But first, I'd like to digress for a moment and tell you about a concept some of you may already be familiar with. Back in 1979, the late R. Buckminster Fuller visited Anchorage to speak at the Future Frontiers conference. It was at this three-day symposium, sponsored by the State Legislative Council, that Mr. Fuller spoke of Alaska's prime location in relation to the world.

During his address, Mr. Fuller presented a map he had developed back in 1930, called the "Dymaxion Sky Ocean World Map". This map was first printed in Life Magazine in 1943 and also published in his book, Critical Path. If you look at this map, you'll see that Alaska is positioned in the center of the map, and that it does absolutely link Asia and America. Alaska anchors the Pacific Rim, around whose circumference clusters 2/3 of the population of the world.

In Anchorage, we have always seen ourselves as the "Air Crossroads of the World". That expression was used for many years as the slogan for the Anchorage Chamber of Commerce. But Mr. Fuller (and several others) have advanced the theory to say that Anchorage and Alaska are not only the crossroads, but the veritable center of the world for trade, commerce and travel. Our markets are not just transpacific, but are, in essence, global.

Bearing that perpective in mind, let's return to our topic today. Anchorage International Airport, as a state-owned facility, began in the early 60's as a principal transfer point for travelers making connections to points within and outside Alska. In addition, the airport was a refueling and an entry and exit point for international flights, principally on routes between Europe and the Far East.

Today, twenty-six years later, Anchorage International still serves those primary funcitons. The plant, however, has grown to include two passenger terminals encompassing 295,000 square feet of total floor area, three runways, extending up to 10,900 feet, 36 aircraft gates, and 6 baggage claim areas. All of this is contained within approximately 2,600 acres. The

airport is serviced by 16 major carriers, 9 of which are international, 5 commuters and approximately 25 non-scheduled airlines.

According to a DOT/PF study conducted in 1983, the airport contributes more than $1.5 billion to the Anchorage economy. Over 13,000 residents counted on the airport's operation for their jobs, earning a total of $375 million dollars.

How would you like your business to have a financial statement like this: In FY '86, the airport took in $45 million dollars, showing a profit of $21 million. Let's take it one step further: image having a business that made a profit of $21 million a year, and that it achieved this profit without any advertising, any public relations, or any marketing studies whatsoever! In today's competive marketplace, it's nearly impossible to believe, but that is precisely the situation at Anchorage International.

The times, they are a'changin', and more and more, international airports are beginning to be seen by the private sector as trade centers, offering enormous potential for economic development within the communities they serve.

As I pointed out earlier, Anchorage's strategic location could easily enable it to serve as a platform for business between Europe and Asia. The possibilities are limitless. For example, if Anchorage were to become a foreign trade zone, goods from around the world could be stored here, processed, used in manufacturing other items, exhibited, repackaged, sold or handled in numerous ways. Imports could be used with domestic parts to

manufacture new items within the zones -- all without paying any customs duties or excise taxes. It would be a tremendous catalyst for development within our business community.

In addition, by expanding the duty free zone at the airport to allow foreign shoppers a much wider range of retail exposure than just gifts and liquors, we could create, in essense, regional shopping centers for stop-over travelers. They could tour duty free trade complexes and show rooms without the necessity of having to go through customs.

More and more, we're seeing international airports taking an active role in marketing their facilities and services. For example, Seattle Tacoma Airport, together with the Port of Seattle, which owns the airport, has developed an agressive campaign to attract the expanding transpacific market, the international tourist market and the air cargo industry.

They've produced numerous brochures and an audio-visual presentation. They have a staff of marketing representatives which actively call on transpacific clients, touting Sea-Tac's excellent international services on the airport premises, such as banks, customs brokers, freight forwarders, warehouses, foreign consultates, plentiful terminal space, excellent ground access, ample runway capacity and minimum environmental concerns. Sea-Tac representatives are even stationed in Tokyo.

By working closely with planning officials of Boeing's aviation market research company, Sea-Tac is able to track aviation trends and target markets for air travel services. The results of their research indicate that

their marketing approach should include such selling points as, lower landing fees than other airports; lower fuel prices; fewer airport delays; improved custom clearance; and greater amenities. These would include duty free shops, foreign language signs, interpreters, exchange facilities, ground transport access and egress.

Sea-Tac's programs and policies have helped to establish it as one of the top twenty airports in the United States for passenger-traffic volume. In 1982, over 9.2 million passengers and 148,000 metric tons of air freight were handled by Sea-Tac. By 1985, the number of passengers at Sea-Tac increased to 11.5 million passengers, up 25%. Freight went up to 210,000 metric tons, up 42%.

Other airports are following suit. Hartsfield International in Atlanta employs a marketing staff, using funds from both public and private sources, to produce brochures, audiovisuals, and advertisements. Trade shows and trade missions are also a part of the airport's marketing strategy.

We see similar efforts at Baltimore/Washington International Airport, and Miami International. We're seeing more and more examples of international airports using ad agencies, public relations firms, and outside sales representatives to establish and position themselves in the international market.

The need, then, to make our presence known is going to become increasingly important in the years ahead. And not just because others are

doing it. At this time, Anchorage International faces a very critical challenge, that being the advancement of aviation technology.

I'm sure most of you have heard about the new Boeing 747-400 series aircraft. This aircraft is an advanced version of the B-747's which have served Anchorage International Airport for the past fifteen years. However, the new 400-series includes some remarkable advancements in engine performance and aerodynamics.

The 400-series requires only a two-person flight crew, compared with the three crew members required on all other 747's. It will be able to carry between 400 and 600 passengers, depending on configuration, and will be able to fly approximately 8,000 miles non-stop. This will allow the aircraft to fly between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without refueling in Anchorage. Boeing received its first order in late 1985 from Northwest Orient Airlines. The first production model of the aircraft is expected in late 1988.

If foreign carriers depart Anchorage International Airport, the operating expenses at the airport will not decline in proportion. The difference between the shortfall in revenue and the continuing expense of operating the buildings, the facilities and the runways will have to be borne by higher landing fees from airlines such as Western, United, Alaska, MarkAir, Reeve and all the commuter carriers. In addition, there will be higher tie-down charges. Thus, the entire rate structure will go up. Who will ultimately pay the cost? You and I, every time we purchase an airline

ticket or use the airport for whatever reason. The effect on the visitor industry itself could be diasterous.

As you can see, we're in a race against time to develop a plan to protect our existing revenue streams and to create opportunities using the airport as a hub for new business activity.

Our window of opportunity is slowly closing, and we can't afford to wait. We need to sell Anchorage International as a place the airlines will want on their route schedules -- whether it be for passengers, cargo or simply refueling. And the most direct way to go about this task is to mount a marketing campaign, promoting our plant and its services to the world.

Funds for marketing the airport are already available. Revenues from the airport's operation go into a reserve account. The money is there. From those funds, we now need to dedicate a line item in the airport's budget to marketing.

Once a line item dedicated to marketing the airport is budgeted by the State, a cooperative effort can be developed, whereby funds from private and public sources would be combined to develop a generic campaign. This program would be modeled after cooperative efforts which have been highly successful in marketing Alaska seafood and tourism.

Based on past experience with those successful cooperative programs, we believe it will take approximately $3 - 5 million dollars to develop and implement a comprehensive marketing plan for the airport. This seems like

a reasonable amount to launch a program to reach the world's markets. Once the groundwork has been laid, we'll have a better feel for what it will take to maintain an on-going marketing program.

Which revenue streams need to be protected and developed?

Obvious ones are, of course, those passengers who are stopping over in Anchorage, on their way to or from a primary destination. Our research shows that 84% of those on flights stopping over in Anchorage would be interested in a stay of 4 -7 days. One-half of those would have stopped on the trip they were on if they would have known they could. Once we tell them they are able to stopover, we need offer an irresistable incentive for them to do so.

One good example of a stopover program was developed by the Port Authority of New York and New Jersey for passengers transitting through the three major airports: Kennedy International, Newark International and LaGuardia. They call it, "On Your Way Over, Stopover". The package includes one-night hotel at a choice of hotels, sightseeing, VIP shopping service at Macy's or Bloomingdales with language assistance, a choice of Broadway theatre tickets, a welcome kit, etc., all at a low package price, depending on the visitor's selections. They've advertised this program in periodicals all over Europe.

The Anchorage Convention and Visitors Bureau is taking its cue and is moving ahead to develop local stopover programs. But the bigger job before us is to let passengers know ahead of time that stopover opportunities exist.

Other international passengers of great interest to us are those on either end of the transpolar route who could be persuaded to use Alaska as a visitor destination. New research by the State of Alaska shows that the potential for Japanese and German visitors selecting Anchorage as a visitor destination nearly equals the potential for visitors coming from the U.S. If we do our job right in selling our destination, it is possible that we could attract an additional 200,000 visitors a year from Germany and Japan, or a 50% increase in vacation/pleasure travel.

While passengers are important, air freight offers even greater potential for growth. By increasing freight handling at AIA, we would see an increase in landing revenues (which are based on the gross takeoff weight of the aircraft) and fuel revenues for the airport. In the private sector, we would see an increase in business and land development surrounding the Anchorage International, as well as crew expenditures at hotels, restaurants, car rental, and retail and service businesses.

International air freight is a rapidly growing market. In recent years, international air cargo shipments have increased at twice the rate of passenger travel. The main reason for this growth has been the overall increase in the importance of speed in international transactions. This is particularly true in Alaska when large volumes of perishables, such as fish, are shipped to outside markets.

The most cost-effective freight for air transportation is low-volume, high-value, and relatively low-weight products, such as electronic

components, mini-computers, and precision instruments. Other less obvious air freight products are those with time-sensitivity, such as high-fashion apparel, pharmaceuticals, animals, produce, seeds and flowers. These markets need to be actively developed.

I mentioned fuel fees, and I'd like to stress that fuel is an important revenue stream. The airport operates a fuel storage farm and many operators have underground storage tanks. On an average day, approximately 1.2 million gallons are pumped. This means approximately $24,000 a day, or $9 million annually in fuel flowage fees.

A natural response to growing freight business would be land and business development near the airport. The development of an airport industrial park and/or a foreign trade zone designation would offer Anchorage new jobs and revenues in a wide range of business activities, including freight forwarding, processing and manufacturing, warehousing and distribution, and much more.

Anchorage presently handles over 300 million pounds of freight each year, a 14.5% increase from ten years ago during the pipeline days. The opportunity is there, but we have to knock on some doors.

There is an old saying regarding the value of advertising: a codfish lays thousands of eggs, and this is done silently. A chicken lays one egg and cackles. The result: nobody eats codfish eggs, and nearly everyone eats chicken eggs. Therefore, we need to cackle about our airport. I guess that would fit in with the bureau's "Wild About Anchorage" campaign.

Who is backing the plan to market the International Airport? This idea was further advanced by the Anchorage Business Council's Airport Committee, which I happen to co-chair, and others. The council, by the way, was formed by Mayor Tony Knowles with the mission of spurring economic development in Anchorage. Both the Municipality and the Anchorage Business Council have endorsed our committee's recommendation. The Greater Anchorage Chamber of Commerce has since given the idea its full support, along with the Anchorage Convention and Visitors Bureau.

We'd like to invite your support as well, because as residents of Alaska and users of the airport, you have a stake in its future operation. We presently have the lead time to plan for the decade ahead. But we can't afford to wait. We need to plan for the 21st century now.

I've enjoyed this opportunity to speak to you today about protecting our airport's future. I've discussed how we've grown in the past 26 years, and which opportunities and challenges await us; I've explained how, through innovative marketing, we can keep the airport solvent and help spur economic development, and I've noted who supports that kind of thinking.

Buckminster Fuller, in describing his Dymaxion World Map, said that the map showed two things: 1) that the colder an area gets, the more the annual temperature variation. (I'm sure all of us in Alaska would concur.)

And 2) the more the geographical temperature varies annually, the more inventive the humans who live in those areas have to be to survive. "If you live by Lake Victoria in eastern Africa," he said, "you will invent a wooden boat if you wish to cross it. If you live beside Lake Baikal in central Siberia and you wish to cross that body of water, you will invent a wooden boat in the summer and skates and a sled in the winter."

That "inventiveness" has to be harnessed, along with financial resources, in order to develop Anchorage International Airport's future markets. In addition, we need the utmost cooperation and support of our elected officials and the state bureaucracy to establish Anchorage International as a premiere airport for trade, commerce, and passengors, truly the "center" of the world. Let's work together to put Anchorage on Main Street!

Crosswinds at the Crossroads

1986 David Predeger

Changing winds aloft are blowing storm clouds toward Anchorage's status as 'Air Crossroads of the World'

BY JUDITH FUERST

AS AIR TRAFFIC PATTERNS evolve, Anchorage risks losing its claim to the title "air crossroads of the world."

Change is in the winds aloft: There's a bypass now, and the intersection's fuel pumps aren't needed by new aircraft capable of flying increased ranges. Anchorage International Airport is no longer the mandatory pit stop it was for traffic between Europe and Asia less than a decade ago.

"We've never had to work for our airport traffic; everything has just fallen into place," says Dan Dixon, director of the Office of International Trade in the state Department of Commerce & Economic Development. He identifies three factors endangering Anchorage International's status as a major airport for international traffic: improvements in air transport technology, relative slowness in marketing the airport and the sluggish development of Alaska as a destination or tourist stopover point for world travelers.

Dixon warns: "Dramatic losses in Anchorage International Airport traffic will have an immediate multimillion-dollar impact on the state's economy in lost revenues. However, the more devastating impact will be on our efforts to sustain and secure growth for our tourist industry and our efforts to provide a foundation for expansion of international trade."

A task force proposed by Dixon began meeting in August to address marketing of the state's major international airport. Its members include representatives of the Division of Tourism, the airport's duty-free shop, the Anchorage Convention & Visitors Bureau (ACVB), the state Department of Transportation & Public Facilities (DOT), the mayor's office and the state legislature.

"It's a baby step in the scheme of things – the first organized step to facing up to what's coming down the road," Dixon says. That specter lurking down the highway is declining revenues for the city, the region and ultimately the state.

It was geography that put Alaska on aviation maps, so to speak. In 1957, Scandinavian Airlines System developed the polar route. Carriers landed at Fairbanks International Airport for refueling in the early years of polar aviation. But as traffic patterns evolved Anchorage became the stopping point for flights traveling from Asia to Europe or the eastern United States.

Sometimes the stops are for refueling only, particularly with cargo flights. Even with planes capable of greater ranges, cargo flights often are routed through a refueling point. By trading payload for fuel weight, the trip becomes more revenue-efficient. Also to be considered in the tradeoff, though, are additional crew and fuel required for landing and takeoff.

Passenger flights, on the other hand, often travel nonstop when able, because most customers prefer direct routing. Typically operational people on carrier staffs argue for stops, while marketing personnel support nonstop routes.

In addition to refueling, many carriers recater planes here, make crew

changes and enter cargo and passengers into the United States to avoid more congested customs clearance in the Lower 48. Each service contributes to airport revenue.

One substantial revenue source for Anchorage International Airport is income from the duty-free concession where international passengers shop during their brief layovers. In 1985 Duty Free Shoppers contributed $14.25 million to airport operations – 30 percent of the system's revenue.

Now, however, what geography giveth technology threatens to taketh. That's already been the fate of three other major refueling points in international air traffic – Gander, New Foundland; Shannon, Ireland, and Bermuda Island. The introduction of the jet eliminated the need to make fueling stops at these locations. Although each has managed to retain traffic, none sees the magnitude of flights – or the revenue from transit air traffic – previously enjoyed.

Anchorage International Airport's contribution to the municipality was calculated in an October 1985 study conducted for the Alaska DOT by Applied Economics Associates. Total economic input was valued at $1.51 billion in 1983, which generated total employment of 13,472.

Contributing to the airport's economic impacts were air transportation, visitor-related, freight forwarding and travel arrangement operations. Those segments directly employed 8,086, with the remaining 5,386 employed as a result of spending by those directly employed.

Total revenue for the Anchorage portion of the state's international airport system (Anchorage and Fairbanks) for the fiscal year ending June 30, 1985, was $39.5 million. Fairbanks International's contribution was $3 million. Because operating expenses for Anchorage and Fairbanks were $16 million and $6 million, respectively, the income generated at Anchorage International subsidized operations at Fairbanks International, thereby contributing to the Interior's economy as well.

Dixon believes 1990 is a critical year for the future of Alaska's airport system. By then carriers will have made important routing decisions based on the delivery of new Boeing aircraft. The new generation 747-400 has optional crew quarters to eliminate the need for stops to relieve crew and a range of 8,000 miles. It is the increasing range of aircraft that weighs most heavily in carrier decisions on whether to land or bypass Anchorage's crossroads.

Carriers that have ordered the new planes include Northwest Airlines, Cathay Pacific Airways, Lufthansa German Airlines, Korean Air Lines, Singapore Airlines and KLM Dutch Royal Airlines. Deliveries of the planes are scheduled to begin December 1988. Except for Cathay Pacific and Singapore, these carriers now land at Anchorage International Airport.

Craig Campbell of Coffman Associates, an airport consulting firm, reports Singapore was known to be considering flights through Anchorage, but with the larger planes probably won't have to. Also, KLM has noted a lack of growth in its routes via Anchorage and is one of the carriers likely to reduce services when it begins flying the new planes, according to Campbell.

BOB COE, PRESIDENT of the Alaska Division of Duty Free Shoppers Ltd. and a member of the state-organized task force, has a vested interest in international transit traffic and keeps tabs on international carriers using Anchorage. He notes in April KAL pulled three inbound and four outbound flights, JAL added two overflights – nonstop routes between Europe or the eastern United States and Asia – and Air France added one overflight. In September, JAL pulled one flight stopping at Anchorage and began another overflight. JAL pulled yet another flight in October.

Earlier this year, JAL – which claims to account for one-fourth of Anchorage's entire international operations – landed at least six freighters and six passenger flights a day. But the carrier's business travelers increasingly opt for nonstop flights from Tokyo to New York or Europe.

Those flights are traveling 98 percent full, while others stopping in Anchorage have "seats available," according to Mitsuo Kitamoto, district manager. Consequently nonstop flights that bypass Anchorage are the area expected to grow.

Another factor changing the relative importance of Anchorage as a refueling center is the ability to travel through Russian air space. JAL is one of a select group of carriers now flying over the Soviet Union in accordance with a bilateral agreement allowing limited use. The route shortens the polar trip, saving three hours in transit time, according to Campbell.

He also points out more foreign carriers are opting for other U.S. landing sites – Seattle, for example, which serves a large population center. "Anchorage is behind the power curve in competition from West Coast airports," Campbell notes. Another region of the country winning new international traffic is the South, particularly Atlanta and Dallas. For example, Delta Airlines recently inaugurated a route from Tokyo to Atlanta.

Airport marketing aimed at attracting international carrier routes has become much more sophisticated in recent years. The stakes are high in terms of airport revenue and regional economic impact. Sandy Daggett, public affairs officer for the Port of Portland, which operates the international airport there, says Delta's Portland service is expected to create an economic impact of $25 million in the State of Oregon.

The carrier will route five flights per week in its new Tokyo-Portland serv
The economic impact is based on 19

CERTIFICATE PROGRAMS

(from 3 months to 24 months):

- ❑ Electronics Engineering Specialist
- ❑ Financial Management Specialist
- ❑ Computerized Accounting Systems Specialist
- ❑ Full-Charge Computerized Bookkeeping Specialist
- ❑ Paralegal Administrative Assistant
- ❑ Executive Administrative Assistant/Office Management
- ❑ Computerized Office Specialist/The Modern Secretary

- Approved by the Alaska Commission on Postsecondary Education.
- Professional Placement Services.
- Financial Assistance Available for Tuition and Living Expenses.
- State-of-the-Art Computers and Software.
- Time-Effective and Cost-Effective.
- Day and Evening Programs.
- Word Processing and Computer Hardware and Software Operation.
- Students in computer courses assigned to their own computers. Hundreds of hours of hands-on computer instruction in each program.

WHERE SUCCESSFUL CAREERS BEGIN

CHARTER C·O·L·L·E·G·E

CALL TODAY: 562-4669

figures and considers tourism generated by the routes as well as airport revenue. To land the new service, Portland spent $300,000, including consulting fees and legal costs.

Daggett says an important factor in securing Portland's position as an international gateway was the more than $4 billion in trade with Japan attributable to the region, which also includes southwest Washington. In the absence of such a trump card, Anchorage must play on other strengths: lack of congestion, facilities, low pricing and a destination for tourism.

"There is a problem developing on the horizon," says Campbell. "Anchorage must go after carriers. It's going to have to be the cheapest if it's goal is to keep airlines here." Other former fuel stops have retained flight operations in various ways. Gander, Newfoundland, has been successful at establishing itself as a service base for charter flights, while Shannon, Ireland, and Bermuda have become destination stops.

Anchorage International Airport currently is not taken seriously as a destination for international travelers. Says Robert Gibbons, spokesman for Northwest, "Alaska is viewed as a domestic tourist market." Although Anchorage once was included in the carrier's international service, "the thrust of operations in Anchorage has shifted to international freighter service and domestic passenger traffic. The international passenger side fell apart with the advent of 747 service," according to Gibbons.

"Nobody knows about Alaska," says JAL's Kitamoto. "Alaska means icy." Canada is much more sophisticated in its marketing, he explains. For example, British Columbia is promoted heavily as a skiing location and attracts many Asian visitors for winter as well as summer travel.

ALTHOUGH ALASKA has the opportunity to sell JAL passengers on tourism in the state when they stop in the international terminal, "the only available display is the duty-free shop" and "bears." Kitamoto suggests one stuffed bear might be enough, but displays currently reinforce misconceptions about a hostile, remote and ice-covered Alaska. Even the stopover tourist booth, which hands out pamphlets, is remembered for its picture of igloos and Eskimos.

"I don't know how the State of Alaska thinks," says Kitamoto. "I would like to say to the state to show more of Alaska—trains, hotels, facilities at Denali. Give the costs and camping information. Let people know how accessible the glaciers are. Other airports all have pictures; only Anchorage has so few in its gate areas."

1986 David Pratoger

In 1985, the Duty Free Shoppers concession contributed $14.25 million in revenue to Anchorage International Airport.

Although Kitamoto expects JAL's freight to increase, he feels the passenger traffic is on uncertain footing: "I don't know what will happen in five years." Once passenger traffic is lost to Anchorage International Airport in nonstop routing, he gives it "no chance to recover."

According to Don Dickey, director of the Alaska Division of Tourism, more than $150,000 has been spent on international tourist promotion in Anchorage International over the last two years. Additionally, the division will be a major funder for the task force to the tune of about $100,000.

Research firms are sampling to obtain a clearer description of passen-

gers passing through Anchorage International and to better understand attitudes of the Japanese and Germans. A continuing problem Dickey notes is carrier preference for selling through tickets rather than ticketing for a layover in Alaska. Hence the Division of Tourism also is meeting with carriers and tour companies to solve those problems and examine incentives.

Reyn Bowman, president and chief executive officer of the ACVB, says the state has been slow to embrace the opportunities of international tourism, but adds, "Now we're making real progress. The Division of Tourism is spending 7-8 percent of its budget on overseas tourists."

According to Rolf Klug, vice president of marketing and sales for ACVB, a 1983 study by Alaska Pacific University showed 84 percent of international transit passengers indicated an interest in visiting Alaska. A further gauge of tourist potential was findings that 62 percent liked winter-oriented travel and 50 percent could have stayed over on that trip.

Says Bowman, "The carriers will keep planes flying in here as long as people want to come. If we don't develop a consumer interest in Alaska as a destination, we stand to lose traffic and see the cost of domestic service increase. If we do develop consumer interest, we've got a win-win situation. But we've got a race with time before carriers receive new aircraft and shift to nonstop flights."

William R. Snell, deputy commissioner of DOT, says, "We've had some flattening off in international passenger service, but it is not a significant decline." Adds Larry Michou, assistant director of administration for Anchorage International, "Our rate base remains solid because as passenger traffic has dropped, cargo, which is heavier and uses more fuel, has increased."

Michou says if the duty-free concession is lost somewhere down the line due to losses of international passenger traffic, the revenue "could be rolled into other fees."

Gina Marie Lindsey, manager of statewide aviation with DOT, points out Anchorage can be cheaper than some of its competitors because of duty-free revenue. Therefore, the loss of Duty Free, which employs about 270 in its Anchorage operations, could mean an increase in airport user rates, both domestic and international.

Snell reports the airport management has initiated four programs aimed at strengthening Anchorage's position in international airport competition. To benefit carriers serving Anchorage and the airport, the airport has promoted the development of a fuel consortium in which member airlines own and control distribution of fuel services. He credits the effort with helping attract new business and stabilizing pricing.

Second, for the first time in Anchorage's history, five-year operating agreements have been signed with the major carriers serving Anchorage and Fairbanks. "Now we know our revenues and commitments for five years, and the airlines get predictability too," he says.

Third, DOT is cooperating in a marketing strategy promoting the airport and increased tourist stopovers. He notes, however, "The airport will market itself if we have competitive facilities for cargo and passengers."

FINALLY, DOT is seeking means to advance Anchorage's use as a hub. It is considering ways to raise capital for facilities. Snell notes any development is expected to involve the private sector. The Alaska Industrial Development Authority and DOT may provide the land, with someone else operating the facilities. Establishment of a foreign trade zone is being considered as well.

Anchorage International Airport would have something to celebrate regarding increased cargo tonnage if a corporation consisting of United Parcel Service and DHL Airways – International Parcel Express (IPX) – is awarded the small package service to Japan. The consortium, which has said it will allow other companies to purchase stock in the venture if it's selected, is one of three applicants.

The final selection will be made by the U.S. Department of Transportation following the recommendation of administrative law judges appointed to weigh the merits of each contender. IPX has stated it would use Anchorage, Cincinnati and Louisville with Tokyo. The two other proposals have been filed by Federal Express, which would use Portland and Memphis with Tokyo, and Orion Air, which has specified Seattle with Tokyo for its service.

IPX traffic through Anchorage would be a welcome addition and perhaps start the airport down the road to becoming a cargo hub. One factor weighing against that happening – or at least one that might limit the size of any hub operation – is the relatively small regional population base. In the past, Anchorage has reaped the benefits of being between major trade and tourist centers of the world. But that position already has been eroded and will not draw international traffic a decade from now unless carriers determine Anchorage International Airport has more than geography to offer.

"We could be facing a grave problem in loss of revenue and jobs. It's later than it should be," says Dixon. □

Unlocking the gates

FOR SEVERAL years Alaskans have been asking for a waiver of visa requirements for international travelers passing through Anchorage International Airport. The waiver, sponsored by Rep. Don Young, became law last week when Congress enacted a new immigration law.

That means it is time for Alaskans to pursue the programs they envisioned as possible if visas were eliminated. The federal government is, more or less, telling us through the waiver action, "Here's what you asked for, now let's see what you can do with it."

More than one million passengers spend an hour or more at the airport while they are traveling between Europe and the Orient. They have been confined to the airport and the airlines faced heavy fines when one failed to re-board the plane he arrived in.

Alaskans have seen these travelers as potential visitors to Anchorage and possible visitors to other areas of the state before going on to their destinations. The visa requirement discouraged efforts to promote stopovers.

A FIRST STEP would be to pursue a concerted program to win support from the airlines. At present they do not want stopovers in Anchorage and it is easy to understand why. When a passenger disembarks here, his seat is usually empty on the second half of a long journey between continents.

From an economic standpoint, the airlines must have the prospect of boarding as many passengers in Anchorage as disembark. The designation of Anchorage as the Olympic City for 1994, when it comes, will serve as a mighty catalyst to this end.

It is critically important that this program be successful. Anchorage must become a destination city instead of only a transit point on the global airways. It's value as a transit point is diminishing as new planes and technology permit overflying.

Both Northwest and Japan Airlines no longer stop here. United Airlines has initiated service over the North Pacific with no stop in Anchorage. There is talk of flying non-stop between Japan and Europe.

SUCCESS in this venture is essential. If one out of four international travelers stopped to visit Anchorage, there would be at least 1,000 a day in town and if they stayed three days there would be 3,000. To accommodate them there would be more hotels, more tour buses, more restaurants, more service establishments of every sort.

Such growth would be the forerunner of additional growth to accommodate the Olympic games in 1994 and the new era of international status and fame.

Editorials

The new tourist season

THERE WERE a lot of happy numbers in a new report from the state's Division of Tourism, which took a statistical look at people who travel to Alaska during the off-season months of fall, winter and spring.

A surprising number — 42 percent — are pleasure visitors. And 24 percent of those come to visit friends and relatives. Business-related trips are the reason for 52 percent of the off-season travel, the state's survey showed — and that's surprising only in that some might have guessed that and even larger percentage of winter-type travel would be of a business nature.

AMONG THE other pleasant findings of the report was the discovery that off-season visitors sightsee and do other touristy things just as much, if not more, than do those who come our way in the summer — and they average 10 years younger in age.

They also tend to come here more than once, and stay longer while they're here.

All of which speaks well for the state's effort to expose more and more visitors to the wonders and beauties of Alaska that can't be seen during June, July and August.

And it's something all of us might keep in mind, when the time comes to invite relatives and friends to visit the 49th State. As a matter of fact, you might want to remember to include an invitation in some of the Christmas cards you'll shortly be addressing to family and friends in far away places Outside.

Opinions . . . Other views, other insights

Alaska's international airports offer economic opportunity

Courtroom to boardroom

by Tony Smith

At a time when the state is struggling with the wrong end of OPEC politics, attempting to be the cornerstone of the international fisheries and hopeful of receiving the nod from the International Olympic Committee, we need to remember the economic opportunities at home. In this writer's view, an important part of the state's economy involves some buildings and some asphalt. That's the Anchorage and Fairbanks airports.

The problem is that technology may doom our airports. If we don't come up with a viable plan, a new generation of aircraft may result in stops at Anchorage and Fairbanks being a vestige of the past. In my estimation, the commercial future of our airports is as important to our economic future as our high profile items.

A 1985 study indicated that Anchorage International Airport contributed $1.5 billion to the Anchorage economy. Indications were that the airport alone generated employment of 13,472 people. The cost for this is only approximately $20 million.

There's nothing that says international flights will continue to call at either the Anchorage or Fairbanks airport. Right now, we are the air crossroads of the world, but new long-range Boeing planes may change that. Already some international passenger carriers are beginning to fly direct.

The state, the municipality, and those involved with the airport, must concentrate on this issue. The airport may not be the sexiest issue, but it is one area where we haven't experienced a downturn.

For example, there are international carriers, like Korea Airlines, who are unable to pick up or discharge passengers because they do not have landing rights. The reason for this seems to stem from events at the Seoul airport, which have nothing to do with Alaska. We can not accept that.

Visas have been a problem in the past, but the Alaska Congressional delegation has started a program which may solve that. From Alaska's vantage, we need to have our international friends have the ability to pass a few days in Alaska. We must market Anchorage and Fairbanks as destination points.

We need Free Trade Zones in order to maximize the opportunities for local businesses to take advantage of our strategic location. Our airports have to provide services competitive with Portland, Seattle, Los Angeles and other gateway locations. We've gone a long way on the services, but we can always do more.

A task force is working on the problem, and that's a start. The downside, however, is such that an all-out effort is called for. It's easy to get people excited about AWWR and the Olympics. We need the same excitement about the continued development and marketing of the Fairbanks and Anchorage airports.

An Alaskan since 1971, Tony Smith is an attorney in private practice in Anchorage.

Municipality of Anchorage

OFFICE OF THE MAYOR

P.O. BOX 196650
ANCHORAGE, ALASKA 99519-6650
(907) 264-4431

TONY KNOWLES
MAYOR

October 9, 1986

Governor Bill Sheffield
P.O. Box A
Juneau, AK 99811

Dear Governor:

You are aware that Anchorage International Airport is the linchpin of Anchorage's economy. As such, when potential declines in its revenues come to light, we become concerned. This concern is manifest in the attached resolutions from the Assembly and Chamber of Commerce.

Anchorage is concerned about keeping our airport economically healthy and growing. To accomplish this, we need a hard-hitting marketing and public relations program. We would appreciate your assistance in this endeavor.

Sincerely,

Tony Knowles
Mayor

Dave Walsh
Chairman of the Assembly

ANCHORAGE, ALASKA
AR NO. 86-178

A RESOLUTION SUPPORTING THE DEVELOPMENT OF A MARKETING PROGRAM FOR ANCHORAGE INTERNATIONAL AIRPORT

WHEREAS, the Municipality is in the process of applying for Foreign Trade Zone status, and

WHEREAS, an important aspect of the success of Anchorage's Foreign Trade Zone is Anchorage International Airport, and

WHEREAS, Anchorage International Airport and the marketing thereof has been a recent topic of discussion for several community groups and in the local news media, and

WHEREAS, stopover air traffic economic opportunities at Anchorage International Airport have not been fully realized, and

WHEREAS, a viable and economically productive international airport is in the best interest of the Anchorage economy, and

WHEREAS, there are sufficient monies in the Airport Fund.

NOW, THEREFORE, the Anchorage Municipal Assembly hereby resolves:

Section 1. That acceleration and expansion of the current airport marketing program is warranted and appropriate.

Section 2. That the creation of a strategic planning program for Anchorage International Airport is of utmost importance to Alaska's economic health.

Section 3. That this Assembly welcomes participation in such an effort.

PASSED AND APPROVED by the Anchorage Assembly this 12th day of August, 1986.

Chairman

ATTEST:

Municipal Clerk

Anchorage·Star of the North
Chamber of Commerce

RESOLUTION 86-07

ANCHORAGE INTERNATIONAL AIRPORT

WHEREAS, the Anchorage Chamber of Commerce has, throughout the history of the Airport, been the leading business organization in support thereof; and

WHEREAS, Anchorage is the transportation and marketing center for the State of Alaska; and

WHEREAS, the Chamber recognizes the International Airport has a primary role in the economic growth of Anchorage and Alaska; and

WHEREAS, existing State policies appear to accept a "status quo" insuring only the mutual support and a common maintenance level at major airports in the state; and

WHEREAS, there appears to be neither a near-term nor long-term plan to insure the growth for current and future commercial users, or enhancements for the public and other users at the International Airport,

THEREFORE BE IT RESOLVED that the Anchorage Chamber of Commerce calls upon the Municipal Assembly to move forthwith and:

- strongly urge the State to develop and implement a viable marketing plan with state, national and worldwide impacts, specifically for the Anchorage International Airport;
- take the steps necessary that will result in a formal role for the city in the policy development and the future of the Airport.

APPROVED BY THE Anchorage Chamber of Commerce Board of Directors this 22nd day of August, 1986.

ANCHORAGE, ALASKA
AR NO. 86- 51

A RESOLUTION REQUESTING IMMEDIATE ACTION TO OBTAIN FOREIGN TRADE ZONE STATUS FOR CERTAIN AREAS OF THE MUNICIPALITY OF ANCHORAGE.

WHEREAS, the future of Anchorage's economy depends on appropriate and timely actions to further growth and opportunities; and

WHEREAS, the Economic Development Committee has studied the foreign trade zone concept and has heard the testimony of experts as well as from the Chamber of Commerce and Economic Development Commission; and

WHEREAS, the Economic Development Committee has found no significant negative aspects of foreign trade zone status; and

WHEREAS, the Port of Anchorage would be influenced by this change in status and thus is an interested agency.

NOW, THEREFORE, the Anchorage Municipal Assembly resolves:

SECTION 1. The Municipality should immediately proceed to assess Anchorage's foreign trade zone potential, and define potential land areas for consideration.

SECTION 2. The Port of Anchorage should function as the action agency for this effort, and shall make application for foreign trade zone status, providing periodic progress reports to the Assembly.

PASSED AND APPROVED by the Anchorage Municipal Assembly this 8th day of April, 1986.

CHAPTER III

THE DEVELOPMENT AND GROWTH OF THE ANCHORAGE INTERNATIONAL AIRPORT

The Anchorage International Airport had its genesis when, late in 1951, operations began on an 8,400 foot east-west and a 5,000 foot north-south runway. The Airport was constructed under the auspices of and operated by the U.S. Civil Aeronautics Authority.

In 1959 Alaska became the 49th state of the Union and, in the following year, ownership and administration of the Airport was transferred to the State of Alaska. During the first year of State administration, construction began to extend the east-west runway to 16,600 feet, necessitated by the advent of jets which were displacing propeller driven-aircraft. Additionally, construction of new parking aprons and ramps began.

The airport expansion and modernization program was interrupted by the 1964 Good Friday earthquake which severely damaged the runways and destroyed the control tower and part of the terminal building. Necessary repairs to make the Airport operational were made quickly, but it took until 1967 before reconstruction of the east-west runway was resumed. It was completed in 1970, in time to handle the ever increasing international traffic as well as the expanding domestic operations, the latter due in large measure due to increased oil related activities.

In order to make the Airport a facility which would be accessible under all but the most adverse wheather conditions, construction of a new north-south runway began in 1978 and was completed in 1980. Throughout that period, modification and improvements continued to be made to the general facilities and the existing terminal building, and a new dedicated international terminal was completed in 1982.

During the 25 years as a State owned and operated airport, the Anchorage International Airport grew from a small regional facility into an important national and international one which, in 1984, served 40 scheduled and non-scheduled airlines. Domestic and international passenger traffic rose from 274,000 in 1960 to over 4,000,000 persons in 1984, making the Airport one of the largest medium size air traffic hubs in the U.S. In 1983, for example, the Federal Aviation Administration (FAA) reported 1.04 million revenue passenger enplanements in Anchorage, compared to 1.04, 1.04 and 1.2 million at the El Paso, Texas, Jacksonville, Florida, and Syracuse, New York airports, respectively [3]. These airports serve metropolitan areas with population bases which (in 1980) ranged from 480,000 to 722,000 persons [4]. Measured on the basis of the number of trips-per-resident population, for example, the Anchorage Airport ranks second (after Reno, Nevada) among all of the 36 medium size hubs in the US with an enplanement ratio of 6.0, compared with 2.2, 1.4, and 1.6, respectively, for the other three cities named above.

Even more striking, and underlining the pivotal role of the Airport in the state's economy, is the volume of freight traffic that passes through it. According to the same FAA source [3], the Airport handled 224,000 tons of enplaned revenue freight in 1983 (20 percent of which were U.S. mail shipments), fully one-half of the total tonnage of

all of the 36 medium size hubs in the U.S. combined, and only slightly less than the tonnage passing through the Los Angeles International and Kennedy International Airports (267,000 and 253,100 tons, respectively) - large hubs serving metropolitan areas with nearly 50 times the population of Anchorage. (In the same year, 72,200 tons of freight were enplaned at the Seattle-Tacoma International Airport.)

The large fraction of U.S. Mail is noteworthy, since subsidized shipments of parcel post are 60 to 80 percent less expensive than airfreight cargo of identical weight. As a result, outlying communities are able to purchase goods at considerably lower than "market" prices, a benefit we have not measured. (Market prices include necessary payments to all factors of production, including a normal return to capital.)

In the sections that follow, we will briefly discuss and document the extraordinary growth of both the domestic and international passenger and freight traffic at and through the Anchorage International Airport between 1960 and 1984.

Passenger Traffic, 1960-1984

Over the 24 year period between 1960 and 1984, total passenger traffic (arriving, departing and in transit) rose from less than 0.3 to over 4.0 million persons, at an average annual rate of 11.9 percent (Table III.1). In only three years, 1965, 1971 and 1972 did passenger traffic fail to increase (Table III.2). (The decrease in 1965 is explained by the 1964 earthquake; the decreases in the other two years are most likely due to the then uncertain future of the Trans-Alaska Pipeline.) The largest growth rate was registered by the "in transit" category, 15.3 percent. Whereas, in 1960, that class of traffic

accounted for only 16.3 percent of total traffic, by 1984 it represented 36.4 percent (Table III.3). However, as Table III.4 shows, growth rates for the several passsenger groups varied substantially over time. Thus, for example, "in transit" traffic rose at an annual rate of 33.6 percent during the 1960-1970 period, 4.6 percent between 1970 and 1980, and only 2.0 percent between 1980 and 1984 (Table III.4).

Detailed data on international traffic were available for the fiscal years 1976-1984 and, together with domestic data, are shown in Tables III.5-III.7. Over the 8 year period, total traffic increased at an annual rate of 6.2 percent. However, during the last two years, international traffic declined by more than 155,000 persons, or over 5 percent per year. Over the 8 year period, the number of arriving and departing international passengers decreased by about 50 percent. Domestic traffic, on the other hand, continued to increase throughout that period.

It is unclear whether the recent decrease in international traffic portends a developing trend, or whether it is a cyclical phenomenon.

NOTE: AARG - Average Annual Rate of Growth

Freight Traffic, 1960-1984

Reference has already been made to the large volume of freight that moves through the Airport. Table III.8 recapitulates freight movements between 1960 and 1984 and Tables III.9 and III.10 show data for annual percentage changes and and the fractions of total freight arriving at and departing from the airport. A major discrepancy is noted between the volume of "departing" freight reported by the Airport in 1983 (92,466 tons) and "enplaned revenue freight" reported by the Federal Aviation Administration for the same year. The FAA data include all freight, originating or transshipped from one aircraft to another. The Airport statistics do not include freight which is transshipped. For purposes of comparing the Anchorage Airport with other US airports, the FAA data [3] were used.

The data show that between 1960 and 1984, total freight movements increased ten-fold, at an average annual rate of 6.1 percent. Growth rates on a year-to-year basis, however, were very uneven. Not surprisingly, and pointing to the Airport's strategic role in the development of the state's economy, are the enormous growth rates (in excess of 23 percent) of freight traffic registered during the pipeline construction period 1973-1977 (Table III.11).

That Anchorage is the Alaskan entrepot and that the Airport is its essential transportation pipeline is manifested by the fact that throughout the 1960-1984 period, "departing" far exceeded "arriving" air freight tonnage. One explanation for these asymmetrical flows is that goods are shipped to the Anchorage maritime port, or arrive over the road, and are then redistributed by air to the rest of the state which has no other transportation links to the "outside"; another is that

large quantities of relatively high value, perishable fish are flown to foreign and domestic markets during peak harvest periods. Rapid access to markets significantly increases the value of these products. At the Seattle-Tacoma International Airport, in comparison, arriving and departing cargo for each of the years during the same period were nearly always in balance. Clearly, many outlying communities could not survive and an array of economic activities would not take place or would be severely curtailed without the cargo services provided through the Airport.

As in the case of passenger traffic, detailed data for international and domestic cargo movements for the fiscal years 1976-1984 are displayed in Tables III.12-III.14. Over the 8 year period, total domestic freight traffic grew at a modest 1.7 percent. Arriving air freight increased at an annual rate of 1.1 percent. Departing traffic, on the other hand, rose nearly twice as fast, at 2.0 percent. In 1984, it accounted for approximately 64 percent of total freight movements.

In contrast, the international components registered extraordinary growth rates. Whereas, in 1976, international air cargo traffic accounted for only 5.8 percent of the total, by 1984 it represented 12.6 percent. That the Airport has become a major point of entry for foreign air cargo is indicated by the fact that in 1984 over 25 percent of total arriving cargo was carried by international airlines, compared to only 12 percent in 1976.

TABLE IV.2

SUMMARY OF RESPONSES TO AIRLINES INDUSTRY QUESTIONNAIRE
(DATA PERTAIN TO 1984-1985 CALENDAR OR FISCAL YEAR)

EXPENDITURE CATEGORY	NUMBER OF RESPONDENTS	EXPENDITURES (DOLLARS)	PERCENT OF TOTAL
(1)	(2)	(3)	(4)
Fuel	13	$ 245,727,171	68.6
Wages and salaries	16	44,330,809	12.4
Other/Misc.*	5	20,734,600	5.8
Goods and services	12	12,753,753	3.6
Food, lodging, and transp. for flight crews	13	11,941,406	3.3
Benefits	12	8,836,808	2.5
Contracted maintenance	10	8,280,867	2.3
Terminal bldg. rent, landing and parking fees	14	4,666,786	1.3
State and local taxes	7	665,500	0.2
Total expenditures		$ 357,937,700	100.0

QUESTION	NUMBER OF RESPONDENTS	RESPONSE
(5)	(6)	(7)
Number of full-time employees residing in Anchorage	16	1,183
Number of hotel room nights generated by		
airline personnel layover	13	60,780
unsched. passenger layover	10	8,161

SOURCE: Questionnaires distributed to airlines industry by Applied Economics Associates, Inc.

NOTE: * Includes items such as inflight meals, contracted ground handling, utilities, insurance, depreciation and interest, and security among others.

As shown in the first line of Table IV.2, expenditures on fuel constitute nearly 70 percent of the respondents' total expenditures. The Airport's financial statement for fiscal year 1984 shows that fuel and oil fees collected by the Airport amounted to $8.3 million, or 31.4 percent of total operating revenues, the second largest income source for the Airport after concession fees of $9.4 million (or 35.4 percent of operating revenues).

The second largest expenditure of the airlines is for wages and salaries. These disbursements are income to employees who reside in the Greater Anchorage Area, and, as such, will be respent on goods and services in the local economy. For example, an Alaska Airlines ticket agent who resides in Anchorage will spend his/her income on housing, food, clothing, entertainment and other consumption items produced and/or distributed in the local economy. These purchases constitute revenue to local businesses who, out of these receipts, pay their employees, purchase goods and services from other local businesses, and so on. This process is referred to as the "multiplier effect" and when measured quantitatively (see Chapters V and VI) will describe an ultimate level of output, earnings, or employment that is generated throughout a regional economy as a result of an initial, direct economic stimulus - the purchase of a good or service, for example. Employee benefits, representing other labor income, similarly generate multiplier effects. Together, expenditures on wages and salaries and employee benefits accounted for 14.9 percent of the total expenditures indicated by the respondents.

Expenditures for goods and services, including contract maintenance, and food, lodging, and transportation for flight crews, as well as most of the other/miscellaneous expenditures represent purchases

by the airlines from local businesses. These operational purchases, representing 15.0 percent of total air carrier expenditures in Anchorage, also generate multiple output, earnings and employment effects throughout the local economy.

The remaining airline expenditures, terminal building rent, landing and parking fees, and state and local taxes, represent payments to government agencies. These expenditures, accounting for 1.5 percent of total expenditures, are ultimately returned to the private economy, although not necessarily in the region in which the revenues were generated, in the form of wage and salary payments to government employees and purchases from private firms.

Other important data were collected from the commercial air carriers. The respondents indicated that they employed 1,183 Anchorage residents and paid for a total of 68,941 hotel rooms in Anchorage due to flight crew and unscheduled passenger layovers. The hypothetical question included on the questionnaire asked for the most likely alternative routes for passenger and freight traffic in the event that the Airport closed for one year: Five respondents indicated that both passenger and freight traffic would be re-routed through Fairbanks, four indicated that passenger traffic would be re-routed through the USSR, while two indicated that freight traffic would be carried over the Soviet route as well. Vancouver, B.C. was also indicated as a terminus or refueling point. Two carriers indicated that passenger traffic would not be re-routed at all.

Airport Related Services

Airport related services consist mainly of concessionaires doing

business at the Airport itself. Also included in this category are firms providing ground transportation to and from the Airport, such as car rental agencies, and travel agents. In short, this industry classification includes those local firms who provide goods and services to passengers arriving at and departing from the Airport. In contrast to commercial air carriers, not all of the businesses rely entirely on the Airport. In order to gauge the dependence of such firms on the Airport, a hypothetical question asking how current operations would be affected if the Airport did not exist was included on the questionnaire. As a further check, respondents were also asked to provide data on the level of gross receipts from operations in Alaska and the level of gross receipts from operations conducted at the Airport. In addition, the questionnaire requested information on employment and expenditures in the Anchorage area.

Airport related services questionnaires were mailed to 46 firms. Fourteen were completed and returned to AEA, while five of the original 46 were returned as non-deliverable. Taking 41 (the original 46 minus the 5 returned) as the relevant base to compute the response rate, 34.1 percent of the firms surveyed responded, as indicated in Table IV.1. Table IV.3 summarizes the information provided by those respondents who indicated that they were at least partially dependent upon the existence of the Airport. The data from the surveys were adjusted to take into account those firms who indicated less than 100 percent dependence and therefore the figures in Table IV.3 reflect estimates of the respondents' levels of expenditures and employment directly tied to the Airport.

As shown in Table IV.3, expenditures on employee compensation (wages and salaries plus benefits) constitute the largest fraction of

AIRPORT HAPPENINGS

As announced in October, Hawaiian Airlines is starting non-stop service to Honolulu, Hawaii. The flight, using a Lockheed L-1011 Tri-Jet departs in the morning, arriving in the islands during mid-afternoon.

While it is not new service, Western Airlines has become the wholly owned subsidiary of Delta Airlines. Just this past year Western celebrated its 60th anniversary, making it America's oldest airline. Western has announced that it will continue to operate as Western Airlines until April 1, 1987. Thereafter it will become a part of Delta Airlines and operate under the Delta name and colors. There has been no announced change in service to Anchorage resulting from the acquisition.

As reported in the Anchorage Times on January 4, 1987, British Airways has announced a reduction in service through Anchorage, starting this spring. Most flights between London and Tokyo will be flown non-stop, via Siberia instead of making the traditional refueling stop in Anchorage. This option became available to the international air carrier community in 1985 when the Soviet Union agreed to allow limited access to international air carriers over Siberia in exchange for expanded landing rights at European and Asian cities. British Airways will retain limited weekly scheduled service through Anchorage and has not announced any plans to terminate service at the airport.

PUBLIC INVOLVEMENT

On January 8, 1987, Coffman Associates held a public meeting with members of the Turnagain Community Council to discuss the refined alternatives for the airport. The meeting was well attended and members of the council were extremely interested in the Lake Hood development plan. It was recognized that considerable effort had been conducted by the consultant team to include many suggestions presented during previous meetings which ensure neighborhood compatibility with the airport. Since development recommendations have not yet been finalized, members were advised that comments would be considered in the final program.

TRIVIA QUIZ

In January, Hawaiian Airlines initiated service between Anchorage and Honolulu, using a Lockheed L-1011 Tri-Jet. The airline has stated that plans are currently being developed to extend the service between Anchorage and Europe, establishing the only through service between Honolulu, Anchorage, and Europe. What is the only other American owned airline to have flown this route?

Answer: Western Airlines (soon to be identified as Delta Airlines through merger action in 1986), but service was discontinued in 1981.

the Transportation Committee
on 2/20/87.

Representative Drue Pearce

Synopsis of Anchorage International Airport Operating Agreement and Lease for Domestic Terminal

Sec.	
Preamble	DOTPF is owner/operator of Anchorage International Airport
2.02	Airlines rights to operate are common rights with others to use the airport for air transportation business
2.03	Airline leases Exclusive Use Space Airline has preferential but non-exclusive use of Apron area Airport Director can authorize other airlines to use holdrooms, loading bridges and airline-designated aircraft parking positions when not needed for regular uses. Airport Director can close, relocate, etc. after reasonable notice so long as other simultaneous access is provided.
3.01	Other Airlines can come in but must first try to deal with Signatory Airlines for space and use of facilities.
3.02	Signatory Airlines can be required to provide space or facilities to other airlines but the type of agreement is at the discretion of the Signatory Airlines. Signatory Airline does not have to comply if it would unreasonably interfere with their use of space and facilities. Signatory Airline may charge costs plus a 15% administrative fee.
4.01	DOTPF will provide a Captial Improvement report to Signatory Airlines by NLT the beginning of

the Fiscal Year before the Fiscal Year in which DOTPF intends to undertake new Capital Improvements (any physical asset that costs more than $100,000 including design and planning costs and has a useful life greater than 3 years).

Report includes description, cost estimate, preliminary drawings, project description and location and maps; supporting data; estimated effective date and amount of adjustment to rents or fees resulting from the Capital Improvements cost; evaluation of need; preferred source of funding.

4.02 System-wide (Anchorage and Fairbanks) Capital Improvement whose costs are to be included in rents and fees charged to Signatory Airline are subject to Signatory Airline review <u>except</u> those capital improvements done for the benefit of an airline or other Airport System tenant "under the terms of a separate agreement that provides for payment of rents or fees to cover" financing, maintenance and operation.

NLT 7/15 of each Fiscal Year, DOTPF will meet with Signatory Airlines to discuss Capital Improvements. Unless 67% of the Signatory Airlines withhold approval of Capital Improvements <u>in writing</u> within 30 days after the meeting, Capital Improvements can go ahead.

If approval is withheld, DOTPF can ask for reconsideration at a meeting within 15 days. If approved by 67%, it passes.

If approval is withheld, DOTPF will either postpone for 1 full Fiscal Year or will exclude the capital costs from the rents and fees.

If after 1 full Fiscal Year postponement, DOTPF proposes to go ahead with the same project, it must be resubmitted to the Signatory Airline and rents and fees may be raised to cover it.

4.03 Capital Improvements may proceed if --
-- cost under $500,000
-- necessary to comply with govt. agency
-- necessary for health and safety

5.01 Rent is $28.99/sq.ft/yr. for exclusive use space. Common use space is $28.99/sq.ft./yr. prorated by use.
Fuel flowage fee is .02/gallon for aviation

fuel.

6.01 DOTPF to maintain cost accounting system for Airports that shows:
-- revenues
-- maintenance and operation expenses
-- expenses of DOTPF allocable to the Airport System
-- annual debt service
-- amortization of assets acquired with IARF funds

Records must be kept for these cost centers:
-- Airfield Area
-- Domestic Terminal Building
-- Fairbanks Terminal
-- International Terminal
-- Other buildings and Grounds

6.02 By 9/30 DOTPF will give following to Signatory Airlines:
-- Proposed annual capital and operating budgets
-- Schedule of annual debt service
-- Preliminary calculation of rents and landing fees for next Fiscal Year.

6.03 IARF financial statements to be audited

7.01 Rents and fees must be adjusted annually without formal amendment to agreement.

7.02 Each year the Airport System terminal building rental rate per square foot per year is recalculated. Calculation takes into account:
-- Total estimated maintenance and operation expenses including administrative overhead allocable to the terminal building cost centers.
-- An amount for amortization of capital expenditures for assets placed in service on or before 7/1/77 and before the new rental rate is to take effect. Assets funded by bonds, loans, grants are excluded
-- Annual Debt Service (including any amount required to satisy the rate covenant in the bond resolution) allocable to the terminal building cost.
-- Any required deposit to reserve accounts allocable to the terminal building costs.
-- Estimated assessments, judgments, settlements or charges payable by DOTPF directly related to the Airport System and allocable to terminal building cost centers.

Airport System parking revenues offset terminal building rents as of 1/1/86.

7.03 Landing Fee Rate is recalculated each year.
-- reductions are allowed by subtracting the following amounts:
  -- revenue derived by DOTPF from all sources other than Signatory Airlines
  -- Signatory Airlines terminal rent
  -- all fuel flowage fees paid by Signatory Airlines
  -- the amount transferred from the Prepaid Airline Revenue Account to the Revenue Account net of any overpayment or underpayment from operation of the Airport System.

7.04 Landing fees can be raised after 30 days written notice to the Signatory Airlines in the event there is not enough revenue to cover the landing fee requirement in 7.03.

If landing fee revenue from all Signatory Airlines for any quarter varies by more than 10% from the estimated landing fee requirement, DOTPF may adjust landing fee rate for balance of Fiscal Year.

8.01 This agreement suordinate to all present IARF Bond resolutions.

Signatory Airlines have the opportunity to review and comment on proposed amendments to Bond resolutions and DOTPF will give consideration to comments before adopting amendments or issuing new bonds.

8.02 DOTPF deposits all revenues from Anchorage and Fairbanks Internationals into IARF. Receipts are applied in the following order:

-- Interest Fund and Retirement Fund of the Revenue Bond Redemption Fund to satisfy payments due during Fiscal Year on all outstanding Bonds.
-- Bond Reserve Fund (to maintain a balance equal to the maximum annual debt service on all Bonds outstanding at the time
-- Repair and Replacement Reserve Account of at least $2 Million dollars
-- Operating Account (reasonable and necessary expenses for operation, maintenance, repair, ordinary replacement, and reconstruction.
-- Operation and Maintenance Reserve Account

(one-quarter of amount of annual budget for operation and maintenance expenses)
-- Capital Improvement Account
-- Prepaid Airline Revenue Account (min. $1 Mil. and any amount remaining in the Revenue Account at the end of the Fiscal Year after all amounts have been deposited into other funds in the section

9.01 Airline Responsibilities
-- to give required information
-- perform reasonable, ordinary maintenance within their Exclusive Use Space
-- remove disabled aircraft

9.02 DOTPF's Responsbilities
-- retain FAA certification
-- operate and maintain Airports in reasonable condision and repair
-- keep terminal buildings clean, heated, etc.

10.01 Indemnification

10.02 Insurance - DOTPF maintains comprehensive general liability and fire for Airport and terminal building.

Airline carries public liability, aviation liability, premises, property damage, etc.

Limits: $1 Million/seat for airline/aircraft/ public liability insurance or equivalent insurance
-- for propeller aircraft $10 Million
-- for jet aircraft $20 Million

10.03 Waiver of Subrogation
10.04 Additional Insured
10.05 Notice of Claim
10.06 Insurance Rates - Airline may not use the airport in any manner that will increase the DOTPF's insurance rates.

11.01 Assignment and sublease allowed with advance written approval

.....balance of agreement is standard airport leasing provisions.

ARTICLE 1
DEFINITIONS

Section 1.01. Definitions

The words and phrases defined below have the following meanings when used in this Agreement:

1. "Airline" means a business entity that provides Air Transportation services.

2. "Air Transportation" means the carriage of persons, property, cargo, or mail by aircraft and the activities, functions, and operations incidental to an air transportation business.

3. "Aircraft Arrival" means any aircraft arrival at the Airport including scheduled, charter, sightseeing, test, ferry, courtesy, inspection, training, or any other flight. Aircraft Arrival does not include any flight that immediately returns to the Airport because of mechanical, meteorological, or other precautionary reason.

4. "Airport" means the real property and facilities of Anchorage International Airport as it exists on the date of execution of this Agreement or in the future. The existing facilities and boundaries of the Airport are shown in Exhibit A and described in the property plan, Exhibit B.

5. "Airport Directives" means the Airport notices and instructions issued by the Airport Director facilitating day to day operation of the Airport and implementing rules and regulations promulgated by state and federal agencies requiring coordination by the Airport.

6. "Airport Director" means the person DOT&PF delegates to act on its behalf at the Airport.

7. "Airport System" means the Anchorage and Fairbanks International Airports as they exist now or in the future. The existing facilities and boundaries of both airports are shown in Exhibits A and C and described in the property plans, Exhibits B and D.

8. "Annual Budget" means the capital and operating budgets for the Anchorage and Fairbanks International Airports as signed by the Governor of the State of Alaska.

9. "Annual Debt Service" means the total amount required as deposits in a Fiscal Year to any interest, principal, or sinking fund account established by the Bond Resolution for any Bonds issued for any Airport System purpose and

ANCHORAGE INTERNATIONAL AIRPORT
AIRLINE OPERATING AGREEMENT AND
TERMINAL BUILDING LEASE
(DOMESTIC TERMINAL)

This Airline Operating Agreement and Terminal Building Lease (the Agreement) is offered this ___ day of _____, by and between the State of Alaska, Department of Transportation and Public Facilities (DOT&PF), and Airline, (AIRLINE), a corporation organized and existing under the laws of _____.

DOT&PF and AIRLINE agree as follows:

DOT&PF is the owner and operator of the Anchorage International Airport in Anchorage, Alaska and has the right to enter into leases and grant operating privileges at the Airport.

AIRLINE is a corporation engaged primarily in the business of providing Air Transportation.

Both DOT&PF and AIRLINE have mutually agreed to establish procedures for the periodic setting of rents and fees for the use of the Airport System. Both DOT&PF and AIRLINE have mutually negotiated and desire to enter into this Agreement in order to set forth the rights, privileges, and obligations of both parties and to facilitate the development, promotion, and improvement of Air Transportation.

9. "Annual Debt Service" means the total amount required as deposits in a Fiscal Year to any interest, principal, or sinking fund account established by the Bond Resolution for any Bonds issued for any Airport System purpose and

to replenish the Bond Reserve Fund and the Repair and Replacement Reserve Account under the Bond Resolution.

10. "Apron Area" means the aircraft parking and maneuvering areas abutting a terminal building up to its dripline.

11. "Bond" or "Bonds" means revenue bond or bonds supported by the IARF and issued by the State of Alaska pursuant to Alaska Statutes 37.15.410-37.15.550 or as amended.

12. "Bond Resolution" means Resolution No. 68-4 adopted by the State Bond Committee of the State of Alaska and any additional resolutions providing for the issuance of Bonds.

13. "Capital Improvement" means any physical asset that costs more then $100,000 including design and planning costs, has an expected useful life greater than three years, and is purchased or constructed to improve, protect, maintain, or develop the Airport System.

14. "Certificated Maximum Gross Takeoff Weight" means the maximum takeoff weight at which each aircraft is authorized by the FAA to operate from the Airport.

15. "Common Use Space" means the space that is available for lease and use in common with other Airlines.

16. "Exclusive Use Space" means the space leased exclusively by AIRLINE.

17. "FAA" means the Federal Aviation Administration.

18. "Fiscal Year" means any fiscal year adopted by DOT&PF. The Fiscal Year of the DOT&PF currently begins on July 1 and ends on June 30.

19. "International Airports Revenue Fund" (IARF) means the fund or funds established now or in the future pursuant to Alaska Statute 37.15.430 or as amended.

20. "Premises" means all of the Common Use Space and Exclusive Use Space leased to AIRLINE under this Agreement.

21. "Rate Covenant" means Section 6.12 of the Bond Resolution and any similar provision of any supplemental or additional resolution providing for the issuance of Bonds.

22. "Signatory Airline" means an Airline that has executed an airline operating agreement with DOT&PF for the use and occupancy of Airport facilities that is substantially similar to this Agreement.

ARTICLE 2
USE OF AIRPORT FACILITIES

Section 2.01. Term

This Agreement is effective from 12:01 a.m. on July 1, 1985 until 12:01 a.m. on July 1, 1990.

Section 2.02. Uses of the Airport

AIRLINE is granted the right to use the Airport, in common with others, for the sole purpose of conducting AIRLINE's Air Transportation business. In addition to all rights granted elsewhere in this Agreement, AIRLINE's use of the Airport for conducting its Air Transportation business includes the right to:

1. Land, takeoff, fly, taxi, push, tow, load, or unload aircraft.

2. Repair, maintain, condition, service, test, park, or store aircraft.

3. Perform or cause to be performed by contract, customary aircraft fueling, servicing, and line maintenance at aircraft parking positions adjacent to the terminal building or on exclusively leased aprons before loading and takeoff or as soon as practical following landing and unloading. AIRLINE may perform other maintenance of aircraft, vehicles, or equipment only at exclusively leased aprons or at locations designated by DOT&PF.

4. Sell tickets, document shipments, handle reservations, and sell transportation of cargo, mail, and personal property by air, and perform, or cause to be performed by contract, the customary handling of passengers, baggage, cargo and mail.

5. Install, maintain, or operate, by AIRLINE alone or in conjunction with any other Airline, air-to-ground and other communication, meteorological, and aerial navigation systems between locations on the Airport, subject to prior written approval of DOT&PF and Section 15.11.

6. Ground train personnel on the Airport necessary to the conduct of AIRLINE's Air Transportation business.

7. Transport by air, load, and unload persons, property, cargo, and mail at the Airport.

8. Use motor vehicles or other ground transportation equipment required for the conduct of AIRLINE's Air Transportation business. This Agreement does not give

AIRLINE the right to operate a ground transportation business to or from the Airport.

9. Install, maintain, and operate passenger clubs, lounges, or VIP rooms in AIRLINE's Exclusive Use Space. AIRLINE may not sell food or beverage items in clubs, lounges, or VIP rooms if the sales violate the contractual rights of the Airport's food and beverage concessionaire.

   a. If AIRLINE sells food or beverage items in its passenger clubs, lounges, or VIP rooms, AIRLINE will submit to DOT&PF a monthly report of the gross sales of food and beverage items and pay DOT&PF a monthly percentage of gross fee for those sales. The percentage amounts used to calculate this fee will be the same as the percentage amounts that DOT&PF requires the food and beverage concessionaire to pay.

   b. If AIRLINE sells food or beverage items in its passenger clubs, lounges, or VIP rooms, AIRLINE will use the Airport's food and beverage concessionaire as AIRLINE's supplier of food and beverage services if required by the terms of the food and beverage concessionaire's contract with DOT&PF. In this event, the monthly report to DOT&PF and the monthly percentage of gross sales fee described in Section 2.02.9.a do not apply to AIRLINE but to the concessionaire only. Nothing in this Agreement prevents AIRLINE from selling memberships in its VIP rooms. The sale of memberships for use of a VIP room is not considered a sale of food and beverage.

10. Install and maintain AIRLINE's identification signs, advertising, or similar matter on AIRLINE's Premises. The size, type and location of signs must be approved in writing by the Airport Director before installation.

11. Purchase AIRLINE's requirements of personal property or services, including fuel, lubricants, inflight food or beverages, and other supplies. AIRLINE may purchase goods and services from any person or company of AIRLINE's choice.

12. Sell, lease, transfer, dispose, or exchange AIRLINE's aircraft, engines, accessories, equipment, or supplies necessary to conduct its Air Transportation business.

13. Use non-exclusive employee vehicle parking facilities for employees at the Airport at locations designated by the Airport Director. The Airport may charge a separate fee for employee vehicle parking which fee must be the

same for AIRLINE's employees as the employees of other Airport tenants.

14. Sell or provide any of the services listed in this Section to any other Airline.

Section 2.03. Exclusive and Common Use Space

A. AIRLINE leases Exclusive Use Space as listed on Exhibit E and depicted on Exhibit J. AIRLINE leases in common with others the Common Use Space listed on Exhibit E and depicted on Exhibit J. AIRLINE may only use each space for the purpose designated on Exhibit E unless the Airport Director approves a change.

B. AIRLINE is granted the preferential but nonexclusive use of the Apron Area at the aircraft parking positions designated for AIRLINE's use on Exhibit H. This is AIRLINE's preferential apron area. AIRLINE may use the parking positions to park a reasonable amount of service equipment required for AIRLINE's operations, subject to the Airport Director's approval.

C. The Airport Director may authorize other Airlines to use AIRLINE's holdrooms, loading bridges, and AIRLINE's designated aircraft parking positions whenever they are not required for AIRLINE's scheduled, extra section, delayed, and charter passenger flight activities or the passenger flight activities of any Airline for which AIRLINE is providing contract services pursuant to a written agreement. As a condition of the use of AIRLINE's facilities, AIRLINE has the right to require the Airline to enter into an agreement covering the use of AIRLINE's facilities and may charge the other Airline a reasonable fee not to exceed the rates designated in the Mutual Assistance Ground Handling Service Agreement (MAGSA) for the use of holdrooms, loading bridges, and associated equipment.

D. DOT&PF grants the right of adequate ingress to and egress from the Airport and the Premises to AIRLINE and its officers, employees, agents, passengers, contractors, invitees, suppliers, and furnishers of services, subject to the Airport Directives.

E. DOT&PF has the right to close, relocate, reconstruct, or modify any access to space provided for AIRLINE's use after reasonable notice so long as adequate substitute access is simultaneously provided. DOT&PF is not obligated to compensate AIRLINE for any change in access. AIRLINE's obligation to perform under this Agreement may not be altered or affected by any change in access described in this subsection.

ARTICLE 3
ACCOMMODATION OF OTHER AIRLINES

Section 3.01. Accommodation Procedures

A. If an Airline initiates or expands regularly scheduled Air Transportation at the Airport and needs terminal space and facilities, DOT&PF will require the Airline to use its best efforts to make suitable arrangements for the Airline's operations at the Airport by:

1. Attempting to secure existing available space or facilities from the DOT&PF, or

2. Attempting to obtain the use of facilities from Signatory Airlines using the terminal.

B. The DOT&PF will use its best efforts to accommodate the Airline by:

1. Attempting to accommodate the Airline in existing available space or facilities for direct lease or use; or, if none is available, by

2. Reviewing the feasibility of immediate construction of new space or facilities for the Airline's lease or use.

C. Upon written request from the Airline, AIRLINE will use its best efforts to make suitable arrangements to either handle the operations of or share its Exclusive Use Space with the Airline.

D. If the efforts of the Airline, DOT&PF, AIRLINE, and other Signatory Airlines do not satisfy the Airline's reasonable space requirements, DOT&PF will, in writing, notify all of the Signatory Airlines at the terminal that all of the requirements of Section 3.01.A, B, and C have been undertaken and have failed to satisfy the requesting Airline's reasonable space requirements.

Section 3.02. DOT&PF's Right to Require Accommodation

A. If the events specified in Section 3.01 have occurred, if 30 days have elapsed since the DOT&PF's notice has been given, and if the Airline is still unable to meet its reasonable requirements for space and facilities, then DOT&PF may require that AIRLINE provide space or facilities to the Airline pursuant to a sublease, assignment, license, use agreement, ground handling agreement, or any combination of them. The type of agreement is at the discretion of AIRLINE.

B. If the proposed accommodation unreasonably interferes or is incompatible with AIRLINE's use of its space and facilities for handling its scheduled passenger and cargo operations, (including the passenger flight activities of any operation for which AIRLINE is providing contract services pursuant to a written agreement) then AIRLINE is under no obligation to provide accommodation.

C. If the proposed accommodation does not unreasonably interfere or is not otherwise incompatible with AIRLINE's use of the space and facilities for handling its scheduled passenger and cargo operations (including the passenger flight activities of any operation for which AIRLINE is providing contract services pursuant to a written agreement), AIRLINE will accommodate the Airline. AIRLINE may charge the Airline for AIRLINE's operating and capital costs related to the space and facilities and an administrative fee that does not exceed 15 percent of AIRLINE's operating and capital costs for the accommodation space.

ARTICLE 4
CAPITAL IMPROVEMENTS

Section 4.01. Capital Improvement Report

A. During the term of this Agreement, DOT&PF will provide a Capital Improvement report to AIRLINE and each Signatory Airline no later than the beginning of the Fiscal Year before the Fiscal Year in which DOT&PF intends to undertake new Capital Improvements. The Capital Improvement report must identify Capital Improvements that will impact AIRLINE's rents and fees.

B. The Capital Improvement report will include the following information:

1. A description of the proposed Capital Improvement, including cost estimates, available preliminary drawings, project descriptions, and location maps;

2. The supporting data used to allocate the proposed Capital Improvement cost to the appropriate Airport System cost centers;

3. The estimated effective date and amount of any adjustment to rents or fees resulting from the proposed Capital Improvement's cost;

4. DOT&PF's evaluation of the need for an anticipated benefit from the proposed Capital Improvement, including any appropriate economic justification; and

5. DOT&PF's preferred source of funding.

Section 4.02. Approval of Capital Improvements

A. All Airport System proposed Capital Improvements whose costs are to be included in the rents and fees charged to AIRLINE and the Signatory Airlines will be subject to Signatory Airline review except those Capital Improvements undertaken by DOT&PF for the benefit of an Airline or other Airport System tenant under the terms of a separate agreement that provides for payment of rents or fees to cover the financing of the improvement and the cost of its maintenance and operation.

B. Two weeks after the beginning of the Fiscal Year, DOT&PF will meet with AIRLINE and the other Signatory Airlines to discuss the proposed Capital Improvements. Unless 67 percent of the number of Signatory Airlines, either directly or through a designated Signatory Airline

representative, withhold approval of specific proposed projects in writing within 30 days after the meeting, the Capital Improvement will be deemed approved by the Signatory Airlines.

C. If DOT&PF receives notice that approval of the Capital Improvement is withheld under Section 4.02.B, the Commissioner of DOT&PF may request reconsideration of the Capital Improvement at a meeting to be held with the Signatory Airlines within 15 days after the notice that approval is withheld has been received. Unless approval is again specifically withheld in writing within 30 days after the reconsideration meeting by 67 percent of the number of Signatory Airlines, either directly or through a designated representative, the proposed Capital Improvement will be deemed approved.

D. If approval is withheld as provided in Section 4.02.B and C, DOT&PF will either postpone the proposed Capital Improvement for one Fiscal Year after the Fiscal Year in which DOT&PF originally intended to undertake the Capital Improvement or will exclude the capital cost of the Capital Improvement from the calculation of AIRLINE's rents and fees.

E. If after the one Fiscal Year postponement DOT&PF proposes to construct the postponed Capital Improvement, the Capital Improvement must be submitted to the Signatory Airlines for review in accordance with Section 4.01.

F. If a Capital Improvement is begun after a one year postponement, approval by the Signatory Airlines is not required and DOT&PF may include the amortization of capital cost, debt service, or lease payments of the Capital Improvement in the rents and fees charged to AIRLINE and the Signatory Airlines after the Capital Improvement has been completed and placed in service.

G. After the postponement described in Section 4.02.D, any Capital Improvement project listed in the Capital Improvement report may be constructed so long as the Capital Improvement project can be completed within the Capital Improvement project scope originally provided to the Signatory Airlines. Any Capital Improvement project that is materially increased beyond the original scope must be resubmitted to the Signatory Airlines for review as a new project.

Section 4.03. Capital Improvement Exceptions

Even if approval of a Capital Improvement is withheld under Section 4.02, DOT&PF may proceed with the Capital Improvement and

upon completion include the cost, net of gifts and grants-in-aid, in the rents and fees charged to AIRLINE and the Signatory Airlines if:

1. DOT&PF determines that the Capital Improvement will cost less than $500,000 including all planning, design, and construction costs, or,

2. The Capital Improvement is necessary and prudent to:

   a. Comply with any regulation or order of any governmental agency (including DOT&PF acting in its nonproprietary capacity) that has jurisdiction over the operation of the Airport System;

   b. Maintain or create Airport System functional capability at the level required by the Bond Resolution or the Bond trustee (whose responsibilities are defined in the Bond Resolution) pursuant to the Bond Resolution for the security of Bonds;

   c. Maintain the public health, safety, or welfare;

   d. Defend and settle litigation, or satisfy judgments against the Airport System rendered by a court of competent jurisdiction;

   e. Repair or prevent casualty damage to Airport System property; or

   f. Acquire land reasonably necessary to preserve the Airport System.

Section 4.04. Approved Capital Improvements

The Capital Improvements listed in Exhibit K are exempt from review under Section 4.02 except as provided in Section 4.02.G.

ARTICLE 5
RENTS AND FEES

Section 5.01. Consideration

The consideration that AIRLINE agrees to provide DOT&PF for this Agreement, including use of the Exclusive Use Space, Common Use Space, and the use of preferential aircraft parking positions, is the following:

A. Provide regularly scheduled Air Transportation to and from the Airport, and

B. Pay the rents and fees and perform all the obligations described in this Agreement. The rents and fees include the following:

1. The initial rent for the Exclusive Use Space set forth in Exhibit E and depicted on Exhibit J that AIRLINE will pay to DOT&PF is the terminal building rent of $28.99 per square foot per year, payable monthly. All rent for the Exclusive Use Space is due on the first day of each month.

2. a. AIRLINE will pay rent for the Common Use Space that is available for use by all Airlines as set forth in Exhibit E and depicted on Exhibit J. The Common Use Space rent that AIRLINE will pay to DOT&PF is AIRLINE's prorated share of the terminal building rent calculated initially at $28.99 per square foot per year, payable monthly. Ten percent of the rent will be prorated equally among the Airlines (including AIRLINE) using the Common Use Space and the remaining ninety percent of the rent will be prorated among the Airlines using the space based on enplanements. AIRLINE 's share of the remaining 90 percent will be based on the ratio of the number of AIRLINE's enplaning passengers at this terminal to the total number of enplaning passengers at this terminal based upon the previous month's certified activity reports. During the first two months after initiating service, enplanements of an Airline initiating service at the Airport will be included in the total number of enplaning passengers at the Airport using the number as reasonably estimated by the Airline initiating service. DOT&PF will invoice AIRLINE its prorated share of the rent for the Common Use Space by the 15th of the month for the following month's rent. DOT&PF will base the prorated rent on enplanements

from the preceding month as reported in AIRLINE's certified activity reports described in Section 5.02.

b. If AIRLINE fails to furnish DOT&PF with a certified activity report by the 10th day of the month as required in Section 5.02, the prorated rent may be calculated by assuming AIRLINE's enplanements were 110 percent of the enplanements used for the previous month's calculation. After delivery of a late certified activity report by AIRLINE, DOT&PF will invoice AIRLINE for any actual enplanements that exceeded the assumed 110 percent used for the first invoice calculation. No adjustment will be made to the rent of any Airline that submits a timely and accurate certified activity report. Any overpayment will not be repaid to AIRLINE.

c. A different prorated rent formula may be applied to the Common Use Space if all of the Signatory Airlines and DOT&PF agree. If all of the Signatory Airlines cannot agree on a different prorated rent formula, DOT&PF may use its management prerogative to determine an equitable formula.

d. All rent for the Exclusive Use Space and Common Use Space is calculated using the terminal building rental rate and is subject to adjustment as provided in Section 7.02. The terminal building rental rate for the Exclusive Use Space and Common Use Space may not be less than $15.00 per square foot per year.

3. AIRLINE, directly or through its supplier or agent, will pay for the term of this Agreement a fuel flowage fee of $0.02 per gallon for aircraft fuel measured as specified in either the Master Agreement Aviation Fueling Operations entered into between Anchorage Fueling Service Company and the State of Alaska, or DOT&PF agreements with suppliers. The fee must be paid monthly and is due on the 20th day of the month after receipt of the fuel.

4. Upon the effective date of this Agreement, rents and fees for the use of all other facilities, rights, and privileges granted to AIRLINE, except as provided elsewhere in this Agreement, will be combined in and represented by a landing fee that is subject to adjustment pursuant to Article 7. No

other fee may be charged AIRLINE for the facilities, rights, and privileges granted under this Agreement.

a. Upon the effective date of this Agreement, the landing fee rate for the Fiscal Year is $.37 per 1;000 pounds of Certificated Maximum Gross Takeoff Weight. The landing fee rate must be recalculated for each Fiscal Year thereafter as set forth in Article 7, but in no event may the landing fee rate be less than $0.30 per 1,000 pounds of Certificated Maximum Gross Takeoff Weight.

b. The landing fees for Aircraft Arrivals must be invoiced monthly by DOT&PF and are due from AIRLINE 30 days after the date on the invoice. The landing fee must be calculated by multiplying the number of 1,000 pound units of the Certificated Maximum Gross Takeoff Weight of AIRLINE during the month by the current landing fee rate established by DOT&PF in accordance with Section 7.03 of this Agreement. Acceptance by DOT&PF of any payment does not preclude DOT&PF from verifying the accuracy of AIRLINE's calculations and from refunding or recovering any difference established by DOT&PF.

Section 5.02. Certified Activity Reports Required

A. By the 10th day of each month, AIRLINE will provide DOT&PF with a certified activity report of AIRLINE's operations at the Airport during the preceding month. The certified activity report must be on Form Anchorage 05-002 provided by DOT&PF and include all data necessary to calculate the landing fee due as well as any other data that DOT&PF reasonably requests.

B. If AIRLINE fails to furnish DOT&PF with the certified activity report required by Section 5.02.A by the 10th day of each month, DOT&PF may determine AIRLINE's landing fee by assuming that the total takeoff weight for AIRLINE during the preceding month was 110 percent of the total takeoff weight of AIRLINE used for the previous month. After delivery of a late certified activity report by AIRLINE, DOT&PF will recalculate the landing fee and will invoice AIRLINE for any underpayment, but any overpayment will not be repaid to AIRLINE. AIRLINE remains responsible for submitting a certified activity report for each month regardless of any estimate made by DOT&PF.

Section 5.03. Interest on Overdue Payments

Any payment due and not received accrues interest from the due date until paid in full at the highest lawful contract rate in Alaska as defined by Alaska Statute 45.45.010 or as amended. Interest on disputed amounts may not be charged to AIRLINE if the dispute is resolved in AIRLINE's favor.

Section 5.04. Additional Rent

After 10 days' written notice to AIRLINE, DOT&PF may, but is not obligated to, cure any default by AIRLINE of its obligation to perform under Article 9 of this Agreement. Any amount paid or cost incurred by DOT&PF to cure any default by AIRLINE, plus a 15 percent administrative fee, is agreed to be additional rent. Unless otherwise provided, all additional rent is due from AIRLINE with the next installment of monthly rent due under this Agreement.

ARTICLE 6
RECORDS AND REPORTS

Section 6.01. DOT&PF Records of Airport System Cost Centers

A. As soon as practicable following the execution of this Agreement, DOT&PF will establish and thereafter maintain a cost accounting system that identifies and segregates by account and cost center the following items for each Fiscal Year: (1) revenues; (2) operation and maintenance expenses, including administrative expenses of the Airport System; (3) expenses of DOT&PF allocable to the Airport System; (4) Annual Debt Service, plus any amount required to satisfy the Rate Covenant of the Bond Resolution; and (5) amortization of assets acquired with International Airport Revenue Funds allocable to the Airport System.

B. Records must be kept for the following cost centers:

1. "Airfield Area Cost Center" includes the aprons, runways, taxiways, approach and clear zones, infield areas, navigational aids, and other facilities of the Airport System that surround the terminal buildings up to the building driplines, are on the airside, and are necessary for aircraft operations.

2. "Domestic Terminal Building Cost Center" includes the domestic terminal complex at Anchorage International Airport including the terminal building with all its fixtures and equipment within the dripline of the building, public parking, employee parking, curbside areas, related landscaping, and access or circulation roads with rights-of-way.

3. "Fairbanks Terminal Cost Center" includes the terminal complex at Fairbanks International Airport including the terminal building with all its fixtures and equipment within the dripline of the building, public parking, employee parking, curbside areas, related landscaping, and access or circulation roads and rights-of-way.

4. "International Terminal Building Cost Center" includes the international terminal complex at Anchorage International Airport including the terminal building with all its fixtures and equipment, public parking employee parking, curbside areas, related landscaping, and access or circulation roads and rights-of-way.

5. "Other Buildings and Grounds Area Cost Center" includes all other areas of the Airport System not included in the above cost centers including facilities, installations, and improvements.

C. The Airport System cost centers as they presently exist are shown on Exhibits F and G.

D. DOT&PF will maintain records that allocate capital funds from the IARF, contributions, Bonds, securities, or other sources to each Airport System cost center. Bond issuance expenses, capitalized interest, and funding of special funds from Bond proceeds as described in Article 8 must be prorated to each Airport System cost center in proportion to the amount of Bond proceeds expended in each Airport System cost center. If it becomes necessary to provide any amount required to satisfy the Rate Covenant of the Bond Resolution, the amount must be prorated among the Airport System cost centers in proportion to the amount of Bond proceeds expended in each Airport System cost center.

Section 6.02. DOT&PF Financial Reports

A. At least nine months before the end of its Fiscal Year, DOT&PF will submit the following items to each of the Signatory Airlines:

1. The proposed annual capital and operating budgets prepared prior to submission to the commissioner that include all estimated Airport System expenses such as maintenance, operation, and administrative expenses. The proposed Annual Budget must include a statement of estimated Airport Systems revenues.

2. A schedule of annual debt service payments required to be made during the next Fiscal Year.

3. A preliminary calculation of the Signatory Airline rents and landing fees for the next Fiscal Year.

B. Within 30 days after receipt of the reports described in Section 6.02.A, AIRLINE may present written comments concerning the reports. Upon request by the Signatory Airlines, a meeting for additional comments must be held between the Signatory Airlines and DOT&PF. DOT&PF will give due consideration to any comments submitted by AIRLINE and the other Signatory Airlines.

C. The proposed budget may be revised as a result of DOT&PF's discussions with AIRLINE, others, or as a result of DOT&PF's budget process. DOT&PF will promptly furnish AIRLINE with a copy of the budget submitted to

the Governor's Office including the schedule of rents and fees.

D. If an Annual Budget is not adopted by the State of Alaska before the Fiscal Year begins, the rents and fees in effect during the preceding Fiscal Year remain in effect until the State of Alaska has adopted a new Annual Budget. The final computation of the new rents and fees will then be made by DOT&PF. The new rents and fees will be retroactively effective as of the beginning of that Fiscal Year.

Section 6.03. IARF Annual Audit

To keep AIRLINE informed of the financial performance of the Airport System, DOT&PF will make available to AIRLINE the annual audit of the IARF financial statements. Upon request by AIRLINE, DOT&PF will answer questions about the audits or statements.

ARTICLE 7
RECALCULATION OF RENTS AND FEES

Section 7.01. Annual Adjustments

Airport System rents and fees must be adjusted annually effective the first day of each Fiscal year without a formal amendment to this Agreement.

Section 7.02. Recalculation of Terminal Building Rental Rate

A. Each year DOT&PF will calculate the Airport System terminal building rental rate per square foot per year for the next Fiscal Year. Whenever the adjustment calculation involves an estimate, the estimate of DOT&PF must be used.

B. DOT&PF will calculate the terminal building rent requirement for each Fiscal year by totaling the following amounts:

1. The total estimated direct and indirect operation and maintenance expenses including DOT&PF's administrative overhead allocable to the terminal building cost centers (combined Domestic, International and Fairbanks Terminal Building Cost Centers).

2. An amount for the amortization of capital expenditures for any asset that has been or will be placed in service on or after July 1, 1977 and before the date the new rental rate is to take effect. Only capital expenditures made by DOT&PF from funds other than Bonds, loans, or grants-in-aid qualify for amortization. Except for planning studies, maintenance equipment, or fleet vehicles that are acquired in the future, amortization of Capital Improvements must be computed at an interest rate of 5 percent per year for an assumed 25-year economic life. Amortization of a Capital Improvement that is a planning study must be computed at an interest rate of 5 percent per year for an assumed 5-year economic life. Amortization of a Capital Improvement that is either maintenance equipment or a fleet vehicle must be computed at an interest rate of 5 percent per year for an assumed 10-year economic life.

3. The Annual Debt Service (including any amount required to satisfy the Rate Covenant of the Bond Resolution) allocable to the terminal building cost

centers or any other amount required by the Bond Resolution.

4. Any required deposit to reserve accounts established pursuant to either the Bond Resolution of this Agreement that is allocable to the terminal building cost centers.

5. The estimated amount of any assessment, judgment (net of insurance proceeds), settlement, or charge to become payable by DOT&PF relating directly to the Airport System that is allocable to the terminal building cost centers.

6. Any adjustment resulting from any difference between the actual versus budgeted costs of the Airport System terminal building cost centers.

C. Effective January 1, 1986 the estimated terminal building rent requirement will be reduced by the estimated amount of Airport System automobile parking revenue.

D. The net terminal building rent requirement for the Fiscal Year must be divided by the total square footage in all of the Airport System terminal buildings minus the square footage used for mechanical and electrical equipment, in order to determine an average rental rate per square foot per year for terminal building space.

Section 7.03. Recalculation of Landing Fee Rate

A. Each year DOT&PF will calculate the Airport System Landing fee for the next Fiscal Year. Whenever the adjustment involves estimated data, the estimate of DOT&PF must be used.

B. The landing fee requirement must be calculated for each Fiscal Year by totaling the following amounts for the Airport System:

1. The total estimated direct and indirect operation and maintenance expenses, including administrative overhead, for the Airport System.

2. An amount for the amortization of Capital Improvement expenditures for any asset that has been or will be placed in service on or after July 1, 1977 and before the date the new landing fee is to take effect. Only Capital Improvement expenditures made by DOT&PF from funds other than Bonds, loans, or grants-in-aid qualify for amortization. Except for planning studies, maintenance equipment, or fleet

vehicles that are acquired in the future, amortization of Capital Improvements must be computed at an interest rate of 5 percent per year for an assumed 25-year economic life. Amortization of a Capital Improvement that is a planning study must be computed at an interest rate of 5 percent per year for an assumed 5-year economic life. Amortization of a Capital Improvement that is either maintenance equipment or a fleet vehicle must be computed at an interest rate of 5 percent per year for an assumed 10-year economic life.

3. The Annual Debt Service (plus any amount required to satisfy the Rate Covenant of the Bond Resolution) of the Airport System or any other amount required by the Bond Resolution.

4. Any required deposits to Airport System reserve accounts established pursuant to the Bond Resolution or this Agreement.

5. The estimated amount of any assessment, judgment (net of insurance proceeds), settlement, or charge to become payable by DOT&PF relating directly to the Airport System operation.

6. Any overpayment or underpayment from operation of the Airport System during the then-current Fiscal Year or any adjustment carried over from any preceding Fiscal Year covered by this Agreement resulting from the difference between the actual versus budgeted revenues and expenses of the Airport System.

7. a. An amount equal to 50 percent of the annual revenue from the duty free concession contract in the International Terminal Building Cost Center or $7.1 million, whichever is greater; or

   b. The amount of the revenue if the total annual revenue from the duty free concession contract is less than $7.1 million.

8. An amount equal to 10 percent of all projected revenue excluding Airline landing fees, Airline terminal rents, and Airline fuel flowage fees.

C. The DOT&PF will reduce the Airport System landing fee requirement for Signatory Airlines for each Fiscal Year by subtracting the following amounts, as presented in the Annual Budget:

1. The operating revenue derived by DOT&PF from all sources other than Signatory Airlines.

2. Signatory Airline terminal rent.

3. All fuel flowage fees paid by Signatory Airlines.

4. The amount transferred from the Prepaid Airline Revenue Account to the Revenue Account net of any overpayment or underpayment from operation of the Airport System as described in Section 7.03.B.6.

D. The Signatory Airline landing fee rate must be calculated for each Fiscal Year by dividing the Airport System landing fee requirement for Signatory Airlines as calculated in Section 7.03.A, B and C by the estimated Certificated Maximum Gross Takeoff Weight for all Signatory Airlines.

Section 7.04. Extraordinary Adjustments of Landing Fee Rate

A. If at any time the revenue of the Airport System is not sufficient to cover the Airport System landing fee requirement described in Section 7.03.B, DOT&PF, after consultation with the Signatory Airlines, and consideration of reducing operation and maintenance costs or using reserve funds to meet the requirement, may immediately increase the landing fee rate to the amount necessary to cover the landing fee requirement after 30 days' written notice to AIRLINE.

B. If the total landing fee revenue from all Signatory Airlines for any quarter of the Fiscal Year varies by more than 10 percent from the estimated total Airport System landing fee requirement for that quarter, DOT&PF may adjust the landing fee rate for the balance of the Fiscal Year.

ARTICLE 8
BOND RESOLUTION AND FLOW OF FUNDS

Section 8.01. Subordination to Bond Resolution

A. This Agreement is subordinate in all respects to all present IARF Bond Resolutions.

B. AIRLINE will be given an opportunity to review and comment on drafts of proposed amendments to all existing IARF Bond Resolutions and drafts of official statements for the issuance of additional IARF Bonds. DOT&PF will give due consideration to the comments before adopting the amendments or issuing new Bonds.

Section 8.02. Flow of Funds

DOT&PF will deposit all revenue received from the Airport System into the IARF. The receipts must be applied in accordance with the Bond Resolution in the following order:

1. a. To the Interest Fund and Retirement Fund of the Revenue Bond Redemption Fund, the amount that will be necessary to satisfy the principal, interest, and minimum sinking fund payments due during the Fiscal Year on all outstanding Bonds.

   b. The Interest Fund and Retirement Fund must be used to pay the principal, premium if any, and interest on Bonds as they become due or for the purchase or redemption of Bonds before their fixed maturity date.

2. a. To the Bond Reserve Fund of the Revenue Bond Redemption Fund, the amount required to maintain a balance equal to the maximum annual debt service on all Bonds outstanding at the time.

   b. The Bond Reserve Fund must be used to pay principal and interest on outstanding Bonds, make minimum sinking fund payments if no other funds are available, or to retire any outstanding Bonds.

3. a. To the Repair and Replacement Reserve Account within the revenue fund, the amount required to maintain a balance of $2,000,000 or any greater amount required by the Bond Resolution.

   b. The Repair and Replacement Reserve Account is to be used to either eliminate any deficiency in the Bond Reserve Fund or to pay the cost of unanticipated or

nonrecurring repairs and replacements to the Airport System as permitted by the Bond Resolution.

4. To the Operating Account, the amount required to pay the reasonable and necessary expenses for the operation, maintenance, repair, ordinary replacement, and reconstruction of the Airport System each Fiscal Year.

5. a. To an Operation and Maintenance Reserve Account, the amount required to maintain a balance equal to one-quarter of the amount in the Annual Budget for operation and maintenance expenses for the Airport System.

   b. The Operation and Maintenance Reserve Account is to be used for the reasonable and necessary expenses for the operation, maintenance, repair, or ordinary replacement and reconstruction of the Airport System to the extent other funds are not available.

6. a. To the Capital Improvement Account, the amount remaining in the Revenue Account at the end of the Fiscal Year after all deposits to the above accounts or uses have been made. No additional deposits may be made into this account after the balance is $12.5 million in excess of the amounts required to fund Capital Improvement projects designated for funding from the IARF as contained in the Annual Budgets. As Capital Improvement projects in the Annual Budgets are completed, the Annual Budget component of the Capital Improvement Account will be reduced by the cost of these Capital Improvement projects.

   b. Beginning July 1, 1986 and each July 1 thereafter, $1 million will be transferred to the Prepaid Airline Revenue Account as the minimum annual deposit. The Capital Improvement Account may be used for any purpose permitted by the Bond Resolution for use of surplus revenue.

7. a. To a Prepaid Airline Revenue Account, an annual minimum deposit of $1 million and any amount remaining in the Revenue Account at the end of the Fiscal Year after all amounts have been deposited into all of the funds and accounts described in this Section.

   b. The Prepaid Airline Revenue Account is the account into which annual Airport System revenue is recorded after all other required fund or account balances are satisfied. Unless 67 percent of the Signatory Airlines agree to an alternate use for the account, the amount in the Prepaid Airline Revenue

Account at the beginning of each Fiscal Year must be transferred to the Revenue Account and used to calculate the Airport System landing fee requirement in the succeeding Fiscal Year as described in Section 7.03.C.4.

ARTICLE 9
ADDITIONAL RESPONSIBILITIES OF PARTIES

Section 9.01. AIRLINE Responsibilities

A. Upon a form provided by DOT&PF, AIRLINE will file with DOT&PF information describing its operations at the Airport within 30 days after the execution of this Agreement. AIRLINE will update this information within 30 days after the beginning of each Fiscal Year. The report must include:

1. Names and telephone numbers of AIRLINE officials responsible for various major AIRLINE functions including station operations, flight operations, scheduling, properties, facilities, and similar information;

2. A general description of AIRLINE's operation including number of employees and employee parking requirements;

3. The current schedule of AIRLINE's flights and as periodically adjusted;

4. A description of AIRLINE's fleet and identification of AIRLINE's aircraft that will serve the Airport and the Certificated Maximum Gross Takeoff Weight for each aircraft; and

5. The identification of AIRLINE's current facility requirements at the Airport.

B. At least ten months before the end of the Fiscal Year, AIRLINE will submit to DOT&PF, in writing, its Certificated Maximum Gross Takeoff Weight forecast for the next Fiscal Year.

C. AIRLINE has the following maintenance, repair, and alteration responsibilities. AIRLINE will at its sole expense and in a manner acceptable to DOT&PF:

1. Maintain and keep in good repair the preferential Apron Area adjacent to its exclusive use holdrooms in a neat, clean, and orderly condition free from litter, debris, refuse, petroleum products, or grease that may result from the activities of its passengers, employees, licensees, invitees, agents, or suppliers. All oil and grease spills must be removed promptly.

2. Perform reasonable, ordinary, and preventive maintenance within its Exclusive Use Space including:

   a. Repair of all personal property and equipment including fixtures, doors, interior windows, baggage conveyors and belts, floor coverings, and ticket counters that are not provided by DOT&PF.

   b. Maintenance and repair of all electrical, plumbing, heating, ventilating, and air conditioning appliances and fixtures that are not provided by DOT&PF.

3. Immediately repair any uninsured damage in any other space at the Airport caused by the fault or negligence of AIRLINE, its servants, contractors, agents, licensees, or employees.

4. Pay as additional rent to DOT&PF any extraordinary cost to provide AIRLINE with water, sewer service, electricity, or extraordinary use of any other utilities as are required.

5. AIRLINE will assure that DOT&PF has emergency access to AIRLINE's Exclusive Use Space either by delivering keys to the Airport Director or by providing emergency telephone numbers by which AIRLINE or its agent can be reached on a 24-hour basis.

D. Disabled or Abandoned Aircraft

1. If any aircraft owned or operated by AIRLINE, through accident or any other reason, is disabled or abandoned in any area on the Airport which could interfere with the continuous, normal operations or any landing and field facilities, AIRLINE will:

   a. Immediately remove the aircraft to a location designated by the DOT&PF unless the aircraft is required to remain in place pending investigation by the appropriate regulatory agencies of the federal government; and

   b. In the event of any accident where federal investigation in place is required, immediately, upon receiving clearance so to do from the appropriate federal agency investigating such accident, remove the aircraft and any resulting wreckage or debris to the area designated by the federal agency authorizing the removal; otherwise the aircraft wreckage and debris

will be immediately removed from the Airport and stored at a location approved by DOT&PF.

If AIRLINE fails to proceed immediately to remove the disabled aircraft as provided above, or if any aircraft owned or operated by AIRLINE is abandoned on Airport, DOT&PF has the right, after reasonable advance written notice to the AIRLINE station manager listed in the report described in Section 9.01.A.1, to remove the aircraft by any reasonable means DOT&PF deems necessary under the circumstances, and AIRLINE will reimburse DOT&PF for all costs and expenses (including storage costs) incurred in the removal and will indemnify, save harmless, and defend the State from any liability, cost, or expense resulting from the removal to the extent set forth in Sectior 10.01.

Section 9.02. DOT&PF's Responsibilities

A. During this Agreement, DOT&PF will:

1. Retain FAA Airport certification;

2. Operate and maintain the Airport in reasonable condition and repair including the runways, taxiways, aprons, roadways, vehicle parking areas, public areas of the terminal buildings, and all appurtenances, facilities, and services;

3. Keep the public areas of the terminal buildings adequately and attractively equipped, furnished, and decorated as well as clean and presentable. In the public view areas of the terminal buildings, DOT&PF will provide and supply directional and informational signs, heat, electricity, light, power, air conditioning, waste-water disposal, water, and janitorial services including rubbish removal. DOT&PF will also keep in good repair and condition the exterior and structural portions of the walls, roof, and floor of the Exclusive Use Space and Common Use Space, as well as all central electrical and mechanical distribution systems; and

4. Maintain existing and future utility systems on the Premises in reasonable condition and repair, including heat, electricity, fire alarm, fire protection, sprinkler, air conditioning, telephone, telegraph, teleregister and intercommunication services, and any lines, pipes, mains, wires, conduits and equipment connected with or

appurtenant to all those systems. DOT&PF may enter the Premises at all reasonable times to make any necessary repairs, alterations, and replacements.

B. DOT&PF will use its best efforts to restore service as soon as practical after any interruption in the services described in this Section.

Section 9.03. DOT&PF's Right to Inspect and Make Repairs

A. DOT&PF or its representative has the right, at reasonable times and with as little interruption of AIRLINE's operations as practical, to enter AIRLINE's Exclusive Use Space and Common Use Space for the following purposes:

1. Inspections to verify AIRLINE's compliance with this Agreement.

2. To do anything that DOT&PF has the right or obligation to do.

B. Except in the case of an emergency reasonable notice must be given and DOT&PF will coordinate with AIRLINE in order to minimize interference with AIRLINE's activities.

Section 9.04. Alterations and Improvements

A. Before beginning construction of any improvement or alteration, AIRLINE will first submit to the Airport Director:

1. Detailed drawings of the proposed construction, and

2. Written proof of approval of the proposed construction from all appropriate agencies.

B. DOT&PF will review and approve or disapprove the proposed construction in writing within 45 days after receipt of the construction drawings.

C. Any construction by AIRLINE must be performed in a safe, neat manner and meet the following criteria:

1. Not interfere with the activities of other tenants;

2. Be compatible with the architecture of the building as determined by the Airport Director;

3. Be performed at no cost to DOT&PF; and

4. Comply with all federal, state and local building codes.

D. Within 30 days after completion of the construction of any alteration or improvement, AIRLINE will deliver to DOT&PF detailed copies of as-built drawings showing the location and dimensions of the alteration or improvement constructed, including structural, mechanical, and electrical systems.

Section 9.05. DOT&PF Modification and Relocation

A. The Airport Director may relocate AIRLINE or modify any portion of AIRLINE's Premises if necessary to renovate or modify the terminal building or apron if that renovation or modification is not inconsistent with the Airport masterplan. If it is necessary to relocate AIRLINE to implement a Capital Improvement, AIRLINE will be notified during the review of Capital Improvements described in Section 4.01.

B. Upon 90 days advance written notice, AIRLINE will vacate and surrender the affected Premises to DOT&PF.

C. If AIRLINE's Premises are modified or relocated, DOT&PF will:

1. Reimburse AIRLINE for the undepreciated capital cost of AIRLINE's improvements that are acquired, demolished, or not replaced in kind by DOT&PF at the new location. Reimbursement must be made on the basis of capital cost figures furnished by AIRLINE and subject to verification by the Airport Director.

2. Provide AIRLINE with substantially similar space so that AIRLINE's operations are not unreasonably disrupted. In the event of relocation, this Agreement will be modified to include AIRLINE's new assigned space.

3. Construct the demising walls and interior improvements to AIRLINE's new area. Interior improvements include wall coverings, floors, ceilings, lighting, electrical, heating units, air ventilation, and fixtures. All material replacement will be similar in type and quality to those on the Premises being relocated.

4. Refinish the remainder of the Premises, if any, for the functions authorized by this Agreement.

5. If requested by AIRLINE, DOT&PF will relocate AIRLINE's fixtures, furnishings, and equipment at DOT&PF expense.

ARTICLE 10
INDEMNIFICATION, INSURANCE, AND SUBROGATION

Section 10.01. Indemnification

A. AIRLINE will indemnify, save harmless, and defend the DOT&PF, its officers, agents and employees from liability of any nature or kind including costs and expenses for or on account of any and all legal actions or claims of any character whatsoever resulting from death or injury to any person(s) or damage to property to the extent caused by any wrongful error, omission, or negligent act of AIRLINE arising out of this Agreement.

B. All liability or costs for legal actions or claims including defense costs resulting from death or injury to any person(s) or damage to property which are caused by the joint negligence of the DOT&PF and AIRLINE arising out of this Agreement will be apportioned on a comparative fault basis.

Section 10.2. Insurance

A. DOT&PF will, during the term of this Agreement, procure and maintain comprehensive general liability and fire and extended coverage insurance for the Airport, terminal building, and other DOT&PF facilities at the Airport in such amounts and for such insured coverages as may be reasonably required for the prudent operation of the Airport.

B. AIRLINE will, during the term of this Agreement, procure and maintain liability insurance for public liability, aviation liability, the leased Premises, property damage, bodily injury and death, with contractual liability endorsements insuring all of AIRLINE's operations under this Agreement, including its obligations under the indemnity clause in Section 10.01 of this Agreement. These policies will be with limits not less than those set forth below. These policies and minimum limits will be consistently applied to all air carriers with similar operations and will be consistent with prudent airport industry practices and this Agreement. Within 30 days after signing this Agreement, AIRLINE will report to DOT&PF the maximum seating capacity installed in each aircraft or type of aircraft operated by AIRLINE at the Airport. If the maximum seating capacity for any aircraft or type of aircraft operated by AIRLINE is changed, AIRLINE will report the change to DOT&PF and obtain any required additional insurance coverage before operating the aircraft at the Airport.

Insurance Coverages	Minimum Limits
Airline/Aircraft/Airport Public Liability Insurance or Equivalent Insurance	$1 million per seat*

With the following minimum limits regardless of seat capacity or cargo configuration:

--	for propeller aircraft	$10 million
--	for jet aircraft	$20 million

* Based on the maximum seating capacity reported by AIRLINE as described in Section 10.02.B in an aircraft operated by AIRLINE at the Airport.

C. All policies of insurance must be in a form and from a company satisfactory to DOT&PF. Each policy must provide that it may not be cancelled or materially changed during its term without at least 30 days' advance written notice to DOT&PF.

D. A certificate certifying coverage of required insurance must be delivered to DOT&PF within 30 days of the effective date of this Agreement.

E. Where any such policy has a normal expiration during the term of this Agreement, AIRLINE will provide a certificate or satisfactory written evidence of continued coverage prior to such expiration. Within 10 days prior to the effective date of any cancellation or reduction in the amount or extent of insurance coverage, AIRLINE will deliver to DOT&PF a certificate or satisfactory written evidence certifying coverage that reinstates or otherwise provides at least the required insurance coverage.

F. The failure by either party at any time to enforce the provisions in this section will not be construed as a waiver of these provisions and will not reduce their obligations under this Agreement.

Section 10.03. Waiver of Subrogation

AIRLINE and DOT&PF agree to waive their respective rights of recovery or claim against the other for any loss or damage to the Premises, the terminal building or their contents (excluding aircraft) resulting from fire or other "all-risk" insurable property hazards caused by the other. Notwithstanding Section 10.01, any fire or "all-risk" property insurance policies carried by either party will include a waiver of subrogation clause waiving any rights of subrogation against the other party to this Agreement.

Section 10.04. Additional Insured

AIRLINE agrees that every insurance policy required under Section 10.02.B will include an endorsement naming DOT&PF as an additional insured to the extent of DOT&PF's indemnified interest under Section 10.01.

Section 10.05. Notice of Claim

Each party will give the other party prompt and reasonable notice of any claim or action involving this Agreement.

Section 10.06. Insurance Rates

AIRLINE may not use the Airport in any manner that will increase DOT&PF's insurance rates. If AIRLINE's activities on the Airport result in increased insurance costs for DOT&PF, then DOT&PF may charge the increased cost to AIRLINE as additional rent.

ARTICLE 11
ASSIGNMENT OR SUBLEASE

Section 11.01. Assignment or Sublease

A. No assignment or sublease is valid without the advance written approval of the Airport Director.

1. The Airport Director may approve a sublease of AIRLINE's Premises, if:

a. In the Airport Director's opinion, the proposed sublease is in the best interest of the Airport's operation;

b. AIRLINE subleases the space for an amount not exceeding the rent DOT&PF charges for that space plus AIRLINE's maintenance and operation costs, an additional allowance for amortization of AIRLINE's improvements, and a 15 percent administrative charge.

c. The term of any sublease does not extend beyond the expiration of the term of this Agreement; and

d. DOT&PF has no comparable vacant space available for lease. The requirement in this sub-paragraph 11.01.A.1.d may be waived in the discretion of the Airport Director.

2. DOT&PF's consent to any sublease does not relieve AIRLINE from obtaining DOT&PF's consent to any future sublease.

3. The Airport Director may approve an assignment of this Agreement if all of the following conditions are met:

a. In the Airport Director's reasonable opinion, the proposed assignment is in the best interest of the Airport's operation;

b. AIRLINE assigns the Agreement to an Airline qualified under the State's regulations to execute the Agreement and capable of complying with all the requirements in this Agreement;

c. AIRLINE assigns this Agreement for an amount not exceeding the cost of AIRLINE's tenant improvements and personal property transferred as part of the assignment; and

B. If this Agreement is assigned pursuant to the bankruptcy code, 11 U.S.C. 101 et seq., any consideration for the assignment greater than the amount permitted under Section 11.01.A.3.c is the exclusive property of DOT&PF and is not the property of AIRLINE or AIRLINE's estate under the bankruptcy code.

Section 11.02. Merger

This article does not prevent the assignment of this Agreement to any corporation or business entity that merges, consolidates, or succeeds to the business of AIRLINE, so long as written documentation of the assignment is given to DOT&PF within 30 days after the merger, consolidation, or succession.

ARTICLE 12
DEFAULT AND TERMINATION

Section 12.01. Reentry and Reletting After Default

A. Without terminating this Agreement and time being of the essence, DOT&PF may immediately reenter, renovate, and relet all or part of the Premises to others and reassign preferential aircraft parking positions to others for the account of AIRLINE if AIRLINE either:

1. Fails to pay any rent or fee, including interest, within 10 days after receipt of written notice of default.

2. Fails to immediately cure a default in performance of any obligation under this Agreement within 30 days after receipt of written notice of default. If the nature of the default is such that it cannot be cured within 30 days after the written notice of default by DOT&PF to AIRLINE, AIRLINE will be deemed to have cured the default if AIRLINE commences to cure the default within the 30 day period and thereafter diligently continues the cure to completion.

3. Fails to continue to perform any obligation of this Agreement after performance is commenced, or

4. Any petition, proceeding, or action by, for, or against AIRLINE is filed under any insolvency, bankruptcy, reorganization, relief of debtors, or receivorship law.

B. DOT&PF will charge AIRLINE renovation costs necessary to restore the Premises to their original condition plus a 15 percent administrative fee for all relet sublease rent received by DOT&PF for AIRLINE's relet space. AIRLINE will reimburse DOT&PF for any deficiency in rents or fees received for the reentered or relet space. A deficiency is the difference between AIRLINE's rent and the relet rent before considering the 15 percent administrative fee.

C. At any time before or after a reentry and reletting as provided in this Section, DOT&PF may terminate AIRLINE's rights under this Agreement, reenter and take possession of the Premises, and cancel all rights and privileges granted to AIRLINE without any restriction on recovery by DOT&PF for past due rents and fees owed by AIRLINE.

D. DOT&PF has any and all additional rights and remedies as provided by law.

Section 12.02. Partial Termination Due to Damage or Destruction

A. If the Exclusive Use Space, Common Use Space, terminal buildings, structures, or any portions of them are damaged by fire or other casualty, DOT&PF will notify AIRLINE within 90 days of the damage whether the damaged space is to be repaired. If the damaged space is to be repaired, DOT&PF will repair the damage with due diligence and will abate the rent allocated to the particular building, room, or other portion of the space rendered untenantable for the period from the occurrence of the damage to the completion of the repairs. DOT&PF will do its best to provide AIRLINE with any available temporary substitute space at the rent deemed reasonable by DOT&PF until the repairs are completed.

B. If DOT&PF fails to notify AIRLINE within 90 days after destruction that DOT&PF will repair the damaged space, AIRLINE may elect within 120 days after destruction to terminate this Agreement as to the space damaged or destroyed, effective on the date of the damage.

Section 12.03. Events Permitting Termination by AIRLINE

AIRLINE may terminate this Agreement if:

A. AIRLINE is prohibited by lawful authority from using the Airport because of any deficiency or unsafe operating condition at the Airport for a period exceeding 60 days. AIRLINE may terminate this Agreement after the 60 days by giving DOT&PF 30 days' advance written notice.

B. DOT&PF does not perform any material covenant in this Agreement for a period of 60 days after written notice of default to DOT&PF by AIRLINE. DOT&PF will be deemed to have cured the default if DOT&PF commences to cure the default within the 60-day period and diligently continues the cure to completion.

C. The IARF statute (AS 37.15.410-37.15.550) is amended to substantially change the structure or operation of the Airport System.

Section 12.04. Events Permitting Termination by DOT&PF

Time being of the essence, DOT&PF may terminate this Agreement immediately and exercise all rights of entry and reentry upon the Premises, with or without process of law, after the occurrence of any of the following events:

A. AIRLINE fails to provide regularly scheduled air transportation to and from the Airport. DOT&PF will not

seek any other damages from AIRLINE for breach of this provision.

B. AIRLINE fails to pay any rent or fee due, including interest, within 10 days after AIRLINE's receipt of written notice of default from DOT&PF.

C. AIRLINE does not perform any other material provision in this Agreement for a period of 60 days after receipt of written notice of default from DOT&PF. If the nature of the default is such that it cannot be cured within 60 days after written notice of default by DOT&PF to AIRLINE, AIRLINE will be deemed to have cured the default if AIRLINE commences to cure the default within the 60-day period and diligently continues the cure to completion.

D. AIRLINE or its creditors file a request for AIRLINE's relief under any state or federal insolvency, bankruptcy, reorganization, relief of debtors, or receivorship statute.

F. A custodian, trustee, receivor, or agent, or any similar person is appointed or authorized to take charge of a substantial part of AIRLINE's property on the Airport.

Section 12.05. Surrender of the Premises

DOT&PF is not required to give AIRLINE notice to quit possession of the Premises at the expiration of this Agreement. Upon the expiration or termination of this Agreement, DOT&PF has the right to take possession of the Premises. AIRLINE agrees to surrender the Premises peaceably and in good condition, except for reasonable wear and tear.

Section 12.06. Ownership of Improvements

A. The ownership of improvements, furnishings, equipment, and fixtures that are constructed or installed on the Premises by AIRLINE is as follows:

1. Title to all removable furniture, furnishings, fixtures, or equipment remains vested in AIRLINE at all times during the term of this Agreement.

2. Title to any structure or other improvement that cannot, in the Airport Director's reasonable determination, be removed without damage to the Premises, vests in DOT&PF upon the expiration or final termination of this Agreement or its extension. These improvements include interior walls, ceilings, carpeting, finished flooring, electrical

wiring, air conditioning ducts and equipment, furnishings, interior decoration, or finishing.

B. AIRLINE may not abandon any property on the Premises without the advance written consent of the Airport Director. Title to any property not removed by AIRLINE at the expiration or termination of this Agreement immediately vests in DOT&PF at its option. At its sole expense, AIRLINE will restore all damaged DOT&PF property to its previous condition or reimburse DOT&PF for the expense to repair any property damage.

Section 12.07. Holdover

If AIRLINE holds over without a written renewal after the expiration of this Agreement, the holding over does not operate as a renewal or extension of the term of this Agreement but only creates a month to month extension of this Agreement regardless of any rent or fee payment accepted by DOT&PF. The obligations of DOT&PF and AIRLINE to perform under this Agreement continue until the month-to-month holdover is terminated. Either party may terminate the holdover at any time by giving the other party at least 30 days' advance written notice.

ARTICLE 13
COMPLIANCE WITH LAW, TAXES, POLICIES AND NONDISCRIMINATION

Section 13.01. Compliance With Law

A. AIRLINE will comply with all present and future statutes, regulations or ordinances of all federal, state, or local governments that apply to or affect AIRLINE or its operations under this Agreement. DOT&PF will comply with all applicable laws governing its operations under this Agreement.

Section 13.02. Taxes

A. AIRLINE will pay, but payment may not be considered part of Airport System revenue, all applicable taxes (including any possessory interest tax, assessment, or similar charge) that at any time during this Agreement may be levied or liened against AIRLINE, the Airport facilities made available for AIRLINE's exclusive use, or AIRLINE's personal property. AIRLINE will pay all taxes, assessments, and charges directly to the taxing or assessing authority.

B. AIRLINE will indemnify and defend DOT&PF from all costs that result directly or indirectly from tax or assessment that AIRLINE is liable for including taxes, penalties, expenses, and reasonable attorney's fees incurred by DOT&PF.

C. At its own expense, AIRLINE may contest the amount or validity of any tax or assessment or the inclusion of the space leased under this agreement as taxable or assessable property directly against the taxing or assessing authority. AIRLINE will indemnify DOT&PF for all taxes, penalties, costs, expenses, and reasonable attorney's fees incurred by DOT&PF resulting directly or indirectly from any tax contest.

D. Upon termination of this Agreement, AIRLINE will promptly pay in full all applicable taxes and liens.

Section 13.03. Policies

A. AIRLINE will comply with all State of Alaska regulations and DOT&PF Policies and Procedures governing the use of Airport facilities.

B. AIRLINE will comply with all local Airport Directives as set forth by the Airport Director.

C. DOT&PF agrees not to promulgate any State of Alaska regulations governing use of the Airport Facilities, DOT&PF Policies and Procedures, or local Airport Directives as set forth by the Airport Director contradictory to:

1. This Agreement,

2. Any regulation of the FAA, or

3. Any government agency regulation that is binding upon AIRLINE.

D. AIRLINE will be given an opportunity to review and comment on periodic changes to all State of Alaska regulations and Airport Directives before implementation.

Section 13.04. Nondiscrimination

A. AIRLINE will not permit discrimination in violation of federal or state law on the grounds of race, color, religion, national origin, ancestry, marital status, age, or sex against any patron, employee, applicant for employment, other person or groups of persons. DOT&PF may take any action necessary to enforce this provision, including actions required by any federal or state law or FAA grant agreement.

B. AIRLINE will undertake an affirmative action program as required by 14 CFR Part 152, Subpart E, to ensure that no person is excluded from participating in any employment, contracting, or leasing activity on the ground of race, creed, color, national origin, or sex. AIRLINE agrees that no person may be excluded on those grounds from participating in or receiving the services or benefits of any program or activity covered by the regulation. AIRLINE will require its covered suborganizations to provide assurance that they will also undertake affirmative action programs and require assurances from their suborganizations, as required by 14 CFR Part 152.

ARTICLE 14
AGREEMENT NOT TO GRANT MORE FAVORABLE TERMS

Section 14.01. Agreement Not to Grant More Favorable Terms

DOT&PF agrees not to enter into any lease, contract, or other agreement with any other Airline containing substantially more favorable rights and privileges than granted in this Agreement. DOT&PF will not grant any right or privilege that is not accorded AIRLINE to any other Airline unless the same right or privilege is made available to AIRLINE. This covenant does not apply to any Airline that only operates aircraft weighing less than 30,000 pounds Certificated Maximum Gross Takeoff Weight.

ARTICLE 15
GENERAL PROVISIONS

Section 15.01. Delivery of Notices

A. Required notices must be hand delivered or sent by registered or certified mail to the addresses below:

1. DOT&PF:

2. AIRLINE:

B. If notice is given in any other manner or at any other place, notice must also be given in writing at the place and in the manner specified in this section in order to be effective under this Agreement. All notice periods begin on the date of receipt of written notice at the address listed in Section 15.01.A except as provided elsewhere in this Agreement.

C. Either party may change the address in this section by written notice to the other party.

Section 15.02. Severability

If any part of this Agreement is declared to be invalid by a court of competent jurisdiction, the other parts of the Agreement remain in full force.

Section 15.03. Quiet Enjoyment

Upon Payment of the required rents and fees, and subject to its performance of this Agreement, AIRLINE may peaceably use the Airport.

Section 15.04 Officers, Agents, and Employees

No commissioner, councilman, director, officer, agent, employee, or other representative of either party may be charged personally nor held contractually liable by the other party for the enforcement, attempted enforcement, or breach of this Agreement if acting within the scope of their duties. DOT&PF and AIRLINE remain

liable for the acts of these persons that are within the scope of their duties.

Section 15.05. Subordination to Agreements with the U.S. Government

This Agreement is subject to any present or future agreement between DOT&PF and the United States of America concerning the operation or maintenance of the Airport System. AIRLINE may not hold DOT&PF liable for any failure to perform any part of this Agreement as a result of any national emergency declared by the federal government.

Section 15.06. Incorporation of Required Provisions

The parties agree to incorporate into this agreement any provision required by any governmental agency, including DOT&PF acting in its non-proprietary capacity, now or in the future.

Section 15.07. Nonwaiver of Rights

No waiver of default of any part of this Agreement by either party may operate as a waiver of any subsequent default of any part of this Agreement that is to be performed by the other party. Consent or notice by either party may not be construed as consent or notice in the future.

Section 15.08 Force Majeure

Notwithstanding Section 12.02, neither DOT&PF nor AIRLINE will be in violation of this Agreement if it is prevented from performance, by reason of strike, boycott, labor dispute, embargo, shortage of energy or materials, act of God, act of public enemy, act of superior governmental authority, weather condition, riot, rebellion, sabotage, or any other circumstance for which it is not responsible and which is beyond its control.

Section 15.09. Contract Interpretation

The headings of articles and sections are used only for convenience and reference, and may not be used to define or interpret the scope or intent of this Agreement. The language in all parts of this Agreement must be construed according to its fair meaning and not strictly for or against either DOT&PF or AIRLINE.

Section 15.10. Federal Aviation Act, Section 308

This Agreement may not be construed to grant AIRLINE any exclusive right or privilege within the meaning of Section 308 of the Federal Aviation Act of 1958, as amended, except that AIRLINE has the right to exclusive possession of its Exclusive Use Space.

Section 15.11. Radio Interference

At DOT&PF's request, AIRLINE will stop using any machine or device that interferes with any government-operated transmitter, receiver, or navigation aid until the cause of the interference is eliminated.

Section 15.12. Obtaining Federal and State Funds

DOT&PF will use its best efforts to obtain maximum entitlement grants from federal, state, or other sources when consistent with prudent management of the Airport System.

Section 15.13. Management Audits

DOT&PF will conduct periodic management and operation audits of the Airport System and the IARF. DOT&PF will use its best efforts to implement the reasonable recommendations of the audits.

Section 15.14. Project Management

DOT&PF will use its best efforts to implement Capital Improvements with efficient and responsive project management.

Section 15.15. Passenger Facility Charges

If the current prohibition against passenger facility charges (sometimes referred to as "head taxes") is removed, DOT&PF reserves the right to institute the charge if it desires. If a passenger facility charge is instituted, the revenue from this charge will be Airport System revenue and will be dedicated to funding the Airport System Capital Improvements.

Section 15.16. Governing Law

This Agreement is governed by the laws of the State of Alaska. Any legal action involving this Agreement must be filed by AIRLINE in the State of Alaska.

Section 15.17. Inspection of Books and Records

At its own expense and upon reasonable notice, each party has the right from time to time to inspect the books, records, or other data of the other party relating to this Agreement. Inspections must be conducted during regular business hours.

Section 15.18. Generally Accepted Accounting Principles

Any report or disclosure referred to in this Agreement that contains financial information must be prepared in accordance with applicable generally accepted accounting principles unless otherwise noted in this Agreement.

Section 15.19. Modification Necessary for Grant of FAA Funds

A. If the FAA requires that this Agreement be amended as a condition precedent to the granting of funds for the improvement of the Airport, AIRLINE agrees to consent to any amendment that is reasonably required in order to enable DOT&PF to obtain the grant of funds.

B. If any FAA required amendment impairs AIRLINE's rights under this Agreement or causes AIRLINE any unreasonable expense, AIRLINE may terminate this Agreement within 60 days by notice to DOT&PF.

Section 15.20. Consent Not to be Unreasonably Withheld

Neither DOT&PF nor AIRLINE will unreasonably withhold any consent or approval required by this Agreement.

Section 15.21. Prudent Operations

DOT&PF will manage the Airport System in a prudent and reasonable manner.

Section 15.22. Independent Contractor

AIRLINE is neither an agent nor an employee of DOT&PF but is an independent contractor with respect to all AIRLINE's activities on the Airport, including any installation, construction, or service provided.

Section 15.23. Entire Agreement

Except as described in Section 15.26, this Agreement with all attached exhibits constitutes the entire agreement between DOT&PF and AIRLINE at the Airport. Statements previously made, verbal or written, are merged in this Agreement. Until signed by the Commissioner of DOT&PF or his designated representative, this Agreement is of no effect. This Agreement may only be amended in a writing that is signed by the authorized representatives of both parties.

Section 15.24. Condemnation

If any of AIRLINE's rights and privileges under this Agreement are condemned by any proper authority, including the State of Alaska, this Agreement terminates automatically on the date AIRLINE is required to surrender possession of the property. DOT&PF is entitled to all the condemnation proceeds except AIRLINE will be paid only the portion of the proceeds attributable to the fair market value of any improvements placed on the property by AIRLINE according to the provisions of 17 AAC 40.330(g), and not any compensation for consequential or severance damages including business damage, lost profits, or leasehold advantage. Rent will be adjusted according to the provisions of 17 AAC 40.330(g).

Section 15.25. Incorporation of Exhibits

Exhibits A through K are a part of this Agreement.

Section 15.26. Preexisting Agreements

A. On the effective date of this Agreement, the following agreements between AIRLINE and DOT&PF at the airport are terminated:

DOT&PF FILE NO.	SPACE OR PROPERTY LEASED

B. The following agreements between AIRLINE and DOT&PF at the Airport are not terminated by the execution of this Agreement:

DOT&PF FILE NO.	SPACE OR PROPERTY LEASED

C. AIRLINE and DOT&PF agree that the only agreements in existence at the Airport between AIRLINE and DOT&PF on the effective date of this Agreement are this Agreement and those listed in Section 15.26.B.

The parties have executed this Agreement on the dates below:

I. Outline of the Survey

1. Objectives

To define Japanese high potential visitors to Alaska numerically, and investigate their characteristics.

2. Procedures of the Survey

A nationally representative 20,000 prospective participants were called and a total of 13,265 responsed to a telephone-screening interview. Thereafter, 715 of the total were screened from the aforementioned 13,265 (1st phase). 715 questionnaires mailed, some 494 completions were received (2nd phase).

The followings are the screening questions.

A. In the past 3 years, have you taken any vacation trips away from home lasting at least 4 days or more?

B. In the past 5 years, have you taken any overseas trips to places that were 3,300 km or more away from your home, that is where the one-way trip was 3,300 km or more from home?

C. Do you currently hold a valid passport?

D. Who in your family decides where to go on vacation?

3. Sampling Method

After selecting 300 locations by proportionate probability procedures, we sampled 20,000 respondents from telephone owners rosters (Japanese yellow pages) in all sampling locations by systematic random sampling techniques.

4. Period of the Survey

(1) Telephone-interview (screening)

27th September, 1986 - 7th October, 1986

(2) Mail-survey

12th October, 1986 - 13th November, 1986

5. The Organization of the Survey

International department, marketing division,

NIKKEI RESEARCH INC. TOKYO, JAPAN

II. Results of the Survey

1. Definitions of PROSPECTS, ACCEPTORS, and HIGH POTENTIALS

(1) Definition of PROSPECTS

A "Prospect" is one who makes or shares in the family vacation decision, has taken vacation of at least 4 days during the 3 years, and taken a vacation of at least 3,300 km one way during the past 5 years.

(2) Definition of ACCEPTORS

An "Acceptor" is the individual who indicates an interest in an Alaskan vacation (3-5 on 1-5 point interest scale).

(3) Definition of HIGH POTENTIALS

A "High Potential" is an Acceptor with a stated interest in an Alaskan vacation, have taken 2 or more long-distance (3,300 km one way) vacations in the past 5 years, and spent at least ¥250,000 per person on the longest distance trip.

Table 1 Constitution of Travelers' Types in Japan

	N	% of Total Population Contacted (N = 13,265)	N	% of PROSPECTS (N = 494)
PROSPECTS (screened samples)	715	5.4%	494	100.0%
ACCEPTORS	-	*) 2.3	215	43.5
HIGH POTENTIALS	-	*) 1.0	95	19.2

*) These volumes were the estimated by the following method PROSPECTS' 5.4% in '% of total populaton contacted' x each volume in '% of PROSPECTS'.

2. Characteristics of PROSPECTS, ACCEPTORS, and HIGH POTENTIALS

(1) Demographic Characteristics

1) Number of Family Members (%)

Table 2

	1	2	3	4	Equal to or more 5	N.A.
PROSPECTS	2.8	17.4	23.1	29.1	26.1	1.4
ACCEPTORS	2.3.	15.3	21.4	30.2	29.8	0.9
HIGH POTENTIALS	4.2	16.8	24.2	24.2	28.4	2.1

2) Children in Family (%)

a. 12 years of age or less

HIGH POTENTIALS	60.0	40.0

8) Family Income (%)

Table 10

	Yen x 10,000									
	-200	200-300	300-400	400-500	500-700	700-1000	1000-1500	1500 2000	2000+	N.A.
PROSPECTS	1.6	6.1	10.3	13.8	21.3	23.9	14.2	3.2	2.2	3.4
ACCEPTORS	2.3	3.7	8.8	12.1	21.4	26.0	15.3	4.7	2.8	2.8
HIGH POTENTIALS	0.0	4.2	9.5	14.7	14.7	26.3	16.8	6.3	4.2	3.2

(2) Characteristics of the Previous Traveling Experiences

1) The Frequency of at least 4 Days Vacation in 5 years

More than 70% of PROSPECTS have taken a vacation trip of at most 5 times or less. The percentage of ACCEPTORS was 64.7%, and that of HIGH POTENTIALS was 51.6%. The vacation frequency was PROSPECTS' 4.9 times, ACCEPTORS' 5.9 times, and HIGH POTENTIALS' 7.8 times. Thus, the half of PROSPECTS have taken at least 4 days vacation annually.

Table 11

	times in 5 years							
	1	2	3	4	5	1-5	6 or more	MEAN
PROSPECTS (N = 494)	16.8%	21.1%	11.9%	9.3%	14.4%	73.5%	26.5%	4.9 times/ 5 YRS
ACCEPTORS (N = 215)	12.6	16.7	11.6	11.2	12.6	64.7	35.3	5.9
HIGH POTENTIALS (N = 95)	0.0	14.7	9.5	11.6	15.8	51.6	48.4	7.8

2) Frequency of at Least 3,300 km Distance Overseas Vacation Trip during the Past 5 Years.

60.3% of PROSPECTS had taken such a vacation only once, while, the percent of ACCEPTORS was 54.4.

The actual frequency was PROSPECT' 1.9 times, ACCEPTORS' 2.0 times, and HIGH POTENTIALS' 3.1 times.

Table 12

	times in 5 years			
	1	2 or more	Mean	
PROSPECTS (N = 494)	60.3%	39.7%	1.9	times/5 years
ACCEPTORS (N = 215)	54.4	45.6	2.0	
HIGH POTENTIALS (N = 95)	0.0	100.0	3.1	

3) Destinations of Overseas Vacation during the Past 5 Years

Table 13 shows the ranking of the visited locations.

North America's (U.S.A. and Canada) accounted for 33.8% of PROSPECTS followed by Hawaii's 34%.

Table 14 shows the visited states in U.S.A., California is the Highest rank and New York ranked second.

Table 13

Unit: % (MA)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
Hawaii	34.0%	34.0%	41.1%
Europe	28.3	32.6	36.8
Asia or India	28.3	31.6	41.1
U.S.A.	26.1	29.3	36.8
South Pacific, Philippines, Indonesia	22.5	20.0	31.6
Canada	7.7	6.5	11.6

North Carolina	0.7	0.0	0.0
Pennysylvania	0.7	1.4	2.6
Wyoming	0.7	1.4	2.6

4) The Furthest Destinations of Overseas Vacation Trips

Table 15 indicates the ranking of the furthest destinations which the respondents had visited.

Europe is the first rank, Hawaii ranked second, and the third was U.S.A. More than 30% of PROSPECTS had been to Europe.

Table 15

Unit: % (SA)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
Europe	30.8%	36.3%	41.1%
Hawaii	19.0	16.3	13.7
U.S.A.	15.8	19.1	18.9
South Pacific, Philippines, Indonesia	11.3	7.4	7.4
Asia or India	8.5	8.8	6.3
Australasia	3.2	2.8	3.2
Canada	3.0	2.3	3.2
Africa	2.2	2.3	3.2
South or Central America	0.8	0.9	2.1
Mexico	0.8	0.5	0.0
Middle East	0.6	0.5	1.1
Caribbean	0.0	0.0	0.0
Others	1.0	1.4	0.0
N.A.	2.8	1.4	0.0

Table 16 indicates the ranking of states for the PROSPECTS who stated U.S.A. as the furthest destination of previous vacation trips.

Table 16

Unit: %

	PROSPECTS (N = 78)	ACCEPTORS (N = 41)	HIGH POTENTIALS (N = 18)
California	50.0	53.7%	55.6
New York	12.8	9.8	0.0
Arizona	2.6	0.0	0.0
Georgia	2.6	2.4	5.6
Alaska	1.3	2.4	5.6
Colorado	1.3	2.4	5.6
Maine	1.3	0.0	0.0
Maryland	1.3	0.0	0.0
Massachusetts	1.3	0.0	0.0
Nebraska	1.3	2.4	0.0
Rhode Island	1.3	2.4	5.6
South Carolina	1.3	0.0	0.0
Virginia	1.3	0.0	0.0
Washington	1.3	0.0	0.0

5) The Total Expenditure for the Furthest Vacation Trip

78% of PROSPECTS spent a maximum ¥800,000 per person for their furthest vacation trip.

The mean expenditure was ¥640,000 per person.

Table 17 The Expenditure per Person for the Furthest Vacation Trip

	Expenditure per person (¥ x 10,000)								
	1-20	21-40	41-60	61-80	81-100	101-150	151-200	201+	MEAN (¥ x 10,000)
PROSPECTS (N = 494)	6.3%	26.1%	30.6%	15.0%	12.3%	3.8%	1.4%	1.6%	64.0
ACCEPTORS (N = 215)	5.1	24.7	28.8	17.7	15.3	3.3	1.9	0.9	64.8
HIGH POTENTIALS (N = 95)	0.0	26.3	35.8	16.8	14.7	3.2	1.1	2.1	67.0

(3) Interests in Vacation Activities

Table 18 indicates the mean scores of the interest-scale for the vacational activities which are more than 3 points in each scale. The traditional sightseeing-related activities such as visiting national parks ..., sightseeing in cities, and visiting museums, and shopping were very popular with PROSPECTS.

Table 18 The Mean Scores of Interests in Vacational Activities Which were rated more than 3 Points
(5 Point rating scale, 1 is the least, 5 is the most)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
Visiting national parks and scenic wonders	4.18	4.40	4.35
Sightseeing in cities	3.97	4.06	4.05
Shopping	3.81	3.80	3.81
Visiting museums	3.67	3.91	3.92
Dining out in fine restaurants	3.65	3.65	3.64
Enjoying nightime entertainment	3.49	3.53	3.45
Learning about different cultures	3.33	3.63	3.66
Seeing wildlife in its natural habitat	3.29	3.75	3.54
Swimming and sunbathing	3.18	3.18	3.16
Visiting friends and relatives	3.08	3.11	3.11
Having things for children to do and be interested in	3.04	3.09	3.09
Taking trips that offer adventure and challenge	3.01	3.26	3.11

3. Images of Alaska

(1) The Associated Images of Alaska

Table 19 indicates the results of the first free associations of Alaska which were higher than 1%.

Alaska was associated with 'climate' and 'surroundings' by more than 50% of PROSPECTS.

Table 19

(SA)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
Cold/Freezing	26.3%	19.1%	14.7%
Snow/Ice/Icicle	14.6	11.6	11.6
General comments on nature	12.8	21.4	24.2
Eskimos/Indians/ Nature Alaskans	10.3	10.2	8.4
Glaciers/Icebergs	7.5	8.4	10.5
Wildlife/Animals	6.5	4.7	3.2

Mt. McKinley/Denali/ National parks	1.6	3.3	3.2
Vast/Open space	1.4	2.3	3.2

Table 20 The Second Free Associations of Alaska

(SA)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
Wildlife?Animals	12.3%	13.0%	16.8%
Cold/Freezing	11.5	8 4	5.3
Eskimos/Indians/ Nature Alaskans	10.9	6.5	6.3
General comments on nature	9.5	14.4	12.6
Snow/Ice/Icicles	7.5	6.0	8.4
Others on sights	5.7	8.8	10.5
Glaciers/Icebergs	5.1	7.0	8.4
Winter sports	2.0	2.8	3.2
Far away	2.0	1.4	0.0
Anchorage/Juneau/ Other cities	1.8	0.5	0.0
Mt. McKinley/Denali/ National parks	1.6	1.9	1.1
Hunting/Fishing	1.6	1.9	2.1
Pipeline/Oil	1.4	1.9	0.0

(2) The Images of Types of Japanese Travelers to Alaska

Table 21 indicates the types of people who would be most likely to take an Alaskan vacation.

Alaska appealed the nature-oriented types such as 'Adventurers', 'People who like scenic wonders', and 'People who like winter sports'.

Table 21

UNIT: % (MA)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
People who like scenic wonders	66.4%	75.8%	76.8%
Advendturers	49.2	42.3	45.3
People who like winter sports	29.8	34.9	38.9
People who like fishing	29.8	40.5	36.8
Clibmers	18.8	20.5	22.1
People who like animals	13.6	18.1	20.0
People who have the interest in different cultures	13.4	17.7	22.1
People who like outdoor sports	11.9	17.7	12.6
People who like outdoor life	11.3	13.0	12.6
Professional travellers	11.1	10.2	12.6
People who enjoy gorgeous hotel-life	2.0	3.7	1.1
People who like shopping	1.0	0.9	1.1
Others	1.4	1.4	1.1

(3) The Vacation-related Attributes of Alaska PROSPECTS indicated that 'Hotels & Motels' and 'Food & restaurants' would have no more than 'fair' conditions.

Table 22 The Mean Scores of the Expectations towards the Alaskan Vacation-related Attributes
(4 Point rating scale - 1: poor, 2: fair, 3: good, 4: excellent)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
Hotels and motels	2.13	2.29	2.33
Food and restaurants	2.15	2.39	2.41
Ease of getting around	1.60	1.72	1.75
Climate	1.40	1.58	1.55
Recreational facilities for tourists	1.86	2.09	2.04

4. The Interest in Alaska

(1) The Intention to Travel to Alaska

43.5% of PROSPECTS had at least some intention to travel to Alaska.

Table 23 The Interest in Traveling to Alaska

(5 Point rating scale - 1: Not at all interested, 5: Very interested)

	Interest scale point						
	5	4	3	2	1	N.A.	MEAN
PROSPECTS (N = 494)	8.1%	17.0%	18.4%	30.6%	24.5%	1.4%	2.53
ACCEPTORS (N = 215)	18.6	39.1	42.3	0.0	0.0	0.0	3.76
HIGH POTENTIALS (N = 95)	20.0	36.8	43.2	0.0	0.0	0.0	3.77

(2) Reasons Why People Would Like to Travel to Alaska

The interest in scenic wonders was the main reason why ACCEPTORS would like to travel to Alaska. On the other hand, coldness is the main reason why NON-ACCEPTORS would not like to travel to Alaska.

PROSPECTS who had never been to Alaska gave as much the same reasons for not going as NON-ACCEPTORS.

Table 24 Reasons for the Interest in an Alaskan Vacation

Base = PROSPECTS who have at least some interest in an Alaskan Vacation

	ACCEPTORS N = 215	HIGH POTENTIALS N = 95
National parks/ scenic wonders	29.8%	31.6%
Different culture	10.2	9.5
Fishing	7.4	5.3
Winter sports	5.6	5.3
Outdoor life	2.8	4.2

5. Evaluation of an Alaskan Vacation

The great nature-oriented activities, such as 'visit national parks and scenic wonders', 'go winter sports', 'see wildlife in its natural habitat', and 'take trips that offer adventure and challenge' were very highly evaluated.

Table 28 The Mean Scores of Expectation of an Alaskan Vacation

(5 Point rating scale, 1: Very poor, 5: Excellent)

	PROSPECTS (N = 494)	ACCEPTORS (N = 215)	HIGH POTENTIALS (N = 95)
Visiting national parks and scenic wonders	4.32	4.57	4.56
Going winter skiing and play other winter sports	4.11	4.18	4.18
Seeing wildlife in its natural habitat	4.11	4.31	4.32
Taking trips that offer adventure and and challenge	4.05	4.05	4.01
Fishing	3.95	4.06	4.15
Learning about different cultures	3.41	3.54	3.67
Camping, hiking, back-packing, and having good facilities for outdoor activities	3.19	3.55	3.55
Having a things for children to do and be interested in	3.07	3.26	3.19
Sightseeing in cities	3.00	3.23	3.22
Shopping	2.99	3.15	3.13
Dining-out in fine restaurants	2.91	3.09	3.09
Visiting museums	2.54	2.68	2.64
Enjoying nighttime entertainment	2.45	2.60	2.55
Playing tennis and golf	2.23	2.46	2.47
Visiting friends and relatives	2.06	2.13	2.14
Swimming and sunbathing	2.01	2.22	2.29

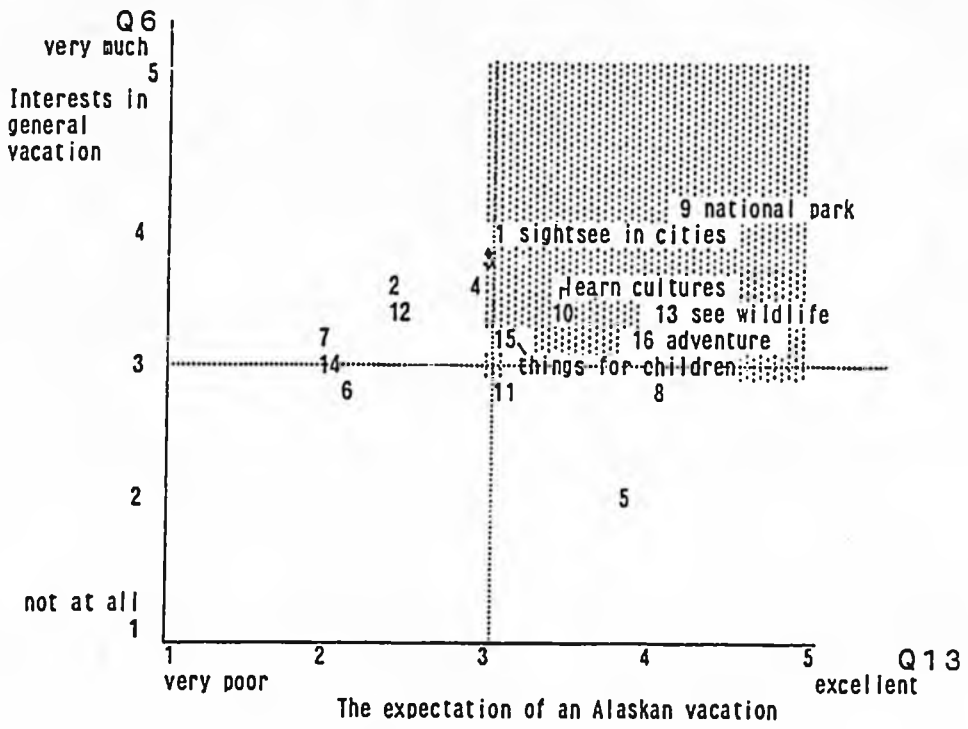
III. Implications and Considerations

1. Benefits of an Alaskan Vacation and Preferred Vacation Pastimes

The vertical score indicates the level of interest in a general vacation, and the horizontal axis indicates the expectation of an Alaskan vacation.

In order to ascertain the most effective activities for the sale & promotion of Alaska, attention should he paid to the areas covered by dots.

Fig. 1 Interest in a General Vacation and Expectations of an Alaskan Vacation



1 To sightsee in cities
2 To visit museums
3 Shopping
4 To dine out in fine restaurants
5 Fishing
6 To play tennis and golf
7 To swim and sunbathe
8 To go winter skiing and play other winter sports
9 To visit national parks and scenic wonders
10 To learn about different cultures
11 To camp, hike, backpack and have good facilities for outdoor activities
12 To enjoy nighttime entertainment
13 To see wildlife and relatives
14 To visit friends and relatives
15 To have things for children to do and be interested in
16 To take trips that offer adventure and challenge

The following are the prospective activities for sale & promotion of an Alaskan Vacation.

to visit national parks and scenic wonders

to see wildlife in its natural habitat

to sightsee in cities

to learn about different cultures

to take trips that offer adventure and challenges

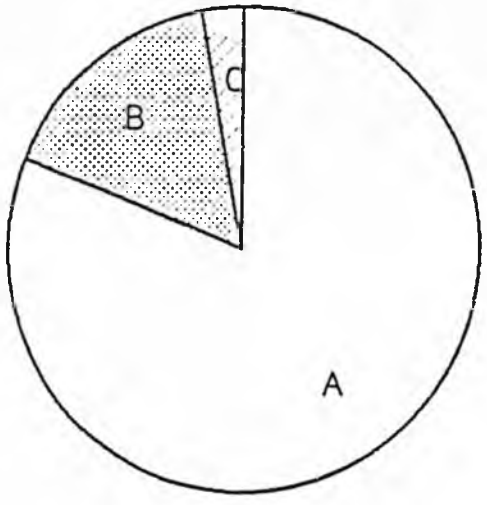
to have things for children to do and to be interested in

2. The Market Characteristics of Prospective Japanese Travelers

(1) The Percentage Rates of Japanese Overseas Travelers by Purpose

Fig. 2 indicates the percentage rates of 1985's Japanese overseas travelers by the purposes of trip. The 81.3% of all Japanese Overseas Travelers who nominated sightseeing as their main vacation determinant may be categorized as Prospects.

fig.2 Percentage of Japanese overseas travelers by purposes
(sourse:1985'data of THE MINISTRY OF JUSTICE)



unit:%

A	sightseeing	81.3	81.3%
B	bisiness	15.5	15.5%
C	others	3.2	3.2%

(2) Distribution of Travelers by Age

Table 29 shows the distribution of 1985's Japanese travelers by age and that of PROSPECTS.

Both approximate each other although the youngest category (18-24 age) of PROSPECTS is somewhat less than the corresponding percentage of the total population, as it is the PROSPECTS are the family vacation decision makers.

Table 29

	*All Japanese travelers	PROSPECTS
18 - 24	15.1%	9.5%
25 - 34	26.5	29.6
25 - 44	22.1	20.9
45 - 54	17.7	17.6
55 - 64	13.2	10.7
65+	5.5	9.9

* The source of these data is THE MINISTRY OF JUSTICE, but we adjusted them in order to match the categories of the survey instrument.

(3) The Constitution of the Total Japanese Outbound Travel Market by Destinations

Table 30 indicates the constitution of the total Japanese outbound travel market segmented by destinations of 3,300 km distance or more, and others.

The percentage of trips equal to or more than 3,300 km is approximately 70%, which corresponds to the definition of PROSPECTS.

Table 30

(Source: WTO & OECD's 1984's data)

	Total Japanese travelers
* More or equal 3,300 km distance destinations	69.7%
Others	30.3%

* We accumulated the % of each destination which is equal to or more than 3,300 km distant from Japan.

(4) The Seasonal Distribution of Japanese Overseas Travelers

Fig. 3 indicates the seasonal distributions of the Japanese overseas travelers in 1985.

Summer is the most favored season for prospective Japanese travelers to Alaska.

THE POTENTIAL FOR JAPANESE TRAVEL TO ALASKA

[EXECUTIVE SUMMARY]

NOVEMBER, 1986

NIKKEI RESEARCH INC.

TOKYO, JAPAN

1. Definition and Percentages of PROSPECTS, ACCEPTORS, and HIGH POTENTIALS.

Table 1 Constitution of Travelers' Types in Japan

	N	% of Total Population Contacted (N = 13,265)	N	% of PROSPECTS (N = 494)
PROSPECTS (screened samples)	715	5.4%	494	100.0%
ACCEPTORS	-	*) 2.3	215	43.5
HIGH POTENTIALS	-	*) 1.0	95	19.2

*) These volumes were the estimated by the following method; PROSPECTS' 5.4% in '% of total populaton contacted' x each volume in '% of PROSPECTS'.

1. Definitions of PROSPECTS, ACCEPTORS, and HIGH POTENTIALS

(1) Definition of PROSPECTS

A "Prospect" is one who makes or shares in the family vacation decision, has taken vacation of at least 4 days during the 3 years, and taken a vacation of at least 3,300 km one way during the past 5 years.

(2) Definition of ACCEPTORS

An "Acceptor" is the individual who indicates an interest in an Alaskan vacation (3-5 on 1-5 point interest scale).

(3) Definition of HIGH POTENTIALS

A "High Potential" is an Acceptor with a stated interest in an Alaskan vacation, have taken 2 or more long-distance (3,300 km one way) vacations in past 5 years, and spent at least ¥250,000 per person on the longest distance trip.

2. Characteristics of PROSPECTS, ACCEPTORS, and HIGH POTENTIALS

(1) Demographic Characteristics

1) Number of Family Members (%)

Table 2

	1	2	3	4	Equal to or more 5	N.A.
PROSPECTS	2.8	17.4	23.1	29.1	26.1	1.4
ACCEPTORS	2.3	15.3	21.4	30.2	29.8	0.9
HIGH POTENTIALS	4.2	16.8	24.2	24.2	28.4	2.1

2) Children in Family (%)

a. 12 years of age or less

Table 3

	YES	NO	N.A.
PROSPECTS	39.9	51.6	8.5
ACCEPTORS	38.1	53.0	8.8
HIGH POTENTIALS	36.8	53.7	9.5

b. 13 to 17 years of age (%)

THE POTENTIAL FOR JAPANESE TRAVEL TO ALASKA [IMPLICATIONS FOR MANAGERS]

NOVEMBER, 1986

NIKKEI RESEARCH INC.

TOKYO, JAPAN

This survey was conducted between October 12 and November 13, 1986, and reflects the market conditions pertaining at that time.

The methodology consisted of a professionally designed self-administered mail questionnaire. Strict national random probability procedures were used to ensure that each element of the population had an equal probability of selection in the sample.

Two waves of mailouts were employed to maximize the data yield and each respondent was given an incentive gift in appreciation of his/her cooperation. The reader is referred to page 2 for full particulars of the sampling procedures.

As Japan is a homogeneous country without significant ethnic or religious subgroups - and since the telephone directories which constituted the frame of reference for respondent selection cover 95 percent of the household population - the sample may be said to be representative of the Japanese population at large.

Furthermore, the two mailouts of 715 questionnaires elicited a total of 494 completions or a response rate of approximately 70 percent, thus minimizing the possibility of bias and inputting the findings with a reliable level of statistical confidence.

Basically, feedback on Alaska and its attractions was relatively low among the target market subgroups of so-called prospects, Acceptors and High Potentials. It may be hypothesized that this was attributable to lack of

cognizance of available facilities and activities. For example, shopping, dining-out and nighttime entertainment generated generally low scores.

Another aspect which seems capable of correction concerns Japanese impressions of Alaska's 'coldness' with it's concurrent implications of discomfort. However, in point of fact Alaska's summer climate is roughly comparable with that of Hokkaido - which is particularly popular with Japanese tourists during the temperate spring through autumn seasons.

As the average temperatures in Alaska from May through September are relatively mild, and since the findings of this survey indicate that Japanese prefer to take their vacations in the summer, a concerted campaign to dispel the negative connotations of Alaska's 'coldness' seems called for. The seriousness of this problem highlighted by the following percentage perceptions which are climate related:

Cold/freezing	26.3%
Snow/ice/icicle	14.6%
Glaciers/icebergs	7.5%
Total:	48.4%

As a corollary of this situation, the image of Alaska as a destinaton to indulge in outdoor sports such as tennis, golf and swimming has been impaired to such an extent that these activities garnered zero percentage reasons for wanting to take a vacation in Alaska among Acceptors and High Potentials.

Similarly, Alaska's image as a place with good restaurants was minimal, although such dishes as Alaska Salmon, Alaska Crab, and other seafood such as

shrimp, virtually parallel similar delicacies which are much sought after from Hokkaido (and which tend to be expensive). Familiarizing potential Japanese visitors with these similarities - and their availability at reasonable prices in comfortable, clean restaurants - should be a cornerstone of any advertising campaign.

Campers, wildlife enthusiasts, skiers, and photographers form significant segments of adventurous travellers who are always seeking new experiences and are sufficiently affluent to actualize their anticipations. On a cost/benefit basis, such subgroups can generally be reached through clubs, associations and specialty publications as well as non-commercial travelogues aired over the Japanese public television network (NHK and affiliated channels).

Another misconception evident from this survey is the far-away distance of Alaska in comparison with other so-called long-haul destinations, and the time/cost constraints involved in getting there. In point of fact, Alaska is closer that either Europe or the popular U.S. East Coast destinations which attract virtually millions of Japanese tourists annually.

It is perhaps also worthy of mention that according to the Ministry of Justice the fastest-growing segment of Japanese outbound travellers consists of younger people in the 15-24 age group. As the importance of this group increases, so the relavance of the head of the family as the destination decision maker tends to diminish. At this juncture the 15-24 rate of increase is as much as 8 percent per annum. To contend with this explosive growth new strategies and appeals much be developed, with more emphasis on activities which are responsive to their wants and needs.

In Japan, the knowledge of Japanese travellers and potential tourists represents only one side of the coin. Equally important functions are the views of travel agents and tour organizers. While in many Western countries, these functionaries are viewed more or less as booking agents, Japanese vacationers look upon them as consultants whose recommendations are sought and acted upon. Unless the agent or wholesaler has an intimate knowledge of all that Alaska has to offer, chances are that a more familiar destination will be recommended.

Our recommendation is therefore that a further study should be conducted among two levels of travel trade professionals - those who man the agency counters and have direct contact with the public, and those at the executive/administrative level who are responsible for providing the guidelines and organizing the various tour packages. By taking a pulse on the extent of their cognizance of Alaska in a frame of reference of similar-distance competing countries, it should be possible to suggest appropriate strategies and campaigns to contend with any areas of haziness or apprehension.

ANNEX: QUESTIONNAIRE (IN GERMAN)

A. OBJECTIVES OF SURVEY

The Alaska Visitors Association Marketing Council, Anchorage, Alaska, commissioned Marplan Forschungsgesellschaft mbH to carry out a marketing study to analyze the size and the structure of the potential visitors to Alaska. This study has been conducted in the USA in 1976 with a similar questionnaire. To achieve comparable data sets it was decided to use similar concepts to the U.S. version in Germany and Japan.

In accordance with the U.S. study several strata are to be considered within the market potential. The modest form of the market potential are the

a) Prospects

who are head of households, responsible for or taking part in decision making for vacations, who took vacations of at least one week in the past three years and who took vacation in a place of at least 3.300 km one way from home in the past five years.

Further groups are:

b) Acceptors

who are prospects who show interest in an Alaska vacation (3 to 5 on a 1 to 5 interest scale).

c) High Potentials

who are acceptors having taken two or more long-distance vacations in the past five years and spent at least 3.000 DM per person on the last long-distance trip.

d) High Profiles

who are prospects, 35 years of age and over with 5.000 DM household income minimum and without children at home.

e) Visitors

Persons having visited Alaska during the past three years.

To work out an optimum marketing concept we have to have some information about the travel behaviour (part 1), the information behaviour (part 2), travel motivations (part 3) and the perception and image Alaska has among prospects.

All questions of the interviews were analyzed and cross tabulated against the potential groups a) to e), demographic variables with touristic relevance as sex, age, education, size of community, children in household and typology. The typology of five attitude types of travel motivations was the result of a cluster analysis. It is a multivariate statistical procedure to get a condensed version of the motivation question (qu. 8). The typology allows a more differentiated analysis of the target group and to design a more specific communication strategy of the benefits of Alaska journeys.

We received five significant groups with specific demands towards travelling:

1. The first type we called the "fun-type", who loves amusement, wants to relax during vacation and is not very interested in culture.

2. The second type we called "adventure-type", he is the one who is most interested in nature and wildlife, also in foreign cultures and likes to hike and camp.

3. The third type is the "sportive/conventional type" who is interested in sports activities (tennis, skiing, etc.). He expects a big range of offers of entertainment and sports activities. But he does not seek as much adventures as other types. Special needs for family vacation must be met.

4. The fourth type we called "visitor-type". He is the one who visits friends and relatives on his long-distance trips to save money.

5. The last type is the "education-type". He is interested in culture and nature. Sports activities are of no interest to him.

We have to point out that within this report only the most relevant results for your marketing actions can be shown. More information can be found in the separate set of tables.

B. SAMPLING AND WEIGHTING PROCEDURES

To have a sound statistical basis for analyzing size and structure of the Alaska tourism market potential in West Germany, the methodological concept had to construct a basis sample which enables to interview 500 prospects (market potential) in a second stage. The total procedure therefore was:

Phase 1: Screening Interviews

Target group for the screening interviews are telephone households in West Germany. The selection of the interviewees was two-fold. In the first stage, the ADM-Master Sample was used with 525 sample points. This sample is representative for West-German households and is a stratified probability sample.

Within the sample points the addresses were drawn at random on the basis of telephone books.

The purpose of the screening interviews was to get information about the potential within the total population and to get the addresses of persons belonging to the target group.

Phase 2: Full Interviews with prospects

489 respondents belonging to the target group were found during the screening interviews. They have been re-interviewed with a full questionnaire. The target group consisted of:

a) prospects: Head of households or one other person in a household who makes or shares in vacation decisions and had taken vacation of at least a one-way distance of 3.300 km.

Weighting: Because of sampling errors, drop-outs and other circumstances the sample had to be weighted. For weighting the following factors were used:

Region, size of community, size of household. Basis for the weighting was the official household statistic of Microcensus.

The tabulation of the results show in the first line the unweighted number of respondents belonging to a group and below a projection in 1.000 households.

Technical details:

Screening interviews	5,987 households
Out of these were found prospects belonging to target group	667 households
re-interviews with full questionnaire	489 households
response rate	73.3%
Target group (prospects) as percentage of total number of households (25.3 Mio.)	11.2%
Target group in numbers approximately	2.84 Mio-

All interviews - screenings and full interviews - were carried out between September 10 and October 8, 1986

Number of interviewers on the job 153

C. RESULTS

1. Travel Behaviour in General

As described in the preface to this report the complete study was carried out in two parts. The target of the first part (screening interviews) was to recruit respondents for the main part of the study and to find some information according to the general behaviour of the German population. Taking the 25,320 Mio. German Households as a basis the findings are that in 68,0%, which means roughly 17 Mio. German households there is at least one person taking a vacation trip lasting one week or longer during the past three years. If we restrict vacation trips to those who went to places with a one-way distance of at least 3.300 km there are still 11,7% (approx. 3 Mio.) found who travelled to these more distant places within the past five years. Reduced by those who travelled to places 3.300 km away during the past five years but did not have vacation of at least one week during the past three years, the final target group for this study is 11.2%, equivalent to 2,840 Mio. households.

	in 1000	in Percent
Total of West-German households	25,320	100.0
With one or more persons having vacation of at least one week during the past three years	17,230	68.0
Having vacation in places at least 3.300 km away from home during the past five years	2,950	11.7
Visited places in 3.300 km distance for vacation during the last five years and having at least one week vacation during the last three years	2,840	11.2

Within the target group the study differentiates between prospects, acceptors, high potentials, high profiles and visitors according the terminology of AVA.

Prospects, the target group for the main study,

Acceptors, those who state interest in an Alaska vacation,

High potential, acceptors who have taken two or more long-distance vacations in the past five years

High profiles, prospects 35 years of age or more with a household income of 5.000 DM net per month as a minimum and finally

Visitors, persons known to have visited Alaska for a pleasure or pleasure/business trip in the past three years.

This study shows the following size of these five groups:

	Households in 1000	Percentage of Prospects	Percentage of total households	
Prospects	2,840	100,0		U.S. - 1990
Acceptors	1,068	37,6	11,3	13.1
High potential	282	9,9	1,1	1.5
High profiles	93	3,3	0,4	2.7
Visitors	42	1,5	0,16	3.3

Evaluating these results one has to take in consideration that at least the groups "high profiles" and "visitors" are based on very small numbers of interviews, i.e. for

high profile	16 interviews
visitors	7 interviews

Even the group "high potentials" is based on 43 interviews only.

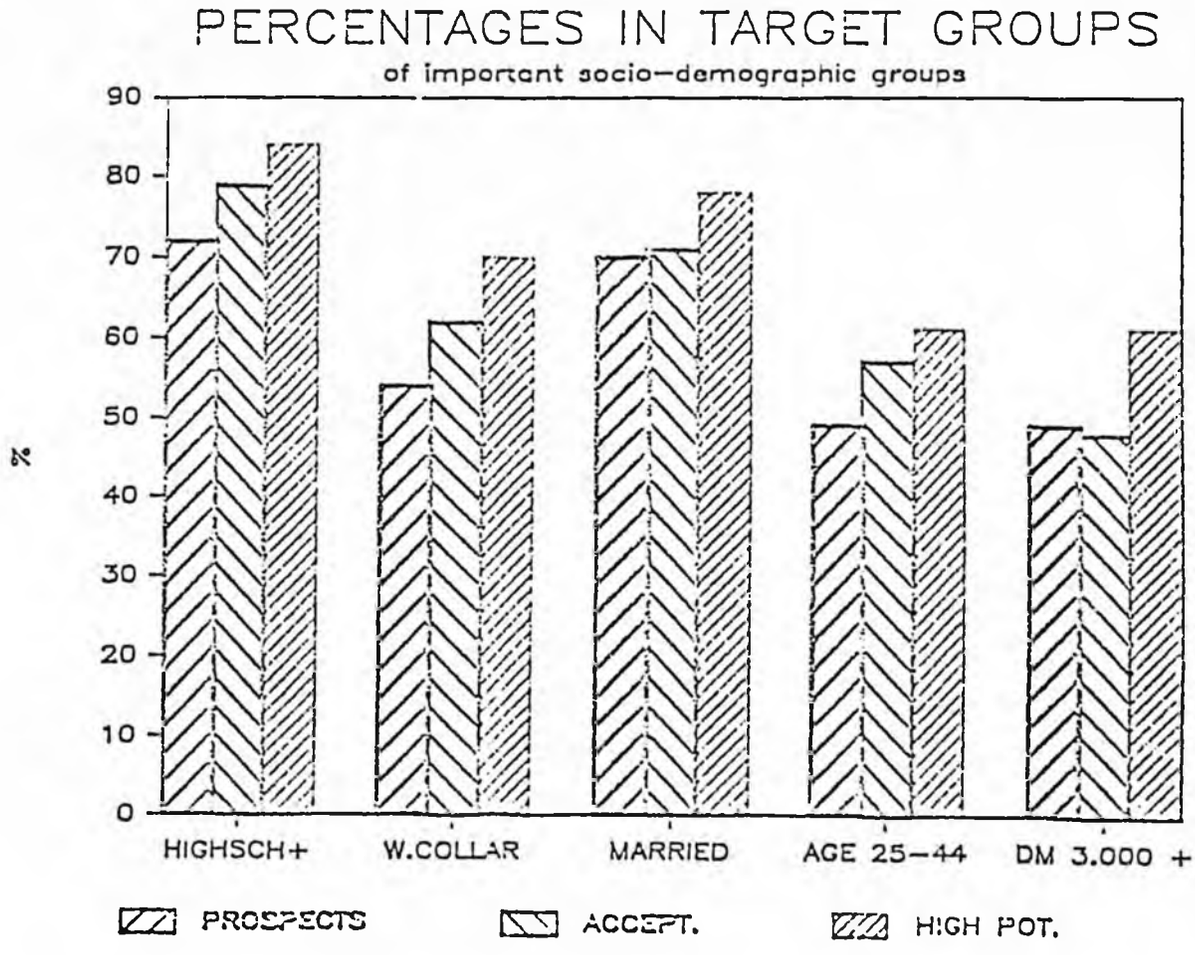
1.1. Structure of Market Potential

For developing marketing strategies AVA has to know which is the structure of the most promising target groups. Accepting that the "value" of the groups is increasing from prospects over acceptors to high potential one has to analyze which socio-demographic groups are increasingly participating on these groups. Education seems to be one of the key elements. The percentage of people with elementary school goes down from 27,7% in the group of prospects to 20,5% among the acceptors to 16,1% within the high potentials. But already the percentage of people with senior high school is going up (from 44,4% to 48,9%). Taking together people with elementary school or better education we find that they make 72% of prospects, 79% of acceptors and 84% of high potential.

There is of course a certain dependency of education and profession and therefore it is not astonishing knowing the results mentioned above that senior personnel in leading positions and white-collar junior executives form another prospective group. They participate with 54% among prospects, 62% among acceptors and 70% among high potential.

Not only because they form the majority in the population married people are a promising target group. We find them at 70% among prospects, 71% among acceptors and 78% among high potentials.

Looking at the age groups we have to accept that neither the young nor the elder people are of high interest. The real target group are people starting in the mid-twenties up to the mid-forties. And, of course, if we come to far-distance travelling income is an important factor. Therefore, the percentage of those having a household income of 3.000 DM net per month and more is growing from 49% to 61% going through target groups from prospects to high potentials.



On the other side: for people who are interested in Alaska as a possible vacation destination it is not important whether they have children or not.

Knowing the structure in West-Germany it is not astonishing to learn that people living in places up to 20.000 inhabitants are nearly as much interested as people in bigger communities. On the contrary, in the big cities and centers of population we find going from prospects to high potential a decreasing percentage going from

prospects	50,8%
acceptors	42,6% to
high potential	38,6%.

Here the most interesting target group could be the population living in places from 20.000 to 500.000 inhabitants but unfortunately compared with those living in the real big places, they are a minority.

Although the regions don't differ too much, Hamburg as well as Bavaria show a remarkable higher percentage among the high potential but on the basis of 43 interviews this does not mean too much. It cannot be proven by the figures but it seems to be a tendency that the more "world-open" places as Hamburg, Rhein-Main-Area and Munich might be of special interest.

At a first glance one cannot recognize a difference between male and female interviewees. But if one analyses the figures deeper one comes to interesting results. Female singles, widowed, divorced or separated living people seem to be more active than their male counterparts and if one analyses the prospects by age and sex one can see that younger females are much more interested than the younger males.

55 + yrs

1.2. Travelling Experience

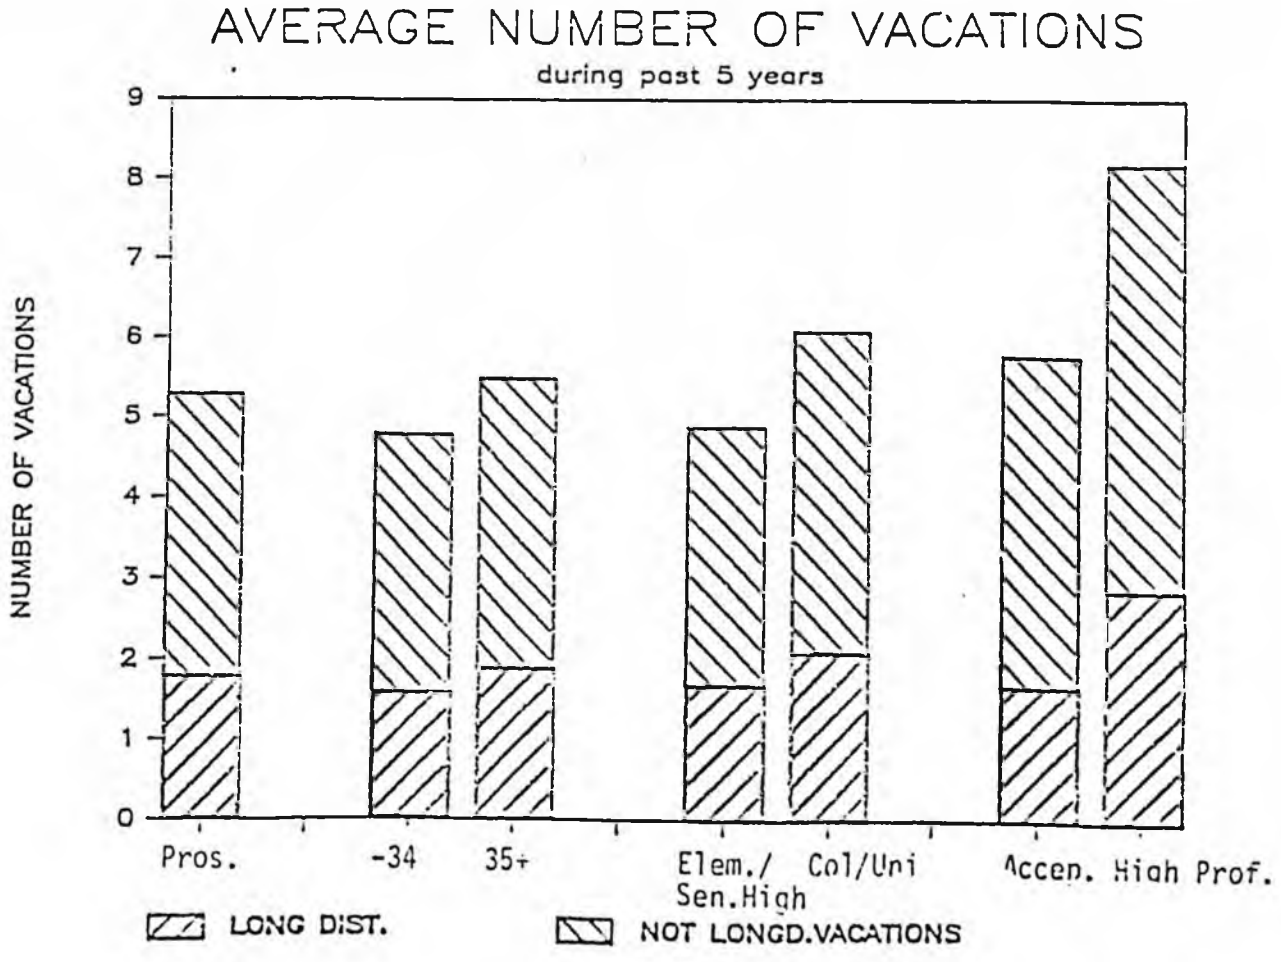
By definition already our target group had to have at least one one-week vacation during the past three years and one long-distance vacation during the past five years. In reality we find that respondents on the average did one vacation of at least one week per year. Over five years it accumulates to an average of 5.3 vacations per person.

For vacations where they had to go to places at least 3.300 km away from home the story is different. During the past five years they had 1.8 vacations of this type. Concerning the number of vacations they had there is a remarkable variation.

	Number of vacations during past 5 years	
	1 week	far distance
n = 489	%	%
1 vacation	10,2	62,2
2 vacations	9,6	21,9
3 vacations	13,6	5,3
4 vacations	11,1	3,9
5 vacations	23,6	4,4
6 vacations and more	31,9	2,3
	100,0	100,0
Mean	5.3	1.8

Nearly two third of our prospects had only one vacation leading to far-distant places compared with only 6,7% saying they had five or more far-distant vacations during the past five years. On the other side more than half (55,5%) of our respondents had five or more vacations of at least one week during the past five years.

If we compare the travel experience among different sub-groups we find the highest frequency of long-distance traveiling among the high potentials. On the average they had 2.9 long-distance vacations during the past five years and belong to the group of "high-frequent-vacationers" if it comes to have vacations of one week or more at all. On the average they had 1.5 vacations per year during the past five years.



1.3. Destination Countries

Asked where they spent their vacation during the past five years European countries are dominating of course. Because they are not of relevance to this study we have to concentrate on Overseas countries visited during the past five years.

Most of the respondents (nearly one third) say they had visited the United States. Second as a single country ranks Canada with 14,5%. Asian destinations were mentioned by 32,1%, Africa by 25,9%, Latin America and Carribean destinations by 20,4%, Australia and New Zealand by 3,9%. Alaska is mentioned by 1,8% which is equal to approximately 50 000 West-German households.

	% of Prospects	Travel groups in 1000
USA	31,3	890
Canada	14,5	413
Africa	25,9	734
Middle East	8,5	241
South/Southeast Asia	18,6	529
East Asia, South Pacific	5,0	141
Australia/New Zealand	3,9	112
Hawaii	2,5	71
Carribean	9,3	263
Mexico	4,6	131
Rest of Central and South America	6,5	184
Alaska	1,8	51

As far as they visited the United States the main regions they went to were:

New York/Rhode Island	37,2%
California	35,4%
Florida	19,1%
Texas	15,6%

Analyzing the results by our sub-groups acceptors and high potentials one can see that nearly all regions are more frequented by acceptors than by the prospects and again more by the high potentials than by the acceptors. The percentage of the visitors of the United States goes from 31,3% to 38,8% and 44,7%, those visiting Canada from 14,5% to 22,1% to 33,4%. Even the figure for visitors to Alaska shows a dramatic increase starting with 1,8% among prospects coming to 3,9% among the acceptors and finally 12,8% among high potentials. But it has to be said again that these results are based on very small figures.

As explained in the preface to this report already Marplan calculated a typology of the respondents based on their travel motivations.

United States and Canada show the highest percentage among conventional travellers and visitors. Mexico and the Carribean Islands are preferred by the fun-type. The educational traveller prefers the Middle-East and plays an important part also in other Asian countries. Hawaii attracts the fun-type very much.

	fun %	advent. %	convent. %	visitors %	educ. %
USA/Canada	25	41	61	57	44
Alaska	-	4	3	1	-
Mexico/Carribean	24	12	14	2	17
South Africa	4	9	6	6	7
Middle East	5	9	5	9	17
Other Asian countries	24	24	16	27	30
Australia/New Zealand	2	4	7	4	1
Hawaii	7	2	2	-	1

After the question which region they have visited during the last five years the question was asked which one was the furthest. Of course, it brings the percentages down because double countings are eliminated. But this effects the different regions in a different way. United States dropped from 31,3% to 23,7%, Canada from 14,5% to 10,0%, South/South-East Asia from 18,6% to 14,3%, the Carribean from 9,3% to 8,0%. This indicates that for instance the Carribean is a destination for itself; if somebody goes to the Carribean it is the furthest destination on this trip.

This is different for Alaska as well as for Hawaii. The figures indicate that Hawaii as well as Alaska are not final "destinations" but more places to have a stop-over when travelling around the world or in case of Alaska being on a flight to e.g. East Asia. Hawaii drops from 2,5% to 1,2%, Alaska from 1,8% to 0,7%.

1.4. Travel Expenditures

Asked for the money they spend for the journey - in case they did more than one trip during the past five years they were asked for the furthest destination - answers differ widely. Some claim they used less than 1.500 DM, others more than 6.000 DM per person. On the average it is calculated with 3.865 DM per person. The average amount per person spent differs with the destinations as well as with different socio-economic groups but also between the types mentioned above already.

Destination:	Average spending per person
Hawaii	6.465 DM
South America	6.220 DM
Australia/New Zealand	5.255 DM
Mexico	4.574 DM
South Asia	4.454 DM
East Asia	4.101 DM
USA	3.913 DM
Carribean	3.713 DM
Africa	3.423 DM
Alaska	3.418 DM
Canada	3.312 DM
Middle East	2.962 DM

Hawaii, Central and South America are the places where they spend the most money, Middle East but also Canada, Alaska and Africa are countries where they spend significantly less. There are different reasons for the differences as availability of reasonably priced package tours or - true certainly for the United States - a high percentage of the visitor type living with friends or relatives in the country of destination or when travelling through several destinations costs for one destination was not so high (e.g. Alaska).

If we analyze the target groups of AVA we find that "high potentials" are high spenders. The average among high potentials is 5,465 DM per person compared to 4,192 DM per person among the acceptors and in average 3,865 DM among the prospects in total.

Among our cluster types we found the lowest spending among the visitors with 2.840 DM.

1.5. Type of Tourism

Again asked if one than more far-distance vacation was taken during the past five years for the furthest destination the respondents were asked what kind of trip it was. The answers show:

* all-inclusive group tours with travel guide	27,7%
* all-inclusive tours without travel guide	20,9%
* self-organized trips	50,5%

The highest proportion of self-organized trips we find among the group of "visitors" (78%) followed by the "adventurers" (58,5%). "Fun" and "educational" travellers organize their trip themselves far less. Educational travellers prefer all-inclusive group tours with a travel guide (51,6%). Even if about half of the travellers organize their trip themselves they ask a travel agent for help and if only to book the transportation.

Again we find remarkable differences according the places the respondents went for vacation.

	self organized %	organized %
Alaska	100	0
Australia/New Zealand	91	9
Canada	82	18
Central/South America	79	21
USA	68	32
East Asia/Pacific	52	48
Middle East	47	53
South Asia	46	54
Mexico	38	62
Hawaii	26	74
Africa	17	83
Carribean	15	85

2. Information Behaviour

The travel agent is the most important source of information. 72,6% of the respondents say they ask their travel agency for information if they start to prepare a long-haul trip.

Other important sources are

Friends	40,9%
Travel guides	34,3%
Automobile club	12,3%
Tourist agencies	11,9%
Books	8,1%

In case one asks the travel agency for information it concerns mostly prices followed by accommodation and transportation facilities; but also 48,3% of the respondents declare they look for information to which country to go.

There are many resources and publications where one can find out through which media channels one can reach certain target groups. Nevertheless, within the study respondents were asked with a list which magazine they read frequently. Prospects as well as acceptors and high potentials read magazines more frequently than average Germans. Within the list ADAC Motorwelt, Stern and Hör Zu are the magazines with the highest coverage. A comparatively small magazine but in a special interest group "Geo" reaches 20,5% or prospects, 23,5% of acceptors and 38,8% of high potential. With a combination of ADAC Motorwelt plus Geo plus Stern one can reach among

Prospects	67,0%
Acceptors	71,2%
High potentials	85,1%

3. Travel Motivations

What are the reasons why Germans travel in their vacation time to far-distant places. Respondents where asked to rank on a 5-point scale how much they like to do some things when they go on vacation. Point 5 equals I like to do it very much and point 1 equals I don't like it at all.

According to these rankings we find the following rank order:

Learn about different cultures	4.3
Sightseeing in cities	4.1
Dine-out in fine restaurants	4.1
Visit national parks and scenic wonders	4.1
Swim and sunbath	4.0
See wildlife in its natural habitat	3.8
Go shopping	3.5
Take trips that offer adventure and challenge	3.4
Visit museums	3.3
Enjoy nighttime entertainment	3.2
Visit friends and relatives	3.2
Camp, hike, outdoor activities	2.9
Wintersports	2.5
Playing possibilities for children	2.3
Play tennis/golf	2.1
Fishing	1.7

As mentioned before these ratings were used to calculate a typology for the respondents. A logical clustering came out with five different types. They were named:

Fun-type	19%
Adventurer	20%
Sportive type	24%
Visitor	18%
Educational traveller	19%
Total	100%

Of course, there is a certain overlapping between the five types but each one of them has its unique strength and can be described as follows:

"Fun" prefers to dine, swim and sunbath and enjoys nighttime entertainment.

"Adventurer" likes to visit natural parks, to camp, hike, take trips but learns about cultures also.

"Sports" likes to swim, likes wintersports, tennis, fishing, wildlife.

"Visitor" is mainly interested in seeing friends and relatives.

"Educational" likes to go sightseeing, visits museums and likes to learn about cultures.

If we look how the picture fits into the target group we find adventurers and sportive travellers above average among the acceptors but in the high potential group only the adventurers are above average this time together with the educational type. High profiles are dominated by the educational type of traveller but if we come to the small group of visitors of Alaska we find only adventurers and sportive types.

4. Perception and Image of Alaska

4.1. Spontaneous Associations

To all respondents the question was asked: "What is the first thing that comes to your mind when you think about Alaska?" Within all very open associations there is a lot of things mentioned by the respondents. But there are some items the answers concentrate on. The image of Alaska is to be a cold country and it is proven by answers as

Coldness	50,1%
Winter, snow, ice	29,6%
Glacier, snow mountains, icebergs	8,8%

and some other things mentioned in this open-ended question. The next dimension we can find is the image of untouched nature expressed in

clean, untouched nature	11,6%
icebears, bears, wild animals	11,7%
wide, big country	7,8%
wildlife	7,5%
landscape, nice sceneries	5,7%
forest	3,1%
lakes, sea, rivers	3,0%

and many others. Another dimension partly seen very close to the second is the relaxing aspect of Alaska shown by answers as

solitude, silence, relaxing	9,9%
not many people	4,4%
not much tourists	1,6%

The second and third dimensions are the more important for the group of acceptors and high potentials.

4.2. The typical Alaska Traveller

If we ask the respondents to describe the kind of people they think people like to have vacations in Alaska are, there are only three types mentioned by more than 10% of the respondents. Mostly it is

the adventurer	37,1%
people who love nature	20,9%
people who love silence, loneliness	9,8%

If we take all different types of sports activities together a fourth group can be formed by sportsmen (14,5%).

4.3. Alaska ranked on Image items

To see a country as an attractive opportunity for vacation it has to offer certain facilities. Vacationers ask for a certain standard in hotels, food, transportation, have some ideas about the climate they want and finally the overall aspect of value for recreation. The image profile of touristic Alaska is not at all excellent, if it comes to the best than it is good. Taking excellent and good together, 56% of the respondents believe they could be satisfied with the hotels and motels in Alaska, 55% believe in good food, 50% that there is a possibility for good recreation but only 29% believe in the climate and 25% in the transportation system.

	Hotels	Food	Transp.	Climate	Recr.
	%	%	%	%	%
excellent	5	8	3	6	14
good	51	47	22	23	36
fair	35	39	42	36	33
poor	9	6	32	33	16
MEAN	2.5	2.4	3.0	3.0	2.5

But again acceptors and high potential see Alaska more positive.

PROSPECTS
ACCEPT.
HIGH POT.

Then again the respondents were shown the list of items they knew already from the question what they like and don't like for their vacation (qu. 8). Taking the rank order of their likes for vacation and comparing it with the rank order for how they see Alaska one can see that Alaska does not fit easily into their picture of an ideal country for vacation.

	Rank on Likes on vacation	Rank on Alaska seen
learn about cultures	1	4
sightseeing	2	9
dining	3	8
natural parks	4	2
swim/sunbath	5	14
see wildlife	6	1
shopping	7	10
visit museums	8	11

If we take the most important items for vacation and compare them with the ranks they have for Alaska we find that only four are the same. The most important point for vacation to learn about cultures is ranked "4" in Alaska, the second important point sightseeing is ranked "9" and the third dining is ranked "8". But visiting national parks and see wildlife are the two most important things one can do in Alaska according to the opinion of the respondents.

So far the results based on ranks and averages. But to go to Alaska for vacation is an individual decision and one has to find out to what extent personal ideas of vacation are satisfied by the image one has of Alaska vacation. In a cross tabulation we tried to find out and calculate the percentages of those who agreed that they would like (point 4 and 5) to find certain circumstances on their vacation and agreed again (point 4 and 5) that they believe this could be found in Alaska. Under this perspective the situation looks far better.

	Prospects %	In 1.000 %
learn about different cultures	66	1.876
visit national parks	62	1.760
see wildlife	58	1.650
dining	35	1.000
si[illegible]tseeing	31	880
camp/hike	30	850
wintersports	25	720
shopping	19	550

66% of the respondents like to learn about different cultures during their vacation and believe there is a possibility for it in Alaska. The potential behind this in numbers is roughly 1.870.000 households in Germany.

62% of the respondents like to visit national parks and believe it could be done easily in Alaska. 58% like to see wildlife and believe they could do it in Alaska, and so on. Here seems to be a quite impressive potential for future tourism.

4.4. Ideal Travel Season

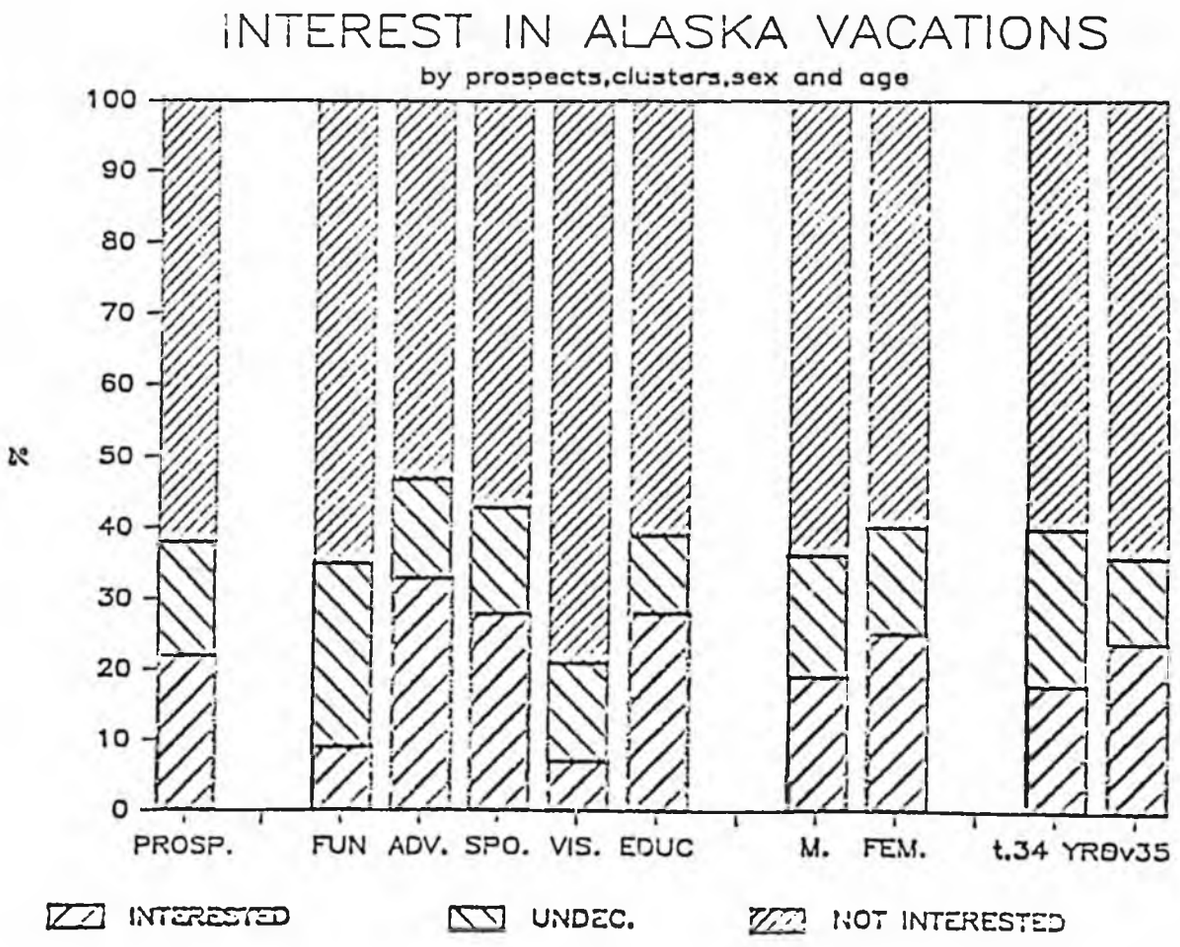
Alaska is seen as a cold country and therefore it is natural that most of the respondents think that summer would be the right time to visit Alaska. In detail they would prefer as their season in Alaska:

Spring	14,9%
Summer	68,5%
Autumn	9,6%
Winter	4,6%

4,7% have no idea which time of the year they would prefer or declare they would not go to Alaska at all.

4.5. Interest in going to Alaska for Vacation

Even if only 8,2% of the respondents say they would be very interested in spending one of their vacations in the next five years in Alaska it still represents a potential of 232.000 households. Knowing that most of the far-distant travellers don't travel alone it might represent a total of 400.000 to 500.000 persons. If we analyze interested (points 4 and 5), undecided (point 3) and not interested (points 1 and 2) by different sub-groups we find the following picture:



ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5175 HTRA HCR 6 - HCR 8

747

It is as we can see primarily the adventure but also the sports type and the educational type who are interested in going to Alaska for vacation. Not much interest can be found with the fun-type and the visitors.

Asking for the reason why one would like or not like to go to Alaska for vacation one cannot find new explanations. For those willing to go to Alaska within the next five years it seems to be an interesting country with beautiful sceneries; the main reason against it is the fear that it would be too cold, one prefers a milder climate.

D. SUMMARY AND RECOMMENDATIONS

After screening nearly 6.000 households representatively spread over the Federal Republic of Germany we interviewed 489 households about their long-haul travel behaviour and attitudes. For having data of relevance for marketing decisions we asked

prospects:
That means heads of households, responsible for or taking part in decision making process for vacation, who took vacations of at least one week in the past three years and who took vacations in a place of at least 3.300 km one way from home in the past five years.

11,2% of West-German households meet these conditions and represent 2.84 Mio. households. Additionally within the prospects we analysed some demographically and behaviourally defined target groups:

acceptors:
prospects who show interest in Alaska vacation

high potentials:
acceptors who have travelled two or more long-distance vacations in the past five years and spent at least 3.000 DM per person on the last long-distance trip

high profiles:
prospects who are 35 years and older with 5.000 DM household income minimum and without children at home

visitors:
prospects having visited Alaska during the past three years.

There are households of these types in Germany as follows:

acceptors	1.068.000
high potentials	282.000
high profiles	93.000
visitors	42.000

By definition acceptors and high profiles are by a high percentage interested or very interested in Alaska vacations:

prospects	21,6%
acceptors	57,6%
high potentials	68,2%
high profiles	42,3%

Interest in an Alaska trip is high positively correlated with education, income and professional status. Your target group tends to concentrate in the age group between 25 and 45 years. They often live in or nearby bigger cities, especially Hamburg, Rhein-Main-area and Munich because they seem to be more open-minded towards long-haul travel.

Long-haul travel is of course very often an unique event in the life of the prospects. Nearly two third of them have had only one long-haul journey during the past five years. Here again the high potentials are leading with 2.9 long-distance vacations during the past five years (1.8 all prospects). Die long-haul destinations of the prospects are mostly U.S.A. (31%), Africa (26%), South/Southeast Asia (19%) and Canada (15%), compared to Alaska with 1,8% (approx. 50.000 households). It is therefore not at all surprising that acceptors and even more high potentials were more often in these countries and the portion with Alaska travel experience rises to 12,8% by the high potentials. Alaska as well as Hawaii is often not a final destination but a stop-over on a travel-around-the-world or on the routes across the pola. region. On the average, prospects spent 3,865 DM on their furthest trip per person. But this figure differs widely by destinations and sub-groups. High potentials spent 5,465 DM on the average.

Every second long-haul trip was self-organized, but for visitors of Alaska it was 100%. This does not mean that travel agencies were nearly unimportant for your marketing mix. The opposite is true. 73% of the respondents ask their travel agency for information when preparing a long-haul trip. Only 12% ask tourist agencies or read books about travelling. Not only in Germany leisure travelling is a high interest product. People are always open for hints about travel destinations, they talk about it with friends, read in journals or watch TV-broadcastings throughout the year. To reach your target groups best, we would recommend to advertise through articles in journals, magazines and broadcastings. When inserting ads it is suggested that you use special interest journals like "Geo", "ADAC-Motorwelt" or the journal "Stern". Inserting in all three you couid reach 85% of the high potentials. With "Geo" alone you could reach 39% of high potentials.

Communication with the consumer side requires information about motivations and attitudes towards leisure travel in general and especially Alaska. In other words: the better you know your target group the better you are able to talk to your consumers by advertisement. Therefore, we have concentrated all the psychological issues and resuits through a consumer typology and have found five significant types:

1. Fun type (19%), who prefers to dine, swim, sunbath and enjoy nighttime entertainment (with low interest for Alaska)

2. Adventurer (20%), who likes to visit natural parks, to camp, hike, take trips but learn about culture also (with high interest for Alaska and relatively high portion of high potentials)

3. Sportive type (24%), who likes rather conventional forms of vacation but is fond of winter and summer sports, fishing and wildlife (with high interest for Alaska but a somewhat lower portion of high profiles)

4. Visitor-type (18%), who is mainly interested in seeing friends and relatives (with low interest for Alaska)

5. Educational traveller (19%), who likes to go sightseeing, visits museums and likes to learn about culture (with medium interest in Alaska, but a relevant portion of high profiles).

So your most interesting motivational target groups are the adventurer, the educational type and the sportive type.

The image of Alaska as a travel destination by your prospects is not surprising at all. The spontaneous associations with Alaska are

- coldness	50%
- snow, ice, winter	30%
- glaciers, icebergs, snow mountains	9%

and untouched nature, silence, etc. So the typical Alaska travellers are

- adventurers	37%
- people who enjoy nature	21%
- sportsmen	15%
- people who enjoy loneliness	10%

Travellers ask for a certain standard in hotels, food, transportation, recreation and have preferences towards specific climates. These aspects for Alaska are not at all excellent, they are at best good. Prospects doubt to find good or excellent conditions for recreation and think the transportation system might be troublemaking. Comparing the features prospects want to find in their holiday destination and what they expect in Alaska we find some important strong points:

- learn about different cultures

- visit national parks
- see wildlife
- dining
- sightseeing
- camp/hike
- wintersports

69% would prefer to visit Alaska in summer.

To conclude we estimate the target group that is very interested in visiting Alaska during the next five years with 230.000 households or 400.000 to 500.000 persons. You should communicate with the "adventurers" and "sportsmen" on the one side and with the "educational type" on the other. These two clusters are somewhat different and you should adjust your marketing mix for these requirements to get a maximum in market success.

Die ordnungsgemäße Durchführung des Interviews bestätigt:

Datum	Unterschrift	Interviewer-Nr.

With respect to the resolution before you, I would like to clearly state that the airlines are not opposed to the concept of the promotion and marketing of Anchorage and Fairbanks International Airports. Such programs, which are in place at various other airports throughout the United States, are sometimes, but not always, beneficial in stimulating additional traffic. Many of these programs are in conjunction with and financially supported by other local agencies and organizations, so that the destination is being marketed, not just the airport. Anchorage and Fairbanks Airports both have excellent airfield and terminal facilities and services; and it is very doubtful that an airline management, anywhere in this country or the world, would necessarily be convinced to fly to one of these airports if there are not operational, technical, market-related, or other business reasons to do so. In other words, there is no assurance that an airport marketing program will bring any new traffic.

The airlines are extremely concerned by the current airport marketing proposals, because, at this point, they lack any definition of how a marketing program would be organized and implemented. We know nothing about the scope of the effort, its management, and overall control. The only information we have heard in recent weeks is the proposal to spend anywhere from $3 million to $5 million per year on an airport marketing program. These amounts are incredibly high compared with other airports and seem to have no basis or solid rationale.

STATEMENT OF ANCHORAGE/FAIRBANKS AIRLINES AIRPORT AFFAIRS COMMITTEE

TO STATE OF ALASKA LEGISLATURE, FEBRUARY 20, 1987

My name is Clifford T. Argue, and I am Staff Vice President of Properties and Facilities for Alaska Airlines. However, I am appearing before you today as Chairman of the Anchorage/Fairbanks Airlines Airport Affairs Committee, which is an organization representing some 22 international and domestic airlines serving Anchorage and Fairbanks airports. These airlines have signed the recently negotiated Airline/Airport Lease and Operating Agreement.

The relationship between the airport operator, in this case the State of Alaska, and the carriers is a partnership. We must continually work together in a spirit of cooperation to ensure the best possible and most cost effective air transportation facilities serving a particular community. Our business relationship has been documented in the operating agreement, which was signed last year following almost two years of intensive negotiation.

This relationship is simple. The airlines are responsible for paying the majority of the costs of the construction, operation, and maintenance of the Anchorage and Fairbanks airports. While there are Federal grants, concession revenues, and other sources of income, our agreements provide that the airlines will make up any difference between revenues and expenses through the rates, fees, and charges we pay to the Department of Transportation and Public Facilities. The burden does not fall back on the general fund of the State.

With respect to the resolution before you, I would like to clearly state that the airlines are not opposed to the concept of the promotion and marketing of Anchorage and Fairbanks International Airports. Such programs, which are in place at various other airports throughout the United States, are sometimes, but not always, beneficial in stimulating additional traffic. Many of these programs are in conjunction with and financially supported by other local agencies and organizations, so that the destination is being marketed, not just the airport. Anchorage and Fairbanks Airports both have excellent airfield and terminal facilities and services; and it is very doubtful that an airline management, anywhere in this country or the world, would necessarily be convinced to fly to one of these airports if there are not operational, technical, market-related, or other business reasons to do so. In other words, there is no assurance that an airport marketing program will bring any new traffic.

The airlines are extremely concerned by the current airport marketing proposals, because, at this point, they lack any definition of how a marketing program would be organized and implemented. We know nothing about the scope of the effort, its management, and overall control. The only information we have heard in recent weeks is the proposal to spend anywhere from $3 million to $5 million per year on an airport marketing program. These amounts are incredibly high compared with other airports and seem to have no basis or solid rationale.

Because of the business relationship noted earlier in my remarks, the airlines also are extremely uneasy about a funding proposal of this magnitude, if it is contemplated to come from the International Airports Revenue Fund. Contrary to some reports, there is not a big fund of unallocated money in the IARF, nor do the airports produce a large "profit." Any apparent "profit" is, in reality, money that is already committed to planned capital projects. Therefore, wherever in the IARF marketing money is budgeted, it will, by necessity, place an additional burden on the airlines through increasing our landing fees paid to the State. Every one million dollars in additional annual cost would require an additional four cents per one thousand pounds of aircraft takeoff weight in landing fees.

We have already seen substantial increases in our landing fees in the past two years to support the extensive construction at both airports, and additional increases can only be counterproductive and burdensome. Such additional costs must be passed on to the consumer through higher air fares and air freight rates; or, as in the recent examples of Boston, Las Vegas, and Florida, recovered through a surcharge on each ticket stated separately. For example, an additional five million dollars in annual costs would cost Alaska Airlines $436,000 and Japan Air Lines $989,000. These are not the types of costs that can be just absorbed by the airlines. Such additional costs might also have the negative effect of causing airlines to curtail service to Anchorage and Fairbanks and seek lower-cost locations. This would certainly be the exact opposite of what is desired in a marketing program.

The airlines recommend that in considering the current resolution, the Legislature request that the Department of Transportation and Public Facilities work cooperatively with other interested agencies in first developing a coordinated marketing plan with specific tasks identified, goals set, and a realistic budget supported not only by the IARF, but all involved organizations.

The airlines are willing to participate in some manner, but only if we are convinced that a prudent and cost-effective approach is being followed.

Thank you.

M88

In assuming the service level of the Alaska Marine Highway System to be comparable to other interstate highways in the state, it is defined to be the level of service authorized for FY 87. Therefore, the required funding represents the dollar amount of decrements included in the Governor's FY 88 Operating Budget.

The service to be restored is as follows:

1. The M/V MALASPINA will not be in unmanned lay-up for four months.

2. The M/V TAKU will not be in unmanned lay-up for six months.

3. Winter mainline service to both Seattle and Prince Rupert, B.C. would be maintained. However, the M/V COLUMBIA will continue with winter unmanned lay-up as in FY 86 and FY 87 and one mainliner will be placed in a reduced operating status for a two-month period as in FY 87.

4. The M/V AURORA will not be placed in unmanned lay-up and the normal feeder schedule will be maintained. With the continued availability of the M/V AURORA, the M/V CHILKAT will be on-line during a four-month period only as originally planned.

5. The M/V BARTLETT will not be placed in unmanned lay-up for six months and normal service to Cordova will be maintained.

1,034 staff months would be restored, affecting 241 people on all ships.

Special notes:

1. Inflationary cost increases have not been included for FY 89 and beyond. Therefore, it is anticipated that, as a result, by FY 92 there would again be a significantly diminished level of service.

2. If service levels are compared to other interstate highway reductions as reduced in the FY 87 Revised Budget, both service levels and costs could be lowered.

Revenue Considerations:

Revenue to be generated as a result of restored ship operations is estimated at $4,000.0, which means that the net subsidy cost to the State would be $6,000.0.

SOUTHEAST ALASKA REGIONAL HEALTH CORPORATION

EXECUTIVE OFFICES

[APR 1 (...

April 7, 1987

Lloyd Jones
P.O. Box V
Juneau, Alaska 99811

Dear Senator Jones:

The Southeast Alaska Regional Health Corporation feels a reduction in ferry service between the villages and cities of Southeast Alaska will result in a deterioration of health services for the people of the Southeast region.

Please allow me to outline some of the problems which the village people will face if the severe cuts in ferry service are put into effect:

1. MANY PEOPLE USE THE FERRY SYSTEM TO OBTAIN MEDICAL AND DENTAL SERVICES WHICH ARE NOT AVAILABLE IN THEIR COMMUNITIES. If people are forced to turn to air transportation to obtain these services, medical and dental care will be delayed or not obtained at all. We feel we should be encouraging people to obtain early intervention before the course of a disease or medical problem has reached advanced stages where drastic measures are required.

2. REDUCTIONS IN THE "ONE DAY TURNAROUND" FERRY SERVICE TO SITKA WILL CAUSE SEVERE PROBLEMS FOR MANY VILLAGE PEOPLE. We have arranged for Mt. Edgecumbe Hospital physicians to conduct full clinics on Saturdays. These clinics are available for village people who need to be seen at the clinic and return to their homes the same evening. Many people use this service to not only receive acute medical care not otherwise available in their village but also to obtain preventive health services such as immunizations or infant check-ups. With the recent reductions in state public health nursing staffing, preventive health measures are even less available in the villages.

3. FOR SOME CONDITIONS OUR PHYSICIANS ARE RELUCTANT TO ALLOW THEIR PATIENTS TO FLY IN AIRPLANES AFTER SURGERY. This is sometimes the case where a youthful patient has had ear surgery and the surgeon does not want to subject the patient to air pressure situations often found on airplanes. This is especially true when repairs have been made to ear drums. Cutbacks in service will cause major delays in patients returning to their homes.

MT. EDG[illegible] CUMBE HOSPITAL
222 TONG[illegible]S DRIVE
SITKA, AK 99835 (907) 966-2411

MEDICAL CENTER (907) 586-1600
DENTAL CENTER (907) 586-6620
JUNEAU, ALASKA 99801

4. WE HAVE BEEN TRYING TO ENCOURAGE PRENATAL PATIENTS TO VISIT THEIR DOCTOR SEVERAL TIMES DURING THEIR PERIOD OF PREGNANCY. If these women need to fly to Sitka to obtain these examinations, many women will postpone or eliminate these visits all together. We feel that pregnancy problems need to be detected early and followed regularly to avoid (as much as possible) the need for heroic evacuations of pregnant women from their villages to nearby hospitals.

We hope that these remarks will assist you in your discussions about the need to continue to provide a high level of ferry service throughout the Alaska Panhandle.

Thank you for this opportunity to provide this perspective on health services in Southeast Alaska.

Sincerely,

Niles C. Cesar
Executive Vice President

Alaska State Chamber of Commerce

Resolution Supporting the Alaska Marine Highway System

Whereas the Alaska Marine Highway System (AMHS) is the primary mode of transportation available for many Alaskan Communities; and

Whereas the AMHS is the primary and in some cases the sole mode of transportation available to some Southeastern Alaskan communities; and

Whereas the AMHS plays a critical role in Alaskan commerce while providing full time employment for thousands of state residents.

Whereas the AMHS interstate passengers are major contributors to the state's economy and tourism activities; and

Whereas approximately 40 percent of AMHS passengers traveling between Seattle and Haines are destined for South Central and Interior regions of Alaska; and

Whereas, the proposed reductions in the AHMS winter schedule will severely impact communities that depend on a reliable and continuous transportation system for essential goods and services.

Be it resolved that, The Alaska State Chamber of Commerce respectfully urges Governor Cowper and the Fifthteenth Alaska Legislature to maintain the ~~current operations~~ of the Alaska Marine Highway System, as it is a critical element of Alaska's economy.

~~Frequency of Service~~

ALASKA TRUCKING ASSOCIATION POSITION PAPER

"ALASKA MARINE HIGHWAY SYSTEM"

WHEREAS the Alaska Marine Highway System is a public utility charged with the task of providing transportation between points where there is public need which cannot be fulfilled by the use of highways or by private enterprise on a sound econiomic basis. The system must have the flexibility to operate in the best interest of the traveling public and citizens of Alaska.

WHEREAS the coastal communities of Alaska are heavily dependant on the Alaska Marine Highway System service for their economic well being:

WHEREAS revenue generated on the Price Rupert route and the Seattle route is equal to an average of 90% of the expenses on these two mainline routes:

WHEREAS the level of service furnished to th population of Southeast Alaska by the trucking industry is totally dependent upon the frequency of service of the Alaska Marine Highway System:

WHEREAS truck service is valuable to the public because it offers transportation of cargo more frequently and in a shorter time frame than barge service which is available only once a week in Southeast Alaska:

WHEREAS time frame becomes critical in the movement of items such as perishables, break-down repair parts, mail, etc.:

WHEREAS the mainline routes were designed to serve the largest majority of the population in Southeast Alaska:

WHEREAS the present 7 month schedule already represents more than a 50% reduction over the present 5 month summer schedule:

BE IT RESOLVED that the Alaska Trucking Association supports maintaining the present frequency of service level of the Alaska Marine Highway System.

INTRODUCTION

INTRODUCTION

This report was commissioned by the Southeast Conference to provide a basic understanding of the importance of the Alaska Marine Highway System to the people of Alaska. The Southeast Conference is an organization of municipalities, chambers of commerce, groups and individuals representing the common interests of citizens, and businesses of Southeast Alaska. This year, the Conference is working on a variety of issues. They include economic development, educational services, fishing and timber enterprises, and transportation.

The general goal of the Conference is to represent the interests of the 70,000 people of Southeast Alaska on those issues where there is common accord and which significantly affect the economic well being of the entire region as well as the state.

While the Southeast Conference is working on a variety of issues, it has focused on the Alaska Marine Highway System as its top priority. This is because the economic stability and way of life of the entire region is so closely linked to the service level of the ferry system. At the time of its genesis in 1956, the establishment of the ferry system was the exclusive goal of the Southeast Conference, and the Conference does credit itself to a large degree for the birth of the ferry system in Southeast.

Now, more than twenty years have elapsed since the Malaspina, the Matanuska and the Taku were commissioned in the spring of 1963. During the past twenty-four years,

the ferry system has served the people of Southeast quite well. Sometimes, especially during recent prosperity, it was even taken for granted. But as times have changed from fat to lean, its budget attracts attention. As the ferry system is subjected to budgetary scrutiny, its crucial importance to the economy and way of life of all of Southeast and other regions is something which we implore be kept in mind. Accordingly, this report is intended to provide a basic understanding of the importance of the ferry system to Southeast and indeed to the entire state. To accomplish this, much of the report focuses on the roots of importance of the ferries in ways that are specific to each community. This perspective is developed to reveal the statewide dangers in dismantling such a broad foundation. In order to discover the particular importance of the ferries in each community, surveys and observations were conducted in each of them and inquiries made of local citizens and business people.

There have been many studies of the ferry system in the past, and there are volumes of reports, but it appears that none of these focuses attention on the critical importance of the evolved system to the communities themselves and ultimately the state.

At the same time as inquiry was made of the ways in which the system is important to each community, inquiry was also made about how the system might be improved and how it should be managed in light of the states' present revenue deficiencies. Thus, one section of the report is devoted

strictly to a set of recommendations and findings. Most of the recommendations merely reflect the views of the citizens of Southeast Alaska. Some, however, have been framed by the authors of this report as a result of their study efforts.

The Southeast Conference is well aware of the fact that the ferry system in Southeast is less than the whole; that the Southwest ferry system is also important. But for purposes of this report, and due to cost and urgency we were only able to focus on the Southeast System as representative of the state's economy as a whole.

The Conference is pleased to offer this report of important aspects of the ferry system which we submit respectfully as assistance to the Legislature and the Governor in their deliberations, and to the people of Alaska who we pray will continue to benefit from our endeavors. Further, we stand ready to serve on any taskforce, advisory board or commission which may be established to help improve the Alaska Marine Highway System.

OVERVIEW

ALASKA MARINE HIGHWAY SYSTEM

SOUTHEAST ALASKA

OVERVIEW
ALASKA MARINE HIGHWAY SYSTEM
SOUTHEAST ALASKA

1988 marks the 25th year of service for the Alaska Marine Highway System (AMHS). While service began in 1963, the real origin of the system was a study by the W.C. Gilman Company of New York, commissioned by the U.S. Department of Commerce in 1958. The resulting report proposed the creation of a new and totally unique solution to the transportation needs of Southeast Alaska - a ferry system capable of carrying the same load that one would find on a normal stretch of asphalt highway connecting Southeast communities, if such a highway were feasible. Thus, through the sale of revenue bonds, the AMHS was born. For the first five years, the AMHS completely funded its operation out of receipts. In 1970, the State convinced the federal government that the system was indeed a "Marine Highway," and as such, began receiving federal maintenance funds on the basis of a determination that the AMHS was, by definition, a bridge 500 miles long.

Today the AMHS for Southeast Alaska is a system of seven vessels serving 18 communities in the Alexander Archipelago. The vessels consist of four "mainline" ferrys, and three vessels which serve what the managers of the system term a secondary system. The mainline vessels, consisting of the Motor Vessels Columbia, Malaspina, Matanuska, and Taku connect the large communities of southeast Alaska with each other and Prince Rupert, British Columbia and Seattle, Washington. The three smaller vessels consisting of the Motor Vessels Le Conte, Aurora, and Chilkat connect the smaller communities of southeast to each other and to the larger communities. The communities served by the mainline vessels are:

Ketchikan
Wrangell
Petersburg
Sitka
Juneau
Haines
Skagway

The communities constituting the "secondary system" are:

Metlakatla
Hollis (Hollis is the terminal for four Prince of Wales Island communities: Craig, Klawock, Hydaburg, Thorne Bay)
Hyder
Kake
Angoon
Tenakee Springs
Hoonah
Pelican

The largest vessel in the Southeast System is the M/V Columbia. It is 418 feet long, carries 1000 passengers and 180 vehicles. The M/V Matanuska and M/V Malaspina are the same size. Each is 408 feet long with a passenger capacity of 750 and a vehicle capacity of 120. The M/V Taku is 352 feet long with a passenger capacity of 500 and a vehicle capacity of 105. The M/V Le Conte and M/V Aurora are sister ships. They have identical capacities of 250 passengers and 47 vehicles. The M/V Chilkat, a smaller, aging vessel has a capacity of 75 passengers and 15 vehicles.

During the summer, the Columbia and the Matanuska are on the Seattle run, completing one round trip each week. During the winter period, from October 1 through April 30, there is only one vessel used on the Seattle run, usually either the Matanuska or the Malaspina. The Columbia is usually laid up for most of the winter due to its high operating cost. The Malaspina and the Taku operate between Prince Rupert and Skagway during the summer, completing the round trip in four days if Sitka is served once on each trip and three days if Sitka is not served. Typically each vessel stops at Sitka once each week. During much of the winter only one vessel is used on this route, due to lower traffic.

The Le Conte and Aurora serve the southeast secondary route, supplemented by the Chilkat. The Le Conte serves the northern panhandle and the Aurora serves the southern panhandle. During the summer, the Le Conte operates between Juneau, Sitka, and Petersburg, with stops at Hoonah, Tenakee Springs, Angoon, and Kake. The Le Conte is routed north to Haines and Skagway once or twice each week. The Aurora operates nearly every day between Ketchikan and Hollis, and during the summer, south to Hyder once each week. In October, 1986 the Aurora began serving Metlakatla as well. The Aurora is also used between Prince Rupert and Ketchikan once or twice each week. These vessels serve the same routes during the winter period, but on a reduced basis.

The Chilkat is used between Ketchikan, Hollis, and Metlakatla. The Chilkat makes two round trips on four days of each week during the summer. The ferry system states in its Draft System Plan dated November 1986 that the Chilkat will be retired soon.

In 1985 the Southeast System carried a total of 313,071 passengers. Of these, 235,850 passengers (75.3%) traveled between mainline ports. Tourist traffic is very heavy in the summer months. During July of 1982, a survey showed that approximately 80% of its mainline passengers live outside of Alaska. Of the remaining 20%, 12% were from S.E. Alaska and the remaining 8% were from other parts of the state. As of the time of the preparation of this report, traffic volume figures for 1986 were unavailable.

During 1985 the Southeast system carried a total of 79,780 vehicles. The largest percentage of these vehicles (17.6%) disembarked at Juneau. Of course, many of the vehicles travelling on the ferry system embarked and disembarked more than once as part of a single trip. 15.6% disembarked at Haines. 8% disembarked at Skagway.

The Alaska Marine Highway System, in its twenty-fifth year, is one of Alaska's success stories. We have in the Southeast AMHS a billion dollar infrastructure that is functioning remarkably well, considering the lack of attention it has had for fifteen years.

EXECUTIVE SUMMARY

This report describes the importance of the Alaska Marine Highway System (AMHS) from the community perspective. It has been developed to show how the economy and way of life of the people in Southeast Alaska has evolved in concert with the ferry system. It points out that budget and other decisions regarding the AMHS should take into consideration the importance of the ferry system in other than strictly economic terms; most particularly the sense of real security, reliability, and the affordable transportation which it offers to the traveling public. It explains the reality that dismantling this billion dollar infrastructure would be a severe blow not only to Southeast Alaska but to the entire state. Th report shows how the ferry system is so interwoven in the economic fabric and well-being of Alaska that it deserves a fresh look; a commitment to efficient management and direction through prudent budget decisions. Further, it offers specific recommendations and findings tc improve the system.

The ferry system is a vital component of the economy of Southeast Alaska. Therefore, any decision that may result in a general service reduction should be approached with great caution. It is an unfortunate reflection of our government that the rationale to reduce service seems based on the assumption that communities must suffer before management can become effective or labor brought to the table as a full partner in resolving the problems. As a matter of fact,

in most cases it costs at least 50% of vessel expense to lay-up. For example, the Bartlett cost 90% of operating expense to be put into lay-up. Therefore, it needs to generate only 10% of costs in revenue to be more cost effective to operate.

As this study began, the focus of the effort was that of discovering the relative ways in which the AMHS is important to each respective community served by the system. The inter-relationships developed with the rest of the State as a result of the ferry system were also explored. It was learned that not only is the system important in a general way for transportion of people, vehicles, and goods, but in particular ways. That is, a particular major component of a local economy has often developed with the ferry service, and vice versa.

The major component in some communities may be a single business, such as the case with the Hoonah Cold Storage. Hoonah Cold Storage depends on the ferry to ship out 100% of its fish products. This was almost two million pounds of salmon in 1986, and the business expects a 30% increase this year. In Sitka, a winter 'turnaround' run is the primary boost to the retail trade. It is an economic convenience, as well as being key to the delivery of important human services, for those who do not live in Sitka. The economy of the City of Skagway in recent years has become almost entirely based on tourism. Of course, the ferry system plays a very important role in bringing tourists to Skagway. The

AMHS brought 36,000 visitors to Skagway in 1986. Ketchikan faces a double-edged sword when the State considers reductions in ferry service. The mainline runs are extremely important because of the tourist trade, export of fisheries products, and the import of goods and supplies to furnish the area's retail demands. But the feeder ferries are critical for retail and commercial trade, fish transport, and winter economic activity. The economies of the people of Ketchikan would be severely impacted by a reduction in either mainline or feeder ferry service. There is one community, however, which appears to have an even deeper dependence on the ferry system: the City of Haines. There are so many business functions in Haines which have evolved with, and depend upon the ferries, it clearly would suffer the most immediate and significant effects of reductions in service. Haines is still the main embarkation and disembarkation point for people and goods destined for the interior or travelling south from the interior. Without the ferry system, Haines would simply be a place at the end of a very long spur road. These are but a few examples of the community perspectives of the AMHS. The more enlightening and detailed reports are found in the Community Section. Reading that section is imperative in understanding the AMHS's relationship to developing economies. The particular ways the communities have used the ferries to develop and stafilize the economy of Southeast must be recognized.

Of course, the communities served by the ferry system are dependent on it in numerous general ways. These include the delivery of food, particularly fresh produce and dairy products; mail delivery; school travel; tourist travel; and the transportation of vehicles, equipment and general freight. In some cases, practically 100% of the fresh produce is delivered by ferry. In addition, all second and third class mail and surface parcel post from the lower 48 travels by ferry. The mail is ferried to Haines, Skagway, Petersburg, Wrangell, Sitka, Ketchikan, and Juneau, then shuttled to smaller communities.

During the school year, all school districts make use of the ferry system for student travel to a remarkable degree. Petersburg, Juneau, Wrangell, and Ketchikan report that a student group (averaging 30 students) from their high schools is going somewhere on the ferry system virtually every week of the school year. For purposes of school travel, both safety and cost considerations combine so that schools schedule events around the ferry schedule. And as funding for education decreases, the cost of flying is not a reasonable alternative for student travel.

The AMHS is also important to the health, welfare and safety of Southeast residents. Residents of the smaller communities depend on the system for transportation to larger communities to meet shopping, business, medical, and recreational needs. The selection of goods and services is extremely

limited in some small communities, making travel to larger communities a necessity. Thirteen of the nineteen SE communities we surveyed have no resident doctor; fourteen have no hospital. Travel by ferry to the larger communities is often the preferred mode of transportation, due to its safety, dependability, and people's fear of flying. The senior citizens of Southeast rely on the ferry system to a great degree, perhaps more than others. For them the ferries are safer, more accessible, and more dependable; as well as providing a far less costly means of transportation.

It is safe to say that almost all Southeast communities served by the AMHS are positively affected by the ferry transport of tourists into their community. Communities as small as Pelican notice an increase in business brought about by the arrival of a ferry. The Southeast communities, through the Southeast Alaska Marketing Council (SAMC), have been doing a great deal to encourage use of the AMHS. They have invested $400,000. in advertising to encourage the 'independent traveller' to visit SE Alaska. To date they have received 12,000 responses to their ads; 57% of these were interested in ferry travel as their means of transport. The SAMC supplies travel information to the respondents based on their interest.

The degree of general dependence on the ferry system by the various communities appears to rise in inverse proportion to the size of the community. The smaller the community, the more dependent it is likely to be on the ferry system for its

transportation needs. However, a reduction in service would adversely impact elements of all local economies.

In addition to the individual and general ways in which the various Southeast communities are dependent on the ferries, the system is an important source of jobs. The system employs approximately 900 people and there are more than 5,000 other people that depend on the system for their jobs. Table 5 which is appended to this report details the number of people directly employed by the AMHS in each community. Ketchikan is home for the largest number of employees of the ferry system: 294 employees.

It is also important to note that the system is not only important to the economy of Southeast, but to the state's overall economy - more important than is generally thought. In all, the Southeast system carried 313,071 passengers during 1985, the latest year for which figures are available. That same year the system transported 79,780 vehicles. The "Alaska Tourism Handbook," published by the Division of Tourism reveals that 60% of the summer travelers on the ferry system visit Anchorage and 59% visit Fairbanks. In addition, 40% of all winter traffic on the Southeast ferries is headed for the interior. Each year the AMHS carries thousands of tons of freight and millions of dollars of visitor revenues to the northern regions of the state. Each week semi-vans loaded with goods and supplies head for interior Alaska. Even more vans flow from the rest of the state, especially Anchorage to

points in Southeast.

The efforts of this study as indicated, included inquiring of local citizens and business people about how they are affected by the ferry system. But it also elicited opinions of how the AMHS could be more efficient. There was a remarkable consensus about whether budget reductions should automatically result in a commensurate reduction in service. Most people believe that large savings could be achieved by better management, privatization or cost reductions in areas such as marketing and food service, and a very close and serious scrutiny of current labor agreements in cooperation with the unions themselves. Some also expressed opinions that procurement of supplies and fuel throughout the system could be done much more efficiently.

It is apparent that any significant progress in these areas will take time. The answer lies in effective management and sufficient time to implement strategies. Therefore, it appears that for the present, the best that can be done is to begin to direct the system toward attainable goals with clearly defined strategies, some of which are offered in the Recommendations and Findings section of this report. In the short term, the system should maintain the current level of service with an authorization of 62.6 million for FY 88. In the long term, a work plan should be developed that sets objectives and milestones that cut costs and increase revenues. However, one of the most important recommendations must be

mentioned here, namely that of establishing an advisory board or task force of professionals, users and legislators to advise the Legislature, Governor, and managers of the AMHS on various aspects of operating the system. This system is in many ways an anomaly to normal government processes; it demands separate unique attention.

The AMHS is such a pervasive part of both the economy and way of life for the 70,000 people of Southeast that the proposed, but unneccesary reduction in service could severely cripple the communities of Southeast. The impact of any significant service reduction would also affect the economy of the rest of Alaska, further exascerbating the state's current economic and social situation.

This community perspective is hopefully the beginning of a fresh look at maintaining our AMHS System with reasonable approaches that go beyond the simplistic, devastating proposal to reduce service. This report provides an interesting review of the AMHS, and proposes a direction of effective management and prudent decisions henceforth. It is intended as a symbol of the efforts of the Southeast Conference to work hard in a cooperative spirit with the AMHS, for all Alaskans.

III.

EXECUTIVE SUMMARY

IV.

THE COMMUNITIES' PERSPECTIVE

KETCHIKAN

Ketchikan is the second largest community in Southeast Alaska, with 14,300 residents. It is situated on the southwest side of Revillagigedo Island. Ketchikan's economy is based primarily on fishing, lumber products, and tourism. As the southern-most Alaska municipality on the ferry system's mainline, it relates closely to Seattle and the coastal communities of Britsh Columbia. As the first Alaska stop not only for the mainline ferry, but for barge, jet, and cruiseship traffic as well, Ketchikan has developed a thriving "micro-economy" servicing those transportation systems. In the past month of March, a major vessel maintenance and dry-dock facility has begun operation, and has already performed maintenance on the AMHS vessels Bartlett and Matanuska. The facility is owned by the state but privately operated by Ketchikan Welding Works.

In its position as the first Alaska stop for both passenger and freight service from the South, Ketchikan has become a strong regional retail center, drawing from an area population of nearly 25,000 in an area generally referred to as Southern Southeast. Because of this position, both mainline and feeder ferries are extremely important to the community. In terms of ferry traffic, Ketchikan is the second busiest port in Southeast. In 1985 51,250 passengers embarked and 50,913 passengers disembarked in Ketchikan; 13,821 vehicles embarked and 13,965 vehicles disembarked. The mainline runs from Seattle and Prince Rupert in the south, to Haines, Sitka, and Juneau in the north providing a steady, dependable system for the delivery of freight, dry goods and produce, as well as tourists and vehicular traffic. The feeder ferries running between Southeast communities provide Ketchikan with the consumers for those products, both from an "import" and "export" perspective. In the sections of this report on Metlakatla and Prince of Wales Island, we discuss the import to the outlying communities of maintaining maximum possible service to Ketchikan. But Ketchikan's health and welfare is also very mu n dependent on the same service. The retail economy of Ketchikan has grown to the service demands of 25,000 - 30,000 year-round consumers, nearly half of whom depend upon the AMHS for access. A decrease in service of the feeder system would indeed have a dramatic affect on Ketchikan's private sector, which has invested heavily, and confidentally in their regional responsibilities.

A study conducted by the Ketchikan Gateway Borough of economic indicators showed that while Ketchikan's tourists are extremely important to the local economy, almost 95% of sales are by area residents, and over 20% of those are by

residents of outlying island communities. The study also found that the average tourist spends $28 per day in Ketchikan. The average ferry passenger, on the other hand, spends $55. Reductions of ferry service over the past winter between Ketchikan, Metlakatla, and Hollis have already resulted in a drop in retail sales. Several businesses have responded by conducting "road trips", taking limited inventories out to the islands for "trade shows". The result is some compensation to the island consumer for the lost accessability to goods, but their purchases are from considerably less selection, and at a higher price.

The mainline ferry is extremely important to Ketchikan's regional responsibilities, especially as it relates to fresh meats, produce, and dairy products. A reduction in service between Ketchikan and Seattle could have a dramatic affect on the quality of those products; a level of quality that all of Southeast has come to expect. By utilizing the ferry system rather than barge service, three days are saved in transit. Fresh pork and chicken are especially volatile products, and a reduction in service could affect their availability. A reduction in mainline service that would force milk to be barged would, at present costs result in a 14% increase in price to the consumer due to decreased shelf life. Such a scenario could also result in an inability to get fresh dairy products to some villages, camps and communities in a reasonable time and in reasonable condition.

The timber industry in Ketchikan also utilizes the ferry system extensively for supplies and freight, but not for shipping product. Ten per cent of their incoming freight arrives by mainline ferry into Ketchikan. However, after arrival, 25% of their outgoing freight leaves Ketchikan on the feeder runs. In addition, the ferry is used for employee and vehicle transport. Any immediate freight or supply needs are sent via ferry.

The fish processing industry in Ketchikan is also a major user of both mainline and feeder ferries. Nearly three hundred linear feet in van space is utilized weekly in the summer, exclusively for fish, between Hollis and Ketchikan. Salmon, black cod, halibut, and herring all are shipped via ferry year-round. The industry is a major seasonal employer. A large on-shore processor will employ as many as 200 people during the season. Winter cutbacks on the Ketchikan-Hollis run have, on occassion, forced some companies to charter their own boats to transport the fish. Good frequency of service on the feeder runs is of utmost importance to the industry. Their need is also a year-round need, as harvest of the different species takes place at different times.

Tourism is of course a major portion of the AMHS's

business, and much of that business is channelled to Ketchikan. As Alaska's first port of entry on the mainline, and also the first stop after 40 hours of travel, almost all passengers disembark for a break. This winter and spring, Alaska Airlines, the Port of Seattle, and the AMHS have jointly contributed to a program to promote the AMHS to Seattle area travel agents. Three lunches for nearly 225 travel agents have been held on board the Matanuska in Seattle, while four familiarization trips have been held for four hundred travel agents. The trip cost each agent $295 and includes a ferry stateroom from Seattle to Ketchikan, and a return by air. The target of the program is the 650 travel agencies in the Seattle area. The program has been so successful that plans are in the works to expand the effort to cover the entire west coast, though the program has revealed some serious flaws in the reservations system, which affect the willingness of travel agents to write AMHS tickets.

System wide, one of the major off-season users of the AMHS are school districts. All inter-school activities and competitions depend heavily on ferry transportation. Cuts in the Education Foundation Funding program have already resulted in dramatic reductions in activity budgets for all of Southeast. Ketchikan, for example, has at least one group traveling every weekend of the school year. Of a $140,000 activities budget, $100,000 goes to travel costs. That budget is a 50% reduction over the past year. 50% of student travel is by air; 50% by ferry. However, the cost ratio is 70/30, air over ferries.

Ketchikan faces a double-edged sword when the State considers reductions in ferry service. The mainline runs are extremely important because of the tourist trade, export of fisheries products, and the import of goods and supplies to furnish the area's retail demands. The feeder ferries are also extremely important because they transport the fish product for the fisheries, and the consumers for the retail and commercial trade. Cutbacks in either mainline or feeder ferry service would have a potentially devastating impact on the service the other can provide. Ketchikan, perhaps more so than most other Southeast communities, is subject to economy-wide repercussions from a loss or reduction of service by the AMHS.

HYDER

Hyder is an unincorporated community of 100 people located at the head of Portland Canal in southern Southeast Alaska. The community is the only one in Southeast accessible by road. The community economy has two primary sources; tourism and retailing, both of which derive from Hyder's "sister city" of Stewart, British Columbia.

More than 60,000 visitors arrive in Hyder every summer, primarily from the Trans-Canada highway. Via that route, Hyder is just a 20 hour drive from Seattle. The tourist trade supports one motel, one inn, three restaurants, and several gift shops. In addition, Hyder is a popular destination for Canadian residents of Stewart and the surrounding area. The principal reason for this is that Britsh Columbian bars close several hours earlier than than those operating under Alaska law in Hyder. One freight line also operates in Hyder, and the community is serviced by float plane from Ketchikan.

Hyder did not begin receiving ferry service until last year, and then only by legislative mandate. The service is for summer months only, and on a weekly basis. The intent of adding service to Hyder was to create an opportunity for a drive/ferry circle from Seattle, through Canada and then return by ferry through Hyder.

Traffic counts and analysis are not available for evaluation yet for this run. The trip is 144 miles from Ketchikan with no stops in-between. The trip takes eleven hours.

METLAKATLA

Metlakatla is a Tsimpshian Indian community of 1,100 residents on Annette Island. It is the southernmost of all Alaskan communities, being 12 miles south of Ketchikan. Metlakatla is not an incorporated municipality under state law. Rather, it is a federally created reservation, created by Congress nearly 100 years ago.

The two mainstays of the Metlakatla economy are a fish trap/cannery operation and a saw mill owned by Louisiana-Pacific. Both of these operations ship their products south by barge, but do rely on the ferry for supplies and equipment. The primary traffic on the Ketchikan-Metlakatla run has always been passengers, but the community does receive two vans/week of groceries. In 1985 Metlakatla embarked 5,974 passengers and 1632 vehicles. 5,651 passengers and 1706 vehicles disembarked.

Given its close proximity to Ketchikan, Metlakatla has interacted closely with Ketchikan for many years. This close interaction was made possible primarily because of daily service that was provided by the Alaska Marine Highway System. The service resembeled a commuter service. It allowed the Metlakatla residents to go into Ketchikan in the morning, take care of their business and return in the afternoon. The service was popular and well used. Indeed, the traffic apparently warranted a larger ferry for the run. Therefore, the Metlakatla terminal was modified to accommodate the larger Aurora. Formerly the Chilkat served the Ketchikan-Metlakatla run. The terminal modifications were completed by October of last year. But now the community must share the Aurora with the Prince of Wales Island communities, and they no longer enjoy the daily, over-and-back service they had for so long.

The reduction in service has created some serious problems and inconveniences. Since the residents can no longer go round trip to Ketchikan in a single day, they must overnight in Ketchikan. Usually this means paying for a hotel room. But on the reverse perspective, there are no hotels or motels in Metlakatla. The community had launched an aggressive tourism promotional effort based on the single day turn around service. Now, however, a day trip can only be accomplished if one flies at least one way. The reduction in service has also had the effect of jeopardizing the availability of emergency medical service. There are about 25 - 30 days a year when wind, fog or snow prevents planes from reaching the community. If an emergency should arise now during one of those periods, the ferry is simply less available as an alternative. Any further reductions in service to Ketchikan would seriously impact Metlakatla.

PRINCE OF WALES ISLAND

Prince of Wales Island is the largest island in Southeast Alaska. It is the site of five incorporated municipalities: Craig, population 1200; Klawock, population 600; Hydaburg, population 500; Thorne Bay, population 400; and Kasaan, population 100. In addition, Prince of Wales Island hosts several other unincorporated communities, villages, and logging camps. They include: Rowan Bay, Hobart Bay, Camp Island, Whale Pass, Dolomi, Port Alice, Chomley, Dana Bay, Shoal Cove, Notaki, Labouchere Bay, Coffman Cove, Polk Bay, Point Baker, Port Protection, Long Island, Warm Springs, Bell Island, Waterfall, and Steamboat Cove.

The residents of Prince of Wales Island apparently have not been informed of the State's recession. Existing industries on the island are going strong and local economies are experiencing something of a "mini-boom". Timber prices have begun to rebound which has made harvesting profitable again. In addition, both regional and village native corporations have extra incentive at this time to set aggressive logging schedules in order to take advantage of their ability, for another four years, to sell operating losses. The summer commercial salmon fishing industry is doing extremely well in the southern panhandle and is expected to continue on an up cycle.

In addition, communities on Prince of Wales are pursuing very aggressive economic development plans. A black cod bottom fishery is just beginning to turn the corner in Craig and Klawock. This past winter, over forty boats took part in the opening. Several areas along the west coast of the island have been identified as the best potential areas for mariculture of salmon, oysters, and seaweed. Additionally, several mining companies have been conducting tests and taking samples for a variety of minerals along some of the island's interior roads. Prince of Wales Island has the most extensive road system in Southeast Alaska. As such, it received a great deal of camper/RV/trailer use during both the summer tourist season and the fall hunting season. In addition, this summer two cruise ships a week will off-load tourists for a two-hour tour of Klawock and the surrounding area. This will be the second summer cruise ships have visited Prince of Wales Island.

Obviously, the communities of Prince of Wales depend a great deal on the AMHS to provide transportation and freight to their thriving economies. All economic development efforts, as well as existing industries, would not function without the AMHS. The cold storage in Craig, a major employer, sends all its fish to Ketchikan via ferry, both summer and winter. They already use the service to capacity. A loss or

reduction of service for the cold storage does not just mean more expense; it means the potential loss of the business itself. Quality is the single most important factor. Fresh fish must be processed and transported as quickly as possible. There exists a fear in Craig that if ferry service is reduced, off-shore processors and tenders will move into the area to service the fishermen on the fishing grounds, and that the Craig cold storage will be by-passed completely.

The lumber camps are supplied almost excusively by the ferry. Five refrigerator vans and four dry vans of groceries come onto the island every week via the ferry. All logging equipment, materials, parts, and supplies arrive by ferry. Forest Service vehicles come by ferry. Nearly all motorized vehicles on the island come and go via the ferry. In 1985 15,881 passengers and 4,739 vehicles embarked at Hollis. 16,591 passengers and 5,116 vehicles disembarked

Mail also arrives by ferry, as does an annual convoy of state road equipment. There is no doctor or dentist on the island, so patients must go to Ketchikan, as do participants in local alcohol rehabilitation and mental health programs. The ferry system is also heavily used by the island's senior citizens. Of course, the residents rely upon Ketchikan for regional shopping for all goods and services not available on the island, and the ferry is the chief mode of transportation.

Residents of the island have long been of the opinion that they are under serviced by the ferry system, and recent developments have not seemed to help. A facility upgrade at Metlakatla last summer now prevents the state's smallest ferry, the Chilkat from docking there. The Chilkat had regularly serviced Metlakatla. As a result, the Chilkat has been switched over to the Ketchikan-Hollis run, and the larger ferry, the Aurora, is utilized for the Metlakatla run, except for Tuesdays, when it goes to Hollis. So the Chilkat serves Hollis approximately six days a week. But it is seriously undersized for the daily trip across Clarence Strait. As a result, many of its trips are delayed or cancelled due to adverse weather and sea conditions. Further, because the Chilkat has such limited vehicle capacity (15 vehicles), competition is fierce for the Tuesday sailing on the Aurora. The situation has caused problems, inconveniences and added expense this past winter.

The real concern, however, is that even without any reduction in service from budget cuts, service to the island may not be adequate to support the burgeoning economy. The situation appears to be a lost opportunity for the ferry system, as well. The demand for service is there, almost all of it freight, which should make the run highly cost-effective for the ferry system. The residents hope the situation can be improved soon, as they must depend on consistent reliable ferry service - at least at the current level.

WRANGELL

The City of Wrangell is located on the northern tip of Wrangell Island, 89 miles northwest of Ketchikan. Its population as of July 1, 1986 was 2376. Bordered by Zimovia Strait, Wrangell is situated near the mouth of the Stikine River, which reaches into the Canadian interior. As the Stikine developed into a gateway for trappers and prospectors, the northern tip of Wrangell Island became a strategic location that was the key to Wrangell's early development as a military outpost, a fur trading center, and an outfitting, support and entertainment center during three successive gold rushes. Changing interests led to several boom and bust cycles in Wrangell's early history.

Today, Wrangell's economy is structured around harvesting and processing renewable resources of the area. The Alaska Lumber and Pulp sawmill employs up to 100 workers and is Wrangell's largest private employer. Fishing is Wrangell's other major resource based industry. More than 100 residents fish commercially, and for about half of these, fishing is their principal source of income. There are two seafood processors in Wrangell, with a combined workforce of about 100 workers during peak processing months each year. Most of the fish processed in Wrangell is canned, but there is an increasing demand for fresh fish. Presently, fresh fish is flown out of Wrangell, though the entire halibut harvest in 1986 (620,000 lbs.) was shipped via ferry. Expanded use of ferries for the shipment of fresh fish south is foreseeable, especially if jet service to Wrangell is suspended.

Recently, Wrangell has begun a conscious shift to develop its tourism potential. They are trying to encourage people to discover the unique attractions of Wrangell, including its petroglyph beach, access to the Stikine River and the hot springs, Chief Shakes Island which is home of many totems and carvings, and their 2 annual community festivals - Tent Days and the 4th of July. The ferry system plays an important role in tourism development and is viewed by Wrangell businesses as a key ingredient for the future. Wrangell, along with a number of other Southeast communities is currently engaged in a promotional campaign to lure the "independent traveler" back to Southeast. The "independent traveler" is seen as the person who eschews both group trips and package tours. Studies have shown that a high percentage of independent travelers choose the ferry as their mode of transportation. Even now, Wrangell's Economic Development Director estimates that 40% of Wrangell's visitors arrive by ferry on an annual basis. Further, he advised that approximately 70% of the guests of the city's four hotels arrive via ferry. During

the summer, a steady flow of recreational vehicles disembark from the ferry and use the RV parking area provided free of charge by the City. Their average stay in Wrangell is 5 days, during which time they help support local businesses. Needless to say, any cut back in ferry service would severely curtail the most important aspects of Wrangell's tourism potential.

The ferries are used for close to 100% of student travel. A minimum of one group of Wrangell High School students travels each week of the school year to athletic events, Close-up, RSVP, band performances, or Native Education functions. The ferries are also important to the Native people of Southeast as a whole. Travel between southeast villages and communities to attend potlatches, 40-day parties, 'Celebrations' of heritage, and Native dance performances most often occurs by ferry.

Like Petersburg, Wrangell is presently threatened with a loss of jet service. Should this occur, the importance of the ferries would expand suddenly, and dramatically. Ferry travel for business and pleasure has become a way of live for Wrangell residents - a way of life which would be jeopardized by reductions in ferry service.

PETERSBURG

The City of Petersburg is a fishing community of 3252 permanent residents located on the north end of Mitkof Island where Wrangell Narrows meets Frederick Sound. By air, it lies halfway between Juneau to the north and Ketchikan to the south. Petersburg grew up around a cannery established by a Norwegian immigrant named Peter Buschmann. The cannery began operating in 1900.

Today, fishing and seafood processing continue to be the mainstay of the town's economy, though wood processing has also been important at times. During the fishing season the town's population swells by an additional 600 seasonal workers who are employed in the town's three processing plants. This does not count the fishermen themselves and their crew who make Petersburg their home base during the fishing season. Managers of the processing plants estimate that about half of the seasonal workforce arrives on the ferry and departs in the same manner. The ferry system is used to ship fresh fish south to Seattle. Last year, the second largest processor in Petersburg shipped more fresh fish in this manner than by air. The use of the ferries for the purpose of shipping fish product south (and for other purposes as well) may suddenly increase in the foreseeable future. Both Petersburg and Wrangell are presently threatened with the loss of jet service if the present federal subsidy of that service should end. Last year the number of passengers arriving by air and by ferry into Petersburg was about the same: approximately 15,000 passengers by each mode. Therefore, the amount of passenger traffic into Petersburg by ferry could possibly double unless some alternate type of airplane service is provided.

Presently, during the month of March 1987, ferry service to Petersburg consists of an average of three mainline stops per week, north and south. It also presently has two feeder stops/week, north and south. During the summer season, service expands to an average of six mainline stops per week, north and south. Feeder service remains about the same. In 1985 15,650 passengers and 3,650 vehicles embarked in Petersburg. 15,720 passengers and 3717 vehicles disembarked.

It appears that in the case of both Petersburg and Wrangell, the ferry system is often the preferred alternative for persons travelling to Juneau, Ketchikan or Sitka because of the relative cost. One way passenger fare from Petersburg to Ketchikan is $24 by ferry and $76 by air. One way fare to Juneau is $26 compared to $73 by air. To Sitka it is $16 by ferry and $69 by air.

The ferry system is also important to Petersburg in general ways. A significant amount of the food consumed in Petersburg arrives by ferry, viz. 25 - 30% of all produce, meat, and dairy products. As with virtually all other Southeast communities, it is heavily used for student travel. Petersburg school officials report that at least one group per week, averaging 30 students per group, travels on the ferry throughout the entire school year. 85 - 90% of all student travel is via ferry. Also similar to other Southeast communities, all third class and fourth class mail (parcel post) comes by ferry.

KAKE

Kake, Alaska is a Tlingit community of approximately 600 residents located on the Northwest end of Kupreanof Island in Southeast Alaska. Its direct ferry connections are to Sitka (8 1/2 hours) and Petersburg (4 hours). In addition to being linked to these two communities by air, it has two direct flights to/from Juneau daily.

Fishing and seafood processing provide the main economic base to the town's economy. It is a community where subsistence hunting and fishing are still an important part of life. Timber harvesting has been important, but recently, poor market conditions have forced operators to severely cut back or suspend operations altogether.

Kake is in the unique position of having three community links which are important to it. Petersburg, Sitka, and Juneau all play a role for Kake's residents. Of the three communities Kake is linked to, Petersburg has become the most important, mainly due to its close proximity and its one day ferry turnaround service. Residents go to Petersburg to purchase items not available in Kake, to take care of their banking needs as there is no bank in Kake, and to take care of general business which they can't do in Kake. In addition, Cuprenof Seafoods, the seafood processing company in Kake is under the same ownership as Chatham Straits Seafoods in Petersburg. There is frequent transfer of equipment between the two by ferry. All of the goods sold by the largest store in Kake (approximately 70% of all goods sold in Kake) arrive by ferry from Petersburg. Also the bookkeeping office of this store is in Petersburg. This relationship requires frequent travel of personnel between the two communities. The non-native residents of Kake generally travel to Petersburg for their medical and dental needs, as they are not eligible for service by the regional health corporation in Sitka. This travel is usually scheduled around ferry service.

Sitka is important as a regional health center for the majority of Kake residents, as well as a somewhat larger shopping center than Petersburg. Round trip travel to Sitka by ferry is difficult as the ferry usually arrives very early in the morning and does not provide same day, or even next day return service. The cost to fly back is $75, as opposed to $14 on the ferry.

Juneau maintains its importance as a regional shopping and service center with Kake. However ferry service to and from Juneau is even more difficult and expensive than Kake to Sitka. The ferry situation for Kake residents tends to add to their isolation.

As with all other Southeast communities served by the ferries, the school district utilizes the ferry system a great deal for school travel. The athletic teams using the ferry include basketball, volleyball, and wrestling. Other student organizations utilizing the ferry are RSVP, student dancers, and the student council. The principal of the high school stated that without a doubt, any reduction in ferry service would concomittantly limit activities.

In 1985, 3,490 people boarded the ferry in Kake; 3,421 people arrived in Kake by ferry. There were 830 vehicle arrivals and departures. As with all other smaller communities served by the ferries, travel to meet medical needs and travel by senior citizens is greatly dependent upon the ferries. Kake's general dependence on the ferry is such that it would suffer greatly by any overall reduction in service; indeed residents would like to see it expanded.

ANGOON

Angoon is a Tlingit Indian village located on the southwest side of Admiralty Island. By ferry, it is halfway between Juneau to the north and east, and Sitka to the west. Angoon is the only permanent community on the island, and is considered to be the most traditional of all Tlingit communities in Southeast. Angoon's 700 residents have, for the most part, maintained their subsistence lifestyle, though commercial fishing is important. Angoon consistently registers the highest level of unemployment in the state, as well as the lowest income per capita.

Angoon is served by one main store. This main store carries a large inventory of fresh produce, dairy products, and meats as well as dry goods, and a variety of other items. All fresh produce, dairy products, meats, and some frozen foods are supplied by the ferry. Prior to its weekly ferry service, Angoon had no fresh or frozen foods available. The cost of flying them in makes the consumer cost prohibitive.

Beyond its dependence on the ferries for all fresh and frozen food, there are other significant dependencies. All food for the Senior Citizens Lunch Program arrives by ferry. All building contractors operating in Angoon use the ferry exclusively to transport equipment and machinery. The ferry also allows for both students and adults to be involved in sports programs. Despite its small size, Angoon consistently produces quality sports experiences. Angoon always places well in the annual Gold Medal Basketball Tournament in Juneau, for example. The City of Angoon, incidentally benefits by serving as the local agent for the ferry system. The city receives a 7% commission on ticket sales. Last year these commissions totalled $12,000 or about half the salary of the municipal secretary. As with other Southeast communities, Angoon depends heavily on the ferries for student travel. Prior to the establishment of ferry service, this function was extremely limited. In addition, the community utilizes the ferries for a wide variety of cultural events, such as potlatches, and forty day parties (a wake forty days after the passing of a loved one).

In 1985 4,834 passengers and 458 vehicles embarked at Angoon. 5,212 passengers and 465 vehicles disembarked.

The people of Angoon appreciate the service they now receive, but express apprehension at a possible reduction in service, especially a reduction in winter service. It is during the winter that they are most dependent on the ferries. Winter weather in Chatham Strait can be most vexing.

Wind, waves, snow and fog each or together can and often do prevent planes from getting in or out often for days at a time. During such times the ferry is the only means of transportation. Additionally, Angoon's dependence on the ferries for food is somewhat greater in the winter as it is then out of season for fishing and hunting. Lastly, Angoon's barge service in winter is less frequent than in summer, by two weeks. Consequently, even goods that might otherwise be brought by barge are shipped by ferry. In winter, Angoon receives two vans (approximately 4,000 lbs) of produce, milk, and supplies by ferry each week. Angoon is a prime example of the rule that dependency on the ferry system rises as the size of the community decreases. In the case of Angoon, even a slight reduction of its present service would hurt. Angoon has already experienced some reduction of service and it has hurt. Last winter the Juneau turnaround was discontinued. This created difficulties in terms of the arrangement that had existed for getting groceries from Juneau.

SITKA

The City and Borough of Sitka, Alaska is located on the west coast of Baranof Island. It is home to 8200 people. The borough's boundaries also include a large portion of Chichagof Island. Sitka was Alaska's first capital and also served as Alaska's capital during Russian settlement. Sitka's rich Russian heritage makes it a favorite stop for tourists. The Sitka Summer Music Festival has become one of the nation's premier chamber music festivals. Sitka is also home of Sheldon Jackson College, Southeast's only privately owned and operated college, and one of only two in the state. In addition, Mt. Edgecumbe High School, the state's only public boarding high school is in Sitka, as is Mt. Edgecumbe Hospital, which provides health services to Southeast's Native population. Sitka is also home to Alaska's shortest and most unusual fishing season. The Sitka sac-roe herring fishery lasts just a couple hours, but involves over 50 teams of seine boats, power skiffs, spotter planes, and tenders, all packed into just a couple small bays and inlets.

Sitka receives both mainline and feeder service from the AMHS. In March of this year, it averages a little more than one stop/week, north and south by mainline ferries, and about three stops/week by the LeConte. In summer this changes to an average of more than two stops per week by mainline ferries and less than two stops per week, north and south by feeder ferries. In 1985 18,381 passengers and 3,536 vehicles embarked at Sitka. 18,463 passengers and 4,002 vehicles disembarked.

One run that is both convenient for the communities it serves and to Sitka's economy is the Saturday feeder turnaround. This ferry leaves Juneau late Friday afternoon and picks up passengers from Hoonah, Tenakee Springs and Angoon enroute to Sitka. It arrives in Sitka at 8:00 a.m., then sails at 4:00 p.m. on the return trip. This run allows the residents of the smaller communities an opportunity to buy supplies without having to spend money on hotels or air fares, which could make their whole trip uneconomical. It is important to Sitka's retail economy as it is the only winter "boost" for the town. Sitka's winter economy is stronger than some other communities largely because of this "turnaround" run.

This "turnaround" run is also key to some important human services provided by the Southeast Regional Health Corporation hospital in Sitka. The hospital serves Native people from all of Southeast, and the ferries are the primary means of transportation for all who do not live in Sitka.

The importance of the Saturday turnaround is demonstrated by the fact that until the service was cut this past winter, the hospital's operations were specially geared for the Saturday turnaround. It would be fully staffed by physicans and dentists for their patients who would arrive on that ferry. When the turnaround service was cut this past winter, patient visits decreased significantly.

The ferry system also serves Sitka in more general ways. The U.S. Postal Service delivers 25,000 pounds of mail each week to the city via the ferries. Nearly 100,000 pounds of meat, produce, and dairy products are delivered each week by the ferries to Sitka grocery stores. One grocery store in Sitka estimates that 40% of its groceries come by ferry.

The AMHS is thus important both as a major support to the local retail and tourist trade, and as the primary method of transportation for clients of regional human services that are provided in Sitka.

TENAKEE SPRINGS

Tenakee Springs, also known as Tenakee, is a small community of about 125 people located on the north shore of Tenakee Inlet on the east side of Chichagof Island. It is about equidistant between Sitka and Juneau, 55 miles either way, or about 45 minutes by air. It is well known for its hot springs. Indeed, the existence of the springs is the reason for its founding. Early prospectors and miners apparently discovered the springs, and began using it as a winter haven - a place to wait out the cold winters while taking advantage of the natural springs. Tenakee became a booming resort, complete with card rooms and pool halls. Later, several canneries operated in the area, with the last one closing in 1974. Today Tenakee is a significant retirement community, a seasonal home for some, and a fishing community. The extent to which it is a seasonal home is significant - of the 125 houses and cabins in Tenakee, only 64 are occupied year-round. Of the year-round population, it is estimated that 30% is over 60 years of age.

Tenakee has a special nostalgic appeal. It has no roads. The only vehicles in Tenakee are a fuel truck, a fire truck, and some ATVs. It is a safe harbor for those who would live apart from the modern world. Life in Tenakee has been described as "like turning the clock back 40 years."

Tenakee has three private businesses: the Blue Moon Cafe, the Tenakee Inn and Bar, which offers ten rooms in addition to its food and beverage service, and Snyder Mercantile, a general store selling food, basic hardware, drug items, and fuel. Snyder Mercantile also has five cabins, with another four or five planned. Owners of the Inn and the cabins estimate that 85% of their customers travel to Tenakee by ferry. The expansion of Snyder Mercantile is based on the assumption of continued ferry service, <u>especially</u> continued weekend service from Juneau.

When ferry service was initiated less than ten years ago, its residents chose to limit loading capabilities to passengers only. No vehicles can offload at Tenakee. Thus, use of the ferry for freight purposes by the community is limited. However, its use for passenger transport is quite important. The residents depend upon the ferry for trips to Juneau and Sitka for shopping and medical care. The residents especially appreciate the availability and dependability of the ferry during the winter. Since Tenakee has no land based airstrip, all planes coming in must land on the water. Boarding float planes is quite difficult for some of the older people, as well as for the wheelchair-bound residents. Therefore these residents have a greater degree of reliance on the ferries.

The residents have found that the introduction of ferry service has not impaired their lifestyle. Indeed, they now rely upon it as their primary mode of transportation.

PELICAN

Pelican is a fishing community of 200 permanent residents located on the Northwestern corner of Chichagof Island. Fishing and seafood processing are nearly the whole of Pelican's economy. Pelican Seafoods is the primary employer. During the fishing season, Pelican's population doubles in size, partially due to the increase in Pelican Seafood workers and partially due to an increase in the fishermen themselves. Seven million pounds of seafood are processed in Pelican per year.

Pelican is not accessible to any other community by road. Juneau is Pelican's primary source of goods and services, though Sitka also serves that function. Pelican has daily scheduled flights from Juneau and scheduled flights three times/week from Sitka. Direct air time is 45 minutes from Juneau. One way air fare is $72 from Juneau, three times the cost by ferry. Pelican does not have a landbased airfield. Therefore, only seaplanes can land in Pelican.

Ferry service is very limited to Pelican. Only one ferry per month travels to Pelican in winter, and two per month in the summer. However, Pelican residents do depend upon it. Because of the town's location, it has more weather problems and planes have a more difficult time getting in and out than with communities on the inside of the Archipelago. Almost every winter Pelican experiences a period of a week at a time without air service due to weather conditions. Some residents expressed the opinion that even though the ferry probably serves more people in the summer, it is more important to them to have good ferry service in the winter, when fewer flights are getting in, and when they don't have access to local boats to take them to town.

There is only one general store in Pelican, owned by Pelican Seafoods. Prices are high in the store. Thus, local residents try to avail themselves of the once/month ferry service which delivers groceries and goods for about half the cost of the general store. There are three restaurants in town, two of which close in the winter. Two of the three restaurants receive all their food and supplies by ferry.

Ferry service is important to Pelican both for passenger transport and some vehicles. Equipment of both the City and school District is sent to Juneau for maintenance. As with all other communities served by the ferries, elderly people much prefer the ferries. It is very difficult for them to attempt to board seaplanes. Also as with other Southeast communities, ferry service is viewed as very important for student travel. All student travel is planned around the ferry schedule. Pelican cannot afford a reduction in service.

HOONAH

Hoonah, Alaska is a Tlingit Indian community (pop. 906) located on Chichagof Island, 3 1/2 hours by ferry from Juneau and 20 minutes by air. Hoonah is not presently connected by road to any other town or village. However, there is a logging camp of approximately 250 people at peak season two miles from town.

Hoonah's economy has changed from a subssistence way of life to a varied one where commercial fishing forms the economic base. During the past five years, logging has also become important. However, in 1987 the loading of logs on ships bound for Japan will cease. This will reduce the number of Huna Totem shareholders employed in the industry by 32. This loss will dramatically affect local employment.

Hoonah is now looking at ways to diversify their economy. Tourism is an option being explored as a means to stabilize the economy. People involved in the operations of the Inn, the Lodge, the restaurant, and the City all spoke of promoting Hoonah as an entry point to Glacier Bay. Hoonah is the closest community to Glacier Bay with ferry service. It is this service that would be essential to the development of tourism for Hoonah.

Presently, the ferry system is essential to the community in a number of ways. 100% of the community's fresh produce, eggs, and bread arrives via the ferry, and 50% of the milk and other dairy products. A total of 8,000 lbs. of food arrives each week destined for three stores, two restaurants, and two food co-ops. An additional 6,000 lbs. of food is delivered each week via the ferry when the logging and fishing seasons are in full operation. 5,584 passengers and 1051 vehicles embarked in Hoonah in 1985. 5,947 passengers and 1172 vehicles disembarked. Perhaps just as important as the transportation of food into town, is the transportation of fish out of town. 100% of the fish from Hoonah Cold Storage is shipped on the ferry. During the fishing season, every northbound ferry (bound for Juneau) is used for the transport of fish. In 1986 approximately two million pounds of fish were shipped in this manner. This year, a 30% increase is anticipated, due to an increased freezer capacity. A common concern voiced by the owners of restaurants and stores stems from their limited storage capacity. The growth of their businesses without a corresponding increase in their storage capacity has resulted in a greater dependence on the ferry system.

In addition to the essential functions of food and fish transportation, there is the normal function of people transport. Hoonah, with its small population, has little selection of clothing, and its selection of items such as furniture,

appliances, and building materials is almost non-existent. For these items and many others there is a significant amount of commerce by the Hoonah residents with Juneau. The ferries provide both the cheapest and most convenient method for the Hoonah citizens to do their regional shopping.

As with other southeast communities, heavy use is made of the ferries during the school year for the transportation of school children for athletic, cultural, and music events. 50% of student travel is by ferry. Most Southeast school events are planned around the ferry schedule. In a time of decreasing revenues to the schools, any significant decrease in ferry service would limit student travel correspondingly.

Significant use of the ferries is made by people in need of medical treatment. Hoonah has limited medical facilities and staff. People travel to Juneau or Sitka to visit the doctor, enter the hospital, get prenatal care, have a baby, get more diagnostic tests, etc. Indeed, unless an emergency exists, it appears that the vast majority of patients and attendants utilize the ferry rather than flying. The Southeast Regional Health Corporation provides vouchers for patient transport by ferry, rather than by air, whenever possible.

In questioning the local citizens regarding their use of the ferries, it was discovered that people who prefer to ride the ferry do so for three reasons: 1) cost. The regular roundtrip airfare from Hoonah to Juneau is $94. But roundtrip fare on the ferry is only $20 (winter rate), and senior citizens and children under the age of six can ride the state ferries for free. 2) safety and the fear of flying. Numerous responses were received citing this as the reason for using the ferry. 3) people can take their car, which makes it much easier to operate in a larger city. Hoonah's senior citizens use the ferry almost exclusively in traveling from Hoonah.

The ferry is also important in the transport of vehicles, machinery, and equipment in and out of Hoonah. Whitestone Logging utilizes the service to bring in trucks and heavy equipment, as does the Forest Service and the Huna Totem Corporation. This year the water line installation should be completed and the roads are scheduled to be paved. Equipment used for these projects is transported on the ferry. In general, all regular size vehicles coming into or going out of Hoonah will be transported by ferry.

Hoonah is a prime example of a community which has both a general and particular dependence on the ferries. The general dependence has to do with the overall transportation needs of a small, isolated community. The particular needs are the dependence on the ferry to transport food into Hoonah and fish out.

JUNEAU

Juneau, Alaska, population 29,370, is Alaska's state capital and third largest city. It is located on the mainland, but is not connected by road to any other mainland community. It's closest link to mainland travel is with Haines, 75 miles to the north.

The discovery of gold in Juneau was the basis for Juneau's early growth. For centuries before this discovery, Tlingit Indians had established and enjoyed a sophisticated culture in the area. However, Juneau's destiny changed dramatically in 1880, when Joe Juneau and Richard Harris found gold. Within a few years Juneau became a center for large-scale hard-rock mining. Three gold mines, the Alaska-Juneau (AJ), the Alaska-Gastineau, and the Treadwell Gold Mining Co. were established and became world renowned. Treadwell production peaked in 1915, but closed two years later due to a cave-in which flooded the mines. The Alaska-Gastineau folded due to high costs in 1921. And the AJ mining was halted by the war in 1944.

By the time the mines closed, the government had been transferred to Juneau, establishing Juneau as Alaska's capital. Government remains the focal point. Today government employs one of every two Juneau workers. As in other Southeast communities, fishing is important in Juneau. Tourism is an ever-expanding industry. In the summer of 1985, Juneau was the most visited community in Alaska by vacation/pleasure visitors and the second most visited commmunity by all visitors.

Each year Juneau's population goes through seasonal cycles. In the winter, as host to Alaska's Legislature, Juneau is home to people from all over Alaska who come here to take part in Alaska's government. In the summer, Juneau is a bustling city, entertaining visitors from all over the world.

Many of these visitors come to Juneau by way of the Alaska Marine Highway System. In 1985, the ferries transported more than 60,000 passengers to Juneau and more than 14,000 vehicles. Juneau receives more ferry traffic than any other community in Alaska. Many of these travellers are tourists, but many are people from outlying communities coming to town to avail themselves of the shopping, medical, social service, and other service opportunities which are not available in their communities. Juneau has become a regional trade and travel center for the northern panhandle. Because it is the only community in northern southeast with year-round jet service, residents from the smaller communities travel to

Juneau to connect with jet flights going both north and south. But in travelling to Juneau from the smaller communities, the residents often prefer to use the ferry system because of its lower cost, safety, and dependability.

Juneau has the widest selection of available goods in Southeast due to its frequent barge, ferry, and air service, and its population base. There are also more doctors, dentists, and medical specialists in Juneau than in other Southeast communities. The Southeast Alaska Regional Health Corporation operates a regional clinic in Juneau; and an alcoholism treatment facility as well as a shelter for battered women and children, serving northern southeast are in Juneau. Juneau is also the regional headquarters for many organizations and government agencies including, the Forest Service, the Bureau of Indian Affairs, the Coast Guard, the Postal Service, and many others. In general, people from all over Southeast travel to Juneau to meet their shopping, business, and medical needs. Frequent and dependable ferry service is essential to this travel.

The movement of construction equipment to smaller communities from Juneau by ferry is extremely important. Many Southeast communities do not have paving equipment, asphalt plants, cement trucks, a sufficient number of dump trucks for projects, or good crane trucks to complete certain projects. Contractors from Juneau have the equipment and move it with them to the communities for projects such as water line installation, paving roads, and building projects. The ferry is the only practical way to move it.

As with other Southeast communities, student travel by ferry has become very important. 90% of the student's travel is by ferry. Students travel in groups of 10-60 to sports activities, music and drama festivals, and to debate and foreign language conferences. There is approximately one of these groups from Juneau-Douglas High School travelling in SE Alaska each week. Any reduction in ferry service would mean a corresponding reduction in student travel.

The Gold Medal Tournament is an annual adult basketball tournament in which most of the Southeast communities participate. It is held in Juneau and attracts approximately 1,000 people. The demand for ferry service at tournament time is so great that walk-on reservations must be made to get on the ferry bringing participants and spectators into Juneau. This event may seem minimally important, but it is the highlight of many communities' spring and has become a social tradition throughout. Angoon even closes its schools to coincide with tournament time. Gatherings such as this decrease the isolation people begin to feel after a long, cold winter.

Juneau to the smaller communities is equally important. Juneau receives approximately 16 27-ft. vans each week from the south, loaded with groceries, mail, and supplies. The desire for quick, frequent dependable service are reasons freight companies cited for ferry use. Juneau is served by barge lines once a week. Ferries arrive from Seattle or Prince Rupert 3 times a week. Ferries are off-loaded quickly, with vans heading for their destination upon arrival. With barge service it takes longer from the time the barge docks, to the loading and delivery of containers. There is no benefit to shipping on the ferry from Seattle or Prince Rupert if the frequency is no better than that of the barge. Thus, if the Seattle and Prince Rupert runs are reduced in the winter from 3 to 1 per week, the ferry system would loose more than the corresponding reduction in revenues; it would loose the business of those who use the ferry for its more frequent deliveries from the south. Foodland, a local store, uses the ferry exclusively in order to insure the freshest produce, milk products, and meat by getting deliveries twice a week. This is not possible by using the barge. Contractors, hospitals, the fishing industry, and the forestry industry use the ferry for its speedy delivery.

The movement of freight out of Juneau to the smaller communities is of growing importance. People in the smaller communities have become accustomed to diets of fresh produce, meats, and dairy products. The ferries are the only cost effective way of providing these items to some communities. Since many of these commuities are served by barge once every 4-6 weeks, a reduction in ferry service would severely limit the availability of these products. Other freight such as car parts, hardware, furniture, fishing gear, etc. make up the bulk of items for transport to the smaller communities. As it is now, the car decks of the feeder ferries are oftentimes too full to carry all the traffic needing transport. A cut in the service offerred by these ferries would increase this problem and the ferries may get into the undesireable position of prioritizing users of the system.

In general, the ferry's importance to Juneau is derived from the transport of tourists and Southeast residents from outlying communities into Juneau, and the transport of freight out of Juneau.

HAINES

The City and Borough of Haines (pop. 1847) is located 75 miles north of Juneau on Lynn Canal. It is 1/2 hour from Juneau by air and 4 1/2 hours by ferry. Haines is connected by road to the interior. Twenty-two miles up this road is Klukwan, a small Chilkat Indian Village with a population of 192. Klukwan has no businesses, so it relies totally on Haines for goods and services. Haines is a major entry point for land travel from Southeast Alaska into Canada or the Interior of Alaska, and from the interior to Southeast, Prince Rupert, and Seattle. This function, however, is only possible because of the ferry system. Despite the still recent completion of the Klondike Highway connecting Skagway to Whitehorse, Haines may still be described as the northern terminus of the Marine Highway System. It is the Panhandle's closest link to the rest of Alaska.

The Haines economy in the past ten years has often seemed to be reacting to the on-again, off-again attempts to keep the sawmill operating. Presently, the sawmill is not operating. Fishing has been an important contributor to the economy, but has recently been facing tougher times. Now the community is turning towards its tourism potential as a means of finally stabilizing the Haines economy. This effort has been helped a great deal by the publicity and attention which has been given to the annual fall eagle migration to the Chilkat River. Work on promoting the eagle reserve as a place to visit is progressing, and a visitor information center is under construction. In addition, other efforts are being made to promote Haines as a place to visit rather than just pass through. The underling key ingredient for Haines' tourism potential is its accessability by ferry. Without the ferries, Haines becomes simply a place at the end of a very long spur road.

It is difficult to overemphasize the importance of the ferry system to the Haines economy. For example:

(1) There are five hotels in Haines (a total of 128 rooms), with a gross income of $625,000. The owners of the hotels state that 90% of their business is derived from travellers on the Marine Highway System.

(2) Even though Haines has little more than a thousand residents, it has 11 restaurants, seven of which remain open year-round. The owners of the restaurants estimate that 80% of their business is derived from ferry travellers.

(3) There are are four automobile service stations. The operators of these stations state that 40% of their business derives from ferry traffic.

(4) In 1985 43,534 passengers embarked at Haines, and 13,454 vehicles. 40,867 passengers and 12,424 vehicles disembarked. In comparison, Juneau, which had the highest number of disembarkations had only 1,650 more vehicles disembarking than Haines.

It appears that when people drive down from the interior to connect with the ferry, they have a strong desire not to miss their connection south. And so they arrive early - early enough to need accommodations. Other examples abound of the importance of the ferry system to the Haines community:

(5) Approximately 1/2 of the food in the grocery stores arrives via the ferry; restaurants and bars receive all their supplies by ferry.

(6) Approximately 1/2 of the construction materials sold in Haines arrives by ferry.

(7) The ferry system itself has 27 employees in Haines; including two seasonal and one part-time.

Of all the communities of Southeast Alaska, it is clear that Haines is the most vulnerable and would be hurt the most by any significant curtailment in ferry service. The community has experienced a taste of the impact of ferry service reductions this winter. Last winter Juneau residents could conveniently travel via ferry for the weekend to Haines. This year, however, the schedule will not allow them to go to Haines and return for the weekend. The result is that some businesses in Haines have had their worst winter ever. Indeed, a tour company that had planned some group tours to the Haines area to enjoy the eagle migration had to cancel their plans due to the scheduling difficulties.

Apart from the aspects already identified, it appears as well that Haines is more dependent upon the ferry system than other communities in terms of social and cultural events. Haines is the site of the annual Southeast Fair. The fair, scheduled every year in August, has become a major event. Last year, attendance was approximately 8,000. And the ferries play a vital role. The event has become such a popular one for for Juneau residents (and those travelling

through Juneau) that demand for space far exceeds capacity. To their credit, managers of the system have cooperated by scheduling an extra run to Haines. The ferries carry horses, other animals, and exhibits as well as people to the fair.

While the fair may be the largest event, there are other cultural events and ongoing functions which depend on the ferries. The famous Chilkat Dancers of Haines use the ferries exclusively in their regional tours. They report that approximately 25% of their audience for Haines performances stem from the ferries. Also, there is an annual drama festival and competition in the summer which draws people to Haines by ferry.

As with most other communities served by the ferries, school travel relies greatly on the ferry system. 90% of student travel from Haines is via ferry. The purposes include travel to the annual music festival (this year held in Ketchikan) and a foreign language festival in addition to athletic events. Choosing ferry travel over air is a matter of safety more than cost, according to the high school principal.

Finally, but not least, there are numerous ongoing people services and functions which depend upon the ferries in a manner which makes life in this and other smaller Southeast communites more manageable. There are only two doctors in Haines, one of which also serves Skagway. There is no hospital. People from both communities depend on the ferries for transportation to Juneau for medical treatment unless an emergency exists. Also, periodic visits to Haines are made by a veterinarian, an optometrist, and a chiropractor, all of whom use the ferry as they carry with them a fair amount of equipment. And, twice a month both the Public Defender and District Attorney along with a judge come to Haines for judicial proceedings. They usually fly, but schedule their visits according to the ferry schedule as a backup. The local magistrate estimates that it would cost the state approximately $1500/day should those three people get weathered in. Of course, as with Skagway and Hoonah, many residents depend upon the ferry to be able to travel to Juneau for consumer goods which are simply not available in their community. It is cheaper, safer, and more dependable than flying.

In this study and report, it appears to a significant degree that the importance of the ferries rises in inverse proportion to the size of the community. Haines happens to be the one example which demonstrates the rule most dramatically. The ferries quite simply are a major factor, not just to the economy, but to the quality of life.

748

SKAGWAY

The City of Skagway is located at the northern end of Lynn Canal. The current population is 790. It is 93 miles north of Juneau, 45 minutes by air and 6 1/2 hours by ferry. Like a great many other places in Alaska, it has had its economic ups and downs, but Skagway's history appears to have peaks and valleys which are both higher and lower than perhaps any other. Soon after its beginning, and at the height of the rush to the Klondike gold fields, Skagway (combined with nearby Dyea) was the largest city in Alaska (pop. 8500). Of course when the boom turned to bust, the population declined rapidly. Skagway might have turned into a ghost town were in not for the construction of the railroad in 1899. Eventually the railroad became the mainstay of the economy, transporting ore from the Yukon to Skagway to be loaded on ships, and tourists and freight north to Lake Bennett and Whitehorse. But the iron mines closed in 1981 forcing the railroad out of business in 1982. This put the very life of Skagway in jeopardy. But the opening of the Klondike Highway connecting Skagway with Whitehorse has given the town new vitality.

Now Skagway concentrates almost entirely on tourism and the ferries are an important component of this economy. 230,000 people visited Skagway last year. Skagway's population doubles in the Summer in an effort to accommodate their visitors.

While the vast bulk of tourists come by cruise ship, it is the visitors who come by ferry who spend money in local restaurants, hotels, service stations and grocery stores. This is because food and lodging is included in the cruise ship package. Thus, the 36,000 visitors who came by ferry in 1986 are an important component to these Skagway businesses. And, to an increasing degree, this component is not restricted to the Summer period. Skagway is working hard at encouraging Juneau residents to travel north for winter breaks. Since this winter is the first winter that the road to Whitehorse has remained open, visitors are being encouraged to come to Skagway for cross-country skiing or to go to Whitehorse. Due to the winter opening of the road, those business remaining open all report increased winter business. Of course, the ferries play an important role in making the increased winter traffic possible.

The opening of the road also means that tourists traveling north with their car now have the option of disembarking at Skagway. Thus, Skagway now joins Haines as an entry point for travel to the interior and Canada. The 1985 Port Traffic Summary Data indicates that 29,577 passengers and 5,731 vehicles embarked from Skagway. 31,522 passengers and 6,402 vehicles disembarked. Presently, (March 1987) Skagway receives four main-

line ferries/week, and one visit by the Le Conte. In the summer, service increases to five mainline ferries while service by the Le Conte remains about the same.

Like other Southeast communities, Skagway depends on the ferry system for its basic transportation needs. The ferry offers a low-priced, dependable means of transportation to Juneau with its greater selection of consumer goods and services. Since Skagway is situated in a narrow valley with steep mountains on either side, it receives winds from the north, especially in winter, which are severe. The winds make flights into Skagway uncomfortable and at times impossible. The ferry offers a dependable option. Most people schedule their departures according to the ferry schedule, so that even though they may plan to fly, they will not be stranded by a flight cancellation.

Skagway's health professional is a Physician's Assistant, with a doctor from Haines visiting once every two weeks. The ferry is an important link between Haines and Skagway for the transfer of medical supplies, drugs, and personnel. If people need more medical services than are available in Skagway, they usually travel to Juneau, and often by ferry.

Given the recent efforts by Skagway businesses to attract winter business, buoyed by the opening of the road for winter traffic, people in Skagway are naturally disheartened at the prospect of decreased ferry service. For it is the current level of ferry service which largely makes it possible for the winter business to grow. That is, the appeal is being made to Juneau residents for a winter foray to Skagway and Whitehorse, and such a visit by car necessarily involves use of the ferries.

V.

RECOMMENDATIONS AND FINDINGS

RECOMMENDATIONS AND FINDINGS

The intent of this section is to provide a helpful perspective of ways to improve our Alaska Marine Highway System (AMHS). We intend no offense. Indeed, this section, like each of the others is to lend assistance.

From the beginning, the goal of the AMHS has been to allow residents of Southeast access to the same transportation opportunities as those residents of areas on maintained road systems. The service has been treated fiscally as lump sum appropriations, turned over to an administrator for disbursement, much like other passthrough programs such as Education Foundation, Municipal Assistance, and Revenue Sharing. But there is a major difference: school districts and local governments statewide are not able to meet their own funding needs. For that matter, neither is the State's land based highway system. But the AMHS on the other hand, is entirely capable of providing most of its own revenues. It has in the past, and studies indicate that the system has the potential, in the short-term (within five years) to provide from 55 to 60 per cent of its operating costs through system receipts.

This potential, however, is dependent upon the continuation and expansion of service. The system generates no revenues sitting off-line at dockside, and in some cases may cost the system more than when operating and generating revenues. The system is a long way from realizing its revenue potential. The solution, however, does not lie in a change of schedule or reduction of service. It lies in necessary changes to the delivery of those services, specifically day-to-day operation, manning requirements, public perception, and management. The following are some areas revealed during this study where significant improvements could be made:

(1) Advisory Board

Foremost among our suggestions is that the Legislature and Governor form a small advisory board to work with the AMHS to develop goals and implement strategies over the next three years. This recommendation cannot be overstated. The board could well serve as the ingredient necessary to make the AMHS the paradigm of marine transportation and the backbone of economic development. The small board should be comprised of transportation and marketing professionals, legislators, and users.

(2) Vessel Lay-Up

One item that should play an important role in the decisions on funding levels are vessel lay-up costs and the amount

of time vessels spend in port for maintenance. Here is a listing of overhaul costs per week for each vessel, shown as a percentage of its weekly operating costs:

Aurora - 51.4%	Tustemena - 65.5%
Chilkat - 82%	Bartlett - 90.8%
LeConte - 49.8%	Columbia - 71.1%
Matanuska - 66.1%	Malaspina - 42.9%

Lastly, the Taku has a percentage of 50.3%.

If you accept the validity of the 1984 Task Force Report that the system could be providing 55 to 60 per cent of its own funding within five years, then only on the Malaspina would it cost significantly less to lay-up for maintenance than to operate. Further, the time periods for lay-ups for maintenance seem to be excessive. They range from a five week maintenance period for the Chilkat to 19 weeks for the Columbia. By contrast, the cruiseship Stardancer lays up for 8 days per year. All other maintenance is done on board, during operation.

Our recommendation is that the Legislature and Governor establish a five year series of attainable revenue goals as a percentage of operating cost, and that these goals be evaluated along with actual experience prior to each fiscal year appropriation. In this manner, the Legislature can encourage the system to eliminate those areas of apparent excess cost, such as the maintenance time on vessels.

(3) Inventory Control and Purchase of Provisions

Perhaps the most common complaint has been the warehousing of supplies, especially foodstuffs, and the system's inability to track those provisions. We came across a report dated August 4, 1983 from Gerald Wilkerson to members of the Legislative Budget and Audit Committee regarding an audit of AMHS warehouses in Seattle and Juneau. The State Acccunting System (SAS) records for the inventory at the Seattle warehouse showed the Seattle inventory at $230,621.49; while the warehouse records showed inventory at $87,161.18, a difference of $143,460.31. Acting Deputy Commissioner Eugene Black attributed the discrepancy to inadequate reconciliation procedures between the AMHS warehouses and the State Accounting System. Indeed, there were consistent diferences between other AMHS records and the SAS. The Seattle finding stands out, however, because of Governor Sheffield's AHMS Task Force, which was conducting its ispections during the same general time period. In its official report dated April, 1984, the Task Force had the following to say about its inspection of the Seattle warehouse:

> The warehouse space at Pier 48 currently leased by the system is not being utilized to its fullest capacity. In addition, the main warehouse is disorganized with little control in effect. Both front and rear doors to the main warehouse were open with vehicles entering unrestricted. There appears to be excess warehouse capacity and minimal control of the main warehouse area.

In the same audit report, Wilkerson also points out another shortcoming that we feel warrants immediate attention. Wilkerson states:

> Juneau warehouse records do not provide historical detail of inventory transactions which would show all purchases, adjustments, and issuance of inventory items. By not having this detail, the disappearance of inventory and subsequent adjustment of records could go undetected.

Black responded that "the data processing program purchased for use at the warehouse does not have the capability of keeping transactions by item."

We are aware that the management is reviewing these cost saving measures. Our recommendation on this matter is that the Legislature and the Governor direct the AMHS to pusue "shipside" purchase of Provisions. That is, shifting to a system of little or no inventory. The benefits are several. There seems little justification for the amount of space currently being payed for in Seattle, especially if supplies were to be purchased "shipside". Inventory could be more easily tracked because everything purchased would actually make it onto the ship rather than be warehoused. It would also allow Alaska dollars to stay in Alaska, and help to support local economies along its routes, plus build a stronger relationship with the business community. An additional effort should be made to evaluate the current procedures for the purchase of fuel by AMHS. This particular purchasing strategy needs a review beyond our budget and timetable. However, it is equally important and seems to be an area which has been neglected. It is a complex question and entails cost comparisons of food purchase alternatives and warehouse efficiencies.

(3) <u>On-Shore Ship Services</u>

The system seems to have little or no control over docking costs, and certainly no consistency in approach. One

community charges the system $600 every time they tie up a boat, while another community provides the service gratis, in recognition of the importance of the ferry to the community. We do not suggest there is no reasonable explanation, we simply do not have one. A similar problem exists with on-shore agents at the various ports of call. Some are AMHS employees, some are contract agents. Some are dedicated to their work and represent the ferry system very well. They keep regular office hours, sell tickets, meet ships, help with tie-ups etc. Some (more likely to be contract agents) keep minimal staff and minimal office hours, do a poor job on-shore costs (such as tie-ups) that are billable directly to the AMHS, do not present a good impression to passengers, and collect a higher percentage of ticket sales than do travel agents.

Our recommendation is that the Legislature and Governor direct the AMHS to determine the most cost-effective method of handling on-shore services, and further direct that those costs and methods should be as consistent as possible throughout the system. Further, that the system should function within a strict set of guidelines to ensure a consistent level of service at a consistent cost.

(5) Ferry Freight

We found a tremendous dependence by some businesses on the ferry system for freight service, but also received many complaints regarding practices on the cargo deck that often cause inconveniences to clients. There was expressed to us a feeling that the AMHS did not consistently recognize the importance of their commercial clients as a source of revenues. One example given is that the system does not enforce its prepayment requirement on vehicles. The result is that commercial opportunities are lost when a passenger vehicle cancels, because there is no incentive for the person cancelling to notify the AMHS. There is then no opportunity for the space to be filled, though there may be a commercial carrier who would desire the space.

Our recommendation is that the Legislature and Governor instruct the AMHS to consider methods of maximizing revenues from commercial freight users through adjustments in scheduling or lay-up schedules so as to "cater" to commercial clients during periods of high freight volume, such as those noted in the community sections of this report.

(6) Promotion and Marketing

The AMHS is the largest public water transportation system in the United States. Southeast Alaska is one of the nation's major tourist destinations. In a recent survey, 58 percent

of all respondents identified the ferry system as their preferred method of travel to Alaska. Yet until just four months ago, very little effort was made at promoting the system "outside", and even less within Alaska. If the AMHS is to survive without dramatic reductions in services, major sources of revenue have to be identified. There is very nearly unlimited potential for "selling" the system, but several changes do need to occur to realize its tourism potential. We believe this can occur in concert with private enterprise, particularly during the winter months.

Our recommendation is that the Legislature and Governor instruct the AMHS to actively pursue changes within the reservation system that will expedite that system. Areas to be considered should include contracting out the reservation function or the training of the staff to experienced professionals within the travel industry; transferring reservations onto one of the major airlines computer systems so that no extra equipment would be needed by travel agents to write tickets for the ferry system; increase the commissions on tickets to at least minimum industry standards; actively recruit and pursue private/public partnerships in the marketing of the system; work closely with the State Division of Tourism for promotional purposes; initiate efforts to improve the impression the system presents at its Seattle and Prince Rupert terminals; provide training to employees in public contact positions, both on-shore and on-ship. Finally, the Legislature and Governor should urge the management and employees to help realize its potential.

(7) Operations

This brings us to our final "operational" recommendation, and the most common issue we found among systems users. We recommend that the AMHS conduct a thorough, comparative review of all contract provisions with organizations representing employees of the system. Further, that special attention be paid to provisions relating to manning requirements, seniority, training programs, assignment of duties, annual leave, sick leave, penalty and overtime compensation, ship-based versus shore-based compensation and benefits, call-out practices, and residency requirements. The various contracts should be consistent in the different provisions. In addition, a similar review should be conducted of the cost of administering the system, and appropriate recommendations made. The findings and recommendations of this contract review and the administrative review should be implemented at the earliest opportunity, in order to help stabilize the system's operating expenses at a level that will assure continued Legislative support. The labor forces of the AMHS are the element primarily responsible for the successes of the system and

maintaining its effectiveness through recent turmoil. They must be full partners in meeting the current challenges.

The conclusions reached by our research lead us to believe that much of the expense in operating the AMHS is not inherent in the ferry service itself. It appears rather to be entrenched in the delivery of that service by the AMHS. Ferry loads are adequate and the system is being used. For that reason, every effort should be made to avoid a reduction in actual service. By the same token, it is imperative that every effort be taken to encourage the system to streamline its delivery of service in an effort to increase revenue, without sacrificing its committment to basic transportation needs of all Southeast residents. It would be truly unfortunate if any reduction in funding should result strictly in a commensurate reduction in service without regard to other areas of the system. We see the decisions made this session as decisions affecting the entire future of the AMHS.

We feel strongly that there are quantifiable ways of both reducing the cost of operation, and at the same time increasing revenues. We urge your support of funding levels that will guarantee the continuation of the essential service level currently being provided by the AHMS. By the same token, we implore you to adopt an aggressive handling of the system's managerial and operational deficiencies. On no level of management theory have we found justification for allowing a billion dollar infrastructure to sit idle. It would be a questionable business decision to do so, and absolutely unacceptable as a matter of public policy. We urge the legislature and governor to fund the AMHS for FY 88 at a level of 62.6 million, and to adopt intent language that service levels be maintained. Since this is the first year of the session, we would also encourage the governor and the legislature to set some General Fund net operating goals for the AMHS for FY 88. A report from management on the status of that effort, with specific citations, should be requested for delivery to the Legislature by the first day of April, 1988.

Thank you for your consideration. We believe that a strong directive from the legislature and Governor to the management of the AMHS, combined with a maintenance level appropriation for FY 88, can assist the AMHS to make great strides toward ensuring that the system will continue to provide adequate levels of service to the State in the future. We do not pretend or suggest that all of our recommendations are absolutes. There is no claim that we have all the answers, but we believe in the viability and future of the ferry system.

strides toward ensuring that the system will continue to provide adequate levels of service to the State in the future. We do not pretend or suggest that all of our recommendations are absolutes. There is no claim that we have all the answers, but we believe in the viability and future of the ferry system.

A RESOLUTION BY THE SOUTHEAST CONFERENCE
RESOLUTION #87-1

WHEREAS, the Southeast Conference has completed a comprehensive review of the Alaska Marine Highway System's critical importance to Alaska communities; and,

WHEREAS, Alaska's rugged coastline prohibits road access to all but two of Southeast Alaska's twenty-four municipalities and boroughs; and,

WHEREAS, Southeast Alaska's severe and unpredictable weather frequently prohibits air access to those municipalities; and,

WHEREAS, the Alaska Marine Highway System is the foundation of Southeast Alaska's economy; and,

WHEREAS, the Alaska Marine Highway System is the primary and only dependable mode of transportation in Southeast Alaska; and,

WHEREAS, the Alaska Marine Highway System also provides a significant means of transportation to Southcentral and Interior Alaska that effects their economy; and,

WHEREAS, the Alaska Marine Highway System is critical to Southeast Alaska's fishing, timber, tourism, and retail industries; and,

WHEREAS, the Alaska Marine Highway System is also critical to the delivery of human services, such as health care and education; and,

WHEREAS, any reduction in the level of service in Southeast Alaska would have a dramatic affect on day-to-day life in Southeast;

THEREFORE, BE IT RESOLVED that the Southeast Conference respectfully urges Governor Cowper and the Fifteenth Alaska State Legislature to accept and implement to the maximum extent practical the recommendations presented by the Southeast Conference in the report entitled "The Alaska Marine Highway System: The Community Perspective;" and,

BE IT FURTHER RESOLVED that the Alaska Marine Highway System maintain its current level of service and be funded by an authorization of $62.6 million for fiscal year 1988.

Adopted by the Southeast Conference on the 7th day of April, 1987.

Ernest Polley, President

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE CONCURRENT RESOLUTION NO. 8 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

Relating to levels of service by the Alaska Marine Highway System.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS interstate highways play an integral role in the commerce of the state and the United States; and

WHEREAS the Alaska Marine Highway System is used by residents of the Southeastern, Southcentral, and Interior Regions of the state as an interstate and intrastate highway; and

WHEREAS the residents of Southeastern Alaska have assented to a less convenient manner of transportation due to the high cost of constructing roads and the limitations, imposed by geographic circumstances, upon road construction; and

WHEREAS the Alaska Marine Highway System is used by shippers to transport produce and other essential goods from Seattle to the Southeastern, Southcentral, and Interior Regions of the state, thus providing retailers and consumers with these goods in the most timely manner possible; and

WHEREAS, in the winter months, approximately 40 percent of the users of the Alaska Marine Highway System traveling between Seattle and Haines are destined for the Southcentral and Interior Regions of the state; and

WHEREAS the closure of, or reduced service on, a highway during winter jeopardizes the tenuous winter economy of communities in the state; and

WHEREAS the proposed reductions in the winter schedule of the Alaska Marine Highway System could severely damage the economy of communities dependent upon the Alaska Marine Highway System for the reliable and continuous supply of produce and other essential goods and for transportation

services;

BE IT RESOLVED that the Alaska State Legislature respectfully requests the Governor to direct the Department of Transportation and Public Facilities to maintain the operation of the Alaska Marine Highway System at the present level of service.

April 24, 1987

Be it resolved that the Alaska State Legislature respectfully requests the Governor to direct the Department of Transportation and Public Facilities to maintain the operation of the Alaska Marine Highway System at the present level of service.

COMMITTEE CALENDAR:

HCR 9: Relating to the expeditious redesign and reconstruction of Hyer Road in the Matanuska-Susitna Borough.

SB 118: "An Act relating to access to public buildings and facilities by the physically handicapped, aged, and infirm."

FOR THIS MEETING YOU HAVE:

A folder on HCR 9 that includes:
* a copy of HCR 9
* a fiscal note from DOT/PF
* letters of support
* a resolution from the Mat-Su Borough
* letters from DOT/PF
* a petition concerning Hyer Road

A folder on SB 118 that includes:
* copy of SB 118
* a fiscal note and position paper from DOT/PF
* a letter from Gov. Cowper to Sen. Faiks

Fiscal Note Analysis
HCR 9

1. Current Status

Hyer Road connects the Parks Highway and the Palmer-Wasilla Highway in the Matanuska Valley. The road is narrow and has many curves and steep hills. Due to subbase problems, the road is difficult to travel during spring breakup. As this bill states, Hyer Road does not meet current State design standards for horizontal and vertical curvature. In this respect, it is similar to many other roads maintained by the Department of Transportation and Public Facilities (DOT&PF) in the Matanauska-Susitna Borough and throughout the State.

2. Reconstruction Costs

The reconstruction and paving of Hyer Road to meet current State standards is expected to cost in the range of $4-5 million. Since Hyer Road is not eligible for Federal funding, the total cost of these improvements would need to be provided by non-Federal sources. The first stage in the reconstruction of this road would be the project's design, which is estimated to cost approximately $300,000. Once the design has been completed, an accurate cost estimate for reconstruction of this road can be made.

3. Maintenance Costs

It is estimated that maintenance on this road would run approximately $17,000 annually. With declining revenues, the Department will not have funds to maintain this road, so any maintenance activities may have to be picked up by the Matanuska-Susitna Borough. Maintenance costs for this particular road are estimated at $3,400 per lane mile multiplied 5 lane miles equals $17,000.

4. Other Information

Each year the DOT&PF develops a Six Year Capital Improvement Program (CIP), which identifies our recommended transporation improvement priorities and their funding schedule. In developing our budget recommendations, we work with the local governments to insure that their transportation improvement priorities for State maintained roads are given careful consideration. During our meetings with the Matanuska-Susitna Borough officials, the reconstruction of Hyer Road was not identified by the Borough as one of their highest improvement priorities for State maintained roads.

BOROUGH ASSEMBLY

February 23, 1987

The Honorable Curtis Menard
Representative
State of Alaska
Pouch V
Juneau, Alaska 99811

Dear Representative Menard: Curt

Thank you for your letter concerning Hyer Road. Hyer Road did not appear on the Borough's legislative priority list because the information did not appear before the Assembly during the period of time we prepared the list. However, once it came before us, action was taken in support of the upgrading of Hyer Road.

We do meet with DOT planning people on a regular basis and have indicated that Hyer Road should be on the CIP list. We will continue to work on seeing that Hyer Road becomes a higher priority. As a matter of fact, DOT'S CIP was fairly well identified before we did get Hyer Road added to it. Granted, it was not a high priority on the list, but, we will continue to work toward getting the job done.

Thank you for your efforts. We appreciate you.

Sincerely,

Dorothy

RE: Redesign & Construction of Hyer Road

Dear Governor Cowper:

The Matanuska-Susitna Borough Assembly adopted Resolution No. 87-10 on February 3, 1987 supporting necessary funding for redesign and construction of Hyer Road, a State maintained road.

A copy of the resolution is enclosed for your information.

Sincerely,

Dorothy A. Jones, Mayor
Matanuska-Susitna Borough

Requested by: Petition

MATANUSKA-SUSITNA BOROUGH
RESOLUTION SERIAL NO. 87-010

A RESOLUTION OF THE ASSEMBLY OF THE MATANUSKA-SUSITNA BOROUGH SUPPORTING NECESSARY FUNDING FOR REDESIGN AND CONSTRUCTION OF HYER ROAD.

WHEREAS, the overall design of Hyer Road is unsafe and jeopardizes the health and well being of motorists and does not meet State road design specifications relating to grade and horizontal and vertical curve distances; and

WHEREAS, Hyer Road is the only collector road feeding traffic from residential areas adjoining Hyer Road to either the Parks Highway or the Palmer-Wasilla Highway; and

WHEREAS, Hyer Road is centrally located in one of the highest residential growth areas in the Mat-Su Valley and there is an immediate and identifiable need for additional, safe, traffic feeder roads between the Parks Highway and the Palmer-Wasilla Highway as an interconnecting link to Bogard and Trunk roads; and

WHEREAS, a petition containing the signatures of 240 residents of the Matanuska-Susitna Borough has been received requesting the redesign and construction of Hyer road;

NOW THEREFORE, BE IT RESOLVED by the Assembly of the Matanuska-Susitna Borough that they support necessary funding for redesign and construction of Hyer Road; and

BE IT FURTHER RESOLVED, that copies of this resolution be forwarded to The Governor of the State of Alaska, the Department of Transportation and Public Facilities, Senator Jalmer Kerttula, Senator Mike Symanski, Representative Ron Larson and Representative Curtis Menard.

PASSED AND APPROVED by the Assembly of the Matanuska-Susitna Borough this 3rd day of February, 1987.

March 17, 1987

The Honorable Curt Menard
Alaska State House
P.O. Box V
Juneau, Alaska 99811

Dear Representative Menard:

Thank you for forwarding a copy of Mr. Schwaderer's letter regarding Hyer Road.

I agree with Mr. Schwaderer that the first step to bringing Hyer Road up to state standards is the project design. Our estimate for the design phase is $300,000. Once the design has been completed, an accurate cost estimate for reconstruction of this road can be made. Our estimate of $4 or $5 million dollars is based on reconstructing and paving Hyer Road to state standards. Since Hyer Road is not eligible for federal funds, all funding will have to be from state sources.

I am unable to comment on the cost of Matanuska-Susitna Borough projects. However, I am informed that during our meetings this year with the Matanuska-Susitna Borough officials, Hyer Road was not identified by the Matanuska-Susitna Borough as one of their highest improvement priorities for roads on the state maintained system.

Please contact me again if you have questions regarding this matter.

Sincerely,

Mark S. Hickey

February 9, 1987

The Hon. Curtis Menard
Pouch V
State Capitol
Juneau, Alaska 99811

Dear Rep. Menard:

Thank you for your letter concerning future improvements for Hyer Road. I signed this petition along with my neighbors because we now endure our share of dust during dry periods and because the present alignment and grades include segments where inadequate sight distances cause hazardous driving conditions. However, I would like to take this opportunity to express my opinions concerning both Hyer Road and the Borough road program in general.

First of all the Department of Transportation & Public Facilities' estimate of four to five million dollars to improve Hyer Road to current Federal-aid Secondary or Borough Arterial Road standards appears to be grossly excessive. During 1986 the Borough Department of Public Works graded and paved 2.28 miles of East Bogard and Moffit Roads to essentially the same standard as the Palmer-Wasilla Highway for approximately $1,100,000 including the cost of engineering and construction. That project involved crossing two swamp areas and several rolling hills with heavy grading comparable to the work involved for Hyer Road. One mile of the project was almost entirely on new alignment. Since Hyer Road is considerably shorter than the Bogard/Moffit project the design and construction costs should be more in the magnitude of that project than the four or five million dollar range provided by DOT&PF.

It is obvious that suitable alignment providing the required sight distances cannot he achieved within the existing Hyer Road right-of-way. Neither can the cost of acquiring sufficient right-of-way be ascertained with any degree of accuracy until such time as a new alignment has been determined from engineering studies. However, some right-of-way obviously exists at present and even an additional mile of new right-of-way 100 feet in width would involve only twelve acres of land. The Borough has been acquiring rural acreage at costs ranging from $3,000 to $4,000 per acre. Unless it becomes necessary to acquire someone's home the right-of-way cost would appear to be in the magnitude of $50,000. If a house must be acquired these costs might be increased to $200,000 or $250,000.

Gravel is readily available along Hyer Road as well as from nearby sources. There are at least two commercial asphalt plants within short haul distances. Because many contractors are out of work unit bid prices for road construction have recently been low and there is little reason to believe that such prices will not prevail during the next few years. The DOT&PF estimate thus appears to be as much as triple the costs which might be anticipated on the basis of the Bogard/Moffit project. Even if circumstances increased those costs by as much as 50 percent the State's projection appears to be at least double a realistic estimate.

So far as timing of the work is concerned construction could not occur before 1988, and 1989 is much more realistic. Were funds to be provided for survey and design during this legislative session they would not become available until July 1st. The Borough might then advertise for engineering services by August 1st, receive proposals by September 1st, and issue a notice to proceed by mid-September. Time required for the field survey, preliminary design and advertisement would be unlikely to permit a location public hearing much before the end of the year. If there were no significant objections to the proposed alignment State and Borough approval of the location might be received in time for an appropriation for right-of-way, and possibly construction, during the 1988 session. However, since these funds would not likely become available until July 1988 much of that season would be lost to right-of-way acquisition activities. Possibly a construction contract could be advertised in time to accomplish the initial work in the fall of 1988. However, the Department of Fish and Game will limit the Wasilla Creek crossing work to the period between May 15th and July 15th. It is then apparent that stream crossing and paving activities cannot occur before the 1989 construction season at the earliest.

Because of the long lead time involved in any highway construction project it is clearly necessary during this legislative session to allocate only funds sufficient for the preliminary engineering phase. An amount more in the magnitude of $150,000 should be adequate rather than the four to five million dollars indicated by DOT&PF. This would permit the necessary preliminary work to be accomplished in advance of the 1988 session. By that time the costs of right-of-way and construction could be determined to a higher degree of accuracy.

While from the personal standpoint I would like to see Hyer Road included in the Borough capital improvement program to the extent of preliminary engineering authorization there are other routes for which engineering has already been acc-

omplished and which I believe should be higher on the priority list for construction funding. Foremost among these projects is Trunk Road. The alignment of this route has been approved by both DOT&PF and the Borough assembly, design is essentially complete, and only appropriations for right-of-way and construction are necessary to begin this much needed improvement.

Other roads which should be high on the Borough priority list include those which comprise the alternate route from Houston to Palmer. This route includes four projects for which it is understood the design is complete or for which the alignment has been approved by the Assembly. These use segments of, or connect with, several existing roads to comprise the route. Included are projects identified as the Parks-Pittman Road, the Pittman-Yolanda Connector, the Seward Meridian Road, Phase III and East Bogard Road from Moffit Road to the Glenn Highway.

Another road which warrants early completion is the Willow Creek Road connecting the Parks Highway with the Susitna River at Willow. This road has been graded for 2.25 miles but has not been completed for lack of funds. The design is complete, right-of-way has been acquired and the wetlands permit issued by the Department of the Army. This road will provide public access to the river below the mouth of Willow Creek at a location where the Division of Parks has planned a boat launching facility. About 1.75 miles of grading is required to reach the river and four miles of surfacing. If completed this facility will serve not only residents of the valley but the many visitors seeking access to the Susitna and connecting rivers.

In summary, I support my neighbors' desire to improve Hyer Road to the extent of an appropriation for preliminary engineering funds this year. However, funds for right-of-way and construction should be deferred until such time as they are needed and known to greater accuracy. Any road construction or right-of-way funds allocated to the Borough this year should be spent for Trunk Road, the Willow Creek Road and other projects mentioned above for which location approval has been received and for which design and right-of-way acquisition are in advanced phases.

Thank you for your interest in the road program.

Sincerely,

George C. Schwaderer

PHONE: (907) 465-3900

FEB 11 RECD

February 11, 1987

Dear Hyer Road Improvement Petitioner:

I have received a copy of a petition which you signed requesting the upgrade of Hyer Road and appreciate your interest in improvements to this road. As the petition states, Hyer Road does not meet current state standards for horizontal and vertical curvature. In this respect, it is similar to many other roads maintained by the Department of Transportation and Public Facilities (DOT&PF) in the Matanuska-Susitna Borough and throughout Alaska.

The reconstruction of Hyer Road to meet current state standards is expected to cost in the range of $4-5 million. Since Hyer Road is not eligible for federal funding, the total cost of these improvements would need to be provided by non-federal sources. The first stage in the reconstruction of this road would be the project's design, which is estimated to cost approximately $300,000. Once the design has been completed, an accurate cost estimate for reconstruction of this road can be made.

Each year, DOT&PF develops a Six Year Capital Improvement Program (CIP), which identifies our recommended transportation improvement priorities and their funding schedule. In developing our budget recommendations, we work with the local governments to insure that their transportation improvement priorities for state maintained roads are given careful consideration. During our meetings with the Matanuska-Susitna Borough officials, the reconstruction of Hyer Road was not identified by the Borough as one of their highest improvement priorities for state maintained roads. Accordingly, we recommend that you work with the Matanuska-Susitna Borough to ensure that the Hyer Road improvements are given careful consideration when the Borough develops its capital improvement priorities.

The department's Six Year CIP is presented to the Governor for his consideration when developing his budget recommendations to the state legislature for funding. The intent of the department's budget recommendations is to identify the highest statewide priorities for transportation improvements for various funding categories. The reconstruction of Hyer Road would probably be dependent upon obtaining state general fund money for this purpose. Due to the recent decline in general fund revenues available to the state, very few general fund transportation improvement projects were included in our budget recommendations. The reconstruction of Hyer Road was not included in our current CIP budget recommendations for state fiscal years 1988 - 1993.

Thank you for informing me of your concern for improvements to Hyer Road. We will give the reconstruction of Hyer Road careful consideration in our discussions with the Matanuska-Susitna Borough regarding the development of our future budget recommendations. However, the opportunity for DOT&PF to recommend the reconstruction of any non-federal aid state maintained roadways will be extremely limited until there is a significant improvement in state general fund revenues available for this purpose.

Thank you for your interest in the transportation needs of your area.

Sincerely,

Rocky Gutierrez
Commissioner

The Honorable Mike Szymanski, Alaska State Senator
William Snell, Deputy Commissioner, Central Region, DOT&PF

PETITION

WHEREAS, the overall design of HYER ROAD is unsafe and jeopardizes the health and well-being of motorists and does not meet state road design specifications relating to grade and horizontal and vertical curve distances, and,

WHEREAS, HYER ROAD is the ONLY collector road feeding traffic from residential areas adjoining HYER ROAD to either the Parks Highway or the Palmer - Wasilla Highway, and,

WHEREAS, HYER ROAD is centrally located in one of the highest residential growth areas in the Mat-Su Valley and there is an immediate and identifiable need for additional, SAFE, traffic feeder roads between the Parks Highway and the Palmer-Wasilla Highway as an interconnecting link to Bogard and Trunk Roads.

THEREFORE, the following individuals petition the Governor of the State of Alaska, the Commissioner of the Department of Transportation, Senator Jalmar Kerttula, Representative Curtis Menard, Representative Ron Larson, Representative Mike Symanski and the Matanuska Susitna Borough to declare HYER ROAD as substandard in design and therefore hazardous to vehicular traffic and to provide immediate support and funding for the redesign and construction of HYER ROAD.

Matanuska-Susitna Borough School District

Box AB PALMER, ALASKA 99645 (907) 745-4822

Bruce P. DeMond, Superintendent

January 12, 1987

Jean Campbell
Palmer Junior High
Palmer, AK 99645

Dear Mrs. Campbell:

It is my understanding that residents and users of Hyer Road intend to petition the Alaska State Department of Transportation to upgrade Hyer Road. The School District supports the intent of such a petition.

For years, school buses have traveled Hyer Road on a daily basis transporting students to and from Wasilla and Palmer schools. If it were possible, the School District would not use Hyer Road for school bus travel. However, the only access for the residential areas east or west of Hyer Road to the Parks Highway or the Palmer-Wasilla Highway is Hyer Road.

It is probable that the portion of Hyer Road that descends the bluff does not meet road design standards. In years past, when traffic volumes were limited, design deficiencies did not impact traffic safety as much as it does now. Not only has residential traffic in the area increased substantially in the last few years, Hyer is also used as a "feeder" road between the Palmer-Wasilla Highway and the Parks Highway. Three school buses travel Hyer Road this year, twice a day.

The DOT-PF capital improvements six-year plan reviewed by the Pupil Transportation Advisory Committee in November did not include Hyer Road. I will ask the Committee to consider a recommendation for upgrade of Hyer Road at the next meeting. The Committee's recommendation would be sent to the Borough Public Works Director. I will advise you of the Committee's action in this matter.

Sincerely yours,

Saundra C. Hutchins
Pupil Transportation Supervisor

1. Assumptions

It is assumed that the referenced Lazy Mountain/Wolverine Road is the same as the Clark-Wolverine Road found on areas maps (copy attached). The project discussed here would realign approximately one mile of a portion of the existing Clark-Wolverine Road from Huntley Road north along a section line identified as Diana Avenue. At the intersection with Clark Road, Clark-Wolverine Road would proceed in a northerly direction for approximately 2 1/2 miles to the Wolverine Canyon.

2. Status of Current Activities

With $187,500 in funding provided by the Matanuska-Susitna Borough, the Department is currently designing the realignment of a one mile section of Clark-Wolverine Road from Huntley Drive north along the section line identified as Diana Avenue. The cost estimate for realigning and paving this new section of roadway is $1,125,000.

3. Analysis of Construction Costs and Alternatives

As noted above, the realignment and construction cost of this new one mile section of Clark-Wolverine Road from Huntley north to Clark Road is estimated to cost $1,125,000. Of this amount $250,000 would be for right-of-way acquisition, $750,000 for construction, and $125,000 for paving. The north end of this section presents a special problem because of swampy ground.

There are two alternatives for improving the 2.5 mile section of Clark-Wolverine Road between Clark Road and Wolverine Canyon. A minimal maintenance project, which would grade and chip seal the 2.5 miles road on the existing alignment would cost approximately $400,000. A more intensive upgrade project would widen the road, realign problem areas, improve drainage, pave, and relocate utilities would cost approximately $1,000,000 per mile for a $2,500,000 total. The costs shown in this fiscal note reflect the $1,125,000 for the first section of road and $400,000 for a minimal maintenance project on the Clark Road to Wolverine Canyon section for a total cost of $1,525,000.

4. Maintenance Costs

The road maintenance cost is estimated to be approximately $27,000 annually. The $27,000 cost is determined by multiplying the 8 lane miles by an estimated $3,375 per lane mile.

5. Other Information

The realignment and reconstruction of Clark-Wolverine Road is not included in the DOT&PF Six Year Capital Improvement Program (CIP) due to very limited General Fund dollars. Besides the $187,500 in design funding provided by the Matanuska-Susitna Borough to design the realignment of the first section of this road, the DOT&PF has no other funding authorized for this project.

REGIONAL DIRECTOR, CENTRAL REGION

March 17, 1988

Re: Clark-Wolverine Road

3

The Honorable Curt Menard
Alaska State House
P.O. Box V
Juneau, Alaska 99811

Dear Representative Menard:

This letter is in response to your letter of March 4, 1988. Since 1979, the Department has received only one direct appropriation for Clark-Wolverine Road and that is the recent appropriation in Chapter 10 SLA 1988 for $50,000 for maintenance activities.

The Matanuska-Susitna Borough has received direct Legislative appropriations for this road. In late 1984 the Matanuska-Susitna Borough entered into an agreement with the department for a preliminary engineering project that would identify right of way needs for the relocation of Clark-Wolverine Road beginning at existing M.P. 1 and proceeding north along section line between Section 27/26 to end at approximately M.P. 3. Any remaining funds were to be used by Maintenance and Operations (M&O) beyond M.P. 3.

The PE effort is complete and plans for construction and right of way acquisition have been given to the Matanuska-Susitna Borough. Out of a $187,500 agreement approximately $35,000 is available for maintenance and operations activities.

Several public meetings have already been held with the Lazy Mountain Community Council and Borough representatives during the development of the plans to realign Clark-Wolverine Road and prior to handing the plans over to the Matanuska-Susitna Borough for funding considerations. Meetings were held in May and July 1986 and November 1987.

The realignment and construction cost of the new one mile section of Clark-Wolverine Road from Huntley North along Diana Road to Clark Road is estimated to cost $1,125,000 of this amount $250,000 would be for right-of-way acquisition, $750,000 for construction, and $125,000 for paving. The north end of this section presents a special problem because of swampy ground.

The realignment and construction this one mile section of Clark-Wolverine Road is not included in the Department of Transportation and Public Facilities (DOT&PF) Six Year Capital Improvement Program (CIP) due to very limited general fund dollars.

The Matanuska River Bridge on the Old Glenn Highway outside of Palmer is in the federally funded bridge replacement program. The replacement will occur as part of the Old Glenn Highway reconstruction project. Because the bridge will be on a new alignment it cannot be constructed prior to receiving Federal Highway Administration location approval for the Old Glenn Highway project. We are just beginning the preliminary engineering phase for this project which will include writing the environmental assessment. Replacement of the Matanuksa River Bridge is still several years in future.

Maintenance and operations will make spot repairs on the deck this spring or summer.

I trust this information will be useful to you. Please feel free to contact me again when you have questions.

Sincerely,

William R. Snell
Regional Director

Jane Seeman
Lazy Mountain Community Council
HC04 Box 9196
Palmer, AK 99645

Dear Jane:

I feel that community councils provide an important link between the Valley and my ability to represent you better.

For this reason, I have written to your President/ Chairman requesting a copy of your Council's minutes.

I will also be available for a teleconference with the Council at any time. It would provide us with a means for exchanging information. I would hear from you, and I could update you on legislation of interest.

I welcome your contact whenever I can be of assistance to you or the Council. I can be reached in Juneau at 465-2679. Please call at any time.

Warm regards,

Curt Menard
Representative

Dear Curt:

If you want to do Something for the dear people in Lazy Mt. you can "get on the stick" and get Money appropriated to Black Top the Clark-Wolverine Road - even if it's only ½ mile at a time. You and Ron and Elmer have got to do more than ASK for the Money - you have got to take a step further and actually get this we get it!!

(over)

How you do that, I do not know, and apparently neither do any of you because your requests never get any farther than just that, a request. The Lazy Mt Community Council was set up in 1992 specifically for the purpose of getting this Road Paved - that is all I care about personally. I am totally disgusted with all your efforts (legislative) if they can be called that, over the past 4½ yrs to get something done with this road. I'm sick and tired of all your promises! Yes, if you and your aides can there can do something constructive, besides promises and wanting to talk, talk, talk - would be interested in hearing from you again - Ten thousand dollars to placate us with a few more tons of gravel does not cut the ice with me.

Warm Regards,

Joe Seaman

Fiscal Note
HCR 13

1. Background

The 4.3 mile long Bethel Airport Road has been on the Federal-aid system since 1969 when the original construction took place. That project replaced a 4-wheel drive road and provided for the alignment and a gravel surface.

In 1970-1971 the road was paved. In 1972 the bridge at Brown's Slough was replaced. The last project in 1981-1982 was funded in Chapter 118 SLA 1980 for $2.5 million. This project consisted of replacing culverts in thaw settlement areas, insulating underneath to protect the permafrost, and an asphalt overlay of the road to a 24' surface width.

In 1986 the City completed a $287,000 shoulder widening project with the funding coming from a Transfer of Responsibility Agreement (TORA) with the Department.

2. Current Status

There are many pavement cracks and sections of the road are very uneven due to thawing and consolidation of the underlying silt permafrost. These problems are beyond Maintenance and Operation's ability to correct.

3. Reconstruction costs

The cost to reconstruct this 4.3 mile section of road is estimated to be $7,000,000. This would provide two 12 foot wide paved driving lanes as well as 8 foot wide shoulders. Approximately $500,000 would be required to design this project for major reconstruction. Even though this road is on the Federal Aid Highway System, with its relatively low traffic volumes (1,420 Average Daily Traffic), it would not compete well on a statewide basis for the limited federal funds because of the many other high priority competing projects. The Department currently has no funding to reconstruct this road.

4. Maintenance Costs

The annual maintenance cost for this 4.3 mile section of road is approximately $50,000. This is computed by multiplying the 8.6 lane miles by the estimated maintenance cost of $5,800 per lane mile for this road.

Dept. of Transportation & Public Facilities

Position Paper

3/4/87
MHH for

BILL NO: Bill No: HCR 13

APPROVED: Rocky Gutierrez
Commissioner

TITLE: Reconstruction of Bethel Airport Road

DATE: 2/27/1987

The Department of Transportation and Public Facilities (DOT&PF) agrees that there is a need to reconstruct the Bethel Airport Road. The current poor condition of the roadway is beyond the ability of our maintenance forces to correct. It is estimated that approximately $500,000 in design and $7,000,000 in construction funding would be needed to reconstruct this 4.3 mile road; however, the DOT&PF has no available funding for this purpose.

This road is on the Federal-aid Secondary System; however, its low traffic volumn (1,420 Average Daily Traffic) would not enable this project to compete well for the limited Federal highway construction funding because of the many other high priority projects throughout the State.

For further information call Susan Fleischhauer at 465-3900.

OFFICE OF THE COMMISSIONER

February 23, 1987

The Honorable Lyman Hoffman
House of Representatives
Alaska State Legislature
P.O. Box V
Juneau, AK 99811

Dear Representative Hoffman:

The following information and attachments are transmitted in response to a request from your office staff to Bruce Freitag concerning the Bethel Airfield Road.

I believe the route in question was placed on the Federal-aid secondary system at statehood, but the earliest records for it in our office are attached. In 1972 the Department of Highways revised their accounting system and gave this route a "CDS Log" number of 080000.

If additional information is needed please let me know.

Sincerely,

Mark S. Hickey
Deputy Commissioner
Operations

Re: Design, Construction and Maintenance of Roads on Ice-Rich Soils

Dear Representative Hoffman:

It is well known that road construction over ice-rich oil without special precautions results in thawing of the frozen soil often with severe settlement. These settlements are known to cause some of the worst highway maintenance problems in Alaska.

Methods That Work

Much of what has been learned over the last two decades in Alaska about road construction is based on monitoring of viable types of existing roads. From this information engineers have developed many methods that can be used to assure good road performance with lower maintenance costs. Some of these methods include use of the following:

* geotextiles - to segregate fine soil materials from structural fills, to bridge settlement zones and reduce differential settlement at roadway surface and to ensure insulation integrity in organic tundra overlay construction (i.e. Red Dog project).

* synthetic plastic honeycomb reinforcing sections - similar to that used in the Shishmaref airport construction.

* rigid insulation - between the embankment and natural ground to slow heat flow into frozen ground. The high strength closed cell rigid insulation provide the best performance.

* thicker embankment fill - when cost effective as an insulating layer. Typically, 1 ft. of soil has the equivalent insulating value of 1 inch of rigid insulation.

* culvert insulation - to slow thaw below culverts thus road settlement.

* adequate shoulder widths - to protect and insulate the roadway edge from settlement due to ambient temperatures and drainage along the road.

* positive drainage - to minimize thermal degradation at culverts and along the shoulders.

* heat pipes - to maintain frozen soil at site specific areas.

* painted surfaces - painting or paving roadway surfaces with white materials to reflect infrared from the sun. A white surface will reflect heat and reduce the temperature in the fill thus reducing thaw in underlying soil. Black surfaces absorb I.R. energy and increase ground temperatures.

Many of these methods can be used to repair and stabilize existing roads or to improve performance and reduce maintenance.

Repair

Road upgrade costs depend on many factors: availability of local building materials and equipment, present condition of the road surface and foundation, soil type, drainage, adequate right-of-way, etc. However, the first step towards developing any upgrade plan would be to prepare a preliminary engineering status and upgrade report listing problems, their extent and obtaining an engineer's opinion on what is required to upgrade the road. These studies can generally be performed by reviewing available data and conducting a site visit.

Example

The Bethel Highway (FAS 208) is an example of improper construction over ice-rich soil. It was built to substandard width and does not use many of the methods now commonly used for roads of this type; it has narrow shoulders, does not use thermal protection for culverts and was constructed with improper base gradation and surfacing. Shoulders are important because they help prevent thawing below the roadway edge. And thermal protection of culverts is important because it protects against thaw under the roadway.

Repair and upgrade of this road to minimum State standards is expected to cost $750,000 to $1,000,000 per mile because some construction materials must be shipped to the site from outside Bethel. However, after a preliminary study, methods may be developed which could more fully utilize near site materials thus reducing costs.

If I may be of any further assistance please call.

Sincerely,

PERATROVICH, NOTTINGHAM & DRAGE, INC.

March 4th, 1987

TO: Commissioner Mark Hickey

FROM: Representative Bette Cato

SUBJECT: HCR 13 - Representative Hoffman
Reconstruction of the Airport Road in Bethel

At the recent Committee meeting held on Monday March 2nd, 1987 the House Transportation Committee requested the following information from the Department:

a. Why is the fiscal note so high?

b. Why does the road not appear in the 6 year plan?

c. What was the departments rationale for taking this project out of the Federal funding request and placing it in with projects requesting general fund appropriations?

d. How did the department arrive at the $2 million per mile figure?

e. Basically, does the department plan new construction or is using part of the existing road feasible?

f. The fiscal note and plans provides for 8 ft. shoulders, could the department reduce the cost by construction of 4 ft. shoulders?

g. Does the construction plan include reusing the asphalt already there or are the plans to bring new asphalt to the construction site?

This resolution is scheduled for a second hearing on Monday March 9th. I would appreciate a representative from the department attending the meeting to answer the above questions.

Thank you

Bette

Representative Bette Cato
House Transportation Chairman

STATE OF ALASKA

STEVE COWPER, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

OFFICE OF THE COMMISSIONER

P.O. BOX Z
JUNEAU, ALASKA 99811-2500
PHONE: (907) 465-3900

March 9, 1987

HCR 13 - Relating to the expeditious redesign and reconstruction of the airport road in Bethel.

1. Why is the fiscal note so high? How did the department arrive at the $2 million per mile figure? The department should revise its fiscal note to reflect a savings from previous fiscal note by reusing existing materials. Would it be possible to lower reconstruction costs by providing for a 4 ft. shoulder width instead of 8 ft?

   The department is in the process of revising cost estimates for the road. Central Region Design and Construction is examining the road section by section to determine if existing materials could be reused in an effort to lower costs.

2. What is the department's rationale for taking this project out of the federal funding request and placing it in with projects requesting general fund appropriations, and why is it not listed in the 6-year CIP?

   Reconstruction of the Airport Road in Bethel was never included in the federal funding request because it does not meet the criteria the department uses to prioritize projects, and, therefore, cannot compete on a statewide basis with other projects being considered. With limited federal funds available each year, identified needs greatly exceed available funding. However, the department is in the process of determining whether or not the project would qualify for the "Federal 3-R Program" (rehabilitation, reconstruction, repaving). The criteria the department uses to determine federal funding priorities are attached.

3. Basically, does the department plan new construction, or is using part of the existing road feasible? Does the construction plan include reusing the asphalt already there or are the plans to bring new asphalt to the construction site?

   Again, in determining a new cost estimate for the project, the department will examine the possibility of reusing existing materials in an effort to lower the cost.

CRITERIA DOT&PF USES TO PRIORITIZE PROJECTS:

-Service Life

-Need to Continue Development of Previously Funded Project

-Post Construction Economic Benefits

-Impact on State M&O Costs

-Impact on Alaska Job Market

-Safety Improvements

-Functional Classification

-Type of Improvement

-Perception of Public Support

-Regional Importance

-Capacity

-Standards

THE DESIGN COST FOR THE RED DOG MINE ROAD PROJECT WAS A LITTLE OVER 1 MILLION DOLLARS. PROJECT DESIGN CONSISTED OF:

9 BRIDGES
500 CULVERTS
14 BARROW PITS (DIRT FOR ROAD USE)
60 ROAD MILES

THE OVERALL PROJECT COST FOR THE RED DOG MINE ROAD WAS $50 TO $60 MILLION.

THE BETHEL AIRPORT ROAD RECONSTRUCTION PROJECT CONSISTING OF 4.3 ROAD MILES WAS GIVEN A DESIGN COST OF $500,000 BY THE DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES.

THE DESIGN AND PROJECT COST COMPARISONS BETWEEN THE RED DOG PROJECT AND THE BETHEL ROAD PROJECT ARE WIDELY DIFFERENT. USUALLY THE DESIGN COSTS ARE +/- 5% OF THE TOTAL PROJECT COST. IN DOT/PF'S FISCAL NOTE FOR RECONSTRUCTION OF THE BETHEL ROAD, THE PROJECT DESIGN COST WAS STATED TO BE $500,000, HOWEVER WITH THE +/- 5% CALCULATION FOR DESIGN COSTS THE FIGURE SHOULD BE $350,000.

THE RED DOG PROJECT IS LOCATED IN A HARD PERMAFROST REGION AND THE BETHEL ROAD IS LOCATED IN A SALINE PERMAFROST REGION, THE DISCREPANCY IN PROJECT COSTS EXCEEDS REASONABLE EXPLANATION BY SITE DIFFERENTIALS. IF THE BETHEL ROAD WAS TOTALLY RECONSTRUCTED NOT USING ANY OF THE MATERIALS (I.E. SAND AND GRAVEL) THAT ARE ALREADY AVAILABLE FROM THE OLD ROAD THE COST STILL SHOULD NOT EXCEED $1 MILLION PER ROAD MILE. A REALISTIC PROJECT COST FIGURE FOR THE AIRPORT BETHEL ROAD WOULD BE APPROXIMATELY +/- $4.3 MILLION, WITH A DESIGN COST OF APPROXIMATELY +/- $215,000.

AS FOR PRIORITY RANKING - THE BETHEL AIRPORT ROAD HAS NOT RECEIVED FEDERAL AID FUNDS SINCE 1972. POPULATION SHOULD NOT BE THE UNDERLYING CRITERIA IN PROJECT RANKING WHEN DETERMINING THE WORTH OF A PROJECT, BUT THE IMPORTANCE OF THE ROAD TO THE PEOPLE IN THE REGION AS WELL AS THEIR SAFETY IN USING THE ROAD.

1. Background

The 4.3 mile long Bethel Airport Road has been on the Federal aid system since 1969 when the original construction took place. That project replaced a 4-wheel drive road and provided for the alignment and a gravel surface.

In 1970-1971 the road was paved. In 1972 the bridge at Brown's Slough was replaced. The last project in 1981-1982 was funded in Chapter 118 SLA 1980 for $2.5 million. This project consisted of replacing culverts in thaw settlement areas, insulating underneath to protect the permafrost, and an asphalt overlay of the road to a 24' surface width.

In 1986 the City completed a $287,000 shoulder widening project with the funding coming from a Transfer of Responsibility Agreement (TORA) with the Department.

2. Current Status

There are many pavement cracks and sections of the road are very uneven due to thawing and consolidation of the underlying silt permafrost. These problems are beyond Maintenance and Operation's ability to correct.

3. Reconstruction costs

The DOT&PF's earlier cost estimate to reconstruct this road was $7,000,000 which would provide two 12 foot wide paved driving lanes as well as 8 foot wide shoulders. $500,000 was estimated to design this project.

A close review of this project indicates that a lower cost federally funded project might be possible. This would be through the federal 3R (resurfacing, restoration, and rehabilitation) program; however, the department would have to receive a Federal Highway Administration (FHWA) waiver to reduce the roadway shoulders and pave the surface to two 12 foot driving lanes with 2 foot wide paved shoulders. A waiver might be justified by the presence of permafrost because the permafrost may thaw faster and in a larger area if shoulders were added.

Assuming the department developed a 3R project, the following would be provided:

- new pavement, 28 feet wide
- erosion control along the most critical slopes
- leveling with gravel as needed
- minor replacement of culverts

The total cost with a 3R project is estimated at $5.0 million with $510,000 of this being for preliminary engineering (PE). The PE money will allow the department to better define the geotechnical problems and propose a long term solution. With this information, we can then discuss with the FHWA the scope of the project and whether or not a 3R project is appropriate. It may be that a 3R project should be done on a periodic basic until the roadway stabilizes. Use of existing materials will be looked at during P.E. Depending on the condition, it may or may not be economical.

4. Maintenance Costs

The annual maintenance cost for this 4.3 mile section of road is approximately $50,000. This is computed by multiplying the 8.6 lane miles by the estimated maintenance cost of $5,800 per lane mile for this road.

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: All Deputy Commissioner

DATE: August 29, 1986

FILE NO:

TELEPHONE NO: 465-3900

SUBJECT: FY88 Capital Budget Instructions

FROM: Warren S. Sparks
Deputy Commissioner
Headquarters

Attached are instructions for development of the FY88 Capital Improvement Program. OMB instructions are the basic instructions for our FY88 capital budget. The remaining instructions in this package are the finalization of drafts previously distributed to your staff.

Completed CP-1 forms (or the computerized equivalent), scoring summaries and worksheets, and the appropriate data diskettes are expected here at Headquarters by September 19, 1986. We have an agreement with OMB that the FY88 capital budget will be due there on October 13.

Attachment

Distribution:

Joe Camp, Deputy Commissioner, Marine Highways
H. Glenzer, Deputy Commissioner, Northern Region
Jon Scribner, Deputy Commisioner, Southeast Region
William Snell, Deputy Commissioner, Central Region

cc: Ron Lind, Director, Plans, Programs & Budget, Headquarters
John Martin, Chief, Planning, Northern Region
Stan McAlister, Planning Supervisor, Marine Highways
Ray Meketa, Chief, Planning, Southeast Region
John S. Tolley, Chief, Planning, Central Region

Instructions for Development of FY 88 Capital Budget

This year the capital budget process incorporates an obligation plan for both federal highways and federal aviation projects. The object of this exercise is to produce a list of expected plus alternate project phases which will be obligating federal funds between July 1, 1987 and September 30, 1988. The FY88 capital budget should include no requests for federal authorization which are not in the Obligation Plan for FFY88.

The match amount for FY87 was developed using the estimated federal apportionment for FFY87. This means that, because of overprogramming, not all federal projects were necessarily provided general fund match. The intention was to match those projects which would obligate federal funds during this year. For FY88 we intend to request federal authorization for only those project phases requiring authorization or supplemental authorization to obligate FFY87 or FFY88 federal funds (in the expected plus alternate project list). The match request for 1988 will be sufficient to provide match required to obligate the federal funds through FFY88. Requests for match will be prepared by Headquarters.

Due Date

Materials required in these instructions are due at Headquarters by September 19, 1986.

Fiscal Guidelines

PROPOSED GENERAL FUND MATRIX FY 88
(Dollars in millions)

	CE	NO	SE	MHS	HQ	TOTAL
Minimum Programming Levels						
Advance Project Definition	$0.4	$0.2	$0.1	$0.05	$ —	$0.75
Aviation	0.5	0.4	0.1	—	—	1.0
Erosion Control	1.0	1.0	—	—	—	2.0
Marine (Ports and Harbors)	1.0	0.3	1.0	—	—	2.3
Facilities*	1.0	1.5	1.0	0.5	—	4.0
Barrier Free Access	0.5	0.5	0.5	0.2	—	1.7
State-Maintained Roads (Non-federally eligible work)	0.5	0.5	0.15	—	—	1.15
LSR&T	—	—	—	—	4.0	4.0
Research	—	—	—	—	0.5	0.5
Regional Discretion	6.0	4.5	1.5	2.5	0.75	15.2
TOTAL GF ALLOCATION	$10.9	$8.9	$4.35	$3.25	$5.25	$32.65

* DOT&PF M&O camp facilities, repairs of multiple occupancy buildings, and correction of construction errors even on single use facilities if DOT&PF was in charge of the facility. Does not include Water and Sewer at airports.

Format

The Office of Management and Budget has forwarded CP-1 forms (copy attached) and requested that our budget submission adhere to that basic format. CABDR is no longer being used. The following numbers represent the fields on the attached CP-1 form. The fields should be formatted as specified, and the resulting report pages to be submitted should resemble the CP-1 as closely as possible, ie the information should reside in the same relative position as on the CP-1. Those CP-1 items not addressed below should follow the general guidelines provided in the OMB instructions (copy of capital sections attached).

"Region:" Insert a line after "Location" to identify the region

4. "Election District:" 2 characters of numeric, districts as specified in the OMB instructions or in the case of region-wide projects use:

DOT Region	Regional Election District
Central	92
Northern	94
Southeast	91
Statewide	99

6. "Program:" use these terms:

AVIATION INTERNATIONAL
International Airports, Fairbanks and Anchorage.

AVIATION
All aviation except Fairbanks and Anchorage International Airports. Aviation is considered all work at airports (including water and sewer, buildings and roads).

MARINE
Ports and harbors.

MARINE HIGHWAYS SYSTEM

PUBLIC FACILITIES

LOCAL ROADS
Local Service Roads and Trails, Road Maintenance Service Areas, RS 2477.

EROSION CONTROL

TRANSIT
UMTA grants and urban systems funded transit projects.

STATE EQUIPMENT FLEET

SUPPORT
Intermodal projects, administrative projects, computerization.

HIGHWAYS
Major roads and especially those funded through FHWA including Forest Highways and Public Lands.

8. "Capital Request:" in thousands with commas and one decimal place.

9. "Operating Costs:" in thousands with commas and one decimal place.

11. "Project Description and Justification:" 50 lines of 72 characters for a total of 3600 characters are allowed.

    Follow the OMB instructions for the description and justification including a discussion on alternatives considered. The description should be extensive enough to allow verification of scoring.

12. The priority field should be left blank. This will be a department-wide priority.

Criteria Application and Ranking

The ranking criteria should be strictly and conservatively applied. Please provide worksheets (and data diskettes) of the question scores for each project. This includes a summary of all projects (title, funding amount and total score) and a detail worksheet (with title, individual question scores and total project score).

Q1. Does the project extend the service life of the facility?

Service life = design life of facility.

$$\text{Yes} = \frac{\text{Extended service life in years}}{\text{Original design life in years}} \times 25 = \text{points}$$

Note: No more than 25 points can be awarded for this question.

No = 0

Assumptions: Any work to be done to an existing facility potentially qualifies. This item is intended to reward projects which protect the State's investment in the existing system.

Q2. Is the project needed to continue the development and construction of previously funded projects in the program?

1. Supplemental funding for work that is under contract.

75 points

2. Supplemental funding for a project that is ready to go to bid in the first quarter of the budget year.

55 points

3. Construction phase funding where project will be ready for bid in the budget year and pre-construction phases were funded in prior years.

35 points

4. Funding for completion of pre-construction phases (applies only if funding need was identified in last year's six year capital improvement program).

15 points

5. All other projects.

0 points

Q3. Will the completion of this project have direct and identifiable post-construction benefits to the local, regional or statewide economy?

1. Highway resurfacing, public facilities repairs and improvements, harbor float replacement or runway resurfacing would have little or no economic effect, since these projects repair or replace existing facilities.

3 points

2. Additional harbor floats, expansion of airport aprons or widening existing roadways would have a moderate impact on the economy since these projects expand existing facilities. It is assumed that a certain amount of infrastructure and economic activity already exists and these projects would support the expansion of this existing activity.

5 points

3. New roads or airports built to support community growth and development.

7 points

4. New or expanded capacity for roads, airports or harbors built specifically to support industrial, commercial or resource development.

$$\frac{\text{Number of Jobs}}{\text{Project Cost}} \times 2{,}000{,}000 = \text{points}$$

Note: Most projects will not be scored using item 4. The project must support new industrial, commercial, resource or other development specifically identified as part of an organized and recognized review of the development (only projects meeting these criteria can be awarded any points under item 4).

Q4. Will state maintenance and/or operations costs change as a result of this project?

Reduction in State M&O costs (i.e. facility upgraded, transfer of responsibility to local government)	20 points
No additional State M&O costs/positions	15 points
One new State M&O position	10 points
Two new State M&O positions	5 points
Three or more new State M&O positions	0 points

Q5. Impact on Alaskan job market.

1. Majority of project jobs can be filled by Alaskans	10 points
2. All other projects	0 points

Assumptions: Apply this item to all projects, design, right of way, construction or combinations of those. Judge each project on its own merits. This item is intended to reward projects that are likely to result in Alaskan hire.

Q6. Will the project provide low-cost solutions to safety problems at high-hazard locations?

1. Specific safety projects for facilities operated and maintained by the State of Alaska.

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 100 = \text{points}$$

- Illumination, signalization and/or channelization of intersections with high accident rates
- Guardrails
- Dangerous surface condition on runway or runway safety area
- Repair of specific hazardous conditions

2. Safety-related projects

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 65 = \text{points}$$

- Accident history of facility indicates need for upgrade
- Runway length is deficient by more than 1000 feet or width by more than 15 feet
- Lane widths of 10 feet or less
- No shoulders

3. Other safety projects

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 30 = \text{points}$$

- Unsafe operating environment
- Lane width, shoulders or runway substandard
- Required CFR, fencing, etc.

4. All other projects 0 points

Q7. What is the functional classification of the facility?

(1) International airports, Interstate highways

60 points

(2) Regional center airports, Major arterial highways

50 points

(3) District and Transport airports, Minor arterial highways, Regional ports, Buildings (Statewide purpose, M&O facilities)

40 points

(4) Community airports, Reliever airports, Major collectors, Urban collectors, Sub-regional harbors, Buildings (Regional purpose)

30 points

(5) Local airports, Other state-maintained routes, Local harbors, Buildings (Local purpose)

20 points

Q8. What type of improvement is proposed?

(1) Project is aimed at preventing an imminent failure of the facility.

60 points

(2) Restoration, preservation, structural maintenance or safety improvement to an existing facility.

50 points

(3) Reconstruction for the purposes of bringing the facility up to modern standards.

40 points

(4) Improvement or expansion of a facility for the purposes of economic development, improved safety or improved levels of service.

30 points

(5) New facility development to relieve congestion of an existing facility, improve efficiency of the transportation system or generate economic development.

20 points

Q9. What is the regional perception of the public's support for this project relative to other projects being ranked?

(1) The project is in the top third of public priorities.

25 points

(2) The project is in the middle third of public priorities.

15 points

(3) The project is in the lower third of public priorities.

5 points

Note: The average of scores for this question cannot exceed 15.

Q10. What importance does the region give to factors not addressed by the other ranking items?

Score this item 0 to 200 for each project; however, the average of the points given to all projects cannot exceed 100.

Note: Regions may be asked to provide back-up information on what these factors were and their importance in evaluating the proposed project.

Q11. Is this project prompted by capacity concerns?

For apron projects, harbor expansions and marine highway system improvements, estimate a volume to capacity ratio based on the demand for the limited space and the capacity of the respective tiedown, parking, mooring areas, transfer facilities and/or vessels. Multiply this ratio by 25 to determine point score; however, no project with an estimated ratio can score more than 75 points.

Roadways - Less than two lanes

$$\frac{\text{Current year ADT} \times 25}{(.5)(\text{Capacity at LOS C for terrain type})} = \text{points}$$

Two lane roadways

Adequate shoulders[A]

$$\frac{\text{Current year ADT} \times 25}{(\text{Capacity at LOS C for terrain type and area})^{A}} = \text{points}$$

Note: [A] If shoulders are inadequate, multiply by (.8)

Multi-lane roadway

Single-direction ADT

$$\frac{(.10)\ (\text{Current year ADT})\ (25)}{(\text{Capacity for terrain type})^{A}(\#\text{ of lanes in that direction})} = \text{points}$$

Q12. Does the facility related to the project meet identified standards for such a facility?

For facilities that do not meet minimum standards, rate the severity of deficiency on a scale of 1 to 100.

Assumptions: This item is intended to reward projects which address substandard facilities.

MEMORANDUM

SUBJECT: Bethel Airport Road

I have reviewed the proposed Bethel Airport Road project to identify a means of reducing the estimated $7.8 million cost for reconstruction and still use Federal funds.

It appears the only way is a resurfacing, restoration and rehabilitation (3R) project. The attached page from CFR 23 Sec. 625.2 is the 3R guideline.

The biggest hurdle I anticipate may be getting a waiver to leave roadway shoulders off. The projected traffic would require a 40-foot roadway instead of the existing 28 feet. A waiver might be justified by the presence of permafrost. The permafrost may thaw faster and in a larger area if shoulders were added.

A check with the Traffic Section indicates a low accident rate. This being so, substantial geometric changes are not indicated.

Assuming we develop this as a 3R project, we would do the following:

1. new pavement, 28 feet wide
2. erosion control along slopes where most critical
3. leveling with HAP and/or gravel as required
4. minor replacement of culverts

Construction, construction engineering and design are estimated to cost $5.0 million.

If we pursue this idea, we should program $510,000 for preliminary engineering through Plans, Specifications and Estimate.

The preliminary engineering money will allow us to better define the geotechnical problems and propose a long term solution. With this information, we can then discuss with the Federal Highways Administration (FHWA), the scope of the project and whether or not a 3R project is appropriate. It may be that a 3R project should be done on a periodic basis until the roadway stabilizes.

Hopefully the FHWA will agree with our scope of work and not consider the road a maintenance problem to be handled by the Maintenance & Operations Division.

DATE: March 9, 1987

FILE NO: 242C

TELEPHONE NO: 266-1525

FROM: Steven R. Horn, P.E.
Regional Traffic & Safety Engineer
Central Region

SUBJECT: Accident Analysis on Bethel Highway

In response to your request, the Traffic & Safety Section has compiled accident rates on the Bethel Highway (CDS Route No. 080000) for the years 1983-1986.

The following table summarizes the number of accidents, average daily traffic (ADT) volumes and resulting accident rates for the subject route:

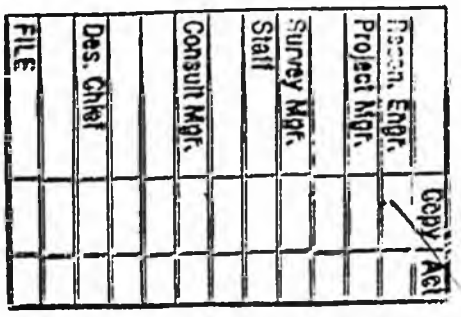
Year	No. of Accidents	ADT	Accident Rate **
1983	7	2950	1.51
1984	10	3100	2.06
1985	5	3340	0.95
1986*	7	3500	1.27
Total	29		

* Accident data for 1986 is thru the middle of November, 1986 ADT is estimated.

** Accicents per million vehicle miles travelled.

The types of accidents occurring on this route can be summarized as follows:

Right Angle	-	10
Rear End	-	5
Pedestrian & Bicycle	-	4
Single Vehicle Overturn	-	3
Fixed Object	-	3
Other	-	4
TOTAL	=	29



RECEIVED
RECONNAISSANCE & LOCATION
MAR 09 '87

An accident cluster analysis was also performed. For the purpose of this report, a cluster was defined as a one-tenth of a mile segment of roadway with at least one accident per year or a total of four accidents in the four year study period. Locations meeting this criteria are summarized below:

Location	CDS Milepoint	No. of Accidents
Tundra Street Intersection	0.33-0.42	5
Main Street Intersection	0.66-0.75	4
Willow Street/Watson's Corner	0.86-0.95	5

If you have any questions or need additional information contact Ron Martindale at extension 528.

THRU:

TELEPHONE NO.: 338-2121

SUBJECT: Bethel Airport to Brown's Slough

FROM: Eric G. Johnson, P.E.
Geotechnical Engineer
Engineering & Operations Standards

As you requested, I have analyzed the available information to determine the cause of the continued differential settlements of the existing embankment and to make preliminary recommendations on the best course of action from a geotechnical point of view.

The road was originally paved in 1972. Since that time it has experienced settlement due to the thawing of the underlying silty sand and sandy-silt permafrost. This thawing is caused by the increased heat input into the ground because of the black pavement surface.

Because the average annual temperature in Bethel (29.2° F) is so warm (close to 32° F) there is no cost effective method of repair that will stop these settlements from occuring. Insulating the embankment will only slow the inevitable thaw and prolong the settlements. Other alternatives such as thermo-syphons are too expensive to install along the entire project.

The thaw of the permafrost will continue, but at an ever reducing rate until the road stabilizes. Experience in the Copper River Basin with the Richardson and Glenn Higways over similar warm permafrost, indicates that this could take as much as 30 years from initial paving. My recommendation for this project is to continue re-leveling and repaving the road as needed until it stabilizes.

§ 625.2 Policy.

(a) Plans and specifications for proposed Federal-aid highway projects shall provide for a facility that will (1) adequately meet the existing and probable future traffic needs and conditions in a manner conducive to safety, durability, and economy of maintenance; and (2) be designed and constructed in accordance with standards best suited to accomplish the foregoing objectives and to conform to the particular needs of each locality.

(b) The development and overall management of highway facilities must be considered as a continuing program. This process of highway management commences with planning and extends through design, construction, maintenance, and operation To assure a continuing acceptable level of safe traffic service, it is essential to provide for adequate maintenance and periodic resurfacing, restoration, and rehabilitation (RRR) throughout the life of the highway. The RRR work is defined as work undertaken to extend the service life of an existing highway and enhance highway safety. This includes placement of additional surface material and/or other work necessary to return an existing roadway, including shoulders or bridges, the roadside, and appurtenances to a condition of structural or functional adequacy. The RRR work may include upgrading of geometric features, such as minor roadway widening, flattening curves, or improving sight distances. The RRR work is an essential part of any highway program, and each State and local agency should provide for these types of improvements in each annual highway program.

(c) An important goal of the FHWA is to provide the highest practical and feasible level of safety for people and property associated with the Nation's highway transportation systems and to reduce highway hazards and the resulting number and severity of accidents on all the Nation's highways. Accordingly, the only constraint on the application of Federal-aid funds to RRR work is that they must be used to provide a facility that adequately meets existing and probable future traffic needs and conditions in a manner conducive to safety, durability, and economy of maintenance, and acceptable levels of community and environmental impact. The RRR projects shall be designed and constructed in a manner that will enhance highway safety and accomplish the foregoing objectives according to the particular needs of each State and locality.

PROJECT TOTAL			$4,927,839.21

Project Length = Lane =
Pavement Width = Thickness =

Basic Assumption:

1. Resurface the entire Road with 2" H.A.P for 28' wide.
2. Use H.A.P for levelling where it is less than one-foot depth.
3. In area where levelling more than 2-ft, proposal will remove the Asphalt and replace with Borrow, Subbase, and pavement. It will add a Culvert - if it help to reduce the problem.
4. Place matting along slope, where erosion most critical.
5. Price based on project D03151 (6-22-83) and Bethel Rd (6-26-81), plus 25% Adjustment to 1981's Bid price.

Re: HCR No. 18, Relating to a Special Report on Long-term Operations of the Alaska Railroad

Dear Chairman Cato,

Thank you for this opportunity to express our support for House Concurrent Resolution No. 18. As you know, the resolution will be considered before the House Transportation Committee on Friday, May 1.

The basis for our support is explained in an attached position paper.

Sincerely yours,

F. G. Turpin
President & CEO

cc: Mr. James O. Campbell, Chairman

4292L

POSITION PAPER / Alaska Railroad Corporation

HOUSE CONCURRENT RESOLUTION NO. 18

RELATING TO A SPECIAL REPORT ON LONG-TERM OPERATIONS OF THE ALASKA RAILROAD

I. Introduction

HCR No. 18 requests the Governor to direct the Department of Commerce and Economic Development to contract for a special report on the long-term operations of the Alaska Railroad. The report is required by Sec. 3(a), Ch. 153, SLA 1984.

The Alaska Railroad Corporation ("ARRC") strongly supports this legislation.

II. Discussion

The text of this resolution best expresses the need for an independent study of the long-term operations of the Alaska Railroad. The special Governor's report is required by a temporary law passed with the Alaska Railroad Corporation Act ("ARCA") in 1984. Although the report was due on February 1, 1987, the consultant's contract was never let and funding lapsed. HCR 18 requests that the report be completed by February 1, 1988.

In adopting ARCA, the legislature found that the railroad was an essential part of the state transportation network and that the State should own the railroad pending eventual transfer to the private sector. The State of Alaska has now begun a third year of ownership of the railroad. A comprehensive study of future railroad operations will provide timely and meaningful direction as the State considers how operational alternatives and the potential transfer of all or part of the Alaska Railroad to the private sector will best serve the State's interests.

If the report strongly recommends that the Alaska Railroad remain publicly owned, its conclusions may ultimately lead to repeal of pertinent ARCA directions that attempts be made to sell the line. The report might also evaluate various alternatives for future operation of the railroad under continued State ownership.

If transfer of the railroad from State to private ownership is to be considered, the report should significantly reduce costs related to preparation and negotiation of railroad sale or lease terms. Within the realm of opportunities for transfer of the railroad, either by sale, lease or lease with a purchase option, there are infinite possibilities. The breakdown of large railroads into much smaller short lines has recently lead to the pooling of a great deal of expertise and experience in these disposals. The options do seem endless and, without a

consultant's assistance in measuring these as operational alternatives, State leaders may become muddled in an explosion of information as they consider future sale proposals.

Finally, we agree that the report should be financed by general fund appropriations. As noted in the resolution, railroad operating revenues are best committed to funding current obligations. Although it may possibly recommend new and alternative relationships between the State and the Alaska Railroad, the report is not expected to provide information of particular value to current or ongoing rail operations. Additionally, to successfully complete its assignment of providing a report on how State interests will best be served by the Alaska Railroad, the consultant's analysis should be independent. State funding and contract administration therefore appears most appropriate.

III. Conclusion

The information provided by a private consultant concerning the long-term operations of the Alaska Railroad, operational alternatives, and the transfer of all or part of the railroad operation to the private sector will be immensely important to the governor and legislature as they determine how the State's interests are best served by future rail operations. Because HCR No. 18 may be instrumental in initiating the report, ARRC urges that it be favorably considered.

4295L

HCR 18

CS HCR 18 - RELATES TO A SPECIAL REPORT ON LONG TERM OPERATIONS OF THE ALASKA RAILROAD.

Chapter 153, SLA 1984 Sec 3 (a) REQUIRED THE GOVERNOR TO CONTRACT FOR THE PREPARATION OF A SPECIAL REPORT ON THE LONG TERM OPERATIONS OF THE ALASKA RAILROAD, OPERATIONAL ALTERNATIVES, AND THE TRANSFER OF ALL OR PART OF THE RAILROAD OPERATION TO THE PRIVATE SECTOR.

THE REPORT WAS DUE FEBRUARY 1, 1987. THE FUNDS WERE AVAILABLE IN THE DEPARTMENT OF COMMERCE HOWEVER, WITH THE BUDGET REDUCTIONS MADE IN FY 87 THESE FUNDS WERE CUT.

THIS RESOLUTION RESPECTFULLY REQUESTS THE GOVERNOR TO DIRECT THE DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT TO CONTRACT FOR THE SPECIAL REPORT ON THE LONG TERM OPERATIONS OF THE ALASKA RAILROAD CORPORATION. THIS REPORT IS TO BE COMPLETE BY FEBRUARY 1, 1989.

I FEEL THIS REPORT IS IMPERATIVE TO ENABLE THE LEGISLATURE TO MAKE THE IMPORTANT DECISIONS ON THE FUTURE OF THE ALASKA RAILROAD. AS YOU ARE ALL WELL AWARE IN THE UPCOMING YEARS WE WILL BE FACED WITH THE DECISION OF SELLING THE RAILROAD TO PRIVATE INDUSTRY, MAINTAINING THE RAILROAD AS A STATE OWNED AND OPERATED RAILROAD OR LEASING OR SELLING A PORTION OF THE ASSETS OF THE CORPORATION. THIS REPORT WILL BE A VALUABLE TOOL TO HELP US DETERMINE THE BEST INTERESTS OF THE STATE WHEN MAKING THESE DECISIONS.

I URGE YOUR SUPPORT OF HCR 18

COMMITTEE CALENDAR:

HCR 34: Relating to tourist-oriented directional signs.

HB 401: "An Act establishing rebates for motor fuel taxes for fuel used in watercraft outside the state; and limiting the authority of the attorney general and the Department of Revenue to recover refunds paid before the effective date of this Act; and providing for an effective date."

HCR 35: Commending the Alaska Marine Highway System for 25 years of service.

FOR THIS MEETING, YOU HAVE BEEN GIVEN:

* A folder on HCR 34

* A folder on HB 401 that includes:
  Item #1: HB 401
  #2: fiscal notes: Depart. of Revenue
  Depart. of Comm. & Eco. Dev.
  position paper: Depart. of Revenue
  #3: Senate companion bill SB 366
  #4: Sectional Analysis
  #5: Statutes
  #6: background information

* a folder on HCR 35

ANALYSIS: (Attach a separate page if necessary)

* The department has prepared a detailed position paper which identifies a number of policy options and sub-options. In brief, this fiscal note identifies an initial cost of $49.0 to establish the TODS signing program of which $27.0 can not be covered by existing budgets. The $22.0 not shown above is covered by existing budgeted staff (personal services).

Continued on page 2.

continued from page 1:

Thereafter, the fiscal impact to the state would reflect the policy option selected. Depicted in this fiscal note is the minimum state investment option wherein the cost of establishing the program would be borne by the state but businesses interested in having signs erected would bear all direct and indirect costs of the program. At minimum, this would be a 1/2 time position to monitor and keep records on the program which is reflected in the above analysis.

Higher fiscal impacts and staffing may be required if other policy options are adopted. For example, if the department were to perform all sign erection, removal and maintenance, staffing additions and associated costs would raise the fiscal impact. In principal, we envision a program that utilizes the private sector to the greatest extent possible, and that policy alternative is reflected in this fiscal note.

For additional detail, pp. 9–13 of the department's position paper is attached which describes the fiscal implications of three policy alternatives.

Phase II - Start Up and Continuation (Indefinite)

This phase involves the physical placement of sign standards and business informational signs following the process and methods selected in the regulations and from legislative intent. It is likely that minor adjustments to the program would be pursued based upon the feedback of field experience. The cost to the state during this phase would vary according the policy option selected regarding the degree to which business enterprises should pay for the program. Following is a range of policy options that better define the possible cost ramifications of various policy options.

State Investment Policy	Description
Minimum	State develops program; businesses pay all other costs including staff support for application processing, sign manufacturing, installation, liability insurance, repairs, replacement and removal, as necessary. This approach would require both an application fee and annual administrative fee to support state costs.
Shared	State develops program; businesses pay application cost, and pay for sign manufacturing, installation and on-going maintenance. State covers personal services cost associated with program administration.
Maximum	State develops program; state supplies signs, sign supports, and pays for installation, repair, replacement and removal, as necessary. Businesses pay a portion of these costs through fixed application and annual maintenance fees. (Estimated at $500 for installation and $250 for annual M&O and administrative costs).

The total cost of this phase will be affected by the number of participating businesses. The number of participating businesses, will, in part, be determined by the cost burden they must assume. It is likely that with greater state participation in program costs the more businesses that will participate.

Sign Cost

The signs will cost about $150 to $200 per panel, plus $150 to $200 for breakaway bases and supports (installed). There can be 1 or 2 sign panels per location for an average cost of $350 per location if one panel is installed and $525 per location if two sign panels are installed ($262 per business). In a typical application each business would have two signs installed, one facing each traffic direction prior to the intersection leading to the business establishment.

We have assumed that the number of one-sign panel and two-sign panel installations will be about equal, thus the average cost per business will be:

$$\frac{\frac{(\$350 + \$525)}{2} * 2 \text{ signs per business}}{\text{Number of Businesses}} = \$875 \text{ per business average}$$

For the purpose of an estimate the following assumptions have been made concerning the number of participating businesses: 1) The number of businesses which elect to participate will vary with the degree of state investment. 2) The ultimate number will not be realized in the first 1 or 2 years, but will gradually increase over a 5 year period; thereafter growth will generally follow state economic trends.

Table 1 indicates the estimated number of participating businesses over a 5 year period, for each of the three policy options previously described.

M&O Cost for Signs

Upkeep, repair, replacement and insurance are estimated to cost 25% of the signs installed value annually. While this may appear as a high figure considering that the signs should have a life of 10 to 12 years from the effects of weathering, it is anticipated they will actually experience a much shorter life due to accidents and vandalism (average life of 4 to 6 years is estimated). Some form of insurance coverage is considered a probable requirement.

DOT&PF Administrative Costs

The department will be required to maintain an inventory and status of the business signing program. While this workload will in fact vary in part with the overall size of the program, for the purposes of this estimate it is considered a fixed cost. It is estimated it will require a 1/2 time position to coordinate the program, serve as center for statewide data collection, and remain current with the progress of the program so that policy adjustments, if necessary, may be pursued.

The administrative staff position would require funding in the range of $24,000 per year (6 mo. @$4,000). Funding for this cost is covered by participating businesses in the *minimum* policy option; it is covered by the state in the other policy options.

This position is over and above the staff support required to process individual applications for signs at the regional level. The regional utility staffs are considered adequate to undertake this role (with necessary coordination with traffic safety staff), though a fee is proposed, as these staffs are funded entirely from program receipts. A $200 application fee is contemplated under all of the policy options. This is the cost for evaluating each sign request and processing it through decision (approve or deny) and is estimated to be $200 (8 hours @ $25/hr.).

State and Business Costs

From the above data it is possible to derive some general estimates of what costs would be incurred to either the state or an individual business relative to the three policy options.

The *minimum* state investment policy option results in the fewest number of businesses participating with the highest cost per business served. An average initial sign installation cost is estimated at $1,075, with an annual cost of $819 in FY 90 (M&O and administrative fee) and a general lowering of the annual cost to $379 in FY 94 as the total number of businesses increases providing a larger base of firms to share the fixed administrative cost. This option results in a one-time expense to the

state of $49,000 for program start-up with all other costs borne by participating businesses.

The *shared* state investment policy option would again cost each business the $1,075 for sign installation. The annual M&O cost to each business is estimated at $219 with the state assuming the fixed administrative cost. This would result in an on-going expense to the state of $24,000 annually, with a total state investment of $169,000.

The *maximum* state investment policy option results in the greatest number of participating businesses as the cost to each is the lowest. Each business is assumed to pay a $500 initial installation fee which partially covers the cost of the sign and application processing. Thereafter, there would be an annual fee of $250 covering administration and sign M&O costs. This option results in a very large investment by the state over the 6 year projection; estimated at $322,000.

Tables 2 - 6 depict the costs for the three policy options and are broken down for the 6 year horizon - FY 89 through FY 94. To reiterate key assumptions used in the analysis they are repeated below:

Number of Businesses per Year:	Varies by option and year, estimated in Table 1
Sign Installation Cost:	$875 average - 2 signs per business
Application Cost:	$200
Annual Sign M&O Cost	$219 average (25% of sign cost)
DOT&PF Administration Cost	$24,000 annually
Business fees under Maximum Policy	$500 for sign installation, and $250 for annual renewal

It is acknowledged that the estimates described herein are just that -- estimates. They are only as good as the assumptions they are built on. The estimates assist in understanding the implications of various policy options and they provide approximate representations of state and private costs that would be associated with the program. The number of participating businesses and the annual sign M&O cost are probably the weakest "links" in the estimates as there are few data upon which to base them. The M&O cost is an average and, unless "pooled" in some fashion, could cost individual businesses much more than this if their signs are vandalized repeatedly. Likewise installation costs may vary greatly by distance from service centers. In summary, while these estimates are quite useful at this stage of investigation, they must be used with caution given the many judgements incorporated into them.

Private Sector Participation

Though mentioned earlier is this paper, the means by which the private sector could assist in program implementation has not been described during the previous discussion on costs. It has been intentionally omitted because there are myriad methods by which the private sector could be involved, and analysis of each, given the many variables already involved, would make the estimates far more complex.

Sign Cost Calculation

Table 6 - Estimated Cost To Business for Sign Pair Installed in FY 90							Aggregate Cost	Average	
Policy Option	FY 89	FY 90	FY 91	FY 92	FY 93	FY 94	To Business	Cost per Year	
Minimum	$0	$1,894	$459	$411	$390	$379	$3,533	$707	
Shared	$0	$1,294	$219	$219	$219	$219	$2,170	$434	
Maximum	$0	$750	$250	$250	$250	$250	$1,750	$350	

This should not suggest the department is disinterested in this approach. Three general options are presented below for consideration. Detailed evaluation is suggested for the task force in analyzing the merits of each option and better defining a course of action.

1. Franchise - Under this concept the program would be almost entirely run by a private firm or firms in franchise fashion. Final decision concerning sign installation and program policies would remain in departmental hands; otherwise individual businesses would make application to the firm(s). The firms would be sanctioned by the department to perform this service and would be responsible for all steps including application processing, sign manufacturing, installation, maintenance, and inventory and status reporting.

2. Installation and M&O Only - Under this concept the state would process each application through decision. The business applicant would have the signs manufactured, installed and maintained to state standards by a firm of their choice.

3. Manufacturing Only -Similar to Option #2, except state highway maintenance crews would install and maintain the signs after they were manufactured for the business and delivered to the appropriate maintenance station. This option allows for greater control of exactly how and where the signs are installed within the ROW and may be less costly to the business when the signs are installed in remote locations.

Technical Issues to be Resolved:

As part of the developmental phase (and with an adjustment period as experience is gained) some technical issues will need to be resolved in more detail than is possible here. Some of these are:

User fee structure	- subsidy from state, equal to cost, or revenue generating.
Insurance requirements or liability potential	- individual policy or pooled coverage.
Conditions of eligibility	- types of businesses, minimum services necessary to qualify, minimum hours of operation, distance from highway.
Allowable number and locations	- sight distance, spacing, etc.
Physical specifications	- size, shape, materials, colors, logos, supports, locations, etc.
Prioritization where demand exceeds available space	- first come, first served? - lottery on a periodic basis? - public necessity?

Representative Ronald L. Larson
District 16B

November 2, 1987

Mark Hickey, Commissioner
Department of Transportation
and Public Facilities
P.O. Box Z
Juneau, Alaska 99811

Dear Commissioner Hickey:

Last week I conducted a meeting on increased visitor signage. Members of your staff attended this meeting in Palmer either by teleconference hook-up from Juneau or in person. I would like to extend my thanks for their participation.

Jeff Ottesen specifically contributed greatly during this teleconference and meeting. I found it refreshing to conduct a meeting with agency professionals who were ready and willing to discuss all the issues in a very calm and informative manner. Jeff, along with all others, were not reluctant to discuss creative approaches to old and frustrating problems.

The results from the meeting are heartening. Mr. Ottesen will be preparing a work plan to address many of the problems we discussed. I am more than willing to sponsor necessary legislation and I will be contacting Representative Cato for her committee's help in this matter. In addition, if the Tourist Oriented Directional Signing system (TODS) approach seems to suit both the urban and rural needs, I will be pleased to offer my help to acquire the necessary state funding for this program.

Once again, I extend my thanks to you and your staff. I look forward to more positive communication on this subject in the near future.

Sincerely,

Ronald L. Larson

PHONE: (907) 465-3900

January 15, 1988

The Honorable Ron Larson
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Larson:

Enclosed is a draft policy paper concerning options for providing for signing of commercial interests within state rights-of-way (R-O-W). In brief, this proposal advocates adoption of a new option that we believe will soon be allowed by the Federal Highway Administration. This new option, termed TODS, provides for tourist-oriented directional signs within the ROW.

The TODS option, while beneficial to many categories of businesses, does not open the door to advertising of all forms within state rights-of-way. The signs are relatively small, allow little more than business name identification, and would not be available to businesses not generally used by tourists. Hopefully, this limitation will negate any concern from those interested in preserving scenic resources. In fact, like most good solutions, TODS is a compromise. It would address the need for provision of information to visitors about various businesses not readily visible from the roadside. We believe it would go a long way toward assisting a large number of businesses that rely upon tourists in whole or in part at a cost acceptable to state government.

In the October teleconference, Jeff Ottesen mentioned a budget of $15 to $20 thousand to prepare the regulations associated with a program of this sort. Our current proposal is for more than this ($27,000), and I believe it deserves clarification. Upon review, I felt it desirable to use a "task force" to establish the rules by which the TODS program would be governed and to increase the number of public hearing locations (see p. 7 of the position paper). We could lower this cost by $10,000 by eliminating the task force approach and reducing the number of public hearing locations from 5 to 3 . However, I think that because of the many complicated questions posed by the adoption of a TODS program for Alaska, and the need for businesses and the public throughout the state to participate in the drafting of the related regulations, the additional money is an appropriate expenditure.

25A-T1LH

Your patience in awaiting this draft policy is appreciated. We are circulating this policy within the department concurrent with your review. If you would like more information or clarification please let me know.

Sincerely,

Mark S. Hickey
Commissioner

DRAFT

POSITION PAPER:

INFORMATIONAL AND DIRECTIONAL SIGNING FOR COMMERCIAL ESTABLISHMENTS

Introduction

The Highway Beautification Act of 1965 severely restricted advertising signs apart from on-premises signs. Many States were even more restrictive to protect the aesthetics of their roadways. In 1969, to provide directional information to motorists on limited-access roadways (Interstates and similar), a system of Specific Service Signs ("Logos") in the right-of-way (ROW) at interchanges was allowed for food, gas, lodging and camping when such enterprises were not visible from the limited-access routes. This program was extended in late 1986 to be eligible on conventional roads[1] with federal approval.

However, the Logo sign program leaves many desirable if not necessary businesses with little or no means to inform motorists of their service and location.

Most states have resisted efforts to institute other signing programs because the demonstrated need from the motorist standpoint was not equal to the costs and public safety consequences. (It is generally held that proliferation of roadside signs causes motorists to tend to ignore them, including necessary traffic control devices, dilutes their attention from the vital driving task, and presents another series of roadside obstacles in collisions.)

However, with the rise in tourism and a lagging economy in some areas, the need for better directional signing for business enterprises was perceived. The Federal Highway Administration is proposing to add a section to the federal Manual on Uniform Traffic Control Devices (MUTCD) to provide for an official system of Tourist Oriented Directional Signs ("TODS") to meet this need. (Attachment 1)

There has been a growing demand for such directional signing in Alaska. During a recent teleconference including representatives from the Federal Highway Administration (FHWA), the Department of Transportation and Public Facilities (DOT&PF), the Legislature, other State departments, local agencies and the public, it was agreed that Alaska needs to systematically and cooperatively address this growing need.

Purpose:

The purpose of this discussion is to provide information on pertinent aspects of programs to enhance motorist directional signing such as the various public policy issues involved (business enhancement, public safety, cost to public agencies, and

---

[1] Including all federally funded highways, not just controlled-access expressways and freeways.

roadside beautification), and to recommend a course of action meeting the cooperative needs of all concerned within the limits of our resources.

While aspects related to advertising outside the right-of-way are discussed, the main thrust is what the DOT&PF can do to enhance directional signing within the right-of-way of state-maintained roads, and in this manner meet the needs of more businesses and motorists.

Review of Statutes, Regulations and Policies on Signing:

FHWA has informed the Department that the "Interstate" routes in Alaska, which were so designated for funding purposes, are not considered as "Interstates" for the purposes of federal statutes and regulations on highway signing. This is of little impact because most of the restrictive federal regulations apply to both Interstate and Primary routes, and Alaska's "Interstates" are Federal Aid Primary routes.

The only areas where we have flexibility absent changes in federal statutes and regulations are outdoor advertising adjacent to state and local roads and secondary Federal Aid routes, and Traffic Control Devices on most roads.

Conventional outdoor advertising possibilities (billboards) are generally limited to locations outside the ROW on Federal Aid Secondary roads, and a proposal is being considered to liberalize the State regulations there to be no more restrictive than the federal regulations.

As explained previously, the most promising avenue for widespread private enterprise identification in the right-of-way is an experimental program (TODS), and this paper will be directed at this more feasible alternative of "official" directional and informational signing.

There are at least three relevant regulatory or statutory areas and at least six documentary authorities regarding signs:

Regulatory Areas:

1. Traffic Control Devices (TCD's)

2. Outdoor Advertising

3. Right-of-Way (ROW) Encroachments

Authority References:

A. Code of Federal Regulations (CFR)
(backed by enabling legislation.)

B. Alaska Statutes (AS)

C. Alaska Administrative Code (AAC)

D. DOT & PF Policy and Procedures (P&P)

E. Alaska Traffic Manual (ATM)

F. Local Laws and Ordinances (not treated here)

Attachment 2 shows which authorities pertain to various roadway classes.

1. TCD's

A. 23CFR655-Subpart F establishes the Manual on Uniform Traffic Control Devices (MUTCD) as the standard on streets, highways, and bicycle trails open to public travel. (Attachment 3)

It allows States to have their own manual or supplements in substantial conformance to the national MUTCD and with the FHWA Regional Administrator's approval of the manual or supplements. The Alaska Traffic Manual (ATM) exercises this option by consisting of the MUTCD with a federally approved "Alaska Supplement".

B. AS28.01.010 requires municipalities to conform as close as practicable to the DOT&PF's ATM. (Attachment 4)

AS19.10.040 requires DOT&PF to conform as far as possible to the national MUTCD. (Attachment 5)

D. P&P 70-7000 defines the ATM as the MUTCD with an Alaska Supplement and establishes the policy that it is the official State manual. (Attachment 6)

E. The MUTCD portion of the ATM (section 1A-3.1) requires that no TCD or its support shall bear any advertising or commercial message, or other message not necessary to traffic control. Furthermore, it requires any unofficial and non-essential signs to be removed as a public nuisance. (Attachment 7)

The ATM allows the State to establish a federally approved program of Specific Services ("Logo") Signs for food, gas, lodging and camping.

[NOTE: It is also likely that a system of Tourist Oriented Directional Signs (TODS) will soon be allowed by the national manual, and would likely be approved under the present statutes and regulations based on precedent in other States. See Attachment 8 for details.]

2. Outdoor Advertising (outside of ROW)

A. 23CFR750 generally prohibits advertising within 660 feet of FA Interstate or Primary routes where visible from the roadway, or

beyond that and intended for visibility from the roadway, except for "on-premise" signs advertising activities on the property or advertising the property for sale. Only the 660 foot border applies in urban areas. Signs consistent with the regulations and authorized by state law which are designed to give information in the specific interest of the traveling public may be permitted in protected areas. Also, signs in bonafide "zoned and unzoned commercial areas" are permissible. (Attachment 9)

B. AS19.25.080-180 is parallel to the federal requirements except it includes the Secondary road system. It also authorizes the DOT&PF to enter into agreements with the U. S. Secretary of Transportation as provided in 23 USC relating to outdoor advertising. (Attachment 10. The original state-federal agreement is Attachment 11.)

3. ROW Encroachments

A. 23CFR1.23 prohibits encroachments or property in the ROW of FA routes except those devoted exclusively to public highway purposes. (Attachment 12)

B. AS19.25.200-250 prohibits encroachments except as permitted by DOT&PF regulations. (Attachment 13)

C. 17AAC20.010-.040 prohibits outdoor advertising signs within the ROW of any highway and forbids the permitting of such. (Attachment 14)

D. P&P 10-0020 requires that in the interest of safety, convenience and pleasure of highway users, encroachments will not be allowed except by permit. (Attachment 15)

E. ATM Section 1A-3 1 prohibits signs in the ROW except for official TCD's. (Attachment 7)

Alternative R.O.W. Programs:

Specific Service Signs (LOGO Signs) -

As discussed in the Introduction, Logo signs for the specific categories of food, gas, lodging and camping are allowed on conventional roads under the Alaska Traffic Manual (The National MUTCD with an Alaska Supplement) provided the State develops a program acceptable to FHWA. These are described in Section 2G-5 of the MUTCD.

These signs are usually placed at interchanges, have rather restrictive applications, and the installation is relatively massive and costly.

Tourist Oriented Directional Signs (TODS) -

This program which is currently experimental in selected states excluding Alaska is expected to be included in the Federal Manual in the near future, and precedents have been set which leads us to believe it can be implemented with minimal statutory or regulatory action.

These signs extend the directional information to more types of business to be determined by the State, and allow for more widespread use.

The signs must follow a prescribed format (white letters and borders on a blue background in keeping with the nationally established system for motorist information signs) and cannot convey an advertising message or other information except the business name and/or logo and directions thereto. It does allow businesses some distance from the highway to be identified, subject to state rulemaking.

Encroachments -

This would consist of allowing certain signs meeting established criteria to be erected within the R.O.W. under a formal permit and agreement. They would require Federal approval on Federal Aid routes and would be expected to have to pass stringent tests as to devotion to "public highway purposes". For example, we are currently requesting approval of state park logo signs to use this approach for approval.

This alternative is not felt to be as satisfactory as the other alternatives, and is probably only feasible on secondary routes and local roads which are outside of DOT&PF's jurisdiction. In many of those cases outdoor advertising adjacent to the R.O.W. is permissible or possible.

Required Changes in Statutes, Regulations, and Polices:

Logo Signs - Little or no need for changes except to establish regulations for permits or fees. The State would have to develop a policy in the Alaska Traffic Manual (ATM) acceptable to the FHWA. (Absent significant state funding subsidies this would be very expensive for most businesses.)

TODS - Similarly, no changes expected except regulations establishing fee structure in the AAC and developing program policy in the ATM acceptable to the FHWA.[2]

Encroachments - Most encroachments of this nature would probably be difficult or impossible for business utilization on the FA Primary system. Otherwise a change

[2] While Federal approval of the TODS concept as a nation-wide program rather than experimental has not taken place, we have been informed by the Divisional office of FHWA that Alaska could adopt it as an official addition to the Alaska Traffic Manual.

in the State statute prohibiting outdoor advertising on secondary routes, a change in the AAC which prohibits advertising in the R.O.W., and an AAC revision establishing a fee structure would be required.

Comparison of Pertinent Features:

The following is a subjective comparison of various aspects of the three envisioned alternatives. The most desirable (or least burdensome) alternative is rated 1 with relative rankings of 2 and 3 (except for equals).

Aspect	Alternatives		
	Logos	TODS	Encroachments
Cost of Signs	3	1	2
Cost to Administer	2	1	1
Cost to Businesses	2	1	2
Availability to Business Types	3	2	1
Availability to Businesses remote from the Through Route	2	1	1
Allowable Roadways	2	1	3
Aesthetics	2	1	3
Impact on Safety	2	1	2
TOTALS	19	9	15

Resources Required:

If the Department's recommendations are accepted, the following phases are envisaged. (see estimate details in following section)

1. Program development phase (estimated at 12 months).

2. Start-up and continuation phase (indefinite).

The costs may be broken down into developmental costs (technical personnel, hearings, AG's assistance on regulations), physical costs (signs, supports, installation), and administrative costs (evaluating requests, issuing "permits", record keeping, maintenance activities). These costs, as a policy matter, may be absorbed completely by the State, completely by the users, or anywhere in between. Because the cost of start-up and proper signing is not low, and because Alaskan businesses will receive tangible benefits , it is suggested that the State participate by subsidizing

the setup costs of the program, while the on-going costs be borne by the benefiting businesses.

The total costs after the developmental phase will depend to a great extent on the number of requests for signs and their locations. A subjective estimate is used for planning purposes, but the cost figures for the second phase can be revised later based on the level of response by businesses to the public notices during the developmental phase.

It should be noted that start-up funds alone will not provide the necessary on-going resources in the absence of funding for personnel to conduct this program unless other services are sacrificed (e.g. traffic safety studies, M&O activities).

It is envisaged that sign installation could be done through contractors from the private sector, and this along with the fabrication of signs by Alaskan firms will be a further benefit to the economy. The form of the physical maintenance function, and removal of signs for businesses that close will need further consideration.

Phase I - Developmental (1 Year)

In this phase the Department, through a 7 member Commissioner-appointed task force, would develop proposed policies, procedures and regulations which, after appropriate public hearings, would be implemented to meet the requirements of businesses, motorists, the FHWA, and the department. The task force is proposed to provide a range of opinion, including federal, state, and business toward the job of establishing policy. Task force composition is suggested to include:

DOTPF	1	Commissioner or designee
Legislature	1	To be determined
DOT&PF Regions:	1	Director, Maintenance & Operations
	1	Director, Design & Construction
DC&ED	1	Director, Division of Tourism
AVA	1	Director, Alaska Visitors Association
Business Rep.	1	Appointed by Commissioner, from list of names submitted by State Chamber of Commerce

The task force would meet for a total of three times. Initially to recommend general policy guidelines and help guide draft regulation language. Following the public hearing phase on the regulations the task force would meet again to assist in policy formulation on the final regulation language. Key staff members from the E&OS division would serve as a resource to this task force. A broad brush outline of the task force's involvement in the process is shown as follows:

1. E&OS Staff prepare initial information package and discussion on range of policy options.
2. Commissioner's Task Force Meeting #1: Start-up meeting to assess policy options; output of meeting is a selection of a limited number of policy options to evaluate in more detail.
3. E&OS Staff prepare second information package and discussion of selected policy options.

4. Commissioner's Task Force Meeting #2: Policy definition session. Commissioner's Task Force would be asked to make recommendation to Commissioner on preferred method of providing for outdoor advertising within and along ROW, including basic ground rules, responsibility assignments and means of implementation.
5. E&OS Staff prepare draft regulations from guidance of Commissioner and Task force. Public Notice provided in accordance with AAC requirements.
6. Public Hearings held in five locations: Juneau, Kenai Peninsula Borough, Anchorage, Mat-Su Borough, and Fairbanks.
7. Commissioner's Task Force Meeting #3: Final meeting to evaluate the public hearing testimony and make policy adjustment recommendations.
8. Finalize regulations and publish.
9. Prepare and publish a handbook describing the program and method of securing off-premise advertising along state maintained roads.

Developmental Expenses

Expenses Item	Units	Cost	Funding Needs	Funding Available
E&OS Staff				
Professional Staff	4 mo.	$5,000		$20,000
Clerical Staff	1 mo.	$2,000		$2,000
Legal Staff	60 hrs.	$100	*$6,000*	
Task Force Travel	16	$500	*$8,000*	
Public Hear. Travel	All	$4,000	*$4,000*	
Public Hear. Transcrip.	5	$600	*$3,000*	
Advertising, Commun.	All	$2,000	*$2.000*	
Graphics & Printing	All	$4,000	*$4,000*	
Totals			***$27,000****	$22,000
Total Program Development Cost			**$49,000**	

(* Note: Only $27,000 would require legislative appropriation. The personal services required for this effort would be provided for from existing budgets.)

Timing

The time necessary to accomplish program preparation is estimated at one year. This reflects, in part, a desire to schedule the public hearing phase in the winter months in order to avoid conflicts with the very "public" being served by the proposed program -- tourist oriented businesses.

Phase II - Start Up and Continuation (Indefinite)

This phase involves the physical placement of sign standards and business informational signs following the process and methods selected in the regulations and from legislative intent. It is likely that minor adjustments to the program would be pursued based upon the feedback of field experience. The cost to the state during this phase would vary according the policy option selected regarding the degree to which business enterprises should pay for the program. Following is a range of policy options that better define the possible cost ramifications of various policy options.

State Investment Policy	Description
Minimum	State develops program; businesses pay all other costs including staff support for application processing, sign manufacturing, installation, liability insurance, repairs, replacement and removal, as necessary. This approach would require both an application fee and annual administrative fee to support state costs.
Shared	State develops program; businesses pay application cost, and pay for sign manufacturing, installation and on-going maintenance. State covers personal services cost associated with program administration.
Maximum	State develops program; state supplies signs, sign supports, and pays for installation, repair, replacement and removal, as necessary. Businesses pay a portion of these costs through fixed application and annual maintenance fees. (Estimated at $500 for installation and $250 for annual M&O and administrative costs).

The total cost of this phase will be affected by the number of participating businesses. The number of participating businesses, will, in part, be determined by the cost burden they must assume. It is likely that with greater state participation in program costs the more businesses that will participate.

Sign Cost

The signs will cost about $150 to $200 per panel, plus $150 to $200 for breakaway bases and supports (installed). There can be 1 or 2 sign panels per location for an average cost of $350 per location if one panel is installed and $525 per location if two sign panels are installed ($262 per business). In a typical application each business would have two signs installed, one facing each traffic direction prior to the intersection leading to the business establishment.

We have assumed that the number of one-sign panel and two-sign panel installations will be about equal, thus the average cost per business will be:

$$\frac{(\$350 + \$525)}{2} * 2 \text{ signs per business} = \$875 \text{ per business average}$$

Number of Businesses

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5178 HTRA HCR 34

750

For the purpose of an estimate the following assumptions have been made concerning the number of participating businesses: 1) The number of businesses which elect to participate will vary with the degree of state investment. 2) The ultimate number will not be realized in the first 1 or 2 years, but will gradually increase over a 5 year period; thereafter growth will generally follow state economic trends.

Table 1 indicates the estimated number of participating businesses over a 6 year period, for each of the three policy options previously described.

M&O Cost for Signs

Upkeep, repair, replacement and insurance are estimated to cost 25% of the signs installed value annually. While this may appear as a high figure considering that the signs should have a life of 10 to 12 years from the effects of weathering, it is anticipated they will actually experience a much shorter life due to accidents and vandalism (average life of 4 to 6 years is estimated). Some form of insurance coverage is considered a probable requirement.

DOT&PF Administrative Costs

The department will be required to maintain an inventory and status of the business signing program. While this workload will in fact vary in part with the overall size of the program, for the purposes of this estimate it is considered a fixed cost. It is estimated it will require a 1/2 time position to coordinate the program, serve as center for statewide data collection, and remain current with the progress of the program so that policy adjustments, if necessary, may be pursued.

The administrative staff position would require funding in the range of $24,000 per year (6 mo. @$4,000). Funding for this cost is covered by participating businesses in the *minimum* policy option; it is covered by the state in the other policy options.

This position is over and above the staff support required to process individual applications for signs at the regional level. The regional utility staffs are considered adequate to undertake this role (with necessary coordination with traffic safety staff), though a fee is proposed, as these staffs are funded entirely from program receipts. A $200 application fee is contemplated under all of the policy options. This is the cost for evaluating each sign request and processing it through decision (approve or deny) and is estimated to be $200 (8 hours @ $25/hr.).

State and Business Costs

From the above data it is possible to derive some general estimates of what costs would be incurred to either the state or an individual business relative to the three policy options.

The *minimum* state investment policy option results in the fewest number of businesses participating with the highest cost per business served. An average initial sign installation cost is estimated at $1,075, with an annual cost of $819 in FY 90 (M&O and administrative fee) and a general lowering of the annual cost to $379 in FY 94 as the total number of businesses increases providing a larger base of firms to share the fixed administrative cost. This option results in a one-time expense to the

state of $49,000 for program start-up with all other costs borne by participating businesses.

The *shared* state investment policy option would again cost each business the $1,075 for sign installation. The annual M&O cost to each business is estimated at $219 with the state assuming the fixed administrative cost. This would result in an on-going expense to the state of $24,000 annually, with a total state investment of $169,000.

The *maximum* state investment policy option results in the greatest number of participating businesses as the cost to each is the lowest. Each business is assumed to pay a $500 initial installation fee which partially covers the cost of the sign and application processing. Thereafter, there would be an annual fee of $250 covering administration and sign M&O costs. This option results in a very large investment by the state over the 6 year projection; estimated at $322,000.

Tables 2 - 6 depict the costs for the three policy options and are broken down for the 6 year horizon - FY 89 through FY 94. To reiterate key assumptions used in the analysis they are repeated below:

Number of Businesses per Year:	Varies by option and year, estimated in Table 1
Sign Installation Cost:	$875 average - 2 signs per business
Application Cost:	$200
Annual Sign M&O Cost	$219 average (25% of sign cost)
DOT&PF Administration Cost	$24,000 annually
Business fees under Maximum Policy	$500 for sign installation, and $250 for annual renewal

It is acknowledged that the estimates described herein are just that -- estimates. They are only as good as the assumptions they are built on. The estimates assist in understanding the implications of various policy options and they provide approximate representations of state and private costs that would be associated with the program. The number of participating businesses and the annual sign M&O cost are probably the weakest "links" in the estimates as there are few data upon which to base them. The M&O cost is an average and, unless "pooled" in some fashion, could cost individual businesses much more than this if their signs are vandalized repeatedly. Likewise installation costs may vary greatly by distance from service centers. In summary, while these estimates are quite useful at this stage of investigation, they must be used with caution given the many judgements incorporated into them.

Private Sector Participation

Though mentioned earlier is this paper, the means by which the private sector could assist in program implementation has not been described during the previous discussion on costs. It has been intentionally omitted because there are myriad methods by which the private sector could be involved, and analysis of each, given the many variables already involved, would make the estimates far more complex.

This should not suggest the department is disinterested in this approach. Three general options are presented below for consideration. Detailed evaluation is suggested for the task force in analyzing the merits of each option and better defining a course of action.

1. Franchise - Under this concept the program would be almost entirely run by a private firm or firms in franchise fashion. Final decision concerning sign installation and program policies would remain in departmental hands; otherwise individual businesses would make application to the firm(s). The firms would be sanctioned by the department to perform this service and would be responsible for all steps including application processing, sign manufacturing, installation, maintenance, and inventory and status reporting.

2. Installation and M&O Only - Under this concept the state would process each application through decision. The business applicant would have the signs manufactured, installed and maintained to state standards by a firm of their choice.

3. Manufacturing Only -Similar to Option #2, except state highway maintenance crews would install and maintain the signs after they were manufactured for the business and delivered to the appropriate maintenance station. This option allows for greater control of exactly how and where the signs are installed within the ROW and may be less costly to the business when the signs are installed in remote locations.

Technical Issues to be Resolved:

As part of the developmental phase (and with an adjustment period as experience is gained) some technical issues will need to be resolved in more detail than is possible here. Some of these are:

User fee structure	- subsidy from state, equal to cost, or revenue generating.
Insurance requirements or liability potential	- individual policy or pooled coverage.
Conditions of eligibility	- types of businesses, minimum services necessary to qualify, minimum hours of operation, distance from highway.
Allowable number and locations	- sight distance, spacing, etc.
Physical specifications	- size, shape, materials, colors, logos, supports, locations, etc.
Prioritization where demand exceeds available space	- first come, first served? - lottery on a periodic basis? - public necessity?

Maintenance requirements	- seasonal removal and installation if business costs during part of year. - cost of vandalism and accident repair - whom is responsible? - removal if business becomes ineligible or closes.

Recommendations:

A signing system based on the Tourist Oriented Directional Signing program is recommended for Alaska to meet the identified needs of motorists and businesses catering to motorists for the following reasons:

1. Little or no need for changes to existing Federal and State statutes and regulations is created, and Federal acceptance seems likely for all roadway classes.

2. A broad range of businesses (such as gift shops, gold panning, lodges, guide services, etc.) can be accommodated which cannot with other programs of official highway signing.

3. Costs would be no greater, and sometimes less, than other feasible alternatives.

4. Motorists nationwide expect blue signs with white lettering to contain information in their interest, such signs convey an image of "official signing", and a neat and orderly appearance of our roadside signing can be maintained.

5. The integrity of sound traffic engineering principles can be maintained and the required relationship of the Alaska Traffic Manual to the Federal Manual on Uniform Traffic Control Devices can remain intact.

6. A wealth of solid experience has been gained in other States that we can learn from in developing a program to suit our own particular needs.

It is recommended that signs of other State agencies that seem to be in the best interests of the State (but which do not meet the engineering technical requirements of traffic control devices, and which only extend or replace devices already in official manuals) be accepted on a case by case basis as encroachments in the public interest.[3]

---

[3]The divisional FHWA office has recently informed us of their intent to disallow the Eagle logo sign now being used by the State Division of Parks on some routes. Their decision will require further thought as to how best provide for the special signage requirements of the Alaksa Division of Parks.

Conclusion:

The Department believes that the needs of motorist-oriented businesses can be met through a cooperative program of Tourist Oriented Directional Signing complying with Federal standards for use on all roadways which preserves the integrity of sound traffic engineering principles and has minimal impact on Alaska's renowned roadside aesthetics.

CIATION OF STATE HIGHWAY PORTATION OFFICIALS

FRANCIS B. FRANCOIS
Executive Director

PC-87-33
May 20, 1987

To the Chief Administrative Officers of the Member Departments of the American Association of State Highway and Transportation Officials

BALLOT ENCLOSED
REPLY REQUESTED BY
JUNE 12, 1987

Dear Members:

Enclosed are recommendations made by the several technical committees of the National Committee on Uniform Traffic Control Devices on thirteen requested changes to the Manual. Also enclosed is a ballot on which it is requested that you indicate your position on each recommendation.

We are unfortunately a little late with this ballot this time and the due date of June 12 allows somewhat less time than usual for your response. The deadline is fixed by the date of the meeting of the National Committee later in June, and your efforts to adhere to the June 12 deadline will be especially appreciated.

Note that one of the options for each recommendation is "concur in part." In such a case, it is requested that you attach a brief explanation as to which of the elements of the recommendation you find acceptable and with which you are not in agreement.

The results of this ballot will be forwarded directly to the National Committee and will also be provided to the AASHTO delegation to that Committee for their guidance in the voting which will take place at their meeting this January.

Very truly yours,

Francis B. Francois
Executive Director

DRAFT

This recommendation has not been approved by the full National Committee.

TECHNICAL COMMITTEE RECOMMENDATION

TECHNICAL COMMITTEE: Signs

DATE OF ACTION: January 8, 1987

REQUEST NUMBER: II-110(Chng)

TOPIC: Tourist Oriented Directional Signs (TODS)

ORIGIN OF REQUEST: FHWA

DISCUSSION:

This item was published in the Federal Register (50FR51405) on December 17, 1985 as a Notice of Proposed Rulemaking. The Highway Beautification Act of 1965 severely restricted advertising signs limiting the capability of business activities to provide directional guidance to activities not visible from the highway system. Signing for such activities on the Interstate System have been accommodated with the Specific Services "Logo" Program.

The Federal Register Notice solicited comments on this signing concept including several questions on types of business activities and signing alternatives that should be considered. The Sign Subcommittee recommended response to the four questions are attached.

The FHWA is proposing this system of TODS signing for the remaining highway system as an alternative to Specific Services Logo Signs on the primary system. This type of signing is presently being used in Vermont Washington, Maine, New York, Oregon and Idaho. The signing would be optional for the States subject to adoption of a State policy meeting the minimum requirements covered in the MUTCD and addressing other criteria for administration of the TODS signing program in that State. The recommended Section 2I MUTCD wording and figures are attached.

COMMITTEE ACTION:

It is recommended that the attached response to the Federal Register and Section 2I Manual additions be approved.

REFERENCE TO AFFECTED PAGE NUMBERS IN MUTCD: New Section 2I

Task Force Report On
Tourist Oriented Directional Signs (TODS)
II-110(Chng) NCUTCD

Task Force members are Jim Pline, Andy Ramisch, Gerald Holmberg, Art Dinitz, Wayne Gruen and Dick Oliver, Chairman.

We recommend the following response to FHWA Docket No. 85-27, in which the FHWA proposed to add a new section 2I to the MUTCD to incorporate standards for tourist oriented directional signs.

We recognize that motorists in rural areas, on highways other than freeways and expressways, may have a need for additional business directional information when the facilities are not visible from the highway and if the installations are voluntary. If a state elects to use TOD signs, the cost should be paid by the business on a permit basis.

The FHWA, in its publication of this request in the Federal Register, solicited answers to four questions.

1. What types of business, service, and activity should be considered or eligible for signing with Tourist Oriented Directional Signs?

2. Should businesses producing or offering certain products be prohibited from eligibility for Tourist Oriented Directional Signs? An example might be those businesses whose principal product is producing promoting, or selling alcoholic beverages which appears contradictory to State and National concerns about alcohol and driving.

3. Should businesses, services, and activities be open to the general public a minimum number of hours a day, and a minimum number of days per week, to qualify for Tourist Oriented Directional Signs?

4. Should Specific Services Information (LOGO) Signing and Tourist Oriented Directional Signs be allowed to be installed at the same intersection? If yes, what is the number of sign panels, and the number of businesses, services, and activities allowed on each panel on a specific intersection approach?

The FHWA's questions are answered as follows:

1. The types of business, service and activity which should be considered eligible for TOD signing, are those whose major portion of income or visitors are derived during the normal business season from motorists not residing in the immediate area of the business or activity.

2. Three categories of business activity should be excluded as eligible from TOD signing.

   a. Those which are illegal under federal, state or local law.

   b. Those which qualify for and have specific services information (logo) signing installed.

   c. Those which are retail or service outlets for goods and services commonly available at a number of locations (as contrasted with goods and/or services targeted to tourists).

3. Facilities should be open a minimum of eight hours per day and six days per week including Saturday and/or Sunday. The facilities shall be open to the general public.

4. Specific services (LOGO) signing and tourist oriented directional signs (TODS) should not be installed at the same intersection. The state should select one type of signing (LOGO or TODS) for a particular highway or system.

The Task Force proposes adding a new section 2I to the MUTCD which reads:

I. Tourist Oriented Directional Signs

2I-1 Purpose and Application

Tourist oriented directional signs (TODS) provide the business identification and directional information for tourist related businesses, services, and activities, the major portion of whose income or visitors are derived during the normal business season from motorists not residing in the immediate area of the business or activity. A TOD sign gives the name, direction and distance to the tourist business. A TOD sign panel is made up of one or more TOD signs.

They are intended for use on rural conventional roads where the facilities are not visible from the highway and shall not be used at interchanges on expressways or freeways. They may be used in conjunction with motorist service signs. A state should select one type of signing (LOGO or TODS) for a particular highway or system.

Each State that elects to use tourist oriented directional signs should have a State policy for use as indicated in Section 2I-7, State Policy.

2I-2 Design

Tourist oriented directional signs shall be rectangular in shape and shall have a white legend and border on a blue background. Standard General Motorist Service signs of Section 2G-6 of the MUTCD and Recreational and Cultural Interest Area signs of Section 2H of the

MUTCD may be used to indicate a general class of business, service, or activity. Logos for specific businesses, services, and activities may also be used. When used, symbols and logos shall be reduced to an appropriate size. Logos resembling official traffic control devices shall not be permitted.

Each sign should have not more than two lines of legend including not more than one symbol or logo, a separate directional arrow, and the distance to the facility shown beneath the arrow. The content of the legend shall be limited to the identification of the business, service, or activity, and the directional information (fig.1). Under special conditions, the hours of operation may be added. Legends shall not include promotional advertising.

Legends, arrows, borders, symbols, and logos shall be reflectorized. Arrows should be as provided in Section 2D-8 of the MUTCD and as provided in the detailed drawings in the "Standard Highway Signs" book.2/ Arrows pointing to the right should be at the extreme right of the sign and arrows pointing to the left should be at the extreme left of the sign. Symbols, when used, should be to the left of the word legend or logo.

2/ Available from GPO, see page 11.

The panel on which these signs are mounted may have the legend TOURIST ACTIVITIES.

2I-3 Style and Size of Lettering

The standard lettering for tourist oriented directional signs should be uppercase letters of the type provided in the "Standard Alphabets for Highway Signs and Pavement Markings" book.3/ The legend on signs used on major routes in rural districts should be in letters and numerals at least 6 inches in height. On less important rural roads the legend should be in letters and numerals at least 4 inches high.

2I-4 Arrangement and Size of Intersection Signs

Signs for right turns and left turns should be arranged vertically on separate sign panels located so that the right turn signs are closer to the intersection. A maximum of four businesses may be signed per intersection approach. When not more than three signs are to be installed on an approach to an intersection, the signs may be combined on the same panel with the left turn signs above the right turn signs. Not more than three signs should be installed on any sign panel and not more than two sign panels (one for left, and one for right) should be installed on an intersection approach. (Fig.2)

The signs should not exceed the size necessary to accommodate two lines of legend without crowding. Symbols and logos should not exceed the height of two lines of word legends. All signs on the same

3/ Available from the Federal Highway Administration, (HTO-20) Washington, D.C. 20590

sign panel should be the same width which should not exceed 6 feet.

2I-5 Advance Signing

Advance signing may be installed in special circumstances if permitted by State policy. However, it should be limited to those situations where sight distance, intersection vehicle maneuvers or other vehicle operating characteristics require advance notification of the service to reduce vehicle conflicts and improve highway safety.

The arrangement of the tourist oriented directional signs on the advance sign panel should be identical to the arrangement on the intersection approach sign panel with a maximum of two sign panels; however, the directional arrows and distances should be omitted. The appropriate legend NEXT RIGHT or NEXT LEFT in letters of the same height as the sign legends, should be placed on the panels above the signs. The legend RIGHT 1/2 MILE or LEFT 1/2 MILE may be used when there are intervening minor streets.

2I-6 Sign Locations

The intersection approach sign panels should be located at least 200 feet from the intersection; and shall not obstruct the driver's critial viewing of other traffic control devices. The sign panels may be located laterally outside the normal longitudinal alignment of other traffic control signs, but within the right-of-way. The location of other traffic control devices shall at all times take precedence over

the location of tourist oriented directional signs. Sign panels should be spaced at least 200 feet apart and at least 200 feet from other traffic control devices.

When used, Advance Sign panels should be located approximately 1/2 mile from the intersection with 800 feet between the panels. In the direction of traffic, the order of advance signing should be for facilities to the left and then the right.

Position, height, and lateral clearance of panels should be governed by Section 2A and 2D of the MUTCD except as permitted above.

2I-7 State Policy

Each State that elects to use tourist oriented directional signs should adopt a policy that complies with the provision contained above. The policy should include:

1. A definition of tdurist oriented businesses, services, and activities. (The inclusion of the wording - the major portion of whose income or visitors are derived during the normal business season from motorists not residing in the immediate area of the activity - is recommended.)

2. Criteria for eligibility for signing.

3. Provision for covering signs during off-seasons for businesses, services, and activities operated on a seasonal basis.

4. Provisions for trailblazing to facilities that are not on the crossroad if the State elects to sign for such facilities.

5. Maximum distances to eligible facilities (A maximum distance of five miles is recommended).

6. Provision for information centers (plazas) when the number of eligible sign applicants exceeds the maximum permissible number of sign panel installations.

7. Provision for limiting the number of signs when there are more applicants than maximum number of signs permitted.

8. Provision for controlling or excluding those businesses which have conforming or non-conforming illegal signs as defined by the Highway Beautification Act of 1965 (23 U.S.C. 131).

9. Provision for states to charge fees to cover the cost of signing through a permit system.

10. A definition of the conditions under which the time of operation is shown.

11. Provisions for determining if advance signing will be permitted.

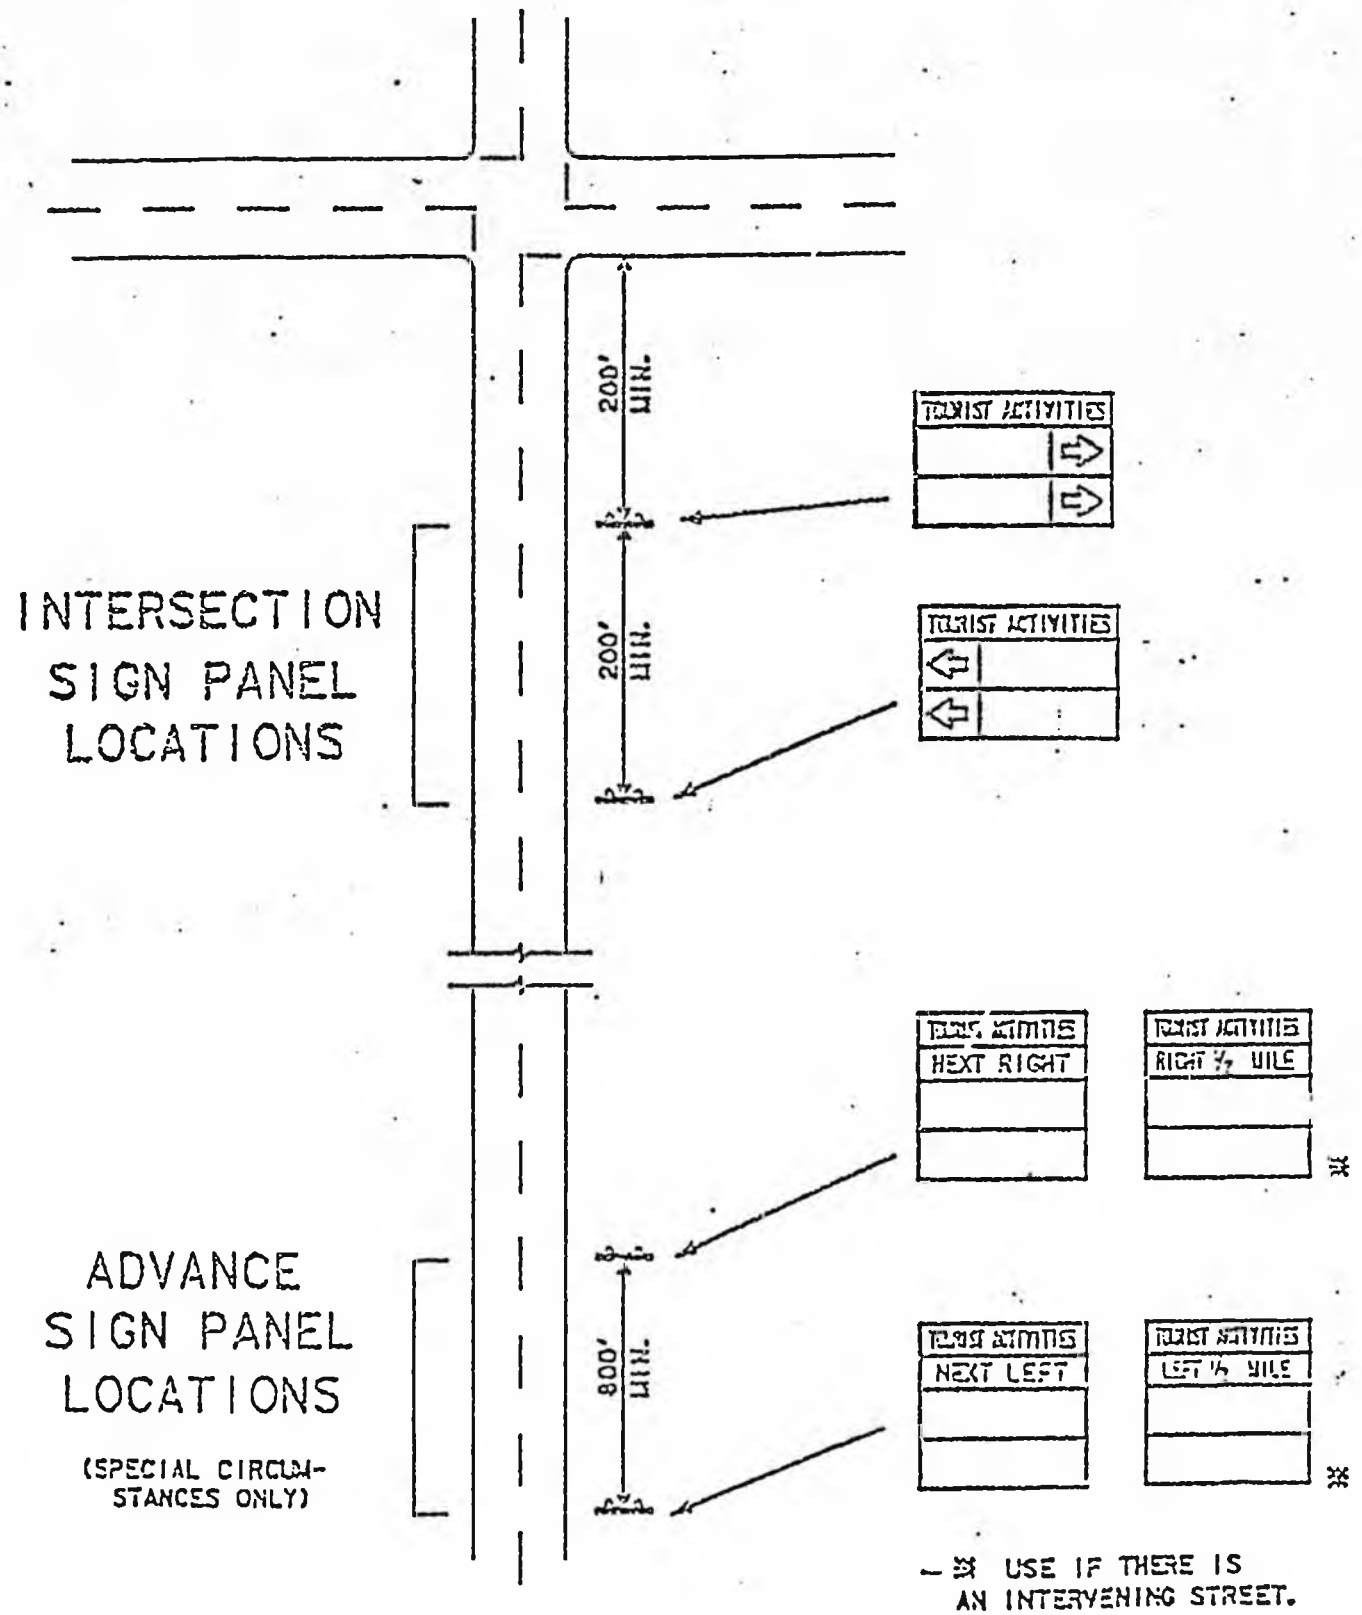
FIGURE 2



COMMENT BY EXECUTIVE BOARD MEMBER FRED RANCK

Concur with request. Strongly suggest that Figure 1 be revised to incorporate a "logo" into one of the typicals shown for a Tourist Oriented sign panel as logos are cited on pages 3 and 4, as well as the word version TOD's shown.

COMMENT BY EXECUTIVE BOARD MEMBER PAUL FOWLER

My present reaction is in opposition to this proposal as both unnecessary and undesirable on primary and secondary highways. In addition, as a general comment, I am increasingly concerned over the amount of detail and space in the MUTCD being devoted to very low priority issues.

Authorities (Laws, Regulations, Policies) Pertaining to Signs
(excluding local laws and ordinances)

(e) *Analysis of laws and ordinances.* Existing traffic laws, ordinances, and regulations relevant to the effective operation of the proposed system shall be reviewed to ensure compatibility.

(f) *Operations plan.* The final element in the traffic engineering analysis shall be an operations plan. It shall include needed legislation, systems design, procurement methods, construction management procedures including acceptance testing, system start-up plan, operation and maintenance plan. It shall include necessary institutional arrangements and the dedication of needed personnel and budget resources required for the proposed system.

(Approved by the Office of Management and Budget under control number 2125-0513)

§ 655.411 Project administration.

(a) Prior to authorization of Federal-aid highway funds for construction, there should be a commitment to the operations plan (see § 655.409 (f)).

(b) The plans, specifications and estimates submittal shall include a total system acceptance plan.

(c) Project approval actions are delegated to the Division Administrator. Approval actions for traffic surveillance and control system projects costing over $1,000,000 are subject to review by the Regional Administrator prior to approval of plans, specifications, and estimates.

(d) System start-up is an integral part of a surveillance and control project. (1) Costs for system start-up, over and above those attributable to routine maintenance and operation, are eligible for Federal-aid funding.

(2) Final project acceptance should not occur until after completion of the start-up phase.

Subpart E—[Reserved]

Subpart F—Traffic Control Devices on Federal-Aid and Other Streets and Highways

AUTHORITY: 23 U.S.C. 109(d), 114(a), 217, 315, 402(a), 23 CFR 1204.4, and 49 CFR 1.48(b).

SOURCE: 48 FR 46776, Oct. 14, 1983, unless otherwise noted.

§ 655.601 Purpose.

To prescribe the policies and procedures of Federal Highway Administration (FHWA) to obtain basic uniformity of traffic control devices on all streets and highways in accordance with the Manual on Uniform Traffic Control Devices (MUTCD).[1]

§ 655.602 Definitions.

The terms used herein are defined in accordance with definitions and usages contained in the MUTCD and 23 U.S.C. 101(a).

§ 655.603 Standards.

(a) *National MUTCD.* The MUTCD approved by the Federal Highway Administrator is the national standard for all traffic control devices installed on any street, highway, or bicycle trail open to public travel in accordance with 23 U.S.C 109(d) and 402(a). The national MUTCD is specifically approved by the FHWA for application on any highway project in which Federal highway funds participate and on projects in federally administered areas where a Federal department or agency controls the highway or supervises the traffic operations.

(b) *State or other Federal MUTCD.* (1) Where State or other Federal agency MUTCDs or supplements are required, they shall be in substantial conformance with the national MUTCD. Changes to the national MUTCD issued by the FHWA shall be adopted by the States or other Federal agencies within 2 years of issuance. The FHWA Regional Administrator has been delegated the authority to approve State MUTCDs and supplements.

(2) The Direct Federal Program Administrator has been delegated the authority to approve other Federal

[1] The MUTCD, which is incorporated by reference at 23 CFR 625.3, may be purchased from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington, D.C. 20402 (GPO Stock No. 050-001-81001-8). It is available for inspection and copying as prescribed in 49 CFR Part 7, Appendix D.

agency MUTCDs with the concurrence of the Office of Traffic Operations. States and other Federal agencies are encouraged to adopt the national MUTCD as their official Manual on Uniform Traffic Control Devices.

(c) *Color specifications.* Color determinations and specifications of sign and pavement marking materials shall conform to requirements of the FHWA Color Tolerance Charts.[2] An alternate method of determining the color of retroreflective sign material is provided in the Appendix.

(d) *Compliance*—(1) *Existing highways.* Each State, in cooperation with its political subdivisions, and Federal agencies shall have a program as required by Highway Safety Program Standard Number 13, Traffic Engineering Services (23 CFR 1204.4) which shall include provisions for the systematic upgrading of substandard traffic control devices and for the installation of needed devices to achieve conformity with the MUTCD.

(2) *New or reconstructed highways.* Federal-aid projects for the construction, reconstruction, resurfacing, restoration, or rehabilitation of streets and highways shall not be opened to the public for unrestricted use until all appropriate traffic control devices, either temporary or permanent, are installed and functioning properly. Both temporary and permanent devices shall conform to the MUTCD.

(3) *Construction area activities.* All traffic control devices installed in construction areas using Federal-aid funds shall conform to the MUTCD. Traffic control plans for handling traffic and pedestrians in construction zones and for protection of workers shall conform to the requirements of 23 CFR Part 630, Subpart J, Traffic Safety in Highway and Street Work Zones.

(4) *MUTCD changes.* The FHWA may establish target dates for achieving compliance with changes to specific devices in the MUTCD.

(e) *Specific information signs.* Standards for specific information signs are contained in 23 CFR Part 655, Subpart C, National Standards for Specific Information Signs.

[2] Available for inspection from the Office of Traffic Operations, Federal Highway Administration, 400 Seventh Street, SW., Washington, D.C. 20590.

§ 655.604 Achieving basic uniformity.

(a) *Programs.* Programs for the orderly and systematic upgrading of existing traffic control devices or the installation of needed traffic control devices on or off the Federal-aid system should be based on inventories made in accordance with 23 CFR 1204.4, Highway Safety Program Standards. These inventories provide the information necessary for programming traffic control device upgrading projects.

(b) *Inventory.* An inventory of all traffic control devices is required by Highway Safety Program Standard Number 13, Traffic Engineering Services (23 CFR 1204.4). Highway planning and research funds and highway related safety grant program funds may be used in statewide or systemwide studies or inventories. Also, metropolitan planning (PL) funds may be used in urbanized areas provided the activity is included in an approved unified work program.

§ 655.605 Project procedures.

(a) *Federal-aid highways.* Federal-aid projects involving the installation of traffic control devices shall follow procedures as established in 23 CFR Part 630, Subpart A, Federal-Aid Programs Approval and Project Authorization. Simplified and timesaving procedures are to be used to the extent permitted by existing policy.

(b) *Off-system highways.* Certain federally funded programs are available for installation of traffic control devices on streets and highways that are not on the Federal-aid system. The procedures used in these programs may vary from project to project but, essentially, the guidelines set forth herein should be used.

§ 655.606 Higher cost materials.

The use of signing, pavement marking, and signal materials (or equipment) having distinctive performance characteristics, but costing more than other materials (or equipment) commonly used may be approved by the FHWA Division Administrator when the specific use proposed is cor to be in the public interest.

§ 655.607 Funding.

(a) *Federal-aid highways.* (1) apportioned or allocated un U.S.C. 104(b) are eligible to par in projects to install traffic con vices in accordance with the M on newly constructed, reconst resurfaced, restored, or rehabi highways, or on existing hig when this work is classified s struction in accordance with 23 101(a). Federal-aid highway fur eligible pavement markings and control signalization may amo 100 percent of the constructio Federal-aid highway funds tioned or allocated under othe tions of 23 U.S.C. are eligible fo ticipation in improvements cor ing to the MUTCD in accordanc the provisions of applicable pr regulations and directives.

(2) Traffic control devices are ble, in keeping with paragraph of this section, provided that the is classified as construction in a ance with 23 U.S.C. 101(a) an State or local agency has a poli ceptable to the FHWA Divisio ministrator for selecting traffic trol devices material or equip based on items such as cost, traffi umes, safety, and expected servic The State's policy should provid cost-effective selection of mat which will provide for substantial ice life taking into account exp and necessary routine maintena For these purposes, effective would normally be measured in t of durability, service life and/or formance of the material. Spe projects including material or eq ment selection shall be develope accordance with this policy. Prop work may be approved on a project project basis when the work is clearly warranted, (ii) on a Federal system, (iii) clearly identified by (iv) substantial in nature, and (v sufficient magnitude at any given l tion to warrant Federal-aid partic tion as a construction item.

(3) The method of accomplish the work will be in accordance with

the specific use proposed is considered to be in the public interest.

§ 655.607 Funding.

(a) *Federal-aid highways.* (1) Funds apportioned or allocated under 23 U.S.C. 104(b) are eligible to participate in projects to install traffic control devices in accordance with the MUTCD on newly constructed, reconstructed, resurfaced, restored, or rehabilitated highways, or on existing highways when this work is classified as construction in accordance with 23 U.S.C. 101(a). Federal-aid highway funds for eligible pavement markings and traffic control signalization may amount to 100 percent of the construction cost. Federal-aid highway funds apportioned or allocated under other sections of 23 U.S.C. are eligible for participation in improvements conforming to the MUTCD in accordance with the provisions of applicable program regulations and directives.

(2) Traffic control devices are eligible, in keeping with paragraph (a)(1) of this section, provided that the work is classified as construction in accordance with 23 U.S.C. 101(a) and the State or local agency has a policy acceptable to the FHWA Division Administrator for selecting traffic control devices material or equipment based on items such as cost, traffic volumes, safety, and expected service life. The State's policy should provide for cost-effective selection of materials which will provide for substantial service life taking into account expected and necessary routine maintenance. For these purposes, effectiveness would normally be measured in terms of durability, service life and/or performance of the material. Specific projects including material or equipment selection shall be developed in accordance with this policy. Proposed work may be approved on a project-by-project basis when the work is (i) clearly warranted, (ii) on a Federal-aid system, (iii) clearly identified by site, (iv) substantial in nature, and (v) of sufficient magnitude at any given location to warrant Federal-aid participation as a construction item.

(3) The method of accomplishing the work will be in accordance with 23 CFR Part 635 Subpart A, Contract Procedures.

(b) *Off-system highways.* Certain Federal-aid highway funds are eligible to participate in traffic control device improvement projects on off-system highways. In addition, Federal-aid highway funds apportioned or allocated in 23 U.S.C. are eligible for the installation of traffic control devices on any public road not on the Federal-aid system when the installation is directly related to a traffic improvement project on a Federal-aid system route.

Appendix—Alternate Method of Determining the Color of Retroreflective Sign Materials

1. The FHWA Color Tolerance Charts provide that conventional color measuring instruments such as spectrophotometers and tristimulus photoelectric colorimeters should not be used for measurement of retroreflective material colors and that such materials should be evaluated visually using the Color Tolerance Charts and paying strict attention to prescribed illumination and viewing conditions.

2. As an alternate to visual testing, the diffuse day color of retroreflective sign material may be determined in accordance with ASTM E 97, "Standard Method of Test for 45-Degree, 0-Degree Directional Reflectance of Opaque Specimens by Filter Photometry." Geometric characteristics must be confined to illumination incident within 10 degrees of, and centered about, a direction of 45 degrees from the perpendicular to the test surface; viewing is within 15 degrees of, and centered about, the perpendicular to the test surface. Conditions of illumination and observation must not be interchanged.

3. Standards to be used for reference are the Munsell Papers designated in Table I or Table II, attached. The papers must be recently calibrated on a spectrophotometer. Acceptable test instruments are:

a. Gardner Multipurpose Reflectometer or Model XL 20 Color Difference Meter,

b. Gardner Model Ac-2a or XL 30 Color Difference Meter,

c. Meeco Model V Colormaster,

d. Hunter lab D25 Color Difference Meter, or

e. Approved equal.

4. Average performance sheeting is identified as Types I and II sheeting and high performance sheeting is identified as Types III and IV sheeting in Standard Specifications for Construction of Roads and Bridges

Revisor's notes. — The provisions of this title were redrafted in 1984 to remove personal pronouns pursuant to § 4, ch. 53, SLA 1982, and to make other minor word changes.

NOTES TO DECISIONS

Stated in Buckalew v. Holloway, Sup. Ct. Op. No. 1988 (File No. 4059), 604 P.2d 240 (1979).

Chapter 01. Scope and Interpretation of Title.

Section
10. Provisions uniform throughout state
20. Short title

Sec. 28.01.010. Provisions uniform throughout state. (a) The provisions of this title and the regulations adopted under this title are applicable within all municipalities of the state. A municipality may not enact an ordinance which is inconsistent with the provisions of this title or the regulations adopted under this title. A municipality may not incorporate into a publication of traffic ordinances a provision of this title or the regulations adopted under this title without specifically identifying the provision or regulation as a state statute or regulation.

(b) A municipality may adopt by reference all or a part of this title and regulations adopted under this title, and may request and shall

receive from the Departments of Public Safety and Community and Regional Affairs assistance in the drafting of model ordinances for adoption by reference. Notwithstanding (a) of this section, a municipality may enact necessary ordinances to meet specific local requirements.

(c) A copy of all traffic ordinances enacted by a municipality shall be forwarded to the commissioner and specific notice of any inconsistent ordinances shall be given by the municipality when the copy of the ordinances is forwarded. So far as practicable, the section number identifying a particular municipal traffic ordinance shall be the same as the section number identifying a corresponding provision of this title or regulations adopted under this title.

(d) A municipality shall erect necessary official traffic control devices on streets and highways within its jurisdiction which as far as practicable conform to the current edition of the Alaska Traffic Manual prepared by the Department of Transportation and Public Facilities.

(e) Copies of all traffic ordinances enacted by a municipality shall be incorporated in a manual and made available to the general public.

(f) Regulations adopted pertaining to a matter partially or wholly governed by this title shall be mutually consistent and compatible, and shall complement each other, as far as practicable. For the purpose of uniformity, the department shall offer and receive reasonable assistance in the coordination and adoption of these regulations.

(g) Regulations adopted under this title shall, as far as practicable, conform to the recommendations of the current edition of the Uniform Vehicle Code adopted by the National Committee on Uniform Traffic Laws and Ordinances. (§ 1 ch 91 SLA 1974; am §§ 1, 2 ch 241 SLA 1976; am §§ 1 — 5 ch 178 SLA 1978)

Revisor's notes. — Pursuant to E.O. No. 39, sec. 11, a reference to Department of Transportation and Public Facilities was substituted for Department of Highways in (d) of this section in 1977.

NOTES TO DECISIONS

A city ordinance, to the extent it is in conflict with the state traffic regulations, constitutes an exercise of home-rule power expressly prohibited by the legislature. Adkins v. Lester, Sup. Ct. Op. No. 1107 (File No. 2078), 530 P.2d 11 (1974).

The word "inconsistent" describes that which reveals lack of uniformity in over-all purpose or design. Cremer v. Anchorage, Sup. Ct. Op. No. 1579 (File No. 3397), 575 P.2d 306 (1978).

Similarity to Uniform Vehicle Code. — Subsection (a) is similar in substance and purpose to the provisions of § 15-101 of the Uniform Vehicle Code Annotated adopted by the National Committee on Uniform Traffic Laws and Ordinances in 1962. Simpson v. Municipality of Anchorage, Ct. App. Op. No. 57 (File Nos. 4945, 4946, 5289), 635 P.2d 1197 (1981).

Under the express terms of subsection (a) it is clear that inconsistency is the standard that governs the validity of a local ordinance regulating the operation of a motor vehicle. Simpson v. Municipality of Anchorage, Ct. App. Op. No. 57 (File Nos. 4945, 4946, 5288), 635 P.2d 1197 (1981).

Nature of inconsistency. — When the question of inconsistency between a local ordinance and state law under subsection

ways and all other duties and powers of the Department of Highways, and specifically including powers and duties formerly held by the Department of Highways under AS 19, AS 23.01, AS 28.05, and AS 44.57 [repealed]."

Chapter 10. State Highway System.

Article
1. Designation, Marking and Use (§§ 19.10.020 — 19.10.100)

STATE OF ALASKA
DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES
POLICY AND PROCEDURES

P & P No. 70-7000 | Page 1 OF 2
Effective Date March 1, 1982

SUBJECT: TRAFFIC CONTROL DEVICES

Supersedes P & P No. 70-7000 | Dated 1/24/80
APPROVED BY [signature]

DIVISION: Standards and Technical Services | SECTION: Traffic & Safety | CHAPTER TITLE: Alaska Traffic Manual

PURPOSE:

To establish policy and procedures for the installation of all traffic control devices on State highways and procedures for the addition, deletion, or clarification of that policy.

POLICY:

It shall be the policy of the Department to implement Sec. 19.10.040 (Uniform System of Marking & Posting) and Sec. 19.10.050 (Traffic Control Signals) of Alaska Statutes by issuing the Alaska Traffic Manual which will include the Manual of Uniform Traffic Control Devices and an Alaska Supplement and this shall be the State policy concerning all traffic control devices. This policy shall be applied uniformly statewide as required in Sec. 28.01.010 (d) Alaska Statute. It shall include such procedures as may be necessary to issue the deliberate and warranted posting of official traffic control devices, description of the proper installation of these devices. All affected employees of the Department shall adhere to the policy and assist in providing a uniform system of marking and posting.

DISTRIBUTION:

All holders of the Administrative, Construction and Design and Maintenance and Operations Manuals and Traffic And Safety personnel.

PROCEDURE:

The State Traffic and Safety Engineer shall be delegated the responsibility to maintain a standard of traffic control devices for Alaska which shall conform as closely as possible with the Manual on Uniform Traffic Control Devices adopted by the American Association of State Highway and Transportation Officials. It shall include a description and policy for the use of service, recreational, and directional signs and such other devices which are specifically reserved for establishment by state policy and clarification or specification of other sections as he may require. This standard shall be the Alaska Traffic Manual and shall incorporate by reference a complete description of all official traffic control devices such as those illustrated in the Alaska Sign Design Specification.

All traffic control devices installed or maintained in Alaska shall conform with this standard. Suitable time will be allowed for the orderly removal and disposal of out-of-date devices and the effective implementation of the standards.

SUBJECT: TRAFFIC CONTROL DEVICES

APPROVED BY: Robert Ward

DIVISION	SECTION	CHAPTER TITLE
Standards and Technical Services	Traffic & Safety	Alaska Traffic Manual

Periodically, the State Traffic and Safety Engineer or his staff will inspect the State highway system for conformance with the system. He may request that the Regional Design and Construction Engineer, in the case of current construction projects, or the Maintenance and Operations Manager to make those changes that may be necessary to obtain conformance with this standard. If they cannot make the required modifications within a reasonable time, they shall indicate what progress has been made, where the remaining problems lie, and what is their proposed schedule for implementation. If either party does not judge the action of the other to be appropriate, he shall refer the matter through the Division Director to the respective Deputy Commissioner for resolution of the problem.

The State Traffic and Safety Engineer will consider and respond to all requests for additions, deletions, and modification to the standards. He shall hold an annual traffic control device conference to entertain suggestions for development of the standard, to instruct in the appropriate application of traffic control devices, and to confer with the various city, borough, state and federal officials concerning these standards. He shall establish an agenda for such a conference, chair the proceedings, and keep adequate records of the discussions.

The Regional Maintenance and Operation's staff shall assist the State Traffic and Safety Engineer in maintaining a current inventory of traffic control devices. The inventory shall include the location, description and legends of all traffic control devices. Copies of this inventory shall be available at all times.

Simply stated, uniformity means treating similar situations in the same way. The use of uniform traffic control devices does not, in itself, constitute uniformity. A standard device used where it is not appropriate is as objectionable as a nonstandard device; in fact, this may be worse, in that such misuse may result in disrespect at those locations where the device is needed.

1A-3 Responsibility for Traffic Control Devices

The responsibility for traffic control devices rests with a multitude of governmental jurisdictions. In virtually all States, traffic control devices placed and maintained by State and local officials are required by statute to conform to a State Manual which shall be in substantial conformance with this Manual. Many Federal agencies have regulations requiring standards in conformance with this Manual for their control device applications.

The Uniform Vehicle Code has the following provision in Section 15-104 for the adoption of a uniform manual:

> "The (State Highway Agency) shall adopt a manual and specifications for a uniform system of traffic-control devices consistent with the provisions of this act for use upon highways within this State. Such uniform system shall correlate with and so far as possible conform to the system set forth in the most recent edition of the Manual on Uniform Traffic Control Devices for Streets and Highways, and other standards issued or endorsed by the Federal Highway Administrator."

Under authority granted by Congress in 1966, the Secretary of Transportation has decreed that traffic control devices on all streets and highways in each State shall be in substantial conformance with standards issued or endorsed by the Federal Highway Administrator.

1A-3.1 Placement Authority

Traffic control devices shall be palced only by the authority of a public body or official having jurisdiction, for the purpose of regulating, warning, or guiding traffic. No traffic control device or its support shall bear any advertizing or commercial message, or any other message that is not essential to traffic control.

Any unauthorized sign placed on the highway right-of-way by a private organization or individual constitutes a public nuisance. All unofficial and nonessential signs should be removed.

With proper authority being given, construction contractors and public utility companies are permitted to erect construction and maintenance signs at work sites to protect the public, equipment, and workmen, provided that such signs conform to the standards of this Manual.

TOURIST ORIENTED DIRECTIONAL SIGNS (TODS)

Introduction

Following passage of the Highway Beautification Act of 1965, many outdoor advertising billboards adjacent to State Primary Highways were removed. As a result, the traditional system for providing motorists with business identification and directional information on goods and services of interest to the traveling public was severely restricted. To resolve this problem, the FHWA proposed adding to the MUTCD, provisions for a system of Tourist Oriented Directional Signing (TODS). This paper summarizes action taken by FHWA, outlines the results of a questionnaire survey of the states on TODS and describes the TODS Program being developed in the State of Iowa.

FHWA Action

In the late 70s and early 80s, authorization was given by FHWA for six states to experiment with Tourist Oriented Directional Signing. They were Maine, New York, New Hampshire, Oregon, Vermont and Washington. Approximately 3000 TODS have been installed in these states and evaluated for a minimum of two years. Evaluation reports from these experimental projects were generally favorable and formed the basis for the FHWA proposal.

The FHWA proposal was published as a Notice of Proposed Amendments to the MUTCD (FHWA Docket 85-27) in the December 17, 1985 issue of the Federal Register. It specified that comments be received by July 19, 1986. Subsequently, this date has been extended to July 24, 1987 to allow more time for interested parties to respond.

Details on the FHWA proposal can be obtained by referring to Docket 85-27 along with the actual text to be included as Section 2I of the MUTCD. Basically, it provides for three panels (left, right and straight ahead) on each intersection approach. Each panel can have up to four tourist oriented signs. Also, a similar number and arrangement of advance signs is allowed. Arrows and mileages are to be shown on each sign. Colors are blue background with white legend. A state policy is encouraged listing definitions, criteria, provisions and limitations of the program.

Response to the FHWA proposal to date has been mixed. Those states who now use TODS are very supportive of the concept; those who do not are strongly opposed to putting TODS in the MUTCD. Similarly, commercial businesses have spoken in favor of the proposal, while those in the outdooor advertising business oppose TODS. Input is yet to be received from the National Committee on Uniform Traffic Control Devices (NCUTCD), a major contributor. After the Docket closes, FHWA will make changes which reflect comments received and expects to proceed to a Final Rule in late 1987.

Action by the National Committee on Uniform Traffic Control Devices

The FHWA proposal had been considered by the Signs Technical Committee of the NCUTCD. A Task Force has drafted a modified version of the FHWA proposal. Their recommendations are more restrictive allowing only two panels (left and right) on each approach. Each panel can have two TODS. Sign fabrication details remain essentially as proposed by the FHWA. The Signs Technical Committee proposal will be voted on by the National Committee at their June 1987 meeting and the results forwarded to FHWA.

Results of TODS Questionnaire Survey

A nationwide survey was conducted to determine how many states have implemented a TODS program in some form or other. A questionnaire containing several items on criteria and details on TODS was distributed. Forty-eight of the 50 states (96%) responded. Of the 48 questionnaires returned, 17 states have or are in the final stages of implementing a TODS program. Another three states are developing plans to adopt TODS. Ten states may consider TODS at some time in the future and 18 states have no plans to use TODS.

All states were asked if they favor placing standards for use and application of Tourist Oriented Directional Signing in the MUTCD. Of the 48 returned questionnaires, 24 answered yes, 17 answered no, four gave no opinion and three states did not answer the question. These results show that a slight majority favor standards in the Manual. A summary on the above information is provided in Table 1.

A more detailed summary of information from the 17 states who have or will shortly implement a TODS Program was developed. This information is shown in Table 2 which was prepared in such a way to make it easy to compare programs between states.

All states had a policy with criteria, requirements and details on their program. Historical sites, recreation areas and cultural/scientific facilities were listed by most states. Motorist services were eligible in 12 of the 17 states. Of less interest were agricultural related businesses (6 of 17) and commercial businesses (9 of 17). Other miscellaneous facilities

TODS QUESTIONNAIRE SUMMARY
Table 1

Do you have a program for installing TODS?
A. Yes, signs are in place
B. Plans are being developed
C. May consider in future
D. No plans to use TODS
E. No reply received

Favor standards for TODS in MUTCD?

Table 2 - Details of TODS Program

1. If TODS are used or planned do you have a policy, instruction or specification on their use?
   (a) Yes (b) No
2. What types of facilities are eligible for TODS?
   (a) Motorist Services (Gas, Food, Lodging, Camping)
   (b) Historical Sites or Buildings
   (c) Recreational Areas
   (d) Cultural/Scientific Facilities
   (e) Educational Facilities
   (f) Agricultural Related Business
   (g) Commercial Business
   (h) Other
3. What are the minimum hours/day, days/week and months/year of operation for the above facilities?
   (a) hours/day (b) days/week (c) months/year

10. The following are specific design details for TODS:
    (a) The size of a sign panel for each destination is _____ (w" x h").
    (b) The number of lines of copy used on each panel is _____.
    (c) The copy size is _____ inches in height.
    (d) The copy type is all caps (AC) or upper/lower case (UL).
    (e) The color of the sign panel is: (backround, copy).
11. Is mileage to the destination specified?
    (a) Yes (b) No
12. Are Logos permitted on destination panels?
    (a) Yes (b) No
13. Is reflectorization of TODS panels required?
    (a) Yes (b) No
14. The cost of material, installation and maintenance of TODS is paid for by which of the following?
    (a) Applicant (b) State Highway Agency (c) Others

TODS design details:				Mileage		Logos		Reflect.		Who pays?

included small animal veterinary clinics, transportation facilities and military installations.

Regarding minimum hours of operation, five states had no minimum requirements. Three other states require "normal" or "variable" hours. The remaining nine states listed minimum hours and/or days of operation. As would be expected, motorist services require the longest hours. Other facilities require less hours of operation to qualify.

To qualify for TODS, facilities and attractions in many cases are required to have an established minimum number of visitors per year. The minimum attendance numbers ranged from 100,000 tourists annually at historic sites, recreation areas or cultural/scientific facilities in the State of Ohio to a minimum student enrollment of 400 at an educational facility in a rural area in the State of Minnesota. Other attractions ranged in an area from 15,000 to 50,000. Nine states had no minimum attendance figures at all.

All 17 states indicated that TODS could be installed in rural areas. Fifteen states allowed TODS to be installed in urban areas. Of these, two had population requirements of 1500 or less and 5000 or less. They were Iowa and Pennsylvania respectively.

Seven states indicated that signs could be installed when the facility is within view of the highway being traveled on. The remaining 10 states said no, signs could not be installed when the facility or attraction was in view.

The maximum distance a facility could be located from the highway and qualify

for TODS ranged from a minimum of one mile to a maximum of 15 miles. The majority fell in the 5-10 mile range. Two states, Delaware and Vermont, had no distance requirements.

The installation and design details varied greatly from state to state. Generally no more than three TODS are permitted in one assembly with one to four assemblies permitted on an intersection approach. Sign spacing was 200-300 ft. or in accordance with the MUTCD.

In some cases, advance signs may be desirable to avoid sight distance or operational problems. When asked if they would provide this signing, 10 states said they would and six said they would not. One state did rot reply to the question.

Sign size, copy specifications and colors were extremely variable. Please refer to Item 10 in Table 2 for more details on sign construction.

Thirteen states indicated that mileage to the destination is specified on TODS. The remaining four states do not specify mileage.

Nine states allow the use of Logos on their TODS. The remaining eight states responded no to the use of Logos.

Sixteen of the 17 states responded that reflectorization is required on TODS. One state, Maine, allows some smaller nonreflectorized signs, but most of the larger more important signs are reflectorized. States were more unanimous on this question than any other.

The final question of the survey deals with the cost of materials, installation and maintenance of TODS. Nine states responded that the applicant pays these costs, while five states said the state highway agency pays for the signing costs. Three states marked both the applicant and the state highway agency. In one case, the state has the applicant pay for the design, materials and fabrication while the state pays for maintenance of the signs. In another case, the applicant pays for the signing if it is a for-profit activity or site while the state pays for signing directing to nonprofit facilities or attractions.

TODS in Iowa

In the early to mid 1980s, a mild recession at the national level combined with a downturn in agricultural prices had a profound effect on the economy of Iowa. Sagging land prices caused serious problems with the finance of farm operations. As a result, many farmers were forced out of business. The downturn in agricultural related businesses affected the entire economy of the State appreciably reducing commercial incomes. To compensate for this loss, it was thought by many that promoting tourism would help restore the economy. While Iowa is not perceived to be a tourist state, there are many sites, facilities and activities that could be of interest to travelers from other parts of the country. To identify tourist attractions, the Iowa TODS Program was initiated.

The 1986 Legislature added a section to the Iowa Code providing the basis for a tourism promotion program. It reads as follows:

> The Department of Transportation shall in cooperation with the Department of Economic Development establish criteria for guiding traffic to eligible tourist attractions along Interstate and Primary highways. The Department shall annually review the list of attractions for which signing is in place. All tourist attraction signing shall conform to the Manual on Uniform Traffic Control Devices. Except as otherwise provided, tourist attraction signing shall be purchased, installed and maintained by the Department of Transportation.

Prior to passage of this section of the Code, the DOT administered a LOGO Program on the Interstate System and provided signing for selected "tourist attractions of regional or national significance" on all Primary and Interstate routes. Criteria was moderately restrictive requiring attractions to be within 15 miles of the route and have at least 50,000 visitors annually. The new tourist promotion program was much more liberal allowing attractions to be as much as 30 miles from the route and have only 15,000 visitors annually. Also, the scope of the program was expanded beyond the traditional tourist attractions in the historic, cultural, scientific, religious, educational and natural categories to motorist services, seasonal agricultural sales and other commercial businesses.

To implement this section of the Code, an Administrative Rule was developed. It is now in the review process and will become effective on July 8, 1987 unless problems develop making revisions necessary. Following the effective date of the rule, applications will begin to be processed for adding TODS to the system. FHWA approval has been given to go ahead with a two year experimental program on this new category of signs. At the end of the two

years, an evaluation will be made to determine the future disposition of this program. To provide more detail, the entire rule is included herein and is as follows:

TOURIST ORIENTED SIGNING

761---119.1(321) Definitions.

"Primary highway", for the purpose of this chapter, does not include an interstate highway or a freeway primary highway as defined in Iowa Code section 306C.10, subsections 2 and 5.

"Tourist oriented signing" is official signing that is located within the right of way of a primary highway and that gives specific information regarding activities or sites of significant interest to the traveling public. However, official signing for campgrounds and ski area facilities is not included in this definition. This signing is addressed elsewhere.

761--119.2(321) Activities or sites of significant interest. The activity or site must be of significant interest to the traveling public to qualify for tourist oriented signing. Any one of the following may qualify the activity or site.

119.2(1) Motorist service. It offers a motorist service, such as gas, food, lodging, or motor vehicle service or repair.

119.2(2) Tourist attraction. It is of reasonable interest to tourists

as a historic, cultural, scientific, educational or religious site, or as a site of natural scenic beauty or naturally suited for outdoor recreation.

119.2(3) Commercial interest. It is of reasonable commercial interest to the traveling public.

761--119.3(321) General requirements. An individual activity or site of significant interest must meet the following general requirements to qualify for tourist oriented signing.

119.3(1) The activity or site shall be open to the general public during regular and reasonable hours and not by appointment or reservation only.

119.3(2) The activity shall be conducted in an appropriate building or area. It shall not be conducted in a building principally used as a residence unless there is a convenient, separate and well-marked entrance.

119.3(3) The activity or site shall be located:

a. In a rural area or inside the corporate limits of a city with a population of less than one thousand five hundred (1,500).

b. Outside the corporate limits of a city with a population between one thousand five hundred (1,500) and five thousand (5,000).

c. Outside the urban area of a city with a population of five thousand (5,000) or greater.

119.3(4) Neither the activity or site nor any on premise sign advertising the activity or site shall be located adjacent to or visible from the primary highway.

119.3(5) An activity or site will not qualify for a tourist oriented sign if the activity or site is identified by an off right of way directional sign, as authorized in 761--chapter 120, that is within one mile, is on the same route, and is facing the same direction as the proposed tourist oriented sign.

119.3(6) The activity or site shall comply with all applicable laws concerning public accommodations without regard to race, religion, color, age, sex, or national origin.

761--119.4(321) Special requirements. In addition to rule 119.3(321), an individual activity or site of significant interest must meet the following requirements to qualify for tourist oriented signing.

119.4(1) Motorist service. An activity or a site providing a motorist service, as described in subrule 119.2(1), must:

a. Be open a minimum of eight hours a day, six days a week, and twelve months a year.

b. Be located within three miles of the primary highway.

119.4(2) Tourist attraction. A tourist attraction, as described in

subrule 119.2(2), must:

a. Have a minimum of two thousand five hundred visitors annually.

b. Be open a minimum of four hours a day, five days a week, and eight months a year.

c. Be located within five miles of the primary highway.

119.4(3) Agricultural business activity. An agricultural business activity must:

a. Be open a minimum of eight hours a day, six days a week, and twelve months a year. However, seasonal activities may qualify if they are open eight hours a day and six days a week during the normal seasonal period.

b. Be located within ten miles of the primary highway.

119.4(4) Other commercial activity. A commercial activity not covered by subrule 119.4(3) must:

a. Be open a minimum of eight hours a day, five days a week, and twelve months a year.

b. Be located within five miles of the primary highway.

761--119.5(321) Procedures.

119.5(1) Requests for tourist oriented signing shall be submitted to: Office of Right of Way, Iowa Department of Transportation, 800 Lincoln Way, Ames, Iowa 50010.

119.5(2) The department of transportation shall forward requests to the department of economic development.

119.5(3) The department of economic development, in cooperation with representatives from the department of transportation, the department of agriculture and land stewardship, and the tourism council, will approve or deny requests.

119.5(4) If a request is approved, the department of transportation shall:

a. Design the tourist oriented sign and furnish a scaled drawing of it to the applicant.

b. Collect from the applicant the cost of sign fabrication, installation and maintenance if the sign identifies a for-pro.it activity or site.

c. Secure and install the sign and provide normal maintenance.

761--119.6(321) Conditions.

119.6(1) A tourist oriented sign shall not be erected until the activity

or site has been approved in accordance with this chapter and the department of transportation has received prepayment of the cost of sign fabrication and installation for a sign identifying a for-profit activity or site.

119.6(2) A tourist oriented sign shall be removed if the activity or site no longer qualifies for tourist oriented signing.

119.6(3) The department of transportation shall remove or mask a tourist oriented sign for a seasonal activity when the activity is closed during the off-season period.

119.6(4) If needed, adequate trailblazing signs shall be provided on local roads and streets to guide motorists from the primary route to the activity or site. Trailblazing shall conform to requirements in the "Manual on Uniform Traffic Control Devices for Streets and Highways", as adopted in rule 761--130.1(321). The department of transportation shall not pay for trailblazing signs. Tourist oriented signs shall not be installed until necessary trailblazing signs are in place.

This rule is intended to implement Iowa Code section 321.252.

--------End of Rule--------

The provisions in this rule are rather liberal and could result in a multitude of new signs to be installed. It will be up to the committee mentioned in Section 119.5(3) to use some discretion on what is approved to avoid signing for questionable attractions. Unjustified signing would erode the credibility

of the program which would diminish the objective of promoting tourism. It may be necessary to adjust the approval criteria after some experience is gained in the early stages of the program.

Tourist Oriented Directional Signs are to be rectangular in shape and have white legend and border on a blue background. Each sign is to have no more than two lines of legend and is to have a directional arrow with the distance to the facility shown below the arrow. The content of the legend is to be limited to identification of the business, service or activity and directional information. Legends are not to include promotional advertising. The applicant may choose the name of the business or activity, but it must be appropriate and approved by the Department of Transportation. Legends, arrows and borders are to be reflectorized.

Each Tourist Oriented Directional Sign is to be 72" wide and 18" in height. Copy is to be upper case letters of the type provided in the Standard Alphabets for Highway Signs and Pavement Markings book. All letters and numbers are to be 6" in height. Arrows are to conform with provisions in the MUTCD and detailed drawings in the Standard Highway Signs book.

Not more than three TODS signs are to be installed to make up a sign panel. Not more than two sign panels are to be installed on an approach to an intersection. If three or fewer attractions or sites are to be signed, a combination panel is to be used. If four to six attractions are to be signed, individual left and right panels with a maximum of three TODS each are to be used. The sign for attractions to the left is to precede the sign for attractions to the right. No signing will be provided for facilities in the

straight ahead direction. Illustrations of the sign panel assemblies are shown in Figures 1, 2 and 3.

Advance panels will not be used except to avoid potential unsafe lane changes or erratic maneuvers. Sign panels are to be located at least 200 ft. from the intersection and spaced 200 ft. from additional sign panels or other traffic control devices. The location of other essential traffic control devices shall at all times take precedence over the location of tourist oriented signing.

The estimated cost of a panel composed of three TODS is approximately $400. Attractions or facilities which operate for profit will be required to pay their proportionate share of the panel cost. For nonprofit attractions, the Department of Transportation will pay for the signs as specified in the Code.

Applications for TODS will be received and handled by the Department of Transportation Outdoor Advertising Section which is part of the Office of Right of Way. Personnel assigned to this office will review the application and perform a field check to verify information provided and collect additional data on existing site conditions. The file will then be forwarded to the Department of Economic Development for committee action. If approved, the applicant will then be asked to submit the installation fee if signing is for a profit making facility. TODS will then be designed by the Traffic Engineering Section and fabricated in the State Sign Shop. The Resident Engineer will then check for necessary trailblazing signs off the Primary system. If they are in place and in satisfactory condition, the TODS will be installed. If the facility or business fails to meet qualifications or ceases

to exist, their signs will be removed. The Resident Engineer will also have the responsibility to mask or remove tourist oriented signs for seasonal activities.

funds may participate in the costs of such project activity.

(d) *Land acquired in connection with other Federal or Federally-assisted programs*—(1) *Land acquired and displacements made prior to location of highway.* Where land is acquired and all displacements made for a program or projects, other than one in which Federal funds administered by the FHWA are or will be utilized, prior to receipt of written advice from the State highway agency concerning the location of a proposed highway or project or a request for reservation or conveyance for such purposes,

(i) The provisions of this part will not apply, and

(ii) There shall be no FHWA participation in relocation costs.

(2) *Land acquired and/or displacements made subsequent to location of highway.* Where land is acquired and/or displacements are made subsequent to written advice from the State highway agency giving the location of a proposed highway or other project in which Federal funds administered by the FHWA will be utilized or a request is made for reservation or conveyance for such purposes,

(i) The applicable provisions of this part will apply, and

(ii) The costs to the State highway agency of the relocation payments and services required by 49 CFR Part 25 will be eligible for the FHWA participation in the same manner and to the same extent as other project costs.

(A) The State highway agency and the displacing agency shall enter into an agreement or memorandum of understanding setting forth the responsibilities of each in the relocations involved and the basis for the sharing of costs. Such agreements should be executed during the early stages of project development and will not jeopardize future Federal participation in costs to the State highway agency of the relocation payments and services if the agreement does not constitute a binding obligation for payment of such costs on specified lands.

(B) The agreement should be in effect when a request for authorization to acquire is submitted to the FHWA and should be coordinated with any agreement to be executed under the provisions of § 710.304(o).

(e) *Surveillance.* The State highway agency shall monitor relocation assistance activities conducted by any State agency, individual, firm, association, or corporation to the extent necessary.

Subpart A—National Standards for Regulation by States of Outdoor Advertising Adjacent to the Interstate System Under the 1958 Bonus Program

Authority: Sec. 12, Pub. L. 85-381, 72 Stat. 95, as amended; 23 U.S.C. 131; delegation of authority in 49 CFR 1.48(b).

§ 750.101 Purpose.

(a) In section 12 of the Federal-Aid Highway Act of 1958, Pub. L. 85-381, 72 Stat. 95, hereinafter called the "act," the Congress declared that:

(1) To promote the safety, convenience, and enjoyment of public travel and the free flow of interstate commerce and to protect the public investment in the National System of Interstate and Defense Highways, hereinafter called the "Interstate System," it is in the public interest to encourage and assist the States to control the use of and to improve areas adjacent to such system by controlling the erection and maintenance of outdoor advertising signs, displays, and devices adjacent to that system.

(2) It is a national policy that the erection and maintenance of outdoor advertising signs, displays, or devices within 660 feet of the edge of the right-of-way and visible from the main-traveled way of all portions of the Interstate System constructed upon any part of right-of-way, the entire width of which is acquired subsequent to July 1, 1956, should be regulated, consistent with national standards to be prepared and promulgated by the Secretary of Transportation.

(b) The standards in this part are hereby promulgated as provided in the act.

[38 FR 16044, June 20, 1973, as amended at 39 FR 23029, Aug. 9, 1974]

§ 750.102 Definitions.

The following terms when used in the standards in this part have the following meanings:

(a) Acquired for right-of-way means acquired for right-of-way for any public road by the Federal Government, a State, or a county, city, or other political subdivision of a State, by donation, dedication, purchase, condemnation, use, or otherwise. The date of acquisition shall be the date upon which title (whether fee title or a lesser interest) vested in the public for right-of-way purposes under applicable Federal or State law.

(b) Centerline of the highway means a line equidistant from the edges of the median separating the main-traveled ways of a divided Interstate Highway, or the centerline of the main-traveled way of a nondivided Interstate Highway.

(c) Controlled portion of the Interstate System means any portion which:

(1) Is constructed upon any part of right-of-way, the entire width of which is acquired for right-of-way subsequent to July 1, 1956 (a portion shall be deemed so constructed if, within such portion, no line normal or perpendicular to the centerline of the highway and extending to bot edges of the right-of-way will intersect any right-of-way acquired for right-of-way on or before July 1, 1956);

(2) Lies within a State, the highway department of which has entered into an agreement with the Secretary of Transportation as provided in the act; and

(3) Is not excluded under the terms of the act which provide that agreements entered into between the Secre-

rary of Transportation and the State highway department shall not apply to those segments of the Interstate System which traverse commercial or industrial zones within the boundaries of incorporated municipalities, as such boundaries existed on September 21, 1959, wherein the use of real property adjacent to the Interstate System is subject to municipal regulation or control, or which traverse other areas where the land use as of September 21, 1959, was clearly established by State law as industrial or commercial.

(d) Entrance roadway means any public road or turning roadway, including acceleration lanes, by which traffic may enter the main-traveled way of an Interstate Highway from the general road system within a State, irrespective of whether traffic may also leave the main-traveled way by such road or turning roadway.

(e) Erect means to construct, build, raise, assemble, place, affix, attach, create, paint, draw, or in any other way bring into being or establish.

(f) Exit roadway means any public road or turning roadway including deceleration lanes, by which traffic may leave the main-traveled way of an Interstate Highway to reach the general road system within a State, irrespective of whether traffic may also enter the main-traveled way by such road or turning roadway.

(g) Informational site means an area or site established and maintained within or adjacent to the right-of-way of a highway on the Interstate System by or under the supervision or control of a State highway department, wherein panels for the display of advertising and informational signs may be erected and maintained.

(h) Legible means capable of being read without visual aid by a person of normal visual acuity.

(i) Maintain means to allow to exist.

(j) Main-traveled way means the traveled way of an Interstate Highway on which through traffic is carried. In the case of a divided highway, the traveled way of each of the separated roadways for traffic in opposite directions is a main-traveled way. It does not include such facilities as frontage roads, turning roadways, or parking areas.

(k) Protected areas means all areas inside the boundaries of a State which are adjacent to and within 660 feet of the edge of the right-of-way of all controlled portions of the Interstate System within that State. Where a controlled portion of the Interstate System terminates at a State boundary which is not perpendicular or normal to the centerline of the highway, protected areas also means all areas inside the boundary of such State which are within 660 feet of the edge of the right-of-way of the Interstate Highway in the adjoining State.

(l) Scenic area means any public park or area of particular scenic beauty or historical significance designated by or pursuant to State law as a scenic area.

(m) Sign means any outdoor sign, display, device, figure, painting, drawing, message, placard, poster, billboard, or other thing which is designed, intended, or used to advertise or inform, any part of the advertising or informative contents of which is visible from any place on the main-traveled way of a controlled portion of the Interstate System.

(n) State means the District of Columbia and any State of the United States within the boundaries of which a portion of the Interstate System is located.

(o) State law means a State constitutional provision or statute, or an ordinance, rule, or regulation enacted or adopted by a State agency or political subdivision of a State pursuant to State constitution or statute.

(p) Trade name shall include brand name, trademark, distinctive symbol, or other similar device or thing used to identify particular products or services.

(q) Traveled way means the portion of a roadway for the movement of vehicles, exclusive of shoulders.

(r) Turning roadway means a connecting roadway for traffic turning between two intersection legs of an interchange.

(s) Visible means capable of being seen (whether or not legible) without visual aid by a person of normal visual acuity.

§ 750.103 Measurements of dist

(a) Distance from the r right-of-way shall be meas zontally along a line normal dicular to the centerline of way.

(b) All distances under (a)(2) and (b) shall be measu the centerline of the highwa two vertical planes which a or perpendicular to and inte centerline of the highway, a pass through the termini of ured distance.

[38 FR 16044, June 20, 1973, as a 41 FR 9321, Mar. 4, 1976]

§ 750.104 Signs that may not be in protected areas.

Erection or maintenance o lowing signs may not be per protected areas:

(a) Signs advertising activi are illegal under State or Fed or regulations in effect at the of such signs or at the locatio activities.

(b) Obsolete signs.

(c) Signs that are not clear good repair.

(d) Signs that are not secu fixed to a substantial structure

(e) Signs that are not co with the standards in this part.

§ 750.105 Signs that may be per protected areas.

(a) Erection or maintenance following signs may be perm protected areas:

Class 1—Official signs. Direct other official signs or notices ere maintained by public officers or pursuant to and in accordance wi tion or authorization contained in Federal law, for the purpose of carr an official duty or responsibility.

Class 2—On-premise signs. Signs hibited by State law which are co with the applicable provisions of tion and § 750.103 and which adver sale or lease of, or activities being co upon, the real property where the s located.

Not more than one such sign ad the sale or lease of the same prope be permitted under this class manner as to be visible to traffic pro in any one direction on any one In Highway.

§ 750.103 Measurements of distance.

(a) Distance from the edge of a right-of-way shall be measured horizontally along a line normal or perpendicular to the centerline of the highway.

(b) All distances under § 750.107 (a)(2) and (b) shall be measured along the centerline of the highway between two vertical planes which are normal or perpendicular to and intersect the centerline of the highway, and which pass through the termini of the measured distance.

[38 FR 16044, June 20, 1973, as amended at 41 FR 9321, Mar. 4, 1976]

§ 750.104 Signs that may not be permitted in protected areas.

Erection or maintenance of the following signs may not be permitted in protected areas:

(a) Signs advertising activities that are illegal under State or Federal laws or regulations in effect at the location of such signs or at the location of such activities.

(b) Obsolete signs.

(c) Signs that are not clean and in good repair.

(d) Signs that are not securely affixed to a substantial structure, and

(e) Signs that are not consistent with the standards in this part.

§ 750.105 Signs that may be permitted in protected areas.

(a) Erection or maintenance of the following signs may be permitted in protected areas:

Class 1—Official signs. Directional or other official signs or notices erected and maintained by public officers or agencies pursuant to and in accordance with direction or authorization contained in State or Federal law, for the purpose of carrying out an official duty or responsibility.

Class 2—On-premise signs. Signs not prohibited by State law which are consistent with the applicable provisions of this section and § 750.108 and which advertise the sale or lease of, or activities being conducted upon, the real property where the signs are located.

Not more than one such sign advertising the sale or lease of the same property may be permitted under this class in such manner as to be visible to traffic proceeding in any one direction on any one Interstate Highway.

Not more than one such sign, visible to traffic proceeding in any one direction on any one Interstate Highway and advertising activities being conducted upon the real property where the sign is located, may be permitted under this class more than 50 feet from the advertised activity.

Class 3—Signs within 12 miles of advertised activities. Signs not prohibited by State law which are consistent with the applicable provisions of this section and §§ 750.108, 750.107, and 750.108 and which advertise activities being conducted within 12 air miles of such signs.

Class 4—Signs in the specific interest of the traveling public. Signs authorized to be erected or maintained by State law which are consistent with the applicable provisions of this section and §§ 750.108, 750.107, and 750.108 and which are designed to give information in the specific interest of the traveling public.

(b) A Class 2 or 3 sign, except a Class 2 sign not more than 50 feet from the advertised activity, that displays any trade name which refers to or identifies any service rendered or product sold, used, or otherwise handled more than 12 air miles from such sign may not be permitted unless the name of the advertised activity which is within 12 air miles of such sign is displayed as conspicuously as such trade name.

(c) Only information about public places operated by Federal, State, or local governments, natural phenomena, historic sites, areas of natural scenic beauty or naturally suited for outdoor recreation and places for camping, lodging, eating, and vehicle service and repair is deemed to be in the specific interest of the traveling public. For the purposes of the standards in this part, a trade name is deemed to be information in the specific interest of the traveling public only if it identifies or characterizes such a place or identifies vehicle service, equipment, parts, accessories, fuels, oils, or lubricants being offered for sale at such a place. Signs displaying any other trade name may not be permitted under Class 4.

(d) Notwithstanding the provisions of paragraph (b) of this section, Class 2 or Class 3 signs which also qualify as Class 4 signs may display trade names in accordance with the provisions of paragraph (c) of this section.

§ 750.105 Class 3 and 4 signs within informational sites.

(a) Informational sites for the erection and maintenance of Class 3 and 4 advertising and informational signs may be established in accordance with § 1.35 of this chapter. The location and frequency of such sites shall be as determined by agreements between the Secretary of Transportation and the State highway departments.

(b) Class 3 and 4 signs may be permitted within such informational sites in protected areas in a manner consistent with the following provisions:

(1) No sign may be permitted which is not placed upon a panel.

(2) No panel may be permitted to exceed 13 feet in height or 25 feet in length, including border and trim, but excluding supports.

(3) No sign may be permitted to exceed 12 square feet in area, and nothing on such sign may be permitted to be legible from any place on the main-traveled way or a turning roadway.

(4) Not more than one sign concerning a single activity or place may be permitted within any one informational site.

(5) Signs concerning a single activity or place may be permitted within more than one informational site, but no Class 3 sign which does not also qualify as a Class 4 sign may be permitted within any informational site more than 12 air miles from the advertised activity.

(6) No sign may be permitted which moves or has any animated or moving parts.

(7) Illumination of panels by other than white lights may not be permitted, and no sign placed on any panel may be permitted to contain, include, or be illuminated by any other lights, or any flashing, intermittent, or moving lights.

(8) No lighting may be permitted to be used in any way in connection with any panel unless it is so effectively shielded as to prevent beams or rays of light from being directed at any portion of the main-traveled way of the Interstate System, or is of such low intensity or brilliance as not to cause glare or to impair the vision of the driver of any motor vehicle, or to otherwise interfere with any driver's operation of a motor vehicle.

[23 FR 8793, Nov. 13, 1958, as amended at 35 FR 18719, Dec. 10, 1970; 41 FR 9321, Mar. 4, 1976]

§ 750.107 Class 3 and 4 signs outside informational sites.

(a) The erection or maintenance of the following signs may be permitted within protected areas, outside informational sites:

(1) Class 3 signs which are visible only to Interstate highway traffic not served by an informational site within 12 air miles of the advertised activity;

(2) Class 4 signs which are more than 12 miles from the nearest panel within an informational site serving Interstate highway traffic to which such signs are visible.

(3) Signs that qualify both as Class 3 and 4 signs may be permitted in accordance with either paragraph (a)(1) or (2) of this section.

(b) The erection or maintenance of signs permitted under paragraph (a) of this section may not be permitted in any manner inconsistent with the following:

(1) In protected areas in advance of an intersection of the main-traveled way of an Interstate highway and an exit roadway, such signs visible to Interstate highway traffic approaching such intersection may not be permitted to exceed the following number:

Distance from intersection	Number of signs
0-2 miles	0.
2-5 miles	6.
More than 5 miles	Average of one sign per mile.

The specified distances shall be measured to the nearest point of the intersection of the traveled way of the exit roadway and the main-traveled way of the Interstate highway.

(2) Subject to the other provisions of this paragraph, not more than two such signs may be permitted within any mile distance measured from any point, and no such signs may be permitted to be less than 1,000 feet apart.

(3) Such signs may not b in protected areas adjac Interstate highway right-o any part of the width of w structed an entrance or ex

(4) Such signs visible to highway traffic which is a or has passed an entranc may not be permitted in areas for 1,000 feet beyor thest point of the intersecti the traveled way of such roadway and the main-trav the Interstate highway.

(5) No such signs may be in scenic areas.

(6) Not more than one su vertising activities being co a single enterprise or givin tion about a single place m mitted to be erected or mai such manner as to be visibl moving in any one directi one Interstate highway.

(c) No Class 3 or 4 signs those permitted by this secti permitted to be erected or n within protected areas, out mational sites.

§ 750.108 General provisions.

No Class 3 or 4 signs may ted to be erected or maintai ant to § 750.107, and no Cl may be permitted to be e maintained, in any manner ent with the following:

(a) No sign may be permitt attempts or appears to at direct the movement of t which interferes with, imita sembles any official traffic si or device.

(b) No sign may be permitt prevents the driver of a veh having a clear and unobstru of official signs and approa merging traffic.

(c) No sign may be permitt contains, includes, or is illum any flashing, intermittent o light or lights.

(d) No lighting may be per be used in any way in connec any sign unless it is so e shielded as to prevent beams c light from being directed at tion of the main-traveled wa Interstate System, or is of suc

(3) Such signs may not be permitted in protected areas adjacent to any Interstate highway right-of-way upon any part of the width of which is constructed an entrance or exit roadway.

(4) Such signs visible to Interstate highway traffic which is approaching or has passed an entrance roadway may not be permitted in protected areas for 1,000 feet beyond the furthest point of the intersection between the traveled way of such entrance roadway and the main-traveled way of the Interstate highway.

(5) No such signs may be permitted in scenic areas.

(6) Not more than one such sign advertising activities being conducted as a single enterprise or giving information about a single place may be permitted to be erected or maintained in such manner as to be visible to traffic moving in any one direction on any one Interstate highway.

(c) No Class 3 or 4 signs other than those permitted by this section may be permitted to be erected or maintained within protected areas, outside informational sites.

§ 750.103 General provisions.

No Class 3 or 4 signs may be permitted to be erected or maintained pursuant to § 750.107, and no Class 2 sign may be permitted to be erected or maintained, in any manner inconsistent with the following:

(a) No sign may be permitted which attempts or appears to attempt to direct the movement of traffic or which interferes with, imitates or resembles any official traffic sign, signal or device.

(b) No sign may be permitted which prevents the driver of a vehicle from having a clear and unobstructed view of official signs and approaching or merging traffic.

(c) No sign may be permitted which contains, includes, or is illuminated by any flashing, intermittent or moving light or lights.

(d) No lighting may be permitted to be used in any way in connection with any sign unless it is so effectively shielded as to prevent beams or rays of light from being directed at any portion of the main-traveled way of the Interstate System, or is of such low intensity or brilliance as not to cause glare or to impair the vision of the driver of any motor vehicle, or to otherwise interfere with any driver's operation of a motor vehicle.

(e) No sign may be permitted which moves or has any animated or moving parts.

(f) No sign may be permitted to be erected or maintained upon trees or painted or drawn upon rocks or other natural features.

(g) No sign may be permitted to exceed 20 feet in length, width or height, or 150 square feet in area, including border and trim but excluding supports, except Class 2 signs not more than 50 feet from, and advertising activities being conducted upon, the real property where the sign is located.

§ 750.109 Exclusions.

The standards in this part shall not apply to markers, signs and plaques in appreciation of sites of historical significance for the erection of which provisions are made in an agreement between a State and the Secretary of Transportation, as provided in the Act, unless such agreement expressly makes all or any part of the standards applicable.

§ 750.110 State regulations.

A State may elect to prohibit signs permissible under the standards in this part without forfeiting its rights to any benefits provided for in the act.

Subpart B—National Standards for Directional and Official Signs

AUTHORITY: 23 U.S.C. 131, 315, 49 U.S.C. 1651; 49 CFR 1.48(b).

§ 750.151 Purpose.

(a) In section 131 of title 23, United States Code, Congress has declared that:

(1) The erection and maintenance of outdoor advertising signs, displays, and devices in areas adjacent to the Interstate System and the primary system should be controlled in order to protect the public investment in such highways, to promote safety and

SEC. 4(f).

recreational value of public travel, and to preserve natural beauty.

(2) Directional and official signs and notices, which signs and notices shall include, but not be limited to, signs and notices pertaining to natural wonders, scenic and historical attractions, which are required or authorized by law, shall conform to national standards authorized to be promulgated by the Secretary, which standards shall contain provisions concerning the lighting, size, number and spacing of signs, and such other requirements as may be appropriate to implement the section.

(b) The standards in this part are issued as provided in Section 131 of title 23, United States Code.

[38 FR 16044, June 30, 1973, as amended at 40 FR 21934, May 20, 1975]

§ 750.152 Application.

The following standards apply to directional and official signs and notices located within six hundred and sixty (660) feet of the right-of-way of the Interstate and Federal-aid primary systems and to those located beyond six hundred and sixty (660) feet of the right-of-way of such systems, outside of urban areas, visible from the main traveled way of such systems and erected with the purpose of their message being read from such main traveled way. These standards do not apply to directional and official signs erected on the highway right-of-way.

[40 FR 21934, May 20, 1975]

§ 750.153 Definitions.

For the purpose of this part:

(a) Sign means an outdoor sign, light, display, device, figure, painting, drawing, message, placard, poster, billboard, or other thing which is designed, intended, or used to advertise or inform, any part of the advertising or informative contents of which is visible from any place on the main traveled way of the Interstate or Federal-aid primary highway.

(b) Main traveled way means the through traffic lanes of the highway, exclusive of frontage roads, auxiliary lanes, and ramps.

(c) Interstate System means the National System of Interstate and Defence Highways described in Section 103(d) of title 23, United States Code.

(d) Primary system means the Federal-aid highway system described in Section 103(b) of title 23, United States Code.

(e) Erect means to construct, build, raise, assemble, place, affix, attach, create, paint, draw, or in any other way bring into being or establish.

(f) Maintain means to allow to exist.

(g) Scenic area means any area of particular scenic beauty or historical significance as determined by the Federal, State, or local officials having jurisdiction thereof, and includes interests in land which have been acquired for the restoration, preservation, and enhancement of scenic beauty.

(h) Parkland means any publicly owned land which is designated or used as a public park, recreation area, wildlife or waterfowl refuge or historic site.

(i) Federal or State law means a Federal or State constitutional provision or statute, or an ordinance, rule, or regulation enacted or adopted by a State or Federal agency or a political subdivision of a State pursuant to a Federal or State constitution or statute.

(j) Visible means capable of being seen (whether or not legible) without visual aid by a person of normal visual acuity.

(k) Freeway means a divided arterial highway for through traffic with full control of access.

(l) Rest area means an area or site established and maintained within or adjacent to the highway right-of-way by or under public supervision or control for the convenience of the traveling public.

(m) Directional and official signs and notices includes only official signs and notices, public utility signs, service club and religious notices, public service signs, and directional signs.

(n) Official signs and notices means signs and notices erected and maintained by public officers or public agencies within their territorial or zoning jurisdiction and pursuant to and in accordance with direction or authorization contained in Federal, State, or local law for the purposes of carrying out an official duty or re-

sponsibility. Historical m
thorized by State law and
State or local government
nonprofit historical societi
considered official signs.

(o) Public utility signs m
ing signs, informational sig
or markers which are c
erected and maintained by
privately owned public utili
sential to their operations.

(p) Service club and religio
means signs and notices, w
tion is authorized by law,
meetings of nonprofit servic
charitable associations, or
services, which signs do not
square feet in area.

(q) Public service signs m
located on school bus stop
which signs:

(1) Identify the donor, sp
contributor of said shelters;

(2) Contain public service
which shall occupy not less
percent of the area of the sig

(3) Contain no other messag

(4) Are located on schoolbu
which are authorized or app
city, county, or State law, re
or ordinance, and at places
by the city, county, or Stat
controlling the highway invol

(5) May not exceed 32 squar
area. Not more than one sign
shelter shall face in any one d

(r) Directional signs mea
containing directional inf
about public places owned or
by Federal, State, or local
ments or their agencies; pub
privately owned natural phe
historic, cultural, scientific, ed
al, and religious sites; and area
ural scenic beauty or naturall
for outdoor recreation, deeme
in the interest of the travelin

(s) State means any one of
States, the District of Colun
Puerto Rico.

(t) Urban area means an ur
area or, in the case of an ur
area encompassing more th
State, that part of the urbaniz
in each such State, or an urba
as designated by the Bureau
Census having a population
thousand or more and not wit
urbanized area, within bound

sponsibility. Historical markers authorized by State law and erected by State or local government agencies or nonprofit historical societies may be considered official signs.

(o) Public utility signs means warning signs, informational signs, notices, or markers which are customarily erected and maintained by publicly or privately owned public utilities, as essential to their operations.

(p) Service club and religious notices means signs and notices, whose erection is authorized by law, relating to meetings of nonprofit service clubs or charitable associations, or religious services, which signs do not exceed 8 square feet in area.

(q) Public service signs means signs located on school bus stop shelters, which signs:

(1) Identify the donor, sponsor, or contributor of said shelters;

(2) Contain public service messages, which shall occupy not less than 50 percent of the area of the sign;

(3) Contain no other message;

(4) Are located on schoolbus shelters which are authorized or approved by city, county, or State law, regulation, or ordinance, and at places approved by the city, county, or State agency controlling the highway involved; and

(5) May not exceed 32 square feet in area. Not more than one sign on each shelter shall face in any one direction.

(r) Directional signs means signs containing directional information about public places owned or operated by Federal, State, or local governments or their agencies; publicly or privately owned natural phenomena, historic, cultural, scientific, educational, and religious sites; and areas of natural scenic beauty or naturally suited for outdoor recreation, deemed to be in the interest of the traveling public.

(s) State means any one of the 50 States, the District of Columbia, or Puerto Rico.

(t) Urban area means an urbanized area or, in the case of an urbanized area encompassing more than one State, that part of the urbanized areas in each such State, or an urban place as designated by the Bureau of the Census having a population of five thousand or more and not within any urbanized area, within boundaries to be fixed by responsible State and local officials in cooperation with each other, subject to approval by the Secretary. Such boundaries shall, as a minimum, encompass the entire urban place designated by the Bureau of the Census.

[38 FR 16044, June 30, 1973, as amended at 40 FR 21934, May 20, 1975]

§ 750.154 Standards for directional signs.

The following apply only to directional signs:

(a) *General.* The following signs are prohibited:

(1) Signs advertising activities that are illegal under Federal or State laws or regulations in effect at the location of those signs or at the location of those activities.

(2) Signs located in such a manner as to obscure or otherwise interfere with the effectiveness of an official traffic sign, signal, or device, or obstruct or interfere with the driver's view of approaching, merging, or intersecting traffic.

(3) Signs which are erected or maintained upon trees or painted or drawn upon rocks or other natural features.

(4) Obsolete signs.

(5) Signs which are structurally unsafe or in disrepair.

(6) Signs which move or have any animated or moving parts.

(7) Signs located in rest areas, parklands or scenic areas.

(b) *Size.* (1) No sign shall exceed the following limits:

(i) Maximum area—150 square feet.

(ii) Maximum height—20 feet.

(iii) Maximum length—20 feet.

(2) All dimensions include border and trim, but exclude supports.

(c) *Lighting.* Signs may be illuminated, subject to the following:

(1) Signs which contain, include, or are illuminated by any flashing, intermittent, or moving light or lights are prohibited.

(2) Signs which are not effectively shielded so as to prevent beams or rays of light from being directed at any portion of the traveled way of an Interstate or primary highway or which are of such intensity or brilliance as to cause glare or to impair the vision of the driver of any motor

vehicle, or which otherwise interfere with any driver's operation of a motor vehicle are prohibited.

(3) No sign may be so illuminated as to interfere with the effectiveness of or obscure an official traffic sign, device, or signal.

(d) *Spacing.* (1) Each location of a directional sign must be approved by the State highway department.

(2) No directional sign may be located within 2,000 feet of an interchange, or intersection at grade along the Interstate System or other freeways (measured along the Interstate or freeway from the nearest point of the beginning or ending of pavement widening at the exit from or entrance to the main traveled way).

(3) No directional sign may be located within 2,000 feet of a rest area, parkland, or scenic area.

(4)(i) No two directional signs facing the same direction of travel shall be spaced less than 1 mile apart;

(ii) Not more than three directional signs pertaining to the same activity and facing the same direction of travel may be erected along a single route approaching the activity;

(iii) Signs located adjacent to the Interstate System shall be within 75 air miles of the activity; and

(iv) Signs located adjacent to the primary system shall be within 50 air miles of the activity.

(e) *Message content.* The message on directional signs shall be limited to the identification of the attraction or activity and directional information useful to the traveler in locating the attraction, such as mileage, route numbers, or exit numbers. Descriptive words or phrases, and pictorial or photographic representations of the activity or its environs are prohibited.

(f) *Selection method and criteria.* (1) Privately owned activities or attractions eligible for directional signing are limited to the following: natural phenomena; scenic attractions; historic, educational, cultural, scientific, and religious sites; and outdoor recreational areas.

(2) To be eligible, privately owned attractions or activities must be nationally or regionally known, and of outstanding interest to the traveling public.

(3) Each State shall develop specific selection methods and criteria to be used in determining whether or not an activity qualifies for this type of signing. A statement as to selection methods and criteria shall be furnished to the Secretary of Transportation before the State permits the erection of any such signs under section 131(c) of title 23, United States Code, and this part.

§ 750.155 State standards.

This part does not prohibit a State from establishing and maintaining standards which are more restrictive with respect to directional and official signs and notices along the Federal-aid highway systems than these national standards.

[33 FR 18044, June 20, 1973, as amended at 40 FR 21934, May 20, 1975]

Subpart C—[Reserved]

Subpart D—Outdoor Advertising (Acquisition of Rights of Sign and Sign Site Owners)

AUTHORITY: 23 U.S.C. 131 and 315; 23 CFR 1.32 and 1.48(b).

SOURCE: 39 FR 27438, July 29, 1974, unless otherwise noted.

§ 750.301 Purpose.

To prescribe the Federal Highway Administration (FHWA) policies relating to Federal participation in the costs of acquiring the property interests necessary for removal of nonconforming advertising signs, displays and devices on the Federal-aid Primary and Interstate Systems, including toll sections on such systems, regardless of whether Federal funds participated in the construction thereof. This regulation should not be construed to authorize any additional rights in eminent domain not already existing under State law or under 23 U.S.C. 131(g).

§ 750.302 Policy.

(a) Just compensation shall be paid for the rights and interests of the sign and site owner in those outdoor advertising signs, displays, or devices which are lawfully existing under St in conformance with the term U.S.C. 131.

(b)(1) Federal reimbursement made on the basis of 75 percen acquisition, removal and in costs legally incurred or oblig the State.

(2) Federal funds will partic 100 percent of the costs of rem those signs which were remove to January 4, 1975, by relocati suant to the provisions of 2 § 750.305(a)(2), and which are r to be removed as a result amendments made to 23 U.S.C. the Federal-Aid Highway ments of 1974, P.L. 93-643, sect January 4, 1975. Such signs mu been relocated to a legal sit have been legally maintained sl relocation, and must not hav substantially changed, as defi the State maintenance sta issued pursuant to 23 § 750.707(b).

(c) Title III of the Uniform tion Assistance and Real Prope quisition Policies Act of 19 U.S.C. 4651, et seq.) applies where complete conformity defeat the purposes set forth U.S.C. 4651, would impede the tious implementation the s moval program or woul increa ministrative costs out of propor the cost of the interests be quired or extinguished.

(d) Projects for the removal door advertising signs includin ship acquisitions should be pro and authorized in accordanc normal program procedures fo of-way projects.

[39 FR 27438, July 29, 1974; 39 FR Aug. 22, 1974, as amended at 41 FR July 27, 1976]

§ 750.303 Definitions.

(a) *Sign.* An outdoor sign, lig play, device, figure, painting, d message, placard, poster, billbo other thing which is designed, ed of the advertising or infor contents of which is visible fr place on the main-traveled way Interstate or Primary Systems, er the same be permanent or p installation.

are lawfully existing under State law, in conformance with the terms of 23 U.S.C. 131.

(b)(1) Federal reimbursement will be made on the basis of 75 percent of the acquisition, removal and incidental costs legally incurred or obligated by the State.

(2) Federal funds will participate in 100 percent of the costs of removal of those signs which were removed prior to January 4, 1975, by relocation, pursuant to the provisions of 23 CFR § 750.305(a)(2), and which are required to be removed as a result of the amendments made to 23 U.S.C. 131 by the Federal-Aid Highway Amendments of 1974, P.L. 93-643, section 109, January 4, 1975. Such signs must have been relocated to a legal site, must have been legally maintained since the relocation, and must not have been substantially changed, as defined by the State maintenance standards, issued pursuant to 23 CFR § 750.707(b).

(c) Title III of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (42 U.S.C. 4651, et seq.) applies except where complete conformity would defeat the purposes set forth in 42 U.S.C. 4651, would impede the expeditious implementation of the sign removal program or would increase administrative costs out of proportion to the cost of the interests being acquired or extinguished.

(d) Projects for the removal of outdoor advertising signs including hardship acquisitions should be programed and authorized in accordance with normal program procedures for right-of-way projects.

[39 FR 27438, July 29, 1974; 39 FR 30349, Aug. 22, 1974, as amended at 41 FR 31193, July 27, 1976]

§ 750.303 Definitions.

(a) *Sign.* An outdoor sign, light, display, device, figure, painting, drawing, message, placard, poster, billboard or other thing which is designed, intended of the advertising or informative contents of which is visible from any place on the main-traveled way of the Interstate or Primary Systems, whether the same be permanent or portable installation.

(b) *Lease (license, permit, agreement, contract or easement).* An agreement, oral or in writing, by which possession or use of land or interests therein is given by the owner or other person to another person for a specified purpose.

(c) *Leasehold value.* The leasehold value is the present worth of the difference between the contractual rent and the current market rent at the time of the appraisal.

(d) *Illegal sign.* One which was erected and/or maintained in violation of State law.

(e) *Nonconforming sign.* One which was lawfully erected, but which does not comply with the provisions of State law or State regulations passed at a later date or which later fails to comply with State law or State regulations due to changed conditions. Illegally erected or maintained signs are not nonconforming signs.

(f) *1966 inventory.* The record of the survey of advertising signs and junkyards compiled by the State highway department.

(g) *Abandoned sign.* One in which no one has an interest, or as defined by State law.

§ 750.304 State policies and procedures.

The State's written policies and operating procedures for implementing its sign removal program under State law and complying with 23 U.S.C. 131 and its proposed time schedule for sign removal and procedure for reporting its accomplishments shall be submitted to the FHWA for approval within 90 days of the date of this regulation. This statement should be supported by the State's regulations implementing its program. Revisions to the State's policies and procedures shall be submitted to the FHWA for approval. The statement should contain provisions for the review of its policies and procedure to meet changing conditions, adoption of improved procedures, and for internal review to assure compliance. The statement shall include as a minimum the following:

(a) *Project priorities.* The following order of priorities is recommended.

(1) Illegal and abandoned signs.

(2) Hardship situations.
(3) Nominal value signs.
(4) Signs in areas which have been designated as scenic under authority of State law.
(5) Product advertising on:
(i) Rural interstate highway.
(ii) Rural primary highway.
(iii) Urban areas.
(6) Nontourist-oriented directional advertising.
(7) Tourist-oriented directional advertising.

(b) *Programing.* (1) A sign removal project may consist of any group of proposed sign removals. The signs may be those belonging to one company or those located along a single route, all of the signs in a single county or other locality, hardship situations, individually or grouped, such as those involving vandalized signs, or all of a sign owner's signs in a given State or area, or any similar grouping.

(2) A project for sign removal on other than a Federal-aid primary route basis e.g., a countywide project or a project involving only signs owned by one company, should be identified as CAP-000B( ), continuing the numbering sequence which began with the sign inventory project in 1963.

(3) Where it would not interfere with the State's operations, the State should program sign removal projects to minimize disruption of business.

(c) *Valuation and review methods—*(1) *Schedules—formulas.* Schedules, formulas or other methods to simplify valuation of signs and sites are recommended for the purpose of minimizing administrative and legal expenses necessarily involved in determining just compensation by individual appraisals and litigation. They do not purport to be a basis for the determination of just compensation under eminent domain.

(2) *Appraisals.* Where appropriate, the State may use its approved appraisal report forms including those for abbreviated or short form appraisals. Where a sign or site owner does not accept the amount computed under an approved schedule, formula, or other simplified method, an appraisal shall be utilized.

(3) *Leaseholds.* When outdoor advertising signs and sign sites involve a leasehold value, the State's procedures should provide for determining value in the same manner as any other real estate leasehold that has value to the lessee.

(4) *Severance dan..ges.* The State has the responsibility of justifying the recognition of severance damages pursuant to 23 CFR 710.304(h), and the law of the State before Federal participation will be allowed. Generally, Federal participation will not be allowed in the payment of severance damages to remaining signs, or other property of a sign company alleged to be due to the taking of certain of the company's signs. Unity of use of the separate properties, as required by applicable principles of eminent domain law, must be shown to exist before participation in severance damages will be allowed. Moreover, the value of the remaining signs or other real property must be diminished by virtue of the taking of such signs. Payments for severance damages to economic plants or loss of business profits are not compensable. Severance damage cases must be submitted to the FHWA for prior concurrence, together with complete legal and appraisal justification for payment of these damages. To assist the FHWA in its evaluation, the following data will accompany any submission regarding severance:

(i) One copy of each appraisal in which this was analyzed. One copy of the State's review appraiser analysis and determination of market value.

(ii) A plan or map showing the location of each sign.

(iii) An opinion by the State highway department's chief legal officer that severance is appropriate in accordance with State law together with a legal opinion that, in the instant case, the damages constitute severance as opposed to consequential damage as a matter of law. The opinion shall include a determination, and the basis therefor, that the specific taking of some of an outdoor advertiser's signs constitutes a distinct economic unit, and that unity of use of the separate properties in conformity with applicable principles of eminent domain law had been satisfactorily established. A legal memorandum must be furnished citing and discussing cases and other authorities supporting the S sition.

(5) *Review of value estimat* timates of value shall be revi person other than the one v the estimate. Appraisal rep be reviewed and approved pr tiation of negotiations. All o mates shall be reviewed be agreement becomes final.

(d) *Nominal value plan.* plan may provide for the costs of eligible nominal va and for payments up to $250 nonconforming sign, and up for each nonconforming sign

(2) The State's procedures vide for negotiations for sign sign removals to be accomp multaneously without prior r

(3) Releases or agreements by the sign and/or site own include the identification of statement of ownership, pri paid, interest acquired, and rights.

(4) It is not expected tha value will be a consideration acquisitions; however, the St cedures may provide that the be turned over to the sign ov owner, contractor, or individ or a part of the consideratic removal, without any project

(5) Programing and authc will be in accord with § 750.3C regulation. A detailed esti value of each individual sig necessary. The project may gramed and authorized as one

(e) *Sign removal.* The State dural statement should inclu sion for:

(1) Owner retention.
(2) Salvage value.
(3) State removal.

[39 FR 27436, July 29, 1974; 42 June 17, 1977, as amended at 50 Aug. 23, 1985]

§ 750.305 Federal participation.

(a) Federal funds may parti

(1) Payments made to a sig for his right, title and inte sign, and where applicable, l hold value in a sign site, and owner for his right and inte site, which is his right to e

authorities supporting the State's position.

(5) *Review of value estimates.* All estimates of value shall be reviewed by a person other than the one who made the estimate. Appraisal reports shall be reviewed and approved prior to initiation of negotiations. All other estimates shall be reviewed before the agreement becomes final.

(d) *Nominal value plan.* (1) This plan may provide for the removal costs of eligible nominal value signs and for payments up to $250 for each nonconforming sign, and up to $100 for each nonconforming sign site.

(2) The State's procedures may provide for negotiations for sign sites and sign removals to be accomplished simultaneously without prior review.

(3) Releases or agreements executed by the sign and/or site owner should include the identification of the sign, statement of ownership, price to be paid, interest acquired, and removal rights.

(4) It is not expected that salvage value will be a consideration in most acquisitions; however, the State's procedures may provide that the sign may be turned over to the sign owner, site owner, contractor, or individual as all or a part of the consideration for its removal, without any project credits.

(5) Programing and authorizations will be in accord with § 750.308 of this regulation. A detailed estimate of value of each individual sign is not necessary. The project may be programmed and authorized as one project.

(e) *Sign removal.* The State's procedural statement should include provision for:

(1) Owner retention.

(2) Salvage value.

(3) State removal.

[39 FR 27435, July 29, 1974; 42 FR 30835, June 17, 1977, as amended at 50 FR 34093, Aug. 23, 1985]

§ 750.305 Federal participation.

(a) Federal funds may participate in:

(1) Payments made to a sign owner for his right, title and interest in a sign, and where applicable his leasehold value in a sign site, and to a site owner for his right and interest in a site, which is his right to erect and maintain the existing nonconforming sign on such site.

(2) The cost of relocating a sign to the extent of the cost to acquire the sign, less salvage value if any.

(3) A duplicate payment for the site owner's interest of $2,500 or less because of a bona fide error in ownership, provided the State has followed its title search procedures as set forth in its policy and procedure submission.

(4) The cost of removal of signs, partially completed sign structures, supporting poles, abandoned signs and those which are illegal under State law within the controlled areas, provided such costs are incurred in accordance with State law. Removal may be by State personnel on a force account basis or by contract. Documentation for Federal participation in such removal projects should be in accord with the State's normal force account and contractual reimbursement procedures. The State should maintain a record of the number of signs removed. These data should be retained in project records and reported on the periodic report required under § 750.308 of this regulation.

(5) Signs materially damaged by vandals. Federal funds shall be limited to the Federal pro-rata share of the fair market value of the sign immediately before the vandalism occurred minus the estimated cost of repairing and reerecting the sign. If the State chooses, it may use its FHWA approved nominal value plan procedure to acquire these signs.

(6) The cost of acquiring and removing completed sign structures which have been blank or painted out beyond the period of time established by the State for normal maintenance and change of message, provided the sign owner can establish that his nonconforming use was not abandoned or discontinued, and provided such costs are incurred in accordance with State law, or regulation. The evidence considered by the State as acceptable for establishing or showing that the nonconforming use has not been abandoned or voluntarily discontinued shall be set forth in the State's policy and procedures.

(7) In the event a sign was omitted in the 1968 inventory, and the State

supports a determination that the sign was in existence prior to October 22, 1965, the costs are eligible for Federal participation.

(b) Federal funds may not participate in:

(1) Cost of title certificates, title insurance, title opinion or similar evidence or proof of title in connection with the acquisition of a landowner's right to erect and maintain a sign or signs when the amount of payment to the landowner for his interest is $2,500 or less, unless required by State law. However, Federal funds may participate in the costs of securing some lesser evidence or proof of title such as searches and investigations by State highway department personnel to the extent necessary to determine ownership, affidavit of ownership by the owner, bill of sale, etc. The State's procedure for determining evidence of title should be set forth in the State's policy and procedure submission.

(2) Payments to a sign owner where the sign was erected without permission of the property owner unless the sign owner can establish his legal right to erect and maintain the sign. However, such signs may be removed by State personnel on a force account basis or by contract with Federal participation except where the sign owner reimburses the State for removal.

(3) Acquisition costs paid for abandoned or illegal signs, potential sign sites, or signs which were built during a period of time which makes them ineligible for compensation under 23 U.S.C. 131, or for rights in sites on which signs have been abandoned or illegally erected by a sign owner.

(4) The acquisition cost of supporting poles or partially completed sign structures in nonconforming areas which do not have advertising or informative content thereon unless the owner can show to the State's satisfacti he has not abandoned the structure. When the State has determined the sign structure has not been abandoned, Federal funds will participate in the acquisition of the structure, provided the cost are incurred in accordance with State law.

§ 750.306 Documentation for Federal participation.

The following information concerning each sign must be available in the State's files to be eligible for Federal participation.

(a) *Payment to sign owner.* (1) A photograph of the sign in place. Exceptions may be made in cases where in one transaction the State has acquired a number of a company's nominal value signs similar in size, condition and shape. In such cases, only a sample of representative photographs need be provided to document the type and condition of the signs.

(2) Evidence showing the sign was nonconforming as of the date of taking.

(3) Value documentation and proof of obligation of funds.

(4) Satisfactory indication of ownership of the sign and compensable interest therein (e.g., lease or other agreement with the property owner, or an affidavit, certification, or other such evidence of ownership).

(5) Evidence that the sign falls within one of the three categories shown in § 750.302 of this regulation. The specific category should be identified.

(6) Evidence that the right, title, or interest pertaining to the sign has passed to the State, or that the sign has been removed.

(b) *Payment to the site owner.* (1) Evidence that an agreement has been reached between the State and owner.

(2) Value documentation and proof of obligation of funds.

(3) Satisfactory indication of ownership or compensable interest.

(c) In those cases where Federal funds participate in 100 percent of the cost of removal, the State file shall contain the records of the relocation made prior to January 4, 1975.

[39 FR 27436, July 29, 1974, as amended at 41 FR 31193, July 27, 1976]

§ 750.307 FHWA project approva

Authorization to proceed with acquisitions on a sign removal project shall not be issued until such time as the State has submitted to FHWA the following:

(a) A general description of t. ect.

(b) The total number of sig acquired.

(c) The total estimated cost sign removal project, inclu breakdown of incidental, acq and removal costs.

§ 750.308 Reports.

Periodic reports on site acqu and actual sign removals shall mitted on FHWA Form 1424 prescribed.[1]

Subpart E—Signs Exempt From Removal in Defined Areas

AUTHORITY: 23 U.S.C. 131 and 315, 49 CFR 1.48, 23 CFR 1.32.

SOURCE: 41 FR 45827, Oct. 18, 1976, unless otherwise noted.

§ 750.501 Purpose.

This subpart sets forth the procedures pursuant to which a State may, if it desires, seek an exemption from the acquisition requirements of 23 U.S.C. 131 for signs giving directional information about goods and services in the interest of the traveling public in defined areas which would suffer substantial economic hardship if such signs were removed. This exemption may be granted pursuant to the provisions of 23 U.S.C. 131(o).

§ 750.502 Applicability.

The provisions of this subpart apply to signs adjacent to the Interstate and primary systems which are required to be controlled under 23 U.S.C. 131.

§ 750.503 Exemptions.

(a) The Federal Highway Administration (FHWA) may approve a State's request to exempt certain nonconforming signs, displays, and devices (hereinafter called signs) within a defined area from being acquired under the provisions of 23 U.S.C. 131 upon a showing that removal would work a substantial economic hardship throughout that area. A defined area is an area with clearly established geographical boundaries defined by the State which the State can evaluate as an economic entity. Neither the States nor FHWA shall rely on individual claims of economic hardship. Exempted signs must:

(1) Have been lawfully erected prior to May 5, 1976, and must continue to be lawfully maintained.

(2) Continue to provide the directional information to goods and services offered at the same enterprise in the defined area in the interest of the traveling public that was provided on May 5, 1976. Repair and maintenance of these signs shall conform with the State's approved maintenance standards as required by Subpart G of this part.

(b) To obtain the exemption permitted by 23 U.S.C. 131(o), the State shall establish:

(1) Its requirements for the directional content of signs to qualify the signs as directional signs to goods and services in the defined area.

(2) A method of economic analysis clearly showing that the removal of signs would work a substantial economic hardship throughout the defined area.

(c) In support of its request for exemption, the State shall submit to the FHWA:

(1) Its requirements and method (see § 750.503(b)).

(2) The limits of the defined area(s) requested for exemption, a listing of signs to be exempted, their location, and the name of the enterprise advertised on May 5, 1976.

(3) The application of the requirements and method to the defined areas, demonstrating that the signs provide directional information to goods and services of interest to the traveling public in the defined area, and that removal would work a substantial economic hardship in the defined area(s).

(4) A statement that signs in the defined area(s) not meeting the exemption requirements will be removed in accordance with State law.

(5) A statement that the defined area will be reviewed and evaluated at least every three (3) years to deter-

[1] Forms are available at FHWA Division Offices located in each State.

SEC. 4 (f)

mine if an exemption is still warranted.

(d) The FHWA, upon receipt of a State's request for exemption, shall prior to approval:

(1) Review the State's requirements and methods for compliance with the provisions of 23 U.S.C. 131 and this subpart.

(2) Review the State's request and the proposed exempted area for compliance with State requirements and methods.

(e) Nothing herein shall prohibit the State from acquiring signs in the defined area at the request of the sign owner.

(f) Nothing herein shall prohibit the State from imposing or maintaining stricter requirements.

Subpart F—[Reserved]

Subpart G—Outdoor Advertising Control

AUTHORITY: 23 U.S.C. 131 and 315; 49 CFR 1.48.

SOURCE: 40 FR 42844, Sept. 16, 1975, unless otherwise noted.

§ 750.701 Purpose.

This subpart prescribes the Federal Highway Administration (FHWA) policies and requirements relating to the effective control of outdoor advertising under 23 U.S.C. 131. The purpose of these policies and requirements is to assure that there is effective State control of outdoor advertising in areas adjacent to Interstate and Federal-aid primary highways. Nothing in this subpart shall be construed to prevent a State from establishing more stringent outdoor advertising control requirements along Interstate and Primary Systems than provided herein.

§ 750.702 Applicability.

The provisions of this subpart are applicable to all areas adjacent to the Federal-aid Interstate and Primary Systems, including toll sections thereof, except that within urban areas, these provisions apply only within 660 feet of the nearest edge of the right-of-way. These provisions apply regardless of whether Federal funds participated in the costs of such highways. The provisions of this subpart do not apply to the Federal-aid Secondary or Urban Highway System.

§ 750.703 Definitions.

The terms as used in this subpart are defined as follows:

(a) Commercial and industrial zones are those districts established by the zoning authorities as being most appropriate for commerce, industry, or trade, regardless of how labeled. They are commonly categorized as commercial, industrial, business, manufacturing, highway service or highway business (when these latter are intended for highway-oriented business), retail, trade, warehouse, and similar classifications.

(b) Erect means to construct, build, raise, assemble, place, affix, attach, create, paint, draw, or in any other way bring into being or establish.

(c) Federal-aid Primary Highway means any highway on the system designated pursuant to 23 U.S.C. 103(b).

(d) Interstate Highway means any highway on the system defined in and designated, pursuant to 23 U.S.C. 103(e).

(e) Illegal sign means one which was erected or maintained in violation of State law or local law or ordinance.

(f) Lease means an agreement, license, permit, or easement, oral or in writing, by which possession or use of land or interests therein is given for a specified purpose, and which is a valid contract under the laws of a State.

(g) Maintain means to allow to exist.

(h) Main-traveled way means the traveled way of a highway on which through traffic is carried. In the case of a divided highway, the traveled way of each of the separate roadways for traffic in opposite directions is a main-traveled way. It does not include such facilities as frontage roads, turning roadways, or parking areas.

(i) Sign, display or device, hereinafter referred to as "sign," means an outdoor advertising sign, light, display, device, figure, painting, drawing, message, placard, poster, billboard, or other thing which is designed, intended, or used to advertise or inform, any part of the advertising or in contents of which is visible place on the main-traveled w Interstate or Primary System er the same be permanent or installation.

(j) State law means a State tional provision or statute, or nance, rule or regulation, er adopted by a State.

(k) Unzoned area means where there is no zoning in does not include areas whic rural zoning classification or established by zoning variance cial exceptions.

(l) Unzoned commercial or i areas are unzoned areas actu for commercial or industrial as defined in the agreements tween the Secretary, U.S. Dep of Transportation (Secretar each State pursuant to 23 131(d).

(m) Urban area is as defin U.S.C. 101(a).

(n) Visible means capable seen, wether or not readable, visual aid by a person of norm acuity.

§ 750.704 Statutory requirements.

(a) 23 U.S.C. 131 provides th adjacent to the Interstate and al-aid Primary Systems which ble from the main-traveled w within 660 feet of the nearest the right-of-way, and those ad signs beyond 660 feet outside o areas which are visible from th traveled way and erected with t pose of their message being rea such main-traveled way, shall b ed to the following:

(1) Directional and official sig notice which shall conform to n standards promulgated by the tary in Subpart B, Part 750, Cha 23 CFR, National Standards for tional and Official Signs;

(2) Signs advertising the sale o of property upon which they are ed;

(3) Signs advertising activitie ducted on the property on whic are located;

(4) Signs within 660 feet of the est edge of the right-of-way areas adjacent to the Interstat

part of the advertising or informative contents of which is visible from any place on the main-traveled way of the Interstate or Primary Systems, whether the same be permanent or portable installation.

(j) State law means a State constitutional provision or statute, or an ordinance, rule or regulation, enacted or adopted by a State.

(k) Unzoned area means an area where there is no zoning in effect. It does not include areas which have a rural zoning classification or land uses established by zoning variances or special exceptions.

(l) Unzoned commercial or industrial areas are unzoned areas actually used for commercial or industrial purposes as defined in the agreements made between the Secretary, U.S. Department of Transportation (Secretary), and each State pursuant to 23 U.S.C. 131(d).

(m) Urban area is as defined in 23 U.S.C. 101(a).

(n) Visible means capable of being seen, whether or not readable, without visual aid by a person of normal visual acuity.

§ 750.704 Statutory requirements.

(a) 23 U.S.C. 131 provides that signs adjacent to the Interstate and Federal-aid Primary Systems which are visible from the main-traveled way and within 660 feet of the nearest edge of the right-of-way, and those additional signs beyond 660 feet outside of urban areas which are visible from the main-traveled way and erected with the purpose of their message being read from such main-traveled way, shall be limited to the following:

(1) Directional and official signs and notice which shall conform to national standards promulgated by the Secretary in Subpart B, Part 750, Chapter I, 23 CFR, National Standards for Directional and Official Signs;

(2) Signs advertising the sale or lease of property upon which they are located;

(3) Signs advertising activities conducted on the property on which they are located;

(4) Signs within 660 feet of the nearest edge of the right-of-way within areas adjacent to the Interstate and Federal-aid Primary Systems which are zoned industrial or commercial under the authority of State law;

(5) Signs within 660 feet of the nearest edge of the right-of-way within areas adjacent to the Interstate and Federal-aid Primary Systems which are unzoned commercial or industrial areas, which areas are determined by agreement between the State and the Secretary; and

(6) Signs lawfully in existence on October 22, 1965, which are determined to be landmark signs.

(b) 23 U.S.C. 131(d) provides that signs in § 750.704(a) (4) and (5) must comply with size, lighting, and spacing requirements, to be determined by agreement between the State and the Secretary.

(c) 23 U.S.C. 131 does not permit signs to be located within zoned or unzoned commercial or industrial areas beyond 660 feet of the right-of-way adjacent to the Interstate or Federal-aid Primary System, outside of urban areas.

(d) 23 U.S.C. 131 provides that signs not permitted under § 750.704 of this regulation must be removed by the State.

§ 750.705 Effective control.

In order to provide effective control of outdoor advertising, the State must:

(a) Prohibit the erection of new signs other than those which fall under § 750.704(a)(1) through (6);

(b) Assure that signs erected under § 750.704(a)(4) and (5) comply, at a minimum, with size, lighting, and spacing criteria contained in the agreement between the Secretary and the State;

(c) Assure that signs erected under § 750.704(a)(1) comply with the national standards contained in Subpart B, Part 750, Chapter I, 23 CFR;

(d) Remove illegal signs expeditiously;

(e) Remove nonconforming signs with just compensation within the time period set by 23 U.S.C. 131 (Subpart D, Part 750, Chapter I, 23 CFR, sets forth policies for the acquisition and compensation for such signs);

(f) Assure that signs erected under § 750.704(a)(6) comply with § 750.710,

SEC. 4(f)

Landmark Signs, if landmark signs are allowed;

(g) Establish criteria for determining which signs have been erected with the purpose of their message being read from the main-traveled way of an Interstate or primary highway, except where State law makes such criteria unnecessary. Where a sign is erected with the purpose of its message being read from two or more highways, one or more of which is a controlled highway, the more stringent of applicable control requirements will apply;

(h) Develop laws, regulations, and procedures to accomplish the requirements of this subpart;

(i) Establish enforcement procedures sufficient to discover illegally erected or maintained signs shortly after such occurrence and cause their prompt removal; and

(j) Submit regulations and enforcement procedures to FHWA for approval.

[40 FR 42344, Sept. 16, 1975; 40 FR 49777, Oct. 24, 1975]

§ 750.705 Sign control in zoned and unzoned commercial and industrial areas.

The following requirements apply to signs located in zoned and unzoned commercial and industrial areas within 660 feet of the nearest edge of the right-of-way adjacent to the Interstate and Federal-aid primary highways.

(a) The State by law or regulation shall, in conformity with its agreement with the Secretary, set criteria for size, lighting, and spacing of outdoor advertising signs located in commercial or industrial zoned or unzoned areas, as defined in the agreement, adjacent to Interstate and Federal-aid primary highways. If the agreement between the Secretary and the State includes a grandfather clause, the criteria for size, lighting, and spacing will govern only those signs erected subsequent to the date specified in the agreement. The States may adopt more restrictive criteria than are presently contained in agreements with the Secretary.

(b) Agreement criteria which permit multiple sign structures to be considered as one sign for spacing purposes must limit multiple sign structures to signs which are physically contiguous, or connected by the same structure or cross-bracing, or located not more than 15 feet apart at their nearest point in the case of back-to-back or "V" type signs.

(c) Where the agreement and State law permits control by local zoning authorities, these controls may govern in lieu of the size, lighting, and spacing controls set forth in the agreement, subject to the following:

(1) The local zoning authority's controls must include the regulation of size, of lighting and of spacing of outdoor advertising signs, in all commercial and industrial zones.

(2) The regulations established by local zoning authority may be either more restrictive or less restrictive than the criteria contained in the agreement, unless State law or regulations require equivalent or more restrictive local controls.

(3) If the zoning authority has been delegated, extraterritorial, jurisdiction under State law, and exercises control of outdoor advertising in commercial and industrial zones within this extraterritorial jurisdiction, control by the zoning authority may be accepted in lieu of agreement controls in such areas.

(4) The State shall notify the FHWA in writing of those zoning jurisdictions wherein local control applies. It will not be necessary to furnish a copy of the zoning ordinance. The State shall periodically assure itself that the size, lighting, and spacing control provisions of zoning ordinances accepted under this section are actually being enforced by the local authorities.

(5) Nothing contained herein shall relieve the State of the responsibility of limiting signs within controlled areas to commercial and industrial zones.

§ 750.707 Nonconforming signs.

(a) *General.* The provisions of § 750.707 apply to nonconforming signs which must be removed under State laws and regulations implementing 23 U.S.C. 131. These provisions also apply to nonconforming signs located in commercial and industrial areas within 660 feet of the nearest edge of the right-of-way whic under the so-called grandfather contained in State-Federal ments. These provisions do not to conforming signs regardl when or where they are erected.

(b) *Nonconforming signs.* A n forming sign is a sign which w fully erected but does not compl the provisions of State law or regulations passed at a later d later fails to comply with State State regulations due to change ditions. Changed conditions i for example, signs lawfully in ence in commercial areas whic later date become noncommerc signs lawfully erected on a sec highway later classified as a p. highway.

(c) *Grandfather clause.* A option of the State, the agre may contain a grandfather under which criteria relative t lighting, and spacing of signs in and unzoned commercial and in al areas within 660 feet of the n edge of the right-of-way apply o new signs to be erected after th specified in the agreement. An lawfully in existence in a comm or industrial area on such dat remain even though it may not c with the size, lighting, or spacing ria. This clause only allows an i ual sign at its particular locati the duration of its normal life s to customary maintenance. Pr ing signs covered by a grandf clause, which do not comply wit agreement criteria have the sta nonconforming signs.

(d) *Maintenance and contin* In order to maintain and conti nonconforming sign, the foll conditions apply:

(1) The sign must have been ac in existence at the time the appl State law or regulations became tive as distinguished from a co plated use such as a lease or ment with the property owner. are two exceptions to actual exi as follows:

(i) Where a permit or similar s State governmental action was ed for the construction of a sign to the effective date of the Stat or regulations and the sign

73-066 O—86—13

edge of the right-of-way which come under the so-called grandfather clause contained in State-Federal agreements. These provisions do not apply to conforming signs regardless of when or where they are erected.

(b) *Nonconforming signs.* A nonconforming sign is a sign which was lawfully erected but does not comply with the provisions of State law or State regulations passed at a later date or later fails to comply with State law or State regulations due to changed conditions. Changed conditions include, for example, signs lawfully in existence in commercial areas which at a later date become noncommercial, or signs lawfully erected on a secondary highway later classified as a primary highway.

(c) *Grandfather clause.* At the option of the State, the agreement may contain a grandfather clause under which criteria relative to size, lighting, and spacing of signs in zoned and unzoned commercial and industrial areas within 660 feet of the nearest edge of the right-of-way apply only to new signs to be erected after the date specified in the agreement. Any sign lawfully in existence in a commercial or industrial area on such date may remain even though it may not comply with the size, lighting, or spacing criteria. This clause only allows an individual sign at its particular location for the duration of its normal life subject to customary maintenance. Preexisting signs covered by a grandfather clause, which do not comply with the agreement criteria have the status of nonconforming signs.

(d) *Maintenance and continuance.* In order to maintain and continue a nonconforming sign, the following conditions apply:

(1) The sign must have been actually in existence at the time the applicable State law or regulations became effective as distinguished from a contemplated use such as a lease or agreement with the property owner. There are two exceptions to actual existence as follows:

(i) Where a permit or similar specific State governmental action was granted for the construction of a sign prior to the effective date of the State law or regulations and the sign owner acted in good faith and expended sums in reliance thereon. This exception shall not apply in instances where large numbers of permits were applied for and issued to a single sign owner, obviously in anticipation of the passage of a State control law.

(ii) Where the State outdoor advertising control law or the Federal-State agreement provides that signs in commercial and industrial areas may be erected within six (6) months after the effective date of the law or agreement provided a lease dated prior to such effective date was filed with the State and recorded within thirty (30) days following such effective date.

(2) There must be existing property rights in the sign affected by the State law or regulations. For example, paper signs nailed to trees, abandoned signs and the like are not protected.

(3) The sign may be sold, leased, or otherwise transferred without affecting its status, but its location may not be changed. A nonconforming sign removed as a result of a right-of-way taking or for any other reason may be relocated to a conforming area but cannot be reestablished at a new location as a nonconforming use.

(4) The sign must have been lawful on the effective date of the State law or regulations, and must continue to be lawfully maintained.

(5) The sign must remain substantially the same as it was on the effective date of the State law or regulations. Reasonable repair and maintenance of the sign, including a change of advertising message, is not a change which would terminate nonconforming rights. Each State shall develop its own criteria to determine when customary maintenance ceases and a substantial change has occurred which would terminate nonconforming rights.

(6) The sign may continue as long as it is not destroyed, abandoned, or discontinued. If permitted by State law and reerected in kind, exception may be made for signs destroyed due to vandalism and other criminal or tortious acts.

(i) Each state shall develop criteria to define destruction, abandonment and discontinuance. These criteria may provide that a sign which for a

SEC. 4 (f)

72-006 O—76—13

designated period of time has obsolete advertising matter or is without advertising matter or is in need of substantial repair may constitute abandonment or discontinuance. Similarly, a sign damaged in excess of a certain percentage of its replacement cost may be considered destroyed.

(ii) Where an existing nonconforming sign ceases to display advertising matter, a reasonable period of time to replace advertising content must be established by each State. Where new content is not put on a structure within the established period, the use of the structure as a nonconforming outdoor advertising sign is terminated and shall constitute an abandonment or discontinuance. Where a State establishes a period of more than one (1) year as a reasonable period for change of message, it shall justify that period as a customary enforcement practice within the State. This established period may be waived for an involuntary discontinuance such as the closing of a highway for repair in front of the sign.

(e) *Just compensation.* The States are required to pay just compensation for the removal of nonconforming lawfully existing signs in accordance with the terms of 23 U.S.C. 131 and the provisions of Subpart D, Part 750, Chapter I, 23 CFR. The conditions which establish a right to maintain a nonconforming sign and therefore the right to compensation must pertain at the time it is acquired or removed.

§ 750.703 Acceptance of state zoning.

(a) 23 U.S.C. 131(d) provide that signs "may be erected and maintained within 660 feet of the nearest edge of the right-of-way within areas . . . which are zoned industrial or commercial under authority of State law." Section 131(d) further provides, "The States shall have full authority under their own zoning laws to zone areas for commercial or industrial purposes, and the actions of the States in this regard will be accepted for the purposes of this Act."

(b) State and local zoning actions must be taken pursuant to the State's zoning enabling statute or constitutional authority and in accordance therewith. Action which is not a part of comprehensive zoning and is created primarily to permit outdoor advertising structures, is not recognized as zoning for outdoor advertising control purposes.

(c) Where a unit of government has not zoned in accordance with statutory authority or is not authorized to zone, the definition of an unzoned commercial or industrial area in the State-Federal agreement will apply within that political subdivision or area.

(d) A zone in which limited commercial or industrial activities are permitted as an incident to other primary land uses is not considered to be a commercial or industrial zone for outdoor advertising control purposes.

§ 750.709 On-property or on-premise advertising.

(a) A sign which consists solely of the name of the establishment or which identifies the establishment's principal or accessory products or services offered on the property is an on-property sign.

(b) When a sign consists principally of brand name or trade name advertising and the product or service advertised is only incidental to the principal activity, or if it brings rental income to the property owner, it shall be considered the business of outdoor advertising and not an on-property sign.

(c) A sale or lease sign which also advertises any product or service not conducted upon and unrelated to the business or selling or leasing the land on which the sign is located is not an on-property sign.

(d) Signs are exempt from control under 23 U.S.C. 131 if they solely advertise the sale or lease of property on which they are located or advertise activities conducted on the property on which they are located. These signs are subject to regulation (Subpart A, Part 750, Chapter I, 23 CFR) in those States which have executed a bonus agreement, 23 U.S.C. 131(j). State laws or regulations shall contain criteria for determining exemptions. These criteria may include:

(1) A property test for determining whether a sign is located on the same property as the activity or pr advertised; and

(2) A purpose test for deter whether a sign has as its sole p the identification of the activity ed on the property or its prod services, or the sale or lease property on which the sign is lc

(3) The criteria must be suffic specific to curb attempts to imp ly qualify outdoor advertising a property" signs, such as sig narrow strips of land contiguc the advertised activity when th pose is clearly to circumvent 23 131.

§ 750.710 Landmark signs.

(a) 23 U.S.C. 131(c) permits th istence of signs lawfully in exis on October 22, 1965, determin the State, subject to the appro the Secretary, to be landmark including signs on farm structur natural surfaces, of historic or a significance, the preservation of v is consistent with the purpose U.S.C. 131.

(b) States electing to permit mark signs under 23 U.S.C. 1 shall submit a one-time list to the e. l Highway Administration fo proval. The list should identify sign as being in the original 19 ventory. In the event a sign was ted in the 1968 inventory, the S may submit other evidence to sup a determination that the sign wa existence on October 22, 1965.

(c) Reasonable maintenance, re and restoration of a landmark sig permitted. Substantial change in lighting, or message content will minate its exempt status.

§ 750.711 Structures which have never played advertising material.

Structures, including poles, w have never displayed advertising o formative content are subject to trol or removal when advertising tent visible from the main-trav way is added or affixed. When th done, an "outdoor advertising s has then been erected which n comply with the State law in effec that date.

property as the activity or property advertised; and

(2) A purpose test for determining whether a sign has as its sole purpose the identification of the activity located on the property or its products or services, or the sale or lease of the property on which the sign is located.

(3) The criteria must be sufficiently specific to curb attempts to improperly qualify outdoor advertising as "on-property" signs, such as signs on narrow strips of land contiguous to the advertised activity when the purpose is clearly to circumvent 23 U.S.C. 131.

§ 750.710 Landmark signs.

(a) 23 U.S.C. 131(c) permits the existence of signs lawfully in existence on October 22, 1965, determined by the State, subject to the approval of the Secretary, to be landmark signs, including signs on farm structures or natural surfaces, of historic or artistic significance, the preservation of which is consistent with the purpose of 23 U.S.C. 131.

(b) States electing to permit landmark signs under 23 U.S.C. 131(c) shall submit a one-time list to the Federal Highway Administration for approval. The list should identify each sign as being in the original 1966 inventory. In the event a sign was omitted in the 1966 inventory, the State may submit other evidence to support a determination that the sign was in existence on October 22, 1965.

(c) Reasonable maintenance, repair, and restoration of a landmark sign is permitted. Substantial change in size, lighting, or message content will terminate its exempt status.

§ 750.711 Structures which have never displayed advertising material.

Structures, including poles, which have never displayed advertising or informative content are subject to control or removal when advertising content visible from the main-traveled way is added or affixed. When this is done, an "outdoor advertising sign" has then been erected which must comply with the State law in effect on that date.

§ 750.712 Reclassification of signs.

Any sign lawfully erected after the effective date of a State outdoor advertising control law which is reclassified from legal-conforming to nonconforming and subject to removal under revised State statutes or regulations and policy pursuant to this regulation is eligible for Federal participation in just compensation payments and other eligible costs.

§ 750.713 Bonus provisions.

23 U.S.C. 131(j) specifically provides that any State which had entered into a bonus agreement before June 30, 1965, will be entitled to remain eligible to receive bonus payments provided it continues to carry out its bonus agreement. Bonus States are not exempt from the other provisions of 23 U.S.C. 131. If a State elects to comply with both programs, it must extend controls to the Primary System, and continue to carry out its bonus agreement along the Interstate System except where 23 U.S.C. 131, as amended, imposes more stringent requirements.

105. Limitations of outdoor advertising signs, displays and devices	170. Agreements with the United States; regulations
110. [Obsolete]	180. Interpretation
120. [Obsolete]	
130. Penalty for violation	

Sec. 19.25.080. Purpose. The purposes of AS 19.25.080 — 19.25.180 are

(1) to protect the public safety and the welfare of persons using the highways of the state by having outdoor advertising signs, displays and devices along the highways controlled;

(2) to prevent unreasonable distraction of operators of motor vehicles; to prevent confusion with regard to traffic lights, signs or signals or otherwise interfere with the effectiveness of traffic regulations, and to promote the safety, convenience and enjoyment of travel on, and protection of the public investment in highways in this state; to preserve and enhance the natural scenic beauty or aesthetic features of the highways and adjacent areas; and to attract tourists;

(3) to regulate outdoor advertising signs, displays and devices in areas adjacent to the rights-of-way of the interstate, primary and secondary systems within this state in accordance with this chapter and the regulations adopted under this chapter;

(4) to provide that outdoor advertising signs, displays and devices which are not in conformity with the requirements of this chapter are a public nuisance;

(5) to provide a statutory basis for regulation of outdoor advertising signs, displays and devices consistent with the public policy relating to areas adjacent to a highway of the interstate or primary systems declared by Congress in Title 23, United States Code, "Highways." (§ 1 ch 59 SLA 1949; am § 1 ch 86 SLA 1953; am § 2 ch 233 SLA 1968; am § 1 ch 155 SLA 1970)

Legislative history reports. — For report on ch. 233, SLA 1968 (HCSCSSB 144 am FCC), see 1968 House Journal, p. 815.

40 C.J.S., Highways, §§ 217, 232.

Billboards and other outdoor advertising signs as civil nuisance. 38 ALR3d 647.

Sec. 19.25.090. Outdoor advertising prohibited. Except as provided in AS 19.25.105, all outdoor advertising is prohibited. (§ 3 ch 59 SLA 1949; am § 1 ch 86 SLA 1953; am § 2 ch 155 SLA 1970)

Sec. 19.25.100. Rural signs.

Repealed by § 14 ch 155 SLA 1970.

Editor's notes. — The repealed section derived from § 4, ch. 59, SLA 1949; § 1, ch. 86, SLA 1953; § 9, art. VII, title II, ch. 152, SLA 1957.

Sec. 19.25.105. Limitations of outdoor advertising signs, displays and devices. (a) No outdoor advertising may be erected or maintained within 660 feet of the nearest edge of the right-of-way and visible from the main-traveled way of the interstate, primary, or secondary highways in this state except the following:

(1) directional and other official signs and notices which include, but are not limited to, signs and notices pertaining to natural wonders, scenic and historic attractions, which are required or authorized by law, and which shall conform to federal standards for interstate and primary systems;

(2) signs, displays and devices advertising the sale or lease of property upon which they are located or advertising activities conducted on the property;

(3) signs determined by the state, subject to concurrence of the United States Department of Transportation, to be landmark signs, including signs on farm structures, or natural surfaces, of historic or artistic significance, the preservation of which would be consistent with the provisions of this chapter;

(4) directional signs and notices pertaining to schools.

(b) Repealed by § 21 ch 94 SLA 1980.

(c) No outdoor advertising may be erected or maintained beyond 660 feet of the nearest edge of the right-of-way of the main traveled way of the interstate primary or secondary highways in this state with the purpose of their message being read from that travel way except those outdoor advertising signs, displays or devices allowed under (a) of this section. (§ 3 ch 155 SLA 1970; am §§ 1, 2 ch 195 SLA 1975; am § 1 ch 30 SLA 1980; am § 21 ch 94 SLA 1980)

Effect of amendments. — The first 1980 amendment added paragraph (4) of subsection (a).

The second 1980 amendment repealed subsection (b).

Sec. 19.25.110. Removal of nonconforming advertising.

Obsolete.

Revisor's notes. — This section is obsolete. It reads as follows: "A sign, display or device which is lawfully in existence along the interstate system or the primary system on August 6, 1968 and which is not in conformity with AS 19.25.080 — 19.25.180 may not be required to be removed until July 1, 1970. A sign, display or device which is lawfully in existence along the secondary system on July 1, 1970 and which is not in conformity with AS 19.25.080 — 19.25.180 shall be removed by July 1, 1971."

Editor's notes. — The obsolete section derived from § 5, ch. 59, SLA 1949; § 1, ch. 86, SLA 1953; § 1, ch. 112, SLA 1955; § 3, ch. 233, SLA 1968; § 44, ch. 69, SLA 1970; § 4, ch. 155, SLA 1970; § 3, ch. 195, SLA 1975.

Sec. 19.25.120. Neglect or refusal to obey removal order.

Obsolete.

Revisor's notes. — This section is obsolete. It reads as follows: "A person who fails to obey an order issued under AS 19.25.110 is subject to the penalty provided in AS 19.25.130. Each day the person neglects or refuses to obey the order is a separate offense."

Editor's notes. — The obsolete section derived from § 6, ch. 59, SLA 1949; § 1, ch. 86, SLA 1953; § 2, ch. 112, SLA 1955.

Sec. 19.25.130. Penalty for violation. A person who violates AS 19.25.080 — 19.25.180, or a regulation adopted under them, is guilty of a misdemeanor and upon conviction is punishable by a fine of not less than $50 nor more than $1,000. (§ 7 ch 59 SLA 1949; added by § 1 ch 86 SLA 1953; am § 4 ch 233 SLA 1968)

Sec. 19.25.140. Compensation for removal of advertising. (a) The department is authorized to acquire by purchase, gift or condemnation, all advertising devices and any property rights pertaining to them, when the advertising devices are required to be removed under AS 19.25.150.

(b) Damages resulting from a taking in eminent domain shall be ascertained in the manner provided by law. (§ 5 ch 233 SLA 1968; am § 45 ch 69 SLA 1970)

Legislative history reports. — For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7.

Sec. 19.25.150. Unlawful advertising. An advertising sign, display or device which violates the provisions of this chapter is a public nuisance. The department shall give 30 days' notice, by certified mail, to the owner of the land on which the advertising sign, display or device is located, ordering its removal if it is prohibited by this chapter or ordering the owner to cause it to conform to regulations if it is authorized by this chapter. If the owner of the property fails to comply within 30 days as required in the notice, the department shall remove

the outdoor advertising sign, display or device at the expense of the owner of the land or the person who erected it. (§ 5 ch 233 SLA 1968)

Sec. 19.25.160. Definitions. In AS 19.25.080 — 19.25.180

(1) "outdoor advertising" includes any outdoor sign, display or device used to advertise, attract attention or inform and which is visible to a person on the main-traveled way of a highway of the interstate, primary, or secondary systems in this state, whether by printing, writing, painting, picture, light, drawing, or whether by the use of figures or objects, or a combination of these, or any other thing designed, intended or used to advertise, inform or attract attention;

(2) "interstate system" means that portion of the National System of Interstate and Defense Highways located in this state, as officially designated, or as may hereafter be so designated, by the commissioner, and approved by the secretary of transportation (or by the secretary of commerce before the effective date of the transfer of functions under Public Law 89-670 [80 Stat. 931]), under the provisions of Title 23, United States Code, "Highways";

(3) "primary system" or "secondary system" means that portion of connected main highways, as officially designated, or as may hereafter be so designated, by the commissioner, and approved by the secretary of transportation (or by the secretary of commerce before the effective date of the transfer of functions under Public Law 89-670 [80 Stat. 931]), under the provisions of Title 23, United States Code, "Highways";

(4) "department" means the Department of Transportation and Public Facilities. (§ 5 ch 233 SLA 1968; am §§ 46, 47 ch 69 SLA 1970; am §§ 5, 6 ch 155 SLA 1970; am Executive Order No. 39, § 11 (1977))

Revisor's notes. — Pursuant to AS 01.05.031, the revisor of statutes has deleted "of transportation and public facilities" following "commissioner" in paragraphs (2) and (3).

Effect of amendments. — The 1977 amendment substituted references to the commissioner of transportation and public facilities for references to the commissioner of highways in paragraphs (2) and (3) and a reference to the Department of Transportation and Public Facilities for a reference to the Department of Highways in paragraph (4).

Legislative history reports. — For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7.

Sec. 19.25.170. Agreements with the United States; regulations. The department is authorized to enter into agreements in conformity with the provisions of this title with the United States Secretary of Transportation as provided by Title 23, United States Code, relating to the control of outdoor advertising signs, displays and devices in areas adjacent to interstate and primary systems and to take action in the name of the state to comply with the terms of the agreements, and to promulgate required regulations. (§ 5 ch 233 SLA 1968)

Sec. 19.25.180. Interpretation. Nothing in AS 19.25.060 — 19.25.180 shall be construed to abrogate or affect any law, ordinance, regulation or resolution which is more restrictive than the provisions of AS 19.25.080 — 19.25.180. (§ 5 ch 233 SLA 1968)

Article 4. Encroachments In Highways.

Section	Section
200. Encroachment permits	230. Notice of removal
210. Relocation or removal of encroachment	240. Summary removal
220. Unauthorized encroachments	250. Removal after noncompliance; removal expense

Sec. 19.25.200. Encroachment permits. An encroachment may be constructed, placed, changed or maintained across or along a highway but only in accordance with regulations adopted by the department. No encroachment may be constructed, placed, maintained or changed until it is duly authorized by a written permit issued by the department. (§ 2 ch 64 SLA 1971)

Collateral references.—3 Am. Jur. 2d, Advertising, §§ 5, 13, 14. 40 Am. Jur. 2d, Highways, Streets and Bridges, § 238. 40 C.J.S., Highways, §§ 217-231.

Sec. 19.25.210. Relocation or removal of encroachment. If, incidental to the construction or maintenance of a state highway, the department determines and orders that an encroachment previously authorized by written permit must be changed, relocated, or removed, the owner of the encroachment shall change, relocate or remove it at no expense to the state (except as provided in AS 19.25.020), within a reasonable time set by the department. If the owner does not change, relocate or remove an encroachment within the time set by the department, the encroachment shall be considered an unauthorized encroachment and subject to the provisions of AS 19.25.220 — 19.25.250. (§ 2 ch 64 SLA 1971)

Sec. 19.25.220. Unauthorized encroachments. If an unauthorized encroachment exists in, on, under or over a state highway, the department may require the removal of the encroachment in the manner provided in AS 19.25.230 — 19.25.250. (§ 2 ch 64 SLA 1971)

Sec. 19.25.230. Notice of removal. Except as otherwise provided in AS 19.25.200, 19.25.210 and 19.25.240, notice shall be given the owner, occupant or person in possession of the encroachment, or to any other person causing or permitting the encroachment to exist, by serving upon any of them a notice demanding the removal of the encroachment. The notice shall describe the encroachment complained of with reasonable certainty as to its character and location. Service of the notice may be made by certified mail. (§ 2 ch 64 SLA 1971)

AGREEMENT

Attachment 11

FOR CARRYING OUT NATIONAL POLICY RELATIVE TO CONTROL OF OUTDOOR ADVERTISING IN AREAS ADJACENT TO THE FEDERAL-AID PRIMARY SYSTEM.

THIS AGREEMENT made and entered into this 29th day of March 1968, by and between the United States of America represented by the Secretary of Transportation acting by and through the Federal Highway Administrator, hereinafter referred to as the "Administrator" and the State of Alaska, represented by the Department of Highways acting by and through its Commissioner hereinafter referred to as the "State." Witnesseth:

WHEREAS, Congress has declared that Outdoor Advertising in areas adjacent to the Federal-aid Primary System should be controlled in order to protect the public investment in such highways, to promote the safety and recreational value of public travel and to preserve natural beauty; and

WHEREAS, Section 131(d) of Title 23, United States Code authorizes the Secretary of Transportation to enter into agreements with the several States to determine the size, lighting, and spacing of signs, displays, and devices, consistent with customary use, which may be erected and maintained within 660 feet of the nearest edge of the right of way within areas adjacent to the Federal-aid Primary System which are zoned industrial or commercial under authority of State law or in unzoned commercial or industrial areas, also to be determined by agreement; and

WHEREAS, the purpose of said agreement is to promote the reasonable, orderly, and effective display of outdoor advertising while remaining consistant with the National policy to protect the public investment in the Federal-aid primary highways, to promote the safety and recreational value of public travel and to preserve natural beauty; and

WHEREAS, Title 19 of the Alaska State Statutes authorizes the Commissioner of Highways to perform and do such other and further acts not specifically provided in Title 19 of the Alaska Statutes as may be necessary to comply with the Federal-aid Highway Acts and the rules and regulations promulgated thereunder; and

WHEREAS, Section 131(b) of Title 23, United States Code provides that Federal-aid highway funds apportioned on or after January 1, 1968, to any State which the Secretary determines has not made provision for effective control of the erection and maintenance along the primary system of outdoor advertising signs, displays and devices which are within six hundred and sixty feet of the nearest edge of the right of way and visible from the main traveled way of the system, shall be reduced by amounts equal to 10 per centum of the amounts which would otherwise be apportioned to such state under Section 104 of Title 23, United States Code until such time as such State shall provide for such effective control; and

WHEREAS, the State of Alaska desires to implement and carry out the provisions of Section 131 of Title 23, United States Code, and the National policy in order to remain eligible to receive the full amount of all Federal-aid highway funds to be apportioned to such state on or after January 1, 1968, under Section 104 of Title 23, United States Code;

NOW, THEREFORE, the parties hereto do mutually agree as follows:

I. Definitions

A. The term "Act" means Section 131 of Title 23, United States Code (1965) commonly referred to as Title I of the Highway Beautification Act of 1965.

B. Commercial or industrial activities for purposes of unzoned industrial and commercial areas mean those activities generally recognized as commercial or industrial by zoning authorities in this State, except that none of the following activities shall be considered commercial or industrial:

1. Outdoor advertising structures.

2. Agriculture, forestry, ranching, grazing, farming, and related activities, including, but not limited to, wayside fresh produce stands.

3. Activities normally or regularly in operation less than three months of the year.

4. Transient or temporary activities.

5. Activities not visible from the main traveled way.

6. Activities more than 300 feet from the nearest edge of the right of way.

7. Activities conducted in a building principally used as a residence

8. Railroad tracks and minor sidings.

C. Zoned commercial or industrial areas mean those areas which are reserved for business, commerce, or trade purusant to a comprehensive State or local zoning ordinance or regulation.

D. Unzoned commercial or industrial areas mean those areas on which there is located one or more permanent structures devoted to a business or industrial activity or on which a commercial or industrial activity is actually conducted, whether or not a permanent structure is located thereon, and the area along the highway extending outward 500 feet from and beyond the edge of such activity. Each side of the highway will be considered separately in applying this definiti

All measurements shall be from the outer edges of the regularly used buildin parking lots, storage or processing areas of the commercial or industrial activi not from the property lines of the activities, and shall be along or parallel to the edge or pavement of the highway.

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5179 HTRA HCR 34 - HJR 6

251

E. Federal-aid primary highway means any highway within that portion of the State Highway System as designated, or as many hereafter be so designated by the State, which has been approved by the Secretary of Transportation pursuant to subsection (b) of Section 103 of Title 23, United States Code.

F. Traveled way means the portion of a roadway for the movement of vehicles exclusive of shoulders.

G. Main-traveled way means the traveled way of a highway on which through traffic is carried. In the case of a divided highway, the traveled way of each of the separated roadways for traffic in opposite directions is a main-traveled way. It does not include such facilities as frontage roads, turning roadways, or parking areas.

H. Sign means any outdoor sign, display, device, figure, painting, drawing message, placard, poster, billboard, or other thing which is designed, intended or used to advertise or inform, any part of the advertising or informative contents of which is visible from any highway.

I. Erect means to construct, build, raise, assemble, place, affix, attach, create, paint, draw, or in any other way bring into being or establish.

J. Safety rest area means an area or site established and maintained withi or adjacent to the highway right of way by or under public supervision or contr for the convenience of the travelling public.

K. Information center means an area or site established and maintained at a safety rest area for the purpose of informing the public of places of intere within the State and providing such other information as the State may conside desirable.

II. Scope of Agreement

This agreement shall apply to the following area.

All zoned and unzoned commercial and industrial areas within 660 feet of the nearest edge of the right of way of all portions of the Federal-aid primary system within the State of Alaska in which outdoor advertising signs, displays, and devices may be visible from the main traveled way of said system.

III. State Control

The State hereby agrees that, in all areas within the scope of this agreement, the State shall effectively control, or cause to be controlled, the erection and maintenance of outdoor advertising signs, displays, and devices erected subsequent to the effective date of this agreement other than those advertising the sale or lease of the property on which they are located, or activities conducted thereon, in accordance with the following criteria:

A. In all zoned and unzoned commercial and industrial areas, the criteri set forth below shall apply.

SIZE OF SIGNS

1. The maximum area for any one sign shall be 650 square feet with a maximum height of 20 feet and maximum length of 50 feet, inclusive of any border and trim but excluding ornamental base or apron support and other structural members.

2. The area shall be measured by the smallest square, rectangle, triangl circle or combination thereof which will encompass the entire sign.

3. A sign structure may contain one or two signs per facing and may be placed double-faced, back to back or V-Type, but the total area of any facing may not exceed 650 square feet.

4. Signs which exceed 325 square feet in area may not be double faced (abutting and facing the same direction).

SPACING OF SIGNS

1. Federal-aid Primary Highways
   a. Signs may not be located in such a manner as to obscure, or otherwise interfere with the effectiveness of an official traffic sign, signal, or device, obstruct or interfere with the driver's view of approaching, merging, or intersection traffic.

2. Controlled Access Highways on the Federal-aid Primary System
   a. No two structures shall be spaced less than 500 feet apart.
   b. No structure may be located within 2000 feet of an interchange, or intersection at grade, safety rest area or information center (measured along the freeway from the sign to the nearest point of the beginning or ending of pavement widening at the exit from or entrance to the main traveled way.)

3. Non-Controlled Access Federal-aid Primary Highways
   a. Outside of Villages and Cities - no two structures shall be spaced less than 300 feet apart.
   b. Within Villages and Cities - no two structures shall be spaced less than 100 feet apart.

4. Explanatory Notes
   a. Official and "on premise" signs, as defined in Section 131(c) of Title 23, United States Code, shall not be counted nor shall measurements be made from them for purposes of determining compliance with spacing requirements.
   b. The minimum distance between signs shall be measured along the nearest edge of the pavement between points directly opposite the signs along each side of the highway.

LIGHTING

Signs may be illuminated, subject to the following restrictions:

1. Signs which contain, include, or are illuminated by any flashing, intermittent, or moving light or lights are prohibited, except those giving public service information such as time, date, temperature, weather, or similar information.

2. Signs which are not effectively shielded as to prevent beams or rays of light from being directed at any portion of the traveled ways of the Federal-aid primary highway and which are of such intensity or brilliance as to cause glare or to impair the vision of the driver of any motor vehicle, or which otherwise interfere with any driver's operation of a motor vehicle are prohibited.

3. No sign shall be so illuminated that it interferes with the effectiveness of, or obscures an official traffic sign, device, or signal.

4. All such lighting shall be subject to any other provisions relating to lighting of signs presently applicable to all highways under the jurisdiction of the State.

B. The State and local political subdivisions shall have full authority under their own zoning laws to zone areas for commercial or industrial purposes and the action of the State and local political subdivisions in this regard will be accepted for the purposes of this agreement.

IV. Interpretation

The provisions contained herein shall constitute the minimum acceptable standards for effective control of signs, displays, and devices within the scope of this agreement.

Nothing contained herein shall be construed to abrogate or prohibit the State from exercising a greater degree of control of outdoor advertising than that required or contemplated by the Act or from adopting standards which are more restrictive in controlling outdoor advertising than the provisions of this agreement if so authorized by the State Legislature.

In controlling outdoor advertising adjacent to Federal-aid primary highways pursuant to the Highway Beautification Act of 1965 and this agreement, the State shall not be required to remove or cause to be removed any sign advertising any natural wonders or scenic or historical attractions until a reasonable length of time subsequent to the promulgation of national standards for such signs pursuant to Section 131(c) of Title 23, United States Code.

In the event the provisions of the Highway Beautification Act of 1965 are amended by subsequent action of Congress, the parties reserve the right to renegotiate this agreement or to modify it to conform with any amendment.

V. Effective Date

This Agreement shall have an effective date of March 29, 1968, and shall become binding on both parties hereto when the Agreement has been ratified by an appropriate Act of the Alaska State Legislature at the Legislative Session of 1968

IN WITNESS WHEREOF the parties hereto have executed this Agreement as of March 29, 1968

STATE OF ALASKA
Department of Highways

Cosby Steen, Acting Commissioner

UNITED STATES OF AMERICA

Federal Highway Administrator

ganizations of the affected railroad companies for railway-highway crossing projects and of the affected utility companies for projects involving utility installations.

(d) *Private engineering organizations.* Private engineering organizations may be utilized on projects in accordance with requirements prescribed by the Administrator.

(e) *Responsibility of the State highway department.* The State highway department is not relieved of its responsibilities under Federal law and the regulations in this part in the event it utilizes the services of any engineering organization under paragraphs (b), (c) or (d) of this section.

§ 1.23 Rights-of-way.

(a) *Interest to be acquired.* The State shall acquire rights-of-way of such nature and extent as are adequate for the construction, operation and maintenance of a project.

(b) *Use for highway purposes.* Except as provided under paragraph (c) of this section, all real property, including air space, within the right-of-way boundaries of a project shall be devoted exclusively to public highway purposes. No project shall be accepted as complete until this requirement has been satisfied. The State highway department shall be responsible for preserving such right-of-way free of all public and private installations, facilities or encroachments, except (1) those approved under paragraph (c) of this section; (2) those which the Administrator approves as constituting a part of a highway or as necessary for its operation, use or maintenance for public highway purposes and (3) informational sites established and maintained in accordance with § 1.35 of the regulations in this part.

(c) *Other use or occupancy.* Subject to 23 U.S.C. 111, the temporary or permanent occupancy or use of right-of-way, including air space, for nonhighway purposes and the reservation of subsurface mineral rights within the boundaries of the rights-of-way of Federal-aid highways, may be approved by the Administrator, if he determines that such occupancy, use or reservation is in the public interest and will not impair the highway or interfere with the free and safe flow of traffic thereon.

§ 1.27 Maintenance.

The responsibility imposed upon the State highway department, pursuant to 23 U.S.C. 116, for the maintenance of projects shall be carried out in accordance with policies and procedures issued by the Administrator. The State highway department may provide for such maintenance by formal agreement with any adequately equipped county, municipality or other governmental instrumentality, but such an agreement shall not relieve the State highway department of its responsibility for such maintenance.

§ 1.28 Diversion of highway revenues.

(a) *Reduction in apportionment.* If the Secretary shall find that any State has diverted funds contrary to 23 U.S.C. 126, he shall take such action as he may deem necessary to compiy with said provision of law by reducing the first Federal-aid apportionment of primary, secondary and urban funds made to the State after the date of such finding. In any such reduction, each of these funds shall be reduced in the same proportion.

(b) *Furnishing of information.* The Administrator may require any State to submit to him such information as he may deem necessary to assist the Secretary in carrying out the provisions of 23 U.S.C. 126 and paragraph (a) of this section.

§ 1.31 Payments.

States may submit requests for payments of Federal funds claimed to be due on account of a project. Such requests shall be in the form of vouchers as prescribed by the Administrator, and shall be certified and accompanied with such supporting data as the Administrator may require. Such vouchers may be submitted from time to time as the work progresses and shall be submitted promptly after completion of the project to which the voucher pertains.

§ 1.32 Issuance of directives.

(a) The Administrator shal
gate and require the obser
policies and procedures, and
other action as he deems ap
or necessary for carrying out
visions and purposes of Fed
the policies of the Federal
Administration, and the regu
this part.

(b) The Administrator or
gated representative, as appro
authorized to issue the follov
of directives:

(1) Federal Highway Admir
Regulations are issued by th
istrator or his delegate, as n
to implement and carry out t
sions of title 23, United Stat
relating to the administratior
eral aid for highways, direct
programs and State and co
safety programs; and title 49
States Code, relating to moto
safety; and other applicable l
programs under his jurisdictio

(2) Notices are temporary i
transmitting one-time or sh
instructions or information
expected to remain in effect
than 90 days or for a predet
period of time normally not t
one year.

(3) Orders are directives lir
volume and contain perma
longlasting policy, instructio
procedures. FHWA Orders ar
used primarily as internal
directives.

(4) Joint Interagency Orders
tices are used by FHWA and
tional Highway Traffic Safety
istration (NHTSA) to issue joi
cies, procedures, and informati
taining to the joint administra
the State and Community H
Safety Program. Where ne

follow:

(i) The Federal-Aid Highwa
gram Manual has been establis

Sec. 19.25.180. Interpretation. Nothing in AS 19.25.080 — 19.25.180 shall be construed to abrogate or affect any law, ordinance, regulation or resolution which is more restrictive than the provisions of AS 19.25.080 — 19.25.180. (§ 5 ch 233 SLA 1968)

Article 4. Encroachments In Highways.

Section		Section	
200.	Encroachment permits	230.	Notice of removal
210.	Relocation or removal of encroachment	240.	Summary removal
220.	Unauthorized encroachments	250.	Removal after noncompliance; removal expense

Sec. 19.25.200. Encroachment permits. An encroachment may be constructed, placed, changed or maintained across or along a highway but only in accordance with regulations adopted by the department. No encroachment may be constructed, placed, maintained or changed until it is duly authorized by a written permit issued by the department. (§ 2 ch 64 SLA 1971)

Collateral references.—3 Am. Jur. 2d, Highways, Streets and Bridges, § 283. Advertising, §§ 5, 13, 14. 40 Am. Jur. 2d, 40 C.J.S., Highways, §§ 217-231.

Sec. 19.25.210. Relocation or removal of encroachment. If, incidental to the construction or maintenance of a state highway, the department determines and orders that an encroachment previously authorized by written permit must be changed, relocated, or removed, the owner of the encroachment shall change, relocate or remove it at no expense to the state (except as provided in AS 19.25.020), within a reasonable time set by the department. If the owner does not change, relocate or remove an encroachment within the time set by the department, the encroachment shall be considered an unauthorized encroachment and subject to the provisions of AS 19.25.220 — 19.25.250. (§ 2 ch 64 SLA 1971)

Sec. 19.25.220. Unauthorized encroachments. If an unauthorized encroachment exists in, on, under or over a state highway, the department may require the removal of the encroachment in the manner provided in AS 19.25.230 — 19.25.250. (§ 2 ch 64 SLA 1971)

Sec. 19.25.230. Notice of removal. Except as otherwise provided in AS 19.25.200, 19.25.210 and 19.25.240, notice shall be given the owner, occupant or person in possession of the encroachment, or to any other person causing or permitting the encroachment to exist, by serving upon any of them a notice demanding the removal of the encroachment. The notice shall describe the encroachment complained of with reasonable certainty as to its character and location. Service of the notice may be made by certified mail. (§ 2 ch 64 SLA 1971)

a segment of the public; "utility" also includes any corporation, company, individual, or association of individuals, or any lessee, trustee, or court-appointed receiver that owns, operates, manages, or controls any system for furnishing transportation of goods or persons by means of a railway, tramway, cableway, conveyer, flume, canal, tunnel, pipeline, or any other similar means;

(55) "utility locate service" means a service provided by a utility to locate its buried utility facilities;

(56) "utility service connection" means the cable, wire, or pipe that connects the utility distribution line to the premises served;

(57) "wet-boring" means the method or process of boring with the use of jets of water or liquid slurry. (Eff. 5/23/82, Reg. 82)

CHAPTER 20. MAINTENANCE

Section
10. Outdoor advertising
20. Closure and restriction
30. Transfer of excess equipment
40. General

17 AAC 20.010. OUTDOOR ADVERTISING. It shall be unlawful to place, erect, or maintain any outdoor advertising sign within the right-of-way of any highway or highway lands, nor shall any permit be issued for the placement or erection of the sign. (Eff. 6/25/69, Reg. 30)

Authority: AS 19.05.020

Historical Note: Former 14 AAC 2.391.2.

17 AAC 20.020. CLOSURE AND RESTRICTION. (a) The department may restrict the use of, or close, any highway whenever the department considers such closing or restriction of use necessary

(1) for the protection of the public; or

(2) for the protection of such highway from damage during storms, floods, thawing conditions or during construction or maintenance operations.

(b) The department will provide traffic guidance in case of restriction or provide suitable detour as soon as possible to minimize traffic delay.

(c) To notify the public that a highway is closed, or its use has been restricted, the department may

(1) erect suitable barriers or obstructions at such locations upon the highway as will best serve the purpose;

(2) post warnings or notices of the condition of any such highway;

(3) post signs for the direction of traffic upon it, or to or upon other highway or detour open to public travel;

(4) place warning devices upon such highways;

(5) assign a flagman to warn, detour or direct traffic on such highway.

(d) Nothing within the above shall be construed to create any liability upon the state or any officer, employee, agent, or contractor of the state for failure to provide any or all of the above notices; however, willful failure or neglect to provide the notice shall be the subject of disciplinary action.

(e) Except in sudden emergencies, the department shall notify the nearest state police unit before closing or restricting the use of any highway, or before diverting traffic to any other highway or detour, in the manner provided in the preceding sections; whenever possible, such notice shall be in writing.

(f) Whenever required by sudden emergency, to protect the traveling public or to prevent or mitigate damage to public property, or to prevent or mitigate damage to private property for which the department might be held responsible, the department may, acting by or through its senior officer, or employee actually at the vicinity of the emergency, enter into contracts for the leasing or renting of tools or equipment needed for such highway emergency purposes. Such contracts shall be in writing, but shall be preceded by a memorandum of intent with a brief explanation of the nature of the sudden emergency, labor and equipment required, estimate of time required and the purpose for which labor, tools and equipment are needed. (Eff. 6/25/69, Reg. 30; am 11/16/83, Reg. 88)

Authority: AS 19.05.020

17 AAC 20.030. TRANSFER OF EXCESS EQUIPMENT. (a) The department is responsible for the transfer of excess automotive and construction equipment to political subdivisions of the state for use in maintenance and construction of roads and airports.

(b) The department will circulate a list of such equipment periodically to all political subdivisions requesting to receive such lists.

(c) Political subdivisions must make requests for any desired equipment from the list within 30 days of mailing of the list.

(d) Political subdivisions must state in any request for excess equipment

(1) the need and contemplated use;

(2) ability to provide transportation; and

(3) ability to perform necessary repairs.

(e) The state maintenance engineer will evaluate all requests made for equipment from the excess list and make recommendations to the commissioner as to which items should be transferred and to which requesting political subdivision.

(f) Repealed 11/16/83.
(Eff. 6/25/69, Reg. 30; am 11/16/83, Reg. 88)

Authority: AS 19.05.020
AS 19.05.060

17 AAC 20.040. GENERAL. No road maintenance of any nature shall be performed by the state on a highway which is not part of the Alaska Highway System, except by reimburseable agreement. (Eff. 6/25/69, Reg. 30)

Authority: AS 19.05.020
AS 19.10.030

Historical Note: Former 14 AAC 2.390(c).

Sec. 19.25.240. Summary removal. The department may at any time remove from a state highway or road an encroachment which obstructs or prevents the use of the highway or road by the public. (§ 2 ch 64 SLA 1971)

Sec. 19.25.250. Removal after noncompliance; removal expense. After a failure of the owner of an encroachment to comply with a notice or demand of the department under the provisions of AS 19.25.200, 19.25.210 and 19.25.230, the department may remove, or cause to be removed, the encroachment, and the owner of the encroachment shall pay to the department:

(1) the expenses of the removal of the encroachment;

(2) all costs and expenses paid by the state as a result of a claim or claims filed against the state by third parties for damages due to delays because the encroachment was not changed, removed, or relocated according to the order of the department; and

(3) costs and expenses of suit. (§ 2 ch 64 SLA 1971)

STATE OF ALASKA DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES POLICY AND PROCEDURES	P & P No. 10-0020	Page 1 OF 2
	Effective Date April 1, 1984	
SUBJECT Encroachment Control	Superseded P & P No. None	Dated
	APPROVED BY	

DIVISION	SECTION	CHAPTER TITLE
Departmental	Commissioner's Office	Policies

Purpose:
In the interest of safety, convenience and pleasure for highway users, all encroachments on rights of way must be effectively controlled. These procedures are established to provide guidelines for discovery and either removal or placing under agreement all of the encroachments on the right of way of the Alaska highway system.

Policy:
It is the policy of this Department to maintain highway rights of way free and clear of encroachments. Two major purposes of this policy are (1) to protect the best interest of the public when considering non-highway use of right of way, and (2) to maintain a safe driving environment for the highway user.

Distribution:
Policy and Procedure manual holders and Division and Section Supervisors.

Procedure:
For purposes of this procedure Utility Facilities are excluded.

The following procedures will be used to implement this policy:

1. Discovery. It is the responsibility of the Regional Director of Maintenance and Operation to maintain encroachment surveillance. During routine maintenance patrol, road and weather condition inspection, or at regular intervals deemed necessary, maintenance personnel shall inspect the right of way for encroachments. When an encroachment is found, a determination will be made as to whether the encroachment is a safety hazard due to physical or visual obstruction of the highway. If the encroachment is considered a safety hazard, it will be summarily removed. Those encroachments judged not to present an immediate safety hazard will be reported to the Regional Chief Right of Way Agent by copy of Encroachment Report Form No. 24 (Revised 6/82) with recommendations as to whether the encroachment should be permitted or removed.

2. Removal or Permitted. When an encroachment report is received, the Regional Chief R/W Agent will make a recommendation to the Regional Director, Design and Construction, as to whether the encroachment should be permitted or removed.

   A. Removal. When it is determined by the Regional Director of Design and Construction that the encroachment should be removed, the Regional Chief R/W Agent or representative should personally contact the owner, if possible, to explain the written notice which is concurrently sent demanding the removal of the encroachment within a reasonable time. The notice shall describe the encroachment complained of with reasonable certainty as to its character and location. Service of the notice may be made by certified mail, return receipt requested, and will state that the removal will be at the owner's expense which includes (1) the expenses of removal of the encroachment plus storage, and (2) all costs and expenses paid by the State as a result of a claim or claims filed against the State by third parties for damages due to delays because the encroachment was not changed, removed or relocated, and (3) costs and expenses of suit. A schedule may be adopted to cover these expenses. Such a schedule should reflect hours of labor, storage and transportation costs incurred and should approximate them as closely as possible.

   The removed encroachment may be stored in the nearest maintenance yard for thirty days and then destroyed. At any time during the thirty-day period an owner may reclaim his property by paying the amount stated in the notice.

When the encroachment is summarily removed, the owner should be notified, if possible, where the Department has the property stored and that a redemption fee will be charged if not reclaimed within ten days. The redemption fee should reflect storage and protection costs which are separate from those of removal.

On encroachments such as major structures, where it is impractical to haul and store, other means of removal shall be worked out, taking care not to trespass on private property.

A follow up system is to be established which provides for automatic contact with the resident maintenance foreman to determine whether or not removal has been accomplished within the specified time.

B. Permitted. When it is determined by the Regional Director of Design and Construction and the Regional Director of Maintenance and Operations that an encroachment will not interfere with the construction, maintenance, free flow of traffic or aesthetics of the highway and will not decrease the safety, convenience or pleasure of the highway user, the encroachment may be permitted with the Federal Highway Administration's concurrence, when required.

The encroachment permit will be processed according to the Right of Way Manual.

In the event the encroachment owner refuses to sign the permit, removal procedures as outlined above will be commenced.

FOR IMMEDIATE RELEASE

#481/ALASKA MARINE HIGHWAY SYSTEM MARKS 25TH YEAR OF SERVICE

January 22, 1988

Juneau--The Alaska Marine Highway System begins capping off a quarter century of operation this month. The first state ferry, the M/V Malaspina, sailed its maiden voyage 25 years ago on January 23, 1963.

To mark the occasion, Governor Steve Cowper is proclaiming a mid-year observance with May as Alaska Marine Highway Month.

In addition, there will be special observances through the year affording Alaskans statewide the opportunity to participate, said Commissioner Mark Hickey of the Department of Transportation and Public Facilities, which operates the Alaska Marine Highway System.

It really is a milestone of solid service by a vital public agency when you look back at it," Hickey said. "Along with providing basic transportation, the Marine Highway system is a boon to tourism and a definite plus for other areas of commerce as well.

"And, then, there's the very human side of this. Ferry personnel over the years have assisted in search and rescue efforts,

(More)

medical emergencies, and on-board contingencies large and small, including the delivery of babies and collecting donations for passengers in emergency situations. It all adds up to much more than just operating a ferry system."

Alaska Marine Highway System Director George Davidson said the special year "serves to keep us on our toes. We naturally look back with pride at the record of service behind us, but also with recharged determination to the challenges ahead."

Following the M/V Malaspina's maiden voyage in 1963, the M/V Taku and the M/V Matanuska were added to the fleet that same year. The ferry system opened to Alaskans and visitors a means of regularly scheduled public transportation connecting the highway system at Prince Rupert, B.C. and Haines, to southeast communities not reachable by land routes.

The system before long, added a lower 48 link to Seattle. It now operates nine vessels, serving southeast, Prince William Sound, Aleutian Chain communities, and southcental Alaska as well. The system serves 3,500 route miles and carries more than 360,000 passengers and 90,000 vehicles annually, along with freight and other goods of Alaskan commerce.

In total, the system has carried six million passengers and one-and one-half million vehicles since 1963.

News

293-940), 62 Pages Ketchikan, Alaska, Saturday-Sunday, January 23-24, 1988

25 years

Ferries sail by silver anniversary

By JUNE ALLEN
Daily News Staff Writer

The inaugural sailing of the Alaska state ferry Malaspina was front page news in Ketchikan long before the new vessel sailed north from the Seattle yards for Alaska.

The date of her first call in Ketchikan was Jan. 23, 1963 — a quarter century ago this weekend.

The Malaspina's prow cut the ribbon on the Alaska Marine Highway System as the first of three sister ships to be built at a cost of $10,445,000, designed by naval architect Philip F. Spaulding and built by Puget Sound Bridge and Dry Dock Co.

Alaska Gov. William A. Egan headed a list of dignitaries aboard the vessel as it awaited a Seattle departure after a series of short shakedown cruises in Puget Sound. A delay in sailing north was caused by repairs to a crack which developed on an engine supercharger casing.

Capt. Reuben Jacobsen ran what he called his "little luxury liner" at speeds above the 18-knot cruising range to make up time, but the Malaspina sailed into Ketchikan almost 10 hours late.

She was greeted with what Daily News headlines called a "New York-Type Welcome."

Scheduled events included performances by both the Metlakatla and Kayhi bands, a fly-over of small planes (probably canceled since the ferry arrived at night), and a boat parade led by the city's fireboat H.V. Newell, skippered by Bud Beck, crewed by Roy Selfridge, Clare Stigan and Walter Fitzgibbon with engineer Mike Kouni.

Ketchikan Daily News editor Albro Gregory was along for the inaugural sailing, doing a series of stories for the Associated Press in Seattle and taking scores of pictures which were featured on page one well into February.

Richard Downing, commissioner of public works, was photographed barefoot, pant legs rolled up as he scrubbed decks — not enough stewards had yet been hired. Fairbanks entrepreneur Chris Palzer had the contract for food service aboard the Malaspina and was attired in a uniform which an eyewitness said looked like it had been borrowed from a South American Navy.

The whole concept of being the first Alaska stop on Southeastern's marine highway was being addressed by the Greater Ketchikan Chamber of Commerce. The chamber's banker president, Jack Reekie Jr., was requesting weekly reports from ferry committees. One was investigating ferry refueling stops in the First City; another was encouraging crews to live in Ketchikan; and still another was called the Ferry Arch committee. It was charged with designing and funding a grand, if rustic, laminated arch to rival the downtown All Alaska City arch on Mission Street. The ferry arch would be supported by logs, later to be replaced with totem poles.

The Matanuska and Taku were due to be finished the end of April 1963 and already the Chamber was studying future ferry extensions, supporting a terminal at Tolstoi Bay on Thorne Arm. However, district Sen., W.O. (Bo) Smith said he supported a future terminal at Hollis.

The entire community was caught up in the excitement of the Malaspina's arrival and significance. When she was tied up here, an agent sold tickets for the continuing voyage north from a cigar box in a borrowed trailer.

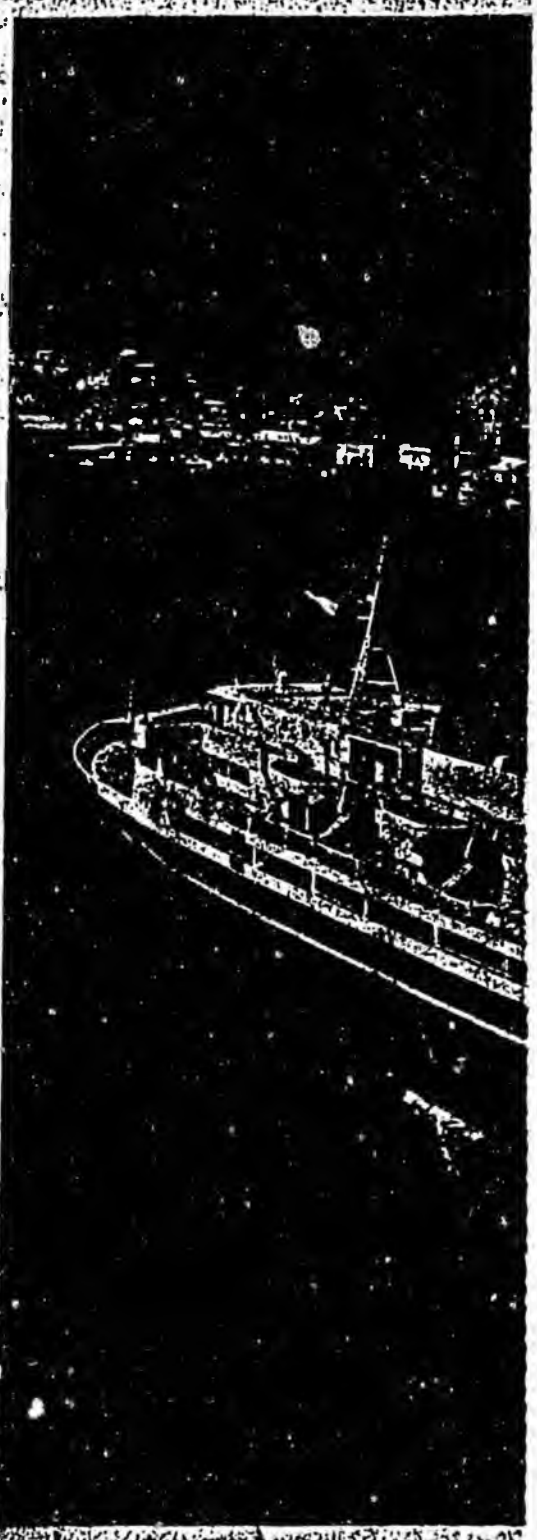
Then the Malaspina sailed north to carry Gov. Egan to his inaugural ceremonies. Along the route each passing fishing boat tooted a greeting which the Malaspina returned with a blast from her whistle.

It was an important event in 1963, the year that was the last for President John F. Kennedy, the year in which people were doing the Twist and Thistle Dew was plotting the death of Dick Tracy's sidekick Junior.

The opening of the marine highway was the culmination of many, many years of planning and preparation.

On the front page of the Jan. 23, 1963, edition of the Ketchikan Daily News was an old 1919 photo of a Fourth of July parade float, built to resemble a ferry. On its side was a sign which said, "Car Ferry No. 1."

It had finally arrived.



This photo was taken 20 years ago Matanuska and Taku had joined the M to create the state's mainland ferry Photographer Steve McCutcheon ca

Familiar infant se

[Editor's note: Many present and former Ketchikan residents remember the years during which the idea of a marine highway for Southeastern Alaska finally became reality.]

Oral Freeman

Oral Freeman was one of Ketchikan's representatives in the first Alaska State Legislature after Statehood in 1959. He says he has no idea who first came up with the concept of a marine highway. It was an old and cherished idea, but during his years in that first Legislature the ferry concept was mostly a dream — there was no money to implement it.

But somehow along the line a study was begun and the idea of

IN THE HOUSE BY CATO

HOUSE CONCURRENT RESOLUTION NO. 46

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

Relating to a Copper River toll road.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS there is currently no road to Cordova; and

WHEREAS the residents of Cordova very much want to be connected by road to other points in the state; and

WHEREAS a road to Cordova would stimulate economic development and encourage tourism in the area; and

WHEREAS the availability of both state and federal funding for road construction has decreased; and

WHEREAS the state has authority under AS 37.15.720 to construct and maintain toll roads;

BE IT RESOLVED by the Alaska State Legislature that the Governor is respectfully requested to direct the Department of Transportation and Public Facilities to construct a toll road under AS along the Copper River via Chitina to Cordova.

Re: Copper River Highway

Dear Margy:

As I promised, we are continuing to gather information about the Copper River Highway. Both Roy Peratrovich and I have always thought that this project is of great economic importance to Chitna, Cordova, Valdez and Alaska.

In earlier days, we both worked on route reconnaissance and designed many of the bridges including the large ones at Flag Point.

When work was stopped in the mid 1970's only about 4 miles was left to complete the initial pioneer road stretching from Chitna to the Million Dollar Bridge, according to Bruce Campbell, then Commissioner of Highways. Apparently work crews on both sides of the Tasnuna River were within sight of each other.

The pioneer road was begun at two ends, one near Chitna and the other near the Million Dollar Bridge. Crews pressed forward to around the Tasnuna River.

Photos taken by the late Charles Matlock are enclosed to show typical views of the road along the route. The pioneer road was about 14 feet wide and in condition to allow car passage.

The route crosses a few rivers that need substantial bridges. The Million Dollar Bridge could be repaired, Allen River needs a bridge, Abercrombie Creek, the large Tasnuna crossing would be the most expensive and there could be some lessor crossings of creeks.

Bruce Campbell says that a 14 foot wide gravel road with turnouts every 1/4 mile or so could be readily built in a fairly short time.

The State apparently owns the entire route right-of-way so that should not be a problem.

Modern technology involving modular bridges, heavy lift techniques and fast track road construction methods could all be employed on this project.

We will continue to support your efforts and should you have any questions please call.

Sincerely,

PERATROVICH, NOTTINGHAM & DRAGE, INC.

RE:COPPER RIVER HIGHWAY SUPPORT BY EYAK

Dear Governor Cowper,

The Eyak Corporation strongly supports the building of the Copper River Highway, and has supported it for a number of years. Any method that would expedite the building of the Copper River Highway, including a pioneer road, we feel would be a benefit to our people and all the people of Cordova. A highway would be a more economical way for people and freight to flow in and out of this community.

We feel that the question of whether or not the people of Cordova want a road, has been answered, and that answer was yes. We also would hope that you would be in favor of tying the state together via a highway system especially one that connects Cordova to the rest of the state. It is our understanding that since the Hickel Administration, no new state highways have been built.

The Eyak Corporation passed a resolution that endorsed the Woods Canyon Route otherwise known as the Chitna Route. This resolution is attached.

We also feel that this road would not only benefit the Cordova area, but it would also benefit the entire state. With the increase in tourism, especially in the area of Mckinley Park, The Copper River Highway could go a long way to diversifying the areas visited by tourists by opening up the Wrangell St Elias area during the tourist season. Additional attractions that would be opened up and visited, are the Childs Glacier, Copper River Delta, and Sheridan Glacier, all of which are currently enjoyed by only a few people. Another fact that should be considered is the potential stabilization of Cordova's economy with the additional flow of persons and commerce that would travel to Cordova via the Copper River Highway. Many of these persons and businesses might not come without the highway.

Again we ask for your support and hope that the Highway can become a reality soon.

Sincerely,

Lucas Borer
Chief Executive Officer
The Eyak Corporation

FEB 23 1988

The Copper River Highway has long been a dream to most Cordovans. The business community has always supported the completion of our Highway. As you know, we were within 10 miles of completion when the Good Friday earthquake hit. Since then, the project has been a political football.

We ask you to support our legislators in the efforts to secure funding for the Copper River Highway. We are not asking for a deluxe or even paved highway, simply a pioneer acess so that our community can be linked to Alaska's road system.

Supporting the development of Alaska's infrastructure through construction of necessary roads is vital to the economic well being of the State of Alaska.

We would be most apprecitive of your support.

Sincerely,

David Henry

FEB 23 1988

Dear Governor Cowper,

I want you to know I am in complete support of completion of the Copper River Highway to Chitna. I was born, raised, and have lived all my life in Cordova. The road would be a real asset to help with all aspects of life here. The ferry is essential and would remain so, but the way things are now the ferry is nearly impossible for the average guy. When I need service on my new truck I have to take a week to go to Anchorage to get the work done. The ferry schedule has always worked this way, and it seems like just by it's very nature it can not provide all our transportation needs. I believe if we had a highway connection with the rest of the state I probably would not have to go to Anchorage for vehicle service, in the long run.

In addition I do not think a road would ruin our town. We who were born and raised here have always had the history of the Copper River and Northwestern Railroad and regular land transportation to the Interior as part of our being and desires. It is very frustrating to have had a bunch of short timers and summer only users telling us a road would ruin our community. Land transportation made this City. It won't ruin anything to have what we grew up expecting to finally be a reality.

Thanks for listening and please help end this very frustrating situation for my community.

Sincerely,

Roger Behymer

Juneau, Alaska, 99811

February 15, 1988

Dear Governor Cowper,

This letter is to show my support for the Copper River Highway which would connect Cordova, Alaska to the rest of the State by means of a road. Not only would the road encourage other Alaskan to visit Cordova, it would make it possible for Cordovans to visit and shop outside of Cordova at less expense.

The local merchants use the "high cost of shipping" excuse to inflate local prices to a ridiculous high and then virtually laugh at their customers because we pay these prices. Example: a gallon of milk cost almost $5.00; a loaf of bread costs $2.50, chicken sells for $2.99 a pound. As there is no competition the merchants can set any price they so desire. If Cordovans were able to drive Anchorage without the need to take a ferry to Valdez, they could afford to bring back a truckload of groceries and still save money.

Please lend your support to the Copper River Highway to connect Cordova to the rest of the State.

Sincerely,

Dixie Lambert

Govenor Steve Cowper
Juneau, 99811-0101
February 15, 1988

FEB 23 1988

Dear Govenor Cowper,

I would like to see the Copper River ROAD COMPLETED. This would be a very strong unifying point for Cordova. You see the people who oppose the road all admit that sooner or later there will be a road. Once the road is finally completed we will be able to start having a city of agreement and purpose. As it is now many people who want the road keep queit. They are afraid to lose some of the little business there is. Some such as our newspaper editor have very negative feelings about the road for selfish reasons. They do not want TO SHARE THE COUNTRY with others. They want to have rafting business or tour business all to themselves. Some of these few can make life uncomfortable for any of the many who want the roaddue to their community position. Many collect a salary from government in some form or another. These few have made life hard on some of our most energetic community members and they have left the community. Far too many of our young adults have to leave also creating a brain drain , and further erode our ability to have any sense of community except the small group of elite who managed to cheat Cordova out of the road. I know this is somewhat hard to believe, but for instance one might wonder why there is never anything in the newspaper about positive aspects of the Copper River Road. The editor makes it appear ridiculous. She will edit for space or run contradictory information .

None of these type of things is good for a community. We need to have our history back.The railroad went to Chitna and let people move freely into the interior and be Alaskans. We must regain our identity and take our place amongst other Alaskan cities. We need your help.

Respectfully,

Dennis A Marchant

Govenor Steve Cowper
Juneau, Alaska
Feb. 16, 1988

Dagmar Davis
Box 192
Cordova, 99574

Dear Govenor Cowper,

I have been a resident of Cordova for forty-three years and have always supported the completion of the Copper River Highway. The town has always been in favor of the road except in the very unfair 1982 vote. They said that it was just another unofficial vote but very unfairly doomed the Million Dollar Bridge on the basis of the vote. To many voters it was just another ho-hum vote for something we all knew was desperately needed and long sought. Advertisemennts in the newspaper made it appear like a yes vote would ruin the hunting and fishing and leave us buried in litter. I don't believe any of these things would happen. I know from living at a turn around spot on Eyak Lake that TOURISTS DON'T LITTER,LOCALS DO.

The ferry system is good but it can not run every day. A road would give us the added dimension of freedom to travel to other Alaskan cities when we need to go. I would be happy to pay a tollto travel at my own convenience and would continue to use the Marine Highway as it fit into my own schedule. I know that the road has been made to appear vey controversial in the past but I do not think this is true. I believe that the '82 vote was generated by a young element who were relatively new to Cordova and wanted it all to themselves. As it is now many of our young people have to move away, and this is not good for our sense of our community.

I hope you will give us strong support in finally finishing the road. Thank you.

Sincerely,

Dagmar J Davis

T-20 #8

FEB 23 1980

Dear Betty:

Copper River Highway #10 finally has come this far with the help of many of you--Cato, City of Cordova, etc. we now have HCR-46 attached.

I don't need to tell you or stress that NOW IS THE TIME. After 50 years, after 29 years in statehood, and only one highway being built, Cordova's economy, future tourism, and the North Gulf Coast should be opened to some development

I only have two words LET'S BUILD.

Under the toll road option we are not asking for handouts, there can be no more legitimate obsticles. For all Alaska, not just this area, build the highway; let's work together. There can be no other alternative but to support HCR 46.

Govenor Steve Cowper
Juneau, 99811-0101
February 15, 1988

Dear Govenor Cowper,

Cordova deserves to be re-connected with the rest of Alaska. The Copper River Route is the easiest way into the interior, and its construction is the history of Cordova. All Americans deserve the chance to travel through the old rail-belt area and see some of the most spectacular scenery on earth. This road has always been a political football. They say copper is the metal people fight the most over. This must be true and have rubbed of on the railroad grade. I hope you can help us rejoin the rest of Alaska.

Sincerely,

P.O. Box 1254

Govenor Steve Cowper
Juneau, 99811-0101
February 15, 1988

FEB 19 1988

Dear Govenor Cowper,

Please give your approval to finishing the road up the Copper River to Chitna. It will be important to protect the salmon stock spawning areas that might be adjacent to the road so fish and game can study any effect additional use might have. perhaps some kind of moratorium could be made so as to do no harm. We need the road very badly right now. If you would help us, may be we would not have to wait another fifty years. It seems similar to the question of ANWR, Only it really is not new business, just a return to what we had historically and something that could be managed with very low impact on the enviorment. The Southeastern tourism people have shown quite plainly that the best return from tourism is the independant traveler. I think we can easily double the amount of business the Bartlett Does here, and that would decrease the overall subsidy to the Marine Highway system.

It seems like the kind of proposition where no one can lose. I sincerely hope you can help make the completion of the road a reality in the very near future. Thank you.

Very Truly Yours,
Brian Lehman

February 15, 1988

FEB 19 1988

Dear Govenor Cowper,

Since our only real builder in Cordova has moved over to Valdez to begin a new fish processing plant where there is a road, and the Coast Guard which is ten percent of our winter population will probably be moving out in the fall we need aroad into Cordova more than ever.. Please if you can help, help now. Some people say that the army has a plan to put a road into Cordova that would only take one month tocomplete. Have you ever heard this about a defense road which the Corps of Engineers supposedly has.? This would really be great if it were true. It really doesn't seem like we should have to wait anymore for permits or any of that stuff. After all this road is not new. It was there 75 years ago. It operated as a railroad for 30 years. We have always wanted to still be a part of Alaska, but it isn't easy being isolated without normal transportation.

I have also heard that a toll road might be possible. If this was true then the road could maintain itself and no one could object due to high costs. Then we here in Cordova could share in the beauty that is in the rest of the state, and the rest of the state could come over here to see the Gulf of Alaska. It would be the only place where Alaskans could see the ocean. Amazing, we have more coast than the entire US and this would be the only place to see the Pacific from that you could drive to! I hope you can help all Alaskans share the beauty we have to offer.

Thanks for reading,

ANALYSIS: The use of a toll authority is not established procedure in the department. The assumptions expressed in this analysis represent the department's initial reactions to this concept and may need modification to more accurately reflect the opportunity costs of money, the pay back terms and other financial assumptions. In addition, federal aid funds for construction may have to be re-paid prior to establishing a toll.

ASSUMPTIONS

A) Toll Checkpoint

1) One toll checkpoint would be needed to collect tolls.

2) Checkpoint costs were based on similar costs for a checkpoint on the Dalton Highway.

3) A checkpoint for year round occupancy would be more expensive as it would require additional insulation, permanent utilities systems, larger living quarters, etc.

B) Pioneer Road

1) Would be 18ft. wide, screened gravel surface and have trestle type bridges. The cost for this work assumes that 18ft. wide road could be constructed so that it was safe and maintainable and that only minimal reconstruction on the existing railbed would be necessary. Should any of these parameters be forced to change, during the course of actual design, the cost could increase substantially. Cost increases would depend on the type of changes that were necessary.

C) Federal Aid Secondary

1) Would be 28ft. wide, crushed gravel surface and have standard bridges. The cost is based on current construction costs for typical gravel surface Federal Aid secondary roads. Assumes construction of access road from the Million Dollar Bridge, Mile Post 49, to Chitina.

D) Copper River Bridge

1) To keep per vehicle tolls to a minimum, it was assumed that the estimated $7,500,000 to construct a bridge across the Copper River, adjacent to the Million Dollar Bridge, would be done with Federal discretionary bridge funds. Therefore, this particular cost does not appear in the overall capital costs. If discretionary funding cannot be obtained the $7,500,000 construction cost would have to be added to the total capital costs of the project. This would increase the per vehicle toll for capital costs payoff by $7.00 for seasonal and $4.00 for year-round.

E) Maintenance Station

1) In order to distribute the added mileage evenly, one additional station would be needed in the Tasnuna River area and additional equipment would be needed at the Chitina Station.

2) Facilities requirements to meet seasonal needs.
2,400 sq. ft. shop
Generator Bldg. w/two generators
4 each trailer pads for 14X70 trailers.
Utilities and water/well system.

3) Facilities requirements to meet year round needs (in addition to above building needs).
2 Trailer pads for 14X70 trailers.
Utilities and water system.
Sand shed 2,000 sq. ft.

2,000 sq. ft. work store building.

F) Maintenance Equipment

1) Seasonal (either type road)

a) New Tasnuna Station
Motor graders CAT 14 Type (2)
Dump Truck 8 Yd.
Loader 4 yd. type (1)
Dozer D-8 type
2 4WD 3/4 ton pickups
Low tractor trailer

b) The mileage this road would add to the existing system would be slightly more than a new station should handle. Therefore, some additional equipment would be needed at the existing Chitina Station to cover the extra northernmost portion of the additional mileage. This additional equipment would also be used on other state-maintained roads in the Chitina area.

c) Chitina Station (additional equipment)
Motor grader CAT 14 type (1)
Loader 4yd. type (1)
Dump Truck 8 yd. type (1)

2) Year-round (in addtion to season equipment needs) [either type road]

a) Tasnuna Station
Truck type Rotary snowblower 2 each 2200 tph
4x4 Oshkosh with V-nose plow, belly blade and wing, 2 each
Sander

G) Building and equipment needs are based on:

1) Historical information from old railroad records, which show that a substantial maintenance effort was required to keep the alignment open and in good repair at all times of the year.

2) Personal on-site observations of substantial slide and erosion activity by DOT&PF maintenance staff and other individuals at various times of the year.

3) If the Pioneer Road is built, it will be heavily used. The one-lane road will not be able to handle the volume of traffic very long. By building and staffing an adequate camp, maintenance forces can make many of the upgrades that will be required by the traffic volume.

H) Maintenance Costs - Manpower Needs

1) Seasonal
   a) Tasnuna Station (New Positions)
      i) 1 WG 52 Foreman
      ii) 2 WG 53 Operations
      iii) 1 WG 53 Operator/Mechanic

   b) Chitina Station
      i) 2 WG 53 Operators

2) Year Round
   a) Tasnuna Station
      i) above 4 Positions @ Full-time
      ii) Plus 1 additional WG 53 Operator and 1 additional WG 54 Operator

I) Toll Program Administration

1) Based on estimates of manpower needs for similar checkpoint program on Dalton Highway at $7,000 per month for a staff of 3.

2) Accounting support assumes accounting clerk, range 9, part-time.

J) Average Annual Traffic

1) Based on historical traffic generating data for similar sized communities, future growth patterns as demonstrated in the draft Cordova Comprehensive Plan and the area's location relative to major population centers and recreational/resource opportunities. This resulted in an average daily traffic count forecast of 375 vehicles a day, or 11,250 a month based on a 30-day month.

2) The average monthly traffic count for a year round rate will be less than a seasonal route. This is because the year round average takes in a 7-month period where historic traffic declines by approximately 60% from the five-month summer period.

K) Capital Costs

1) Capital costs for check point construction, maintenance equipment, maintenance station construction, and Pioneer Road would all have to be funded initially from General Funds.

2) Capital costs for constructing the Federal Aid Secondary Road would be split 91.35% Federal and 8.65% State General Fund match.

3) Costs for Pioneer Road construction could be recovered from the FHWA upon upgrade of this road to Federal Highway Secondary standards. However this recovered cost would come from federal obligation authority which could otherwise be used on other projects.

L) Toll charges for private vehicles may be able to be lessened by charging on the basis of vehicle gross weight. This would increase the cost to truck traffic, but assumably increase shipping costs as well. Because we have no way to determine gross weight at this time, such a charge schedule would have to wait until traffic data could be collected on the road, so that a determination could be made as to whether or not actual truck traffic was substantial enough to invoke such a schedule. An annual reassessment of toll charges could be done if changes in traffic level, maintenance costs, and/or toll program costs change.

M) Analysis does not include "cost of money."

FISCAL NOTE ANALYSIS OF

HCR 46-COPPER RIVER HIGHWAY TOLL ROAD

COSTS	SEASONAL		YEAR-ROUND

HCR 46
Fiscal Analysis

In order to provide emergency response and regular road patrol, one commissioned State Trooper position would be required. The current Alaska State Trooper staffing level does not allow for the picking up of these additional responsibilities. Presumptions made in preparing this fiscal note are that actual construction would not begin until July 1, 1991. No inflation is accounted for and the equipment requirement will exist in the first year only.

JUSTIFICATION:

A fully trained and experienced law enforcement officer is needed to provide accident response, patrol, investigation, and Search and Rescue along the Copper River Toll Road. This Trooper position would require a 4x4 vehicle (A152P) in order to be able to patrol the road during wet conditions. All other costs are average Trooper costs and are based upon experience.

FY92

01-1137(7/82)-13

GOOD MORNING - I AM THE SPONSOR OF HCR 46. I AM VERY PROUD OF THIS RESOLUTION AS I FEEL IT IS A STEP IN THE RIGHT DIRECTION. WITH DECLINNING FEDERAL HIGHWAY DOLLARS AND, REDUCED STATE MONIES WE NEED TO BE MORE INNOVATIVE. WE CAN NO LONGER LOOK TO THE STATE AND FEDERAL GOVERNMENTS TO CONTINUE TO PROVIDE US WITH OUR HIGHWAYS AND ROADS. THE AMOUNT OF FEDERAL MONIES FOR THE UPCOMING FISCAL YEAR HAS BEEN REDUCED FROM 148 MILLION TO AN EXPECTED $128 MILLION FOR THE FY 89. IN ORDER TO CONTINUE TO EXPAND AND DIVERSIFY IN THIS STATE, WE NEED TO LOOK TO NEW AND CREATIVE METHODS OF FINANCING THE INFRASTRUCTURE WITHIN THE STATE.

INITIALLY, I WAS VERY FRUSTRATED AT THE LACK OF FUNDING FOR CONSTRUCTION OF THIS ROAD. AFTER SEVERAL MEETINGS WITH THE DEPARTMENT OF TRANSPORTATION, IT BECAME VERY CLEAR TO ME THAT WE HAD BECOME VERY ACUSTOMED TO ASKING FOR FEDERAL AND STATE DOLLARS AND RECEIVING THEM. I REALIZED THEN, WE NEED TO CHANGE OUR WAY OF THINKING, OTHER AREAS THROUGHOUT THE COUNTRY HAVE BEEN VERY SUCCESSFUL IN THIS AREA, WE MUST ALSO BEGIN TO LOOK IN OTHER DIRECTIONS. I CONTACTED NUMEROUS OTHER STATES AND SPOKE WITH MANY TRANSPORTATION REPRESENTATIVES, THIS RESOLUTION OFFERS WHAT I CONSIDER TO BE THE BEST CREATIVE FINANCING METHOD AVAILABLE TO US.

IT IS A STAND ALONG PROJECT, NO CAPITAL ON MAINTENANCE COSTS WILL BE INCURRED BY THE STATE. NO FEDERAL DOLLARS WILL BE ASSOCIATION INITIALLY WITH THIS PROJECT. THIS IS CERTAINLY A CHANGE FROM THE METHODS WE ARE ACUSTOMED TO FOR FINANCING ROAD

HCR 46

I HAVE INTRODUCED HCR 46 - A RESOLUTION RELATING TO THE COPPER RIVER TOLL ROAD. THIS RESOLUTION RESPECTFULLY REQUESTS THE GOVERNOR TO DIRECT THE DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES TO CONSTRUCT A TOLL ROAD ALONG THE COPPER RIVER VIA CHITINA TO CORDOVA.

THIS TOLL ROAD WOULD BE CONSTRUCTED UNDER AUTHORITY GRANTED UNDER AS.73.15.720. THIS PROVIDES THE STATE WITH THE AUTHORITY TO ACQUIRE, CONSTRUCT, EQUIP AND MAINTAIN TOLL BRIDGES, HIGHWAYS, ROADS, CROSSINGS, AND CAUSEWAYS FOUND TO BE NECESSARY BY THE COMMISSIONER OF TRANSPORTATION AND PUBLIC FACILITIES.

AS. 37.15.730 SETS DOWN CRITERIA TO BE MET IN ORDER FOR THE TOLL FACILITY TO BE FINANCED. THIS CRITERIA INCLUDES:

1. THE DEPARTMENT SUBMITS TO THE GOVERNOR AND THE LEGISLATURE A FEASIBILITY STUDY THAT FINDS THAT THE PROJECT IS FINANCIALLY FEASIBLE AND ABLE TO PRODUCE REVENUE ADEQUATE TO REPAY THE BONDS WITH WHICH IT IS FINANCED.

2. IF FINANCING IN ADDITION TO REVENUE BONDS IS ANTICIPATED, THE DEPARTMENT SUBMITS TO THE GOVERNOR AND LEGISLATURE A FINANCE PLAN TO INCLUDED AN ESTIMATE OF THE TOTOAL COST OF THE PROJECT AND A DESCRIPTION OF THE SOURCES OF MONEY THAT WILL BE USED TO FINANCE THE TOTAL COST OF THE PROJECT.

THE DEPARTMENT OF TRANSPORTATION HAS PROVIDED A FISCAL NOT WHICH SHOWS THE COST TO CONSTRUCT A PIONEER ACCESS ROAD AND A FEDERAL AIDE HIGHWAY. THE INFORMATION ALSO SHOWS THE COST TO MAINTAIN AND OPERATE THIS ROAD ON A YEAR ROUND BASIS. WITH DECLINING FEDERAL AND STATE DOLLARS WE NEED TO FIND NEW AND INNOVATE WAYS TO FINANCE VITAL PROJECTS IN OUR STATE. I FEEL THIS METHOD OFFERS A VERY GOOD ALTERNATE FOR THE STATE TO FINANCE CONSTRUCTION OF ROADS AND HIGHWAYS WITHOUT THE USE OF STATE AND FEDERAL FUNDS.

IN THE CASE OF CORDOVA, THE PIONEER ACCESS ROAD WOULD BE CONSTRUCTED AT A COST OF $18,405,000, THIS AMOUNT WOULD BE REPAID OVER 20 YEARS. THE YEARLY M & O COSTS ARE ESTIMATED TO BE $1,200,000 AND THE TOLL PROGRAM COSTS TOTAL $120,000 YEARLY. THE TOTAL PER VEHICLE TOLL CHARGE TO REPAY THE CONSTRUCTION COST AND OFFSET THE EXPENSES INCURRED WOULD BE $16.90. THIS AMOUNT IS CONSIDERABLY LESS THAN LOCAL RESIDENTS CURRENTLY PAY TO TRAVEL TO OR FROM CORDOVA, AND THE ROAD PROVIDES THEM WITH THE FREEDOM TO TRAVEL AT THEIR OWN CONVENIENCE.

I ASK YOUR SUPPORT FOR HCR46 - I FEEL THIS IS AN EXCELLENT RESOLUTION AND PROVIDES THE STATE WITH A NEW AND INNOVATIVE FINANCING CONCEPT THAT WILL NO IMPACT THE GENERAL FUND BUT STILL ALLOW THE STATE TO CONTINUE TO GROW AND DIVERSIFY.

3. THE OFFICE OF MANAGEMENT AND BUDGET REVIEWS THE FEASIBILITY STUDY AND THE FINANCE PLAN, IF REQUIRED, AND REPORTS ITS FINDINGS AND RECOMMENDATIONS TO THE GOVERNOR AND LEGISLATURE NOT LATER THAN 90 DAYS AFTER THE STUDY AND PLAN ARE RECEIVED BY THE OFFICE.

I FEEL THE ABOVE CRITERIA PROVIDE ADEQUATE OVERSIGHT AND REVIEW TO ENSURE THAT ANY PROJECTS FINANCED UNDER AS.37.15.720 DO NOT PLACE THE STATE AT RISK.

I WOULD LIKE TO INFORM YOU ABOUT THE PROJECT ITSELF. THERE IS CURRENTLY NO ACCESS TO CORDOVA OTHER THAN PLANE OR FERRY. CORDOVA RESIDENTS AND LOCAL CITY OFFICIALS WOULD LIKE TO SEE THEIR COMMUNITY DIVERSIFY AND GROW HOWEVER, WITHOUT ROAD ACCESSIBILITY IT IS VERY DIFFICULT TO ATTRACT NEW INDUSTRY TO THE COMMUNITY AS MANY OF THE EVERYDAY TRANSPORTATION COSTS ARE VERY HIGH. CORDOVA HAS A LOT TO OFFER, A LARGE PORT AND DOCKING FACILITY, BEAUTIFUL SCENERY, TREMENDOUS FISHING WATERS, AN ABUNDANCE OF BUILDABLE LAND AND A COMMUNITY ATTITUDE THAT IS VERY SUPPORTIVE OF NEW INDUSTRY. REGARDLESS, WITHOUT ROAD ACCESS MANY OF THE PROJECTS LOOKED INTO ARE NOT FEASIBLE WITHOUT ROAD TRANSPORTATION.

THE ROAD PROPOSED IS VIA THE COMMUNITY OF CHITNA 130 MILES TOTAL SOME OF THE ROAD BED ALREADY EXISTS, IN FACT THE COPPER RIVER ROAD CURRENTLY EXISTS TO THE MILLION DOLLARS BRIDGE, 49 MILES FROM CORDOVA. THIS SECTION OF THE ROAD IS IN GOOD REPAIR AND IS USED TODAY. FROM 49 MILE TO 72 MILE IS DRIVABLE WITH A TWO OR FOUR WHEEEL DRIVE. 72 MILE TO MILE 105 WOULD NEED TO BE CONSTRUCTED WITH THE REMAINING 25 MILES IN NEED OF OVERLAY OF EXISTING ROADWAY.

The Honorable Ted Stevens
United States Senate
522 Hart Building
Washington, D.C. 20510-6025

Dear Senator Stevens:

Thank you for your letter of January 19, 1988 and Marla Jean Adkins' letter of November 21, 1987 concerning the Copper River Highway. A copy of my November 12, 1987 letter to Ms. Adkins is enclosed. I believe it will give you our perspective of the past and present problems facing the Copper River Highway. Following are some comments on Ms. Adkins' letter and an update on our Copper River Highway work.

In Ms. Adkins' November 21 letter she states that the department's estimated cost of $177 to $200 million to construct the highway to federal secondary standards is too high compared to the $50 to $60 million quoted by private engineering firms.

We advised Ms. Adkins some time ago that the information base for these estimates is over 14 years old and that these costs were updated to reflect a more inflationary period in time (1984). We agree that these estimates do need to be re-evaluated and they will be as part of our current reconnaissance study.

Ms. Adkins' November 21 letter also refers to an FHWA comparison data sheet which shows FHWA recommending $3.6 million for 1988 urban projects and State DOT allotting $51.4 million. I am not aware of the existence of such a comparison data sheet, nor do I know how the figures were derived.

We are currently preparing a scope of work and cost estimate for the option of a pioneer access type road as one element of our reconnaissance study for the Copper River Highway. Our preliminary estimate includes $1 million for permits and preconstruction work, plus at least $9.5 million for actual construction. We have included various trestle bridges along the route, but no additional costs for reconstruction of the "Million Dollar Bridge" near Cordova. A pioneer access approach assumes that a road would be constructed along the old rail bed from Cordova to Chitina. A state-owned right-of-way exists along that route.

If a pioneer access road were constructed, it would be a very basic road similar to the present road from Chitina to McCarthy. The road would be 18-20 feet wide and would have, at best, a screened gravel surface. Minimal summer only maintenance would cost approximately $600,000 each year.

Before proceeding with any funding for any route for the Copper River Highway, a systematic analysis must be made to support a decision as to whether or not a highway between Cordova and the existing highway system should be built. We are proceeding with the reconnaissance study for the Copper River Highway in order to make this decision and to preserve the option of a federally funded route.

If we can be of any further assistance regarding this issue, please contact me.

Sincerely,

Mark S. Hickey
Commissioner

November 12, 1987

Ms. Marla Jean Adkins
Box 461
Cordova, AK 99574

Dear Ms. Adkins:

I am in receipt of your letter dated October 23, which supports completing the Copper River Highway through Chitina to the Interior highway system.

In your letter you point out that other small communities have road access, and that Department of Transportation and Public Facilities construction funds are going to other road projects while the community of Cordova has been waiting for a road for many years.

Your frustrations with all this are understandable, but a few things might help to put this into proper context. Unlike the other roads you mentioned, the road to Cordova is a victim of history. One only needs to look at the many obstacles that have delayed this road over the years: (1) the 1964 earthquake; (2) a stop-work court injunction in 1972; (3) the resolution of land ownership through the Alaska Native Claims Settlement Act and Alaska National Interest Land Conservation Act, which did not occur until 1980; and (4) the need to complete the Prince William Sound Transportation Study to satisfy DOT&PF's out-of-court settlement of the 1972 stop-work injunction, which was not completed until 1982. If not for these problems, it is likely there would now be a road to Cordova.

By the time all these problems had been settled, the state was facing a downturn in revenues, while needs on the existing road system and in the fast-growing urban areas were increasing. This led to yet another obstacle to working on the road to Cordova: the lack of state financial resources. This has put us into the current position of being able to only program major projects that could qualify for federal funds. Because the road to Cordova is eligible for federal funds, the decision was made to seek funding from the Federal Highway Administration (FHWA). The FHWA in turn has required that we, update our reconnaissance study work before any more federal funds can be forthcoming.

If state funds were made available for construction of a road to Cordova, some non-construction work would still need to be done in order to satisfy mandatory permit requirements, such as Army Corps of Engineers wetland permits. Although 100% state funded construction would allow the road to be built with less total

funding because federal standards would not apply, it would still need to be built to safe standards, which means that construction would still be many millions of dollars.

In your October 23 letter you also requested the amount of construction contracts let over the last 2-3 years, per area. We are working on this now and will have these figures to you shortly. I did not want to hold up this response to wait for the data to be collected.

How completion of the Copper River Highway using federal funds will compete with the ever increasing demand for our every decreasing amount of federal funds is another matter. To complete this road under federal standards will cost a considerable sum of money. Additionally, without funding support for maintenance, DOT&PF would be hard pressed to assume the additional responsibility. We are barely able to keep up with current duties. This is the reality I face in trying to manage the department and will influence the advice I give the Governor and Legislature regarding this project.

The one assurance I will give you is to deal with the issue on the merits and make myself as knowledgeable as I can be about the trade-offs and the desires of the people of Cordova. In that regard, I intend to visit Cordova at some point between now and next summer, and would like to meet you to discuss this further.

Sincerely,

Mark S. Hickey

Re: House Concurrent Resolution #46

Dear Ms. Cato:

The repair of the bridge and the extension of the road to Cordova would create a much needed link in the State highway system. Please support HCR #46.

A toll bridge would set a dangerous precedent and I would recommend instead that general fund monies or other general tax funds be used.

Sincerely,

Juneau, Ak. 99811

Dear Governor,

In less than a year - Jan. 1989- We Alaskans will be celebrating 30 years of Statehood.
We are once again reminded that one of the main reasons for gaining statehood was to share in Federal Funds for the building of roads. And to put an end to isolationism.
THIRTY YEARS! WHERE ARE OUR ROADS?
An Alaskan road map today looks much the same as it did 22 years ago when I arrived in Cordova to work on the building of the Copper River Highway.

Frankly we are stunned at the lack of progress on this worthy project that would benefit the entire state.

We would urge you and the legislature to make highway transportation the priority as it was set forth in the statehood act.

We request your full support of Resultion No. 46 (By Bette Cato) relating to a Copper River Toll Road.

Sincerely,

Glenn C. Criner

TITLE 46

SHIPPING
("JONES ACT")

§ 883. Transportation of merchandise between points in United States in other than domestic-built or rebuilt and documented vessels

No merchandise shall be transported by water, or by land and water, on penalty of forfeiture of the merchandise (or a monetary amount up to the value thereof as determined by the Secretary of the Treasury to be recovered from any consignor, seller, owner, importer, consignee, agent, or other person or persons so transporting or causing said merchandise to be transported), between points in the United States, including Districts, Territories, and possessions thereof embraced within the coastwise laws, either directly or via a foreign port, or for any part of the transportation, in any other vessel than a vessel built in and documented under the laws of the United States and owned by persons who are citizens of the United States, or vessels to which the privilege of engaging in the coastwise trade is extended by section 13 or 808 of this title: *Provided*, That no vessel having at any time acquired the lawful right to engage in the coastwise trade, either by virtue of having been built in, or documented under the laws of the United States, and later sold foreign in whole or in part, or placed under foreign registry, shall hereafter acquire the right to engage in the coastwise trade: *Provided further*, That no vessel of more than five hundred gross tons which has acquired the lawful right to engage in the coastwise trade, by virtue of having been built in or documented under the laws of the United States, and which has later been rebuilt, shall have the right thereafter to engage in the coastwise trade, unless the entire rebuilding, including the construction of any major components of the hull or superstructure of the vessel, is effected within the United States, its Territories (not including trust territories), or its possessions: *Provided further*, That this section shall not apply to merchandise transported between points within the continental United States, including Alaska, over through routes heretofore or hereafter recognized by the Interstate Commerce Commission for which routes rate tariffs have been or shall hereafter be filed with said Commission when such routes are in part over Canadian rail lines and their own or other connecting water facilities: *Provided further*, That this section shall not become effective upon the Yukon River until the Alaska Railroad shall be completed and the Secretary of Transportation shall find that proper facilities will be furnished for transportation by persons citizens of the United States for properly handling the traffic: *Provided further*, That this section shall not apply to the transportation of merchandise loaded on railroad cars or to motor vehicles with or without trailers, and with their passengers or contents when accompanied by the operator thereof, when such railroad cars or motor vehicles are transported in any railroad car ferry operated between fixed termini on the Great Lakes as a part of a rail route, if such car ferry is owned by a common carrier by water and operated as part of a rail route with the approval of the Interstate Commerce Commission, and if the stock of such common carrier by water, or its predecessor, was owned or controlled by a common carrier by rail prior to June 5, 1920, and if the stock of the common carrier owning such car ferry is, with the approval of the Interstate Commerce Commission, now owned or controlled by any common carrier by rail and if such car ferry is built in and documented under the laws of the United States: *Provided further*, That upon such terms and conditions as the Secretary of the Treasury by regulation may prescribe, and, if the transporting vessel is of foreign registry, upon a finding by the Secretary of the Treasury, pursuant to information obtained and furnished by the Secretary of State, that the government of the nation of registry extends reciprocal privileges to vessels of the United States, this section shall not apply to the transportation by vessels of the United States not qualified to engage in the coastwise trade, or by vessels of foreign registry, of (a) empty cargo vans, empty lift vans, and empty shipping tanks, (b) equipment for use with cargo vans, lift vans, or shipping tanks, (c) empty barges specifically designed for carriage aboard a vessel and equipment, excluding propulsion equipment, for use with such barges, and (d) any empty instrument for international traffic exempted from application of the customs laws by the Secretary of the Treasury pursuant to the provisions of section 1322(a) of Title 19, if the articles described in clauses (a) through (d) are owned or leased by the owner or operator of the transporting vessel and are transported for his use in handling his cargo in foreign trade; and (e) stevedoring equipment and material, if such equipment and material is owned or leased by the owner or operator of the transporting vessel, or is owned or leased by the stevedoring company contracting for the lading or unlading of that vessel, and is transported without charge for use in the handling of cargo in foreign trade: *Provided further*, That upon such terms and conditions as the Secretary of the Treasury by regulation may prescribe, and, if the transporting vessel is of foreign registry, upon his finding, pursuant to information furnished by the Secretary of State, that the government of the nation of registry extends reciprocal privileges to vessels of the United States, the Secretary of the Treasury may suspend the application of this section to the transportation of merchandise between points in the United States (excluding transportation between the continental United States and noncontiguous states, districts, territories, and possessions embraced within the coastwise laws) which, while moving in the foreign trade of the United States, is transferred from a non-self-propelled barge certified by the owner or operator to be specifically designed for carriage aboard a vessel and regularly carried aboard a vessel in foreign trade to another such barge owned or leased by the same owner or operator, without regard to whether any such barge is under foreign registry or qualified to engage in the coastwise trade: *Provided further*, That until April 1, 1984, and notwithstanding any other provisions of this

INTRODUCTION

1. On April 2, 1986, Alaska Marine Lines, Inc. (A.M.L.) applied to the Minister of Revenue and the Water Transport Committee for a renewal of the one-year waiver granted to it commencing May 3, 1985, to enable it to continue to move Canadian goods between British Columbia and the Yukon Territory on its weekly water-bridge service between Seattle, Washington and Haines and Skagway, Alaska. (Attachment 1).

2. Three Canadian operators have objected to the application by A.M.L. on grounds that they have suitable Canadian vessels available for the proposed service. The Canadian operators who have objected to the A.M.L. application are Rivtow Straits Ltd., Seaspan International Limited, and Whitepass and Yukon Transportation Company. A.M.L. responded to the offer of vessels by these operators in its Reply to Vessel Offers, submitted to the Water Transport Committee on April 22, 1986. (Attachment 2).

3. A.M.L. wishes to make the following additional submissions to the Minister of Revenue in support of its application to renew its waiver.

REQUIREMENT FOR THE ALASKA MARINE LINES SERVICE

4. Over the past year, Alaska Marine Lines (A.M.L.) has provided a dependable weekly scheduled service to the Yukon. The flexibility that the A.M.L. water-bridge service offers to Canadian shippers and truckers operating in British Columbia and the Yukon has earned the A.M.L. service public acceptance among northern shippers in the Yukon over the past year. A.M.L. wishes to confirm its commitment of service to Yukoners on a continuing basis.

5. The benefits provided by the A.M.L. service to Canadian shippers are confirmed by the acceptance of the water-bridge service by the Yukon Liquor Corporation. After a year of using the A.M.L. waterbridge for its shipments, the Yukon Liquor Corporation has made it a requirement in its call for trucking tenders on the contract for deliveries of liquor that a rate be quoted based on a water-bridge route via either Skagway or Haines, Alaska. Use of the water-bridge service offered by A.M.L. has thus resulted in lower shipping costs for Yukoners, along with the flexibility offered by a guarantee of weekly scheduled deliveries.

INTRODUCTION

1. On April 2, 1986, Alaska Marine Lines, Inc. (A.M.L.) applied to the Minister of Revenue and the Water Transport Committee for a renewal of the one-year waiver granted to it commencing May 3, 1985, to enable it to continue to move Canadian goods between British Columbia and the Yukon Territory on its weekly water-bridge service between Seattle, Washington and Haines and Skagway, Alaska. (Attachment 1).

2. Three Canadian operators have objected to the application by A.M.L. on grounds that they have suitable Canadian vessels available for the proposed service. The Canadian operators who have objected to the A.M.L. application are Rivtow Straits Ltd., Seaspan International Limited, and Whitepass and Yukon Transportation Company. A.M.L. responded to the offer of vessels by these operators in its Reply to Vessel Offers, submitted to the Water Transport Committee on April 22, 1986. (Attachment 2).

3. A.M.L. wishes to make the following additional submissions to the Minister of Revenue in support of its application to renew its waiver.

REQUIREMENT FOR THE ALASKA MARINE LINES SERVICE

4. Over the past year, Alaska Marine Lines (A.M.L.) has provided a dependable weekly scheduled service to the Yukon. The flexibility that the A.M.L. water-bridge service offers to Canadian shippers and truckers operating in British Columbia and the Yukon has earned the A.M.L. service public acceptance among northern shippers in the Yukon over the past year. A.M.L. wishes to confirm its commitment of service to Yukoners on a continuing basis.

5. The benefits provided by the A.M.L. service to Canadian shippers are confirmed by the acceptance of the water-bridge service by the Yukon Liquor Corporation. After a year of using the A.M.L. waterbridge for its shipments, the Yukon Liquor Corporation has made it a requirement in its call for trucking tenders on the contract for deliveries of liquor that a rate be quoted based on a water-bridge route via either Skagway or Haines, Alaska. Use of the water-bridge service offered by A.M.L. has thus resulted in lower shipping costs for Yukoners, along with the flexibility offered by a guarantee of weekly scheduled deliveries.

. . ./2

6. It is respectfully submitted that the continuation of the weekly service offered by A.M.L. will provide benefits to Yukon shippers in the form of a flexible, lower-cost shipping alternative suitable to their needs.

ECONOMIC VIABILITY OF THE ALASKA MARINE LINES SERVICE

7. Alaska Marine Lines has sufficient American base traffic on its weekly scheduled service to ensure the commercial viability of its offer of service to Canadian shippers. The existance of this base traffic is crucial to the ability of any operator to offer shipping services to the Yukon at a reasonable cost to the shipper. This is because the expected volumes of traffic destined for the Yukon, including Canadian traffic expected to be generated as a result of the re-opening of the mine at Faro, do not justify the higher cost to the shipper of chartering a barge. For this reason, it is respectfully submitted that the "offer" of barges by two Canadian operators, Rivtow Straits Ltd. and Seaspan International Limited, to move Canadian goods to the Yukon on a weekly basis, is not commercially feasible.

BENEFITS TO YUKON SHIPPERS FROM COMPETITION

8. Whitepass and Yukon Corporation has objected to the application for a renewal of its waiver by Alaska Marine Lines on the grounds that it is planning to start a scheduled service from Vancouver to Skagway, using one of the ships it kept in drydock after it withdrew its previous service in January, 1983.

9. A.M.L. responded to the objection to its waiver application by Whitepass in paragraph 10 of its Reply (pp.7 et seq., Attachment 2). After reviewing the submissions by Whitepass to the Water Transport Committee dated April 24, 1986, it is further noted that Whitepass is confident it has sufficient base traffic to justify the operation of a scheduled service to the Yukon. This base traffic consists of existing fuel deliveries, for which Whitepass currently uses a barge provided by Seaspan, and an export program consisting of traffic bound for Southeast Alaska. It is therefore submitted that the continuation of the A.M.L. offer of service to Canadian shippers will not result in the withdrawal by Whitepass of its proposed scheduled service.

. . ./3

10. It is respectfully submitted that the existence of two shipping services into the Yukon will result in competition in the market which will benefit Yukon shippers and businesses. Competition between two operators will ensure that cost competitive rates are maintained and that service remains dependable on a year round basis.

11. It is submitted that the existence of competitive shipping services are crucial for Yukon shippers, particularly as the Yukon economy recovers from its recent severe recession. In this context, it is respectfully submitted that the interests of Yukon shippers should be the primary consideration in determining whether a waiver should be granted to Alaska Marine Lines.

12. At the same time, there has been no indication by Whitepass to the Water Transport Committee as to what its rates will be, other than the broad assertion that they will be competitive. Whitepass has also been asked by Curragh Resources to quote a rate to them for movement of their general freight in and out of the mine at Faro, and to date has not provided such a quotation.

13. It is respectfully submitted that Whitepass is avoiding the requirements and intent of the Coasting Trade Exemption Order by failing to provide its rates and other terms on which it is willing to offer its service. It is submitted that the intent of the coasting trade protection in the Canada Shipping Act and the Exemption Order is to reserve the coastal trade to Canadian traffic where Canadian ships are available to perform the requested shipping movement in a competitive fashion. It is respectfully submitted that in these circumstances, Whitepass cannot be allowed to circumvent the regulatory process designed to administer this policy by failing to respond to shippers in the Yukon until and in the hope that potential competition by A.M.L. will be eliminated by denial of the waiver application.

14. The denial of the A.M.L. waiver application will leave Yukon shippers with only one shipping alternative over water, with the concommitant risks to shippers of higher rates unrestrained by competitive pressures and loss of service. It is respectfully submitted that granting the application by A.M.L. for a renewal of its waiver, on the other hand, will ensure that needed shipping alternatives will be provided to Yukoners.

. . ./4

15. Alaska Marine Lines wishes to emphasize that it has no desire to prevent or preclude Canadians from operating ship or barge water-bridge service to the Yukon. The interest of Alaska Marine Lines in this application is to be allowed an opportunity to continue the service it has offered to Yukon shippers over the past year in a competitive market environment. Alaska Marine Lines submits that, in its anticipation, the continued availability of its service in the Yukon, in competition with Canadian operators, can only be to the benefit of Yukon shippers.

SUPPORT BY YUKON TERRITORIAL GOVERNMENT

16. The Yukon Territorial Government has recognized the necessity of ensuring the continuation of dependable scheduled year round service at competitive rates for shippers and businesses in the Territory. For this reason, the Minister of Community Services and Transportation in the Yukon Territorial Government has supported the A.M.L. application. In the Minister's letter to the Water Transport Committee, a copy of which is attached to these submissions, the interest of the Yukon Government in ensuring the lowest possible transportation costs in order to encourage recovery of the Yukon economy are set out:

> As you are no doubt aware, Yukon's economy is an extremely fragile one and is presently getting back on its feet after a devastating downturn in the mining industry over the last three or four years. It is apparent from this experience that the economy is extremely dependant upon the ability of businesses to obtain goods and to ship goods to market at the lowest transportation costs possible. In the view of the Yukon Government, the Yukon economy requires access to frequent, reliable year around and cost competitive marine shipping service. Alaska Marine Lines has demonstrated the ability to provide such service on a weekly basis since last May.
>
> I appreciate that the Committee must examine the potential for Canadian ships and companies to carry out shipping operations between Canadian points. However, the existence of a dependable and cost effective transportation alternative to highway trucking routes is so critical to Yukon's efforts

. . ./5

for increased economic development that unless the Whitepass and Yukon Corporation Ltd. can guarantee frequent, reliable, year around service on a long term basis at rates similar to those currently available, we would feel compelled to support Alaska Marine Lines' request for a further one year waiver under the Canada Shipping Act. I would impress upon you that we must hold this view because of the importance of such service to the Yukon ecomomy as a whole.

17. It is therefore respectfully submitted that granting the A.M.L. application would be in the public interest in the Yukon and would be consistent with the objectives of encouraging the recovery and development of Yukon's economy.

RECIPROCITY WITH THE UNITED STATES - JONES ACT

18. Canadian ship operators now enjoy an exemption from the provisions of the United States Jones Act, under what is known as the "Third Proviso", whereby Canadian vessel operators may ship U.S. goods to Alaska without the need for a waiver from U.S. authorities if the goods involved are delivered, in part, over Canadian rail lines. A copy of the Jones Act with the "Third Proviso" underlined, is attached to these submissions. To our knowledge, Canadian operators now ship U.S. goods to Whittier, Alaska under this provision via Prince Rupert, British Columbia (Canadian National); and to Kaktovik and Prudoe Bay, on the north slope of Alaska via Hay River and the MacKenzie River in the Northwest Territories (Northern Transportation). The volumes involved in these movements are significantly greater than those contemplated by Alaska Marine Lines to be moved to the Yukon Territory under a Canadian waiver.

19. The movement proposed by Alaska Marine Lines parallels Canadian-Alaska operations such as those described above in that Canadian goods transported by Alaska Marine Lines are trucked, by Canadian truckers, to and from U.S. points serviced by the waterbridge portion of the movement. Similarly, other Canadian operators wishing to ship U.S. traffic to southeast Alaska via the Canadian west coast waterway could do so, for example, by transporting U.S. goods to Vancouver by rail. The "Third Proviso" in the Jones Act

. . ./6

was enacted, and has resulted, in increased competition among all operators in Alaska, to the benefit of Alaskan shippers. It is submitted that similar benefits will arise for Yukon shippers should Alaska Marine Lines be afforded a reciprocal opportunity to carry Canadian goods on its scheduled tug and barge service.

20. It is respectfully submitted that a decision to grant the application by A.M.L. for a renewal of its waiver would be consistent, from the standpoint of reciprocity, with the administration by the United States of its coasting trade legislation.

CONCLUSION

21. It is respectfully requested that, for all of the reasons submitted above, the application by Alaska Marine Lines for a waiver of Part XV of the Canada Shipping Act in respect of Canadian goods carried on its weekly scheduled tug and barge service be granted.

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

April 17, 1986

The Honorable Elmer MacKay
Minister, Revenue Canada
House of Commons
707 Confederation Building
Ottawa K1A 0A6
CANADA

Dear Mr. Minister:

I am writing in support of the recent application from Alaska Marine Lines, Inc., for a one-year continuance of their waiver of the Canadian Shipping Act. This will allow continued movement of Canadian products through Haines and Skagway, Alaska, at a cost savings for the citizens of Yukon.

Alaska Marine Lines' regular barge service for Yukon has been in operation for one year, with favorable results for Whitehorse merchants and Yukon citizens. A continuation of these arrangements will benefit Yukon and southeast Alaska, since the additional volume from Canadian products means lower overall unit costs.

As you may know, the State of Alaska and the Government of Yukon have recently agreed to provide year-round maintenance of the Klondike Highway between Skagway and Whitehorse, Yukon. This decision should enhance the transportation system serving both regions and improve the delivery of services by Alaska Marine Lines.

Additionally, an important component of the road agreement is our desire to foster a free trade environment, whereby U.S. and Canadian firms alike can compete side by side for transportation business. Favorable action on the waiver request would be viewed as an affirmation of your government's support for that aspect of the agreement.

Your support and approval of the waiver application by Alaska Marine Lines would be greatly appreciated.

Sincerely,

Bill Sheffield

Dear Sir:

With this letter we would like to inform you that the "Water Bridge" concept by Alaska Marine Lines has allowed us to obtain quantities of merchandise, also heavy equipment haulage rates far below those presently obtainable by the all road method.

Alaska Marine Lines, along with the road haulage companies involved, have been punctual and without damage to equipment or merchandise.

We feel in these hard economic times, that a water route from the south to the northern gateway to Yukon, ie Skagway or Haines, Alaska, should be maintained, especially if the rates are consistently below the road route.

We have no hesitation thanking Alaska Marine Lines for the "Water Bridge" concept - it certainly has helped us secure a reasonable commodity rate.

Yours truly

Dear Mr. Cote,

RE: Alaska Marine Lines Transportation
Yukon Freight Lines

This is a letter of information regarding the transportation system used by the Yukon Liquor Corporation to ship liquor from Vancouver, B.C. to Whitehorse, Yukon.

The Corporation has a contract with Yukon Freight Lines Ltd., a Canadian Motor Carrier to transport goods to Whitehorse via a truck/barge route. The contractor has subcontracted with Alaska Marine Lines to provide the water portion of this route being Seattle, Washington to Haines, Alaska.

The marine route for transportation that has been used for the last eight months is a weekly service.

The Yukon Liquor Corporation has found the road/marine route of transportation to be both reliable and cost effective.

Yours truly,

R. Thibault
General Manager

Attn: Mr. Antoine Cote
Director Merchants Board

Dear Mr. Cote:

This letter is in support of Alaska Marine Lines application to continue their scheduled service moving Canadian freight to the Port of Haines or Skagway, Alaska.

There are a number of reasons for our support.

The major one is Alaska Marine Lines is not in competition with Yukon Trucking Companies.

Alaska Marine Lines provides a service that all Trucking Companies can use and not be bothered with back soliciting.

Our Company has had great success with movement of heavy equipment for customers in the Yukon by reducing the cost by 20 to 30 percent.

Alaska Marine Lines is a very fine Company to do business with and their weekly service makes our Company look very good to our customers.

Yours truly,

Lloyd Bjork

1986 03 27

Mr. Antoine Cote
Director, Merchants Branch
Water Transport Committee
Terasses des Chaudieres
OTTAWA, ON K1A ON9

Dear Mr. Cote:

Last year about this time, the Whitehorse Chamber of Commerce supported Alaska Marine Lines in its bid to obtain a Waiver of the Canadian Coastal Trade Regulations in order to provide a "water bridge" for the movement of freight from the greater Vancouver area to Yukon.

The bid, of course, was successful, and this community has enjoyed and appreciated Alaska Marine Lines alternative freight service over the past twelve months.

The Whitehorse Chamber of Commerce is interested in seeing that an efficient barge service is maintained. We hope that in your deliberations on the licensing of barge services you will take into consideration these points:

First, that the availability of an alternate method of transporting general cargo (by water) has become, and will likely remain, a very attractive and cost effective means of moving freight to the Territory.

Second, that the offering of a regular year round schedule without any interruption of service is important.

Yours truly,

April Neave
Manager

35th ANNIVERSARY

March 25, 1986

Mr. Antoine Cote
Director Merchants Branch
Water Transport Committee
Terasses De Les Chaudieres
Ottawa, Ontario
K1A ON9

Dear Mr. Cote:

Please accept this as a letter of support for the continuation of Alaska Marine Lines which is presently bringing freight up the west coast to Haines, and possibly Skagway, for distribution in Whitehorse and the Yukon.

This carrier has provided a reliable service at a competitive price and provide a very viable option to bring freight into the Yukon. They are competitive both in delivery time and cost.

As you know, we are an isolated and distant centre from the rest of Canada and very vulnerable to freight costs. We believe healthy competition is the best way to keep a good service coming to our doors at a reasonable price. For these reasons, we would ask you to extend the present waiver to the Canadian Coastal Trade Regulations to accommodate Alaska Marine Lines.

Yours truly,

D. W. Branigan
Mayor

CITY OF SKAGWAY, ALASKA

RESOLUTION 86-6R

A RESOLUTION URGING THE CANADIAN GOVERNMENT TO ACT FAVORABLY ON THE WAIVER EXTENSION REQUEST OF ALASKA MARINE LINES FOR EXEMPTION TO THE CANADIAN SHIPPING ACT.

WHEREAS: The year round maintenance of the South Klondike Highway has been agreed upon by the Government of the State of Alaska and the Government of the Yukon Territory, and

WHEREAS: The citizens of Skagway strongly desire that the transportation of freight to and through Skagway to Northwestern Canada becomes more frequent, reliable, and economical, and

WHEREAS: A strong and competetive freight system is deemed to be in the best interest of, and of highest priority to, both the citizens of Skagway and Northwestern Canada, and

WHEREAS: Such a system encourages economic development and well being through more competetive freight rate and employment opportunities, and

WHEREAS: Alaska Marine Lines desires to continue to operate its presently established weekly freight service to Northwestern Canada utilizing its scheduled year round barge service.

NOW, THEREFORE, BE IT RESOLVED, that the Skagway City Council urges the Canadian Government to act favorably on Alaska Marine Line's request for an extension of waiver to the Canadian Shipping Act.

PASSED AND APPROVED THIS 19th DAY OF MARCH, 1986.

WILLIAM E. FEERO, MAYOR

ATTEST:

Lorene S. Gordon, City Clerk

Upon reapplication in 1986, the Canadian Whitepass and Yukon Corporation objected to Alaska Marine Lines' service, as it desired to offer its own service. Even though the proposed Whitepass service was less frequent and more expensive, Alaska Marine Lines was denied the right to continue its service from Vancouver to Skagway and Whitehorse. Enclosed for your information is a copy of our submission to the Canadian Minister of National Revenue and numerous letters of support from the Yukon, Skagway, and the Governor which accompanied it.

HCR 6 basically says that it is unfair for Canada to preclude such marine transportation service when Canadian service is noncompetitive. The resolution urges Congress to take what steps it deems necessary, including modification of the third proviso of the Jones Act, if Canada does not reciprocate in its treatment of U.S. marine transportation companies.

While Alaska Marine Lines is most impacted by this particular Canadian decision, it has ramifications for all U.S. and Alaskan marine transportation companies.

Thank you for the opportunity to testify, and I strongly encourage you to support this resolution.

TESTIMONY REGARDING HCR 6
PRESENTED BY JIM JANSEN, PRESIDENT
OF LYNDEN, INC. TO THE
HOUSE TRANSPORTATION COMMITTEE
FEBRUARY 4, 1987

Chairman Cato and members of the House Transportation Committee, my name is Jim Jansen and I am president of Lynden, Inc., which is an Alaskan transportation and construction company.

I would like to thank Madam Chairman for introducing this resolution, as we feel it involves a fundamental issue of fairness between the U.S. and Canada in trade relations.

As you are aware, the U.S. Jones Act generally precludes foreign vessels from transporting American goods between American ports. One exception to this requirement contained in the third proviso of the Jones Act allows Canadian vessels to haul American goods between the Continental U.S. and Alaska if the route includes a segment on Canadian rail lines.

The Canadian equivalent of the Jones Act is the Canada Shipping Act. As in the U.S. legislation, there are provisions for exemptions to the Act under limited circumstances. Through regulation, it is possible to obtain a "Coasting Trade Exemption Order", which for a period of one year, waives the Act where no suitable Canadian vessel is available to provide service at a reasonable rate.

Alaska Marine Lines, a subsidiary of Lynden, received such an exemption in 1985 to haul goods from Vancouver to Whitehorse, via Skagway on a weekly basis. This resulted in lower freight costs for both Skagway and the Yukon by virtue of the greater volume of goods transported on this Southeast Alaska route.

Upon reapplication in 1986, the Canadian Whitepass and Yukon Corporation objected to Alaska Marine Lines' service, as it desired to offer its own service. Even though the proposed Whitepass service was less frequent and more expensive, Alaska Marine Lines was denied the right to continue its service from Vancouver to Skagway and Whitehorse. Enclosed for your information is a copy of our submission to the Canadian Minister of National Revenue and numerous letters of support from the Yukon, Skagway, and the Governor which accompanied it.

HCR 6 basically says that it is unfair for Canada to preclude such marine transportation service when Canadian service is noncompetitive. The resolution urges Congress to take what steps it deems necessary, including modification of the third proviso of the Jones Act, if Canada does not reciprocate in its treatment of U.S. marine transportation companies.

While Alaska Marine Lines is most impacted by this particular Canadian decision, it has ramifications for all U.S. and Alaskan marine transportation companies.

Thank you for the opportunity to testify, and I strongly encourage you to support this resolution.

House Floor Speech on HJR 6

Mr. Speaker,

This resolution, directed to Congress and the Reagan Administration, urges appropriate action to insure that the Canadian Government allows United States maritime transportation companies equitable treatment in applications for waivers from the Canadian Shipping Act, just as the U. S. Government allows Canadian companies waivers from the Jones Act.

A recent specific case illustrates the problem. Alaska Marine Lines had a waiver from Canada to ship Canadian goods to Whitehorse and Faro, Yukon Territories, on its weekly barge run to Haines and Skagway. Its waiver was revoked due to political pressure from a Canadian firm that wanted to displace Alaska Marine Lines service with its own more expensive but less frequent service.

While American firms are prevented from competing with Canadian companies, the U.S. allows the Canadian National Railroad and Canadian vessels the right to ship American goods to American ports under the Third Proviso of the Jones Act.

This resolution will help our Congressional delegation to protest such trade inequities.

Thank you.

OFFICE OF THE COMMISSIONER

February 27, 1987

MAR 04 1987

The Honorable Bette Cato
Alaska State Representative
P.O. Box V
Juneau, AK 99811

Dear Representative Cato:

I am writing to express some concerns regarding HJR 6, which recommends certain actions by Congress regarding the third proviso of the Jones Act.

As you know, Initiative 83-02, approved by the voters in November 1984, expresses the will of the people of the State of Alaska that they wish Congress to repeal fully the Jones Act. While I realize the intent of HJR 6 is certainly consistent with that notion, and merely a response to Canadian Shipping Act restrictions that preclude Alaskan transportation firms from competing freely in this case in the Southeast market for movements of Canadian origin goods destined for the Yukon Territory, I feel obliged to point out that HJR 6 can also be interpreted as being inconsistent with Initiative 83-02.

The third proviso of the Jones Act is a provision which basically exempts certain types of movements (i.e., those goods originating in the U.S. that move through Canada by rail under a tariff regulated by the Interstate Commerce Commission) from the basic requirement to move to and from Alaska in a U.S. bottom vessel. As you probably know, Canadian National currently provides such a service with a rail-car barge that is Korean-built operating between Prince Rupert, British Columbia and Whittier, Alaska. I believe any effort to recommend repeal of this provision could easily be interpreted as an act contrary to the intent of the initiative, since this provision is the one section of the Jones Act which at least provides some relief from the onerous provisions of that law.

It is also worth noting that there may be other Alaskan interests greater than the one addressed in HJR 6 that would warrant support for repeal of a third proviso. A few years ago when this topic was discussed and draft legislation introduced in Congress, the state considered trading repeal of the third proviso for a blanket exemption for the Alaska Marine Highway System to use foreign bottoms that would otherwise be U.S.-owned and U.S.-crewed. My point in mentioning this is merely to stress there may be a more important "quid pro quo" to request if the third proviso is to be offered up in an overall strategy to lessen the anti-competitive effects of both the Jones Act and the Canadian Shipping Act.

I wanted to bring these issues to your attention as your proceed with your deliberations. Please realize that the mentioning of these concerns should not be construed as lack of support for the basic intent of your resolution, nor lack of support for Alaskan transportation firms having an equal opportunity to compete in the movement of goods to and from the Yukon Territory.

If you wish to discuss this further, please give me or Mark Hickey a call.

Sincerely,

Rocky Gutierrez

APR 20 1987

APR 27 1987

LIEUTENANT GOVERNOR

The Honorable Stephen McAlpine
Lieutenant Governor
State of Alaska
P.O. Box AA
Juneau, Alaska 99811

Dear Lt. Governor McAlpine:

Thank you for your letters to President Reagan and Secretary Dole on the subject of marine transportation services in the United States by Canadian companies.

I have asked my staff to look into the issue that prompted the resolution of the Alaska Legislature, which is the loss of a Canadian government waiver granted to an American company to carry cargo in the Canadian coastal trade. We have discussed the matter with a representative of the company, Alaska Marine Lines, and obtained up-to-date information on the status of the situation. The Department of State had made previous representations before the Canadian government on the refusal of this waiver petition, but was unsuccessful in reversing the decision.

On April 13 several DOT representatives met in Ottawa with Canadian officials from the Department of External Affairs to express our continued concern over the waiver refusal. We provided to the Canadians new information on the present carriage of the cargo, and we communicated the fact that the United States Congress had taken heed of your resolution and was considering the development of a legislative proposal mandating reciprocity.

The Canadian officials promised to look into the situation. We will keep you informed of any developments.

Sincerely,

Matthew V. Scocozza
Assistant Secretary for Policy
and International Affairs

Marine Trans. Services (reciprocal competition)

HOUSE JOINT RESOLUTION NO. 6, by Rep. Cato. Requests the President, Secretaries of State, Transportation, and Commerce to pursue equitable and reciprocal treatment from the Canadian government for U.S. marine transportation companies seeking to provide services to the Yukon Territory and to take action limiting the authority of Canadian marine transportation companies to operate in Alaska until the Canadian government grants rights to U.S. companies to operate in the Yukon Territory.

Requests Congress to amend the Jones Act to require that the authority for Canadian marine transportation companies to operate between ports in Alaska is contingent upon a reciprocal grant of authority for U.S. marine transportation companies to provide service to communities of the Yukon Territory.

Requests the Alaska delegation in Congress to initiate legislation and to seek administrative action to ensure that U.S. marine transportation companies are accorded the same treatment in Alaska and Yukon Territory markets as are Canadian marine transportation companies.

Introduced January 22 and referred to Transportation.

RELATIONSHIP BETWEEN SJR 11 AND HJR 6 AM

SJR 11 urges Congress to repeal those portions of the Jones Act which prohibit the use of foreign built vessels in the American coast wise trade, so long as they are owned by Americans, meet American safety standards, and are crewed by Americans.

HJR 6 AM urges Congress to expand the benefits to Alaska of the Third Proviso of the Jones Act, which is an exception to the Jones Act which does currently allow the use of foreign vessels to transport American goods within the U.S. if a portion of the route includes Canadian rail service. Specifically, the resolution urges Congress to take action to ensure that Canada allows U.S. companies the same treatment under its Shipping Act as the U.S. permits Canadian Companies (i.e., the Canadian Pacific Railroad) under an exception to the Jones Act.

There is nothing inconsistent with the resolutions, although they do deal with separate issues: SJR 11 seeks to change one adverse provision of the Jones Act and HJR 6 seeks pressure on Canada to broaden the opportunity for U.S. companies to engage in coastal commerce.

STEVE COWPER
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

JAN 27 1987

January 23, 1987

Dear Reviewer:

A copy of the Jones Act Report is attached for your information and consideration. The report satisfies the requirements of Initiative 83-02, which mandates the Governor to report annually to the Legislature any actions taken during the preceeding year toward repeal of the Jones Act or mitigation of its effects.

This report to the 1987 Legislature covers the calendar year of 1986. It is the product of a team effort by the Governor's Office in Washington, D.C., the Office of Management and Budget, the Department of Revenue, the Department of Commerce and Economic Development, and the Department of Transportation and Public Facilities. If you have any questions about the report, please call Elliot Lipson at 465-2171.

Sincerely,

Steve Cowper
Governor

A REPORT TO THE ALASKA LEGISLATURE

JONES ACT RELATED ACTIVITIES
AND EFFORTS DURING 1986

JANUARY 1987

The purpose of this report is to satisfy the requirements of Initiative 83-02, adopted by Alaskan voters on November 6, 1984. The initiative requires the Governor to lobby Congress for the repeal of the Jones Act and to report annually to the legislature any actions taken in this regard and their effects. This report is an update and expansion of the initial report submitted to the Legislature on January 13, 1986.

In developing the legislative issues list for the second session of the 99th Congress, the Washington, D.C. Office staff identified Jones Act modification as a state priority. In a February 21, 1986, report, it also identified Cook Inlet and North Slope Oil Exports as priorities for the second session. These items are related to the Jones Act initiative because their purposes are to stimulate the international trade activity of Alaskan industries, and to remove the barriers that exist to achieving that goal.

In a series of meetings with key staff from each of the Congressional delegation offices, and in subsequent meetings with delegation principals, the Washington Office discussed the requirement of the initiative to work for the repeal of the Jones Act. In each instance, reference was made to the repeal of the Jones Act as a priority of the state. Discussion of this item with the respective staffs produced a consensus that the climate in Congress was not favorable for major modification or repeal of the Jones Act, but that we would be alert to any possibilities for making minor amendments to, or any waivers of, the Act that might benefit Alaskan commerce. Consensus was also evident in meetings with delegation members that the mood of the Congress had not changed and that any meaningful modification to the Jones Act was very unlikely. These conclusions were corroborated in discussions and meetings with other Congressional staff and with knowledgeable outside observers.

In other actions involving the Jones Act, Senator Stevens introduced S.1935 in December, 1985, to direct the Secretary of Transportation to document certain foreign built vessels as vessels of the United States so as to be entitled to engage in domestic coastwise trade. This bill, as amended by the House, would have authorized an unlimited number of vessels to operate in the coastwise trade. The intention was to allow these vessels to function as cruise ships in the tourist industry. The bill would have constituted a waiver of the Jones Act. Governor Sheffield submitted testimony in support of this measure. However, differences in the Senate and House versions were never resolved, so this legislation was not enacted. A commentary on S. 1935 which discusses Alaska's interests is attached as Appendix A.

Another bill, S.2662, was introduced by Senators Stevens and Inouye to develop and deregulate the United States flag liner fleet. This bill would have provided operating differential subsidy contracts to qualified vessels (using U.S. crewmen) entering into international trade. The Washington Office monitored the bill's Congressional hearing, discussed its possible Alaska implications with Commerce Committee staff, and discussed the legislation with private counsel representing the Alaska Railroad. The opinion of all parties was that the bill would have little or no impact on Alaska. Primarily because of the Administration's objection to the cost of implementing the bill, it was never brought before the full Senate for a vote.

Finally, it should be noted that ADOT&PF has notified the Washington Office that at least one private carrier has contacted Senator Stevens about using the threat of eliminating the third proviso of the Jones Act as leverage in trade discussions with Canada. The third proviso allows American goods shipped between two U.S. ports to travel by Canadian rail as part of their routing. The carrier wants the government to use the threat of ending the third proviso in order to receive similar, but not identical concessions from Canada.

ADOT&PF staff has indicated its concern that this proposal would have a negative impact on the Alaska Railroad's current barge service. Also, the elimination of the third proviso runs against the purpose of the initiative which is to eliminate the Jones Act. The Washington Office contacted Senator Stevens' staff about those concerns and was told that no effort would be made by the Senator in this area without state participation. Furthermore, any strategy involving the third proviso does not seem very promising in view of the prior history of Congressional consideration of this subsection -- a matter dealt with in past communications from the Washington Office.

Even though Congress is presently reluctant to consider changes to the Jones Act, significant elements of national transportation, national defense and national economy interests recognize the need for changes from the status quo. In recent years and months there have been numerous articles by qualified experts and statements by affected organizations which recognize that:

(1) The Jones Act and related statutes have been unsuccessful in preserving, maintaining and protecting U.S. Merchant Marine and shipbuilding capabilities;

(2) The present and projected situation is technologically, economically, politically and socially different from that which existed when the present maritime statutes were enacted; and,

(3) The present deficiencies in merchant marine and shipbuilding capacities have reached critical levels in regard to the several legitimate interests of the United States and the various states.

A July 1985 Special Report to the President and the Congress by the National Advisory Committee on Oceans and Atmosphere concludes that:

(1) National efforts should emphasize development of a viable commercial fleet during peacetime in order to satisfy potential defense needs;

(2) Requirements for U.S. build have contributed to the decline of the U.S. merchant fleet and have not created substantial work for U.S. shipyards.

The report recommends:

(1) Eliminate all requirements for U.S. operators who receive government subsidies to build vessels in U.S. shipyards;

(2) Amendment of current maritime statutes that impair the competitiveness of U.S. vessels in foreign trade;

(3) Amendment of the Jones Act to allow foreign building of new vessels for the Jones Act domestic trade.

A copy of the executive summary of this report is attached as Appendix B.

A recent article by L. Edgar Prina made the following significant points:

(1) In 1950, the U.S. ranked first in the world in numbers of merchant ships and carrying capacity (dwt). Today it is 10th in ships and 8th in dwt.

(2) In 1950, U.S. flag vessels carried 21 percent of U.S. foreign trade tonnage. In 1983 they carried only 5.8 percent.

(3) As of August 1985, only 8 U.S. flag merchant vessels were under construction or on order in U.S. shipyards.

The article goes on to identify the national defense implications of these facts and to indicate that the present maritime statutes are clearly not accomplishing their intended purposes. A copy of this article is attached as Appendix C.

The Standing Committee on Water Transportation (SCOWT) of the American Association of State Highway and Transportation Officials (AASHTO), chaired by Richard J. Knapp, then Alaska's Commissioner of Transportation and Public Facilities, developed a policy position statement on National Maritime Policy. The statement recognizes the same kinds of deficiencies in the present situation and calls for the creation of a presidential task force to review present national maritime policy and to recommend changes. A copy of the AASHTO policy position statement and its transmittal to President Reagan are attached as Appendix D.

The heart of Alaska's concerns over Jones Act restrictions, oil export limitations and related federal laws is clearly identified in a September 10, 1986 memorandum from Gregg Erickson, Division of Strategic Planning, to State Senator Frank Ferguson. The memo indicates that the state treasury suffers approximately $433 million per year in reduced oil revenues alone because of the effects of these laws. A copy of this memo is attached as Appendix E.

To date, we have essentially "tinkered" with the Jones Act and related laws to eliminate or mitigate those restrictions most onerous to Alaskans. Clearly, these laws are not achieving their originally intended purposes and are no longer relevant to the present situation. We feel it will be more effective and will more effectively serve Alaska's interests if a broader perspective is adopted. National interests which coincide with or complement Alaskan interests should be identified and pursued. This approach would offer an alternative program which would better serve the U.S. and Alaskan interests.

Such an alternative program might contain the following kinds of provisions:

(1) Construction of vessels anywhere in the world, but to U.S. standards, would be allowed for U.S. registered vessels, provided other requirements are met.

(2) To be U.S. registered, a vessel would have to be:

(a) Built to U.S. standards;

(b) At least 51 percent U.S. owned;

(c) Manned by U.S. crews;

(d) Have all major repairs performed in U.S. shipyards.

The beneficial effects of such a program would:

(1) Eliminate the need for vessel construction subsidies;

(2) Offset higher operating costs due to U.S. crews and standards with lower amortization costs;

(3) Create a basis to reestablish and maintain U.S. shipyard capabilities with vessel repairs;

(4) Provide and maintain the sealift capabilities necessary for national defense purposes and favorable balance of trade.

As indicated, recognition of the need for and value of such a program is growing nationally. The state of Alaska should take advantage of this situation to spearhead an effort to consolidate the interests of other states. All sympathetic states should coordinate their actions to concentrate attention at the national level on reviewing and changing national maritime policy to reflect today's needs rather than outmoded and obsolete impressions of such needs.

In conclusion, various political constraints, particularly the opposition of the maritime industry, blunted the effort to obtain repeal or significant modification of the Jones Act during the 99th Congress. In the absence of major allocations of state resources -- allocations which are far beyond the capacity of existing state agencies -- there is little likelihood that the Jones Act can be significantly modified in the 100th Congress. Even a major dedication of resources does not assure Jones Act repeal given the strength of the forces arrayed against the state on this issue. In these circumstances, the result which is most likely of achievement is the piecemeal modification or waiver of the Jones Act in well-defined factual contexts, such as the cruise ship example described above, according to the Washington Office.

APPENDICES

APPENDIX A

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: John Katz
Special Counsel
State/Federal Relations
Office of the Governor

DATE: June 23, 1986

FILE NO:

TELEPHONE NO: 465-3900

FROM: R. J. Knapp
Commissioner

SUBJECT: S. 1935

The Alaska Department of Transportation and Public Facilities has the following comments on S. 1935, a bill directing the Secretary of Transportation to document up to five foreign-built passenger vessels. The effect of documentation would be to allow these five vessels to carry passengers between U. S. ports, in spite of the restrictions of the Jones Act and similar type legislation. S. 1935 is sponsored by Senator Stevens; Senator Murkowski is a co-sponsor.

The provisions of S. 1935 would apply only if -

(1) Transportation is limited solely to passengers and their personal luggage.

(2) The vessel was originally delivered for passenger cruise service.

(3) The vessel is <u>less than</u> twelve years old <u>but at least</u> two years old.

(4) The vessel has a minimum of 400 passenger cabins with modern facilities and can be converted to a troop ship.

(5) Current and future improvements to each vessel will be done in U. S. shipyards.

S. 1935 proposes an exception to the prohibitions of Jones Act type legislation for the purposes of developing a domestic cruise ship industry, according to a recent article in the Alaska Journal of Commerce. The Governor's approach to the prohibitions of the Jones Act is similar in approach, although much broader in application. Under the Governor's approach foreign-built ships could enter all segments of the coastwise trade, as long as are were staffed by U. S. crews and meet U. S. safety and environmental requirements. Both the Governor's position and S. 1935 are in response to a domestic shipbuilding industry that is seen as a high-cost producer. Increasingly, domestic shipyards are losing the ability to produce certain types of vessels at any cost.

The provisions of S. 1935 could be broadened to provide more benefits to the State of Alaska, although most such changes would eliminate any chances of passage that the current proposal may have. For example, the exceptions proposed in S. 1935 do not apply to the Alaska Marine Highway System (AMHS). Among the differences between large cruise ships and AMHS vessels are the smaller number of cabins and the dedication of a full deck to the transportation of private vehicles and some cargo-carrying vans. The State of Alaska should consider some way to broaden the provisions of S. 1935 so it applies to more types and sizes of vessels.

99TH CONGRESS
1ST SESSION

S. 1935

To direct the secretary of the department in which the Coast Guard is operating to cause certain vessels to be documented as vessels of the United States so as to be entitled to engage in the domestic coastwise trade, and for other purposes.

IN THE SENATE OF THE UNITED STATES

DECEMBER 12 (legislative day, DECEMBER 9), 1985

Mr. STEVENS (for himself, Mr. GOLDWATER, Mr. PRESSLER, and Mr. MURKOWSKI) introduced the following bill; which was read twice and referred to the Committee on Commerce, Science, and Transportation

---

A BILL

To direct the secretary of the department in which the Coast Guard is operating to cause certain vessels to be documented as vessels of the United States so as to be entitled to engage in the domestic coastwise trade, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) notwithstanding section 12106 or 12107 of title 46, United States Code, section 27 of the Merchant Marine Act, 1920 (46 App. U.S.C. 883), or any other provision of law, the Secretary of the department in which the Coast Guard is operating shall cause, upon application made in accordance

with this Act, not more than five vessels under foreign ownership, registry and flag on the date of enactment of this Act to be documented permanently as vessels of the United States with the privilege of engaging in the coastwise trade, if—

(1) each such vessel is in compliance with all other requirements of law applicable to vessels engaging in the coastwise trade;

(2) any alterations, repairs, or rebuilding of each such vessel that is necessary to bring the vessel into compliance with the requirements of part B of subtitle II of title 46, United States Code (relating to inspection and regulation of vessels) and regulations issued under that part, or any conversion to eliminate cargo space necessary to bring the vessel into compliance with paragraph (5) of this subsection, are done in the United States.

(3) all future nonemergency alterations, repairs, or rebuilding of each such vessel after it is documented under this subsection are effected in the United States pursuant to the then applicable laws, so long as the vessel remains documented as a United States vessel;

(4) on the date of such documentation, each such vessel is owned by a citizen or citizens of the United States, as defined in the applicable laws prescribing the

qualifications for vessels to engage in the coastwise trade;

(5) transportation in each such vessel is limited solely to passengers and their personal luggage; and

(6) each such vessel also—

(A) has a minimum of four hundred passenger cabins with modern facilities;

(B) is capable of being converted to a troopship; and

(C) has been originally delivered solely for passenger cruise service within twelve years before the date of enactment of this Act, except that any vessel constructed in a foreign shipyard and delivered solely for passenger cruise service within two years before the date of enactment of this Act shall be deemed constructed solely for the purpose of entering the coastwise trade pursuant to this Act, and such vessel shall not be eligible for documentation pursuant to this Act.

(b) For purposes of this Act, the Secretary of the department in which the Coast Guard is operating shall, with respect to vessels subject to this Act, determine the eligibility of each vessel to engage in the coastwise trade in chronological order of application, made after the date of enactment of this Act, to the Secretary for documentation as a United

States vessel under this Act. Any such application shall be filed not later than twelve months after the date of enactment of this Act. Any rebuilding of a vessel or repair work necessary to bring each such vessel into compliance with the requirements of part B of subtitle II of title 46, United States Code (relating to inspection and regulation of vessels) and the regulations issued under that part shall be completed within twenty-four months after the date of enactment of this Act.

O

State News

Cruise ship promotion bill is introduced

A bill which would promote the development of a domestic cruise ship industry has been introduced in the Senate by Sen. Ted Stevens.

The measure, which would permit five foreign-built passenger ships to be documented under U.S. law, would require American crews, and would also require that all repairs and modifications to meet Coast Guard inspection standards would be done in U.S. shipyards.

"Our domestic cruise ship industry is non-existent," Stevens said in a statement on the Senate floor, "and it will remain so without the utilization of foreign-built vessels."

Noting the development of a domestic cruise ship industry could benefit many U.S. ports which might not be included in the routes traveled by foreign cruise ships, Stevens said, "My state is a prime example of the impact a cruise industry can have on ports. Foreign cruises make periodic stops in towns in Southeast Alaska, and the tourism generated through these cruises is rapidly becoming a mainstay of Southeast Alaska's economy."

Any U.S. citizen would be allowed to file an application for documentation under the measure, Stevens said. The bill contains three criteria designed to bring modern and militarily useful vessels into the cruise ship trade.

The first criterion would require that each vessel have a minimum of 400 passenger cabins with modern facilities. This would ensure that in times of emergency the vessel would be large enough to make a significant contribution to the Navy's ability to move people, or could be used as a hospital ship.

The second criterion would require that each vessel would be capable of being converted into a troop ship.

The third requirement would be an age limitation on each vessel to ensure modernity. It would also prohibit potential applicants from contracting for the construction of new passenger vessels in foreign shipyards.

"The purpose behind the bill is to revitalize a U.S. industry," Stevens said, "not to encourage the growth of foreign industries."

Kodiak Fish Tech Center wins Board of Regents OK

The University of Alaska Board of Regents has given the go-ahead on planning a facility for the Kodiak-based Fishery Industrial Technology Center (FITC).

"Forty-four of the 50 states," President Donald O'Dowd said, "and Alaska is not one of those 44, have universities with technology development centers. Since fishing is Alaska's num-

processing and new products development.

The staff of the center has been sharing research facilities with other Kodiak fisheries related agencies and providing about 40 workshops each year in fishing communities throughout the state.

The new facility will provide about 18,000 square feet of cryogenic laboratories, con-

July 1985

NATIONAL ADVISORY COMMITTEE
ON
OCEANS AND ATMOSPHERE
3300 Whitehaven Street, N.W.
Washington, D.C. 20235

SEP 08 1986

To the President and the Members of the Congress:

As Chairman of the National Advisory Committee on Oceans and Atmosphere (NACOA), I am pleased to forward to you a copy of our report, "Shipping, Shipyards and Sealift: Issues of National Security and Federal Support." The conclusions reached and the recommendations made support current trends unlinking shipping from shipbuilding and advance several approaches for strengthening our Nation's sealift capability in the interests of national security.

Respectfully,

John E. Flipse

John E. Flipse
Chairman

EXECUTIVE SUMMARY

Defining the Problem

The Nation's maritime policy, embodied in the Merchant Marine Acts of 1920 and 1936, as amended, has for over half a century provided Federal supports to the maritime industries to preserve in peacetime sufficient capacity to respond to a national defense emergency. It is increasingly clear that our maritime policy, and the package of protections derived from it—tax credits, loan guarantees, ship construction and operating subsidies, limited cargo preference, protected domestic trade (cabotage) and build-U.S. requirements—have had limited success in preserving a viable U.S.-flag fleet and merchant marine. The decline in the shipping and shipbuilding industries despite substantial government supports suggests the need to examine and define the national security requirements for each.

The United States has for some time been the world's largest trading nation with a dramatic increase from 130 million long tons of foreign trade in 1950 to 630 million in 1983. Carriage of foreign trade in U.S.-flag vessels has fallen from over half (by weight) at the end of World War II to less than 6 percent in 1983, but the declining role of U.S. shipping has not impeded the overall growth of the U.S. economy or our foreign trade. Indeed it can be argued that the decline of the high-cost, U.S.-flag fleet, and its supporting shipbuilding base, has had a net beneficial effect on the overall national economy. The economic arguments for Federal support of the maritime industries are thus less than conclusive, and the arguments have focussed increasingly on the national defense needs for U.S. shipping and shipyards.

The primary national requirements for the U.S. maritime industries are the national defense needs, during a conflict, for naval combatant ships to wage war at sea; adequate merchant sealift capacity to project military equipment and supplies overseas and concurrently provide critical shipping to support our economy; and sufficient shipyard capacity to support both. Sealift needs fall into three categories: floating prepositioned storage of supplies; rapid initial overseas deployment of forces, their equipment and supplies (surge sealift); and long-term resupply of overseas forces (sustaining sealift). In addition, shipping assets would be needed for import of critical materials and some ordinary trade and for domestic waterborne transport of critical materials, such as transport of strategic petroleum reserve oil to refineries.

Many experts are concerned that, in time of conflict, the Nation will need many more ships for combat and sealift—and more shipyards to activate, repair and replace them—than present natural economic forces will maintain in peacetime. NACOA has therefore defined the issues, for the purposes of this study on shipbuilding and sealift in the national defense context, as follows:

- What is the most effective and least costly way to ensure that adequate sealift capacity will be available in the timeframe required for a major modern conflict?
- What level of shipbuilding capacity would ensure an adequate base for mobilization and new ship construction and repair in a major conflict?
- To the extent that shipping and shipbuilding capacity is required, what level and type of Federal support are needed or appropriate?

The Scenario

Until recently, national sealift requirements were based on the scenario of a NATO/Warsaw Pact conflict requiring movement of U.S. troops and supplies across the North Atlantic to Europe. The changing balance of world economic and political forces resulting from the late 1960s discovery of massive oil reserves in the Middle East prompted U.S. military planners to begin focusing more attention on the Indian Ocean and the Southwest Asia region (the Middle East and Persian Gulf area). The current defense planning scenario, established by the Joint Chiefs of Staff, assumes that a major global conflict could begin in Southwest Asia, and spread to Europe, Northeast Asia (especially Korea) and three oceans. It is a worst-case scenario in terms of the requirements it generates—a prolonged (3-year), non-nuclear, global conflict, waged in three theatres, with two major periods of sea battle.

Military strategists conclude that a modern global conflict would have to be fought with Naval and sealift vessels already built during peacetime; NACOA concurs with this conclusion. Unlike the beginnings of World War II, where the United Kingdom held off the aggressor for several years while the United States prepared for war, a modern global conflict would almost

certainly mean immediate U.S. involvement, and the increased distance required for sealift of supplies adds severe time constraints. These considerations have prompted serious reappraisal of the status of, and requirements for, the Nation's sealift assets.

Maritime Industry Status

The continued decline in both the shipping and shipbuilding industries in this country has raised increasing national defense concerns.

Although the United States has one of the largest shipbuilding industries in the world, devoted almost solely to naval programs at this time, it ranks only 10th among commercial shipbuilding nations worldwide with less than two percent of the world's commercial ship orderbook. Largely because of differences in national standards of living, the world shipbuilding market, as with other heavy industry, is moving generally from the United States and Europe to the Orient, and from developed to developing nations. The U.S. shipbuilding industry has long been unable to compete with foreign yards. Virtually all of the merchant vessels built in U.S. yards in the past decade have been built either with Federal subsidy or for protected domestic trades, but recent changes in Federal maritime support programs and depressed economic conditions have all but halted this commercial ship construction. Three major shipyards have closed since 1982, and General Dynamics Corporation recently announced that its Quincy Shipbuilding Division, a major shipyard that has been in business for 101 years, will close in the spring or summer of 1986.

There are currently only 6 major U.S. shipping lines, carrying container cargo, down from 19 in 1970, and they are heavily dependent on government cargo reserved for U.S. ships. Almost all U.S.-flag bulk vessels operate in the domestic trades that are reserved for U.S. ships. In the domestic trades, however, trucks, railroads, pipelines, and tug/barges are replacing oceangoing, self-propelled cargo vessels. These developments threaten the viability of the domestic fleet, an important source of militarily useful tonnage and trained U.S. crews for meeting sealift demands in a national emergency.

There are currently less than 500 oceangoing vessels greater than 1,000 gross tons in the U.S.-flag fleet, and 105 U.S. shipyards capable of building or repairing vessels of this size. Except for the tremendous World War II peak, the U.S. shipyard employment base has risen fairly steadily over six decades despite the continued decline in the U.S.-flag fleet. Our longstanding national maritime policy appears to have done a better job of preserving our shipyard base than our U.S.-flag fleet.

Defense Requirements for Ships

The primary national defense requirement for the U.S. shipping and shipbuilding industries, beyond the peacetime carriage of government cargos and peacetime building and repair of military vessels, is to provide increased sealift and Naval combatant capacity in case of national emergency. Sealift requirements would be similar for a global conflict and for a major U.S. action in Southwest Asia, because lift requirements for other areas would be provided by our allies. Sealift and shipyard requirements to support a major deployment to Southwest Asia have thus received great attention in recent years.

Since 1981, the Department of Defense has completed a comprehensive series of studies quantifying requirements for: prepositioning of supplies, airlift and sealift, delivery of liquid products, shipping needs at home during a global conflict, shipyard capacity for early mobilization (e.g., activating reserve ships) and shipyard capacity for wartime shipbuilding. These studies are all classified either "Secret" or "For Official Use Only;" NACOA has reviewed the entire series.

The 1981 "Congressionally Mandated Mobility Study" (CMMS) concludes that the United States requires an additional airlift capacity of about 20 million ton-miles per day, and recommends that this be supplemented by additional prepositioned supplies and more and faster sealift. The "DOD Sealift Study," completed in March 1984, concludes that the sealift capacity necessary to meet dry-bulk lift requirements for Southwest Asia is about 4.6 million deadweight tons of shipping capacity during the initial surge and about 3.3 million deadwight tons for sustaining resupply. Every militarily useful U.S.-flag private cargo vessel would be needed for sealift in a major overseas deployment, and projections of the future size of the fleet indicate a growing shortfall in U.S.-flag, dry-bulk sealift tonnage. Most of the U.S.-owned vessels under foreign flag are not now considered militarily useful. A companion study, called the "DOD Sealift Tanker Study," now nearing completion, will document a shortfall in militarily useful wet-bulk tonnage for sealift under U.S. ownership (U.S. and foreign flag).

The "Economic Security Shipping Study," recently completed by the Maritime Administration, addresses the shipping requirements for import and domestic transport of critical materials during wartime. The study concludes that there is no shortfall in container or breakbulk ship capacity, because most scheduled general cargo is nonessential in wartime. No shortfall in dry-bulk capacity is expected, since most critical bulk materials are required in small enough quantities to be taken from strategic stockpiles or imported by air. A shortfall is projected, however, in tanker capacity for domestic carriage of refined petroleum prod-

ucts, because the U.S.-flag tanker fleet would be required to support U.S. forces overseas.

Responding to the rapid decline of the U.S.-flag fleet, and increased readiness requirements imposed by the long-distance sealift routes in the new scenario, the Navy is rapidly improving the Nation's sealift capacity. More than $1 billion a year for 5 years is planned for strategic sealift expenditures, more each year than was spent during all the years since World War II combined. The shortfall in dry cargo sealift is being addressed by increases in government-owned sealift vessels and increased funding for modifying commercial cargo vessels. The shortfall in wet-bulk sealift will probably be addressed by purchase of tankers for the Ready Reserve Force and further examination of alternatives such as foreign petroleum supply. The only projected shortfall in domestic shipping needs during a conflict is in tanker capacity for domestic petroleum carriage, but this could be alleviated by allowing foreign tank vessels (owned by U.S. citizens) to enter the protected Jones Act trade during a conflict. The cumulative effect of these approaches is greatly enhanced sealift capacity that is substantially more "ready."

Defense Requirements for Shipyards

The U.S. shipbuilding base must have sufficient "surge capacity" during early mobilization to activate the reserve combatant and sealift vessels and to convert active merchant vessels for sealift, and must expand quickly for battle damage repair of merchant and combatant ships and for new construction to replace vessels lost during a prolonged conflict.

Two joint studies by the Department of Defense and the Maritime Administration examine the shipyard capacity requirements. The "Shipyard Mobilization Base Study" (SYMBA) reviews the adequacy of the October 1982 shipbuilding base for a 3-year global conflict. The "National Defense Shipyard Study" (NADES) examines the adequacy, for the early mobilization stage of a conflict, of a much smaller shipyard base that is expected to survive the current decline and remain available in 1988-1990. The SYMBA Study concludes that an absolute minimum of facilities needed for the first year of conflict is 51 building positions, 41 graving docks and 56 floating drydocks; that shipyard facilities existing in October 1982 were more than adequate for a major mobilization; and that there might be temporary shortfalls in the number of skilled shipyard workers during early mobilization and later during wartime ship construction. The NADES Study uses different, and NACOA believes more realistic, assumptions about early mobilization and reflects the increased sealift readiness now planned by the Department of Defense. The NADES Study found that early mobilization would require initial availibility of 142,000 skilled shipyard workers, peaking to 157,000 in the eighth month. The Department of the Navy concludes that peacetime employment, even in the smaller shipyard base projected for 1990, would be roughly adequate for early mobilization and facilities would be more than adequate for mobilization tasks.

An independent NACOA survey of shipyard surge capacity in the major defense contract yards suggests they are currently operating at only about half their full peacetime capacity in workers and steel fabrication, and only about a third of their capacity to finish new vessels. Our estimate of their wartime maximum capacity suggests a possible increase in ship production of 4 to 6 times greater than in today's underutilized shipbuilding base, without expansion of facilities.

Surge requirements for U.S. shipyards for a major mobilization have been lowered through several government initiatives: by increasing the amount of prepositioned military supplies, thus reducing the number of sealift ships needed; by building and converting a number of vessels under government control for sealift; by increasing the readiness of our reserve fleets, and thus reducing the shipyard work needed for activation; by relying more on conversion of existing commercial vessels than on wartime newbuilding of sealift vessels; and by planning more pre-mobilization work on commercial vessels in the active U.S.-flag fleet. NACOA concurs with the Department of Defense that a substantially reduced private U.S. shipbuilding base would be adequate to meet early mobilization needs required by the present scenario.

Alternatives

The range of solutions offered by public and private interests for solving the Nation's sealift problems fall into three broad categories:

- Preserving excess shipbuilding capacity through increased support for U.S. shipyards in peacetime, so that warships and sealift vessels can be activated, repaired and built during a major conflict.
- Increasing the government-controlled merchant fleet to have immediate and direct control of needed sealift assets during a major mobilization.
- Increasing the number and military readiness of privately owned sealift assets through measures to aid U.S. ship operators.

Our positions on several major proposals are as follows. We oppose a Federal shipbuilding program for new merchant vessels to be chartered or laid up in reserve fleets. We oppose a cargo preference scheme that would reserve a percentage of commercial cargos in U.S. foreign trade to U.S.-flag, U.S.-built vessels. We oppose a federally supported "Maritime Redevelopment Bank," that would use Federal funds to encourage financing for ship construction. We oppose any increased Federal supports to the U.S. shipbuilding industry, because the industry has overcapacity for the commercial market it serves, and the present

shipyard base is substantially in excess of the capacity needed for defense mobilization. We support more concerted efforts to increase the military usefulness of private merchant vessels and to increase the shipping tonnage in the active commercial U.S.-flag fleet. We favor increased use of private vessels as sealift assets rather than preserving excess shipbuilding capacity or increasing government control of sealift assets.

For the most part, NACOA opposes the range of proposals initiated largely in the Congress to preserve excess shipbuilding capacity; opposes further growth in the government-controlled active and reserve sealift fleets without fully exploring other alternatives; and supports a range of proposals from various sources, including our own deliberations, to increase the number and military usefulness of private vessels under U.S. control.

Conclusions and Recommendations

NACOA concludes the following:

- Sealift requirements for the initial stages of a modern major conflict depend more on the sufficiency of existing U.S.-controlled shipping and trained U.S. crews than on shipbuilding capacity. National efforts should therefore emphasize developing a viable Federal and commercial sealift fleet in peacetime.
- The United States now has a very large shipbuilding capacity, and the yards expected to survive the current decline will still have sufficient surge capacity to satisfy wartime needs as defined by current defense scenarios.
- Requirements to build in U.S. shipyards have impaired the competitiveness of U.S. operators of oceangoing, self-propelled cargo vessels, have contributed to the decline in the U.S.-flag fleet, and have failed in recent years to create substantial commercial work in U.S. shipyards.
- Most recent proposals to aid the U.S. shipbuilding industry—such as a federally funded merchant shipbuilding program, renewed construction subsidies, a federally backed maritime bank, and expanded cargo preference—are too small in scope to be of significant impact or would create larger problems.

NACOA recommends the following:

1. OPPOSITION TO PROPOSALS FOR A FEDERAL SHIPBUILDING PROGRAM FOR COMMERCIAL SEALIFT VESSELS—OR ANY OTHER PROGRAM REQUIRING MAJOR FEDERAL FUNDING—DESIGNED TO PRESERVE THE PRESENT EXCESS CAPACITY IN THE SHIPBUILDING BASE.

NACOA believes that all additional surge capacity required for mobilization currently exists within the yards doing Navy peacetime construction, and Navy and commercial repair work, and that this work will preserve an "irreducible minimum" shipbuilding base that will be adequate in future mobilization. This smaller shipbuilding base might initially be inadequate for wartime construction, but shipyard expansion would begin immediately and would continue as needed throughout the conflict. The Department of Defense studies allow virtually no geographic movement of skilled shipyard workers during mobilization, and we believe this is an unrealistic constraint. The major constraint on expansion of wartime shipbuilding would not be shipyard capacity, but delayed availability of major components, e.g., propulsion plants for Navy and merchant vessels, and complex weapons systems for combatant vessels; increases or decreases in the shipbuilding base would not affect this problem.

2. DECREASED DEPENDENCE ON A GOVERNMENT-OWNED AND MAINTAINED READY RESERVE FORCE, AND REDUCED SIZE AND INCREASED READINESS OF THE RESERVE SEALIFT FLEETS.

NACOA supports the approach of adapting modern, active commercial vessels to military purposes, because maintenance costs are borne by the operator in trade, the vessel provides training for U.S. crew, and the ship would have a ready crew if it were called up for service. In the long run, we believe this is a more efficient and less costly alternative than Federal building, acquiring or serving of an outmoded reserve fleet.

3. CONTINUED EMPHASIS ON METHODS OF ADAPTING COMMERCIALLY EFFICIENT VESSELS FOR MILITARY PURPOSES.

Continued research is needed to develop cost-effective ways of adapting modern commercial vessels to military sealift needs. In addition, funding should be provided to do such conversion and activation work on U.S.-flag commercial ships during peacetime to enhance their readiness, reduce the shipyard conversion time required at mobilization, decrease the shipyard base required and decrease the need for expanded government-controlled sealift fleets.

4. INCREASED EMPHASIS ON ENSURING THE AVAILABILITY, TRAINING AND READINESS OF U.S. CREWS NEEDED FOR MOBILIZATION OF RESERVE AND FOREIGN-FLAG SEALIFT VESSELS.

Requirements for increased numbers of ready crews are being generated by the expanding size of the Ready Reserve Force, and increased reliance on U.S.-owned, foreign-flagged vessels. In addition, the greater readiness requirements for sealift vessels require better training and more rapid availability of crews to staff them.

5. CONTINUED UNLINKING OF NATIONAL SHIPPING AND SHIPBUILDING POLICIES BY ELIMINATING ALL REQUIREMENTS FOR U.S.-FLAG OPERATORS RECEIVING GOVERNMENT SUPPORTS TO BUILD VESSELS IN U.S. SHIPYARDS.

Specifically, we recommend that operators be allowed to use foreign-built vessels in the U.S. foreign trades and still be eligible for Capital Construction Fund tax deferral, Title XI Federal Ship Loan Guarantees, immediate access to government-impelled cargos and operating subsidy, preferably a new form of operating incentives we propose. (See recommendation #6.)

We believe the half century of requirements to build new vessels in high-cost U.S. shipyards has increased the capital and operating costs of the U.S. shipping industry; has discouraged modernization and expansion of the U.S.-flag fleet; and has contributed to the long-term decline of domestic and foreign waterborne trading opportunities for the U.S. fleet. We support permanent authority for U.S. shipowners to operate foreign-built vessels in the foreign trades while receiving Federal supports, to improve the competitive position, and thus the size and sealift capacity, of the U.S.-flag fleet.

6. AMENDMENT OF CURRENT MARITIME STATUTES THAT IMPAIR THE COMPETITIVENESS OF U.S. VESSELS IN FOREIGN TRADE.

Specifically, we recommend establishment of a new form of operating incentives linked to reductions in crew size and related operating costs; amendment of shipboard manning laws and regulations that prevent reductions in U.S. vessel crew size; and exemption of oceangoing cargo ships from paying duty on foreign shipyard repairs. Federal supports must be designed to encourage decreases in U.S. operating costs. Crew size and other operating costs must be reduced if the U.S. fleet is to become competitive in the world market and grow to provide increased sealift assets under private control.

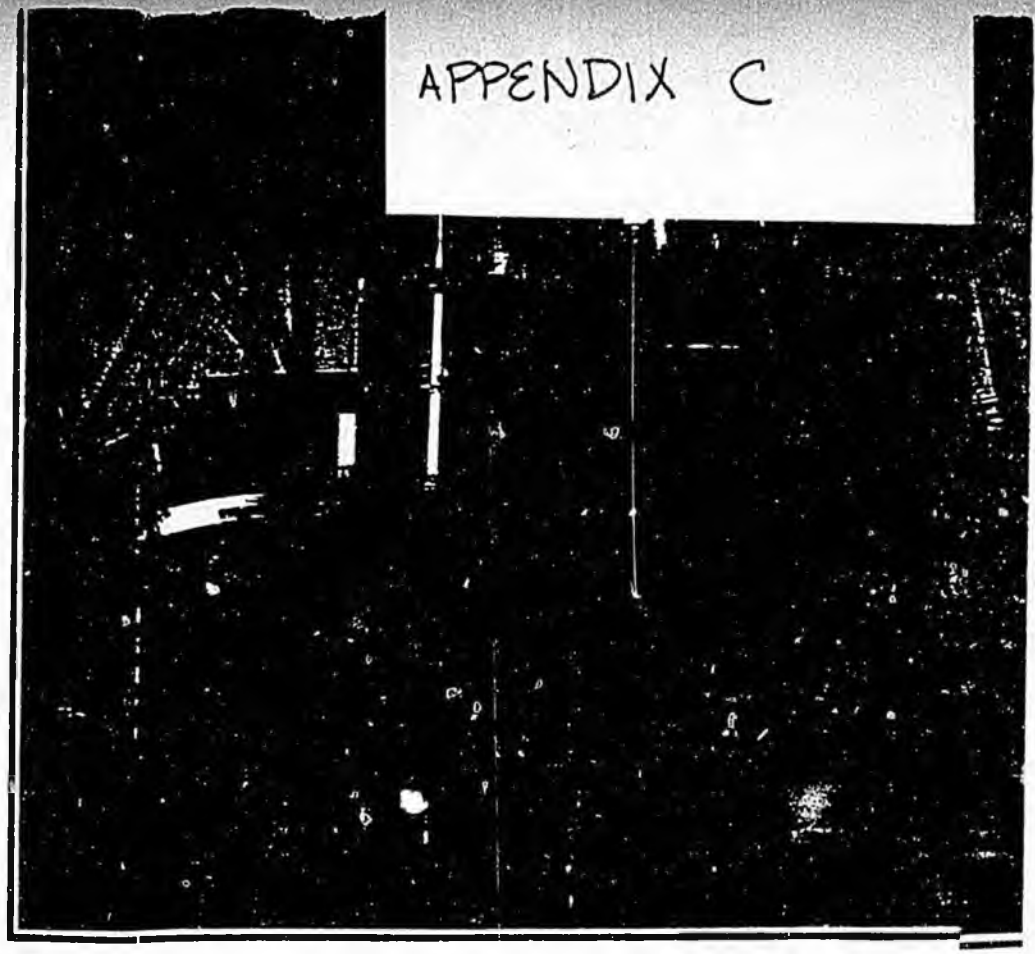
7. INCREASED EMPHASIS ON INCENTIVES TO ATTRACT FOREIGN-REGISTERED VESSELS—UNDER U.S. OR FOREIGN OWNERSHIP—TO THE U.S. FLAG.

We propose a number of measures to encourage reflagging to the U.S. registry of vessels now under foreign registry. Even a small-scale reflagging would be desirable from a national defense standpoint, because these ships would provide work and training for U.S. crews, would be available for pre-mobilization installation of Sealift Enhancement Features, and would thus increase the sealift readiness of the U.S.-flag fleet.

8. AMENDMENT OF THE JONES ACT TO ALLOW SOME FOREIGN BUILDING OF NEW COMMERCIAL CARGO SHIPS FOR THE JONES ACT DOMESTIC TRADE.

We recommend a 10-year "coproduction" period, requiring building in U.S. shipyards in order to earn transferable credits for building in foreign yards. We suggest that these provisions be applicable only to large, oceangoing self-propelled, cargo-carrying ships that are capable of contributing to the Nation's sealift needs in case of a national emergency. This approach might stimulate a limited increase in commercial shipbuilding orders in U.S. yards, without Federal funding, and would expand and modernize the U.S.-flag, sealift capable cargo fleet.

APPENDIX C



CONTROL OF THE SEAS IS VITAL DURING WARTIME, BUT CAN OUR U.S. MERCHANT FLEET STILL MEET ITS COMMITMENTS?

OUR AILING MARITIME INDUSTRY

By L. Edgar Prina

NAVAL experts from Mahan to Gorshkov have agreed unanimously that a nation's sea power is made up not of warships alone, but also of its blue-water commercial fleet and shipbuilding assets.

The current administration has done an outstanding job of strengthening the combat potential and readiness of the U.S. Navy in the last four years. It has done little, however, to halt the increasing deterioration of the mari time industry. The 1980 campaign promises to revitalize the merchant marine, which President Eisenhower called "our fourth arm of defense," remain unfulfilled.

America's maritime industry has been ailing for a number of years. It is sicker today than it was yesterday and it will be sicker tomorrow than it is today.

The Pentagon is deeply concerned that in the event of war it will not have sufficient shipping available to support and sustain U.S. ground and air forces overseas, to say nothing of simultaneously meeting the needs of the economy at home.

The dramatic decline of the U.S. maritime industrial base is told in these stark statistics:

- In 1950, the U.S. ranked first in the world in numbers of ships and in carrying capacity or deadweight tonnage (dwt). Today, it stands 10th in ships and eighth in dwt.

The Soviet Union, which was virtually off the charts in 1950, ranked 26th in ships in 1960 and is now number two. It ranks seventh in carrying capacity.

- As of Aug. 15, 1985, only eight U.S.-flag commercial vessels were under construction or on order in American yards.
- U.S.-flag ships carried only 5.8 percent of the total tonnage of our foreign trade—the world's largest—in 1983. It carried 21 percent in 1950.

That's not all the bad news. Thirty private U.S. shipyards have gone out of business in the past eight years. Currently, 24 major and 8 smaller yards remain in operation.

With the global glut of commercial ships not expected to ease before 1992, and non-subsidized U.S. yards unable to compete with the lower labor costs enjoyed by foreign builders, some experts believe that as many as seven

SEATTLE/MARKOTO

A SHRINKING FLEET—*American ports such as Seattle always seem busy, but the ships are mostly foreign.*

other major and 35 smaller yards could be forced to shut down by 1990.

Ship operators have done somewhat better than the builders. Construction differential subsidies (CDS) were halted by the administration in 1981, but operating differential subsidies (ODS) are still being paid. The subsidies were designed to help operators and builders meet foreign competition.

With a few exceptions, however, things have not been rosy for the operators either. Of 19 American liner companies in business in 1965, only seven remain and one of them has filed for bankruptcy.

The number of U.S.-flag ships in the active, privately owned ocean-going commercial fleet today totals 383. It could easily drop to 300 or fewer by 1990, if no remedial action is taken by the government.

Several major factors have caused this erosion of the U.S. maritime industry.

More and more countries have adopted cargo preference programs to aid their commercial fleets, something the United States has declined to do because it would violate the principle of free trade.

U.S. competitiveness was limited by the high salary structure labor unions negotiated for seamen, mates and masters, as well as for shipyard workers.

There also is the Kremlin factor. The Soviet Union began expanding its merchant marine by cutting rates far below the profit line. It was thus able to penetrate and then dominate a number of trade routes. This had led to shrinking Western merchant fleets, bankruptcies and disinvestment in the shipping industry.

Extremely close coordination exists between the Soviet merchant marine and the Soviet navy. Acting as a naval auxiliary, the merchant marine exercises regularly with the fleet. Naval officers command and staff the merchantmen, most of which are readily adaptable for military use.

The Soviet Union, in short, knows the importance of a large and versatile merchant marine. It has learned well the lessons of Admiral Alfred Thayer Mahan, even if the United States appears to have forgotten them.

The decline of the U.S. merchant marine has had a grave impact upon our capability for reinforcing and supporting American military units overseas. Many officials have been reluctant to concede this. The true situation is masked by optimistic calculations of potential losses to enemy attack or to the number of bottoms that would be available from allies and the fleet of American-owned ships that sail under Liberian, Honduran, Panamanian and other flags.

Admiral James D. Watkins, Chief of Naval Operations, was one who did speak out. In a little-noticed speech last April, he said:

"Can we allow this vital arm of sea power (merchant marine) to atrophy by default any further? I say, no. If we do, our nation could easily be crippled by determined foes and they know it."

Pointing out that the British barely prevailed in the Falklands War with a merchant fleet twice as large as ours, the admiral said:

"Today, our sealift studies show that it would essentially take every single U.S.-flag merchant ship and most of those of our allies just to support our forward deployed forces in a large-scale conflict. And that doesn't even include any additional ships for attrition."

Losses very likely would be staggering, particularly in the early weeks, given the large and powerful fleet of Soviet nuclear submarines armed with missiles and torpedoes.

IT HAS been widely assumed that great numbers of allied merchant ships would be made available to the United States in the event of a NATO war. But allied commercial fleets have been shrinking for years and the end is not in sight. The British merchant navy numbered 1,592 ships in 1975. It is now down to 685. Norway, France and Italy have 600 fewer ships today than they had 10 years ago.

Despite the atmosphere of gloom and doom that pervades much of the maritime industry today, the situation is not hopeless. If the American people and their representatives in Congress could be alerted, a number of reasonable, logical and legal actions could be taken to protect and preserve the maritime base.

First, the President could order the strict enforcement of the cargo preference laws already on the books. A new report by the Congressional Office of Technology Assessment quoted liner operators who said that the requirement for 50 percent of U.S. government

MARITIME INDUSTRY

Continued from page 25

cargoes to be shipped in American-flag bottoms is "not being met in a single U.S. preference program."

Indeed, of 55 Postal Service contracts issued in fiscal year 1984 to carry U.S. mail overseas by ship, 43 were awarded to foreign-owned, foreign-flag vessels. Four of the contracts went to Poland's state-controlled line and one to communist Yugoslavia.

Senator Daniel K. Inouye of Hawaii and Rep. Helen Delich Bentley of Maryland introduced bills earlier this year to require the Postal Service to use American ships.

Another popular assumption is that the Navy, in time of war, could draft U.S.-owned ships flying foreign flags and crewed by non-Americans. Unfortunately, many of the 400 vessels in this fleet are huge tankers having little military usefulness.

Given these circumstances, the U.S. Navy recognized it had to do something to guarantee that at least a minimum number of merchant ships would be immediately available if war should come. Accordingly, it has been buying surplus commercial ships for its Ready Reserve force. Current plans are for a total of 116 ships to be ready for sea within five, 10 and 20 days of the outbreak of a national emergency.

The Navy's new construction and ship repair programs have been a godsend to the U.S. shipbuilding industry, accounting for more than 80 percent of its current workforce. Since 1981, the number of yards involved in Navy work has increased from nine to 21. But as large as these programs are—the Navy has obligated more than $50 billion for them over the past five years—they cannot, by themselves, sustain the present maritime industrial base.

Outraged by what she asserted was a violation of the Merchant Marine Act of 1936, Bentley made this point on the House floor in July:

"It is bad enough that foreign-flag ships of friendly nations are allowed to carry U.S. mail, but I think it is a national disgrace that the privilege to carry this important cargo is now enjoyed by Soviet-bloc vessels."

The current administration, with an assist from Congress, could restore construction subsidies to encourage the building of 20 merchant ships a year in U.S. yards, as suggested in a recent

MARITIME INDUSTRY

Continued from page 52

Congressional Budget Office report. This would be enough, the CBO said, along with projected naval programs, to maintain the current industrial base.

The Navy could provide additional help if it withdrew its objections to the building of foreign warships in American yards.

Commercial shipping and shipbuilding depend upon cargo availability. The administration could aid both by entering into bilateral agreements with its allies to share the carriage between their countries.

U.S.-flag ships would benefit also if the United States would approve the U.N. Conference on Trade and Development Code of Conduct for Liner Conferences, as many West European countries and Japan have done.

Some students of maritime affairs, such as Dr. Harlan K. Ullman of the Georgetown Center for Strategic and International Studies, believe the present industrial base could be preserved at an annual cost of $2 billion.

The United States needs to develop a comprehensive, coordinated maritime policy at the earliest moment. Critical to this policy is a determination of the minimum number of commercial ships and shipyards needed for the mobilization base.

As Vice Admiral William H. Rowden, then-commander of the Military Sealift Command, said last May:

"The U.S.-flag merchant marine and shipbuilding industry is the cornerstone of our wartime sealift capability. It's clearly in the best interests of the United States that the American maritime industry survive and prosper." □

THE LEGION'S POSITION

The American Legion has long been aware of the urgency to rebuild and modernize the U.S. Merchant Marine Fleet. The resolving clause of Res. 302 reads:

RESOLVED, by The American Legion in National Convention assembled in Salt Lake City, Utah, Sept. 3, 4, and 5, 1984, that we urge the U.S. Government, in cooperation with labor and management, to revitalize the U.S. Merchant Marine to its former position as second to none in the world, under the Merchant Marine Act of 1970."

APPENDIX D

AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS

RICHARD P. BRAUN, President
Commissioner
Minnesota Department
of Transportation

FRANCIS B. FRANCOIS
Executive Director

October 10, 1985

President Ronald Reagan
The White House
1600 Pennsylvania Avenue, N.W.
Washington, D.C. 20500

Dear President Reagan:

We are writing to you to express our concerns about the maritime industry in the United States, and the importance of establishing a cohesive and comprehensive national maritime policy.

Founded in 1914, the American Association of State Highway and Transportation Officials (AASHTO) represents the departments concerned with highways and transportation in the fifty states, the District of Columbia, and Puerto Rico, to foster the development, operation and maintenance of an integrated national transportation system. The active members of AASHTO are the duly constituted heads and other chief directing officials of the member highway and transportation agencies. As state officials involved with all modes of transportation, we have become increasingly concerned over the problems facing the maritime industry in our country.

As evidenced by trends observed in a number of reports published in recent years, the United States imports and exports significant levels of tonnage every year, but the percentage of foreign trade which is transported in U.S. flag ships has steadily declined. Additionally, the number of vessels in the U.S. overseas fleet has declined from 1,100 ships in 1950 to fewer than 400 today, while construction of ships in U.S. shipyards has virtually ceased. At the same time, the U.S.S.R. has over 2,500 vessels in its merchant fleet. It appears that our defense posture and our ability to respond to overseas conflicts may well be diminished by the lack of a merchant marine fleet to call into military service. The import and export industries are also important to the U.S. in other ways. For example, millions of people are employed in manufacturing, agricultural, mining and other jobs related to exports, alone.

AASHTO believes that the significant changes taking place in this most important industry are occurring, to the detriment of our country, without the benefit of the clear direction that a comprehensive national-level policy could provide.

In the past, several programs have been initiated or proposed to promote our exports and development of the U.S. merchant marine. These have included the following:

- A proposed promotional program to allow for overseas construction of U.S. vessels without loss of operating subsidies, authorize U.S. vessel operators to use certain tax-deferred funds to purchase foreign built ships, make vessels newly transferred from foreign to U.S. registry immediately eligible to carry government preference cargoes, and allow an increase in the percent foreign investment in U.S. flag vessels.

- Streamlining of the operating differential subsidy program.

- Proposed reduction in regulations to minimize government intervention in the shipping industry.

- A proposal to reorganize U.S. trade policy by the creation of a Department of International Trade and Industry.

While these programs to stimulate exports and to restructure our maritime assistance programs might be helpful to the maritime industry, they do not constitute a national maritime policy, even when taken collectively. For example, they do not address such critical policy issues as the desired size and composition of the U.S. flag merchant marine fleet; the need for federal subsidies for construction and operation of U.S. flag vessels; whether U.S. cargoes should be reserved for U.S. flag vessels; the role of the merchant marine in national defense and military mobilizations; and the need for domestic shipyard capability.

A recent study by the U.S. Office of Technology Assessment, An Assessment of Maritime Trade and Technology, states that "Existing Maritime policies are a patchwork of measures adopted at various times to address specific needs. They do not add up to a comprehensive and coherent policy with clearly defined purposes," and "it is clear that major new or revised Federal policies are needed if the U.S. maritime industries are to remain healthy in the decades to come". We agree with these findings.

AASHTO believes that a Presidential directive creating a special maritime task force could be the right catalyst for developing a comprehensive national maritime policy. We thus recently adopted, by a vote of our member departments of 50 affirmative, none opposed, a "Policy Position Statement on Development of National Maritime Policy." A copy of this position statement is enclosed. In that statement we urge that you "create a special task force to study the problems facing our maritime industry, both the government and the private sector, and prepare a final report which recommends a national maritime policy. The composition of this task force should include representatives of all levels of government and the maritime and port industries, both coastal and inland." We would greatly appreciate your giving this recommendation your serious consideration.

Very truly yours,

Francis B. Francois
Executive Director

AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS

POLICY POSITION STATEMENT ON DEVELOPMENT OF NATIONAL MARITIME POLICY

The presence of a strong U.S. merchant marine fleet is vital to the economy and national defense, to our domestic and international transportation systems and to maintaining the shipment of exports from and imports to all states -- those located inland as well as those having ports on the oceans and Great Lakes. Despite the vitality of the national economy and the growth of exports and imports since 1950, the U.S. merchant marine fleet has been declining in size and capacity, which is threatening our capability to maintain a competitive fleet of vessels for waterborne commerce and defense purposes. The health of the American maritime/port industry is dependent upon the resolution of a wide range of complex issues. These issues encompass diverse areas such as the huge task of maintaining and improving the inland and deep water port complexes, user charges, intermodalism and related issues, shipbuilding and repair, subsidy for construction and operation of the U.S. merchant fleet, cargo reservation policies, federal regulation of oceanborne commerce, commercial trading relationships with other countries, implementation of international trade agreements, the UNCTAD Code, and cross-border movements.

Contributing to the decline of the U.S. position in world trade has been the lack of a comprehensive and consistent national maritime policy.

AASHTO urges the Administration to direct immediate attention to the development of a national maritime policy. The President has addressed other critical national issues by creating special task forces to define the problems and recommend solutions. Because of the acceptance of this approach, AASHTO recommends that the President create a special task force to study the problems facing our maritime industry, both the government and the private sector, and prepare a final report which recommends a national maritime policy. The composition of this task force should include representatives of all levels of government and the maritime and port industries, both coastal and inland.

Adopted by mail ballot by the
AASHTO Policy Committee,
August 8, 1985

SUBJECT: The Jones Act and the Price of Alaska Oil

GE

Introduction

At the July 21 meeting of the Joint Special Committee on Tax Policy you requested that OMB provide you with background information and material regarding the Jones Act and the price of Alaska oil.

Background

Shipyard inefficiencies, lack of competition, and high labor costs, make American ships two to three times as expensive to build and operate as their foreign counterparts. Despite these higher costs, virtually all waterborne commerce between Alaska and the rest of the United States moves in U.S. rather than foreign ships. The reason is the Jones Act (Sec. 27 of the federal Merchant Marine Act of 1920), which requires that maritime trade between U.S. ports be carried in ships built in the U.S., documented under U.S. law, owned by U.S. citizens, and crewed by Americans.

Trade goods shipped between the Alaska and American ports must bear this burden, either as lower return to the seller or a higher price to the buyer. As a practical matter, Alaska usually bears the burden regardless of which way the commerce moves. In the case of Alaska crude oil, the burden is reflected in reduced wellhead values; over $100 million per year may be lost to the State treasury due to lower severance taxes and royalties.

A related burden on the value of Alaska oil comes from the Export Administration Act of 1979 and other U.S. laws that prohibit the foreign export of Alaska oil. The prohibitions deny Alaska oil its most profitable markets in the Far East, and thus make the oil less valuable at the wellhead. A recent study by the federal Department of Commerce estimated the loss to the State treasury at $333 million per year.

Some oil companies have opposed any relaxation of the export limitations, noting that much of their investment in U.S. flag tankers could be lost if exports were allowed. Oil companies'

production revenues would be enhanced if exports were allowed, however, and this would marginally encourage additional development of existing fields and further exploration.

Recent Studies

Several recent studies have addressed these issues. An annotated listing of those that appear most interesting in terms of the State revenue implications is attached. Copies of the studies themselves are attached with the original of this memorandum.

Annotated Listing of Selected Studies On The Jones Act, Oil Export Limitations, and Alaska Oil Revenue

U.S. Department of Commerce, *Report To Congress on Alaskan Oil*, June 1986. In 1985 Alaska made an unsuccessful effort in Congress to amend the Export Administration Act to allow some exports of Alaska oil. As a consolation prize for Alaska, Congress authorized and directed the administration to conduct the study that led to this Report. According to the study, the export limitations will cost Alaska $1,330 million in the 1987-90 period ($333 million per year), $1,510 million in 1991-95, and $1,116 million in 1996-2000. The study's findings generally support Alaska's position, though the authors make some factual errors and incorporate a number of unusual assumptions. For example, the federal study's "low" oil production scenario shows about twice as much annual production as the state's current "mean" production forecast.

Samuel A. Van Vactor and Arlon Tussing, "The Export of Alaska Crude Oil: Its Significance for Pacific Basin petroleum Trade," prepared for the International Association of Energy Economists annual meeting, June 1986. The authors believe that "[o]ver the coming year...the distortions and waste entailed by [the export limitations] will become more apparent, and as they come to light, the policy is likely to change. Once the inhibition on exports of Alaska oil is removed, there will likely be a cascade of reactions that will substantially increase crude-oil and petroleum product trade throughout the Pacific Basin."

State of Alaska, *Report to the Legislature on Implementation of Initiative 83-02*, January 1986. The initiative was adopted by the voters in 1982. It directs the governor to work for repeal of the Jones Act, and to annually report on those efforts. This was the first of these annual reports, and was largly prepared by John Katz and his staff in the governor's Washington, D.C. office. the report uses data from the Alaska Statehood Commission studies (cited below) to estimate that the Jones Act costs Alaska consumers $40 million per year, and the state treasury $225 million. The report is not optimistic about the prospects for near-term fundamental change in the trade restrictions.

National Advisory Committee on Oceans and Atmosphere, *Shipping, Shipyards and Sealift*, July 1985. The report focus on the national security implications of the Jones Act. It concludes that the nation's defense capabilities would be improved if foreign built ships were allowed to be used in the domestic maritime trade. The authors say they had access to "secret" and "official use only" Department of Defense materials on sealift capacity, etc.

Alaska Department of Revenue, "The Export of Oil to Japan - State Revenue Impacts," by Dr. Charles Logsdon in *Petroleum Production Revenue Forecast Quarterly Report, March 1983*. "Under a wide range of assumptions the State of Alaska would enjoy revenue increases should the current ban on exports [of Alaska North Slope crude oil] be removed. Though the impact illustrated ranges between $10 and $500 million per year..., the best guess revenue impact would probably be about $50-$100 million per year."

Simat, Hellieson, & Eichner, Inc., for The Alaska Statehood Commission, *The Jones Act and Its Impact on the State of Alaska*, July 1982; and Arlon R. Tussing and Associates, Inc., for The Alaska Statehood Commission, *Alaska's Economy and the Merchant Marine Act of 1920 (the Jones Act)*, September 1982. Though now somewhat out of date, these two studies still remain the best starting point for anyone wishing a good understanding of the effects of the Jones Act (and the export limitations) on Alaska.

HB 93, (cont'd)

designation of the recreation river unless the commissioner determines that the activity threatens the water quality or an essential habitat within the river.

Provides for adoption of a management plan and addresses management of municipal land, acquisition of additional land, application of public land laws, and cooperative management agreements. Lists rivers to be included in the system. Provides Act takes effect immediately.

Introduced January 30 and referred to Resources; Finance.

Boat Numbering, Accidents & Safety

HOUSE BILL NO. 94, by Rep. Taylor. Adds new sections to AS 05.25 (Amusements & Sports. Watercraft) prohibiting a person from operating a boat on state water unless the owner of the boat holds a current, valid state or federal certificate of number issued in the owner's name. The owner of the boat is prohibited from allowing another person to operate the boat unless he holds a current, valid certificate, also. The certificate of number must be carried on the boat and be available for inspection by a peace officer.

Prohibits operation of a boat on state waters unless a number is painted or permanently attached to each side of the forward half of the boat. Lists method for applying for number; application by owner having a number given by the federal government or another state; application by dealers or manufacturers; fees; etc.

Adds another section that outlines the duties of boat operators and witnesses at the scene of a boating accident. Requires an accident report be filed with the Dept. of Public Safety. Requires notification of department when a passenger dies or disappears from a boat. States that a boat owner is liable for injury or damage caused by the negligent operation of the boat, whether the negligence consists of a violation of state law or failure to observe ordinary care in the operation of the boat.

Would require the Dept. of Public Safety, in cooperation with the Dept. of Education, to offer public education programs designed to reduce boating accidents. Requires boats operating on inland water to carry and exhibit between sunset and sunrise at least one white light to show all around the horizon. Also requires boat operated on inland water to carry at least one readily accessible life preserver. Motor-driven boats operated for hire would be required to carry a fire extinguisher. Divers would be required to display a diver's flag. Lists requirements for boats towing water skiers and surfboards.

Provides Act takes effect January 1, 1968.

Introduced January 30 and referred to Transportation; Judiciary; Finance.

INTRODUCTION OF BILLS (House)

Limited Gambling (historic)

HOUSE BILL NO. 95, by Rep. Taylor. Would authorize certain municipalities to conduct limited historic gambling enterprises. The municipality would be allowed to do so if it adopts an ordinance permitting the limited gambling; if the economy depends substantially on tourism; if the municipality has a substantial history of gambling during the gold rush; and if the gambling enterprise enhances the historic character of the municipality.

Would limit gambling to locations that are in historic districts or parks established to preserve or recreate the historic character of the municipality and that are approved by a majority of the voters of the municipality. Prohibits gambling by minors under the age of 18. Limits gambling to those types of games occurring in the municipality during the period of 1890 - 1910. The municipality would be required to establish by ordinance the maximum amount of a bet. Proceeds would go to the municipality. Provides Act takes effect immediately.

Introduced January 30 and referred to State Affairs; Community & Regional Affairs; Finance.

Kindergarten (compulsory/ age minimum)

HOUSE BILL NO. 96, by Rep. Miller. Note: Also see HB 76, this report, similar). Would require each school district to offer a kindergarten program. Sets time requirement for kindergarten programs at three hours, exclusive of intermission. A child who is five or who will become five before June 2 preceding the beginning of the school year, and who is under the age of 20 and who has not completed the 12th grade, is of school age (current law sets the minimum school age child as one who is six or who will become six before November 2 following the beginning of the school year). A child who is five before June 2 preceding the beginning of the school year may enter a public school kindergarten (currently the child must be five or become five before November 2 following the beginning of the school year).

Would allow a school board to require that a child attend kindergarten before entering first grade. Changes age of child who must attend public school to six (currently seven). Provides Act takes effect July 1, 1987.

Introduced January 30 and referred to Health, Education & Social Services; Finance.

INTRODUCTION OF RESOLUTIONS (House)

Surface Transportation Act

HOUSE JOINT RESOLUTION NO. 8, by Reps. Davis, Koponen, Boyer, Frank, Miller, Cato. Requests the Congress to expeditiously enact legislation reauthorizing the Surface Transportation Assistance Act and to maintain the present formulas for allocation of federal-aid highway funds among the states. Note: Also see SJR 9, Senate introductions and committee action, this week, same subject.

Introduced January 26 and referred to Transportation.

FEB 2 4 1987

Representative Bette Cato
Fifteenth Alaska State Legislature
First Session, 1987
Alaska State House of Representatives
P. O. Box V
Juneau, AK 99811

Dear Representative Cato:

This letter expresses my support for House Joint Resolution No. 11.

Current U. S. Postal Service mail distribution methods are encouraging all-cargo aircraft and all-cargo companies to provide infrequent flights into rural Alaskan communities. This practice reduces federal funding of the Alaskan multi-service air transportation system. Eventually, the practice will result in higher passenger fares, lower passenger service levels, and fewer jobs in rural Alaskan communities.

I hope that the Alaska Legislature will see the adverse impact of this practice and help to nip it in the bud before the rural Alaskan communities suffer damage to their air services and economies.

Thank you.

Yours truly,
Richard Stern

COMMITTEE ON APPROPRIATIONS
WASHINGTON, DC 20510

February 6, 1987

The Honorable Elizabeth Dole
The Secretary of Transportation
400 Seventh Street, S.W.
Washington, D.C. 20590

Dear Elizabeth:

As you are aware, Section 6(b) of the Civil Aeronautics Board Sunset Act of 1984 (P.L. 98-443) requires reports to Congress by July 1, 1987, from the Department of Transportation and the Postmaster General recommending "whether the authority to establish rates for the transportation of mail between points within the State of Alaska should continue to be carried out by the Secretary by regulatory ratemaking or by the Postal Service through negotiations for competitive bidding."

As the author of the provisions in the Sunset Act which retained the status quo regarding both the fair and equitable distribution of mail within Alaska to the various air carriers, and the establishment of rates for the carriage of that mail, I wanted you to know that I continue to support the current system. With minor modifications, it will continue to adequately serve the interests of Alaskans and the Postal Service.

The vast majority of the communities in Alaska rely on air service for the delivery of the mail, and the revenue from mail carriage to rural air carriers represents a major portion of their total revenues. Due to the impact that these mail revenues have on the rural air carriers' schedules and overall service to the smaller Alaskan communities, a competitive bidding allocation system for the mail which distributed this mail to a single carrier would effectively eliminate competitive service into many of the rural communities. Without mail, no carrier can afford to provide scheduled service to rural Alaska. Accordingly, in order to ensure a competitive air transportation system, the current mail allocation system and rate making procedures should be maintained, with only minor modifications.

While the current system provides an excellent framework -- I believe it should be modified by requiring the Department and the Postal Service to factor into the allocation methodology the needs of the traveling public. Under the present Postal Service policy, any air carrier is entitled to an equal share of the non-priority mail if that air carrier provides at least three trips per week to a given community. This policy does not account for the level of service or the type of aircraft serving the community. Furthermore, this policy may encourage a one-dimensional approach to rural Alaska air transportation.

One-dimensional service to rural Alaska, in turn, may force up the costs of the Essential Air Service (EAS) program in Alaska. If mail, pasenger, and cargo, revenues are not adequate to support service, EAS costs will rise. Simply put, mail acts as a supplement to the entire rural air transportation system -- and if it is not fully integrated into the spectrum of services, the shortfall will be borne by the EAS program. Consequently, I encourage you to examine methods of maximizing service to rural communities by coordinating the carriage of mail with the objectives of the EAS program.

In these tight budgetary times, it is imperative that we carefully consider how these programs can best use available Federal resources to encourage the optimal air service within the State. Factoring the quality or range of services provided by a carrier into the allocation methodology would enhance the overall service to rural Alaska, and might also result in a reduction of EAS payments within Alaska.

Please don't hesitate to contact me if I can be of any assistance in this matter. I look forward to your July 1, 1987 report.

With best wishes,

Cordially,

TED STEVENS

FEB 2 4 1987

February 16, 1987

Representative Bette Cato
Fifteenth Alaska State Legislature
First Session, 1987
House of Representatives
P. O. Box V
Juneau, AK 99811

Dear Representative Cato:

This letter is to express MarkAir's support of House Joint Resolution #11.

Current U.S.P.S. mail distribution methods encourage all-cargo aircraft providing infrequent flights into communities. This practice reduces federal funding of the Alaskan transportation system and will result in higher passenger fares and fewer jobs at community passenger airlines.

I am confident that MarkAir is one airline among many who feel that mail revenues are the backbone of the Alaskan passenger transportation system.

Very truly yours,

Robert Ensminger
Vice President Postal Affairs

FEB 2 4 1987

February 18, 1987

Honorable Betty Cato
House of Representatives
P.O. Box V
Juneau, AK 99811

Dear Representative Cato:

Reeve Aleutian Airways respectfully requests your support of HJR11.

Involvment by the U.S. Dept. of Transportation in this issue would seem appropriate. With the sunset of EAS subsidies in the near future it seems that now is the time to consider to what extent U.S. Postal Service revenues may offset the loss of the EAS subsidies.

It is our belief that HJR11 will initiate a process in the U.S. Postal Service to consider methods and alternatives for distribution of mail to air carriers which recognizes an air carrier's overall level of service and financial committments to a community.

Sincerely,

David D. Jensen

MAIL DISTRIBUTION IN RURAL ALASKA

U.S. MAIL DESTINED FOR RURAL ALASKA FROM THE ORIGIN POINTS OF ANCHORAGE AND FAIRBANKS IS CURRENTLY TENDERED TO THE MAINLINE CARRIERS (ALASKA AIRLINES, MARKAIR AND NORTHERN AIR CARGO) ON THE BASIS OF A USPS POLICY KNOWN AS "EQUITABLE TENDER".

EQUITABLE TENDER SIMPLY MEANS THAT THE USPS DISTRIBUTES THE VOLUME OF MAIL AS EQUALLY AS POSSIBLE AMONG THE AIRLINES FLYING ON A PARTICULAR ROUTE. AN EXAMPLE OF THIS IS THE ANCHORAGE TO BETHEL WHERE THE MAIL IS SPLIT AMONG TH. 3 CARRIERS, THE CARRIER WITH THE MOST FREQUENCY OF SERVICE IN THAT MARKET RECEIVING A PROPORTIONATELY LARGER SHARE.

FOR THE PAST 3 YEARS THERE HAS BEEN A LOBBYING EFFORT OF THE ALASKA CONGRESSIONAL DELEGATION TO PRESSURE THE USPS TO CHANGE THEIR EQUITABLE TENDER POLICY TO A FORMULA WHICH MARKAIR HAS DEVELOPED AND WHICH EFFECTIVELY ELIMINATES NORTHERN AIR CARGO FROM CARRYING U. S. MAIL.

THE RATIONAL BEHIND THIS LOBBYING EFFORT ALLEGES THAT PASSENGER SERVICE IS BEING HAMPERED BY NORTHERN AIR CARGO, AN "ALL CARGO" AIRLINE, CARRYING THE U.S. MAIL AND THEREBY DEPRIVING THE PASSENGER CARRIERS OF THE ADDITIONAL REVENUE TO OFF SET THE COST OF PROVIDING PASSENGER SERVICE.

THIS ALLEGATION HAS NOT BEEN BORNE OUT BY THE FACTS. PASSENGER SERVICE IN RURAL ALASKA IS AT AN ALL TIME HIGH IN BOTH THE MAINLINE AND THE BUSH. THE LEVEL OF SERVICE HAS CONTINUED TO INCREASE AS WITNESSED BY TWO NEW PASSENGER CARRIERS RECENTLY ENTERING THE ANCHORAGE TO DILLINGHAM, KING SALMON, AND KODIAK MARKETS. THE SAME TREND IS OCCURRING IN THE SMALLER BUSH COMMUNITIES.

IT MAY BE TRUE THAT THERE IS TOO MUCH PASSENGER SERVICE AND SOME AIR CARRIERS MAY NEED TO ADJUST THEIR STRATEGIES. WHAT IS MORE IMPORTANT TO RURAL ALASKANS IS THAT THEIR QUALITY OF LIFE HAS IMPROVED DRAMATICALLY WITH THE ADVENT OF RELIABLE SCHEDULED ALL CARGO AIRLINE MAIL AND AIR FREIGHT SERVICE. EVIDENCE OF RURAL ALASKANS FEELINGS ON THIS ISSUE IS OBVIOUS BY THE MANY RESOLUTIONS, PETITIONS, AND LETTERS OF SUPPORT FOR ALL CARGO SERVICE THAT THE ALASKAN CONGRESSIONAL DELEGATION HAS RECEIVED ON THIS ISSUE.

ATTACHED IS A COPY OF A NEWSPAPER ARTICLE WHICH APPEARED IN THE ANCHORAGE DAILY NEWS ON APRIL 27, 1986 AND GIVES A FACTUAL ACCOUNT OF BOTH SIDES OF THE ISSUE.

Today, freight and mail fly on Douglas DC-6 air freighters. The airline owns ten DC-6 aircraft, and each plane can lift nearly 30,000 pounds. The planes are economical to operate, reliable, and ideally suited to the varied Alaskan flying conditions. The planes are able to land on improved and unimproved airstrips 4,000 feet in length, and the Company has upgraded the aircraft to include sophisticated electronics including LORAN nagivation and Color Radar. Eight of the ten aircraft in the fleet are of the standard configuaration; the ninth freighter is dedicated exclusively as a tanker, and can haul up to 4,500 gallons of fuel; the tenth freighter is one of only two in the world with a "Swingtail" which swings completely open from the tail allowing rear loading of cargo as long as 65 feet. The aircraft is ideally suited for the special transportation needs of rural Alaska.

Northern Air Cargo's philosophy is one of service to the customer, and providing this service as quickly, effeciently, and safely as possible. The airline has had over 30 years of accident free operations.

Northern Air Cargo employees 150 people in Anchorage and sub-contracts with local business enterprises in the 20 rural Alaskan communities that it serves. In all these areas, Northern Air Cargo has made a significant economical contribution.

NORTHERN AIR CARGO

Northern Air Cargo was founded in 1956 as a partnership between Robert "Bobby" Sholton and Maurice Carlson. The airline was established as a charter air freight service, utilizing two C-82 "Flying Boxcars." As the airline founders, Sholton and Carlson were both considered Alaskan aviation pioneers; since the late 1940's, Sholton had flown extensively all over Alaska delivering freight, passengers, and mail; Carlson had flown for the military.

With a fleet of C-82's, Northern Air Cargo established an impressive record of service to many areas of the State. The airline pioneered delivery of special-outsized cargo to some 192 different air strips within the State. Areas served were mining settlements, construction and DEW Line sites as well as delivering freight to rural communities on a charter basis. In 1969, the first DC-6 aircraft was added to the operation. These aircraft gave the Company additional lift and capacity and opened up even more expanded rural market. Since the early 1970's, Northern Air Cargo has been on a controlled rate of growth adding DC-6 all-cargo aircraft periodically up to its present fleet of ten aircraft. Northern Air Cargo was co-owned by Sholton and Carlson until Sholton purchased his partner's interest in the airline in 1981.

The widow of Robert Sholton, Mrs. Rita Sholton is the airline's President and Chief Executive Officer. Mrs. Sholton has steered Northern Air Cargo on a course of steady growth since Robert Sholton's death in 1982. Mrs. Sholton moved the airline from almost 100% charter operations prior to 1982, to a scheduled airline that serves 20 communities within Alaska on a regularly scheduled basis with freight and mail delivery. The airline flies approximately two and one-half million miles per year within the State of Alaska.

MAIL FLIGHTS: Airlines fight for bigger share of Bush cargo

Continued from Page J-1

age mail and oversized freight in a low-cost fleet of vintage DC-6s to 25 Bush destinations.

Northern Air's schedule includes the only direct mail service from Anchorage to about a half dozen villages. Passenger airlines shuttle mail for these villages through regional hubs, such as Nome or Bethel. The mail is then unloaded to await delivery on smaller commuter airlines.

MarkAir officials say their reform proposal is not aimed at Northern Air.

"It's a philosphical issue as to whether or not the mail should, in any way, shape or form, be a factor in providing safe and reliable and passenger service," said Jim Berg, a MarkAir vice president for finance.

Passenger airlines deserve more mail freight because they offer far more flights than cargo competitors, said Larry Anderson, another MarkAir official. The passenger airlines also have much larger investments in terminal buildings, salaries and equipment than the cargo carriers.

"We're not after Northern Air Cargo, we're after a more equitable distribution of the mail," Anderson said.

But Northern Air Cargo officials disagree.

"The MarkAir proposal must be viewed for what it is: a blatant effort to put a competitor out of business," wrote Theodore Seamens, a Washington, D.C. attorney for Northern Air, in a memo to the Postal Service.

Dennis Gladwin, a Northern Air vice president, said MarkAir is trying to fix a system that isn't broken. He has launched a vigorous public relations counteroffensive to kill the MarkAir proposal. He carries around a binder full of petitions and testimonials from villagers and shippers who like his cargo airline's mail service and don't want to see it hurt.

Postal Service officials also have problems with the MarkAir proposal. Their attorney said it's probably illegal.

Congress told the agency to develop an air delivery system that provides customers with the best possible system, wrote Michael J. Vandamm, the Postal Service's assistant general counsel, in an internal agency memorandum.

That means subsidizing the cost of mail delivery in Alaska so it's the same as in the Lower 48. But Vandamm doesn't think it means skewing the system to help bail out passenger airlines.

"There is no statutory basis for establishing a policy of distributing the mail business so as to favor passenger carriers at the expense of all-cargo and small aircraft operators," he stated.

Despite Postal Service skepticism, MarkAir's postal proposal is very much alive.

The proposal has been promoted by Stevens, chairman of the Senate Postal Subcommittee. Stevens helped arrange a meeting in Anchorage last February at which Bergt unveiled the formula to a crowded room of Postal Service and airline officials.

In a recent interview, Stevens said he's talked with both Northern Air and MarkAir officials. But he appeared to support MarkAir's proposal.

Northern Air Cargo plans to add new routes and Stevens that expansion threatens the stability of the state's air passenger system.

Mail makes up at least one-third of the revenue for most passenger airlines. Without this revenue, the passenger airlines will reduce service and raise their rates, Stevens predicted.

Today, federal Transportation Department records show Alaska passenger service levels, despite all-cargo competition, are at an all-time high. And most airfares have stabilized.

But if passenger carriers keep losing mail to cargo lines, Stevens said the state transportation system will begin to disintegrate.

"We will rue the day that happens because there is no alternative. You can't take a bus . . . ," Stevens said.

Postal Service officials are well aware of Stevens views.

In recent weeks, the Postal Service has had "a lot of correspondence" with Stevens' office about the MarkAir proposal, said Rex Maytam, a Postal Service program manager based in Washington, D.C.

Maytam, of the Postal Service, said his agency is reviewing the MarkAir proposal and may hold hearings on it later this year.

□

The mail distribution formula that Bergt is seeking to reform was written three years ago in a sweeping Postal Service policy change that broke up mail-route monopolies held by the old Wien Airlines and a handful of subcontractors.

Under the old system, the Postal Service heavily subsidized shippers who chose to mail merchandise to the Bush. In some instances, the Postal Service paid more than 90 percent of the $50 cost of shipping a 50 pound box to a Bush village.

Wien and its subcontractors loaded the groceries, merchandise and other mail in the cargo holds of passenger planes and took it to regional hubs. Village-bound mail — including perishable meat, dairy products and vegetables — then was unloaded and stored in warehouses. It often sat there for days until a smaller passenger airline, under subcontract to Wien, found room to deliver it to the villages.

The present postal distribution system retains the old system's heavy freight subsidies. But it attempts to divide up the postal money more evenly among the dozens of Alaska carriers spawned by the 1978 federal deregulation of the airline industry.

Most of the mail travels fourth class. And the formula offers roughly equivalent amounts of mail to all carriers who maintain at least once-a-day service levels to Alaska towns, said Daniel Benton, an Anchorage-based Postal Service official.

And it offers some mail to cargo planes that bypass regional hubs and fly direct from Anchorage to more than eight Bush villages. Most of these flights are offered by Northern Air; one by MarkAir.

The cargo planes fly only to villages with enough people to support once-weekly cargo trips and airstrips long enough to handle big planes.

The direct flights have been embraced by villagers and Anchorage shippers. Produce no longer rots in hub warehouses and merchandise arrives in better shape because it is handled less.

"The whole community has been behind Northern Air Cargo," said H. Vernon Slwooko, mayor of the St. Lawrence Island village of Gambell.

In St. Paul in the Pribilof Islands, Northern Air's direct flights have drastically reduced food prices by allowing frozen products to be shipped through the subsidized mail system, said Carol Melovidov, manager of the village's Aleut Community Store. The cargo service has also reduced monthly damage bills from mishandled mail by $1,000, she said.

The direct flights also save the Postal Service money. The subsidy formula often requires the Postal Service to pay much higher freight costs to passenger airlines that carry freight via the indirect flights that pass through the hub system.

For example, mailing a package from Anchorage to Gambell on a direct cargo flight costs the Postal Service 43 cents a pound. The same freight flying to Gambell via Nome on a passenger jet costs the Postal Service $1.22, according to federal Department of Transportation statistics.

Last year, Postal Service statistics showed a saving of more than $1 million from direct cargo flights to the villages.

But officials of some commuter airlines say they need those mail revenues to help finance passenger service. They don't think they get a fair share of the mail; one that fully reflects their high service levels to rural Alaska.

"You get someone coming in and sharpshooting a certain type of (air) traffic," said Richard Reeve of Reeve Aleutian Airways. "You know that the other types of traffic are going to suffer."

"They (Northern Air) carry no passengers, and they do not face the high insurance premiums," said Grant Thompson, vice president of Barrow-based Cape Smythe Airlines.

"Bypassing the hub with the mail will eventually cause a collapse of the (passenger) system," said Jim Rowe, president of Bering Air.

But commuter airlines aren't entirely united in their opposition to the direct cargo flights.

Wilfred Ryan, president of Ryan Air — Western Alaska's largest passenger airline — said his company has lost mail to Northern Air, but he doesn't favor changing the formula. Instead, he favors free-market competition between the cargo carriers and the passenger airlines.

"The ultimate benefactor is the village consumer," he said. "The cost of living is declining."

In Unalakleet, which receives direct all-cargo service, Ryan Air has responded to the competition by operating small aircraft that can be filled up with passengers alone.

Ryan hasn't supported changing the postal formula. But a half dozen other commuter airlines have joined with MarkAir to lobby for changes in the Postal Service formula.

MarkAir's proposal would help the small passenger airlines by requiring all village mail carriers to provide service at least three times a week. Northern Air officials say that level of service isn't profitable for an all-cargo airline, so they would have to end village service.

The proposal helps the large passenger airlines flying from Anchorage by heavily weighing a carrier's weekly flights and plane size. The more flights and the bigger the planes, the more mail a carrier would receive.

MarkAir, for example, flies 20 times a week to Bethel; Northern Air flies seven. The new formula would raise MarkAir's share of the mail market to Bethel from 37 to 59 percent, earning the carrier more than $500,000 in new revenue.

But according to Berg of MarkAir, the statewide effect of the MarkAir proposal would not have much effect on the carrier's revenue.

"It seems like everyone thinks this is a fight between a couple of different carriers," Berg said. "But we're not really that big of winners in this thing. We won't gain that much."

According to Berg, other passenger airlines would benefit as much, if not more, than MarkAir.

Northern Air's calculations of the MarkAir formula — using the last quarter of 1984 as a base — indicate Northern Air's state-wide mail share would drop from 20 percent to 8 percent. Meanwhile MarkAir's share would increase from 39 to 45 percent.

With only 8 percent of the mail, Northern Air couldn't afford to operate postal or freight service, said Gladwin, the company's vice president.

Stevens, when asked about Northern Air's claims that the formula would put them out of business, showed little sympathy.

"We must take whatever steps we have to assure the viability of passenger air transportation system," Stevens said.

Stevens believes the greater danger lies in allowing cargo carriers to keep grabbing more mail.

As passenger traffic softens in a faltering economy, he fears the rise of "monopoly carriers who are interested in freight delivery only."

Melovidov, of the St. Paul's Aleut Community store, said she understands the problems of the passenger airlines who are losing mail. But in a recent letter to Stevens, she urged to the senator to also consider her community's villagers who want to see Northern Air survive.

"My feelings are that the United States Postal system was initiated to benefit the people — not those private corporations that are presently backing those proposed revisions."

NORTHERN AIR CARGO

February 11, 1987

Representative Betty Cato
House of Representatives
P.O. Box V
Juneau, Alaska 99811

Dear Representative Cato:

Northern Air Cargo has been notified that House Joint Resolution #11 has been scheduled for a hearing on February 25, 1987. We have also been notified this hearing will not be teleconferenced.

During our meeting with you last week, we indicated we would be Outside at a seafood industry convention during the 25th, 26th and 27th of February. This convention is critical to our business.

We have also been informed by many of our customers who live in rural Alaska that they will not be able to travel to Juneau to testify because of conflicting business already committed to on February 25th. Further, some have indicated that the financial burden is a hardship they don't wish to incur in view of the current economic situation. We also have had requests from numerous seafood industry executives who are desirous of testifying and wish to have access to some sort of teleconference arrangement so that they may inform the committee of the seriousness of this resolution to their industry.

Because this resolution has a severe impact on Northern Air Cargo and our customers who are principally residents of rural Alaska, we respectfully request that this hearing be scheduled for a later date which will accomodate our schedule and teleconferencing.

Thank you for your consideration of this request on behalf of rural Alaskans.

Sincerely,

Don Brugman
Vice-President/General Manager

BUSH MAIL SERVICE MEANS BIG BUCKS FOR AIRLINES

Anchorage Daily News/Bob Hallinen

Cargo carrier faces fight to keep Bush mail routes

By HAL BERNTON
Daily News business reporter

Stacked on pallets in an Anchorage hangar sits some of Alaska's most lucrative air cargo: boxes of candy and tobacco, six-packs of pop, crates of vine-ripened tomatoes and bananas, and sacks of potatoes.

This is the Bush-bound U.S. mail, the financial backbone of Alaska's far-flung air transportation system. Last year, the U.S. Postal Service paid nearly $56 million to Alaska carriers to fly mail around the state.

Neil Bergt, chairman of MarkAir Inc., doesn't think his airline — or other passenger airlines — got their fair share.

Bergt and MarkAir officials, aided by Alaska Sen. Ted Stevens, have led a group of passenger airlines in a quiet but powerful lobbying campaign to change the way the Postal Service divvies up the mail.

His postal proposal would give MarkAir and other passenger airlines more mail to carry — largely at the expense of Northern Air Cargo, the state's only all-freight airline.

The campaign pits Bergt's MarkAir against its longtime rival, Northern Air, in a high stakes battle for multi-million dollar mail revenues.

As passenger and freight traffic decline in the post oil-boom Alaska air economy, Bergt needs more mail to fill up the cargo holds of MarkAir's costly fleet of Boeing 737 jets.

Bergt is molding the fleet into one of the state's dominant passenger carriers. But the company is losing a lot of money. In the last quarter of 1985, MarkAir lost $1.8 million, according to a financial statement filed with the federal Department of Transportation. A financial statement put previous losses at $18.8 million.

Northern Air Cargo likes the present mail distribution system just fine. The carrier is prospering by shuttling Anchor-

age mail and oversized freight in a low-cost fleet of vintage DC-6s to 25 Bush destinations.

Northern Air's schedule includes the only direct mail service from Anchorage to about a half dozen villages. Passenger airlines shuttle mail for these villages through regional hubs, such as Nome or Bethel. The mail is then unloaded to await delivery on smaller commuter airlines.

MarkAir officials say their reform proposal is not aimed at Northern Air.

"It's a philosphical issue as to whether or not the mail should, in any way, shape or form, be a factor in providing safe and reliable and passenger service," said Jim Berg, a MarkAir vice president for finance.

Passenger airlines deserve more mail freight because they offer far more flights than cargo competitors, said Larry Anderson, another MarkAir official. The passenger airlines also have much larger investments in terminal buildings, salaries and equipment than the cargo carriers.

"We're not after Northern Air Cargo, we're after a more equitable distribution of the mail," Anderson said.

But Northern Air Cargo officials disagree.

"The MarkAir proposal must be viewed for what it is: a blatant effort to put a competitor out of business," wrote Theodore Seamens, a Washington, D.C. attorney for Northern Air, in a memo to the Postal Service.

Dennis Gladwin, a Northern Air vice president, said MarkAir is trying to fix a system that isn't broken. He has launched a vigorous public relations counteroffensive to kill the MarkAir proposal. He carries around a binder full of petitions and testimonials from villagers and shippers who like his cargo airline's mail service and don't want to see it hurt.

Postal Service officials also have problems with the MarkAir proposal. Their attorney said it's probably illegal.

Congress told the agency to develop an air delivery system that provides customers with the best possible system, wrote Michael J. Vandamm, the Postal Service's assistant general counsel, in an internal agency memorandum.

That means subsidizing the cost of mail delivery in Alaska so it's the same as in the Lower 48. But Vandamm doesn't think it means skewing the system to help bail out passenger airlines.

"There is no statutory basis for establishing a policy of distributing the mail business so as to favor passenger carriers at the expense of all-cargo and small aircraft operators," he stated.

Despite Postal Service skepticism, MarkAir's postal proposal is very much alive.

The proposal has been promoted by Stevens, chairman of the Senate Postal Subcommittee. Stevens helped arrange a meeting in Anchorage last February at which Bergt unveiled the formula to a crowded room of Postal Service and airline officials.

In a recent interview, Stevens said he's talked with both Northern Air and MarkAir officials. But he appeared to support MarkAir's proposal.

Northern Air Cargo plans to add new routes and Stevens that expansion threatens the stability of the state's air passenger system.

Mail makes up at least one-third of the revenue for most passenger airlines. Without this revenue, the passenger airlines will reduce service and raise their rates, Stevens predicted.

Today, federal Transportation Department records show Alaska passenger service levels, despite all-cargo competition, are at an all-time high. And most airfares have stabilized.

But if passenger carriers keep losing mail to cargo lines, Stevens said the state transportation system will begin to disintegrate.

"We will rue the day that happens because there is no alternative. You can't take a bus . . . ," Stevens said.

Postal Service officials are well aware of Stevens views.

In recent weeks, the Postal Service has had "a lot of correspondence" with Stevens' office about the MarkAir proposal, said Rex Maytam, a Postal Service program manager based in Washington, D.C.

Maytam, of the Postal Service, said his agency is reviewing the MarkAir proposal and may hold hearings on it later this year.

□

The mail distribution formula that Bergt is seeking to reform was written three years ago in a sweeping Postal Service policy change that broke up mail-route monopolies held by the old Wien Airlines and a handful of subcontractors.

Under the old system, the Postal Service heavily subsidized shippers who chose to mail merchandise to the Bush. In some instances, the Postal Service paid more than 90 percent of the $50 cost of shipping a 50 pound box to a Bush village.

Wien and its subcontractors loaded the groceries, merchandise and other mail in the cargo holds of passenger planes and took it to regional hubs. Village-bound mail — including perishable meat, dairy products and vegetables — then was unloaded and stored in warehouses. It often sat there for days until a smaller passenger airline, under subcontract to Wien, found room to deliver it to the villages.

The present postal distribution system retains the old system's heavy freight subsidies. But it attempts to divide up the postal money more evenly among the dozens of Alaska carriers spawned by the 1978 federal deregulation of the airline industry.

Most of the mail travels fourth class. And the formula offers roughly equivalent amounts of mail to all carriers who maintain at least once-a-day service levels to Alaska towns, said Daniel Benton, an Anchorage-based Postal Service official.

And it offers some mail to cargo planes that bypass regional hubs and fly direct from Anchorage to more than eight Bush villages. Most of these flights are offered by Northern Air; one by MarkAir.

The cargo planes fly only to villages with enough people to support once-weekly cargo trips and airstrips long enough to handle big planes.

The direct flights have been embraced by villagers and Anchorage shippers. Produce no longer rots in hub warehouses and merchandise arrives in better shape because it is handled less.

"The whole community has been behind Northern Air Cargo," said H. Vernon Slwooko, mayor of the St. Lawrence Island village of Gambell.

In St. Paul in the Pribilof Islands, Northern Air's direct flights have drastically reduced food prices by allowing frozen products to be shipped through the subsidized mail system, said Carol Melovidov, manager of the village's Aleut Community Store. The cargo service has also reduced monthly damage bills from mishandled mail by $1,000, she said.

The direct flights also save the Postal Service money. The subsidy formula often requires the Postal Service to pay much higher freight costs to passenger airlines that carry freight via the indirect flights that pass through the hub system.

For example, mailing a package from Anchorage to Gambell on a direct cargo flight costs the Postal Service 43 cents a pound. The same freight flying to Gambell via Nome on a passenger jet costs the Postal Service $1.22, according to federal Department of Transportation statistics.

Last year, Postal Service statistics showed a saving of more than $1 million from direct cargo flights to the villages.

But officials of some commuter airlines say they need those mail revenues to help finance passenger service. They don't think they get a fair share of the mail; one that fully reflects their high service levels to rural Alaska.

"You get someone coming in and sharpshooting a certain type of (air) traffic," said Richard Reeve of Reeve Aleutian Airways. "You know that the other types of traffic are going to suffer."

"They (Northern Air) carry no passengers, and they do not face the high insurance premiums," said Grant Thompson, vice president of Barrow-based Cape Smythe Airlines.

"Bypassing the hub with the mail will eventually cause a collapse of the (passenger) system," said Jim Rowe, president of Bering Air.

But commuter airlines aren't entirely united in their opposition to the direct cargo flights.

Wilfred Ryan, president of Ryan Air — Western Alaska's largest passenger airline — said his company has lost mail to Northern Air, but he doesn't favor changing the formula. Instead, he favors free-market competition between the cargo carriers and the passenger airlines.

"The ultimate benefactor is the village consumer," he said. "The cost of living is declining."

In Unalakleet, which receives direct all-cargo service, Ryan Air has responded to the competition by operating small aircraft that can be filled up with passengers alone.

Ryan hasn't supported changing the postal formula. But a half dozen other commuter airlines have joined with MarkAir to lobby for changes in the Postal Service formula.

MarkAir's proposal would help the small passenger airlines by requiring all village mail carriers to provide service at least three times a week. Northern Air officials say that level of service isn't profitable for an all-cargo airline, so they would have to end village service.

The proposal helps the large passenger airlines flying from Anchorage by heavily weighing a carrier's weekly flights and plane size. The more flights and the bigger the planes, the more mail a carrier would receive.

MarkAir, for example, flies 20 times a week to Bethel; Northern Air flies seven. The new formula would raise MarkAir's share of the mail market to Bethel from 37 to 59 percent, earning the carrier more than $500,000 in new revenue.

But according to Berg of MarkAir, the statewide effect of the MarkAir proposal would not have much effect on the carrier's revenue.

"It seems like everyone thinks this is a fight between a couple of different carriers," Berg said. "But we're not really that big of winners in this thing. We won't gain that much."

According to Berg, other passenger airlines would benefit as much, if not more, than MarkAir.

Northern Air's calculations of the MarkAir formula — using the last quarter of 1984 as a base — indicate Northern Air's state-wide mail share would drop from 20 percent to 8 percent. Meanwhile MarkAir's share would increase from 39 to 45 percent.

With only 8 percent of the mail, Northern Air couldn't afford to operate postal or freight service, said Gladwin, the company's vice president.

Stevens, when asked about Northern Air's claims that the formula would put them out of business, showed little sympathy.

"We must take whatever steps we have to assure the viability of passenger air transportation system," Stevens said.

Stevens believes the greater danger lies in allowing cargo carriers to keep grabbing more mail.

As passenger traffic softens in a faltering economy, he fears the rise of "monopoly carriers who are interested in freight delivery only."

Melovidov, of the St. Paul's Aleut Community store, said she understands the problems of the passenger airlines who are losing mail. But in a recent letter to Stevens, she urged to the senator to also consider her community's villagers who want to see Northern Air survive.

"My feelings are that the United States Postal system was initiated to benefit the people — not those private corporations that are presently backing those proposed revisions."

Dear Representative Cato:

Northern Air Cargo has been notified that House Joint Resolution #11 has been scheduled for a hearing on February 25, 1987. We have also been notified this hearing will not be teleconferenced.

During our meeting with you last week, we indicated we would be Outside at a seafood industry convention during the 25th, 26th and 27th of February. This convention is critical to our business.

We have also been informed by many of our oustomers who live in rural Alaska that they will not be able to travel to Juneau to testify because of conflicting business already committed to on February 25th. Further, some have indicated that the financial burden is a hardship they don't wish to incur in view of the current economic situation. We also have had requests from numerous seafood industry executives who are desirous of testifying and wish to have access to some sort of teleconference arrangement so that they may inform the committee of the seriousness of this resolution to their industry.

Because this resolution has a severe impact on Northern Air Cargo and our customers who are principally residents of rural Alaska, we respectfully request that this hearing be scheduled for a later date which will accomodato our schedule and teleconferencing.

Thank you for your consideration of this request on behalf of rural Alaskans.

Sincerely,

Don Brugman

Dear Representative Cato:

I would like to personally thank you for the time you spent with Don Brugman, "Jorgie" Jorgensen and myself during our recent visit to Juneau.

I hope you have had the opportunity to read the position paper we supplied regarding House Joint Resolution No. 11.

As we discussed, House Joint Resolution No. 11 is not a resolution without significant consequences. Because of the impact this resolution would have on the Bush communities, we would appreciate as much time as possible before your committee schedules the hearing.

Again, thank you for your time.

Sincerely,

Rita N. Sholton

HERMENS AIR, INC.

Box 1778 • Bethel, Alaska 99559 • (907) 543-4220

Feb. 11, 1987

The Honorable Bette Cato
Chairman House Transportation Committee
P.O. Box V
Juneau, AK 99811

FEB 17 1987

Dear Ms. Cato:

I would like to voice my support for JR-11.

Hermens Air, Inc. serves 52 villages with daily schedules from 4 hubs; Bethel, St. Mary's, Aniak, and Unalakleet. In these 4 hubs we employ 75 full time personnel.

Allowing mainline airplanes to over fly the bush hubs with mail will seriously impact the well established hub and spoke system that allows rural Alaskans a reliable and affordable system of transportation. The bush mail has allowed us to provide passenger service and comfortable facilities for the people traveling to and from the bush villages. Without the mail to these villages, passenger fares would have to be doubled putting an unnecessary financial burden on rural Alaskans. Without the mail we would not be able to operate our present facilities, and we would be forced to decrease our personnel.

Hermens Air has made a financial commitment of over a million dollars in rural Alaska in terminal facilities and large ground handling equipment to turn the mainline aircraft at the bush hubs. Hermens Air has provided a stable work environment with many benefits such as health, dental, and pension plans to rural Alaskans and we feel a strong commitment to continue to do so. That is why it is so important for you to understand the importance of JR-11 passing to support the established transportation system in rural Alaska.

If I can be of any further help in answering questions about this important subject please feel free to contact me at 543-4220 Ext. 30.

Thank you for your time and consideration.

Sincerely,

Tan Hermens

-NOTICE-

November 10, 1986

The Federal Department of Transportation is preparing a study of the impact of discontinuation of the Essential Air Service (EAS) Program, which is scheduled to expire in 1988. As part of the study, they have sent each eligible EAS community a survey and have scheduled a public meeting in Anchorage on November 17, 1986 at 10:00 a.m. in room C122 in the Federal Building. We anticipate participation by EAS communities, air carriers, possibly representatives of the Congressional delegation is anticipated and your participation would be welcome.

Attached for your information is a copy of the survey and list of EAS communities that currently receive subsidized air service. If you have any questions about the meeting, please contact Dick Steinman of the *ederal DOT at 271-5147 or Gina Lindsey of DOT&PF at 266-1460.

SUBSIDIZED COMMUNITIES IN ALASKA

Subsidized Carrier	Communities Covered by Rate	Subsidy Rate
Alaska Airlines	Cordova Gustavus Petersburg Wrangell Yakutat	$1,973,534
Chitina	Boswell Bay Cape Yakutaga Chitina Icy Bay	127,888 1/
40-Mile	Chisana	13,582 1/

Ms. Gina Lindsey
Department of Transportation
Statewide Aviation Section
P.O. Box 196900
Anchorage, AK 99519-6800

24 OCT 1986

Dear Ms. Lindsey:

As part of the Airline Deregulation Act of 1978, Congress established the Essential Air Service Program guaranteeing air service for all communities listed on air carrier operating certificates as of the date of enactment and authorized the payment of operating subsidies to air carriers, when necessary, to meet the service guarantees. Congress took this action to ensure that small communities receiving air service under the regulated system then in effect would not lose all service as a result of the deregulation provisions allowing incumbent carriers to terminate their operations.

The guaranteed service program was enacted for a ten-year period to afford communities time to adjust to a totally deregulated environment. It was envisioned that at the end of the ten-year period all communities would have to rely on the marketplace for service, without Federal assistance. The ten-year period ends on October 23, 1988.

In light of the scheduled end of the current authorization, Congress has directed us to undertake a study of the impact to small and remote communities of the discontinuation of essential air service subsidies in 1988. We are required to identify those communities that are likely to realize transportation dislocations without some level of air service support and to identify various methods and options for continued air transportation support. We must submit the report to Congress by February 1, 1987.

As an initial step in this study, we are contacting all eligible communities and the aviation agencies of the states for their views on the air service needs of these communities, the possible alternatives for meeting those air service needs after 1988 and options for funding the service, where subsidies are necessary. We have sent a questionnaire to the mayor or corresponding public offical of each community with an essential air service determination and requested that they complete the questionnaire and return it to us by November 24, 1986. We would appreciate your submitting views for your state in response to these questions and issues included in the questionnaire and have enclosed a copy of the questionnaire for you.

In addition, in order to afford affected communities and states an opportunity to explore any ideas and alternatives for consideration with us in an open forum, we are planning to hold several meetings around the country to enable us to discuss with community and state officials the service and funding alternatives and their costs and benefits so that we can provide Congress with a complete discussion and evaluation of the options. We are currently planning on holding a meeting in Anchorage in mid-November to meet with community and state officials from Alaska. We will advise you of the date, time and location of the meeting as soon as the final arrangements are made.

tentative
11/17

It is important that the communities participate fully in this process so that the record and the report adequately reflect their views and afford Congress a thorough array of options. Given the deadline for our submission and the timeframe that we must impose for responses to the questionnaire and the public meetings, it is critical that the communities begin addressing these questions immediately and preparing their responses, and we would greatly appreciate any assistance you could give us in this regard by contacting the communities in your state and coordinating their responses and forum presentations.

I would also like to provide you some general background information on the current numbers of communities receiving service under the program, the levels of traffic at those communities and the current subsidy costs, so that you can consider these facts in developing your comments and recommendations.

As noted above, all communities that were certificated as of October 24, 1978, are eligible under the program. 480 communities in the 48 states, 237 in Alaska, 9 in Hawaii and 20 in the territories are therefore eligible. Not all of these communities have been directly affected by the program, however. Within this group, only those communities that have been served by one or no certificated carrier at some time since passage of the Act are required to have an essential air service determination made by us which establishes the level of service that is guaranteed. (The transportation needs of communities that have continuously received service from two or more certificated carriers — that is the larger transportation centers such as New York, Knoxville, Tulsa, etc. — are being met by the marketplace, and therefore do not require the protection of the program.) In addition, under section 419(b) of the Act, we have added a limited number of points that were deleted from certificates during the 10-year period prior to deregulation and have issued essential air service determinations for them. As of this date, we have issued essential air service determinations for a total of 328 communities in the 48 states, 225 communities in Alaska, 3 communities in Hawaii and 7 communities in the territories. Most of these communities are presently receiving air service in the marketplace on their own without our intervention; we are only subsidizing service at 99 communities in the 48 states, 41 communities in Alaska and one community in the territories.

The enclosure with this letter lists the points in Alaska that are currently being subsidized, the carriers being subsidized and the amount of subsidy. We hope this information will be helpful to you in developing your responses regarding how the air transportation needs of subsidized communities should continue to be met.

We appreciate your cooperation and assistance in this effort and look forward to receiving your input. If you have any questions please contact Bill Boyd of my staff at (202) 366-1052.

Sincerely,

John V. Coleman

ESSENTIAL AIR SERVICE SURVEY (Alaska)

I. Demographic Information

1. Most recent community data:

Population _____

Year _____

2. Total population of actual airport service area — all surrounding area served by the local air center:

_____

II. Service Needs

3. What is the current overall annual level of traffic at your community in terms of:

(a) passenger enplanements _____

(b) cargo (pounds) _____

(c) mail (pounds) _____

4. List the major travel destinations, i.e. final destinations, for existing passengers at your community and the percentage of your community's overall traffic to each destination. Also, if direct service to the final destination is not available, indicate what connecting center(s) are used by travelers to the destination.

	Destination	Percentage of Total Traffic	Connecting Point(s)
(1)	_____	_____	_____
(2)	_____	_____	_____
(3)	_____	_____	_____
(4)	_____	_____	_____
(5)	_____	_____	_____

5. Describe the current traffic at your community. What is the frequency that most travelers use the air transportation at your community — once a year, twice a year, monthly, etc.? For all three categories — passengers, cargo and mail — indicate if there is a seasonality to traffic levels. Estimate what percentage of traffic for passengers, cargo and mail to/from your community originates at the community and what percentage originates at other areas of the state/country (directional traffic imbalance). _____

_____

_____

_____

_____

6. Does current traffic reflect total potential demand for air transportation at your community? If not, indicate the amount of additional traffic potential, the nature of that traffic and what alternative transportation those potential travelers are currently using, if any. Please indicate the basis for your conclusions, such as travel surveys or economic/community planning studies.

7. What changes in your current service would be required to realize the potential traffic? How long would it take to realize this traffic potential? Estimate the additional costs entailed for these changes in service?

8. What alternative air transportation is available to travelers at your community — such as air taxi service at the local community or air service that is accessible at nearby communities? What is the nearest (or most convenient) airport currently receiving scheduled service, other than the airport which directly serves your community? What is the distance to that airport and are there roads between your community and that airport?

9. Given the current levels of traffic at your community, what is the most efficient way of meeting the transportation needs of your community? Please explain the basis for your position.

10. If air transportation subsidies are discontinued in 1988, how would that affect air service at your community? How would it affect the community overall? Please detail the basis for your position.

11. What alternative options (relying on alternative air or ground service), new program (Federal, state or local), or changes to the existing Essential Air Service Program would you favor to meet the transportation needs of your community? Please detail proposals.

12. If the program is modified, should there be eligibility requirements such as isolation and minimum traffic standards, or any other standard that would be appropriate for communities in Alaska? If so, what standards should be established for eligibility? Please explain the basis of your position on this issue.

SUBSIDY FUNDING

13. If continued operating subsidy is required to maintain air service to your community and you support the continuation of air service, how should the subsidy be funded?

14. If subsidy is needed, would your community be willing to share in the cost? If so, to what extent and under what conditions? Are there any legal obstacles to the community's providing operating subsidy under a subsidy-sharing arrangement? Are there state funds available for air transportation subsidy?

15. Are there any other options for funding subsidy requirements that you would prefer, such as a user's tax -- federal, state or local -- use of federal transportation trust funds, general tax revenues? Please support your position on this issue. _____

_____

_____

_____

_____

_____

16. Please submit any other information, views and ideas on service requirements, subsidy programs and funding alternatives.

If more space is required for any of your responses, please use additional pages, making sure that you label your responses by the corresponding number of the question.

The completed questionnaire and any other submissions should be sent to the following address:

The Honorable Bette Cato
Chairwoman, Transportation Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Chairwoman Cato:

We have recently become aware of House Joint Resolution No. 11 which recommends the revision of the existing mail system to take into account the frequency and capacity of passenger service offered by each carrier serving a community. As one of the largest users of non-priority mail in the state, approximately 13 million pounds a year, we feel it appropriate and necessary for us to comment on any potential change to that system.

The special features of the mail system in rural Alaska were designed to accomplish social and economic objectives that are related to delivery of freight to lower the cost of goods. This efficient, cost effective system has enabled us to increase the selection of products available to our customers while allowing us to maintain low prices. ACC prides itself on being able to deliver a broad selection of goods at the lowest prices and the bypass mail system has helped make this possible. By confusing the issue of mail with passenger service it becomes more complex than it was meant to be. While passenger service in rural Alaska is important and perhaps warrants additional financial support, it should be separate from the mail revenues. It would be counterproductive should mail service suffer in an attempt to maintain a high level of passenger service. Mail revenues should continue to be used to lower the cost of bringing goods to rural communities.

From the perspective of a user of this system, it works smoothly and efficiently. While we are not against change if there is something to be gained, we believe it would be wrong to change a system that is working to one which is tied to an unrelated commodity. We would suggest that extensive hearings be conducted by the legislature prior to the passage of any resolution relating to the mail system in Alaska to better determine the impact such a change would have on the communities and people the system was established to serve. These hearings should be conducted not only by the Department of Transportation but also by the Department of Community and

Regional Affairs and should be held in communities throughout the state. In this way information can be gathered from those users of the mail system which will be affected by any change. By discussing the proposed changes with the customers who will be affected, the impact can better be determined.

It is our understanding that the US Postal Service is planning on conducting hearings throughout the state this spring in an effort to evaluate the existing system and discuss any improvements which could be made. Perhaps it would be possible to conduct legislative hearings at the same time. This could accomplish both the objective of the Post Office while providing more definitive information on which for the Legislature to base their decision. We would respectfully request that we be notified of any hearings scheduled on this resolution so that we have an opportunity to further explain the potential impact of the implementation of this resolution on the communities in which we live.

While the Alaska Commercial Company does not want to interfere with the legislative process, we do believe it imperative that additional research be conducted before a decision of such magnitude is made.

Sincerely,

Juneau, Alaska

FEB 2 5 1987

Dear Representative Cato:

It is absolutely essential that the House pass Joint resolution 11 for the benefit of the State and most of all the poeple of Alaska.

If mail is allotted to cargo only airlines, passenger service to the villages will become virtually non-existent. Cargo only airlines have the advantage of much lower insurance rates because of the lack of passenger liability. (These insurance premiums are charged on a per-seat basis--cargo airlines are not required to carry it). They would also have the benefit of the mail revenues. This would produce a "double jeopardy" situation for the airlines which do carry the passengers--increased liability AND lower revenues. The only alternative would be either to eliminate service completely or raise fares to exhorbitant levels.

The State too would severely be affected. Many of our passengers travel under State funded programs (such as medical programs). Virtually every State agency--State Troopers, Fish and Game, Dep't of Natural Resources, Dep't of Transportation to name a few--purchases tickets on our airline. We also serve

school districts such as Yukon Flats and companies which serve the needs of these schools. Tanana Chiefs, the FAA, the list goes on...! If all these organizations are forced to CHARTER in order to accomplish their business the cost to ALL government agencies and in turn to the people of the state would be astronomical. We are already experiencing requests from organizations which serve the villages to DISCOUNT fares due to budget crunches. The rise in fares which would be necessitated by this proposal would make essential travel virtually impossible.

It is absolutely imperative that the legislature THINK ABOUT WHAT IT IS DOING before allowing a situation like this to occur. The future of budgets, departments and most of all the people of the State is at stake!

Thank you.

Yours truly,

Larry Chenaille

Ms. Betty Cato, Chairperson
House Transportation Committee
P.O. Pouch V
Juneau, Alaska 99811

Dear Ms. Cato:

As all rural leaders, I am concerned with the cost of transportation for both freight and passengers in bush Alaska. The small carriers who provide these services in rural Alaska need adequate revenues to provide their services.

At the present time there are moves at the federal level to allow freight aircraft to deliver mail to communities. Such overflight of hubs will take revenue needed by small carriers to enable them to provide both freight and passenger services to rural Alaska at the present rate.

The proposed changes at the federal level will result in increased passenger fares to rural Alaskans and may impact the safety of such transportation. In addition the reliability and the frequency of services now provided by 401 carriers may be undermined. I recognize your understanding of this issue and give my full support to your resolution concerning air transportation in rural Alaska.

Sincerely,

Edward Itta

February 17, 1987

Ms. Bette Cato
Chairperson of House
Transportation Committee
Pouch V
Juneau, Alaska 99811

Dear Bette,

I am a resident of Kaktovik, have been since the day I was born.

I was approach by an agent of an airline in Kaktovik. I was told how Northern Air Cargo would like to start making runs in the slope which would limit the other airlines we have coming into our village here in Kaktovik. These Air lines we have coming in are doing just fine and they take care of the passengers just as will as they take care of the cargo.

If Northern Air Cargo is going take over the cargo the airfare of the other airlines we have coming into our village may go so many dollars higher and cut their travel here which I sure don't want to see happen especially since our village is so far away from the nearest Hospital.

Please keep in mind that we cannot afford to pay such high airfares as it is now. Also keep in mind our Senior Citizens who cannot afford anymore high airfare to go see Doctors out of our village.This can happen should Northern Air Cargo decide to take over the Cargo leaving the other Airlines with much higher airfare and this would limit the regular schedule flights that we have now.

It would be good if the Northern Air Cargo would reconsider their proposal not to take over the whole cargo route.

Sincerely,

Susie T. Akootchook

Dear Chairwoman Cato:

We are opposed to the adoption of House Joint Resolution No. 11 relating to transportation of mail to Mainline and Bush communitites in Alaska.

The intent of the resolution is to have the U.S. Postal Service subsidize the passenger air service. What the resolution fails to recognize is that the majority of all people living in rural Alaska, have benefited from the deregulation of the airlines, which in fact has brought more frequent passenger service, along with competitive air freight service to Alaska villages for the first time in many years of airline monopoly of mail service.

It is a known fact that just a few airlines in the State of Alaska who want to control mail servie object to competition and favor this House Bill No. 11.

As an Alaska Native owned cooperative which has been in business for over 40 years, serving over 40 different rural Alaska villages, we urge that House Joint Resolution No. 11 be defeated.

Sincerely,

Dear Chairwoman Cato:

We are opposed to the adoption of House Joint Resolution No. 11 relating to transportation of mail to Mainline and Bush communities in Alaska.

The intent of the resolution is to have the U.S. Postal Service subsidize the passenger air service. What the resolution failed to address is that the majority of people in the Bush and Mainline communities in Alaska depend more heavily upon cheaper freight rates, for the delivery of food and supplies that only cargo carriers can provide, than for cheaper passenger air fare. Presently, air fare into the Bristol Bay is one half of what it was last year and very adequate. This is due to increased competition. Therefore, we urge that House Joint Resolution No. 11 be defeated.

Sincerely,

P. O. Box V
Juneau, AK 99811

Dear Representative Cato:

This letter is to express MarkAir's support of House Joint Resolution #11.

Current U.S.P.S. mail distribution methods encourage all-cargo aircraft providing infrequent flights into communities. This practice reduces federal funding of the Alaskan transportation system and will result in higher passenger fares and fewer jobs at community passenger airlines.

I am confident that MarkAir is one airline among many who feel that mail revenues are the backbone of the Alaskan passenger transportation system.

Very truly yours,

Robert Ensminger

Cape Smythe Air

The Honorable Bette Cato, Chairman
House Transportation Committee
P. O. Box V
Juneau, Alaska 99811

Dear Ms. Cato:

I am writing this letter in support of HJR - 11. I feel it is very important that our state understand the problems that are about to occur in rural Alaska if the larger all cargo aircrafts are allowed to continue to haul the mail past the hubs.

If the all cargo aircrafts are allowed to continue to do this, we will see a great deterioration of the system now in place that has evolved over many years.

The communities of rural Alaska deserve to have good and reliable scheduled services at reasonable rates as other parts of the state. The mail that goes to these communities helps provide revenues that enable carriers such as Cape Smythe Air to provide this service. If the mail is taken away and given to the all cargo carriers then service will have to decline and fares will have to rise.

Cape Smythe Air is a 401 Federally Certified carrier that operates in the Arctic and Northwestern Alaska. We operate from three hubs: Barrow, Kotzebue, and Nome with a total of 73 employees. We are owned by a life long native resident of Alaska, Thomas P. Brower, who has hauled mail in Alaska since back in the days when mail was transported by sailing vessels and dog teams. We have spent lots of money in trying to provide a service that is greatly needed in rural Alaska.

At present we are finding it hard to maintain services due to the cut backs and the declining of revenues that all businesses and the state are experiencing. This makes HJR - 11 even more important because if the US Postal service saves money by giving the mail to the all cargo carriers, then that in turn translates down to less dollars in rural Alaska, the area that will hurt first with declining revenues.

I thank you for your consideration in this matter and appreciate your having this hearing on the 25th. If I can be of any further assistance in this, I may be contacted at 852-8333.

Sincerely,

Grant B. Thompson

Rep. Adelheid Herrmann
Pouch V
Juneau, Ak. 99811

Dear Adelheid:

Enclosed are copies of letters to Senator Stevens and the Alaska Air Carriers Association, explaining our resignation from the AACA.

The AACA now has only 28 members and I feel it has become controlled by a small segment of the industry which is trying to force the Postal Service to favor a few particular carriers to the detriment of the general public.

In particular I feel you should be very careful in supporting HJR 11, as it may affect your constituents for instance in Togiak and St. George.

What has happened in those small communities now receiving direct large aircraft mail and freight service is what I would call progress, as their runways have been upgraded to support large aircraft operations it has become economically possible.

If Federal help is necessary to maintain good passenger transportation for some communities and situations (and I agree that Federal help is necessary), there is already exists the perfect program, the Essential Air Service Act, to improve transportation without forcing the Postal Service to operate ineffectively and expensively.

The real effort needed in the coming year is to get the Congress to extend the EAS indefinitely, and possibly expand it to more better cover these situations.

So please don't listen to a few carriers that tell you that if the system isn't changed they are going to hurt passenger service, because whenever I see points not being served properly, I can tell you my company will be there to provide service.

Very truly yours

Dear Cindy:

This letter is to inform you of the resignation of Peninsula Airways from the AACA.

While I firmly believe in the concept and the need of an organization to represent the industry as a whole, I am concerned that the membership has dwindled so badly that the Association no longer has a true representation of the industry as a whole.

I truly appreciate the time and effort you have put into the association, we all know it is far over and above what your compensation is, and I certainly hope you can continue your efforts to regain membership and make the AACA a united and state-wide voice of the industry as a whole.

When it is apparent that a majority of the operators see the need and are willing to participate in such an association, I would very much like to have the opportunity to rejoin.

Very truly yours

TELEPHONE: (907) 243-7701

March 3, 1987

Senator Ted Stevens
522 Hart Senate Office Bldg
Washington, D. C. 20510

Dear Ted:

Enclosed is a copy of my letter to The Alaska Air Carriers Association, resigning our membership from that organization.

Out of some two hundred Commercial Operators throughout the State, only 28 now belong to AACA. Of the more than 45 mail carriers on the DOT service list, fewer than 20 belong to AACA.

Since the AACA no longer represents a true cross-section of the industry, I don't feel our name should be used in support of programs we don't agree with, the mail issue being one.

While I do sympathize with the large passenger carriers need to operate profitably while providing convenient service, I don't think the Postal Service should be used to operate inefficiently for its patrons.

If the Federal Government is to help guarantee jet service to Alaskan communities, the proper program to use is the Essential Air Service Act.

My strong feeling is that we should all be working together to prevent termination of the EAS, as the Administration seems to want, as well as extending the program for another ten years.

The EAS funds have been very efficiently used to cover deficiencies in service at specific communities. This program helps guarantee the right of every U. S. citizen to reasonable access to the National Transportation System at much lower cost to the taxpayer than the old regulated subsidy system.

Very truly yours

The Honorable Bette Cato
Cairwoman, Transportation Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Chairwoman Cato:

We are opposed to the adoption of House Joint Resolution No. 11, relating to the transportation of mail, by passenger air carriers, only.

The reason we oppose this resolution, is, if it is passed, the United States Postal Service would be subsidizing the passenger air lines.

These air passenger carriers are concerned with service to their "Main Line" communities only, and not to the bush communities like Holy Cross, who are served by small bush air taxi companies. An example, several years ago, befor the all cargo air service we enjoy now, We, Holy Cross Mercantile, ordered several snow-machines. They were promply delivered to Aniak, by the Main Line Passenger Carrier, then they sat there for 6 weeks waiting for the air passenger carrier to bring in a plane large enough to carry them the rest of the way to Holy Cross. Another example, By-Pass Mail: This is how we order our groceries for the store. By-pass mail is handled by the passenger air line much in the same manner. They drop it off in Aniak and then the bush air taxi people transport it on to Holy Cross, in small planes, 600 to 700 pounds at a time. This takes them anywhere from 3 days to 2 weeks to accomplish. In the process, there was always some loss, damage, spoilage, and pilferage. With the service we now have, an all cargo air carrier, we have no damage, no loss, no pilferage, and its a one day service. Freight costs are down by at least 15¢ a pound, if not more. I could go on and on, but enough is enough.

Mark us down as being opposed to the House Joint Resolution No. 11.

Thank you very kindly for your interest in this matter.

Sincerely,

Roy A. Prestegard

February 25, 1987

The Honorable Bette Cato
Chairwoman, Transportation Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Chairwoman Cato:

We, the people living in Holy Cross, are opposed to the adoption of House Joint Resolution No. 11, relating to the transportation of mail to 'Hub' and 'Bush" communities in Alaska.

We feel that the intent, of the resolution, is to have the United States Postal Service subsidize the passenger air carriers.

Living in Holy Cross, we are more concerned about costs and timely delivery of food and other supplies. Freight cost, which effect everyone of us, is lower now than it ever has been, thanks to an all cargo freight carrier serving Holy Cross. Passenger air fares are also reasonable. We have 3 passenger air carriers now serving Holy Cross. Just recently all of them lowered their fares between Holy Cross and Anchorage...which to us indicates that their revenue is adequate. They don't need to be subsidized by the United States Postal Service, or anyone else.

Therefore we urge that, House Joint Resolution #11 be defeated.

Sincerely,

Residents of Holy Cross, on the Yukon

HOLY CROSS LOOSES NORTHERN AIR SERVICE

According to House Joint Resolution Number 11, dated January 30, 1987; we are in possible trouble.

Marc Air is trying to get legislation passed - that would eliminate Northern Air Cargo from visiting our community.

"Whereas it is critical to the provision of adequate passenger service in Alaska that the U.S. Postal Service equitably apportion contracts for the carriage of mail among carriers and that the U. S. Postal service seriously consider the level of passenger service offered by carriers to each affected community in awarding contracts for carriage of mail".

Can yu imagine a return to very few fresh vegitables, meat, or other items in our stores ? Can you imagine a small air carrier bringing in your large piece of equipment or furnature ?

I believe that our cost of shipping large items will increase quite a bit, compared to what it is now.

We have grown accustomed to the finer things of life - does someone wise have the right to change things for us ?

The Northern Air agent has been contacted - and will have a petition to sign - if you want to keep things the way they are now.

If you are the person that likes to write letters (50 words or less) - here are a few names of people who should "listen" to you.

Representative Al Adams
Representative Kay Wallis
Representative Adelheid Herrmann
Representative Heinrich Springer

If you are the person that likes to talk on the phone - here is a number.

Legislative Affairs Office
Anchorage, AK
Phone: 278-3688

This matter goes to hearing in Juneau on Wednesday February 25, 1987.

This article does not represent the IASD School District views or policy. I am writing this because - I live in Holy Cross and consider this my home.

ATV Contest

During the month of March - we will have a person from the Health Corporation - on site to talk about three and four wheel safety. I understand that we will have contests for the students and community There is a possibility that trophies will be awarded to the best participants.

SPECTACULAR BIG EVENT!

Some of our students will be attending the SWABB meet in McGrath this coming week. The meet will be February 26-28.

Those eligible will be notified this friday February 20, 1987.

The letters stand for (S)skiing; (W) writing; (A) art and (BB) battle of the books.

The students are expected to participate in two of the events.

This is a tough competition and we send our best wishes with our team.

We are winners !!

COMING SOON!

The next printing of the newspaper will feature the Kindergarden and First grade.

The students will be writing stories and drawing pictures for you.

At present the staff plans to have students help with the collection, editing, and printing of the INJUN BULL.

The staff of the school wishes to thank you for your support.

We are the PRIDE OF THE YUKON

INJUN BULL

HOLY CROSS SCHOOL NEWSPAPER

VOL.87
NO. 1

CREATED BY THE STUDENTS AND STAFF

ART IN SCHOOL

This week we have Bev Shupp visiting us from McGrath.

She is an art teacher, and will be teaching our students many different types of art.

You will see many projects done by our children by the end of the week.

Bev will be leaving us this Friday or Saturday.

Many thanks to Bev !!

Tutor Program

During the week of February 16-21 the school will begin a new program.

The tutor program will help some of the students in subjects they are having trouble with.

The skills to be taught are reading comprehension, main idea, basic skills, problem solving and study skills.

The tutors will be Mary (Sims), Judi (Walker) and LeeAnn (Tyree).

Congradulations to the lucky students.

Community Education

James Anthony Jr. is our new Community Education person.

He started the job February 10, 1987.

Willie is responsible for many duties. Some of which are: directing events for the Elders, young children, care of the gym and setting up local contest events.

The students will notice that one of the school policies will now be enforced.

If students are reported to the office for -- excessive tardies; homework not turned in; discipline problems or truancy -- they will not be allowed to participate in activities for a period of one week.

This policy goes hand-in-hand with the eligibility code of our school.

THE STOPS HERE

ELIGIBILITY

The recent policy code adopted by the ASB concerns the eligibility rules for the students wishing to attend a school sponsored trip.

In a nut-shell the policy states -- students are responsible for their conduct in school, grades, attendance and homework.

Students and parents/guardians will be notified by the school 5 (five) school days before an event, whether a student is eligible to go on a trip.

This policy is in accordance with the INSD School Board policy.

MID-TERM GRADES

This week marks the middle of the third nine weeks of the school year.

As usual, the teachers will be contacting you with student grades and recommendations for improvement.

The mid-term reports are necessary tools. They let you know where your child needs help and lets the students know exactly what they have to work on.

NOORVIK IRA COUNCIL
P.O. Box 71
Noorvik, Alaska 99763

MAR 15 1987

March 13, 1987

The Honorable Bette Cato
Chairwoman, Transportation Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Chairwoman Cato:

The Noorvik IRA Council, on their March 9, 1987 meeting, opposed the adoption of House Joint Resolution No. 11 relating to transportation of mail to mainline and bush communities in Alaska.

The resolutions main concern is for the provision of scheduled passenger air service, without and reference to what might occur to freight rate costs if the formula proposed by the resolution is adopted. The IRA Council's concern is that, under the proposed formula, freight costs would go up and delays in mail/freight services to the villages would occur.

Presently, with the air carrier competition, Northwest Area villages including Noorvik, have greatly benefited through cheaper freight rates and air fares and more flights for mail delivery. The people of Noorvik are more dependant on cheaper freight rate costs, then they are on cheaper air fares, because of the impact it has on the cost of living. For that reason, we urge that House Joint Resolution No. 11 be defeated.

Sincerely,

NOORVIK IRA COUNCIL

SUBJECT: HJR 33 - Relating to the Shipping of Oil

House Joint Resolution 33, relating to the shipping of Alaska oil, has been scheduled for a hearing in the House Transportation Committee on Monday, May 4th.

This resolution urges the Secretary of the United States Department of Transportation to adopt before July 16, 1987, a rule that would enable four very large crude oil carrier ships to continue to operate in the United States domestic shipping market without interruption.

Attached is a brief background and summary of the reason for this resolution. It is important that we act expeditiously on the resolution because if the U.S. Department of Transportation fails to adopt a rule by July 16, 1987, the transportation of Alaska oil may be disrupted. In addition, the transportation costs will increase substantially, and the state government could stand to lose a significant amount of money.

I appreciate your consideration on this resolution. Thank you.

HOUSE JOINT RESOLUTION 33

HISTORY

On January 16, 1987, the U.S. Court of Appeals decision (First Attransco Tanker Corp. vs. Dole) vacated a Department of Transportation ruling. The DOT ruling permitted three very large crude carrier ships to repay the remainder of their construction subsidies in 1985/6. In doing so, they became Jones Act ships rather than just U.S. flag ships.

The Court ruled that the Secretary of Transportation was well within her authority to permit this repayment. However, the Court also ruled there were procedural defects in that she did not adequately explain the effect of this action on other Jones Act ships. Thus the ruling was unjustified. The decision requires all three ships to cease Alaskan service on July 16, 1987, unless the Department of Transportation explains the effect on other Jones Act ships to the Court's satisfaction.

Prior to repaying the subsidy, these three large, efficient U.S. flag ships were not allowed to carry Alaskan oil unless there were no suitable Jones Act ships available. Even under those circumstances these ships could only be used part time (no more than six months out of the year). A fourth ship which entered Jones Act trade under generally similar circumstances in 1983 is also vulnerable to the ruling.

In total these four ships are currently moving 200,000 barrels of Alaskan oil to market every day. If they are taken out of the fleet, then a large number of much smaller, less efficient and more expensive ships must take their place if the Alaskan oil is to get to market. This would raise the market price for all Jones shipping by an estimated 25 cents to $1.00 per barrel.

An increase in the cost of transportation not only reduces oil company income and incentive in Alaska but also reduces the netback value of all Alaskan production. For example, each 50 cent increase in per barrel transportation cost would reduce state income by roughly $75 million per year.

Given this situation, Alaska should support the DOT's intention to issue a new rule confirming that these vessels should remain Jones Act vessels as soon as possible because of the July 16, 1987 deadline.

Attached is further information regarding this "Repayment of Construction Differential Subsidies (CDS)".

Repayment of Construction Differential Subsidies (CDS) (also called "CDS Sanitization")

DISCUSSION ISSUES:

The following information should be noted in discussion of CDS Sanitization:

- This is a significant economic issue for Alaska. Removal of the four large efficient ships will require using nearly all the smaller ships available, driving the market price for all shipping up by $.25 to $1 per barrel. Netback values on the crude oil will decline accordingly. Each $.50 per barrel reduction in netback represents roughly $75 MM per year in lost state revenues.

- Alaskan oil production has increased significantly in the last year, highlighting the need for efficient transportation. The Lisburne field (40-50 MBD) began commercial production in early 1986, Prudhoe Bay production increased with natural gas liquid (NGL) recovery in early 1987 (50 MBD). Kuparuk has reached peak production, and Endicott field is expected to begin production in the fourth quarter of 1987 (up to 100 MBD).

- Largely because of the increased Alaskan production the four large, efficient VLCC vessels in question have been in continuous service since repayment of their remaining subsidy: the BROOKLYN and the BAYRIDGE under charter to EXXON, and the ARCO INDEPENDENCE and the ARCO SPIRIT under long term charter to Standard Oil.

- Larger vessels make the transport of crude oil to the West Coast and Gulf Coast more economically efficient than smaller vessels. This is especially true to the Gulf Coast, which accounts for a substantial portion of the Alaskan oil delivered.

Plans, Programs and Budget

The Honorable Elizabeth H. Dole
Secretary
Department of Transportation
400 Seventh Street, S.W.
Room 10200
Washington, D.C. 20590

Dear Secretary Dole:

The State of Alaska is concerned about a recent court decision and possible action by Congress that could seriously affect the Alaska North Slope oil trade.

As you know, the decision in Independent U.S. Tanker Owners Committee v. Dole, vacating a Department of Transportation ruling which allowed three VLCC class CDS ships to enter the Alaskan trade, would cause higher transportation costs for Alaska oil. The court decision would force the use of smaller, less efficient tankers, assuming alternative transportation is even available. The added expense of using smaller tankers would cause the State to lose millions of dollars in severance taxes and royalties. Significant revenue losses would also be incurred by the Federal government.

As you are probably aware, the Maritime Administration (Marad), in a notice of intended action in the March 11, 1987 Federal Register, promised to address the CDS issue through new rule making. However, to date proposed rules have not been published. The Court vacating the rule stayed its order until July 16, 1987. We are concerned that any delay in promulgating a new rule could allow the July court deadline to take effect, given the stringent requirements of the Administrative Procedure Act and the various regulatory approvals which must be obtained before final rule making. To safeguard Alaska and the nation from large scale disruption in the North Slope oil trade, and to protect all the parties that have relied on the previous Department of Transportation ruling struck down by the Court, we urge that you expeditiously issue the necessary regulations.

Regarding a parallel issue, we appreciate your efforts, including your letter to Chairman Whitten of the House

Appropriations Committee, to reject an amendment, which would block Marad from proceeding in any manner to act on the CDS repayment. Although the Committee adopted the amendment, the State of Alaska looks forward to working with you to ensure that this measure will eventually be rejected by Congress. Toward this end, my Washington, D.C., staff has already been in touch with Rebecca Range of your department.

Thank you for your consideration of these matters.

Sincerely,

Steve Cowper
Governor

MEMORANDUM
STATE OF ALASKA DEPARTMENT OF REVENUE
PETROLEUM RESEARCH SECTION

TO: Eric Ostrovsky, Governor's Office, Washington, D.C.
FROM: Roger Marks, Petroleum Economist
SUBJECT: CDS Tankers
DATE: April 2, 1987

Our June 1985 analysis showed that CDS tankers could save 45% on average shipping costs over non-CDS tankers. This amounted to $1.25/bbl for Gulf Coast shipments and $0.57/bbl for West Coast shipments. Since repayment we have seen average tanker rates to destinations east of Panama drop 75 cents.

The three CDS tankers now engaged in ANS trade are moving oil to the U.S. Gulf Coast, and can carry 60 million barrels of ANS per year.

The losses to the State from removal of these tankers would accrue from lower wellhead values due to higher transportation costs. We estimate these losses to be a minimum of $18 million and as much as $50 million annually:

Royalty Effect

60 X 1.25 X .125 = $9.4

Severance Tax Effect

60 X 1.25 X (1 - .125) X .15 X .84 = $8.3

TOTAL $17.7 million

(The severance tax is levied on non-royalty oil. The severance tax rate is 15 percent. The economic limit factor (ELF), which reduces the effective severance tax rate as well productivity declines, is estimated to be 0.84 over the near term.)

This can be considered a conservative estimate. The reduced competition from removal of the tankers (the tanker market is tight now) could raise transportation cost for all ANS, in which case the State could stand to lose over $50 million annually if tanker rates on all shipments to the Gulf Coast returned to the previous level:

Royalty Effect

300 X 0.75 X .125 = 28.1

Severance Tax Effect

300 X 0.75 X (1 - .125) X .15 X .84 = 24.8

TOTAL $52.9 million

TESTIMONY OF STANDARD OIL ON HJR 33

THE JONES ACT REQUIRES THAT ALL CARGO TRANSPORTED IN THE DOMESTIC TRADE BE CARRIED ON VESSELS BUILT IN THE UNITED STATES, DOCUMENTED UNDER UNITED STATES LAW, CREWED BY U.S. SEAMEN AND OWNED BY U.S. CITIZENS. UNDER THE MERCHANT MARINE ACT, JONES ACT TANKERS MUST BE BUILT WITHOUT CONSTRUCTION SUBSIDIES AND MUST OPERATE WITHOUT DIRECT FEDERAL OPERATING ASSISTANCE. TANKERS BUILT WITH CONSTRUCTION DIFFERENTIAL SUBSIDY (CDS) ARE ALSO U.S. BUILT, MANNED AND OWNED BUT THESE VESSELS ARE NOT PERMITTED PERMANENT TRADING PRIVILEGES IN THE DOMESTIC TRADE BECAUSE OF THE SUBSIDY THEY RECEIVED.

IN 1977, DEMAND FOR LARGE U.S. FLAG CRUDE TANKERS TO CARRY ANS CRUDE FROM VALDEZ TO PANAMA WAS GREATER THAN THE JONES ACT FLEET COULD SATISFY. IN ORDER TO ALLEVIATE THE SHORTAGE OF LARGE, JONES ACT CRUDE TANKER CAPACITY, VERY LARGE CARGO CARRIERS (VLCC) BUILT WITH CDS WERE GIVEN PERMISSION TO ENTER THE ANS TRADE ON A TEMPORARY BASIS. THESE VESSELS WERE ORIGINALLY BUILT FOR FOREIGN TRADE BUT REDUCED WORLD PETROLEUM DEMAND AND THE HIGHER COST OF US FLAG VESSELS MADE THESE VESSELS UNSUITABLE FOR IMPORT TRADES.

IN ADDITION TO THE SECRETARY'S AUTHORITY TO TEMPORARILY WAIVE JONES ACT SHIP REQUIREMENTS, THE SECRETARY HAS UNDER THE MERCHANT MARINE ACT, THE AUTHORITY TO ELIMINATE ALL DOMESTIC TRADE RESTRICTIONS ON A VESSEL CONSTRUCTED WITH CDS IN EXCHANGE FOR FULL REPAYMENT WITH INTEREST OF THE CDS OBLIGATION. FIVE SHIPS HAVE BEEN ALLOWED TO REPAY THEIR CDS OBLIGATIONS, THE STUYVESANT, BAY RIDGE, BROOKLYN, ARCO SPIRIT AND ARCO INDEPENDENCE. ALL OF THESE SHIPS ARE IN THE ALASKA TRADE.

ON MAY 7, 1985 THE DEPARTMENT OF TRANSPORTATION PUBLISHED A FINAL RULE WHICH

WAIVER ON THE

ALLOWED THESE VESSELS TO OBTAIN A PERMANENT BAN ON DOMESTIC TRADING PRIVILEGES. ON JANUARY 16, 1987, THE COURT OF APPEALS RULES THAT THE SECRETARY VIOLATED THE ADMINISTRATIVE PROCEDURE ACT IN ADOPTING THIS RULE. THE COURT VACATED ITS ORDER, HOWEVER, UNTIL JULY 16, 1987 TO"ALLOW THE SECRETARY TO UNDERTAKE FURTHER PROCEEDINGS TO ADDRESS THE PROBLEMS OF THE MERCHANT MARINE."

SINCE

THE DEPARTMENT HAS PROPOSED A RULE WHICH WOULD REAFFIRM ALLOWING THESE VESSELS IN THE ANS TRADE.

THE FINANCIAL EFFECT ON STANDARD IF WE ARE NOT ALLOWED TO CONTINUE UTILIZING THESE SHIPS IS IN THE MILLIONS OF DOLLARS.

THE FINANCIAL EFFECT ON THE STATE OF ALASKA FROM REDUCED ROYALTIES AND SEVERANCE TAXES ARE ESTIMATED TO RANGE FROM$18-150 ANNUALLY. IF THE PROPOSED RULE IS NOT ALLOWED TO TAKE EFFECT.

STANDARD STRONGLY SUPPORTS THE RESOLUTION BEFORE YOU. ALLOWING THESE SHIPS IN THE ANS TRADE IS IN THE BEST INTEREST OF BOTH THE ALASKAN OIL INDUSTRY AND THE STATE OF ALASKA.

SPONSOR SUBSTITUTE FOR HOUSE JOINT RESOLUTION NO. 46

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

Requesting the Federal Aviation Administration to exempt aircraft in Alaska from regulations on the size of aircraft registration numbers and on supplemental identification plates.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS agencies of the federal government sometimes adopt regulations that have detrimental effects on the Alaskan economy and that cause inconvenience to Alaskans; and

WHEREAS federal regulations are sometimes not relevant to Alaska and serve no useful purpose; and

WHEREAS the Federal Aviation Administration has adopted regulations that require 12-inch registration numbers on aircraft entering or leaving an Air Defense Identification Zone (ADIZ) or a Distant Early Warning Identification Zone (DEWIZ) and a supplemental identification plate on the exterior of aircraft; and

WHEREAS some parts of Alaska are included within an ADIZ or DEWIZ and other parts are not, and thus those aircraft that fly in and out of these zones must display 12-inch registration numbers, but those aircraft that never enter or leave one of these zones may continue to display three-inch registration numbers; and

WHEREAS it is nearly impossible to predict whether an aircraft in Alaska will ever need to enter or leave an ADIZ or DEWIZ; and

WHEREAS compliance with these regulations imposes an estimated cost of up to $215 per aircraft; and

WHEREAS these regulations were adopted to assist the U.S. Customs Service in identifying aircraft suspected of carrying illegal drugs across these zones; and

WHEREAS there has been no documented case in Alaska involving a small aircraft entering an ADIZ or DEWIZ transporting illegal drugs; and

WHEREAS these regulations apply to tourists who visit Alaska by private plane; and

WHEREAS the International Cessna 170 Association has chosen to hold a convention in Fairbanks during July 1988 with an expected attendance of 100 aircraft, most of which will be Cessna 170's ranging from 32 to 40 years old; and

WHEREAS these regulations will have a negative effect on the number of visitors coming to the state by private aircraft for the International Cessna 170 Association convention and for business and tourism purposes; and

WHEREAS the Federal Aviation Administration is presently considering proposals to redefine the Alaska ADIZ;

BE IT RESOLVED that the Alaska State Legislature respectfully requests the Federal Aviation Administration to either exempt aircraft flying within Alaska and between Alaska and the other states from 14 CFR 45.11(a) and (d) and 14 CFR 45.29(h) or grant an exemption from these regulations to participants in the International Cessna 170 Association convention; and be it

FURTHER RESOLVED that the Alaska State Legislature respectfully requests the Federal Aviation Administration to exempt aircraft flying between points in Alaska from these regulations when the boundaries of the Alaska Air Defense Identification Zone are redefined.

COPIES of this resolution shall be sent to the Honorable James H. Burnley IV, Secretary of Transportation; the Honorable T. Allan McArtor, Administrator of the Federal Aviation Administration; and to the Honorable

Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

Steve, we might do include this

FURTHER RESOLVED that the Alaska State Legislature respectfully requests the Federal Aviation Administration to authorize the Alaska Region of the Federal Aviation Administration to grant temporary relief from the regulation requiring 12-inch registration numbers to those pilots who penetrate the current Alaska Air Defense Identification Zone until the new description of the Alaska Air Defense Identification Zone is adopted.

COPIES of this resolution shall be sent to the Honorable James H. Burnley IV, Secretary of Transportation; to the Honorable T. Allan McArtor, Administrator of the Federal Aviation Administration; and to the Honorable Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

IN THE SENATE

SENATE JOINT RESOLUTION NO. 56

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

Requesting the Federal Aviation Administration to redescribe the Air Defense Identification Zones north of the contiguous 48 states of the United States.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Federal Aviation Administration has adopted regulations that require 12-inch registration numbers on aircraft penetrating an Air Defense Identification Zone (ADIZ) or a Distant Early Warning Identification Zone (DEWIZ); and

WHEREAS these regulations were adopted to assist the U.S. Customs Service in identifying aircraft suspected of carrying illegal drugs across these zones; and

WHEREAS there has been no documented case in Alaska involving a small aircraft entering an ADIZ or DEWIZ transporting illegal drugs; and

WHEREAS these regulations will have a negative effect on the number of individuals coming to Alaska by private aircraft for business and tourism purposes, for example, the International Cessna 170 Association convention in Fairbanks;

BE IT RESOLVED that the Alaska State Legislature respectfully requests the Federal Aviation Administration to proceed in the most expeditious manner with the redescription of the Alaska Air Defense Identification Zone and other Air Defense Identification Zones north of the contiguous 48 states of the United States in order to eliminate the requirement that aircraft flying in Alaska and between Alaska and the other states penetrate these zones; and be it

FURTHER RESOLVED that the Alaska State Legislature respectfully requests the Federal Aviation Administration to authorize the Alaska Region of the Federal Aviation Administration to grant temporary relief from the regulation requiring 12-inch registration numbers to those pilots who penetrate the current Alaska Air Defense Identification Zone until the new description of the Alaska Air Defense Identification Zone is adopted.

COPIES of this resolution shall be sent to the Honorable James H. Burnley IV, Secretary of Transportation; to the Honorable T. Allan McArtor, Administrator of the Federal Aviation Administration; and to the Honorable Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

New Regs

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Parts 43, 45, and 91

[Docket No. 25033; Amendment Nos. 43-29, 45-17, and 91-206]

Aircraft Identification and Retention of Fuel System Modification Records

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This final rule amends the Federal Aviation Regulations to require: (1) that 12-inch high nationality and registration marks be displayed on all aircraft that penetrate an Air Defense Identification Zone or a Defense Early Warning Identification Zone; (2) that a civil aircraft identification data plate be displayed on the exterior surface of each U.S.-registered aircraft; and (3) that a copy of the form which authorizes the alteration of an aircraft with fuel tanks within the passenger or a baggage compartment be kept on board the modified aircraft.

These amendments are necessary because of the increased dangers to civil aviation resulting from the major increase in illegal drug importations into the United States by air. They are intended to expand the effectiveness of narcotic interdiction and, thereby, provide for improvement in safety of civil aviation operations, while at the same time reducing the flow of drugs by air into the United States.

EFFECTIVE DATE: December 8, 1987.

FOR FURTHER INFORMATION CONTACT: Joseph J. Gwiazdowski, Aircraft Manufacturing Division (AWS-200), Office of Airworthiness, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591, telephone (202) 267-9541.

SUPPLEMENTARY INFORMATION:

Background

Although the Federal Aviation Airworthiness (FAA) does not enforce the anti-drug smuggling and related criminal statutes, it is concerned with the hazards to air commerce in the United States arising from the use of aircraft to escape detection while importing illegal, contraband substances (narcotic drugs, marijuana, and depressant or stimulant drugs) into the United States. The hazards to air commerce have increased consistent with the growing number of pilots who are willing to risk the carriage of these illegal goods despite escalating law enforcement activities. The U.S. Customs Service (Customs) reports that the vast majority of illegal drug trafficking by air into the United States passes through an Air Defense Identification Zone (ADIZ) or Defense Early Warning Identification Zone (DEWIZ). The means for detection of these aircraft include low altitude radar, law enforcement pursuit aircraft, and advanced police techniques. Those pilots committed to evading detection by pursuit aircraft may engage in extremely dangerous flight techniques, such as very low flight to avoid radar; landing and taking off from unprepared landing areas; operation without lights; and operation in weather conditions beyond the capability and/or qualifications of the aircraft or pilot. These flight techniques create a safety hazard for all other aircraft in the area and for persons and property on the ground. Additionally, many of the aircraft used for such operations have been equipped with extended-range fuel tanks which are not installed in accordance with the Federal Aviation Regulations (FAR), posing an additional safety hazard. Thus, while other agencies are responsible for criminal law enforcement concerning illegal substances (narcotic drugs, marijuana, and depressant or stimulant drugs), the hazardous aeronautical activities of pilots engaged in smuggling and the potential increase in volume of these substances into the United States pose a direct threat to air commerce. This threat was a basis for the FAA adopting § 91.12 of the FAR, which provides that no person may operate a civil aircraft within the United States with knowledge that narcotic drugs, marijuana, and depressant or stimulant drugs are carried in the aircraft, unless authorized under Federal or State law. During several meetings, the FAA and Customs representatives focused on actions required to develop more effective means to reconcile specific drug enforcement problems involving aircraft. In a July 11, 1985, letter to the FAA, the Assistant Secretary of the Department of Treasury outlined and proposed the specific regulatory amendments which Customs considered to be necessary to assist it in curbing use of aircraft carrying illegal substances and to identify those aircraft which may be used for drug smuggling. Customs believes that their proposed amendments represent a significant step toward curbing the use of aircraft for drug smuggling. The proposed amendments are based on the increase of illegal drug importation by aircraft and on the value to law enforcement officials of positive identification of all aircraft including those aircraft which may be involved in such activities. The problems identified by Customs include:

1. Positive air-to-air identification of aircraft penetrating an ADIZ or DEWIZ is hindered by the difficult-to-read 3-inch identification marks displayed on some of these aircraft;

2. Aircraft with identification (I.D.) plates which cannot readily be seen hamper the prompt identification of stolen or falsely numbered aircraft; and

3. Inability to readily verify unapproved aircraft modifications involving unauthorized fuel tanks in the passenger compartment or a baggage compartment because the records for approved aircraft modifications are not required to be kept aboard the aircraft.

On July 3, 1986, the FAA issued Notice of Proposed Rulemaking (NPRM) No. 86-9 (51 FR 25174; July 10, 1986) proposing responses to these three problems raised by Customs.

Registration Numbers

As discussed in the notice, Customs and other law enforcement groups, in combating drug trafficking by air, frequently must attempt to identify, from a high-performance aircraft, a small low-performance aircraft including aircraft suspected of being used in the illegal activity. Often these operations must be performed at night using special devices and capabilities to enhance identification and to apprehend smugglers. Many of the suspected aircraft have small, 3-inch nationality and registration marks (N-numbers) which are difficult to see or detect when attempting air-to-air identification. This requires maneuvering relatively close to these aircraft so that positive identification can be made. The use of larger registration marks makes identification easier and results in safer operation by maintaining a larger (up to six times greater) separation between the aircraft.

Customs has found that many aircraft flying into the United States display the small, 3-inch marks, making it difficult to identify aircraft, including suspect aircraft. The vast majority of the suspected aircraft, which are not limited to a particular type of aircraft, pass through an ADIZ or DEWIZ prior to entering the United States. It is these aircraft for which Customs, or other law enforcement or military organizations, are likely to attempt air-to-air identification.

Identification Plates

The FAA has adopted several related amendments concerning I.D. plates based on the needs and comments of the aviation community. Section 45.11 of the

FAR was changed by Amendment 45–3 (52 FR 187; January 10, 1967) to require the I.D. plate to be in an accessible location "near an entrance," not necessarily an *external* location, to allow for maximum I.D. plate protection and to facilitate normal aircraft inspection. Based on information presented by small aircraft manufacturers, the FAA again changed § 45.11 of the FAR by adopting Amendment 45–7 (33 FR 14402; September 25, 1968) to provide an optional location for an aircraft I.D. plate. Under this option, the I.D. plate may be affixed permanently on the exterior of the fuselage near the tail surfaces, if it is legible to an observer on the ground. Additionally, FAA Advisory Circular AC 45–2, Identification and Registration Markings, which provides guidance and information concerning the identification and marking requirements for aircraft, includes a provision that, if under certain conditions the I.D. plate had to be covered or enclosed in any manner, its accessibility is considered acceptable if it can be revealed without the use of tools.

The Customs Service indicates that when investigating aircraft, including those suspected of being used for smuggling, it is difficult to determine quickly whether the FAA assigned N-number is displayed appropriately on the aircarft. Furthermore, false numbers may be used on stolen aircraft, which frequently are used for smuggling. Cross-checking the N-number with the I.D. plate data, which is an integral part of identification for the aircraft, assists in determining whether the N-number is false. The I.D. plates for many aircraft, however, are located in the aircraft interior so that they cannot be read from outside the aircraft, making it difficult for investigators to make an on-the-spot check of a suspected aircraft. Customs contends that the repositioning of existing I.D. plates, or placement of another I.D. plate on the exterior of the aircraft near the main entrance, would enable investigators to compare quickly the serial number with the N-number to help determine whether suspect aircraft have been stolen or the N-numbers falsified.

Additional Fuel Tank Installation

The FARs prescribe requirements for the approval of major alterations to aircraft type designs, which include such installations as additional fuel tanks in an aircraft. The FARs also prescribe recordkeeping requirements for such approvals. Most fuel tank installations performed on aircraft operating under Part 91 require an appropriate approval for the type design change and recording of the completion of the modification on FAA Form 337. Those aircraft operated under Part 121, 127, and 135 of the FARs may have additional fuel tanks installed in accordance with applicable requirements, of the particular continuous airworthiness program and prepare the documentation for the alteration other than an FAA Form 337, in accordance with the continuous airworthiness program.

Customs reports that aircraft used to smuggle drugs are often modified with fuel tanks which are installed in the passenger or a baggage compartment and which are not authorized by the FAA. These fuel tanks are installed to permit the aircraft to make long unrefueled flights, such as from the United States to South America. This long-range unrefueled capability adds to the difficulty in pursuing suspected aircraft. These unauthorized, usually haphazard, fuel tank installations create a safety hazard because there is no assurance that they meet the safety standards established by the FAA.

One problem with attempting to identify the unauthorized extended-range fuel tank installation is that it is difficult to check, on the spot, whether the tanks have been installed in accordance with FAA requirements. The FAR type certification procedures require FAA approval for any changes to type design of a U.S. civil aircraft, such as modifications to install extended-range fuel tanks. Documentation evidencing such approval may vary depending upon the nature of the change to the aircraft's type design.

One way that approval can be evidenced is for an authorized person performing the work to execute an FAA Form 337 in accordance with Appendix B of Part 43 of the FAR. However, there is currently no requirement for records of such authorization to be on board the aircraft. Customs contends that a regulation requiring an FAA Form 337 to be aboard the aircraft when extended-range fuel tanks are installed within the passenger or a baggage compartment would assist Customs in concentrating interdiction efforts on suspicious aircraft not authorized to have such installations. Customs investigators can make an on-the-spot check of the suspected aircraft's FAA Form 337. In addition, this action would assist the FAA in identifying aircraft with unauthorized fuel tanks, and thus avoid a potential hazard to the aviation community and the public.

Participation in Rulemaking

Notice No. 86–9 gave interested persons an opportunity to participate in amending these rules. Due consideration was given to all information submitted by the commenters. Except as discussed in this preamble, the revisions adopted by these amendments and the reasons for them are the same as those in Notice No. 86–9.

Discussion of Amendments

The FAA has determined that the amendments proposed in Notice No. 86–9 should be adopted. The comments received in response to the notice are discussed below.

A. Improve Indentification of Aircraft Penetrating the ADIZ and DEWIZ—§§ 45.21 and 45.29

This amendment requires that all aircraft penetrating the ADIZ or DEWIZ display 12-inch markings. However, if any surface authorized to be marked is not large enough for full-size marks, marks as large as practicable shall be placed on the largest of the authorized surfaces in accordance with § 45.29(f).

To ease the burden on owners of affected aircraft which penetrate the defense zones, under the provision of § 45.21(d), this amendment permits the 12-inch markings to be temporary on those "grandfathered" aircraft and certain aircraft which are currently authorized to operate with small markings as specified in § 45.29(b). Moroever, to avoid any burden due to downtime, ferrying, or loss of revenue associated with marking the affected aircraft, a 90-day period is allowed for compliance.

Adoption of this amendment provides for the improvement in safety associated with air-to-air identification of *all aircraft* which penetrate the ADIZ or DEWIZ. It has no impact on the majority of other aircraft operators since most aircraft currently displaying marks less than 12 inches high under Part 45 do not penetrate these zones and thus pose no problem at this time. Those aircraft with smaller marks operating solely within one of these zones, e.g., the Alaska DEWIZ or ADIZ, also will not be affected if they do not depart and reenter (penetrate) the zone.

B. Change I.D. Plate Location—§ 45.11

This amendment requires that all aircraft display an I.D. plate, as specified by § 45.11(a), on the aircraft fuselage exterior surface, in a location legible to an observer on the ground. It must be located adjacent to and aft of the rear-most entrance door or on the exterior surface near the tail. An aircraft

I.D. plate affixed in an easily accessible area, legible to an observer on the ground, facilitates verification of aircraft identification by FAA inspectors, Customs investigators, and other law enforcement officials. The amendment provides for ready access to the I.D. plate data without having to enter the aircraft. It makes the I.D. plate information and N-number available simultaneously to provide a cross reference to help determine whether the aircraft may have been stolen or to determine if the registration number has been falsified. It also facilitates FAA inspectors' identification of aircraft for verification of maintenance, modification, and other airworthiness requirements to assure safe aircraft operation.

This amendment is not retroactive since this could result in a major change which would pose an undue burden on many aircraft owners. For example, if the I.D. plates currently affixed to aircraft, as required, were to be removed (i.e., repositioned) from the existing locations, this could result in damage to the aircraft and I.D. plate, and might require burdensome engineering and manufacturing changes such as structural, interior or exterior repair, or repainting.

As a cost-saving alternative for aircraft manufactured prior to 90 days after the effective date of this amendment, this final rule allows the display of just the model designation and builder's serial number on the fuselage exterior, adjacent to and aft of the rear-most entrance. This may be done if the identification plate is secured at an accessible exterior or interior location near an entrance. The model designation and serial number are required to be affixed in such a manner that they are not likely to be defaced or removed during normal service. Unlike the required fireproof I.D. plate, this "supplemental" identification does not have to be affixed in a manner such that it is not likely to be lost or destroyed in an accident. Thus, the data may be affixed in a relatively low-cost manner, such as by painting or decal.

C. Illegal Fuel Tank Installation—Part 43, Appendix B(a) and (d); § 91.27(c); and § 91.173(a) and (d)

This amendment requires that all affected aircraft modified with additional fuel tanks in the passenger or a baggage compartment, under Part 43 of the FAR, physically have on board the aircraft a copy of the required FAA Form 337. This includes aircraft previously not required to have an FAA Form 337 for fuel tank installations when operating with a special flight permit for the purpose of delivery or export. This amendment also requires that the owner or operator of an aircraft with such fuel tanks present the FAA Form 337 for inspection by any law enforcement officer.

This amendment provides one means for FAA, Customs, and other investigators to quickly obtain evidence as to whether the additional tanks in the aircraft are authorized or possibly illegally installed. Enforcement action can then be taken by the FAA and the appropriate agency against persons operating such aircraft. Action can also be taken to prevent the aircraft from being flown. This rule makes it possible for Customs to concentrate interdiction efforts on those aircraft modified with unathorized fuel tank installations and which are possibly being used for illegal drug trafficking. By limiting this rule to aircraft modified with fuel tanks in the passenger or baggage compartments, which requires an FAA Form 337 under Part 43, operators of aircraft with FAA-approved extended-range fuel tanks located elsewhere in the aircraft (e.g., wing tip tanks) would not be required to keep that authorization on board the aircraft.

Discussion of Comments

General

Eighty commenters, representing the views of the aviation community, participated in this rulemaking. Comments were submitted by individual pilots and owners and operators of aircraft including representatives of some aviation and aircraft manufacturers associations. Generally, the commenters support Customs' objective to stop the flow of illegal drugs into the United States by air. However, most commenters disagree as to what amendments should be adopted and who should comply with them. Some commenters disagree with all the amendments or recommend proposals which are outside the scope of the NPRM. The majority of the commenters address the proposed amendments separately and give reasons which oppose a particular issue and either concur in or withhold comments on the other issues.

The comments from aviation association representatives on the amendments also range from full support as noted by the Airline Pilots Association (ALPA) to "no merit" as the Aircraft Owners and Pilots Association (AOPA) contends. Many commenters contend that the FAA action will not stop drug trafficking and question the value of these amendments. They contend that there are more effective ways to stop drug smugglers such as direct legislation against smugglers. The commenters, however, fail to recognize or acknowledge that the FAA action proposed in Notice No. 86-9 is only a part of the total U.S. Government on-going effort to actively suppress drug smuggling, which includes law enforcement agencies efforts of other Departments such as the Treasury, Justice, and Defense. These initiatives carry out the mandates of Congress, such as the Anti-Drug Abuse Act (Pub. L. 99-570, October 27, 1986).

The pertinent comments and commenters' recommendations concerning each amendment are discussed in the following paragraphs. In addition, comments concerning the time and cost of compliance are discussed separately.

Registration Numbers

The majority of commenters object to the requirement for displaying 12-inch N-numbers on certain aircraft that penetrate an ADIZ or DEWIZ. The commenters contend that the amendment imposes unnecessary costs on owners and operators of aircraft allowed to display smaller N-numbers under § 45.29(b), with no benefit to legitimate operators who must pay for an ineffective law which drug smugglers can easily circumvent with temporary and false markings. Also, operators of some aircraft such as experimental amateur-built, rotorcraft, gliders, airships, and balloons feel that this amendment should be limited to twin-engine, fixed-wing aircraft.

The FAA disagrees because, as stated in the notice, there is an urgent need for positive identification of *all aircraft* that penetrate the defense zones, regardless of size and configuration. However, it should be noted that this amendment only affects those aircraft that display the ineffective small N-numbers and penetrate the ADIZ or DEWIZ. Additionally, to avoid unnecessary costs to operators of the affected aircraft, a 90-day time period is provided for compliance. This provides for sufficient time in which the temporary or permanent 12-inch N-numbers can be affixed to aircraft affected.

A few commenters questioned why all aircraft operating in Alaska must display 12-inch marks since Alaska lies entirely within an ADIZ while aircraft in the contiguous United States may display small N-numbers. However, the rule applies to those aircraft that *penetrate* the ADIZ or DEWIZ. Accordingly, aircraft allowed to display small N-numbers in accordance with

regulations, whether in the United States or elsewhere, must affix 12-inch N-numbers only if they are going to penetrate an ADIZ or DEWIZ. Thus, aircraft operating solely within the State of Alaska will not be required to display 12 inch N-numbers unless they depart on and reenter the ADIZ.

Some commenters contend that the amendment penalizes legitimate aircraft operators while drug smugglers can easily circumvent or violate the regulation. The FAA disagrees because most aircraft operators are required to display 12-inch N-numbers under Part 45. Further, the FAA, in conjunction with other law enforcement agencies, aggressively investigates and takes appropriate action on incidents involving violations of the FAR. Furthermore, under the new Anti-Drug Abuse Act, increased civil and criminal penalties may be imposed on aircraft operators involved in drug smuggling. These penalties range up to $250,000 and 20 years in prison and include the seizure and forfeiture of the aircraft. The amendments to §§ 45.21 and 45.29 have been adopted as proposed.

Identification Data Plates

With regard to the exterior location of I.D. plates and/or data, most commenters contend generally that this amendment is ineffective, impractical, or redundant. A majority of the commenters contend that the amendments would be ineffective because the rule can be easily circumvented by falsifying the data on the exterior surface of the aircraft. The FAA does not agree since the FAA penalties and the more recent legislation, cited previously, are expected to deter such violations.

Some commenters maintain that the rule is impractical because repositioning the existing I.D. plates or affixing a second I.D. plate could damage the aircraft, especially those covered with fabric. The FAA does not agree since the rule does not require repositioning of the original I.D. plates, which conceivably could result in damage to the aircraft. Also, both old and new aircraft can have I.D. plates affixed on the exterior surface, as required, without damaging even fabric-covered aircraft.

Some commenters claim that I.D. plates affixed to the exterior surface of large aircraft would be too high to read by an observer on the ground. Others argue that there is no need to change the I.D. plate location on some rotor-craft, open cockpit aircraft, and balloons where the required I.D. plate can be viewed by an observer outside the aircraft.

However, although I.D. plates can be viewed from the outside of some aircraft, the FAA has determined that I.D. plates in a *standard* location on the exterior surface adjacent to and aft of the rear-most entrance door of an aircraft provides for quick access to the I.D. information, in addition to precluding the need to gain access to the inside of an aircraft.

With regard to the redundant data, commenters contend that there is no need to affix the same data in two places on the same aircraft, therefore, the status quo should be maintained or the NPRM withdrawn.

The FAA disagrees because the I.D. information which is secured inside an aircraft cannot be obtained readily, as some contend, without gaining access to the aircraft. The FAA has determined that the standard exterior location is the most effective location for I.D. plates and/or data. A standard location provides quick access to the identification data with the least impact on the aviation community since most aircraft owners and operators already comply with that requirement, while others can mark their aircraft inexpensively as discussed in Notice No. 86-9.

Additional Fuel Tank Installations

The majority of commenters responding to this amendment agreed with the requirement to have the completed FAA Form 337 aboard an aircraft modified in accordance with Part 43 with fuel tanks in the passenger or baggage compartments. Those opposed contend that the amendment imposes an unnecessary burden on operators of aircraft that may be modified with fuel tanks in accordance with regulations which do not require the use of an FAA Form 337 for documenting major alternations. Accordingly, they maintain that the rule should exempt operators under Parts 121, 127, or 135, as applicable.

The FAA considered the regulations governing aircraft modified under other applicable provisions. However, approved documentation under a continuous airworthiness maintenance program may not be as suitable for carriage on an aircraft as the FAA Form 337. For that reason, the proposed amendment applied only to aircraft modified pursuant to part 43 with fuel tanks installed in the passenger or baggage compartments. This amendment adopts that proposal. The new rule does not require documentation for aircraft modified under other provisions of the FAR.

Some commenters state that the FAA Form 337 can be easily falsified or that an approved installation could be used by a smuggler and that, either way, the amendment has little value. The FAA does not agree since violations of the applicable regulations, such as unapproved equipment installations, are vigorously pursued and enforced by the FAA to maintain safety in air operations. In addition, Customs considers this amendment to be a significant step toward curbing the use of aircraft for drug smuggling.

Time for Compliance

Some commenters object that the proposal does not provide sufficient time for compliance and that this creates an undue burden on owners and operators because of the requirements for ferrying and downtime. The FAA agrees with these commenters. It was planned to allow a period of 90 days after the effective date for compliance with the requirements for the display of 12-inch N-numbers and for the affixing of I.D. plate and/or data. In the NPRM, however, the "October 8, 1986" date was published in error apparently by using the published date of July 10, 1986, as the start of the 90-day period. A correction is made to allow sufficient time for compliance.

To preclude an undue burden on aircraft owners and operators, the 90-day period provides time for appropriate N-numbers and the I.D. plate and/or data to be affixed. The delayed compliance time only applies to the requirements for the display of 12-inch N-numbers and the I.D. plate and/or data. The display of temporary 12-inch markings is permitted for N-numbers, as appropriate, and the method for affixing data plate information on the exterior surface of an aircraft is purposely undefined to allow for economic alternatives, such as painting or decals.

Cost of Compliance

The majority of commenters object to the cost that would be imposed by the proposed 12-inch N-numbers and I.D. plate amendments. They contend that the cost of compliance estimates are too low. In addition, the commenters indicate that the FAA cost estimates do not reflect a loss of revenue caused by ferrying and downtime.

The FAA disagrees with the commenters that its cost estimates are too low. The FAA believes its cost estimates to be a good indicator of what aircraft operators/owners impacted would, on the average, incur. Moreover, after careful examination of the comments received on NPRM No. 86-9, it has become apparent to the FAA that the majority of the commenters

apparently failed to consider the FAA assumptions noted in the NPRM or as detailed in the draft regulatory evaluation in the docket. This evaluation fully explains how the cost of compliance estimates, which range between $100 and $215, were derived and contains a number of assumptions on which these cost estimates are based. Briefly, some of these assumptions are based on the fact that only those aircraft displaying small N-numbers under § 45.29, which includes aircraft "grandfathered" by Amendments 45–13 and 45–15, would be impacted by the 12-inch N-numbers requirement when penetrating the ADIZ or DEWIZ. It is further assumed that all operators of those "grandfathered" aircraft will be required to display 12-inch N-numbers only 1 or 2 years sooner than they otherwise would be required because of repainting, restoring, or changing the marks. Therefore, the FAA evaluation accurately reflects only that small portion of the estimated $550 cost of displaying 12-inch N-numbers. The net result is that this rule will impact very few aircraft since most aircraft would switch to permanent 12-inch N-numbers in that period.

The cost of compliance for the I.D. plate amendment assumes that this data information would be painted on the designated exterior of all existing impacted aircraft for about $100 based on conversations between FAA and fixed base operators.

With regard to downtime and ferrying, the FAA allows impacted aircraft operators and owners a period of 90 days after the effective date of the final rule to come into compliance. This period of 90 days provides sufficient time for impacted operators and owners to comply with the rule without incurring additional costs attributed to downtime and ferrying. The intent of the FAA has always been to allow a reasonable period of time for impacted parties to comply with the rule. It has always been the policy of the FAA *not* to impose undue cost burdens on parties impacted by its regulatory efforts.

Summary of Comments

Most commenters oppose the adoption of the amendments; however, they have neither provided sufficient justification for their positions nor shown that withdrawing Notice No. 86–9 is in the public interest. It appears that many commenters failed to consider the reasons for adopting the amendments provided in the NPRM. Many comments objected that they must comply with the amendments when, in fact, they are not affected. For example, their aircraft will not penetrate an ADIZ or DEWIZ, or the I.D. plates are already affixed as required. The new requirement for the appropriate FAA Form 337 to be aboard aircraft modified with certain fuel tanks under Part 43 is favored by the majority of the commenters and poses no problem.

The FAA agrees with comments requesting that it clarify and correct errors. Therefore, the comments that the FAA is accepting, and which the final rule reflects, include an appropriate compliance date and editorial changes suggested to clarify the amendments as proposed. Also, in response to comments, the FAA has also reevaluated and clarified the cost impact where necessary.

Regulatory Evaluation Summary

The regulatory evaluation prepared for this rule examines the benefit and cost aspects of the establishment of identification, registration marking and recording of major repair requirements that impact general aviation aircraft. The rule includes amendments to Parts 43, 45, and 91 of the FAR, which respond to the Department or Treasury's request for the following:

1. That, 90 days after the effective date of this rule, 12-inch high nationality and registration marks (N-numbers) must be displayed on aircraft that penetrate an ADIZ or a DEWIZ;
2. That, 90 days after the effective date of this rule, a civil aircraft identification (I.D.) plate or its information must be displayed in a legible area on the fuselage exterior of an aircraft either adjacent to and aft of the rear-most entrance, or on the fuselage near the tail surfaces; and
3. That, after the effective date of this rule, a copy of the FAA Form 337 completed upon installation of fuel tanks installed within the passenger compartment or a baggage compartment under Part 43 of the FAR be kept in the aircraft by the owner or operator.

Costs

Estimates of the cost of compliance with the amendments to Parts 43, 45, and 91 have been developed by the FAA. Cost estimates were obtained primarily from civil aircraft manufacturers and fixed based operators.

This evaluation estimates that the one-time cost of compliance associated with the amendments to § 45.11 (I.D. plate amendment) and § 45.29 (12-inch N-number amendment) are expected to range between $7 million and $8 million (present discounted value of cost at 10 percent, 1987). The amendment to § 45.11 will impact an estimated 79,300 to 82,000 fixed-wing aircraft, rotorcraft, and other types of affected civil aircraft (blimps, balloons, and gliders) at a cost of $100 each. Moreover, the amendment to § 45.29 will affect an estimated 3,900 to 13,500 fixed-wing aircraft and rotorcraft at a cost of $55 to $115 each, respectively. Collectively, the cost of compliance will range between $100 and $215 per aircraft (1985 dollars). Conversely, the amendments to Appendix B of Part 43 (Recording of Major Repairs and Major Alterations), § 91.27 (Civil Aircraft: Certifications Required), and § 91.173 (Maintenance Records) are estimated to impose no additional cost. Under this amendment, this form is filled out in triplicate, rather than duplicate, to provide for a copy to be kept on board an aircraft modified with a fuel tank in the passenger compartment or a baggage compartment. In addition, the amendment to § 45.21 (General) is estimated to impose no additional cost to owners and operators of aircraft which may penetrate a defense zone because it merely provides for the option of using temporary or permanent 12-inch markings rather than an additional requirement.

Benefits

The anticipated benefits of the amendments include the following: (1) improved positive identification of those aircraft previously allowed to display small N-numbers when penetrating the ADIZ or DEWIZ; (2) improved verification of aircraft identification and enhanced ability of inspectors to determine noncompliance, such as whether a suspect aircraft had been stolen or the N-numbers falsified; and (3) increased effectiveness of Customs in concentrating interdiction efforts on suspicious aircraft not authorized to operate with fuel tanks installed in the passenger compartment or a baggage compartment. The FAA has been unable to quantitatively determine the extent to which Customs' drug interdiction efforts will be enhanced by this rule and resulting benefits. This difficulty is largely attributed to the fact that benefits of Customs' drug enforcement efforts represent a public good. This good does not subject itself to market evaluation. Thus, it is extremely difficult to evaluate these benefits in monetary terms. An indication of the potential benefits that could accrue from reduced drug abuse activity, due to enhanced drug interdiction, is shown in a 1984 report by the Research Triangle Institute. The report revealed that the economic cost to society of drug abuse amounts to approximately $64 billion annually.

Safety benefits are also expected to accrue from this rule. These benefits are related to the lowering of fatalities and serious injuries associated with operation of civil aircraft in active drug trafficking areas. A review of the National Transportation Safety Board's data base for drug-related accidents revealed that 127 fatalities and 33 serious injuries occurred between 1975 and 1984. During this period, these statistics equated to an annual average of 13 fatalities and 3 serious injuries related to drug trafficking activity. The rule is expected to have a positive impact on these grim statistics, though to what extent is not known by the FAA.

The regulatory evaluation that has been placed in the docket contains information in more detail related to costs and benefits that are expected to accrue from the implementation of this rule.

Regulatory Flexibility Determination

The FAA has determined that, under the criteria of the Regulatory Flexibility Act of 1980, the amendments contained in this rule are not expected to have a significant economic impact on a substantial number of small entities. The responsibility for marking or providing I.D. plate information on existing aircraft is placed directly on the owner or operator of the aircraft. However, for new aircraft, the I.D. plate responsibility is placed on the applicant for airworthiness certificate, usually the manufacturer. This amendment will impose no additional cost on manufacturers since it only requires that the I.D. plate be located on the exterior rather than interior of the aircraft. The majority of small entities impacted by this rule represent operators of unscheduled aircraft for hire. These operators are expected to incur a one-time compliance cost ranging between $155 and $215. These costs are far below the annualized threshold of significant regulatory cost of $3,540. Therefore, this rule will not have a significant economic impact on a substantial number of small entities.

International Trade Impact Statement

All foreign and domestic manufactured aircraft sold in the United States need to be identified in accordance with the provisions of this rule. The cost of marking the aircraft is borne by individual domestic owners or operators only. This rule will not have an impact on trade opportunities for U.S. firms doing business overseas or for foreign firms doing business in the United States.

Conclusion

The amendments contained in this FAA document involve only the cost of affixing N-numbers or data to aircraft belonging to a minor part of the aviation community. The benefits are unquantifiable in that the amendment will enhance safety as well as assist Customs in its drug interdiction efforts as requested. The cost imposed on small entities are below the annualized threshold of significant regulatory costs. Therefore, I certify that under the criteria of the Regulatory Flexibility Act, these amendments do not have a significant economic impact, positive or negative, on a substantial number of small entities, and a regulatory flexibility analysis is not required. In addition, for the same reasons, the amendments do not involve a major rule under Executive Order 12291. Because it involves important DOT policy, the rule is considered significant under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the regulatory evaluation for this action is contained in the regulatory docket. A copy of it may be obtained by contacting the person identified under the caption "FOR FURTHER INFORMATION CONTACT."

14 CFR Part 45

Nationality.

14 CFR Part 91

Aircraft, Airworthiness directives and standards.

Adoption of the Amendments

In consideration of the foregoing, Parts 43, 45, and 91 of the Federal Aviation Regulations (14 CFR Parts 43, 45, and 91) are amended as follows:

PART 43—MAINTENANCE, PREVENTIVE MAINTENANCE, REBUILDING, AND ALTERATION

1. The authority citation for Part 43 continues to read as follows:

Authority: 49 U.S.C. 1354, 1421 through 1430; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983).

2. Appendix B is amended by revising the introductory text of paragraph (a) and adding a new paragraph (d) to read as follows:

Appendix B—Recording of Major Repairs and Major Alterations

(a) Except as provided in paragraphs (b), (c), and (d) of this appendix, each person performing a major repair or major alteration shall—

* * * * *

(d) For extended-range fuel tanks installed within the passenger compartment or a baggage compartment, the person who performs the work and the person authorized to approve the work by § 43.7 of this part shall execute an FAA Form 337 in at least triplicate. One (1) copy of the FAA Form 337 shall be placed on board the aircraft as specified in § 91.173 of this chapter. The remaining forms shall be distributed as required by paragraph (a) (2) and (3) or (c) (1) and (2) of this paragraph as appropriate.

PART 45—IDENTIFICATION AND REGISTRATION MARKING

3. The authority citation for Part 45 continues to read as follows:

Authority: 49 U.S.C. 1348, 1354, 1401, 1402, 1421, 1423, and 1522; 49 U.S.C. 106(g) (Revised, Pub. L. 97-449, January 12, 1983).

4. Section 45.11 is amended by revising paragraph (a) and adding a new paragraph (d) to read as follows:

§ 45.11 General.

(a) *Aircraft and aircraft engines.* Aircraft covered under § 21.182 of this chapter must be identified, and each person who manufacturers an aircraft engine under a type or production certificate shall identify that engine, by means of a fireproof plate that has the information specified in § 45.13 of this part marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate for aircraft must be secured in such a manner that it will not likely be defaced or removed during normal service, or lost or destroyed in an accident. Except as provided in paragraphs (c) and (d) of this section, the aircraft identification plate must be secured to the aircraft fuselage exterior so that it is legible to a person on the ground, and must be either adjacent to and aft of the rear-most entrance door or on the fuselage surface near the tail surfaces. For aircraft engines, the identification plate must be affixed to the engine at an accessible location in such a manner that it will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

* * * * *

(d) On aircraft manufactured before December 6, 1987, the identification plate required by paragraph (a) of this section may be secured at an accessible exterior or interior location near an entrance, if the model designation and builder's serial number are also displayed on the aircraft fuselage exterior. The model designation and

builder's serial number must be legible to a person on the ground and must be located either adjacent to and aft of the rear-most entrance door or on the fuselage near the tail surfaces. The model designation and builder's serial number must be displayed in such a manner that they are not likely to be defaced or removed during normal service.

5. Section 45.21 is amended by revising paragraph (d)(3) to read as follows:

§ 45.21 General.

* * * * *

(d) * * *

(3) It is marked temporarily to meet the requirements of § 45.22(c)(1) or § 45.29(h) of this part, or both.

6. Section 45.29 is amended by revising the introductory text of paragraph (b) and adding a new paragraph (h) to read as follows:

§ 45.29 Size of Marks.

* * * * *

(b) *Height.* Except as provided in paragraph (h) of this part, the nationality and registration marks must be of equal height and on—

* * * * *

(h) After December 8, 1987, each operator of an aircraft penetrating an ADIZ or DEWIZ shall display on that aircraft temporary or permanent nationality and registration marks at least 12 inches high.

PART 91—GENERAL OPERATING AND FLIGHT RULES

7. The authority citation for Part 91 continues to read as follows:

Authority: 49 U.S.C. 1301(7), 1303, 1344, 1348, 1352 through 1355, 1401, 1421 through 1431, 1471, 1472, 1502, 1510, 1522, and 2121 through 2125; Articles 12, 29, 31, and 32(a) of the Convention on International Civil Aviation (61 S A . 1180); 42 U.S.C. 4321 *et seq.*; E.O. 11514; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983).

8. Section 91.27 is amended by adding a new paragraph (c) to read as follows:

§ 91.27 Civil aircraft: Certifications required.

* * * * *

(c) No person may operate an aircraft with a fuel tank installed within the passenger compartment or a baggage compartment unless the installation was accomplished pursuant to Part 43 of this chapter, and a copy of FAA Form 337 authorizing that installation is on board the aircraft.

9. Section 91.173 is amended by revising paragraph (c) and adding a new paragraph (d) to read as follows:

§ 91.173 Maintenance records.

* * * * *

(c) The owner or operator shall make all maintenance records required to be kept by this section available for inspection by the Administrator or any authorized representative of the National Transportation Safety Board (NTSB). In addition, the owner or operator shall present the Form 337 described in paragraph (d) of this section for inspection upon request of any law enforcement officer.

(d) When a fuel tank is installed within the passenger compartment or a baggage compartment pursuant to Part 43, a copy of the FAA Form 337 shall be kept on board the modified aircraft by the owner or operator.

Issued in Washington, D.C., on September 1, 1987.

T. Allan McArtor,

Administrator.

APPENDIX F—ATC TRANSPONDER TESTS AND INSPECTIONS

The ATC transponder tests required by § 91.177 of this chapter may be conducted using a bench check or portable test equipment and must meet the requirements prescribed in paragraphs (a) through (d) of this appendix. If portable test equipment with appropriate coupling to the aircraft antenna system is used, operate the test equipment at a nominal rate of 235 interrogations per second to avoid possible ATCRBS interference. An additional 3bd loss is allowed to compensate for antenna coupling errors during receiver sensitivity measurements conducted in accordance with paragraph (c)(1) when using portable test equipment.

(a) For reply radio frequency, interrogate the transponder and verify that the reply frequency of the system is 1090±3 MHZ.

(b) Suppression: When the transponder is interrogated on mode 3/A at an interrogation rate between 230 and 1000 interrogations per second for class 1B and 2B transponders or between 230 and 1200 interrogations per second for class 1A and 2A transponders:

(1) Verify that the transponder does not respond to more than 1 percent of the interrogations when the amplitude of P_2 pulse is equal to the P_1 pulse.

(2) Verify that the transponder replies to at least 90 percent of the interrogations when the amplitude of the P_2 pulse is 9db less than the P_1 pulse.

If the test is conducted with a radiated test signal, the interrogation rate shall be 235 ±5 interrogations per second unless a higher rate has been approved for the test equipment used at that location.

(c) Receiver sensitivity:

(1) Verify that receiver sensitivity of the system is −73±4dbm by use of a test set—

(i) Connected to the antenna end of the transmission line;

(ii) Connected to the antenna terminal of the transponder with a correction for transmission line loss; or

(iii) Utilizing a radiated signal.

(2) Verify that the difference in mode 3/A and mode C receiver sensitivity does not exceed 1db.

(d) Records:

Comply with the provisions of § 43.9 of this chapter as to content, form, and disposition of the records.

(Secs. 313, 314, and 601 through 610 of the Federal Aviation Act of 1958 (49 U.S.C. 1354, 1355, and 1421 through 1430) and sec. 6(c), Dept. of Transportation Act (49 U.S.C. 1655(c)))

SPECIAL FEDERAL AVIATION REGULATION NO. 27—FUEL VENTING AND EXHAUST EMISSION REQUIREMENTS FOR TURBINE ENGINE POWERED AIRPLANES

EDITORIAL NOTE: For the text of SFAR No. 27, see Part 11 of this chapter.

Subpart A—General

§ 45.1 Applicability.

This part prescribes the requirements for—

(a) Identification of aircraft, and identification of aircraft engines and propellers that are manufactured under the terms of a type or production certificate;

(b) Identification of certain replacement and modified parts produced for installation on type certificated products; and

(c) Nationality and registration marking of U.S. registered aircraft.

[Doc. No. 2047, 29 FR 3223, Mar. 11, 1964, as amended by Amdt. 45-3, 32 FR 188, Jan. 10, 1967]

Subpart B—Identification of Aircraft and Related Products

§ 45.11 General.

(a) *Aircraft and aircraft engines.* Aircraft covered under § 21.182 of this chapter must be identified, and each person who manufactures an aircraft engine under a type or production certificate shall identify that engine by means of a fireproof plate that has the

1-19-88; 10:29 AM; 907 271 5980 → 9076867402 ; # 4
NO. 002 004

information specified in § 45.13 marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate for aircraft must be secured in such a manner that it will not likely be defaced or removed during normal service, or lost or destroyed in an accident. Except as provided in paragraph (c) of this section, the aircraft identification plate must be secured to the aircraft at an accessible location near an entrance, except that if it is legible to a person on the ground it may be located externally on the fuselage near the tail surfaces. For aircraft engines, the identification plate must be affixed to the engine at an accessible location, in such a manner that it will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(b) *Propellers and propeller blades and hubs.* Each person who manufactures a propeller, propeller blade, or propeller hub under the terms of a type or production certificate shall identify his product by means of a plate, stamping, engraving, etching, or other approved method of fireproof identification that is placed on it on a noncritical surface, contains the information specified in § 45.13, and will not be likely to be defaced or removed during normal service or lost or destroyed in an accident.

(c) For manned free balloons, the identification plate prescribed in paragraph (a) of this section must be secured to the balloon envelope and must be located, if practicable, where it is legible to the operator when the balloon is inflated. In addition, the basket and heater assembly must be permanently and legibly marked with the manufacturer's name, part number (or equivalent) and serial number (or equivalent).

[Amdt. 45-3, 32 FR 188, Jan. 10, 1967 as amended by Amdt. 45-7, 33 FR 14402, Sept. 25, 1968; Amdt. 45-12, 45 FR 60183, Sept. 11, 1980; 45 FR 85597, Dec. 29, 1980]

§ 45.13 Identification data.

(a) The identification required by § 45.11 (a) and (b) shall include the following information:

(1) Builder's name.

(2) Model designation.

(3) Builder's serial number.

(4) Type certificate number, if any.

(5) Production certificate number, if any.

(6) For aircraft engines, the established rating.

(7) Any other information the Administrator finds appropriate.

(b) Except as provided in paragraph (d)(1) of this section, no person may remove, change, or place identification information required by paragraph (a) of this section, on any aircraft, aircraft engine, propeller, propeller blade, or propeller hub, without the approval of the Administrator.

(c) Except as provided in paragraph (d)(2) of this section, no person may remove or install any identification plate required by § 45.11 of this part, without the approval of the Administrator.

(d) Persons performing work under the provisions of Part 43 of this chapter may, in accordance with methods, techniques, and practices acceptable to the Administrator—

(1) Remove, change, or place the identification information required by paragraph (a) of this section on any aircraft, aircraft engine, propeller, propeller blade, or propeller hub; or

(2) Remove an identification plate required by § 45.11 when necessary during maintenance operations.

(e) No person may install an identification plate removed in accordance with paragraph (d)(2) of this section on any aircraft, aircraft engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

[Amdt. 45-3, 32 FR 188, Jan. 10, 1967, as amended by Amdt. 45-10, 44 FR 45379, Aug. 2, 1979; Amdt. 45-12, 45 FR 60183, Sept. 11, 1980]

[Amdt. 45-16, 51 FR 40703, Nov. 7, 1986]

EFFECTIVE DATE NOTE: Section 45.14 was revised at 51 FR 40703, Nov. 7, 1986, effective January 6, 1987. For the convenience of the reader, the superseded text is set forth below.

§ 45.14 Identification of critical components.

Each person who produces a part for which a replacement time, inspection interval, or related procedure is specified in the Airworthiness Limitations section of a Manufacturer's Maintenance Manual or Instructions for Continued Airworthiness shall mark that component with a part number (or equivalent) and serial number (or equivalent).

[Amdt. 45-12, 45 FR 60183, Sept. 11, 1980]

§ 45.15 Replacement and modification parts.

(a) Except as provided in paragraph (b) of this section, each person who produces a replacement or modification part under a Parts Manufacturer Approval issued under § 21.303 of this chapter shall permanently and legibly mark the part with—

(1) The letters "FAA-PMA";

(2) The name, trademark, or symbol of the holder of the Parts Manufacturer Approval;

(3) The part number; and

(4) The name and model designation of each type certificated product on which the part is eligible for installation.

(b) If the Administrator finds that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a) of this section, a tag attached to the part or its container must include the information that could not be marked on the part. If the marking required by paragraph (a)(4) of this section is so extensive that to mark it on a tag is impractical, the tag attached to the part or the container may refer to a specific readily available manual or catalog for part eligibility information.

[Amdt. 45-8, 37 FR 10660, May 26, 1972, as amended by Amdt. 45-14, 47 FR 13315, Mar. 29, 1982]

Subpart C—Nationality and Registration Marks

§ 45.21 General.

(a) Except as provided in § 45.22, no person may operate a U.S.-registered aircraft unless that aircraft displays nationality and registration marks in accordance with the requirements of this section and §§ 45.23 through 45.33.

(b) Unless otherwise authorized by the Administrator, no person may place on any aircraft a design, mark, or symbol that modifies or confuses the nationality and registration marks.

(c) Aircraft nationality and registration marks must—

(1) Except as provided in paragraph (d) of this section, be painted on the aircraft or affixed by any other means insuring a similar degree of permanence;

(2) Have no ornamentation;

(3) Contrast in color with the background; and

(4) Be legible.

(d) The aircraft nationality and registration marks may be affixed to an aircraft with readily removable material if—

(1) It is intended for immediate delivery to a foreign purchaser;

(2) It is bearing a temporary registration number; or

(3) It is marked temporarily to meet the requirements of § 45.22(c)(1).

[Doc. No. 8093, Amdt. 45-5, 33 FR 450, Jan 12, 1968]

§ 45.22 Exhibition, antique, and other aircraft: Special rules.

(a) When display of aircraft nationality and registration marks in accordance with §§ 45.21 and 45.23 through 45.33 would be inconsistent with exhibition of that aircraft, a U.S.-registered aircraft may be operated without displaying those marks anywhere on the aircraft if:

(1) It is operated for the purpose of exhibition, including a motion picture or television production, or an airshow;

(2) Except for practice and test flights necessary for exhibition purposes, it is operated only at the loca-

1-13-88; 10:32 AM; 307 271 2330 # 2; 3075867402 # 5
ND 002 006

tion of the exhibition, between the exhibition locations, and between those locations and the base of operations of the aircraft; and

(3) For each flight in the United States:

(i) It is operated with the prior approval of the General Aviation District Office, in the case of a flight within the designated airport control zone of the takeoff airport, or within 5 miles of that airport if it has no designated control zone; or

(ii) It is operated under a flight plan filed under § 91.83 of this chapter describing the marks it displays, in the case of any other flight.

(b) A small U.S.-registered aircraft built at least 30 years ago or a U.S.-registered aircraft for which an experimental certificate has been issued under § 21.191(d) or 21.191(g) for operation as an exhibition aircraft or as an amateur-built aircraft and which has the same external configuration as an aircraft built at least 30 years ago may be operated without displaying marks in accordance with §§ 45.21 and 45.23 through 45.33 if:

(1) It displays in accordance with § 45.21(c) marks at least 2 inches high on each side of the fuselage or vertical tail surface consisting of the Roman capital letter "N" followed by:

(i) The U.S. registration number of the aircraft; or

(ii) The symbol appropriate to the airworthiness certificate of the aircraft ("C", standard; "R", restricted; "L", limited; or "X", experimental) followed by the U.S. registration number of the aircraft; and

(2) It displays no other mark that begins with the letter "N" anywhere on the aircraft, unless it is the same mark that is displayed under paragraph (b)(1) of this section.

(c) No person may operate an aircraft under paragraph (a) or (b) of this section—

(1) In an ADIZ or DEWIZ described in Part 99 of this chapter unless it temporarily bears marks in accordance with §§ 45.21 and 45.23 through 45.33;

(2) In a foreign country unless that country consents to that operation; or

(3) In any operation conducted under Part 121, 127, 133, 135, or 137 of this chapter.

(d) If, due to the configuration of an aircraft, it is impossible for a person to mark it in accordance with §§ 45.21 and 45.23 through 45.33, he may apply to the Administrator for a different marking procedure.

[Doc. No. 8093, Amdt. 45-5, 33 FR 450, Jan. 12, 1968, as amended by Amdt. 45-13, 46 FR 48603, Oct. 1, 1981]

§ 45.23 Display of marks; general.

(a) Each operator of an aircraft shall display on that aircraft marks consisting of the Roman capital letter "N" (denoting United States registration) followed by the registration number of the aircraft. Each suffix letter used in the marks displayed must also be a Roman capital letter.

(b) When marks that include only the Roman capital letter "N" and the registration number are displayed on limited or restricted category aircraft or experimental or provisionally certificated aircraft, the operator shall also display on that aircraft near each entrance to the cabin or cockpit, in letters not less than 2 inches nor more than 6 inches in height, the words "limited," "restricted," "experimental," or "provisional airworthiness," as the case may be.

[Doc. No. 8093, Amdt. 45-5, 33 FR 450, Jan. 12, 1968, as amended by Amdt. 45-9, 42 FR 41102, Aug. 15, 1977]

§ 45.25 Location of marks on fixed-wing aircraft.

(a) The operator of a fixed-wing aircraft shall display the required marks on either the vertical tail surfaces or the sides of the fuselage, except as provided in § 45.29(f).

(b) The marks required by paragraph (a) of this section shall be displayed as follows:

(1) If displayed on the vertical tail surfaces, horizontally on both surfaces, horizontally on both surfaces of a single vertical tail or on the outer surfaces of a multivertical tail. However, on aircraft on which marks at least 3 inches high may be displayed in accordance with § 45.29(b)(1), the marks may be displayed vertically on the vertical tail surfaces.

(2) If displayed on the fuselage surfaces, horizontally on both sides of the

e operator of a fixed-wing air- all display the required marks r the vertical tail surfaces or s of the fuselage, except as in § 45.29(f).

ne marks required by para-) of this section shall be dis- s follows:

displayed on the vertical tail , horizontally on both sur- orizontally on both surfaces of vertical tail or on the outer of a multivertical tail. Howev- rcraft on which marks at least high may be displayed in ac- with § 45.29(b)(1), the marks displayed vertically on the ver- surfaces.

displayed on the fuselage sur- rizontally on both sides of the

fuselage between the trailing edge of the wing and the leading edge of the horizontal stabilizer. However, if engine pods or other appurtenances are located in this area and are an integral part of the fuselage side surfaces, the operator may place the marks on those pods or appurtenances.

(Amdt. 45-9, 42 FR 41102, Aug. 15, 1977)

§ 45.27 Location of marks; nonfixed-wing aircraft.

(a) *Rotorcraft.* Each operator of a rotorcraft shall display on that rotorcraft horizontally on both surfaces of the cabin, fuselage, boom, or tail the marks required by § 45.23.

(b) *Airships.* Each operator of an airship shall display on that airship the marks required by § 45.23, horizontally on—

(1) The upper surface of the right horizontal stabilizer and on the under surface of the left horizontal stabilizer with the top of the marks toward the leading edge of each stabilizer; and

(2) Each side of the bottom half of the vertical stabilizer.

(c) *Spherical balloons.* Each operator of a spherical balloon shall display the marks required by § 45.23 in two places diametrically opposite and near the maximum horizontal circumference of that balloon.

(d) *Nonspherical balloons.* Each operator of a nonspherical balloon shall display the marks required by § 45.23 on each side of the balloon near its maximum cross section and immediately above either the rigging band or the points of attachment of the basket or cabin suspension cables.

(Docket No. 2047, 29 FR 3223, Mar. 11, 1964, as amended by Amdt. 45-15, 48 FR 11392, Mar. 17, 1983)

§ 45.29 Size of marks.

(a) Except as provided in paragraph (f) of this section, each operator of an aircraft shall display marks on the aircraft meeting the size requirements of this section.

(b) *Height.* The character marks must be of equal height and on—

(1) Fixed-wing aircraft, must be at least 12 inches high, except that:

(i) An aircraft displaying marks at least 2 inches high before November 1, 1981 and an aircraft manufactured after November 2, 1981, but before January 1, 1983, may display those marks until the aircraft is repainted or the marks are repainted, restored, or changed;

(ii) Marks at least 3 inches high may be displayed on a glider;

(iii) Marks at least 3 inches high may be displayed on an aircraft for which an experimental certificate has been issued under § 21.191(d) or 21.191(g) for operating as an exhibition aircraft or as an amateur-built aircraft when the maximum cruising speed of the aircraft does not exceed 180 knots CAS; and

(iv) Marks may be displayed on an exhibition, antique, or other aircraft in accordance with § 45.22.

(2) Airships, spherical balloons, and nonspherical balloons, must be at least 3 inches high; and

(3) Rotorcraft, must be at least 12 inches high, except that rotorcraft displaying before April 18, 1983, marks required by § 45.29(b)(3) in effect on April 17, 1983, and rotorcraft manufactured on or after April 18, 1983, but before December 31, 1983, may display those marks until the aircraft is repainted or the marks are repainted, restored, or changed.

(c) *Width.* Characters must be two-thirds as wide as they are high, except the number "1", which must be one-sixth as wide as it is high, and the letters "M" and "W" which may be as wide as they are high.

(d) *Thickness.* Characters must be formed by solid lines one-sixth as thick as the character is high.

(e) *Spacing.* The space between each character may not be less than one-fourth of the character width.

(f) If either one of the surfaces authorized for displaying required marks under § 45.25 is large enough for display of marks meeting the size requirements of this section and the other is not, full-size marks shall be placed on the larger surface. If neither surface is large enough for full-size marks, marks as large as practicable shall be displayed on the larger of the two surfaces. If any surface authorized to be marked by § 45.27 is not large

enough for full-size marks, marks as large as practicable shall be placed on the largest of the authorized surfaces.

(g) *Uniformity.* The marks required by this part for fixed-wing aircraft must have the same height, width, thickness, and spacing on both sides of the aircraft.

[Doc. No. 2047, 29 FR 3223, Mar. 11, 1964, as amended by Amdt. 45-2, 31 FR 9663, July 21, 1966; Amdt. 45-9, 42 FR 41102, Aug. 15, 1977; Amdt. 45-13, 46 FR 48604, Oct. 1, 1981; Amdt. 45-16, 48 FR 11392, Mar. 17, 1983]

§ 45.31 Marking of export aircraft.

A person who manufactures an aircraft in the United States for delivery outside thereof may display on that aircraft any marks required by the State of registry of the aircraft. However, no person may operate an aircraft so marked within the United States, except for test and demonstration flights for a limited period of time, or while in necessary transit to the purchaser.

§ 45.33 Sale of aircraft; removal of marks.

When an aircraft that is registered in the United States is sold, the holder of the Certificate of Aircraft Registration shall remove, before its delivery to the purchaser, all United States marks from the aircraft, unless the purchaser is—

(a) A citizen of the United States;

(b) An individual citizen of a foreign country who is lawfully admitted for permanent residence in the United States; or

(c) When the aircraft is to be based and primarily used in the United States, a corporation (other than a corporation which is a citizen of the United States) lawfully organized and doing business under the laws of the United States or any State thereof.

[Amdt. 45-11, 44 FR 61938, Oct. 29, 1979]

FOR IMMEDIATE RELEASE
September 30, 1987
#87-35

contact: Paul Steucke

LARGER AIRCRAFT NUMBERS REQUIRED

Effective December 8, 1987, all aircraft entering into the Alaskan ADIZ or DEWIZ (Alaskan Air Defense Identification Zones) north of Yakutat, will be required to have 12 inch high identifying registration numbers and letters on the outside of the aircraft (map attached). Previous regulations required the letters and numbers to be at least 3 inches high. The major purpose of the larger numbers is to allow law enforcement officers patrolling coastal areas to identify suspect aircraft which might be carrying drugs into the country. For example, aircraft flying to Anchorage from Juneau will require the larger numbers because they are penetrating the zones. This also includes flights from Canada into central and northern Alaska.

5

Secretary of Transportation Elizabeth Dole announced the new rule which contains three major provisions, on September 17, 1987.

The first new requirement is that all aircraft flying through off-shore air defense identification zones display 12 inch high nationality and registration marks ("N numbers"). The second requires aircraft to have an externally mounted identification plates. The third requires that aircraft modified with supplemental fuel tanks, which were installed in compliance with FAA regulations, carry authorization for the modification aboard the aircraft.

Dole said, "The larger markings will make it easier for law enforcement officers to identify suspect aircraft, and the external identification plates will help authorities to identify aircraft that have been stolen and possibly used to smuggle drugs into the U.S.".

more...

Current FAA regulations allow some aircraft to display N-numbers only three inches high, which makes them difficult to read at a distance. Although the FAA rules were changed in Nov. 1981 to require the display of at least 12 inch high marks, the smaller markings were allowed to continue until the airplane was repainted or the numbers changed.

The new rule overrides this past exception and requires display of the 12 inch numbers when an aircraft is penetrating an Air Defense Identification Zone or Defense Early Warning Identification Zone where U.S. Customs agents, the Coast Guard or other law enforcement aircraft are most likely to attempt air-to-air identification. These zones cover all of Alaska north of Yakutat, including the Alaska-Canada border.

Maps of these zones are in the Alaska Airmen Supplement. Pilots seeking additional information should contact their local FAA Flight Standards District Office.

The identification data plates must be readable to a person standing outside the aircraft when it is on the ground. this will allow law enforcement officers to cross check the serial number of an aircraft with FAA records to determine if the N numbers had been changed in order to conceal the ownership of the aircraft or hide the fact that it had been stolen. This now can be done only by gaining access to the interior of some aircraft.

The new requirement that aircraft operators carry documentation covering the installation of extra fuel tanks also will help identify suspect aircraft used in smuggling operations.

December 10, 1987

State House Representative Steve Frank
1125 Sunset Drive
Fairbanks, AK 99701

Dear Representative:

Please note the attached article from Air Alaska, November 1987 issue. I understand the date for implementation has been moved to March 7, 1988. I don't believe the provisions for 12" numbers or for an outside data plate are necessary for Alaska. The requirement for the form 337 to be aboard the aircraft for fuel tanks installed according to FAA regulations is a matter of paperwork and not of significant concern. The main purpose of the first two provisions is to make it easier for Customs to identify aircraft suspected of running drugs across the Air Defense Identification Zones. The pertinent FAA regulations are FAR 45.29(h) for the 12" numbers, FAR 45.11(d) for the data plate information, and FAR 91.27(c) for the fuel tank requirements.

I am concerned because my wife and I invited the International Cessna 170 Association to convention in Alaska for a week during July 1988. We expect close to 100 airplanes to come to Fairbanks. Many of the aircraft have small numbers. All Cessna 170's are between 32 and 40 years old. The amount of money that we expect to be spent by the occupants of each Cessna 170 is substantial, and will be spread throughout the communities of Alaska. Gas sales, hotel rooms, meals, sightseeing, and tourist purchases will result in a boost to the businesses in the area, while taxes or direct fees will generate revenue for the local governments and the State of Alaska. We don't want to miss the opportunity for the revenue.

More importantly, however, is the fact that we do not want to have the inconvenience for our visitors and fellow Alaskans. Whenever one of us flies across the border to visit our neighbors in Canada, we will have to comply with the new law. Contrary to what the FAA says in their comments on the regulations, my maps show that flights conducted entirely within Alaska can be subject to the rules. Look at the fact that Tin City, Wales Point Hope, Icy Cape, Wainwright and Point Barrow Dew Station are outside the Alaskan ADIZ. Anytime the ADIZ or DEWIZ is penetrated, the law comes into effect.

The regulations mentioned above were designed for the coastal areas of the lower 48, where drug running is a real problem. Here, over-regulation, by virtue of including Alaska in regulations that do not fit the situation is a problem. This happens in more instances than just this one. Please provide your support by getting Congress to make an exception for Alaska.

I would be happy to discuss this with you further. I certainly appreciate your help.

Sincerely,

Rick Schikora

Larger aircraft numbers required

Effective Dec. 8, 1987, all aircraft entering into the Alaska ADIZ or DEWIZ (Alaskan Air Defense Identification Zones) north of Yakutat will be required to have 12-inch high identifying registration numbers and letters on the outside of the aircraft, says the Federal Aviation Administration.

The major purpose of the larger numbers is to allow law enforcement officials patrolling coastal areas to identify suspect aircraft which might be carrying drugs into the country, FAA said. For example, aircraft flying from Anchorage to Juneau will require the larger numbers because they are penetrating the zones. This also includes flights from Canada into central and northern Alaska.

The rule, announced Sept. 17, contains three provisions: 12-inch numbers, aircraft must have externally mounted identification plates, and aircraft modified with supplemental fuel tanks installed to FAA regulations must carry authorization for the modification aboard the aircraft.

Maps of the zones are in the Alaska Airmen Supplement. Pilots seeking more information should contact their local FAA Flight Standards District Office.

ADIZ problem is fixing itself

By Kent Lee Woodman

As recently reported in these pages, the FAA has adopted three changes to the FARs which affect certain general aviation aircraft. In addition to the change in documentation for internal Auxilliary fuel tanks and the requirement for all aircraft to have certain data plates, there was a rule requiring all aircraft "penetrating" the ADIZ (Alaska Defense Identification Zone) or the DEWIZ (Distant Early Warning Identification Zone) to have 12" identification within a 90 day compliance period following Dec. 8 or early March 1988.

The Alaska Airmen's Association tried valiently to prevent this rule from taking effect for Alaskan bound aircraft, because it prevented flights from Anchorage and Juneau or to and from Canada without the expensive alteration, they felt, interfering with their rights of interstate travel.

Suddenly, from an unlikely and completely unsuspected corner, comes help: clearly the easiest solution (except revocation of the rule) would be to simply change the boundaries of the ADIZ and this is precisely what has been proposed! The ADIZ and DEWIZ have been in place for many years with no changes. Within these zones the U.S.Air Force had been intercepting increased numbers of Russian aircraft, so it is a vital area. The surprise suggested change, however, is to delete the DEWIZ and shrink the ADIZ down to an offshore area surrounding the land mass of Alaska, and thus prevent all the difficulties the Airmen perceived they faced.

The accompanying map shows the newly proposed area for the ADIZ. It is obvious that "penetrations" of the ADIZ will be greatly reduced by this change, and that there will be no unwarranted intrusions on the privacy of visitors to Alaska, folks going to Whitehorse for the weekend or Alaskans trying to fly to their capitol.

The Airmen have enthusiastically embraced the proposed change as a masterful, if surprising solution to a complex bureaucratic problem. At press time the notice of proposed rule making was in final draft and should appear in the Federal Register within about 30 days. Assuming there are no major objections, it could be in place within 180 days. As seen in the diagram, the present boundaries place Nome and portions of the Seward Peninsula in the ADIZ. The Airmen are petitioning to move it to at least the shoreline.

Finally, that leaves the question of

See ADIZ, Page 24

tals. Preliminary NTSB statistics for the first half of 1987 show general aviation has continued to improve its safety record this year, with significant declines in numbers of accidents, fatal accidents and fatalities.

The National Safety Council's 1987 edition of Accident Facts shows more Americans were killed in bicycle or boating accidents during 1986 than in general aviation accidents, which represented only 1 percent of the total number of accidental deaths in the U.S.

In 1986, there were 958 general aviation accidents compared to 1,229 marine transportation fatalities. The Council estimates 1,200 people lost their lives in collisions between bicycles and motor vehicles.

The NSC also estimated that in 1986, 47,900 people died in motor vehicle accidents; 11,000 died in falls; 5,600 drowned; 4,800 died as a result of fires or burns, and 4,000 more were accidentally poisoned.

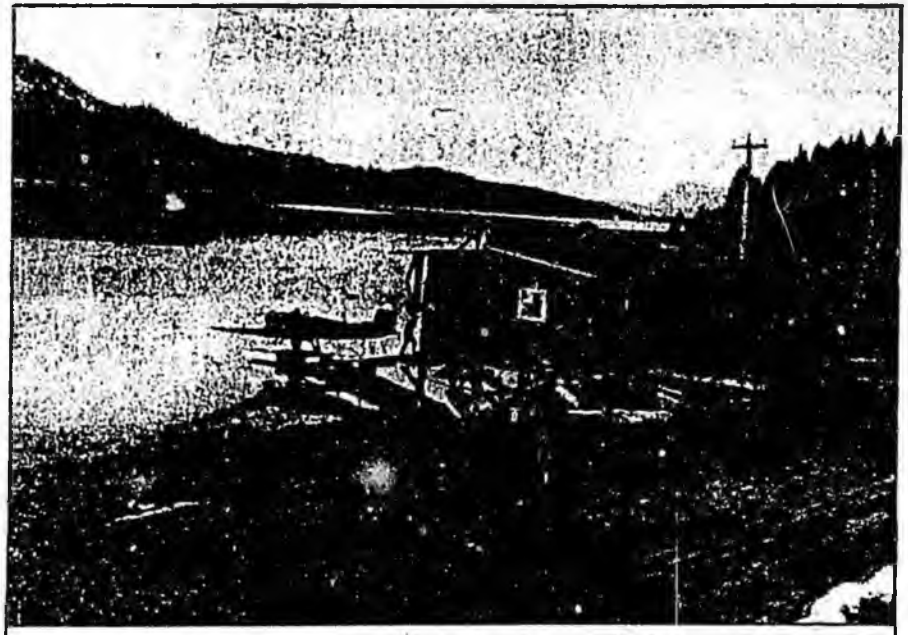
Meteorologist Evangelista will write column on Alaska flying and weather

Meteorologist and pilot Mark Evangelista will be writing columns, Eye on the Sky, for Air Alaska concerning weather and Alaska flying. His first column appears in this issue on Page 20.

Evangelista, who works for the National Weather Service, can also

In the aviation meteorology business for five years, Evangelista came to Alaska with the U.S. Air Force. "I was one of the few that asked to come up here," he says.

A ground instructor as well as a meteorologist, Evangelista flies with the Elmendorf AFB Aero Club, preferring light singles.



Here we go again with another edition of "name that mystery plane." Last month's mystery plane (see letters to the editor page) was a replica of the

Air Alaska January 1988 page 1

ment prototypes may be on display, and plans include video taping presentations from industry experts for later programs

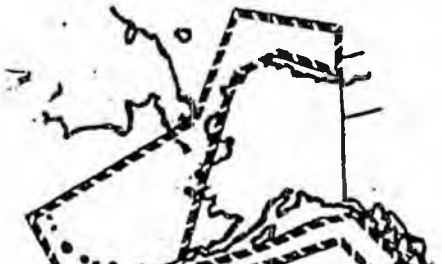
Initial thinking is to use the ACC Aviation Complex hangar and have booths, show area, tables for swap meet and perhaps classrooms for special presentations.

Manufacturers, dealers and individuals who are interested in participating in the program should contact Kent Lee Woodman, c/o the Alaska Airmen's Association Inc., c/o ACC Aviation Complex, 2811 Merrill Field Drive, Anchorage 99501. Details will be presented in the February and March issues of Air Alaska.

• ADIZ

Continued from Page 1

compliance with the present new rule and enforcement between March 8 and the change in the ADIZ. How foolish it would be to make the major expenditure to comply for two months, or to be involved in an enforcement action for an area we know in advance is about to change. To his credit, Frank A. Cunningham, the FAA Alaskan Region Director, has initiated action to either exempt Alaska, or obtain permission to stay enforcement pending the newest rule. NORAD and the USAF are to be commended for their proposal, and the FAA for its logical help in the interim.



The sketch shows the preliminary proposed new boundaries for the Alaskan ADIZ. The DEWIZ would disappear entirely. The move is sponsored by NORAD, which is realligning all of its defense identification zones to match the current, state of the art radar systems and perceived threat to North America. Sketch courtesy FAA.

and polishing, C.F.M. tested

- **Equalized inlet and exhaust air flow distribution**
- **Improves engine performance**
- **Reduces engine combustion stress and vibration**
- **Increases overall engine reliability**

During the T.B.O. of your aircraft engine, various cylinder and valve assemblys are repaired and replaced. Each cylinder will actually produce a different horsepower and (cubic feet per minute) air flow distribution creating a volumetric efficiency imbalance resulting in reduced horsepower, reduced speed, increased vibration, increased wear, and poor combustion chamber performance. These problems are often found even from an originally manufactured engine.

By the creation of "POWER BY VICTOR" Cylinder Assemblys, all of your cylinders will be matched for perfect volumetric effi-

RESOLUTION 1 - 0188

WHEREAS, the Greater Fairbanks Chamber of Commerce is concerned about the economy in Fairbanks, and

WHEREAS, the federal government frequently institutes regulations and laws which have detrimental effects on the economy, and

WHEREAS, the International Cessna 170 Association has chosen to convention in Fairbanks during July 1988, with an expected attendance of 100 airplanes most of which will be Cessna 170s ranging in age from 32 to 40 years old, and

WHEREAS, the Federal Aviation Administration has recently instituted a regulation requiring 12 inch registration numbers on aircraft penetrating the Alaska Domestic Air Defense Identification Zone or the Distant Early Warning Indentification Zone, and

WHEREAS, the reason for requiring 12 inch numbers is to assist Customs in identifying aircraft suspected of running drugs across ADIZs or DEWIZs, and

WHEREAS, these regulations will likely have a negative impact on the number of tourists coming to Alaska by aircraft, for the Cessna 170 Convention and other purposes,

THEREFORE BE IT RESOLVED, that the Greater Fairbanks Chamber of Commerce supports the repeal of regulation FAR 45.21 (h) requiring 12 inch numbers for Alaska, and its companion regulation FAR 45.11 (a) and (d), and

BE IT FURTHER RESOLVED, that if the regulations cannot be repealed for Alaska then a special blanket exemption be granted for the International Cessna 170 conventioneers.

DATED THIS 4th DAY OF August 1988.

CURRENT ALASKAN ADIZ ALIGNMENT
PINE TREE RADAR SYSTEM

PROPOSED ALASKAN ADIZ ALIGNMENT

BRIEFING ITEM FOR AVIATION FORUM

SUBJECT: AIR DEFENSE IDENTIFICATION ZONE (ADIZ) REALIGNMENT

Proposed effective date: May 5, 1988.

BACKGROUND

The military has decided that the ADIZ realignment is necessitated by the various North American Aerospace Defense Modernization initiatives and HQ NORAD direction to simplify identification zones for North America.

CHANGES

The terms "Coastal ADIZ," "Domestic ADIZ," and "Distant Early Warning Identification Zone (DEWIZ)" will be eliminated. Henceforth, "ADIZ" will be the only term used regarding identification zones.

Significant Alaskan NORAD Region changes.

1. The Alaskan ADIZ will include all of the Aleutian Islands (current DEWIZ does not).
2. Off the Alaska north coast, the ADIZ line will extend northward an additional 120 nautical miles.
3. A portion of the existing ADIZ line between Alaska and Canada will be eliminated (see marking on proposed realignment chart).
4. Establish ADIZ along southeast coast of Alaska to cover gap which presently exists between the Canadian Coastal ADIZ and the Alaskan DEWIZ.

Other changes.

1. Institute a new ADIZ off both the Canadian and U.S. coastal areas to provide for integral perimeter coverage for the continent.
2. The ADIZ across central Canada is no longer required due to the closure of the Pinetree line radars.

Attached is depiction of current alignment and the proposed realignment. FAA Washington Headquarters is preparing a notice of proposed change to FAR 99, "Security Control of Air Traffic," for publication in the Federal Register.

House of Representatives

TO: The House Transportation Committee

FROM: Rep. Steve Frank

RE: HJR 46 - "Size of Aircraft Numbers"

DATE: January 27, 1988

House Joint Resolution 46 requests that the FAA grant an exemption from their new regulations for Alaskan pilots flying intrastate.

The Federal Aviation Administration (FAA) has implemented new regulations requiring planes that penetrate an Air Defense Identification Zone (ADIZ) or a Distant Early Warning Identification Zone (DEWIZ) to display larger registration numbers and exterior identification plates. Currently the majority of Alaska is surrounded by an ADIZ with the exception of Southeastern and some parts of Western Alaska.

Recently the Air Force announced its plans to revise the ADIZ which will solve the problem in most of Alaska. However, the proposed ADIZ will encompass significant parts of Western Alaska such as St. Mary's, Nome, Pt. Hope, and Icy Cape. As a consequence, aircraft flying from anywhere in Alaska to these places would still have to comply with the 12 inch lettering requirement.

For that reason we are requesting that the FAA grant this exemption for Alaskan planes flying intrastate. In addition, since the proposed ADIZ will not become effective until May, we are requesting a waiver from the new regulations until the new ADIZ is implemented.

Thank you for your consideration.

ANALYSIS: The use of a toll authority is not established procedure in the department. The assumptions expressed in this analysis represent the department's initial reactions to this concept and may need modification to more accurately reflect the opportunity costs of money, the pay back terms and other financial assumptions. In addition, federal aid funds for construction may have to be re-paid prior to establishing a toll.

ASSUMPTIONS

A) Toll Checkpoint

1) One toll checkpoint would be needed to collect tolls.

2) Checkpoint costs were based on similar costs for a checkpoint on the Dalton Highway.

3) A checkpoint for year round occupancy would be more expensive as it would require additional insulation, permanent utilities systems, larger living quarters, etc.

B) Pioneer Road

1) Would be 18ft. wide, screened gravel surface and have trestle type bridges. The cost for this work assumes that 18ft. wide road could be constructed so that it was safe and maintainable and that only minimal reconstruction on the existing railbed would be necessary. Should any of these parameters be forced to change, during the course of actual design, the cost could increase substantially. Cost increases would depend on the type of changes that were necessary.

C) Federal Aid Secondary

1) Would be 28ft. wide, crushed gravel surface and have standard bridges. The cost is based on current construction costs for typical gravel surface Federal Aid secondary roads. Assumes construction of access road from the Million Dollar Bridge, Mile Post 49, to Chitina.

D) Copper River Bridge

1) To keep per vehicle tolls to a minimum, it was assumed that the estimated $7,500,000 to construct a bridge across the Copper River, adjacent to the Million Dollar Bridge, would be done with Federal discretionary bridge funds. Therefore, this particular cost does not appear in the overall capital costs. If discretionary funding cannot be obtained the $7,500,000 construction cost would have to be added to the total capital costs of the project. This would increase the per vehicle toll for capital costs payoff by $7.00 for seasonal and $4.00 for year-round.

E) Maintenance Station

1) In order to distribute the added mileage evenly, one additional station would be needed in the Tasnuna River area and additional equipment would be needed at the Chitina Station.

2) Facilities requirements to meet seasonal needs.
2,400 sq. ft. shop
Generator Bldg. w/two generators
4 each trailer pads for 14X70 trailers.
Utilities and water/well system.

3) Facilities requirements to meet year round needs (in addition to above building needs).
2 Trailer pads for 14X70 trailers.
Utilities and water system.
Sand shed 2,000 sq. ft.

2,000 sq. ft. work store building.

F) Maintenance Equipment

1) Seasonal (either type road)
   a) New Tasnuna Station
      Motor graders CAT 14 Type (2)
      Dump Truck 8 Yd.
      Loader 4 yd. type (1)
      Dozer D-8 type
      2 4WD 3/4 ton pickups
      Low tractor trailer

   b) The mileage this road would add to the existing system would be slightly more than a new station should handle. Therefore, some additional equipment would be needed at the existing Chitina Station to cover the extra northernmost portion of the additional mileage. This additional equipment would also be used on other state-maintained roads in the Chitina area.

   c) Chitina Station (additional equipment)
      Motor grader CAT 14 type (1)
      Loader 4yd. type (1)
      Dump Truck 8 yd. type (1)

2) Year-round (in addtion to season equipment needs) [either type road]
   a) Tasnuna Station
      Truck type Rotary snowblower 2 each 1200 tph
      4x4 Oshkosh with V-nose plow, belly blade and wing, 2 each
      Sander

G) Building and equipment needs are based on:

1) Historical information from old railroad records, which show that a substantial maintenance effort was required to keep the alignment open and in good repair at all times of the year.

2) Personal on-site observations of substantial slide and erosion activity by DOT&P. maintenance staff and other individuals at various times of the year.

3) If the Pioneer Road is built, it will be heavily used. The one-lane road will not be able to handle the volume of traffic very long. By building and staffing an adequate camp, maintenance forces can make many of the upgrades that will be required by the traffic volume.

H) Maintenance Costs - Manpower Needs

1) Seasonal
   a) Tasnuna Station (New Positions)
      i) 1 WG 52 Foreman
      ii) 2 WG 53 Operations
      iii) 1 WG 53 Operator/Mechanic

   b) Chitina Station
      i) 2 WG 53 Operators

2) Year Round
   a) Tasnuna Station
      i) above 4 Positions @ Full-time
      ii) Plus 1 additional WG 53 Operator and 1 additional WG 54 Operator

I) Toll Program Administration

1) Based on estimates of manpower needs for similar checkpoint program on Dalton Highway at $7,000 per month for a staff of 3.

2) Accounting support assumes accounting clerk, range 9, part-time.

J) Average Annual Traffic

1) Based on historical traffic generating data for similar sized communities, future growth patterns as demonstrated in the draft Cordova Comprehensive Plan and the area's location relative to major population centers and recreational/resource opportunities. This resulted in an average daily traffic count forecast of 375 vehicles a day, or 11,250 a month based on a 30-day month.

2) The average monthly traffic count for a year round rate will be less than a seasonal route. This is because the year round average takes in a 7-month period where historic traffic declines by approximately 60% from the five-month summer period.

K) Capital Costs

1) Capital costs for check point construction, maintenance equipment, maintenance station construction, and Pioneer Road would all have to be funded initially from General Funds.

2) Capital costs for constructing the Federal Aid Secondary Road would be split 91.35% Federal and 8.65% State General Fund match.

3) Costs for Pioneer Road construction could be recovered from the FHWA upon upgrade of this road to Federal Highway Secondary standards. However this recovered cost would come from federal obligation authority which could otherwise be used on other projects.

L) Toll charges for private vehicles may be able to be lessened by charging on the basis of vehicle gross weight. This would increase the cost to truck traffic, but assumably increase shipping costs as well. Because we have no way to determine gross weight at this time, such a charge schedule would have to wait until traffic data could be collected on the road, so that a determination could be made as to whether or not actual truck traffic was substantial enough to invoke such a schedule. An annual reassessment of toll charges could be done if changes in traffic level, maintenance costs, and/or toll program costs change.

M) Analysis does not include "cost of money."

RE: HJR 50

HJR 50 asks the Congress to remove the Highway Trust Fund and the Airport and Airway Trust Fund from the Unified Federal Budget.

The highway and airport trust funds receive their revenue from user fees and are dedicated to highway and airport improvement programs. The funds are the source of most federal matching money in the Alaska Department of Transportation budget.

Inclusion of these two funds in the Unified Federal Budget has subjected them to federal budget reduction acts. However, monies in the funds cannot be spent on other areas of the budget because they are dedicated. Therefore, the highway and airport/airway funds accumulate a balance while the critical transportation needs of the states may go unmet.

Factory ships caught with nets down in Bering Sea

SEATTLE (AP) – Tough penalties and increased Coast Guard surveillance are being sought after seven Japanese factory ships reportedly were seen fishing illegally in U.S. waters.

Ted Evans, director of the Alaska Factory Trawlers Association, and Sam Hjelle, president of Glacier Fish Co., said they made videotapes of the ships they saw Wednesday from a privately charted jet about 38 miles inside the 200-mile fishery zone and northwest of Adak in the Aleutian Islands.

"This simply confirms what we have suspected all along," Evans said, "that there is massive, calculated foreign fishing within the U.S. zone."

Hjelle, whose Seattle company operates a factory trawler, said overall Japanese fleet sizes in the area and shipments of processed seafood lead him to believe as much as five million metric tons of unreported fish worth as much as $2 billion may have been caught in the north Pacific Ocean last year – more than twice what U.S. scientists say would be a biologically acceptable harvest.

The Seattle-based trawlers group will report the findings at a meeting of the North Pacific Fisheries Management Council this week in Anchorage, Alaska, along with requests for tough penalties and increased Coast Guard surveillance, Evans said.

A State Department official in Washington D.C. told The Seattle Times that Japanese diplomats were asked for an explanation Friday, with further action unlikely until the unofficial report is confirmed.

Last year Japanese, Korean and other foreign fishing representatives reported catching more than a million metric tons, or 2.2 billion pounds, of bottomfish in the "doughnut hole," an expanse of international waters covering 4,500 square miles in the Bering Sea where the water is more than two miles deep.

"No way they're catching all that fish in the doughnut hole," Hjelle said. "Fish don't like the deep water. They school up on the edge (of the continental shelf, inside the zone) where there's lots of upwelling."

He and others say it is far more likely those fish were taken by boats that slipped inside the fishery zone under cover of darkness or low clouds.

A Coast Guard official in Washington D.C. said the agency has similar suspicions and has often heard unconfirmed reports of illegal fishing, but despite air and sea patrols the foreign fleets have never been caught with their nets down.

Last year the Coast Guard report spotting as many as 200 foreign fishing vessels in the Bering Sea.

Evans said he, Hjelle and the charter pilots had been flying for several hours when they saw some radar blips and dipped beneath the 200-foot cloud cover in an area the plane's Loran gear indicated was 38 miles inside the zone.

In three passes they said they videotaped seven factory trawlers, each more than 200 feet long, fishing on Ulm's Plateau, an area of shallow water known as a productive fishing area. Moments later, just outside the U.S. zone, they spotted about 20 scattered Japanese vessels that appeared to have just pulled in their nets and seemed to be processing, Evans said.

The Times described the tapes as grainy in quality but clearly showing nets in the water. Evans said he recorded the identification numbers of at least three ships, but the hull numbers of two others were covered by canvas tarpaulins.

Hjelle said the size of the boats indicated they were fishing for halibut, turbot or black cod, also known as sablefish, rather than pollock or other less lucrative fish.

Occasional snow tonight with northwest winds at 20 mph and a low near 30. Snow showers tomorrow with a high near 34. Record high for this date is 46, set in 1962; record low is -1, set in 1947. Sunset tonight at 5:04; sunrise tomorrow at 9:36. Daylight: 7 hours, 26 minutes.

the Kodiak daily mirror

VOL. 48 NO. 011 MONDAY, JANUARY 18, 1988 KODIAK, ALASKA 12 PAGES 35 CENTS

6 men overboard off crabber

By KAREN DURR
Staff Writer

Six crewmen abandoned the sinking FV Wayward Wind early this morning as a Coast Guard Cutter, aircraft, and commercial fishing vessels raced to the rescue.

Two survivors and four bodies have been picked up and returned to Kodiak. Officials were not releasing any identities at press time.

The men were reportedly in 10-foot seas south of Tugidak Island.

The Coast Guard received the Wayward Wind's mayday call at 1:15 a.m. Monday, according to a Kodiak Air Station spokesman. She was taking on water and the crew were putting on survival suits.

The Coast Guard launched a C-130 which pinpointed the vessel's Emergency Locator Transmitter signal and guided an H-3 helicopter to the area, 10 miles south of Tugidak off Kodiak's southernmost tip.

Two other fishing vessels were on scene this morning and others were on the way. The Coast Guard Cutter Boutwell also was to join the search.

The steel-hulled 86-foot Wayward Wind is homeported in Kodiak and is owned by Irish Lady Inc. of Port Williams on Shuyak Island. Her operator, is William "Red" Nietupski, according to City Harbormaster records. A multi-use vessel, she was geared for Tanner crabbing.

The search was being conducted in 25 knot winds and 10-foot seas with blowing snow, the AirSta spokesman said.

In an unrelated case, the Coast Guard also medevaced a crewman off the FV Yardarm Knot Friday afternoon.

Craig Davies, 19, was taken off the vessel.

Boat hull, 2 bodies found from FV Cape Karluk

By NELL WAAGE
Staff Writer

Two bodies from the FV Cape Karluk and the wrecked hull of the boat were found by searchers over the weekend.

Authorities have discontinued the search for a third crewman said to be aboard when the boat disappeared between Jan. 12 and 13.

The body of Merle P. Ashouwak, 24, was spotted by the Coast Guard search helicopter Saturday in Geese Channel and later recovered by crewmen aboard the Alaska Fish and Wildlife Patrol Vessel Vigilant. Ashouwak's body was clad in a Mustang "skiff suit" or "deck suit," according to LL Tom Schwantes of the FWP. Later in the day the body of Jerry D. Christiansen, 30, was located and recovered. Schwantes said that to his knowledge Christiansen was not wearing a survival or deck suit.

Still missing is Eugene Naumoff, 34.

The Coast Guard initially located the wreckage of the 32-foot Cape Karluk Friday in Geese Channel and was able to relocate it Saturday and direct the Vigilant to it. The entire cabin and wheel house were gone, LL Schwantes said, and the port side from the fish hold forward was torn away, making it possible to verify that no bodies were in the wreckage.

The search was discontinued late Saturday.

Jeff Peterson, Village Public Safety Officer of Old Harbor, said the men, all Old Harbor residents, had set off from the village for Moser Bay to pick up some crab pots. The boat left Moser Bay around noon on Jan. 12, according to information furnished to the FWP. Tuesday evening those aboard the boat radioed Old Harbor they were seeking shelter from severe weather in Russian Harbor at the southernmost tip of Kodiak Island and expected to reach the village the next morning. The VPSO reported the Cape Karluk overdue at around noon the next day.

The Vigilant happened to be in Geese Channel at 1 p.m. that day when they heard the missing boat report and began searching, Schwantes said, continuing on into Alitak and Moser Bay. The Coast guard also began a search. Seas were rough in the area, Schwantes said. A steady wind had buffeted the area at 40 miles per hour with gusts to 60 the two previous days.

Christiansen was owner of the Cape Karluk.

Admiral says fish patrol cuts likely

By KAREN DURR
Staff Writer

Depending on decisions being made in Washington D.C. soon, the Coast Guard is facing some drastic changes. Nationwide the service may sustain a $100 million cut – about 10 percent of last year's total – in this year's budget, and that cut must be worked into a fiscal year that's already more than a quarter past.

In Alaska's 17th Coast Guard District those changes could be felt immediately: a 30 percent cut in cutter operations, 10-15 percent cuts in flight time, moving the buoy tender Sweetbriar from its homeport in Cordova to Ketchikan and decommissioning another buoy tender, the Planetree.

The Commander of the 17th Coast Guard District, Rear Adm. Edward Nelson Jr., discussed some of those impending changes during an interview with *The Kodiak Daily Mirror*.

Mirror: We understand you were given some direction on cuts to be made to the Coast Guard in Alaska.

Nelson: That's something that was imposed last week, to make up the shortfall between what we need and what we don't have.

Mirror: But we also understand the Coast Guard has been authorized $100 million to come from the Department of Defense. Won't that offset this year's cut?

Nelson: We always do get some support from the Navy--what we would need in the event of a mobilization. But all I know is that additional DOD $100 million is in kind, not in dollars. Two examples would be C-130 parts or fuel. Specifically what kind other kinds of support I could not tell you. We're still in the process of working out what kind of support that could be.

If it wasn't for that $100 million, it would be a $200 million deficit.

Mirror: What restrictions would be placed on that DOD funding?

Nelson: It would be restricted in the same sense as using coupons in a company store. You can get fuel or parts, but it isn't dollars coming across the counter.

Mirror: It seems that every year the Coast Guard goes through a similar process of being cut drastically and at the last minute things work out.

Nelson: It's different this year with the Gramm-Rudman cuts. I don't know where the help is going to come from since it's gotten past the Congressional stage here. But you're right, every year we spend a lot of time finding relief and we have had some help before. It's very frustrating to face this every year. But we belong to Department of Transportation. If they take something out of the Department's budget that is high priority, like mass transit, it had to come out of that same piece of pie and we have a small piece.

Mirror: So what losses does Alaska face?

Nelson: We were asked what we were going to do to deal with this kind of reduction. We knew we're going to lose a buoy tender for some time. The Planetree hasn't gone through the extensive rehabilitation the others have. The need hasn't changed, but we were asked where would you make that up.

Another target might have been the Firebush. You can't get into personalities, but operations only. We feel like we can cover the needs of Aids to Navigation with the Homer-based Sedge or the Firebush out of Kodiak. If we have to take a loss somewhere it'll have to be the Sweetbrier.

We're basing this decision on operational needs, not on the way it's received in the community or who has what facilities.

Mirror: How are you going to handle other cuts?

Nelson: We'll probably close the MSDs (Marine Safety Detachments) in Kodiak and Sitka – that's two men in Kodiak, one in Sitka – and phase down the one in Valdez. We might make that a MSD and not a MSO (Marine Safety Office).

Kenai and Ketchikan both have a much heavier load. It would be

(See "Admiral," Page 12)

Admiral discusses cuts

(Continued from Page 1)

more expensive to cover them with transportation costs than, say, Kodiak or Sitka.

Mirror: How about the reported 10-15 percent reduction in aircraft operations?

Nelson: We knew we were going to have some reduction. Kodiak was supposed to be getting another C-130, but there was no place to hangar it so it's just as well we won't now.

Other than that, augmentation of airframe support on patrols is to be reduced. Already a bunch of the folks out of the (fishing) associations in Seattle – the larger catcher processors, the factory trawlers – have written Sen. Stevens and the North Pacific Fishery Management Council because they've been concerned we don't have enough information on fishing in the doughnut hole.

We weren't doing enough before and we'll be doing even less with less flight time. Beyond that, we didn't get any mandated cuts.

Mirror: What vessel operations may be affected by these 30 percent cuts?

Nelson: High-endurance cutters out of Seattle, Hawaii or San Francisco and enforcement of laws and treaties, readiness exercises, fisheries patrols, the Alaska Patrol, special operations, refresher training with the Navy.

Mirror: Specifically the Alaska Fisheries Patrol?

Nelson: We like to have two (patrol vessels) on the (fishing) grounds all the time. We'll flat not be able to do that. We'll have to compensate with the Storis out of Kodiak when we don't have the high-endurance cutters up here. The Storis does a fine job, but it isn't a high-endurance cutter.

We usually try to get the Boutwell on the grounds for 60 days, but with search and rescue cases and so on, they'll have less time on patrol.

Mirror: And your other training cutbacks?

Nelson: We canceled the Sedge out of Homer going on spring refresher training. But we rescheduled her for the fall and that turned out better anyways with the extensive turnover of officers due this summer. It'll be better in the fall with the new command.

Two other training excercises are coming up and the plan is to send them. It's pretty important. It's not just fighting war, but damage control training--how to hande a hole in the side. It's pretty important for the survival of a ship.

Training supposedly sticks, but with new people coming along all the time it has to be a constant thing.

We're looking across all expenses, down to the cost of having a phone sitting on a desk in someone's office and to a large part we can stall off somethings we can do without. But in the last few years, we've learned we can't do without training too long or it's going to turn around and bite you. So we're doing the best we can to maintain that training.

Mirror: What's the next step in the decision making process?

Nelson: The Department of Transportation is trying to work with the White House and we're getting pretty good support from the Department.

Mirror: When's the final decision due?

Nelson: Last week we thought Friday would have the answer. But we still haven't heard the word.

HOUSE RESOLUTION NO. 56-Requesting the U. S. Forest Service to upgrade Resurrection Creek Road in the Chugach National Forest

STATEMENT OF ROBERT L. GROGAN, DIRECTOR, DIVISION OF GOVERNMENTAL COORDINATION, OFFICE OF MANAGEMENT AND BUDGET, OFFICE OF THE GOVERNOR APRIL 11, 1988

State agencies have reviewed House Resolution No. 56 regarding the Resurrection Creek Road. The Department of Transportation and Public Facilities anticipates no fiscal impact from implementation of this resolution because the road is maintained by the U. S. Forest Service. The Department of Natural Resources believes that an upgraded road could enhance the value of state-owned land and potential land selections in the area.

We understand that the community of Hope is currently participating in a Forest Service planning process which will address overall land management concerns in the Resurrection Creek Valley. Among the public concerns is road access to Resurrection Pass Trail and impacts associated with increased visitor use. The Forest Service has informed us that, in the interim, it intends to schedule some road improvement work this summer, including the addition of a few turn-outs and widening of some narrow sections to enhance public safety. Completion of the Forest Service planning process will help ensure that improvement of road access to the Resurrection Trailhead is appropriate to the public needs that are identified.

FEB 0 1 1988

January 21, 1988

The Honorable Betty Cato
P.O. Box V
Juneau, AK 99811

Dear Representative Cato:

I talked with you in December. Our conversation was concerning the efforts of the citizens of Hope, Alaska, to have the Forest Service upgrade the Resurrection Creek Road.

The Forest Service said they were willing to upgrade the road, if they had the necessary funding to do so. We are requesting the Alaska Delegation to obtain the necessary Federal funding.

The citizens of Hope would appreciate a joint resolution signed by the House, Senate and Governor. Enclosed is a copy of the Resolution unanimously enacted by the Kenai Peninsula Borough.

Your consideration to this matter will be greatly appreciated.

Sincerely,

Tom Williams

KENAI PENINSULA BOROUGH

RESOLUTION 87-121

SUPPORTING THE ALASKA CONGRESSIONAL DELEGATION EFFORTS TO OBTAIN NECESSARY FUNDS FOR THE UPGRADING OF RESURRECTION CREEK ROAD IN HOPE, ALASKA

WHEREAS, Resurrection Creek Road is receiving larger volumes of traffic yearly to the trailhead of Resurrection Trail; and

WHEREAS, the last portion of Resurrection Creek Road is passible by one lane traffic only; and

WHEREAS, due to the increase in tourism a need exists to upgrade the necessary portions of Resurrection Creek Road to insure suitable safety standards;

NOW THEREFORE, BE IT RESOLVED BY THE ASSEMBLY OF THE KENAI PENINSULA BOROUGH:

Section 1. That the Kenai Peninsula Borough Assembly supports all efforts by the Alaska Congressional Delegation to obtain the funds necessary into the Dept. of Agriculture's budget for the upgrading of a portion of Resurrection Creek Road.

Section 2. That this resolution be sent to Senators Ted Stevens and Frank Murkowski, Representative Don Young, Senator Robert Bird, Chairman of the Senate Appropriations Committee, Subcommittee on the Interior and related agencies and Representative Sydney Yates, Chairman of the House Appropriations Committee, Subcommittee on the Interior and related agencies.

ADOPTED BY THE ASSEMBLY OF THE KENAI PENINSULA BOROUGH ON THIS 15th DAY OF December, 1987.

CS FOR HOUSE JOINT RESOLUTION NO. 68 (Resources)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

Urging Congress to restore the exemption from the federal excise tax on taxable fuels for certain diesel fuel users.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the State of Alaska has an extensive coastline, an economy dependent on resource extraction and development, and long transportation lines between principal commercial centers; and

WHEREAS transportation, commerce, and economic development in the state are greatly dependent on the use of tax exempt fuels, especially diesel fuel, by marine fuel consumers and by other fuel users engaged in resource development and transportation; and

WHEREAS the federal government has long exempted from the excise tax diesel fuel sold by a wholesale dealer to the ultimate consumer of the fuel; and

WHEREAS, under the provision that allowed tax-free sales for certain exempt sales purposes, most Alaskans who purchased diesel fuels for off-road use involving, among other activities, commercial fishing, timber, mining, farming, ranching, and marine transportation operations, did not pay the federal excise tax; and

WHEREAS the Omnibus Budget Reconciliation Act (P.L. 100-203) requires the collection of diesel fuel taxes at the wholesale level and repeals the provision allowing tax-free sales of diesel and other fuels for certain exempt purposes; and

WHEREAS, under that Act, effective April 1, 1988, except for sales of fuel destined for use as heating oil, all sales involving diesel fuel

HJR0683

beyond the wholesale level are subject to the excise; and

WHEREAS, to implement authority given to the United States Treasury to make exemptions from the tax, regulations proposed by the Internal Revenue Service establish a system by which persons who qualify for exemption from the federal excise tax and who claim the benefit of exemption may, with documentation of the fuel's nontaxable use, apply for a refund of the amount of the excise tax that the person has paid, either quarterly, if the person pays more than $1,000 per calendar quarter, or annually, as an adjustment to the person's individual income tax; and

WHEREAS the tax collection procedure imposed by this Act requires each purchaser of diesel fuel in the marketing chain to remit the tax, adding to the heavy cash flow burden of each party; and

WHEREAS the repeal of the exemption and substitution of the refund system will have a generally negative effect on the state's domestic economy by reducing the profit margins of many small ventures engaged in commercial fishing, timber, mining, farming, ranching, and marine transportation operations, and other resource extraction and development activities; and

WHEREAS, in a highly competitive seafood industry that is undercapitalized and often economically uncertain, repeal of the exemption and imposition of the federal excise tax, even with a refund provision, will have an extraordinarily detrimental effect by making it more difficult for domestic marine fuel suppliers and consumers who use the fuel in fishery activities to compete against foreign flag operators;

BE IT RESOLVED by the Alaska State Legislature that the Alaska Congressional delegation is urged to introduce and support passage of legislation restoring the exemption from payment of the federal excise tax on sales of diesel fuel in place of the amendments made by the Omnibus Budget Reconciliation Act.

COPIES of this resolution shall be sent to the Honorable Ted Stevens

M E M O R A N D U M

TO: Representative Bette Cato, Chair
House Transportation Committee

FROM: Representative Cliff Davidson

DATE: March 2, 1988

SUBJECT: House Joint Resolution 68 by the Resources Committee

Enclosed is a copy of House Joint Resolution 68, which was introduced today and assigned the Resources and Transportation Committees.

It will be heard on Wednesday, March 9 in the Resources Committee. May I request a hearing on this piece of legislation as soon as possible pending referral? There is a rush on getting HJR 68 to Congress before April 1, 1988.

This resolution requests Congress to preserve the way they collect the fifteen cent per gallon federal excise tax on diesel fuel.

Under legislation passed last December, tax-exempt categories must first pay the tax and then apply for a refund later. Under current practice, these tax exempt categories do not pay the tax at all.

While still technically exempt, the way the federal government will collect this tax unnecessarily raises the cost of doir business for many Alaskans. It will restrict their cash flow, increase paperwork and is essentially an interest free loan to the government.

This resolution asks Congress to reinstate the current practice and repeal the proposed changes, which take effect April 1, 1988.

Thank you for your support.

NATIONAL FISHERIES INSTITUTE, IN

2000 M STREET, N.W., STE. 580 ■ WASHINGTON, D.C. 20036 ■ (202) 296-5

February 12, 1988

TAX ALERT

ACTION REQUESTED

NFI VESSEL OPERATORS

Vessel operators should be aware that as of April 1, 1988:

- The up-front exemption from federal excise taxes will be repealed for diesel fuel purchased by fishery vessels.
- Diesel fuel used for vessels will continue to be nontaxable, but operators will be required to pay a 15.1 cents per gallon tax when purchasing fuel, then apply to the Treasury Department on a quarterly basis for a refund.

NFI is asking Congress to restore the up-front exemption for our industry. You are urged to contact your Senators and Representatives and urge them to sponsor legislation to permit tax-free sales of diesel fuel for fishery vessels.

BACKGROUND

A provision in the 1987 Budget Reconciliation Act passed in December requires federal excise taxes on diesel fuel to be collected at the wholesale level and repeals exempt sales beyond the wholesale level, except in four circumstances:

- diesel fuel sold for use as a fuel in a diesel-powered train;
- commercial aviation fuel;
- taxable fuel sold for industrial use other than as a motor fuel; and
- taxable fuel sold for use by a state or a political subdivision of a state.

These exemptions are not across-the-board; rather, they will have to be obtained on a case-by-case basis by each company.

(3)

All other current exemptions from the diesel fuels tax, including those for farmers, fishermen and other off-highway business use, have been eliminated. Instead, non-taxable uses will be taxed at time of purchase and refunds made pursuant to applications filed to document the non-taxable use. Although the regulations implementing this change have not been finalized, the Treasury Department indicates that they expect to use a quarterly refund process for amounts in excess of $1,000 which is similar to the existing refund process for non-taxable gasoline and diesel fuel uses. All refunds less than $1,000 per quarter will be handled annually.

The changes that were enacted had the objective of deterring tax-evasion schemes which are estimated to cost the Highway Trust Fund several hundred million dollars in lost revenues annually. However, the repeal of the exemption will place a heavy cash-flow burden on the seafood industry, which has legitimate tax exempt uses.

IMPACT

This law becomes effective April 1. The impact on fishery companies includes:

- o added cost for fuel;
- o additional recordkeeping and paperwork to enable recovery of funds through a yet-to-be established refund procedure; and
- o loss of the time value of the funds paid for fuel tax (which may be substantial as federal officials are swamped in an avalanche of refund requests).

LEGISLATIVE ACTIVITY

Several bills have been introduced. Four would restore the exemption for farmers only. These are:

- o H.R. 3850 sponsored by Congressman Jontz (D-IN)
- o H.R. 3844 sponsored by Congressman Daub (R-NE)
- o H.R. 3881 sponsored by Congresswoman Smith (R-NE)
- o S. 2003 sponsored by Senator Gramm (R-TX)

Two bills would restore exemptions for all off-highway uses including vessel operations. Those are:

- o H.R. 3865 sponsored by Congressman Combest (R-TX)
- o H.R. 3866 sponsored by Congressman De la Garza (D-TX)

FUEL TAX Report Language.

OMNIBUS BUDGET RECONCILIATION ACT OF 1987

CONFERENCE REPORT

TO ACCOMPANY

H.R. 3545

DECEMBER 21, 1987.—Ordered to be printed

maximum reduction in estate taxes to $750,000, (5) imposes holding period requirements for the decedent and the ESOP, (6) prohibits the deduction in the case of securities acquired with assets transferred from another plan of the employer, and (7) imposes certain excise taxes on an ESOP or worker-owned cooperative for a failure to satisfy the allocation and holding period requirements.

The confirmation of the IRS Notice is effective as if included in the Tax Reform Act of 1986. The other provisions are effective with respect to sales of securities to ESOPs after February 26, 1987, except that the ESOP holding period requirement generally applies to dispositions of securities by the ESOP after February 26, 1987. Securities subject to the ESOP holding period requirement are qualified employer securities, which for this purpose includes employer securities sold before February 27, 1987, for which a deduction was allowed.

Senate amendment

The Senate amendment is the same as the House bill, except that the provisions (other than the confirmation of the IRS Notice) are effective with respect to sales of securities to ESOPs after February 27, 1987, and that the ESOP holding period requirement generally applies to dispositions of securities by the ESOP after February 27, 1987. Securities subject to the ESOP holding period requirement are qualified employer securities, which for this purpose includes employer securities sold before February 27, 1987, for which a deduction was allowed.

Conference agreement

The conference agreement follows the House bill.

V. Excise Taxes; User Fees

A. EXCISE TAXES

1. Telephone excise tax: 3-year extension

Present law

A 3-percent excise tax is imposed on amounts paid for local telephone service, toll (long-distance) telephone service, and teletypewriter exchange service. This tax is scheduled to expire after December 31, 1987.

House bill

The House bill extends the present 3-percent telephone excise tax for 3 years, through December 31, 1990.

Senate amendment

The Senate amendment is the same as the House bill.

Conference agreement

The conference agreement follows the House bill and the Senate amendment.

2. Collection of diesel fuel and sales t

Present law

The excise taxes on diesel fue line aviation fuel generally are fuel by a retail dealer to the 4041). Under an exception, reta sale distributors collect and pay sold to the retailer.

House bill

The excise tax on taxable fue taxable special fuels, and nong posed on sale of the fuels to any

Taxable special fuels include oline or diesel fuel) that are (ol cle or motorboat. Nongasoline which tax would be imposed if commercial aviation.

)llows the House bill and the Senate

2. Collection of diesel fuel and certain other motor fuels taxes on sales to retailers

Present law

The excise taxes on diesel fuel, special motor fuels, and nongasoline aviation fuel generally are imposed on the sale of the taxable fuel by a retail dealer to the ultimate consumer of the fuel (sec. 4041). Under an exception, retail dealers may elect to have wholesale distributors collect and pay the diesel fuel tax when the fuel is sold to the retailer.

House bill

The excise tax on taxable fuels, which are defined as diesel fuel, taxable special fuels, and nongasoline aviation fuels, is to be imposed on sale of the fuels to any taxable fuel retailer.

Taxable special fuels include special motor fuels (other than gasoline or diesel fuel) that are sold for use as a fuel in a motor vehicle or motorboat. Nongasoline aviation fuels means any liquid on which tax would be imposed if sold for use in an aircraft in noncommercial aviation.

Collection of the excise tax on the sale of any taxable fuel by wholesale dealers is made mandatory for all sales. The provisions of present law permitting tax-free sales for certain exempt purposes are repealed.

Any taxable fuel that is held on January 1, 1988, by a dealer for sale is subject to a floor stocks tax at the rate applicable under this section to that fuel.

The provision is effective on January 1, 1988.

Senate amendment

The Senate amendment generally is the same as the House bill, with the following differences.

The Treasury Department is authorized to prescribe regulations for purposes of making refunds or allowing credits of the non-gasoline fuels excise taxes. In addition, Treasury is authorized to require information reporting and registration from such persons in the distribution chain of these fuels as is deemed necessary to prevent evasion of the tax.

The Senate amendment also requires that amounts equivalent to revenues raised by the floor stocks taxes be transferred to the Highway Trust Fund or the Leaking Underground Storage Tank (LUST) Trust Fund.

The provision is effective on January 1, 1988.

Conference agreement

The conference agreement generally follows the House bill and the Senate amendment, but includes several modifications. First, the tax on special motor fuels continues to be imposed at the retail level. In the case of the taxes on diesel fuel and nongasoline aviation fuels, tax technically is imposed on the sale (or earlier use) of a taxable fuel by the producer thereof. The term producer is defined, however, to include wholesale distributors and other intermediate persons in the chain of distribution of the taxable fuel. All persons who are producers of a taxable fuel must register with the

Treasury Department and satisfy such bonding requirements as Treasury may prescribe. Therefore, a wholesale distributor may buy fuels without payment of tax only upon satisfaction of these requirements.

In general, like the House bill and Senate amendment, all provisions permitting exempt sales beyond the wholesale level are repealed. Treasury is, however, given discretionary authority to exempt from tax certain sales where the purchaser demonstrates to the satisfaction of Treasury that the fuel will be used in a nontaxable use and also registers and posts such bond as Treasury may require. This authority is to be exercised on a case-by-case basis. Sales that may be exempted include (1) diesel fuel sold for use as a fuel in a diesel-powered train, (2) aviation fuel sold for use as a fuel in an aircraft in commercial aviation, (3) taxable fuels sold for industrial use other than as a motor fuel, and (4) taxable fuel sold for exclusive use of any State, a political subdivision of a State, or the District of Columbia.[2] As under the House bill and the Senate amendment, sales of fuel that Treasury determines is destined for use as heating oil may be made without payment of tax. All other exemptions from these taxes must be realized through refund procedures following purchase of the fuels tax-paid.

The conference agreement grants Treasury broad authority to ensure compliance generally with the provisions of the agreement. Specifically, Treasury may, in its discretion, require information reporting by and registration of any person in the distribution chain of any taxable fuel (including, e.g., any distributor of fuel destined for use as heating oil).

These provisions of the conference agreement are effective on and after April 1, 1988, with a floor stocks tax being imposed as was provided under the House bill and the Senate amendment on all persons holding non-tax-paid fuels on April 1, 1988.

3. Extension of termination date for coal excise tax rate

Present law

A manufacturer's excise tax is imposed on the sale or use of domestically mined coal by the producer (sec. 4121). Effective April 1, 1986, the tax rate was increased (by .) percent) to $1.10 per ton of coal from underground mines, and 55 cents per ton of coal from surface mines, but not to exceed 4.4 percent of the sales price.

Under present law, the tax rate is scheduled to revert to the pre-1982 rate of 50 cents per ton on underground coal and 25 cents per ton on surface coal (but not to exceed two percent of price) on the earlier of January 1, 1996 or the first January 1 as of which there is (1) no balance of repayable advances from the general fund to

[2] States and local governmental units eligible to apply to the Treasury for approval to buy fuels without payment of tax generally include those governmental units that are permitted to buy tax-free under present law (sec. 4221(a)(4)). The conferees are aware that repeal of automatic tax-free sales of these fuels to States and local governments may, in certain cases, result in a temporary additional cost on certain of these entities, but determined that general concerns about compliance with these taxes outweigh that possibility. The discretionary exemption included in the agreement reconciles these compliance concerns with any potential burden on States and local governments. The conferees intend that in determining which governmental units may purchase taxable fuels without payment of tax under the agreement, the Treasury Department is to attempt to minimize any such costs to the extent consistent with the increased compliance objectives of the conference agreement.

used to acquire employer securities from transferred assets (within the meaning of section 2057(c)(2)(B)).

"(d) ORDERING RULES.—For purposes of this section and section 4978, any disposition of employer securities shall be treated as having been made in the following order:

"(1) First, from qualified employer securities acquired during the 3-year period ending on the date of such disposition, beginning with the securities first so acquired.

"(2) Second, from qualified employer securities acquired before such 3-year period unless such securities (or the proceeds from such disposition) have been allocated to accounts of participants or their beneficiaries.

"(3) Third, from qualified securities (within the meaning of section 4978(e)(2)) to which section 1042 applied acquired during the 3-year period ending on the date of such disposition, beginning with the securities first so acquired.

"(4) Finally, from any other employer securities. In the case of a disposition to which section 4978(d) or subsection (e) applies, the disposition of employer securities shall be treated as having been made in the opposite order of the preceding sentence.[133]

"(e) SECTION NOT TO APPLY TO CERTAIN DISPOSITIONS.—

"(1) IN GENERAL.—This section shall not apply to any disposition described in paragraph (1) or (3) of section 4978(d).

"(2) CERTAIN REORGANIZATIONS.—For purposes of this section, any exchange of qualified employer securities for employer securities of another corporation in any reorganization described in section 368(a)(1) shall not be treated as a disposition, but the employer securities which were received shall be treated—

"(A) as qualified employer securities of the plan or cooperative, and

"(B) as having been held by the plan or cooperative during the period the qualified employer securities were held.

"(3) DISPOSITION TO MEET DIVERSIFICATION REQUIREMENTS.—Any disposition which is made to meet the requirements of section 401(a)(28) shall not be treated as a disposition.

"(f) DEFINITIONS AND SPECIAL RULES.—For purposes of this section—

"(1) TERMS USED IN SECTION 2057.—Any term used in this section which is used in section 2057 shall have the meaning given such term by section 2057.

"(2) QUALIFIED EMPLOYER SECURITIES.—The term 'qualified employer securities' has the meaning given such term by section 2057, except that such term shall include employer securities sold before February 27, 1987, for which a deduction was allowed under section 2057.

"(3) DISPOSITION.—The term 'disposition' includes any distribution.

"(4) LIABILITY FOR PAYMENT OF TAXES.—The tax imposed by this section shall be paid by—

"(A) the employer, or

"(B) the eligible worker-owned cooperative,

which made the written statement described in section 2057(e)."

(b) CONFORMING AMENDMENTS.—

(1) Section 4978(b)(2) is amended by striking out the parenthetical and inserting in lieu thereof "(determined as if such securities were disposed of in the order described in section 4978A(e))".

(2) The table of sections for chapter 43 is amended by inserting after the item relating to section 4978 the following new item:

"Sec. 4978A. Tax on certain dispositions of employer securities to which section 2057 applied."

[133] Indention wrong in copy on this sentence.

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable events (within the meaning of section 4978A(c) of the Internal Revenue Code of 1986) occurring after February 26, 1987.

Subtitle E—Provisions Relating to Excise Taxes and User Fees

PART I—EXCISE TAXES

SEC. 10501. EXTENSION OF TELEPHONE EXCISE TAX.

Paragraph (2) of section 4251(b) (relating to applicable percentage) is amended to read as follows:

"(2) APPLICABLE PERCENTAGE.—The term 'applicable percentage' means 3 percent; except that, with respect to amounts paid pursuant to bills first rendered after 1990, the applicable percentage shall be zero."

SEC. 10502. DIESEL FUEL AND AVIATION FUEL TAXES IMPOSED AT WHOLESALE LEVEL.

(a) IN GENERAL.—Part III of subchapter A of chapter 32 is amended by inserting after subpart A the following new subpart:

"Subpart B—Diesel Fuel and Aviation Fuel

"Sec. 4091. Imposition of tax.
"Sec. 4092. Definitions.
"Sec. 4093. Exemptions; special rule.

"SEC. 4091. IMPOSITION OF TAX.

"(a) IN GENERAL.—There is hereby imposed a tax on the sale of any taxable fuel by the producer or the importer thereof or by any producer of a taxable fuel.

"(b) RATE OF TAX.—

"(1) IN GENERAL.—The rate of the tax imposed by subsection (a) shall be the sum of—

"(A)(i) the Highway Trust Fund financing rate in the case of diesel fuel, and

"(ii) the Airport and Airway Trust Fund financing rate in the case of aviation fuel, and

"(B) the Leaking Underground Storage Tank Trust Fund financing rate in the case of any taxable fuel.

"(2) HIGHWAY TRUST FUND FINANCING RATE.—For purposes of paragraph (1), except as provided in subsection (c), the Highway Trust Fund financing rate is 15 cents per gallon.

"(3) AIRPORT AND AIRWAY TRUST FUND FINANCING RATE.—For purposes of paragraph (1), the Airport and Airway Trust Fund financing rate is 14 cents per gallon.

"(4) LEAKING UNDERGROUND STORAGE TANK TRUST FUND FINANCING RATE.—For purposes of paragraph (1), the Leaking Underground Storage Tank Trust Fund financing rate is 0.1 cent per gallon.

"(5) TERMINATION OF RATES.—

"(A) The Highway Trust Fund financing rate shall not apply on and after October 1, 1993.

"(B) The Airport and Airway Trust Fund financing rate shall not apply on and after January 1, 1988.

"(C) The Leaking Underground Storage Tank Trust Fund financing rate shall not apply during any period during which the Leaking Underground Storage Tank Trust Fund financing rate under section 4081 does not apply.

"(c) REDUCED RATE OF TAX FOR DIESEL FUEL IN ALCOHOL MIXTURE, ETC.—Under regulations prescribed by the Secretary—

"(1) IN GENERAL.—The Highway Trust Fund financing rate shall be—

"(A) 9 cents per gallon in the case of the sale of any mixture of diesel fuel if—

"(i) at least 10 percent of such mixture consists of alcohol (as defined in section 4081(c)(3)), and

"(ii) the diesel fuel in such mixture was not taxed under subparagraph (B), and

"(B) 10 cents per gallon in the case of the sale of diesel fuel for use (at the time of such sale) in producing a mixture described in subparagraph (A).

"(2) LATER SEPARATION.—If any person separates the diesel fuel from a mixture of the diesel fuel and alcohol on which tax was imposed under subsection (a) at a Highway Trust Fund financing rate equivalent to 9 cents a gallon by reason of this subsection (or with respect to which a credit or payment was allowed or made by reason of section 6427(f)(1)), such person shall be treated as the producer of such diesel fuel. The amount of tax imposed on any sale of such diesel fuel by such person shall be 5 cents per gallon.

"(3) TERMINATION.—Paragraph (1) shall not apply to any sale after September 30, 1993.

"(d) EXEMPTION FROM TAX FOR AVIATION FUEL IN ALCOHOL MIXTURE, ETC.—

"(1) IN GENERAL.—The Airport and Airway Trust Fund financing rate shall not apply to the sale of—

"(A) any mixture of aviation fuel at least 10 percent of which consists of alcohol (as defined in section 4081(c)(3)), or

"(B) any aviation fuel for use (at the time of such sale) in producing a mixture described in subparagraph (A).

"(2) LATER SEPARATION.—If any person separates the aviation fuel from a mixture of the aviation fuel and alcohol on which the Airport and Airway Trust Fund financing rate did not apply by reason of this subsection (or with respect to which a credit or payment was allowed or made by reason of section 6427(f)(2)), such person shall be treated as the producer of such aviation fuel.

"(3) TERMINATION.—Paragraph (1) shall not apply to any sale after September 30, 1993.

"SEC. 4092. DEFINITIONS.

"(a) TAXABLE FUEL.—For purposes of this subpart—

"(1) IN GENERAL.—The term 'taxable fuel' means—

"(A) diesel fuel, and

"(B) aviation fuel.

"(2) DIESEL FUEL.—The term 'diesel fuel' means any liquid (other than any product taxable under section 4081) which is suitable for use as a fuel in a diesel-powered highway vehicle or a diesel-powered train.

"(3) AVIATION FUEL.—The term 'aviation fuel' means any liquid (other than any product taxable under section 4081) which is suitable for use as a fuel in an aircraft.

"(b) PRODUCER.—For purposes of this subpart—

"(1) CERTAIN PERSONS TREATED AS PRODUCERS.—

"(A) IN GENERAL.—The term 'producer' includes any person described in subparagraph (B) who elects to register under section 4101 with respect to the tax imposed by section 4091.

"(B) PERSONS DESCRIBED.—A person is described in this subparagraph if such person is—

"(i) a refiner, compounder, blender, or wholesale distributor of a taxable fuel, or

"(ii) a dealer selling any taxable fuel exclusively to producers of such taxable fuel.

"(C) TAX-FREE PURCHASERS TREATED AS PRODUCERS.—Any person to whom any taxable fuel is sold tax-free under this subpart shall be treated as the producer of such fuel.

"(2) WHOLESALE DISTRIBUTOR.—For purposes of paragraph (1), the term 'wholesale distributor' includes any person who sells a taxable fuel to producers, retailers, or to users who purchase in bulk quantities and deliver into bulk storage tanks. Such term does not include any person who (excluding

the term 'wholesale distributor' from paragraph (1)) is a producer or importer.

"SEC. 4093. EXEMPTIONS; SPECIAL RULE.

"(a) HEATING OIL.—The tax imposed by section 4091 shall not apply in the case of sales of any taxable fuel which the Secretary determines is destined for use as heating oil.

"(b) SALES TO PRODUCER.—Under regulations prescribed by the Secretary, the tax imposed by section 4091 shall not apply in the case of sales of a taxable fuel to a producer of such fuel.

"(c) AUTHORITY TO EXEMPT CERTAIN OTHER USES.—Subject to such terms and conditions as the Secretary may provide (including the application of section 4101), the Secretary may by regulation provide that—

"(1) the Highway Trust Fund financing rate under section 4091 shall not apply to diesel fuel sold for use by any purchaser as a fuel in a diesel-powered train,

"(2) the Airport and Airway Trust Fund financing rate under section 4091 shall not apply to aviation fuel sold for use by any purchaser as a fuel in an aircraft not in noncommercial aviation (as defined in section 4041(c)(4)),

"(3) the tax imposed by section 4091 shall not apply to taxable fuel sold for use by any purchaser other than as a motor fuel, and

"(4) the tax imposed by section 4091 shall not apply to taxable fuel sold for the exclusive use of any State, any political subdivision of a State, or the District of Columbia.

"(d) SPECIAL ADMINISTRATIVE RULES.—The Secretary may require—

"(1) information reporting by each remitter of the tax imposed by section 4091, and

"(2) information reporting by, and registration of, such other persons as the Secretary deems necessary to carry out this subpart.

"(e) CROSS REFERENCES.—

"(1) For imposition of tax where certain uses of diesel fuel or aviation fuel occur before imposition of tax by section 4091, see subsections (a)(1) and (c)(1) of section 4041.

"(2) For provisions allowing a credit or refund for fuel not used for certain taxable purposes, see section 6427."

(b) RETAIL DIESEL FUEL AND AVIATION FUEL TAXES TO BE RESIDUAL TAXES.—

(1) Paragraph (1) of section 4041(a) is amended—

(A) by striking out "DIESEL FUEL" in the heading and inserting in lieu thereof "TAX ON DIESEL FUEL WHERE NO TAX IMPOSED ON FUEL UNDER SECTION 4091", and

(B) by adding at the end thereof the following new sentence:

"No tax shall be imposed by this paragraph on the sale or use of any liquid if there was a taxable sale of such liquid under section 4091."

(2) Paragraph (1) of section 4041(c) is amended—

(A) by striking out "IN GENERAL" in the heading and inserting in lieu thereof "TAX ON NONGASOLINE FUELS WHERE NO TAX IMPOSED ON FUEL UNDER SECTION 4091", and

(B) by adding at the end thereof the following new sentence:

"No tax shall be imposed by this paragraph on the sale or use of any liquid if there was a taxable sale of such liquid under section 4091."

(3) Subsection (d) of section 4041 is amended by redesignating paragraph (3) as paragraph (4) and by striking out paragraphs (1) and (2) and inserting in lieu thereof the following:

"(1) TAX ON SALES AND USES SUBJECT TO TAX UNDER SUBSECTION (a).—In addition to the taxes imposed by subsection (a), there is hereby imposed a tax of 0.1 cent a gallon on the sale or use of any liquid (other than liquefied petroleum gas) if tax is imposed by subsection (a) on such sale or use.

"(2) TAX ON DIESEL FUEL USED IN TRAINS.—There is hereby imposed a tax of 0.1 cent a gallon on any liquid (other than a product taxable under section 4081)—

"(A) sold by any person to an owner, lessee, or other operator of a diesel-powered train for use as a fuel in such train, or

"(B) used by any person as a fuel in a diesel-powered train unless there was a taxable sale of such liquid under subparagraph (A).

No tax shall be imposed by this paragraph on the sale or use of any liquid if there was a taxable sale of such liquid under section 4091.

"(3) LIQUIDS USED IN AVIATION.—In addition to the taxes imposed by subsection (c), there is hereby imposed a tax of 0.1 cent a gallon on any liquid (other than any product taxable under section 4081)—

"(A) sold by any person to an owner, lessee, or other operator of an aircraft for use as a fuel in such aircraft, or

"(B) used by any person as a fuel in an aircraft unless there was a taxable sale of such liquid under subparagraph (A).

No tax shall be imposed by this paragraph on the sale or use of any liquid if there was a taxable sale of such liquid under section 4091."

(4) Subsection (n) of section 4041 is hereby repealed.

(c) AMENDMENTS RELATING TO CREDITS AND REFUNDS.—

(1) Section 6427 is amended by redesignating subsections (i) through (p) as subsections (m) through (q), respectively, and by inserting after subsection (k) the following new subsection:

"(i) NONTAXABLE USES OF DIESEL FUEL AND AVIATION FUEL TAXED UNDER SECTION 4091.—

"(1) IN GENERAL.—Except as provided in subsection (k) and in paragraph (3) of this subsection, if any fuel on which tax has been imposed by section 4091 is used by any person in a nontaxable use, the Secretary shall pay (without interest) to the ultimate purchaser of such fuel an amount equal to the aggregate amount of tax imposed on such fuel under section 4091.

"(2) NONTAXABLE USE.—For purposes of this subsection, the term 'nontaxable use' means, with respect to any fuel, any use of such fuel if such use is exempt from the taxes imposed by subsections (a)(1) and (c)(1) of section 4041 (other than by reason of the imposition of tax on any sale thereof).

"(3) NO REFUND OF LEAKING UNDERGROUND STORAGE TANK TRUST FUND FINANCING TAX.—Paragraph (1) shall not apply to so much of the tax imposed by section 4091 as is attributable to the Leaking Underground Storage Tank Trust Fund financing rate imposed by such section in the case of—

"(A) fuel used in a diesel-powered train, and

"(B) fuel used in any aircraft."

(2) Paragraph (1) of section 6427(b) is amended—

(A) by striking out "subsection (a) of section 4041" the first place it appears and inserting in lieu thereof "section 4041(a) or 4091", and

(B) by striking out "subsection (a) of section 4041" the second place it appears and inserting in lieu thereof "section 4041(a) or 4091, as the case may be".

(3) Subparagraph (B) of section 6427(e)(1) is amended by inserting "or 4091" after "section 4041".

(4) Subsection (f) of section 6427 is amended to read as follows:

"(f) GASOLINE, DIESEL FUEL, AND AVIATION FUEL USED TO [sic] PRODUCE CERTAIN ALCOHOL FUELS.—Except as provided in subsection (k)—

"(1) GASOLINE AND DIESEL FUELS.—

"(A) IN GENERAL.—If any gasoline or diesel fuel on which tax was imposed by section 4081 or 4091 at the regular Highway Trust Fund financing rate is used by any person in producing a mixture described in section 4081(c) or in section 4091(c)(1)(A) (as the case may be) which is sold or used in such person's trade or business, the Secretary shall pay (without interest) to such person an amount equal to the excess of the regular Highway Trust Fund financing rate over the incentive Highway Trust Fund Financing rate with respect to such fuel.

"(B) DEFINITIONS.—For purposes of subparagraph (A)—

"(i) REGULAR HIGHWAY TRUST FUND FINANCING RATE.—The term 'regular Highway Trust Fund financing rate' means—

"(I) 9 cents per gallon in the case of gasoline, and

"(II) 15 cents per gallon in the case of diesel fuel.

"(ii) INCENTIVE HIGHWAY TRUST FUND FINANCING RATE.—The term 'incentive Highway Trust Fund Financing rate' means—

"(I) 3½ cents per gallon in the case of gasoline, and

"(II) 10 cents per gallon in the case of diesel fuel.

"(C) COORDINATION WITH OTHER REPAYMENT PROVISIONS.—No amount shall be payable under subparagraph (A) with respect to any gasoline or diesel fuel with respect to which an amount is payable under subsection (d), (e), or (i) of this section or under section 6420 or 6421.

"(2) AVIATION FUEL.—If any aviation fuel on which tax was imposed by section 4091 is used by any person in producing a mixture at least 10 percent of which is alcohol (as defined in section 4081(c)(3)) which is sold or used in such person's trade or business, the Secretary shall pay (without interest) to such person an amount equal to the aggregate amount of tax (attributable to the Airport and Airway Trust Fund financing rate) imposed on such fuel under section 4091.

"(3) TERMINATION.—Paragraphs (1) and (2) shall not apply with respect to any mixture sold or used after September 30, 1993."

(5)(A) Paragraph (1) of section 6427(i) is amended by striking out "or (h)" and inserting in lieu thereof "(h), or (i)".

(B) Clause (i) of section 6427(i)(2)(A) is amended by striking out "and (h)" and inserting in lieu thereof "(h), and (i)".

(6) Subsection (o) of section 6427 (as redesignated by paragraph (1)) is amended to read as follows:

"(o) TERMINATION OF CERTAIN PROVISIONS.—Except with respect to taxes imposed by section 4041(d) and sections 4081 and 4091 at the Leaking Underground Storage Tank Trust Fund financing rate, subsections (a), (b), (c), (d), (g), (h), and (i) shall only apply with respect to fuels purchased before October 1, 1993."

(d) OTHER CONFORMING AMENDMENTS.—

(1) Subsection (c) of section 40 is amended by striking out "or section 4081(c)" and inserting in lieu thereof ", section 4081(c), or section 4091(c)".

(2) Subparagraph (B) of section 4081(c)(2), as amended by section 1703 of the Tax Reform Act of 1986, is amended by striking out "net revenues" and all that follows and inserting in lieu thereof the following: "net revenues are at least $500,000,000 from taxes imposed by section 4041(d) and

[sic] Copy read "to".

taxes attributable to Leaking Underground Storage Tank Trust Fund financing rate imposed under this section and sections 4042 and 4091."

(3) Subsection (a) of section 4101, as amended by section 1703 of the Tax Reform Act of 1986, is amended by inserting "or 4091" after "section 4081".

(4) Subsection (a) of section 4221 is amended by striking out "(other than" and all that follows through "sale by the manufacturer" and inserting in lieu thereof "(other than under section 4121, 4081, or 4091) on the sale by the manufacturer".

(5) Section 6206 is amended by striking out "or 4041" and inserting in lieu thereof "or 4041 or 4091".

(6) Paragraph (2) of section 6416(b) is amended—

(A) by striking out "(other than coal taxable under section 4121)", and

(B) by adding at the end thereof the following new sentence: "This paragraph shall not apply in the case of any tax paid under section 4091 or 4121."

(7) Subparagraph (A) of section 6416(b)(3) is amended by inserting "and other than any fuel taxable under section 4091" after "section 4081".

(8) Subparagraph (B) of section 6416(b)(3) is amended by striking out ", such gasoline" and inserting in lieu thereof "or any fuel taxable under section 4091, such gasoline or fuel".

(9) Subparagraph (C) of section 6421(e)(2) is hereby repealed.

(10) The subsection (j) of section 6421 relating to cross references is amended by striking out paragraph (1) and by redesignating paragraphs (2), (3), and (4), as paragraphs (1), (2), and (3), respectively.

(11) Section 6652 is amended by striking out the subsection (j) added by section 1702(b) of the Tax Reform Act of 1986 and by redesignating subsections (l) and (m) as subsections (k) and (l), respectively.

(12) Subsection (b) of section 9502 is amended by striking out "and" at the end of paragraph (2), by redesignating paragraph (3) as paragraph (4), and by inserting after paragraph (2) the following new paragraph:

"(3) amounts determined by the Secretary to be equivalent to the taxes received in the Treasury before January 1, 1988, under section 4091 (to the extent attributable to the Airport and Airway Trust Fund financing rate), and".

(13) Paragraph (1) of section 9503(b) is amended by striking out subparagraph (F) and inserting in lieu thereof the following:

"(F) section 4091 (relating to tax on diesel fuel), and".

(14) Paragraph (4) of section 9503(b) is amended to read as follows:

"(4) CERTAIN ADDITIONAL TAXES NOT TRANSFERRED TO HIGHWAY TRUST FUND.—For purposes of paragraphs (1) and (2)—

"(A) there shall not be taken into account the taxes imposed by sections 4041(d), and

"(B) there shall be taken into account the taxes imposed by sections 4081 and 4091 only to the extent attributable to the Highway Trust Fund financing rates under such sections."

(15) Paragraph (2) of section 9503(e) is amended—

(A) by striking out "sections 4041 and 4081" and inserting in lieu thereof "sections 4041, 4081, and 4091", and

(B) by striking out "section 4041 or 4081" and inserting in lieu thereof "section 4041, 4081, or 4091".

(16) Subsection (b) of section 9508 is amended by redesignating paragraphs (3) and (4) as paragraphs (4) and (5), respectively, and by inserting after paragraph (2) the following new paragraph:

"(3) taxes received in the Treasury under section 4091 (relating to tax on diesel fuel and aviation fuel) to the extent attributable to the Leaking Underground Storage Trust Fund financing rate under such section,".

(17) Subparagraph (A) of section 9508(c)(2) is amended by striking out clause (ii) and all that follows and inserting in lieu thereof the following:

"(ii) credits allowed under section 34,

with respect to the taxes imposed by section 4041(d) or by sections 4081 and 4091 (to the extent attributable to the Leaking Underground Storage Trust Fund financing rate under such sections)."

(18) The table of subparts for part III of subchapter A of chapter 32 is amended by inserting after the item relating to subpart A the following new item:

"Subpart B. Diesel fuel and aviation fuel."

(e) EFFECTIVE DATE.—The amendments made by this section shall apply to sales after March 31, 1988.

(f) FLOOR STOCKS TAX.—

(1) IMPOSITION OF TAX.—On any taxable fuel which on April 1, 1988, is held by a taxable person, there is hereby imposed a floor stocks tax at the rate of tax which would be imposed if such fuel were sold on such date in a sale subject to tax under section 4091 of the Internal Revenue Code of 1986 (as added by this section).

(2) OVERPAYMENT OF FLOOR STOCKS TAXES, ETC.—Sections 6416 and 6427 of such Code shall apply in respect of the floor stocks taxes imposed by this subsection so as to entitle, subject to all provisions of such sections, any person paying such floor stocks taxes to a credit or refund thereof for any reason specified in such sections. All provisions of law, including penalties, applicable with respect to the taxes imposed by section 4091 of such Code (as so added) shall apply to the floor stocks taxes imposed by this subsection.

(3) DUE DATE OF TAX.—The taxes imposed by this subsection shall be paid before June 16, 1988.

(4) DEFINITIONS.—For purposes of this subsection—

(A) TAXABLE FUEL.—

(i) IN GENERAL.—The term "taxable fuel" means any taxable fuel (as defined in section 4092 of such Code, as added by this section) on which no tax has been imposed under section 4041 of such Code.

(ii) EXCEPTION FOR FUEL HELD FOR NONTAXABLE USES.—The term "taxable fuel" [125] shall not include fuel held exclusively for any use which is a nontaxable use (as defined in section 6427(l) of such Code, as added by this section).

(B) TAXABLE PERSON.—The term "taxable person" means any person other than a producer (as defined in section 4092 of such Code, as so added) or importer of taxable fuel.

(C) HELD BY A TAXABLE PERSON.—An article shall be treated as held by a person if title thereto has passed to such person (whether or not delivery to such person has been made).

(5) SPECIAL RULE FOR FUEL HELD FOR USE IN TRAINS AND COMMERCIAL AIRCRAFT.—Only the Leaking Underground Storage Tank Trust Fund financing rate under section 4091 of such Code shall apply for purposes of this subsection with respect to—

(A) diesel fuel held exclusively for use as a fuel in a diesel-powered train, and

(B) aviation fuel held exclusively for use as a fuel in an aircraft not in noncommercial aviation (as defined in section 4041(c)(4) of such Code).

(6) TRANSFER OF FLOOR STOCK REVENUES TO TRUST FUNDS.—For purposes of determining the amount transferred to any trust fund, the tax imposed by this subsection shall be treated as imposed by section 4091 of such Code (as so added).

(g) COORDINATION WITH AIRPORT AND AIRWAY SAFETY AND CAPACITY EXPANSION ACT OF 1987.—If the Airport and Airway Safety and Capacity Expansion Act of 1987 is enacted, effective on December 31, 1987, sections 4091(b)(5)(B) and 9502(b)(3) of such Code (as added by this section) are each amended by striking out "January 1, 1988" and inserting in lieu thereof "January 1, 1991".[126]

SEC. 10503. EXTENSION OF TEMPORARY INCREASE IN AMOUNT OF TAX IMPOSED ON COAL PRODUCERS.

Subparagraph (A) of section 4121(e)(2) (relating to temporary increase termination date) is amended by striking out "January 1, 1996" and inserting in lieu thereof "January 1, 2014".

PART II—TAX-RELATED USER FEES

SEC. 10511. FEES FOR REQUESTS FOR RULING, DETERMINATION, AND SIMILAR LETTERS.

(a) GENERAL RULE.—The Secretary of the Treasury or his delegate (hereinafter in this section referred to as the "Secretary") shall establish a program requiring the payment of user fees for requests to the Internal Revenue Service for ruling letters, opinion letters, and determination letters and for similar requests.

(b) PROGRAM CRITERIA.—

(1) IN GENERAL.—The fees charged under the program required by subsection (a)—

(A) shall vary according to categories (or subcategories) established by the Secretary,

(B) shall be determined after taking into account the average time for (and difficulty of) complying with requests in each category (and subcategory), and

(C) shall be payable in advance.

(2) EXEMPTIONS, ETC.—The Secretary shall provide for such exemptions (and reduced fees) under such program as he determines to be appropriate.

(3) AVERAGE FEE REQUIREMENT.—The average fee charged under the program required by subsection (a) shall not be less than the amount determined under the following table:

Category	Average Fee
Employee plan ruling and opinion	$250
Exempt organization ruling	$350
Employee plan determination	$300
Exempt organization determination	$275
Chief counsel ruling	$200.

(c) APPLICATION OF SECTION.—Subsection (a) shall apply with respect to requests made on or after the 1st day of the second calendar month beginning after the date of the enactment of this Act and before September 30, 1990.

SEC. 10512. OCCUPATIONAL TAXES RELATING TO ALCOHOL, TOBACCO, AND FIREARMS.

(a) OCCUPATIONAL TAXES ON DISTILLED SPIRITS PLANTS, BONDED WINE CELLARS, BREWERIES, ETC.—

(1) DISTILLED SPIRITS PLANTS, BONDED WINE CELLARS, ETC.—

(A) IN GENERAL.—Part II of subchapter A of chapter 51 (relating to distilled spirits, wines, and beer) is amended by inserting before subpart B the following new subpart:

[125] Copy read "'taxable fuel'".

[126] Copy read "1991', and.".

February 04, 1988

Senator Frank H. Murkowski
United States Senate
709 Hart Building
Washington, D.C.

Dear Senator Frank:

It has come to my attention that Congress passed a Mid-Distillates Fuel Tax Bill in the chaotic and waning hours of December 22, 1987 as a part of the overall U.S. Tax Reduction Act. A close examination of the provisions of the Act have raised serious concerns and accordingly I wish to bring them to your attention.

The Act states that a diesel fuel tax of $.151 per gallon is to be levied on "any liquid suitable for use as a fuel in a diesel highway vehicle or a diesel powered train (does not apply to fuel for home heating use)". The key word here is "suitable"--whether the product is used as such or not. The collection of the excise tax on the sale of any taxable fuel by wholesale dealers is made mandatory on all sales. All tax free sales for certain exempt sales purposes are repealed. Wholesalers can buy diesel fuel for resale provided they are registered and have posted bonds as required by the Treasury.

Petro Marine Services is a marine-oriented fuel distributorship with a majority of our customers being fishing industry related. A recent review of our sales volumes reflect that less than one-percent of our total diesel fuel gallons are taxable highway and off-highway use fuel. Fronting this tax to the Treasury will significantly increase the cost of doing business for our customers by adversely affecting their cash flow and, of consequence, we dealers will be affected likewise. End-use consumers will not be able to apply for a refund of these taxes unless the amount of the tax withheld is over $1,000 in a quarter. Furthermore, consumers must wait until year end and apply the overpayment to their income tax return as stipulated in the Bill. The Treasury is not obligated to pay interest on the refunds; thus, the collected amounts are, in essence, interest-free loans to the government from marine fuel consumers, many of whom are struggling to derive a living from an uncertain and undercapitalized fishing industry.

In addition this tax will have a negative impact on domestic marine fuel suppliers as opposed to foreign bunkerers and processors many of whom import their fuel and sell to U.S. flag vessels on the high-seas and within our Exclusive Economic Zone (EEZ). With the $.151 per gallon Federal Excise Tax plus the $.05 per gallon State of Alaska Marine Fuel Tax, it will be economically impossible to compete against foreign flag operators. I am certain this was not the intent of Congress.

One of the provisions in the law states that "the Treasury has been given discretionary authority to exempt certain sales from tax where the purchaser satisfactorily demonstrates to the Treasury that the fuel will be consumed for use deemed non-taxable in nature, that these parties must also register and post bonds as required by the Treasury". Let me assure you bonding requirements will only impose a further financial hardship on fuel distributorships some of whom are already faced with problems securing basic insurance needs. If indeed, the end-user is included in this Clause, we alone have several hundred customers who would be required to register and post bond with the Treasury in order to be deemed tax-exempt. This stipulation will be very cumbersome and difficult for all affected to comply with. The law further reads that the Treasury is expected to exercise the authority on a "case by case" basis. Inasmuch as our taxable highway use diesel fuel customer base is miniscule as compared to our predominate marine base, it seems reasonable to assume that an overwhelming amount of time and effort will be consumed by the Treasury in rendering these assessments. Under the aforementioned circumstances it would seem that a blanket waiver would be a viable alternative for marine oriented fuel distributors such as ourselves.

Without question the Mid-Distillate Fuel Tax Bill in its present form represents ill-conceived legislation. As a company, Petro Marine Services has consistently supported reasonable regulation at all levels of government; however, this particular Bill serves only to finance and broaden Federal bureaucracy at the expense of fuel dealers and end-use consumers. In view of this fact I respectfully urge that immediate consideration be given to amending those provisions in the Bill which are not applicable to highway diesel fuel use.

Sincerely,

Dale R. Lindsey, President
HARBOR ENTERPRISES, INC.

The Honorable John Warner
United States Senator
421 Senate Russell Office Building
Washington, D.C. 20510

February 22, 1988

Dear Senator Warner:

The Alaska Factory Trawler Association (AFTA), the trade association which represents the factory trawler fleet operating in the North Pacific groundfish fishery, seeks your assistance in a matter of significant economic importance to us and to other segments of the fishing industry - establishing an up-front exemption for fishing vessels from the 15.1 cent per gallon federal highway excise tax on diesel fuels.

This federal excise tax, passed December 22, 1987, was designed to tax highway users. However, current exemptions from diesel fuel taxes for off-highway users, including fishing vessels, has been eliminated. Loss of this up-front exemption means that fishermen will be required to pay the tax up front, then apply for a refund on a quarterly basis. This needlessly increases the recordkeeping and paperwork for both the fishermen and the government, and costs the fishermen signifiicantly due to the loss of the time value of the money deposited with the government.

While this is a problem for all fishermen, the problem becomes particularly acute for the factory trawler operators. These large American owned and operated vessels participate in high volume, low margin fisheries and must compete in the world market against foreign producers who enjoy lower operating costs. As illustrated in the attached fact sheet, factory trawler operators can expect to have between $22,500 and $67,950 awaiting rebate at any time. This amount increases if rebates aren't made in a prompt manner.

At a time when prices for our products have declined and other operating costs have increased, many operators cannot afford this additional drain to their cash flow.

One of the objectives of doing away with the exemption was to deter tax-evasion schemes, in which fuel which is ostensibly purchased for off-highway use is diverted to use in a highway vehicle. Such a scheme is only a remote possibility for an operator of a vessel fishing in the Gulf of Alaska or the Bering Sea, and a burden of the magnitude imposed by this law is unjustified. If deterring such schemes is the goal of Congress, a provision applying the exemption only to fuel pumped directly into the fishing vessel would be appropriate.

You can help with this issue by supporting a bill, such as the one enclosed, which amends the Internal Revenue Code by providing fishing vessels, fish processing vessels, and tender vessels an up-front exemption from this highway tax.

The members of AFTA would like to thank you for the assistance you have given us in the past, and hope that you will work with us to resolve the problem we are facing today.

Sincerely,

William R. Orr

William R. Orr

2/88

FACTORY TRAWLER FUEL CONSUMPTION

An informal survey was conducted among factory trawler operators to determine fuel consumption patterns. The results, which are rough averages, are categorized into three categories: vessels less than 200 feet, vessels 200 - 250 feet, and vessels greater than 250 feet. The number of vessels include vessels which will enter the fishery this year.

Factory Trawlers less than 200 feet

Number of vessels:	16
Fuel carrying capacity:	75,000 - 100,000 gallons
Daily fuel consumption:	2000 gallons/day
Quarterly fuel consumption:	150,000 gallons
Quarterly tax @ $.151/gal :	$22,500

Factory Trawlers between 200 and 250 feet

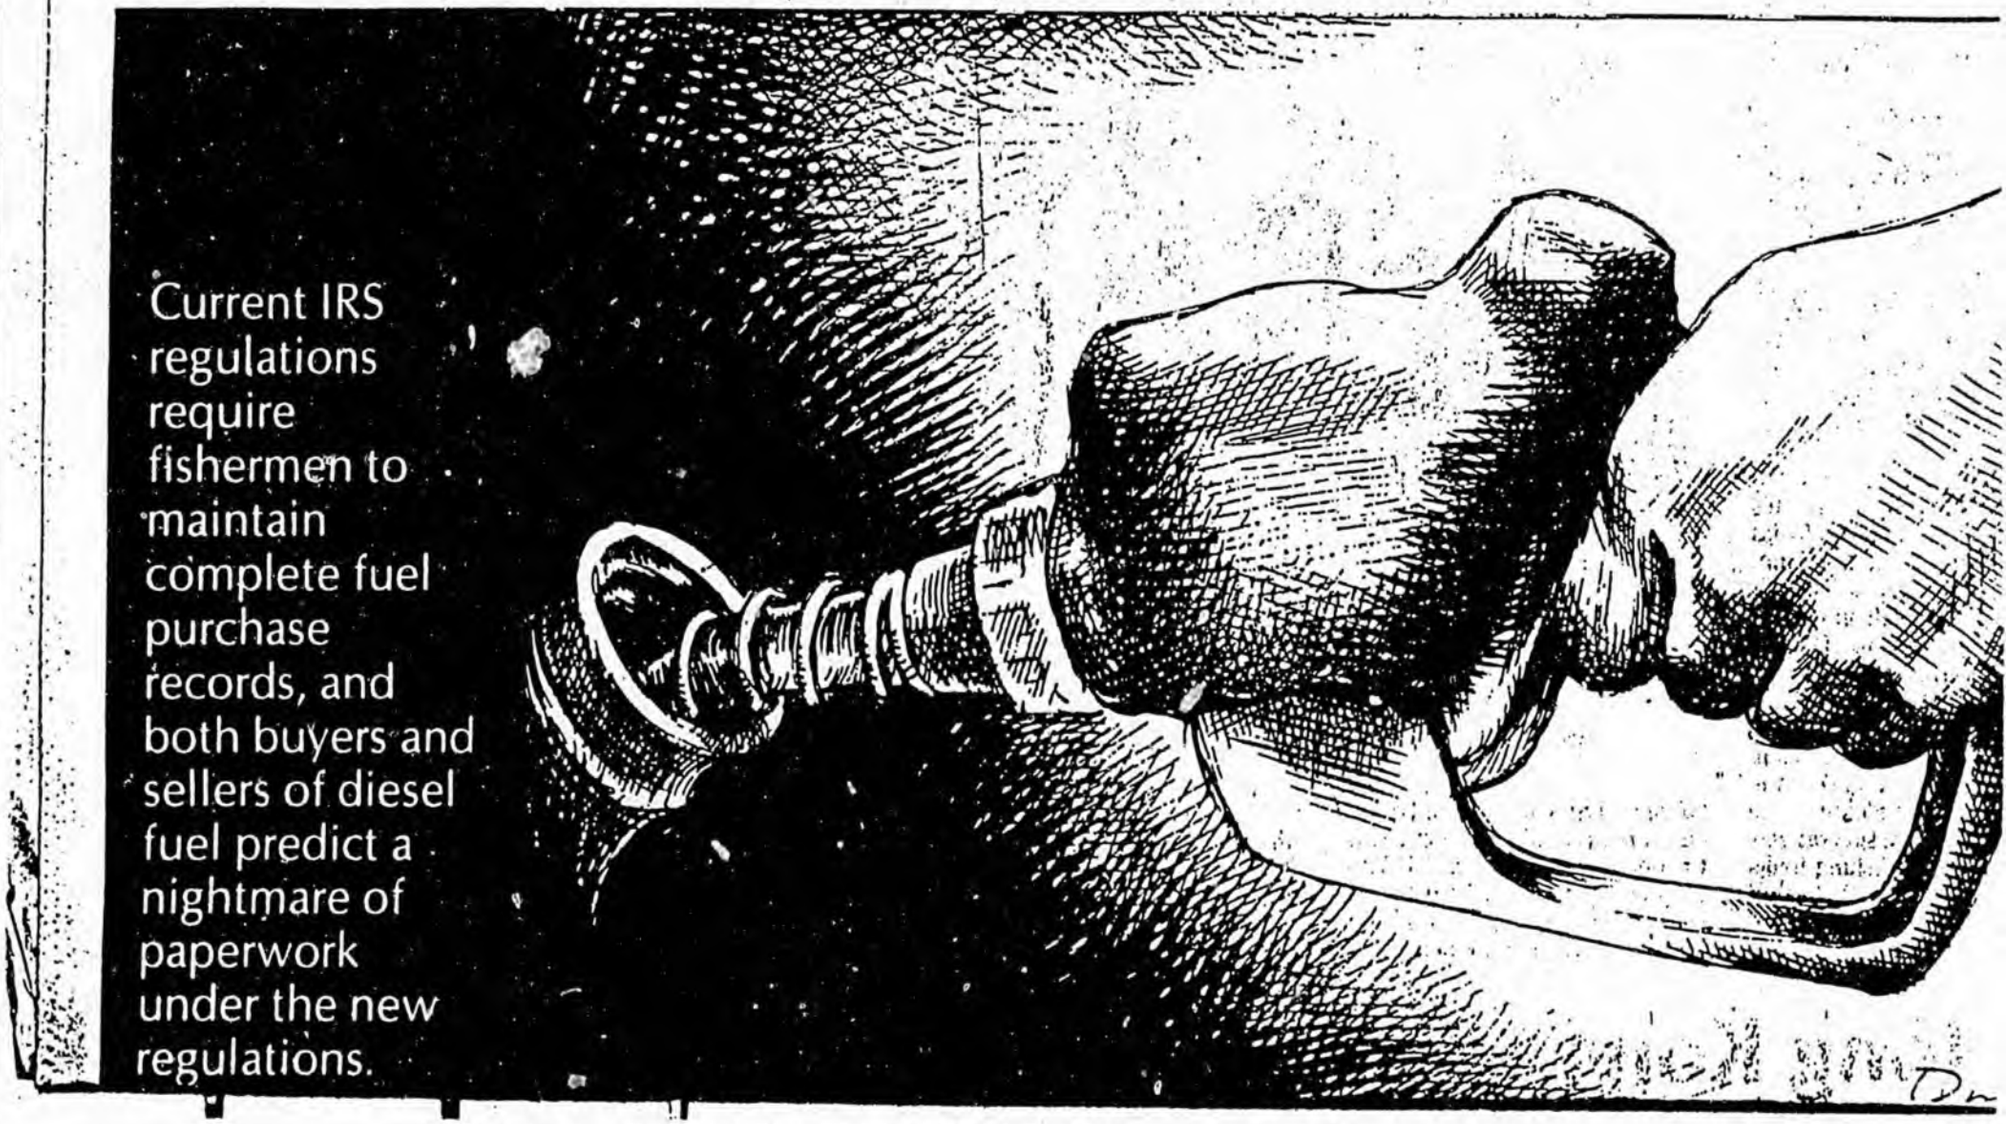
Number of vessels:	14
Fuel carrying capacity:	150,000 gallons
Daily fuel consumption:	2600 gallons/day
Quarterly fuel consumption:	200,000 gallons
Quarterly tax @ $.151/gal :	$30,200

Factory Trawlers larger than 250 feet

Number of vessels:	10
Fuel carrying capacity:	200,000 to 325,000 gallons
Daily fuel consumption:	6000 gallons/day
Quarterly fuel consumption:	450,000 gallons
Quarterly tax @ $.151/gal :	$67,950

Nearly all of the fuel is taken at Alaskan ports. The average price of fuel (#2 diesel) purchased in Alaska is $.75/gallon. (A quarter is figured as 75 days of operation.)

Business



Current IRS regulations require fishermen to maintain complete fuel purchase records, and both buyers and sellers of diesel fuel predict a nightmare of paperwork under the new regulations.

Diesel fuel users sputter over tax changes

By Daniel R. Saddler
Times Business Writer

Changes in 1988 federal tax law will force users of tax-exempt diesel fuel to wait up to a year for refunds of federal excise taxes, a delay some fishermen say will eat into already-thin operating margins.

Under the change, brought on by the Budget Reconciliation Act of 1987, fishermen, farmers, state and local governments and other tax-exempt users will no longer be able to buy their diesel fuel tax-free at the pump as of April 1.

Instead, they must pay a 15.1 cents-per-gallon excise tax on diesel fuel, then apply for tax credits or refunds. Tax-exempt users of gasoline already began paying a 9.1-cents-per-gallon tax at the pump Jan. 1.

"Coastal Alaska, not to mention the whole state, runs on diesel fuel, and much of it is tax-free," said Jim Ramaglia, vice president of Kodiak Oil Sales.

"It doesn't take a lot of imagination to see what this expense is going to do to farmers, fishermen, loggers, miners, and ranchers," Ramaglia said.

Under current tax law, these users do not currently pay the 15.1-cent federal excise tax, which raises the cost of a gallon of diesel to about $1 per gallon. They can either register to buy tax-free fuel at a dealer registered to sell it, or must display an exemption certificate at other dealers.

If fishermen do buy tax-paid fuel, they may claim credit on their tax returns for the tax paid, or file for refunds, according to IRS Publication 378, "Fuel Tax Credits."

The refund or credit process is similar for off-road users of fuels, such as farmers, loggers, state and local governments and schools. Those paying less than $1,000 in tax per quarter may file for annual refunds, while those who paid more can seek quarterly refunds.

The need to tie up an extra 15 percent of annual fuel bills could force the commercial fishermen who are his customers to cut back on maintenance, pay, or safety equipment, said Ramaglia.

"Long-lining for cod is a high-volume, low-margin operation, and a lot of these guys are operating on trip-to-trip basis," Ramaglia said.

"Every fisherman goes through a point either in his career or annually, when every penny counts, and the government adding this expense is going to put a real hardship on them," he said.

IRS officials in Anchorage and Washington said shifting the burden of tax payment from wholesalers to retailers will make it easier to track payment of fuel taxes.

"Before, we had hundreds of thousands, maybe millions of taxpayers," said Don Fidlow, an IRS attorney in Washington, D.C. "But by moving the tax to wholesalers we are limiting it to a handful of taxpayers. In effect it's saving a lot of paperwork and headaches for both taxpayers and the service."

But fishermen say the changes will add paperwork and headaches, and quietly speculate the tax office hopes paperwork will discourage fishermen from filing for refunds.

Sonja Corazza, president of the North Pacific Fisheries Association, operates a 40-foot fishing boat in the Bering Sea with her husband six months a year.

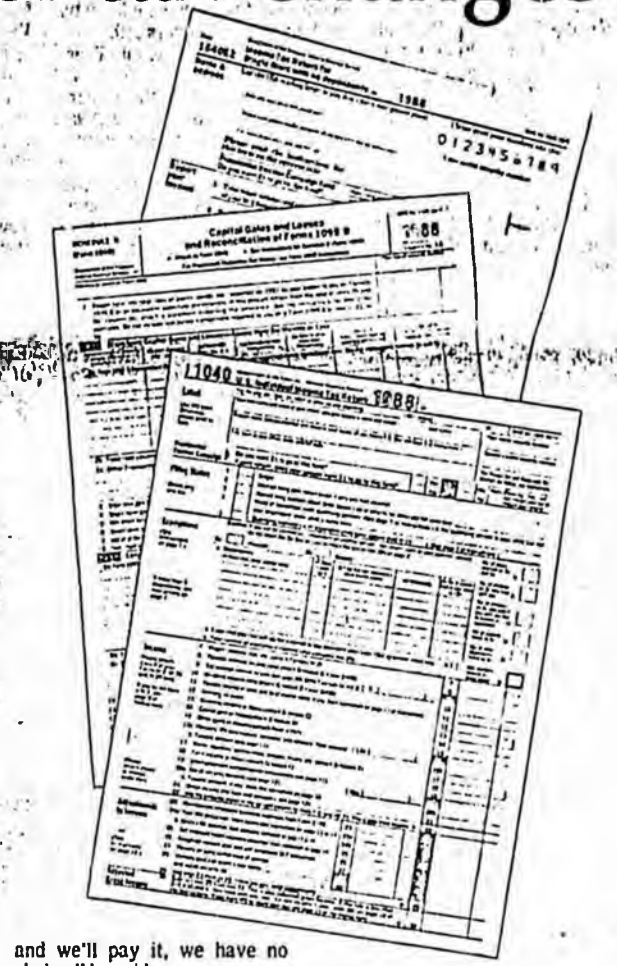
"We try to plan ahead in our year, and usually we know how much a trip will cost us," she said. "And if we have to add that extra cost for fuel, it may have an impact on other equipment.

"A dollar is a dollar, you can only stretch it so far," she said.

Al Burch, director of the Alaska Draggers Association and owner of two Bering Sea draggers, agrees.

"Fishing is a real marginal business, and a fisherman in slow times needs every penny he can get," he said. "There may be only a very short time when he may be making money, but he has to stretch the short good times over bad months."

"The price of fuel will go up and we'll pay it, we have no choice," he said.



Ramaglia said he expects the tax law change will force him to charge an extra cent or two per gallon of fuel to cover his paperwork and interest costs. He also anticipates being forced, along with other dealers, into giving the government free use of his money while waiting to collect the taxes from customers.

"The fuel companies are required to pay that 15.1 cents (per gallon) to the feds within two weeks of the sale, whether they have collected the tax or not," he said. "But we usually only collect bills every 30 or 60 days, so we'll be serving as banker for the government."

Current IRS regulations require fishermen to maintain complete fuel purchase records in case of IRS inquiry or audit, and both buyers and sellers of diesel fuel predict a nightmare of paperwork under the new regulations.

"It is going to work a real hardship on small businesses of

Tips for property owners

Once you've stopped worrying about the 1987 tax return due April 15, you can start worrying about how to get through 1988 so you won't have so much to worry about at this time next year.

Changes in the law are bringing twists to some familiar features of your federal income tax return.

• Home mortgages. Just when you thought this year's home mortgage rules were complicated enough, Congress came along just before Christmas and changed the rules, retroactive to Oct. 13, 1987. It could affect your deductions on your 1988 return.

Under the new law, you can still get a tax break when you borrow up to $1 million to buy and/or improve a first and second home. And you can still take out a home equity loan and still get a mortgage deduction.

But under the 1988 regulations, the interest on any equity borrowings over $100,000 will be treated as consumer interest unless it is clearly earmarked for the home.

• Property sales. If you plan to sell property this year, weigh the benefits of taking the total payment in cash up front, versus an installment sale, in which you are paid over a period of years.

Alan Weiner, of Holtz Rubenstein, notes that if you sell a piece of property at $1 million, a good chunk of the price, maybe $200,000, will go to the IRS, but you will still have $800,000 to invest. Using the installment plan may cut your taxes, but your return on the investment may be less.

• Individual Retirement Account. If you're no longer eligible to make a tax-reducing contribution to an IRA, don't make one, suggests Michael Corsuk, of accounting firm Coopers & Lybrand. Although some investment experts might disagree, he figures making the extra contributions will complicate your life when it comes to making withdrawals and filing tax returns at that time.

• Capital gains. Since there is no longer a separate tax on capital gains, you might want to wait until October or November to sell a stock or other security that has risen in price. By then, you'll be able to make a projection of your income and tax situation for the rest of the year.

• Rental income. If you rent your vacation home for less then 15 days a year, you don't have to report the income, according to the H&R Block Tax Guide. There is a catch, however: You can't claim any upkeep expenses or depreciation. Mortgage interest and property taxes remain deductible.

Fuel: Frustrations

Continued from page D-4

all types, all around the nation, like farmers and fishermen," said Al Cobb, director of legal and political affairs for the Petroleum Marketers Association of America."The IRS is likely to be overwhelmed by paperwork for these refunds."

"Since we're eligible for the rebates, we don't think it's wise to put the tax on the first place. We've always been exempt in the past," Corazza said.

At least one fishing industry expert, however, said the tax credit change is a bit of a red herring.

"It isn't going to make that much difference," said Craig Wiese, business management specialist at the Marine Advisory Program at University of Alaska Anchorage.

Wiese estimated that an average 42-or 48-foot seining ship operating in Prince William Sound would spend about $5,000 on fuel a year, only five percent of annual revenue of $100,000

Wiese acknowledged that paying the fuel tax up front could make a significant difference in the finances of a family trying to live off a seiner's earnings.

The fuel tax law changes began as an IRS effort to get a better handle on the fuel taxes, said local and national IRS officials.

"The government is trying to force users to leave a paper trail so when we do future audits we can follow where the fuel got sold," the tax attorney Fidlow said.

Marilyn Steen, spokeswoman for the IRS office in Anchorage, said some fuel dealers in U.S. cities were taking advantage of lax IRS auditing and enforcement to dodge fuel taxes.

But the pressure on Congress to raise revenues without raising taxes during the Budget Reconciliation Act may result in placing an extra burden on fishermen, especially smaller operators, Burch said.

"One thing that will happen is a lot of excellent fishermen will not file for a refund," he said.

Burch, who spends $100,000 per year on diesel fuel for his two boats, said accountants will make sure he and other large operators file for tax refunds. "Fishermen, like a lot of businessmen, are undercapitalized, and they'll be caught by having to pay for it up front," Ramaglia said. "They'll have to decide whether to put off maintenance on the engine, or put new cable on the winch, or to maintain their EPIRBs (emergency locator transmitters)."

The new tax laws give the IRS the discretion to allow state and local governments, airplanes, diesel trains, and industrial users of fuel to continue to buy diesel fuel tax-free, Cobb said.

Steen said the tax service would probably preserve the exemptions for diesel fuel, as they do for gasoline.

But until the actual announcement of the regulations, which Steen expects in three weeks, there is no way of knowing for sure which users other than fishermen and farmers will have to pay their taxes up front.

In Alaska, Burch is encouraging members of his draggers' association to write protest letters to the state's congressmen, and Ramaglia said he is encouraging his customers to do the same.

Withdrawal of non-roadway users fuel tax exemption would hurt fish, timber and ag

BY IMRE NEMETH (mike)

The probable intent of legislation stuck in 1987's year-end budget reconcilliation bill agreed to by the White House and Congress was probably to save the country money by enforcing greater control over fuel taxes.

Jim Ramaglia calls the actual result a free loan to the government that could put many in the fishing, timber and agricultural industries out of business.

The dispute concerns a measure that would disallow current exemption of the 18-cent-per-gallon tax by industries not using the roadways. If instituted, wholesalers would have to charge their patrons the added tax after April 15.

Under the new law, those businesses holding an exemption in the past would be able to apply for a refund at the end of the year.

"When people have to pay this tax, that means they are going to have to extend maintenance schedules, put off replacement of parts and worn out equipment," Ramaglia said. "In the commercial fishing industry, this might mean delaying the purchase or repair of life-saving equipment such as survival suits or life rafts. I'm sure a similar situation exists in other industries such as farming and logging."

Ramaglia has reason to be concerned. As vice president and man-

See EXEMPTION, Page 24

Journal increases its tax lien coverage

The Alaska Journal of Commerce has made a major addition to its "On The Record" coverage with state and federal tax lien and lien release filings from Alaska's First Judicial District (Southeast).

"We've carried tax lien and lien release coverage for many years from the Second (Fairbanks and Interior) and Third (Anchorage, MatSu, Kenai Peninsula, Kodiak Island and Aleutian Chain) Judicial Districts and we just recently began carrying the filings for the Fourth Judicial District (Barrow, Northwest Alaska, Nome)," said AJC Publisher Jim Martin. "Now our coverage of state and federal tax liens is statewide."

"Following the liens" has always been an important tool for creditwise companies, even in the best of economic times, Martin said, "and in a tough economic environment, it can be crucial."

"Should the IRS or state departments of Revenue or Labor place a tax lien against one of your customers, you should definitely reassess your relationship with that customer," Martin said. "In fact, some CPAs suggest putting that customer on a cash-up-front basis until you can be assured of the economic viability of that business."

A lien is one of the first pieces of hard evidence that a company may be in serious financial trouble. "Catching early signs early will increase your chances of either collecting an outstanding debt or protecting yourself on new orders from an possibly insolvent customer."

For Heather Bradner

• Exemption loss "throws wrench at the little guy"

Continued from Page 1

ager of Kodiak Oil Sales, Inc., in Kodiak, he's the one who must levy the tax. It's a job he doesn't really care for.

Since learning of the measure in an industry weekly review two months ago, the fuel distributor has organized fishermen on his island and made waves in Washington D.C.

"A bill has come about in the last couple of weeks to address the issue," said Steve Bolderjack, staff attorney at Rep. Don Young's Washington D.C. office. "It was introduced by a Congressman from Texas and already has 60 cosponsors."

Bolderjack said the change in the exemption process would affect a lot of people. The bill countering the erradication of the exemption (HR 3865) would preserve the prior practice, he said.

"If we can get any action before (April 15), I don't know," said the Congressional attorney. "It would be nice if we could get it through but they're going to have to come up with a lot more support" to get it resolved in that short of time.

Bolderjack said Young himself had supported initial versions of the reconcilliation package but refrained from voting yes on the final version because of amendments, like the tax issue, added right before passage.

Ramaglia said fuel costs for his fishermen (many of whom are already strapped for cash for whatever reason) will be pushed from 72 cents to 90 cents.

"Fuel is one of the single most expensive costs on a fishing boat," Ramaglia said. "And bottomfishing is very fuel intensive."

With more and more Alaska fishermen dragging large nets across the bottom of the ocean floor, their fuel costs have exceeded past usages. It could throw a wrench in a developing industry for the little guy, Ramaglia warns.

"For the fishing industry to put that money up front considering how much fuel they already buy could be a disaster," said Chris Blackburn, executive director of the Alaska Groundfish Data Bank.

Industry watcher Blackburn pointed out that none of the paperwork necessary for such an undertaking by the federal government appears to exist, nor do the forms for getting reimbursed toward year's end. She said Kodiak has been mobilized and many fishermen have contacted their associations spreading the word ever farther down the political channels.

One Anchorage petroleum distributor said that for the government to send that money back a whole new department would have to be set up to handle the auditory processes necessary to keep everybody honest. It would cost more than they would save, he said.

The Kodiak distributor called everybody in his business in the state to warn them of the upcoming change in procedure. Of 10 he got ahold of, only three knew of the tax implementation, he said.

"I see it as having a real devastating effect on Alaska industry in general," he said.

CONGRESSMAN YOUNG CO-SPONSORS BILL TO STOP UP-FRONT DIESEL FUEL EXCISE TAX PAYMENTS

WASHINGTON, D.C. - Alaska Congressman Don Young is supporting legislation to put a stop to "the needless up-front diesel tax payments now required by the federal government."

Young is a co-sponsor of H.R. 3865, which will reverse the up-front payments required under last year's budget reconciliation act.

"The current law requires that wholesalers rather than retailers collect the excise tax on off-highway diesel users," Young said. "Because of this, the off-road diesel users have to pay the excise tax up-front and then apply for a refund at the end of the year. This is wrong and adds an unnecessary financial burden on Alaska's diesel users.

"By rescinding this law, we'll get rid of the needless bureaucratic red tape and paperwork now required of Alaska's industries and small businessmen."

Young added that the new bill would restore the exemption that off-highway users presently have without any ultimate reduction in the amount of diesel fuel excise tax collected by the government.

"This new legislation will help solve the problem for Alaska's agricultural, timber, maritime and fishing industries and all other users of diesel fuel. In addition, oil field refineries and their suppliers will benefit," Young added.

"This is good legislation for Alaska and I'm confident that we'll be successful in getting this passed by Congress and signed by the President."

CONGRESSMAN YOUNG INTRODUCES SPORT FISHING, BOAT SAFETY BILL

WASHINGTON, D.C. - Alaska Congressman Don Young and four other members of the Merchant Marine and Fisheries Committee have introduced legislation to provide funds for recreational boat safety programs and sport fishing restoration.

Young also serves as Vice Chairman of the Subcommittee on Fisheries and Wildlife Conservation and the Environment, which will consider the reauthorization bill.

"For the past several years, our nation's boaters and anglers have contributed to programs through excise taxes imposed on motorboat fuel and sport fishing equipment," Young said. "This bill will ensure that those funds continue to be used for the purposes intended by Congress - to provide for the enhancement of sport fishing programs and boating safety programs.

"Alaska has been a major beneficiary of the sport fish restoration funds, having received over $7 million in Fiscal Year 1987 - the most of all 50 states," Young added. "Alaska would receive additional funding if the state were to participate in the boating safety program, as is now being considered by the state legislature."

The other sponsors of H.R. 3918 are Congressmen Walter Jones (D-N.C.), Robert Davis (R-Mich.), Earl Hutto (D-Fla.), and Mario Biaggi (D-N.Y.).

4-24-87

Dear Senator Hanley,

I don't usually complain much but this recent article in the Anchorage paper really gauled me; so much so that I cancelled a trip to Seattle next month.

Several years ago it seems our legislature in Juneau complained to the airlines about singling out Alaskans for higher fares to the states and they lowered them for awhile but it didn't last long.

Also, why do I have to pay a full month in advance to get any break at all?

Hope you can help us out.

Sincerely,

Gordon Halkett

Air fare wars to continue this summer

But won't apply to Alaska

By BILL MENEZES
The Associated Press

NEW YORK — Several major airlines said Monday they would extend their lowest discount fares through the end of summer, but the tickets would be more expensive and carry more restrictions than the cut-rate fares unveiled earlier this year.

The lower fares will not apply to travel between Alaska and the Lower 48, a local travel agency spokesman said.

"It's fair to say that in the current pricing environment that the relatively high fares between Anchorage and the Lower 48 help offset losses from fare wars in the Lower 48," said Scott McMurren of Easy Travel.

Also Monday, Continental Airlines said it had asked the Department of Transportation to require U.S. airlines to routinely disclose service information such as on-time performance, complaints about lost luggage, and the time it takes for answers on telephone reservation lines.

Continental and Eastern Airlines, both units of Texas Air Corp., said they would continue offering the special "Maxsaver" fares previously slated to end May 20.

Those non-refundable fares, which were matched by other major airlines when introduced in late January, are discounted as much as 80 percent from regular fares and are less than the supersaver fares that previously were the industry's lowest.

Northwest Airlines said it would match the discount fare extension. United and Delta and American representatives said their companies were studying the fare announcements.

Industry analysts said they expected the major airlines to follow the move, noting the summer fares would be higher to reflect the peak travel season and the advance purchase requirements would be slightly greater.

"Those are two positives," said Louis Marckesano, of Janney Montgomery Scott Inc. in Pittsburgh. "We were hoping they would modify pricing upward and or increase the minimum stay involved."

Thomas G. Plaskett, Continental's president, told a news conference the Maxsaver fares had proven "extremely popular," and some 3 million passengers had bought the fares since Feb.1.

The fares good through May 20 — intended to fill seats that otherwise would go empty on many flights — could be purchased at any time up until two days before the flight. Passengers changing or canceling their reservations forfeited the entire ticket price.

The summer fares will cost more than the earlier Maxsavers and the advance purchase requirement was stretched to seven days. They also require a Saturday night stayover and a roundtrip purchase.

The summer Maxsavers are priced from $38 to $278 roundtrip, compared with a range of $38 to $198 roundtrip before May 20. A Maxsaver flight from New York to Los Angeles, for example, would be $129 one-way this summer, compared with $89 each way before May 20.

Continental also said it was trimming the advance purchase restriction on its regular supersavers to seven days from 30 days, while reducing the cancellation penalty to 25 percent from 50 percent.

Juneau Empire 1/21/88

Lower fares would create happy faces

Dear Editor:

I think concerns are being misplaced about Alaska Airlines' advertising symbol. While this issue has been capturing headlines and legislators' attention, Juneauites continue paying air fares that are among the highest in the country.

I'm currently planning a trip to Boston. The round-trip air fare for the approximately 900 miles from Juneau to Seattle is $340.60. The round-trip fare for the approximately 3,000 miles from Seattle to Boston is $238. I've lived in Juneau for 14 years and I've yet to talk to anyone who hasn't shared my ill feelings about air fares from Juneau. I really cannot believe that costs here justify fares two or three times greater per mile than typical Lower 48 fares. I'd at least feel a lot better about paying higher air fares from Juneau if those fares could be justified and that justification be publicized with the same vigor as the recent logo switch.

I do have empathy for the airline business here in that I don't think it's reasonable to expect healthy competition in such a confined market. I believe it would be good for the public and the airline industry if an appropriately sanctioned monopoly could be granted to one airline to serve all of Southeast Alaska. I'm thinking of this in similar terms of the monopolies that utility companies now operate under. In the case of air service we would have the opportunity to nationally solicit bids to obtain the best service for the best price over a specified time.

In this manner, the public would benefit from expanded competition and the winning airline would be assured the highest possible volume to allow the lowest possible cost per passenger mile. This would bring air fares down and I suspect Juneau would see more tourists while the state and private sector would save on travel costs.

I appreciate having the opportunity to share my views and I encourage others to share their opinions about this. I think we need everyone to work honestly together on this so we will all be winners and fly with a happy face.

Sincerely,
Mark J. Miller
Douglas

New logo suggested for Alaska Airlines

Juneau Empire 2/12/88

Dear Editor:

While watching television last night I saw a commercial on one of the Seattle TV stations for Alaska Airlines. This ad was for roundtrip airfare to San Diego – 2,100 air miles, plus two nights' hotel accommodations for a total of $267. The cheapest roundtrip airfare from Juneau to Seattle, 1,818 air miles, is $340 and includes nothing extra.

Seeing this commercial brought to mind the Great Logo Crisis of Alaska Airlines that has been in the news so much during the past few weeks. My suggestion is to get rid of the Eskimo and replace him with a picture of Jesse James – gun, mask and all. This would better represent the highway robbery we all face buying an airline ticket in Southeast Alaska.

Thank you,
Dean Nordenson

MEMORANDUM

TO: All House Members

FROM: Representative Alyce Hanley

SUBJECT: Resolution relating to the cost of air travel and to competition in the airline industry; and a bill relating to unfair trade practices of air carriers and ticket agents.

I have prepared for introduction this morning the attached House Resolution and Bill concerning the high cost of airline travel not only within the State of Alaska but to and from Alaska. A similar resolution was introduced during the 14th Legislature and the cost of commercial passenger fares continues to increase. In addition I have also introduced a bill to add a new section to Title 2 called Unfair Trade Practices. This section outlines who can file complaints and adds penalties for participating in restriction of competition in air commerce.

I would welcome your co-sponsorship of this resolution. If you have any questions please do not hesitate to contact my office.

5-1972A

IN THE HOUSE BY HANLEY

HOUSE RESOLUTION NO. 12

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

Relating to the cost of air travel and to competition in the airline industry.

BE IT RESOLVED BY THE HOUSE OF REPRESENTATIVES:

WHEREAS airline travel is an essential means of transportation for the people of the state; and

WHEREAS the competitive market forces in many other states have caused a decline in commercial passenger air fares; and

WHEREAS there are no competitive forces in the state to cause a significant decline in commercial air fares; and

WHEREAS commercial passenger air fares are higher today and continue to escalate upward; and

WHEREAS the cost of air travel in the state has become prohibitively expensive in many rural areas; and

WHEREAS passengers traveling to and from Alaska pay a significantly higher fare per air mile than passengers traveling between other states; and

WHEREAS the commercial air carriers appear to be engaging in setting mutually beneficial fare rates that restrict a free and open competitive market;

BE IT RESOLVED that the House of Representatives urges the Governor, the Attorney General, and the commissioner of transportation and public facilities to investigate and report to the legislature any barriers to an open and competitive airline industry and pursue every avenue that will reduce the cost of airline travel for passengers traveling to and from the State of Alaska.

5-1971A

IN THE HOUSE BY HANLEY

HOUSE BILL NO. 525

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to unfair trade practices of air carriers and ticket agents."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 02 is amended by adding a new chapter to read:

CHAPTER 07. AIR COMMERCE TRADE PRACTICES.

Sec. 02.07.010. UNFAIR TRADE PRACTICES. (a) The department, upon its own initiative or upon complaint by an air carrier, ticket agent, or a member of the public, shall investigate and determine whether an air carrier or ticket agent has been or is engaged in unfair or deceptive practices or unfair methods of competition in air commerce or the sale of air commerce.

(b) If the department finds, after notice and opportunity for hearing, that the air carrier or ticket agent is engaged in unfair or deceptive practices or unfair methods of competition, it shall order the air carrier or ticket agent to cease and desist from those practices or methods of competition.

(c) The department may enforce this section and adopt procedural regulations necessary to implement this section.

(d) In addition to other penalties and remedies provided by law, a person who violates a provision of this section is subject to a civil penalty not to exceed $100,000 for each violation.

(e) In this section

(1) "air carrier" means a person engaged in air commerce, directly or indirectly, by lease, contract, or other arrangement, and

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: CSHCR 36 TRANS

TITLE: Intrastate Air Travel

APPROVED: [signature] J. Knapp
Commissioner

DATE: 2/12/86

The Department supports the goals of this bill which we assume to be a concern for reducing, insofar as practicable, the costs for air travel within the State of Alaska. However, there is some question as to how involved the State should get in private industry decisions in a deregulated environment.

The DOT&PF has undertaken a cursory review of air fares for one airline only. This paper (attached) indicates that for one air carrier serving in and out of Alaska, the per mile fare is higher for routes within the State. In evaluating this information, however, it is crucial to consider the different characteristics of the individual routes involved (traffic loads, staging length, competition, etc.)

Part of this analysis also compared costs for in-State routes with costs for routes of comparable length in the lower 48 states. In general, it appeared that the in-State routes were quite comparable and, in some cases, lower than the lower 48 routes of comparable length.

This information is very cursory and cannot be viewed as conclusive, but it does indicate that if there is unfair pricing within the State, it will likely be very difficult to prove.

The DOT&PF will administer the study suggested in HCR 36 if the Legislature deems it advisable. A description of the study is shown on the accompanying fiscal note.

For further information call Susan Fleischhauer at 465-3900.

- D R A F T -

ALASKA/LOWER 48 STATES AIR FARES

DOT&PF - STATEWIDE AVIATION

December 2, 1985

I. INTRODUCTION

This paper conducts two analyses of air fares. The first is a comparison of Alaska Airlines' (ASA's) air fares over three types of routes:

(1) routes between points in Alaska,
(2) routes between points in Alaska and points in the Lower 48 States, and
(3) routes between points in the Lower 48 States.

The intent is to determine how ASA's air fares in Alaska compare to their air fares in the Lower 48 States. For ease of comparison and data collection, only coach and SuperSaver fares of ASA have been used.

The second analysis is a comparision of several of ASA's air fares and air fares of other airlines for trips of comparable length in the Lower 48 States. The intent of this analysis is to determine how ASA's air fares compare to fares of other airlines. Only coach fares have been compared, again for ease of comparison and data collection.

II. ALASKA AIRLINES' FARES; Within Alaska, Alaska to Lower 48 States, and Within the Lower 48 States

Table I compares average ASA fares for three types of routes in Alaska and the Lower 48 States.

TABLE 1
ASA's
AVERAGE COACH AND SUPERSAVER
FARES/MILE

ASA's Routes	ASA's Coach Fares/Mile	ASA's SuperSaver Fares/Mile
Within Alaska	$.30	$.22
Alaska to Lower 48	.21	.15
Within the Lower 48	.22	.15

The Table shows that fares for travel within Alaska far exceed other fares. There may be a variety of explanations for this. Higher labor and operation costs and shorter stage lengths (flight distances) for ASA routes within Alaska compared to the Lower 48 States could be one cause of the differential. In addition, traffic densities and load factors are likely to be lower in Alaska. The low traffic in Alaska also results in fewer carriers competing with ASA compared to the relatively stiff competition for heavier traveled routes between Alaska and the Lower 48 States and between points in the Lower 48 States.

Table 1 also shows that ASA's fares for travel between Alaska and the Lower 48 States are comparable to their fares for travel within the Lower 48 States. Some fares are higher than others, but on the average, they are comparable.

Actual fares for travel between points in Alaska are shown in Table A-I in the Appendix. Only fares from Anchorage to outlying communities were used because ASA routes to the outlying communities originate in Anchorage. For example, to fly Fairbanks to Deadhorse would require a flight from Fairbanks to Anchorage and another flight from Anchorage to Deadhorse.

Fares range from the highest fare/mile for service to Cordova which has low traffic, a short stage length and only air taxi competition, to the lowest fare in the Anchorage to Fairbanks market which has higher traffic, heavier loads, and greater competition. It should be noted that fares to points in Southeast Alaska are as much as three cents/mile less than the average fares for other routes within Alaska. These fares may be slightly artificially low due to subsidies provided through the Essential Air Service (EAS) program.

Actual fares for travel between Alaska and the Lower 48 States are shown in Table A-II in the Appendix. Fares have been shown from Anchorage, Fairbanks, and Juneau because most routes originate from these points. Coach and SuperSaver fares from Anchorage average about one cent/mile less than fares from Fairbanks and Juneau. The highest fares/mile are for routes to Seattle and Portland while the lowest fares/mile are for the longer routes to Phoenix and Tucson.

Actual fares for travel between points in the Lower 48 States are shown in Table A-III. Fares have been shown for travel from Seattle and Portland since most of the ASA routes in the Lower 48 States arrive or depart from these cities.

III. AIR FARES; ALASKA AIRLINES - OTHER AIRLINES

This analysis compares air fares for several of ASA's routes to fares of other airlines for routes of comparable length in the Lower 48 States. Only coach fares are compared and none of ASA's routes entirely within the Lower 48 States were examined.

Table II summarizes the results of this comparison. This table shows that, except for routes from Fairbanks to Seattle and Anchorage to Deadhorse, ASA's flights were consistently cheaper per mile than routes of comparable length by other airlines.

This data has limitations in that only 5 or 6 Lower 48 routes were used for each comparison. In addition, in the case of comparisons of routes within Alaska to routes in the Lower 48 States, in some instances the aircraft flown in the Lower 48 are different from aircraft flown in Alaska. Furthermore, many routes within Alaska utilize 737 aircraft equipped for cargo and passenger loads. In general, however, it appears that ASA's fares are generally lower than fares of other airlines in the Lower 48 for routes of comparable length.

TABLE II
COMPARISON OF ASA's FARES TO OTHER AIRLINES' FARES

ASA's Route	Approximate Stage Length	ASA's Coach Fare/Mile	Other Airlines' Average Coach Fare/Mile for Lower 48 Routes of Comparable Length
Anchorage-Seattle	1450 miles	$.22	$.24
Fairbanks-Seattle	1550 miles	.25	.23
Juneau-Seattle	900	.25	.29
Ketchikan-Seattle	650	.27	.36
Anchorage-Deadhorse	627	.38	.36
Anchorage-Petersburg	677	.29	.36
Anchorage-Sitka	592	.29	.36
Anchorage-Wrangell	709	.27	.36
Anchorage-Bethel	500	.25	.42
Anchorage-Fairbanks	500	.21	.42
Anchorage-Nome	539	.37	.42
Anchorage-Kotzebue	540	.36	.42

The Lower 48 States routes used to compare to Alaska Airlines fares are shown in Tables A-IV-AIX.

IV. CONCLUSIONS

The data presented in this paper suggests three conclusions, based on a fare per mile comparison.

(1) ASA's air fares for travel within Alaska are substantially higher than its fares for travel to and within the Lower 48 States. Higher labor and operations costs in Alaska and lower stage lengths and load factors may be the primary reasons for the higher fares for travel in Alaska.

(2) ASA's air fares for travel from Alaska to the Lower 48 States are, on the average, comparable to ASA's fares for travel within the Lower 48 States.

(3) ASA's fares for travel within Alaska and from Alaska to the Lower 48 States are usually lower than fares of other airlines for routes of comparable length in the Lower 48 States.

TM/sg

STATEMENT

OF

LARRY MERCULIEFF

CS FOR HOUSE CONCURRENT RESOLUTION 36

HOUSE FINANCE COMMITTEE

March 27, 1986

Mr. Chairman, Members of the Committee, my name is Larry Merculieff, representing the City of St. Paul and the St. Paul Trust. My primary task, as an economic development advisor for the City and the Trust, is to seek means by which the community of St. Paul can be economically self-sufficient before Trust funds (which support critical island services) are depleted. I also serve as chairman of the Western Alaska Fishery Loan Board of CEDC which administers a million dollars of revolving loan funds to support developing small boat fisheries in western Alaska.

I wish to speak in support of the committee substitute for HCR 36. As you all know, marine and air transportation to rural Alaska is extremely important for good economic development. In the west coast of Alaska, the primary means by which the communities can develop meaningful entre into the Bering Sea fisheries is by transporting product by air to the markets. In developing coastal fisheries, we have a chicken or egg syndrome. Efficient, low-cost marine transportation cannot financially justify stop-over in a community with low volumes of fish product

to transport. By the same token, developing fisheries communities cannot develop their full potential until low-cost and efficient marine transportation is available and local cold storage facilities are available. This requires, initially, that such communities transport product by air. Obviously, the more cost-efficient the air transportation, the more competitive such communities will be in the various fish markets, and thus, the more likely the developing fisheries will expand.

Needless to say, air transportation costs for passengers and cargo to and from rural communities is costly, affecting every aspect of community economic development. I believe the State of Alaska needs to obtain a clear picture of these costs and the factors which affect them in order to begin addressing the development of integrated and comprehensive plans which achieve the goal of lowering air and marine transport costs in rural Alaska. For example, one factor affecting air transport cost is the method of tendering the mail to the airlines by the U.S. Post Office. Should the U.S. Post Office consider changing their present policies (of what is called <u>equitable tender of mail</u>) to eliminate certain categories of air carriers or somehow make such categories less competitive in their tendering policies, many rural communities may receive less service or experience higher costs, or both, due to a lessening of competition. We understand that at least one special interest group is seeking just such policy changes within the U.S. Post

Office. The point is, the more aware we are of major factors affecting air transport costs, the more able we are to direct efforts to control such factors - and/or to develop plans to lower costs. Certainly we cannot make any impacts on costs without reliable information. We believe that the studies and analyses proposed by CS for HCR 36 is a good step in the right direction.

Thank you.

RE: HCR 36, RELATING TO INTRASTATE AIRLINE TRAVEL

THE EXECUTIVE COMMITTEE OF THE BRISTOL BAY AREA HEALTH CORPORATION MET TODAY AND VOTED BY RESOLUTION TO SUPPORT HCR 36 RELATING TO THE HIGH COST OF AIRLINE TRAVEL IN RURAL AREAS. WE HOPE THAT SOMETHING CAN BE DONE TO LOWER AIRFARES. PLEASE PASS HCR 36. OTHER MEMBERS OF THE EXECUTIVE BOARD ARE JOHN MARK, ANDREW WASSILLIE AND ALVIN BOSKOFSKY.

ANCHORAGE, AK 99503 PHONE: 562-2924

SUBJECT: HCR 36 - INTRASTATE TRAVEL

THE ALEUTIAN REGION SCHOOL DISTRICT SUPPORTS THE ATTENTION OF HCR 36 TO INVESTIGATE THE RATE CHARGE FOR INTRASTATE TRAVEL. RATE INCREASES HAVE RESTRICTED THE ABILITY OF RURAL DISTRICT TO OPERATE EFFECTIVELY. SEVERAL RURAL DISTRICTS ARE INVOLVED IN AN ATTEMPT TO NEGOTIATE THEIR RATES FOR REQUIRED DISTRICT TRAVEL. THIS EFFORT COULD BE GREATLY AIDED BY PASSAGE OF HCR 36.

FROM: NORMAN ANDERSON, BOX 112 NAKNEK, AK. 99633

RE: HCR 36, RELATING TO AIR TRAVEL INTRASTATE

I WISH TO EXPRESS MY VIEWS ON HCR36. TRANSPORTATION COSTS IN THE BRISTOL BAY AREA ARE AT AN ALL TIME HIGH. ALTHOUGH WE ARE ENJOYING A REDUCED FARE PRESENTLY, THIS IS A TEMPORARY AND TIMELY FIXED RATE. IN A COUPLE OF WEEKS, WE AGAIN, WILL HAVE TO PAY THE INFLATED SCHEDULED RATES WHICH, FIRSTLY MAKES TRAVEL BY SMALL CHARTER AIRLINES MORE ATTRACTIVE WHICH IS PLACING MORE OF A RISK TO TRAVELERS. SMALL PLANES ARE MORE SUSCEPTIBLE TO THE HARSH WEATHER AND TERRAIN CONDITIONS BETWEEN THE ANCHORAGE AND BRISTOL BAY AREA.

SECONDLY, TRAVEL BETWEEN ANCHORAGE AND OUR AREAS IS COMPARED TO TRAVEL COAST TO COAST OUTSIDE. MANY PEOPLE ARE LIMITED TO TRAVEL OUTSIDE THE METROPOLITAN AREA BECAUSE OF THE HIGH COST OF AIRFARE LIMITING THE AVAILABILITY AND ACCESS TO LESS EXPENSIVE PRODUCTS FORCING US TO PAY THE HIGH COST LOCALLY. WE ARE A CAPTIVE AUDIENCE AND AT THE MERCY OF THESE AIR PIRATES.

TO: HOUSE TRANSPORTATION COMMITTEE

PIGNALBERI, SHULTZ

REPRESENTATIVES WALLIS AND THOMPSON

FROM: BILLIE BENEDICT, BOX 10019, DILLINGHAM, AK.

RE:

I WOULD LIKE TO FULLY SUPPORT REPRESENTATIVE HERRMANN'S, THOMPSON'S AND WALLIS' LEGISLATION FOR LOOKING INTO AIR FARES TO RURAL ALASKA AREAS. IN CHOOSING TO LIVE IN ISOLATION, WE WERE AWARE OF THE SACRIFICES. HOWEVER, THE HIGH AIR FARES ARE NOT ONLY AN INCONVENIENCE WHICH PREVENTS US FROM TAKING VACATION OUTSIDE OUR AREA, BUT MOST OF US LEFT FAMILIES BEHIND FROM WHOM WE ARE CUT OFF. ALSO, CONSIDER THE COST TO THE STATE FOR THESE AIR FARES WHEN STATE WORKERS AND WORKERS FROM STATE FUNDED ORGANIZATIONS TRAVEL. THE COST IN OUR COMMUNITY ALONE IS INCREDIBLE. I WOULD LIKE TO SEE SOMETHING POSITIVE DONE TO INCLUDE US IN THE REST OF THE WORLD.

Febrary 11, 1986

Adelheid Herrmann
Pouch V
Juneau, AK 99811

Dear Representative Herrmann:

I have lived in Naknek for the past 11 years and have seen airline prices and air freight rates go up steadily.

We now have two "competing" airlines and three freight haulers all charging to the penny the same rate. For the price of a round trip ticket to Anchorage I could go to Seattle from Anchorage, five times the distance.

Southeast Alaska gets subsidized transportation via the Marine Highway. Most people of the state can at least drive to major shopping areas. We only have the choice air transportation.

This means that all food, household goods and the like needed for living have to come by air and transportation of a family to Anchorage is not a matter of jumping into a car but buying seat fare for each.

Hopefully you can look into this matter.

Kurt Jaehning
Naknek AK 99633

Low air fares extended to Anchorage

11/13/85 Anch. Daily News

Daily News staff and wire services

The low Thanksgiving air fares being offered in the Lower 48 were extended Tuesday to travelers from Anchorage.

Western Airlines announced Tuesday it will offer $158 round-trip "Turkey fares" from Anchorage to anywhere Western flies in the continental United States.

Travel must take place on Nov. 28, 29 and 30, and the return flight must begin by noon on Nov. 30, according to Rachel Cavitt, sales manager for Western Airlines in Alaska.

Tickets also must be purchased within three days of reserving the seat and they are nonrefundable. The last day to purchase tickets is Nov. 26, Cavitt said.

"This is definitely just for the impulse traveler," said one Anchorage travel agent. "But it's just about the cost for two people to go out and have a fancy dinner and drinks."

The Turkey fare offers up to 85 percent savings on some of Western's tickets, Cavitt said.

Western flies to numerous West Coast cities and other destinations across the country including Salt Lake City, Boston, New York, Washington D.C. and Texas.

The Turkey fare is less than half the cost of an ultimate supersaver fare to Los Angeles, which now is about $398.

Two more airlines joined in the Thanksgiving fare war Tuesday, and the carriers reported a surge of telephone queries and bookings for the steep discounts that are designed to fill empty holiday flights.

"It's been very heavy. There are some markets selling out rapidly," said Linda Johnson, spokeswoman for American Airlines. She said Florida routes were practically booked for the 60-hour period covered by American's offer.

United Airlines spokesman Chuck Novak said the number of phone calls to its reservation centers was up 50 percent. Jim Ewing, a spokesman for Delta Air Lines, said: "The volume of calls has increased drastically, I'd say by 15, 20 percent. We've got to put supervisors on the phones."

American was the first to offer the sharply reduced fares in a Monday announcement aimed at luring travelers who otherwise would stay home during Thanksgiving. United and Delta quickly followed with their own plans, and Northwest Airlines and Eastern Airlines announced sales 24 hours later.

American and Eastern are offering discounts of up to 85 percent on round-trips in the 48 continental states from Thanksgiving Day, Nov. 28, through noon Nov. 30, when passenger traffic traditionally is very light. Thanksgiving eve and the following Sunday have been heavily booked for months.

United matched American's offer on routes they both fly. United, American and Eastern require round-trip bookings and payment within three days of making reservations. Their sale deadline is Nov. 26 and tickets

Tuesday, December 3, 1985, The Anchorage Times

For a New Stuyahok pair, it wasn't good day to fly

by Mitch Lipka
Times writer

After visiting her sick son in an Anchorage hospital, all Annie Gumlickpuk wanted to do was go home to the Bristol Bay village of New Stuyahok.

It all seemed simple enough and it had been done time and time before. All they had to do was get on a plane to Dillingham, catch a Bush plane up the Nushagak River and they would be home.

She and about 10 others boarded a SeAir flight Monday afternoon knowing there was good weather in Anchorage and good weather in Dillingham.

Bad weather is the bane of Bush flying — the major variable people there must learn to cope with.

Off went the SeAir flight and back it came. Mechanical difficulties, the passengers were told.

After a plane switch and more than a hour more on the ground, a second SeAir flight speeded down the runway for the 300-mile trip. Back it came.

Mechanical difficulties, they say.

That's when things began to get bad. Gumlickpuk and her elderly father-in-law, Johnuk Gumlickpuk were informed by the carrier with the next flight out, AirPac, that their tickets would not be honored.

To make the situation still worse, Johnuk Gumlickpuk speaks only Yupik, and had to sit off to the side not understanding what was happening.

It seems that the $163 weekender fare tickets the Gumlickpuks had purchased may only be used on the airline that issued them, even if that airline can't get them where they are going. The Gumlickpuks did not have the money on hand to buy $160 one-way tickets for other carriers.

All things considered it's probably just as well the Gumlickpuks didn't get on the AirPac flight because it too returned to Anchorage and was cancelled. The problem — mechancial difficulties, the passengers were told.

"I don't like being stuck here," Annie Gumlickpuk said. "If they had been courteous and at least put us up for our meals it would have at least made us feel better."

"We don't have to take somebody's room and board and all of that," said Irene Bonner, director of customer services for SeAir. An airline flying a plane with fewer than 60 seats is not required to put up stranded passengers, she said.

"Most people who fly in Alaska understand the hassles with the weather conditions flying to these places," Bonner said. "We do accommodate them any way we can."

Bonner said ticket agents were not able to reach her Monday night, and if they would have, she would have given the Gumlickpuks a ticket on another airline.

"I've been flying all my life but this is the worst it has been," Annie Gumlickpuk said.

"We're so unlucky today," Johnuk Gumlickpuk said with Annie translating. "And it's not our fault."

Janet Schichnes and her family managed to be aboard both SeAir planes and the AirPac plane that were brought back to Anchorage.

"We got on every plane but MarkAir got us here," she said for her Dillingham home this morning. "It's absolutely insane.

"It took us about seven hours to get from Anchorage to Dillingham (normally a one hour flight) and we don't even have our bags."

Repeated calls to AirPac were not returned.

Alaska State Legislature

Senate

Official Business

Pouch V
State Capitol
Juneau, Alaska 99811

January 25, 1985

The Honorable Norman Gorsuch
Attorney General
State of Alaska
Pouch K
Juneau, Alaska 99811

Dear Mr. Attorney General:

As you know, Alaska Airlines has announced substantial fare increases for coach class passengers.

Advertising has indicated that each of the other interstate carriers (United Airlines, Northwest Airlines and Western Airlines) has followed the new Alaska Airlines fare schedule with virtual exactitude.

Before the new increases took effect, the one-way coach class fare between Anchorage and Seattle, on each of the carriers, amounted to a cost of 22 cents per mile. Alaska Airlines charged a one-way fare of $324.90. Two other carriers (Northwest Airlines and Western Airlines) were three cents cheaper, at $324.87. United Airlines charged $5.90 less than Alaska Airlines, or $319.00. This is an obviously miniscule "spread", and, as noted, each of the carriers is charging 22 cents per mile in fact.

The route between Anchorage and Juneau is extremely important to State government, inasmuch as many passengers are flying either on state business, at state expense, or because they are exercising their right or duty of citizenship to visit and speak with officials of the government. The fare over this route, where no competition exists, is 33 cents per mile.

For the purpose of this inquiry, however, I will not concern myself with the Anchorage-Juneau route, because only one carrier serves the route. Instead, I will confine my comparisons to the interstate route between Anchorage and Seattle, and other destinations in the continental United

States, on the one hand, and other American routes, not involving an Alaska airport, on the other. The comparisons are based upon the old fares before this month's increases took effect.

Between Anchorage and Seattle, passengers in coach class (disregarding "super saver" passengers) paid 22 cents per mile, as noted. This cost per mile is twice the cost per mile between Salt Lake City, Utah, and Washington, D.C. The distance between Salt Lake City and the nation's capital is 413 miles greater than the distance between Anchorage and Seattle. The fare is $109.00 less than the Anchorage-Seattle fare before the new increase!

If Alaskans were able to travel for 11 cents per mile, they would pay a one way fare to Seattle of $162.45, not $319.00 to $324.90, or the higher fares now in effect.

Another example -- and the examples are endless, obviously -- is the flight between Kansas City and Seattle, a distance of 1,851 miles (slightly farther than the distance from Anchorage to Seattle). Western Airlines offers a one-way fare of $185.00, or 12 cents per mile, between Kansas City and Seattle.

Because "super saver" fares are offered virtually everywhere, and have many restrictions, including a requirement for round trip purchases, I have not attempted to calculate their effect. Our research is particularly interesting, I think, in its showing that the four carriers in the Alaska trade follow virtually equivalent coach class fares, as well as super-saver fares, and are also identical in their failure to offer any type of other discount fares (except senior citizens' discounts offered by Alaska Airlines and United Airlines).

Many Alaskans expected that deregulation of the industry would result in lower fares. Many Alaskans expected that the entry into the Alaska trade of United Airlines would enhance competition and result in savings to the consumer. As shown by the two newspaper clippings I enclose (article from the Anchorage Daily News of January 17, 1985 and editorial from the Anchorage Times of January 18, 1985), the fare increases are of interest and concern to Alaska residents.

The problem of the cost of travel is exacerbated for Alaskans because of the absence of rail or other surface travel modes that can be reasonable alternatives for many, given the distances to be covered and the climate that prevails during most of the year.

The inability of Alaskans to travel out-of-state means diminished opportunities for contact with family and friends in "the lower 48", and diminished opportunities for education, professional seminars, and other activities important to the development and fulfillment of the individual Alaskan in his or her personal life and career.

With all of these considerations in mind, I would be grateful for any reflections you and your Department may have, and would like to know particularly:

1. The elements of proof that would normally be required to show an unlawful "contract, combination or conspiracy" in restraint of trade, or other violation of the state anti-trust law. (AS 45.50.562 et. seq.)

2. Whether there may be a possible application of state anti-trust laws, for restraint of trade or price fixing by agreement or conscious parallelism, in this context.

3. Whether state anti-trust laws apply to interstate air carriers.

4. If not, whether state anti-trust statutes could be changed in a constitutional manner to provide such applicability and to establish state court jurisdiction.

5. Whether there is any precedent for anti-trust suits against air carriers in interstate commerce, either under federal or state anti-trust statutes, brought by attorneys general on behalf of state governments or their people, for alleged price-fixing and restraint of trade.

6. Whether there are any other statutory remedies that can be considered or developed to deal at the state level with the problem.

7. Whether the state has been given any data from the carriers which might justify either the apparent coincidence in their respective fare structures or the recent round of fare increases.

Because the matter I have raised is of great importance to the Alaska tourism industry and Alaska business in general, I am sending a copy of this letter to the Honorable Loren H. Lounsbury and I am inviting him and the Department

of Commerce and Economic Development, which he heads, to share with me any comments or ideas that they may have. At a minimum, it would be my hope that state officials in the executive branch will express to the carriers some of the concerns I have voiced here, and encourage fare competition and lower fares.

One of the puzzling factors in all of this is that it would appear to me to be evident that if fares were lower, more passengers would fill the airlines' seats. I am wondering whether the government or the industry has any information or studies, such as studies for the Division of Tourism of the Department of Commerce and Economic Development, which could help us (and the carriers) estimate what the passenger load factor would be if fares were lower.

Today, Alaskans pay more than 100 percent above what coach class travelers pay, on a per mile basis, elsewhere in the nation. Alaskan travelers appear to be subsidizing travelers on other routes.

All of this occurs at a time when the rate of inflation in Alaska is less than the rate of inflation across the nation. In the past several years, the federal government has noted on many occasions that the cost-of-living differential between Alaska and the rest of the country is narrowing, not growing. And airline fuel costs are reportedly stabilizing, too. Some airlines, as we know, have renegotiated union agreements to reduce labor costs. Finally, as I have noted above, we are in a deregulation environment that is a supposed benefit to the consumer.

Your assistance and advice would be very welcome, so that all of us in state government, working together, can help bring down the cost of airplane travel, absent compelling justifications from the carriers showing good reasons why prior rates and recent increases have been necessary and good reasons why all the carriers are charging essentially the same fares.

Sincerely,

Joe P. Josephson.

Re: Airline Ticket Prices
A.G. File 166-312-85

Dear Senator Josephson:

Your recent inquiry concerning the high prices Alaskans are forced to pay for airline tickets has been reviewed in detail by my department. This is a matter of substantial public concern, as air travel costs impact Alaskans in many different ways.

My office has been monitoring the situation for sometime. In particular, the nearly identical prices charged by the carriers for travel between Anchorage and Seattle caught our attention. We did initiate an inquiry to find out how and why Alaska Airlines, United, Western, and Northwest all charge essentially the same prices on this heavily travelled route.

Our investigation revealed that the airlines are able to keep track of each others prices and proposed price increases, through several computerized information networks. The main network is the Airline Travel Publishing Company's computer service (ATPCO). The ATPCO system publishes routes, schedules, fares, and proposed fare changes nationwide, and is apparently updated daily. This system is used by travel agents as well as by the airlines, and allows its subscribers to know -- to the penny -- what any given airline is charging on its routes.

We are informed that airlines generally "move in packs" when it comes to prices. That is to say, as a general rule, no one airline wants to offer a fare that is much higher than any other airline, for fear of losing business. Air travel is a particularly price-sensitive industry. Consumers will fly the airline that offers the best price, with other factors (schedule, quality of in-flight service, etc.) running far behind price as a factor in selecting which airline to choose. If one airline lowers its prices, its competitors follow suit quickly.

We are informed that when an airline decides to raise its prices, it will publish the planned increase through the ATPCO system with an effective date of one to two months after the initial announcement. Thus, its competitors are given notice of any up-coming price rise. The competitors are in a position to follow the leader and file corresponding price increases. Unless one airline does not go along, we are told, the upward change is likely to happen. By closely following the proposals of their competitors, and responding to the changes as they occur, airlines are able to keep their prices within a few percentage points of each other. This process is what is known as "conscious parallelism" in antitrust law. It is not illegal, under either the Alaska Restraint of Trade Act or the Federal Sherman Act, to closely follow and to respond to a competitor's prices.

Your letter asks for my thoughts on how the state antitrust laws apply, and whether they ought to be changed, in this situation. The problem is not one of jurisdiction, nor is it, in my opinion, one which can be remedied easily by changes to the law. If it could be shown by direct evidence that the airlines actually met, and agreed to charge any particular fare on Alaska routes, this office would be able to intervene and seek redress on behalf of consumers. But to prove pricefixing, we need evidence which we do not have, and which our initial inquiry does not indicate we would find. Nor would it be wise policy to seek a change in the law making it illegal for a business to watch a competitor's prices and respond to them -- consumers benefit when businesses cut prices in response to competition.

I join with you in expressing concern for the high prices Alaskans have to pay for airfare, in a time when the cost of air travel elsewhere in the country has declined dramatically. I certainly hope that consumers will express their concerns to the airlines. Perhaps one or more of the air carriers serving Alaska may respond by reducing its fares.

Sincerely yours,

Norman C. Gorsuch
Attorney General

SENATE CHAIR, ANCHORAGE CAUCUS

February 6, 1985

Mr. Bruce Kennedy
President
Alaska Airlines
P.O. Box 68900
Seattle, Washington 98188

Dear Mr. Kennedy:

As a state senator from Anchorage, I have asked why air fares have increased in Alaska this year, at the same time that significant new discount fares are offered elsewhere. My inquiries have resonated in the Alaska community, because Alaskans know that fares charged for flights to and from Alaska were high, both in relative and absolute terms, even before the latest increases took effect.

I am enclosing a copy of my letter to the Attorney General of Alaska dated January 25 and a copy of the press release which I issued at that time. I am also enclosing three other newspaper clippings on this subject, including a recent editorial and a recent travel column, which show the existence of widespread community concern.

This office has received many messages from constituents, and there has been a proliferation of letters to the editor on this subject. For example, I also enclose some letters to the editor of the Anchorage Daily News which appeared in that paper recently.

Alaskans who travel know that the fares now available between points in the continental United States tend to be far lower than the fares available between Anchorage and Seattle, on a cost-per-mile basis. From a traveler's standpoint, as the enclosed newspaper clippings make manifest, there does not appear to be an obvious rationale for the existing fare structures, and there is certainly no discernible relationship between distance and cost.

I need not detail here the very serious consequences to us Alaskans of the high airplane fares. We have no rail alternative. Buses and cars do travel over the Alaska

Highway, but considerations of climate, distance and time make these modes all but useless for most business and vacation travelers.

On the other hand, there is an alternative to the high fares now charged Alaskans on the Anchorage-Seattle route: Alaskans can stay home. Their relatives and friends in the "lower 48", and potential tourists, can stay home, too, rather than visit the 49th State.

That alternative is bad for the airlines. It is bad for Alaskans. It is bad for family relationships. It is bad for tourism. It is bad for commerce. It is bad for those who want to pursue educational curricula and professional seminars in other states. It is bad for community morale. It is bad for the relationship between the airlines and their customers. It is bad for the taxpayers of Anchorage who have invested in a new convention center, a sports arena, and other amenities designed to enhance tourism.

Alaskans are educated and sophisticated. They ask me:

1. Why are airline fares going up here while fares in other places are going down?

2. Why do all airlines consider the high fares to be more profitable, even though they compel many would-be travelers to stay put?

3. What are the justifications for the higher Alaska route fares? Are Alaska state airport landing fees higher than elsewhere? Is jet fuel bought for travel to and from Alaska more expensive? Is there a wage differential paid to employees working in Alaska? Are load factors so low that the costs of operation per seat, relative to revenues, are very high? If so, why do four carriers compete over the market, and why wouldn't lower fares build profits, at least on certain flights, or at least on designated flights off-season? Or, conversely, are load factors so high that it matters not to the carriers whether some Alaskans choose to be price-resistant?

4. Why has deregulation not led to price competitiveness here?

I am considering introducing legislation on this subject, and as a member of the Senate Transportation Committee, I have requested public hearings on this question. The Chairman of the Transportation Committee, I am informed, has scheduled such hearings.

I have also received a response from the Attorney General of the State of Alaska to my inquiry about possible anti-trust violations. The reply of the Attorney General indicates that an element in any anti-trust litigation would be evidence of actual consultations among the carriers to set prices; it does appear that such evidence is difficult to obtain, if it exists at all. The Airline Travel Publishing Company computer service gives every carrier access to detailed fare schedules from every competitor, and so a consciously-parallel fare policy can be set without direct communication among competitors on the subject.

The remedies for Alaskans in this environment would appear to be limited to a spontaneous or concerted abstinence or boycott from air travel; consultations with the Alaska delegation in Congress to explore inducements or sanctions at the federal level; utilization of the state's bargaining position as a major customer to bring about price concessions benefiting all Alaska travelers; encouragement of a new entrant in the Alaska market; and public relations rewards and honors to that carrier which is imaginative enough to be the first to give Alaska travelers some overdue relief.

I solicit your comments and suggestions so that Alaskans can begin to get some of the price benefits deregulation was supposed to bring. I have written in an identical vein to your three counterparts at the other interstate air carriers. In my judgment, imaginative leadership in this regard will inure to the short-range and long-range benefit of the company displaying it, and will certainly earn the recognition and gratitude of the legislature and the people of Alaska.

Sincerely,

Joe P. Josephson
State Senator

TO: Vince O'Reilly, Deputy Commissioner

DATE: February 12, 1985

FROM: Orhan M.Yildiz
Economic Analysis Section

SUBJECT: Airline Industry

THROUGH: Committee of Directors, Economic Analysis Section

In response to your request concerning determinants of airline travel demand we performed a literature search on the subject. Not surpisingly, there is no relevant information specifically for the Alaska market. However, from the limited literature that is available locally I have put together the following discussion, which may shed some light on the questions raised by Senator Josephson.

The 1978 Airline Deregulation Act has increased competition in most of the U.S. airline markets. Consequently, consumers have, in general, benefited from lower fares. In the Alaska market, however, steady price increases in recent years above the inflation rate indicate that Alaskans might not have benefited from the industry deregulation equally. Finding the reasons behind this would require an analysis of the local market characteristics and the airline industry structure in Alaska.

In spite of the increase in competition in the U.S. air travel market, the industry earnings in the post deregulation years have been good, except around the 1980 recession period, and were exceptionally good in 1984. Earnings are expected to increase in 1985. (This information was given by Albert Khan, the man responsible for the deregulation of the airline industry, on the KTOO TV show "Firing Line" on Feb. 9, 1985.) This may imply a price elastic (or price responsive) demand for air travel -- i.e., a decrease in fares is more than offset by an increase in demand so that the industry revenues in fact increase. Why, then, is this experience in the lower 48 not transferable to Alaska?

First, the Alaska market has little competition compared to markets elsewhere in the U.S. Even the national market is not entirely competitive, since it is still dominated by the large Trunks, although their market share decreased considerably after the deregulation. In Alaska not only are the alternative modes of travel practically absent, but few airlines operate within the state boundaries. The existence of a small number of operators with similar cost structures and nearly identical products makes

the disadvantage of rivalry clear. This does not necessarily imply collusion. When the market is dominated by one large airline that airline could act as the leader and set the market price, which would be adapted immediately by the smaller airlines. Thus, it is likely that the Alaska market gravitates toward a monopolistic structure or toward an oligopoly with joint profit-maximizing behavior.

Where the air fares are set depends on how easy it is for other airlines to enter the market and the elasticity of demand for air travel. If barriers to entry were low, fares would not be much above those found in a "competitive market," for otherwise new airlines would enter the market to share profits. Thus, one question to be answered is how difficult it is to open the Alaska market to further competition.

If demand for air travel is not responsive to price changes the industry can pass most of the general operating cost increases on to the customers. The existence of monopoly conditions would further exacerbate the situation, because costs due to inefficiencies would be added to the overall costs -- while in a competitive market the inefficient airline would be forced to drop from the market. If the demand responds elastically to price changes cost increases would be born mostly by the industry. Hence, any price increase due to increasing costs would cut revenues drastically. Conversely, a decrease in price would increase revenues but not necessarily the profits of a monopolist. Therefore, the second question that would need to be answered is whether the demand for airline travel in Alaska is responsive to changes in prices.

Whether the Alaska market can become more competitive depends on several factors. Entering into the Trunk business involves economies of scale. Literature indicates that "... a carrier would have to supply at least two billion available ton miles ... in order to achieve unit costs comparable to those of the typical Trunk;" beyond this level of operation economies of scale disappear.1/ In this situation the economical alternative would be the entry of an existing airline company, not a new carrier, to the Alaska market. This way the airline would pick the revenue

---

1/ Paul Biederman, "The U.S. Airline Industry: End of an Era," Praeger Special Studies, 1982.

Ton miles is the available tons multiplied by mileage flown.

passenger miles of travelers destined to other locations within the U.S. The market share of a carrier also depends on the frequency of service (number of flights per day), although as length of trip increases this becomes less of a factor.2/ In Alaska, trip lengths between Anchorage and Seattle, Southeast and Seattle, and Southeast and Anchorage would make it feasible to capture a reasonable share of the market with few flights per day.

Obviously, each carrier does not have the same cost structure, since there are other determinants of cost than size. One indicator of carrier efficiency is employee productivity, which could be measured as revenue ton miles per employee.3/ Total operating expenses of a carrier depends on total employment, age of aircraft fleet (affects maintenance), type of aircraft (technology) and cargo revenue. Since the two major airlines operating in Alaska are lower 48 based their employee costs in routes between Alaska and Seattle are probably not much higher than an average U.S. carrier. Of course, airlines have to maintain ground crews (for maintenance and service) at every airport. In addition, the cost of providing service within Alaska would be higher. One factor of great importance for the Alaska market is the cargo revenues of carriers. These work to reduce operating costs considerably. In all likelihood airlines in Alaska receive considerable cargo revenues, which lower operating costs and increase total revenues. Consequently, it is not clear whether operating cost of air carrier service to Alaskans is overall costlier than elsewhere. If further work in the airline cost area is sought, financial data for Alaska carriers could be obtained from the Federal Aviation Administration (FAA). Such reporting is a requirement of FAA.

In addition to operating costs, a major obstacle to entry into the Alaska market would be fixed depreciation and amortizations costs of investment. Airlines with the monopoly power could easily undercut the prices, even below the level of a competitive market, to drive out a new entrant to the market. A carrier with high financing costs might not survive such rivalry unless it is protected by a parent corporation.

2/ Geaorge C. Eads, "The Local Service Airline Experiment," The Brookings Institute.

3/ A revenue ton mile is the revenue generated from carrying one ton a distance of one mile.

passenger. For a new carrier to enter the Alaska market it is important to know whether Alaska travelers are sensitive to price reductions. If they are not, utilization of additional carrier capacity offered by the new carrier may require deep price cuts, which would also reduce the total revenue earrings of the industry. On the other hand, if there are barriers to entry into a market, companies with the monopoly advantage benefit from inelastic demand. When demand is not responsive to price the reduction in demand would be proportionately less than the price increase, resulting in an increase in revenues.

The results of demand elasticity analysis in the U.S. carrier market has mixed results. In general, demand for business travel is relatively insensitive to price, whereas the reverse is true for vacation travel. Nevertheless, it is not clear that these conclusions apply to the Alaska market. It is possible that even the vacation travel might be inelastic, considering that few substitutes for air travel exist. Besides, demand for travel is derived from demand for other things, such as business, vacation, visiting family or friends. It is generally acknowledged that the geographical conditions here necessitate occasional vacations to outside. Also few Alaskans may spend their annual leaves at a touristic location of Alaska. There is also the fact that most people here have relatives in the lower 48, whom they may need to visit occasionally. Without specific analysis of the market we can not draw definitive conclusions, although these arguments point to a market with low price responsiveness to air travel. However, acknowledging the price sensitivity of vacation travelers, air carriers offer price discounts. Thus, the existence of different fare categories in Alaska indicate that nonbusiness travelers still have a more price elastic demand curve, but this is likely to be a matter of degrees.

A study for the airline travel in the North Atlantic market seems to give some, albeit shaky, evidence to the hypothesis of inelastic demand in Alaska. Cigliano has analyzed the effect of price and income elasticity of airline travel between the U.S. and Europe, and also between Canada and Europe.4/ The total demand (aggregate of different fare classes) was responsive to personal income in both markets, responsive to price in the U.S. market but unresponsive to price in the Canada market. The author attributes

---

4/ J. M. Cigliano, "price and Income Elasticities for Airline Travel; The North Atlantic Market," Business Economics, 1980.

the price inelastic demand in Canada to a different mix of travelers — e.g., more first class or business travelers. It is also possible that the special relationship of Canada to England requires a level of governmental and business interaction which is less sensitive to price. Alaska's remote geographical location to the mainland U.S. could easily be likened to the Canadian situation Cherington, who did the first comprehensive, but subjective, review of airline pricing concluded that price changes of less than 10 percent produced an inelastic response.5/ This study is now out dated, but for a new entrant to the market this figure gives an idea of the type of strategy required in order to be competitive.

In conclusion, the position of the State of Alaska should be the encouragement of competition in the Airline industry by making entry to the market easier. This can take the form of low interest business loans, tax legislation, or contract bidding. By opening the fiscal year air travel to a bidding process the government would be acting as a monopsonist (a monopolist of the user of services). If the size of government related travel is large the bidding process may prove to be very effective and may even lure a new carrier to enter the Alaska market.

AN ACT

RELATING TO ENPLANEMENTS, ENFORCEMENT OF COMPLIANCE WITH FINANCIAL RESPONSIBILITY AND CERTIFICATE OF COMPLIANCE REQUIREMENTS FOR AIR CARRIERS, PENALTIES, ISSUANCE AND DISPLAY OF CERTIFICATES OF COMPLIANCE, AND THE DEFINITION OF AIRCRAFT; AND PROVIDING FOR AN EFFECTIVE DATE.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* SECTION 1. AS 02.15.050 IS AMENDED BY ADDING A NEW SUBSECTION TO READ:

(G) THE DEPARTMENT MAY ACQUIRE DATA ON PASSENGER ENPLANEMENTS FROM AIR CARRIERS; HOWEVER, THE DEPARTMENT MAY NOT OBTAIN PASSENGER MANIFESTS FROM AIR CARRIERS EXCEPT FOR MATTERS CONCERNING PUBLIC SAFETY.

* SEC. 2. AS 42.30.200(C) IS AMENDED TO READ:

(C) THE DEPARTMENT MAY AUTHORIZE DEPARTMENT PERSONNEL TO ENFORCE THIS SECTION AND MAY ADOPT PROCEDURAL REGULATIONS NECESSARY TO IMPLEMENT THIS SECTION. UPON FINDING A VIOLATION THE DEPARTMENT MAY ISSUE A STOP USE ORDER.

* SEC. 3. AS 42.30.200(E) IS AMENDED TO READ:

(E) A PERSON WHO VIOLATES (A) OF THIS SECTION IS GUILTY OF A CLASS A B MISDEMEANOR AND IS PUNISHABLE BY A FINE OF NOT LESS THAN $1,000 $500 OR MORE THAN $5,000 FOR EACH DAY OF VIOLATION BUT NOT TO EXCEED $10,000 FOR EACH VIOLATION $1,000 .

* SEC. 4. AS 42.30.225(A) IS AMENDED TO READ:

(A) A PERSON MAY NOT USE AN AIRCRAFT IN AIR COMMERCE BEFORE OBTAINING AN ANNUAL CERTIFICATE OF COMPLIANCE FOR THAT AIRCRAFT FROM THE DEPARTMENT. THE DEPARTMENT MAY ISSUE A CERTIFICATE OF COMPLIANCE FOR ONE AIRCRAFT OR A FLEET OF TWO OR MORE AIRCRAFT. THE DEPARTMENT SHALL ISSUE OR RENEW A CERTIFICATE OF COMPLIANCE UPON APPLICATION AND PRESENTATION OF

(1) PROOF OF FINANCIAL RESPONSIBILITY REQUIRED UNDER AS 42.30.200;

(2) PROOF OF COMPLIANCE WITH FEDERAL AVIATION ADMINISTRATION REQUIREMENTS, AND, WHERE APPLICABLE, FEDERAL CERTIFICATION FOR SCHEDULED AIRLINE SERVICE.

* SEC. 5. AS 42.30.225(B) IS AMENDED TO READ:

(B) THE ANNUAL FEE FOR A CERTIFICATE OF COMPLIANCE IS $50

PER CALENDAR YEAR FOR ONE AIRCRAFT AND $100 PER CALENDAR YEAR FOR A FLEET OF TWO OR MORE AIRCRAFT . THE CERTIFICATE IS VALID FOR A PERIOD OF 12 MONTHS FOLLOWING THE DATE OF CERTIFICATION . THE CERTIFICATE SHALL BE DISPLAYED ON THE AIRCRAFT SO THAT IT IS VISIBLE TO BOARDING PASSENGERS.

* SEC. 6. AS 42.30.225(B) IS REPEALED AND REENACTED TO READ:

(B) THE ANNUAL FEE FOR A CERTIFICATE OF COMPLIANCE FOR ONE AIRCRAFT AND FOR A FLEET OF TWO OR MORE AIRCRAFT SHALL BE SET BY THE DEPARTMENT BY REGULATION. THE CERTIFICATE IS VALID FOR A CALENDAR YEAR. THE CERTIFICATE SHALL BE VISIBLE TO BOARDING PASSENGERS.

* SEC. 7. AS 42.30.225(E) IS AMENDED TO READ:

(E) THE DEPARTMENT MAY AUTHORIZE DEPARTMENT PERSONNEL TO ENFORCE THIS SECTION AND MAY ADOPT PROCEDURAL REGULATIONS NECESSARY TO IMPLEMENT THIS SECTION. UPON FINDING A VIOLATION THE DEPARTMENT MAY ISSUE A STOP USE ORDER.

* SEC. 8. AS 42.30.225 IS AMENDED BY ADDING A NEW SUBSECTION TO READ:

(G) A PERSON WHO VIOLATES THIS SECTION IS GUILTY OF A CLASS B MISDEMEANOR AND IS PUNISHABLE BY A FINE OF NOT LESS THAN $500 OR MORE THAN $1,000.

* SEC. 9. AS 42.30.380(3) IS AMENDED TO READ:

(3) "AIRCRAFT" MEANS A PROPELLER, ROTOR, OR JET-POWERED DEVICE USED OR DESIGNED FOR FLIGHT IN THE AIR;

* SEC. 10. NOTWITHSTANDING AS 42.30.225(B), AS AMENDED BY SEC. 5 OF THIS ACT, A CERTIFICATE OF COMPLIANCE ISSUED BY THE DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT AND IN EFFECT ON THE DAY BEFORE THE EFFECTIVE DATE OF SEC. 5 OF THIS ACT IS VALID FOR THE PERIOD ISSUED.

* SEC. 11. AS 42.30.225(C) AND 42.30.225(D) ARE REPEALED.

* SEC. 12. SECTION 6 OF THIS ACT TAKES EFFECT JANUARY 1, 1989.

MAR 18 1988

March 14, 1988

The Honorable Bette M. Cato
P.O. Box V
Juneau, Alaska 99811

Dear Bette:

I am writing to express my concern with Senate Bill 3, currently in Committee. As you are probably aware, this bill will change vehicle licensing requirements from two vehicle identification plates, to one.

My reservations arise from the obvious impact that this would have upon law enforcement. Having just one plate on a vehicle, in the rear, would make identification of the vehicle very difficult. There are so many models of cars out today, that without two plates, it is very difficult to tell one from another. As an example, the typical armed robber does not back into a convenience store to attack. He pulls in with the front of the vehicle facing the store. He usually backs away. With two plates, there is a chance that witnesses may be able to identify the car. With the above scenario, and one plate in the rear, there is no chance.

Officers searching for a stolen car would be unable to check any oncoming vehicle. A vehicle would have to be parked before a check could be made.

As things are made more difficult for law enforcement, so too does public safety suffer. As your opportunity to express your opinion or vote on this bill arises, please take the above factors into consideration. I believe that the loss of this asset to law enforcement would have a strong impact upon our ability to protect the public safety.

Sincerely,

Louis A. Bencardino
Chief of Police
Seward Police Department

Dear Representative Cato,

I am writing to address CS for Senate Bill No. 3, which has to do with motor vehicle license plates. Under this bill, motor vehicles would be issued only one license plate instead of two.

I can appreciate the need for cutting costs wherever possible and from that point of view the bill is good. However, I would like for you and the Transportation Committee to consider that single license plates will make it more difficult for law enforcement and citizens to identify motor vehicles. With only one license plate, you reduce your chances of seeing the license numbers of vehicles that may have been involved in crimes.

Thank you for any consideration you and the Transportation Committee may give this.

Sincerely,

Duane S. Udland

Duane S. Udland
Chief of Police

TO: REPRESENTATIVE BETTE CATO, CHAIRMAN
HOUSE TRANSPORTATION COMMITTEE

FROM: SENATOR MITCH ABOOD

RE: SB 3 "AN ACT RELATING TO MOTOR VEHICLE REGISTRATION AND REGISTRATION PLATES; AND PROVIDING FOR AN EFFECTIVE DATE."

I respectfully request a hearing on SB 3 at your earliest possible convenience.

SB 3 requires the Department of Public Safety to issue one registration plate, instead of the existing requirement of two plates. This bill also requires the plate to be attached to the rear of the vehicle.

The bill tends to be rather lengthy due to the housekeeping measures of changing the plural language to singular in reference to the registration plates.

Committee Substitute for SB 3(Finance) has strong support from the Department of Public Safety and they had indicated a cost saving of approximately $60,000.

Thank you for your consideration in hearing SB 3 and moving it on to the next committee of referral.

Should you have any questions, please contact me or Rhonda Cargill of my staff at 465-4714.

Senator Mitch Abood
SENATE DISTRICT G-A

DATE: 08 MARCH 1988

TO: REPRESENTATIVE BETTE CATO, CHAIRMAN
HOUSE TRANSPORTATION COMMITTEE

FROM: SENATOR MITCH ABOOD

RE: SB 3 "AN ACT RELATING TO MOTOR VEHICLE REGISTRATION AND REGISTRATION PLATES; AND PROVIDING FOR AN EFFECTIVE DATE."

I respectfully request a hearing on SB 3 at your earliest possible convenience.

SB 3 requires the Department of Public Safety to issue one registration plate, instead of the existing requirement of two plates. This bill also requires the plate to be attached to the rear of the vehicle.

The bill tends to be rather lengthy due to the housekeeping measures of changing the plural language to singular in reference to the registration plates.

Committee Substitute for SB-3(Finance) has strong support from the Department of Public Safety and they had indicated a cost saving of approximately $60,000.

Thank you for your consideration in hearing SB 3 and moving it on to the next committee of referral.

Should you have any questions, please contact me or Rhonda Cargill of my staff at 465-4714.

CONTINUATION OF FISCAL NOTE ANALYSIS

For Bill/Resolution No. CSSB 3(Fin) (Work Draft)

This bill reduces the number of license plates required on a motor vehicle from two to one. 50,000 sets of new license plates are issued annually. The cost savings would be $1.00 per vehicle (Capital). 650,000 sets of tabs are issued annually. The cost savings would be $.015 per vehicle (Operating). Effective date is January 1, 1989, thus one-half year savings is reflected in FY 90 and subsequent years.

At present, the FY 89 Capital request for the Department of Public Safety does not include any funding for the purchase of new license plates. The reduction shown in the Capital Budget category reflects only the amount of decrease in future requests.

BILL NO: WORK DRAFT
CS SB 3(FIN)

DATE: February 4, 1988

TITLE: An Act relating to motor vehicle registration...

CONTACT: Bill Brown
465-4335

DEPARTMENT OF PUBLIC SAFETY

This bill reduces the number of license plates required to be displayed on a motor vehicle from two to one.

The one license will be displayed on the rear of the vehicle. At least twenty states currently issue only one plate, and others have introduced legistation to change to one plate. This is a cost savings measure with a total annual savings of over $60,000.00.

The department supports this bill.

SECTIONAL ANALYSIS FOR CS FOR SB 3 (Finance)

"An Act relating to motor vehicle registration and registration plates; and providing for an effective date."

HOUSEKEEPING CHANGES (such as changing "plates" to "plate"; "are" to "is", etc.)

Section 1 AS 28.10 051
Section 2 AS 28.10.091
Section 3 AS 28.10.108(g)
Section 4 AS 28.10 108(h)
Section 5 AS 28.10.111(b)

Section 6. AS 28.10.161(a)

Requires the department to issue one registration plate, instead of the existing requirement of two plates.

According to the Department of Public Safety's position paper of February 8, 1988, this reduction will save the state over $60,000.

Section 7. AS 28.10.171(b)
Requires the plate to be attached to the rear of the vehicle.

HOUSEKEEPING CHANGES

Sections 8 - 24

Section 25
Repeals AS 28.10.171(a) "Display of registration plates. (a) When two registration plates are issued for a vehicle, they shall be attached to the vehicle for which issued, one in front and the other in the rear. When one registration plate is issued, it shall be attached to the rear of the vehicle for which issued."

Section 26
Effective date

Effect of amendments. — The first 1985 amendment in paragraph (7) of subsection (a) deleted ", motor freight carrier fees or bus transportation fees" following "taxes" and made a related stylistic change.

The second 1985 amendment added paragraph (10) of subsection (a).

The third 1985 amendment added subsection (c).

The fourth 1985 amendment added paragraph (9) of subsection (a).

Sec. 28.10.051. Department may suspend or revoke registration. The department may suspend or revoke the registration of a vehicle, the certificate of registration or registration plates for a vehicle, or a special permit when

(1) the department determines that the registration or certificate, plate or permit was fraudulently procured or erroneously issued;

(2) the department determines that a registered vehicle is mechanically unsafe to be driven or moved on a highway, vehicular way or area, or other public property in this state and the vehicle has been seized or impounded under AS 28.05.091;

(3) a registered vehicle has been scrapped, dismantled or destroyed beyond repair;

(4) the department determines that a required fee or tax has not been paid and the fee or tax is not paid upon reasonable notice and demand;

(5) a registration plate, permit, or certificate is knowingly displayed upon a vehicle other than the vehicle for which issued;

(6) the department determines that the owner of a vehicle has committed an offense under this chapter involving the registration or the certificate, plate, or permit to be suspended or revoked;

(7) the vehicle has been reported to the department as stolen or unlawfully converted; or

(8) the department is otherwise required to do so under the laws of this state. (§ 7 ch 178 SLA 1978; am § 4 ch 60 SLA 1986)

Effect of amendments. — The 1986 amendment in paragraph (1) substituted "determines" for "is satisfied" and inserted "procured."

Sec. 28.10.081. Issuance of certificate of registration; certificate to be signed, carried and displayed.

NOTES TO DECISIONS

Cited in Resecker v. State, Ct. App. Op. No. 636 (File No. A-1248), P.2d (1986).

Sec. 28.10.080. False statements. [Repealed, § 20 ch 241 SLA 1976.]

Sec. 28.10.081. Issuance of certificate of registration; certificate to be signed, carried and displayed. (a) The department shall mail or deliver the certificate of registration to the owner. The certificate of registration shall contain the assigned registration number, the name, the residence and mailing addresses of the owner, the vehicle identification number, the fees paid and as much of the vehicle description appearing on the title as the commissioner considers necessary.

(b) Every certificate of registration shall, except when used to apply for renewal of registration or to transfer the registration, be carried in the vehicle to which it refers. The driver of a vehicle shall display the original certificate of registration or a legible photocopy if the original is on file at the address shown on the certificate of registration to a peace officer or an officer or employee of the department acting in an official capacity upon the request of that officer or employee. (§ 7 ch 178 SLA 1978)

Collateral references. — 60 C.J.S., Motor Vehicles, § 106.

Validity and construction of statute making it a criminal offense for the operator of a motor vehicle not to carry or display his vehicle registration certificate, 6 ALR3d 506.

Sec. 28.10.090. New vehicles. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.091. Lost or mutilated certificates of registration or registration plates. If a certificate of registration or a registration plate is lost, stolen, mutilated or becomes illegible, the owner or legal representative or successor in interest of the owner of the vehicle for which the certificate or plate was issued as shown by the records of the department shall, immediately upon discovering the fact, apply for a duplicate or substitute certificate of registration or registration plate and shall return to the department all parts of the original certificate of registration or registration plates that the applicant possesses. (§ 7 ch 178 SLA 1978)

Sec. 28.10.100. Grounds for refusal. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.101. Expiration of registration. After October 15, 1978 vehicles required to be registered under this chapter shall be registered as follows:

(1) Until December 31, 1978, every vehicle registered and every registration plate issued under this chapter expires at midnight on December 31 of each year. The owner of a registered vehicle may drive the vehicle under the registration for the preceding year until May 31 of the year for which the registration is required.

Sec. 28.10.101. Expiration of registration. [Repealed, § 37 ch 21 SLA 1985. For current law see AS 28.10.108.]

Sec. 28.10.105. Staggered registration. [Repealed, § 37 ch 21 SLA 1985. For current law see AS 28.10.108.]

Sec. 28.10.107. Staggered registration implementation. [Repealed, § 37 ch 21 SLA 1985. For current law see AS 28.10.108.]

Sec. 28.10.108. Registration procedures. (a) A vehicle required to be registered under this chapter shall be registered under the procedures set out in this section.

(b) Subject to the provisions of (f) of this section, a vehicle subject to registration

(1) under AS 28.10.011 and 28.10.421(b)(3) and (4) and (c)(1)-(4) shall have its initial registration, and may have its annual registration, renewed during the month of December;

(2) under AS 28.10.181, 28.10.411 and 28.10.421(d)(3), (6) and (9) shall have its initial registration, and may have its annual registration, renewed during the month of January.

(c) A vehicle subject to registration and not described in (b) of this section shall have its initial registration, and may have its annual registration, renewed in the month of initial registration in the state, subject to the provisions of (f) of this section.

(d) A registered vehicle retains the same annual expiration date regardless of the ownership of the vehicle.

(e) The registration of a vehicle expires on the last day of the month to which the vehicle is assigned.

(f) Upon request of the owner and payment of the proportionate prorated applicable fees, a vehicle registered under this section shall have its registration period extended in monthly increments to allow annual registration to occur in the month of the owner's choice.

(g) The department shall issue to the registered owner, upon receipt of the proper application and fees, registration plates, tabs and registration form displaying the month and year in which the registration expires.

(h) The department shall mail notice of registration expiration to the registered owner of record at the owner's mailing address as shown in the records of the department. An owner of a vehicle subject to registration who has received notice under this subsection may renew registration of the vehicle by returning the notice form, together with appropriate fees, to the department by mail postmarked no later than the fifth day of the registration renewal period shown upon the vehicle's current registration or notice form. Upon receipt of a timely postmarked registration renewal and the appropriate fees and taxes, the department shall renew the registration and mail the

current registration card and registration plates or tabs to the owner at the owner's mailing address as shown in the department's records.

(i) If a vehicle is held for sale by a dealer, the requirement of registration and payment of fees and taxes does not apply until the vehicle is sold to a party other than another dealer. The exemption from payment of fees and taxes under this subsection applies only if

(1) the dealer is registered with the state; and

(2) the vehicle for which the exemption is sought can be shown to be part of the dealer's inventory at the time of exemption.

(j) The purchaser of a vehicle for which registration and taxes have been held in abeyance under (i) of this section shall register the vehicle within five working days of purchase and pay the prorated fees and taxes required by the department.

(k) The department shall prorate fees in monthly increments to allow for registration of vehicles in more or less than one-year periods when required by any provision of this section. (§ 38 ch 21 SLA 1985)

Sec. 28.10.111. Renewal of registration. (a) Application for the renewal of vehicle registration shall be made by completing the proper form and paying any required fee and tax.

(b) The department may receive an application for the renewal of vehicle registration and issue a new certificate of registration at any time before the expiration of the annual registration as prescribed in regulations adopted by the commissioner. Nothing in this section prevents the commissioner from providing for multi-year registration; however, a person may not display the new registration plates on a vehicle before a date which may be set by the commissioner. (§ 7 ch 178 SLA 1978; am § 39 ch 21 SLA 1985)

Effect of amendments. — The 1985 amendment deleted ", and any motor freight carrier fee or bus transportation fee required under AS 42" at the end of subsection (a).

Sec. 28.10.121. Vehicles of nonresidents. (a) A nonresident owner of a noncommercial vehicle registered outside the state is exempt from the registration provisions of this chapter for 60 days after entry into the state if the vehicle at all times when driven in this state is registered in and has displayed upon it a currently valid registration plate issued for it by another jurisdiction. However, if the person becomes gainfully employed in the state or takes action that indicates an intention to acquire residence in the state, the person shall comply with the licensing and registration provisions of this chapter within 10 days of commencement of employment or of taking action that indicates the person's intention to acquire residence. If the vehicle is a commercial vehicle, the vehicle must be registered when its commercial use begins except as provided in AS 28.10.011 and 28.10.131(c).

(2) a vehicle while being moved from one place to another for the purpose of inspection, weighing, or meeting other requirements of the department; or

(3) a vehicle while being moved or driven from one location to another for the purpose of rebuilding, dismantling, or permanently removing the vehicle from the highways and vehicular ways and areas of the state. (§ 7 ch 178 SLA 1978)

Sec. 28.10.160. Transfers. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.161. Registration plates to be furnished by department. (a) Except as provided in AS 28.10.181(i), the department, upon registering a vehicle, shall issue the owner one fully reflectorized registration plate for a trailer or a motorcycle and two fully reflectorized registration plates for every other vehicle. Except as specifically provided in AS 28.10.181, the plate or plates shall remain with the vehicle as long as the vehicle is subject to registration under this chapter.

(b) After January 1, 1979, every passenger vehicle registration plate, except as specifically provided in AS 28.10.181, shall have displayed upon it

(1) the Alaska flag;

(2) the traditional colors of yellow-gold and blue;

(3) the slogan "The Last Frontier";

(4) the registration number assigned to the vehicle for which it is issued;

(5) the name of this state which may be abbreviated; and

(6) the registration year number or expiration date for which time it is validated; the registration year number or expiration date may be part of the license plate or contained on a suitable sticker or tab device issued by the department.

(c) The department may not adopt a new or altered passenger vehicle registration plate unless it substantially embodies the specifications of this section. (§ 7 ch 178 SLA 1978)

Sec. 28.10.170. Expiration. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.171. Display of registration plates. (a) When two registration plates are issued for a vehicle, they shall be attached to the vehicle for which issued, one in front and the other in the rear. When one registration plate is issued, it shall be attached to the rear of the vehicle for which issued.

(b) Every registration plate issued under this chapter shall be securely fastened to the vehicle to which it is assigned, with the upper edge of the plate horizontal, at a height of not less than 12 inches from the ground measuring from the bottom of the plate, and maintained in a location and condition so as to be clearly legible. However, when considered necessary to insure legibility, the commissioner may provide by regulation for another method of installation. (§ 7 ch 178 SLA 1978)

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5184 HTRA SB 3 - SB 118

Effect of amendments. — The 1987 amendment, effective June 9, 1987, added subsections (a)(4) and (b).

Sec. 28.10.181. Registration of unique and special vehicles and vehicles used for special purposes. (a) The department shall register unique and special vehicles and vehicles used for special purposes and issue registration plates as provided in this section. Notwithstanding other provisions of this chapter, registration plates issued under this section remain with the person or organization to whom they are issued when vehicle ownership is transferred or title or interest in the vehicle is assigned, except for plates issued under (b), (h) and (i) of this section. Registration plates issued under this section may not be used on, or transferred to, a vehicle other than the vehicle for which the plates are issued without the approval of the department and payment of any required fees and taxes prescribed in AS 28.10.421(d), 28.10.431 and 28.10.441; however, if the plates issued under (c), (f) and (j) of this section are transferred to a vehicle for which the registration fee is more than the fee for the vehicle from which the plates are transferred, the owner shall pay the difference between the two fees. Registration plates issued under this section to which a person is no longer entitled or the transfer of the plates to another vehicle which the department does not approve shall be returned immediately to the department by the person or organization to whom the plates were originally issued.

(b) Historic vehicles. The owner of an historic vehicle may make application for special registration under this subsection. The department, when satisfied that the vehicle meets the requirements for historic vehicle registration under regulations adopted by the commissioner, shall register the vehicle and issue two permanent registration plates of distinctive design and color bearing no date. These plates remain with the vehicle as long as it is registered under this subsection. Vehicles qualifying for registration under this subsection shall be issued registration plates numbered in a separate numerical series beginning with "Historic Vehicle No. 1."

(c) Special request plates. Upon application by the owner of a passenger vehicle, noncommercial van or pick-up truck, or motor home, the department may design and issue registration plates containing a series of not more than six letters or numbers or combination of letters and numbers as requested by the owner. The department may, in its discretion, disapprove the issuance of registration plates under this subsection when the requested symbols are a duplication of an existing registration or when the symbols are considered unacceptable by the department.

(d) Vehicles owned by disabled veterans and handicapped persons. A person who presents to the department written proof that the per-

son is at least 70 per cent disabled or medically handicapped and should be given special consideration by the public with respect to the parking or standing of the person's vehicle in designated spaces, may register one passenger vehicle without charge. The proof required under this subsection may consist of evidence that the person receives at least 70 per cent disability compensation from a government agency at the time of registration or an affidavit signed by a physician licensed to practice medicine in this state. Upon the request of the applicant the department shall issue a specially designed registration plate which displays

(1) recognition of the disabled veteran if the applicant's disability originated from the applicant's service with the armed forces of the United States; or

(2) the standard handicap symbol (the wheelchair logo).

(e) Vehicles owned by the state, municipalities, and charitable organizations of the state. Every certificate of registration and registration plate issued to the state, a municipality or charitable organization of the state is in effect until the vehicle for which the registration certificate and plate were issued is no longer owned and operated by the state, the municipality or the charitable organization of the state or until the department, in its discretion, declares its expiration. The state, municipality or charitable organization of the state shall maintain a current listing of all vehicles registered to it in the order of the registration number assigned to each vehicle, and shall provide a copy of the listing to the department upon request. The listing shall include a description of each vehicle and other identifying information required by the department. Registration plates issued under this subsection shall be of a distinctive design and numbering system. For the purposes of this subsection, "charitable organization" means a nonprofit association, corporation, society or other entity organized, incorporated or headquartered in the state for educational, cultural, scientific or other charitable purposes, as prescribed in regulations of the department.

(f) Vehicles owned by elected state officials. The department shall issue special registration plates to each incumbent elected state official for display on noncommercial motor vehicles owned and driven by the official. The department shall number or design the plates so that registration by an elected state official is indicated upon the plates. The registration plates issued under this subsection remain with the owner of the vehicle only during the official's term of office.

(g) Vehicles owned by consular officers of foreign governments. A vehicle owned by a consular officer of a foreign government shall be issued registration plates displaying the title "consular corps" or "cc." However, the commissioner may waive the registration of consular vehicles and the payment of fees and taxes when consistent with international treaties or agreements.

(h) Vehicles owned by ranchers, farmers, and dairymen. A vehicle not exceeding an unladen total gross weight of 16,000 pounds, owned by a person deriving the person's primary source of livelihood from the operation of a ranch, farm, or dairy where the person resides full-time, and which vehicle is used exclusively to transport the person's own ranch, farm, or dairy products to and from the market or to transport supplies, commodities or equipment to be used on the person's ranch, farm or dairy, may be registered under this subsection and may be issued registration plates of a distinctive design or system of numbering.

(i) Amateur mobile radio station vehicles. A validly licensed amateur radio operator who presents satisfactory proof that the owner holds an unexpired Federal Communications Commission amateur radio operator's license of any renewable class, and who presents satisfactory proof that the vehicle contains or carries an amateur radio transmitter and receiving unit of a type applicable to the license class applied for, and who is permitted by law to operate a fixed station, may register one amateur mobile radio station vehicle for each radio license issued by the federal government and may receive for the vehicle distinctive registration plates instead of regular registration plates. The number on the plates shall be the radio call sign of the owner.

(j) Vehicles owned by dealers. A state-registered and bonded vehicle dealer may apply for dealer registration plates. A plate issued under this subsection may be used only on dealer-owned vehicles during the routine and normal course of the dealer's business, excluding service vehicles, or for transporting an unregistered vehicle from a port of entry to the dealer's facilities or from one dealer to another or, in the case of a house trailer, from the retail facility to a trailer space. If the dealer sells or transfers the vehicle, the dealer plates may be used on the vehicle by the new owner or transferee for a period of not more than five days after the sale or transfer. The department may seize the dealer plates if it has reason to believe that the plates are being used to defeat the purposes of, or are in violation of, this chapter.

(k) Occasional users of highways. The department may issue a license to the owner of a vehicle which is only occasionally used on a highway. The applicant must show to the satisfaction of the department that the vehicle to be licensed under this subsection will travel upon state highways less than five per cent of its total hours of operation. The department may not issue more than two licenses under this subsection to a single person.

(l) Vehicles owned by former prisoners of war. The department, upon receipt of written proof, may issue without charge special registration plates for one noncommercial motor vehicle to a person who has been a prisoner of war during a declared war or other conflict, as determined by the Department of Defense under federal regulations.

The design and color of the prisoner of war plates shall be solely within the discretion of the commissioner.

(m) Special request plates for Alaska National Guard personnel. Upon application by the owner of a passenger vehicle, noncommercial van or pick-up truck, or motor home who presents satisfactory proof of current membership in the Alaska National Guard, the department may design and issue registration plates that identify the vehicle as registered to a member of the Alaska National Guard. The owner shall return the registration plates to the department within 10 days following discharge from the Alaska National Guard. (§ 7 ch 178 SLA 1978; am § 2 ch 54 SLA 1979; am § 1 ch 151 SLA 1984; am § 5 ch 60 SLA 1986)

Effect of amendments. — The 1986 amendment added subsection (m).

Article 2. Title.

Section
201. Title required; exceptions

Sec. 28.10.201. Title required; exceptions. (a) Except as otherwise provided in (b) of this section or in AS 28.10.131 and 28.10.141, every owner of a vehicle subject to registration in this state shall apply for a certificate of title under this chapter.

(b) The owner of a vehicle described in AS 28.10.011 as being exempt from registration and the owner of a snowmobile or off-highway vehicle may not apply for, nor may the department issue, a certificate of title for such a vehicle. However, the department may issue a certificate of title to the owner of a vehicle exempt from registration under AS 28.10.011(3), (6), (7), (11), or (12) only upon application by that owner.

(c) The certificate of title issued may, when there is more than one owner, state the name of each owner in the conjunctive or in the disjunctive in order to indicate that the owners own the vehicle together or in the alternative.

(d) Except for vehicles registered under AS 28.10.131(b) or (c) and 28.10.141, the department may not register a vehicle unless the applicant for registration at the same time applies for and obtains a certificate of title under this chapter, or presents satisfactory evidence that a certificate of title was previously issued to the applicant. The department may not accept the application for the original certificate of registration or title to a vehicle unless the vehicle is in the state at the time of application. However, the department may accept an application for registration and certificate of title for a vehicle which is not in the state when the application is made by a registered and bonded dealer or by a resident of the state when the application is accompa-

Collateral references. — 7A Am. Jur. 2d, Automobiles and Highway Traffic, §§ 30 to 48.
60 C.J.S., Motor Vehicles, §§ 39 to 41.

Sec. 28.10.271. Transfer of vehicle by owner. (a) When the owner of a registered vehicle transfers or assigns the owner's title or interest in the vehicle, the registration of the vehicle expires; however, the registration plates remain on the vehicle except as otherwise provided in AS 28.10.181.

(b) The owner shall, at the time of delivery of the vehicle, endorse an assignment and warranty of title to the transferee in the space provided on the certificate of title. The owner shall deliver the certificates of title and registration to the transferee at the time of delivery of the vehicle, except as otherwise provided in AS 28.10.291.

(c) The owner shall notify the department of the transfer or assignment of the owner's title or interest in the vehicle within 10 days following transfer or assignment. This notification shall constitute a valid transfer under AS 28.10.321 and 28.10.361. The notice form to be provided by the department shall include the following information:

(1) name and address of owner;
(2) name and address of transferee;
(3) date of transfer or assignment; and
(4) description and license number of vehicle. (§ 7 ch 178 SLA 1978)

NOTES TO DECISIONS

Former law construed. — See Harbor Ins. Co. v. United States Fid. & Guar. Co., 350 F. Supp. 723 (D. Alaska. 1972); State Farm Mut. Auto. Ins. Co. v. Clark, 397 F. Supp. 745 (D. Alaska. 1975); Graham v. North River Ins. Co., Sup. Ct. Op. No. 1130 (File No. 1945), 533 P.2d 20 (1975).

Sec. 28.10.280. Title for vehicles of other state. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.281. Transfer to dealer. (a) When the owner of a registered vehicle transfers or assigns the owner's title or interest to a vehicle dealer under AS 28.10.271, the dealer is not required to present the certificates of registration and title to the department as provided in AS 28.10.321 and 28.10.361 until the vehicle is transferred by the dealer.

(b) A vehicle transferred to a dealer may not be driven unless it is re-registered under this chapter or is driven under dealer registration plates issued under AS 28.10.181(j). (§ 7 ch 178 SLA 1978)

(b) A person holding a certificate of title to a vehicle whose interest in the vehicle has been extinguished or transferred other than by voluntary transfer shall mail or deliver the certificates of title and registration to the department upon request of the department. The delivery of the certificates of title and registration to the department upon its request does not affect the rights of the person surrendering the certificate of title, and the action of the department in issuing a new certificate of title or registration as provided in this chapter is not conclusive upon the rights of an owner or lienholder named in the surrendered certificate of title. (§ 7 ch 178 SLA 1978)

Sec. 28.10.320. Issuance. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.321. New owner to secure transfer of registration and new title. (a) Except as provided under AS 28.10.281 and 28.10.291, the new owner shall, within 30 days, present the certificates of title and registration properly endorsed to the department, apply for a new title, and register the vehicle as upon an original registration.

(b) An application for certificates of title and registration shall be accompanied by any required registration fees and taxes, transfer of title and lien fees, and motor freight carrier or bus transportation fees, if any, and by the previous certificates of title and registration, if any. (§ 7 ch 178 SLA 1978)

NOTES TO DECISIONS

Former law construed. — See State Farm Mut. Auto. Ins. Co. v. Clark, 397 F. Supp. 745 (D. Alaska 1975).

Sec. 28.10.330. Delivery. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.331. Department to issue new certificates of title and registration. The department, upon receipt of the certificate of title properly endorsed, the certificate of registration, the registration plates, if any, the application for new title and registration and all required fees and taxes, shall issue a certificate of title and a certificate of registration to the transferee or the lienholder lawfully entitled to the certificates. (§ 7 ch 178 SLA 1978)

NOTES TO DECISIONS

Former law construed. — See Harbor Ins. Co. v. United States Fid. & Guar. Co., 350 F. Supp. 723 (D. Alaska 1972); Christian v. State, Sup. Ct. Op. No. 921 (File No. 1626), 513 P.2d 664 (1973); Graham v. Black, Superior Court, 3rd Jud. Dist., C.A. No. 71-3441 (1973); State Farm Mut. Auto. Ins. Co. v. Clark, 397 F. Supp. 745 (D. Alaska 1975); Graham v. North River Ins. Co., Sup. Ct. Op. No. 1130 (File No. 1945), 533 P.2d 20 (1975).

Sec. 28.10.340. Duplicates. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.341. Duty of lienholder in possession of title to transferred vehicle. Upon request of an owner or transferee, a lienholder in possession of the certificate of title to a transferred vehicle shall, unless the transfer is in breach of a security agreement, deliver the certificate to the transferee. The delivery of the certificate of title does not affect the rights of the lienholder under the lienholder's security agreement. (§ 7 ch 178 SLA 1978)

Sec. 28.10.350. Transfer. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.351. Dismantling or wrecking vehicle. A person who dismantles, scraps or destroys a registered vehicle shall immediately forward to the department the certificates of title and registration and the registration plates for the vehicle. (§ 7 ch 178 SLA 1978)

Secs. 28.10.355, 28.10.360. Purchase by minor; duty of new owner. [Repealed, § 7 ch 178 SLA 1978.]

Sec. 28.10.361. When transfer effective. A transfer by an owner or dealer is not effective until all applicable provisions of this chapter have been complied with. However, an owner or dealer who has delivered possession of a vehicle to the transferee and has endorsed an assignment and warranty of title on the certificate of title and delivered the certificates of title and registration to the transferee or, in the case of a transfer from a dealer, delivered proof of the sale to the transferee, is not liable as the owner for any liabilities resulting from the driving or movement of the vehicle after the transfer. (§ 7 ch 178 SLA 1978)

Sec. 28.10.370. Issuance. [Repealed, § 7 ch 178 SLA 1978.]

use, including, but not limited to, a boat trailer, baggage trailer, box trailer, utility trailer or house trailer .....$ 5.

(c) The annual registration fees under this subsection are imposed and are based upon the actual unladen weight as established by the manufacturer's advertised weight or upon the actual weight which the owner shall furnish, subject to the approval of the commissioner or the commissioner's representative, for a vehicle, including a motor vehicle pulling a trailer or semi-trailer, used or maintained for the transportation of passengers for hire, excepting taxicabs and buses under (b) of this section, or for the transportation of property for hire or for other commercial use, including a commercial vehicle such as a trailer, semi-trailer, truck, wrecker, tow car, hearse, ambulance, and tractor, as follows:

(1) up to and including 5,000 pounds $50;

(2) more than 5,000 pounds to and including 12,000 pounds $85;

(3) more than 12,000 pounds to and including 18,000 pounds ..$155;

(4) more than 18,000 pounds .....$220.

(d) The special registration fees under this subsection are imposed annually, unless otherwise specified, for:

(1) an historic vehicle (one time only upon initial registration under AS 28.10.181) $10;

(2) special request plates including those authorized for use by Alaska National Guard personnel only .....$30; plus the fee required for that vehicle under (b)(1) or (2) of this section; the fee required by this paragraph shall be collected only on the first issuance and on the replacement of special request plates;

(3) a vehicle owned by a disabled veteran or other handicapped person, and registered under AS 28.10.181 or a resident 65 years of age or older who files a written application for an exemption on a form prescribed by the department .....none;

(4) a vehicle owned by the state .....none;

(5) a vehicle owned by an elected state official ..... the fee required for that vehicle under (b) of this section;

(6) a vehicle owned by a consular officer, unless waived under AS 28.10.181 .....$35;

(7) a vehicle owned by a rancher, farmer, or dairyman and registered under AS 28.10.181 .....$35;

(8) a snowmobile or off-highway vehicle .....$ 5;

(9) an amateur mobile radio station vehicle,

(A) with a transceiver capable of less than 5-band operation ..... the fee required for that vehicle under (b) or (c) of this section;

(B) in recognition of service to the public: a mobile amateur radio station owned by an amateur with general class or higher license, provided the station must be satisfactorily proved capable of operating on at least five bands from 160 through 10 meters, must have an antenna, and must have a power supply and wiring as a permanent

part of the vehicle; the transmitting unit may be removed from the car for service or dry storage .....none
for a mobile amateur radio station vehicle included in (b)(1) or (2) of this section;

(10) dealer registration plates,

(A) the initial set of plates $45;

(B) each subsequent set of plates $25;

(11) a vehicle owned by a municipality or charitable organization meeting the requirements of AS 28.10.181(e) .....$ 5;

(12) an occasional use vehicle under AS 28.10.181(k) $15;

(13) a vehicle owned by a former prisoner of war .....none.

(e) A vehicle registered under this section which, by the removal of seats, a camper unit, a canopy or other equipment, may be converted into a vehicle on which the registration fee is computed on a different basis or in a different amount may not be driven or moved with seats, camper unit, canopy or other equipment removed unless the other applicable registration fee is paid. (§ 7 ch 178 SLA 1978; am §§ 4, 5 ch 54 SLA 1979; am § 2 ch 151 SLA 1984; am § 41 ch 21 SLA 1985; am §§ 7 — 9 ch 60 SLA 1986; am § 1 ch 70 SLA 1986)

Effect of amendments. — The 1985 amendment substituted "AS 28.10.108 and 28.10.111" for "AS 28.10.101 — 28.10.111" at the end of subsection (a).

The first 1986 amendment increased the fees in paragraphs (1) through (5) of subsection (b), increased the fees in subsection (c), and in subsection (d) in paragraph (2) added "including those authorized for use by Alaska National Guard personnel only" and increased the fee, in paragraph (3) subsituted "files a written application for an exemption on a form prescribed by the department" for "complies with AS 28.10.411(c)," and increased the fees in paragraphs (6), (7) and (10).

The second 1986 amendment of paragraph (3) of subsection (d) made by § 1, ch. 70, SLA 1986 was identical to the amendment made by § 9, ch. 60, SLA 1986, which is already in effect.

Sec. 28.10.423. Emission control inspection program fees. In addition to the annual registration fee specified in AS 28.10.421, a $1 fee is imposed upon every vehicle required to be inspected under an emission control program established under AS 46.03.210. This fee shall be collected at the same time and in the same manner as the registration fee. (§ 2 ch 56 SLA 1985)

Sec. 28.10.431. Annual motor vehicle registration tax. (a) There is levied a motor vehicle registration tax within each municipality which elects, by passage of an appropriate ordinance, to come under this section. A municipality shall file a written notice of election with the department and may not rescind the notice for a subsequent fiscal year. The notice must be filed on or before January 1 of the year preceding the year election under this section is to become effective. If a municipality has, before October 15, 1978, levied a motor vehicle registration or ad valorem tax which has been repealed by a vote of the people at any regular or special municipal election, then

(e) The department shall refund money collected under this section, less five per cent as collection costs, to a municipality for which the money was collected, as determined by (1) the address of residence of an individual required to pay the tax, or (2) the situs of the vehicle if the vehicle is not owned by an individual; the tax situs is the location at which the motor vehicle is usually, normally, or regularly kept or used. For the first year in which the tax is levied within a municipality, the department may retain actual costs of collection of the tax within the municipality as determined by the department.

(f) Money received by an organized borough under this section shall be allocated by the borough by ordinance for city, area outside city, and service area purposes within the borough.

(g) Payment of the registration t x is in lieu of all local use taxes and ad valorem taxes on motor vehicles subject to the tax. A municipality which elects to come under the provisions of this section may not levy use or ad valorem taxes on motor vehicles subject to the registration tax during a fiscal year in which the election is in effect.

(h) A vehicle owned by a former prisoner of war exempted from registration fees under AS 28.10.421(d)(13) is subject to a motor vehicle registration tax under this section. (§ 7 ch 178 SLA 1978; am § 3 ch 151 SLA 1984)

Effect of amendments. — The 1984 amendment added subsection (h).

Article 7. General Provisions.

Section
495. Parking permit for vehicle transporting disabled person
Section
502. Towing and storage lien

Sec. 28.10.495. Parking permit for vehicle transporting disabled person. (a) Upon application by a disabled or medically handicapped person; the department shall issue to the applicant, without charge, a special permit bearing the control number of the applicant. The permit issued under this section, when displayed in the front windshield of a parked or standing vehicle, shall provide for special consideration by the public with respect to the parking or standing in designated spaces of a vehicle which is being used for the transportation of the disabled or medically handicapped person.

(b) A person is not entitled to use the special permit provided for in (a) of this section except when providing transportation for the disabled or handicapped person with respect to whom the permit was issued. Upon the death of the disabled or handicapped person, the special permit shall be returned to the department.

(c) Proof of disablement or medical handicap, for the purpose of this section, shall be provided as specified in AS 28.10.181(d). (§ 24 ch 178 SLA 1978; am § 1 ch 11 SLA 1980; am § 1 ch 11 SLA 1987)

Effect of amendments. — The 1987 amendment added the last sentence of subsection (b).

Sec. 28.10.502. Towing and storage lien. (a) A person engaged in the business of towing motor vehicles, who tows, transports or stores a motor vehicle, has a possessory lien on the vehicle. This lien attaches when the person acts under a contract with the owner or at the direction of a public officer acting lawfully or a person entitled to possession of the property upon which the motor vehicle is parked without consent. The lien remains in effect while the motor vehicle is in the possession of the person, and the vehicle may be sold, as pro-

Senator Mitch Abood
SENATE DISTRICT G-A

DATE: 17 MARCH 1988

TO: MEMBERS OF THE HOUSE TRANSPORTATION COMMITTEE

FROM: Senator Mitch Abood

RE: Summary of changes to CSSB 3(Finance)

The following is a summary of the various versions of Senate Bill 3 and the reasons for those changes:

SB 3 "An Act relating to motor vehicle registration and registration plates."

- Authorizes the Department of Public Safety to design and issue special registration plates.

- Requires surrendering, to the court, registration and registration plates of a motor vehicle for:
  a. a second conviction within a five year period or a third conviction within a ten year period, for driving while intoxicated or refusal to submit to a chemical test of breath.
  b. driving a motor vehicle when that person's driver's license has been revoked and the revocation was imposed under AS 28.15.181(a)(5)

- Requires a person who has surrendered his plates to identify to the court all persons of his household who are 17 years of age or older to be included in the record of conviction.

- Requires the Department to provide each named person notification that the described persons driver's license has been revoked and the consequences of letting him drive without a valid driver's license.

- Allow transfer of ownership of the vehicle with the permission of the court.

In Senate Bill 3, I was attempting to reach the drunk drivers who have a problem with alcohol. Those that continue to drink and drive even after their driver's license has been revoked for DWI or for any other reason.

Senate Bill 3 would allow the State to, in some cases, forfeit the motor vehicle registration and license plates of a drunk driver in cases where that driver had a record of prior DWI's or refusing the breath test.

CSSB 3(State Affairs) "An Act relating to motor vehicle registration and registration plates."

==========

- Authorizes the Department of Public Safety to design and issue special registration plates (no change from Senate Bill 3)

- Requires surrendering registration and registration plates to the court for the above offenses. The plates will be transmitted to the department. (Instead of leaving them with the court)

- Requires a person who has surrendered his plates to identify to the court all persons of his household who are 17 (instead of 16) years of age or older. (This bill also takes the names of persons in the household out of the conviction record).

- Requires the department to provide each named person notification that the described persons driver's license has been revoked and the consequences of letting him drive without a valid driver's license. (No Change)

- Allows transfer of ownership of the vehicle with the permission of the department (instead of the court).

The above amendments were made as a result of suggestions and discussions by -

Mothers Against Drunk Drivers, the Department of Public Safety and further discussions by the committee.

CSSB 3 (Transportation)

In addition to existing language:

- Increases by $2 the fee for acquiring a driver's license, motorcycle license, instruction permit, school bus driver's permit, or state identification card.

- Requires the department to issue one registration plate, instead of the existing requirement of two plates.

- When one registration plate is issued, it shall be attached to the rear of the vehicle for which issued.

- Adds effective dates.

CSSB 3 (Finance)

- All sections are deleted except those dealing with requiring the Department of Public Safety to issue one registration plated, instead of the existing requirement of two plates.

After several discussions with the Department of Public Safety, we learned that information gathered form Minnesota, which has a similar program contained overstatements about the success rate of the program and the evidence of the program's effectiveness.

As you can see from the attached correspondence from Mr. Dulany of the Division of Motor Vehicles, I felt it best to follow the Department's suggestions on this program.

I have been assured by the Department of Public Safety, that no fee increase is necessary to run their existing program nor for the issuance of one license plates. With that, I chose not to increase the fee for driver's licenses or permits at a time of economic hardship our State is battling.

DATE: 04 FEBRUARY 1988

TO: THE HONORABLE RICK HALFORD
CO-CHAIRMAN, SENATE FINANCE COMMITTEE

FROM: Senator Mitch Abood

RE: CS SB 3 ( )

Please find attached a draft of a committee substitute for SB 3 which I would like the Senate Finance Committee to consider.

CS SB 3 ( ) deletes all sections of CS SB 3 (Transportation) except those dealing with requiring the Department of Public Safety to issue one registration plate, instead of the existing requirement of two plates.

After several discussions with the Department of Public Safety, we learned that information gathered from Minnesota, which has a similar program, contained overstatements about the success rate of the program. Also, I understand the evidence of that program's effectiveness was misleading.

As you can see from the attached correspondence from Mr. Dulany of the Division of Motor Vehicles, I felt it best to follow the Department's suggestion on this program.

I have been assured by the Department of Public Safety, that no fee increase is necessary to run their existing program, nor for the issuance of one license plate. With that, I chose not to increase the fee for driver's licenses or permits at a time when our State is experiencing economic hardship.

Should you have any questions or concerns, please contact me at 4714 or 4747. If for some reason I am not available,

please speak with Rhonda Cargill on my staff who has been working with me on this proposed legislation.

Thank you for your consideration of this matter.

STATE OF ALASKA

STEVE COWPER, GOVERNOR

DEPARTMENT OF PUBLIC SAFETY

DIVISION OF MOTOR VEHICLES

5700 EAST TUDOR ROAD
ANCHORAGE, ALASKA 99507-1225
PHONE: (907) 269-5551

December 10, 1987

The Honorable Mitch Abood
Alaska State Legislature
3111 C Street, Suite 535
Anchorage, Alaska 99503

Dear Senator Abood:

As we discussed, I am very interested in insuring passage of those sections of Senate Bill 3 that allow for the issuance and use of a single rear license plate on motor vehicles. The resultant savings are critical to the viability of our 1989 capitol budget request.

There are technical problems in the sections requiring forfeiture of registrations and license plates, but I am more concerned about the effectiveness of a program of this type. I have had several telephone conversations with contacts in Minnesota and feel that the Minnesota representatives testifying before your committee on a similar program in their state rather overstated the success of the Minnesota program. There is no evidence of the program's effectiveness.

Ray Lewis, Research Consultant with the Minnesota Criminal Justice System DWI Task Force, has attempted to evaluate the Minnesota program on the basis of four or five years worth of data provided by the judicial practices in two counties. Mr. Lewis stated that the forfeiture of registrations and plates was only marginally effective with "...not a whole lot of deterrence in recidivism, but some lower frequency of driving during the license action..." for those in the study group. One judge indicated to Mr. Lewis that the forfeitures caught the attention of everyone the first year with some effectiveness, but DWI's went back up to previous levels in the second and subsequent years.

With 15,000 repeat offenders eligible for registration/plate forfeiture in 1986, from a total of 42,000 DWI convictions, only 123 special license plates were issued according to the Minnesota Violations Section. Nearly 4 million vehicles were registered in Minnesota during that year.

According to some testimony in the committee hearing on SB-3 the special license plate alone is sufficient probable cause for a police officer to stop the vehicle for further investigation. A Special Assistant Attorney General in Minnesota's Office of the Attorney General says that is untrue. There must be evidence of wrongdoing. According to several Alaska District Court judges the license plate alone is certainly insufficient to justify an investigatory stop.

The Alaska judges with whom I spoke were also uniformly opposed to provisions of the bill that required the surrender of the registration/plates to the court. If indeed at all enforceable, the provision would likely require additional appearances in court by defendants and subsequent additional warrants for those not appearing. One judge was concerned with the names of innocent family members becoming a part of the public record in a criminal proceeding. Another indicated that a significant portion of third offenders are driving vehicles belonging to others. While the court administration had little comment on the bill, had judges been asked to comment you would have been given a much clearer picture of the problems.

As I stated when we met on this issue, the passage of the one license plate provision is imperative. I wish it were in a separate bill. I would like to discuss this with you again at your convenience.

If you still want to pursue the registration/plate forfeiture I will insure that the appropriate people from this division work closely with you to iron out the technical problems.

Sincerely,

Jay N. Dulany

Billboards and other outdoor advertising signs as civil nuisance. 38 ALR3d 647.

Sec. 19.25.090. Outdoor advertising prohibited. Except as provided in AS 19.25.105, all outdoor advertising is prohibited. (§ 3 ch 59 SLA 1949; am § 1 ch 86 SLA 1953; am § 2 ch 155 SLA 1970)

Sec. 19.25.100. Rural signs.

Repealed by § 14 ch 155 SLA 1970.

Editor's notes. — The repealed section derived from § 4, ch. 59, SLA 1949; § 1, ch. 86, SLA 1953; § 9, art. VII, title II, ch. 152, SLA 1957.

Sec. 19.25.105. Limitations of outdoor advertising signs, displays and devices. (a) No outdoor advertising may be erected or maintained within 660 feet of the nearest edge of the right-of-way and visible from the main-traveled way of the interstate, primary, or secondary highways in this state except the following:

(1) directional and other official signs and notices which include, but are not limited to, signs and notices pertaining to natural wonders, scenic and historic attractions, which are required or authorized by law, and which shall conform to federal standards for interstate and primary systems;

(2) signs, displays and devices advertising the sale or lease of property upon which they are located or advertising activities conducted on the property;

(3) signs determined by the state, subject to concurrence of the United States Department of Transportation, to be landmark signs, including signs on farm structures, or natural surfaces, of historic or artistic significance, the preservation of which would be consistent with the provisions of this chapter;

(4) directional signs and notices pertaining to schools.

(b) Repealed by § 21 ch 94 SLA 1980.

(c) No outdoor advertising may be erected or maintained beyond 660 feet of the nearest edge of the right-of-way of the main traveled way of the interstate primary or secondary highways in this state with the purpose of their message being read from that travel way except those outdoor advertising signs, displays or devices allowed under (a) of this section. (§ 3 ch 155 SLA 1970; am §§ 1, 2 ch 195 SLA 1975; am § 1 ch 30 SLA 1980; am § 21 ch 94 SLA 1980)

Effect of amendments. — The first 1980 amendment added paragraph (4) of subsection (a).

The second 1980 amendment repealed subsection (b).

CSSB 4 An Act relating to outdoor advertising by Senator Fahrenkamp

Background

Commercial advertising is commonly found on the sides of buses and on bus shelters and bus benches along bus routes within municipal right of ways. Typically, an advertising firm will supply the benches and shelters at no cost to the municipality in return for the privilege of placing them at bus stops and along bus routes and selling advertising space on them. In this manner a public need and convenience is fulfilled at no cost to government.

However, under existing state law, DOT/PF cannot allow such transit related advertisement to be placed near state right of ways along interstate, primary, and secondary highways. There are strict state and federal restrictions on advertising along roadways, dating back to the federal Beautification Act and the Federal Aid Highway Act. The Federal Highway Administration is responsible for enforcing the laws and regulations pertaining to outdoor advertising. The Highway Administration has approved bench and shelter advertising along federal aid highways in those states that authorize it. FHWA recognized that this form of advertising is an attractive fiscal proposition for local governments and in the interest of promoting mass transit as a way of making it more convenient and thus more appealing.

Purpose

CSSB 4 amends AS 19.25.105 LIMITATIONS ON OUTDOOR ADVERTISING to include a new exception to allow advertising along state right-of-ways on bus benches and bus shelters. Current law does not make an exception for this form of advertising.

Sectional Analysis

Section 19.25.105 LIMITATIONS ON OUTDOOR ADVERTISING
Subsection (a) is reworded to state the limitation in a more clear manner.

Subsection (a)(5) is added to allow "advertising on bus benches or bus shelters if the state determines that the advertising conforms to state and federal standards for interstate and highway systems." Standards will be set by DOT/PF to insure conformity with federal requirements so no federal funding would be in jeopardy.

Dear Senator Abood:

I support and urge the Alaska State Legislature to pass SB4, "An Act Relating to Outdoor Advertising".

A private enterprise is presently providing bus benches and bus shelters to the residents of the borough who use public transportation. This is a service used and appreciated by bus riders borough-wide. It is also a service that the borough government would not be able to provide.

I whole-heartedly support the concept of the public and private sectors collaborating to provide additional services to the public and additional opportunities for private enterprise to be successful. Passage of SB4 will allow this collaboration to continue.

Sincerely,

Juanita Helms

To: House State Affairs Committee Re: Senate Bill #4

In reference to Senate Bill No. 4 relating to outdoor advertising, it seems very ironic to me that we hear from our Governor and legislators how important it is for us to develop alaskan owned and operated businesses, especially tourism related businesses, and then we hear of a bill which appears to be designed to stifle the single most important source of revenue producing advertising for these businesses.

There are numerous, off the road, attractions, recreational opportunities, and services that the highway traveler can take advantage of, if they are aware of their existence.

This bill will seriously damage existing lodges, campgrounds, RV parks, restaurants, recreational areas, guides, charter operators, resorts, gas stations etc. that are a little off the beaten path and rely in large part on highway advertising.

The expansion, development, and survival of alaskan owned businesses, particularly in tourism, which brings in outside revenue to the state should be promoted and supported by the state government.

In this light, a bill making state right of ways and highway easments available to alaskan businesses for the purpose of advertising would be more logical, appropriate, and consistent with state policy.

I don't think that the full implications of this bill have been considered. In my opinion, the passage of this bill would be a direct attack on the small alaskan business person.

Sincerely,

Lawrence G. Wilson

BILL NO: CSSB 17 (Trsp)

DATE: 4/08/87

TITLE: "An Act relating to unlawful possession and vandalism of official traffic control devices, disregard of a highway obstruction, and damage to highways."

CONTACT: James Vaden
Deputy Commissioner

APR 14 1987

DEPARTMENT OF PUBLIC SAFETY

This bill groups these types of offenses in one area of statutes, clarifies penalties, and provides a mechanism for forfeiture of firearms and other personal property, except a motor vehicle, used in aid of a violation.

Provides penalties and/or forfeiture of property relating to unlawful possession and vandalism of official traffic control devices, disregard of erected highway obstructions, and damages to highways.

Sec. 11.46.460 provides authority to arrest or charge an individual who disregards traffic control devices and/or detours through construction zones, closed roadways, and barricaded traffic lanes.

Sec. 11.46.462 appears to be redundant to AS 11.46.190 "Theft by Receiving." However, this may be necessary to clarify forfeitures under Sec. 11.46.487 - 489 of this bill.

Sec. 11.46.484(a)(7) provides penalties for theft or vandalism of traffic control devices, etc.

Sec. 11.46.487 would allow for stiff penalties to be applied to individuals who knowingly violate the law. This would provide the Court with a mechanism to forfeit the instrumentalities of the offense to the State.

The Department of Public Safety supports this legislation.

JUNEAU, ALASKA 99811

Senate

April 10, 1987

MEMORANDUM

TO: Representative Bette Cato, Chairman
House Transportation Committee

FROM: Senator Jan Faiks
President of the Senate

SUBJECT: Background to Senate Bill 17
An Act relating to vandalism of official traffic control devices and damages to highways and roads.

Senate Bill 17 has been referred to the House Transportation Committee for consideration. This bill expands the current statutes relating to vandalism of official traffic control devices and damages to highways and roads.

Safety on our highways and roads has long been of prime concern to all Alaskans. In recent years, the increase in the number of vehicles on our roads, along with an increase in major highway construction projects has lead to an alarming rate of accidents.

Vandalism to traffic signs, barricades, warning lights, and other safety devices contributes greatly to the deaths, personal injuries, and property damages suffered each year on our highways, roads, waterways, and other public and private property. The intent of this legislation is to provide criminal sanctions for vandalism to and theft of traffic control devices which have been utilized to protect or warn of dangers to real or personal property.

Senate Bill 17 strengthens the current provisions found in AS 19.25.30-40 by incorporating language of the Model Statute on Vandalism as developed by the American Traffic Safety Services Association. The criminal sanctions specified by this bill

OUT OF SESSION
6060 YUKON DRIVE ANCHORAGE, ALASKA 99516 907-274-6611

conform with those currently provided under the Alaska Statutes.

Since filing, and upon further review of this bill, various concerns were raised, which the CS from the Senate Transportation Committee effectively answers. The particular provisions of that CS are as follows:

Section 1. DISREGARD OF A HIGHWAY OBSTRUCTION/UNLAWFUL POSSESSION OF OFFICIAL TRAFFIC CONTROL DEVICE. AS 11.46 is amended by adding new sections (11.46 460 - 11.46.462) which provide criminal sanctions for the disregard of a highway obstruction or the unlawful possession of official traffic control devices by any person who neither has the right to do so nor a reasonable ground to believe that he does. Disregard of a highway obstruction is a class A misdemeanor (up to one year in prison and $5,000 fine). Unlawful possession of official traffic control is punishable by not less than $100 for the first offense, and not less than $300 for subsequent offenses.

Section 2. CRIMINAL MISCHIEF IN THE 3RD DEGREE. AS 11.46.484(a) is amended by adding a new section (7) which creates the crime of criminal mischief in the third degree for a person who knowingly removes, destroys, or otherwise tampers with an official traffic control device or damages work upon a highway under construction. Section (1) of this statute as presently enacted would cover those situations in which damage is done to the traffic control devices utilized by private persons to protect their property or warn others of possible dangers.

Section 3. FORFEITURE OF PROPERTY UPON CONVICTION. Amends AS 11.46 by adding a new section, 11.46.489, which provides for forfeiture to the state, upon conviction, of firearms and other personal property, excluding motor vehicles, which are used to aid the commission of these acts.

Section 4. DEFINITIONS. Adds new definitions to AS 11.46.490, including "highway","motor vehicle", "official traffic control device", and "traffic control device".

Section 5. DAMAGES TO STATE HIGHWAYS AND ROADS. AS 19.25.040 presently requires the commissioner of administration to separately account for money deposited in the general fund that is derived from damages to property related to state-owned highways and roads that are recovered from vehicle owners, drivers, or insurance companies. Such related property includes bridges, overpasses, signal poles, street lights and poles, traffic signals, guardrails, or fences.

SB 17 expands AS 19.25.040 to include "other person" in the class of persons from whom damages to property may be recovered. Additionally, it replaces the phrase "traffic signals" with the broader term "traffic control devices". The purpose of these amendments is to increase the amount of money deposited in the general fund for damages to state highways and roads.

Section 6. Repeals AS 19.25.030, which is provided for in Section 1 and Section 2 of this bill. This is the language which makes it a crime to disregard a highway obstruction or to unlawfully possess an official traffic control device.

I would appreciate the committee's consideration of this legislation at its earliest convenience. Should you need any additional information, please let me know.

Thank you.

Sec. 11.16.110. Legal accountability based upon the conduct of another: Complicity.

NOTES TO DECISIONS

Cited in Dailey v. State, Ct. App. Op. No. 329 (File No. 7128), 675 P.2d 657 (1984).

Sec. 11.16.120. Exemptions to legal accountability for conduct of another.

NOTES TO DECISIONS

Quoted in Kott v. State, Sup. Ct. Op. No. 2774 (File No. 5570), 678 P.2d 386 (1984).

Revisor's notes. — Minor word changes were made in the section in 1984.

Effect of amendments. — The 1984 amendment added paragraph (4) to subsection (a) and added subsection (c).

Sec. 11.46.482. Criminal mischief in the second degree.

NOTES TO DECISIONS

Conviction and sentence upheld. — See Andrejko v. State, Ct. App. Op. No. 444 (File No. A-205), 695 P.2d 246 (1985).

Sec. 11.46.484. Criminal mischief in the third degree. (a) A person commits the crime of criminal mischief in the third degree if, having no right to do so or any reasonable ground to believe the person has such a right

(1) with intent to damage property of another, the person damages property of another in an amount of $50 or more but less than $500;

(2) the person drives, tows away, or takes the propelled vehicle of another;

(3) having custody of a propelled vehicle under a written agreement with the owner of the vehicle that includes an agreement to return the vehicle to the owner at a specified time, the person knowingly retains or withholds possession of the vehicle without the consent of the owner for so long a period beyond the time specified as to render the retention or possession of the vehicle an unreasonable deviation from the agreement;

(4) the person tampers with a fire protection device in a building that is a public place;

(5) the person knowingly accesses a computer, computer system, computer program, computer network, or any part of a computer system or network; or

(6) the person uses a device to descramble an electronic signal that has been scrambled to prevent unauthorized receipt or viewing of the signal unless the device is used only to descramble signals received directly from a satellite or unless the person owned the device before September 18, 1984.

(b) Except as provided in (c) of this section, criminal mischief in the third degree is a class A misdemeanor.

(c) A person convicted under (a)(2) of this section is guilty of a class C felony if, within the preceding seven years, the person was convicted under

(1) the provisions of (a)(2) of this section;

(2) former AS 28.35.010;

(3) the provisions of AS 11.46.482(a)(4);

(4) an offense involving the theft of a propelled vehicle under AS 11.46.120 — 11.46.140; or

7.30.900

Chapter 05. Administration.

Article

1. Department of Transportation and Public Facilities (§§ 19.05.020, 19.05.040, 19.05.046)
2. Acquisition of Property (§ 19.05.080)

Article 1. Department of Transportation and Public Facilities.

Section

20. Regulations
40. Powers of department
46. Accounting and disposition of receipts from nonstate entities

Sec. 19.05.020. Regulations [Effective July 1, 1987]. The department shall adopt regulations necessary to carry out the purpose of AS 19.05 — AS 19.25. The regulations may not conflict with AS 36.30 (State Procurement Code) or regulations adopted by the Department of Administration to implement that chapter. (§ 1 art III title I ch 152 SLA 1957; am § 10 ch 106 SLA 1986)

Effect of amendments. — The 1986 amendment, effective July 1, 1987, added the second sentence.

(1) by the department as a cost of highway construction, if the utility facility is installed or authorized under a utility permit or a regulation after the effective date of this Act and is installed in the location specified in the permit;

(2) by the department as a cost of highway construction, if the facility was installed before the effective date of this Act under a utility permit issued on or after July 1, 1960, and is in the location specified in the permit;

(3) by the department as a cost of highway construction, if the utility facility was installed before July 1, 1960, or before the road became part of the state highway system;

(4) by the department as a cost of highway construction, if the utility permit that requires the utility to pay the relocation cost was issued more than five years before the contract for the highway construction project was first advertised;

(5) by the utility in all other cases, unless the commissioner finds it is in the public interest for the cost to be paid by the department.

(d) If requested by a municipality, the department shall implement this chapter by requiring to the maximum extent possible location underground of electric power transmission lines within the municipality. (§§ 2, 3 ch 57 SLA 1961; am § 4 ch 106 SLA 1977; am § 3 ch 142 SLA 1986)

Effect of amendments. — The 1986 amendment, effective June 11, 1986, in subsection (c) deleted "by the state" following "construction to be paid" and substituted the language beginning "as follows:" for "notwithstanding the terms or provisions of any existing permit, agreement, regulation or statute to the contrary."

Article 2. Damages and Obstructions.

Section
40. Damages to state highways and roads

Sec. 19.25.040. Damages to state highways and roads. The commissioner of administration shall separately account for money deposited in the general fund that is derived from damages that are recovered from vehicle owners, drivers, or insurance companies for damage to property related to state-owned roads and highways, including bridges, overpasses, signal poles, street lights and poles, traffic signals, guardrails, or fences. The annual estimated balance in the account may be used by the legislature to make appropriations to the department for the purpose of repairing the damage. (§ 40 ch 138 SLA 1986)

lations prescribed by the department and if authorized by a written permit issued by the department. (§ 8 art VII title II ch 152 SLA 1957; am § 3 ch 106 SLA 1977)

Effect of amendments. — The 1977 amendment rewrote this section.

Collateral references. — 39 Am. Jur. 2d, Highways, Streets and Bridges, §§ 218-234.

40 C.J.S., Highways, §§ 232, 233.

Sec. 19.25.020. Relocation of utilities incident to highway projects. (a) If, incident to the construction of a highway project, the department determines and orders that a utility facility located across, along, over, under, or within a state right-of-way must be changed, relocated or removed, the utility owning or maintaining the facility shall change, relocate or remove it in accordance with the order. The order shall provide a reasonable time period for compliance.

(b) If the utility facility is not changed, relocated or removed in accordance with the order, the facility becomes an unauthorized encroachment and may be disposed of in accordance with AS 19.25.240 — 19.25.250. In addition, the owner of the facility shall indemnify the state for any amount for which the state may be liable to a contractor by reason of the encroachment.

(c) The cost of change, relocation, or removal necessitated by highway construction is a cost of highway construction to be paid by the state in accordance with AS 19.45.001(4), notwithstanding the terms or provisions of any existing permit, agreement, regulation or statute to the contrary.

(d) If requested by a municipality, the department shall implement this chapter by requiring to the maximum extent possible location underground of electric power transmission lines within the municipality. (§§ 2, 3 ch 57 SLA 1961; am § 4 ch 106 SLA 1977)

Revisor's notes. — A reference to AS 19.45.001(4) was substituted for a reference to AS 19.05.130(4) in subsection (c) to conform to the renumbering of that section by the revisor of statutes under AS 01.05.031.

Effect of amendments. — The 1977 amendment rewrote this section.

Opinions of attorney general. — This section is constitutional. 1961 Op. Att'y Gen., No. 12.

Article 2. Damages and Obstructions.

Section

30. Damages to obstructions, signs, and construction

Sec. 19.25.030. Damages to obstructions, signs, and construction. The driver or owner, or both, of a vehicle, self-propelling or otherwise, which passes through, over or around an obstruction placed under authority of AS 19.10.100, or a person who opens, removes or defaces an obstruction or warning sign without written permission

from the engineer in charge of the highway or the work on the highway, or a person who wilfully, knowingly, or maliciously damages the work under construction, is guilty of a misdemeanor. (§ 8 art IV title II ch 152 SLA 1957)

Collateral references. — 40 Am. Jur. 2d, Highways, Streets and Bridges, §§ 604-610.

40 C.J.S., Highways, §§ 248-282.

60 C.J.S., Motor Vehicles, §§ 655, 714.

Liability for damaging highway or bridge by nature or weight of vehicles or loads transported over it. 5 ALR 768.

Construction and application of statute or ordinance designed to prevent the use of vehicles or equipment thereof injurious to the highway. 135 ALR 550.

Article 3. Outdoor Advertising.

Section

80. Purpose
90. Outdoor advertising prohibited
100. [Repealed]
105. Limitations of outdoor advertising signs, displays and devices
110. [Obsolete]
120. [Obsolete]
130. Penalty for violation
140. Compensation for removal of advertising
150. Unlawful advertising
160. Definitions
170. Agreements with the United States; regulations
180. Interpretation

Sec. 19.25.080. Purpose. The purposes of AS 19.25.080 — 19.25.180 are

(1) to protect the public safety and the welfare of persons using the highways of the state by having outdoor advertising signs, displays and devices along the highways controlled;

(2) to prevent unreasonable distraction of operators of motor vehicles; to prevent confusion with regard to traffic lights, signs or signals or otherwise interfere with the effectiveness of traffic regulations, and to promote the safety, convenience and enjoyment of travel on, and protection of the public investment in highways in this state; to preserve and enhance the natural scenic beauty or aesthetic features of the highways and adjacent areas; and to attract tourists;

(3) to regulate outdoor advertising signs, displays and devices in areas adjacent to the rights-of-way of the interstate, primary and secondary systems within this state in accordance with this chapter and the regulations adopted under this chapter;

(4) to provide that outdoor advertising signs, displays and devices which are not in conformity with the requirements of this chapter are a public nuisance;

(5) to provide a statutory basis for regulation of outdoor advertising signs, displays and devices consistent with the public policy relating to areas adjacent to a highway of the interstate or primary systems declared by Congress in Title 23, United States Code, "Highways." (§ 1 ch 59 SLA 1949; am § 1 ch 86 SLA 1953; am § 2 ch 233 SLA 1968; am § 1 ch 155 SLA 1970)

METRO COMPANY

Box 257

FAIRBANKS, ALASKA 99701

April 28, 1987

MAY 1 1987

Honorable Bette Cato, Chairman
House Transportation Committee
P.O. Box V
Juneau, Alaska. 99811

Dear Representative Cato:

As you are no doubt aware, SB 25 for Airport Tax Relief has passed the Senate.

From our experience, there is no money to be made in the smaller, private air strips. On the surface some may look quite active and prosperous, but rarely is it real. We may seem to be coming from a selfish position, but in truth it is because we appreciate the fact that private airstrips are available, and that we have been able to enjoy their facilities. Our road system will take some time yet to serve where air travel now must.

Please, if you would, incorporate SB 25 for early consideration.

Respectfully yours,

Harvey W. Marlin

April 24, 1987

The Honorable Bette Cato
Chairman
House Transportation Committee
Post Office Box V
Juneau, Alaska 99811

Dear Bette:

I have received a communication from Charles L. Gray, President and General Manager of the Daily News Miner; and am glad to have a report on the progress on SB 25.

I would like to ask you to schedule this bill for quick action. Alaskans need this bill. We air field owners have land tied up in air parks--land with runways which are, and will continue to be, very valuable to the community in future years. This land is now classified as residential, and is being assessed at residential tax rates--valuations of $10,000 and over per acre. Taxes are so high every air field owner is tempted to sell the ground off in building lots.

With this type of pressure, there will be fewer and fewer small airstrips left in the ~~urban~~ Rural areas.

Would you please give whatever relief is possible by having this bill scheduled for action as quickly as is possible?

Sincerely,

Clyde G. Sherman
President, ATC and
Sherman Land Development, Inc.

Airfield options

Private airports face an uncertain future in urbanizing areas such as Fairbanks.

Because these airports require lots of land in comparison to the income they can earn, property taxes can threaten their very existence.

A bill being introduced in the legislature by Sen. Don Bennett (R-Fairbanks) would allow local governments to give a property tax break to private airports that are open to the public. Rather than a break, it would be more of a just tax considering their value to the communities they serve. At present, state law prohibits municipalities like the Fairbanks North Star Borough from offering such tax breaks except to farmland.

Private airports make an important contribution to Alaska aviation. Among other things, they help draw light planes away from major government-run airports that serve airliners and other heavy aircraft. Anything that separates small planes from their bigger brothers increases the safety and convenience of all air travelers.

In addition, they reduce the need to expand government-run airports, reducing the demands on the public purse.

Bennett's bill would not *require* tax relief for private airports; it would only allow such relief. The choice would be up to the local government, just as it should be. And the tax break could be extended only to private airports open to the public.

This bill would cost the state nothing while providing an important and useful option to local government in Alaska. We hope it passes.

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: SB 118

APPROVED: R. J. Knapp
Commissioner

TITLE: An Act Relating to Access to Public Buildings and Facilities by the Physically Handicapped, Aged and Infirm.

DATE: 11-18-86

The Department requests that the proposed language modifications be supported for the following reasons.

1. Modifications to AS 35.10.015(a) would allow the use of the "Uniform Federal Accessibility Standards" (UFAS) on all projects. Currently we administer "state" projects under the "American Standard Specifications" (ANSI) document and "federal" projects under UFAS.

2. Additional language to AS 35.10.015(e) would allow the Department to establish design parameters for specific facilities not identified in either the UFAS or ANSI codes. Presently designers working on these types of facilities have no guidelines other than applying the "inappropriate" requirements presented in the adopted codes.

All parties involved will benefit from the changes in that (1) the Department will only have to administer a single code, (2) designers will consistently know the "code" which is applicable to their project, (3) the handicapped community will receive uniformity in their built environment, and (4) the public at large will benefit from a more effective administration of accessibility requirements. These changes will not increase or diminish the already existing requirements for handicapped access to public buildings or facilities.

For further information call Susan Fleischhauer at 465-3900.

STEVE COWPER
GOVERNOR

sb 118

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

February 9, 1987

The Honorable Jan Faiks
President of the Senate
Alaska State Legislature
P.O. Box V
Juneau, AK 99811

Dear Senator Faiks:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill relating to access to public buildings and facilities by the physically handicapped, aged, and infirm. This bill will give the Department of Transportation and Public Facilities greater flexibility in developing standards for particular facilities for which there currently are no standards.

Federal law and regulations, and the publication entitled "American Standard Specifications for Making Buildings and Facilities Accessible to and Usable by the Physically Handicapped" are presently used to determine standards for many public buildings and facilities. Section 1 of the bill will provide the department with greater flexibility in this area by allowing it to choose the best and most applicable standards from the several now in existence. For example, the federal government in 49 Federal Register 31528 (August 7, 1984) has published standards which are comparable to and in many ways more comprehensive than those found in the "American Standard Specifications for Making Buildings and Facilities Accessible to and Usable by the Physically Handicapped."

In addition, there are public facilities for which standards have not been developed. It is the intent of sec. 2 of this bill to direct the Department of Transportation and Public Facilities to develop standards for unique public facilities in the State of Alaska for which there currently are no standards, e.g. for ski lifts, hiking trails, and boat harbors.

SB 118

In short, this bill will clarify and broaden the authority of the Department of Transportation and Public Facilities to provide access to and use of public buildings and facilities by the physically handicapped, aged, and infirm. I urge your favorable action on this measure.

Sincerely,

Steve Cowper
Governor

Chapter 05. Administration.

Section

10. Planning and construction
20. Regulations
40. Powers of department

Sec. 35.05.010. Planning and construction [Effective July 1, 1987]. The department is responsible for the planning and construction of public works except as provided for court facilities in AS 22.05.025. Contracts for planning and construction of public works are governed by AS 36.30 (State Procurement Code). (§ 1 art III title I ch 152 SLA 1957; am § 2 ch 160 SLA 1980; am § 31 ch 106 SLA 1986)

Effect of amendments. — The 1986 amendment, effective July 1, 1987, added the last sentence.

Editor's notes. — Section 3, ch. 160, SLA 1980, as amended by § 2, ch. 70, SLA 1982, provided that the amendment made by § 2, ch. 160, SLA 1980 terminated June 30, 1984. Section 3, ch. 160, SLA 1980, as amended by § 2, ch. 70, SLA 1982, was repealed by § 3, ch. 78, SLA 1984.

Sec. 35.05.020. Regulations [Effective July 1, 1987]. The department shall adopt regulations that it considers necessary to carry out the purpose of this title. The regulations may not conflict with AS 36.30 (State Procurement Code) or the regulations adopted by the Department of Administration under that chapter. (§ 1 art III title I ch 152 SLA 1957; am § 32 ch 106 SLA 1986)

Chapter 10. Public Works.

Article
1. Public Works Planning and Construction (§ 35.10.015)
3. Financial Provisions (§ 35.10.135)
5. Public Facility Procurement Policy (§ 35.10.195)
6. Utilities and Encroachments in Public Facilities (§§ 35.10.210 — 35.10.270)

Article 1. Public Works Planning and Construction.

Section
15. Architectural barrier regulations; enforcement

Sec. 35.10.015. Architectural barrier regulations; enforcement. (a) The department shall prepare, promulgate and enforce regulations governing the construction of public buildings and facilities by or for the state, including the University of Alaska, and its political subdivisions, whether financed in whole or in part by federal funds, to ensure that the public buildings and facilities are accessible to, and usable by, the physically handicapped, aged or infirm. The regulations of the department shall conform to a standard comparable to the applicable provisions of federal law or regulation and to the publication entitled "American Standard Specifications for Making Buildings and Facilities Accessible to and Usable by the Physically Handicapped" and any amendments to this publication as approved by the American Standards Association, Incorporated, under the sponsorship of the National Society for Crippled Children and Adults and the President's Committee on Employment of the Physically Handicapped.

(b) The department shall develop and maintain an inventory of all public buildings and facilities with respect to their compliance with the regulations adopted under (a) of this section. The department shall make an annual report to the governor and the legislature describing work performed in the preceding calendar year to upgrade public buildings and facilities to conform with the regulations. In addition, the department shall develop cost estimates and recommended priorities for the upgrading of public buildings and facilities that do not conform with the regulations adopted under (a) of this section and shall include these estimates and the recommended priorities in the annual report to the governor and the legislature.

(c) In this section, "public facilities" includes vessels owned by the state and operated by the division of marine transportation of the department as a part of the Alaska marine highway system. All ferries owned or operated by the state shall be equipped with elevators or other passenger lifting equipment, ramps, or other facilities and devices to ensure that these vessels are accessible to and usable by physically handicapped, aged or infirm passengers. In this subsection, "accessible to and usable by" means that a physically handicapped,

aged or infirm passenger can board, disembark and move between decks and about the public areas aboard a state ferry with personal comfort and with safety to himself, other passengers and members of the crew.

(d) After June 25, 1976, no ferry may be constructed, lengthened, completely renovated, or purchased for use or entered into service by the division of marine transportation of the Department of Transportation and Public Facilities as a part of the Alaska marine highway system that does not include adequate facilities and devices to ensure that the vessel is accessible to and usable by physically handicapped, aged or infirm passengers. Some staterooms and all restrooms, indoor passageways, outdoor weather decks, and other public areas aboard the vessel shall be so designed and constructed as to permit access and use by physically handicapped, aged or infirm passengers, including but not limited to those persons occupying a wheelchair.

(e) After June 25, 1976, no public building or facility in the state may be planned, designed, financed, constructed, opened to public use, or otherwise placed in operation unless it meets the standards established under this section. (§ 1 ch 119 SLA 1966; am § 1 ch 48 SLA 1972; am §§ 1 — 4 ch 249 SLA 1976; am E.O. No. 39, § 11 (1977))

Article 3. Financial Provisions.

Section
135. Public facility planning fund

Sec. 35.10.135. Public facility planning fund. There is established within the Office of the Governor, office of management and budget a public facility planning fund. The fund is a capital fund and consists of (1) money appropriated by the legislature, (2) money reimbursed to it from the proceeds of the sales of general obligation bonds and revenue bonds issued for projects and (3) money reimbursed to it from appropriations for any projects for which money from the fund has been spent. The fund is available for expenditure, on a reimbursable basis, only for the purposes of providing working capital for facility program planning and for facility procurement planning as specified in this chapter. All expenditures from the fund are subject to an independent audit which shall be made annually and reported to the governor and the legislature. (§ 1 ch 57 SLA 1973; am § 1 ch 58 SLA 1976; am § 28 ch 63 SLA 1983)

Effect of amendments. — The 1983 amendment substituted "office of management and budget" for "division of budget and management."

SENATE BILL 118

LETTER OF INTENT - HOUSE TRANSPORTATION COMMITTEE

It is the intent of the House Transportation Committee in passing SB 118 out of committee that the construction standards established by the state of Alaska for facilities not covered by federal standards will in no way diminish the Legislature's intent to provide accessibility for the handicapped, aged and infirm to all state facilities.

A state facility is defined as any structure constructed or operated with state or federal funds.

5/16/87

Mr. Speaker,

The Department of Transportation and Public Facilities currently operates under two sets of regulations regarding setting standards for accessibility to public buildings by the handicapped, aged and infirm. Those standards are the "Uniform Federal Accessibility Standards" which are currently used to administer federal projects, and the "American Standard Specifications" which are used to administer state projects. SB 118 would change current statutes such that it would allow the department to use the "Uniform Federal Accessibility Standards" for all projects. The bill would also give DOT/PF the authority to write standards for any project that was not covered by current federal regulations.

Thank you, Mr. Speaker

House Committee on Transportation

FROM: Senator Jim Duncan

SUBJECT: SB 125, Marine Transportation Advisory Board

I respectfully request a hearing for this bill at your earliest convenience. I am forwarding information to be used as backup for this legislation.

The creation of the Marine Transportation Advisory Board will guarantee that passengers who use the Marine Highway System, along with merchants who depend on the system for freight, will have a voice in the systems level of service.

Because the Alaska Marine Highway System is used by so many people, both in South Central Alaska and in Southeast, it is imperative they have a mechanism in which their concerns are considered. As has been the case in many private sector transportation organizations, an advisory board has proven to be an entity the public can focus on that takes into consideration their real needs. It is important that a formal citizens' group review budget-induced schedule changes in the system and make recommendations on potential changes that might have less of an effect on the public. More over, citizen advisory boards tend to bring out many good ideas that will enhance an organization's ability to operate effeciently.

The Marine Transportation Advisory Board will consist of five members from which at least three come from communities served by the Alaska Marine Highway System.

CONTINUATION of FISCAL NOTE ANALYSIS

For Bill/Resolution No. SB 125

The proposed legislation creates an Advisory Board for the Alaska Marine Highway System, with five members to serve without compensation. Necessary costs, therefore, are limited to those of conducting the Board's meetings. After two familiarization meetings to be held in Juneau during the first three months, regular meetings will be held on a quarterly basis. The effective date is assumed to be July 1, 1987.

FY 88 COSTS

Travel		$ 16.0
Transportation and per diem for five Board members	$ 13.5	
Transportation and per diem for AMHS staff to attend Board meetings (locations other than Juneau)	2.5	
Contractual Services		2.5
Public Notice Advertising		
Total		$ 18.5

An annual inflation factor of 5% has been included beginning in FY 89. Costs have been reduced for FY 89 to reflect a total of four quarterly meetings, three to be held in Southeast Alaska and one in Southcentral.

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: SB 125

TITLE: Alaska Marine Highway System Advisory Board

APPROVED: Mark S. Hickey MSH
Commissioner

DATE: 3/17/87

The Department of Transportation and Public Facilities has reviewed the subject bill. We endorse the concept and will welcome the input from the Advisory Board.

The bill does contain some language which we feel would imply a role for the Advisory Board which is contrary to our desires.

On page 3, Section 19.65.150 Duties (1) directs the Board to coordinate with the Governor and Legislature. We feel a more productive approach would be to coordinate with the Governor and Commissioner through a direct contact with the Director of Alaska Marine Highway System.

Other than this one change that which we feel will provide a more useful role for the Board we support its existence and encourage support for the passage of the Bill and funding of the program.

For further information call Susan Fleischhauer at 465-3900.

Duncan proposes ferry advisory board

By CHUCK KLEESCHULTE
THE JUNEAU EMPIRE

In an effort to guarantee that freight and passenger users get some voice in future schedule reductions facing the Alaska Marine Highway System, Juneau Sen. Jim Duncan this morning introduced legislation setting up a citizens' advisory board.

The Democrat said he believes it is important that a formal citizens' group review budget-induced schedule changes in the ferry system and make recommendations on potential changes that might have less of an effect on the public.

"What I see coming is a reduced level of service, but it is important that we evaluate plans from a user's perspective so that freight and passengers get a level of service that takes their real needs into consideration," said Duncan this morning.

He said under his plan five public members – at least three from communities served by the ferry system – would be appointed by the governor. While not paid, the advisory board, which would serve five-year terms, would get per diem and be empowered by the governor to hold hearings and make recommendations on changes in the operation of the nine-vessel ferry fleet.

"It's really important given the changes coming that we make sure freight user needs are protected, plus the true needs of passengers. We need to maximize the frequency of service in Southeast and a citizens' board may help to make sure the department does that in coming up with new operating schedules," said Duncan.

On Wednesday, Sen. Lloyd Jones, R-Ketchikan, proposed that Ketchikan be the end of the state's mainline service from Seattle to improve the frequency of runs to the West Coast. Duncan said he's not in a position to support or oppose that suggestion yet, but he said he wants to see it and other suggestions considered as an alternative to once-a-week mainline and once-a-week non-summer feeder ferry service proposed in Gov. Steve Cowper's budget for next year.

Under Cowper's original budget, ferries would sustain a $10 million cut in their operating subsidy. About $2 million of that was added back to pay for higher insurance costs, leaving a cut of over $8 million in the operating subsidy for the $65 million system. Last year, about $30 million of its budget came from the state.

Please turn to Page 8

Ferry...

Continued from Page 1

Duncan said his bill might not pass in time to have the board be functional to help in making suggested changes to the proposed schedule that would go into effect in late September. But he said the advisory board would certainly help to gain public reaction to future schedule shifts.

Advisory board a good idea

For years, private companies have been using citizens' advisory boards to great advantage. When they want to test "trial balloons" or when they simply want a reading on how well they are doing, they go to their advisory boards and ask. The answers they get help correct problems, prevent mistakes and improve good ideas. Above all else, the boards prove that the companies *listen* to the people they serve.

Juneau Sen. Jim Duncan has proposed incorporating this valuable private-enterprise tool into the state-run Alaska Marine Highway System. Last week he submitted a bill in the Senate that would establish a citizens' advisory board for the ferry system.

ISSUE: Advisory board proposed for state ferries

The idea is long overdue. For years, most decisions regarding the ferry system reflected the interests of either the management or the employees. The public's needs often seemed to be lost in the shuffle, even though the public pays for the ferries and uses them.

As long as it is composed of citizens who will be "plugged into" the needs and attitudes of their communities, an advisory board will help ferry managers and employees refocus their attention on the people they are serving. The board should not be composed of junior-grade bureaucrats who will have a bunch of meaningless public hearings or take it upon themselves to manipulate their positions to benefit other interests besides those of the public. That's how the ferry system got off track in the first place.

The folks who ride the ferries want friendly service, good food, convenient schedules and reasonable rates. They also want to know about their ferry system and how it works. If you gauge the system on these basics, it's obvious there is room for improvement.

A citizens' advisory board may not be the answer to all of these problems, but it would sure go a long way toward finding the answer.

SUBJECT: Sectional analysis - CSSB 146(Transportation)

TO: Senator Lloyd Jones

FROM: Michael F. Ford
Legislative Counsel

The following is a sectional analysis of CSSB 146(Trsp):

Section 1 - Expands the authority of the commissioner of the Department of Commerce and Economic Development to adopt regulations.

Section 2 - Creates authority for the issuance of a citation for a violation of weight, size, or load limits; overweight or oversize permits; and for vehicle equipment violations. Establishes procedures for issuance and for response to a citation. Requires the Supreme Court to establish a bail schedule and a procedure for bail forfeiture for certain violations.

Section 3 - Establishes a penalty for certain offenses. Adds violations established under AS 45.75.050(b)(5) as offenses subject to the penalty established in this section.

Section 4 - Establishes a penalty for overweight vehicles. This penalty presently exists as AS 28.40.050(e) and is being moved to add this penalty as a part of AS 45.75.380.

Section 5 - Definition.

Section 6 - Repealers.

Section 7 - Effective date.

Dept. of Transportation & Public Facilities

POSITION PAPER

BILL NO: CSSB 146 (Transportation)

TITLE: An Act Relating to Weight and Measures and Providing for an Effective Date

APPROVED: Mark S. Hickey
Commissioner

DATE: 4/29/87

The department supports SB 146.

This legislation provides statutory authority for the Departments of Commerce and Economic Development and Public Safety for enforcement of vehicle size, weight and load limitations. It also provides for penalties for those who violate either the provisions of an oversize or overweight vehicle permit or the legal size, weight and load limitations adopted under Alaska Statutes.

The legislation is needed since without it there is no legal mechanism for enforcement of penalties for violations of existing vehicle size and weight regulations. States that do not provide adequate enforcement for oversize and overweight vehicles may be subject to a reduction of ten percent of the State's federal highway apportionment.

Senate Transportation Committee

MEMORANDUM

TO: Representative Bette Cato, Chairman
House Transportation Committee

FROM: Senator Lloyd Jones, Chairman
Senate Transportation Committee

DATE: May 12, 1987

SUBJECT: CS for SB 146 (Trsp), An Act relating to weights and measures.

The Senate Transportation Committee introduced this measure so the state would have the necessary legal mechanism to protect our highways from damage. In addition, without adequate enforcement standards the state of Alaska is in jeopardy of losing ten percent of the State's federal highway apportionment.

In 1982, when the enforcement of weights and measures was transferred from the Department of Public Safety to the Department of Commerce; the penalty provisions were not transferred to commerce. During the past five years, the Department of Commerce has issued citations. However, the Alaska Supreme Court has dropped the bail forfeiture from the bail schedule because of no statutory authority.

The status quo is not in the state or industry's best interest. In Fairbanks a mandatory court appearance is necessary. This causes needless delays of truckers and overtime problems for the Department of Commerce. In Anchorage the situation is even worse, the courts are not enforcing the citations.

This bill would provide the necessary level of vehicle size, weight, and overload limitation enforcement. It provides penalties for violators of oversized or overweight vehicle permits or the legal weight, and load limitations adopted under Alaska Statutes.

I encourage the House Transportation Committee to approve this measure so there will be adequate protection of our highways in the immediate future, and to ensure we do not place our federal highway funds at risk.

M E M O R A N D U M

TO: House Transportation Committee Members

FROM: Senator Jack Coghill

DATE: April 11, 1988

RE: SB 298

I respectfully request your support of Senate Bill 298. This bill was generated by the community members of McKinley Village and Healy.

Gary Crabb was one of the founding fathers of McKinley Village, dating back to the early 1950's when access was only available via the Denali Highway from Paxon. Gary was a leader in the early development in Alaska's tourism industry. Gary passed away after a long and courageous battle with cancer. I have known Gary for many years. He had lived in the McKinley area for 26 years and worked tirelessly to make McKinley Village succeed.

The bridge crossing the Nenana River at the southern entrance to McKinley Park and proximate to McKinley Village is not named. It is referred to as Bridge #694 at milepost 231.2 on the George Parks Highway. I believe naming this bridge "Crabbie's Crossing" after Gary Crabb, is the least we can do to show our genuine appreciation for Gary's hard work and dedication to making McKinley Village a viable community.

The residents of McKinley Village, Healy, and I would appreciate your support for SB 298.

REVIEW:

Section 1 lines 10-14 provide the unexpended and unobligated balances of appropriations made in 1982 to lapse into the general fund on June 30, 1988 from the following:

sec. 17, ch 101 SLA 1982 as amended by sec. 122, ch 105 SLA 1985 Also sec. 18, ch 101 SLA 1982 -see attached (2) 335am line funding from Dept of Rev. for 1982 Gen. Fund and 1982 PFD.

Sec. 2, line 15 equal sums of unexpended and unobligated funds as repealed by this section is appropriated from the dividend fund to the Dept. of Rev to pay permenant fund dividends in 1988 are as follows:

sec. 1, ch 6, SLA 1983
sec. 2, ch, 44, SLA 1984
sec. 3 ch, 44, SLA 1984
sec. 26, ch, 98, SLA 1985, page 26, line 5 (PFD)
sec. 26, ch, 98, SLA 1985, page 35, line 7 permenant fund dividend hold harmless. See attached items.

Sec. 3. The unexpended and unobligated balances of the following appropriations are repealed and an equal amount to the sum of the appropriations repealed by this section is appropriated from the earnings reserve account of the permenant fund to the dividend fund.

sec. 32, ch. 107, SLA 1983, page 14, line 11 PFD
sec. 14, ch. 122, SLA 1984
sec. 15, ch. 122, SLA 1984
sec. 14, ch. 98, SLA 1985, as amended by
sec. 763, ch. 105, SLA 1985. See attached items for details.

Sec. 4. The amount equal to the amount appropriated to the dividend fund by sec. 3 of this Act is appropriated from the

(SB 335 9m

SECTIONAL ANALYSIS (Senator Paul Fischer)

SENATE BILL 335 (Making, amending, lapsing, and repealing appropriations pertaining to permanent fund dividends)

This bill provides for the transfer of the unexpended and unobligated balances of permanent fund dividend appropriations for what are known as "prior year dividends" for the years 1982 through 1985.

Section 1 lapses the unexpended and unobligated balances of the 1982 appropriations originally made from the general fund back to the the general fund (approximately $4 million).

Section 2 of the bill repeals the unexpended and unobligated balances of 1983, 1984, and 1985 appropriations from the dividend fund to the Department of Revenue for the payment of dividends.

Section 3 repeals the unexpended and unobligated balances in several appropriations from the permanent fund earnings reserve account to pay permanent fund dividends in the years 1983 through 1985. This would allow the Department of Revenue to "sweep" all their accounts and deposit the balances in one account.

Section 4 appropriates the sum of money appropriated tc the dividend fund by section 3 of this bill out of the dividend fund to the Department of Revenue for payment of permanent fund dividends.

Section 5 is the effective date and is contingent upon passage of Senate Bill 336 or a similar version. However, an amendment will be offered by the sponsor to replace this section.

SUBJECT: SB 336 "An Act relating to computation of permanent fund dividends; and providing for an effective date. (Fischer)

****

REVIEW: The only change in this section of the law is on line 27 through 29: plus any additional amount appropriated to the dividned fund for distribution as dividends during the current year.

There are other requirements of the law that mandate certain information about the permanent fund dividends. This will provide information about any additional amount appropriated to the dividend fund for distribution as dividends during the current year.

Sec. 2. This Act takes effect immediately under AS 01.10. 070(c).

(4) SB 336

SECTIONAL ANALYSIS (Senator Paul Fischer)

SENATE BILL 336 (Relating to computation of permanent fund dividends)

The purpose of this bill is to revise the method of calculation and allow for including the additional unexpended and unobligated balances of past appropriations in this year's dividend formula.

This bill will also allow for future unexpended and unobligated balances of appropriations to lapse into the dividend fund for which the appropriation was made and shall be used in determining the amount of and paying the subsequent year's dividend.

MEMORANDUM

March 10, 1988

TO: Representative Bette Cato, Chairman
House Transportation Committee

FROM: Senator Jim Duncan

SUBJECT: SB 347 am "An act relating to the regulation of motorboat motor repairs".

Thank you for scheduling SB 347 am for a hearing. SB 347 am amends the definition section of the current law relating to the Regulation of Motor Vehicle Repairs to include motorboat motors and defines motorboats and motorboat motors.

Currently under AS 45.45, motor vehicle repair, when a customer takes his motor vehicle to a shop for repair the customer may request a written estimate prior to the commencement of any repairs. Nothing in this section requires a shop to provide a price estimate if the shop does not agree to perfrom the requested repairs. If the shop has given the customer an estimate and the price for the authorized repairs exceeds the estimate, the shop must call the customer before continuing with the repairs and at that time the shop has the opportunity to give the customer a new estimate. Also if the customer requests, at the time the repair order is taken, the customer may elect to receive the parts of their motor vehicle that are replaced.

Essentially 45.45 Regulation of Motor Vehicle Repairs is a consumer protection law. SB 347 am will provide the same protection for boat owners as for motor vehicle owners under AS 45.45.

My office was contacted by an individual who needed to have his boat engine repaired. A verbal estimate by the boat dealership indicated the repairs would cost $4,500.00. When the dealership was finished repairing the engine the total bill was over $7,000.00 There was no indication to the owner at any time prior to the billing that the amount due would be over the original estimate.

With the large number of boat owners in our state and the fact that for many their boat is an important means of transportation, I believe this bill will extend the necessary protection for boat owners that currently exists for car owners.

Article 5. Regulation of Motor Vehicle Repairs.

Section		Section	
130.	Repair order	180.	Return of parts
140.	Repair price information	190.	Invoice
150.	Notice to customer	200.	Prohibited practices
160.	Charges	210.	Disclosure of regulation
170.	Authorization to proceed with repairs	220.	Records
		240.	Definitions

Sec. 45.45.130. Repair order. Upon request of the customer and before the commencement of repairs, the shop shall provide the customer with a copy of a dated repair order legibly describing the repairs to be performed. The shop shall record the odometer reading of the customer's motor vehicle on the repair order, and shall sign the customer's copy. (§ 1 ch 146 SLA 1976)

NOTES TO DECISIONS

Cited in State v. Grogan, Sup. Ct. Op. No. 2356 (File No. 5199), 628 P.2d 570 (1981).

Sec. 45.45.140. Repair price information. Upon request of the customer and before the commencement of repairs, the shop shall provide the customer with a price estimate for the repairs. The repair price estimate shall be made in good faith by the shop and may not be exceeded except for good cause and additional charges over the price estimate may not be incurred without approval of the customer. Nothing in this section may be construed as requiring a shop to provide a price estimate if the shop does not agree to perform the requested repairs. (§ 1 ch 146 SLA 1976)

Sec. 45.45.150. Notice to customer. The shop shall post a conspicuously located and easily readable sign which states:

"You are entitled to a price estimate for the repairs you authorize if you request the estimate before the repairs are begun. This price estimate will not be exceeded if the motor vehicle is delivered to the shop within five days. After the motor vehicle is delivered to the shop the repair price may be less than the estimate but will not exceed the estimate without your permission. Your signature on the repair order will indicate your authorization of repairs at the price estimated.

You are entitled to the return of any or all replaced parts, except parts which must be returned to a manufacturer because of warranty and/or exchange agreement, if you request the parts at the time your order is taken. Those parts which must be returned to the manufacturer will be made available for inspection to you when you pick up your vehicle if you request the parts at the time your repair order is taken." (§ 1 ch 146 SLA 1976)

Sec. 45.45.160. Charges. A shop may not charge for making a repair price estimate unless, before making the estimate, the shop discloses to the customer the amount of the charge, or, if the amount cannot be determined, the basis on which the charge will be calculated. A shop may not impose, or threaten to impose, a charge which is clearly excessive in relation to the work involved in making the price estimate. (§ 1 ch 146 SLA 1976)

Sec. 45.45.170. Authorization to proceed with repairs. (a) If the shop has given the customer an estimate and the price for the authorized repairs will exceed the estimate, the shop shall call the customer before continuing with the repairs and shall provide the customer with a new, good faith estimate of the repair price. The shop may not then continue with the repairs until it receives the customer's written or oral authorization to do so.

(b) Before undertaking repairs other than those previously authorized by the customer, the shop shall call the customer and describe to the customer the proposed additional repairs, together with a good faith estimate of the price for the repairs. The shop may not then undertake the additional repairs until it receives the customer's written or oral authorization to do so.

(c) If the shop does not receive the customer's authorization to proceed with the repairs under (a) or (b) of this section, the shop shall either agree to perform the repairs at the original estimated price or provide for the customer to retake possession of the vehicle in at least as good condition as it was delivered to the shop and notify the customer accordingly.

(d) A written authorization under (a) or (b) of this section shall be made on the repair order or on the invoice when a repair order is not requested and shall specify newly authorized repairs, as well as the newly authorized repair price estimate. If authorization under (a) or (b) of this section is received orally, the shop shall specify on the repair order or invoice newly authorized repairs, as well as the newly authorized repair price estimate. It shall also specify the date and time of authorization, and the person and telephone number called. (§ 1 ch 146 SLA 1976)

Sec. 45.45.180. Return of parts. Parts from a customer's motor vehicle which are replaced by the shop shall be returned to the customer if they are requested by the customer at the time the repair order is taken. However, parts which must be returned to the manufacturer because of a warranty or exchange agreement need not be returned to the customer upon request but shall instead be made available for the customer's inspection when the customer retakes possession of the motor vehicle. (§ 1 ch 146 SLA 1976)

Sec. 45.45.190. Invoice. The shop shall provide every customer, at the time the customer retakes possession of the motor vehicle, with a copy of a dated invoice detailing the costs of all parts and labor involved in the repair, and identifying all parts replacements as being either new, used, rebuilt or reconditioned. (§ 1 ch 146 SLA 1976)

Sec. 45.45.200. Prohibited practices. (a) A shop may not misrepresent, directly or by implication,

(1) the cost of repairs authorized by the customer;

(2) the terms or conditions of a warranty or service agreement;

(3) that repairs are necessary;

(4) that repairs have been made; or

(5) that the motor vehicle is in a dangerous condition, or that the customer's continued use of the motor vehicle will be hazardous to persons or harmful to the motor vehicle.

(b) A shop may not collect or attempt to collect for

(1) repairs not authorized either orally or in writing by the customer;

(2) repairs which the shop knew or reasonably ought to have known to be unnecessary; or

(3) repairs which have not been made.

(c) A shop which is also a warrantor or a party to a service agreement may not refuse to repair a motor vehicle in accordance with the terms and conditions of the warranty or service agreement.

(d) A shop may not fail to return a customer's motor vehicle because the customer has refused to pay for unauthorized repairs, or because the customer has refused to pay repair charges in excess of the price authorized under AS 45.45.130 — 45.45.140, if the customer pays the authorized price for the authorized repairs.

(e) A shop may not alter a customer's motor vehicle with intent to create a condition requiring repairs. (§ 1 ch 146 SLA 1976)

Sec. 45.45.210. Disclosure of regulation. The following statement shall be conspicuously printed, either on the invoice or on another form given to every customer for whom the shop performs repairs:

"Motor vehicle repair trade practices are regulated by Alaska Statutes 45.45.130 — 45.45.240, administered by the consumer protection section, Alaska Department of Law." (§ 1 ch 146 SLA 1976)

Sec. 45.45.220. Records. A shop shall maintain repair records and invoices for parts purchased by the shop. The records shall be available for reasonable inspection by the attorney general or other persons acting at the request of the attorney general and shall be retained for at least two years. (§ 1 ch 146 SLA 1976)

Sec. 45.45.240. Definitions. In AS 45.45.130 — 45.45.240

(1) "customer" includes a person authorized by the customer to act on the customer's behalf;

(2) "motor vehicle" or "vehicle" means a motor vehicle as defined in AS 28.40.100 which is required to be registered under AS 28.10, or with a governmental agency of another jurisdiction performing a similar function;

(3) "motor vehicle repair shop" or "shop" means an individual, corporation, partnership, or other form of business organization engaged in the motor vehicle repair business and includes owners, officers, directors, agents, employees, and representatives but excludes the following:

(A) a shop engaged solely in the business of repairing the motor vehicles of a single commercial, industrial or governmental establishment, or of two or more of these establishments which are related by common ownership or corporation affiliation;

(B) a person repairing the person's own or a family member's motor vehicle;

(4) "repair" or "repairs" means the improvement, adjustment, replacement, examination, diagnosis, maintenance, servicing, removal or installation of any component or part of a motor vehicle, but does not include towing or the supplying of motor fuel to a motor vehicle. (§ 1 ch 146 SLA 1976; am § 21 ch 144 SLA 1977)

Opinions of attorney general. — The Better Business Bureau's auto line informal dispute resolution mechanism pursuant to this article is in substantial compliance with 16 C.F.R. § 703, setting forth the standards for informal dispute settlement procedures. 1986 Op. Att'y Gen. No. 01.

NOTES TO DECISIONS

Cited in Universal Motors, Inc. v. Waldock, Sup. Ct. Op. No. 3060 (File No. S-796), P.2d (1986).

Sec. 45.45.300. Repairs required. If a new motor vehicle does not conform to an express warranty that is applicable to it and the owner of the vehicle reports the defect or condition to the manufacturer of the vehicle or to the manufacturer's or distributor's dealer during the term of the warranty, the manufacturer, distributor, dealer, or a repairing agent shall make the necessary repairs to conform the vehicle to the express warranty. (§ 1 ch 101 SLA 1984)

Revisor's notes. — As enacted, this section contained subsections (b)-(m). They were renumbered in 1984 as AS 45.45.305 — 45.45.360.

Sec. 45.45.305. Replacement or refund. If during the term of the express warranty or within one year from the date of delivery of the motor vehicle to the original owner, whichever period terminates first, the manufacturer, distributor, dealer, or repairing agent is unable to conform the motor vehicle to an applicable express warranty after a reasonable number of attempts, the manufacturer or distributor shall accept the return of the nonconforming motor vehicle, and, at the owner's option, shall replace the nonconforming vehicle with a new, comparable vehicle or shall refund the full purchase price to the owner less a reasonable allowance for the use of the motor vehicle from the time it was delivered to the original owner. A refund under this section shall be made to a lienholder of record, if any, and the owner, as their interests may appear. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(b). Renumbered in 1984.

Sec. 45.45.310. Notice by owner. In order to claim a refund or replacement under AS 45.45.305, the owner shall give written notice by certified mail to the manufacturer and its dealer or repairing agent at any time before 60 days have elapsed after the expiration of the express warranty or the one-year period after the date of delivery of the motor vehicle to the original owner, whichever period terminates first, (1) stating that the vehicle has a nonconformity; (2) providing a reasonable description of the nonconformity; (3) stating that the manufacturer, distributor, dealer, or repairing agent has made a reasonable number of attempts to conform the vehicle; and (4) stating that the owner demands a refund or replacement vehicle to be delivered on the 60th day after the mailing of the written notice. Within 30 days

after receiving the notice required by this section the manufacturer may make a final attempt to conform the vehicle before a refund or replacement is made under AS 45.45.305. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(c). Renumbered in 1984.

Sec. 45.45.315. Exceptions. An owner may not receive a refund or replacement under AS 45.45.300 — 45.45.360 if the manufacturer or distributor shows that the nonconformity complained of

(1) does not substantially impair either the use or the market value of the motor vehicle; or

(2) is the result of

(A) alteration of the motor vehicle by the owner or a person other than a dealer or repairing agent that is not authorized by the manufacturer or distributor; or

(B) abuse or neglect by the owner or a person other than the dealer or repairing agent. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(d). Renumbered in 1984.

Sec. 45.45.320. Presumption. A presumption that a reasonable number of attempts have been made to conform a motor vehicle under an applicable express warranty is established if:

(1) the same nonconformity has been subject to repair three or more times by the manufacturer, distributor, dealer, or repairing agent during the term of the express warranty or the one-year period after delivery of the motor vehicle to the original owner, whichever period terminates first, but the nonconformity continues to exist; or

(2) the vehicle is out of service for repair for a total of 30 or more business days during the express warranty term or the one-year period referred to in (1) of this section, whichever period terminates first; any period of time that repairs are not performed for reasons that are beyond the control of the manufacturer, distributor, dealer, or repairing agent is excluded from the 30-day time period referred to in this paragraph. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(e). Renumbered in 1984.

Sec. 45.45.325. Parts availability. A manufacturer whose vehicles are sold in the state through an authorized dealer shall provide its dealer or repairing agent with any part necessary to make a repair of a nonconformity covered under an express warranty, as soon as possible, without additional charge for freight or handling, if the part is not

in the dealer's or agent's inventory when the nonconforming vehicle is brought to the dealer or repairing agent for repair. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(f). Renumbered in 1984.

Sec. 45.45.330. Failure to replace or refund. A manufacturer or distributor who fails to refund the full purchase price of a motor vehicle or replace the motor vehicle when there is a requirement to do so under AS 45.45.300 — 45.45.360 is presumed to have committed an unfair trade practice under AS 45.50.471. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(g). Renumbered in 1984.

Sec. 45.45.335. Resale without disclosure prohibited. A motor vehicle returned under AS 45.45.305 may not be resold by the manufacturer or distributor in the state unless full disclosure of the reason for the return is made to the prospective buyer before the resale is concluded. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(h). Renumbered in 1984.

Sec. 45.45.340. Other rights and remedies. The provisions of AS 45.45.300 — 45.45.360 do not limit other rights and remedies that may be available to the owner of a motor vehicle under other provisions of law. This section does not create a new cause of action against a dealer or repairing agent who sells or attempts to repair a motor vehicle found to be nonconforming under AS 45.45.300 — 45.45.360. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(i). Renumbered in 1984.

Sec. 45.45.345. Repair facilities. A manufacturer or distributor or motor vehicles who authorizes the sale of the manufacturer's or distributor's motor vehicles in the state shall maintain authorized dealership facilities within the state that are able to perform the service and make the repairs required by the manufacturer's express warranty and by AS 45.45.300 — 45.45.360. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(j). Renumbered in 1984.

Sec. 45.45.350. Reimbursement of shipping costs. A manufacturer or distributor who accepts the return of a nonconforming motor vehicle under AS 45.45.305 shall reimburse the owner for any reasonable cost incurred in shipping the vehicle to and from the nearest authorized facility for warranty service and repair of a nonconformity that causes the return of the vehicle. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(k). Renumbered in 1984.

Sec. 45.45.355. Arbitration or mediation. If a manufacturer or distributor has established an informal dispute settlement procedure that substantially complies with the requirements of 16 C.F.R. 703, as that section may be amended, or if the manufacturer or distributor, after receipt of notice required by AS 45.45.310, offers in writing to participate in an arbitration or mediation process with the owner and the arbitration or mediation decision is binding on the manufacturer or distributor but not on the owner, and if the informal dispute settlement or arbitration or mediation process is approved by the attorney general, the provisions of AS 45.45.305 concerning refund or replacement or AS 45.45.350 concerning shipping costs do not apply to an owner who has not first resorted to the informal dispute settlement procedure or arbitration or mediation process. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(*l*). Renumbered in 1984.

Opinions of attorney general. — Request for approval of Ford Motor Company's Consumer Appeals Board informal dispute mechanism was denied because it did not substantially comply with 16 C.F.R. § 703, especially that portion requiring that board members be sufficiently insulated from the warrantor so that decisions are not influenced by the warrantor. 1985 Op. Att'y Gen. No. 06.

Sec. 45.45.360. Definitions. In AS 45.45.300 — 45.45.360,

(1) "dealer" means a person who has obtained a franchise from, or is authorized by, a motor vehicle manufacturer to engage in the retail sale and warranty repair of the manufacturer's new motor vehicles in the state;

(2) "distributor" means a person who is authorized by a manufacturer to engage in the wholesale distribution of the manufacturer's new motor vehicles in the state;

(3) "express warranty" or "warranty" means an express written warranty provided by the manufacturer of a new motor vehicle;

(4) "full purchase price" means the total price paid for a motor vehicle by the original owner, including costs added to the retail price, such as original registration fees, transportation fees, dealer preparation, and dealer installed options;

(5) "manufacturer" means a person who by labor transforms raw materials and component parts into motor vehicles for wholesale or retail sale;

(6) "motor vehicle" or "vehicle" means a land vehicle having four or more wheels, that is self-propelled by a motor, is normally used for personal, family, or household purposes, and is required to be registered under AS 28.10; but does not include a tractor, farm vehicle, or a vehicle designed primarily for off-road use;

(7) "nonconformity" means a defect or condition in a motor vehicle caused by a manufacturer, distributor, dealer or repairing agent that substantially impairs the use or market value of a vehicle;

(8) "owner" means a purchaser, other than for resale, of a new motor vehicle, and a person to whom ownership of the motor vehicle is transferred in conformity with AS 28;

(9) "reasonable allowance" means an amount attributable to an owner's use of a motor vehicle; a "reasonable allowance" may not exceed an amount equal to the depreciation in value of the vehicle for the period during which the vehicle is available for use by the owner, calculated by a straight line depreciation method over seven years, plus an amount equal to the depreciation in value of the vehicle that is caused by

(A) any neglect or abuse by the owner; or

(B) body damage not caused by a nonconformity;

(10) "repairing agent" means a person who has been specifically authorized by a motor vehicle manufacturer or distributor to perform warranty repairs in the state on one or more of the manufacturer's or distributor's motor vehicles;

(11) "substantially impairs the market value" means a nonconformity that substantially decreases the dollar value of a vehicle to the owner when compared to the dollar value of a similar vehicle that does not have the nonconformity;

(12) "substantially impairs the use" means a nonconformity that prevents a motor vehicle from being operated or makes the vehicle unsafe to operate. (§ 1 ch 101 SLA 1984)

Revisor's notes. — Enacted as AS 45.45.300(m). Renumbered in 1984.

Article 7. Miscellaneous.

Section

900. Indemnification agreements contra to public policy

Sec. 45.45.900. Indemnification agreements contra to public policy. A provision, clause, covenant, or agreement contained in, collateral to, or affecting a construction contract that purports to indemnify the promisee against liability for damages for (1) death or bodily injury to persons, (2) injury to property, (3) design defects or (4) other

TONGASS MARINE

February 2, 1988

Senator Lloyd Jones
Box V
Juneau, AK 99811

Dear Lloyd:

I just got wind of Senate Bill 347 dealing with the regulation of motorboat repairs.

I read over the proposed legislation, and it's a slap in the face to every marine repair shop in the state. Every shop I'm familiar with already abides by reputable business practices and I see no need to have them legislated. Unethical business practices are already covered under existing statutes.

I think there are more urgent priorities for the Legislature than passing laws telling marine repair shops how to run their business, and urge you to vote no on the above.

Sincerely,

Tongass Marine

John Murgas, Owner

National Marine Manufacturers Association

March 11, 1988

Representative Bette Cato
Chairperson
House Committee on Transportation
Alaska Legislature
Pouch V
Juneau, Alaska 99811

Dear Chairperson Cato:

The National Marine Manufacturers Association, representing over 1300 boat and boat product manufacturers, wishes to express its support for Senate Bill No. 347, currently under consideration by your committee.

NMMA strongly supports requiring repair shops to provide customers with cost estimates before the repairs are begun. It is only fair and equitable to amend the law that protects consumers of motor vehicle repairs to persons in need of marine engine repairs.

Representative Cato, we urge you and the ~~State Affairs~~ House Transportation Committee to favorably report this legislation in the interests of safe and enjoyable boating in Alaska.

If you have questions or comments about this or any other boating-related matter, please do not hesitate to contact this office.

Sincerely,

Nancy Linden

All outdoor advertising has been prohibited within highway rights-of-way by 17 AAC 20.010 since June 25, 1969 (Authority: AS 19.05.020). Recently, the Federal Highway Administration (FHwA) has informed the department that their restrictions under Code of Federal Regulations 23, §1.23 , Right of Way, (e), has been somewhat lessened to allow certain types of outdoor advertising within the rights-of-way of Federal-aid projects.

Consistent with this new federal flexibility this bill would authorize advertising on bus stop benches and bus stop shelters as a public service, properly permitted as an encroachment within the right-of-way, and with FHwA approval. Consistent with other similar encroachments that are now permitted or anticipated, the department would envision a fee to address the initial and on-going administrative costs. Following is an analysis of the resource requirements for implementation and management of the program:

1. Program Development - Changes to the Alaska Administrative Code will be required to both bring it into compliance with this statute change and establish the ground rules for placement of outdoor advertising on bus stop benches and shelters. This requires funds for the contractural legal services, advertising and travel to public hearings required under the Alaska Administrative Procedures Act. Staff provided by the department to write the new regulations would be covered by existing budgets.

Expense Item	Units	Cost	Funds Needed
Legal Staff	25 Hours	$100.	$2,500.
Advertising (Pub. Notices)	All	600.	600.
Public Hearings Travel	All	1,500.	1,500.
Total Development Costs:			$4.600.

2. DOT&PF Administrative Costs and Receipts - The department will be required to process each application for an encroachment permit, maintain an inventory and status of each permit, and provide overall management for the program in each Region. The regional and statewide Right-of-Way staff are adequate to undertake this role (with necessary coordination with Traffic Safety, Maintenance, and FHwA staff) through a fee, as these sections are funded principally from program receipts. A $250 application fee is contemplated under the level of management involved, with a smaller annual renewal fee. This approach is consistent with the TODS signing proposal that is now being proposed to address another outdoor advertising requirement. The number of anticipated permits can not be accurately determined at this time as the department has no experience with the program. An estimate of 40 or fewer applications was made for 1989, and double thereafter. Funding for these on-going costs are shown as program receipts. However, estimates for the cost of the application fee is based on, in part, the time involved in processing encroachment permits for other activities.

MEMORANDUM

TO: House Transportation Committee Members

FROM: Senator Bettye Fahrenkamp

DATE: April 13, 1988

RE: SB 421 An Act relating to outdoor advertising within highway rights-of-way; and providing for an effective date.

What the bill would do

SB 421 would allow advertising on bus benches and bus shelters within a right-of-way by permit. Last year, SB 4 passed and was signed into law. It authorized advertising on bus benches and shelters along rights-of-way. At that time, it was thought that advertising within rights-of-way would be allowable under existing law by permit. However, as DOT/PF implemented SB 4, it came to our attention that advertising that is visible from the roadway would not be allowable.

If this bill passes, DOT/PF would issue an Encroachment Permit under 17 AAC 10.010 as authorized by AS 19.25.200 to allow such advertising.

The bill has the support of DOT/PF and is allowable under federal law. The bill has a zero fiscal note.

Sectional Analysis

Section 1. AS 19.25.080 Purpose is amended to include outdoor advertising within a right-of-way. Also, it clarifies that outdoor advertising can take place on secondary as well as primary or interstate roads and to conform with new section 2 below.

Section 2. AS 29.25.105 Limitations of outdoor advertising signs, displays and devices. A new section is added to allow outdoor advertising within the right-of-way of an interstate, primary or secondary highway under the authority of a permit issued under the existing encroachment statutes.

Section 3. Provides for an immediate effective date.

Questions and Answers about SB 421

Why is this bill necessary? Wasn't a similar one passed last year?

Last year, SB 4 passed and was signed into law. It authorized advertising on bus benches and shelters along rights-of-way. At that time, it was thought that advertising within rights-of-way would be allowable under existing law by permit. However, as DOT/PF implemented SB 4, it came to our attention that advertising that is visible from the roadway would not be allowable.

How will this program work?

Typically, an advertising firm will supply and maintain the benches and shelters at no cost to a municipality in return for the privilege of placing them at authorized bus stops and selling advertising space on them. In this manner a public need and convenience is fulfilled at no cost to government.

Is this program allowable under federal law?

Yes. State law is currently more restrictive than federal law.

Will this action enhance or jeopardize federal funds?

Neither. Federal funds will not be jeopardized as long as the federal standards mentioned below are met.

What are the federal standards?

Specific federal requirements are that bus benches and shelter franchises be awarded on the basis of public invitations, and that equal access should be provided to all advertisers at reasonable rates. Further federal requirements are only that "adequate controls" be placed, by the jurisdiction, on items such as location, design, amount of advertising space, and advertising content.

Aren't we weakening the Highway Beautification Act?

No, federal policies permit this type of advertising. There are still strong "anti-billboard" provisions in federal and state law.

Is there a way to keep objectionable advertising off the benches and shelters?

As per above, the feds require adequate controls be placed on advertising content. Also, the contract between the advertising firm and the advertiser could address the issue. Finally, an appeal process to the Commissioner could be established by the department.

How does this legislation affect local advertising ordinances?

The bill does not make legal any activities prohibited by municipalities by local ordinances.

What benefit will the public receive?

It's particularly important that in these times of tight revenues, we find ways to provide desirable government services and programs that otherwise would not be available, such as bus benches and shelters. The private sector is able and willing to assist with easing the burden government faces. Enactment of this bill would create and foster new businesses in Alaska.

How will political signs be affected by this bill?

Political advertising on the bus benches and shelters is not prohibited by this bill. Federal standards would allow, however, DOT/PF to regulate advertising content, so it is conceivable that political advertising could be prohibited.

Is there any relationship to the proposal for Tourist Oriented Directional Signs?

No, there is no relationship.

Prepared by Senator Fahrenkamp's Office

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF TRANSPORTATION
FEDERAL HIGHWAY ADMINISTRATION

DATE: JUL 17 1978

In reply refer to: HOA-3

SUBJECT: INFORMATION: Bus Shelters with Advertising

FROM : Executive Director

TO : All Regional Federal Highway Administrators
Regions 1-10 and 15

It has come to our attention that many local jurisdictions are seeking to negotiate agreements with private companies for the free installation and maintenance of bus shelters along highways in urbanized areas, in return for the granting of a franchise to sell advertising space on portions of the shelters. We recognize that this is an attractive proposition for local government, both from an economic and fiscal point of view, and in the interest of promoting public mass transportation.

Since some of the roadways along which these shelters would be installed are covered by Federal-aid highway project agreements, the provisions of 23 CFR 1.23 are applicable. In FHWA Order 1-1, the authority to make determinations under that regulation is delegated to the Regional Administrators (with further authority to redelegate to the Division Administrators). The purpose of this memorandum is to provide you with some guidance for the exercise of your discretion under 23 CFR 1.23.

In determining whether a facility installed on the right-of-way of a previously approved Federal-aid highway project is permissible, the mere presence of advertising, which is understood to be the source of profit for a private enterprise, would not always render impermissible an otherwise permissible use of the right-of-way for a highway or other public purpose. However, there should be satisfactory assurance that such use will not impair the highway or interfere with the free and safe flow of traffic thereon. The same advice would apply to the approval of new Federal-aid highway projects when such facilities are in existence on the right-of-way.

We have conducted an informal review of a bus shelter program which has been in effect in New York City for the last three years, and it is our opinion that the presence of shelters of this design, with their limited use for advertising, is not inconsistent with

the purposes of 23 CFR 1.23 in urbanized areas. Since the various jurisdictions interested in these programs should be allowed enough flexibility to resolve competing interests in light of their own particular local conditions, we see little need at the present to impose specific restrictions on the approval of these programs.

At this time, we only require specifically that State or local jurisdictions award bus shelter franchises on the basis of public invitations, and that equal access should be provided to all qualified advertisers at reasonable rates. Proposed bus shelter franchise agreements should be reviewed, however, to assure that adequate controls are provided over items such as, but not limited to, location (site specific), design, amount of advertising space, and advertising content.

The previous advice on this subject from the Office of Traffic Operations, provided in a memorandum dated April 26, 1978, and in an attachment thereto dealing with a Minnesota request, is rescinded and superseded by this memorandum. We are, however, interested in taking a continuing look at bus shelter programs as they are put into operation. Thus, those programs that are approved should be subject to continuing review and informational reports should be prepared for the Office of Traffic Operations. These reports should provide a basis for evaluating the approaches taken at local, State, and Federal levels to exercise control, and determining what appropriate Federal Highway Administration policy should be in this area.

Article 3. Outdoor Advertising.

Section

80. Purpose
90. Outdoor advertising prohibited
100. [Repealed]
105. Limitations of outdoor advertising signs, displays and devices
110. [Obsolete]
120. [Obsolete]
130. Penalty for violation
140. Compensation for removal of advertising
150. Unlawful advertising
160. Definitions
170. Agreements with the United States; regulations
180. Interpretation

Sec. 19.25.080. Purpose. The purposes of AS 19.25.080 — 19.25.180 are

(1) to protect the public safety and the welfare of persons using the highways of the state by having outdoor advertising signs, displays and devices along the highways controlled;

(2) to prevent unreasonable distraction of operators of motor vehicles; to prevent confusion with regard to traffic lights, signs or signals or otherwise interfere with the effectiveness of traffic regulations, and to promote the safety, convenience and enjoyment of travel on, and protection of the public investment in highways in this state; to preserve and enhance the natural scenic beauty or aesthetic features of the highways and adjacent areas; and to attract tourists;

(3) to regulate outdoor advertising signs, displays and devices in areas adjacent to the rights-of-way of the interstate, primary and secondary systems within this state in accordance with this chapter and the regulations adopted under this chapter;

(4) to provide that outdoor advertising signs, displays and devices which are not in conformity with the requirements of this chapter are a public nuisance;

(5) to provide a statutory basis for regulation of outdoor advertising signs, displays and devices consistent with the public policy relating to areas adjacent to a highway of the interstate or primary systems declared by Congress in Title 23, United States Code, "Highways." (§ 1 ch 59 SLA 1949; am § 1 ch 86 SLA 1953; am § 2 ch 233 SLA 1968; am § 1 ch 155 SLA 1970)

Sec. 19.25.105. Limitations of outdoor advertising signs, displays and devices. (a) Outdoor advertising may not be erected or maintained within 660 feet of the nearest edge of the right-of-way and visible from the main-traveled way of the interstate, primary, or secondary highways in this state except the following:

(1) directional and other official signs and notices which include, but are not limited to, signs and notices pertaining to natural wonders, scenic and historic attractions, which are required or authorized by law, and which shall conform to federal standards for interstate and primary systems;

(2) signs, displays, and devices advertising the sale or lease of property upon which they are located or advertising activities conducted on the property;

(3) signs determined by the state, subject to concurrence of the United States Department of Transportation, to be landmark signs, including signs on farm structures, or natural surfaces, of historic or artistic significance, the preservation of which would be consistent with the provisions of this chapter;

(4) directional signs and notices pertaining to schools;

(5) advertising on bus benches or bus shelters if the state determines that the advertising conforms to local, state, and federal standards for interstate and primary highway systems.

(b) *[Repealed by § 21 ch 94 SLA 1980.]*

(c) No outdoor advertising may be erected or maintained beyond 660 feet of the nearest edge of the right-of-way of the main traveled way of the interstate primary or secondary highways in this state with the purpose of their message being read from that travel way except those outdoor advertising signs, displays or devices allowed under (a) of this section. (§ 3 ch 155 SLA 1970; am §§ 1, 2 ch 195 SLA 1975; am § 1 ch 30 SLA 1980; am § 21 ch 94 SLA 1980; am § 1 ch 6 SLA 1987)

Effect of amendments. — The 1987 amendment in subsection (a) substituted "outdoor advertising may not" for "No outdoor may" at the beginning of the subsection and added paragraph (5).

Article 4. Encroachments In Highways.

Section
200. Encroachment permits

Sec. 19.25.200. Encroachment permits. (a) An encroachment may be constructed, placed, changed, or maintained across or along a highway, but only in accordance with regulations adopted by the department. An encroachment may not be constructed, placed, maintained, or changed until it is authorized by a written permit issued by the department, unless the department provides otherwise by regula-

the outdoor advertising sign, display or device at the expense of the owner of the land or the person who erected it. (§ 5 ch 233 SLA 1968)

Sec. 19.25.160. Definitions. In AS 19.25.080 — 19.25.180

(1) "outdoor advertising" includes any outdoor sign, display or device used to advertise, attract attention or inform and which is visible to a person on the main-traveled way of a highway of the interstate, primary, or secondary systems in this state, whether by printing, writing, painting, picture, light, drawing, or whether by the use of figures or objects, or a combination of these, or any other thing designed, intended or used to advertise, inform or attract attention;

(2) "interstate system" means that portion of the National System of Interstate and Defense Highways located in this state, as officially designated, or as may hereafter be so designated, by the commissioner, and approved by the secretary of transportation (or by the secretary of commerce before the effective date of the transfer of functions under Public Law 89-670 [80 Stat. 931]), under the provisions of Title 23, United States Code, "Highways";

(3) "primary system" or "secondary system" means that portion of connected main highways, as officially designated, or as may hereafter be so designated, by the commissioner, and approved by the secretary of transportation (or by the secretary of commerce before the effective date of the transfer of functions under Public Law 89-670 [80 Stat. 931]), under the provisions of Title 23, United States Code, "Highways";

(4) "department" means the Department of Transportation and Public Facilities. (§ 5 ch 233 SLA 1968; am §§ 46, 47 ch 69 SLA 1970; am §§ 5, 6 ch 155 SLA 1970; am Executive Order No. 39, § 11 (1977))

Revisor's notes. — Pursuant to AS 01.05.031, the revisor of statutes has deleted "of transportation and public facilities" following "commissioner" in paragraphs (2) and (3).

Effect of amendments. — The 1977 amendment substituted references to the commissioner of transportation and public facilities for references to the commissioner of highways in paragraphs (2) and (3) and a reference to the Department of Transportation and Public Facilities for a reference to the Department of Highways in paragraph (4).

Legislative history reports. — For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7.

Sec. 19.25.170. Agreements with the United States; regulations. The department is authorized to enter into agreements in conformity with the provisions of this title with the United States Secretary of Transportation as provided by Title 23, United States Code, relating to the control of outdoor advertising signs, displays and devices in areas adjacent to interstate and primary systems and to take action in the name of the state to comply with the terms of the agreements, and to promulgate required regulations. (§ 5 ch 233 SLA 1968)

tion. The department may charge a fee for a permit issued under this section. The commissioner of administration shall separately account for encroachment permit fees that the department deposits in the general fund. The annual estimated balance in the account may be used by the legislature to make appropriations to the department to carry out the purposes of this section.

(b) The provisions under (a) of this section do not apply to a mailbox or a newspaper box attached to a mailbox. (§ 2 ch 64 SLA 1971; am § 41 ch 138 SLA 1986; am § 4 ch 142 SLA 1986)

Effect of amendments. — The first 1986 amendment added the third, fourth and fifth sentences and made grammatical changes in the second sentence.

The second 1986 amendment designated the existing language as subsection (a), in the second sentence of subsection (a) deleted "duly" preceding "authorized" and added the language "unless the department provides otherwise by regulation" and added subsection (b).

Chapter 30. Access Roads.

Article
2. Roads to State Lands Programmed for Surface Disposal (§§ 19.30.070, 19.30.080)
3. Local Service Roads and Trails (§§ 19.30.127 — 19.30.141, 19.30.161, 19.30.241)
4. Road Maintenance Service Areas (§§ 19.30.260 — 19.30.320)

Article 2. Roads to State Lands Programmed for Surface Disposal.

Section
70. Contracts for construction of roads
80. Construction standards and maintenance

Sec. 19.30.070. Contracts for construction of roads. The director of the division of lands may contract with private persons for the construction of roads to and on state land programmed for surface disposal that are not more than six miles from existing roads or highways. Contracts under this section are governed by AS 36.30 (State Procurement Code). (§ 1 ch 122 SLA 1961; am § 2 ch 7 SLA 1964; am § 16 ch 106 SLA 1986)

Effect of amendments. — The 1986 amendment, effective January 1, 1988, added the last sentence.

Sec. 19.30.080. Construction standards and maintenance. An access road constructed under AS 19.30.060 — 19.30.100 shall be of low standard, not necessarily suitable for all weather use. The state is not under obligation to maintain an access road constructed under AS 19.30.060 — 19.30.100. If an access road is constructed outside a municipality that has zoning ordinances, the right-of-way width for the road shall be determined by the division of lands and the Department

CHAPTER 10.
ENGINEERING: ENROACHMENTS, DRIVEWAYS, AND ROAD APPROACHES

Section
10. Encroachments
20 Driveways and road approaches
30. Driveway and road approach permits and utilities
40. Facility service roads and trails
50. Definitions

17 AAC 10.010. ENCROACHMENTS. Encroachments may be installed or permitted within highway lands, or rights-of-way, under certain conditions when they have been the subject of a previously secured written authorization issued by the department and, in respect to all highways acquired or constructed in whole, or in part, with federal-aid funds, in accordance with the federal regulations governing the future use and occupation of such highways. (Eff. 6/25/69, Reg. 30)

Authority: AS 19.05.020

17 AAC 10.020. DRIVEWAYS AND ROAD APPROACHES. (a) All driveways or road approaches constructed under permit within any highway lands or rights-of-way shall be the property of the state, but all cost and liability in their connection or in connection with their maintenance shall be at the sole expense of those lands served.

(b) Such facilities shall be constructed and maintained in such a manner that the highway, and all its appurtenances or facilities including, but not limited to, all drainage facilities, pipes, culverts, and ditches, and their safety shall not be impaired or endangered in any way by the construction or maintenance; the permits shall contain express conditions which provide for the enforcement of (a) and (b) of this section.

(c) The permit forms, except the utility permits described in 17 AAC 15, shall contain a clause which provides that the permittee shall adjust or relocate such encroachments without cost or liability to the state if, at any time, or from time to time, the use or safety of the highway within which such encroachment exists requires that the encroachment be adjusted or relocated, and that the permittee shall save and keep harmless the state, its officers, agents, employees, and contractors in any matters pertaining to the encroachment, and that the permittee shall assume all liability or cost in connection with the encroachment.

(d) Permits may be issued for driveways on any highway not converted to, or originally established as, a controlled access facility, if, in the opinion of the department, the driveways are proposed to be located in a manner which is compatible with the public safety and which will not interfere with the use of the highway; provided, however, that if the highway was financed in whole, or in part, with federal-aid funds, a stipulation in the permit shall provide that the driveway is a portion of the public facility; and further provide, that the permittee or his successors and assigns shall assume all cost and liability occasioned by either the construction or maintenance of the driveway.

(e) If a driveway constitutes the replacement of an existing means of access to privately owned lands, the department, at the time of the construction or reconstruction of the highway, shall cause such driveways to be constructed in a manner and location consistent with the engineering standards proper to the highway, in preference to replacing the existing means of access in kind, and any major improvement in the property thus effected shall be considered to be a special benefit to be offset against any severance damages to the land. Upon the completion of the construction of the highway, the owner of said lands shall be issued a standard encroachment permit containing the provisions described in (d) of this section.

(f) If no means of access, as described in (e) of this section, exist to serve any such private parcel of land, and provided that the owner is resident thereon, or has made improvements to the land, the department shall designate and construct such a driveway at a location which best serves the land, or at a location selected and designated by the owner of the land, to the extent that such driveway locations are consistent with good engineering practice and economy, the standards pertaining to such highway, and the full use and safety of such highway. Upon the completion of the construction of the highway, the owner of the

a segment of the public; "utility" also includes any corporation, company, individual, or association of individuals, or any lessee, trustee, or court-appointed receiver that owns, operates, manages, or controls any system for furnishing transportation of goods or persons by means of a railway, tramway, cableway, conveyer, flume, canal, tunnel, pipeline, or any other similar means;

(55) "utility locate service" means a service provided by a utility to locate its buried utility facilities;

(56) "utility service connection" means the cable, wire, or pipe that connects the utility distribution line to the premises served;

(57) "wet-boring" means the method or process of boring with the use of jets of water or liquid slurry;

(58) "airport" has the same meaning as in AS 02.15.260(5);

(59) "public facility" has the same meaning as in AS 35.25.020(7). (Eff. 5/23/82, Reg. 82; am 10/2/87, Reg. 103)

Senator Bettye Fahrenkamp
P.O. Box V
Juneau, AK 99811

Dear Senator Fahrenkamp,

Refering to Senate Bill 421 An Act relating to outdoor advertising within highway rights of way, and providing for an effective date, I would like to thank you for the work you have done on this legislation.

After reading all available information regarding SB 421, and having been in the outdoor advertising business for the past three years, and havingbuilt, placed, and maintained over 50 bench/sign units over the past three years, I have a few questions and comments about the proposed SB 421.

The major concern that I have is the "estimated application fee of $250.00" for each permit, as described in the March 7, 1988 fiscal note. I understand that the bill now carries a new zero fiscal note. Does that mean that both the expenditures and revenues are now zero.? That new fiscal note is dated March 10th.

Nonetheless, I have some questions about the $250.00 fee.

How was the $250.00 fee determined in the first place? The estimated expenditures/revenues show a cost of $10,000 for "personal services" listed for FY 89. This $10,000 cost divided by the estimated 40 permit/application fees you expect during FY89 comes out to $250.00. This seems high. This $250.00 fee per unit would really make me think about the feasibility of continuing my business, particularly since it would also put me in a position of having to raise about $12,500. I am the only business that currently has the benches placed. Over a period of time more will come on line. Also, what will be the amount of the "smaller annual renewal fee"? Why is it necessary? How about charging it only if changes are made?

Recently I have discovered that DOT/PF in permiting existing bus shelters in Anchorage, has until this bill, charged significantly less to municipalities for permits for shelters on state right of way. According to the Capital Projects Coordinator for the Municipality of Anchorage Transit Department, they have paid a total of $2000.00 for the permiting of 50 shelters. Why would my benches and shelters require a $250.00 fee? Would it be advisable to amend Senate Bill 421 to direct the state to charge the same permiting fee whether the permitee is a private firm or a government entity?

Could a master application be made for all of my present locations to save me money and the state the effort of reviewing individual application? Could the Borough or the City process the application?

Is there any other way to lower the cost of the fee?

Transit Advertising Group
P.O. Box 84662 • Fairbanks, AK 99708
(907) 479-3281

I know you are aware of the difficulties I have had in dealing with the Northern Region office. I would hope that whatever is decided, that it will be uniformly embraced by all the regions and regulations, policies and procedures be carried out in the same way by each right of way section.

Thank you for your consideration.

Sincerely,

Bill St. Pierre

Commissioner Hickey

Item #7

Explanation of Proposed Fee
Senate Bill 421
April 18, 1988

The proposed administrative fees for processing permits concerning bus benches and bus shelters has been an issue of concern with the department's fiscal note on this bill. In further explanation of the purpose and need for an administrative fee of the proposed magnitude the following is offered.

Each permit will require a substantial degree of analysis and evaluation in order to fulfill a requirement of the Federal Highway Administration (FHWA). Because of federal-aid funding on most state routes, they have the ability to approve or deny a permit program for these benches and shelters and to individually approve or deny applications therefore.

One required aspect will be a careful analysis of safety issues. Safety in general, and removal of roadside obstacles in particular, is an emerging focus of the FHWA. There is now considerable attention and funding directed at removal or mitigation of existing roadside obstacles, including culvert ends, bridge railings, sign posts, illegal mail box installations and similar obstacles. Given this environment, the FHWA will only approve a bus bench and shelter program if an equal degree of attention is paid to safety for these non-essential obstacles. The time involved in analyzing the design of individual requests (bench or shelter) and the proposed location relative to traffic conditions, accident histories and probability of future accidents is substantial.

The staff required to perform these analyses and process the permits have no general fund component to their salary. As such, they must have a funding source to charge to which is the need for the proposed fees. Without the proper level of analysis, FHWA will disallow these installations and legislative action authorizing bus bench advertising will be effectively moot. For a bus bench and shelter advertising program to succeed, a funding mechanism for implementing regulations and individual permit processing is necessary.

M E M O R A N D U M

To: House Transportation Committee members
From: Sen. Joe Josephson
Re: SB 463

SB 463 would remove airline tickets from Alaska's unclaimed property statute (AS 34.35.). Existing law requires that sums equal to the price of all "unused" airline tickets be paid over by air carriers to the State five years from the date of ticket issuance. (In theory, these sums, when paid, are received by the State in trust for the passengers who bought the tickets. Under AS 34.35.310, the State is supposed to try to locate these people.)

I believe the law's requirements and procedures are illogical and unreasonable as they apply to airline tickets:

1. In some cases, such so-called "unused tickets" were not used on the flights for which they were issued or within the applicable expiration dates, and so the value of such tickets has been eliminated or reduced under the terms of the passenger-carrier contract. In other cases the tickets were used or redeemed, but through data entry mistakes the use or redemption was not properly recorded.

2. When a person purchases a standard-fare ticket but fails to show up for the flight, the current policy of the major carriers is generous. Although the carrier may have been unable to fill the empty seat, a refund is still given for the full ticket value.

3. If small in-state airlines are compelled to comply with the unclaimed property statute, the additional record-keeping burden could require them to purchase new equipment and suffer additional personnel costs. These requirements may cause ticket prices to increase. Air carriers suggest that the additional recordkeeping costs they will bear will be greater than the amount of money that would be produced.

4. Airline marketing techniques -- including the introduction of discount and frequent-flyer programs -- have changed radically since airline tickets were included in the uniform law developed in 1981. As interpreted by the Department of Revenue, the Alaska unclaimed property statute would infringe on the airlines' ability to offer limited-duration and special restriction tickets. If a carrier wishes to offer a discounted fare for a ticket, but require that it will be used by a certain date, or on certain flights, it should be able to do so. After all, that was one of the objectives of airline deregulation.

Conceptually, the issue presented is whether airline tickets should be treated the same as such property as bank accounts, stock certificates, or real estate, which are "unclaimed property" under the law, or whether they should be treated the same as tour packages, season theater or sports tickets, and similar items, which are not considered "unclaimed property".

If you have any questions, please contact me at 465-4525. Thank you for your consideration.

SB 463 Fiscal Note Analysis

Alaska adopted the Uniform Unclaimed Property Act (AS.34.45) in 1986. This Act is a strong piece of consumer protection legislation. This legislation goes contrary to that act. No other state has excluded airline tickets from being considered unclaimed property. The National Association of Unclaimed Property Administrators (NAUPA) has been opposed to legislation similar to SB 463. The Department of Revenue is opposed to this legislation.

The Fiscal Note reflects an annual anticipated revenue reduction of $100,000. This is based on an estimate made from our short history with this law. We believe this figure to be quite low, especially as the first report year filed will include all unclaimed tickets to date held by the airlines. To date only one Air Carrier has filed with the department and remitted $26,000. This air carrier is a local one.

Currently there are 22 domestic and 14 international air carriers operating in Alaska. The department believes the major air carriers operating in Alaska have substantial amounts of unclaimed property. This property should be turned over to the state so we may locate the owners.

March 3, 1988

The Honorable Lloyd Jones
The State Senate
Alaska State Capitol
Senate Transportation Committee
Juneau, Alaska 99802

Dear Senator Jones:

I am very much in support of Senator Josephson's legislation to delete unused airline tickets from the state's unclaimed property list.

1. Our company writes around 50,000 tickets per year.

2. Four or five tickets per month are unclaimed but are paid for with a travel voucher. Those vouchers are voided by the agency, thus cancelling the ticket value.

3. We have less than one ticket per month that is paid for but not picked up.

4. The average value of our ticket is only $45.00 and the cost of tracking these unused tickets for five years would far exceed the ticket value.

5. Each time a passenger makes a reservation the airline is charged about $1.50. Each ticket cost approximately ten cents plus the cost of the agent writing the ticket.

Therefore, we are not making money on unused tickets.

Sincerely,

Stan Hermens
President

SH/fc

DISCUSSION ON ABANDONED PROPERTY LAW RE: UNUSED AIRLINE TICKETS

MarkAir's position is that unused airline tickets should not be classified as abandoned property. The main reasons for this position are:

I Of all the airline tickets sold, very few of these tickets actually result in unused transportation.

II Of all the tickets sold but not used, most have a de minimus value.

III Accounting for tickets sold over an extended period carries a significant and burdensome cost.

IV Tickets are sold with the understanding they are good for travel anytime within the subsequent year unless restrictions are imposed on their use due to special discounted fares.

MarkAir utilizes a computerized system to account for the sale of tickets and passenger revenue. The system matches each sales document with its related tickets based on the ticket and coupon number.

A simplified description of how MarkAir's sales and Match-Use Accounting System works may be helpful at this point.

A passenger ticket or excess baggage ticket is prepared at a MarkAir ticket counter, city ticket office or any of five hundred plus travel agency locations authorized to issue tickets on MarkAir. An accounting copy of the transaction

is submitted to the Anchorage accounting office for recording its value, taxes, routing and other data by ticket number.

The ticket number, along with its value and issue date becomes the basis of a Match-Use file and general ledger transportation liability account. As a flight coupon is used by the passenger, the coupon is processed into the file using its fourteen digit ticket number. The system will then match the coupon to a sales record and reduce the liability value of the file and the general ledger for the amount of the ticket.

The entire sales record for each ticket will remain in the file until one of two events occur: (1) all coupons are matched off or, (2) the record becomes fifteen months old, at which time the remaining open coupons are removed.

The checks and balances in the system include a computerized file which provides an item by item history of transportation coupon values and is the support to the transportation liability account in the general ledger. On a monthly basis, the general ledger account is reconciled to the computer file, with accepted differences resulting in revenue adjustments.

Since the monthly revenue dollars are entirely controlled within the computer system, tickets which are used but are not processed for whatever reason, are excluded from the match process. This results in an overstatement of the transportation liability and understatement of revenue. Unmatched tickets having on issue date in excess of fourteen months from the current month are recorded as revenue.

The major areas which cause revenue to age-off rather than be matched-off are as follows:

1. Failure to lift flight coupons and excess baggage coupons from passengers makes it impossible to remove them by the match-use process from the sales record.

2. Loss of entire flight envelopes containing the flight coupons lifted from passengers results in used MarkAir flight coupons not being match-used off the sales record.

3. Failure of headquarters accounting personnel and the system to match used flight coupons off the sales record by:

   a) Failure to process coupons/data.

   b) Keypunch error in fourteen digit ticket number.

   c) Unable to read the fourteen digit ticket number.

4. Failure for other airlines to bill MarkAir because of similar mishandling problems as mentioned in 3.

5. Tickets which are refunded but are not removed from the sales record because of the absence of applicable ticket and coupon number.

6. Refunds of "Aged" sales. Refunds of tickets over fourteen months in age are made and accounted for in the current accounting period. No adjustments for these refunds can ever be made to a closed record.

7. Unsupported exchange use tickets not being removed from the sales record because the applicable ticket and coupon numbers were not available.

Adjustments to the transportation liability account are also required to adjust the sales record for fare changes, refund fees and commission expense paid to travel agencies.

An analysis of ticket sales and lift processing has been performed to define what accounts for this failure to achieve matched use removal:

About sixty-three percent of use against MarkAir sales is from LIFT use. Passenger coupons can be lifted by MarkAir personnel in several airport locations. For passenger convenience and to relieve conjestion, some flight coupons may be lifted at the podium in the gate waiting area and some are lifted by the inflight attendants at the doorway to the plane. All coupons for the same flight are consolidated, put into a flight envelope and sent into the Anchorage accounting office.

The flight envelopes are checked against a flight roster. Coupons issued by other airlines are separated from those issued by MarkAir. The other airline sales coupons are input and processed to the billing system. MarkAir lift coupons are input and processed to be matched to the sales record computer file.

Approximately twenty-nine percent of the tickets sold by MarkAir are used for flights on other airlines. The other airlines then bill MarkAir for these used flight coupons. The billed coupon numbers are entered into our system to match-off use from the computer sales record file. A major problem encountered

here is that many times an airline will bill multiple coupons for the same ticket but indicate only one coupon number with the entire billing on the one coupon. This results in a failure to remove used coupons from the sales record file.

Refunds are made at ticket counters, ticket offices, at travel agencies and in the Anchorage accounting office. When refunds are made, the refunded coupons are batched and sent to data input so that the ticket and coupon numbers can be input to relieve the sales records. There have always been a number of difficulties processing refunded coupons to the computer file. The refunds are made but the coupons may go to storage prematurely without the use (refund) being processed against the sales record file. Some refunds made in the field are missing entire or partial coupon and ticket numbers or we are unable to read them. Other refunds are made to passengers who have lost their flight coupons and we are unable to determine the complete ticket or coupon number.

The exchange of one ticket for another ticket creates a new sales record. When flight coupons are exchanged for new transportation, the exchanged flight coupons are normally attached to the new sales records and sent into the accounting office to process both the "use" on the old sale and to establish a new sale record. Whenever new transportation is issued without receiving the old flight coupon, the necessary ticket and coupon number required to clear the old record is absent and the transportation liability is incorrectly overstated.

Approximately ninety-nine percent of use is properly applied in the normal routine manner to the computer sales record file. The other one percent is

taken as aged revenue because we know the problems and errors which exist in the handling of used tickets. MarkAir has always been concerned about use processing errors, but it has never been economically justifiable to seek a hundred percent accuracy from the many employees handling transactions many times.

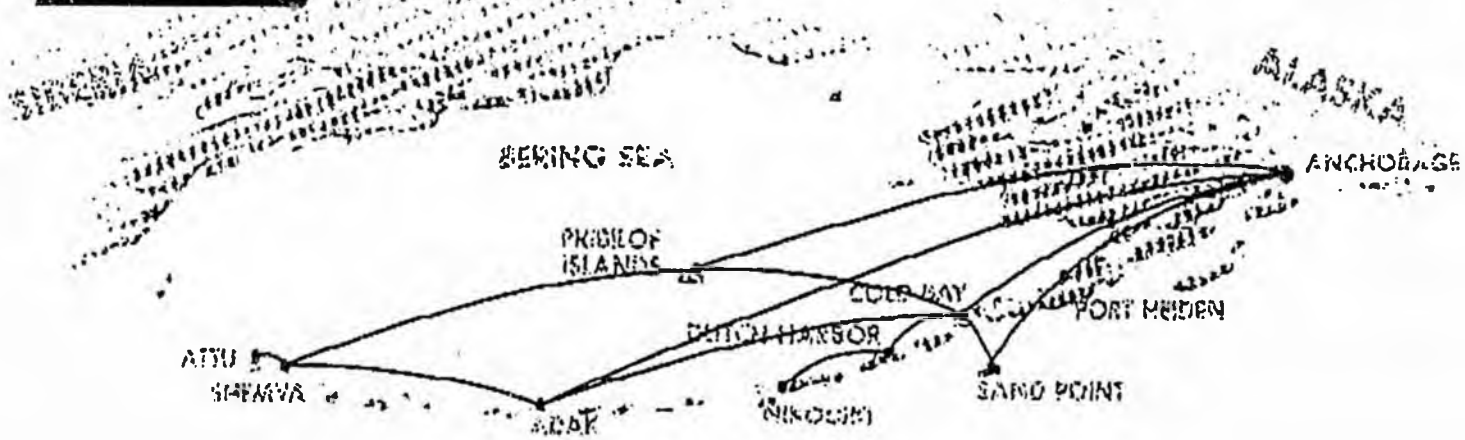
While nearly all tickets sold are used by the passenger, some very small percentage remain unused. Since we refund expired tickets as well as lost tickets, unused and unrefunded tickets are most likely of little value. We have found people generally seek refunds on unused tickets of almost any value, however, refund fees and adjustments for breaking restrictions on discounted tickets e.g., weekender or supersaver fares, make the nuisance of applying for the refund of certain tickets not worth the value of these promotional tickets.

Accounting for sold tickets over an extended period carries significant costs. These costs arise from record keeping, research, auditing and storage. For a carrier like MarkAir, this cost today would involve adding additional personnel, record storage space and computer processing and storage capability. These costs would continue to rise over the years as additional sales records continue to be added to historical files. Small carriers without a computerized match-use system would be forced to add personnel and computer hardware and software to develop a similar capability. The result would be the eventual resolution of most unused tickets as misprocessed or mishandled or unused discounted tickets which through the passage of time may have no refund value.

Finally, since tickets are generally valid for one year after purchase, being forced to refund unused tickets many years after they are sold infringes on the contract made between the airline and the ticket purchaser. The airline will

have provided the availability of transportation for the year after purchase and incurred the costs associated with producing the service and schedule. Whether the tickets are used or not, airlines will have held up their side of the contract and one year later if the ticket has expired they deserve to retain the value of the ticket and not be required to incur the costs to track, audit and research old tickets for years.

RAA REEVE ALEUTIAN AIRWAYS, INC.



March 7, 1988

Honorable Lloyd Jones
Chairman
Senate Transportation Committee

Dear Senator Jones:

Reeve Aleutian Airways would like to comment on the Uniform Unclaimed Property Act (AS 34.45) that your committee is reviewing.

Reeve Aleutian Airways did remit $25,109 in miscellaneous open accounts with credits due pursuant to Uniform Unclaimed Property Act. The accounts varied in dollar value with a vast majority less than $50.00. I also wish to note that the time period Reeve researched and made remittance for exceeded 5 years. Accordingly, any subsequent remittances pursuant to this act would be substantially less.

Reeve did protest and assert to the Dept. of Revenue that AS 34.45 created a conflict with filed tariff rules regarding refunds by individuals or claims by other airlines. Reeve also argued that with respect to tickets, revenues and liabilities were earned. Please note that a credit may be claimed within a time frame of two years for an individual and two and one half years by an airline for unused ticket coupons.

Reeve charges a passenger the appropriate amounts for travel including taxes. Unless the passenger can prove that he did not travel by presenting an unused coupon Reeve does not refund money. Reeve does however set up credits by passenger name/airline until the entire package of ticket coupons is received to debit against credits. Coupons are lost, misplaced, not matched, misfiled, not submitted, etc., etc. Accordingly, there are credits that are not cleared during the tariff time period. That certainly does not mean that Reeve should issue a credit nor consider the credits abandoned property. Until the expiry of the tariff time period all liabilities and revenues are considered earned income.

4700 W. INTERNATIONAL AIRPORT RD. • ANCHORAGE, ALASKA 99502

RAA

Reeve believes that a significant portion of the sum remitted to the State is earned revenue belonging to Reeve. The Dept. of Revenue considers unmatched coupons as miscellaneous intangible property that is abandoned and thus reportable. Reeve disputes that position. The fact that Reeve remitted sums does not mean that Reeve concurs nor agrees with the Department's position.

Please consider the various points and arguments before you carefully. I would like to urge the committee to exempt airline ticket coupons from AS 34.45.

Thank you.

Sincerely,

David D. Jensen

Re: SB 463

Dear Commissioner Malone:

The Unclaimed Property Administrator for the State of Alaska, Patty LaPierre, has brought to my attention a bill now pending in Alaska which could have substantial impact on other states. SB 463 apparently excludes unused airline tickets from the reporting and remitting requirements of the Alaska unclaimed property laws.

No other states exclude unused airline tickets from their laws. In addition, most states have encountered, either through legislation or litigation, attempts to carve out exceptions to the unclaimed property laws. In the southwest, oil and gas companies long resisted unclaimed property requirements. In other states, co-ops have attempted to avoid turning over abandoned property.

Ordinarily, both the State and its citizens suffer as a result of any exceptions to the unclaimed property laws -- the State, because of a diminution in revenue, and its citizens, because they probably will not be notified about their abandoned accounts.

Another impact to the kind of exception the Alaska legislature is considering is that under the United States Supreme Court case of Texas v. New Jersey, 379 U.S. 674 (1965), any property excepted from coverage by Alaska law may then be subject to reporting and remitting under the laws of the state of incorporation of the holder (in this instance, the airline). Thus, if the property (unused airline tickets) is not covered by the law of the state of the passenger's last-known address, it will probably be covered by the law of the state of incorporation of the airline (for example, Delaware).

AN EQUAL OPPORTUNITY EMPLOYER

Moreover, it will be only the citizens of Alaska who suffer from this law, because the laws of the other states will apply when their residents have unused tickets for Alaskan airlines. For example, the unused ticket of a Texas resident travelling on an Alaskan airline would still be subject to Texas unclaimed property laws.

In the past few years, the National Association of Unclaimed Property Administrators has worked closely with corporations required to report in many states. A goal of both the states and corporations has been to make the unclaimed property laws more uniform -- not complicate corporate reporting by state exceptions. On behalf of the Association, we hope you and legislators considering SB 463 will consider carefully the matters set forth above in your deliberations.

MEMORANDUM

April 13, 1987

TO: Representative Bette Cato, Chairman
House Transportation Committee

FROM: Senator Arliss Sturgulewski
Senate District F

RE: SCR 5 "Relating to promotion and marketing of the state-operated international airports."

The lack of a marketing plan for the state's international airports could well result in reduced revenue for the airports in the future. It is hoped that the administration would be able to address this situation in the FY 88 budget. Since budgets are now in final preparation, I hope you will be able to schedule a hearing soon on SCR 5.

Please let me know if you need additional information. Thank you.

MAR 23 1987

MEMORANDUM

March 20, 1987

TO: Representative Bette Cato, Chairman
House Transportation Committee

FROM: Senator Arliss Sturgulewski
Senate District F

RE: SCR 5 "Relating to promotion and marketing of the state-operated international airports"

SCR 5 "Relating to promotion and marketing of the state-operated international airports" has been referred to your committee. Timing is very critical as it is hoped that the administration will be able to incorporate this request into the FY 88 budget. The lack of a marketing plan for the state's international airports could have a very serious negative impact on our state and I hope that you can schedule an early hearing.

My concern in sponsoring SCR 5 is that there is no marketing plan for the state-operated international airports at Anchorage and Fairbanks. This resolution merely asks the administration to initiate a marketing plan. It does not try to push any preconceived structure or budget.

There are serious concerns about the future financial health of the international airports. New technology, particularly the new Boeing wide-body 747-400's can fly from Europe to the Orient without refueling in Anchorage. Growing competition from Moscow as well as Pacific Northwest cities could have a negative impact on passenger and freight through Anchorage.

A 1985 study by the Alaska Department of Transportation and Public Facilities showed that the Anchorage International Airport generated more than $1 billion for the Anchorage economy. This included more than 13,000 jobs with annual earnings of $375 million. This, of course, is a major contributor to the state's economy that we cannot afford to lose.

My staff is available to provide backup material. Again, thank you for your consideration.

TONY KNOWLES, MAYOR

April 22, 1987

The Honorable Arliss Sturgulewski
Alaska State Legislature
P. O. Box V
Juneau, Alaska 99811

Dear Senator Sturgulewski:

For some time, concern has been expressed for the future viability of Alaska's International Airport System, including the facilities in Anchorage and Fairbanks. In fact, since 1979, Anchorage officials, business leaders and organizations have encouraged marketing programs to protect, develop or improve the crucial overseas revenue streams which make the airport system self-supporting.

Technological change is certainly one of the factors impacting the airports. Marketing won't prevent these changes, but it can re-position the airports to take advantage of the changes rather than be a victim of them. The real threat lies in competing communities and countries effectively using marketing tools and strategies to persuade carriers, passengers and shippers to use alternatives to the traditional Transpolar and Transpacific air routes through Anchorage. Even the Soviet Union is aggressively advertising the Siberian route.

The threat is no longer in the future. Very reliable sources have confirmed plans by some carriers to shift as many as six flights per week by mid-87 from Anchorage to the Siberian route. The average loss of one 747 overseas flight per week will impact Anchorage and Alaska annually with:

$131,273 less in airport fees for customs, fuel, landing, loading, etc.

$205,000 less in hotel revenues for crew rooms

$100,000 less in miscellaneous spending by crews

$608,400 less in duty-free and other concession revenues

Total average loss in a year to the community, the airport and the State from the loss of just one overseas flight per week is more than $1M.

If we stand by and fail to aggressively and effectively reposition Anchorage and the Transpolar route with carriers, passengers and shippers, we face the inevitable shift of the cost of operating the airport to either the taxpayers or to the domestic carriers, and ultimately, to the cost of inter- and intrastate air travel and shipping. We will not only lose economically in the near term - we will also lose the opportunity to develop overseas markets and trade. With higher domestic costs, we will also become less competitive in the effort to expand existing business and attract new business.

The airports are not just a state problem. They are crucial to the economic health of the communities surrounding them. With the participation of local private and public sector leaders and business organizations, we are forming the Anchorage Economic Development Corporation as a vehicle for the Municipality, the airport, and private business to market the economy and the airport cooperatively. We have encouraged a similar consortium to support the Fairbanks airport. We hope to be on the street by June 1, and we need your support and encouragement.

The need for action is clearly established. We have a plan, and now with AEDC we will have a vehicle to pool our resources for action. With hard work and cooperation, there is no reason we can't overcome this threat. We also need your support to continue to bring the importance of this problem and the critical need for action to everyone's attention on a local, state and federal level.

Sincerely,

Tony Knowles
Mayor

Anchorage Convention & Visitors Bureau
Our Community's Way of Attracting and Serving Visitors

Dana Brockway
President

February 6, 1987

Dear Senator Sturgulewski,

Recently, I had an opportunity to talk with you regarding proposals to establish a national and international marketing program for Anchorage International Airport. I am forwarding this packet to provide you with some background information on the issue. While is is incomplete, I hope that you will find it useful.

In it you will find excerpts of several reports that detail the economic impact of airport activity on Anchorage's economy, problems that could erode the airports revenue base, opportunities that exist for market expansion, a proposed solution and copies of some of the articles and resolutions supporting the proposal. The concept of developing a strategic airport marketing program is not a new one, but it surely is an idea whose time has come. The importance of our need to intensify our efforts has never been greater. I hope that following review and discussion you will be able to support it. If I can be of any help or provide any additional information on this important issue, please call me.

Sincerely,

Dana Brockway
President

1987

ACVB LEGISLATIVE & COMMUNITY RELATIONS PRIORITIES

Governmental

1. Cargo and passenger marketing program to protect the future revenue streams of the Anchorage International Airport.

1. $8.2 Million Alaska Division of Tourism Budget.

2. Creation of a Legislative Committee on Tourism.

3. Year-round operation of the Begich Boggs Center At Portage Glacier.

4. Visitor related improvements and enhancements on state highway projects to include but not be limited to pull outs, interpretive displays and signage.

5. Whittier access toll road.

Community

1. Continue joint meetings between the ACVB and AVA Board of Directors at least twice each year to communicate and understand respective legislative goals.

2. Encourage combined monthly membership meetings by the ACVB and the local AVA Chapter.

Programs

Marketing the airport will involve research and target identification, direct sales, advertising, publicity, trade shows, promotions, and tools including brochures, audio visuals etc. Quantitative measurement in the short term will be carrier, passenger, cargo retention and growth and airport land and new businesses development. In the long term, measurement will include self supporting income and overall position in the world market.

Funding

Based on formulas used in private sector marketing, the airports should initially devote a greater percentage of gross sales or margin to marketing and then lower the rate when marketing effort and positioning are well established. Based on the size of the airports and the urgency of the problem, it makes sense to transfer at least $5 Million from "International Airport Fund" reserves to establish an annual marketing line item for the two International Airports.

however," he said, "our estimated arrival time will be about two hours later than scheduled."

"Ye gods!" cried a lady sitting next to me, who happened to be on her first flight, "if that fourth engine goes, we may be up here all night!"

As the story points out, it is one thing to recognize that a challenge exists, but making a correct interpretation of that challenge is another matter.

Today, I will focus on the challenges facing Anchorage International Airport. First, I'll discuss the growth of the airport since it began operating; next, I'll point to opportunities that await international airports willing to market their facilities and services; third, I'll talk about the advance of aviation technology and how it may effect Anchorage's airport; fourth, I will provide recommendations as to how we may market our airport, to which likely targets, and finally, who supports the marketing of Anchorage International.

But first, I'd like to digress for a moment and tell you about a concept some of you may already be familiar with. Back in 1979, the late R. Buckminster Fuller visited Anchorage to speak at the Future Frontiers conference. It was at this three-day symposium, sponsored by the State Legislative Council, that Mr. Fuller spoke of Alaska's prime location in relation to the world.

ANCHORAGE BUSINESS COUNCIL
AIRPORT COMMITTEE
MARKETING PROPOSAL
January 14, 1987

Problem

Alaska's International Airports presently generate enough revenues to be self-supporting. Last year, even after accounting for the deficit at FIA, the airports had an income of $14 Million. However, competitive and technological changes threaten to undermine Alaska's traditional airport revenue streams within five years.

There is clear evidence Alaska is losing its position as a re-fueling stop for Transpolar and Trans Pacific flights. This raises at least two concerns. If the trend continues, eventually domestic carriers and passengers will be required to pick up the slack which will dramatically impact domestic tourism, the cost of shipping and "lower 48" travel. Even more significantly, Alaska will begin to lose undeveloped opportunities for International Trade.

Solution

Since the late 1970s, de-regulation and other developments have increasingly required airports to proactively market themselves in order to remain competitive and hold market position. Newark, Kennedy, LaGuardia, Baltimore/Washington, Atlanta/Harsfield, Miami, and Seattle/Tacoma are good examples.

Following the successful example of these airports, Alaska's International Airports should establish a marketing function as a standard part of their mission and operation. The marketing funds should come from airport operating reserves. The airport marketing effort should protect existing revenue streams and seek to attract and facilitate new ones working in cooperation with economic development partners in each airport location.

Marketing Partners

Airport marketing efforts aimed at passenger development are customarily mounted in conjunction with community convention and visitor bureaus and those aimed at cargo and land development are mounted in conjunction with local economic development coalitions involving communities, utilities, transportation companies, resource development corporations, foreign trade zones, chambers of commerce etc. Partnerships such as these permit airport marketing efforts to stretch and avoid duplication.

Programs

Marketing the airport will involve research and target identification, direct sales, advertising, publicity, trade shows, promotions, and tools including brochures, audio visuals etc. Quantitative measurement in the short term will be carrier, passenger, cargo retention and growth and airport land and new businesses development. In the long term, measurement will include self supporting income and overall position in the world market.

Funding

Based on formulas used in private sector marketing, the airports should initially devote a greater percentage of gross sales or margin to marketing and then lower the rate when marketing effort and positioning are well established. Based on the size of the airports and the urgency of the problem, it makes sense to transfer at least $5 Million from "International Airport Fund" reserves to establish an annual marketing line item for the two International Airports.

PROTECTING THE AIRPORT'S FUTURE

Al Parrish, Speaker
President, Sheffield Enterprises, Inc.
Anchorage, Alaska

Speech Prepared for the **ACVB Membership Luncheon**
December 18, 1986

Thank you. It's good to see so many friends in the audience today and to see such a good turn-out of those in our community who share a growing concern over the future of the Anchorage International Airport.

Before I begin, I'd like to tell you an aviation story: Some time ago, I was on a flight into Kennedy Airport, one of a plane's engines died while flying over Pennsylvania. In a reassuring voice, the captain spoke to the passengers, "I'm sorry to say that our outside port engine has stopped functioning. There is no cause for alarm. However, we'll be about twenty minutes late reaching Kennedy Airport."

A little later, the captain spoke over the intercom again, announcing that a second engine had failed, and again he said there was no cause for alarm -- the other two engines were more than sufficient. "However," he said, "we'll now be about an hour late in landing."

A few minutes later, the captain reported a third engine had conked out, but that the remaining engine would get us down safely. "Now,

however," he said, "our estimated arrival time will be about two hours later than scheduled."

"Ye gods!" cried a lady sitting next to me, who happened to be on her first flight, "if that fourth engine goes, we may be up here all night!"

As the story points out, it is one thing to recognize that a challenge exists, but making a correct interpretation of that challenge is another matter.

Today, I will focus on the challenges facing Anchorage International Airport. First, I'll discuss the growth of the airport since it began operating; next, I'll point to opportunities that await international airports willing to market their facilities and services; third, I'll talk about the advance of aviation technology and how it may effect Anchorage's airport; fourth, I will provide recommendations as to how we may market our airport, to which likely targets, and finally, who supports the marketing of Anchorage International.

But first, I'd like to digress for a moment and tell you about a concept some of you may already be familiar with. Back in 1979, the late R. Buckminster Fuller visited Anchorage to speak at the Future Frontiers conference. It was at this three-day symposium, sponsored by the State Legislative Council, that Mr. Fuller spoke of Alaska's prime location in relation to the world.

During his address, Mr. Fuller presented a map he had developed back in 1930, called the "Dymaxion Sky Ocean World Map". This map was first printed in Life Magazine in 1943 and also published in his book, Critical Path. If you look at this map, you'll see that Alaska is positioned in the center of the map, and that it does absolutely link Asia and America. Alaska anchors the Pacific Rim, around whose circumference clusters 2/3 of the population of the world.

In Anchorage, we have always seen ourselves as the "Air Crossroads of the World". That expression was used for many years as the slogan for the Anchorage Chamber of Commerce. But Mr. Fuller (and several others) have advanced the theory to say that Anchorage and Alaska are not only the crossroads, but the veritable center of the world for trade, commerce and travel. Our markets are not just transpacific, but are, in essence, global.

Bearing that perpective in mind, let's return to our topic today. Anchorage International Airport, as a state-owned facility, began in the early 60's as a principal transfer point for travelers making connections to points within and outside Alska. In addition, the airport was a refueling and an entry and exit point for international flights, principally on routes between Europe and the Far East.

Today, twenty-six years later, Anchorage International still serves those primary funcitons. The plant, however, has grown to include two passenger terminals encompassing 295,000 square feet of total floor area, three runways, extending up to 10,900 feet, 36 aircraft gates, and 6 baggage claim areas. All of this is contained within approximately 2,600 acres. The

airport is serviced by 16 major carriers, 9 of which are international, 5 commuters and approximately 25 non-scheduled airlines.

According to a DOT/PF study conducted in 1983, the airport contributes more than $1.5 billion to the Anchorage economy. Over 13,000 residents counted on the airport's operation for their jobs, earning a total of $375 million dollars.

How would you like your business to have a financial statement like this: In FY '86, the airport took in $45 million dollars, showing a profit of $2 1 million. Let's take it one step further: image having a business that made a profit of $2 1 million a year, and that it achieved this profit without any advertising, any public relations, or any marketing studies whatsoever! In today's competive marketplace, it's nearly impossible to believe, but that is precisely the situation at Anchorage International.

The times, they are a'changin', and more and more, international airports are beginning to be seen by the private sector as trade centers. offering enormous potential for economic development within the communities they serve.

As I pointed out earlier, Anchorage's strategic location could easily enable it to serve as a platform for business between Europe and Asia. The possibilities are limitless. For example, if Anchorage were to become a foreign trade zone, goods from around the world could be stored here, processed, used in manufacturing other items, exhibited, repackaged, sold or handled in numerous ways. Imports could be used with domestic parts to

manufacture new items within the zones -- all without paying any customs duties or excise taxes. It would be a tremendous catalyst for development within our business community.

In addition, by expanding the duty free zone at the airport to allow foreign shoppers a much wider range of retail exposure than just gifts and liquors, we could create, in essense, regional shopping centers for stop-over travelers. They could tour duty free trade complexes and show rooms without the necessity of having to go through customs.

More and more, we're seeing international airports taking an active role in marketing their facilities and services. For example, Seattle Tacoma Airport, together with the Port of Seattle, which owns the airport, has developed an agressive campaign to attract the expanding transpacific market, the international tourist market and the air cargo industry.

They've produced numerous brochures and an audio-visual presentation. They have a staff of marketing representatives which actively call on transpacific clients, touting Sea-Tac's excellent international services on the airport premises, such as banks, customs brokers, freight forwarders, warehouses, foreign consultates, plentiful terminal space, excellent ground access, ample runway capacity and minimum environmental concerns. Sea-Tac representatives are even stationed in Tokyo.

By working closely with planning officials of Boeing's aviation market research company, Sea-Tac is able to track aviation trends and target markets for air travel services. The results of their research indicate that

their marketing approach should include such selling points as, lower landing fees than other airports; lower fuel prices; fewer airport delays; improved custom clearance; and greater amenities. These would include duty free shops, foreign language signs, interpreters, exchange facilities, ground transport access and egress.

Sea-Tac's programs and policies have helped to establish it as one of the top twenty airports in the United States for passenger-traffic volume. In 1982, over 9.2 million passengers and 148,000 metric tons of air freight were handled by Sea-Tac. By 1985, the number of passengers at Sea-Tac increased to 11.5 million passengers, up 25%. Freight went up to 210,000 metric tons, up 42%.

Other airports are following suit. Hartsfield International in Atlanta employs a marketing staff, using funds from both public and private sources, to produce brochures, audiovisuals, and advertisements. Trade shows and trade missions are also a part of the airport's marketing strategy.

We see similar efforts at Baltimore/Washington International Airport, and Miami International. We're seeing more and more examples of international airports using ad agencies, public relations firms, and outside sales representatives to establish and position themselves in the international market.

The need, then, to make our presence known is going to become increasingly important in the years ahead. And not just because others are

doing it. At this time, Anchorage International faces a very critical challenge, that being the advancement of aviation technology.

I'm sure most of you have heard about the new Boeing 747-400 series aircraft. This aircraft is an advanced version of the B-747's which have served Anchorage International Airport for the past fifteen years. However, the new 400-series includes some remarkable advancements in engine performance and aerodynamics.

The 400-series requires only a two-person flight crew, compared with the three crew members required on all other 747's. It will be able to carry between 400 and 600 passengers, depending on configuration, and will be able to fly approximately 8,000 miles non-stop. This will allow the aircraft to fly between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without refueling in Anchorage. Boeing received its first order in late 1985 from Northwest Orient Airlines. The first production model of the aircraft is expected in late 1988.

If foreign carriers depart Anchorage International Airport, the operating expenses at the airport will not decline in proportion. The difference between the shortfall in revenue and the continuing expense of operating the buildings, the facilities and the runways will have to be borne by higher landing fees from airlines such as Western, United, Alaska, MarkAir, Reeve and all the commuter carriers. In addition, there will be higher tie-down charges. Thus, the entire rate structure will go up. Who will ultimately pay the cost? You and I, every time we purchase an airline

ticket or use the airport for whatever reason. The effect on the visitor industry itself could be diasterous.

As you can see, we're in a race against time to develop a plan to protect our existing revenue streams and to create opportunities using the airport as a hub for new business activity.

Our window of opportunity is slowly closing, and we can't afford to wait. We need to sell Anchorage International as a place the airlines will want on their route schedules -- whether it be for passengers, cargo or simply refueling. And the most direct way to go about this task is to mount a marketing campaign, promoting our plant and its services to the world.

Funds for marketing the airport are already available. Revenues from the airport's operation go into a reserve account. The money is there. From those funds, we now need to dedicate a line item in the airport's budget to marketing.

Once a line item dedicated to marketing the airport is budgeted by the State, a cooperative effort can be developed, whereby funds from private and public sources would be combined to develop a generic campaign. This program would be modeled after cooperative efforts which have been highly successful in marketing Alaska seafood and tourism.

Based on past experience with those successful cooperative programs, we believe it will take approximately $3 - 5 million dollars to develop and implement a comprehensive marketing plan for the airport. This seems like

a reasonable amount to launch a program to reach the world's markets. Once the groundwork has been laid, we'll have a better feel for what it will take to maintain an on-going marketing program.

Which revenue streams need to be protected and developed?

Obvious ones are, of course, those passengers who are stopping over in Anchorage, on their way to or from a primary destination. Our research shows that 84% of those on flights stopping over in Anchorage would be interested in a stay of 4 -7 days. One-half of those would have stopped on the trip they were on if they would have known they could. Once we tell them they are able to stopover, we need offer an irresistable incentive for them to do so.

One good example of a stopover program was developed by the Port Authority of New York and New Jersey for passengers transitting through the three major airports: Kennedy International, Newark International and LaGuardia. They call it, "On Your Way Over, Stopover". The package includes one-night hotel at a choice of hotels, sightseeing, VIP shopping service at Macy's or Bloomingdales with language assistance, a choice of Broadway theatre tickets, a welcome kit, etc., all at a low package price, depending on the visitor's selections. They've advertised this program in periodicals all over Europe.

The Anchorage Convention and Visitors Bureau is taking its cue and is moving ahead to develop local stopover programs. But the bigger job before us is to let passengers know ahead of time that stopover opportunties exist.

Other international passengers of great interest to us are those on either end of the transpolar route who could be persuaded to use Alaska as a visitor destination. New research by the State of Alaska shows that the potential for Japanese and German visitors selecting Anchorage as a visitor destination nearly equals the potential for visitors coming from the U.S. If we do our job right in selling our destination, it is possible that we could attract an additional 200,000 visitors a year from Germany and Japan, or a 50% increase in vacation/pleasure travel.

While passengers are important, air freight offers even greater potential for growth. By increasing freight handling at AIA, we would see an increase in landing revenues (which are based on the gross takeoff weight of the aircraft) and fuel revenues for the airport. In the private sector, we would see an increase in business and land development surrrounding the Anchorage International, as well as crew expenditures at hotels, restaurants, car rental, and retail and service businesses.

International air freight is a rapidly growing market. In recent years, international air cargo shipments have increased at twice the rate of passenger travel. The main reason for this growth has been the overall increase in the importance of speed in international transactions. This is particularly true in Alaska when large volumes of perishables, such as fish, are shipped to outside markets.

The most cost-effective freight for air transportation is low-volume, high-value, and relatively low-weight products, such as electronic

components, mini-computers, and precision instruments. Other less obvious air freight products are those with time-sensitivity, such as high-fashion apparel, pharmaceuticals, animals, produce, seeds and flowers. These markets need to be actively developed.

I mentioned fuel fees, and I'd like to stress that fuel is an important revenue stream. The airport operates a fuel storage farm and many operators have underground storage tanks. On an average day, approximately 1.2 million gallons are pumped. This means approximately $24,000 a day, or $9 million annually in fuel flowage fees.

A natural response to growing freight business would be land and business development near the airport. The development of an airport industrial park and/or a foreign trade zone designation would offer Anchorage new jobs and revenues in a wide range of business activities, including freight forwarding, processing and manufacturing, warehousing and distribution, and much more.

Anchorage presently handles over 300 million pounds of freight each year, a 14.5% increase from ten years ago during the pipeline days. The opportunity is there, but we have to knock on some doors.

There is an old saying regarding the value of advertising: a codfish lays thousands of eggs, and this is done silently. A chicken lays one egg and cackles. The result: nobody eats codfish eggs, and nearly everyone eats chicken eggs. Therefore, we need to cackle about our airport. I guess that would fit in with the bureau's "Wild About Anchorage" campaign.

Who is backing the plan to market the International Airport? This idea was further advanced by the Anchorage Business Council's Airport Committee, which I happen to co-chair, and others. The council, by the way, was formed by Mayor Tony Knowles with the mission of spurring economic development in Anchorage. Both the Municipality and the Anchorage Business Council have endorsed our committee's recommendation. The Greater Anchorage Chamber of Commerce has since given the idea its full support, along with the Anchorage Convention and Visitors Bureau.

We'd like to invite your support as well, because as residents of Alaska and users of the airport, you have a stake in its future operation. We presently have the lead time to plan for the decade ahead. But we can't afford to wait. We need to plan for the 21st century now.

I've enjoyed this opportunity to speak to you today about protecting our airport's future. I've discussed how we've grown in the past 26 years, and which opportunities and challenges await us; I've explained how, through innovative marketing, we can keep the airport solvent and help spur economic development, and I've noted who supports that kind of thinking.

Buckminster Fuller, in describing his Dymaxion World Map, said that the map showed two things: 1) that the colder an area gets, the more the annual temperature variation. (I'm sure all of us in Alaska would concur.)

And 2) the more the geographical temperature varies annually, the more inventive the humans who live in those areas have to be to survive. "If you live by Lake Victoria in eastern Africa," he said, "you will invent a wooden boat if you wish to cross it. If you live beside Lake Baikal in central Siberia and you wish to cross that body of water, you will invent a wooden boat in the summer and skates and a sled in the winter."

That "inventiveness" has to be harnessed, along with financial resources, in order to develop Anchorage International Airport's future markets. In addition, we need the utmost cooperation and support of our elected officials and the state bureaucracy to establish Anchorage International as a premiere airport for trade, commerce, and passengers, truly the "center" of the world. Let's work together to put Anchorage on Main Street!

Crosswinds at the Crossroads

Public Domain Photograph

Changing winds aloft are blowing storm clouds toward Anchorage's status as 'Air Crossroads of the World'

BY JUDITH FUERST

AS AIR TRAFFIC PATTERNS evolve, Anchorage risks losing its claim to the title "air crossroads of the world."

Change is in the winds aloft: There's a bypass now, and the intersection's fuel pumps aren't needed by new aircraft capable of flying increased ranges. Anchorage International Airport is no longer the mandatory pit stop it was for traffic between Europe and Asia less than a decade ago.

"We've never had to work for our airport traffic; everything has just fallen into place," says Dan Dixon, director of the Office of International Trade in the state Department of Commerce & Economic Development. He identifies three factors endangering Anchorage International's status as a major airport for international traffic: improvements in air transport technology, relative slowness in marketing the airport and the sluggish development of Alaska as a destination or tourist stopover point for world travelers.

Dixon warns: "Dramatic losses in Anchorage International Airport traffic will have an immediate multimillion-dollar impact on the state's economy in lost revenues. However, the more devastating impact will be on our efforts to sustain and secure growth for our tourist industry and our efforts to provide a foundation for expansion of international trade."

A task force proposed by Dixon began meeting in August to address marketing of the state's major international airport. Its members include representatives of the Division of Tourism, the airport's duty-free shop, the Anchorage Convention & Visitors Bureau (ACVB), the state Department of Transportation & Public Facilities (DOT), the mayor's office and the state legislature.

"It's a baby step in the scheme of things – the first organized step to facing up to what's coming down the road," Dixon says. That specter lurking down the highway is declining revenues for the city, the region and ultimately the state.

It was geography that put Alaska on aviation maps, so to speak. In 1957, Scandinavian Airlines System developed the polar route. Carriers landed at Fairbanks International Airport for refueling in the early years of polar aviation. But as traffic patterns evolved Anchorage became the stopping point for flights traveling from Asia to Europe or the eastern United States.

Sometimes the stops are for refueling only, particularly with cargo flights. Even with planes capable of greater ranges, cargo flights often are routed through a refueling point. By trading payload for fuel weight, the trip becomes more revenue-efficient. Also to be considered in the tradeoff, though, are additional crew and fuel required for landing and takeoff.

Passenger flights, on the other hand, often travel nonstop when able, because most customers prefer direct routing. Typically operational people on carrier staffs argue for stops, while marketing personnel support nonstop routes.

In addition to refueling, many carriers recater planes here, make crew

changes and enter cargo and passengers into the United States to avoid more congested customs clearance in the Lower 48. Each service contributes to airport revenue.

One substantial revenue source for Anchorage International Airport is income from the duty-free concession where international passengers shop during their brief layovers. In 1985 Duty Free Shoppers contributed $14.25 million to airport operations – 30 percent of the system's revenue.

Now, however, what geography giveth, technology threatens to taketh. That's already been the fate of three other major refueling points in international air traffic – Gander, New Foundland; Shannon, Ireland, and Bermuda Island. The introduction of the jet eliminated the need to make fueling stops at these locations. Although each has managed to retain traffic, none sees the magnitude of flights – or the revenue from transit air traffic – previously enjoyed.

Anchorage International Airport's contribution to the municipality was calculated in an October 1985 study conducted for the Alaska DOT by Applied Economics Associates. Total economic input was valued at $1.51 billion in 1983, which generated total employment of 13,472.

Contributing to the airport's economic impacts were air transportation, visitor-related, freight forwarding and travel arrangement operations. Those segments directly employed 8,086, with the remaining 5,386 employed as a result of spending by those directly employed.

Total revenue for the Anchorage portion of the state's international airport system (Anchorage and Fairbanks) for the fiscal year ending June 30, 1985, was $39.5 million. Fairbanks International's contribution was $3 million. Because operating expenses for Anchorage and Fairbanks were $16 million and $6 million, respectively, the income generated at Anchorage International subsidized operations at Fairbanks International, thereby contributing to the Interior's economy as well.

Dixon believes 1990 is a critical year for the future of Alaska's airport system. By then carriers will have made important routing decisions based on the delivery of new Boeing aircraft. The new generation 747-400 has optional crew quarters to eliminate the need for stops to relieve crew and a range of 8,000 miles. It is the increasing range of aircraft that weighs most heavily in carrier decisions on whether to land or bypass Anchorage's crossroads.

Carriers that have ordered the new planes include Northwest Airlines, Cathay Pacific Airways, Lufthansa German Airlines, Korean Air Lines, Singapore Airlines and KLM Dutch Royal Airlines. Deliveries of the planes are scheduled to begin December 1987. Except for Cathay Pacific and Singapore, these carriers now land at Anchorage International Airport.

Craig Campbell of Coffman Associates, an airport consulting firm, reports Singapore was known to be considering flights through Anchorage, but with the larger planes probably won't have to. Also, KLM has noted a lack of growth in its routes via Anchorage and is one of the carriers likely to reduce services when it begins flying the new planes, according to Campbell.

BOB COE, PRESIDENT of the Alaska Division of Duty Free Shoppers Ltd. and a member of the state-organized task force, has a vested interest in international transit traffic and keeps tabs on international carriers using Anchorage. He notes in April KAL pulled three inbound and four outbound flights, JAL added two overflights – nonstop routes between Europe or the eastern United States and Asia – and Air France added one overflight. In September, JAL pulled one flight stopping at Anchorage and began another overflight. JAL pulled yet another flight in October.

Earlier this year, JAL – which claims to account for one-fourth of Anchorage's entire international operations – landed at least six freighters and six passenger flights a day. But the carrier's business travelers increasingly opt for nonstop flights from Tokyo to New York or Europe.

Those flights are traveling 98 percent full, while others stopping in Anchorage have seats available. According to Masao Kinamiti, district manager. Consequently nonstop flights that bypass Anchorage are the area expected to grow.

Another factor changing the relative importance of Anchorage as a refueling center is the ability to travel through Russian air space. JAL is one of a select group of carriers now flying over the Soviet Union in accordance with a bilateral agreement allowing limited use. The route shortens the polar trip, saving three hours in transit time, according to Campbell.

He also points out more foreign carriers are opting for other U.S. landing sites – Seattle, for example, which serves a large population center. "Anchorage is behind the power curve in competition from West Coast airports," Campbell notes. Another region of the country winning new international traffic is the South, particularly Atlanta and Dallas. For example, Delta Airlines recently inaugurated a route from Tokyo to Atlanta.

Airport marketing aimed at attracting international carrier routes has become much more sophisticated in recent years. The stakes are high in terms of airport revenue and regional economic impact. Sandy Daggett, public affairs officer for the Port of Portland, which operates the international airport there, says Delta's Portland service is expected to create an economic impact of $25 million in the State of Oregon.

The carrier will route five flights per week in its new Tokyo-Portland service. The economic impact is based on 1979

figures and considers tourism generated by the routes as well as airport revenue. To land the new service, Portland spent $300,000, including consulting fees and legal costs.

Daggett says an important factor in securing Portland's position as an international gateway was the more than $4 billion in trade with Japan attributable to the region, which also includes southwest Washington. In the absence of such a trump card, Anchorage must play on other strengths: lack of congestion, facilities, low pricing and a destination for tourism.

"There is a problem developing on the horizon," says Campbell. "Anchorage must go after carriers. It's going to have to be the cheapest if it's goal is to keep airlines here." Other former fuel stops have retained flight operations in various ways: Gander, Newfoundland, has been successful at establishing itself as a service base for charter flights, while Shannon, Ireland, and Bermuda have become destination stops.

Anchorage International Airport currently is not taken seriously as a destination for international travelers. Says Robert Gibbons, spokesman for Northwest, "Alaska is viewed as a domestic tourist market." Although Anchorage once was included in the carrier's international service, "the thrust of operations in Anchorage has shifted to international freighter service and domestic passenger traffic. The international passenger side fell apart with the advent of 747 service," according to Gibbons.

"Nobody knows about Alaska," says JAL's Kitamoto. "Alaska means icy." Canada is much more sophisticated in its marketing, he explains. For example, British Columbia is promoted heavily as a skiing location and attracts many Asian visitors for winter as well as summer travel.

ALTHOUGH ALASKA has the opportunity to sell JAL passengers on tourism in the state when they stop in the international terminal, "the only available display is the duty-free shop" and "bears." Kitamoto suggests one stuffed bear might be enough, but displays currently reinforce misconceptions about a hostile, remote and ice-covered Alaska. Even the stopover tourist booth, which hands out pamphlets, is remembered for its picture of igloos and Eskimos.

"I don't know how the State of Alaska thinks," says Kitamoto. "I would like to say to the state to show more of Alaska—trains, hotels, facilities at Denali. Give the costs and camping information. Let people know how accessible the glaciers are. Other airports all have pictures; only Anchorage has so few in its gate areas."

1986 David Prudeger

In 1985, the Duty Free Shoppers concession contributed $14.25 million in revenue to Anchorage International Airport.

Although Kitamoto expects JAL's freight to increase, he feels the passenger traffic is on uncertain footing: "I don't know what will happen in five years." Once passenger traffic is lost to Anchorage International Airport in nonstop routing, he gives it "no chance to recover."

According to Don Dickey, director of the Alaska Division of Tourism, more than $150,000 has been spent on international tourist promotion in Anchorage International over the last two years. Additionally, the division will be a major funder for the task force to the tune of about $100,000.

Research firms are sampling to obtain a clearer description of passen-

gers passing through Anchorage international and to better understand attitudes of the Japanese and Germans. A continuing problem Dickey notes is carrier preference for selling through tickets rather than ticketing for a layover in Alaska. Hence the Division of Tourism also is meeting with carrier and tour companies to solve those problems and examine incentives.

Reyn Bowman, president and chief executive officer of the ACVB, says the state has been slow to embrace the opportunities of international tourism, but adds, "Now we're making real progress. The Division of Tourism is spending 7-8 percent of its budget on overseas tourists."

According to Rolf Klug, vice president of marketing and sales for ACVB, a 1983 study by Alaska Pacific University showed 84 percent of international transit passengers indicated an interest in visiting Alaska. A further gauge of tourist potential was findings that 62 percent liked winter-oriented travel and 50 percent could have stayed over on that trip.

Says Bowman, "The carriers will keep planes flying in here as long as people want to come. If we don't develop a consumer interest in Alaska as a destination, we stand to lose traffic and see the cost of domestic service increase. If we do develop consumer interest, we've got a win-win situation. But we've got a race with time before carriers receive new aircraft and shift to nonstop flights."

William R. Snell, deputy commissioner of DOT, says, "We've had some flattening off in international passenger service, but it is not a significant decline." Adds Larry Michou, assistant director of administration for Anchorage International, "Our rate base remains solid because as passenger traffic has dropped, cargo, which is heavier and uses more fuel, has increased."

Michou says if the duty-free concession is lost somewhere down the line due to losses of international passenger traffic, the revenue "could be rolled into other fees."

Gina Marie Lindsey, manager of statewide aviation with DOT, points out Anchorage can be cheaper than some of its competitors because of duty-free revenue. Therefore, the loss of Duty Free, which employs about 270 in its Anchorage operations, could mean an increase in airport user rates, both domestic and international.

Snell reports the airport management has initiated four programs aimed at strengthening Anchorage's position in international airport competition. To benefit carriers serving Anchorage and the airport, the airport has promoted the development of a fuel consortium in which member airlines own and control distribution of fuel services. He credits the effort with helping attract new business and stabilizing pricing.

Second, for the first time in Anchorage's history, five-year operating agreements have been signed with the major carriers serving Anchorage and Fairbanks. "Now we know our revenues and commitments for five years, and the airlines get predictability too," he says.

Third, DOT is cooperating in a marketing strategy promoting the airport and increased tourist stopovers. He notes, however, "The airport will market itself if we have competitive facilities for cargo and passengers."

FINALLY, DOT is seeking means to advance Anchorage's use as a hub. It is considering ways to raise capital for facilities. Snell notes any development is expected to involve the private sector. The Alaska Industrial Development Authority and DOT may provide the land, with someone else operating the facilities. Establishment of a foreign trade zone is being considered as well.

Anchorage International Airport would have something to celebrate regarding increased cargo tonnage if a corporation consisting of United Parcel Service and DHL Airways – International Parcel Express (IPX) – is awarded the small package service to Japan. The consortium, which has said it will allow other companies to purchase stock in the venture if it's selected, is one of three applicants.

The final selection will be made by the U.S. Department of Transportation following the recommendation of administrative law judges appointed to weigh the merits of each contender. IPX has stated it would use Anchorage, Cincinnati and Louisville with Tokyo. The two other proposals have been filed by Federal Express, which would use Portland and Memphis with Tokyo, and Orion Air, which has specified Seattle with Tokyo for its service.

IPX traffic through Anchorage would be a welcome addition and perhaps start the airport down the road to becoming a cargo hub. One factor weighing against that happening – or at least one that might limit the size of any hub operation – is the relatively small regional population base. In the past, Anchorage has reaped the benefits of being between major trade and tourist centers of the world. But that position already has been eroded and will not draw international traffic a decade from now unless carriers determine Anchorage International Airport has more than geography to offer.

"We could be facing a grave problem in loss of revenue and jobs. It's later than it should be," says Dixon. □

Unlocking the gates

FOR SEVERAL years Alaskans have been asking for a waiver of visa requirements for international travelers passing through Anchorage International Airport. The waiver, sponsored by Rep. Don Young, became law last week when Congress enacted a new immigration law.

That means it is time for Alaskans to pursue the programs they envisioned as possible if visas were eliminated. The federal government is, more or less, telling us through the waiver action, "Here's what you asked for, now let's see what you can do with it."

More than one million passengers spend an hour or more at the airport while they are traveling between Europe and the Orient. They have been confined to the airport and the airlines faced heavy fines when one failed to re-board the plane he arrived in.

Alaskans have seen those travelers as potential visitors to Anchorage and possible visitors to other areas of the state before going on to their destinations. The visa requirement discouraged efforts to promote stopovers.

A FIRST STEP would be to pursue a concerted program to win support from the airlines. At present they do not want stopovers in Anchorage and it is easy to understand why. When a passenger disembarks here, his seat is usually empty on the second half of a long journey between continents.

From an economic standpoint, the airlines must have the prospect of boarding as many passengers in Anchorage as disembark. The designation of Anchorage as the Olympic City for 1994, when it comes, will serve as a mighty catalyst to this end.

It is critically important that this program be successful. Anchorage must become a destination city instead of only a transit point on the global airways. It's value as a transit point is diminishing as new planes and technology permit overflying.

Both Northwest and Japan Airlines no longer stop here. United Airlines has initiated service over the North Pacific with no stop in Anchorage. There is talk of flying non-stop between Japan and Europe.

SUCCESS in this venture is essential. If one out of four international travelers stopped to visit Anchorage, there would be at least 1,000 a day in town and if they stayed three days there would be 3,000. To accommodate them there would be more hotels, more tour buses, more restaurants, more service establishments of every sort.

Such growth would be the forerunner of additional growth to accommodate the Olympic games in 1994 and the new era of international status and fame.

Editorials

The new tourist season

THERE WERE a lot of happy numbers in a new report from the state's Division of Tourism, which took a statistical look at people who travel to Alaska during the off-season months of fall, winter and spring.

A surprising number — 42 percent — are pleasure visitors. And 24 percent of those come to visit friends and relatives. Business-related trips are the reason for 52 percent of the off-season travel, the state's survey showed — and that's surprising only in that some might have guessed that and even larger percentage of winter-type travel would be of a business nature.

AMONG THE other pleasant findings of the report was the discovery that off-season visitors sightsee and do other touristy things just as much, if not more, than do those who come our way in the summer — and they average 10 years younger in age.

They also tend to come here more than once, and stay longer while they're here.

All of which speaks well for the state's effort to expose more and more visitors to the wonders and beauties of Alaska that can't be seen during June, July and August.

And it's something all of us might keep in mind, when the time comes to invite relatives and friends to visit the 49th State. As a matter of fact, you might want to remember to include an invitation in some of the Christmas cards you'll shortly be addressing to family and friends in far away places Outside.

Opinions . . . Other views, other insights

Alaska's international airports offer economic opportunity

Courtroom to boardroom

by Tony Smith

At a time when the state is struggling with the wrong end of OPEC politics, attempting to be the cornerstone of the international fisheries and hopeful of receiving the nod from the International Olympic Committee, we need to remember the economic opportunities at home. In this writer's view, an important part of the state's economy involves some buildings and some asphalt. That's the Anchorage and Fairbanks airports.

The problem is that technology may doom our airports. If we don't come up with a viable plan, a new generation of aircraft may result in stops at Anchorage and Fairbanks being a vestige of the past. In my estimation, the commercial future of our airports is as important to our economic future as our high profile items.

A 1985 study indicated that Anchorage International Airport contributed $1.5 billion to the Anchorage economy. Indications were that the airport alone generated employment of 13,472 people. The cost for this is only approximately $20 million.

There's nothing that says international flights will continue to call at either the Anchorage or Fairbanks airport. Right now, we are the air crossroads of the world, but new long-range Boeing planes may change that. Already some international passenger carriers are beginning to fly direct.

The state, the municipality, and those involved with the airport, must concentrate on this issue. The airport may not be the sexiest issue, but it is one area where we haven't experienced a downturn.

For example, there are international carriers, like Korea Airlines, who are unable to pick up or discharge passengers because they do not have landing rights. The reason for this seems to stem from events at the Seoul airport, which have nothing to do with Alaska. We can not accept that.

Visas have been a problem in the past, but the Alaska Congressional delegation has started a program which may solve that. From Alaska's vantage, we need to have our international friends have the ability to pass a few days in Alaska. We must market Anchorage and Fairbanks as destination points.

We need Free Trade Zones in order to maximize the opportunities for local businesses to take advantage of our strategic location. Our airports have to provide services competitive with Portland, Seattle, Los Angeles and other gateway locations. We've gone a long way on the services, but we can always do more.

A task force is working on the problem, and that's a start. The downside, however, is such that an all-out effort is called for. It's easy to get people excited about AWWR and the Olympics. We need the same excitement about the continued development and marketing of the Fairbanks and Anchorage airports.

An Alaskan since 1971, Tony Smith is an attorney in private practice in Anchorage.

Municipality of Anchorage

OFFICE OF THE MAYOR

P O BOX 196650
ANCHORAGE, ALASKA 99519-6650

TONY KNOWLES
MAYOR

October 9, 1986

Governor Bill Sheffield
P.O. Box A
Juneau, AK 99811

Dear Governor:

You are aware that Anchorage International Airport is the linchpin of Anchorage's economy. As such, when potential declines in its revenues come to light, we become concerned. This concern is manifest in the attached resolutions from the Assembly and Chamber of Commerce.

Anchorage is concerned about keeping our airport economically healthy and growing. To accomplish this, we need a hard-hitting marketing and public relations program. We would appreciate your assistance in this endeavor.

Sincerely,

Tony Knowles
Mayor

Dave Walsh

ANCHORAGE, ALASKA
AR NO. 86-178

A RESOLUTION SUPPORTING THE DEVELOPMENT OF A MARKETING PROGRAM FOR ANCHORAGE INTERNATIONAL AIRPORT

WHEREAS, the Municipality is in the process of applying for Foreign Trade Zone status, and

WHEREAS, an important aspect of the success of Anchorage's Foreign Trade Zone is Anchorage International Airport, and

WHEREAS, Anchorage International Airport and the marketing thereof has been a recent topic of discussion for several community groups and in the local news media, and

WHEREAS, stopover air traffic economic opportunities at Anchorage International Airport have not been fully realized, and

WHEREAS, a viable and economically productive international airport is in the best interest of the Anchorage economy, and

WHEREAS, there are sufficient monies in the Airport Fund.

NOW, THEREFORE, the Anchorage Municipal Assembly hereby resolves:

Section 1. That acceleration and expansion of the current airport marketing program is warranted and appropriate.

Section 2. That the creation of a strategic planning program for Anchorage International Airport is of utmost importance to Alaska's economic health.

Section 3. That this Assembly welcomes participation in such an effort.

PASSED AND APPROVED by the Anchorage Assembly this 12th day of August, 1986.

Chairman

ATTEST:

Chamber of Commerce

RESOLUTION 86-07

ANCHORAGE INTERNATIONAL AIRPORT

WHEREAS, the Anchorage Chamber of Commerce has, throughout the history of the Airport, been the leading business organization in support thereof; and

WHEREAS, Anchorage is the transportation and marketing center for the State of Alaska; and

WHEREAS, the Chamber recognizes the International Airport has a primary role in the economic growth of Anchorage and Alaska; and

WHEREAS, existing State policies appear to accept a "status quo" insuring only the mutual support and a common maintenance level at major airports in the state; and

WHEREAS, there appears to be neither a near-term nor long-term plan to insure the growth for current and future commercial users, or enhancements for the public and other users at the International Airport,

THEREFORE BE IT RESOLVED that the Anchorage Chamber of Commerce calls upon the Municipal Assembly to move forthwith and:

- strongly urge the State to develop and implement a viable marketing plan with state, national and worldwide impacts, specifically for the Anchorage International Airport;

- take the steps necessary that will result in a formal role for the city in the policy development and the future of the Airport.

APPROVED BY THE Anchorage Chamber of Commerce Board of Directors this 22nd day of August, 1986.

ANCHORAGE, ALASKA
AR NO. 86-61

A RESOLUTION REQUESTING IMMEDIATE ACTION TO OBTAIN FOREIGN TRADE ZONE STATUS FOR CERTAIN AREAS OF THE MUNICIPALITY OF ANCHORAGE.

WHEREAS, the future of Anchorage's economy depends on appropriate and timely actions to further growth and opportunities; and

WHEREAS, the Economic Development Committee has studied the foreign trade zone concept and has heard the testimony of experts as well as from the Chamber of Commerce and Economic Development Commission; and

WHEREAS, the Economic Development Committee has found no significant negative aspects of foreign trade zone status; and

WHEREAS, the Port of Anchorage would be influenced by this change in status and thus is an interested agency.

NOW, THEREFORE, the Anchorage Municipal Assembly resolves:

SECTION 1. The Municipality should immediately proceed to assess Anchorage's foreign trade zone potential, and define potential land areas for consideration.

SECTION 2. The Port of Anchorage should function as the action agency for this effort, and shall make application for foreign trade zone status, providing periodic progress reports to the Assembly.

PASSED AND APPROVED by the Anchorage Municipal Assembly this 8th day of April, 1986.

CHAPTER III

THE DEVELOPMENT AND GROWTH OF THE ANCHORAGE INTERNATIONAL AIRPORT

The Anchorage International Airport had its genesis when, late in 1951, operations began on an 8,400 foot east-west and a 5,000 foot north-south runway. The Airport was constructed under the auspices of and operated by the U.S. Civil Aeronautics Authority.

In 1959 Alaska became the 49th state of the Union and, in the following year, ownership and administration of the Airport was transferred to the State of Alaska. During the first year of State administration, construction began to extend the east-west runway to 16,600 feet, necessitated by the advent of jets which were displacing propeller driven-aircraft. Additionally, construction of new parking aprons and ramps began.

The airport expansion and modernization program was interrupted by the 1964 Good Friday earthquake which severely damaged the runways and destroyed the control tower and part of the terminal building. Necessary repairs to make the Airport operational were made quickly, but it took until 1967 before reconstruction of the east-west runway was resumed. It was completed in 1970, in time to handle the ever increasing international traffic as well as the expanding domestic operations, the latter due in large measure due to increased oil related activities.

In order to make the Airport a facility which would be accessible under all but the most adverse wheather conditions, construction of a new north-south runway began in 1978 and was completed in 1980. Throughout that period, modification and improvements continued to be made to the general facilities and the existing terminal building, and a new dedicated international terminal was completed in 1982.

During the 25 years as a State owned and operated airport, the Anchorage International Airport grew from a small regional facility into an important national and international one which, in 1984, served 40 scheduled and non-scheduled airlines. Domestic and international passenger traffic rose from 274,000 in 1960 to over 4,000,000 persons in 1984, making the Airport one of the largest medium size air traffic hubs in the U.S. In 1983, for example, the Federal Aviation Administration (FAA) reported 1.04 million revenue passenger enplanements in Anchorage, compared to 1.04, 1.04 and 1.2 million at the El Paso, Texas, Jacksonville, Florida, and Syracuse, New York airports, respectively [3]. These airports serve metropolitan areas with population bases which (in 1980) ranged from 480,000 to 722,000 persons [4]. Measured on the basis of the number of trips-per-resident population, for example, the Anchorage Airport ranks second (after Reno, Nevada) among all of the 36 medium size hubs in the US with an enplanement ratio of 6.0, compared with 2.2, 1.4, and 1.6, respectively, for the other three cities named above.

Even more striking, and underlining the pivotal role of the Airport in the state's economy, is the volume of freight traffic that passes through it. According to the same FAA source [3], the Airport handled 224,000 tons of enplaned revenue freight in 1983 (20 percent of which were U.S. mail shipments), fully one-half of the total tonnage of

all of the 36 medium size hubs in the U.S. combined, and only slightly less than the tonnage passing through the Los Angeles International and Kennedy International Airports (267,000 and 253,100 tons, respectively) - large hubs serving metropolitan areas with nearly 50 times the population of Anchorage. (In the same year, 72,200 tons of freight were enplaned at the Seattle-Tacoma International Airport.)

The large fraction of U.S. Mail is noteworthy, since subsidized shipments of parcel post are 60 to 80 percent less expensive than airfreight cargo of identical weight. As a result, outlying communities are able to purchase goods at considerably lower than "market" prices, a benefit we have not measured. (Market prices include necessary payments to all factors of production, including a normal return to capital.)

In the sections that follow, we will briefly discuss and document the extraordinary growth of both the domestic and international passenger and freight traffic at and through the Anchorage International Airport between 1960 and 1984.

Passenger Traffic, 1960-1984

Over the 24 year period between 1960 and 1984, total passenger traffic (arriving, departing and in transit) rose from less than 0.3 to over 4.0 million persons, at an average annual rate of 11.9 percent (Table III.1). In only three years, 1965, 1971 and 1972 did passenger traffic fail to increase (Table III.2). (The decrease in 1965 is explained by the 1964 earthquake; the decreases in the other two years are most likely due to the then uncertain future of the Trans-Alaska Pipeline.) The largest growth rate was registered by the "in transit" category, 15.3 percent. Whereas, in 1960, that class of traffic

accounted for only 16.3 percent of total traffic, by 1984 it represented 36.4 percent (Table III.3). However, as Table III.4 shows, growth rates for the several passsenger groups varied substantially over time. Thus, for example, "in transit" traffic rose at an annual rate of 33.6 percent during the 1960-1970 period, 4.6 percent between 1970 and 1980, and only 2.0 percent between 1980 and 1984 (Table III.4).

Detailed data on international traffic were available for the fiscal years 1976-1984 and, together with domestic data, are shown in Tables III.5-III.7. Over the 8 year period, total traffic increased at an annual rate of 6.2 percent. However, during the last two years, international traffic declined by more than 155,000 persons, or over 5 percent per year. Over the 8 year period, the number of arriving and departing international passengers decreased by about 50 percent. Domestic traffic, on the other hand, continued to increase throughout that period.

It is unclear whether the recent decrease in international traffic portends a developing trend, or whether it is a cyclical phenomenon. However, it is well known that at least two international airlines (JAL and SAS) have exercised transit rights through Soviet airspace, which may have affected the level of international travel at the Airport. Other carriers are also contemplating route changes via the USSR which also may impact international passenger traffic to and through Anchorage.

NOTE: AARG - Average Annual Rate of Growth

Freight Traffic, 1960-1984

Reference has already been made to the large volume of freight that moves through the Airport. Table III.8 recapitulates freight movements between 1960 and 1984 and Tables III.9 and III.10 show data for annual percentage changes and and the fractions of total freight arriving at and departing from the airport. A major discrepancy is noted between the volume of "departing" freight reported by the Airport in 1983 (92,466 tons) and "enplaned revenue freight" reported by the Federal Aviation Administration for the same year. The FAA data include all freight, originating or transshipped from one aircraft to another. The Airport statistics do not include freight which is transshipped. For purposes of comparing the Anchorage Airport with other US airports, the FAA data [3] were used.

The data show that between 1960 and 1984, total freight movements increased ten-fold, at an average annual rate of 6.1 percent. Growth rates on a year-to-year basis, however, were very uneven. Not surprisingly, and pointing to the Airport's strategic role in the development of the state's economy, are the enormous growth rates (in excess of 23 percent) of freight traffic registered during the pipeline construction period 1973-1977 (Table III.11).

That Anchorage is the Alaskan entrepot and that the Airport is its essential transportation pipeline is manifested by the fact that throughout the 1960-1984 period, "departing" far exceeded "arriving" air freight tonnage. One explanation for these asymmetrical flows is that goods are shipped to the Anchorage maritime port, or arrive over the road, and are then redistributed by air to the rest of the state which has no other transportation links to the "outside"; another is that

large quantities of relatively high value, perishable fish are flown to foreign and domestic markets during peak harvest periods. Rapid access to markets significantly increases the value of these products. At the Seattle-Tacoma International Airport, in comparison, arriving and departing cargo for each of the years during the same period were nearly always in balance. Clearly, many outlying communities could not survive and an array of economic activities would not take place or would be severely curtailed without the cargo services provided through the Airport.

As in the case of passenger traffic, detailed data for international and domestic cargo movements for the fiscal years 1976-1984 are displayed in Tables III.12-III.14. Over the 8 year period, total domestic freight traffic grew at a modest 1.7 percent. Arriving air freight increased at an annual rate of 1.1 percent. Departing traffic, on the other hand, rose nearly twice as fast, at 2.0 percent. In 1984, it accounted for approximately 64 percent of total freight movements.

In contrast, the international components registered extraordinary growth rates. Whereas, in 1976, international air cargo traffic accounted for only 5.8 percent of the total, by 1984 it represented 12.6 percent. That the Airport has become a major point of entry for foreign air cargo is indicated by the fact that in 1984 over 25 percent of total arriving cargo was carried by international airlines, compared to only 12 percent in 1976.

SUMMARY OF RESPONSES TO AIRLINES INDUSTRY QUESTIONNAIRE
(DATA PERTAIN TO 1984-1985 CALENDAR OR FISCAL YEAR)

EXPENDITURE CATEGORY	NUMBER OF RESPONDENTS	EXPENDITURES (DOLLARS)	PERCENT OF TOTAL
(1)	(2)	(3)	(4)
Fuel	13	$ 245,727,171	68.6
Wages and salaries	16	44,330,809	12.4
Other/Misc.*	5	20,734,600	5.8
Goods and services	12	12,753,753	3.6
Food, lodging, and transp. for flight crews	13	11,941,406	3.3
Benefits	12	8,836,808	2.5
Contracted maintenance	10	8,280,867	2.3
Terminal bldg. rent, landing and parking fees	14	4,666,786	1.3
State and local taxes	7	665,500	0.2
Total expenditures		$ 357,937,700	100.0

QUESTION	NUMBER OF RESPONDENTS	RESPONSE
(5)	(6)	(7)
Number of full-time employees residing in Anchorage	16	1,183
Number of hotel room nights generated by		
airline personnel layover	13	60,780
unsched. passenger layover	10	8,161

SOURCE: Questionnaires distributed to airlines industry by Applied Economics Associates, Inc.

NOTE: * Includes items such as inflight meals, contracted ground handling, utilities, insurance, depreciation and interest, and security among others.

As shown in the first line of Table IV.2, expenditures on fuel constitute nearly 70 percent of the respondents' total expenditures. The Airport's financial statement for fiscal year 1984 shows that fuel and oil fees collected by the Airport amounted to $8.3 million, or 31.4 percent of total operating revenues, the second largest income source for the Airport after concession fees of $9.4 million (or 35.4 percent of operating revenues).

The second largest expenditure of the airlines is for wages and salaries. These disbursements are income to employees who reside in the Greater Anchorage Area, and, as such, will be respent on goods and services in the local economy. For example, an Alaska Airlines ticket agent who resides in Anchorage will spend his/her income on housing, food, clothing, entertainment and other consumption items produced and/or distributed in the local economy. These purchases constitute revenue to local businesses who, out of these receipts, pay their employees, purchase goods and services from other local businesses, and so on. This process is referred to as the "multiplier effect" and when measured quantitatively (see Chapters V and VI) will describe an ultimate level of output, earnings, or employment that is generated throughout a regional economy as a result of an initial, direct economic stimulus - the purchase of a good or service, for example. Employee benefits, representing other labor income, similarly generate multiplier effects. Together, expenditures on wages and salaries and employee benefits accounted for 14.9 percent of the total expenditures indicated by the respondents.

Expenditures for goods and services, including contract maintenance, and food, lodging, and transportation for flight crews, as well as most of the other/miscellaneous expenditures represent purchases

by the airlines from local businesses. These operational purchases, representing 15.0 percent of total air carrier expenditures in Anchorage, also generate multiple output, earnings and employment effects throughout the local economy.

The remaining airline expenditures, terminal building rent, landing and parking fees, and state and local taxes, represent payments to government agencies. These expenditures, accounting for 1.5 percent of total expenditures, are ultimately returned to the private economy, although not necessarily in the region in which the revenues were generated, in the form of wage and salary payments to government employees and purchases from private firms.

Other important data were collected from the commercial air carriers. The respondents indicated that they employed 1,183 Anchorage residents and paid for a total of 68,941 hotel rooms in Anchorage due to flight crew and unscheduled passenger layovers. The hypothetical question included on the questionnaire asked for the most likely alternative routes for passenger and freight traffic in the event that the Airport closed for one year: Five respondents indicated that both passenger and freight traffic would be re-routed through Fairbanks, four indicated that passenger traffic would be re-routed through the USSR, while two indicated that freight traffic would be carried over the Soviet route as well. Vancouver, B.C. was also indicated as a terminus or refueling point. Two carriers indicated that passenger traffic would not be re-routed at all.

Airport Related Services

Airport related services consist mainly of concessionaires doing

business at the Airport itself. Also included in this category are firms providing ground transportation to and from the Airport, such as car rental agencies, and travel agents. In short, this industry classification includes those local firms who provide goods and services to passengers arriving at and departing from the Airport. In contrast to commercial air carriers, not all of the businesses rely entirely on the Airport. In order to gauge the dependence of such firms on the Airport, a hypothetical question asking how current operations would be affected if the Airport did not exist was included on the questionnaire. As a further check, respondents were also asked to provide data on the level of gross receipts from operations in Alaska and the level of gross receipts from operations conducted at the Airport. In addition, the questionnaire requested information on employment and expenditures in the Anchorage area.

Airport related services questionnaires were mailed to 46 firms. Fourteen were completed and returned to AEA, while five of the original 46 were returned as non-deliverable. Taking 41 (the original 46 minus the 5 returned) as the relevant base to compute the response rate, 34.1 percent of the firms surveyed responded, as indicated in Table IV.1. Table IV.3 summarizes the information provided by those respondents who indicated that they were at least partially dependent upon the existence of the Airport. The data from the surveys were adjusted to take into account those firms who indicated less than 100 percent dependence and therefore the figures in Table IV.3 reflect estimates of the respondents' levels of expenditures and employment directly tied to the Airport.

As shown in Table IV.3, expenditures on employee compensation (wages and salaries plus benefits) constitute the largest fraction of

AIRPORT HAPPENINGS

As announced in October, Hawaiian Airlines is starting non-stop service to Honolulu, Hawaii. The flight, using a Lockheed L-1011 Tri-Jet departs in the morning, arriving in the islands during mid-afternoon.

While it is not new service, Western Airlines has become the wholly owned subsidiary of Delta Airlines. Just this past year Western celebrated its 60th anniversary, making it America's oldest airline. Western has announced that it will continue to operate as Western Airlines until April 1, 1987. Thereafter it will become a part of Delta Airlines and operate under the Delta name and colors. There has been no announced change in service to Anchorage resulting from the acquisition.

As reported in the Anchorage Times on January 4, 1987, British Airways has announced a reduction in service through Anchorage, starting this spring. Most flights between London and Tokyo will be flown non-stop, via Siberia instead of making the traditional refueling stop in Anchorage. This option became available to the international air carrier community in 1985 when the Soviet Union agreed to allow limited access to international air carriers over Siberia in exchange for expanded landing rights at European and Asian cities. British Airways will retain limited weekly scheduled service through Anchorage and has not announced any plans to terminate service at the airport.

PUBLIC INVOLVEMENT

On January 8, 1987, Coffman Associates held a public meeting with members of the Turnagain Community Council to discuss the refined alternatives for the airport. The meeting was well attended and members of the council were extremely interested in the Lake Hood development plan. It was recognized that considerable effort had been conducted by the consultant team to include many suggestions presented during previous meetings which ensure neighborhood compatibility with the airport. Since development recommendations have not yet been finalized, members were advised that comments would be considered in the final program.

TRIVIA QUIZ

In January, Hawaiian Airlines initiated service between Anchorage and Honolulu, using a Lockheed L-1011 Tri-Jet. The airline has stated that plans are currently being developed to extend the service between Anchorage and Europe, establishing the only through service between Honolulu, Anchorage, and Europe. What is the only other American owned airline to have flown this route?

Answer: Western Airlines (soon to be identified as Delta Airlines through merger action in 1986), but service was discontinued in 1981.

SUBJECT: Anchorage Overflight Issue

FROM: E. John Pearson
Travel Development Specialist
Division of Tourism

Several days ago, I received a copy of a respected airline industry intelligence publication from England which provides an outstanding situational analysis of the overflight issue.

In reading this material (which was published in spring), you should keep in mind my previous memos that reported other airlines as having taken action on future overflights. These actions are not reported in the attached publication. So the situation is much more critical than reported herein.

There should be no question in anyone's mind that we are faced with a grim situation that few understand. It is, therefore, essential that information such as this receives the widest circulation among key opinion formers.

SOVIET GOODWILL HELPS OPEN UP AIR ROUTES

After last November's Geneva summit, the USA and Soviet Union agreed to resume flights between their countries. Meanwhile, Moscow is allowing more trans-Siberian non-stop overflights between Europe and the Orient. Trevor French examines the consequences of recent major diplomatic agreements.

Civil air treaty negotiators, who have for years numbered the Soviets among their toughest opponents, must be eyeing the two most recent agreements with the USSR with some surprise. Air services agreements with the Soviet Union have traditionally been heavily restrictive for the non-Communist partners. The commercial bias in favour of Aeroflot has caused raised eyebrows even among negotiators long used to the Soviets' tough bargaining positions, often prompted by Aeroflot's established role as a visible presence around the world and a generator of much-needed foreign currency. But it seems, temporarily at least, that Soviet attitudes towards air service partners have softened significantly.

The agreements which allow Pan Am and Aeroflot to resume services between the United States and the Soviet Union, and which allow direct non-stop flights between Europe and Japan through Soviet airspace, appear to have conceded real commercial advantages to Pan Am and Japan Air Lines without asking too heavy a price in return. Observers who cited the general thaw in East-West relations, which culminated in the Geneva super-power summit late last year, do not believe it was alone responsible for the apparent generosity of the Soviet air authorities. Indeed some have spoken of a new Soviet willingness to allow Aeroflot to operate with less protection, allied to a more realistic assessment of the security dangers posed by foreign aircraft using Soviet airspace, as contributing factors.

The air services accord which opened the way for the resumption of services between the US and USSR was seen by some as the only concrete result of the Geneva summit. In fact negotiations had been under way

since early 1985. Pan Am had suspended its direct Boeing 707 operations to the Soviet Union in 1978 for economic and commercial reasons. Crippling Soviet restrictions meant Aeroflot dominated the market and it became unprofitable for Pan Am. Aeroflot in turn had its US rights suspended in 1981 after the Soviet occupation of Afghanistan.

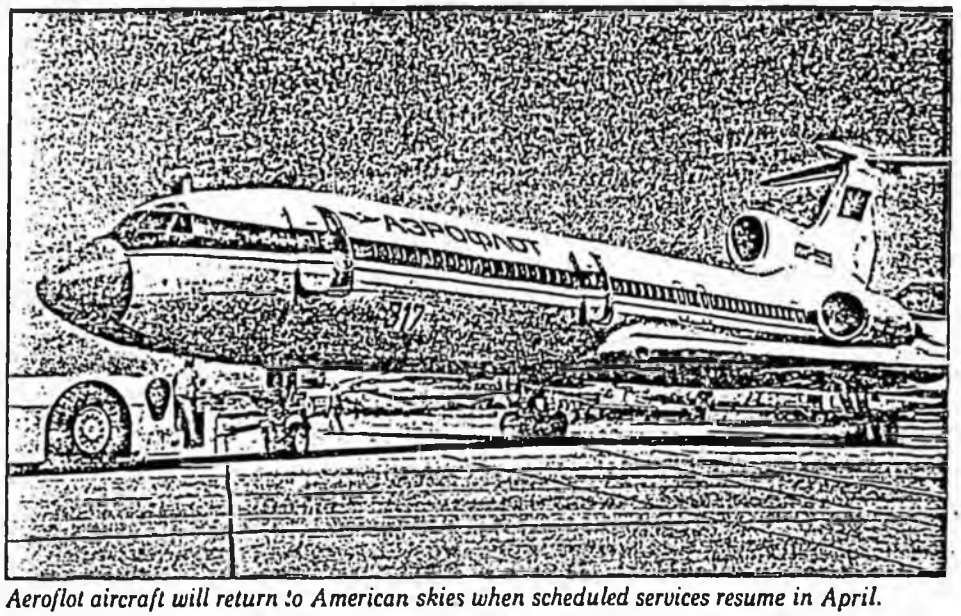
The new agreement means that when services resume on April 28 this year, Pan Am and Aeroflot regain basically the same rights they had before. Pan Am will, however, now be operating a change-of-gauge service by Boeing 747 to Frankfurt and then Boeing 727 on to Moscow four times weekly, with two of the flights continuing to Leningrad. Aeroflot has four weekly flights to New York, with two continuing to Washington.

The crucial difference is that the agreement now includes a revenue balancing mechanism which leaves Pan Am in a much stronger position commercially than before. Each carrier is allowed to retain full revenues for the first 12,000 revenue passengers it carries in either direction. Only after that number will revenue units, fixed at US$175 per passenger, be shared with the other carrier.

Pan Am's senior vice-president of government affairs, Richard Mathias, says this mechanism, plus the change-of-gauge service, means the airline now expects the routes to be profitable. Before 1978 Aeroflot carried far more traffic than Pan Am, principally because Pan Am was prevented from selling tickets in the USSR and from "doing business on a regular basis," says Mathias. Pan Am still cannot sell tickets in the Soviet Union, although Aeroflot can now sell tickets in the US directly without having to sell through Pan Am. Hence the balancing mechanism.

"It's a sort of insurance policy that will allow us to operate with sufficient freedom so we can carry at least half of the market. Either airline will suffer significant financial losses if it is unable to capture a significant share of the traffic," says Mathias. "The real importance is to provide an incentive to Aeroflot and the Soviet Government to allow Pan Am to carry roughly a half share of total traffic. It's something both sides are comfortable with."

The more liberal commercial conditions of the US-USSR services are not the only benefit extracted from the Soviets. Pan Am also gained the right to overfly Soviet territory on seven scheduled services a week between Frankfurt and the Indian sub-continent. Mathias says Pan Am has not yet completed its plans for these routes, but agrees that substantial fuel savings not far short of US$500,000 a year will be made by abandoning the present much more westerly routings. The overflight rights were part of the overall package, and there was no item-by-item trade off in the negotiations.



Aeroflot aircraft will return to American skies when scheduled services resume in April.

Both Mathias and chief spokesman of the US Department of Transportation team at the negotiations, Ed Oppler, noted what they called a "greater receptiveness" on the part of their Soviet counterparts. Oppler is not happy that the US was forced into having the balancing mechanism, and adds that it would not sign such an agreement with any other country. But he agrees that it is a significant concession by the Soviets and Pan Am will benefit substantially from it.

"I think they were willing to take more of a commercial risk in the balancing mechanism because they knew our carrier was guaranteed a certain share. It was very important for them to get this service going again for a combination of reasons – economic, gaining hard currency, and showing the flag," says Oppler.

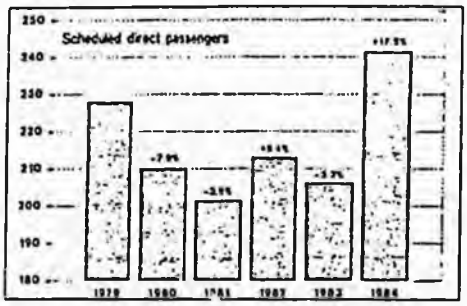
Negotiations between Japan and the Soviets for Japan Air Lines' rights for four non-stop Europe to Tokyo overflights a week took much longer than the US-USSR pact. The agreement was announced in February last year after discussions opened in 1981. But again in the end the agreement reached seems remarkably uncomplicated. JAL's regional manager UK and Eire, Takemi Tamaki, describes it as a simple exchange of traffic rights. "There were no politics involved, no trickery." JAL is starting with two direct trans-Siberia non-stop return flights a week from London and Paris from April 1. The flights will replace services which at present operate from the same destinations via a stop-over at Moscow. In return Tamaki believes Aeroflot gained cargo frequency between Moscow and Tokyo.

While JAL's traffic rights between Europe and Japan remain unchanged in terms of capacity and frequency, the Russian concession gives the airline a sharp commercial edge in a market it already dominates. Fares remain unchanged, but the substantially reduced flight durations compared with the routes via Moscow and Anchorage (see table), plus more attractive arrival and departure times, will help JAL corner the business travel market at which the non-stop services are principally aimed, says Tamaki. JAL is expecting load factors on the non-stop flights to be three or four points higher than those on its existing services, which average between 70 and 75 per cent. Substantial cost benefits include a fuel saving of some US$450,000 a year at the present frequency compared with a Moscow stop, and savings in landing and ground handling fees at Moscow.

Why did the Soviets agree to this concession if they stood to lose foreign currency earned through JAL stopovers at Moscow? Tamaki believes the answer is to be found in Aeroflot's increased penetration and market share on routes from Moscow to Europe and Tokyo. The negotiations which allowed the first Europe-Moscow-Tokyo services in the early 1970s also spawned a pooling formula which meant that money continuously flowed from Western airlines to Aeroflot, then a vastly unpopular airline. That pooling formula still exists, says Tamaki, but under its terms the flow of currency is no longer one-way traffic. The Soviets, it seems, are satisfied with Aeroflot's performance on the route and did not view non-stop overflight rights as a lever to extract large concessions from Japan. And Japan, of course, was in the powerful position of being the single destination not only of Aeroflot's Tokyo flights, but also those from many European countries.

Full development of the non-stop trans-Siberia route is being held back at the ▶

USSR



The strong traffic growth between London and Tokyo in 1984 is likely to have been repeated in 1985. Passengers up to May 1985 were 16.9 per cent up. Source: British Caledonian.

moment by Japan's bilateral partner, Britain, claims JAL. The British at present are only allowing JAL a single non-stop flight a week to London. JAL wants to operate all four services for which the Soviets have granted non-stop overflight rights from the British capital, but is being forced for the moment to fly just two, one of them from Paris.

At press time Britain's future on the non-stop route to Tokyo was awaiting the final outcome of a conflict between British Airways and British Caledonian. BCal has been granted three non-stop services a week from London-Gatwick, two continuing to the South Korean capital of Seoul. BA serves Tokyo six times a week via Anchorage, having added the sixth service in mid-1985 after BCal's application, and has indicated it wants to start a seventh service and to serve Seoul. But the UK-Japan bilateral allows only eight flights a week. BCal failed to have BA restricted to five, all via an intermediate point, and also failed to have London-Seoul deleted from BA's licence. If both airlines are to be satisfied Britain will have to negotiate with Japan for at least two more London-Tokyo flights a week, and may have to allow other Japanese airlines to serve London in return.

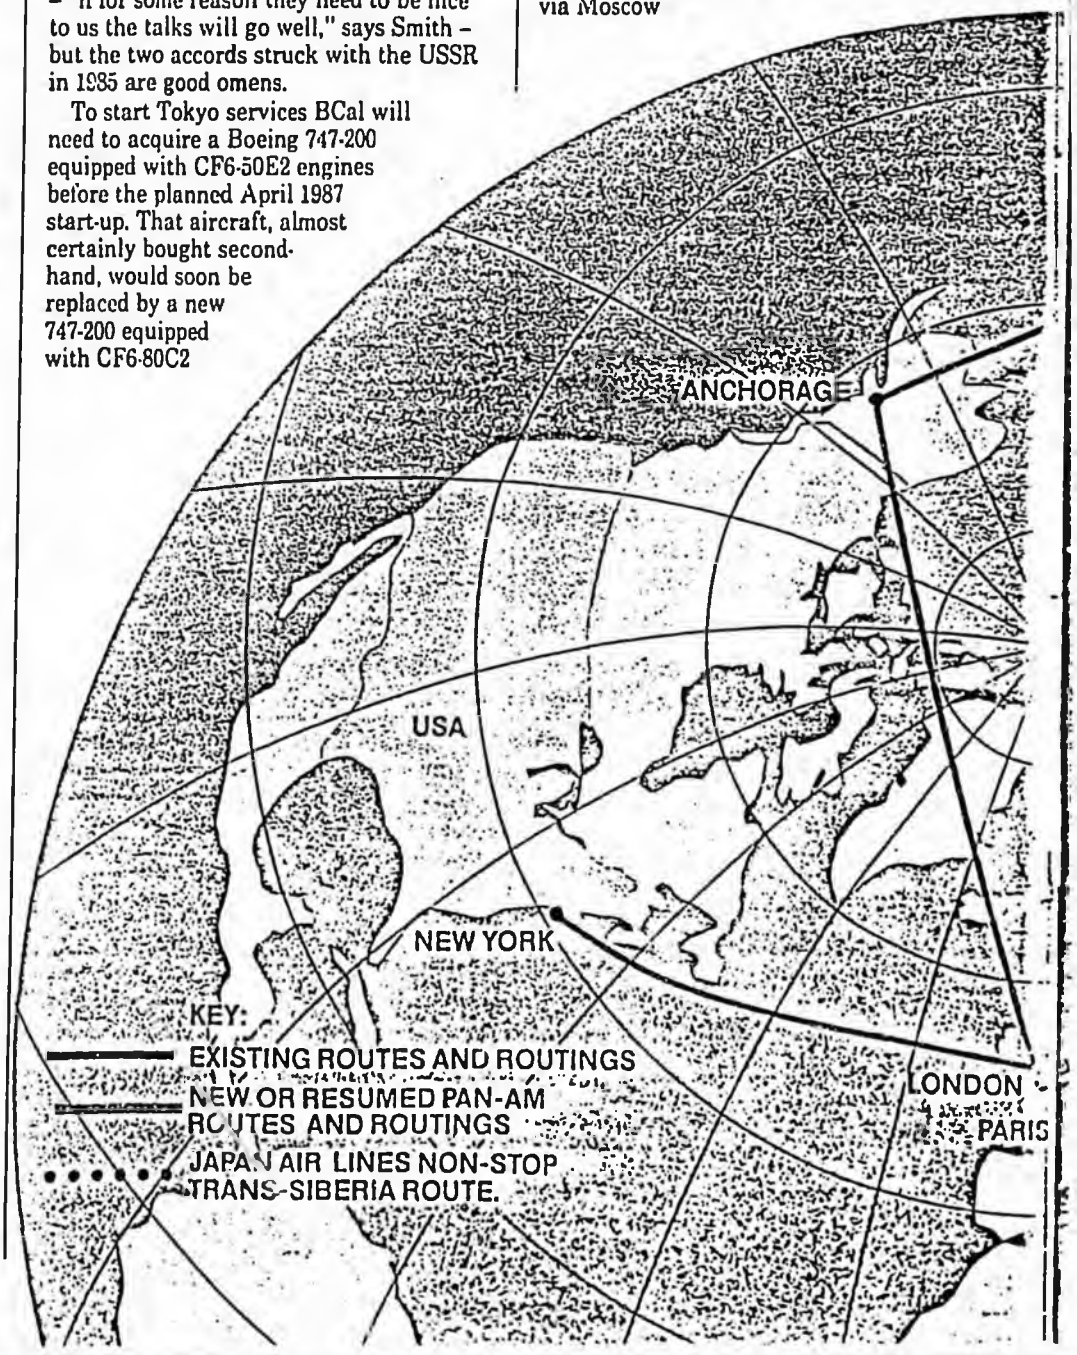
BCal's planning and corporate affairs director, Peter Smith, sees the issue as the first real test of the British Government's resolve to introduce more competition between the two British carriers. "We would expect BA to operate non-stop services, but if there are only a limited number available, BCal would expect to have them all."

Right: The two recent agreements with the Soviets show a new willingness to grant commercial benefits to western airlines through their use of Soviet airspace.

Smith believes there are no insurmountable issues in the way of finalising overflight rights for Britain with the Soviets. "The benefits of securing this for the United Kingdom are very substantial." Britain's position in negotiating with the Japanese is complicated now BCal has approval for the routes, as two British carriers are now involved in the bilateral. But as Aeroflot already overflies Britain between 12 and 16 times a week on flights to Cuba, and needs the rights it presently holds to land through Heathrow, Smith believes Britain is in a powerful bargaining position. As is usual with the Soviets, timing could be important – "if for some reason they need to be nice to us the talks will go well," says Smith – but the two accords struck with the USSR in 1985 are good omens.

To start Tokyo services BCal will need to acquire a Boeing 747-200 equipped with CF6-50E2 engines before the planned April 1987 start-up. That aircraft, almost certainly bought second-hand, would soon be replaced by a new 747-200 equipped with CF6-80C2 engines, says Smith. But in the meantime, all such plans await the outcome of the negotiations with the Japanese, the Soviets, and the Koreans. The Soviets may not be happy about the flights going on to Seoul.

It remains to be seen whether the start of JAL's non-stop flights will generate a queue of European airlines knocking at the Soviets' door asking for similar rights. Air France is expected to begin non-stop services from Paris to Tokyo soon after JAL. But Lufthansa, which has had none too good relations with the Soviet Union and Aeroflot in the past, is biding its time. The West German airline suspended Tokyo flights via Moscow



Route	Time	Distance
London/Heathrow – Tokyo/Narita		
Non stop	11 hr 35 min	10,270 km
via Moscow	14 hr 10 min	10,570 km (1 hr 20 min stopover)
Polar route	17 hr 15 min	12,906 km (1 hr 15 min stopover)
Tokyo/Narita – London/Heathrow		
Non stop	12 hr 20 min	10,270 km
via Moscow	14 hr 55 min	10,570 km (1 hr 10 min stopover)
Polar route	16 hr 20 min	12,906 km (1 hr 15 min stopover)

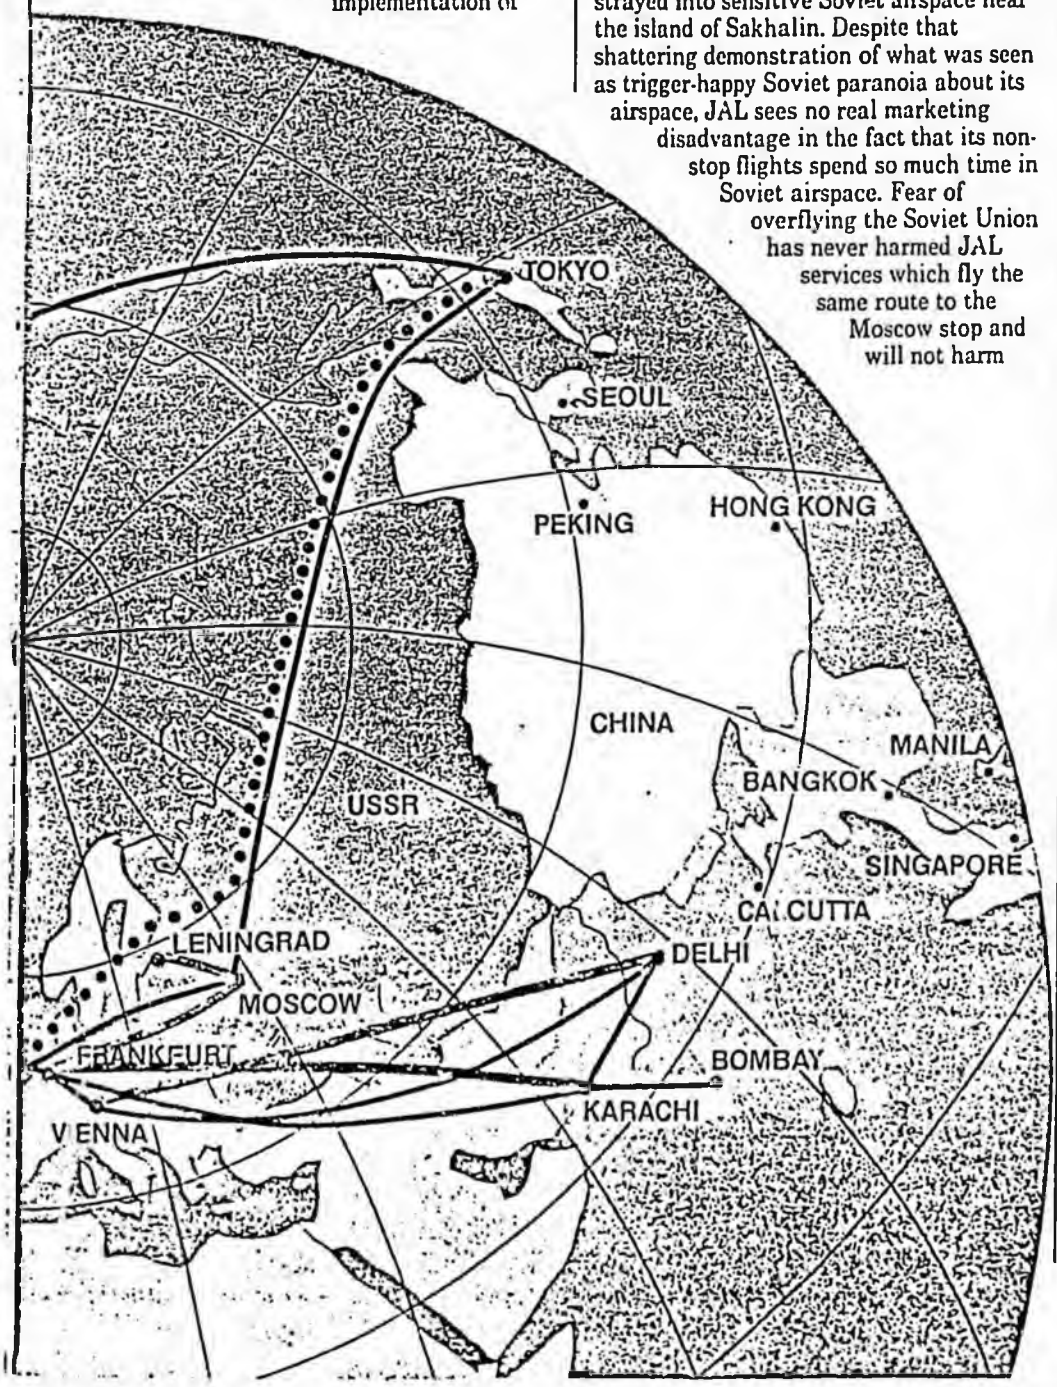
Non stop	14 hr	11,293 km
Tokyo/Narita – New York/JFK		
Non stop	12 hr 20 min	11,293 km

in April 1983 after Soviet demands in return for permission for Lufthansa to change from Boeing 707s to widebody aircraft proved too expensive. Soviet demands for beyond rights from Frankfurt, and problems with ticketing in Moscow, were also believed to be behind Lufthansa's withdrawal. Lufthansa, and indeed JAL itself, believes JAL's start-up frequencies are too few to have a significant impact on overall market shares between Europe and Tokyo. Until a larger number of non-stop flights are operating it seems to be a case of "wait and see".

Both 1985 agreements with the Soviets were conditional on the implementation of safety measures for aircraft on North Pacific air routes, worked out between US, Soviet and Japanese officials in Washington in November last year. That agreement will have gone a long way towards reassuring those who remember the shooting down by Russian fighters of the Korean Air Lines Boeing 747 on August 31, 1983, after it strayed into sensitive Soviet airspace near the island of Sakhalin. Despite that shattering demonstration of what was seen as trigger-happy Soviet paranoia about its airspace, JAL sees no real marketing disadvantage in the fact that its non-stop flights spend so much time in Soviet airspace. Fear of overflying the Soviet Union has never harmed JAL services which fly the same route to the Moscow stop and will not harm the non-stop service either, says Tamaki.



Some passengers are less happy, but for different reasons. One carrier with routes between Europe and South-East Asia reported that some companies, whose representatives frequently carry "sensitive documents", would only book with airlines whose routes avoided Russian airspace.

BCal's Smith believes there remains one further major prize to be won involving Soviet airspace – a direct route from Europe over the Soviet Union and China to South-East Asia. Cathay Pacific calculates such a route would cut almost two hours off its present non-stop London-Hongkong flight duration of 12 hours, but is unaware of any British initiative to secure such rights. Singapore Airlines, for which the time benefits would be much less, considers the political relationship between the Soviet Union and China makes the route too remote a possibility to be worth considering. "If we thought there was a prospect of being able to operate our Boeing 747-300s to London non-stop on a great circle route we wouldn't be considering the expense of buying a 400 series," says a SIA spokesman.

Smith disagrees. "It may not be possible at the moment, but at some stage I do see the route being established." Britain's withdrawal from Hongkong in 1997 will mean powerful commercial and political pressures from China, he says. "How long can Hongkong afford to be at a disadvantage to, say, Singapore and Tokyo? They are going to want that route to get the best air services between Hongkong and Europe, and there are already signs of a thaw between China and Russia."

In the meantime the new trans-Siberian services and Pan Am's overflight rights to India remain the latest routes to chip away at the vast blank space in the world's air routes that is the Soviet Union. That country's position as an enormous barrier between Europe and the Orient gives it a powerful bargaining position in air treaty negotiations. But the two new agreements do show that the barrier is not impregnable. And the apparent new-found willingness on the part of the Soviets to grant more overflight rights holds out hope that other prizes may be won. ■

Air Transport

Alaska's Economic High Flyer

By MARK HARRIS

Russia never would have sold Alaska to the United States had air transportation been a fact of life in 1867. A vast stretch of wilderness, Alaska has evolved into one of the world's key points in terms of commerce and military defense by air.

Alaska has the distinction of being the most important link in the Orient-North America-Europe air transport chain. It is the vital front line in the United States' northern hemisphere air defense system. Alaska also is the state most dependent on air service for supplying and distributing goods and moving people.

Alaska could not sustain a state capital in Juneau or oil industry operations on the North Slope without aviation services. Small rural communities could not prosper and grow without regular air cargo and passenger service. Mineral and forest development, tourism and even the state's vital fishing industry would be retarded without today's air services network.

Simply put, Alaska would be just another economic backwater — instead of an increasingly important player in national and world trade — without a well-developed domestic and international air-service system.

State and federal governments realize all this, as evidenced by the importance placed on airport construction, upgrades and maintenance funding in Alaska. The Department of Transportation and Public Facilities spent $39 million on airport construction and improvements in fiscal 1986. Since the funding was mainly federal, fiscal 1986 here refers to the October-to-October federal fiscal year. The state spent another $13.7 million on airport operations and maintenance in fiscal 1986 — the state's July-to-July fiscal year, that is.

The above figures pertain to rural airfields only. The state's two international airports, Anchorage and Fairbanks, are administered under a separate arrangement with improvements funded partially through revenues generated by airport operations.

AC&O estimates DOT/PF will spend $30 million to $35 million on airport-related construction and improvements in FY 1987.

The DOT/PF's ongoing six-year capital improvement program for airports is updated annually. Table 1 shows examples of airport construction projects currently planned through the third quarter of 1987. It should be noted that funding levels, priorities and project completion dates are in constant flux. For this reason, it is impossible to provide a full and accurate listing of upcoming projects.

A single airport construction or expansion project in rural Alaska can run between $2 million and $7 million, according to a 1984 DOT/PF study. (See Table 2, p. 11.) This assumes a gravel surface, 5,000-sq.-yd. apron and a 100-ft. by 50-ft. taxiway.

A lighting system could add another $40 to $50 per lin. ft. of runway, depending on lighting requirements and power source, according to the report.

A federal-state appropriation ratio of 96 percent to 4 percent makes the costly Bush airport construction program possible. However, this funding level is far from secure. Like federal highway funding, aviation fund money is apportioned to states on a formula constantly subjected to political attack by heavily populated states.

There are some 1,000 recognized airports and airstrips in Alaska, of which 162 are in the Cook Inlet basin population center. Most are little more than private gravel strips.

The Department of Transportation and Public Facilities controls and maintains 270 airports statewide and 23 in the busy Cook Inlet region. The state's airport/air service classification system places airports in nine categories with four main classifications:

- **International airports** — These are major international and interstate access points to Alaska. Anchorage International and Fairbanks International are the state's only international airports.
- **Regional centers** — These are primary intrastate access points to regional centers with populations above 1,000. The Juneau and Ketchikan airports would be examples.
- **Regional** — These are secondary intrastate access points within a region. Homer and Kenai have such airports.
- **Transport** — These are primary access points to medium-sized communities and, like the first three, are bases for private aviation served by scheduled carriers, air taxi, mail and

TABLE 1
DOT/PF Preliminary Schedule for 1987 Airport Construction-Improvement

Project Description	Estimated Value
Petersburg Airport Runway & Apron Repair	$ 250,000 to 500,000
Angoon Seaplane Basin	1,000,000 to 1,500,000
Haines Airport Improvement	250,000 to 500,000
Ketchikan Seaplane Basin	250,000 to 500,000
Mountain Village Airport Relocation	2,000,000 to 3,000,000
Grayling Airport Improvements	1,000,000 to 1,500,000
Kodiak Airport Lighting	500,000 to 750,000
Anchorage International Airport Ramp	500,000 to 750,000
Bethel Airport South Apron Paving	750,000 to 1,000,000
Birchwood Airport Improvements	750,000 to 1,000,000
Cold Bay Airport Resurfacing	2,000,000 to 3,000,000
Goose Bay Airport Lighting	500,000 to 750,000
Unalaska Runway Extension	1,000,000 to 1,500,000
Kotzebue Airport Improvements	2,000,000 to 3,000,000
Allakaket Airport Lighting	250,000 to 500,000
Golovin Airport Relocation	2,000,000 to 3,000,000
Tok Airport Improvements	750,000 to 1,000,000
Council Airport Improvements	1,500,000 to 2,000,000
Nome Airport N.S Runway Repair	3,000,000 to 4,000,000
Chalkyitsik Airport Improvements	500,000 to 750,000

Source: Alaska Department of Transportation and Public Facilities

air cargo services. The Bethel airport is an example.

The vast majority of airports fall into the community and local categories. These are access points to small rural communities served by non-scheduled service and recreational or emergency airstrips, often privately owned.

Ironically, Merrill Field in Anchorage is classed as a community airport. The municipal airport has about 300,000 operations (take-offs and landings) a year, more than Anchorage International Airport.

A multi-year improvement program will wrap up at Merrill Field this summer. Wilder Construction Co. has nearly completed a $4-million contract for work on aprons, perimeter roads, tiedowns, lighting, storm drains and landscaping. Rogers and Babler, an Anchorage company, will finish this summer a $3.2-million project involving more apron work, tiedowns and storm drains. Both are Anchorage-based construction companies.

The Anchorage and Fairbanks airports are the key hubs for international, interstate and intrastate air travel and commerce. Together they open Alaska to the world and comprise the Alaska Airport System, a fiscal entity all its own.

Anchorage International

Anchorage International Airport is the heart of the state's air circulatory system. It also is of great economic importance to the Anchorage economy.

A 1984 Department of Transportation and Public Facilities study showed that AIA had a direct and indirect economic impact of $1.151 billion on the municipality in 1983. (See Table 3, p. 12.)

The study showed that transportation, visitor-related activities, freight forwarding and travel arrangements were of key importance to the growth of Anchorage. Within these four categories, 13,472 people were employed. Those people, about 12.8 percent of the total Anchorage area workforce, earned $375 million in a year. That comes to more than $1 million per day in payroll and $4.1 million per day in economic benefit to the Anchorage bowl area.

While more current figures are not available, a look at fiscal 1986 airport operations statistics leads us to believe the overall economic impact of AIA has continued to grow.

In fiscal 1986 (ended June 30, 1986) AIA had 4,633,845 passenger boardings, deboardings and transfers. That's equivalent to moving the entire population of Washington state through the airport.

About 150,174 tons of freight entered or left the airport, and 72,034 landings also generated revenue. More than 37,500 commercial jet aircraft made use of the facility.

The airport also supports an Air National Guard base from which C-130 aircraft make about 2,600 takeoffs and landings a year.

TABLE 2
Airport Construction Costs by Runway Dimensions

Runway Length X Width	Aircraft Capacity	Cost Estimate
2,100-2,500 x 50-60 ft.	Single & light twin-engine, some STOL turbo-prop (twin Otter, Skyvan), VFR operations.	$1,900,000 to 2,850,000
2,600-3,400 x 75 ft.	Single and multi-engine, some larger STOL (DASH-7), VFR or non-precision IFR operations.	$2,750,000 to 3,540,000
3,500-4,600 x 100 ft.	Small and medium turbo-prop, VFR or non-precision IFR operations.	$3,353,000 to 4,400,000
4,700-7,500 x 100 ft.	Medium, large turbo-prop (C-130 Hercules, L188 Electra); precision or non-precision IFR and VFR operations.	$4,000,000 to 6,830,000

IFR = Instrument Flight Rules
VFR = Visual Flight Rules
STOL = Short Takeoff and Landing Aircraft
Note: Construction costs include 10-percent design engineering and 15-percent administration and inspection costs.

The Jet Set

International travel is a mainstay of both the Anchorage and Fairbanks airports, even though Fairbanks serves no international flights. Revenue for both airports is channeled through the International Airports Revenue Fund, created by the Alaska Legislature in 1961. Of the fund's $47.9 million in revenues during fiscal 1986, all but $3.5 million was generated by Anchorage International Airport. About 57 percent of the revenue for both airports is generated by international traffic at AIA. Another 38 percent comes from domestic (interstate and intrastate) traffic at both airports, with the remainder generated by general aviation and other activities.

AIA is served by 36 airlines: 19 international carriers (cargo and passenger), nine interstate and eight intrastate airlines. It is strategically located to serve as a refueling stop for nine international cargo and passenger airlines and for 10 airlines that take on (enplane) and let off (deplane) passengers and freight. All these flights use the polar route between the Far East and Europe or routes linking the Lower 48 states with the Orient.

A flight from Paris to Tokyo, for example, must avoid Soviet airspace. So a dogleg route is used over Greenland to Anchorage then over the Pacific to Japan. Also, Anchorage is in a direct flight pattern for a flight from Tokyo to Chicago.

More than 1.5 million international passengers used AIA in fiscal 1986, and they spent more than $15 million in the duty-free shops and other concessions. Another 27,700 people began their international trips from Anchorage, while 1.5 million more boarded domestic and instate flights.

By June 30 of this year, AIA will have served another 3.2 million domestic and international passengers. That number will grow by some 350,000 by the end of fiscal 1990, according to one consultant's estimate. The same forecast calls for 74,866 domestic, international and all-cargo aircraft departures from the airport by mid 1987 and 82,270 such departures in FY 1990. These figures may be optimistic and certainly don't reflect growth in every sector through the end of the century.

There is increasing concern that new aircraft now being ordered by international carriers will fly over Anchorage. The Boeing 747-400, for example, can carry up to 600 passengers and fly some 8,000 mi. non-stop. This will allow the

aircraft to operate between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without the currently required refueling stop in Anchorage.

The city could lose more than 500,000 stopover passengers by 1990 plus the revenue gain from landing fees and refueling, according to a consultant's estimate. That is cause for alarm considering the millions of dollars in Airport System funding generated by international landing fees, fuel flowage fees and patronage of duty-free concessions by in-transit and Alaska destination passengers.

Concern about the potential loss of visitor revenue has led the Anchorage business community to call for greater airport marketing efforts by the state. The Legislature is under pressure to place $3 million to $5 million in the airport's FY 88 budget just for marketing promotion.

The idea of the Municipality of Anchorage or an independent authority taking over the airport also has gained new interest. Many feel the city could better administer and promote AIA to potential air carrier customers.

Building to Keep Up

The domestic and regional passenger sector is projected to grow as are the general aviation and air cargo sectors. (See Table 4.) This growth in activity calls for a corresponding growth in facilities. In 1986, AIA spent $37.6 million on capital projects and will have spent another $16.4 million by the end of FY 87.

Projects completed or in progress to date include construction and remodeling of a domestic terminal concourse, a 1,200-space parking garage, west apron reconstruction, remote refueling apron construction, installation of concrete hardstands (pads) for remote parking positions, installation of a ground radar system and demolition of the old airport post office building.

Anchorage airport officials have a $28-million wish list for work to be done in FY 1988 en route to the Alaska Legislature. The full capital improvement spending plan for FY 88 through FY 93 calls for $211.8 million in project, maintenance and equipment funding.

Key projects for 1988 include overlay and grove runway 6R/24L, $2 million; structure for consolidating crash/fire/rescue operations, $4 million; Phase III domestic terminal expansion, $11 million; domestic and international terminal repair and rehabilitation, $5 million; reconstruction of five taxiways, $1.4 million; concrete ramp surfacing, $1 million; and general aviation paving, $1 million.

Another $11.6 million would be needed to move private aviation parking away from the congested international terminal area, relocate the gravel airstrip and enlarge Lake Hood to provide more floatplane slips. About 1,200 private aircraft operate out of AIA and Lake Spenard-Lake Hood.

Already under way is a $13.2-million noise monitoring and abatement program. Coffman Associates Inc., an airport consulting firm with offices in Anchorage, is conducting the Airport Noise Compatibility Study in conjunction with an International Airport Master Plan update.

The master plan recommends building consolidated freight handling facilities on vacant land along the north-south runway. Air freight services and cargo handlers would lease airport-owned warehouse, office and apron space.

One 25,000-sq.-ft. apron, capable of accommodating a B-747 aircraft, has been constructed. An estimated 1.7 million sq. ft. of apron area will be needed during the next 20 years, according to Coffman.

A DOT/PF report states, "In 1983, 224,000 tons of enplaned revenue freight passed through the airport, according to FAA statistics. That was fully one-half of the total tonnage of all the 36 medium-size hub airports in the United States combined, and only slightly less than the tonnage passing through the Los Angeles International and Kennedy International airports. By comparison, 72,200 tons of freight were enplaned at the Seattle-Tacoma International Airport that year."

The master plan further recommends moving the current airport maintenance storage area from behind the main post office to an area south of Runway 6R and west of South Air Park.

A new fuel tank farm also is suggested, possibly at the corner of West Northern Lights Boulevard and Post Mark Drive or on the west side of the airport. A Coffman report states, "Ultimately, the fuel system could be connected to the Nikiski Pipeline, thereby eliminating use of the Alaska Railroad for fuel transport from the Port of Anchorage to the airport." About 1.2 million gal. of fuel is pumped on an average day at AIA.

Fairbanks International Airport

The Fairbanks facility was designated an international airport in 1948. It has sinced played a key role in Interior growth and North Slope oil field development.

TABLE 3
Economic Impact of Anchorage International Airport

Classified as a small hub airport, FIA serves as a weather diversion airport for polar route traffic. It can accommodate 747-type aircraft, refuel them with 30,000 gal. and get them back in the air in less than an hour.

FIA handled about 600,000 passengers in fiscal 1985. About 260,500 of them boarded commercial flights at the airport. This was down from the peak of 301,288 in 1983. The number of people boarding flights in Fairbanks increased by about 10 percent a year between 1980 and 1983, but passenger traffic has been declining since.

About 25,000 tons of freight, of which 19,400 tons was enplaned freight, moved through the airport last year. This compares to 50,580 tons of enplaned freight in fiscal 1980.

With 80,000 takeoffs and landings annually, FIA is the second busiest domestic flight destination in Alaska, according to airport director Doyle C. Ruff. In 1986, there were 14,600 cargo and passenger airline revenue landings. This indicates the vast majority of flight operations are related to private aviation.

FIA operations are largely funded through the International Airports Revenue Fund. After deducting operating expenses, AIA showed $19.8 million in operations income while FIA had a $6.6-million loss. Consequently, Anchorage's larger traffic base was able to subsidize the smaller Fairbanks operation and show an IARF balance of $13.2 million.

Capital projects at FIA, as at AIA, are funded largely through federal appropriations. In fiscal 1986, FIA had $9.4 million in capital projects, $5.1 million funded with federal dollars. About $4.3 million in work is programmed for FY 87. Another $5.1 million of work is on the drawing boards for FY 88.

Construction work over recent years has added a hydrant fuel system capable of handling aircraft serving international as well as domestic routes. Also, a terminal expansion and renovation project doubled the building's capacity to serve the traveling public.

Other work has included a 13-percent increase in apron area, a 41-percent increase in lane miles of road and a 35-percent increase in auto parking spaces. A 1984-85 project upgraded general aviation parking, aprons, runways and taxiways and added new taxiway and aircraft parking facilities.

A float plane pond was expanded to 6,300 ft. and the number of tiedown berths was doubled to 184.

In 1986, the airport's 10,300-ft. main runway was reconditioned and grooved, a parallel taxiway resurfaced and the runway lighting system upgraded.

Fairbanks International is in the enviable position of not needing major capital project financing as it enters a new five-year planning period. However, an airport is never "finished."

New projects on the books include an extension of the main aircraft parking apron, perimeter vehicle road construction and crash/fire/rescue building upgrades.

As noted, DOT/PF operates the two international airports separately from the network of smaller airfields and landing strips around the state. Yet all the state's air travel and commerce facilities are interdependent.

Alaska is the flyingest state in the union and the one most dependent on air service for daily living and economic growth. Continued long-term planning and timely facility repairs and upgrades, coupled with a sustained capital projects program, translate into a healthy air transport industry — something Alaska will need long after all the oil is gone. □

Anchorage International Faces Uncertain Times Ahead

Concerns range from the present domestic traffic drop-off from the oil industry's slump, to the future effects of longer-range aircraft that won't need to refuel at Anchorage. An occasional moose on the runway is just part of the job.

By Bruce Johnson

Anchorage—International flight stopovers, Alaska's dependence on air transportation and the deregulation of the domestic airline industry all are making Anchorage International Airport a much busier place than the area's population of about 250,000 persons would suggest.

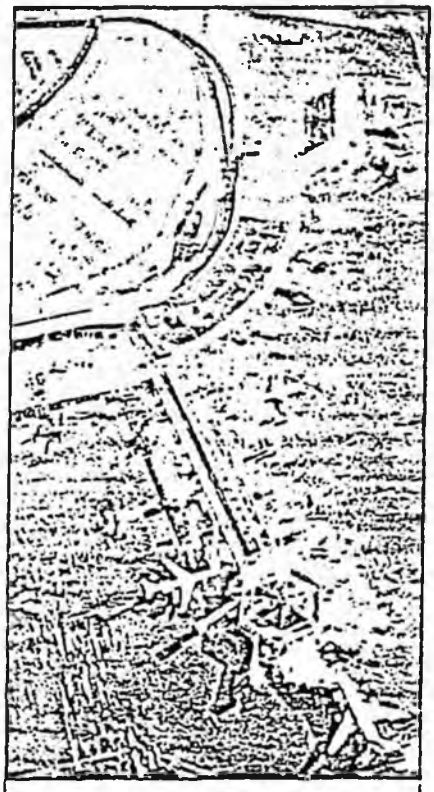
Among the nation's 36 medium-sized air traffic hubs, Anchorage ranks second in number of revenue passengers. Indeed, last year more than 4.6 million passengers were handled at the airport.

But unlike in many communities as large as or even much larger than that of the Anchorage vicinity, there is real meaning behind the "international" portion of the Anchorage airport's name. Of its 4.6 million passenger total last year, more than 1.6 million were classified as through passengers—largely visitors to the airport during refueling/reprovisioning of aircraft flying between the Orient and Europe. No less than ten international carriers have stopover operations at Anchorage International. The latest to join the list is Swissair, operating between Tokyo and Zurich.

Because of Anchorage's central position between Europe and Asia on the polar route, Anchorage International ranks seventh in the United States in terms of international operations. Flights take about nine hours between Anchorage and Europe and about seven hours between Anchorage and Tokyo. The longest nonstop flight between Anchorage and Asia is flown by China Airlines to Taiwan—almost 10 hours.

"We average 40 to 55 widebody aircraft per day here," said Guy Russo, airport director. "Most of those widebody visits involve international stopovers, including freighters."

In order to more effectively accommodate this heavy international side of the business, the airport authority recently added five remote fueling pits. The airport now has eight such parking positions—all dedicated to international stopovers. In addition, three years ago the airport completed construction of an international terminal that serves passengers while their planes are being refueled and reprovisioned. The terminal contains a duty-free shop that Russo unabashedly claims is "one of the nicest in the world."



With prices so low, at least half of the oil industry's Alaska exploration activity has been halted, resulting in a reduction of personnel and freight moving through the Anchorage airport.

The airport's main terminal—dedicated to domestic traffic—accommodates intrastate commuter operations as well as the half-dozen airlines that link Anchorage with the "Lower 48," primarily through Seattle-Tacoma International Airport.

"We run around 6000 seats a day going south from here," Russo said. That capacity includes a daily United Airlines flight direct to Chicago and a Northwest Airlines flight to Minneapolis.

Extremely air-dependent

Deregulation, as well as this giant northern state's extreme dependence on air transportation, is responsible for a marked increase in the number of seats (and decrease in rates—see separate story) being experienced in the Seattle-Anchorage corridor, in particular.

In March, AirCal extended its regional operations to Anchorage and quickly expanded the schedule there to four flights daily. Another newcomer is TWA, with one domestic flight per day out of Seattle.

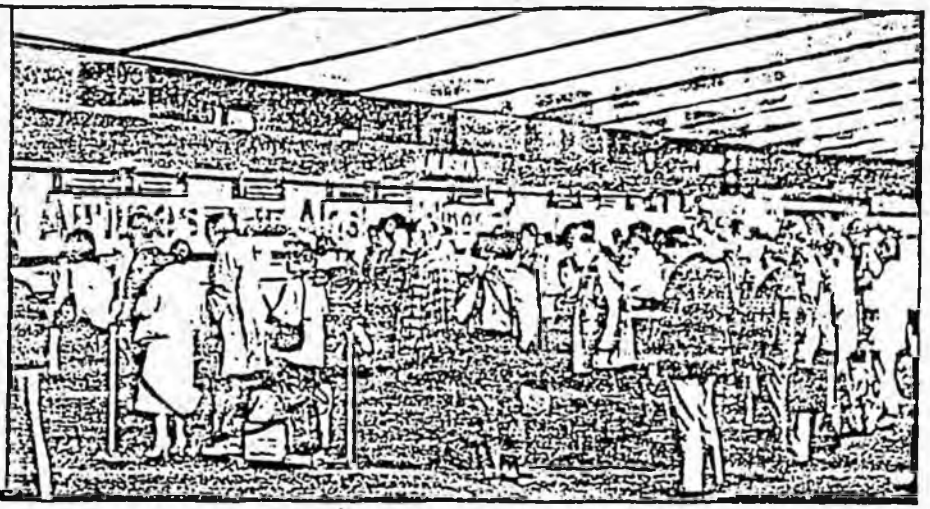
Anchorage International—state-owned and the largest airport in the state—serves as the main hub for persons flying to or from most places in Alaska, which has a total population of little more than twice that of the Anchorage area. In-state destinations include Fairbanks (which has the second largest airport, also state-owned) in the interior, the Prudhoe Bay oil field area on the North Slope, and remote fishing and other communities in the Kenai Peninsula, Gulf of Alaska mainland, Kodiak Island, western Alaska and the Aleutian Islands areas.

The popular tourist region of Southeast Alaska, also containing the state capital of Juneau, is served directly out of Anchorage as well as from Seattle.

Traffic tied to oil

Although Lower 48 domestic and in-state commuter business remains strong this summer at Anchorage International, the airport is likely to see a

An airport economic impact study last year revealed that airlines paid for nearly 69,000 hotel rooms in Anchorage due to crew and unscheduled passenger layovers.



greater-than-normal drop in business this fall and winter following the summer peak season of tourists, fish processors and fishermen. This is due to the dramatic downturn earlier this year in world crude oil prices. With prices so low, at least half of the oil industry's Alaska exploration activity has been halted, resulting in a reduction of personnel and freight moving through the Anchorage airport.

Also beginning to adversely affect air travel, particularly of business people, is a downturn in North Slope oil revenues flowing into the state government coffers, and the adverse spinoff impact that this is starting to have on Alaska business and individuals in general.

The dominant carriers in the highest-volume portions of the intrastate markets are MarkAir, a relatively new carrier that is solely an in-state operator, and Alaska Airlines, which also is the highest-volume scheduled carrier between the Lower 48 and Anchorage. In addition, United, Northwest, AirCal and TWA compete, as does Western Airlines, a veteran, high-volume operator of the Lower 48-Anchorage trade.

Russo is a longtime Western hand. The airport's director, who has been working in Alaska since 1955, retired as Western's Alaska regional director in January 1983. A year later, he was appointed director of Anchorage International.

Weakening stopovers

During his many years at Anchorage, Russo has seen a dramatic increase in international stopover business. In 1973, he recalled, the airport logged little more than 700,000 international passengers. "That segment of the airport's business surpassed the one-million-person mark for the first time in 1978," he noted.

International stopovers are good business for the Anchorage community. Besides refueling (32.5 million gallons last April, for example) and reprovisioning, fresh flight crews are accommodated for two to four days at a time at Anchorage, depending on flight and personnel schedules. Indeed, an airport economic impact study conducted last year by Applied Economics Associates (AEA), revealed that airlines paid for nearly 69,000 hotel rooms in Anchorage due to crew and unscheduled passenger layovers.

Unfortunately, this lucrative international stopover business is showing signs of weakening somewhat.

Because Asians appear to be traveling to Europe as well as other destinations in increasing numbers, the slight slowdown in Anchorage's international business does not appear to be linked to the terrorism-caused falloff in American travel to Europe. Rather, the slight weakening of Anchorage's international activity could be related to a rise in increased competition from the Asia-Europe route via northern Siberia.

In 1983 Anchorage International handled half of total tonnage flowing through all of the nation's medium-sized airports—an air freight volume only slightly less than that passing through LAX or JFK.

The AEA report noted that at least two international carriers—JAL and SAS—have exercised transit rights through Soviet airspace and that some other carriers are contemplating route changes via Russia.

Of longer term concern at Anchorage is the possible adverse effect on international stopovers that Boeing Co.'s development of the longer-range 747-400 will have.

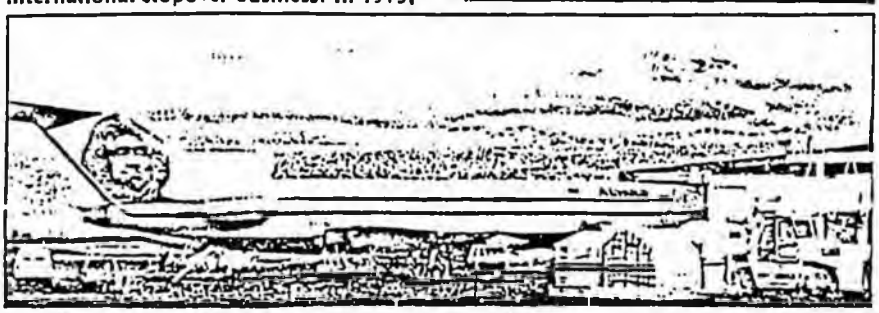
"We're now in a unique position, I guess, similar to what Gander was during the prop aircraft days across the Atlantic; but I suppose we're going to be faced with some loss of business when the Boeing 747-400 comes on line," Russo reflected.

He observed that the 747-400 will be capable of flying 8000 statute miles—enough to fly the plane nonstop between Asia and Europe via the American and Canadian airspace polar route.

"Not all of the airlines of Europe are going to afford the luxury of having a 747-400," Russo reasoned, but he admits that "some" 747-400-caused deterioration of international stopover business is anticipated during the next decade after the new model enters service.

Reacting to the recent downturn in Alaska's economy caused by the collapse of crude oil prices, the state is intensifying its efforts to attract tourists—international as well as domestic visitors. As part of these efforts, it is focusing increased attention on marketing Alaska as a destination—not just a stopover—for Asian and European tourists. Presently, only about 25,000 international passengers disembark each year at Anchorage to spend some time in Alaska.

"We get quite a few (big-game) hunt-



Alaska Airlines carries highest Alaska-Lower 48 volume.

ers from Austria, Germany and other European countries, and the Japanese like to fish," Russo observed. But he said there is considerable untapped potential for attracting international visitors on the basis of Alaska's spectacular scenery of mountains, glaciers and fjords as well as its cultural and other attractions.

"The long-haul seats are what the airlines are going to fill first," Russo acknowledged concerning the superior revenues generated by Asia-Europe traffic as opposed to Asia-Alaska or Europe-Alaska traffic. But because of the state's international promotion efforts, he is optimistic that more international passengers will disembark at Anchorage.

Heavy traffic, plus floats

Anchorage International, which had 36,738 jet aircraft landings last year, has three 11,400-foot runways—two of which are parallel east-west runways that are instrumented. The third, a north-south runway, is not instrumented. Simultaneous landings and takeoffs occur routinely at the airport. Because of prevailing winds, landings usually are from west to east and takeoffs are from south to north.

Air traffic is heavy in the Anchorage area. Not only do the northerly takeoffs encroach on military plane approaches at Elmendorf Air Force Base, but Anchorage International itself has a large general aviation facility for both wheeled and float planes.

The FAA-operated tower at the airport coordinates commercial and general aviation traffic, each of which has separate traffic patterns.

One of the more interesting aspects of the Anchorage International operation is its base for float planes. Two natural lakes—connected through dredging—are located adjacent to the airport and are ideal for float plane operations. In addition, next to one of the lakes is a general aviation dirt strip.

"We have at least a thousand, maybe 1200, general aviation airplanes around the airport here," Russo related. "People jump into their airplanes here on weekends like people in the Lower 48 jump into their cars."

As far as airliner operations are concerned, the only congestion occurs when, as the airport director puts it, the planes are scheduled to "fly out of here in formation."

Anchorage International has the usual morning (7:30 to 9) and late afternoon (4 to 6:30) peaks in traffic. But in a departure from the norm, the airport also has a peak period between midnight and 2 a.m. This is due to the desire of many passengers wanting red eye flights to Seattle for catching early morning Lower 48 flights there.

Because the airport is getting close to

"We're now in a unique position, I guess, similar to what Gander was during the prop aircraft days, but I suppose we're going to be faced with some loss of business when the Boeing 747-400 comes on line."

gate capacity during those three periods, continued redevelopment and expansion of terminal facilities is being planned.

Extensive changes coming

The airport, which went on line in 1953 in part to accommodate international refueling stopovers between Europe and Asia, has been undergoing extensive facility changes in recent years.

Last September, a commuter carrier wing was added at Concourse C, and domestic carrier gates were added and renovations were accomplished at Concourse B—at a total cost of about $25 million. Anchorage International now has eight widebody gates at the international terminal and 20 domestic and five commuter gates at the main terminal. Concourse A has eight gates, but only three are equipped with jetways because of extensive use of combi planes (with freight forward) into Anchorage. Newly renovated Concourse B has 12 gates, all with jetways. Seven of the airport's domestic gates handle widebody aircraft.

In order to keep up with market demand, construction is underway on a $25 million, 1200-vehicle parking garage with an underground connection to the terminal building lobby. In addition, plans are being made for demolishing the original, 1953-vintage section of the terminal and building another concourse that will be designed for eventual development of a wing stretching between the domestic and international terminals.

When this new building—Concourse C—comes on stream several years from now, there will be a major reassignment of gates at the airport. Said Russo, "Operating efficiency will be enhanced significantly. All commuter flights will be consolidated in one area, narrowbody planes are moved into their own area, and widebody domestic flights will be accommodated out of the new and enlarged Concourse C."

"We have at least a thousand, maybe 1200, general aviation airplanes around the airport. People jump into their airplanes here on weekends like people in the Lower 48 jump into their cars."

Although state owned and operated, Anchorage International has not shared in the spending spree for capital improvements and other projects undertaken by the state government, whose coffers became swelled with oil revenues. All of Anchorage International's expenditures have been supported by operational revenues, Russo reported.

"We didn't benefit from the (state government financial) upturn, and we're not getting hurt by the downturn," he observed.

Freight—the airport's ace

Besides being an important hub for passengers, Anchorage International is a major factor in the movement of air freight.

In fact, the facility ranks first (among the nation's 36 medium-sized air traffic hubs) in the amount of revenue freight handled. Last year alone the airport logged nearly 316.8 million pounds of freight. In 1983, the AEA economic impact study noted, Anchorage International handled a half of total tonnage flowing through all of the nation's medium-sized airports and that the air freight volume at Anchorage was only slightly less than that passing through LAX or JFK that year.

Lots of time-sensitive general freight flows into or through Anchorage airport as belly and freighter traffic from the Lower 48. Most of the freight flow is one way, although fresh fish is a strong backhaul during summers.

Interestingly, the Anchorage airport traditionally has more departing air freight than arriving air freight. This is mainly due to certain freight arriving on express steamship services operating between Washington state and the Port of Anchorage, from where the freight is trucked to the airport for fast distribution by air to in-state destinations.

Milder than Minneapolis

To someone on the "outside"—a term commonly used is Alaska to denote the Lower 48—Alaska is seen as a state plagued with heavy snow and intense cold. But Anchorage, adjacent to saltwater at the head of Cook Inlet, usually has milder winter weather than is often experienced by cities in the northern tier of the Midwest and the Northeast, Russo observed.

Two feet of snowfall is about average during the winter at Anchorage. Usually, the snow comes only a few inches

at a time, although snowstorms—including an 18-inch snowfall last March—are not uncommon. Twenty degrees below zero is about the coldest the temperature gets at Anchorage, with zero being the usual low temperature during the winter, according to Russo. Average low temperatures in the winter are 15 to 20 degrees.

With winter weather usually being milder than at Minneapolis, for example, Anchorage International does not experience abnormal snow removal problems. The airport authority has about 100 pieces of equipment that can be used for snow removal, including graders, grader-towed sweepers, blowers and trucks, plus front-end loaders for hauling snow to remote areas of the airport.

Even during heavy snowfalls, "we're able to keep at least one runway open at all times," Russo said. "It takes us 45 minutes to an hour to get a runway totally clean and back in operation."

Visitors: VIPs and moose

Actually, moose—not snowfalls—create the biggest runway operation problem at Anchorage International.

"A big concern is keeping moose off the runways in the fall and spring," Russo said. "They're capable of going *through* the fence or they can jump *over* the fence."

"A big concern is keeping moose off the runways in the fall and spring; they're capable of going through the fence or they can jump over the fence."

The airport perimeter has an eight-foot-high chain link fence topped with barbed wire, but each year eight to 10 moose—which Russo terms "very stubborn animals"—either are detected near the fence or have broken through or jumped over the fence.

"If we can't herd them out, we have permission from (state) Fish and Game to destroy the moose," Russo said. "We give the meat to a charitable organization."

Besides patroling for moose, airport security personnel occasionally have extra work to do because of stopovers by international dignitaries, whose planes are being refueled. Japan's Prime Minister Nakasone is a frequent visitor. Also a familiar personality is Great Britain's Margaret Thatcher.

The international terminal has a VIP lounge to accommodate those and certain other international visitors, but frequently international dignitaries desire a trip to and from downtown Anchorage—little more than four miles from the airport.

Russo noted that the U.S. Secret Service has personnel based at Anchorage and that Secret Service people from West Coast states are flown north when necessary to augment the Alaska contingent.

The eruption last Easter weekend of Mt. St. Augustine, a volcano about 150 miles from Anchorage, also has made life interesting lately for Russo.

"We never closed the airport, but some of the carriers chose not to come in," he said. "They were concerned about volcanic ash in the air and the effect it would have on jet engines."

So, for several days while the wind blew some ash into Anchorage, flight schedules were seriously disrupted. During that time, the airport lost about 75 percent of its overall traffic load. Ironically, that disruption was far greater than the airport has ever experienced from winter weather. ■

Opinions . . . Other views, other insights

Protecting the future of Anchorage'

Editor's note: this column is excerpted from remarks made by Sheffield Enterprises president Al Parrish to the Dec. 18 membership luncheon of the Anchorage Convention and Visitor's Bureau. Mr. Parris is chairman of the Anchorage Business Council's airport subcommittee.

Comments
by Al Parrish

ANCHORAGE International Airport, as a state-owned facility, began in the early 60's as a principal transfer point for travelers making connections to points within and outside Alaska. In addition, the airport was a refueling and an entry and exit point for international flights, principally on routes between Europe and the Far East.

Today, 26 years later, Anchorage International still serves those primary functions. The plant, however, has grown to include two passenger terminals encompassing 295,000 square feet of total floor area, three runways, extending up to 10,900 feet, 36 aircraft gates, and six baggage claim areas. All of this is contained within approximately 2,600 acres. The airport is serviced by 16 major carriers, nine of which are international, five commuters and approximately 25 non-scheduled airlines.

According to a Department of Transportation study conducted in 1983, the airport contributes more than $1.5 billion to the Anchorage economy. Over 13,000 residents counted on the airport's operation for their jobs, earning a total of $375 million dollars.

HOW WOULD you like your business to have a financial statement like this: In FY '86, the airport took in $45 million dollars, showing a profit of $21 million. Let's take it one step further: image having a business that made a profit of $21 million a year, and that it achieved this profit without any advertising, any public relations, or any marketing studies whatsoever!

Anchorage's strategic location could easily enable it to serve as a platform for business between Europe and Asia. The possibilities are limitless. For example, if Anchorage were to become a foreign trade zone, goods from around the world could be stored here, processed, used in manufacturing other items, exhibited, repackaged, sold or handled in numerous ways. Imports could be used with domestic parts to manufacture new items within the zones — all without paying any customs duties or excise taxes. It would be a tremendous catalyst for development within our business community.

In addition, by expanding the duty free zone at the airport to allow foreign shoppers a much wider range of retail exposure than just gifts and liquors, we could create, in essence, regional shopping centers for stop-over travelers. They could tour duty free trade complexes and showrooms without the necessity of having to go through customs.

More and more, we're seeing international airports taking an active role in marketing their facilities and services. For example, Seattle-Tacoma Airport, together with the Port of Seattle, which owns the airport, has developed an aggressive campaign to attract the expanding transpacific market, the international tourist market and the air cargo industry.

They've produced numerous brochures and an audio-visual presentation. They have a staff of marketing representatives which actively calls on transpacific clients, touting Sea-Tac's excellent international services on the airport premises, such as banks, customs brokers, freight forwarders, warehouses, foreign consultates, plentiful terminal space, excellent ground access, ample runway capacity and minimum environmental concerns.

Sea-Tac's programs and policies have helped to establish it as one of the top 20 airports in the United States for passenger-traffic volume. In 1982, over 9.2 million passengers and 148,000 metric tons of air freight were handled by Sea-Tac. By 1985, the number of passengers at Sea-Tac increased to 11.5 million passengers, up 25 percent. Freight went up to 210,000 metric tons, up 42 percent.

THE NEED, then, to make our presence known is going to become increasingly important in the years ahead. And not just because others are doing it. At this time, Anchorage International faces a very critical challenge, that being the advancement of aviation technology.

I'm sure most of you have heard abou the new Boeing 747-400 series aircraft. This aircraft is an advanced version of the B-747's which have served Anchorage International Airport for the past 15 years. Howevr, the new 400-series requires only a two-person flight crew, compared with the three crew members required on all other 747's. It will be able to carry between 400 and 600 passengers, and will be able to fly approximately 8,000 miles nonstop. This will allow the aircraft to fly between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without refueling in Anchorage.

OUR WINDOW of opportunity is slowly closing, and we can't afford to wait. We need to sell Anchorage International as a place the airlines will want on their route schedules — whether it be for passengers, cargo or simply refueling. And the most direct way to go about this task is to mount a marketing campaign, promoting our plant and its services to the world.

Funds for marketing the airport are already available. Revenues from the airport's operation go into a reserve account. The money is there.

Once a line item dedicated to marketing the airport is budgeted by the state, a cooperative effort can be developed, whereby funds from private and public sources would be combined to develop a generic campaign. We believe it will take approximately $3-$5 million to develop and implement a comprehensive marketing plan for the airport. This seems like a reasonable amount to launch a program to reach the world's markets.

Which revenue streams need to be protected and developed?

Obvious ones are, of course, those passengers who are stopping over in Anchorage, on their way to or from a primary destination. Our research shows that 84 percent of those on flights stopping over in Anchorage would be interested in a stay of four to seven days. One-half of those would have stopped on the trip they were on if they would have known they could.

One good example of a stopover program was developed by the Port Authority of New York and New Jersey for passengers transitting through the three major airports: Kennedy International, Newark International and LaGuardia. They call it, "On Your Way Over, Stopover." The package includes one-night hotel at a choice of hotels, sightseeing, VIP shopping service at Macy's or Bloomingdales with language assistance, a choice of Broadway theatre tickets, a welcome kit, etc., all at a low package price. They've advertised this program in periodicals all over Europe.

Other international passengers of great interest to us are those on either end of the transpolar route who could be persuaded to use Alaska as a visitor destination. New research by the state of Alaska shows that the potential for Japanese and German visitors selecting Anchorage as a visitor destination nearly equals the potential for visitors coming from the U.S. If we do our job right in selling our destination, it is possible that we could attract an additional 200,000 visitors a year from Germany and Japan, or a 50 percent increase in vacation or pleasure travel.

WHILE PASSENGERS are important, air freight offers even greater potential for growth. By increasing freight handling at AIA, we would see an increase in landing revenues (which are based on the gross takepoff weight of the aircraft) and fuel revenues for the airport.

International air freight is a rapidly growing market. In recent years, international air cargo shipments have increased at twice the rate of passenger travel.

The most cost-effective freight for air transportatoin is low-volume, high-value, and relatively low-weight products, such as electronic components, mini-computers, and precision instruments. Other less obvious air freight products are those with time-sensitivity, such as high-fashion apparel, pharmaceuticals, animals, produce, seeds and flowers. These markets need to be actively developed.

I mentioned fuel fees, and I'd like to stress that fuel is an important revenue stream. The airport operates a fuel storage farm and many operators have underground storage tanks. On an average day, approximately 1.2 million gallons are pumped. This means approximately $24,000 a day, or $9 million annually in fuel flowage fees.

Who is backing the plan to market the International Airport? This idea was further advanced by the Anchorage Business Council's Airport Committee, which I happen to co-chair, and others. The council, by the way, was formed by Mayor Tony Knowles with the mission of spurring economic development in Anchorage. Both the municipality and the Anchorage Business Council have endorsed our committee's recommendation. The Greater Anchorage Chamber of Commerce has since given the idea its full support, along with the Anchorage Convention and Visitors Bureau.

We'd like to invite your support as well, because as residents of Alaska and users of the airport, you have a stake in its future operation. We presently have the lead time to plan for the decade ahead. But we can't afford to wait. We need to plan for the 21st Century now.

Senate Transportation Committee

MEMORANDUM

TO: House Transportation Committee Members

FROM: Senator Lloyd Jones, Chairman Senate Transportation Committee

DATE: March 7, 1988

SUBJECT: CS for SCR 9, Relating to levels of service by the Alaska Marine Highway System.

SCR 9 asks the Governor to maintain a consistent level of Alaska Marine Highway service from year to year. In doing so, the Governor would ensure that all Alaskans who rely upon winter "roads" to support their local economies would have continued, reliable service.

All too often the Alaska Marine Highway is considered a special case, a subsidized tourist ship, rather than what it is for many Alaskans, their only highway. By geographic circumstance conventional highways are often cost prohibitive. Alaskans in many areas have foregone conventional roads because of the high costs or the impossibility of building roads. This has been the case in most areas of Southeast Alaska, some areas of Southcentral Alaska, and most areas of Southwest Alaska.

The effect of a reduced winter schedule would cause a ripple effect which would be felt by all Alaskans. The marine highway system is utilized by trucking firms to ship items from Seattle to Southeast, Southcentral, and Interior Alaska. There is also a growing amount of intrastate commerce, as fishmeal from Seward is shipped to Southeast hatcheries, and bait herring is shipped from Southeast to Southcentral Alaska for example. It has also been estimated that 40% of Marine Highway users traveling between Seattle and Haines are destined for the Southcentral, Interior, and other regions of the State.

I would appreciate your support of this resolution.

IN THE SENATE BY THE TRANSPORTATION COMMITTEE

HOUSE CS FOR CS FOR SENATE CONCURRENT RESOLUTION NO. 9 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

Relating to levels of service by the Alaska Marine Highway System.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS interstate highways play an integral role in the commerce of the state and the United States; and

WHEREAS the Alaska Marine Highway System is used by residents of the Southeastern, Southcentral, Interior, and Southwestern Regions of the state as an interstate and intrastate highway; and

WHEREAS the residents of Southeastern and Southwestern Alaska have assented to a less convenient manner of transportation due to the high cost of constructing roads and the limitations, imposed by geographic circumstances, upon road construction; and

WHEREAS the Alaska Marine Highway System is used by shippers to transport produce and other essential goods from Seattle to the Southeastern, Southcentral, and Interior Regions of the state, thus providing retailers and consumers with these goods in the most timely manner possible; and

WHEREAS, in the winter months, approximately 40 percent of the users of the Alaska Marine Highway System traveling between Seattle and Haines are destined for the Southcentral, Interior, and other regions of the state; and

WHEREAS the closure of, or reduced service on, a highway during winter jeopardizes the tenuous winter economy of communities in the state; and

WHEREAS the Alaska Marine Highway System already operates at a reduced level of service during the winter when compared to the level of service during the summer; and

WHEREAS reductions in the winter schedule of the Alaska Marine Highway System could severely damage the economy of communities dependent upon the Alaska Marine Highway System for the reliable and continuous supply of produce and other essential goods and for transportation services;

BE IT RESOLVED that the Alaska State Legislature respectfully requests the Governor to direct the Department of Transportation and Public Facilities to maintain the operation of the Alaska Marine Highway System at the same level of service as during the last fiscal year.

CS FOR SENATE CONCURRENT RESOLUTION NO. 9 (Trans)

FISCAL NOTE ANALYSIS

The proposed legislation would request an increase in the level of direct public service provided by the Alaska Marine Highway System (AMHS) to that provided during FY86. In FY89, the cost of this additional service is estimated to be $3,797.1. On the assumption that this increased level of service would continue beyond FY89, the additional expenditure authorization would be continued, with a 5% annual inflation factor applied to travel, contractual services, and supplies. Personal services costs are assumed to remain at a constant level.

It should be noted that in FY89, FY90, and FY91, the M/V TURTUMENA will be undergoing major refurbishment during her out-of-service periods. This would leave the southwest portion of the AMHS with only the only the M/V BARTLETT on-line for a longer than normal period during the winter. Therefore, the costs of contracting with a private carrier to reduce the period of single ship service to a normal level are included.

The capital costs shown are to construct and modify terminal facilities at Metlakatla and Hollis to accommodate the M/V CHILKAT. The M/V CHILKAT can no longer call at Metlakatla as a result of recent docking facility improvements and was removed from service beginning December, 1987. The Hollis facility is in need of modifications due to its deteriorating condition.

The expanded service will result in $1,800,000 in additional revenues in FY89. Offsetting these revenues against the expenditure appropriation of $3,797,100, the net cost of providing the additional service is $1,997,100. A combination of traffic and tariff increases will result in a 4% annual revenue.

VEHICLE POPULATION:

3500 plus vehicles estimated year-round

OVERVIEW

The Prince of Wales Island road system is the most extensive of any in Southeast Alaska. It includes a network of over 700 miles with all the primary routes integrated into the Alaska State Highway Marine System.

The only access to Prince of Wales Island is by airplane or boat. The Alaska Marine Highway System provides a convenient and necessary link to other locations within the state and out of the state.

The recreational opportunities are among the greatest that the State of Alaska enjoys. There is easy access to Historical Sites, Fishing, Hunting, Camping and Wildlife viewing.

Boyer Freight Lines operates as as-needed barge service irregularly to the Island and is used largely to transport large equipment, flammables and large shipments of wood products that cannot be accommodated on the ferries.

Alaska Outport serves the Island approximately once a month with barge service for its members only.

The Island residents depend on the weekly Alaska Ferries from Seattle to Ketchikan to bring their perishables as well as much of their other freight to the Island.

Presently, seafood products are being shipped from the Island via the Alaska Marine Highway System. If there were more regularly scheduled sailings from the Prince of Wales Island, these freight shipments would be increased.

IN CONCLUSION, WE THE PRINCE OF WALES ISLAND COMMITTEE FOR IMPROVED FERRY SERVICE ASK THAT YOU THOUGHTFULLY REVIEW OUR REQUESTS AND PROVIDE THE SAME CONSIDERATIONS ENJOYED BY OTHER AREAS OF THE STATE OF ALASKA.

THANK YOU FOR YOUR TIME AND YOUR CONSIDERATIONS.

Waunita Pannell

CHAIRMAN-Waunita Pannell

Percy Frisby

VICE-CHAIRMAN-Percy Frisby

FACTS

FACT I. We the Prince of Wales Committee for Improved Service to the island. Would like to make the suggestion that there be a meeting of all Captains of the Motor Vessels in usage for the purpose of informing the Department of Transportation, Division of Maintenance in charge of the scheduling, of their input as how to better improve the present mode of scheduling the entire system.

FACT II. Klawock City School's cost in transporting students to school sponsored activities is over five (5) times the cost. Presently it costs $65.00 RT to travel from Hollis to Ketchikan by plane. The cost per student on the ferry RT is only $12.00 The weekend of March 4 and March 5 we will need to send 20 students to Ketchikan. Air cost will be $1300.00. If the ferry were operating the cost would be $240.00 Klawock will be joined by Hydaburg, Craig, and Thorne Bay in paying these higher transportation costs due to lack of ferry service at appropriate times.

FACT III. Revenues now being infused into the Alaska Marine Highway System are in great danger of being placed into the hands of private enterprise. This statement is backed by the facts that there are now private barge services being offered to the container traffic areas that now are trying to make use of the Ferry System, but are unable to do so, because of the present system of scheduling.

FACT IV. The people of Prince of Wales Island are now being forced to use a more expensive mode of travel because of the very poor scheduling of the Ferry System. Many find air travel and/or overnighting in Ketchikan with families too costly for their budgets. The Ferry System is a State Highway connecting Prince of Wales and Ketchikan and should be usable at more convenient times. Air travel during much of the year is uncomfortable, frightening or impossible because of inclement weather, besides being cost prohibitive.

FACT V. Clark Bay is in the process of being improved so as to accommodate the MV Taku and/or her sister ships. This has been a great improvement to the port of Clark Bay terminal, at times, directly ahead of the Aurora, causing a doubling up of the ferries from the same port at about the same time, with the same port of destination.

FACT VI. Legislative bill #HB377 was passed in 1986 requiring that handicapped access be provided on our ferries. It was backed by appropriations in 1986 and 1987. The equipment for chair lifts on the stairs of the LeConte and the Aurora were ordered. When were they ordered, and as both of these vessels have been in dry dock this winter, why were they not installed?

FACT VII. Other highway systems in the State of Alaska are obtaining funding for improvements, maintenance, repair, policing, etc. The areas only serviced by the State's Marine Highway System should have the same access of state funding, to maintain and improve the service.

FACT VIII. The staging area is most unsatisfactory as passengers and vehicles vie for space with the freight services. It is not only dangerous and conducive to accidents, it is difficult especially for the elderly and handicapped to traverse the area to get to the ferry terminal. The previously appropriated funds for the improvement of the facility have not been used.

FACT IX. We appreciate the improved service scheduling for the summer months, however, it still is not adequate for the tremendous traffic during this period.

FACT X. Word has been received that the Seattle ferry may be discontinued in a rescheduling effort to try to make an efforts at a budget-saving plan. We find this solution to the scheduling efforts not an acceptable conclusion to the problems. Transportation of freezer/cooler products to Southeast as well as exports of seafood products to the lower 48 states depend on this scheduled run and would be in serious jeopardy were this to happen.

FACT XI. The Department of Transportation spends $2,500.00 for every mile of land highway, (gaining nothing from passenger revenue) while only $73.00 per mile of actual travel by the Alaska Marine Highway System. (recouping some of the revenue in the form of fares). The Prince of Wales Committee would like to suggest to the Department of Transportation, the possibility of equalizing these expenditures between the land system and the marine system.

PROPOSAL

WHEREAS, The Prince of Wales Committee for improved service to the Island via Alaska Marine Highway System.

WHEREAS, The island population is approximately 4700 to 5200 persons and the embarking - dis-embarking statistics of the Alaska Marine Highway usage for 1986 was above and comparable to larger ports.

WHEREAS, Our present schedule (especially during winter months) does not meet the direct needs of the people of Prince of Wales Island.

WHEREAS, The lack of daily schedules hinder the people from using the services of Physicians, Medical facilities, Attorneys and other professionals without the additional expense of having to make use of the airline services rather than the ferry system.

WHEREAS, The ferry does not allow for travelers who would like to utilize the weekend in Ketchikan to do so without loss of time from work.

WHEREAS, Ketchikan City and Borough and the State of Alaska are losing daily revenue,as money is being spent on mail order services, that would otherwise be directed to the city.

WHEREAS, With a regular daily schedule there would be more participation on the Marine Highway between families of Prince of Wales and Ketchikan. also, the possiblity of added tourism to the island.

WHEREAS, With the daily schedule the school systems of Prince of Wales would be able to participate in more activities to benefit the students and also increase ridership rather than being forced to utilize the airline system, which is sometimes cost prohibitive and impossible due to weather conditions.

WHEREAS, An early haul-out of the M.V. Aurora (during the winter months) causes an extra burden on those leaving for the winter, or taking vacations during the holidays.

WHEREAS, The hendicapped do not have access to special care and handling such as elevators for the ill, aged or wheel chair confined.

WHEREAS, this committtee is aware of the endeavors of the ANB-ANS Grand camp and the city of Hydaburg towards the same effort.

WHEREAS, This committee would like to have this petition draw special attention to their efforts.

THEREFORE, Be it resolved that the Prince of Wales Commitee for Improved Service to the Island via Alaska Marine Highway system urges the Department of Transportation and the Legislature to upgrade and improve the present service to the island in accordance with the above mentioned items to ensure regular guaranteed scheduling that the people of Prince of Wales can rely upon.

MEMORANDUM

TO: House Transportation Committee Members

FROM: Senator Rick Halford, Co-Chairman
Senate Finance Committee

Rick Halford

SUBJECT: SCR 40, Relating to the Revision of Title 2

I introduced Senate Concurrent Resolution 40 at the request of the Revisor of Statutes, David Dierdorff, who informed me that AS 02 (Aeronautics) was scheduled for routine replacement in 1988. It was his belief that many of the provisions in the title are very old and haven't kept up with changes in the field of aviation, avionics and federal regulation.

Legal Services does not believe its staff has the technical expertise to do the job. Since the Code Revision Commission's primary duty is to revise statutes, the Transportation Committee version of the resolution assigns the task to the commission.

It is my understanding that $14,000 will be requested in Legislative Council's budget for Legislative Affairs to cover the costs associated with the assignment. As a result, there is a zero fiscal note.

MEMORANDUM January 19, 1988

SUBJECT: AS 02 (Aeronautics)

TO: Senator Rick Halford
Co-chair, Senate Finance Committee

FROM: David R. Dierdorff
Revisor of Statutes

I recently completed routine editorial work on AS 02, which is scheduled for replacement in 1988. In going through the title, it became apparent that many of the provisions (particularly those in AS 02.10, AS 02.15, AS 02.30, and AS 02.35) are very old and that they probably haven't kept up with changes in the field of aviation, avionics, and federal regulation. It also appears that the title could stand some reorganization to make it more readable and useful.

I discussed this matter with Tam Cook, and she agreed with me that the technical nature of many of the provisions requires a level of expertise not available in our office for an adequate substantive review of the title. She suggested that I ask you to consider asking, by resolution or temporary law, the Department of Transportation and Public Facilities, to conduct a review of AS 02 during the upcoming interim, with the goal of bringing it up to date and reorganizing it as necessary. Our office would be happy to work with DOT/PF and draft any legislation that the review might recommend.

If you agree that this would be a worthwhile project, please let Tam or me know, and we will prepare an appropriate resolution or bill draft for your further consideration.

UNIFORM RULES

ALASKA

STATE LEGISLATURE

ADOPTED 1981

by the

TWELFTH LEGISLATURE - FIRST SESSION

AS AMENDED 1985

BY THE

FOURTEENTH LEGISLATURE - FIRST SESSION

Legislative Affairs Agency

deleted from the bill. The fact that a bill contains a section which changes a court rule shall also be noted in the title of the bill.

(f) If a bill or portion of a bill contains material which has an effective date other than the date which is 90 days after the bill becomes law, the bill must contain a section or sections setting out the proposed effective date or dates. The section or sections relating to the effective dates must be approved by an affirmative vote of two-thirds of the full membership of each house. If a section setting out an effective date fails to receive the required two-thirds vote in either house, the section is void and without effect and is deleted from the bill. The fact that a bill contains a section which sets out an effective date shall also be noted in the title of the bill.

(g) A bill may be recommitted any time before passage.

COURSE OF BILLS

RULE 40. COURSE OF BILLS. When a bill has passed the house in which it originated and has been certified as properly engrossed by the clerk or secretary and photographed for duplication (if changes have been made), it shall be signed by the presiding officer and the clerk or secretary. The clerk or secretary shall transmit the original and committee copies of the bill on receipt to the other house. When the second house receives the message accompanying the engrossed bill and reporting its passage, the bill shall be read by the clerk or secretary for the first time and then referred by the presiding officer to one or more committees for subsequent action by that house.

AMENDMENTS IN OTHER HOUSE

RULE 41. AMENDMENTS IN OTHER HOUSE. (a) When a bill, resolution, or citation passed in one house is amended in the other house, the bill, resolution, or citation with certified amendments is returned to the house of origin requesting concurrence. The vote on concurrence in amendments is taken by the calling of the roll and the recording of the yeas and nays in the journal. Adoption requires a majority vote of the full membership in each house. If concurrence is had the clerk or secretary notes the concurrence in the journal, informs the other house of the concurrence, and proceeds to have the bill or resolution enrolled for certification and transmittal to the governor.

(b) An amendment to a bill introduced in the other house is not in order if the amendment requires a change of the bill title other than a clerical or technical change.

CONFERENCE AND FREE CONFERENCE COMMITTEES

RULE 42. CONFERENCE AND FREE CONFERENCE COMMITTEES. (a) If one house refuses to concur in the amendments of the other it so notifies the amending house and requests that it recede from its amendments. The vote on receding from amendments is taken by the calling of the roll and the recording of the yeas and

request to committee members and the public; committee minutes, tapes and other materials of research value shall be delivered by the committee at the end of each session or each legislature to the legislative reference library for appropriate disposition;

(4) may make available to the Legislative Affairs Agency a copy of all minutes of committee meetings during the session for entry of the minutes as a data base on the legislative computer system.

COMMITTEE REFERRAL AND ACTION

RULE 24. COMMITTEE REFERRAL AND ACTION. (a) A committee acts on all bills referred to it and reports its actions and recommendations to the house as soon as practicable. Committee reports must be in writing and the report must be signed by a majority of the members of the committee. The report will note the recommendation of each member signing the report.

(b) When a bill is reported back by a committee without at least one "Do Pass", unless the bill has a subsequent referral or referrals of record, the presiding officer shall put the question 'Shall the bill be referred to the Rules Committee for placement on the calendar for second reading notwithstanding the report of the committee(s)?" If the bill has a subsequent referral or referrals of record, the question shall not be put until the last committee has reported and unless all reports are without at least one "Do Pass". The question is debatable and if a majority of the membership of the house votes in the negative, the bill is lost.

(c) If a committee has more than one bill on the same subject or if it finds it necessary to revise a bill substantially, it may report out a substitute bill and recommend that the substitute be accepted for second reading in the place of the original bill. A committee of the second house may not report a committee substitute for a bill or an amendment to a bill that requires a change in the title of the bill, other than a clerical or technical change, as the title was enacted in the house of origin. Substitute bills are duplicated and distributed when they are reported out by the committee. Committee substitute bills carry a notation of the source or sponsor of the original bill in the manner prescribed by the drafting manual unless the sponsor objects to the name so appearing.

(d) All bills involving appropriations, revenues or bonding must be referred to the Finance Committee before they can be advanced to second reading.

COMMITTEE OF THE WHOLE

RULE 25. COMMITTEE OF THE WHOLE. When the house forms itself into a Committee of the Whole the presiding officer vacates the chair and calls upon a member to preside. The Uniform Rules are observed in the Committee of the Whole but no member shall be recognized a second time until every member wishing to speak has spoken. When a bill is considered in the Committee of the Whole it shall be read and debated by sections and amendments adopted shall be noted on paper separate

officer shall then direct the clerk to record the vote. The clerk shall then transmit the result to the presiding officer, who shall announce the vote. The result shall be recorded in the daily journal.

(4) Copies of voting records. The clerk or secretary shall retain one copy of the voting record on each question in the file of the house and provide one copy for the press room file and the files of the Legislative Affairs Agency.

(5) Voting stations. A member may vote only when at the member's desk. When a member other than the regular presiding officer is presiding, the presiding officer, if present, and the other member may direct the chief clerk or secretary to indicate their votes.

(6) Misuse of voting station. A member may not vote for another member. A person may not cast a vote for a member except as otherwise provided in these rules. A member who votes for another member may be punished in a manner the house determines. A person voting for a member when not authorized by this rule is barred from the floor of the house and may be further punished as the house considers proper.

AMENDMENT

RULE 35. AMENDMENT. A motion or proposition on a subject may not be admitted under color of amendment if the subject matter is different from that under consideration. A motion or proposition on a subject that requires a change in the title of the bill as enacted in the house of origin, other than a clerical or technical change, is not in order in the second house. An amendment may not be considered by the house unless submitted in writing and read aloud by the clerk or secretary. Amendments offered by a committee shall be included in its written report and attached to the original bill. A bill in second reading is subject to amendment and is treated section by section. An amendment may not be made to a bill in its third reading, but the bill may be returned to second reading by a majority vote of the full membership of the house for the purpose of specific amendment. When action on a specific amendment in second reading is completed, the bill automatically advances to third reading. Except as provided in this rule, a title may be amended or a change of sponsor made in third reading or after passage by a majority vote of the members present, but the title amendment or sponsor change must be accomplished before the measure acted upon has been enrolled. When amendments to the body of a bill affect the numbering of sections, or passage or failure of the effective date clause affects the title, the clerk or secretary may accomplish the necessary changes without formal motion, and the changes shall be noted in the journal. Resolutions may be amended in the same manner as a bill.

PREFILING OF BILLS

RULE 36. PREFILING OF BILLS. (a) Bills or proposals for bills may be prefiled with the executive director of the Legislative Affairs Agency at any time

M E M O R A N D U M

TO: Representative Bette Cato, Chair
House Transportation Committee

FROM: Senator Jack Coghill

DATE: April 11, 1988

RE: SCR 55 and SB 298

SB 298 as originally titled, An Act naming bridge number 1146 at milepost 240 on the George Parks Highway, was intended to honor Gary Crabb by naming the bridge (crossing the Nenana River at the south boundary of McKinley Park which is also proximate to Crabb's McKinley Village community) as "Crabbie's Crossing".

SB 298 passed the Senate and went to (H) Transportation. After leaving the Senate, my staff discovered the bridge designated in the bill's title and text was already named and was not the intended bridge; possibly miscommunication with DOT.

I wish to correct this bill's title and text. This requires a Senate Concurrent Resolution requesting that uniform rules be suspended regarding changes to the title of a bill. Affirmative action by the House will be appreciated.

Thank you.

RE: SCR 63, URGING THE GOVERNOR TO ESTABLISH THE ALASKA RAILROAD DEPOT AT NENANA AS THE OFFICIAL MUSEUM FOR THE ALASKA RAILROAD AND A STATE HISTORICAL SITE.

THE ORIGINAL ALASKA RAILROAD DEPOT LOCATED IN NENANA, HAS GREAT HISTORICAL SIGNIFICANCE TO THE STATE, TO THE RAILROAD, TO THE CITY OF NENANA, TO THE PUBLIC AND TO TOURISM. LET ME GIVE YOU A VERY BRIEF HISTORY OF THE NENANA DEPOT.

IN 1914, PRES. WILSON SIGNED A BILL AUTHORIZING CONSTRUCTION OF A FEDERALLY OWNED RAILROAD BETWEEN FAIRBANKS AND THE COAST.

NENANA WAS CHOSEN AS THE NORTHERN CONSTRUCTION BASE FOR THE RAILROAD.

ON JULY 15, 1923, PRES. WARREN HARDING DROVE THE "GOLDEN SPIKE" AT NENANA TO SIGNIFY COMPLETION OF THE ALASKA RAILROAD, AND A MONUMENT WAS ERECTED NEARBY TO HONOR THE EVENT.

THE OLD ALASKA RAILROAD DEPOT AT NENANA WAS BUILT IN 1918 AND HAS HISTORICAL SIGNIFICANCE BECAUSE IT IS THE ONLY DEPOT REMAINING FROM THE ORIGINAL RAILROAD SYSTEM.

THE NENANA DEPOT WAS PLACED ON THE FEDERAL REGISTER OF NATIONAL HISTORIC SITES IN AUGUST OF 1977.

THE TRANSFER OF THE ALASKA RAILROAD FROM FEDERAL TO STATE OWNERSHIP WAS SIGNED IN NENANA ON JANUARY 6th, 1985.

THE RAILROAD DONATED THE DEPOT TO THE CITY OF NENANA TO BE PRESERVED FOR HISTORIC PURPOSES AND CONVERSION TO A MUSEUM FOR THE GENERAL PUBLIC IN MARCH OF 1987.

SCR 63 TIES TOGETHER FEDERAL, ARRC, AND STATE RECOGNITION OF THE NENANA DEPOT AS A HISTORIC RAILROAD SITE AND MUSEUM.

THERE IS NO COST TO THE STATE FOR THIS HISTORICAL DESIGNATION, BUT IT WILL ASSIST IN OBTAINING FEDERAL FUNDS FOR HISTORICAL SITES RESTORATION AND DEVELOPMENT WHICH IN TURN WILL BENEFIT TOURISM AND THE GENERAL PUBLIC.

YOUR SUPPORT OF SCR 63 IS ENCOURAGED.

RE: SJR 11, Urging repeal of certain portions of the Jones Act

---

Alaska is penalized over $200 million each year in higher costs and exported commodities are priced out of the market due to restrictions on ocean shipping by the federal Jones Act.

The Jones Act, as described in the bill text and the supporting information, requires "All-U.S." ships to carry commodities between Alaskan and Lower 48 ports, coming and going. The resulting higher overall shipping cost of "All-U.S." ships makes goods shipped to Alaska higher cost to us...and Alaska-produced goods shipped out of state must be priced less by the local Alaskan manufacturer, to absorb the added ocean freight cost, to make the product price competitive on the Outside.

An example of higher ocean freight cost is the comparison of an "All-U.S." tanker's total cost to a "Foreign-Flagged" tanker on a voyage between Los Angeles and Anchorage. The "All-U.S." tanker is 74 percent higher than a comparable "Foreign-Flagged tanker.

Voyage: L.A. to Anch.	"All-U.S."	"Foreign-Flagged
Total Dollars	$449,000	$258,000
Cost Per Ton	$12.82	$7.36
Higher Cost	74%	

Another example: Please refer to line 15 of the bill: Last month, the ocean freight companies announced another freight rate increase of 7 percent. This is the third increase in 14 months. The ocean freight carriers justified the rate increase by saying, "...because of Alaska's economic downturn and increased competition,we were not making enough money, so we had to increase prices..." In a protected, monopolistic arena, the ocean freight carriers hold Alaska hostage. These higher ocean freight costs increase the cost of goods to us, and make our locally produced commodities less price competitive on the Outside.

Alaska would greatly benefit with repeal of certain portions of the Jones Act. Passage of SJR 11 will send a clear message to the U.S. Congress about the mandate of Alaskans.

RE: SJR 11, Urging repeal of certain portions of the Jones Act

---

BACKGROUND

The term 'Jones Act' refers to Section 27 of the Merchant Marine Act of 1920, which states:

> "No merchandise shall be transported by water, or by land and water,...between points in the U.S....either directly or via a foreign port or for any part of the transportation, in any other vessel than a vessel built in and documented under the laws of the U.S. and owned by persons who are citizens of the U.S."

The purpose of the Merchant Marine Act of 1920 was:

> "That it is necessary for the national defense and for the proper growth of its foreign and domestic commerce that the U.S. shall have a merchant marine of the best equipped and most suitable types of vessels sufficient to carry the greater portion of its commerce and serve as a naval or military auxiliary in time of war or national emergency, ultimately to be owned and operated privately by citizens of the U.S...."

JONES ACT EFFECT ON ALASKA

The Jones Act Cost Penalty

> The Jones Act restricts the "coastwise" waterborn transportation of the U.S., including transportation between Alaska and the Lower 48 ports and transportation within Alaska, to vessels that are US-built, US owned, US-registered, and US -crewed. Detached and remote from other states, separated by a foreign country, Alaska depends disproportionately on ocean transportation for its economic

BACK GROUND AND EFFECT ON ALASKA

links with the rest of the nation. The Jones Act has long been a point of contention between Alaskans and other Americans --- it was one of the grievances that motivated Alaska's struggle against "colonialism" and the desire to become a State; 24 years after Statehood some Alaskans still regard the law as a symbol of their state's second-class membership in the American union.

Whatever transportation-cost penalty the Jones Act carries is imposed disproportionately on the Alaska economy. In general, the relatively small size of Alaska's economy makes it a "price-taker" in national and international markets. That is, both the prices of goods exported from Alaska and those of goods imported into the state tend to be set in larger markets outside its borders. Higher transportation costs are thus added to the cost of Alaska's imports, and subtracted from the market prices of her exports. Thus, the prices of most consumer goods in Anchorage are composed of a price determined in some outside market, plus the transportation cost from that market to Anchorage. This does not include local distribution markups.

Alaska's position as a price-taker means that its economy tends to suffer a double penalty from any adverse transport-cost differential. In general, the state's exports to Lower 48 markets will have lower prices at their point of origin than would otherwise have been the case. The most obvious impact of this kind is on the state government's natural resource royalties and severence taxes, which are keyed to netback prices.

The biggest cost impacts of the Jones Act will be on crude oil, Alaska's chief export commodity. The estimated reduction in the value of Alaska crude resulting from the Jones Act is $225 million per year.

Alaska North Slope Crude must be shipped pursuant to Jones Act regulations, which provide an exclusive monopoly to U.S. flag ships for all domestic intercity shipborne freight. The transportation of ANS crude accounts for more than half the business conducted by the Jones Act tanker fleet. It is contended that the majority of Jones Act tankers, however, are aging, inefficient, and uncompetitive with foreign flag vessels. The inefficiency stems from; very high labor costs; direct tax subsidies for construction and operating costs; indirect tax subsidies from wellhead-price manipulation by vertically integrated oil-and-tanker companies, allowing greater shipping costs to be offset against reduced wellhead netbacks.

Below is a comparison of transportation differentials between markets:

Valdez to Japan	$0.50
Persian Gulf to Japan	1.00
	$0.50
Valdez to Gulf Coast	$4.00*
Persian Gulf to Gulf Coast	2.00
	$2.00

*With Trans Panama Pipeline ($5.00 without)

As shown from these equations, there is an efficiency loss equaling $2.50 per barrel. Consumers everywhere lose because economic efficiency has been sacrificed resulting in higher delivered costs to both markets. While Valdez to Gulf Coast is just twice the distance from Valdez to Japan, transportation costs are 10 times as high. The bulk of this expense is directly attributable to Jones Act tanker costs, which do not compete with foreign-owned tankers in the U.S. trades.

SUMMARY OF FINDINGS ON THE JONES ACT FOR THE ALASKA STATEHOOD COMMISSION

The Alaska Statehood Commission prepared a report in January of 1982. In this report was the commissions conclusions on the Jones Act. Listed below are some of those conclusions:

> The costs of industry subsidies are not evenly distributed nationwide, but are borne by heavy users of Jones Act protected shipping.
>
> Many Alaskans have called the Jones Act a gross form of discrimination against Alaska.
>
> We (AK Statehood Commission) believe that if national security requires a protected merchant fleet, all the nation - not just the states heavily dependent on shipping - should support the cost.
>
> Transportation is Alaska's lifeline, and Alaska's growth needs may be severely restricted by the Jones Act because of its inflexibility and the unwillingness of interests that benefit from the act to allow even small changes.
>
> We find from our preliminary studies of the Jones Act... (that it) discriminates blatantly against Alaskans, helps drive up the cost of living here, and stifles economic development.

NOT JUST ALASKA

The Jones Act repeal is not just an Alaskan issue. Other states are adversely impacted as well. A recent article in the Seattle Post Intelligencer, (2-22-85) mentions that the Jones Act has failed in many respects:

> The U.S. fleet has diminished over several decades from 1,300 to 400 vessels. Commercial shipbuilding in the country has come to a virtual standstill.

These laws "keep Seattle from becoming a premier destination for cruise ships. Foreign-flag ships, unable to transport passengers between U.S. ports, dock instead in Vancouver, B.C., when cruising to and from Alaska." "A cruise ship exemption could inject millions of dollars into the local economy from passenger traffic through Seattle."

CONCLUSION

The largest adverse effects of the Jones Act for Alaska are likely to be in the future , as transportation costs for crude oil and other minerals can be an important factor determining the economic feasibility of developing specific deposits.

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: The Honorable Jack Coghill
Senator
Alaska State Legislature

DATE: March 2, 1987

FILE NO:

TELEPHONE NO: 465-3900

FROM: Mark S. Hickey MSH
Deputy Commissioner
Operations

SUBJECT: SJR 11

The Alaska Department of Transportaiton and Public Facilities (ADOT&PF) has reviewed SJR 11 and is in general agreement with it. The thrust of the resolution to allow the use of foreign built vessels in domestic maritime trade - provided they satisfy the same standards of design, construction, ownership and crewing as US building vessels - is in line with the recommendations in the 1986 Jones Act Report to the Legislature. Inasmuch as ADOT&PF was the lead agency in developing that report, we have no problem in supporting the resolution.

Last year U. S. Senator Stevens introduced S 1935 which would have accomplished the purpose of your resolution for tourships which serve Alaska, allowing them to operate from Seattle rather than Vancouver, B.C. Unfortunately, the bill died in committee last year and no subsequent measure has yet been introduced into the present Congress.

BACKGROUND

The purpose of the study is to provide "an expert and objective analysis of the economic effects of the Merchant Marine Act of 1920 (The Jones Act) on the economy of Alaska," considering:

- The costs which the Act adds to the ultimate price of important classes of freight coming to and leaving Alaska;
- The effect of the Act on the cost and standard of living in Alaska;
- The effect the Act has upon further development and expansion of shipping-dependent industries;
- The composition of the U.S.-flag Jones Act fleet;
- The effects higher shipping costs have on state revenues;
- Other important effects the Act may have upon Alaska's economy, resources, and future development.

The Jones Act

The term "Jones Act" refers to Section 27 of the Merchant Marine Act of 1920, which states:

> No merchandise shall be transported by water, or by land and water,....between points in the U.S.....either directly or via a foreign port or for any part of the transportation, in any other vessel than a vessel built in and documented under the laws of the U.S. and owned by persons who are citizens of the U.S.....

Because Section 27 restricts U.S. domestic waterborne trade to vessels of U.S. construction, U.S. registration, and U.S. ownership, the Jones Act has come to be referred to as the U.S. cabotage law. Cabotage refers to the reservation of a nation's domestic cargo to ships of that nation's fleet. It could be described as a form of protectionism applied to transportation services. In fact, the purpose of the Merchant Marine Act of 1920 is stated clearly in the preamble of the Act:

> That it is necessary for the national defense and for the proper growth of its foreign and domestic commerce that the United States shall have a merchant marine of the best equipped and most suitable types of vessels sufficient to carry the greater portion of its commerce and serve as a naval or military auxiliary in time of war or national emergency, ultimately to be owned and operated privately by citizens of the United States....

Factors Leading Up to Passage of the Act

To understand why the Merchant Marine Act of 1920 was enacted, it is first necessary to review the U.S. experience in World War I.

At the beginning of World War I in 1914, the British maintained the world's largest merchant fleet with over 8,500 vessels. The remaining protagonists, together with Britain, accounted for over 14,000 vessels or nearly 60 percent of the world fleet and over 65 percent of the world's tonnage.

As the warring nations recalled their merchant fleets to military service or lost them in action on the high seas, the U.S. began to experience a crippling scarcity of vessels for its on-going commerce. Commodities and goods were left literally rotting on the piers. A major shipbuilding program to provide the country with the ships necessary to carry men and materials to Europe for an extended war was undertaken. However, only a few vessels were delivered before the armistice ending World War I was declared in November of 1918.

The experience of World War I indicated to U.S. lawmakers the dangers of relying on foreign-flag fleets. In the summer of 1919, the Senate Commerce Committee chaired by Wesley L. Jones, Republican from the State of Washington (1909 to 1932), began working on a revision of the national maritime laws. Under Jones' direction the Merchant Marine Act of 1920 was passed into law.

EXCEPTIONS TO THE ACT

A variety of circumstances and conditions have resulted in differing exceptions to the Jones Act for some territories and states. The third and fourth proviso exceptions to Section 27 of the Merchant Marine Act of 1920 are examples of exceptions that apply to Alaska. For practical purposes, the third proviso allows the use of foreign owned, registered, and built ships for carrying cargoes between Alaska and the lower 48 states via Canadian ports so long as rail movement is involved, while the fourth proviso applies to movements on the Yukon River.

There are other exceptions. For instance, trade with the U.S. island possessions of Guam, Tutuila (American Samoa), Wake, Midway and Kingman Reef may be carried on foreign built U.S.-flag vessels.

Of direct interest to Alaska are the conditions that govern trade to the Virgin Islands. For historical reasons, the Virgin Islands are exempt from the Jones Act. As a result, Alaskan crude oil can be shipped out of Alaska on foreign-flag vessels to a refinery in the Virgin Islands. The product can then be shipped foreign-flag to the U.S. mainland. Data compiled by the Maritime Administration indicate that this route accounts for about 5 percent to 15 percent of Alaskan oil shipments.

THE JONES ACT FLEET

The Jones Act fleet consists of those vessels eligible to engage in the coastwise trade. Generally, that includes any vessels built in the U.S., under

U.S. ownership, registered under the laws of the U.S., and not restricted because of subsidy status. Vessels that have received Construction Differential Subsidy (CDS) or are receiving Operating Differential Subsidy (ODS) from the Maritime Administration cannot serve the cabotage or coastwise trade without special waivers.

Currently, the Jones Act fleet accounts for 60.7 percent of U.S.-flag tonnage. Most of these vessels are tankers; in that category, 86.8 percent of all vessels are eligible for coastwise trading. Data appear in Table 1.

The Alaska trade fleet of six[1/] dry cargo freighters and 88 tankers constitutes 28.8 percent of the Jones Act fleet and 16 percent of the active U.S.-flag privately owned fleet.

Alaska trade freighters constitute only 8.6 percent of the total Jones Act eligible freighters. The containerships are smaller than those generally found in the Jones Act fleet and the Ro/Ro ships are larger. Among tankers, the Alaska trade fleet is made up of 34.4 percent of the total Jones Act fleet, but has 54 percent of the carrying capacity. This is because tankers in Alaska service are larger than the fleet average. Data appear in Table 2.

ALASKA WATERBORNE TRADE

Alaska's waterborne commerce is dominated by crude oil shipments from Valdez which accounted for 89.5 percent of Alaska's total port activity in 1979. When crude oil shipments are subtracted from the total, remaining waterborne commerce is 34.5 percent foreign imports and exports, 47.5 percent coastwise receipts and shipments, and 18 percent internal receipts and shipments. Data illustrating the relationship of total foreign, coastwise, and internal movement of the top ten Alaska ports is shown in Figure 1. Excluding crude oil shipments, the activity of the top ten Alaska ports includes approximately 60 percent of the state's total waterborne commerce.

Coastwise dry cargo shipments out of Alaska move primarily to the Pacific Northwest (Seattle and Tacoma). Of the total, 51.2 percent move to the Pacific Northwest, California receives 15.9 percent, and internal shipments within Alaska account for the remaining 32.9 percent.

Tanker movements from Alaska are destined primarily for refineries in California. Panama, the Pacific Northwest, and Hawaii also receive varying amounts of Alaska crude, based on the 1979 data.

Coastwise dry cargo shipments to Alaska originate to a large degree in the Pacific Northwest (77.3 percent). A very high proportion of the cargo moving to and from Alaska's smaller ports is transshipped via the major ports.

1/ Includes Sea-Land and TOTE; excludes barge services.

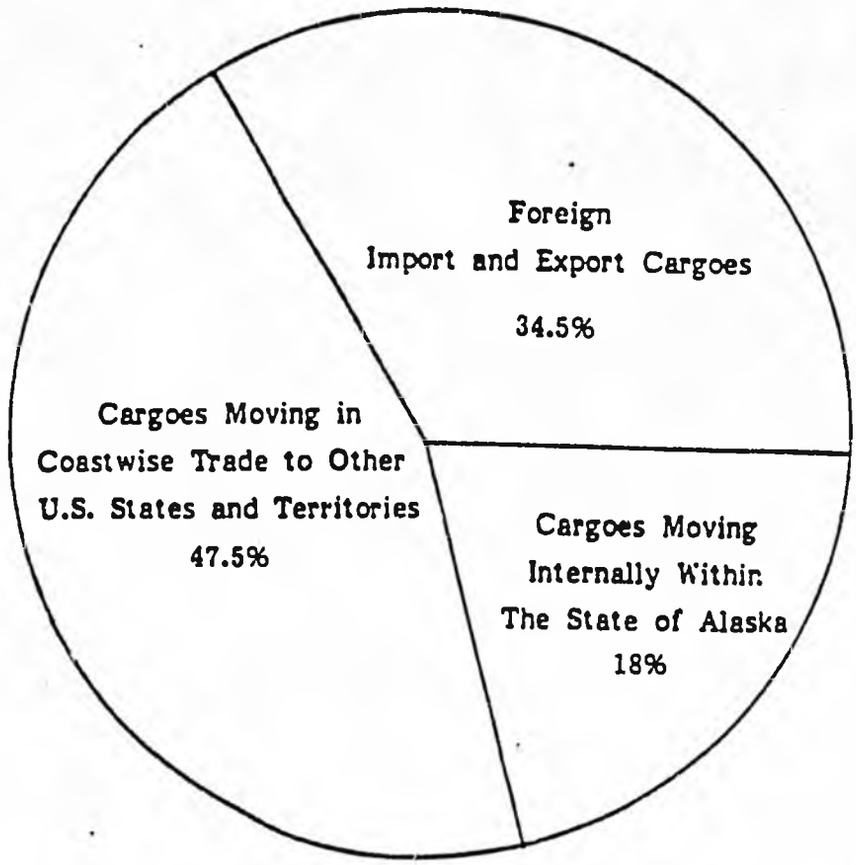
FIGURE 1

CARGO ACTIVITY OF CORPS OF ENGINEERS TOP 10 ALASKA PORTS
(EXCLUDING CRUDE OIL AT VALDEZ)
BASED ON TONS OF CARGO SHIPPED AND RECEIVED
1979



Tanker cargo being received in Alaska, consisting of petroleum products for consumption in the state, flows almost exclusively from California; a high percentage is redistributed from larger to smaller Alaska ports.

Anchorage is the primary receiving port for consumer products, building materials, and food. Whittier also serves the Anchorage market with the same categories of cargo. Most of the high volume cargoes (commodities registering annual volumes of 10,000 tons or more) moving into Alaskan ports other than Anchorage and Whittier, consist of petroleum products.

ALASKAN SHIPPING COSTS

The Impact of Costs on Rates

The cost of shipping in the Alaska trade, and the cost premium caused by the Jones Act, were estimated by comparing the cost of present vessel services with the probable cost of those services were they operated with foreign-flag ships. Although it is true that the observed impact on customers is conveyed through shipping rates, not underlying shipping costs, and that competition and value of service, or "what the traffic will bear," establish freight rates for each commodity in the short run, costs set the limits for freight rates in the long term. In other words, although cost and rate may not be the same or even similar for any given commodity at any given time, in the long run (and/or over a mixture of commodities carried in the same service), rates are, in fact, cost determined. Hence, the cost-based method is a valid approach for determining the relative impact of differing governmental policies which affect the long term character of a shipping market.

Shipping Costs

Ocean shipping costs can generally be divided into the following categories:

Capital
Manning and Subsistence
Fuel
Maintenance and Repair (M&R)
Supplies and Equipment
Insurance
Cargo Handling
Other Port Costs
Agency, brokerage, and Commission
Waterway Tolls and Pilot Fees
Corporate Overhead

There are exceptions, however. For example, tanker movements seldom involve meaningful cargo handling costs, because this function is provided by shipboard pumps, the cost of which is already part of other cost categories. Other types of shipping have other costs—e.g., container ownership in the case of container systems.

U.S.-flag Cost Disadvantages

Among the categories listed, not all are areas in which there are cost differences between U.S.- and foreign-flag vessels. The major areas in which U.S.-flag vessels are at a disadvantage are:

- Crew wages — Generally, U.S. manning costs are higher, due in part to higher rates of compensation and in many cases, higher manning levels.

- Insurance — Insurance is usually higher because of higher U.S. vessel repair costs and typically higher levels of medical care, workmen's compensation, etc.

- Vessel acquisition — Vessel acquisition costs are higher because of higher U.S. construction costs. In addition, delivery schedules in the U.S. are said to be much slower, introducing a cost of delay. The requirement for U.S. subsidized operators to purchase U.S.-built vessels has been temporarily waived, allowing U.S.-flag carriers to buy vessels overseas at cheaper prices. This does not apply in the domestic trades, however.

- Vessel Maintenance and Repair — Vessel M&R is higher due to the necessity for making repairs in the U.S.

- Overhead — Overhead is sometimes higher due to higher general levels of salary for U.S. headquarters office staffs, to the extra staff required for government compliance activity, and the fact that foreign lines use agents in the U.S.

- Fuel Costs — In most cases U.S. fuel costs are higher because steam turbine vessels are employed which have higher fuel consumption rates than foreign-flag vessels that traditionally use slow speed diesel engines.

U.S.- vs. Foreign-flag Shipping Comparisons

The SH&E Required Freight Rate model was used to calculate costs of U.S. and hypothetical foreign-flag vessels in a representative sample of Alaskan service, focusing on cost differences in the categories set out above. Summary results from four runs appear in Tables 3-6, as follows:

Table 3	-	Container vessel: Seattle-Anchorage
Table 4	-	Roll on/Roll off vessel; Tacoma-Anchorage
Table 5	-	Crude Oil Tanker; Valdez-Los Angeles
Table 6	-	Petroleum Products Tanker; California to various Alaskan ports.

These summary runs indicate that the relative impact of the Jones Act on Alaskan commerce varies with specific circumstances. For example, in liner trades[1/] (represented by container and Ro/Ro vessels) a significant part of the total cost relates to containers, cargo handling, and other cargo-related functions. These are not affected by the Jones Act. Hence, the relative cost difference between U.S.- and foreign-flag vessel service is less than, say, the tanker trades, where Jones Act-affected cost categories make up a much larger share of the total cost.

THE IMPACT OF SHIPPING COSTS DUE TO THE JONES ACT

Open Questions About the Jones Act

There are a number of unanswered questions relating to changing or eliminating the Jones Act. They include:

- Is it preferable to remove all provisions of the Act or a selected subset?
- What is the likely response by foreign shipping interests to a relaxation of the coastwise laws? On what terms would foreign owners and operators be interested in providing service?
- What immigration problems, if any, would result from employing foreign seamen in the Alaska coastwise trade?
- If foreign-flag operations can be introduced at great savings, what has impeded foreign-flag vessels from being used more extensively to carry coastwise cargoes via Canadian ports?
- What will be the U.S. labor reaction to the introduction of foreign ships and foreign crews and what secondary effect might this have on Alaska?

The Impact of The Act on Liner Services

The total U.S.-flag premium cost for liner services in the Alaskan trade (i.e., services which transport package cargo such as consumer goods, automobiles, machinery, etc.) is about $41 million per year, as follows:

	Container	Ro/Ro	Tug Barges
Cost per trip - U.S.-flag	$981,774	$1,024,030	$195,217
Cost per trip - foreign-flag	850,658	889,373	158,023
Net	$131,116	$134,657	$37,188
Voyages per year	X 155	X 100	X 200
	$20,322,980	$13,465,700	$7,437,600
		GRAND TOTAL	$41,226,280

1/ "Liner trades" refers to all ocean freighter services which handle packaged and piece goods, in contrast to "bulk trades" which handle petroleum, grain, ore, and other bulk commodities.

The cost penalty applies to commodities as a group. How it may be distributed to any specific commodity or group of commodities is uncertain; if any one item is judged to pay less premium, then something else must automatically be said to pay more, and the net result to the people of Alaska is essentially the same.

With regard to the relative impact of the Act on inbound versus outbound commodities, the analysis indicates it is northbound liner commodities which are most likely absorbing the cost premium, meaning the direct (or initial) impact of the Jones Act is falling more heavily on Alaskan receivers and consumers rather than on Alaskan businesses shipping their products southbound.

The Impact of the Act on the Crude Oil Trades

With regard to crude oil, the RFR analyses indicated the differential between U.S.- and foreign-flag tanker operations in the Valdez to Los Angeles service is $1.39 per long ton. For shipments from Valdez, transshipped at the Panama Canal and sent onward to the U.S. Gulf Coast, the differential would be $5.67.

Assuming an average annual U.S.-flag shipment rate of 80 million tons per year, with two-thirds moving to California and one-third to the Gulf Coast via Panama, the annual cost penalty ultimately being borne by Alaska through the netback mechanism is $225 million. Clearly, the Jones Act's major impact on Alaska is in the sphere of crude oil shipments.

MAJOR CONCLUSIONS

The Jones Act and Alaska's Liner Service

- Commerce of the State of Alaska moving in liner services, mostly consumer goods and business supplies, is absorbing an aggregate annual cost of approximately $41 million because of the restrictions imposed by the Merchant Marine Act of 1920.

- Due to the inherent directional imbalance of Alaska cargoes, the incidence of higher costs and rates is having the greatest impact on northbound cargoes.

- In the high-volume Anchorage-Pacific Northwest trade, the state may have a potential for reducing rates by stimulating backhaul cargoes. The extra cost of transportation for such cargoes would be low.

- In modern containerized-type operations, the bulk of the costs are not flag related. Consequently, the scope for cost and rate reductions as a result of introduction of foreign-flag services is not as great proportionately as in other sectors of the merchant marine.

The Jones Act and Alaska's Crude Oil Transportation Service

- Alaska's net return from its oil sales is being reduced due to the additional costs imposed by the Jones Act, which, based on current conditions, are approximately $225 million per year.

Current Use of Exemptions from the Act

- The State of Alaska has some relief available from the Merchant Marine Act of 1920. This relief is currently not being exploited. Non-use of this loophole does indicate that the cost savings ultimately available from use of foreign-flag vessels may not be as great as has sometimes been supposed.

Changes in U.S. Maritime Policy

- In view of the Administration's apparent position to uphold the Jones Act, efforts to have it rescinded in toto will be difficult in the immediate future.

- Given the recent lifting of prohibitions on overseas-built vessels for U.S. subsidized trades, the State of Alaska may wish to consider an effort to obtain a waiver of the requirement to use vessels built in the U.S. and place less emphasis on changing the remainder of the Jones Act.

- The State of Alaska should develop a coordinated, thoroughly-considered Jones Act strategy that seeks reasonable and politically attainable concessions in areas where the cost impacts are most meaningful. This approach has the potential for success, and can be instrumental in reducing the impact of the Jones Act on the State's economy.

RE: SJR 18, AlCan Highway Commemorative Stamp

I respectfully request a hearing for this bill at your earliest convenience. I am forwarding information to be used as backup for this legislation.

The 50th Anniversary of the construction of the Alaska Highway, referred to as the Alaska-Canada Highway, or the AlCan Highway, is in the year 1992. It has been requested by Philatelic groups, both in Alaska and Canada, that a commemorative stamp be issued in honor of the event. I have included correspondence as backup to the resolution.

Because of the requirement to submit a special request stamp issuance 36-months in advance, by the U.S Postal Service Citizens Stamp Advisory Committee in Washington, D.C., it is recommended that the process be initiated right away. Through this resolution, the Alaska Legislature will go on record as endorsing this action.

RE: Construction of the AlCan Highway
Request #87-001182

Attached is the information you requested on who constructed the AlCan Highway.

Initial construction of the AlCan Highway was completed by the U.S. Army. The units involved are listed below with their current status. If they are still active, I also gave an address to contact them.

ACTIVE

35th Engineer Battalion (originally 35th Combat Engineer Regiment)
Address: Commander
35th Engineer Battalion
Ft. Leonard Wood, Missouri 65473

76th Engineer Battalion (originally 340th General Services Regiment)
Address: Commander
76th Engineer Battalion
Ft. Drum, New York 13602

73rd Engineer Company (originally 73rd Light Ponton Company)
Address: Commander
73rd Engineer Company
Ft. Lewis, Washington 98433

Company D, 29th Engineer Topographic Battalion
Address: Commander
29th Engineer Topographic Battalion
Ft. Shafter, Hawaii 96858

INACTIVE
18th Engineer Battalion (originally 18th Combat Engineer Regiment)
93rd, 95th, and 97th Army Engineer Regiments
77th Engineer Battalion (originally 341st General Services Regiment)
74th Light Ponton Company
133rd and 134th Quartermaster Truck Company
140th and 141st Quartermaster Truck Company
428th Engineer Heavy Dump Truck Company
Company A, 648th Engineer Topographic Battalion

Later the AlCan was improved to a year-round road with wider roadbeds and permanent bridges built by the U.S. Public Roads Administration.

My contact person for the above information was Doris Thomas in Public Affairs at Ft. Richardson in Anchorage. Her phone number is 862-9298.

If you have any further questions, please don't hesitate to call us.

the TRAIL of '42

A Pictorial History of the Alaska Highway

by stan cohen

northwest. Another access point was through Skagway, Alaska.

The road, when completed, traversed over 1400 miles from Dawson Creek to its junction with the Richardson Highway at Delta Junction, Alaska.

INITIAL CONSTRUCTION

The bombing of Pearl Harbor on December 7, 1941 was to produce one of the great engineering feats of the century. The west coast of the United States and Canada and all of Alaska lay open to a possible Japanese invasion and the defense of the area was of paramount importance in the early days of the war.

The attack had prompted President Roosevelt to form the Special Cabinet Committee to study the problems of building a road to Alaska through Canada. Brigadier General C.L. Sturdevant, the Assistant Chief of the United States Army Corps of Engineers was detailed to put together plans for the road's actual construction at the earliest possible time. There was opposition to building the road even after Pearl Harbor. The navy thought it could keep the sea lanes free of enemy intrusions and the army questioned the use of badly needed supplies and soldiers on such a large scale project. But the pressing need for a quick decision to get men and supplies to the area while the ground was still frozen prompted action. After much haggling over which route to follow, a decision was made on February 2, 1942 to follow Route C or the Prairie Route. On February 14 a directive was issued for actual work to begin.

The plan was to start a road from the end of the railroad at Dawson Creek, British Columbia, cutting a pioneer road suitable only for military traffic to Whitehorse and terminating at Fairbanks, Alaska. It was to be built as fast as possible. Later it was to be followed up as a year around road with wider roadbeds and permanent bridges built by the United States Public Roads Administration (PRA).

Arrangements had to be made with the Canadian government, as most of the road would be built through British Columbia and the

Governor Ernest Gruening of Alaska, second from left, visited the Public Roads Administration camp in Whitehorse in October, 1942. On the left is Brigadier General James J. O'Conner, Commanding General of the highway construction. Third from left is Colonel John Wheeler, in charge of the actual construction and to his right is Colonel K. Bush, Chief of Staff. NA

Yukon Territory, using American troops and equipment. The Canadians agreed to furnish the right of way; to waive import duties, sales taxes, income taxes and immigration regulations, and to permit the taking of timber, gravel and rock from crownlands along the route. The Americans agreed to pay for the construction and to turn over the Canadian portion of the road to the Canadian government six months after the war ended.

The initial command of the construction project was in the hands of General William M. Hoge, who tried to control the entire length of the route. He set up a southern sector headquarters at Ft. St. John and a northern sector headquarters at Whitehorse. This arrangement did not work due to the scope of the project and in June General Hoge assumed command of the northern sector. Colonel James A. O'Conner took over the southern sector. O'Conner, a 1907 West Point graduate was the engineer in charge of tunneling Corregidor's fortress in Manila harbor. Due to a lack of control over the entire project and to supply problems, a Northwest Service Command was established in September, 1942 in Whitehorse with O'Conner, now a general, in charge. The Command was in charge of all U.S. Army activities along the highway and in that part of Canada.

By the first week of February, the President had authorized the army to proceed with all haste to begin construction of the road. It was initially named the Alcan Highway. Emergency funds were allocated and orders were issued to army troops to proceed to the end of rail at Dawson Creek. On March 2, 1942 the first train carrying troops arrived at the town.

There were few reliable maps of the proposed route and only a few trails cut by the local trappers and prospectors. There was a winter trail from Dawson Creek to Ft. Nelson and a wagon road from Whitehorse northwest to Kluane Lake, but not much more.

The 35th Combat Engineers were ordered to proceed to Dawson Creek and then to Ft. Nelson to begin location work in the spring. The 340th General Service Regiment went to Whitehorse and was to build the road south. The

341st General Service Regiment was stationed at Ft. St. John and was to build the road to Ft. Nelson. The 18th Combat Engineer Regiment went to Skagway and traveled the railroad to Whitehorse to build the road northwest toward Alaska.

Those four regiments were thus poised in the spring of 1942 for the great construction job ahead. Twelve hundred miles of road in Canada and over 200 miles in Alaska were to be cut through as quickly as possible. With the addition of three more army regiments, the 93rd, 95th and 97th — all of which were composed of black troops with white officers — the total strength of troops for the construction job in 1942 was over 11,000. The PRA also provided location crews and private contractors during this period.

Dawson Creek in early March was swarming with troops starting up the "road" to Ft. St. John and Ft. Nelson. The road was to follow the winter trail from Ft. St. John past Charlie Lake through thick forests and along ridgetops on the eastern slopes of the Rocky Mountains, crossing several large rivers and continuing to Ft. Nelson.

Local trappers, Indians and prospectors were pressed into service to help locate the way, although their suggestions for possible routes were not always the most appropriate for a motorized highway. Local packers with their mule teams were used to help supply the advanced survey parties.

Six hundred thirty-five miles of wilderness stretched from Ft. Nelson to Watson Lake, the first settlement in the Yukon Territory. The highest point of the road crossed Summit Lake at over 4,000 feet. The road then traversed up mountains and down valleys, crossing large rivers and hundreds of small streams. The road followed a general northwesterly direction to Watson Lake. Names such as Trutch, Steamboat Mountain, Toad River, Muncho Lake and the Liard River were etched forever in the minds of the soldiers who labored on the road.

At Lower Post, just south of the Yukon border, the new road followed an old road to Watson Lake, where the route to the northwest

was very unclear. Several routes to Whitehorse were explored and the one finally chosen followed the Rancheria River Valley across the Mackenzie-Yukon River divide, then along the Swift River to Teslin Lake and Marsh Lake. It followed an old prospector's trail to Whitehorse.

From Whitehorse, the road skirted the north side of the St. Elias Range, around the south shore of Kluane Lake, the largest in the Yukon, and crossed the large glacial rivers of western Yukon — the Sims, the Donjek and the White. At the Alaska border, over 1200 miles from Dawson Creek, the route traversed through the Tanana River Valley connecting Northway and Tok to Delta Junction where the road connected with the Richardson Highway, built in the 1920s. Delta Junction is recognized by some and Fairbanks by others as the official end of the highway.

The soldiers of the army and the civilians of the PRA faced countless days of below zero temperatures, snow, rain, insects and even intense heat coupled with the problems associated with building a road in an unknown environment.

By April, road locaters were working throughout the country with the hum of bulldozers on their heels. Decisions on the route were sometimes made on the spot and if the route was not quite in the right place, the PRA men corrected it later. Workers often climbed trees to figure out the route ahead. Then the bulldozers would cut out a path. Often three to four miles of road were built in a day as the summer daylight hours permitted the men to work 24 hours a day. The big push was to get to Fairbanks as soon as possible with a pioneer road. Local bush pilots were hired to ferry men and supplies along the route. The riverboats along the Yukon's inland rivers and lakes were pressed into service. There was no limit set on

opposite
Surveying to lay out a line for the bulldozers to follow through the dense forest was difficult but necessary. The center line was roughed out on maps but the foot-by-foot line had to be surveyed and investigated on the ground. Members of the 341st Engineers survey between Ft. St. John and Ft. Nelson in May, 1942. USA

the amount of equipment or money to get the job done. To the old-timers of the north, this American explosion of power and wealth was overwhelming.

There was a race against time in the southern sector as spring thaws made travel over the winter trail in the Ft. St. John to Ft. Nelson area impossible. Supplies had to be stockpiled on the route for the spring and summer construction period.

The most pressing problem along the route was the inexperience of the engineers in building a highway on the muskeg and permafrost. The ground is permanently frozen year around just below the muskeg in many areas along the route and if the top layer is stripped off, which was the case along part of the route, the underlying ground thaws out and produces a quagmire which is difficult to deal with. Ditches were installed to drain off the excess thawing water, but were ineffective. Finally the crews left the muskeg intact and built the road on top of it, laying a roadbed of gravel where needed.

The construction methods took a terrific toll in men and machines and there were bound to be accidents along the way. One of the worst tragedies occurred at Charlie Lake near Ft. Nelson on May 14, 1942. Eleven men drowned in the lake when their raft capsized. Other men were killed in road accidents or died from the extremely cold temperatures.

The route between Whitehorse and the Alaska border was extremely difficult to work on. There was no adequate route information and the terrain was very difficult to cut a road through. There were miles of swamps, large glacial rivers to cross and much hard rock construction — especially around Kluane Lake. Ice jams in the rivers during the spring breakup were very dangerous. The temperatures in winter fell to 50 degrees below zero and lower. At this temperature, machinery would not function and it was very dangerous to work outside. But the work continued through the early spring, summer and fall, with the road slowly being inched toward Alaska. The troops were building both north and south of Whitehorse, the major supply point of the northern sector, and toward

Whitehorse from Ft. Nelson. Additional troops of the 97th Engineers proceeded north from Valdez, Alaska and started building the road southeast to the Yukon border. The PRA and the Alaska Road Commission personnel also worked to improve the Richardson Highway into Fairbanks.

Finally on September 24, 1942, bulldozer operators of the 35th and 340th Regiments met at Contact Creek (MP 588.1, Km 946.3) to close the southern sector of the road at Beaver Creek, Yukon (MP 1202, Km 1934) on October 20, 1942, when troops working south from Alaska and north from Whitehorse met. Thus the pioneer road had been completed in record time (eight months and twelve days) and an opening ceremony was held at Soldiers Summit on Kluane Lake on November 20, 1942 to officially celebrate the completion of an overland link to northern Canada and Alaska. General O'Connor represented the United States Army and Minister Ian Mackenzie represented Canada along with a contingent of Royal Canadian Mounted Police and American soldiers. This had been a joint effort of the United States and Canada that probably would have been years off if not sparked by wartime emergencies.

But this was only the beginning as the pioneer road was just that — a partially single lane, very rough road that would have to be upgraded immediately in order to be usable by the increasing military traffic.

Dear Jim:

I am enclosing a letter we received from the Fort St. John Junior Stamp Club, in regard to a joint Canada-US stamp commemorating the 50th anniversary of the completion of the Alcan Highway. At our last meeting we resolved to support the issuance of a stamp in honor of the great event. The Anchorage Philatelic Society feels the same way.

We believe this to be a very important event, so we are asking your support at this time, and to do whatever is necessary to get it accomplished. I am also writing Fran Ulmer & Bill Hudson. Thank you.

Sincerely yours,

Mrs Gloria Ahrensfeld

Mrs. Gloria Ahrensfeld

FORT ST. JOHN JUNIOR STAMP CLUB
c/o 10003-100th Street
Fort St. John, B.C., V1J 3Y5
Canada

September 30, 1986

Dear Sir/Madam:

The Fort St. John Junior Stamp Club, located at Mile 49 of the Alaska Highway is asking the Governments of Canada and the United States to issue a joint commemorative stamp in 1992 honouring the construction of the Alaska Highway.

In its construction, the Alaska Highway helped to ensure that Alaska and the northwest would remain in Allied hands. It helped to tie down enemy forces and to weaken opposition to the Allied war effort in the Pacific. That a 1,500 mile road was built in some of the roughest terrain and weather conditions known, in the short time of nine months in 1942 was itself an engineering miracle.

Since the end of the war, the Alaska Highway region has seen tremendous development. Today, this Highway carries the lifeblood of the economies of Alaska, Yukon and northern British Columbia along its route. In 1992, we will celebrate the Fiftieth Anniversary of the construction of the Alaska Highway. We have received the support of our regional government, the Peace River-Liard Regional District. Letters have been written to the representatives of other governments along the length of the Alaska Highway. Now we ask that you lend your support to this request by sending a letter of support to the addresses noted below and by making your elected representatives aware that you support the issue of commemorative stamps by Canada and the United States to honour the construction of the Alaska Highway. It would be appreciated if you could send a copy of your letter to the undersigned.

Send your letters to:

Mr. Rene Marin, Chairman
Stamp Selection Committee
Canada Post Corporation
Ottawa, Ontario K1A 0V1

and to

Mr. Belmont Farley, Chairman
Stamp Advisory Committee
United States Postal Service
Washington, D.C. 20260-6352

Sincerely yours,

Phil Cove
Advisor

Mr. Speaker;

The Al-Can Highway has been an inportant lifeline to the development of the economies of Alaska and northwestern CAnada. Construction on the highway began in 1942 in response to the bombing of Pearl Harbor which was thought to have laid the entire west coast of the United State and Canada open to a possible invasion from Japan. President Roosevelt felt that access to the Territory was essential to the country's security and a construction plan was quickly put into action. Construction of the highway at that time was considered to be a great engineering accomplishment given the 1500 miles of rough terrain to be covered and the tecnology that was available at the time.

The 50th anniversary of the construction of the Al-Can Highway is in 1992. In order to recognize this occasion, CS SJR 18 has been introduced to encourage the United States Postal Service and the Canada Post Corporation to coordinate a simultaneous issuance of a United States stamp and a Canadian stamp commemorating the event. Action is required at this time because of the 36 month notice required by the U. S. Postal Service Citizen's Stamp Advisory Committee in Washington, D. C., as it considers requests for the issue of special stamps. I urge your support of CS SJR 18 so that the Alaska State Legislature will go on record as endorsing this action.

MEMORANDUM:

TO: Representative Betty Cato, Chair
House Transportation Committee

FROM: Senator Fred Zharoff FZ/M.T.

I appreciate your scheduling SJR 27 for review by the House Transportation Committee, and attached you will find back up material relating to this measure.

As indicated in the text of the resolution, a shoal is developing at St Paul Harbor which presents a navigational hazard to the shipping industry serving Kodiak. In an effort to avert potential economic disruption to the region, I have introduced this resolution requesting both the Governor and our Congressional Delegation to urge the US Army Corps of Engineers to initiate a dredging operation as soon as possible.

Michael Thill, of my staff, will be availbale to discuss this measure with either yourself or your staff.

Again, I thank you for your consideration of this measure.

FISCAL NOTE ANALYSIS SJR 27

Current information verifies that the shoal in St. Paul Harbor is growing. However, information gathered by NOAA is not adequate to determine what solution will be best for eliminating the shoal as a hazard to navigation. The Corps of Engineers is prepared to proceed with a Reconnaissance Study under the continuing authority of their Section 107 Program to gather more information about the shoal. The Department of Transportation and Public Facilities (DOT&PF) agrees that there is a need to further study the shoal.

1. Background

During the summer of 1986, a request was submitted to the Department of Commerce's National Oceanic and Atmospheric Administration (NOAA), requesting they study a subsurface formation in Kodiak's St. Paul Harbor.

2. Current Status

NOAA has completed their field work by gathering data on the shoal's formation. NOAA has forwarded copies of their preliminary analysis, as well as copies of their advance final review comments, to the U.S. Army Corps of Engineers as well as SeaLand, Inc., and the shipping company's consultant's Peratovich, Nottingham and Drage. There has been a change in the shoal's formation since 1982 when data was previously gathered.

The shoal is presently outside of the Corps existing project limits for dredging in St. Paul Harbor. However, the Corps of Engineers is prepared to initiate a study project under their Section 107 Continuing Authority Program. The study project has three phases: Reconnaissance; Feasibility; and Construction.

3. Costs

Under the Section 107 Program, the Corps will assume all costs for the first phase of the project (Reconnaissance). It is estimated the Reconnaissance Study will cost the Corps approximately $50,000. If the Corps determines that the shoal is a hazard to navigation, they will proceed to conduct a Feasibility Study. The preparation of the Feasibility Study will require a 50/50 cost share with a local sponsor. It is our assumption that the City of Kodiak will act as local sponsor. The cost of the Feasibility Study is estimated to total $150,000. Finally, if it is determined to be in the best interest of navigational safety to proceed with a construction (dredging) project, the local sponsor will be required to share in up to 20 percent of the construction costs. The Corps does not have any cost estimate available for the construction (dredging) phase of the project.

4. Maintenance Costs

The periodic maintenance costs for maintaining the approach channel will be borne by the Corps.

Dept. of Transportation & Public Facilities

POSITION PAPER

BILL NO: SJR 27

TITLE: Dredging of shoal in St. Paul Harbor, Kodiak

APPROVED: Mark S. Hickey
Commissioner

DATE: 3/23/87

Current information verifies that the shoal in St. Paul Harbor is growing. However, information gathered by NOAA is not adequate to determine what solution will be best for eliminating the shoal as a hazard to navigation. The Corps of Engineers is prepared to proceed with a Reconnaissance Study under the continuing authority of their Section 107 Program to gather more information about the shoal. The Department of Transportation and Public Facilities (DOT&PF) agrees that there is a need to further study the shoal.

1. Background

During the summer of 1986, a request was submitted to the Department of Commerce's National Oceanic and Atmospheric Administration (NOAA), requesting they study a subsurface formation in Kodiak's St. Paul Harbor.

2. Current Status

NOAA has completed their field work by gathering data on the shoal's formation. NOAA has forwarded copies of their preliminary analysis, as well as copies of their advance final review comments, to the U.S. Army Corps of Engineers as well as SeaLand, Inc., and the shipping company's consultant's Peratovich, Nottingham and Drage. There has been a change in the shoal's formation since 1982 when data was previously gathered.

The shoal is presently outside of the Corps existing project limits for dredging in St. Paul Harbor. However, the Corps of Engineers is prepared to initiate a study project under their Section 107 Continuing Authority Program. The study project has three phases: Reconnaissance; Feasibility; and Construction.

3. Costs

Under the Section 107 Program, the Corps will assume all costs for the first phase of the project (Reconnaissance). It is estimated the Reconnaissance Study will cost the Corps approximately $50,000. If the Corps determines that the shoal is a hazard to navigation, they will proceed to conduct a Feasibility Study. The preparation of the Feasibility Study will require a 50/50 cost share with a local sponsor. It is our assumption that the City of Kodiak will act as local sponsor. The cost of the Feasibility Study is estimated to total $150,000. Finally, if it is determined to be in the best interest of navigational safety to proceed with a construction (dredging) project, the local sponsor will be required to share in up to 20 percent of the construction costs. The Corps does not have any cost estimate available for the construction (dredging) phase of the project.

For further information call Susan Fleischhauer at 465-3900

4. Maintenance Costs

The periodic maintenance costs for maintaining the approach channel will be borne by the Corps.

POLLUTION REPORTS

Report all spills of oil and hazardous substances to the National Response Center via 800-424-8802 (toll free), or to the nearest U.S. Coast Guard facility if telephone communication is impossible (33 CFR 153).

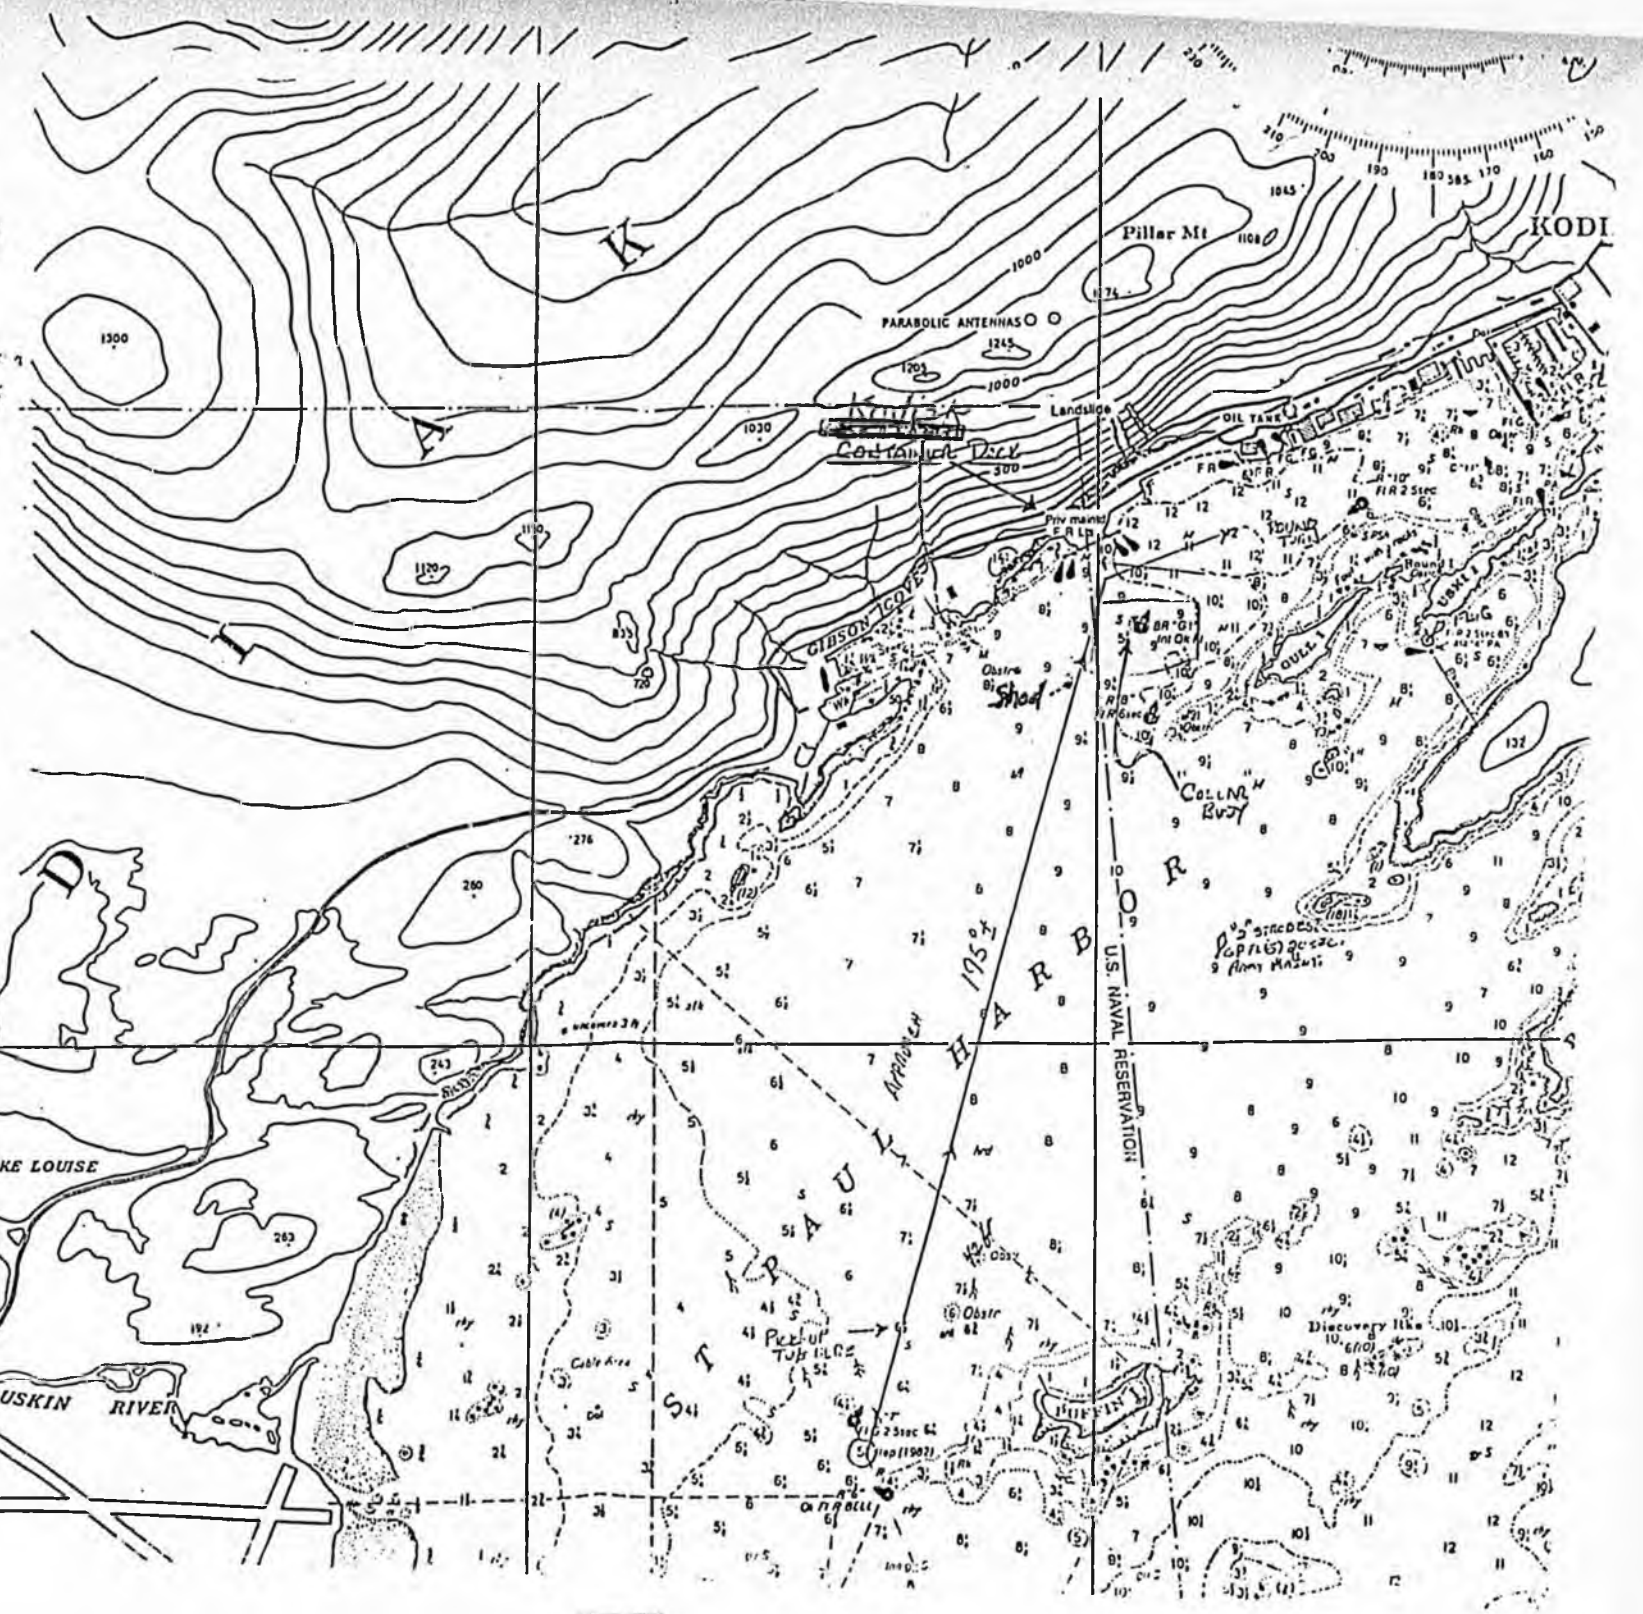
RADAR REFLECTORS

Radar reflectors have been placed on many floating aids to navigation. Individual radar reflector identification on these aids has been omitted from this chart.

CAUTION

Significant changes in depths and shoreline have occurred in the area of this chart as a result of the earthquake of March 27, 1964. Charted hydrography in the vicinity of Kodiak Harbor is from post earthquake surveys. Tidal observations since the earthquake indicate bottom subsidence of −5.6 feet at Womens Bay.

Mariners are urged to use extreme caution when navigating in other areas of this chart.



November 3, 1986

Honorable Fred T. Zharoff
Box 405
Kodiak, AK 99615

Dear Senator Zharoff:

In 1986 we were fortunate enough to obtain soundings of the problem shoal in St. Paul Harbor, as well as soundings in front of Pier 3 and the area off the spit, thanks to your help in getting the ball rolling. We have more work ahead: now we can compare them with the 1983 soundings taken by NOAA, but never published.

This shoal does not seem to go away, and could continue to grow. It is now a hazard to navigation for all vessels entering St. Paul Harbor, because of the narrow range of approach to Pier 3. As you are aware, a vessel must go around the shoal and make a semicircle in approaching Pier 3 in a very small area.

With new ships coming into the Alaska trade, the steamship industry will be further hampered by the confined approach to Pier 3 via St. Paul Harbor. As Kodiak increases its position in the world seafood industry, the larger vessels could be restricted in the use of this vital port. As we all know, the Port of Kodiak will become the "hub" collecting and distributing fish, Alaska's most vital resource, from all of the outports to the domestic and export markets.

Since the U.S. Army Corps of Engineers is responsible for keeping existing waterways open for interstate and foreign commerce, it is essential that we immediately make the following request, through the proper channels.

1. You, as the area's State Senator, should immediately request funds from the Congressional Supplemental Appropriations before February 1987 to determine the content of the shoal, by core drilling, as well as total size and an estimate of removal costs. We would then hope to obtain the funds to remove this hazard to navigation in the immediate future.

2. If you write to the Governor, and he in turn writes the two Alaska Senators and one Congressman in Washington, we do stand a chance of getting action in February 1987.

I know you are are aware of the "tricky" navigational problems in St. Paul Harbor, particularly with larger vessels, the tides, and the various changing cross winds experienced in getting a vessel to the dock in such close waters. It is also possible that a grounded vessel could jeopardize the commerce of the Port of Kodiak during a busy shipping season, preventing further use by large seagoing vessels.

Thank you in advance for your assistance on this very important issue. I will be discussing this further with you by telephone as well as in person.

Sincerely,

Hal Livingston

HLS/lc

May 6, 1986

Honorable Bill Sheffield
Governor of Alaska
Box A
Juneau, Alaska 99811

Dear Governor Sheffield:

I respectfully request your assistance in contacting Alaska's congressional delegation and in working with the federal government regarding a matter of great importance to Kodiak Island and western Alaska.

A large shoal apparently is forming 900 yards off the face of the Kodiak dock in St. Paul Harbor. This shoal could jeopardize navigation by restricting the turning circle area. Because of various rapidly changing cross-winds and tidal actions, the Port of Kodiak already is a very difficult port to maneuver in and out of. This shoal makes it much worse.

The shoal appears to be 25 feet under the surface at low tide. Container ships now coming into Kodiak draw between 25 feet and 40 feet. Sea-Land Service, Inc., has plans to replace its current fleet with larger ships that all draw 40 feet. If a ship were to strike the shoal, the southwest entrance to Kodiak harbor could be blocked. The shoal is not shown on existing nautical charts.

The formation of this shoal is a very serious matter for Kodiak. The community and the region, like most of Alaska, is heavily dependent on sea transportation for goods and services. If large ships run into underwater barriers while entering and departing the Port of Kodiak, the effect on the local economy could be devastating. Kodiak is the supply center for the region. It is the shipment center for millions of dollars worth of seafood. If goods cannot be shipped in, and our seafood cannot be shipped out, Kodiak's system of commerce would be destroyed.

At this time, the main problem with the shoal is that we do not have much information about it -- size, how fast it is growing, exact location, etc. Enclosed are copies of the letters I wrote to Alaska's congressional delegation requesting them to explore the possibility of obtaining a supplemental appropriation for Army Corps of Engineers to have the National Oceanic and Atmospheric Administration conduct a survey of the shoal during the course of the agency's planned summer

survey work. The cost of the additional survey should be less than $100,000.

I would be most grateful, Governor, if you could also write to our congressional delegation requesting them to seek funding for the survey. Please contact me if you require additional information.

Thank you for your attention to this important matter.

Sincerely,

Fred F. Zharoff
Alaska State Senate

Enclosure

cc: Commissioner William Knapp

BILL SHEFFIELD
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

June 17, 1986

The Honorable Fred F. Zharoff
P.O. Box 405
Kodiak, AK 99615

Dear Fred,

Staff from the Department of Transportation and Public Facilities has reviewed the information available on the Kodiak Harbor shoal and has talked to Kodiak residents to obtain more current information. As a result of that review, Commissioner Knapp has written to the National Oceanic and Atmospheric Administration (NOAA) requesting assistance on the project to document the shoal and any changes that may be occurring.

To follow up on your specific request that I ask the Alaska Congressional Delegation to seek funding for the project, my staff in the Washington, D.C., office spoke with Senator Stevens' office. It is our understanding that a request was made to the Corps of Engineers that information on the Kodiak shoal be updated and examined and your specific request to help the community develop a plan to prevent the shoal from becoming a barrier to the use of the harbor be considered. The Corps should be replying to that request with whatever current information is available and with some comments about pursuing the mapping of the shoal to determine if it is changing.

When we receive responses from NOAA and the Corps of Engineers, we will relay that information to you. In addition, our staff will continue to work with the Congressional Delegation to ensure continued attention to this problem. In the interim, if I can be of any further assistance in this matter, please let me know.

Sincerely,

Bill

Bill Sheffield
Governor

MEMORANDUM

State of Alaska
Department of Transportation & Public Facilities

TO: The Honorable Bill Sheffield
Governor

DATE: June 9, 1986

FILE NO:

TELEPHONE NO: 465-3900

SUBJECT: Kodiak/Harbor Shoaling

FROM: R. O. Knapp
Commissioner

The Department of Transportation and Public Facilities has reviewed a copy of Senator Fred Zharoff's May 6, 1986, letter to you regarding a shoaling problem in Kodiak Harbor. We support the Senator's efforts to gather information regarding the underwater formation's origin and development.

The Department will be notifying the U.S. Department of Commerce's National Oceanic and Atmospheric Administration (NOAA) of the community's interest in studying the subsurface formation. NOAA has an active research program within its Bathymetric Mapping Group and is always interested in identifying conditions affecting current nautical charts. It is possible their upcoming program may allow them to include a reconnaissance of the harbor area this summer.

13 March, 1987

The Honorable Steve Cowper
Governor
State of Alaska

Dear Governor Cowper:

This correspondence is a follow up to my letter of November 21st, 1986 concerning the development of a shoal in the St Paul Harbor at Kodiak. As you know, the emergence of this shoal presents an impediment to navigation, with potential for economic disruption to the region. Additionally, harbor navigability is both vital to, and consistent with the policy position taken by the state with respect to development of international export trade.

I respectfully request your assistance in urging support from our Congressional Delegation to request the US Army Corps of Engineers to dredge the shoal at St Paul Harbor. Thank you for your consideration of this matter.

Sincerely,

Senator Fred Zharoff

cc: H.L. Schuyler
Sea-Land Service, Inc.

STEVE COWPER
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

April 17, 1987

The Honorable Ted Stevens
United States Senate
522 Hart Building
Washington, DC 20510

Dear Senator Stevens:

During the last few months there have been a number of contacts between our offices regarding the development of a hazard to navigation in Kodiak's St. Paul Harbor and the need for the gathering of data on the subsurface formation. We want to thank you for your previous support of our requests to study the shoal.

Since our previous contact, the National Oceanic and Atmospheric Administration (NOAA) has completed a series of soundings on the shoal. It is our understanding that the information has been forwarded to the U.S. Army Corps of Engineers. Preliminary analysis indicates the shoal has changed in formation since sounding studies were conducted in 1983. Since the change in the formation's shape can now be substantiated, we believe it is important to continue to determine the impacts of the shoal on navigation.

We are requesting your support in encouraging the U.S. Army Corps of Engineers to select the project for further study under their Section 107, Continuing Authority Program. Under the Section 107 program, the Corps will be able to conduct a reconnaissance study to determine the shoal's particular characteristics and identify some possible solutions to mitigating its impact on navigation. It is only by proceeding with the reconnaissance study that we eventually may be able to determine the best solution for removing the shoal.

Your support of this request will be appreciated.

Sincerely,

S/S Steve Cowper

OFFICE OF THE GOVERNOR
JUNEAU

April 17, 1987

The Honorable Frank Murkowski
United States Senate
709 Hart Building
Washington, DC 20510

Dear Senator Murkowski:

During the last few months there have been a number of contacts between our offices regarding the development of a hazard to navigation in Kodiak's St. Paul Harbor and the need for the gathering of data on the subsurface formation. We want to thank you for your previous support of our requests to study the shoal.

Since our previous contact, the National Oceanic and Atmospheric Administration (NOAA) has completed a series of soundings on the shoal. It is our understanding that the information has been forwarded to the U.S. Army Corps of Engineers. Preliminary analysis indicates the shoal has changed in formation since sounding studies were conducted in 1983. Since the change in the formation's shape can now be substantiated, we believe it is important to continue to determine the impacts of the shoal on navigation.

We are requesting your support in encouraging the U.S. Army Corps of Engineers to select the project for further study under their Section 107, Continuing Authority Program. Under the Section 107 program, the Corps will be able to conduct a reconnaissance study to determine the shoal's particular characteristics and identify some possible solutions to mitigating its impact on navigation. It is only by proceeding with the reconnaissance study that we eventually may be able to determine the best solution for removing the shoal.

Your support of this request will be appreciated.

Sincerely,

S/S Steve Cowper

May 6, 1986

Honorable Ted Stevens
United States Senate
522 Hart Building
Washington, D.C., 20510

Dear Senator Stevens: Ted

I respectfully request your assistance in solving a problem that poses a potential threat to the economy and commerce of Kodiak Island and, possibly, western Alaska.

It has been brought to my attention that a large shoal apparently is forming 900 yards off the face of the City of Kodiak dock in St. Paul Harbor. The shoal could pose a major threat to navigation by seriously restricting the turning radius in the channel. From unscientific and unofficial surveys, its depth appears to be 25 feet at low tide. With the container ships now coming into Kodiak drawing between 29 feet and 40 feet, you can see how serious the situation has become. If a ship were to strike the shoal, the southwest entrance to Kodiak harbor could be blocked. Combined with the already existing problems of rapidly changing cross-winds and tidal action, this shoal poses a serious threat to the ocean traffic in and out of the Port of Kodiak.

In addition, Sea-Land Service, Inc., is planning to upgrade its fleet to vessels of a larger size, drawing 40 feet. Vessels of this size will truly need the flexibility for proper maneuvering to use Kodiak as one of their ports of call.

Kodiak and the surrounding communities are heavily dependent on sea transportion for the importation of supplies and for the export of millions of dollars worth of seafood products, the mainstay of the region's economy. This navigational hazard could cause a major disruption in the flow of ocean traffic resulting in devastation to the local economy.

We have very little information regarding this shoal. The shoal is not shown on any of the existing, and outdated, nautical charts, which at best are approximately 10 years old. The shoal's size, exact location, and rate at which it is growing are unknown. As a first step to solving this problem, we need to find out exactly how serious the shoal is and how rapidly it is growing.

I respectfully request you to explore the possibility of obtaining supplemental funding for the Army Corps of Engineers with the intent of

having one of the the National Oceanic and Atmospheric Administration's survey vessels, during this year's planned summer field work, stop into St. Paul Harbor and survey the shoal. The unofficial estimated cost of this survey is less than $100,000. Please advise whether this appropriation is a possibility. I feel, as do others, the situation is serious and warrants immediate action.

Thank you for any assistance or advice you can offer.

Sincerely,

Fred F. Zharoff
Alaska State Senate

November 21, 1986

The Honorable Ted Stevens
United States Senate
522 Hart Building
Washington, D.C. 20510

Dear Senator Stevens:

As you are aware, Kodiak is facing a potential problem due to the formation of a shoal in St. Paul Harbor. This shoal presents a problem to ships attempting to dock at Pier 3 in Kodiak. Sea-Land Services, Inc., the major container ship line that services Kodiak, is planning to deploy new, larger ships in the Alaska market. This further the need to investigate this problem shoal.

Through your help, NOAA made some soundings of this shoal during this past summer. These soundings can now be compared to the soundings of 1983 in order to determine if, in fact, the shoal is growing in size.

Because of the hazard this shoal creates to ships navigating into St. Paul Harbor, I respectfully request you to attempt to obtain funds through the Congressional Supplemental Appropriations to determine the content and size of the shoal by core drilling and accurate cost estimates for removal of the shoal. I request funds through this vehicle in order for work to begin this spring or summer.

I am most appreciative of your past support on this important matter and I thank you in advance for your efforts.

Sincerely,

Fred F. Zharoff
Alaska State Senate

Senator Fred F. Zharoff
P.O. Box 405
Kodiak, Alaska 99615

Dear Senator Zharoff:

Senator Stevens is away from his Washington office during this Congressional recess. However, I shall bring your request for work on the shoal to his attention upon his return. We have contacted the Corps of Engineers to determine the time frame necessary to conduct such work.

Due to the changes in the budget process resulting from Gramm-Rudman-Hollings, only very limited funds are available through supplemental appropriations. To obtain funds in a supplemental appropriations bill it is now necessary to take those funds out of some other program. Because funds were spread thinly this year there is likely to be strong resistance to removal of funds from any programs during this budget cycle.

I hope you find this is responsive to your request.

With best wishes,

Cordially,

Washington, D.C. 20510

Dear Senator Stevens;

I received your December 16, 1986 letter regarding State Senator Zharoff's inquiry about the formation of a shoal in St. Paul harbor at Kodiak, Alaska.

A comparison of the soundings done by NOAA last summer with previous soundings in 1983 can be accomplished at minimal cost and is within our funding capability. The comparison can be done in a few days, but it will take some time to collect the required data. We will provide a detailed response to you within 60 days.

A copy of this letter is being sent to your Anchorage office.

If you have any questions please feel free to contact Mr. Carl Borash of my Plan Formulation Section at (907) 753-2632.

Sincerely,

Wilbur T. Gregory, Jr.

REPLY TO
ATTENTION OF:

Plan Formulation Section

Honorable Ted Stevens
United States Senate
Washington, D.C. 20510

Dear Senator Stevens:

This will follow up my December 31, 1986 letter to you regarding the formation of a shoal in St. Paul Harbor at Kodiak, Alaska. We have reviewed soundings done by the National Oceanic and Atmospheric Administration (NOAA) in 1986. The shallowest point on the shoal has an elevation of -30 feet MLLW.

The Corps was authorized to study the deep-draft navigation needs of Southcentral Alaska through resolutions adopted by the Committee on Public Works of the U.S. Senate on April 27, 1970, and by the Committee on Public Works of the U.S. House of Representatives on December 2, 1970. Under this authorization the Corps produced a preliminary interim Deep-Draft Navigation Report for Kodiak in June of 1982 which recommended that further investigations concentrate on breakwater and channel improvements as additional data became available. The study was discontinued in 1984 due to the decline in shipping volumes at Kodiak resulting from the collapse of the king crab resource. The study will resume when the cargo volume increases. Navigation problems from the shoal in question could then be investigated as part of that study.

The Corps could also evaluate this problem through a Section 107 navigation study under our continuing authorities if a local or State government sponsor requests our assistance. A Reconnaissance Report could be prepared at Federal expense. If Federal participation in a project appears to be economically feasible, the non-Federal sponsor would be asked to share the cost of a feasibility study in accordance with the Water Resources Development Act of 1986.

A copy of this letter is being sent to your Anchorage office.

If I can be of further assistance, please do not hesitate to contact me directly. If further details are desired by your staff, contact can be made with Mr. Carl Borash of my Plan Formulation Section at (907) 753-2632.

Sincerely,

Wilbur T. Gregory, Jr.

May 19, 1987

The Honorable Fred F. Zharoff
Alaska State Senate
P.O. Box V
State Capitol
Juneau, Alaska 99811

Dear Fred:

I want to share with you the latest letter I have received from Colonel Gregory concerning the shoal in Kodiak's harbor.

The Corps of Engineers is apparently willing to go forward with a reconaissance study of the shoal's movement. However, a local sponsor -- or the State -- must request the Corps' assistance before they can go forward. This is due to the requirement that a non-federal sponsor share in the costs of a feasiblity study if the reconaissance study indicates one is warranted.

I hope this information proves useful.

With best wishes,

Cordially,

TED STEVENS

REPLY TO
ATTENTION OF:

Plan Formulation Section

April 29, 1987

Honorable Ted Stevens
United States Senate
Washington, D.C. 20510

Dear Senator Stevens:

This will respond to your letter of April 9, 1987 concerning the formation of a shoal in St. Paul Harbor at Kodiak. This will also supplement my letter to you of March 27, 1987.

The soundings done by the National Oceanic and Atmospheric Administration (NOAA) in 1986 were compared with those done by NOAA in 1982. It appears that the shoal has grown slightly in that time period. To determine the shoal's long-term potential for growth or decline, it would be necessary to conduct a detailed investigation into the physical processes acting on the shoal.

The Corps of Engineers is not authorized to initiate such an investigation on its own motion. However, the Corps could evaluate this problem through a Section 107 navigation study under our continuing authorities if a local or State government sponsor requests our assistance. A Reconnaissance Report could be prepared at Federal expense. If Federal participation in a project appears to be economically feasible, the non-Federal sponsor would be asked to share the cost of a feasibility study in accordance with the Water Resources Development Act of 1986.

A copy of this letter is being sent to your Anchorage office.

If I can be of further assistance, please do not hesitate to contact me directly. If further details are desired by your staff, contact can be made with Carl Borash of my Plan Formulation Section at (907) 753-2632.

ATTENTION OF:

Plan Formulation Section

June 26, 1986

Honorable Frank Murkowski
United States Senate
Washington, D.C. 20510

Dear Senator Murkowski:

Based on your request dated June 11, 1986 and Senator Zharoff's letter dated May 6, 1986, my staff has examined the shoaling problem to the west of Gull Island in Kodiak.

Contact with city officials, specifically with the harbormaster and the city engineer, revealed a developing problem near the collar buoy adjacent to Gull Island. Apparently, this problem has recently become more pronounced. Potentially hazardous shoaling was evidently recognized in the 1970's, when the U.S. Coast Guard placed the collar buoy on or near an obstruction.

Surveys and other site-specific data to define the specific geometry or physical character of the obstruction are needed.

The National Oceanic and Atmospheric Administration (NOAA) has a survey vessel operating in the area this summer, and it is our understanding that NOAA has apparently just conducted a survey of the obstruction. We are currently confirming this information and will take appropriate action to evaluate the problem upon receipt of the survey data.

A copy of this letter is being sent to your Anchorage office.

If I can be of further assistance, please do not hesitate to contact me directly. If further details are desired by your staff, contact can be made with Mr. Carl E. Borash of my Plan Formulation Section at (907) 753-2620.

Sincerely,

THE ADMINISTRATOR

JUL 21 1986

Honorable Frank H. Murkowski
United States Senate
Washington, D.C. 20510

Dear Senator Murkowski:

Thank you for your letter regarding reports of a shoal forming in St. Paul Harbor.

The NOAA Ship FAIRWEATHER is presently assigned to a survey project in the Shelikof Strait area with port calls in Kodiak. During a recent in-port period, FAIRWEATHER personnel met with representatives of the city, the pilots, and Sea Land, Inc., to show them a copy of a thorough hydrographic survey of the harbor completed in 1983 and to discuss the reported shoaling problem.

Following the meeting, FAIRWEATHER conducted a very detailed hydrographic survey of the area of reported shoaling. The area in question is in fact a shoal, but this new survey revealed that the least depth and size of the shoal are unchanged since the basic survey of 1983. Copies of both the 1983 survey and the new survey will be available to those concerned in Kodiak.

Sincerely,

Anthony J. Calio

Dear Fred:

Thank you for your letter regarding the St. Paul Harbor shoal.

Sea-Land's Washington office has informed me that they have hired a private contractor to perform core sampling to determine the nature of the shoal, as well as to provide an estimate of the cost of shoal removal.

When this information is available and if you feel Corps of Army Engineers's involvement is warranted, please contact me and I will be glad to pursue funding.

Sincerely,

Frank H. Murkowski

Honorable Donald E. Young
United States House of Representatives
2331 Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Young:

I respectfully request your assistance in solving a problem that poses a potential threat to the economy and commerce of Kodiak Island and, possibly, western Alaska.

It has been brought to my attention that a large shoal apparently is forming 900 yards off the face of the City of Kodiak dock in St. Paul Harbor. The shoal could pose a major threat to navigation by seriously restricting the turning radius in the channel. From unscientific and unofficial surveys, its depth appears to be 25 feet at low tide. With the container ships now coming into Kodiak drawing between 29 feet and 40 feet, you can see how serious the situation has become. If a ship were to strike the shoal, the southwest entrance to Kodiak harbor could be blocked. Combined with the already existing problems of rapidly changing cross-winds and tidal action, this shoal poses a serious threat to the ocean traffic in and out of the Port of Kodiak.

In addition, Sea-Land Service, Inc., is planning to upgrade its fleet to vessels of a larger size, drawing 40 feet. Vessels of this size will truly need the flexibility for proper maneuvering to use Kodiak as one of their ports of call.

Kodiak and the surrounding communities are heavily dependent on sea transportion for the importation of supplies and for the export of millions of dollars worth of seafood products, the mainstay of the region's economy. This navigational hazard could cause a major disruption in the flow of ocean traffic resulting in devastation to the local economy.

We have very little information regarding this shoal. The shoal is not shown on any of the existing, and outdated, nautical charts, which at best are approximately 10 years old. The shoal's size, exact location, and rate at which it is growing are unknown. As a first step to solving this problem, we need to find out exactly how serious the shoal is and how rapidly it is growing.

I respectfully request you to explore the possibility of obtaining supplemental funding for the Army Corps of Engineers with the intent of

having one of the the National Oceanic and Atmospheric Administration's survey vessels, during this year's planned summer field work, stop into St. Paul Harbor and survey the shoal. The unofficial estimated cost of this survey is less than $100,000. Please advise whether this appropriation is a possibility. I feel, as do others, the situation is serious and warrants immediate action.

Thank you for any assistance or advice you can offer.

Sincerely,

Fred F. Zharoff
Alaska State Senate

Dear Fred:

Thank you for your letter regarding the need for additional surveys of Kodiak Harbor. I appreciated hearing from you.

I have been informed by the National Oceanic and Atmospheric Administration (NOAA) that a survey done in 1983 will be updated in the near future. Representatives of NOAA will be visiting Kodiak in June or July to meet with the harbormaster and see what work needs to be done. The work will be accomplished using existing funds and facilities and will not require additional funding support by the Congress.

If I can be of any other assistance in the future, please do not hesitate to let me know.

Sincerely,

DON YOUNG
Congressman for all Alaska

Dear Senator Zharoff:

Thank you for your letter regarding problems with the shoal in Kodiak harbor. I hope that the following will be of interest to you.

Sea-land Services, Inc., has retained a private contractor to conduct test drilling on the shoal to determine size and composition. After the work is completed, the contractor will provide an estimate to Sea-land as to the cost of removing the shoal. If the cost is not excessive, Sea-land intends to pay for removal itself. Otherwise, some State or federal funding may be necessary.

Because the work has not yet been completed, I suggest that we wait for the cost determinations before attempting to obtain scarce State or federal dollars. If outside funding is needed, however, I can assure you that I will do what I can to assist.

If I can provide any other help in the meantime, please let me know.

Sincerely,

Don Young

Sept.12,1983

Mr.D.Venetiou
Vessel Operations
P.O.Box 3045
Seattle,Wash.98114

Dear Mr.Venetiou,

On Sept.9,1983 I took a series of soundings in the harbor at Kodiak,Ak. using the tug Kodiak King. The King has two operable fathometers,both digital readout. The recording fathometer was not operational.Soundings at the dock indicated that there was approximately one more foot of water than indicated on the fathometer. Readings at the survey area were taken from fifteen minutes before to twenty five minutes after a high water of 9.4 feet.We assumed the tide table figure to be correct and constant during this period and that the position of the buoys as indicated on the chart was correct.The chart used for reference was the final computer drafted NOAA Survey chart completed in 1982.

The tug went between the two buoys along the normal ship's course(013-193) ,once directly in the center of the channel and once each on either side of mid channel. Also we steamed along a line between the two buoys and once on each side of such an imaginary line. The final area checked was a 360 degree turn around buoy #7 at a transducer distance of about 25 feet.No exact positions were taken as time and equipment did not allow for such accuracy. The fathometer was observed visually(reading in feet and tenths about once per second),the tug's position was estimated by eye, and the depth and position observed was compared with the NOAA chart directly in front of me.Also the numbers being flashed were mentally averaged and the correction to zero datum applied.There were numerous random numbers flashed whenever we encountered any swirling current or air bubbles from our previously made wake which were discounted.

The purpose of this exercise as I understand it was to investigate the reported existance of a 31.5 foot spot in the middle of the channel.This was investigated briefly by Capt.Collar and myself when it was first reported and we found the charted depth to be correct.. Again,no such depths were found.Were I to draw a chart with depths along our midchannel course and somewhat to each side,it would show that there was 36 feet when abeam buoy seven,37 feet abeam buoy six and 35 feet midway between them along our course. The soundings around Buoy #7 would read 33 feet in the NW quadrant and 34 feet in all other quadrants.The 4½ fathom spot on our navigation chart did not appear and is not indicated on the NOAA chart.

When passing through buoys 6-7 on the Portland arriving and departing,the fathometer was constantly monitored.(The accuracy of this fathometer has not been checked.) A different method of determing actual depth was used in each case but both times, the depth of the water,reduced to chart datum,was 33½ feet.

Finally, as to the accuracy of my survey from the King,I would estimate that an allowance of plus/minus one foot should be applied due to the many instances of rounding off indicated.I am confident that there is no water in the vicinity of mid channel less than 34 feet at chart datum.

The NOAA survey chart is attached to this report. I found no water less than that indicated and no cause to dispute any of their findings. I am in doubt now about the existence of the 4½ fathom spot NW of buoy #7 and whether buoy #6 is really in the best position for the safe navigation of deep water vessels. I hope you find the information contained in this report to be of some use.

March 26, 1986

Honorable Fred Zharoff
Alaska State Senator
Room 121, Capitol Building
Juneau, Alaska 99811

Dear Senator:

In July 1985, we wrote a letter to Mr. Boardman, Chief, Army Corps of Engineers, Alaska District with copy to Commissioner Knapp, Transportation and Public Facilities for the State of Alaska, relative to this hazard to navigation. In August 1985, we received an answer back from a Harlan E. Moore, Chief, Engineer Division, Corps of Engineers, Alaska Division.

The answer we received was certainly not pertinent to the problem. His statement referred to the collapse of the crab fishery and to the downtrend in shipping as reasons for discontinuing their study. Of course there are peaks and valleys in commerce in every port in the world, but Kodiak has come back very well and salmon is still a big item, as well as the developing bottom fishery. Sea-Land as well as other vessels are using this port and are working with Kodiak industry in developing more trade, domestic as well as export.

Fred, the Governor should ask for a NOAA survey of the shoal, to be done in the summer or fall of 1986, and thus track the growth as it occurs. The Port of Kodiak is a difficult port to maneuver in and out of with the various cross-winds and tidal actions, which change very rapidly. I think you can relate to this because of your own fishing experiences. We think that with political pressure in Washington D.C., a supplemental appropriation could be granted to the Corps of Engineers to have NOAA survey this shoal at the beginning or end of their summer work.

Kodiak will increase in volume for seafood, since it is the hub for that area in domestic shipments as well as export. Container ships are being built larger these days in order to compete economically and the seafood industry relies on fast, economical transportation.

Please feel free to call on me for any additional needed information. Best regards.

Sincerely,

HLS/lc

Dear Sirs:

The State of Alaska Department of Transportation and Public Facilities has received a copy of correspondence from Alaska State Senator Fred Zharoff requesting National Oceanic and Atmospheric Administration (NOAA)assistance in dragging a "shoal" formation in Kodiak's St. Paul Harbor. We are including a copy of the letter and enclosures for your information.

Any assistance that could be offered to the City of Kodiak in the identifying the underwater formation's origin and development would be appreciated.

Sincerely,

R. J. Knapp

November 26, 1986

Honorable Fred F. Zharoff
Alaska State Senator
P. O. Box 405
Kodiak, Alaska 99615

Dear Senator:

Thank you for getting the process started on the Shoal problem in St. Paul Harbor at Kodiak. Let's hope that they only find silt and no boulders or rocks under the silt; as you can appreciate, it would be faster and less costly to remove.

For your personal information, we asked the contractor who is now doing work in Kodiak to drive three test piles into the Shoal in order to get more information as well as to give an estimate on removal. This figure, of course, will vary somewhat from a Corps figure; however, it will give us a "ball park" approach.

Thanks again.

Sincerely,

HLS/jc

IN THE SENATE BY THE TRANSPORTATION COMMITTEE

CS FOR SENATE JOINT RESOLUTION NO. 36 (Trsp)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - FIRST SESSION

Relating to passenger and air cargo service to Anchorage by Korean Air Lines.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS, under the 1978 Memorandum of Understanding between the Republic of Korea and the United States, Korean Air Lines has the right to operate between Korea and Los Angeles or New York with a stopover in Anchorage, but may not pick up passengers in Anchorage; and

WHEREAS the 1980 Memorandum of Understanding between the two countries that would allow Korean Air Lines to pick up passengers in Anchorage has not been ratified; and

WHEREAS Korean Air Lines' request in 1983 to provide passenger service between Anchorage and Korea was rejected because the 1980 Memorandum of Understanding has not been ratified; and

WHEREAS Korean Air Lines operates 17 passenger flights each week between Seoul and the United States and Europe that use Anchorage as a technical stop; and

WHEREAS Korean Air Lines operates 25 to 30 cargo flights each week between Seoul and the United States that use Anchorage as a technical stop; and

WHEREAS no direct passenger service is provided between Korea and Anchorage so that passengers travelling between those points must use connecting passenger service that is inconvenient, time-consuming, and infrequent; and

WHEREAS existing air cargo service between Korea and Anchorage is

neither direct nor frequent; and

WHEREAS there exists a pressing need for improved air transportation service between Korea and Alaska; and

WHEREAS passenger service between Anchorage and destinations in Asia, Europe, and North America served by Korean Air Lines would be enhanced if the airline was allowed to pick up passengers during stopovers in Anchorage;

BE IT RESOLVED that the Alaska State Legislature supports a mutually agreeable resolution of the issues between the United States and the Republic of Korea that have prevented ratification of the 1980 Memorandum of Understanding, so that Korean Air Lines may commence passenger and air cargo service to Anchorage at the earliest possible date.

COPIES of this resolution shall be sent to the Honorable Ronald Reagan, President of the United States; the Honorable Elizabeth Dole, Secretary of the Department of Transportation; the Honorable George P. Shultz, Secretary of the Department of State; and to the Honorable Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

M E M O R A N D U M

TO: Members, House Transportation Committee

FROM: Senator Bettye Fahrenkamp

DATE: May 12, 1987

RE: Background information for SJR 36, relating to Korean Air Lines passenger and air cargo service

SJR 36 is similar to SJR 30 which passed the Alaska State Legislature last session, to become Legislative Resolve #33.

SJR 36 passed the Senate unanimously on 4/21/87.

Background:

Several of my constituents have contacted me regarding a continuing problem for Alaskans wishing to travel from Alaska to Korea, and for goods to be transported from Anchorage to Korea. Korean Air Lines has approximately forty flights from Seoul, Korea which stop in Anchorage. Korean Air Lines currently does not have boarding rights in Anchorage, thus, Anchorage passengers bound for Korea must fly to Seattle to board, or fly with Japan Air Lines to Tokyo, transfer planes and fly to Seoul, Korea. No cargo service is available by KAL in Anchorage. This resolution encourages the United States to seek a mutually agreeable solution to the complex issue of boarding rights and cargo handling rights through negotiations with the Republic of Korea.

Both Senator Murkowski and Senator Stevens support resolving the issues relating to passenger service by Korean Air Lines in Anchorage.

I have attached a copy of the testimony provided by Mr. Jong Kuen Park, KAL Anchorage Manager, before the Senate Transportation Committee on April 10, 1987.

Passage of this resolution shows continued support and interest by the Alaska State Legislature. I would appreciate your support.

M E M O R A N D U M

TO: Senator Lloyd Jones
Chair, Senate Transportation Committee

FROM: Senator Bettye Fahrenkamp

DATE: April 8, 1987

RE: Background information for SJR 36, relating to Korean Air Lines passenger and air cargo service

SJR 36 is similar to SJR 30 which passed the Alaska State Legislature last session.

Several of my constituents have contacted me regarding a continuing problem for Alaskans wishing to travel from Alaska to Korea, and for goods to be transported from Anchorage to Korea. Korean Air Lines has approximately forty flights from Seoul, Korea which stop in Anchorage. Korean Air Lines does not have boarding rights in Anchorage, thus, Anchorage passengers bound for Korea must fly to Seattle to board, or fly with Japan Air Lines to Tokyo, transfer planes and fly to Seoul, Korea. No cargo service is available by KAL in Anchorage.

In 1978, a Memorandum of Understanding between the Republic of Korea and the United States established, among other provisions, boarding rights for Korean Air Line in New York. In turn, one provision requested by the United States was to receive use of a cargo facility in Seoul, Korea. The United States did not receive use of the cargo facility in Seoul and the 1980 Memorandum, which outlined specific terms was not ratified. Since that time, Korea has met the specified air cargo facility terms, but many changes in foreign relations between the countries have occurred. Since 1978, Korean Air Lines has enjoyed the privilege of passenger service to New York. Negotiations between Korea and the U.S. State Department and U.S. Department of Transportation continued in order to resolve problems associated with passenger and air cargo service, and the related U.S. trade deficit with Korea. The U.S. negotiators continue to seek parity for U.S. passenger airlines and cargo operators within the scope of the United States open skies policy.

Both Senator Murkowski and Senator Stevens support resolving the issues relating to passenger service by Korean Air Lines in Anchorage. Senator Stevens' staff suggested that passage of this resolution shows continued support and interest by the Alaska State Legislature.

Mr. Jong Kuen Park of Korean Airlines will provide testimony for the hearing which will address their interest in obtaining these passenger boarding rights and air cargo service in Anchorage.

April 9, 1987

STATEMENT OF
JONG-KEUN PARK OF KOREAN AIR LINES CO., LTD.
BEFORE THE
SENATE TRANSPORTATION COMMITTEE OF ALASKA

Good afternoon, Chairman Jones and other distinguished members of the Senate Transportation Committee.

My name is Jong-Keun Park, Manager of the Anchorage office of Korean Air Lines. It is an honor and a privilege to testify before the Committee today as it considers Senate Joint Resolution No. 36. That Resolution supports Korean Air's long-standing efforts to establish direct air service between the State of Alaska and the Republic of Korea. Korean Air believes that its proposed service would foster improved trade, commercial and cultural ties between Alaska and Korea, and it believes that the adoption of Senate Joint Resolution No. 36 will help hasten the day when this service becomes a reality.

Mr. Chairman, the last several years have witnessed a phenomenal growth in trade and commerce between the State of Alaska and Korea. Last year, Korea ranked as Alaska's second largest export market. It purchased almost $114 million of Alaskan exports. In addition to traditional exports of timber, fish and ammonia, last year also saw the first major exports of Alaskan coal to Korea. Those exports transited the newly constructed port facility at Seward, a facility which was constructed by an Alaskan affiliate of a Korean shipping firm.

The last several years have also witnessed several important developments in Korean trade and investment in the State of Alaska. One of the significant developments last year was the dedication of Korean Air's new multi-million dollar catering facility at Anchorage International Airport.

Korean Air is proud to play an important role in the development of the Alaskan economy. Korean Air has committed millions of dollars to the construction of modern facilities to support its operations at Anchorage. Approximately, 40 Korean Air flights transit Alaska every week, making the Company the State's second largest international airline. These activities contribute more than $65 million to the Alaskan economy every year.

Tourists and business visitors also are vital to the Alaskan economy. Tourism is Alaska's second largest industry. The influx of visitors generates millions of dollars for Alaska's economy each year. Asia, particularly Japan and Korea, represents an important potential tourist market for Alaska. The development of this market, however, is severely constrained by the relative lack of direct air service linking Alaska and major Asian destinations. This is especially true in the case of Korea. Without direct air service, travel between Seoul and Anchorage is time consuming, infrequent and inconvenient. Passengers frequently are required to stay overnight enroute. According to some estimates, as many as 2-3,000 passengers per month make the trek down to Seattle for connections to the

Orient. The cost to businesses in terms of travel delays and loss of productivity as a result of the lack of direct air service is obvious, and the adverse effect of such a lack of direct air service upon the State's ability to tap the enormous potential tourist markets of Asia can hardly be overstated.

If trade, commerce and tourism between Alaska and Korea are to continue to grow and flourish, then improved air service must become a reality. Over the last 16 months, Korean Air has received scores of requests to provide transportation between Anchorage and Seoul. The requests have come from a variety of groups and organizations, including the Anchorage Organizing Committee for the 1992 Olympics and the Korean Community of Anchorage. More than a dozen of those requests came from government and business leaders who were traveling to Korea as part of official delegations striving to promote improved trade and economic ties between Alaska and Korea. On each of these occasions, Korean Aid had to obtain special authorization from the U.S. Department of Transportation in order to provide the transportation even though its flights transit Anchorage every day. In an effort to remedy this situation, Korean Air in June of 1983 filed an application with the then Civil Aeronautics Board (now the Department of Transportation) requesting authorization to provide direct air service between Anchorage and Seoul as contemplated under the terms of an agreement signed

between the United States and Korea in 1980. Regrettably, due to a series of misunderstandings and disagreements between the two countries, no action has been taken upon that application.

Korean Air looks forward to the day when it can begin providing direct air service between Alaska and Korea. It believes that the adoption of the resolution now being considered by this Committee would send a strong signal to officials in Washington that the time has come for the United States and the Republic of Korea to reach a mutually agreeable resolution of their differences so that Korean Air's direct service between Alaska and Korea can at long last become a reality.

That concludes my remarks, Mr. Chairman. I thank you for allowing me to address the Committee today. I would be happy to answer any questions that you or other members of the Committee may have.

MEMORANDUM OF UNDERSTANDING

1. Delegations representing the Governments of the Republic of Korea and the United States of America met in Washington, D.C. April 8-12, 1980, at the request of the Government of the Republic of Korea to discuss air transport relations between the two countries. During the discussions, the delegations reached the agreements contained herein, with which both delegations expressed their complete satisfaction. Delegation lists are attached as Annexes 1 and 2.

2. During the consultations, views were exchanged on the following items:

A. Implementation of the current Air Transport Services Agreement, as amended, particularly as regards cargo handling, customs and immigration operations, and market access.

B. Airport conditions.

C. Fuel supplies.

D. Storage facilities and procedures.

E. Route schedules.

3. The Korean Delegation expressed its dissatisfaction with the route schedule contained in the existing Agreement. It reaffirmed its desire for an expansion of the route schedule so that it could offer service to additional points in the United States and to initiate service beyond the United States. The delegations agreed to augment the Korean route schedule by adding full traffic rights to/from Anchorage,

Oakland and Chicago; as well as beyond rights from/to one United States point to/from one point in Europe, both to be mutually agreed upon. These rights will become available during the period 1980-1983, under the conditions specified below. The revised route description is contained in Annex 3 of this Memorandum.

4. The Korean delegation noted the delays which its designated airline has encountered at Anchorage because of immigration procedures. It requested that the United States authorities permit the immigration procedures to take place at New York rather than Anchorage. It promised to provide a statement which will detail the delays it has experienced at Anchorage because of immigration requirements and will explain the justification for permitting these procedures to occur at New York. The United States delegation agreed to consider such a detailed statement and to discuss the problem with the United States immigration authorities.

JK

5. The Korean delegation expressed considerable concern about operating conditions at the Los Angeles airport, particularly as regards fuel availability, counter space, baggage handling and passenger access to the terminal. It stated that these conditions, and particularly its impending transfer to a temporary terminal, would seriously impede its operations. The United States delegation stated that it had, this week, been informed by officials of the United States Department of Energy and the Los Angeles

airport that ample fuel supplies are available. It agreed, however, that it would intervene with the appropriate authorities about this matter should a fuel shortage occur. It noted also its intent to study the other difficulties which the Korean delegation raised.

6. The Korean delegation described several operational difficulties at the New York airport, citing particularly the fuel situation and the apparent unavailability of a company that would be willing to provide continuing service for the Korean carrier's cargo. The United States delegation expressed its intention to discuss these issues with the New York airport authorities in order to obtain a solution to these problems.

7. The Korean delegation presented the following proposal concerning surface transportation for consideration by the United Stated delegation:

> "The Korean delegation believes that designated airlines of both countries would have greater operating flexibility and could much better serve the public if they are allowed to directly arrange with surface transportation companies to carry cargo (and passengers) from any point within a country to the gateway or gateways served by the particular airline within that country. This arrangement would allow more efficient operation and improved quality of service."

The United States delegation noted that this issue is a very complicated question, but agreed to study the Korean proposal and to provide a response at a later date.

8. The Delegation of the United States expressed its concern about the progress in the construction of the new cargo facility specified in the March 1979 exchange of diplomatic notes. The Korean delegation agreed that by May 15, 1980, the Korean authorities will present to the U.S. air carriers a specific proposal for the construction of the new cargo facility for the exclusive use of U.S. carriers. This proposal will provide the option for the U.S. air carrier or carriers to construct the building. If by June 15, 1980, the U.S. air carriers do not exercise this option to construct the facility on the terms specified, then the Government of the Republic of Korea will construct the facility. Consultations will be held among all interested parties during the design and construction of the facility. This facility will be as large as space permits; it will be no less than 2,688 square meters; it will be an addition to the existing structure with access, if structurally possible, to the space presently allocated to the U.S. air carriers. Those U.S. air carriers which elect to self-handle will have sole use of the new facility and all allocated space in use by them when the new facility opens. Any U.S. air carrier which does not elect to self-handle may choose to utilize the service of an agent.

9. The United States delegation expressed its concern about construction necessary for the U.S. carriers to

self-handle their transit cargo, as well as to self-handle their in-bound cargo from the aircraft to the customs area. The Korean delegation assured the U.S. delegation that all necessary steps have been taken to initiate construction and that it will be completed no later than June 30, 1980. At that time, the U.S. carriers will be permitted to self-handle in-bound cargo from their aircraft to the customs area and to self-handle their transit cargo.

10. The United States delegation noted that one of its designated airlines has experienced difficulty importing equipment into Korea without paying customs duties. To ensure that the provisions of Article 7 of the 1957 Agreement, as amended, are being fully implemented, the Korean delegation promised to look into the matter and to communicate its findings through diplomatic channels.

11. The United States delegation reported that one of its designated carriers has had difficulties remitting its excess currencies from Korea. The Korean delegation agreed to look into the matter to ensure that prompt and effective remittances of excess currencies can be made.

12. The Korean delegation agreed that fuel will be provided on a non-discriminatory basis among the airlines of the United States, whether they are engaged in scheduled or charter transportation with stops in Korea for either traffic or transit services, when fuel is available. The

United States delegation stated that, by law, fuel must be made available in the United States on a non-discriminatory basis, whether the air carrier is providing scheduled or charter transportation.

13. The United States delegation expressed its concern that U.S. carriers apparently will soon lose their present storage facility without a replacement area being available, and that one U.S. carrier confronts delays because it currently submits its stored material to customs PROCEDURES because of the present location of its storage area. The Korean delegation expressed its intent that the availability and location of storage areas should not constitute an impediment or obstacle to airline operations and assured that the competent authorities will exercise their utmost efforts to seek a solution to this problem. The Korean delegation noted, meanwhile, that because of the physical conditions obtaining at Kimpo Airport all carriers have been subjected to some constraints in space availability.

14. The United States delegation expressed its serious concern that the Government of Korea has not permitted U.S. carriers to provide each other ground handling services. It noted that the Korean designated carrier faces no such constraint in its current operations within the United States. Moreover, the United States delegation noted that foreign corporations are precluded from acting as air

freight forwarders within Korea. In the spirit of liberalization and in view of the substantial route expansion proposed for the Korean designated airline(s), the United States delegation urged the Korean delegation to seek a change in the present legal situation. The Korean delegation responded by stating that the laws and regulations in force in the Republic of Korea do not permit the Government of Korea to grant to foreign carriers the right to provide ground handling services for each other. As regards freight forwarding services, the Korean delegation stated that Korean law does not permit foreigners to perform such services in Korea. The Korean delegation expressed its intention to discuss this issue with its competent authorities, taking due note of the U.S. delegation's concern about this matter.

15. The two delegations agreed that before any of the new traffic rights, specified in Annex 3 to this Memorandum, for the Korean designated airlines will be granted:

A. The Government of the Republic of Korea will, by diplomatic note, advise the Government of the United States that:

1. The limitation on the exercise of beyond rights contained in the exchange of letters dated March 26, 1971, is eliminated.

2. The airlines of the United States have the right to make transit stops in Korea, the right of overflight of Korea and the right to carry traffic to/from Korea from/to any point beyond, without geographical limitation. This provision shall not preclude the application of Article 5 of the Air Transport Services Agreement of 1957 (as amended).

B. The Government of the Republic of Korea will, by diplomatic note, advise the Government of the United States that:

The new cargo facility having been completed, the airlines of the United States may perform all of their own cargo self-handling services in respect of in-bound, out-bound and transit cargo. The Government of the United States will advise of its confirmation by diplomatic note.

16. The two delegations agreed that the designated airlines may serve points behind any homeland gateway point with or without change of aircraft or flight number and may hold out and advertise such services to the public as through services.

Effectiveness:

The two delegations agreed to recommend to their governments that the agreements recorded in this Memorandum of Understanding, signed ad referendum, be confirmed by an exchange of diplomatic notes, which shall then constitute an amendment to the Air Transport Services Agreement of 1957 (as amended).

TESTIMONY BEFORE

SENATE TRANSPORTATION COMMITTEE

BY SENATOR BETTYE FAHRENKAMP

MR. CHAIRMAN, MEMBERS OF THE SENATE TRANSPORTATION COMMITTEE, I APPRECIATE THE OPPORTUNITY TO SPEAK BEFORE YOU TODAY ON BEHALF OF SENATE JOINT RESOLUTION 36, RELATING TO PASSENGER AND CARGO SERVICE BY KOREAN AIR LINES IN ANCHORAGE.

LAST YEAR THE ALASKA STATE LEGISLATURE PASSED A SIMILAR RESOLUTION TO ENCOURAGE THE UNITED STATES TO RATIFY THE 1980 MEMORANDUM OF UNDERSTANDING BETWEEN THE REPUBLIC OF KOREA AND THE UNITED STATES. THE RESOLUTION BEFORE YOU REPEATS THAT MESSAGE, BUT EXPANDS THE RESOLVE TO ADDRESS CARGO RIGHTS , UPDATES THE PROVISIONS WHICH ADDRESS THE CURRENT FLIGHTS BETWEEN THE COUNTRIES, AND MODIFIES THE FINAL RESOLVE IN ORDER TO ALLOW OUR NATIONAL LEADERS THE FLEXIBILITY TO RESOLVE THE MATTER THROUGH NEGOTIATIONS.

I'VE BEEN APPROACHED BY SEVERAL CONSTITUENTS AS REGARDS THE ADDITIONAL TIME AND EXPENSE ALASKA PASSENGERS EXPERIENCE IN ORDER TO FLY TO SEOUL, KOREA. THIS CONCERN ENCOMPASSES NOT ONLY VACATIONERS, BUT ALASKANS WISHING TO DO BUSINESS WITH KOREA.

IT TAKES (8 ½) EIGHT AND ONE-HALF HOURS TO TRAVEL DIRECTLY FROM ANCHORAGE TO SEOUL. CURRENTLY, PASSENGERS MUST EITHER TRAVEL ON JAPAN AIR LINES TO TOKYO, TRANSFER PLANES, THEN TO SEOUL, FOR A TOTAL OF ABOUT 10 ½ HOURS , OR FLY TO SEATTLE TO BOARD A FLIGHT TO

SEOUL, WHICH TAKES ABOUT 17 ½ HOURS. OF COURSE, ADDITIONAL EXPENSE IS INCURRED TO TRAVEL THESE INDIRECT ROUTES.

THERE ARE MANY CONSIDERATIONS AND ISSUES TO CONSIDER DURING THE NEGOTIATIONS BETWEEN THE UNITED STATES AND KOREA THAT AFFECT THIS PARTICULAR REQUEST FOR BOARDING RIGHTS AND CARGO HANDLING RIGHTS IN ANCHORAGE BY KOREAN AIRLINES.

THIS RESOLUTION ENCOURAGES THE UNITED STATES TO SEEK A MUTUALLY AGREEABLE SOLUTION TO THOSE ISSUES. I'VE PROVIDED A MEMORANDUM IN YOUR PACKET WHICH OFFERS A BRIEF OVERVIEW OF THE ISSUES WHICH THE UNITED STATES MUST ADDRESS WHEN CONSIDERING THIS REQUEST. THESE ISSUES INCLUDE EXISTING REVENUE TRADE BALANCES, SELF- HANDLING RIGHTS, CURRENT BOARDING RIGHTS, AND OTHER RELATED MATTERS FOCUSING ON IMMIGRATION, TOURISM, COMPETITION BETWEEN OTHER COUNTRIES TOURISM, AND COMPETING FOR U.S. MARKETS.

THIS RESOLUTION SENDS A MESSAGE I BELIEVE WE WISH TO CONVEY: THAT ALASKA IS VERY INTERESTED IN HAVING OUR NATIONAL LEADERS, BOTH IN CONGRESS AND THE ADMINISTRATION, WORK TOGETHER TO QUICKLY RESOLVE ANY DISPUTES AND DIFFERENCES SO AS TO ENABLE ALASKANS DIRECT PASSENGER AND CARGO ACCESS TO KOREA, WHICH WOULD THEREBY ENCOURAGE AND PROMOTE TRAVEL AND ADDITIONAL TRADE BETWEEN ALASKA AND THE REPUBLIC OF KOREA.

I'VE WORKED WITH THE CHAIR, U.S. SENATOR STEVENS' AND MURKOWSKI'S OFFICES, THE DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT,

INTERNATIONAL TRADE DIVISION (DAN DIXON), AND KOREAN AIR LINES TO DEVELOP LANGUAGE CHANGES BEFORE YOU IN THE PROPOSED COMMITTEE SUBSTITUTE FOR SJR 36. I WOULD BE HAPPY TO ANSWER ANY QUESTIONS YOU MAY HAVE, AND ASK THAT THIS COMMITTEE EXPEDITIOUSLY PASS OUT THIS RESOLUTION.

THANK YOU.

M E M O R A N D U M

TO: All Representatives

FROM: Senator Bettye Fahrenkamp

DATE: May 15, 1987

RE: Background information for SJR 36, relating to Korean Air Lines passenger and air cargo service

SJR 36 is similar to SJR 30 which passed the Alaska State Legislature last session, to become Legislative Resolve #33. This resolution, with the support of the International Trade Office, was expanded to include air cargo service.

Several of my constituents have contacted me regarding a continuing problem for Alaskans wishing to travel from Alaska to Korea, and for goods to be transported from Anchorage to Korea. Korean Air Lines has approximately forty flights from Seoul, Korea which stop in Anchorage. Korean Air Lines does not have boarding rights in Anchorage. Currently, Anchorage passengers bound for Korea must fly to Seattle to board flights, or fly with Japan Air Lines to Tokyo, transfer planes and fly to Seoul, Korea, all of which is more costly in terms of time lost or additional fares. No cargo service is available by KAL in Anchorage. Anchorage is currently considered a technical stop, only catering and crew changes are allowed at present.

Both Senator Murkowski and Senator Stevens support resolving the issues relating to passenger service by Korean Air Lines in Anchorage and suggested that passage of this resolution shows continued support and interest by the Alaska State Legislature.

The Department of Commerce and Economic Development, Office of International Trade supports this resolution.

MEMORANDUM

February 8, 1988

TO: Representative Bette Cato, Chairman
House Transportation Committee

FROM: Senator Arliss Sturgulewski
Senate District F

RE: SJR 54 "Expressing support for the Alaska Airlines application for approval to fly to Siberia."

The recent U.S. and Soviet summit meeting has resulted in the opportunity for the establishment of air links between the U.S. and Russia. Alaska Airlines has submitted an application to begin flights to Provideniya, Siberia from Nome, Alaska. Preliminary discussions have begun between the U.S. Department of Transportation and their Soviet counterpart. This resolution would show support from the State of Alaska for approval of the Alaska - Siberia connection.

There is a zero fiscal note and the resolution received unanimous support in the Senate. I have attached the relevant backup material and hope you will be able to schedule SJR 54 for an early hearing.

Please contact my office if you have any questions.

Attachments

SCHEDULE
(Saturday and Sunday)

	ANC		OME		PROVIDENIYA	
	Arr.	Dep.	Arr.	Dep.	Arr.	Dep.
Flight 001		0700	0830	0910	0955	
Flight 002	1315		1115	1155		1030
Flight 003		1245	1415	1455	1540	
Flight 004	1855		1700	1735		1615

1. The above schedule is illustrative of the B-727/B737 summer season service pattern that Alaska Airlines would operate and all times set forth are expressed in Alaska Daylight Time without modification for crossing the international dateline.

2. Alaska Airlines initially contemplates operating a twice weekly service pattern (two round trip flights on each day) during the ten week summer season and further flights would be added when justified by traffic levels.

FOR IMMEDIATE RELEASE

January 12, 1988

ALASKA AIRLINES ANNOUNCES FILING TO SERVE SIBERIAN CITY

SEATTLE -- Alaska Airlines announced today that it has filed an application with the U.S. Department of Transportation to provide scheduled air service between Nome, Alaska, and Provideniya, Siberia, U.S.S.R.

Provideniya, a Soviet Far Eastern city of approximately 4,500 persons, is located on the southeastern tip of the Chukchi Peninsula. The city is about 230 nautical miles across the Bering Sea from Nome.

According to Bruce R. Kennedy, chairman and chief executive officer of the airline, the proposed service would establish a new transportation link between the U.S. and the U.S.S.R.

Kennedy said the new service, if approved by the appropriate U.S. and Soviet authorities, would reunite the indigenous Native people of Alaska and Siberia and provide a unique tourist opportunity for travelers interested in the Arctic and the Soviet Far East.

- more -

While acknowledging that diplomatic and technical questions need to be answered before service can begin, Kennedy said, "Alaska Airlines is no stranger in the arena of Soviet/U.S. aviation." During the summers of 1970, 1971 and 1972 Kennedy noted Alaska Airlines operated some thirty round trip charters between Anchorage and the Siberian city of Khabarovsk, as well as to Leningrad.

Alaska Airlines, a wholly-owned subsidiary of Alaska Air Group, Inc., serves 30 cities in six Western states.

BEFORE THE

DEPARTMENT OF TRANSPORTATION

WASHINGTON, D.C.

In The Matter Of The Application Of ALASKA AIRLINES, INC. For A Certificate of Public Convenience and Necessity To Serve Provideniya, Siberia, U.S.S.R.	Docket

APPLICATION OF ALASKA AIRLINES INC.

FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

Alaska Airlines, Inc. requests a certificate of public convenience and necessity, pursuant to Section 401 of the Federal Aviation Act of 1958, as amended, to operate scheduled service between Nome, Alaska and Provideniya, Siberia, U.S.S.R. Alaska's proposal is designed to forge a new transportation link to the U.S.S.R. in the aftermath of the summit between President Reagan and General Secretary Gorbachev. Among the many outgrowths of the summit are strong indications of warming relationships between the United States and the U.S.S.R. particularly with respect to enhanced trade and cultural exchanges. Alaska's

application would provide a further opportunity for both the United States and the U.S.S.R. to solidify these relationships.

The Nome Gateway has long been a major Alaskan tourist destination during the winter as well as summer months and the addition of a stopover at Provideniya would likely prove extremely attractive to a number of U.S. tourists. The fact that Provideniya is only approximately 230 nautical miles distant from Nome, Alaska would also mean that the new transportation link would assist in re-establishing the longstanding cultural relationships that exist between many native Alaskans and Siberians.

Alaska Airlines was the last U.S. carrier to have operated regular service to Siberia and is therefore particularly well-suited to provide the proposed service. During the 1970-72 period, Alaska pioneered and operated a weekly B-707 charter program to Khabarovsk in Siberia as well as to Leningrad. In conducting that unique program, Alaska Airlines was required to cooperate extensively with the U.S.S.R. and Aeroflot and it is expected that their familiarity with Alaska would allow for a relatively easy implementation of a tourist and exchange program to Provideniya once the Department issues the requested certificate of public convenience and necessity.

In further support of this application, Alaska states as follows:

1. Alaska Airlines, Inc. has it principal headquarters located at 9300 Pacific Highway South, Seattle, Washington 98188. Alaska Airlines is incorporated under the laws of the State of Alaska and is a wholly owned subsidiary of Alaska Air Group Inc., a corporation organized under the laws of the State of Delaware.

2. Alaska Airlines, Inc. is a citizen of the United States within the meaning of Section 101(13) of the Federal Aviation Act of 1958, as amended. Each of Alaska's officers and directors is a U.S. citizen and the owners of record of at least 75% of Alaska's outstanding voting securities are U.S. citizens.

3. Alaska Airlines has repeatedly been found fit, willing and able to provide interstate and foreign air transportation and the the Department is requested to take official notice of Alaska's continuing fitness. See e.g. Orde 82-6-80, 82-8-69, 81-12-131 and 81-1-30.

4. Alaska Airlines will engage in the carriage of persons, property and mail between Nome, Alaska and Provideniya, Siberia, U.S.S.R. and this service would be operated with either B-727-200 or B-737-200 aircraft. Alaska currently owns and operates a number of such aircraft.

5. Alaska will also shortly provide a map depicting the route beetween Nome, Alaska and Provideniya, Siberia and an illustrative service proposal setting forth the aircraft type, capacity, elapsed trip time and an estimate of the fuel to be consumed during the first year of proposed operations.

CONCLUSION

WHEREFORE, Alaska Airlines, Inc. respectfully requests that the Department issue Alaska Airlines, Inc. a certificate of public convenience and necessity authorizing Alaska to engage in scheduled foreign air transportation between Nome, Alaska and Provideniya, Siberia U.S.S.R. or grant such other relief as the Department may deem appropriate.

TO: REPRESENTATIVE BETTE CATO, CHAIRMAN
HOUSE TRANSPORTATION COMMITTEE

FROM: SENATOR JAY KERTTULA

RE: SJR 58, RELATING TO THE COAST GUARD CUTTER SWEETBRIER

SJR 58 requests that the U.S. Coast Guard keep Cordova as the home port of the cutter Sweetbrier. The Coast Guard has had a presence in Cordova for 53 years, and the Sweetbrier has been stationed in Cordova for almost 12 years.

The bill passed the Senate unanimously on March 3. Attached is the City of Cordova's Resolution, which parallels SJR 58.

At the beginning of 1988 it was believed that the Coast Guard might pull out of Cordova, taking one hundred and eleven Cordova residents, approximately four percent of the town's population, with it when it departed.

SJR 58 shows that the Alaska State Legislature is serious about its interest in maintaining Cordova as the home port for the Sweetbrier.

Since 1976, when the Sweetbrier was first brought to Cordova, it has performed 130 to 140 rescues. The Coast Guard's presence in Cordova must be maintained to protect the marine safety of this busy port and that of Prince William Sound.

Prince William Sound is one of the world's prime fisheries. It is critical for the protection of the fishing industry for the Coast Guard to maintain its presence in Cordova.

Thank you for your consideration of SJR 58. If you have any questions please contact either Beth Kerttula or Alexis Miller at 465-3717.

CITY of CORDOVA, ALASKA

JAN 15 1988

RESOLUTION 88-3

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF CORDOVA, ALASKA, THAT THE UNITED STATES COAST GUARD IS INVITED AND ENCOURAGED TO CONTINUE ITS PRESENCE IN PRINCE WILLIAM SOUND, WITH CORDOVA AS THE HOME PORT OF THE U.S.C.G. CUTTER SWEETBRIER

WHEREAS, the United States Coast Guard has held a respected and necessary presence in the city of Cordova, Alaska, for fifty-three years; and

WHEREAS, the Coast Guard Cutter "Sweetbrier" has proven its critical importance to maritime safety and navigation in Prince William Sound since 1976; and

WHEREAS, commercial fishing, which is the basis of the economy of Cordova, is dependent upon the Coast Guard to protect the safety of the fleet and fishery; and

WHEREAS, the officers and crew of the "Sweetbrier" represent the presence of one hundred eleven Cordova residents, which is approximately 4% of the population of Cordova; and

WHEREAS, the city of Cordova is, and wishes to remain, the Home Port of the Coast Guard Cutter "Sweetbrier";

NOW, THEREFORE, BE IT RESOLVED by the Mayor and City Council of the City of Cordova, Alaska, that the United States Coast Guard is invited and encouraged to continue its presence in Prince William Sound, with Cordova as the Home Port of the U.S.C.G. Cutter "Sweetbrier".

PASSED AND APPROVED THIS 7th DAY of January, 1988.

Senator Lloyd Jones

MEMORANDUM

TO: Representative Bette Cato, Chairman
Members, House Transportation Committee

FROM: Senator Lloyd Jones

DATE: May 2, 1988

SUBJECT: SJR 66 - Proposed constitutional amendment creating a dedicated fund for highways.

The purpose of this proposed constitutional amendment is to dedicate the proceeds of the motor fuel tax, thus making it a direct user fee. This constitutional amendment would assure, with a diminishing state budget, these fuel tax funds would not be diverted to other uses.

The highways and roads of our state have not been adequately maintained over the past few years. This has been the result of a combination of factors, among them; an expansion of the state's road system during the high growth years and an inflated DOT/PF administrative budget. These factors resulted in less money for maintenance of roads when the DOT/PF budget was reduced.

Twenty-four states[1] presently have constitutional provisions in place which protect highway user revenue through anti-diversion language.

The fund would receive an estimated annual revenue stream of $23,235,888[2] in proceeds from the highway motor fuel tax, from both highway and off-highway uses, after the six cents per gallon off-highway rebate.

---

[1]According to the June 1, 1987, STATUS ON HIGHWAY USER FEE PROTECTION, by the Highway users Federation for Safety and Mobility

[2]Source: Department of Revenue FY 87

This resolution would afford the voters of Alaska the option of dedicating proceeds from the highway fuel tax to a highway fund. The fund would be available for appropriation by the legislature for expenditure for construction and maintenance of roads and highways in the state.

In conclusion, I am offering this proposal to ensure all funds received from the fuel tax will continue to be utilized for the construction, and maintenance of roads and highways in the state. I believe dedicating these funds will give the citizens of Alaska confidence that expenditures from these user taxes will be used for roads and highways into the future.

counting purposes. However, these costs are based on the assumption that all candidates and issues will fit on three ballot cards, which is the norm. It should be noted, however that should the inclusion of this issue require a 4th ballot to be printed, the cost increase would have to be calculated at 16 cents per ballot x approximately 320,000 voters. The total cost of printing the additional ballot card would be $51.2.

Under these circumstances the fiscal note would be:

Letter of Intent SJR 66

It is the intent of the Legislature that ongoing research related to roadbuilding materials, products, and equipment is considered a necessary component of construction and maintenance of roads in the State of Alaska.

Senate adopted 4/29/88

STATE OF ALASKA

STEVE COWPER, GOVERNOR

DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES

P.O. BOX Z
JUNEAU, ALASKA 99811-2500
PHONE: (907) 465-3900

OFFICE OF THE COMMISSIONER

March 18, 1988

The Honorable Steve Cowper
Governor, State of Alaska
Post Office Box A
Juneau, AK 99811

Dear Governor Cowper:

In your Administrative Order creating the Task Force on Transportation Facilities, we were charged with, among other things, examining "reasonable and equitable funding sources for maintenance activities, including a review of the motor fuel tax..." Pursuant to this charge, the task force has closely examined issues related to using fuel taxes as a means of providing funding for the maintenance and operations of transportation facilities and has unanimously adopted two interim recommendations which are conveyed by this letter.

There are some underlying assumptions and positions which we feel deserve highlighting. First, in reviewing historical information related to the fuel tax issue in Alaska, it is clear that the tax was meant to be a user fee collected to recoup some of the funds necessary to maintain the particular transportation system from which it was collected. We believe that over the years this purpose has become clouded by legislative action. We are unanimous in our belief that the state should clarify and reaffirm the intended purpose of the fuel tax in Alaska as a user fee for the particular transportation system from which it was collected.

After considerable thought and debate, it is the position of the task force that a fuel tax is one of the reasonable and equitable funding sources for expenses, related to transportation systems, so long as it is treated as a user fee. In this regard, it is our unanimous recommendation that the best method of re-establishing the fuel tax as a user fee is to dedicate the revenues from the tax to the expenses related to the maintenance activities of the transportation system from which the revenue was generated.

In adopting the attached interim recommendations, the task force also debated at length what expenses should be included in maintenance activity costs. It is the unanimous consensus of the task force that all direct costs for improvement, maintenance and operation of the existing transportation systems should be included in the maintenance activity costs. This analysis would include such expenses as the operation of a maintenance station

camp facility as a maintenance expense, but would exclude indirect administrative costs as a maintenance expense. Similarly, reconstruction of an existing highway to comparable standards would be a direct maintenance expense, while construction of a new highway to a higher standard, even on an existing right-of-way, would not be a maintenance expense.

The task force continues to study issues related to the distribution of responsibility and equitable funding sources for transportation facilities as you directed. As this study continues, it is becoming increasingly clear that any realignment of responsibility also involves establishing a mechanism whereby adequate funding to support a transferred facility is consistently available. We have a full schedule during the next four months, and expect to have our final recommendations to you by the June 30th deadline.

Thank you for your consideration of our recommendations. If you have any questions or would like to discuss our recommendations with the members of the task force, please do not hesitate to call upon us.

Sincerely,

Mark S. Hickey
Chairman, Governor's Task Force on Transportation Facilities

cc: Senator Jan Faiks, President, Alaska State Senate
Representative Ben Grussendorf, Speaker, Alaska State House of Representatives
Members of the Governor's Task Force on Transportation Facilities

GOVERNOR'S TASK FORCE ON

TRANSPORTATION FACILITIES

INTERIM TASK FORCE RECOMMENDATION # 2

Whereas: This task force was created by the Governor's Administrative Order #105 and under intent language adopted by the 15th Alaska Legislature.

Whereas: The charge by the Governor and the Legislature to this task force was to evaluate and examine reasonable and equitable funding sources for expenses related to transportation facilities.

Whereas: The charge by the Governor and the Legislature to this task force specifically required a review of motor fuel taxes in Alaska.

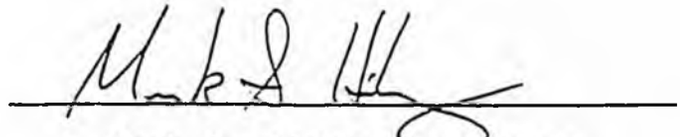
Whereas: The task force, for purposes of this resolution, interpets expenses related to transportation facilities to mean expenses for the Alaska transportation systems excluding indirect costs.

Whereas: This task force has recommended with Interim Task Force Recommendation # 1, that revenue collected and retained by the State of Alaska for fuel taxes should be dedicated for direct costs related to the transportation system from which the revenue was generated.

And Whereas: It is the determination of this task force that the current status of the dedication of fuel taxes for the Alaska transportation systems found in article IX, section 7, of the Alaska Constitution is unclear.

NOW THEREFORE BE IT RESOLVED, that it is the recommendation of this task force that the Governor and the Legislature should seek a constitutional amendment which would unequivocally dedicate all fuel tax revenues collected and retained by the State of Alaska to the direct costs associated with the improvement, maintenance and operation of the existing transportation system from which the revenues were generated.

Adopted this 8th day of March, 1988.



Mark S. Hickey, Chairman

GOVERNOR'S TASK FORCE ON

TRANSPORTATION FACILITIES

INTERIM TASK FORCE RECOMMENDATION # 1

Whereas: This task force was created by the Governor's Administrative Order #105 and under intent language adopted by the 15th Alaska Legislature.

Whereas: The charge by the Governor and the Legislature to this task force was to evaluate and examine reasonable and equitable funding sources for expenses related to transportation facilities.

Whereas: The charge by the Governor and the Legislature to this task force specifically required a review of motor fuel taxes in Alaska.

Whereas: This task force has evaluated and examined historical, constitutional and statutory information regarding fuel taxes as a source of funding for transportation facilities in Alaska.

Whereas: The task force, for the purposes of this resolution, interpets expenses related to transportation facilities to mean expenses for the Alaska transportation systems excluding indirect costs.

Whereas: This task force has determined that fuel taxes are one reasonable source of funding for expenses related to the Alaska transportation systems.

Whereas: This task force has determined that fuel taxes are one equitable method of assessing costs for the use of the Alaska transportation systems.

And Whereas: This task force has further determined that funding for transportation systems is an important function of government; that the Alaska transportation systems are an investment in current and future economic development and stability; that funding for the Alaska transportation systems requires a predictable and stable source of revenue.

NOW THEREFORE BE IT RESOLVED, that it is the recommendation of this task force after careful review of all information put before us, and in response to the charge of the Governor and the Legislature of the State of Alaska, that revenue collected and retained by the State of Alaska for fuel taxes should be dedicated for direct costs related to the transportation system from which the revenue was generated.

Adopted this 8th day of March, 1988.

Mark S. Hickey, Chairman

U.S. Department
of Transportation
**Federal Highway
Administration**

Juneau, Alaska 99802-1648

April 19, 1988

HDA-AK

The Honorable Lloyd Jones
Alaska State Senate
P.O. Box V
Juneau, Alaska 99811

Dear Senator Jones:

Senate Joint Resolution No. 66

Your April 15, 1988 letter asked for a position paper from the Federal Highway Administration on a proposed constitutional amendment. This amendment, if passed, would dedicate the proceeds of the tax on motor fuel to a fund for the construction and maintenance of roads and highways.

The mechanism the State utilizes in securing funding for construction and maintenance of roads and highways would not be an issue in which the Federal Highway Administration would have an official position. We do have related concerns that adequate funding is provided to have a state highway department (Title 23, United States Code, Section 302) and to maintain any project constructed with Federal-aid funds (Title 23, Section 116). However, how those funds are derived should remain a State issue.

A review of what other States are doing would offer support for your proposal. Thirty-eight states have highway user fees dedicated for highway purposes and of the remaining twelve states, seven have special funds designated for highway purposes.

Sincerely yours,

Barry F. Morehead

Barry F. Morehead
Division Administrator

STATUS OF HIGHWAY USER FEE PROTECTION

June 1, 1987

Prepared by

Washington, DC 20036

Highway User Fees

Highway user fees are those taxes and fees which are imposed on the owners and operators of motor vehicles for the privilege of using the highways. Although such fees are imposed by the federal, state, and local governments, we are primarily concerned in this project with state highway user fees. State highway user fees include all of the following:

Vehicle registration fees. This is the first structure tax on highway users. It is a tax imposed directly on the owners of the vehicles which use the highways. Typically the fees are collected on an annual basis, and vary according to the weight and use of the vehicle. Heavier vehicles and commercial vehicles generally pay more.

Motor fuel taxes. This is the second structure tax on highway users. It is a tax on the fuel which is used in motor vehicles operated on the highways. The gasoline tax is the most common of this group of taxes, but taxes on diesel fuel and other special fuels are generally included.[1] The tax is typically imposed on a cents per gallon basis. It is generally assessed against distributors of the fuel, and then passed on to highway users in the price of the fuel. Most states also have some form of motor fuel use tax which is assessed directly against certain highway users such as commercial carriers. This is not really a separate tax. It is just a different means of collecting the regular motor fuel taxes. It is intended to prevent avoidance of the motor fuel taxes by out of state purchases.

Weight-distance taxes. This group of taxes, which constitutes a third structure tax on highway users, is the least well defined. Only about one-fifth of the states impose this

---

1. The term "special fuel" typically refers to all combustible gases and liquids suitable for use to generate power in an internal combustion engine, except gasoline.

kind of tax, and it differs from state to state.[2] The tax is imposed only on commercial carriers, and typically only on vehicles which exceed a specified weight limit. In most cases, the tax is based on vehicle weight and the miles operated within the state during the tax year.

Other taxes and fees. There are, of course, myriad other state and local taxes and fees imposed on highway users which are in some way related to the use of their vehicles or the highways. Some of these obviously should be considered highway user fees, and some should not. Some examples:

Sales tax on vehicles, accessories, and fuels
Personal property tax on vehicles
Vehicle title fees
Driver license fees
Overweight permit fees and overweight fines
Traffic law fines
Motor carrier registration or permit fees
Highway tolls

---

2. Examples of such taxes may be found in Arizona, Arkansas, Colorado, Idaho, Kentucky, New Mexico, New York, Ohio (based on number of axles rather than weight), Oregon, Utah (based on months of operation rather than mileage), and Wyoming. Several other states, Illinois and Nevada for example, have taxes which are similar to weight-distance taxes, but which are imposed only in lieu of some other kind of tax.

Not all of these taxes are discussed in the state summaries which make up the bulk of this report. In those states which have a protective constitutional anti-diversion provision, our research did not explore the statutory provisions relative to each highway user tax.

General sales taxes and personal property taxes are based on the value of the vehicle or other object of the tax. Such ad valorem taxes have generally not been considered highway user taxes, although a few states will include revenue from some such taxes as highway user revenue.[3]

Title fees, driver licensing fees, and other service fees charged by the motor vehicle administration are generally not large revenue producers. In most states, these fees are used to pay the administrative cost of providing the service, but there are exceptions.[4] Motor carrier registration and permit fees are also generally used to pay the cost of administering and enforcing the carrier regulations.

Highway tolls, overweight or oversize vehicle permit fees, and size-weight fines or penalties seem clearly to be highway user fees. It is somewhat surprising that few of the constitutional or statutory provisions which protect highway user revenue specifically mention these fees.[5] Revenue from all traffic law fines, often including size-weight violations, is often allocated to traffic safety programs or enforcement, or to the general education fund. Tolls are often collected and expended by a separate entity which owns and operates the toll roads.

---

3. See, for example, the state summaries for Alabama (revenue from use tax in lieu of sales tax on vehicle is not highway user revenue), Arizona (constitutional license tax in lieu of ad valorem tax on vehicle is not protected highway user revenue), and Virginia (revenue from sales tax on vehicle is highway user revenue).

4. See, for example, the state summaries for Indiana and Pennsylvania (driver license fees); Kansas (title fees); and Maryland, New York, North Carolina, and Wisconsin (all DMV revenue).

5. See, for example, the state summaries for New Hampshire (tolls), Maryland and Vermont (overweight penalties), and Connecticut (all penalties).

Some states also impose other kinds of taxes on highway users which differ from the taxes imposed in most states.[6] Although they may clearly consitute highway user fees, it is difficult to compare one state with another on the basis of these taxes.

The goal of this project was to assess the overall status of highway user fee protection in the United States, and to identify states where that protection is particularly strong, or weak. In order to accomplish that, we have focused primarily on the first and second structure taxes -- the vehicle registration fees and the motor fuel taxes. Other highway user fees move in and out of the picture, from state to state, but the registration fees and fuel taxes are constants. Every state imposes these taxes on highway users, and they certainly constitute the largest component of state highway user revenue. Evaluation of the protection of revenue from these two user fees affords an excellent assessment of the overall status.

---

6. Pennsylvania, for example, imposes an "axle tax" and a "gross receipts tax" on commercial carriers

Legitimate Use and Diversion

The purpose in assessing highway user fees is to create a fund to defray the expense of providing the highways being used, now and in the future. Some uses of highway funds are unquestionably legitimate. Using the funds for construction and maintenance of a highway, for example, is clearly legitimate. Highways cannot be built without right of way, so using the funds to purchase right of way is obviously legitimate. Highways are often funded through the sale of bonds. Where the proceeds of the bond sale are used entirely for highway purposes, highway funds can legitimately be used to pay off those bonds. These are easy conclusions.

There are some other uses of highway funds which are clearly not legitimate. Expending highway funds to build schools or pay teachers, for example, would clearly be a diversion. Spending highway money on a subway system or other forms of nonhighway transportation is also a diversion of the funds from their proper use.

Between these extremes, however, there are many potential uses for highway funds which are less clearly either legitimate or diversionary. This report will not attempt to determine which expenses are legitimate. It will list some of the potential uses for highway funds, along with references to identify the state summaries in which there is some discussion of the manner in which the issue has been addressed by the states. This listing follows in the tables on the next six pages.

NOTE: Keep in mind that the tables <u>do not</u> show whether a particular kind of expenditure is considered legitimate in a particular state. The tables only indicate that more information on that issue will be found in the state summary for the indicated state.

Overview of Highway User Fee Protection

In assessing the overall status of highway user fee protection, it is important to understand that only a clear and comprehensive constitutional anti-diversion provision can provide any real protection. That point cannot be too strongly emphasized.

The kind of constitutional provision needed does not have to be long or complicated. The following language would serve quite well, for example:

> No monies derived from fees, excises, or license taxes relating to registration, operation, or use of vehicles on the public highways, or to fuels used for the propulsion of such vehicles, shall be expended for other than the cost of administering the laws under which such monies are derived, statutory refunds and adjustments provided therein, payment of highway obligations, the cost of construction, reconstruction, maintenance, and repair of public highways and bridges, and the expense of state enforcement of traffic laws.

Seventeen states currently have language in their constitutions which affords that kind of excellent protection for highway user revenue. These states are shown in column A of the table on the next two pages. Another seven states have constitutional provisions which afford some protection for highway user revenue, but the protection is not complete. These states are shown in column B of the table.

ALASKA

Alaska lacks a constitutional anti-diversion provision. Current statutes afford protection for motor fuel tax revenue only. The constitution prohibits any new dedication of tax revenue to any particular purpose.

A statutory provision specifies that revenue from the tax on motor fuels used to propel vehicles on the highways must be deposited in a special highway fuel tax account.[1] These funds may be expended only for highway construction and maintenance, construction of ferries, right of way acquisition, and other highway costs, including surveys, administration, and related matters.[2]

The constitution prohibits dedication of the proceeds of any state tax or license fee to any special purpose except when such dedication is required by the federal government as a condition of participation in federal programs.[3] The provision also specifies that dedications existing at the time the provision was adopted (1956) may be continued. The statutory dedication of motor fuel tax revenue described above was in effect prior to the adoption of the constitution's prohibition of dedications.[4]

---

1. Alaska Stat. § 43.40.010 (g) (1985).

2. The law also permits paying valid motor fuel tax refund claims from the highway fuel tax account. Alaska Stat. § 43.40.010 (h) (1985).

3. Alaska Const. art. 9, § 7 (1985).

4. This constitutional provision was ratified on April 24, 1956. This provision has been construed strictly against dedications. The state attorney general has concluded that the only power which the legislature retains with respect to existing dedications is to repeal them. Existing dedications may be continued but may not be revised in any way which would increase or decrease either the percentage or total amount of the proceeds which are dedicated. Op.Atty.Gen. No. 7, No. 14 (1959). If the tax is decreased, the entire dedication falls and all of the tax revenue goes to the general fund; if the tax is increased, all of the increased revenue goes to the general fund. Op.Atty.Gen. No. 14 (1959).

PROTECTION OF HIGHWAY FUNDS

A = Has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

B = Has a constitutional provision, but protection is incomplete.

C = Has a constitutional provision which specifically permits or requires diversion.

D = Has no relevant constitutional provision but current statutes generally apply highway user revenue to highway purposes.

E = Has no relevant constitutional provision and current statutes afford little or no protection for highway user revenue.

F = Has no relevant constitutional provision and current statutes provide for significant diversion of highway user revenue to nonhighway purposes.

Designated states are marked with an 'O'

	A	B	C	D	E	F
Alabama	-	O	-	-	-	-
Alaska	-	-	-	-	O	-
Arizona	O	-	-	-	-	-
Arkansas	-	O	-	-	-	-
California	-	-	O	-	-	-
Colorado	O	-	-	-	-	-
Connecticut	-	-	-	-	O	-
Delaware	-	-	-	-	O	-
D. of Columbia	-	-	-	-	O	-
Florida	-	-	-	-	-	O
Georgia	-	O	-	-	-	-
Hawaii	-	-	-	-	O	-
Idaho	O	-	-	-	-	-
Illinois	-	-	-	-	O	-
Indiana	-	-	-	O	-	-
Iowa	O	-	-	-	-	-
Kansas	-	O	-	-	-	-
Kentucky	O	-	-	-	-	-
Louisiana	-	-	-	-	-	O
Maine	O	-	-	-	-	-
Maryland	-	-	-	-	-	O

The situation in the remaining states is much worse. Four states are shown in column D as having no constitutional provision but having current statutes which apply highway user revenue to highway purposes. While the current application of the revenue in these states is laudable, that status could change at any time the legislature decided to change it. There is no real protection for highway user revenue in these states.[7] A statutory dedication cannot provide any real protection for highway user revenue.

The 18 states shown in columns E and F of the table have no constitutional provision, and current statutes do not allocate all of the revenue to highway purposes. In some cases, the statutes provide for diversion of the funds. Statutes in the eight column F states provide for significant diversions to nonhighway purposes.

The five states shown in column C have constitutional provisions which specifically permit or require a diversion of some highway user revenue to nonhighway purposes.

It is interesting to compare the status today with the status of constitutional anti-diversion provisions in 1965.[8] Today there are 17 states with excellent protection. In 1965 there were 22. One of the 22 has been repealed (Louisiana). The other four were not repealed but were amended to specifically permit or require some diversion of funds (California, Massachusetts, Michigan, and Montana). The total number of relevant constitutional provisions remains 29 today, just as it was in 1965. The one provision newly adopted since 1965 (New Jersey) affects only a portion of highway user revenue and dedicates it to general transportation purposes rather than specifically to highway purposes. We might conclude that there has not been a significant amount of change since 1965, but all the change has been negative.

---

7. The point is well illustrated by the statutory laws of Illinois. One section attempts to dedicate highway user revenue to highway purposes, while other sections provide for extensive diversion. See the Illinois summary.

8. In 1965 the National Highway Users Conference published the text of the then-current constitutional anti-diversion provisions in a paper entitled, "Texts of Good Roads Amendments." That is the basis for this comparison.

COLORADO

Colorado has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

The constitution provides that revenue from any license, registration fee, or other charge with respect to the operation of a motor vehicle on the highways, and revenue from the imposition of any excise tax on gasoline or other liquid motor fuel, except aviation fuel used for aviation purposes, must be used exclusively for the construction, maintenance, and supervision of the highways.[1]

---

1. Colo. Const. art. 10, § 18 (1980). The provision also specifies that the revenue may be used for the cost of administration of the tax law.

Since this section sets aside the whole of the revenues from the specified taxes for highway purposes, no appropriation by the legislature is required. Johnson v. McDonald, 49 P.2d 1017 (Colo. 1935).

IOWA

Iowa has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

The constitution provides that revenue from motor vehicle registration fees and all taxes and license fees on motor vehicle fuel must be used exclusively for the construction, maintenance, and supervision of the highways, or for the payment of principal and interest on highway construction bonds.[1]

This provision has been interpreted to allow use of the funds to pay for relocation of utilities necessitated by highway construction;[2] to lease land in order to provide barriers to control wind erosion which interferes with highway maintenance and safety;[3] to pay the salaries of the highway patrol, since supervision of the highways is one of their primary duties;[4] to erect a garage to house and maintain highway construction and maintenance equipment;[5] and to provide rest areas along the highways.[6] On the other hand, the provision prohibits use of highway funds to pay for construction of a bridge when part of it would lie in another state;[7] to develop and operate a motor vehicle ferry service;[8] and to purchase billboards, signs, and

---

1. Iowa Const. art. 7, § 8 (1949). Motor vehicle certificate of title fees and lien notation fees are not "registration fees" within the meaning of this provision. Op.Att'y.Gen. (Thompson, April 13, 1971. Also, revenue from tax on motor vehicle fuel used for non-highway purposes is not covered by this provision. Op.Att'y.Gen. (Tieden) March 13, 1970.

2. Edge v. Brice, 113 N.W.2d 755 (Iowa 1962).

3. Op.Att'y.Gen. (Scott) April 26, 1979.

4. Op.Att'y.Gen. (Walsh) May 3, 1971.

5. Op.Att'y.Gen. (Fenton) June 2, 1969.

6. Op.Att'y.Gen. Jan. 16, 1968.

7. Frost v. State, 172 N.W.2d 575 (Iowa 1969).

8. Op.Att'y.Gen. (Rigler) Oct. 12, 1977.

KENTUCKY

Kentucky has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

The constitution provides that money derived from taxes related to gasoline and other motor fuels, and from taxes relating to registration, operation, or use of vehicles on the highways may be expended only for the payment of highway obligations; the costs of construction, reconstruction, maintenance, and repair of the highways and bridges; the cost of highway right-of-way; and the cost of enforcing the state traffic and motor vehicle laws.[1] Several judicial and attorney general's opinions have construed this section.[2]

---

1. Ky. Const. § 230 (1973). The section also specifies that such money may be expended for the cost of administration and for refunds and adjustments relating to the tax from which the money is derived.

2. The funds may be used for publication and distribution of highway information which results in increased revenue for use in the highway program. Keck v. Manning, 231 S.W.2d 604 (Ky. 1950). The funds may be used for necessary relocation of utilities belonging to a municipality. Op.Atty.Gen. 74-199. The funds may not be used for a transit authority. Op.Atty.Gen. 78-144. A municipality may not expend the funds for a parking lot. Op.Atty.Gen. 82-492. Where a municipality places road funds in an interest bearing account, the interest earned on the funds is subject to the same restrictions as the road funds. Op.Atty.Gen. 81-143.

MINNESOTA

Minnesota has several constitutional provisions which together afford excellent protection for highway user revenue.

One section creates a highway user tax distribution fund to be used solely for highway purposes.[1] This fund is divided into three other funds, for use on state, county, and municipal highways. The sections which create these funds allow expenditures only to pay the principal or interest on highway bonds or for construction, improvement, and maintenance of highways.[2]

The highway user tax distribution fund consists of revenue from taxes authorized by two other sections. The first of these sections authorizes the legislature to tax motor vehicles using the highways, and specifies that this tax is in lieu of any other tax upon motor vehicles except wheelage taxes imposed by political subdivisions solely for highway purposes.[3] The second of the two sections authorizes an excise tax on any means or substance used for propelling vehicles on the highways, or on the business of selling such a substance.[4]

---

1. Minn. Const. art. 14, § 5 (1976).

2. Minn. Const. art. 14, §§ 2, 6, 7, 8 (1976); art. 14, § 11 (Supp. 1985).

3. Minn. Const. art. 14, § 9 (1976).

4. Minn. Const. art. 14, § 10 (1976).

other purposes and contingencies relating and appertaining to the construction and maintenance of highways and bridges as the commission may deem necessary and proper.[3]

Another constitutional provision specifies that one-half the revenue from the state sales tax on vehicles shall be dedicated to "highway and transportation use."[4] Most of this revenue goes to the state road fund described above.[5]

Another section deals with revenue from the motor vehicle fuel tax, and specifies how the portion of that revenue which does not go to the state road fund is to be spent. Ten percent of the fuel tax revenue goes to a county road fund, to be used by counties only for construction, reconstruction, maintenance, and repair or highways and bridges.[6] Fifteen percent of the fuel tax revenue goes to municipalities to be used only for construction, reconstruction, maintenance, repair, policing, signing, lighting, and cleaning highways.[7]

---

3. The section specifically allows the payment of fuel tax refunds, and payment of costs of collecting all the taxes before the revenue is credited to the state road fund. Some of the expenses listed in the text are authorized before the revenue is credited to the state road fund; others are authorized from the road fund itself.

4. Mo. Const. art. 4, § 30(b)2 (Supp. 1986).

5. Seventy-four percent goes to the state road fund; twenty-five percent goes to political subdivisions for highway and transportation use; one percent goes to the state transportation fund to be used as provided by law.

6. Mo. Const. art. 4, § 30(a)1(1) (Supp. 1986).

7. Mo. Const. art. 4, § 30(a)1(2) (Supp. 1986). This provision also allows the money to be used for payment of principal and interest on indebtedness incurred prior to January 1, 1980 for highway purposes.

NEW HAMPSHIRE

New Hampshire has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

The constitutional section provides that revenue from registration fees, operators licenses, motor fuel road tolls, and any other special charges or taxes with respect to the operation of motor vehicles or the sale or consumption of motor vehicle fuels may be used only for the costs of construction, reconstruction, and maintenance of highways; for the payment of principal and interest of highway obligations; and for the costs of supervision of traffic on the highways.[1]

---

1. N.H. Const. part 2, art. 6-a (1970). The section also specifies that such revenue may be expended for the cost of administration and collection of the tax or fee from which the revenue is derived.

OHIO

Ohio has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

The section provides that revenue derived from fees or taxes relating to the registration, operation, or use of vehicles on the highways, or to fuels used for propelling such vehicles may be used only for the payment of highway obligations; the costs of construction, reconstruction, maintenance, and repair of highways and bridges; other statutory highway purposes; expenses of state enforcement of traffic laws; and expenses authorized for hospitalization of indigent persons injured in motor vehicle accidents on the highways.[1]

This section has been held applicable only to state revenue; it does not restrict the use of revenue from taxes and fees imposed by municipal corporations.[2]

---

1. Ohio Const. art. 12, § 5a (1979). The section also specifies that such revenue may be expended for the cost of administration and for refunds and adjustments relating to the tax from which the revenue is derived.

It has been held that the funds may be used for street lighting systems on urban portions of limited access highways. State ex rel. Walter v. Vogel, 159 N.E.2d 892 (Ohio 1959).

2. Garrett v. Cincinnati, 139 N.E.2d 35 (Ohio 1956).

PENNSYLVANIA

Pennsylvania has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

The provision applies to revenue from gasoline and other motor fuel taxes, motor vehicle registration fees, drivers license fees, and other taxes on products used in motor transportation.[1] It specifies that these funds must be used solely for highway construction, reconstruction, maintenance, and repair; highway safety; expenses incident to those activities; or to pay bond obligations incurred for those purposes.[2] The section also provides for distribution of the funds to political subdivisions to use solely for the same purposes.

The provision also permits the state to borrow from the funds for a period not exceeding eight months. The loan must be repaid within one month after the beginning of a new fiscal year.

---

1. Pa. Const. art. 8, § 11(a) (Supp. 1985). A tax on gross receipts of a motor carrier has been held not to be covered by this provision. Shirks Motor Express Corp. v. Messner, 100 A.2d 913 (Pa. 1954), appeal dismissed, 347 U.S. 941 (1954).

2. The language of this provision which would permit use of the funds for construction of a bridge does not permit use of the funds for purchase of an already constructed bridge. Peoples Bridge Co. v. Shroyer, 50 A.2d 499 (Pa. 1947). But see 1973 Op.Att'y.Gen. No. 19. Payment of that portion of a county engineer's salary attributable to the highway purposes specified in the section is a legitimate use of the funds. 1975 Op.Att'y.Gen. No. 10. Payment by the Dept. of Transportation to lease an aircraft for use in highway construction and maintenance is also a legitimate use. 1973 Op.Att'y.Gen. No. 40.

WASHINGTON

Washington has a constitutional anti-diversion provision which affords excellent protection for highway user revenue.

The constitutional provision applies to all fees collected by the state as license fees for motor vehicles; all excise taxes collected by the state on the sale, distribution, or use of motor vehicle fuel; and all other state revenue intended to be used for highway purposes.[1] All such revenue must be placed in a special fund and may be used only for highway purposes.[2]

The section provides that "highway purposes" includes construction, reconstruction, maintenance, repair, and betterment of state, county, and city highways and bridges. More specifically, this includes the cost of right of way acquisition; the cost of installing, maintaining, and operating traffic signs and signal lights; the cost of policing the highways by the state; the cost of operation of movable span bridges; and the cost of operation of ferries which are a part of any highway.[3] The section also provides that "highway purposes" includes the necessary operating, engineering, and legal expenses connected with the administration of the highways.[4]

---

1. Washington Const. amend. 18 (1966). The section also specifies that it shall not be construed to apply to revenue from general or special taxes or excises not levied primarily for highway purposes, or to vehicle operator's license fees, any excise tax imposed on motor vehicles or the use thereof in lieu of a property tax thereon, or fees for certificates of ownership of motor vehicles.

2. The section specifically allows use of the revenue for refunds authorized by law on taxes paid on motor vehicle fuels, and for paying the cost of collecting any revenues described in the section.

3. See State ex rel. Toll Bridge v. Yelle, 377 P.2d 466 (Wash. 1962). The funds may not be used for public transportation systems. State ex rel. O'Connell v. Slavin, 452 P.2d 943 (Wash. 1969). The funds may be used for construction and operation of "park and ride" lots. State Highway Commission v. O'Brien, 523 P.2d 190 (Wash. 1974).

4. The section also specifies that "highway purposes" includes the payment or refunding of any obligation of the state or any political subdivision thereof for which any of the described revenues may have been legally pledged prior to the effective date of the section.

FOR THIS MEETING, YOU HAVE BEEN GIVEN:

a folder on SJR 27 that includes:

item #1: SJR 27
#2: a statement from Senator Zharoff
#3: fiscal note - DOT/PF
#4: position paper - DOT/PF
#5: map of the shoal
#6: status of the shoal
#7: correspondences to and from the Governor
#8: correspondences to and from the Alaska's congressional delegation
#9: information on the original soundings

a folder on SJR 68 that includes:

item #1: SJR 68
#2: fiscal note - DOT/PF
#3: a statement from Sen. Johne Binkley
#4: letter of support - DOT/PF Commissioner
#5: resolutions and a letter of support

a folder on HB 544 that includes:

item #1: HB 544
#2: fiscal note - Dept. of Public Safety
#3: position paper - Dept. of Public Safety
#4: background information
#5: statutes

POSITIONS:

FULL-TIME						
PART-TIME						
TEMPORARY						

ANALYSIS: There is no fiscal impact to the Department of Transportation and Public Facilities. However, the certification of RL lights will allow future capital funds for rural runway lighting to go farther due to the avoidance of diesel generation required for conventional lighting systems.

Prepared by: W. Keith Gerken WKG Phone: 465-3900
Division: Deputy Commissioner, Operations Date: 2/22/88

March 24, 1988

The Honorable Bette Cato
Chairman, Transportation Committee
Alaska House of Representatives
Room 15, Capitol Building
Juneau, AK 99801

Dear Representative Cato:

On Friday, March 25, you will have before your committee SJR 68, relating to radioluminescent runway lights. I would like to offer the following on this type of lighting system for the information of the committee.

As you know, most rural airports are community class, requiring a runway of about 3,000 feet. DOT/PF estimates that the cost of purchasing and installing a diesel generator powered medium intensity runway lighting system for a runway of this length is about $250,000 with annual maintenance and operational costs of about $10,000.

The cost of purchasing and installing a radioluminescent (RL) lighting system for the same length runway is approximately $190,000 with no annual maintenance or operational costs. At this time, only one private company has the required Federal Energy Regulatory Commission's permit to manufacture and sell RL lights. However, four other companies have applied for the necessary permits to manufacture RL lights. The Statewide Research Division of DOT/PF in Fairbanks expects the price of this lighting system to drop by 50% as more companies enter the market and the technology becomes established.

Currently, there are twenty-four community class airports statewide without any type of lighting system which would be good candidates for RL lights. However, until the FAA has completed its testing and approved the RL lights, the system cannot be fully implemented. FAA approval is essential to commercial use of RL lights as an alternative to lanterns under FAR 135.229. Your favorable consideration of this Resolution would be greatly appreciated.

Sincerely,

Johne

The Honorable Johne Binkley
Alaska State Senate
P.O. Box V
Juneau, Alaska 99811

Dear Senator Binkley:

I am writing to express my support for the resolution that you have introduced that asks the Federal Aviation Administration (FAA) to complete their evaluation of radioluminescent runway edge lighting (RL) systems. Alaska has an immediate need for low maintenance RL systems for our rural airports. RL systems represent a cost effective alternative to electrical powered lights. However, until FAA completes its testing of RL systems and grants some level of approval, their usefulness is greatly diminished.

Thank you for your support of the radioluminescent runway edge lights program.

Sincerely,

Mark S. Hickey
Commissioner

YUKON KUSKOKWIM DELTA MAYOR'S CONFERENCE

BETHEL, ALASKA
OCTOBER 7, 8, and 9, 1987

RESOLUTION 87-18

A RESOLUTION OF THE 1987 YUKON-KUSKOKWIM DELTA MAYOR'S CONFERENCE REQUESTING THE LEGISLATURE AND GOVERNOR TO WORK TOGETHER TO ACCELERATE THE FUNDING AND CONSTRUCTION OF AIRPORT RUNWAY LIGHTING SYSTEMS WHICH ARE NEEDED THROUGHOUT RURAL ALASKA.

WHEREAS, there are many rural airports which remain without any form of adequate runway lighting or navigational aides which would enhance the safety of our people; and

WHEREAS, runway lighting systems at these village locations is an absolutely essential need for purposes of public transportation, freight delivery, public safety and medical services; and

WHEREAS, this is a basic service which many municipalities have been requesting for years and others have enjoyed for years.

NOW THEREFORE BE IT RESOLVED THAT the Yukon-Kuskokwim Delta Mayor's Conference requests the State of Alaska Department of Transportation aggressively pursue the investigation and testing of new technology, where it appears that such technology may facilitate the installation of needed electrically powered runway lighting and that the State provide funds for the installation.

PASSED and APPROVED BY THE NINTH ANNUAL YUKON-KUSKOKWIM DELTA MAYOR'S CONFERENCE this 9th day of October, 1987.

CONVENTION RESOLUTION NO. 87-10-11

A RESOLUTION CALLING ON THE STATE OF ALASKA TO PROVIDE GRANT FUNDS TO THE CITY OF AKIAK FOR SOME AIRPORT LIGHTS.

WHEREAS, The City of Akiak is a second class city which is a responsible organization to maintain airport lights through the Department of Transportation; and

WHEREAS, The City of Akiak has no airport lights and when there is an emergency during the night and early morning hours, the health aide has to contact 4 to 5 people to light up the airstrip with their trucks and 3-wheelers; and

WHEREAS, The local people of Akiak are affected by this need as well as producing a hazard for the planes without airport lights; and

NOW THEREFORE BE IT RESOLVED that the City of Akiak call upon the Association of Village Council Presidents at its Annual Convention to assist the City of Akiak in their pursuit of grant funds to provide lights at their airport; and

BE IT FURTHER RESOLVED that the AVCP Administration bring this request to the State of Alaska's Department of Transportation.

Adopted by action of unanimous vote of delegates assembled at the 1987 Fall Convention of the Association of Vilalge Council Presidents held in Scammon Bay, Alaska, on October 17, 1987, meeting in a duly constituted meeting of the AVCP Full Board of Directors with a quorum having been present.

Mr. Lee Leonard, Facilities Research Manager
Alaska Department of Transportation and Public Facilities
2301 Peger Road
Fairbanks, AK, 99709

Dear Mr. Leonard,

At our last meeting, Phyllis Tate told Association members about "radioactive luminescent" runway lights that the state is using at remote locations. We depend on our runway for all passenger and freight traffic in and out of Minchumina, and there are several small planes based here permanently. We have had no runway lights for some years, and this has restricted aviation activities at Minchumina, for both scheduled and unscheduled flights, to daylight hours. With lights, planes can land in darkness, adding greatly to safety, both for us and for transient pilots.

We understand there is a set of these lights available, and we would greatly appreciate it if they could be installed at Lake Minchumina.

Sincerely,

Florence R. Collins
