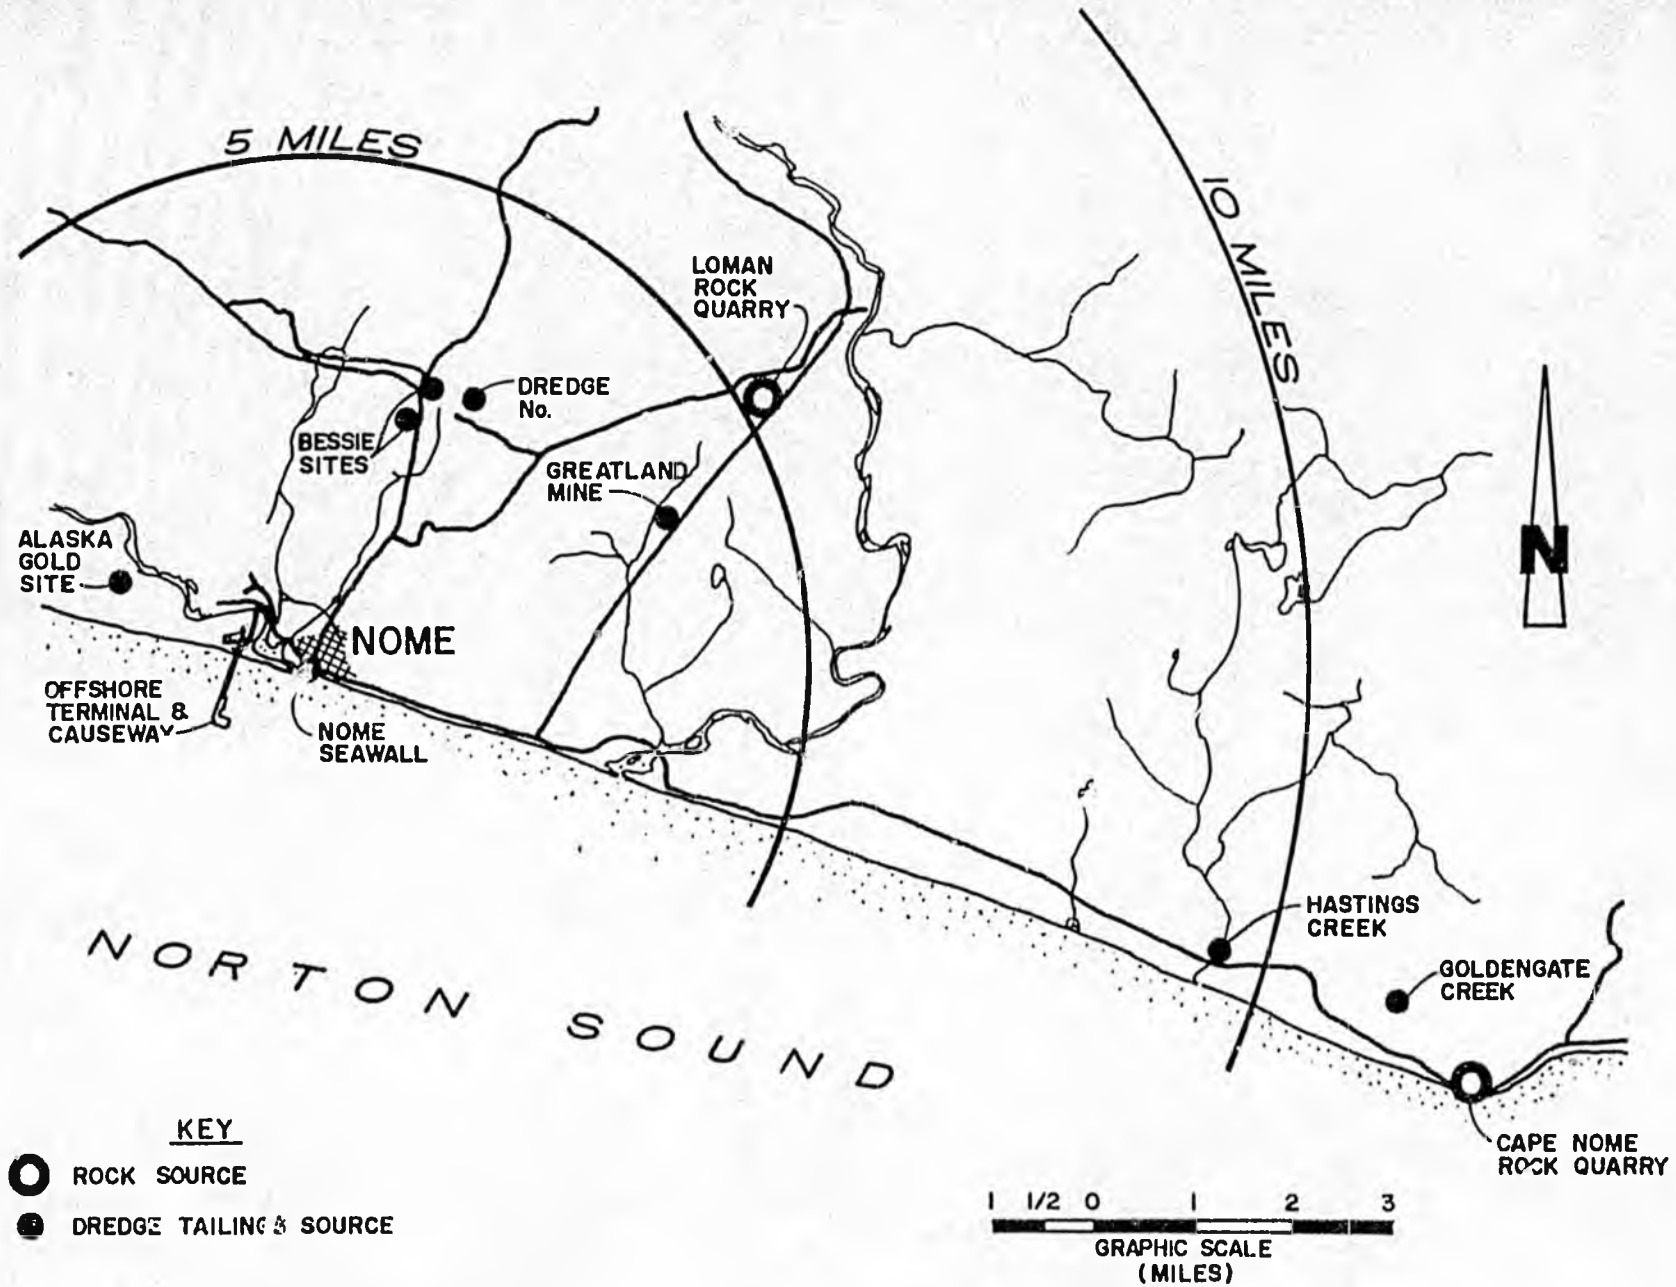

Fig. 8

LOCATION MAP - SOIL AND ROCK BORROW SITES

Materials source investigations carried out in June 1982 were followed by a test blast at the Cape Nome quarry. The results of these and all other site investigations will be made available to contractors at bid time and may be reviewed by arrangement with TAMS.

PERMIT STATUS:

An application for a Corps of Engineers construction permit was submitted in August 1982. Prior to the application extensive discussions with interested state and federal agencies were carried out to resolve concerns and incorporate mitigation measures where necessary.

MATERIALS QUANTITIES:

A preliminary, abbreviated list of materials quantities for the Phase I construction contract is attached.

Further information on the project may be obtained from the following:

Juneau, Alaska 99811

Dear Bette:

I have attached a copy of the TAMS Engineers report entitled Port of Nome, Alaska Economic Development Analysis. I felt that rather than send you reading materials on the Nome Port project at once, it would be better to send you the information on a piece-meal basis. By doing it this way, it would give you an opportunity to review the information at your leisure. I know how it is when a bill has been scheduled and you have to review all the material at once. I hope this will be satisfactory to you. I have also sent copies of this report to the members of the Transportation Committee.

There will be more information forthcoming and I will be sending it to you and the Committee on Wednesday.

Thank you.

Sincerely,

Jack

CHAIRMAN

H 60 (Rev. 3/81)

We, the undersigned, urge passage of HB 472 to provide funds to purchase right-of-way easements on privatelands through which passes the National Historic Iditarod Trail.

This legislation and the funds it will provide is critical to protect the integrity and use of this National Historic Trail.

Re: RIGHT OF WAY ACQUISITION COSTS FOR IDITAROD TRAIL

Dear Jack:

Enclosed are some materials you may find useful in arriving at a fiscal note for right of way acquisition costs for that portion of the Iditarod Trail between Mile 13, Knik Road and a point just west of Burma Road.

The total estimated acquisition costs, based largely upon a projected 200 foot width, and assessed valuations is $204,262.

Not included are any costs of DOT/PF administration, overhead, surveying costs or legal costs. You would know what type of factor to apply for those costs.

The above dollar amount is based upon four assumptions:

1. The right of way width across private properties would be reduced from 400 foot to 200 feet.

2. Assessed valuations are used in estimating fair market value as of today except for the two parcels abutting Knik Lake, where more lake oriented valuations are used.

3. No severance damages are calculated even though there will be severance damages in most cases.

4. The value of any existing rights the State and public may have in trail right of way under 43 U.S.C. Section 932 (RS 2247) is not estimated as the costs of establishing any such right of way by court action would probably exceed the cost of buying it outright.

Most of the Iditarod Trail between Mile 13, Knik Road and Susitna Station on the Susitna River crosses borough and state owned land. Four hundred feet has been reserved for those

portions of the trail which cross publicly owned lands. This provides almost 200 feet on both sides of the trail, which is needed if the trail is to continue to have a wilderness aspect and if adjacent commercial, industrial and residential uses are not to interfere with trail uses. There has to be some types of control on both sides of the trail lest the buffering be lost, lest local dogs and domestic animals interfere with dog teams, etc.

There is probably room for creativity in negotiating rights of way easements across the privately owned land in that, if building setbacks are agreed upon, and if areas where clearing will not be accomplished is agreed upon, the state could probably get by with title to a lesser right of way width. In at least one case, this type of approach would not work, because the right of way goes right down the middle of a long subdivision lot, which destroys the value of the remainder parcels on both sides of the trail. In this case the cost of a whole taking would be almost the same as a partial taking. I see a possibility of reducing acquisition costs by narrowing the rights of way across private parcels which savings would be equal to the severance damages to the remainder areas. So maybe this would be a wash.

The right of way situation at Knik Lake is complicated. It is very important that some lake shore on the south side of the lake be acquired. The lake shore property would almost certainly carry a very high price, since only rarely do you see a good lakeside lot in this borough selling for less than $25,000 even if you are only talking about one acre. For purposes of estimating we have shown 6.198 acres at a per acre cost of $8,000 for a total of $49,584. This acquisition could well be reduced in acreage, but because you are dealing with perhaps two acres right on the lake shore, you would still probably come out with a number close to $50,000, figuring $25,000 for each lake lot.

It is important to have access to the lake because there would be no practical way for snow machiners to get onto the Iditarod Trail except by coming onto the trail from the south shore of Knik Lake, since the right of way across the 17 acres of Knikatnu Native Corporation on Knik Road precludes snow machine use, except for purposes of grooming the trail for specific races. Also, the south shore of the lake is only about 200 yards from the Iditarod Hall of Fame, and anyone wishing to get a feel for the old Iditarod Trail by walking it ought to be able to get to the lake shore.

As you can tell from looking at the map of Knik Lake, the Iditarod Hall of Fame is in danger of being closed off from the lake by construction of houses along the shores of Knik Lake. If this should occur, much of the atmosphere of the historic trail at the very start of the trail, would be severely impaired. We did allocate $25,000 for acquisition of one lot adjacent to the Iditarod Hall of Fame.

I do not think that $300,000 is an excessive estimate of the cost of acquiring right of way for the Iditarod Trail. However, if there should be any question as to whether this is an excessive amount of money, the bill could be amended to include not only right of way acquisition, but also trail improvements, as there are many locations along the trail which would be much improved if signed and brushed. These areas would not necessarily be within the Matanuska-Susitna Borough.

Sincerely,

Gary Thurlow

b. State and Local Government Lands

For Trail segments on State patented lands or on lands tentatively approved for patent under the Alaska Statehood Act or patented local government lands, rights-of-way consistent with those on federally managed lands are recommended.

On lands that have been selected by the State, but not yet conveyed nor tentatively approved for conveyance as of the date of passage of the Act (November 10, 1978), it is recommended a Federal right-of-way be retained as provided for in the Act:

> Whenever the Secretary of the Interior makes any conveyance of land under any of the public land laws, he may reserve a right-of-way for trails to the extent he deems necessary to carry out the purposes of this Act. (Section 7(h), National Trails System Act, as amended).

c. Private Lands

Existing and proposed Federal easements through Native lands which overlay or closely parallel the actively managed historic route will be recognized and uniformly marked as the historic Trail after the Trail segment is certified.

Where no existing or proposed easements exist across Native lands, there may be cooperative agreements to recognize and use specific Trail segements.

No additional easements or restrictions will be negotiated for National Historic Trail management purposes unless special circumstances warrant an additional agreement between the Federal government and the Native corporation.

On other (non-Native) privately-owned lands where no public rights-of-way or easement exists, cooperative agreements can be made with the Federal government allowing for public use of the historic route. If private landowners reject public use of the historic route, alternate routes will be explored.

Acquisition of private lands is recommended only for the 1½ miles of private land in Knik which connects the road system with the historic Trail System. The Bureau of Outdoor Recreation in 1977 also recommended this acquisition as found in their report to Congress. A 300-foot-wide fee simple purchase or an adequate easement for this access point should be consummated or an exchange for other unappropriated Federal lands should be pursued.

3. TRANSPORTATION AND OFF-ROAD VEHICLE USE

As well as being an important historic resource, Trail segments making up the Iditarod National Historic Trail system are also vital transportation arteries in the State of Alaska. In designating the Trail System as a national historic trail, Congress intended to honor the existing uses of the trail segments.

a. Motorized Use

Section 7(c) of the National Trails Act (as amended through P.L. 95-625) states:

> "Other use along the historic trails...which will not substantially interfere with the nature and purpose of the trail...including the use of motorized vehicles, shall be permitted...."

Local people use substantial segments of the historic route near Bush towns and villages in traveling between villages, camps, and mining, hunting, trapping, and fishing areas. In the

Comments:

If the State does not fund ROW acquisition for this trail, the potential of losing this historic trail exists. The Borough has negotiated with some land owners successfully and others require payment for right-of-way acquisition.

This is a national event that is given national exposure and generates interest that results in tourism. This tourism benefits the entire State and not just the Borough. We urge your support for this piece of legislation.

The Iditarod Trail, a symbol of frontier travel, served a string of mining camps, trading post and other settlements founded between 1880-1920 during Alaska gold rush era. Its antecedents were native trails of the Ingalik and Tanaina indians and the Innuit and Yuit eskimos.

The Seward-Nome route became one of the first National Historic Trails selected when public law 95-625 (National Parks and Recreation Act) was signed by the president on November 10, 1978. The Historic Trail from Knik to the Susitna river was located and marked by the state of Alaska in 1980. It's along this trail that the Iditarod Trail sled dog race has been run each year since March 3, 1973 and was declared the states official sled dog race by Gov. Jay Hammond in 1976.

Today up to 70 mushers from all over the world come to Alaska for the worlds longest sled dog race. This year there will be participants from Italy, England,Norway and Canada. When these teams leave for Nome they will in some places not be traveling the original trail because from Knik to the Little Susitna river the trail crosses private parcels of land and the owners have posted no trespassing signs on iron stakes in the middle of the trail.

What we are requesting is for the state of Alaska to acquire a 200'right of way access across the private lands so that the historical and recreational uses of this trail will be preserved. If the state does not fund the right of way acquisition for this trail,the potential of losing this portion of the historical trail exist. The Mat-Su borough has negotiated with some landowners sucessfully and others will require payment for this right of way acquisition.

ANALYSIS OF FISCAL NOTE - HB 472

This estimate assumes a right of way 300' wide and approximately 12 miles in length running from near Knik Village to Burma Road.

It would encompass approximately 435 acres @ $1,000 per acre. The fiscal note amount includes about $15,000 for appraisal and negotiations.

If the width were reduced to 200', the amount would be approximately $290,000 plus $15,000 for incidentals totalling $305,000. A reduction to 150' would be estimated at $233,000.

If this trail has been used by the public while the land ownership was Public Domain, it is possible that a right of way was established by U.S.C. 43, Section 932 (usually called Revised Statute 2477). However, such title would be difficult to prove and harder still to locate.

POUCH M
JUNEAU, ALASKA 99811
PHONE: 907-465-2400

APR 25 1983

April 20, 1983

Mr. Bob Thom
Mat-Su Borough Agricultural
Advisory Committee
SRA Box 6007
Palmer, AK 99645

Dear Mr. Thom:

Thank you for your letter of February 23, regarding the width and location of the Iditarod Trail corridor through agricultural lands in the Fish Creek area. I apologize for the delay in answering your letter.

The decision to route the Iditarod Trail along the historic alignment was based on the recommendation of the Matanuska-Susitna Borough Trails Committee. This recommendation was made at the Trails Committee March 4, 1982 meeting. It is my understanding that you were present at the meeting.

Subsequently, the historic alignment of the trail was located on the ground by Joe Redington, Sr., accompanied by two staff members from this department. Trail location was verified where possible by old tree blazes and other signs. This is the alignment which is currently being surveyed. The line shown on U.S.G.S. maps as the Iditarod Trail is not the actual location of the historic route.

The Willow Sub-basin Plan, adopted by this department and the Matanuska-Susitna Borough after extensive public review, calls for a 600 foot wide corridor for the Iditarod Trail through the Fish Creek unit. This is a reduction from the 1,000 foot width called for in the plan elsewhere along the trail. The reduction was made because of the value of the agricultural soils and because agricultural use 300 feet from the trail was judged to have low impact on recreation.

10-J9LH

The Borough Trails Committee recommended that the trail width be further reduced from 600 feet. In response to that request, the planning team for the Fish Creek Management Plan reviewed the trail corridor, the issues, and the comments they had received, and they decided on a 400 foot width as a reasonable compromise between agricultural and recreational interests. The Division of Agriculture and the Matanuska-Susitna Borough concurred in this compromise (see attachments). The Borough owns nearly 2/3 of the land in the Fish Creek unit that is traversed by the trail.

Insofar as state lands are concerned, the planning team's decision is a recommendation to Tom Hawkins, the Director of the Division of Land and Water Management, and will appear in the draft plan. I have been assured that the team did consider your views in developing this recommendation. It is because of your input, in part, that the corridor was reduced to 400 feet. However, the team felt that the public recreational and historical values of the Iditarod Trail precluded further reduction.

Mr. Hawkins will not make the final decision on the width of the trail corridor until after public and agency comments have been received on the draft plan. We expect the draft plan to be available this summer, and you will be sent a copy.

There are a few other points of which you should be aware:

1. The Matanuska-Susitna Borough Agricultural Advisory Board officially requested a 150 foot corridor on November 8, 1982 (see attachment).

2. The acreage in Class II and III soils included in a 100 foot corridor is 61 acres, not 6.

3. The acreage in Class II and III soils included in a 150 foot corridor is 91 acres.

4. Of the Class II and III soils traversed by the trail, not all will be included in the agricultural tracts anyway; a little over 1/2 mile of the trail traverses Class II and III soils that are isolated, noncontiguous parcels that do not lend themselves to economical farm units. This reduces the number of agricultural acres affected by a 400 foot corridor by 24 acres (to 218 acres).

MAR 16 1983

March 15, 1983

Mr. Joe Redington, Sr.
President, Knik Chapter
Iditarod Trail Blazers
Box 5460 Knik Road
Wasilla, AK 99687

Dear Mr. Redington:

I want to thank you for alerting me to the problem encountered where the Iditarod Trail passes through private land in the vicinity of Knik.

As you know, the Department of Natural Resources is currently conducting a survey between Goose Creek and the Susitna River with invaluable assistance from your organization. The contractor is surveying the Trail across State, Matanuska-Susitna Borough and private property where written permission has been given by the land owner. Once this survey has been completed, the Department of Natural Resources will be processing the appropriate documents necessary to dedicate a public right-of-way along the Trail.

In the meantime, the Attorney General's Office is currently assessing specific historic information and legal documents supplied by the Division of Parks in regard to this segment. Once the precise centerline is supplied by the survey contractor, and all appropriate historical and legal material has been analyzed, the Attorney General's Office will advise the Department of Natural Resources as to the State's and the landowners' legal rights along the Trail.

10-J9LH

As soon as the Attorney General's Office advises us, we will take the appropriate action. I will see that you are kept informed on this matter.

Sincerely,

Esther C Wunnicke

KNIK CHAPTER

IDITAROD TRAIL BLAZERS

— *IDITASKI* —

January 28, 1983

MAR 16 1983

Esther Wunnicke, Commissioner
Department of Natural Resources
11th Floor, State Office Building
Pouch M
Juneau, Alaska 99811

Dear Commissioner Wunnicke;

I am concerned whether the Iditarod Trail will be available for dog mushing, the annual Iditarod Trail Race, Iditaski Races, and other trail uses any longer, since Federal government refuses to do anything on it except those sections crossing Federal land; other than funding a BLM Iditarod Trail person in the State Division of Parks. Senator Stevens was able to get funding for this BLM position this last December.

I have mushed this trail since 1948 and know exactly where the National Historic Trail goes as you leave Knik. In my opinion, the State Department of Natural Resources is doing a good job in getting a good survey of this trail as it goes across state and borough land, but to my knowledge, the State has not done anything to preserve the right-of-way to the trail across the ten to fifteen privately owned parcels between Knik Road and the Little Susitna River. We just won't have a historic trail if we cannot preserve this portion of it.

We are trying to get some sort of alternate trail going across private properties for a cross-country ski race in early February, but we would not be able to get a permanent trail at a different location and it just would not be the Historic Iditarod Trail!

I would like your assurance that the State will see to it that this trail is preserved and the right-of-way obtained so that we can use it without getting involved in tangled disputes each year.

Sincerely,

Joe Redington, Sr.

Joe Redington, Sr.

ANALYSIS

The Department of Transportation and Public Facilities has determined that $2,784.0 is needed to reduce the number of moose killed by vehicles on the Glenn Highway from mile 132 to 140. The funds will be used to install continuous illumination. The estimated cost breakdown consists of $2,227.0 for construction contract, $267.0 for construction administration, $67.0 for preliminary engineering and $223.0 for contingencies. No additional staffing will be needed as current CIP employees will be utilized.

The Department had not requested funding for this project in the FY85 Capital Budget Request because of the budget ceiling and priorities given to other projects being considered.

Re: Glenn Highway Illumination

The Honorable Randy E. Phillips
Representative
S.R. Box 421
Eagle River, Alaska 99577

Dear Representative Phillips:

Attached is the report you requested concerning moose/vehicle collision deterrents along the Glenn Highway. The report concludes that the most feasible method of decreasing these accidents is to provide continuous illumination on both sides of the Glenn Highway from Muldoon to the Artillery Road Interchange. The cost estimate for illumination is $2,784,000 which would provide one luminaire approximately every 275 feet along the outside lanes. We anticipate the annual operating and maintenance cost to be approximately $50,000.

The Department is required by law to design and construct this type of project according to the standards established by the American Association of State Highway and Traffic Officials (AASHTO). These standards have been developed to insure that highway improvements are uniform, safe, and effective. The 275 foot spacing has been determined to be the maximum spacing that will still provide adequate levels of light. If these standards are not followed, the State could be found liable in case of an accident.

The Department has determined that this project would be eligible for Federal Safety Program Funds. However, DOT&PF's Central Region, which includes most of Alaska south of Cantwell and west of Valdez, receives a maximum of $67,500 per year for this program. To use this money to fund this illumination project would require 42 years worth of Federal Safety Program allocations. No other source of funding has been identified.

We have evaluated this project against other projects considered in our FY'85 CIP. Because of our budget ceiling and the low rating of this project as compared to other identified transportation needs, this project is not included in our FY'85 CIP request.

This summer the Department cleared additional brush near the scale house. Last summer there was extensive brush cutting along the Anchorage outbound

JAN.25 '84 09:38 STATE OF ALASKA DOT ANCHORAGE P.05

lane and a recent inspection by our maintenance and operations personnel found that there was not enough new growth to justify additional clearing. There has been only limited clearing on the in-bound lane to Anchorage at the request of the Municipality of Anchorage because of the desire to maintain a buffer along the bike path.

Please contact me if I can answer any questions.

Sincerely,

William R. Snell
Director

PURPOSE

This report is a summary of the Department's efforts to identify and analyze alternative means of reducing moose/vehicle accidents on the Glenn Highway between Anchorage and Eagle River. The following paragraphs describe the nature of the problem, how the alternatives were identified and evaluated, and a recommended course of action.

INTRODUCTION

The corridor selected for construction of the Glenn Highway was chosen to take advantage of a relatively flat strip of land running between Anchorage and Eagle River. Unfortunately, this same strip of land is the traditional wintering area for up to 250 moose from Fort Richardson, the Ship Creek Valley, and nearby slopes of the Chugach Mountains. The result is a chronic problem of moose/vehicle accidents which has resulted in the death of 50-60 moose each year and annual vehicle damage of $40,000 along this 8 mile length of highway.

Each fall, as snow accumulates on the nearby slopes of the Chugach Mountains and in the Ship Creek Valley, moose begin an orderly and predictable migration down to the lowlands. Young stands of birch and willow adjacent to the highway provide optimum wintering habitat for moose. Seasonal movements of moose are not random, they correspond to the topography and location of prime wintering habitat. As a result, several "accident zones" exist where the highway bisects moose travel corridors. During the 10 year period between 1971 and 1981, 45% of the moose/vehicle accidents occurring between Anchorage and Eagle River happened between Miles 138.5 and 135.5. Between Miles 134 and 132, 35% occurred. These two areas directly correspond to the primary moose travel corridors and winter concentration areas.

Previous attempts to alleviate this problem have included the installation of reflectors designed to repel deer, the removal of brush from within the highway right-of-way, and the installation of moose crossing signs to warn motorists. None of these measures have proven to be significant in reducing the moose/vehicle accident problem. The volume of traffic on the Glenn Highway between Miles 132 and 140 in 1982 was 2.5 times greater than it was in 1972. Between 1981 and 1982, the traffic volume grew by 23%. Unless additional measures are taken, the moose/vehicle accident rate can be expected to increase.

METHODOLOGY

Material presented in this report was gathered from several sources. The Department of Transportation and Public Facilities' (DOT&PF) Highway Research Section conducted a literature search of the Highway Research Information Service (HRIS) in Washington, D.C. The resultant compilation of studies represents hundreds of thousands of dollars spent researching the problem of collisions between animals and vehicles in the continental United States and foreign countries (see HRIS report attached). Additional material and assistance was contributed by the Alaska Department of Fish and Game, the United States Army, and DOT&PF's Maintenance and Operations Division.

FINDINGS

The following measures have been implemented in the field and were found to have little or no effect upon the rate of collisions between game animals and vehicles:

- Illuminated game crossing signs (motorists disregard signs unless game is physically present)
- Highway underpasses (game unwilling to enter underpasses)
- Conventional fencing (game penetrated fence at open gates, crawled under, or walked over on snow drifts; game that penetrated the fence became trapped in the highway right-of-way)
- Reflecting mirrors (no apparent effect on game; difficult to maintain)
- Brush removal adjacent to highway (besides being ineffective, it is expected that both the State Division of Parks and the Municipal Parks and Recreation Department would object to this treatment since it would decrease the attractiveness of the bike trail adjacent to the highway)

The following measures have been implemented in the field and were found to be effective in reducing the rate of collisions between vehicles and game animals:

- Electrified fences (high construction and maintenance costs, potential safety hazard to humans, any animal that succeeds in penetrating the fence becomes trapped within the highway right-of-way)
- Highway illumination (high construction and operation costs)
- Deliberately placed animal carcass on shoulder of road (offensive to the public)

JAN.24 '84 09:36 STATE OF ALASKA DOT MICROFAX 8
P.06

RECOMMENDATION

From an examination of the findings above, it appears that the only feasible method of decreasing moose/vehicle collisions is to construct continuous illumination on both sides of the Glenn Highway from Muldoon to Eagle River. The estimated cost of this project is $2,784,000.

The Department has determined that this project would be eligible for Federal Safety Program Funds. However, DOT&PF's Central Region, which includes most of Alaska south of Cantwell and west of Valdez, receives a maximum of $67, [illegible] year for this program. To use this money to fund this illumination project would require 42 years worth of Federal Safety Program allocations. No other source of funding has been identified.

We have evaluated this project against other projects considered in our FY85 CIP. Because of our budget ceiling and the low rating of this project as compared to other identified transportation needs, this project is not included in our FY85 CIP request.

Ms. Bette Cato
House Transportation Committee
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Ms. Cato:

Reference is made to House Bill 493 sponsored by Representative Randy Phillips of Eagle River.

I hope you seriously consider passing the bill. One of my family members hit a moose on the Glenn Highway. It is a very dangerous highway. You have thousands of cars driving the highway and most exceed the 55 mph limit. I have seen a 4-car accident (involving both sides of the highway) where a moose crossed the highway and caused a chain reaction accident. It is almost impossible to see moose coming onto the road from the brush. Lighting or fencing would at least give us a chance to see the moose and then act accordingly. For certain, you cannot stop some of these jerks from going 60-70 mph on the highway. These are the same people who hit moose at a high speed and throw the moose into oncoming traffic.

Please help us.

Thank you for your time.

Sincerely,

Marge Founds

Mrs. Marge Founds

Lights along Glenn Highway sought

By CRAIG MEDRED
Daily News reporter

Lawmakers from Eagle River have asked Gov. Bill Sheffield for $2.8 million to install lights along an eight-mile stretch of the Glenn Highway to help cut down on collisions between moose and cars.

The state Department of Transportation has concluded that lighting the highway from Muldoon to the Artillery Road Interchange is the best way to reduce moose-car accidents.

Motorists have been killing 50 to 60 moose annually in that area, according to the state agency. It says vehicle damage has amounted to about $40,000 a year.

"Literally every other day a moose is hit," said Rep. Randy Phillips, R-Eagle River. "Something's got to be done on this problem. I hope the lights work."

Phillips joined Sen. Rick Halford, R-Chugiak, and Rep. John Liska, R-Eagle River, in asking for the money in the next state budget for capital improvement projects. Phillips said the governor is reviewing the request.

The Department of Transportation says illuminating the highway and its shoulders with overhead lights is the best way to prevent moose-car collisions. The agency rejected other ideas as infeasible.

The agency ruled out illuminated warning signs because, they say, drivers ignore them unless game is physically present. It also discounted highway underpasses for game because moose won't use them, and conventional fences because moose are likely to walk through them or over them.

Phillips said a reduction in the speed limit on the highway was discarded as unworkable. Studies have shown the most effective way to limit collisions between cars and big-game animals is to force drivers to slow down.

"I don't think that's possible," said Phillips. "I don't think it would be real practical to lower the speed limit, at least from 55."

A lower speed limit, he said, would increase the congestion on the highway, which the Department of Transportation already considers marginal for moving peak flows between Anchorage and its bedroom suburb of Eagle River.

'Stricter enforcement of the existing speed limit would help, however," Phillips said. "In a lot of these cases, a lot of these collisions can be avoided. You can usually spot moose on the right-hand side. You just have to keep an eye out to the right."

Phillips said drivers should be watching for dark blobs against the snowy background along the road. Often, he said, those dark spots turn out to be moose about to venture onto the pavement.

A lot of moose roam the area because the highway passes through the pasture, according to a Department of Transportation report.

"The corridor selected for construction of the Glenn Highway was chosen to take advantage of a relatively flat strip of land running between Anchorage and Eagle River," the report said. "Unfortunately, this same strip of land is the traditional wintering area for up to 250 moose from Fort Richardson, the Ship Creek Valley, and nearby slopes of the Chugach Mountains."

The worst stretches of road, the agency said, are between miles 138.5 and 135.5 of the Glenn — 45 percent of the accidents in the last 10 years — and miles 134 and 132 — 35 percent of the accidents in the past 10 years.

The Department of Transportation said it would cost about $50,000 a year to operate and maintain the lights along the road.

Liska views highway lighting project

Rep. John Liska is meeting with individuals and organizations in Chugiak - Eagle River in an effort to learn their priorities for funding during the 1984 legislative session.

The Chugiak Republican said it is uncertain how much money will be available for district needs this year, but he hopes to obtain an amount similar to the $10 million-plus which funded local projects from the 1983 session. Allocations could change, he said, since Rep. Randy Phillips was stripped of majority status after he withdrew from the leadership coalition which rules the state House of Representatives.

Although he is now the only one from the district in a majority position, Liska said he hopes to gain adequate funding for the area and will argue that as the fastest-growing part of the state, its needs must be met because of statewide impact. Funds which would have been allocated to ex-majority member Phillips "will have to be given to someone," Liska said, adding that he "will try to get it to stay here."

Schools, safety, water and sewer remain as top priority items, Liska said, and he expects these will receive funding. Funds for road work are uncertain, he said, although "I imagine they will be about the same as the $2.2 million obtained last year."

In looking for priority needs, Liska said he wants to see things which will "meet the needs of the most people."

One item which he said has been gaining support from many residents in a proposal to install lighting along Glenn Highway between Eagle River and Ship Creek where there have been many moose-vehicle collisions.

Lighting of portions of the area which are most heavily crossed by moose would enable motorists to see the large animals at night, thereby cutting down on the number which are hit by cars.

Highway engineers have estimated that one light every 275 feet would cost $2.8 million, Liska said, although he believes that figure is high. He said not all of the distance would have to be illuminated.

A major problem area is an island where the northbound and southbound lanes separate on a curve near Mi. 10, where Liska said trees and brush make it even more difficult to spot the animals. He said highway officials apparently are beginning to acknowledge that the trees should be cut. He said the city had also wanted to limit clearing beside the roadway in order to provide a buffer for the bicycle path but that this position may change, particularly in view of reported sexual assaults which have taken place on the secluded trail.

"We can't annihilate the moose," Liska said. The animals' habitat is in the remote areas around Eagle River and Ft. Richardson. But when the snow gets deep and browse gets thin, "they will come out of the hills for groceries and that's when we have problems."

Highway lights said best way to cut moose-vehicle collisions

Lights along the stretch of highway between Eagle River and Anchorage appear to be "the only feasible method of decreasing moose/vehicle collisions," according to a study by the state division of highways. Lights every 275 feet, which is said to be the maximum distance, would cost $2.8 million.

But no source of the funds has been identified other than a federal safety program allocation. And if Alaska's entire $67,500 share is used each year, it would take 42 years before there would be enough to pay off the job, engineers say.

The project does not rate highly in the division's list of priorities and is not included in its request for capital project funding for 1985.

Rep. Randy Phillips, who requested the study during the last legislative session, said he will ask Gov. Bill Sheffield to include the project in the administration's budget.

The report, completed last month and made available to district legislators, reviews findings of other jurisdictions in the United States and abroad where large animals frequently cross highways. Among them:

- Signs, even when illuminated, which warn of game crossing areas are ignored by motorists except when animals are actually present.
- Game is unwilling to use tunnels under the highways.
- Conventional fencing is penetrated by game which becomes trapped in the highway right-of-way.
- Reflecting mirrors have no apparent effect on game and are difficult to maintain.
- Brush removal adjacent to the roadway is ineffective and would be expected to be objectionable for parks and recreation uses, detracting from attractiveness of paralleling bicycle paths.
- Electric fences have high construction and maintenance costs and pose a safety hazard to humans. They also serve to trap animals within the highway limits.
- Illumination helps motorists see game on the sides of the roads and avoid some of the collisions. It has high construction and operation costs.
- Carcasses of dead animals deliberately placed along a road cause motorists to slow down and be more cautious, according to one study report. That method is considered offensive to the public.

Bowhunters may solve urban moose problem

by Stephen J. Downes
Times Writer

A bowhunt designed to trim the Anchorage bowl's growing moose population may be opened this winter, state Department of Fish and Game officials said Thursday.

The department is looking for ways to control the migration of moose into residential areas, and its "primary management option" is a plan to open parts of the Hillside area to winter bow hunting, said Karen Lew, a spokeswoman for the department.

An aerial survey taken last week turned up at least 171 moose (130 adults and 41 calves) on the hillsides east of the city and south of Fort Richardson, said biologist Herman Griese.

He said the department wants to keep as many moose as possible out of Anchorage residential areas by harvesting them before their food supply at higher elevations is depleted and they head down into town.

Details of the proposal have not been finalized and no decision has been made on when a hunt would be open, Lew said.

But a press release issued by the department said that biologists believe the dangers caused by migrating moose can be lessened "by harvesting 20 to 30 percent of these moose during November and December."

The moose follow the drainages of Campbell, Rabbit and Potter creeks, looking for more food when their supply at higher elevations is used up, said department biologist Dave Harkness.

The moose then invade residential areas, creating hazards for area residents and motorists.

"We are aware that many people on the Hillside enjoy seeing their 'pet moose' wander at will through residential areas," Harkness said. "But this same moose, one block over, becomes a problem moose, chasing pets and children, eating expensive trees and stepping into rush-hour traffic."

Harkness said in years past, when winter hunting was permitted on Fort Richardson near the Glenn Highway, the rate of collisions with moose declined.

Department officials think the same tactic may reduce the moose population and decrease the number of moose entering residential areas.

In order to be eligible, a hunter would be required to obtain a special permit and could not have killed a moose this year.

Department statistics show that 26 moose were killed in vehicle collisions on Anchorage streets from October of last year to March. Another 65 were killed on the road between Elmendorf Air Force Base and Eagle River, and 22 were killed between Eagle River and the Knik River.

Griese speculates that as many as 40 moose could be killed on Anchorage streets this winter.

Moose bowhunt to open

by Stephen J. Downes
Times Writer

Bowhunters will be permitted to hunt up to 35 moose in the Anchorage bowl to control the moose's migration into residential areas, an official for the state Department of Fish and Game said Friday.

The controlled hunt will open Nov. 15 in certain remote hillside areas east of the city, said game director Lew Pamplin.

Department biologists hope the hunt will cut back on the number of moose wandering into residential areas in search of food.

"We would much rather see a moose harvested by a hunter than see it destroyed by a vehicle on the highway, with potential injury or death to the driver," said biologist Dave Harkness.

The hunt includes the area east of Hillside Drive, south of Tudor Road and the Upper Potter Creek and Rabbit Creek drainages.

That area also covers ski trails in the Hillside portion of Chugach State Park and ski trails linking Prospect Heights to Glen Alps.

Because that area is heavily used by weekend cross-county skiers, the hunt will be open only during the daylight hours on Tuesdays, Wednesdays and Thursdays, until 35 moose have been harvested.

An aerial survey taken last week turned up at least 171 moose (130 adults and 41 calves) in the hillside areas east of the city and south of Tudor Road.

The hunt will be strictly regulated: Hunters must take a state-sanctioned proficiency test, attend a bow hunting briefing, and obtain a special permit.

Hunters who bag a moose must return hunter reports within two days. Unsuccessful hunters or those who don't hunt must file reports within 15 days of the hunt.

Train targets commuter 'dance of death'

by Al Campbell
Times Valley Bureau

Palmer — The Alaska Railroad will experiment with a week of free commuter train rides this winter to help determine whether daily passenger service would be practical between Anchorage and a central Matanuska-Susitna location.

If the program is deemed feasible, the federal railroad may initiate wintertime service, five days a week, from the Valley to Downtown Anchorage, provided sufficient revenue can be generated from daily fares and a state subsidy to pay the estimated $3,000-a-day operating costs. The round trip fare would be $10.

Backers of the plan hope to draw at least 200 commuters a day from the highways to the rails. Currently, an estimated 3,000 people travel each day by car between the Mat-Su area and Anchorage.

Those drivers merge with thousands more from Chugiak, Eagle River and the military bases. As the Matanuska-Susitna Borough population continues to expand, planners fear the traffic situation may worsen.

Already, particularly in the dark, icy winter months, some drivers refer to the daily, rush-hour trip as the "Dance of Death."

Mat-Su Borough Planning Director Robert Stickles says the borough government is interested in the rail-commuter proposal, advanced last week at a meeting between railroad, Anchorage and state transportation officials.

But, Stickles says, he does not see sufficient interest in the commuter system unless two conditions are met:

- The travel time between the Matanuska Junction is reduced from the current estimate of one hour.
- Would-be riders must be convinced they can save money compared to their current car costs, estimated at about 30 cents a mile.

Stickles said here Friday he feels the Anchorage bus service also should provide guarantees that connecting local bus service would be provided to disperse the commuters to their jobs or shopping throughout Anchorage.

Last week's meeting produced an estimated break-even per-passenger charge of $15 per round trip — $10 to be paid by the rider and a $5 daily subsidy to the railroad, probably paid by the state.

Those at the meeting proposed a central parking and pickup point where the tracks now cross the Glenn Highway at Mile 35. The site is about 10 miles from both central Palmer and Wasilla, where most of the commuters depart each day.

The commuter plan envisages three coaches and a diner/lounge departing Matsu Crossing at 6:30 a.m., arriving in Anchorage at 7:30. The return trip would leave Anchorage at 5:30 p.m. for the one-hour trip.

The diner would be open for coffee and donuts in the morning, and for alcoholic beverages on the evening run.

Officials at the meeting say although the initial winter service would be austere,

See Rail-commuter, page A-13

Rail-commuter plan

Continued from page A-1

providing only parking and direct service, it could be expanded to provide for plug-in parking, a permanent building and secure, lighted parking.

Stickles, and other Mat-Su Borough officials say the inconvenient location of the proposed station would be a disadvantage, as would the hour-long trip, necessitated by the deteriorated condition of the railbed. Trains now travel the route at about 30 mph, top speed.

"But the borough is interested," he said. "And if they can shave some time off the trip (which now takes about 45 minutes by car) they might come up with something."

The railroad has indicated it might expand to the Palmer and Wasilla areas if traffic warranted. At present the railroad is considering only winter commuter service, chiefly to avoid interfering with the profitable

The $3,000-a-day cost is based on a crew of four and fuel and service of the locomotive and passenger cars.

Funds sought to cut moose-car crashes

by Andy Ryan
Times Juneau Bureau

Juneau — Two lawmakers from Eagle River are seeking $3 million in state funds to help reduce accidents between moose and cars along the Glenn Highway between Anchorage and Eagle River.

The money, sought by Republican Reps. Randy Phillips and John Liska, would be used to install street lights along both sides of the highway, where 50 to 60 moose are killed by vehicles each year, with a resulting $40,000 worth of vehicle damage.

Phillips said he and Liska asked the state Department of Transportation to look into the problem after being besieged by constitutents who were alarmed at the carnage along the highway.

Department researchers then conducted an exhaustive study of international literature on the subject of collisions between motor vehicles and wild, hooved creatures.

Of eight schemes for preventing such collisions, researchers found that five — including the use of game crossing signs, conventional fencing, and brush removal — didn't work. Two others — electric fencing and the deliberate placing of animal carcasses along the side of the road to warn motorists — did work but were deemed unacceptable.

That left only street lighting, an effective but expensive undertaking. To comply with state law and federal standards, the department says it will be necessary to install one luminaire

See Signs, page A-12

Signs don't help

Continued from page A-1

every 275 feet along the outside lanes of the highway. Cost of the lights would be about $2.7 million, with an annual maintenance charge of $50,000.

The car-moose problem arises, the department report said, because the same strip of flat lowland chosen for the Glenn Highway is also the traditional wintering area for about 250 local moose.

"Each fall, as snow accumulates on the nearby slopes of the Chugach Mountains and in the Ship Creek Valley, moose begin an orderly and predictable migration down to the lowlands," the report says. "Young stand of birch and willow provide optimum wintering habitat for moose."

Previous attempts to end the slaughter — including reflectors designed to repel animals, removal of brush along the highway right-of-way and use of moose crossing signs — have been unsuccessful.

Looking at studies conducted by other states and in foreign countries, the department found:

- The use of lighted, animated deer crossing signs had no effect on reducing the number of deer killed by motorists, Colorado researchers found.
- A study of 400 deer/vehicle accidents in Buenos Aires, Argentina, concluded that humans were at fault most of the time.
- Swedish researchers, using five-wire electric fences, proved that such fences can significantly reduce the number of accidents between deer and elk and vehicles.

The highway moose problem

Dear Editor:

Re: The Anchorage Times, Jan. 18, "Moose kills on the highway spur plan."

Attitudes reflected in the article are the epitomes of most that is wrong, attitude-wise, with segments of the public and with a great number of legislators here and nationwide.

Irresponsible, selfish minority groups (numerically speaking) and self-serving politicians have taken us down a path of economic misery which will become worse if their attitudes don't change.

In the article, constituents reportedly besieged two Alaskan lawmakers about the annual $40,000 worth of vehicle damage caused by collisions with moose on the Glenn Highway. The lawmakers responded by proposing installation of $2.7 million worth of lights along a portion of the road with an annual maintenance cost of $50,000.

The article also indicated that, in most cases, the individuals involved in the collisions caused them. Result! The public should finance a safeguard to protect negligent individuals from themselves for an amount that exceeds the cost of their negligence. (Note: The article did not mention any deaths or injuries as a result of the collisions; only property damage.)

The lawmakers involved apparently care little about justice or the financial well-being of the state as a whole; or they may only be charlatans who seek to appease their constituents while knowing that such a proposal as theirs would never be funded.

The danger of such conduct to the public is that, sometimes, bills supporting such special interest schemes do get introduced in the legislature (and in Congress) and are sometimes passed soley because such self serving legislation has become a way of life for politicians who scratch each others' backs.

I have driven the Glenn Highway for 17 years. I am always amazed by the number of negligent drivers who exceed the legal speed limit, exceed prudent speeds under adverse conditions, weave in and out of traffic, drive with damaged headlights and taillights and drive with obscured windows.

I wonder how many are drunk. There are additional types of negligent drivers who seen to be increasing in numbers: The rearview mirror makeup specialist; the family argument antagonist; the jolly, arm-waving, good-natured conversationlist; and the daydreamer — all of whom pay more attention to what is going on inside the vehicle than without. Frankly, I don't care if they do have an accident, but I do sympathize with the moose.

The only legitimate solution that should be considered in this matter is legislation mandating vehicle insurance.

AVAILABILITY OF DOCUMENTS

When it is known by HRIS that full-text copies of documents are available from an organization other than the publishing agency, the name and address of the document distribution center are given in an availability statement below the abstract of the HRIS document record. When a document is ordered, the document title, author, and publisher should always be given.

Only publications of the Transportation Research Board are available from the Transportation Research Board. Articles and reports issued by other agencies are NOT available from TRB. They may be obtained from the publication source shown immediately following the name of the author on the document record or from the document distribution center identified by the availability statement that follows the abstract on the document record.

Reports emanating from research projects sponsored by the Federal Highway Administration and the Urban Mass Transportation Administration are normally available from the National Technical Information Service. If the abstract carries a document order number (PB or AD followed by six digits), the report is available from NTIS.

When no availability is specified, the user should consult an established transportation library.

A loan service for publications and a photocopy service for articles and papers are available at document delivery centers as explained on page vii.

A large number of documents are available from a few sources. The names, addresses, and telephone numbers of those sources are listed below under the abbreviation used for each.

LOAN AND PHOTOCOPY SERVICES

Loans of books and reports and photocopies of articles and conference papers referenced by the Highway Research Information Service can be obtained from three transportation libraries designated as TRISNET Centers. Two of them are Regional Centers:

Transportation Center Library
Northwestern University
Evanston, IL 60201
312-492-5273
TWX 910-231-0872

Institute of Transportation Studies
Library
University of California
412 McLaughlin Hall
Berkeley, CA 94720
415-642-3604

and one is a Federal Center:

Headquarters Library
U.S. Department of
Transportation
Washington, DC 20590
202-426-1792

The three centers are not HRIS depositories in that copies of all HRIS-referenced publications are not added to their collections automatically. Rather, each has a collection of transportation publications and all research reports, in microfiche or paper copy, that have been issued by the U.S. Department of Transportation and distributed through the National Technical Information Service.

The centers cannot supply reports of or information on research that is in progress. Information on research in progress can usually be obtained from the principal investigator at the contracting agency or the project monitor at the sponsoring agency.

Regional Centers

HRIS clients outside the U.S. Department of Transportation should first contact the Regional Center at Northwestern University or at the University of California, Berkeley. If the Regional Center contacted does not have the item, it will transfer the request to the other Regional Center or the Federal Center holding the item or to the best available source.

Northwestern University will accept requests for loans and photocopies by telephone, letter, or interlibrary loan form. The University of California will accept requests for photocopies by telephone or letter, but requires an interlibrary loan form for loan of books and reports.

Requests for publications by loan or photocopy should include either a copy of the entry in the HRIS publication or the following information:

1. TRIS accession number (six-digit number at top of printout);
2. Title;
3. Author, including individuals and organizations responsible for the publication (for example, James, John J., West Virginia Department of Highways); and
4. Publication data, including publisher, periodical title, conference, date, paging, series numbers (for example, Public Roads, Dec. 1976, pp. 116-120; or National Technical Information Service, PB 259 688).

The library responding to the request will lend books and reports for 2 weeks plus the estimated mailing time. Services are free if books or reports are mailed at the book rate. If the user requires priority mailing, the center will send an invoice for mailing costs. Charges for photocopies of articles and conference papers are 10 cents per page plus $1.00 per item for handling.

An invoice is sent with the requested document; the Regional Centers request that payment *not* be made in advance.

The Regional Centers attempt to respond to all requests within one week of receipt.

Federal Centers

HRIS clients inside the U.S. Department of Transportation should contact the Headquarters Library. The Headquarters Library will not lend materials to individuals outside of the department, but will accept interlibrary loan forms for five or fewer items from company, government, or university libraries.

Other Libraries

Many of the publications referenced by HRIS are available in local transportation libraries or through a public or state library. Each of these libraries will also prepare and process an interlibrary loan form on request.

FOREIGN LANGUAGE DOCUMENTS

Foreign language documents referenced by HRIS are generally recognizable through the foreign language title listing (after the translated title) in the document record. In *HRIS Abstracts* text language is indicated at the end of the abstract; in the current awareness service it appears with publication data information. It does not appear in the TRIS-on-line short-form printouts.

Documents published outside of the United States are usually written in the language of the country of origin and can be obtained from the publisher in that country. Documents published by the Organization for Economic Cooperation and Development (OECD) can be obtained at the following address:

OECD Publications Center
1750 Pennsylvania Avenue
Washington, DC 20006
Telephone 202-298-8755

Translations may be obtained through agencies listed in the yellow pages of the telephone book in metropolitan areas, through embassies in Washington, D.C., from language departments of universities, or from one of the translations centers listed below. Some of these, such as the National Translations Center, do not translate but maintain a registry of translations. Fees for translation services vary but in the Washington, D.C., area average about $10 per page for technical material.

IDENTIFICATION GUIDE FOR AN HRIS RECORD OF A PUBLISHED WORK

JOURNAL ARTICLE

Document Record Number
TRIS Accession Number
HRIS Subject Area Number — 32 345788

Title — EVALUATION FOR DURABILITY AND STRENGTH DEVELOPMENT OF A GROUND GRANULATED BLAST FURNACE SLAG

Authors — Bojan, FJ; Atlantic Cement Company, Incorporated
Heusel, JW; Atlantic Cement Company, Incorporated

Publication Data — ASTM Cement, Concrete, and Aggregates; American Society for Testing and Materials; 1916 Race Street; Philadelphia, Pennsylvania; 19103

Document Data — V3 N1; 81; pp 48-52; 23 Fig.; 12 Tab.; 25 Ref.

Abstract — This paper covers the evaluation of a ground granulated blast furnace slag as a partial replacement for portland cement in mortars and concrete. The ground slag was evaluated for strength-producing properties as well as durability performance when used to replace 40 to 65% portland cement. This study shows that the ground slag when used to replace 40 to 65% portland cement did significantly improve strengths, sulfate resistance, and alkali aggregate reactivity. (Author)

TECHNICAL PAPER IN A CONFERENCE PROCEEDINGS

Document Record Number
TRIS Accession Number
HRIS Subject Area Number — 28 198188

Title — EVALUATION OF PAVEMENT SERVICEABILITY ON THE INTERSTATE SYSTEM IN OREGON

Authors — Miller, TC; Portland Cement Association

Publication Data — New Mexico University, Albuquerque; 915 Stanford Drive, NE; Albuquerque, New Mexico; 87131; PPCCMI

Document Data — 91; pp 208-213

Abstract — Measurements of present serviceability index (PSI) using a PCA Road Meter have been made on the 318-mile Interstate system in Oregon annually since 1972. The system has been broken down into sections based on the pavement structure and construction contract. Structural strip maps were prepared and the PSI ratings plotted on this map show the pavement performance trend for each section. The superior performance of some pavements has been documented and sections that will be in need of early rehabilitation identified. Analysis of PSI vs Age and PSI vs Heavy Truck Traffic has been made and compared with the M. P. Prokau model equations for the concrete sections. The goal is to develop PSI trend curves and to predict when rehabilitation of the pavement will be required.

EFFECTIVENESS OF A LIGHTED, ANIMATED DEER CROSSING SIGN

Pojar, TM

Journal of Wildlife Management; Wildlife Society; Suite S-176, 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V39 N1; Jan 75; pp 87-91

Two lighted, animated deer crossing signs were installed adjacent to State Highway 82 south of Glenwood Springs, Colorado, delineating a 1.61km (1-mile) segment of highway where deer-vehicle accidents frequently occurred. Crossings per kill ratios were nearly identical with the signs off (56.5:1) and with the signs on (56.9:1). When the motorist was presented with evidence that a danger existed (i.e., deer carcasses in emergency lane), the response was much greater than when they were merely warned (via the deer crossing sign) of a potential danger. With evidence of danger, the response was the same regardless of whether or not the warning signs were on. Motorists' response in the form of speed reduction and/or increased awareness was not sufficient to affect the crossings per kill ratio. Since these lighted, animated signs were not effective in reducing the number of deer-vehicle accidents, it seems reasonable to assume that conventional deer crossing signs are not effective either. However, in areas where deer-vehicle accidents are especially numerous, warning signs may be useful for public relations and liability reasons.

BEHAVIORAL RESPONSE OF MULE DEER TO A HIGHWAY UNDERPASS

Reed, DF
Woodward, TN
Pojar, TM

Journal of Wildlife Management; Wildlife Society; Suite S-176, 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V39 N2; Apr 75; 00 361-367

A concrete box underpass 3.05 x 3.05 m (10 feet) and 30.48 m (100 feet) long under Interstate 70 in west central Colorado was monitored for deer use during four years following its completion in early 1970. A seasonal mean of 345.1 plus or minus 133.0 (50) mule deer (Odocoileus hemionus) passed through the structure when moving to or from their summer range. A video time-lapse surveillance system recorded behavioral responses during four migration periods, spring-summer and fall in 1972 and 1973. On the basis of video tape playback of 4,450 approaches and 1,739 entrances, deer displayed three basic overt responses: look-up, tail-up, and muzzle-to-ground. The frequency of the look-up response was indicative of the reluctance of the animals to go through a structure of this size and character. The underpass was successful in permitting about 61 percent of the local deer population to migrate safely under the highway. /Author/

ANALYSIS OF ROAD ACCIDENTS
UN ANALISIS DE LOS ACCIDENTES DE TRANSITO

Bandel, E
Yanez, J

Decimo Concurso de Trabajossobre Temas Viales; Ministerio de Obras Publicas; C/7 Numero 1175, La Plato; Buenos Aires; Argentina

N84; Conf Paper; Oct 68; pp 47-73; 16 Fig.; 12 Tab.; Spanish

400 accidents which occurred in buenos aires during 1967 and which represent 40% of the total number of accidents are analyzed in detail. The analysis is divided as follows: monthly, daily and hourly distribution of accidents and casualties, classification of accidents per types, main factors recurring in these accidents, and economic evaluation of the latter. It was found that the main causes of accidents were: the human factor (driver or pedestrian) which accounted for 84% of accidents; the road for 9% and the vehicle 7%. A more detailed study showed the following results: driver/pedestrian factor: excess speed (2%), carelessness (53%), drunkenness (3%), other causes 24%; road factor: wet road (43%), bad weather conditions (27%), bad road conditions (11%), bad visibility caused by vegetation or obstruction (9%), animals roaming on the road (7%), defective shoulders (3%), other causes (7%); vehicle factor: lighting defects (33%), defective brakes (19%), punctures (5%), other mechanical faults (9%). The number of the covering abstract is IRRD Abstract No. 100834.

EFFECTS OF MULTIPLE LAND USE PRACTICES ON BIG GAME HABITAT & BEHAVIOR IN THE CENTRAL ROCKY MOUNTAINS

PERFORMING AGENCY:
Wyoming University; Laramie, Wyoming; 82071; FS RM

INVESTIGATOR:
Ward, AL

FUNDING AGENCY:
Department of Agriculture; Independence Avenue, Between 12th and 14th Streets, SW; Washington, D.C.; 20250; RM-1804

AS-Active; RD-Jun 80; SD-Nov 68; DC-Nov 81 EST

Determine the environmental impacts and the interrelationships of major land use practices on the spectrum of habitats essential for optimum elk and other big game populations. Determine patterns of elk behavior and movements following harvest and activities related to increased human ingress, studies will be made of plant succession on harvested areas of various ages, silvicultural systems, and site conditions. The effects of increased numbers of people on the game populations will be evaluated. Also the behavioral characteristics of big game in the vicinity of road systems of various standards will be monitored through he use of radio telemetry and time lapse photography. Pre- and post-construction situations will be evaluated in conjunction with various practices to mitigate unfavorable effects of the road developments. Elk behavior in relation to timber harvest operations in South-central Wyoming was studied using telemetry, time-lapse photography and fecal and track counts. Elk preferred to be at least one-half mile from harvest and clean-up operations. Elk can be expected to move back to a harvest site witnin three weeks after humans leave. Traffic on Forest Systems roads has little effect on elk activity, especially beyond 300 yards. Resident populations of mule deer are living adjacent to the heavy traffic on I-80 near Laramie, Wyoming. In other areas deer migrate across I-80 to move from summer to winter ranges. Available underpasses are not being utilized and highway accidents are common. Pronghorn antelope are kept off I-80 where right-of-way fences are in good shape and snow has not drifted, creating a bridge for the antelope. Antelope are not using underpasses. I-80 acts as a barrier for elk although they are seen regularly within 300 yards.

DEER-CAR ACCIDENTS IN SOUTHERN MICHIGAN

Allen, RE; Michigan University, Ann Arbor
McCullough, DR; Michigan University, Ann Arbor

Journal of Wildlife Management; Wildlife Society; Suite S-176, 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V40 N2; Apr 76; pp 317-325; Figs.; Tbls.; 20 Ref.

Collisions of cars with white-tailed deer (Odocoileus virginianus) were studied in southern Michigan in 1966 and 1967. Most of the 2,566 accidents studied occurred at dawn, dusk, or after dark with peaks at sunrise and 2 hours after sunset. Accidents were highest on weekends when evening traffic was greatest. A low seasonal peak in collisions occured in May and a high one in November. Sex ratio of the annual kill was predominately female, but it shifted in favor of males during seasonal peaks. Causes of the peaks seemed to be primarily rutting activities, with hunter disturbance and food of lesser importance. Accidents were related to habitat type approximately according to the prevalence of the type. Accidents were most common at speeds of 80-95 km/h (50-59 mph), and the deer was killed in 92 percent of the accidents. Human injuries occurred in less than 4 percent, and most resulted from secondary collisions.

HIGHWAY FENCES AS VEHICLE-DEER COLLISION DETERRENTS

Bellis, ED
Graves, HB, III

Pennsylvania State University, University Park; Institute for Research on Land and Water Resources; University Park, Pennsylvania; 16802; 432-41 (3502)

Final Rpt.; #FHWA-PA-74-9; Jun 76; 26 pp

FT-Contract; CN-53029

A survey of highway fencing along Interstate 80 in Centre County showed that 7 1/2 foot, type 3-modified fence has little value as a vehicle-deer collision deterrent; many deer crawl under the fence to the planted right-of-way and abundance of gaps underneath provides for easy penetration. From December 1974 through March 1976 numbers and position of deer were observed from a vehicle driven along 6 miles of I-80 at night. Bimodal patterns of abundance were found, deer were most numerous in spring and fall; of 2577 deer sightings, 74.5% were on the highway side and 25.5% on the far side of the fence. Comparisons between a control area (north side of highway) where the fence was unmodified and test areas (south side) where gaps underneath were plugged and/or top five wires removed or repaired showed that the critical weakness in the fence is the underside but also that large numbers of deer cross a fully repaired fence. Only 6 deer were reported killed during the 16 months of study and no live deer were seen on the highway; these results, relative to previous findings beginning in 1967, strongly suggest that high traffic volume prevents deer from venturing onto the highway, thus reducing collisions.

FUNDING AGENCY:
FHWA Code E-0231

FT-Contract; CN-P.O. 3-1-1517

Pronghorn antelope, mule deer, and elk are affected by right-of-way fences and highway traffic. At least 153 antelope, 561 mule deer, and 10 elk have been killed through vehicle accidents along a 55-mile section of I-80 west of Laramie, Wyoming, during a 5.5-year period. Since antelope are reluctant to jump fences and use underpasses, I-80 is a barrier and the herds are managed accordingly. Antelope can be kept off the highway by maintaining good woven wire fences and preventing snow from drifting over the right-of-way fence. Mule deer jump right-of-way fences, but can be forced to use underpasses by using deer-proof fencing. Both resident and migratory mule deer are affected by roads and traffic. Proper management should provide safe deer crossings thus increasing the safety of the highway user. Since elk are large, they present a greater hazard to motorists, and should be discouraged from crossing highways by proper fencing and road location. New techniques using heart-rate telemetry shows great potential for use in further studies of animal behavior in relation to the ever increasing activities of man.

TESTS WITH ELECTRICAL GAME PRESERVES DURING 1975-76
FOERSOEK MED VILT STAENGSEL TYP NITRO-NOBEL ELSTAENGSEL I D-LAEN AAR 1975-76

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Intrm Rpt.; #NR 19; 77; 15 pp; 4 Fig.; 5 Tab.; 1 Phot.; Swedish

Electrical fences were tested as game preserves on roads in Sweden for 1.5 years. The purpose was: (1) to study different types of uprights and number of wires and their position, (2) to obtain a value of management safety, (3) to determine construction and management costs, and (4) to study the effect on animal accidents. Of the types tested a 130 cm high fence with 5 wires on pressure impregnated uprights of wood (space 6 M) has proved the best. The construction costs have been low. Mechanical wear an soiling from the road have created some problems. In particular the wire (a laminated band) has been damaged. There were no animal accidents after the erection of the fence. At present a new wire with an expected endurance of 5 to 7 years is being tested.

To determine whether rear-view silhouette models of deer with raised-tails would be effective in keeping deer off planted interstate highway rights-of-way, such models were tested in four experiments along Interstate 80 in Centre County, PA. Results of counts of deer in experimental and control areas obtained from a moving vehicle or examination of tracks through gaps under the fence revealed that the models were ineffective as deterrents to deer gaining access to the right-of-way. It is not recommended that they be used to reduce vehicle-deer collisions. /FHWA/

FT-Contract; CN-1478

Deer vehicle accidents have been the cause of considerable property damage and the loss of biotic resources. This is especially the case in rural areas in mountainous terrain where nighttime driver visibility is poor. The purpose of this research was to determine if deer-vehicle accidents were affected by fixed highway illumination. This was done by comparing responses of motorists to deer on the highway and deer responses to the motorists, with and without fixed illumination. Estimated deer crossings per kill was 9.7 percent higher with the lights on compared to lights off. When a deer simulation was present under lighted conditions mean vehicle speeds decreased by 13.9 km (8.6 miles) per hour with brake lights observed on 50.6 percent of the approaching vehicles. The Roadway Lighting Committee (1972) recommends lighting standards based on mean horizontal illumination and illumination uniformity ratios for different roadway and area classifications. /FHWA/

WIRE-NETTING FENCES FOR GAME ACCIDENT PREVENTION
NAETSTAENGSEL FOER VILT

Ljungqvist, S

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; #VTU Internrpt 23; Apr 78; 8 p.; 8 Fig.; 2 Tab.; Swedish

This report deals with the technical and geometric design of wire-netting fences for the prevention of accidents involving wild animals. Details of fences, nettings, posts, stays and assembly are presented. Finally, the installation procedure is described.

THE ANIMAL ACCIDENT PROJECT. PART 2. SITUATION REPORT SEPTEMBER 1978
VILTOLYCKSPROJEKTET 2. LAEGESRAPPORT SEPT 1978

Almkvist, B
Andre, T
Ekblom, S
Aaberg, L
Rempler, S-A

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; #Interarapport Nr 33; Sep 78; 16 p.; 3 Fig.; Swedish

An analysis of accidents involving moose and deer shows that 70% of all accidents occur in the summer, with peaks in June, and end of September and end of January. Almost 40% occur at dawn. On newly constructed roads, the number of accidents during the first year is about 2.5 times the normal; even after three years, the number of accidents is twice that normally expected. 50% of accidents occur where distance between road and forest is 5 M, and over 90% where distance is up to 20 M. On roads in open country less than 20% of accidents occur. Peaks involving moose are influenced by behaviour of the calves. Measures to counteract such accidents are (1) game fences; deer usually crawl underneath while moose jump over. Where fence consists of a mesh with single strands above, animals are often injured, and fences should therefore consist of mesh over full height. (2) game mirrors; these are used extensively, and an investigation of their efficacy is in progress. (3) clearance along roads; it appears that this is effective in reducing accidents. New measures are the use of visual or smell signals, and speed restrictions. Driver attitude is also significant. Further studies are planned. /TRRL/

COLLISION OF VEHICLES WITH DEER STUDIED ON PENNSYLVANIA INTERSTATE ROAD SECTION

Bellis, ED
Graves, HB

Highway Research News, Hwy Res Board

71; No 43, pp 13-17, 8 REF

IN 1968 AND 1969 THE NUMBERS OF WHITE-TAILED DEER REPORTED KILLED ON PENNSYLVANIA HIGHWAYS WERE 21,607 AND 21,246, RESPECTIVELY. DEER-VEHICLE COLLISIONS ALSO OFTEN ENTAIL EXTENSIVE VEHICLE DAMAGE AND INJURY OR DEATH TO THE HUMAN OCCUPANTS. A LONG-TERM STUDY HAS BEEN UNDERTAKEN, EMPLOYING AN EIGHT-MILE STRETCH OF I-80, TO DETERMINE THE ACTIVITY, BEHAVIOR, AND MORTALITY OF DEER. PARAMETERS IN THE STUDY ARE DESCRIBED, DATA ARE CITED, AND TENTATIVE CONCLUSIONS ARE DRAWN.

"DEER CROSSING" SIGNS MAY PROVE VALUABLE IN REDUCING ACCIDENTS AND ANIMAL DEATHS

Pojar, TM
Reseigh, TC
Reed, DF

Highway Research News, Hwy Res Board

N46; Jan 72; pp 20-3; 1 Fig; 2 Phot; 1 Ref

A SECTION OF COLOADO HIGHWAY WITH THE HIGHEST FREQUENCY OF DEER ACCIDENTS PER MILE IN THE STATE WAS CHOSEN FOR THE STUDY. A REFLECTORIZED DIAMOND SIGN WITH "DEER XING" IN NEON LIGHTS WAS COMPARED WITH A REFLECTORIZED DIAMOND WITH 4 ANIMATED SILHOUETTES IN NEON TUBING, LIT IN SEQUENCE. BOTH SIGNS RESULTED IN A SMALL, BUT STATISTICALLY SIGNIFICANT REDUCTION IN TRAFFIC SPEEDS PAST THE SIGN. THE SECOND SIGN APPEARED TO INITIATE A GREATER RESPONSE ON THE PART OF THE MOTORIST.

DEER MIRRORS IN MISSOURI

American Highways

V51 N1; Jan 72; p 17

THE EFFECTIVENESS AND USE OF DEER MIRRORS BY THE MISSOURI HIGHWAY DEPARTMENT ARE REPORTEDLY FAVORABLE. THE NUMBER OF DEER-VEHICLE ACCIDENTS WERE CUT DOWN ENORMOUSLY WHILE IN USE. THE DEVICE CONSISTS OF TWO ROUND THREE INCH MIRRORS MOUNTED AT 45 DEGREE ANGLES ABOUT FOUR FEET ABOVE THE GROUND. THESE ARE INSTALLED ON A STAGGERED SYSTEM AT ABOUT 75 FT INTERVALS ON BOTH SIDES OF THE HIGHWAY DEPENDING ON THE TERRAIN BORDERING THE HIGHWAY AND THE NUMBER OF DEER CROSSING. HEADLIGHTS FROM PASSING CARS REFLECT AGAINST THE MIRRORS CAUSING LIGHT TO FLICKER SHARP, PENCIL-LIKE BEAMS STARTLING THE DEER AND CAUSING THEM TO STOP. ONCE THE LIGHT BEAMS STOP FLICKERING, THE DEER SAFELY CROSS.

USE OF ONE-WAY GATES BY MULE DEER

Reed, DF
Pojar, TM
Woodard, TN

Journal of Wildlife Management

V38 N1; Jan 74; pp 9-15

GATES DESIGNED TO ALLOW PASSAGE OF MULE DEER (ODOCOILEUS HEMINOUS) IN ONLY ONE DIRECTION WERE TESTED UNDER CONTROLLED AND FIELD CONDITIONS. TWO GATE TYPES HAD SIGNIFICANTLY DIFFERENT FREQUENCIES OF USE UNDER CONTROLLED CONDITIONS. EIGHT GATES OF THE TYPE DEEMED MOST EFFECTIVE WERE INSTALLED IN EIGHT-FOOT (2.44-M) FENCES ADJACENT TO INTERSTATE HIGHWAY 70 NEAR VAIL, COLORADO. A TOTAL OF 558 PASSAGES WERE RECORDED THROUGH THESE GATES DURING 1970-72 AND 96 PERCENT OF THESE WERE IN THE ONE-WAY DIRECTION FOR WHICH THE GATE WAS DESIGNED. BASED ON TRACK COUNTS, IT WAS ESTIMATED THESE GATES PERMITTED ABOUT 223 DEER TO ESCAPE THE IMMEDIATE HIGHWAY RIGHT-OF-WAY. /AUTHOR/

DEER MORTALITY ON A MICHIGAN INTERSTATE HIGHWAY

Reilly, RE
Green, HE

Journal of Wildlife Management; Wildlife Society, Suite S-176; 3900 Wisconsin Avenue, NW; Washington, D.C.; 20016

V38 N1; Jan 74; pp 16-19

Yearly totals of white-tailed deer (Odocoileus virginianus) killed by automobiles in a northern white cedar (Thuja accidentalis) deer wintering area in Upper Michigan's Mackinac County were compiled for a 13-year period from 1960 through 1972. Mackinac Trail, a two-lane highway (formerly US 2), intersects approximately a five-mile stretch of this wintering area. In 1963, Interstate 75 was constructed roughly parallel to US 2 and about 0.25 mile east of it and thus also intersected the wintering area. In 1964, car-deer kills in the study area increased by approximately 500 percent over the average of the previous four years. This car-deer kill declined slightly through 1967, and has recently fluctuated about an average which is approximately twice that of the pre-Interstate yearly mortality figure. /Author/

GAME FENCES. LOCATION, COSTS AND MANAGEMENT
VILTSTAENGSEL. PLACERING, KOSTNADER OCH DRIFT

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; #TU 1979:1; 79; 26 p.; 4 Fig.; Swedish

This report is a summary of present knowledge concerning game fencing for traffic accident prevention. Costs of construction, operation and maintenance are studied together with how the fence can be adapted to prevailing terrain conditions and adjacent roads. Results from tests of special take-off mounds for elks that have wandered into fenced areas are also included in the report. Different types of fences are studied. Some results from the report: net fence is more costly to erect than electrified fence, but it has lower maintenance costs. A combination fence also has a maintenance cost lower than that for the electrified fence. The accident prevention effect of the net fence was studied with aid of accident statistics from the Stockholm region. It was found that a reduction of accidents by 70-80 percent is well within the reach of what can be obtained by game fencing. /TRRL/

WHITE-TAILED DEER (ODOCOILEUS VIRGINIANUS) ON THE DEPARTMENT OF ENERGY'S OAK RIDGE RESERVATION: DATA ON ROAD-KILLED ANIMALS, 1969--1977

Story, JD
Kitchings, JT

Oak Ridge National Laboratory; Post Office Box X; Oak Ridge, Tennessee; 37830
Department of Energy; 1000 Independence Avenue, SW; Washington, D.C.; 20585

Jul 79; 36 p.

FT-Contract; CN-W-7405-ENG-26

During nine years (1969--1977), 126 white-tailed deer (Odocoileus virginianus) were killed by highway vehicles on the Department of Energy's Oak Ridge, Tennessee Reservation. Mortality was highest in the fall, and more males than females were killed among both fawns and adults. While traffic volume increased 8.2% annually, deer road-kills increased 42.8% annually. Increased road-kills were attributed primarily to an increase in the resident population.

INVESTIGATION OF ELK ACCIDENTS IN THE COUNTY OF NORRBOTTEN, SWEDEN 1978
UNDERSOEKNING AV AELGOLYCKOR I NORRBOTTENS LAEN 1978

Pettersson, G
Svedberg, AA

Trafiksaekerhetsverket; Oevre Norra Distriktet; Luleaa; Sweden

Monograph; 79; 29p; 15 Fig.; 20 Tab.; Swedish

The study aims at obtaining answers to questions such as, when, where and how do elk accidents occur and who meets with them. It draws upon 294 police reports of elk accidents during 1978 in the province of Norrbotten. The drivers involved were asked to answer a questionnaire comprising the following variables: vehicle, light conditions, traffic conditions, lighting, when was the elk discerned, speed, road standard, surrounding terrain, knowledge, damage/injury, previous experience. The answers received were compiled in frequency and cross tables. The results show that the drivers, irrespective of speed, speed limit or knowledge of elk danger often did not see the elk before the collision, or saw it so late that he was unable to react. There was no over-representation of any age group or sex of driver. Accidents mainly occurred in darkness and at dawn. Surprisingly enough one fourth of the accidents occurred at places described by drivers as open field with good visibility. The author concludes that measures aimed at drivers to reduce the number of accidents have limited effect. Instead long-term measures must be taken to prevent elks from coming into conflict with road traffic. In the meantime the number of elks must be kept at a suitable level by shooting. (TRRL)

FHWA Code E-0469

Vegetative ground cover under snowdrifts formed behind snowfences used along Interstate 80 to control blowing and drifting snow has not changed appreciably over a five-year period. Sagebrush (Artemisia tridentata) has decreased significantly under snowdrifts where deep drifts occurred every year and is being replaced by grasses and forbs. Mule deer (Odocoileus heminous) use machinery and box-type underpasses to cross under Interstate 80 when big game fencing 8 feet (2.44 m) high is constructed in place of the regular right-of-way fence. Deer-vehicle accidents were reduced over 90 percent, which is a large savings of deer life and vehicle damage. Only one pronghorn antelope (Antilocarpa americana), out of several hundred in the area, has been known to use the same underpasses. Elk (Cervus canadensis) have not had occasion to use the underpasses. Hunted mule deer and elk cross Forest roads most in areas where their feeding sites are adjacent to the road. Elk show a perference to stay over 0.1 mile (160 m) from streams when crossing roads, while deer are not so sensitive. Elk show a preference to stay a minimum of 0.25 mile (400 m) from traffic while deer prefer a minimum of 100 yards (91.m), and antelope use the habitat up to the right-of-way fence. All three species are more responsive to people walkering; elk prefer a distance of 0.5 mile (800 m), deer 200 yards (182 m) and antelope somewhere between the two distances, depending on habitat and experiences. The displacement reaction is definitely the most serious response. Camera systems using microwave sensors and lights are useful in recording animal activities at underpasses. (FHWA)

THE GAME ACCIDENT PROJECT (VIOL). FINAL REPORT, MAY 1980
VILTOLYCKSPROJEKTET (VIOL). SLUTRAPPORT MAJ 1980

National Swedish Road Administration; Pack S-10220; Stockholm 12; Sweden

Monograph; STU 146; May 80; 117p; Figs.; Tabs.; Refs.; Apps.; Swedish

The number of police reported accidents with game and motor vehicles increased heavily in the 1960's. As a result the government assigned to the National Road Administration the task to carry out research and experimental work for the purpose of reducing the number of such accidents. The work has been going on between 1970 and 1979. Basic facts about game, traffic and accidents have been collected and analysed. The analyses have led to an estimation of game accident hazards under different conditions. Accident preventive measures have been thoroughly studied through practical experiments, statistical accident analyses and economic assessments. The investigation comprises elk, roe deer, fallow deer and red deer with the accent on elk. Game accidents have increased no less heavily in the 1970's and they are likely to constitute about 15% of the total number of road accidents. A number of measures are discussed, ie game fences, mirrors, improved visibility through clearing, big game signs, repellents, information to road users, reduction of the stock of game. Fences have an accident reducing effect of approx 80% whereas mirrors show no significant effect. Clearing is an expensive measure. Further research is necessary to establish the effect of signs. Repellents in the form of evil-smelling preparations seem to have some effect. (TRRL)

GAME AND TRAFFIC: REPORT OF HUNTING AND WILDLIFE MANAGEMENT COMMISSION
VILT OCH TRAFIK: BETAENKANDE AV JAKT- OCH VILTVAARDSBEREDNINGEN

Jordbruksdepartementet; Fack; Stockholm; Sweden; 0375-250X; 91-38-05660-7

Monograph; #SOU 1990:29; 80; 120p; Figs.; Tabs.; Swedish

There are no simple ways of solving the problem of accidents involving game. These proposals are only limited efforts which might contribute to reducing the risks. A somewhat increased hunting ought not to cause any greater risks for the fauna. In contrast to traffic safety demands, the aim should be to create one balanced elk stock in larger regions. Lower speed on the roads, especially where and when the accident risk is high, leads to fewer and less serious accidents. It can be done with speed limits and use of warning signs. Education (driving-school) and information (eg forwarding the police knowledge about temporary elk accumulations) can also help to decrease the number of accidents. To reduce the accident risk several actions in connection with the carriageway have been tried, for instance fences, land clearance and game mirrors. The game mirrors, however, have not proved to have any considerable efficiency. Biotope actions are seldom justified, at least not concerning elk. Light, sound and odour signals have not yet been used in any great degree. Tests have showed that odour signals have a high effect. (TRRL)

ACCIDENTS BETWEEN WILD ANIMALS AND VEHICLES. THE BEHAVIOUR OF ROAD USERS, AND POSSIBILITIES OF CHANGING IT
VILTOLYCKOR. TRAFIKANTERS BETEENDE OCH MOEJLIGHETER ATT PAAVERKA DETTA

Swedish Transport Research Delegation; Wenner-Gren Center, Sveavaegen 166; S-11346 Stockholm; Sweden; 91-85562-27-0

Monograph; #No. TFD 1980:3; 80; 47p; 9 Fig.; 10 Tab.; Phots.; Ref.; Swedish

This is the final report of a three year research project. The general purpose of the project has been to investigate the possibility of changing driver behaviour in order to reduce the risks of accidents between wild animals and vehicles. Only accidents involving moose and car drivers have been considered. Four different investigations have been carried out. The first two studies consist of analyses of survey data from drivers sampled from three Swedish counties. In the first study relations between the probability of a collision with moose and drivers' experiences with knowledge and attitudes about moose were explored. In the second study the problem was to investigate and compare circumstances in accidents and near-accidents and to relate the results to differences in driver behaviour. In the third study the relation between the attention distribution of drivers and their detection of moose dummies was studied experimentally. The effect of the wild animal crossing warning sign is investigated in the fourth and final study as manifested in drivers' detection of moose dummies. (TRRL)

TRAFFIC SAFETY EFFECT OF GUIDE POSTS
TRAFIKSAEKERHETSEFFEKTEN AV KANTSTOLPAR

National Swedish Road Administration; Fack S-10220; Stockholm 12; Sweden

Monograph; #Meddelande Tu 1980:7; 80; 26p; 8 Tab.; Swedish

The number of accidents on twenty road sections with guide posts provided with reflectors, was compared to the number on twenty control sections. The test started in January 1977 and has been in progress for somewhat more than two years. During this time 584 police reported accidents occurred on the stretches with guide posts and 615 on the control sections. After a correction of the numbers with regard to differences in vehicle kilometers, the increase of safety with guide posts, was calculated to three percent.a closer analysis of the accidents shows that the guide posts have little effect on accidents involving wild animals, while the effect on accidents involving one or several vehicles can be as high as 5-10 percent. Earlier, tests were done with reflectors on snow guide posts on almost the same road sections, but with a considerably higher effect. The causes of the different results are discussed in the report. WILDLIFE RESEARCH REPORT. PART ONE

Colorado Division of Wildlife; Fort Collins, Colorado

Jul 80; 178p

Methods, devices, or structures related to reducing the number of deer-vehicle accidents were evaluated or experimentally tested after obtaining preliminary data on study areas and methodology. These methods, devices, or structures were highway lighting, underpasses, overpasses, 2.44-m fences and one-way deer gates, and deer guards. During the highway lighting study, 84 deer-vehicle accidents occurred, 45 and 39 with lights off and on, respectively. Behavioral responses of deer to the Vail deer underpass did not change substantially over the 10 years (1970-1979) of study. Five deer guard prototypes were evaluated. Highway lighting, as tested in this study, did not result in significantly fewer accidents.

FT-Contract; CN-A-8-34

The project was developed to determine the effectiveness of deer-crossing structures, deer-proof fence, and one-way deer gates in preventing deer-vehicle collisions on a section of highway which crosses a deer migration route. All information on this study was gathered by direct and indirect observation. It has been determined that the wide open type of deer crossing system is effective in providing deer a safe passage across the highway. It took three years before the major portion of the herd approached the crossings directly rather than moving to them along the fence. Until that time, every weak spot in the fence was challenged by the deer moving to the structures. Man was the major cause for openings in the crossing system during this study. The opening that accounted for the major portion of the deer killed during the study was a drive through gate, frequently left open by a local rancher. (FHWA)

FENCES FOR PROTECTION OF TRAFFIC AND DEER. SUMMARY

Lehtimaki, R

Central Organization for Traffic Safety, Finland; PL 239; 00120 Helsinki 12; Finland; 0355-6670; 951-9431-32-2

Monograph; No. 37/1981; Feb 81; 14p; 1 Fig.; 2 Tab.; 8 Ref.

The effect of 12 short wire-net fences built along the road network on deer accidents and on the movement of deer were studied by accident analysis and observation at the test fences. It was found the number of deer accidents decreases if fences are built, but only where the fences are located there was a corresponding increase in the number of accidents at both ends of the short wire-net fences studied. Thus the short wire net fences have no effect on the total number of deer accidents.

The study will evaluate the effectiveness of metal mirrors placed along the highway row in redu ing deer-vehicle accidents. The operating theory is that car lights reflecting of the mirrors will cause deer to stop as the vehicle passes.

THE HUMAN FACTOR IN GAME-VEHICLE ACCIDENTS. A STUDY OF DRIVERS' INFORMATION ACQUISITION

Aaberg, L

Uppsala University, Sweden; P.O. Box 227; S-751 05 Uppsala; Sweden; 0586-8858; 91-554-1185-1

Monograph; #No. 6; 81; 130p; 17 Fig.; 15 Tab.; 2 Phot.; Refs.;

The problem of game-vehicle accidents is discussed in terms of driver's strategies for visual search in driving. To find possible measures for reducing the number of wildlife accidents, four studies were undertaken. Initially, two exploratory investigations were made: a survey of drivers' expectancies concerning moose in traffic and a study involving reports of accidents and near-accidents with moose. The results of these investigations give no evidence that drivers' experience, knowledge, or attitude concerning moose are related to wildlife accidents. Instead they suggest that the visual search patterns of drivers might explain some of the effects obtained. In a series of field experiments, drivers' ability to detect moose dummies was explored and in a final study the effectiveness of the game crossing sign was investigated experimentally. The results were interpreted as evidence that in rural driving, drivers normally scan the view ahead in a systematic and almost automatic way which is not effective for the task of detecting moose. Drivers can easily change their automatic scanning into a controlled search for animals but this search is demanding and can probably not be sustained for any length of time without feedback. (TRRL)

RE: Moose-Auto Accidents on Glenn Highway

Representative Randy Phillips
Box 142
Eagle River, Alaska 99577

Dear Representative Phillips:

Thank you for your letter of May 9, 1983 and also for sending along the copy of the letter from the Department of Transportation.

It sounds as though you are trying to get someone on the ball about the moose situation on Glenn Highway. You said that maybe sometime in June the research on the problem of lighting Glenn Highway would be completed. Have you heard anything yet? I hope they can do something before darkness falls again.

Could you please check into it again. Please don't let them drop the ball.

Also, I am really upset about you being kicked off the committee. Is there anyone in particular I could write about it? I would be glad to let them know how we feel about it.

Thank you very much for helping.

Sincerely,

Marge Founds

The Honorable Randy Phillips
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Phillips:

Per your conversation with Michelle Michaud regarding moose-automobile accident prevention measures along the Glenn Highway, Alan Bennett, a biologist with the U.S. Army has indicated that illumination may reduce moose-auto accidents by 20% whereas fencing and underpasses could reduce these accidents by up to 70%. Since a higher reduction in accidents would occur with fencing and underpasses, this method will be considered first.

I have requested the Central Region's Design & Construction Division to investigate the possibility of using federal safety funds for the design portion of the project. They have indicated that the report should be completed in about two weeks. I will forward a copy of that report to you at that time.

In the meantime if I can be of further assistance please call.

Sincerely,

Gina M. Lindley for

May 4, 1983

The Honorable Randy Phillips
Representative
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Phillips:

Sorry for the delay in responding to your request regarding protective/preventive measures along the Glenn Highway (Fort Richardson to Eagle River) to reduce the number of moose-auto accidents.

I requested the Department's Research Section in Fairbanks to do a literature search (attached) to determine various types of methods used in other states and countries to reduce moose-auto accidents. As you can see from the attached list of studies, many thousands of dollars have been spent researching the problem with some success.

A reflector device has been utilized along the Glenn Highway with little success. This has been mainly due to the fact that excess dust and winter snow covers the devices and maintenance of the reflectors has been insufficient as well as costly. Also note that studies directly related to roadway illumination did not tend to show a decrease in vehicle/wildlife accidents.

Herman Griese, a game biologist for the Department of Fish and Game (DF&G) in Anchorage, and Alan Bennett, a biologist for the U.S. Army indicated that the following would probably be the best solution for reducing the occurrence of moose related auto accidents along this section (Mile 132-140) of the highway.

1. Clear at least 35 feet on each side of the road bed. This allows both the driver to see the moose and the moose also does not walk directly onto the road from the trees.

   Mr. Griese mentioned that if 35 feet is cleared on each side of the road that this should occur after the buds have begun to open up around the middle or end of June. Also the brush would need to be cut back periodically (approximately every 3 years) to prevent prime "moose habitat" vegetation from growing back.

2. Install fencing and underpasses for the moose to travel from one side of the road to the other (the attached map shows where the fencing and underpasses should be placed).

3. Install lighting on the both sides of the highway to provide continuous illumination from Muldoon Road to Hiland Road.

Mr. Bennett indicated that 80% of the moose-auto accidents occur within two main areas. He also indicated that approximately 53 mooses were killed on this stretch of the highway last year. Mr. Griese said that ADF&G and the U.S. Army only have accident records in which the accident caused the death of the moose. Mr. Griese also pointed out that moose behave differently than deer, hence those measures used to reduce deer related auto accidents may not work where moose are involved.

Mr. Griese and Mr. Bennett have indicated that the moose herd in this area has remained relatively stable; however, travel along this section of the highway will continue to increase and without some type of prevention measures moose related auto accidents will most likely increase.

A cost estimate has been prepared to determine the costs for: 1) lighting (continuous illumination), 2) fencing and underpasses, and 3) clearing of road side. This cost estimate should give you some indication of the costs involved. The Department has not had time to fully analyze the possibilities of installing any of the above mentioned prevention measures.

In the interim, the Department's Central Region Maintenance & Operations Division will clear certain areas along the roadway pending availability of funds; however, a long-term solution will need to be funded, fully or partially by the Legislature.

Mr. Bennett has indicated that the U.S. Army would be willing to fund part of any project that the Department may construct. The Department is looking into possibly securing federal "safety" funds.

If I can be of further assistance to you regarding this matter please call.

Sincerely,

William R. Snell
