March 1, 1987

POUCH V
Juneau, AK 99811

This letter is to support House Bill #47, in particular the section requiring the Alaska Railroad to open its' financial records to the public.

We believe the financial disclosure should be in sufficient detail to allow the reader the option to determine how the railroad's losses are financed, what kind of taxes are paid and to what extent the State subsidizes its operation.

The State's ownership of the railroad has been a severe economic hardship on the trucking industry and to the businesses that industry supports, such as, parts and supplies, fuel and tire dealers.

Much more needs to be done to prevent the State from being in direct competition with private enterprise but this Bill is a step in the right direction.

We urge you to give this Bill your support.

Sincerely,

John C. Tower

Representative Kay Brown
P.O. Box V
Room #515
Juneau, AK 99811

Dear Representative Brown:

As a commercial tenant occupying railroad land on Government Hill I am concerned to read of House Bill #47. This proposed legislation is a step backwards to a system more antiquated than the Federal Land Mismanagement program that we just got rid of.

Since the State took over the railroad my dealing with Real Estate Representatives has been very fair and reasonable. New railroad policies and lease contracts now have a long overdue "private sector" flavor. For the first time these new contracts actually offer a tenant something to sell in the open market. I feel your bill would hamper management decisions of the railroad to the severe detriment of current tenants, future tenants and the business community at large.

Sincerely,

[illegible]

[illegible] TESACO

The Honorable Kay Brown
House of Representatives
P.O. Box V
Juneau, AK 99811

Dear Representative Brown:

We have recently become aware of House Bill 47 and its proposed changes to the Alaska Railroad Corporation Act. It is our belief that legislation of this nature may have an adverse and detrimental effect on our position as lessees of railroad land and, ultimately, upon our respective business operations.

As long-time tenants occupying railroad land, we were initially concerned about yet another public bureaucracy administering rail industrial lands. However, since transfer to the State, we believe the management of the Alaska Railroad Corporation (including its Board of Directors) has developed and implemented land use policies in a fair and commercially reasonable manner. The recnt development of ARRC's long-term lease policy is an example of a fair and workable public hearing process, with the corporation exhibiting sensitivity to concerns expressed by the affected public.

In sum, House Bill 47 appears to add another layer of procedures and considerations which seem excessive and burdensome in a commercial decision-making process. We see no reason to change the ARRC's current approach to land management and urge that the bill's provisions on this subject be rejected.

Sincerely,

Juneau, Alaska 99811

Dear Representative Cato:

Thursday evening Jim Hill, President of Government Hill Community Council, relayed a message from Peg Mantele, aid to Representative Kay Brown. I was asked to forward a copy of a letter to the editor I wrote to The Anchorage Times to Representative Brown and also a copy to you. A copy is enclosed. Unfortunately the Times edited my letter and made some errors in so doing. I had addressed my remarks to Mr. Kuechle, the writer of an earlier letter to the editor. As this is not acceptable policy, the Times changed my letter to third person. In the process they completely garbled the second to the last paragraph. It originally read as follows: "If you have parklands in your neighborhood, Mr. Kuechle, more power to you. But don't be overconfident. You may think the municipality owns them. Maybe they do. Then again you could wake up some morning to see a row of townhouses rising on your former greenbelt! This almost happened to Government Hill last fall. It was averted through Community Council appeal. The large Government Hill contingent was granted a 90-day moratorium by the railroad's board of directors. This has been extended to permit negotiations with the municipality." Also the 27° panorama should read "270°."

I rewrote substantially the same message but in different form to the Anchorage Daily news on March 17. Michael Carey, one of their editors, informs me it will appear in the News within the next few days. I am enclosing a copy of my rough draft of that letter for your information.

Yours truly,

Mary E. Schenker

Letters from the People
Anchorage Daily News
P.O. Box 14-9001
Anchorage, Alaska 99514-9001

Attention: Mr. Michael Carey

In a letter to the News George Kuechle implied that only a "few" Government Hill property owners out for personal gain will benefit by curbing the Alaska Railroad's leasing powers as proposed by H.B. 47. The truth is that all Alaskans stand to profit by requiring our railroad to operate in the public interest and hold public hearings before leases are canceled.

At present the railroad may on 30 days' notice terminate any lease! Brown's Point, Harvard, and Alderwood Parks as well as our greenbelt are jeopardized. A planned town-house development on some of these lands was averted last fall through Community Council appeal to the railroad's board of directors. H.B. 47's requirements are intended to protect all neighborhoods from experiencing similar crises.

If present leasing powers go unchecked and if the railroad and the municipality fail to negotiate to protect parklands, we profit-hungry property owners won't be the only ones who lose. Here are some others:

1. Municipal taxpayers who will lose their considerable investment in park developments

2. Anchorage curlers and square dancers who lease park buildings

3. Tourists and newspaper photographers who will lose access to one of the city's most spectacular views

4. All residents who presently enjoy the parks

Few if any Hill people bear the railroad ill will. Many of us are ex-employees. We are neighbors of long standing and I for one love the sound of train whistles in the night. We should not be expected, however, to forfeit our parks to improve the railroad's balance sheet.

Yours truly,

Mary E. Schenker

Protecting the greenbelts

Dear Editor:

I am one of those "few" contemptible Government Hill property owners referred to in Mr. Kuehle's letter to The Times. He first decried Rep. Brown's HB 47 that would curb the railroad's authority '.. cancel leases on 30 day's notice without a he..ng, and require it to operate in the public interest. "The Alaska Railroad belongs to all Alaskans," he stated, "not just a few property owners on Government Hill who would like to see greenbelts next to their homes for personal gain." Well, I confess. If our parks and greenbelt are retained and designated as public lands, I'll make tremendous profits. Here are some:

1. I'll continue to live across from Alderwood Park, a modest open space adjoining the greenbelt where children frolic, neighbors walk their dogs, and families picnic.

2. I'll continue to traverse the greenbelt's rim or hike its trails marveling at the beauty of the Chugach Range and the reflections in downtown's shimmering towers. When I arrive at Brown's Point, I'll again enjoy a 27-degree panorama so spectacular that in summer busloads of tourists stand in awe.

3. I'll continue to play tennis on Harvard Park's courts as kids shoot baskets nearby. In winter I'll watch yougsters sled while curlers curl and square dancers twirl in their adjacent clubs.

If Mr. Kuechle's park lands in his neighborhood, more power to him. But don't be overconfident. He may think the municipality owns them. Maybe they do. Then again he could wake up some morning to see a row of townhouses rising on his former greenbelt! This almost happened to Government Hill last fall. It was averted through Community Council appeal. The large Government Hill contingent was granted a 90-day moratorium by the railroad's board of directors. This has been extended to permit negotiations with the municipality.

H.B. 47 was introduced not to hamper the railroad but to temper its exceptional powers. The least any neighborhood should expect is a right to cry out when its assets are imperiled. Public hearings are a must!

granted board permit road least cry ings

Sorry, paper skyjacked

INSIDE YOUR FOLDERS ARE:

- HB 62 An Act relating to ferries and ferry terminals and establishing the Alaska Marine Highway Authority

- An analysis of HB 62

- Review of FY'88 Governor's Budget for the Alaska Marine Highway System

OVERVIEW OF HOUSE BILL 62

The purpose of the Act is to establish an authority for the operation, management, planning and construction of facilities for the Marine Highway System with a legal existence independent of and separate from the state government.

The authority consists of a seven member board appointed by the Governor. The Authority is a public corporation of the state and is an instrumentality of the state D.O.T. BUT has a legal existence independent of and separate from the state.

The directors serve at the pleasure of the Governor for four year terms. The directors receive no compensation but are entitled to travel and per diem expenses authorized by law for state boards and commissions.

The Authority shall employ an executive director who is responsible for selecting and employing additional staff as necessary.

The Authority may adopt and enforce by-laws and regulations for the conduct of its business and for the use of its services and facilities.

It is assumed the Authority would utilize the State Accounting System where possible.

The following assumptions are made:

1. The Alaska Marine Highway Authority's time and attendance, personnel and accounting systems would interface the existing State systems and be compatible.

2. There would be an annual appropriation for full operating costs of the authority each year that would be made up of expected revenue, i.e. program receipts and a general fund subsidy to cover the remainder.

3. The authority would continue to use:

    a. State owned office buildings
    b. The State Mail System
    c. The state equipment fleet
    d. The statewide purchasing contracts
    e. Share communications lines
    f. Insurance, bonding, etc. as now supplied
    g. Legal service from the Attorney General's office

4. The Directors of the Authority would meet an average of three days per month or thirty six days per year.

5. Administrative support would be provided to the Board of Directors from their existing staff

REVIEW OF FY88 GOVERNOR'S BUDGET

FOR

ALASKA MARINE HIGHWAY SYSTEM

ITEM	COMPARISON INCREASE OR DECREASE OVER FY 87	
MARINE ADMINISTRATION		
Administration	+105.0	4.7%

   g. Legal service from the Attorney General's office

4. The Directors of the Authority would meet an average of three days per month or thirty six days per year.

5. Administrative support would be provided to the Board of Directors from their existing staff

THE ALASKA MARINE HIGHWAY SYSTEM

It is generally acknowledged that changes are required in the Alaska Marine Highway System.

In order to make these changes we need to identify what the areas of concern are:

ARE THEY:

1. Revenue shortfalls - Are revenues generated adequate?
   Does AMHS continue to hold it's share of the market?
   Are management decisions dramatically affecting the revneue picture?
   What can be done to increase revenues OR decrease expenses?

2. Services?
   a. Proposed cuts in services
   b. lack of adequate services to accommodate in-state transportation needs

3. Scheduling - Is the scheduling of ferries convenient and adequate to meet the needs of the residents of the communities it serves?

4. Marketing - Is the Marine Highway being marketed properly?

5. Personnel - Is the department top heavy/bottom heavy?
   When cuts to AMHS budget are made, are these cuts absorbed in personnel and in services?

6. Management - Are management decisions for AMHS made after extensive consideration of the alternatives?
   Is adequate time spent working toward improving AMHS?
   Does management have representation from the various aspects of the industry to enable well researched decisions to be made?
   What could help improve and expand the decision making process?
   Should decisions for AMHS be made by by DOT management?

SUMMER SCHEDULING - AMHS

Vessels servicing the North and Southbound runs

Malaspina - Monday and Thursday services from Prince Rupert to Skagway via Ketchikan, Wrangell Petersbury, Juneau, Haines

Taku - Sunday and Tuesday services from Prince Rupert to Skagway vai Ketchikan, Wrangell Petersbury, Juneau, Haines

Matanuska - Tuesday service Seattle to Skagway via Ketchikan, Wrangell, Petersbury, Juneau Haines

Columbia - Friday service from Seattle to Skagway via Ketchikan, Wrangell, Petersburg, Juneau Haines

****

Le Conte - Monday service leaves Petersburg to Skagway via Kake, Sitka, Angoon, Tenekee, Hoonah, Juneau, Haines

Thursday service Pelican to Haines via Hoonah and Juneau

Aurora - Monday, Tuesday, Thursday, Saturday and Sunday services from Ketchikan to Hollis

Friday service from Hyder to Hollis via Ketchikan

Tustumena - Provides continual service between Seward, Kodiak, Seldovia, Homer and Port Lions. Provides summer service between Valdez and Cordova

Bartlett - Sails on a daily basis to provide services between the ports of Valdez, Whittier and Cordova in summer.

The new FY 88 budget for AMHS proposes the following cuts:

a. Reduce Malaspina service by four months

b. Reduce Taku service by six months

c. Columbia lay up planned for 6 months

d. Scheduled service lay up of all vessels

This will mean only the Matanuska will operate year round on this north and southbound run. As a result of these reductions in service and layups 164 crew members will be impacted

****

Service to Prince of Wales Island and Southeast communities

a. Reduce the Aurora service by four months resulting in a single feeder vessel service in Southeast for eight months of the year versus the current four month period.
The Le Conte would be the single feeder vessel.
The Chilkat would increase service by four months to supplement service between Ketchikan and Prince of Wales Island.

****

Service to Southwest system

a. Reduce the Bartlett service by six months. The Tustumena will provide service for the entire Southwest system. Services between Cordova and Valdez in winter would not be available for 2 months because the Bartlett would be in lay up and the Tustumena would be in for servincing

****

OVERVIEW OF ALASKA MARINE HIGHWAY SYSTEM

Under the direction and supervision of House Transportation Chairman, Representative Bette Cato, House Transportation Committee staff, Rhonda Cargill and Wendy Chamberlain attended the Alaska Marine Highway Advisory Board Meeting. A meeting was also held with Deputy Commissioner Joe Camp who provided a great deal of information to the Chairman. This is an overview of those meetings. Due to the Chairman's strong interest in the Marine Highway System this report also includes information on areas researched, and answers to questions asked by the Chairman.

On Friday August 12th, 1985 the Alaska Marine Highway Authority Advisory Board had its' first meeting with Alaska Marine Highway. Approximately 2 years ago the Governor appointed members to a Marine Highway Task Force. The Task force work ended after completion of the Task Force Report which included 139 recommendations.

The Southeast Conference Board of Directors, comprised of southeast district representatives, southeast legislators, and southeast community mayors wrote to the Governor and the Department of Transportation requesting the task force be continued as an active board and be expanded to include representation from each marine highway "user" community. This would insure ongoing communication between the State administration and the people of Alaska serviced by the ferry system.

Although the task force was disbanded, Commissioner Knapp felt that the Southeast Conference provided a mechanism for input and recommendations from many of the southeast communities, and hence the Southeast Conference appointed representatives from each of the communities to serve on the Alaska Marine Highway Advisory Board.

The Advisory Board plans to meet with Marine Highway on a quarterly basis. As this was the first meeting an overview of Marine Highway was given by Commissioner Knapp and Deputy Commissioner Camp.

As this overview of Marine Highway is being done in August, 1985 it may be necessary to update this report to reflect any unanticipated changes made by Marine Highway during the next few months. Information gathered from monitoring and oversight of AMHS by the Chairman and staff will also be updated.

ALASKA MARINE HIGHWAY REPORT

Personnel

Commissioner of DOT - Richard Knapp
Deputy Commissioner - Joe Camp

There are 725 persons with Marine Highway who work afloat.
155 persons work ashore
During the past summer there were 350 vessel employees required to fill 231 jobs per week on all vessels. Considering two crews that [illegible] permanent jobs with 350 called persons to fill in. Despite this there were times when there were not enough personnel to dispatch to cover all positions on vessels. Sick leave and vacation leave taken by employees accounted for a large portion of the personnel shortage.

Most of the personnel for Marine Highway are under union agreement. New contracts were recently agreed upon, these contracts are in effect until 1988.

Over 90% of unlicensed personnel are Alaskan residents
Over 50% of the masters, mates and pilots are Alaskan residents
Under 50% of the engineers are Alaskan residents

64% of the Marine Highway's total operating budget is for personnel services costs and benefits for employees.

During the past several months various "letters to the editor" have appeared in local newspapers drawing attention to the high salaries earned by Marine Highway management. The figures presented by Deputy Commissioner Joe Camp and those outlined in the Alaska Marine Highway budget indicate the following:
21% of ashore Marine Highway personnel earn over $40,000/year
32% of afloat Marine Highway personnel earn over $40,000/year

Alaska Marine Highway has recently reached an acceptable agreement with the Marine Engineers Beneficial Association on the local hire of engineers, therefore the percentage of Alaska hire of engineers should increase.

Vessel Information

The Alaska Marine Highway currently has nine vessels in operation. These include:

M/V Chilkat - the original ship of the Alaska Marine Highway She was acquired in 1959 and services the Southeast Panhandle.

M/V Malaspina - built in 1963, renovated in 1972 she services Northbound and Southbound areas

M/V Matanuska - built in 1963, renovated in 1978 she services Northbound and Southbound areas

M/V Taku - built in 1963, renovated in 1981, services northbound and southbound ports.

M/V Tustumena - built in 1964, renovated in 1969, services Seldovia, Homer, Port Lions and Kodiak.

M/V Bartlett - launched in 1968 she services Cordova, Valdez and Whittier.

M/V Columbia - She is the largest of Alaska's ferries and was launched in 1973.

M/V LeConte - Launched in 1973 servicing the Northern Panhandle.

Plans for the future for vessels

As the M/V Chilkat is the oldest vessel, the Marine Highway plans to retire the M/V Chilkat in the summer of 1986. She will stay in reserve for emergencies.

There is currently a masterplan being developed for the Alaska Marine Highway a draft of which should be available for the next legislative session. This plan will include a report on fast ferries.
Hopefully these fast ferries will provide a comfortable, cost effective and efficient alternative for various southeast communities.
The Marine Highway plans to request funds for the purchase of fast ferries in their FY 87 budget. (Federal and State)
Preliminary estimates show the cost of the fast ferry to be between 2-3 million dollars.
Further information on these ferries will be available when the masterplan is completed.

The Tustamena requires major passenger refurbishing. A recent survey showed a lot of life left in the hull of the Tustamena and therefore the Alaska Marine Highways plans to request refurbishing funds for the Tustamena in the FY 1988 budget. (Fed. & State)

Currently, each vessel is laid up for repairs annually. These routine repairs and maintanence can usually be completed in 30 days. Alaska Marine Highway has received a great deal of publicity over the recent laying up of the Colombia. It is anticipated that the Colombia will be in dead ship lay up in Seattle until at least March 1, 1986. The maintanence work on the Colombia is being done in Seattle, this in itself has created a great deal of controversy, particularly among Marine Highway employees.

The decision to place the Colombia in dead ship lay up was made because of revenue shortfalls. It costs approximately $90,000 more per run to sail the Colombia as compared to the other vessels that complete the same run. The maintenance contract was awarded to a Seattle firm because it was considerably less expensive and because no facilities are currently available in Alaska to allow for ships to be laid up for a long period of time. It is anticipated that next year the Ketchikan facility will be completed and ship lay up will then be done in Ketchikan, however, at the present time the additional cost of laying a ship up in the state of Alaska makes this unfeasible.
The plan for bringing the Colombia out of lay up and the expenses and considerations for the lay up are explained fully in the budget section.

Marine Highway would also like to increase the number of ocean going vessels they have available. Currently only the Tustamena is able to make runs to the Aleutian chain or any other "ocean" areas.

Future plans for terminals and facilities

Alaska Marine Highway recently reached an agreement with Canada on the use of the Prince Rupert facility. In the near future a 5 year lease will be signed for the facility with options to renew every five years for the next 20 years.

In June this year Marine Highway began providing services to the community of Hyder. This community will be serviced once a week by the Marine Highway. There are no plans to move the terminal from Prince Rupert to Hyder at this time, however, monies will be requested in the FY 87 budget to build a facility in Hyder. If approved this terminal may be considered for use in conjuction with the Prince Rupert terminal for north and southbound services. As Federal funds can only be used for capital projects such as purchasing and refurbishing of vessels, rebuilding and reparing facilities etc. it is likely that the much of the funding required to build the facility in Hyder will be requested from the Federal Government.

The $38 million Ketchikan vessel maintainence facility is underway and is scheduled for completion in December, 1986. The maintenance work is currently being done in Seattle, therefore this should be a definite asset to the community of Ketchikan and the State.

Funds have been allocated for construction of shore facilities at Kodiak, Homer, Seldovia and Whittier. Much of this funding is received from the Federal Government. For Example:

Kodiak	(Federal)	$2,790,000
	(State)	210,000

This facility will be an important step towards increasing the quality and efficiency of the service provided by the M/V Tustumena and/or the Tustumena replacement vessel.

Homer	(Federal)	$3,255,000
	(State)	245,000

This project is being coordinated with the City of Homer's revised Port Development/Small Boat Harbor project.

Seldovia Ferry Terminal	(Federal)	$3,255,000
	(State)	245,000

Additional site reconnaissance and preliminary engineering is being done on this project to enable shuttle ferry service for Homer/Seldovia.

Whittier Ferry Terminal (Federal) $2,180,000
(State) 140,000

Funds were allocated for this project in FY 86. Due to the poor condition of the current structure immediate reconstruction will be necessary.

Current Marine Highway Preliminary Engineering Projects.

Valdez Ferry Terminal - $50,000
After the preliminary engineering is done funds for construction of this project will be requested in future years budgets

Seward Ferry Terminal - $75,000
This facility is in very poor condition. Alaska Marine Highway made an emergency appropriation of $150,000 in August, 1985 to assist with repair of pilings and bumpers at this terminal. After the preliminary engineering and location study is completed Alaska Marine Highway plans to request capital construction funds for this project.

Plans are in progress to build new immigration offices and ticketing offices in the Prince Rupert facility.

A new terminal in Metlakatla should be completed in May of 1986. Metlakatla will then be serviced by the Aurora via Prince of Wales Island, this will allow the Chilkat to retire.

Terminal work is now being done at both the Wrangell and Petersburg facilities

MARINE HIGHWAY FY 86 BUDGET

FY 86 Budget for Marine Highway

The next section reviewed is the budget. Under the direction of the Chairman, this section was monitored and reviewed continually. This information is being presented now because much of the decision making and questions asked regarding such matters as ferry scheduling, areas serviced, fares and overall operations are made based on their overall impact on the budget.

In FY 86 the total budget for Alaska Marine Highway is $68 million This is a $3 million or 4% increase over FY 85.

The total budget breaks down as follows:

$32 million state funds
$36 million project revenue

In FY 86 the Legislature changed slightly the way in which funds are appropriated for Alaska Marine Highway. Previously, all revenues from Marine Highway went into the general funds and an amount was appropriated from the Legislature for operation and maintenance of Alaska Marine Highway.

In FY 86 Alaska Marine Highway requested a $68 million dollar budget. The Legislature approved this amount and appropriated $32 million from the general fund. The remaining $36 million is to come from revenue generated by Alaska Marine Highway. If they do not generate this amount, they will have to make cuts to balance their budget. This allowed Alaska Marine Highway to receive Legislative approval for the budget amount requested, and yet provides management with the challenge of making decisions that will directly affect their revenues and in turn their overall operating budget.

Although it is early in the fiscal year, information provided to the Chairman indicate that the $36 million in projected revenues for the year may have been somewhat optomistic.
The projected revenues were approximately a $3 million increase over FY 85. It is realistic to expect that Marine Highway will increase revenues slightly over FY 85. Taking this into consideration Marine Highway anticipate that the "magic number" for "additional" revenues that they will need to generate to be approximately $1.3 million.

With overall revenue figures available as of September, 1985 it has become apparent that Marine Highway management will have to make operating cuts if they are to balance their budget for FY86. To date preliminary estimates show that cuts up to $1.3 million will have to be made by management. In an attempt to meet this shortfall, Marine Highway has implemented the following cost saving measures:

1. Lay up the M/V Colombia in Seattle until at least March 1, 1986. As stated earlier, each year the vessels go into lay up for approxmimately 30 days for rountine maintanence. Because the Colombia is the most expensive vessel run on the Seattle run, and, the winter operating costs exceed the revenues generated management decided to lay her up.
A contract for the maintanence and repairs to the Colombia was awarded to a Seattle based firm. When consideration was given in an attempt to lay up the Colombia in Ketchikan the additional cost made this unfeasible.
The cost comparison done by Marine Highway was as follows:

Contract work in Seattle	$143,000
Contract work in Ketchikan	$528,000

Several factors account for the higher costs to lay up the vessel in Ketchikan.

a. Cost to steam the ship would be very expensive, as the Ketchikan facility is not completed there is not adequate power available to steam the ship.
600 amps is required
280 amps power available from ship

b. Cost for 122 days of crew salary for 10 crew members. This was estimated to amount to approximately $297,000.

c. Garbage collection would have to be arranged
d. Sewer disposal (estimated to be $12,000)
e. Telephone

It is hoped that the Colombia will be brought out of lay up and crewed March 1st, however, Marine Highway management may find it necessary to leave the Colombia in lay up status until April. This decision will be made late December when the revenue picture becomes clearer.

2. Discussions between Representative Cato and Marine Highway management in early December provided no other definite information on proposed cuts or changes in service to balance the budget. Areas management stated may need to be considered included assessing the toll free lines and evaluating the cost of maintaining this service. Marine Highway management state that the cost of providing these toll free lines is very expensive, particularly the intrastate lines. Therefore careful consideration may need to be given to the actual benefit verses the cost of this service in the upcoming months.

re: THE SHORTFALL IN REVENUE PROJECTIONS:

Alaska Marine Highway is concerned about the shortfall in revenue projection for FY 86. After many discussions, meetings and evaluation of information available, management feel the following areas contribute to this shortfall:

1. Airline fares

With the recent ultra super saver fare reduction by both Alaska and Western airlines many people are using air as a means of transportation because with the current price structure it is considerably faster and less expensive to fly. A decline in reservations is also being voiced by a number of local hotels who state that reservations are down as much as 30% under previous years. Inexpensive fares to Europe and other overseas countries are considered to be one reason for this as people are taking advantage of these low fares to travel overseas.

2. Cruiseship lines more competitive.

M/V Stardancer, owned by an overseas company loads in Vancouver and sails on a 3 day trip to Haines with a 4 day return trip. The Stardance makes stops in Juneau, Misty Fjords and Tracy Arm. This vessel has the capacity to carry approximately 300 vehicles. The fares for this trip are lower than fares charged by Alaska Marine Highway.

Example:

Standard Automobile shipping cost	
Seattle to Haines on Alaska Marine Highway	$500.00
Vancouver to Haines on M/V Stardancer	$250.00
25 to 26 foot motor home	
Seattle to Haines on Alaska Marine Highway	$1,000.00
Vancouver to Haines on M/V Stardancer	$350.00

Cabins

Cabin prices on the M/V Stardancer vary depending on the luxury of the cabin, however, a person may travel on the Stardancer in an inside cabin, with his/her meals included for the same price as a standard cabin on Alaska Marine Highway excluding meals.

2. Passenger load down

Although reservations for this summer were as projected, the actual revenue generated as a result of this travel is down. Alaska Marine Highway management feel that while numbers are up, the actual distance that individual passengers travelled is down and hence revenues are down.
The Seattle run is the most profitable run.
From information available it appears that the number of persons travelling on this run is down AND, the number of large vehicles transported on this run is also down.
In summary, this summer the Alaska Marine Highway system transported a greater number of passengers and vehicles, however, passengers travelled shorter distances. Also, while there was an increase in the number of vehicles transported by Alaska Marine Highway, the number of oversized vehicles travelling was down considerably.

Both long distance travel and large vehicle transportation are two areas that are very profitable for Marine Highway.

Representative Cato was assured the problem of "no shows" would be overcome this year as new regulations (attached), requiring advance payment of tickets and penalties for cancellation went into effect October 1st, 1985. Previously, persons who made reservations could pick up and pay for their ticket on the day of sailing. This, although very convenient for the traveller made the problem of "no shows" very frustrating and expensive.
The threatened strike by the masters, mates and pilots also had an effect as people either cancelled their reservations or used alternative means of travel.

WHAT ARE THE SOLUTIONS?

Proposed solutions to these concerns are currently being discussed. As several of these solutions go hand in hand with proposed changes in ferry scheduling and services this section will be outlined next along with the proposed changes.

Ferry Scheduling

Along with being one of the most difficult tasks for Alaska Marine Highway, scheduling is also one of the areas that many of the complaints arise over.

In order for persons to be able to plan for their vacations, ferry schedules are printed months in advance.
The decisions on next summers schedule were made September 1st 1985. This schedule has already been sent to the printers.
Once schedules are printed the department is locked in as far as the number of vessels servicing an area, the number of runs being made per week and the pricing structure for fares, therefore long range decisions have to be made as accurately as possible well in advance.

Possible Solutions

In discussions with Representative Cato, Deputy Commissioner Joe Camp outlined the many alternatives that have been explored.

1. Agressively compete with the cruise lines.

2. Increase services on the most heavily booked runs to try and increase revenues.

3. Increase services on the most profitable runs. The revenue and direct expenses graphs included in the appendices provides a clear breakdown on each runs revenue verses direct expenses.

4. Cut services

5. Evaluate all the runs and have fares structured to attempt to make each run, where possible, cover expenses. (See attached graph in appendices)

6. Look at alternatives - fast ferries - as a more cost effective method of travel to areas within the state.

It is the intent of DOT and Alaska Marine Highway to continue all areas currently serviced. Runs made within Alaska to the smaller rural communities are not profitable, and, in many cases these runs only return revenues to cover approximately 20-30% of the expenses. Both Commissioner Knapp and the Chairman feel that services must be continued to these areas, they are remote parts of Alaska that have very few alternatives available. One of the main reasons Alaska Marine Highway was put into service was to provide a means of transportation within Alaska.

Several of the above alternatives are being considered at this time.

1. Increase services.
   The most heavily booked runs are the north and southbound runs from Seattle and Prince Rupert to Haines and Skagway. A great difference is apparent when the profitability of these two runs is compared:

Current service and revenues

Seattle to Skagway - 1 trip per week
1000 passengers (total) 165 vehicles
200 state rooms

Revenue for this run $325,000.00

Prince Rupert to Skagway - 2 trips per week
1400 passengers 330 vehicles
400 state rooms

Revenue from this run $213,000.00

The above breakdown shows that by carrying fewer people and fewer vehicles per week the Seattle run returns $107,000 more than the Prince Rupert run.

Consideration has been given to raising the fares on the Prince Rupert run to make the same profit as the Seattle run, however this would mean a 50% increase in fares. Marine Highway has therefore increased the fares on the Seattle run 4% and increased fares on the Prince Rupert run 8%.

In an attempt to take advantage of the more profitable Seattle run, Marine Highway has decided to make an additional weekly run from Seattle during the summer instead of Prince Rupert. This change is reflected in the new ferry schedules.

The graphs that follow and also those included in the appendices given an actual breakdown of each run and show revenues generated verses expenses incurred.

Other areas discussed or review

The reservations section of the Marine Highway is an area that is very busy. While on tour of the facility with Mr. Camp the telephones were ringing constantly. This is another area that many people complain about, - not being able to reach the Marine Highway for reservations.

There are currently 9 lines available to Marine Highway:
These calls are answered in priority from Group 1 to 3.
Group 1 - 2 toll free lines for use within Alaska
Group 2 - 3 lines available for local callers
Group 3 - 4 toll free numbers for out of state use.

As you will see from the attached summary, 5163 calls were made to Marine Highway on August 5th, 1985. Of this 1389 calls were answered from the 2 toll free in state lines compared to 1400 from the 4 toll free out of state lines. This possibly explains the difficulty getting through to Marine Highway within Alaska.
The department is considering deleting one of the toll free out of state lines and possibly adding another toll free in state line for use by Alaskans. This addition may not be possible if revenues for the year continue to be down from those projected.
The cost of maintaining a toll free in state line is considerably more expenses because of in state telephone rates.

Although the 4 toll free out of state lines are constantly in use the time taken with each of the out of state calls is much longer than the local and in state calls. This is due to the fact that many people call from other states to make inquiries on everything from scheduling to the weather and are usually unfamiliar with the area and request a description on each port of call, which in turn ties up the staff and the lines for a considerable length of time. Therefore, deletion of one or more of the out of state toll free lines would be both cost saving and time saving.

Other office procedures

One of the biggest obstacles facing the Marine Highway should be overcome in this fiscal year. At the present time much of the hardware needed to make the computer system truly effective is not on line. Therefore in order to compare revenues from ticket sales month to month each ticket has to be individually punched into the

computer before a monthly figure is available. Currently the information available in from sales 2 to 3 months previous. The necessary hardware has been purchased and is currently being installed. This will provide accurate, up to date information on revenues generated for the previous months. This will help with management decisions such as fare structures etc.

All time sheets for all marine highway onshore an offshore personnel are computed by hand. Requests for funds for computers will be in the FY 87 budgets.

In summary, Alaska Marine Highway system has several short time priorities:

a. To make the necessary adjustments or cuts to balance the FY 86 operating budget. It is hoped that any adjustments or necessary cuts will have the least amount of impact on services or personnel.
b. To assess and implement methods to attain projected revenues. To work toward overcoming any obstacles and agressively compete in the transportation business.
c. To automate the offices to provide the most current and accurate information on passengers travelled, revenues generated and expenses incurred and therefore allow management to react more agressively to industry demands and swings, and to implement any changes that may be necessary for them to meet or exceed their projections.

The Long term plans for Marine Highway include looking into the fast ferries as an alternative. Constructing, upgrading and rebuilding facilities and vessels and providing more cost effective, efficient services both onshore and offshore.

JUL 15 1985

NOTICE OF PROPOSED CHANGES IN THE
REGULATIONS OF DEPARTMENT OF TRANSPORTATION AND
PUBLIC FACILITIES

Notice is given that the Department of Transportation and Public Facilities, under authority vested by AS 44.42.030, proposes to adopt regulations in Title 17 of the Alaska Administrative Code, dealing with Alaska Marine Highway tickets, to implement AS 44.42.020 as follows:

(1) 17 AAC 70.220(a) and (b) are proposed to be amended to incorporate the provisions of 17 AAC 70.221, and

(2) 17 AAC 70.221 is proposed to be adopted to establish procedures for refunds on Alaska Marine Highway tickets with the amount refunded, reduced depending upon when in relation to sailing the cancellation of the reservations occurs, the time of the year the space is reserved, and the particular route.

Notice is also given that any person interested may present written statements or arguments relevant to the proposed action by writing to Deputy Commissioner, Alaska Marine Highway System, Pouch R, Juneau, Alaska 99811, so that they are received no later than August 9, 1985.

This action is not expected to require an increased appropriation.

Copies of the proposed regulations may be obtained by writing to:

Merv Griggs
Alaska Marine Highway System
Pouch R
Juneau, Alaska 99811

The Department of Transportation and Public Facilities, upon its own motion or at the instance of any interested person, may, after the deadline stated above, adopt proposals within the scope of this notice without further notice or may decide to take no action on them.

DATE: _____

_____
Joe D. Camp
Deputy Commissioner
Alaska Marine Highway System
Department of Transportation
and Public Facilities

17 AAC 70.220(a) and (b) are amended as follows:

17 AAC 70.220. REFUND OF FARES, RATES OR CHARGES. (a) Passage tickets for passengers or vehicle deck space when presented by the legal owner, within one year of valid date, may be redeemed, subject to the provisions of 17 AAC 70.221, under the following conditions:

(1) unused passage tickets when travel was not performed or when transportation was not provided will be refunded at full value upon application;

(2) changes in destination, number of persons ticketed, size of vehicle or other details that result in the transportation provided being of lesser value than the purchase price of the passage ticket, must be adjusted on the basis of the true published value of the transportation provided; the adjusted difference will be refunded upon application;

(3) lost tickets may be refunded upon application and certification of loss.

(b) Tickets issued for stateroom or berth accommodations, when presented by the legal owner, may be redeemed, subject to the provisions 17 AAC 70.221, under to the following conditions:

(1) if canceled prior to sailing full refund may be made upon application,

(2) when travel distance is shorter than originally ticketed, or when all berths originally ticketed are not used, no adjustment in charges for the berth or stateroom service will be allowed. (Eff. 7/8/72, Reg 42; am / / , Reg.)

17 AAC 70.221. REFUND OF TICKET AMOUNTS. (a) Amounts refunded on tickets shall be reduced from the full ticket price for routes specified in this section as follows:

(1) if cancelled thirty days prior to sailing, 100 percent is refunded;

(2) if cancelled more than twenty days, but less than thirty days before sailing, 80 percent is refunded;

(3) if cancelled more than ten, but less than twenty days before sailing, 60 percent is refunded;

(4) if cancelled less than ten days before sailing -0 percent is refunded; and

(5) if the vessel sails without cancellation of the tickets, nothing is refunded;

(b) The provisions of this section apply to the following routes:

(1) all tickets for sailings using Seattle as a point of origin or as a destination;

(2) all tickets for sailings northbound from Prince Rupert during June and July of each year;

(3) all tickets for sailings southbound to Prince Rupert from July 15 through September 15 of each year;

(4) all tickets for any sailing between Whittier and Valdez; and

(5) all tickets for individual sailings specified in the Alaska Marine Highways' schedule. Schedules are issued for the periods October 1 through April 30 and May 1 through September of 30 each year. Copies of the schedules may be obtained from The Alaska Marine Highway System, Pouch R, Juneau, Alaska 99811. (Eff. / / / , Reg.)

All Employees
Alaska Marine Highway System

I am writing this letter to all employees in response to a letter (copy attached) published on Thursday, October 31 in the Juneau Empire. That letter got my attention for three reasons:

1) It contained persistent false rumors and accusations;

2) it was allegedly signed by a dedicated employee who had recently died; and

3) it mentioned one event that occurred after his death.

On Friday morning, November 1, while pondering how Mr. Clark could have written a letter about something that occurred after his death, I received a call from Mr. Carl Sampson, Managing Editor of the Empire. He had just received a call from Mr. Clark's daughter who had informed him that Mr. Clark could not have written or had anything to do with that letter since Mr. Clark had been gravely ill in a Portland hospital for some time before his death. The Friday Empire carried an editorial (copy attached) that states the Editor's position much better than I can.

Even though some individual or group of individuals has taken advantage of Mr. Clark and his family and possibly the letter to the editor should be ignored, I believe I owe it to all of you to answer with facts the false charges that letter implied. My comments respond paragraph by paragraph to the letter to the editor.

Our labor costs are high. Over 53.5 percent of our total operating budget is in personal services costs and benefits for our vessel employees. Shore employee personal services and benefits are less than 9.5 percent of our total operating budget. No other major vessel operator faces those types of labor costs to my knowledge and experience. Most of the wages are hard earned and well deserved, but management must ensure that we do not pay for services not needed.

Office personnel have not tripled. In fact, there have been a total of only 15 personnel added to the authorized Alaska Marine Highway System (AMHS) personnel count since July 1980 and seven of these were approved this year and are Capital funded positions to manage construction projects for Marine Facilities Engineering. It may seem to the unknowning as if many positions have been added to headquarters staff since AMHS has consolidated under one Deputy Commissioner. With the exception of the 15 new personnel, all other positions have long been employed in Department of Transportation and Public Facilities (DOT&PF), doing AMHS work. Many were simply located elsewhere where they reported to different supervisors but they were performing AMHS tasks. The DOT&PF reorganization in 1983/84 simply located them centrally in the same organization which, incidentally has made us more responsive and efficient. There are 7 persons or 4.7 percent in the shore staff of AMHS earning $60,000 or more. There are 69 or over 3.1% of all vessel personnel earning that much or more. In addition, there are 205 or 24% of all vessel personnel earning between $40,000 and $60,000. Ashore there are 24 or 16.3% earning those wages. Shoreside supervisors and managers are not eligible for overtime even though many extra hours of work are required. The shore staff to vessel employee ratio of AMHS compares very favorably with the Washington State Ferries. Washington State Ferries have one person ashore for every four afloat while AMHS has one person ashore for every 5.3 persons afloat.

In the winter our administrative staff must still order the supplies, account for revenues and expenses, pay the bills, dispatch personnel, handle payroll, prepare budgets, manage capital construction projects and make reservations. There is no slack period ashore as there is on the routes.

We are implementing a limited number of training programs for our shoreside staff just as we are for our vessel personnel. Both programs will increase as our budget will allow. Non-performers, both afloat and ashore are being appropriately dealt with within the bounds of union contracts.

Management philosophy is not intended to be antagonistic toward vessel personnel. When I was at sea I made a vow that if ever I was in a management position ashore, I would ensure that the shore staff always remembered that their only reason for being was to support the ships. We are dedicated to making AMHS a more efficient organization that better serves the needs of all Alaskans. We are antagonistic to any personnel who seem only to think of how they can get more for doing less or those who fail to remember that our sole reason for operating is to serve the public.

Mr. Black and I were recruited from outside the state. We both had extensive experience in managing and working with civilian crewed vessels. Many successful businesses recruit ex-military personnel for their proven track record as cost effective managers. We both hope to remain in Alaska for a long time. Incidentally, we have given all vessel employees who collect COLA but who are "P. O. Box Alaska residents" the opportunity to correct past errors without penalty. Those who we now identify as having filed false claims in order to collect COLA will be dealt with to the limits of the law including termination and collection actions to recover COLA paid non-residents. Only the cheaters should be bothered by this. Alaska residents and those honest outsiders who don't collect COLA should be happy to see it happen.

Some marketing surveys have been conducted for specific purposes. Where appropriate and where funding is available the recommendations are implemented.

I made the statement that I thought airline super saver fares were the principle cause of falling revenue this year. There are many other factors involved and we are taking whatever action we can to counter those losses. One will be to sail two vessels out of Seattle next summer. Our service to Hyder was the result of legislation that required it. DOT&PF argued against it in all committee hearings because of the anticipated losses. The $47,000 loss was for the entire summer, not each week. We will again serve Hyder/Stewart next summer, but since we will be carrying vehicles we should not have a loss.

Last summer we had over 850 vessel employees to fill 331 jobs per week on all vessels. Considering two crews that totals 662 permanent jobs with 138 relief personnel to fill in. In spite of that number of extra personnel we sometimes did not have enough personnel to dispatch to cover all positions on all vessels. We did not sail below Coast Guard certificate. AMHS is the only seasonal business I know of that has allowed almost unlimited leave during the peak season. Too liberal a leave policy and a higher than usual "not fit" situation during a portion of this summer left us short. With the funding shortages we have, hiring additional personnel was not the answer, but better managing the personnel we have may be. We are seriously considering limiting all personnel to no more than one work week leave and then only for a limited number on leave each week between May 15 and September 15 next year. I dislike having to limit leave but we are in a seasonal business whether we like it or not.

M/V COLUMBIA will be in a dead ship lay up status until at least March 1. Todd Shipyard will also complete the industrial overhaul during that period. To lay COLUMBIA up in Ketchikan this year would have cost AMHS a minimum of $328,000 in auditable costs. The Todd Shipyard contract is for $143,000, or a savings of $385,000. That savings equates to two extra weeks sailing for a mainline vessel, providing service to the public.

Shoreside employees travel on passes only when they are on official business, therefore reservations for cabins are in order and meals are included in lieu of per diem. Occasionally, I take my vehicle when I travel on official business on the ferry. It is a cost savings measure as I then do not need to rent a car at destination and I only do this if there is adequate space available. Shoreside personnel do not receive passes for vacation travel. Shoreside employees' family members never receive passes for passage or meals. Mr. Black's daughter was, traveling on a purchased ticket, erroneously not charged for an evening meal on M/V COLUMBIA this summer. Mr. Black brought it to the attention of the Port Steward and thought it was resolved before he left the ship. After debarking, he discovered the meal had not been paid for and he paid the bill the next COLUMBIA trip through Juneau.

I firmly believe that we have the finest system and that we have more dedicated, hard working employees than any organization of comparable size anywhere in the world. We must all work together to improve our system so that it can function to its fullest to provide service to the public. To the majority of you who work so hard for our system, I say thanks, keep up the good work and help us realize the real potential this system has.

Sincerely,

Joe D. Camp
Deputy Commissioner

JUNEAU EMPIRE - October 31, 1985

Letters

Ferries need help from top down

Dear Sirs,

This letter is a response to the growing antipathy being created in the Alaska Marine Highway Systems (A.M.H.S.) between shipboard personnel and the management in the Juneau office. Management seems oblivious to its contribution to waste in state government and prefers to put the blame on "high" labor costs. Examples of mismanagement are rife, but we will explore only a few in this document.

Office personnel and mid-level managers have about tripled in the past five year, with officer's wages averaging $60,000 a year. One might compare ferry management (in terms of the ratio of office to line workers) with private shipping companies or the Washington State Ferries. They operate with a fraction of the personnel and have bigger budgets, more ships, and larger payrolls.

Each winter half the ships are laid up in the shipyard for maintenance, but there is never a reduction in force in office personnel. Actual ships and compliment crews are static, while office workers multiply exponentially.

There is no policy of continuing (or even initial) management training. Poor personnel are never removed, just shifted to a different title – usually a position of more responsibility.

Management philosophy is antagonistic to shipboard workers and is heavily infiltrated by ex-military personnel. Since when is the military a good place to recruit people to be cost effective?

Top management has been imported from outside the State of Alaska, even though Governor Sheffield in a recent press interview still gives lip service to local hire on state financed projects.

There have been approximately 11 marketing surveys done for the state in as many years (at what cost?) that have NEVER been utilized. Evidently no one in Juneau knows how to analyze and implement the data gathered by the firms contracted for the surveys.

A D.O.T. official in a recent public statement blamed loss of ferry revenue on super saver air fares, but said the A.M.H.S. is taking steps to save money at the operational level. So far this has translated into less sailors and stewards to work shipboard during peak summer months, and inaugurating weekly trips to Hyder, Alaska, at $47,000 per trip.

Lay up on "dead ships" (those vessels with no maintenance being done and no workers aboard) are being tied up to sit in ports outside of Alaska. These docking fees could just as easily go to Alaskan cities with docking facilities.

Ethical standards for any operation, be it public service, the private sector or the military, are set by the leadership and filter down to subordinates. At the A.M.H.S. we are given the examples of "do as I say, not as I do." Memorandums are issued denying employees traveling on passes from (1) reserving staterooms or (2) having free meals aboard the ship, yet an official's daughter travels with her father while he is ostensibly on official business, all meals provided to them at state expense. On a recent "special" voyage to Sitka, officials traveling on passes reserved their stateroom accommodations, even after their own memos (dated two weeks previously) state quite clearly there would be no exceptions to the pass-reservation rule.

The old adage "Physician, heal thyself" might be well applied to a bloated, inefficient bureaucracy whose typical response to declining state revenues and calls for a more cost effective program is to blame the workers who set no policy, have little or no control of day-to-day operations and who struggle to interpret variable and often capricious office politics.

Please sign us,
Frustrated Public Servants

JUNEAU EMPIRE - November 1, 1985

An apology for an abuse of a privilege

A newspaper has many jobs: to inform, to entertain and to provide a forum for the expression of opinions. Each of those functions is important, because together they provide a well-rounded view of the world around us. If one of those functions had to be chosen as most important, the free expression of opinion would probably be it. That's because in a democracy, the free expression of opinion is not reserved for the few, it is a privilege enjoyed by all.

Most of the time, people express their opinions in a responsible manner. Once in a great while, however, that privilege is abused. It doesn't happen when an individual speaks deeply held beliefs, and it doesn't happen when an honest error in fact is stated.

It happens when an individual, or group of individuals, purposely seeks to deceive.

By all indications, that's what happened in a letter to the editor published in Thursday's Empire. In it, someone apparently forged another person's signature. While that is bad enough, the person whose name had been forged had passed away nine days after the letter was dated. The family says he had been severely ill in Oregon and there is no way he could have written the letter or had anything to do with it.

Maybe the person who forged that letter has a just cause. Or maybe he thought he was being real smart by taking another man's name. But no matter how you look at it, nothing can justify this sort of flagrant and willful abuse of a privilege. Whoever did it not only destroyed his credibility and perpetrated the most irresponsible of deceptions, he needlessly hurt the man's family, friends and former co-workers.

What can justify that sort of action? Nothing. What can make up for the hurt? Nothing.

We offer our apologies to the members of Larry Clark's family and the many other people who we hurt by publishing that letter, and you can bet we will make every effort to make sure this never happens again.

If the person responsible for this deception had any courage or sense of right, he or she would also apologize to the family and to the public.

DIVISION OF ADMINISTRATIVE SUPPORT
ALASKA MARINE HIGHWAY SYSTEM

Martin J. Nusbaum, Director

- With its staff of 51 the Division of Administrative Support was able to meet its objective of providing the necessary supply, personnel and finance functions for the Alaska Marine Highway System by meeting the following objectives.
- Payroll and dispatching errors decreased by 25%.
- Decrease in crew travel pay due to dispatch errors by 23%.
- Decrease in time on recording crew seniority points by 33%.
- Decreased processing time whereby vendor payments were accomplished under thirty days from time of invoice to payment.
- Further progress is anticipated in FY 86 in that objectives toward improving systems with the help of computers is expected to be made in the following areas:
- Prompt and accurate rating and response to marine employee applicants as to hiring qualifications and compliance with affirmative action.
- Improve warehouse and inventory control procedures. Reduce error rate to 2%.
- Establishment of cost centers including management and accounting requirements to identify profit/loss for services performed.

ALASKA MARINE HIGHWAY SYSTEM
DIVISION OF MARKETING AND SERVICES

Josephine Emery, Director

- A major change took place within the Division of Marketing and Services in FY 85 when reservations' functions were centralized in Juneau. A staff of 65 includes reservations positions which were shifted from both the Seattle and Anchorage offices, which had previously shared the reservations load, to the Juneau office. Toll free lines, two Alaskan and four out-of-state were installed along with appropriate electronic call distribution, monitoring and reporting. This has proven effective with the number of unanswered telephone calls being reducted significantly.

- Most of the objectives of the Division were reached as the response to telephone and letter inquiries improved as planned and the number of vehicles transported increased from 94,000 to 99,000 as projected. However, two objectives were not reached. Passenger traffic did not reach projected levels as ridership actually declined one percent compared to the projected rise of three percent.

- With passenger traffic declining, revenue also fell short of projections by nearly six percent at $32.6 million.

ALASKA MARINE HIGHWAY SYSTEM
DIVISION OF MARINE FACILITIES ENGINEERING

Harold Moeser, Director

- With the FY 85 funding level Marine Facilities Engineering was able to meet its objectives in the development and obligation of $10,700,000 in capital construction. Projects included the rehabilitation of the M/V MATANUSKA and Petersburg Ferry Terminal ($7,500,000), and new or major improvements at Tenakee, Hoonah and Ketchikan ($3,200,000).

- The staff total of 20 includes a Naval Architect and five registered professional engineers. Beginning in FY 85 a full time Shore Maintenance Manager function was established to schedule and contract for shore maintenance as needed.

- The legislature authorized 7 additional positions for FY 86 which will allow this Division to target for an FY 86 capital construction output of $26,000,000. The primary emphasis will be in completing the Ketchikan Ship Repair Yard ($13,000,000), improvements to vessels M/V COLUMBIA (Bow Thruster), M/V BARTLETT and M/V MATANUSKA ($2,600,000), and new or improved terminal facilities at Wrangell, Metlakatla and Seward ($5,200,000). Maintenance of all Alaska Marine Highway Terminals is ongoing and estimated to be $200,000 per year.

ALASKA MARINE HIGHWAY SYSTEM
DIVISION OF MARINE OPERATIONS

Eugene H. Black, Director

Objectives of FY 85

- Full utilization of our capital assets, our ships, and shore facilities.
- Provide additional service the private sector could not offer. This deals with new Alaskan ports and frequency of service.
- Increase ship operating days and passenger boardings.
- Reduce overhaul costs
  a. Increasing productivity per labor hour
  b. Improved scheduling
  c. Shorter layup period
- Improve passenger service by upgrading facilities and expanding passenger food service options.
- Re-engine the M/V MATANUSKA.
- Upgrade safety equipment to state of the art on all Alaska Marine Highway System vessels.

The number of employees under Alaska Marine Highway System supervision

- Nine shoreside management positions to supervise 725 vessel positions.

Accomplishments

- The ships were better utilized with an increase in ships operating days.
- Service to Alaskan communities was expanded by scheduled trips to Hyder, Alaska. Service across the Gulf of Alaska was expanded and studies are being done to analyze this area.
- Overhaul costs were reduced by several changes in management practice.

a. Executed second year of a five (5) year service contract with main engine manufacturer for the maintenance of the main engines on the M/V COLUMBIA with an estimated annual cost savings of 300,000 dollars, which has resulted in improved operational reliability of the M/V COLUMBIA.

b. Better scheduling of layup personnel resulted in more productivity with smaller crew levels.

c. Less days were spent in layup status resulting in more use of Alaska Marine Highway System vessels.

- Extensive upgrading of Alaska Marine Highway System vessels occurred in FY 85. The major ones that affected Passenger Services are:

a. Reinstituted year-round table service for dinner meal on board Seattle run ships.

b. Installed Amtrak style recliners on M/V's LeCONTE, AURORA and COLUMBIA.

c. Installed toddler play area on M/V's TAKU and MALASPINA.

d. Major carpet upgrading on M/V's MALASPINA, LeCONTE and TAKU.

e. Remodel of Cocktail Lounge and Dining Room on the M/V MALASPINA.

f. Installed public showers on the M/V AURORA and M/V LeCONTE.

- The M/V MATANUSKA was re-engined. The life cycle cost savings justified this project. The fuel consumption comparisons are very favorable after the first four months of operations.

- Several safety related changes were made to bring Alaska Marine Highway System up to the state of the art.

a. Upgraded all radar systems in the fleet with state of the art capability.

b. Installed new extended skeg on the M/V COLUMBIA to improve her handling characteristics.

c. Conducted firefighting and CPR training programs for employees in Deck, Engine and Stewards Departments.

d. Continued upgrading the plumbing, electrical and ventilation systems aboard the ships.

e. Increased emphasis on the upgrading of all navigational equipment.

The change in direction from FY 84 to FY 85 was more a consolidation than a change. More efficient use of Alaska Marine Highway System Facilities, better scheduling of work and personnel, and expanded frequency of service.

FY 86 is a year where due to budgetary restraints, major cost cutting measures are being put in place. It is our intention to not retreat in regard to increasing our passenger boardings comparison. We are planning to accomplish more but with less. The proposed changes are:

a. By better scheduling, the M/V COLUMBIA will be layed up during the least profitable period. Even with the layup, passenger boardings should show a reasonable increase. The savings from this measure will result in a cost savings of approximately $431,952.16 due to her being in cold ship status void of crew.

b. The average time the ships will remain in maintenance/overhaul status will be cut, allowing additional time on the run to offset the M/V COLUMBIA layup.

c. Size of overhaul crew levels will be cut by 11%. Due to improved procedures and scheduling, the work will be completed in less days.

d. The food service during overhaul period will be replaced with meal per diem, which will result in a cost savings of $241,915.46.

e. There will be a change to two mainline ships calling on Seattle during the summer season, which will result in savings from less expensive supply costs and should increase revenues due to more passenger miles being logged.

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

POUCH Z
JUNEAU, ALASKA 99811
PHONE (907) 465-3900

OFFICE OF THE COMMISSIONER

February 28, 1985

Ms. Sally Smith
President
Southeast Conference
P. O. Box 20
Douglas, AK 99824

Dear President Smith:

This is in response to your recent letters to Deputy Commissioner Joe Camp and me regarding reactivation and expansion of the Marine Highway Task Force. The Task Force was appointed by Governor Sheffield, and its work ended with completion of the Task Force Report. I do not believe it would be beneficial to reactivate and expand the Task Force at this time.

I do, however, see some benefits from having an advisory group to work with the Alaska Marine Highway System. I believe such a mechanism currently exists within the Southeast Conference. I would like to suggest that your Transportation Committee or some other group from your organization assume such a role. I can see the need for regular meetings and suggest for your consideration, quarterly meetings to be scheduled by the Advisory Group at their convenience with the concurrence of the Deputy Commissioner of the Alaska Marine Highway.

Sincerely,

A. J. Kemp
Commissioner

cc: Joe Camp, Deputy Commissioner
Alaska Marine Highway System

SOUTHEAST CONFERENCE

P.O. Box 23 • Douglas, Ak. 99824

(907) 586-6846

February 5, 1985

The Honorable Bill Sheffield
Governor
State of Alaska
Pouch A
Juneau, AK 99811

Dear Governor Sheffield:

The Southeast Conference board of directors, comprised of Southeast district representatives, Southeast legislators, and Southeast community mayors, has reviewed the Marine Highway Task Force report to the State and is following the implementation of those recommendations we support.

The Southeast Conference board requests the Marine Highway Task Force be continued as an active board and be expanded to include a representative from each marine highway "user" community. This would ensure ongoing communication between the State administration and the people of Alaska serviced by the ferry system.

We shall appreciate your comments regarding this request which the board believes will achieve a balanced direction for the future of the marine highway system.

Respectfully,

Sally Smith

RE: Ferry Stystems in Washington State and British Columbia
Research Request 87-025

You requested general information regarding the ferry systems in Washington State and British Columbia. Information on fares, traffic, employee unions and financial structure is provided below.

Washington State Ferry System

The Washington State Ferry (WSF) system began operation in 1951. The system was purchased from individuals who had been operating ferries on the Puget Sound since the turn of the century. The state purchased 10 ferries, 20 terminals and miscellaneous supplies for $4.95 million. Today, the Marine Division of the Washington State Department of Transportation controls assets valued at over $308 million and operates 22 vessels which carry seven million vehicles and 17 million passengers each year.

All of the ferries are capable of carrying cars as well as passengers. The largest vessels in the system are two 440-foot "jumbo" ferries, each with a capacity of 206 autos and 2,000 passengers. The smallest ferry (150 feet) is capable of carrying 40 autos and 200 passengers. The total car-carrying capacity of all the ferries is 2,412. The ferries are not equipped with sleeping facilities, although food service is available on the majority of the vessels.

The system operates nine routes serving 20 terminal locations throughout Puget Sound. Routes are devoted to both commuting and recreational travel. The shortest route is 1.5 nautical miles (15 minutes) to the Tacoma urban area, and the longest route is 38 nautical miles (3-1/2 hours) to the San Juan Islands. Recreational travel accounts for 32 percent of all ferry trips. Seventy percent of all passengers are recreational travelers.

The British Columbia Ferry Corporation

The British Columbia Ferry (BCF) Corporation was created in 1960 by the provincial government. The system began after two private ferry companies operating in B.C. went on strike. During 1961, with purchase of the assets of one of the striking companies, the corporation operated two ships over one route and employed approximately 225 people. In 1985, the BCF was consolidated with the coastal fleet of the Provincial Division of the Ministry of Transportation and gained 14 vessels and ten routes. Today BCF operates 39 vessels over 25 routes and employs approximately 2,700 people. The system is a Crown Corporation, which means it is publicaly owned and pays no provincial or federal income taxes.

Of the 39 ships operated by the system, 38 have car carrying capabilities. The largest vessels are five 457-foot "jumbo" ferries that can each carry 360 venicles and 1,300 passengers. The smallest vessel is a 38-foot passenger-only ferry with a capacity of 40 people. Two vessels have sleeping facilities and approximately half offer food service.

The shortest route in the system is two nautical miles (18 minutes) and the longest is 274 nautical miles (15 hours). The busiest route is between Vancouver and Victoria--the provincial capital. All of the routes are day routes except for one, which becomes an overnight trip during the winter season. The corporation serves urban commuters, recreational travelers, and a great number of business travelers between the mainland and the capital. Summer is the busiest season; during the winter, traffic drops by approximately 50 percent.

Fares. Fares for the most heavily used route between Vancouver and Victoria are $19 for a car and driver and $4 for a passenger. Today's fares represent about a 200 percent increase for vehicles and a 100 percent increase for passengers over fares charged when the corporation began operation in 1960. Reservations are utilized for vehicles and passengers on one route and for vehicles on only two routes. Credit cards are accepted only on the routes which utilize reservations.

Traffic. Until 1982, the BCF had experienced a steady growth in traffic. Since that time, volume has decreased slightly each year. The system expects 1986 to set all time traffic records due the increase in tourism at the World's Exposition in Vancouver. According to the corporation, traffic is handled efficiently by the current vessels and there are no plans for fleet expansion.

Employees. Of the 2,700 employees, all are unionized except for the ship's captains. The British Columbia Ferry and Marine Workers Union represents the workers.

RE: Ferry Stystems in Washington State and British Columbia
Research Request 87-025

You requested general information regarding the ferry systems in Washington State and British Columbia. Information on fares, traffic, employee unions and financial structure is provided below.

Washington State Ferry System

The Washington State Ferry (WSF) system began operation in 1951. The system was purchased from individuals who had been operating ferries on the Puget Sound since the turn of the century. The state purchased 18 ferries, 20 terminals and miscellaneous supplies for $4.85 million. Today, the Marine Division of the Washington State Department of Transportation controls assets valued at over $308 million and operates 22 vessels which carry seven million vehicles and 17 million passengers each year.

All of the ferries are capable of carrying cars as well as passengers. The largest vessels in the system are two 440-foot "jumbo" ferries, each with a capacity of 206 autos and 2,000 passengers. The smallest ferry (150 feet) is capable of carrying 40 autos and 200 passengers. The total car-carrying capacity of all the ferries is 2,412. The ferries are not equipped with sleeping facilities, although food service is available on the majority of the vessels.

The system operates nine routes serving 20 terminal locations throughout Puget Sound. Routes are devoted to both commuting and recreational travel. The shortest route is 1.5 nautical miles (15 minutes) in the Tacoma urban area, and the longest route is 28 nautical miles (3 hours) in the San Juan Islands. Recreational travel accounts for 32 percent of all ferry trips. Seventy percent of all passengers are recreational travelers.

Fares. Fares range from $0.95 (passenger) and $3.40 (car and driver) for a 15-minute route to $5.50 (passenger) and $23.65 (car and driver) for a 3-1/2-hour route. Table 1 presents a history of cross sound auto and driver fares and passenger fares and the consumer price index during the last sixteen years. The table indicates that fares have increased at a pace comparable to the Seattle area consumer price index. The WSF does not utilize reservations, except for cars on the Anacortes, Washington-Sidney, B.C. route during the summer months only. The WSF does not accept credit cards for payment of fare.

Traffic. Table 2 shows that systemwide traffic grew steadily during the 1970s but declined in the early 1980s, when Washington experienced a severe economic downturn. Since 1982, total traffic volume has been gradually returning to the 1979 peak. Traffic has already exceeded previous highs on many routes. The system makes an average of 323 daily trips, carrying 47,000 passengers and 19,000 vehicles. The smallest route has 534 average daily passengers and 200 vehicles; the largest has 8,554 average daily passengers and 4,325 vehicles. The summer months are the busiest time: traffic drops by 67 percent during the winter.

During the past six years, WSF has acquired six new vessels. Due to reduced traffic and these new vessels, the system has been able to avoid increasing service hours. Total system vehicle traffic is projected to grow at an average annual rate of 0.4 percent during the next six years. Traffic on some routes is expected to decline, while other routes are expected to expand substantially. To accomodate the growth, the system plans to purchase four passenger-only vessels. These ferries will be utilized on runs that currently experience traffic overloads during certain service periods.

Employees. The WSF employs approximately 950 year-round employees, with 250 employees added during the summer months. All employees are unionized. The three unions representing WSF employees are: Captains, Mates, and Pilots Union; Inland Boatmen's Union; and Marine Engineers Beneficiaries Association.

Financial Structure. Fare revenues have covered approximately 70 percent of operating expenditures and 40 percent of operating and capital expenditures during the last three fiscal years. In addition to fares, the WSF system acquires revenue from taxes and a toll bridge. Table 3 is a flow chart depicting how the revenues from fares, car registration fees, gas and vehicle taxes, bond sales, and federal funds are channeled into different accounts to cover operating and maintenance, ferry improvement, construction, and debt service expenses. Table 4 is a history of operating expenses and revenue sources of the WSF since 1967. Table 5 presents anticipated revenues and expenditures in the 1985-1987 biennium.

The British Columbia Ferry Corporation

The British Columbia Ferry (BCF) Corporation was created in 1960 by the provincial government. The system began after two private ferry companies operating in B.C. went on strike. During 1961, with purchase of the assets of one of the striking companies, the corporation operated two ships over one route and employed approximately 225 people. In 1985, the BCF was consolidated with the coastal fleet of the Provincial Division of the Ministry of Transportation and gained 14 vessels and ten routes. Today BCF operates 39 vessels over 25 routes and employs approximately 2,700 people. The system is a Crown Corporation, which means it is publicaly owned and pays no provincial or federal income taxes.

Of the 39 ships operated by the system, 38 have car carrying capabilities. The largest vessels are five 457-foot "jumbo" ferries that can each carry 360 venicles and 1,500 passengers. The smallest vessel is a 33-foot passenger-only ferry with a capacity of 40 people. Two vessels have sleeping facilities and approximately half offer food service.

The shortest route in the system is two nautical miles (18 minutes) and the longest is 274 nautical miles (15 hours). The busiest route is between Vancouver and Victoria--the provincial capital. All of the routes are day routes except for one, which becomes an overnight trip during the winter season. The corporation serves urban commuters, recreational travelers, and a great number of business travelers between the mainland and the capital. Summer is the busiest season; during the winter, traffic drops by approximately 50 percent.

Fares. Fares for the most heavily used route between Vancouver and Victoria are $19 for a car and driver and $4 for a passenger. Today's fares represent about a 200 percent increase for vehicles and a 100 percent increase for passengers over fares charged when the corporation began operation in 1960. Reservations are utilized for vehicles and passengers on one route and for vehicles on only two routes. Credit cards are accepted only on the routes which utilize reservations.

Traffic. Until 1982, the BCF had experienced a steady growth in traffic. Since that time, volume has decreased slightly each year. The system expects 1986 to set all time traffic records due the increase in tourism at the World's Exposition in Vancouver. According to the corporation, traffic is handled efficiently by the current vessels and there are no plans for fleet expansion.

Employees. Of the 2,700 employees, all are unionized except for the ship's captains. The British Columbia Ferry and Marine Workers Union represents the workers.

Financial Structure. The BCF operates each year on a $40 million (Canadian) subsidy from the provincial government. Due to the large increase in traffic from Expo, the corporation hopes to show a profit this year.

* * * *

I hope you find this information useful. I am expecting detailed traffic and financial reports from the British Columbia Ferry Corporation and will contact you when I receive them. Please contact our office if you have any questions.

The Honourable Alex V. Fraser
Minister of Transportation & Highways:

1984-85 yielded appreciable reductions in the B.C. Ferry Corporation's operating deficit. This was achieved while still meeting the Corporation's mandate of offering the best possible service in the most efficient manner. While 1983-84 was effectively a year of stabilization and overall operational streamlining, this past fiscal year has been one of significant adjustment to the service to high loss areas. At the same time, the modest traffic growth experienced in 1983-84 over that of 1982-83 was once again reversed in 1984-85. The traffic results were well below expectations, with vehicles at 4,460,069 and passengers at 11,912,943. This represents a decline of .5% in vehicles and 3.9% in passengers over 1983-84.

In keeping with the British Columbia Government's instructions to pare costs in all possible areas, a major assessment review of high loss areas was completed. The review, which touched on all aspects of service to the North Coast, Sunshine Coast and Gulf Islands, took a three-pronged approach: 1) to reduce operating costs, particularly during the low revenue off season period by more closely matching schedules to traffic demand and patterns; 2) to provide residents of communities dependent upon the ferries as a transportation link with a service that would meet their day to day requirements; and, 3) to maximize the Corporation's role in the province's vital tourist industry.

I am pleased to report that the success of the Ferry Corporation's ongoing cost reducing program is due in part to the spirit of cooperation that prevailed between the communities concerned and the Corporation in implementing cost reducing measures that have already yielded impressive results. For example, service to the North Coast was reduced between Prince Rupert and Port Hardy during traditionally low traffic months. However, the projected savings allowed the Corporation to carry out ship renovations necessary to implement a day boat operation during the summer tourist season. The summer of 1985 will see the launching of this new day cruise service between Prince Rupert and Port Hardy - a service that will substantially increase the tourist activity to northern communities.

Efficiency measures undertaken on the Sunshine Coast also involved a reduction in the number of sailings. However, a ramp at Langdale terminal was doubledecked with the result that the route can now be fully operated with a doubledecked ship. This has effectively increased the lift-off capacity while at the same time allowing the Corporation to operate the service in a more cost efficient manner.

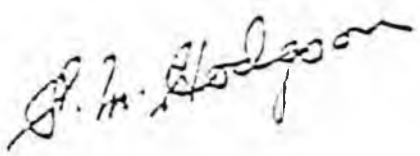
While the emphasis this past year was directed to cutting costs on specific routes, overall savings were achieved in all facets of the operation. Labour costs, which account for the major part of the operating budget, were substantially reduced by a general streamlining of the establishment in line with the provisions of the collective agreement.

As mentioned, the anticipated turnaround in traffic levels did not materialize during 1984-85. Indeed, while in 1983-84 a slight increase in vehicles and passengers was experienced, this past year has seen a decline of 22,638 vehicles and 484,962 passengers. Nevertheless, despite the general decline in traffic, the month of August set an all-time record for passengers and vehicles. Also, a hopeful indication that recovery has begun is the performance of commercial vehicle traffic. For all routes, commercial traffic was up 3% over 1983-84 and 6% over 1982-83. For the last quarter of 1984-85, commercial traffic on the two Vancouver Island routes was up 8.8%. In the past, commercial traffic has often been a precursor or leading indicator of overall traffic trends.

With this in mind plans are underway to meet the increased demand during Expo '86. The fleet's expansion since 1980 by way of lifting five major vessels, plus the ships presently laid up, has put the Corporation in an excellent position to meet projected vehicle lift-off demands. In addition, bus passenger pick up and drop off zones are being revamped at the major terminals to make it a more attractive and convenient means of travel.

British Columbia's ferry fleet plays an important role in preserving the coastal residents' way of life by offering a vital transportation link. At the same time the fleet itself is seen by millions of tourists as a major attraction. The B.C. Ferry Corporation's employees, management and board of directors take pride in meeting the many and varied needs of their travelling public.

On behalf of the Board,



Stuart M. Hodgson
Chairman

The Corporation has now experienced three straight recessionary years with little or no growth in most categories of traffic. The notable exception to this pattern is the 3% increase in commercial vehicles – a hopeful sign toward economic recovery in British Columbia.

In spite of soft traffic patterns, the future looks promising. In the face of adversity over the past three years, costs have actually been reduced through careful planning of ship and crew schedules. It is encouraging to note that these and other continuing management efficiencies have resulted in a further 8% reduction of operating expenses while net revenue increased 5% in spite of declines in traffic. The increase in revenue was in part, a reflection of the very modest increase in fares. Vehicle fares increased by approximately 5% in February of 1985.

The Corporation is now leaner, more efficient and well positioned to take advantage of the anticipated return to healthy traffic growth expected over the next two years.

Good progress was made this year in a continuing effort to improve overall efficiency of the fleet through the application of a more precise match between capacity and traffic. Input from local residents has become a regular feature of the planning process. Community meetings were held on the Sunshine Coast, the North Coast and the Gulf Islands to discuss proposed schedule changes.

Although service was cut back on some routes, the number of sailings for the entire system increased by 3% in 1984/85. There was a total of 70,313 one-way sailings.

Sunshine Coast service and efficiency were improved with the introduction of the converted "Queen of Alberni" into operation on the Langdale-Horseshoe Bay route in conjunction with upgraded terminal facilities at Langdale.

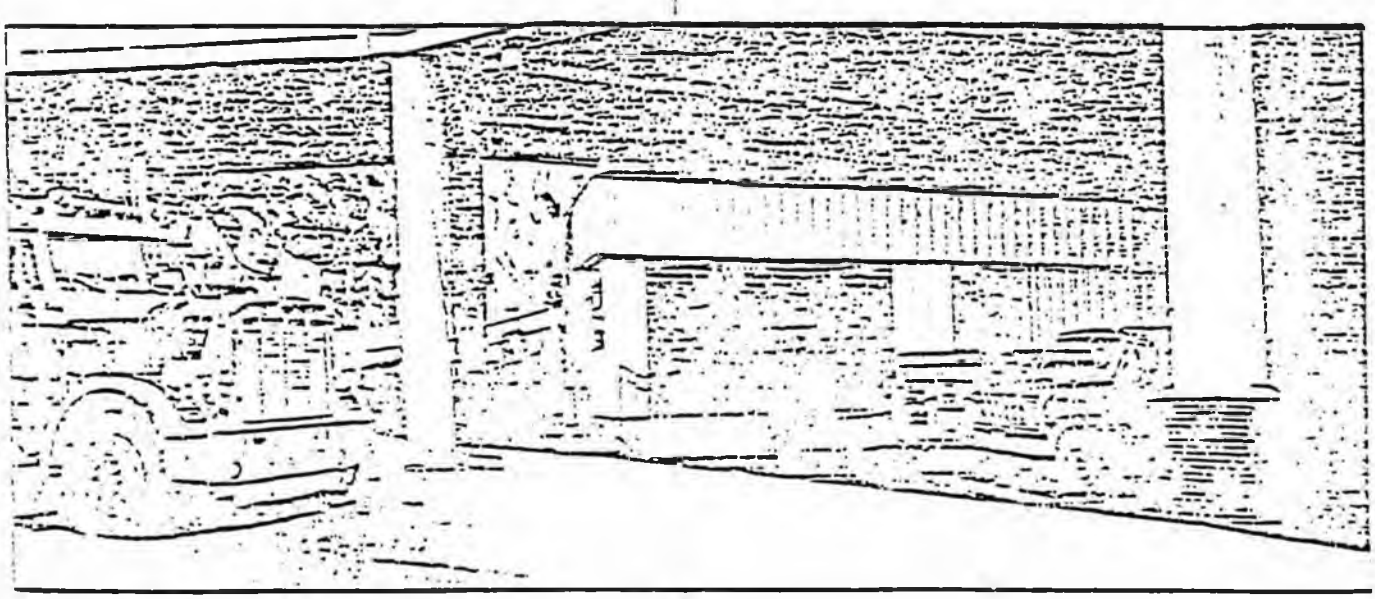
On the North Coast substantial cuts were made in winter service, with the elimination of the Tsawwassen leg of the Prince Rupert-Port Hardy route from the winter operation. A single ship made one trip per week to Port Hardy and two round trips to Skidegate.

In addition, the chartered Prince Rupert-Masset tug and barge service for drop trailers was terminated March 31, 1985. Commercial drop trailers will be carried on the regular ferry route from Prince Rupert to Skidegate. During 1984/85 it was decided that the summer service between Prince Rupert and Port Hardy would be a daylight operation commencing the summer of 1985.

The most significant improvements in efficiency have resulted from better scheduling of crews. Overtime costs have been substantially reduced. A policy of flexible vessel licences has enabled the Corporation to vary the size of crews throughout the day according to the requirements of traffic.

One of the new management tools introduced in 1984/85 was an Executive Network of microcomputers.

The Executive Network provides senior management with traffic statistics, revenue information, spreadsheet applications and forecasting models. Senior managers are using the system to monitor current traffic and demands on schedules. Historical data can be viewed in order to identify trends. By combining



Passenger waiting room, Horseshoe Bay

...ne features with a forecasting model, it is possible to ...ly predict capacity utilizations, licence requirements and probable overloads. By using the spreadsheet application, senior managers can analyze various scenarios with regard to tariff and revenue items. The system, therefore, is a powerful tool that can aid senior management in both short term and long term planning.

Engineering

The Corporation's major construction project this year was the refitting of the "Queen of Alberni." The contract was placed February 27, 1984 and 105 days later, on June 11, 1984, the ship was back in service with a new upper car deck doubling its original vehicle capacity.

Coinciding with this project was a major upgrading of facilities at Langdale Terminal. The vehicle loading ramps were double-decked in order to permit simultaneous loading of both vehicle decks. New offices and waiting rooms were constructed and the holding compound layout was redesigned.

Modifications were commenced on the "Queen of the North" to suit the new "Day Cruise" service. Because of the cancellation of contracted tug and barge service to the Queen Charlotte Islands, both the "Queen of the North" and "Queen of Prince Rupert" were outfitted to carry refrigerated trucks by installation of new car deck exhaust systems to enable truck trailing units to operate during the crossing of Hecate Strait. The holding compound at Skidegate Terminal was increased in size to accommodate drop trailer traffic.

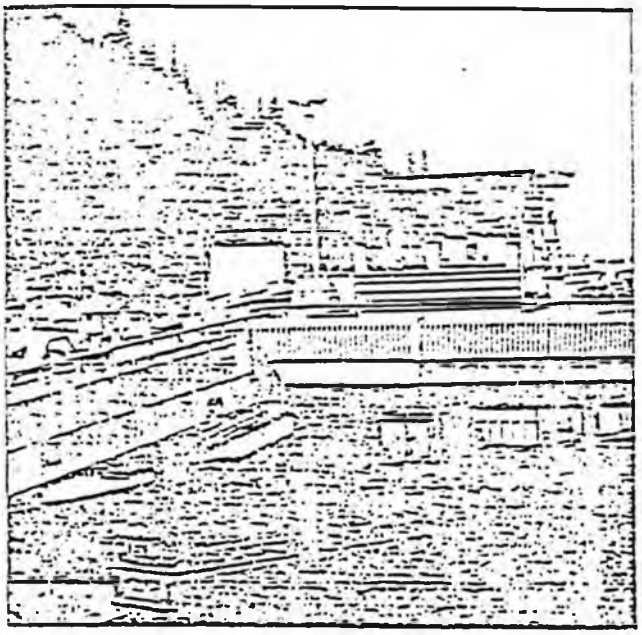
Improvements in facilities at major terminals have continued.

At Swartz Bay a new passenger pick-up facility was completed adjacent to the docks, thus shortening the walking distance for disembarking foot passengers and alleviating congestion at the departure ticketing area. New toll booths were built in order to improve the flow of traffic and expand the holding compound. Planning is underway at Swartz Bay for double-laning the upper vehicle ramp at Number 1 Berth; for expansion of the refrigerated and dry stores area; and for construction of a new bus passenger loading facility which will include six bus bays and a new passenger waiting room.

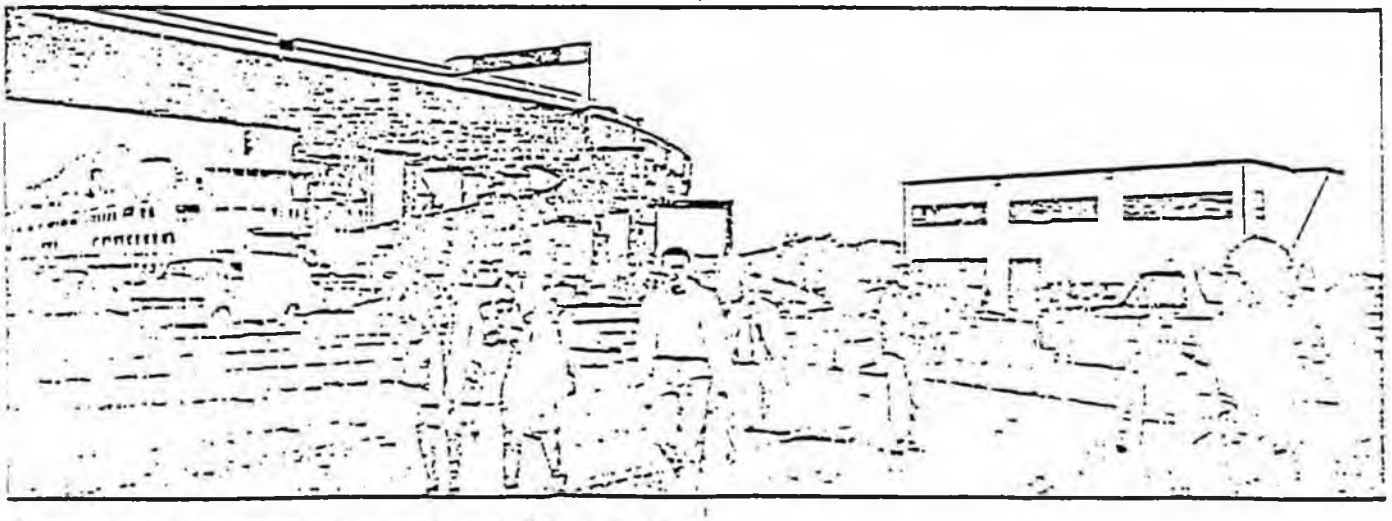
At Tsawwassen the upper vehicle ramp at Number 2 Berth has been widened to two lanes, thus speeding the loading and unloading process, and the cafeteria was expanded to provide additional seating.

At Horseshoe Bay the upper vehicle holding area was extended and a new passenger waiting room and control tower were built.

After a period of extensive testing during 1983-84, fuel metres have been fitted to all major vessels. The fuel metres, together with better ship scheduling, has resulted in total fuel consumption in 1984/85 of 76,256,000 litres, a 3% reduction from the previous year.



Control tower, Horseshoe Bay



Overhead ramp, passenger waiting room, and office, Langdale

New fleet colours are appearing on the vessels as they go into refit for regular maintenance. Approximately half the vessels have now been repainted. The EXPO 86 logo is being painted on funnels in conjunction with the repainting program.

Catering

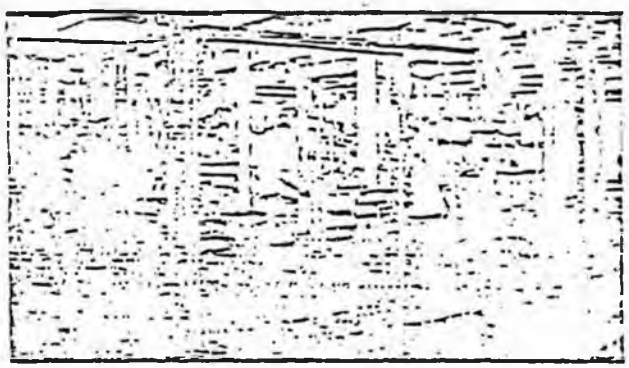
The past fiscal year was a period of consolidation for the Catering and Passenger Services area. Total revenue declined as a result of lower passenger traffic, smaller average expenditure per passenger and the closing of marginal outlets. Although within budget, the Gross Profit percentage was slightly lower than the previous year. Menu price increases were kept at a minimum in response to the public's resistance to high priced menu items.

General operating expenses were reduced substantially with the result that the net operating loss was reduced from previous years in spite of declining revenue.

Reductions in Route #10 (Port Hardy-Prince Rupert) operations have produced substantial drops in both liquor and store.com revenue; however, the lost revenue was more than offset by reduced expenses. Anticipated sales increases on the new day run concept should more than replace these lost marginal sales with very productive revenue dollars.

Ongoing emphasis on newsstand development has produced an increase in both sales and newsstand gross profit in spite of limited passenger traffic. In support of this trend, the Vancouver Class vessels will be featuring new expanded gift shops with three vessels completed prior to the summer of 1985.

The new Tsawwassen test kitchen and Quality Control Supervisor continue to produce basic improvements in food quality. Although gradual, these improvements have proven to be lasting and consistant throughout the fleet. Revised food purchasing procedures have also been effective in improving quality consistance and value.

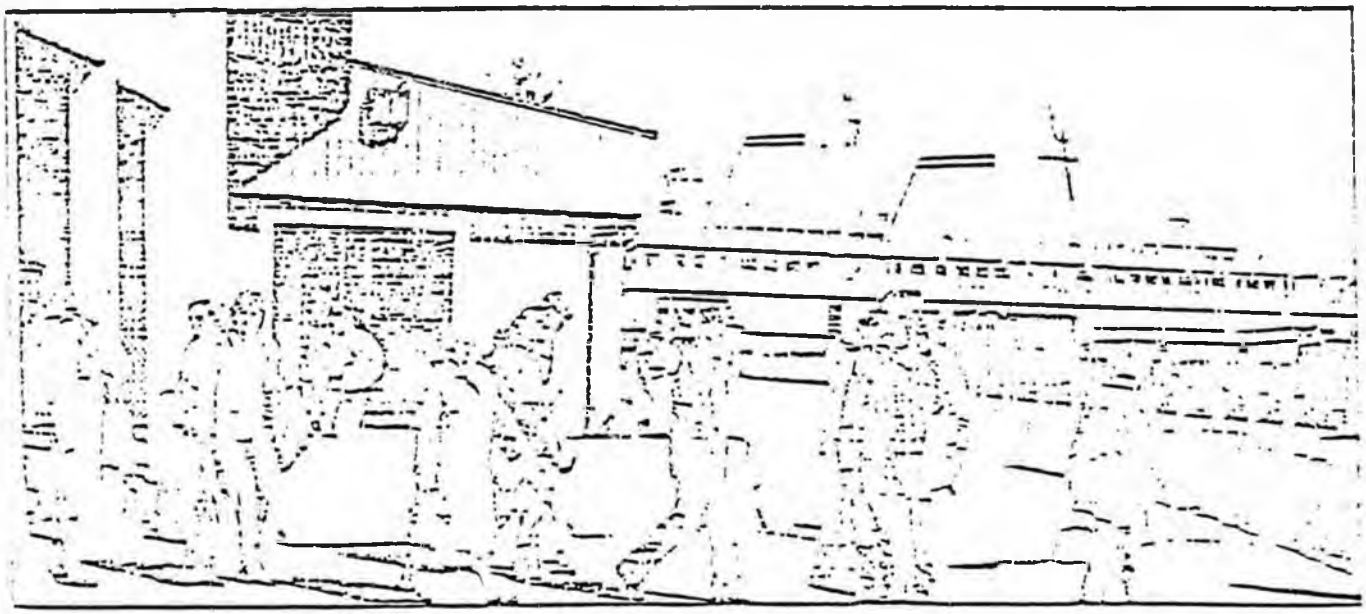


Expanded newsstand/giftshop

Communications

B.C. Ferries has continued to expand its role in the promotion of tourism, in recognition of the significance of this growing industry to British Columbia and the Corporation as a major source of revenue. A major activity this winter has been the promotion of the Day Cruise, which is to be introduced on the Northern route to Prince Rupert in the summer of 1985.

The Corporation has also expanded its activities in major travel shows in key market areas of the U.S. and Canada, working in close cooperation with Tourism B.C. and the tourism regions of the province. The past year also featured more involvement with local tourism communities in areas served by the Corporation.



Foot passenger arrivals, Swartz Bay

mputerized reservations for the Gulf Islands and North st which were completed in 1983 have been streamlined. now offer an even more efficient service to travel agents and the general public. This process will continue as we prepare well ahead for the anticipated volume of enquiries that will be generated by Expo 86.

Labour Relations

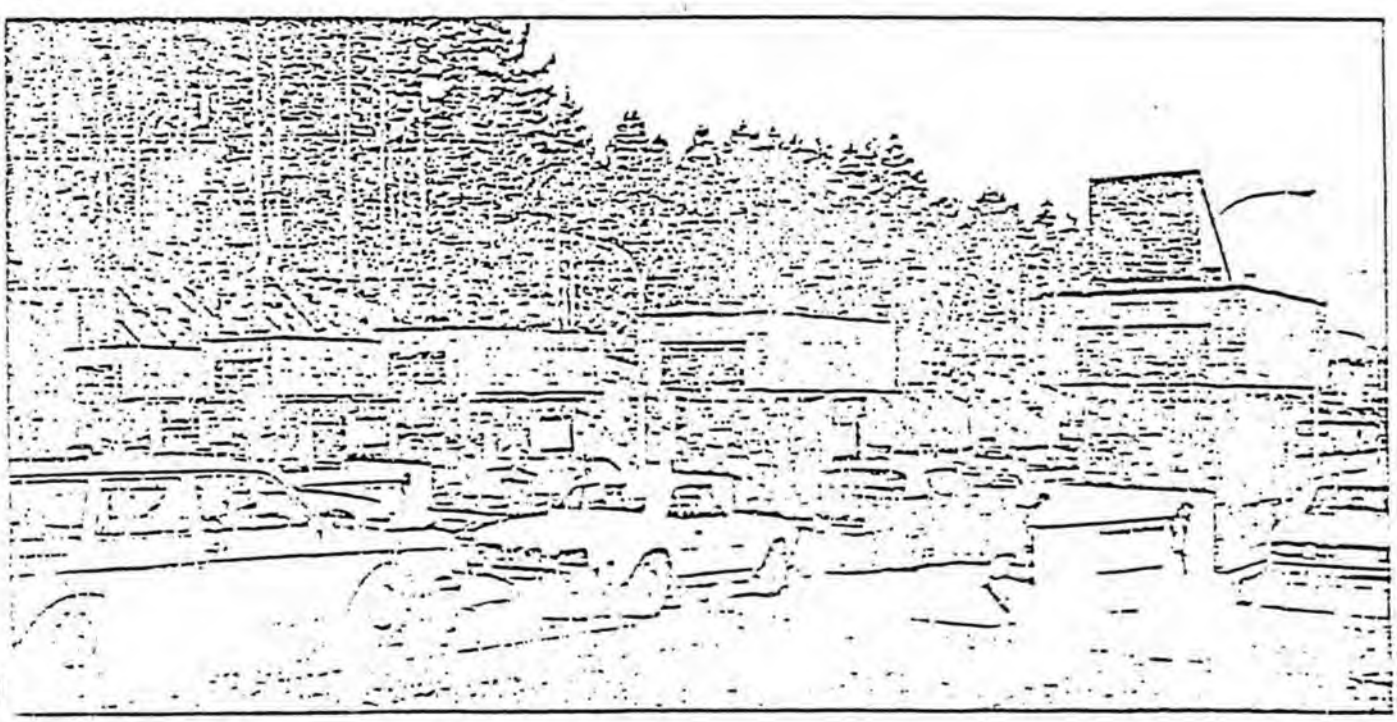
The main Labour Relations activity during 1984 was the administration of the collective agreement that was concluded in 1983. This included developing a layoff and recall procedure with the Union which allowed the Corporation to downsize its work force.

A number of grievances arose as a result of the new contract language; however, the parties were able to resolve these differences of opinion in accordance with procedures established under the collective agreement. This last fiscal year saw no time loss due to picket action of any kind, including third-party picketing.

Personnel

The greater flexibility in manning and improvements in scheduling afforded by the Agreement concluded on October 30, 1983, impacted most significantly on the personnel function in 1984. A new bargaining unit establishment, reflecting the orporation's ongoing commitment to reduce overall wage osts by means of the rationalization of the Corporation's an resource requirement to a level commensurate with its operational requirements, was accepted and approved. At the same time the Corporation's commitment to reduce its outstanding banked overtime liability continued with positive results; careful manpower planning reduced the total banked overtime by 31%.

The new bargaining unit establishment of 1951 positions resulted in a reduction of 221 positions effective October 10, 1984. Where the reduction impacted on an employee it was effected in consultation with that employee, his Union representative and his Union executive. As a result of the extensive preparatory work completed, and despite the inevitable rippling effect of "bumping," the overall reduction in the number of employees was brought about with a minimum of disruption of personal inconvenience. Of those employees who were laid off and who elected to return to work with the Corporation when work is available, and after allowing for attrition of present regular employees through retirement, death, disabilities, etc. it is considered that the vast majority will return to work as full time regular employees within the next 18 months. In the interim, they will be offered every opportunity to work for the Corporation throughout the busy summer months or any other time that their services can be used.



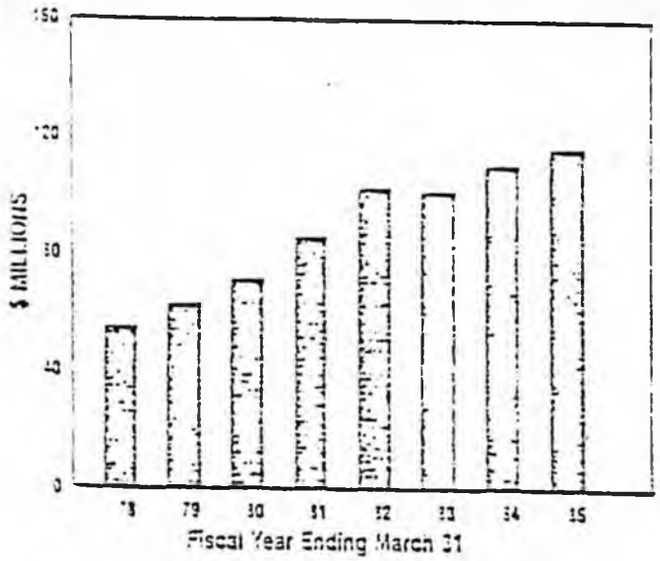
A.L. Collier
President and
Chief Executive Officer

Vehicle toll booths, Swartz Bay

NET OPERATING REVENUE + 5%

Despite the lack of significant traffic growth in recent years, revenues have been growing as a result of regular, modest, annual fare increases.

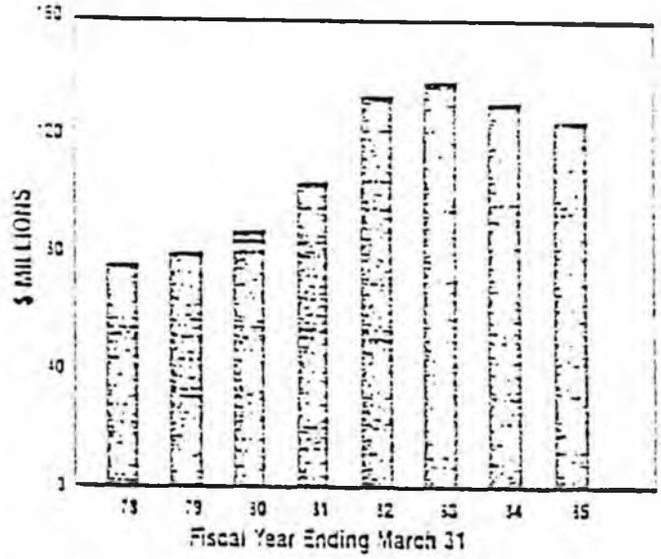
Net operating revenue has grown at an average rate of 7.7% per year over the past five years.



OPERATING EXPENSES – 5%

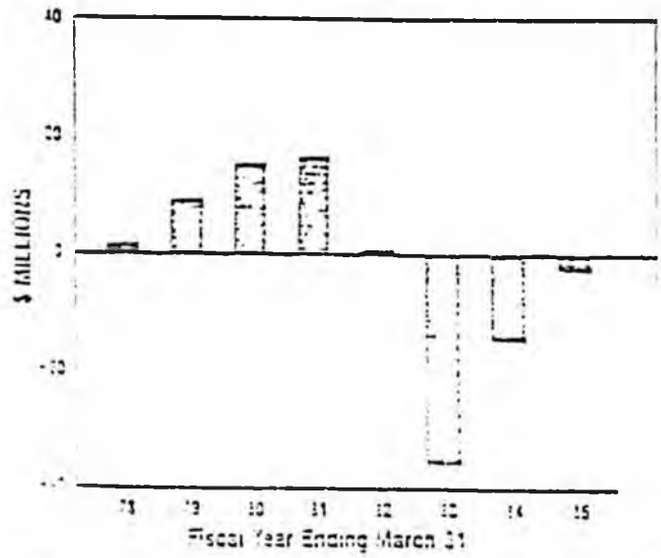
After a period of sharply rising costs in the late 70's and early 80's, operating expenses have been brought under control over the past three years.

This restraint was essential due to lack of traffic growth and a major reduction in the provincial government subsidy.



INCOME/LOSS AFTER SUBSIDY & DEPRECIATION

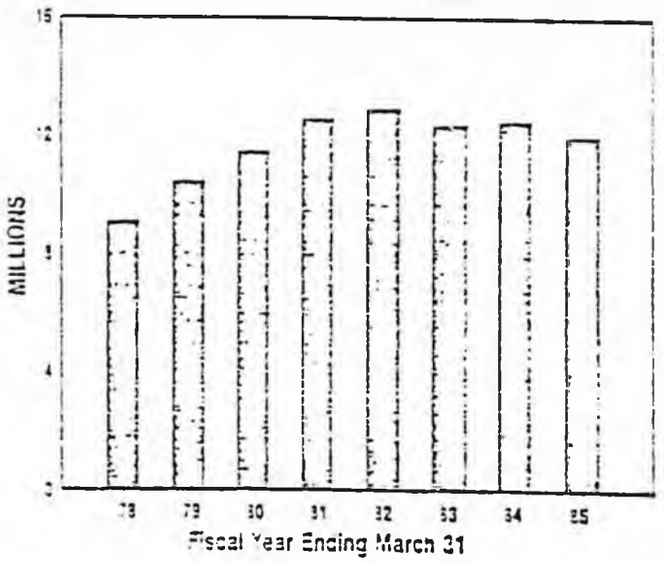
Despite the lack of traffic growth there has been a strong financial recovery over the past three years as a result of operating cost restraint and modest fare increases.



TOTAL PASSENGERS – 4%

After a small increase in 1983/84, passenger traffic has fallen again in 1984/85.

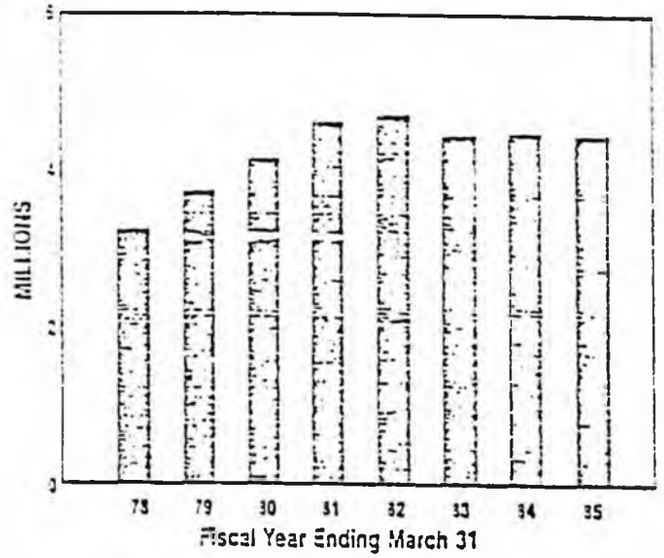
Over the past 24 years, 185 million passengers have been carried. The 200 millionth passenger is expected during the summer of 1986.



TOTAL VEHICLES – 0.5%

Total vehicle traffic has remained virtually unchanged over the past three years.

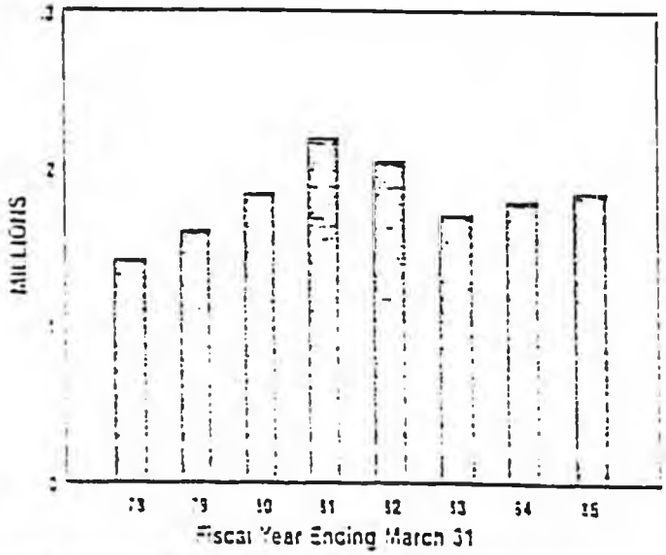
Over 87 million vehicles have been carried since 1960.



COMMERCIAL VEHICLES + 3%

Commercial vehicles have shown a steady increase over the past two years after suffering a sharp decline in the early 1980's.

In the past, commercial traffic has usually been a precursor or leading indicator of changes in other traffic categories.



THORNE RIDDELL
Chartered Accountants

AUDITORS' REPORT

To the Lieutenant-Governor in Council
Province of British Columbia

We have examined the balance sheet of British Columbia Ferry Corporation as at March 31, 1985 and the statements of income, deficit and changes in financial position for the year then ended. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests and other procedures as we considered necessary in the circumstances.

In our opinion, these financial statements present fairly the financial position of the Corporation as at March 31, 1985 and the results of its operations and the changes in its financial position for the year then ended in accordance with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

Thorne Riddell

Summary of Accounting Policies

YEAR ENDED MARCH 31, 1985

In accordance with Section 8(7) of the *Ferry Corporation Act* the financial statements of the Corporation are prepared in accordance with generally accepted accounting principles. Significant accounting policies followed in the preparation of these financial statements are:

Inventories –

Inventories are valued at the lower of cost and current replacement cost.

Long-Term Disability –

Amounts paid to the Superannuation Branch of the Public Service Commission under the Long-Term Disability Plan are accounted for by the Corporation on the basis of accruing in the financial statements that portion estimated to be payable to employees until retirement for individual disability with the balance of the amounts paid being included in prepaid expenses.

Fixed Assets –

Acquired from the Province of British Columbia effective January 1, 1977:

(a) Ships

Ships, which comprise part of the total assets acquired from the Province effective January 1, 1977 by Order-In-Council dated December 16, 1975 and transferred at an assigned value of $1, have been revalued by the Corporation and are reflected in the accompanying financial statements at their estimated depreciated replacement value as at January 1, 1977 on the basis of construction records for labour and materials valued at 1977 cost exclusive of any federal ship building subsidies which may have been available during the extended period of years during which the individual ships were built and during which such subsidies fluctuated substantially. The estimated depreciated replacement value of the ships at January 1, 1977 is not intended to reflect fair market value of the fleet nor can it be considered to approximate fair market value because of the specialized nature and limited saleability of the ships themselves.

In addition, three ships presently under charter by the Province until 1994 are subchartered to the Corporation for the same period at an annual cost of $1 each, with the Corporation being responsible for all operating, repair, and maintenance costs. Under the terms of the subcharter agreement with the Province, the Corporation may in 1994 request that the Province exercise its option to purchase these ships at its own expense in accordance with the terms of its charter agreement. In the event that such option is exercised, clear title to the ships will be transferred to the Corporation. As a result of these transactions and agreements, these ships are reflected as capital assets of the Corporation in the accompanying financial statements and are similarly stated at their estimated depreciated replacement value as at January 1, 1977.

(b) Berths, buildings and equipment

Berths, buildings and equipment also comprise part of the total assets acquired from the Province effective January 1, 1977 by Order-In-Council dated December 16, 1976 and transferred at an assigned value of $1.

These assets are reflected in the accompanying financial statements at their estimated depreciated replacement value as at January 1, 1977 based upon an appraisal made by Universal Appraisal Company Limited as at that date.

Additions and disposals subsequent to January 1, 1977:

The costs of major replacements, additions, extensions and improvements are capitalized in the fixed asset accounts. The costs of maintenance, repairs, minor renewals or replacements are charged against income. On retirement or disposal of fixed assets, the costs thereof and the related accumulated depreciation are eliminated from the accounts and any gains or losses are reflected in the statement of income.

On October 1, 1983 the remaining buildings and equipment at Deas Dock facility, not acquired from the Province on January 1, 1977 were transferred at an assigned value of $1. These assets are reflected in the accompanying financial statements at their estimated depreciated replacement value as at October 1, 1983 based upon an appraisal made by Universal Appraisal Company Limited as at that date.

Depreciation –

Fixed assets are depreciated on the straight line method based upon the following useful lives:

Ships	25 years
Berths	5 - 10 years
Buildings and equipment	4 - 25 years

Amortization of Promissory Note Discount and Issue Costs –

Promissory note discount is amortized on a compound interest method over the term of the debt. Issue costs are amortized on a straight-line basis over the term of the debt.

Provision for Annual Refit Costs –

The Corporation provides for ship refit expense by charging against income the anticipated costs over the period between refits.

Notes to Financial Statements

YEAR ENDED MARCH 31, 1985

1. CASH AND SHORT-TERM INVESTMENTS

Funds, other than those required for immediate settlement of liabilities, are invested in short-term commercial securities authorized pursuant to the terms and provisions of the Financial Administration Act of British Columbia. The investments are arranged through the Ministry of Finance of the Province.

2. ACCOUNTS RECEIVABLE

Provision has been made for the uncollectibility of a 1980 accounts receivable of $1,950,619 due from the British Columbia Steamship Company (1975) Ltd. for the lease and modifications to the Lessee's specifications of the M.V. "Queen of Prince Rupert".

3. INVENTORIES

	1985	1984
	(expressed in thousands)	
Spare components, parts and supplies	$ 6,997	$ 6,392
Fuel and lubricants	1,153	1,930
Goods for resale and catering supplies	413	440
	$ 8,563	$ 8,762

4. RESERVED FUNDS

The Corporation has segregated assets that are required for specific purposes or as required by long-term debt obligations.

6. LONG-TERM DEBT

	1985	1984
	(expressed in thousands)	
Long-term debt issued by the Corporation		
9.85% Promissory notes (effective rate of 15.73%), are repayable in five equal annual instalments of $5.7 million commencing March 5, 1988	$ 28,500	$ 28,500
Less unamortized discount and issue costs	6,473	7,332
	22,027	21,168
12.38% Promissory note (effective rate of 12.44%) due September 9, 2003 is repayable by annual sinking fund payments of $322,492 commencing September 9, 1984	14,758	14,758
Less unamortized issue costs	17	18
	14,741	14,740
	36,768	35,908
Sinking fund payment required within one year	322	322
	$ 36,446	$ 35,586

Principal and sinking fund payments due in each of the next five years:

1986	1987	1988	1989	1990
$322,492	$322,492	$6,322,492	$6,322,492	$6,322,492

The Province of British Columbia unconditionally guarantees the payment of principal and interest on the Promissory notes.

7. ACCRUED SICK LEAVE LIABILITY

On September 1, 1979 the Corporation introduced short-term illness and injury and long-term disability plans and as of that date all employees ceased accruing sick leave credits. Under the collective agreement with the employees, in the event of illness, the accumulated sick time may be withdrawn prior to retirement and on retirement any balance remaining is payable in cash at 50% of accredited time. The liability as at March 31, 1985 based upon a recent actuarial evaluation by Reed Stenhouse Associates Limited established the present lump sum value of cash payouts on retirement to all employees at $4,172,000 which, with interest will accumulate an amount required to meet those obligations. The recorded liability as actuarially evaluated in 1982 with accrued interest net of withdrawals to 1985 exceeded the current evaluation by $1,569,391. One third of the excess is reflected in current operations and the balance will be reflected in operations of the next two fiscal periods. Funds reserved for liquidation of this liability are invested in short-term commercial security (Note 1).

8. CONTRIBUTED SURPLUS

	1985	1984
	(expressed in thousands)	
Excess of estimated depreciated replacement value over assigned value of $1 of assets acquired from the Province of British Columbia		
- Ships, berths, buildings and equipment effective January 1, 1977	$ 249,674	$ 249,674
- Buildings and equipment effective October 1, 1983	727	727
	$ 250,401	$ 250,401

9. OTHER INCOME

	1985	1984
	(expressed in thousands)	
Parking and ancilliary traffic revenue	$ 947	$ 837
Interest earned on funds in bank and short-term investments	1,559	1,112
	$ 2,506	$ 1,949

10. PROVINCIAL SUBSIDY AND BENEFITS

The Corporation receives a subsidy from the Province of British Columbia which is determined annually.

Included in fixed assets as "ships under capital lease" are three ships leased from the Province at an annual cost of $1 each. The annual cost of these charters to the Province is $4,819,300. In addition the Corporation utilizes Crown land for terminals and highway access without rental or property taxes. The value of these benefits is indeterminable. The Corporation, as an agent of the Crown, is not liable to taxation, including taxation on improvements, except insofar as the Crown is liable.

The Corporation utilizes Ministries and Agencies of the Provincial Government for negotiation and purchase of fuel, materials, and communications. The aggregate of these transactions is $39.3 million (1984 - $45.3 million).

11. INTEREST EXPENSE

	1985	1984
	(expressed in thousands)	
Interest expense, amortization of promissory note discount and amortization of debt issue cost on:		
- long term debt	$ 5,171	$ 4,292
- short term borrowings	6	1,906
	$ 5,177	$ 6,198

12. CASH FROM OPERATIONS

	1985	1984
	(expressed in thousands)	
Loss for the year after depreciation	$(2,312)	$(14,397)
Items not involving cash		
Depreciation	31,364	30,886
Amortization of promissory note discount and issue costs	360	741
Loss on retirement of fixed assets	—	248
Increase (decrease) in accrued sick leave liability	(528)	(184)
Cash generated from continuing operations	28,886	16,742
Cash generated from (used for) operating working capital		
Accounts receivable	(295)	104
Inventories	396	269
Prepayments and deposits	(288)	1,542
Accounts payable and accrued liabilities	(1,196)	(1,349)
Deferred revenue	(130)	(130)
Cash generated from operations	$ 28,365	$ 17,198

13. COMMITMENTS

The Corporation is contractually committed to modify the passenger areas on the M.V. "Queen of the North" and to complete terminal compound improvements at Skidegate and Departure Bay. The total estimated cost of these capital projects is $0.9 million and as at March 31, 1985 the estimated remaining cost to complete these commitments is $0.4 million.

Not included in the accounts is a lease commitment of $5.4 million for the M.V. "Quinsam" which is fully recoverable through a non-cancellable sub-lease with the Ministry of Transportation and Highways for British Columbia.

14. COMPARATIVE FIGURES

Certain comparative figures for the previous year have been reclassified to conform with the March 31, 1985 financial statement presentation.

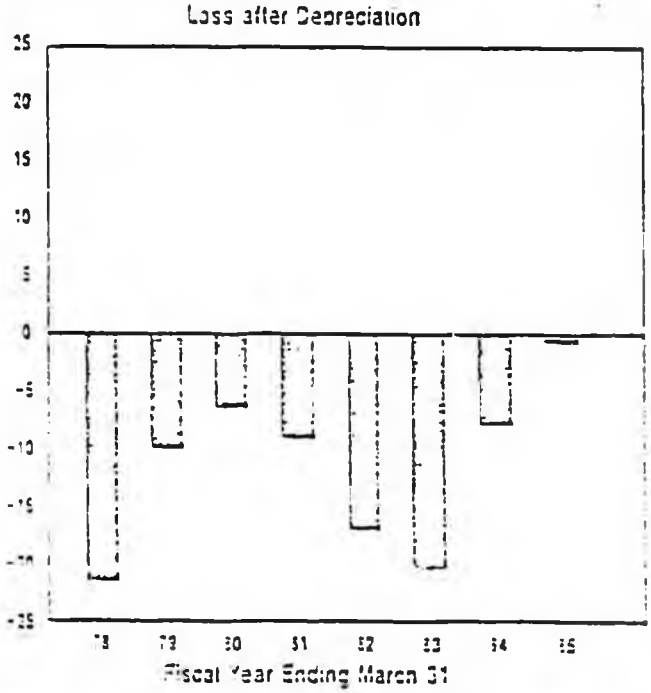
VANCOUVER ISLAND

The two Mainland-Vancouver Island routes are among the busiest ferry routes in the world, carrying 7.8 million passengers and 2.8 million vehicles in 1984/85.

A concentrated effort at improving cost efficiency over the past 3 years has resulted in a tremendous reduction in the loss.

For the first time this year the Vancouver Island routes are very close to a break-even operation.

VANCOUVER ISLAND
Loss after Depreciation

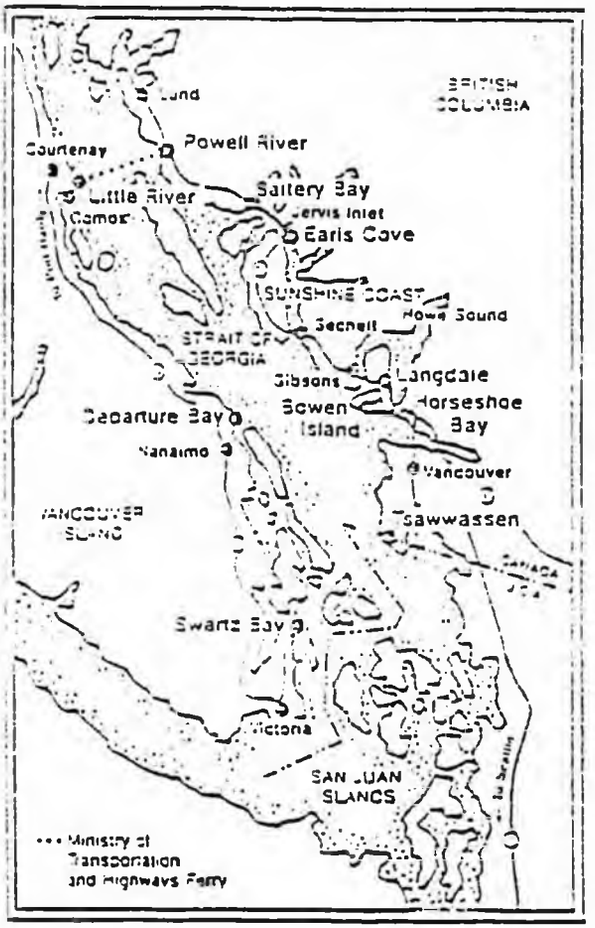


SUNSHINE COAST

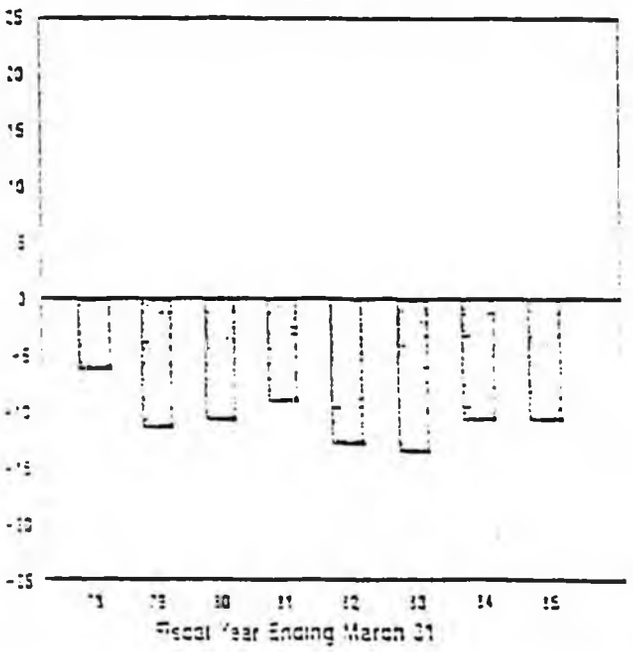
The Sunshine Coast includes four routes:
Horseshoe Bay - Langdale
Horseshoe Bay - Bowen Island
Earls Cove - Saltery Bay
and the passenger-only service from Langdale-Gambier Island-Keates Island.

These routes carried 2.6 million passengers and 1 million vehicles in 1984/85. Although traffic has declined in each of the past three years, there has been an improvement in the financial performance.

The loss in 1984/85 was $11 million, virtually unchanged from the previous fiscal year.



SUNSHINE COAST
Loss after Depreciation

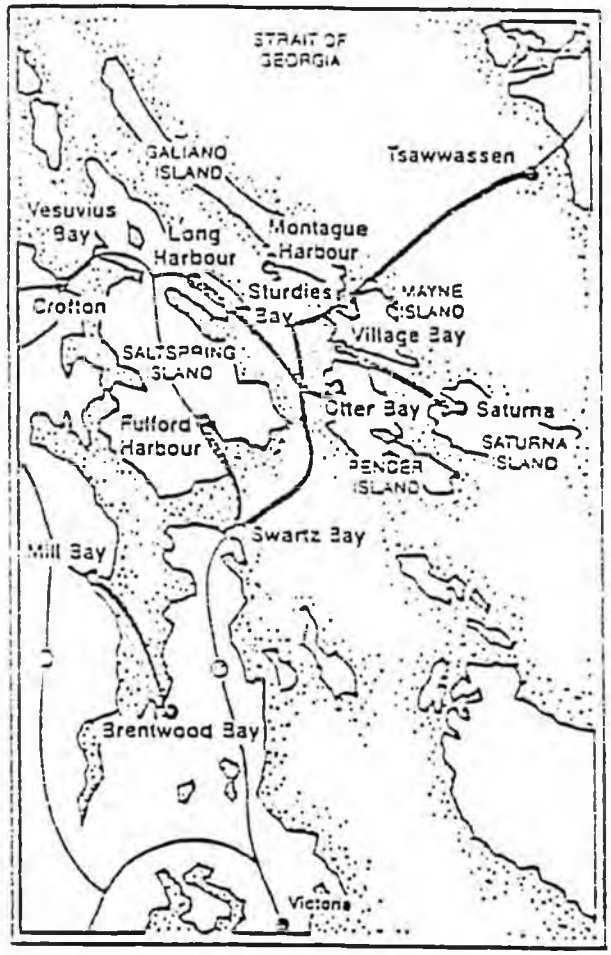


GULF ISLANDS

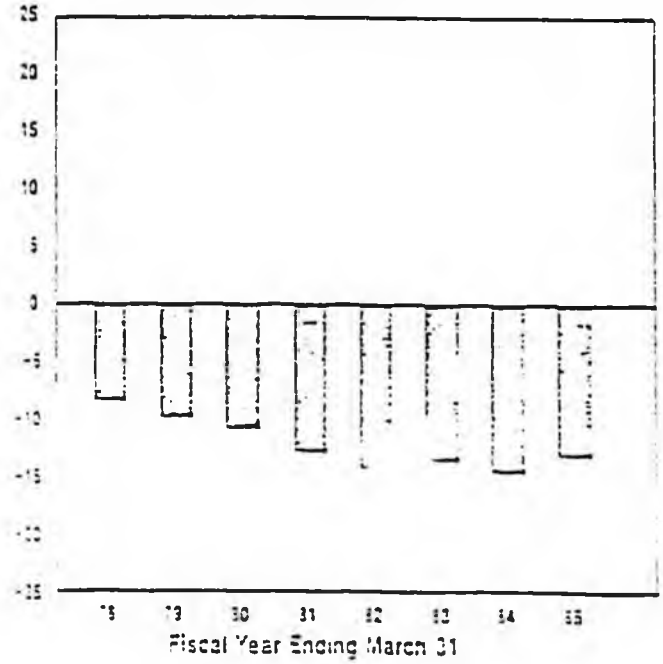
The Gulf Islands vessels service the islands of Salt Spring, Pender, Galiano, Mayne and Saturna. The region also includes the Brentwood-Mill Bay route.

In 1984/85 these routes carried 1.5 million passengers and 623,000 vehicles.

The operating loss in 1984/85 was $13 million, which is a 9% reduction from the previous year.



GULF ISLANDS
Loss after Depreciation



Fiscal Year Ending March 31

NORTH COAST

The North Coast services include:
Prince Rupert - Port Hardy
Prince Rupert - Skidegate.

In addition the Corporation has contract services for passenger routes from Prince Rupert to Port Simpson and Kincolith.

Until March 31, 1985 there was also a contract tug-and-barge service between Prince Rupert and Masset.

For the three years previous to 1984/85 the loss on these routes averaged about $16 million per year. With the elimination of Tsawwassen-Port Hardy service and other cost efficiencies the operating loss has been reduced by 19% to $11 million.

Swartz Bay	450 "
Tsawwassen	1250 "

Catering

Passengers have the convenience of an enlarged cafeteria system on the converted ferries. These cafeterias have seating for up to 224 people at one time. There is also a snack bar on the four vessels operating between Tsawwassen and Swartz Bay. These ships also provide buffet service during the peak summer schedule. Catering facilities are also on most other vessels servicing the major routes and at major terminals except Horseshoe Bay.

. . . . /3

Employees

There are approximately 2000 employees in the system, compared with 200 when the ferry service began in 1960.

Ships Services

Passenger elevators have been installed in all the major and 'C' Class ships, specifically for those who are unable to manage the stairs. The M.V.s "Queen of Sidney" and "Queen of Tsawwassen" do not have elevators. All major ferries have nursing mothers facilities, non-smoking sections, and restrooms for the disabled.

Machine Repair Shop

A service unique to the ferry business is the combined machine repair shop established at Deas Dock on the Fraser River, which allows for a planned program of continuing preventative maintenance. Another unique service is the most modern and completely equipped life raft servicing centre in Canada, also located at Deas Dock. Refitting and lay-up berths are now in operation on the man-made basin at this location.

Capsule History

The idea of a ferry system germinated when Vancouver Island was isolated during the Seamen's Strike in July 1958. Private ferry companies were approached to provide the solution with the Provincial Government undertaking to build highway and wharf facilities on Vancouver Island and the mainland to provide the quickest possible service. When private industry turned down the plan, the Government decided to go ahead on its own.

In March 1959, the Provincial Government announced plans to enter the ferry business. The first contracts were let to Victoria Machinery depot and Burrard Dry Dock for the M.V. "Sidney" and the M.V. "Tsawwassen".

Landings were built at Swartz Bay to service Victoria and at Tsawwassen to service Vancouver. At the latter site, a two-mile causeway was built which used 2,500,000 cubic yards of boulder, rock, and gravel fill.

Inauguration of the two-hour service started on June 15, 1960.

On September 1, 1961, the Gulf Island Service was purchased by the British Columbia Ferry Authority. In October 1961, Black Ball Ferries Ltd., which operated ferries from Horseshoe Bay to Nanaimo and to the Sunshine Coast, was purchased.

The inaugural run of the M.V. "Queen of Prince Rupert", sailing the Inside Passage to Prince Rupert from Kelsey Bay, was in May 1966.

In April 1967, British Columbia Ferries purchased the "Pere Nouvel", which was renamed the M.V. "Sunshine Coast Queen", to replace the "Langdale Queen" and the "Sechelt Queen" on the Howe Sound service. This double-ended ferry was the largest in the fleet at that time, having a capacity of over 180 cars. This is no longer the case, as the stretch-lifted ferries now have lift-off capabilities of up to 400 vehicles. The "Sunshine Coast Queen" has since been sold.

In June 1967, the M.V. "Mill Bay" was purchased from Coast Ferries and serves the Saanich Peninsula between Brentwood Bay, on the Peninsula, to Mill Bay, approximately 15 miles from Duncan.

The "Howe Sound Queen", which has a carrying capacity of 70 automobiles, was taken over to replace the "Bowen Queen" to alleviate the increasing traffic on the Horseshoe Bay/Bowen Island route.

The jumbo vessels, Queens of "Cowichan" and "Coquitlam", were added to the fleet in 1976. Both capable of carrying 362 automobiles each, they were joined by the "Queen of Alberni", built specifically to carry overheight, commercial, and recreational vehicles. All have elevators and on board cafeterias.

On January 1, 1977, British Columbia Ferries became British Columbia Ferry Corporation, a Crown Corporation. The Chairman of the Board is Stuart Hodgson, President is Andrew Collier. George Baldwin is the General Manager.

Three minor vessels, the M.V.s "Mayne Queen", "Powell River Queen", and "Bowen Queen", were stretched and repowered in 1979. Each ship is now capable of carrying 70 vehicles.

In May 1979, the "Dogwood Princess II" replaced the "Dogwood Princess" on the Gambier and Keats Islands route. The new passenger-only vessel carries 38 people.

On May 29, 1980, the M.V. "Queen of the North", formerly the "Queen of Surrey", commenced service on the Inside Passage run. Port Hardy became the new terminus on northern Vancouver Island on May 31, 1979, replacing Kelsey Bay. During the summer, this vessel departs from Port Hardy every other day with an en route stop at Bella Bella once a week. In the off-season service between the two ports is on a once-weekly basis.

The "Queen of Prince Rupert" was chartered by B.C. Steamship Company to operate between Seattle, Washington and Victoria during the summer of 1980. She was returned to B.C. Ferries in October of that year and commissioned to the service between Prince Rupert and Skidegate, Queen Charlotte Islands. The "Queen of Prince Rupert" operates on the Skidegate - Prince Rupert route in the summer.

Two more jumbo (360-car) ferries, the Queens of "Surrey" and "[illegible]", were built at Burrard Yarrows Corporation in Vancouver and Victoria. They entered service in May and June of 1981.

. . . . /5

An innovative new conversion program was begun in 1981 with the "lifting" of two of the "stretched" vessels, the Queens of "Vancouver" and "Victoria". Each ship was cut in half horizontally, just below the passenger (promenade) deck, raised vertically 10 feet on hydraulic jacks, and an upper car deck was added. This same operation has since been effected on the Queens of "Saanich" and "Esquimalt" and these four converted ships are now carrying record loads of vehicles.

On June 15, 1985, the B. C. Ferry Corporation celebrated its 25th Anniversary of operation, a significant milestone in the history of British Columbia.

On October 6, 1985, the 14 saltwater ferries (formerly operated by the Provincial Ministry of Transportation and Highways) were transferred to the B.C. Ferry Corporation making the Crown Corporation one of the largest ferry operations in the world in terms of number of ships (39) and number of routes (24). Over 400 employees joined B.C. Ferries at the same time, increasing the number of workers in the ferry fleet to approximately 2600, rising to over 3000 in summer.

Alterations and Innovations

Over the years since the inception of the ferry service, innovations have continuously been undertaken to improve and increase capacities. When the first two ships were built, they were modelled on the style of Black Ball ferries. The Queens of "Sidney" and "Tsawwassen" are both very similar to Black Ball's "Coho". Then, when the next seven ships were built, the plans differed and, because of this change, each of these ships have been able to undergo alterations that have greatly improved their lift-off potential.

In 1968, ramps were installed on the car decks leading to mezzanine decks affixed to the midships bulkhead. This innovation increased the car carrying space from 110 vehicles to 150. Then, starting in 1969, an amazing (at that time) alteration took place. Each ship was taken to the shipyard, cut in half, and an 84 foot section was built, floated into place, and the ship was welded together again! This further increased the capacity for vehicles to 200. At the same time, the dining rooms were extended and solarium seating was added in the new section aft of the bridge on the sun deck.

As time went on, more and more people were using the popular ferries, and line-ups in the peak travel periods became a problem. More ferries were needed, so three new vessels were commissioned. Two of them were built on the lines of Washington State ferries; the third, with basically the same lines, was constructed to carry primarily overweight, recreational, and commercial traffic. This was in 1976 but in 1978, it became evident that another two 'C' Class (or Super ferries) were required and they were built with yet more improvements, enabling them to carry 350 cars.

. . . . .

In the spring of 1981, an enormous ar' exciting conversion program was commenced. Two of the original seven major vessels, those built between 1961 and 1964 and which had already been"stret-hed", were now to be "lifted". The ship was cut in half again, this time horizontally, the top half raised on hydraulic jacks, and a new deck inserted. The upper sun deck solariums also underwent change, they were covered in and made into more useful and attractive seating areas. The midships lounge on the promenade deck was also renovated with a snack bar added. Since then, two more of this class vessel have been converted, this time adding ramps, bringing the car carrying capability to, believe it or not, 400 cars!

The "Queen of Alberni", B.C. Ferries' "overheight vehicle" ship, was lifted in the spring of 1984 increasing her car-carrying capacity from 150 to 300 vehicles and returned to service on the Horseshoe Bay/Langdale route 3 months later.

At her 1986 refit, the "Queen of Alberni's" passenger lounges and cafeteria were enlarged making this vessel more suitable for service on the Horseshoe Bay/Departure Bay route.

During the Expo season (May - October, 1986), five ferries that had been in lay-up were repainted in the new B.C. Ferry colours (red, marine blue, and white) and came into service to assist with the heavy demand expected during the World's Fair.

Yes, since 1960, there have been many changes, both on and off the ships of B.C. Ferries. Carpeted decks, where there was once linoleum; cafeterias with an extensive menu; elevators (the new ships have two each); restrooms for the disabled; and pay phones. And ashore, special ramps had to be constructed to comply with the converted vessels' modifications; overhead walkways extended, improved, and carpeted for foot pasesengers' comfort: greater parking areas; new and more ticket booths; and extra berths and docking facilites. The list just goes on!

MEMORANDUM

TO: Representative Bette Cato

FROM: Mary Jennings MJ
Legislative Analyst

RE: Options for the Alaska Marine Highway System to Operate Similarly to Cruise Ships
Research Request 87.058

You requested a discussion of options for the Alaska Marine Highway System (AMHS) to operate more similarly to cruise ships on the mainline route. The mainline is the route from Seattle to Skagway via Prince Rupert; four ships operate on the mainline at different times of the year.

Background

The number of cruise ships that operate in the waters of Southeast Alaska has grown dramatically during the past few years. According to the State Division of Tourism, over 90 percent of all tourists in Southeast arrive by way of cruise ships. Although specific data are not available from cruise ship companies, one can assume that the expansion that has occurred is an indicator of profitabity. The AMHS vessels that operate on the mainline generate revenue equal to approximately 80 percent of costs. Since ferries and cruise ships operate basically over the same route, the question arises as to why the cruise ships are able to operate at a profit and the ferries are not. The following sections of this memorandum present a discussion of options that would allow the AMHS to operate more similarly to cruise ships.

Reducing Labor Costs

Labor costs of onboard personnel of AMHS ferries account for approximately 50 percent of a vessel's operating costs. According to persons contacted in various cruise ship companies, the labor costs of cruise ships are much lower than ferries. None of the cruise ship companies were willing to give specific data concerning operating costs, but one company official estimated that the labor cost of the AMHS were more than twice as high as the labor costs of a cruise ship. The official added that this was not due to less on-board personnel but because cruise ships utilized nonunion labor at relatively low wages.

Due to union labor on AMHS vessels, labor costs can be reduced only by contract negotiations. Contracts are scheduled for negotiation during 1988. Potential cost savings may be realized if contracts can be negotiated for lower wages, although it is doubtful that the unions would accept wages at the same level as cruise ship workers.

Leasing to Private Industry

According to the Executive Director of the Inland Boatman's Union, the current contract does not allow nonunion workers on vessels leased by the State. The union does not feel that this is a negotiable issue. Therefore, even if mainline operation were leased to the private sector it would still be difficult to lower labor costs to cruise ship levels. The option of selling the vessels to private industry also exists, but because this would remove the vessels from control of the State, this option was not researched.

Year Round Full Capacity

A cruise ship company representative stated that cruise ship lines are able to operate profitably because their vessels operate at full capacity year-round. This is achieved by operating in different locations, such as Europe and the South Pacific, during the winter in North America. According to Joe Camp, Deputy Commissioner of the Alaska Marine Highway System, the level of ferry useage drops by approximately half during the period from October to May. Mr. Camp did not feel it was feasible for AMHS ferries to operate outside Alaska during the winter because this would leave many Alaska communities without ferry transportation. He also doubted that ferry unions would be amenable to operating outside Alaska for half of the year.

Package Tours

Travel agents suggested that AMHS could compete more effectively if trips were offered as a package of complete services. Agents stated that the majority of cruise ship passengers buy package tours that include all aspects of their trip, from meals to airfare. According to travel agents with whom I spoke, the AMHS would have to change several areas of service in order to accommodate the package tour traveler. One travel agent suggested that the AMHS should redesign staterooms into a uniform two-bed size because this is the standard package tour booking size. (Ferries are designed in two, three and four-bed size.) One agent suggested that ferries should dock in communities for longer periods of time and only during the day. The agent stated that because the ferries tend to dock in the middle of the night, it is difficult to coordinate ferry useage with other tourism-related activities. The agent also suggested that the ferries should dock closer to downtown areas because this is more convenient for tourists.

Other travel agents suggested that the ferry should offer higher quality food and onboard entertainment, such as discos and gaming.

The AMHS representatives felt that many of the changes to allow package tours would be costly and would conflict with the system's goal of providing basic transportation services for Alaskans. One official stated that to redesign all staterooms into a two-bed size would require a great deal of lay up time and would be expensive. Additionally, AMHS stated it would be difficult to schedule mainline vessels for strictly daytime docking because this would conflict with the schedules of feeder vessels that also use mainline docks. Another AMHS official stated that many downtown docking facilities that the cruise ships use would not accommodate ferries because of the need for vehicle-loading facilities.

Additional Marketing

One cruise ship company stated that a high level of marketing is an important factor in determining the level of business of a cruise ship company. According to Joe Camp, marketing of the AMHS has suffered in the past two fiscal years due to budget cuts. He stated that the system plans to spend more money on marketing this year and will emphasize mainline operations. For example, Mr. Camp stated that a "weekend getaway" promotional program is being developed to encourage Seattle area residents to ride the ferry during the months of May and September when ferry traffic is moderate. The system plans to offer a package tour that will include a ferry ride to a port in Alaska and a flight back to Seattle. The AMHS is working with the Port of Seattle, Alaska Airlines and Seattle area travel agents.

Raising Ticket Prices.

During the summer of 1987, a roundtrip ticket on the AMHS between Seattle and Skagway will cost $396. A comparable length trip on a cruise ship will cost anywhere from $2,000 to $5,000 dollars. As mentioned earlier, the cruise ship package includes many other services besides travel. If the AMHS were to include additional services with the ticket price, then rates may be increased to be more comparable with cruise ship rates. It is questionable whether it would be feasible for the system to offer different levels of service on the mainline route--one level for package tours and another level to provide basic transportation needs. According to AMHS, the additional administration to provide two levels of service would be costly. Additionally, operations of the ship would have to altered drastically to provide the same services offered on cruise ships.

Independent Travelers

Bob Dindinger, who is a member of the Southeast Tourism Marketing Council, felt that the AMHS could best increase tourist useage by targeting the independent traveler. He stated that the independent traveler is not as convenience-oriented as a tour ship traveler and therefore is more amenable to ferry useage.

A study by the State Division of Tourism indicates that during the 1970s, 68 percent of independent travelers came through Southeast and today only seven percent visit this area. The study indicates that the majority of independent travelers now visit the Southcentral area. Mr Dindinger felt that this is due to promotional campaigns by Anchorage and Fairbanks directed toward the independent traveler. He stated that the council is currently working with the State Division of Tourism and tourism-related businesses in Southeast, including the AMHS, to develop a promotional campaign to attract independent travelers to Southeast.

Mr. Dindinger had other ideas that would allow the ferry system to compete more aggressively in the overall tourism market. He suggested that a travel agent's commission for booking ferry space should be raised from the current seven percent to ten percent. He stated that a ten percent commission is the standard commission awarded to travel agents. Mr. Dindinger felt that the seven percent commission awarded by the AMHS is a disincentive to travel agents who might otherwise promote ferry travel. Mr. Dindinger added that a study has shown that over half of all independent travelers utilize travel agents.

Mr. Dindinger also suggested that the system should pre-sell only 80 percent of its space 90 days before departure instead of the current 90 percent. He felt the remaining 20 percent should be sold full price. He felt that this would increase revenues because less space would discounted by a travel agent's commissions. He also noted that it might leave more space open to Alaskans, who tend to make reservations closer to departure dates.

I hope you find this information useful. If you have any questions please feel free to contact me.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M December 12, 1986

SUBJECT: Alaska Marine Highway System
(Work Order No. 15-0270)

TO: Representative Bette Cato

FROM: George Utermohle
Legislative Counsel

You have asked whether certain recommendations for improvements to the Alaska Marine Highway System (AMHS) can be implemented through legislation. This memorandum addresses those recommendations.

ONE: ALLOW AMHS TO OPERATE AS A SEPARATE ENTITY FROM THE DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES.

Government agencies may be conferred with a wide range of independence. Most government agencies are established as subordinate entities within a department and are subject to the centralized administration and control of the commissioner of the department. The divisions within the departments fall into this category. Certain other agencies are attached to a department only for administrative purposes and have a legislative mandate distinct from that of the department. These agencies, such as the Alaska State Building Authority, the Alaska Housing Finance Corporation, and the Alaska Railroad Corporation, are usually state corporations and operate independently of any policy control by the commissioner of the department. Even among these independent agencies there is considerable variation in the amount of autonomy conferred on them. The agency with the greatest degree of independence is the Alaska Railroad Corporation (ARRC). ARRC maintains its own administrative and budgeting functions, as well as policy development functions independent of any other state agency, including the legislature. This high degree of independence is granted by the legislature and thus can be reduced or eliminated by the legislature.

Generally, the highest degree of independence occurs at the department level. Any state agency could be raised to the level of department. The former Division of Corrections was moved from the Department of Health and Social Services and was made into a separate department of its own. The major draw backs to this approach are the costs involved and the Alaska Constitution. When a department is created a commissioner and staff must be hired, and independent accounting, budgeting, purchasing, personnel, and other services must be established. The Alaska Constitution limits the executive branch of government to twenty principal departments. (art. III, sec. 22, Ak Const.) There are currently fifteen principal departments in the executive branch.

The Alaska Marine Highway System is currently a line division within DOTPF and is subject to administrative, budgetary, and policy oversight by the commissioner. AMHS would achieve greater independence from DOTPF by making it a an independent corporation within the department. HB 23 (Fourteenth Legislature) did exactly that. HB 23 created the Alaska Marine Highway Authority as a corporation within DOTPF. The department would exercise no control over the Authority, but could handle the administrative functions such as purchasing, payroll, etc.

TWO. ALLOW AMHS TO OPERATE WITHOUT REQUIRING IT TO MAKE A PROFIT LIKE THE ALASKA RAILROAD CORPORATION.

AMHS is not required to make a profit. Neither is ARRC. The only mandate to ARRC is that it should generally operate the railroad on a self-sustaining basis.

AHMS is not required to return a profit or even break even under its current mandate. HB 23 did not change this, even though management of the marine highway system was transferred to an independent state corporation.

THREE: SEPARATE MANAGEMENT, ACCOUNTING, AND OPERATION OF THE MARINE HIGHWAY SYSTEM FROM DOTPF.

AMHS can operate independently of the administrative structure of DOTPF by creating an independent administrative structure within the current division. Administrative independence can also be achieved by conferring the necessary authority on an independent state corporation to manage the marine highway system. Administrative independence comes as a matter of course when an agency is made a department.

The Alaska Marine Highway Authority proposed in HB 23 had considerable control over its own operations. HB 23 did not specifically mention whether the authority was to perform its own administrative work. Whether an independent authority does its own administrative work is mostly a matter of whether the legislature appropriates funds for administrative services. So, it is not necessary for HB 23 to confer administrative independence on the Alaska Marine Highway Authority, but mention of such an intent in the bill would assure that money will be allocated to that function.

FOUR: ENSURE THAT AMHS CONTINUES TO PROVIDE IN-STATE TRANSPORTATION SERVICES.

Establishing priorities for the service by AMHS is a very straight forward process. All that is required is that the legislature establish those priorities. Such priorities can be established through appropriations or through legislation establishing priorities or levels of service for the marine highway system. For example, if you wish to ensure that ferry service is provided to certain towns or no service is provided outside the state, these requirements can be specified in statute.

FIVE: PROVIDE A MECHANISM FOR OVERSIGHT AND INPUT TO THE MARINE HIGHWAY SYSTEM, PARTICULARLY FROM PRIVATE INDUSTRY.

State agencies receive oversight and input on a daily basis from the public which they serve. Oversight and input are also received from commissioners, the governor, and the legislature (especially through the budget process). In a number of instances the legislature has created specific mechanisms for input and oversight of state agencies. These mechanisms vary in formality from the loosely-knit but extensive system of fish and game advisory boards to the boards of independent state corporations which have explicit requirements for public and private industry members.

In HB 23 an independent state corporation was created with responsibility for operating the marine highway system. The board of the corporation included a number of seats restricted to members of various private industry groups and to members of the public from various parts of the state. Such a mechanism as this assures that some oversight and input to the marine highway system takes place.

If you should decide to introduce legislation on the marine highway system, please contact me with your specific proposals. If I can provide further assistance, please contact me.

August 14, 1986

Mr. Stephan Mason
Acting Chairman
Coalition for the Improvement of
Alaska Marine Highway System
P. O. Box 9625
Ketchikan, AK 99901

Dear Mr. Mason:

I appreciate the opportunity to reply to your letter of August 1. Many of the questions have been asked of me personally on my various ship visits and obviously my answers have not reached all the right ears. The following should provide factual data and I hope it will clear up some popular misconceptions currently in circulation. The deadline you imposed has made it difficult to research all of the technical and detailed data you have requested. That information will be forwarded at a later date. I will restate or paraphrase your question, then provide the answer.

1. Q. Give us background information regarding lost jobs.

   A. For FY 87 Alaska Marine Highway System (AMHS) like other branches of State government, was cut below FY 86 levels. These cuts came in several increments of various amounts during the budget process and included cost avoidances achieved through reduction in fuel prices. It was and continues to be our goal to provide the maximum amount of service to the public with the resources available. During the process it was determined that cutting of approximately $700,000 in vessel personal services would result in less severe cuts in scheduled vessel service than would otherwise be required. This decision was made for two reasons; 1) to continue maximum service to the public and 2) maximum service means maximum employment. The guidelines used to determine which positions would be cut were; 1) not adversely effect safety, 2) not adversely effect passenger services and 3) keep additional overtime to a minimum. The Director of Operations outlined the requirements to the shoreside department heads who then met and agreed on specific positions for cuts. I reviewed and approved the cuts.

2. Q. How much money was estimated would be saved by each department cut and all collectively?

A.

Engineer Department	$178,000
Deck Department	303,700
Purser	33,300
Steward	208,800
Total	$723,300

3. Q. How much increased overtime has been submitted from each department since the job cuts. How much increased overtime has been submitted collectively?

A. There has been substantial overtime submitted. It is being compiled and analyzed as limited staff time permits. I will forward the results of this effort when it is completed.

4. Q. When exactly can we expect all these lost jobs to be reinstated?

A. AMHS is conducting an internal review of shipboard manning comparing required functions and work loads with manning. This study is expected to be completed this fall. Upon completion of this review, the preliminary finding will be reviewed with union and operating personnel prior to making any final determination. Both licensed and unlicensed input will be solicited and discussed. The result of this process should provide us with a valid manning document, based on required functions, workloads and services aboard each vessel.

5. Q. How many jobs have been eliminated from Department of Transportation and Public Facilities beach operations in accordance with recent funding cuts. What job positions and titles were eliminated and were these people terminated or moved to other positions within your operation? What exactly is the revenue savings currently reflecting these job cuts on the beach?

A. The following matrix should answer the above questions for AMHS.

FY 87 Budget Reductions prior July 1

Position/Title	Who	Action	Where did the incumbent go	Estimated Savings (in Thousands)
Administrative Assistant	vacant	Delete	vacant	34.1
Director of Marketing & Services	Emery	Delete	accepted classified service job	39.9
Secretary I	McCorcle	Delete	transferred to another department	31.8
Reservation Specialist	vacant	Delete	vacant	46.6
Accounting Clerk II	Roberson	PFT to seasonal	reduced pay	15.3
Accounting Clerk II	Harrigan	PFT to seasonal	reduced pay	10.6
Accounting Clerk II	Ketcham	PFT to seasonal	reduced pay	10.6
Clerk III	Salazar	PFT to seasonal	reduced pay	5.2
Clerk III	Seagrave	PFT to seasonal	reduced pay	5.2
Clerk III	Annand	PFT to seasonal	reduced pay	5.2
Clerk III	vacant	PFT to seasonal	reduced pay	5.2
Clerk III	vacant	PFT to seasonal	reduced pay	5.2
Clerk IV	Romzek	PFT to seasonal	reduced pay	5.8
Budgeted overtime for various positions		Delete		48.6
				309.3

Additional Cuts ordered since July 1

Position/Title	Who	Action	Where did the incumbent go	Estimated Savings (in Thousands)
Director of Operations	Black	Terminated	Terminated August 15	32.9
Secretary I	Vaden	Layoff	Lay off 8/29	27.6
Planner	Lindbeck	Layoff	Bumped down Jr. person Lay off 8/29	45.2
Payroll Supervisor	O'Connor	retirement	leave vacant	45.7
Ferry Services Manager III	Clark	retirement	leave vacant	43.3
Accounting Technician I	Reddekopp	PFT reduced to 30 hr wk	reduced pay	12.6
Clerk III	Del Fierro	PFT reduced to 30 hr wk upon retirement	reduced pay beginning September 96	10.0
Stockhandler	Currie	Seasonal reduced from 9.6 months to 6 months	reduced pay	11.9
			Total	279.7

The net result is that approximately 15 percent of the total shoreside AMHS staff have had their jobs eliminated, held vacant or experienced some lesser degree of negative effect on their pay.

6. Q. How does that revenue savings correspond to the estimated revenue cuts the shore-side DOT&PF operations are expected to take in response to current funding cuts?

A. The Department of Transportation and Public Facilities was required to take an overall 15% cut in the operating budget. If each element within the Department had been required to absorb that degree of cut the AMHS service and employment would have been severely crippled. By allocating total DOT&PF resources AMHS initially took approximately a 10% cut while the rest of the Department absorbed the rest. Impacts of this funding level would have included laying up the Columbia indefinitely and dropping one main line ship from winter service to southeast. When presented to the Governor this was considered unacceptable and he restored $2 million to take the COLUMBIA out of layup and put on schedule to take advantage of the busy season. This meant that AMHS took approximately a 7% cut while the rest of the Department took an 18% cut.

7. Q. May we have an official statement concerning Mr. Black's dismissal?

A. Mr. Black was relieved of duties as Director of Operations on July 16. He has been assigned some technical projects to work on prior to his final day at work on August 15.

8. Q. What transfer of job functions will this represent?

A. There are no plans to refill the position at this time nor has a decision been made as to whether or not it will be refilled. In the interim, I am taking on the responsibility of the Division and am relying heavily on the Port Captain, Port Engineer and Passenger Services Manager for day-to-day operations.

9. Q. Who has access to our reservations system and to our standby reservations and wait lists? What kind of confidentiality can we expect in regard to protecting our reservations from being raided by private enterprise?

A. All AMHS terminals have access to Reservation Management System (RMS II). Vista Travel in Fairbanks is the only travel agency with access to RMS and they finally became operational in late June 1986. Because of the special equipment requirements and technical difficulties experienced when we were actively attempting to bring

Vista Travel "on-line" I believe it would be almost impossible for an unauthorized party to gain usable access to RMS II. I have heard many rumors that "STARDANCER" has access to RMS II. I don't believe it. I have heard stories that "someone made a reservation on AMHS and was immediately called by STARDANCER and offered a better deal". I would like to talk to someone this actually happened to in order to attempt to reconstruct what happened. The only possible connection of STARDANCER to State of Alaska "lists" I am aware of is the fact that the Division of Tourism compiles a computer list of all people who respond to their Vacation Planner questionnaire and indicate they would consider visiting Alaska by "ferryliner" and this list is available for sale to any firm wishing to purchase it.

10. Q. What were the exact figures on passenger and vehicle reservations made for the special Expo sailing of the M/V MATANUSKA?

A.

	Southbound	Northbound
Passengers	159	147
Vehicles	13	24

At no time was either sailing booked full and there is no reason potential passengers should have been told it was full.

11. Q. Exactly how many reservations were made for Alaska State Government officials and dignitaries?

A. One. A reservation was made for DOT&PF Commissioner Knapp with the hope that he would be available to make the trip and present a letter from Governor Sheffield to the "Counsel General of the Expo". Other State business prevented Commissioner Knapp from making the trip and Captain R. M. Johnson presented the letter from the Governor.

12. Q. Were Governor Sheffield and Lt. Governor McAlpine scheduled to sail on that special Expo trip.

A. No.

13. Q. Exactly how many passengers actually showed for the sailing? How may vehicles?

A.

	Southbound	Northbound
Passengers	75	75
Vehicles	10	17

14. Q. Please give us the exact amount collected on the cancellation fees.

A. None. All passengers who paid in advance made the trip. Since there were numerous staterooms and car deck space available for additional passengers desiring to make reservations the manifests were not purged of those who had not paid.

15. Q. How much revenue was expended on the Expo sailing?

A. The M/V MATANUSKA was operating on the Seattle route, Tuesday sailings. On May 20, the M/V MATANUSKA called in Vancouver, B. C. instead of proceeding on south to Seattle, therefore the only additional costs of the "Expo trip" were those incurred directly as a result of calling in Vancouver. Those costs were as follows:

Agency fee	Canadian	$1,350.00
Pilot	Canadian	2,017.55
Berthage	Canadian	2,700.13
Miscellaneous	Canadian and U.S.	596.62
Total	U. S.	$4,936.56

16. Q. Please give us a complete description of the complete Expo advertising campaign and its cost.

A. No money was budgeted or expended on special advertising for the Expo sailing. Maximum advantage was taken of radio public service announcements, press releases and media interviews, all at no cost to AMHS.

17. Q. A number of questions were asked concerning repairs and upgrade to the Haines and Skagway docks with the implication that these were undertaken by AMHS in order to accommodate STARDANCER.

A. I will deal with Skagway first. The City of Skagway obtained a grant from the State of Alaska to improve the ore dock to accommodate SUNDANCER. AMHS had no part in that grant. The Haines transfer bridge and tower were old and in need of replacement just as the Petersburg and Wrangell facilities were. Replacement of the Haines facilities was budgeted in FY 81. Design specifications were completed and received FHWA approval in January 1981. The project was advertised in November 1983 and construction began March 6, 1984. This dock was designed for AMHS vessels only. The STARDANCER was modified to fit Haines rather than the other way around, and for the record STARDANCER pays approximately $1,000.00 per hour to use the Haines dock on a not to interfere basis with AMHS vessels.

18. Q. Who authorized the solicitation of AMHS traffic in line for boarding AMHS vessels by McDonald Enterprise/Sundance Cruise lines? Who authorized their use of the Haines terminal building for the same?

A. No one. In fact the State Terminal Tariff prohibits their use of our building. When it was brought to my attention that this was happening, I immediately had it stopped.

19. Q. How much of the Haines dock was federally funded? How much was State taxpayer funded?

A. Haines terminal project

State general funds	$ 159,591.91
FHWA funds	2,246,636.09
Total	$2,406,228.00

20. Q. Was the M/V COLUMBIA instructed to priority-load Juneau vehicles out of Haines during the summer of 1985? If so, who authorized it and for what reasons?

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5144 HTRA HB 62 - HB 78
716

A. There were no changes in standby loading procedures ordered for M/V COLUMBIA or any other vessels out of Haines last summer.

21. Q. Was the M/V AURORA instructed to load only Ketchikan/Hollis traffic out of Prince Rupert during the summer of 1985?

A. No. If there was space available after loading all reserved vehicles, standby vehicles would be loading in their order on the standby list.

22. Q. Why have you not initiated an additional flyer inclusion on all tickets indicating a passengers "final destination"?

A. This may be a good idea as the data would be useful. We do have data on passengers disembarking at Haines and Skagway but we do not have final destination. Presently there is no staff time available to compile the data because of other higher priority work and reduced staff.

23. Q. What was price per gallon for fuel in Seattle and Skagway during the time M/V MALASPINA was on the Seattle run in the winter of 1985? (December 1984, January and February 1985). How much fuel did M/V MALASPINA purchase from each facility during that time?

A.

	Price	Amount Purchased
Skagway	.919 gal	208,193 gals
Seattle	.738 gal	202,649 gals

The M/V MALASPINA is required to fuel in Skagway for stability reasons.

24. Q. What is being done to publish and promote the life saving and waterway safety contributions of the Alaska Marine Highway vessels.

A. If the press has not already covered the story a press release is prepared. In addition, articles are carried in the DOT&PF newsletter In Transit as appropriate.

25. Q. May we have a complete list of all rescue operations by AMHS vessels, all records of assistance to vessels in trouble, and all contributions made by AMHS vessels in the area of public waterway safety?

A. No specific record is kept other than the entries in the ship's logs. Complete retrieval would require prohibitive efforts.

26. Q. We would greatly appreciate receiving a full and complete selection of personal and/or community commendations which exist. (In the area mentioned in Q. 25.)

A. No such file exists. As such letters and/or commendations are received, they are sent with a forwarding letter to the vessel Master and/or individuals as appropriate. An example is enclosed.

27. Q. Please give us a description of the Seattle phone reservation system from 1982 to the present.

A. In 1982 and until December 1984, the Seattle office had four telephone reservation clerks. Reservations were centralized in Juneau in December 1984 and toll free lines from both "outside" and within Alaska were established to the Juneau office. The Seattle "reservations" office was closed (the terminal and ticketing remained) and the four reservation clerk positions were transferred to Juneau.

28. Q. How many phone lines existed at which periods of time? When was the toll free 800 number installed? How long was it in existence and how much did it cost? When was it removed, how many non-toll free lines were installed to replace it?

A. When the Centralized Reservation Office was established in Juneau in December 1983 it was set up with two Alaska-only toll free lines, four "outside" toll free lines and three local lines. The "outside" toll free lines were discontinued in April 1986 because of budgetary restrictions. At that time an additional Alaska-only toll free line and three additional non-toll free (907) lines were installed. The actual bills paid for the toll free lines are as follows:

		Outside lines	Alaska only lines
January	1985	$ 4,612.92	
February	1985	3,337.19	$ 7,793.54
March	1985	4,191.61	16,486.63
April	1985	5,510.98	12,507.86
May	1985	8,059.46	15,307.62
June	1985	7,714.86	15,307.62
July	1985	8,456.62	15,307.62
August	1985	5,828.09	17,263.15
September	1985	4,481.02	16,264.00
October	1985	3,201.24	4,398.77
November	1985	2,506.58	6,716.92
December	1985	3,152.71	781.11
January	1986	7,141.40	2,515.70
February	1986	6,391.85	23,741.05
March	1986	4,878.45	21,099.20
April	1986	101.32	25,646.09
May	1986		25,621.65
June	1986		29,342.40
July	1986		28,681.00
		$79,566.30	$284,251.93

29. Q. Josephine Emery was Director of Marketing for what period of time?

A. Mrs. Emery was Director of Marketing and Services from January 1984 until May 1986.

30. Q. Could you please give us a description of her duties as Director of Marketing?

A. Her primary responsibilities included managing a $4.7 million operating budget along with the development, revision and communication of policies, rules and procedures for the promotion and sales of passenger, vehicle and stateroom space on the system which carries approximately 370,000 passengers and 100,000 vehicles.

She participated in the tourism industry to promote travel on the system, monitored community needs and probable effects of changing schedules or capacity; monitored passenger services on vessels; and responded to customer complaints.

She also supervised 65 employees, located in 13 offices and terminals in Seattle, Washington; Prince Rupert, B. C. and Alaska. She was responsible for publication and distribution of seasonal schedules and acted as project manager for the development and maintenance of a second generation computerized Reservation Management System (RMS II).

31. Q. What were her accomplishments as Director of Marketing?

A. She was Project Manager for the development of second generation Computer Reservation Management system; centralized and increased reservation sales office hours. Introduced toll-free numbers and introduced electronic call distribution system in central reservation office to assist planning for proper staffing, monitor efficiency and provide necessary data for future staffing levels; timely publication and distribution of printed schedules; employees in uniforms to improve Alaska Marine Highway system image and assist in public identification; coordinated promotional programs with the State Division of Tourism; and served on the Board of Directors of the Southeast Tourism Council and Juneau Convention and Visitor Bureau.

32. Q. Please give us a brief history of her prior marketing experience.

A. 1978 - 1980 Instructor - Tanana Valley Community College. Instructed three credit course - "Fundamentals of Transportation".

1974 - 1978 Manager, Passenger Services and Sales. Wien Air Alaska, Fairbanks.

1961 - 1974 Supervisor, Marketing and Sales - Western Airlines. Seattle, San Francisco, Ketchikan and Anchorage.

33. Q. How much was the advertising budget for FY 82 through FY 86?

A. The base budget printing and advertising line item for FY 82 through FY 86 was as follows:

FY 82	121.7
FY 83	149.4
FY 84	177.7
FY 85	125.3
FY 86	161.4

34. Q. What was the general breakdown of advertising costs for FY 85 and FY 86?

A. FY 85 breakdown: Summer and Winter schedules printing $90,000; tickets $20,000; miscellaneous printing and print advertising $14,000.

FY 86 breakdown: Summer and Winter schedules printing $100,000; tickets $30,000; miscellaneous printing, photo contest and print advertising $31,000.

35. Q. Who decided to implement the cancellation fees?

A. I did.

36. Q. Do you think the cancellation fees are particularly unfair during the busy summer months when the rooms, in particular, can be resold and bring in their expected revenue?

A. No, I do not. The cancellation penalty is a tool to encourage people who change their mind about traveling to cancel their reservation in order that we may then offer the space to someone on our "wait-list", a new innovation which allows our reservation's center personnel to confirm reservations for people on the wait-list as cancellations occur. This is in contrast to the standby list which only allows people in the terminal to board if there is a no-show. Before the penalty individuals were not cancelling their reservations causing the computer to show the vessel "booked solid". Other potential passengers then could not make reservations and when the person with the original reservation "no showed" we sailed with light loads. Staterooms almost always are filled on board by "cabin standby", passengers, but others may have decided not to travel because of non-availability of confirmed car deck or stateroom space.

37. Q. For exactly how many years was the no-charge stopover option available?

A. Staterooms have always been charged on a trip segment basis. This is the first year trip segment fares have been charged for other classes of fares.

38. Q. Who decided to discontinue this attractive travel incentive?

A. I did to help cover some of our costs during a year when operation of our vessels was directly tied to earned revenue for the first time.

39. Q. Could you please give us the cost increase figures on a fare from Seattle/Skagway with stops in Ketchikan, Wrangell, Petersburg, Juneau and Haines as opposed to a through fare?

A.

Trip Segment Fare		Through Fare	
Sea-Ktn	138	Sea-Sgy	208
Ktn-Wrg	22		
Wrg-Psg	14		
Psg-Jnu	36		
Jnu-Hns	18		
Hns-Sgy	10		
Total	238	Total	208

40. Q. Are you considering reinstating the travel incentive of through fares?

A. Yes, either through elimination of or by lowering the difference in costs.

41. Q. May we have a list of private organizations that the State has contracted with for labor with their physical location and address?

A. AMHS has contracted on occasion for specific jobs when cost analysis has shown contracting out to be less expensive. Specifically, the M/V MATANUSKA staterooms were cleaned by Coast Janitorial Service following the reengining of that vessel in Portland. The contracted

job cost $8,230.00. The Chief Steward has stated he needed 10 stewards to do the job which would have cost $21,918.00 per diem and wages (minimum guarantee included) and $376.70 in travel cost. The cost avoidance was approximately $14,064.70. Additionally, a contract has been signed with a company, Wright Service, to provide assistance in cleaning staterooms on the vessel turn arounds in Skagway. The contract calls for a cost of $6.25 per room. This is measured against the cost of "turn around" stewards from Juneau to Skagway to Juneau and the overtime plus the limited time in port. This program has been accepted by Chief Stewards as necessary, especially when there is limited turn around time in Skagway. Other contracts are entering into only if specific cost avoidance can be shown.

42. Q. How much was spent on contracted labor in 1984, 85 and 86?

A. This information is not readily available. As staff time will allow the answer will be researched and the information provided at a later date.

43. Q. How many "Comprehensive Plans" have been done regarding proposed operating plans for the Alaska Marine Highway System?

A. The Alaska Marine Highway is currently developing a comprehensive System Plan as recommended in the 1984 AMHS Task Force Report. It is scheduled to be completed this fall, and to my knowledge this is the only comprehensive plan developed in recent history.

The Southeast Region of DOT&PF has a Southeast Transportation Plan developed in 1980 that address AMHS as well as other modes of transportation in Southeast Alaska. It was updated earlier this year. It is a plan that addresses transportation from a regional aspect and does not go into detail nor does it address all the aspects that the AMHS System Plan will include.

44. Q. Is the AMHS System Plan Policy Workshop report yet another "proposed comprehensive plan"?

A. No. It is a small portion of the System Plan under development.

Sincerely,

Joe D. Camp
Deputy Commissioner

DEPARTMENT OF TRANSPORTATION & PUBLIC FACILITIES
OPERATING BUDGET COMPARISON
AND NARRATIVE OVERVIEW
FY86 AUTHORIZED - FY88 GOVERNOR'S REQUEST
(in millions)

Source of Funding	FY86 Authorized	FY87 Authorized	FY87 Revised	FY88 Governor's Request*	$ Change FY87 Rev. to FY88
Gen. Fund	$177.8	$161.4	$143.4	$124.1	($19.3)
Other Funds	116.2	118.5	118.8	122.1	3.3
Dept. Totals	$294.0	$279.9	$262.2	$246.2	<$16.0>
% G.F. Change From Previous Year	<0.4>%	<9.2>%	<11.2>%	<13.6>%	

*Excludes $5.2 million switch to user fees for Dalton Highway toll charges.

General fund decrements totalling $21.1 million and one general fund increment for $1.8 million for Marine Highways Risk Management increases have been accepted by the Governor. This is a net reduction of $19.3 million for the Department of Transportation and Public Facilities (DOT&PF). This yields a 13.5% departmental reduction from the FY87 Revised general fund budget. Please note this includes a net reduction of approximately 14% for the Alaska Marine Highway System (AMHS) and a 13.1% cut for all remaining DOT&PF general funds.

In addition, it is proposed that $5.2 million be changed from general funds to user fees to reflect operation of the Dalton Highway as a toll road. This would bring the general fund (GF) reduction to $24.5 million, or 17.1% of the Department's FY87 Revised GF budget. However, since this proposal would require separate legislative action this funding change is being considered as a part of the proposal for new legislation rather than as a part of the Department's budget.

Excluding the AMHS, and the Dalton Toll proposal, a general fund reduction of 13.1% and $11.0 million from the FY87 Revised GF level of $84 million is proposed. This 13.1% reduction in FY88

would mean that units of the department other than AMHS have been reduced by 36.1% since the FY86 authorized GF budget.

A net reduction for the general fund portion must be viewed in light of the overall impact to revenue from cuts to the AMHS. The AMHS has a FY'87 general fund revised budget of approximately $60 million and a subsidy level of about $30 million. We have identified the impacts from reducing the subsidy level by about $6 million, which results in a total reduction to the AMHS general fund budget of about $8.4 million due to revenue cuts.

MAJOR HIGHLIGHTS

The following depicts the major impacts from adoption of these proposals:

(1) Elimination of all state maintenance on nearly 1,600 miles of roads currently on the state maintenance system that are not considered the highest priority routes, or do not require minimal maintenance efforts due to investment of federal funds;

(2) Elimination of all maintenance except for minimal safety repairs and physical highway protection (which adds a hidden cost for increased legal liability) for approximately 800 miles of highways that are not priority routes, but have federal investment requiring continued state efforts to protect this investment;

(3) Reduction of maintenance funding by another 8% on the remaining 2900 miles of roads, which means a total reduction well in excess of 25% for maintenance and operation of these facilities in less than 18 months;

(4) Elimination or reduction of airport maintenance by over 7%, with particular emphasis on daytime operations only and major reduction of winter maintenance at certain airports statewide;

(5) Substantial reductions in Marine Highway service including unmanned layup of 6 vessels for a total of 29 months. This will affect at least 230 crew members. This leaves the Southeast system with no change to summer service, but only one mainline vessel and one feeder vessel for the other 8 months of the year, and the Southwest system with single vessel service for 6 months and no service for 2 months during the winter.

(6) Institution of a toll or user fee charge of approximately $500 per trip, per 18-wheeler for commercial use of the James Dalton Highway north of the Yukon River, which

may lead to eventual closure due to inability to recover adequate fees;

(7) Elimination of maintenance for campgrounds, rest areas, turnouts and waysides, land fills, and litter pickup for state highways to preserve funds for essential M&O functions; and

(8) Reductions in facilities maintenance including janitorial services for state buildings from 5 to 3 days per week, grounds-keeping, and clearing of snow and ice from sidewalks and parking areas.

HIGHWAY MAINTENANCE & OPERATIONS

The impact to highway M&O is particularly troublesome when viewed in a longer term context. Since 1980, DOT&PF's responsibilities have grown over 10%, while available real dollars have decreased by nearly 30% under the FY'87 revised budget.

To gain additional perspective, consider the likely effects of the FY'87 reductions already taken:

(1) Little preventative maintenance anywhere on the system, which means little highway crack sealing, patching or resurfacing.

(2) Traffic services such as snow plowing, striping, and pothole patching can only be performed on a priority basis, and roads to recreational areas and low traffic rural and suburban areas can be plowed only if time permits; and

(3) Routine summer maintenance will have to be eliminated or drastically curtailed if extraordinary winter snow and ice conditions occur.

Following the M&O cuts in August 1986, it is no longer possible to cut further on the basis of a straight percentage decrease across the entire system. Instead, it has been necessary to structure further reductions on a programmatic basis by classifying the highway system as follows:

(1) Category I: Priority routes that provide the intrastate connecting system between the population and economic centers, airports, and major harbors, thereby covering Alaska's fundamental transportation links.

(2) Category II: Routes where the state has invested sufficient federal funds to contractually bind us to provide a minimum level of maintenance to realize anticipated service life of the constructed improvements.

(3) Category III: All other routes that the state currently has on the state maintenance system.

We have further differentiated the importance of state efforts for maintenance into eight groups. These are in increasing order of importance (1) snow and ice control on Category III roads within organized governmental units; (2) all activities on Category III roads within organized governmental units; (3) snow and ice control on Category II routes within organized governmental units; (4) snow and ice control for Category III routes outside governmental units; (5) snow and ice control on Category II roads outside governmental units; (6) all activities on Category III roads outside governmental units; (7) maintenance at 30% of historical levels for Category II roads within governmental units; and (8) maintenance at 30% of historical levels on Category II routes outside governmental units.

The basic assumption is that a currently organized governmental unit would be better able, and probably more likely, to assume maintenance responsibilities for routes within their boundaries than people outside of a governmental unit. Please note this may require legislative action to grant road powers in certain cases. This also recognizes that for many routes in rural areas there is not an identifiable user group to assume this responsibility. We have also assumed that while snow and ice control is important, it is less critical in the long run than basic life/safety and structural maintenance efforts, partially because of our agreement with the Federal Highway Administration (FHWA) to prevent highway deterioration.

While we tried to structure the decrements in increasing order of importance, and with as much individual selection as possible to allow decisions other than simply "take it or leave it," it is important to underscore the radical and severe nature of these proposals. First, these cuts have been prepared on top of other drastic cuts that we're currently managing, with cost data gaps regarding current performance. Second, there has been no public involvement to review and legitimize the methodology. Third, there may be administrative code and federal legal constraints hindering or preventing implementation of some of these proposals. Finally, there is probably a hidden cost of increased legal liability from implementing these proposals, which needs to be scrutinized.

AVIATION/BUILDING MAINTENANCE & OPERATIONS

The FY'87 aviation cuts have also severely curtailed preventative maintenance work, such as runway crack sealing and patching. Snow and ice removal may not always occur, depending on available manpower. Certified airports may not be open for all scheduled flights if safe operational conditions cannot be provided, or if overtime is not available to provide required crash/fire/rescue (CFR) services. Additional curtailment of routine summer maintenance efforts may also occur.

The proposed FY'88 decrements reduce these efforts further, and force more service elimination. Elimination of winter maintenance may force operators to perform their own snow control or to switch to a different airport. Reductions or elimination of CFR activities may restrict the types of aircraft now using certain runways. Specific impacts include the winter closure of Nome's North/South runway, and service reductions or eliminations at Barrow, Umiat, Northway, Bettles, Tanana, Unalakleet, Talkeetna, and Kotzebue. If significant cuts are pursued in the aviation M&O area, more work is needed to ensure an equitable level of service reductions statewide.

FY'87 reductions for building M&O have meant that efforts on heating and ventilation components have been limited to emergency repairs. Considerable deferred maintenance continues to accrue. Any FY'88 cuts would further exacerbate these problems.

ALASKA MARINE HIGHWAY SYSTEM

To date the AMHS has not incurred any substantial reductions in available general funds, although there have been service reductions to offset cost increases. Since the AMHS's portion of DOT&PF overall general fund budget is about 40%, it has become necessary to scrutinize all components carefully and to propose ways to achieve significant general fund reductions to accommodate your request.

Since the AMHS is a transportation entity that generates revenue, the true cost to the state is not the total general fund appropriation, but is the net general fund cost or subsidy. Accordingly, we have proposed three sets of decrements to reduce the net subsidy by about $6 million for FY'88. Although we have not structured our proposal in this fashion, we believe serious consideration should be given to changing the current budget method to provide program receipt authority to expend generated revenues, along with the general fund subsidy needed to achieve the selected service level. This separation in funding would make it clearer to all concerned there is a revenue aspect to the AMHS.

The following depicts the specific impacts from reducing the subsidy level by $6 million:

(1) Reduce M/V MALASPINA service by four months. Reduce M/V Taku service by six months. Both vessels would be placed in unmanned layup. In combination with the already scheduled layup of the M/V COLUMBIA for six months and the overhaul periods for every ship, this will leave only one mainline vessel in service from Seattle or Prince Rupert to Skagway for eight months of the year. This will impact approximately 164 crew members during this period.

(2) Reduce M/V AURORA service by four months resulting in single feeder vessel service in Southeast for eight months of the year versus the current four month period. The M/V CHILKAT would increase service by four months to supplement service between Ketchikan and Prince of Wales Island.

(3) Reduce M/V BARTLETT service by six months. The M/V TUSTUMENA will provide service for the entire Southwest system, resulting in general service reductions in the winter, particularly between Valdez and Cordova. There would be no service for two months during the winter.

There are several key assumptions under each scenario. The basic intent is to maximize service for Alaskans, at the expense of tourist business if necessary. Although no service or cost saving assumptions have been included for eliminating Seattle service since current data is inconclusive, we intend to continue reviewing this option as a means to improve service for Alaskans without increasing the subsidy. Another key assumption is that it would be more cost efficient to maintain the same level of summer service for the entire 1987 summer before instituting reductions. This is because of (1) the FY'87 budget authorizes initiation of this level; (2) these are the high revenue months; (3) we have already published our schedule and are accepting reservations; and (4) it would minimize the impact from implementing cuts immediately. If earlier implementation of service cuts is desired, we can analyze this further.

We have not made any assumptions regarding possible savings to minimize service cuts by fare increases. Further work is needed to ascertain what service level savings can be obtained without increasing the subsidy, although we believe there are some possibilities here. Finally, no assumptions have been made about further savings from negotiating wage and benefit concessions or

crew size reductions, or through major streamlining of the administrative side. Please also note there is an increment to fund additional risk management expenses not covered in the current base budget, which if not funded will cause a further reduction in service.

It is important to underscore that the proposed service cuts are not "set in concrete," but merely a general sense of what service levels would be by reducing the subsidy level by $6 million. On the other hand, our current review of available data suggests that changes fairly close to these would be needed to obtain the targeted level of savings. The AMHS is a difficult entity to analyze correctly to achieve the savings we believe can be made, while preserving essential service levels. Any decision to achieve major subsidy reductions will require more work together to ensure we have a rational proposal.

JAMES DALTON HIGHWAY

While the Dalton Highway remains an important transportation facility, we believe it is reasonable to consider covering all or some of the high annual M&O costs through a user fee or toll charge. This is not a new issue, as evidenced by the state's success in including the special provision in Sec. 1113 of the Alaska National Interest Lands Conservation Act, which allows the charging of tolls without facing an obligation to repay federal-aid highway money used to construct the road.

The primary user and beneficiary from continued operation are North Slope oil producers and Aleyska. While it can be argued that we'd be biting the hand that feeds us, and clearly there would be some reduction in tax receipts because of the additional costs, we know of no covenant or agreement requiring continuation of this support at our expense. The Department of Law has advised us that there may be some changes to state statutes needed prior to initiating this proposal.

The per mile M&O cost for the Dalton is higher by at least 70% than for any other major rural transportation route in Interior District. Further, it is worth noting that since state assumption of this responsibility in 1978, we have spent about $50 million in state capital dollars to support this function. While it is conceivable that the net effect over time might be closure of the road because aviation and/or marine modes are selected as the more economical means for support of North Slope oil activities, we believe these are exactly the type of hard choices Alaskans are facing under declining revenues.

Outside of the hue and cry from the oil industry, the other major group negatively impacted would be the trucking industry, particularly owner-operators. We are sympathetic to this concern in light of currently depressed conditions, but ultimately the most cost efficient means of transporting goods must be used to maintain economic stability and growth in Alaska. One answer, which incidentally might also help address the general complaints about "unfair" competition from the Alaska Railroad Corporation (ARRC), would be an interim state assisted training program to relocate trucking industry people into other job opportunities. Another entity that would be negatively impacted if the Dalton closed would be the ARRC since they now haul a fair portion of this business to Fairbanks. It might be necessary to contact them to obtain an assessment of this impact.

A toll to recover the full charge of the department's maintenance and operations costs for the Dalton Highway would mean a charge of about $500 per trip for an 18-wheeler. Our costs are estimated to be $5.2 million annually, approximately $4.3 million in Interior M & O's Highway and Aviation component and $.9 million in the Facilities component. In addition, we have requested an increment for $.4 million in user fees to cover the costs associated with collection of the toll charges (.3 million would be the

annual cost, plus a one time cost of moving and modifying the checkpoint facility). The proposed toll does not include the capital coats for resurfacing or major maintenance of this road.

ADMINISTRATION/PLANNING/DESIGN & CONSTRUCTION

During prior reduction reviews, considerable general funds reductions were obtained in these areas. A total of 30.5% of general funds have been cut in these areas between the FY'86 authorized and FY'87 revised budgets. For example, a considerable portion of the reductions made to achieve the FY'87 revised budget were in these areas, allowing AMHS and M&O cuts to be considerably less than otherwise would have been the case.

Our decrements do include some additional general fund cuts in the planning areas. Otherwise, we are not proposing any further cuts at this time. It appears that sizeable "fat" trimming has already occurred. There is also a potential problem of making reductions to the point that we face problems with the FHWA and Federal Aviation Administration as to whether we are maintaining sufficient state funded management and administration to continue qualifying for federal highway and aviation money. Finally, we do not want to propose any cuts in the administrative or accounting side at least until we have a better handle on the magnitude of those problems, and the level of resources needed to fix them.

One change in the transfer area warrants mention. We are proposing to raise the State Equipment Fleet (SEF) fixed fee rate from 51% of the budgeted FY'87 rate back to 72% of that rate. This rate was dropped as a one-time cost savings measure for FY'87, with an understanding that the rate would be re-instated to keep the Highway Working Capital Fund fiscally sound over the long term. It is our intention to maintain the 72% rate level for at least the next two years, and then reassess what, if any, additional adjustments are needed, particularly in light of possible reduced need for equipment due to other budget reductions. We project this increase will allow us to meet vehicle replacement demand, while maintaining a positive cash flow. This means increased fee costs of about $1.8 million for DOT&PF, which represents about 35% of the SEF's business.

REORGANIZATION SAVINGS

The attached budget submission includes some adjustments for organizational changes that have already been made, including the deletion of a net 5 PX positions based on already taken personnel actions. While further general fund savings are anticipated through additional reorganization and streamlining of current operations, we are not prepared to present any further proposals at this time.

The Commissioner wants to assess the overall operations for a period of time to ensure we don't destroy valuable portions of the organization that are working well. It may be that some of these savings won't materialize until mid to late FY'88 or at the start of FY'89. Accordingly, we respectfully request an understanding that any savings in these areas will be given priority consideration for use to restore reduced or deferred DOT&PF M&O activity.

REVENUE GENERATION

One way to offset some of the impact of both the proposed FY'88 and actual FY'87 reductions is to generate more revenue through our proposal to increase the motor fuel tax from 8¢ to 16¢ per gallon. We estimate this will generate approximately $20 million in additional revenue. We recommend using this increase to help local governments and communities to pay for the increased M&O costs for those roads and highways removed from the state maintenance system. There may be other ways to generate further receipts, such as airport landing and tie-down fees, to offset other reductions. We will continue to review these possibilities.

SUMMARY

DOT&PF provides the state with numerous, essential transportation services. There is no doubt that transportation serves a critical economic role in a state such as ours. We fear pursuing major cuts, particularly in highway and aviation M&O, will only exacerbate our current problems.

Accordingly, until we can develop some of these proposals more fully, including greater acceptance by local communities of many of these responsibilities, it is imperative that we carefully analyze adoption of the large reductions we have identified, and if possible, find other revenues to avoid drastic reductions.

OVERVIEW OF QUESTIONS ASKED BY HOUSE FINANCE COMMITTEE MEMBERS DURING A PRESENTATION BY THE DEPARTMENT OF TRANSPORTATION.

Tuesday, January 26 1987, Commissioner Gutierrez and staff for the Department of Transportation gave a budget presentation and overview to the House Finance Committee.

Attached please find the Department's proposed FY 88 budget from the Governor's office and an overview of the proposed budget changes and cuts.
Much of the information presented at this meeting is in the attached DOT overview report. Rather than be repetitive I felt it may be helpful to update you on some of the questions raised by House Finance Committee members at this meeting.

1. Why have such substantial cuts been made in the areas of M & O and to the Alaska Marine Highway System?

   In 1985, major cuts were made in the areas such as management and design and construction. No cuts have been made in the AMHS and very minimal cuts, have been made in M & O during the previous few years budget cuts. Another point to consider is that when looking at the cuts made to AMHS these cuts reflect cuts from the 1987 "actual" figure and not the revised figures - therefore, the cut to AMHS is actually less than in other areas.

2. How did the department go about categorizing Class I, II and III roads - were they categorized on a user basis?

   No. The department felt that if roads were categorized on a user basis, heavily populated areas would have a great deal more Class I roads than rural areas. Several factors were taken into consideration including whether the road provides freight transportation needs (Valdez to Fairbanks), whether the road provides the only access to the area, how many people live in the area and numerous other factors where also taken into consideration. The department feels that this area is one that will need further consideration and will ask for community input and advice from local area DOT personnel to help prioritize the roads.

3. With the Capital Projects Cleanup, why can't we just get a computer print out of the total number of projects currently authorized? Then, compile a list of those projects that are physically under construction, complete these projects and start over again with all other projects so that are books and information would be correct and so that the problems with the Federal Government Highway on reimbursement of Federal dollars could be overcome? How long would it take to get this list?

It would be possible to compile a list and have it available in a very short time, 3-5 days. The department feels this would be very inaccurate as the problem is with billings not being made to projects. Therefore, it would take some time to figure out what monies had not been billed to projects and get the paper path moving along. Also, some projects are in the planning and design phase, some are under construction, some have been completed and require outstanding bills to be logged in before the project can be closed out. Because of the methods used for billing to the projects and the way in which project tracking has been done, the department now finds that there are currently thousands of projects that are in question.
Because of the poor accounting system information requested on projects before 1985 is difficult to provide accurately. The older the project, the harder it becomes to provide accurate information.

As of 6/30/85, the capital projects clean up list identified each project and the status of the project. When the department changed over to the new state accounting system this information was not recorded. The department is currently working on correcting the problems that exist.
Mr. Bob Poe has been hired to head up this project and the department is currently working on:

1. Correcting the Federal billing system problem. At the present time all bills submitted for Federal reimbursement receive a manual audit from the Feds before reimbursement is made. This is partly due to previous incorrect billings and also an inefficient system for compiling the bills.
   The department is in the process of requesting proposals for putting in place a system that will adequately perform all FHWA billings. The contract should be awarded within 45 days and the system should be in place in 6 months.

2. The department is also bringing on board two C.P.A.'s to help set up and administer the new accounting system.

4. Is there statutory language changes required to turn the Dalton Highway into a toll road? Is there anything that prevents turning a road that received consideral Federal funds into a toll road?

Based on discussions with the Department of law, DOT believes it advisable to amend As 19.40 to make it clear this arrangement would be legal, therefore yes, an amendment to the AS 19.40 would be required. The State of Alaska has a specific exemption from the requirements under Section 11.13 of the lands bill and relieves the state of any requirement to repay Federal monies used to build this road.

5. On the three tier maintenance program plan, is there some kind of legislation needed to establish a tier reduction program rather than the usual pro-rated reductions usually implemented?

The Department would like to investigate this further, As Mr. Hickey sees it now the statutes provide the Commissioner with a great deal of latitude to make these decisions. The department has administrative procedures in place as well as regulations which require the department to receive public input and recommendations however, at the present time it does not appear that anything legislative would be required.
This will need to be looked into further.

6. You refer to an increase in legal liability because of the reduced maintenance, could you explain further?

The Commissioner stated the department will have to state the level of service it will provide. He feels that if in fact, a road is open, there is a responsibility to provide a minimum level of maintenance on the road. The Commissioner is not sure what this level is and he feels the department will need to consult with the Attorney General's office for legal direction. However, he has raised the question and feels it must be addressed.

7. How will user fees on the Dalton Highway affect the lift axle? If the axle is on the truck would there be a toll for this axle? How is the department addressing the overall lift axle question?

In terms of the toll charge, if the axle were down and used for weight carrying purposes, it would be charged at the same level - $100/axle.
As far as the question on regulations, the department has suspended implementation of the regulation to give the department and the legislature a chance to look at some of the issues. There is considerable controversy about some of the issues and, frankly, with the rapid change in economic conditions this issue may require rethinking on how to phase in a proposal. The department still has some basic concerns. There are a lot of concerns about the safety of using the lift axle, the test performed by the department would suggest they are a problem and many drivers have stated to the department in hearings that they are a problem.

Enforcement is a problem because they are used for weight purposes at the scale houses and then in order to avoid wear and tear they are not used. The department is looking at a new proposal that would allow for lift axles to continue under certain conditions such as Washington has just done.
Steerable as opposed to fixed
Certification from the manufacturer that they are properly guaged to carry the weight they are carrying
Controls on the outside only
The department is still looking into this but feels this type of proposal may be acceptable.

8. Do you envision the $20 million revenue from doubling the motor fuel tax coming back to municipal governments through some sort of statutory shared taxes or how do you envision this? How does the $20 million relate to the actual cost of maintaining roads today?

The administration is going to propose legislation to provide for the pass back of this money. The total M & O cut talked about in Category I II and III is about $10 million. With the cuts taken in the past plus this years $10 million total cuts in the past few years in M & O will total about $20 million. This therefore should be sufficient to offset these cuts.

9. Who would have to pay for use of the toll road?

The proposal is a new proposal and has a charge for light vehicles, this charge would be less but there would be a charge for any user of the road on a structured basis.

10. Where do you place schools in the three category system?

It would be catagorized depending on whether the school is on a route. If the school is on a category III route we would be looking for the schools to take on the responsibility.
DOT may have to reconsider this categorizing and receive additional input.
Concerns were expressed by Senator Fischer about the roads to schools not being open and yet the constitutional requirement to provide education.
DOT will have to consider this.

11. Why is there an increase in the total dollars for the state equipment fleet, state planning and research and yet dramatic cuts are shown for M & O. What are the philosophical goals of the department?

The administrative sections, planning, research and administration is roughly 12% of the overall general fund dollars of the department budget. In FY 87 revised a large cut was made in these areas and none in AMHS and very little in O & M. The department would be willing to look at the budget more closely as the figures shown are not set. Until the department has a better feel for things such as the Capital Project cleanup they did not want to get rid of any available personnel.

HB 62

FISCAL NOTE ANALYSIS

During FY 84, the Department of Transportation and Public Facilities completed a program of reorganization. Basically, the efforts were toward regionalization of the Department and decentralization of the functions within its operation. As a result, Marine Highway System became a "region" or a stand alone operating unit headed by a Deputy Commissioner.

After almost three years of operating at the new level, the Alaska Marine Highway System has shaken-down internally with planned organization adjustments to ensure all functions previously accomplished outside the System are covered. The current organization with a minimum of additional positions would be required for independent operation as the "Alaska Marine Highway Authority". The new positions required are identified on the attached Request for New Position forms.

No funds for the increased operation of vessels are being requested in this fiscal note. Such an increase would require additional funds whether the System is managed as an Authority or under the present organization within the Department of Transportation and Public Facilities.

It is assumed the Authority would continue to utilize the State Accounting System and other State computer resources, including those needed to support our Reservations Management System. The requirements will remain the same under the current organization or an Authority.

The following assumptions were made:

1. The legislation would take effect July 1, 1987.

2. The "Alaska Marine Highway Authority's" time and attendance, personnel, and leave accounting computer systems will be completed with existing funding and will interface with existing State systems.

3. There would be an annual appropriation for full operating costs of the Authority each year that would include all revenues generated (Program Receipts) and a General Fund subsidy appropriation to cover the balance of costs needed to maintain the currently budgeted level of vessel operating schedules.

4. An inflation factor of five percent has been included for future years beyond FY 88.

5. The position of Deputy Commissioner would be converted to Executive Director and administrative support would be provided to the Board of Directors by the existing staff and the additional positions requested. No transfers of positions would be made from the Department of Transportation and Public Facilities.

6. The Authority would continue to use:

   A. State-owned office buildings.
   B. The State mail system
   C. The State equipment fleet.
   D. The statewide purchasing contracts (i.e. fuel).
   E. "Shared" communications lines.
   F. Insurance, bonding, etc., as now supplied.
   G. Legal services from the Attorney General's Office.

7. The Directors of the Authority would meet an average of three days per month, or thirty-six days per year.

DETAIL OF FY 88 COSTS

Rev. 9/16/86

POSITION PAPER
HB 62

House Bill 62 establishes the Alaska Marine Highway Authority as an independent public corporation for the operation, management, planning and construction of the State's marine highway system.

Section 19.70.040 specifies that the authority shall hire an executive director and may employ additional staff as necessary. The proposed language clearly and appropriately places the employees of the Authority in the classified service. However, the status of the executive director and legal counsel are not clearly delineated.

> "The executive director and legal counsel are in the exempt service under AS 39.25.110."

Also add another section to the bill which states:

> "AS 39.25.110 is amended by adding a new paragraph to read:
>
> (23) The executive director and legal counsel of the Alaska Marine Highway Authority."

The Department of Administration/Division of Personnel's position on this bill is neutral.

CS FOR HOUSE BILL NO. 74 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to motorcycle license plates."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 28.10.181(c) is amended to read:

(c) Special request plates. Upon application by the owner of a passenger vehicle, noncommercial van or pick-up truck, or motor home, the department may design and issue registration plates containing a series of not more than six letters or numbers or combination of letters and numbers as requested by the owner. Upon application by the owner of a motorcycle, the department may design and issue registration plates containing a series of not more than four letters or numbers or combination of letters and numbers as requested by the owner. The department may, in its discretion, disapprove the issuance of registration plates under this subsection when the requested symbols are a duplication of an existing registration or when the symbols are considered unacceptable by the department.

To: Representative Cato
Chair, House Transportation Committee

From: Representative Sund

Date: February 9, 1987

Subj: House Bill 74
Personalized Motorcycle License Plates
Scheduling Request

House Bill 74 would allow motorcycle owners to obtain personalized license plates. Car, truck and motor home owners already have this option. House Bill 74 simply adds motorcycles to the already established program.

Currently, the state charges an additional $30 license fee for personalized plates above the standard $35 fee for cars and motor homes and the $40 license fee for trucks and vans. The rate for motorcycle license fees is $20.

Allowing motorcycles owners to obtain personalized license plates would generate additional revenue to the state. Please see the attached fiscal analysis.

I would appreciate it if you could schedule HB 74 sometime in the near future.

CONTINUATION of FISCAL NOTE ANALYSIS

For Bill/Resolution No. HB 74

EXPENDITURES:

Contractual	
License Plates @ $2.50 x 250	.6
Postage @ $.76 x 250	.2
Total	.8

After the original impact of 250 personalized motorcycle license plates the first year, it is estimated there will be 50 such plates issued in FY89 and subsequent years.

REVENUES:

FY88 is based on issuance of 250 personalized motorcycle license plates at cost to owner of $30 per plate.

FY89 and subsequent years based on issuance of 50 new personalized motorcycle license plates per year.

INFORMATION:

As a result of the FY88 budget decrement the Division of Motor Vehicles may discontinue issuing personalized license plates as of July 1, 1987.

It is realized there will be few requests for personalized motorcycle plates. However, if the position in the Special Programs Unit of DMV, which now issues personalized plates, is not funded in the operating budget it is the intent of the department to not issue any personalized license plates under AS 28.10.181(c), including motorcycles.

The department feels it would not be appropriate to request funding in this fiscal note for a part-time position so personalized plates could be issued only to motorcycle owners if we discontinue issuing such plates to the other classes of vehicles that are now eligible. It is also felt it would be inappropriate to request funding in this fiscal note to reestablish a position that may be deleted in the operating budget when the majority of the position's duties are not affected by this bill.

BILL NO: HB 74 DATE: January 30, 1987

TITLE: An Act relating to motorcycle license plates

CONTACT: Bill Brown
465-4335

Current law authorizes the issuance of personalized (vanity) license plates for use on passenger vehicles, noncommercial vans or pickup trucks, and motor homes. This bill includes motorcycles as a type of vehicle for which the department may issue personalized plates.

The inclusion of motorcycles as a class of vehicle that would be eligible for a personalized license plate would have a slight impact on the department. Special plates do require extra processing and handling, thus take considerable more time when originally applied for than a regular registration.

As a result of the FY88 budget decrement the Division of Motor Vehicles may discontinue issuing personalized license plates as of July 1, 1987. It is realized there will be few requests for personalized motorcycle plates. However, if the position in the Special Program Unit of DMV, which now issues personalized plates, is not funded in the operating budget it is the intent of the department to not issue any personalized license plates under AS 28.10.181(c), including motorcycles.

The department is oppossed to this bill because it is felt that a time when we are cutting positions and functions is not the time to be adding additional duties.

JUNEAU, ALASKA 99802-0020

DIVISION OF MOTOR VEHICLES

PHONE: (907)465-2650

February 3, 1987

The Honorable John Sund
Alaska State Legislature
P.O. Box V
Juneau, Alaska 99811

Dear Representative Sund:

Enclosed is a draft of a fiscal note which the department will submit for the proposed House State Affairs committee substitute to HB 74, which changes the number of digits authorized on a personalized license plate from six to seven.

The division has turned down several requests in the past for seven digit plates. Thus, it is felt there would be a large influx the first year, and a new position would be requested to handle that increase. I would again like to emphasize it is currently our intent to discontinue issuing personalized license plates on July 1, 1987, because of necessary budget cuts. This would apply even if the amended version were to pass with the new position. The one position could not handle the increase, plus the current workload.

Our main priority must be to provide the basic services to the public at our field offices, rather than providing non-essential services to a select few. This is the reason the position who currently handles personalized license plates was cut rather than a position who works the counter in a field office.

An item which was brought to my attention today is that a motorcycle license plate with six digits, let alone seven, would take away part of the basic purpose of a license plate, which is to provide identification of a vehicle from a distance. The motorcycle license plate is considerably smaller than a regular license plate, thus it was felt a maximum of four or five digits, preferably four, should be allowed for these plates.

If you have any questions, or I can be of any other assistance, let me know.

Sincerely,

Bill Brown
Chief of Driver Services

One Motor Vehicle Rep III, Anchorage (full time first year, part time second and subsequent years)	31.4	31.4
Contractual		
Data Processing changes	25.0*	
License Plates 5,000 @ $5.00	25.0	
250 @ $2.50 (m/c)	.6	
Postage 5,000 plates @ 1.75 per set	8.8	
250 plates @ $.76 per plate	.2	
General correspondence 2,625 @ $.22	.8	
Printing Temporary registrations 5,250 x .07	.4	
Total	60.8	60.8
Commodities		
Normal Office Supplies	.1	.1
	Total	92.3

*One time charge

REVENUES:

FY88 is based on issuance of 5,000 regular personalized license plates with 7 digits, and 250 motorcycle personalized license plates at the cost to the owner of $30.00 per application.

FY89 and subsequent years based on issuance of 500 regular personalized license plates, over and above the current trend, and 50 new motorcycle personalized license plates per year.

INFORMATION:

This fiscal note reflects what the increased cost would be to issue personalized license plates to motorcycles, and increase the number of digits on personalized plates from six to seven.

The position in the Special Programs Unit of DMV which now handles personalized plates is not funded in the FY88 operating budget due to the required decrement. The new position requested in this fiscal note would not be able to handle the increase, plus current workload of the deleted position.

Therefore, it is the current intent of the department to not hire the position requested in this fiscal note, and to discontinue issuing personalized license plates on July 1, 1987.

Dear Representative Cato:

During the hearing on HB 74 on February 16, 1987, you requested some data concerning the number of license plates DMV issues for no fee and to charitable organizations. The last year for which these figures are currently available is calendar year 1985.

The no fee plates are as follows:

Handicapped	978
Disabled	70
Amateur Radio Op.	365
Prisoner of War	28
Senior Citizen	8,821

The number of charitable organization plates, which includes churches and non-profit organizations, was 2,472. There is a $5.00 registration fee for these vehicles.

If I can be of any further assistance let me know.

Sincerely,

Bill Brown

IN THE HOUSE

CS FOR HOUSE BILL NO. 78 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the operation of farm equipment on state highways."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 19.10.060 is amended to read:

Sec. 19.10.060. REGULATION OF WEIGHT AND LOAD OF VEHICLES AND USE OF HIGHWAYS DURING CERTAIN SEASONS. The department, with respect to highways under its jurisdiction, may

(1) establish limitations on weight, size, and load of vehicles, except as otherwise provided in AS 19.10.065;

(2) [REPEALED

(3)] prohibit the operation or impose restrictions on vehicular use of highways during certain seasons of the year.

* Sec. 2. AS 19.10 is amended by adding a new section to read:

Sec. 19.10.065. OPERATION OF FARM EQUIPMENT ON HIGHWAYS. (a) Implements of husbandry, as defined by regulation under AS 28.05.011, are not subject to restrictions adopted under AS 19.10.060(1) unless the implement is the load of another vehicle. Implements of husbandry may be operated on highways subject to the department's jurisdiction without obtaining a permit, as provided in this section.

(b) The incidental operation of an implement of husbandry up to 12 feet wide on a state highway is authorized without a permit if the implement

(1) is operated only during daylight hours;

(2) displays a slow-moving vehicle emblem on the rear of

the implement;

(3) displays a red flag on the implement in a location that affords greatest visibility; and

(4) is moving from one farm operation to another within 50 miles of the home base of the implement of husbandry.

(c) An implement of husbandry that is more than 12 feet wide may be operated on a state highway without a permit if it meets the provisions of (b) of this section and is preceded by a pilot car during operation on the highway.

* Sec. 3. AS 28.10.011 is amended to read:

Sec. 28.10.011. VEHICLES SUBJECT TO REGISTRATION. Every vehicle driven, moved, or parked upon a highway or other public parking place in the state shall be registered under this chapter except when the vehicle is

(1) driven or moved on a highway only for the purpose of crossing the highway from one private property to another, including an implement of husbandry as defined by regulation;

(2) driven or moved on a highway under a dealer's plate or temporary permit as provided for in AS 28.10.031 and 28.10.181(j);

(3) special mobile equipment as defined by regulation;

(4) owned by the United States;

(5) moved by human or animal power;

(6) exempt under 50 U.S.C. App. 501-591 (Soldier's and Sailor's Civil Relief Act);

(7) driven or parked only on private property;

(8) the vehicle of a nonresident as provided under AS 28.10.121;

(9) a commercial interstate vehicle under AS 28.10.141;

(10) transported under a special permit under AS 28.10.151;

(11) being driven or moved on a highway, vehicular way, or a public parking place in the state that is not connected by a land highway or vehicular way to

(A) the land-connected state highway system, or

(B) a highway or vehicular way with an average daily traffic volume greater than 499;

(12) a mobile home as defined by regulation;

(13) an implement of husbandry operated in accordance with the provisions of AS 19.10.065.

MEMORANDUM

TO: Representative Bette Cato, Chairman,
House Transportation Committee

FROM: Representative Mike Miller

RE: House Bill 78, "An Act relating to the operation of farm equipment on state highways."

DATE: 4/14/87

I would like to formally request that House Bill 78 be scheduled for a hearing before the House Transportation Committee.

HB 78 was heard by the House Labor and Commerce Committee on Tuesday, April 14th at which time, a committee substitute was adopted. The bill will now be formally referred to the Transportation Committee during the House floor session Wednesday, April 15th.

If you have any questions regarding this request, please contact me at 465-4976.

MEMORANDUM

TO: Representative Mike Miller

FROM: Staff

RE: Analysis of CS HB 78(L&C), "An Act relating to the operation of farm equipment on state highways."

DATE: 4/14/87

Section 1

Amends the current statutory authority of the Department of Commerce and Economic Development to regulate the weight, size, and load of vehicles operating on the State highway system. Adds an exemption which is outlined in section 2 of the bill.

Section 2

Adds a new statutory section allowing implements of husbandry to operate on the State highway system without obtaining a permit. This section also establishes four criteria, for implements up to 12 feet in width, that must be met to qualify for the permit exemption. The implement may only be operated on the highway system during daylight hours. A slow-moving vehicle emblem must be displayed on the rear of the implement. The implement must display a red flag where it affords the greatest visibility. The permit exemption is only good for moves within a 50 mile radius of the implements home base.

Implements that exceed 12 feet in width are eligible for the permit exemption if they meet the four requirements for narrower implements and are preceded by a pilot car during operation on the highway.

Section 3

Adds implements of husbandry to the list of vehicles that are exempt from the motor vehicle registration requirements of AS 28.10.011.

Dear Representative Miller:

We recommend inserting the following language on page 1, line 24, of House Bill 78:

..." without obtaining a permit [,as] while moving from one farming operation to another within fifty (50) miles of the home base of the implement of husbandry and as further provided in this section."

The purpose of this language is to allow the movement of equipment from one field to another or from the farm's equipment storage area to a field under its own power, yet not allow the equipment to be moved from, for example, the Point McKenzie area to Anchorage for repair. When traveling distances greater than fifty miles, we feel the equipment should be loaded on a truck and a permit required.

With this change, we are in support of this legislation. We feel that this will provide the necessary flexibility during the short growing season.

Sincerely,

Joe Swanson
Director

JS:cs/P.5.

cc: John Williams, Deputy Commissioner
Department of Commerce and
Economic Development

Position Paper

BILL NO: HB 78

APPROVED: Mark S. Hickey
Commissioner

TITLE: An Act Relating to the Operation of Farm Equipment on State Highways

DATE:

The proposed legislation would considerably relax existing restrictions concerning the movement of farm equipment on state highways.

The legislation does not directly impact the department, but could create unsafe conditions for other highway users as noted below:

(1) For "daylight hours", certain restrictions should apply to prevent movement where high-speed traffic conditions exist. "Daylight hours" should also be defined as in the existing DCED Permit Manual.

(2) A permit should always be required in order to apply any load controls for a particular piece of equipment in a given area.

(3) "Oversize" signs and flashing lights should be required for those slow moving pieces of equipment the same as would be required for any other wide-load move - especially as most rural farm state routes have limited sight distance.

(4) Since most rural state roads have driving lanes less than twelve feet in width, any movement of slow farm equipment over ten feet in width should have at least one pilot car.

(5) By allowing farm implements of widths greater then 8 1/2 feet to use highways without a permit there would be no way of revoking their movement if safety problems result. A revocation section should be added to the existing proposal.

In summary, since the department is concerned with providing safe facilities for the motoring public, we feel the above items should be considered in the development of your legislation. Most of the above information was taken from the attached Washington regulations.

For further information call Susan Fleischhauer at 465-3900.

and remove the unit from the highway when any of the above conditions exist which could create an unsafe movement.

WAC 468-38-270 Construction equipment. Pursuant to RCW 46.44.091(3), permits may be issued to move equipment on approved highways whose single axle weight is not more than 45,000 pounds if operating on single pneumatic tires having a rim width of 20 inches or more and a rim diameter of 24 inches or more. If the vehicle has dual pneumatic tires, the rim width shall be at least 16 inches and the rim diameter shall be at least 24 inches.

WAC 468-38-280 Special Equipment. Special equipment employing axle groupings other than the conventional single or tandem axle must first be approved by the department before permits will be granted authorizing the unit to operate on state highways.

A retractable axle carrying weight allowed under RCW 46.44.041 shall have a manufacturer's rating of at least 10,000 pounds, shall be self-steering, and shall have the capacity to be activated only from outside the driver's compartment: PROVIDED, The requirement that controls be activated only from outside the driver's compartment shall not apply to existing trucks presently equipped with hydraulically loaded lift axles which presently can be activated inside the driver's compartment.

WAC 468-38-290 farm implements.

(1) Farm implement means any device that directly affects the production of agricultural products. For purposes of this section, it must weigh less than forty-five thousand pounds. It must move on pneumatic tires when on public highways and must be less than twenty feet wide.

Spray rigs including fertilizer or chemical applicator rigs or equipment auxiliary to any of these rigs are farm implements.

(2) Permits: Farm implements less than fourteen feet wide do not require a special permit for movement on state highways other than fully controlled limited access highways.

A quarterly or annual permit to move farm implements may be purchased by a farmer or by a person engaged in the business of selling or maintaining farm implements. Such a permit or copy will allow the person or company identified on the permit to draw, drive, or haul any farm implement on state highways.

(3) Movements of oversize farm implements are subject to the following regulations:

(a) An unescorted farm implement shall travel at least five hundred feet behind other vehicles so as to allow other drivers to pass.

(b) If five or more vehicles line up behind a farm implement, the operator of the farm implement shall pull off the road at the first point wide enough to allow traffic to pass safely.

(c) Oversize farm implements may be moved only during daylight hours. Such movements are prohibited at the times and on the those days listed in WAC 468-38-230.

The department may permit movements outside daylight hours during an emergent harvest season to a company or farmer who requests and receives permission in writing. Pilot cars are required for such movements as prescribed in subsection (4)(c) of this section.

(d) Convoying with pilot cars may be used to move farm implements. Two-way radio equipment shall be provided to the pilot cars.

(e) Lights: Requirements for hazard warning lights visible from one thousand feet, clearance lights, reflectors, and other lights shall be as prescribed in RCW 46.37.160.

(4) Flags, signs, and escorts are required for the movement of farm implements as follows:

(a) Flags: If the farm implement is over eight and one-half feet wide, it must display red flags at least twelve inches square so as to wave freely on all four corners of the vehicle and at the extreme ends of all protrusions, projections, or overhangs.

(b) Signs: If the farm implement is over eight and one-half feet wide, OVERSIZE LOAD signs visible to oncoming and overtaking traffic must be displayed. These signs must meet the requirements of WAC 468-38-190. A farm implement preceded and followed by pilot cars is not required to display such signs.

(c) Escort cars: On two-lane state highways, escort cars must precede and follow if the farm implement is over twelve and one-half feet wide. Vehicles or loads whose width is between ten and twelve and one-half feet are exempt from having escort cars only when operating within fifty miles of the business owning the equipment.

On multiple-lane state highways, one escort car in the rear is required if vehicle or load is more than fourteen feet wide.

Other requirements for escort cars and their operation are prescribed by WAC 468-38-110.

When approval to use a flagnerson instead of an escort vehicle is given, the permit shall specifically state that exemption.

(d) Posting a route may be used in lieu of escort cars if the route to be traveled is less than two miles. Signs reading OVERSIZE VEHICLE MOVING AHEAD on a square at least three feet on each side shall be placed at points before the oversize farm implement enters or leaves the highway and at any entry points along the way. These signs must be removed immediately after the oversize movement has been completed.

(6) Any other provision of law to the contrary notwithstanding, district courts having venue have concurrent jurisdiction with the superior courts for the imposition of any penalties authorized under this section.

(7) For the purpose of determining additional penalties as provided by subsection (2) of this section, "excess weight" means the poundage in excess of the maximum gross weight prescribed by RCW 46.44.042 and 46.44-.041 plus the weights allowed by RCW 46.44.047, 46-.44.091, and 46.44.095.

(8) The penalties provided in subsections (1) and (2) of this section shall be remitted as provided in chapter 3.62 RCW or RCW 10.82.070. For the purpose of computing the basic penalties and additional penalties to be imposed under the provisions of subsections (1) and (2) of this section the convictions shall be on the same vehicle or combination of vehicles within a twelve-month period under the same ownership.

(9) Any state patrol officer or any weight control officer who finds any person operating a vehicle or a combination of vehicles in violation of the conditions of a permit issued under RCW 46.44.047, 46.44.090, and 46.44.095 may confiscate the permit and forward it to the state department of transportation which may return it to the permittee or revoke, cancel, or suspend it without refund. The department of transportation shall keep a record of all action taken upon permits so confiscated, and if a permit is returned to the permittee the action taken by the department of transportation shall be endorsed thereon. Any permittee whose permit is suspended or revoked may upon request receive a hearing before the department of transportation or person designated by that department. After the hearing the department of transportation may reinstate any permit or revise its previous action.

Every permit issued as provided for in this chapter shall be carried in the vehicle or combination of vehicles to which it refers and shall be open to inspection by any law enforcement officer or authorized agent of any authority granting such a permit.

Upon the third finding within a calendar year of a violation of the requirements and conditions of a permit issued under RCW 46.44.095 as now or hereafter amended, the permit shall be canceled, and the canceled permit shall be immediately transmitted by the court or the arresting officer to the department of transportation. The vehicle covered by the canceled permit is not eligible for a new permit for a period of thirty days.

(10) For the purposes of determining gross weights the actual scale weight taken by the arresting officer is prima facie evidence of the total gross weight.

The chief of the state patrol, with the advice of the department, may adopt reasonable rules to aid in the enforcement of this section. [1985 c 351 § 6; 1984 c 258 § 327; 1984 c 7 § 58; 1979 ex.s. c 136 § 75; 1975 '76 2nd ex.s. c 64 § 23.]

Rules of court: Monetary penalty schedule——JTIR 6.2.

Court Improvement Act of 1984——Effective dates——Severability——Short title——1984 c 258: See notes following RCW 3.30.010.

Intent——1984 c 258: See note following RCW 3.46.120.

Severability——1984 c 7: See note following RCW 47.01.141.

Effective date——Severability——1979 ex.s. c 136: See notes following RCW 46.63.010.

Effective dates——Severability——1975-'76 2nd ex.s. c 64: See notes following RCW 46.16.070.

RCW 46.44.110 Liability for damage to highways, bridges, etc. Any person operating any vehicle or moving any object or conveyance upon any public highway in this state or upon any bridge or elevated structure that is a part of any such public highway is liable for all damages that the public highway, bridge, or elevated structure may sustain as a result of any illegal operation of the vehicle or the moving of any such object or conveyance or as a result of the operation or moving of any vehicle, object, or conveyance weighing in excess of the legal weight limits allowed by law. This section applies to any person operating any vehicle or moving any object or contrivance in any illegal or negligent manner or without a special permit as provided by law for vehicles, objects, or contrivances that are overweight, overwidth, overheight, or overlength. Any person operating any vehicle is liable for any damage to any public highway, bridge, or elevated structure sustained as the result of any negligent operation thereof. When the operator is not the owner of the vehicle, object, or contrivance but is operating or moving it with the express or implied permission of the owner, the owner and the operator are jointly and severally liable for any such damage. Such damage to any state highway or structure may be recovered in a civil action instituted in the name of the state of Washington by the department of transportation. Any measure of damage to any public highway determined by the department of transportation by reason of this section is prima facie the amount of damage caused thereby and is presumed to be the amount recoverable in any civil action therefor. [1984 c 7 § 59; 1961 c 12 § 46.44.110. Prior: 1937 c 189 § 57; RRS 6360-57.]

Severability——1984 c 7: See note following RCW 47.01.141.

RCW 46.44.120 Liability of owner, others, for violations. Whenever an act or omission is declared to be unlawful in chapter 46.44 RCW, the owner or lessee of any motor vehicle involved in such act or omission is responsible therefor. Any person knowingly and intentionally participating in creating an unlawful condition of use, is also subject to the penalties provided in this chapter for such unlawful act or omission.

If the person operating the vehicle at the time of the unlawful act or omission is not the owner or lessee of the vehicle, such person is fully authorized to accept the citation and execute the promise to appear on behalf of the owner or lessee. [1980 c 104 § 2; 1971 ex.s. c 148 § 1; 1969 ex.s. c 69 § 1.]

RCW 46.44.130 Farm implements——Gross weight and size limitation exception——Penalty. The limitations of RCW 46.44.010, 46.44.020, 46.44.030, and 46-.44.041 shall not apply to the movement of farm implements of less than forty-five thousand pounds gross weight, a total length of seventy feet or less, and a total outside width of fourteen feet or less when being moved while patrolled, flagged, lighted, signed, and at a time of

day in accordance with rules hereby authorized to be adopted by the department of transportation and the statutes. Violation of a rule adopted by the department as authorized by this section or a term of this section is a traffic infraction. [1979 ex.s. c 136 § 76; 1975 '76 2nd ex.s. c 64 § 20; 1975 1st ex.s. c 168 § 3; 1973 1st ex.s. c 1 § 1.]

Effective date——Severability——1979 ex.s. c 136: See notes following RCW 46.63.010.

Effective dates——Severability——1975-'76 2nd ex.s. c 64: See notes following RCW 46.16.070.

Effective date——1975 1st ex.s. c 168: See note following RCW 46.44.091.

RCW 46.44.140 Farm implements——Special permits——Penalty. In addition to any other special permits authorized by law, special permits may be issued by the department of transportation for a quarterly or annual period upon such terms and conditions as it finds proper for the movement of (1) farm implements used for the cutting or threshing of mature crops; or (2) other farm implements that may be identified by rule of the department of transportation. Any farm implement moved under this section must have a gross weight less than forty-five thousand pounds and a total outside width of less than twenty feet while being moved, and such movement must be patrolled, flagged, lighted, signed, at a time of day, and otherwise in accordance with rules hereby authorized to be adopted by the department of transportation for the control of such movements.

Applications for and permits issued under this section shall provide for a description of the farm implements to be moved, the approximate dates of movement, and the routes of movement so far as they are reasonably known to the applicant at the time of application, but the permit shall not be limited to these circumstances but shall be general in its application except as limited by the statutes and rules adopted by the department of transportation.

A copy of the governing permit shall be carried on the farm implement being moved during the period of its movement. The department shall collect a fee as provided in RCW 46.44.0941.

Violation of a term or condition under which a permit was issued, of a rule adopted by the department of transportation as authorized by this section, or of a term of this section is a traffic infraction. [1984 c 7 § 60; 1979 ex.s. c 136 § 77; 1973 1st ex.s. c 1 § 2.]

Severability——1984 c 7: See note following RCW 47.01.141.

Effective date——Severability——1979 ex.s. c 136: See notes following RCW 46.63.010.

RCW 46.44.150 Highway improvement vehicles——Gross weight limit excesses authorized——Limitations. The state, county, or city authority having responsibility for the reconstruction or improvement of any public highway may, subject to prescribed conditions and limitations, authorize vehicles employed in such highway reconstruction or improvement to exceed the gross weight limitations contained in RCW 46.44.041 and 46.44.042 without a special permit or additional fees as prescribed by chapter 46.44 RCW, but only while operating within the boundaries of project limits as defined in the public works contract or plans. [1983 c 3 § 121; 1975 1st ex.s. c 63 § 1.]

RCW 46.44.160 Monthly or quarterly permits for additional tonnage. When vehicles for which licensed tonnage has been purchased on a monthly or quarterly basis pursuant to RCW 46.16.135 or 46.85.120 as now or hereafter amended, then the additional tonnage provided for in RCW 46.44.095 may be purchased on a monthly or a quarterly basis: *Provided*, That the total additional tonnage purchased under RCW 46.44.095 is not less than six thousand pounds. The fee for a monthly permit shall be one-twelfth the amount charged for a corresponding twelve-month period, and the fee for a quarterly permit shall be one-fourth the amount charged for a corresponding twelve-month permit, and shall further be reduced by one-twelfth for each full calendar month of the quarter that has elapsed at the time the quarterly permit is purchased. In addition, a fee of five dollars shall be charged for each monthly or quarterly permit issued hereunder.

The quarterly periods covered by this section shall be registration quarters consisting of three registration months. The first quarter shall commence with registration month one. [1981 c 229 § 1; 1975-'76 2nd ex.s. c 64 § 21; 1975 1st ex.s. c 196 § 1.]

Effective dates——Severability——1975-'76 2nd ex.s. c 64: See notes following RCW 46.16.070.

RCW 46.44.170 Mobile home movement special permit and decal——County treasurer certification of taxes paid——Vehicle license plates——Rules. (1) Any person moving a mobile home as defined in RCW 46.04.302 upon public highways of the state must obtain a special permit from the department of transportation and local authorities pursuant to RCW 46.44.090 and 46.44.093 and shall pay the proper fee as prescribed by RCW 46.44.0941 and 46.44.096.

(2) A special permit issued as provided in subsection (1) of this section for the movement of any mobile home shall not be valid until the county treasurer of the county in which the mobile home is located shall endorse or attach thereto his certificate that all property taxes due in that calendar year, and all delinquent taxes upon the mobile home being moved have been satisfied. Further, any mobile home required to have a special movement permit under this section shall display an easily recognizable decal: *Provided*, That endorsement or certification by the county treasurer and the display of said decal is not required when a mobile home is to enter the state or is being moved from a manufacturer or distributor to a retail sales outlet or directly to the purchaser's designated location or between retail and sales outlets. It shall be the responsibility of the owner of the mobile home or the agent to obtain such endorsement from the county treasurer and said decal.

(3) Nothing herein should be construed as prohibiting the issuance of vehicle license plates for a mobile home,

Lights: Flashing amber lights at least 6 inches in diameter shall be mounted on the upper outer edges of the rear of the trailing unit. They shall be in good working order, and clearly visible, and meet the requirements of WAC 468-38-110(12).

County Treasurer Validation: If a mobile home is to be moved on public highways, the county treasurer of that county must certify that all property taxes due on that mobile home have been paid (RCW 46.44.170). A decal indicating that county taxes have been paid must be affixed to the mobile home. This is an essential element of the permit, and the permit is invalid without it.

FARM IMPLEMENTS

Definition: A farm implement means any device that directly affects the production of agricultural products. It does NOT include:

a. Implements having a gross weight of 45,000 pounds or more;

b. Those more than 20 feet wide;

c. Those not equipped with pneumatic tires when operating on the highway surface; or

d. Those more than 14 feet wide unless used for the harvest of mature crops.

Permits: Farm implements do not need permits to operate on the state highway system unless they are more than 14 feet wide except that permits are required to operate any oversize farm vehicle on the interstate system (WAC 468-38-290).

Vehicles not meeting the criteria of "farm implements" must have permits to be driven or drawn on state highways.

Regulations for the Movement of Farm Implements:

a. If the implement is more than 8½ feet wide, it must display bright red flags at least 12 inches square on all four corners and on any protrusions.

b. It must keep at least a 500 foot distance between itself and other vehicles. If five or more vehicles line up behind it, it must pull off the roadway to let the traffic clear.

c. Movement may be made only during daylight hours and when visibility is at least 1,000 feet. If an emergency exists, WSDOT or the Washington State Patrol may allow nighttime movements with escort cars. In that case, the farm implement must be properly lighted and have two 4 inch double face flashing amber lights positioned at the widest points on the farm implement.

d. On two-lane highways, if the implement is over 8½ feet but less than 12½ feet wide, OVERSIZE LOAD signs in front and back must be attached; if 12½ to 20 feet wide, escort cars must precede and follow as well.

Vehicles between 10 and 12-1/2 feet wide are exempt from escort car requirements only when operating within 50 miles of the business owning the equipment.

e. On a multiple-lane highway, if the implement is over 8½ but less than 14 feet wide, the implement shall have an OVERSIZE LOAD sign on the rear; if between 14 to 20 feet wide, an escort vehicle shall follow as well.

f. A flagperson may be used under some circumstances when stipulated on the permit. A route may be posted indicating movement of farm implements under some conditions. (See WAC 468-38-290.)

g. Farm implements may be moved in convoy when escort cars are equipped with two-way radio equipment.

Alaska State Troopers

DEPARTMENT OF PUBLIC SAFETY / / BILL BOARD

To allow for movement of farm equipment upon roadways and provide guidelines, requirements, and restrictions for such movements.

This version of HB 78 contains no changes which alter the original position of the Division of Alaska State Troopers. It clarifies AS 19.10.065(B)(1) as to daylight hours, (3) as to placement of the red flag and (4) limits distance allowed to within 50 miles from home base. All of these changes are of a positive nature and make the statute more easily understood.

The Division of Alaska State Troopers is neutral on this legislation.

DEPARTMENT OF PUBLIC SAFETY / / /

TYPES OF PERMITS

Throughout this manual we refer to vehicles and vehicles with loads. It is important to distinguish between the two.

Permits may be issued for vehicles that exceed the legal limitations. These permits may be issued for vehicles capable of being driven on a highway but which are designed for purposes other than the transportation of a load upon a highway. Examples of such vehicles may be self propelled cranes, off road construction equipment or other road maintenance equipment.

Permits may be issued for vehicles with loads that exceed the legal limitations. These permits are intended to allow the transportation of a non-reducible load on a standard size vehicle or on specialized hauling equipment that is designed for the transportation of non-reducible oversize or overweight loads.

Permits may be issued for certain specialized hauling equipment designed to transport oversize and overweight loads. These permits are issued to allow the movement of the trailer with or without a load. Permits may be issued for extended periods to allow the movement of the empty or loaded trailer. Normally, a load that extends beyond the width or length of an overwidth trailer will require a single trip permit. It must also be understood that the permit allowing the use of specialized equipment does not authorize loading side by side, stacking or loading end to end. This permit is designed to allow the movement of equipment that would not normally be transported on a legal trailer. An example of such specialized hauling equipment is a ten foot wide lowboy.

Oversize and/or overweight permits may be issued for various lengths of time as described below:

1. Single Trip: One move from origin to destination and return for a specific period of time. Usually one day unless the move is of a greater distance.

2. Extended Period Permits (monthly periods for up to a maximum of one year)

   A. Vehicles

      1. Vehicle dimensions may not exceed:

         a. 10 feet wide
         b. 15 feet high
         c. Legal length including front and/or rear overhangs not to exceed 10 feet.

   B. Vehicles with Loads

      1. Truck-tractor semi-trailer:

         a. Vehicle may not exceed legal length or width.

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5145 HTRA HB 78 - HB 94

717

b. When loaded with a non-reducible load and with proper lighting, the maximum dimensions may be:

(1) 10 feet wide
(2) 15 feet high
(3) 75 feet long, including overhangs. The maximum overhang, front and/or rear, is 10 feet.

NOTE: Normally, when empty, stretch trailers must meet legal limitations. When loaded, the above dimensions apply.

2. Specialized hauling equipment:

a. Lowboys

(1) Lowboy trailer may be a maximum of 10 feet wide without the use of outriggers.
(2) When loaded with a non-reducible load and with proper lighting, the maximum dimensions may be:

(a) 10 feet wide
(b) 15 feet high
(c) 75 feet long, including overhangs. The maximum overhang, front and/or rear, is 10 feet.

3. Multi-Move: Issued for a period of 30 days when numerous moves are involved for the same piece of equipment. The permit must be filled out in full leaving out date of move, origin, and destination. Each time the piece of equipment is moved, the user must call the issuing office for approval of the move.

4. Pre-Issue: A number of permits up to ten per applicant, issued in advance, for a specific type of load or move which is moved frequently (mobile homes, trusses, etc.). Permit usage must be made within a 30 day period and used for only one move. These permits are completed in their entirety but lack the date, time, origin, destination, and route of movement. This portion is completed by the applicant after verification of the move and approval from the issuing permit office.

5. Seasonal: A permit issued to government agencies and public utilities only, exceeding 30 days but not exceeding 12 months, for equipment used exclusively in the maintenance of highways and other public facilities.

6. Doubles: An authorization agreement is used to allow truck-tractor and trailers in a doubles configuration to the maximum length of 105 feet on the Glenn Highway from Anchorage to Palmer, the Parks Highway from Fairbanks to its junction with the Glenn Highway, and the Richardson Highway from Fairbanks to Delta Junction or other designated routes as determined by the Department of Transportation and Public Facilities, Department of Public Safety or the Department of Commerce and Economic Development. Loads must be of legal weight, width, and height.

7. Convoys: No more than two mobile homes being towed on their own axles or three self propelled off the road type vehicles shall be allowed per convoy, or a total combined vehicle length of 200 feet (including pilot

7. *Convoys: Oversize vehicles or vehicles with loads may be authorized to move in convoy when there are no more than two vehicles with loads or three off the road type vehicles in a convoy and the overall length of the convoy, including pilot cars, does not exceed 200 feet. The maximum width of vehicles or vehicles with loads, in convoy, is 14 feet. Each permit application for convoy will be considered individually and, when justified, convoy permits may be issued when criteria for weather, road conditions, traffic, and safety are met. Convoys are not allowed in city areas.*

Convoy permits shall be single trip permits only.

"Oversize" signs for each convoy shall clearly state the number of units in the convoy, with one pilot car required in front and one pilot car in the rear. The permit shall stipulate that a maximum distance of 1,000 feet between each convoyed unit is allowed during travel status and, if two convoys are involved, a distance of one mile must be maintained between the rear pilot car of the first convoy and the front pilot car of the rear convoy at all times.

The issuance of the permit stipulates that traffic behind a convoy shall not be allowed to build unreasonably. Where it is not feasible to pull off the roadway, convoys must come to a stop and flagpersons equipped with hand paddles and red flags are required to direct the traffic buildup. A violation of this restriction may result in voiding the permit and may be grounds for denial of future permits.

8. Equipment Engaged in Snow Removal: Special permits may be issued for equipment engaged in snow removal operations. Maximum widths allowed are 12'0" for graders and 10'0" for loaders and are to be issued on a seasonal basis. These permits will be marked: "Valid for Snow Removal Operations Only" and are not valid for general construction use.

   Other conditions of the permit are that equipment operated during the hours of darkness or adverse weather conditions shall be equipped with stop lights, taillights, clearance lights, and reflectors mounted on extremities. In areas of high traffic volume, no movement is allowed from 7 to 8 a.m. and 4:30 to 6 p.m., Monday through Friday, unless an emergency or snow removal is in progress. Amber rotating or flashing beacons visible for a distance of 1,000 feet under normal conditions are required. "Oversize" signs and pilot cars shall be waived when engaged in a working status but are required when in a general travel status.

9. Exceptions: Exceptions are listed here for clarification:

   A. Bulk (dry) Cement - Vehicles must be legal in all dimensions and combined vehicle weight. A permit may be issued to allow for the shifting of the load as long as the legal gross weight is not exceeded. Applicant agrees to use all care in loading to maintain legal axle loadings. Permits may be issued for seasonal periods.

   B. Car Carriers - Maximum height 15 feet, 6 inches and overall length including overhangs not to exceed 85 feet. Car carriers may travel 24 hours a day, seven days a week, including holidays, on specific designated routes. Permits may be issued for extended periods.

   C. Cylindrical Hay Bales - Bales may be loaded side by side provided that the maximum width does not exceed 10 feet. The vehicle with load must be legal in all other respects. Movement is restricted to daylight hours only, and to the normal peak traffic restrictions. Permits may be issued for extended periods.

D. Farm Equipment - Vehicles may move Saturday and Sundays from one field to another during harvest season or emergency situations only. Ordinarily, integral components of farm equipment need not be removed on movements within a 50 mile radius of the point of origin. No movement will be allowed in town during 7:00 a.m. to 8:00 a.m. and 4:30 p.m. to 6:00 p.m., Monday through Friday or past noon on Saturdays, all day Sunday or holidays. Each towing or self propelled vehicle must have its own individual permit.

E. Construction Equipment - Ordinarily, removal and separate transport of appurtenances will not be required for a move within a 50 mile radius of point of origin if weight is not a detriment to the roadway and bridges involved in the route of travel. Generally, outside of the local boundary areas (defined as a 50 mile radius), appurtenances will require removal, however, equipment with appurtenances attached may move outside a local boundary area if weight is legal and width does not exceed 10 feet.

F. Tanks - Loads may be stacked in a pyramid fashion as long as the dimensions do not exceed 15 feet high, 10 feet wide, and legal length. Weight must be legal. Permits may be issued for an extended period.

G. Truck Mounted Cranes - In local areas, a front overhang of up to 15 feet may move during hours of darkness if a rotating or flashing beacon is mounted at the extreme end of the boom. Permits may be issued for an extended period.

H. Trusses and/or Glu Lam Beams - Loads may be 15 feet high, may have a front and/or rear overhang of 15 feet and the truss or glu lam may not exceed 60 feet long.

The Honorable Donley,
My name is Mike Bigge and I am a member of the North Pole Chapter of the Future Farmers of America. I am writing to you to ask you to support HB 78 which Representative Miller has introduced. This bill would allow us to move our equipment from our fields in Fairbanks to our fields in North Pole without having to get a permit. Obtaining a permit to move farm equipment is a very expensive and time consuming job. As a concerned member and also a person who has used the farm equipment on several occasions. I once again urge you to support HB 78.

Thank You for your valuable time.

Sincerely.

Mike Bigge

The Honorable Donley:

I am writing to you about HB 78. I sincerely wish that you would take action and support this bill. I am in the ninth grade, and plan on being an FFA member. How are we ever going to succeed in the field of Agriculture if everytime we move from one field to another we must get a permit. We are involed in several public service projects that require the use of our equipment and the cost of getting permits for each piece of equipment makes it very expensive. With the permits costing $15 if we moved our 6 pieces of our equipment to Creamers Field and back it would cost us $180.

We are working on a field there and in North Pole by the High School and so we are moving the equipment many times during the summer. We would go broke before we would be able to succeed in the field of Agriculture. My dad is a hard working farmer also, and he could never afford to pay that much everytime he moves his equipment. I am asking you to please support HB 78.

Thank you very much for your time.

Sincerely,

Chairman Dave Donley
House Labor & Commerce Committee
Pouch V
Juneau, AK. 99811

Dear Honorable Donley:

I'm writing you about HB 79. We need to get more [illegible] State Highways with our [illegible] equipment [illegible] with low costs. It costs too much for a [illegible] pieces of equipment from North Pole to Fairbanks to harvest hay from Creamers Field and then back again. We need to take action on, and pass HB 79.

Thank you for your time.

Sincerely,

Marek G. Dodson

March 11, 1987

Representative Dave Donley
House Labor & Commerce Comm.
P.O. Box V
Juneau AK 99811

The Honorable Donley:

I am writing to you regarding House Bill Number [illegible] on Equipment of state highways. This is of interest to me because I am a member of Future Farmers of America (FFA). FFA is a service organization which does community work [illegible] up keep of North Pole Park and care of Creamers Field, are a few of the things we do. In some of our work we use farm equipment, because we are a service organization we do not have much money, and we cannot afford to pay a fee everytime we wish to do a service that requires our equipment.

It is my feeling that you should not put a charge on farm equipment using state highways. I feel hat we should not have to go to DOT/PF before we operate on the highway.

I have just recently learned how to operate a tractor and I am eager to put my knowledge to use.

It would [illegible] us our [illegible] through the state involved with agriculture. [illegible] passing House Bill [illegible]

Sincerely yours,

[illegible]

IN THE HOUSE

CS FOR HOUSE BILL NO. 94 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to boat numbering, accidents, and safety; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 05.25 is amended by adding new sections to read:

ARTICLE 1. NUMBERING AND REGISTRATION.

Sec. 05.25.200. CERTIFICATE OF NUMBER REQUIRED ON BOAT. (a) A person may not operate a boat on state water, and an owner of a boat may not knowingly allow another to operate the owner's boat on state water, unless

(1) the owner of the boat holds a current, valid certificate of number issued in the owner's name as owner

(A) under this chapter;

(B) by an agency of the federal government; or

(C) by the state of principal use that issued the certificate of number under a federally approved numbering system; and

(2) the certificate of number is carried on the boat in a manner that protects the certificate from the elements, and is available for inspection by a state, federal, or municipal law enforcement officer.

(b) A certificate of number for a boat less than 26 feet in length and leased or rented to another for the latter's noncommercial operation of fewer than seven days may be retained on shore by the boat's owner or representative at the place from which the boat

departs or returns to the possession of the owner or the owner's representative. If the certificate of number is retained on shore, then a copy of the lease or rental agreement must be carried on the boat. The lease or rental agreement must

(1) be signed by the owner of the boat or the owner's representative, and by the person leasing or renting the boat; and

(2) specify the period for which the boat is leased or rented.

Sec. 05.25.205. IDENTIFYING NUMBER ON FORWARD HALF OF BOAT. (a) A person may not operate a boat on state water unless there is painted on or permanently attached to each side of the forward half of the boat a current, valid identifying number awarded to the boat

(1) under this chapter;

(2) by an agency of the federal government; or

(3) subject to the provisions of AS 05.25.215, by another state that awards identifying numbers under a federally approved numbering system.

(b) An identifying number shall be painted on or permanently attached to each side of the forward half of the vessel in a position that provides clear legibility for identification. Each number must read from left to right and must be in plain vertical block characters of good proportion not less than three inches in height. The number must be of a color that contrasts with the color of the background and shall be maintained so that it is clearly visible and legible. Each number must have spaces or hyphens that are equal to the width of a letter other than "I" or a number other than "1" between the letter and number groupings.

(c) On boats so configured that a number on the hull or superstructure would not be easily visible, the number shall be painted on

or attached to a backing plate that is attached to the forward half of the boat so that the number is visible from each side of the boat.

(d) A number other than the identifying number may not appear on the forward half of the boat.

Sec. 05.25.210. APPLICATION FOR BOAT NUMBER. (a) The owner of a boat that is operated principally on state water, or a dealer who wishes to demonstrate one or more boats on state water, shall apply to the department for an identifying number. The application must include the true name of the owner, the residence or business address of the owner, a description of the boat or boats, and other information required by the department or under Coast Guard regulations. The application shall be signed by the owner and must be accompanied by the prescribed fee.

(b) A certificate of number may be issued to a dealer for use on more than one boat.

Sec. 05.25.215. APPLICATION BY OWNER HAVING NUMBER AWARDED BY FEDERAL GOVERNMENT OR ANOTHER STATE. The owner of a boat covered by a number that is still in effect and that has been issued under federal law or a federally approved numbering system of another state shall apply to the department for an identifying number within 10 days after the expiration of the applicable reciprocity period provided in AS 05.25.240(6).

Sec. 05.25.220. CERTIFICATE OF NUMBER FEES. (a) The commissioner shall adopt regulations establishing fees for original, renewal, and duplicate certificates of number, and for dealer demonstration certificates of number.

(b) The fee for a certificate of number shall be prorated according to the number of months the certificate will be in effect.

(c) The fees in this section are in addition to any other tax or

license fee for a boat.

Sec. 05.25.225. ISSUANCE OF CERTIFICATE OF NUMBER AND VALIDATION STICKERS; STICKERS PLACED ON BOATS. (a) If the application is in order, the department shall issue to the owner a certificate of number that shall state the identifying number awarded to the boat, the name and address of the owner, the state of principal use, the normal use of the boat, the description of the boat, the hull identification number, make, year, length, type of hull material, type of propulsion and type of fuel, the issue date, and the expiration date of the certificate of number. The certificate of number shall be wallet size.

(b) The department shall issue a set of validation stickers bearing the year through which the certificate of number is issued. The year shall be indicated by the colors blue, international orange, green, and red, in rotation beginning with red for stickers that expire in 1988. A validation sticker must be approximately three inches square. The stickers shall be placed three inches to the rear of the identifying number placed on the boat as required under AS 05.-25.205.

Sec. 05.25.230. EXPIRATION OF CERTIFICATE OF NUMBER; RENEWAL OF CERTIFICATE AND STICKERS. (a) A certificate of number expires three years after the last day of the month in which the certificate is issued.

(b) The department may require the surrender of the expired certificate of number before issuing a new certificate of number.

(c) The identifying number awarded to a boat by the department remains the same.

(d) An application for renewal of a certificate of number shall be made in the same manner as provided in AS 05.25.210. The application shall be accompanied by the fee required under AS 05.25.220. The

department shall renew certificates of number and issue validation stickers in the same manner as provided in AS 05.25.225.

(e) A certificate of number is invalidated if

(1) the boat is subsequently documented or required to be documented;

(2) the boat is sold or destroyed;

(3) the applicant supplies false information in the application for the certificate;

(4) the owner, through legal process, involuntarily loses the ownership interest in the boat for which the certificate is issued.

Sec. 05.25.235. REPORT OF TRANSFER, ABANDONMENT OR DESTRUCTION OF BOAT, OR CHANGE OF ADDRESS OF OWNER. (a) Within 15 days after the transfer of all or a part of the interest of the owner in a boat, or the abandonment or destruction of a boat, for which a certificate of number has been awarded under this chapter, the owner shall notify the department of the transfer of interest, destruction, or abandonment.

(b) Within 15 days after a change of address, the owner of a boat for which a certificate of number has been awarded under this chapter shall report the change to the department.

Sec. 05.25.240. EXEMPTIONS. The following classes of boats are exempt from the provisions of AS 05.25.200 - 05.25.235:

(1) a boat that has a valid marine document issued by the United States Coast Guard;

(2) a foreign boat operated only temporarily in state water;

(3) a boat owned and operated by the United States or a state or by an entity or political subdivision of the United States or a state, except recreational type public vessels;

(4) a ship's lifeboat used solely for lifesaving purposes;

(5) a boat belonging to a class of boats that has been exempted from the provisions of AS 05.25.200 - 05.25.235 by the department as provided in AS 05.25.910;

(6) a boat already covered by a number that is still in effect and that has been issued to it under

(A) federal law and the boat has not been in this state for more than one year; or

(B) a federally approved numbering system of another state and the boat has not been in this state for more than 60 consecutive days; and

(7) a boat that is not propelled by machinery.

ARTICLE 2. BOATING ACCIDENTS.

Sec. 05.25.300. DUTIES OF OPERATORS AND WITNESSES AT ACCIDENTS. (a) The operator of a boat involved in an accident that results in injury or death to a person or causes damage to property immediately shall stop the boat as close as possible to the scene of the accident and shall remain at the scene of the accident until the operator has fulfilled the requirements of (b) of this section.

(b) The operator of a boat involved in an accident resulting in injury or death to a person or damage to property shall

(1) give to the other operator, to the owner or a surviving occupant of the other boat or damaged property, or to another appropriate person, the name, address, and identifying number of the boat that the operator is operating, and the name and address of any other occupants of the boat; and

(2) render reasonable assistance to every person injured in the accident, including the conveying or the making of arrangements for the conveying of the person to a physician, surgeon, or hospital

for medical or surgical treatment, if it is apparent that treatment is necessary or if conveyance is requested by an injured person.

(c) A witness to the accident shall furnish to the operator, occupant, or injured person, the name and address of the witness.

Sec. 05.25.305. ACCIDENT REPORT REQUIRED. (a) The operator of a boat involved in an accident shall submit a report of the accident to the department in the form and manner the department prescribes if the accident results in

(1) the death of a person;

(2) injury to a person requiring medical treatment beyond first aid;

(3) the disappearance from the boat of a person under circumstances indicating death or injury;

(4) damage to the boat or other property in an aggregate amount of more than $200; or

(5) complete loss of the boat.

(b) The department may require a person who submits an insufficient report under this section to file a supplemental report, and may require a witness to the accident to submit a report to the department.

(c) If the operator of a boat is incapable of submitting a required accident report, the owner of the boat, if different from the operator, or a person who was in the boat at the time of the accident who is capable of submitting a report, shall submit the report or cause the report to be submitted.

(d) A report required under this section shall be submitted

(1) within 48 hours after the accident if a perso dies within 24 hours after the accident;

(2) within 48 hours after the accident if a person is

injured and requires medical treatment beyond first aid, or disappears from a boat; and

(3) within 10 days after the accident or death if an earlier report is not required under this subsection.

Sec. 05.25.310. FORM OF REPORT; SENDING DEATH CERTIFICATE TO DEPARTMENT. (a) The department shall prepare and make available to the public forms for accident reports required under AS 05.25.305. The report form must call for the information required in casualty and accident reports under United States Coast Guard regulations and other information the department may require. The form must provide that the person who completes the form shall sign and date it upon completion.

(b) The state registrar of vital statistics shall, on or before the 15th day of each month, forward to the department a copy of the death certificate covering each death that occurred during the second preceding calendar month and that resulted from a boat accident in state water.

Sec. 05.25.315. CONFIDENTIAL NATURE OF REPORT. (a) An accident report submitted to the department shall be without prejudice to the individual reporting and shall be for the confidential use of administrative and enforcement agencies only.

(b) The department upon written request, shall, if available, disclose the following information to a party involved in the accident, or, in the event of the party's death, to a member of the party's family, or to the party's personal representatives:

(1) the identity of the owner, operator, and occupants, and the identifying number of a boat involved in an accident;

(2) the names of companies insuring the owner or operator; and

(3) the identity of witnesses to the accident.

(c) A report under AS 05.25.300 - 05.25.315 may not be used as evidence in a civil or criminal trial arising out of the accident. The department shall furnish, upon demand of a person who has or claims to have made a report or upon demand of a court, a certificate showing that a specified accident report has or has not been made to the department, solely to prove a compliance or a failure to comply with the requirement that a report be submitted to the department.

(d) The department shall compile and may analyze all accident reports and shall publish annually, or at more frequent intervals, statistical information relating to boat accidents.

(e) In response to a request from an authorized official or agency of the United States, or in compliance with United States Coast Guard regulations or any requirement under 46 U.S.C. 6101 - 6103, the department shall transmit information compiled or otherwise available to the department from the accident reports required under AS 05.-25.305.

Sec. 05.25.320. NOTICE OF ACCIDENT RESULTING IN DEATH OR DISAPPEARANCE; DUTIES OF PASSENGERS. (a) When, as a result of an occurrence that involves a boat or its equipment, a person dies or disappears from a boat, the operator shall, without delay, by the quickest means available, notify the department of the

(1) date, time, and exact location of the occurrence;

(2) name of each person who died or disappeared;

(3) number and name of the boat; and

(4) names and addresses of the owner and operator.

(b) When the operator of a boat cannot give the notice required under (a) of this section, each person on board the boat shall notify the department or determine that the notice has been given.

Sec. 05.25.325. APPLICATION OF AS 05.25.300 - 05.25.320. (a) Except as otherwise provided in this section or under AS 05.25.910, the provisions of AS 05.25.300 - 05.25.320 apply to all boats operated in state water, except when inconsistent with an applicable law or regulation of an agency of the United States, in which case the federal law or regulation shall prevail.

(b) The provisions of AS 05.25.300 - 05.25.320 do not apply to

(1) a boat that has a valid document issued by the United States Coast Guard;

(2) foreign boats operated temporarily in state water;

(3) a boat owned and operated by the United States or by an entity of the United States;

(4) a lifeboat used solely for lifesaving purposes; or

(5) a boat required to have a certificate of inspection under 46 C.F.R., Chapter I.

Sec. 05.25.330. OWNER'S CIVIL LIABILITY. An owner of a boat is liable for injury or damage caused by the negligent operation of the boat, whether the negligence consists of a violation of a state statute or failure to observe ordinary care in the operation of the boat as the rules of the common law require. The owner is not liable, however, unless the boat is used with the owner's express or implied consent. It is rebuttably presumed that the boat is being operated with the knowledge and consent of the owner if, at the time of the injury or damage, it is under the control of the owner's spouse, father, mother, brother, sister, son, daughter, or other member of the owner's immediate family. This chapter does not relieve any other person from a liability that the person would otherwise incur, and does not authorize or permit recovery in excess of injury or damage actually incurred.

ARTICLE 3. BOATING SAFETY.

Sec. 05.25.400. BOATING SAFETY EDUCATION. The department, in cooperation with the Department of Education, shall offer public education programs designed to reduce boating accidents.

Sec. 05.25.405. SAFETY EQUIPMENT. (a) A boat operated on inland water shall carry and exhibit between sunset and sunrise at least one white light to show all around the horizon.

(b) A boat operated on inland water shall carry at least one readily accessible life preserver, lifebelt, ring buoy, or other device of the type approved by the United States Coast Guard for each person on board. A boat carrying passengers for hire shall carry at least one readily accessible life preserver of the type approved by the United States Coast Guard for passenger-carrying boats for each person on board.

(c) A motor-driven boat operated for hire shall carry a fire extinguisher capable of promptly and effectively extinguishing burning gasoline.

Sec. 05.25.410. ADDITIONAL EQUIPMENT. The commissioner may require by regulation that a boat or class of boats shall carry or install additional equipment necessary for the safety of persons and property. To the extent considered by the commissioner to be consistent with the safety of persons and property, the regulations must conform to the regulations of the United States Coast Guard for inland water.

Sec. 05.25.415. DIVER'S FLAG. A person who is in the water using an underwater breathing device may display a diver's flag constructed of rigidly supported material at least 12 inches by 12 inches in area of red background with a white diagonal stripe. The diver's flag may be displayed on a boat or surface float and must extend a

minimum distance of three feet from the surface of the water. The diver's flag shall be placed at or near the point of submergence and constitutes a warning that a diver is submerged and may be within 100 feet of the flag. A diver shall remain within 100 feet of the diver's flag while at or near the surface. A boat operator within sight of a diver's flag shall proceed with caution, steering clear of the flag by a distance of at least 100 feet. If, because of the location of the diver's flag, it is impossible to steer clear of the flag by at least 100 feet, then the boat operator shall proceed at no-wake speeds or five miles per hour, whichever is necessary to maintain steerage in the seaway. A diver's flag shall be displayed only while diving operations are underway.

Sec. 05.25.420. WATER SKIS AND SURFBOARDS. A person may not operate a boat on the inland waters of this state for towing a person on water skis, or a surfboard, or similar devices unless

(1) the boat is equipped with a rearview mirror in which the person being towed can be viewed; or

(2) there is in the boat a person 12 years of age or older, in addition to the operator, in a position to observe the progress of the person being towed.

Sec. 05.25.425. PROHIBITED OPERATION. (a) A person may not operate a boat or manipulate water skis, a surfboard, or a similar device on state water in a reckless or negligent manner so as to endanger the life or property of another person.

(b) A person may not operate or give permission for another person to operate a boat that is not equipped as required under this chapter and regulations adopted under this chapter.

ARTICLE 4. GENERAL PROVISIONS.

Sec. 05.25.900. ACCOUNTING AND DISPOSITION OF FEES. The

commissioner of administration shall separately account for fees collected under this chapter that the department deposits in the general fund. The annual estimated balance in the account may be used by the legislature to make appropriations to the department to carry out the purposes of this chapter.

Sec. 05.25.910. EXEMPTIONS. Except when inconsistent with federal laws and regulations, the commissioner may exempt from a provision of this chapter a class of boats if the commissioner determines that the safety of persons and property will not be materially promoted by the applicability of the provision to the class of boats. The commissioner may not exempt a class of boats from the numbering requirements of this chapter unless the commissioner determines that the numbering will not materially aid in their identification and unless the Secretary of Transportation has exempted from numbering the same boats or class of boats.

Sec. 05.25.920. ENFORCEMENT. A peace officer may enforce this chapter and in the exercise of enforcement may stop and board boats that the officer reasonably believes are or may be subject to this chapter.

Sec. 05.25.930. PENALTIES. A person who violates a provision of this chapter is guilty of a misdemeanor and is punishable by a fine of not more than $500, or by imprisonment of not more than six months, or by both.

Sec. 05.25.940. REGULATIONS. The commissioner shall adopt regulations necessary for the implementation of this chapter.

Sec. 05.25.990. DEFINITIONS. In this chapter, unless the context requires otherwise,

(1) "boat" means every type of watercraft used or capable of being used as a means of transportation on water, but does not

include aircraft equipped to land on water, boathouses, or personal flotation devices;

(2) "commissioner" means the commissioner of the Department of Public Safety;

(3) "dealer" means a person who engages wholly or in part in the business of buying, selling, or exchanging boats, either outright or on conditional sale, bailment lease, chattel mortgage, or otherwise;

(4) "department" means the Department of Public Safety;

(5) "length" means the length of a boat measured from end to end over the deck excluding sheer;

(6) "motorboat" means a boat propelled in whole or in part machinery, including boats temporarily equipped with detachable motors;

(7) "operate" means to navigate or otherwise use a boat on water;

(8) "owner" means a person who has a property interest other than a security interest in a boat and the right of use or possession of the boat, but does not include a lessee unless the lease is intended as security;

(9) "ownership" means a property interest other than a security interest;

(10) "passenger" means a person on board a boat who is not the master, operator, crew member, or other person engaged in a capacity in the business of the boat;

(11) "state of principal use" means the state on whose water a boat is used or is to be used during most of a calendar year;

(12) "state water" means water within the territorial limits of the state, the marginal sea adjacent to the state, and the

high seas when navigated as part of a journey or ride to or from the shore of the state.

* Sec. 2. AS 05.25.010, 05.25.012, 05.25.020, 05.25.030, 05.25.040, 05.25.050, 05.25.060, 05.25.070, 05.25.080, 05.25.090, and 05.25.100 are repealed.

* Sec. 3. This Act takes effect January 1, 1988.

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE BILL NO. 94 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to boat numbering, accidents, and safety; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 05.25 is amended by adding new sections to read:

ARTICLE 1. NUMBERING AND REGISTRATION.

Sec. 05.25.200. CERTIFICATE OF NUMBER REQUIRED ON BOAT. (a) A person may not operate a boat on state water, and an owner of a boat may not knowingly allow another to operate the owner's boat on state water, unless

(1) the owner of the boat holds a current, valid certificate of number issued in the owner's name as owner

(A) under this chapter;

(B) by an agency of the federal government; or

(C) by the state of principal use that issued the certificate of number under a federally approved numbering system; and

(2) the certificate of number is carried on the boat in a manner that protects the certificate from the elements, and is available for inspection by a state, federal, or municipal law enforcement officer.

(b) A certificate of number for a boat less than 26 feet in length and leased or rented to another for the latter's noncommercial operation of fewer than seven days may be retained on shore by the boat's owner or representative at the place from which the boat

departs or returns to the possession of the owner or the owner's representative. If the certificate of number is retained on shore, then a copy of the lease or rental agreement must be carried on the boat. The lease or rental agreement must

(1) be signed by the owner of the boat or the owner's representative, and by the person leasing or renting the boat; and

(2) specify the period for which the boat is leased or rented.

Sec. 05.25.205. IDENTIFYING NUMBER ON FORWARD HALF OF BOAT. (a) A person may not operate a boat on state water unless there is painted on or permanently attached to each side of the forward half of the boat a current, valid identifying number awarded to the boat

(1) under this chapter;

(2) by an agency of the federal government; or

(3) subject to the provisions of AS 05.25.215, by another state that awards identifying numbers under a federally approved numbering system.

(b) An identifying number shall be painted on or permanently attached to each side of the forward half of the vessel in a position that provides clear legibility for identification. Each number must read from left to right and must be in plain vertical block characters of good proportion not less than three inches in height. The number must be of a color that contrasts with the color of the background and shall be maintained so that it is clearly visible and legible. Each number must have spaces or hyphens that are equal to the width of a letter other than "I" or a number other than "1" between the letter and number groupings.

(c) On boats so configured that a number on the hull or superstructure would not be easily visible, the number shall be painted on

or attached to a backing plate that is attached to the forward half of the boat so that the number is visible from each side of the boat.

(d) A number other than the identifying number may not appear on the forward half of the boat.

Sec. 05.25.210. APPLICATION FOR BOAT NUMBER. (a) The owner of a boat that is operated principally on state water, or a dealer who wishes to demonstrate one or more boats on state water, shall apply to the department for an identifying number. The application must include the true name of the owner, the residence or business address of the owner, a description of the boat or boats, and other information required by the department or under United States Coast Guard regulations. The application shall be signed by the owner and must be accompanied by the prescribed fee.

(b) A certificate of number may be issued to a dealer for use on more than one boat.

Sec. 05.25.215. APPLICATION BY OWNER HAVING NUMBER AWARDED BY FEDERAL GOVERNMENT OR ANOTHER STATE. The owner of a boat covered by a number that is still in effect and that has been issued under federal law or a federally approved numbering system of another state shall apply to the department for an identifying number within 10 days after the expiration of the applicable reciprocity period provided in AS 05.25.240(6) or (7).

Sec. 05.25.220. CERTIFICATE OF NUMBER FEES. (a) The commissioner shall adopt regulations establishing fees for original, renewal, and duplicate certificates of number, and for dealer demonstration certificates of number.

(b) The fee for a certificate of number shall be prorated according to the number of months the certificate will be in effect.

(c) The fees in this section are in addition to any other tax or

license fee for a boat.

Sec. 05.25.225. ISSUANCE OF CERTIFICATE OF NUMBER AND VALIDATION STICKERS; STICKERS PLACED ON BOATS. (a) If the application is in order, the department shall issue to the owner a certificate of number that shall state the identifying number awarded to the boat, the name and address of the owner, the state of principal use, the normal use of the boat, the description of the boat, the manufacturer's hull identification number if one exists, make, year, length, type of hull material, type of propulsion and type of fuel, the issue date, and the expiration date of the certificate of number. The certificate of number shall be wallet size.

(b) The department shall issue a set of validation stickers bearing the year through which the certificate of number is issued. The year shall be indicated by the colors blue, international orange, green, and red, in rotation beginning with red for stickers that expire in 1988. A validation sticker must be approximately three inches square. The stickers shall be placed three inches to the rear of the identifying number placed on the boat as required under AS 05.-25.205.

Sec. 05.25.230. EXPIRATION OF CERTIFICATE OF NUMBER; RENEWAL OF CERTIFICATE AND STICKERS. (a) A certificate of number expires three years after the last day of the month in which the certificate is issued.

(b) The department may require the surrender of the expired certificate of number before issuing a new certificate of number.

(c) The identifying number awarded to a boat by the department remains the same.

(d) An application for renewal of a certificate of number shall be made in the same manner as provided in AS 05.25.210. The

application shall be accompanied by the fee required under AS 05.25.-220. The department shall renew certificates of number and issue validation stickers in the same manner as provided in AS 05.25.225.

(e) A certificate of number issued under this chapter is invalidated if

(1) the boat is subsequently documented or required to be documented;

(2) the boat is sold, destroyed, or abandoned;

(3) the applicant supplies false information in the application for the certificate;

(4) the fees for issuance or renewal of the certificate are not paid;

(5) 60 days have passed since the boat ceased to be used principally in the state; or

(6) the owner, through legal process, involuntarily loses the ownership interest in the boat for which the certificate is issued.

Sec. 05.25.235. REPORT OF TRANSFER, ABANDONMENT OR DESTRUCTION OF BOAT, OR CHANGE OF ADDRESS OF OWNER. (a) The owner of a boat for which a certificate of number has been issued under this chapter shall notify the department of any of the following events within 15 days after the event occurs:

(1) the transfer of all or a part of the ownership interest in the boat;

(2) the theft or recovery of the boat;

(3) the destruction of the certificate of number; or

(4) an event described in AS 05.25.230(e).

(b) Within 15 days after a change of address, the owner of a boat for which a certificate of number has been awarded under this

chapter shall report the change to the department.

Sec. 05.25.240. EXEMPTIONS. The following classes of boats are exempt from the provisions of AS 05.25.200 - 05.25.235:

(1) a boat that has a valid marine document issued by the United States Coast Guard;

(2) a foreign boat operated only temporarily in state water;

(3) a boat, other than a recreational type public boat, owned and operated by the United States or an entity or political subdivision of the United States, or owned and operated for government purposes by a state or an entity or political subdivision of a state;

(4) a ship's lifeboat;

(5) a boat belonging to a class of boats that has been exempted from the provisions of AS 05.25.200 - 05.25.235 by the department under AS 05.25.910;

(6) a boat with a certificate of number issued by the United States Coast Guard, for a period of one year after the date of issuance;

(7) a boat with a current, valid certificate of number issued by another state having a federally approved numbering system, for a period of 60 days after arriving in the state; and

(8) a boat that is not propelled by machinery.

ARTICLE 2. BOATING ACCIDENTS.

Sec. 05.25.300. DUTIES OF OPERATORS AND WITNESSES AT ACCIDENTS. (a) The operator of a boat involved in an accident that results in injury or death to a person or causes damage to property immediately shall stop the boat as close as possible to the scene of the accident and shall remain at the scene of the accident until the operator has fulfilled the requirements of (b) of this section.

(b) The operator of a boat involved in an accident resulting in injury or death to a person or damage to property shall

(1) give to the other operator, to the owner or a surviving occupant of the other boat or damaged property, or to another appropriate person, the name, address, and identifying number of the boat that the operator is operating, and the name and address of any other occupants of the boat; and

(2) render reasonable assistance to every person injured in the accident, including the conveying or the making of arrangements for the conveying of the person to a physician, surgeon, or hospital for medical or surgical treatment, if it is apparent that treatment is necessary or if conveyance is requested by an injured person.

(c) A witness to the accident shall furnish to the operator, occupant, or injured person, the name and address of the witness.

Sec. 05.25.305. ACCIDENT REPORT REQUIRED. (a) The operator of a boat involved in an accident shall submit a report of the accident to the department in the form and manner the department prescribes if the accident results in

(1) the death of a person;

(2) injury to a person requiring medical treatment beyond first aid;

(3) the disappearance from the boat of a person under circumstances indicating death or injury;

(4) damage to the boat or other property in an aggregate amount of more than $200; or

(5) complete loss of the boat.

(b) The department may require a person who submits an insufficient report under this section to file a supplemental report, and may require a witness to the accident to submit a report to the

department.

(c) If the operator of a boat is incapable of submitting a required accident report, the owner of the boat, if different from the operator, shall submit the report or cause the report to be submitted.

(d) A report required under this section shall be submitted

(1) within 48 hours after the accident if a person dies within 24 hours after the accident;

(2) within 48 hours after the accident if a person is injured and requires medical treatment beyond first aid, or disappears from a boat; and

(3) within 10 days after the accident or death if an earlier report is not required under this subsection.

Sec. 05.25.310. FORM OF REPORT; SENDING DEATH CERTIFICATE TO DEPARTMENT. (a) The department shall prepare and make available to the public forms for accident reports required under AS 05.25.305. The report form must call for the information required in casualty and accident reports under United States Coast Guard regulations and other information the department may require. The form must provide that the person who completes the form shall sign and date it upon completion.

(b) The state registrar of vital statistics shall, on or before the 15th day of each month, forward to the department a copy of the death certificate covering each death that occurred during the second preceding calendar month and that resulted from a boat accident in state water.

Sec. 05.25.315. CONFIDENTIAL NATURE OF REPORT. (a) An accident report submitted to the department shall be without prejudice to the individual reporting and shall be for the confidential use of administrative and enforcement agencies only.

(b) The department upon written request, shall, if available, disclose the following information to a party involved in the accident, or, in the event of the party's death, to a member of the party's family, or to the party's personal representatives:

(1) the identity of the owner, operator, and occupants, and the identifying number of a boat involved in an accident;

(2) the names of companies insuring the owner or operator; and

(3) the identity of witnesses to the accident.

(c) A report under AS 05.25.300 - 05.25.315 may not be used as evidence in a civil or criminal trial arising out of the accident. The department shall furnish, upon demand of a person who has or claims to have made a report or upon demand of a court, a certificate showing that a specified accident report has or has not been made to the department, solely to prove a compliance or a failure to comply with the requirement that a report be submitted to the department.

(d) The department shall compile and may analyze all accident reports and shall publish annually, or at more frequent intervals, statistical information relating to boat accidents.

(e) In response to a request from an authorized official or agency of the United States, or in compliance with United States Coast Guard regulations or any requirement under 46 U.S.C. 6101 - 6103, the department shall transmit information compiled or otherwise available to the department from the accident reports required under AS 05.-25.305.

Sec. 05.25.320. NOTICE OF ACCIDENT RESULTING IN DEATH OR DISAPPEARANCE; DUTIES OF PASSENGERS. (a) When, as a result of an occurrence that involves a boat or its equipment, a person dies or disappears from a boat, the operator shall, without delay, by the quickest

means available, notify the department of the

(1) date, time, and exact location of the occurrence;

(2) name of each person who died or disappeared;

(3) number and name of the boat; and

(4) names and addresses of the owner and operator.

(b) When the operator of a boat cannot give the notice required under (a) of this section, each person on board the boat shall notify the department or determine that the notice has been given.

Sec. 05.25.325. APPLICATION OF AS 05.25.300 - 05.25.320. (a) Except as otherwise provided in this section or under AS 05.25.910, the provisions of AS 05.25.300 - 05.25.320 apply to all boats operated in state water, except when inconsistent with an applicable law or regulation of an agency of the United States, in which case the federal law or regulation shall prevail.

(b) The provisions of AS 05.25.300 - 05.25.320 do not apply to

(1) a boat that has a valid document issued by the United States Coast Guard and that is operated only for nonrecreational purposes;

(2) foreign boats operated temporarily in state water only for nonrecreational purposes;

(3) a boat owned and operated for government purposes by the United States or by an entity of the United States; or

(4) a ship's lifeboat.

ARTICLE 3. BOATING SAFETY.

Sec. 05.25.400. BOATING SAFETY EDUCATION. The department, in cooperation with the Department of Education, shall offer public education programs designed to reduce boating accidents.

Sec. 05.25.405. SAFETY EQUIPMENT. (a) A boat operated on nonnavigable water shall carry and exhibit between sunset and sunrise

at least one white light to show all around the horizon.

(b) A boat operated on inland water shall carry at least one readily accessible life preserver, lifebelt, ring buoy, or other device of the type approved by the United States Coast Guard for each person on board. A boat carrying passengers for hire shall carry at least one readily accessible life preserver of the type approved by the United States Coast Guard for passenger-carrying boats for each person on board.

Sec. 05.25.410. ADDITIONAL EQUIPMENT. The commissioner may require by regulation that a boat or class of boats when operated on inland water shall carry additional equipment necessary for the safety of persons and property. To the extent considered by the commissioner to be consistent with the safety of persons and property, the regulations must conform to the regulations of the United States Coast Guard for water subject to the jurisdiction of the United States.

Sec. 05.25.415. DIVER'S FLAG. (a) A person who is in the water using an underwater breathing device may display a diver's flag constructed of rigidly supported material at least 12 inches by 12 inches in area of red background with a white diagonal stripe. The diver's flag may be displayed on a boat or surface float and must extend a minimum distance of three feet from the surface of the water. The diver's flag shall be placed at or near the point of submergence and constitutes a warning that a diver is submerged and may be within 100 feet of the flag. A diver shall remain within 100 feet of the diver's flag while at or near the surface. A diver's flag shall be displayed only while diving operations are underway.

(b) A boat operator within sight of a diver's flag shall proceed with caution, steering clear of the flag by a distance of at least 100 feet. If, because of the location of the diver's flag, it is

impossible to steer clear of the flag by at least 100 feet, then the boat operator shall proceed at no-wake speeds or five miles per hour, whichever is necessary to maintain steerage in the seaway.

(c) A diver's flag under this section may be used with, but not in place of, an International Code flag "A" if required under 33 U.S.C. following 1602 (Rule 27, International Regulations for Preventing Collisions at Sea, 1972).

Sec. 05.25.420. PROHIBITED OPERATION. (a) A person may not operate a boat or manipulate water skis, a surfboard, or a similar device on state water in a reckless or negligent manner so as to endanger the life or property of another person.

(b) A person may not operate or give permission for another person to operate a boat that is not equipped as required under this chapter and regulations adopted under this chapter.

ARTICLE 4. GENERAL PROVISIONS.

Sec. 05.25.900. ACCOUNTING AND DISPOSITION OF FEES. The commissioner of administration shall separately account for fees collected under this chapter that the department deposits in the general fund. The annual estimated balance in the account may be used by the legislature to make appropriations to the department to carry out the purposes of this chapter.

Sec. 05.25.910. EXEMPTIONS. Except when inconsistent with federal laws and regulations, the commissioner may exempt from a provision of this chapter a class of boats if the commissioner determines that the safety of persons and property will not be materially promoted by the applicability of the provision to the class of boats. The commissioner may not exempt a class of boats from the numbering requirements of this chapter unless the commissioner determines that the numbering will not materially aid in their identification and

unless the United States Secretary of Transportation has exempted from numbering the same boats or class of boats.

Sec. 05.25.920. ENFORCEMENT. A peace officer may enforce this chapter and in the exercise of enforcement may stop and board boats that the officer reasonably believes are or may be subject to this chapter.

Sec. 05.25.930. PENALTIES. A person who violates a provision of this chapter is guilty of a misdemeanor and is punishable by a fine of not more than $500, or by imprisonment of not more than six months, or by both.

Sec. 05.25.940. REGULATIONS. The commissioner shall adopt regulations necessary for the implementation of this chapter.

Sec. 05.25.990. DEFINITIONS. In this chapter, unless the context requires otherwise,

(1) "boat" means every type of watercraft used or capable of being used as a means of transportation on water, but does not include aircraft equipped to land on water;

(2) "commissioner" means the commissioner of the Department of Public Safety;

(3) "dealer" means a person who engages wholly or in part in the business of buying, selling, or exchanging boats, either outright or on conditional sale, bailment lease, chattel mortgage, or otherwise;

(4) "department" means the Department of Public Safety;

(5) "inland water" means water that is inland of the territorial sea baseline and not subject to the jurisdiction of the United States;

(6) "length" means the length of a boat measured from end to end over the deck excluding sheer;

(7) "motorboat" means a boat propelled in whole or in part by machinery, including boats temporarily equipped with detachable motors;

(8) "nonnavigable water" means lakes, rivers, and other waterways in the state that are not classified under federal law or regulation as navigable water of the United States and to which 33 U.S.C. 1601-1608 do not apply;

(9) "operate" means to navigate or otherwise use a boat on water;

(10) "owner" means a person who has a property interest other than a security interest in a boat and the right of use or possession of the boat, but does not include a lessee unless the lease is intended as security;

(11) "ownership" means a property interest other than a security interest;

(12) "passenger" means a person on board a boat who is not the master, operator, crew member, or other person engaged in a capacity in the business of the boat;

(13) "state of principal use" means the state on whose water a boat is used or is to be used during most of a calendar year;

(14) "state water" means water within the territorial limits of the state.

* Sec. 2. AS 05.25.010, 05.25.012, 05.25.020, 05.25.030, 05.25.040, 05.25.050, 05.25.060, 05.25.070, 05.25.080, 05.25.090, and 05.25.100 are repealed.

* Sec. 3. This Act takes effect January 1, 1988.

Department of Public Safety	Boat owners and manufacturers
ORGANIZATIONAL SUPPORT FOR BILL	**ORGANIZATIONAL OPPOSITION TO BILL**

FISCAL IMPACT: ☒ NONE ☐ FISCAL NOTE ATTACHED

BACKGROUND/LEGISLATIVE INTENT

This Act amends AS 05.25 by adding sections requiring boats to register with the Department of Public Safety, to display registration numbers on the boat, and to maintain a current registration on the boat when in operation. This bill also contains provisions for the reporting of of accidents and boating safety requirements.

ANALYSIS OF BILL/PROGRAM EFFECTS

The Department of Health and Social Services supports the passage of HB 94 and its intent to reduce boating accidents and their associated deaths and injuries. Unintentional injuries are the leading cause of death in Alaska. Among the causes of these injuries, water transport related deaths are second only to deaths from motor vehicle accidents. In 1985 there were 94 deaths reported related to water transport accidents and 25 additional deaths due to drowning were recorded.

This bill includes the provision of boating safety education programs. DHSS has developed a water safety curriculum for children ("Cold Water Winners"). In cooperation with the Dept. of Public Safety, the University of Alaska's Marine Advisory program, and various private agencies, DHSS has also deveoped an extensive marine safety and survival curriculum. The continuation of these activities should be suported by the passage of this bill. Appropriations made to carry out the purposes of this bill should specifically include the provision of boating safety training as well as the administration of registration and accident reporting functions.

HOUSE TRANSPORTATION COMMITTEE

HB 94

SAFE BOATING BILL

CDR G. M. HARBEN, USCG

CDR D. M. WALDRON, USCG

Since the turn of the century, boating has steadily grown to become one of the nation's most popular pastimes. Correspondingly, the boating accident statistics have also grown. As the years went by the Congress enacted several pieces of legislation to deal with the growing problem. Finally, on August 10, 1971, the Federal Boat Safety Act was signed into law establishing minimum standards which would provide the public with reasonably safe boats and equipment. At the same time the Act stressed the need for the individual states to enact equivalent legislation of their own, thus motivating the public to boating safety awareness through public education and operator and equipment requirements.

With the enactment of the Federal Boat Safety Act of 1971, the vast majority of states have recognized the inherent dangers associated with boating and during the ensuing years, 49 states have enacted boating safety legislation which squarely faced the problems head on. Their actions and subsequent programs have significantly turned the tide of rising boating accidents and deaths within their states. These programs have received national acclaim for the advancements that have been made in the field of boating safety education and public protection.

To better coordinate their activities among themselves, the National Association of State Boating Law Administrators (NASBLA) was formed to serve as a viable public forum for reviewing and improving upon the federally approved state boating programs.

In Alaska, the only state where there is no Federally approved state boating program, the Coast Guard acts as the boating law administrator for areas that fall under Federal jurisdiction. Consequently, because of this very limited Federal Boating Safety Program, Alaska's boaters are paying dearly through personal injury, loss of life and loss of property. In 1985 70 people lost their lives in recreational boating accidents, 70% of these tragedies occurred on inland Alaskan waters such as lakes, rivers and sheltered waters.

This was second only to motor vehicle fatalities as the largest category of accidental deaths. When this figure is compared with the rest of the United States, Alaska has by far the worst boating record --- over 40 times the National average. Only California (76) and Texas (72) had more fatalities and these states have 24 times the number of registered boats.

Another thing to be remembered in the case of California, is that the boating season in many areas of the state lasts year round, unlike Alaska, which has a boating season of 6 months or less.

It is evident from these statistics that Alaska has a severe boating problem when compared to the rest of the United States. What can we do to solve this problem or at least bring it under control?

The most effective and proven means for dealing with this problem

would be to legislate a comprehensive state boating safety program.

How is a state boating safety program going to change Alaska's unenviable record of boating activity?

First of all, it will identify and charge a state agency with the responsibility for implementing a coordinated boating safety program. Not just another law enforcement program of the Department of Public Safety, but more importantly a means to implement a comprehensive public education program.

Why an education program?

With a state as vast as Alaska the emphasis needs to be focused on public education. The resources and expertise of the Department of Education would be utilized to assist in the development and operation of a public education program. In addition, the Coast Guard can be called upon for assistance, training and advice for program development in order to establish effective programs.

How would public protection be handled with the new law?

In addition to the education program, incorporation of the Federal boating regulations into the state boating law would provide procedures and policies for dealing with violators, as well as provide for the minimum operator requirements for safety equipment

and boat operation. Specific sections of the act will empower state law enforcement officials with the necessary authority to carry out its provisions. Existing manpower form the Alaska State Troopers and the Fish and Wildlife Protection could be utilized for public protection purposes without the necessity of recruiting more personnel to enforce boating laws.

The Coast Guard does not have access or jurisdiction to the inland areas where most of the fatalities occur. Each year the number of complaints received by the Alaska State Troopers, the Coast Guard and other state and federal agencies concerning the negligent operation of boats continues to mount, especially along the inland rivers.

With the passage of a state boating safety act, where will the revenues come from to administer these programs?

There is a National Recreational Boating Safety Financial Assistance program, for these states with a federally approved safe boating program.

In-state revenue available would be would be moneys generated by a state operated boating registration program. At the present time this program is administered on behalf of the Federal government by the Coast Guard in Juneau, with all the revenues from this program being deposited in the U. S. Treasury. None of the revenues remain in Alaska!!

What advantages are there to numbering boats?

Most importantly, boats need to be numbered to aid in search and rescue. For example, if a boat is found adrift or capsized, in just a matter of minutes the boat owner can be identified through the numbers on the hull and a check can be made with owner, relatives or neighbors to if there was anyone on board or if the boat was just adrift.

The boat registration program also provides an added benefit for the prospective boat buyer. Financial institutions will more readily lend money for the purchase of boats if some form of previous ownership can be provided.

Boat numbers also fulfill other useful purposes. Among them law enforcement, educational contact, accident reporting and consumer defect notification. Whether used for tracing a person for the negligent operation of a boat, to provide boating safety materials, or notify a consumer of a possible product defect, it helps protect and serve the public welfare.

With the passage of a comprehensive state boating safety program won't the Coast Guard reduce its efforts in boating safety in Alaska?

Quite the contrary, the Coast Guard has a dedicated commitment to boating safety in Alaska. The presence of a state boating safety

program would lend a new dimension to the Coast Guard's role in this area. Specifically, the Coast Guard would assist the State in establishing its own program, provide training to State law enforcement officers and work hand in hand with State and local agencies.

But what if the legislature fails to enact a state boating safety law, what will the consequences be?

With no possibility of the Coast Guard expanding their boating program, the number of boating accidents and fatalities will continue to soar as the boating population grows.

Without a doubt the proposed state boating law will provide the boaters of Alaska with a program designed to meet their special needs without burdening the non-boater.

COAST GUARD ASSISTANCE

1. Training and assistance will be provided by the Coast Guard for initial development of educational programs.

2. Initial training of law enforcement officers to assist in the development of an effective public protection program.

3. The Coast Guard will continue its coastal boarding program for enforcement of boating safety laws.

4. The Coast Guard will continue with present educational programs --- in relation to the Coast Guard Auxiliary.

5. The Coast Guard will remain a viable support agency for state assistance.

ADVANTAGES TO STATE IN ESTABLISHING A BOATING SAFETY PROGRAM

1. The State will assume management, administration and control of the program.

2. Revenues will remain in Alaska, available for state usage, instead being deposited with the Federal government.

3. Offers programs and protection to the entire state, not just coastal areas.

4. The means of reducing Alaska's tragic boating fatality statistic.

MEMORANDUM

TO: Representative Robin Taylor

ATTN: Elsa Froehlich Demeksa

FROM: Mary Jennings MJ
Legislative Analyst

RE: State Assumption of Boat Registration and Safety Programs
Research Request 87.090

You requested that we provide: 1) an estimate of costs and revenues that would result if the State were to begin a boat registration program; 2) a discussion of the benefits of a State boating safety program; and 3) a discussion of costs and revenues of boat registration and boating safety programs in Washington, Oregon, Texas and California.

Background

In other states, the fees generated from registration and titling of undocumented or pleasure boats are used to provide boating safety programs. These programs enforce registration of boats in both inland and coastal waters, enforce safe boating regulations, and provide education to the public on safe boating practices. Alaska is the only state that does not require statewide registration of undocumented boats and, as a result, does not have a boating safety program. According to the U.S. Coast Guard, the minimal enforcement of boating safety regulations that occurs in Alaska results in improperly equipped pleasure boats and a general lack of safe boating practices. The Coast Guard notes that Alaska has the highest boating fatality rate in the nation.

Federal law requires all boats that operate in coastal waters to be numbered. In Alaska, the Coast Guard presently registers undocumented power boats used in coastal waters. The Coast Guard charges a two dollar renewal fee, which is deposited into the U.S. treasury. The Coast Guard provides this service for an estimated annual cost of $53,000. Registration generates approximately $70,000 in annual revenues.

Registration Fees. The Coast Guard estimates that if boating registration were enforced by the State in both coastal and inland waters, approximately 50,000 boats would be registered. Fees for registration in other states range from one dollar to $50. An annual fee of $10 dollars

($30 per three years) is recommended by the Coast Guard. At present, there are 1,200 vessels with Alaska numbers from Washington, Oregon, and other west coast states. The Coast Guard recommends that out-of-state boats be charged $50 per year.

Operating Cost and Revenues. If Alaska were to initiate a boat registration program, the Coast Guard stated that the present boat registration computer system could be used by the State. (Software changes would be required to provide titling capability.) The Coast Guard estimates that costs to start the registration operation would be $35,000 and that annual operating costs would be approximately $95,000. Based upon the number of boats estimated to be eligible for registration and the suggested fees, the Coast Guard estimates that annual revenues would be $550,000 (for a breakdown of data, see Attachment A).

Federal Funds. States with boating safety programs are eligible to receive federal funds to enhance their programs. One-third of a $30 million dollar fund, which is appropriated annually by Congress, is divided equally among states and the remainder is distributed based upon the number of vessels registered in the state and the amount of money spent by the state for boating safety. The Coast Guard estimates that Alaska would receive approximately $250,000 in federal funds if a boating safety program were initiated.

Benefits. A program that enforced boating regulations and provided education on safe boating practices would likely result in greater safety in Alaska's waters. In addition, the initiation of a State boat registration and a boating safety program would likely result in the creation of several jobs. Based upon the number of boats, the Coast Guard estimates that 2.2 positions would be needed to administer registration. Personnel would also be needed for enforcement and for safety education. Funding for these jobs could come from registration fees and federal funds.[1]

Washington

Boating registration and boating safety programs in Washington are administered by the Department of Parks and Recreation. The department reports that approximately 150,000 boats are registered in the state. An annual registration fee of $6 is charged. In addition to this fee, an excise tax based on 0.5 percent of the depreciated value of a boat is charged. The title fee is $5. Revenues are deposited into the state's general fund. Counties in Washington are allowed to charge an additional 50 cents per foot; these revenues are kept at the county level. Washington collects approximately $5 million in annual registration fees. The state's boating safety program has an annual operating cost of approximately $300,000, which includes the cost of registration administration, educational programs, and some limited enforcement of regulations.

---

[1]Although the State Constitutior prohibits and dedication of user fees to a program's budget, the legislature has routinely appropriated program receipts to the program that generated the revenue.

Robert Porterfield, of the Washington Department of Parks and Recreation, stated that revenue raised from boat registration is viewed as a means of providing money to the state's general fund in addition to providing funds to operate the boating safety program. He added that because funding is not appropriated to local governments for the enforcement of boating registration, compliance is poor. He felt that only about half of all eligible boats in the state were registered.

Oregon

Oregon, which has 143,000 registered boats, collects approximately $1.5 million annually in boat registration and title fees. Registration fees are based upon a sliding scale and range from $11 for a boat less that 12 feet to $21 for a boat over 20 feet. A $7 fee is charged to title boats. Revenue generated from boat registration is dedicated to the Marine Board Fund, which is used for the boating safety program and construction of boating facilities. The state spends approximately $500,000 annually to operate its boating safety program. The Oregon State Marine Board, which administers the program, stated that these operating costs include registration administration, law enforcement, and safety education.

Paul Donhuffner, of the State Marine Board, stated that because Oregon dedicates boat registration fees to a fund for boating-related functions, compliance with registration is excellent. He said that this was because Oregonians feel the fees are justified because they are used to improve aspects of boating in Oregon.

Texas

Boating registration and safety in Texas is administered by the State Department of Parks and Wildlife. Approximately 605,000 boats are registered in Texas. Fees for registration range from $12 for a 16-foot boat to $30 for a boat over 40 feet. A title fee of $5 dollars is charged for all boats over 14 feet. All revenue is deposited to the State Parks and Wildlife Fund which is used for boating safety and other related programs. The department was not able to provide operating and revenue data, but stated that 23 full-time and 12 seasonal employees are utilized to operate the registration and safety program.

Jim Ramsey, of the department, stated that the boating safety program utilizes game wardens who are specifically assigned to water safety patrol and enforcement of safety regulations. He added that state law requires that each boat registration document be accompanied by a pamphlet on boating safety when mailed to the boat owner.

California

The California Department of Boating and Waterways reports that approximately 650,000 boats are registered in the state. A $9 fee is charged to initially register undocumented boats and thereafter a $5 annual renewal fee is charged. The department reports that $4.8 million is collected annually in boat registration fees. All revenues are deposited into the Harbor and Water Craft Fund, which is used for the boating safety program.

The operating cost of the boating safety program, which includes registration administration, enforcement, facility construction, and education programs, is approximately $6.1 million. According to David Johnson, the legislative coordinator for the department, the program also receives revenue from a boat gasoline tax. Mr. Johnson stated that California has good compliance with its registration and safety laws.

I hope you find this information useful. I have requested a copy of the boat registration fee schedules in the other states from the National Association of Safe Boating Law Administrators. I will send it to you when I receive it. Please feel to contact me if you have any questions.

The Honorable Robin Taylor
House of Representatives
P.O. Box V
Juneau, Alaska 99811

Dear Representative Taylor:

All States except Alaska received at least $200,000 in federal funds for boating safety last year. Alaska's share would have been about $250,000. The recreational (not commercial) boating accident death rate in Alaska is forty times the national average. Alaska is the only state that has the Federal Government selling boat registration to its citizens with the funds going to the U.S. Treasury.

I hope that I have sufficiently aroused your interest enough to review the attached information. One or more of your colleagues will be entering legislation this session regarding boating safety and registration for the State of Alaska. The potential benefit to the citizens of Alaska is quite evident, as well as the need for state involvement in the safety and welfare of thousands of boaters.

If you are interested in discussing this area of mutual concern, please call me at 586-7349 or feel free to stop by at 612 Willoughby Street.

Sincerely,

D. M. WALDRON
Commander, U. S. Coast Guard
Marine Safety Office Juneau, Alaska
Commanding Officer

COST/BENEFIT ANALYSIS
BOAT REGISTRATION, STATE OF ALASKA

Background:

The Coast Guard presently registers undocumented power boats used in the coastal waters of Alaska. Estimated costs for this service is as follows:

Personnel 1.1 man years	$35K
Computer Generated Forms	8K
Postage	5K
Overhead (office space, computer, etc.)	5K
Estimated costs based on 30,000 boats, renewals every 3 years	$53K

Renewal Fees at $2 per year have averaged about $70K to the U.S. Treasury.

Proposal: That the State of Alaska establish a boating registration program and eventually a boating safety program. All power boats in the state would be required to be registered, not just in coastal (Federal) waters. It is estimated that this would be at least 50,000 vessels. Fees for other states range from $1 per year to over $50 per year. An annual fee of $10 ($30 for 3 years) is suggested. At present there are about 1200 vessels with Alaska numbers from Washington, Oregon, and other west coast states. It is recommended that out of state boats be charged $50 per year. The present computer system's use could be negotiated for use by the state. Software changes would be required to provide titling capability and would cost about $25K. Costs are estimated as follows: (based on 50K boats, 3 year renewal)

Operating Costs

Personnel 2.2 man years	$60K
Forms	15K
Postage	10K
Overhead	10K
	95K

Startup Costs

Furniture, Setup Costs	$ 5K
Software Changes	25K
Computer Terminals	3K
Misc Expenses	2K
	35K

Total first year expenses $130K.

First year estimated revenues (at $10/boat, $30 for 3 years)

1/3 X present 30K boats	10Kx$30 =	300K
New Vessels (not presently registered)	10Kx$30 =	300K
Out of State Vessels ($150 for 3 yrs)	400x$150 =	60K
	TOTAL	660K

Second year

1/3 present vessels (10K)		300K
New Vessels (5K)		150K
Out of State Vessels (.4K)		60K
	TOTAL	510K

Third year

1/3 present vessels (10K)		300K
New Vessels (3K)		90K
Out of State (.4K)		60K
	TOTAL	450K

Fourth year

Registered Vessel (20K)		600K
New Vessels (2K)		60K
Out of State (.4K)		60K
	TOTAL	720K

Revenues should tend to stabilize (at about 50K boats) at $500-600K.

There are many other benefits that are not easily quantified as follows:

a. Enforcement of boating safety regulations - At present, federal enforcement is minimal in most areas of Alaska resulting in pleasure vessels not properly equipped for Alaskan waters.

b. Fee for present registration not remaining in the state.

c. Federal funds in excess of $250K are being lost because of lack of boating safety program.

d. Present fatality rate for a summer month recreational boating season is 40 times the national average. An equivalent death rate in Minnesota per 100,000 boats would be 1694 deaths! The loss of 70 Alaskans last year is hard to ignore or put a price tag on.

e. The creation of jobs for boating registration and boating safety utilizing revenue from the registration program and federal funds would benefit Alaska especially at this time.

f. The mechanism for assessing local user fees based on the zip code of the boat owner could be implemented in the software changes. This would provide equitable, low cost collection of local user fees.

g. Alaskans would have a vested interest in having vessels comply with safety standards and registration requirements.

h. Harbormasters would have better control over vessels in their harbors and enforcement authority to require vessels to comply.

i. Excess registration and federal grant funds would be available for law enforcement equipment and for hiring additional personnel.

j. Federal enforcement would probably remain at current levels.

SAFE BOATING BILL

Questions and Answers

Q. Why does the Coast Guard want Alaska to pass a Boating Bill?

A. Because Alaska has the highest boating death rate in the U.S.

Because the Coast Guard does not have jurisdiction over all waters of the state and there is no law applicable to many Alaskan boats.

Because a law forms the basis from which to educate people on a local level, on how they should equip their boats for their own safety.

Because an acceptable law will allow the federal government, thrcugh the Coast Guard, to enter into a mutual agreement with the state for conducting a coordinated educational program (and enforcement when and where necessary) throughout the state.

Because the state can recieve federal funds to assist in boating safety activities.

Q. How can you legislate safety on boats?

A. You can't really. People must be simultaneously educated regarding the NEED for safety. A good example is traffic laws. They don't prevent all the accidents and deaths on the road - but they do give most people a safe guideline by which to drive.

Q. Would the state law be similar to federal law?

A. Yes. It would require boats to carry the same equipment required by Federal law. At present in Alaska there is no law requiring such things as red and green lights at night, fire extinguishers on boats of appropriate size and type, Coast Guard aproved life-saving devices, etc.. In 61% of the 1985 fatalities, either there were no personal flotation devices on board or approved devices that were accessible were not used.

Q. Why would the state want to take over the job of boat registration from the Coast Guard?

A. Net revenues to the state could amount to over 300K. This is

A. If past statistics can prove a point . . . YES!. Since the passage of the Safe Boating Law of 1971, fatalities have decreased across the nation by 30% while the number of boats has increased by 50%. This statistic has to prove that a better educated public is a safer public. The Bill will provide a springboard for education and reasonable enforcement to the safety of all, and by this it will hopefully reduce our tragically high boating accident fatalities.

Q. Where can answers be obtained to questions not listed here?

A. Contact: Chief, Boating Safety Division
Seventeenth Coast Guard District
Box 3-5000
Juneau, AK 99802-1217

US Department of Transportation
United States Coast Guard

Commander
Seventeenth Coast Guard District

P.O. Box 3-5000
Juneau, AK 99802 -1217
Staff Symbol: (b)
Phone: (907) 586-7467

16750
12 February 1987

The Honorable B. Cato
Alaska House of Representatives
P. O. Box V
Juneau, AK 99801

Dear Representative Cato:

These statistics were obtained from various states concentrating on when they adopted their Safe Boating Law, annual fatalities, and most important the number of registered boats. In some cases, although the number of fatalities did not decrease, they remained level while the number of registered boats increased drastically.

Year Passed	State, Reg Boats and Fatalities That YR	1985 Reg Boats and Fatalities
	Arizona	
1972	62,912(6)	111,702(6)
	Delaware	
1974	27,251(7)	39,875(2)
	Florida	
1974	248,898(82)	537,086(65)
	South Carolina	
1977	160,336(41)	221,322(17)

Similar statistics continue for other states. A State Education Program has a positive effect on reducing fatalities even in the face of increased boating activity.

Thank you for any support you can lend to this effort in Alaska. Enclosed are copies of this letter for all House Transportation Committee members.

Sincerely,

G. M. HARBEN
Commander, U. S. Coast Guard
Chief, Boating Safety Division
Seventeenth Coast Guard District

Office of Management and Budget
Impacted Agency(ies)
Senate Secretary

* FY 88 - with program implementation effective on January 1, 1988 - budget estimates include start-up costs for equipment: 5 boats, $125.0; 5 vehicles, $41.4; enforcement and training position costs, $192.2. FY 89 (and each fiscal year continuing) salary and benefit costs are summarized: Administrative Officer, Accounting Clerk, Education Specialist, Publication Specialist, 2 Data Processing Clerks, Clerk Typist; and 10 Compliance Officers (Seasonal): $395.8. Space will come from currently available facilities; utilities, communications, travel, commodities, and office equipment needs are estimated for each position.

Costs are derived from broad-brush estimates due to short time-frame preparation. A 3% inflation rate is added.

I. Restricted

Federal funds for boat safety training may be available in the sum of $250.0 for the first year and approximately $290.0 for subsequent years.

II. Unrestricted Revenues (see chart pg. 3)

CONTINUATION OF FISCAL NOTE ANALYSIS

For Bill/Resolution No. CSHB 94 (TRSP)

Revenue estimates:

II. Unrestricted

Number of Boats to Register By Year	Registered Boats 30,000 $30 X	Boats Currently Not Registered Carried Through the Triennial Cycle 6,600 1st Yr $30 X	6,600 2nd Yr $30 X	6,600 3rd Yr $30 X	6,600 4th Yr $30 X	6,600 5th Yr $30 X	Fines Aprox. $17.0 Year	TOTAL REVENUE
1st Year (88) 10000+6600	$300.0	$198.0	- - -	- - -	- - -	- - -	$17.0	$515.0
2nd Year (89) 10000+6600	300.0	- - -	$198.0	- - -	- - -	- - -	17.0	515.0
3rd Year (90) 10000+6600	300.0	- - -	- - -	$198.0	- - -	- - -	17.0	515.0
4th Year (91) 10000+6600	300.0	- - -	- - -	- - -	$198.0	- - -	17.0	515.0
5th Year (92) 10000+6600	300.0	- - -	- - -	- - -	- - -	$198.0	17.0	515.0

Notes:

1. Boat registration fee, average, is $30 triennial.
2. According to our estimates, by the fourth year there will be approximately 50,000 boats registered.
3. Of the 30,000 boats already registered, we estimate 33 1/3% (or 10000 boats) will register during the 1st year, 10000 in the 2nd year, and the remainder (10000) in the 3rd year.
4. Register 6,600 boats currently not registered during each year for three years (Coast Guard estimates 20,000 boats not registered). Anticipate three-year period before majority of citizens would be in compliance.
5. Estimate $17.0 in fines levied per year.

Justification

These positions will be responsible for the seasonal enforcement of the statutes modified by HB 94. These positions will verify compliance with registration requirements; participate in safety and educational programs; followup on boating accident reports, investigating accidents as necessary; inspect boats for required safety equipment and navigation lights; verify compliance with ski observer requirements; patrol marine events; investigate reports of reckless or negligent vessel operation; and, cite suspected violators.

Approximately 10 hours of overtime for each month of position funding will be required.

Support costs include travel funds necessary to aid investigations, etc. Contractual costs include funds for 5 HMCF pickup expenses. Commodities include funding for uniforms, fuel for trucks and patrol vessels, and food essentials. Costs include purchase of 5 18-21' Boston Whaler type boats to be used by Compliance Officers (one-time expense).

FY 88

BILL NO: HB 94 DATE: February 27, 1987

TITLE: An Act relating to boat numbering, accidents, and safety; and providing for an effective date

CONTACT: James D. Vaden

DEPARTMENT OF PUBLIC SAFETY

This bill was drafted to allow the State of Alaska to receive federal funds for registering boats in Alaska.

This bill would require the Department of Public Safety to:

1. Develop a boating numbering system;

2. develop and maintain a record keeping system;

3. develop an accident reporting system;

4. develop and present a boating safety education program;

5. promulgate regulations.

As a result of this bill, extensive public information and education would be required prior to implementation or enforcement.

Federal funding is available until April 1, 1989. These funds are distributed to the states using the following criteria:

a. one-third of funds are allocated equally each fiscal year among eligible states;

b. one-third of funds based on reported number of vessels registered;

c. one-third of funds based on state obligations and expenditures for RSB programs during the prior fiscal year.

This would give the state approximately $250.0 for the first year, and up to $290.0 thereafter.

In order to receive funds from the Aquatic Resource Trust Fund, the Department must provide the following:

1. There are sufficient state matching funds available from general revenues, vessel numbering and licensing fees, state marine fund tax, or from a fund established from those funds to finance a state recreational boating safety program.

2. An approved vessel numbering system.

3. Cooperative boating assistance program between the U.S. Coast Guard and the state to include:

(Continued on page 2)

a. law enforcement,
b. accident investigation,
c. search and rescue,
d. marine events,
e. Coast Guard Auxiliary assistance on state waters.

4. Adequate patrol to insure laws are enforced to include:

a. sufficient uniform patrol to insure compliance with all aspects of boating safety and regulations,

b. that the individuals have received in-service training,

c. procedures to selectively assign individuals to vessel traffic.

5. Adequate boating education programs:

a. must meet or exceed minimum standards established by the National Association of State Boating Law Administrators,

b. classes must be offered both in classroom and through correspondence.

6. Approved system for reporting marine fatalities.

As with most federal funds which require certification that the grantee has complied, the requirements and audits become more stringent with the passage of time. In this case, boat registration and record keeping could be accomplished with one or two clerks. Analyzing accident data would initially require the collection and input of the data, the analysis, and an Annual Report. If the number of accidents reported remain constant (62 in 1985), this could be accomplished by a part-time clerk. However, this bill requires all accidents with more than $200.00 damage be reported; there are few accidents that would not involve $200.00 damage. If those are reported, it could result in a significant quantity of work.

The Coast Guard requires uniformed officers to patrol and enforce the state's laws and regulations concerning boating safety. This could create a tremendous responsibility if we are expected to patrol all state waters, to include the three-mile limit and virtually all streams and lakes.

Certainly we could be asked why we are not patrolling the Kenai River during peak salmon runs, or Big Lake during the summer. Neither the Troopers nor Fish and Wildlife Protection have the manpower available for these patrols. Additionally, the bill requires in-service training for officers who are assigned these enforcement responsibilities.

(Continued on page 3)

In order to fully comply with the bill and the Coast Guard's requirements, we would need some level of enforcement officer assigned to nearly every community which enjoys recreational boating activities.

The following amendments are proposed:

AS 05.25.200(a)(2). It is not feasible to keep the Certificate of Number on a boat unless it is produced in such a manner that it would be protected from the elements.

AS 05.25.220. Should be rewritten to include a fee to be paid by a dealer which would include a certificate to be displayed, if requested, when demonstrating a boat. Fees under this section should be established by regulation.

AS 05.25.225. Fees should be set by regulation.

AS 05.25.225 (c). Amended to read: "The registration fees in this section are in addition to any other tax or license fee."

AS 05.25.230 (b). Amended to read: "The Department shall design and issue a set of validation stickers bearing the year through which the Certificate of Number is issued. The validation sticker must be three inches square and shall be placed three inches to the rear of the identifying number, when placed on the boat as required by AS 05.25.205."

AS 05.25.235. Amended to read: "The Department of Public Safety shall develop procedures for a staggered registration system."

AS 05.25.245. Seems awkward. Perhaps this could be entitled "Exceptions." AS 05.25.200, etc., do not apply.

Article 2. Sections 05.25.300, 305, 310, 315, 320 need to be rewritten. Should start with duties to others, immediately report, exchange information, file written reports, etc.; something to keep it in chronological order.

Section 05.25.330. Addresses owners civil liability. We are not accustomed to seeing this type of information in bills of this nature. Normally we address the owner's financial liability.

William R. Nix
Acting Commissioner
Department of Public Safety

STATE OF ALASKA

STEVE COWPER, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY

OFFICE OF THE COMMISSIONER

P.O. BOX N
JUNEAU, ALASKA 99811-1200
PHONE: 465-4322

March 9, 1987

The Honorable Robin Taylor
Alaska State Legislature
P.O. Box V
Juneau, AK 99811

Dear Representative Taylor:

We have the following suggestions for CSHB94.

Section 05.25.200(a)(2) states, "The certificate of number is carried on the boat in a manner that protects the certificate from the elements, and is available for inspection by a state, federal, or municipal law enforcement officer."

If we want a certificate carried on open boats, we should design it so it could be kept on board and protected from the elements. Perhaps a card embossed on plastic like a credit card would be appropriate.

Section 05.25.210, entitled "Application for Boat Number," should probably be entitled "Application for Dealer Certificate." I do not believe it is possible to describe the boat or boats (see line 10, page 3 of the working draft dated 3/06/87). Instead, this certificate should identify the dealer and the lengths of vessels which can be operated or demonstrated under the certificate. This would also allow us to charge different dealers different fees.

Section 05.25.225 should be entitled "Issuance of certificate and validation decals."

I find 05.25.200, 05.25.205, and 05.25.225(b) confusing as written. Section 05.25.225(b) should be broken down and include display of decals, placement of numbers, and carrying and displaying certificate, under Section 05.25.200.

Section 05.25.230 should be entitled "Expiration and Renewal of Certificates." We do not need to address "stickers" in any event; they should be addressed as "decals."

12-L2LH

If we charge an appropriate fee of $10.00 per year for an outboard, we would collect $30.00 for the certificate. However, if we charge $100.00 or more for a $100,000.00+ yacht, they may have to pay $300.00 up front. Unless the Coast Guard's computer cannot handle it, perhaps it would be more reasonable to propose a two-year certificate, at $15.00 per year, particularly since the certificate becomes void if the vessel is transferred.

Section 05.25.320 should be renumbered to 05.25.305.
Section 05.25.305 should be renumbered to 05.25.310.
Section 05.25.310 should be renumbered to 05.25.315, and
Section 05.25.315 should be renumbered to 05.25.320.

We agree that this is an important bill. We are attempting to be very conservative in our fiscal note. The Coast Guard is attempting to sell this bill as something that will save lives. If that is true, then there must be enforcement.

Our Fish and Wildlife Protection Troopers are attempting to protect the resources. That is their primary responsibility. There is a conflict when you think these officers can patrol effectively for both. In most cases, sport fishing enforcement will suffer the most by our present budget reductions. There will be few state enforcement officers to tackle this added responsibility. We need this modest fiscal note to provide a minimal enforcement presence.

As Deputy Commissioner Vaden said, "If you just want a registration and numbering program, let's not take the federal money. We can register the boats for about $50,000.00 a year and collect $300,000.00."

However, if we are going to take the federal dollars, then we must provide for a "boating safety program" which complies with federal mandates. This would be a minimal enforcement effort.

To do this job correctly and save lives would cost the State a tremendous amount of money.

Sincerely,

Gretchen A. Derr
Special Assistant

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5146 HTRA HB 94 - HB 100

718

Honorable Chair and members of the Committee. My name is Gretchen Derr, I am from the Department of Public Safety.

The Department of Public Safety is Neutral on this piece of legislation.

The purpose of this bill is to generate revenues for the State, both in fees received from a vessel numbering system, and through federal assistance funds. This bill is designed to address boating safety and boating registration while generating revenues for the State, etc.

Passage of this bill would require the Department to:

1. develop a boat numbering system;

2. develop and maintain a record-keeping system;

3. develop an accident reporting system;

4. develop and present boating safety education programs; and,

5. promulgate regulations.

Prior to implementation of this bill, extensive public education would be required to advise the public of the change in this responsibility from the federal government to the State.

Federal assistance funds from the Acquatic Resource Trust Fund are available through April 1, 1989. There is a bill in Congress to extend the Trust Fund; however, it has not passed, and is still in Committee. The State would receive approximately $250.0 the first year and up to $290.0 per year thereafter under the current law.

In order for the State to qualify for these funds, we must meet a number of requirements:

1. develop an approved vessel numbering system;

2. provide sufficient state matching funds -- these funds could come from fees received through vessel numbering.

3. maintain a cooperative boating assistance program with the U.S. Coast Guard;

4. provide adequate patrol to insure compliance with all laws and regulations concerning boating safety;

5. provide a boating safety program which meets the standards established by the National Association of State Boating Law Administrators; and, finally,

6. have an approved system for reporting marine fatalities.

The Department feels that, as with most federal funds which required certification that the grantee has complied, the requirements and audits become more stringent with the passage of time. There is no free lunch.

The Coast Guard requires uniformed officers to patrol and enforce the state's laws and regulations. This could create a tremendous responsibility if we are required to patrol all state waters - including the three-mile limit and all lakes and streams.

The Department could not fully meet the federal requirements with existing personnel -- that is, the reduced number of enforcement personnel we will have in FY88.

Subj: ALASKA HOUSE BILL 94

g. Section 5.25.240 discusses the report of transfer, abandonment or destruction of boat or change of address of owner. 33 CFR 174.13 incorporates the provision of 33 CFR 173.29 mandating that the owner must also provide the issuing authority with notice of the theft/recovery of the vessel or destruction of the certificate of number. These matters should be included with the required notice provisions of this section.

h. Section 5.25.245 sets forth the applicability of the numbering portion of the draft state law. Subsection 4 thereof provides that AS 5.25.200 - 5.25.240 do not apply to ship's lifeboats" used soley for lifesaving purposes". This qualification as to ships' lifeboats goes further than the requirments of 33 CFR 174.11 which incorporates the requirements of 33 CFR 173.11(d). Whereas Coast Guard regulations state that ships' lifeboats are to be exempted from state numbering requirements, the State of Alaska purports to exempt only those ships' lifeboats that are used soley for lifesaving purposes. The issue of the use of ships' lifeboats as small passenger vessels for passenger lightering has been a local bone of contention. Therefore, this provision which would exempt only those lifeboats that are properly used as such may indeed be considered a legitimate exercise of the State's authority.

i. Section 5.25.325 sets forth the applicability of AS 5.25.300 through 5.25.320, the provisions dealing with accident reporting. Subsection (b) provides exemption for certain vessels from the applicability of the section. 33 CFR 174.101 sets for the requirements for applicability of state casualty reporting systems and encorporates 33 CFR 173.51 therein. 33 CFR 173.51 provides that all uninspected vessels which are either required to be numbered or used for recreational purposes fall under the casualty and accident reporting regulations. Insofar as draft 5.25(b)(1) and (2) would exempt a documented or foreign boat being used by its operator for recreational purposes from the casualty reporting regulations, this section conflicts with the federal law. Therefore, this section should be modified to more closely mirror the provisions of 33 CFR 173.51.

j. Section 5.25.330 deals with the owner's civil liability. This section includes the provision that the owner of the boat is liable for injury or damage caused by the negligent operation of the boat whether the negligence consists of a violation of a state statute or a failure to use ordinary care. Such a provision seems to create a "per se" negligence rule which arguably could create liability based merely upon

the expiration of a certificate of number notwithstanding the use of reasonable care. Insofar as the legislature intends this effect there is no objection from the standpoint of federal law. However, comment is made to insure that the ramifications of this language are fully considered prior to its inclusion in the final bill.

k. Section 5.25.405 contains provisions relating to safety equipment on recreational vessels. Subsection (a) has a requirement for a white light. It is noted that the COLREGS and the requirements therein for lights control exclusively in the navigable waters of the State of Alaska. This provision dealing with lights therefore should be modified to state its applicability to only non-navigable waters. Moreover, if the state desires to include provisions for lights and shapes, etc., the statute should make reference to the international navigation rules.

l. Section 5.25.415 requires a diver's flag. This provision likewise can have effect only insofar as it does not conflict with the COLREGS. Rule 27 of the COLREGS sets forth the requirements for the exhibition of lights and shapes for vessels engaged in diving operations. Subsection (e) requires that a vessel which cannot exhibit all the lights and shapes described must still exhibit three all around lights in a verticle line where they can best be seen, the highest and lowest of these lights being red and the middle being white and a rigid replica of the international code flag "A" not less than one meter in height in a manner providing all around visibility. This section of the Alaska bill purports to require a different flag when diving operations are underway. The application of the diving flag laws in conjunction with the COLREGS was discussed in 434 Coast Guard Law Bulletin 24, corrected by (G-LMI) letter 16672 dated 12 November 1985. In short, the ruling has been made that the "Alpha" flag signal is to be flown as a means of indicating when a small vessel engaged in diving operations is restricted in ability to maneuver. Flying a state prescribed flag may be used as a personal identifying signal and may be used either in conjunction with the "Alpha" flag signal when the vessel is restricted in the ability to maneuver or alone if the vessel is not restricted in ability to maneuver. However, a vessel is not exempt from flying the code "Alpha" flag merely because it is flying a state prescribed flag and that state prescribed flag cannot be allowed to impair the visibility of the code "Alpha" flag. I would suggest that the draft bill be modified to reflect the foregoing.

(29) enter into agreements with a state agency or other instrumentality of the state; and

(30) do all things necessary or desirable to carry out the powers and duties of the corporation granted or necessarily implied in this chapter or other laws of the state or the laws or regulations of the federal government. (§ 2 ch 153 SLA 1984)

Sec. 42.40.260. Annual report. (a) Within 90 days following the end of the fiscal year of the Alaska Railroad the board shall distribute to the governor and to the legislature a report describing the operations and financial condition of the corporation during the preceding fiscal year. The report may include suggestions for legislation relating to the structure, powers or duties of the corporation or to the operation or facilities of the corporation. Subject to AS 42.40.220, the report shall itemize the cost of providing each category of service offered by the railroad and the income generated by each category.

(b) Every five years the annual report shall include an analysis of potential sale arrangements whereby the corporation may be transferred into private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation during the last five years. (§ 2 ch 153 SLA 1984)

Jack Meyer, AG most specific

Sec. 42.40.270. Audits. (a) The board shall have the financial records of the corporation audited annually by an independent certified public accountant experienced in railroad accounting. The board shall have an annual performance audit conducted by a recognized railroad management expert to assure that the railroad is being managed and operated effectively and efficiently in accordance with the requirements of this chapter and that each appropriation is used to directly support those services for which the appropriation was requested. Auditors shall use the standards required under AS 42.40.100(9) and determine whether appropriations received for a service that is not self-sustaining were calculated in accordance with United States Interstate Commerce Commission standards for determining rail service subsidies.

(b) The corporation shall make all of its financial records available to an auditor appointed by the governor and to the legislative audit division for examination. Disclosure to the public by the auditor or legislative audit division of this information is subject to AS 42.40.220 and rules implementing that section. (§ 2 ch 153 SLA 1984)

SUBJECT: Budget and fiscal records of the Alaska Railroad Corporation (Work Order 15-0271)

TO: Representative Bette Cato

FROM: George Utermohle GU
Legislative Counsel

You have asked that the budget and fiscal records of the Alaska Railroad Corporation be more available to the legislature.

While the corporation is exempt from the Executive Budget Act and the Fiscal Procedure Act, under AS 42.40.220(a) information in the possession of the corporation is public and is open to public inspection. The only information which the corporation may withhold from the public are matters of a privileged or proprietary nature such as personnel records, communications and work product of legal counsel and other information associated with specific shippers, divisions, and contrast rate agreements. (AS 42.40.220(b)) Budget and fiscal records of the corporation are not included in the matters that the corporation may withhold from disclosure. Thus the legislature should already have access to budget and fiscal information of the corporation as well as the financial and performance audits conducted under AS 42.40.270.

However if the corporation can legally withhold budget and fiscal information under AS 42.40.220(b) or if that information has simply been difficult to obtain, then the following amendment is proposed in order to require the corporation to provide some of the information that you seek:

AS 42.40.260(a) is amended to read:

> (a) Within 90 days following the end of the fiscal year of the Alaska Railroad the board shall distribute to the governor and to the legislature a report describing

the operations and financial condition of the corporation. The report shall include

(1) the goals and objectives of the board for the preceding fiscal year and modifications of the goals and objectives for the current fiscal year;

(2) proposed plans to implement goals and objectives, including estimates of future service needs, proposed modifications of existing services and establishment of new services, and the estimated financial and personnel resources to carry out the proposed plan;

(3) a budget to carry out its proposed plans in the current fiscal year including an explanation of services to be provided, the total number of persons employed or under contract by the corporation for personnel services including those for capital improvements, the need for the services, the cost of the services and other related information requested by the governor or legislature;

(4) a report of the receipts and the expenditures during the preceding fiscal year, an estimate of the receipts during the current fiscal year, and an estimate of the receipts for the succeeding fiscal year.

The report may include suggestions for legislation relating to the structure, powers or duties of the corporation or to the operation or facilities of the corporation. Subject to AS 42.40.220, the report shall itemize the cost of providing each category of service offered by the railroad and the income generated by each category.

If I can provide further assistance on this matter, please contact me.

Legislative history reports. — For legislative letter of intent relating to ch. 153, SLA 1984 (SCS CSHB 512 (Fin) am S), see 1984 Senate Journal, p. 3221

Article 1. Establishment and Organization.

Section
10 Establishment of the corporation
20 Board of directors
30 Term of office
40 Vacancies
50 Compensation and expenses
60 Board officers

Sec. 42.40.010. Establishment of the corporation. There is established the Alaska Railroad Corporation. The corporation is a public corporation and is an instrumentality of the state within the Department of Commerce and Economic Development. The corporation has a legal existence independent of and separate from the state. The continued operation of the Alaska Railroad by the corporation as provided in this chapter is considered an essential government function of the state. (§ 2 ch 153 SLA 1984)

Sec. 42.40.020. Board of directors. (a) The powers of the corporation are vested in the board of directors. The board consists of the commissioner of commerce and economic development, the commissioner of transportation and public facilities, and five members appointed by the governor. The five appointed members must be registered voters in the state except as provided in (1) and (2) of this subsection. Except for the commissioners and the member appointed under (5) of this section, a member may not be a state officer or employee. Appointed members shall have the following qualifications:

(1) one member of the board shall be a person who has at least 10 years of experience in railroad management; a person who is not a resident of the state may be appointed under this paragraph;

Article 4. Powers and Duties.

Section
250. General powers
260. Annual report
270. Audits
280. State oversight reports
285. Legislative approval required
290. Long-range capital improvement and program plan
300. Use of corporation assets
310. Indemnification

Sec. 42.40.250. General powers. In addition to the exercise of other powers authorized by law, the corporation may

(1) adopt a seal;

(2) adopt bylaws governing the business of the corporation;

(3) sue and be sued;

(4) appoint trustees and agents of the corporation and prescribe their powers and duties;

(5) hire legal counsel to represent the corporation;

(6) make contracts and execute instruments necessary or convenient in the exercise of its powers and duties;

(7) acquire by purchase, lease, bequest, devise, gift, exchange, the satisfaction of debts, the foreclosure of mortgages, or otherwise, personal property, rights, rights-of-way, franchises, easements, and other interests in land, and acquire by appropriation water rights that are located in the state, taking title to the property in the name of the corporation;

(8) hold, maintain, use, operate, improve, lease, exchange, donate, convey, alienate, encumber, or otherwise grant a security interest in, or authorize use or dispose of, land or personal property, subject to other provisions of this chapter;

(9) contract with and accept transfers, gifts, grants or loans of funds or property from the United States and the state or its political subdivisions, subject to other provisions of federal or state law or municipal ordinances;

(10) undertake and provide for the management, operation, maintenance, use, and control of all of the property of the corporation, including all land and personal property of the Alaska Railroad transferred under 45 U.S.C. 1203(a) and described in the report dated July 14, 1983, as amended, submitted to Congress and the legislature under 45 U.S.C. 1204(a);

(11) recommend to the legislature and the governor any tax, financing, or financial arrangement the corporation considers appropriate for expansion or extension and operation of the Alaska Railroad;

(12) maintain offices and facilities at places it designates;

(13) apply to the state, the United States, and foreign countries or other proper agencies for the permits, licenses, rights-of-way, or approvals necessary to construct, maintain, and operate transportation and related services, and obtain, hold, and reuse the licenses and permits in the same manner as other railroad operators;

(14) prescribe rates to be charged for services provided by the Alaska Railroad consistent with 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982);

(15) determine the routes, schedules, and types of service to be provided by the Alaska Railroad;

(16) enter into contracts, leases, and other agreements with connecting carriers, shippers, and other persons concerning the services, activities, operations, property, and facilities of the corporation, including agreements that contain provisions to preserve and expand the railroad's traffic base;

(17) plan for and undertake expansion of the railroad and railroad activities, including extension of the rail system, and contract with other modes of transportation service connecting to the rail system;

(18) hire and discharge railroad personnel and determine benefits and other terms and conditions of employment;

(19) assume all rights, liabilities, and obligations of the Alaska Railroad in accordance with 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982);

(20) maintain a security force to enforce municipal ordinances, state laws, and the corporation's rules with respect to violations that occur on or to property owned, managed or transported by the corporation;

(21) issue its bonds upon approval of the legislature and provide for and secure their payment, provide for the rights of their holders and hold or dispose of them;

(22) purchase the corporation's bonds at a price not more than the principal amount of them plus interest;

(23) cancel bonds of the corporation purchased by the corporation;

(24) secure the payment of its bonds by pledge, mortgage, or other lien on its contracts, revenues, income, or property;

(25) consent to the modification of the rate of interest, time of payment of an installment of principal or interest, or other term of a loan, contract, or agreement to which the corporation is a party;

(26) borrow money, including the amounts necessary to establish reasonable reserves, and pay financing charges and interest on bonds for a reasonable period after which the corporation estimates other money will be available to pay the interest, consultant, advisory, and legal fees, and other expenses necessary or incident to borrowing;

(27) acquire, hold, and dispose of stocks, memberships, contracts, bonds, general or limited partnership interests or other interests in another corporation, association, partnership, joint venture, or other legal entity, and exercise the powers or rights in connection with these interests that are provided in contracts or agreements and that are allowed by law concerning the satisfaction of debts;

(28) undertake and provide for the acquisition, construction, maintenance, equipping, and operation of connecting, switching, terminal, or other railroads and railroad facilities;

(29) enter into agreements with a state agency or other instrumentality of the state; and

(30) do all things necessary or desirable to carry out the powers and duties of the corporation granted or necessarily implied in this chapter or other laws of the state or the laws or regulations of the federal government. (§ 2 ch 153 SLA 1984)

Sec. 42.40.260. Annual report. (a) Within 90 days following the end of the fiscal year of the Alaska Railroad the board shall distribute to the governor and to the legislature a report describing the operations and financial condition of the corporation during the preceding fiscal year. The report may include suggestions for legislation relating to the structure, powers or duties of the corporation or to the operation or facilities of the corporation. Subject to AS 42.40.220, the report shall itemize the cost of providing each category of service offered by the railroad and the income generated by each category.

(b) Every five years the annual report shall include an analysis of potential sale arrangements whereby the corporation may be transferred into private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation during the last five years. (§ 2 ch 153 SLA 1984)

Sec. 42.40.270. Audits. (a) The board shall have the financial records of the corporation audited annually by an independent certified public accountant experienced in railroad accounting. The board shall have an annual performance audit conducted by a recognized railroad management expert to assure that the railroad is being managed and operated effectively and efficiently in accordance with the requirements of this chapter and that each appropriation is used to directly support those services for which the appropriation was requested. Auditors shall use the standards required under AS 42.40.100(9) and determine whether appropriations received for a service that is not self-sustaining were calculated in accordance with United States Interstate Commerce Commission standards for determining rail service subsidies.

(b) The corporation shall make all of its financial records available to an auditor appointed by the governor and to the legislative audit division for examination. Disclosure to the public by the auditor or legislative audit division of this information is subject to AS 42.40.220 and rules implementing that section. (§ 2 ch 153 SLA 1984)

Sec. 42.40.280. State oversight reports. (a) The board shall provide a state oversight report to the governor and the legislature before undertaking

(1) expansion, reduction, or diversification of services provided by the railroad upon the date of transfer or as provided under this chapter that the board determines would represent a significant and permanent change in the level and nature of services provided; or

(2) an application for an appropriation to be used for providing any service that is not self-sustaining.

(b) The report under (a) of this section shall be in writing, describe the proposed undertaking in detail, and specify

(1) its financial impact on the corporation;

(2) its impact on the level and nature of services provided by the corporation;

(3) the reasons the action is necessary or desirable to achieve the purposes of this chapter;

(4) whether and when the undertaking or service is expected to be self-sustaining financially; and

(5) if the undertaking requires an appropriation to be used for providing a service that is not self-sustaining, that the amount of the appropriation has been strictly calculated in accordance with United States Interstate Commerce Commission standards for determining rail service subsidies. (§ 2 ch 153 SLA 1984)

Sec. 42.40.285. Legislative approval required. Unless the legislature approves the action by law, the corporation may not

(1) exchange, donate, sell, or otherwise convey its entire interest in land;

(2) issue bonds;

(3) extend railroad lines; this paragraph does not apply to a spur, industrial, team, switching or side track;

(4) lease land for a period in excess of 35 years unless the corporation reserves the right to terminate the lease if the land is needed for railroad purposes. (§ 2 ch 153 SLA 1984)

Sec. 42.40.290. Long-range capital improvement and program plan. (a) The corporation shall prepare and the board shall adopt a long-range capital improvement and program plan. The plan shall explain the manner in which the corporation intends to accomplish the purposes of this chapter and the corporation's anticipated capital improvements during each of the five years after the plan is adopted.

(b) The board shall annually review and approve revisions to the long-range capital improvement and program plan. The board shall provide copies of the updated plan to the governor and the legislature by December 1 of each year. (§ 2 ch 153 SLA 1984)

Sec. 42.40.905. Notice of legal actions. (a) The corporation shall notify the Department of Law within 30 days before initiating legal action unless special circumstances exist that require immediate legal action to protect the corporation assets or to continue existing service.

(b) If notice of legal action is not given under (a) of this section, within seven days of taking action the board shall notify the Department of Law of the action taken and of the special circumstances that exempted the action from the requirements of (a) of this section. (§ 2 ch 153 SLA 1984)

Sec. 42.40.910. Exemption from taxation. (a) The exercise of the powers granted by this chapter shall be in all respects for the benefit of the people of the state, for their well-being and prosperity, and for the improvement of their social and economic conditions. Subject to (b) of this section, the real and personal property of the corporation and its assets, income, and receipts are exempt from all taxes and special assessments of the state or a political subdivision of the state.

(b) Bonds and notes issued under this chapter are issued by a body corporate and public of the state and for an essential public and governmental purpose. Therefore, the bonds and notes, the interest and income from them, and all fees, charges, funds, revenue, income and other money pledged or available to pay or secure the payment of the bonds and notes or interest on them, are exempt from taxation except for inheritance, transfer, and estate taxes.

(c) This section does not affect or limit an exemption from license fees, property taxes, or excise, income or other taxes, provided under any other law, nor does it create a tax exemption with respect to the interest of any business enterprise or other person, other than the corporation. (§ 2 ch 153 SLA 1984)

Sec. 42.40.920. Application of existing laws. (a) The corporation is not subject to the jurisdiction of the Alaska Transportation Commission.

(b) [Effective July 1, 1987] Unless specifically provided otherwise in this chapter, the following laws do not apply to the operations of the corporation:

sets up DOT
(1) AS 19; - Highways & Ferries
(2) AS 30.15; - Navigation, Harbors + Shipping - State grants for port facilities constru
(3) AS 35; - Public Buildings, Works & Improvements
(4) AS 36.30, except as specifically provided in that chapter; - Public Contracts
(5) AS 37.05: Public Finance — financial reports - uniform accounting
(6) AS 37.07: - Exec. Budget Act
(7) AS 37.10.010 — 37.10.060. Public Funds
(8) AS 37.10.085; - Fin. Aid to Corporations in State or political subdiv.
(9) AS 37.20; - Acceptance of federal funds.

(10) AS 37.25; - Misc provisions re appropriations
(11) AS 38; — Public Lands
(12) AS 44.62.010 — 44.62.320. (§ 2 ch 153 SLA 1984; am § 41 ch 106 SLA 1986) - Admin Procedures Act. - applies primarily to developing regulations

Effect of amendments. — The 1986 amendment, effective July 1, 1987, inserted paragraph (4) of subsection (b) and redesignated the following paragraphs accordingly.

Editor's notes. — Prior to July 1, 1987, subsection (b) read as follows: "(b) Unless specifically provided otherwise in this chapter, the following laws do not apply to the operations of the corporation

"(1) AS 19;
"(2) AS 30.15;
"(3) AS 35;
"(4) AS 37.05;
"(5) AS 37.07;
"(6) AS 37.10.010 — 37.10.060;
"(7) AS 37.10.085;
"(8) AS 37.20;
"(9) AS 37.25
"(10) AS 38;
"(11) AS 44.62.010 — 44.62.320."

Sec. 42.40.930. Conflicting laws inapplicable. If provisions of AS 42.40 conflict with the provisions of other state law, the provisions of AS 42.40 prevail. Provisions of AS 42.40 shall be construed so that they do not conflict with 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982). (§ 2 ch 153 SLA 1984)

Sec. 42.40.935. Railroad facilities code compliance. (a) Not later than two years after the date of transfer the corporation in consultation with the Department of Labor shall develop and adopt a plan to achieve compliance with AS 18.60. The plan shall be implemented and compliance achieved within five years after it is adopted.

(b) No later than two years after the date of transfer, the corporation in consultation with the Department of Public Safety and appropriate municipal officials, shall develop and adopt a plan to achieve compliance with building and related safety codes applicable to facilities of the corporation. The plan shall be implemented and compliance achieved within five years after it is adopted. In the sole determination of the commissioner of public safety, any existing building owned or controlled by the corporation that does not present a serious safety hazard and for which compliance would be uneconomical in consideration of its remaining useful life shall be exempted from compliance with state or municipal safety codes. (§ 2 ch 153 SLA 1984)

Sec. 42.40.940. Sale or lease of the railroad. (a) The governor may provide for the sale or lease of the Alaska Railroad and dissolve the corporation if

(1) it can be assured that the railroad will continue to operate after the sale or lease; and

(2) under the terms of the sale or lease, the state will receive the amount of money it has spent in connection with the Alaska Railroad

(b) A sale under this section is subject to approval by law. (§ 2 ch 153 SLA 1984)

Sec. 42.40.950. Reversion of assets. Except as provided in AS 42.40.940, if the corporation ceases to exist its assets revert to the state. (§ 2 ch 153 SLA 1984)

Sec. 42.40.980. Definitions. In this chapter unless the context otherwise requires,

(1) "board" means the board of directors of the Alaska Railroad Corporation;

(2) "bonds" means bonds, bond anticipation notes, notes, refunding bonds, or other obligations;

(3) "collective bargaining" means the performance of the mutual obligation of the corporation or its designated representatives and the representatives of the employees to meet at reasonable times, including meetings in advance of the budget making process, and negotiating in good faith with respect to wages, hours, and other terms and conditions of employment, or the negotiation of an agreement, or negotiation of a question arising under an agreement and the execution of a written contract incorporating an agreement reached if requested by either party, but these obligations do not compel either party to agree to a proposal or require the making of a concession;

(4) "corporation" means the Alaska Railroad Corporation;

(5) "date of transfer" means the date on which the United States Secretary of Transportation delivers the transfer documents under 45 U.S.C. 1201 -- 1214 (Alaska Railroad Transfer Act of 1982);

(6) "employees" means all persons employed by the corporation including executive officers;

(7) "executive officer" means the corporation's chief executive officer, assistant chief executive officer, assistant to the chief executive officer, chief of administration, superintendent of transportation, manager of marketing and sales, chief engineer, chief mechanical officer, manager of industrial development and real estate, manager of budget and accounting, manager of planning, manager of personnel, manager of supply and procurement, chief of security, manager of operating rules, manager of data processing, manager of strategy, manager of operations planning, manager of supply, manager of procurement, manager of safety, manager of administrative procedure, chief counsel, or if so designated by the board, any employee who fulfills these management functions under a different title or who exercises a similar or comparable level of responsibility or supervision;

(8) "land" means any interest in real property, including tide and submerged land, and any right appurtenant to the interest.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M December 11, 1986

SUBJECT: Alaska Railroad Corporation Act
(Work Order No. 15-0271)

TO: Representative Bette Cato

FROM: George Utermohle GU
Legislative Counsel

You have asked a number of questions regarding the Alaska Railroad Corporation (ARR). This memorandum is in answer to those questions.

ONE: WHAT ARE THE LEGAL AND ECONOMIC EFFECTS OF THE EXEMPTIONS CONTAINED IN AS 42.40.920?

AS 42.40.920 specifically exempts ARR from compliance with eleven parts of the statutes.

(1) AS 19

AS 19 addresses highways and ferries. Generally AS 19 is irrelevant to ARR, however there are some sections that could affect railroad operations. In AS 19.05 - 19.40 "utility" is defined to include railroads, so that those provisions of AS 19 addressing the interactions between the Department of Transportation and Public Facilities (DOTPF) and utilities also apply to railroads. In particular AS 19.25.010 - 19.25.020 provides that utilities may be located in highway right-of-ways with the approval of DOTPF and that utilities can be removed from highway right-of-ways if necessary to construct or repair highways.

The economic effect of this provision is to free ARR from the obligation to consult with DOTPF before locating its tracks within a highway right-of-way or to remove tracks from a highway right-of-way. The exemption puts ARR in a better position to negotiate with DOTPF for relocation of tracks from highway right-of-ways, so that DOTPF may have to

bear a larger portion of the cost of relocation. If ARR did not have this exemption, it would be in the same position as other utilities such as power companies, gas companies, and other railroads.

(2) AS 30.15

AS 30.15 provides for state participation in port development projects by authorizing grants to municipalities. The selection and support of port development projects is subject to some control by DOTPF. ARR is exempted from this process for port development.

This exemption enhances the autonomy of ARR more than it promotes economic efficiency of the railroad. Without the exemption ARR may have its port development projects complicated by cooperation with municipalities and DOTPF, but the economic cost of the cooperation should not be significant.

(3) AS 35

AS 35 relates to the construction of public facilities. ARR is exempt from several significant provisions of this title.

AS 35.05.010 designates DOTPF as the agency responsible for construction of public works in the state.

AS 35.10.015 delegates responsibility for enforcement of regulations for handicapped access to public buildings to DOTPF.

AS 35.10.025 requires that state facilities comply with local building codes.

AS 35.10.090 - 35.10.120 makes DOTPF responsible for establishing priorities for port development and for applying for federal funds for harbor facilities.

AS 35.10.160 makes DOTPF responsible for the planning, design, and construction of public facilities. This section also requires that life-cycle costing be used in estimating the total cost of proposed public facilities.

AS 35.27.020 requires that one per cent of the construction cost of public facilities be allocated to art in public places.

AS 35.30 requires that DOTPF and University of Alaska building projects receive the approval of municipal planning authorities.

ARR receives a considerable economic benefit from the exemptions from state handicapped access regulations, participation in the one-per cent-for-art program, and compliance with municipal building codes and planning ordinances.

The exemption from state handicapped access regulations may not mean any real economic benefit to ARR. ARR is still subject to federal regulations regarding handicapped access to federally licensed common carriers and to demands of the market that the railroad serves.

(4) AS 37.05

AS 37.05 is the Fiscal Procedures Act. The act requires that state agencies submit annual financial reports and statements. The act also makes the Department of Administration responsible for accounting, public records, purchasing, and space leasing for state agencies. AS 37.05.230 requires competitive bidding for goods and services purchased by state agencies and grants a bidder's preference to Alaskan businesses. AS 37.05.230 will be repealed on July 1, 1987 and replaced by provisions of the State Procurement Code (AS 36.30).

This exemption gives greater autonomy to ARR, but does not confer a measurable economic benefit on ARR.

(5) AS 37.07

AS 37.07 is the Executive Budget Act. The act requires the governor to prepare and the legislature to review budgets for state agencies. The effect of this exemption is to assure the autonomy of ARR. There is no significant economic benefit to ARR as a result of this exemption.

(6) AS 37.10.010 - 37.10.060

AS 37.10.010 - 37.10.060 requires the Department of Administration to disburse money for state agencies and the Department of Revenue to deposit in the state treasury all money received by state agencies. The exemption from these provisions assures autonomy for ARR without conferring an economic benefit.

(7) AS 37.10.085

AS 37.10.085 prohibits the state from subscribing to capital stock of corporations, from lending credit to corporations, and from borrowing money for the use of a corporation. This exemption permits ARR to invest its funds in corporations and enhances the autonomy that ARR has over its own capital.

(8) AS 37.20

AS 37.20 establishes procedures for receipt of money, property, and land from the federal government. This exemption allows ARR to receive aid from the federal government without having to receive the aid through the governor, Department of Administration, or the Department of Natural Resources. This exemption enhances the autonomy of ARR by freeing ARR from having to cooperate with other agencies in order to receive federal aid. There is no particular economic benefit to ARR associated with this exemption because ARR could still receive federal aid through the processes established in AS 37.20.

(9) AS 37.25

AS 37.25 establishes the lapse date for one year appropriations and for capital appropriations. This exemption makes it necessary for an appropriation to ARR to specifically designate a lapse date.

(10) AS 38

AS 38 relates to the management of state lands. Under AS 38 land in the public domain is managed by the Department of Natural Resources. The disposal of state land to private owners and to municipalities and the exchange of land between state, federal, and municipal governments and private landowners is also controlled under AS 38.

Most provisions of AS 38 would affect ARR only indirectly by establishing procedures for the use and management of railroad lands. However AS 38.35.020 provides for pipeline right-of-ways across state lands including railroad lands. By exempting ARR from the pipeline right-of-way provisions a pipeline company must negotiate a right-of-way across railroad lands just as if ARR was a private company.

The exemption from AS 38 enhances the autonomy of ARR by allowing ARR to manage its own land. The exemption does not confer a direct economic benefit on ARR, but may indirectly result in savings for land management costs associated with the detailed notice and public hearing requirements of AS 38.

(11) AS 44.62.040 - 44.62.320

AS 44.62.040 - 44.62.320 relates to the procedures for the adoption of regulations and for public meetings. The operation of ARR is controlled by rules adopted by the Board of the corporation in accordance with the procedures set out in AS 42.40.180. The procedures under AS 42.40.180 are analogous to the procedures required by the Administrative Procedures Act (AS 44.62) but are much less detailed regarding the notice required and the timing of the process.

The Railroad Labor Relations Agency, however, must fully comply with the Administrative Procedures Act.

ARR is also exempt from the "open meetings" law (AS 44.62.310). However ARR is subject to AS 42.40.150 and 42.40.170 which are analogous to the open meetings law. Unless the board of the corporation is discussing privileged or confidential information, the board must discuss its business in public.

The exemption from the provisions of the Administrative Procedures Act relating to adoption of regulations simplifies the process for making rules governing the railroad. The economic impact of this exemption is that ARR does not incur the costs associated with the complex procedures required to adopt regulations under AS 44.62.

The exemption from the "open meetings" law enhances the autonomy of ARR by freeing the railroad's decision-making process from the statute applicable to other government agencies. However, since ARR is required to hold open meetings under its own legislation, there is no real difference between ARR and other state agencies.

(12) AS 36.30

Effective July 1, 1987 ARR will be exempt from the State Procurement Code. However, ARR must adopt procurement procedures which are substantially equivalent to the procedures contained in the State Procurement Code and the regulations adopted under the authority of the Code. (AS 36.30.015(e))

Since ARR must adopt procurement procedures equivalent to the State Procurement Code, ARR is not truly exempt.

The only effect of this exemption is that it reflects the legislature's acknowledgement of the relatively independent status of ARR.

TWO: YOU HAVE STATED THAT YOU WOULD LIKE TO SEE ARR PROVIDE MORE INFORMATION ON ITS REVENUES, RATES, FINANCES, AND OPERATIONS. THE FOLLOWING IS A SUMMARY OF REPORTS REQUIRED OF ARR.

Ninety days after the end of ARR's fiscal year on December 31 ARR must prepare an annual report relating to the operations and financial conditions of the corporation. (AS 42.40.260) Every five years the annual report must contain a report on offers to sell the railroad. The annual report is subject to restrictions on the release of confidential information (AS 42.40.220); these restrictions may limit the informational value of the annual report.

ARR must prepare an oversight report when a significant and permanent expansion, reduction, or diversification is made in the level and nature of services provided and when the ARR applies to the legislature for a subsidy to provide rail service. (AS 42.40.280) The report must include discussions on the financial impact the railroad, on the impact of the action on the level and nature of services, on the reasons for the action, on whether and when the project will be self-supporting, and on whether the subsidy has been calculated in accordance with the standards of the Interstate Commerce Commission. ARR has not been required to prepare an oversight report to date.

ARR must prepare a five year capital improvement plan and update it annually. (AS 42.40.290) The plan must explain the manner in which the ARR will achieve the purposes of the Alaska Railroad Corporation Act. ARR must submit the report to the legislature by December 1 of each year. ARR has prepared the five year plan and at least one annual update. The update for 1986 has not been released yet.

The governor is required to contract with a private consultant for a special report on the long term operations of the railroad that are in the best interest of the state. The report must include specific recommendations on operational alternatives and on transfer of all or part of the railroad

operations to the private sector. The report is due February 1, 1987. The funds for this report lapsed without being spent. The consultant was never hired. This report has not been and is not likely to be completed.

THREE: WHAT ARE THE REQUIREMENTS FOR THE SALE OF THE RAILROAD? WHAT IS THE TIME FRAME? WHAT HAS BEEN DONE TO DATE? WHAT HAPPENS IF ARR DOES NOT COMPLY WITH THE STATUTE?

There is no specific requirement that the railroad be sold. AS 42.40.940 authorizes the governor to sell or lease the railroad and dissolve the Alaska Railroad Corporation if

> (1) it can be assured that the railroad will continue to operate after the sale or lease; and
>
> (2) under the terms of the sale or lease, the state will receive the amount of money it has spent in connection with the Alaska Railroad.

The legislature must approve any sale.

AS 42.40.260(b) requires ARR to include in its annual report once every five years

> an analysis of potential sale arrangements whereby the corporation may be transferred into private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation during the last five years.

This language can be construed as a requirement that ARR make three offers to sell the railroad every five years, but this language does not require the railroad to be sold.

There is no time period in which the railroad must be sold. The only time period involved is the requirement that ARR report on three offers to sell the railroad every five years.

To date ARR has made no offers to sell the railroad. The annual report containing information on offers to sell the railroad is due by 1990.

AS 42.40 contains no sanctions for failure to sell the railroad or to make the offers to sell the railroad. If ARR does not make the offers to sell the railroad, the only result will be that the railroad will not be sold.

Please contact me if you have further questions regarding the Alaska Railroad Corporation Act.

Re: HB 100, An Act Relating to the Annual Report of the Alaska Railroad Corporation

Dear Representative Cato,

We understand that on Friday, March 6, 1987, the House Transportation Committee will be considering HB 100 which proposes some changes to the annual report of the Alaska Railroad Corporation ("ARRC"). We are hopeful that the committee will find the Corporation's position paper useful as it reviews the bill.

Unfortunately, Frank Turpin is out of town and is unable to present our comments personally. However, I know that he would want me to extend his best regards and to thank you for your continued interest in Railroad-related activities.

Because of travel budget cuts, we do not currently plan to send an ARRC representative to the hearing, but can arrange it if you believe a Railroad presence is imperative. As an alternative, our Director of Administration, Jim Blasingame, or I will be available during Friday afternoon to answer questions or concerns generated by the position paper. Our telephone numbers are 265-2425 and 265-2461, respectively.

Thank you very much.

Sincerely yours,

Larry D. Wood
General Counsel

POSITION PAPER / Alaska Railroad Corporation

HOUSE BILL NO. 100

An Act Relating to the Annual
Report of the Alaska Railroad Corporation

I. Introduction

The Alaska Railroad Corporation Act ("ARCA") requires the Board of Directors of the Alaska Railroad Corporation ("ARRC") to prepare and distribute an annual report to the governor and legislature within 90 days following the end of each corporate fiscal year. HB 100 proposes amendments to ARCA's annual report section, AS 42.40.260(a), which are intended to add several items which must be discussed in the report.

The substance of these items appear to be generally covered in ARRC's annual report, long-range or five-year capital improvement and program plan and its yearly updates, performance and financial audits, and operating and capital budgets. However, even if the same information may be largely available now, HB 100 reflects a desire that all of it be combined in the railroad's annual report. Should the bill be favorably considered for this reason, ARRC requests that the legislation be amended to call for the items to be presented in a supplement to the annual report. Because year-end financial information would also appear in this supplement, we request that 120 days, rather than 90, be available for annual report preparation.

II. Discussion

Part A of the following discussion explains current ARCA goal setting and reporting requirements in greater detail and compares them to HB 100's modifications of the law. Part B describes changes to HB 100 which will help mitigate its impact on ARRC operations if the bill is passed.

A. ARCA's Present Planning and Reporting Requirements

In short, HB 100 will require that ARRC's annual report include:

1. The Board's goals and objectives;

2. Proposed plans to implement these goals and objectives;

3. A budget to carry out proposed plans; and

4. A report of past, present, and future receipts and expenditures.

Currently, the corporation's goals and objectives and its plans to implement them are contained in its long-range or five-year capital improvement and program plan. Goals and objectives are also discussed in ARRC's annual report and a consultant's management audit measures ARRC's success in attaining them. Moreover, ARRC's budget is prepared before the close of each fiscal year. A report of railroad receipts and expenditures appears in the yearly financial audit which is published in the annual report. These plans, reports, audits, and budgets are presently available to the governor and legislature to assist their review of railroad activities.

We have attached ARRC's five-year plan, 1985 annual report, performance audit, and 1987 operating and capital budget. As noted, the financial audit is published in the annual report.

For examples of current ARRC planning and reporting, the reader may turn to ARRC's five-year plan. The plan must be updated annually and copies provided to the governor and legislature by December 1 of each year. It "must explain the manner in which the corporation intends to accomplish the purposes of this chapter and the corporation's anticipated capital improvements during each of the five years after the plan is adopted." AS 42.40.290.

Corporate goals and objectives are divided into four categories, physical plant, revenue, personnel, and general on page four of the current plan. Physical plant goals, for example, include "Major effort to upgrade equipment to improve efficiency and lower maintenance costs will continue throughout the planning period." Page 5. Efforts to implement this goal are explained in the Plans Priority and Classification of Capital section and also appear in the form of a capital spending program on page 18.

The corporation's goals for 1985 also appear on page 4 of the 1985 annual report. Goals and accomplishments are discussed by department throughout the report. In addition, ARCA requires that the annual report describe the operations and financial condition of the corporation during the preceding fiscal year. The report must itemize the cost of providing each category of service offered by the railroad and the income generated by each category.

The goal of "modernizing the railroad's rolling stock, equipment and physical plant" is repeated in the 1985 annual report. A detailed discussion of improvements and maintenance appears in the performance audit as another means of measuring goal attainment. The operating and capital budget lists those projects and expenditures which propose specific actions to achieve upgrade and maintenance objectives.

Finally, the budget and audited year-end financial statements appearing in the annual report do substantially include the information identified by HB 100's final paragraphs. ARRC's 1987 operating and capital budget lists those services each department will provide during the fiscal year. A manpower budget projects the number of personnel needed to accomplish operating and capital goals.

Although in separate formats, railroad plans, reports, audits, and budgets already largely cover the data and information targeted by HB 100. However, the bill's primary focus may be upon combining the information into an enlarged or supplemented annual report. Should HB 100 receive favorable consideration for this or other reasons, there are two modifications which would greatly alleviate its anticipated impact upon corporate operations.

B. Proposed Amendments to HB 100

First, because financial information would be included in the annual report, ARRC requests that the report be due 120 days, not 90, following the end of the railroad's fiscal year. By this time, audited data would more likely be available. Our experience last year indicates that 90 days is not a realistic deadline given the delays inherent in exhaustive, external financial reviews.

Second, we request that the information directed by HB 100 to be combined or provided in the annual report actually appear in a supplement. To effect this change, HB 100 could be easily modified by adding "A supplement to" before "The report" in line 18.

Although primarily a report to the governor and legislature (who, of course, represent ARRC's "shareholders"), the annual report is also used as a marketing tool. In the manner of private corporations, ARRC provides copies of its annual report to customers, potential customers, carriers, and government officials to promote and market its operations and services. We are concerned that a voluminous report will contain information of little interest to such groups, increase publication costs, and seriously damage this effective marketing tool. On the other hand, a supplemented report can be easily and less expensively provided to meet legislative needs. Finally, goals related to market strategies and costing

models will contain sensitive, sometimes confidential, information which should not be widely disseminated.

C. Fiscal Impact of HB 100

Because we view the tasks as largely already required by present law, favorable consideration and passage of a modified HB 100 will mostly have an administrative impact upon ARRC. To the extent that composites and additional information may be needed for an supplemented annual report, we presently believe that they can be provided without a great deal of additional expense in the area of staff and Board time, wordprocessing, copying, printing, and postage.

II. Conclusion

HB 100 requires information to be inserted in ARRC's annual report which is largely already available to the legislature in the railroad's annual report, five-year plan and updates, audits, and operating and capital budget. However, should the bill receive favorable legislative consideration, we request two amendments which will ensure a more realistic report deadline and preserve the marketing advantages of the present annual report format.

Ms. Penelope Weyhrauch
Legislative Analyst
Alaska State Legislature House of
Representatives Research Agency
P.O. Box Y
State Capital
Juneau, Alaska 99811-3100

Dear Ms. Weyhrauch:

Your letter dated December 4, 1986 to Mr. Larry Wood, General Counsel of the Alaska Railroad Corporation, was referred to me for response.

You have asked for our assessment of negative impacts that the Alaska Railroad Corporation ("ARRC") might experience if the statutory exemptions in AS 42.40.920 were repealed. Unfortunately, your question does not avail itself of a simple response.

In order to answer your question, it is important to understand the various laws and agreements which circumscribe ARRC's existence and operations. The federal Alaska Railroad Transfer Act ("ARTA"), 45 U.S.C. §§1201-1214, authorized the transfer of the Alaska Railroad to ARRC and established the ground rules for the State's purchase of the Railroad. As part of that act, the State was required to make certain declarations and agreements to abide by the sale terms. The state Alaska Railroad Corporation Act ("ARCA"), AS 42.40.010-.990, implemented the State's commitments all within the requirements of ARTA through the creation of a public corporation to own and operate the Alaska Railroad.

ARTA, the State's own declarations and agreements to abide by those sale terms, and ARCA insure that the State-owned railroad shall be a rail carrier generating, retaining, and managing its own revenues for railroad purposes to better serve Alaska's transportation and development needs. In framing the operating characteristics of the public corporation to conform to this expectation, Alaska's leadership, both federal and state, gave ARRC enough independence to conduct its activities as a

separate and viable economic entity. Exemptions from laws which apply to state agencies mean generally that ARRC promotes, receives, and manages its own revenues, supplies, equipment, facilities, and real estate, establishes its own personnel policies, compensation systems, and employment agreements, promulgates its own rules and regulations to govern internal and external affairs, and manages its own purchasing, financing, and budgeting needs. On the other hand, a desire for public accountability requires open meetings, appointments by the Governor to the railroad board, procurement and ethical codes substantially equivalent to State models, financial and management audits, annual and oversight reports, legislative approval of certain real estate transactions, and long-range capital improvement and program plans. This wise blend of financial and operations independence with State oversight requirements results in a quasi-public, quasi-private railroad armed with the flexibility needed to quickly react to changing market, financial, and legal needs and with the accountability mechanisms necessary to satisfy the governmental aspects of its operations.

As a result of the dual legislative desires of self-sufficiency and public accountability all within the confines of ARTA, the Alaska legislature created a public corporation unlike any other public corporation in Alaska. This is reflected in the legislative findings and purposes which accompanied ARCA. See 1984 Alaska Session Laws, Chapter 153, Section 1. The findings and purposes clauses state that the public corporation is to be exclusively responsible for the management of the financial and legal obligations of the Alaska Railroad, carry out its responsibilities on a self-sustaining basis, and provide for the prudent operation of the railroad according to sound business management practices. Also, ARCA creates a "viable economic entity with the powers and duties necessary to operate and manage the Alaska Railroad pending eventual transfer of the Railroad to the private sector." ARCA and its legislative history reflect a legislative desire that the railroad operate as independently as possible from the State to facilitate the smooth transfer of its business and assets to a private owner. Indeed, AS 42.40.260 requires that ARRC's annual report contain every five years an analysis of potential sale arrangements, including documentation of at least three offers to sell ARRC.

Under AS 42.40.920, ARRC is exempt from the following statutes:

(1) AS 19;
(2) AS 30.15;
(3) AS 35;
(4) AS 37.05;
(5) AS 37.07;
(6) AS 37.10.010 - 37.10.050;
(7) AS 37.10.080;
(8) AS 37.20;

(9) AS 37.25;
(10) AS 38;
(11) AS 44.62.040 - 44.62.320.

A careful review of these statutes demonstrates how each conflicts with ARCA or ARTA. Titles 19 and 35 set forth the powers and duties of the Department of Transportation and Public Facilities ("DOT/PF") to plan, construct, maintain and operate transportation facilities, including state ferries, airports and water and harbor facilities, and to plan and construct public buildings, boat harbors, dikes and breakwaters. Since ARRC operates as a self-sustaining public corporation, exemptions from Titles 19 and 35 insure that ARRC is responsible for its own facilities and operations.

AS 30.15 provides for state grants of monies and land for construction of local port facilities. ARRC's exemption precludes municipalities from using ARRC funds or lands for port facility development.

Exemptions from portions of Title 37 are required by ARTA which states that "revenues generated by the state-owned railroad shall be retained and managed by the state-owned railroad for railroad and related purposes." 45 U.S.C. §1207(a)(5). AS 37.05, the Fiscal Procedures Act, establishes uniform accounting, purchasing, post auditing, and related financial provisions for all "state agencies" and requires state agencies to submit reports, documents, and statements to the Department of Administration for accounting purposes, requires federal funds received by state agencies to be deposited in the state treasury, makes the Department of Administration responsible for all accounts and purchases of state agencies, requires competitive bidding procedures, and imposes other financial and reporting requirements. The exemption from AS 37.05 conforms to ARTA by allowing ARRC to maintain and control its own accounts and to act as its own purchasing agent.

The exemption from AS 37.07, the Executive Budget Act, also conforms to ARTA by allowing the ARRC to budget and manage its revenues as a separate economic entity.

AS 37.10.010 - .060 designates the Department of Administration as the custodian of state funds and requires all officers, boards and commissions to account to the Department of Revenue for moneys received. Again, an exemption from AS 37.10.010 to 37.10.060 allows ARRC to manage its own revenues.

AS 37.25 determines which unexpended appropriations lapse and which do not. This exemption insures that all ARRC's monies are available to it from year to year.

AS 37.10.035 prohibits political subdivisions from subscribing to the stock of a corporation and from loaning credit or

borrowing money for a corporation's use. Exemption from AS 37.10.085 permits ARRC to manage its revenues by placing its funds in a wide range of investments, including lending its credit and borrowing money for the use of a corporation.

AS 37.20 authorizes the governor to accept federal grants and transfers of property. Transferred land falls within the jurisdiction of the Department of Natural Resources. ARRC's exemption from AS 37.20 insured that federal railroad property, including land, building, monies, personnel property and structures, would be directly conveyed to ARRC rather than to the Departments of Administration, Natural Resources and Transportation and Public Facilities.

Title 38 states that the lands of the state are to be managed by the Department of Natural Resources. Exemption from Title 38 conforms to ARTA's and ARCA's mandate that ARRC manage railroad real estate.

AS 44.62.040 to 44.62.320, much of the Administrative Procedures Act, provide procedures for adopting and implementing regulations in state government. These provisions are supplanted by ARCA's AS 42.40.170 - .270, which call for publicly adopted rules by ARRC's board of directors.

The eradication of one or more of the ARCA exemptions will substantially change the model of a self-sufficient, competitive and accountable public railroad corporation that was created by Alaska's state and federal leadership. Furthermore, through the development of its own personnel, procurement, surplus property, budget, accounting, and land and lease plans, policies, and procedures, ARRC stands ready for expeditious transfer to the private sector. The short history of ARRC operations have underscored the wisdom of the legislature's original direction. We very much support that mission and would most appreciate the opportunity to comment upon proposed legislation to change or amend it.

I hope this adequately answers your question. Please feel free to call if you have any further questions.

Yours very truly,

E. Thaddeus Lewis
Associate General Counsel

cc: F. G. Turpin
L. D. Wood, Esq.

3505L

Questions asked to the Alaska Railroad Corporation by the House Labor & Commerce Committee, 1987.

26. Describe each instance since February 1985 in which the Board has invoked an executive session to discuss the subjects described in A.S. 42.40.170(b)(7).

Response: Those instances included the following Board meetings:

February 15, 1985 - Board Mtg. - Tariff Increase
November 21, 1985 - Board Mtg. - Corporation Marketing Plan
- Costing Procedures
December 19, 1985 - Board Mtg. - Corporation Marketing Plan
February 20, 1986 - Board Mtg. - Marketing Update
April 17-18, 1986 - Board Mtg. - Marketing and Financial Projections
May 21, 1986 - Board Mtg. - Marketing Update

Such information was also discussed in executive session as part and parcel of litigation reports. For example, a state case, City of Valdez v. ARRC, unsuccessfully sought protected pipe rate costing information, and an ICC boxcar exemption proceeding was an unsuccessful effort by watercarriers to deny ARRC the benefit of ICC deregulation of railroad boxcar movements.

27. Describe those specific categories of documents which the ARRC does not make public.

Response: ARRC does not specifically designate by type those documents that are open for public inspection and those that are not. Rather, when a particular request for information is received, ARRC first determines the nature of the request and then provides the information if it is not within the scope of those matters set forth in AS 42.40.210(b) and Board Rule No. 4.

ARRC's Board of Directors has adopted Rule 4, a copy of which is attached as an exhibit, which elaborates upon matters not available for public inspection.

28. Describe those specific categories of documents which the ARRC does make public.

Response: See response to Question No. 27.

29. Describe the specific types of documents which ARRC withholds from the public as being "proprietary information" associated with specific shippers consistent with the standards and practices of the ICC.

Response: The types of documents which fall into the category relating to proprietary information, divisions and

contract rate agreements would include cost studies, cost data, contract rate agreements, exempt rate quotations, divisions sheets, bills of lading, waybills, any documents relating to a shipper's business, and any notes or correspondence relating to any of the above.

30. Describe the specific types of documents which ARRC withholds from the public as being "proprietary information" associated with divisions consistent with the standards and practices of the ICC.

Response: See response to Question No. 29.

31. Describe the specific types of documents which ARRC withholds from the public as being "proprietary information" associated with contract rate agreements consistent with the standards and practices of the ICC.

Response: See response to Question No. 29.

32. Other than the specific types of documents described, describe other specific types of documents which the ARRC withholds from the public as "proprietary information" consistent with the standards and practices of the ICC.

Response: See response to Question No. 29.

33. List each rule pursuant to which the ARRC has designated documents as privileged or proprietary under A.S. 42.40.220 or otherwise, and describe the types of documents and information withheld from the public pursuant to each rule.

Response: See response to Question No. 27.

34. Describe the rationale of the ARRC in refusing to provide the Transportation Committee with documents requested by that committee in 1985 and 1986.

Response: It is our recollection that the information requested was operating costs for movement of freight via trailers on flat cars. Railroads in the United States have not been required by law to divulge costs. Such information has always been considered proprietary, and confidentiality has been protected. Clearly, such rules promote competition by allowing railroads the same business advantages and marketing mechanisms enjoyed by other transportation modes. In those instances where it was necessary for the Interstate Commerce Commission to have the costs in order to arrive at a conclusion, the cost data was submitted to the Commission on a confidential basis, was not divulged to the complainant or to the public, and did not appear in any printed report. Federal and state laws provide ARRC the same rights and benefits to

protect confidential information. This enables the company to price and contract its services on a businesslike basis and to respond quickly to market conditions.

35. Describe the documents and categories of information the ARRC refused to give to the Transportation Committee.

Response: Although we are not certain at this date what documents were refused, they were most probably those which would divulge confidential contract rates or operating costs, and which could be attributed to any freight service segment.

Categories of information which must remain confidential:

- contract rates
- operating costs for specific freight moves
- any information which would identify shipments concerning one shipper or consignee

36. Describe all procedures and practices by which the ARRC attempts to minimize the adverse effect of the operation of the railroad on wildlife.

Response: In cooperation with the Alaska Department of Fish and Game ("ADF&G"), the ARRC has experimented with numerous methods to minimize the adverse effects of its operations on wildlife, specifically big game. Historically, moose are the game population most affected by the railroad, primarily in years of deep snow (3 to 5 feet) for long periods of time. Unfortunately, many of the experiments have failed to demonstrate a reliable way to discourage moose usage of the plowed track (see response to Question No. 39 below). Presently, the effort is concentrated on plowing the right-of-way as wide as possible, and a combination of lights, horns and bells to frighten them away from the track. Where possible, the train engineers slow down to reduce the chance of a strike.

ARRC is again cooperating with ADF&G in its ongoing study of the moose mortality along the tracks. For example, arrangements are being made for game biologists to accompany a locomotive on several trips north this season. The corporation has also engaged a private consultant to develop electronic equipment to frighten the moose and drive them away from the track. Research and equipment design under that contract are scheduled for completion within the current winter season, with construction and installation of equipment to follow depending on the results of research.

37. Describe all actions taken by the ARRC if a train hits a moose, including names of people to whom the information is reported, reports made, and attempts to salvage meat.

RULE NO. 4 - PUBLIC DISCLOSURE OF INFORMATION

(Adopted 12-17-84
Amended 7-18-85)

A. Public Information:

As provided in AS 42.40.220, information in the possession of the Corporation is public and available to public inspection at reasonable times.

B. Restrictions on Disclosure:

As further provided under such provision and as required by the Alaska Railroad Transfer Act of 1982 (ARTA) (45 U.S.C. 1204), the following information is hereby designated to be of a privileged or proprietary nature and shall be withheld from public inspection:

1.) As required under Sec. 605(b) (ARTA), certain information of the Federal Alaska Railroad available to the Corporation, including, "proprietary business data, personnel records, and other information, the public disclosure of which is prohibited by law;"

2.) personnel records of the Corporation including but not limited to each employee's original application for employment and employment memorandum, resume, any and all salary information, reports of other employment investigations, tests, any letters of recommendation, reports of work performance, reports of the employee's progress, disciplinary actions, and such other records as may be created in the employee's initial employment and continued service to the Alaska Railroad Corporation. Personnel records may be released upon receipt of written authorization from the employee, former employee, or applicant whose records are requested. Such authorization shall specifically identify the information authorized for release.

For employees who transferred to the Corporation pursuant to P.L. 97-468, personnel records shall include the employee's Official Personnel Folder, Emergency Medical Folder, and any copies thereof. Disclosure of information contained in the Official Personnel Folder and Emergency Medical Folder shall be governed by applicable Federal law and regulation;

3.) communications with and work product of counsel;

4.) all other records, documents, data or information of a privileged or proprietary nature, including but not limited to proprietary information associated with specific shippers, divisions and contract rate agreements, and specifically including all information that may be withheld or protected from discovery in proceedings before the Interstate Commerce Commission consistent with the Commission's standards and practices;

5.) other information the subject of which could be discussed in executive session under AS 42.40.170;

6.) any other information or records required to be kept confidential by Federal or State law or regulations.

THE PRECEDING PAGES WERE TREATED AS
A UNIT IN THE ORIGINAL FILE.

HOUSE BILL 100 - AN ACT RELATING TO THE ANNUAL REPORT OF THE ALASKA RAILROAD CORPORATION.

GOOD AFTERNOON - MY NAME IS REPRESENTATIVE BETTE CATO.

AFTER SEVERAL YEARS OF LISTENING TO THE ANNUAL PRESENTATION BY THE ALASKA RAILRAOD CORPORATION BOARD AND MANAGEMENT, AND REVIEWING THE ANNUAL REPORT BY THE CORPORATION TO THE LEGISLATURE, I FELT THE NEED FOR A MORE COMPLETE, INDEPTH REPORT BEING MADE AVAILABLE THAT WOULD ENABLE US TO PROPERLY EVALUATE THE RAILROAD'S OPERATIONS.

I WAS DIRECTLY INVOLVED WITH THE TRANSFER OF THE RAILROAD TO STATE OWNERSHIP. MANY HOURS WERE SPENT WRITING STATUTES THAT SET UP A "QUASI" PUBLIC CORPORATION AS AN INSTRUMENTALITY OF THE STATE WITHIN THE DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT, HOWEVER, THE CORPORATION HAS A LEGAL EXISTENCE INDEPENDENT OF AND SEPARATE FROM THE STATE.

THE POWERS OF THE CORPORATION ARE VESTED IN A SEVEN MEMBER BOARD OF DIRECTORS APPOINTED BY THE GOVERNOR.

WHILE I DO AGREE THAT THE CORPORATION NEEDS THIS AUTONOMY IF THEY ARE OPERATE SUCESSFULLY AS A CORPORATION, I DO FEEL THE NEED FOR THE GOVERNOR AND THE LEGISLATURE TO HAVE ACCESS TO A REPORT THAT CONTAINS A COMPLETE OVERVIEW OF THE RAILROADS OPERATIONS, BUDGET, REVENUES, EXPENDITURES, CAPITAL EXPENDITURES AND GOALS FOR THE NEXT FISCAL YEAR.

CHAPTER 40 SECTION 42.40.920 - APPLICATION OF EXISTING LAWS PROVIDES THE CORPORATION WITH 12 EXEMPTIONS. THESE EXEMPTIONS, WHICH WOULD NORMALLY APPLY TO A STATE AGENCY, DO NOT APPLY TO THE ALASKA RAILROAD CORPORATION BECAUSE IT WAS FELT THE AUTONOMY OF THE CORPORATION WOULD BE GREATLY

IMPAIRED IF IT WAS TO COMPLY WITH THESE EXEMPTIONS. A COPY OF THESE EXEMPTIONS IS SHOWN IN YOUR FOLDERS UNDER THE SECTION LEGAL AND EXEMPTIONS - PAGE 219. ALSO AVAILABLE IS A LEGAL OPINION ON THE RAMIFICATIONS OF REPEALING THESE EXEMPTIONS. THE CORPORATION AND LEGAL SERVICES BOTH AGREE THAT THIS INFORMATION SHOULD BE PROVIDED. THE CORPORATION BY LAW MAY WITHHOLD INFORMATION FROM THE PUBLIC THAT IS OF A PROPRIETARY NATURE SUCH AS PERSONNEL RECORDS, COMMUNICATIONS AND RATE STRUCTURES,

THE CORPORATION ADOPTED RULE NUMBER 4 - PUBLIC DISCLOSURE OF INFORMATION ON 12-17-84 AND AMENDED THIS RULE ON 7-18-85. THIS RULE, WHICH YOU WILL FIND ON THE LAST SHEET OF YOUR PACKETS, SETS DOWN THE INFORMATION THE RAILROAD HAS DESIGNATED AS PRIVILEGED INFORMATION AND THEREFORE WITHHELD FROM PUBLIC INSPECTION. NONE OF THE INFORMATION REQUIRED BY HB 100 FALLS INTO RULE 4.

IN THE RESPONSE FROM THE RAILROAD, THEY STATE THAT MUCH OF THE INFORMATION REQUESTED IS CURRENTLY PROVIDED BY THE RAILROAD. ON YOUR DESKS YOU WILL SEE A LARGE PACKET WHICH IS A SAMPLE OF SOME OF THIS INFORMATION REQUESTED. ~~I~~ MYSELF, HAVE ~~"~~AD A DIFFICULT TIME OBTAINING SOME OF THIS INFORMATION. ~~AND I HAVE ALSO RECEIVED NUMEROUS COMPLAINTS FROM INDIVIDUALS WHO HAVE ALSO EXPERIENCED THE SAME PROBLEM~~.

I DO FEEL IF WE, THE LEGISLATURE, IS RESPONSIBLE FOR OVERSIGHT OF THE ALASKA RAILROAD CORPORATION, WE NEED TO HAVE A COMPLETE OVERVIEW REPORT CONTAINING ALL THE RELEVANT INFORMATION NECESSARY FOR US TO MAKE A WELL INFORMED DECISION ON THE OPERATIONS AND FUTURE OF THE RAILROAD.

THE STATE SPENT $22.9 MILLION ON THE PURCHASE OF THE RAILROAD AND PROVIDED AN ADDITONAL $10.9 MILLION FOR THE FIRST YEARS OPERATIONAL FUNDS. I FEEL WE HAVE A RESPONSIBILITY TO ENSURE THAT THE STATE'S INVESTMENT IS MANAGED PROPERLY.

THE INFORMATION REQUESTED IN HB 100 WILL ENABLE US TO PROVIDE THIS PROPER OVERSIGHT.

THANK YOU FOR LISTENING TO ME.

From: The Alaska Railroad Initiative Committee

Donald Hennessey, Chairman

Representing:

Owner-operators, Road Houses(Parks highway), Repair Shops, mechanics, Allied Workers and 4500 Alaskans that signed our pilot initiative.

We heartily endorse HB 100 because an oversight committee can not oversee an operation without a full insight of the operation. The Alaska Railroad has been less than enthusiastic about informing the legislature. A point of discussion at the October Board Meeting was on the timing of disposal and purchase of passenger cars to avoid reporting to the Oversight Committee. The ARR has consistently over estimated their planned capital expenditures on many phases. The roadbed and track are prime example. Because the railroad has consistently over estimated income and expenditures by 15 to 20 per cent, we feel the requirement of a detailed explanation of the difference between estimated and actual income and expenditure would be in order. The only other business, we know of, that may survive with this type of variance between estimated and actual might be architechural businesses working on public buildings This has caused an on going raging debate. An explanation should be provided if the ARR's proposed and actual track and roadbed capital budget fails to meet or approach the Sverdrup Engineering Report and recommendations. The deteriation of roadbed is the biggest single factor in loss of assets and the easiest to hide or ignore for several years.

REPORT OF THE GOVERNOR'S TASK FORCE ON

RAIL LINE ABANDONMENT

RAIL DIVISION OREGON PUBLIC UTILITY COMMISSIONER OCTOBER 1986

Deferred Maintenance

Maintenance of way and structures is the third of the three major expenses in railroad operation. It is both a symptom of abandonment and a cause. Initially, deferred maintenance is a result of lower revenues; ultimately, deferred maintenance lowers service levels and discourages shipper use.

The decline of rail traffic system-wide over the last 20 yea s has encouraged the larger railroads to diversify and disinvest in railway operations. The companies tended to delay the purchase of new track and equipment and to defer maintenance (replacement of track, ties and ballast), where lower maintenance levels would not greatly affect train operations. High use lines usually get plenty of attention, but low-density lines have often been allowed to deteriorate. Normal maintenance on a low-density line runs between $3,000 and $7,000 per mile per year. For a long line with one or two shippers, that is a significant cost.

Many branch lines subject to abandonment suffer from deferred maintenance. In some cases the cost of rehabilitating the line, using either public or private money, is unjustifiable given even the most optimistic traffic level. This not only is a disincentive to line improvement for the owning railroad, it is a disincentive to anyone else interested in buying the line.

A good example of how deferred maintenance can contribute to the abandonment of a line is the Wilkins line, located in Linn County. (see Case Studies) Approximately $3 million was needed to bring the line to minimum standards. Given the very low traffic levels on the line, such an enormous investment would have been unwise.

REPORT OF THE GOVERNOR'S TASK FORCE ON

RAIL LINE ABANDONMENT

RAIL DIVISION OREGON PUBLIC UTILITY COMMISSIONER OCTOBER 1986

Deferred Maintenance

Maintenance of way and structures is the third of the three major expenses in railroad operation. It is both a symptom of abandonment and a cause. Initially, deferred maintenance is a result of lower revenues; ultimately, deferred maintenance lowers service levels and discourages shipper use.

The decline of rail traffic system-wide over the last 20 years has encouraged the larger railroads to diversify and disinvest in railway operations. The companies tended to delay the purchase of new track and equipment and to defer maintenance (replacement of track, ties and ballast), where lower maintenance levels would not greatly affect train operations. High use lines usually get plenty of attention, but low-density lines have often been allowed to deteriorate. Normal maintenance on a low-density line runs between $3,000 and $7,000 per mile per year. For a long line with one or two shippers, that is a significant cost.

Many branch lines subject to abandonment suffer from deferred maintenance. In some cases the cost of rehabilitating the line, using either public or private money, is unjustifiable given even the most optimistic traffic level. This not only is a disincentive to line improvement for the owning railroad, it is a disincentive to anyone else interested in buying the line.

A good example of how deferred maintenance can contribute to the abandonment of a line is the Wilkins line, located in Linn County. (see Case Studies) Approximately $3 million was needed to bring the line to minimum standards. Given the very low traffic levels on the line, such an enormous investment would have been unwise.

Construction of the highway system has had a much broader and significant impact on the modal choice, in this case between rail and motor carriage. However, the highway cost structure is not artificial, since highway users pay fees which, in a cumulative sense, are designed to cover the costs of constructing and maintaining the highway system.

6. Railroad Taxation

Railroad taxation, particularly property taxation, is a particularly thorny problem. The task force looked at railroad taxation for ways of providing incentives to railroads to keep branch lines in operation, only to discover that the method of taxation made developing incentives difficult.

All three of the Class I Carriers and some of the short lines have filed suits against the Oregon Department of Revenue. These suits are costly to all parties and are creating growing animosities between the state and the railroads. Also, as the number of short lines in the state increases, the manner of appraising short lines deserves to be reviewed. The task force did not have the expertise or the authorization to embark on a study of the state tax system, but members of task force felt such a study is needed.

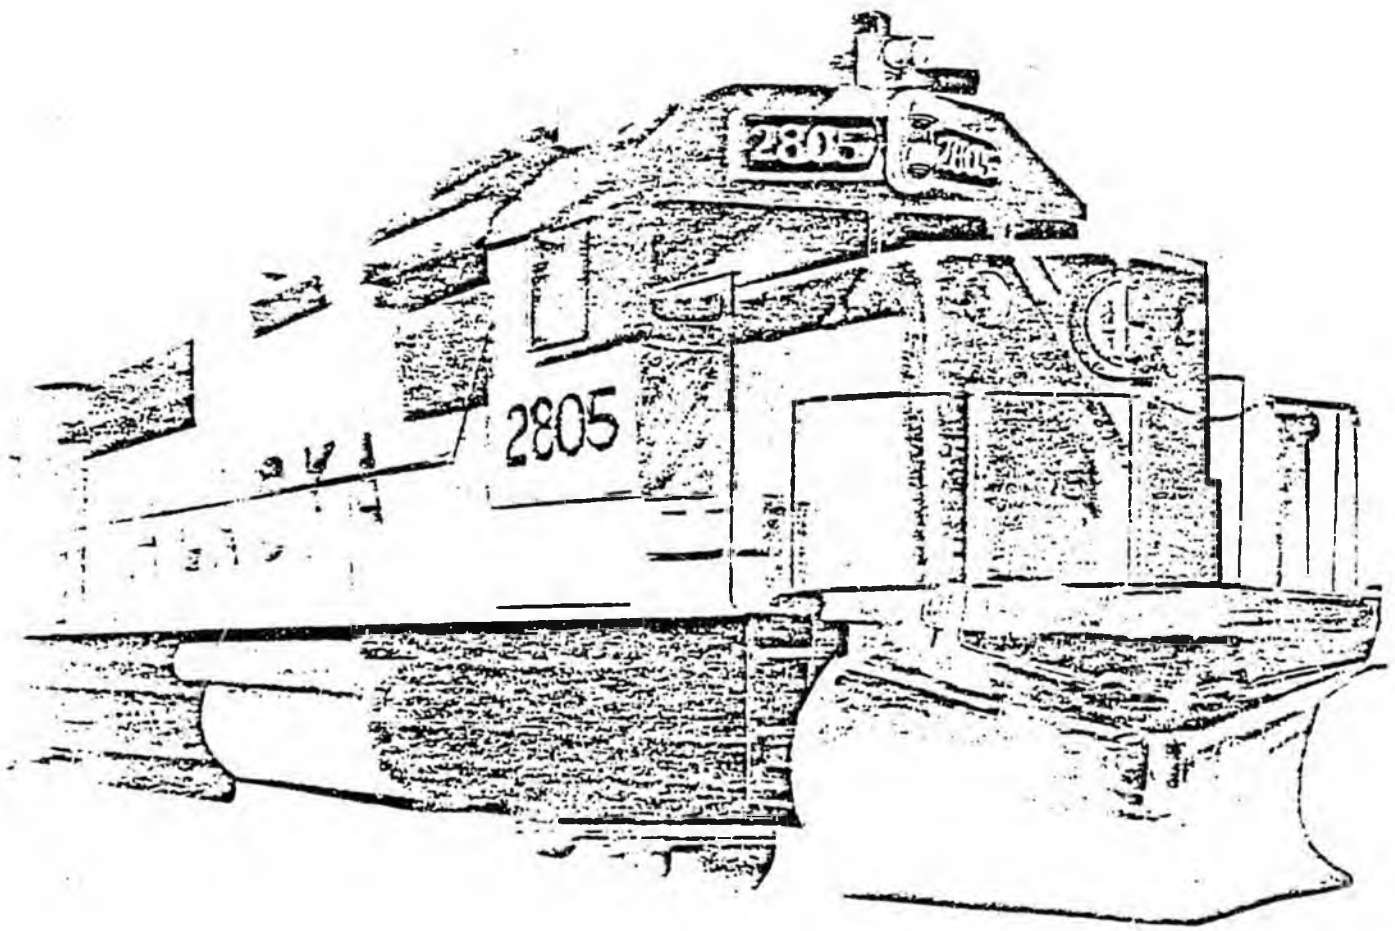
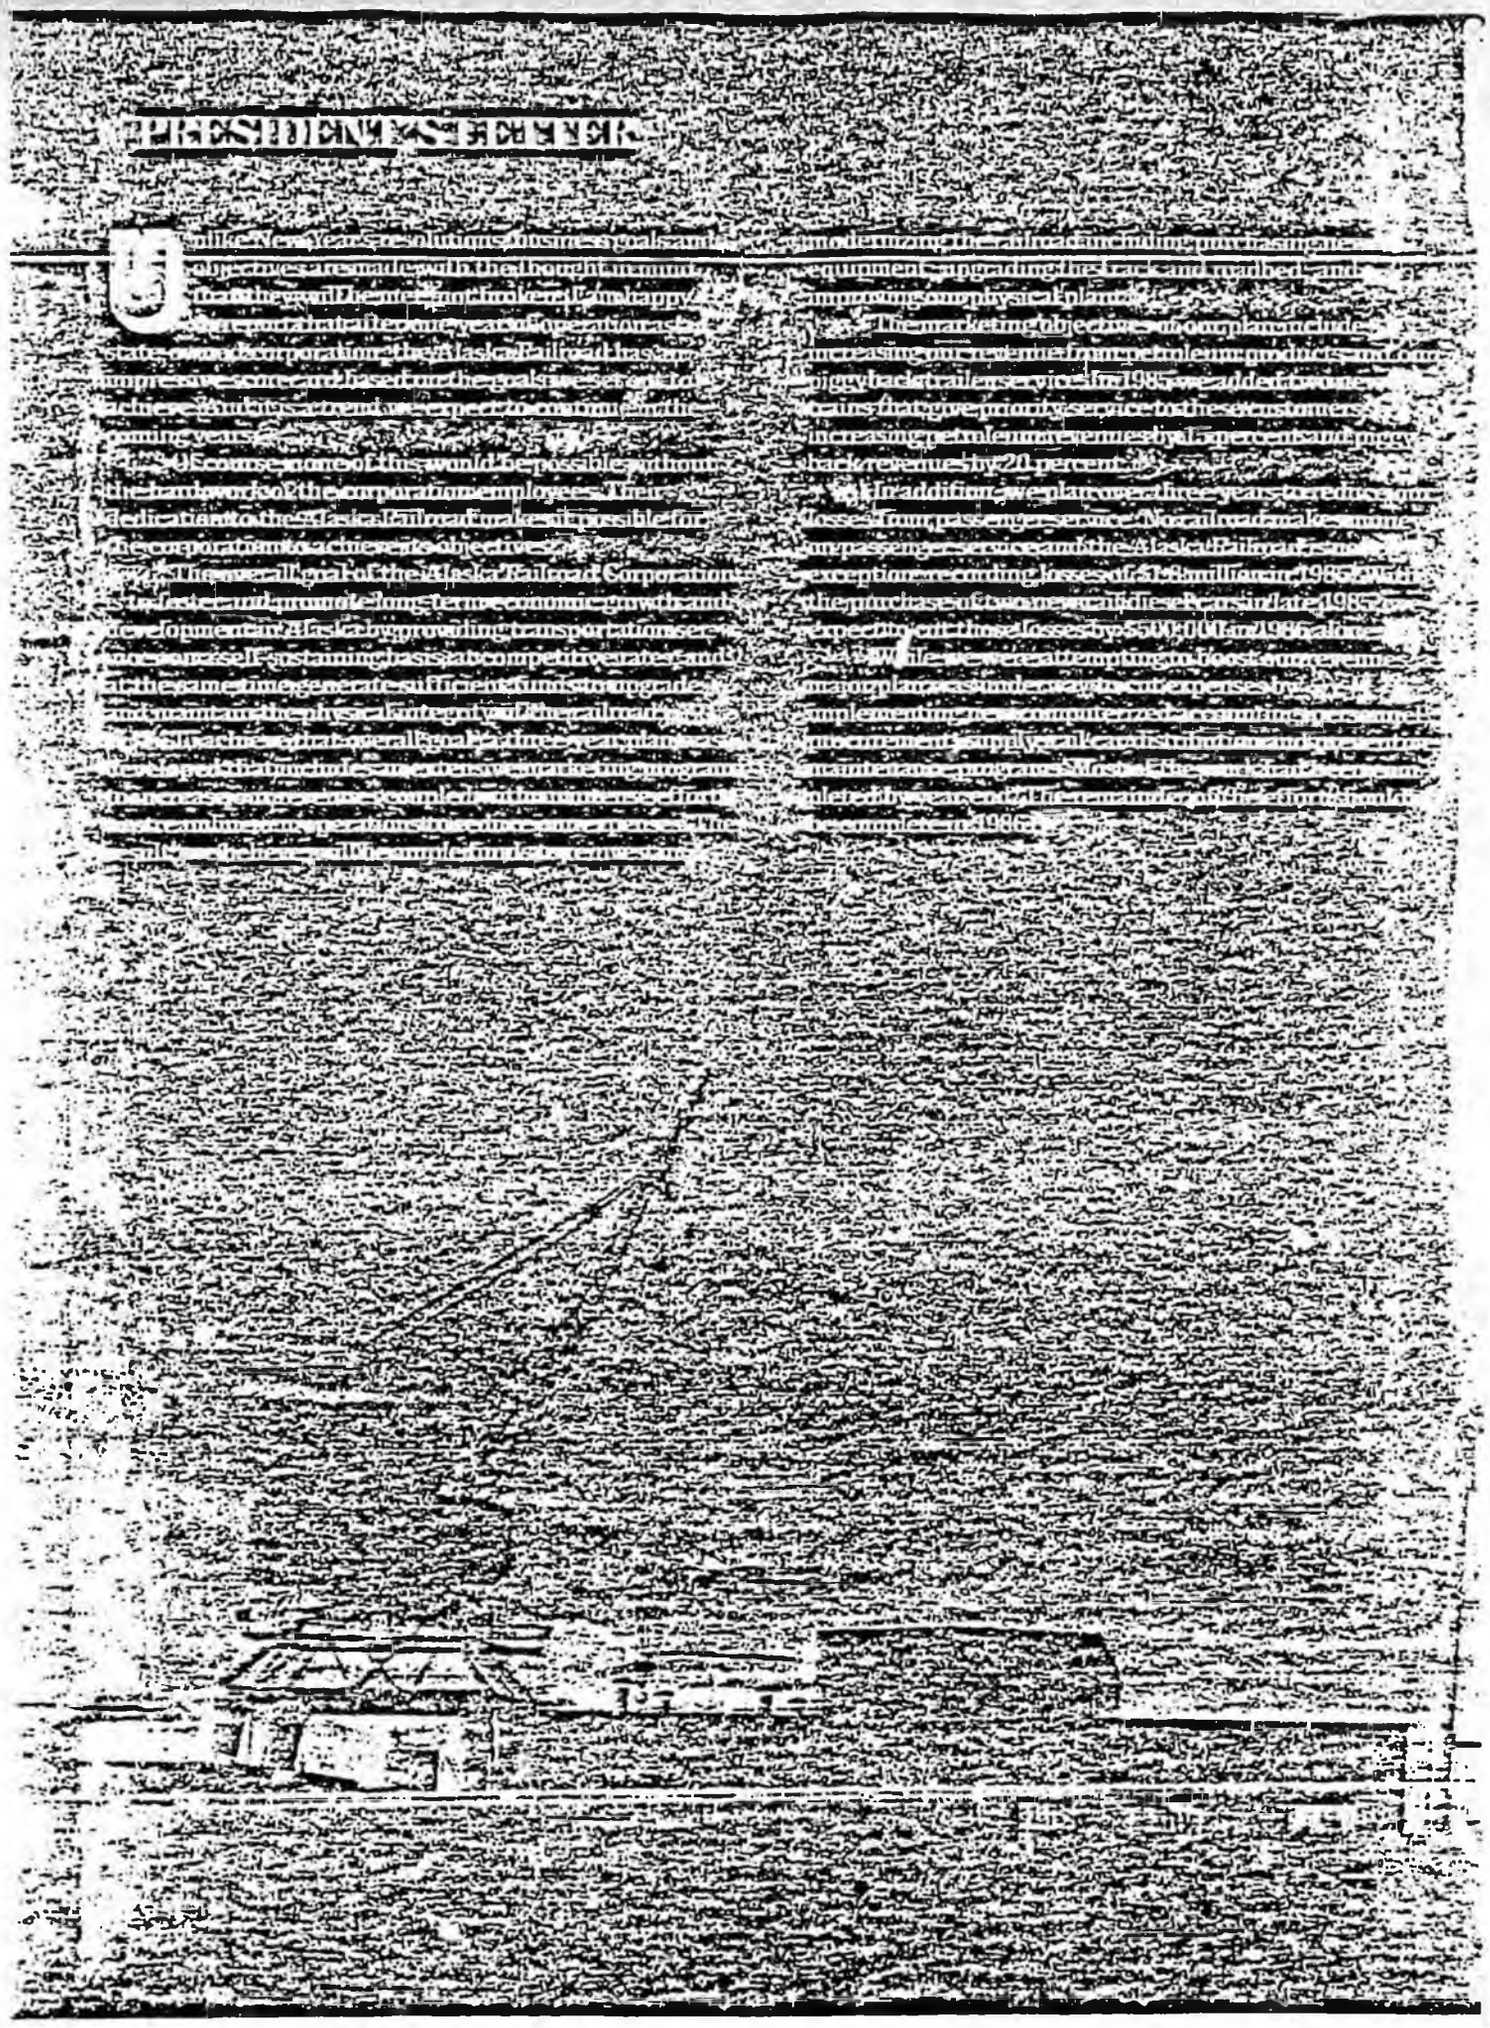
A N N U A L R E P O R T





For the Alaska Railroad Corporation, 1985 was a year of changes.

Change is inevitable in any business. It is a natural part of growth. However, for the Alaska Railroad Corporation, 1985 was a year of changes unlike any the Alaska Railroad had ever experienced.

The first and most dramatic change came within the first week of 1985, when on January 5 ownership of the Alaska Railroad was officially transferred from the federal government to the state of Alaska.

That transfer of ownership set the stage for many, many more changes, from management and personnel to policies and procedures. And with those changes a foundation was laid for the prosperous development of the newly formed Alaska Railroad Corporation.

Alaska paid the federal government $22.3 million for the Alaska Railroad. That purchase price included 655 miles of track, 38,000 acres of land including all rights-of-way, 1,545 units of rolling stock including locomotives, freight cars and passenger coaches, and four terminal facilities, one each in Seward, Whittier, Anchorage and Fairbanks.

A NEW CORPORATION

Transfer of railroad ownership to Alaska was made possible by the Alaska Railroad Transfer Act (ARTA), enacted by Congress in 1982. In 1984 the Alaska legislature adopted the Alaska Railroad Corporation Act (ARCA), establishing it as a public corporation of the state that would act as a separate, profit-making entity.

On January 5, 1985, as a result of the transfer, the federal railroad's financial books were closed. On January 6 the new state corporation technically began business with no operating funds. To meet the railroad's immediate money needs, the state legislature allocated, in addition to the sale price, a one-time start-up fund of $10.9 million. The money was used to meet the corporation's first month's payroll and to continue several capital improvement projects that had been initiated under the federal system.

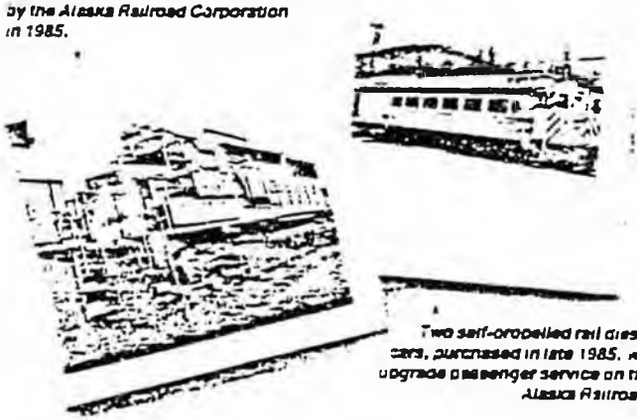
Within its first month of operation the new Alaska Railroad Corporation showed a profit, and continued to do so through the end of the year. In its first year of operation under state ownership, the Alaska Railroad Corporation netted $7.1 million, among the largest gains recorded by the railroad in its 62-year history.

John Riley, Federal Railroad Administrator, and Bill Sheffield, Governor of Alaska, signed an agreement January 5, 1985 to transfer the Alaska Railroad from federal to state ownership.

ARCA provided for the stewardship of the new corporation by a seven-member board of directors appointed by the Governor of Alaska.

The board is responsible for management of the corporation but has delegated certain powers and duties to Frank G. Turpin whom the board selected to serve as the railroad's president to guide the day-to-day operations of the corporation. He joined the railroad immediately upon transfer.

Five new locomotives were purchased by the Alaska Railroad Corporation in 1985.



Two self-propelled rail diesel cars, purchased in late 1985, will upgrade passenger service on the Alaska Railroad.

GOALS FOR 1985

As chief executive officer, Turpin set three goals for the new corporation: earn a profit without seeking state subsidies, broaden management emphasis from a concentration on operations to include marketing and finance, and modernize the railroad's rolling stock, equipment and physical plant.

Giant steps forward were accomplished in 1985 in all three areas. Each step meant changes as the railroad moved away from federal procedures and began operating more like a private business.

The first goal of earning a profit without state subsidies was accomplished in the first year. To control future spending and to get the best value from its revenue, the corporation developed a three-year capital spending program. The plan includes replacement or addition of several units of rolling stock and heavy equipment. The net result will be lower maintenance costs and improved service to customers.

MODERNIZING THE RAILROAD

The three-year plan also tied in with the corporation's goal to modernize the railroad. To improve freight hauling capabilities, 45 new intermodal flatcars called "articulated" cars were purchased for $4.5 million. The first step toward upgrading the aging locomotive fleet was the purchase of five new state-of-the-art diesel locomotives valued at $1 million each. The cars and locomotives arrived in the spring of 1985 and were placed in service immediately. At the close of the year the first of two 48-seat, self-propelled rail diesel cars (RDCs) arrived. The result cars were purchased to improve and reduce the cost of the winter passenger service and to augment summer and charter services.

The new cars and engines were obtained through a lease/purchase program that allowed the corporation to avoid seeking state subsidies. While the railroad had not been able to take advantage of the lease/purchase option under federal ownership, the corporation's unique position as a quasi-public enterprise enabled the railroad to make the best use of its revenue by leveraging its cash and buying on credit.

NEW MANAGEMENT EMPHASIS

Other changes occurred within the railroad's Finance Department as steps were taken to equalize the emphasis on the three key departments in the railroad: operations, marketing and finance. A computerized accounting system was implemented to improve what had previously been manual procedures. Generally Accepted Accounting Principles (GAAP) were adopted as the railroad's accounting standards, which more closely matched revenue to expenses.

The Marketing Department took a more aggressive stance in seeking business for the railroad. The freight sales division was expanded by the addition of a freight sales manager with responsibility for the sales force in Anchorage and Seattle. Marketing developed and promoted two new unit trains, one for overnight trailer traffic and one for bulk petroleum products, to better meet the needs of Alaska shippers.

The Operations Department, responsible for all train movements and the upkeep on all rolling stock, equipment and track, in 1985 conducted the largest overall roadbed maintenance program in recent years. There were 31,000 linear feet of rail replaced, 26,000 new ties laid and about 200 miles of main line track resurfaced.

OUR EMPLOYEES

With all the changes that occurred at the Alaska Railroad Corporation, it is natural that employees would feel the impact. Steps were taken to streamline some departments while others added personnel. An average of 600 employees worked throughout the year, with peak employment topping the 900 mark during the busy summer construction season.

A significant change occurred in the personnel office when it was tied to the labor relations and the

Doug Engebretson is a carman for the Alaska Railroad in Fairbanks. An average of 600 employees worked at the railroad in 1985.

compensation and benefits divisions under the corporate umbrella title of Human Resources Department.

All but about 120 of the corporation's employees are represented by unions. There are seven bargaining units representing five unions: American Federation of Government Employees (blue collar and white collar units), American Train Dispatchers Association, Agents/Operators Unit; American Train Dispatchers Association, Train Dispatchers Unit; Brotherhood of Railway Carmen of the U.S. and Canada, International Association of Machinists and Aerospace Workers, and the United Transportation Union.

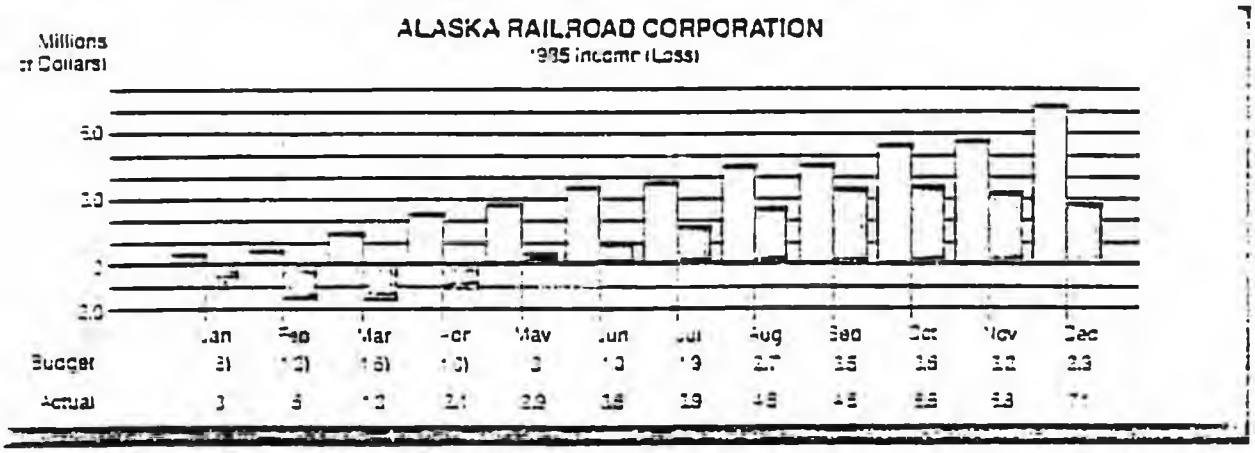
Under federal and state law the union contracts in existence at the time of transfer are to be renegotiated by the corporation within the first two years of operation under state ownership. Beginning in August 1985, for the first time in the history of the Alaska Railroad, all seven bargaining units and management met at the bargaining table to begin hammering out new contracts. Negotiations will continue in 1986.

THE FUTURE

Despite all the changes and reorganization it experienced in 1985, the Alaska Railroad Corporation is looking to 1986 as another year of challenges. An ambitious program is planned to continue to upgrade and improve the railroad's track and roadbed, its rolling stock and its physical plant. A $66 million operating budget was approved by the Board of Directors for 1986 plus $13.3 million in capital improvements.

The Marketing Department will continue its aggressive stance in seeking business for the railroad while providing new, more improved services to meet the customers' needs.

While 1985 was a year of transition for the Alaska Railroad, 1986 is expected to be a year of fine-tuning that will bring the corporation into the forefront of the transportation industry in Alaska.



The Operations Department is the part of the railroad most people are familiar with because it is most visible. Operations has three major divisions: Transportation, Motive Power and Equipment, and Engineering. Together these three divisions are responsible for all train movements, for the upkeep of all rolling stock and equipment, and for construction and maintenance of the track and roadbed and all railroad buildings.

Other divisions in Operations are less known, such as Security and Claims, Operating Rules and Hazardous Materials. Security and Claims is responsible for the security of the line including preventing trespassing and for investigating train and train-related accidents. This department also processes all claims for lost or damaged freight and equipment.

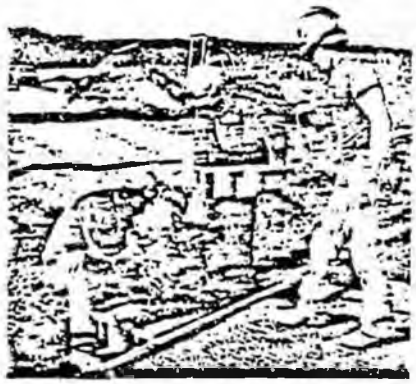
The Operating Rules Department administers the railroad's rules program for operating trains and equipment. To ensure understanding and compliance of the operating rules and special instructions, periodic training and testing is provided for operating personnel by this department.

The Hazardous Materials Office is responsible for inspecting equipment, rolling stock and buildings for compliance with corporate rules and regulations regarding the use and transportation of hazardous materials.

ENGINEERING

In 1985 crews replaced about 26,000 crossties, relaid 31,000 linear feet of mainline rail using premium alloy rail, and turned another 40,500 feet of rail on curves. More than one-third of the rail system, or about 200 miles, was surfaced.

Bridge crews repaired and upgraded 23 steel and timber bridges, including the repair or installation of timber stringers, bulkheads, pilings, guard rails and bridge ties.



Maintenance workers installed a new, high technology material at railroad crossings that will provide a better crossing surface for the traveling public.

The single largest maintenance expenditure totalled about $2 million for rehabilitation of five tunnels between mile 51 and 53 of the main line. The two-year, $4 million project, about 50 miles north of Seward, will decrease maintenance of the tunnels and improve operations through that section of track. Work completed by the project contractor in 1985 included rock bolting of all the tunnels, ditching to improve drainage, and pouring four of 10 new reinforced concrete tunnel portals.

The Engineering Department coordinated with the state Department of Transportation and the Municipality of Anchorage in construction of two grade-separated crossings in the Anchorage area. The work included three new railroad bridges at Dimond Boulevard, Tern Avenue, and Campbell Creek, plus 1.6 miles of new mainline track. Work was begun also on the Municipality's West Northern Lights Boulevard project in Anchorage. When completed in 1986 it will be similar to the grade-separated crossing at Dimond Boulevard.

Engineering also coordinated with the Department of Transportation in Fairbanks in making track changes to the Fairbanks Yard to provide space for construction of a highway nearby and an overpass across the Fairbanks Yard. The work included construction of a balloon track to replace the wye and will eliminate a crossing in the middle of the yard.

Most of the work completed by the Engineering Department was designed to improve or enhance other areas of the Operations Department. For instance, electrical service was installed at the Anchorage and Fairbanks van terminals to provide "keep from freezing" (KFF) trailer service. KFF provides shippers with electrical power for heating and preserving goods shipped during the winter in trailers on flat cars.

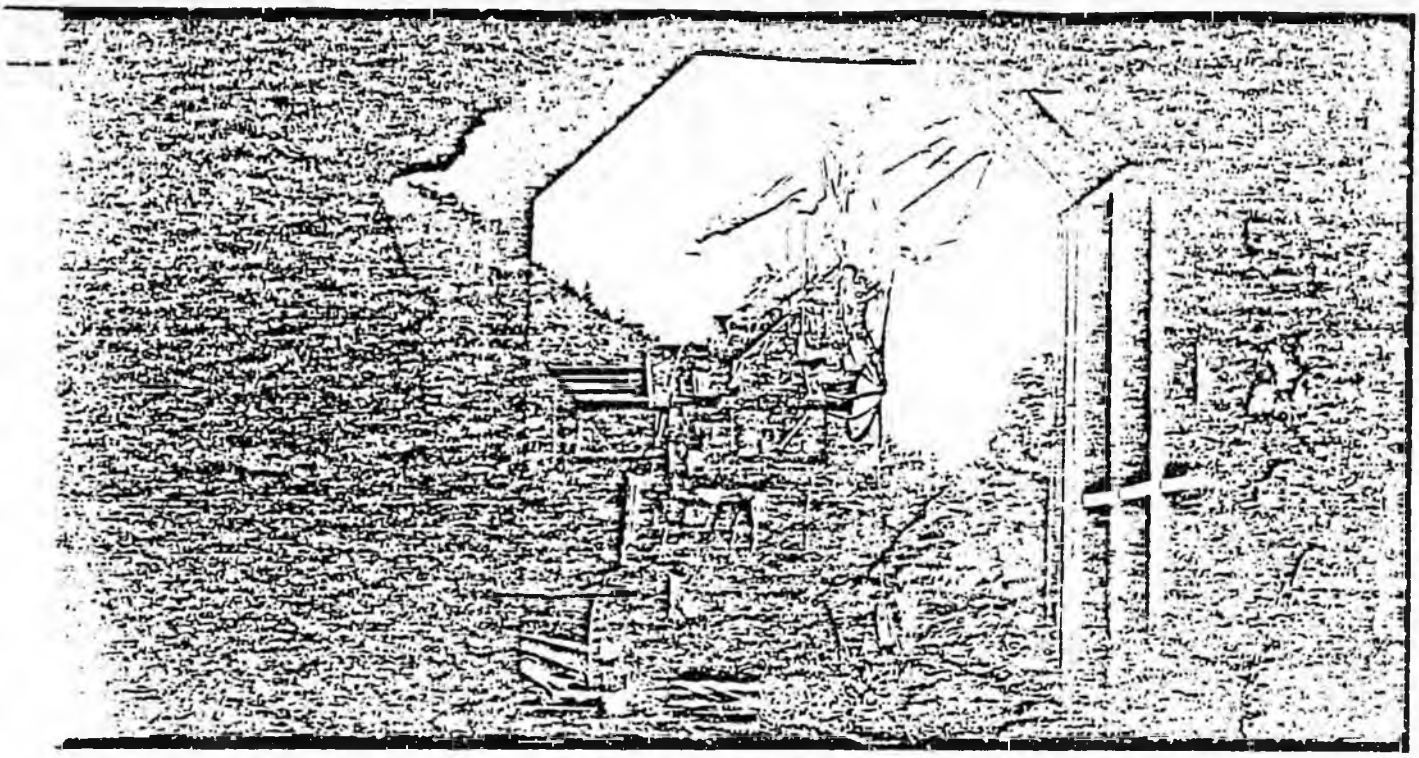
Increased truck-trailer traffic on the Alaska Railroad led to the construction of a 4,000-foot van track in Whittier to improve trailer-on-flatcar (TOFC) service. Other van terminal improvements were made both at Whittier and Seward including new trackage, lighting and drainage.

Upgrade of 12 miles of the Eielson Branch was begun with the replacement of 4.6 miles of 75-lb. rail with secondhand 115-lb. rail that was replaced on the main line. The branch line serves Ft. Wainwright, North Pole and Eielson Air Force Base. It is used for delivery of coal to fuel the military's power plants. A 4,100-foot siding was constructed on the branch line at North Pole to accommodate increased traffic expected to result from the expansion of the nearby oil refinery.

Throughout the year Engineering employees worked to upgrade and improve the railroad's physical plant. Facilities at Fairbanks, Denali Park, Anchorage and Seward were painted or remodeled; water, heating and sewage systems were improved; and roofs were replaced or insulated to reduce maintenance, repair defects, reduce heat loss and improve appearance and operation.

The single largest physical improvement was construction of boiler plants in several Anchorage facilities as part of the final phase of a three-step utility modernization program that eliminates the railroad's dependence on a nearby high-cost, outmoded, commercial heating plant. The results are significant energy savings and improved working conditions.

The project included installation of five boilers, including three 400-horsepower steam boilers in the old blacksmith shop, which when constructed in the early 1920s was the original railroad boiler plant, and two 125-horsepower hot water boilers in a new building constructed near the Anchorage warehouse area. Three smaller plants were installed to heat the general office building, which houses the Anchorage Passenger



Rehabilitation of five tunnels between Seward and Portage was the single largest track maintenance expenditure in 1985. The $4 million, two-year project will be completed in 1986.

Depot: the annex, which includes the accounting and computer personnel; and the Anchorage freight house, which includes the procurement offices.

This project will be completed in 1986 with installation of an energy management and control system, some minor renovations to buildings, and relocation of the car cleaning facility.

MOTIVE POWER AND EQUIPMENT

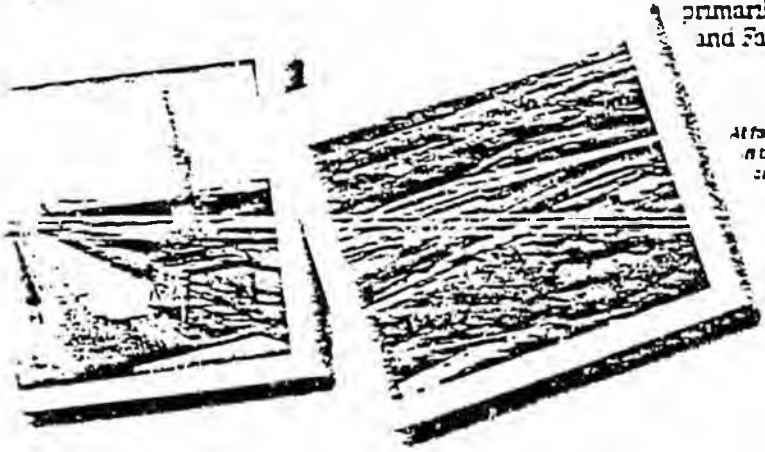
While the Engineering Department was working in 1985 to improve the condition of the railroad tracks, roadbed and physical plant, the Motive Power and Equipment (MP&E) Department acquired new rolling stock and equipment or overhauled much of what was already on hand.

Major purchases included five new state-of-the-art GP49 diesel locomotives manufactured by the Electro Motive Division of General Motors. The 2,300-horsepower locomotives have an anti-wheel-slip system that improves train performance and fuel consumption.

In an effort to improve the reliability of the existing locomotive fleet and to reduce maintenance costs, MP&E completed a major overhaul of the electrical components and trucks on two locomotives and completed the rewire and electrical upgrade to control circuits on a third. A fourth locomotive was repowered with new pistons, cylinder liners and heads.

Several locomotives were judged beyond economical repair and were retired, including No. 1500. An F-7 engine that had a glamorous history with the Alaska Railroad, No. 1500 provided the power for many ceremonial trains including two trains used during transfer ceremonies in January. No. 1500 also was featured in a motion picture filmed on the Alaska Railroad in 1985 called "Runaway Train." It was the grand old lady's last official duty before being retired and donated to a local transportation museum.

To improve freight-hauling capabilities, 45 articulated intermodal cars were purchased for TOFC service. Each car is hinged, or articulated, in three sections to allow for easier train movement. There is space on each car for three trailers. The cars are used primarily for hauling trailers between Anchorage and Fairbanks.



At far left, the railroad yard in Fairbanks includes about 440 acres in the heart of the city. A row of articulated flat cars shown at center awaits trailers for shipment to Anchorage.

Left, the Alaska Railroad owns about 660 acres near downtown Anchorage, most of which is at the mouth of Ship Creek. In the background is the roundhouse where all equipment maintenance and repairs are done.

MP&E began construction of two power cars and wired 15 of the new articulated cars to provide electricity for trailers carrying perishable goods and other commodities that might freeze.

Two self-propelled passenger cars were purchased in 1985 also. The cars, known as rail diesel cars or RDCs, were rebuilt with the installation of twin 347-horsepower Cummins engines and twin-disc transmissions. The first of the two cars was received in December 1985 and was placed in winter passenger service at the start of the new year.

For the first time MP&E placed an employee in the railroad's Seattle office to work exclusively with shippers in solving technical problems related to equipment use and loading requirements. A program establishing new rules for open-top loads was initiated to reduce the cost to shippers for improperly secured or heavy loads.

TRANSPORTATION

Train movements increased dramatically in 1985 and the Transportation Department worked to ensure those movements were made safely and efficiently. Gross trailing ton miles, a measurement for the movement of one ton over one mile, were up 25 percent in 1985 over 1984. Freight traffic accounted for the major portion of this increase, but passenger traffic also rose. Ridership surpassed the quarter-million mark for the first time in the railroad's history.

The first full year of export coal service by the railroad was completed in 1985. A steady source of revenue was derived from the three-unit-trains-a-week movement of coal from the Usibelli mine at Healy to Seward for export to Korea. The contract for hauling export coal began in December 1984 and since its inception 132 coal trains have hauled 671,000 tons of export coal.

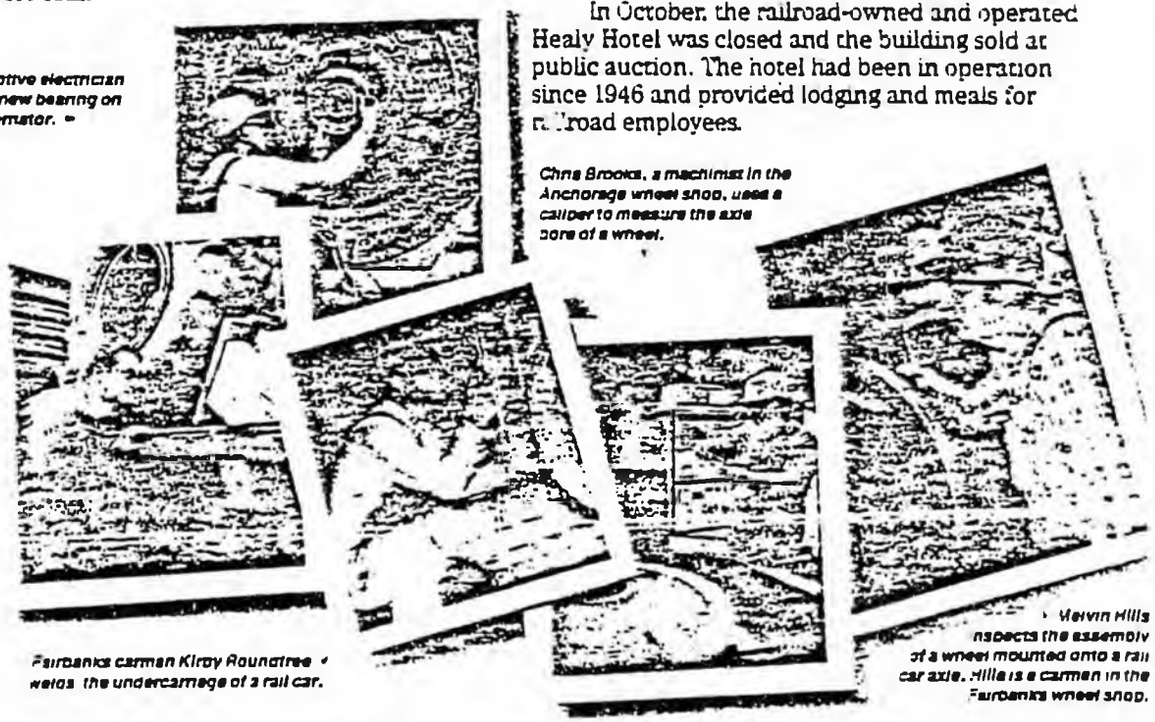
In addition, 562,000 tons of coal were moved from Healy to the Fairbanks area to provide fuel for five power plants in Interior Alaska and the military bases at Wainwright, Clear and Eielson.

In May 1985, a new intermodal freight service was inaugurated called the Arctic FOX, or Freight Overnight Express. This service is a unit trailer train that provides six-days-a-week overnight delivery of trailers and containers between Anchorage and Fairbanks. The Arctic FOX operates with an average of 10 articulated flat cars that provide space for about 30 trailers or containers. The FOX hauled 5,332 trailers in its seven months of operation in 1985.

The FOX is the first cabooseless train service operated on the Alaska Railroad and the first service operated with a two-member crew. This was made possible by the addition of train rear-end devices. These end-of-train monitors provide vital information to locomotive engineers operating cabooseless trains. Each device consists of two units, a receiver in the locomotive cab and a transmitter on the rear car of the train. Together these units allow crews to monitor air brake pressure, detect motion in the last car of the train and measure train distances traveled. The units also provide the rear-end car with an FRA-required amber light that automatically turns on at dark.

During the same time the Arctic FOX service was initiated, the Anchorage freight house operations were discontinued. All services for loading and unloading railcars, consolidation of freight, and rubber-tire delivery were contracted to local businesses in an effort to divest from some less profitable, labor-intensive operations. Because of the railroad's rapid growth in the intermodal business, all Anchorage freight house employees were transferred to Intermodal Services, which was established as a separate division within the Transportation Department.

In October, the railroad-owned and operated Healy Hotel was closed and the building sold at public auction. The hotel had been in operation since 1946 and provided lodging and meals for railroad employees.



Jim Truesdood, a locomotive electrician in Anchorage, installs a new bearing on a locomotive engine alternator.

Chris Brooks, a machinist in the Anchorage wheel shop, uses a caliper to measure the axle bore of a wheel.

Larry Newsham, technical services manager, inspects insulated rail cars before shipment from Seattle to Anchorage.

Fairbanks carman Kirby Roundtree welds the undercarriage of a rail car.

Melvin Hills inspects the assembly of a wheel mounted onto a rail car axle. Hills is a carmen in the Fairbanks wheel shop.

Because of its high operating and maintenance costs, the hotel was closed in favor of a more economical means of providing these services by contracting with a local motel and cafe at Healy.

In December the second new freight service for 1985 began operating. A daily unit tank train service between Fairbanks and Anchorage, called the Oil Worker Limited or OWL, transports petroleum products from the local oil refinery southbound to Anchorage and gasoline northbound to Fairbanks from storage yards in Anchorage. This daily service greatly improved freight delivery service for these commodities and turnaround time on empty tank cars.

OPERATING RULES

In late 1985, after extensive review and consultation with railroads operating in the Lower 48, the Operating Rules Department began training operating personnel on an innovative new system known as Track Warrant Control. This system is used on many other U.S. railroads and is designed to expedite the movement of trains while providing a safe and efficient operation. It will replace the complicated and time-consuming train order method in use at the Alaska Railroad for decades. Target date for railroad-wide implementation of the Track Warrant Control system is set for February 1986.

SECURITY AND RISK MANAGEMENT

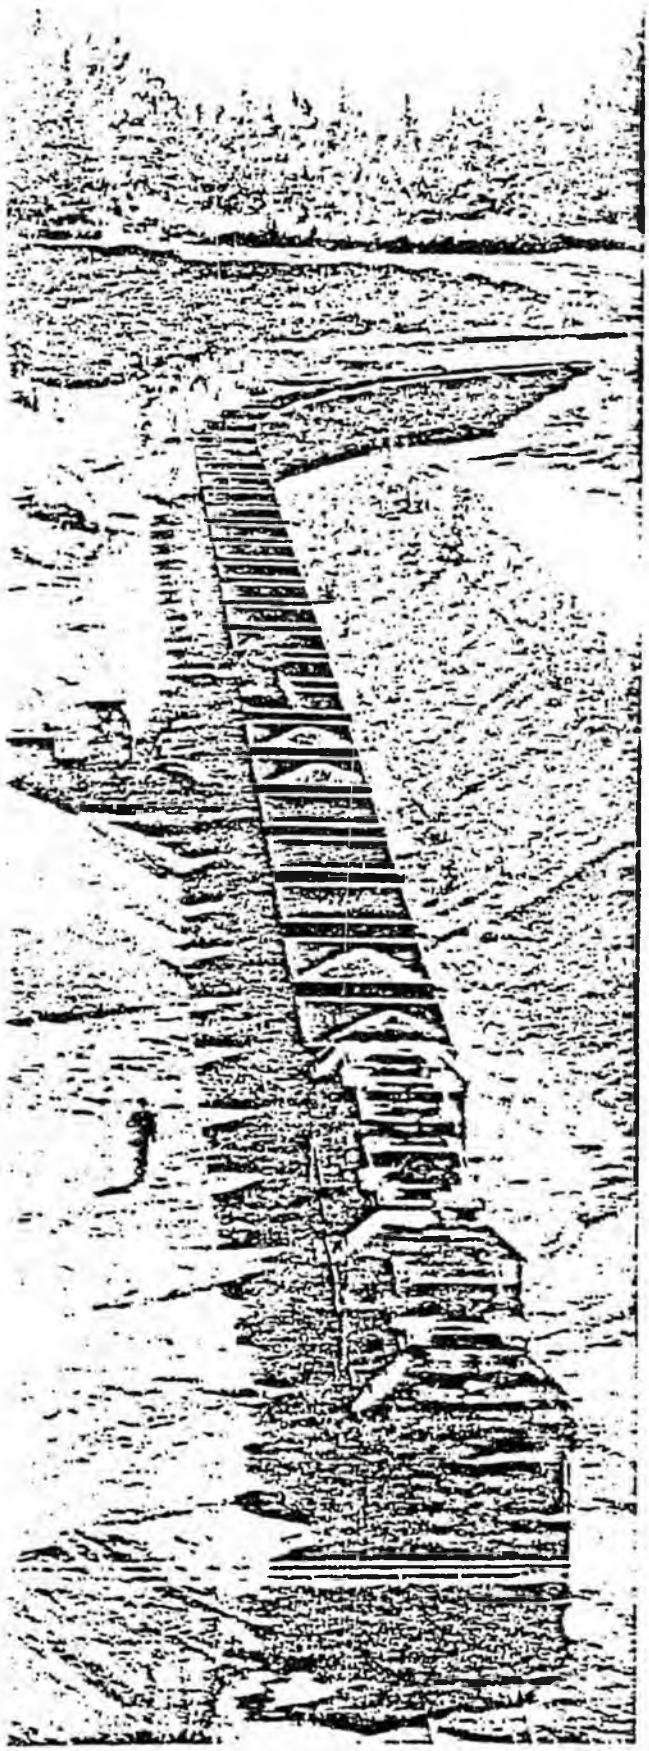
With the transfer of the Alaska Railroad to state ownership, the new corporation was required to organize a risk management program to provide insurance for property damage or loss, theft, fire, vandalism and other potential liabilities. For the first six months of 1985 the railroad operated on an interim program with coverage provided under the state of Alaska's risk management program.

During this interim period a review of the railroad's insurance needs was conducted and a risk management program developed that was marketed to domestic and foreign underwriters.

With the first year of experience as a reference, the risk management program is being assessed and modifications being made as the insurance markets dictate and as the corporation also continues to define and refine its specialized insurance needs.

HAZARDOUS MATERIALS

As part of its continuing safety program, the Alaska Railroad provided training and information regarding the loading and movement of hazardous materials to shippers as well as local fire fighting and emergency services personnel along the railbelt. The Hazardous Materials Specialist provides assistance to customers to ensure that materials shipped on the Alaska Railroad are loaded and placarded in compliance with federal regulations. Examples of materials shipped in 1985 include petroleum products such as gasoline and jet fuel, and chemicals for use in manufacturing.

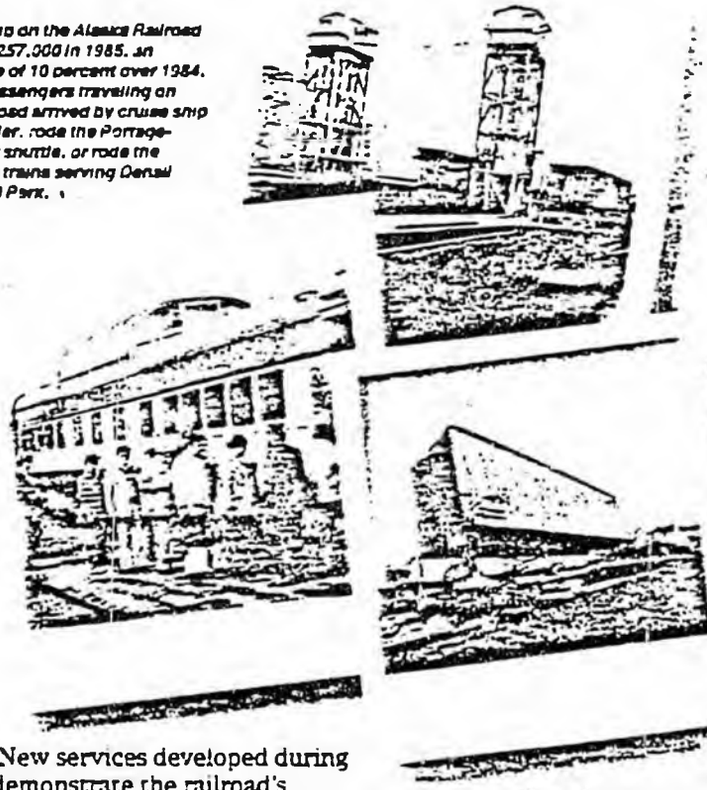


Travel unit trains are loaded near Palmer, in the Matanuska Valley, 40 miles north of Anchorage.

To achieve the business goals of the new railroad, the Marketing Department expanded the activities of the department, placing greater emphasis on developing new markets for the railroad's services.

Marketing's role within the corporation includes selling, pricing, rate and service contracting, cost of service analysis, market planning, market research, market development, customer service, advertising and promotion of both freight and passenger service. It also includes management and development of the real estate holdings of the corporation.

Ridership on the Alaska Railroad totaled 257,000 in 1985, an increase of 10 percent over 1984. Most passengers traveling on the railroad arrived by cruise ship in Whittier, rode the Portage-Whittier shuttle, or rode the express trains serving Denali National Park.



Whittier is one of Alaska's major ports and is also an important freight terminal for the Alaska Railroad. Rail cars, truck trailers and containers bring goods to Alaska through Whittier.

Seward is another major port served by the railroad. Coal exports, rail cars, trailers and imported pipe shipments are moved by the railroad from this small seaport community.

A trailer is shipped on an articulated flat car, one of 45 specially designed cars bought by the railroad in 1985. Each flat car can carry three trailers.

New services developed during 1985 demonstrate the railroad's dedication to customer service. The first of these specialized services was initiated only four months after the railroad transfer. Named the Arctic FOX (Freight Overnight Express), the service provides overnight delivery of high priority, highway trailers between Anchorage and Fairbanks using specially designed articulated flat cars, the first equipment purchased by the railroad in 1985. The efficiency of the FOX operation permits the railroad to compete with motor carriers in this market and pass the cost saving along to the Alaska consumer. Since its inception in May, the popularity of the FOX has steadily increased. By the end of the year it was operating regularly at over 90 percent capacity.

Another priority service begun in 1985 was the OWL (Oil Worker Limited). This daily train transports jet fuel from the petroleum refinery at North Pole to Anchorage, returning to the Fairbanks area with gasoline and other petroleum products. The efficiency of this service has made it possible for the customer to double the shipping volume without increasing the number of tank cars it leases.

FREIGHT SERVICE

Freight service is the most important source of income for the railroad. In 1985 it resulted in three-quarters of the corporation's $67 million in revenue. Passenger service and real estate revenues accounted for another 13 percent of the total.

Over 90 percent of freight revenue is derived from five areas: rail cars from the Lower 48, coal, petroleum, gravel, and TOFC/COFC (trailer on flat car/container on flat car). The remaining percentage of freight is split between pipe shipments and local freight. Rail cars, coal and TOFC/COFC are handled predominately at two of Alaska's major ports, Seward and Whittier.

One-fifth of the freight revenue is derived from coal shipments, either export or local delivery. Alaska coal is exported to Korea through a major coal transloading facility built at the Port of Seward in 1984. The coal export contract with the Koreans runs through 1992. During the first year of the contract (actually 13 months, including December 1984) 671,000 tons of coal were moved to Seward. That is about 20 percent below the volume projected because of lower consumption by the customer, Korea Electric Power Company.

Coal shipments within Alaska were also lower than expected. Warmer than usual temperatures in

interior Alaska resulted in reduced consumption by the five power plants in the Fairbanks area and the nearby military bases that use coal for fuel. About 562,000 tons were shipped locally in 1985.

Gravel and sand shipments, which move in unit trains between the Matanuska Valley and Anchorage, were the fifth largest revenue producers among all commodities shipped by rail. These shipments are tied to the cyclical rise and fall of the Anchorage area construction industry, which began to decline in 1985. Although lower activity in highway and building construction is anticipated again in 1986, a high volume of gravel is expected to move via the Alaska Railroad.

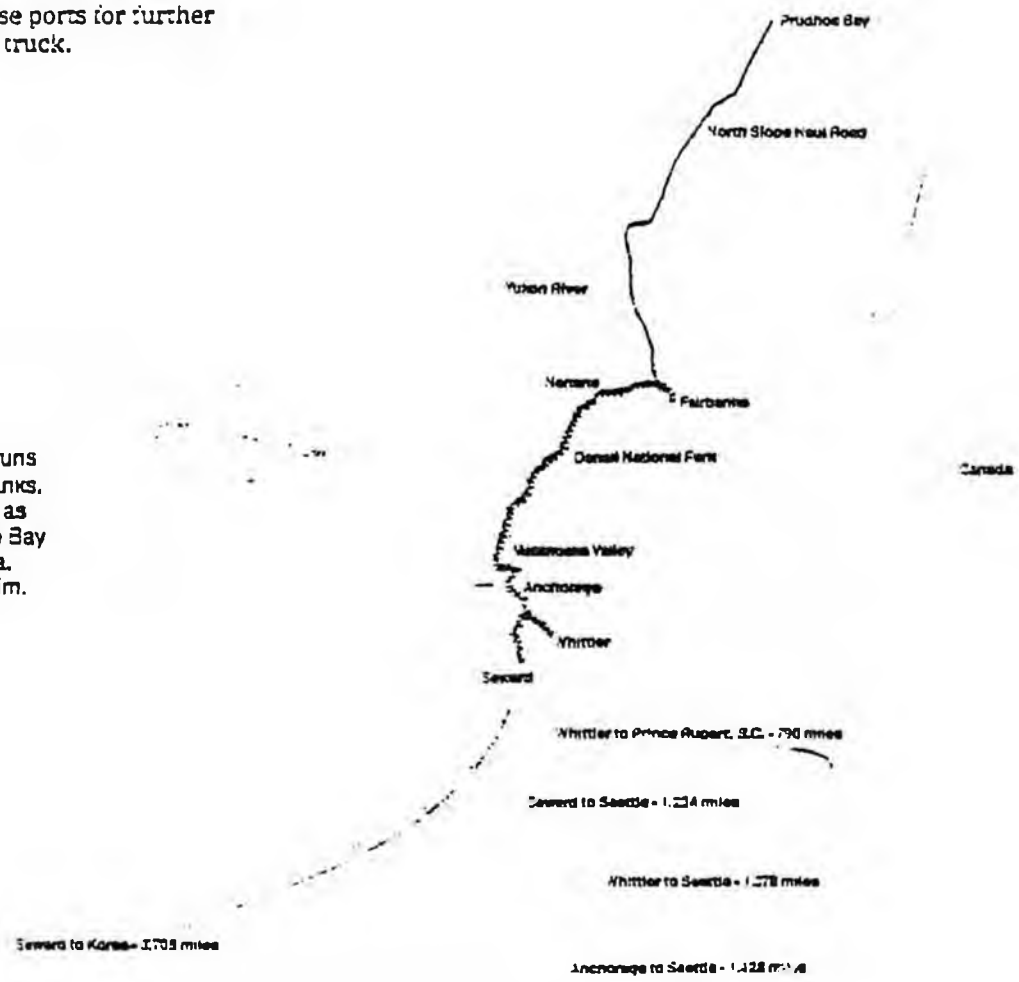
The Alaska Railroad connects with a number of water carriers providing a variety of excellent services from the Lower 48 to Alaska ports of Whittier, Seward, and Anchorage. Major rail carriers and truck lines connect with these water carriers at Seattle, Tacoma, and Prince Rupert, British Columbia. The water carriers provide frequent rail car barge, trailer and container service.

Among the extensive railroad properties are the modern facilities at the ice-free ports of Whittier and Seward. Bulk and container cargos are unloaded at these ports for further transportation via rail and truck.

Interior Alaska covers thousands of square miles, much of it primitive wilderness; and, its towns and settlements are often isolated by distance and terrain. But, although the Alaska Railroad goes no farther than Fairbanks, it uses a combination of transportation modes, including motor carriers, river boats, and aircraft, to carry freight to the remote corners of the state.

Freight is transferred at Nenana to river barges which provide through routes and rates in connection with the railroad. This river freight service extends along the Tanana and Yukon rivers to Fort Yukon, and even to Marshall, just 150 miles from the Bering Sea. The railroad has for decades provided this essential service to the Bush, and is continuing to upgrade transportation facilities and services.

The railroad competes actively for the transportation of imported steel pipe products, which move into Alaska principally through the ports of Seward, Anchorage, and Valdez. The railroad moved 74,000 tons of pipe in 1985.



The "railbelt" region of Alaska runs 470 miles from Seward to Fairbanks, connecting southcentral Alaska as well as the interior and Prudhoe Bay with water carriers from Canada, the Lower 48, and the Pacific Rim.

An aggressive marketing effort and improved service by rail led to a strong recovery in this business in December. Ship traffic through Seward resumed late in the year, discharging pipe for movement to the North Slope oil fields through the railroad's terminal in Fairbanks.

The Alaska Railroad Corporation is a major supplier of transportation services for the petroleum industry. Steel pipe, drilling compounds, machinery, and supplies routinely move over the railroad to Fairbanks for further movement by motor carrier to the North Slope. Massive drilling rigs are fabricated by an Anchorage firm then disassembled for transportation to the oil fields.

PASSENGER SERVICE

The majority of the 257,000 passengers who chose the Alaska Railroad for travel in 1985 arrived on cruise ships through the railroad's port of Whittier, rode the Portage-Whittier shuttle, or rode the express trains serving Denali National Park. Ridership rose by almost 10 percent over 1984, making the year a record for the railroad's passenger train service.

The purchase of two specially rebuilt rail diesel cars (RDCs) received in late 1985 is expected to reduce significantly the cost of wintertime rail service to rural areas, where the greater part of passenger service losses are incurred. These self-propelled passenger cars are available for charter and excursion trains and to supplement other passenger services where necessary.

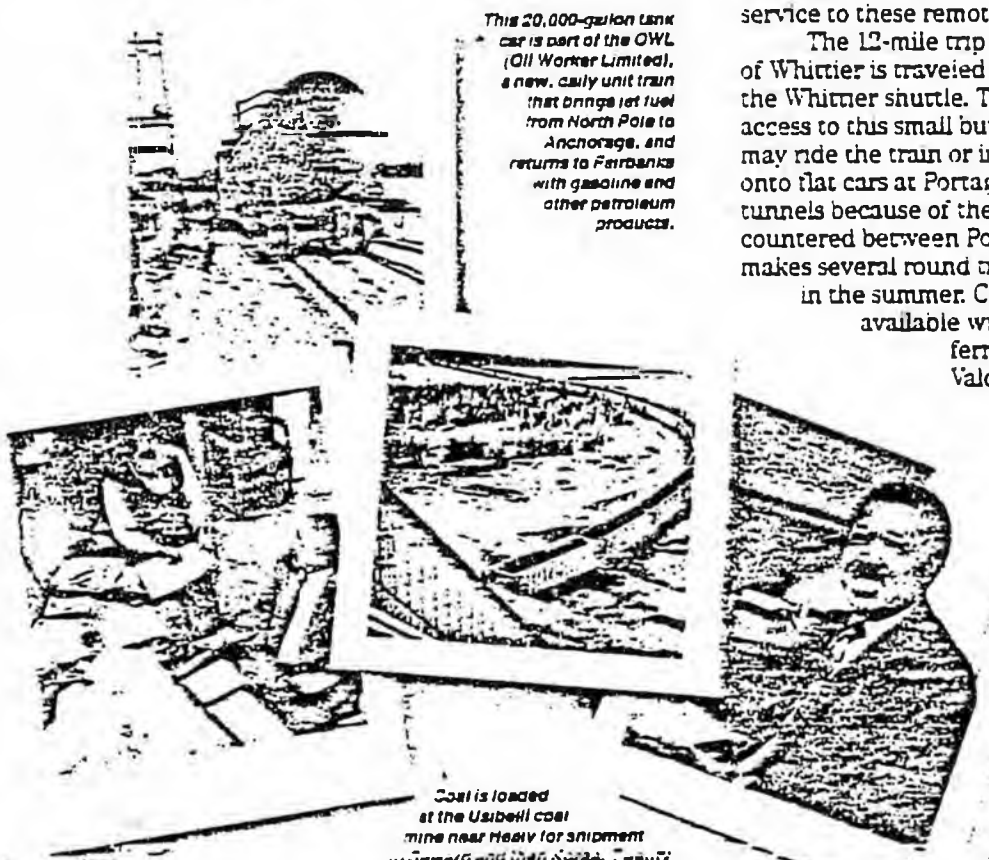
The Alaska Railroad offers several types of passenger services, depending on season and destination. These services include the Denali express, the rural local service, Whittier shuttle, Seward excursion, and winter service.

The Denali express is the summer service on the Anchorage - Denali Park - Fairbanks route. Trains leave Anchorage and Fairbanks daily from late May to mid-September and serve Denali National Park each way. The Denali express is the last traditional intercity passenger train in the United States and provides spectacular views of Mt. McKinley, the tallest mountain in North America.

The rural, or Bush, service which moves people and their belongings (such as animals, supplies, and food) to remote areas not served by highway or air, is a major public service of the railroad. Bush passengers flag the train at almost any point for personalized service. Wintertime essential Bush and shuttle services during the eight-month season result in about 7 percent of the railroad's annual passenger business. The railroad also provides weekly small freight shipment service to these remote homesites.

The 12-mile trip from Portage to the community of Whittier is traveled by what is familiarly known as the Whittier shuttle. The shuttle provides the only land access to this small but major seaport town. Passengers may ride the train or in their vehicles that are loaded onto flat cars at Portage. Much of the trip is through tunnels because of the many rugged mountains encountered between Portage and Whittier. The train makes several round trips daily between the two stops in the summer. Connections and reservations are available with the Alaska Marine Highway ferry service from Whittier to Valdez.

Cruise ship service to Whittier and significant increases in recreational use of the Prince William Sound region, coupled with a banner tourist year on the Valdez to Whittier state ferry route, boosted the number of passengers on the Whittier shuttle by over 20 percent. Ridership in 1986 promises to exceed 1985.

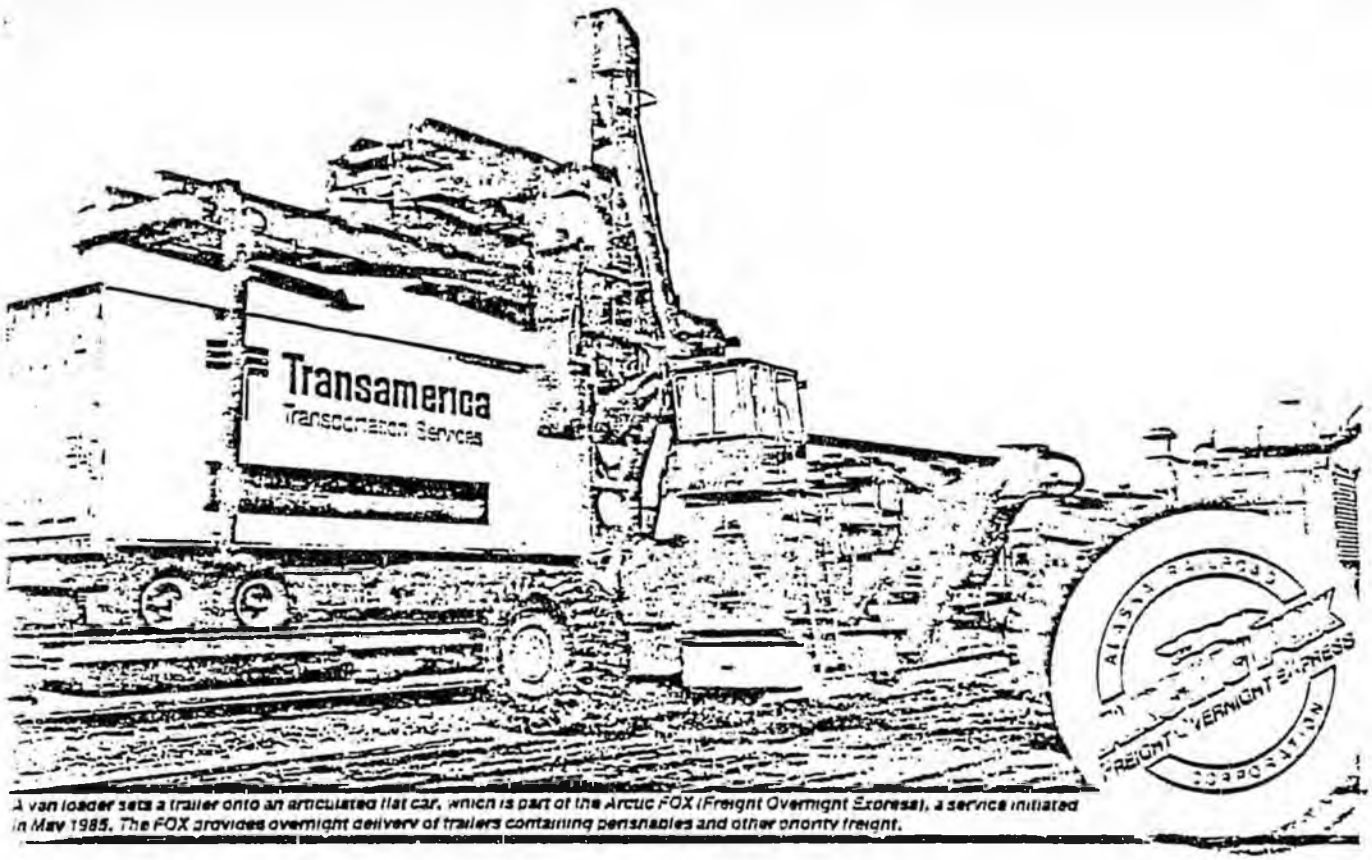


This 20,000-gallon tank car is part of the OWL (Oil Worker Limited), a new, daily unit train that brings jet fuel from North Pole to Anchorage, and returns to Fairbanks with gasoline and other petroleum products.

Coal is loaded at the Usibelli coal mine near Healy for shipment to Seward and then Korea. Twenty percent of freight revenue comes from local and export coal.

Phil Hibdon, left, and Dennis Smith, railroad marketing representatives, provide pricing information for freight service.

Bob Smith is a freight salesman in the railroad's Seattle office. His duties include selling freight services, making customer contacts and servicing existing contracts between the Lower 48 and Alaska.



A van loader sets a trailer onto an articulated flat car, which is part of the Arctic FOX (Freight Overnight Express), a service initiated in May 1985. The FOX provides overnight delivery of trailers containing perishables and other priority freight.

Passenger trains to Seward will begin regular service in 1986 after a 30-year absence. The Railroad was the original link between Anchorage and Seward but service was discontinued when highway travel became more popular. During the summer the railroad will offer a weekly day-long excursion from Anchorage to Seward. Passengers will see glistening glaciers, experience the view from high rocky ledges and wind along canyon streams on this 230-mile round trip through some of Alaska's most beautiful mountain territory.

Winter passenger service is provided on a reduced scale during the shoulder season of September to May. Passenger trains travel between Anchorage and Fairbanks twice each month and to Hurricane twice each weekend.

REAL ESTATE

The Alaska Railroad Corporation controls approximately 38,000 acres of land from the ports of Seward, Whittier and Anchorage to the interior city of Fairbanks. Approximately 40 percent of the land is a transportation corridor or railroad rights-of-way. The remaining real estate includes operational and nonoperational parcels within railbelt communities.

Since transfer of the railroad to state ownership, the scope and duties of the Real Estate Department have expanded to include a greater involvement in land-use planning. Coordinated efforts between Operations and Real Estate departments have been initiated to identify surplus lands available for long term lease. This would result in a more efficient use of undeveloped railroad properties. Leasing policies and practices have been written and implemented to create a more equitable and consistent approach to land management. Innovative ground lease techniques such as rent credits for certain non-depreciable lessee improvements and rent caps that create predictable and financially attractive lease documents will be made available under this new policy. Real estate revenues for 1985 were approximately $4.3 million.

During 1985, a study was initiated to analyze and recommend for the department an office automation system to catalog and create a database to store some 1,200 real estate lease and permit contracts. The recommendation will be implemented in 1986.

Positive steps are being taken to develop a closer working relationship within railbelt communities. The Real Estate Department recognizes the need for a more cooperative approach between the Alaska Railroad Corporation and its host municipalities and boroughs.

THE FUTURE

To implement the Marketing Department's diverse role within the railroad, a formal marketing plan was developed by the department and in late 1985 was approved by the Alaska Railroad Corporation Board of Directors. A key element of the plan calls for new, aggressive marketing programs to establish the identity of the Alaska Railroad throughout the Northwest as well as in the Alaska shipping community.

CHIEF COUNSEL'S OFFICE

The Chief Counsel and his staff were kept very busy in 1985 with the myriad legal issues facing the new railroad corporation.

Topics reviewed during the year by the legal staff included real estate, regulatory review of the rail industry and the railroad's rate structure, personnel and labor relations, commercial financing, and risk management.

The State Transfer Team, which was created prior to transfer of ownership of the railroad to coordinate that process, passed responsibility for many legal tasks to the Chief Counsel in the first quarter of 1985. Foremost among these assignments was continuing oversight of the conveyancing of 38,000 acres of railroad parcels and right-of-way from the federal government to the corporation. Survey, description, and procedural issues continue to be overshadowed by Native corporation claims to valuable railroad parcels. The railroad was involved in negotiations with Ahtna, Eklutna and Toghetthele native corporations. An agreement was reached with Ahtna Inc. in 1985. Negotiations will continue in 1986 to resolve the remaining claims.

The interpretation and application of both old and new railroad leases required considerable legal support. Corporate attorneys assisted in development of a new leasing policy and new master lease. The legal office also participated in the development of corporate relations with many state, federal, and military agencies regarding mutual land ownership and management concerns.

The legal staff was instrumental in the financing of millions of dollars in new equipment purchases in 1985 by preparing and negotiating necessary commercial documents. Procurement of equipment and materials also required legal review of solicitation packages and legal assistance in the resolution of bid disputes.

Competitor challenges to the corporation's pricing of piggyback traffic (truck trailers on flat cars) led the Chief Counsel to retain transportation and accounting experts to review the corporation's rate costing practice. The studies confirmed that the corporation's pricing was appropriate.

Competing water carriers fought unsuccessfully to deny the corporation any participation in the Interstate Commerce Commission's exemption of boxcar traffic from regulation. The exemption will permit more freedom in the marketing of transportation services.

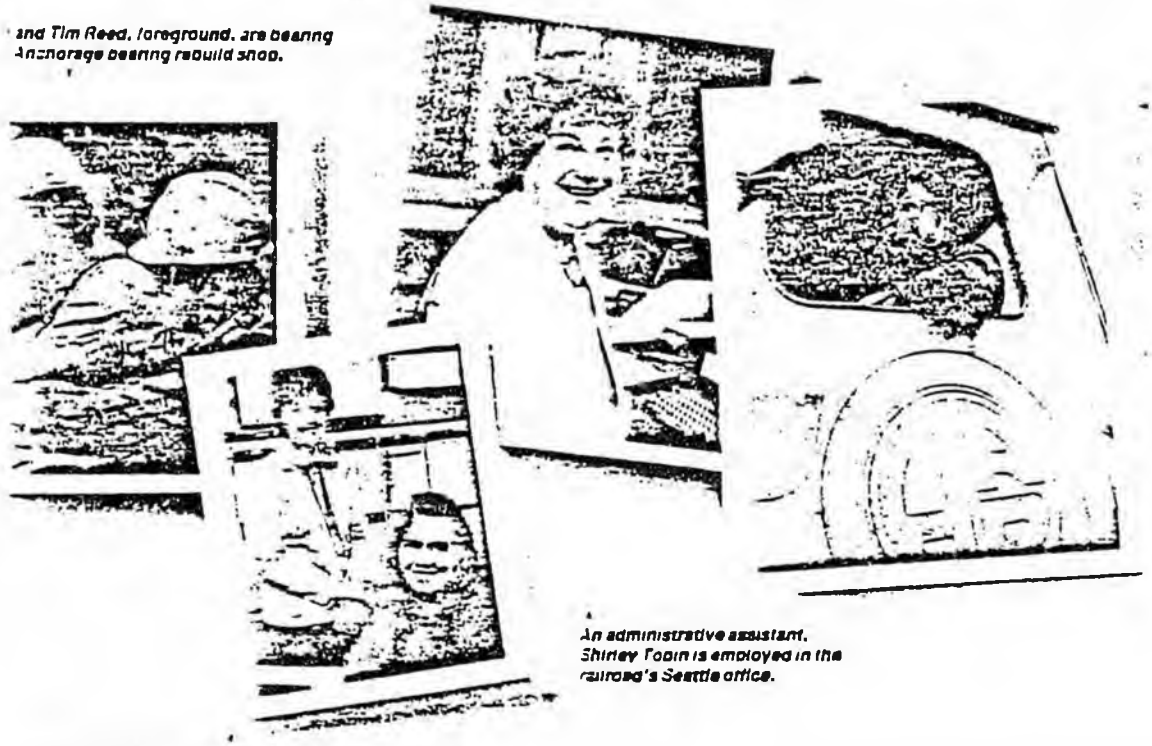
Through the first year of state ownership, the corporation received relatively few claims for personal injury and property damage related to railroad operations. Corporate counsel participated in resolution of several of the claims and in review of the corporation's risk management procedures.

Given the breadth of 1985 corporate legal affairs, the Office of the Chief Counsel will be challenged by these and new assignments in 1986.

Terry T... specialist

Cathie McLeod is a clerk-typist in the Fairbanks freight house.

The Alaska Railroad General Office building in Anchorage was constructed in 1942. It houses most of the corporation's administrative employees.



and Tim Reed, foreground, are bearing Anchorage bearing rebuild shop.

Chris Muniz, a truck driver for the railroad, assists in loading and unloading trailers on flat cars in the Anchorage yard.

An administrative assistant, Shirley Fobin is employed in the railroad's Seattle office.

Betty Elge is the dock agent, and Beverly Clauson, foreground, a clerk-typist, in Seward.

As a federal agency, the Alaska Railroad had adhered to federal hiring practices and personnel procedures. With transfer of ownership to the state, the railroad began to develop and implement policies and procedures that more closely responded to the needs of the new Alaska Railroad Corporation.

In the process, several personnel and employee relations functions were consolidated into one department. The Human Resources Department was created from the old Personnel Office. Added to it were Organization, Compensation and Benefits, Labor Relations, and Health, Safety and Environment. This reorganized department provides a full range of employee relations services for both management and employees. Affirmative action and the streamlining of recruiting and hiring practices are a top priority in better utilization of the work force.

Among the major Human Resources projects in 1985 was conversion of all personnel and payroll records to a fully automated, computerized system. Complete conversion to the new records system was expected by February 1986. This change will allow ready access to employee data and will insure an accurate employee record system.

Human Resources played a significant role in labor negotiations in 1985. According to both the federal transfer and state corporation acts, union contracts in existence at the time of transfer to state ownership are to be renegotiated by the corporation within the first two years of state operation. Beginning in August 1985, for the first time in the history of the Alaska Railroad, representatives from all seven bargaining units and management met at the bargaining table. This unique process called for bargaining with all the unions at once on items common to all the units. By year's end significant steps had been made toward reaching a mutually agreeable master contract.

Negotiations will continue in 1986 to finalize the master agreement after which each bargaining unit will have an opportunity to negotiate an addendum specifically for each union.

UNIONS REPRESENTING RAILROAD EMPLOYEES

(As of December 31, 1985)

Union	Employees
United Transportation Union	128
Brotherhood of Railway Carmen	40
International Association of Machinists and Aerospace Workers	89
American Federation of Government Employees	288
American Train Dispatchers Association	13
Train Dispatchers Unit	5
Blue collar and office craft units	

Administration of all benefits programs for railroad employees is managed by the Organization, Compensation and Benefits Department in Human Resources. This department administers the new life insurance and medical care programs for employees, including vision, hearing and dental care. This new program is designed to cover new employees and transferred employees and was implemented in February 1985.

This department also implemented a pension plan and a tax-deferred savings plan for non-represented employees. These plans allow employees to contribute a portion of their pre-tax earnings to a retirement and investment program. The deferred savings plan allows employees to build funds for their retirement while reducing their current taxes. Employees who participated in the Civil Service Retirement program prior to transfer remain in that system.

A safe workplace and working conditions have always been a priority at the Alaska Railroad. Corporation-wide training programs in first aid and cardiopulmonary resuscitation were provided several times throughout the year by the Safety Office. Safety meetings were held throughout the railroad on a regular basis to keep safety in the forefront of employees' minds while at work and at home.

The result was a reduction in accidents and serious on-the-job injuries. At the close of the year the Alaska Railroad Corporation was in contention with other railroads of similar size for a second place Harriman Award. The Harriman is a national safety award presented by the Federal Railroad Administration. The railroad received a fourth place Harriman in 1984 and a third place in 1983.

BENEFIT PROGRAMS
(As of December 31, 1985)

PENSION PLAN	Federal Retirement System*	Corporation Program	Total
Employee Contributions	$1,338,311.56	$41,634.28	$1,379,945.84
Employer Contributions	$1,338,311.56	$15,389.00**	$1,373,700.56
TOTAL	$2,676,623.12	$57,023.28	$2,753,646.40

* Employees who participated prior to transfer remained in this program after state ownership.

** Employer contributions are based on projected cash payouts, reflecting information received from the trust administrator.

TAX DEFERRED SAVINGS

Employee Contributions***	$232,697.29

***The present plan covers permanent, non-union employees. Union employees may become eligible depending upon the outcome of contract negotiations.

CORPORATION PAID LEAVES
(In hours)

When the Alaska Railroad changed hands from federal to state government, the Finance Department was a primary recipient for dramatic alterations. The changes were part of a corporate three-year plan generated in early 1985. The Finance Department as well as the corporation met or exceeded its goals for the first year.

The financial reorganization began with a management-oriented focus on the department. Accordingly, the position of Vice President of Finance was created, with all finance, information systems, procurement and supply departments reporting to this position. Formerly, under federal administration, those departments reported to the Department of Administration.

An important objective outlined in the three-year plan was the purchase of new equipment. Under federal administration all major purchases were paid by cash appropriated by Congress as part of the federal Department of Transportation budget. The new Finance Department was able to prepare a financial package that emphasized lease/purchase agreements for equipment and also established a credit line for the new corporation. The package resulted in the purchase of approximately $12 million in new equipment such as flat cars, locomotives, rail diesel cars and computers. The corporation spent an additional $10 million for improvements to the mainline track, tunnels and other areas.

Installation of an on-line accounting and financial system was another giant step taken by Finance. A new IBM 4361 computer was added which handles accounts payable/receivable, general ledger, inventory, purchasing, payroll and personnel management. The new system uses modern on-line capabilities as the standard for its operations, which prior to transfer had depended on a manual accounting system. In addition to updating the railroad's finance and record keeping capabilities, the Finance Department was responsible for expanding the use of personal computers in several work areas. The new PCs generate a huge time and cost savings in every department in which they are used.

A major activity of the new corporation in 1985 was wrapping up all accounts receivables and payables left behind by the federal government. The Federal Railroad Administration (FRA) contracted with the Alaska Railroad Corporation to collect outstanding accounts receivable and make payments for outstanding federal debts. Over $12 million of federal accounts receivable was collected by the corporation, much of which was more than six months past due. The corporation received a collection fee based on its contract with the FRA.

Another major activity specifically involved the corporation's surplus inventories. The Finance Department streamlined the warehouse and supply operations by eliminating excess inventories through public auctions held throughout 1985, generating approximately $1 million in revenue. A more efficient supply operation has resulted from the reductions.

New computers help Dave Brazzell, computer operator, to streamline the financial and record keeping process for the railroad.

The accounting department in Anchorage was substantially updated with the addition of a new computer which handles accounts payable and receivable, general ledger, inventory, purchasing, payroll and personnel management.

The corporation began divesting itself of the gift shop business in 1985. Though not finalized at the close of the year, sale of the Passenger Depot gift shops to the private sector is in progress.

When reflecting on 1985 I consider the major accomplishment of the Alaska Railroad Board of Directors was effectively setting the stage under state ownership for the future successful management of the Alaska Railroad.

As directors we fully realize that our first responsibility is to the citizens of Alaska. We also see a need to establish an arena of cooperation and accountability with the Governor and the state legislature. Thanks to the positive response of Governor Bill Sheffield and the oversight committees of the legislature, we were able to establish this bond of trust and were given the latitude to function in a free enterprise environment. This certainly contributed to our success in 1985 and provided a platform on which those who follow in our footsteps may build.

At our regular board meetings, in order to be more responsive to the needs of the communities we serve, as well as our customers, an opportunity is provided at each forum for public comment. It is this exchange that has given the board of directors an opportunity to receive input on such issues as leasing policies, bidding procedures, needs of our employees, and the public response to our services.

This ability to communicate on a local level with management, as well as the board of directors, has provided a vehicle for public communication that was practically nonexistent under federal ownership. I am sure this was the intent of Senator Ted Stevens and the many others who worked so long and hard for state ownership of the Alaska Railroad.

In 1985 we were able to benefit from the momentum of the prior year's economy, a stable work force and some creative management innovations by the railroad management. The result was increased earnings and a profit at the bottom line. However, 1986 will present new concerns. The Alaska Railroad, like any other business in Alaska, is not exempt from the predicted slowdown in the economy. It will take a concerted effort on the part of each of us to continue our first year's success.

The board of directors would be remiss if each member did not thank you for your patience and support during this first year. We are making history with this railroad and it is exciting.

James O. Campbell
Chairman of the Board of Directors

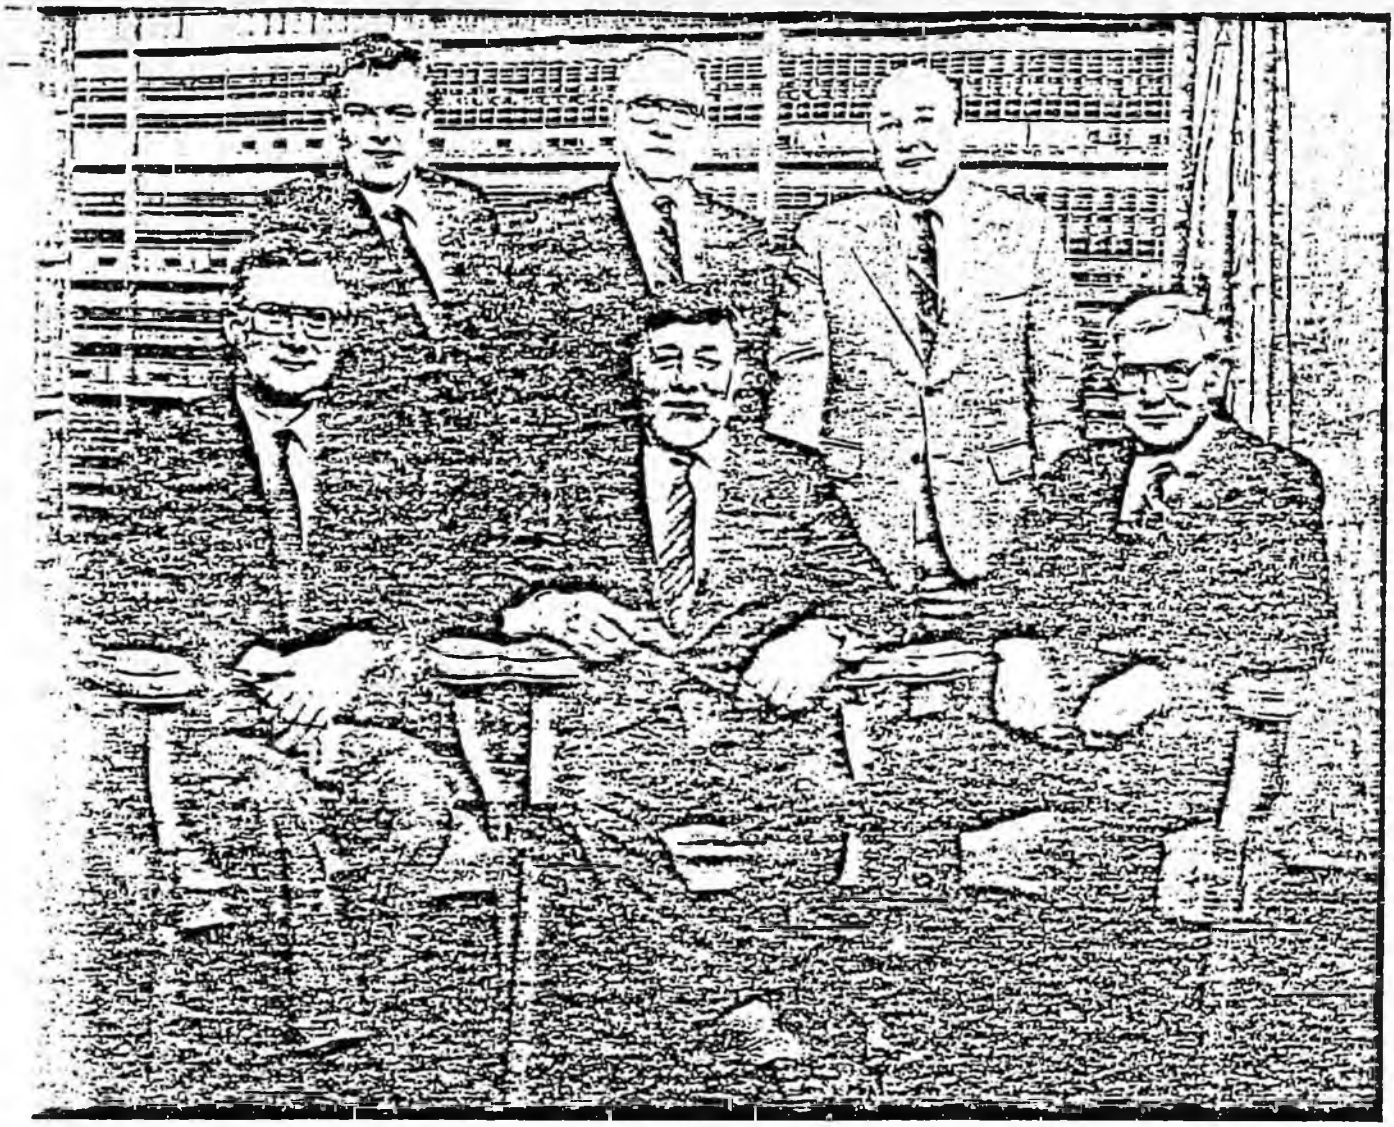
Prior to the transfer of the Alaska Railroad to state ownership in January 1985, a seven-member board of directors for the Alaska Railroad Corporation was appointed by Governor Bill Sheffield. Appointment of the board fulfilled a requirement outlined in the 1983 Alaska Railroad Corporation Act, which established the corporation.

The Alaska Railroad Corporation board is responsible for the management of the corporation but has delegated certain powers and duties to the Chief Executive Officer, Railroad President Frank Turpin.

James O. Campbell is chairman of the board of directors. He was president and general manager of Spenard Builders Supply when his retirement was announced in late 1985. Campbell has worked and served on numerous special committees and community service projects. A resident of Alaska since 1959 he has been an Anchorage assemblyman and president of the Anchorage Chamber of Commerce.

Board vice chairman is **Frank X. Chapados** of Fairbanks. He has been an Alaska resident since his birth in Juneau in 1914, and has worked most of his life in southeastern and interior Alaska. Currently, he is president and general manager of H & S Forwarders, Inc., in Fairbanks. Chapados was elected to the state House of Representatives in 1958, re-elected in 1961, and served as chairman of the Joint House & Senate Finance Committee. He has been active in many civic and community programs including being past president of the Fairbanks Chamber of Commerce. He has worked as an enforcement agent for the U.S. Fish and Wildlife Service and was also a U.S. Marshal in Fairbanks.

Myron M. Christy is the railroad board member from out of state. He resides in San Francisco and fulfills the directive of the legislature that one board member have at least 10 years of management experience in the railroad industry outside Alaska. Christy worked with the Western Pacific Railroad Company from 1950 to 1979 in many positions including president and CEO. Currently he is consultant and director for U.S. Leasing International, Inc.



The Board of Directors, seated from left: Commissioner Loren H. Lounsbury; Board Chairman James O. Campbell; and Lewis E. Dickinson. Standing from left are Gerald D. Valinske; Board Vice Chairman Frances X. Chapados; and Commissioner Richard J. Knapp. Shown separately below left is Myron M. Christy.

Lewis E. Dickinson is a founding partner of DOWL Engineers, a professional engineer and a registered land surveyor. As a railroad board member, he brings with him over 30 years of engineering experience and almost 25 years of business management experience. Prior to founding DOWL Engineers, he worked for the City of Anchorage in the city engineer's office.

Richard J. Knapp is one of the two state commissioners who serve on the railroad board. As commissioner for the Department of Transportation and Public Facilities, Knapp represents the transportation interests of the state. Knapp is a retired rear admiral of the U.S. Coast Guard, one of six appointed by President Carter in 1978. A graduate of the U.S. Coast Guard Academy, he served as district commander of the Coast Guard in Alaska from 1980 to 1984, and has a master's degree in business administration from George Washington University in Washington, D.C.

The second commissioner representing the state of Alaska is **Loren H. Lounsbury**, Commissioner of Commerce and Economic Development. Lounsbury is a 40-year Alaska resident, and graduated from Anchorage High School in 1962. He is a professional engineer and a registered land surveyor. Until his appointment as commissioner in January 1985, he was president of Lounsbury and Associates, Inc. Lounsbury has served on numerous community service boards and is the former Honorary Consul of the Republic of Korea for Anchorage.

Gerald D. Valinske serves on the railroad board as a member of the United Transportation Union, Local 1626. He has been a conductor with the Alaska Railroad since 1975. A 12-year Alaska resident, Valinske worked with the Milwaukee Railroad as a brakeman prior to moving to Alaska. In 1984, he was a lobbyist for the United Transportation Union, American Federation of Government Employees, and the Brotherhood of Railway Carmen.

EXPLANATION OF VARIANCES - YEAR-TO DATE

- Revenues are lower due primarily to reduced coal shipments, gravel, TOFC/COFC, and miscellaneous shipments; increased revenues have been obtained in petroleum products, real estate, and reimbursable work for State road crossing projects, etc.

- Expenses are down primarily due to early reduction in summer work force, reduced car hire costs, better fleet utilization, and accounting adjustments for inventories/depreciation due to Purchase Accounting Allocation Method, and reclassification of Summer Track Improvement Program from expense to capital in accordance with unit of property definition.

* Minor difference due to rounding

** The month of December, 1985, reflects adjustments to accruals/estimates for both revenue and expense.

Overheads[3]	(2,255)	1,206	(3,461)	11,980	13,224	(1,244)
Depreciation[4]	267	400	(133)	1,455	4,800	(3,345)
Total	2,390	5,240	(2,850)	60,101	70,279	(10,178)

Explanation of Variances - Year-to-Date

(1) Decrease due to freight movements, primarily TOFC/COFC, gravel, and reduced coal traffic.

(2) Reduction results from accounting adjustment for Summer Track Improvement Program from expense to capital in accordance with ICC unit of property definitions offset by higher than budgeted personnel costs.

(3) Underrun due to inventory re-evaluation partially offset by increased insurance costs, reorganization costs and other miscellaneous costs.

(4) Depreciation lower due to restatement of assets according to purchase accounting allocation method.

* December, 1985, reflects accrual adjustments to conform with audited year end financial statements.

OPERATIONS DEPARTMENT CAPITAL PROPOSAL

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A.	PROJECT TITLE:	LIGHT VEHICLE REPLACEMENT PROGRAM
B.	LOCATION:	OPERATIONS DIVISION
C.	ESTIMATED COST:	$278
D.	ACCURACY OF COST ESTIMATE:	CLASS 111 (+ OR - 15%)
E.	STATUS OF ENGINEERING DESIGN & COST ESTIMATE:	N/A
F.	PROJECT DESCRIPTION:	PURCHASE 16 LIGHT VEHICLES

G. PROJECT JUSTIFICATION:

The present vehicles scheduled for replacement have body and rust damage, high mileage, and experience high maintenance costs. The vehicles' average age is eight years and mileage over 80,000. These vehicles have met or exceeded their forecasted economic life of five years or 70,000 miles.

Older vehicles with high mileage are difficult to maintain to ensure reliable operating status. An annual replacement program will result in lower vehicle maintenace cost, increase availability resulting in increased productivity, and a higher quality vehicle fleet.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE: UPGRADE ANCHORAGE TOFC YARD

B. LOCATION: SHIP CREEK

C. ESTIMATED COST: $65

D. ACCURACY OF COST ESTIMATE: CLASS 111 (+ OR - 15%)

E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE: N/A

F. PROJECT DESCRIPTION:

Resurface the existing TOFC Yard. The project will consist of fill, grading, compaction, and surfacing with D-1 or equivalent.

G. PROJECT JUSTIFICATION:

The current TOFC Yard has not received any major improvements since 1984. Over the last three years of constant use and exposure to weather conditions, the yard has deteriorated to an uneven, wash-board surface resulting in slower operations and potential safety hazards. In August, two employees claimed on-the-job back injuries from operating yard hostlers over this rough terrain for extended periods of time.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE:	HEAD END POWER PLANT
B. LOCATION:	ANCHORAGE
C. ESTIMATED COST:	$75
D. ACCURACY OF COST ESTIMATE:	CLASS 11 (+ OR - 10%)
E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE:	COMPLETE

F. PROJECT DESCRIPTION:

Purchase and install a 315 KW head end power plant in locomotive 3010. This project was initiated in fourth quarter 1986 with $28 forecasted as a work in process carryover. The estimated 1987 expenditures is $75.

G. PROJECT JUSTIFICATION:

The modification of locomotive 3010 with a head end power unit provides the most utility to railroad operations. This modified locomotive will be used in passenger service and winter freight service. The winter utilization will consist of keep from freezing freight service.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE:	MATERIAL HANDLING EQUIPMENT
B. LOCATION:	ANCHORAGE
C. ESTIMATED COST:	$20
D. ACCURACY OF COST ESTIMATE:	CLASS III (+ OR - 15%)
E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE:	N/A

F. PROJECT DESCRIPTION:

Purchase and install miscellaneous shop equipment

G. PROJECT JUSTIFICATION:

This investment pool represents an equipment replacement program established to update our shop equipment. The shop equipment will be replaced with new more efficient equipment when the old equipment breaks down beyond economic repair.

PROPOSED 1987 BASL .NE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE: OVERHEAD CRANE IMPROVEMENTS

B. LOCATION: ANCHORAGE

C. ESTIMATED COST: $50

D. ACCURACY OF COST ESTIMATE: CLASS 11 (+ OR - 10%)

E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE: N/A

F. PROJECT DESCRIPTION:

Purchase and install new power supply for the General Repair Shop DC cranes.

G. PROJECT JUSTIFICATION:

The proposed new power supply will enable the crane to be operated from floor level controls versus from a cab on the crane. The new floor level controls will reduce labor requirements and improve shop safety. Additionally, noise levels will be reduced and improving the working conditions.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE: RAIL PROGRAM

B. LOCATION: SYSTEM WIDE

C. ESTIMATED COST: $319

D. ACCURACY OF COST ESTIMATE: CLASS III (+ OR - 15%)

E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE: COMPLETE

F. PROJECT DESCRIPTION:

Install 14,400 feet of alloy rail.

G. PROJECT JUSTIFICATION:

This is an annual major maintenance program designed to replace rail that has exceeded its useful life for mainline operations. The used rail will be cascaded to sidings and or yard tracks where re-required. The replacement rail will come from existing inventories and will not require a capital outlay.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE:	BALLAST PROGRAM
B. LOCATION:	SYSTEM WIDE
C. ESTIMATED COST:	$658
D. ACCURACY OF COST ESTIMATE:	CLASS III (+ OR - 15%)
E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE	COMPLETE

F. PROJECT DESCRIPTION:

Replace 60,000 cubic yards of ballast and resurface 300 miles of track.

G. PROJECT JUSTIFICATION:

This is an annual major maintenace program designed to replace ballast that has exceeded its useful life. The replacement ballast will come from existing inventories and will not require a capital outlay.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE: BRIDGE PROGRAM

B. LOCATION: SYSTEM WIDE

C. ESTIMATED COST: $575

D. ACCURACY OF COST ESTIMATE: CLASS III (+ OR - 15%)

E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE: COMPLETE

F. PROJECT DESCRIPTION:

This is an annual program of major maintenance on steel bridges, timber trestles, and culverts. Deteriorated ties, piling, bridge timbers, and culverts are replaced on a programmed basis.

G. PROJECT JUSTIFICATION:

Timber bridge components have an average service life of 30 years. Major rehabilitation work in the 1952 - 1956 period resulted in a significant amount of 30+ year old timber in service. This program is required to replace these bridge members to reduce the risk of failure. Culvert replacements are required to maintain drainage and keep roadbed maintenance costs from increasing. Renewed bridges also reduces the cost of track maintenace at the bridge ends. The replacement and/or upgrade of the substructure of the bridges is required to ensure the load carrying capabilities of the bridge and maintain a safe operating railroad.

The material cost is estimated at $200 with the majority of the materials coming from existing inventory.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE: RAIL TIE FASTNERS

B. LOCATION: SYSTEM WIDE

C. ESTIMATED COST: $100

D. ACCURACY OF COST ESTIMATE: CLASS III (+ OR - 15%)

E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE: COMPLETE

F. PROJECT DESCRIPTION:

Install 150 gage plates and 300 Pandrol tie plates on curves of 6 degrees or greater. This is a carryover project approved in the 1986 Capital Budget.

G. PROJECT JUSTIFICATION:

These devices prevent spreading track gage. Spreading of gage on sharp curves as well as rail rotation under severe lateral loading is a very serious concern for the Railroad. Constant regaging on wooden ties reduces tie service life by an estimated 15%.

The gage plates and Pandrol tie plates are in our current inventory minimizing any capital outlay for materials.

PROPOSED 1987 BASE ME CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A PROJECT TITLE: FIBER OPTIC CABLE TERMINALS

B. LOCATION: ANCHORAGE, PORTAGE, & WHITTIER

C. ESTIMATED COST: $112

D. ACCURACY OF COST ESTIMATE: CLASS III (+ OR - 15%)

E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE: COMPLETE

F. PROJECT DESCRIPTION:

Install digital fiber optical terminals to replace open wire pole line and marine cable system between Portage and Whittier. This is a carryover project approved in the 1986 Capital Budget.

G. PROJECT JUSTIFICATION:

The pole line cable system to Whittier was built in 1940 and is in need of major overhaul and replacement. The system received major damage during the 1964 earthquate and four sections have been replaced with temporary cable. In the last six years most of the lead splices have badly corroded and are close to failure. A replacement system will cost $325,000, but an agreement between Anchorage Telephone Utility and the Railroad has enabled us to utilize the fiber optic system between Anchorage and Whittier. This agreement will eliminate the need for replacement of the pole line. Purchasing the fiber optic terminals and connecting them to ATU's fiber optic system will give us full data and telephone service to the Whittier Terminal.

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE: WHITTIER ELECTRIC

B. LOCATION: WHITTIER TERMINAL

C. ESTIMATED COST: $200

D. ACCURACY OF COST ESTIMATE: CLASS III (+ OR - 15%)

E. STATUS OF ENGINEERING DESIGN & COST ESTIMATE: REVIEW STATUS

F. PROJECT DESCRIPTION:

Replacement of existing high voltage distribution system in the Whittier Yard.

G. PROJECT JUSTIFICATION:

The railroad has incurred a PCB contamination problem in the Whittier electrical distribution system. The current system is a non-standard distribution network which is contaminated with PCB's. A replacement system is necessary to eliminate future PCB problems and to minimize clean up costs of the current contaminated system.

PASSENGER SERVICES CAPITAL PROPOSAL

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE — Containerized Baggage

B. LOCATION — Anchorage

C. ESTIMATED COST

40 Containers @ $800 each	$32,000
Fairbanks Forklifts	Already Owned
Anchorage Forklift	20,000
Denali Forklift	20,000
Total Cost	$72,000

D. ACCURACY OF COST ESTIMATE — Class 3

E. PROJECT DESCRIPTION
Purchase containers and forklifts to handle the baggage on the Anchorage via Denali to Fairbanks Express. The containerization will reduce the manual handling of the baggage.

F. PROJECT JUSTIFICATION
The ARRC needs to come into the modern ages with baggage handling. The containerized system will reduce staffing at Fairbanks and Anchorage and save layover time at Denali Park.

Cash Flow	Year 0	Year 1	Year 2	Year 3	Year 4	Year 5
Equipment	(72)					
Anc/Fbx Labor Savings		24	24	24	24	24
Forklift Maintenance		(2)	(4)	(6)	(8)	(10)
Less 12 Hour Dead Head Trains		2	2	2	2	2
	(72)	24	22	20	18	16

Life Expectancy probably 7 years, use 5 to be conservative.

INTERNAL RATE OF RETURN 13.05%

PROPOSED 1987 BASELINE CAPITAL BUDGET
SUPPLEMENTAL PROJECT INFORMATION SHEET
($000)

A. PROJECT TITLE — Whittier Shuttle Flat Cars

B. LOCATION — Anchorage

C. ESTIMATED COST — 5 @ $20,000 each = $100,000
This project will be funded with State of Alaska Shuttle Funds.

D. ACCURACY OF COST ESTIMATE — Class 3

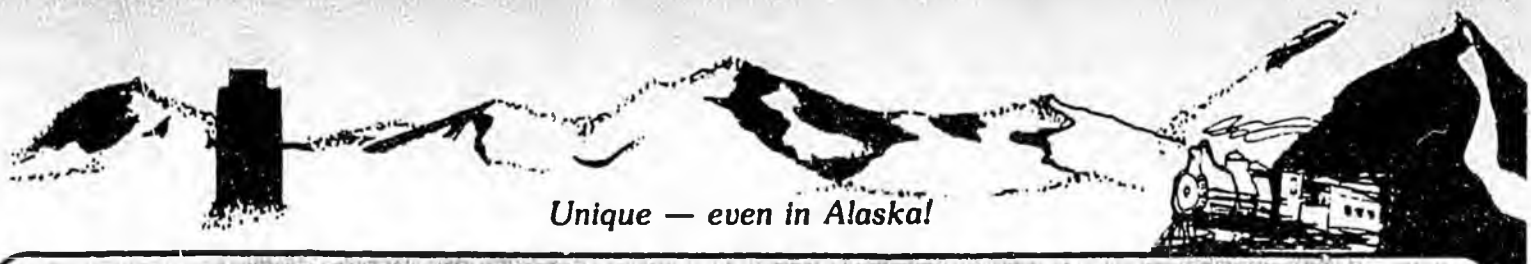
E. PROJECT DESCRIPTION
The cost of maintaining the current rail passenger cars used on the Whittier Shuttle was excessive so this equipment has been disposed of. In reviewing the alternatives, it appears that buses on flat cars may be the most cost effective. This requires the purchase of flatcars to place the buses on. The current flatcars are filled to capacity on numerous occasions so putting the buses on these would reduce vehicle capacity too much.

F. PROJECT ALTERNATIVES FOR WHITTIER PASSENGER EQUIPMENT
1. Rental Buses on Flatcars.
2. Purchased Buses on Flatcars.
3. Lease of Rail Passenger Equipment.

The cost of these three alternatives will be analyzed extensively prior to the actual purchase decision.

HB

101



Unique — even in Alaska!

THE CITY OF WHITTIER

APR 6 1987

March 31, 1987

The Honorable Representative Bette Cato
P.O. Box V
Juneau, AK 99811

Dear Representative Cato,

Please extend our warmest greetings to your staff and colleagues. We are submitting this letter for your perusal in lieu of in person testimony on HB 101 while it is in committee.

We perceive this measure to be a first step if you will, in the process of enabling a project of this nature to go forward. At this time, the measure costs us nothing but the energy spent on its consideration in the legislature. It is our strongly held belief that this measure is essential for us to even begin to consider any of the options that have been suggested for improved transportation access from Portage to Whittier. Through this legislation we envision a future project that will be self sufficient with regard to the retirement of [illegible] al financial obligations.

We believe that sometime in the future a road will be constructed which will serve to connect the last unpaved link between Whittier and Anchorage. This will thereby increase the utility of the Port of Whittier as a freight handling terminal for the entire state by enhancing current rail only operations. It would also add to the convenience of the many visitors from Anchorage who utilize Whittier as the closest access to the recreational opportunities on Prince William Sound. Other benefits would include the impacts that would be felt by the fishing industry in western Prince William Sound and the flexibility that could be enjoyed by the tourism industry in their scheduling through this Port.

Sincerely,

Courtland H. Ofelt, Ed.D.

TO: Senate Transportation Committee Members

FROM: Representative Bette Cato BC

SUBJECT: HB 101

I have reviewed the proposed committee substitute for CSHB 101 and I am happy with the changes.

Essentially, the proposed changes would allow ANY state toll facility to be constructed provided the conditions in AS 37.15.730 are met. Oringinally, HB 101 required Knik Arm Crossing and the Whittier Toll road be the first state toll facilities constructed.

Thank you for considering CSHB 101.

SENATE CS FOR CS FOR HOUSE BILL NO. 101 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to state toll facilities."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 19.05.040(11) is amended to read:

(11) establish, levy, and collect tolls, fees, charges, and rentals for the use of state roads, highways, bridges, tunnels, crossings, and causeways; and

* Sec. 2. AS 37.15.720 is amended to read:

Sec. 37.15.720. STATE TOLL FACILITIES. The state is authorized to acquire, construct, equip, and maintain toll bridges, tunnels, highways, roads, crossings, and causeways found to be necessary by the commissioner of transportation and public facilities.

* Sec. 3. AS 37.15.730 is amended to read:

Sec. 37.15.730. REVIEW OF TOLL FACILITY PROJECTS [KNIK ARM CROSSING]. A toll facility may be financed under AS 37.15.610 - 37.15.760 [NOTWITHSTANDING THE PROVISIONS OF AS 37.15.720 THE FIRST STATE TOLL FACILITY TO BE FINANCED UNDER AS 37.15.610 - 37.15.760 IS THE KNIK ARM CROSSING NEAR ANCHORAGE] if the following conditions are met for that toll facility:

(1) the department submits to the governor and the legislature a feasibility study that finds that the toll facility [CROSSING] is financially feasible and able to produce revenue adequate to repay the bonds with which it is financed;

(2) if financing in addition to revenue bonds is required to finance the toll facility [ANTICIPATED], the department submits to

the governor and legislature a finance plan that includes [TO INCLUDE] an estimate of the total cost of the toll facility [PROJECT] and a description of the sources of money that will be used to finance the total cost of the toll facility [PROJECT]; and

(3) the office of management and budget reviews the feasibility study and the finance plan, if required, and reports its findings and recommendations to the governor and legislature not later than 90 days after the study and plan are received by the office.

* Sec. 4. AS 37.15.760(7) is amended to read:

(7) "toll facilities" means highways, roads, bridges, tunnels, crossings, and causeways upon which tolls, charges, rentals, or other user fees are placed by the commissioner of transportation and public facilities.

SCS CS HB 101 (Finance)
Fiscal Note Analysis

The following amounts of debt service on $22,000,000 of toll facilities revenue bonds assume a 30 year maximum maturity and an average interest rate of 9 percent:

	Fund Source	
Fiscal Year	Toll Facilities Construction Fund	Toll Facilities Revenue Fund
1989	$1,000,000	0
1990	2,000,000	0
1991	1,000,000	$1,100,000
1992		2,100,000
1993		2,100,000

The amounts paid from the Toll Facilities Construction Fund are capitalized interest (interest during construction). Total debt service to maturity (including capitalized interest) would be approximately $68 million.

Up to $6.5 million of the bond proceeds might be required for capitalized interest, a debt service reserve fund of $2.1 million, and issuance costs. This would leave $15.5 million available for construction costs.

CHUGACH ALASKA CORPORATION

April 9, 1987 APR 14 1987

The Honorable Bette M. Cato
Alaska State Legislature
P. O. Box V
Juneau, Alaska 99811

Dear Madam:

This is to convey Chugach Alaska Corporation's support for the passage of House Bill 101 amending Alaska Statutes 19 and 37 to provide for the establishment the Whittier Toll Road. The road will greatly enhance access not only to the existing community at Whittier but also to Passage Canal and the Prince William Sound. The corporation owns approximately 450 acres west of town where it is planning to develop its recreation and tourism resources.

The State's long standing interest in the project is attested to by its formal reports and correspondence with the City of Whittier dating from the late sixties to the present. The latest study has identified several feasible options which can be financed either entirely through a toll-related revenue bond or through a combination of the toll bonding and outside capital. The passage of this bill into law this year will coincide well with the further analysis of the final options and other land use planning that is planned in the area.

The progress of this bill is critical for the well being of the south-central region's tourism and recreation economy. The Prince William Sound Tourism Coalition, of which CAC is a member, is beginning its second year of guiding the development of the area's recreational resources into a condition that will accomodate a world class visitor experience.

Thank you for your work on this important bill. If we can assist you further on this matter, please do not hesitate to contact us.

Sincerely,

CHUGACH ALASKA CORPORATION

Keith Gordaoff

Keith Gordaoff

The Honorable Jan Faiks, President
Alaska State Senate

The Honorable Steve Cowper, Governor
State of Alaska

HOUSE BILL 101 - AN ACT RELATING TO STATE TOLL FACILITIES.

~~THE CITY OF WHITTIER HAS EXPERIENCED TREMENDOUS GROWTH SINCE ITS DEVELOPMENT DURING WORLD WAR II. WHEN YOU CONSIDER THE MANY BENEFITS THAT A CITY LIKE WHITTIER COULD PROVIDE NOT ONLY TO THE CITY AND LOCAL RESIDENTS, BUT TO THE STATE AS A WHOLE I THINK YOU WILL AGREE THAT ANY INVESTMENT MADE TOWARD~~ THE FUTURE GROWTH AND DEVELOPMENT OF THE CITY OF WHITTIER WOULD VERY ADVANTAGEOUS TO THE STATE OF ALASKA.

THE POPULATION OF WHITTIER IS 362. THIS NUMBER INCREASES TO OVER 900 HUNDRED DURING THE SUMMER MONTHS. THERE ARE OVER QUARTER MILLION TOURISTS VISIT THE CITY OF WHIITIER EACH YEAR BY SHIP OR VIA THE ALASKA RAILROAD.

THIS IS A CITY THAT HAS AN IDEAL LOCATION. CURRENTLY ONE CAN TAKE A 35 MINUTE TRAIN RIDE FROM PORTAGE TO WHITTIER, APPROXIMATELY 11 MILES. WITH THIS CLOSE PROXIMITY TO ANCHORAGE MANY ANCHORAGE RESIDENTS MOORE THEIR BOATS AT ONE OF THE 340 BOAT SLIPS AVAILABLE IN WHITTIER. THIS NUMBER COULD BE INCREASED DRAMATICALLY IF MORE SLIPS WERE AVAILABLE AS WHITTIER CURRENTLY HAS A WAITING LIST OF OVER 400 PEOPLE. WHEN WE CONSIDER THAT HERE LIES A COMMMUNITY THAT NOT ONLY OFFERS TOURISTS THE OPPORTUNITY TO SEE SOME OF THE MAGNIFICANT BEAUTY ALASKA HAS TO OFFER BUT, WHITTIER IS IDEALLY LOCATED TO PROVIDE ALASKA WITH ONE OF THE MAJOR PORTS FOR INTERNATIONAL TRADE. WITH THE ALASKA RAILROAD PROVIDING CONTINUAL SERVICE FROM WHITTIER TO ANCHORAGE AND, THE POSSIBILITIES OF DEVELOPING THE PORT AND HARBOR AREAS IN WHITTIER THE BENEFITS TO SHIPPERS AND FREIGHT COMPANIES ARE OBVIOUS.

THERE IS ONE BIG HURDLE TO OVERCOME IF THE POTENTIAL OF THE CITY OF WHITTIER IS TO BE TRULY REALIZED. ACCESS
HB 101 HELP TO OVERCOME THIS MAJOR PROBLEM BY PROVIDING THE DEPARTMENT OF TRANSPORTATION THE AUTHORITY TO CONSTRUCT A TOLL ROAD TO THE CITY OF WHITTIER. THE TOLL ROAD WOULD BE CONSTRUCTED UTILIZING EXISTING STRUCTURES.

HB 101 STATES THAT THE WHITTIER TOLL ROAD WILL BE THE FIRST STATE TOLL FACILITY FINANCED IF THE FOLLOWING CONDITIONS ARE MET:

1. tHE DEPARTMENT SUBMITS TO THE GOVERNOR AND THE LEGISLATURE A FEASBILITY STUDY THAT FINDS THAT THE PROJECT IS FINANCIALLY FEASIBLE AND ABLE TO PRODUCE REVENUE ADEQUATE TO REPAY THE BONDS WITH WHICH IT FINANCED.
2. IF FINANCING IN ADDTION TO REVENUE BONDS IS ANTICIPATED THE DEPARTMENT SUBMITS TO THE GOVERNOR AND LEGISLATURE A FINANCE PLAN THAT INCLUDES AN ESTIMATE OF THE TOTAL COST OF THE PROJECT AND THE SOURCES OF MONIES THAT WILL BE USED TO FINANCE THE TOTAL COST OF THE PROJECT.
3. THE OFFICE OF MANAGEMENT AND BUDGET REVIEWS AND RECOMMENDS TO THE GOVERNOR THE FEASIBILITY OF THIS PROJECT.

WHILE HB 101 WILL GREATLY BENEFIT BOTH THE CITY OF WHITTIER AND THE STATE OF ALASKA BY PROVING ACCESS TO THE CITY OF WHITTIER, THIS BILL DOES NOT DRAMATICALLY CHANGE THE EXISTING STUTUES. AS YOU WILL SEE IN YOU FOLDERS THE

STATUTES CURRENTLY PROVIDES FOR THE TOLL ROAD TO BE CONSTRUCTED FOR THE KNIK ARM CROSSING.

I FEEL THAT IF WE ARE TO CONTINUE TO PURSUE TO ECONOMIC GROWTH AND DEVELOPMENT OF THIS STATE AND, CONTINUE TO WORK TOWARD INCREASING TOURISM WE NEED TO SUPPORT LEGISLATION THAT WILL WORK TOWARD THESE GOALS.

THANK YOU FOR LISTENING TO ME.

ANALYSIS: This bill will remove the authority to charge tolls on the Dalton Highway. These are estimated to produce $5.6 million in FY88 to support the maintenance and operating costs of this route. These tolls would have been deposited in the General Fund to offset the budgeted costs for operation.

The deletion of the requirement for the checkpoint will not impact the 1988 budget because funding is not included.

The reduced operating expenditures and funding are related to the estimated costs of collection of the tolls.

BILL NO: HB 115

DATE: February 27, 1987

TITLE: "An Act relating to public use of the Dalton Highway."

CONTACT: Maj. Walter J. Gilmour
Acting Director
Alaska State Troopers

DEPARTMENT OF PUBLIC SAFETY

HB 115 will open the Dalton Highway for public access for the entire year.

The Division of Alaska State Troopers will need to provide a full range of law enforcement services to include accident response and investigation, search and rescue and patrol in order to protect the users of the highway. Winter use of the highway will result in a need to provide these services under difficult conditions, and equipment costs reflect this fact.

The Department of Public Safety is opposed to this legislation.

CONTINUATION OF FISCAL NOTE ANALYSIS

For Bill/Resolution No. HB 115

In order to keep the Dalton Highway open throughout the entire year, a full range of law enforcement services must be maintained. In order to provide accident response, patrol, investigation and search and rescue services, four additional State Trooper positions will be needed; one at Coldfoot, one at 7-Mile Camp, and two others in Prudhoe Bay. The costs below summarize their Personal Services and related costs. It is anticipated that equipment will be needed in the first year only and that a 3% inflationary cost will be incurred each year after 1988.

	Trooper Coldfoot	Trooper 7-Mile	Trooper Prudhoe Bay	Trooper Prudhoe Bay	Increased Helo Oper. Costs (1)	Total
Personal Services	71.5	66.9	71.5	71.5		281.4
Travel	2.0	2.0	2.0	2.0		8.0
Contractual	8.5	8.5	42.1	32.5	1.3	92.9
Supplies	3.3	3.3	3.3	3.3		13.2
Equipment	22.3	22.3	22.3	22.3		89.2
	107.6	103.0	141.2	131.6	1.3	484.7

(1) - Helicopter costs include one additional trip up and down the highway, fueling at Coldfoot and Prudhoe Bay (contract). This is expected to involve seven hours @ $187 per hour.

CIP Receipts	1061	
Other		

Justification

A fully trained and experienced law enforcement officer is needed to provide accident response, patrol, investigation and Search and Rescue along the Dalton Highway. This trooper position must have a 4 X 4 vehicle (152P) in order to be able to travel the rough road during winter conditions. All other costs are average Trooper costs and are based upon experience.

Currently, The FY88 FWP operating plan calls for the elimination of the FWP Trooper stationed in Coldfoot. This state housing unit will be occupied by this new AST Trooper.

P.O. Box 74446
Fairbanks, Alaska 99707

RESOLUTION 3-0287

A RESOLUTION TO OPEN THE DALTON HIGHWAY TO THE GENERAL PUBLIC

WHEREAS, there is no justifiable reason that the general public should not have access to a public highway, and

WHEREAS, public funds are used to maintain this road, and

WHEREAS, the denial of the public to use the Dalton Highway as any other highway in Alaska, as stated in A.S. 19.40.120, is discriminatory, and

WHEREAS, there are existing state and federal regulations which provide for management of public use of land and resources adjoining public highways, and

WHEREAS, the opening of the Dalton Highway has been part of the program of work as stated in the Interior Transportation Needs Study developed by the Greater Fairbanks Chamber of Commerce;

NOW, THEREFORE, be it resolved, that the Greater Fairbanks Chamber of Commerce recommends that the Legislature pass HB 115 without further restrictions.

Be it further resolved that this resolution be sent to the following:

Governor Cowper
The Interior Delegation
The Congressional Delegation
The Commissioner of Transportation

DATED THIS 23rd DAY OF February, 1987

BY _____
James Dodson, Chairman of the Board

BY _____
Althea St. Martin, Acting President

Greater Fairbanks Chamber of Commerce

First National Center
100 Cushman Street
(907) 452-1105
P.O. Box 74446
Fairbanks, Alaska 99707

RESOLUTION 1-0287

A RESOLUTION RECOMMENDING THAT A TOLL SHOULD NOT BE CONSIDERED ON THE DALTON HIGHWAY

WHEREAS, Fairbanks is facing an economic down trend, and

WHEREAS, more effort needs to be placed on trying to assist Fairbanks to recover and continue to offer competitive services in deploying freight through Fairbanks to users along and at the end of the Dalton Highway, and

WHEREAS, a toll could work an economic hardship on any business planning to use the road, and

WHEREAS, the Greater Fairbanks Chamber of Commerce feels that the road should not be used as a single purpose road, and

WHEREAS, this proposed toll would represent a double tax on the oil industry,

NOW, THEREFORE, be it resolved that options other than a toll being placed on a road in Alaska (specifically the Dalton Highway), be considered as a method to generate more state revenue.

BE IT FURTHER RESOLVED that this resolution be sent to the following:
Governor Cowper
The Interior Delegation
The Congressional Delegation
Commissioner of Transportation

DATED THIS Feb. 23 87 DAY OF 2-23- , 1987

Ex-lawmaker says Dalton should be open

By JOHN FRIDRICH
Staff Writer

A former Fairbanks lawmaker who fought to open the Dalton Highway to the public, told a forum held Wednesday the U.S. Constitution makes it clear the portion of the road now closed to the public should be open.

"That was my reason, and I can't speak for anybody else, for trying to get it open and open to everyone on the same terms," Charlie Parr told about 60 people who attended a panel discussion held by the Alaska Outdoor Council.

The Dalton Highway, built in 1974 at a cost of $307 million so the Trans-Alaska Pipeline could be constructed, stretches from Livengood to Prudhoe Bay, a distance of 415 miles.

Since 198[illegible], two years after the state took over maintenance duties from the Alyeska Pipeline Service Co., the southern half of the highway has been opened to the public. The northern half has been closed, however, with permits available only to people who have a commercial purpose in the area north of Disaster Creek, such as oil production.

Although several people brought up safety issues during the 1½-hour discussion, the prevailing sentiment among people in the audience who spoke was that the road should be open to Prudhoe Bay.

"They're trying to make it something special and I think that's wrong," said Andy Mlscovich, who added that a toll on trucks proposed by Gov. Steve Cowper to raise maintenance funds is sending industry the wrong message.

The state Department of Transportation and Public Facilities spent $6.5 million for maintenance of the Dalton Highway in fiscal year 1986, a figure that is projected to be $4.9 million in the 1988 budget, according to Fritz Guenther, DOT maintenance engineer for the Northern Region.

At its peak, the road handled 215 vehicles daily, but that has dropped to around 75 a day during the summer in the past two years, Guenther said. State officials say a toll on truck traffic would bring in about $5.6 million annually.

He said keeping the road surface intact is a problem, an issue that several people also raised. Another was efforts by the North Slope Borough, oil industry and truckers to keep the northern part of the road closed. DOT maintains a checkpoint three months of the year and gets money from the North Slope Borough to keep it manned an additional two months, which drew objections from several people.

Much of the discussion centered on public access to hunting, an issue towards which the Department of Fish and Game has generally adopted a neutral position, said Dick Bishop, regional supervisor of the agency's game division.

In theory, the area's wildlife could be effectively managed if the road was open, but the practical end is a different story, he said. "In practical terms, especially considering everybody is short of money, I think it may be very difficult; it has been difficult in any case, to have adequate enforcement of fish and game in that area," Bishop said.

As it stands, there a[illegible]e laws prohibiting all-terrain vehicle use within five miles of either side the road, but it's technically not possible to prosecute violators, Bishop said.

Areas of discrimination related to the road's closure were also aired. Firearms can not be used for hunting in that 10-mile wide corridor, but people can use guns in the pursuit of trapping in that area. Bow and arrow hunters are allowed in the corridor, another area that some found discriminatory. Certain rifles and ATVs can be used near Paxson, but not along the haul road.

"They ought to look at all areas of discrimination," said one man.

CONSTRUCTION AGREEMENT

This Agreement was made and entered into this 11th day of June, 1971, between the STATE OF ALASKA, hereinafter referred to as State, acting by and through its Commissioner of Highways, hereinafter called the Commissioner, and ALYESKA PIPELINE SERVICE COMPANY, a Delaware corporation, its successors and assigns, hereinafter referred to as Contractor.

The State and the Contractor agree that:

1. The Contractor shall perform, or cause to be performed, at the Contractor's sole expense, all the work and labor required to construct a highway for the State of Alaska generally described as follows: (1) from a point on the Livengood to Yukon highway approximately three miles northwest of the Yukon Radio Repeater Tower to the South bank of the Yukon River and (2) from the North bank of the Yukon River to Prudhoe Bay, Alaska. The Contractor shall also construct, at its sole expense, all the said highway and facilites related thereto which Contractor deems necessary or useful to the construction of that highway (both segments together hereinafter referred to as Highway), in accordance with those documents listed and described in Exhibit A, all of which documents are by reference incorporated herein and made a part hereof. All of said construction of the Highway and related facilities shall be substantially in accordance with secondary highway standards for the State of Alaska. At the time this Agreement is executed by the parties hereto, the said documents will describe only that part of

the highway north of the Yukon River; however, as soon thereafter as practicable, the parties hereto shall supplement Exhibit A with a document or documents describing route alignment of that segment of the highway south of the said River. Upon proper application by Contractor, the State shall issue to Contractor a Utility Permit, in State's customary form and subject to all requirements of the law and the State's standard conditions, granting the Contractor authority to lay the trans Alaska pipeline across the said Highway at the locations along the Highway indicated on Exhibit A in its present form and as supplemented by the parties hereto.

2. The State will be responsible for securing, in advance of construction, all rights-of-way across State and Federal lands for the Highway and all facilities related thereto which Contractor deems necessary or useful to the construction of the Highway. The State will also be responsible for obtaining free use of mineral materials from Federal and State of Alaska lands for use in the construction of the Highway. If the State does not, however, secure such rights-of-way and permits, it shall not be liable for damages, if any, resulting therefrom. The State will also acquire all necessary rights-of-way across private lands, and the Contractor agrees to reimburse the State the actual cost of the acquisition thereof, as determined solely by the Commissioner. In order for the State to acquire such right-of-way in an orderly fashion, the Contractor agrees to furnish the State for its use a plat of the right-of-way required across private lands in advance of such right-of-way acquisition.

3. The Highway shall be a State highway and may be used by Contractor, its employees, agents and sub-contractors in a lawful manner for the construction and operation of the trans Alaska pipeline without incurring any State-imposed tolls or costs for such use of the Highway, except for applicable motor vehicle taxes, licenses and fees, such as the Alaska Motor Fuel Oil Tax, and such other fees and costs imposed by law, regulations and customary conditions of its utility permits. During construction of the trans Alaska

pipeline the Contractor shall have the right to traverse the Highway with construction equipment of all kinds as necessary or convenient to Contractor in such construction, provided however that Contractor shall repair damage to said Highway caused by such construction equipment, and provided further that such damage shall not be constituted to include normal wear and tear. Any damages apart from normal wear and tear as determined by the Commissioner will be repaired by the Contractor at its own cost and expense and to the satisfaction of the Commissioner.

4. When the Commissioner determines in writing that there is no danger to the public from hazards associated with construction, the Highway may be opened by the State for use by the public during construction of the trans Alaska pipeline.

5. The Contractor shall perform all work and labor required by this Agreement and shall conform with the plans and specifications listed and described in Exhibit A attached hereto. The Contractor shall carry Workmen's Compensation Insurance in an approved amount. The Contractor will comply with all federal, state and local laws and regulations and all stipulations, covenants, and agreements specified herein and included in Exhibit A, or Exhibit A as it may be amended, by mutual agreement, and in the Environmental Stipulations. "Environmental Stipulations" means the Environmental Stipulations of the Department of the Interior for the Trans Alaska Pipeline System (hereinafter referred to as Environmental Stipulations) insofar as they are applicable to construction of the Highway, and all rights and rights of action which accrue to the United States under the Environmental Stipulations of the Department of the Interior accrue also to the State. The State may revise or amend the applicable Environmental Stipulations if unforeseen conditions arise during construction or maintenance of the Highway. If there is non-compliance with the provisions of this paragraph, the work or

materials shall be moved and replaced or otherwise corrected by and at the expense of the Contractor.

6. Contractor, its agents and employees, are and shall act as independent contractor and not as officers, employees, or agents of the State in the performance of this Agreement.

7. Any dispute concerning a question of fact or a value judgment arising under this contract (which is not disposed of by agreement of the parties) shall be finally decided by the Commissioner.

8. Contractor shall immediately notify the Commissioner of commencement of construction hereunder. Prior to the time such notice is given by Contractor and accepted by the State either party to this Agreement may elect, in writing, to terminate this Agreement and upon termination shall thereafter be relieved of all obligations hereunder; provided that said termination shall not become final until the Contractor has immediately paid to the State the actual costs incurred by the State pursuant to or by reason of this Agreement, thereafter the Contractor shall be relieved of all obligations imposed under this Agreement.

9. The State shall inspect the construction of the Highway and authorized representatives of the State shall be allowed access to all parts of the work and shall be furnished with such information and assistance by the Contractor as is required to make a complete and detailed inspection.

10. Upon written notice from the Contractor of the completion of the construction of the Highway or any segment thereof, the State will make an inspection of the Highway or such segment. If such construction is found completed in accordance with all terms and provisons of this agreement, that inspection shall constitute the final inspection and the State will accept construction of the Highway or the segment or segments found to be so completed and shall notify the Contractor in writing of such acceptance as of the date of the final inspection. Thereafter State shall maintain the portions of the Highway so accepted in accord with standards established by the Commissioner and Contractor shall have no further responsibility or obligation or liability

of any kind under this Agreement with respect to portions of the Highway so accepted, provided that Contractor shall reimburse State its actual, direct , out-of-pocket cost of such maintenance until either (1) State permits public access to any portion of the road except for restricted use which must be jointly approved or (2) the trans Alaska pipeline is commissioned and first oil is transported therein from Prudhoe Bay to Valdez, Alaska, whichever shall first occur. Such cost shall include no overhead or other indirect cost whatever and shall not exceed $800,000 for any calendar year.

11. Any structure, property, land, stream or wildlife harmed or damaged by the Contractor, its employees or agents, during the construction or maintenance of the Highway shall be reconstructed, repaired, rehabilitated and restored by the Contractor at the direction of the Commissioner, so that the condition thereof, in the judgment of the Commissioner, is at least equal to the conditions thereof immediately prior to such damage or destruction. The Contractor shall further abate at the direction of the Commissioner any condition or conditions existing with respect to the Highway or its related facilities, during construction or maintenance thereof caused by the Contractor, its employees or agents, which may be causing harm or damage to any person, structure, property, land, stream or wildlife.

12. The Contractor shall pay the State for any damage suffered or cost or expense incurred by the State in any way arising from or connected with any operation under this Agreement whenever such damage, cost or expense results from any breach of the Agreement or from any wrongful or negligent act of the Contractor, its employees, agents or subcontractors. Upon the mailing of written notice by the Commissioner to the Contractor of the nature and amount of such damage to, or cost or expense of, the State, the Contractor shall pay the State therefor.

13. The Contractor shall indemnify, defend and hold harmless the State against and from any and all demands, claims or liabilities of every

nature whatsoever, arising directly or indirectly from or in any way connected with any or all of the following: (1) the construction or maintenance by the Contractor, its employees, agents or subcontractors, of the Highway or of any facility or structure used in connection therewith, and (2) the use or occupancy, whether authorized or not, by any person whomsoever of any land owned by the State which is the subject of any permit or right granted to the Contractor, its employees, agents or subcontractors; provided, however, that the Contractor is not responsible for injuries or damages caused by employees of the State.

14. The Contractor is and shall be liable, without regard to negligence, and shall pay the State or other person or entity thereto for any damage or loss occasioned to fish and wildlife and their habitat by construction and operations of the Contractor, its employees, agents or subcontractors, for work done under this Agreement.

15. The construction and maintenace of the Highway pursuant to this Agreement are subject to the employment preference provisions of AS 36.10.010 -110 to the extent permitted by Federal Law.

16. In the event the Commissioner determines in writing that the Contractor, its employees, agents and subcontractors have failed or refused to comply with any provision of this Agreement or of the Environmental Stipulations the State may without liability to the Contractor, its employees, agents and subcontractors, suspend or terminate any or all of the activities under this Agreement. Work so suspended or terminated shall not be resumed until the Commissioner gives the Contractor written authorization to do so.

17. In the event of any inconsistency in the provisions of the documents listed below, the following order of preference shall be observed:

(1) This Construction Agreement;
(2) Specifications;
(3) Design Criteria;
(4) Drawings.

18. Before this Agreement becomes effective, pursuant to the provisions of AS 19.40.030, the State in lieu of bonds or individual sureties required by AS 36.25.010, may accept corporate undertakings which include the same essential provisions of the bonds or individual sureties required by AS 36.25.010 and which are satisfactory to the State, from each of the corporations owning an interest in the Alyeska Pipeline Service Company.

19. The Contractor shall furnish to the State all records of geological data, hydrological data, soil core drillings and terrain temperature measurements made during pre-construction investigations, test results, engineering standards, basic data and technical criteria relating to the design and construction of the Highway and other similar information.

20. Exhibit A attached hereto at the execution of this Agreement describes that portion of the Highway crossing Dietrich Pass in the Brooks Range as designed with grades up to 24%. The parties agree that said Exhibit shall be amended to reduce the maximum grade for that portion of the Highway between Station 1155+00 in Segment 4 and Station 159+50 in Segment 5 to grades of approximately 12%; provided, that if State can demonstrate to Contractor that said grade for said portion of the Highway can be reduced to less than 12% (without adding to the difficulty of constructing the pipeline) for a cost not to exceed $10.4 million, which is the present estimated cost, then Contractor will construct said portion of the Highway to the lesser grade as demonstrated by State; however, in the event Contractor's estimates of unit costs as set forth in Exhibit B attached hereto are modified by reason of renegotiation with its subcontractors or otherwise, then said $10.4 million maximum shall be adjusted accordingly.

21. This Agreement shall be binding upon and inure to the benefit of the parties in this Agreement and their successors and assigns.

IN WITNESS WHEREOF, the parties hereunto have caused this Agreement

to be executed by their authorized officers and their seals to be affixed as of the day and date first written above.

Re: North Slope Haul Road

Dear Ms. Ulmer:

INTRODUCTION

You have asked our opinion on several issues concerning the North Slope Haul Road (hereinafter "Haul Road" or "Road"). While most of these questions were addressed, either directly or indirectly, in a September 7, 1976 Attorney General's Opinion to former director of Policy Development & Planning Robert LeResche, this opinion will supplement and update that previous opinion.

The Haul Road extends north from Livengood, Alaska across the Yukon River and on to Prudhoe Bay, Alaska. The road south of the Yukon River and the bridge across the river are currently open to the public and maintained by the state in the same manner as are all other state highways. This opinion will deal primarily with the approximately 370 miles of road between the Yukon River bridge and Prudhoe Bay

which were constructed for the State by Alyeska Pipeline Service Company (hereinafter "Alyeska") pursuant to a Construction Agreement dated June 21, 1971, as subsequently amended.

The pertinent factual background of the Haul Road was summarized in Part II of the September 7, 1976 opinion. Two important matters which occurred after that earlier opinion are pertinent here. First, on June 17, 1977, an agreement was executed by the State and Alyeska listing remaining work items to be completed by Alyeska on the Haul Road by mid-October, 1978, and providing that control of the Road would be retained by Alyeska until that time. Second, Congress has approved the Alcan route for the gas pipeline from the North Slope. This route parallels the Haul Road from Prudhoe Bay to Fairbanks, and the Road will be necessarily used in the construction of the line.

You have asked us to discuss issues concerning maintenance obligations of the State, means by which access to the Road may be limited, if at all, and possible funding sources for maintenance costs. We will discuss those questions in the order stated.

I. MAINTENANCE

Maintenance of the Haul Road presents unique considerations because of its geographic location, the surrounding terrain, and the extreme climatic conditions to which

the road is exposed. There is also an additional factor which is unique to the Haul Road. Unlike other state highways, the Road is the subject of a contractual maintenance obligation which arises from the June 11, 1971 Construction Agreement bewteen the State and Alyeska. Paragraph 10 of that agreement, as amended, provides in part that after acceptance of the completed Haul Road from the construction contractor (Alyeska), the "State shall maintain the portions of the highway so accepted in accord with standards established by the commissioner . . ." This provision clearly imposes a duty of maintenance on the State, though it also specifically recognizes that the commissioner may set the particular standards for maintenance.

The contractual obligation of the State to maintain the Haul Road requires no greater commitment than the general duty of the State to maintain all public highways. This duty of maintenance is one of the primary characteristics that defines a public highway. Prillaman v. Commonwealth, 100 S.E. 2d 4 (Va. 1957).*/ The general duty of maintenance has been delegated by the legislature to the Department of Highways (AS 19.05.010 and .030(1)) and transferred to the new Department of Transportation and Public Facilities (DOTPF) by Executive Order No. 39 (1977) as of

---

*/ The State also has the same obligation to maintain all highways constructed with Federal highway funds under § 12 of the Project Agreement granting such funds.

July 1, 1977. Pursuant to both general powers and the specific contractual obligations present in this case, the commissioner of DOTPF, in his discretion, may determine reasonable standards for maintenance of the Haul Road. That discretion includes the power to close the Road seasonally, or otherwise to prevent damage, or danger to traffic. (AS 19.05.100 and AS 28.05.010(4)). No obligation exists to maintain the Haul Road or any other highway year-round or to particular standards other than that set generally by AS 19.05.130(9) which provides:

> "maintenance" means the preservation of each type of highway, roadside structure and facility as nearly as possible in its original condition as constructed, or as subsequently improved, and the operation of highway facilities and services to provide satisfactory and safe highways.

Despite the broad nature of the Commissioner's discretion in the area of highway maintenance, it is conceivable that some actions might constitute a breach of that obligation. For example, the maintenance standards established by the commissioner of DOTPF might be unreasonable or actual maintenance might fall short of reasonable standards established. If the State were to somehow breach its obligation to Alyeska to maintain the Haul Road, it could possibly be liable to Alyeska for damages. These damages would probably be measured by estimating the difference between the value to Alyeska of use of the Road maintained according

to reasonable standards and the value to Alyeska of use of the Road as actually maintained. Because Alyeska's use of the Haul Road for maintenance and operation of the oil pipeline is expected to be much less than its use of the Road during construction of the pipeline, and because other transportation options available to Alyeska may not be much more costly than use of the Road, it is unlikely that such damages would be substantial. However, any breach of the State's obligation to Alyeska to maintain the Road would probably also constitute a breach of the State's obligation to maintain the Road under paragraph 12 of its Project Agreements with the Federal Highway Administration (FHWA) and 23 U.S.C. § 116. That would not open the State to damages, but it could nonetheless, have serious legal consequences including possible vulnerability to an action for specific performance and possible loss of future Federal Aid Highway funds.

The obligation of the State to maintain the Haul Road will not become operative until the State accepts the Haul Road from Alyeska. (¶10 of June 11, 1971 Construction Agreement as amended.) According to a recent agreement between the State and Alyeska, this will be in the first half of October, 1978, assuming Alyeska completes the ten work items listed therein according to Federal secondary road standards. (¶12 of June 17, 1977 Agreement.) When

the State accepts the Road, it will be a completed public highway under the State's control and subject to the State's obligation of maintenance. Alyeska will no longer be subject to any duty to maintain the Road or any part of it.

Even after the Haul Road is accepted by the State, Alyeska may wish to voluntarily assume responsibility for some maintenance on all or part of the Road. If the reasonable maintenance standards set by the commissioner of DOTPF do not reach the level or duration of maintenance desired by Alyeska, nothing would prevent Alyeska from entering an arrangement with the State whereby Alyeska would perform or pay for extraordinary maintenance above that otherwise performed by the State. For example, Alyeska may wish to maintain all or part of the Road during seasonal periods when the State may choose not to maintain the Road at all. Likewise, Alyeska may wish to maintain parts of the Road which they plan to use more heavily than other parts to a higher level than that provided by the State.

The State might make similar agreements for special maintenance with Alcan Pipeline Company (Alcan). If the Alcan gas line construction schedule requires use of the Haul Road during seasonal periods when the State chooses not to maintain the Road, Alcan may wish to assume maintenance responsibility for those periods. Similarily, if Alcan's gas pipeline construction activity requires a higher level

of maintenance of the Haul Road than is required by the reasonable maintenance standards set by the commissioner of DOTPF, Alcan may wish to enter into an agreement with the State to perform or pay for extraordinary maintenance above that otherwise performed by the State.

By assuming responsibility to maintain the Haul Road, above the reasonable standards set by the State, both Alyeska and Alcan could make possible more intensive use of the Road and/or use of the Road during seasonal suspension of state maintenance. Also, weight restrictions which might otherwise necessarily be imposed by the commissioner of DOTPF under AS 19.10.060(1), AS 28.05.020(3), and 17 AAC 25.100(a) could be avoided or minimized.*/

In conclusion, the State will have the responsibility of maintaining the Haul Road to reasonable minimum

---

*/ It has been suggested that the commissioner of the Department of Natural Resources may insert a provision in the Alcan right-of-way lease requiring Alcan to assume all or part of the State's obligations to maintain the Haul Road. The lease will be granted under the Right-of-Way Leasing Act, AS 38.15. Under AS 38.315.120(c), the commissioner may insert only "reasonable provisions that he determines the public interest requires." We have some doubt whether such a provision, requiring an activity outside the right-of-way to be leased, could be considered reasonable and valid. The Haul Road will not be part of the Alcan "pipeline" as defined in AS 38.35.250(12). In contrast, access roads between the Haul Road and the Alcan right-of-way will clearly be part of the Alcan "pipeline" and Alcan can validly be required to maintain those roads in the lease. Likewise, Haul Road maintenance can not properly be viewed as part of the consideration or rental for the lease because AS 38.35.140 limits the price of a pipeline right-of-way lease to the fair market value of the land leased.

standards after acceptance of the Road from Alyeska. Either Alyeska or Alcan can assume part of this responsibility or the responsibility to maintain the Road to higher standards or during seasonal periods of no state maintenance.

II. LIMITS ON ACCESS

The second primary attribute of the Haul Road once it is accepted as a public highway is the public's right of access to and use of the Road. This right is subject to reasonable restrictions and regulations calculated to secure the best practical benefit and enjoyment of the public. (Part III A., p. 16 of the September 7, 1976 opinion and authority cited therein.) Such restrictions and regulations must be directed toward the protection of the public health, safety, and general welfare in exercise of the State's police power. This power is exceptionally broad and need only be exercised in a manner that is reasonable and not arbitrary. (See Part III. B., pp. 22-3 of the September 7, 1976 opinion and cases cited therein.) Distinctions may be made according to classifications of types of potential users as long as the classifications bear a fair and substantial relation to the purpose of the regulations. Isakson v. Rickey, 550 P.2d 359, 363 (Ak. 1976).

The broad power of the State to regulate and restrict access to public highways, including the Haul Road, has been delegated by the legislature to the commissioner of

DOTPF. Under AS 19.05.040, the Department (of Transportation and Public Facilities) may:

(4) control access to highways;
(5) regulate roadside development; (and)
(6) preserve and maintain the scenic beauty along state highways.

Under AS 19.10.100, the department may close a highway "when it is necessary to exclude traffic from any portion of a highway." Under AS 28.05.010:

> The commissioner of (DOTPF) has the power and duty:
>
> (4) to order a public road or highway, or portion of it, closed entirely or closed as to certain classes of vehicles when for any reason the use or continued use of it would cause damage or be dangerous to traffic, or when it is being . . . maintained in such a manner as to require restriction of traffic . . .

Finally, under AS 28.105.020(3)

> The commissioner of (DOTPF) may adopt rules and regulations . . . governing the size, weight, and load limits of all vehicles operating upon public roads, highways, or bridges . . .

Various possible options for valid restrictions on access to the Haul Road in exercise of the commissioner's broad police power based authority were discussed at pages 23 to 30 of the September, 1976 opinion. In the interest of brevity, we will summarize those options here:

1) Delay opening Road to the general public for a reasonable but finite period. The commissioner may delay opening the Haul Road for a reasonable period. Such a delay

clearly could be justified by the need for completion and implementation of a comprehensive land use plan for the vast fragile newly roaded area adjacent to the Haul Road, coupled with the need for adequate facilities and services to protect the public safety and welfare, such as Trooper and Fish & Wildlife Protection patrols and stations. An additional justification for a delayed opening to the general public is the expected volume of traffic related to construction of the Alcan gas pipeline, especially considering the nature of the traffic which will likely be predominately large trucks and heavy equipment and involve a number of crossings and entrances and exits. Such heavy industrial traffic on a secondary road could very likely pose problems to the safety of the average citizen driving the Haul Road in a private vehicle which couls be avoided by restricting access.

2) Interim Distinction between Industrial and Non-Industrial Users. As suggested above, a temporary delay in opening the Road to the general public would most likely be accompanied by allowance of access to industrial users during the interim. Under Paragraph 3 of the June 11, 1971 Construction Agreement between the State and Alyeska, Alyeska and its employees, agents and sub-contractors must be allowed to use the Haul Road for operation of the oil pipeline. Also, the state and national interest in fast, efficient, economical construction of the gas pipeline seems to require

special consideration and access to traffic related to Alcan's gas line construction. Likewise, it may well be in the state's and nation's best interest to grant similar special consideration and access to other industrial traffic, especially that related to operation and maintenance of the oil pipeline and to oil, gas, and mineral exploration, development, and production, both along the Haul Road right-of-way and at P dhoe Bay.

The classification of potential Haul Road users into industrial and non-industrial users would, in our opini n satisfy the equal protection test enunciated by the Alaska Supreme Court in Isakson v. Rickey, supra. Non-industrial users (general public, private vehicle traffic) would pose the greatest threat of degradation to the heretofore isolated environs of the Haul Road in the absence of the completion and implementation of a land use plan. Unlimited public use would generate a far greater necessity for Trooper and Fish & Wildlife Protection presence and for other private sector services and facilities such as gas, food, lodging, campgrounds, trails, emergency auto maintenance and repairs.*/ A distinction then, between industrial

---

*/ There is no obligation on the part of the State to provide any such services and facilities along the Haul Road which it is not obligated to provide on any other highway. Nonetheless, the absence of such private commercial presence along the Haul Road is part of the justification for police power restriction of general public access to protect the public health, safety, and welfare. If the option of temporarily restricting general access to private vehicles is chosen, however, the state should provide any assistance it can in the planning and provision of such facilities for the time when they will be needed.

and private use would be reasonable, even under the intensive scrutiny prescribed by Isakson. (See pp. 28-29 of September, 1976 opinion.)

3) Limiting Public Access to Mass Transit. There is a strong possibility that the commissioner of DOTPF may validly exercise his broad power to control access to highways by prohibiting the use of private vehicles on the Haul Road altogether and confining public access to the Road to mass transit vehicles such as buses. Although there is no case authority directly in point, cases upholding bus and carpool lanes and ramps seem to provide by analogy, a rational basis for such a restriction. These cases are discussed at pages 25-27 of our 1976 Opinion. A contrary ruling would mean that the right of public access to highways is the same as the right to use private motor vehicles on the highway, regardless of a alternative means provided for access. We do not believe such a holding would be warranted in the case of the Haul Road where the use of private vehicles would cause environmental and safety problems which can be avoided by provision of mass transportation.

Restriction of general public access to the Haul Road to utilization of mass transit is more than an iterim option - it is an option for permanent use of the road as well. However, if it is chosen as a permanent measure, legislation would be desirable to clarify the commissioner's

authority in this area, although this limitation may well be within the commissioner's already existing authority.

The options mentioned below are also equally valid as either interim or permanent measures.

4) Seasonal Denial of Access. The commissioner may validly deny access to the general public or to all potential Haul Road users on a seasonal basis.

5) Vehicle Quota. The commissioner may validly impose a maximum on the number of vehicles allowed on the Haul Road at one time or during a specific period. The maximum may apply either to all vehicles or only to non-industrial vehicles.

6) Regulation of Manner of Vehicle Use. The commissioner may also control the way in which vehicles are used on the Haul Road such as by allowing stopping or turning off only at designated points.

In addition to these listed options which were discussed in the 1976 Opinion, several other valid access restriction options are worthy of mention. One of these is restricting access to the Haul Road only to private vehicles which have certain required equipment. Examples of equipment which might be required are 4-wheel drive, snow tires, chaines, tow chain, survival gear, and food and water for a specified number of Days. Under AS 28.05.030(a):

> The commissioner of public safety may adopt regulations governing . . .
>
> (3) the required equipment to be carried

Although all of the existing regulations adopted under this authority apply to vehicles on all state highways (See e.g. 13 AAC 04), there is no apparent reason why special requirements may not be imposed on vehicles used on a special highway such as the Haul Road.

Whatever options (interim or permanent) are finally adopted, we believe it follows that the State may establish a system for the issuance of permits for Haul Road use which reflects the restrictions imposed. Such a permit system could probably be established through regulations adopted by the commissioner of DOTPF under his existing broad authority. However, as with the option of limiting general public access to mass transit vehicles, specific legislation would strengthen and clarify this approach. The permit system could incorporate criteria which would give preference to industrial users over non-industrial users or criteria which would give preference to some industrial users over others. It could allow for some limited access to private non-industrial vehciles. Alternatively, it could limit non-industrial permit issuance to mass transit vehicles such as buses.

The options listed may be combined with each other in a variety of ways and they may be applied to all or only a part of the Road. The options are available as either permanent or interim controls. Any option imposed as either

a temporary or permanent restriction on access, however, must be a valid exercise of the police power.

III. FUNDING

The final general subject area addressed by this opinion is that of financing the maintenance of the Haul Road. Because of the uniqueness of the Road, its maintenance may require expenditure far above that required for other state highways. As discussed in Part I above, part of the cost of maintaining the Road may be shifted from the State to industrial users such as Alcan and/or Alyeska by agreement. Essentially, the costs which may be shifted by agreement are those generated by maintenance above the reasonable standards to which the state would otherwise maintain the Road or by maintenance during periods the state would not otherwise maintain it.

There is little that may be validly done presently to pass on the cost of maintaining the Haul Road directly to the users of the road. One limited possibility is through the use of the permit system option previously mentioned. A fee could be required for issuance of the permits, and this fee could generate a slight amount of revenue over and above the cost of administering the permit program. However, such a permit fee must be primarily based upon an estimate of the cost of administering the permit program, and if it were established at a level much higher than a reasonable estimate of that cost, it would be invalid for reasons which

will appear shortly.

The status of the Haul Road as part of the Federal Aid Highway System is the major obstacle blocking the passage of maintenance costs through to users of the Road. The Haul Road is part of Federal Aid Secondary (FAS) Route 681 which extends from Livengood to Prudhoe Bay. As such, the State received funds for environmental surveillance of its construction pursuant to a "Project Agreement" dated May 23, 1974 from the Federal Highway Administration (FHWA). The Project Agreement authorized expenditure by the State of nearly $3 million Federal funds, but indications are that only approximately half or $1.5 million of these funds have been or will be expended by the State. Placement of the Haul Road on the FAS system, execution of the Project Agreement, and State receipt and expenditure of FHWA funds bring the Road under the provisions of Title 23 of the United States Code and of the Code of Federal Regulations.

23 U.S.C. § 301 provides that, (with an exception not applicable to the Haul Road), "all highways constructed under this Title shall be free from tolls of all kinds." Because of this prohibition, the State is unable to impose tolls, or any special user fee on Haul Road users, as long as the Road remains on the FAS system. (See pp. 29-34 of September, 1976 Opinion.) The only way tolls or user fees may be imposed on the Haul Road is by removing the Road from the Federal Aid System. Such a removal would require the

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5149 HTRA HB 115 - HB 123

721

concurrence of the FHWA or, in the alternative, an Act of Congress. It is possible that the FHWA would require repayment of the Federal funds used for surveillance of construction of the road as a condition to its concurrence in removal from the system. However, there is no legal requirement of such a condition.

The FHWA has recently taken the position that it lacks the authority to concur in the removal of a highway from the Federal Aid System even if federal funds spent constructing the highway are repaid. This position is stated in a Memorandum of Law by the Office of the Chief Counsel for FHWA dated September 14, 1976 which is based on a 1958 decision of the Comptroller General, 38 Comp. Gen. 266 (October 3, 1958). In all frankness, we do not believe that this preliminary opinion by the Chief Counsel correctly states the law. FHWA's insistence on Congressional authorization for removal of a highway from the Federal Aid System ignores the precedent set in New York which is discussed in Bogart v. Westchester County, 57 N.Y.S. 2d 506 at 513 (Sup. Ct. 1945); aff'd 59 N.Y.S.2d 77 (App. Div. Second Dept. 1945), the FHWA's own Policy and Procedure Memorandum 10-1, May 28, 1965 and the FHWA's own regulation 23 CFR § 470.111(b). That regulation provides:

> Federal Highway Administration approval of a deletion or a route from any Federal-aid system, without reclassification and

> redesignation to another Federal-aid system, shall relieve the State of its obligation to the Federal Government to maintain portions thereof constructed as Federal-aid projects with the exception of defense access-road projects constructed under the provisions of Volume 6, Chapter 9, Section 5 of the Federal-Aid Highway Program Manual. Such deletion shall also relieve the State of any other obligations included in project agreements executed for Federal-aid projects on portions of the deleted route. (Emphasis added).

Subsection (c) further provides for reinstatement of a route previously deleted from a Federal Aid system if a State agrees to resume its maintenance obligation.

> Requests for reinstatement of routes deleted from any Federal-aid system shall be approved by FHWA only when the State expressly agrees to resume its obligation for the maintenance of any portion of the route previously constructed as a Federal-aid project. Resumption of any other obligations included in project agreements executed for Federal-aid projects on the route being considered for reinstatement shall be mutually agreed to by the State and the FHWA.

These regulations, which are now in effect and the above cited FHWA Policy and Procedure Memorandum in effect when the Haul Road Project Agreement was executed, give rise to serious doubt as to the validity of FHWA's position that it may not approve deletion of a route from the Federal Aid system without congressional approval. However, the FHWA position is significant as an indication of the agency's reluctance to give its approval to removal of the Haul Road from the FAS system. There is nothing which would require

FHWA to give its approval, short of an Act of Congress. Therefore, the FHWA position may be self-fulfilling.

If removal of the Haul Road is accomplished, with or without Congressional legislation, tolls may be imposed on users of the Road, but the tolls must be authorized by State legislation. Moreover, under paragraph 3 of the June 11, 1971 State-Alyeska Construction Agreement, any tolls imposed must exempt Alyeska and its employees, agents, and sub-constractors who use the Road for the operation and maintenance of the oil pipeline. Such an exemption would be legally valid since it would be a part of the consideration to Alyeska from the State for building the Haul Road.

The discussion of removing the Road from the Federal Aid System has focussed primarily on the Road north of the Yukon River Bridge. However, it is possible, of course, to broaden the outlook toward removing the bridge as well from the federal system. If removal included reimbursement of FHWA funds used by the State for construction, an additional $25 million would have to be repaid by the State. This is the approximate amount of FHWA funds received by the State for construction of the bridge under a separate Project Agreement. The bridge, though the subject of this separate Agreement, is part of the same FAS Route 681 as the Road, which extends from Livengood to Prudhoe Bay. Removal of both the bridge and the Road from the Federal Aid System

would simply allow the point at which tolls were collected to be moved to the south end of the bridge and tolls could be set at a level which would include the costs related to the bridge.

Removal of the Road north of the bridge from the Federal Aid System would not necessitate removal of the bridge also. Under 23 U.S.C. § 129(c), Federal aid funds may validly be used on a project approaching a toll road as long as the project "will have some use irrespective of its use for such toll road." If the Road north of the bridge were removed from the Federal Aid System and made a toll road the bridge could have some use irrespective of its use as an approach to the toll road. It provides access to both sides of the Yukon River with its enormous recreational potential. The area could be developed and improved and combined with a tourist service and information center as suggested by some and the independent usefulness of the bridge would be augmented.

Removal of the Road and/or bridge from the Federal Aid System may be accomplished by obtaining the approval of FHWA pursuant to 23 C.F.R. § 470.111(b). However, in light of the FHWA position that, despite its own regulation, it lacks the authority to grant such approval, Congressional action may be the most practical, expeditious means to accomplish removal. If FHWA reevaluates its position and

grants removal approval administratively, it is likely that it will require as a condition, reimbursement of Federa funds spent in construction of whatever part of FAS Route 681 is to be removed. If Congressional approval is obtained, it may or may not be conditioned upon reimbursement. Once removal is accomplished, tolls may be imposed if the Alaska legislature provides the authority.*/ Part of the revenue from the tolls may be used to amortize the cost of reimbursement.**/

Congress has approved removal of roads and bridges from the Federal Aid System in the past to enable states to impose tolls.***/ Most of these approvals required repayment of Federal Aid Highway funds used to construct the highway, but the repayment was credited to the balance of Federal Aid Highway funds apportioned to the State and made available to that State for expenditure on other highway projects. (e.g. P.L. 93-87, § 131(a)). Thus, the repayment required by

---

*/ The legislature has granted the authority to levy bills only on bridges to the Alaska Toll Bridge Authority - AS 44.57.180(a).

**/ 23 U.S.C. § 129(a), which delineates the valid uses of revenue from toll facilities constructed as part of the Federal Aid System pursuant to pre-construction agreements, would not apply.

***/ E.G.: P.L. 83-350, § 22, May 6, 1954 (Connecticut); P.L. 86-657, § 6, July 14, 1960 (Delaware and Maryland); P.L. 90-495, § 20(a), August 23, 1968 (New Jersey); P.L. 91-605, § 145, December 31, 1970 (Michigan); and P.L. 93-87, § 131, August 13, 1973 (New Hampshire).

Congress is less a reimbursement than a transfer of funds to other highways or routes in the state.

Short of removal of the Haul Road from the Federal Aid System and imposition of tolls on its users, the only other means for funding the cost of maintaining the Road are indirect and statewide. The graduated commercial vehicle tax (AS 28.10.200(b)(4)) could be increased. The motor fuel tax of 8¢/gallon (AS 43.40.010) could be increased. The partial motor fuel tax refund of 6¢/gallon for non-highway use of fuel (AS 43.40.030) could be adjusted, narrowed, or eliminated.*/ All of these measures would, of course, require legislative action. There may be other statewide revenue generating possibilities involving taxes or fees imposed on the basis of mileage, vehicle weight or type, or other classification with a rational basis.

---

*/ The off highway use motor fuel tax refund is now available only for fuel other than aviation or watercraft fuel not used in conjunction with vehicles licensed to be operated on public highways under AS 28.10. Under AS 28.10.030, all vehicles used on public highways must be licensed (registered). The only exceptions relevant to the Haul Road are vehicles used only cross highways and special mobile equipment which is defined in AS 28.10.650(14) includes most heavy construction equipment (AS 28.10.040(1) and (3)).

We trust we have adequately responded to your questions concerning the Haul Road in this opinion. If you have any further questions, or if you would like to discuss any portion of this opinion in greater detail, please do not hesitate to contact us.

Yours very truly,

AVRUM M. GROSS

March 4th, 1987

TO: Commissioner Mark Hickey

FROM: Representative Bette Cato

SUBJECT: House Bill 115 - Representative Steve Frank
Public Use of the Dalton Highway

During the House Transportation Committee meeting held on Wednesday, March 4, 1987, the committee members asked the department to provide information on the following:

a. The statute that applies to the opening of the road in 1980 from Dietrich to the Yukon.

b. How many years the road has actually been open.

c. How many accidents have occurred on the road since it has been open.

d. A breakdown on the accidents:
   1. number of accidents on this road in the summer months compared to the winter months
   2. The number of accidents involving commercial vehicles as compared with non commercial.

e. Since the opening of this road, the enviromental impacts in the summer months compared to the winter months.

d. The overall total number of accidents that have occurred on the Dalton Highway.

This bill is scheduled for a second public hearing on Wednesday March 11th. I would appreciate a representative from the department being available to answer the above questions and provide any additional information required.

Thank you

Bette

RE: HB 115 - Public Use
of the Dalton Highway

The Honorable Bette Cato
Alaska State House of Representatives
P. O. Box V
Juneau, AK 99811

Dear Representative Cato:

The following is the department's response to questions from the March 4 House Transportation Committee meeting concerning the Dalton Highway.

A. Provide (copy of) the statute that applies to the opening of the road in 1980 from Dietrich to the Yukon.

A copy of the statute, AS 19.40.110, is attached.

B. How many years has the road actually been open?

The Dalton Highway was completed in 1974 and turned over to the State in 1978. In 1981, it was opened to the public as far as Dietrich from June 1 to September 1. Since January, 1983, it has been open to the public as far as Dietrich year-round.

C. How may accidents have occurred on the road since it has been open?

The total number of accidents recorded on the Dalton Highway (Livengood to Deadhorse) from 1977 through September 1986, is 245. Of those, 87 were between Livengood and the Yukon River Bridge, and 158 were north of the Yukon River. On the section of road between the Yukon River and Dietrich, there have been 36 accidents during 66 months of restricted use and 40 accidents during 51 months of open, public use. Accident statistics are attached.

D. Show a breakdown on the number of accidents on this road in the summer months compared to the winter months.

The following accident numbers are presented by section of road and by month. Figures are an average from 1977 through September 1987.

	J	F	M	A	M	J	J	A	S	O	N	D
Livengood-Yukon River	9	6	7	1	4	3	8	2	11	18	5	13
Yukon River-Dietrich	6	4	9	6	0	3	5	8	9	5	11	11
Dietrich-Deadhorse	6	9	12	2	2	4	7	8	3	5	8	15
TOTAL	21	19	28	9	6	10	20	18	23	28	24	39

E. Since opening the road, (what are) the environmental impacts in the summer months compared to the winter months.

There is not quantifiable information available to use which would make it possible to answer this question. Therefore, any response would only be subjective.

F. The overall total number of accidents that have occurred on the Dalton Highway.

See response to question "C".

G. Provide a copy of the Attorney General's Opinion that states that the Department of Transportation and Public Facilities currently has the authority to charge tolls.

A copy of the February 20, 1987 Opinion is attached.

H. Is Alyeska Pipeline Service Company exempt from toll activities?

The Attorney General's office has reviewed the original Construction Agreement between Alyeska and the State of Alaska. Attached is their response.

I. How many miles of federal route is there south of Deadhorse to Dietrich?

The entire Dalton Highway from Livengood to the Deadhorse Airport is a federal-aid route. It is 416 miles long. The portion from Dietrich to Deadhorse is 205 miles long.

J. How long has the bridge at Dietrich been open to the public year-round?

The Dalton Highway has been open to Dietrich (Disaster Creek Checkpoint at MP 211) year-round since January, 1983.

K. What are the accident statistics on the portion of the Dalton Highway currently open to the public?

Compiles accident statistics for the Livengood-Yukon River and Yukon River-Disaster Creek Checkpoint sections are attached. Note that the compilations are for 1977 to present. For the Yukon River-Disaster Creek section the compilation includes information from several years before it was open to the public. We have information on individual accidents on computer and can retrieve and compile it by date or by milepost.

Sincerely,

Mark S. Hickey
Commissioner

RE: Toll on Dalton Highway
Our file: 773-87-0129

At our February 7, 1987, meeting on legislation, you asked whether it would be necessary to have a bill to authorize charging a toll for use of the Dalton Highway. The short answer is no. In fact, at least one bill (SB 132, by Coghill) has been introduced to prevent charging such a toll.

AS 19.05.040 lists the powers of the Department of Transportation and Public Facilities (DOTPF). Paragraph (11) of that statute provides that the department may

> establish, levy, and collect tolls, fees, charges, and rentals for the use of state roads, highways, bridges, crossings, and causeways.

AS 19.45.001 is the definition section for AS 19.05 -- AS 19.40. Paragraph (9) of that statute defines "highway" as follows:

> "highway" includes a highway (whether included in primary or secondary systems), road, street, trail, walk, bridge, tunnel, drainage structure and other similar or related structure or facility, and right-of-way thereof, and further includes a ferry system, whether operated solely inside the state or to connect with a Canadian highway, and any such related facility.

Clearly, the James Dalton Highway, established under AS 19.40, fits that definition. Thus, it is within the power of DOTPF to charge a toll for the use of this highway. AS 19.40.-100(a) provides that "the department shall maintain the highway and keep it open to industrial or commercial traffic throughout

the year." Keeping the highway open for this kind of traffic does not mean that the department may not charge a toll for the use of the highway.

AS 37.15.610 -- 37.15.760 provide for toll facilities revenue bonds. AS 37.15.720 authorizes construction, maintenance, etc., of toll bridges, highways, etc. AS 37.15.740 authorizes the DOTPF commissioner to charge fees, tolls, etc., for use of such facilities. However, these two statutes should be read in the context of AS 37.15.610 -- 37.15.760, i.e., as applicable to facilities constructed with money derived from the issuance of bonds under those sections. This does not detract from DOTPF's general authority to charge tolls, as described above.

MEMORANDUM State of Alaska

TO: Honorable Mark S. Nickey
Commissioner
Department of Transportation
and Public Facilities

DATE: March 10, 1987

FILE NO.:

THRU:

TELEPHONE NO.: 465-3603

SUBJECT: Dalton Highway (Haul Road) Agreement with Alyeska

FROM: Grace Berg Schaible
Attorney General

By:
Jack B. McGee
Assistant Attorney General
Transportation Section-Juneau

You recently asked our office two questions concerning the above agreement (copy attached). Your questions and our answers follow:

1) Does the agreement preclude DOT/PF from charging tolls on the Dalton Highway?

Answer: Paragraph 3 of the agreement says in effect that except for "such other fees and costs imposed" by law or regulation, no "tolls or costs" shall be charged Alyeska, its employees, agents and subcontractors for Alyeska's use of the highway "for the construction and operation of the trans Alaska pipeline."

Three conclusions follow from a close reading of paragraph 3:

a) It is clear that paragraph 3 does not operate to prohibit tolls for vehicles other than those operated by Alyeska, its employees, agents, and subcontractors.

b) It is at least arguable that paragraph 3 does not prohibit user fees for vehicles operated by Alyeska provided they are imposed by regulation.

c) In any event, paragraph 3 does not prohibit a toll for those vehicles operated by Alyeska that are not used for the construction and operation of the pipeline.

2) Does the agreement require the state to provide maintenance on the Dalton Highway for an indefinite period of time?

Answer: Paragraph 10 of the agreement says that after inspection and upon acceptance of the highway by the state, the "state shall maintain the portions of the highway so accepted in accord with standards established by the commissioner and the contractor shall have no further responsibility or obligation or liability" for the portion of the highway accepted by the state.

a) This section does not require the state to maintain the highway indefinitely; it operates to relieve Alyeska from the legal obligation of maintaining the highway to the standards referred to in paragraph 1 after state acceptance.

b) Paragraph 10 specifically leaves the question of the level of maintenance to the discretion of the commissioner. Moreover, AS 19.40.120 specifically authorizes the state to close the highway in accord with the commissioner's discretion under AS 19.10.160.

Re: House Bill 115 - "An Act relating to the Dalton Highway, and providing for an effective date."

Date: March 4, 1987

House Bill 115 would statutorily open the Dalton Highway to the general public and prohibit the imposition of a toll for vehicular traffic.

Currently, the Dalton Highway is open to the public as far as Disaster Creek which lies about half way between the Yukon River bridge and Prudhoe Bay. State statutes allow vehicles with an industrial or commercial purpose to travel beyond this point but those vehicles are required to obtain a permit from the Department of Transportation. There is a checkpoint at Dietrich Camp, 31 miles north of Disaster Creek, open from June 1 through September 1 each year to check permits and keep unauthorized travelers from entering the closed portion of the road.

The term "commercial use" causes some obvious problems with consistency. For example, if a person wants to drive up the highway to sightsee, they would be denied access. However, if that same person buys a business license as a tour operator, he or she could obtain a permit.

Paramount to the logic of this bill is the belief that the road should be open to the public because it is a publicly owned road, and is maintained with millions of public dollars.

Moreover, opening the Dalton Highway would encourage tourism and improve access to our natural resources. Also, residents would have the opportunity to visit a unique area of our state for hiking, sightseeing, camping, photography,

fishing & hunting under certain restrictions, and other types of outdoor recreation.

Certainly, there are legitimate safety, environmental and fish & game protection concerns; however, those concerns can be adequately addressed and they, by themselves, should not deny public use of the road. Other Alaska highways such as the Taylor and the Steese are similar in nature. They are remote and travelers do need to take special precautions and be aware of potential dangers while traveling these roads. In addition, the environment and fish & game must be protected and these needs can be adequately addressed by the Departments of Environmental Conservation and Fish & Game.

As indicated earlier, HB 115 would also prevent the Department of Transportation from charging a toll for use of the Dalton Highway. The reasons to prohibit the imposition of a toll are philosophical, practical and legal.

First of all, the policy of the State should be to encourage commerce and other uses of our public facilities. We don't charge tolls on any other roads in the state, why start here?

Secondly, as a practical matter, the tolls collected from the so called "single user" will be deductible expenses in calculating our oil & gas taxes and neither DOT/PF nor the Office of Management & Budget has done an analysis to show the reduction in those taxes. Therefore, they haven't properly calculated the net revenues of a toll to the General Fund or conversely, the negative fiscal note prepared by DOT/PF for HB 115.

Finally, from the perspective of the Federal Highway Administration and the construction agreement with Alyeska Pipeline Service Company, legal impediments to charging a toll may exist.

The Federal Highway Administration has taken the position that because federal funds were used in part to build the Dalton Highway and it is on the Federal Aid Secondary System, that 23 U.S.C. 301 applies; it provides that "...all highways constructed under this title shall be free from tolls of all kinds." There is some difference of opinion as to whether it would take an act of Congress to remove the Dalton Highway from the Federal System; however, at best the issue must be addressed and resolved.

Also, a construction agreement applicable to the Dalton Highway between the Commissioner of Highways of the State of Alaska and the Alyeska Pipeline Service Company (June 11, 1971) stipulates:

"3. The Highway shall be a State highway and may be used by Contractor, its employees, agents and sub-contractors in a lawful manner for the construction and operation of the trans Alaska pipeline without incurring any State-imposed tolls or costs for such use of the Highway, except for applicable motor vehicle taxes, licenses and fees, such as the Alaska Motor Fuel Oil Tax, and such other fees and costs imposed by law, regulations and customary conditions of its utility permits."

In conclusion, opening the Dalton Highway to the public without a toll will encourage economic development and increase recreational opportunities. Your favorable consideration of this legislation would be appreciated.

TITLE I—PURPOSES, DEFINITIONS, AND MAPS

PURPOSES

16 USC 3101.

SEC. 101. (a) In order to preserve for the benefit, use, education, and inspiration of present and future generations certain lands and waters in the State of Alaska that contain nationally significant natural, scenic, historic, archeological, geological, scientific, wilderness, cultural, recreational, and wildlife values, the units described in the following titles are hereby established.

(b) It is the intent of Congress in this Act to preserve unrivaled scenic and geological values associated with natural landscapes; to provide for the maintenance of sound populations of, and habitat for, wildlife species of inestimable value to the citizens of Alaska and the Nation, including those species dependent on vast relatively undeveloped areas; to preserve in their natural state extensive unaltered arctic tundra, boreal forest, and coastal rainforest ecosystems; to protect the resources related to subsistence needs; to protect and preserve historic and archeological sites, rivers, and lands, and to preserve wilderness resource values and related recreational opportunities including but not limited to hiking, canoeing, fishing, and sport hunting, within large arctic and subarctic wildlands and on

areas, and national conservation areas, and shall not be prohibited unless, after notice and hearing in the vicinity of the affected unit or area, the Secretary finds that such use would be detrimental to the resource values of the unit or area. Nothing in this section shall be construed as prohibiting the use of other methods of transportation for such travel and activities on conservation system lands where such use is permitted by this Act or other law.

(b) Notwithstanding any other provisions of this Act or other law, in any case in which State owned or privately owned land, including subsurface rights of such owners underlying public lands, or a valid mining claim or other valid occupancy is within or is effectively surrounded by one or more conservation system units, national recreation areas, national conservation areas, or those public lands designated as wilderness study, the State or private owner or occupier shall be given by the Secretary such rights as may be necessary to assure adequate and feasible access for economic and other purposes to the concerned land by such State or private owner or occupier and their successors in interest. Such rights shall be subject to reasonable regulations issued by the Secretary to protect the natural and other values of such lands.

TEMPORARY ACCESS

SEC. 1111. (a) IN GENERAL.—Notwithstanding any other provision of this Act or other law the Secretary shall authorize and permit temporary access by the State or a private landowner to or across any conservation system unit, national recreation area, national conservation area, the National Petroleum Reserve—Alaska or those public lands designated as wilderness study or managed to maintain the wilderness character or potential thereof, in order to permit the State or private landowner access to its land for purposes of survey, geophysical, exploratory, or other temporary uses thereof whenever he determines such access will not result in permanent harm to the resources of such unit, area, Reserve or lands. 16 USC 3171.

(b) STIPULATIONS AND CONDITIONS.—In providing temporary access pursuant to subsection (a), the Secretary may include such stipulations and conditions he deems necessary to insure that the private use of public lands is accomplished in a manner that is not inconsistent with the purposes for which the public lands are reserved and which insures that no permanent harm will result to the resources of the unit, area, Reserve or lands.

NORTH SLOPE HAUL ROAD

SEC. 1112. (a) IN GENERAL.—So long as that section of the North Slope Haul Road referred to in subsection (c) is closed to public use, but not including regulated local traffic north of the Yukon River, regulated industrial traffic and regulated high occupancy buses, such regulation to occur under State law, except that the Secretary, after consultation with the Secretary of Transportation, and the Governor of Alaska shall agree on the number of vehicles and seasonality of use, such section shall be free from any and all restrictions contained in title 23, United States Code, as amended or supplemented, or in any regulations thereunder. Prior to executing an agreement pursuant to this subsection, the Secretary and the Governor of Alaska shall consult with the head of any unit of local government which encompasses lands located adjacent to the route of the North Slope Haul Road. The State of Alaska shall have the authority to limit access, 16 USC 3172.

impose restrictions and impose tolls, notwithstanding any provision of Federal law.

(b) RELEASE.—The removal of restrictions shall not be conditioned upon repayment by the State of Alaska to the Treasurer of the United States of any Federal-aid highway funds paid on account of the section of highway described in subsection (c), and the obligation of the State of Alaska to repay these amounts is hereby released so long as the road remains closed as set forth in subsection (a).

(c) APPLICATION OF SECTION.—The provisions of this section shall apply to that section of the North Slope Haul Road, which extends from the southern terminus of the Yukon River Bridge to the northern terminus of the Road at Prudhoe Bay.

STIKINE RIVER REGION

Consultation with Canadian Government and report to Contress. 16 USC 3173.

SEC. 1113. Congress finds that there is a need to study the effect of this Act upon the ability of the Government of Canada to obtain access in the Stikine River region of southeast Alaska. Accordingly, within five years from the date of enactment of this Act, the President shall consult with the Government of Canada and shall submit a report to the Congress containing his findings and recommendations concerning the need, if any, to provide for such access. Such report shall include, among other things, an analysis of the need for access and the social, environmental and economic impacts which may result from various forms of access including, but not limited to, a road along the Stikine and Iskut Rivers, or other alternative routes, should such access be permitted.

TITLE XII—FEDERAL-STATE COOPERATION

ALASKA LAND USE COUNCIL

16 USC 3181.

SEC. 1201. (a) ESTABLISHMENT.—There is hereby established the Alaska Land Use Council (hereinafter in this title referred to as the "Council").

Presidential appointment.

(b) COCHAIRMEN.—The Council shall have Cochairmen. The Federal Cochairman shall be appointed by the President of the United States with the advice and consent of the Senate. The State Cochairman shall be the Governor of Alaska.

(c) MEMBERS.—In addition to the Cochairmen, the Council shall consist of the following members:

(1) the head of the Alaska offices of each of the following Federal agencies: National Park Service, United States Fish and Wildlife Service, United States Forest Service, Bureau of Land Management, Heritage Conservation and Recreation Service, National Oceanic and Atmospheric Administration, and Department of Transportation;

(2) the Commissioners of the Alaska Departments of Natural Resources, Fish and Game, Environmental Conservation, and Transportation; and

(3) two representatives selected by the Alaska Native Regional Corporations (in consultation with their respective Village Corporations) which represent the twelve geographic regions described in section 7(a) of the Alaska Native Claims Settlement Act.

Any vacancy on the Council shall be filled in the same manner in which the original appointment was made.

RE: Toll on Dalton Highway
Our file: 773-87-0129

At our February 7, 1987, meeting on legislation, you asked whether it would be necessary to have a bill to authorize charging a toll for use of the Dalton Highway. The short answer is no. In fact, at least one bill (SB 132, by Coghill) has been introduced to prevent charging such a toll.

AS 19.05.040 lists the powers of the Department of Transportation and Public Facilities (DOTPF). Paragraph (11) of that statute provides that the department may

> establish, levy, and collect tolls, fees, charges, and rentals for the use of state roads, highways, bridges, crossings, and causeways.

AS 19.45.001 is the definition section for AS 19.05 -- AS 19.40. Paragraph (9) of that statute defines "highway" as follows:

> "highway" includes a highway (whether included in primary or secondary systems), road, street, trail, walk, bridge, tunnel, drainage structure and other similar or related structure or facility, and right-of-way thereof, and further includes a ferry system, whether operated solely inside the state or to connect with a Canadian highway, and any such related facility.

Clearly, the James Dalton Highway, established under AS 19.40, fits that definition. Thus, it is within the power of DOTPF to charge a toll for the use of this highway. AS 19.40.-100(a) provides that "the department shall maintain the highway and keep it open to industrial or commercial traffic throughout

STATEMENT FROM T.J. THRASHER - EXECUTIVE DIRECTOR

ALASKA TRUCKING ASSOCIATION

T. J. Thrasher had planned to attend this meeting to testify, however, unfortunately she had to remain in Anchorage until tonight.

T. J. wished to express the Trucking Association's position on House Bill 115.

The Trucking Association agree the Dalton Highway should not be a toll road.

They agree this road should be open to the public.

The Association support HB #115, HOWEVER, they do have several concerns they would like to see addressed if the road is opened to the public.

1. They feel that unless the Department of Transportation agree to maintain and upgrade the road there will be definite safety problems. The road is not in a safe condition.

2. There are no provisions or amenities past Hilltop and there are many stretches where you cannot pull off.

While the Trucking Association does support HB #115, they would like to see these concerns addressed.

As per telephone conversation with T.J. Thrasher on Wednesday, March 4th, 1987 at 9.10 a.m.

re: HB 115 and SB 132

Dear Steve:

The Resource Development Council is pleased to support HB 115 and SB 132, Acts relating to public use of the Dalton Highway. Our Executive Committee's action in this regard was unanimous.

We agree that these bills will allow the state to further develop the industries that rely on access to Northern Alaska. We need to encourage development and use of this key element in the state's road system if we are to foster development of valuable resources.

Please call on RDC if we can be of assistance to your office on this issue.

Sincerely,

RESOURCE DEVELOPMENT COUNCIL

FEB 17 1987

Feb. 12 - 1987

House Transportation Commission
Chairperson - Representative Bettie Cato
Fourth V Juneau 99811 -

Dear Chairperson.

I am vitally interested in our state transportation system. I am having my troubles in getting access (except during 5 winter months) to both patented & unpatented claims - in the Yukon Charley Preserve.

Now, I hear of - the continued abuse I am right to use - the Dalton Highway. The Gov. even has even suggested a toll fee -

This is totally unacceptable under our constitution - so let us forget it and offer this road to the public.

This road - is access to the major source of Alaska income - Prudhoe Bay. The initial return to Limited is a disgrace to a civilized society.

It should be - the best road in the nation - for the wealth it gives access to and it is not by a long-shot.

The entire state of Alaska deserves an income to a large degree - and should be instated in the areas it provides.

If they are not - maybe we need some changes - North & South Alaska maybe?

Thankyou for opening up this road to the public - improving it, and hopefully expanding the source of income - our natural resources.

Alaskan Patriot

RE: Toll on Dalton Highway
Our file: 773-87-0129

At our February 7, 1987, meeting on legislation, you asked whether it would be necessary to have a bill to authorize charging a toll for use of the Dalton Highway. The short answer is no. In fact, at least one bill (SB 132, by Coghill) has been introduced to prevent charging such a toll.

AS 19.05.040 lists the powers of the Department of Transportation and Public Facilities (DOTPF). Paragraph (11) of that statute provides that the department may

> est[illegible]y, and collect tolls, fees, charges, and rentals for the use of state roads, highways, bridges, crossings, and causeways.

AS 19.45.001 is the definition section for AS 19.05 -- AS 19.40. Paragraph (9) of that statute defines "highway" as follows:

> "highway" includes a highway (whether included in primary or secondary systems), road, street, trail, walk, bridge, tunnel, drainage structure and other similar or related structure or facility, and right-of-way thereof, and further includes a ferry system, whether operated solely inside the state or to connect with a Canadian highway, and any such related facility.

Clearly, the James Dalton Highway, established under AS 19.40, fits that definition. Thus, it is within the power of DOTPF to charge a toll for the use of this highway. AS 19.40.-100(a) provides that "the department shall maintain the highway and keep it open to industrial or commercial traffic throughout

the year." Keeping the highway open for this kind of traffic does not mean that the department may not charge a toll for the use of the highway.

AS 37.15.610 -- 37.15.760 provide for toll facilities revenue bonds. AS 37.15.720 authorizes construction, maintenance, etc., of toll bridges, highways, etc. AS 37.15.740 authorizes the DOTPF commissioner to charge fees, tolls, etc., for use of such facilities. However, these two statutes should be read in the context of AS 37.15.610 -- 37.15.760, i.e., as applicable to facilities constructed with money derived from the issuance of bonds under those sections. This does not detract from DOTPF's general authority to charge tolls, as described above.

23 February, 1987

Dick Mackey, owner and operator of Coldfoot services, called to voice his opinion over the Dalton Highway. He asserts that the Dalton Highway "north of the Yukon should be treated no differently than south of the Yukon."

He explained that in '81 Gov. Hammond opened the highway from the Yukon north to Deitrich camp for 3 months out of the year. By Gubernatorial decree, he asked Mackey to operate a service area 12 months at Coldfoot.

Later, during the Sheffield adminstration, Mackey pointed out to Gov. Sheffield that it made no sense for him to be there 12 months when the road was only open to the public for 3 months. Sheffield agreed and opened the highway to Dietrich.

Deitrich is not a safety checkpoint, claims Mackey, but a political one. There is no reason for restricting access, according to Mackey, as those who wish to hunt already do so, and there is no corporate land to deny access to that would be effected by such an action. If it is to be a safety check-point, he says, ask folks to demonstrate that they have a 5 gallon can of gas, tools or whatever, and let the folks go.

Westours and Princess tours are taking buses up there this summer, and the business done has doubled. One state agency spends millions to promote tourism while another throws roadblocks in the way.

He claims that the checkpoint is a farce, that privately D.O.T. officials despise the loathsome checkpoint, and that the constitution of Alaska states that any road which is built and maintained with public funds is to be accessible by the public which pays for it.

PLEASE SUPPORT HB115.

I asked that he put some of this in writing so that it could be used as testimony in a hearing at some later date.

MEMORANDUM

MAR 18 1987

DATE: March 13, 1987

TO: David Teal, Director
House Research

FROM: Representative Pat Pourchot, Chair
House Finance Subcommittee - DOT/PF

Pat

SUBJECT: Request for information on Dalton Highway trucking

In our review of the current DOT/PF budget, one proposed change receiving considerable scrutiny is the imposition of a toll on the Dalton Highway (the Haul Road) to pay for the operating and maintenance costs of the road. Current plans call for a toll sufficient to cover the costs of the approximate $5.2 million in Operations and Maintenance. This would be based on the number of axles and is estimated to work out to be about $500 roundtrip for an "18-wheeler."

The criticism raised is that the cost will make commercial trucking on the road economically prohibitive and force the abandonment of the route in favor of air transportation. Such a switch would not only result in significantly higher operating costs on the North Slope, but would reportedly cause the dislocation of significant economic activity and employment in the Fairbanks area associated with Haul Road trucking.

It is very hard to evaluate the proposal and its reported impacts without more detailed facts. I would greatly appreciate your help in researching some of this needed economic information, as much of it apparently lies outside the expertise or knowledge of DOT/PF. Specifically, we would like to know what the toll costs would mean to shippers or truckers relative to the other transport costs involved in moving goods from Fairbanks to Prudhoe Bay; how existing trucking costs compare to air transport alternatives; some indication as to the elasticity of demand for the Haul Road in light of significant tolls; and the importance of Haul Road trucking as an economic activity in the Fairbanks area.

Thank you for your help in this matter.

RE: HB 118 "Decisions on ROW Lease Applications"

Presently under AS 38.35.100(B), the Commissioner of DNR must make the determination that the applicant is "fit, willing and able to perform the transportation" prior to issuing a right-of-way lease.

Past interpretation of this standard has meant that any applicant must have the financial capability to go forth with the project which would utilize the right-of-way.

In today's world a right-of-way permit has a value all its own when negotiating financing. To make financing a condition of the ROW lease application hampers a project's chances of becoming a financial reality.

This bill amends the Right-of-Way Lease Act so that the Commissioner can condition a grant of right-of-way so that the applicant can receive the right-of-way but must demonstrate the it is "fit, willing and able" prior to being allowed to start construction on that right-of-way.

The current standard of "fit, willing and able" is not circumvented but the finding is postponed to a later phase in the process.

I believe it is important in these times to allow modifications in our statutes that assist industry in the real world, without lifting our standards.

STATE OF ALASKA

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

STEVE COWPER, GOVERNOR

400 WILLOUGHBY AVE.
JUNEAU, ALASKA 99801-1796
PHONE: (907) 465-2400

February 24, 1987

The Honorable Bette Cato
Chair
House Transportation Committee
Alaska State Legislature
P.O. Box V
Juneau, AK 99801

Dear Representative Cato:

Subject: House Bill 118, relating to decisions on right-of-way lease applications.

Position: The Department of Natural Resources supports the amendment to the oil and gas pipeline right-of-way leasing statute (AS 38.35.100(b)) described in this bill.

Background: House Bill 118 would allow the commissioner to issue a conditional pipeline right-of-way lease even if the applicant is not presently "fit, willing and able."

The existing "fit, willing and able" standard requires the applicant to be nearly ready to begin construction before a right-of-way lease can be issued. In other words, financing has to be reasonably assured, gas sale contracts and markets in place, and construction designs substantially completed.

The commissioner currently has only one alternative to finding an applicant "fit, willing and able," and that is to deny the application. This bill would provide the commissioner with an additional alternative; the ability to issue a conditional right-of-way lease, subject to conditions that ensure the applicant will become "fit, willing and able."

This bill would have a positive effect on the economic development of pipeline projects in Alaska and would not reduce the "fit, willing and able" standards an applicant would be required to meet prior to actual construction of a pipeline.

10-J9LH

Recommendation: To ensure that the applicant is required to become "fit, willing and able" within a reasonable period of time, add the words "within a prescribed amount of time" to line 15, after the word "able."

Please let me know if you would like additional information.

Sincerely,

Judith M. Brady
Commissioner

HOUSE TRANSPORTATION COMMITTEE

HB 118

March 13, 1987

Madam Chairman:

My name is Harold Moles, Vice President of Northwest Alaskan Pipeline with offices in Fairbanks, Alaska. Northwest Alaskan Pipeline has reimbursed the State of Alaska over five million dollars on permit activities related to a state ROW lease, and believes AS 38.35.100, as currently written, is a workable statute with definitive criteria for issuing a State ROW lease.

Before amending this statute as proposed in HB 118, leaving the issuance of a ROW lease "subject to conditions established by the Commissioner", the state may want to ask more important questions, such as:

1) Does the applicant have the financial and technical capability to construct the project in a responsible manner to protect public lands and the environment along with the residents of Alaska-

2) Does the applicant have gas purchases agreements or is gas ~~&~~ cc supply even available for the project?

3) Is an export license in place?

4) Or is the project even economically feasible?

Madam Chairman, thank you for the opportunity today to provide this testimony for the record.

Yukon . 17

Re: Further Processing of the Right-of-Way Lease(s) Referenced in the Behlke to Kuhn Letter of June 18, 1982 (NWA-82-038)

Dear Mr. Kuhn:

The following project developments:

1) NWA's decision to request a separate right-of-way lease for the conditioning plant;

2) Multi-year delay in the project schedule; and

3) Cancellation of the reimbursement agreement with the State for pre-right-of-way lease work;

have resulted in substantial changes in the status of the Northwest Alaskan Pipeline Company (NWA) Right-of-Way lease application and of its future processing by the State.

The Department of the Interior (DOI) Right-of-Way Grant as issued to Northwest Alaskan Pipeline Company on December 1, 1980, contained a set of Stipulations that had been developed with significant input from representatives of the State of Alaska. The overall objective, as you are aware, was to have a State Right-of-Way Lease with stipulations similar to the DOI Right-of-Way Grant, an objective the State still maintains. Therefore, in the past several years the majority of NWA project related documents which received a coordinated State agency review have actually been fulfilling requirements of the DOI Right-of-Way Grant as well as the pending State Lease. For example, when NWA filed its pipeline right-of-way lease with the State, it deferred submission of several items pending ongoing work with State and Federal agencies in the preparation of key "1.6.1 Plans" which it indicated would serve two

SLH

purposes; 1) be elements of the right-of-way lease application, and, 2) satisfy subsequent lease stipulations. With an adequate level of State agency review, this was an acceptable process. Indeed completed 1.6.1 Plans would, in general, go farther than required for right-of-way lease applications. However, these plans have not been completed, and, by virtue of NWA's cancellation of its pre-lease, reimbursable services agreement with the State, State participation in further reviews of post-lease related items (i.e., 1.6.1 Plans) is not possible. Those key 1.6.1 Plans which were to have been prepared in conjunction with State and Federal agencies and which were to satisfy both the requirements of the lease application and subsequent lease stipulations include the following 1.6 Plans referenced in the application.

Blasting
Camps Plan
Clearing Plan
Environmental Briefings Plan
Fire Control Plan
Pesticides, Herbicides and Chemicals
Quality Assurance/Quality Control
Human-Carnivore Interaction Plan
Restoration Plan
Visual Resources Plan
River Training Structures
Stream, River and Floodplain Crossings
Wetland Construction
Erosion and Sedimentation Control
Oil and Hazardous Substances Control, Cleanup and Disposal

Additional deficiencies in NWA's Right-of-Way Application are identified, as listed below:

1) Schedule - the schedule, as filed, is obviously incorrect in light of recent announcements. NWA should at such time as it is prepared to do so, provide realistic estimates of initiation and completion dates to which it intends to adhere;

2) It is not possible to determine from the present application NWA's technical capability to:

   a) protect property interests;

   b) prevent adverse environmental impact;

   c) undertake necessary restoration and revegetation;

   d) properly develop material sites or disposal sites; and

   e) protect the interests of subsistence resource users along the pipeline right-of-way and in the vicinity of related activities.

3) The present application does not demonstrate the applicant's financial capability to fulfill the requirements of A.S. 38.35.100. Extensive rhetoric, submitted in support of NWA's financial capability to perform the proposed transportation, related only to government approvals (President's Decision, Federal Right-of-Way Grant, etc.) which do not prove the sponsor's financial capability to perform the proposed transportation of natural gas. Though the items enumerated by NWA, in support of its application, (plus the later waiver package approval) are some of the conditions necessary for the obtaining of financing, events of the past year certainly prove that they do not provide financing. When the NWA financial plan is ready for submission to the FERC, it also should be submitted to the State as part of an extensively amended application for a State Right-of-Way Lease, so that the Commissioner may reasonably determine if NWA is actually financially capable to perform the transportation proposed;

4) No agreement has been obtained with Alaska Department of Transportation and Public Facilities (ADOT/PF) covering highway useage, damage, and encroachments (Yukon River Bridge, Atigun Pass, Ice Cut Hill, proximity, thermal workpads, etc.); and

5) As indicated before, a conditioning plant lease application should be filed separately.

6) AS 38.35.050 also requires that all persons planning to own an interest in a pipeline must join in the application. The application must be amended to reflect changes in interest in ownership.

It appeared last year when NWA filed its lease application that NWA's financial capability would now be established, and, through work and negotiation with the State, NWA would be able, by now, to satisfy the lease application requirements of A.S. 38.35. Unfortunately, those developments, optimistically anticipated by NWA and this office a year ago, have not happened. At this point, the lease application does not meet the requirements of A.S. 38.35.050 to the extent that the analysis required under A.S. 38.35.080 could be properly accomplished and the Commissioner could make the decision required under A.S. 38.35.100.

When the proper amendments have been provided and when the separate conditioning plant lease application has been received by this office, the pipeline lease application and the conditioning plant application processing will again be resumed through the normal State pipeline leasing process. The recently announced delays provide more than adequate time for NWA to provide the State with the amendments for further processing of the lease(s) as well as providing more than adequate time for the State to process the lease prior to the time it will actually be needed. This is, of course, only true if NWA does not allow the preparation of the application amendment and the plant lease application to drag on.

Sincerely,

C. Behlke

Re: Major Issues

Dear Mr. Kuhn:

Reference is made to the Northwest Alaskan Pipeline Company (NWA) letters dated November 5, 1981, (GOA-81-1133), January 8, 1982, (GOA-82-1004), February 16, 1982, (GOA-82-1021), and March 29, 1982, (GOA-82-1034) regarding NWA's application for a right-of-way lease for the gas pipeline and the Alaska Gas Conditioning Facility. In these communications, specifically the February 16, 1982, letter, NWA responded to some of the major issues identified by the State in previous letters.

The purpose of this letter is to address and explain, in further detail, the State's position with respect to the pending NWA application for a lease. I will attempt to respond to each point covered in your recent letters, and I also will identify other outstanding concerns which continue to be important but which NWA has not addressed.

State-Selected and Tentatively Approved Lands

Your assessment of my previous verbal statements regarding Tentatively Approved (TA'd) lands is correct, except that I have never thought the State's control of TA'd lands could be in question and have considered any such question to be frivolous.

At the time land becomes TA'd, the Federal government has no further alternative but to patent the land to the State upon survey. Thus, only the State issues the Right-of-Way (ROW) lease on TA'd land. The only exception to this is that TA'd lands which were withdrawn and properly

JLH

selected pursuant to Alaska Native Claims Settlement Act (ANCSA), but not yet conveyed, may be leased with the concurrence of the State, the Native corporation(s), and the Federal government.

The topic of selected lands has not, to the best of my memory, been raised before. Pursuant to Federal regulation, land is segregated at the time it is selected by the State. Prior to Alaska National Interest Lands Conservation Act (ANILCA) no procedure was spelled out in the law for conveyance of any interest in selected lands to a third party. Arguably, prior to ANILCA selected lands could not be conveyed to a third party at all, until becoming TA'd, whereupon the State could convey. However, the standard procedure, which was acceptable to the State, was that, following the State's concurrence, the Federal government could convey interests in selected land to third parties. You will note that this procedure was followed on the IAPS project. However, at no time has the Federal government notified the State that it wished to issue a ROW grant to NWA on selected lands; thus, it did not seek the State's concurrence prior to the issuance of the Federal ROW grant as is required, and which was required even prior to ANILCA, for the conveyance to a third party of interests in selected lands.

Since State concurrence to convey rights to selected land was neither sought nor obtained by Department of Interior (DOI) for the NWA ROW grant, the Federal government did not convey a ROW grant across selected lands, because it lacked the authority, without prior State concurrence, to do so. (Again, where State-selected land was opened for Native selection pursuant to ANCSA and selected by a Native corporation, all parties must concur in any grant or lease to third parties.)

At some point, should the project become an imminent reality, NWA would appear to be well advised to seek a Right-of-Way Grant from the Federal government to cover those lands which (1) were validly State-selected on December 1, 1980, and (2) still remain in that category. (Clearly those lands which were State-selected on December 1, 1980, and which have become TA'd or patented since will be covered by the State Right-of-Way Lease.) Such a grant would have to receive the formal concurrence of the State, prior to its issuance. The State's concurrence would probably be conditioned on the Federal lease's lapsing at the time of TA with the State lease becoming effective simultaneously. The State lease must contain a provision for the inclusion of lands which "hereafter" become TA'd, patented, or otherwise acquired. If a Federal Grant covering selected lands is ultimately obtained by NWA, the TA would, of course, be subject to the Federal grant conditions to the extent that the State recognizes prior authorized activities conducted pursuant to that grant prior to TA.

Any actions by Northwest on TA'd lands which do not comply with the above-outlined procedure could place NWA in a trespass posture and would be dealt with accordingly by the State.

Socioeconomic Matters

I was pleased to receive NWA's proposed socioeconomic planning activities attached to your letter of February 16, 1982. However, as indicated by NWA in the initial, and only, negotiating meeting of July 12, 1981, and corroborated by my letter to Kuhn of August 18, 1981, I have been awaiting NWA's written response to the draft Socioeconomic Stipulations given to NWA on March 18, 1981. Thus far, there has been no response by NWA, except for the NWA socioeconomic planning document of February 16, 1982.

It appears that your proposed socioeconomic planning activities of February 16, 1982, constitute a further elaboration of your letter of December 8, 1980, (COA-80-1189), in which you outlined similar plans. As you noted in your December 8, 1980, letter, "the impact plans are presumably a part of the Stipulations, and a complete assessment requires us to review them in their larger context" (emphases added).

While it appears that you have reassessed the plans outlined in your December 8, 1980, letter in light of the initial draft Socioeconomic Stipulations transmitted to your office on March 18, 1981, we are unable to comment upon their adequacy in the absence of knowing how the proposed planning fits into the larger context of the proposed Stipulations which, as you correctly observed, needs to be done.

The State views NWA's obligation to minimize the cost impact to the potential rate-payers as being parallel to, and not in conflict with, sound social impact management. Minimal disruption of services and infrastructure both inside and outside the corridor upon which the project depends for support can only enhance the smooth progress of project construction. NWA estimates (Center Point Justification, Vol. V, July 1, 1980, page 4-12) that each break in project cadence will cost two million dollars, and, given the close and complex interrelationship between project activities and State and local support systems, the possible points of inadvertent conflict and disruption are many. NWA recognizes this, as you point out in your December 8, 1980, letter.

We believe that planning in these areas is important both to the success of the project and for the avoidance of unnecessary disturbance to Alaskan communities. However, the plans which you have set forth fall far short of the extent of those promised by the April 1978, agreement signed by Mr. McMillian and Governor Hammond. Clearly, NWA still has a great deal of work to do.

NWA has expressed cost concerns for its potential rate-payers; however, the State sees little virtue in the concept of its communities and some of its citizens suffering severe, adverse, unmitigated socioeconomic impacts in order to reduce costs to the rate-payers. NWA has equally as important an obligation to mitigate adverse impacts on Alaska as it does

to attempt to mitigate the cost impact to the potential rate-payers. We see no possible reason for the Alaskan communities and adversely impacted citizens to become, essentially, paying partners in the project while not receiving the benefits which the other equity partners and the rate-payers would receive.

Similarity of Federal and State Right-of-Way Grant/Lease

The State has been working to have the technical and environmental segments of the State Right-of-Way lease be as consistent with the Federal Right-of-Way Grant as is prudent at the time of offering of the lease. Though I anticipate the similarities to be very considerable, differences are deemed necessary to reflect:

A) NWA's response, to date, to the Federal stipulations;

B) Movement of the NWA pipeline ROW location, after development of the Federal stipulations, to close proximity to State highways at locations extending over approximately 270 miles of the right-of-way;

C) Socioeconomic implications (including plans identified in my letter of March 18, 1991) to citizens of Alaska not addressed by the Federal Right-of-Way Grant;

D) Additional State concerns for the health, safety, and welfare of State citizens;

E) Additional Stipulation 1.6.1 Plans to cover the Haul Road and the possible choice by contractors to use snow/ice workpads and roads;

F) The State Lease Stipulations will not contain a preamble; and

G) The State Lease will contain additional language dealing with Stop Orders and other matters which, in the Federal Grant, are covered by regulations incorporated by reference.

You have expressed concerns regarding the potential inclusion of a field authorization procedure in the State Right-of-Way lease. It is the State's position that field authorizations to proceed are necessary since Notices to Proceed (NTP's) will be issued, generally, many months prior to the beginning of work and prior to contractors' bidding on the work covered by the NTP. It is not the purpose of the proposed field authorizations to change the stipulations of a Right-of-Way Lease. The principal purpose of the field authorization is to provide a check on field conditions, field staking (where necessary), and compliance of the contractor's work plan, submitted immediately prior to the initiation of work, with the lease stipulations. I certainly agree that the contractor must not be exposed to the possibility of having conditions of the

lease, principally the stipulations, subject to unilateral change by the State during the course of the bidding and contract award processes or during the mobilization and construction processes.

It is also important for a high level of government authority to be located in the field to expedite field changes proposed by the contractors through the project sponsors. The field authorization also will allow this to be achieved, and it should be a positive improvement of the State Right-of-Way Lease over the Federal Right-of-Way Grant.

You have mentioned that the field authorization concept may affect "fixed-price contracting." I think your concerns have been addressed above; however, the State is concerned about possible interpretations of what "fixed-price contracting" actually is. Does NWA mean that it will contract on the basis of a fixed-cost for a completed spread of pipeline or a completed foot of pipeline, or does it mean, on the other hand, that NWA will contract, for example, on a fixed-unit basis per cubic yard of excavation for trench, workpad, haul, etc.? The concept of a fixed-unit price bid for each of the separate components of a completed unit of pipeline is not a fixed-price bid, but is, rather, an open-ended bid. Such unit-cost bidding would not meet the concept of fixed-price bidding required by the President's Decision and would certainly leave the possibilities for cost overruns wide-open. Indeed, it would probably promote cost overruns. The State is curious to know what NWA's precise definition of the term "fixed-price contracting" is.

Highway Matters

You have expressed concern about the State's position that all highway-related matters must be brought to agreement simultaneously.

On January 26, 1981, (NWA-81-70), the SPCO informed NWA of the key issues which require negotiation between NWA and the Alaska Department of Transportation and Public Facilities (ADOT/PF). Included with that letter was an identification of 13 points requiring resolution in addition to Highway Indemnification. It is the intent of this office to include as a binding part of the lease an agreement between ADOT/PF and NWA which addresses the following:

- Highway Indemnification;
- Alignment;
- Construction scheduling (minimize conflicts between NWA and ADOT/PF highway improvement programs);
- Yukon River Bridge (risk analysis);
- Ice Cut Hill;
- Five-Mile Airport;
- Governor's Haul Road Policy;
- Pipe Haul, corresponding permits, methods, and scheduling;
- Regulatory enforcement (weights, measures, public safety);
- Security within the camps and along the Haul Road;

- The use of various State airports and the need for improvement of existing facilities;
- Atigun Pass; and
- Availability of Mineral Materials.

Thus far, NWA has been quite anxious to reach agreements with the State on these critical areas in which NWA desires to obtain special concessions from the State to allow the pipeline to be constructed within the Dalton Highway and, in some cases, beneath the road surface, while exposing the State and the driving public to the attendant risks, hazards, and traffic delays on this most important of the State's industrial highways, not to mention additional risks to the Yukon River Bridge's integrity and to the transportation (and production) of crude oil from the North Slope. For more than two years, the State has repeatedly, (by letter and verbally), indicated that NWA must develop, for the State's review and approval, thermal analyses and appropriate mitigation designs for thaw settlement for the approximately 270 miles of workpad, which would severely impact the short-and long-term stability of the highway, immediately adjacent to the Prudhoe Bay highway. To date, though NWA has developed preliminary proposed designs and construction plans for the Yukon River Bridge, Ice Cut Hill, and Atigun Pass, no such long-term thermal design or thaw settlement mitigation designs have been presented by NWA to the State for review.

NWA's construction plans call for considerable highway-hauling of pipe and gravel in an overload or over-dimension mode. Such loads are hazardous to the driving public and generally destructive to the highways involved. NWA has stated that it wants to be treated in a "non-discriminatory" fashion with regard to highway usage. It interprets the term "non-discriminatory" to allow NWA to inflict highway damages which the State has estimated to potentially be approximately $170 M (1980 $'s). Thus, on the one hand, NWA wishes the State to "sign off" now on the very considerable concessions which NWA desires from the State that will clearly discriminate against the traffic rights of other users of the highway and will certainly create massive additional road maintenance problems; while, on the other hand, NWA wishes to delay, until some undesignated future time, resolution of the important matters of thermal design of 270 miles of work pad and of the highway damages which NWA's work plans clearly indicate will occur to the State's highways. In addition, NWA's risk analysis supporting its desire to locate its pipe on the Yukon River Bridge has ignored the potential losses of revenue to the State and the North Slope oil producers which a possible disastrous gas pipeline-generated accident could cause. That risk analysis has also ignored construction activities risks. Thus, the risk analysis, by virtue of its incompleteness, really does not answer the question, "What is the risk to the State and others of the construction and operation of the NWA pipe on the Yukon River Bridge?"

The State declines to accept hundreds of million of dollars of NWA highway and other damages while simultaneously giving NWA hundreds of millions of dollars of concessions for which the State and travelling public would incur indirect expenditures. It also declines to needlessly endanger the continued, timely production of crude oil from Prudhoe Bay. Thus, the State insists that all highway related matters must be resolved simultaneously in a single agreement. The State Department of Transportation and Public Facilities is prepared, as it has been for the past two years, to discuss any or all highway matters with NWA which would lead to a complete, acceptable agreement.

Separate Lease for Pipeline and Conditioning Plant

The State accepts the concept of separate ROW leases for the gas conditioning plant and the pipeline across State lands, when highway related and socioeconomic matters are satisfactorily resolved for inclusion or reference in the two ROW leases and when NWA has satisfied certain other conditions (discussed later).

On April 17, 1981, Commissioner LeResche waived the requirements for the filing of a separate Form DL10-130 (pursuant to 11 AAC 80.005) for the Conditioning Plant because the Plant was to be included as an addendum to the Pipeline Right-of-Way Lease. Since NWA has recently determined that it desires separate leases for the pipeline and conditioning plant, a Form DL10-130 for the Conditioning Plant lease must be filed.

Certainly, according to the present project schedule, the two leases can be developed and could go to the required public hearings well in advance of initiation of construction unless, of course, NWA continues to ignore the State's important highway and socioeconomic concerns.

Subsistence

Not discussed in your letter of February 16, 1982, is the topic of subsistence, addressed in my letter of May 14, 1981. The impacts of the project on various rural subsistence users (subsistence hunting, fishing, trapping, etc.) may be quite important. In my letter I noted that NWA would have to be prepared to identify and set forth the potential subsistence impacts of the project and commit to appropriate impact mitigation plans. I stated that subsistence use of resources requires the continued presence, during construction, of normally usable resources and the timely accessibility to the resource for the users. NWA studies, to date, address the present existence of some subsistence resources. This and information documenting the present subsistence use of such resources must be related by NWA to the presence and accessibility of the resources to subsistence users during the construction process. If the construction process and scheduling cannot reasonably accommodate normal subsistence resource harvests in the area, proper mitigation

procedures must be set forth by NWA for review and discussion among the people effected so that a suitable set of mitigation procedures, where necessary, may be finalized, approved by the State, and implemented by NWA.

Applicability of AS38.35 to Temporary Facilities

NWA requested, in the January 8, 1982, and the March 29, 1982, letters, that the State ROW lease (AS 38.35) cover temporary facilities. Whereas I had initially hoped that temporary facilities, including access roads, camps, disposal sites, could be included under AS 38.35, I have now determined that leases issued pursuant to AS 38.35 can cover only the permanent pipeline facilities (for example, if permanent access roads can be identified, NWA should submit a list of these to the State for inclusion under AS 38.35) including the pipeline. All remaining facilities (temporary-use areas, including disposal sites) will be processed under AS 38.05, and the possibility of issuing 38.05 permits for period in excess of one year is being explored. However, I have not requested a formal Attorney Generals (AG's) opinion on the applicability of AS 38.35 to temporary facilities. Should NWA wish to pursue this topic further (AG's opinion) please inform Commissioner Katz.

Further Processing of the Right-of-Way Lease

Several deficiencies exist at this time in the NWA Right-of-Way Lease application. The details of the deficiencies are dealt with by a separate letter, however, a summary of the deficiencies are as follows:

1) No valid application exists for a separate lease for the conditioning plans (previously discussed, page 7);

2) When NWA filed its pipeline Right-of-Way Lease with the State it deferred submission of several items pending then ongoing work with State and Federal agencies in the preparation of key "1.6.1 Plans". These plans have still not been completed, and by virtue of NWA's cancellation of its pre-lease, reimbursable services agreement with the State, State participation in the pre Right-of-Way Lease development of the lease application is no longer possible. Thus, the NWA's statement in several locations of its lease application justifying deferral is no longer valid. Prior to further processing of the Lease, now through normal State operations, these items of the application must be properly completed and submitted for review; and

3) In NWA's lease application several very subjective statements are made in support of NWA's financial capability to perform the transportation proposed in its application. It is abundantly clear that though the President's Decision and a Federal Right-of-Way Grant (and later, the "waiver package") are necessary to allow NWA to obtain financial capability to perform the actions outlined in the

Right-of-Way Lease application, they do not provide or guarantee such financial capabilities. Also, a definition of all persons owning or planning to own an interest in the project has not been provided in the application, as is required by statute.

Because of the continuing absence of the items mentioned above, as required by AS 38.35.050 and 11 AAC 80.005, it has not been possible for the State to move to the procedures set forth on AS 38.35.080(a), (b), and (c) which must precede a decision on the application as required by AS 38.35.100.

To summarize: a complete lease application must be filed for the Conditioning Plant, and the lease application for the pipeline Right-of-Way must be amended to properly and completely address the information required by AS 38.35 and 11 AAC 80.005. When the existing lease application have been properly amended, the lease application processing will be carried forth through the normal State processing procedures for such applications. The most recently announced project delays of three years should provide adequate time for processing through the normal channels if NWA provides the necessary information to complete its lease application in a timely manner. However, if NWA continues to ignore important aspects of its Right-of-Way lease application, it will create additional delays which, certainly, the State will have no control over. NWA should be advised that the review of the significant amount of still outstanding information for the lease application will require several months prior to proceeding with the requirements of AS 38.35.080 and AS 38.35.100. Public hearings also require lead time. Thus, processing of a properly ammended Right-of-Way Lease application will not be an instantaneous matter. It is thus, extremely important that the numerous remaining deficiencies in the lease application, which I have summarized above and itemize by separate letter, be properly addressed according to a realistic time schedule if NWA is not to create additional, future delays in the issuance of the appropriate leases.

Sincerely,

C. Behlke

Are the Japanese and South Koreans finally getting ready to buy Alaskan natural gas?

Gas for the lamps of Seoul?

By Lawrence Minard

If the Japanese, Koreans and Taiwanese are serious about reducing their trade surpluses—$81 billion, combined, last year—against the U.S., there is a U.S. product to which they could quickly commit: Alaskan natural gas. So much natural gas comes up with the crude oil on the North Slope that the Prudhoe Bay field's owner-operators, Standard Oil and Arco, are reinjecting the gas at the rate of 2.6 billion cubic feet a day (bcf/d).

Over the years, several schemes have been advanced to create a market for the gas. One was the Alaska Natural Gas Transportation System (Angts) proposal, which was approved by the U.S. and Canadian governments in 1977. Under it, a 4,790-mile pipeline would have been built from the North Slope through Canada, piping the gas into midwestern and California markets *(see map)*. Projected cost in 1980: about $40 billion, which reflected inflation and interest rates at the time.

The Angts proposal remains the only federally approved gas pipeline project. But falling energy prices have postponed the project, perhaps indefinitely: five of the original ten members of the consortium backing Angts have dropped out. Says a leading North Slope oil executive bluntly: "Angts is dead."

What may have more life in it is a five-year-old competing proposal by Anchorage's Yukon Pacific Corp. to ship liquefied natural gas across the Pacific. Yukon Pacific has substantial backers, including CSX Corp., with a one-third interest; former Alaska Governor Walter J. Hickel and other investors, with another one-third; and Supra Corp., one-third. Supra's owners include former Arco Chairman Robert O. Anderson and shipping magnate Daniel K. Ludwig.

Yukon Pacific's proposed Trans-Alaska Gas System (Tags) would run a pipeline along most of the existing Trans-Alaska oil pipeline's right-of-way 800 miles south to Valdez. There the gas would be liquefied and shipped to Asia.

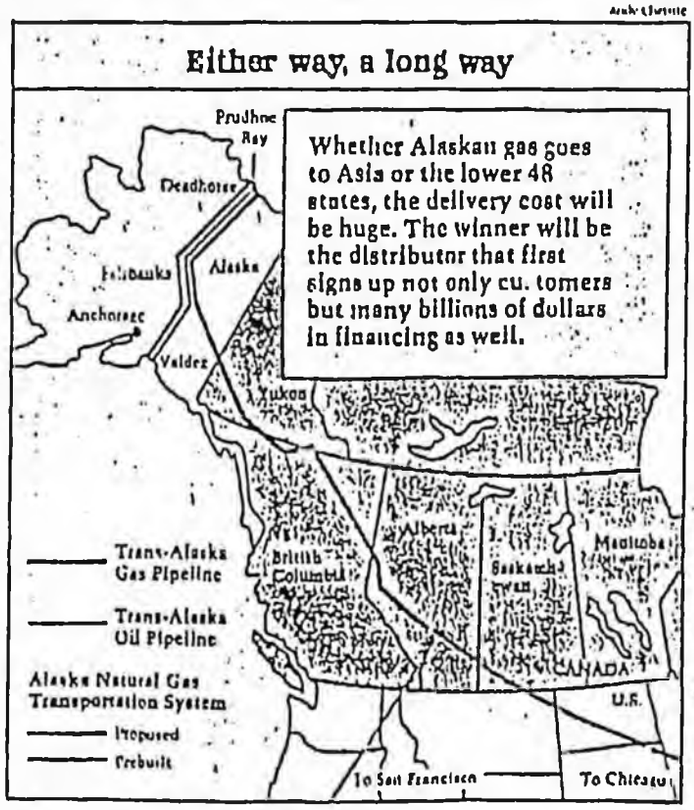
In his modest Anchorage offices, Yukon Pacific Chief Executive Howard Griffith says he would like to market all 14 million metric tons of liquefied natural gas a year (the equivalent of around 2 billion cubic feet daily) of North Slope gas available. But Tags, he adds, could be viable on half that volume.

Japan is the most obvious prospect. It currently consumes around 28 million metric tons of gas annually, most of it imported from Indonesia and Brunei. Projecting energy needs is notoriously difficult. But according to the Japan Gas Association's latest forecast, Japanese gas consumption will rise to over 42 million metric tons annually by the year 2000. Yet contracts and commitments have been signed for up to 35 million metric tons. Yukon Pacific wants to supply the additional 7 million or 8 million metric tons.

But so large is Tags' scale, says Yukon Pacific Treasurer Mead Treadwell, that "it's too big for any one country to take on." For Tags to work well, Korea would have to sign on for around 6 million metric tons a year. Or Taiwan would have to.

Why have the Asians so far failed to commit to Alaskan gas? Price, mainly. In 1982 the estimated cost of Tags' pipeline, compressor stations and 15 LNG tankers was $14 billion (some $27 billion, factoring in inflation and prevailing interest rates). That put Alaskan gas at a steep disadvantage against gas from Indonesia and Brunei. Alaskan gas is still at a disadvantage, but somewhat less so. Falling inflation and interest rates, and improved knowledge of arctic and subarctic construction gleaned from the North Slope's 1974-84 building boom, have sharply reduced all North Slope construction cost projections. Says Treadwell: "Once we applied a lot of study to that $14 billion number, we came up with less than $10 billion, at least 10% less."

Treadwell expects the U.S.-Japan Energy Working Group, created by President Reagan in 1983 to promote U.S. energy exports to Japan, will conclude this year that Tags is viable. He predicts the



Japanese will sign letters of intent to buy Alaskan gas early next year, with deliveries beginning in 1995 or 1996. Treadwell also notes that the Commerce and State departments have forcefully raised the gas issue in trade talks with the Japanese and Koreans. "Support like that," says Treadwell, "doesn't go unnoticed over there."

If Yukon Pacific can sell gas to the Asians and arrange Tags' financing, it will still face a fight from its primary competitor, the Alaska Natural Gas Transportation System. Late last month, lawyers for Angts insisted to the Federal Energy Regulatory Commission that Angts has exclusive right to market existing North Slope gas reserves, implying that Yukon Pacific has nothing to sell. On Yukon Pacific's side in this debate is the state of Alaska. It doesn't care who trades in its gas, so long as someone does.

Standard Oil President Frank Mosier would also like to sell his Prudhoe Bay gas. Mosier doubts that either Angts or Tags will move ahead until oil gets back over $25 a barrel. But he says: "If someone can make Tags work, we stand ready to make our gas available. We'd feel blessed if something happened to allow us to market our North Slope gas." ■

* a fiscal note from DOT/PF
* a fiscal note from the Department of Revenue
* a letter of support
* a copy of the statutes impacted by HB 123

JUNEAU

February 10, 1987

The Honorable Ben Grussendorf
Speaker of the House
Alaska State Legislature
P.O. Box V
Juneau, AK 99811

Dear Representative Grussendorf:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill that relates to the manner by which international airport revenue bonds may be sold. The principal purpose of this bill is to authorize the sale of international airport revenue bonds by either private or public sale (similar, for example, to the Alaska Industrial Development Authority's authority under AS 44.88.090(d)). Present law requires that airport revenue bonds be sold by public sale. While a public sale is often desirable, it is at times in the best interests of the state to sell bonds by private or negotiated sale. For example, a private sale may enable the state to move quickly to take advantage of favorable market conditions. The bill provides this desirable flexibility.

I urge your prompt review and approval of this legislation.

Sincerely,

Steve Cowper
Governor

Dear Representative Cato:

As you are aware, HB 123 is in your committee. I feel this legislation is quite important to the proper operation and functioning of my administration.

I would appreciate your committee review and action on this legislation and your personal assistance to move this bill out of your committee. As we both know, this legislative session will soon be drawing to a close.

If you have any questions please contact my legislative office and either George or Bob will see that the appropriate people promptly respond to you.

Thank you for your continued support.

Sincerely,

Steve Cowper

ANALYSIS: There is no identifiable fiscal impact for this bill. A private sale of International Airport Revenue Bonds may enable the State to move quickly to take advantage of favorable market conditions.

The Honorable Milton B. Barker
Deputy Commissioner
Department of Revenue
State of Alaska
333 Willoughby Avenue
Pouch SB
Juneau, AK 99811

Dear Milt:

This letter has been drafted to set forth the reasons legislation should be enacted by the Alaska legislature to allow the securities issued by the Anchorage International Airport to be sold on a negotiated basis. It should be immediately emphasized, however, that as a matter of public policy, competitive sales should be encouraged and utilized to the maximum extent possible. Nevertheless, as described below, a series of reasons exist to authorize negotiated sales for these securities.

As a matter of practice, negotiated sales are appropriate when they can save interest expense or market cost for the issuer. Under the following conditions, negotiated sales can be cost-effective.

1. New Security. If the borrower sells a security with characteristics unlike those employed for other securities previously sold by the borrower, then the issue is a candidate for being sold on a negotiated basis.

2. Volatile Market. During periods in the recent past, the tax-exempt market has experienced substantial volatility in interest rates. In such periods, the timing flexibility that is available from negotiated sales can result in lower interest expense and a more stable borrowing.

3. Uncertainty In The Market Place. Since January 1, 1986, the tax-exempt market has been particularly unsettled, responding to the Tax Reform Act passed

by the House of Representatives at the end of 1985. Frequently, unanticipated events create uncertainty, and in these circumstances, the ability of a borrower to negotiate can prove beneficial. For example, the City of Phoenix, a highly rated city, offered a bond issue in early January on a competitive basis. Because of the unsettled conditions, Phoenix received only one bid, with interest rates which were comparatively very high. The City decided to reject the bid, but it subsequently sold the issue on a negotiated basis with more favorable results.

4. Credit Concerns. If the market needs to be "sold" on the creditworthiness of a particular security issue, a negotiated sale is a much more effective way of doing it. The underwriting group is responsible for educating the market about the credit. It is unlikely that a competitive sale can adequately accomplish this education process.

As you know, as a result of many of the ideas presented above (i.e., the expanded use of new debt instruments, the general volatility in the market, and increased credit problems), an increasing number of negotiated issues have come to market. While Airport securities may continue to be sold competitively, we believe it wise to provide the Airport the additional flexibility to sell debt on a negotiated basis.

If you have further questions, please do not hesitate to contact us.

Best regards,

J. Chester Johnson

Representative Robin Taylor
P.O. Box V (MS-3100)
Juneau, Alaska 99811

Dear Representative Taylor:

Enclosed please find copies of the petition that has been circulating in Petersburg. The citizens of Petersburg would like the Legislature to change the Laws regarding Stolen Vehicles. We feel that a person who steals a vehicle, be it an automobile, boat, or airplane; should be prosecuted as having committed a Felony, rather than Criminal Mischief. The fact that we live on an island is immaterial, and should not make a difference in the level of punishment for stealing a vehicle.

Only you, as our elected representative, can author a Bill to change the Law. So we are formally requesting you to do this.

If I can be of any assistance to you in doing this, please feel free to contact me.

We still have petitions out, in Petersburg, but it appears that we have 100% of the adult population in favor of the above change; AND we also have the endorsement of the Petersburg City Council.

Respectfully yours,

Gayle M. Eastwood

enc:

cc: Governor Cowper
Senator Jones
Representative Sund

We, the citizens of Petersburg, feel the need for a change from "Joy-riding" to Grand Theft Auto, if a person steals a vehicle. We feel that it is immaterial if we live on an island or not. It is a case of taken someone's property without their permission and should receive the penalty for their actions. If the owners leave their key in the ignition, that is between their insurance company and themselves. The thief should be prosecuted as a car thief.

Please put Street address

William E. [illegible] Petersburg AK Del. Steal A CAR go to JAIL

We, the citizens of Petersburg, feel the need for a change from "Joy-riding" to Grand Theft Auto, if a person steals a vehicle. We feel that it is immaterial if we live on an island or not. It is a case of taken someone's property without their permission and should receive the penalty for their actions. If the owners leave their key in the ignition, that is between their insurance company and themselves. The thief should be prosecuted as a car thief.

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: HB 155

TITLE: Utility Relocation on Municipal Projects

APPROVED: Mark Hickey MSH
Commissioner

DATE: 3/9/87

The Department of Transportation and Public Facilities supports HB 155.

The legislation would require municipalities to treat utility relocation, incident to municipal road and other project construction, in a manner similar to that currently required for utility relocation on State highway, airport and public facility construction. As the bill is written, it would apply only to utilities regulated under AS 42.05.

For further information call Susan Fleischhauer at 465-3900.

POSITION PAPER

RE: HB 155 -- "An Act relating to the change, relocation, or removal of utility facilities incident to the construction of road or other projects by a municipality."

SPONSOR: Representative Cato

Effects of Bill:

Section 1 of the bill simply adds another home rule limitation appropriate for this bill.

Section 2 of the bill designates to municipalities the power to order a utility within a municipal grants right-of-way to be changed, relocated, or removed and provides for the cost of the order to borne by the municipality if the facility is within the municipalities' jurisdiction.

Comments:

The majority of utility facilities are owned and operated by municipalities in rural areas. This bill will place the burden of all costs relating to movement of utilities on the entity requesting the movement.

Because of the costs associated with utility relocation, the Department believes that the proposed legislation would provide the means for municipalities to thoroughly review proposed changes before requiring the movement of utilities. The Department recognizes that this bill may place additional costs on governments, but since the cost is created by the local government, this is not unreasonable. The Department does not oppose this bill.

David G. Hoffman By Doug Griffin

David G. Hoffman, Commissioner

STATE OF ALASKA
THE LEGISLATURE
LEGISLATIVE AFFAIRS AGENCY

POUCH Y STATE CAPITOL
JUNEAU, ALASKA 99811
907 465 3800

MEMORANDUM March 6, 1987

SUBJECT: Sectional analysis of HB 155

TO: Representative Heinrich Springer, Chair
House Community and Regional Affairs
Committee

FROM: Tamara Brandt Cook
Director
Division of Legal Services
TBC

Here is the sectional analysis that you requested of HB 155.

Sec. 1. Adds to the list of home rule limitations a reference to the new section added in this bill, so that home rule, as well as general law, municipalities are bound by that section.

Sec. 2. Permits a municipality to order a utility to change, relocate, or remove a facility if necessary as a result of a construction project. The order must give the utility a reasonable time for compliance. If the facility is not changed, it may be disposed of by the municipality. The cost of the change shall be allocated as provided in the permit, franchise, or agreement with the municipality. If no allocation has been agreed to, the cost is borne by the municipality only if the facility has been placed in a municipal right-of-way under a valid easement or permit that specifies the location of the facility and the facility is within two horizontal feet of that location, or if the facility was installed before the municipality had a system for granting easements or permits for utility facilities. A definition of "cost of change, relocation, or removal" is provided. The section applies to home rule and general law municipalities.

TBC:mkr
m9/110

House Bill 155

THIS LEGISLATION RELATES TO THE RELOCATION OF UTILITY FACILITIES OF A MUNICIPAL CONTRUCTION PROJECT. HOUSE BILL 155 WOULD CLARIFY THE LAWS AS TO WHEN THE UTILITY PAYS AND WHEN THE MUNICIPALTIY PAYS FOR THE RELOCATION OF UTILITIES. WHEN THERE IS A WRITTEN AGREEMENT ON THESE MATTERS BETWEEN PARTIES, THE AGREEMENT WOULD GOVERN.

WHEN THERE IS NOT A WRITTEN AGREEMENT ON ALLOCATION COSTS, THE MUNICIPALITY WOULD PAY IF THE UTILITY FACILITY IS PROPERLY LOCATED UNDER A PERMIT OF IF THE UTILITY FACILITY WAS INSTALLED BEFORE THE MUNICIPALITY PERMIT SYSTEM APPLIED TO THE CONSTRUCTION OF THE FACILITY IN QUESTION.

BY MAKING UTILITY RELOCATION COSTS A COST OF THE HIGHWAY PROJECT, THE LOCAL UTILITY RATE PAYER IS RELIEVED OF THIS BURDEN. WITHOUT THIS LEGISLATION, THE MUNICIPALITY CONSIDERS ALL OF THE BENEFITS OF A PROPOSED PROJECT, BUT IT ONLY CONSIDERS PART OF THE COST.

SEC. 1 OF HOUSE BILL 155 ADDS TO THE LIST OF HOME RULE LIMITATIONS A REFERENCE TO THE NEW SECTION ADDED IN THIS BILL.

SEC. 2 PERMITS A MUNICIPALITY TO ORDER A UTILITY TO CHANGE, RELOCATE, OR REMOVE A FACILITY IF NECESSARY AS A RESULT OF A CONSTRUCTION PROJECT. THE ORDER MUST GIVE THE UTILITY A REASONABLE TIME FOR COMPLIANCE. THE COST OF THE CHANGE SHALL BE ALLOCATED AS PROVIDED INTHE PERMIT, FRANCHISE OR AGREEMENT WITH THE MUNICIPALITY. IF NO ALLOCATION HAS BEEN AGREED TO THE COST IS BORNE BY THE MUNICIPLAITY ONLY IF THE FACITLY HAS BEEN PLACED IN A MUNICIPAL RIGHT-OF-WAY UNDER A VILID EASEMENT OFR PERMIT THAT SPECIFIES THE LOCATION OF THE FACILITY AND THE FACILITY IS WITHIN TWO HORIZONTAL FEET OF THAT LOCATION, OR IF THE FACILITY WAS INSTALLED BEFORE THE MUNICIPALITY HAD A SYSTEM FOR GRANTING EASEMENTS OR PERMITS FOR UTILITY FACILITIES. A DEFINAITION OF "COST OF CHANGE, RELOCATION, OR REMOVAL" IS PROVIDED. THE SECTION APPLIES TO HOME RULE AND GENERAL LAW MUNICIPALITIES.

BILL WORKSHEET

@ HB 155

Bill #: HB 155
Date Sched.: HCRA Committee, Monday, Mar. 9, 1987
Title: "An Act relating to the change, relocation, or removal of utility facilities incident to the construction of road or other projects by a municipality"
Sponsors: Rep. Cato

Info Attached: Copy of Bill
Fiscal Note
Existing statutes
Sectional analysis
Position paper from the Dept. of Comm. & Reg. Affairs

Sponsor's Briefing, Intent/purpose:
I have nothing to add here to what you probably have already heard from Ken Johnson and Sharon Macklin.

Effect of Bill:
Section 1. Limitation of Home Rule Powers.
- Adds another limitation to the powers of a home rule municipality. Relocation of utility facilities.

Section 2. Relocation of Utility Facilities
- subsection (a) provides for the change, relocation, or removal of utility facilities under the jurisdiction of municipal rights of way.
  - The utility is responsible for effecting the change
  - A "change order" shall provide for a period of compliance.
- subsection (b) requires that the cost of the change shall be borne by the party specified in the utility permit. If no specific cost allocation has been specified the municipality would bear the cost:
  - if a valid easement for the location of the facility exists, or
  - if the facility was in place before an easement permitting system existed
- this law applies to both Home Rule and general law municipalities.

Fiscal Impact:
0 (Zero)

Proponents:
Every utility in the state.

Opponents:
None coming out of the bushes

Analysis of Bill's effect, by staff:
This bill enacts for municipalities provisions already governing federal and state liabilities incident to construction. Generally speaking, the bill places the burden of all costs relating to movement of utilities on the entity requesting the movement.

March 3, 1987

Representative Bette Cato
Pouch V
Juneau, AK 99811

Dear Representative Cato:

Thank you for introducing HB 155.

In regard to the relocation of utility facilities incident to a municipal construction project, this legislation would clarify the law as to when the utility pays and when the municipality pays. If there is a written agreement on these matters between the parties, that agreement would govern. If there is not a written agreement on allocation of costs, the municipality would pay if the utility facility is properly located under a permit or if the utility facility was installed before the municipality permit system applied to the construction of the facility in question in question.

The effect of all this is to resolve a long-standing dispute by protecting the utility investment in existing facilities. It will require municipalities in some cases to include utility relocation costs in the cost of municipal construction projects which would otherwise be in dispute between the parties.

By making these utility relocation costs a part of the cost of the highway project, the local utility rate payer is relieved of this burden. In most cases a State or federal grant is the funding source for the road project. In those cases, these relocation costs would be transferred to the state or federal government.

In some cases the expense will be assumed by the municiaplity. When this expense is transferred from the local utility rate payer to the local municipal taxpayer, there is no net change for residents who are in both roles. However, a utility's consumers and the municipality's taxpayers are not always the same people. Fairness requires that if a municipal project causes the cost of relocating

MEMORANDUM

TO: Representative Henry Springer, Chairman
Members of House Community & Regional Affairs Committee

FROM: Scott A. Burgess, Executive Director

SUBJECT: HB 155 - Relocation of Utilities

The Alaska Municipal League is opposed to HB 155. The AML has long been opposed to legislative proposals to shift the cost of relocating utilities to municipalities as outlined in the 1987 Policy Statement. Part VI. UTILITIES, A. State Regulation, 3. Utility Relocation Costs on page 17 states "The League opposes any effort to shift to municipalities the cost of all non-municipal, utility relocation within existing rights-of-way associated with municipal street work."

I would respectfully request that the Committee hold HB 155 until I am able to present the AML's position. Due to prior commitments and having just returned from a National League of Cities meeting in Washington, D.C., I am unable to appear before the Committee today, and have had insufficient time to review the current legislation which appears to be similar to past legislation which the AML has opposed for good reasons.

I have attached sample copies of testimony on a similar piece of legislation, SB 67, introduced in the 13th Alaska State Legislature. I respect AML opposition to HB 155 and my request to delay Committee action to give me sufficient time to assess the legislation and its impacts on our members for your information prior to Committee action.

Re: SB67 and HB244

Dear Don:

As you may recall, I testified at a Community and Regional Affairs hearing last Friday via a teleconference from Anchorage. I explained that the Municipality of Anchorage objects to SB67 and HB244. The purpose of this letter is to set forth in a little more detail the Municipality's objections and to ask you to share this information with the other members of the Community and Regional Affairs Committee.

I would like to dispel the notion that the issue involved here is "The cost causer should be the cost payer". This is really an inaccurate statement. The real issue is whether the taxpayers as a whole or whether the rate-payers should bear utility relocation costs. The Municipality's philosophy and practice since 1969 has been that the rate-payer (i.e., the utility company) should pay for utility relocation costs in connection with the road improvement project in a public right-of-way. This rule follows the common law, case law, and the practice followed in the cities which the Municipality's Public Works Department recently surveyed regarding their approach to utility relocation costs. Let me explain these points in a little more detail.

Basically, a utility's use of a public right-of-way is free of charge. The only cost is a nominal permit fee. This permit lets the Municipality know that a utility is in the right-of-way

Dear Representative Cato:

Thank you for introducing HB 155.

In regard to the relocation of utility facilities incident to a municipal construction project, this legislation would clarify the law as to when the utility pays and when the municipality pays. If there is a written agreement on these matters between the parties, that agreement would govern. If there is not a written agreement on allocation of costs, the municipality would pay if the utility facility is properly located under a permit or if the utility facility was installed before the municipality permit system applied to the construction of the facility in question in question.

The effect of all this is to resolve a long-standing dispute by protecting the utility investment in existing facilities. It will require municipalities in some cases to include utility relocation costs in the cost of municipal construction projects which would otherwise be in dispute between the parties.

By making these utility relocation costs a part of the cost of the highway project, the local utility rate payer is relieved of this burden. In most cases a State or federal grant is the funding source for the road project. In those cases, these relocation costs would be transferred to the state or federal government.

In some cases the expense will be assumed by the municiaplity. When this expense is transferred from the local utility rate payer to the local municipal taxpayer, there is no net change for residents who are in both roles. However, a utility's consumers and the municipality's taxpayers are not always the same people. Fairness requires that if a municipal project causes the cost of relocating

utility facilities, then the municipality should be responsible for that cost. It is also important that all of the costs as well as all of the benefits of a proposed project be considered at the time a municipality decides to relocate or widen a highway. Without HB 155, the municipality considers all of the benefits of a proposed project, but it only considers a part of the cost.

Sincerely,

David Hutchens

As you may recall, I testified at a Community and Regional Affairs hearing last Friday via a teleconference from Anchorage. I explained that the Municipality of Anchorage objects to SB67 and HB244. The purpose of this letter is to set forth in a little more detail the Municipality's objections and to ask you to share this information with the other members of the Community and Regional Affairs Committee.

I would like to dispel the notion that the issue involved here is "The cost causer should be the cost payer". This is really an inaccurate statement. The real issue is whether the taxpayers as a whole or whether the rate-payers should bear utility relocation costs. The Municipality's philosophy and practice since 1969 has been that the rate-payer (i.e., the utility company) should pay for utility relocation costs in connection with the road improvement project in a public right-of-way. This rule follows the common law, case law, and the practice followed in the cities which the Municipality's Public Works Department recently surveyed regarding their approach to utility relocation costs. Let me explain these points in a little more detail.

Basically, a utility's use of a public right-of-way is free of charge. The only cost is a nominal permit fee. This permit lets the Municipality know that a utility is in the right-of-way

and where it is located. No other charges are assessed against the utility company for the use of the public right-of-way. This is in contrast to the situation found in the Municipality's telephone survey. The cities contacted told us that the utilities in their area had franchises and part of the franchise included a percentage payment of the gross revenues of the utility annually to the local government for the use of the right-of-way.

The Municipality, and formally the GAAB, did not want to impose an annual charge upon utility companies for the use of public rights-of-way. Instead, utility companies were expected to pay for any relocations that may be required because of the government's improvement of the right-of-way. In short, the primary purpose of the right-of-way was for road use and utilities were considered secondary users. Please keep in mind that the utilities all along have had the option of purchasing private easements for the placement of their facilities. They did not do this in many cases. Instead, they used the public right-of-way free of charge. Accordingly, if SB67 and HB 244 are passed and signed into law, there will be a significant impact on the Municipality's road construction budget. Because road improvements are a local priority, we may be forced to greatly increase the annual permit fees that are charged utilities for the use of our rights-of-way.

In those situations where a utility company has been able to establish some prior right; that is, a right that existed before the right-of-way was dedicated to public use or before the local government came into existence, then the Municipality has traditionally paid for relocation costs. In every other case, the utility has paid for such costs pursuant to our local ordinance. This pattern and practice, which the Municipality of Anchorage wants to continue withut interference by State statute, is the common law rule. As 12 McQuillan, Municipal Corporations, § 34.74a at page 183 states:

> The fundamental common-law right applicable to franchises in streets is that the utility company must relocate its facilities in public streets when changes are required by public necessity. Accordingly, it is

> generally held that the municipality may require a change in the location of pipes or other underground facilities of the grantee of a franchise, where public convenience or security require it, even at the grantee's own expense, and even in the face of a protest by a consumer. It makes no difference whether the surface or subsurface of streets is involved.

The cases are legion which support this proposition. In an early case, New York Tunnel Authority v. Consolidated Edison Company of New York, Inc., 295 N.Y. 467, 474, 68 N.E. 445, 448 (1946) the Court stated:

> Although authorized to lay its pipes in the public streets, the company takes the risk of their location and is bound to make such changes as the public convenience and security require, at its own cost and charge. (citations) All these cases are to the point, that these public service corporations maintain their rights in the streets, subject to reasonable regulation and control, and are bound to relocate their structures at their own expense whenever the public health, safety, or convenience require the change to be made.

And in the very recent case of Michigan Bell Tel. Company v. City of Detroit, 308 N.W.2d 608 (1981) the Court stated

> The dispute in the present case is a simple one. Defendant contends that its police powers permit it to require plaintiff to move its facilities from one street to another for the purpose of making way for a public improvement. Plaintiff, on the other hand, contends that because its easements are vested, it may not be required to relocate its facilities without reimbursement from defendant as would be the case in any condemnation proceeding. . . .
>
> On the facts before us then, we hold that the common-law rule requiring a utility to remove its facilities at its own expense where necessary to protect the public health or general welfare is applicable. At pages 610-611.

Another recent case is Mountain States Tel. & Tel. Company v. Boise, etc., 607 P.2d 1084 (1980) where the Court said:

> There is no taking of private property for public use in causing relocation of the utilities' facilities in anywise violative of the eminent domain provisions of Idaho Constitution Article I § 14, the injury sustained, if any, being damnum asque injuria, since "uncompensated obedience to a regulation enacted for the public safety under the police power of the state was not taking property without due compensation." . . . At page 1086.

As you can see, then, it is certainly the rule that when local governments improve their streets, utilities located in those streets must move at their own expense. These cases stand for the proposition that a local government, under its police power, has this authority. The Municipality of Anchorage can see no valid reason why this rule should be changed as the proposed SB67 and HB244 intend to do.

Furthermore, there is a real question with reference to another aspect of what we do here in Anchorage. This involves specific franchise agreements that we have with various utilities. Specifically, we have written agreements (i.e., franchises or permits) with several oil companies and a local cable television company. These specific agreements clearly set forth the obligation of these private companies to pay their own relocation costs. Again, the philosophy behind this is that these companies are using public rights-of-way free of charge. Please note also that in some of our existing franchise agreements, such as our pole attachment agreement with MultiVisions, their promise to pay relocation costs is part of the "basis of the bargain" which, if disturbed, not only poses Constitutional problems, but may require termination and a complete renegotiation.

The adoption of the proposed legislation poses a Constitutional problem with respect to our existing franchises. Article I, Section 15 of the Alaska Constitution provides:

> No law impairing the obligation of contracts, and no law making any irrevocable grant of special privileges shall

be passed. . . .

It is our position that SB67 and HB244 as presently written would be violative of this Constitutional provision because of our existing franchises.

Finally, it would appear that the Legislature should not be venturing into this field of control over local governments. The Municipality of Anchorage is a Home Rule municipality and believes that it has the authority and power to control this aspect of its business. We do own several utility companies ourselves and are perfectly capable of handling the situation with respect to our own utilities. The other private utilities that do business here in Anchorage really do not have a firm basis to request that this local government pay their tab when. in the first place, they began using public rights-of-way with the full knowledge that this method of doing business would require them to pay relocation costs when the Municipality exercised its police power. As has been emphasized in 12 McQuillan, Municipal Corporations § 34.74 at page 179:

> The grant by a municipality to a public service company of the right to use streets does not divest the municipality of its police power over the grantee in relation to its use of such streets. Indeed, a municipality cannot grant away or limit the police powers conferred upon it by the Legislature.

Accordingly, Don, I would request that you share the view of the Municipality, as set forth in this letter, with the other members of the Community and Regional Affairs Committee and with any other Committee which may consider this legislation. As far as the Municipality is concerned, this is an extremely important and far reaching issue and we respectfully request that SB 7 and HB244 be defeated. The Director of the Department of Public Works has already provided to your Committee a rather lengthy report of the telephone survey that was conducted last month. I believe that this survey conclusively establishes, along with the points raised in this letter, the validity of the Municipality's position.

If you have any further questions, or if the members of your Committee have any further questions with regard to the points that I have raised herein, I would be more than happy to address those concerns either over the telephone or in person.

As a personal note, I hope you and Betty are doing well these days.

Yours very truly,

RE: CSSB 67 Utility Relocation

Dear Representative Fuller,

Through the past few legislative sessions this bill SB 67 and now CSSB67 and others have been proposed to shift the burden onto the local government for utility relocation that was not installed with proper easements, installed outside easements, installed contrary to local rules and regulations and adinfinitum.

The City of Palmer in the past two years has undertaken over $1,750,000 in local street construction which included asphalt paving, curb, gutter and sidewalk in most instances.

It is the City of Palmer's policy that a residential street is twenty eight (28) feet wide back of curb to back of curb which is assessed to the abutting property owners and benefiting property owners. The cost distribution is made using the zone method similar to the City of Anchorage. From our master plan, any street which is designated collector or arterial and is upgraded to a forty-four (44) foot wide street back of curb to back of curb plus a four (4) foot sidewalk on each side, the City bears the additional cost.

During the course of construction, we have run into buried cables which have meandered through the right of way varying up to eighteen (18) feet from the property line. This was on North Alaska Street for which the City was billed $19,329.06. On North Gulkana Street, the cables were buried up to ten feet from the property line for which we were billed $22,248.45 or an additional seven (7%) percent and seven and four tenths (7.4%) percent respectively to each project.

To regress for a bit, the City of Palmer had and still has its ordinances that require utility companies to one, provide plans annually of the system layout; two, placement is to be one (1) foot off the property line and three, have a franchise with the City for the use of the right of way. Presently, Matanuska Electric Association has a non-exclusive franchise which was renewed in 1974 when the original franchise expired. Matanuska Telephone Association has chosen to this point not to enter into a non-exclusive franchise with the City of Palmer. (A sample copy is enclosed). Yet have continued to bury cable prior to 1982 without regard to local ordinances or charter provisions.

March 5, 1984

Senator Richard Eliason
Pouch V
Juneau, Alaska 99811

Dear Senator Eliason;

You recently received a letter from Dave Palmer, City Administrator of Craig, regarding House CS for CS for Senate Bill 67 (L&C). In it he discusses some of the serious problems connected with this new version of the utility relocation bill. I have discussed this matter with the Skagway City Council and they are strongly opposed to this bill as it stands.

Skagway's strongest objection is that this bill negates existing mutually-agreeable relocation contracts. Last year for instance, the City of Skagway finally signed a francise agreement with Alaska Power & Telephone Company regarding right-of-way usage. This concluded a year of heated arguments regarding, among other things, quality of service, possible condemnation, and power pole relocation. The two final points of contention were the term of the agreement and the cost of utility relocation as a consequence of public construction. The final result was a twenty year francise in return for Alaska Power & Telephone Company's agreement to pay all relocation costs. If the current House version of SB67 passes then the City would be saddled with a 20 year francise which no longer contains the major provision fought for and won by the City of Skagway

The City Council has consequently asked me to write you on this matter and request that you vigorously oppose passage of any version of this bill that does not allow municipalities and utilities to mutually agree upon allocation of relocation expenses.

Sincerely,

Skip Elliott

Senator Dick Eliason
Pouch V
Juneau, Alaska 99811

Dear Dick:

I am writing with comments on what's left of SB67 - now House CS for CS for SB 67 (L&C).

I have an objection to the bill on public policy issues as well as technical objections. Policy first.

A utility that is a private, for profit enterprise (like AP&T) uses the public Rights of Way in the exercise of their business. The public is entitled to compensation for such private use of public property. The only compensation requested of AP&T has been that their utilities "be located at such places as will not unreasonably interfere with travel or public use of such streets..." SB 67 now places burden on the municipality to move utilities when necessary for public good. In otherwords, the public is required to pay to move private facilities located within public Right of Way when the public Right of Way is needed for public uses. Use of the public Right of Way by a private company is not a right and such use should not become a burden on the very same entity that grants permission to use the Right of Way.

To the bill:

1. If the intent of the bill is to allow relocation costs to be part of grant funding, it should just say so. There is no definition of "highway construction" but "highway" is defined in AS 19.45.001(8) and it includes everything from trails to culverts. In Craig, any action in the Right of Way, culvert installation, driveways, retaining walls and the like, would be "highway construction". I'd like to see minor projects excluded. Say, define "highway construction" as a grant funded project exceeding a value of $250,000.00. This would avoid small, day to day relocation expenses for guy wires and individual poles.

CITY OF KENAI

Honorable Mitch Abood
Representative, State of Alaska
Pouch V
Juneau, Alaska 99801

Dear Representative Abood:

I want to take this opportunity to congratulate you and thank you on behalf of the City of Kenai for your vote on SB 67 which is typically referred to as the Utility Relocation Bill.

On the basis of your "no" vote and the "no" votes of 26 other members of the Alaska House of Representatives, you have prevented legislation that would have cost local communities millions of dollars over the next few years, and at the same time, permitted additional construction throughout the municipalities of the State of Alaska that might not have taken place had this bill not been defeated.

The municipalities' main concerns with this legislation was that the utilities are provided easements by the municipalities at no cost and in most cases knowing full well that municipalities (providing money is available) will be upgrading and improving their road systems, and therefore, should be aware of the possible costs of having to relocate. The second major concern is that if the State forces local government to also absorb the costs for moving the "freebie" utility lines which are in municipalities' easements or right-of-way at the sufferance of the cities, this additional cost might persuade many municipalities to forego many road improvement projects which are sorely need in almost every community in the State of Alaska.

To my knowledge, I know of no elected local public officials or appointed local public officials who supported SB 67 in the first place. The only source of support that this bill had was from the utilities themselves and from the paid lobbyists that the utilities hire in order to accomplish their legislative goals.

Re: SB 67 - Utility Relocation Costs

The League opposes SB 67, as introduced, relating to the relocation of utility facilities incident to the construction of road or highway projects by a municipality.

The League opposes any effort to shift to municipalities the cost of all non-municipal utility relocation within existing rights-of-way associated with municipal street work.

Municipalities are already facing decreased revenues from reductions in Municipal Assistance and State Revenue Sharing Programs. The additional burden of paying utility relocation costs could only come from an increase in property taxes, unless the municipality owned the utility and could pass the cost on to the ratepayers directly. The problem is further exacerbated in municipalities with limited road powers. The cost of relocating utilities would reduce the amount of money available to the road service districts for road construction and maintenance. Road service districts rely heavily on state funds and their ability to levy taxes is limited.

Re: SB 67 - Utility Relocation Costs

Municipalities oppose SB 67 because the issue is a local one and should be resolved at the local level. This bill would amend Title 29, Chapter 25 - Protection and Use of State Highways and Roads (emphasis added). The changes in SB 67, however, don't relate to state roads; they deal with local roads.

It is easy to understand why there is a provision in law for the state to pay the utility relocation costs since 95% of the funding is paid by the federal government. In municipal road projects, however, there is no way to shift 95% of the costs to a non-resident third party. The costs are paid by the local taxpayer unless the municipality receives a specific state grant for a specific project.

Since cost figures vary widely depending on the circumstances of each road project, I was not able to generate any average municipal cost per mile figures, but I do have general comments from several municipalities.

City of Palmer - Manager David Soulak estimates the provisions of SB 67, without section 5, would cause a 5% to 15% increase on three road projects currently being planned. In many cases, utilities are not where they're supposed to be. He doesn't think that municipalities should have to pay for utility mistakes, but does not oppose the municipality paying to relocate the utility if it is put in according to a permit.

Matanuska-Susitna Borough - Manager Gary Thurlow basically agrees with Soulak.

City and Borough of Sitka - Administrator Rocky Gutierrez believes that municipalities shouldn't be in state statutes except in Title 29. Sitka has worked out an agreement with the non-municipal utilities.

City of Kodiak - Manager Sam Gesko opposes section 3 of the bill, making the relocation costs a municipal responsibility.

City of Fairbanks - Manager Wally Droz says there would be no effect on

the City of Fairbanks because their policy is to pay relocation costs, although the utility pays for any upgrades.

Fairbanks North Star Borough - Public Works Director Don Moore reports that current borough practice is for the utility to pay relocation costs so shifting the cost to municipalities would cut down on the amount of road work that could be done with the available money.

City and Borough of Juneau - Public Works Director George Porter says that cost allocations are decided on a case by case basis, depending on whether the utility is where it was supposed to be, the age of the line, etc.

City of Ketchikan - City Manager Jim Van Altvorst estimates that the bill would cost the city an estimated $50,000 this year.

Municipality of Anchorage - Public Works Director Paul Diener believes that this is a local issue. Anchorage has a new ordinance in the works that would require the municipality to pay the relocation costs if the utility has a permit and is at the location specified in the permit; in other cases, the utility would be required to pay.

City of Kenai - Paying relocation costs would cut down the amount of road work the city could do. Attorney Tim Rogers points out that common law indicates that "Rights in streets or highways....are at all times held in subordination to the superior rights of the public".

A. Passage of the draft will require this BRU to revise and reprint all tax forms related to motor fuel tax. These forms include the Motor Fuel Tax Return, Motor Fuel Reseller Claim for Refund, Motor Fuel Adjustment Report and the Statute and Regulations Pamphlet. Costs to revise and print these forms is approximately $5.0.

B. The Department will be required to write regulations providng rules for the transition period. It is likely that without regulations large quantities of fuel may be taxed at the lower rate of eight cents. Public notice of the regulations and holding hearings will approximate $2.5.

Continuation for Fiscal Note Analysis

Bill: _____

Analysis:

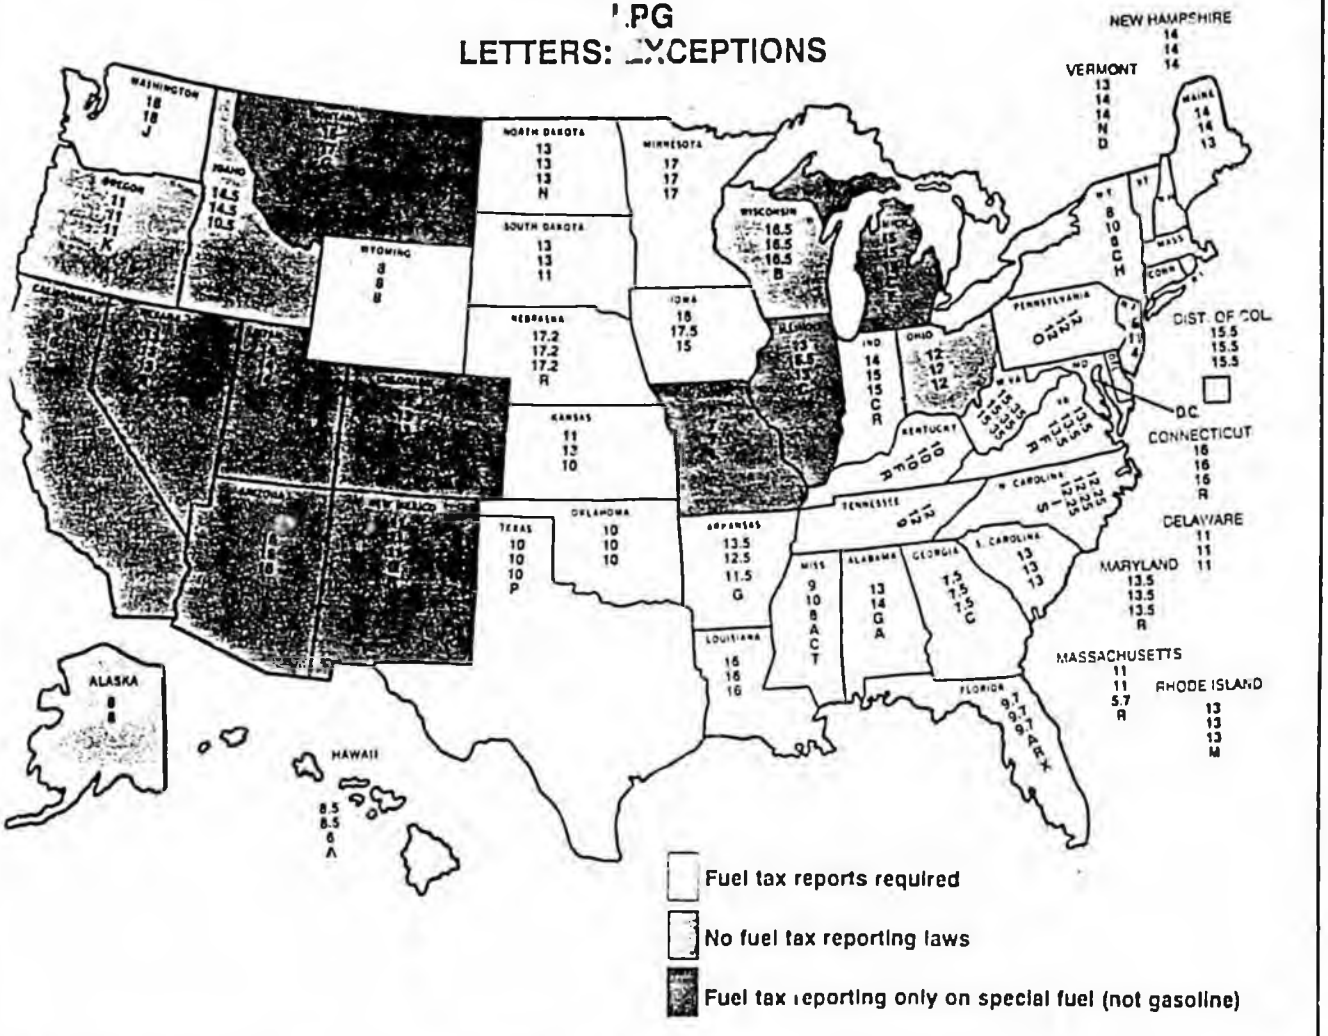
This legislation raises the tax on motor fuel (gasoline and diesel) from $.08/gallon to $.16/gallon. Taxes on marine and aviation fuel uses remain unchanged. The refund for off-highway use (43.40.030) remains at $.06/gallon which raises the rate for this use from $.02 to $.10/gallon. This analysis assumes an effective date of July 1, 1987 (FY88).

FY 86 is used as a starting point for this analysis as this is the last full year for which data on fuel distributions, refunds and credits is available. These assumptions are made:

1. The overall level of economic activity in Alaska will probably decline over the next several years. This note assumes these declines in fuel gallonage (taxable distributions) from the FY86 base year: FY87 (-2%), FY88 (-3%), FY89 (-3%), FY90 (-1%), FY91 (-1%) and FY92 (-0%).

2. Although fuel prices have fallen since the FY86 base period the recent increases in crude oil prices,if maintained,will increase future prices for gasoline and diesel. This analysis uses a price before additional tax of $1.20/gallon for diesel and $1.15/gallon for gasoline to estimate the effects of the tax-induced price increase. Price elasticities from national studies indicate that the price increase due to the additional tax will decrease the quantity of fuel consumed between 4 and 5 percent. This study uses the 5 percent figure to adjust gallonages under the proposed legislation.

FUEL TAXES IN CENTS-PER-GALLON
GASOLINE
DIESEL
LPG
LETTERS: EXCEPTIONS



Federal diesel fuel tax of 15¢ a gallon remained unchanged in 1985. Twelve states' gasoline taxes were increased by: Ark., 4.5¢; Ariz., 4¢; Ia., 3¢; Ind., 2.9¢; Neb., 2.3¢; Tenn. and Wash., 2¢; Conn., Nev., Okla. and Ore., 1¢; Wisc., .5¢. Wyo. enacted an 8¢ tax on diesel fuel. And diesel fuel taxes in 13 other states were increased by: Ariz., 4¢; Ind., 3.9¢; Ark., 3.5¢; Ia. and N.J., 3¢; Neb., 2.3¢; Wash., 2¢; Conn., Ill., Nev., Okla. and Ore., 1¢; Wisc., .5¢. Wyo. also established an 8¢ LPG tax. In 11 states, LPG fuel taxes were increased by: Ark., 4.5¢; Ariz. and Ia., 4¢; Ind., 3.9¢; Neb., 2.3¢; Conn., Ill., Nev., Okla. and Ore., 1¢; Wisc., .5¢. No federal fuel tax increases in 1986 are anticipated. However, according to Highway Users Federation, 26 states are expected to raise motor fuel taxes in 1986.

In the Key to Exceptions listed on this page, note that variable taxes (R) are recomputed at least annually, based on an indicator such as the consumer price index or a percentage of the wholesale price of fuel.

Since the taxes noted are subject to revision, contact the appropriate state office for the most current information.

Key To Exceptions

A – city/county taxes additional
B – reporting form required if fuel not purchased in state
C – sales tax additional
D – diesel fuel sales tax additional
E – except for 100 + passenger, regularly scheduled, in-state route buses
F – surtax on any vehicle with 3 or more axles (2% in Ky., 2¢ per gallon in Va.)
G – LPG fueled vehicles may pay an annual flat rate
H – some refunds for taxicabs and buses
I – city transit buses refunded 11¢ per gallon
J – annual license fee based on vehicle tonnage imposed in lieu of LPG tax
K – vehicles (except gasoline) subject to mileage tax are exempt from fuel tax
L – decal fee if under 18,000-lb GVW for Missouri-based vehicles
M – 2% excise tax on distributors of motor fuels
N – non-diesel fuel license
O – gross receipts tax
P – decal fee
R – variable tax
S – $10 per vehicle with 3 axles or more
T – diesel fuel sales tax additional 6% of total selling price
X – decal fee covers local option and motor fuel tax

ANALYSIS: The bill increasing the motor fuel tax will not necessarily have an impact on DOT&PF. The revenue will be collected by the Department of Revenue and the appropriation of the proceeds of the revenue is a separate issue. We believe that the proceeds should be used to improve the maintenance and operations of the highways, roads and streets in Alaska.

Plans, Programs, and Budget

POTENTIAL APPROACHES TO A FUEL TAX INCREASE

Introduction

Alaska has not increased its tax on motor fuels used for highway purposes since 1961. Still taxed at 8¢ per gallon, this rate has gone from being among the highest in the nation to being one of the five lowest. There are many reasons for increasing what is generally considered to be a highway user fee; perhaps the most important being to increase the amount of revenues available to support DOT&PF expenditures on operations, maintenance and capital improvements for the state highway system.

Need

Although Alaska does not dedicate revenues from transportation user fees to transportation-related expenditures, it is still possible to compare revenues to these expenditures. The following figures (taken from Alaskan entries in a federal publication entitled Highway Statistics, 1985) tend to understate all potential uses of highway-related revenues, but they clearly point out the large shortfall between existing revenues and expenditures.

	(Dollars in millions)	
Revenues		
Motor Fuel Tax	22.6[A]	
Registration Fees/Driver Licenses	15.1	
Subtotal Revenues	37.7	
Collection Costs		
Motor Fuel Tax	0[B]	
Registration Fees/Driver Licenses	5.5	
TOTAL REVENUES MINUS COLLECTION COSTS	32.2	
Highway Related Expenditures - DOT&PF		
Maintenance & Operations		59.3[C]
Physical Maintenance		(24.6)[C]
Snow removal and sanding		(31.1)[C]
Traffic Control (signals)		(3.6)[C]
Obligation of Federal-Aid Apportionments		16.4[D]
State-funded capital projects		1.0[E]
Subtotal Expenditures- DOT&PF		75.7

Bond interest	13.4
Bond principal repayment	25.9
Traffic Law Enforcement (Troopers)	3.8
Weigh Station Operation	1.2
Municipal Revenue Sharing ($2375 per mile)	8.8
ROUGH TOTAL - 1985 HIGHWAY-RELATED EXPENDITURES	128.8
NET REVENUES (For comparison purposes)	32.2

Notes: [A] The slowdown in Alaska's economy has reduced both fuel consumption and fuel tax revenues- revenues are now at the $20 million level.
[B] $34,000 rounds to zero.
[C] Inflated by 30 percent to reflect overhead, administrative and materials costs not allocated to these categories.
[D] FY 88 Capital Budget
[E] Capital appropriations will occasionally be required to meet emergency and maintenance needs not qualifying for federal funding.

THE TOTAL EXPENDITURE FIGURE FOR 1985 IS FOUR TIMES THE AMOUNT OF REVENUES COLLECTED! Furthermore, the expenditure figure does not include any of the following:

(1) Other highway-related general fund expenditures of DOT&PF;
(2) General fund expenditures by other state agencies (for example, Division of Motor Vehicles estimates that state lease and data processing costs would add an <u>additional</u> $1.5 million to their budget);
(3) Increases in revenue sharing costs as municipalities proceed to maintain more miles of local roads.

<u>Justification</u>

One of the simplest methods of justifying a motor fuel tax increase is to compare Alaska's tax rate to that of other states. The following distribution of state gasoline tax rates indicates that an increase of 66% would be required to put Alaska on par with the average of tax rates in the other 49 states. A doubling of the current rate would put Alaska in the top twelve currently, although some states have already legislated increases that are yet to go into effect.

Lowest 7 ¢	Missouri
7.5 - 9 ¢	Seven states (including Alaska, New Jersey, New York and Wyoming @ 8 ¢)
9.7 - 12 ¢	Nine states
13 - 13.5 ¢	Ten states

14 - 15.75 ¢		Eleven states and the District of Columbia
16 ¢		Arizona, Iowa and Louisiana
17 ¢		Connecticut, Minnesota, Montana and Tennessee
17.5 ¢		Virginia and Wisconsin
18 ¢		Colorado and Washington
Highest	18.2 ¢	Nebraska

Sample of 50 states and the District of Columbia

Mean - 13.3 ¢
Median - 13.5 ¢
Mode - 13 ¢ (8 states)
Range - 11.2 ¢

Alternative Approaches to Raising the State Motor Fuel Tax

(A) Justify the increase based on the shortfall between revenues and expenditures. Increase the fuel tax to raise enough revenue to meet a politically identified level of funding support.

(B) Increase the fuel tax based on any of a number of objective considerations, such as increase in the Consumer Price Index, parity with other states , etc.

(C) Work with other agencies which could potentially spend highway-related revenues (Department of Public Safety, Department of Commerce and Economic Development, etc.) to develop a statewide plan for matching highway-related revenues with expenditures.

(D) Research and develop an Alaskan methodology for allocating highway costs to an Alaskan structure of existing and potential highway user fees.

(E) Pursue a fuel tax increase as part of a broader revenue-raising effort. Consider increases in the aviation and marine motor fuel taxes at the same time.

Additional Information

Two-page summaries of successful efforts to raise the gas tax in Oregon and Washington are attached. More backup information is available upon request.

COWPER ADMINISTRATION - DOT&PF
FY'88 OPERATING BUDGET PROPOSAL

A. Contingent upon passage of the increased motor fuel tax proposal and implementation of the user fee proposal for the Dalton Highway, an increment of $20 million and another $3.5 to $4 million in general fund transfer will be made available for the general FY'88 operating budget for the Department of Transportation and Public Facilities. These funds will be allocated as follows: (1) $18.5 to $19 million for highways and aviation maintenance and operations (M&O) and (2) $5 million for the Alaska Marine Highway System (AMHS).

B. Of this total, a fiscal note for $20 million will be proposed to accompany the motor fuel tax increase of 8 cents. This amount is equivalent to the estimated revenue that will be generated from the fuel tax increase for highway use. The use of a fiscal note is proposed instead of a budget amendment to clarify the relationship between the increased spending authorization and the increased revenue generated by the tax.

C. Another $3.5 to $4 million in general funds will be made available as a result of proceeding with funding FY'88 Dalton Highway maintenance through user fees. Approximately three months of the FY'88 costs will still be covered with general funds dollars to allow sufficient time to seek funding agreements with affected oil companies, or if unsuccessful, to implement direct user fees through regulations. Budget amendments will be submitted which allocate the "released" general funds to the M&O consistent with the numbers outlined in "A" above.

D. The additional $18.5 to $19 million in funds for the highways and aviation M&O components will allow the continued maintenance of Category II and III roads during FY'88, and allow an improvement in services for all of these activities in FY'88 as compared to the current year. The increased funding will bring the total general funds for the highways and aviation M&O components to an amount nearer the FY'87 Authorized levels.

The increased funding will bring the total general funds for the highways and aviation M&O components to an amount nearer the FY'87 Authorized levels.

E. The Administration still wishes to pursue a program for phased transfer of road responsibilities, and will continue working to prepare a proposal during the interim. As part of this effort, we anticipate receiving input and assistance on program development from the Senate and House Transportation Committees and an Advisory Group or Task Force of affected local officials. We will probably recommend a small amount of funding be used from the $20 million in fuel tax increase to cover costs to develop this program. An additional element will be ensuring the department has authority to pursue transfer agreements during FY'88 if local communities so desire.

F. The $5 million in funding for the AMHS will restore 50% of the FY'88 operations decrement, and could provide for the normal operation of the MV Bartlett and Aurora, as well as fund approximately three additional months (for a total of 7) for the MV Taku. Alternative operating plans are still being analyzed to determine the optimum plan for maximizing service to Alaskans. Other savings to restore even more service may still be possible through revenue generation and/or cost reductions. Additional user fee authority may be requested to cover this possibility.

A HOME RULE CITY

March 23, 1987

MAR 2 8 1987

The Honorable Jalmar Kerttula
Senator
State of Alaska
Box V
Juneau, Alaska 99811

RE: HB 156, An Act Increasing the Motor Fuel Tax

Dear Senator Kerttula,

I have reviewed the proposed legislation in HB 156, An Act Increasing the Motor Fuel Tax.

The City of Palmer is unalterably opposed to this piece of legislation since all the funds generated by the increased motor fuel tax will be earmarked for the State of Alaska's General Fund as outlined in 43.40.010 of the Alaska State Statutes.

With the present Department of Transportation and Public Facilities proposal to have all municipalities and boroughs maintain state highways within their jurisdiction, there is no indication of any of the newly generated funds being allocated to the municipalities.

In the past, local political entities received Local Service Roads and Trails funds to assist in street and trails improvements. Since 1985, these funds have been curtailed.

There has been no justification as to why the motor fuel tax has to be increased. The need for upgrading as well as maintenance of the road system is needed, we will agree. However, the allocation of the funds to a single department for overall spending on a variety of functions rather than the intended use of highway construction and maintenance leaves a lot to be desired. The Department of Transportation and Public Facilities functions are not limited to only highways, but also various public works projects, such as buildings, which also causes concern for the expenditure of motor fuel tax funds.

We ask that this hastily drafted bill be tabled until further accountability of the Department of Transportation and Public Facilities is available with regard to the expenditures of funds, namely the Motor Fuel Tax monies.

Further, we feel that a permanent equitable entitlement be made to the political subdivisions who have road powers and exercise them, if this legislation is to be enacted.

Should you have any questions, please contact me.

Yours truly,

David L. Soulak

GOVERNING

MOTOR FUEL TAX

November 1984

04-548

PRINTED BY ALASKA LITHO, INC.

(b) Bulk sales of fuel to a person who uses a common storage tank servicing both taxable and nontaxable uses, except bulk sales of jet fuel to a person who flies directly from the state to a foreign country, are subject to the motor fuel tax under AS 43.40.010 - 43.40.100, but the portion actually used for nontaxable purposes is eligible for a tax refund upon application to the department. A dealer who makes bulk sales of motor fuel shall collect and remit the tax in accordance with this chapter, except that if the sales is a sale of jet fuel to a person who flies directly from the state to a foreign country, the tax may not be collected. However, if a portion of that jet fuel is used on a foreign flight which includes a stop or stops in this state or in another state, the user shall file a return as required by 15 AAC 40.010 and remit the amount of tax due for the jet fuel actually consumed over Alaska.

ARTICLE 8.
(Reserved)

ARTICLE 9
GENERAL PROVISIONS

Section
900. Definition

15 AAC 40.900. Definitions. In this chapter

(1) "charitable institution" means an organization that is exempt from taxation under Section 501(c)(3) of the Internal Revenue Code;

(2) "dealer" means a person who sells or otherwise transfers in this state motor fuel upon which the taxes imposed by AS 43.40 have not been paid;

(3) "department" means the Department of Revenue;

(4) "fuel reseller" means a person who sells or otherwise transfers in this state fuel upon which the taxes imposed by AS 43.40 have been paid;

(5) "shrinkage" means loss of volume as a result of temperature changes;

(6) "user" means a person consuming or using motor fuel who purchases the fuel out of state or ships it into the state for personal use in the state, who manufactures the fuel in the state, or who purchases or receives in the state fuel that is not taxed at the time of purchase or receipt or is taxed at a rate that is less than the rate prescribed by AS 43.40.010;

(7) "timely filed" means received by the department or postmarked on or before the last day of the month following the month motor fuel is sold, transferred, or used;

(8) "watercraft" means a ship, boat, vessel, or other structure that is capable of being moved in or on water either under its own propulsion or propelled by another craft, including a floating fish-processor, a transportation barge, a drilling ship, and a semi-submersible drilling rig;

(9) "commercial buildings and facilities" means all buildings and facilities other than single and multiple unit private dwellings and mobile homes but does not include watercraft;

(10) "person" means an individual, firm, partnership, joint venture, government or military agency, association, corporation, estate trust, business trust, receiver, or any group or combination acting as a unit. Chapter 40. Motor Fuel Tax.

Section
10. Tax on transfers or consumption of motor fuel and expenditure of proceeds
30. Refund for nonhighway use
35. Other refunds and credits
50. Refund claim by affidavit
60. Separate invoices
70. Refund warrants
80. Examination of books and records
85. Preservation of books and records
100. Definitions

Collateral references. — Am. Jur. 2d, State and Local Taxation, §§ 616 — 634; 53 Am. Jur. 2d, Licenses, §§ 30, 46 — 58.

State tax on or in respect of goods shipped in interstate commerce to consignee for sale on consignor's account without previous sale or order for purchase, 4 ALR2d 244.

Loading or unloading interstate freight in performance of obligation resting upon one other than interstate carrier as interstate commerce as regards local taxation, 10 ALR2d 651.

State taxation of motor carriers as affected by commerce clause, 17 ALR2d 421.

Power of legislature to remit, release, or compromise tax claim, 28 ALR2d 1425.

Financial hardship or inability to pay taxes as rendering inapplicable statutes denying remedy by injunction against assessment or collection of tax, 65, ALR2d 550.

Sec. 43.40.010. Tax on transfers or consumption of motor fuel and expenditure of proceeds. (a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state except that

(1) the tax on aviation gasoline is four cents a gallon

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(b) There is levied a tax of eight cents a gallon on all motor fuel consumed by a user, except that

(1) the tax on aviation gasoline consumed is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(3) the tax on all aviation fuel other than gasoline is two and one-half cents a gallon.

(c) Every dealer who sells or otherwise tranfers motor fuel in the state shall collect the tax at the time of sale, and remit the total tax collected during each calendar month of each year to the department by the last day of each succeeding month. Every user shall likewise remit the tax accrued on motor fuel actually used by the user during each month. If the monthly tax return is timely filed, one percent of the total monthly tax due, limited to a maximum of $100, may be deducted and retained to cover the expense of accounting and filing the monthly tax return. At the time the remittance is made, each dealer or user shall submit a statement to the department showing all fuel which the dealer or user has distributed or used during the month.

(d) *[Repealed, § 3 ch 166 SLA 1975.]*

(e) Sixty per cent of the proceeds of the revenue from

the taxes on aviation fuel, excluding the amount determined to have been spent by the state in its collection, shall be refunded to a municipality owning and operating or leasing and operating an airport in the proportion that the revenue was collected at the municipal airport. All other proceeds of the taxes on aviation fuel shall be paid into a special aviation fuel tax account in the state general fund. The legislature may appropriate funds from this account for aviation facilities.

(f) The proceeds from the revenue from the tax on motor fuel used in boats and watercraft of all descriptions shall be deposited in a special watercraft fuel tax account in the general fund. The legislature may appropriate from this account for water and harbor facilities.

(g) The proceeds of the revenue from the tax on all motor fuels, except as provided in (e), (f) and (j) of this section, shall be deposited in a special highway fuel tax account in the state general fund. The legislature may appropriate funds from it for expenditure by the Department of Transportation and Public Facilities directly or as matched with available federal-aid highway money for maintenance of highways, construction of highway projects and ferries included in the program provided for in AS 19.10.150, including approaches, appurtenances and related facilities and acquisition of rights-of-way or easements, and other highway costs including surveys, administration, and related matters. All departments of the state government authorized to spend funds collected from taxes imposed by this chapter shall perform when feasible, all construction or reconstruction projects by contract after the projects have been advertised for competitive bids, except that, when feasible, arrangements shall be made with political subdivisions to carry out the construction or reconstruction projects. If it is not feasible for the work to be performed by state engineering forces, the commissioner of transportation and public facilities may contract on a professional basis with private engineering firms for road design, bridge design, and services in connection with surveys. If more than one private engineering firm is available for the work the contracts shall be entered into on a negotiated basis.

(h) All motor fuel tax receipts shall be paid into the general fund and distributed to the proper accounts in the general fund. Valid motor fuel tax refund claims shall be paid from the highway fuel tax account in the general fund.

(i) Within 30 days after the legislature convenes the Department of Transportation and Public Facilities shall submit an annual budget covering anticipated revenues and their expenditure, for the consideration and approval by the legislature. The budget shall cover all money collected or anticipated to be collected under this chapter for the year following the adjournment of each regular session of the legislature.

(j) The proceeds from the tax on motor fuel used in snow vehicles and, unless a tax refund is applied for under AS 43.40.040, other internal combustion engines not used in or in conjunction with a motor vehicle licensed to

15 AAC 40.220. Recovery of Erroneous Refunds. The department will, in its discretion, recover any refund or portion of any refund which is erroneously made and any credit or portion of any credit which is erroneously allowed. (Eff. 7/19/82, Reg. 83).

15 AAC 40.230. Records. (a) A person filing a claim for a motor fuel tax refund must keep a complete record in gallons showing

(1) all motor fuel inventories on hand at the beginning and closing of the claim period;

(2) all motor fuel purchased or received, showing the name of the seller and the date of each purchase,

(3) all motor fuel transferred into the fuel supply tanks of an internal combustion engine that is used in or in conjunction with a motor vehicle licensed to be operated on public ways;

(4) all motor fuel transferred into the fuel supply tanks of an internal combustion engine that is not used in or in conjunction with a motor vehicle licensed to be operated on public ways, showing the purpose for which it is used; and

(5) all motor fuel used for exempt purposes under 15 AAC 40.020(b) with documentation of the specific purpose for which the fuel is used.

(b) A person claiming a motor fuel tax refund must preserve for three years from the date of filing a claim, books and records pertaining to all acquisitions and uses of motor fuel.

(c) Failure to maintain records required by (a) and (b) of this section for a period necessary to substantiate any claim filed for that period may be cause for denial of a refund or for recovery of a refund paid on a claim. (Eff. 7/19/82, Reg. 83; am 11/14/82, Reg. 84)

15 AAC 40.210. Requirements for Filing Claims for Refund of Motor Fuel Tax. (a) A claim for refund of motor fuel tax under 15 AAC 40.200 must include the following information for the period covered by the claim:

(1) a schedule indicating by type of fuel (e.g. gasoline, diesel, etc.), the following:

(A) total gallons of motor fuel purchased during the period;

(B) total gallons of motor fuel used during the period;

C) total gallons of fuel used for tax exempt purposes, as described in 15 AAC 40.020(b); and

(D) total gallons of motor fuel used that are eligible for refund, as described in 15 AAC 40.200;

(2) if fuel was used for tax-exempt purposes, a clear complete explanation of that use, including the category of exempt use under 15 AAC 40.020(b); and

(3) a schedule indicating by type of equipment, the gallons used that are eligible for refund.

(b) The first claim filed during each calendar year must include a list of the final user's equipment, including license and serial numbers.

(c) The original invoices issued to the final user at the time the motor fuel was purchased must be submitted to substantiate any claim for refund. Corrected invoices will be accepted only if the original incorrect invoice is also submitted. The department will, in its discretion, accept copies of original invoices if the refund applicant

(1) explains in writing why original invoices are not being submitted;

(2) obtains a statement from the vendor indicating that the copies are true copies showing invoice numbers, dates and amounts; and

(3) signs an affidavit on a form prescribed by the department certifying that no other refund has or will be claimed on the same motor fuel. (Eff. 7/19/82, Reg. 83; am 8/12/84, Reg. 91)

Authority: AS 43.05.080

As 43.40.060

be operated on public ways shall be deposited in a special nonpublic highway use account in the general fund. The legislature may appropriate from this account to the Department of Transportation and Public Facilities for trail staking and shelter construction and maintenance.

(k) The tax on the transfer or consumption of motor fuel provided for in this section does not apply to liquified petroleum gas.

(l) If a dealer has a reasonable belief at the time of sale or transfer that fuel that is sold or transferred is not to be used as motor fuel, the dealer need not collect the motor fuel tax. If the tax is not collected, the dealer shall obtain a certificate of use from the buyer or transferee stating that the fuel that has been or will be purchased or received is not intended for use as motor fuel. The department may not collect the motor fuel tax from a dealer for fuel for which a certificate of use has been properly obtained under this subsection. A certificate of use is not required for fuel for any domestic purpose in a single or multiple unit private dwelling, including motor homes, or for fuel which is at least 10 percent alcohol by volume. An annual certificate of use is required for all other exemptions listed under AS 43.40.100(2), except certificate of use needs under AS 43.40.100(2)(K) will be determined by the department. The dealer shall retain a copy of each certificate of use obtained under this subsection for examination or audit on request by the department. The form of a certificate of use may be prescribed by regulation adopted by the department. (§ 48-5-2 ACLA 1949; am § 1 ch 80 SLA 1951; am § ch 47 SLA 1955; am §§ 1, 2 ch 27 SLA 1957; am § 1 ch 134 SLA 1957; am § 1 art VI title II ch 152 SLA 1957; am § 2 art V title III ch 152 SLA 1957; am § 2 ch 124 SLA 1959; am §§ 1, 2 ch 20 SLA 1960; am § 1 ch 150 SLA 1960; am § 1 ch 110 SLA 1961; am § 1 ch 136 SLA 1961; am §§ 1 — 3 ch 131 SLA 1962; am § 1 ch 130 SLA 1968; am § 10 ch 143 SLA 1968; am §§ 1, 2 ch 216 SLA 1968; am §§ 1 — 3 ch 158 SLA 1970; am § 3 ch 58 SLA 1971; am §§ 1, 2 ch 124 SLA 1971; am §§ 2, 3, ch 125 SLA 1971; am §§ 1 — 3 ch 153 SLA 1972; am § 3 ch 166 SLA 1976; am §§ 1, 2 ch 116 SLA 1977; am § 4 ch 82 SLA 1982; am §§ 1, 2 ch 87 SLA 1983)

Cross references. — For civil penalty imposed for failure to file a return or report, or pay the full amount of a tax, or a portion or a deficiency of the tax, see AS 43.05.220.

Effect of amendments. — The 1982 amendment added subsection (l).

The 1983 amendment, in subsection (c), added the present third sentence and deleted "motor" preceding "fuel" in the last sentence, and in subsection (l), added the present fourth and fifth sentences.

OPINIONS OF ATTORNEY GENERAL

The purpose of the dedication of the taxes on motor fuels contained in subsection (g) of this section is public highways. 1959 Op. Att'y Gen., No. 9.

A proposed alteration going to the geographical area of expenditure rather than to the special purpose of a dedication, does not contravene the constitution. 1959 Op. Att'y Gen., No. 9.

The Civil Air Patrol is exempt from taxation under the Alaska Motor Fuel Oil Tax Act because it is an instrumentality of the federal government, but volunteer members of Civil Air Patrol are not exempt. 1961 Op. Att'y Gen., No. 26.

Sec. 43.40.020. Penalty for violation. *[Repealed, § 46 ch 113 SLA 1980. For criminal penalties, see AS 43.05.290.]*

Sec. 43.40.030. Refund for nonhighway use. (a) Except as specified in AS 43.40.010(j), a person who uses motor fuel to operate an internal combustion engine is entitled to a refund of six cents a gallon if

(1) the tax on the motor fuel has been paid;

(2) the motor fuel is not aviation fuel, or motor fuel used in or on watercraft; and

(3) the internal combustion engine is not used in or in conjunction with a motor vehicle licensed to be operated on public ways.

(b) The entire tax levied by this chapter shall be refunded to the purchaser on that part of the motor fuel used in a foreign country on which the tax has been paid when the fuel is sold and delivered in the state for nonhighway use in a foreign country.

(c) The department shall establish the necessary regulations and prescribe the appropriate forms to prove that the motor fuel is taken to and used in foreign countries.

(d) If a person obtains motor fuel on which the tax levied by this chapter has been paid and the motor fuel is exempt from the tax, the person is entitled to a refund of the tax paid. (§ 2 ch 47 SLA 1955; am § 3 ch 27 SLA 1957; am § 2 ch 136 SLA 1961; am § 4 ch 158 SLA 1970; am § 3 ch 124 SLA 1971; am § 4 ch 125 SLA 1971; am § 4 ch 116 SLA 1977; am §§ 35, 36 ch 113 SLA 1980; am § 5 ch 82 SLA 1982)

Effect of amendments. — The 1980 amendment substituted a reference to this chapter in subsection (b), and added subsection (d).

The 1982 amendment substituted "the tax has been" for "duty is" in subsection (b).

Sec. 43.40.035. Other refunds and credits. (a) A person who resells fuel on which the tax under AS 43.40.010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements of AS 43.40.010(l) have been fulfilled; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

(b) A reseller may elect, with the express written consent of the supplier of the reseller, to receive the credit or refund under this section directly from the supplier rather than by filing a claim for the credit or refund with signed in quadruplicate by the fuel reseller and by the supplier. The fuel reseller and the supplier must each file one copy of the election, with original signatures, with the department. The fuel reseller and the supplier must each retain a copy of the election, with original signatures, for audit review by the department. If an election is made under this section, it may not be revoked without the express written consent of the supplier.

(d) A claim for refund or credit must be filed within one year after the date of the sale as shown on the invoice issued by the claimant. Failure to file within the one-year period waives the right to a refund or credit. The claim must include the name, address, and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the basis for the refund or credit. A claim for refund must be supported by copies of the original invoices issued to the claimant and copies of certificates of use obtained under 15 AAC 40.030. A claimant qualifying as a charitable institution under 15 AAC 40.900(1) must submit with its initial claim for refund a copy of its Internal Revenue Service Determination Letter. A claimant that has had its tax-exempt status denied by the Internal Revenue Service is not eligible for a motor fuel tax refund as a charitable institution. (Eff. 4/8/82, Reg. 82; am 8/1/82, Reg. 83; am 7/19/82, Reg. 83; am 11/14/82, Reg. 84; am 8/12/84, Reg. 91)

ARTICLE 3. TAX REFUNDS AND CREDITS FOR FINAL USER

Section
200. Refunds on certain uses of motor fuel
210. Requirements for filing claims for refund of motor fuel tax
220. Recovery of erroneous refunds
230. Records

15 AAC 40.200. Refunds on Certain Uses of Motor Fuel. (a) If a person uses motor fuel in an internal combustion engine and the motor fuel tax of eight cents a gallon has been paid but that fuel is not used in, or in conjunction with, a licensed motor vehicle, as aviation fuel, or in or on watercraft, that person is entitled to a refund of six cents a gallon.

(b) If a person purchases fuel upon which the motor fuel tax has been paid and uses the fuel for tax-exempt purposes as described in 15 AAC 40.020(c), that person is entitled to a refund of the full amount of tax paid if that person has not signed a certificate of use stating that the fuel that was purchased was not intended for use as motor fuel.

(c) If a person purchases motor fuel upon which the amount of tax paid exceeds the tax imposed by AS

(4) all motor fuel sold, transferred or used during each month, the date of sale, transfer, or use, and the names of all purchasers and transferees;

(5) all nontaxable fuel sales or transfers made during each month; and

(6) all motor fuel inventories on hand at the end of each month.

(b) Each dealer, fuel reseller and user must keep a complete record showing all amounts received from a supplier or the department for exempt sales or transfers and for credits or refunds for taxes paid.

(c) Each dealer, fuel reseller and user must preserve for three years from the due date, or the date the return was filed, whichever is later, all books and records required under this section. (Eff. 7/19/82, Reg. 83; am 11/14/82, Reg. 84)

Authority: AS 43.05.080 AS 43.40.050

ARTICLE 2. TAX REFUNDS AND CREDITS FOR FUEL RESELLERS

Section
100. Refunds and credits on certain sales or transfers of motor fuel
110. (Repealed)

15 AAC 40.100. Refunds and Credits on Certain Sales or Transfers of Motor Fuel. (a) If a fuel reseller makes a sale or transfer of motor fuel that is exempt under 15 AAC 40.020(b) and upon which motor fuel tax has been previously paid, the fuel reseller is entitled to a refund equal to the amount of tax previously paid on the resold fuel from the department. To receive a refund the fuel reseller must have on file a certificate of use from the buyer if a certificate of use is required by 15 AAC 40.030.

(b) If a fuel reseller makes a sale or transfer of motor fuel upon which the motor fuel tax has been previously paid and the tax paid exceeds the tax due on resale, the fuel reseller is entitled to a refund equal to the amount of tax previously paid less the amount of tax prescribed by AS 43.40.010.

(c) Instead of claiming a refund directly from the department, a fuel reseller who sells or transfers fuel that is exempt or is subject to a lesser tax on resale than that previously paid may elect with the express written consent of the supplier, to receive the refund or credit directly from the supplier. A claim for refund or credit must be supported by copies of the original invoices issued by the reseller and copies of certificates of use obtained under 15 AAC 40.030. When an election is made under this section, the supplier may claim the credit or refund from the department by adjusting the motor fuel tax return accordingly. To be effective, an election under this section must be submitted on a form prescribed by the department and the department. When an election is properly made under this subsection, the supplier may claim the credit or refund from the department. To be effective an election under this subsection must be signed in quadruplicate by the reseller and by the supplier. The reseller and the supplier shall each file one copy of the election, with original signatures, with the department. The reseller and supplier shall each retain a copy of the election with original signatures for audit review by the department. If an election is made under this subsection, it may not be revoked without the express written consent of the supplier. (§ 6 ch 82 SLA 1982; am § 3 ch 87 SLA 1983)

Effect of amendments. — The 1983 amendment substituted "the requirements of AS 43.40.010(l) have been fulfilled" for "a certificate of use is acquired under AS 43.40.010(l)" in the first sentence of subsection (a).

Sec. 43.40.040. Applications and permits for refund. *[Repealed, § 45 ch 113 SLA 1980. For current law, see AS 43.40.050(a).]*

Sec. 43.40.050. Refund claim by affidavit. (a) A person who claims a refund under AS 43.40.030 shall present the claim for the refund to the commissioner of revenue by affidavit upon a form provided by the commissioner. The claim shall include the name, address and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the machinery or equipment in which the motor fuel for which the refund is claimed was used. The claim shall be accompanied by each invoice issued to the claimant at the time the motor fuel was purchased. The commissioner may require any additional information which the commissioner considers necessary for the administration of this subsection.

(b) A claim for refund under AS 43.40.030 or 43.40.035 shall be filed within one year from the date of the purchase of the motor fuel as indicated on the invoice, and failure to file within the one-year period is a waiver of the right to the refund. A claim is considered to be filed when the claim is mailed or personally presented to an office of the department.

(c) A reseller who claims a refund or credit under AS 43.40.035 shall present the refund claim to the department or to the supplier of that reseller by affidavit on a form provided by the department. The claim shall include the name, address, and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the reason for the refund or credit. The claim shall be supported by documentation required by the department. (§ 4 ch 47 SLA 1955; am § 1 ch 139 SLA 1960; am § 37 ch 113 SLA 1980; am §§ 7 — 9 ch 82 SLA 1982)

Effect of amendments. — The 1980 amendment in subsection (a), changed a reference to this chapter at the beginning and at the end of the subsection, substituted the present second sentence for the former material, which read: "with the information the commissioner requires", and substituted "was" for "is" preceding "purchase" at the

end of the present third sentence.

The 1982 amendment substituted "under AS 43.40.030" for "as provided in AS 43.40.010 — 43.40.100" and "the claim for the refund" for "his claim" in the first sentence of subsection (a), substituted "the commissioner" for "he" and "this subsection" for "AS 43.40.010 — 43.40.100" in the last sentence of subsection (a), inserted "under AS 43.40.030 or 43.40.035" in the first sentence of subsection (b), and added subsection (c).

Collateral references. — 53 C.J.S., Licenses, § 62.

Sec. 43.40.060. Separate invoices. The department may require the issuance of separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim. (§ 6 ch 47 SLA 1955)

Sec. 43.40.070. Refund warrants. Upon approval of a refund claim by the department, a warrant shall be drawn on the highway fuel tax account in the general fund in favor of the applicant in the amount of the claim. (§ 7 ch 47 SLA 1955; am § 5 ch 131 SLA 1962)

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the department may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The department may cancel the refund permit of the claimant relying upon a fraudulent invoice for a period of not more than one year.

(b) *[Repealed, § 46 ch 113 SLA 1980.]* (§ 5 ch 47 SLA 1955; am § 46 ch 113 SLA 1980)

Effect of amendments. — The 1980 amendment repealed subsection (b).

Sec. 43.40.085. Preservation of books and records. Dealers and users shall preserve for three years all books and records pertaining to sales, transfers, and uses of motor fuel which are taxed under this chapter. (§ 5 ch 158 SLA 1970)

Sec. 43.40.090. Criminal violation. *[Repealed, § 46 ch 113 SLA 1980.]*

Sec. 43.40.100. Definitions. In this chapter

(1) "dealer" means a person who sells or otherwise transfers in this state motor fuel upon which the taxes imposed by this chapter have not been paid;

(2) "motor fuel" means fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor; "motor fuel" does not include

(A) fuel consigned to foreign countries;

(B) fuel sold for use in jet propulsion aircraft operating in flights to foreign countries;

(C) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public;

(D) fuel used by nonprofit power associations or corporations for generating electric energy for resale;

15 AAC 40.050. Bonding Requirement for Qualified Dealer License. (a) An applicant for a qualified dealer license must file with the department a bond made payable to the department in an amount equal to twice the average monthly motor fuel tax remittance or in the amount of $5,000, whichever is greater. The department will, in its discretion, accept a cash deposit or a bank letter of credit in the appropriate amount in lieu of a bond.

(b) In lieu of the requirements of (a) of this section, an applicant for a qualified dealer license may file a sworn statement in affidavit form stating that the applicant owns real property in the state equal in value to at least twice the average monthly motor fuel tax remittance, on which the motor fuel tax may become a first lien, and describing the property and the fair market value of the applicant's interest in the property. (Eff. 7/19/82, Reg. 83)

Authority: AS 43.05.080
AS 43.40.100

15 AAC 40.060. Revocation of Qualified Dealer License. (a) The department will, in its discretion, revoke a license issued under 15 AAC 40.040 if a licensee fails to comply with the requirements of AS 43.40.010 — 43.40.100 or this chapter.

(b) If the department determines a license should be revoked for failure to comply with the requirements of AS 43.40.010 — 43.40.100 or this chapter it will give the licensee 30 days' notice of a proposed revocation. If the basis for revocation still exists on the 30th day, the department will, upon notice of revocation to the licensee, revoke the license, unless an appeal under (d) of this section has been timely filed by the licensee.

(c) When a license is revoked under this section, the licensee may not apply for a new license until 60 days after the date of revocation. The date of revocation is the date on which the notice of revocation is issued.

(d) A person may appeal a notice of proposed revocation to the department. The appeal must be submitted to the department in person or by mail within 10 days of the date of issuance of the notice of proposed revocation. The department will hold a formal hearing on the appeal as prescribed by 15 AAC 05.030. The hearing officer will issue a written decision, and, if appropriate, a notice of revocation will be issued by the department. (Eff. 7/19/82, Reg. 83; am 11/14/82, Reg. 84)

Authority: AS 43.05.080
AS 43.40.100
AS 43.40.240

15 AAC 40.070. Records. (a) Each dealer, fuel reseller and user must keep a complete record by gallons showing

(1) all motor fuel inventories on hand at the first of each month;

(2) all motor fuel refined during each month;

(3) all motor fuel purchased, received or produced during each month, showing the name of the seller and the date of each purchase or receipt;

15 AAC 40.030. Certificate Requirements for Certain Sales. (a) Except as provided by (b) of this section, a dealer or fuel reseller who sells or transfers fuel that is exempt under 15 AAC 40.020(b) shall obtain an annual certificate of use from the buyer or transferee at the time of the first sale in each calendar year stating that the fuel that is purchased or received is not intended for use as motor fuel subject to tax under AS 43.40.010. A dealer or fuel reseller may use a certificate-of-use form prescribed or approved by the department.

(b) A certificate of use under (a) of this section is not required in support of an exemption under 15 AAC 40.020(b)(4), (6), (13) (15), and (16).

(c) In support of an exemption under 15 AAC 40.020(b)(5), the annual certificate of use must itemize and show the location of each tank or other facility which stores fuel used exclusively for heating commercial buildings and facilities.

(d) If a purchaser certifies in writing on a certificate of use that the use of the fuel purchased is for an exempt use and the purchaser subsequently uses the fuel for taxable purposes, that purchaser is liable for payment of the motor fuel tax.

(e) A certificate of use under this section must be signed by the purchaser or his or her representative. The certificate remains in effect unless revoked by the department or in writing by the purchaser, dealer, or fuel reseller. The dealer, fuel reseller, or user must retain a copy of each certificate of use required under this section for three years. (Eff. 7/19/82, Reg. 83; am 11/14/82, Reg. 84; am 8/12/84, Reg. 91)

Authority: AS 43.05.080 AS 43.40.050
AS 43.40.010 AS 43.40.085
AS 43.40.035

15 AAC 40.040. Qualified Dealer License. (a) In order to purchase or sell tax-exempt fuel as a qualified dealer under 15 AAC 40.020(b)(15), a person must apply for and obtain a qualified dealer license from the department.

(b) A person is eligible for a qualified dealer license if that person

(1) refines, imports, manufactures, produces, or blends motor fuel; or

(2) sells fuel at least 20 percent of which is for resale or for residential heating purposes or for a combination of these purposes.

(c) A license issued under (a) of this section is in addition to any other license required by law.

(d) The department will not issue a license to a person described in (a) of this section if there is reasonable cause to believe that the applicant has wilfully withheld information necessary to determine eligibility for a license or if there is reasonable cause to believe that information submitted in the application is false or misleading. (Eff. 7/19/82, Reg. 83; am 11/14/82, Reg. 84; am 8/12/84, Reg. 91)

Authority: AS 43.05.080 AS 43.40.100

(E) fuel used by charitable institutions;

(F) fuel which is at least 10 percent alcohol by volume;

(G) fuel sold or transferred between qualified dealers;

(H) fuel sold to federal, state, and local government agencies for official use;

(I) fuel used in stationary power plants that generate electrical energy for private residential consumption;

(J) fuel used to heat private or commercial buildings or facilities;

(K) fuel used for other nontaxable purposes as prescribed by regulations adopted by the department; or

(L) fuel used in stationary power plants of 100 kw or less that generate electrical power for commercial enterprises not for resale;

(3) "qualified dealer" means a person who (A) refines, (B) imports, (C) manufactures, (D) produces, (E) compounds, or (F) wholesales motor fuel, who satisfies criteria for qualified dealers established by the department by regulation and who obtains a qualified dealer's license from the department;

(4) "user" means a person consuming or using motor fuel, who either

(A) purchases the fuel out of the state and ships it into the state for personal use in the state;

(B) manufactures the fuel in the state; or

(C) purchases or receives fuel in the state that is not taxed at the time of purchase or receipt or is taxed at a rate that is less than the rate prescribed by AS 43.40.010. (§ 48-5-1 ACLA 1949; am § 1 ch 56 SLA 1949; am § 9 ch 47 SLA 1955; am § 26 ch 70 SLA 1964; am §§ 6, 7 ch 158 SLA 1970; am § 1 ch 74 SLA 1972; am § 5 ch 116 SLA 1977; am § 10 ch 83 SLA 1980; am §§ 10 — 12 ch 82 SLA 1982; am § 4 ch 87 SLA 1983)

Revisor's notes. — Paragraphs (3) and (4) were renumbered in 1983 to achieve alphabetical order.

Effect of amendments. — The 1980 amendment added subparagraph (F) in paragraph (2).

The 1982 amendment, in paragraph (2), added subparagraphs (G)-(K); in paragraph (3) added the subparagraphs (A and (B) designations, substituted "personal use" for "his own use" and deleted "or" from the end, in subparagraph (A), added "or" to the end of subparagraph (B), and added subparagraph (C); and added paragraph (4).

The 1983 amendment added paragraph (2)(L).

Secs. 43.40.110 — 43.40.120. Additional tax levy on transfers or consumption of motor fuel. *[Repealed, § 8 ch 158 SLA 1970.]*

15 AAC 40.010. Tax Return Filing Requirements. Each dealer and each user must submit monthly to the department a return showing all motor fuel sold or transferred by the dealer or consumed by the user in the state, including all tax-exempt sales, transfers and uses. The return must be signed by the dealer or user under penalty of perjury and must show to whom fuel was sold or transferred and the reasons for any tax exemption. The return, supporting documentation, and the tax collected or accrued must be remitted by the last day of the month following the month the motor fuel was sold, transferred or used. One percent of the total monthly tax due and remitted, up to $100, may be deducted and retained if the return is timely filed. (Eff. 7/19/82, Reg. 83; am 8/12/84, Reg. 91)

Authority: AS 43.05.080
AS 40.40.010

15 AAC 40.020. Fuel Subject to Tax and Exemptions. (a) All motor fuel sold or transferred in the state or consumed by a user in the state is subject to the motor fuel tax under AS 43.40.010 — 43.40.100, unless exempted under (b) of this section. For purposes of AS 43.40.010 — 43.40.100 and this chapter, "motor fuel" is fuel used in an engine for the propulsion of a motor vehicle or aircraft, and fuel used in and on watercraft for any purpose, or in a stationary engine, machine or mechanical contrivance which is run by an internal combustion motor, including bulk or other transfers of fuel between producing, refining, importing or exporting companies and gasoline separated from a mixture of gasoline and alcohol that was not taxed in its combined state. All bulk sales of fuel to a person who uses a common storage tank servicing both taxable and nontaxable uses, except bulk sales of jet fuel to a person who exclusively flies directly from the state to a foreign country, are subject to the motor fuel tax under AS 43.40.010 — 43.40.100, but the portion actually used for nontaxable purposes is eligible for a tax refund upon application to the department.

(b) SEE BACK OF BOOKLET

(c) Fuel meeting the following requirements is exempt from the motor fuel tax under AS 43.40.010 — 43.40.100:

(1) fuel sold to, transferred to, or used by United States, Alaska, or local government agencies for official use, except motor fuel sold to a contractor who purchases motor fuel either for its own account or as the agent of a government agency for use in the performance of a contract with that agency;

(2) fuel sold to, transferred to, or used by auxiliary military units for official use, not including fuel purchased by a volunteer member of an auxiliary unit for use in a private vehicle;

(3) fuel used in stationary power plants operating as public utility plants and generating electrical energy for sale to the general public;

(4) fuel used exclusively for a domestic purpose in single or multiple unit private dwellings including mobile homes, but not including watercraft;

(5) fuel sold exclusively for use for heating commercial buildings or facilities;

(6) fuel used in stationary power plants that generate electrical energy exclusively for private residential consumption;

(7) fuel used in stationary commercial power plants of 100 kw or less;

(8) fuel used by nonprofit power associations or corporations for generating electrical energy for resale;

(9) fuel used by charitable institutions;

(10) refined fuel transported as cargo out of the state into international waters if the fuel is sold or otherwise transferred to watercraft which operate exclusively in international waters and which do not enter state territorial waters, ports, or facilities;

(11) refined fuel transported as cargo out of the state on a vessel from a port in this state to a port outside this state, unless the fuel is purchased for use within state territorial waters;

(12) fuel consigned to foreign countries;

(13) fuel sold to, transferred to, or used on jet propulsion aircraft operating flights from the state to a foreign country, except flights to a foreign country, with intermediate stops within the United States;

(14) fuel which is at least 10 percent alcohol by volume;

(15) fuel sold to or transferred between licensed qualified dealers;

(16) actual losses of volume which occur during handling, transporting or storing motor fuel, including shrinkage and losses from fire and other accidents;

(17) additives that are used for improving existing characteristics of fuel, not including blended fuels; and

(18) fuel used for any other purpose which the department determines is not motor fuel as defined by AS 43.40.100(2) if the purpose is fully disclosed on the monthly motor fuel tax return.

(c) For purposes of (b)(1) and (2) of this section, "official use" does not include sales of fuel. (Eff. 7/19/82, Reg. 83; am 11/14/84, Reg. 84; am 8/12/84, Reg. 91)

ANALYSIS: (Attach a separate page if necessary)

The fiscal note is difficult to predict because Anchorage International Airport is really the rating or premium base for the State's entire aviation insurance program. The attached details the estimated fiscal note.

Note page 3 for total estimated costs to the State.

CONTINUATION of FISCAL NOTE ANALYSIS

Sponsor Substitute HB

For House Bill No. 173

FY 88 State airport premiums amount to approximately $1,200.0. If the premium base, i.e., Anchorage and Fairbanks international airports are deleted from the State blanket policy the insurance companies will then charge an average premium per airport for all small fields, this is estimated at $4,000 per air field. The State has 265 smaller airports so after removal of the two internationals the premium remains at $1,060.0 for airports--or a negative fiscal note of ($140.0).

Workers' compensation and general liability charged these two airports amount to $289.0 and property premiums total $154.1.

The total negative fiscal note for risk management, therefore, would be approximately ($583.1).

7/0K1/011088 01/3v2

POSITION PAPER
House Bill #173
Sponsor Substitute

1. The bill creates the Alaska International Airport Authority for Anchorage and Fairbanks and creates an autonomous operation much like the Alaska Railroad.

2. From a risk management standpoint, both the State and the Airport Authority suffer. Anchorage International (and to a lesser extent Fairbanks) represent the rate base for our entire State aviation program. Anchorage and Fairbanks presently pay $960.0 of our total airport premium of $1,200.0. If they are removed from the schedule the remaining 265 airports' insurance charges are estimated at $1,060.0. In other words, separation will almost double the combined airport premiums paid prior to separation.

   Also outstanding active (or pending) workers' compensation and liability cases would have to be transferred to the airports since the State would no longer have their payroll premium assessments to meet obligations.

3. From a risk management standpoint we see increased insurance charges to the airports and no relief to the balance of the State's program. We cannot support the Bill.

Don Hitchcock, Director
Division of Risk Management

March 30, 1987

ALASKA INTERNATIONAL AIRPORT AUTHORITY

The Department of Transportation and Public Facilities (DOT&PF) is not yet prepared to take a formal policy position regarding the concept of placing the Alaska International Airport System (AIAS), comprised of the Anchorage and Fairbanks International Airports, within an independent public corporation.

Ultimately, this type of structure may make the most sense for the long-term efficient management of these airports. However, it is not entirely clear to DOT/PF that these goals cannot be achieved working within the current organizational structure. In fact, several recent changes have been instituted to accomplish these purposes.

House Bill 173 appears to be well organized and comprehensive. There are, however, a few issues that appear to remain unresolved. We understand a new sponsor substitute has been prepared which may address several of these concerns. General comments and explanations follow:

1. Section 1 PURPOSE -- It would be helpful to more fully establish the policy and justification for an Alaska International Airport Authority. For example, an expanded statement of findings would clearly establish the general legislative intent, which is then defined specifically in the subsequent sections of the legislation. The enabling legislation for the Alaska Industrial Development Authority (A.S. 44.88) has a similar initial section. A few examples of what DOT&PF assumes to be important motivating factors behind this bill are:

   - to facilitate consolidated, cohesive management of the airports;
   - to effect greater responsiveness and interaction between the airports and their respective communities;
   - to clearly segregate the IARF enterprise fund management from general government operations;
   - to enhance the businesslike approach to this enterprise activity;
   - to establish a basis for the administration of the international airport consistent with industry standards necessary to compete in the international marketplace.

2. Section 02.40.020 BOARD OF DIRECTORS -- Since Anchorage and Fairbanks International Airports are gateways to the entire State, it may be advisable to leave two appointments unrestricted as to place of residency. In this way, the

The controller should be responsible for the issuance of bonds and the management of debt; not "monitor" the issuance. Further discussion of this point is contained in point #7 to follow.

Recommend sub-paragraph (d) be revised to read "The Board may empower the Executive Director to contract for and engage the services of consultants and professional, technical, and financial advisers the Authority considers necessary for the purpose of developing information, conducting hearings, studies, investigations or other proceedings, or otherwise exercising its powers." Typically, from a procedural standpoint, it will be the Executive Director who actually signs the contracts and approves selection of firms to provide the professional assistance.

7. Section 020.40.100 POWERS OF THE AUTHORITY -- The Authority should be empowered to sell international airport revenue bonds. The international airport revenue bonds are not backed by the full faith and credit of the state and are very different from the G.O. bonds usually issued for state purposes. Both the Alaska Industrial Development Authority (AIDA - A.S. 44.88.080) and the Alaska Housing Finance Corporation (AHFC - A.S. 18.56) are empowered to sell their own bonds. Bonding authority is also standard for other major airports across the country such as Sea-Tac, Portland, and Indianapolis.

As an independent corporation, the Authority should be able to hire all necessary financial advisors, bond counsel, and feasibility consultants, and should be empowered to direct the bond sales and subsequent debt payments through the controller. This ability to control debt issuance and management will be critical to the Authority's ability to issue debt that is consistent with airport industry standard.

In addition, the Authority should be empowered to hire, or retain its own legal counsel for the Alaska International Airport Authority.

Governor would be free to have rural or other Alaska representation on the Board if he so chose.

Another alternative could be to expand the Board to seven members, with the Anchorage and Fairbanks communities each having two seats and still leaving room outside those communities for rural or other Alaska representation. While this could be an option, it should be clearly stated that the accompanying fiscal note assumes a five-member Board.

Instead of requesting one member to be nominated by the local governments, the legislation could provide for a list of three names to be submitted by each of the Anchorage and Fairbanks communities, and from which the Governor would try to choose the communities' appointee. This process would reduce the potential conflict between the Governor and the communities.

One question related to subparagraph (f) of the bill is whether or not there is a constitutional problem with requiring legislative confirmation of Board appointees. There may also be a constitutional question with the proposed "nominated appointment" process. These questions should be addressed by the Attorney General's staff.

3. Section 02.40.040 REMOVAL OF MEMBERS -- There may also be a constitutional problem here unless the members simply serve at the pleasure of the Governor.

4. Section 02.40.050 MEETINGS -- The Board should be required to meet at least quarterly.

5. Section 02.040.060 OFFICERS AND QUORUM -- Is it necessary for the Board to elect a treasurer when the IARF controller works for the Board? Further, it may be advisable to provide for election of a vice-chairman as well as a chairman. This would be consistent with the approach taken by both the Railroad Corporation and the Alaska Industrial Development Authority.

6. Section 02.40.070(b) STAFF -- Language in the bill needs to make it clear that the Executive Director, and not the Board, selects and hires the administrative and operations staff. The last sentence of sub-paragraph (a) could be interpreted to mean that all staff would be required to be directly screened by the Board. We assume the intent was for the Board to approve the positions, but not the specific personnel selected for each position.

8. Section 02.40.220 SALE AND DELIVERY OF IN-BOND MERCHANDISE -- DOT&PF feels sub-paragraph (d) needs to be revised to allow the Airport Authority the flexibility to award the in-bond merchandise concession contract based on either competitive proposal, competitive bid, or through a management contract. The competitive proposal approach allows airport management to award the concession based on performance standards as well as financial considerations. The management contract approach is still based on a bid and essentially allows th Authority to hire a company to run the concession. If market conditions change materially, the airports may need the flexibility of competitive proposal or management contract, in addition to the straight competitive bid, to assure continued quality service to the travelling public. Further justification for requested management contract or competitive proposal flexibility can be provided if necessary.

9. Section 02.40.240 COURTESY CARS -- Language in this section should be revised to allow the Authority to establish an access fee for these vehicles.

   This subject appears to be covered twice in the bill; it is also listed on page 16, Section 02.15.095. Does it need to be in both places?

10. Section 02.40.300 BUDGET REQUEST -- In order for the Alaska International Airport Authority to be in a position to maximize its enterprise opportunities, budget approval authority should be vested with the Board of Directors. This will avoid compromise of the Authority's ability to administer the enterprise as a business by providing it with the power of controlling its budget and amending it throughout the year as needs and conditions change. The budgeting process is unclear in the existing language of the bill. The DOT&PF recommends that the process include legislative appropriation of a line item budget amount for the Authority, but the Board must have the flexibility to reallocate funds within the lump sum budget amount as each fiscal year progresses.

11. Section 02.40.320 PERFORMANCE REPORTING -- DOT&PF suggests leaving the introductory paragraph without the specific items listed in sub-paragraphs (1) through (8). Several of the requirements listed may be extremely time consuming and expensive. As examples:

    (3) A statement of the performance and accomplishments and costs incurred by the Authority for the last four years could involve several weeks of staff time and Board of Directors' review prior to release to the Governor.

    (4) Identifying the number and types of persons affected by the Authority will be extremely time-consuming. This information would appear to have no direct benefit.

    (5) The summary statement for the last three fiscal years for personnel employed and under contract is additional information requiring significant staff time to produce, again with no apparent usefulness.

    (6) Assessment of the authority on the economy of the state, is a major effort requiring probably $100,000 of consultant time and achieves no result relevant to administering the international airports.

    It is recommended that the Authority provide the Governor with the annual audit of the IARF and that all other listed requirements be omitted.

12. Section 02.40.350 ANNUAL AUDIT -- This section should specify that the annual IARF audit be done by an external certified public accounting firm.

13. Section 02.40.900(b) AUTHORITY EMPLOYEES -- DOT&PF recognizes the sensitive issues involved in the transition and status of the current state employees. The provision for employee transfer needs to be addressed, as well as the workers' rights as public employees. It is our opinion that input on the issues should be obtained from other agencies, employee associations, and other interest groups.

14. It is advisable to include language in the bill to recognize that the Airport Security Officers (ASO) working on airport property have all the rights and powers included under the Alaska Police Standards (A.S. 18.65.130 through 18.65.190). To comply with state and federal requirements, the Anchorage and Fairbanks Airports must employ certified officers. The Alaska Court System recognizes the enforcement powers of ASO's, however, the Attorney General's staff have expressed concern over whether the ASO's have enforcement powers. These powers of enforcement are necessary and should be clearly articulated in this legislation. DOT&PF recommends seeking specific advice from the Attorney General's staff.

15. Section 02.15.090 OPERATION AND USE PRIVILEGES -- Both the department and the Authority require the ability to enter into contracts, leases, etc. It appears the addition of "and subject to the jurisdiction of the department" may not address this problem. Subsequent references in the bill indicate there are separate jurisdictions of the department and the Authority. Recommend that the new language "and subject to the jurisdiction of the department" be deleted and line 24 be modified to read "...the department or the Authority may enter into contracts, leases, and other..."

16. This legislation should include a section protecting the DOT&PF's existing facility interest on Anchorage International Airport land. The Central Region DOT&PF building is on five acres of land adjacent to Lake Hood.

17. Section 37.15.480 AMOUNTS REQUIRED FOR PAYMENTS -- DOT&PF recommends that the IARF debt be managed by the controller and management for the IARF be under the sole control of the Authority and its controller. See Comment #7.

18. We understand work is continuing to add a section addressing bonding requirements. Provisions should be included to ensure transfer of all existing debt obligations to the new entity.

Investment Manager			25.0			
TOTAL:	940.4	55.0	679.7	32.5	-0-	1,707.6[2]

1 Actual cost of legal office is 487.6 which is reduced by the approximately 100.0 RSA from the Airports to Department of Law. Therefore, contractual estimate of 182.2 is reduced 100.0 to reflect the RSA amount.

2 In the miscellaneous column, 529.3 is deducted to represent the reduction in IARF funding to DOT&PF that will be credited back to the fund.

Justification

The legislation creating the International Airport Authority would appear to require the establishment of a personnel function that would include a personnel office to handle day to day operations necessry to classify positions, process applications for employment, conduct testing, and the preparation of hiring documents; a labor relations function to negotiate employee contracts, represent the authority in arbitrations and grievances, and to resolve contract conflicts.

Justification

The legislation creating the International Airport Authority would appear to require the establishment of a personnel function that would include a personnel office to handle day to day operations necessry to classify positions, process applications for employment, conduct testing, and the preparation of hiring documents; a labor relations function to negotiate employee contracts, represent the authority in arbitrations and grievances, and to resolve contract conflicts.

FISCAL NOTE ANALYSIS
HOUSE BILL 173

OVERVIEW:

The Department of Transportation and Public Facilities (DOT&PF) has reviewed House Bill 173 and has concluded that an Alaska International Airport Authority could be constituted in three possible forms.

Alternative I is envisioned as a fully stand-alone Authority with an independent Board of Directors. The Authority would not utilize any services currently available in other state agencies except for the State main frame computer for general ledger, the State payroll systems and other available software, and the current risk management program.

Alternative II establishes an Authority that would perform some functions as an independent agency, but would continue to use services from State agencies and DOT&PF.

Alternative III establishes an Authority that would be a policy board for the Internationals, while all other relationships between Anchorage and Fairbanks International Airports, DOT&PF, and other state agencies would remain as they currently exist.

ANALYSIS:

1. **Analysis of Fiscal Impact on Existing Programs**

DOT&PF has assumed only International Airport Revenue Fund (IARF) funding for the Authority. Currently, appropriations are made from the IARF to fund the operating and capital improvement budgets for both the Anchorage and Fairbanks International Airports and to partially fund other Budget Request Units in DOT&PF for services provided to the International Airports. The FY88 budget includes 891.7 in IARF funding for the DOT&PF divisions listed below, exclusive of the airports, based on the following distribution:

Division/Unit	FY88
Commissioner's Office	20.3
Deputy Commissioner's Office	29.4
Internal Review	50.0
Management and Finance	183.2
Information Systems	48.3
Central Administrative Service	110.2
Central D & C Engineering Management	193.5
Central M & O Administration	30.0
Interior District Admin. Services	156.2
Northern D & C Engineering Management	70.6
TOTAL:	891.7

Three of these functions would be continued whether as support from DOT&PF or transfer of the employees to the Authority. The functions are clearly identifiable and will be a required part of the Authority. The three are:

Internal Review	50.0
Information Systems	48.3
Design & Construction	264.1
TOTAL:	362.4

In Alternative I and II, the cost estimate for the Authority is reduced by 529.3, based on 891.7 -362.4.

The other services are administrative in nature and do not solely support the Airports. The funding portion from IARF in the non-airport DOT&PF divisions is based on an estimate of the cost of services provided to the Airports. In Alternative I and II, these services will be replaced by newly created functional units in theAuthority or continued to be supported by DOT&PF and other State agencies. In Alternative III, the funding will continue as is.

It should be noted that in the areas of Legal Services, Personnel/Labor Relations, and Supply/Purchasing the airports are receiving maximum return on the current IARF investment. This is due to the fact that the Airports are receiving the benefits of supply contract awards, negotiated personnel contracts, application processing applicant testing, and the accounting supervision of DOT&PF and the Department of Administration. An independent Authority would have to fund these functions completely.

The impact of reducing the IARF funding to the Divisions in DOT&PF will have to be analyzed. While it is recognized that once service to the Airports is eliminated, making some reductions possible, replacement funding may be required since many of the these functions serve other units as well.

DOT&PF recommends the Authority continue as part of the State's Insurance program currently administered by the Division of Risk Management, Department of Administration. The underwriters consider the majority of aviation risk to be at the Anchorage and Fairbanks International Airports. The remainder of the State airports are simply included under the policy covering AIA and FIA. The impact of purchasing separate aviation policies would be that the Internationals would continue paying about the same premium while the other 265 state owned airports would have to be covered under a separate policy. The Division of Risk Management estimates that the cost of separate coverage would be about $1.5 million.

Further impact would be that the Authority would be required to purchase separate fire, liability, and workman's compensation coverage. The cost of acquiring and administering separate policies in these areas could exceed $2.5 million, which would be an increased cost to the IARF. The impact on of the Airports acquiring separate fire, liability, and workman's compensation insurance would be minimal on the premiums paid by other state agencies. Therefore, separate insurance would increase costs, both in general fund and IARF dollars, with no additional positive result.

2. **Analysis of Fiscal Impact on New Programs**

The creation of a fully independent/stand-alone Authority (Alternative I) will have the greater fiscal impact since many new functions will require additional funding. The creation of a partially independent Authority (Alternative II) will have a more moderate fiscal impact based on the Authority performing purchasing, labor relations, personnel, and investment management functions, while continuing to fund other support services from DOT&PF. The establishment of the Authority with all other conditions remaining the same (Alternative III) will have the least fiscal impact.

3. **Analysis of Expenditures**

Alternative I - Fully Independent Authority

The establishment of an independent Board that would function as a stand-alone Authority that would not utilize any services currently available in other state agencies except for the State main frame computer for general ledger through the use of AKSAS, the State payroll systems and other software available on the Statewide network.

The Authority functions represented in Alternative I are:

Function	First Year	Years Thereafter
Board of Directors	456.1	346.0
Legal	387.8	347.8
Purchasing/Supply	457.0	432.0
Labor Relations/Personnel	606.8	556.8
Investment Management	25.0	25.0
TOTAL:	1,932.7	1,707.6
Less DOT&PF Charges	< 529.3>	< 529.3>
	1,403.4	1,178.3

The detail calculations supporting the cost of the functions is provided on the Request for New Positions forms.

Alternative II:

The establishment of an Authority that would perform some functions as an independent agency, but would continue to use services from State agencies and DOT&PF. The only savings in the amounts currently appropriated to DOT&PF from the IARF are:

Deputy Commissioners	< 29.4>
Management and Finance	<100.0>
Central Administration Services	< 50.0>
Interior District Admin. Services	< 50.0>
	<229.4>

The remainder, 299.9 (529.3 - 229.4), would continue as a funding source for DOT&PF.

Function	First Year	Years Thereafter
Board of Directors	456.1	346.0
Purchasing	183.0	170.5
Labor Relations/Personnel	606.8	556.8
Investment Management	25.0	25.0
TOTAL:	1,270.9	1,098.3
Less DOT&PF Funding	< 229.4>	< 229.4>
	1,041.5	868.9

Alternative III:

The establishment of the Authority as a policy board with all other relationships between the Airports, DOT&PF, and other state agencies remaining as they currently exist.

Function	First Year	Years Thereafter
Board of Directors	456.1	346.0
TOTAL New Funding	456.1	346.0

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5152 HTRA HB 173 (FILE 1)

724

POSITION PAPER
SSHB 173

Sponsor Substitute for HB 173 establishes the Alaska International Airport Authority and makes it the exclusive State agency responsible for the operation and mangement of the State owned Fairbanks and Anchorage International Airports.

Under the proposed Article I, the powers of the Authority are vested in a Board of Directors. The board is to employ an executive director and controller who serve at the pleasure of the Board and may contract for consultants and professional, technical and financial advisors the Authority considers necessary. The executive director, with the concurrence of the board, is to employ airport directors. Article 5 in Section 2 states that the employees of the Authority are not employees of the State and are not subject to the requirements of AS 39 (public officers and employees) except in the Public Employees' Retirement System and the Supplemental Benefits System. Section 35(b), (c), and (d) addresses the transfer of current classified State employees to the Authority. Section 37 repeals AS 39.25.120(14), the provision which currently places airport managers (or directors) in the partially exempt service.

This bill would remove current employees from the classified and partially exempt State service and transfer them to the Authority. The legislation states that these employees would not be considered "State employees". There is precedence in this regard. Employees of the Alaska Railroad Corporation, the Medical Indemnity Corporation of Alaska and the Commercial Fishing and Agriculture Bank are not considered employees of the State. This bill would establish a unique precedent since it would constitute the first time classified and partially exempt employees would be transferred to such an entity.

In actuality, the only real affect of this bill on current employees would be to give them a "new boss", the Authority, instead of the Department of Transportation and Public Facilities; their duties would be relatively the same. A classified clerk typist working in an aiport office would still be performing the same duties whether the airport was managed by the Authority or the Department. We know of no business necessity, or public policy, or interest to be served by removing the clerk typist or other classified airport employees from coverage of AS 39.25 due to the creation of the Alaska International Airport Authority.

Section 35(b), (c), and (d), which effects the transfer of current employees to the Authority, binds the Authority to the collective bargaining for the employees in effect on July 1, 1987, and provides that current employees retain the rights and status of State employees until expiration of the July 1 agreements, is problematic. Negotiations are currently in progress for new agreements covering most of those employees. Assuming new three-year agreements are in effect on July 1 covering the current employees that would be transferred to the Authority, the question becomes what are the status and rights of any new Authority employees hired subsequent to July 1, 1987. For up to a three-year period two categories of employees performing the same work would exist at the airports--those with clearly defined status and rights and those without. The legislation needs to address this potential disparity.

Even if Authority employees were not covered by Title 39,

AS 23.40. Since airport employees currently enjoy those rights, it is reasonable to assume they will want to continue to do so with their "new employer," the Airport Authority, at the expiration of collective bargaining agreements in effect on July 1, 1987. This will require the Authority to employ its own personnel/labor relations staff and cause the State Labor Relations Agency to address creation of new bargaining units, conduct representative elections and so forth. These measures would unnecessarily duplicate current Department of Transportation and Public Facilities functions and fragment and proliferate current bargaining units. Any new bargaining units would be duplicate microcosms of already existing units.

From a Risk Management standpoint, both the State and the Authority would suffer. Anchorage International (and to some extent Fairbanks) represent the rate base for our entire State aviation insurance program. Currently, the Anchorage and Fairbanks costs represent $1.200.0 of Risk Mangement's total airport premium of $1,500.0. If both airports are removed from the schedule, it is estimated that the premium would increase to $1,325.0 for the remaining 265 airports. Additionally, any outstanding active or pending workers' compensation and liability cases would have to be transferred to the Authority since the State would no longer have their payroll assessments to meet Risk Management's obligations.

With respect to proposed AS 02.40.910 (1), this bill appears to relieve the requirement that the Authority have its procurement performed by the Department of Administration and Department of Transportation and Public Facilities, unless delegated. If that is the intent, the transfer of procurement responsibility from the Department of Administration to the Authority would have an insignificant impact. We cannot speak for the Department of Transportation and Public Facilities. If the intent has been properly interpreted, a clarification of proposed AS 02.40.910(1) is requested or AS 36.30 should be amended to address the Authority.

Finally, transisition costs will be incurred by the Division of Finance as the change in employee status from State employees to Authority employees will result in the transfer of employee payroll records and files to the Authority's jurisdiction.

No impact is noted by the Division of Retirement and Benefits.

The Department of Administration is opposed to those portions of SSHB 173 which change in any way the current status of airport employees.

Rev. 9/16/86
9/9K1/032787-12/1

FY 87 State airport premiums amount to approximately $1,500.0. If the premium base, i.e., Anchorage and Fairbanks international airports are deleted from the State blanket policy the insurance companies will then charge an average premium per airport for all small fields, this is estimated at $5,000 per air fie.. The State has 265 smaller airports so after removal of the two internationals the premium remains at $1,325.0 for airports--or a negative fiscal note of ($175.0).

Workers' compensation and general liability charged these two airports amount to $289.0 and property premiums total $154.1.

The total negative fiscal note for risk management, therefore, would be approximately ($618.1).

RE: Management of the Anchorage International Airport
Research Request 85-269

You asked the following questions concerning the Anchorage International Airport:

- Does a board comprised of airline carrier personnel have input into the management of the Anchorage International Airport? If so, have any changes recently occurred in the "management make-up" of the body? Who are the members of the board and what are their affiliations? From whom does the board derive its authority and to whom does it report?
- How are gates assigned to airlines?
- How is the "cash reserve account" accumulated? How is it used? Who has the authority to expend money from the account?

Carrier Involvement in Management

According to Guy Russo, Director of the Anchorage International Airport, airline carrier personnel contribute to the management of the airport through participation on an operating council. The Anchorage International Airport Operating Council is comprised of one representative (usually the station manager) from each of the 25 domestic and international carriers which serve the airport. (See Attachment A for a list of the current members of the operating council and their affiliations.) Mr. Russo described the purpose of the council as providing input into the total operation of the airport, including commenting on the airport master plan and construction projects, as well as on the daily operations of the airport.

Changes in the make-up and duties of the council have not occurred recently, with the exception of changes in the membership of the council

due to personnel turnover. Mr. Russo noted that the council also elects a new chairperson each year. He said that no future changes in the council are planned at this time.

According to Mr. Russo, the operating council does not derive its authority from any given body. Instead, each member of the council derives his/her authority from the upper management of the carrier the person represents. The council reports its suggestions, findings and grievances to the director of the airport. If the director does not adequately respond to the council's requests, the council may then report to the Deputy Commissioner of the Department of Transportation and Public Facilities (DOT/PF) for the Central Region. The Deputy Commissioner's Office is also located in Anchorage.

Gate Assignments

According to Mr. Russo, all gates in the domestic portion of the airport are leased on a five-year basis. When the lease for a gate expires, the airport is required to give public notice of the vacancy and accept applications for the use of the gate. The cost of leasing a gate is based on a flat fee of $21.12 per square foot. However, if more than one carrier applies for the same gate, the gate is assigned to the highest bidder. Mr. Russo stated that it has not been necessary to accept bids for vacant gates to date. Currently, all gates are in use. Any new carriers will have to share gates with other carriers until additional gates become available.

In the international portion of the airport, airline carriers do not lease specific gates. Instead, gates for international flights are assigned on a daily basis. Gate assignment is dependent upon when particular flights are arriving or departing and which gates are available. Mr. Russo noted that gates for international flights are assigned on a first come, first serve basis. Airline carriers pay a flat fee of $230.00 for each use of a gate.

You also requested information on the "cash reserve account". Mr. Russo suggested I contact Ron Lind, DOT/PF's Director of Financial and Administrative Services, for information on the account. Mr. Lind was unaware of such a fund. I reported these findings to you on March 29, 1985. At your request, I have ceased looking for information on the account until I hear further from you.

RE: **Airport Marketing and Funding in Other States**
Research Request 87.112

You requested information on airport marketing and funding in other states. Specifically, you asked:

How many U.S. airports spend money on marketing and/or promotion?

How much is spent for this purpose by Sea-Tac and Portland airports?

For airports with the same or similar volume/capacity as Anchorage International, what is the range of marketing and promotional expenditures?

What is the source of funding--annual appropriations or airport revenues?

Number of U.S. Airports Spending Money on Marketing

The National Airport Operators Council (NAOC) in Washington, D.C. currently has a survey underway regarding airport marketing but does not expect to have results for six months. Debra Lunn, of the NAOC, stated that "marketing is a serious and growing concern since deregulation" and that most large and medium hub airports currently have either in-house or contract marketing programs.

Of the 11 airports I contacted, three had no marketing program, one had a study underway to decide on a marketing program, and seven had varying levels of marketing expenditures.

Sacramento Metro (California) contracts with a local advertising agency to run a campaign to prevent loss of traffic to the Bay Area airports, which are a two-hour drive away. The campaign includes educating the public on services available, encouraging local travel agents to book out of Sacramento, and promoting the airport as a gateway market for cruise packages. This is the third year of marketing, the first-year budget was $150,000, the second-year was $300,000, and the current budget is $500,000.

Greater Mitchell Field (Milwaukee, Wisconsin) is 70 miles from Chicago and spends about $200,000 per year to maintain a local market.

Port Columbus International (Ohio) budgeted $80,000 for salaries for two staff, printing of newsletters and purchase of video equipment. An additional $30,000 in private donations was collected for special promotions. The staff stressed that their budget was not adequate for a good marketing/promotional program.

Salt Lake City (Utah) spends about $60,000 per year to produce an annual report, quarterly reports and various studies which are distributed as promotional materials.

Spokane Airport (Washington); **John Wayne Airport** (Santa Ana, California); **Greater Buffalo Metro** (New York); and **Bradley International** (Hartford, Connecticut) all have no marketing program at this time. All are operating at capacity due to limited facilities or zoning constraints. Bradley International has contracted for a market study and hopes to expand as demand allows.

Funding Source

Funding for airport marketing generally comes from airport revenues with a few exceptions. The $370,000 in contracts supervised by Sea-Tac is from general fund appropriations. At Port Columbus International, the marketing department solicits private donations for special promotions.

>
> What is the source of funding--annual appropriations or airport revenues?

Number of U.S. Airports Spending Money on Marketing

The National Airport Operators Council (NAOC) in Washington, D.C. currently has a survey underway regarding airport marketing but does not expect to have results for six months. Debra Lunn, of the NAOC, stated that "marketing is a serious and growing concern since deregulation" and that most large and medium hub airports currently have either in-house or contract marketing programs.

Of the 11 airports I contacted, three had no marketing program, one had a study underway to decide on a marketing program, and seven had varying levels of marketing expenditures.

Portland and Sea-Tac Airports

The **Portland Airport**, with gross revenues of $28 million, spends $750,000 per year on marketing. This supports a staff of two, public relations contracts with Tokyo and London firms, and entertainment for fam trips (familiarization tours for travel industry personnel). Their goals are to generate new air services and encourage new airlines to use the airport. Recently, they gained service stopovers for Delta Airline's Atlanta-Tokyo flights and Federal Express's small package routes to Japan.

Sea-Tac Airport, with gross revenues of $53 million, has three offices involved in marketing and promotions, with an estimated combined budget of $1 to $1.2 million. They include a marketing office largely responsible for cargo operations, with a staff of one and estimated $2,000 per year in expenditures; a public relations staff of six which produces publications promoting the airport; and an Office of Tourism with a 1987 budget of $406,000. The Office of Tourism budget supports a staff of three, public relations contracts with Tokyo and London firms, entertainment for fam trips of five to seven days in the area, and a small travel budget for overseas tourism missions. The Office also supervises contracts totalling $370,000 with the Seattle and East King County Convention and Visitor Bureaus.

Range of Marketing Expenditures for Airports Similar to Anchorage International

During FY 86, Anchorage International served slightly more than three million passengers, of which over 1.5 million of them were international travelers. The National Airport Operators Council provided the names of seven airports in the U.S. with similar total passenger loads. In addition, I contacted the Spokane and Salt Lake City airports as they are western regional hubs. Marketing expenditures of these airports ranged from $550,000 to zero. Debra Lindsey, Manager of Statewide Aviation, Department of Transportation and Public Facilities (DOT/PF), believes Sea-Tac is the airport most comparable to Anchorage in terms of passenger composition. She says there is no comparable airport in terms of both volume and composition.

> **Norfolk International Airport** (Virginia) competes with two other airports in the area for passengers and carriers. Of the airport's $550,000 marketing budget, $200,000 goes to an advertising campaign to attract passengers and advise them of new services/carriers. The staff of four includes a director, an assistant for cargo development, an assistant for travel agency coordination and a secretary.

Sacramento Metro (California) contracts with a local advertising agency to run a campaign to prevent loss of traffic to the Bay Area airports, which are a two-hour drive away. The campaign includes educating the public on services available, encouraging local travel agents to book out of Sacramento, and promoting the airport as a gateway market for cruise packages. This is the third year of marketing, the first-year budget was $150,000, the second-year was $300,000, and the current budget is $500,000.

Greater Mitchell Field (Milwaukee, Wisconsin) is 70 miles from Chicago and spends about $200,000 per year to maintain a local market.

Port Columbus International (Ohio) budgeted $80,000 for salaries for two staff, printing of newsletters and purchase of video equipment. An additional $30,000 in private donations was collected for special promotions. The staff stressed that their budget was not adequate for a good marketing/promotional program.

Salt Lake City (Utah) spends about $60,000 per year to produce an annual report, quarterly reports and various studies which are distributed as promotional materials.

Spokane Airport (Washington); **John Wayne Airport** (Santa Ana, California); **Greater Buffalo Metro** (New York); and **Bradley International** (Hartford, Connecticut) all have no marketing program at this time. All are operating at capacity due to limited facilities or zoning constraints. Bradley International has contracted for a market study and hopes to expand as demand allows.

Funding Source

Funding for airport marketing generally comes from airport revenues with a few exceptions. The $370,000 in contracts supervised by Sea-Tac is from general fund appropriations. At Port Columbus International, the marketing department solicits private donations for special promotions.

Dear:

Thank you for your !SOURCE! regarding HB 173. It appears that you have some reservations about HB 173 and SB 172 that propose to form the Alaska International Airport Authority.

Perhaps after I share some information with you about the bill, you will find reasons to reconsider your position.

Can employees transferred to the Authority lose the retirement benefits they have already earned as a state employee? Absolutely not! Even though the employees transferred to the Authority would no longer be state employees, this right cannot be taken away because it is protected by Article 7 of Alaska's Constitution.

What about health insurance benefits? Employees would be covered by a health insurance plan that would be purchased by the Authority -- just as the State of Alaska currently purchases a plan to cover its employees. Several options would be available such as one plan available through the State of Alaska that would allow the Authority to supply a health benefit at least as comprehensive as the one currently enjoyed by General Government employees. Of course employees of the Authority would have the option of negotiating for another health insurance package that could be purchased from a private carrier.

What about the other benefits for current state employees who would be transferred to the Airport Authority? Even though it is proposed that the employees on the airports in Anchorage and Fairbanks would be employees of the Airport Authority rather than being state employees, they would still be covered by the Public Employees Retirement System (PERS) and the Supplemental Benefits System (SBS) because the Authority can enroll with the State to cover their employees. New employees could also be covered by PERS and SBS after the Authority enrolled. Because of the misunderstandings on this one provision, I am adding language to the bill to clarify this issue. Your benefits will be protected by statute!

What about union affiliations and collective bargaining agreements? Classified employees who are transferred to the Authority keep their status as state employees until the collective bargaining agreements covering the classified employees expire. After the expiration of the agreements, the employees are free to form their own bargaining unit to negotiate with the Authority on their behalf. In fact, I expect that is exactly what will happen.

If the International Airports make money, why is the state giving them away? This isn't a "give away". This is simply a transfer of responsibility to an entity that has no other job but to efficiently operate, effectively manage, and to provide accountability for these two state-owned and state-operated international airports.

Some of the people who have sent Public Opinion Messages to me believe that reduced morale and professional service will result from the creation of an Airport Authority. I believe that <u>just the opposite</u> will result. With an Authority, there will be clearer lines of authority and responsibility, and the management structure will be less top-heavy than it is now under the Department of Transportation and Public Facilities.

Experience has shown that Authorities work. Alaska is behind the times in that regard. In fact, Anchorage International Airport is the largest international airport in the country that is still run as a state-owned facility.

In other words, employees at every job level should find it easier to affect positive changes in their workplace.

I believe in the concept of an Airport Authority, and I believe that it will be a positive step for employees. I hope you will keep an open mind and continue to contact me with your thoughts and ideas as you study the bill. (Copies of the Sponsor Substitute should be available in Legislative Information Offices next week.)

If you have other questions about the bill, I would urge you to feel free to come to me for the answers.

Thank you for contacting me. Let's keep the channels of communication open.

Sincerely,

(Ms.) Drue Pearce

MEMORANDUM

TO: Representative Bette Cato
Chairperson, House Transportation
Committee

FROM: Cherie Shelley
Executive Director

SUBJECT: SSHB 173 - Alaska International Airport Authority

DATE: March 26, 1987

In an earlier position paper on this bill, we expressed some strong reservations about the effect of the bill on the status, rights and benefits of the state classified employees who would be transferred to the authority. When I met with the bill's sponsors, they agreed to modify the bill to try to alleviate our concerns. The result is the sponsor substitute before the Transportation Committee. While the substitute is an improvement on the original bill, it still in our opinion has several major problems.

The substitute partially addresses the question we raised as to Supplemental Benefits System (SBS) coverage for authority employees. It continues SBS coverage for current state workers transferred to the authority. However, it would leave new employees out in the cold. There is no justification for this disparate treatment.

The same is true for Public Employees Retirement System (PERS). Transferred employees are grandfathered in. New employees will be covered only if the authority choose to join PERS.

The transition section, Section 35 (on pages 27 and 28), still has serious flaws. Subsection (c) obliquely allows continued representation of authority employees by their current union (either APEA or Public Employees Local 71) until the expiration of any agreement in effect on July 1, 1987. Subsection (d) binds the authority to those agreements. However, these subsections

Fairbanks Field Office
825-D College Road
Fairbanks, AK 99701
Telephone: (907) 456-5412

Anchorage Field Office
833 Gambell Street, Suite A
Anchorage, AK 99501
Telephone: (907) 274-1688

Juneau Field Office

Juneau, AK 99801
Telephone: (907) 586-6305

would allow a maximum of three years continued representation; we would like to see permanent continued representation. Second, it is quite possible that neither APEA nor Local 71 will have a three-year agreement in place on July 1; there may be either no agreement or a short extension of an exisiting agreement. If this is the case on July 1, subsections (c) and (d) are of no use at all.

Subsection (e) makes the state personnel rules applicable to the authority until January 1, 1988, or until the authority adopts rules, whichever comes first. This is a slight improvement from the previous version, which had no provision for application of the state rules. It still leaves the authority employees pretty much at the mercy of the authority. We would still like to see the authority to be governed by the state rules, and see no valid objections to this. The state rules are fair, and it is not a significant restriction on the authority's power to conduct its business to require it to use those rules.

In short, APEA cannot support this sponsor substitute unless it is further amended.

Re: Senate Bill No. 172 and
House Bill No. 173

Dear Tom:

At your request, we have reviewed Senate Bill No. 172 and House Bill No. 173 (the "Bills") introduced in the Legislature of the State of Alaska. The Bills relate to the International Airports in Anchorage and Fairbanks and would establish an Alaska International Airport Authority. We have conducted a preliminary review of the provisions of the Bills in light of the requirements of Resolution No. 68-4, as supplemented and amended (the "Bond Resolution"), of the State Bond Committee of the State of Alaska, which authorized the issuance of State of Alaska International Airports Revenue Bonds, Series A through G (the "Bonds"). The Bond Resolution was adopted pursuant to AS § 37.15.410-.550 (the "Act").

Under the Act and the Bond Resolution, the principal of and interest on International Airports Revenue Bonds are paid out of and secured by the gross revenues derived by the State of Alaska (the "State") from the ownership, lease, use and operation of the international airports at Anchorage and Fairbanks (the "Airports"). The Act also creates a special fund of the State, known as the "International Airports Revenue Fund" into which is paid all revenues, fees, charges and rent-

als derived by the State from the ownership, lease, use and operation of the Airports. The moneys in the Revenue Fund are to be used solely for paying or securing the payment of principal of and interest on the Bonds, to provide funds to acquire, equip, construct and install additions and improvements to the Airports and to pay the costs of maintaining and operating the Airports (AS § 37.15.430).

Section 6.12 of the Bond Resolution requires that the Commissioner of Transportation and Public Facilities fix and collect fees, charges and rentals to be derived by the State from the ownership, lease, use and operation of the Airports which yield Net Revenues (as defined in the Resolution) in each year at least equal to one and three tenths (1.3) times the sum of the debt service on the Bonds during such year plus any deposits required to be made during such year into the bond reserve fund.

In addition, Section 6.03 of the Bond Resolution provides that the State shall not sell or otherwise depose of the Airports or any part thereof essential to the proper operation of the Airports or the maintenance of the Revenues. Section 6.04 of the Bond Resolution requires that the State maintain and preserve the Airports in good repair at all times and to operate the Airports in an efficient and economic manner.

The Bills create the Alaska International Airport Authority as a "public corporation of the state", which corporation is to be an "instrumentality of the state in the Department of Transportation and Public Facilities but has a legal existence independent of and separate from the State". The Bills also delegate to the Authority exclusive responsibility for the "operation, management, planning, effective marketing and construction of facilities for the Airports." (Section 02.40.010(a)(b)).

A significant question raised by the Bills is whether their provisions conflict with the requirements of the Bond Resolution in a manner that would impair the contract between the State and the bondholders.

The Bills appear to contain no express provision for transfer of airport property from the State to the Authority. Assuming such transfer is, in fact, provided for, consideration must be given to whether such transfer of property from the State to the Authority conflicts with the provisions of Sections 6.03 and 6.04 of the Bond Resolution (discussed above), which give the State responsibility for ownership and operation of the Airports.

Furthermore, the Bills do not provide for the assumption of liability by the Authority of the obligations of the State under the Bond Resolution. Even if such an assumption were provided, the Trustee for the bondholders (the "Trustee") presumably would litigate the validity of any such transfer of control and assumption of liabilities by the Authority.

Under Article 3 of each Bill, the Authority is given the right to establish all charges, rentals and fees for use of airport facilities. This right may conflict with the provisions of Section 6.12 of the Bond Resolution, which imposes such duties upon the Commissioner of Transportation and Public Facilities. Although the Commissioner is a member of the board of the Authority, he clearly would not control the activities of the Authority.

The Trustee may object to the Bills on the grounds that they effect a substantial and impermissible change in the nature of the obligor on the Bonds. The Bonds were issued by the State acting through the State Bond Committee of the State of Alaska, established pursuant to AS § 37.15.110. The Committee is comprised of the Commissioner of Commerce and Economic Development, the Commissioner of Administration and the Commissioner of Revenue. The Airports are under the control of the Commissioner of Transportation and Public Facilities. Under the Bills, the Board of Directors of the Authority would be comprised of the Commissioner of Transportation and Public Facilities and four members appointed by the Governor. The appointed members would serve for staggered terms of four years and could only be removed by the Governor "for cause." This structure creates a public body with control over the operations of the Airports

which is, to some degree, independent of the Governor and the Executive Branch. On the other hand, the Airports are currently under the direct control of officers of the Executive Branch that are directly responsible to the Governor. The Trustee could argue that such a change in the nature of the entity responsible for operating the Airports and paying the Bonds is a significant impairment of the bondholders' contract with the State.

As we have also discussed, if it were determined that creation of the Authority impaired the rights of bondholders, it would probably be impossible under existing tax laws for the Authority to issue tax-exempt advance refunding bonds to defease the outstanding non-callable International Airports Revenue Bonds.

Please call us if you would like us to explore these issues with you further.

Very truly yours,

Karen J. Hedlund

TO THE FOLLOWING PERSONS:

REPRESENTATIVE ALYCE HANLEY
REPRESENTATIVE DRUE PEARCE

SENATOR MITCHELL ABOOD
SENATOR RICK UEHLING

REGARDS TO: HOUSE BILL NO: 173 and SENATE BILL NO: 172

Dear Representatives and Senators:

After reading the above proposed bills on the Anchorage International Airport Authority we are more OPPOSED to these two bills than we were before. There is not one thing that says that the Anchorage International Airport Authority could not lease or contract out the Anchorage or Fairbanks International Airports and/or the work (jobs) over to a Municipality or a private sector. There is no job security for the present State of Alaska employees that presently work at the airports and would be transferred over to be Anchorage International Airport Authority Employees. There should be no way that the Anchorage International Airport Authority can lease or contract out the Airports or any of the work or maintenance to be done at the Airports that the State of Alaska employees are doing now. All the work and maintenance should be by Anchorage International Airport Authority Employees or State of Alaska Employees only and no contract or maintenance work.

Would the Anchorage and Fairbanks International Airports be the only Airports under the Anchorage International Airport Authority or would other Airports be added to it? What else would be under the Anchorage International Airport Authority? Where would the profits from the two airports go? Would the profits go back into the two airports or would it be spent somewere else? Would the Anchorage International Airport Authority be associated with the Department of Transportation? The Anchorage International Airport Authority should not be associated with the Department of Transportation, other wise it would be just another name for the Department of Transportation and it would have more high priced chiefs running it. How come there has to be so many high paid directors? Some of the directors are appointed by the Governor. Every time we get a new Governor do we get new directors? Where does the State of Alaska get the funds to pay for all these high priced directors?

The Anchorage International Airport Authority should only have Anchorage and Fairbanks International Airports under it and no other airports or anything else under it. All the profits should go back into the two airports and no where else.

If the present State of Alaska Employees became Anchorage International Airport Authority Employees then the employees no longer have a union to protect or represent them. The unions represents State of Alaska employees only. The employees would not have a contract and would be facing large cuts in wages and benifits and even job loss. Could the State of Alaska Employees Union represent the Anchorage International Airport Authority Employees and would it be valid? The sponsors of these two bills say the SBS and PERS retirments programs would stay the same as they are now. What good are the retirment programs if you might not have a job? The State of Alaska should give the State of Alaska Employees a good contract that could be transferred over to the Anchorage International Airport Authority. This way the employees have some job security and would not be facing pay and benifit cuts or a job loss.

Until all the questions that so many of us have are answered and these two bills are rewrote, we and so many like us will be opposed to these two bills on the Anchorage International Airport Authority. We do not know what the sponsors of these two bills had in mind but it was not for the good of the State of Alaska or for the Employees. The State of Alaska and the Employees have so much to lose and a municipality or a private sector has so much to gain on leases and contracts. Our thoughts are that it sounds like the sponsors of these two bills have someone dictating to them on how they want the bill to read. Sounds like some big wig (or friends of a sponsor) is out of a job and needs a job so the can bleed the State of Alaska and the Anchorage International Airport Authority for every cent they can get.

THE SPONSORS ARE NOT DOING THIS FOR THE GOOD OF THE STATE OF ALASKA OR FOR THE GOOD OF THE EMPLOYEES THAT IS FOR SURE. THEY ARE DOING IT FOR THE GOOD OF SOME ONE ELSE.

Sincerely,

Jack Jones

The Honorable Bette Cato
Chairman, House Transportation Committee
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Cato:

While I cannot personally be in Juneau today for the workshop on House Bill 173 regarding the establishment of the Alaska International Airports Authority, I wanted to advise you by this letter of Alaska Airlines' current position on the Bill.

Alaska Airlines favors the concept of an independent Airport Authority for Anchorage and Fairbanks Airports. However, at this point, we do not feel the Bill goes far enough in providing full financial independence for the proposed Authority and therefore it needs modifications in this regard. Among other things, we are concerned about the preparation and oversight of the budgets and the ability to independently issue revenue bonds. We are also reviewing the overall financial impact of this proposal.

As the coordinator for the Air Transport Association of American carriers serving Alaska, please be advised that the positions expressed earlier on this legislation through the Chairman of the Anchorage/Fairbanks Airlines Airport Affairs Committee, Mr. Clifford Argue, are also endorsed.

We look forward to wor[illegible] you, Representative Pearce, and others in revising this legi[illegible] acceptable.

Sincerely,

ALASKA AIRLINES, INC.

March 24, 1987

Mr. George Krusz
President
Alaska State Chamber of Commerce
210 Second St.
Juneau, Ak. 99801

Dear George:

In response to your letter dated March 12, 1987, Alaska Airlines has been, and continues to be, in support of the concept of an independent Airport Authority to operate Anchorage and Fairbanks International Airports. Therefore, HB 173 appears to be a step in the right direction in this regard.

In our initial reading of this proposed legislation, we feel that it does not go far enough in making the proposed Airport Authority truly independent. Specifically, it is Alaska's position that in order for such an Authority to be cost effective and to provide the type of professional airport management necessary for major international facilities such as Anchorage and Fairbanks, the International Airport Revenue Fund and the Authority should be removed from the normal State budget process. The IARF is already a separate fund and the business arrangement for the airline support of the IARF is well documented in the recently completed airline/airport Lease and Operating Agreement.

Further, it is imperative that the Authority have the right to finance, through the sale of revenue bonds, its proposed capital expenditures rather than going through the State Bond Committee and their requirements. This is typical of most Airport Authorities, even throughout the rest of the country.

)MMERCE
310 Second Street
:au, Alaska 99801
(907) 586-2323

We are going to continue to review the proposed legislation, both directly and in conjunction with the other airlines serving the two airports. We will undoubtedly be in direct contact with legislators as this bill proceeds, and will keep you advised of our additional comments.

Sincerely,

Jim Johnson

INTENT LANGUAGE
INTERNATIONAL AIRPORT REVENUE FUND

$500,000 INTERNATIONAL AIRPORT MARKETING

It is the intent of the Legislature that this appropriation be expended through a cooperative marketing effort with municipalities and the private sector for marketing the Anchorage and Fairbanks International Airports. The effort shall utilize state, municipal, and private funds. No state funds shall be used for any purpose other than marketing the Anchorage and Fairbanks International Airports. ~~No~~ One new position may be funded with this appropriation for the sole purpose of marketing the Anchorage & Fairbanks International Airports. The department will provide a written report regarding the expenditure of this appropriation by the 10th day of the 2nd session of the 15th legislature.

CHAPTER 4

Airport Organization, Direction, Staffing and Communications

This chapter defines the respective responsibilities of administrators and managers in planning, developing and delivering the airport's products at quality levels desired by the airport owner and acceptable to patrons, users and neighbors. The airport is viewed as a factory or manufacturing unit producing, offering, or supervising the offering of facilities, services and amenities at defined levels of quality to meet various needs.

Chapter 1 addressed these needs and resulting problems faced by each participant involved in the provision, direction and use of the airport or affected by its operation. Chapter 2 reviewed typical airside and landside management tasks in product delivery and delineated product quality improvement needs as goals for airport administration.

This chapter reviews basic external needs to be met by the airport administration and management, and presents several essential elements of airport organization. In this presentation terms are defined; examples of proven structures, creative mandates and internal communications systems are screened; and good management principles are advanced. The chapter closes with a review of administrative and management programs and suggestions for their optimum deployment within the recommended entity and structure. These programs and their functioning are addressed in the remaining chapters of this book.

Airport administration and management is an art involving the skillful use of people and things. This art is exercised through a sequence of activities that generally involve policy making, setting objectives, planning to meet objectives, organizing to execute the plan, selecting and training for manning the organization, motivating people and appraising results.

A basic administrative/management ability underlies any effective scheme of direction—the ability to concentrate on what is important. This ability must be safeguarded by separation and delegation of function to ensure that all essential priority work, perhaps in separate fields, is happening simultaneously and that decision points are presented for review on a timely basis. This is relatively easy to do in a large organization where tasks often are divided between specialists (e.g. planning and operations). It is very *difficult* to do in smaller organizations where very few practitioners have specialized staffs working on only one thing at a time. In such instances self-discipline must be exercised in setting priorities and working

toward solutions. This is the only way to avoid hopping from one small task to another while more important tasks sit waiting.[39]

BASIC NEEDS TO BE MET BY ADMINISTRATION

Preceding chapters placed heavy emphasis on broad, basic public issues that airports must satisfy if their administrations are to be considered as discharging their responsibilities completely. These requirements cover a spectrum running from the obvious technical and operational characteristics inherent in a high technology complex like an airport, through economic and legal aspects of its creation and maintenance in being, to the social, political and aesthetic considerations that determine the airport's acceptance and effectiveness in the community. These requirements are summarized in the following sections.

System Concept

The planning and environmental discussions in Chapter 8 emphasize that airports must be considered as parts of the total social, economic and political systems in which they exist, and not be relegated narrowly to aviation issues nor even to the wider, but still incomplete systems defined by transportation issues. The mandate to the airport administrator is clear—participate in the broadest applicable system planning concept either directly or through trade associations.

Balance

In finding their places within such systems, airport administrations are confronted with the inevitability of reaching a position of equilibrium between opposing forces. The more obvious external forces come to mind first—the need for balance between the right of airport neighbors for a quiet environment, and the overall community economic need for trade, industry and tourism to provide support for a desired quality of life.

[39] For further discussion on this subject, see Appendix B.

There are also many internal forces, properly conflicting by deliberate organization structure design and duty assignment, that must be balanced in an effective administration. Some examples of these less obvious, but most important, interplays follow.

The desire of the airport landside manager to *expedite* passenger flow through the terminal must be tempered by the need for *security* inspection and its inherent retarding effect.

The desire of public relations for *more porter service* or *more baggage trolleys* must be weighed against *financial limitations of the budget.*

The inclination to *speed passenger flow* and, thus increase capacity by higher velocity escalators and moving sidewalks, must be measured against possible resulting decreases in *safety* and added *risk of injury* to patrons.

Finally *aesthetic desires for gardens and landscaping* must be viewed in the context of the *propriety of public land use.*

Resolving conflict requires time, energy and skill from the successful airport administrator/manager and an organization and communications structure that brings conflicts constructively to light.

Environmental Improvement

Airports and the aviation industry today are paying a frightful price in terms of constrained present and future development for their earlier failure or inability to deal effectively with aircraft noise and pollution. Chapter 8 outlines the Environmental Protection Agency (EPA) and Federal Aviation Administration (FAA) controls that have been developed to remedy this situation. For the future, apart from complying with EPA/FAA procedures in processing airport development and improvement projects, airport administrators must seek solutions that afford positive improvements in the environment. The temper of the times will not permit solutions that seek only to maintain status quo.

Public Confidence

Evolving and improved steps in the airport planning process and the EPA procedures involving the

public in environmental impact planning considerations (see Figure 37 in Chapter 8) set guidelines for airport administrators. The final winning of public acceptance for airport projects, however, depends on: (1) the zeal and sincerity of the airport administrator toward public participation in planning decisions; (2) the adequacy of the solutions the airport administrator proposes that give appropriate weight to the rights and needs of all; (3) the completion of staff work and presentation of solutions by airport administrators that make it feasible for elected officials to support present and future planning programs; and (4) the ability of the airport administrator to convince the community that air transportation and the airport are beneficial to the area served. None of these tasks are easy for airport administrators to accomplish. Their chances of success, however, are greatly enhanced by the support of an effective organizational structure backed by appropriate program tools, well trained, adequately compensated people, and practical internal and external communications.

ORGANIZATION, DIRECTION, STAFFING AND COMMUNICATIONS

In meeting the publicly-required administrative/management goals, airports today exist under many entity forms and structures and perform with varying degrees of success. Success is based not so much on the geometrical form of the entity as it is on a number of other elements closely related to the human equation: personal identification with results and job satisfaction.

Thus, while a proven entity and structural organization form are important, clear direction, a sense of the importance of the work assigned and recognition for tasks well performed are the real lubricants that raise performance of the enterprise above mediocrity. These added elements include:

1. placement of the entity in the governmental hierarchy;
2. clarity and completeness of the mandate given the entity by its creator;
3. specific definition of the terms describing the organizations's purposes and functions;
4. clear presentation of the organizational structure in graphical form;
5. effectiveness and understanding of the two-way internal communication link established between policy source, chief executive and the line/staff units of the entity;
6. degree to which the policy source (e.g. board of directors, board of commissioners, council of ministers or other) limits itself to *policy determination and action;*
7. conversely, the degree of latitude given the chief executive officer (CEO) by the policy source in its delegation of authority to him, within established powers and limitations, to recruit, train, develop and direct a competent, motivated staff willing to accept responsibility and to be judged on bottom-line service and financial results; and
8. extent to which certain tested administrative/management tools are implemented as a framework on which to base the activities of the enterprise.

Creating an Organization

Benefits to be derived from the form, structure and optimum placement of the entity within the governmental hierachy and from a clear statement and definition of powers and limitations expressed in the mandate creating the entity must be evaluated. In order to create an effective workable system for day-to-day administration and management communications, a standard definition of terms to facilitate common understanding should be formulated.

The latter involves principles of delegation of authority, careful distinction of line and staff responsibilities and the notion of the corpus of management. Particular stress is placed on the identification and recognition by giver and receiver of various kinds of internal messages that form the nerve system (working relationships) of the enterprise. When a healthy system of working relationships exists within an organization it becomes a priceless asset.

(In the above discussion, the term "message" has been used to avoid confusion with the sometimes hackneyed employee communications. The latter is also important but takes place in a different milieu through house organs, group activities, social events and enlightened personnel practices.)

The following sections discuss proven avenues of delegation to achieve policy implementation.

The Choice of Operating Entity

While many airports outside the United States are operated by national governments, the operating entity is more varied within the United States. Many U.S. cities operate airports through a commission, special department of the city, advisory board, or aviation director answerable to city government. County and bi-government, as well as private corporation operations, are also common operating entity forms. The authority forms of airport operation, either multipurpose or aviation only, are also popular in the United States and in some foreign countries. Table 7 lists basic airport operating entities and the cities that use each type.

There is no set formula to decide the optimum form of entity to fit every case. Quite the contrary, a specific choice must be made in each instance, taking into account the pertinent circumstances: size, nature, projected growth and geographical extent of the task to be performed; facilities, resources and finances available and those visualized in principle as required to accommodate desired growth; and the desires of the community's people and businesses expressed through their government as to self or subsidized support for the airport. The box story "Is the Authority Form Always the Answer?" asks a number of test questions that can be used as guidelines in accepting or rejecting that choice. This, in turn, may provide a helping hand toward an ultimate decision suited to local circumstances.

The Organization Form

The following describe organizational structures and the placement of airport administration within them.

Structure. Various types of organization structures exist that effectively support the managerial communications linkages, and operate successfully under different management/operating entity forms such as authorities, local or national government, or private enterprise. Regardless of structure form, emphasis should be on the communications loop for various kinds of internal "messages" that form the working relationships of the airport.

In a line/staff structure, the line responsibilities are entirely separate and distinct from those of staff whose job it is to provide advice, teaching, service, and audit functions to the line. Under this

Is the Authority Form Always the Answer?

At this juncture it is appropriate to consider the authority form as an entity for airport administration. The Port of New York Authority did not enter the scene originally as an airport operator. It was created as a bi-state agency in an effort to recognize and unify as one port a single body of water artificially separated by the state line running down the middle of the Hudson River. It was eventually directed into airport administration in 1947 by the legislatures of New York and New Jersey after it had acquired a sound reputation in public administration arising from its activities in the 1930s and 1940s in bridge, tunnel, seaport, and terminal planning construction and operation.

Since the 1950s, the Port Authority has been responsible for the planning, development, operation and maintenance of the northern New Jersey-New York regional system of airports—John F. Kennedy International, LaGuardia, Newark International, and Teterboro Airports. During this period air passengers at Kennedy, LaGuardia and Newark grew from 5,000,000 in 1950 to over 70,000,000 in 1984, and Port Authority investments in the airports grew from zero to over $1.5 billion. As in the case with any large public enterprise it has been the target of some criticism. This was not unexpected in light of its pioneering roles in dealing with the first exposures to aircraft noise impacts, early surges in traffic demand, and the provision of new technology facilities for the first passenger jet aircraft in the United States. The Port Authority of New York and New Jersey, however, has earned its reputation as a competent, business-like airport administration.

The Authority form, however is not a ready-made panacea for all airport administrative ills.[1] During the 1930s and 1940s as the fledgling Port Authority was beginning to acquire its reputation, the creation of an authority came to be the popular solution for any and every governmental problem. By 1935 no less than 23 new authorities had been created in the state of New York alone. The number throughout the country rapidly grew into thousands and unfortunately many were created for the wrong reason.

In his 1953 landmark paper, *Authorities as a Governmental Technique*, presented at the height of this wave of mania for authorities, Austin Tobin provided the following concrete guidelines for determining the applicability of the authority form: (1) there is a task to be accomplished or a service to be performed, which in the judgement of the people as expressed through their government, either could not or should not be performed by private enterprise; (2) large amounts of capital are needed; (3) efficient management with initiative and business imagination is essential; (4) long-range planning must be in the hands of competent business, financial and professional technicians; (5) the task/service must be self-supporting; (6) free from political interference, bureaucracy and red tape; and (7) the scope of the task/service involves areas more extensive than the established geographical boundaries of state and local government.

The above statements and their reflection of conditions present in a given situation are pertinent to the propriety of creating an authority for the task/service, and to the usefulness of an authority in carrying it out. The creation of an authority may be indicated in many circumstances where affirmative support cannot be given to one or more of the foregoing statements. But, if the majority of the statements command a negative response the necessity for the creation of what amounts to a new division of government must be seriously questioned.

In summary, Tobin stated:

> *To spin it around the other way, we might say that where the program can be administered within the regular framework of government departments; where there is no objective of self support and the financial aspects can be handled by annual appropriations and normal governmental accounting; where responsibilities are similar to those which pertain to well-run government departments or bureaus; where the activity cannot be separated from continuous and detailed government controls; then the creation of an authority is certainly* not *the answer.*
>
> *. . . Between these two extremes, may I suggest also that an authority should not be created simply to replace the normal functions of the established bureaus or divisions of government; nor to lull the public into belief that the activity is self supporting when in reality it is subsidized; nor solely as a device to avoid debt limitations."*

One of the worst *sole* reasons to create an authority is because by so doing it may be possible to pay higher salaries and provide enhanced fringe benefits in this form than in a more conventional governmental form.

[1] Austin J. Tobin, *Authorities as a Governmental Technique*, Paper before the Third Annual Institute—"The Place of Authorities in the Life of New Jersey Citizens," Rutgers University, March 26, 1953, p. 16 et seq. Tobin applied these tests of good corporate management to the public authority form but as good practice they are applicable to *any* entity form. This paper also provides an excellent history of the development of the authority form.

concept staff is responsible for "how" or the "standard" to which the assigned function is to be performed. The line is responsible for the "what" or the results. The Chief Executive Officer (CEO) can hold a line unit head responsible for bottom-line financial and service results.

In contrast to the line/staff organization is the skills type organization structure. The skills type groups employees according to their profession or trade, each having equal access to the authority over the producing line units. Under this structure it is difficult, if not impossible, for the CEO to hold one individual and subordinate supervisors responsible for delivering the product or service according to standards and time constraints. Certainly the producing line units would not know which "skills-boss" to obey and conflicting messages would result. The skills structure type illustrates the old adage: "fuzzy control is no control." Figure 8 compares the two organization types graphically. (For further discussion see the box story "The Line Staff Versus Skills Choice.")

Many foreign airports are operated by national governments. The line/staff concept, illustrated in Figure 8, can be easily incorporated into a typical national government organizational framework as shown in Figure 9. In this example, line units provide service directly to the public, and staff units provide advice, teaching, service or audit to the line units or to external objectives. Thus, the financial and engineering procedures applicable to the line airport unit in Figure 9 might very well flow respectively from the finanace and public works staff ministries.

Placement. With good management the entity form is not particularly critical. However, it is critical for the airport administration to be able to report directly and independently to the source of policy flow, and not be subordinated in another entity unit created for another purpose. For example, in a municipal operating entity, airport administration should exist as a line function reporting directly and independently to the mayor, city council, or advisory board from whom policy direction flows. This avoids submerging airport administration in, for instance, a municipal department of public works where the emphasis might be on construction excellence and permanence when what is really needed is phased, modular, simple construction to meet rapidly changing demands of traffic growth and technological obsolescence. Yet, in such an independent organizational relationship, airport administration could draw on public works' expertise for the staff functions of advice, education, service, and inspection to assure meeting the quality objectives of the operating entity.

The Mandate Given to the Entity

The word "mandate" refers to the enabling statute, ordinance, executive order or decree creating the airport entity. A clear mandate that explicitly spells out the powers granted to, and the limitation placed on the public service organization can be a most important factor in its services. For example, a comparison has been made of articles of the Port Compact (basis for creation of the Port of New York Authority, now known as the Port Authority of New York and New Jersey (PANYNJ) in 1921) with sections of the more recent AAT ACT BE 2522 (the statutory basis for creation of the Airports Authority of Thailand in 1979). The comparison shows that in the 58 years that elapsed between formation of the two authorities, the knowledge of public administration became so widespread that the framers of the Thai Act were able to include within the Act itself many highly desirable operating policies, rules and regulations omitted from the pioneering act in 1921 but later added by amendatory statute or PANYNJ Board Resolution.

Similarly, another example of a recent well-drafted mandate to a public corporation exists in Chapter 270 of the Laws of Hong Kong, the Mass Transit Railway (MTR) Corporation Ordinance, revised edition 1979. This ordinance, besides providing requisite powers and limitations in support of the creation and then the highly successful development, operation and maintenance of the MTR, is also noteworthy for its Section 20, the recoupment provision, which states:

> *. . . the Governor (of Hong Kong) in Council may, if he considers the public interest so requires, give directions in writing of a general character to the Corporation and the Corporation shall comply with those directions so long as...it is fully compensated by the Government in respect of any direction requiring the Corporation to act contrary to prudent commercial principles. . . .*

This provision safeguards the reserves of the public corporation (if it is successful), protects

The Line Staff Versus Skills Choice

Common sense supports the line/staff structure choice illustrated in Figure 8 and adapted to overseas usage in Figure 9. Much more compelling, however, is the following cold logic of one who lived with and directed the administration of a large enterprise first in the skills structure form, later converted for stated reasons to the line/staff form.[1]

Reporting to the Executive Director are a series of staff and line departments established in a major reorganization in 1963. To operate a single type of transportation facility, tunnels and bridges, we previously had a 'process' e.g., skills type organization structure, which grouped employees by technical skills they possessed: all operating personnel in one department, all engineers in another, all accountants in a third. But, as the Authority grew and was directed into operating of airports, marine terminals and inland terminals, it became more appropriate and efficient to group job functions according to the 'purpose' e.g., product, service or facility to be accomplished. Thus we formed line departments composed of operating personnel and some engineers, accountants and other specialists.

The most significant impact of the new organization plan was to establish four line departments (two more were added later) to locate in these departments the primary responsibility for assuring over-all success of groups of like facilities and the requisite authority to acheive it; to establish a group of central staff departments possessing specialized skills for policy planning, advice, evaluation and technical services e.g., advice, teaching, service and audit and to set up internal machinery for facilitating the most effective interchange of information, ideas and suggestions between the line and staff departments, e.g., working relationships.

The accompanying figure depicts the line/staff organizational structure of the Port of New York Authority (now the Port Authority of New York and New Jersey) as it existed after the changes reported.

them from raids by well-meaning but short-sighted governments and thus helps preserve the creditworthiness of the entity and its ability to finance its future development.

Definition of Terms

In order to examine the functioning of line/staff structures in various configurations, it is necessary to define some common terms.[40]

Airport. An airport is a meeting ground and exchange point for people and goods arriving and departing on a variety of air and surface vehicles having differing spatial and other requirements. These differing requirements make it logical and convenient to divide an airport for purpose of operational control into an "airplane" part or air side (AIR) and a "people/surface vehicle" part or land side (LAND).

Terminals. Passenger and cargo terminals provide the interfaces between AIR and LAND at airports. The boundary between the two lies at the apron side doorway of the terminal. On the air side are aprons, taxiways, runways and restricted lane areas for air side service land vehicles. On the land side are terminal facilities, curbs, roads and car parks. The separate characteristics of air and surface vehicles lend challenge to the terminal interchange activity and its optimal solution.

Airport Users. Airports are used by people, shippers and consignees as interchange points between ground and air movement and by the carriers providing the transportation. Airports are also used by a host of companies or agencies providing essential services and supplies to airports themselves and to carriers and patrons of the airport. Along with accommodating these intrinsic demands, airports have also become important community focal points for business, recreation and education.

Airport Products. The products of the airport are the *facilities* (runways, terminals, roads, utilities), *services* (marshalling of aircraft, passenger handling, parking, ground transport), and *amenities* (food, drink, lodging, shops) it provides (plans, develops, operates and maintains) itself or supervises as to quality when these products are provided by others. The *quality level* at which the airport's products are provided either by itself or under its supervision is determined by the policy source (board of directors) of the airport administration reflecting the wishes of the airport owner (government).

Overall Tasks of Airport Administration.[41] The basic task of airport administration is to forecast the needs for, and to plan, develop, operate and maintain products of the airport that meet the requirements of users at the quality levels desired by the owner. Many of these functions and their underlying support—forecasting, concept development, preliminary and detailed design, supervision of construction and quality control—can be economically provided by consultant services for airports not having a large supporting staff or not wishing to expand staff temporarily only to reduce it again after the development period.

Airport administration must also arrange financing for and revenues from the products it provides or supervises in order that the costs may be equitably shared among users and between them and the airport owner. The latter sharing reflects the owner's desire as to self support or subsidy in whole or in part.

In short, *airport administration* provides the tools, procedures and programs under which *airport management* delivers, or supervises delivery of, the airport's products at the quality level established by the policy source.

Tasks of Airport Management. The airport general manager (G/M) is responsible for providing or supervising the provision by others (air carriers, contract services etc.) of the air and land side products at the quality levels established by the policy source. These quality levels are transmitted to him through the CEO either directly by job descriptions and standard procedures developed by cognizant staff departments, reviewed in draft and cleared by the G/M, approved by the CEO and transmitted to the G/M as Airport Standard Instructions (ASIs) in the Administrative Manual.

The products of the airport are provided (or supervised) by the AIR and LAND line units of the airport under the direction of the airport G/M.

The business administration line unit (BAD) supports the provision of air-side, and land-side products by determining, negotiating and en-

[40] Figures 10, 11 and 12, and their appended legends provide full titles of organization units identified in the following discussion by initials, e.g. BAD = Business Administration Division.

[41] For a discussion of the role of the administrator in performing these tasks see sec. titled *Role of the Administrator* in this chapter.

forcing the leases, permits and agreements under which airport supporting revenues are developed.

In such tasks BAD is guided by standard forms and procedures developed by the director of finance (FIN) and by general counsel (LAW) and transmitted to the G/M by the Administrative Manual procedure described above. In some multi-airport administrations there may also be a small properties headquarter staff unit to assure standardization of policy by the BAD units at the several airports (see PROP in Figures 11 and 12).

The plant and structures (P&S) line unit supports the provision of air and land products by maintaining (or supervising the maintenance by others of) the facilities, assets and services of the airport at established quality levels. These quality levels are established, cleared and transmitted to P&S as described above. In many administrations, P&S is also responsible for completing construction projects within the time and funds budgeted, subject to quality controls by the engineering staff.

Difference between "Administration" and "Management." Administration is composed, *in the proforma discussion of this book,* of the CEO and staff departments. The policy source (Board) delegates to the CEO full responsibility and authority to recruit, train and direct staff and line personnel to interpret and implement board policy both as to *delivery* of the *products* the airport provides and the *quality levels* at which they are provided.

The staff departments assist the CEO in establishing these quality levels and promulgating them by advice (manuals, procedures etc.) teaching (training), serving (e.g. providing staff services to the line units—recruitment, payroll etc.) and auditing (inspecting) the line's performance.

Management is composed of CEO and the line departments. The policy source (Board) delegates to the G/Ms and their subordinate supervisors, through the CEO, the responsibility and authority to implement board policy as to the *delivery* of the airport's products.

Members of both staff and line components must provide feedback to ensure rational and sensible orders (within line and staff) on the one hand and procedures (from staff to line) on the other.

Typical Line/Staff Structures[42]

Figure 10, a pro-forma chart of organization for an entity charged with planning, developing, operating and maintaining two airports, illustrates (in the left margin) the establishment of administration and management at policy, executive, staff and line levels. Clear definition is provided between product delivery at the line level and responsibility for procedural and quality control at the staff level. The broad nature of tasks assigned to each block is set forth in the legend. Since this example is of a single-modal entity, all staff would be oriented toward aviation and airport considerations. Special attention is given in the legend to the structural treatment of the sometimes difficult interface between management and security forces. A later section in this chapter, *Management Control Applied to Security Functions,* describes the management aspect of this interface. Figure 11 displays a multimodal entity, including three airports of various sizes. This example is a true-to-life depiction of sub-structures of JFK, Newark International and La Guardia Airports, based on their sizes and functions. In this example, the staff departments are general in their expertise, which is shared by aviation and the other modal line departments.

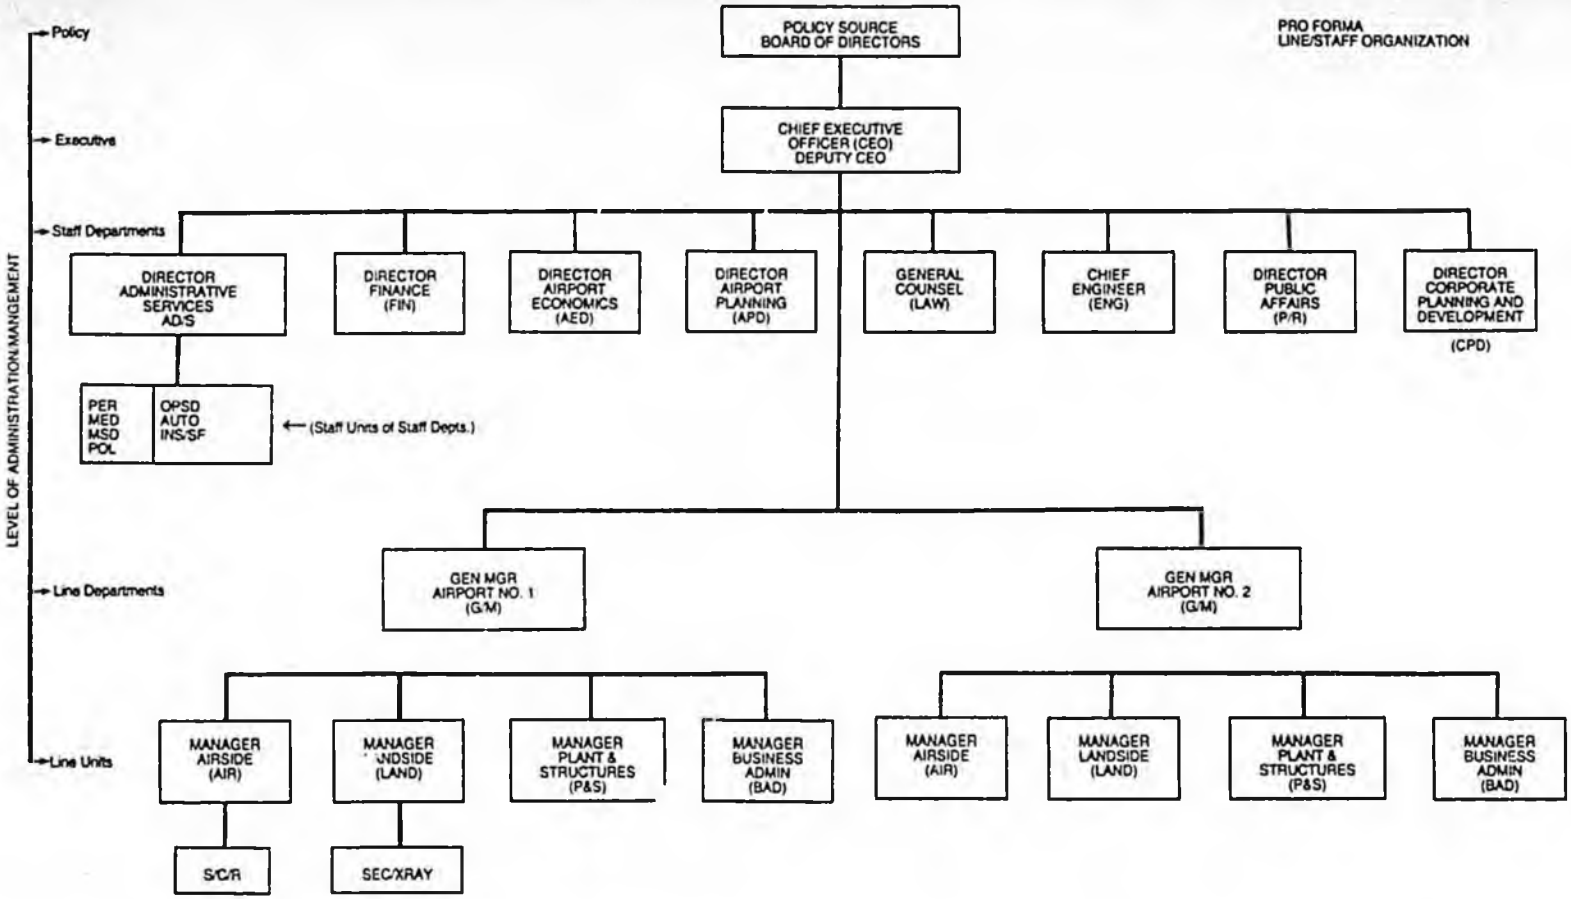
Figure 12 shows a single-modal format for six airports of varying sizes with provision for partial decentralization of certain staff functions. In this single-modal case, staff departments would be aviation/airport oriented but could be decentralized in part to line units in order to provide closer procedural and quality control support to the line, particularly in multi-airport entities of wide geographic distribution.

The form of organization structure, although important, is only one of the means by which the efforts of the entire staff are directed toward common goals; it is not an end in itself and must be tailored in actual practice to ad hoc needs and available manpower.

Working Relationships

The term "working relationships" defines a method of ensuring that both givers and receivers of internal communications identify their nature (for example "order" or "advice") and understand their content and expected response. Thus they are like the human nerve system.

[42] For examples of several existing airport structures see Ashford, Stanton and Moore, *Airport Operations* (New York: John Wiley & Sons, 1984), pp. 16-23.



Executive

CEO - Chief Executive Officer

Staff Departments

AD/S - Administrative Services
FIN - Finance
AED - Airport Economics
APD - Airport Planning
LAW - Law
ENG - Engineering
P/R - Public Affairs
CPD - Corporate Planning/Development

Staff Units of Staff Departments

PER - Personnel
MED - Medical
GSD - General Services[a]
MSD - Management Services
POL - Police (Recruitment with PER, Training & Discipline; Operation of Police Academy)
OPSD - Operations Standards
AUTO - Automotive
INS/SF - Inspection/Safety (*not* security - this unit encompasses industrial safety and hygiene)

Line Departments

G/M - General Manager (The title "Director" is optional and could also be used for the head of the line department operating an airport).

Line Units of Line Departments

AIR - Airside Product Delivery
LAND - Landside Product Delivery
P&S - Plant & Structures
BAD - Business Administration
S/C/R[b] - Search/Crash/Roscue = Rescue of passengers and crew from crashed or disabled aircraft.
XRAY[b] - Inspection of passengers, cargo and baggage for prevention of sabotage and/or hijacking.

[a] Purchasing, Stores, Reproduction Services, Photo Services, etc.

[b] Duties of these services are spelled out in broad terms to differentiate between them. They may be operated by one cross-trained force as in PANYNJ or they may be performed by separate forces. In either event they may be assigned for management control to either AIR or LAND or split as shown in Figures 10 and 11. See further reference to management control in Figure 13 and in the section titled *Management Control Applied to Security Functions.*

The Nerve System. Many administrators and managers believe the nerve system is the most important organizational element (see box story "The Human Being—Organizational Analogy"). A human being or an organization possessing all other attributes but lacking a nerve system (working relationships) becomes an uncontrollable monster! Or, stated another way, a good set of *practiced* working relationships will make a poor entity and structures form work, but the reverse is seldom true.

Responsibilities of Line and Staff. Table 8 provides guidelines to define line and staff responsibilities and relationships. The key to the success of this system is the careful identification by giver, as well as receiver, of the nature of communications exchanged. Differentiation must be made between what is to be done (orders) and how it is to be done (quality standard).

Content of Staff-to-Line Communications. Table 9 defines the content of staff-to-line communications and suggests a means of avoiding the sometimes (and too often) disagreable auditor-auditee relationship that builds up when an "expert from headquarters" visits a field unit on a "spying mission" and follows "tattletale" procedures.

Working Relationships Presented Graphically. The pro-form line/staff organization chart (Figure 10) can be redrawn to add the working relationship flow within and between line and staff respectively and in both directions in each case (Figure 13). Clear lines of communications flow can be identified and drawn to and between each unit. This facilitiates training of personnel, minimizes the possibility of confusion and greatly improves the efficiency of the whole organization.

The Human Being—Organizational Analogy

To be effective an organization must be alive, vibrant and adaptable to changing conditions. It is thus, not unreasonable to draw an analogy between essentials that produce these qualities in a human being and their counterparts in a viable enterprise. This table displays such a comparison and explores the expression of human attributes in the organizational sense.

Essentials in a Human Being	Equivalent in an Organization	How Expressed in an Organization
1. Skeleton	1. Organization Chart	1. A Good Clear Chart
2. Flesh and Blood	2. People	2. Qualified, trained, well compensated personnel
3. Will or Purpose	3. Task or Job Description	3. ASI's[a]
4. Nerve System	4. Working Relationships	4. ASI's Training[b]

[a] For an organization, ASIs define *what is to be done* (by "line") *to what quality standards* (prescribed by "staff") under the direction of the chief executive.
[b] Working relationships are expressed in an organization through ASIs and training. In the human body, the nerve system provides communciation between brain and eyes, ears, hands, legs, etc., not only to carry out the brain's orders but also to channel feedback from senses so that actions are rational and sensible. *Systematic working relationships perform the same function for an organization in both directions.*

Management Control Applied to Security Functions

It is indispensable in the overall coordination of airport product delivery that airport management be able to exercise control of the search/crash/rescue (S/C/R), security (SEC), and inspection (XRAY) functions, yet airport management must avoid interfering with the professional performance, esprit de corps and discipline of these uniformed forces. Under the "five adverb rule," operations (AIR or LAND) should direct "when," "where" and "why" the S/C/R, SEC, or XRAY function is to be performed but never "what" to do or "how" to do it. The "what" and "how" are learned by S/C/R, SEC and XRAY officers in police academy training. Also operations *never* disciplines an S/C/R, SEC or XRAY officer. Infractions should be reported to the commanding officer at the airport of the S/C/R, SEC or XRAY unit (or units) for handling.

By grouping line and staff functional blocks separately as in Figures 10 and 13, the lines of communication can be clearly and simply drawn. Such clear definition would not be possible in the skills organization structure depicted in the lower half of Figure 8.

Figure 14 displays these working relationships in a simplified form for a two-airport single-modal entity.[43]

[43] See Table 8. This system of defined working relationships has been extensively proven in actual practice.

Table 8. Definition of Line and Staff Responsibilites and Relationships — Basic Principles.

WHAT is to be done Is charged to LINE UNITS	*To what QUALITY STANDARD it is to be done is charged to STAFF UNITS*
1. No man may have more than one supervisor	1. No man may have more than one supervisor
2. Line supervisor issues *orders within line* to subordinates: may only give *information to Staff Units.*	2. Staff supervisor issues *orders within staff* to subordinates: *may only communicate following to line units:* Units: (Pertaining to his particular staff speciality): a) Staff Advice b) Staff Teaching c) Staff Service d) Staff Audit
3. Subordinates in line must obey orders from line supervisor but also give feedback information to ensure sensible and rational orders. Subordinates in line are *not* required to obey advice, teaching, service or audit communication from staff, but should have good reason for not doing so and be prepared to defend it. This is especially true when communications from staff are based on manual procedures bearing line approval.	3. Subordinates in staff and all in line units feed back information to insure sensible and rational quality standards.
EXCEPTION: The operating head or chief executive of the organization is the supervisor of both line and staff units and may of course issue orders to both or either type of unit.	

Source: Newton K. Wilson, Retired President Sky Chefs, Inc. Newton K. Wilson was selected in the late 1940s to head Sky Chefs, Inc., the then newly formed in-flight caterer/restaurant operating subsidiary of American Airlines, Inc. After a year in office he noted costs rising at the same rate as revenues with no profit and improvement and concluded that in a high-quality control operation like food service his people were confused, hence inefficient, by inability to differentiate between orders from line supervisors and quality control communications from staff units that in many cases appeared to conflict. Wilson then devised and applied this system of organization and communications identification. It proved most effective. With permission from Mr. Wilson, the writer subsequently adapted these principles and procedures with excellent results in his own administrative tasks in American Airlines and later in the Port of New York Authority

Table 9. Staff-To-Line Working Relationships

1. Staff Advice: Information, manuals, forms, standard operaing procedures, etc. setting for. the particular expertise in the area of quality control or staff function assigned to a staff unit. Must be submitted to and approved by line suprvisor in advance of issuance to line.
2. Staff Teaching: Instruction offered by staff in the above.
3. Staff Service: Service performed by a staff unit in its specialty for a line unit. (Usually reimbursable by the line unit in a fully cost accounted system).
4. Staff Audit: Inspection to determine line conform to quality control or other norms established by staff *and agreed to in advance by line.* Also may be regarded as eyes and ears of the chief executive to determine quality to line's production.

The coordinative working relationship or simply "coordination" deserves special emphasis. It means exchange of information where required between all levels and in all directions in an organization to ensure informed personnel and minimize lost motion. There are no rules limiting how coordination may flow.

Caution: In staff audit functions, auditor must report *first and only* to head of unit being audited. Report is made to head of staff department concerned only after line unit has read, corrected or otherwise commented on audit. Exception: when theft or crime is involved, report is made simultaneously to supervisor of person or persons suspected and to head of staff unit concerned.

Policy Determination and Delegation of Responsibility for Implementation

It is important that responsibility for policy determination and direction be clearly separated from delegated responsibility and authority for implementation. The following definitions assist such understanding.

Policy Direction. The major administrative role of the governing entity is to provide policy direction. Policy direction may come from an individual (the mayor), from a government body (city council or, overseas, ministry of transportation), from a board of commissioners (in an authority), or from a purely advisory board (a device employed by many local governments). Whatever the source, the policy direction must be impersonal, qualified, and limited.

Impersonal. Public policy makers should have no personal financial attachment to the projects of the enterprise. Objectivity is more nearly assured when their services are rendered in the public interest without compensation.

Qualified. Airport administrations need policy guidance in many fields of expertise, such as finance, law, engineering, and business. In most cities citizens can be found who are willing to devote their skills in these areas to the public interest by serving on airport advisory boards or committees. However, this works best when individuals are chosen who bring luster to the office rather than those to whom the office might be the donor.[44]

Limited. Once the policy source has formulated and/or approved long-range goals, annual budgets, major projects, and contract awards, the achievement of objectives is delegated to the chief executive and staff for accomplishment. Results should be judged from periodic reports and recommendations for future actions. Policy makers should avoid involvement in day-to-day management processes.

Decision Making and Delegation of Authority

The airport administrator is responsible for all decisions that affect the airport's performance; but

[44] Austin J. Tobin, *Authorities as a Governmental Technique,* paper presented before the Third Annual Institute—"The Place of Authorities in the Life of New Jersey Citizens," Rutgers University, March 26, 1953, p. 18.

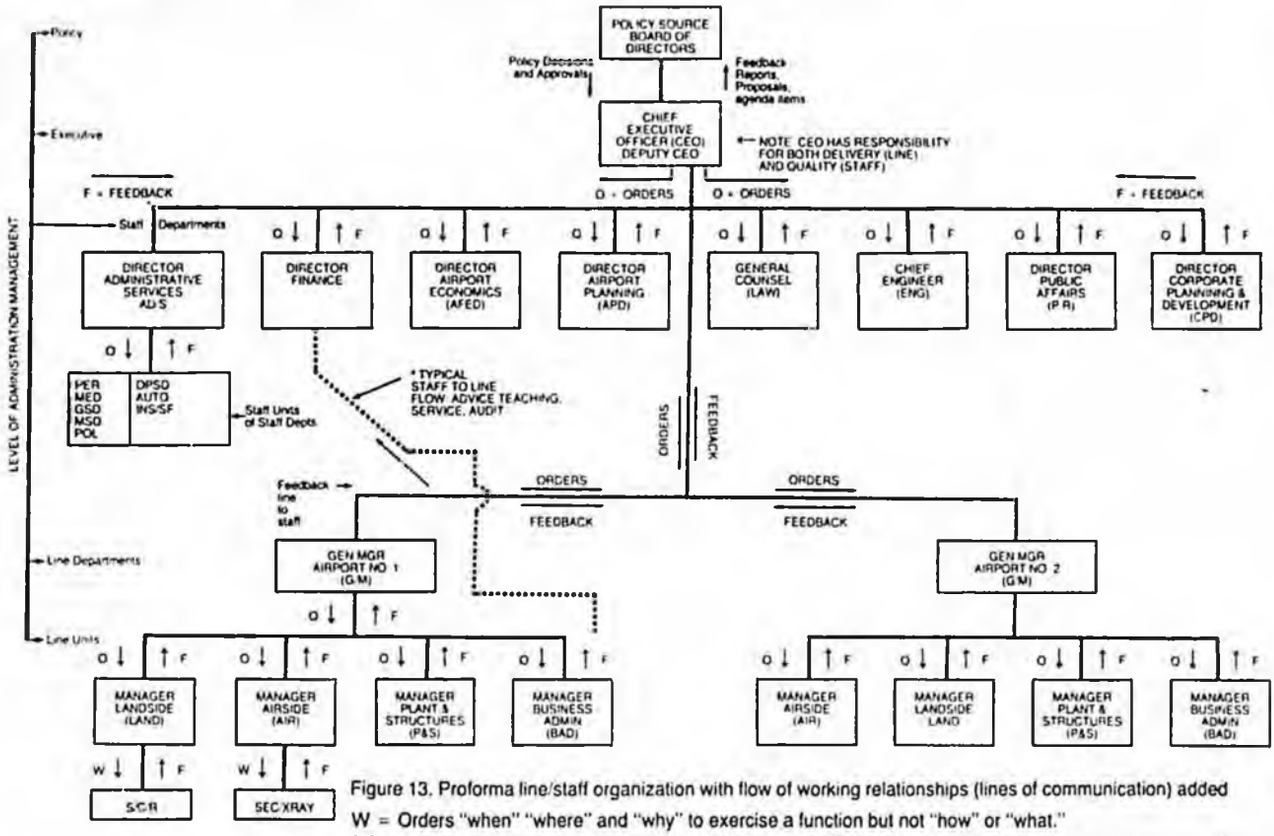

Figure 13. Proforma line/staff organization with flow of working relationships (lines of communication) added

W = Orders "when" "where" and "why" to exercise a function but not "how" or "what."

[a] Only one example shown, to avoid confusion. Same flow line could be drawn between any staff and any line block.

not all airport operating decisions should be made by the administrator (unless the airport is a small operation). The line manager, not the administrator, is responsible for making the decision on what to do when performance departs from standard. Since most control action takes place at the line level, it is inevitable that most decision making likewise must take place here. This, of course, requires delegation of authority and requires that line managers be trained and stimulated to be decisive.

Likewise, the administrator must be given complete decision-making responsibility by the policy source for implementing policies. With a public or quasi-public governing entity, airport administrators should be charged with the same responsibility for executive action and administration as the president of a private corporation. The policies of the governing entity should be transmitted to the airport administration through the airport administrator and all personnel recommendations to the policy source should be made by the administrator. The airport administrator should be made completely responsible for the daily management decisions and for recruitment and development of a managerial staff fully qualified to carry out their respective responsibilities, and adequate in depth to assure the availability of trained personnel and the continuity of effective administration.

Personnel Policies and Staff Selection

The selection policies of the executive, administrative and professional staff followed in any successful private corporation, are equally applicable to airport administration. Success depends on obtaining the best talent available, paying them salaries that are at least in some limited degree comparable with those of private industry and making it sufficiently attractive to encourage a career in the field of public enterprise.[45]

Many successful administrators have found that it is never a sign of weakness when a person in high position delegates authority; on the contrary, it is a sign of strength and of the capacity to de-

[45] Ibid, pp. 18-19.

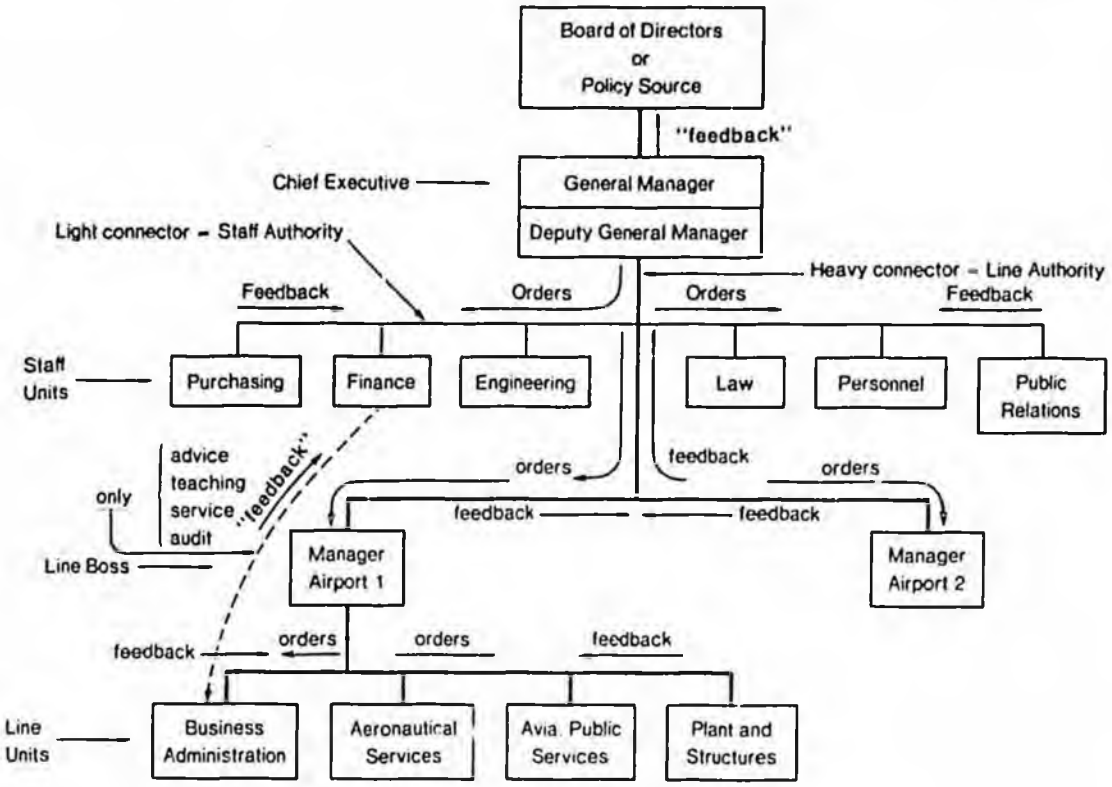

Figure 14. The organizational structure and its working relationships or nerve system.

serve success. In the final analysis, the staff must be willing to take the delegated responsibility and to be judged by their success or failure in discharging it.[46]

Taking Action and Following Up

Taking action on decisions and following up on the results closes the communication loop for administrative control. In brief review, the communications loop consists of seven elements: (1) control subject; (2) unit of measure; (3) standard level of performance; (4) audit device; (5) organization; (6) decision; and (7) action and follow up.[47]

Few things in this world are perfect. Managers who expect perfection from their people are doomed to disappointment. Good leaders always strive for perfection. But, at the same time, they cannot allow themselves to be such perfectionists that people find them impossible to live with when they make mistakes. When people goof, they should be corrected. However, managers who are supercritical, set impossible standards, question every detail, or are otherwise difficult to please, leave people discouraged—even fearful. Their confidence can be badly shaken if they get to feeling that no matter how good a job they do, it is never good enough.

The airport administrator must consider the time and effort expended in obtaining performance results, along with many other factors including the always present human element. When performance results are less than standard, the cause, not the symptom, must be addressed, and action must be taken to put performance back on the planned course—preventing change from planned performance. However, administrators must also optimize performance, which may call for creating change, either in the form of operating or training method improvements.[48]

[46] Ibid, p. 19 et seq. provide additional guidelines for personnel administration that are covered by reference only due to space limitations.

[47] For a full discussion of these elements see Appendix C.

[48] For some protocol considerations of training, see Appendix D.

ROLE OF THE ADMINISTRATOR

The chief executive must possess a clear awareness of the nature of airport services, processes, and procedures, as well as some concept of their time and life cycle. The administrator's prime objective is to optimize performance through improvement. Improvement comes from eliminiating causes of variance from standard. This causes performance to rise from substandard to standard. This is normally handled by unaided operating (line) management. Improvement also comes with increased effectiveness through greater diligence, making better use of existing facilities, know-how, etc. For example, selective decreases in maintenance cost brought about by changing supply vendors means improved effectiveness. However, improvements such as this are handled by the unaided operating (line) management.

The role of the administrator in realizing improvement, is the establishment of a higher level of effectiveness through method improvement rather than through operating efficiency improvement. Examples could be the realization of a new terminal building or the creation of a more positive public image of the airport's operations. The chief executive must become personally involved in urging major new births such as a new terminal facility, and the administrator should also become personally involved in seeing to it that what is doomed does not linger on. (Few managers will put part of their job to death. In really big cases, the chief executive may shield a dying operation, so that governing entity intervention is necessary.)

The administrator should be familar with, and acquire skill in, use of the levers of the office—setting the important goals, organizing to meet them, and seeing that they are indeed met. The administrator must have certain tools of administration. Three of the most important tools for the airport administrator are training (particularly the development of management capability in personnel), already discussed, the administrative manual and public relations, which follows in Chapter 5.

Description and Placement of Programs

The adoption of the following 14 administrative and management programs and their implementation in a well conceived line/staff structure by clear job/task descriptions, coordinated standard procedures, and effective administration and management can assure achievement of the system's missions and goals.

This listing serves as a checklist, and is not meant to imply that programs can *only* be performed by the "responsible" units designated in this example. As discussed earlier, flexibility is more important than doctrinaire rigidity. For example, within the recommended line/staff group-

Proven Essential Programs or Tools

Any project or program whose quality control standards have been examined from the points of view of each of the following seven aspects could be considered well defined. They are, in alphabetical order: aesthetic, economic, legal, operational, political, social and technical aspects.

If these aspects are grouped by the missions or the broad tasks they could support, say, in the case of an international airport system, their order would be as follows:

Considered Aspects	*System Missions and Goals*
1. Technical 2. Operational	Provide a safe, user-friendly airport system for its patrons and users
3. Economic 4. Legal	On an efficient, self supporting or cost/known basis
5. Social 6. Asethetic 7. Political	While being a good neighbor-contributor to the needs of the government served by the system and its citizens, businesses and visitors

The use of certain essential programs as tools can help simplify and organize the administrative process seeking to satisfy airport management needs. These programs have the overall objective of establishing and maintaining a communications loop to enable effective control and are not unusual to the administration of other business types. In this book, however, the use of these programs is based on a responsive line/staff structure with strong emphasis on two-way communications. This results in a simple system, but one that does require careful indoctrination and continuous training and review.

ings, organization charts should be tailored to take advantage of the skills of particular personnel who are available and titles and assignments can and should be altered to meet specific needs. (Abbreviations at the end of the paragraphs identify organization units responsible for each program.)

Administrative Programs—Tools Supporting Management

Staff departments are normally responsible for administrative programs either in a controlling or advisory/service capacity. The roles of the staff departments and their interfaces with line departments in both areas of responsibility are described in Chapter 5 along with a review of certain general administrative guidelines. The following sections highlight the several administrative program tasks.

Airport Organization. Structure, locus, form, manning criteria, task description and communications-identification and use (AD/S—MSD).

Airport Administrative Services. Organization and procedures including editing the administrative manual containing job/task descriptions and standard operating procedures; personnel, medical, police, purchasing, stores, reproduction services, visual aids, travel services, etc.

Law. Functions of general counsel in areas of corporate government relations, risk exposure, litigation, legal opinion, and contracts (financial, construction, purchase and real estate leases and permits).

Airport Public Affairs. Guides administration in the potential impact of its decisions on the public, and deftly calls attention to good performance after the fact. Monitors quality levels of patron services and facilities, handles complaints and prepares or clears speeches, papers, brochures, publications, etc. (P/R).

Airport Marketing. Promotes the use of the airport, attracts business to the area it serves and enhances the value of the airport to its community. This includes representing the interests of the airport at hearings of regulatory bodies and government agencies dealing with service rights, tariffs, etc. (P/R—with advice of LAW).

Corporate Planning and Development. Establishes long-range objectives, goals and purposes for the entity to meet future technical, operational, social, aesthetic, and economic needs. Considers and defines legal and political measures that must be instituted to meet them and the organizational ramifications of such measures. (CPD)

Airport Financial Control. Tools and procedures for budgeting, recording, reporting, and controlling: capital investments, operating revenues, operating expenses and operating margins (profit/loss or subsidy need). Capital formation and management. Insurance, bonding and computer programs. (FIN)

Airport Economics. Forecasts: rental rate and fee setting following FIN standards; economic analysis preparation (AED). (The economic analysis preparation function may also be decentralized to management status under the G/M).

Airport Planning. Long-range master planning; facilities planning; securing users', operations' and government's inputs to airport planning projects; simulation and model building; feedback to the design agency; change order monitoring; feedback from construction supervision and quality control; liaison with operations and users during project in service life to obtain feedback; representation of airport in technical areas with governments (e.g. ICAO), and with trade and industry associations (e.g. AOCI/ICAA) (APD). This program is often managed for new or developing airports by consultants.

Airport Engineering. Provides detailed cost estimates for construction projects under consideration; designs services for approved projects under development; provides recommendations on construction contract breakdown and contractor qualification; analyzes bids and contract awards; quality control and audit during construction; materials testing laboratories and liaison with building codes agencies (ENG). This program is often managed for new or developing airports by consultants.

Management Programs—Using the Supplied Administrative Tools

Line departments are normally responsible for management programs. The following sections highlight the several management tasks detailed in Chapters 10, 11 and 12.

Airport Operations. Airport project delivery (AIR and LAND); security. (S/C/R — SEC and XRAY).

Airport Maintenance Control. Ensures safety for patrons and users, preserves the asset represented by the airport, its facilities and equipment, and keeps all facilities, equipment and services operating at a high level of dependability (P&S).

Airport Project Control. Provides for completion of on-going construction projects or purchasing major components within time and funds budgeted at desired level of quality as prescribed by the quality control agency (e.g. ENG) or APD and FIN in control aspects (P&S). This program is often managed for new or developing airports by consultants.

Airport Business Administration. Arranges equitable, compensatory contracts, leases, permits and agreements with users, and those supplying facilities and services to the airport, its tenants and patrons; administers the Tenant Alteration/ Construction Control program to maintain aesthetic standards on the airport and its environs; and prevents confusing clutter of uncoordinated signing, lighting and facility construction (BAD). Formats contracts, leases, permits and agreements as prescribed by FIN and LAW. Standardization of lease/permit provisions may be overseen by PROP.

Training. This is a requirement of each of the above administrative and management programs. It may be done "on-the-job" or may be handled in lectures or at briefing sessions either internally or externally.

Apart from on-the-job training endemic to each of the management services, the provision of wide-ranging education and self-improvement programs supported by financial grants is a most important attribute of a successful enterprise. Supervisors should be reminded of their responsibility to make proper training available to their staffs.

Regardless of the organization for management, it can only be as good as the people involved in it. Airport administrators can maintain low employee turnover and high morale by successfully communicating the organization's goals and policies to their people. The moment employees get the feeling that they are not sharing in company goals, in what's going on, morale drops, and turnover increases. The employees lose the sense of belonging. Administrators with the least amount of "secrets" from their people, who level with them, who try to keep them informed and inspired, will usually enjoy excellent morale among their people. By contrast, leaders who feed their egos by keeping secrets, who pride themselves on having "inside" information, can do severe damage. Obviously some information cannot be shared, but good managers will do all they can to communicate the organization's goals and policies to their people as completely as possible.

It is mandatory for airport administration to cultivate good employee morale and attitude in every link of the communications loop that provides managerial control.

On-going Implementation

Many on-going studies and development efforts are required in devising an organizational entity to adequately deal with the issues involved in administering and managing an airport or airport system. Such efforts could include, for example, the tailoring of the pro-forma line/staff organizational structure set forth in Figure 10 to meet specific requirements and the development of job/task description to fit such a structure. Other needs include organizing the format and initial content of an administrative manual and training courses in working relationships and in the development and implementation of the 14 essential programs.

HB 173

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 173 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the international airports in Anchorage and Fairbanks and establishing the Alaska International Airport Authority; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. FINDINGS AND PURPOSE. (a) The Alaska State Legislature finds that the state-owned and state-operated international airports at Anchorage and Fairbanks are critical links in air transportation between the Orient, Europe, and North America and are the major points of access to Alaska for international and interstate air travelers. In order to protect and maintain the viability and competitive position of the Anchorage and Fairbanks international airports, it is in the best interest of the state to vest management of these airports in an independent authority that can provide effective marketing of the airports; efficient, responsive, and integrated management of the airports; and competitive services and facilities to users of the airports.

(b) The purpose of this Act is to establish an authority for the operation, management, planning, and construction of facilities for the state-owned and state-operated international airports.

* Sec. 2. AS 02 is amended by adding a new chapter to read:

CHAPTER 40. ALASKA INTERNATIONAL AIRPORT AUTHORITY.

ARTICLE 1. CREATION AND ORGANIZATION.

Sec. 02.40.010. ALASKA INTERNATIONAL AIRPORT AUTHORITY. (a) The Alaska International Airport Authority is established. The

authority is a public corporation of the state. The corporation is an instrumentality of the state in the Department of Transportation and Public Facilities but has a legal existence independent of and separate from the state and has continuing succession until its existence is terminated by law.

(b) The authority is the exclusive state agency responsible for the operation, management, planning, marketing, and construction of facilities for the state-owned and state-operated international airports located at Fairbanks and Anchorage.

Sec. 02.40.020. BOARD OF DIRECTORS. (a) The powers of the authority are vested in the board of directors. The board consists of the commissioner of transportation and public facilities, or the commissioner's designee, and four qualified members appointed by the governor. Except for the commissioner, a member may not be employed by the state, including the University of Alaska, or hold elective state or municipal office.

(b) Two members shall be residents of the Municipality of Anchorage. One of these two members shall be nominated by the municipal assembly. The governor shall appoint or reject the person nominated by the assembly. If the governor rejects the nominee, the assembly shall nominate another qualified person.

(c) Two members shall reside within the geographic boundaries of the Fairbanks North Star Borough. One of these two members shall be nominated by the borough assembly. The governor shall appoint or reject the person nominated by the assembly. If the governor rejects the nominee, the assembly shall nominate another qualified person.

(d) The appointed members serve for staggered terms of four years. A member holds office for the term of the member's appointment and until a successor is appointed and qualified. A member may be

reappointed. A vacancy in the membership occurring other than by expiration of term shall be filled in the same manner as the original appointment but only for the unexpired term.

(e) The members shall comply with the requirements of AS 39.50 (conflict of interest).

(f) Except for the commissioner and the commissioner's designee, the members of the board shall be confirmed by a majority of the members of the legislature in joint session. A member appointed by the governor has the powers and responsibilities of a confirmed board member until the member is rejected by the legislature or the legislature adjourns without confirming the member.

Sec. 02.40.030. COMPENSATION AND EXPENSES. (a) An appointed member of the board is entitled to compensation not to exceed $400 for each day the member is engaged in the actual performance of duties as a member of the board for a maximum of 60 days in a calendar year. The board may provide by rule for compensation for partial days during which an appointed member is engaged in actual performance of duties as a member of the board.

(b) In addition to compensation under (a) of this section, an appointed member of the board is entitled to per diem and travel expenses authorized by law for state boards and commissions under AS 39.20.180.

Sec. 02.40.040. REMOVAL OF MEMBERS. The governor may remove an appointed member for cause, including incompetence, neglect of duty, or misconduct in office. Before a member is removed for cause, the member shall be given a copy of the charges and afforded an opportunity to publicly present a defense in person or by counsel upon not less than 10 days' notice. If a member is removed for cause, the governor shall file with the lieutenant governor a complete statement of all

charges made against the member and the governor's findings based on the charges, together with a complete record of the proceedings.

Sec. 02.40.050. MEETINGS. (a) The board shall meet at least four times each year.

(b) The board shall meet at the call of the chair or at the request of three members of the board.

Sec. 02.40.060. OFFICERS AND QUORUM. (a) The board shall elect one of its appointed members as chair and one of its appointed members as vice-chair. The board shall elect a secretary who need not be a member.

(b) Three members of the board constitute a quorum. Action may be taken and motions and resolutions adopted by the board at a meeting by the affirmative vote of at least three members. A vacancy in the membership of the board does not impair the right of a quorum to exercise all the powers and perform all the duties of the board.

(c) Members may not vote by proxy.

Sec. 02.40.070. STAFF. (a) The board shall employ an executive director who serves at the pleasure of the board as its chief administrative officer. The executive director shall be selected on the basis of education, experience, training, and expertise in management. The executive director may select and employ additional staff as necessary.

(b) The board shall employ a controller who serves at the pleasure of the board. The controller is responsible for the fiscal management of the authority and shall prepare financial reports, monitor the issuance and management of the debt of the authority, and perform other duties assigned by the authority.

(c) The executive director, with the concurrence of the board, shall employ airport directors. Airport directors shall be selected

on the basis of education, experience, training, and expertise in management of airports.

(d) The board may employ or contract for legal counsel, including bond counsel, to represent or to advise it.

ARTICLE 2. POWERS AND DUTIES.

Sec. 02.40.100. POWERS AND DUTIES OF AUTHORITY. (a) In addition to other powers granted in this chapter, the authority may

(1) sue and be sued;

(2) adopt and alter an official seal;

(3) maintain an office in the state;

(4) acquire, hold, use, and dispose of its money, subject to appropriation by the legislature;

(5) acquire, hold, use, lease, rent, construct, and dispose of property for its purposes;

(6) operate, maintain, and improve airport facilities;

(7) issue revenue bonds in the amount authorized by law;

(8) assign duties to the executive director and to the controller; and

(9) do all acts necessary to carry out this chapter that are not expressly prohibited by law.

(b) The authority shall adopt and enforce

(1) rules for the conduct of its business and for the use of its services and facilities;

(2) a code of ethics for its directors and employees that is substantially equivalent to that in AS 39.52;

(3) personnel rules necessary to establish a system of personnel administration substantially equivalent to the state personnel rules adopted under AS 39.

Sec. 02.40.110. PUBLIC NATURE OF AUTHORITY ACTIVITIES. The

planning, construction, improvement, maintenance, equipment, and operation of an airport, whether by the authority separately or jointly with another state agency, municipality, or person, and the exercise of other powers granted to the authority are public and governmental functions, exercised for a public purpose, and matters of public necessity. Land and other property and privileges acquired and used by or on behalf of the authority for the purposes enumerated in this chapter are acquired and used for public and governmental purposes and as a matter of public necessity.

Sec. 02.40.120. ACQUISITION OF LAND AND EASEMENTS. The authority, as part of the cost of constructing, maintaining, or improving airport facilities, may acquire by purchase, gift, exchange, or eminent domain land in fee simple or easements that it considers necessary for present or future public use, either temporary or permanent, including easements in airport hazards or land outside the boundaries of an airport, necessary to permit the removal, elimination, obstruction-marking or obstruction-lighting of airport hazards, or to prevent the establishment of airport hazards. By the same means, the authority may obtain material, including clay, gravel, sand, or rock, or the land necessary to obtain the material. The authority may acquire the land or material notwithstanding the fact that title to it is vested in the state or a department, agency, commission, or institution of the state.

Sec. 02.40.130. AUTHORITY TO ACQUIRE PROPERTY FOR THE PURPOSE OF EXCHANGE. When the authority declares that it is in the best public interest of the state to do so, the authority may acquire by purchase, gift, exchange, or eminent domain privately or publicly owned land or an interest in it for the purpose of exchanging it for privately or publicly owned land that the authority is authorized by law to

acquire.

Sec. 02.40.140. EMINENT DOMAIN. (a) The authority may exercise the power of eminent domain under AS 09.55.240 - 09.55.460 to acquire land for airport purposes consistent with this chapter. Notwithstanding AS 09.55.250, the authority may acquire a fee simple title whenever, in the judgment of the authority, ownership of a fee simple title is necessary to carry out the purposes of this chapter.

(b) The authority may file a declaration of taking in the manner provided for the state under AS 09.55.420.

(c) The exercise of the power of eminent domain requires the prior approval of the governor.

Sec. 02.40.150. INDEMNIFICATION. (a) The authority may defend and indemnify a current or former member of the board, employee, or agent of the authority against all costs, expenses, judgments, and liabilities, including attorney's fees, incurred by or imposed upon that person in connection with a civil or criminal action in which the person is involved by affiliation with the authority, if the person acted in good faith on behalf of the authority and within the scope of official duties or powers.

(b) The authority may purchase insurance to protect and hold personally harmless its employees, agents, and board members from an action, claim, or proceeding arising out of the performance, purported performance, or failure of performance, in good faith, of duties for, or employment with, the authority and to hold them harmless from expenses connected with the defense, settlement, or monetary judgments from that action, claim, or proceeding. The purchase of insurance is discretionary with the board and insurance is not considered to be compensation to the insured person.

Sec. 02.40.160. FIDELITY BOND. The authority shall obtain a

fidelity bond in an amount determined by the board for board members and each executive officer responsible for accounts and finances. A bond must be in effect during the entire tenure in office of the bonded person.

Sec. 02.40.170. INSURANCE. Except as provided in AS 02.40.-150(b), the authority shall protect its assets, services, and employees by purchasing insurance or providing for certain self-insurance retentions. The authority shall also maintain casualty, property, and other insurance in amounts reasonably calculated to cover potential claims against the authority or state for bodily injury, death, or disability and property damage that may arise from or be related to authority operations and activities.

ARTICLE 3. INTERNATIONAL AIRPORT FACILITIES.

Sec. 02.40.200. ACQUISITION AND MAINTENANCE OF AIRPORT FACILITIES. The authority may construct and operate airport facilities. The authority shall repair and maintain these facilities.

Sec. 02.40.210. OPERATION AND USE PRIVILEGES. In operating an airport or air navigation facility owned or controlled by the authority, the authority may enter into contracts, leases, and other arrangements covering periods not exceeding 55 years with a person or municipality or the United States, granting the privilege of using or improving an airport or air navigation facility or a portion of it or space in it for commercial or governmental purposes or conferring the privilege of supplying goods, commodities, services, or facilities at an airport or air navigation facility. The authority may establish the terms and conditions and fix the charges, rentals, and fees for the privileges or services that are reasonable and uniform for the same class of privilege or service. These terms, conditions, charges, rentals, and fees shall be established with due regard to the property

and improvements used and the expense of operation to the authority. However, the public may not be deprived of its rightful, equal, and uniform use of the airport or air navigation facility.

Sec. 02.40.220. SALE AND DELIVERY OF IN-BOND MERCHANDISE. (a) As provided by (b) and (c) of this section, the authority shall allow the sale and delivery of in-bond merchandise at an airport only by an exclusive contract.

(b) If an exclusive contract for the sale and delivery of in-bond merchandise at an airport exists on June 30, 1987, the authority may not permit or confer a right on another person to offer to sell, sell, or deliver in-bond merchandise at that airport except as provided in (c) of this section.

(c) After exclusive contracts described in (b) of this section expire, the authority shall enter into one exclusive contract and, on its expiration, additional successive exclusive contracts for the sale and delivery of in-bond merchandise at each airport. Except under the existing and future exclusive contracts described in this section, the authority may not permit or confer a right upon a person to offer to sell, sell, or deliver in-bond merchandise at an airport.

(d) The authority shall offer the exclusive contracts required by this section by competitive bid and shall award the contracts after considering the generation of maximum revenue for the international airports revenue fund under AS 37.15.430.

(e) The authority shall actively supervise the operations under each exclusive contract for the sale and delivery of in-bond merchandise in order to ensure the effectiveness of the operations. To supervise contract operations under this section, the authority shall develop and implement guidelines that provide for review of the reasonableness of price schedules, quality and assortment of merchandise,

and customer service.

(f) This section does not apply to deliveries of in-bond merchandise as cargo to airlines.

Sec. 02.40.230. POLICE POWERS VESTED. The officers and employees of the authority who the authority may designate have general police powers in aid of the enforcement of this chapter. The persons designated under this section shall meet the minimum standards for police officers adopted under AS 18.65.130 - 18.65.290.

Sec. 02.40.240. REGULATION OF GROUND TRANSPORTATION AT AIRPORTS. (a) Notwithstanding the provisions of AS 02.40.210, the authority may not exclude taxis, buses, or limousines that carry passengers for hire or courtesy cars from the highways, parking facilities, or other portions of an airport designated for operation or parking of ground transportation vehicles. The authority may regulate by rule the operations of taxis, buses, limousines, and courtesy cars as necessary to promote efficient operation of an airport.

(b) In this section, "courtesy car" means a motor vehicle owned or operated by a hotel, motel, or other place of public accommodation for the transportation of its guests to and from the airport at the request of the guest and for which service no charge is made to the guest.

Sec. 02.40.250. RULES. (a) The authority shall adopt rules to carry out its functions and the purposes of this chapter, including rules to safeguard property owned by the authority and to protect employees and persons using the authority's property or services. At least 15 days before the adoption of a rule, the authority shall give public notice of the proposed action by publishing a notice in at least two newspapers of general circulation in the state and by mailing a copy of the notice to each person who has requested notice of

proposed changes to its rules. The notice must state the time, place, and nature of the proceedings and must contain a summary of the subject of the proposed rule.

(b) On the date and at the time and place designated in the notice required under (a) of this section, the authority shall provide each interested person an opportunity to present statements in writing concerning the proposed rule and shall give members of the public an opportunity to present oral statements for a total period of at least one hour.

(c) The authority shall consider all relevant matters presented to it before adopting a rule. The authority may take action on a rule that varies in content from the summary provided with the notice of the proposed rule if the subject of the rule was reflected in the summary in a way that provided reasonable notice to the public about whether their interests could be affected by the authority's action on that subject.

(d) The authority may establish in the bylaws of the corporation additional procedures for adopting rules under this section.

Sec. 02.40.260. EMERGENCY RULES. (a) The authority shall establish in the bylaws of the corporation a procedure for the adoption of a rule on an emergency basis. An emergency rule may be adopted only when necessary for the orderly operation of the authority's facilities or programs. The requirements of AS 02.40.250 do not apply to actions under this section. However, within 10 days after the adoption of a rule on an emergency basis the authority shall give notice of its action that substantially complies with the notice requirements of AS 02.40.250(a).

(b) An action under this section remains in effect for not more than 120 days. To prevent an emergency rule from lapsing the

authority may adopt the same rule under AS 02.40.250 before the end of the 120-day period.

Sec. 02.40.270. VALIDITY OF RULES. (a) Failure to mail notice to a person under AS 02.40.250(a) or 02.40.260(a) does not invalidate an action taken by the authority.

(b) An interested person may challenge a rule adopted by the authority by bringing an action in the superior court. In addition to other grounds, a court may declare a rule invalid

(1) for substantial failure by the authority to comply with AS 02.40.250 or 02.40.260; or

(2) if the rule was adopted under AS 02.40.260, upon the grounds that the emergency rule was not necessary for the orderly operation of the authority's facilities or programs.

ARTICLE 4. FISCAL PROCEDURES.

Sec. 02.40.300. BUDGET REQUEST. (a) The authority, on the date and in the form and content prescribed by the governor after consultation with the legislative finance division, shall prepare and forward to the governor and the legislative finance division a document containing

(1) the goals and objectives of the authority and the problem or need that the activities and operations of the authority are intended to address;

(2) its proposed plans to implement the goals and objectives, including estimates of future service needs, planned methods of administration, proposed modification of existing services and establishment of new services, and the estimated resources needed to carry out the proposed plan;

(3) the budget requested to carry out its proposed plans in the succeeding fiscal year, including information reflecting the

expenditures during the last fiscal year, those authorized for the current fiscal year, those proposed for the succeeding fiscal year, an explanation of the services to be provided, the number of total positions for all persons employed or under contract by the authority for personal services including those rendered for capital improvement projects, the need for the services, the cost of the services, and other information requested by the governor;

(4) a report of the receipts during the last fiscal year, an estimate of the receipts during the current fiscal year, and an estimate for the succeeding fiscal year;

(5) a statement of the performance and accomplishments of the authority in each of the last four fiscal years;

(6) a statement of legislation required to implement the proposed programs and financial plans;

(7) an assessment of the degree to which the overall policies of the authority, as expressed in rules adopted by the authority, meet the objectives of the legislature in establishing the authority;

(8) an evaluation of the advantages and disadvantages of specific alternatives to existing or proposed program policies or administrative methods.

(b) The authority's proposals prepared under (a) of this section shall describe the relationships of the services to those of other agencies, of other governments, and of nongovernmental bodies.

(c) If the authority fails to transmit the program and financial information provided under (a) of this section on the specified date, the governor may prepare the information.

(d) All goals and objectives, plans, programs, estimates, budgets, and other documents forwarded to the governor by the authority

under this section are public information after the date they are forwarded.

Sec. 02.40.310. PROGRAM EXECUTION. (a) Except as limited by policy decisions of the governor, appropriations by the legislature, and other provisions of law, the authority has power to administer its programs and is responsible for the proper management of the airports.

(b) The governor may direct the withholding or reduction of appropriations to the authority during the fiscal year only if the governor determines that

(1) the planned expenditures can no longer be made due to factors outside the control of the state that make the expenditure factually impossible; or

(2) estimated receipts and surpluses will be insufficient to provide for appropriations.

Sec. 02.40.320. ACCEPTANCE OF MONEY FROM FEDERAL AND OTHER PUBLIC OR PRIVATE SOURCES. The authority may accept federal money, and money from other public or private sources, subject to appropriation by the legislature, to accomplish the purposes of this chapter. Federal money accepted under this chapter shall be accepted and expended by the authority under the terms and conditions prescribed by federal law and regulations.

Sec. 02.40.330. ANNUAL REPORT. By January 15 of each year, the authority shall submit to the governor and the legislature a concise report describing the operations, income, and expenditures for the preceding fiscal year. The report shall include financial statements audited by independent outside auditors.

Sec. 02.40.340. ANNUAL AUDIT. The authority shall have a certified audit of its financial records prepared annually by an independent certified public accountant.

Sec. 02.40.400. RESPONSIBILITY OF AUTHORITY FOR REVENUE BONDS. The authority succeeds to all rights, duties, powers, and obligations of the state bond committee regarding the issuance, sale, and repayment of revenue bonds authorized under AS 37.15.410 - 37.15.550.

ARTICLE 5. GENERAL PROVISIONS.

Sec. 02.40.900. AUTHORITY EMPLOYEES. (a) Employees of the authority are not employees of the state.

(b) Notwithstanding (a) of this section, employees of the authority who were state employees the day before they were transferred to the authority shall continue to participate in the supplemental employee benefits program under AS 39.30.150 - 39.30.180 and in the Public Employees' Retirement System under AS 39.35. The authority shall pay the employer's contributions required under AS 39.30.150 - 39.30.180 and under AS 39.35.

Sec. 02.40.910. APPLICATION OF EXISTING LAWS. Unless specifically provided otherwise in this chapter, the following laws do not apply to the operations of the authority:

(1) AS 36.30, except as specifically provided in that chapter;

(2) AS 37.07;

(3) AS 39, except as provided in this chapter;

(4) "bonds" mean the international airports revenue bonds authorized by AS 37.15.410 - 37.15.550;

(5) AS 44.62.010 - 44.62.300.

Sec. 02.40.990. DEFINITIONS. In this chapter, unless the context requires otherwise,

(1) "airport" means the international airports owned and operated by the state and located at Anchorage and Fairbanks;

(2) "authority" means the Alaska International Airport

Authority established by this chapter;

(3) "board" means the board of directors of the authority;

(4) "bonds" means the international airports revenue bonds authorized by AS 37.15.410 - 37.15.550; and

(5) "capital improvement" means a project for the construction, rehabilitation, rebuilding, enlarging, or improving of all or a part of the international airport system, as determined by the authority to be necessary or desirable for efficient operation of the international airports and to best serve the public.

Sec. 02.40.995. SHORT TITLE. This chapter may be cited as the Alaska International Airport Authority Act.

* Sec. 3. AS 02.15.090 is amended to read:

Sec. 02.15.090. OPERATION AND USE PRIVILEGES. (a) [STATE OPERATION.] In operating an airport or air navigation facility owned or controlled by the state <u>and subject to the jurisdiction of the department</u>, the department may enter into contracts, leases, and other arrangements covering periods not exceeding 55 years with a person or municipality or the United States, granting the privilege of using or improving an airport or air navigation facility or a portion of it or space in it for commercial or governmental purposes; or conferring the privilege of supplying goods, commodities, services, or facilities at an airport or air navigation facility. The department may establish the terms and conditions and fix the charges, rentals, and fees for the privileges or services, which are reasonable and uniform for the same class of privilege or service. These terms, conditions, charges, rentals, and fees shall be established with due regard to the property and improvements used and the expense of operation to the state. In no case shall the public be deprived of its rightful, equal, and uniform use of the airport, air navigation facility, or portion of

them [THEREOF].

(b) [OTHER OPERATION.] The department may by contract or other arrangement, upon a consideration fixed by it, grant to a [ANY] qualified municipality or person for a reasonable period of time the privilege of operating, as agent of the state or otherwise, an [ANY] airport owned or controlled by the state and subject to the jurisdiction of the department. A [NO] municipality or person granted that privilege may not operate the airport other than as a public airport or enter into a [ANY] contract, lease, or other arrangement in connection with the operation that [WHICH] the department may not have undertaken under (a) of this section.

* Sec. 4. AS 02.15.095 is amended to read:

Sec. 02.15.095. GROUND TRANSPORTATION: "COURTESY CARS." Notwithstanding the provisions of AS 02.15.090(a), in operating an airport subject to the jurisdiction of the department, the department may not exclude from the [STREETS, ROADS,] highways, parking facilities, or other portions of the [A STATE-OPERATED] airport designated for operation or parking of ground transportation vehicles, nor may the department prohibit from picking up and discharging passengers, those motor vehicles commonly known as "courtesy cars" owned or operated by hotels, motels, or other similar places of public accommodation for the transportation of their guests to and from the airport at the request of the guest and for which service no charge is made to the guest.

* Sec. 5. AS 02.15.102 is amended to read:

Sec. 02.15.102. USE OF AIRPORTS FOR UTILITIES. A utility facility may be constructed, placed, or maintained across, along, over, under, or within

(1) a state airport, other than an airport subject to

AS 02.40, only under [IN ACCORDANCE WITH] regulations adopted or procedures prescribed by the department and only if authorized by a written permit issued by the department; or

(2) a state airport subject to AS 02.40, only under rules adopted by the authority and only if authorized by a written permit issued by the authority.

* Sec. 6. AS 02.15.104 is amended to read:

Sec. 02.15.104. RELOCATION OF UTILITY FACILITIES INCIDENT TO AIRPORT PROJECTS. (a) If, incident to the construction of an airport project, the department or authority determines and orders that a utility facility located across, along, over, under, or within a state airport subject to its jurisdiction must be changed, relocated, or removed, the utility owning or maintaining the facility shall change, relocate, or remove it under [IN ACCORDANCE WITH] the order, within a reasonable time set by the department or the authority in the order.

(b) If the utility facility is not changed, relocated, or removed under [IN ACCORDANCE WITH] the order, the [ANY] permit authorizing the facility issued by the department or the authority under AS 02.15.102 becomes invalid and the facility is [WILL BE] considered an unauthorized encroachment subject to the provisions of AS 02.15.-114.

(c) The cost of change, relocation, or removal, as defined in AS 02.15.260, ordered under (a) of this section is to be paid as follows:

(1) by the department or the authority as a cost of airport construction, if the utility facility is installed or authorized after June 11, 1986, [THE EFFECTIVE DATE OF THIS ACT] under a utility permit or a regulation and is installed in the location specified in the permit;

(2) by the department or the authority as a cost of airport construction, if the utility facility was installed before June 11, 1986, [THE EFFECTIVE DATE OF THIS ACT] under a utility permit or utility easement and is in the location specified in the permit or easement;

(3) by the department or the authority as a cost of airport construction, if the utility facility was installed before the location became part of a state airport or before permits were required;

(4) by the department or the authority as a cost of airport construction, if the utility permit that requires the utility to pay the relocation cost was issued more than five years before the contract for the airport construction project was first advertised;

(5) by the utility in all other cases unless

(A) for airports subject to the jurisdiction of the department, the commissioner finds it is in the public interest for the cost to be paid by the department; or

(B) for airports subject to the jurisdiction of the authority, the authority finds it is in the public interest for the cost to be paid by the authority.

* Sec. 7. AS 02.15.106 is amended to read:

Sec. 02.15.106. ENCROACHMENT PERMITS. An encroachment may be constructed, placed, changed, or maintained across or within an airport, but only under [IN ACCORDANCE WITH] regulations or procedures adopted by the department for airports subject to the jurisdiction of the department or only under rules adopted by the authority for airports subject to the jurisdiction of the authority. An encroachment may not be constructed, placed, maintained, or changed until it is authorized by a written permit issued by the department or the authority, unless the department or the authority provides otherwise by

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5153 HTRA HB 173 (FILE 1) - HB 173 (FILE 2)

725

regulation or rule.

* Sec. 8. AS 02.15.108 is amended to read:

Sec. 02.15.108. RELOCATION OR REMOVAL OF ENCROACHMENT. If, incidental to the construction or maintenance of a state airport subject to the jurisdiction of the department or the authority, the department or the authority determines and orders that an encroachment previously authorized by written permit must be changed, relocated, or removed, the owner of the encroachment shall change, relocate, or remove it within a reasonable time set by the department or the authority in the order. The cost of the change. relocation, or removal shall be paid as provided in AS 02.15.104(c). If the owner does not change, relocate, or remove an encroachment within the time set by the department or the authority, the encroachment will be considered an unauthorized encroachment subject to the provisions of AS 02.15.114.

* Sec. 9. AS 02.15.110 is amended to read:

Sec. 02.15.110. UNAUTHORIZED ENCROACHMENTS. If an unauthorized encroachment exists in, on, under, or over a state airport subject to the jurisdiction of the department or the authority, the department or the authority may require the removal of the encroachment, at the expense of the owner, in the manner provided in AS 02.15.112 - 02.15.-114.

* Sec. 10. AS 02.15.112 is amended to read:

Sec. 02.15.112. NOTICE OF REMOVAL OF UNAUTHORIZED ENCROACHMENT. Notice shall be given the owner, occupant, or person in possession of an unauthorized encroachment, or to another person causing or permitting the encroachment to exist, by serving upon any of them a notice demanding the removal of the encroachment within a time limit set by the department or the authority. The notice must describe the encroachment with reasonable certainty as to its character and location.

Service of the notice may be made by certified mail.

* Sec. 11. AS 02.15.114 is amended to read:

Sec. 02.15.114. REMOVAL AT OWNER'S EXPENSE AFTER NONCOMPLIANCE; REMOVAL EXPENSE. After a failure of the owner of an unauthorized encroachment to comply with a notice or order of the department or the authority under AS 02.15.104, 02.15.108, or 02.15.112, the department or the authority may remove the encroachment, or cause it to be removed. The owner of the unauthorized encroachment shall pay to the department or the authority

(1) the expense of the removal of the encroachment;

(2) all costs and expenses paid by the state as a result of a claim or claims filed against the state by third parties for damages due to delays because the encroachment was not changed, removed, or relocated according to the order of the department or the authority; and

(3) costs and expense of suit.

* Sec. 12. AS 02.15.130 is amended to read:

Sec. 02.15.130. ASSISTANCE TO MUNICIPALITIES AND OTHER PERSONS. The department may make available its engineering, maintenance, and other services, with or without charge, to the federal government, to the authority, or to a municipality or person in connection with the planning, acquisition, construction, improvement, maintenance, or operation of airports or air navigation facilities. The commissioner of administration shall separately account for money that is generated by the provision of services to nonstate entities under this section and that the department deposits in the general fund. The annual estimated balance in the account may be used by the legislature to make appropriations to the department to carry out the purposes of this section. The department may make available its engineering and

other technical services, with or without charge, to a [ANY] municipality or person in connection with the planning, acquisition, construction, improvement, maintenance, or operation of airports or air navigation facilities.

* Sec. 13. AS 02.15.210 is amended to read:

Sec. 02.15.210. NO EXCLUSIVE RIGHTS GRANTED. The department may not grant an exclusive right for the use of an airway, airport, or air navigation facility under its jurisdiction. This section does not prevent the making of contracts, leases, and other arrangements under AS 02.15.060 - 02.15.100 and 02.15.120, including exclusive contracts for the sale and delivery of in-bond merchandise [DESCRIBED IN AS 02.-15.091].

* Sec. 14. AS 02.15.260 is amended by adding new paragraphs to read:

(19) "authority" means the Alaska International Airport Authority created under AS 02.40.010;

(20) "highway" includes roads and streets.

* Sec. 15. AS 02.25.110(4) is amended to read:

(4) "department" means the Department of Transportation and Public Facilities of this state with regard to airports that are not subject to AS 02.40 and the Alaska International Airport Authority with regard to airports that are subject to AS 02.40;

* Sec. 16. AS 35.27 is amended by adding a new section to read:

Sec. 35.27.025. APPLICATION TO ALASKA INTERNATIONAL AIRPORT AUTHORITY. This chapter applies to the Alaska International Airport Authority. Compliance with this chapter is the sole responsibility of the authority with respect to the public buildings and facilities of the authority.

* Sec. 17. AS 35.27.030(2) is amended to read:

(2) "building" or "facility" means a permanent improvement

constructed by the department or the Alaska International Airport Authority; the term

(A) includes, but is not limited to,

(i) schools, office buildings, and court buildings;

(ii) other buildings which the commissioner determines are designed for substantial public use;

(iii) boats and vessels of the marine highway system;

(iv) transportation facilities which accommodate traveling passengers;

(B) excludes other transportation facilities; [.]

* Sec. 18. AS 36.10.180(a) is amended to read:

(a) The preferences established in AS 36.10.150 - 36.10.175 apply to work performed

(1) under a contract for construction, repair, preliminary surveys, engineering studies, consulting, maintenance work, or any other retention of services necessary to complete a given project that is let by the state or an agency of the state, a department, office, state board, commission, public corporation, or other organizational unit of or created under the executive, legislative, or judicial branch of state government, including the University of Alaska, the Alaska International Airport Authority, and the Alaska Railroad Corporation, or by a political subdivision of the state including a regional school board with respect to an educational facility under AS 14.11.020;

(2) on a public works project under a grant to a municipality under AS 37.05.315;

(3) on a public works project under a grant to a named

recipient under AS 37.05.316;

(4) on a public works project under a grant to an unincorporated community under AS 37.05.317; and

(5) on any other public works project or construction project that is funded in whole or in part by state money.

* Sec. 19. AS 36.30.015(e) is amended to read:

(e) The boards of directors of the Alaska Railroad Corporation, the Alaska International Airport Authority, and the Alaska State Building Authority shall adopt procedures to govern the procurement of supplies, services, professional services, and construction by the corporation. The procedures must be substantially equivalent to the procedures prescribed in this chapter and in regulations adopted under this chapter.

* Sec. 20. AS 36.30.050(c) is amended to read:

(c) The lists may be used by the chief procurement officer or an agency when issuing invitations to bid or requests for proposals under this chapter. The lists may be used by the Legislative Council, the court system, the Alaska State Building Authority, the Alaska International Airport Authority, and the Alaska Railroad Corporation.

* Sec. 21. AS 36.30.850(b)(8) is amended to read:

(8) acquisitions or disposals of property and other contracts relating to airports under AS 02.15.070 and [,] 02.15.090 [, AND 02.15.091];

* Sec. 22. AS 36.30.990(1) is amended to read:

(1) "agency" means a department, institution, board, commission, division, authority, public corporation, the Alaska Pioneers' Home, or other administrative unit of the executive branch of state government, except for the University of Alaska, the Alaska State Building Authority, the Alaska International Airport Authority, and

the Alaska Railroad Corporation; it does not include a regional Native housing authority created under AS 18.55.996, or a regional electrical authority created under AS 18.57.020;

* Sec. 23. AS 37.05 is amended by adding a new section to read:

Sec. 37.05.307. APPLICABILITY TO ALASKA INTERNATIONAL AIRPORT AUTHORITY. The commissioner of administration may delegate the performance of the functions under this chapter as they relate to the Alaska International Airport Authority to the authority and set out the criteria and guidelines that shall be followed. The commissioner shall direct necessary stipulations and exercise monitoring responsibility for conformance through the board of directors of the Alaska International Airport Authority.

* Sec. 24. AS 37.15.480 is amended to read:

Sec. 37.15.480. AMOUNTS REQUIRED FOR PAYMENTS. The committee shall, before December 31 of each year, commencing with the year in which the bonds are issued, determine [CERTIFY TO THE COMMISSIONERS OF REVENUE AND TRANSPORTATION AND PUBLIC FACILITIES] the amounts required in the next ensuing calendar year by the bond resolution or resolutions to be paid out of the revenue fund into the bond redemption fund and to be paid into and maintained in a [ANY] reserve fund or account or [ANY] other fund or account created by the bond resolution or resolutions, and shall also determine [CERTIFY TO THE COMMISSIONERS] the last date or dates upon which payments may be made.

* Sec. 25. AS 37.15.500 is amended to read:

Sec. 37.15.500. AIRPORT CHARGES. The authority [COMMISSIONER OF TRANSPORTATION AND PUBLIC FACILITIES] shall fix and collect the [SUCH] fees, charges, and rentals derived by the state from the ownership, lease, use, and operation of the airports and all of the facilities and improvements of them or used in connection with them that [AS]

will provide revenues sufficient to comply with all of the covenants of the bond resolution.

* Sec. 26. AS 37.15.510 is amended to read:

Sec. 37.15.510. STATE IMPROVEMENTS TO AIRPORTS. The state is authorized to acquire, equip, construct, and install additions and improvements to and extensions of the airports, facilities for the landing, parking, loading storing, repairing, safety, and utility of aircraft at the airports and passenger, freight, and terminal facilities, including safety equipment and devices at the airports, found to be necessary by the authority [COMMISSIONER OF TRANSPORTATION AND PUBLIC FACILITIES].

* Sec. 27. AS 37.15.550 is amended by adding a new paragraph to read:

(10) "authority" means the Alaska International Airport Authority created by AS 02.40.010 or another committee, body, department, or officer of the state that or who succeeds to the rights, powers, duties, and obligations of the authority by lawful act of the legislature.

* Sec. 28. AS 38.05.030(b) is amended to read:

(b) The provisions of this chapter do not apply to a [ANY] power, duty, or authority now or in the future granted to the Department of Transportation and Public Facilities or the Alaska International Airport Authority in the name of the state, to acquire, use, lease, dispose of, or exchange real property, or an [ANY] interest in real property. Land assigned by the division of lands to the Department of Transportation and Public Facilities or the Alaska International Airport Authority shall be returned to the management of the division of lands when it is no longer needed for the purposes assigned.

* Sec. 29. AS 39.35 is amended by adding a new section to read:

Sec. 39.35.152. ALASKA INTERNATIONAL AIRPORT AUTHORITY EMPLOYEES. (a) An employee of the Alaska International Airport Authority who was an employee of the state on the day before the employee was transferred to the authority under AS 02.40 shall be included in the system.

(b) An employee of the authority who is not covered under (a) of this section shall be included in the system on the effective date of the authority's participation in the system for that employee.

* Sec. 30. AS 39.50.200(b) is amended by adding a new paragraph to read:

(49) Alaska International Airport Authority (AS 02.40.010).

* Sec. 31. AS 39.52.960(2) is amended to read:

(2) "agency" means a department, office of the governor, or entity in the executive branch, including but not limited to the University of Alaska, public or quasi-public corporations, and boards or commissions, but excluding the Alaska International Airport Authority and the Alaska Railroad Corporation;

* Sec. 32. AS 39.52.960(4) is amended to read:

(4) "board or commission" means a board, commission, authority, or board of directors of a public or quasi-public corporation, established by statute in the executive branch, but excluding the Alaska International Airport Authority and the Alaska Railroad;

* Sec. 33. AS 39.52.960(12) is amended to read:

(12) "instrumentality of the state" means a state agency or administrative unit, whether in the legislative, judicial, or executive branch, including [SUCH ENTITIES AS] the University of Alaska, the Alaska Railroad, the Alaska International Airport Authority, and any public or quasi-public corporations, boards, or commissions; the term includes municipalities;

* Sec. 34. AS 44.42.020(a)(7) is amended to read:

(7) manage, operate, and maintain state transportation facilities and all docks, floats, breakwaters, and buildings, including all state highways, vessels, railroads, pipelines, and airports [,] and aviation facilities other than airports and aviation facilities subject to AS 02.40;

* Sec. 35. TRANSITION. (a) Real and personal property used and controlled by the Anchorage International Airport or the Fairbanks International Airport on July 1, 1987, shall be transferred to the Alaska International Airport Authority.

(b) All employees of the Department of Transportation and Public Facilities assigned to the management, operation, and maintenance of the Anchorage International Airport or the Fairbanks International Airport on July 1, 1987, shall be transferred to the authority as employees of the authority.

(c) Classified state employees transferred to the authority under (b) of this section retain the rights and status of state employees until the expiration dates of the collective bargaining agreements covering those employees that are in effect on July 1, 1987.

(d) The authority is bound by the collective bargaining agreements covering employees transferred to the authority under (b) of this section for the terms of the agreements.

(e) Notwithstanding AS 02.40.900(a), as enacted by sec. 2 of this Act, and (c) - (d) of this section, the authority shall operate under personnel rules adopted under AS 39 until January 1, 1988, or until the authority adopts its own personnel rules under AS 02.40.100(b), as enacted by sec. 2 of this Act, whichever occurs first.

* Sec. 36. INITIAL APPOINTMENTS. Notwithstanding AS 39.05.055, one member of the board of directors of the Alaska International Airport

Authority residing in the Municipality of Anchorage and one member residing within the geographic boundaries of the Fairbanks North Star Borough shall be appointed to an initial term of four years and the remaining members shall be appointed to initial terms of two years. The governor shall designate the initial terms of the members under this section at the time the members are appointed.

* Sec. 37. TRANSFER OF RESPONSIBILITY FOR INTERNATIONAL AIRPORTS REVENUE BONDS. All rights, duties, powers, obligations, and authorities of the state bond committee in regard to international airports revenue bonds under AS 37.15.410 - 37.15.550 are transferred to the Alaska International Airport Authority.

* Sec. 38. SAVINGS CLAUSE. Litigation, hearings, investigations, and other proceedings pending under a law amended or repealed by this Act, or in connection with functions transferred by this Act, continue in effect and may be continued and completed notwithstanding a transfer or amendment or repeal provided for by this Act. Regulations adopted under authority of a law amended or repealed by this Act remain in effect for the term adopted or until repealed or otherwise amended under the provisions of this Act.

* Sec. 39. The revisor of statutes shall change "committee" to "authority" as appropriate, in AS 37.15.410 - 37.15.550.

* Sec. 40. AS 02.15.091; AS 37.15.550(5), 37.15.550(6); and AS 39.25.120(14) are repealed.

* Sec. 41. Except for secs. 19 - 22, this Act takes effect July 1, 1987.

* Sec. 42. Sections 19 - 22 of this Act take effect on the effective date of sec. 2, ch. 106, SLA 1986.

11/10/87

HB 173 - An act creating an International Airport Authority

During the interim, House Transportation staff visited with numerous persons on all aspects of the airline industry to receive comments, suggestions and recommendations on HB 173

These persons included:

Mr. Richard Wein, President, Fairbanks Chamber of Commerce and representative from the airline industry.

Mr. Chris Birch, Manager, Fairbanks International Airport

Mr. Dave Carlstrom, Marketing Director, Fairbanks Chamber of Commerce.

Mr. Doyle Ruff, International Airport Director.

Mr. Robert Smith, City Manager, city of Anchorage

Mr. Brian Phillips, City Manager, city of Fairbanks

Mr. Jim Dobson, city of Fairbanks

Mr. Bob Poe, Deputy Commissioner, DOTPF

After many hours of discussion it became very apparent that everyone was in agreement in almost all areas. Industry representatives, a majority of the airlines, Anchorage and Fairbanks city officials, the Chamber of Commerce and various other related businesses all support HB 173. However, these same individuals and groups feel the recent reorganization of the International Airports by the Department of Transportation does provide many of the same benefits proposed in HB 173.

Until recently, the Anchorage International Airport fell under the central region and the Fairbanks International Airport under the Northern Region. With each airport accountable to different Deputy Commissioners, co-ordination of the two airports was difficult.

Under the reorganization, both Fairbanks and Anchorage International Airports are supervised by one Director. Each airport has its own airport manager who answers directly to the International Airports Director. This restructuring has gone a long way to answering a lot of the concerns regarding coordinating efforts.

While those involved in the discussions did feel this restructuring by DOTPF did answer a lot of the problems with coordination, concerns over marketing of the airports still exist. Representatives from Fairbanks and Anchorage expressed their concern regarding the state's ability to adequately market the airports. Mr. Wein stated while he felt the Department of Transportation could effectively manage the airports, he did not feel the department has the marketing expertise or background necessary to properly market the airports.

Proper marketing of the airports is vital to the future growth and development of the state. Chamber of Commerce representatives, city officials and representatives from the private sector unanimously agreed upon the importance of a professional, well developed and uniquely designed marketing plan for the airports. With the recent expansion of both airports the possibilities for new business is endless. However, marketing is the key to this expansion and the expansion of our tourism markets.

Representatives from both Fairbanks and Anchorage feel the cities, the chamber and other related industries should be involved in the marketing process. Tourists do not come to see the airports, they come to see the state and what it has to offer. Stopover passengers may stay longer if they know what the state had to offer. Airlines and travel agencies may increase travel to and from Alaska at reduced rates if the proper marketing strategies were offered.

In summary, all those involved feel the restructuring and reorganization of the International Airports within DOTPF should answer most of the coordination and operational concerns. While coordination and smooth operation of the airports is important, marketing the airports and attracting new business, industry and tourists to our state is vital for the continued growth and development of the airports and the state. House Bill 173 does offer the autonomy necessary to provide aggressive marketing of the airports. Industry officials feel without further restructuring of the International airports within DOTPF, marketing efforts will be fairly passive.

SUBJECT: Section-by-section analysis of SS HB 173: An Act relating to the international airports in Anchorage and Fairbanks and establishing the Alaska International Airport Authority.

TO: Representative Drue Pearce

FROM: George Utermohle
Legislative Counsel

The following is the section-by-section analysis of SS HB 173, requested by Jo Fenety of your staff.

A section-by-section analysis or summary of a bill should not be considered an authoritative interpretation of a bill, and the bill itself is the best statement of its contents.

Section 1. Section 1 of the bill states the findings of the legislature and the purpose of the bill.

Section 2. Section 2 of the bill adds a new chapter to AS 02 creating the Alaska International Airport Authority.

Sec. 02.40.010 creates the Alaska International Airport Authority as a public corporation and instrumentality of the state in the Department of Transportation and Public Facilities.

The authority is the exclusive state agency responsible for the state owned and operated international airports at Anchorage and Fairbanks.

Sec. 02.40.020 vests the powers of the authority in its board of directors consisting of five members. One member of the board is the commissioner of transportation and public facilities. The other four members of the board are appointed by the Governor and may not be employed by the state or hold elective state or municipal office.

Two members of the board shall reside in the Municipality of Anchorage. One of the two members from Anchorage

must be nominated by the Assembly of the Municipality of Anchorage.

Two members of the board shall reside in either the North Star Borough or the City of Fairbanks. One of the two members from the Fairbanks area must be nominated by the borough assembly.

Appointed members of the board serve staggered, four year terms, may be reappointed, and may serve until a successor is appointed.

Members of the board are subject to AS 39.50 relating to conflict of interest.

Appointed members of the board shall be confirmed by the legislature but may serve as a member until the nomination is rejected or not confirmed by the legislature.

Sec. 02.40.030 limits the compensation of members of the board to an amount not to exceed $400 per day while performing the duties of the board up to a maximum of 60 days per year. Members are also entitled to per diem and travel expenses authorized under AS 39.20.180.

Sec. 02.40.040 describes the grounds and procedure for removing members of the board.

Sec. 02.40.050 requires the board to hold at least four meetings each year. The board may hold other meetings as the chair or three members consider necessary.

Sec. 02.40.060 describes the officers of the board, sets the quorum of the board at three members, and prohibits voting by proxy.

Sec. 02.40.070 describes the staff that the board may employ. The board may employ an executive director, a controller, and legal counsel. The executive director with the concurrence of the board may employ airport directors.

Sec. 02.40.100 lists the powers of the authority.

Sec. 02.40.110 determines that the activities of the authority in regard to the international airports are governmental functions and are exercised for a public purpose.

Sec. 02.40.120 grants the authority the power to acquire land and easements in land necessary for the purposes of the authority. The authority may exercise this power to abate

airport hazards and to obtain sand, gravel, rock, and other materials.

Sec. 02.40.130 grants the authority the power to acquire land for the purpose of exchanging for other land needed by the authority.

Sec. 02.40.140 grants the authority the power to acquire land by eminent domain. The governor must approve the exercise of eminent domain by the authority.

Sec. 02.40.150 allows the authority to defend and indemnify current or former board members, employees, or agents of the authority in a civil or criminal action, if the person acted in good faith and within the scope of the person's official duties or powers.

The authority may purchase insurance to cover employees, agents, and board members for actions arising out of the performance of their duties for the corporation.

Sec. 02.40.160 requires the authority to obtain a fidelity bond for board members and for executive officers responsible for accounts and finances.

Sec. 02.40.170 requires the authority to obtain insurance or provide for self-insurance, to protect its assets, services, and employees and to protect against claims for bodily injury, death, or property damage.

Sec. 02.40.200 grants to the authority the power to construct and operate airport facilities and imposes a duty on the authority to repair and maintain the facilities.

Sec. 02.40.210 grants the authority the power to enter into long term agreements (up to 55 years) for the use of airport facilities or for the privilege of supplying goods, services, and facilities at an airport or air navigation facility. The authority may set the terms, charges, rents, and fees for the use of airport facilities and for the services. The authority in making these agreements may not deny to the public the right to equal use of the airports and air navigation facilities.

Sec. 02.40.220 requires the authority to grant an exclusive contract for the sale and delivery of in-bond merchandise at the airports.

Existing contracts for the delivery and sale of in-bond merchandise at the Fairbanks and Anchorage international airports may continue until they expire, but no additional contracts for the delivery and sale of in-bond merchandise may be made. When the existing contracts for the delivery and sale of in-bond merchandise expire the authority shall enter into an exclusive agreement for the delivery and sale of in-bond merchandise at the Fairbanks and Anchorage international airports.

The authority shall award the exclusive contracts for the delivery and sale of in-bond merchandise by competitive bid.

Deliveries of in-bond merchandise to airlines as cargo are exempt from this section.

Sec. 02.40.230 grants general police powers to the designated officers and employees of the authority and requires these officers and employees to meet certain minimum standards.

Sec. 02.40.240 prohibits the authority from excluding taxis, buses, limousines or courtesy cars from airports. Courtesy cars are defined.

Sec. 02.40.250 grants to the authority the power to adopt rules and sets out the procedure which the authority must follow in adopting rules.

Sec. 02.40.260 grants to the authority the power to adopt emergency rules and sets out the procedure for adopting emergency rules. Emergency rules are valid for 120 days.

Sec. 02.40.270 sets out the grounds on which a rule adopted by the authority may be invalidated.

Sec. 02.40.300 sets out the procedures for the authority to follow in preparing its budget for consideration by the governor.

If the authority does not prepare its budget by the date set by the governor, the governor may prepare a budget for the authority.

The authority's budget becomes public information after it is submitted to the governor.

Sec. 02.40.310 grants the authority the power to administer its programs for the management of airports, except as limited by the governor, appropriations, and other laws.

The governor may direct the authority to withhold or reduce expenditures if external factors make the expenditure factually impossible or if estimated receipts and surpluses are not sufficient to fund the expenditure.

Sec. 02.40.320 grants the authority the power to receive money from federal agencies and other public and private sources to accomplish the purposes for which the authority was created, provided that the legislature appropriates the money to the authority. Funds received from the federal government shall be spent under the terms and conditions set out in federal laws and regulations.

Sec. 02.40.330 requires the authority to prepare a concise report to the governor and legislature describing the operations, income and expenditures of the authority for the prior fiscal year.

Sec. 02.40.340 requires the authority to have a certified audit of its financial records performed annually by an independent certified public accountant.

Sec. 02.40.900 declares that the employees of the authority are not employees of the state.

Those employees of the authority who were state employees before they were transferred to the authority continue to participate in the Public Employee Retirement System under AS 39.35 and the supplemental benefits system. The authority shall continue to contribute to these programs for those employees.

Sec. 02.40.910 exempts the authority from the State Procurement Code (AS 36.30) except as specifically provided, the Executive Budget Act (AS 37.07), AS 39, relating to public employees, except as provided in this chapter, and portions of the Administrative Procedure Act (AS 44.62.010 - 44.62.300).

Sec. 02.40.990 defines the terms "airport", "authority", "board", and "capital improvement."

Sec. 02.40.995 designates this chapter as the Alaska International Airport Authority Act.

Section 3. Section 3 of the bill makes a technical amendment of AS 02.15.090 in order to conform with the substance of Section 2 of the bill.

Section 4. Section 4 of the bill makes a technical amendment of AS 02.15.095 in order to conform with the substance of Section 2 of the bill.

Sections 5 - 11. Sections 5 - 11 of the bill make technical amendments to AS 02.15.102 - 02.15.114 in order to clarify the responsibility of the authority and the Department of Transportation and Public Facilities in regard to the construction, maintenance, relocation, removal, and permitting of utilities on airports. The authority is responsible for activities involving utilities on the Anchorage and Fairbanks international airports. The department is responsible for activities involving all other state-owned or state-operated airports.

Section 12. Section 12 of the bill makes a technical amendment to AS 02.15.130 to allow the Department of Transportation and Public Facilities to provide engineering, maintenance, and other services to the authority.

Section 13. Section 13 of the bill makes a technical amendment to AS 02.15.210 in order to conform with the substance of Section 2 and Section 37 of the bill.

Section 14. Section 14 of the bill makes a technical amendment to AS 02.15.260 by adding a definition of "authority" and "highway".

Section 15. Section 15 of the bill makes a technical amendment to AS 02.25.110(4) in order to clarify the responsibility of the Department of Transportation and Public Facilities and the authority in regard to state-owned or state-operated airports and to conform with the substance of Section 2 of the bill.

Section 16. Section 16 of the bill makes a change to AS 35.27 (Art in Public Buildings) to give the authority responsibility for complying with the chapter as it affects the buildings and facilities of the authority.

Section 17. Section 17 of the bill makes a technical amendment to AS 35.27.030(2) in order to conform with Section 16.

Section 18. Section 18 of the bill makes a technical amendment to AS 36.10.180(a) in order to subject the authority to the preferential hiring requirements for contracts subject to AS 36.10.150 - 36.10.175.

Section 19. Section 19 of the bill makes an amendment to AS 36.30.015(e) in order to allow the authority to adopt its own procurement code that is substantially equivalent to the state procurement code (AS 36.30).

Section 20. Section 20 of the bill makes a technical amendment to AS 36.30.050(c) in order to allow the authority to use the list of contractors compiled by the commissioner of administration.

Section 21. Section 21 of the bill makes a technical amendment to AS 36.30.850(b)(8) in order to conform with Section 38 of this bill.

Section 22. Section 22 of the bill makes an amendment to AS 36.30.990(1) in order to exempt the authority from the definition of agencies subject to the state procurement code (AS 36.30).

Section 23. Section 23 of the bill amends AS 37.05 (Fiscal Procedures Act) in order to allow the commissioner of administration to delegate functions under AS 37.05 to the authority.

Section 24. Section 24 of the bill amends AS 37.15.480 in order to transfer authority from the commissioner of transportation and public facilities to the controller of the authority in regard to the repayment of international airport revenue bonds.

Section 25. Section 25 of the bill amends AS 37.15.500 in order to transfer responsibility for setting and collecting fees, rents, and charges for use of the international airports from the commissioner of transportation and public facilities to the authority and to conform with Section 2 of this bill.

Section 26. Section 26 of the bill makes a technical amendment to AS 37.15.510 substituting the authority for the commissioner of transportation and public facilities in order to conform with Section 2 of this bill.

Section 27. Section 27 of the bill makes a technical amendment to AS 37.15.550 by adding a definition of "authority" in order to conform with Sections 2 and 24-26 of this bill.

Section 28. Section 28 of the bill makes an amendment to AS 38.05 in order to exempt land held by the authority from the jurisdiction of the Department of Natural Resources under AS 38.05.

Section 29. Section 29 of the bill amends AS 39.35 by adding a section that requires state employees who are transferred to the authority to remain as participants in the Public Employees Retirement System.

The authority may elect to include new employees of the authority within the coverage of the Public Employees Retirement Systems.

Section 30. Section 30 of the bill amends AS 39.50.200(b) in order to subject members of the board of the authority to AS 39.50 (Conflict of Interest).

Section 31. Section 31 of the bill amends AS 39.52.960(2) in order to exclude the authority from the definition of "agency".

Section 32. Section 32 of the bill amends AS 39.52.960(4) in order to exclude the authority from the definition of "board or commission."

Section 33. Section 33 of the bill amends AS 39.52.960(12) in order to include the authority in the definition of "instrumentality of the state."

Section 34. Section 34 of the bill amends AS 44.42.020(a)(7) relating to the duties of the commissioner of transportation and public facilities in order to clarify the jurisdiction of the commissioner over state operated and state owned airports and to conform with Section 2 of this bill.

Section 35. Section 35 of the bill provides for the transfer of real and personal property used or controlled by the Anchorage International Airport and the Fairbanks International Airport to the Alaska International Airport Authority.

Employees of the Department of Transportation and Public Facilities who are involved in the maintenance, operation, and management of the Anchorage and Fairbanks internation airports are transferred to the Alaska International Airport Authority.

Classified employees transferred to the authority retain their rights and status as state employees until their existing collective bargaining agreements expire.

The authority is bound by the collective bargaining agreements covering those employees that are transferred to the authority.

The authority shall develop its own personnel rules, but for the first six months of operation or until the authority develops its own personnel rules, whichever happens first, the authority shall follow state personnel rules.

Section 36. Section 36 of the bill prescribes the terms of the initial appointments to the board of directors of the Alaska International Airport Authority.

Section 37. Section 37 of the bill repeals AS 02.15.091, AS 37.15.550(5), and AS 39.25.120(14).

Section 38. Section 38 of the bill establishes July 1, 1987 as the effective date for secs. 1-18 and 23-37 of the bill.

Section 39. Section 39 of the bill establishes the effective date of secs. 19-22 of the bill as the same as the effective date of sec. 2, ch. 106, SLA 1986.

GU:csh
c7/110

OVERVIEW OF HB 173

The purpose of this Act is to establish an Authority for the operation, management, planning, effective marketing, and construction of facilities for the state-owned and state-operated international airports located at Fairbanks and Anchorage.

The Board of Directors of the Authority consists of five members. Two members are appointed from Anchorage with one member being nominated by the Municipal Assembly. Two members are appointed from Fairbanks with one member being nominated by the Borough Assembly. The fifth member is the Commissioner of the Department of Transportation and Public Facilities. The board members are appointed by the Governor and confirmed by the legislature to serve staggered four-year terms. A member may be removed for cause.

The board meets at least quarterly receiving compensation of $400 per day for a maximum of 60 days plus travel and per diem authorized by law for the state's boards and commissions.

The board hires an executive director who in turn hires staff including a controller and airport directors for each of the international airports. Specific reference is made to the qualifications of the airport directors. Those qualifications are education, experience, training, and expertise in management of airports.

The Authority would be exempted from the Executive Budget Act and the Administrative Procedures Act except that they would be required to create systems and procedures that would be acceptable to the governor.

Each year the Authority would be required to submit to an independent audit by a certified public accountant and also to submit a performance report to the Governor and the Legislature.

The Act contains a provision honoring collective bargaining agreements in force upon the day the Authority is created. Those agreements will be honored until their expiration.

ANCHORAGE/FAIRBANKS AIRLINES AIRPORT AFFAIRS COMMITTEE

P.O. Box 68900
Seattle, WA 98168
March 27, 1987

The Honorable Drue Pearce
Alaska State Representative
Pouch V
Juneau, AK 99811

Dear Representative Pearce:

The Anchorage/Fairbanks Airlines Airport Affairs Committee is an organization representing the scheduled airlines (international, domestic, and regional) serving the State's two International Airports. A majority of the members of the Committee have advised me that they are in support of the concept of creating an independent Airport Authority to operate Anchorage and Fairbanks International Airports, along the general lines set forth in your legislation, HB 173.

However, the airlines are very concerned that the legislation as written does not go far enough in making the Airport Authority truly independent. Specifically, we feel that the proposed Authority, similar to many airport authorities throughout the country, should be completely independent in matters such as establishment of the budget, fiscal oversight and financing, including the issuance of Airport Revenue Bonds. The International Airports Revenue Fund is totally self-sufficient and therefore does not present even a potential burden to the General Fund of the State. Further, the airport revenue bonds issued by the IARF are not supported by the full faith and credit of the State, but instead are backed by the revenues of the airports which come from the airlines and other users. These are important issues to the airlines.

At this point, we have not been able to review the legislation in full detail and will most likely have more specific comments in the near future. Individual airlines may also be providing direct input as the legislation progresses.

The overall goal of the airlines, as evidenced in our recently negotiated Lease and Operating Agreement with the State, is to operate in a partnership with the airports and to help ensure the most cost-effective, prudent management structure possible. The proposed Airport Authority can be an excellent vehicle to this end, subject to the concerns expressed above relating to the degree of independence.

Thank you for introducing this legislation. We look forward to working with you to finalize a bill that is mutually agreeable to all concerned.

Sincerely,

Clifford T. Argue

Clifford T. Argue

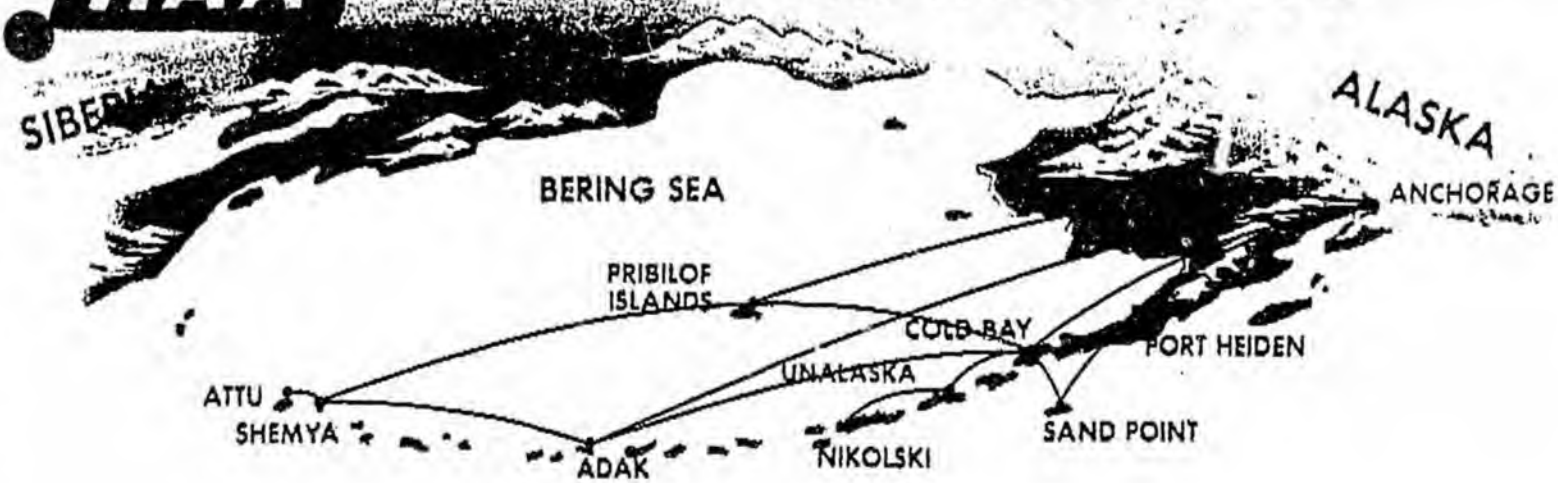
RAA REEVE ALEUTIAN AIRWAYS, INC.



March 27, 1987

Honorable Betty Cato
Chairman - House Transportation Committee
P.O. Box V
Juneau, AK 99811

Dear Rep. Cato:

Reeve Aleutian Airways fully supports in concept SSHB173 as introduced by Pearce and Hanley. Reeve believes that creation of an Alaskan International Airport Authority is in the best interest of air carriers, air commerce and the traveling public.

Reeve notes that the legislation omits language relating to revenue bonding and strongly encourages addition of such provisions in powers granted the authority. I understand that language is being drafted to permit this authority.

Reeve does anticipate testifying at some later time in favor of this legislation and I do wish to keep this letter as brief as possible. There are certain other points I would like to comment on.

Under Section 02.40.020 BOARD OF DIRECTORS ....
Reeve believes that Anchorage and Fairbanks are regional airports in addition to their International status. Each community should have the authority to nominate one person directly to the legislature without the governor's confirmation. The governor should have the authority to select two nominees without restriction as to place of residency.

Page 3, line 6 .... any reference to designees for board members is troublesome. No board member should be authorized to have a designee, including the commissioner.

RAA

March 27, 1987
Honorable Betty Cato
Page 2

This legislation is pretty straight forward. The concept is tested, proven and common throughout the United States. The legislation is sorely needed here in Alaska. I would be happy to answer any questions or address any concerns you may have or the committee members may have. I am hopeful that this bill will move along quickly and that we will see the legislation this year.

Thank you.

Sincerely,

David A. Jensen
Adminstrative Vice President

The Honorable Drue Pearce
Alaska State Legislature
House of Representatives
Post Office Box V
Juneau, Alaska 99811

Ref: SSHB 173; Anchorage and Fairbanks International Airport Authority.

Dear Representative Pearce,

We at ERA support the essence of the Bill you and Representative Hanley have sponsored, and we wish to commend you and your staffs for the excellent work. Creation of an Airport Authority will result in a vast improvement in the management of the Anchorage and Fairbanks International Airport System.

As we have noted before, there are some areas of the Bill that we would like to see refined. We will outline those briefly here, and comment in further depth as discussion on the Bill progresses.

Proper management of the Airport System requires an Authority that is independent of disruptive influences. We need continuity and consistency in management, and a management that is truly focused on the purposes, obligations and needs of the Airport System. The effectiveness of the Authority will in large measure depend on the degree of its independence. The Authority should be as independent as feasible from certain influences that may not be based entirely on the best interests of the Airport System, its users, and the communities it serves.

The Board in particular should be as independent as possible. We suggest that all four Board members other than the Commissioner be nominated by their respective communities. We also believe that the Board ought to be more staggered in terms. That is, of the four Board members other than the Commissioner, one should be appointed for an initial term of one year, one for two

years, one for three years and one for four years. The way it stands now, any governor could appoint a majority (and a quorum) of three members every two years.

On the other hand, the method of selecting Board members proposed by Reeve Aleutian Airways in its March 27th letter to Representative Cato would be an acceptable improvement.

Section 2.40.100 sets forth the powers of the Authority, but not the duties. We suggest the addition of a provision to the effect that the primary duties of the Authority include the management, operation, maintenance, development and promotion of the Airport System in an efficient, responsive and businesslike manner, with due regard for the System, its users, and the people they serve.

The Authority should have more independence in terms of controlling its own finances and budgets. In particular, it should not be subject to the control of the State Bond Committee when issuing Bonds. Nor should it be subject to undue control by the Governor or the Legislature when establishing Airport System budgets or priorities.

We believe the Controller should be hired by and should report to the Executive Director. If the Board does not like the choice, or the Controller's performance, we are confident that the Board's views will be taken seriously.

We are unclear about the effect of the language permitting the Commissioner's "designee" to sit on the Board. If the governor wishes to appoint a qualified "designee" in lieu of the Commissioner, fine. If, on the other hand, the Commissioner could assign a different deputy or staff person to attend Board meetings on his behalf any time he chose to be elsewhere, that would not be appropriate. No other Board member may vote by proxy.

We are also unclear about the purpose of the difference in residency requirements between Board members from the Fairbanks area and those from the Anchorage area. We suggest changing the first sentence in Section 2.40.020(b) to read "Two members shall reside within the geographic boundaries of the Greater Anchorage Area Borough". This would make it parallel with Section 2.40.020(c).

The Honorable Drue Pearce
Alaska State Legislature
House of Representatives
March 27, 1987

Again, our thanks to all for the time and energy put into this important matter. Please do not hesitate to call if we can help in any way.

Very truly yours,

Jack Birmingham
Vice President & General Counsel

cc: The Honorable Betty Cato, Chairman, House Transportation Committee.

JB/bjc

MEMORANDUM

TO: Representative Bette Cato, Chair
House Transportation Committee

FROM: Representative Drue Pearce

DATE: March 26, 1987

SUBJECT: HB 173 - Potential policy issues

The committee will hear the Alaska International Airport Authority bill on Monday, March 30, 1987. The purpose of this memo is to suggest some policy issues which the committee may wish to address.

___ The Authority is a corporation established in the Department of Transportation and Public Facilities but has its legal existence independent of the state.
___ The Authority is responsible for the operation, management, planning, effective marketing, and construction of facilities for the two Internationals located at Fairbanks and Anchorage.
___ Should it be specifically stated that the Authority should be self-sustaining?

Authority Board

___ Five-member board. Two from Anchorage, two from Fairbanks plus the Commissioner of DOTPF.
___ Board appointed by Governor and confirmed by legislature. Members serve for four-year staggered terms.
___ Members subject to conflict of interest disclosure (AS 39.50).
___ Compensation is set at the "not to exceed" amount of $400/day payable for a maximum of 60 days in a calendar year. Per diem and travel expenses are authorized.
___ Members may be removed for cause (incompetence, neglect of duty, or misconduct in office).
___ Board must meet at least quarterly upon the call of the chair or at the request of three members.

Representative Cato
March 26, 1987

Staff of Authority

___ Board employs an executive director who serves at the pleasure of the board. Executive director responsible for selection and hiring of additional staff.
___ Board employs a controller who serves at the pleasure of the board. Should the controller report to the board or to the executive director?
___ Executive director, with the concurrence of the board, employs airport directors for each airport. The directors are selected on the basis of education, experience, training and expertise in management of airports. Should directors hold the professional designation "AAE" (Accredited Airport Executive)? Should the director be allowed a period of time such as 24 months to receive the designation?

Insurance

___ What are the consequences of the Authority removing itself from the umbrella of the state for the purposes of insurance? What are the present costs? Is there a way for the Authority to participate in the state's insurance coverage in order to hold down costs?

Budget Preparation and Presentation

__ Shall the Authority be required to submit information to the governor in a document that sets out the goals and objectives, proposed plans to implement those goals and objectives, and a budget for the succeeding fiscal year?
___ Shall the Authority be exempted from the Executive Budget Act?
___ Shall there be legislative oversight regarding appropriations?

Reporting Requirements

___ The Authority is required to submit a concise report to the Governor by January 15 of each year describing its operations, income, and expenditures for the preceding fiscal year.
___ The report includes audited financial statements.
___ The Authority shall have a certified audit annually conducted by an independent CPA.

Representative Cato
March 26, 1987

Real Property

___ All real and personal property used and controlled by the Anchorage and Fairbanks International Airports will be transferred on the effective date.
___ Eminent domain exercised only with Governor's approval.

Employees of the Authority

___ Employees transferred from DOTPF to the Authority will continue to participate in SBS and PERS.
___ New employees will be included in the system on the effective date of the Authority's participation in the system for that employee. (Requires that the Authority sign a Participation Agreement with the Department of Administration.)
___ All employees of DOTPF assigned to the management, operation, and maintenance of Anchorage and Fairbanks Internationals on the date of transfer shall be transferred to the Authority as employees of the Authority.
___ Classified employees transferred retain the rights of state employees until the expiration of the collective bargaining agreements in effect on the effective date.
___ The Authority will operate under the State's personnel rules until 1/1/88 or until the Authority adopts its own personnel rules, whichever occurs first.

Exemptions

___ Except as may specifically noted the Authority is exempt from:
    ___ the State's procurement code AS 36.30.
    ___ the Executive Budget Act AS 37.07.
    ___ AS 39 (Public Officers and Employees)
    ___ the Administrative Procedures Act AS 44.62.010 - 44.62.300
___ Specifically NOT exempted from the Open Meetings Act.

Bonded Indebtedness

___ Existing debt will be transferred.
___ When new bonds are issued, shall the Authority have responsibility for selling its own bonds? Should the authority come from the state's Bond Committee or from the Legislature?

AMERICAN ASSOCIATION OF AIRPORT EXECUTIVES

Professional Designation known as A.A.E.

Summary of Requirements

1. Apply to Association with recommendation by person currently holding designation.

2. Write a 10,000 word thesis on some phase of airport management.

3. Complete three 2-hour written exams on the subjects of history of transportation industry, economics, and management theory. (The written exams can be proctored locally.)

4. Complete a 3-4 hour oral examination that is given twice each year only at a national conference.

It is reasonable to believe that a person could apply for and complete the A.A.E. designation in 24-36 months.

AIRPORT HIGHLIGHTS

March 2, 1987
Volume XXIII, No. 9

Published Weekly By The AIRPORT OPERATORS COUNCIL INTERNATIONAL, Inc.

EMPLOYMENT OPPORTUNITIES

Three positions are open at Robert Mueller Municipal Airport in Austin, Texas. All carry a March 15, 1987, deadline for resumes to be received by Paula Gamez, City of Austin, Human Resources Dept., P.O. Box 1088, Austin, Texas 78767 -- 512-445-1030.

Minimum requirements for manager, administration and finance, are a bachelor's degree in airport management, finance/accounting or related field; and five years experience in airport management, including two years in a supervisory capacity. Salary range is $32,800 - $52,000.

Minimum requirements for manager, project planning, are a bachelor's degree in civil engineering or related field and eight years experience. Professional engineering work involving airport construction projects is preferred. The job requires registration as a Professional Engineer in the state of Texas, or ability to obtain registration within one year. Salary range is $38,900 - $63,000.

Minimum requirements for manager, airport operations, are a bachelor's degree in aviation management, business administration, or related field; and five years management experience in airport operations and maintenance. Salary range is $35,600 - $57,900.

The Port of Seattle, Washington, is seeking a deputy director for its aviation division, which manages Sea-Tac International Airport. Resumes should be received by March 6, 1987, by Port of Seattle Human Resources Dept., P.O. Box 1209, Seattle, Washington 98111.

Minimum requirements for this new position are a bachelor's degree in business, airport management, engineering, law, or a related field; and, ideally, experience that includes an emphasis on operations management, tenant negotiations, budgeting, cost control, and work with governmental agencies on security. Salary range is $55,200 - $75,684; starting salaries normally don't exceed $65,442.

The City of San Jose, California, has an opening for a supervising real estate agent at San Jose International Airport. Candidates must have a bachelor's degree (or equivalent) and four years of property-related experience, including two years with a public agency. The salary range is $38,340 - $46,680. Interested persons must contact Sharon Borden by March 13, 1987, at the City of San Jose, Personnel Dept., 801 N. First St., Room 207, San Jose, California 95110 -- 408-277-4204.

FAIRBANKS INTERNATIONAL AIRPORT

FAIRBANKS INTERNATIONAL AIRPORT

Fairbanks International Airport (FIA) together with Anchorage International form the Alaska International Airport System. FIA is a unique and integral part of this system. In addition to being the second busiest domestic flight destination in the State, FIA serves as the primary Federally required alternate airport for polar and Far East flights diverted from Anchorage International Airport. This airport also serves a principal support function for the operation and development of the interior and northern sectors of the State, as well as having a large general and commuter aviation constituency.

The Airport System is self-supporting and derives its funding from the International Airport Revenue Fund (IARF). The IARF is an enterprise fund which is supported by receipts from landing and parking fees, terminal and land rental charges, and concession and fuel flowage fees collected at both airports. Since over 70% of the IARF revenue collected annually comes from major domestic and international airlines, in early 1986 five-year Airline Operating Agreements were executed with 34 airlines in order to establish a steady and guaranteed flow of revenue into the fund. During FY88, FIA is forecast to collect $5,270,200 in revenue out of $59,673,000 total for the IARF.

The facilities within the Airport System are operated and maintained using only IARF revenue. Airport facilities are constructed using IARF funding which may be utilized in conjunction with either Federal grants or bond funds. Given the requirement for public air transportation facilities, the purpose of the FIA operating budget is to provide a safe, efficient, convenient, economically positive transportation center. Activities required for year-round maintenance, operation, and administrative efforts at FIA include snow removal, asphalt patching, sanding and ice control on traveled and parking surfaces, erosion control, custodial services, building maintenance, revenue accounting, leasing property and building space, billing preparation and collection, overseeing parking lot management, providing for safety and fire protection (both aircraft and facilities), emergency medical services, and overall police protection within the airport perimeter. During FY88, FIA is projected to have 339,000 enplaned passengers, 16,813 aircraft departures, and 163,000 total aircraft operations within the airport's 20 mile control zone radius. FIA has 11,885,663 square feet of paved taxi-ways, runways and aprons and 203,140 square feet of building space being maintained along with 34 lane miles of roadway. The FY88 operating budget request for FIA is $8,075,100, an increase of $179,900 over FY87. These additional costs are directly attributable to law enforcement related functions that include meeting increased F.A.A. requirements caused by world-wide terrorism and performing duties that had to some extent been previously handled by the State Troopers.

Major issues facing FIA and shared by Anchorage International are the completion of expanded and improved facilities, maximizing airport revenues, reduction of operational deficits, marketing the Airport System, reorganization of the airports into an Airport Authority, and completing the implementation of the comprehensive Airport Management Information System. Addressing these challenges while maintaining the posture of providing the necessary facilities for the aviation industry and the traveling public is the primary objective.

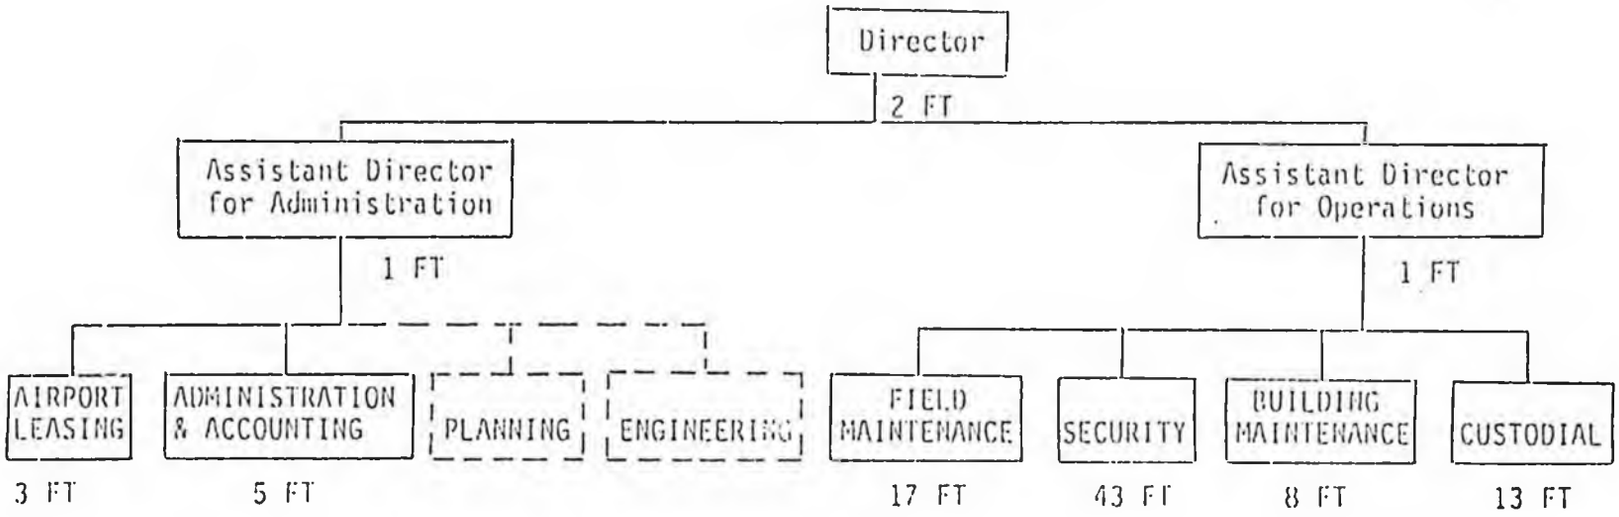
Only major change for Fiscal Year 1988 over Fiscal Year 1987 budget is a $179.9 increase in the Personal Services portion of the Security Component budget. These additional costs are directly attributable to law enforcement related functions.

Department of Transportation and Public Facilities

Fairbanks International Airport



Total Positions:

93 FT CURRENT AUTHORIZATION
93 FT FY88 REQUEST

Close liaison is maintained with other Divisions' engineering and planning personnel on a daily basis. This is in lieu of establishing an in-house infrastructure of assigned positions to perform these functions as is the case at Anchorage International. Also unlike Anchorage International, Equipment Maintenance is not a separate budget component but rather this type of maintenance is performed and budgeted for within the Field Maintenance and Security Components.

Notes from meeting 1/29/87 among Drue, Jo and Ron Lind (DOTPF)

The International Airport Revenue Fund (IARF) was established as a financing mechanism so the airport could issue bonds.

The fuel tax goes to the General Fund; the fuel flowage fee goes to the IARF.

Approx. $750,000 to $1,000,000 goes to DOTPF from the IARF to pay for certain services.

The IARF can receive federal funds. That money can be spent on ANC/FAI airports which are considered to be of the "prime" class or those monies can be spent on airports of "lower" classes.

The Operating Agreement (OA) for the airports gives those who signed the agreement some say in the way their fees are spent in order to keep increases in their fees under control. The OA basically says "you'll collect enough to operate the airport, pay debt service and maintain a small reserve". When the state proposes a new project on the airport that will affect the amount of fees charged to the carriers, they have the right to approve the project or they can disapprove the project thereby delaying a project for one year. If the state chooses to go ahead with the project before the one year's time, those increased fees cannot be included in the operating agreement. Those carriers who have not signed the OA are on a month-to-month agreement and have no say in the way their fees are spent. The OA gives both the state and the carriers some stability.

If the IARF capital dollars are used, the fund expects to receive a return on its investment. This kind of revenue is the first source of funds for new construction projects.

Prepaid Airline Revenue Account: This account contains a small reserve of prepaid fees in the event that the costs of operating the airport do not exceed the income. The signers of the OA have the option as to how this money is applied.

Ron will get back to us with the reserve balance numbers. See also the IARF Financial Report.

Synopsis of Anchorage International Airport Operating Agreement and Lease for Domestic Terminal

Sec.	
Preamble	DOTPF is owner/operator of Anchorage International Airport
2.02	Airlines rights to operate are common rights with others to use the airport for air transportation business
2.03	Airline leases Exclusive Use Space Airline has preferential but non-exclusive use of Apron area Airport Director can authorize other airlines to use holdrooms, loading bridges and airline-designated aircraft parking positions when not needed for regular uses. Airport Director can close, relocate, etc. after reasonable notice so long as other simultaneous access is provided.
3.01	Other Airlines can come in but must first try to deal with Signatory Airlines for space and use of facilities.
3.02	Signatory Airlines can be required to provide space or facilities to other airlines but the type of agreement is at the discretion of the Signatory Airlines. Signatory Airline does not have to comply if it would unreasonably interfere with their use of space and facilities. Signatory Airline may charge costs plus a 15% administrative fee.
4.01	DOTPF will provide a Captial Improvement report to Signatory Airlines by NLT the beginning of

the Fiscal Year before the Fiscal Year in which DOTPF intends to undertake new Capital Improvements (any physical asset that costs more than $100,000 including design and planning costs and has a useful life greater than 3 years).

Report includes description, cost estimate, preliminary drawings, project description ar location and maps; supporting data; estimated effective date and amount of adjustment to rents or fees resulting from the Capital Improvements cost; evaluation of need; preferred source of funding.

4.02 System-wide (Anchorage and Fairbanks) Capital Improvement whose costs are to be included in rents and fees charged to Signatory Airline are subject to Signatory Airline review <u>except</u> those capital improvements done for the benefit of an airline or other Airport System tenant "under the terms of a separate agreement that provides for payment of rents or fees to cover" financing, maintenance and operation.

NLT 7/15 of each Fiscal Year, DOTPF will meet with Signatory Airlines to discuss Capital Improvements. Unless 67% of the Signatory Airlines withhold approval of Capital Improvements <u>in writing</u> within 30 days after the meeting, Capital Improvements can go ahead.

If approval is withheld, DOTPF can ask for reconsideration at a meeting within 15 days. If approved by 67%, it passes.

If approval is withheld, DOTPF will either postpone for 1 full Fiscal Year or will exclude the capital costs from the rents and fees.

If after 1 full Fiscal Year postponement, DOTPF proposes to go ahead with the same project, it must be resubmitted to the Signatory Airline and rents and fees may be raised to cover it.

4.03 Capital Improvements may proceed if --
-- cost under $500,000
-- necessary to comply with govt. agency
-- necessary for health and safety

5.01 Rent is $28.99/sq.ft/yr. for exclusive use space. Common use space is $28.99/sq.ft./yr. prorated by use.
Fuel flowage fee is .02/gallon for aviation

fuel.

6.01 DOTPF to maintain cost accounting system for Airports that shows:
-- revenues
-- maintenance and operation expenses
-- expenses of DOTPF allocable to the Airport System
-- annual debt service
-- amortization of assets acquired with IARF funds

Records must be kept for these cost centers:
-- Airfield Area
-- Domestic Terminal Building
-- Fairbanks Terminal
-- International Terminal
-- Other buildings and Grounds

6.02 By 9/30 DOTPF will give following to Signatory Airlines:
-- Proposed annual capital and operating budgets
-- Schedule of annual debt service
-- Preliminary calculation of rents and landing fees for next Fiscal Year.

6.03 IARF financial statements to be audited

7.01 Rents and fees must be adjusted annually without formal amendment to agreement.

7.02 Each year the Airport System terminal building rental rate per square foot per year is recalculated. Calculation takes into account:
-- Total estimated maintenance and operation expenses including administrative overhead allocable to the terminal building cost centers.
-- An amount for amortization of capital expenditures for assets placed in service on or before 7/1/77 and before the new rental rate is to take effect. Assets funded by bonds, loans, grants are excluded
-- Annual Debt Service (including any amount required to satisy the rate covenant in the bond resolution) allocable to the terminal building cost.
-- Any required deposit to reserve accounts allocable to the terminal building costs.
-- Estimated assessments, judgments, settlements or charges payable by DOTPF directly related to the Airport System and allocable to terminal building cost centers.

Airport System parking revenues offset terminal building rents as of 1/1/86.

7.03 Landing Fee Rate is recalculated each year.
-- reductions are allowed by subtracting the following amounts:
  -- revenue derived by DOTPF from all sources other than Signatory Airlines
  -- Signatory Airlines terminal rent
  -- all fuel flowage fees paid by Signatory Airlines
  -- the amount transferred from the Prepaid Airline Revenue Account to the Revenue Account net of any overpayment or underpayment from operation of the Airport System.

7.04 Landing fees can be raised after 30 days written notice to the Signatory Airlines in the event there is not enough revenue to cover the landing fee requirement in 7.03.

If landing fee revenue from all Signatory Airlines for any quarter varies by more than 10% from the estimated landing fee requirement, DOTPF may adjust landing fee rate for balance of Fiscal Year.

8.01 This agreement suordinate to all present IARF Bond resolutions.

Signatory Airlines have the opportunity to review and comment on proposed amendments to Bond resolutions and DOTPF will give consideration to comments before adopting amendments or issuing new bonds.

8.02 DOTPF deposits all revenues from Anchorage and Fairbanks Internationals into IARF. Receipts are applied in the following order:

-- Interest Fund and Retirement Fund of the Revenue Bond Redemption Fund to satisfy payments due during Fiscal Year on all outstanding Bonds.
-- Bond Reserve Fund (to maintain a balance equal to the maximum annual debt service on all Bonds outstanding at the time
-- Repair and Replacement Reserve Account of at least $2 Million dollars
-- Operating Account (reasonable and necessary expenses for operation, maintenance, repair, ordinary replacement, and reconstruction.
-- Operation and Maintenance Reserve Account

(one-quarter of amount of annual budget for operation and maintenance expenses)
-- Capital Improvement Account
-- Prepaid Airline Revenue Account
(min. $1 Mil. and any amount remaining in the Revenue Account at the end of the Fiscal Year after all amounts have been deposited into other funds in the section

9.01 Airline Responsibilities
-- to give required information
-- perform reasonable, ordinary maintenance within their Exclusive Use Space
-- remove disabled aircraft

9.02 DOTPF's Responsbilities
-- retain FAA certification
-- operate and maintain Airports in reasonable condision and repair
-- keep terminal buildings clean, heated, etc.

10.01 Indemnification

10.02 Insurance - DOTPF maintains comprehensive general liability and fire for Airport and terminal building.

Airline carries public liability, aviation liability, premises, property damage, etc.

Limits: $1 Million/seat for airline/aircraft/ public liability insurance or equivalent insurance
-- for propeller aircraft $10 Million
-- for jet aircraft $20 Million

10.03 Waiver of Subrogation
10.04 Additional Insured
10.05 Notice of Claim
10.06 Insurance Rates - Airline may not use the airport in any manner that will increase the DOTPF's insurance rates.

11.01 Assignment and sublease allowed with advance written approval

.....balance of agreement is standard airport leasing provisions.

ANCHORAGE INTERNATIONAL AIRPORT
AIRLINE OPERATING AGREEMENT AND
TERMINAL BUILDING LEASE
(DOMESTIC TERMINAL)

This Airline Operating Agreement and Terminal Building Lease (the Agreement) is offered this ____ day of _____, by and between the State of Alaska, Department of Transportation and Public Facilities (DOT&PF), and Airline, (AIRLINE), a corporation organized and existing under the laws of _____.

DOT&PF and AIRLINE agree as follows:

DOT&PF is the owner and operator of the Anchorage International Airport in Anchorage, Alaska and has the right to enter into leases and grant operating privileges at the Airport.

AIRLINE is a corporation engaged primarily in the business of providing Air Transportation.

Both DOT&PF and AIRLINE have mutually agreed to establish procedures for the periodic setting of rents and fees for the use of the Airport System. Both DOT&PF and AIRLINE have mutually negotiated and desire to enter into this Agreement in order to set forth the rights, privileges, and obligations of both parties and to facilitate the development, promotion, and improvement of Air Transportation.

ARTICLE 1
DEFINITIONS

Section 1.01. Definitions

The words and phrases defined below have the following meanings when used in this Agreement:

1. "Airline" means a business entity that provides Air Transportation services.

2. "Air Transportation" means the carriage of persons, property, cargo, or mail by aircraft and the activities, functions, and operations incidental to an air transportation business.

3. "Aircraft Arrival" means any aircraft arrival at the Airport including scheduled, charter, sightseeing, test, ferry, courtesy, inspection, training, or any other flight. Aircraft Arrival does not include any flight that immediately returns to the Airport because of mechanical, meteorological, or other precautionary reason.

4. "Airport" means the real property and facilities of Anchorage International Airport as it exists on the date of execution of this Agreement or in the future. The existing facilities and boundaries of the Airport are shown in Exhibit A and described in the property plan, Exhibit B.

5. "Airport Directives" means the Airport notices and instructions issued by the Airport Director facilitating day to day operation of the Airport and implementing rules and regulations promulgated by state and federal agencies requiring coordination by the Airport.

6. "Airport Director" means the person DOT&PF delegates to act on its behalf at the Airport.

7. "Airport System" means the Anchorage and Fairbanks International Airports as they exist now or in the future. The existing facilities and boundaries of both airports are shown in Exhibits A and C and described in the property plans, Exhibits B and D.

8. "Annual Budget" means the capital and operating budgets for the Anchorage and Fairbanks International Airports as signed by the Governor of the State of Alaska.

9. "Annual Debt Service" means the total amount required as deposits in a Fiscal Year to any interest, principal, or sinking fund account established by the Bond Resolution for any Bonds issued for any Airport System purpose and

to replenish the Bond Reserve Fund and the Repair and Replacement Reserve Account under the Bond Resolution.

10. "Apron Area" means the aircraft parking and maneuvering areas abutting a terminal building up to its dripline.

11. "Bond" or "Bonds" means revenue bond or bonds supported by the IARF and issued by the State of Alaska pursuant to Alaska Statutes 37.15.410-37.15.550 or as amended.

12. "Bond Resolution" means Resolution No. 68-4 adopted by the State Bond Committee of the State of Alaska and any additional resolutions providing for the issuance of Bonds.

13. "Capital Improvement" means any physical asset that costs more then $100,000 including design and planning costs, has an expected useful life greater than three years, and is purchased or constructed to improve, protect, maintain, or develop the Airport System.

14. "Certificated Maximum Gross Takeoff Weight" means the maximum takeoff weight at which each aircraft is authorized by the FAA to operate from the Airport.

15. "Common Use Space" means the space that is available for lease and use in common with other Airlines.

16. "Exclusive Use Space" means the space leased exclusively by AIRLINE.

17. "FAA" means the Federal Aviation Administration.

18. "Fiscal Year" means any fiscal year adopted by DOT&PF. The Fiscal Year of the DOT&PF currently begins on July 1 and ends on June 30.

19. "International Airports Revenue Fund" (IARF) means the fund or funds established now or in the future pursuant to Alaska Statute 37.15.430 or as amended.

20. "Premises" means all of the Common Use Space and Exclusive Use Space leased to AIRLINE under this Agreement.

21. "Rate Covenant" means Section 6.12 of the Bond Resolution and any similar provision of any supplemental or additional resolution providing for the issuance of Bonds.

22. "Signatory Airline" means an Airline that has executed an airline operating agreement with DOT&PF for the use and occupancy of Airport facilities that is substantially similar to this Agreement.

ARTICLE 2
USE OF AIRPORT FACILITIES

Section 2.01. Term

This Agreement is effective from 12:01 a.m. on July 1, 1985 until 12:01 a.m. on July 1, 1990.

Section 2.02. Uses of the Airport

AIRLINE is granted the right to use the Airport, in common with others, for the sole purpose of conducting AIRLINE's Air Transportation business. In addition to all rights granted elsewhere in this Agreement, AIRLINE's use of the Airport for conducting its Air Transportation business includes the right to:

1. Land, takeoff, fly, taxi, push, tow, load, or unload aircraft.

2. Repair, maintain, condition, service, test, park, or store aircraft.

3. Perform or cause to be performed by contract, customary aircraft fueling, servicing, and line maintenance at aircraft parking positions adjacent to the terminal building or on exclusively leased aprons before loading and takeoff or as soon as practical following landing and unloading. AIRLINE may perform other maintenance of aircraft, vehicles, or equipment only at exclusively leased aprons or at locations designated by DOT&PF.

4. Sell tickets, document shipments, handle reservations, and sell transportation of cargo, mail, and personal property by air, and perform, or cause to be performed by contract, the customary handling of passengers, baggage, cargo and mail.

5. Install, maintain, or operate, by AIRLINE alone or in conjunction with any other Airline, air-to-ground and other communication, meteorological, and aerial navigation systems between locations on the Airport, subject to prior written approval of DOT&PF and Section 15.11.

6. Ground train personnel on the Airport necessary to the conduct of AIRLINE's Air Transportation business.

7. Transport by air, load, and unload persons, property, cargo, and mail at the Airport.

8. Use motor vehicles or other ground transportation equipment required for the conduct of AIRLINE's Air Transportation business. This Agreement does not give

AIRLINE the right to operate a ground transportation business to or from the Airport.

9. Install, maintain, and operate passenger clubs, lounges, or VIP rooms in AIRLINE's Exclusive Use Space. AIRLINE may not sell food or beverage items in clubs, lounges, or VIP rooms if the sales violate the contractual rights of the Airport's food and beverage concessionaire.

   a. If AIRLINE sells food or beverage items in its passenger clubs, lounges, or VIP rooms, AIRLINE will submit to DOT&PF a monthly report of the gross sales of food and beverage items and pay DOT&PF a monthly percentage of gross fee for those sales. The percentage amounts used to calculate this fee will be the same as the percentage amounts that DOT&PF requires the food and beverage concessionaire to pay.

   b. If AIRLINE sells food or beverage items in its passenger clubs, lounges, or VIP rooms, AIRLINE will use the Airport's food and beverage concessionaire as AIRLINE's supplier of food and beverage services if required by the terms of the food and beverage concessionaire's contract with DOT&PF. In this event, the monthly report to DOT&PF and the monthly percentage of gross sales fee described in Section 2.02.9.a do not apply to AIRLINE but to the concessionaire only. Nothing in this Agreement prevents AIRLINE from selling memberships in its VIP rooms. The sale of memberships for use of a VIP room is not considered a sale of food and beverage.

10. Install and maintain AIRLINE's identification signs, advertising, or similar matter on AIRLINE's Premises. The size, type and location of signs must be approved in writing by the Airport Director before installation.

11. Purchase AIRLINE's requirements of personal property or services, including fuel, lubricants, inflight food or beverages, and other supplies. AIRLINE may purchase goods and services from any person or company of AIRLINE's choice.

12. Sell, lease, transfer, dispose, or exchange AIRLINE's aircraft, engines, accessories, equipment, or supplies necessary to conduct its Air Transportation business.

13. Use non-exclusive employee vehicle parking facilities for employees at the Airport at locations designated by the Airport Director. The Airport may charge a separate fee for employee vehicle parking which fee must be the

same for AIRLINE's employees as the employees of other Airport tenants.

14. Sell or provide any of the services listed in this Section to any other Airline.

Section 2.03. Exclusive and Common Use Space

A. AIRLINE leases Exclusive Use Space as listed on Exhibit E and depicted on Exhibit J. AIRLINE leases in common with others the Common Use Space listed on Exhibit E and depicted on Exhibit J. AIRLINE may only use each space for the purpose designated on Exhibit E unless the Airport Director approves a change.

B. AIRLINE is granted the preferential but nonexclusive use of the Apron Area at the aircraft parking positions designated for AIRLINE's use on Exhibit H. This is AIRLINE's preferential apron area. AIRLINE may use the parking positions to park a reasonable amount of service equipment required for AIRLINE's operations, subject to the Airport Director's approval.

C. The Airport Director may authorize other Airlines to use AIRLINE's holdrooms, loading bridges, and AIRLINE's designated aircraft parking positions whenever they are not required for AIRLINE's scheduled, extra section, delayed, and charter passenger flight activities or the passenger flight activities of any Airline for which AIRLINE is providing contract services pursuant to a written agreement. As a condition of the use of AIRLINE's facilities, AIRLINE has the right to require the Airline to enter into an agreement covering the use of AIRLINE's facilities and may charge the other Airline a reasonable fee not to exceed the rates designated in the Mutual Assistance Ground Handling Service Agreement (MAGSA) for the use of holdrooms, loading bridges, and associated equipment.

D. DOT&PF grants the right of adequate ingress to and egress from the Airport and the Premises to AIRLINE and its officers, employees, agents, passengers, contractors, invitees, suppliers, and furnishers of services, subject to the Airport Directives.

E. DOT&PF has the right to close, relocate, reconstruct, or modify any access to space provided for AIRLINE's use after reasonable notice so long as adequate substitute access is simultaneously provided. DOT&PF is not obligated to compensate AIRLINE for any change in access. AIRLINE's obligation to perform under this Agreement may not be altered or affected by any change in access described in this subsection.

ARTICLE 3
ACCOMMODATION OF OTHER AIRLINES

Section 3.01. Accommodation Procedures

A. If an Airline initiates or expands regularly scheduled Air Transportation at the Airport and needs terminal space and facilities, DOT&PF will require the Airline to use its best efforts to make suitable arrangements for the Airline's operations at the Airport by:

1. Attempting to secure existing available space or facilities from the DOT&PF, or

2. Attempting to obtain the use of facilities from Signatory Airlines using the terminal.

B. The DOT&PF will use its best efforts to accommodate the Airline by:

1. Attempting to accommodate the Airline in existing available space or facilities for direct lease or use; or, if none is available, by

2. Reviewing the feasibility of immediate construction of new space or facilities for the Airline's lease or use.

C. Upon written request from the Airline, AIRLINE will use its best efforts to make suitable arrangements to either handle the operations of or share its Exclusive Use Space with the Airline.

D. If the efforts of the Airline, DOT&PF, AIRLINE, and other Signatory Airlines do not satisfy the Airline's reasonable space requirements, DOT&PF will, in writing, notify all of the Signatory Airlines at the terminal that all of the requirements of Section 3.01.A, B, and C have been undertaken and have failed to satisfy the requesting Airline's reasonable space requirements.

Section 3.02. DOT&PF's Right to Require Accommodation

A. If the events specified in Section 3.01 have occurred, if 30 days have elapsed since the DOT&PF's notice has been given, and if the Airline is still unable to meet its reasonable requirements for space and facilities, then DOT&PF may require that AIRLINE provide space or facilities to the Airline pursuant to a sublease, assignment, license, use agreement, ground handling agreement, or any combination of them. The type of agreement is at the discretion of AIRLINE.

B. If the proposed accommodation unreasonably interferes or is incompatible with AIRLINE's use of its space and facilities for handling its scheduled passenger and cargo operations, (including the passenger flight activities of any operation for which AIRLINE is providing contract services pursuant to a written agreement) then AIRLINE is under no obligation to provide accommodation.

C. If the proposed accommodation does not unreasonably interfere or is not otherwise incompatible with AIRLINE's use of the space and facilities for handling its scheduled passenger and cargo operations (including the passenger flight activities of any operation for which AIRLINE is providing contract services pursuant to a written agreement), AIRLINE will accommodate the Airline. AIRLINE may charge the Airline for AIRLINE's operating and capital costs related to the space and facilities and an administrative fee that does not exceed 15 percent of AIRLINE's operating and capital costs for the accommodation space.

ARTICLE 4
CAPITAL IMPROVEMENTS

Section 4.01. Capital Improvement Report

A. During the term of this Agreement, DOT&PF will provide a Capital Improvement report to AIRLINE and each Signatory Airline no later than the beginning of the Fiscal Year before the Fiscal Year in which DOT&PF intends to undertake new Capital Improvements. The Capital Improvement report must identify Capital Improvements that will impact AIRLINE's rents and fees.

B. The Capital Improvement report will include the following information:

1. A description of the proposed Capital Improvement, including cost estimates, available preliminary drawings, project descriptions, and location maps;

2. The supporting data used to allocate the proposed Capital Improvement cost to the appropriate Airport System cost centers;

3. The estimated effective date and amount of any adjustment to rents or fees resulting from the proposed Capital Improvement's cost;

4. DOT&PF's evaluation of the need for an anticipated benefit from the proposed Capital Improvement, including any appropriate economic justification; and

5. DOT&PF's preferred source of funding.

Section 4.02. Approval of Capital Improvements

A. All Airport System proposed Capital Improvements whose costs are to be included in the rents and fees charged to AIRLINE and the Signatory Airlines will be subject to Signatory Airline review except those Capital Improvements undertaken by DOT&PF for the benefit of an Airline or other Airport System tenant under the terms of a separate agreement that provides for payment of rents or fees to cover the financing of the improvement and the cost of its maintenance and operation.

B. Two weeks after the beginning of the Fiscal Year, DOT&PF will meet with AIRLINE and the other Signatory Airlines to discuss the proposed Capital Improvements. Unless 67 percent of the number of Signatory Airlines, either directly or through a designated Signatory Airline

representative, withhold approval of specific proposed projects in writing within 30 days after the meeting, the Capital Improvement will be deemed approved by the Signatory Airlines.

C. If DOT&PF receives notice that approval of the Capital Improvement is withheld under Section 4.02.B, the Commissioner of DOT&PF may request reconsideration of the Capital Improvement at a meeting to be held with the Signatory Airlines within 15 days after the notice that approval is withheld has been received. Unless approval is again specifically withheld in writing within 30 days after the reconsideration meeting by 67 percent of the number of Signatory Airlines, either directly or through a designated representative, the proposed Capital Improvement will be deemed approved.

D. If approval is withheld as provided in Section 4.02.B and C, DOT&PF will either postpone the proposed Capital Improvement for one Fiscal Year after the Fiscal Year in which DOT&PF originally intended to undertake the Capital Improvement or will exclude the capital cost of the Capital Improvement from the calculation of AIRLINE's rents and fees.

E. If after the one Fiscal Year postponement DOT&PF proposes to construct the postponed Capital Improvement, the Capital Improvement must be submitted to the Signatory Airlines for review in accordance with Section 4.01.

F. If a Capital Improvement is begun after a one year postponement, approval by the Signatory Airlines is not required and DOT&PF may include the amortization of capital cost, debt service, or lease payments of the Capital Improvement in the rents and fees charged to AIRLINE and the Signatory Airlines after the Capital Improvement has been completed and placed in service.

G. After the postponement described in Section 4.02.D, any Capital Improvement project listed in the Capital Improvement report may be constructed so long as the Capital Improvement project can be completed within the Capital Improvement project scope originally provided to the Signatory Airlines. Any Capital Improvement project that is materially increased beyond the original scope must be resubmitted to the Signatory Airlines for review as a new project.

Section 4.03. Capital Improvement Exceptions

Even if approval of a Capital Improvement is withheld under Section 4.02, DOT&PF may proceed with the Capital Improvement and

upon completion include the cost, net of gifts and grants-in-aid, in the rents and fees charged to AIRLINE and the Signatory Airlines if:

1. DOT&PF determines that the Capital Improvement will cost less than $500,000 including all planning, design, and construction costs, or,

2. The Capital Improvement is necessary and prudent to:

   a. Comply with any regulation or order of any governmental agency (including DOT&PF acting in its nonproprietary capacity) that has jurisdiction over the operation of the Airport System;

   b. Maintain or create Airport System functional capability at the level required by the Bond Resolution or the Bond trustee (whose responsibilities are defined in the Bond Resolution) pursuant to the Bond Resolution for the security of Bonds;

   c. Maintain the public health, safety, or welfare;

   d. Defend and settle litigation, or satisfy judgments against the Airport System rendered by a court of competent jurisdiction;

   e. Repair or prevent casualty damage to Airport System property; or

   f. Acquire land reasonably necessary to preserve the Airport System.

Section 4.04. Approved Capital Improvements

The Capital Improvements listed in Exhibit K are exempt from review under Section 4.02 except as provided in Section 4.02.G.

ARTICLE 5
RENTS AND FEES

Section 5.01. Consideration

The consideration that AIRLINE agrees to provide DOT&PF for this Agreement, including use of the Exclusive Use Space, Common Use Space, and the use of preferential aircraft parking positions, is the following:

A. Provide regularly scheduled Air Transportation to and from the Airport, and

B. Pay the rents and fees and perform all the obligations described in this Agreement. The rents and fees include the following:

1. The initial rent for the Exclusive Use Space set forth in Exhibit E and depicted on Exhibit J that AIRLINE will pay to DOT&PF is the terminal building rent of $28.99 per square foot per year, payable monthly. All rent for the Exclusive Use Space is due on the first day of each month.

2. a. AIRLINE will pay rent for the Common Use Space that is available for use by all Airlines as set forth in Exhibit E and depicted on Exhibit J. The Common Use Space rent that AIRLINE will pay to DOT&PF is AIRLINE's prorated share of the terminal building rent calculated initially at $28.99 per square foot per year, payable monthly. Ten percent of the rent will be prorated equally among the Airlines (including AIRLINE) using the Common Use Space and the remaining ninety percent of the rent will be prorated among the Airlines using the space based on enplanements. AIRLINE 's share of the remaining 90 percent will be based on the ratio of the number of AIRLINE's enplaning passengers at this terminal to the total number of enplaning passengers at this terminal based upon the previous month's certified activity reports. During the first two months after initiating service, enplanements of an Airline initiating service at the Airport will be included in the total number of enplaning passengers at the Airport using the number as reasonably estimated by the Airline initiating service. DOT&PF will invoice AIRLINE its prorated share of the rent for the Common Use Space by the 15th of the month for the following month's rent. DOT&PF will base the prorated rent on enplanements

from the preceding month as reported in AIRLINE's certified activity reports described in Section 5.02.

b. If AIRLINE fails to furnish DOT&PF with a certified activity report by the 10th day of the month as required in Section 5.02, the prorated rent may be calculated by assuming AIRLINE's enplanements were 110 percent of the enplanements used for the previous month's calculation. After delivery of a late certified activity report by AIRLINE, DOT&PF will invoice AIRLINE for any actual enplanements that exceeded the assumed 110 percent used for the first invoice calculation. No adjustment will be made to the rent of any Airline that submits a timely and accurate certified activity report. Any overpayment will not be repaid to AIRLINE.

c. A different prorated rent formula may be applied to the Common Use Space if all of the Signatory Airlines and DOT&PF agree. If all of the Signatory Airlines cannot agree on a different prorated rent formula, DOT&PF may use its management prerogative to determine an equitable formula.

d. All rent for the Exclusive Use Space and Common Use Space is calculated using the terminal building rental rate and is subject to adjustment as provided in Section 7.02. The terminal building rental rate for the Exclusive Use Space and Common Use Space may not be less than $15.00 per square foot per year.

3. AIRLINE, directly or through its supplier or agent, will pay for the term of this Agreement a fuel flowage fee of $0.02 per gallon for aircraft fuel measured as specified in either the Master Agreement Aviation Fueling Operations entered into between Anchorage Fueling Service Company and the State of Alaska, or DOT&PF agreements with suppliers. The fee must be paid monthly and is due on the 20th day of the month after receipt of the fuel.

4. Upon the effective date of this Agreement, rents and fees for the use of all other facilities, rights, and privileges granted to AIRLINE, except as provided elsewhere in this Agreement, will be combined in and represented by a landing fee that is subject to adjustment pursuant to Article 7. No

other fee may be charged AIRLINE for the facilities, rights, and privileges granted under this Agreement.

a. Upon the effective date of this Agreement, the landing fee rate for the Fiscal Year is $.37 per 1,000 pounds of Certificated Maximum Gross Takeoff Weight. The landing fee rate must be recalculated for each Fiscal Year thereafter as set forth in Article 7, but in no event may the landing fee rate be less than $0.30 per 1,000 pounds of Certificated Maximum Gross Takeoff Weight.

b. The landing fees for Aircraft Arrivals must be invoiced monthly by DOT&PF and are due from AIRLINE 30 days after the date on the invoice. The landing fee must be calculated by multiplying the number of 1,000 pound units of the Certificated Maximum Gross Takeoff Weight of AIRLINE during the month by the current landing fee rate established by DOT&PF in accordance with Section 7.03 of this Agreement. Acceptance by DOT&PF of any payment does not preclude DOT&PF from verifying the accuracy of AIRLINE's calculations and from refunding or recovering any difference established by DOT&PF.

Section 5.02. Certified Activity Reports Required

A. By the 10th day of each month, AIRLINE will provide DOT&PF with a certified activity report of AIRLINE's operations at the Airport during the preceding month. The certified activity report must be on Form Anchorage 05-002 provided by DOT&PF and include all data necessary to calculate the landing fee due as well as any other data that DOT&PF reasonably requests.

B. If AIRLINE fails to furnish DOT&PF with the certified activity report required by Section 5.02.A by the 10th day of each month, DOT&PF may determine AIRLINE's landing fee by assuming that the total takeoff weight for AIRLINE during the preceding month was 110 percent of the total takeoff weight of AIRLINE used for the previous month. After delivery of a late certified activity report by AIRLINE, DOT&PF will recalculate the landing fee and will invoice AIRLINE for any underpayment, but any overpayment will not be repaid to AIRLINE. AIRLINE remains responsible for submitting a certified activity report for each month regardless of any estimate made by DOT&PF.

Section 5.03. Interest on Overdue Payments

Any payment due and not received accrues interest from the due date until paid in full at the highest lawful contract rate in Alaska as defined by Alaska Statute 45.45.010 or as amended. Interest on disputed amounts may not be charged to AIRLINE if the dispute is resolved in AIRLINE's favor.

Section 5.04. Additional Rent

After 10 days' written notice to AIRLINE, DOT&PF may, but is not obligated to, cure any default by AIRLINE of its obligation to perform under Article 9 of this Agreement. Any amount paid or cost incurred by DOT&PF to cure any default by AIRLINE, plus a 15 percent administrative fee, is agreed to be additional rent. Unless otherwise provided, all additional rent is due from AIRLINE with the next installment of monthly rent due under this Agreement.

ARTICLE 6
RECORDS AND REPORTS

Section 6.01. DOT&PF Records of Airport System Cost Centers

A. As soon as practicable following the execution of this Agreement, DOT&PF will establish and thereafter maintain a cost accounting system that identifies and segregates by account and cost center the following items for each Fiscal Year: (1) revenues; (2) operation and maintenance expenses, including administrative expenses of the Airport System; (3) expenses of DOT&PF allocable to the Airport System; (4) Annual Debt Service, plus any amount required to satisfy the Rate Covenant of the Bond Resolution; and (5) amortization of assets acquired with International Airport Revenue Funds allocable to the Airport System.

B. Records must be kept for the following cost centers:

1. "Airfield Area Cost Center" includes the aprons, runways, taxiways, approach and clear zones, infield areas, navigational aids, and other facilities of the Airport System that surround the terminal buildings up to the building driplines, are on the airside, and are necessary for aircraft operations.

2. "Domestic Terminal Building Cost Center" includes the domestic terminal complex at Anchorage International Airport including the terminal building with all its fixtures and equipment within the dripline of the building, public parking, employee parking, curbside areas, related landscaping, and access or circulation roads with rights-of-way.

3. "Fairbanks Terminal Cost Center" includes the terminal complex at Fairbanks International Airport including the terminal building with all its fixtures and equipment within the dripline of the building, public parking, employee parking, curbside areas, related landscaping, and access or circulation roads and rights-of-way.

4. "International Terminal Building Cost Center" includes the international terminal complex at Anchorage International Airport including the terminal building with all its fixtures and equipment, public parking employee parking, curbside areas, related landscaping, and access or circulation roads and rights-of-way.

5. "Other Buildings and Grounds Area Cost Center" includes all other areas of the Airport System not included in the above cost centers including facilities, installations, and improvements.

C. The Airport System cost centers as they presently exist are shown on Exhibits F and G.

D. DOT&PF will maintain records that allocate capital funds from the IARF, contributions, Bonds, securities, or other sources to each Airport System cost center. Bond issuance expenses, capitalized interest, and funding of special funds from Bond proceeds as described in Article 8 must be prorated to each Airport System cost center in proportion to the amount of Bond proceeds expended in each Airport System cost center. If it becomes necessary to provide any amount required to satisfy the Rate Covenant of the Bond Resolution, the amount must be prorated among the Airport System cost centers in proportion to the amount of Bond proceeds expended in each Airport System cost center.

Section 6.02. DOT&PF Financial Reports

A. At least nine months before the end of its Fiscal Year, DOT&PF will submit the following items to each of the Signatory Airlines:

1. The proposed annual capital and operating budgets prepared prior to submission to the commissioner that include all estimated Airport System expenses such as maintenance, operation, and administrative expenses. The proposed Annual Budget must include a statement of estimated Airport Systems revenues.

2. A schedule of annual debt service payments required to be made during the next Fiscal Year.

3. A preliminary calculation of the Signatory Airline rents and landing fees for the next Fiscal Year.

B. Within 30 days after receipt of the reports described in Section 6.02.A, AIRLINE may present written comments concerning the reports. Upon request by the Signatory Airlines, a meeting for additional comments must be held between the Signatory Airlines and DOT&PF. DOT&PF will give due consideration to any comments submitted by AIRLINE and the other Signatory Airlines.

C. The proposed budget may be revised as a result of DOT&PF's discussions with AIRLINE, others, or as a result of DOT&PF's budget process. DOT&PF will promptly furnish AIRLINE with a copy of the budget submitted to

the Governor's Office including the schedule of rents and fees.

D. If an Annual Budget is not adopted by the State of Alaska before the Fiscal Year begins, the rents and fees in effect during the preceding Fiscal Year remain in effect until the State of Alaska has adopted a new Annual Budget. The final computation of the new rents and fees will then be made by DOT&PF. The new rents and fees will be retroactively effective as of the beginning of that Fiscal Year.

Section 6.03. IARF Annual Audit

To keep AIRLINE informed of the financial performance of the Airport System, DOT&PF will make available to AIRLINE the annual audit of the IARF financial statements. Upon request by AIRLINE, DOT&PF will answer questions about the audits or statements.

ARTICLE 7
RECALCULATION OF RENTS AND FEES

Section 7.01. Annual Adjustments

Airport System rents and fees must be adjusted annually effective the first day of each Fiscal year without a formal amendment to this Agreement.

Section 7.02. Recalculation of Terminal Building Rental Rate

A. Each year DOT&PF will calculate the Airport System terminal building rental rate per square foot per year for the next Fiscal Year. Whenever the adjustment calculation involves an estimate, the estimate of DOT&PF must be used.

B. DOT&PF will calculate the terminal building rent requirement for each Fiscal year by totaling the following amounts:

1. The total estimated direct and indirect operation and maintenance expenses including DOT&PF's administrative overhead allocable to the terminal building cost centers (combined Domestic, International and Fairbanks Terminal Building Cost Centers).

2. An amount for the amortization of capital expenditures for any asset that has been or will be placed in service on or after July 1, 1977 and before the date the new rental rate is to take effect. Only capital expenditures made by DOT&PF from funds other than Bonds, loans, or grants-in-aid qualify for amortization. Except for planning studies, maintenance equipment, or fleet vehicles that are acquired in the future, amortization of Capital Improvements must be computed at an interest rate of 5 percent per year for an assumed 25-year economic life. Amortization of a Capital Improvement that is a planning study must be computed at an interest rate of 5 percent per year for an assumed 5-year economic life. Amortization of a Capital Improvement that is either maintenance equipment or a fleet vehicle must be computed at an interest rate of 5 percent per year for an assumed 10-year economic life.

3. The Annual Debt Service (including any amount required to satisfy the Rate Covenant of the Bond Resolution) allocable to the terminal building cost

centers or any other amount required by the Bond Resolution.

4. Any required deposit to reserve accounts established pursuant to either the Bond Resolution of this Agreement that is allocable to the terminal building cost centers.

5. The estimated amount of any assessment, judgment (net of insurance proceeds), settlement, or charge to become payable by DOT&PF relating directly to the Airport System that is allocable to the terminal building cost centers.

6. Any adjustment resulting from any difference between the actual versus budgeted costs of the Airport System terminal building cost centers.

C. Effective January 1, 1986 the estimated terminal building rent requirement will be reduced by the estimated amount of Airport System automobile parking revenue.

D. The net terminal building rent requirement for the Fiscal Year must be divided by the total square footage in all of the Airport System terminal buildings minus the square footage used for mechanical and electrical equipment, in order to determine an average rental rate per square foot per year for terminal building space.

Section 7.03. Recalculation of Landing Fee Rate

A. Each year DOT&PF will calculate the Airport System Landing fee for the next Fiscal Year. Whenever the adjustment involves estimated data, the estimate of DOT&PF must be used.

B. The landing fee requirement must be calculated for each Fiscal Year by totaling the following amounts for the Airport System:

1. The total estimated direct and indirect operation and maintenance expenses, including administrative overhead, for the Airport System.

2. An amount for the amortization of Capital Improvement expenditures for any asset that has been or will be placed in service on or after July 1, 1977 and before the date the new landing fee is to take effect. Only Capital Improvement expenditures made by DOT&PF from funds other than Bonds, loans, or grants-in-aid qualify for amortization. Except for planning studies, maintenance equipment, or fleet

vehicles that are acquired in the future, amortization of Capital Improvements must be computed at an interest rate of 5 percent per year for an assumed 25-year economic life. Amortization of a Capital Improvement that is a planning study must be computed at an interest rate of 5 percent per year for an assumed 5-year economic life. Amortization of a Capital Improvement that is either maintenance equipment or a fleet vehicle must be computed at an interest rate of 5 percent per year for an assumed 10-year economic life.

3. The Annual Debt Service (plus any amount required to satisfy the Rate Covenant of the Bond Resolution) of the Airport System or any other amount required by the Bond Resolution.

4. Any required deposits to Airport System reserve accounts established pursuant to the Bond Resolution or this Agreement.

5. The estimated amount of any assessment, judgment (net of insurance proceeds), settlement, or charge to become payable by DOT&PF relating directly to the Airport System operation.

6. Any overpayment or underpayment from operation of the Airport System during the then-current Fiscal Year or any adjustment carried over from any preceding Fiscal Year covered by this Agreement resulting from the difference between the actual versus budgeted revenues and expenses of the Airport System.

7. a. An amount equal to 50 percent of the annual revenue from the duty free concession contract in the International Terminal Building Cost Center or $7.1 million, whichever is greater; or

   b. The amount of the revenue if the total annual revenue from the duty free concession contract is less than $7.1 million.

8. An amount equal to 10 percent of all projected revenue excluding Airline landing fees, Airline terminal rents, and Airline fuel flowage fees.

C. The DOT&PF will reduce the Airport System landing fee requirement for Signatory Airlines for each Fiscal Year by subtracting the following amounts, as presented in the Annual Budget:

1. The operating revenue derived by DOT&PF from all sources other than Signatory Airlines.

2. Signatory Airline terminal rent.

3. All fuel flowage fees paid by Signatory Airlines.

4. The amount transferred from the Prepaid Airline Revenue Account to the Revenue Account net of any overpayment or underpayment from operation of the Airport System as described in Section 7.03.B.6.

D. The Signatory Airline landing fee rate must be calculated for each Fiscal Year by dividing the Airport System landing fee requirement for Signatory Airlines as calculated in Section 7.03.A, B and C by the estimated Certificated Maximum Gross Takeoff Weight for all Signatory Airlines.

Section 7.04. Extraordinary Adjustments of Landing Fee Rate

A. If at any time the revenue of the Airport System is not sufficient to cover the Airport System landing fee requirement described in Section 7.03.B, DOT&PF, after consultation with the Signatory Airlines, and consideration of reducing operation and maintenance costs or using reserve funds to meet the requirement, may immediately increase the landing fee rate to the amount necessary to cover the landing fee requirement after 30 days' written notice to AIRLINE.

B. If the total landing fee revenue from all Signatory Airlines for any quarter of the Fiscal Year varies by more than 10 percent from the estimated total Airport System landing fee requirement for that quarter, DOT&PF may adjust the landing fee rate for the balance of the Fiscal Year.

ARTICLE 8
BOND RESOLUTION AND FLOW OF FUNDS

Section 8.01. Subordination to Bond Resolution

A. This Agreement is subordinate in all respects to all present IARF Bond Resolutions.

B. AIRLINE will be given an opportunity to review and comment on drafts of proposed amendments to all existing IARF Bond Resolutions and drafts of official statements for the issuance of additional IARF Bonds. DOT&PF will give due consideration to the comments before adopting the amendments or issuing new Bonds.

Section 8.02. Flow of Funds

DOT&PF will deposit all revenue received from the Airport System into the IARF. The receipts must be applied in accordance with the Bond Resolution in the following order:

1. a. To the Interest Fund and Retirement Fund of the Revenue Bond Redemption Fund, the amount that will be necessary to satisfy the principal, interest, and minimum sinking fund payments due during the Fiscal Year on all outstanding Bonds.

   b. The Interest Fund and Retirement Fund must be used to pay the principal, premium if any, and interest on Bonds as they become due or for the purchase or redemption of Bonds before their fixed maturity date.

2. a. To the Bond Reserve Fund of the Revenue Bond Redemption Fund, the amount required to maintain a balance equal to the maximum annual debt service on all Bonds outstanding at the time.

   b. The Bond Reserve Fund must be used to pay principal and interest on outstanding Bonds, make minimum sinking fund payments if no other funds are available, or to retire any outstanding Bonds.

3. a. To the Repair and Replacement Reserve Account within the revenue fund, the amount required to maintain a balance of $2,000,000 or any greater amount required by the Bond Resolution.

   b. The Repair and Replacement Reserve Account is to be used to either eliminate any deficiency in the Bond Reserve Fund or to pay the cost of unanticipated or

nonrecurring repairs and replacements to the Airport System as permitted by the Bond Resolution.

4. To the Operating Account, the amount required to pay the reasonable and necessary expenses for the operation, maintenance, repair, ordinary replacement, and reconstruction of the Airport System each Fiscal Year.

5. a. To an Operation and Maintenance Reserve Account, the amount required to maintain a balance equal to one-quarter of the amount in the Annual Budget for operation and maintenance expenses for the Airport System.

   b. The Operation and Maintenance Reserve Account is to be used for the reasonable and necessary expenses for the operation, maintenance, repair, or ordinary replacement and reconstruction of the Airport System to the extent other funds are not available.

6. a. To the Capital Improvement Account, the amount remaining in the Revenue Account at the end of the Fiscal Year after all deposits to the above accounts or uses have been made. No additional deposits may be made into this account after the balance is $12.5 million in excess of the amounts required to fund Capital Improvement projects designated for funding from the IARF as contained in the Annual Budgets. As Capital Improvement projects in the Annual Budgets are completed, the Annual Budget component of the Capital Improvement Account will be reduced by the cost of these Capital Improvement projects.

   b. Beginning July 1, 1986 and each July 1 thereafter, $1 million will be transferred to the Prepaid Airline Revenue Account as the minimum annual deposit. The Capital Improvement Account may be used for any purpose permitted by the Bond Resolution for use of surplus revenue.

7. a. To a Prepaid Airline Revenue Account, an annual minimum deposit of $1 million and any amount remaining in the Revenue Account at the end of the Fiscal Year after all amounts have been deposited into all of the funds and accounts described in this Section.

   b. The Prepaid Airline Revenue Account is the account into which annual Airport System revenue is recorded after all other required fund or account balances are satisfied. Unless 67 percent of the Signatory Airlines agree to an alternate use for the account, the amount in the Prepaid Airline Revenue

Account at the beginning of each Fiscal Year must be transferred to the Revenue Account and used to calculate the Airport System landing fee requirement in the succeeding Fiscal Year as described in Section 7.03.C.4.

ARTICLE 9
ADDITIONAL RESPONSIBILITIES OF PARTIES

Section 9.01. AIRLINE Responsibilities

A. Upon a form provided by DOT&PF, AIRLINE will file with DOT&PF information describing its operations at the Airport within 30 days after the execution of this Agreement. AIRLINE will update this information within 30 days after the beginning of eacn Fiscal Year. The report must include:

1. Names and telephone numbers of AIRLINE officials responsible for various major AIRLINE functions including station operations, flight operations, scheduling, properties, facilities, and similar information;

2. A general description of AIRLINE's operation including number of employees and employee parking requirements;

3. The current schedule of AIRLINE's flights and as periodically adjusted;

4. A description of AIRLINE's fleet and identification of AIRLINE's aircraft that will serve the Airport and the Certificated Maximum Gross Takeoff Weight for each aircraft; and

5. The identification of AIRLINE's current facility requirements at the Airport.

B. At least ten months before the end of the Fiscal Year, AIRLINE will submit to DOT&PF, in writing, its Certificated Maximum Gross Takeoff Weight forecast for the next Fiscal Year.

C. AIRLINE has the following maintenance, repair, and alteration responsibilities. AIRLINE will at its sole expense and in a manner acceptable to DOT&PF:

1. Maintain and keep in good repair the preferential Apron Area adjacent to its exclusive use holdrooms in a neat, clean, and orderly condition free from litter, debris, refuse, petroleum products, or grease that may result from the activities of its passengers, employees, licensees, invitees, agents, or suppliers. All oil and grease spills must be removed promptly.

2. Perform reasonable, ordinary, and preventive maintenance within its Exclusive Use Space including:

   a. Repair of all personal property and equipment including fixtures, doors, interior windows, baggage conveyors and belts, floor coverings, and ticket counters that are not provided by DOT&PF.

   b. Maintenance and repair of all electrical, plumbing, heating, ventilating, and air conditioning appliances and fixtures that are not provided by DOT&PF.

3. Immediately repair any uninsured damage in any other space at the Airport caused by the fault or negligence of AIRLINE, its servants, contractors, agents, licensees, or employees.

4. Pay as additional rent to DOT&PF any extraordinary cost to provide AIRLINE with water, sewer service, electricity, or extraordinary use of any other utilities as are required.

5. AIRLINE will assure that DOT&PF has emergency access to AIRLINE's Exclusive Use Space either by delivering keys to the Airport Director or by providing emergency telephone numbers by which AIRLINE or its agent can be reached on a 24-hour basis.

D. Disabled or Abandoned Aircraft

1. If any aircraft owned or operated by AIRLINE, through accident or any other reason, is disabled or abandoned in any area on the Airport which could interfere with the continuous, normal operations or any landing and field facilities, AIRLINE will:

   a. Immediately remove the aircraft to a location designated by the DOT&PF unless the aircraft is required to remain in place pending investigation by the appropriate regulatory agencies of the federal government; and

   b. In the event of any accident where federal investigation in place is required, immediately, upon receiving clearance so to do from the appropriate federal agency investigating such accident, remove the aircraft and any resulting wreckage or debris to the area designated by the federal agency authorizing the removal; otherwise the aircraft wreckage and debris

will be immediately removed from the Airport and stored at a location approved by DOT&PF.

If AIRLINE fails to proceed immediately to remove the disabled aircraft as provided above, or if any aircraft owned or operated by AIRLINE is abandoned on Airport, DOT&PF has the right, after reasonable advance written notice to the AIRLINE station manager listed in the report described in Section 9.01.A.1, to remove the aircraft by any reasonable means DOT&PF deems necessary under the circumstances, and AIRLINE will reimburse DOT&PF for all costs and expenses (including storage costs) incurred in the removal and will indemnify, save harmless, and defend the State from any liability, cost, or expense resulting from the removal to the extent set forth in Section 10.01.

Section 9.02. DOT&PF's Responsibilities

A. During this Agreement, DOT&PF will:

1. Retain FAA Airport certification;

2. Operate and maintain the Airport in reasonable condition and repair including the runways, taxiways, aprons, roadways, vehicle parking areas, public areas of the terminal buildings, and all appurtenances, facilities, and services;

3. Keep the public areas of the terminal buildings adequately and attractively equipped, furnished, and decorated as well as clean and presentable. In the public view areas of the terminal buildings, DOT&PF will provide and supply directional and informational signs, heat, electricity, light, power, air conditioning, waste-water disposal, water, and janitorial services including rubbish removal. DOT&PF will also keep in good repair and condition the exterior and structural portions of the walls, roof, and floor of the Exclusive Use Space and Common Use Space, as well as all central electrical and mechanical distribution systems; and

4. Maintain existing and future utility systems on the Premises in reasonable condition and repair, including heat, electricity, fire alarm, fire protection, sprinkler, air conditioning, telephone, telegraph, teleregister and intercommunication services, and any lines, pipes, mains, wires, conduits and equipment connected with or

appurtenant to all those systems. DOT&PF may enter the Premises at all reasonable times to make any necessary repairs, alterations, and replacements.

B. DOT&PF will use its best efforts to restore service as soon as practical after any interruption in the services described in this Section.

Section 9.03. DOT&PF's Right to Inspect and Make Repairs

A. DOT&PF or its representative has the right, at reasonable times and with as little interruption of AIRLINE's operations as practical, to enter AIRLINE's Exclusive Use Space and Common Use Space for the following purposes:

1. Inspections to verify AIRLINE's compliance with this Agreement.

2. To do anything that DOT&PF has the right or obligation to do.

B. Except in the case of an emergency reasonable notice must be given and DOT&PF will coordinate with AIRLINE in order to minimize interference with AIRLINE's activities.

Section 9.04. Alterations and Improvements

A. Before beginning construction of any improvement or alteration, AIRLINE will first submit to the Airport Director:

1. Detailed drawings of the proposed construction, and

2. Written proof of approval of the proposed construction from all appropriate agencies.

B. DOT&PF will review and approve or disapprove the proposed construction in writing within 45 days after receipt of the construction drawings.

C. Any construction by AIRLINE must be performed in a safe, neat manner and meet the following criteria:

1. Not interfere with the activities of other tenants;

2. Be compatible with the architecture of the building as determined by the Airport Director;

3. Be performed at no cost to DOT&PF; and

4. Comply with all federal, state and local building codes.

D. Within 30 days after completion of the construction of any alteration or improvement, AIRLINE will deliver to DOT&PF detailed copies of as-built drawings showing the location and dimensions of the alteration or improvement constructed, including structural, mechanical, and electrical systems.

Section 9.05. DOT&PF Modification and Relocation

A. The Airport Director may relocate AIRLINE or modify any portion of AIRLINE's Premises if necessary to renovate or modify the terminal building or apron if that renovation or modification is not inconsistent with the Airport masterplan. If it is necessary to relocate AIRLINE to implement a Capital Improvement, AIRLINE will be notified during the review of Capital Improvements described in Section 4.01.

B. Upon 90 days advance written notice, AIRLINE will vacate and surrender the affected Premises to DOT&PF.

C. If AIRLINE's Premises are modified or relocated, DOT&PF will:

1. Reimburse AIRLINE for the undepreciated capital cost of AIRLINE's improvements that are acquired, demolished, or not replaced in kind by DOT&PF at the new location. Reimbursement must be made on the basis of capital cost figures furnished by AIRLINE and subject to verification by the Airport Director.

2. Provide AIRLINE with substantially similar space so that AIRLINE's operations are not unreasonably disrupted. In the event of relocation, this Agreement will be modified to include AIRLINE's new assigned space.

3. Construct the demising walls and interior improvements to AIRLINE's new area. Interior improvements include wall coverings, floors, ceilings, lighting, electrical, heating units, air ventilation, and fixtures. All material replacement will be similar in type and quality to those on the Premises being relocated.

4. Refinish the remainder of the Premises, if any, for the functions authorized by this Agreement.

5. If requested by AIRLINE, DOT&PF will relocate AIRLINE's fixtures, furnishings, and equipment at DOT&PF expense.

ARTICLE 10
INDEMNIFICATION, INSURANCE, AND SUBROGATION

Section 10.01. Indemnification

A. AIRLINE will indemnify, save harmless, and defend the DOT&PF, its officers, agents and employees from liability of any nature or kind including costs and expenses for or on account of any and all legal actions or claims of any character whatsoever resulting from death or injury to any person(s) or damage to property to the extent caused by any wrongful error, omission, or negligent act of AIRLINE arising out of this Agreement.

B. All liability or costs for legal actions or claims including defense costs resulting from death or injury to any person(s) or damage to property which are caused by the joint negligence of the DOT&PF and AIRLINE arising out of this Agreement will be apportioned on a comparative fault basis.

Section 10.2. Insurance

A. DOT&PF will, during the term of this Agreement, procure and maintain comprehensive general liability and fire and extended coverage insurance for the Airport, terminal building, and other DOT&PF facilities at the Airport in such amounts and for such insured coverages as may be reasonably required for the prudent operation of the Airport.

B. AIRLINE will, during the term of this Agreement, procure and maintain liability insurance for public liability, aviation liability, the leased Premises, property damage, bodily injury and death, with contractual liability endorsements insuring all of AIRLINE's operations under this Agreement, including its obligations under the indemnity clause in Section 10.01 of this Agreement. These policies will be with limits not less than those set forth below. These policies and minimum limits will be consistently applied to all air carriers with similar operations and will be consistent with prudent airport industry practices and this Agreement. Within 30 days after signing this Agreement, AIRLINE will report to DOT&PF the maximum seating capacity installed in each aircraft or type of aircraft operated by AIRLINE at the Airport. If the maximum seating capacity for any aircraft or type of aircraft operated by AIRLINE is changed, AIRLINE will report the change to DOT&PF and obtain any required additional insurance coverage before operating the aircraft at the Airport.

Insurance Coverages	Minimum Limits
Airline/Aircraft/Airport Public Liability Insurance or Equivalent Insurance	$1 million per seat*

With the following minimum limits regardless of seat capacity or cargo configuration:

--	for propeller aircraft	$10 million
--	for jet aircraft	$20 million

* Based on the maximum seating capacity reported by AIRLINE as described in Section 10.02.B in an aircraft operated by AIRLINE at the Airport.

C. All policies of insurance must be in a form and from a company satisfactory to DOT&PF. Each policy must provide that it may not be cancelled or materially changed during its term without at least 30 days' advance written notice to DOT&PF.

D. A certificate certifying coverage of required insurance must be delivered to DOT&PF within 30 days of the effective date of this Agreement.

E. Where any such policy has a normal expiration during the term of this Agreement, AIRLINE will provide a certificate or satisfactory written evidence of continued coverage prior to such expiration. Within 10 days prior to the effective date of any cancellation or reduction in the amount or extent of insurance coverage, AIRLINE will deliver to DOT&PF a certificate or satisfactory written evidence certifying coverage that reinstates or otherwise provides at least the required insurance coverage.

F. The failure by either party at any time to enforce the provisions in this section will not be construed as a waiver of these provisions and will not reduce their obligations under this Agreement.

Section 10.03. Waiver of Subrogation

AIRLINE and DOT&PF agree to waive their respective rights of recovery or claim against the other for any loss or damage to the Premises, the terminal building or their contents (excluding aircraft) resulting from fire or other "all-risk" insurable property hazards caused by the other. Notwithstanding Section 10.01, any fire or "all-risk" property insurance policies carried by either party will include a waiver of subrogation clause waiving any rights of subrogation against the other party to this Agreement.

Section 10.04. Additional Insured

AIRLINE agrees that every insurance policy required under Section 10.02.B will include an endorsement naming DOT&PF as an additional insured to the extent of DOT&PF's indemnified interest under Section 10.01.

Section 10.05. Notice of Claim

Each party will give the other party prompt and reasonable notice of any claim or action involving this Agreement.

Section 10.06. Insurance Rates

AIRLINE may not use the Airport in any manner that will increase DOT&PF's insurance rates. If AIRLINE's activities on the Airport result in increased insurance costs for DOT&PF, then DOT&PF may cnarge the increased cost to AIRLINE as additional rent.

ARTICLE 11
ASSIGNMENT OR SUBLEASE

Section 11.01. Assignment or Sublease

A. No assignment or sublease is valid without the advance written approval of the Airport Director.

1. The Airport Director may approve a sublease of AIRLINE's Premises, if:

a. In the Airport Director's opinion, the proposed sublease is in the best interest of the Airport's operation;

b. AIRLINE subleases the space for an amount not exceeding the rent DOT&PF charges for that space plus AIRLINE's maintenance and operation costs, an additional allowance for amortization of AIRLINE's improvements, and a 15 percent administrative charge.

c. The term of any sublease does not extend beyond the expiration of the term of this Agreement; and

d. DOT&PF has no comparable vacant space available for lease. The requirement in this sub-paragraph 11.01.A.1.d may be waived in the discretion of the Airport Director.

2. DOT&PF's consent to any sublease does not relieve AIRLINE from obtaining DOT&PF's consent to any future sublease.

3. The Airport Director may approve an assignment of this Agreement if all of the following conditions are met:

a. In the Airport Director's reasonable opinion, the proposed assignment is in the best interest of the Airport's operation;

b. AIRLINE assigns the Agreement to an Airline qualified under the State's regulations to execute the Agreement and capable of complying with all the requirements in this Agreement;

c. AIRLINE assigns this Agreement for an amount not exceeding the cost of AIRLINE's tenant improvements and personal property transferred as part of the assignment; and

B. If this Agreement is assigned pursuant to the bankruptcy code, 11 U.S.C. 101 et seq., any consideration for the assignment greater than the amount permitted under Section 11.01.A.3.c is the exclusive property of DOT&PF and is not the property of AIRLINE or AIRLINE's estate under the bankruptcy code.

Section 11.02. Merger

This article does not prevent the assignment of this Agreement to any corporation or business entity that merges, consolidates, or succeeds to the business of AIRLINE, so long as written documentation of the assignment is given to DOT&PF within 30 days after the merger, consolidation, or succession.

ARTICLE 12
DEFAULT AND TERMINATION

Section 12.01. Reentry and Reletting After Default

A. Without terminating this Agreement and time being of the essence, DOT&PF may immediately reenter, renovate, and relet all or part of the Premises to others and reassign preferential aircraft parking positions to others for the account of AIRLINE if AIRLINE either:

1. Fails to pay any rent or fee, including interest, within 10 days after receipt of written notice of default.

2. Fails to immediately cure a default in performance of any obligation under this Agreement within 30 days after receipt of written notice of default. If the nature of the default is such that it cannot be cured within 30 days after the written notice of default by DOT&PF to AIRLINE, AIRLINE will be deemed to have cured the default if AIRLINE commences to cure the default within the 30 day period and thereafter diligently continues the cure to completion.

3. Fails to continue to perform any obligation of this Agreement after performance is commenced, or

4. Any petition, proceeding, or action by, for, or against AIRLINE is filed under any insolvency, bankruptcy, reorganization, relief of debtors, or receivorship law.

B. DOT&PF will charge AIRLINE renovation costs necessary to restore the Premises to their original condition plus a 15 percent administrative fee for all relet sublease rent received by DOT&PF for AIRLINE's relet space. AIRLINE will reimburse DOT&PF for any deficiency in rents or fees received for the reentered or relet space. A deficiency is the difference between AIRLINE's rent and the relet rent before considering the 15 percent administrative fee.

C. At any time before or after a reentry and reletting as provided in this Section, DOT&PF may terminate AIRLINE's rights under this Agreement, reenter and take possession of the Premises, and cancel all rights and privileges granted to AIRLINE without any restriction on recovery by DOT&PF for past due rents and fees owed by AIRLINE.

D. DOT&PF has any and all additional rights and remedies as provided by law.

Section 12.02. Partial Termination Due to Damage or Destruction

A. If the Exclusive Use Space, Common Use Space, terminal buildings, structures, or any portions of them are damaged by fire or other casualty, DOT&PF will notify AIRLINE within 90 days of the damage whether the damaged space is to be repaired. If the damaged space is to be repaired, DOT&PF will repair the damage with due diligence and will abate the rent allocated to the particular building, room, or other portion of the space rendered untenantable for the period from the occurrence of the damage to the completion of the repairs. DOT&PF will do its best to provide AIRLINE with any available temporary substitute space at the rent deemed reasonable by DOT&PF until the repairs are completed.

B. If DOT&PF fails to notify AIRLINE within 90 days after destruction that DOT&PF will repair the damaged space, AIRLINE may elect within 120 days after destruction to terminate this Agreement as to the space damaged or destroyed, effective on the date of the damage.

Section 12.03. Events Permitting Termination by AIRLINE

AIRLINE may terminate this Agreement if:

A. AIRLINE is prohibited by lawful authority from using the Airport because of any deficiency or unsafe operating condition at the Airport for a period exceeding 60 days. AIRLINE may terminate this Agreement after the 60 days by giving DOT&PF 30 days' advance written notice.

B. DOT&PF does not perform any material covenant in this Agreement for a period of 60 days after written notice of default to DOT&PF by AIRLINE. DOT&PF will be deemed to have cured the default if DOT&PF commences to cure the default within the 60-day period and diligently continues the cure to completion.

C. The IARF statute (AS 37.15.410-37.15.550) is amended to substantially change the structure or operation of the Airport System.

Section 12.04. Events Permitting Termination by DOT&PF

Time being of the essence, DOT&PF may terminate this Agreement immediately and exercise all rights of entry and reentry upon the Premises, with or without process of law, after the occurrence of any of the following events:

A. AIRLINE fails to provide regularly scheduled air transportation to and from the Airport. DOT&PF will not

seek any other damages from AIRLINE for breach of this provision.

B. AIRLINE fails to pay any rent or fee due, including interest, within 10 days after AIRLINE's receipt of written notice of default from DOT&PF.

C. AIRLINE does not perform any other material provision in this Agreement for a period of 60 days after receipt of written notice of default from DOT&PF. If the nature of the default is such that it cannot be cured within 60 days after written notice of default by DOT&PF to AIRLINE, AIRLINE will be deemed to have cured the default if AIRLINE commences to cure the default within the 60-day period and diligently continues the cure to completion.

D. AIRLINE or its creditors file a request for AIRLINE's relief under any state or federal insolvency, bankruptcy, reorganization, relief of debtors, or receivorship statute.

F. A custodian, trustee, receivor, or agent, or any similar person is appointed or authorized to take charge of a substantial part of AIRLINE's property on the Airport.

Section 12.05. Surrender of the Premises

DOT&PF is not required to give AIRLINE notice to quit possession of the Premises at the expiration of this Agreement. Upon the expiration or termination of this Agreement, DOT&PF has the right to take possession of the Premises. AIRLINE agrees to surrender the Premises peaceably and in good condition, except for reasonable wear and tear.

Section 12.06. Ownership of Improvements

A. The ownership of improvements, furnishings, equipment, and fixtures that are constructed or installed on the Premises by AIRLINE is as follows:

1. Title to all removable furniture, furnishings, fixtures, or equipment remains vested in AIRLINE at all times during the term of this Agreement.

2. Title to any structure or other improvement that cannot, in the Airport Director's reasonable determination, be removed without damage to the Premises, vests in DOT&PF upon the expiration or final termination of this Agreement or its extension. These improvements include interior walls, ceilings, carpeting, finished flooring, electrical

wiring, air conditioning ducts and equipment, furnishings, interior decoration, or finishing.

B. AIRLINE may not abandon any property on the Premises without the advance written consent of the Airport Director. Title to any property not removed by AIRLINE at the expiration or termination of this Agreement immediately vests in DOT&PF at its option. At its sole expense, AIRLINE will restore all damaged DOT&PF property to its previous condition or reimburse DOT&PF for the expense to repair any property damage.

Section 12.07. Holdover

If AIRLINE holds over without a written renewal after the expiration of this Agreement, the holding over does not operate as a renewal or extension of the term of this Agreement but only creates a month to month extension of this Agreement regardless of any rent or fee payment accepted by DOT&PF. The obligations of DOT&PF and AIRLINE to perform under this Agreement continue until the month-to-month holdover is terminated. Either party may terminate the holdover at any time by giving the other party at least 30 days' advance written notice.

ARTICLE 13
COMPLIANCE WITH LAW, TAXES, POLICIES AND NONDISCRIMINATION

Section 13.01. Compliance With Law

A. AIRLINE will comply with all present and future statutes, regulations or ordinances of all federal, state, or local governments that apply to or affect AIRLINE or its operations under this Agreement. DOT&PF will comply with all applicable laws governing its operations under this Agreement.

Section 13.02. Taxes

A. AIRLINE will pay, but payment may not be considered part of Airport System revenue, all applicable taxes (including any possessory interest tax, assessment, or similar charge) that at any time during this Agreement may be levied or liened against AIRLINE, the Airport facilities made available for AIRLINE's exclusive use, or AIRLINE's personal property. AIRLINE will pay all taxes, assessments, and charges directly to the taxing or assessing authority.

B. AIRLINE will indemnify and defend DOT&PF from all costs that result directly or indirectly from tax or assessment that AIRLINE is liable for including taxes, penalties, expenses, and reasonable attorney's fees incurred by DOT&PF.

C. At its own expense, AIRLINE may contest the amount or validity of any tax or assessment or the inclusion of the space leased under this agreement as taxable or assessable property directly against the taxing or assessing authority. AIRLINE will indemnify DOT&PF for all taxes, penalties, costs, expenses, and reasonable attorney's fees incurred by DOT&PF resulting directly or indirectly from any tax contest.

D. Upon termination of this Agreement, AIRLINE will promptly pay in full all applicable taxes and liens.

Section 13.03. Policies

A. AIRLINE will comply with all State of Alaska regulations and DOT&PF Policies and Procedures governing the use of Airport facilities.

B. AIRLINE will comply with all local Airport Directives as set forth by the Airport Director.

C. DOT&PF agrees not to promulgate any State of Alaska regulations governing use of the Airport Facilities, DOT&PF Policies and Procedures, or local Airport Directives as set forth by the Airport Director contradictory to:

1. This Agreement,

2. Any regulation of the FAA, or

3. Any government agency regulation that is binding upon AIRLINE.

D. AIRLINE will be given an opportunity to review and comment on periodic changes to all State of Alaska regulations and Airport Directives before implementation.

Section 13.04. Nondiscrimination

A. AIRLINE will not permit discrimination in violation of federal or state law on the grounds of race, color, religion, national origin, ancestry, marital status, age, or sex against any patron, employee, applicant for employment, other person or groups of persons. DOT&PF may take any action necessary to enforce this provision, including actions required by any federal or state law or FAA grant agreement.

B. AIRLINE will undertake an affirmative action program as required by 14 CFR Part 152, Subpart E, to ensure that no person is excluded from participating in any employment, contracting, or leasing activity on the ground of race, creed, color, national origin, or sex. AIRLINE agrees that no person may be excluded on those grounds from participating in or receiving the services or benefits of any program or activity covered by the regulation. AIRLINE will require its covered suborganizations to provide assurance that they will also undertake affirmative action programs and require assurances from their suborganizations, as required by 14 CFR Part 152.

ARTICLE 14
AGREEMENT NOT TO GRANT MORE FAVORABLE TERMS

Section 14.01. Agreement Not to Grant More Favorable Terms

DOT&PF agrees not to enter into any lease, contract, or other agreement with any other Airline containing substantially more favorable rights and privileges than granted in this Agreement. DOT&PF will not grant any right or privilege that is not accorded AIRLINE to any other Airline unless the same right or privilege is made available to AIRLINE. This covenant does not apply to any Airline that only operates aircraft weighing less than 30,000 pounds Certificated Maximum Gross Takeoff Weight.

ARTICLE 15
GENERAL PROVISIONS

Section 15.01. Delivery of Notices

A. Required notices must be hand delivered or sent by registered or certified mail to the addresses below:

1. DOT&PF:

2. AIRLINE:

B. If notice is given in any other manner or at any other place, notice must also be given in writing at the place and in the manner specified in this section in order to be effective under this Agreement. All notice periods begin on the date of receipt of written notice at the address listed in Section 15.01.A except as provided elsewhere in this Agreement.

C. Either party may change the address in this section by written notice to the other party.

Section 15.02. Severability

If any part of this Agreement is declared to be invalid by a court of competent jurisdiction, the other parts of the Agreement remain in full force.

Section 15.03. Quiet Enjoyment

Upon Payment of the required rents and fees, and subject to its performance of this Agreement, AIRLINE may peaceably use the Airport.

Section 15.04 Officers, Agents, and Employees

No commissioner, councilman, director, officer, agent, employee, or other representative of either party may be charged personally nor held contractually liable by the other party for the enforcement, attempted enforcement, or breach of this Agreement if acting within the scope of their duties. DOT&PF and AIRLINE remain

liable for the acts of these persons that are within the scope of their duties.

Section 15.05. Subordination to Agreements with the U.S. Government

This Agreement is subject to any present or future agreement between DOT&PF and the United States of America concerning the operation or maintenance of the Airport System. AIRLINE may not hold DOT&PF liable for any failure to perform any part of this Agreement as a result of any national emergency declared by the federal government.

Section 15.06. Incorporation of Required Provisions

The parties agree to incorporate into this agreement any provision required by any governmental agency, including DOT&PF acting in its non-proprietary capacity, now or in the future.

Section 15.07. Nonwaiver of Rights

No waiver of default of any part of this Agreement by either party may operate as a waiver of any subsequent default of any part of this Agreement that is to be performed by the other party. Consent or notice by either party may not be construed as consent or notice in the future.

Section 15.08 Force Majeure

Notwithstanding Section 12.02, neither DOT&PF nor AIRLINE will be in violation of this Agreement if it is prevented from performance, by reason of strike, boycott, labor dispute, embargo, shortage of energy or materials, act of God, act of public enemy, act of superior governmental authority, weather condition, riot, rebellion, sabotage, or any other circumstance for which it is not responsible and which is beyond its control.

Section 15.09. Contract Interpretation

The headings of articles and sections are used only for convenience and reference, and may not be used to define or interpret the scope or intent of this Agreement. The language in all parts of this Agreement must be construed according to its fair meaning and not strictly for or against either DOT&PF or AIRLINE.

Section 15.10. Federal Aviation Act, Section 308

This Agreement may not be construed to grant AIRLINE any exclusive right or privilege within the meaning of Section 308 of the Federal Aviation Act of 1958, as amended, except that AIRLINE has the right to exclusive possession of its Exclusive Use Space.

Section 15.11. Radio Interference

At DOT&PF's request, AIRLINE will stop using any machine or device that interferes with any government-operated transmitter, receiver, or navigation aid until the cause of the interference is eliminated.

Section 15.12. Obtaining Federal and State Funds

DOT&PF will use its best efforts to obtain maximum entitlement grants from federal, state, or other sources when consistent with prudent management of the Airport System.

Section 15.13. Management Audits

DOT&PF will conduct periodic management and operation audits of the Airport System and the IARF. DOT&PF will use its best efforts to implement the reasonable recommendations of the audits.

Section 15.14. Project Management

DOT&PF will use its best efforts to implement Capital Improvements with efficient and responsive project management.

Section 15.15. Passenger Facility Charges

If the current prohibition against passenger facility charges (sometimes referred to as "head taxes") is removed, DOT&PF reserves the right to institute the charge if it desires. If a passenger facility charge is instituted, the revenue from this charge will be Airport System revenue and will be dedicated to funding the Airport System Capital Improvements.

Section 15.16. Governing Law

This Agreement is governed by the laws of the State of Alaska. Any legal action involving this Agreement must be filed by AIRLINE in the State of Alaska.

Section 15.17. Inspection of Books and Records

At its own expense and upon reasonable notice, each party has the right from time to time to inspect the books, records, or other data of the other party relating to this Agreement. Inspections must be conducted during regular business hours.

Section 15.18. Generally Accepted Accounting Principles

Any report or disclosure referred to in this Agreement that contains financial information must be prepared in accordance with applicable generally accepted accounting principles unless otherwise noted in this Agreement.

Section 15.19. Modification Necessary for Grant of FAA Funds

A. If the FAA requires that this Agreement be amended as a condition precedent to the granting of funds for the improvement of the Airport, AIRLINE agrees to consent to any amendment that is reasonably required in order to enable DOT&PF to obtain the grant of funds.

B. If any FAA required amendment impairs AIRLINE's rights under this Agreement or causes AIRLINE any unreasonable expense, AIRLINE may terminate this Agreement within 60 days by notice to DOT&PF.

Section 15.20. Consent Not to be Unreasonably Withheld

Neither DOT&PF nor AIRLINE will unreasonably withhold any consent or approval required by this Agreement.

Section 15.21. Prudent Operations

DOT&PF will manage the Airport System in a prudent and reasonable manner.

Section 15.22. Independent Contractor

AIRLINE is neither an agent nor an employee of DOT&PF but is an independent contractor with respect to all AIRLINE's activities on the Airport, including any installation, construction, or service provided.

Section 15.23. Entire Agreement

Except as described in Section 15.26, this Agreement with all attached exhibits constitutes the entire agreement between DOT&PF and AIRLINE at the Airport. Statements previously made, verbal or written, are merged in this Agreement. Until signed by the Commissioner of DOT&PF or his designated representative, this Agreement is of no effect. This Agreement may only be amended in a writing that is signed by the authorized representatives of both parties.

Section 15.24. Condemnation

If any of AIRLINE's rights and privileges under this Agreement are condemned by any proper authority, including the State of Alaska, this Agreement terminates automatically on the date AIRLINE is required to surrender possession of the property. DOT&PF is entitled to all the condemnation proceeds except AIRLINE will be paid only the portion of the proceeds attributable to the fair market value of any improvements placed on the property by AIRLINE according to the provisions of 17 AAC 40.330(g), and not any compensation for consequential or severance damages including business damage, lost profits, or leasehold advantage. Rent will be adjusted according to the provisions of 17 AAC 40.330(g).

Section 15.25. Incorporation of Exhibits

Exhibits A through K are a part of this Agreement.

Section 15.26. Preexisting Agreements

A. On the effective date of this Agreement, the following agreements between AIRLINE and DOT&PF at the airport are terminated:

DOT&PF FILE NO.	SPACE OR PROPERTY LEASED

B. The following agreements between AIRLINE and DOT&PF at the Airport are not terminated by the execution of this Agreement:

DOT&PF FILE NO.	SPACE OR PROPERTY LEASED

C. AIRLINE and DOT&PF agree that the only agreements in existence at the Airport between AIRLINE and DOT&PF on the effective date of this Agreement are this Agreement and those listed in Section 15.26.B.

The parties have executed this Agreement on the dates below:

[METROPOLITAN WASHINGTON AIRPORTS ACT OF 1986]

[¶ 3965]

Act of October 18, 1986 (P. L. 99-500)

TITLE VI—METROPOLITAN WASHINGTON AIRPORTS

[¶ 3965a] SHORT TITLE

Sec. 6001. This title may be cited as the "Metropolitan Washington Airports Act of 1986".

[¶ 3965b] FINDINGS

Sec. 6002. The Congress finds that—

(1) the two federally owned airports in the metropolitan area of Washington, District of Columbia, constitute an important and growing part of the commerce, transportation, and economic patterns of the Commonwealth of Virginia, the District of Columbia, and the surrounding region;

(2) Baltimore/Washington International Airport, owned and operated by the State of Maryland, is an air transportation facility that provides service to the greater Metropolitan Washington region together with the two federally owned airports, and timely Federal-aid grants to Baltimore/Washington International Airport will provide additional capacity to meet the growing air traffic needs and to compete with other airports on a fair basis;

(3) the Federal Government has a continuing but limited interest in the operation of the two federally owned airports, which serve the travel and cargo needs of the entire Metropolitan Washington region as well as the District of Columbia as the national seat of government;

(4) operation of the Metropolitan Washington Airports by an independent local agency will facilitate timely improvements at both airports to meet the growing demand of interstate air transportation occasioned by the Airline Deregulation Act of 1978 (Public Law 95-504; 92 Stat. 1705);

(5) all other major air carrier airports in the United States are operated by public entities at the State, regional, or local level;

(6) any change in status of the two airports must take into account the interest of nearby communities, the traveling public, air carriers, general aviation, airport employees, and other interested groups, as well as the interests of the Federal Government and State governments involved;

(7) in recognition of a perceived limited need for a Federal role in the management of these airports and the growing local interest, the Secretary has recommended a transfer of authority from the Federal to the local/State level that is consistent with the management of major airports elsewhere in the Nation;

(8) an operating authority with representation from local jurisdictions, similar to authorities at all major airports in the United States, will improve communications with local officials and concerned residents regarding noise at the Metropolitan Washington Airports;

(9) a commission of congressional, State, and local officials and aviation representatives has recommended to the Secretary that transfer of the federally owned airports be as a unit to an independent authority to be created by the Commonwealth of Virginia and the District of Columbia; and

(10) the Federal interest in these airports can be provided through a lease mechanism which provides for local control and operation.

[¶ 3965c] PURPOSE

Sec. 6003. (a) IN GENERAL.—It is therefore declared to be the purpose of the Congress in this title to authorize the transfer of operating responsibility under

long-term lease of the two Metropolitan Washington Airport properties as a unit, including access highways and other related facilities, to a properly constituted independent airport authority created by the Commonwealth of Virginia and the District of Columbia, in order to achieve local control, management, operation, and development of these important transportation assets.

(b) INCLUSION OF BWI NOT PRECLUDED.—Nothing in this title shall be construed to prohibit the Airports Authority and the State of Maryland from entering into an agreement whereby Baltimore/Washington International Airport may be made part of a regional airports authority, subject to terms and conditions agreed to by the Airports Authority, the Secretary, the Commonwealth of Virginia, the District of Columbia, and the State of Maryland.

[¶ 3965d] DEFINITIONS

Sec. 6004. In this title—

(1) ADMINISTRATOR.—The term "Administrator" means the Administrator of the Federal Aviation Administration.

(2) AIRPORTS AUTHORITY.—The term "Airports Authority" means the Metropolitan Washington Airports Authority, a public body to be created by the Commonwealth of Virginia and the District of Columbia consistent with the requirements of section 6007.

(3) EMPLOYEES.—The term "employees" means all permanent Federal Aviation Administration personnel employed on the date the lease under section 6005 takes effect by the Metropolitan Washington Airports, an organization within the Federal Aviation Administration.

(4) METROPOLITAN WASHINGTON AIRPORTS.—The term "Metropolitan Washington Airports" means Washington National Airport and Washington Dulles International Airport.

(5) SECRETARY.—The term "Secretary" means the Secretary of Transportation.

(6) WASHINGTON DULLES INTERNATIONAL AIRPORT.—The term "Washington Dulles International Airport" means the airport constructed under the Act entitled "An Act to authorize the construction, protection, operation, and maintenance of a public airport in or in the vicinity of the District of Columbia", approved September 7, 1950 (64 Stat. 770), and includes the Dulles Airport Access Highway and Right-of-way, including the extension between the Interstate Routes I-495 and I-66.

(7) WASHINGTON NATIONAL AIRPORT.—The term "Washington National Airport" means the airport described in the Act entitled "An Act to provide for the administration of the Washington National Airport, and for other purposes", approved June 29, 1940 (54 Stat. 686).

[¶ 3965e] LEASE OF METROPOLITAN WASHINGTON AIRPORTS

Sec. 6005. (a) AUTHORITY TO ENTER INTO LEASE.—The Secretary is authorized to enter into a lease of the Metropolitan Washington Airports with the Airports Authority for a 50-year term and to enter into any related agreement necessary for the transfer of authority and property to the Airports Authority. Authority to enter into a lease and agreement under this section shall lapse two years after the date of the enactment of this title.

(b) PAYMENTS.—

(1) LEASE PAYMENTS.—The lease shall provide for the Airports Authority to pay to the general fund of the Treasury annually an amount, computed using the GNP Price Deflator, to equal $3,000,000 in 1987 dollars. The Secretary and the Airports Authority may renegotiate the level of lease payments attributable to inflation costs every ten years.

(2) RETIREMENT OBLIGATIONS.—

© 1986, Commerce Clearing House, Inc.

(A) DISCONTINUED SERVICE.—Not later than one year after the lease takes effect, the Airports Authority shall pay to the Treasury of the United States, to be deposited to the credit of the Civil Service Retirement and Disability Fund, an amount determined by the Office of Personnel Management to represent the actual added costs incurred by the Fund due to discontinued service retirement under section 8336(d)(1) of title 5, United States Code, of employees who elect not to transfer to the Airports Authority.

(B) UNFUNDED LIABILITY.—Not later than one year after the lease takes effect, the Airports Authority shall pay to the Treasury of the United States, to be deposited to the credit of the Civil Service Retirement and Disability Fund, an amount determined by the Office of Personnel Management to represent the present value of the difference between (i) the future cost of benefits payable from the Fund and due the employees covered under section 6008(e) of this title that are attributable to the period of employment following the date the lease takes effect, and (ii) the contributions made by the employees and the Airports Authority under section 6008(e). In determining the amount due, the Office of Personnel Management shall take into consideration the actual interest such amount can be expected to earn when invested in the Treasury of the United States.

(c) MINIMUM TERMS AND CONDITIONS.—The Airports Authority shall agree, at a minimum, to the following conditions and requirements in the lease:

(1) OPERATION OF AIRPORTS AS A UNIT.—The Airports Authority shall operate, maintain, protect, promote, and develop the Metropolitan Washington Airports as a unit and as primary airports serving the Metropolitan Washington area.

(2) AIRPORT PURPOSES.—The real property constituting the Metropolitan Washington Airports shall, during the period of the lease, be used only for airport purposes. For the purposes of this paragraph, the term "airport purposes" means a use of property interests (other than a sale) for aviation business or activities, or for activities necessary or appropriate to serve passengers or cargo in air commerce, or for nonprofit, public use facilities. If the Secretary determines that any portion of the real property leased to the Airports Authority pursuant to this Act is used for other than airport purposes, the Secretary shall (A) direct that appropriate measures be taken by the Airports Authority to bring the use of such portion of real property in conformity with airport purposes, and (B) retake possession of such portion of real property if the Airports Authority fails to bring the use of such portion into a conforming use within a reasonable period of time, as determined by the Secretary.

(3) AIP REQUIREMENTS.—The Airports Authority shall be subject to the requirements of section 511(a) of the Airport and Airway Improvement Act of 1982 and the assurances and conditions required of grant recipients under such Act as of the date the lease takes effect. Notwithstanding section 511(a)(12) of such Act, all revenues generated by the Metropolitan Washington Airports shall be expended for the capital and operating costs of such airports.

(4) CONTRACTS.—In acquiring by contract supplies or services for an amount estimated to be in excess of $200,000, or awarding concession contracts, the Airports Authority shall obtain, to the maximum extent practicable, full and open competition through the use of published competitive procedures. By a vote of seven members, the Airports Authority may grant exceptions to the requirements of this paragraph.

(5) CONTINUATION OF REGULATIONS.—

(A) IN GENERAL.—Except as provided in subparagraph (B), all regulations of the Metropolitan Washington Airports (14 C. F. R. part 159) shall become regulations of the Airports Authority on the date the lease takes effect and shall remain in effect until modified or

revoked by the Airports Authority in accordance with procedures of the Airports Authority.

(B) EXCEPTIONS.—The following regulations shall cease to be in effect on the date the lease takes effect:

(i) section 159.59(a) of title 14, Code of Federal Regulations (relating to new-technology aircraft); and

(ii) section 159.191 of title 14, Code of Federal Regulations (relating to violations of Federal Aviation Administration regulations as Federal misdemeanors).

(C) OPERATIONS.—The Airports Authority may not increase or decrease the number of instrument flight rule takeoffs and landings authorized by the High Density Rule (14 C. F. R. 93.121 et seq.) at Washington National Airport on the date of the enactment of this Act and may not impose a limitation after the date the lease takes effect on the number of passengers taking off or landing at Washington National Airport.

(6) TRANSFER OF RIGHTS, LIABILITIES, AND OBLIGATIONS.—

(A) IN GENERAL.—Except as specified in subparagraph (B) of this paragraph, the Airports Authority shall assume all rights, liabilities, and obligations (tangible and incorporeal, present and executory) of the Metropolitan Washington Airports on the date the lease takes effect, including leases, permits, licenses, contracts, agreements, claims, tariffs, accounts receivable, accounts payable, and litigation relating to such rights and obligations, regardless whether judgment has been entered, damages awarded, or appeal taken. Before the date the lease takes effect, the Secretary shall also assure that the Airports Authority has agreed to cooperate in allowing representatives of the Attorney General and the Secretary adequate access to employees and records when needed for the performance of functions related to the period before the effectiveness of the lease. The Airports Authority shall assume responsibility for the Federal Aviation Administration's Master Plans for the Metropolitan Washington Airports.

(B) EXCEPTIONS.—The procedure for disputes resolution contained in any contract entered into on behalf of the United States before the date the lease takes effect shall continue to govern the performance of the contract unless otherwise agreed to by the parties to the contract. Claims for monetary damages founded in tort, by or against the United States as the owner and operator of the Metropolitan Washington Airports, arising before the date the lease takes effect shall be adjudicated as if the lease had not been entered into.

(C) PAYMENTS INTO EMPLOYEES' COMPENSATION FUND.—The Federal Aviation Administration shall remain responsible for reimbursing the Employees' Compensation Fund, pursuant to section 8147 of title 5, United States Code, for compensation paid or payable after the date the lease takes effect in accordance with chapter 81 of title 5, United States Code, with regard to any injury, disability, or death due to events arising before such date, whether or not a claim has been filed or is final on such date.

(D) COLLECTIVE BARGAINING RIGHTS.—The Airports Authority shall continue all collective bargaining rights enjoyed before the date the lease takes effect by employees of the Metropolitan Washington Airports.

(7) AUDITS.—The Comptroller General of the United States may conduct periodic audits of the activities and transactions of the Airports Authority in accordance with generally accepted management principles, and under such rules and regulations as may be prescribed by the Comptroller General. Any such audit shall be conducted at such place or places as the Comptroller General may deem appropriate. All books, accounts, records,

© 1986, Commerce Clearing House, Inc.

reports, files, papers, and property of the Airports Authority shall remain in possession and custody of the Airports Authority.

(8) CODE OF ETHICS.—The Airports Authority shall develop a code of ethics and financial disclosure in order to assure the integrity of all decisions made by its board of directors and employees.

(9) RESTRICTION ON USE OF CERTAIN REVENUES.—Notwithstanding any other provision of law, no landing fee imposed for operating an aircraft or revenues derived from parking automobiles—

(A) at Washington Dulles International Airport may be used for maintenance or operating expenses (excluding debt service, depreciation, and amortization) at Washington National Airport; or

(B) at Washington National Airport may be used for maintenance or operating expenses (excluding debt service, depreciation, and amortization) at Washington Dulles International Airport.

(10) GENERAL AVIATION FEES.—The Airports Authority shall compute the fees and charges for landing general aviation aircraft at the Metropolitan Washington Airports on the same basis as the landing fees for air carrier aircraft, except that the Airports Authority may require a minimum landing fee not in excess of the landing fee for aircraft weighing 12,500 pounds.

(11) OTHER TERMS.—The Secretary shall include such other terms and conditions applicable to the parties to the lease as are consistent with and carry out the provisions of this title.

(d) SUBMISSION TO CONGRESS.—The Secretary shall submit the lease entered into under this section to Congress. The lease may not take effect before the passage of (1) 30 days, or (2) 10 days in which either House of Congress is in session, whichever occurs later.

(e) ENFORCEMENT OF LEASE PROVISIONS.—The district courts of the United States shall have jurisdiction to compel the Airports Authority and its officers and employees to comply with the terms of the lease. An action may be brought on behalf of the United States by the Attorney General, or by any aggrieved party.

[¶ 3965f] CAPITAL IMPROVEMENTS, CONSTRUCTION, AND REHABILITATION

Sec. 6006. (a) IMPROVEMENTS.—It is the sense of the Congress that the Airports Authority should—

(1) pursue the improvement, construction, and rehabilitation of the facilities at Washington Dulles International Airport and Washington National Airport simultaneously; and

(2) to the extent practicable, cause the improvement, construction, and rehabilitation proposed by the Secretary to be completed at both of such Airports within 5 years after the earliest date on which the Airports Authority issues bonds under the authority required by section 6007 of this title for any such improvement, construction, or rehabilitation.

(b) SECRETARY'S ASSISTANCE.—The Secretary shall assist the three airports serving the Washington, D. C. metropolitan area in planning for operational and capital improvements at those airports and shall accelerate consideration of applications for Federal financial assistance by whichever of the three airports is most in need of increasing airside capacity.

[¶ 3965g] AIRPORTS AUTHORITY

Sec. 6007. (a) POWERS CONFERRED BY VIRGINIA AND THE DISTRICT OF COLUMBIA.—The Airports Authority shall be a public body corporate and politic, having the powers and jurisdiction as are conferred upon it jointly by the legislative authority of the Commonwealth of Virginia and the District of Columbia or by either of the jurisdictions and concurred in by the legislative authority of the other jurisdiction, but at a minimum meeting the requirements of this section.

(b) PURPOSE.—The Airports Authority shall be—

(1) independent of the Commonwealth of Virginia and its local governments, the District of Columbia, and the Federal Government; and

(2) a political subdivision constituted solely to operate and improve both Metropolitan Washington Airports as primary airports serving the Metropolitan Washington area.

(c) GENERAL AUTHORITIES.—The Airports Authority shall be authorized—

(1) to acquire, maintain, improve, operate, protect, and promote the Metropolitan Washington Airports for public purposes;

(2) to issue bonds from time to time in its discretion for public purposes, including the purposes of paying all or any part of the cost of airport improvements, construction, and rehabilitation, and the acquisition of real and personal property, including operating equipment for the airports, which bonds—

(A) shall not constitute a debt of either jurisdiction or a political subdivision thereof; and

(B) may be secured by the Airports Authority's revenues generally, or exclusively from the income and revenues of certain designated projects whether or not they are financed in whole or part from the proceeds of such bonds;

(3) to acquire real and personal property by purchase, lease, transfer, or exchange, and to exercise such powers of eminent domain within the Commonwealth of Virginia as are conferred upon it by the Commonwealth of Virginia;

(4) to levy fees or other charges; and

(5) to make and maintain agreements with employee organizations to the extent that the Federal Aviation Administration is so authorized on the date of enactment of this title.

(d) CONFLICT-OF-INTEREST PROVISIONS.—The Airports Authority shall be subject to a conflict-of-interest provision providing that members of the board and their immediate families may not be employed by or otherwise hold a substantial financial interest in any enterprise that has or is seeking a contract or agreement with the Airports Authority or is an aeronautical, aviation services, or airport services enterprise that otherwise has interests that can be directly affected by the Airports Authority. Exceptions to requirements of the preceding sentence may be made by the official appointing a member at the time the member is appointed, if the financial interest is fully disclosed and so long as the member does not participate in board decisions that directly affect such interest. The Airports Authority shall include in its code developed under section 6005(c)(8) of this title the standards by which members will determine what constitutes a substantial financial interest and the circumstances under which an exception may be granted.

(e) BOARD OF DIRECTORS.—

(1) APPOINTMENT.—The Airports Authority shall be governed by a board of directors of 11 members, as follows:

(A) five members shall be appointed by the Governor of Virginia;

(B) three members shall be appointed by the Mayor of the District of Columbia;

(C) two members shall be appointed by the Governor of Maryland; and

(D) one member shall be appointed by the President with the advice and consent of the Senate.

The Chairman shall be appointed from among the members by majority vote of the members and shall serve until replaced by majority vote of the members.

© 1986, Commerce Clearing House, Inc.

(2) RESTRICTIONS.—Members shall (A) not hold elective or appointive political office, (B) serve without compensation other than for reasonable expenses incident to board functions, and (C) reside within the Washington Standard Metropolitan Statistical Area, except that the member appointed by the President shall not be required to reside in that area.

(3) TERMS.—Members shall be appointed to the board for a term of 6 years, except that of members first appointed—

(A) by the Governor of Virginia, 2 shall be appointed for 4 years and 2 shall be appointed for 2 years;

(B) by the Mayor of the District of Columbia, 1 shall be appointed for 4 years and 1 shall be appointed for 2 years; and

(C) by the Governor of Maryland, 1 shall be appointed for 4 years.

(4) REMOVAL OF PRESIDENTIAL APPOINTEES.—A member of the board appointed by the President shall be subject to removal by the President for cause.

(5) REQUIRED NUMBER OF VOTES.—Seven votes shall be required to approve bond issues and the annual budget.

(f) BOARD OF REVIEW.—

(1) COMPOSITION.—The board of directors shall be subject to review of its actions and to requests, in accordance with this subsection, by a Board of Review of the Airports Authority. Such Board of Review shall be established by the board of directors and shall consist of the following, in their individual capacities, as representatives of users of the Metropolitan Washington Airports:

(A) two members of the Public Works and Transportation Committee and two members of the Appropriations Committee of the House of Representatives from a list provided by the Speaker of the House;

(B) two members of the Commerce, Science, and Transportation Committee and two members of the Appropriations Committee of the Senate from a list provided by the President pro tempore of the Senate; and

(C) one member chosen alternately from members of the House of Representatives and members of the Senate, from a list provided by the Speaker of the House or the President pro tempore of the Senate, respectively.

The members of the Board of Review shall elect a chairman. A member of the House of Representatives or the Senate from Maryland or Virginia and the Delegate from the District of Columbia may not serve on the Board of Review.

(2) TERMS.—Members of the Board of Review appointed under subparagraphs (A) and (B) of paragraph (1) shall be appointed for terms of six years, except that of the members first appointed, one member under each of subparagraphs (A) and (B) shall be appointed for a term of two years and one member under each of subparagraphs (A) and (B) shall be appointed for a term of four years. Members of the Board of Review appointed under subparagraph (C) shall be appointed for terms of two years. A vacancy in the Board shall be filled in the same manner in which the original appointment was made. Any member appointed to fill a vacancy before the expiration of the term for which his or her predecessor was appointed shall be appointed only for the remainder of such term.

(3) PROCEDURES.—The Board of Review shall establish procedures for conducting its business. The procedures may include requirements for a quorum at meetings and for proxy voting. The Board shall meet at least once each year and shall meet at the call of the chairman or 3 members of the

Board. Any decision of the Board of Review under paragraph (4) or (5) shall be by a vote of 5 members of the Board.

(4) DISAPPROVAL PROCEDURE.—

(A) SUBMISSION REQUIRED.—An action of the Airports Authority described in subparagraph (B) shall be submitted to the Board of Review at least 30 days (or at least 60 days in the case of the annual budget) before it is to become effective.

(B) ACTIONS AFFECTED.—The following are the actions referred to in subparagraph (A):

(i) the adoption of an annual budget;

(ii) the authorization for the issuance of bonds;

(iii) the adoption, amendment, or repeal of a regulation;

(iv) the adoption or revision of a master plan, including any proposal for land acquisition; and

(v) the appointment of the chief executive officer.

(C) 30-DAY DISAPPROVAL PERIOD.—If the Board of Review does not disapprove an action within 30 days of its submission under this paragraph, the action may take effect. If the Board of Review disapproves any such action, it shall notify the Airports Authority and shall give reasons for the disapproval.

(D) EFFECT OF DISAPPROVAL.—An action disapproved under this paragraph shall not take effect. Unless an annual budget for a fiscal year has taken effect in accordance with this paragraph, the Airports Authority may not obligate or expend any money in such fiscal year, except for (i) debt service on previously authorized obligations, and (ii) obligations and expenditures for previously authorized capital expenditures and routine operating expenses.

(5) REQUEST FOR CONSIDERATION OF OTHER MATTERS.—The Board of Review may request the Airports Authority to consider and vote, or to report, on any matter related to the Metropolitan Washington Airports. Upon receipt of such a request the Airports Authority shall consider and vote, or report, on the matter as promptly as feasible.

(6) PARTICIPATION IN MEETINGS OF AIRPORTS AUTHORITY.—Members of the Board of Review may participate as nonvoting members in meetings of the board of the Airports Authority.

(7) STAFF.—The Board of Review may hire two staff persons to be paid by the Airports Authority. The Airports Authority shall provide such clerical and support staff as the Board may require.

(8) LIABILITY.—A member of the Board of Review shall not be liable in connection with any claim, action, suit, or proceeding arising from service on the Board.

(g) CERTAIN ACTIONS TO BE TAKEN BY REGULATION.—Any action of the Airports Authority changing, or having the effect of changing, the hours of operation of or the type of aircraft serving either of the Metropolitan Washington Airports may be taken only by regulation of the Airports Authority.

(h) LIMITATION ON AUTHORITY.—If the Board of Review established under subsection (f) is unable to carry out its functions under this title by reason of a judicial order, the Airports Authority shall have no authority to perform any of the actions that are required by paragraph (f)(4) to be submitted to the Board of Review.

[¶3965h] FEDERAL EMPLOYEES AT THE METROPOLITAN WASHINGTON AIRPORTS

Sec. 6008. (a) EMPLOYEE PROTECTION.—Not later than the date the lease under section 6005 takes effect, the Secretary shall ensure that the Airports Authority

© 1986, Commerce Clearing House, Inc.

has established arrangements to protect the employment interests of employees during the 5-year period beginning on such date. These arrangements shall include provisions—

(1) which ensure that the Airports Authority will adopt labor agreements in accordance with the provisions of subsection (b) of this section;

(2) for the transfer and retention of all employees who agree to transfer to the Airports Authority in their same positions for the 5-year period commencing on the date the lease under section 6005 takes effect except in cases of reassignment, separation for cause, resignation, or retirement;

(3) for the payment by the Airports Authority of basic and premium pay to transferred employees, except in cases of separation for cause, resignation, or retirement, for 5 years commencing on the date the lease takes effect at or above the rates of pay in effect for such employees on such date;

(4) for credit during the 5-year period commencing on the date the lease takes effect for accrued annual and sick leave and seniority rights which have been accrued during the period of Federal employment by transferred employees retained by the Airports Authority; and

(5) for an offering of not less than one life insurance and three health insurance programs for transferred employees retained by the Airports Authority during the 5-year period beginning on the date the lease takes effect which are reasonably comparable with respect to employee premium cost and coverage to the Federal health and life insurance programs available to employees on the day before such date.

(b) LABOR AGREEMENTS.—

(1) ADOPTION.—The Airports Authority shall adopt all labor agreements which are in effect on the date the lease under section 6005 takes effect. Such agreements shall continue in effect for the 5-year period commencing on such date, unless the agreement provides for a shorter duration or the parties agree to the contrary before the expiration of that 5-year period. Such agreements shall be renegotiated during the 5-year period, unless the parties agree otherwise. Any labor-management negotiation impasse declared before the date the lease takes effect shall be settled in accordance with chapter 71 of title 5, United States Code.

(2) CONTINUATION.—The arrangements made pursuant to this section shall assure, during the 50-year lease term, the continuation of all collective bargaining rights enjoyed by transferred employees retained by the Airports Authority.

(c) RIGHTS OF TERMINATED EMPLOYEES.—Any transferred employee whose employment with the Airports Authority is terminated during the 5-year period beginning on the date the lease under section 6005 takes effect shall be entitled, as a condition of any lease entered into in accordance with section 6005 of this title, to rights and benefits to be provided by the Airports Authority that are similar to those such employee would have had under Federal law if termination had occurred immediately before such date.

(d) ANNUAL AND SICK LEAVE.—Any employee who transfers to the Airports Authority under this section shall not be entitled to lump-sum payment for unused annual leave under section 5551 of title 5, United States Code, but shall be credited by the Airports Authority with the unused annual leave balance on the date the lease under section 6005 takes effect, along with any unused sick leave balance on such date. During the 5-year period beginning on such date,

[The next page is 2691-11.]

annual and sick leave shall be earned at the same rates permitted on the day before such date, and observed official holidays shall be the same as those specified in section 6103 of title 5, United States Code.

(e) CIVIL SERVICE RETIREMENT.—Any Federal employee who transfers to the Airports Authority and who on the day before the date the lease under section 6005 takes effect is subject to subchapter III of chapter 83 of title 5, United States Code, or chapter 84 of such title shall, so long as continually employed by the Airports Authority without a break in service, continue to be subject to such subchapter or chapter, as the case may be. Employment by the Airports Authority without a break in continuity of service shall be considered to be employment by the United States Government for purposes of such subchapter and chapter. The Airports Authority shall be the employing agency for purposes of such subchapter and chapter and shall contribute to the Civil Service Retirement and Disability Fund such sums as are required by such subchapter and chapter.

(f) SEPARATED EMPLOYEES.—An employee who does not transfer to the Airports Authority and who does not otherwise remain a Federal employee shall be entitled to all of the rights and benefits available under Federal law for separated employees, except that severance pay shall not be payable to an employee who does not accept an offer of employment from the Airports Authority of work substantially similar to that performed for the Federal Government.

(g) ACCESS TO RECORDS.—The Airports Authority shall allow representatives of the Secretary adequate access to employees and employee records of the Airports Authority when needed for the performance of functions related to the period before the date the lease under section 6005 takes effect. The Secretary shall provide the Airports Authority access to employee records of transferring employees for appropriate purposes.

[¶ 3965i] RELATIONSHIP TO AND EFFECT OF OTHER LAWS

Sec. 6009. (a) OTHER LAWS.—In order to assure that the Airports Authority has the same proprietary powers and is subject to the same restrictions with respect to Federal law as any other airport except as otherwise provided in this title, during the period that the lease authorized by section 6005 of this title is in effect—

(1) the Metropolitan Washington Airports shall be considered public airports for purposes of the Airport and Airway Improvement Act of 1982 (49 App. U. S. C. 2201 et seq.); and

(2) the Acts entitled "An Act to provide for the administration of the Washington National Airport, and for other purposes", approved June 29, 1940 (54 Stat. 686), "An Act to authorize the construction, protection, operation, and maintenance of a public airport in or in the vicinity of the District of Columbia", approved September 7, 1950 (64 Stat. 770), and "An Act making supplemental appropriations for the support of the Government for the fiscal year ending June 30, 1941, and for other purposes", approved October 9, 1940 (54 Stat. 1030), shall not apply to the operation of the Metropolitan Washington Airports, and the Secretary shall be relieved of all responsibility under those Acts.

(b) INAPPLICABILITY OF CERTAIN LAWS.—The Metropolitan Washington Airports and the Airports Authority shall not be subject to the requirements of any law solely by reason of the retention by the United States of the fee simple title to such airports or by reason of the authority of the Board of Review under subsection 6007(f).

(c) POLICE POWER.—The Commonwealth of Virginia shall have concurrent police power authority over the Metropolitan Washington Airports, and the courts of the Commonwealth of Virginia may exercise jurisdiction over Washington National Airport.

(d) PLANNING.—

(1) IN GENERAL.—The authority of the National Capital Planning Commission under section 5 of the Act of June 6, 1924 (40 U. S. C. 71d) shall not apply to the Airports Authority.

(2) CONSULTATION.—The Airports Authority shall consult—

(A) with the National Capital Planning Commission and the Advisory Council on Historic Preservation before undertaking any major alterations to the exterior of the main terminal at Washington Dulles International Airport, and

(B) with the National Capital Planning Commission before undertaking development that would alter the skyline of Washington National Airport when viewed from the opposing shoreline of the Potomac River or from the George Washington Parkway.

(e) OPERATIONS LIMITATIONS.—

(1) HIGH DENSITY RULE.—The Administrator may not increase the number of instrument flight rule takeoffs and landings authorized for air carriers by the High Density Rule (14 C. F. R. 93.121 et seq.) at Washington National Airport on the date of the enactment of this title and may not decrease the number of such takeoffs and landings except for reasons of safety.

(2) ANNUAL PASSENGER LIMITATIONS.—The Federal Aviation Administration air traffic regulation entitled "Modification of Allocation: Washington National Airport" (14 C. F. R. 93.124) shall cease to be in effect on the date of the enactment of this title.

[¶ 3965j] AUTHORITY TO NEGOTIATE EXTENSION OF LEASE

Sec. 6010. The Secretary and the Airports Authority may at any time negotiate an extension of the lease entered into under section 6005(a).

[¶ 3965k] SEPARABILITY

Sec. 6011. Except as provided in section 6007(h), if any provision of this title or the application thereof to any person or circumstance, is held invalid, the remainder of this title and the application of such provision to other persons or circumstances shall not be affected thereby.

[¶ 3965 l] NONSTOP FLIGHTS

Sec. 6012. PERIMETER RULE.—An air carrier may not operate an aircraft nonstop in air transportation between Washington National Airport and another airport that is more than 1,250 statute miles away from Washington National Airport.

PURPOSE OF THE REPORT

In accordance with a special request of the Legislative Budget and Audit Committee and Title 24 of the Alaska Statutes, this special report has been prepared to:

1. Document the history and current status of the renovation and expansion at the Anchorage International Airport.

2. Document the decision-making process for assigning and leasing airport space to terminal tenants.

3. Provide information on the International Airport Revenue Fund regarding the types of revenues generated and expenses incurred.

ORGANIZATION AND FUNCTION

The two international airports in Alaska, located at Anchorage and Fairbanks, were first authorized by the 80th Congress on May 28, 1948 for $13 million under the Alaska Public Airport Act. The Civil Aeronautics Authority, predecessor to the present Federal Aviation Administration, operated the airports until their transfer to the State on June 25, 1959.

Alaska Statute 44.42.020 provides that the Department of Transportation and Public Facilities (DOTPF) has the power to manage, operate, and maintain State transportation facilities including airports. As such both international airports have an Airport Director who is responsible for the day-to-day operations at the airport. Together, the international airports are self-supporting and operate from the International Airport Revenue Fund (IARF). The IARF is comprised of receipts from aviation and support industries which are used by the airports to provide terminal space plus field maintenance, crash-fire-rescue, law enforcement, and cleaning services to the tenants and other users of the airport (refer to the IARF section for a detail explanation).

In total, the Anchorage International Airport was authorized 270 positions with an operating budget for FY 86 of $18,060,600 while Fairbanks International Airport was authorized 88 positions and an operating budget of $7,350,800.

AUDITOR'S CONCLUSION

In our opinion, the airport renovation and expansion project was not effectively and efficiently managed to minimize total project costs and any inconvenience to the traveling public. During the course of our review we observed or were given several explanations that led us to our conclusion. The following summarizes those findings:

1. The project scope was not finalized prior to a construction commitment. The scope was revised both prior to and subsequent to the construction contract award date. (refer to the Project Scope Revisions Section).

2. Airport tenant requests for scope revisions to the project necessitated redesign by the design consultant at the State's expense (refer to Increased Interest-Airport Tenant Involvement and the sections following).

3. A substantial number of design deficiencies resulted in the general contractor submitting over 750 design clarification or variation requests as of June 11, 1985.

4. The general construction contract was awarded for $17,844,000 with an original contingency of $1,602,748. Through June 19, 1985, ninety-nine change orders totalled $3,126,300.

Currently, the Department of Transportation and Public Facilities (DOTPF) is planning for the expansion of the main terminal over the arrival and departure drives and for the construction of a covered parking facility. Undoubtedly, these projects will cause significant inconvenience to the traveling public, but are recognized as essential needs of the airport. To minimize this necessary inconvenience, DOTPF should ensure that the project scope is finalized and the design completed prior to any commitment for construction. In addition, while it may be prudent to request input from the airport tenants, those requests should be required early in the planning phase and finalized prior to construction. The cost of any changes to accommodate the airport tenants after the construction is started should be borne by the requesting party. Following is our detail of the renovation and expansion project's history and current status.

RENOVATION AND EXPANSION PROJECT HISTORY

Early Project History

The Anchorage International Airport (AIA) first began operations in December 1951 under the Civil Aeronautics Authority (CAA) predecessor to the present Federal Aviation Administration. On May 28, 1948, the 80th Congress passed the Alaska Public Airport Act authorizing $13 million for construction by the CAA of two international type facilities for Alaska's two largest cities; Fairbanks and Anchorage. The original Anchorage terminal building consisted of a rectangular two-story complex in a north-south direction. Additional, sporadic expansion by the State and Northwest Airlines, the major airport user, occurred between the transfer of airport ownership on June 25, 1959 and 1964.

Much of the terminal facilities were lost as a result of the devastating 1964 earthquake. Consequently, a major renovation project was undertaken to replace the damaged terminal. In 1965, the present West Concourse satellite (hexagon) was constructed to accommodate the expanding international market. In addition, from 1968 to 1970 the main terminal building was expanded westward and connected to the hexagon. The project added approximately 188,000 square feet of space. These additions increased the total terminal building area to 307,000 square feet and consisted of the following:

1. The original two-story passenger terminal (North Concourse C) used primarily for domestic and commuter passenger holdrooms, airline operations, as well as airline, concessionaire, and tenant offices.

2. A two-story main passenger terminal with passenger ticketing, check-in, and baggage claim facilities and passenger convenience and service facilities such as food, beverage, and gift concessions. There also was space for airline operations, offices, and passenger holdrooms.

3. A two-story West Concourse B and hexagon which had international intransit facilities, Federal Inspection Services, domestic airline holdrooms, various offices, tenant storage, and airline operations facilities.

Airport Feasibility Studies - Expansion

Airport growth as measured by enplaning and deplaning passengers continued to grow during the 1970's, in part, as a result of the introduction of transoceanic routes, significant oil discoveries culminating in the Prudhoe Bay exploration and subsequent construction of the Alaska Pipeline,

With the commitment to construct the international terminal, DOTPF determined that a new program statement and scope of work became necessary for work efforts regarding the south terminal as strictly a domestic facility. TRA/Farr was retained through a letter of agreement for $200,000 to develop alternative concepts for the south terminal. In addition, TRA/Farr was directed to develop a public seating layout and to formulate documents for bidding and purchasing the new seating in addition to developing an interior paint scheme and wall graphics. The effort was completed in January 1981 and a report issued. TRA/Farr recommended the following as part of the scope of work.

1. Expand the main terminal approximately 100 feet to the southeast to increase the length of the ticket counter frontage, offices, gate lobbies, and claim areas.

2. Construct a new commuter facility connected to the 100 foot addition to serve eight to ten aircraft.

3. Remodel West Concourse B to serve ten aircraft positions.

4. Reduce the security checkpoints to two positions.

5. Develop the mechanical plant to accommodate the loads from the expansion.

6. Demolish North Concourse C and expand the main terminal to the north.

7. Increase the depth of the main terminal by expanding over the existing departure and arrival drives.

8. Construct a parking structure east of the terminal building.

DOTPF approved of the plan provided by the architect and subsequently executed a sole source professional services agreement to design the project on April 7, 1981 for $288,995. The scope was limited to the 100 foot expansion and a single level commuter concourse. The estimated construction cost was $4.5 million. Funding for the design was provided by chapter 120, SLA 1980.

Project Scope Revisions

In October of 1981, the Commissioner executed the first of twelve contract amendments issued for the design work. Amendment one changed the commuter concourse from a single level non-secure function to a two level structure with full airport security located on the upper level. In addition, the consultant was required to design the Concourse B renovation. Total estimated construction costs increased to $12.5 million. According to the DOTPF design manager, the

one of the major changes to the project. The amendment, issued on March 21, 1984 for $743,100, requested the consultant, in part, to design a new baggage delivery and distribution system to accommodate the baggage make-up areas in the lower level of Concourse B. The make-up area increased from the previously approved 8,000 square foot addition to 45,000 square feet. The ATC had requested this area during their June 2, 1983 meeting. As a result of this request, DOTPF awarded a contract for $1,249,191 to install the new baggage conveyor system into Concourse B. Furthermore, amendments five and nine added work at the request of the ATC. Amendment five was issued on April 27, 1984 and expanded the Alaska Airline ticket office and amendment nine issued on December 14, 1984 revised the Alaska Airline Board Room and also added various changes to concessionaire space.

Issuance of Contract Change Orders

As of June 19, 1985, there have been ninety-nine change orders issued on the general construction contract. The original contract award was for $17,844,000. As of the last change order the contract has escalated to $20,970,300 an increase of 17.5 percent. DOTPF stated that there will be additional change orders issued to complete the project.

The scope of the project involved, in part, the renovation of Concourse B. According to the DOTPF project manager, certain change orders were necessary due to the lack of adequate documentation of changes to the original airport structure through periodic construction upgrades. However, many of the change orders were originated by the airport tenants and DOTPF for project additions. As an example, Alaska Airlines requested that the podiums located in the hexagon be relocated. The costs associated with change order twelve amounted to $253,845. Also, DOTPF requested an upgrade in the carpet to be installed which resulted in change order forty-four costing $104,820.

The majority of the change orders were for design verifications. According to DOTPF personnel, these changes were the result of inadequate design of the project. The general contractor submitted over 750 design clarification or variation requests as of June 11, 1985. DOTPF has tentatively identified the responsible party for forty-six of the change orders and can be categorized as follows:

	DOTPF	Design Consultant	Airport Tenant	Total
Dollar Amount	$198,924	$558,116	$336,728	$1,157,532
Percentage	18.2%	51.0%	30.8%	100%
Total Number	14	33	7	54
Percentage	25.9%	61.1%	13.0%	100%

Note: Seven change orders involved two parties. Thus, for percentage calculations these were added to each party.

DOTPF expects to finalize their assignment of all change orders by October 1985.

In addition, DOTPF issued a separate contract on January 4, 1985 for the removal of asbestos in the main terminal for $1,771,300. Asbestos-containing material was discovered during the renovation which necessitated its removal. This contract also covered the carpeting of Concourse C.

Current Status

Phase one of the project including the expansion of the main terminal 100 feet to the southeast, construction of the new commuter facility (Concourse A), remodeling the Concourse B, and the remodeling and expansion of the baggage conveyor system is substantially complete. DOTPF is also planning for future airport expansion. As identified by the Terminal Renovation and Expansion Study by TRA/Farr, future plans involve the following:

1. Increase the depth of the main terminal by expanding over the existing departure and arrival drives. This would increase the existing gate lobbies, airport ticket offices, check-in lobby, and the area of baggage claim.

2. Construct new, two-level arrival and departure drives adjacent to the existing drives capable of expansion towards the north.

3. Demolish the North Concourse C and expand the main terminal to the north, maintaining its depth and profile.

4. Construct a parking structure east of the terminal complex for short-term and daily public parking and the car rental ready-return facility. Estimated construction cost is $16 million.

5. Demolish the old post office structure to open up the terminal expansion corridor.

(Intentionally left blank)

Concession Leases

Concession leases include, in part, gift shops, book stores, restaurants, lounges, and car rental agencies. All concession leases are public bid with the bidder guaranteeing the highest return receiving the lease with the exception of the car rental leases. The car rental leases are non-exclusive which allows free entry into the terminal.

Car rental agencies pay a percentage of their gross income and, in addition, pay the $21.12 per square foot for any space that is occupied. All other concession lessees pay a guaranteed percentage of their gross income.

Other Leases

The AIA does have other lessees that include State agencies, Anchorage Municipality, Federal agencies, a bank, and a non-profit native assistance organization. Except for the native assistance organization who is not charged for rent, the lessees pay the basic rental fee of $21.12 per square foot.

5. Vehicle Parking Fees: Gross receipts from public parking lots.

6. Land Rental: Rental of leased airport land. Rentals are contractually set at varying rates according to the class of usage set forth in 17 AAC 40.

The above types of fees accounted for 98 percent of the gross revenues collected during FY 84 at the international airports. In addition, two customers of AIA, Alaska Fuel and Aviation and Duty Free (gift shop), provided revenues of approximately $7,866,000 and $7,151,000 representing 27 and 24 percent, respectively, of the airports' FY 84 operating revenues.

Although the IARF is a self-supporting account, the Legislature appropriates monies from the fund to the Department of Transportation and Public Facilities for anticipated expenditures during the fiscal year.

Long-distance jets may cut JAL refueling stops

The Associated Press

A new generation of jumbo jets with increased flying range may reduce the number of stops that at least one airline makes at Anchorage International Airport, an airline executive said.

Japan Air Lines may stop refueling some jets at Anchorage on flights between Japan and Europe in three to four years, JAL Vice President Mitsuo Kitamota told a Resource Development Council of Alaska meeting Thursday.

The airline plans to start using the Boeing 747-400 series, which the airplane manufacturer says can fly 8,000 nautical miles non-stop, about 2,000 miles more than current jumbo jets.

Boeing spokeswoman Elizabeth Reese in Seattle said the 400 series is to be delivered to its first customer in December 1988, but so far JAL is not a committed customer.

JAL has already dropped Anchorage as a refueling stop on flights between Atlanta and the Orient and has added a non-stop route to Europe across Siberia.

The airline plans to promote Anchorage as a destination, Kitamota said. But he added that it will take at least a tripling of the current 5,000 stopover passengers a year to keep the carrier here.

The airline hopes to carry 10,000 stopover travelers to Anchorage this year, he said.

Kitamota said easier access to sightseeing destinations such as Columbia Glacier will be needed to draw more Japanese visitors.

Something else that might attract more travelers to Anchorage would be creating a foreign trade zone at the airport, said Al Parrish, president of Sheffield Enterprises Inc. in Anchorage.

Parrish told the resource development council that expanding the airport's duty-free zone could lead to the creation of regional shopping centers for stopover visitors to use.

"The airport is a business that generated $21 million in profit last year without any marketing, without any advertising," said Parrish, also chairman of the Anchorage Business Council's airport subcommittee.

Anchorage International Faces Uncertain Times Ahead

Concerns range from the present domestic traffic drop-off from the oil industry's slump, to the future effects of longer-range aircraft that won't need to refuel at Anchorage. An occasional moose on the runway is just part of the job.

By Bruce Johnson

Anchorage—International flight stopovers, Alaska's dependence on air transportation and the deregulation of the domestic airline industry all are making Anchorage International Airport a much busier place than the area's population of about 250,000 persons would suggest.

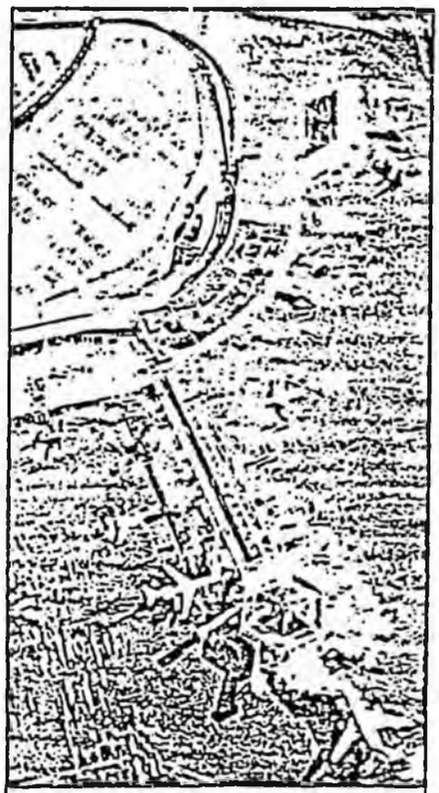
Among the nation's 36 medium-sized air traffic hubs, Anchorage ranks second in number of revenue passengers. Indeed, last year more than 4.6 million passengers were handled at the airport.

But unlike in many communities as large as or even much larger than that of the Anchorage vicinity, there is real meaning behind the "international" portion of the Anchorage airport's name. Of its 4.6 million passenger total last year, more than 1.6 million were classified as through passengers—largely visitors to the airport during refueling/reprovisioning of aircraft flying between the Orient and Europe. No less than ten international carriers have stopover operations at Anchorage International. The latest to join the list is Swissair, operating between Tokyo and Zurich.

Because of Anchorage's central position between Europe and Asia on the polar route, Anchorage International ranks seventh in the United States in terms of international operations. Flights take about nine hours between Anchorage and Europe and about seven hours between Anchorage and Tokyo. The longest nonstop flight between Anchorage and Asia is flown by China Airlines to Taiwan—almost 10 hours.

"We average 40 to 55 widebody aircraft per day here," said Guy Russo, airport director. "Most of those widebody visits involve international stopovers, including freighters."

In order to more effectively accommodate this heavy international side of the business, the airport authority recently added five remote fueling pits. The airport now has eight such parking positions—all dedicated to international stopovers. In addition, three years ago the airport completed construction of an international terminal that serves passengers while their planes are being refueled and reprovisioned. The terminal contains a duty-free shop that Russo unabashedly claims is "one of the nicest in the world."



With prices so low, at least half of the oil industry's Alaska exploration activity has been halted, resulting in a reduction of personnel and freight moving through the Anchorage airport.

The airport's main terminal—dedicated to domestic traffic—accommodates intrastate commuter operations as well as the half-dozen airlines that link Anchorage with the "Lower 48," primarily through Seattle-Tacoma International Airport.

"We run around 6000 seats a day going south from here," Russo said. That capacity includes a daily United Airlines flight direct to Chicago and a Northwest Airlines flight to Minneapolis.

Extremely air-dependent

Deregulation, as well as this giant northern state's extreme dependence on air transportation, is responsible for a marked increase in the number of seats (and decrease in rates--see separate story) being experienced in the Seattle-Anchorage corridor, in particular.

In March, AirCal extended its regional operations to Anchorage and quickly expanded the schedule there to four flights daily. Another newcomer is TWA, with one domestic flight per day out of Seattle.

Anchorage International—state-owned and the largest airport in the state—serves as the main hub for persons flying to or from most places in Alaska, which has a total population of little more than twice that of the Anchorage area. In-state destinations include Fairbanks (which has the second largest airport, also state-owned) in the interior, the Prudhoe Bay oil field area on the North Slope, and remote fishing and other communities in the Kenai Peninsula, Gulf of Alaska mainland, Kodiak Island, western Alaska and the Aleutian Islands areas.

The popular tourist region of Southeast Alaska, also containing the state capital of Juneau, is served directly out of Anchorage as well as from Seattle.

Traffic tied to oil

Although Lower 48 domestic and in-state commuter business remains strong this summer at Anchorage International, the airport is likely to see a

An airport economic impact study last year revealed that airlines paid for nearly 69,000 hotel rooms in Anchorage due to crew and unscheduled passenger layovers.

greater-than-normal drop in business this fall and winter following the summer peak season of tourists, fish processors and fishermen. This is due to the dramatic downturn earlier this year in world crude oil prices. With prices so low, at least half of the oil industry's Alaska exploration activity has been halted, resulting in a reduction of personnel and freight moving through the Anchorage airport.

Also beginning to adversely affect air travel, particularly of business people, is a downturn in North Slope oil revenues flowing into the state government coffers, and the adverse spinoff impact that this is starting to have on Alaska business and individuals in general.

The dominant carriers in the highest-volume portions of the intrastate markets are MarkAir, a relatively new carrier that is solely an in-state operator, and Alaska Airlines, which also is the highest-volume scheduled carrier between the Lower 48 and Anchorage. In addition, United, Northwest, AirCal and TWA compete, as does Western Airlines, a veteran, high-volume operator of the Lower 48-Anchorage trade.

Russo is a longtime Western hand. The airport's director, who has been working in Alaska since 1955, retired as Western's Alaska regional director in January 1983. A year later, he was appointed director of Anchorage International.

Weakening stopovers

During his many years at Anchorage, Russo has seen a dramatic increase in international stopover business. In 1973, he recalled, the airport logged little more than 700,000 international passengers. "That segment of the airport's business surpassed the one-million-person mark for the first time in 1978," he noted.

International stopovers are good business for the Anchorage community. Besides refueling (32.5 million gallons last April, for example) and reprovisioning, fresh flight crews are accommodated for two to four days at a time at Anchorage, depending on flight and personnel schedules. Indeed, an airport economic impact study conducted last year by Applied Economics Associates (AEA), revealed that airlines paid for nearly 69,000 hotel rooms in Anchorage due to crew and unscheduled passenger layovers.

Unfortuately, this lucrative international stopover business is showing signs of weakening somewhat.

Because Asians appear to be traveling to Europe as well as other destinations in increasing numbers, the slight slowdown in Anchorage's international business does not appear to be linked to the terrorism-caused falloff in American travel to Europe. Rather, the slight weakening of Anchorage's international activity could be related to a rise in increased competition from the Asia-Europe route via northern Siberia.

In 1983 Anchorage International handled half of total tonnage flowing through all of the nation's medium-sized airports—an air freight volume only slightly less than that passing through LAX or JFK.

The AEA report noted that at least two international carriers--JAL and SAS—have exercised transit rights through Soviet airspace and that some other carriers are contemplating route changes via Russia.

Of longer-term concern at Anchorage is the possible adverse effect on international stopovers that Boeing Co.'s development of the longer-range 747-400 will have.

"We're now in a unique position, I guess, similar to what Gander was during the prop aircraft days across the Atlantic; but I suppose we're going to be faced with some loss of business when the Boeing 747-400 comes on line," Russo reflected.

He observed that the 747-400 will be capable of flying 8000 statute miles—enough to fly the plane nonstop between Asia and Europe via the American and Canadian airspace polar route.

"Not all of the airlines of Europe are going to afford the luxury of having a 747-400," Russo reasoned, but he admits that "some" 747-400-caused deterioration of international stopover business is anticipated during the next decade after the new model enters service.

Reacting to the recent downturn in Alaska's economy caused by the collapse of crude oil prices, the state is intensifying its efforts to attract tourists—international as well as domestic visitors. As part of these efforts, it is focusing increased attention on marketing Alaska as a destination—not just a stopover—for Asian and European tourists. Presently, only about 25,000 international passengers disembark each year at Anchorage to spend some time in Alaska.

"We get quite a few (big-game) hunt-

Alaska Airlines carries highest Alaska-Lower 48 volume.

ers from Austria, Germany and other European countries, and the Japanese like to fish," Russo observed. But he said there is considerable untapped potential for attracting international visitors on the basis of Alaska's spectacular scenery of mountains, glaciers and fjords as well as its cultural and other attractions.

"The long-haul seats are what the airlines are going to fill first," Russo acknowledged concerning the superior revenues generated by Asia-Europe traffic as opposed to Asia-Alaska or Europe-Alaska traffic. But because of the state's international promotion efforts, he is optimistic that more international passengers will disembark at Anchorage.

Heavy traffic, plus floats

Anchorage International, which had 36,738 jet aircraft landings last year, has three 11,400-foot runways—two of which are parallel east-west runways that are instrumented. The third, a north-south runway, is not instrumented. Simultaneous landings and takeoffs occur routinely at the airport. Because of prevailing winds, landings usually are from west to east and takeoffs are from south to north.

Air traffic is heavy in the Anchorage area. Not only do the northerly takeoffs encroach on military plane approaches at Elmendorf Air Force Base, but Anchorage International itself has a large general aviation facility for both wheeled and float planes.

The FAA-operated tower at the airport coordinates commercial and general aviation traffic, each of which has separate traffic patterns.

One of the more interesting aspects of the Anchorage International operation is its base for float planes. Two natural lakes—connected through dredging—are located adjacent to the airport and are ideal for float plane operations. In addition, next to one of the lakes is a general aviation dirt strip.

"We have at least a thousand, maybe 1200, general aviation airplanes around the airport here," Russo related. "People jump into their airplanes here on weekends like people in the Lower 48 jump into their cars."

As far as airliner operations are concerned, the only congestion occurs when, as the airport director puts it, the planes are scheduled to "fly out of here in formation."

Anchorage International has the usual morning (7:30 to 9) and late afternoon (4 to 6:30) peaks in traffic. But in a departure from the norm, the airport also has a peak period between midnight and 2 a.m. This is due to the desire of many passengers wanting red eye flights to Seattle for catching early morning Lower 48 flights there.

Because the airport is getting close to

> *"We're now in a unique position, I guess, similar to what Gander was during the prop aircraft days, but I suppose we're going to be faced with some loss of business when the Boeing 747-400 comes on line."*

gate capacity during those three periods, continued development and expansion of terminal facilities is being planned.

Extensive changes coming

The airport, which went on line in 1953 in part to accommodate international refueling stopovers between Europe and Asia, has been undergoing extensive facility changes in recent years.

Last September, a commuter carrier wing was added at Concourse C, and domestic carrier gates were added and renovations were accomplished at Concourse B—at a total cost of about $25 million. Anchorage International now has eight widebody gates at the international terminal and 20 domestic and five commuter gates at the main terminal. Concourse A has eight gates, but only three are equipped with jetways because of extensive use of combi planes (with freight forward) into Anchorage. Newly renovated Concourse B has 12 gates, all with jetways. Seven of the airport's domestic gates handle widebody aircraft.

In order to keep up with market demand, construction is underway on a $25 million, 1200-vehicle parking garage with an underground connection to the terminal building lobby. In addition, plans are being made for demolishing the original, 1953-vintage section of the terminal and building another concourse that will be designed for eventual development of a wing stretching between the domestic and international terminals.

When this new building—Concourse C—comes on stream several years from now, there will be a major reassignment of gates at the airport. Said Russo, "Operating efficiency will be enhanced significantly. All commuter flights will be consolidated in one area, narrowbody planes are moved into their own area, and widebody domestic flights will be accommodated out of the new and enlarged Concourse C."

> *"We have at least a thousand, maybe 1200, general aviation airplanes around the airport. People jump into their airplanes here on weekends like people in the Lower 48 jump into their cars."*

Although state owned and operated, Anchorage International has not shared in the spending spree for capital improvements and other projects undertaken by the state government, whose coffers became swelled with oil revenues. All of Anchorage International's expenditures have been supported by operational revenues, Russo reported.

"We didn't benefit from the (state government financial) upturn, and we're not getting hurt by the downturn," he observed.

Freight—the airport's ace

Besides being an important hub for passengers, Anchorage International is a major factor in the movement of air freight.

In fact, the facility ranks first (among the nation's 36 medium-sized air traffic hubs) in the amount of revenue freight handled. Last year alone the airport logged nearly 16.8 million pounds of freight. In 1983, the AEA economic impact study noted, Anchorage International handled a half of total tonnage flowing through all of the nation's medium-sized airports and that the air freight volume at Anchorage was only slightly less than that passing through LAX or JFK that year.

Lots of time-sensitive general freight flows into or through Anchorage airport as belly and freighter traffic from the Lower 48. Most of the freight flow is one way, although fresh fish is a strong backhaul during summers.

Interestingly, the Anchorage airport traditionally has more departing air freight than arriving air freight. This is mainly due to certain freight arriving on express steamship services operating between Washington state and the Port of Anchorage, from where the freight is trucked to the airport for fast distribution by air to in-state destinations.

Milder than Minneapolis

To someone on the "outside"—a term commonly used is Alaska to denote the Lower 48—Alaska is seen as a state plagued with heavy snow and intense cold. But Anchorage, adjacent to saltwater at the head of Cook Inlet, usually has milder winter weather than is often experienced by cities in the northern tier of the Midwest and the Northeast, Russo observed.

Two feet of snowfall is about average during the winter at Anchorage. Usually, the snow comes only a few inches

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5155 HTRA HB 173 (FILE 2) - HB 209

at a time, although snowstorms—including an 18-inch snowfall last March—are not uncommon. Twenty degrees below zero is about the coldest the temperature gets at Anchorage, with zero being the usual low temperature during the winter, according to Russo. Average low temperatures in the winter are 15 to 20 degrees.

With winter weather usually being milder than at Minneapolis, for example, Anchorage International does not experience abnormal snow removal problems. The airport authority has about 100 pieces of equipment that can be used for snow removal, including graders, grader-towed sweepers, blowers and trucks, plus front-end loaders for hauling snow to remote areas of the airport.

Even during heavy snowfalls, "we're able to keep at least one runway open at all times," Russo said. "It takes us 45 minutes to an hour to get a runway totally clean and back in operation."

Visitors: VIPs and moose

Actually, moose—not snowfalls—create the biggest runway operation problem at Anchorage International.

"A big concern is keeping moose off the runways in the fall and spring," Russo said. "They're capable of going *through* the fence or they can jump *over* the fence."

"A big concern is keeping moose off the runways in the fall and spring; they're capable of going through the fence or they can jump over the fence."

The airport perimeter has an eight-foot-high chain link fence topped with barbed wire, but each year eight to 10 moose—which Russo terms "very stubborn animals"—either are detected near the fence or have broken through or jumped over the fence.

"If we can't herd them out, we have permission from (state) Fish and Game to destroy the moose," Russo said. "We give the meat to a charitable organization."

Besides patroling for moose, airport security personnel occasionally have extra work to do because of stopovers by international dignitaries, whose planes are being refueled. Japan's Prime Minister Nakasone is a frequent visitor. Also a familiar personality is Great Britain's Margaret Thatcher.

The international terminal has a VIP lounge to accommodate those and certain other international visitors, but frequently international dignitaries desire a trip to and from downtown Anchorage—little more than four miles from the airport.

Russo noted that the U.S. Secret Service has personnel based at Anchorage and that Secret Service people from West Coast states are flown north when necessary to augment the Alaska contingent.

The eruption last Easter weekend of Mt. St. Augustine, a volcano about 150 miles from Anchorage, also has made life interesting lately for Russo.

"We never closed the airport, but some of the carriers chose not to come in," he said. "They were concerned about volcanic ash in the air and the effect it would have on jet engines."

So, for several days while the wind blew some ash into Anchorage, flight schedules were seriously disrupted. During that time, the airport lost about 75 percent of its overall traffic load. Ironically, that disruption was far greater than the airport has ever experienced from winter weather. ■

MEMORANDUM

State of Alaska

TO: Loren Lounsbury
Commissioner
Department of Commerce
& Economic Development

DATE: June 27, 1987 — 1986?

FILE NO:

TELEPHONE NO:

JAN 16 1987

FROM: Dan Dixon, Director
DCED/Office of
International Trade

SUBJECT: Overflight Issue
and the Int'l
Airport

For several years informed sources have been sending warnings with respect to the future health and economic vitality of Anchorage International Airport (AIA). Specifically, these warnings have set out a scenario of drastically reduced air traffic through AIA as a result of the major airlines adopting direct flights in the Europe/Asia sections of their world flight routes. Advancements in long range aircraft and the obvious ecomomic advantages to traveling direct between, say, Tokyo and New York, or Tokyo and Paris, have brought us to the brink of the above referenced scenario.

Dramatic losses in AIA traffic will have an immediate multi-million dollar impact on the State's economy in lost revenues. However, the more devastating impact will be on our efforts to sustain and ultimately secure growth for our tourist industry, and our efforts to provide a foundation for expansion of international trade. Our goal in the tourist industry has been to expand business by promoting Alaska as a destination stop for potential visitors, rather than merely a stopover location. To accomplish this goal we will need to anchor various countries in the state via hotels, tour companies and equity participation in the economic development of the statewide community. In the area of general international trade development, if we were to lose our close connection as a bridge between Europe, the U.S. and the Pacific Rim, we lose much of our strategic advantage in future development efforts.

While many informed individuals have periodically sounded alarms, these have for the most part faded plaintively into the mist of other more "immediate" issues. What we have lacked to date is an organized, well thought out action campaign which addresses both the problem and various solutions. I am proposing the immediate formation and institution of such a campaign. This campaign should include representatives of appropriate state and municipal agencies, private sector business and community leaders and the media. The effort envisions an active, highly visible campaign, requiring a public/private partnership at all levels. Our goals include promoting AIA to our present and potential international economic partners, attracting investment, and encouraging new industries in the state.

I believe that the Governor should make this a visible priority by appointing representatives to perform the action campaign. Preferably the Governor would use the campaign in speeches as a method to bring the issue out in the public forum.

The Governor's action here and the formation of a centralized campaign is especially important in light of the fact that there are numerous groups and individuals working independently on this issue. The Anchorage Convention and Visitors Bureau, Department of Transportation, Department of Commerce, the Governor's Washington D.C. Office and the Anchorage Chamber of Commerce have all done studies. Moreover, presently there are at least two studies being conducted simultaneously by two different groups on the issue. An organized effort would focus our energies and increase the likelihood of a successful campaign.

POTENTIAL PARTNERS IN THE GATEWAY TO THE PACIFIC CENTURY CAMPAIGN:

Department of Commerce and Economic Development
Department of Transportation (including appropriate representatives of the international airport section)
Municipality of Anchorage (particularly the Mayor and planning department)
Anchorage Chamber of Commerce
District Export Council
Resource Development Council
Anchorage Assembly
Alaska State Legislators
Congressional Delegation
Anchorage Convention and Visitors Bureau
Major Airline representatives (both domestic and foreign)
Tour group representatives (particularly hotel interests both Alaska and foreign)
Foreign Consulate Offices

Like all campaigns it is advantageous to have a good "hook" or catch phrase that the general public and media can make their own. The concept we propose here is to be known as "Anchorage International Airport: Gateway to the Pacific Century". The exposure and excitement within the community generated by this type of campaign may very well create a momentum and an atmosphere conducive to resolving this important issue. An excellent example of this approach is the action recently undertaken by the Anchorage Organizing Committee for the 1992 Winter Olympics. A carefully orchestrated marketing campaign, a community-wide education program and a partnership between the private and government sectors has generated an international

interest in Anchorage which will ultimately bring the Winter Olympics to Anchorage. Public recognition of the possibility of successfully obtaining the Winter Olympics was not very high just two short years ago.

I believe that there are three (3) central components to this campaign: EDUCATIONAL, POLITICAL, AND DEVELOPMENTAL.

EDUCATIONAL

This component should be the first priority of our efforts. It involves a careful presentation of the issues to the general public in a manner which first informs and then builds activities and target plans into an overall marketing strategy. This component will include appropriate speeches by government and private sector representatives on this issue; press releases and interviews; a careful publishing of applicable reports; and the development of a thorough working relationship based upon this education process with State and Municipal agencies and legislative bodies.

As part of this component an international marketing campaign should be instituted. The goals of the campaign will include promoting Anchorage and Alaska in the international arena as a good location to develop business and as an excellent place to invest for long-term positive returns. The effort should include film, brochures, target meetings/presentations, and other appropriate means of communication. I would recommend that this particular campaign would be an ideal project for the Honorary Trade Representative Program which has been sent to the Governor by our Department.

This marketing effort is critical in order to anchor new industries and services in the Anchorage area, all requiring the maintenance of Anchorage as a gateway to the Pacific Rim region. This is particularly imperative in the tourist industry which will require new hotels and other associated industries to anchor international flights at AIA.

The Department of Commerce, Department of Transportation, or some other entity may provide oversight for the marketing campaign, but a private firm with extensive experience should be charged with the execution of a marketing strategy and implementation. With the use of a professional marketing firm, an image plan consisting of the facts pertaining to the advantages of AIA should be organized.

A representative or organization should be charged with developing a reaction plan in conjunction with the marketing campaign to provide diligent and meaningful response to all

inquiries generated by the campaign. It is also imperative that in formulating both the marketing and reaction plans, emphasis should be directed toward identification of those industries and airlines, and firms, which would have the most interest in AIA.

POLITICAL

This component requires us to take this issue to the legislative level in order to obtain sufficient interest to secure funding, if necessary, and pertinent laws assisting the campaign, such as business incentives. This will involve work at both the State and Municipal level. Naturally, the same educational format for the general public could be used with the legislative bodies. However, the format will ultimately need to be put into a lobbying effort to succeed with the agenda. It will be helpful to our efforts if certain key legislators are brought in early to assist in our efforts and perhaps be made part of our campaign. I believe it is critical that this organization be nonpartisan in addition to crossing state and municipal boundaries of authority.

A Final element of the political component involves our congressional delegation and the Federal Government. Our representatives should be involved in the early stages of our efforts since they can assist us in such difficult issues as stopover rights, short-term visas and the like. Moreover, each Senator and our Representative will have contacts throughout the world that we should take advantage of in our efforts. The Federal Government, of course, controls the above-referenced stopover and visa issues.

DEVELOPMENTAL

Due to the nature of this issue and our need to anchor AIA in the community, the objectives of our campaign should include attracting investment, new industries, stimulating an entrepreneurial climate, and improving access to international markets. The strategy of the campaign should focus on the quality of life of Anchorage, the vast potential of our resources and service industries and our proximity to the Pacific Rim nations and Europe. An integral part of the campaign should be a vigorous promotion of reverse investment in Alaska's (and Anchorage's) bright economic future.

Those projects of immediate concern to us include: the development of hotel projects and the various tour activities which spring from that hub, additional stopover by foreign carriers based upon Alaska as a tourist paradise, the institution of foreign trade zones in Anchorage with AIA serving as part of that zone, short term visas, and the general advocacy of our economic potential.

I would be happy to coordinate these efforts with you or do anything else necessary to make this campaign a success. Perhaps our first effort should be to let the referenced potential partners comment on our suggested approach so that we can launch a thorough and unified campaign.

Air Transport

Alaska's Economic High Flyer

By MARK HARRIS

Russia never would have sold Alaska to the United States had air transportation been a fact of life in 1867. A vast stretch of wilderness, Alaska has evolved into one of the world's key points in terms of commerce and military defense by air.

Alaska has the distinction of being the most important link in the Orient-North America-Europe air transport chain. It is the vital front line in the United States' northern hemisphere air defense system. Alaska also is the state most dependent on air service for supplying and distributing goods and moving people.

Alaska could not sustain a state capital in Juneau or oil industry operations on the North Slope without aviation services. Small rural communities could not prosper and grow without regular air cargo and passenger service. Mineral and forest development, tourism and even the state's vital fishing industry would be retarded without today's air services network.

Simply put, Alaska would be just another economic backwater — instead of an increasingly important player in national and world trade — without a well-developed domestic and international air-service system.

State and federal governments realize all this, as evidenced by the importance placed on airport construction, upgrades and maintenance funding in Alaska. The Department of Transportation and Public Facilities spent $39 million on airport construction and improvements in fiscal 1986. Since the funding was mainly federal, fiscal 1986 here refers to the October-to-October federal fiscal year. The state spent another $13.7 million on airport operations and maintenance in fiscal 1986 — the state's July-to-July fiscal year, that is.

The above figures pertain to rural airfields only. The state's two international airports, Anchorage and Fairbanks, are administered under a separate arrangement with improvements funded partially through revenues generated by airport operations.

AC&O estimates DOT/PF will spend $30 million to $35 million on airport-related construction and improvements in FY 1987.

The DOT/PF's ongoing six-year capital improvement program for airports is updated annually. Table 1 shows examples of airport construction projects currently planned through the third quarter of 1987. It should be noted that funding levels, priorities and project completion dates are in constant flux. For this reason, it is impossible to provide a full and accurate listing of upcoming projects.

A single airport construction or expansion project in rural Alaska can run between $2 million and $7 million, according to a 1984 DOT/PF study. (See Table 2, p. 11.) This assumes a gravel surface, 5,000-sq.-yd. apron and a 100-ft. by 50-ft. taxiway.

A lighting system could add another $40 to $50 per lin. ft. of runway, depending on lighting requirements and power source, according to the report.

A federal-state appropriation ratio of 96 percent to 4 percent makes the costly Bush airport construction program possible. However, this funding level is far from secure. Like federal highway funding, aviation fund money is apportioned to states on a formula constantly subjected to political attack by heavily populated states.

There are some 1,000 recognized airports and airstrips in Alaska, of which 162 are in the Cook Inlet basin population center. Most are little more than private gravel strips.

The Department of Transportation and Public Facilities controls and maintains 270 airports statewide and 23 in the busy Cook Inlet region. The state's airport-air service classification system places airports in nine categories with four main classifications:

- **International airports** — These are major international and interstate access points to Alaska. Anchorage International and Fairbanks International are the state's only international airports.
- **Regional centers** — These are primary intrastate access points to regional centers with populations above 1,000. The Juneau and Ketchikan airports would be examples.
- **Regional** — These are secondary intrastate access points within a region. Homer and Kenai have such airports.
- **Transport** — These are primary access points to medium-sized communities and, like the first three, are bases for private aviation served by scheduled carriers, air taxi, mail and

TABLE 1
DOT/PF Preliminary Schedule for 1987 Airport Construction-Improvement

Project Description	Estimated Value
Petersburg Airport Runway & Apron Repair	$ 250,000 to 500,000
Angoon Seaplane Basin	1,000,000 to 1,500,000
Haines Airport Improvement	250,000 to 500,000
Ketchikan Seaplane Basin	250,000 to 500,000
Mountain Village Airport Relocation	2,000,000 to 3,000,000
Grayling Airport Improvements	1,000,000 to 1,500,000
Kodiak Airport Lighting	500,000 to 750,000
Anchorage International Airport Ramp	500,000 to 750,000
Bethel Airport South Apron Paving	750,000 to 1,000,000
Birchwood Airport Improvements	750,000 to 1,000,000
Cold Bay Airport Resurfacing	2,000,000 to 3,000,000
Goose Bay Airport Lighting	500,000 to 750,000
Unalaska Runway Extension	1,000,000 to 1,500,000
Kotzebue Airport Improvements	2,000,000 to 3,000,000
Allakaket Airport Lighting	250,000 to 500,000
Golovin Airport Relocation	2,000,000 to 3,000,000
Tok Airport Improvements	750,000 to 1,000,000
Council Airport Improvements	1,500,000 to 2,000,000
Nome Airport N/S Runway Repair	3,000,000 to 4,000,000
Chalkyitsik Airport Improvements	500,000 to 750,000

Source: Alaska Department of Transportation and Public Facilities

aircraft to operate between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without the currently required refueling stop in Anchorage.

The city could lose more than 500,000 stopover passengers by 1990 plus the revenue gain from landing fees and refueling, according to a consultant's estimate. That is cause for alarm considering the millions of dollars in Airport System funding generated by international landing fees, fuel flowage fees and patronage of duty-free concessions by in-transit and Alaska destination passengers.

Concern about the potential loss of visitor revenue has led the Anchorage business community to call for greater airport marketing efforts by the state. The Legislature is under pressure to place $3 million to $5 million in the airport's FY 88 budget just for marketing promotion.

The idea of the Municipality of Anchorage or an independent authority taking over the airport also has gained new interest. Many feel the city could better administer and promote AIA to potential air carrier customers.

Building to Keep Up

The domestic and regional passenger sector is projected to grow as are the general aviation and air cargo sectors. (See Table 4.) This growth in activity calls for a corresponding growth in facilities. In 1986, AIA spent $37.6 million on capital projects and will have spent another $16.4 million by the end of FY 87.

Projects completed or in progress to date include construction and remodeling of a domestic terminal concourse, a 1,200-space parking garage, west apron reconstruction, remote refueling apron construction, installation of concrete hardstands (pads) for remote parking positions, installation of a ground radar system and demolition of the old airport post office building.

Anchorage airport officials have a $28-million wish list for work to be done in FY 1988 en route to the Alaska Legislature. The full capital improvement spending plan for FY 88 through FY 93 calls for $211.8 million in project, maintenance and equipment funding.

Key projects for 1988 include overlay and grove runway 6R/24L, $2 million; structure for consolidating crash/fire/rescue operations, $4 million; Phase III domestic terminal expansion, $11 million; domestic and international terminal repair and rehabilitation, $5 million; reconstruction of five taxiways, $1.4 million; concrete ramp surfacing, $1 million; and general aviation paving, $1 million.

Another $11.6 million would be needed to move private aviation parking away from the congested international terminal area, relocate the gravel airstrip and enlarge Lake Hood to provide more floatplane slips. About 1,200 private aircraft operate out of AIA and Lake Spenard-Lake Hood.

Already under way is a $13.2-million noise monitoring and abatement program. Coffman Associates Inc., an airport consulting firm with offices in Anchorage, is conducting the Airport Noise Compatibility Study in conjunction with an International Airport Master Plan update.

The master plan recommends building consolidated freight handling facilities on vacant land along the north-south runway. Air freight services and cargo handlers would lease airport-owned warehouse, office and apron space.

One 25,000-sq.-ft. apron, capable of accommodating a B-747 aircraft, has been constructed. An estimated 1.7 million sq. ft. of apron area will be needed during the next 20 years, according to Coffman.

A DOT/PF report states, "In 1983, 224,000 tons of enplaned revenue freight passed through the airport, according to FAA statistics. That was fully one-half of the total tonnage of all the 36 medium-size hub airports in the United States combined, and only slightly less than the tonnage passing through the Los Angeles International and Kennedy International airports. By comparison, 72,200 tons of freight were enplaned at the Seattle-Tacoma International Airport that year."

The master plan further recommends moving the current airport maintenance storage area from behind the main post office to an area south of Runway 6R and west of South Air Park.

A new fuel tank farm also is suggested, possibly at the corner of West Northern Lights Boulevard and Post Mark Drive or on the west side of the airport. A Coffman report states, "Ultimately, the fuel system could be connected to the Nikiski Pipeline, thereby eliminating use of the Alaska Railroad for fuel transport from the Port of Anchorage to the airport." About 1.2 million gal. of fuel is pumped on an average day at AIA.

Fairbanks International Airport

The Fairbanks facility was designated an international airport in 1948. It has sinced played a key role in Interior growth and North Slope oil field development.

Air Transport

Alaska's Economic High Flyer

By MARK HARRIS

Russia never would have sold Alaska to the United States had air transportation been a fact of life in 1867. A vast stretch of wilderness, Alaska has evolved into one of the world's key points in terms of commerce and military defense by air.

Alaska has the distinction of being the most important link in the Orient-North America-Europe air transport chain. It is the vital front line in the United States' northern hemisphere air defense system. Alaska also is the state most dependent on air service for supplying and distributing goods and moving people.

Alaska could not sustain a state capital in Juneau or oil industry operations on the North Slope without aviation services. Small rural communities could not prosper and grow without regular air cargo and passenger service. Mineral and forest development, tourism and even the state's vital fishing industry would be retarded without today's air services network.

Simply put, Alaska would be just another economic backwater — instead of an increasingly important player in national and world trade — without a well-developed domestic and international air-service system.

State and federal governments realize all this, as evidenced by the importance placed on airport construction, upgrades and maintenance funding in Alaska. The Department of Transportation and Public Facilities spent $39 million on airport construction and improvements in fiscal 1986. Since the funding was mainly federal, fiscal 1986 here refers to the October-to-October federal fiscal year. The state spent another $13.7 million on airport operations and maintenance in fiscal 1986 — the state's July-to-July fiscal year, that is.

The above figures pertain to rural airfields only. The state's two international airports, Anchorage and Fairbanks, are administered under a separate arrangement with improvements funded partially through revenues generated by airport operations.

AC&O estimates DOT/PF will spend $30 million to $35 million on airport-related construction and improvements in FY 1987.

The DOT/PF's ongoing six-year capital improvement program for airports is updated annually. Table 1 shows examples of airport construction projects currently planned through the third quarter of 1987. It should be noted that funding levels, priorities and project completion dates are in constant flux. For this reason, it is impossible to provide a full and accurate listing of upcoming projects.

A single airport construction or expansion project in rural Alaska can run between $2 million and $7 million, according to a 1984 DOT/PF study. (See Table 2, p. 11.) This assumes a gravel surface, 5,000-sq.-yd. apron and a 100-ft. by 50-ft. taxiway.

A lighting system could add another $40 to $50 per lin. ft. of runway, depending on lighting requirements and power source, according to the report.

A federal-state appropriation ratio of 96 percent to 4 percent makes the costly Bush airport construction program possible. However, this funding level is far from secure. Like federal highway funding, aviation fund money is apportioned to states on a formula constantly subjected to political attack by heavily populated states.

There are some 1,000 recognized airports and airstrips in Alaska, of which 162 are in the Cook Inlet basin population center. Most are little more than private gravel strips.

The Department of Transportation and Public Facilities controls and maintains 270 airports statewide and 23 in the busy Cook Inlet region. The state's airport/air service classification system places airports in nine categories with four main classifications:

Source: Alaska Department of Transportation and Public Facilities

air cargo services. The Bethel airport is an example.

The vast majority of airports fall into the community and local categories. These are access points to small rural communities served by non-scheduled service and recreational or emergency airstrips, often privately owned.

Ironically, Merrill Field in Anchorage is classed as a community airport. The municipal airport has about 300,000 operations (take-offs and landings) a year, more than Anchorage International Airport.

A multi-year improvement program will wrap up at Merrill Field this summer. Wilder Construction Co. has nearly completed a $4-million contract for work on aprons, perimeter roads, tiedowns, lighting, storm drains and landscaping. Rogers and Babler, an Anchorage company, will finish this summer a $3.2-million project involving more apron work, tiedowns and storm drains. Both are Anchorage-based construction companies.

The Anchorage and Fairbanks airports are the key hubs for international, interstate and intrastate air travel and commerce. Together they open Alaska to the world and comprise the Alaska Airport System, a fiscal entity all its own.

Anchorage International

Anchorage International Airport is the heart of the state's air circulatory system. It also is of great economic importance to the Anchorage economy.

A 1984 Department of Transportation and Public Facilities study showed that AIA had a direct and indirect economic impact of $1.151 billion on the municipality in 1983. (See Table 3, p. 12.)

The study showed that transportation, visitor-related activities, freight forwarding and travel arrangements were of key importance to the growth of Anchorage. Within these four categories, 13,472 people were employed. Those people, about 12.8 percent of the total Anchorage area workforce, earned $375 million in a year. That comes to more than $1 million per day in payroll and $4.1 million per day in economic benefit to the Anchorage bowl area.

While more current figures are not available, a look at fiscal 1986 airport operations statistics leads us to believe the overall economic impact of AIA has continued to grow.

In fiscal 1986 (ended June 30, 1986) AIA had 4,633,845 passenger boardings, deboardings and transfers. That's equivalent to moving the entire population of Washington state through the airport.

About 150,174 tons of freight entered or left the airport, and 72,034 landings also generated revenue. More than 37,500 commercial jet aircraft made use of the facility.

The airport also supports an Air National Guard base from which C-130 aircraft make about 2,600 takeoffs and landings a year.

TABLE 2
Airport Construction Costs by Runway Dimensions

Runway Length X Width	Aircraft Capacity	Cost Estimate
2,100-2,500 x 50-60 ft.	Single & light twin-engine, some STOL turbo-prop (twin Otter, Skyvan), VFR operations.	$1,900,000 to 2,850,000
2,600-3,400 x 75 ft.	Single and multi-engine, some larger STOL (DASH-7), VFR or non-precision IFR operations.	$2,750,000 to 3,540,000
3,500-4,600 x 100 ft.	Small and medium turbo-prop, VFR or non-precision IFR operations.	$3,353,000 to 4,400,000
4,700-7,500 x 100 ft.	Medium, large turbo-prop (C-130 Hercules, L188 Electra); precision or non-precision IFR and VFR operations.	$4,000,000 to 6,830,000

IFR = Instrument Flight Rules
VFR = Visual Flight Rules
STOL = Short Takeoff and Landing Aircraft
Note: Construction costs include 10-percent design engineering and 15-percent administration and inspection costs.

The Jet Set

International travel is a mainstay of both the Anchorage and Fairbanks airports, even though Fairbanks serves no international flights. Revenue for both airports is channeled through the International Airports Revenue Fund, created by the Alaska Legislature in 1961. Of the fund's $47.9 million in revenues during fiscal 1986, all but $3.5 million was generated by Anchorage International Airport. About 57 percent of the revenue for both airports is generated by international traffic at AIA. Another 38 percent comes from domestic (interstate and intrastate) traffic at both airports, with the remainder generated by general aviation and other activities.

AIA is served by 36 airlines: 19 international carriers (cargo and passenger), nine interstate and eight intrastate airlines. It is strategically located to serve as a refueling stop for nine international cargo and passenger airlines and for 10 airlines that take on (enplane) and let off (deplane) passengers and freight. All these flights use the polar route between the Far East and Europe or routes linking the Lower 48 states with the Orient.

A flight from Paris to Tokyo, for example, must avoid Soviet airspace. So a dogleg route is used over Greenland to Anchorage then over the Pacific to Japan. Also, Anchorage is in a direct flight pattern for a flight from Tokyo to Chicago.

More than 1.5 million international passengers used AIA in fiscal 1986, and they spent more than $15 million in the duty-free shops and other concessions. Another 27,700 people began their international trips from Anchorage, while 1.5 million more boarded domestic and instate flights.

By June 30 of this year, AIA will have served another 3.2 million domestic and international passengers. That number will grow by some 350,000 by the end of fiscal 1990, according to one consultant's estimate. The same forecast calls for 74,866 domestic, international and all-cargo aircraft departures from the airport by mid 1987 and 82,270 such departures in FY 1990. These figures may be optimistic and certainly don't reflect growth in every sector through the end of the century.

There is increasing concern that new aircraft now being ordered by international carriers will fly over Anchorage. The Boeing 747-400, for example, can carry up to 600 passengers and fly some 8,000 mi. non-stop. This will allow the

aircraft to operate between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without the currently required refueling stop in Anchorage.

The city could lose more than 500,000 stopover passengers by 1990 plus the revenue gain from landing fees and refueling, according to a consultant's estimate. That is cause for alarm considering the millions of dollars in Airport System funding generated by international landing fees, fuel flowage fees and patronage of duty-free concessions by in-transit and Alaska destination passengers.

Concern about the potential loss of visitor revenue has led the Anchorage business community to call for greater airport marketing efforts by the state. The Legislature is under pressure to place $3 million to $5 million in the airport's FY 88 budget just for marketing promotion.

The idea of the Municipality of Anchorage or an independent authority taking over the airport also has gained new interest. Many feel the city could better administer and promote AIA to potential air carrier customers.

Building to Keep Up

The domestic and regional passenger sector is projected to grow as are the general aviation and air cargo sectors. (See Table 4.) This growth in activity calls for a corresponding growth in facilities. In 1986, AIA spent $37.6 million on capital projects and will have spent another $16.4 million by the end of FY 87.

Projects completed or in progress to date include construction and remodeling of a domestic terminal concourse, a 1,200-space parking garage, west apron reconstruction, remote refueling apron construction, installation of concrete hardstands (pads) for remote parking positions, installation of a ground radar system and demolition of the old airport post office building.

Anchorage airport officials have a $28-million wish list for work to be done in FY 1988 en route to the Alaska Legislature. The full capital improvement spending plan for FY 88 through FY 93 calls for $211.8 million in project, maintenance and equipment funding.

Key projects for 1988 include overlay and grove runway 6R/24L, $2 million; structure for consolidating crash/fire/rescue operations, $4 million; Phase III domestic terminal expansion, $11 million; domestic and international terminal repair and rehabilitation, $5 million; reconstruction of five taxiways, $1.4 million; concrete ramp surfacing, $1 million; and general aviation paving, $1 million.

Another $11.6 million would be needed to move private aviation parking away from the congested international terminal area, relocate the gravel airstrip and enlarge Lake Hood to provide more floatplane slips. About 1,200 private aircraft operate out of AIA and Lake Spenard-Lake Hood.

Already under way is a $13.2-million noise monitoring and abatement program. Coffman Associates Inc., an airport consulting firm with offices in Anchorage, is conducting the Airport Noise Compatibility Study in conjunction with an International Airport Master Plan update.

The master plan recommends building consolidated freight handling facilities on vacant land along the north-south runway. Air freight services and cargo handlers would lease airport-owned warehouse, office and apron space.

One 25,000-sq.-ft. apron, capable of accommodating a B-747 aircraft, has been constructed. An estimated 1.7 million sq. ft. of apron area will be needed during the next 20 years, according to Coffman.

A DOT/PF report states, "In 1983, 224,000 tons of enplaned revenue freight passed through the airport, according to FAA statistics. That was fully one-half of the total tonnage of all the 36 medium-size hub airports in the United States combined, and only slightly less than the tonnage passing through the Los Angeles International and Kennedy International airports. By comparison, 72,200 tons of freight were enplaned at the Seattle-Tacoma International Airport that year."

The master plan further recommends moving the current airport maintenance storage area from behind the main post office to an area south of Runway 6R and west of South Air Park.

A new fuel tank farm also is suggested, possibly at the corner of West Northern Lights Boulevard and Post Mark Drive or on the west side of the airport. A Coffman report states, "Ultimately, the fuel system could be connected to the Nikiski Pipeline, thereby eliminating use of the Alaska Railroad for fuel transport from the Port of Anchorage to the airport." About 1.2 million gal. of fuel is pumped on an average day at AIA.

Fairbanks International Airport

The Fairbanks facility was designated an international airport in 1948. It has sinced played a key role in Interior growth and North Slope oil field development.

TABLE 3
Economic Impact of Anchorage International Airport

Impact Measure	Direct Impact	Indirect & Induced Impact	Total Impact
Output ($)	$697,600,000	$453,500,000	$1,151,100,000
Earnings ($)	$223,000,000	$151,600,000	$ 374,600,000

Classified as a small hub airport, FIA serves as a weather diversion airport for polar route traffic. It can accommodate 747-type aircraft, refuel them with 30,000 gal. and get them back in the air in less than an hour.

FIA handled about 600,000 passengers in fiscal 1985. About 260,500 of them boarded commercial flights at the airport. This was down from the peak of 301,288 in 1983. The number of people boarding flights in Fairbanks increased by about 10 percent a year between 1980 and 1983, but passenger traffic has been declining since.

About 25,000 tons of freight, of which 19,400 tons was enplaned freight, moved through the airport last year. This compares to 50,580 tons of enplaned freight in fiscal 1980.

With 80,000 takeoffs and landings annually, FIA is the second busiest domestic flight destination in Alaska, according to airport director Doyle C. Ruff. In 1986, there were 14,600 cargo and passenger airline revenue landings. This indicates the vast majority of flight operations are related to private aviation.

FIA operations are largely funded through the International Airports Revenue Fund. After deducting operating expenses, AIA showed $19.8 million in operations income while FIA had a $6.6-million loss. Consequently, Anchorage's larger traffic base was able to subsidize the smaller Fairbanks operation and show an IARF balance of $13.2 million.

Capital projects at FIA, as at AIA, are funded largely through federal appropriations. In fiscal 1986, FIA had $9.4 million in capital projects, $5.1 million funded with federal dollars. About $4.3 million in work is programmed for FY 87. Another $5.1 million of work is on the drawing boards for FY 88.

Construction work over recent years has added a hydrant fuel system capable of handling aircraft serving international as well as domestic routes. Also, a terminal expansion and renovation project doubled the building's capacity to serve the traveling public.

Other work has included a 13-percent increase in apron area, a 41-percent increase in lane miles of road and a 35-percent increase in auto parking spaces. A 1984-85 project upgraded general aviation parking, aprons, runways and taxiways and added new taxiway and aircraft parking facilities.

A float plane pond was expanded to 6,300 ft. and the number of tiedown berths was doubled to 184.

In 1986, the airport's 10,300-ft. main runway was reconditioned and grooved, a parallel taxiway resurfaced and the runway lighting system upgraded.

Fairbanks International is in the enviable position of not needing major capital project financing as it enters a new five-year planning period. However, an airport is never "finished."

New projects on the books include an extension of the main aircraft parking apron, perimeter vehicle road construction and crash/fire/rescue building upgrades.

As noted, DOT/PF operates the two international airports separately from the network of smaller airfields and landing strips around the state. Yet all the state's air travel and commerce facilities are interdependent.

Alaska is the flyingest state in the union and the one most dependent on air service for daily living and economic growth. Continued long-term planning and timely facility repairs and upgrades, coupled with a sustained capital projects program, translate into a healthy air transport industry — something Alaska will need long after all the oil is gone. □

THE SOLUTION

THE TASK

Deliver crews and supplies to offshore drilling platforms

THE CHALLENGE

- Provide 24-hour on-call availability for delivery of supplies and crew changes
- Handle medical emergencies

THE SOLUTION

Alaska Helicopter's experienced pilots and the Bell Jet Ranger. Fast, versatile, Medevac equipped, room for up to six with enclosed cargo space.

FAST.
DEPENDABLE.
COST EFFECTIVE.

Anchorage as international finance center is yet to come

tim bradner

Let's be down to earth about Pacific rim exports. Can we export more commodities — timber, coal, oil and fish -- to the Far East? You bet, if the price is right.

But Anchorage as a center for international finance? I'm willing to be convinced, but I suspect this is an idea whose time has yet to come.

Politically, the Pacific Rim is back in vogue. In Juneau, both the House and Senate have new special committees on international trade, and Gov. Steve Cowper devoted a substantial part of his State of the State address to the subject.

No harm in brainstorming ideas to help Alaska's battered economy. But in the search for new ideas, let's not overlook some old ones that might be good.

Some specifics: Far East timber markets are looking better than they have in years, but most of these benefits will go to our competitors in the Pacific Northwest, Canada, the Soviet Union and Southeast Asia. A forest products loan program, which could help small Alaska timber operators modernize and compete, has been kicked around the legislature for years, with no success. Can we re-examine this?

Just as important: Can we resolve tough land-use and environmental conflicts that prevent putting together large blocks of timber, which are necessary to get Southcentral and Interior Alaska timber into export markets?

Another example: Southeast Alaska's two pulp mills are seeing better markets after years of losses. But good times may be short-lived. There is tough competition from newer plants selling in the Pacific that don't have the high costs and tough environmental problems our Alaska plants face.

Alaska Pulp Co. in Sitka has developed an innovation in water treatment technolo-

See Page E-2, BRADNER

BRADNER COLUMN: Anchorage as an international finance center may be a ways off

Continued from Page E-1

gy that could lower its costs. The Federal Environmental Protection Agency is interested. But Alaska Pulp needs help. Is there a role here for the Alaska Industrial Development Authority?

In coal, we have an insecure toehold in Pacific markets, and that is thanks to international politics, not economics. But we can better our long-range competitive position:

Usibelli Coal Co. is investigating a promising new coal-drying technology that could remove moisture and sharply upgrade the quality of Alaska sub-bituminous coal. With about 25 percent moisture in our coal, essentially every fourth cargo we ship now is water. If that were reduced, and the heat value of the coal increased an estimated one-third, our ability to compete economically with Canadian, Australian and South African coal would be enhanced greatly.

Can we help Usibelli or other coal producers introducing this new technology? Almost every other coal-producing state helps its coal industry with research and development. Why not Alaska?

Another possibility: Coal-fired power plants are a good bet to meet incremental power demand in the Railbelt, even with the Bradley Lake hydro project. If one or more of these plants were built, the mine supplying the coal would have enough base demand to produce coal for export at very competitive marginal unit costs.

Coal producers say they won't need a subsidy with any of these plants, but here is another example where state encouragement, by including coal in our long-range energy planning, would greatly enhance Alaska's coal export capabilities.

Here's something that merits more attention: International air cargo is big business for Anchorage International Airport; about 60 percent of international flights are cargo and the volume is expected to double in the next 20 years, as U.S.-Pacific trade grows.

What many don't realize is that the new generation of long-range jumbo jets isn't the threat to Anchorage's role in air cargo that it is to the passenger jets. That's because of air cargo's economics: It's more profitable to carry more payload and less fuel, and stop here to refuel, than it would be to sacrifice payload for a non-stop trans-Pacific or polar flight.

A major state-sponsored study is underway to assess Pacific air cargo trends and ways Alaska can take advantage of them. Can we be a Pacific cargo "hub," where freight from the Far East is shifted to planes headed for different regions of the United States or Europe?

Or, can we break into the huge Japanese market for fresh fish, shipped by air? Norway ships fresh salmon to Japan right over Alaska. Fresh fish from the U.S. East Coast flies to Japan? Why not from Alaska?

These aren't new ideas. Flying Tigers and Northwest Airlines do a limited amount of cargo-switching here now; Japan Air Lines and MarkAir Inc. are now exporting fresh seafood.

I'm all for looking at new ideas in international trade. A lot of good can come from it. But the danger we face is that if our approach is too scattered, we risk diverting scarce resources away from things we can do to help companies already exporting and already employing Alaskans. These should be prominent on the agenda of any discussion of international trade.

Marketing plan urged for airport

By SUE CROSS
The Associated Press

JUNEAU — Alaska officials have been trumpeting stopover businesss at the Anchorage and Fairbanks international airports as a big plus for the state economy, but they're worried about losing that advantage because of new aviation technology and competition.

Several travel promotion groups and nearly all of the Alaska Senate want to offset the changes with an aggressive marketing plan for the airports.

"If we don't do that, we're going to have an international airport system that, instead of making money as it does today, will lose money. When it starts losing money, the landing fees and fueling fees for domestic flights will go up and all of us will be hurt," says Dale Fox, director of the Alaska Visitors Association.

Fox was in Juneau Thursday to ask state officials to boost their airport marketing efforts.

Dale Fox

A resolution (SCR5) asking the Cowper administration to come up with a promotional plan for the airports was introduced Wednesday in the Alaska Senate. It was drafted by Sen. Arliss Sturgulewski, R-Anchorage, and co-sponsored by 18 other senators.

A major angle of state tourism efforts has been to get international passengers from flights refueling in Alaska off their planes to visit the state enroute to their final destinations.

In addition, cargo flights make up 60 percent of the airports' business, and they must not be lost to other states, Fox said.

But according to the proposed resolution, Alaska airports' success in winning stopover business is being jeopardized by development of new aircraft capable of flying nonstop between Europe and the Orient.

Other airports around the Pacific Rim also are promoting themselves to get a greater share of markets for trans-Pacific flights, international tourism and air cargo, Sturgulewski said.

Fox said such promotions have long been run by the Seattle, New York, Los Angeles and other major airports, but now such smaller cities as Portland, Oregon, are cutting into the Alaska flights.

"Anchorage has geographic advantages, but Portland, because of its marketing, is getting more than its share of the planes," Fox said.

Sturgulewski said Alaska stands to lose $14 million net profit generated last year by the Anchorage and Fairbanks airports. That income came from $45 million in revenues.

"Good business for those airports is good business for the state," she said.

Alaska's international airports offer economic opportunity

Courtroom to boardroom

by Tony Smith

At a time when the state is struggling with the wrong end of OPEC politics, attempting to be the cornerstone of the international fisheries and hopeful of receiving the nod from the International Olympic Committee, we need to remember the economic opportunities at home. In this writer's view, an important part of the state's economy involves some buildings and some asphalt. That's the Anchorage and Fairbanks airports.

The problem is that technology may doom our airports. If we don't come up with a viable plan, a new generation of aircraft may result in stops at Anchorage and Fairbanks being a vestige of the past. In my estimation, the commercial future of our airports is as important to our economic future as our high profile items.

A 1985 study indicated that Anchorage International Airport contributed $1.5 billion to the Anchorage economy. Indications were that the airport alone generated employment of 13,472 people. The cost for this is only approximately $20 million.

There's nothing that says international flights will continue to call at either the Anchorage or Fairbanks airport. Right now, we are the air crossroads of the world, but new long-range Boeing planes may change that. Already some international passenger carriers are beginning to fly direct.

The state, the municipality, and those involved with the airport, must concentrate on this issue. The airport may not be the sexiest issue, but it is one area where we haven't experienced a downturn.

For example, there are international carriers, like Korea Airlines, who are unable to pick up or discharge passengers because they do not have landing rights. The reason for this seems to stem from events at the Seoul airport, which have nothing to do with Alaska. We can not accept that.

Visas have been a problem in the past, but the Alaska Congressional delegation has started a program which may solve that. From Alaska's vantage, we need to have our international friends have the ability to pass a few days in Alaska. We must market Anchorage and Fairbanks as destination points.

We need Free Trade Zones in order to maximize the opportunities for local businesses to take advantage of our strategic location. Our airports have to provide services competitive with Portland, Seattle, Los Angeles and other gateway locations. We've gone a long way on the services, but we can always do more.

A task force is working on the problem, and that's a start. The downside, however, is such that an all-out effort is called for. It's easy to get people exicted about AWWR and the Olympics. We need the same excitement about the continued development and marketing of the Fairbanks and Anchorage airports.

An Alaskan since 1971, Tony Smith is an attorney in private practice in Anchorage.

Trade, tourism linked

By DEAN FOSDICK
The Associated Press

Alaska's chances of selling its resources to Pacific Rim nations would be greatly enhanced if it could step up tourist trade with that region, a spokesman for Japan Airlines says.

Mitsuo Kitamoto, a JAL vice president and head of the company's Anchorage office, said trade follows tourism, and Alaska is missing out on a good thing by not promoting vacation opportunities to people passing through the airport's international terminal.

"After vacations, businessmen often go back to their offices and are more receptive to (trade) offers — especially if those offers are competitive," Kitamoto said.

"Australia and Alaska have many of the same things to offer — coal, ore — and they both have good locations for the (Pacific Rim) market. But Australia changed its tourism policy about two years ago and there's been a rapid increase in the number of (Japanese) tourists there.

"After tourism comes business," Kitamoto said.

Anchorage International Airport is the Alaska gateway for people crossing between Asia and Europe, he said.

But technology and international politics may reduce the number of people passing through the airport, Kitamoto said in an interview.

"Long-range jets are coming that can fly non-stop between Tokyo and Europe ... Paris," he said. "And already last year we started flying a polar route over Siberia.

"Businessmen are asking for more non-stops, for additional flights. And we're looking at it."

What that means for Anchorage is unclear, but it could cut into the transient traffic from Japan, which for JAL means about 4,500 passengers a year, Kitamoto said.

"There's been almost no change in the number of Anchorage-destined passengers in the last two years," he said. "A lack of promotion here has been one problem."

Kitamoto said JAL has agreed to help promote Alaska to its Japanese passengers this year. Alaska should do the same for overseas visitors, he said, an idea he has been pushing over the past several weeks during speeches before civic groups.

"The state needs some selling. We get the same questions (from Japanese) about Alaska we do about Africa. What kinds of shoes and gear are required? Is there any kind of shopping here?

"Why should they buy in Europe when they can buy in Alaska? Why not open a corner of the (airport) duty free shop to Alaska crafts?

"Having resources isn't enough," he said.

Editorials

Crisis at the airport

WE'RE STILL uncertain whether anybody in the state or city governments is listening to our repeatedly stated concerns about the future of Anchorage International Airport. But somebody should be.

We're convinced there's an urgent need to start aggressively developing a new and innovative marketing and servicing program that will keep the airport a vital part of the operating plans of the big commercial carriers, domestic and foreign.

Unfortunately, we don't see that happening.

We need to sell Anchorage International as a place the airlines want on their route schedules — whether it be for passengers, for cargo or simply for refueling.

And we need to make sure that Anchorage International provides its customers — the airlines, the passengers and the commercial shippers — with the absolute best facilities, best services and best rates that be found.

IF WE can't do those things, the advance of new aircraft technology — which makes possible globe-girdling non-stop flights — is going to leave our airport an empty shell.

We don't want to be doom and gloom about this.

It isn't going to happen overnight.

We've got some lead time — but not much.

But the fact is that the airlines — and our competitor airports — already are making their plans for the 21st Century.

Some of them are well along into operational changes relating to the 1990s.

And that decade of the '90s, we need to emphasize, is just a little more than three years away.

Already, the long-range aircraft are in service — and even longer range jets are on the drawing boards down at Boeing and in the engineering departments of the world's other great aircraft manufacturing companies.

IN THE process of discussing this, we also need to restate another continuing recommendation.

And that is that the city take over ownership and control of Anchorage International Airport.

The state can't do the job that needs to be done here.

The bureaucracy is too big, the chain of command goes through too many departments and the ultimate decisions have to be made in Juneau, which is too far away to understand the problem.

Not only that, so long as the airport remains under state control, its top brass in the state government must look at it from a political perspective in which all kinds of tugs and pulls are at work, not all necessarily beneficial to the task at hand — which is to run the best airport in the world, serving the airlines which use it.

If you think Anchorage felt an economic pinch when the oil companies cut back, you'd be shocked even more so if the Anchorage aviation industry suffered a similar reduction.

This is a priority item — but one which isn't at the top of anybody's list. It should be. And fast.

Change in the cockpi

A CHANGE in managers at Anchorage International Airport is one of those things that usually happens when a new governor takes over. It's a choice assignment and one of the major political prizes that is at the disposal of the man in charge when the time comes to assemble the new team.

Thus the departure of Guy Russo from the post comes as no surprise. On the other hand, at the age of 65, he's earned some time off after a fine career as an airline executive (going back to the old days before Pacific Northern Airlines became part of Western), as an elected public servant (mayor of Douglas), and as a public official on the firing line as airport manager for the last several years.

His successor still remains to be announced. But whoever gets the job had better be aware that he faces a major challenge — no less than the future of the facility as a major international airport.

WE'VE DISCUSSED this problem on many occasions in these columns over the past couple of years. Now, we're pleased to note, a number of civic and political leaders have begun to address the issue.

The problem is that new aircraft technology, which permits intercontinental flights without refueling stops, and the opening of a trans-Siberian route by the Soviet Union, provide the means for airlines flying the polar route to bypass Anchorage.

It isn't all happening at once. But it's happening — little by little.

That means there's time to fight back. But not much time.

And the new airport manager must be a key playe that fight, one that also require the best talents ideas from the state, the and the business commun

To emphasize the ma tude of the challenge, Alaska vice president Japan Air Lines indicated a meeting here a few d ago that Anchorage's w dow of opportunity may open only for another thi or four years, at best.

By then, said Mitsuo Ki mota, JAL will be in the with Boeing 747-400 lo range aircraft — and fligh using that equipment simp won't have the need to p down here. Moreover, J already is using the trans- berian route on at least o flight between Tokyo a Europe.

WHAT'S THE answer?

Several things. We need get serious about promotir Anchorage as a stopov point — as a destination, other words, rather than ju a place for passengers stretch their legs.

We need to get busy deve oping the airport as a cent for trade and commerce. foreign trade zone has bee a topic of idle conversatio and chit-chat for more year than we like to remembe Now is the time.

Private enterprise need to be fully cranked into th operation, working with th state and the city to d things that have to be don at the government level.

And, as a final admoni tion, if the state can't do the job — under a new governor and a new commissioner o Transportation and a new airport manager — then it should get out of the way, turn the airport over to the city, and let the work to preserve and enhance Anchorage International Airport proceed with diligence and vigor.

Opinions .... Other views, other insights

Protecting the future of Anchorage's international airport

Editor's note: this column is excerpted from remarks made by Sheffield Enterprises president Al Parrish to the Dec. 18 membership luncheon of the Anchorage Convention and Visitor's Bureau. Mr. Parris is chairman of the Anchorage Business Council's airport subcommittee.

Comments
by Al Parrish

ANCHORAGE International Airport, as a state-owned facility, began in the early 60's as a principal transfer point for travelers making connections to points within and outside Alaska. In addition, the airport was a refueling and an entry and exit point for international flights, principally on routes between Europe and the Far East.

Today, 28 years later, Anchorage International still serves those primary functions. The plant, however, has grown to include two passenger terminals encompassing 295,000 square feet of total floor area, three runways, extending up to 10,900 feet, 36 aircraft gates, and six baggage claim areas. All of this is contained within approximately 2,000 acres. The airport is serviced by 16 major carriers, nine of which are international, five commuters and approximately 25 non-scheduled airlines.

According to a Department of Transportation study conducted in 1983, the airport contributes more than $1.5 billion to the Anchorage economy. Over 13,000 residents counted on the airport's operation for their jobs, earning a total of $375 million dollars.

HOW WOULD you like your business to have a financial statement like this: In FY '86, the airport took in $45 million dollars, showing a profit of $21 million. Let's take it one step further: image having a business that made a profit of $21 million a year, and that it achieved this profit without any advertising, any public relations, or any marketing studies whatsoever!

Anchorage's strategic location could easily enable it to serve as a platform for business between Europe and Asia. The possibilities are limitless. For example, if Anchorage were to become a foreign trade zone, goods from around the world could be stored here, processed, used in manufacturing other items, exhibited, repackaged, sold or handled in numerous ways. Imports could be used with domestic parts to manufacture new items within the zones — all without paying any customs duties or excise taxes. It would be a tremendous catalyst for development within our business community.

In addition, by expanding the duty free zone at the airport to allow foreign shoppers a much wider range of retail exposure than just gifts and liquors, we could create, in essence, regional shopping centers for stop-over travelers. They could tour duty free trade complexes and showrooms without the necessity of having to go through customs.

More and more, we're seeing international airports taking an active role in marketing their facilities and services. For example, Seattle-Tacoma Airport, together with the Port of Seattle, which owns the airport, has developed an aggressive campaign to attract the expanding transpacific market, the international tourist market and the air cargo industry.

They've produced numerous brochures and an audio-visual presentation. They have a staff of marketing representatives which actively calls on transpacific clients, touting Sea-Tac's excellent international services on the airport premises, such as banks, customs brokers, freight forwarders, warehouses, foreign consulates, plentiful terminal space, excellent ground access, ample runway capacity and minimum environmental concerns.

Sea-Tac's programs and policies have helped to establish it as one of the top 20 airports in the United States for passenger-traffic volume. In 1982, over 9.2 million passengers and 143,000 metric tons of air freight were handled by Sea-Tac. By 1985, the number of passengers at Sea-Tac increased to 11.5 million passengers, up 25 percent. Freight went up to 210,000 metric tons, up 42 percent.

THE NEED, then, to make our presence known is going to become increasingly important in the years ahead. And not just because others are doing it. At this time, Anchorage International faces a very critical challenge, that being the advancement of aviation technology.

I'm sure most of you have heard about the new Boeing 747-400 series aircraft. This aircraft is an advanced version of the B-747's which have served Anchorage International Airport for the past 15 years. However, the new 400 series requires only a two-person flight crew, compared with the three crew members required on all other 747's. It will be able to carry between 400 and 600 passengers, and will be able to fly approximately 8,000 miles nonstop. This will allow the aircraft to fly between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without refueling in Anchorage.

OUR WINDOW of opportunity is slowly closing, and we can't afford to wait. We need to sell Anchorage International as a place the airlines will want on their route schedules — whether it be for passengers, cargo or simply refueling. And the most direct way to go about this task is to mount a marketing campaign, promoting our plant and its services to the world.

Funds for marketing the airport are already available. Revenues from the airport's operation go into a reserve account. The money is there.

Once a line item dedicated to marketing the airport is budgeted by the state, a cooperative effort can be developed, whereby funds from private and public sources would be combined to develop a generic campaign. We believe it will take approximately $3-$5 million to develop and implement a comprehensive marketing plan for the airport. This seems like a reasonable amount to launch a program to reach the world's markets.

Which revenue streams need to be protected and developed?

Obvious ones are, of course, those passengers who are stopping over in Anchorage, on their way to or from a primary destination. Our research shows that 84 percent of those on flights stopping over in Anchorage would be interested in a stay of four to seven days. One-half of those would have stopped on the trip they were on if they would have known they could.

One good example of a stopover program was developed by the Port Authority of New York and New Jersey for passengers transiting through the three major airports: Kennedy International, Newark International and LaGuardia. They call it, "On Your Way Over, Stopover." The package includes one-night hotel at a choice of hotels, sightseeing, VIP shopping service at Macy's or Bloomingdales with language assistance, a choice of Broadway theatre tickets, a welcome kit, etc., all at a low package price. They've advertised this program in periodicals all over Europe.

Other international passengers of great interest to us are those on either end of the transpolar route who could be persuaded to use Alaska as a visitor destination. New research by the state of Alaska shows that the potential for Japanese and German visitors selecting Anchorage as a visitor destination nearly equals the potential for visitors coming from the U.S. If we do our job right in selling our destination, it is possible that we could attract an additional 200,000 visitors a year from Germany and Japan, or a 50 percent increase in vacation or pleasure travel.

WHILE PASSENGERS are important, air freight offers even greater potential for growth. By increasing freight handling at AIA, we would see an increase in landing revenues (which are based on the gross takeoff weight of the aircraft) and fuel revenues for the airport.

International air freight is a rapidly growing market. In recent years, international air cargo shipments have increased at twice the rate of passenger travel.

The most cost-effective freight for air transportation is low-volume, high-value, and relatively low-weight products, such as electronic components, mini-computers, and precision instruments. Other less obvious air freight products are those with time-sensitivity, such as high-fashion apparel, pharmaceuticals, animals, produce, seeds and flowers. These markets need to be actively developed.

I mentioned fuel fees, and I'd like to stress that fuel is an important revenue stream. The airport operates a fuel storage farm and many operators have underground storage tanks. On an average day, approximately 1.2 million gallons are pumped. This means approximately $24,000 a day, or $9 million annually in fuel flowage fees.

Who is backing the plan to market the International Airport? This idea was further advanced by the Anchorage Business Council's Airport Committee, which I happen to co-chair, and others. The council, by the way, was formed by Mayor Tony Knowles with the mission of spurring economic development in Anchorage. Both the municipality and the Anchorage Business Council have endorsed our committee's recommendation. The Greater Anchorage Chamber of Commerce has since given the idea its full support, along with the Anchorage Convention and Visitors Bureau.

We'd like to invite your support as well, because as residents of Alaska and users of the airport, you have a stake in its future operation. We presently have the lead time to plan for the decade ahead. But we can't afford to wait. We need to plan for the 21st Century now.

AT

Short cut to Europe

OK, HERE'S an immediate target of opportunity for those committees that are stirring around these days trying to enhance the future of Anchorage International Airport.

Shippers in Japan, if you can believe it, reportedly are moving cargo via ocean freighter to the Port of Seattle, trucking it to Seattle-Tacoma International Airport, and forwarding it to Europe by air.

That's the word, anyway, in the January-February issue of Tradelines, an official publication of the Port of Seattle.

But that's the long way to go, for heaven's sake.

IF CARGO is bound from Japan to Europe on a ship-air combination, the port of entry should be Anchorage — not Seattle. Anchorage is hundreds of miles closer and many hours quicker from Tokyo.

And it would be just as easy — if not easier — to offload here, truck the cargo to Anchorage International Airport in minutes, and have it on its way to Europe — again a much quicker flight that the route out of Seattle.

The ball's in your court, Anchorage airport committees.

Some realistic advice

EIN 112310?

If anyone should know how Alaska can promote trade with Japan, it's Mitsuo Kitamoto. He's vice-president for Japan Airlines and head of the company's Anchorage office. So when Mr. Kitamoto says Alaska can help its trade prospects by luring more Japanese visitors, Alaskans should take note.

Unlike much of today's Pacific Rim rhetoric, his advice sounds realistic. Often it seems that the state's political and business leaders invoke "Pacific Rim trade" as a magic mantra, the mere chanting of which will help lead Alaska out of the economic doldrums. But most of our trade promotion efforts will take years to pay off — if they ever do.

Mr. Kitamoto's strategy would do something here and now. The tourist industry would get a short-term boost while the state builds its long term prospects for Pacific Rim business by showing the Japanese the state.

Some changes already in the works may help do what Mr. Kitamoto suggests. The new immigration law will make it easier for foreign travelers to get off in Alaska without visas. But Alaska shouldn't stop there. As longer range aircraft enter service, there may come a day when the state cannot rely on refueling stops to bring foreigners to our doors.

In the old days, doing more to draw visitors would have meant spending more state money. But in these times, state funding is scarce. State tourism officials will have to find ways to do more with less — or convince Alaska's tourist businesses to come up with the money themselves.

Bill No. House Bill 195

Date April 3, 1987

Title "An Act excluding services provided by certain taxicab operators from the definition of employment for unemployment compensation coverage, etc."

Contact: Joe Sitton
465-2712

Eileen Plate
465-2700

House Bill 195 seeks to categorically exclude certain taxicab operators from the definition of employment for the purposes of unemployment insurance coverage.

The Department is puzzled as to the reason for the proposed exclusion since persons, including taxicab operators, who actually are performing as independent contractors, are presently excluded from unemployment insurance coverage under AS 23.20.525(a)(10). Under this current law, a person's status as an independent contractor is shown to exist if:

(A) the individual has been and will continue to be free from control and direction in connection with the performance of the service, both under the individual's contract for the performance of service and in fact;

(B) the service is performed either outside the usual course of the business for which the service is performed or is performed outside of all the places of business of the enterprise for which the service is performed; and

(C) the individual is customarily engaged in an independently established trade, occupation, profession, or business of the same nature as that invclved in the service performed;

Examination of the employee/employer relationship in this regard is appropriate, and the Department supports the application of these criteria in making such determinations.

The exemption of taxicab operators from the independent contractor test, as appears to be proposed in this bill, is not in the interest of Alaska's workers, and the Department opposes it.

APPROVED:

Jim Sampson, Commissioner
Department of Labor

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to enplanements, enforcement of compliance with financial responsibility and certificate of compliance requirements for air carriers, penalties, issuance and display of certificates of compliance, and the definition of aircraft; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 02.15.050 is amended by adding a new subsection to read:

(g) The department may acquire data on passenger enplanements from air carriers; however, the department may not obtain passenger manifests.

* Sec. 2. AS 42.30.200(c) is amended to read:

(c) The department may authorize department personnel to enforce this section and may adopt procedural regulations necessary to implement this section. Upon finding a violation the department may issue a stop use order.

* Sec. 3. AS 42.30.200(e) is amended to read:

(e) A person who violates [(a) OF] this section is guilty of a class A [B] misdemeanor and is punishable by a fine of not less than $1,000 [$500] or more than $5,000 for each day of violation but not to exceed $10,000 for each violation [$1,000].

* Sec. 4. AS 42.30.225(a) is amended to read:

obtaining an annual certificate of compliance for that aircraft from the department. The department may issue a certificate of compliance for one aircraft or a fleet of two or more aircraft. The department shall issue or renew a certificate of compliance upon application and presentation of

(1) proof of financial responsibility required under AS 42.30.200;

(2) proof of compliance with Federal Aviation Administration requirements, and, where applicable, federal certification for scheduled airline service.

* Sec. 5. AS 42.30.225(b) is amended to read:

(b) The annual fee for a certificate of compliance is $50 per calendar year for one aircraft and $100 per calendar year for a fleet of two or more aircraft. The department shall prorate the fee for a certificate of compliance issued after the beginning of the calendar year [. THE CERTIFICATE IS VALID FOR A PERIOD OF 12 MONTHS FOLLOWING THE DATE OF CERTIFICATION]. The certificate shall be [DISPLAYED ON THE AIRCRAFT SO THAT IT IS] visible to boarding passengers.

* Sec. 6. AS 42.30.225(b) is repealed and reenacted to read:

(b) The annual fee for a certificate of compliance for one aircraft and for a fleet of two or more aircraft shall be set by the department by regulation. The certificate is valid for a calendar year. The certificate shall be visible to boarding passengers.

* Sec. 7. AS 42.30.225(e) is amended to read:

(e) The department may authorize department personnel to enforce this section and may adopt procedural regulations necessary to implement this section. Upon finding a violation the department may issue a stop use order.

* Sec. 8. AS 42.30.225 is amended by adding a new subsection

(g) A person who violates this section is guilty of a class B misdemeanor and is punishable by a fine of not less than $500 or more than $1,000.

* Sec. 9. AS 42.30.380(3) is amended to read:

(3) "aircraft" means a propeller, rotor, or jet-powered device used or designed for flight in the air;

* Sec. 10. Notwithstanding AS 42.30.225(b), as amended by sec. 5 of this Act, a certificate of compliance issued by the Department of Commerce and Economic Development and in effect on the day before the effective date of sec. 5 of this Act is valid for the period issued.

* Sec. 11. AS 42.30.225(c) and 42.30.225(d) are repealed.

* Sec. 12. Section 6 of this Act takes effect January 1, 1989.

Sectional Analysis - House Bill 196

Section 1 This specifically authorizes DOT/PF to collect the data necessary for the State to receive federal aid to airports. The provision was suggested last year by Commissioner Knapp, and is still deemed desirable by DOT/PF this year. Passenger enplanement statistics mean the number of passengers arriving or departing at a given airport, but does not include a list of passenger names.

Section 2: This section clarifies existing law by specifically authorizing the department (Commerce) to prevent a commercial carrier from flying passengers for hire on a plane which has not been insured for liability at the State minimum level.

Section 3: This section increases the penalties for flying passengers for hire without obtaining the minimum required level of liability insurance.

Section 4: This allows the department (Commerce) to issue a single certificate of insurance for a fleet of aircraft instead of for each individual aircraft. Many air carriers obtain a fleet insurance policy rather than individual plane policies. This would simplify the existing administrative procedure.

Section 5: Maintains the existing fee for a single certificate of insurance and establishes the fee for a fleet certificate. It also allows carriers to display certificates of insurance at the counter, gate, or other location rather than on the aircraft itself.

Section 6: This specifically authorizes the department (Commerce) to issue a stop use order for plane carrying passengers for hire when the carrier has not obtained a certificate of insurance from the State.

Section 7: This section establishes a penalty for the violation described in Section 6. It is a lesser penalty than for violations under Section 3, as flying without a State certificate of insurance is not as serious a violation as flying without liability insurance at the established minimum level.

Section 8: Adds helicopters to the aircraft covered under this bill. This was an oversight in 1985 when this statute was passed.

Section 9: Repeals existing 42.30.225(c) which is superseded by Sections 2 and 6 in this bill

Repeals existing 42.30.225(d) which was a transitional provision of the 1985 statute, and is no longer meaningful.

March~~MAR~~,1 0987

SUBJECT: Certificate of compliance requirements for air carriers (Work Order 5-0472)

TO: Representative Bette Cato

FROM: George Utermohle GU
Legislative Counsel

Enclosed is a draft bill incorporating SCS CSHB 611(Fin) (Fourteenth Legislature) and additional proposed changes to AS 42.30.200 and 42.30.225.

The draft bill deletes the amendments to 42.30.200(c) and 42.30.225(e) contained in SCS CSHB 611(Fin) allowing the department to authorize its employees to investigate compliance with each of these sections. These amendments are not necessary because the authority to enforce these sections includes the authority to conduct investigations necessary for enforcement purposes.

Similarly the draft bill does not contain language authorizing department employees to seek the aid of state troopers in enforcing AS 42.30.220 and AS 42.30.225. The department already has the authority to request assistance from the state troopers in enforcing these statutes by virtue of the department's responsibility for enforcement and the authority of the state troopers to investigate violations of criminal laws under AS 18.65.080.

If I have overlooked a compelling reason for these provisions please contact me, so that I can address those issues.

BILL ANALYSIS OF

HOUSE BILL NO. 209

"An Act relating to establishment of a port authority by a municipality."

The legislation would be added to Title 29, Chapter 35 of the Alaska Statutes.

Under Section 29.35.600, the Port Authority Commission may be established with the adoption of an ordinance by the governing body. Also include in this section are the procedures for the nomination and ensuing election of commissioners.

Under Section 29.35.610, the Port Authority is supervised and controlled by the Port Commission. This section explains the term of a Port Commissioner and allows for the adoption of meeting rules.

Under Section 29.35.620, the Port Commission may employ a director, retain legal counsel, and employ other personnel deemed necessary.

Under Section 29.35.630, the powers of the Port Commission are described including economic analysis, acquisition of property, development of plans; entering into contracts, raise revenues, lease property, and accept grants and donations.

Under Section 29.35.650, the financing of the Port Authority is explained. Finances may be obtained through donations, borrowed money, revenues from any property, building, or facility under its control, and the issuance of revenue bonds (these revenue bonds are not a debt of the municipality or state).

Under Section 29.35.660, when the Port Commission proposes a project using revenue bonds, a Development Plan is to be prepared and submitted to the governing body. This section explains what a Development Plan must contain.

Under Section 29.35.670, the procedure for the approval of a Development Plan from the Port Commission is covered.

Under Section 29.35.680, the budget shall be prepared by the Director of the Port Authority with approval by the governing body. The budget may not include money of the municipality except if authoized by the governing body.

RE: SB 168 - "An Act relating to establishment of a port authority by a municipality."

SB 168 is designed to enable municipalities to to establish their own port authority commissions. The bill's goal is to create a mechanism that municipalities can use to focus on water related economic development.

Alaska currently has a port facilities and development act, however, it stipulates that funding must be appropriated by the state. SB 168 would allow funds to be raised by any legal means approved by the appropriate city council or borough assembly.

The bill provides that a municipality's port authority commission would be established by ordinance and three commissioner's elected. The commission would do its own budget and long range planning. The bill is based on legislation from the State of Washington.

This packet contains a memo from the sponsor and his sectional analysis, a memo from the Senate Advisory Council, and the existing state law on ports.

March 24, 1986

Senate Committee on
Community and Regional Affairs

Senator Arliss Sturgulewski, Chairman

Presentation by
Senator Jim Duncan
Sponsor of SB 168

MADAME CHAIRMAN, ALASKA IS NOT UTILIZING, ONE OF IT GREATEST ECONOMICAL POTENTIALS, WATERFRONT DEVELOPMENT. THE PURPOSE FOR CREATING THIS LEGISLATION IS TO PROVIDE AN IMPETUS TO THOSE COMMUNITIES THAT STAND TO GAIN, ECONOMICALLY, THROUGH THE USE OF THEIR WATERFRONTS. THIS BILL IS THE FRAMEWORK TO ESTABLISH PORT AUTHORITIES THAT ARE, IN A SENSE, SEMI-INDEPENDENT.

CURRENTLY, THERE IS A STATUTE WHICH ALLOWS THE STATE OF ALASKA TO FUNNEL MONEY THROUGH TO COMMUNITIES FOR PORT FACILITIES AND DEVELOPMENT (AS 30.15). HOWEVER, IT IS THE INTENTION OF THIS BILL NOT TO HAVE THE STATE INVOLVED, FISCALLY. RATHER, IT IS THE INTENTION OF THIS BILL TO SET UP THESE PORT AUTHORITIES WITHIN THE LOCAL GOVERNING BODY BUT THAT THEY OPERATE IN A SEMI-INDEPENDENT NATURE.

UNDER THIS LEGISLATION, THE PORT AUTHORITY IS SUPERVISED AND CONTROLLED BY THE PORT COMMISSION. THE PORT COMMISSION MAY HAVE A DIRECTOR, RETAIN LEGAL COUNSEL, AND EMPLOY OTHER PERSONNEL AS IT SEES FIT TO DO SO. THE PORT COMMISSION CREATES ITS OWN BUDGET AND OBTAINS FUNDS FOR THE BUDGET THROUGH VARIOUS METHODS INCLUDING, BUT NOT LIMITED TO, RECURRING REVENUES, ISSUANCE OF REVENUE BONDS, DONATIIONS, AND BORROWED MONEY.

ALASKA FACES TREMENDOUS ECONOMIC POTENTIAL THROUGH ITS PORT DEVELOPMENT. WITH THIS LEGISLATION, THE GROUNDWORK CAN BE LAID IN THE EFFORT TO GREATLY ENHANCE PORT DEVELOPMENT AROUND THE STATE. THE GOVERNOR HAS ALREADY STATED THAT INTERNATIONAL TRADE IS A HIGH PRIORITY IN HIS ECONOMICAL DEVELOPMENT PLAN. WITH AN AGGRESSIVE PORT DEVELOPMENT PLAN, BY THE VARIOUS PORT AUTHORITIES, THROUGH THE BACKING OF THIS LEGISLATION, ALASKA CAN BEGIN TO REALIZE THE ECONOMIC POTENTIAL OF ITS WATERFRONTS.

WE HAVE RECEIVED FAVORABLE COMMENTS FROM SEVERAL COMMUNITIES ALREADY. THE COMMENTS HAVE BEEN PRIMARILY SEEKING ASSURANCE THAT THOSE COMMUNITIES ARE INCLUDED IN THE BILL BECAUSE THEY SEE POSITIVE THINGS WITH IT.

MANY CITIES CAN NOW ESTABLISH SOME FORM OF PORT SYSTEM BUT THEY ARE ONLY IN AN ADVISORY CAPACITY AND ITS MEMBERS ARE APPOINTED BY THE LOCAL GOVERNING BODY. SB 168 DIFFERS IN THAT THE COMMISSIONERS ARE ELECTED DURING MUNICIPAL ELECTIONS. THIS ALLOWS THE COMMISSION TO BE SET UP AS A SUBDIVISION OF THE MUNICIPALITY, SIMILAR TO A SCHOOL DISTRICT. THE COMMISSION WILL BE ESTABLISHED BY ORDINANCE AND THREE COMMISSIONERS WILL BE ELECTED BY THE PEOPLE THEREBY GIVING THE PEOPLE THE STRONGEST VOICE IN A PORT'S DEVELOPMENT.

THIS LEGISLATION HAS BEEN MODELLED AFTER THE STATE OF WASHINGTON. THE BILL IS IN ITS SIMPLEST FORM AT THIS TIME, HOWEVER WE MUST WORK TO STRENGTHEN OUR WATERFRONT DEVELOPMENT AND CREATE A BILL THAT'S IN THE BEST INTEREST OF ALASKA. THIS BILL IS MERELY A STARTING POINT WITH THE INTENTION THAT A STRONG PIECE OF LEGISLATION WILL BE DEVELOPED THROUGH OUR LEGISLATIVE PROCESS. THANK YOU.

MEMORANDUM

TO: Senator Duncan
Alaska State Senate

ATTN: Ron Whitcraft

FROM: Lee Ann Lucas
Senate Advisory Council

DATE: February 18, 1987

RE: Port Authorities

Referencing your request for information on the organization, administration and authorities of various port authorities, I offer the following.

Today, there are 105 state, local, county or independent public seaports in the United States and its territories, 76 of them Corporate members of the American Association of Port Authorities (AAPA). Historically, port development and operation in the United States has been a local or state function. There is considerable variety in the structure, powers and the purpose of port authorities in the United States.

I contacted Mr. Rexford Sherman, Director for Research and Information Services with the AAPA. Mr. Sherman provided a copy of a report entitled "Public Port Agencies In The United States and Canada" (copy attached) which gives an overview of port authorities.

Also attached is a listing of the AAPA Corporate Member Ports. As you can see, the complexity becomes evident in looking at just the port authorities that comprise the U.S. corporate membership of the APPA. Some are administrative divisions of state government. Others are in effect public corporations set up under state law and directed to develop specific port areas in the public interest. Some are state port authorities with responsibility for the several ports that may lie in a given state. In other instances, states have created port administrations that are basically political subdivisions of the state, frequently called navigation districts, which like other such subdivisions (e.g., school districts or

townships) have the power to tax and float bonds. In addition there are county and municipal port departments and, to further complicate the picture, bi-state port authorities with jurisdictions covering two states.

In the North Atlantic, the preference appears to have been for public corporations, state port administrations and bi-state ports. State port authorities are most common in the South Atlantic. Independent navigation districts are particularly popular in the Gulf and Pacific Northwest, while municipal port departments are favored in California.

The variety of port structure types and their distribution among the various U.S. port ranges is indicated in the attached chart. For example, the Massachusetts Port Authority is a autonomous public corporation set up through an act of the legislature which has a seven-member Board of Directors appointed by the Governor. The Port of Bellingham is defined as an independent navigation district which has three elected Commissioners. Attached are the enabling acts for the State of Washington and the State of Massachusetts.

Most U.S. port authorities (though there are exceptions) are governed by a board of commissioners (or directors) which oversee port policy and operations as custodians of the public interest. But among the 80 U.S. member port authorities, most boards (48) are appointed, usually by a governor (sometimes with the advice and consent of the state legislature), mayor, city council or county commissioners. Twenty-two boards, however, are elected by local voters. Nine have no board whatsoever. Elected boards are most common among independent navigation districts. On the other hand, state port authorities and other state-chartered port corporations are generally appointive. Typically, state port departments do not have a board of any sort.

After you have had a chance to review the attached materials, please call me and I will collect the enabling acts, charters and information you feel may be useful in formulating similar legislation.

JUNEAU --- LEGISLATION WAS INTRODUCED TODAY (FRIDAY), IN THE ALASKA SENATE, THAT WOULD GIVE AN ECONOMIC BOOST TO MANY COMMUNITIES IN THE STATE. THE MEASURE WOULD ENABLE LOCAL GOVERNING BODIES TO ESTABLISH THEIR OWN PORT AUTHORITY COMMISSIONS AND THEREBY GIVE THEM THE ABILITY TO FOCUS SOME ATTENTION ON WATERFRONT DEVELOPMENT.

THE BILL'S AUTHOR, SENATOR JIM DUNCAN OF JUNEAU, STATED THAT ALASKA HAS A GREAT POTENTIAL FOR WATERFRONT DEVELOPMENT. ALTHOUGH ALASKA HAS A PORT FACILITIES AND DEVELOPMENT ACT IN PLACE NOW, IT STIPULATES THAT FUNDS ARE APPROPRIATED BY THE STATE. SENATE BILL ONE SIXTY-EIGHT ALLOWS PORT DEVELOPMENT DOLLARS TO BE RAISED HOWEVER THE COMMISSION SEES FIT WHETHER BY REVENUE BONDS, WORKING WITH THE PRIVATE SECTOR, OR WHATEVER MECHANISM IS SUITABLE FOR A COMMUNITY.

SENATOR DUNCAN SAID, "THE BILL IS AN ATTEMPT TO STRENGTHEN OUR ABILITY IN THIS STATE TO DEVELOP OUR WATERFRONT AREAS AND TO BRING MORE ECONOMIC ACTIVITY INTO THE COMMUNITIES OF ALASKA."

S-B ONE SIXTY-EIGHT PROVIDES THAT A COMMUNITY'S PORT AUTHORITY COMMISSION WOULD BE ESTABLISHED BY ORDINANCE AND THAT THREE COMMISSIONERS ARE ELECTED TO SERVE THE BODY. THE COMMISSION

WOULD ALSO CREATE ITS BUDGET AND DO ITS OWN LONG RANGE PLANNING, ALL DESIGNED TO PROMOTE THE ECONOMIC GROWTH OF A COMMUNITY.

"IT IS NOT AN ATTEMPT TO BUILD ANOTHER BUREAUCRACY AND WE'RE NOT ASKING FOR ANY STATE MONEY," DUNCAN ADDED. "IT'S PURELY UP TO LOCAL COMMUNITIES TO MAKE THE DECISION AS TO WHETHER THEY WANT TO FOCUS IN ON THAT TYPE OF DEVELOPMENT."

Representative Ronald L. Larson
District 16B

April 23, 1987

House Committee on
Community and Regional Affairs

Representative Henry Springer, Chairman

Testimony on House Bill No. 209

Mr. Chairman, Alaska is not developing one of its greatest resources to near the level it might. I am speaking of Alaska's waterfront. In this time of economic crisis, in this time when economic development is being encouraged, we must find ways to develop that great potential. I believe HB 209 will do that very thing. The legislation would allow local governing bodies to establish, by ordinance, their own port authority.

Currently, there is a Port Facilities and Development Act in statute (at AS 30.15); however, that Act calls for development through state appropriated funds. HB 209 would take the state out of waterfront development and would provide an impetus to communities to develop their waterfronts independent of state monies.

Each port authority would be set up as a subdivision of the local governing body, similar to a school district. An authority would be allowed to employ an executive director and staff and to retain legal counsel. It could sue or be sued in state court, and it would be empowered to complete economic analysis, acquire and develop land and facilities, develop and implement long range plans, enter into contracts, raise revenues, and accept grants and donations. A port authority would also have the power of eminent domain. Finally, an authority could enter into agreements with other port authorities for sharing development or management of land and facilities within the jurisdiction of the commissions.

Let me clarify the relationship between a port authority and the local governing body. First of all, for an authority to be formed, the governing body would hold public hearing on a proposed ordinance establishing the authority and its powers. After public hearing, if the governing body intended to proceed with the establishment of the authority, it would hold a vote on the proposed ordinance and at the same time the election of port commissioners. After an authority was established, and after it decided to finance a project in whole or in part with revenue bonds, it would submit a development plan to the governing body. Upon receipt of the development plan, the governing body would hold public hearing on the plan and subsequently by ordinance approve or reject the plan. In short, the port authority would be a semi-independent entity of the local governing body.

It is my belief that HB 209 will lay the groundwork for a greatly enhanced effort to develop waterfronts around the state and to bring more economic activity into several communities of the state.

Let me conclude by encouraging the committee to adopt the amendments proposed by Representative Hudson. His proposed amendments do three primary things: First, they clean up some drafting errors. Secondly, and more importantly, they would allow city and towns such as Homer, Seward, and Kodiak to develop port authorities independent of the borough or municipality to which they belong. Third, they would amend Sec. 29.35.660 to require an economic analysis and justification for the project as well as a description of the expected benefits and other effects of the project to be included in the development plan.

For the sake of economic development in the state, I urge this committee to examine this legislation closely, make the changes it deems necessary, and pass it on to the House Committee on Transportation. I would add that the bill is supported by several communities around the state, and, as you will notice in your packet, by the Department of Community and Regional Affairs and Department of Commerce and Economic Development.

Thank you, and I will answer whatever questions you may have.

(7) HB 209

Position Paper

48A

BILL NO: HB 209

APPROVED: MARK S. HICKEY
COMMISSIONER

TITLE: An Act Relating to Establishment of a Port Authority by a Municipality.

DATE: April 22, 1987

The Department of Transportation and Public Facilities feels that authorization of port authorities under HB 209 is mainly a local government issue. It basically allows a local government to operate its port through an authority instead of directly by the municipal government. Therefore, we do not have a position on this bill.

There are cases of cities within boroughs which presently operate ports. As written the bill would preclude allowing them to create port authorities. This discrimination among municipalities appears to be unjustified.

For further information call Susan Fleischhauer at 465-3900.

POSITION PAPER

RE: House Bill 209 - "An Act relating to establishment of a port authority by a municipality."

SPONSOR: Representative Larson

Program Effects of Bill

House Bill 209 proposes to amend AS 29.35 as follows:

Section 29.35.600 would allow the governing body of a borough, unified municipality or city in the unorganized borough to establish a port authority by ordinance, upon approval of the voters of the municipality.

Section 29.35.610 would establish an elected three member port commission and Section 29.35.620 would allow for staffing of the commission.

Section 29.35.630 would establish the powers of the port commission. These powers would include planning and implementation of plans for development in waterways or in waterfront areas, appropriate contracting, property management, and the acceptance of grants.

Section 29.35.640 would allow the municipality to exercise the powers of eminent domain for the purpose of transferring property to the port authority.

Section 29.35.650 sets out how the port authority would be financed.

Section 29.35.660 would require the port commission to prepare a development plan, to be submitted to the governing body, when a project is to be financed by revenue bonds. The plan must be approved or rejected by ordinance.

Section 29.35.670 would instruct the governing body to hold a public hearing on the proposed development plan and adopt, modify, or reject the plan by ordinance.

Section 29.35.680 would require the port authority director to prepare and submit the budget to the governing body for approval before it is adopted by the port commission.

Section 29.35.690 would allow the port authority to be dissolved by an ordinance approved by the voters. Remaining property and assets after obligations have been fulfilled would belong to the municipality.

Comments

The Department supports this bill in concept because it provides additional flexibility to municipalities for port operations without limiting the ultimate control of those municipalities. The bill would allow a municipality to establish a local port authority following approval by voters within the municipality. The port authority could have a greater degree of management autonomy than currently allowed. The authority would have the ability to plan for and manage its own operations and to finance these operations through user fees and revenue funds. However, unlike the case in other states such as Washington, the municipality would continue to have ultimate control over any port authority established.

The Department suggests several minor modifications to the bill as follows: Section 29.35.600(a), page 1, lines 15 and 16 should be amended to read: "The authority possesses all powers specified in AS 29.35.600-29.35.690 unless these powers are restricted in the ordinance under which it is formed. The authority may be granted additional powers in the enabling ordinance." This revision will provide a greater amount of flexibility to municipalties.

In Section 29.35.600(b), page 1, line 22, the Department suggests inserting: "Amendments to the ordinance are also subject to voter approval." as the last sentence of that paragraph.

In Section 29.35.630, page 3, lines 17 through 20, the authority to acquire and convey, or otherwise dispose of land and other property should be subject to approval by the local governing body either through approval of the port plan or by specific action.

David G. Hoffman, Commissioner

(4) HB 209

(3) "cost" includes the cost of acquisition or construction of all or any part of transportation facilities and of all or any property, rights, easements and franchises considered by an authority to be necessary, useful, or convenient, including without limitation reimbursements to the authority or any other person of money expended for the purposes of the authority and interest or discount on bonds to finance those expenses, engineering and inspection costs and legal expenses, the cost of financial, professional and other advice, and the cost of issuance of bonds;

(4) "district" means the area within the boundaries of an authority;

(5) "person" includes a corporation, company, partnership, firm, association, organization, business trust, society, state or agency or subdivision of the state, municipality of the state, or an authority, as well as a natural person;

(6) "transportation facilities", or "facilities", or "projects" means harbor, port, shipping and transportation facilities of all kinds, including harbors, channels, turning basins, anchorage areas, jetties, breakwaters, waterways, canals, locks, tidal basins, wharves, docks, piers, slips, bulkheads, public landings, warehouses, terminals, refrigerating and cold storage plants, rolling stock, car ferries, tugs, boats, conveyors, tunnels, bridges, highways, roads and railroads, and appliances of all kinds for the handling, storage, inspection and transportation of freight and natural resource products; it also includes all property, rights, easements and franchises relative to a facility and necessary or convenient for the acquisition, construction or operation of the facility, but does not include airport facilities. 30.	Limitation on grants	70.	Definitions
40.	Disposition of state land for port facilities development projects	80.	Short title

Sec. 30.15.010. State grants for port facilities construction. To the extent funds are appropriated by the legislature, or from the proceeds from the sale of bonds, the state may make grants to municipalities to finance a portion of the cost of constructing local, regional or state port facilities. The state shall participate only in those projects approved by the governor on recommendation of the commissioner. (§ 1 ch 85 SLA 1974; am E.O. No. 39, § 11 (1977))

Sec. 30.15.020. Criteria for establishing eligibility. (a) Before a grant may be awarded under this chapter, the commissioner shall determine that

(1) the grant is for a feasible project;

(2) the project is endorsed by resolution of the governing body of the sponsoring municipality on its own behalf, or on behalf of a service area in an organized borough if a service area is established to finance and construct port facilities and operate and maintain them once constructed; and

(3) the municipality can clearly demonstrate its ability to finance the local share of project costs.

(b) A grant may not be awarded under this chapter for a port facility development project until a study of its feasibility is conducted and submitted with the application for the grant. The project also must be justifiable on the basis of public convenience and necessity. The study shall be conducted by consultants, engineers or other technical experts, who may be officers or employees of the municipality in making application for a grant. (§ 1 ch 85 SLA 1974; am E.O. No. 39, § 11 (1977))

Sec. 30.15.030. Limitation on grants. Grants for the development of port facilities may not exceed

(1) 90 per cent of project costs for municipalities under 5,000 population;

(2) 80 per cent of project costs for municipalities 5,000 population and over. (§ 1 ch 85 SLA 1974)

Sec. 30.15.040. Disposition of state land for port facilities development projects. The division of lands in the Department of Natural Resources, subject to the applicable provisions of AS 38.05 and 38.10, may convey title or other interests in state land, provide for the exchange of state land, or make other arrangements with respect to state land that may be necessary to complete a project for which a state grant is approved under this chapter. (§ 1 ch 85 SLA 1974)

Sec. 30.15.050. Combined port and ferry terminal facilities. A grant may be awarded under this chapter for a port facilities development project that includes, or combines, state ferry terminal facilities as a part of the project. However, the state shall pay the proportionate projects costs attributable to the ferry terminal including but not limited to vehicle staging areas, transfer spans and aprons, passenger terminal facilities and offices, docks and other docking facilities for ferry vessels. (§ 1 ch 85 SLA 1974)

Sec. 30.15.060. Regulations. The commissioner shall adopt regulations under the Administrative Procedure Act (AS 44.62) that the commissioner considers necessary to carry out the provisions of this chapter. (§ 1 ch 85 SLA 1974; am E.O. No. 39, § 11 (1977))

Sec. 30.15.070. Definitions. In this chapter

(1) "commissioner" means commissioner of transportation and public facilities;

(2) "department" means Department of Transportation and Public Facilities;

(3) "municipality" means a home rule or general law borough or city including but not limited to a unified municipality organized under AS 29.68;

(4) "port facilities" means docks, wharves, bulkheads, seawalls, landfills, warehouses, staging areas, transfer spans and aprons, lifting equipment and similar structures together with the necessary equipment and facilities required to accommodate waterborne commerce and shipping, including but not limited to combined port and ferry terminal facilities;

(5) "project costs" means the cost of financing or borrowing, site acquisition and rights-of-way, planning, engineering and designing, construction, equipment acquisition and installation, but does not include the cost of operation or maintenance of the port facilities once constructed or the cost of feasibility studies required in making application for a grant under this chapter. (§ 1 ch 85 SLA 1974; am E.O. No. 39, § 11 (1977))

Sec. 30.15.080. Short title. This chapter may be cited as the Port Facilities Development Act. (§ 1 ch 85 SLA 1974)

Chapter 20. Regulation of Tank Vessel Traffic.

[Repealed, § 11 ch 116 SLA 1980.]

Chapter 25. Oil Terminal Facilities: Transfer of Crude Oil, Refined Petroleum Products or Their By-Products.

[Repealed, § 11 ch 116 SLA 1980.]

BOROUGH ATTORNEY'S OFFICE

April 30, 1987

Representative Heinrich Springer
Chairman, House Community and Regional
Affairs Committee
P. O. Box V
Juneau, AK 99811

Attention: Terry

Subject: House Bill 209 (port authorities)

Dear Chairman Springer:

Enclosed is language which could be added to the statute in lieu of what is proposed in House Bill 209. This is the "two liner" bill I suggested during your hearing on House Bill 209 would be more appropriate. I would have gotten this to you sooner but felt it was essential to have the comments of our bond attorney before submitting it to you. Unfortunately, he was out of town until this morning.

You will note that the first section sets out the purpose as being to confirm the authority of municipalities to do what I believe they already have the power to do; that is, to form commissions, boards, authorities and public corporations to carry out any of the functions or duties they may have under a power the municipalities have assumed. I believe this section is necessary so that doubt is not cast on the validity of any port authority, hospital board or other entity that has already been created by a municipality. That doubt arises when the legislature adopts a bill which purports to give municipalities authority to do something. Courts can, and sometimes do, interpret such legislative action as an indication by the legislature that the legislature did not believe that the municipalities had such a power and that it was necessary to grant that power to them by statute. Such an interpretation can cast doubts on the validity of actions taken by municipalities prior to the grant. The first section of the bill would eliminate the basis for that doubt.

You will note in section 2 that the language is no longer restricted to port authorities. This broadening also arises out of concern for another rule of statutory interpretation used by the courts. There is a lovely latin litany that lawyers use to state this rule but freely translated it means that where the

legislature has addressed one subject, it is presumed that the legislature has excluded all other subjects that might logically have been addressed at the same time. The problem this rule creates for House Bill 209 is that if the legislature authorizes municipalities to create port authorities for the specific purpose of owning and operating facilities related to waterborne commerce, the legislature would be deemed to have denied the power of municipalities to operate airports or other transportation facilities through the mechanism of an authority. Further, a court could also interpret such legislative action as denying to municipalities the ability to create authorities for other reasons; for example, a hospital authority (or anything that looks like a hospital authority), a housing authority, a sanitation authority for the purpose of providing sewage collection and treatment, etc. Because municipalities already have the power to create such entities, it would be a most unfortunate situation if, in an effort to assist those who wanted clarification of their ability to establish a port authority the legislature inadvertently created grave doubts about the authority of municipalities to create authorities or similar entities for the operation of other municipal enterprises. It is for this reason that the language has been broadened to make it clear that municipalities can use any of a variety of public entities to exercise any of its powers. As noted above, the language I am proposing has been reviewed by our bond attorney and I have incorporated in it the suggestions he gave me. He agrees that this approach is the best approach to clarifying the ability of municipalities to establish port authorities without at the same time creating other legal problems or questions.

May I reemphasize that the municipal attorneys with whom I have discussed the question agree that Alaskan municipalities clearly (or at least probably) currently have the power to use any one of the entities or mechanisms set out in the substitute language to perform municipal functions. I think a quick inquiry of your Legislative Affairs Legal Services office would confirm this interpretation. Even so, I would have to agree that there could be a question in the minds of some persons over whether Alaskan municipalities have this authority. Because authorities and similar entities are often formed for the purpose of financing municipal ventures, we should remove any question as to the authority of municipalities to form such entities. The adoption of the substitute language should remove all questions about this authority and should facilitate the ability of such entities to obtain needed financing. For that reason I would urge the committee to adopt and pass out with a "do pass" recommendation the substitute language enclosed.

If the committee does not adopt the substitute language, there are areas of House Bill 209 that should receive very careful consideration. The major area is the areawide/nonareawide/assumption of powers question to which I alluded in my testimony before the committee. Under Title 29, first and second class boroughs must adopt an ordinance to assume

a power. In addition, a second class borough (with some exceptions) may not exercise a new power until it has been approved by the voters. If the power is to be exercised in a second class borough in the area outside cities, the voters in that area must vote on the power assumption question. If the power is to be exercised in a service area in a second class borough, the persons within the proposed service area vote on the question. A simple majority vote in these two cases is all that is required. On the other hand, if a new power is to be exercised on an areawide basis in either a first or second class borough, the power assumption question must be voted on by everyone within the borough. However, under A.S. 29.35.330(c) the votes must be tabulated in two separate classifications. One is all the votes cast in all cities within the borough and the other consists of all votes cast in the borough area outside the cities. There must be a majority favoring the areawide assumption of the power in both classifications. Once a borough has assumed an areawide power, that power may not be exercised by a city and all assets of the city that may previously have been devoted to the areawide function are transferred to the borough.

With this procedure for assuming areawide and nonareawide powers in mind, please examine the voting procedure proposed in House Bill 209. Note that while a city within a borough may not form a port authority, there is nothing that clearly states that a favorable vote creates an areawide power in the borough. Also, if it was intended to create an areawide power, note that there is no requirement for a dual majority. There is nothing illegal about not requiring a dual majority in this particular case, but it is a policy question to which the legislature should give some conscious consideration. If the legislature intends that the borough assume the port authority power on an areawide basis, what happens to the port-type property of a city that was exercising port-type powers prior to the power becoming areawide? Does this mean that the cities of Kenai and Homer must turn over to the borough all or a portion of their small boat harbors? Another matter that could be clarified is whether a borough may even form an authority under HB 209 if it has not already assumed the necessary port powers; that is, does this bill merely authorize a municipaly to use the port authority mechanism to exercise powers it already has, or does the voter approval not only authorize the creation of a port authority but also convey to the municipality the new port powers? These are all questions that need not be answered if the substitute language is used. Under the substitute language, a city or borough could assume port powers in the same manner as is already provided under Title 29 and could exercise those powers in the way the council or assembly determines is most appropriate for their own particular municipality. Why, for instance, must the authority have a commission rather than a board of directors? Why must the commissioners be elected as opposed to appointed? In fact, it may be far more appropriate to have an appointed commission if the legislative body wants to have a little more control over those who are supposed to be implementing the policies of the

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5156 HTRA HB 209 - HB 213 (FILE 1)

728

council or assembly. Whether the commission is elected or appointed should be left to the municipality. Also, why should the director of the authority be hired only by the commission. The authority may be much more responsive to municipal policies if the governing body has a hand in selecting the director. Again, these sort of things ought to be left to each municipality to work out what best suits its situation.

I can certainly understand the policy behind requiring a well thought out development plan before a municipality attempts to obtain project financing. However, as a practical matter, this financing will probably most often be revenue financing which means that those who market the bonds are going to have to be convinced that the project will produce sufficient revenues to operate the facility and pay the debt service. It seems highly unlikely that a port authority or municipality seeking to issue revenue bonds is going to find any interested buyers unless it does have a well thought out plan for the facility. Therefore, the statutory requirement is probably superfluous.

Again, I believe that the proposed substitute language not only clarifies the authority question that House Bill 209 would resolve, it also avoids several unfortunate legal consequences that would occur if House Bill 209 is adopted. In addition, the substitute language would leave municipalities with the greater flexibility they now have in shaping solutions at the local level to respond to local concerns.

If you, your committee or staff members have any questions, please do not hesitate to call me at 745-9678.

Sincerely,

Lee Sharp

For an Act entitled: "An Act relating to the exercise of municipal powers and functions through authorities and other entities."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. PURPOSE. It is the purpose of this Act to confirm the authority of municipalities to exercise functions and powers through authorities and other entities.

* Sec. 2. AS 29.35 is amended by adding a new section reading:

Sec. 29.35.150. EXERCISE OF POWERS THROUGH MUNICIPAL ENTITIES. (a) Except as may be otherwise required by law, a municipality may exercise its powers and functions through any entity authorized by the legislative body; such entities include, but are not limited to, commissions, boards of directors, agencies, and independent public corporations, enterprises and authorities that are established by the governing body, and other municipalities.

(b) The governing body may grant to an entity such powers as may be necessary or reasonable in the discharge of the duties of the entity, including the power to issue the bonds and other indebtedness of the entity; except, the power to acquire property through eminent domain and to

levy taxes and special assessments may not be granted.

(11) HB 209

Alaska State Legislature

House of Representatives

Committee on
Community & Regional Affairs

Pouch V
State Capitol
Juneau, Alaska 99811
(907) 465-4833

To: House Community and Regional Affairs Committee members

From: Committee Staff

Date: May 1, 1987

Subject: Issues raised regarding HB 209

Whether such legislation is necessary or whether municipalities already possess the statutory authority to create port authorities:

Current statutes do permit municipalities to create port authorities. This legislation will (a) inform communities of such authority, (b) mollify bonding agents, (c) enable more creative financing, (c) provide for more singular and directed management of port authorities, and (d) offer a model to municipalities.

Simplification of the bill by (a) eliminating boilerplate language, or (b) drafting a "2 line enabling statute:

See above. Discussion with the bill drafter indicates that the bill sponsor intended language to accomplish those purposes.

Whether the language of the bill is restrictive or permissive in nature.

Page 1, lines 14, 15, and 16 insert permissive language into what ordinarily would be a specific language (and restrictively interpreted) bill.

Whether municipalities with existing agreements with the State for port facilities would be constrained in some way from forming a port authority.

Current capital investments and facilities are the subject of contractual arrangements between municipalities and the State. These contractual agreements can be renegotiated or title can be ceded by the State to the port authority.

Whether the power authorized in this bill would be an areawide or non-areawide power in a borough.

Areawide.

CS FOR HOUSE BILL NO. 209 (C&RA)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to establishment of a port authority by a municipality."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.35 is amended by adding new sections to read:

ARTICLE 9. PORT AUTHORITIES.

Sec. 29.35.600. ESTABLISHMENT OF AUTHORITY. (a) Notwithstanding other provisions of law, a borough, unified municipality, home rule city, or first class city may establish a port authority in accordance with AS 29.35.600 - 29.35.690. An authority established by a borough under AS 29.35.600 - 29.35.690 may exercise its power in a second class city located within the borough but may not exercise its power in a home rule or first class city unless the exercise of the power is approved by resolution of the council. The authority shall be a corporate public body that may sue and be sued in any court of the state. The authority possesses all powers specified in the ordinance under which it is formed in addition to those enumerated in AS 29.35.600 - 29.35.690.

(b) In a resolution proposing formation of a port authority, the governing body shall set a date for the holding of a public hearing on the adoption of a proposed ordinance establishing the authority and designating the powers of the authority. After the public hearing, if the governing body intends to proceed with the establishment of the authority, it must do so by ordinance subject to voter approval.

(c) At the time of adopting an ordinance proposing formation of

a port authority, the governing body shall issue a call for nomination of port commissioners, specifying the filing deadline and procedure for making nominations. The election of the initial members of the port commission shall take place at the same time as the election on the question of forming a port authority. If at least one candidate for each of the three commission seats is not nominated, the proposal to form a port authority is void and no election on the question shall be held.

Sec. 29.35.610. PORT COMMISSION. (a) A port authority formed under AS 29.35.600 - 29.35.690 shall be under the supervision and control of a port commission consisting of three elected members. The term of a member is six years, except that one initial member shall serve a term of four years, and one initial member shall serve a term of two years, to be determined by lot. Commission members may be reelected.

(b) A vacancy on the commission shall be filled by appointment by the mayor. An appointed member serves for the remainder of the term to which appointed. On notice and an opportunity to be heard, a member of the commission may be removed for cause by the governing body. Removal of a member is subject to review by the superior court.

(c) The commission shall adopt rules governing its procedure and the holding of regular meetings. Special meetings may be held when called in the manner provided in the rules of the commission.

Sec. 29.35.620. EXECUTIVE DIRECTOR AND EMPLOYEES. (a) The port commission may employ and fix the compensation of a director, subject to the approval of the governing body of the municipality. The director serves at the pleasure of the commission. A member of the commission is not eligible to hold the position of director.

(b) The commission may retain legal counsel to advise the

commission in the proper performance of its duties. The legal counsel shall represent the commission in actions brought by or against the commission.

(c) The commission may employ other personnel considered necessary by the commission.

(d) The employees of the commission may participate in municipal retirement and insurance programs of the municipality.

Sec. 29.35.630. POWERS. The port commission may

(1) study and analyze the effect of economic changes and growth on the waterfront and waterways;

(2) acquire, construct, repair, renovate, and manage sea walls, jetties, piers, wharves, docks, boat landings, and other harbor improvements, warehouses, cold storage plants, grain bins, bunkers, ferries, bridges, and other facilities for the handling, storing, and transporting of freight and passengers, or the processing of seafood, agricultural products, and other goods;

(3) develop and implement long-range plans, in cooperation with the governing body, designed to promote the economic growth of the municipality and the growth and efficiency of waterfront development;

(4) implement any plan of development for waterways or waterfront areas in accordance with the powers of the port authority under AS 29.35.600 - 29.35.690 or the ordinance under which the authority is established;

(5) make and enter into contracts necessary or incidental to the exercise of its powers and the performance of its duties, including agreements with other port commissions providing for shared development or management of facilities located within the jurisdiction of the commissions;

(6) acquire and convey, or otherwise dispose of, land and other property;

(7) fix, charge, and collect fees, rents, and charges for the use of a building or property under its control and pledge the fees, rents, and charges for the payment of revenue bonds issued by the authority;

(8) lease any buildings, facilities, or properties under its control;

(9) accept grants and donations from any public or private source.

Sec. 29.35.640. EMINENT DOMAIN. A municipality, other than a second class city, may take private property under AS 09.55.240 - 09.55.460 for the purpose of transfer to a port authority formed under AS 29.35.600 - 29.35.690, and may transfer the property to the authority on terms and conditions it considers appropriate. The taking, transfer, and use shall be considered necessary for public purposes and for the benefit of the public.

Sec. 29.35.650. FINANCING. (a) The activities of a port authority formed under AS 29.35.600 - 29.35.690 shall be financed from one or more of the following sources:

(1) donations to the authority for the performance of its functions;

(2) money borrowed and to be repaid;

(3) revenue from any property, building, or facility owned, leased, licensed, or operated by the authority or under its control, subject to the limitations imposed upon the authority by trusts or other agreements or by the municipality;

(4) money obtained from other sources approved by the governing body of the municipality.

(b) Upon approval of a development plan under AS 29.35.670, the authority may borrow money and issue negotiable revenue bonds as provided for a municipality under AS 29.47. Revenue bonds issued by the authority are not a debt of the municipality or the state.

Sec. 29.35.660. DEVELOPMENT PLAN. When the port commission decides to finance a project in whole or in part by the use of revenue bonds, it shall prepare a development plan for submission to the governing body. The development plan must contain

(1) the boundaries of the project area in relation to highways, streets, streams, or otherwise and a legal description of the area;

(2) the location and extent of existing streets and other public and private structures within the project area and a designation of the location, character, and extent of the categories of public and private land uses proposed for the project area;

(3) a description of existing improvements in the project area to be demolished, repaired, or altered, a description of any repairs and alterations, and an estimate of the time required for completion;

(4) the location, extent, character, and estimated cost of the improvements, including rehabilitation contemplated for the project area, and an estimate of the time required for completion;

(5) a statement of the construction or stages of construction planned, and the estimated time of completion of each stage;

(6) a description of any parts of the project area to be left as open space and the use contemplated for the space;

(7) a description of any portions of the project area that the commission intends to sell, donate, exchange, or lease to or from the municipality and the proposed terms;

(8) a description of desired zoning changes and changes in streets, street levels, intersections, and utilities;

(9) an estimate of the cost of the project and a statement of the proposed method of financing the project and the ability of the authority to arrange the financing;

(10) designation of the person to whom all or a portion of the project is to be leased, sold, or conveyed if that information is available to the commission;

(11) an economic analysis and justification for the project and a description of the expected benefits and other effects of the project.

Sec. 29.35.670. APPROVAL OF DEVELOPMENT PLAN. (a) Upon receipt of a development plan prepared under AS 29.35.660, the governing body shall hold a public hearing on the plan. After the public hearing, the governing body shall by ordinance approve or reject the plan, or approve it with modification.

(b) Amendments to an approved development plan must be submitted by the port authority to the governing body for approval or rejection.

Sec. 29.35.680. BUDGET. The director of a port authority formed under AS 29.35.600 - 29.35.690 shall prepare and submit for the approval of the port commission a budget for the operation of the authority for the ensuing fiscal year. The budget shall be prepared in the manner and contain the information required of municipal departments. Before the budget may be adopted by the commission, it must be approved by the governing body of the municipality. Money of the municipality may not be included in the budget of the authority except that money authorized by the governing body of the municipality.

Sec. 29.35.690. DISSOLUTION. A port authority formed under AS 29.35.600 - 29.35.690 may be dissolved by ordinance approved by the

voters. The property and assets of the authority remaining after the satisfaction of the obligations of the authority belong to the municipality.

IN THE HOUSE BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

CS FOR HOUSE BILL NO. 209 (C&RA)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to establishment of a port authority by a municipality."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.35 is amended by adding new sections to read:

ARTICLE 9. PORT AUTHORITIES.

Sec. 29.35.600. ESTABLISHMENT OF AUTHORITY. (a) A borough, unified municipality, home rule city, or first class city may establish a port authority. The authority shall be a corporate public body that may sue and be sued in any court of the state. The authority possesses all powers specified in the ordinance under which it is formed in addition to those enumerated in AS 29.35.600 - 29.35.690.

(b) In a resolution proposing formation of a port authority, the governing body shall set a date for the holding of a public hearing on the adoption of a proposed ordinance establishing the authority and designating the powers of the authority. After the public hearing, if the governing body intends to proceed with the establishment of the authority, it must do so by ordinance subject to voter approval.

(c) At the time of adopting an ordinance proposing formation of a port authority, the governing body shall issue a call for nomination of port commissioners, specifying the filing deadline and procedure for making nominations. The election of the initial members of the port commission shall take place at the same time as the election on the question of forming a port authority. If at least one candidate for each of the three commission seats is not nominated, the proposal

to form a port authority is void and no election on the question shall be held.

Sec. 29.35.610. PORT COMMISSION. (a) A port authority shall be under the supervision and control of a port commission consisting of three elected members. The term of a member is six years, except that one initial member shall serve a term of four years, and one initial member shall serve a term of two years, to be determined by lot. Commission members may be reelected.

(b) A vacancy on the commission shall be filled by appointment by the mayor. An appointed member serves for the remainder of the term to which appointed. On notice and an opportunity to be heard, a member of the commission may be removed for cause by the governing body. Removal of a member is subject to review by the superior court.

(c) The commission shall adopt rules governing its procedure and the holding of regular meetings. Special meetings may be held when called in the manner provided in the rules of the commission.

Sec. 29.35.620. EXECUTIVE DIRECTOR AND EMPLOYEES. (a) The port commission may employ and fix the compensation of a director, subject to the approval of the governing body of the municipality. The director serves at the pleasure of the commission. A member of the commission is not eligible to hold the position of director.

(b) The commission may retain legal counsel to advise the commission in the proper performance of its duties. The legal counsel shall represent the commission in actions brought by or against the commission.

(c) The commission may employ other personnel considered necessary by the commission.

(d) The employees of the commission may participate in municipal retirement and insurance programs of the municipality.

Sec. 29.35.630. POWERS. The port commission may

(1) study and analyze the effect of economic changes and growth on the waterfront and waterways;

(2) acquire, construct, repair, renovate, and manage sea walls, jetties, piers, wharves, docks, boat landings, and other harbor improvements, warehouses, cold storage plants, grain bins, bunkers, ferries, bridges, and other facilities for the handling, storing, and transporting of freight and passengers, or the processing of seafood, agricultural products, and other goods;

(3) develop and implement long-range plans, in cooperation with the governing body, designed to promote the economic growth of the municipality and the growth and efficiency of waterfront development;

(4) implement any plan of development for waterways or waterfront areas in accordance with the powers of the port authority under AS 29.35.600 - 29.35.690 or the ordinance under which the authority is established;

(5) make and enter into contracts necessary or incidental to the exercise of its powers and the performance of its duties, including agreements with other port commissions providing for shared development or management of facilities located within the jurisdiction of the commissions;

(6) acquire and convey, or otherwise dispose of, land and other property;

(7) fix, charge, and collect fees, rents, and charges for the use of a building or property under its control and pledge the fees, rents, and charges for the payment of revenue bonds issued by the authority;

(8) lease any buildings, facilities, or properties under

its control;

(9) accept grants and donations from any public or private source.

Sec. 29.35.640. EMINENT DOMAIN. A municipality, other than a second class city, may take private property under AS 09.55.420 - 09.55.460 for the purpose of transfer to the port authority, and may transfer the property to the authority on terms and conditions it considers appropriate, and the taking, transfer, and use shall be considered necessary for public purposes and for the benefit of the public.

Sec. 29.35.650. FINANCING. (a) The activities of the port authority shall be financed from one or more of the following sources:

(1) donations to the authority for the performance of its functions;

(2) money borrowed and to be repaid;

(3) revenue from any property, building, or facility owned, leased, licensed, or operated by the authority or under its control, subject to the limitations imposed upon the authority by trusts or other agreements or by the municipality;

(4) money obtained from other sources approved by the governing body of the municipality.

(b) Upon approval of a development plan under AS 29.35.670, the authority may borrow money and issue negotiable revenue bonds as provided for a municipality under AS 29.47. Revenue bonds issued by the authority are not a debt of the municipality or the state.

Sec. 29.35.660. DEVELOPMENT PLAN. When the port commission decides to finance a project in whole or in part by the use of revenue bonds, it shall prepare a development plan for submission to the governing body. The development plan must contain

(1) the boundaries of the project area in relation to highways, streets, streams, or otherwise and a legal description of the area;

(2) the location and extent of existing streets and other public and private structures within the project area and a designation of the location, character, and extent of the categories of public and private land uses proposed for the project area;

(3) a description of existing improvements in the project area to be demolished, repaired, or altered, a description of any repairs and alterations, and an estimate of the time required for completion;

(4) the location, extent, character, and estimated cost of the improvements, including rehabilitation contemplated for the project area, and an estimate of the time required for completion;

(5) a statement of the construction or stages of construction planned, and the estimated time of completion of each stage;

(6) a description of any parts of the project area to be left as open space and the use contemplated for the space;

(7) a description of any portions of the project area that the commission intends to sell, donate, exchange, or lease to or from the municipality and the proposed terms;

(8) a description of desired zoning changes and changes in streets, street levels, intersections, and utilities;

(9) an estimate of the cost of the project and a statement of the proposed method of financing the project and the ability of the authority to arrange the financing;

(10) designation of the person to whom all or a portion of the project is to be leased, sold, or conveyed if that information is available to the commission;

(11) an economic analysis and justification for the project and a description of the expected benefits and other effects of the project.

Sec. 29.35.670. APPROVAL OF DEVELOPMENT PLAN. (a) Upon receipt of a development plan from the port authority, the governing body shall hold a public hearing on the plan. After the public hearing, the governing body shall by ordinance approve or reject the plan, or approve it with modification.

(b) Amendments to an approved development plan must be submitted by the authority to the governing body for approval or rejection.

Sec. 29.35.680. BUDGET. The director of the port authority shall prepare and submit for the approval of the port commission a budget for the operation of the authority for the ensuing fiscal year. The budget shall be prepared in the manner and contain the information required of municipal departments. Before the budget may be adopted by the commission, it must be approved by the governing body of the municipality. Money of the municipality may not be included in the budget of the authority except that money authorized by the governing body of the municipality.

Sec. 29.35.690. DISSOLUTION. A port authority may be dissolved by ordinance approved by the voters. The property and assets of the authority remaining after the satisfaction of the obligations of the authority belong to the municipality.

Representative Ron Larson
Alaska State Legislature
Juneau, Alaska

Dear Representative Larson:

Attached you will find some proposed amendments to HB 209, relating to establishment of a port authority by a municipality. The major amendment would change the bill to allow cities and towns, such as Homer, Seward or Kodiak to develop a port authority independent of the borough or municipality to which it belongs. Second class cities would not have the authority.

The proposed amendment to page 5 adding a new subsection (11) would require an economic analysis and justification for the project as well as a description of the expected benefits and other effects of the project to be included in the development plan.

Unless you have objections, I'll forward the amendment request to the Community and Regional Affairs Committee.

Respectfully yours,

Bill

Bill Hudson

IN THE HOUSE

BY LARSON, MENARD, HUDSON AND ULMER

HOUSE BILL NO. 209

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to establishment of a port authority by a municipality."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.35 is amended by adding new sections to read:

ARTICLE 9. PORT AUTHORITIES.

Sec. 29.35.600. ESTABLISHMENT OF AUTHORITY. (a) A borough, home rule city or first class city, unified municipality, ~~or city in the unorganized~~ borough may establish a port authority. The authority shall be a corporate public body that may sue and be sued in any court of the state. The authority possesses all powers specified in the ordinance under which it is formed in addition to those enumerated in AS 29.35.600 - 29.35.690.

(b) In a resolution proposing formation of a port authority, the governing body shall set a date for the holding of a public hearing on the adoption of a proposed ordinance establishing the authority and designating the powers of the authority. After the public hearing, if the governing body intends to proceed with the establishment of the authority, it must do so by ordinance subject to voter approval.

(c) At the time of adopting an ordinance proposing formation of a port authority, the governing body shall issue a call for nomination of port commissioners, specifying the filing deadline and procedure for making nominations. The election of the initial members of the port commission shall take place at the same time as the election on the question of forming a port authority. If at least one candidate for each of the three commission seats is not nominated, the proposal

to form a port authority is void and no election on the question shall be held.

Sec. 29.35.610. PORT COMMISSION. (a) A port authority shall be under the supervision and control of a port commission consisting of three elected members. The term of a member is six years, except that one initial member shall serve a term of four years, and one initial member shall serve a term of ~~five~~ two years, to be determined by lot. Commission members may be reelected.

(b) A vacancy on the commission shall be filled by appointment by the mayor. An appointed member serves for the remainder of the term to which appointed. On notice and an opportunity to be heard, a member of the commission may be removed for cause by the governing body. Removal of a member is subject to review by the superior court.

(c) The commission shall adopt rules governing its procedure and the holding of regular meetings. Special meetings may be held when called in the manner provided in the rules of the commission.

Sec. 29.35.620. EXECUTIVE DIRECTOR AND EMPLOYEES. (a) The port commission may employ and fix the compensation of a director, subject to the approval of the governing body of the municipality. The director serves at the pleasure of the commission. A member of the commission is not eligible to hold the position of director.

(b) The commission may retain legal counsel to advise the commission in the proper performance of its duties. The legal counsel shall represent the commission in actions brought by or against the commission.

(c) The commission may employ other personnel considered necessary by the commission.

(d) The employees of the commission may participate in municipal retirement and insurance programs of the municipality.

Sec. 29.35.630. POWERS. The port commission may

(1) study and analyze the effect of economic changes and growth on the waterfront and waterways;

(2) acquire, construct, repair, renovate, and manage sea walls, jetties, piers, wharves, docks, boat landings, and other harbor improvements, warehouses, cold storage plants, grain bins, bunkers, ferries, bridges, and other facilities for the handling, storing, and transporting of freight and passengers, or the processing of seafood, agricultural products, and other goods;

(3) develop and implement long-range plans, in cooperation with the governing body, designed to promote the economic growth of the municipality; and the growth and efficiency of the port;

(4) implement any plan of development in waterways or in the waterfront areas in accordance with the powers of the port authority under AS 29.35.600 - 29.35.690 or the ordinance under which the authority is established;

(5) make and enter into contracts necessary or incidental to the exercise of its powers and the performance of its duties, including agreements with other port commissions providing for shared development or management of facilities located within the jurisdiction of the commissions;

(6) acquire and convey, or otherwise dispose of, land and other property;

(7) fix, charge, and collect fees, rents, and charges for the use of a building or property under its control or any part of it; or facility in it, and pledge the fees, rents, and charges for the payment of revenue bonds issued by the authority;

(8) lease a building or property under its control;

(9) accept grants and donations from a public or private

source.

Sec. 29.35.640. EMINENT DOMAIN. A municipality may take private property under AS 09.55.420 - 09.55.460 for the purpose of transfer to the port authority, and may transfer the property to the authority on terms and conditions it considers appropriate, and the taking, transfer, and use shall be considered necessary for public purposes and for the benefit of the public.

Sec. 29.35.650. FINANCING. (a) The activities of the port authority shall be financed from one or more of the following sources:

(1) donations to the authority for the performance of its functions;

(2) money borrowed and to be repaid;

(3) revenue from any property, building, or facility owned, leased, licensed, or operated by the authority or under its control, subject to the limitations imposed upon the authority by trusts or other agreements; or by the municipality;

(4) money obtained from other sources approved by the governing body of the municipality.

(b) Upon approval of a development plan under AS 29.35.670, the authority may borrow money and issue negotiable revenue bonds as provided for a municipality under AS 29.47. Revenue bonds issued by the authority are not a debt of the municipality or the state.

Sec. 29.35.660. DEVELOPMENT PLAN. When the port commission decides to finance a project in whole or in part by the use of revenue bonds, it shall prepare a development plan for submission to the governing body. The development plan must contain

(1) the boundaries of the project area in relation to highways, streets, streams, or otherwise and a legal description of the area;

(2) the location and extent of existing streets and other public and private structures within the project area and a designation of the location, character, and extent of ~~the categories of~~ public and private land uses proposed for the project area;

(3) a description of existing improvements in the project area to be demolished, repaired, or altered, a description of any repairs and alterations, and an estimate of the time required for completion;

(4) the location, extent, character, and estimated cost of the improvements, including rehabilitation contemplated for the project area and an estimate of the time required for completion;

(5) a statement of the construction or stages of construction planned, and the estimated time of completion of each stage;

(6) a description of any parts of the project area to be left as open space and the use contemplated for the space;

(7) a description of any portions of the project area that the commission intends to sell, donate, exchange, or lease to or from the municipality and the proposed terms;

(8) a description of desired zoning changes and changes in streets, street levels, intersections, and utilities;

(9) an estimate of the cost of the project and a statement of the proposed method of financing the project and the ability of the authority to arrange the financing;

(10) designation of the person to whom all or a portion of the project is to be leased, sold, or conveyed if that information is available to the commission.

Sec. 29.35.670. APPROVAL OF DEVELOPMENT PLAN. (a) Upon receipt of a development plan from the port authority, the governing body shall hold a public hearing on the plan. After the public hearing,

(11) an economic analysis and justification for the project and a description of the expected benefits and other costs of the project.

the governing body shall by ordinance approve or reject the plan, or approve it with modification.

(b) Amendments to an approved development plan must be submitted by the authority to the governing body for approval or rejection.

Sec. 29.35.680. BUDGET. The director of the port authority shall prepare and submit for the approval of the port commission a budget for the operation of the authority for the ensuing fiscal year. The budget shall be prepared in the manner and contain the information required of municipal departments. Before the budget may be adopted by the commission, it must be approved by the governing body of the municipality. Money of the municipality may not be included in the budget of the authority except that money authorized by the governing body of the municipality.

Sec. 29.35.690. DISSOLUTION. A port authority may be dissolved by ordinance approved by the voters. The property and assets of the authority remaining after the satisfaction of the obligations of the authority belong to the municipality.

The Honorable Lyman Hoffman
Alaska State House of Representatives
P.O. Box V
Juneau, Alaska 99801

Attention: Laurie Nottingham

Dear Representative Hoffman:

During a recent conversation concerning HB 213, Ms. Nottingham asked for some background information concerning the origin of the formulas used for apportioning the Federal-Aid Highway funds for the primary, secondary and urban systems.

The very first Federal-Aid Highway Bill which was passed in 1916, distributed the funds on essentially the same basis as we use today: 1/3 according to area, 1/3 according to population, and 1/3 according to road mileage. The purpose of the bill was to develop a system of roads radiating from the towns and railway stations out among the farms. The concept was wholeheartedly endorsed and debate revolved almost entirely about the apportionment formula and the exclusion of places of more than 2,500 population from the benefits of the Act.

Discussions of the factors were very similar to the debates which still occur today when each new Federal-Aid Highway Bill is introduced. Opponents of the 1916 bill claim that the apportionment formula gave the wealthier States, which contributed most of the Federal revenues, less than their fair share of the the road benefits, and they were particularly bitter that the cities, which contributed a very large share of the revenue in all States, got nothing at all from the bill. The rural road advocates replied that the wealthy States and the cities had already received more than their fair share of the national income in other forms, such as expensive post offices and public buildings, harbor improvements, veterans pensions (1/3 of the pensioners lived in six eastern States) and, most of all, in shelters of their industries behind a high protective tariff. Despite these problems the bill was passed by a considerable margin.

It was not until 1944, that Congress specifically allocated funds for roads in urban areas. These funds were apportioned in the ratio that their urban population (cities of 5,000 population) had to the national urban populations.

A review of our files show that for Fiscal 1986, $32.1 million was authorized for work on the urban system in Alaska. Our annual FY 86 apportionment on the urban system was $3.7 million.

I hope this information will be of assistance.

Sincerely yours,

Barry F. Morehead
Division Administrator

Robert E Ruby

By: Robert E. Ruby
Assistant Division Administrator

LETTER OF INTENT
CSHB 213 (TRSP)

It is the intent of the Legislature to ensure fair and equitable distribution of federal-aid highway program funds throughout the entire state.

It is the intent of the Legislature to take into account the uniqueness of the marine highway system as a viable transportation route and allocate 9% of the federal-aid highway program funds for this purpose, and that the remaining funds (91%) shall be distributed to each of the Department of Transportation and Public Facilities' administrative regions for specified highway programs on a formula basis. The formulas for determining funding for each highway program are as follows:

HIGHWAY PROGRAM	WEIGHT	REGION FACTORS
Primary	1/3	urban population
	2/9	rural population
	2/9	federal-aid route/road miles
	2/9	area
Secondary	1/3	rural population
	1/3	federal-aid route/road miles
	1/3	area
Urban	1	population

It is the intent of the Legislature to direct the Department of Transportation and Public Facilities to implement the formula funding as provided in HB 213. The Department shall establish project ranking criteria for each highway program (primary, secondary and urban). Project ranking would determine the priority of designated federal-aid highway projects for each highway program that require funding.

It is the intent of the Legislature to allow the department to reallocate surplus federal-aid highway program funds among regions of the state within the specific highway programs provided all qualified highway projects within the region have been funded. Furthermore, the department may only transfer federal-aid funds among federal-aid highway programs when all qualified projects are funded and a surplus of federal funds exists. Any surplus federal-aid highway program funds shall be transferred first to secondary roads, then to primary roads, and then urban roads. If all qualified highway projects that are eligible for funding under the federal-aid highway programs are funded then the surplus funds may be transferred to the federal-aid interstate program.

It is the intent of the Legislature to allow up to six years from the effective date of HB 213 for the Department of Transportation and Public Facilities to phase in the federal-aid highway program funding formula. The minimum amount of funding that must be specifically allocated to each region's highway programs for the phase in period are as follows:

YEAR	PHASE IN PERCENTAGE
1987	22%
1988	42%
1989	60%
1990	66%
1991	90%
1992	100%

It is the intent of the Legislature that this funding schedule be used as a temporary alternative to the federal-aid highway program funding formula in HB 213, and urges the Department of Transportation and Public Facilities to establish policy that will conform to the federal-aid highway program funding formula as quickly as possible.

It is the intent of the Legislature that the department's policy and funding decisions shall be more responsive to rural communities in Western, Southwestern and Southcentral Alaska, and to safety conditions on existing federal-aid highways; and to economic and commercial development on existing and/or potential new federal-aid highways in all areas of the state.

Bette Cato

Rep. Bette Cato, Chairman
House Transportation Committee

ANALYSIS: The Committee Substitute for House Bill 213 provides the department with enough flexibility to prevent the loss of federal obligation authority outlined in our previous fiscal note.

We assume that "qualified projects" are those projects which have all federally required documentation and are in the headquarters FHWA programming unit awaiting submission to FHWA. We would rev the funding status within the federal category and region when a project is submitted for obligation. If there were not sufficient funding available we would review the status of other regions and federal categories compared to the projects that are pending. If there were not "qualified projects" pending at headquarters we would proceed with the programming action. The record keeping for these activities would be a slight increase in effort, however it would not be significant. If a more complicated review process is desired, we would require additional funding in the operating budget to carry it out.

Examples of Effects of CSHB213 on the

Department of Transportation and Public Facilities

May 6, 1987

(1) Current Practice: Our Six Year Plan anticipates the addition of two lanes to the Glenn Highway between Eklutna and the Parks Highway in FY 89, 90 and 91. These improvements require over $50 million in federal funds, and would typically be funded with Interstate and Primary funds.

Under CSHB 213: We would be restricted to the use of Interstate apportionments to fund these improvements. If other qualified projects were ready to obligate, we would need to stretch out the implementation of these much needed improvements to the Glenn Highway, or pursue alternative funding sources.

(2) Current Practice: As indicated in our Position Paper on HB213, we currently plan to make major improvements to roads on Alaska's urban systems, particularly in Anchorage and Fairbanks. The use of primary and secondary apportionments on these projects is made possible by Subsection 118(f) of Title 23, U.S.C.

Under CSHB213: Each time a project needed funding and the regional share of the appropriate apportionment were depleted, the department would need to review whether or not there were other qualified projects to use the funds. A surplus would need to exist in both the secondary and primary programs before most urban system projects could be funded. This process would likely delay much needed highway improvements in Alaska's urban areas.

(3) Current Practice: The budgeting process encourages greater use of federal-aid resources to meet improvement needs on the Alaska Marine Highway System (AMHS). The actual pace of project development has not yet reached the spending level identified in the budget process.

Under CSHB213: The bill requires the department to allocate and expend 9% of primary and secondary funds for AMHS improvements. If not enough projects were ready to fully utilize this setaside, we would need to find a mechanism to transfer excess funds to qualified projects in other regions. If the funding requirements of the AMHS exceed 9%, some mechanism would be needed to provide the extra funding or project delays could result. This won't be a problem if we can assume the AMHS can be construed as an "administrative region."

(4) Current Practice: The department cautiously evaluates the need for extensions to the primary or secondary systems. Given the large unmet needs for improvements to the existing system, the department has focused its resources on improving and modernizing these routes.

Under CSHB213: The emphasis could shift to developing new routes, particularly on the Secondary System, to meet the legislative intent for an ambitious secondary program. Building these new routes would require millions of dollars each year, and would create an ongoing requirement for additional maintenance and operations funding.

(5) Current Practice: Each year many safety problems are investigated through preliminary engineering starts under the Highway Safety Improvement Program. If the proposed solution to the safety problem requires a significant amount of funding for construction it is frequently funded with secondary or primary apportionments instead of safety funding.

Under CSHB213: The department could no longer routinely fund higher cost safety improvements with other apportionments. Whenever such safety projects were on the urban system, we would have to see if any urban, primary or secondary apportionments were available to fund the safety work. Alternatively, we could use safety funding for construction, and delay the start-up of other safety investigations.

(6) Current Practice: Currently projects in the urban areas are evaluated based on a needs criteria without regard to the amount of funding that is available for the federal urban system. Currently the federal urban system category provides approximately $3.6 million annually; however, we have been programming over 10 times this amount because of the needs evaluation.

Under CSHB213: The department would assume that this bill is directing the department to change our program to assure that our project development provided "qualified projects" in the amounts approximating the levels provided by the federal categories. This would mean we would reduce the levels of projects we would be proposing on the urban system to approximate the $3.6 million in funding that is available annually. This would be a significant reduction in effort. The specific projects which would be proposed would continue to be identified through the existing AMATS and similar planning processes.

Statement by Representative Hoffman
on HB 213
March 30, 1987

House Bill 213 (An Act relating to allocation of federal-aid highway funds; and providing for an effective date.) is a vehicle to provide a "fair and equitable" solution to the allocation and expenditure of federal-aid highway program funds throughout the state.

The "federal-aid highway program" specified in this bill pertains to those roads within the state that are designated as federal-aid primary, federal-aid secondary, and federal-aid urban. This bill does not effect other federal-aid highway allocations such as: the interstate system, hazard elimination, and highway safety.

Currently, federal-aid highway funds are allocated among states by the federal government based on such factors as area, rural population, urban population, road miles, etc.

This bill requires the Alaska Department of Transportation and Public Facilities (DOT/PF) to allocate obligated federal-aid highway program funds within the regions of this state according to the same formulas that the federal government uses to allocate funds among the states.

Under the provisions of HB 213, DOT/PF would be mandated to fund each designated road classification according to the proportion identified under the federal-aid highway obligation. This means, for example, the federal-aid highway funds may not be transferred from use on primary to urban roads.

House Bill 213 does permit DOT/PF to transfer funds between regions of the state. The Department may transfer up to 50% of the funds designated for one region into another region, thereby insuring that major road construction needs within a region may be met.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to allocation of federal-aid highway funds; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 19.15 is amended by adding a new section to read:

Sec. 19.15.050. ALLOCATION OF FEDERAL AID. (a) The department shall allocate and expend federal-aid highway funds received for a federal-aid highway program among the administrative regions of the department for qualified projects in the same proportion as the eligibility of each region bears to the total eligibility of the state to receive the funds.

(b) Subject to (c) of this section, the department may transfer a maximum of 50 percent of the federal-aid highway funds allocated to a region under (a) of this section to qualified projects in another region.

(c) The department may not transfer federal-aid highway funds among federal-aid highway programs.

(d) In this section "federal-aid highway program" means the federal-aid primary system, the federal-aid secondary system, or the federal-aid urban system.

* Sec. 2. This Act takes effect July 1, 1987.

MEMORANDUM March 13, 1987

SUBJECT: Section-by-section analysis of 5-0834A

TO: Representative Lyman Hoffman

FROM: George Utermohle
Legislative Counsel

The following is the section-by-section analysis of Work Order 5-0834A requested by Lori Nottingham of your staff.

A section-by-section analysis or summary of a bill should not be considered an authoritative interpretation of a bill, and the bill itself is the best statement of its contents.

Section 1. Section 1 of the bill adds a new section to AS 19.15 providing for the allocation and expenditure of federal funds received for certain federal-aid highway programs.

Sec. 19.15.050(a) requires the Department of Transportation and Public Facilities to allocate and expend federal funds received for certain federal-aid highway programs within each of the administrative regions of the department in the proportion that the region contributes to the total eligibility of the state for federal funds. Federal funds are allocated to the states based on such factors as area, rural population, urban population, road miles, etc. This provision requires the department to allocate and expend the federal funds among the regions established by the department according to the same formulas that the federal government uses to allocate the funds among the states.

Sec. 19.15.050(b) allows the department to reallocate funds from one region of the state to another up to a maximum of 50 percent. Funds reallocated to another region may not be transferred to fund a different kind of highway program in the other region.

Sec. 19.15.050(c) prohibits the department from transferring federal-aid funds from one kind of federal-aid highway program to another.

Sec. 19.15.050(d) defines the term "federal-aid highway program" to mean either the federal-aid primary system, the federal-aid secondary system, or the federal-aid urban system. As a result of this definition this section does not require allocation of other federal-aid highway program funds among regions of the state; federal-aid highway programs exempt from this section include the federal-aid interstate system, hazard elimination program, and highway safety program.

Sec. 2. Section 2 of this bill establishes July 1, 1987 as the effective date of this Act.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M April 27, 1987

SUBJECT: Section-by-section analysis of CSHB 213 ( )

TO: Representative Lyman Hoffman

FROM: George Utermohle GU
Legislative Counsel

The following is the section-by-section analysis of CSHB 213 ( ) dated April 27, 1987 requested by Lori Nottingham of your staff.

A section-by-section analysis or summary of a bill should not be considered an authoritative interpretation of a bill. The bill itself is the best statement of its contents.

Section 1. Section 1 of the bill adds a new section to AS 19.15 providing for the allocation and expenditure of federal funds received for certain federal-aid highway programs.

Sec. 19.15.050(a) requires the Department of Transportation and Public Facilities to allocate and expend nine percent of federal funds received for certain federal-aid highway programs on qualified projects in the marine highway system. The department shall allocate and expend the remaining 91 percent of federal-aid highway funds within each of the administrative regions of the department. Federal funds are allocated to the states based on such factors as area, rural population, urban population, rural delivery route mileage, etc. This provision requires the department to allocate and expend the federal funds among the regions established by the department according to the same formulas that the federal government uses to allocate the funds among the states, except that for primary and secondary road systems the department shall use federally designated primary and secondary road mileage, as appropriate, in the formulas in lieu of rural delivery route mileage.

Sec. 19.15.050(b) allows the department to reallocate surplus funds from one region of the state to another if all

qualified highway projects within the region have been funded.

Sec. 19.15.050(c) prohibits the department from transferring federal-aid funds from one kind of federal-aid highway program to another unless all qualified projects eligible for funding by one of the federal-aid highway programs are funded and a surplus of federal funds still exists. Any surplus federal funding available must be allocated first to secondary roads, then primary roads, and then urban roads. If all qualified highway projects eligible for funding under the federal-aid secondary system, the federal-aid primary system and the federal-aid urban system are fully funded, then the surplus funds may be transferred to the federal-aid interstate program.

The interaction of subsections (b) and (c) require surplus funds to be used to fund qualified projects within each region before funds can be transferred to other regions.

Sec. 19.15.050(d) defines the term "federal-aid highway program" to mean either the federal-aid primary system, the federal-aid secondary system, or the federal-aid urban system. As a result of this definition, this bill does not require allocation of other federal-aid highway program funds among regions of the state; federal-aid highway programs exempt from this section include the federal-aid interstate system, hazard elimination program, and highway safety program.

The term "qualified project" is defined as a highway project eligible for federal-aid highway funds that receives any points under the criteria used by the Department of Transportation and Public Facilities for ranking priorities for highway projects.

Sec. 2. Section 2 of this bill establishes July 1, 1987, as the effective date of this Act.

GU:mkr
m11/084

sions of the Administrative Procedure Act, sections 551 et seq. and 701 et seq. of Title 5, when providing for alternative procedure for approving state highway safety plans and failure of the Federal Highway Administration to open meetings with a particular organization to the public pursuant to Federal Advisory Committee Act, Appendix I of Title 5. Id.

3. Regulations

Under this section, Federal Highway Administration's duty to promulgate regulations pertaining to states' plans for certification acceptance is mandatory, although agency is vested with some discretion in deciding what type of regulations are necessary. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

In light of Federal Highway Administration's pending reconsideration of regulations pertaining to certification acceptance plans under this section, there was no final agency action which court could review in action challenging such regulation; however, if agency did not complete reconsideration of regulations within reasonable period of time, agency would run risk of having its failure to act treated, upon appropriate motion made by plaintiffs, as final reviewable agency action. Id.

In the absence of any showing of prejudice as to Federal Highway Administration acceptance of Georgia's certification acceptance plan for highway safety standards pursuant to original tainted regulations governing certification applications, since nonprofit organization which challenged the regulations and the certification was able to comment on the plan while it was pending, and since the organization was entitled to substantive judicial review of the acceptance of the certification, court would not set aside approval of the Georgia plan because of the procedural irregularities in the adoption of the regulations. Center for Auto Safety v. Tiemann, D.C.D.C.1976, 414 F.Supp. 215, remanded on other grounds 580 F.2d 689.

4. Judicial review

Finding of Federal Highway Administration that state had capability to insure that safety standards were contained in state's plan for certification acceptance under this section was not sufficiently explained to afford court proper basis for judicial review, in view of failure of agency to inform court as to which portions of exhibits consisting of thousands of pages were relied upon by agency in making such determination, and thus case would be remanded to agency for clarification. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

While Federal Highway Administrator's decision to employ certification acceptance procedures for state highway safety plan is unreviewable, his decision to approve a state certification is dependent upon mandatory findings and is therefore subject to judicial review. Center for Auto Safety v. Tiemann, D.C.D.C.1976, 414 F.Supp. 215, remanded on other grounds 580 F.2d 689.

5. Safety standards—Generally

When Federal Highway Administration approves state's certification acceptance plan under this section, agency must make finding that state has the capability to insure that safety standards will be enforced. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

6. —— Factors considered

Under provision of this section authorizing Secretary of Transportation to accept certification from a state on finding that its highway projects will be carried out in accordance with state laws and standards which will accomplish policies and objectives of this title, it is for the Secretary to determine factors relevant to a "capability" finding and the appropriate method for making such a finding; hence, "Certification Acceptance" regulation which specifies reports, etc., that may be examined in evaluating the state's performance and resources is not deficient for failure to include a comprehensive list of specific factors for making a capability finding. Center for Auto Safety v. Bowers, D.C.D.C.1979, 466 F.Supp. 829.

Fact that some documents provided by Secretary of Transportation and Administrator of Federal Highway Administration were prepared after acceptance of Georgia's certification that federal aid highway projects would be carried out in accordance with state laws and standards that met objectives of this title did not undermine the award where there was no post hoc rationalization and subsequent material was relevant to determining continuing adequacy of the state plan and review of such documents was proper in face of court's recognition of possibility of future consideration of the capability finding. Id.

7. Substantial evidence

Decision of Secretary of Transportation and Administrator of Federal Highway Administration to accept Georgia's certification of safety standards for federal aid highways was supported by substantial evidence, including showing that for 20 years the state operated satisfactorily under the secondary road plan, which plan was predecessor to current "Certification Acceptance" system, with remainder of documents reviewed covering many topics, including research and development, safety review and ability of Georgia's Department of Transportation to take corrective action once deficiencies have been spotted. Center for Auto Safety v. Bowers, D.C.D.C.1979, 466 F.Supp. 829.

§ 118. Availability of sums apportioned

(a) On and after the date that the Secretary has certified to each State highway department the sums apportioned to each Federal-aid system or part thereof pursuant to an authorization under this title, or under prior Acts, such sums shall be available for expenditure under the provisions of this title.

(b)(1) Sums apportioned to each Federal-aid system (other than the Interstate System) shall continue available for expenditure in that State for the appropriate Federal-aid system or part thereof (other than the Interstate System) for a period of three years after the close of the fiscal year for which such sums are authorized and any amounts so apportioned remaining unexpended at the end of such period shall lapse.

(2) Except as otherwise provided in this subsection, sums apportioned for the Interstate System in any State shall remain available for expenditure in that State for the Interstate System until the end of the fiscal year for which authorized. Sums not obligated within the time period prescribed by the preceding sentence shall be made available by the Secretary for projects on the Interstate System (other than projects for which sums are apportioned under section 104(b)(5)(B)) in accordance with the following priorities: First, for high cost projects which directly contribute to the completion of an Interstate segment which is not open to traffic; and second, for projects of high cost in relation to a State's apportionment. Sums may only be made available under this paragraph in any State if the Secretary determines that the State has obligated all of its apportionments other than an amount which, by itself, is insufficient to pay the Federal share of the cost of a project on the Interstate System which has been submitted by such State to the Secretary for approval, and the applicant is willing and able to (A) apply the funds to a ready-to-commence project; and (B) in the case of construction work, begin work within ninety days of obligation. Sums made available under this paragraph shall remain available until expended.

(3) Any amount apportioned to the States for the Interstate System under subsection (b)(5)(B) of section 104 of this title shall continue to be available for expenditure in that State for a period of two years after the close of the fiscal year for which such sums are authorized. Sums not obligated within the time period prescribed by the preceding sentence shall be made available by the Secretary for projects for resurfacing, restoring, rehabilitating, and reconstructing the Interstate System to any other State applying for such funds, if the Secretary determines that the State has obligated all of its apportionments under such subsection other than an amount which, by itself, is insufficient to pay the Federal share of the cost of such a project which has been submitted by such State to the Secretary for approval, and the applicant is willing and able to (A) obligate the funds within one year of the date

the funds are made available; (B) apply them to a ready-to-commence project; and (C) in the case of construction work, begin work within ninety days of obligation. Sums made available under this paragraph shall remain available until expended.

(4) Sums apportioned to a Federal-aid system for any fiscal year shall be deemed to be expended if a sum equal to the total of the sums apportioned to the State for such fiscal year and previous fiscal years is obligated. Any Federal-aid highway funds released by the payment of the final voucher or by the modification of the formal project agreement shall be credited to the same class of funds, primary, secondary, urban, or interstate, previously apportioned to the State and be immediately available for expenditure.

(c) Before any apportionment is made under section 104(b)(5)(A) of this title for a fiscal year beginning after September 30, 1983, the Secretary shall set aside $300,000,000. Such amount shall be available only for obligation by the Secretary in accordance with subsection (b)(2) of this section.

(d) In addition to amounts otherwise available to carry out this section, an amount equal to the amount by which the unobligated apportionment for the Interstate System in any State is reduced under section 103(e)(4) of this title on account of the withdrawal of a route or portion thereof on the Interstate System, which withdrawal is approved after the date of enactment of this subsection, shall be available to the Secretary for obligation in accordance with subsection (b)(2) of this section.

(e) The total payments to any State shall not at any time during a current fiscal year exceed the total of all apportionments to such State in accordance with section 104 of this title for such fiscal year and all preceding fiscal years.

(f) Funds made available to the State of Alaska under this title may be expended for construction of access and development roads on a Federal-aid system that will serve resource development, recreational, residential, commercial, industrial, or other like purposes.

(As amended Pub.L. 89–574, § 7(a), Sept. 13, 1966, 80 Stat. 768; Pub.L. 94–280, Title I, § 117(a), May 5, 1976, 90 Stat. 436; Pub.L. 95–599, Title I, § 115(a), Nov. 6, 1978, 92 Stat. 2697; Pub.L. 96–106, § 5(a), Nov. 9, 1979, 93 Stat. 797; Pub.L. 97–424, Title I, § 115, Jan. 6, 1983, 96 Stat. 2107.)

References in Text. The date of the enactment of this subsections, referred to in subsec. (d), is the date of the enactment of Pub.L. 97–424, which was approved on Jan. 6, 1983.

1983 Amendment. Subsec. (b). Pub.L. 97–424, § 115(a), designated existing provisions as pars. (1) through (4), in par. (2) as so designated, substituted "for projects on the Interstate System (other than projects for which sums are apportioned under section 104(b)(5)(B)) in accordance with the following priorities: First, for high cost projects which directly contribute to the completion of an Interstate segment which is not open to traffic; and second, for projects of high cost in relation to a State's apportionment. Sums may only be made available under this paragraph in any State" for "to any other State applying for such funds for the Interstate System," after "available by the Secretary", struck out former cl. (1), which had required readiness to obligate funds within one year of the date the funds are made available, redesignated former cls. (2) and (3) as (A) and (B), respectively; and in par. (3) as so designated, struck out "and any amounts so apportioned remaining unexpended at the end of such period shall lapse" after "such sums are authorized", added provision relating to the disposition of funds not obligated within the prescribed time period, and added further provision that sums made available under this paragraph shall remain available until expended.

Subsecs. (c), (d). Pub.L. 97–424, § 115(b), added subsecs. (c) and (d). Former subsecs. (c) and (d) were redesignated (e) and (f), respectively.

Subsecs. (e), (f). Pub.L. 97–424, § 115(b), redesignated former subsecs. (c) and (d) as (e) and (f), respectively.

1979 Amendment. Subsec. (b). Pub.L. 96–106 substituted "shall continue to be available for expenditure in that State for a period of two years after the close of the fiscal year for which such sums are authorized and any amounts so apportioned remaining unexpended at the end of such period shall lapse" for "remaining unexpended at the end of the period of its availability shall lapse".

1978 Amendment. Subsec. (b). Pub.L. 95–599 substituted provisions relating to the availability of funds until the end of the fiscal year for provisions relating to the availability of funds until two years after the close of the fiscal year and substituted provisions establishing requirements for eligibility for funds for provisions calling for immediate reapportionment of funds.

1976 Amendment. Subsec. (b). Pub.L. 94–280, in revising the text, provided for a separate three year period of availability of sums apportioned to a Federal-aid system (other than the Interstate System), increased from the previously applicable two year period; continued the existing two year period for sums apportioned to the Interstate System; substituted provision for reapportionment of sums, apportioned to the States for the Interstate System under section

Notes of Decisions

Federal restrictions 2
Justiciable issues 3
State control of allotted funds 1
State funds, use of its own 4

---

1. State control of allotted funds

A reasonable construction of provision of this section providing that sums apportioned to each Federal-aid system or part thereof shall be available for expenditure on and after date Secretary has certified sums to each State highway department was not supportive of Secretary's argument that states have no inchoate interest whatsoever in funds so apportioned. State Highway Commission of Missouri v. Volpe, C.A.Mo.1973, 479 F.2d 1099.

2. Federal restrictions

Provision of subsec. (b) of this section providing that highway funds shall continue to be available for expenditure "in that state" for a period of two years before the lapse simply means that money is to be available for an individual state to use, and if any state does not obligate all their money within two-year period, then money will lapse, but does not mean that federal government may withhold money as it sees fit so long as states are allowed to obligate funds within two years. State Highway Commission of Missouri v. Volpe, C.A.Mo.1973, 479 F.2d 1099.

State which was ready, willing and able to obligate its apportionment from highway trust fund but was prevented from doing so by withholding, by Secretary of Transportation of the United States with approval of Director of the Office of Management and Budget of the United States, of authority to obligate apportionment from the fund for reasons related to prevention or control of inflation was entitled to injunctive and declaratory relief. State Highway Commission of Mo. v. Volpe, D.C.Mo.1972, 347 F.Supp. 950, modified on other grounds 479 F.2d 1099.

Under this chapter and V.A.M.S. Const. art. 4, §§ 29, 30 and V.A.M.S. § 226.010 et seq., State Highway Commission of Missouri had standing, as state agency invested with exclusive and plenary powers and duties on behalf of Missouri to receive and administer federal highway funds and apportionments, to maintain action against Secretary of Transportation of the United States and Director of the Office of Management and Budget of the United States seeking injunctive, declaratory and mandamus relief in connection with withholding authority from Missouri to obligate apportionment from highway trust fund. Id.

3. Justiciable issues

Action under section 1361 of Title 28 by State to compel Secretary to release all funds authorized and apportioned to State for contractual obligation under this chapter presented a justiciable controversy. State of Iowa ex rel. State Highway Commission v. Brinegar, C.A. Iowa 1975, 512 F.2d 722.

Although Indiana motorist contended that he had been injured by failure of Director of Office of Management and Budget and Secretary of Transportation to release impounded highway funds, where no state project had been denied by Administration and all money apportioned to state for prior fiscal years, as well as major portion of current fiscal year's funds, were available to state, the issue motorist presented was conditioned on events that had not occurred and were so hypothetical as to be nonjusticiable. Stanton v. Ash, D.C.Ind.1974, 384 F.Supp. 625.

4. State funds, use of its own

Where state highway project had not received federal funding prior to injunction halting project, district court was without authority to enjoin state's use of its own funds to engage in preliminary planning and design activities on theory that state and federal government were partners in the enterprise. Sierra Club v U.S. Army Corps of Engineers, C.A.N.Y.1984, 732 F.2d 253.

§ 119. Interstate System resurfacing

(a) The Secretary may approve projects for resurfacing, restoring, rehabilitating, and reconstructing routes on the Interstate System designated under sections 103

To impose liability on the state for its negligent failure to maintain Alaska highways through the winter would not place an "impossible burden" on the state. State v. Abbott, Sup. Ct. Op. No. 804 (File Nos. 1463, 1467), 498 P.2d 712 (1972).

Sec. 19.05.040. Powers of department. The department may

(1) acquire property;

(2) exercise the power of eminent domain;

(3) take immediate possession of real property, or any interest in it under a declaration of taking or by other lawful means;

(4) acquire rights-of-way for present or future use;

(5) control access to highways;

(6) regulate roadside development;

(7) preserve and maintain the scenic beauty along state highways;

(8) dispose of property acquired for highway purposes;

(9) accept and dispose of federal funds or property available for highway construction, maintenance, or equipment;

(10) enter into contracts or agreements relating to highways with the federal government, municipalities, a political subdivision, or with a foreign government, if the contract is approved by the federal government; and

(11) exercise any other power necessary to carry out the purpose of chs. 5 — 25 of this title. (§ 2 art III title I ch 152 SLA 1957; am § 3 ch 35 SLA 1971)

Legislative history reports. — For report on ch. 35, SLA 1971 (HB 387), see 1971 House Journal, p. 776.

NOTES TO DECISIONS

Department may acquire real property for highway through eminent domain. — The Department of Highways [now Department of Transportation and Public Facilities] may acquire real property for the purpose of constructing a highway through the exercise of eminent domain power, under the authority of this section, AS 19.05.080 — 19.05.120 and AS 19.20.040. Babinec v. State, Sup. Ct. Op. No. 908 (File No. 1539), 512 P.2d 563 (1973), rev'd on other grounds, 586 P.2d 966 (1978).

Sec. 19.05.045. Relocation payments.

Repealed by § 2 ch 60 SLA 1969.

Editor's notes. — The repealed section derived from § 1, ch. 93, SLA 1968.

Sec. 19.05.050. Roads in tourist and trailer camps. The department may adopt regulations governing the use of roads in tourist, trailer and other camps when public and private roads in or through the camps are used by, or are open to, the general public. (§ 1 ch 59 SLA 1955)

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5157 HTRA HB 213 (FILE 1)

commissioner shall, in conformity with the Administrative Procedure Act (AS 44.62), if necessary, adopt a regulation approving, modifying, or rejecting the proposed utility corridor and railroad right-of-way.

(c) If the commissioner approves or modifies the proposed utility corridor and railroad right-of-way,

(1) the Department of Natural Resources shall promptly classify, or reclassify, and reserve any state land within the utility corridor for use as a utility corridor and railroad right-of-way; and

(2) the department shall

(A) exercise its authority under AS 19.05.040 to acquire rights-of-way across land within the utility corridor which is subject to the state's power of condemnation;

(B) work with federal officials to secure reclassification and withdrawal of federal land in the utility corridor for reservations and rights-of-way across the federal land for use as a utility corridor and railroad right-of-way; and

(C) prepare a report evaluating the impact of construction of an extension of the Alaska Railroad across federal lands within the railroad right-of-way; the statement shall satisfy the requirements for an "environmental impact statement" under 42 U.S.C. 4332.

(d) The requirements of the Alaska Land Act (AS 38.05) relating to classification and reclassification of land are inapplicable to actions taken under this section. (§ 1 ch 145 SLA 1977; am §§ 1—4 ch 95 SLA 1981)

Effect of amendments. — The 1981 amendment substituted "not later than April 1, 1982, the" for "the" preceding "interior division" in the first sentence of subsection (a) and substituted "a complete legal description of the" for "a delineation of a" preceding "proposed railroad" in the second sentence of the subsection. In subsection (b) the amendment substituted "within 90 days after receiving a report transmitting the work of the interior division of the department under (a) of this section, the" for "the" preceding "commissioner" and added "if necessary" preceding "adopt a regulation" and in subsection (c)(1), added "promptly" preceding "classify." In subsection (c)(2), the amendment designated the language beginning "exercise its authority" and ending "power of condemnation" as subparagraph (A) and added subparagraphs (B) and (C).

Legislative history reports. — For report on ch. 145, SLA 1977 (HB 47), see 1977 House Journal, p. 371.

Article 3. General Provisions.

Section	Section
125. Purpose	140. [Transferred]
130. [Transferred]	150. [Transferred]

Sec. 19.05.125. Purpose. The purpose of chs. 5 — 25 of this title is to establish a highway department capable of carrying out a highway planning, construction, and maintenance program which will provide a common defense to the United States and Alaska, a network of highways linking together cities and communities throughout the state (thereby contributing to the development of commerce and indus-

try in the state, and aiding the extraction and utilization of its resources), and otherwise improve the economic and general welfare of the people of the state. (§ 2 art I title I ch 152 SLA 1957; am § 28 ch 32 SLA 1971)

Sec. 19.05.130. Definitions.

Transferred to AS 19.45.001.

Editor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Sec. 19.05.140. Penalties.

Transferred to AS 19.45.002.

Editor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Sec. 19.05.150. Naming of a highway.

Transferred to AS 19.10.085.

Revisor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Chapter 10. State Highway System.

Article
1. Designation, Marking and Use (§§ 19.10.010 — 19.10.100)
2. Planning (§§ 19.10.110 — 19.10.160)
3. Construction (§§ 19.10.170 — 19.10.250)

Article 1. Designation, Marking and Use.

Section
10. Dedication of land for public highways
15. Establishment of highway widths
20. Designation of state highway system
30. Responsibility for system
40. Uniform system of marking and posting
50. Traffic control signals
52. [Transferred]
60. Regulation of weight and load of vehicles and use of highways during certain seasons
70. Determination of safe speed limits
80. Designation of through highways
85. Naming of a highway
90. Erection and maintenance of guard rails
100. Closing highways

Sec. 19.10.010. Dedication of land for public highways. A tract 100 feet wide between each section of land owned by the state, or acquired from the state, and a tract four rods wide between all other sections in the state, is dedicated for use as public highways. The section line is the center of the dedicated right-of-way. If the highway

(1) replace all permanent markers on private or municipal property that were destroyed or lost during highway construction to permit persons to determine accurately new boundary lines resulting from the construction;

(2) file in the local recording district, after completion of highway construction, an accurate right-of-way map that will contain sufficient engineering and survey information designating where the resulting boundary lines are located on private or municipal property along the highway. (§ 1 ch 14 SLA 1967)

Sec. 19.10.200. Local control of state transportation corridors.

Transferred to AS 19.20.015.

Revisor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Chapter 15. Financial Provisions.

Section
10. Loans
20. Assent to federal aid
30. Participation by municipality in federal highway construction
40. General laws governing assessments by municipalities to pay highway costs

Sec. 19.15.010. Loans. For the purpose of participating in a federal grant-in-aid program, the department may apply to the Department of Administration for short-term loans from the general fund for periods not to exceed nine months and for amounts estimated not to exceed anticipated revenues for the term of the loan. The Department of Administration may approve the loan if it determines that the loan would not adversely curtail other expenditures from the general fund. (§ 2 art VI title II ch 152 SLA 1957)

Collateral references. — 39 Am. Jur. 2d, Highways, Streets and Bridges, §§ 122-129.
40 C.J.S., Highways, § 176.

Sec. 19.15.020. Assent to federal aid. The legislature assents to the Act of Congress approved July 11, 1916 (39 Stat. 355) entitled, "An Act to provide that the United States shall aid the states in the construction of rural post roads, and for other purposes." The department may make all contracts and do all things necessary to cooperate with the federal government in the construction of highways under the provisions of that Act, and all Acts amending or supplementing it, and any other Act of Congress that may be enacted, including the Federal-Aid Highway Act of 1956 (Public Law 627, 85th Congress, 2nd Session). (§ 1 art II title II ch 152 SLA 1957)

Sec. 19.15.030. Participation by municipality in federal highway construction. When a federal-aid highway is routed through a municipality, it may participate in the financing, planning, construction, acquisition of right-of-way, and maintenance of the highway in the manner and proportion the department determines is reasonable and proper. (§ 2 art II title II ch 152 SLA 1957)

Cross references. -- For provisions allowing for local control of state transportation corridors, see AS 19.20.015.

Sec. 19.15.040. General laws governing assessments by municipalities to pay highway costs. The provisions of law relating to the levying of assessments for highway financing, planning, construction, acquisition of right-of-way and maintenance, referred to in AS 19.15.030 apply to the extent that they are not inconsistent with the general purpose of chs. 5--25 of this title. (§ 3 art II title II ch 152 SLA 1957)

Chapter 17. Littering.

Section
10. [Repealed]

Sec. 19.17.010. Posting of law.
Repealed by § 3 ch 149 SLA 1980.

Cross references. -- For provisions concerning recycling and reduction of litter, see AS 46.06.010 -- 46.06.150.

Editor's notes. -- This section derived from § 2, ch. 13, SLA 1966; Executive Order No. 39, § 11 (1977).

Section 5, ch. 149, SLA 1980, provides: "This Act terminates July 1, 1984."

Chapter 20. Cooperation by and with the State.

Section
10. Connecting highways
15. Local control of state transportation corridors
17. Local control of traffic control systems
20. Authority to establish controlled-access facilities
30. Design of controlled-access facility
40. Acquisition of property and property rights
50. Grade-crossing eliminations
60. Participation in financing, planning, and regulation
70. Local service roads
80. Municipal master highway plan
90. [Transferred]

Sec. 19.20.010. Connecting highways. (a) The department may enter into cooperative agreements with a municipality for the construction or maintenance of a connecting highway which is part of the state highway system and located within the municipality.

MEMORANDUM

TO: Representative Lyman Hoffman

ATTN: Lori Nottingham

FROM: Mary Jennings MJ
Legislative Analyst

RE: Federal-Aid Highway Fund Distribution
Research Request 87.151

You requested that we determine: 1) the amount of federal-aid highway funds that have been appropriated to each community and election district during the past four years; 2) the criteria for transferring federal-aid highway funds among system funds; 3) the Department of Transportation and Public Facilities (DOT/PF) level of compliance with the transferability guidelines; and 4) how compliance could be improved.

Background

The "Federal-aid Highway program" is an umbrella term generally referring to all activities funded through the Federal Highway Administration (FHWA) and administered by the states' highway or transportation agencies. The term "program" is used to refer to the many components that make up the overall federal-aid highway program. Each program is separately funded. For example, within the federal-aid highway program, there is specific funding for bridge replacement and rehabilitation, primary systems, urban systems and interstates, etc.

Federal-aid highway acts have traditionally been the vehicle for providing funds, termed "authorizations," for the federal-aid highway program. It is these authorizations that spell out the amount and purpose for which federal-aid highway funds are to be expended and lead directly to the financing procedures of the program.

The authorizations contained in highway acts are the amounts of funds that the Secretary of Transportation, acting through the FHWA, can obligate on behalf of the federal government. The license to proceed with federal programs is generally called budget authority. Through what is termed "contract authority," which is another type of budget authority, sums authorized in the federal-aid highway acts are available for obligation without an appropriation action. The use of contract authority gives the states advance notice of the size of the federal-aid program.

The federal-aid highway program is a reimbursable program; the federal government reimburses states for costs they have incurred. The authorization amounts allocated to the states represent a line of credit upon which states may draw as Federal projects advance. The states generally start the federal projects using their own money, i.e., they provide front-end financing for projects and receive cash for the federal share of the project's cost as the work is completed.

After deductions for administration and research, the FWHA allocates the remaining portion of the sums authorized for the various funding categories to the states. The apportionments are based on several formulas prescribed by law. For example, urban system funds are apportioned to each state according to its percentage of the nation's urban area population (places of 5,000 or more persons), interstate system apportionments are based on the relative share of the cost to complete the system, etc. Attachment A contains a list of the apportionment formulas.

Transferability of Funds.

The levels of authorization reflect Congress's relative priority among the federal-aid funding categories, and the apportionment formulas are intended to reflect the relative needs of the states for each authorization. To provide for flexibility in the use of specific sums, federal law permits transfers to be made among certain funds. Funds apportioned to the federal-aid primary system may be transferred for use on the federal-aid secondary system and vice-versa. Primary system and urban system apportionments may be transferred from one category to the other in the same manner. However, the amount transferred may not increase or decrease the original apportionment for such systems by more than 50 percent. This effectively limits the amount which can be transferred to 50 percent of the smaller of the two apportionments. The law does not provide for direct transfer from the urban system fund to the secondary system fund or vice versa and also prevents any indirect transfer between the two funds during a year. Transfers may also be made among some safety funds and a state may transfer an amount equivalent to the cost to complete open-to-traffic interstate segments from its interstate construction funds to its Interstate 4R funds.

Title 23 Section 118 paragraph (f) of the United States Codes specifically addresses Alaska's transferability of funds. The paragraph states, "Funds made available to the State of Alaska under this title [23 USCS § 101 et seq.] may be expended for construction of access and development roads on a federal-aid system that will serve resource development, recreational, residential, commercial, industrial, or other like purposes." The DOT/PF has interpreted this paragraph to mean that the State has greater flexibility in the transferability of federal-aid system monies than what is allowed under federal guidelines. According to Ron Lind, Legislative Liaison for DOT/PF, the department follows the federal guidelines for transferability, except for primary, urban, and secondary system funds. Mr. Lind stated that the department has allowed transfers between primary and secondary system funds and primary and urban system funds that have decreased the original apportionment to the primary system fund by more than 50 percent.

In order to gain an idea of the extent to which Alaska transfers primary system funds to other system funds, I requested Mr. Lind to provide federal-aid apportionments to Alaska by system fund for the last four years and a break down of how these funds were actually obligated. Mr. Lind stated that provisions of the data will require a review of individual projects. He estimated that with other workload considerations, it will take his department two weeks to provide the information. I will forward this to you upon receipt.

In order to determine ways DOT/PF could achieve a greater level of compliance with federal transferability guidelines concerning primary, secondary and urban system funds, I contacted Barry Moorhead, Alaska Division Administrator of Federal Highways. Mr. Moorhead suggested that DOT/PF should formulate a comprehensive six-year plan and follow this plan without reprioritizing projects each year. He felt that if the department adhered to a long-term plan, all types of projects, both urban and primary (i.e., rural) projects, would be funded. He felt that DOT/PF is not currently able to plan well because the legislature continuously passes resolutions that place a high priority on certain projects. Mr. Moorhead felt that DOT/PF and the legislature could work together in order to allow the department to develop a nonpolitical highway project plan that could be carried out from year to year without emphasis continuously being shifted from one project to another.

Federal-aid Distribution

Attachment B, prepared by the Office of Management and Budget (OMB) provides appropriations of State and federal funds by election district, affected community, and road. The attachment also cites the Session Law authorizing the funding for a particular project. Pages 32 through 35 of the attachment provide data for projects that could not be attributed to a

particular election district--projects that were regional or statewide. It should be noted that the data do not contain legislative repeals of appropriations and/or reappropriations.

Table 1 compiles the data contained in Attachment B into election district format. The table provides the amount and percent of federal-aid monies by each election district for the years 1984-1987. The table indicates that the Anchorage Election District received the highest percentage of federal-aid monies for the fiscal years 1984, 1986 and 1987. During FY 85, Election District 17--Interior Highways--received the highest percentage. Election Districts 3, 24, 25, 26, and 27 received virtually no federal-aid monies during the period.

I hope you find this information useful. I have attached maps detailing federal-aid highway systems in Alaska. The DOT/PF is currently working on a project which will identify the number of highway miles of each type of federal highway system by census area. I will contact you when the project is completed. Please contact me if you have any questions.

APPENDIX C-1

Apportionment Formulas

Formulas for apportioning authorized sums for certain classes of Federal-aid highways are specified by statute. Those are shown below.

Fund	Factors	Weight	Statute*	Minimum Apportionment
Interstate [illegible] for completion only	Relative Federal Share of Cost to Complete the System**	1	[illegible]	1/2 percent (including Alaska)
Interstate Resurfacing, Restoration, Rehabilitation, and Reconstruction	Interstate System Lane Miles	55%	104(b)(5)(B)	1/2 percent
	Vehicle Miles Traveled on Interstate System	45%		
Interstate Highway Substitution (Not apportioned, 1/4 discretionary allocation	Relative Federal Share of Cost to Complete Substitute Projects	1	103(e)(4)	----------
Primary System	Formula A		104(b)(1)	
	Area	2/9		
	Rural Population	2/9		
	Rural Delivery Route Mileage and Intercity Mail Route Mileage	2/9		
	Urban Population*** (1/2 percent minimum (except D.C.))	1/3		
	Formula B		Sec. 108, P.L. 97-424	—
	Rural Population	1/2		
	Urban Population***	1/2		
	For each State, determine greater of A or B, then: Each State's apportionment equals: A or B x Total Primary Authorization / Sum of all States' A or B. Except that: the apportionment is not less than smaller of A or B			1/2 percent (including territories as a whole)
Secondary System	Area	1/3	104(b)(2)	1/2 percent (except for D.C.)
	Rural Population	1/3		
	Rural Delivery Route Mileage and Intercity Mail Route Mileage	1/3		
[illegible]	Urban Area*** Population	1	[illegible]	1/2 percent
[illegible]	[illegible] Area**** Population		[illegible]	[illegible]
[illegible]	[illegible]			[illegible]

Fund	Factors	Weight	Statute*	Minimum Apportionment
Hazard Elimination	Total Population Public Road Mileage	3/4 1/4	152(e)	1/2 percent
Highway Safety Programs	Total Population Public Road Mileage	3/4 1/4	402(c)	1/2 percent
Rail-Highway Crossing	Area Rural Population Rural Delivery Route Mileage and Intercity Mail Route Mileage Urban Population Number of Rail-Highway Crossings	1/12 1/12 1/12 1/4 1/2	Sec. 203(d) of the 1973 Highway Act as amended	1/2 percent 1/2 percent none

Minimum Allocation

For fiscal years 1983-86, each State is guaranteed an amount so that its percentage of total apportionments in each fiscal year of Interstate, Interstate 4R, Interstate highway substitutes, primary, secondary, urban, bridge replacement and rehabilitation, hazard elimination and rail-highway crossings shall not be less than 85 percent of the percentage of estimated contributions to the Highway Trust Fund, not including the Mass Transit Account (23 U.S.C. 157).

---

* Denotes appropriate section in Title 23, U.S.C., unless otherwise indicated.

** Apportionment factors are contained in the periodic reports, "A Revised Estimate of the Cost of Completing the National System of Interstate and Defense Highways," submitted to Congress as required in 23 U.S.C. 104(b)(5)(A).

*** Places of 5,000 or more persons.

**** Usually places of 50,000 or more persons--definition contained in 23 U.S.C. 101(a).

The Honorable Lyman Hoffman
Alaska State House of Representatives
P.O. Box V
Juneau, Alaska 99801

Attention: Laurie

Dear Mr. Hoffman:

In reference to the request Laurie made by phone on Monday, March 23, I am enclosing a copy of 23 U.S.C., paragraph 129(f) and (g) which provides instructions for the use of Federal Aid for ferries. In general, FHWA can authorize Federal participation in the construction and/or reconstruction of a ferry boat itself (excluding the appurtenances that are strictly for passeng r services nonrelated to travel such as a lounge/bar) and the approaches thereto. Approaches are those fixed highways facilities including structures which carry the road from the water's edge to the ferry moorage. The construction of a ferry boat includes those items, such as movable ramps and transfer bridges, which enable transfer from and continuation of the highway to the ferry boat. The statute does not provide for Federal funding for the construction of ferry terminal facilities in general, such as terminal buildings, warehouse facilities, dolphins, fuel stations, berth facilities, ticket offices, etc. which do not constitute a facility that enables transfer from highway to the ferry boat.

If this does not fully answer your questions, please feel free to call our office for further clarification.

Sincerely yours,

Barry F. Morehead
Division Administrator

Jareene Barkdoll

Assistant Transportation Planner

Enclosure

toll road or any bonds outstanding at the time constituting a valid lien against such section of toll road covered in the agreement and their maintenance and operation and debt service during the period of toll collections, and

(2) that there is one or more reasonably satisfactory alternate free routes available to traffic by which the toll section of the system may be bypassed.

(e) Notwithstanding the provisions of subsection (b) of this section, the Secretary may permit Federal participation in the reconstruction and improvement of any toll road providing for only two lanes of traffic, which is designated part of the Interstate System as he may find necessary to bring such two lane toll road to the geometric and construction standards for the Interstate System in order to provide for the safe use of such highway as part of the Interstate System and to facilitate the removal of tolls therefrom. Federal participation in such reconstruction and improvement shall be on the same basis and in the same manner as in the construction of free Interstate System highways under this chapter. No Federal participation shall be permitted pursuant to this subsection except on two lane toll roads which were designated as a part of the Interstate System on or before June 30, 1973. Before Federal participation under this subsection, the State highway department and the toll road authority involved shall enter into an agreement with the Secretary which shall provide that—

(1) no indebtedness which is to be liquidated by the collection of tolls (in addition to indebtedness in existence on date of enactment in this subsection) shall be incurred after the date of enactment of this subsection;

(2) all tolls received from the operation of the toll road, less the actual cost of such operation and maintenance, shall be applied to the repayment of only those bonds outstanding on the date of enactment of this subsection constituting a valid lien against such toll road and its maintenance and operation and debt service during the period of toll collection;

(3) the toll road shall become free to the public upon collection of tolls sufficient to liquidate all such bonds. [124]

(f) Notwithstanding the provisions of section 301 of this title, the Secretary may permit Federal participation under this title in the construction of a project constituting an approach to a ferry, whether toll or free, the route of which has been approved under section 103(b) or (c) of this title as a part of one of the Federal-aid systems and has not been designated as a route on the Interstate System. Such ferry may be either publicly or privately owned and operated, but the operating authority and the amount of fares charged for passage shall be under

ferry

[124] New subsection added by sec. 133 of Public Law 91-605, Dec. 31, 1970 (84 Stat. 1713); and amended by sec. 118(b) of Public Law 93-87, Aug. 13, 1973 (87 Stat. 259).

409-582 O - 84 - 9 : QL3

the control of a State agency or official, and all revenues derived from publicly owned or operated ferries shall be applied to payment of the cost of construction or acquisition thereof, including debt service, and to actual and necessary costs of operation, maintenance, repair, and replacement. [125]

(g) * Notwithstanding section 301 of this title, the Secretary may permit Federal participation under this title in the construction of ferry boats, whether toll or free, subject to the following conditions:

(1) It is not feasible to build a bridge, tunnel, combination thereof, or other normal highway structure in lieu of the use of such ferry.

(2) The operation of the ferry shall be on a route which has been approved under section 103 (b) or (c) of this title as a part of one of the Federal-aid systems within the State and has not been designated as a route on the Interstate System.

(3) Such ferry shall be publicly owned and operated.

(4) The operating authority and the amount of fares charged for passage on such ferry shall be under the control of the State, and all revenues derived therefrom shall be applied to actual and necessary costs of operation, maintenance, and repair.

(5) Such ferry may be operated only within the State (including the islands which comprise the State of Hawaii and the islands which comprise the Commonwealth of Puerto Rico) or between adjoining States. Except with respect to operations between the islands which comprise the State of Hawaii and operations between the islands which comprise the Commonwealth of Puerto Rico and operations between any two points in Alaska and between Alaska and Washington, including stops at appropriate points in the Dominion of Canada, no part of such ferry operation shall be in any foreign or international waters. [126]

(6) No such ferry shall be sold, leased, or otherwise disposed of without the approval of the Secretary. The Federal share of any proceeds from such a disposition shall be credited to the unprogramed balance of Federal-aid highway funds of the same class last apportioned to such State. Any amount so credited shall be in addition to all other funds then apportioned to such State and available for expenditure in accordance with the provisions of this title. [127]

---

[125] New subsection (e) added by sec. 5(a) of Public Law 86-657, July 14, 1960 (74 Stat. 522); relettered by sec. 133 of Public Law 91-605, Dec. 31, 1970 (84 Stat. 1713).
* Relettered by sec. 139(a) of Public Law 93-87, Aug. 13, 1973 (87 Stat. 270).
[126] Amended by sec. 139(b) of Public Law 93-87, Aug. 13, 1973 (87 Stat. 271); sec. 108 of Public Law 93-643, Jan. 4, 1975 (88 Stat. 2284); and sec. 121 of Public Law 94-280, May 5, 1976 (90 Stat. 438).
[127] New subsection added by sec. 139 of Public Law 91-605, Dec. 31, 1970 (84 Stat. 1713).

PROJECT RANKING CRITERIA
June 9, 1986

Q1. Does the project extend the service life of the facility?

Assumptions: Any work to be done to an existing facility potentially qualifies. This question is intended to reward projects which protect the State's investment in the existing system.

Projects were divided into the following categories of given points:

Reconstruction Project	25 points
Resurfacing/Overlay Project	15 points
New Project	0 points

Q2. Is the project needed to continue the development and construction of previously funded projects in the program?

1. Supplemental funding for work that is under contract or funding for ongoing operational programs such as ridesharing. — 75 points

2. Supplemental funding for a project that is ready to go to bid in the first quarter of the budget year (July 1). — 55 points

3. Construction phase funding or funding for completion of pre-construction phases (preliminary engineering, right-of-way, and utilities). — 35 points

4. Funding to begin preliminary engineering. — 15 points

5. New or other projects. — 0 points

Q3. Will the completion of this project have direct and identifiable post-construction benefits to the local, regional, or statewide economy?

1. Highway resurfacing and improvements would have little or no economic effect, since these projects repair or replace existing facilities. — 3 points

2. Widening existing roadways would have a moderate impact on the economy since these projects expand existing facilities. It is assumed a certain amount of infrastructure and economic activity already exists and these projects would support the expansion of this existing activity. — 5 points

3. New roads built to support community growth and development. — 7 points

4. New or expanded capacity for roads built specifically to support industrial, commercial, or resource development. Few projects will be scored using item 4. This criteria is intended to support regional developments such as a Red Dog Mining project.

$$\frac{\text{Number of Jobs}}{\text{Project Cost}} \times 2{,}000{,}000 = \text{points}$$

Q4. Will State maintenance and/or operations costs change as a result of this project?

Reduction in State M&O costs (e.g. some rehabilitation projects without any expansion, transfer of responsibility to local government)	20 points
No additional State M&O costs/positions (e.g. safety improvement, some reconstruction and rehabilitation projects)	15 points
One new State M&O position (e.g. typically in cases of added capacity, interchange projects)	10 points
Two new State M&O positions (e.g. new facilities)	5 points
Three or more new State M&O positions	0 points

Q5. Impact on Alaskan job market.

1. Majority of project jobs can be filled by Alaskans — 10 points
2. All other projects — 0 points

Assumptions: Apply this item to all projects, design, right-of-way, construction, or combinations of those. Judge each project on its own merits. This item is intended to reward projects that are likely to result in Alaskan hire. (Anchorage projects all received 10 points.)

Q6. Will the project provide low-cost solutions to safety problems at high-hazard locations? The higher the safety cost/benefit ratio or dollars addressing safety, the higher the points awarded.

1. Specific safety projects for State of Alaska facilities — 100 points
   Projects would include:
   - Illumination, signalization, and/or channelization of intersections and facilities with high accident rates. This includes safety improvement projects.
   - Guardrails.
   - Repair of specific hazardous conditions such as site distance problems.
2. Safety related projects — 65 points
   - Accident history of facility indicates need for upgrade. (Many Anchorage reconstruction projects fall into this category.)
   - Lane widths of 10 feet or less.
   - No or abrupt shoulders.
3. Other safety projects — 30 points
   - Unsafe operating environment. Rehabilitation and capacity improvement projects may qualify.
   - Lane width or shoulders substandard.
4. All other projects — 0 points

Q7. What is the functional classification of the facility? This question rewards the higher functionally classed facilities consistent with State goals and objectives.

1.	Interstate highways, expressways	60 points
2.	Major arterial highways	50 points
3.	Minor arterial highways	40 points
4.	Major collectors, urban collectors	30 points
5.	Other state-maintained routes	20 points

Q8. What type of improvement is proposed? This question rewards projects which protect the State's investment in existing facilities.

1.	Project is aimed at preventing an imminent failure of the facility.	60 points
2.	Restoration (3R type projects), preservation, structural maintenance or rehabilitation of an existing facility.	50 points
3.	Reconstruction for the purposes of bringing the facility up to modern standards. This scores only those reconstruction projects with no expansion.	40 points
4.	Improvement or expansion of a facility for the purposes of economic development, improved safety, or improved levels of service. This score; reconstruction projects with expansion, interchanges, safety projects, and capacity improvement projects.	30 points
5.	New facility development to relieve congestion of an existing facility, improve efficiency of the transportation system or generate economic development.	20 points

Q9. What is the regional perception of the public's support for this project relative to other projects being ranked? Projects were scored based on input from local governments. The average of scores for this question cannot exeed 15.

1. The project is in the top third of public priorities.	25 points
2. The project is in the middle third of public priorities.	15 points
3. The project is in the lower third of public priorities.	5 points

Q10. What importance does the region give to factors not addressed by the other ranking items? The average of scores for this question cannot exceed 100.

As a guide and an aide for consistency, projects were divided into the following categories of points. Other factors may be used and the regions may be asked to provide backup information on the factors used to evaluate a project.

Imminent pavement failure, projects of regional significance.	200-175 points
Interstate with LOS E or below (may include interchange projects).	175-150 points
Top M&O priorities, priority major facility projects.	150-125 points
Major facility projects with average - slightly above average priority.	125-100 points
Average priority projects, minor facility projects, projects of less than average importance.	100-50 points
Projects with limited or no relationship to the overall transportation system, not on the State system, low traffic volumes.	50-0 points

Q11. Is this project prompted by capacity concerns? If a ratio is estimated, the maximum score is 75 points.

1. Roadways - Less than two lanes

$$\frac{\text{Current year ADT} \times 25}{(.5)\ (\text{Capacity at LOS C for terrain type})} = \text{points}$$

2. Two lane roadways

Adequate shoulders[A] $\dfrac{\text{Current year ADT} \times 25}{(\text{Capacity at LOS C for terrain type and area})^{A}} = \text{points}$

3. Multi-lane roadway

Single-direction ADT $\dfrac{(.10)\ (\text{Current year ADT})\ (25)}{(\text{Capacity at LOS C for terrain type})^{A}(\#\text{ of lanes in that direction})} = \text{points}$

Note: [A]If shoulders are inadequate, multiply LOS C by .8.

Q12. Does the facility related to the project meet identified standards for such a facility? Projects were divided into the following categories of points:

Project addresses air quality, access control, and safety standards. Facility is extremely substandard and is seasonally impassable.	100 points
Facility is substandard but passable year round. Reconstruction of substandard facilities, i.e. lack of shoulders, inadequate lane widths, etc.	75 points
Facility meets minimal or most standards but requires resurfacing.	50 points
New or recently constructed to standards.	0-25 points

ANALYSIS: The amounts shown above are based on federal fiscal years and represent the amounts we would be unable to obligate as a result of this bill. Application of this bill to FFY87 would have resulted in the "loss" of $56 million, however since the bill is not effective until 7/1/87 it is impossible to project the actual impact for the projects and amounts that will remain in federal fiscal year 1987. ★

Prepared by: Ron B. Lind, Director
Phone: 465-4070
Division: Plans, Programs, and Budget
Date: 04/14/87

Approved by Commissioner: Mike D. Utz
Date: 4/15/87
Agency:

Distribution (by preparer):
Legislative Finance
Legislative Sponsor
Requestor
Office of Management and Budget
Impacted Agency(ies)
Senate Secretary

★ PLEASE NOTE THERE ARE MANY VARIABLES TO ASSESSING FISCAL IMPACT FROM THIS BILL. THIS ESTIMATE SHOULD BE VIEWED AS A "WORSE-CASE" ESTIMATE FOR FIRST 3 YEARS. MBH

Because of time constraints only three years of calculations were prepared, and it is expected that by 1990 we should be able to have additional projects ready to obligate in the Secondary and Primary categories.

These amounts are based on the FHWA project listings in our Capital Improvement Program 1987 - 1993. The attached table shows the impact by federal system by year and attached lists identify specific projects by region.

Even though the loss of ability to obligate funds in the early years would not mean the loss of federal apportionments it has the same impact. The federal program does not have a mechanism which would allow a state to obligate the losses in early years in the later years.

We have not included cost estimates for increased maintenance that would be required on our existing system if reconstruction projects were not completed because we did not have time to quantify these items. But we know there would be a cost.

Federal Obligation and Project Activity Loss

(In Millions of Dollars)

Formula

	FFY 1987*		Anticipated Loss		FFY 1988		Anticipated Loss		FFY 1989		Anticipated Loss	
	Available	Expected	Federal Dollars	Project Activity	Available	Expected	Federal Dollars	Project Activity	Available	Expected	Federal Dollars	Project Activity
Interstate	34.7	41.4	-0-	6.7	34.7	43.2	-0-	8.5	34.7	37.3	-0-	2.6

* Applied to activity for the entire fiscal year, including some obligations that have already occurred.

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: HB213

TITLE: "An Act relating to allocation of federal-aid highway funds; and providing for an effective date."

APPROVED: Mark S. Hickey MSH
Commissioner

DATE: April 13, 1987

The Department of Transportation and Public Facilities is opposed to HB213. This bill would seriously restrict the ability of the department to meet transportation needs in many parts of Alaska. Some of the major problems we see with this legislation are -

(1) It would severely reduce and almost eliminate federal funding available for urban system improvements. Most federal-aid routes in Anchorage, Fairbanks, Juneau, Ketchikan and Sitka are on the federal-aid urban system. Only $3.6 annually in federal funding would be available for highway improvements on these routes.

(2) The bill nullifies the special flexibility in federal highway law available only to Alaska and Puerto Rico under Subsection 118(f) of Title 23. Shortly after statehood, Alaskans successfully sought the addition of Subsection 118(f) to federal highway law to enable our new state to fully participate in the federal highway program. We believe it is poor public policy to limit the options available to us under federal highway law.

(3) The bill makes no specific provision for the federal funding needs of the Alaska Marine Highway System, and the formula factors recognized by the bill do not allocate funds specifically for Marine Highway needs. We currently conduct an ongoing program to improve transfer facilities and rebuild our vessels using primary and secondary funds.

(4) The bill would discourage Alaska from full-fledged participation in the national effort to rebuild the Interstate System. We understand it is the intent of the sponsors to prevent transfers of primary system funds to Interstate improvements. Therefore, our expenditures on our almost 1100 miles of Interstate would be limited to the $34.7 million available annually and directed specifically at Interstate needs.

(CONTINUED)

For further information call Susan Fleischhauer at 465-3900.

(5) Implementation of this bill will likely cause the department to embark upon the construction of new collector and potentially arterial links. These new miles of federal-aid highways will require a new commitment of general fund resources to meet federal requirements for road maintenance.

(6) The bill assumes that factors that work well at the national level for allocating funds will work well for distributing funds within Alaska. We question whether postal route miles, for example, has any relevance to the diverse funding needs of each region of Alaska.

(7) The bill provides for almost an immediate effective date (July 1, 1987). We will not have enough bid-ready projects in the primary and secondary categories to spend all of federal funding in the three months remaining before the close of the federal fiscal year (September 30, 1987). We do not see this problem being resolved until FY89 at the earliest because of the long time spans involved in developing federal-aid projects.

In the months ahead the Department will pursue reviewing and refining the way we select and rank projects in our capital improvement program. We recognize that we have not made a full transition to a capital improvement program that relies almost exclusively on federal funds to meet transportation needs, even in our most remote areas. We believe this effort is the best approach to meeting the improvement needs of our highway system, and urge the Legislature to give us time to allow it to proceed.

IN THE HOUSE

CS FOR HOUSE BILL NO. 213 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to allocation of federal-aid highway funds; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 19.15 is amended by adding a new section to read:

Sec. 19.15.050. ALLOCATION OF FEDERAL AID. (a) The department shall allocate and expend nine percent of federal-aid highway funds received for federal-aid highway programs on qualified projects in the marine highway system. The department shall allocate and expend the balance of federal-aid highway funds received for federal-aid highway programs among the administrative regions of the department for qualified projects in the same proportion as the eligibility of each region bears to the total eligibility of the state to receive the funds. However, in determining the allocation of the balance of the funds utilizing the federal allocation formulas for the federal-aid primary system and the federal-aid secondary system, the department shall use designated federal primary system route mileage or designated federal secondary system route mileage, as appropriate, instead of rural delivery route mileage.

(b) Subject to (c) of this section, the department may transfer surplus federal-aid highway funds allocated to a region under (a) of this section to qualified projects in another region if all qualified projects within the region to which the funds were allocated are funded.

(c) The department may not transfer federal-aid highway funds

among federal-aid highway programs unless a surplus of funds exists after all qualified projects within a federal-aid highway program are funded. The department shall allocate surplus funds within a federal-aid highway program first to qualified projects within the federal-aid secondary system, then the federal-aid primary system, and then the federal-aid urban system. If all qualified projects eligible for funding under a federal-aid highway program are funded, the department may transfer surplus funds to qualified projects eligible for funding under the federal-aid interstate system.

(d) In this section

(1) "federal-aid highway program" means the federal-aid primary system, the federal-aid secondary system, or the federal-aid urban system

(2) "qualified project" means a highway project eligible for federal-aid highway funds that receives points under the state ranking criteria for federal-aid highway projects.

* Sec. 2. This Act takes effect July 1, 1987.

HOUSE COMMITTEE REPORT

(7)

Date referred: 3/25/87 **FURTHER REFERRALS:** Finance
