I would like to extend my appreciation to you and the House Transportation Committee for the time and committment afforded CSHB 213 (Trsp).

I feel this legislation is very important, and has revealed many inequities in the state's allocation of federal highway funds.

However, additional research by the House Transportation Committee during the interim will be of great value in remedying this situtation.

Subject: CSHB 213 - Allocation of Federal Highway Funds

The bill on allocation of federal highway funds, which you co-sponsored, (CSHB 213) was passed out of the House Transportation Committee today, and is scheduled for the House Finance Committee on Wednesday, May 13, 1987.

There were a number of concerns addressed during the House Transportation Committee's review of CSHB 213. The House Transportation Committee agreed that the issue of fair and equitable distribution of federal highway funds be placed as a major priority for the committee and additional research be conducted during the interim.

However, the House Transportation Committee wanted to provide the House Finance Committee the opportunity to address CSHB 213 during this legislative session.

If you have any questions, please do not hesitate to contact my office.

HB

213

(FILE 2)

SUMMARY OF INTERIM WORK ON HB 213

House Transportation Committee chairman, Representative Bette Cato, and transportation committee staff worked during this interim to address recommendations and concerns associated with HB 213.

House Bill 213, "An Act relating to allocation of federal-aid highway funds; and providing for an effective date", passed out of the House Transportation Committee (HTC) on May 11, 1987, and is currently being considered by the House Finance Committee. House Transportation Committee members submitted a letter of intent with CSHB 213 (trans) when it passed out of committee. This letter of intent (attached) reflects House Transportation concerns and provides policies and a formula that the committee would like to see the Department of Transportation and Public Facilities (DOT/PF) implement to help address these concerns.

During interim, DOT/PF Director of Plans, Program and Budget, Mr. Ron Lind, informed HTC staff that the department was holding several meetings with regional directors to discuss and review changes to the department's present capital project ranking criteria. On August 24, 1987, DOT/PF provided HTC staff with information on the changes made by the department to improve the capital program development process. Commissioner Mark Hickey stated he did not think this process had incorporated all the changes which he feels are ultimately necessary.

The changes outlined in Commissioner Hickey's letter reflect major changes in the project ranking criteria. These changes include:

(a) Creation of a separate set of criteria for federal highway (FHWA), Airport Improvement Program (AIP), and other funding (includes State General Funds).

(b) Award of additional points to projects that directly support industrial, commercial or resource development.

(c) Recognition of the importance of a particular transportation facility which may provide the only year-round access to a community.

(d) Recognition that the formal functional classificiation of highways may not be appropriate for roads not on the contiguous road system.

Representative Lyman Hoffman's staff has reviewed the new criteria and feels these changes address many of the concerns expressed over the current project ranking criteria. However, Laurie Nottingham, aide to Representative Hoffman, stated that the real concerns lie in the policies and guidelines adopted by the DOT/PF. Representative Hoffman would like to see the department adopt more concise, clearly defined policies that ensure fair and equitable distribution within in region of the federal-aid dollars.

Representative Hoffman is currently working to outline policy changes for DOT/PF that would provide each region with clear guidelines for the capital program development program. Representative Hoffman will provide this information during the HTC meeting on November 10, 1987.

This overview of HB 213 includes:

- summary
- copy of HB 213
- DOT/PF's new ranking criteria
- House Research analysis and information on distribution of federal-aid dollars
- committee minutes
- additional backup information.
- The section labeled comments will include information provided by Representative Hoffman.

On August 24, 1987 the Department of Transportation

3. Required that any project identified as an "Alternate" be an "Expected" project within two years. This will assure that federal items for which we are programming funding actually end up being scheduled for completion.

4. Required that regional personnel notify the appropriate legislators of meetings scheduled with community planning groups and others to discuss development of the capital program, as well as solicit more input from affected legislators regarding possible projects for unorganized areas.

The target dates identified within these instructions will be modified slightly to reflect the later due date of October 31, 1987, now apparently established for the operating and capital budgets. Additional information will be forwarded as available regarding regional meeting schedules. Any comments, suggestions or project proposals for consideration would be most welcomed. Please call if you have any questions.

Sincerely,

Mark S. Hickey
Commissioner

The Commissioner's specific modifications to the ranking criteria and funding matrix have been incorporated into this package and all of the major changes have been discussed and approved by him. I would also like to thank you for the review efforts already provided by your staff during the preparation of this package.

The key due dates shown below, are based on an October 15, 1987 submission date approved by the Division of Budget Review.

Revised FFY88 Obligation Lists	September 1
FY89 Capital Budget (Project descriptions and rankings)	September 15
FY90 - 94 Complete packages	September 30
Commissioner's Review (Deputy Commissioner's and Regional Directors)	Week of October 5
Submission to OMB	October 15

If you have questions concerning this process please contact me or have your staff contact Ron Lind and his staff in the Division of Plans, Programs, and Budget. Thank you, in advance, for your cooperation in this planning effort, it is a very important element in the positive changes we are trying to bring about within DOT&PF.

SUBJECT: 1988-1994 Capital Improvement Program

Attached are the instructions for revision of the FFY88 obligation plans, preparation of the 1989-1994 Capital Improvement Program and the 1989 capital budget request. All of these items are interrelated, however, the specific due dates and uses of each vary. The project ranking criteria and funding limits have already been provided to your planning staff.

The process for this year is very similar to last year, however, there have been some changes to this process as follows:

1. FHWA "Expected" obligation plan totals are now targeted at the obligation limit, not apportionment total.

2. AIP totals are based on the increased amounts contained in the reauthorization bills under review by Congress. Ultimate disposition of these bills may require readjustment of the totals.

3. "Alternate" lists for FHWA and AIP are limited to 60% of "Expected".

4. Ranking criteria is applied to all 1989 projects as well as new starts in the 6 year program, not just the items requiring additional funding in the budget year.

5. A comparison to the year by year project listings contained in the "Capital Improvement Program 1987 - 1993" will be provided in the new document.

6. Six year project listings will be with the capital budget submitted to OMB.

7. Alternate projects must be incorporated into an "Expected" list within 2 years. It is still anticipated that almost all "Alternate" projects will appear as "Expected" in the next year.

8. Opportunity for public participation especially by Legislators, will be increased. Specific directions on this issue are not yet available but it will be necessary to notify Legislators of meetings scheduled with community planning groups and others to discuss the capital program.

The Commissioner's specific modifications to the ranking criteria and funding matrix have been incorporated into this package and all of the major changes have been discussed and approved by him. I would also like to thank you for the review efforts already provided by your staff during the preparation of this package.

The key due dates shown below, are based on an October 15, 1987 submission date approved by the Division of Budget Review.

Revised FFY88 Obligation Lists	September 1
FY89 Capital Budget (Project descriptions and rankings)	September 15
FY90 - 94 Complete packages	September 30
Commissioner's Review (Deputy Commissioner's and Regional Directors)	Week of October 5
Submission to OMB	October 15

If you have questions concerning this process please contact me or have your staff contact Ron Lind and his staff in the Division of Plans, Programs, and Budget. Thank you, in advance, for your cooperation in this planning effort, it is a very important element in the positive changes we are trying to bring about within DOT&PF.

OFFICE OF THE COMMISSIONER

SEP 3 1987

August 24, 1987

The Honorable Bette Cato
House Transportation Committee Chairman
P.O. Box V
Juneau, AK 99811

Dear ~~Representative~~ Bette Cato:

Attached are the detailed instructions issued within DOT&PF for the preparation of the 1989 Capital Budget and the revised Six Year Plan. These instructions will need to be considered in context with the instructions from the Division of Budget Review when issued.

Our instructions improve the capital program development process. However, they do not incorporate all changes that I ultimately feel are necessary. Some major changes already instituted which I think you will find of interest are as follows:

1. Project Ranking Criteria has been improved by:

   (A) Creation of a separate set of criteria for federal highway (FHWA), Airport Improvement Program (AIP), and other funding (includes State General Funds).

   (B) Award of additional points to projects that directly support industrial, commercial or resource development. (Questions #3 and 5)

   (C) Recognition of the importance of a particular transportation facility which may provide the only year-round access to a community. (Question #8)

   (D) Recognition that the formal functional classification of highways may not be appropriate for roads not on the contiguous road system. (Question #7; FHWA Ranking Criteria)

2. A project-by-project comparison to the information contained in the printed document "Capital Improvement Program 1987-1993" will be provided. This will allow an understanding of the changes and reasons for the changes that have occurred or are proposed.

3. Required that any project identified as an "Alternate" be an "Expected" project within two years. This will assure that federal items for which we are programming funding actually end up being scheduled for completion.

4. Required that regional personnel notify the appropriate legislators of meetings scheduled with community planning groups and others to discuss development of the capital program, as well as solicit more input from affected legislators regarding possible projects for unorganized areas.

The target dates identified within these instructions will be modified slightly to reflect the later due date of October 31, 1987, now apparently established for the operating and capital budgets. Additional information will be forwarded as available regarding regional meeting schedules. Any comments, suggestions or project proposals for consideration would be most welcomed. Please call if you have any questions.

Sincerely,

Mark S. Hickey
Commissioner

INSTRUCTIONS

1988 - 1994 Capital Improvement Program

INTRODUCTION

The 1989 capital budget request is a subset of the "1988 - 1994 Capital Improvement Program." The project funding requests entered on the CP-1's, Capital Project Description for all sources except Federal Highway Administration (FHWA) and Airport Improvement Program (AIP) funding exactly match the items in the 1989 obligation plan. For AIP and FHWA funded projects, the CP-1's, the 1989 capital budget request, are only used to request the additional funding required for projects contained on the 1988 and 1989 obligation lists. Therefore, the obligation plans for FHWA and AIP must be completed before the budget request forms can be prepared.

The remainder of this package identifies the funding limits for the various fund sources, the project ranking criteria, the steps required for preparation of the obligation plans, and the technical data requirements for completion of the computer files we will use to accumulate our program. Instructions from the Office of the Governor, Division of Budget Review will be distributed as soon as they are available. The information currently available indicates that there will be very little change from their 1988 instructions. The general information requirements for data on the CP-1's will be contained in those instructions. Specific attention should be given to the operating cost elements and assuring that the CP-1 (except for PE and APD projects) is as project specific as possible. This will allow for a more understandable review and prioritization process.

SCHEDULE

1988 - 1994 Capital Improvement Program

August 26	Headquarters provides update of estimated federal obligation funding for FFY87.
September 1	1988 Revised Obligation Plans Submitted for Review.
September 15	1988 Revised Obligation Plans Approved.
September 15	1989 Obligation Plans and 1989 Capital Budget Submitted to Headquarters.
September 30	1990 - 1994 Obligation Plans Submitted
October 5	Submit any revisions caused by federal obligation activity during September which is different than that assumed. (Hopefully this will not be required.)
Week of October 5	Budget discussions between Commissioner, Deputy Commissioners and Regional Directors
October 13	Submit revisions required as result of budget discussions.
October 15	Complete capital program package submitted to Office of Management and Budget.
November 1	Public document prepared based on Departmental Submission.
December	Public document modified to reflect Governor's decisions.
January	Document submitted to Legislature.

GENERAL INSTRUCTIONS

There are two basic requirements for revision of obligation plans: 1) verification/update of the FFY88 Expected and Alternate Lists and 2) verification and update of the 1989 - 1994 obligation plans. Revisions to the 1988 Expected and Alternate lists are due September 1, 1989 obligation lists and budget requests, September 15, and the 1990 through 1994 information, September 30.

The criteria for project inclusion on the Expected and Alternate obligation lists remains the same. All projects must be capable of being obligated during the year, however those on the Expected List are the ones that you anticipate doing within the available funding and those on the Alternate List will only be used if unforseen problems arise with the Expected Projects. Any project included on the Alternate List must appear in the next year and as an Expected project within two years.

In preparing the obligation plan, Design and Construction (D&C) may only be able to provide an estimate for total cost by phase, in these situations please use the following percentages to derive a figure for federal share for the obligation plan. Project estimate figures are to be rounded, see "G. Report Format and Data Input".

	Federal Portion %
Interstate System Projects	94.73
Primary, Secondary	91.35
Urban	91.35/100[A]
Bridge	80
Safety	90
RR-Hwy Crossing funds used for ROW purchase	75
Federal Lands Highways[B]	100
All AIP Projects	93.75

Note: [A] Use this figure if the Department does not provide matching funds for the urban system project.

[B] These funds are not part of the States obligation limits and therefore do not count against the limits. Typically, these projects are not constructed by the State.

For purposes of estimating the federal shares for the budget and the obligation plan you should assume that there will not be unforseen non-participating costs. If a specific item of work is known not to be eligible for participation it should be considered as a separate project. An example of this type of expense would be the lighting for the "second runway" at Kodiak which the Federal Aviation Administration (FAA) had early on identified as ineligible. The "match pot" request for state funds will include funding to cover average ineligible items. Major disallowance of costs on projects may need to be covered by a supplemental appropriations if they exceed the total historical projections.

Regional personnel may need to check with D&C to assure that cost estimates conform to the assumptions above.

Additional Notes:

Except for the funding limit decreases, revising the obligation plan will be virtually the same as last year's process. The following are items that need to be clarified:

1. Project - specific preliminary engineering starts need to be included in the obligation plan.

2. Any proposed use of safety apportionments FFY88 and FFY89-94 should be included in the obligation plan. There is no need to list each specific safety project. The actual request in the FY89 Capital Budget for new federal authority will be a single, statewide request limited to the amount of the new apportionments.

   *If a safety project does not rank high enough in the 'HSIP', but still has a high Regional priority, then the project should be programmed as a seperate line item.

3. Each region needs to include bridge projects and urban projects in the obligation plan. The Department has unobligated balances in both bridge and urban categories. A list of eligible bridges is attached for programming consideration.

A. <u>1988 "Expected" and "Alternate" Revision.</u>

Each region needs to review their current Federal Highway Administration (FHWA) and Airport Improvement Program (AIP) plans as printed in the "Capital Improvement Program 1987 to 1993" and identify project changes to conform to the reduced funding guidelines as well as accomodate other changes which have occurred. The changes proposed for 1988 will need to be documented and approved prior to adoption of the 1988 Expected Revised Obligation Plan by the Department. In addition, no items will be included on the 1988 105 Program for FHWA that are not on the 1988 Revised Plan (Expected and Alternate).

Even though previous Obligation Revisions may have identified changes in the 1988 Plan, they must be categorized for this process to assure that there is a concise explanation and justification of all program changes. It is realized that activities during September 1987, the last month of the federal year may cause a need to revise the 1988 proposal. These modifications will be processed as soon as possible after October 1. Each project in the 1988 Expected and Alternate List should be coded for condition/change and any funding change identified. The following categorizations should be used, however, certain types require a project specific explanation.

1. No change to published FY88 Obligation Plan (Blue Book).

2. Funding additions and reductions due to minor programming actions (i.e. changes in federal funding sources or ratios, etc.) not new phases.

3. Funding additions or subtractions due to revised cost estimates, not new phases.

4. Phase deletions due to project development issues (ability to accomplish project with staff resources, major unresolved issues such as right-of-way or wetlands mitigations or funding constraints). Specific reasons must be identified for each phase.

5. Phase deletions to live within lower obligation plan limits. This reason would only be used if items 1-4 did not result in sufficient savings to reduce the funding to the new limit.

6. Phase additions as a result of new projects or phases being advanced (for example, an alternate project being substituted for an expected project) when an expected project cannot be accomplished. This reason would only be used if item 5 not used. In other words if 1-4 resulted in a reduction in excess of the required reduction for the new limit you could substitute projects.

7. Phase/Project substitutions because of priority changes which removed a current phase to allow inclusion of a new phase. Specific explanation of the reasons for the change is required.

The specific reasons required for certain projects should be summarized in the space provided on the file, (sample report attached) and a more detailed explanation provided in a memorandum submitted with the proposed revision. This will be the first Obligation Revision for 1988 and create the basis for all changes after that date.

B. Obligation Plans 1989 - 1994

The project listings as contained in the "1987 - 1993 Capital Improvement Program" will serve as the basis for these lists. Because of the changed levels of obligation available for each year it is expected that FHWA projects will need be moved to later years and AIP projects accelerated. Each project status must be categorized. See "A. 1988 Expected and Alternate Revision" for details.

The 1989 - 1993 lists must be reviewed for changed priorities, conditions and scheduling concerns before consideration of the new projects for the 1994 year is made.

The same financial limits and definitions apply to the 1989 - 1994 lists as apply to the 1988 Expected and Alternate Listings. Alternate Lists will not be included in the published material for years beyond 1990, however you may choose to provide them in your internal review and data base.

Any project which appears in the Alternate List must be included in the following year, and as an Expected project within two years.

C. Obligation Limits - FHWA

In preparing the revision of the Obligation Plan for federal fiscal year 1988, (FFY88) and beyond, we will use the federal "obligation" limit, rather than the "apportionment" level.

Projected Obligation (from FHWA)	=	$145,781,000
HPR, PL & PR (Not CIP Construction)	=	(3,030,900)
		$142,750,100

We will use our statewide limit of $143 million for the list of Expected projects, (8.2% decrease from last year), and $86.0 million for Alternate projects (60% of the Expected List).

	FFY88		FFY89 - 94	
	EXPECTED	ALTERNATE	EXPECTED	ALTERNATE
HIGHWAYS	$ 143.0	$ 86.0	$ 143.0	$ 86.0

The regional allocations are as follows:

	REGIONAL UNITS $'s Millions		
REGION	EXPECTED HIGHWAYS	ALTERNATE HIGHWAYS	RATIOS
Central	$ 65	$39	45.5%
Northern	54.3	32.6	38%
Southeast	13.6	8.2	9.5%
Marine Hwys	8.6	5.2	6.0%
Statewide	1.4	.8	1%
TOTAL	$143.0	$86.0	100%

The same methodology was used the last two years to distribute funding using the fiscal matrix. The percentages were revised due to the addition of the Statewide share (approx 1.0%) in the highways program and the application of the highway program percentages directly to the total amount of proposed federal obligation authority available.

D. Obligation Limits - Aviation

The AIP obligation ceiling will be higher this year than last. This is based on the assumption that either the House or Senate Bill, now under review, will pass. Again each region will be given a percentage of the total. Project proposals will then be evaluated on a statewide basis to assure consistancy with the Alaska Aviation System Plan and federal funding constraints. Statewide considerations of these projects may cause the regional amounts to vary from this allocation.

	REGIONAL UNITS, $'s MILLIONS		
REGION	EXPECTED AVIATION	ALTERNATE AVIATION	RATIOS
CENTRAL	$ 16.7	$ 10.0	44%
NORTHERN	15.6	9.4	41%
SOUTHEAST	5.7	3.4	15%
AIA & FIA	10.0	6.0	Direct Entitlement
TOTAL	$ 48.0	$ 28.0	100%

The Alternate limits reflect 60% of the Expected list.

E. General Fund Limits

The following general fund regional allocations ($'s thousands) are to be used for the six year plan. The 1989 limit has been increased to approximate the level used initially for FY88. This increased funding allows the presentation of a more complete listing of project options for review. In addition, the 1989 required programming for ports and harbors has been increased to equal the receipts from tax on marine fuels. The funding limits after 1989 are unchanged from last year's plans.

	FY89	FY90	FY91	FY92	FY93	FY94
Central	$11,700.0	$5,100.0	$5,100.0	$5,100.0	$5,100.0	$5,100.0
Northern	9,600.0	4,400.0	4,400.0	4,400.0	4,400.0	4,400.0
Southeast	4,970.0	2,100.0	2,100.0	2,100.0	2,100.0	2,100.0
AMHS	3,250.0	2,200.0	2,200.0	2,200.0	2,200.0	2,200.0
*Statewide	5,250.0	1,200.0	1,200.0	1,200.0	1,200.0	1,200.0
TOTALS	$36,100.0	$15,000.0	$15,000.0	$15,000.0	$15,000.0	$15,000.0

*General Fund Match will be submitted as a total by mode for each fiscal year by Headquarters.

Mandatory General Fund Projects in all years (after FY'89)

1. Advanced Project Definition $ (regional discretion)
2. Handicapped Access @ $250,000

General Fund Required Programming for FY'89 (Excludes Match)

Programming Levels $'s in millions	CE	NO	SE	MHS	HQ	TOTAL
Advance Project Definition	$0.4	$0.2	$0.1	$0.05	$--	$0.75
Aviation	0.5	0.4	0.1	--	--	1.0
Erosion Control	1.0	1.0	--	--	--	2.0
Marine (Ports and Harbors)	1.8	0.7	1.8	--	--	4.3
Facilities*	1.0	1.5	1.0	0.5	--	4.0
Barrier Free Access	0.5	0.5	0.5	0.2	--	1.7
State-Maintained Roads (Non-federally eligible work)	0.5	0.5	0.15	--	--	1.15
LSR&T	--	--	--	--	4.0	4.0
Research	--	--	--	--	0.5	0.5
Regional Discretion	6.0	4.5	1.5	2.5	0.75	15.2
TOTAL GF ALLOCATION	$11.7	$9.6	$4.97	$3.25	$5.25	$36.1

* DOT&PF M&O camp facilities, repairs of multiple occupancy buildings, and correction of construction errors even on single use facilities if DOT&PF was in charge of the facility. Does not include Water and Sewer at airports.

F. Ranking Criteria and Application

The attached ranking criteria should be strictly and conservatively applied. This year there is an expanded requirement for scoring projects.

Projects in FY'88 ALT, all FY'89 projects and any new project starts after FY'89 must be scored. In previous years only the projects requesting new funding in the budget year were scored.

*When ranking a specific phase of a project, treat the phase as if it were the actual construction project. - "What will the total project accomplish"?

G. Report Format and Data Input

1. Like last year, the report format and data input will utilize your personal computers. This will allow the final document to be in a standardized format.

   a. Headquarters will provide the data diskette for the currently published information and hard copy for FFY'88 & FY'89.

   b. "Reflex" will again be the data base.

   c. Headquarters will compile and merge the regional reports.

2. Data Input for Project Forms

   a. All numbers in thousands with commas and one (1) decimal place. FY'88 data will be rounded to at least the nearest thousand, FY'89 to at least the nearest five thousand, and years FY'90 and beyond to at least the nearest ten thousand unless an exact amount is known.

   b. Project titles should establish type of work and project limits. (easily understood abbreviations are fine)

   c. The 'Add.Fed.Required' column will be used for values in Fiscal Years 88-89-90 only.

   d. Expected and alternate projects for federal-aid are required in the early years of the Six Year Program. It is not required to have 'Alternates' after FY90. Alternates for FY90 and beyond are your option.

   e. The 'Class Type' data field: divide out the PS (primary/secondary) indicator into two seperate indicators P & S.

   f. Be consistant with project names. Pick a good title and maintain its use throughout; PDA's, 105, Obligation Plan, Six Year, etc.

   g. Several new data fields have been included in the report.

      - Revised FHWA Funds or AIP or General Fund.
      - Comments
      - Score
      - Revision indicator
      - Phase - we have the data but never used it on the final report.

   h. Column field keys are indicated on the attached form.

   i. Project ranking scores are to be recorded.

3. CP-1's must be provided for projects requiring funding in the 1988 Legislative session for the FY'89 Budget. A diskette with the appropriate format has been provided to the planning section.

* Specific PE starts should be identified in the obligation plan. For the FY'89 Annual Budget highways mode, one CP-1, listing the projects and estimated funding, can summarize the highways PE starts for that year. To make the report list hwys PE together the titles used should start with "PE-HWYS-..."

4. Unprogrammed Federal Authorization

Those phases of existing federal-aid appropriations or allocations not scheduled in the six years of the plan should be included in a list which will be reviewed for possible lapse. The list should simply be: Chapter/Year/ page/line; Title; Amount; and the reason the funding will not be obligated.

5. Strip Maps, Area Maps and Project Scheduling
* The following is required only if there was a change from last year's material.

Strip maps are required to provide a visual display of federal-aid highway project development.

a. Only projects on major routes.

b. Only projects listed in the 'Expected' list.

c. Use Northern Region's definitions and symbols.

d. Southeast will need to provide strip maps for the following:

- Haines Highway
- Klondike Highway
- Egan Expressway
- Glacier Highway
- Tongass Avenue - Ketchikan

Area maps locating significant projects are required for the following:

a. City of Anchorage

b. City of Fairbanks

c. City of Juneau

d. City of Ketchikan

e. Regional Aviation projects - (one map for all six years)

Map Key

FY 89 = ■ FY 92 = ▬
FY 90 = ▲ FY 93 = ▲
FY 91 = ○ FY 94 = ●

Project Scheduling for AMHS

a. Provide a list of vessels and delineate the fiscal year the work is scheduled to be performed on each vessel.

6. Required Submittal

Each region is to provide Headquarters with the folllowing:

a. One hard copy of each of the following reports generated from your data file.

1. Federal Highways Obligation Plan containing additional authorization required.
2. Federal Aviation Obligation Plan and additional authorization required.
3. International Airports Projects.
4. General Fund Projects.
5. Other Funding Projects.

b. Appropriate CP-1's

c. List of unprogrammed federal authorization

d. Strip maps, area maps, vessel listings

e. Program data diskette(s) used to produce the above items.

*TOTALS AFFECTED BY ROUNDING

1988 - 1994 CAPITAL IMPROVEMENTS PROGRAM

PROJECT RANKING CRITERIA

AIP AIRPORTS + I.A.R.F.

PROJECT RANKING CRITERIA

July, 1987

Q1. Does the project extend the service life of the facility?

Service life = design life of facility

$$\text{Yes} = \frac{\text{Extended service life in years}}{\text{Original design life in years}} \times 25 = \text{points}$$

Note: No more than 25 points can be awarded for this question.

No = 0

Assumption: Any work to be done to an existing facility potentially qualifies. This item is intended to reward-projects which protect the State's investment in the existing system.

Q2. Is the project needed to continue the development of previously funded projects in the program?

1. Supplemental funding for work that is under contract.

75 points

2. Supplemental construction funding for a project that is ready to go to bid in the first quarter of the budget year.

55 points

3. Construction phase funding where project will be ready for bid in the budget year and pre-construction phases were programmed in prior years.

35 points

4. Funding need was identified in last year's six year capital improvement program.

15 points

5. All other projects

0 points

Q3. Will the completion of this project have direct and identifiable post-construction benefits to the local, regional or statewide economy?

1. Runway resurfacing would have little or no economic effect, since these projects repair or replace existing facilities.

0 points

2. Expansion of airport aprons would have a moderate impact on the economy since these projects expand existing facilities. It is assumed that a certain amount of infrastructure and economic activity already exists and these projects would support the expansion of this existing activity.

15 points

3. New airports built to support community growth and development.

30 points

4. New or expanded capacity for airports built specifically to support industrial, commercial or resource development.

$$\left(\frac{\text{Number of Jobs}}{\text{Project Cost}} \times 2{,}000{,}000 \right) \times 30 = \text{points [not to exceed 150]}$$

Note: Most projects will not be scored using item 4. The project must support new industrial, commercial, resource or other development specifically identified as part of an organized and recognized review of the development (only projects meeting these criteria can be awarded any points under item 4).

Q4. Will state maintenance and/or operations costs change as a result of this project?

Reduction in State M&O costs (i.e. facility upgraded, transfer of responsibility to local government)	20 points
No additional State M&O costs/positions	10 points
Additional State M&O costs/positions	0 points

Q5. Impact on Alaskan job market.

1. Majority of project jobs can be filled by Alaskans	50 points
2. All other projects	0 points

Assumptions: Apply this item to all projects, design, right-of-way, construction or combinations of those. Judge each project on its own merits. This item is intended to reward projects that are likely to result in Alaskan hire.

Q6. Will the project provide low-cost solutions to safety problems at high-hazard locations?

Assumptions: All safety projects get points, but low-cost projects get more points.

: Projects receive points based upon the tier in which the majority of the value of the work is performed. For example, a project to extend a runway to a length in excess of the AASP standard and fence the airport would be categorized as a Tier IV and receive 0 points, even though some of the work was eligible for a higher point score. To achieve the maximum points for the fencing project it would need to be made a separate project.

Tier 1: 100 points

Low cost safety projects

Examples:

° Resurfacing (gravel)
° Runway Lighting: provided it's North of 66° Latititude (AASP)
° Obstruction Removal (most cases)
° Runway marking
° Fencing
° CFR equipmen
° Jet blast abatement
° Airspace easement acquisition
° Consolidate fuel storage

Tier II: 65 points

Moderate cost safety projects

Examples:

° Resurfacing (pavement replacement)
° Runway extension (to AASP standards)
° Safety area extension (to FAA standards)
° Apron relocation (to AASP standards)
° Apron expansion (to AASP standards where congestion exists)
° Heliport construction/designation (to separate fixed-wing aircraft from rotary wing)

Tier III: 30 points

Examples:

° Airport relocation
° Crosswind runway
° Parallel taxiway

Tier IV: 0 points

Projects not safety-related

Examples:

° Increasing runway, runway safety area, or apron dimensions beyond AASP or FAA standards, as appropriate.

° Consolidated terminals
° Other terminal area improvements (parking, water, and sewer, etc.)
° Lease lot development

Q7. What is the functional classification of the facility?
*(Assumption: DOT/PF weights these classifications based on statewide importance.)

Tier 1: International airports

50 points

Tier 2: Regional center airports

40 points

Tier 3: District and transport airports

30 points

Tier 4: Community and reliever airports

20 points

Tier 5: Local airports

10 points

Q8. What is the primary purpose of the proposed improvement? (one tier per project)

Tier 1: Project is aimed at preventing an imminent failure or re-opening of the facility, or the reduction of service, which provides the only year-round access to the community.

100 points

Tier 2: Bring existing facility up to AASP or FAA standards.

60 points

Tier 3: Prevent imminent, near term physical failure of the existing facility.

50 points

Tier 4: Structural maintenance or safety improvement to existing facility.

40 points

Tier 5: Improve or expand existing facility for the purposes of economic development.

30 points

Tier 6: Construction of new airport not intended to replace existing airport.

20 points

Q9. What is the regional perception of the public's support for this project relative to other projects being ranked?

1. The project is in the top third of public priorities.

25 points

2. The project is in the middle third of public priorities.

15 points

3. The project is in the lower third of priorities.

5 points

Note: The average of scores for this question cannot exceed 15.

Q10. What importance does the region give to factors not addressed by the other ranking items?

* The Administration and the Department are interested in projects that will provide long term economic development/benefits to Alaskans. Please keep this in mind when assigning points for this question.

Score this item 0 to 200 for each project; however, the average of the points given to all projects cannot exceed 100.

Note: Regions may be asked to provide back-up information on what these factors were and their importance in evaluating the proposed project.

Q11. Is this project prompted by capacity concerns?

Range 0 to 75

Note: It is highly unlikely that runway capacity will be a problem except at international and a few regional center airports.

For Runway Projects

$$\frac{\text{Total hourly traffic for runway system}}{\text{Hourly capacity runway system (VCR)}} \times 75$$

Example: Single runway VFR system:

$$\frac{5 \text{ Operations}}{55 \text{ Operations}} \times 75 = 6.8 = 7 \text{ (rounded)}$$

For Apron Projects

Predominantly GA and Air taxi operations: $\frac{\text{\# Based and itinerant aircraft} \times 320\ yd^2}{\text{Area existing apron (in } yd^2\text{)}} \times 75$

Predominantly Heavy aircraft (DC-6, C-130, B737): $\frac{\text{Max. \# aircraft operating simultaneously} \times 3300\ yd^2}{\text{Area existing apron}} \times 75$

Q12. Does the proposed project upgrade the existing facility to meet identified standards?

$$\frac{\text{AASP Standard - Existing relevant dimension}}{\text{Standard dimension}} \times \begin{cases} 100 \text{ for runways} \\ 50 \text{ for other} \end{cases}$$

Example: Community Airport Apron expansion project.
AASP STANDARD = 60,000 ft^2
EXISTING AREA = 20,000 ft^2

$$\frac{\text{AASP Standard - Existing area (in } ft^2\text{)}}{\text{AASP standard}} \times 50 = \frac{60{,}000\ ft^2 - 20{,}000\ ft^2}{60{,}000\ ft^2} \times 50 = 33.3 = 33 \text{ (rounded)}$$

Example: Community Airport Runway extension project
AASP STANDARD = 3000 ft.
EXISTING RUNWAY = 1700 ft.

$$\frac{\text{AASP Standard - Existing runway length}}{\text{AASP standard}} \times 100 = \frac{3000 - 1700}{3000} \times 100 = 43.3 = 43 \text{ (rounded)}$$

* Score the predominant improvement only.
For example: a project is lengthening the runway and increasing the apron area - score the runway extension only.

FHWA HIGHWAYS

PROJECT RANKING CRITERIA

July, 1987

Q1. Does the project extend the service life of the roadway?

Service life = design life of facility

Yes = $\frac{\text{Extended service life in years}}{\text{Original design life in years}}$ X 25 = points

Note: No more than 25 points can be awarded for this question.

No = 0

Assumptions: Any work to be done to an existing roadway potentially qualifies. This item is intended to reward projects which protect the State's investment in the existing system.

Q2. Is the project needed to continue the development and construction of previously funded projects in the program?

1. Supplemental funding for work that is under contract.

75 points

2. Supplemental construction funding for a project that is ready to go to bid in the first quarter of the budget year.

55 points

3. Construction phase funding where project will be ready for bid in budget year and pre-construction phases were funded in prior years.

35 points

4. Funding need was identified in last year's six year capital improvement program.

15 points

5. All other projects

0 points

Q3. Will the completion of this project have direct and identifiable post-construction benefits to the local, regional or statewide economy?

1. Highway resurfacing, would have little or no economic effect, since these projects repair or replace existing facilities.

0 points

2. Widening existing roadways would have a moderate impact on the economy since these projects expand existing facilities. It is assumed that a certain amount of infrastructure and economic activity already exists and these projects would support the expansion of this existing activity.

15 points

3. New roads built to support community growth and development.

30 points

4. New or expanded capacity for roads built specifically to support industrial, commercial or resource development.

$$\left(\frac{\text{Number of Jobs}}{\text{Project Cost}} \times 2{,}000{,}000 \right) \times 30 = \text{points [not to exceed 150]}$$

Note: Most projects will not be scored using item 4. The project must support new industrial, commercial, resource or other development specifically identified as part of an organized and recognized review of the development (only projects meeting these criteria can be awarded any points under item 4).

Q4. Will state maintenance and/or operations costs change as a result of this project

State M&O costs (i.e. facility upgraded, transfer of responsibility to local government)	20 points
No additional State M&O costs/positions	10 points
Additional State M&O costs/positions	0 points

Q5. Impact on Alaskan job market.

1. Majority of project jobs can be filled	50 points
2. All other projects	0 points

Assumptions: Apply this item to all projects, design, right of way, construction or combinations of those. Judge each project on its own merits. This item is intended to reward projects that are likely to result in Alaskan hire.

Q6. Will the project provide low-cost solutions to safety problems at high-hazard locations?

1. Specific safety projects for facilities operated and maintained by the State of Alaska.

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 100 = \text{points}$$

° Illumination, signalization and/or channelization of intersection with high accident rates.

° Guardrails

° Repair of specific hazardous conditions

2. Safety-related projects

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 65 = \text{points}$$

° Accident history of facility indicates need for upgrade

° Lane widths with less than tolerable conditions

° No shoulders

3. Other safety projects

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 30 = \text{points}$$

° Unsafe operating environment

° Lane width, shoulders or runway substandard

° Resurface

4. All other projects 0 points

Q7. What is the functional classification of the facility?
*(Assumption: DOT/PF weights these classifications based on statewide importance.)

Roads on contiguous Road System

1. Interstate highways

50 points

2. Major arterial highways

40 points

3. Minc. arterial highways, (Statewide purpose, M&O facilities)

30 points

4. Major collectors, Urban collectors (Regional purpose)

20 points

5. Other state-maintained routes (Local purpose)

10 points

Rural Roads (not on the contiguous road system):

1. Federal-aid road from regional center airports, from a hospital and connection to communities and military bases.

60 points

2. Federal-aid road to district airports, from a hospital and connections to communities, public health hospitals, and military bases.

50 points

3. Road to communities identified as regional center airports and connections to major recreational centers.

40 points

4. Road to communities identified as district airports and connections to major recreational centers, other State maintenance routes.

30 points

5. Other Federal-Aid routes or State-maintained routes off of the contiguous road system.

20 points

Q8. What type of improvement is proposed?
* (One improvement per project)

1. Project is aimed at preventing an imminent failure or reopening the facility, which provides the only access to the community.

100 points

2. Reconstruction for the purposes of bringing a facility that is below tolerable standards up to design standards.

60 points

3. Restoration, preservation, structural maintenance or safety improvement to an existing facility.

50 points

4. Improvement or expansion of a facility for the purposes of economic development, improved safety or improved levels of service.

40 points

5. New facility development to relieve congestion of an existing facility, improve efficiency of the transportation system or generate economic development.

30 points

Q9. What is the regional perception of the public's support for this project relative to other projects being ranked?

1. The project is in the top third of public priorities.
25 points

2. The project is in the middle third of public priorities.
15 points

3. The project is in the lower third of public priorities.
5 points.

Note: The average of scores for this question cannot exceed 15.

Q10. What importance does the region give to factors not addressed by the other ranking items?
* The Administration and the Department are interested in projects that will provide long term economic development/benefits to Alaskans. Please keep this in mind when assigning points for this question.

Score this item 0 to 200 for each project; however, the average of the points given to all projects cannot exceed 100.

Note: Regions may be asked to provide back-up information on what these factors were and their importance in evaluating the proposed project.

Q11. Is this project prompted by capacity concern?

Roadways - Less than two lanes

$$\frac{\text{Current year ADT x 25}}{(.5)(\text{Capacity at LOS C for terrain type})} = \text{points}$$

Two lane roadways

Adequate shoulders $\dfrac{\text{Current year ADT x 25}}{(\text{Capacity at LOS C for terrain type and area})} = \text{points}$

Note: If a combination of lane-width and shoulders are below tolerable standards, multiply capacity by (.8)

Multi-lane roadway

Single-direction ADT $\dfrac{(.10\ (\text{Current year ADT}\ (25)}{(\text{Capacity for terrain type}\ (\#\ \text{of lanes in that direction})} = \text{points}$

Q12. Is the project to improve a facility which is below tolerable standards?
* (A project <u>can</u> score in all three categories)

A. WIDTH

1. If below tolerable (for functional class and traffic volume)
35 points

2. If between tolerable and design
5 points

B. ALIGNMENT/SITE DISTANCE

1. If below tolerable
35 points

2. If between tolerable and design
5 points

C. SURFACE

1. Extreme (pavement failed)
35 points

2. Substandard but passable
30 points

3. Needs preventative resurfacing
20 points

4. @ Standard
0 points

GENERAL FUND

PROJECT RANKING CRITERIA

July, 1987

Q1. Does the project extend the service life of the facility?

Service life = design life of facility

$$\text{Yes} = \frac{\text{Extended service life in years}}{\text{Original design life in years}} \times 25 = \text{points}$$

Note: No more than 25 points can be awarded for this question.

No = 0

Assumptions: Any work to be done to an existing facility potentially qualifies. This item is intended to reward projects which protect the State's investment in the existing system.

Q2. Is the project needed to continue the development and construction of previously funded projects in the program?

1. Supplemental funding for work that is under contract.

75 points

2. Supplemental construction funding for a project that is ready to go to bid in the first quarter of the budget year.

55 points

3. Construction phase funding where project will be ready for bid in the budget year and pre-construction phases were funded in prior years.

35 points

4. Funding need was identified in last year's six year capital improvement program.

15 points

5. All other projects.

0 points

Q3. Will the completion of this project have direct and identifiable post-construction benefits to the local, regional or statewide economy?

1. Highway resurfacing, public facilities repairs and improvements, harbor float replacement or runway resurfacing would have little or no economic effect, since these projects repair or replace existing facilities.

0 points

2. Additional harbor floats, expansion of airport aprons or widening existing roadways would have a moderate impact on the economy since these projects expand existing facilities. It is assumed that a certain amount of infrastructure and economic activity already exists and these projects would support the expansion of this existing activity.

15 points

3. New roads or airports built to support community growth and development.

30 points

4. New or expanded capacity for roads, airports or harbors built specifically to support industrial, commercial or resource development.

$$\left(\frac{\text{Number of Jobs}}{\text{Project Cost}} \times 2{,}000{,}000 \right) \times 30 = \text{points [not to exceed 150]}$$

Note: Most projects will not be scored using item 4. The project must support new industrial, commercial, resource or other development specifically identified as part of an organized and recognized review of the development (only projects meeting these criteria can be awarded any points under item 4).

Q4. Will state maintenance and/or operations costs change as a result of this project?

Reduction in State M&O costs (i.e. facility upgraded, transfer of responsibility to local government)	20 points
No additional State M&O costs/positions	10 points
Additional State M&O costs/positions	0 points

Q5. Impact on Alaskan job market.

1. Majority of project jobs can be filled by Alaskans	50 points
2. All other projects	0 points

Assumptions: Apply this item to all projects, design, right-of-way, construction or combinations of those. Judge each project on its own merits. This item is intended to reward projects that are likely to result in Alaskan hire.

Q6. Will the project provide low-cost solutions to safety problems at high-hazard locations?

1. Specific safety projects for facilities operated and maintained by the State of Alaska.

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 100 = \text{points}$$

° Illumination, signalization and/or channelization of intersections with high accident rates.

° Guardrails

° Dangerous surface condition on runway or runway safety area

° Repair of specific hazardous conditions

2. Safety-related projects

$$\frac{\text{Dollars directly addressing}}{\text{Project Cost}} \times 65 = \text{points}$$

° Accident history of facility indicates need for upgrade

° Runway length is deficient by more than 1000 feet or width by more than 15 feet

° Lane widths with less than tolerable conditions

° No shoulders

3. Other safety projects

$$\frac{\text{Dollars directly addressing safety}}{\text{Project Cost}} \times 30 = \text{points}$$

° Unsafe operating environment

° Lane width, shoulders or runway substandard

° Required CFR, fencing, etc.

4. All other projects 0 points 0 points

Q7. What is the functional classification of the facility?
*(Assumption: DOT/PF weights these classifications based on statewide importance.)

1. International airports, Interstate highways.

50 points

2. Regional center airports, Major arterial highways

40 points

3. District and transport airports, minor arterial highways, regional ports, buildings (statewide purpose, M&O facilities).

30 points

4. Community airports, reliever airports, major collectors, urban collectors, sub-regional harbors, buildings (regional purpose).

20 points

5. Local airports, other state-maintained routes, local harbors, buildings (local purpose).

10 points

Q8. What type of improvement is proposed?
* (one improvement per project)

1. Project is aimed at preventing an imminent failure or reopening of the facility, which provides the only access to the community.

100 points

2. Project is aimed at preventing an imminent failure of the facility.

60 points

3. Restoration, preservation, structural maintenance or safety improvement to an existing facility.

50 points

4. Reconstruction for the purposes of bringing the facility up to modern standards.

40 points

5. Improvement or expansion of a facility for the purposes of economic development, improved safety or improved levels of service.

30 points

6. New facility development to relieve congestion of an existing facility, improve efficiency of the transportation system or generate economic development.

20 points

Q9. What is the regional perception of the public's support for this project relative to other projects being ranked?

1. The project is in the top third of public priorities.
25 points

2. The project is in the middle third of public priorities
15 points

3. The project is in the lower third of public priorities
5 points

Note: The average of scores for this question cannot exceed 15.

Q10. What importance does the region give to factors not addressed by the other ranking items?

* The Administration and the Department are interested in projects that will provide long term economic development/benefits to Alaskans. Please keep this in mind when assigning points for this question.

Score this item 0 to 200 for each project; however, the average of the points given to all projects cannot exceed 100.

Note: Regions may be asked to provide back-up information on what these factors were and their importance in evaluating the proposed project.

Q11. Is this project prompted by capacity concerns?

For apron projects, harbor expansions and marine highway system improvements, estimate a volume to capacity ratio based on the demand for the limited space and the capacity of the respective tiedown, parking, mooring areas, transfer facilities and/or vessels. Multiply this ratio by 25 to determine point score; however, no project with an estimated ratio can score more than 75 points.

Roadways - Less than two lanes

$$\frac{\text{Current year ADT} \times 25}{(.5)(\text{Capacity at LOS C for terrain type})} = \text{points}$$

Two lane roadways

Adequate shoulders $\dfrac{\text{Current year ADT} \times 25}{(\text{Capacity at LOS C for terrain type and area})A} = \text{points}$

Note: A If a combination of lane-width and shoulders are below tolerable standards, multiply capacity by (.8)

Multi-lane roadway

$$\text{Single-direction ADT} \quad \frac{(.10 \text{ (Current year ADT (25)}}{\text{(Capacity for terrain type (\# of lanes in that direction)}} = \text{points}$$

For Runway Projects

$$\frac{\text{Total hourly traffic for runway system}}{\text{Hourly capacity runway system (VCR)}} \times 75$$

Example: Single runway VFR system:

$$\frac{5 \text{ Operations}}{55 \text{ Operations}} \times 75 = 6.8 = 7 \text{ (rounded)}$$

For Apron Projects

Predominantly GA and Air taxi operations

$$\frac{\text{\# Based and itinerant aircraft} \times 320 \text{ yd}^2}{\text{Area existing apron (in yd}^2\text{)}} \times 75$$

Predominantly Heavy aircraft (DC-6, C-130, B737)

$$\frac{\text{Max. \# aircraft operating simultaneously} \times 3300 \text{ yd}^2}{\text{Area existing apron}} \times 75$$

Q12. Is the project to improve a facility which is below tolerable standards?

A. ROADWAYS & RUNWAYS
(A project can score in all three categories)

Width

1. If below tolerable (for functional class and traffic volume) 35 points
2. If between tolerable and design 5 points

Alignment/Site Distance

1. If below tolerable 35 points
2. If between tolerable and design 5 points

Surface

1. Extreme (pavement failed) 35 points
2. Substandard but passable 30 points
3. Needs preventative resurfacing 20 points
4. @ Standard 0 points

B. EQUIPMENT

Funding approval for the project will:

1. Avoid the required closure of the facility — 105 points
2. Avoid the possible disruption of service — 50 points
3. Reduce M&O costs — 35 points
4. Provides duplication (backup) — 0 points

C. BUILDINGS/FACILITIES

1. Has the building and/or facility been sited for Handicapped Access or Fire/Life Safety code violations? — 105 points
2. Is the facility in non-compliance of code, which if not remedied, could cause the disruption of service to the facility? — 50 points
3. Will the project reduce M&O costs? — 35 points
4. Other — 0 points

D. HARBOR FACILITIES

Funding approval for the project will:

1. Avoid closure of the facility due to high risk/ safety related problems — 105 points
2. The local jurisdiction takes over M&O responsibilities — 50 points
3. Reduce M&O costs to State — 35 points
4. Add amenities to existing facilities — 0 points

* This is provided for consideration on question 10. It's a good guideline for your point(s) dispersal.

Stratification for Questions 10
==========

200	Regional Significance/Imminent Failure
150	Top M&O priorities/critical
125	More than average/not critical
100	Average priority
50	Minor Facilities

HIPS PHASE II: HIGHWAY NEEDS ASSESSMENT PROCESS

Task 2:

Determine Standards, Assessment Criteria and Tolerable Conditions

INTRODUCTION

The Highway Improvement Programming System (HIPS) is a management process for highway system improvements. Phase II begins HIPS by developing a Highway Needs Assessment Process by Functional Classification for the HIPS management subsystems described below. The Pavement Management Subsystem (PMS) is being developed separately by others.

The management subsystems being considered in HIPS Phase II are:

- Functional Improvements
- Bridges
- Unpaved Roads

This report documents Task 2, wherein standards for the various elements selected in Task 1 have been determined within each subsystem for each functional classification. The 1984 AASHTO Policy on Geometric Design of Highways and Streets was used in determining these standards. Each element was also analyzed to determine tolerable conditions for each functional class, both urban and rural.

Interviews were held with select personnel from Construction, Design and Maintenance in each Region to assist in determining assessment criteria to be used.

Roadway data from the Highway Analysis System (HAS) will be compared to the appropriate tolerable conditions to determine substandard sections or bridges. Needs will then be developed by determining the cost to improve these sections up to the minimum design standards established for the appropriate functional class.

DEFINITIONS AND GLOSSARY OF TERMS

A - Total number of accidents during a study period, used in calculating an Accident Rate.

ADT - Average Daily Traffic volume, usually for a year.

Accident Rate, R_a - The accident rate for a highway section expressed in accidents per million vehicle-miles traveled.

As-Built Plans - A record drawing which is a plan that has been checked in the field and corrected to show the major differences between the "as designed" and "as built" conditions.

AASHTO - American Association of State Highways and Transportation Officials.

Bridge Roadway Width - The most restrictive minimum distance between curbs on the structure roadway.

Capacity - The maximum number of vehicles expected to pass over a given section of a lane or roadway during a given time period under prevailing roadway and traffic conditions.

Continuity - Something that continues or is connected such as a road.

Critical Accident Rate, R_c - A statistically derived value to which a comparison may be made to determine if the accident rate at a specific location is high enough above the average rate of similar locations or roadway categories to be designated as a critical location.

Critical Member - A structural member of a bridge having a deficiency which causes the bridge to be posted.

D - The directional split as a percent the peak direction is of the total volume during the peak hour or design hour.

DHV - Design Hourly Volume. An hourly volume used for design purposes representing traffic expected to use the highway.

Demand Flow Rate - The rate of flow representing the maximum number of vehicles passing a point during a time interval less than one hour but expressed as an equivalent hourly rate.

Design Speed - The maximum safe speed that can be maintained over a specified section of highway when conditions are so favorable that the design features of the highway govern.

Design Standards - The minimum criteria or conditions to which a highway or a planned improvement is constructed in order to provide desirable speed, safety and comfort to the motorist.

Full Approach Roadway Width - The full width of a roadway approaching a bridge, either from curb to curb or from outside shoulder to outside shoulder.

H - The maximum loading for a bridge for design purposes as determined by a two-axle standard truck. The H followed by a number such as 20 indicates the gross weight in tons of the standard truck.

HS - The maximum loading for a bridge for design purposes as determined by a standard truck train. The HS followed by a number such as 20 indicates the gross weight in tons of the standard truck train.

HAR - Hazardous Accident Rate used by ADOT&PF in their hazard elimination priority formula.

HAS - Highway Analysis System. This system coordinates the formatting, data entry and retrieval of all data bases required for the Highway Improvement Programming System.

Inventory Rating - A capacity rating for a bridge for a load level which can safely utilize an existing structure for an indefinite period of time, under standard operating conditions.

K - The percent the Design Hour Volume is of the annual Average Daily Traffic volume.

k - A constant at 95 percent confidence used to calculate the Critical Accident Rate.

L - Total length in miles of a section for which an accident rate is being calculated.

Lane Width - The width of a strip of roadway used for a single lane of vehicles.

LOS - Level of Service. A qualitative rating of the effectiveness of a highway in serving traffic, measured in terms of operating conditions, ranging from "A" for best operation to "E" for poor operations at possible capacity load.

Level Terrain - That terrain condition where highway sight distances, as governed by both horizontal and vertical restrictions, are generally long or could be made so without construction difficulty or major expense.

M - Represents vehicle exposure expressed in million vehicles used in the calculation of the Critical Accident Rate.

Maximum Service Flow Rate - The highest 15-minute rate of flow that can be accommodated on a highway facility under ideal conditions, while maintaining the operating characteristics for a stated level of service, expressed as passenger cars per hour per lane.

Mountainous Terrain - That terrain condition where longitudinal and transverse changes in the elevation of the ground with respect to the road are abrupt, and where benching and side hill excavation are frequently required to obtain acceptable horizontal and vertical alignment.

NBIS - National Bridge Inspection Standards.

Operating Rating - A capacity rating which represents the absolute maximum permissible load level under restricted operating conditions to which a bridge may be subjected.

Pavement Width - Equal to the lane width times the number of lanes.

PHF - Peak Hour Factor. The ratio of total hourly volume to the maximum 15-minute rate of flow within the hour, calculated by dividing the total hourly volume by four times the highest 15 minute volume.

Posting Rating - The ratio of the Operating Rating for a bridge to its Inventory Rating.

Roadway Width - The pavement width plus the width of both shoulders.

R_{CHAR} - The Critical Accident Rate calculated using the Hazardous Accident Rate as one of the variables.

Rolling Terrain - That terrain condition where the natural slopes consistently rise above and/or fall below the road grade and where occasional steep slopes offer some restriction to normal horizontal and vertical road alignment.

Severity Index - A method of identifying high accident locations by taking into account the severity of accidents and the resulting economic loss.

Shoulder Width - The width of the shoulder from the edge of the pavement to the outside edge of the shoulder.

SI&A - Structural Inventory and Appraisal. An inventory method to identify the pertinent data elements about an individual bridge which will form a bridge inventory data base.

Subsurface Condition - The condition of the roadway below the subgrade.

Surface Condition - The condition of the roadway above the subgrade.

Sufficiency Rating - An evaluation process resulting in a numerical value which indicates the sufficiency of a bridge to remain in service. The higher the rating the more sufficient is the bridge.

T - The percent of trucks in the traffic stream during a given period of time, usually the peak hour or design hour volume.

T' - The time period in years used to calculate an Accident Rate, usually the three most recent years where data is available.

Tolerable Conditions - The minimum conditions under which an existing roadway can provide reasonable speed, safety and comfort to the motorist.

Tolerable Speed - The minimum speed below design speed that can be permitted on an existing highway while still maintaining safety and comfort to the motorist.

Transverse Slope - The slope across a roadway away from its center to its outside edge.

V - The average daily traffic volume for a highway section used in computing the accident rate.

V/C - Volume/Capacity Ratio. The ratio of peak hour volumes (Demand Flow Rate) to the capacity of given roadway section, where capacity represents the maximum at Level of Service E.

$V/C_{LOS\ D}$ - The volume/capacity ratio where the capacity represents Level of Service D.

Vertical Clearance - The clearance from above the bridge deck or from the roadway to the lowest bridge member.

Section I

Design Standards
Tolerable Conditions

The design standards and tolerable conditions to be used for the Alaska Highway Needs Assessment Process are shown on Table 1. The general description of Interstate, Arterial, Collector and Local Road are shown for rural highways in the tables. For urban roadways, the Urban Street classification replaces the Local Road and all other higher classification descriptions remain the same. Traffic volumes consistent with AASHTO have been used. The rural design standards have not been increased for DHVs greater than 200 on the collectors and greater than 400 ADT for the local roads since nearly all traffic volumes on these two road classifications in Alaska do not reach the higher traffic volumes specified in AASHTO.

The needs analysis for a roadway functionally classified as Minor Arterial, for example, will use the arterial standards, and geometrics will be based on traffic volume.

Table 2 includes the design standards and tolerable conditions for bridges on both the rural and urban highways.

Design speed and tolerable speed for the rural system are shown on Table 3. Tolerable speed is the minimum speed below design speed that can be permitted on an existing highway while still maintaining safety and comfort to the motorist. When considering improvements in the needs assessment process, all geometric features will be improved to design standards.

The design speeds for urban highways are as follows:

Arterials	40 mph
Urban Collectors	30 mph
Urban Streets	20 mph

The tolerable speeds for urban highways are as follows:

Arterials	35 mph
Urban Collectors	25 mph
Urban Streets	20 mph

Design standards for horizontal curves will include a radius consistent with the 1984 AASHTO Policy on Geometric Design of Highways and Streets using a maximum superelevation rate of 0.06 ft./ft.

DESIGN STANDARDS AND TOLERABLE CONDITIONS
RURAL HIGHWAYS

Functional Class	Traffic Volume		Design Standards		Tolerable Conditions	
	ADT	DHV	Lane Width (Ft.)	Shoulder Width(1) (Ft.)	Lane Width (Ft.)	Shoulder Width(2) (Ft.)
Interstate		<200	12	6	11	6
		200-400	12	8	11	6
		>400	12	10	11	8
Arterial	<400		12	4	11	3
	>400		12	6	11	4
		200-400	12	8	11	6
		>400	12	10	11	8
Collector	<400		11	2	10	1
	>400		11	4	10	2
		>100	11	6	10	4
Local	<400		10	2	9	0
	>400		11	4	10	2

URBAN ROADWAYS

Functional Class	Traffic Volume (DHV)	Number of Lanes	Design Standards			Tolerable Conditions		
			Lane Width (Ft.)	Shoulders		Lane Width (Ft.)	Shoulders	
				Left	Right(3)		Left	Right(3)
Arterial(4)	>1500	2	12	NA	8	11	NA	7
	1500-3000	4	12	2	8	11	1	7
	3000-4500	6	12	2	8	11	1	7
Urban Collector	0-1500	2	11	NA	8	10	NA	7
Urban Street	All	2	10	NA	7	9	NA	6

(1) On multilane divided highways the outside shoulder width will be as listed. The inside median shoulder shall be 4 feet wide when there are two lanes in each direction. On divided highways with three or more lanes in each direction, the shoulder width required is 8 feet.

(2) For multilane divided highways the inside shoulder shall be 3 feet for two lanes in each direction and 7 feet for three or more lanes in each direction.

(3) Width shown includes parking lane width. Where parking is not permitted, a 2 foot shy distance from the lane edge will be required.

(4) The urban Arterial classification includes Interstate, other Freeways and Expressways, Principal Arterials and Minor Arterials.

TABLE 1

BRIDGE ROADWAY WIDTH
RURAL AND URBAN HIGHWAYS

Functional Class	Design Standards		Tolerable Conditions
Interstate	Full approach roadway width		Pavement width plus 2 feet each side
Arterial	Full approach roadway width		Pavement width plus 2 feet each side
Collectors	ADT <400	Pavement width plus 2 feet each side	Pavement width
	ADT >400	Pavement width plus 3 feet each side	Pavement width plus 1 foot each side
	DHV >100	Full approach roadway width	Pavement width plus 2 feet each side
Local Roads and Urban Streets	ADT <400	Pavement width plus 2 feet each side	Pavement width
	ADT >400	Pavement width plus 3 feet each side	Pavement width plus 1 foot each side

MEMORANDUM

TO: Representative Lyman Hoffman

ATTN: Lori Nottingham

FROM: Mary Jennings MJ
Legislative Analyst

RE: Federal-Aid Highway Fund Distribution
Research Request 87.151

You requested that we determine: 1) the amount of federal-aid highway funds that have been appropriated to each community and election district during the past four years; 2) the criteria for transferring federal-aid highway funds among system funds; 3) the Department of Transportation and Public Facilities (DOT/PF) level of compliance with the transferability guidelines; and 4) how compliance could be improved.

Background

The "Federal-aid Highway program" is an umbrella term generally referring to all activities funded through the Federal Highway Administration (FHWA) and administered by the states' highway or transportation agencies. The term "program" is used to refer to the many components that make up the overall federal-aid highway program. Each program is separately funded. For example, within the federal-aid highway program, there is specific funding for bridge replacement and rehabilitation, primary systems, urban systems and interstates, etc.

Federal-aid highway acts have traditionally been the vehicle for providing funds, termed "authorizations," for the federal-aid highway program. It is these authorizations that spell out the amount and purpose for which federal-aid highway funds are to be expended and lead directly to the financing procedures of the program.

Title 23 Section 118 paragraph (f) of the United States Codes specifically addresses Alaska's transferability of funds. The paragraph states, "Funds made available to the State of Alaska under this title [23 USCS § 101 et seq.] may be expended for construction of access and development roads on a federal-aid system that will serve resource development, recreational, residential, commercial, industrial, or other like purposes." The DOT/PF has interpreted this paragraph to mean that the State has greater flexibility in the transferability of federal-aid system monies than what is allowed under federal guidelines. According to Ron Lind, Legislative Liaison for DOT/PF, the department follows the federal guidelines for transferability, except for primary, urban, and secondary system funds. Mr. Lind stated that the department has allowed transfers between primary and secondary system funds and primary and urban system funds that have decreased the original apportionment to the primary system fund by more than 50 percent.

In order to gain an idea of the extent to which Alaska transfers primary system funds to other system funds, I requested Mr. Lind to provide federal-aid apportionments to Alaska by system fund for the last four years and a break down of how these funds were actually obligated. Mr. Lind stated that provisions of the data will require a review of individual projects. He estimated that with other workload considerations, it will take his department two weeks to provide the information. I will forward this to you upon receipt.

In order to determine ways DOT/PF could achieve a greater level of compliance with federal transferability guidelines concerning primary, secondary and urban system funds, I contacted Barry Moorhead, Alaska Division Administrator of Federal Highways. Mr. Moorhead suggested that DOT/PF should formulate a comprehensive six-year plan and follow this plan without reprioritizing projects each year. He felt that if the department adhered to a long-term plan, all types of projects, both urban and primary (i.e., rural) projects, would be funded. He felt that DOT/PF is not currently able to plan well because the legislature continuously passes resolutions that place a high priority on certain projects. Mr. Moorhead felt that DOT/PF and the legislature could work together in order to allow the department to develop a nonpolitical highway project plan that could be carried out from year to year without emphasis continuously being shifted from one project to another.

Federal-aid Distribution

Attachment B, prepared by the Office of Management and Budget (OMB) provides appropriations of State and federal funds by election district, affected community, and road. The attachment also cites the Session Law authorizing the funding for a particular project. Pages 32 through 35 of the attachment provide data for projects that could not be attributed to a

APPENDIX C-1

Apportionment Formulas

Formulas for apportioning authorized sums for certain classes of Federal-aid highways are specified by statute. These are shown below.

Fund	Factors	Weight	Statute*	Minimum Apportionment
Interstate System (for completion only)	Relative Federal Share of Cost to Complete the System **	1	104(b)(5)(A)	1/2 percent (including Alaska)
Interstate Resurfacing, Restoration, Rehabilitation, and Reconstruction	Interstate System Lane Miles Vehicle Miles Traveled on Interstate System	55% 45%	104(b)(5)(B)	1/2 percent
Interstate Highway Substitution (3/4 apportioned, 1/4 discretionary allocation)	Relative Federal Share of Cost to Complete Substitute Projects	1	103(e)(4)	----------
Primary System	Formula A		104(b)(1)	
	Area	2/9		
	Rural Population	2/9		
	Rural Delivery Route Mileage and Intercity Mail Route Mileage	2/9		
	Urban Population*** (1/2 percent minimum (except D.C.))	1/3		
	Formula B		Sec. 108, P.L. 97-424	
	Rural Population	1/2		
	Urban Population***	1/2		
	For each State, determine greater of A or B, then: Each State's apportionment equals: A or B x Total Primary Authorization / Sum of all States' A or B Except that: the apportionment is not less than smaller of A or B			1/2 percent (including territories as a whole)
Secondary System	Area	1/3	104(b)(2)	1/2 percent (except for D.C.)
	Rural Population	1/3		
	Rural Delivery Route Mileage and Intercity Mail Route Mileage	1/3		
Urban System	Urban Area*** Population	1	104(b)(6)	1/2 percent
Urban Transportation Planning	Urbanized Area**** Population	1	[illegible]	1/2 percent
Bridge Replacement & Rehabilitation	Relative share of total cost of deficient bridges	1	[illegible]	1/4 percent (50 percent maximum)

MEMORANDUM

TO:

ATTN:

FROM: Mary Jennings
Legislative Analyst

RE: **Federal Funding of Interstate Systems and Bike Paths**
Research Request 87.304

You requested that we provide the following information: 1) the amount of federal-aid highway funds that were appropriated for interstate systems and bike paths during FY 84 - FY 87; 2) the mileage of the interstate systems; 3) the amount of federal-aid highway funds that have been appropriated to the Bethel area since FY 78; and 4) the amount of General Funds for highway projects that were appropriated to each election district during FY 84 - FY 87.

Bike Paths. During FY 84 - FY 87 no federal-aid highway funds were appropriated for the construction of recreational bike paths. During this time, recreational bike path projects were funded entirely with General Funds. According to Tommy Heinrich, Director of Design and Construction for the Central Region of the Department of Transportation and Public Facilities (DOT/PF), federal-aid highway funds may be used to construct bike paths in conjunction with approved federal-aid highway projects. Mr. Heinrich stated that under federal regulations, the bike paths may only be constructed in order to fulfill the following specific transportation need: separating bicyclists from traffic in order to move the bicyclist between residential and urban areas. Mr. Heinrich added that a bike path constructed in the state in conjunction with a federal-aid highway project costs between $50 to $75 per foot.

Interstate Systems. Table 1 lists the mileage of the four interstate systems in Alaska. Attachment A provides a breakdown of federal-aid highway funds spent in Alaska during FY 84 - FY 87 for various types of road systems, including interstate systems.

Highway Funding: Federal Distribution Formulas Should Be Changed

RCED-86-114, 03/31/86

Background

In response to a congressional request, GAO reviewed the statutory formulas used to apportion federal highway funds to the states.

Findings

More than $13 billion in highway funds have been apportioned among the states in fiscal year 1986 on the basis of highway formulas enacted by Congress over the years. GAO found that: (1) the factors used in formulas to apportion highway funds should reflect the extent and usage of today's highway system; (2) lane-miles is a direct measure of the size of the road network and should be used to reflect the extent of the system to be preserved; (3) highway use can be measured by both vehicle-miles of travel and motor fuel consumption; (4) each method of measurement has advantages and disadvantages as a formula; (5) the interstate resurfacing, restoration, rehabilitation, and reconstruction program is the only formula currently using a combination of these factors; and (6) the primary, secondary, and urban formulas need to be revised to be consistent with the extent and use of the current system. Changing the factors used in arriving at these apportionment formulas would result in some states receiving more or less funds than under the present formulas.

Open Recommendations to Congress

Congress should revise the factors used in the primary, secondary, and urban formulas as follows: (1) land area, which correlates poorly with the extent of the highway system, should be deleted from the primary and secondary formulas and be replaced with lane-miles, which more closely measures the extent of the highway system; (2) population, either rural or urban, which is an inexact measure of highway use, should be replaced with either vehicle miles of travel or motor fuel consumption, either of which more closely reflects highway use, including changes in such use; (3) postal mileage, which seems to bear no relationship to either the extent of the highway system or its use, should be deleted from the primary and secondary formulas; and (4) lane-miles should be added to the federal-aid urban highway apportionment formula, which is now based only on urban population, to provide a measure of the extent of the urban system.

Status: Action not yet initiated.

Congress should request that the primary, secondary, and urban formula factors be weighted to reflect road deterioration.

Status: Action not yet initiated.

If Congress wishes to continue to use population in primary, secondary, and urban formulas, the Census Bureau's current state population estimates should be used between decennial censuses to develop annual estimates of urban and rural population.

Status: Action not yet initiated.

Ground Transportation

Auto Safety: Effectiveness of Ford Transmission Settlement Still at Issue

RCED-86-52, 06/10/86

Background

Pursuant to a congressional request, GAO examined the agreement between Ford Motor Company and the Department of Transportation that closed the National Highway Traffic Safety Administration's (NHTSA) investigation of an alleged transmission defect in certain 1970-79 model year Fords.

Findings

As a result of increased injuries and fatalities due to allegedly faulty Ford automobile transmissions, Ford and

sions of the Administrative Procedure Act, sections 551 et seq. and 701 et seq. of Title 5, when providing for alternative procedure for approving state highway safety plans and failure of the Federal Highway Administration to open meetings with a particular organization to the public pursuant to Federal Advisory Committee Act, Appendix I of Title 5. Id.

2. Regulations

Under this section, Federal Highway Administration's duty to promulgate regulations pertaining to states' plans for certification acceptance is mandatory, although agency is vested with some discretion in deciding what type of regulations are necessary. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

In light of Federal Highway Administration's pending reconsideration of regulations pertaining to certification acceptance plans under this section, there was no final agency action which court could review in action challenging such regulation; however, if agency did not complete reconsideration of regulations within reasonable period of time, agency would run risk of having its failure to act treated, upon appropriate motion made by plaintiffs, as final reviewable agency action. Id.

In the absence of any showing of prejudice as to Federal Highway Administration acceptance of Georgia's certification acceptance plan for highway safety standards pursuant to original tainted regulations governing certification applications, once nonprofit organization which challenged the regulations and the certification was able to comment on the plan while it was pending, and since the organization was entitled to substantive judicial review of the acceptance of the certification, court would not set aside approval of the Georgia plan because of the procedural irregularities in the adoption of the regulations. Center for Auto Safety v. Tiemann, D.C.D.C.1976, 414 F.Supp. 215, remanded on other grounds 580 F.2d 689.

4. Judicial review

Finding of Federal Highway Administration that state had capability to insure that safety standards were contained in state's plan for certification acceptance under this section was not sufficiently explained to afford court proper basis for judicial review, in view of failure of agency to inform court as to which portions of exhibits consisting of thousands of pages were relied upon by agency in making such determination, and thus case would be remanded to agency for clarification. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

While Federal Highway Administrator's decision to employ certification acceptance procedures for state highway safety plan is unreviewable, his decision to approve a state certification is dependent upon mandatory findings and is therefore subject to judicial review. Center for Auto Safety v. Tiemann, D.C.D.C.1976, 414 F.Supp. 215, remanded on other grounds 580 F.2d 689.

5. Safety standards—Generally

When Federal Highway Administration approves state's certification acceptance plan under this section, agency must make finding that state has the capability to insure that safety standards will be enforced. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 11.

6. —— Factors considered

Under provision of this section authorizing Secretary of Transportation to accept certification from a state on finding that its highway projects will be carried out in accordance with state laws and standards which will accomplish policies and objectives of this title, it is for the Secretary to determine factors relevant to a "capability" finding and the appropriate method for making such a finding; hence, "Certification Acceptance" regulation which specifies reports, etc., that may be examined in evaluating the state's performance and resources is not deficient for failure to include a comprehensive list of specific factors for making a capability finding. Center for Auto Safety v. Bowers, D.C.D.C.1979, 466 F.Supp. 829.

Fact that some documents provided by Secretary of Transportation and Administrator of Federal Highway Administration were prepared after acceptance of Georgia's certification that federal aid highway projects would be carried out in accordance with state laws and standards that met objectives of this title did not undermine the award where there was no post hoc rationalization and subsequent material was relevant to determining continuing adequacy of the state plan and review of such documents was proper in face of court's recognition of possibility of future consideration of the capability finding. Id.

7. Substantial evidence

Decision of Secretary of Transportation and Administrator of Federal Highway Administration to accept Georgia's certification of safety standards for federal aid highways was supported by substantial evidence, including showing that for 20 years the state operated satisfactorily under the secondary road plan, which plan was predecessor to current "Certification Acceptance" system, with remainder of documents reviewed covering many topics, including research and development, safety review and ability of Georgia's Department of Transportation to take corrective action once deficiencies have been spotted. Center for Auto Safety v. Bowers, D.C.D.C.1979, 466 F.Supp. 829.

§ 118. Availability of sums apportioned

(a) On and after the date that the Secretary has certified to each State highway department the sums apportioned to each Federal-aid system or part thereof pursuant to an authorization under this title, or under prior Acts, such sums shall be available for expenditure under the provisions of this title.

(b)(1) Sums apportioned to each Federal-aid system (other than the Interstate System) shall continue available for expenditure in that State for the appropriate Federal-aid system or part thereof (other than the Interstate System) for a period of three years after the close of the fiscal year for which such sums are authorized and any amounts so apportioned remaining unexpended at the end of such period shall lapse.

(2) Except as otherwise provided in this subsection, sums apportioned for the Interstate System in any State shall remain available for expenditure in that State for the Interstate System until the end of the fiscal year for which authorized. Sums not obligated within the time period prescribed by the preceding sentence shall be made available by the Secretary for projects on the Interstate System (other than projects for which sums are apportioned under section 104(b)(5)(B)) in accordance with the following priorities: First, for high cost projects which directly contribute to the completion of an Interstate segment which is not open to traffic; and second, for projects of high cost in relation to a State's apportionment. Sums may only be made available under this paragraph in any State if the Secretary determines that the State has obligated all of its apportionments other than an amount which, by itself, is insufficient to pay the Federal share of the cost of a project on the Interstate System which has been submitted by such State to the Secretary for approval, and the applicant is willing and able to (A) apply the funds to a ready-to-commence project; and (B) in the case of construction work, begin work within ninety days of obligation. Sums made available under this paragraph shall remain available until expended.

(3) Any amount apportioned to the States for the Interstate System under subsection (b)(5)(B) of section 104 of this title shall continue to be available for expenditure in that State for a period of two years after the close of the fiscal year for which such sums are authorized. Sums not obligated within the time period prescribed by the preceding sentence shall be made available by the Secretary for projects for resurfacing, restoring, rehabilitating, and reconstructing the Interstate System to any other State applying for such funds, if the Secretary determines that the State has obligated all of its apportionments under such subsection other than an amount which, by itself, is insufficient to pay the Federal share of the cost of such a project which has been submitted by such State to the Secretary for approval, and the applicant is willing and able to (A) obligate the funds within one year of the date

the funds are made available; (B) apply them to a ready-to-commence project; and (C) in the case of construction work, begin work within ninety days of obligation. Sums made available under this paragraph shall remain available until expended.

(4) Sums apportioned to a Federal-aid system for any fiscal year shall be deemed to be expended if a sum equal to the total of the sums apportioned to the State for such fiscal year and previous fiscal years is obligated. Any Federal-aid highway funds released by the payment of the final voucher or by the modification of the formal project agreement shall be credited to the same class of funds, primary, secondary, urban, or interstate, previously apportioned to the State and be immediately available for expenditure.

(c) Before any apportionment is made under section 104(b)(5)(A) of this title for a fiscal year beginning after September 30, 1983, the Secretary shall set aside $300,000,000. Such amount shall be available only for obligation by the Secretary in accordance with subsection (b)(2) of this section.

(d) In addition to amounts otherwise available to carry out this section, an amount equal to the amount by which the unobligated apportionment for the Interstate System in any State is reduced under section 103(e)(4) of this title on account of the withdrawal of a route or portion thereof on the Interstate System, which withdrawal is approved after the date of enactment of this subsection, shall be available to the Secretary for obligation in accordance with subsection (b)(2) of this section.

(e) The total payments to any State shall not at any time during a current fiscal year exceed the total of all apportionments to such State in accordance with section 104 of this title for such fiscal year and all preceding fiscal years.

(f) Funds made available to the State of Alaska under this title may be expended for construction of access and development roads on a Federal-aid system that will serve resource development, recreational, residential, commercial, industrial, or other like purposes.

(As amended Pub.L. 89-574, § 7(a), Sept. 13, 1966, 80 Stat. 768; Pub.L. 94-280, Title I, § 117(a), May 5, 1976, 90 Stat. 436; Pub.L. 95-599, Title I, § 115(a), Nov. 6, 1978, 92 Stat. 2697; Pub.L. 96-106, § 5(a), Nov. 9, 1979, 93 Stat. 797; Pub.L. 97-424, Title I, § 115, Jan. 6, 1983, 96 Stat. 2107.)

References in Text. The date of the enactment of this subsections, referred to in subsec. (d), is the date of the enactment of Pub.L. 97-424, which was approved on Jan. 6, 1983.

1983 Amendment. Subsec. (b). Pub.L. 97-424, § 115(a), designated existing provisions as pars. (1) through (4), in par. (2) as so designated, substituted "for projects on the Interstate System (other than projects for which sums are apportioned under section 104(b)(5)(B)) in accordance with the following priorities: First, for high cost projects which directly contribute to the completion of an Interstate segment which is not open to traffic; and second, for projects of high cost in relation to a State's apportionment. Sums may only be made available under this paragraph in any State" for "to any other State applying for such funds for the Interstate System," after "available by the Secretary", struck out former cl. (1), which had required readiness to obligate funds within one year of the date the funds are made available, redesignated former cls. (2) and (3) as (A) and (B), respectively; and in par. (3) as so designated, struck out "and any amounts so apportioned remaining unexpended at the end of such period shall lapse" after "such sums are authorized", added provision relating to the disposition of funds not obligated within the prescribed time period, and added further provision that sums made available under this paragraph shall remain available until expended.

Subsecs. (c), (d). Pub.L. 97-424, § 115(b), added subsecs. (c) and (d). Former subsecs. (c) and (d) were redesignated (e) and (f), respectively.

Subsecs. (e), (f). Pub.L. 97-424, § 115(b), redesignated former subsecs. (c) and (d) as (e) and (f), respectively.

1979 Amendment. Subsec. (b). Pub.L. 96-106 substituted "shall continue to be available for expenditure in that State for a period of two years after the close of the fiscal year for which such sums are authorized and any amounts so apportioned remaining unexpended at the end of such period shall lapse" for "remaining unexpended at the end of the period of its availability shall lapse".

1978 Amendment. Subsec. (b). Pub.L. 95-599 substituted provisions relating to the availability of funds until the end of the fiscal year for provisions relating to the availability of funds until two years after the close of the fiscal year and substituted provisions establishing requirements for eligibility for funds for provisions calling for immediate reapportionment of funds.

1976 Amendment. Subsec. (b). Pub.L. 94-280, in revising the text, provided for a separate three year period of availability of sums apportioned to a Federal-aid system (other than the Interstate System), increased from the previously applicable two year period, continued the existing two year period for sums apportioned to the Interstate System; substituted provision for reapportionment of sums apportioned to the States for the Interstate System under section

Notes of Decisions

Federal restrictions 2
Justiciable issues 3
State control of allotted funds 1
State funds, use of its own 4

---

1. State control of allotted funds

A reasonable construction of provision of this section providing that sums apportioned to each Federal-aid system or part thereof shall be available for expenditure on and after date Secretary has certified sums to each State highway department was not supportive of Secretary's argument that states have no inchoate interest whatsoever in funds so apportioned. State Highway Commission of Missouri v. Volpe, C.A.Mo.1973, 479 F.2d 1099.

2. Federal restrictions

Provision of subsec. (b) of this section providing that highway funds shall continue to be available for expenditure "in the" state" for a period of two years before the lapse simply means that money is to be available for an individual state to use, and if any state does not obligate all their money within two-year period, then money will lapse, but does not mean that federal government may withhold money as it sees fit so long as states are allowed to obligate funds within two years. State Highway Commission of Missouri v. Volpe, C.A.Mo.1973, 479 F.2d 1099.

State which was ready, willing and able to obligate its apportionment from highway trust fund but was prevented from doing so by withholding, by Secretary of Transportation of the United States with approval of Director of the Office of Management and Budget of the United States, of authority to obligate apportionment from the fund for reasons related to prevention or control of inflation was entitled to injunctive and declaratory relief. State Highway Commission of Mo. v. Volpe, D.C.Mo.1972, 347 F.Supp. 950, modified on other grounds 479 F.2d 1099.

Under this chapter and V.A.M.S. Const. art. 4, §§ 29, 30 and V.A.M.S. § 226.010 et seq., State Highway Commission of Missouri had standing, as state agency invested with exclusive and plenary powers and duties on behalf of Missouri to receive and administer federal highway funds and apportionments, to maintain action against Secretary of Transportation of the United States and Director of the Office of Management and Budget of the United States seeking injunctive, declaratory and mandamus relief in connection with withholding authority from Missouri to obligate apportionment from highway trust fund. Id.

3. Justiciable issues

Action under section 1361 of Title 28 by State to compel Secretary to release all funds authorized and apportioned to State for contractual obligation under this chapter presented a justiciable controversy. State of Iowa ex rel. State Highway Commission v. Brinegar, C.A. Iowa 1975, 512 F.2d 722.

Although Indiana motorist contended that he had been injured by failure of Director of Office of Management and Budget and Secretary of Transportation to release impounded highway funds, where no state project had been denied by Administration and all money apportioned to state for prior fiscal years, as well as major portion of current fiscal year's funds, were available to state, the issue motorist presented was conditioned on events that had not occurred and were so hypothetical as to be nonjusticiable. Stanton v. Ash, D.C.Ind.1974, 384 F.Supp. 625.

4. State funds, use of its own

Where state highway project had not received federal funding prior to injunction halting project, district court was without authority to enjoin state's use of its own funds to engage in preliminary planning and design activities on theory that state and federal government were partners in the enterprise. Sierra Club v. U.S. Army Corps of Engineers, C.A.N.Y.1984, 732 F.2d 253.

§ 119. Interstate System resurfacing

(a) The Secretary may approve projects for resurfacing, restoring, rehabilitating, and reconstructing routes on the Interstate System designated under sections 103

To impose liability on the state for its negligent failure to maintain Alaska highways through the winter would not place an "impossible burden" on the state. State v. Abbott, Sup. Ct. Op. No. 804 (File Nos. 1463, 1467), 498 P.2d 712 (1972).

Sec. 19.05.040. Powers of department. The department may

(1) acquire property;

(2) exercise the power of eminent domain;

(3) take immediate possession of real property, or any interest in it under a declaration of taking or by other lawful means;

(4) acquire rights-of-way for present or future use;

(5) control access to highways;

(6) regulate roadside development;

(7) preserve and maintain the scenic beauty along state highways;

(8) dispose of property acquired for highway purposes;

(9) accept and dispose of federal funds or property available for highway construction, maintenance, or equipment;

(10) enter into contracts or agreements relating to highways with the federal government, municipalities, a political subdivision, or with a foreign government, if the contract is approved by the federal government; and

(11) exercise any other power necessary to carry out the purpose of chs. 5 — 25 of this title. (§ 2 art III title I ch 152 SLA 1957; am § 3 ch 35 SLA 1971)

Legislative history reports. — For report on ch. 35, SLA 1971 (HB 387), see 1971 House Journal, p. 776.

NOTES TO DECISIONS

Department may acquire real property for highway through eminent domain. — The Department of Highways (now Department of Transportation and Public Facilities) may acquire real property for the purpose of constructing a highway through the exercise of eminent domain power, under the authority of this section, AS 19.05.080 — 19.05.120 and AS 19.20.010. Rabinec v. State, Sup. Ct. Op. No. 908 (File No. 1539), 512 P.2d 563 (1973), rev'd on other grounds, 586 P.2d 966 (1978).

Sec. 19.05.045. Relocation payments.

Repealed by § 2 ch 60 SLA 1969.

Editor's notes. — The repealed section derived from § 1, ch. 93, SLA 1968.

Sec. 19.05.050. Roads in tourist and trailer camps. The department may adopt regulations governing the use of roads in tourist, trailer and other camps when public and private roads in or through the camps are used by, or are open to, the general public. (§ 1 ch 59 SLA 1955)

commissioner shall, in conformity with the Administrative Procedure Act (AS 44.62), if necessary, adopt a regulation approving, modifying, or rejecting the proposed utility corridor and railroad right-of-way.

(c) If the commissioner approves or modifies the proposed utility corridor and railroad right-of-way,

(1) the Department of Natural Resources shall promptly classify, or reclassify, and reserve any state land within the utility corridor for use as a utility corridor and railroad right-of-way; and

(2) the department shall

(A) exercise its authority under AS 19.05.040 to acquire rights-of-way across land within the utility corridor which is subject to the state's power of condemnation;

(B) work with federal officials to secure reclassification and withdrawal of federal land in the utility corridor for reservations and rights-of-way across the federal land for use as a utility corridor and railroad right-of-way; and

(C) prepare a report evaluating the impact of construction of an extension of the Alaska Railroad across federal lands within the railroad right-of-way; the statement shall satisfy the requirements for an "environmental impact statement" under 42 U.S.C. 4332.

(d) The requirements of the Alaska Land Act (AS 38.05) relating to classification and reclassification of land are inapplicable to actions taken under this section. (§ 1 ch 145 SLA 1977; am §§ 1—4 ch 95 SLA 1981)

Effect of amendments. — The 1981 amendment substituted "not later than April 1, 1982, the" for "the" preceding "interior division" in the first sentence of subsection (a) and substituted "a complete legal description of the" for "a delineation of a" preceding "proposed railroad" in the second sentence of the subsection. In subsection (b) the amendment substituted "within 90 days after receiving a report transmitting the work of the interior division of the department under (a) of this section, the" for "the" preceding "commissioner" and added "if necessary" preceding "adopt a regulation" and in subsection (c)(1), added "promptly" preceding "classify." In subsection (c)(2), the amendment designated the language beginning "exercise its authority" and ending "power of condemnation" as subparagraph (A) and added subparagraphs (B) and (C).

Legislative history reports. — For report on ch. 145, SLA 1977 (HB 47), see 1977 House Journal, p. 371.

Article 3. General Provisions.

Section	Section
125. Purpose	140. [Transferred]
130. [Transferred]	150. [Transferred]

Sec. 19.05.125. Purpose. The purpose of chs. 5 — 25 of this title is to establish a highway department capable of carrying out a highway planning, construction, and maintenance program which will provide a common defense to the United States and Alaska, a network of highways linking together cities and communities throughout the state thereby contributing to the development of commerce and indus-

try in the state, and aiding the extraction and utilization of its resources), and otherwise improve the economic and general welfare of the people of the state. (§ 2 art I title I ch 152 SLA 1957; am § 28 ch 32 SLA 1971)

Sec. 19.05.130. Definitions.

Transferred to AS 19.45.001.

Editor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Sec. 19.05.140. Penalties.

Transferred to AS 19.45.002.

Editor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Sec. 19.05.150. Naming of a highway.

Transferred to AS 19.10.085.

Revisor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Chapter 10. State Highway System.

Article
1. Designation, Marking and Use (§§ 19.10.010 — 19.10.100)
2. Planning (§§ 19.10.110 — 19.10.160)
3. Construction (§§ 19.10.170 — 19.10.280)

Article 1. Designation, Marking and Use.

Section
10. Dedication of land for public highways
15. Establishment of highway widths
20. Designation of state highway system
30. Responsibility for system
40. Uniform system of marking and posting
50. Traffic control signals
52. [Transferred]
60. Regulation of weight and load of vehicles and use of highways during certain seasons
70. Determination of safe speed limits
80. Designation of through highways
85. Naming of a highway
90. Erection and maintenance of guard rails
100. Closing highways

Sec. 19.10.010. Dedication of land for public highways. A tract 100 feet wide between each section of land owned by the state, or acquired from the state, and a tract four rods wide between all other sections in the state, is dedicated for use as public highways. The section line is the center of the dedicated right-of-way. If the highway

(1) replace all permanent markers on private or municipal property that were destroyed or lost during highway construction to permit persons to determine accurately new boundary lines resulting from the construction;

(2) file in the local recording district, after completion of highway construction, an accurate right-of-way map that will contain sufficient engineering and survey information designating where the resulting boundary lines are located on private or municipal property along the highway. (§ 1 ch 14 SLA 1967)

Sec. 19.10.290. Local control of state transportation corridors.

Transferred to AS 19.20.015.

Revisor's notes. — This section was renumbered by the revisor of statutes pursuant to AS 01.05.031.

Chapter 15. Financial Provisions.

Section
10. Loans
20. Assent to federal aid
30. Participation by municipality in federal highway construction
40. General laws governing assessments by municipalities to pay highway costs

Sec. 19.15.010. Loans. For the purpose of participating in a federal grant-in-aid program, the department may apply to the Department of Administration for short-term loans from the general fund for periods not to exceed nine months and for amounts estimated not to exceed anticipated revenues for the term of the loan. The Department of Administration may approve the loan if it determines that the loan would not adversely curtail other expenditures from the general fund. (§ 2 art VI title II ch 152 SLA 1957)

Collateral references. — 39 Am Jur. 2d, Highways, Streets and Bridges, §§ 122-129.
40 C.J.S., Highways, § 176.

Sec. 19.15.020. Assent to federal aid. The legislature assents to the Act of Congress approved July 11, 1916 (39 Stat. 355) entitled, "An Act to provide that the United States shall aid the states in the construction of rural post roads, and for other purposes." The department may make all contracts and do all things necessary to cooperate with the federal government in the construction of highways under the provisions of that Act, and all Acts amending or supplementing it, and any other Act of Congress that may be enacted, including the Federal-Aid Highway Act of 1956 (Public Law 627, 85th Congress, 2nd Session). (§ 1 art II title II ch 152 SLA 1957)

Sec. 19.15.030. Participation by municipality in federal highway construction. When a federal-aid highway is routed through a municipality, it may participate in the financing, planning, construction, acquisition of right-of-way, and maintenance of the highway in the manner and proportion the department determines is reasonable and proper. (§ 2 art II title II ch 152 SLA 1957)

Cross references. — For provisions allowing for local control of state transportation corridors, see AS 19.20.015.

Sec. 19.15.040. General laws governing assessments by municipalities to pay highway costs. The provisions of law relating to the levying of assessments for highway financing, planning, construction, acquisition of right-of-way and maintenance, referred to in AS 19.15.030 apply to the extent that they are not inconsistent with the general purpose of chs. 5 -25 of this title. (§ 3 art II title II ch 152 SLA 1957)

Chapter 17. Littering.

Section
10. [Repealed]

Sec. 19.17.010. Posting of law.
Repealed by § 3 ch 149 SLA 1980.

Cross references. — For provisions concerning recycling and reduction of litter, see AS 46.06.010 — 46.06.150.

Editor's notes. — This section derived from § 2, ch. 13, SLA 1966; Executive Order No. 39, § 11 (1977).

Section 5, ch. 149, SLA 1980, provides: "This Act terminates July 1, 1984."

Chapter 20. Cooperation by and with the State.

Section
10. Connecting highways
15. Local control of state transportation corridors
17. Local control of traffic control systems
20. Authority to establish controlled-access facilities
30. Design of controlled-access facility
40. Acquisition of property and property rights
50. Grade-crossing eliminations
60. Participation in financing, planning, and regulation
70. Local service roads
80. Municipal master highway plan
90. [Transferred]

Sec. 19.20.010. Connecting highways. (a) The department may enter into cooperative agreements with a municipality for the construction or maintenance of a connecting highway which is part of the state highway system and located within the municipality.

MEMORANDUM

TO:

FROM: Katherine Hazard
Legislative Analyst

RE: Federal Funds by Election District
Research Request 85-038

This memorandum is in response to a request for information about federal funds to Alaska by election district. The original request inquired about the amount of federal matching funds received by each election district during the last ten years. I have encountered several dilemmas in locating the information requested because of the ways in which information on federal funds is recorded. In this memorandum, I have described what information is available and could be compiled into a table and what is not available. With further direction from you, it may then be possible for us to provide you with information in the form most useful.

Matching funds are not distinguished from other federal receipts in the State budget summaries or, in most cases, in the budget records of the agencies receiving the grants. I spoke with your aide on November 21 to let him know of the difficulty in obtaining information on matching funds; he said information on federal receipts and/or federal matching funds by election district would be useful.

Roughly half the federal funds granted to Alaska are channeled through State government. For example, in FY 80, Alaska received $473.9 million in federal grants; of this, $272.2 million (57 percent) was received by the government of the State of Alaska. The remaining 43 percent was granted directly to local governments, programs or organizations.[1] From FY 80 through FY 84, federal grants constituted approximately six percent to ten percent of total State revenues.

---

[1]The amount received in grants from the federal government comprises about 22 percent of federal funds to the state. The remainder is for salaries and wages of federal employees, direct payments to individuals, procurements and operation of federal facilities.

Information on federal grant receipts is recorded by election district for the State of Alaska capital budget, and could be compiled for the last ten years. Matching funds are not distinguished from other federal grants, however. When averaged over a five year period, approximately half the federal funds received by the State are in the capital budget and half in the operating budget.

Information on federal grant receipts to the State of Alaska operating budget is not recorded by election district, or other indicator of location. Beginning in January it will be possible to list the State positions, salaries and location of positions which are funded in whole or in part by federal funds. This system will account for only the segment of the federal receipts dedicated to salaries of state employees. For jobs which are centered in one place but serve other places, it would appear that funds are allocated to the election district in which the position is headquartered. For example, RuralCAP is located in Anchorage, but serves rural communities.

Information on federal grants to Alaska by census district are available for FY 75 through FY 80, in the "Federal Outlays" and "Geographic Distribution of Federal Funds" reports. In these reports, funds channeled through the State government are not distinguished from other grants. A copy of the report from FY 80 is attached. Clarification on which federal funds are of interest would be helpful.

During FY 81 and FY 82, information on federal funds was not recorded by census district; there are records only of the amounts granted to the state as a whole. In FY 83, some information was recorded on a census district basis, but grants appropriated to the State government or to central offices of programs were recorded as allocations to the district in which the office was located. Consequently, Juneau appears to have received a very high percentage of the federal funds received by Alaska in FY 83. In earlier years, the federal granting agencies used a proration technique to approximate the probable distribution of funds on a geographic basis. In FY 84, information on large grants was prorated; information or smaller grants is recorded as going to the State capital. Thus, information on federal grants by census district is available for the years FY 75-80, but is either not available, or not comparable for the subsequent years.

Maps showing the census districts and election districts are attached as Attachment B. As you can see, some census and election districts have the same boundaries; others do not.

Please let us know if you have further questions, and advise us as to what information will be most useful.

Geographic Distribution of Federal Funds in ALASKA

A report of the
Federal Government's impact by
State, County and large City

FISCAL YEAR 1980

Compiled for the EXECUTIVE OFFICE OF THE PRESIDENT
By the COMMUNITY SERVICES ADMINISTRATION

USERS GUIDE

The Geographic Distribution of Federal Funds Report (formerly entitled Federal Outlays) for Fiscal Year 1980 (October 1, 1979 to September 30, 1980) reports the distribution of Federal funds of the Executive Branch of the Federal Government, by agency, program, and indirect federal support for every county of the United States and for each city where the population exceeds 25,000. Additionally, the data are summarized at State and National levels by agency, program, indirect federal support and budget function. State summaries are provided. A highlight of the summaries are tables which provide State rankings in terms of Federal funds received by organizational unit, demographic characteristics and major functional classification. A separate volume, titled Geographic Distribution of Federal Funds in Summary, contains data at the National and State levels only for all 50 States, the District of Columbia, and Territories and other Areas administered by the United States. The data at the state level are identical to the "State Summary for Federal Agency Operations" section of each State report.

These documents are published for the Executive Office of the President by the Office of the Controller, Community Services Administration. They are the product of a joint effort by Federal Departments and Agencies in response to the requirements of the Office of Management and Budget under Circular A-84. Any questions related to the material in this report may be referred to:

Community Services Administration
Federal Information Exchange
Robin Building, Room 301
7981 Eastern Avenue
Silver Spring, Md. 20910
Telephone: 301 427-7596 or 7523

Indirect Federal Support

"Indirect Federal Support" activity dollars are listed separately from the dollar outlays of programs at each governmental level. Indirect Federal Support includes (1) the current market value of donated commodities; (2) the original acquisition cost of donated surplus real and personal property; and (3) the face value or contingent liability of guaranteed/insured loans. Indirect Federal support also includes some foreign assistance programs which only indirectly impact the geographic areas to which they are distributed. The dollar funds for the budgeted programs are totaled while those for the indirect federal support are listed, but not totaled. These programs are identified in the data under the heading "Indirect Federal Support" followed by an asterisk (*); dollar amounts are enclosed in parentheses to indicate that they are not included in the totals.

In the Geographic Distribution of Federal Funds Report for Fiscal Year 1977, and the Federal Outlays Reports for prior years, interest on the public debt was treated as indirect federal support and the amounts not included in the totals. This treatment continues in this year's version of the report, except that $32,104,523,577 of the public debt has not been included. The items excluded are interest paid to trust funds, foreign banks and governments, the Exchange Stabilization Fund, and the Federal Reserve System Open Market Account, and the difference between cost and accrual basis of accounting for the interest.

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5160 HTRA HB 213 (FILE 2)

732

This report differs in program coverage, timing and geographic detail from the "Federal Aid to States" publication prepared by the Department of the Treasury. The Department of the Treasury publication includes only a portion of the total Federal expenditure impact on the States—only the portion that relates to Federal grants-in-aid to State and local governments. Outlays are based on checks issued and payments-in-kind and represent actual spending at the time these payments are made. The information is not shown below the State level. The "Federal Aid to States" publication is available from the Special Reporting Branch, Bureau of Government Financial Operations, Department of the Treasury, Treasury Annex No. 1, Attention: GAO Building, Washington, D.C. 20226 (Telephone 202 566-4531).

Some Considerations on Use of the Data

The Community Services Administration makes some checks on the validity and reasonableness of the data published. However, the federal departments and agencies are responsible for the accuracy and completeness of the data. Users of the information should keep in mind the following:

A. Proration and Allocation Techniques

Since these reports reflect the distribution of federal funds by program, indirect support, and geography, they provide a useful guide for planning and budgeting officials at all government levels. However, in some instances the funds pass through State governments or their intermediaries, such as prime contractors, before reaching the ultimate recipient. A timely and economically feasible means of tracking these funds to the final recipient has not been developed.

In such cases, the federal agency involved has used a statistical proration technique which they believe most nearly approximates the probable distribution of the funds on a geographic basis. These proration or allocation techniques are described in Exhibit No. 1. Each method is identified by a code number which appears with each entry where applicable.

B. Reporting Basis of the Federal Funds

Federal funds are generally reported on the basis of obligations of government administered funds, except deposit funds. In the Federal government budget accounting system, "obligations" are funds legally set aside to be spent, but not actual expenditures. Therefore, it is possible that in some cases the dollar amounts reported in the Geographic Distribution of Federal Funds Report for a particular program reflect obligations incurred in the current fiscal year to be spent over a period of several years. However it should be stressed that there are few such multi-year Federal programs; most obligations reported as current fiscal year funds accurately represent the level of Federal spending during that year.

In other instances, the data may represent costs or expenditures. Exhibit No. 3 of the User's Guide provides additional information describing the reporting basis for specific types of agency operations.

C. Program Identification

Program names in this report are listed in alphabetical order by Federal department or agency. In addition, the Catalog of Federal Domestic Assistance program number (CFDA NO.) is listed opposite each program name where applicable. The Catalog, published by the Office of Management and Budget, contains information in a single publication about programs of Federal departments and agencies and may be used in

conjunction with this report for analysis purposes and to gain a better understanding of the data presented.

D. Additional Precautions on the Use of Federal Funds Data

Users of the Federal Funds Report should take the following into consideration:

- Comparisons between the dollar figures shown in a geographical area in this report and similar reports for previous years must be made with caution since additional programs have been classified as "Indirect Federal Support" programs.
- Funds are reported only for the Executive Branch of the Federal government. Funds of the Legislative and the Judical Branches are not reported
- Reporting is incomplete in some instances because of security reasons.
- Grants include aid-to-state and local governments, private organizations and some programs that aid individuals, such as fellowships or research grants.
- Funds for insured and guaranteed loan programs include the face value of the loans rather than the cost of the program's operation. Exhibit No. 2 of the User's Guide provides additional information about the reporting bases for various types of loan programs.
- Information about the activities of certain agencies, boards and commissions will be found in the report of the agency to which the funds were transferred, or which may have performed the accounting rather than the funding.
- County data include funds also reported at the city level, except for independent cities which are treated as counties.
- Certain H.U.D. indirect support programs such as the home mortgage and property improvement loan insurance programs are reported at the national, state, and county level only. Transportation Department highway programs are also reported at the national, state and county levels only
- Data for a number of H.U.D. Programs were not reported by the Department. If there is a question concerning the unreported programs, please contact the Department directly on 202 557-0605.
- The Legal Service Corporation did not report data as it is a private non-profit corporation established by the Legal Services Corporation Act of 1974. Its Federal payment is outlaid in the accounts of the U.S. upon transfer from the Department of the Treasury to the Corporation's commercial bank accounts. Information on allocations of Corporation funds can be obtained directly from the Legal Services Corporation, 733 15th Street, NW, Washington, D.C. 20005 (202-272-4000).

Distribution of the Federal Funds Report

The Fiscal Year 1980 Federal Funds Report have been distributed to a large number of institutions, individuals, and groups. Single state reports have been sent to:

- U.S. Senators
- U.S. Representatives
- State Governors
- Governors of Territories and other Areas
- Mayors of Cities over 30,000 population
- Principal County Officials of counties over 50,000 population
- State Economic Opportunity Offices
- State Planning Offices
- Regional Commissions
- State Legislative Research Councils
- State Budget Offices

Also, State Governors, Governors of Territories and other Areas, U.S. Senators, U.S. Representatives, and State Legislative Research Councils receive a copy of the Federal

Funds in Summary volume. Federal Executive Boards and representative offices of the states having offices in Washington, D.C. also receive a copy of the State Report and the Summary. Additionally, each of the some 1200 libraries across the country, which has been designated as a depository for receipt of U.S. Government publications, receives a copy of the appropriate State Report directly from the Superintendent of Documents, Washington, D.C.

Complete sets of Federal Funds Report (50 States, District of Columbia, Territories and other Area volumes and Federal Funds Report in Summary volume) have been distributed to:

- The White House
- The Office of Management and Budget
- Selected Congressional Committees
  (House Appropriations Committee)
  (House Budget Committee)
  (House Intergovernmental Relations Committee)
  (House Ways and Means Committee)
  (Senate Appropriations Committee)
  (Senate Budget Committee)
  (Senate Subcommittee on Intergovernmental Relations)
- Major Federal Agencies
- Selected Public Interest Groups
  (National Association of Counties)
  (U.S. Conference of Mayors)
  (National League of Cities)
  (International City Management Association)
  (Council of State Governments)
  (State-County City Service Center)
  (National Association of Regional Councils)

In addition, regional sets have been sent to each Federal Regional Council Chairman in the ten Federal regions. These sets include the Geographic Distribution of Federal Funds in Summary volume. We encourage users to refer other users to these recipients of the Federal Funds Report before ordering additional copies.

EXHIBIT NO. 1

Identification, Proration, and Allocation Methods Key

Present agency accounting systems do not always provide accurate data as to the total geographic area in which the funds are expended. In those instances, the Federal Agency develops a statistical formula to predict the most probable distribution of its funds. These formulas or methods are described below and identified by a code number that is printed in each Federal Funds entry where applicable. The absence of a code number after a program title indicates that the outlay is accurate at all levels geographically. Where a proration or allocation method has been used to determine funds at the city level only, one may assume that the stated funds are accurate at the state and county levels. Correspondingly, where a proration or allocation method was used to determine funds at county and city levels, the stated funds at the state level may be regarded as accurate.

Code No.	Identification, Proration, and Allocation Method
1.	To obtain city estimates, the county figures are prorated on the basis of the portion of the population in the city relative to the county population.
2.	Prorated to county level based on a previous year's survey of consumers and subscribers by county.
3.	Allocated equally to counties within each re-development district located in 13 Appalachian states.
4.	Funds are allocated or identified to the location of the State Agency receiving the money.
5.	Funds are allocated or identified to the location of the Prime contractor's main office.
6.	Funds are allocated or identified to the location of the purchasing office.
7.	Funds are allocated or identified to the location of the duty station where the costs are incurred. In distributing these costs to counties or cities, total costs at the lowest organizational level of the cost accounting system are determined. There costs are then prorated to counties or cities based upon the number of operating units in each of the counties or cities. State office costs are charged to the county and city in which the office is located.
8.	State totals are based on average monthly annuities applied to the national figure. Proration to counties and cities is based on population.
9.	Actual payroll costs are distributed to the given county and city levels (these actual figures represent 85 percent of total funds), and other obligations (15 percent of total funds) are prorated in the same proportion as payroll to county and city levels.
10.	The monies assigned to a state are allocated within the state to counties and cities on the basis of the proportion of the state population in the given county or city.
11.	Funds are reported for the largest city in the state and the county in which that city is located.
12.	This technique prorates funds to localities on the basis of the fraction of the state's special group population in a county or city (e.g., recipient of a specific service, state employees, veterans).

13. Prorated by computing a percentage for each office corresponding to the ratio that each office's annual payroll cost bears to the total annual payroll cost for the agency. This percentage is then applied to the total annual obligations for the agency to arrive at an estimated obligation for each office at the state, county and city levels. The data are accurate at the national level.
14. Prorated to state, county, and city by size of geographic area.
15. Prorated to state, county, and/or city of geographic distribution of employees.
16. Prorated to state, county and city by payroll costs except for large expenditures which are actual for the area. The allocations to the localities are directly proportional to the payroll costs for the localities.
17. The data are accurate to National and Federal Reserve District levels. Data are prorated to the city or county level based on the ratio of city or county population to the population of the Federal Reserve District in which the city or county is located.
18. Prorated by estimated obligation to state, county, and city levels.
19. Payroll costs are distributed to actual geographic level (based on duty station of employee). The number of employees in each location is used to obtain a factor for each location in relation to total employment, and this is then applied to "Other Expenses" for allocation to each location. The "Other Expenses" and the payroll cost are totaled for each geographic level.
20. Actual funds are obtained at each geographic level for the first month in each quarter. For these four months (July, October, January and April), the fractions of the funds assigned to the given locations are determined. These fractions are then applied to the year end totals to obtain the yearly totals allocated to each location.
21. State totals based on statistical tabulations derived from monthly accounting totals; city and county totals projected from December payments of prior fiscal year to arrive at full year totals; records of city and county payment distribution maintained on Zip Code basis.
22 Payroll funds are accurate to all levels. Other funds are prorated to state, county, and city levels by projecting annual payments to suppliers and producers from total obligations extending over a period of years (negative factoring method); records of city and county distribution maintained through accounting documentation of expenditures.
23. Payroll and travel accurate to all levels. Administrative expenses prorated based on prior year's geographic levels.
24. Funds are allocated or identified to the location of prime contractor's place of performance.
25. Funds are reported in the capital city of the state and the county in which the capital city is located.

EXHIBIT NO. 2

Loan Programs Key

I. LOAN GUARANTEE PROGRAMS, BY AGENCY, REPORTED BY FACE VALUE OF LOAN

Department of Health, Education and Welfare
Higher Education Act Insured Loans
Nursing School Construction — Loan Guarantees

Department of Housing and Urban Development
Loan Insurance — Major Home Improvements
Mobile Home Loan Insurance
Mortgage Insurance — Condominium Homes
Mortgage Insurance — Experimental Homes
Mortgage Insurance — Home Coinsurance Program
Mortgage Insurance — Homes
Mortgage Insurance — Hospitals
Mortgage Insurance — Mobile Home Parks
Mortgage Insurance — Nursing Homes
Mortgage Insurance — Redevelopment Homes
Mortgage Insurance — Servicemen's Homes
Mortgage Insurance — Condominium Housing Projects
Mortgage Insurance — Graduated Payment Mortgage Program
Mortgage Insurance — Homes for Certified Veterans
Mortgage Insurance — Homes for Special Credit Risks
Mortgage Insurance — Homes in Declining Areas
Mortgage Insurance — Homes in Outlying Areas
Mortgage Insurance — Land Development & New Community
Mortgage Insurance — Low/Moderate Income Hous-Market Int Rate
Mortgage Insurance — Low/Moderate Income Family Homes
Mortgage Insurance — Lower Income Family Homes
Mortgage Insurance — Multifamily Supplemental Loans
Mortgage Insurance — Projects With 2-Year Operating Losses
Mortgage Insurance — Purchase/Refinish Existing Housing
Mortgage Insurance — Redevelopment Housing Projects
Mortgage Insurance — Rental Housing Assistant Projects
Mortgage Insurance — Rental Housing for the Elderly
Mortgage Insurance — Rental Housing Projects
Mortgage Insurance — Sales Type Co-op Projects
Mortgage Insurance — Sales Type Cooperative Homes
Property Improvement Loan Insurance

Veterans Administration
Veterans Guaranteed and Insured Loans

II. DIRECT LOAN PROGRAM, BY AGENCY, REPORTED BY OBLIGATION

Department of Agriculture
Very Low Income Housing Repair Loans
Self-Help Housing Land Development Loans
Rural Telephone Bank Loans

Department of Commerce
Grants and Loans for Public Works and Development Facilities
Loans to Business for Development Companies
Trade Adjustment Assistance Loans
Fishery Loan Fund

Department of Health, Education and Welfare
NDEA Loans to Institutions
Higher Education Facilities Loan Fund

Veterans Administration
Veterans Direct Loans

III. LOAN PROGRAMS, BY AGENCY, THAT COMBINE DIRECT LOANS AND LOAN GUARANTEED, REPORTED BY FACE VALUE OF LOANS

Department of Agriculture
Commodity Loans
Storage Facilities and Equipment Loans

Small Business Administration
Economic Opportunity Loans to Small Business
Loans to State and Local Development Companies
Disaster Loans
Small Business Financial Assistance Program
Small Business Investment Company Programs

IV. LOAN PROGRAMS THAT COMBINE DIRECT LOANS AND GUARANTEED LOANS, REPORTED BY OBLIGATION

Department of Agriculture
Rural Telephone Loans
Rural Electric Loans
Farm Ownership Loans
Water and Waste Disposal Systems Loans
Watershed Protection Loans
Farm Operating Loans
Resource Conservation and Development Loans
Farm Ownership Non-Farm Enterprise Loans
Soil and Water Loans to Individuals
Indian Tribes and Tribal Corporation Loans
Irrigation, Drainage, and Other Soil and Water Corservation Loans
Recreation Facility Loans
Flood Prevention Loans
Grazing Association Loans
Low to Moderate Income Housing Loans
Rural Rental Housing Loans
Farm Labor Housing Loans
Rural Housing Site Loans
Business and Industrial Loans
Community Facilities Loans
Emergency Disaster Loans
Emergency Livestock Loans
Recreation Association Loans

EXHIBIT No. 3

Reporting Basis Key

The following are program funds reported on other than an obligation basis.

I. PROGRAMS BY AGENCY, THAT WERE REPORTED BY COSTS

Department of Agriculture
Agricultural Product Grading
Federal Grain Inspection Service
Federal-State Marketing Improvement Program
Inspection and Grading of Farm Products
Inspection and Weighing Services
Livestock and Poultry Market Supervision
Market News
Market Supervision
Marketing Agreements and Orders
Marketing Services
Miscellaneous Contributed Funds, AMS
Perishable Agriculture Commodities Act Fund

Department of Transportation
St. Lawrence Seaway Development Corporation Fund

Veterans Administration
Dependency and Indemnity and Death Compensation
Veterans Burial Awards and Other Miscellaneous Benefit Payments
Veterans Death Pension
Veterans Disability Compensation
Veterans Disability Pension

II. PROGRAMS, BY AGENCY, THAT WERE REPORTED BY EXPENDITURES

Department of Agriculture
Agricultural Conservation Program
Commodity Inventory Operations
Cotton Production Stabilization
Dairy and Beekeeper Indemnity Payments
Emergency Conservation Measures
Emergency Feed Program
Feed Grains Production Stabilization
Financing Exports Under Short-Term Credit Sales
Financing P.L. 480 Dollar Credit Sales
Forestry Incentives Program
Grain Reserve Program
National Wool Act Payments
Purchase of Commodities
Purchases for Child Nutrition Program
Purchases for Elderly Feeding

Purchases for Food Donation Program
Rice Production Stabilization
Section 6 Purchases
Title II, P.L. 480 Foreign Donations
Water Bank Programs
Wheat Production Stabilization

Department of State
All funds reported by the Department of State are by expenditures (disbursements)

Railroad Retirement Board
Social Insurance Program for Railroad Workers

III. PROGRAMS, BY AGENCY, THAT WERE REPORTED BY OTHER PROCEDURES

Department of Agriculture
The following programs were reported by the weighted average costs to the Federal government of the foods donated, including transportation, storage, and processing:

Donation of Commodities to School Lunch
Food Distribution to Institutions
Food Distribution to Needy Families
Food Distribution to Schools
Nutrition Programs for the Elderly

Treasury
Treasury reports interest on the public debt as an appropriation

Agency for International Development
All funds are reported by the amounts drawn against letter of credit issued to foreign governments.

General Services Administration
GSA's funds are a combination of expenditures, obligations or costs. The donation of surplus real and personal property is based on the original acquisition cost of the property.

EXHIBIT No. 4

List of Federal Funds Report Abbreviations

This list is intended as a guide to users unfamiliar with Federal agency program abbreviations. The list is arranged alphabetically by agency. Two abbreviations common to all agencies and used extensively throughout the Federal Funds Report are:

S&E	Salaries and Expenses
CWF	Consolidated Working Fund

Department of Agriculture

AMS	Agricultural Marketing Service
APHIS.....	Animal and Plant Health Inspection Service
ASCS.....	Agricultural Stabilization and Conservation Service
BOR	Bureau of Outdoor Recreation
CCC.....	Commodity Credit Corporation
EPA.....	Environmental Protection Agency
ESCS.....	Economics, Statistics and Cooperatives Service
FCIC.....	Federal Crop Insurance Corporation
FGIS.....	Federal Grain Inspection Service
FMHA.....	Farmers Home Administration
FNS.....	Food and Nutrition Service
FS.....	Forest Service
FSQS.....	Food Safety and Quality Service
IDS.....	International Development Staff
REA	Rural Electrification Administration
SCS.....	Soil Conservation Service
SEA.....	Science and Education Administration
SFCP.....	Special Foreign Currency Program
USDA	United States Department of Agriculture

Department of Commerce

ARC	Appalachian Regional Commission
BEA	Bureau of Economic Analysis
EDA	Economic Development Administration
ITA.....	International Trade Administration
MAR.....	Maritime Administration
NBS.....	National Bureau of Standards
NFPCA	National Fire Prevention Control Administration
NMFS.....	National Marine Fisheries Service
NOAA.....	National Oceanic and Atmospheric Administration
NWS	National Weather Service
OMBE.....	Office of Minority Business Enterprise
O/S.....	Office of the Secretary
USTS.....	United States Travel Service

Department of Health, Education and Welfare

ADMHA . . .	Alcohol, Drug Abuse and Mental Health Administration
ASH	Assistant Secretary for Health
CDC	Center for Disease Control
DIS	Disease
ED.	Education
FDA	Food Drug Administration
HFCA	Health Care Financing Administration
HI	Health Insurance
HRA	Health Resources Administration
HSA	Health Services Administration
NDEA	National Defense Education Act
NIE	National Institute of Education
NIH.	National Institutes of Health
OE.	Office of Education
OS.	Office of the Secretary
RES.	Research
SAFA	School Assistance Federally Affected Areas
SS	Social Security
SSA.	Social Security Administration

Department of Housing and Urban Development

CPD.	Community Planning and Development
HPMC	Housing Production and Mortgage Credit

Department of the Interior

BIA.	Bureau of Indian Affairs
BM	Bureau of Mines
FWS	Fish and Wildlife Service
GS.	United States Geological Survey
HCRS	Heritage Conservation and Recreation Service
LBR	Bureau of Reclamation
NPS.	National Park Service
OT.	Office of Territorial Affairs
OWRT.	Office of Water Research and Technology
SFCP.	Special Foreign Currency Program
SM.	Office of Surface Mining and Reclamation Enforcement

Department of Justice

LEAA	Law Enforcement Assistance Administration

Department of Labor

BLS.	Bureau of Labor Statistics
ESA.	Employment Standards Administration
ETA	Employment and Training Administration
MSHA	Mine Safety and Health Administration
OSHA	Occupational Safety and Health Administration

Department of State

E&W . . . . . East and West
FHWA. . . . . Federal Highway Administration (Department of Transportation)

MEMORANDUM

TO: Representative Niilo Koponen

ATTN: Lisa McLaren

FROM: Gretchen Keiser
Legislative Analyst

RE: Federal Transportation Funds for Alaska
Research Request 87-015

You asked us to investigate sources of federal transportation funds for Alaska to determine whether we were obtaining all available funding. In addition, you wanted to know if federal transportation funds for construction, maintenance and mass transit were administered separately.

We contacted the U.S. Department of Transportation for information on federal highway and mass transit funds for Alaska. The Alaska Department of Transportation and Public Facilities (DOT/PF) provided information about the administrative procedures involved in spending the federal funds. This memorandum first discusses federal highway funds administered by the Federal Highway Administration (FHWA) and then considers federal mass transit funds administered separately by the Urban Mass Transit Administration (UMTA).

Federal Highway Funds for Alaska

Annual revenues from the federal excise tax on gasoline are allocated nationwide on the basis of a state's miles of interstate highway, population and size. Alaska receives the minimum allocation of 0.5 percent, which represents about two to three times the amount of gasoline tax revenues collected in this state. General federal highway funds originally allocated to Alaska totalled $165.4 million in the current federal fiscal year 1986--a one percent decline from the FY 85 funding level of $167.6 million--following Gramm-Rudman budget adjustments. In mid-August, Alaska was notified that it will receive a supplemental allocation of $3.2 million, which represents a share of unexpended FY 86 highway funds redistributed nationwide. The state also received $5.2 million in FY 86 funding for special highway projects on federal public lands (e.g. the Craig-Klawock road on Prince of Wales Island).

During the past few years, Congress has placed limitations on the amount of allocated funds each state is authorized to spend during the fiscal year. In FY 85, for example, Alaska was limited to 95 percent ($158.6 million) of its allocation. During FY 86, Alaska may obligate $151.1 million in general federal highway funds--about 90 percent of its revised $168.6 million allocation. The previously mentioned special highway project funding is not subject to the Congressional limitation.

Federal highway funds may not be used for highway maintenance, except for major renovations of interstate highways. Table 1 summarizes the federal highway fund categories and provides examples of Alaska highways which fall into the various categories. The funds which have been obligated in Alaska during the current fiscal year are also presented in Table 1. As of July 31, 1986, about $104 million had been obligated in all fund categories; Alaska could spend an additional $43.6 million in FY 86 funds. If we take into account the $3.2 million in supplemental funds which the state recently received and obligations through August 21, 1986, the state has a balance of $39 million--or 26 percent of the revised $151.1 million FY 86 limitation.

According to the Federal Highway Administration, Alaska receives all federal highway funds to which it is entitled and routinely spends those funds up to its annual limitation. The Department of Transportation and Public Facilities (DOT/PF) must submit project-specific information in order to obligate federal funds and receive the authority to proceed on a highway project. Once federal funds are obligated, the DOT/PF contracts for design, engineering or construction work. According to Ron Lind (Director, Division of Plans, Programs and Budget in the DOT/PF), the above-mentioned balance of $39 million with only six weeks remaining in federal FY 86 is somewhat large but represents primarily a $25 million Glenn Highway project to be obligated shortly. The DOT/PF has submitted to the FHWA a preliminary list of about $50 million in projects to be authorized under the remaining FY 86 obligations.

The DOT/PF pays expenses as work proceeds on a highway project and then submits a monthly bill, which consolidates expenditures for all qualified projects, to the FHWA for reimbursement. In the past, there has been a 100 to 180-day delay before the DOT/PF submitted bills for reimbursement. According to Doug Goldbach of the Division of Management and Finance in the DOT/PF, the lag now averages about 60 days under the Alaska State Accounting System (AKSAS). Much of this lag occurs because expenditure data in AKSAS must be converted into a form acceptable by the FHWA. Mr. Goldbach indicated that they are supplementing AKSAS with new accounting software which will speed the data conversion and reduce this lag. In addition, DOT/PF is developing an "on demand" billing system, which would allow more frequent billing (up to the FHWA's once-a-week limit) during the peak construction season.

Federal Mass Transit Funds for Alaska

According to Pat LeVine, Alaska Regional Administrator for the Urban Mass Transit Administration (UMTA), Alaska has done quite well over the past few years with respect to mass transit funding. In FY 86, the State has received about $370,000 for rural (entire state outside of Anchorage) and elderly/handicapped programs. The Municipality of Anchorage has also received about $1 million in UMTA "Section 9" funds this year. Additional sources of mass transit funds to Alaska include Federal Highway Administration funds which can be shifted from the urban system category to the UMTA. Anchorage and Juneau are sharing about $1 million in FY 86 FHWA funds for mass transit programs. Finally, the UMTA has "Section 3" discretionary funds available for special projects. According to Ms. LeVine, the Municipality of Anchorage has received about $20 million in Section 3 funds over the past several years for construction of its vehicle maintenance facility.

MEMORANDUM

TO: Representative Niilo Koponen

ATTN: Lisa McLaren

FROM: Gretchen Keiser G. Keiser
Legislative Analyst

RE: Federal Transportation Funds for Alaska
Research Request 87.015 (Supplemental Information)

You requested us to provide additional information about the Federal Highway Administration (FHWA) FY 86 funds which were transferred to the Urban Mass Transit Administration (UMTA) and subsequently disbursed as mass transit grants to Alaska cities. Specifically, you were interested in: 1) how these funds are administered; and 2) why Fairbanks did not receive any of these FY 86 funds.

We contacted Pat LeVine, Alaska Regional Administrator for the Urban Mass Transit Administration, who clarified the use of FHWA funds for mass transit projects. During federal FY 86, about $1.2 million was transferred from the FHWA to the UMTA for mass transit projects in Alaska. These so called Federal Aid Urban System (FAUS) FY 86 funds were disbursed by the UMTA to the Municipality of Anchorage. Anchorage has an ongoing metropolitan transportation planning process, with an advisory team of municipal, State and private transportation/mass transit people. The team identifies local mass transit projects, which are subject to approval by the municipality. The municipality then seeks FAUS funding for these capital improvement projects by submitting a grant application directly to the UMTA.

The FAUS funds are available through the UMTA for mass transit projects in other Alaska cities and towns in addition to Anchorage. We previously reported incorrectly that the City and Borough of Juneau had received some FY 86 FAUS funds; Juneau has received FAUS funds in the past but did not apply for these funds during FY 86. According to Ms. LeVine, the Fairbanks North Star Borough has not applied for FAUS funds in the past but has instead sought and obtained federal mass transit capital funding through UMTA's Section 3 discretionary funds program. Ms. LeVine suggested that Section 3 funds are less plentiful than in the past and that applications for FY 87 funds would likely be more successful through the FAUS funding route.

We also contacted Ron Moore, Director of Mass Transit for the Fairbanks North Star Borough (FNSB), who was able to provide a historical overview of federal mass transit funding to the Borough. According to Mr. Moore, the FNSB received UMTA Section 3 discretionary funds during the early 1980s for capital improvements (i.e., the purchase of new buses and the rehabilitation of old buses). In recent years, however, the borough has sought and received UMTA Section 18 funds for operations. In FY 86, for example, the FNSB received about $55,000 in Section 18 funds--its share of UMTA operating funds allocated to Alaska.

According to Mr. Moore, the FNSB is now completing a grant application for approximately $40,000 - 60,000 in UMTA Section 8 FY 87 planning funds. These funds would be used to update the Borough's Transit Development Plan. An update must be prepared in order for the borough to be eligible for Section 3 or FAUS mass transit capital improvement funds. The borough will be submitting its Section 8 application to the State, which receives the federal planning funds and allocates them among approved applicants throughout the state. According to Mr. Moore, the State should know the amount of FY 87 Section 8 funds which will be available from the UMTA by the end of 1986. Mr. Moore indicated that the Fairbanks North Star Borough would likely seek FAUS and/or Section 3 capital funds in federal FY 88, provided the transit plan update is completed during FY 87.

Deputy Commissioner
Operations

SUBJECT: Obligation of
Federal-Aid Funds

Attached for your review and approval is a recommended list of projects for obligating the majority of remaining federal-aid funds. This will use most of our available apportionments until Congress reauthorizes the highway program, unless major unanticipated de-obligation of already apportioned funds occurs during the interim.

This list has been compiled based on recommendations from the regions and the Alaska Marine Highway System. An additional review opportunity was provided and no major objections or concerns were identified. The list has also been discussed with the Division Office of the Federal Highway Administration (FHWA) to ensure there aren't technical problems with proceeding with any of these projects.

Every effort has been made to fund identified priorities, with an emphasis on using available apportionments for important construction projects that would otherwise be delayed until the 1988 construction season. Second priority was given to preliminary engineering, right-of-way, and utility work needed to ensure full utilization of the federal FY'87 obligation authority, based on an assumption that Congress will reauthorize the program before October 1987. I currently anticipate problems in this regard even with these actions.

Please note that we have reserved about $2.5 million for a contingency account, which is less than 10% of the available apportionment recommended for obligation. This will be needed to cover reimbursement for overspent phases and any unidentified priorities. I do not believe it would be prudent to reserve any less an amount. Please also note that we are currently accepting local FHWA advice and not attempting to use any bridge replacement funds for other categories. We may wish to re-examine this at a later time.

Highway Funding: Federal Distribution Formulas Should Be Changed

RCED-86-114, 03/31/86

Background

In response to a congressional request, GAO reviewed the statutory formulas used to apportion federal highway funds to the states.

Findings

More than $13 billion in highway funds have been apportioned among the states in fiscal year 1986 on the basis of highway formulas enacted by Congress over the years. GAO found that: (1) the factors used in formulas to apportion highway funds should reflect the extent and usage of today's highway system; (2) lane-miles is a direct measure of the size of the road network and should be used to reflect the extent of the system to be preserved; (3) highway use can be measured by both vehicle-miles of travel and motor fuel consumption; (4) each method of measurement has advantages and disadvantages as a formula; (5) the interstate resurfacing, restoration, rehabilitation, and reconstruction program is the only formula currently using a combination of these factors; and (6) the primary, secondary, and urban formulas need to be revised to be consistent with the extent and use of the current system. Changing the factors used in arriving at these apportionment formulas would result in some states receiving more or less funds than under the present formulas.

Open Recommendations to Congress

Congress should revise the factors used in the primary, secondary, and urban formulas as follows: (1) land area, which correlates poorly with the extent of the highway system, should be deleted from the primary and secondary formulas and be replaced with lane-miles, which more closely measures the extent of the highway system; (2) population, either rural or urban, which is an inexact measure of highway use, should be replaced with either vehicle miles of travel or motor fuel consumption, either of which more closely reflects highway use, including changes in such use; (3) postal mileage, which seems to bear no relationship to either the extent of the highway system or its use, should be deleted from the primary and secondary formulas; and (4) lane-miles should be added to the federal-aid urban highway apportionment formula, which is now based only on urban population, to provide a measure of the extent of the urban system.

Status: Action not yet initiated.

Congress should request that the primary, secondary, and urban formula factors be weighted to reflect road deterioration.

Status: Action not yet initiated.

If Congress wishes to continue to use population in primary, secondary, and urban formulas, the Census Bureau's current state population estimates should be used between decennial censuses to develop annual estimates of urban and rural population.

Status: Action not yet initiated.

Auto Safety: Effectiveness of Ford Transmission Settlement Still at Issue

RCED-86-52, 06/10/86

Background

Pursuant to a congressional request, GAO examined the agreement between Ford Motor Company and the Department of Transportation that closed the National Highway Traffic Safety Administration's (NHTSA) investigation of an alleged transmission defect in certain 1970-79 model year Fords.

Findings

As a result of increased injuries and fatalities due to allegedly faulty Ford automobile transmissions, Ford and

sions of the Administrative Procedure Act, sections 551 et seq. and 701 et seq. of Title 5, when providing for alternative procedure for approving state highway safety plans and failure of the Federal Highway Administration to open meetings with a particular organization to the public pursuant to Federal Advisory Committee Act, Appendix I of Title 5. Id.

3. Regulations

Under this section, Federal Highway Administration's duty to promulgate regulations pertaining to states' plans for certification acceptance is mandatory, although agency is vested with some discretion in deciding what type of regulations are necessary. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

In light of Federal Highway Administration's pending reconsideration of regulations pertaining to certification acceptance plans under this section, there was no final agency action which court could review in action challenging such regulations; however, if agency did not complete reconsideration of regulations within reasonable period of time, agency would run risk of having its failure to act treated, upon appropriate motion made by plaintiffs, as final reviewable agency action. Id.

In the absence of any showing of prejudice as to Federal Highway Administration acceptance of Georgia's certification acceptance plan for highway safety standards pursuant to original tainted regulations governing certification applications, since nonprofit organization which challenged the regulations and the certification was able to comment on the plan while it was pending, and since the organization was entitled to substantive judicial review of the acceptance of the certification, court would not set aside approval of the Georgia plan because of the procedural irregularities in the adoption of the regulations. Center for Auto Safety v. Tiemann, D.C.D.C.1976, 414 F.Supp. 215, remanded on other grounds 580 F.2d 689.

4. Judicial review

Finding of Federal Highway Administration that state had capability to insure that safety standards were contained in state's plan for certification acceptance under this section was not sufficiently explained to afford court proper basis for judicial review, in view of failure of agency to inform court as to which portions of exhibits consisting of thousands of pages were relied upon by agency in making such determination, and thus case would be remanded to agency for clarification. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

While Federal Highway Administrator's decision to employ certification acceptance procedures for state highway safety plan is unreviewable, his decision to approve a state certification is dependent upon mandatory findings and is therefore subject to judicial review. Center for Auto Safety v. Tiemann, D.C.D.C.1976, 414 F.Supp. 215, remanded on other grounds 580 F.2d 689.

5. Safety standards—Generally

When Federal Highway Administration approves state's certification acceptance plan under this section, agency must make finding that state has the capability to insure that safety standards

will be enforced. Center for Auto Safety v. Tiemann, D.C.D.C.1977, 428 F.Supp. 118.

6. —— Factors considered

Under provision of this section authorizing Secretary of Transportation to accept certification from a state on finding that its highway projects will be carried out in accordance with state laws and standards which will accomplish policies and objectives of this title, it is for the Secretary to determine factors relevant to a "capability" finding and the appropriate method for making such a finding; hence, "Certification Acceptance" regulation which specifies reports, etc., that may be examined in evaluating the state's performance and resources is not deficient for failure to include a comprehensive list of specific factors for making a capability finding. Center for Auto Safety v. Bowers, D.C.D.C.1979, 466 F.Supp. 829.

Fact that some documents provided by Secretary of Transportation and Administrator of Federal Highway Administration were prepared after acceptance of Georgia's certification that federal aid highway projects would be carried out in accordance with state laws and standards that met objectives of this title did not undermine the award where there was no post hoc rationalization and subsequent material was relevant to determining continuing adequacy of the state plan and review of such documents was proper in face of court's recognition of possibility of future consideration of the capability finding. Id.

7. Substantial evidence

Decision of Secretary of Transportation and Administrator of Federal Highway Administration to accept Georgia's certification of safety standards for federal aid highways was supported by substantial evidence, including showing that for 20 years the state operated satisfactorily under the secondary road plan, which plan was predecessor to current "Certification Acceptance" system, with remainder of documents reviewed covering many topics, including research and development, safety review and ability of Georgia's Department of Transportation to take corrective action once deficiencies have been spotted. Center for Auto Safety v. Bowers, D.C.D.C.1979, 466 F.Supp. 829.

§ 118. Availability of sums apportioned

(a) On and after the date that the Secretary has certified to each State highway department the sums apportioned to each Federal-aid system or part thereof pursuant to an authorization under this title, or under prior Acts, such sums shall be available for expenditure under the provisions of this title.

(b)(1) Sums apportioned to each Federal-aid system (other than the Interstate System) shall continue available for expenditure in that State for the appropriate Federal-aid system or part thereof (other than the Interstate System) for a period of three years after the close of the fiscal year for which such sums are authorized and any amounts so apportioned remaining unexpended at the end of such period shall lapse.

(2) Except as otherwise provided in this subsection, sums apportioned for the Interstate System in any State shall remain available for expenditure in that State for the Interstate System until the end of the fiscal year for which authorized. Sums not obligated within the time period prescribed by the preceding sentence shall be made available by the Secretary for projects on the Interstate System (other than projects for which sums are apportioned under section 104(b)(5)(B)) in accordance with the following priorities: First, for high cost projects which directly contribute to the completion of an Interstate segment which is not open to traffic; and second, for projects of high cost in relation to a State's apportionment. Sums may only be made available under this paragraph in any State if the Secretary determines that the State has obligated all of its apportionments other than an amount which, by itself, is insufficient to pay the Federal share of the cost of a project on the Interstate System which has been submitted by such State to the Secretary for approval, and the applicant is willing and able to (A) apply the funds to a ready-to-commence project; and (B) in the case of construction work, begin work within ninety days of obligation. Sums made available under this paragraph shall remain available until expended.

(3) Any amount apportioned to the States for the Interstate System under subsection (b)(5)(B) of section 104 of this title shall continue to be available for expenditure in that State for a period of two years after the close of the fiscal year for which such sums are authorized. Sums not obligated within the time period prescribed by the preceding sentence shall be made available by the Secretary for projects for resurfacing, restoring, rehabilitating, and reconstructing the Interstate System to any other State applying for such funds, if the Secretary determines that the State has obligated all of its apportionments under such subsection other than an amount which, by itself, is insufficient to pay the Federal share of the cost of such a project which has been submitted by such State to the Secretary for approval, and the applicant is willing and able to (A) obligate the funds within one year of the date

the funds are made available; (B) apply them to a ready-to-commence project; and (C) in the case of construction work, begin work within ninety days of obligation. Sums made available under this paragraph shall remain available until expended.

(4) Sums apportioned to a Federal-aid system for any fiscal year shall be deemed to be expended if a sum equal to the total of the sums apportioned to the State for such fiscal year and previous fiscal years is obligated. Any Federal-aid highway funds released by the payment of the final voucher or by the modification of the formal project agreement shall be credited to the same class of funds, primary, secondary, urban, or interstate, previously apportioned to the State and be immediately available for expenditure.

(c) Before any apportionment is made under section 104(b)(5)(A) of this title for a fiscal year beginning after September 30, 1983, the Secretary shall set aside $300,000,000. Such amount shall be available only for obligation by the Secretary in accordance with subsection (b)(2) of this section.

(d) In addition to amounts otherwise available to carry out this section, an amount equal to the amount by which the unobligated apportionment for the Interstate System in any State is reduced under section 103(e)(4) of this title on account of the withdrawal of a route or portion thereof on the Interstate System, which withdrawal is approved after the date of enactment of this subsection, shall be available to the Secretary for obligation in accordance with subsection (b)(2) of this section.

(e) The total payments to any State shall not at any time during a current fiscal year exceed the total of all apportionments to such State in accordance with section 104 of this title for such fiscal year and all preceding fiscal years.

(f) Funds made available to the State of Alaska under this title may be expended for construction of access and development roads on a Federal-aid system that will serve resource development, recreational, residential, commercial, industrial, or other like purposes.

(As amended Pub.L. 89–574, § 7(a), Sept. 13, 1966, 80 Stat. 768; Pub.L. 94–280, Title I, § 117(a), May 5, 1976, 90 Stat. 436; Pub.L. 95–599, Title I, § 115(a), Nov. 6, 1978, 92 Stat. 2697; Pub.L. 96–106, § 5(a), Nov. 9, 1979, 93 Stat. 797; Pub.L. 97–424, Title I, § 115, Jan. 6, 1983, 96 Stat. 2107.)

References in Text. The date of the enactment of this subsections, referred to in subsec. (d), is the date of the enactment of Pub.L. 97–424, which was approved on Jan. 6, 1983.

1983 Amendment. Subsec. (b). Pub.L. 97–424, § 115(a), designated existing provisions as pars. (1) through (4), in par. (2) as so designated, substituted "for projects on the Interstate System (other than projects for which sums are apportioned under section 104(b)(5)(B)) in accordance with the following priorities: First, for high cost projects which directly contribute to the completion of an Interstate segment which is not open to traffic; and second, for projects of high cost in relation to a State's apportionment. Sums may only be made available under this paragraph in any State" for "to any other State applying for such funds for the Interstate System," after "available by the Secretary", struck out former cl. (1), which had required readiness to obligate funds within one year of the date the funds are made available, redesignated former cls. (2) and (3) as (A) and (B), respectively; and in par. (3) as so designated, struck out "and any amounts so apportioned remaining unexpended at the end of such period shall lapse" after "such sums are authorized", added provision relating to the disposition of funds not obligated within the prescribed time period, and added further provision that sums made available under this paragraph shall remain available until expended.

Subsecs. (c), (d). Pub.L. 97–424, § 115(b), added subsecs. (c) and (d). Former subsecs. (c) and (d) were redesignated (e) and (f), respectively.

Subsecs. (e), (f). Pub.L. 97–424, § 115(b), redesignated former subsecs. (c) and (d) as (e) and (f), respectively.

1979 Amendment. Subsec. (b). Pub.L. 96–106 substituted "shall continue to be available for expenditure in that State for a period of two years after the close of the fiscal year for which such sums are authorized and any amounts so apportioned remaining unexpended at the end of such period shall lapse" for "remaining unexpended at the end of the period of its availability shall lapse".

1978 Amendment. Subsec. (b). Pub.L. 95–599 substituted provisions relating to the availability of funds until the end of the fiscal year for provisions relating to the availability of funds until two years after the close of the fiscal year and substituted provisions establishing requirements for eligibility for funds for provisions calling for immediate reapportionment of funds.

1976 Amendment. Subsec. (b). Pub.L. 94–280, in revising the text, provided for a separate three year period of availability of sums apportioned to a Federal-aid system (other than the Interstate System), increased from the previously applicable two year period; continued the existing two year period for sums apportioned to the Interstate System; substituted provision for reapportionment of sums, apportioned to the States for the Interstate System under section

Notes of Decisions

Federal restrictions 2
Justiciable issues 3
State control of allotted funds 1
State funds, use of its own 4

---

1. State control of allotted funds

A reasonable construction of provision of this section providing that sums apportioned to each Federal-aid system or part thereof shall be available for expenditure on and after date Secretary has certified sums to each State highway department was not supportive of Secretary's argument that states have no inchoate interest whatsoever in funds so apportioned. State Highway Commission of Missouri v. Volpe, C.A.Mo.1973, 479 F.2d 1099.

2. Federal restrictions

Provision of subsec. (b) of this section providing that highway funds shall continue to be available for expenditure "in that state" for a period of two years before the lapse simply means that money is to be available for an individual state to use, and if any state does not obligate all their money within two-year period, then money will lapse, but does not mean that federal government may withhold money as it sees fit so long as states are allowed to obligate funds within two years. State Highway Commission of Missouri v. Volpe, C.A.Mo.1973, 479 F.2d 1099.

State which was ready, willing and able to obligate its apportionment from highway trust fund but was prevented from doing so by withholding, by Secretary of Transportation of the United States with approval of Director of the Office of Management and Budget of the United States, of authority to obligate apportionment from the fund for reasons related to prevention or control of inflation was entitled to injunctive and declaratory relief. State Highway Commission of Mo. v. Volpe, D.C.Mo.1972, 347 F.Supp. 950, modified on other grounds 479 F.2d 1099.

Under this chapter and V.A.M.S. Const. art. 4, §§ 29, 30 and V.A.M.S. § 226.010 et seq., State Highway Commission of Missouri had standing, as state agency invested with exclusive and plenary powers and duties on behalf of Missouri to receive and administer federal highway funds and apportionments, to maintain action against Secretary of Transportation of the United States and Director of the Office of Management and Budget of the United States seeking injunctive, declaratory and mandamus relief in connection with withholding authority from Missouri to obligate apportionment from highway trust fund. Id.

3. Justiciable issues

Action under section 1361 of Title 28 by State to compel Secretary to release all funds authorized and apportioned to State for contractual obligation under this chapter presented a justiciable controversy. State of Iowa ex rel. State Highway Commission v. Brinegar, C.A. Iowa 1975, 512 F.2d 722.

Although Indiana motorist contended that he had been injured by failure of Director of Office of Management and Budget and Secretary of Transportation to release impounded highway funds, where no state project had been denied by Administration and all money apportioned to state for prior fiscal years, as well as major portion of current fiscal year's funds, were available to state, the issue motorist presented was conditioned on events that had not occurred and were so hypothetical as to be nonjusticiable. Stanton v. Ash, D.C.Ind.1974, 384 F.Supp. 625.

4. State funds, use of its own

Where state highway project had not received federal funding prior to injunction halting project, district court was without authority to enjoin state's use of its own funds to engage in preliminary planning and design activities on theory that state and federal government were partners in the enterprise. Sierra Club v. U.S. Army Corps of Engineers, C.A.N.Y.1984, 732 F.2d 253.

§ 119. Interstate System resurfacing

(a) The Secretary may approve projects for resurfacing, restoring, rehabilitating, and reconstructing routes on the Interstate System designated under sections 103

APPENDIX C-1

Apportionment Formulas

Formulas for apportioning authorized sums for certain classes of Federal-aid highways are specified by statute. These are shown below.

Fund	Factors	Weight	Statute*	Minimum Apportionment
Interstate System (for completion only)	Relative Federal Share of Cost to Complete the System**	1	104(b)(5)(A)	1/2 percent (including Alaska)
Interstate Resurfacing, Restoration, Rehabilitation, and Reconstruction	Interstate System Lane Miles Vehicle Miles Traveled on Interstate System	55% 45%	104(b)(5)(B)	1/2 percent
Interstate Highway Substitution (3/4 apportioned, 1/4 discretionary allocation)	Relative Federal Share of Cost to Complete Substitute Projects	1	103(e)(4)	----------
Primary System	Formula A		104(b)(1)	
	Area	2/9		
	Rural Population	2/9		
	Rural Delivery Route Mileage and Intercity Mail Route Mileage	2/9		
	Urban Population*** (1/2 percent minimum (except D.C.))	1/3		
	Formula B		Sec. 108, P.L. 97-424	
	Rural Population	1/2		
	Urban Population***	1/2		
	For each State, determine greater of A or B, then: Each State's apportionment equals: A or B x Total Primary Authorization / Sum of all States' A or B. Except that: the apportionment is not less than smaller of A or B			1/2 percent (including territories as a whole)
Secondary System	Area	1/3	104(b)(2)	1/2 percent (except for D.C.)
	Rural Population	1/3		
	Rural Delivery Route Mileage and Intercity Mail Route Mileage	1/3		
Urban System	Urban Area*** Population	1	104(b)(3)	1/2 percent
Urban Transportation Planning	Urbanized Area**** Population			
Bridge Replacement & Rehabilitation	Relative share of total cost of deficient bridges			maximum

ALASKA STATE LEGISLATURE
HOUSE OF REPRESENTATIVES
RESEARCH AGENCY

Pouch Y, State Capitol
Juneau, Alaska 99811
(907) 465-3991

September 1, 1983

MEMORANDUM

TO: Representative Niilo Koponen

FROM: Betty Barton, Legislative Analyst BB
Susan Brody, Director SEB

RE: Reductions in Federal Funding in Alaska
Research Request No. 83-140

You asked this agency to obtain information about decreases in federal funding that may have occurred in Alaska since fiscal year 1980. In those instances where reductions have taken place, you also asked that we examine whether the State had attempted to replace lost federal funds or had absorbed these losses. No agency within the State has comprehensively monitored this issue in the past, and there is no single source that is considered to be entirely accurate regarding either the obligation or outlay of federal funds in Alaska.[1] At the federal level, existing data is also limited. Because of this, a detailed response to several components of your request was not possible.

Part one of this memorandum presents an overview of several of the fundamental and significant issues concerning federal aid to State and local governments; it reviews the types of federal assistance that are received and summarizes the proposed changes in federalism policies as well as the significance of the changes to State and local governments. Part two examines the reductions in federal aid to Alaska and the effects of these reductions on the State and its municipalities. Part two also presents the results of a survey we conducted of State agencies in Alaska regarding reductions in federal funding for the period FY 1980 to FY 1984.

---

1 The Governor's Office of Management and Budget (OMB) is in the process of developing a system for monitoring federal spending in Alaska by department.

OVERVIEW OF FEDERAL AID

Categories of Federal Spending

Federal spending in the states may be divided into five categories:

1. Payments to individuals;
2. Procurements;
3. Grants to states and local governments;
4. Salaries and wages; and
5. Miscellaneous expenditures.

Of these, payments to individuals is the largest category of federal expenditure. Of the $603.5 billion in federal outlays for Federal Fiscal Year (FFY) 1982, $286 billion or 47 percent was for direct payments to individuals.[2] These payments, which include medicare, social security, and federal retirement, are primarily distributed to the elderly. However, food stamp distribution, payments to veterans and to the disabled, and several other program outlays are included in this category.

Twenty-four percent of federal outlays in FFY 1982 was in procurement, the acquistions made by federal agencies within states. The vast majority of these outlays are military-related; in FFY 1982, 80 percent of the outlays in this category were for procurement by the Department of Defense.

The third largest category of federal assistance is grants to states and local governments. Eighty-eight billion dollars[3] (15 percent of total outlays) fall within this category, which includes direct cash grants to state and local government units, payments for grants-in-kind, payments to nongovernmental entities when such payments result in cash or in-kind services that are passed on to a state or local government, payments to regional organizations that are redistributed at the state or local level, research development payments to state and local governments, and shared revenues.[4] Twenty-eight percent of this

---

2 Based on data provided by the U.S. Bureau of the Census.

3 Figures for federal grants that were used by the U.S. Bureau of the Census at the time of its preparation of Federal Expenditures by State for Fiscal Year 1982 were primary and may differ slightly from final data to be prepared by the U.S. Department of Treasury.

4 Excluded from this category are federal government grant payments to individuals, some profit and nonprofit organizations, and payment for services rendered.

category of federal assistance was for Aid to Families with Dependent Children (AFDC) and Medicaid while 5 percent was for shared revenues.

Less than ten percent of all federal expenditures fall within the miscellaneous category. These amounts, as reported to the Census Bureau Federal Assistance Award Data System (FAADS), generally represent obligations of the federal government based upon awards of financial assistance approved during the fiscal year. However, the differences between these amounts and actual expenditures are estimated to be small. Roughly $5 billion fell within this category in FFY 82.

Of the five categories of federal expenditures occurring in states, it is grants-in-aid that most directly affects state and local government budgets. Consequently, it is this type of federal aid that is the focus of this memorandum.[5]

Federal Grants to State and Local Governments

Essentially, there are three types of federal grants made to states and municipalities: categorial grants, block grants, and general revenue sharing funds. Generally speaking, categorical grants may be used only for designated, narrowly defined purposes. General revenue sharing funds, on the other hand, are distributed to states and local governments by formula and have few restrictions regarding either the purpose or process utilized for expenditure. In between these two kinds of grants are block grants which present fewer limitations than categorical grants but more than would be imposed through general revenue sharing. Block grants are normally distributed by formula to governments and are to be used in a broad functional area; the specific uses of block grant funds are generally left to the recipient's discretion.[6]

Categorical grants are the oldest and most utilized method of dispensing federal aid; the first block grant was not established until 1966 and general revenue sharing not until 1972. In terms of purpose, federal grants-in-aid fall within one of three categories: grants for operating purposes; grants for capital expenditures; and entitlement grants to individuals or families, e.g. AFDC or Medicaid grants.

---

5 Some attention will also be given to direct payments to individuals.

6 Claude E. Barfield, Rethinking Federalism: Block Grants and Federal, State and Local Responsibilities, pages 1 and 2.

The federal grants-in-aid concept emerged during the middle part of this century and made a substantial impact on the spending pattern of state and local governments. Between 1956 and 1981, federal, state and local spending (in nominal terms) increased ten times in size; public spending rose from $99 billion in 1956 to $925 billion in 1981.[7] Public expenditures are commonly measured as a percentage of the gross national product (GNP) in order to account for certain factors, such as price increases and growing population. Expressed in these terms, public spending increased from 24 percent of the GNP in 1956 to 32 percent in 1981. In the federal GNP share, more than 33 percent of this growth is attributed to increased outlays in grants to state and local governments.[8]

The largest increase in federal aid occurred in 1972 when general revenue sharing was implemented. The advent of dollars distributed through this program enabled states and local governments to establish tax relief measures between 1973 and 1975.[9] By 1976, in most states, revenue surpluses had declined causing a resumption of high state and local tax burdens. In many states and localities, property tax relief campaigns were initiated which resulted in a substantial reduction in state and local revenues. At the same time that states and localities were encountering difficulties in their ability to drive down costs and generate revenues, federal domestic policies began to change.[10]

Changing Policies Regarding Federal Aid

In 1981, President Reagan presented an economic package that included substantial modifications to the relationship between the federal government and its states and local governments. Central to the President's position was a concern that the federal government had assumed responsibilities that could be underrtaken more effectively by state and local governments. Included within this position was a belief that the system of dispensing federal aid--largely through categorical grants--was duplicative, ineffective, and frequently involved excessive regulatory requirements. In response to these concerns, the Reagan administration began to devise both long and short-term goals.

---

7 John L. Palmer and Isabel V. Sawhill, eds., The Reagan Experiment, page 61.

8 Ibid.

9 Ibid., page 161

10 Ibid.

Included among the long-term goals was an extensive plan for several major program transfers which would have resulted in the federal government assuming complete responsibility for the administration and financing of Medicaid while giving the state governments complete responsibility for Aid to Families with Dependent Children and Food Stamps. In subsequent proposals, the Food Stamp program was excluded from the proposal. The Reagan administration appears to have postponed consideration of this aspect of the federalism initiative. Although a plan of transfer was proposed in the FFY 83 budget plan, it does not appear in the FFY 84 proposal.

Under the original plan, responsibility for approximately 40 grants-in-aid programs would be "turned back" to the states, and, on a transitional basis (until 1987), would be financed by a trust fund to be comorised of revenues from the federal windfall oil profits tax[11] and excise taxes. Between 1988 and 1991, states could determine whether or not to assume responsibility for the former federal programs and would be able to reimpose taxes at the state level that had been phased out at the federal level. Elements of the President's "turn back" plan currently appear in the FFY 84 budget proposal.

The short-term goals of the Reagan administration regarding state and local governments are expressed throughout the FFY 1982 - 1984 budget proposals. Essentially, they may be summarized as follows:

- Reduce grants-in-aid funding;
- Simplify the administration and regulation of grants; and
- Consolidate categorical grants into block grants.

The third goal--concerning block grants--is clearly the major underpinning of the short-term strategy.

In 1981, in his initial budget proposal, President Reagan proposed the consolidation of 85 categorical programs into seven block grants. Congress was generally responsive to this plan, but made several modifications. As enacted, the Omnibus Budget Reconciliation Act of 1981 consolidated 54 programs into the following nine block grants:[12]

- Preventive Health
- Maternal and Child Services

---

11 The windfall profits tax eventually was dropped from the proposal.

12 Seven block grants were created and two existing ones were restructured.

- Alcohol and Drug Abuse
- Social Services (revamped)
- Community Services
- Low-Income Energy Assistance (revamped)
- Community Development
- Education and Consolidation Improvement Act

The most substantial effect of this was in the area of health services which had 21 categorical grant programs consolidated into four block grants and which resulted in funding reductions of between 20 and 35 percent. Although the Reagan administration made significant gains in their effort to reduce the number of categorical grants, 450 remained in 1982.

In his FFY 83 budget proposal, President Reagan proposed eight additional block grant initiatives and modifications of these existing grants to include still more categorical programs. As articulated by the U.S. Office of Management and Budget, the purpose of the administration's proposals was to: continue the consolidation effort initiated in the previous year, give states more discretion over the use of their funds, and decrease state and local dependence on federal funds.

By many interpretations, the congressional response to Reagan's proposal in 1982 was less favorable than it had been earlier. Congress authorized only two additional block grants in 1982: the Jobs Training Partnership Act and the Surface Transportation Act.

In the FFY 84 budget plan, the administration has proposed four new block grant initiatives, each introduced as a separate bill:

- The State Fiscal Assistance Block Grant Act (S763 & HR 2650)
- The Local Fiscal Assistance Block Grant Act (S762 & HR 2648)
- The Federalism Block Grant Highway Act (S767 & HR 2649)
- The Rural Housing Block Grant Act (S761 & HR 2647)

If enacted, the grants would be authorized for a five-year period (FFY 84 - FFY 88). According to the President's annual budget message, he intends to appoint a special commission that would explore whether or not excise taxes or a percentage of the income tax could be turned back to states and localities.[13]

---

13 Dierdre Riemer, National Governors' Association, InfoLetter, "Federalism Update," 5/18/83, page 4.

Under the FFY 1984 proposal, federal aid outlays appear, on the surface, to increase from $93.5 billion to $95.9 billion. However, the increase is primarily due to $3.2 billion in additional highway funds resulting from the recent gasoline tax increase and $1.5 billion in increased medicaid expenditures that are resulting from continued increases in health care costs. If enacted as proposed, the budget would result in roughly $2.7 billion in reductions for a variety of social programs. In turn, federal aid outlays would decline from 11.6 percent of total outlays to 11.3 percent.[14]

Fiscal Impact of the New Federalism

According to staff at the National Governors' Association, the likelihood that Congress will enact any of the Reagan administration's most recent federalism initiatives is not strong, particulary given the absence of substantial support from either state or local interest groups.[15]

However, regardless of whether or not the Reagan administration's plan is approved, most forecasters have predicted a continued downward trend in the level of federal aid that is obligated to state and local governments. In its most recent report on the features of federalism, the U.S. Advisory Commission on Intergovernmental Relations, has stated that indicators point to a continued decline.[16] The Commission attributes this trend to the action of federal policymakers who are "returning to the basics" in federal budgeting policy. In a recent article in the National Journal, analysts noted that federal aid is one of the simplest components of the budget to reduce: it is roughly one-half of the "so-called controllable" part of the budget and its constituency tends to be diffused.[17]

The fiscal impact of these policies on state and local budgets could be substantial. For example, according to Steven Gold of the National Conference of State Legislatures, if the Reagan adminstration's budget

proposals were all adopted, 1991 federal aid would comprise only 3 or 4 percent of state and local budgets as compared to 25 percent in 1980.

Of fundamental concern is whether state and local governments would be able to absorb reductions in aid and program transfers without establishing large increases in local tax structures. A recent survey of state budgets conducted by the National Governors' Association and the National Association of State Budget Offices, found the financial condition of states to be substantially weakened. Based on survey findings, states tended to spend more in FY 83 than they generated in revenues; 27 states are anticipating balances of less than one percent of current expenditures.[18] Forty-six states plan to continue using budget balancing measures; of these, 38 will employ temporary or permanent tax increases; 27 will maintain hiring limits; and 18 will restrict all out-of-state travel for public personnel.

In light of these gloomy fiscal conditions, surprisingly little research has been conducted regarding the effects of these new policies on states and localities. A notable exception is an extensive study directed by Richard P. Nathan, professor of public and international affairs at Princeton's Woodrow Wilson School.[19] The project evaluated 14 states and 40 cities, seeking to identify both the specific programs and services that these governments eliminated in FY 1982 and the ways in which the sample governments responded to federal reductions. In the FFY 82 budget, the largest reductions occurred in social programs, particularly those that provide grants-in-aid. The type of federal aid to states and localities that received the most substantial reductions was in the area of operating grants, which experienced a 17.5 percent decrease in outlays compared to FFY 81. However, capital grants also declined, receiving a 7.5 percent reduction. And, although entitlement grants rose slightly (two percent), the rate of increase was substantially less than those occurring during the past five years, which average ten percent.

---

18 National Governors' Assocaiation Office of Research and Development and the National Association of State Budget Offices, Fiscal Survey of the States, 1983, June 1983, page 2.

19 The results of the study have published in a book entitled The Consequences of Cuts: The Effects of Reagan Domestic Program on State and Local Goverments (Princeton University Press), which is scheduled to be distributed this month.

Despite the magnitude of these reductions, the Princeton study has found that for most states and localities, fiscal impacts were not as significant as anticipated. Only in occasional instances were lost federal aid dollars replaced with state and local funds.[20]

It is important to stress that the mildness of these fiscal impacts is partially attributable to a delayed reaction on the part of state and local governments. Dr. Nathan, in fact, has noted that "state and local governments used various delaying and coping strategies to postpone the effects of the federal budget cuts in fiscal year 1982."[21] He found this pattern to be particulary prevalent in terms of block grants. Governments frequently used federal carry over funds to delay the effects of reductions. Consequently, more significant effects may be felt in state operations in current and future years.

Finally, although state and local governments did not sustain major fiscal impacts as a result of the FFY 82 reductions, that is not to say that states were not affected. According to the findings of the study, those who were most significantly affected by the reductions were people, particularly the "working poor," who were negatively affected by reductions in entitlement programs and operating programs.

---

20 According to study findings, replacement was most prevalent in Oklahoma, New York and Massachusetts where states replaced between 10 and 25 percent of lost aid. Five of the fourteen states replaced some of the lost funds, but at a rate of less than 10 percent. At the local level, the replacement rate was smaller.

FEDERAL FUNDS IN ALASKA

Amounts and Sources of Federal Aid

Since 1970, Alaska has consistently received more federal funds on a per capita basis than any other state in the nation. The state ranks first in federal wages and salaries paid per capita, first in grants to states and local governments, and sixth in federal procurement. This is not to say that Alaska ranks high in all categories of federal assistance. Alaska receives fewer payments to individuals than any other state due to its comparatively small elderly population. Moreover, per capita analysis has limitations because it does not account for unique characteristics of states, e.g., large land area and small population, extensive social programs, the presence of Native Americans, large numbers of federal employees, high costs of living and a large amount of federal shared revenues resulting from natural resource exploration occurring on federal lands.

Approximately $1.9 billion in federal outlays were made in Alaska in FFY 82. Of the federal spending that occurs in the state, much is attributable to military-related expenditures. The state's largest category of federal outlays is wages and salaries which comprises 38 percent of the federal spending that occurs in Alaska.[22]

Of the federal outlays that Alaska received in FFY 82, roughly 22 percent ($422 million) were grants -- that type of federal assistance which is generally regarded to be of greatest direct economic benefit to State and local budgets.[23] Table 1 shows the total amount of federal grants in aid received by State and local governments in Alaska for federal fiscal years (FFY) 19771982. This is compared to the amount received by all states for the same period.

---

22 Of this, military salaries account for 26 percent. Alaska's military payroll is $1,187 per person compared to $24 per capita in Iowa; in other words, military wages in Alaska are more than 40 times the size of those in Iowa when measured on a per capita basis.

Source: United States Department of Commerce

Transportation is the largest category of aid in Alaska, representing approximately 32 percent of federal aid outlays. According to NCSL, in other states, these outlays, which are principally used for highway expenditures, represent about 14 percent of federal aid. Generally speaking, health and human services comprise the major portion of federal aid in other states. According to staff at the National Conference of State Legislatures, more than half of state welfare spending is federally funded, and, on the average, welfare outlays represent roughly 43 percent of the federal aid received by other states.[24] In Alaska, 17 percent of the federal aid distributed in FFY 82 was related to social service spending.

---

24 Steven Gold, National Conference of State Legislatures, Recent Developments in State Finances, Legislative Finance Paper #32, (NCSL: Denver), 2/83, page 23.

Reductions in Federal Aid

As in other states, the amount of federal aid has declined in recent years. Alaska received its largest share of outlays in FFY 80 when $451 million was distributed.[25] Federal aid outlays in FFY 82 reflect a 6.5 percent reduction from this amount. To date, federal aid reductions in Alaska have been slightly less than the national average. Between FFY 81 and FFY 82, for example, Alaska experienced a decrease in federal aid of only 5.9 percent compared to an average decrease of 6.9 percent in all states.

In Alaska, the most substantial reduction occurring between FFY 81 and 82 was in the grants in aid distributed by the U.S. Department of Labor, primarily the result of the elimination and reduction of employment and training programs. The State experienced a decrease of almost $15 million, which was a 34.5 percent reduction from the previous year's outlays. Other significant losses were in federal aid distributed by the U.S. Department of Education, where outlays to Alaska decreased by $9 million (a reduction of 12.3 percent); by the Environmental Protection Agency which made $6.2 million less in outlays (a 35.2 percent reduction); and the Department of Housing and Urban Development which provided $3.4 million fewer outlays (an 11.8 percent reduction). The U.S. Department of Health and Social Services, which was projected by many national analysts to be one of the primary areas of budgetary reduction, distributed 6.7 percent fewer outlays to Alaska in FFY 82--representing a loss of more than $5 million (in nominal dollars).

The impact of these reductions on Alaska's State budget is unclear and depends on the ability of the State to withstand and compensate for losses in the various program categories. However, as a broad statement, it is fair to say that states, such as Alaska, which rely heavily on federal aid may be expected to encounter some negative impacts. As National Governors' Association analysts noted in describing the perceived impacts of the Reagan administration's proposed FFY 83 budget, "on a per capita basis, the big federal aid losers are the big federal aid users."[26] Much of the impact, however, may be passed directly on to Alaska's local governments, because generally a substantial portion of the federal aid that a State receives is redistributed to its municipal governments. According to some analysts, local governments may have developed stronger federal aid dependencies than states.

---

25 U.S. Department of the Treasury, Federal Aid to States, 1981, (U.S. Government Printing Office: Washington).

26 National Governor's Association, The Impact of the FY 1983 Federal Budget on the States: State by State Analysis, Preliminary Draft, 2/82, page 15.

It should be noted that several areas of federal aid experienced noteworthy increases in outlays. Grants distributed by the U.S. Department of the Interior, for example, more than doubled between FFY 81 and FFY 82, principally due to sizable increases in outlays from receipts under the Mineral Leasing Act. Treasury grants also rose from $16.3 millio to $19.6 million, a 20.5 percent increase, the result of increases in general revenue sharing.

Federal Funds Received by State Agencies in Alaska

The House Research Agency sent a letter to all executive branch agencies in April of this year asking for information on federal funds received or expected for fiscal years 1980-1984 (see Attachment A). Detailed responses were received from 12 agencies. The Departments of Law and Natural Resources did not provide the requested information, and the Department of Transportation and Public Facilities provided only a partial response.

Brief summaries of most of the responses we received from the State departments are presented on the following pages. Attachment B contains copies of the detailed agency responses. Unfortunately, the information we received cannot be summarized easily. Some of the funding data was presented by State fiscal year (SFY) while other information is by federal fiscal year (FFY). In addition, no clear pattern of federal funding reductions or changes emerges from the data.

Moreover, information for State fiscal year 83 and 84 is somewhat speculative; the estimates provided could vary substantially from the actual amount which will be received. State FY 83 actuals are not computed until the fall of 1983 and FY 84 actuals will not be available until a year from now.

The four State agencies receiving the largest amounts of federal funding were the Departments of Transportation and Public Facilities, Health and Social Services, Education, and Labor, in that order. Federal receipts constitute a substantial part of the budgets of certain agencies, but only a very small percentage of other agency budgets. For example, in FY 83, federal funds represented only about 2 percent of the operating budget of the Department of Commerce and Economic Development, but was 24 percent of the Health and Social Services budget and 55 percent of Department of Labor's budget.

Department of Administration

The only federal funds received by the Department of Administration went to the Older Alaskans Commission. These included funds from the U.S. Departments of Health and Human Services, Labor, and Agriculture.

The largest source of federal funds for the Commission (estimated at $3.2 million in FFY 83) was Title III of the Older Americans Act for social and nutrition programs for the elderly. Funding levels have increased slightly for this program from FFY 80 to FFY 83 and are estimated to continue this trend for FFY 84.

Department of Commerce and Economic Development

No clear trends are evident in the pattern of federal funding for the Department of Commerce and Economic Development. Total federal funds received over the last four State fiscal years have ranged from $2.5 million to $3.7 million.

The Department of Commerce and Economic Development has the following divisions which receive some support from federal funds: Alaska Seafood Marketing Institute; Division of Measurement Standards; Division of Energy and Power Development; Division of Economic Enterprise; and the Alaska Public Utilities Commission. Many of the federal grants to these divisions over the last three fiscal years were for one-time, project-specific purposes. Energy and Power Development is the division in the department which has received the largest amount of federal funds; its federal funds have come primarily from the U.S. Department of Energy.

In addition, the Department's Division of Economic Enterprise participated in a cooperative funding assistance program with the U.S. Economic Development Administration (EDA) through which grant funds were made available to public and nonprofit agencies for public works and technical assistance projects. These federal funds did not pass through the Department, but instead were granted directly to the recipient agencies. The amount granted through this program was substantial and decreased significantly from $4.1 million in FFY 80 to $69 thousand in FFY 83. There is no commitment for funding under this program in FFY 84.

Department of Community and Regional Affairs

The Department of Community and Regional Affairs receives funds from a variety of federal agencies including the U.S. Departments of Commerce, Agriculture, Labor, and Housing and Urban Development. The three largest sources in recent years have been the Coastal Energy Impact Program ($1.8 million in SFY 83) and the Coastal Management Development Program ($3.4 million in SFY 83) both in the U.S. Department of Commerce. The U.S. Department of Labor's CETA program (now the Jobs Training Partnership Act) also has provided a significant source of federal funds ($5.9 million in SFY 83).

Total federal funding for the department has ranged from $11 million to $19 million. No major program reductions are evident except for the CETA program where federal funding decreased steadily from $15.7 million in SFY 80 to $6 million in SFY 83.

Department of Education

The Department of Education's federal funding comes from thirteen federal programs. The federal programs providing the largest amount of funding include the child nutrition programs in the U.S. Department of Agriculture, the ESEA Title I program for disadvantaged children, and the vocational rehabilitation program.

Funding for the child nutrition programs has increased from $5.8 million in SFY 80 to $7.4 million in SFY 83 and is estimated to stay at approximately that level for SFY 84. However, as noted by the department, the funding increases do not give a true picture of the federal budget cuts or their impact. Increases in funding are due to the fact that more children are participating in the program; the actual benefit amounts have decreased. The largest cuts were apparently made in 1981 and 1982.

In addition, under P.L. 81-874, the federal government provides Federal Impact Aid to school districts for students whose parents live and/or work on federal lands not subject to State or local taxation. These funds are classified as "other receipts" and do not become part of the Department of Education's operating budget. In SFY 1980, $46.9 million was received from the federal government under this program. This amount had declined to $34.4 million in SFY 1983.

Department of Environmental Conservation

The State Department of Environmental Conservation (DEC) receives federal funds almost exclusively from the U.S. Environmental Protection Agency. Some of the federal grants are for continuing programs, while others fund one-time special projects.

Reasons cited by the DEC for loss of federal funds over the last several years include: federal budget cuts, State funding for particular programs below the minimum support required for federal matching funds, and a depletion in federal carry over funds from one budget period to the next.

Two of the largest sources of federal funds to the department have been EPA's safe drinking water program and the water pollution control program. The DEC has experienced significant reductions in federal funding for both programs. According to DEC, the amount of funding from

the federal drinking water grant base was reduced by $293,000 beginning with SFY 83; the reductions to the water pollution control program started in SFY 82 and resulted in a permanent loss of approximately $284,100.

Office of the Governor

Federal funding does not represent a substantial part of the Governor's Office total budget. The Alaska Human Rights Commission and the Division of Policy Development and Planning (now a part of OMB) are the two sub-entities in the Governor's office which receive federal funds. The amounts received are given below by State fiscal year. Note that the amounts for SFY 80-82 are actuals, while only the authorized amounts are available for SFY 83 and 84.

SFY 80	SFY 81	SFY 82	SFY 83	SFY 84
$688,500	$149,600	$445,800	$316,600	$366,000

Department of Health and Social Services

The Department of Health and Social Services (DHSS) has many divisions which receive federal funding. The Division of Public Assistance received the majority of DHSS's federal funds. The department notes that the only reduction in federal funding in the Division of Public Assistance occurred in the Title XIX Medicaid program. Medicaid payment entitlements to states were reduced in P.L. 96-499 by 4 percent in FY 83 and 4.5% in FY 84.

The Division of Family and Youth Services also experienced some reductions in federal funding for social services under Title XX of the Social Security Act. Title XX was changed from a categorical grant in fiscal year 1981; the resulting loss of federal funds was replaced with State funds. Many of the other divisions within DHSS experienced funding changes in certain programs when various categorical grant programs were converted to block grants by the Reagan administration, but this did not necessarily result in actual reductions in federal funding.

Department of Labor

The Department of Labor receives federal funds from three agencies: the U.S. Department of Labor, Employment and Training Administration; the U.S. Occupational Safety and Health Administration; and the Bureau of Labor Statistics. Federal funding reductions over the last several years have been felt by most of the programs run by the department.

A substantial amount (roughly 34 percent in SFY S3) of the federal funds received by the Department of Labor go to employment services. In FY 82 federal funds were not provided to operate the rural offices of Employment Services. The State legislature and Governor provided replacement funds to help maintain these offices. Other federal funding reductions were accommodated in this program through staff reductions.

In the area of occupational safety and health (which received 6 percent of the department's federal funds) , the federal funding reduction received in FY 82 was the result of State legislative action, not federal budgetary cutbacks. The State reduced the amount of general funds going to the division which, in turn, decreased the federal contribution as federal funds are tied to the level of State funding.

The total amount of federal funds recieved by the Department of Labor for the past four State fiscal years and anticipated for 1984 is shown below.

SFY 80	SFY 81	SFY 82	SFY 83	SFY 84
$19,616,500	$21,252,600	$18,733,200	$19,859,400	$20,211,300

Department of Military Affairs

Two divisions within the Department of Military Affairs receive federal funds: the Division of Emergency Services (ADES) and the U.S. Property and Fiscal Office (USPFO--includes Army and Air Guard). ADES has had an increase in program funding in federal fiscal years 82 and 83. The Army and Air Guards have also experienced federal funding increases.

Department of Revenue

The Department of Revenue receives federal funds only for its Child Support Enforcement Division. This funding represents a reimbursement of 75 percent of the division's operating expenditures for State fiscal years 1980 through 1982. Beginning in SFY 83, the reimbursement rate decreased to 70 percent. As the reimbursement rate decreases, more State funds are required to maintain the current level of services.

A summary of federal funding received by the Child Support Enforcement Division is presented below for State fiscal years 80 - 84. Funds for SFY 83 and 84 are estimates only.

SFY 80	SFY 81	SFY 82	SFY 83	SFY 84
$1,505,100	$1,755,300	$1,815,000	$2,458,800	$2,875,200

Department of Transportation and Public Facilities

The Department of Transportation and Public Facilities (DOTPF) recieves more federal funds than any other State department, primarily in its capital budet. According to DOTPF, their major source of federal funds (the Federal Highway Administration) has increased by almost 50 percent this year and will continue to increase.

DOTPF anticipates only one reduction in federal funding. The Department has been receiving approximately $162,500/year from the Urban Mass Transit Administration; this has been passed through to seven Alaska cities to help pay for the operating costs of transit services (ferries, buses, etc.). The federal government plans to reduce the funding by 80 percent in 1984, 90 percent in 1985, and eliminate it altogether after that.

Federal Budget Impact Fund

In 1981 and 1982, the Alaska State Legislature established funds to help alleviate the problems created by reductions in federal funding. In 1981, $5 million was appropriated in Chapter 82, SLA 81; the Governor was required to consult with the chairmen of the Legislative Budget & Audit Committee (LB&A) and the House & Senate Finance committees prior to disbursing any of these funds to State and non-State agencies.

The State Federal Budget Impact Fund was created in 1982 by Chapter 125, SLA 82 with a total appropriation of $20 million. The legislation required the governor to submit proposed disbursements from the fund to the LB&A Committee for review. According to information supplied by the Governor's Office of Management & Budget, approximately $16 million was disbursed from this fund in SFY 1983. Many of the recipients of the fund were private nonprofit agencies providing social services. The two largest disbursements went to the Department of Health and Social Services for Medicaid ($1.5 million) and to the Department of Education for BIA school transfers ($7.9 million).

Dear .. Pomeroy and Ms. Barton:

This is in response to your letter dated April 20, 1983 to Commissioner Lisa Rudd in regard to reductions in federal funding that have occurred between FY 1980 and FY 1984. You had requested this information by May 13. On May 10th, we requested an extension of the required date to May 18, until our accountant returns from annual leave.

Listed below are the federal funds received or anticipated to be received by the Older Alaskans Commission during FY '80 to FY '84.

Federal Funds:

U.S. Department Health and Human Services
Older Americans Act:

	FFY'80	FFY'81	FFY'82	FFY'83	FFY'84
a) Title III, Social and Nutrition Program for the Elderly	$3,114,001	$3,289,900	$3,203,023	$3,400,291	$3,400,291
b) Title IVa, Training	30,000	30,000	30,000	30,000	30,000

Juneau, Alaska 99811

Dear Betty and Debbie:

The Department of Commerce and Economic Development does not receive major federal funding in support of overall operations. A few specific orograms, however, are supported by federal funds. These areas follow, by agency:

Alaska Seafood Marketing Institute

ASMI has received two federal cooperative agreements, 81-ABH-00109 for $217,000 for State fiscal years 1982 and 1983, and 82-ABH-00121 for $254,000 for State fiscal years 1983 and 1984. Both grants were for advertising, promotion and quality assurance education of/for Alaska seafood products. The grants are from DOC/NOAA/NMFS. No further federal grants are expected.

Division of Measurement Standards

The Division of Measurement Standards assumed responsibility for the vehicle weigh stations in FY 83, and with them a Federal Demonstration Program involving commercial vehicle weighing and inspection. This demonstration program ended in March, 1983.

The contract number was DT-FH-61-80-X-00042 Mod #3, and was from the U. S. Department of Transportation, Federal Highway Administration for $672,000. No further federal funding is expected.

08-H2LH

Division of Energy and Power Development

DE&PD has had numerous federally funded programs. A summary of those is attached.

Division of Economic Enterprise

The Division of Economic Enterprise has had three federally funded projects. The history of each is as follows.

BIA Grants - The U. S. Department of Interior, Bureau of Indian Affairs, contracted with the Division of Economic Enterprise through a memorandum of agreement to provide various economic development grants to rural communities throughout Alaska. The contract number was E00C14201732. Funding was $216,000 in FY '80, $154,900 in FY '81, and $10,000 in FY '82. The contract expired September 30, 1981. No further funding has been available.

BLM Grant - The U.S. Department of Interior, Bureau of Land Management, contracted with the Division of Economic Enterprise so the division could participate in the Southcentral Alaska Water Resource Study. The contract number was AK-910-4930-0109-9475. The FY '80 funding was $1,000. No further funding is expected.

NOAA Grant - The U.S. Department of Commerce, National Oceanic and Atmospheric Administration contracted with the Division of Economic Enterprise to supplement the State's efforts for a commercial geoduck feasibility study. The contract was for $10,000 in FY '81, and supplemented an FY '81 authorization of $30,000 for that project. The grant number was 81-ABD-00035. The project is complete; no further funding is expected.

Alaska Public Utilities Commission

The U.S. Department of Energy, Economic Regulatory Administration, granted the Alaska Public Utilities Commission $200,000 in FY '80 and $182,700 in FY '81 to assist the commission in implementing responsibilities mandated under the Public Utilities Regulatory Policies Act (PURPA) enacted November 9, 1978. The grant number as DE-FG01-79RG-10168. Those responsibilities have been assumed. No further federal funding is expected.

I hope this information sufficiently answers your inquiry. If you have any further questions, please call me at 465-2509.

Sincerely,

Steven D. Hildebrand

Juneau, Alaska 99811

Dear Betty and Debbie:

I was finally able to scratch together significant information on the Economic Enterprise EDA grant funding. This information should be added to that of my letter to you dated May 20, 1983.

EDA 302 The U.S. Department of Commerce, Economic Development Administration, granted $150,000 to the Division of Economic Enterprise in FY '80 for the development of an economic development planning process within the State of Alaska. The grant number was 07-25-01659-03. No further funding was received by the DC&ED. The economic development planning process has been assumed by the Office of the Governor.

EDA 304 The Division of Economic Enterprise participated in a cooperative funding assistance program with the U.S. Economic Development Administration (EDA). Through this program, grant funds can be made available to public and nonprofit agencies for public works and technical assistance projects which will result in the creation of new permanent jobs in the private sector. The State is required to match at least 25% of the EDA funds for a project. No federally funded authorization is on the State books. All EDA funds are granted directly to the recipient agency by the feds.

The amount of EDA funded projects by federal fiscal year is: FFY '79 $1,947,903; FFY '80 $4,112,738; FFY '81 $2,823,983; FFY '82 $1,669,174; and, FFY '83 $68,924. There is no commitment for funding in federal fiscal year '84.

I apologize for the delay on this additional information that I had promised you, as per our phone conversation on May 20. If you have any questions, please call me at 465-2509 and I'll try to help.

Sincerely,

Steven D. Hildebrand

Dear Betty and Deborah,

Attached is the response by the Department of Community and Regional Affairs to your request of April 20. Hopefully this information on federal funding for FY80 through FY84 is adequate to meet your needs. If you require any further assistance, please contact Bob Rehfeld, Director of Administrative Services at 465-4708.

Sincerely,

Robert F. Rehfeld for

RECEIVED
JUN 07 1983
HOUSE RESEARCH AGENCY

SUMMARY OF MAJOR FEDERAL FUNDING SOURCES
ALASKA DEPARTMENT OF EDUCATION

All Dates Are State Fiscal Years

Note: (Firm Fiscal Year 1984 entitlements have not been released at this time.)

Program: P.L. 81-874 Federal Impact Aid

1978	$44,874,571
1979	47,928,481
1980	46,934,161
1981	46,399,198
1982	41,658,687
1983	34,444,051

These funds are provided for students whose parents live and/or work on federal lands not subject to State or local taxation. Entitlement variations are caused primarily by changes in the level of annual federal appropriations.

Impact: State aid to public schools is affected by the provision of AS 14.17.021(b) as applied to the Rural Education Attendance Areas; decreases in federal funds causes a demand for added State funds to meet school district entitlements computed under the State aid distribution formula of AS 14.17.

These funds are normally classified as "other receipts." Funds received directly by the State are used as part of State funding for school operations on military reservations (See AS 14.08.031(c); AS 14.12.020 (a); and AS 14.14.110(c)).

Program: U.S. Department of Agriculture Federal Child Nutrition Programs

1. National School Lunch Program
2. School Breakfast Program
3. Special Milk Program
4. USDA Food Distribution Program
5. Child Care Food Program
6. Nutrition Education and Training Program

The first five programs are "grants-in-aid" entitlement programs with performance funding. The State earns funds or draws USDA commodities based on the number of meals served, times a federally determined reimbursement rate per meal.

School Food Services
Federal Reimbursement Summary

	FY 80	FY 81	FY 82	With est. FY 83	With est. FY 84
SPECIAL MILK PROGRAM (SMP)	174,752	125,889	42,567	33,205	33,205
NUTRITION EDUCATION & TRAINING PROGRAM (NETP)	74,498	74,963	50,000	50,000	50,000
NATIONAL SCHOOL LUNCH PROGRAM (NSLP)					
General Assistance for all Children (Sec. 4)	1,477,038	1,579,285	1,021,988	1,091,961	1,113,800
Assistance for Needy Students (Sec. 11)	2,496,275	3,057,479	3,539,980	3,775,427	3,813,181
Food Service Equipment Assistance - Schools	42,227	40,540	-0-	-0-	-0-
Total Lunch Reimbursement	4,015,540	4,677,304	4,561,968	4,867,388	4,926,981
SCHOOL BREAKFAST PROGRAM (SBP)	284,075	363,836	403,815	457,507	462,082

School Food Services
Federal Reimbursement Summary

	FY 80	FY 81	FY 82	Est. FY 83	Est. FY 84
CHILD CARE FOOD PROGRAM (CCFP)					
Food Service	$ 916,412	$1,687,277	$1,334,701	$1,481,349	$1,599,349
Sponsor Administration	14,028	98,158	137,286	164,712	181,183
Sponsor Startup	12,140	-0-	-0-	1,350	
Cash in lieu of Commodities	80,471	77,087	63,920	82,501	83,429
Food Service Equipment Asstc.	15,062	7,543	-0-	-0-	-0-
Audit Funds	5,398	8,573	-0-	35,859	29,439
Total Child Care Reimbursement	$1,043,511	$1,878,638	$1,535,907	$1,765,771	$1,893,400
SUMMER FOOD SERVICE PROGRAM (SFSP)	-0-	-0-	-0-	-0-	-0-
STATE ADMINISTRATIVE FUNDS (SAE)					
Summer SAE	-0-	-0-	-0-	-0-	-0-
SAE	192,091	214,375	247,126	262,604	274,429
TOTAL REIMBURSEMENT	$5,784,467	$7,335,005	$6,841,383	$7,436,475	$7,640,097

The bottom line figures do not give a true picture of federal budget cuts or their impact. Increases in program participation have entitled Alaska to receive more funds almost every year since 1980 when the federal cuts began.

The following factors have decreased expected funding:

1. Twice yearly upward cost of living adjustments in reimbursement rates were reduced to annual adjustments.

2. A change in the method of calculating reimbursement for the Child Care Food Program (elimination of the tiering method).

3. A lowered reimbursement rate for the reduced price child thereby increasing costs to the student and increasing the cost of total care to the parent in child care institutions.

4. Change in the income level index used to determine eligiblity for free and reduced price meals thus making fewer students qualify for this aid.

5. The limit on the number of meals served per child in the Child Care Food Program was lowered from 5 (3 meals and 2 supplements) to 3 (3 meals and 1 supplement).

Impact: In 1983 there were no federal cuts in the Child Nutrition feeding programs. Although the 1984 President's budget proposed more cuts, the "feeling" we are getting from Congress is that there will be no cuts. However, cuts from 1981 and 1982 are still being felt (Ref.: 1-5, above).

In 1982 General Assistance (Section 4 in School Programs and the paid rate in Child Cares) and the value of donated commodities received per meal was cut 40% (see 1-6, below). If the normal biannual increase had occurred (see Item No. 1, above), the rate would have increased around 21% by 1984.

1. Elemination of one high school program in Kodiak;

2. Elimination of Hydaburg schools in 1982, but they again participated in 1983;

3. Elimination of three small Child Care Programs;

4. Increased cost to children in most urban schools resulting in a decrease in the number of children participating in the programs;

5. Increased local district and Child Care center subsidy to the programs;

6. Belt tightening by everyone.

Program: ESEA Title VII Indian Education (Categorical)

1980	$ 40,369
1981	57,891
1982	51,706
1983	28,101
1984	27,824 (Estimated)

The State Department of Education receives approximately 5 percent

of all Title VII funding which are appropriated directly by the federal government to local school districts. Federal appropriations to local school districts have been decreasing dramatically since FY 1980.

Impact: None specifically on local programs of bilingual/bicultural education; however, increasing demands for State funds at local school district sites for the purposes of developing and implementing local innovations to meet special needs are developing. Reduced Department of Education receipts requires greater use of State general funds for program administration and technical assistance.

Program: Civil Rights Act Title IV (Categorical)
(By grant application and competition)

1980	-0-
1981	$ 82,956
1982	73,156
1983	53,141
1984	130,160 (Applied for)

Impact: Typically used for State Bilingual/Bicultural Education administration and to fund special Department of Education Bilingual/ Bicultural projects. Reduced funding places greater demand on State general funds to maintain same level of service.

Program: ESEA Title I, P.L. 89-313 and P.L. 91-142 VI-B (Categorical)

	P.L. 89-313 Disadvantaged Handicapped)	P.L. 94-142 VI-B (All Handicapped Act)
1980	$1,757,891	$1,496,568
1981	1,641,517	1,815,428
1982	1,826,761	1,724,376
1983	1,842,910	1,908,893
1984	2,000,000(Est.)	2,000,000 (Est.)

Impact: None

Program: ESEA Title I (ECIA Chapter I, FY 1983) (Categorical)
Disadvantaged Children--Basic Skills

	Part A (Disadvantaged)	Delinquent	DOE Administration
1980	$5,681,315	$ 77,925	$225,000
1981	5,136,090	95,949	225,000
1982	5,065,096	114,603	225,000
1983	5,038,933	111,656	225,000
1984	5,038,933 (Est.)	111,656 (Est.)	225,000 (Est.)

Impact: None anticipated. Funds received are based on qualified student enrollment.

Program: ESEA Title I (ECIA FY 1983) Migrant Education (Categorical)

1980	$ 30,000
1981	90,724
1982	186,344
1983	313,538
1984	423,397 (Est.)

Impact: None anticipated. Funds received are based on qualified student enrollments.

Program: ESEA Title IV-B/C (Block Grants ECIA Chapter II FY 1983) (Categorical)

	Title IV-B	Title IV-C	ECIS Chapter II Block Grants (Formerly IV-B/C)
1981	$ 366,892	$ 792,756	
1982	345,437	265,577	
1983			1,749,888
1984			1,783,443

Impact: The greatest impact of federal aid reduction has been on local school district and individual classroom teachers who use Block Grant funds to develop or adapt innovative educational programs at the classroom level. State funding is not categorically available for this purpose. Additionally, funding was also available for the strengthening and development of general Department of Education administration, administrative systems, and activities. The funding of general SEA administrative activities and the development of SEA managment systems has been greatly reduced under the block grant concept. Categorical program funding such as ECIA Chapter I, P.L. 94-142, Career and Vocational Education, and P.L. 89-313 cannot be used for this purpose.

Program: School Bus Driver Training and Driver Safety Education (Categorical)

	School Bus Driver Training	K-12 Traffic Safety Education	Winter & Emergency Driving Education
1980	$23,170	$36,150	-0-
1981	12,250	12,975	$14,840
1982	12,250	-0-	-0-
1983	14,700	-0-	-0-
1984	14,700 (Est.)	-0-	-0-

Impact: None anticipated.

Program: Vocational Education (Categorical)

1980	$1,060,000
1981	1,060,000
1982	1,060,000
1983	1,060,000
1984	1,060,000 (Est.)

Impact: None anticipated. However, federal regulations and federal accountability requirements necessitate the use of DOE staff beyond that which federal sources are willing to pay. Essentially, we have a State vocational education program administered by federal funds for federal purposes.

Program: Alaska Occupational Information Coordinating Committee (AOICC)
(Funding Source for the Alaska Career Information System (AKCIS))

1980	$ 86,500
1981	95,730
1982	86,779
1983	70,920
1984	70,920 (Est.)

Impact: Must use State general funds (vocational matching) or administrative funds from federal vocational education sources to maintain a useful operational level of the program.

Program: Vocational Rehabilitation

1980	$4,754,500
1981	5,121,800
1982	4,907,300
1983	5,090,800
1984	5,114,900 (Est.)

Impact: We do not anticipate any loss of federal funds for FY 1984.

Program: State Library Grants
(Also includes Health/Science Library funds)

1980	$ 300,600
1981	428,500
1982	428,100
1983	461,800
1984	364,300

Impact: No specific impact on general library services. However, current reductions have resulted in the loss of one clerical position, library materials acquisition, and contractual abilities. The majority of the contractual service loss can generally be classified as office support, i.e., telephone, Xerox, and supplies; however, the ability of the Health/Science Library to provide data-base search service has been severely impaired.

RE: Loss federal funds.

Dear Ms. Barton and Ms. Pomeroy:

The Alaska Department of Environmental Conservation (ADEC) is the recipient of federal funds from two federal agencies. U.S. Environmental Protection Agency (EPA) is ADEC's cognizant agency. U.S. Department of Agriculture (USDA) awards only one grant for the cooperative meat inspection program. All grants are categorical and are divided between continuing programs funded each year and special projects that are funded one-time.

ADEC is a young state agency with a small operating budget, 7% of Natural Resources Category. In fact, Department of Military Affairs is the only state agency with a smaller budget. ADEC's budget does not include general funds for special studies. In 1985, all special project funding (Exhibit B) by EPA will cease.

There are several reasons for loss of federal funds. Those affecting ADEC are federal budget cuts, a state program that does not qualify for funding, and ADEC's state funding being below the minimum support required by the federal regulations. Another factor in lower federal funds is related to carry over funds from one budget period to the next budget period. In SFY 84 carry over funds will be near zero.

Grants awarded by EPA have been for the purpose of developing environmental programs to enhance the environment and health in the state. To receive a grant award, ADEC must meet definite terms and conditions such as, maintenance of effort by ADEC, good past performance, and a qualified technical staff.

In SFY 80, the federal government stopped their solid waste program for all states. In SFY 84, hazardous waste grant may be unavailable if the limited state funded program does not meet the basic criteria for grant awards. The environmental problems in Alaska are large, complicated, and increase each year. The work exceeds the available manpower in ADEC. The necessary state budget cuts have added to this burden and also jeopardize future federal funding.

It is important to realize that the difference between the state fiscal year and the federal fiscal year means that firm grant amounts are not available from the federal agency until after the state budget has been prepared. The grant amount in the budget is the best available estimate. In reality, a different amount may become available and the grant award increase. The difference between the budgeted amount and the actual grant award is authorized through an RPL.

Attached are exhibits giving comparisions of grant funding for years 1980-1984. Exhibit A lists all federal expenditures for years 1980 - 1983 and projected grant awards for 1984. Exhibit B is a listing of all EPA special one-time funding grants. Exhibit C is a comparison of match and grant expenditure and lists each years grant award. Exhibit D is a comparison between 1982 and 1984. Comparing these two years gives a view of the creeping problem ADEC is having with federal funding. Following the exhibits are narratives explaining each program that has funding problems.

If you have any questions, please feel free to call Joe Cladouhos, Director, Environmental Quality Management, at 465-2640.

Sincerely,

Richard A. Neve'
Commissioner

*Special Projects that cease in 1985 which had a total 1984 funding of $468.50

I. Safe Drinking Water

Beginning with SFY 83, the amount of funding from the federal drinking water grant base was reduced by $293.8. The Office of the Governor furnished the department with a $112.0 RSA to supplement this loss.

The need for department services continues to increase. For instance, public water systems in the southcentral region have been increasing dramatically. These services are necessary to carry out the department's mandate to protect public drinking water supplies, AS 46.03.020(10).

One task of this program is collecting and utilizing laboratory testing information and water systems inventory data. Due to problems with the State's automated system, ADEC has implemented an interim manual/automated data management system. It will be difficult for the program to support a new fully automated data processing system without federal funds. The future status of the data collection system has not been determined.

For further details, please contact the program manager, Dick Farnell at 465-2653.

II. Water Pollution Control

The federal reduction to the Clean Water Act Section 205(g) grant money starting in FY 82 resulted in a permanent loss of approximately $284.1 to the State's Water Pollution Control Program (WPC). This money was formerly used to assist with special projects such as a pass through grant to the Muncipality of Anchorage for monitoring of the impacts of rapid urbanization on their streams. These funds also contributed to personal services and related travel and commodities for the department's WPC staff. Loss of these funds has resulted in the reduction of two staff positions, one Ecologist II and one Environmental Engineer III in Environmental Quality Management. Due to the loss of federal funding, less work will be done for the prevention of water pollution at a time when the State's rapid industrial and urban growth demand more services. Specific program elements can not at this time be enumerated, however, with a little more lead time they can be supplied upon request.

For further details, please contact the program manager, Alex Viteri, at 465-2653.

Special Projects

Since 1977, the Department has received $2,641.6 in 208 grant funds from EPA. These grant funds supported some departmental staff but mainly provided contractual monies for special projects. The 208 grant program was terminated. In SFY 84 the small balance of 208 funds has been committed and there are no other ADEC funds available for special projects. Staff positions formerly funded by 208 grant funds have either been eliminated or funded by general funds.

For further details, please contact the progrm manager, George Franklet at 465-2653.

III Air Program

During development of the 1977 Clean Air Act Amendments, Alaska was instrumental in assuring that control of air quality and sources of air pollutants would be a state function. The state must have the ability to assure orderly management and development of its resources and economic development.

A function of state and local governments is to establish programs to control pollutants which cause unhealthful air quality. Some of these sources are automobiles and woodstoves.

Management of air programs includes the tasks of review and permit issuance for complex industrial activities. Alaska is witnessing a rapid rate of industrial growth requiring an increased need for technical staff.

In the past, additional federal monies in the form of grant carryover have supplied about $100.0 annually to supplement the state's program. These funds will not be available in SFY 84 and beyond. Federal support monies have diminished at a time when we have made commitments to carry out additional programs required to manage the air resources of the state. Without increased state funding, implementation of these programs is questionable.

For further details, please contact the program manager, Len Verrelli, at 465-2666.

IV. Hazardous Waste

Solid Waste

Alaska solid waste management is a very large continuous task. There are 30 cities and 300 additional population clusters for which effective standards and technical advice would reduce safety hazards and the potential for drinking water borne disease and animal carried diseases such as rabies. Loss of funding does not alter this need.

EPA does not have a solid waste management grant program for any state. This ceased in 1980. Some funding from FFY 80 did continue into SFY 81. State funds were inadequate to continue or improve the work effort. The solid waste management staff has been reduced from three to one, while the field staff has remained relatively constant at 3.75 work years per year. An increase of five positions would be necessary to effect measurable improvement in sanitary conditions, during the next five-year period.

For further details, please contact the program manager, Dick Williams, at 465-2666.

Hazardous Waste

The federal program first became effective in FFY 80. The state applied and received funds for one central staff technical employee and his supervisor. They were previously paid by general funds. These positions developed the legislation to implement an Alaskan hazardous waste program.

In 1982, the legislature funded and increased the staff by seven to eight persons with general funds. Significant budget cuts were requested from the agency, so authorized staff and much of the funding were deleted from the management office.

Criteria upon which SFY 83 grants were to be awarded made the state's embryonic program ineligible for federal funds. Carryover funds from 1982 were reawarded to purchase equipment capable of analysing the full array of potentially hazardous chemicals to be regulated. The regulatory and program development work was done with contractual, technical and legal staff. Incremental increases in funds and staffing to establish and implement the program were requested for SFY 84 but not approved. The existing laboratory position assigned to use the grant-funded equipment was deleted and the management staff's funds reduced in the 1984 budget cuts.

Eligibility for the 1984 grant will be based upon the existence of adequate staffing and state resources to implement the program, which currently is not available in the 1984 budget. The $208.5 listed in the exhibits may not be awarded.

For further details, please contact the program manager, David DiTraglia, at 465-2666.

V. Consumer Protection

The U.S. Department of Agriculture has not reduced DEC's grant award for the cooperative Meat Inspection Program in the past several years. The program is funded by 50% federal funds and 50% state matching funds. We receive reimbursement for our indirect costs associated with the program which makes the federal share 62% of the total program costs.

The SFY 84 budget request for federal and state matching funds in the Meat Inspection Program is $280.0 federal funds and $280.0 general fund match. The U.S.D.A. grant award for this program for the corresponding fiscal year of SFY 84 is $332.0. DEC cannot spend and receive the $52.0 difference without increasing our match by the same amount.

The federal government is in the process of regulating all flight kitchens and all school districts under the Meat Inspection Program. Additionally, two new slaughter facilities will be in operation by 1985. This increase in inspection and other program activities will require, at the minimum, one additional inspector.

With declining revenues to the state treasury, it seems inappropriate not to be able to take advantage of 100% of a federal grant award. In SFY 84 the state treasury could receive $63.2 in additional revenue if the corresponding match requirement is met.

For further details, please contact Dennis Grimmer, Fiscal Officer, at 465-2675.

Juneau, Alaska 99811

Dear Ms. Barton & Ms. Pomeroy:

This is in response to your letter dated April 20, 1983, requesting information on programs that have incurred substantial losses of Federal funding.

We have enclosed reports for each of our Budget Request Units that receive Federal funding for the fiscal years 1980 through 1984:

Division of Habitat Protection
Division of Commercial Fisheries
Division of Sport Fisheries
Division of Fisheries Rehabilitation, Enhancement & Development (FRED)
Division of Game
Commercial Fisheries Entry Commission
Administration and Support
Division of Boards of Fisheries and Game
Division of Subsistence

The Divisions of Habitat Protection, Commercial Fisheries, and Sport Fisheries have had or will have Federal fund reductions going into fiscal year 1984.

If you have any questions, please contact John Stewart, 465-4120.

Sincerely,

Don W. Collinsworth
Commissioner

SOURCE OF NEW FUNDS OR REDUCTION IN PROGRAM:	Balance will be carried forward into FY 84
FUTURE STATUS OF PROGRAM:	This project terminates on 12/31/83, and no new or alternative funding is available. This will severely limit the Department's ability to participate in the planning, review, and mitigation of major energy development (other than oil and gas) such as coal and geothermal power, and LNG and petrochemical facility development.

FY 83 (cont)

SOURCE: CEIP 308(c)(2) administered by DPDP

PROGRAM OR PROJECT: Participation in Federal OCS Lease Program

AMOUNT: $57,568.36

CLASSIFICATION: Categorical

REDUCTION FROM PRIOR YEAR: N/A

SOURCE OF NEW FUNDS OR REDUCTION IN PROGRAM: N/A

FUTURE STATUS OF PROGRAM: Total of $124,668.36 was received for FY 82 and FY 83. This project terminates on 06/30/83. No new or alternative funding is available. The project has provided most of the Department's funding for participation in the Federal Outer Continental Shelf Lease Program. Lack of adequate Department participation will greatly degrade the protection of State fish, wildlife, and habitat interests impacted by OCS oil and gas leasing.

OFFICE OF THE GOVERNOR

OFFICE OF MANAGEMENT AND BUDGET
DIVISION OF BUDGET REVIEW

BILL SHEFFIELD, GOVERNOR

POUCH AM
JUNEAU, ALASKA 99811
PHONE: (907) 465-3568

April 26, 1983

Ms. Betty Barton, Research Staff
Alaska State Legislature
House of Representatives
Research Agency
Pouch Y, State Capitol
Juneau, AK 99811

Dear Ms. Barton:

The attached chart summarizes the amount of Federal funds received by the Office of the Governor between Fiscal Years 1980 and 1984. As you can see, Federal funding does not play a substantial role in the Office of the Governor. Of the various funding categories you described, funds to the Governor's Office would be considered "other receipts."

Funds received by the Alaska Human Rights Commission come from the U.S. Equal Employment Opportunity Commission (EEOC) and the U.S. Department of Housing and Urban Development (HUD). HUD enters into cooperative agreements with State agencies to ensure the rights of citizens to fair housing including sale, rental and financing practices without regard to race, sex, color, religion or national origin. HUD enforces Title VIII of the Civil Rights Act of 1964; the Alaska Human Rights Commission enforces AS 18.80.230 - .250 in a similar fashion. EEOC and the Commission have engaged in worksharing since 1973. Funds from EEOC help pay personal services costs related to human rights caseload work. As the five-year funding analysis shows, the funds received by the Commission have been relatively stable, with a slight increase in FY 84.

The Division of Policy Development and Planning has been the other recipient of Federal funds. Beginning in FY 84, the Division will be consolidated within the Office of Management and Budget. Funds received have varied from year to year, with Fiscal Year 1981 showing very little receipts. From Fiscal Year 1983 on, it looks like the

Office of the Governor Fiscal Year	Federal Receipts FY 80-84 Authorized	 Actual

FROM: Rod Betit, Director
Division of Public Assistance

SUBJECT: House Research Inquiry
Federal Funding
1980-1984

The attached summary lists federal source of funds, the program that is recipient of the funds and the level of funds for the period covering fiscal years 1980 through 1984. During this period the only reduction in federal funding occurring in programs administered by Division of Public Assistance is Title XIX Medicaid. Public LAW 96-499 changed Title XIX Medicaid payment to states by reducing the amount of payment which a State is entitled by 4 percent in FY83 and 4.5% in FY84. Additionally, Title XIX - Medicaid deferrals for hospital and nursing home cost limits are estimated at 1963.0 in FY83 and 2800.0 in FY84.

TELEPHONE NO:

FROM: Lee Hendrickson
DP Manager II
Office of Data Processing

SUBJECT: Federal Funds

The Office of Data Processing has received the following federal funds from 1980 thru 1984:

FY 80

U. S. Dept. of Agriculture	Foodstamps	$55.3
Dept. of HEW	Medicade	213.4
	BAF	96.1

Dept. of HEW--National Center for Health Statistics
Coop. Health Statistics $158.9

FY 81

U. S. Dept. of Agriculture	Foodstamps	$128.8
Dept. of HEW	BAF	167.8

Dept. of HEW--National Center of Health Statistics
Health Stats. Contract $168.4
SSI Stats. HEW 9.5

FY 82

Dept. of HEW--National Center for Health Statistics
Health Stats. Contract $120.9

FY 83

Dept. of HEW--National Center for Health Statistics
Health Stats. Contract $ 76.6

FY 84

No federal funds anticipated this year. It is anticipated that these funds for the Health Stats. Contract will be received by the new division of Policy, Planning and Evaluation.

The above are considered categorical grants. There are basically no effects on programs as any losses were anticipated as the funds were for a set contract period and the programs were eliminated at the end of the contract period.

MEMORANDUM State of Alaska

TO: Marsha Hubbard
Director
Division of Budget and Finance

DATE: May 11, 1983

FILE NO:

TELEPHONE NO: 465-3037

FROM: Daniel J. Meddleton, Director
Division of Planning, Policy
and Program Evaluation

SUBJECT: Reductions in
Federal Funding

In response to your April 28, 1983 memorandum regarding reductions in federal funding, the Division of Planning, Policy and Program Evaluation has two components which have federal funding. The following information details the funding source, the amount of federal funding and the reduction impact:

I. Health Planning and Development Component:

A. Alaska State Health Planning and Development Agency federal grant under PL 93-641.

B. Funding: Federal Support
1980 -- 415,439
1981 -- 432,846
1982 -- 436,000
1983 -- 241,348
1984 -- 237,600

C. Funding Impact:

Reductions in federal funds for the State Health Planning and Development Agency have resulted in curtailment or loss in the following areas:

Personal Services:

1. The part-time Clerk Typist III for the Statewide Health Coordinating Council (SHCC) could not be filled the majority of time from 1981 through 1984.

2. The Research Analyst I and the part-time Clerk Typist III have been placed on lay off status effective the beginning of Fiscal Year 1984.

Travel:

1. Reductions in travel funds have forced the Health Planning staff and SHCC members to hold their quarterly and committee meetings by teleconference. The teleconference system presents limitations with a group of twenty members and staff, particularly in areas where hand outs and visual aids are necessary.

DIVISION OF FAMILY & YOUTH SERVICES

FEDERAL FUNDS RECEIVED

Allotments	Program	FY 80 Actual	FY 81 Actual	FY 82 Actual	FY 83 Estimate	FY 84 Estimate
Title IVA, Social Security Act	Foster Care & Institutional Care	$ 159.0	$ 296.5	$ 354.1	(Became Title IVE)	
Title IVE, Social Security Act	Foster Care	(Formerly Title IVA)			105.0	105.0
Title IVB, Child Welfare Services	Foster Care	141.5	238.0			
	Preventive Services			0.0	257.0	257.0
Title IVC, Social Security Act	Work Incentive (WIN)	655.0	377.6	289.5	437.5	437.5
Title XX, Social Security Act	Social Services	5,010.7	6,609.4	1,307.6	(Became Block Grant 10/81)	
Block Grant						
Social Services Block Grant	Social Services	(Formerly Title XX)		3,032.9	3,652.2	3,652.2
Grant						
Title II, Juvenile Justice Delinquency & Prevention Act	Delinquency Prevention	9.7	49.6	225.0	225.0	225.0

Effects of reductions: Title IVE is unrestricted due to the unpredictable nature of eligible cases for claiming.
Title IVB is unrestricted; new federal reporting requirements made claiming impossible in FY 82.
Title IVC; the reduction resulted in funding of the Fairbanks program with SGF.
Title XX/SS Block Grant; the loss of federal funds were replaced with SGF.
Title II funds were transferred from the Department of Law in FY 83, and included Law's unused funds. The FY 80 funds have lapsed.

5/9/83

Work Plan Reductions:

The following activities will be terminated effective July 1, 1984:

1. Update of sections in the State Health Plan (State Profile, Health Status Indicators, Hospital and Long Term Care).

2. Hospital and Long Term Nursing Care Survey.

3. Data development related to new projects.

4. Data requests for technical assistance from other agencies.

5. SHPDA library maintenance, indexing and shelving.

6. Timely responses to reports, plans and correspondence deadlines.

Because of the updates and projects which were undertaken during Fiscal Year 1982 and 1983, the termination of the activities listed will not be as serious for the upcoming Fiscal Year as they will be in Fiscal Year 1985 and 1986. However, reductions in federal funds seriously jeopardize the ability of the State Health Planning and Development Agency to maintain the mandated federal functions.

II. Strategic Planning component: (Information Systems)

A. Federal Contract:

1. National Center for Health Statistics, (NCHS), PL 95-623

B. Funding:

1. 9/30/79 -- 9/29/82. The original contract amount was approved at $505,724. This amount subsequently was amended two different times within this time frame by NCHS resulting in an ending approved award of $353,270; a reduction of $152,454 of the initial figure. Contract #233-79-2099.

2. 9/30/82 -- 9/29/83 = $76,632
Contract #282-82-2045

3. 9/30/83 -- 9/29/84 = $79,300 (Estimated)

C. Funding Impact:

Funding for the Vital Statistics Cooperative Program (via NCHS contract) was reduced from approximately $168,575 per year to $76,630 per year for federal fiscal year 1983.

The funding level for Fiscal Year 1983 and (projected) Fiscal Year 1984 will allow the continuance of the transferral of the State's vital statistic's data to the federal government. However, the appropriate personnel, Analyst Programmer and Statistical Technician, must be maintained in the Department in order to comply with the current contract committment.

The funding reduction that occurred prior to the federal Fiscal Year 1983 caused the reduction of the following personnel and services:

Personnel:

Project Coordinator, half-time Analyst Programmer, Statistical Technician, Statistical Clerk, Clerk IV, and Clerk III.

Services:

Approximately 50% reduction in vital statistic's analysis and dissemination; and 100% reduction in capability to produce Health Manpower information.

SUBJECT: Reductions in Federal Funding

Pursuant to your request of April 28, 1983 and that of the House of Representative's Research Agency, we have prepared the attached chart with notes of explanation of federal funding received by this office from FY-80 through FY-84, inclusive.

There have been no significant reductions. The only change has been the obvious shift from categorical grants to block grants.

If you have any questions or need additional information, please do not hesitate to call me.

Department of Labor

STATE OF ALASKA

BILL SHEFFIELD, GOVERNOR

DEPARTMENT OF LABOR

OFFICE OF THE COMMISSIONER

P. O. BOX 1149
JUNEAU, ALASKA 99802
(907)465-2700

May 9, 1983

Betty Barton
House Research Agency
Pouch Y
Juneau, AK 99811

Dear Ms. Barton:

The Department of Labor receives federal funds from three agencies; the U.S. Department of Labor, Employment and Training Administration (ETA), the U.S. Occupational Safety and Health (OSH) Administration, and the Bureau of Labor Statistics OSH. The following components receive funds from the U.S. Department of Labor, ETA: Employment Service, Unemployment Insurance, UI Fraud Investigations, WIN, Labor Market Information, Research Contracts, and Management Services. The Department's Occupational Safety and Health component receives funds from the U.S. Occupational Safety and Health Administration. Additionally, the LMI component receives funds from the Bureau of Labor Statistics OSH. All of these monies come to the Department in the form of categorical grants; but beginning October 1, 1983 (FY '84), the federal funds for the Employment Service component are anticipated to be received as a block grant through the Office of the Governor.

The following components of the Department of Labor have, and expect to receive federal funds as indicated:

Dollars in Thousands

	FY 80	FY 81	FY 82	FY 83	FY 84
Employment Service	$7,380.2	$8,209.9	$6,702.9	$6,805.1	$6,618.0
Unemployment Insurance	9,444.2	10,329.1	9,794.1	10,526.1	11,117.1
UI Fraud	214.2	233.9	255.4	228.4	242.2
WIN	900.9	711.3	546.3	616.5	897.7
OSHA	1,200.1	1,213.0	940.3	1,176.3	1,249.3
Labor Market Information	335.6	393.2	421.1	434.9	87.0
Research Contracts	57.8	162.2	73.1	72.1	Ø
Management Services	83.5	Ø	Ø	Ø	Ø
	$19,616.5	$21,252.6	$18,733.2	$19,859.4	$20,211.3

Employment Service

In FY '82 federal funds were not provided to operate the rural offices of Employment Services ($1507.0). In order to maintain these offices, the Legis-

lature and Governor provided $305.0 and $500.0 (from the FBIF) respectively to help maintain these offices. The remaining reduction of $702.0 was accomplished through staff reductions. This action resulted in substantially fewer Alaskans registered and placed. Between FY '82 and FY '83 real federal funding was decreased (1.5 percent aggregate funding increase)[1], and the State Legislature increased the general fund level by over $900.0. Coupled with some administrative efficiencies, the increase level of general funding enabled the Department to maintain the level of FY '82 service.

Unemployment Insurance Fraud Investigation

The effect of the reduced level of federal funding in FY '83 was to reduce staff by one position. The Department requested and received FBIF to satisfy the difference. In FY '84 we have requested Training and Building funds so that the level of service provided can be maintained.

WIN

Federal funding reductions in FY '82 necessitated the closure of the Ketchikan office and staff reductions in Anchorage and Juneau; but at the same time we were able to enter the Kenai and Wasilla areas. This was done to more effectively utilize remaining funds by concentrating training and grant delivery in the more populated areas and thereby increase the potential of receiving higher levels of federal funding. Additionally, since FY '81, federal funding for WIN has not been included in the federal executive budget document, but has been funded through the continuing resolution process in Congress. Again, in FY '84 it is not included in the President's budget.

Occupational Safety and Health

The federal funding reduction that the division received in FY '82 was the result of Alaska legislative action and not federal budgetary constraints. Because OSHA receives monies from two sources (50/50 program grant and 90/10 contract) which are determined by the level of general fund match, a reduction in general funds will yield proportionate reductions in federal funds. The action in FY '82 resulted in the elimination of sixteen positions and underfunding four of the remaining thirty-two positions.

Labor Market Information and Research Contracts

Although aggregate federal funding has increased, this has been the result of Federal Supplemental Budget requests submissions and approvals. This has created an atmosphere of uncertainty within which it has become difficult to plan for products, projects, and the overall level of service to be

---

1/ During this period inflation was assumed to be 6 percent for budgetary purposes; therefore, the department experienced a 4.5 percent real dollar funding reduction.

provided. This problem will be exacerbated in FY '84 due to the enactment of the Job Training Partnership Act. In FY '84 the Employment and Training Administration will provide funds to the State in a block grant (instead of a categorical grant) and will contract for specific products from the State. This will eliminate funding for several products currently produced.

In FY '84 the Labor Market Information and the Research Contracts components will be combined, and the vast majority of FY '83 federal funding continuation will reside in the Employment Service component. The remaining Labor Market Information component anticipates receiving $87.0 in federal funding directly from the Bureau of Labor Statistics OSH.

Management Services

Federal funds in this component for the Occupational Safety and Health Bureau of Labor Statistics Contract were transferred in FY '81 to the Research Contracts component because the tasks being funded were more appropriately housed there.

If you need additional information, please contact Nico Bus at 465-2720.

Sincerely,

Jim Robison

Juneau, Alaska 99811

Dear Ms. Barton:

Per your letter of April 20, 1983, the following information is submitted concerning 1980-1984 reductions in federal funding.

The two attachments represent input from the two (2) divisions within this Department which are in receipt of federal money - specifically the U.S. Property and Fiscal Office (Attachment 1) and the Alaska Division of Emergency Services (Attachment 2).

I hope the information submitted will be useful in your assessment concerning the level of federal support to Alaska.

Sincerely,

Edward G. Pagano

ADES has had an increase in program funding in the past two (2) years (82-83). Items 80-81 shown N/A have been audited and closed out no information is available. The dash lines shown (80-81-82) are prior to program being established. The Tsunami and Earthquake funding are on-going programs.

We have requested minor increases in 84 but have not received funding level we can expect to receive.

FEDERAL FUNDING PER
FEDERAL FISCAL YEAR
CONTRACT/COOPERATIVE AGREEMENT

	80	81	82	83	84
EMA	301,700.00	301,700.00	321,100.00	344,400.00	
NCP	---	---	20.0	85.3	
RDO	---	---	35.9	62.0	
M&S	N/A	N/A	12.3	11.8	
T&E	20.0	20.0	20.0	53.5	
RSM	N/A	43.0	53.5	61.0	
DPIG	25.0	25.0	25.0	25.0	
SHELTER SURVEY	---	---	---	38.4	
EARTHQUAKE	XXXXXXXXXXX	149.9			
TSUNAMI		XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX		112.9	

EMA = Personnel and Administration

NCP = Nuclear Civil Protection

RDO = Radiological Defense Officer

M&S = Maintenance and Service, e.g. telephone, etc.

T&E = Training and Education

RSM = Support Materials, e.g. comm. equip., etc.

DPIG = Disaster Plan Improvement Grant

The following figures for USPFO (based on the federal FY 1 Oct - 31 Dec) are provided for your information:

	FY 80	FY 81	FY 82	FY 83*
Army Guard	$13,579,400	$15,974,600	$17,924,700	$19,126,500
Air Guard	7,507,711	8,354,226	9,109,534	9,984,700
Total	$21,087,111	$24,328,826	$27,034,234	$28,981,200

*Amounts are not final and remain subject to year-end adjustment.

Projections at this time are that both the Army and Air National Guard federal support levels will continue to grow over the next five years. Federal support of the Alaska National Guard is accomplished in the form of direct allotment from the National Guard Bureau to the USPFO for Alaska.

The federal budget for FY 84 has not been finalized at this time, therefore, it is not possible to provide any actual data. The Department does anticipate increased support over the FY 83 funding level.

Dear Research Staff:

In response to your letter of April 20, 1983 to Commissioner Sundberg, the attached data identifies the federal funding received by the Department of Public Safety.

Narrative is provided to describe the program effects of reduced federal funding for the Highway Safety Planning Agency.

The Fatal Accident Reporting System (FARS) has received stable federal funding.

The Commercial Motor Carrier Safety Inspection and Weighing Demonstration Program was intended to terminate at the end of its third funding year.

If you have any questions, please call me or my staff.

Sincerely,

Jos Mapranath
Director

12-L15LH

HIGHWAY SAFETY PLANNING AGENCY

The "Highway Safety Act" mandated that each state have a highway safety program and provided that the Governors would be directly responsible for the program within their respective states. AS 44.99.001, and Administrative Order Number 34 delegate the Governor's responsibility and authority to the Highway Safety Planning Agency for the highway safety program in Alaska. The highway safety program is a federally assisted state program which Congress requires be approved by the Secretary of Transportation.

Federal funds are allocated to the state to help administer sub-grants to state agencies and local jurisdictions.

The federal funds identified below are "no year funds" from the federal government, which means that we have the funds until spent, regardless of the fiscal year authorized, or the number of fiscal years needed to spend the funds. Because of this, the State budget usually requests authorization to carry forward and expend prior year funds.

The following obligational limitations on our federal funding reflect only the amounts actually received in the respective fiscal years. The State budgets may not coincide with the obligational limitations because of the difference in fiscal years and as explained previously, because of prior year federal funds being moved forward.

1980 Base Program	$ 834,383	1981 Base Program	$ 697,960
55 Enforcement	101,351	55 Enforcement	120,000
Seat Belts	16,975	Seat Belts	19,100
School Bus	12,500	School Bus	12,500
FHWA	138,846	FHWA	139,223
TOTAL	$1,104,055	TOTAL	$ 988,783

1982 Base Program	$ 329,875	1983 Base Program	$ 341,015
55 Enforcement	100,000	55 Enforcement	100,000
Seat Belts	9,500	Seat Belts	9,500
School Bus	25,000	School Bus	7,500
FHWA	49,000	FHWA	49,000
TOTAL	$ 513,375	TOTAL	$ 507,015

For FY 84, we anticipate $507,015 will be new federal funds however we will not know for sure until about October.

As can be seen by the foregoing, federal funds are less than half of what they used to be and although we have supported legislation to offset these losses over the years, upon request for increased State funds, we have not been successful in obtaining more.

The biggest problem this has caused, is that although we receive less funds, the job that has to be done has not decreased.

The main area in which we have suffered is in the operation of this agency.

In 1981, for example, our Personal Services costs were $361,500 for 9 positions. This has steadily decreased over the years to the point where our FY 84 Governor approved budget only provides $140,300 for 5 positions, although this amount barely covers a little more than 2 positions.

The effects of this situation are having a tremendous impact on the citizens of the State as is explained in the following:

During the years 1975 through 1979, a great deal of emphasis was placed on the highway safety program in Alaska.

During this period, accidents, fatalities and the costs of accidents steadily decreased, as well as the cost of law suits against the State for engineering and maintenance related traffic accidents. In addition, according to the Division of Insurance, the cost of automobile insurance to the citizens of the State decreased steadily and significantly.

Beginning in 1980, the support for a comprehensive State traffic safety program was reflected by a reduction in federal as well as state funding.

During this period the reductions experienced in the period 1975 through 1979 began to turn around and have begun to increase steadily each year.

ASSUMPTION:

Economic conditions in the South 48 will drive more people to Alaska -- hence more drivers and more miles driven.

Decreased federal funds will be available for maintaining and improving the existing road network -- hence heavier traffic on deteriorating roads.

Decreased federal funds will be available for comprehensive highway safety projects.

Accidents and fatalities will continue to increase, as will the cost of these accidents to the citizens of the State.

Highway Safety related law suits against the State and its political subdivisions will continue to increase.

The cost of automobile insurance will cease its downward trend and will begin to increase.

Alaska Highway Safety Planning Agency

Traffic Accident Projection

YEAR	TOTAL ACCIDENTS	INJURY ACCIDENTS	FATALITIES/RATE	PROPERTY DAMAGE
1977	15,086	5,085	136/ 4.5	$20,348,441
1978	12,962	4,822	127/ 4.5	18,775,536
1979	13,521	4,560	90/ 3.2	19,365,424
1980	13,165	4,993	88/ 3.3	20,793,029
1981	13,500	5,500	100/ 4.0	22,250,000
1982	14,000	6,000	115/ 4.5	23,750,000

FATAL ACCIDENT REPORTING SYSTEM (FARS)

Since 1972, the National Highway Traffic Safety Administration (NHTSA) with the cooperation of the states has been developing the Fatal Accident Reporting System (FARS). The FARS is a national computerized data collection system which contains reports of current data on all motor vehicle traffic accidents in which there is a fatality. The FARS definition of a fatality is one which occurs within thirty (30) days of a motor vehicle traffic accident and as a result of the accident. The FARS is a primary tool which can be used by the NHTSA, the states, and the highway community to quantify the national and state accident picture, to identify problem areas, to evaluate highway safety countermeasures programs, and to enhance operation at both state and federal levels.

Calendar Year	Contract Award
1978	10,784
1979	10,393

1982	12,961
1983	14,854

COMMERCIAL MOTOR CARRIER SAFETY INSPECTION AND WEIGHING DEMONSTRATION PROGRAM

Alaska's participation in the "Commercial Motor Carrier Safety Inspection and Weighing Demonstration Program" began on March 12, 1980, through Cooperative Agreement DTFH 61-80-X-00042. The objectives of the Demonstration Program are to demonstrate the extent to which safety benefits can be obtained and to determine if the program is effective in increasing motor carrier compliance with the weight limitation specified by the United States Code and the State of Alaska.

Scope of Work

The State of Alaska shall accomplish these objectives during the term of the cooperative agreement by expanding State activity in the weighing and inspection of motor carriers utilizing uniform procedures. The activity under the Demonstration Program shall be above a base level of effort which shall be maintained be Alaska during the demonstration period.

In general, Alaska shall conduct combined weighing and inspection activities at fixed or permanent weighing facilities coupled with expanded portable weighing operations at various locations.

Alaska shall undertake the following three areas of responsibility; 1) the weighing of trucks; 2) the inspection of trucks and their drivers; and 3) the collecting and reporting of weighing, inspection, accident and cost data.

Period	Amount
March 12, 1980 - March 11, 1981	720,900
March 12, 1981 - March 11, 1982	709,250
March 12, 1982 - March 11, 1983	877,000

Ladies:

The Department of Revenue receives federal funds for its Child Support Enforcement Division. This funding is a reimbursement of 75 percent of the operating expenditures each fiscal year through FY 82. Beginning in FY 83 and in FY 84 the reimbursement rate is 70 percent. The following chart shows actual receipts for the fiscal years 1980, 1981, and 1982 and estimated receipts for 1983 and 1984.

Federal Receipts
Department of Health and Human Services
Title IV-D of the Social Security Act

FY 1980	FY 1981	FY 1982	FY 1983	FY 1984
$1,505,100	$1,755,300	$1,815,000	$2,458,800	$2,875,200

As the reimbursement rate decreases, more state funds are required to maintain the current level of services.

Sincerely,

Joseph K. Donohue
Deputy Commissioner, Taxation

Dear Ms. Barton and Pomeroy:

With one minor exception, the Department of Transportation and Public Facilities is not experiencing any reductions in federal funding. In fact, the opposite is true as our major source of funds from the Federal Highway Administration has increased by almost 50% this year and will continue to increase in each of the next three years.

The only case where we are experiencing a reduction is in our Urban Mass Transit Administration (UMTA) section 18 funds. In the past few years we have been averaging approximately $162,500 a year. The Department has passed the funding through to seven Alaskan cities to assist the communities in paying operating cost of transit services such as ferries, buses and taxis. These funds are classified as block grants and the current federal administration plans to reduce the funding by approximately 80% in 1984, 90% in 1985, and eliminate altogether after that. If the reductions are realized as planned the cities will have to increase taxes or fares or substantually reduce their operations.

Sincerely,

Fred J. Seeger

Dear Ms. Pomeroy:

As we discussed the Alaska Court System is not a direct recipient of federal funds. The Court receives funds through other state agencies or political subdivisions. A schedule of grant funds received by the Court during fiscal years 1980 through 1984 is attached.

The effect of the loss of this funding can be summarized by the use of the funds. The elimination of CETA funds has greatly hampered the Court's ability to create a pool of trained temporary employees. Many of these employees were later promoted into permanent positions. The CETA program also helped to provide a ready pool of employees during temporary workload increases.

The elmination of the planning and continuing education funds has created a direct impact on the Court's operating budget. These programs are quite worthwhile and have had to be continued using general funds.

I hope this satisfactorily answers your questions. If not, please feel free to contact me.

Sincerely,

Robert G. Fisher

Dear Representative Cato,

I have been contacted by Mr. John Anton with an idea that just might save the Railroad some of their money, the Legislature their time, and the moose their hides.

I am forwarding this same information to the co-sponsors of HB214, The Departments of Fish and Game and Natural Resources, all members of House Transportation, the Alaska Moose Federation and the Alaska Outdoor Council.

This information is being offered for discussion purposes in relation to the objectives outlined in HB214.

Please feel most welcome to call if there are any questions.

Warm Regards,

Curt Menard
Representative

SPECIFICATIONS

Dimension of tank may vary due to placement. At 7.8 gallons per cubic foot, you would have to maintain at least 133 cubic feet. This would give you about 1,000 gallons. You also would have to consider a tank heater if mounted externally. Minimum 3" rigid pipe will be needed to supply the vain pump. Heat tape will be needed concentrically applied to rigid pipe. The nozzle will have to be wraped with heat tape also. Pump must be applied as close to nozzle as possible to prevent water loss. Water supply must be actuated at the end of the nozzle. The pump switch would have to be at hand right at the turret. You would have pressure instantaneously when throwing the switch. You would open and close the nozzle manually but you could not slam the lever shut very fast because it would produce a hammer effect which could possible destroy the hydraulics. Capacity of the pump would have to be of minimum output of 250 GPM. The turret would have to be omni-directional. Pump pressure would have to be minimum of 120 PSI to maintain 90 PSI at end of nozzle due to pressure loss in pipe. Water will have significant force at the extreme range of 200 feet when using a 1" nozzle and an increasing force the closer the target. At this GPM you would have basically enough fluid supply for 4 minutes of steady stream. Therefore by using 3 to 4 second blasts of water the use of the wate is more efficient. Exact placing of this device may be applied to the train itself under direction and consideration of the railroad mechanics since this device may be removed seasonally.

My experience with wild game, is that when pursued they run in a line of least resistance, i.e. down the tracks. They will continue on this course until they sense a more immediate threat. The purpose of this water cannon is to make the moose aware that it is in "contact" with its pursuer, therefore resorting to its natural instinct of changing direction - hence leaving the tracks.

If you have any questions and/or would like to discuss this project please contact me by phone at 248-3114 or correspondence at 3322 W. 88th, Anchorage, AK 99502

Sincerely,

John D Anton

FOR TODAY'S MEETING YOU HAVE:

A FOLDER ON HB 221 THAT INCLUDES:

* a copy of HB 221
* a zero fiscal note from the Dept. of Commerce and Economic Development
* a position paper from the Alaska Railroad Corp.
* a copy of the statutes impacted by HB 221

SECTIONAL ANALYSIS OF SSHB 221:

Title 42 refers to the Alaska State Statutes on Public Utilities and Carriers.

Chapter 40 refers to the Alaska Railroad Corporation (ARRC).

Entry #260(b) is part of Article 4 regarding powers and duties of the ARRC and has to deal with ARRC's annual report.

Section 1 of SSHB 221 has to do with a report that would analyze potential sale arrangements whereby ARRC may be transferred into private ownership.

SSHB 221 specifies that the first report to the effect of selling the railroad would be due in ARRC's annual report for fiscal year 1991. THE FISCAL YEAR REFERRED TO IN SSHB 221 IS THE FISCAL YEAR OF THE ALASKA RAILROAD CORPORATION.

The ARRC operates on a fiscal year that extends from January 1 through December 31. The legislature operates on a fiscal year that extends from July 1 through June 30. By including the required information in its 1991 annual report, ARRC would be providing the legislature with the required information during legislative fiscal year 1992.

Re: HB No. 221, An Act Suspending Requirements for Reports on Arrangements and Offers to Sell the Alaska Railroad

Dear Representative Cato,

Thank you for providing this opportunity for the Alaska Railroad Corporation ("ARRC") to comment on HB No. 221. As you know, the bill proposes to amend the Alaska Railroad Corporation Act and will require that the first analysis and documentation of potential railroad sale arrangements appear in the corporation's annual report for fiscal year 1992. We understand that "1990" in the present version of the bill is a typographical error.

For the reasons stated in enclosed position paper, we strongly support this legislation. Should the railroad be sold, delay of mandatory sale arrangements beyond 1990 will avoid federal legal requirements that sale profits be paid to the United States. This action will clearly serve the State's best interests.

Thank you also for your sponsorship of this important legislation.

Sincerely,

F. G. Turpin
President and Chief Executive Officer

cc: James C. Campbell, Chairman

4112L

POSITION PAPER / Alaska Railroad Corporation

HOUSE BILL NO. 221

AN ACT SUSPENDING REQUIREMENTS FOR REPORTS ON ARRANGEMENTS AND OFFERS TO SELL THE ALASKA RAILROAD

I. INTRODUCTION

HB No. 221 proposes that the first analysis and documentation required under AS 42.40.260(b) (part of the Alaska Railroad Corporation Act ("ARCA")) be included in the corporation's annual report for fiscal year 1992.

The Alaska Railroad Corporation ("ARRC") strongly supports this legislation.

II. DISCUSSION

When the State of Alaska purchased the Alaska Railroad in January, 1985, it agreed to many sale terms. These terms include a provision in the federal Alaska Railroad Transfer Act ("ARTA") which requires the State to turn over any profits of a subsequent sale or transfer of the railroad to the United States, if the sale occurs within the first five years of state ownership. 45 USC § 1209(e). This period expires on January 5, 1990.

In the face of this restriction, ARCA presently requires ARRC to include in its annual report an analysis of potential arrangements to sell the railroad every five years, including documentation of at least three offers to sell the railroad. These offers must be bona fide attempts by the state-owned railroad to sell all or part of its assets and operations.

The combination of ARTA's requirement that the State turn over any profits to the federal government if the railroad is sold before January 5, 1990, and the great cost of researching, preparing, soliciting, and negotiating meaningful sale offers does justify delay of ARCA's mandate that sale offers be solicited by ARRC before 1990. This will be simply accomplished by HB No. 221.

The bill extends the due date for the first analysis of potential sale arrangements to fiscal year 1992 which is outside the federal protection period. This action will guarantee that the State will properly enjoy the entire

proceeds of any sale or transfer of the line. The modification of ARCA will clearly serve the State's best interests.

Finally, although out-of-pocket expenses associated with the preparation and negotiation of meaningful offers to sell the railroad may be deducted from sale proceeds which must be paid to the United States, there is less certainty about the deductibility of sale costs directly attributed to hundreds of hours of State and Railroad staff time. In light of that uncertainty, it is most prudent to delay such activities until all costs associated with State disposal of the railroad can be fully realized by its sale.

III. CONCLUSION

ARRC views HB 221 as an important modification of the Alaska Railroad Corporation Act and urges that it be favorably considered.

(10) "property" includes real and personal property;

(11) "real property" is coextensive with land, tenements, and hereditaments;

(12) "signature" or "subscription" includes the mark of a person who cannot write, with the name of that person written near the mark by a witness who writes the witness's own name near the name of the person who cannot write; but a signature or subscription by mark can be acknowledged or can serve as a signature or subscription to a sworn statement only when two witnesses so sign their own names to the sworn statement;

(13) "state" means the State of Alaska unless applied to the different parts of the United States and in the latter case it includes the District of Columbia and the territories;

(14) "writing" includes printing. (§ 4 ch 62 SLA 1962; am § 2 ch 66 SLA 1965; am § 10 ch 117 SLA 1968; am § 19 ch 74 SLA 1985)

Revisor's notes. — Reorganized in 1985 to alphabetize the defined terms.

Effect of amendments. — The 1985 amendment added paragraph (4).

NOTES TO DECISIONS

Quoted in Hull v. Alaska Fed. Sav. & Loan Ass'n, Sup. Ct. Op. No. 2605 (File No. 6346), 658 P.2d 122 (1983).

Article 3. Effect of Statutes.

Section
70. Time statutes become law and take effect

Sec. 01.10.070. Time statutes become law and take effect. (a) All bills passed by the legislature become law upon the governor's signature or upon the governor's veto being overridden or, when the governor allows a bill to become law without signature, on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution. Acts become effective 90 days after becoming law, unless the legislature, by concurrence of two-thirds of the membership of each house, provides for another effective date.

(b) The actual effective date of an Act having no effective-date provision is determined by starting with the day after it is signed by the governor or the day after the governor's veto is overridden or the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution, and counting 90 calendar days, the Act becoming effective at 12:01 a.m., Alaska Standard Time on the 90th day.

(c) The actual effective date and time of an Act having an immediate-effective-date provision is 12:01 a.m., Alaska Standard Time, on

the day after it is signed by the governor or on the day after the governor's veto is overridden or on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution.

(d) An Act which specifies a definite effective date becomes effective at 12:01 a.m., Alaska Standard Time on the date specified.

(e) When the governor allows a bill to become law without signature, the governor shall give written notice of that fact to the legislature. The date of this notice has no effect upon the date the bill becomes law nor upon the date the Act takes effect.

(f) In this section

(1) "Act" means a bill which has become law;

(2) "bill" means a legislative document proposing an Act;

(3) "becomes effective" means becomes applicable; "effective date" does not mean date of enactment (or date of becoming law), although the two will coincide when a bill which has an immediate-effective-date provision is allowed to become law without the governor's signature;

(4) "becomes law" means is enacted; "enactment" occurs when any one of the following takes place:

(A) a bill which is passed by the legislature is signed by the governor;

(B) the period specified in art. II, § 17 of the Alaska Constitution expires without gubernatorial action;

(C) the legislature overrides the governor's veto of a bill;

(5) "passed by the legislature" means that the required majority of each house of the legislature has taken final action in approving the same version of a bill. (§ 5 ch 62 SLA 1962; am § 8 ch 126 SLA 1966; am § 1 ch 115 SLA 1974; am §§ 1—3 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment substituted "Alaska" for "Pacific" near the end of subsection (b), near the beginning of subsection (c), and in subsection (d).

NOTES TO DECISIONS

Applied in Atlantic Richfield Co. v. State, Sup. Ct. Op. No. 2695 (File No. S-52), 666 P.2d 1031 (1985).

Sec. 01.10.080. Computation of time.

NOTES TO DECISIONS

10. General Provisions (§§ 42.05.711, 42.05.720)

Article 2. Powers and Duties of the Commission.

Section

141. General powers and duties of the commission

Sec. 42.05.141. General powers and duties of the commission. (a) The Alaska Public Utilities Commission may

(1) regulate every public utility engaged or proposing to engage in such a business inside the state, except to the extent exempted by AS 42.05.711, and the powers of the commission shall be liberally construed to accomplish its stated purposes;

(2) investigate, upon complaint or upon its own motion, the rates, classifications, rules, regulations, practices, services and facilities of a public utility and hold hearings on them;

(3) make or require just, fair and reasonable rates, classifications, regulations, practices, services and facilities for a public utility;

(29) enter into agreements with a state agency or other instrumentality of the state; and

(30) do all things necessary or desirable to carry out the powers and duties of the corporation granted or necessarily implied in this chapter or other laws of the state or the laws or regulations of the federal government. (§ 2 ch 153 SLA 1984)

Sec. 42.40.260. Annual report. (a) Within 90 days following the end of the fiscal year of the Alaska Railroad the board shall distribute to the governor and to the legislature a report describing the operations and financial condition of the corporation during the preceding fiscal year. The report may include suggestions for legislation relating to the structure, powers or duties of the corporation or to the operation or facilities of the corporation. Subject to AS 42.40.220, the report shall itemize the cost of providing each category of service offered by the railroad and the income generated by each category.

(b) Every five years the annual report shall include an analysis of potential sale arrangements whereby the corporation may be transferred into private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation during the last five years. (§ 2 ch 153 SLA 1984)

Sec. 42.40.270. Audits. (a) The board shall have the financial records of the corporation audited annually by an independent certified public accountant experienced in railroad accounting. The board shall have an annual performance audit conducted by a recognized railroad management expert to assure that the railroad is being managed and operated effectively and efficiently in accordance with the requirements of this chapter and that each appropriation is used to directly support those services for which the appropriation was requested. Auditors shall use the standards required under AS 42.40.100(9) and determine whether appropriations received for a service that is not self-sustaining were calculated in accordance with United States Interstate Commerce Commission standards for determining rail service subsidies.

(b) The corporation shall make all of its financial records available to an auditor appointed by the governor and to the legislative audit division for examination. Disclosure to the public by the auditor or legislative audit division of this information is subject to AS 42.40.220 and rules implementing that section. (§ 2 ch 153 SLA 1984)

MEMORANDUM

TO: Representative Bette Cato

ATTN: Wendy Chamberlain

FROM: Penelope Weyhrauch
Legislative Analyst

RE: Exemptions to and Sale Provision of the Alaska Railroad Act
Research Request 87.057

You asked for a discussion of the Alaska Railroad Act exemptions and what effect repealing the exemptions might have on the Alaska Railroad Corporation. You also asked for a discussion of the requirement relating to offering the railroad for sale, and whether or not the Alaska Railroad Corporation is complying with this requirement.

Alaska Railroad Act Exemptions

I contacted the Alaska Railroad Corporation (ARRC) and asked them to discuss how the corporation would be affected by repealing the exemptions listed in AS 42.40.920. I asked Tad Lewis, General Counsel for the ARRC, what specific effect on the corporation's revenue and operations the repeal of each of the statutory exemptions would have. Mr. Lewis' letter response is attached. You will note that the response is very general.

Offering the Alaska Railroad for Sale

Alaska Statutes 42.40.260(b) states that "Every five years the [corporation's] annual report shall include an analysis of potential sale arrangements whereby the corporation may be transferred into private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation during the last five years."

According to Jack McGee, Assistant Alaska Attorney General, AS 42.40.260(b) provides all the guidelines available for ARRC to follow to meet the offer-to-sell requirement. Mr. McGee said that the first five-year period began on January 5, 1985, at the time ownership for the railroad passed from the

federal government to the State. The ARRC is required to offer the railroad for sale three times before January 5, 1990.

Mr. McGee said that he interprets the statutory offer-to-sell requirement to mean that the ARRC must actively solicit offers and not just advertise that the railroad is for sale. Mr. McGee said that if the corporation does not comply with the statutory requirement, the legislature would probably take action, the severity of which would depend on how strongly they believed that the railroad should be transferred to private ownership.

I asked Mr. Lewis if the ARRC has taken any steps to begin complying with the statute. He said that at the last corporation board meeting, the board asked the ARRC's legal counsel to begin looking at different ways the corporation could approach complying with the requirement. Mr. Lewis mentioned that the board discussed the form in which offers should be conducted and how a sale will be most advantageous to the State. Mr. Lewis said that an offering to sell will probably be in the form of a solicitation of proposals to buy the railroad.

Mr. Lewis referenced federal restraints (included in the Alaska Railroad Transfer Act) in regard to selling the railroad. He said that one restraint is that if the railroad were sold within five years of the transfer of the railroad to State ownership, any profit from the sale reverts to the federal government. This restraint was included in the act because the federal government wanted the State to operate the railroad for at least five years. Mr. Lewis said that this restraint makes it more beneficial for the State to retain the railroad until after 1990.

* * * *

I have attached the Alaska Railroad Corporation Act (AS 42.40.010-980) for your information. If you would like the ARRC to provide more specific information on each of the exemptions, please let me know and I will write a second letter to the corporation.

PW

Attachments

The Federal Transfer Act has several provisions:

a. If the state sells all or any part of the railroad during the first 5 years the monies from this sale will revert to the Federal Government.

b. After the 5 years the state may not sell any land which is needed to operate the railroad (rights of ways) etc. The state may sell land that is not necessary for the railraod to operate, BUT it may not sell any of the approximate 18,000 acres required for the railraod to operate.

c. After the ten years, the state may sell the entire Corporation is so desired.

ALASKA RAILROAD CORPORATION

Ms. Penelope Weyhrauch
Legislative Analyst
Alaska State Legislature House of
Representatives Research Agency
P.O. Box Y
State Capital
Juneau, Alaska 99811-3100

Dear Ms. Weyhrauch:

Your letter dated December 4, 1986 to Mr. Larry Wood, General Counsel of the Alaska Railroad Corporation, was referred to me for response.

You have asked for our assessment of negative impacts that the Alaska Railroad Corporation ("ARRC") might experience if the statutory exemptions in AS 42.40.920 were repealed. Unfortunately, your question does not avail itself of a simple response.

In order to answer your question, it is important to understand the various laws and agreements which circumscribe ARRC's existence and operations. The federal Alaska Railroad Transfer Act ("ARTA"), 45 U.S.C. §§1201-1214, authorized the transfer of the Alaska Railroad to ARRC and established the ground rules for the State's purchase of the Railroad. As part of that act, the State was required to make certain declarations and agreements to abide by the sale terms. The state Alaska Railroad Corporation Act ("ARCA"), AS 42.40.010-.990, implemented the State's commitments all within the requirements of ARTA through the creation of a public corporation to own and operate the Alaska Railroad.

ARTA, the State's own declarations and agreements to abide by those sale terms, and ARCA insure that the State-owned railroad shall be a rail carrier generating, retaining, and managing its own revenues for railroad purposes to better serve Alaska's transportation and development needs. In framing the operating characteristics of the public corporation to conform to this expectation, Alaska's leadership, both federal and state, gave ARRC enough independence to conduct its activities as a

separate and viable economic entity. Exemptions from laws which apply to state agencies mean generally that ARRC promotes, receives, and manages its own revenues, supplies, equipment, facilities, and real estate, establishes its own personnel policies, compensation systems, and employment agreements, promulgates its own rules and regulations to govern internal and external affairs, and manages its own purchasing, financing, and budgeting needs. On the other hand, a desire for public accountability requires open meetings, appointments by the Governor to the railroad board, procurement and ethical codes substantially equivalent to State models, financial and management audits, annual and oversight reports, legislative approval of certain real estate transactions, and long-range capital improvement and program plans. This wise blend of financial and operations independence with State oversight requirements results in a quasi-public, quasi-private railroad armed with the flexibility needed to quickly react to changing market, financial, and legal needs and with the accountability mechanisms necessary to satisfy the governmental aspects of its operations.

As a result of the dual legislative desires of self-sufficiency and public accountability all within the confines of ARTA, the Alaska legislature created a public corporation unlike any other public corporation in Alaska. This is reflected in the legislative findings and purposes which accompanied ARCA. See 1984 Alaska Session Laws, Chapter 153, Section 1. The findings and purposes clauses state that the public corporation is to be exclusively responsible for the management of the financial and legal obligations of the Alaska Railroad, carry out its responsibilities on a self-sustaining basis, and provide for the prudent operation of the railroad according to sound business management practices. Also, ARCA creates a "viable economic entity with the powers and duties necessary to operate and manage the Alaska Railroad pending eventual transfer of the Railroad to the private sector." ARCA and its legislative history reflect a legislative desire that the railroad operate as independently as possible from the State to facilitate the smooth transfer of its business and assets to a private owner. Indeed, AS 42.40.260 requires that ARRC's annual report contain every five years an analysis of potential sale arrangements, including documentation of at least three offers to sell ARRC.

Under AS 42.40.920, ARRC is exempt from the following statutes:

(1) AS 19;
(2) AS 30.15;
(3) AS 35;
(4) AS 37.05;
(5) AS 37.07;
(6) AS 37.10.010 37.10.060;
(7) AS 37.10.085;
(8) AS 37.20;

(9) AS 37.25;
(10) AS 38;
(11) AS 44.62.040 - 44.62.320.

A careful review of these statutes demonstrates how each conflicts with ARCA or ARTA. Titles 19 and 35 set forth the powers and duties of the Department of Transportation and Public Facilities ("DOT/PF") to plan, construct, maintain and operate transportation facilities, including state ferries, airports and water and harbor facilities, and to plan and construct public buildings, boat harbors, dikes and breakwaters. Since ARRC operates as a self-sustaining public corporation, exemptions from Titles 19 and 35 insure that ARRC is responsible for its own facilities and operations.

AS 30.15 provides for state grants of monies and land for construction of local port facilities. ARRC's exemption precludes municipalities from using ARRC funds or lands for port facility development.

Exemptions from portions of Title 37 are required by ARTA which states that "revenues generated by the state-owned railroad shall be retained and managed by the state-owned railroad for railroad and related purposes." 45 U.S.C. §1207(a)(5). AS 37.05, the Fiscal Procedures Act, establishes uniform accounting, purchasing, post auditing, and related financial provisions for all "state agencies" and requires state agencies to submit reports, documents, and statements to the Department of Administration for accounting purposes, requires federal funds received by state agencies to be deposited in the state treasury, makes the Department of Administration responsible for all accounts and purchases of state agencies, requires competitive bidding procedures, and imposes other financial and reporting requirements. The exemption from AS 37.05 conforms to ARTA by allowing ARRC to maintain and control its own accounts and to act as its own purchasing agent.

The exemption from AS 37.07, the Executive Budget Act, also conforms to ARTA by allowing the ARRC to budget and manage its revenues as a separate economic entity.

AS 37.10.010 - .060 designates the Department of Administration as the custodian of state funds and requires all officers, boards and commissions to account to the Department of Revenue for moneys received. Again, an exemption from AS 37.10.010 to 37.10.060 allows ARRC to manage its own revenues.

AS 37.25 determines which unexpended appropriations lapse and which do not. This exemption insures that all ARRC's monies are available to it from year to year.

AS 37.10.085 prohibits political subdivisions from subscribing to the stock of a corporation and from loaning credit or

borrowing money for a corporation's use. Exemption from AS 37.10.085 permits ARRC to manage its revenues by placing its funds in a wide range of investments, including lending its credit and borrowing money for the use of a corporation.

AS 37.20 authorizes the governor to accept federal grants and transfers of property. Transferred land falls within the jurisdiction of the Department of Natural Resources. ARRC's exemption from AS 37.20 insured that federal railroad property, including land, building, monies, personnel property and structures, would be directly conveyed to ARRC rather than to the Departments of Administration, Natural Resources and Transportation and Public Facilities.

Title 38 states that the lands of the state are to be managed by the Department of Natural Resources. Exemption from Title 38 conforms to ARTA's and ARCA's mandate that ARRC manage railroad real estate.

AS 44.62.040 to 44.62.320, much of the Administrative Procedures Act, provide procedures for adopting and implementing regulations in state government. These provisions are supplanted by ARCA's AS 42.40.170 - .270, which call for publicly adopted rules by ARRC's board of directors.

The eradication of one or more of the ARCA exemptions will substantially change the model of a self-sufficient, competitive and accountable public railroad corporation that was created by Alaska's state and federal leadership. Furthermore, through the development of its own personnel, procurement, surplus property, budget, accounting, and land and lease plans, policies, and procedures, ARRC stands ready for expeditious transfer to the private sector. The short history of ARRC operations have underscored the wisdom of the legislature's original direction. We very much support that mission and would most appreciate the opportunity to comment upon proposed legislation to change or amend it.

I hope this adequately answers your question. Please feel free to call if you have any further questions.

Yours very truly,

E. T. L.

E. Thaddeus Lewis
Associate General Counsel

Article 1. Establishment and Organization.

Section
10. Establishment of the corporation
20. Board of directors
30. Term of office
40. Vacancies
50. Compensation and expenses
60. Board officers

Sec. 42.40.010. Establishment of the corporation. There is established the Alaska Railroad Corporation. The corporation is a public corporation and is an instrumentality of the state within the Department of Commerce and Economic Development. The corporation has a legal existence independent of and separate from the state. The continued operation of the Alaska Railroad by the corporation as provided in this chapter is considered an essential government function of the state. (§ 2 ch 153 SLA 1984)

Sec. 42.40.020. Board of directors. (a) The powers of the corporation are vested in the board of directors. The board consists of the commissioner of commerce and economic development, the commissioner of transportation and public facilities, and five members appointed by the governor. The five appointed members must be registered voters in the state except as provided in (1) and (2) of this subsection. Except for the commissioners and the member appointed under (5) of this section, a member may not be a state officer or employee. Appointed members shall have the following qualifications:

(1) one member of the board shall be a person who has at least 10 years of experience in railroad management; a person who is not a resident of the state may be appointed under this paragraph;

Article 4. Powers and Duties.

Section
250. General powers
260. Annual report
270. Audits
280. State oversight reports
285. Legislative approval required
290. Long-range capital improvement and program plan
300. Use of corporation assets
310. Indemnification

Sec. 42.40.250. General powers. In addition to the exercise of other powers authorized by law, the corporation may

(1) adopt a seal;

(2) adopt bylaws governing the business of the corporation;

(3) sue and be sued;

(4) appoint trustees and agents of the corporation and prescribe their powers and duties;

(5) hire legal counsel to represent the corporation;

(6) make contracts and execute instruments necessary or convenient in the exercise of its powers and duties;

(7) acquire by purchase, lease, bequest, devise, gift, exchange, the satisfaction of debts, the foreclosure of mortgages, or otherwise, personal property, rights, rights-of-way, franchises, easements, and other interests in land, and acquire by appropriation water rights that are located in the state, taking title to the property in the name of the corporation;

(8) hold, maintain, use, operate, improve, lease, exchange, donate, convey, alienate, encumber, or otherwise grant a security interest in, or authorize use or dispose of, land or personal property, subject to other provisions of this chapter;

(9) contract with and accept transfers, gifts, grants or loans of funds or property from the United States and the state or its political subdivisions, subject to other provisions of federal or state law or municipal ordinances;

(10) undertake and provide for the management, operation, maintenance, use, and control of all of the property of the corporation, including all land and personal property of the Alaska Railroad transferred under 45 U.S.C. 1203(a) and described in the report dated July 14, 1983, as amended, submitted to Congress and the legislature under 45 U.S.C. 1204(a);

(11) recommend to the legislature and the governor any tax, financing, or financial arrangement the corporation considers appropriate for expansion or extension and operation of the Alaska Railroad;

(12) maintain offices and facilities at places it designates;

(13) apply to the state, the United States, and foreign countries or other proper agencies for the permits, licenses, rights-of-way, or approvals necessary to construct, maintain, and operate transportation and related services, and obtain, hold, and reuse the licenses and permits in the same manner as other railroad operators;

(14) prescribe rates to be charged for services provided by the Alaska Railroad consistent with 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982);

(15) determine the routes, schedules, and types of service to be provided by the Alaska Railroad;

(16) enter into contracts, leases, and other agreements with connecting carriers, shippers, and other persons concerning the services, activities, operations, property, and facilities of the corporation, including agreements that contain provisions to preserve and expand the railroad's traffic base;

(17) plan for and undertake expansion of the railroad and railroad activities, including extension of the rail system, and contract with other modes of transportation service connecting to the rail system;

(18) hire and discharge railroad personnel and determine benefits and other terms and conditions of employment;

(19) assume all rights, liabilities, and obligations of the Alaska Railroad in accordance with 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982);

(20) maintain a security force to enforce municipal ordinances, state laws, and the corporation's rules with respect to violations that occur on or to property owned, managed or transported by the corporation;

(21) issue its bonds upon approval of the legislature and provide for and secure their payment, provide for the rights of their holders and hold or dispose of them;

(22) purchase the corporation's bonds at a price not more than the principal amount of them plus interest;

(23) cancel bonds of the corporation purchased by the corporation;

(24) secure the payment of its bonds by pledge, mortgage, or other lien on its contracts, revenues, income, or property;

(25) consent to the modification of the rate of interest, time of payment of an installment of principal or interest, or other term of a loan, contract, or agreement to which the corporation is a party;

(26) borrow money, including the amounts necessary to establish reasonable reserves, and pay financing charges and interest on bonds for a reasonable period after which the corporation estimates other money will be available to pay the interest, consultant, advisory, and legal fees, and other expenses necessary or incident to borrowing;

(27) acquire, hold, and dispose of stocks, memberships, contracts, bonds, general or limited partnership interests or other interests in another corporation, association, partnership, joint venture, or other legal entity, and exercise the powers or rights in connection with these interests that are provided in contracts or agreements and that are allowed by law concerning the satisfaction of debts;

(28) undertake and provide for the acquisition, construction, maintenance, equipping, and operation of connecting, switching, terminal, or other railroads and railroad facilities;

(29) enter into agreements with a state agency or other instrumentality of the state; and

(30) do all things necessary or desirable to carry out the powers and duties of the corporation granted or necessarily implied in this chapter or other laws of the state or the laws or regulations of the federal government. (§ 2 ch 153 SLA 1984)

Sec. 42.40.260. Annual report. (a) Within 90 days following the end of the fiscal year of the Alaska Railroad the board shall distribute to the governor and to the legislature a report describing the operations and financial condition of the corporation during the preceding fiscal year. The report may include suggestions for legislation relating to the structure, powers or duties of the corporation or to the operation or facilities of the corporation. Subject to AS 42.40.220, the report shall itemize the cost of providing each category of service offered by the railroad and the income generated by each category.

(b) Every five years the annual report shall include an analysis of potential sale arrangements whereby the corporation may be transferred into private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation during the last five years. (§ 2 ch 153 SLA 1984)

Jack Meyce, AG most specific

Sec. 42.40.270. Audits. (a) The board shall have the financial records of the corporation audited annually by an independent certified public accountant experienced in railroad accounting. The board shall have an annual performance audit conducted by a recognized railroad management expert to assure that the railroad is being managed and operated effectively and efficiently in accordance with the requirements of this chapter and that each appropriation is used to directly support those services for which the appropriation was requested. Auditors shall use the standards required under AS 42.40.100(9) and determine whether appropriations received for a service that is not self-sustaining were calculated in accordance with United States Interstate Commerce Commission standards for determining rail service subsidies.

(b) The corporation shall make all of its financial records available to an auditor appointed by the governor and to the legislative audit division for examination. Disclosure to the public by the auditor or legislative audit division of this information is subject to AS 42.40.220 and rules implementing that section. (§ 2 ch 153 SLA 1984)

Sec. 42.40.280. State oversight reports. (a) The board shall provide a state oversight report to the governor and the legislature before undertaking

(1) expansion, reduction, or diversification of services provided by the railroad upon the date of transfer or as provided under this chapter that the board determines would represent a significant and permanent change in the level and nature of services provided; or

(2) an application for an appropriation to be used for providing any service that is not self-sustaining.

(b) The report under (a) of this section shall be in writing, describe the proposed undertaking in detail, and specify

(1) its financial impact on the corporation;

(2) its impact on the level and nature of services provided by the corporation;

(3) the reasons the action is necessary or desirable to achieve the purposes of this chapter;

(4) whether and when the undertaking or service is expected to be self-sustaining financially; and

(5) if the undertaking requires an appropriation to be used for providing a service that is not self-sustaining, that the amount of the appropriation has been strictly calculated in accordance with United States Interstate Commerce Commission standards for determining rail service subsidies. (§ 2 ch 153 SLA 1984)

Sec. 42.40.285. Legislative approval required. Unless the legislature approves the action by law, the corporation may not

(1) exchange, donate, sell, or otherwise convey its entire interest in land;

(2) issue bonds;

(3) extend railroad lines; this paragraph does not apply to a spur, industrial, team, switching or side track;

(4) lease land for a period in excess of 35 years unless the corporation reserves the right to terminate the lease if the land is needed for railroad purposes. (§ 2 ch 153 SLA 1984)

Sec. 42.40.290. Long-range capital improvement and program plan. (a) The corporation shall prepare and the board shall adopt a long-range capital improvement and program plan. The plan shall explain the manner in which the corporation intends to accomplish the purposes of this chapter and the corporation's anticipated capital improvements during each of the five years after the plan is adopted.

(b) The board shall annually review and approve revisions to the long-range capital improvement and program plan. The board shall provide copies of the updated plan to the governor and the legislature by December 1 of each year. (§ 2 ch 153 SLA 1984)

Sec. 42.40.905. Notice of legal actions. (a) The corporation shall notify the Department of Law within 30 days before initiating legal action unless special circumstances exist that require immediate legal action to protect the corporation assets or to continue existing service.

(b) If notice of legal action is not given under (a) of this section, within seven days of taking action the board shall notify the Department of Law of the action taken and of the special circumstances that exempted the action from the requirements of (a) of this section. (§ 2 ch 153 SLA 1984)

Sec. 42.40.910. Exemption from taxation. (a) The exercise of the powers granted by this chapter shall be in all respects for the benefit of the people of the state, for their well-being and prosperity, and for the improvement of their social and economic conditions. Subject to (b) of this section, the real and personal property of the corporation and its assets, income, and receipts are exempt from all taxes and special assessments of the state or a political subdivision of the state.

(b) Bonds and notes issued under this chapter are issued by a body corporate and public of the state and for an essential public and governmental purpose. Therefore, the bonds and notes, the interest and income from them, and all fees, charges, funds, revenue, income and other money pledged or available to pay or secure the payment of the bonds and notes or interest on them, are exempt from taxation except for inheritance, transfer, and estate taxes.

(c) This section does not affect or limit an exemption from license fees, property taxes, or excise, income or other taxes, provided under any other law, nor does it create a tax exemption with respect to the interest of any business enterprise or other person, other than the corporation. (§ 2 ch 153 SLA 1984)

Sec. 42.40.920. Application of existing laws. (a) The corporation is not subject to the jurisdiction of the Alaska Transportation Commission.

(b) [Effective July 1, 1987] Unless specifically provided otherwise in this chapter, the following laws do not apply to the operations of the corporation:

sets up DOT
- (1) AS 19; - Highways & Ferries
- (2) AS 30.15; - Navigation, Harbors + Slupping - State grants for port facilities constr
- (3) AS 35; - Public Buildings, Works & Improvements
- (4) AS 36.30, except as specifically provided in that chapter; - Public Contract
- (5) AS 37.05; Public Finance : financial reports - uniform accounting
- (6) AS 37.07; - Exec. Budget Act
- (7) AS 37.10.010 — 37.10.060; Public Funds
- (8) AS 37.10.085; - Fin. Aid to Corporations by state or political subdiv.
- (9) AS 37.20; - Acceptance of federal funds.

(10) AS 37.25; - Misc provisions re appropriations
(11) AS 38; — Public Lands
(12) AS 44.62.010 — 44.62.320. (§ 2 ch 153 SLA 1984; am § 41 ch 106 SLA 1986) - Admin Procedures Act. - applies primarily to developing regulations

Effect of amendments. — The 1986 amendment, effective July 1, 1987, inserted paragraph (4) of subsection (b) and redesignated the following paragraphs accordingly.

Editor's notes. — Prior to July 1, 1987, subsection (b) read as follows: "(b) Unless specifically provided otherwise in this chapter, the following laws do not apply to the operations of the corporation:
"(1) AS 19;
"(2) AS 30.15;
"(3) AS 35;
"(4) AS 37.05;
"(5) AS 37.07;
"(6) AS 37.10.010 — 37.10.060;
"(7) AS 37.10.085;
"(8) AS 37.20;
"(9) AS 37.25;
"(10) AS 38;
"(11) AS 44.62.040 — 44.62.320."

Sec. 42.40.930. Conflicting laws inapplicable. If provisions of AS 42.40 conflict with the provisions of other state law, the provisions of AS 42.40 prevail. Provisions of AS 42.40 shall be construed so that they do not conflict with 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982). (§ 2 ch 153 SLA 1984)

Sec. 42.40.935. Railroad facilities code compliance. (a) Not later than two years after the date of transfer the corporation in consultation with the Department of Labor shall develop and adopt a plan to achieve compliance with AS 18.60. The plan shall be implemented and compliance achieved within five years after it is adopted.

(b) No later than two years after the date of transfer, the corporation in consultation with the Department of Public Safety and appropriate municipal officials, shall develop and adopt a plan to achieve compliance with building and related safety codes applicable to facilities of the corporation. The plan shall be implemented and compliance achieved within five years after it is adopted. In the sole determination of the commissioner of public safety, any existing building owned or controlled by the corporation that does not present a serious safety hazard and for which compliance would be uneconomical in consideration of its remaining useful life shall be exempted from compliance with state or municipal safety codes. (§ 2 ch 153 SLA 1984)

Sec. 42.40.940. Sale or lease of the railroad. (a) The governor may provide for the sale or lease of the Alaska Railroad and dissolve the corporation if

(1) it can be assured that the railroad will continue to operate after the sale or lease; and

(2) under the terms of the sale or lease, the state will receive the amount of money it has spent in connection with the Alaska Railroad.

(b) A sale under this section is subject to approval by law. (§ 2 ch 153 SLA 1984)

Sec. 42.40.950. **Reversion of assets.** Except as provided in AS 42.40.940, if the corporation ceases to exist its assets revert to the state. (§ 2 ch 153 SLA 1984)

Sec. 42.40.980. **Definitions.** In this chapter unless the context otherwise requires,

(1) "board" means the board of directors of the Alaska Railroad Corporation;

(2) "bonds" means bonds, bond anticipation notes, notes, refunding bonds, or other obligations;

(3) "collective bargaining" means the performance of the mutual obligation of the corporation or its designated representatives and the representatives of the employees to meet at reasonable times, including meetings in advance of the budget making process, and negotiating in good faith with respect to wages, hours, and other terms and conditions of employment, or the negotiation of an agreement, or negotiation of a question arising under an agreement and the execution of a written contract incorporating an agreement reached if requested by either party, but these obligations do not compel either party to agree to a proposal or require the making of a concession;

(4) "corporation" means the Alaska Railroad Corporation;

(5) "date of transfer" means the date on which the United States Secretary of Transportation delivers the transfer documents under 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982);

(6) "employees" means all persons employed by the corporation including executive officers;

(7) "executive officer" means the corporation's chief executive officer, assistant chief executive officer, assistant to the chief executive officer, chief of administration, superintendent of transportation, manager of marketing and sales, chief engineer, chief mechanical officer, manager of industrial development and real estate, manager of budget and accounting, manager of planning, manager of personnel, manager of supply and procurement, chief of security, manager of operating rules, manager of data processing, manager of strategy, manager of operations planning, manager of supply, manager of procurement, manager of safety, manager of administrative procedure, chief counsel, or, if so designated by the board, any employee who fulfills these management functions under a different title or who exercises a similar or comparable level of responsibility or supervision;

(8) "land" means any interest in real property, including tide and submerged land, and any right appurtenant to the interest;

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 2, 1988

SUBJECT: Solicitation of offers to purchase the Alaska Railroad (W.O. 5-1769)

TO: Representative Bette Cato
Chairperson
House Transportation Committee

FROM: George Utermohle
Legislative Counsel

Enclosed is the draft bill relating to solicitation of offers to purchase the Alaska Railroad requested by Wendy Chamberlain of your staff.

The bill establishes a schedule for the Governor to solicit offers for the purchase of the Alaska Railroad and then to report back to the legislature on the results of the solicitation. The bill achieves its purpose by imposing the duty upon the Governor under his authority under AS 42.40.940, rather than upon the Board of Directors of the Alaska Railroad under the provisions of AS 42.40.260(b).

The contents of the solicitation is left to the discretion of the Governor. The bill takes this approach rather than list all the things that must be included in the solicitation, because it would be difficult to anticipate all of the kinds of information that a prospective buyer may need in order to make a decision whether to pursue the issue further. Also a detailed listing of the contents of a solicitation for offers would require the assistance of experts familiar with privatization of government enterprises, and the sale of large corporations. In the absence of such expertise, the bill relies on the Governor to develop a meaningful solicitation for offers and gives the Governor ample time in which to develop and release the solicitation.

If I can provide further assistance, please advise.

Enclosure

BILL NO: HB 256 DATE: 4/22/87

TITLE: "An Act relating to driving motor vehicles in the vicinity of the James Dalton Highway..."

CONTACT: James D. Vaden
Deputy Commissioner
465-4322

DEPARTMENT OF PUBLIC SAFETY

The bill establishes penalties for violating a provision in existing law which prohibits driving a vehicle within five miles of the James Dalton Highway (the North Slope haul road). Existing law, while prohibiting such conduct, does not specify a penalty for violation of the law. Because of this apparently inadvertent omission, there is no practical way to ensure compliance with the law.

HB 256 broadens the prohibition from "off-road vehicles" (a term that is not defined in AS 19) to all "motor vehicles" as defined under AS 28.40.100. It further clarifies, and slightly expands, the exceptions to the general prohibition.

This bill makes violation of the statute a "strict liability" offense. This means that the state need not prove that the offender intended to break the law, only that he voluntarily committed an act that did violate the law. Under the bill, the offense is classified as a "violation," punishable by a maximum fine of $300; no jail time may be imposed. If it can be proved that the offender acted with "criminal negligence," however -- that is, his conduct was a gross deviation from the standard of care that a reasonable person would observe in the situation (see AS 11.81.900(a)(4)) -- his conduct would constitute a class B misdemeanor offense, punishable by up to 90 days in jail, up to a $1,000 fine, or both.

This bill also amends AS 19.45.002 to explicitly provide that the penalties set out in that section apply not only to violations of the designated chapters of the statute, but to regulations adopted under those chapters. This clarification is needed to allow the state to regain the ability to enforce existing regulations regarding commercial vehicle width, height, and weight. Although these regulations have been in effect for many years, and have been enforced under the authority of AS 19.45.002 since at least 1972, the new "bail schedule" contained in the "Vehicle and Traffic Offenses" booklet issued by the Alaska Court System on January 1, 1987 states that 17 AAC 25.020 -- 17 AAC 25.060 and 17 AAC 25.100, regarding vehicle width, height, load, road closures and restrictions, etc., "are not enforceable because there is no penalty in the statutes (AS 19) for violation of the regulations." Vehicle Booklet at 27. The new bail schedule does not include a bail amount for violations of these regulations, effectively precluding enforcement of the existing regulations. The absence of any enforceable vehicle weight, height, or width limits, or road closure provisions, will have a devastating effect on highway safety and the protection of the roadway surfaces in Alaska; this problem should be addressed as quickly as possible.

The language of AS 19.45.002 is also updated by making a violation of the designated provisions a "class B misdemeanor" offense, a cross-reference to the

classification and penalty structures contained in Alaska's revised criminal code. The substance of the new subsec. (b) was taken from existing AS 28.40.050(e), and makes clear that, notwithstanding the general penalty provision, the penalty for a violation of a vehicle weight limit is a fine of five cents for each pound of weight over the authorized limit.

Passage of this bill would help to protect the state's roadway surfaces and the frozen terrain along the Dalton Highway.

The Department of Public Safety supports this legislation.

Arthur English
Commissioner

The bill also amends AS 19.45.002 to explicitly provide that the penalties set out in that section apply not only to violations of the designated chapters of the statute, but to regulations adopted under those chapters. This clarification is needed to allow the state to regain the ability to enforce existing regulations regarding commercial vehicle width, height, and weight. Although these regulations have been in effect for many years, and have been enforced under the authority of AS 19.45.002 since at least 1972, the new "bail schedule" contained in the "Vehicle and Traffic Offenses" booklet issued by the Alaska Court System on January 1, 1987 states that 17 AAC 25.020 -- 17 AAC 25.060 and 17 AAC 25.100, regarding vehicle width, height, load, road closures and restrictions, etc., "are not enforceable because there is no penalty in the statutes (AS 19) for violation of the regulations." Vehicle Booklet at 27. The new bail schedule does not include a bail amount for violations of these regulations, effectively precluding enforcement of the existing regulations. The absence of any enforceable vehicle weight, height, or width limits, or road closure provisions, will have a devastating effect on highway safety and the protection of the roadway surfaces in Alaska; this problem should be addressed as quickly as possible.

The language of AS 19.45.002 is also updated by making a violation of the designated provisions a "class B misdemeanor" offense, a cross-reference to the classification and penalty structures contained in Alaska's revised criminal code. The substance of new subsec. (b) was taken from existing AS 28.40.050(e), and makes clear that, notwithstanding the general penalty provision, the penalty for a violation of a vehicle weight limit is a fine of five cents for each pound of weight over the authorized limit.

To protect the state's roadway surfaces, the people who travel on them, and the fragile terrain along the Dalton Highway, I urge your prompt and favorable action on this measure.

Sincerely,

Steve Cowper
Governor

Article

1. Department of Transportation and Public Facilities (§§ 19.05.020, 19.05.040, 19.05.046)
2. Acquisition of Property (§ 19.05.080)

Article 1. Department of Transportation and Public Facilities.

Section

20. Regulations
40. Powers of department
46. Accounting and disposition of receipts from nonstate entities

Sec. 19.05.020. Regulations [Effective July 1, 1987]. The department shall adopt regulations necessary to carry out the purpose of AS 19.05 — AS 19.25. The regulations may not conflict with AS 36.30 (State Procurement Code) or regulations adopted by the Department of Administration to implement that chapter. (§ 1 art III title I ch 152 SLA 1957; am § 10 ch 106 SLA 1986)

Effect of amendments. — The 1986 amendment, effective July 1, 1987, added the second sentence.

Sec. 19.40.200. Disposal of land or materials. (a) The state may not dispose of state land under AS 38 which is within five miles of the right-of-way of the highway.

(b) The prohibition on disposal of state land under (a) of this section does not apply to a disposal necessary for

(1) an oil and gas lease under AS 38.05.180;

(2) exploration, development, production, or transportation of oil and gas north of 68 degrees north latitude; or

(3) a state lease or materials sale for exploration, development, production, or transportation of oil and gas or reconstruction or maintenance of the highway north of 68 degrees north latitude.

(c) Before the sale of materials under (b)(3) of this section to a private entity or person or to a state agency the state shall give due consideration to the availability of materials from private sources in the area where the materials are needed. (§ 5 ch 177 SLA 1980; am § 1 ch 77 SLA 1985)

Revisor's notes. — By judgment dated March 19, 1981, in Alaska Legislative Council v. Hammond, case no. 4FA-80-1689, the superior court for the fourth judicial district upheld the validity of the enactment of ch. 177, SLA 1980. The attorney general's opinion cited in the legislative history note to this section in the main pamphlet should be disregarded.

Effect of amendments. — The 1985 amendment added subsections (b) and (c).

Editor's notes. — Section 3, ch. 77, SLA 1985 made the 1985 amendments to this section retroactive to October 5, 1980.

Legislative history reports. — For Senate letter of intent relating to (b)(3) of this section, see 1985 Senate Journal, page 264, which refers to identical language in an earlier version of the bill.

Sec. 19.40.210. Prohibition of off-road vehicles. Off-road vehicles are prohibited on land within five miles of the right-of-way of the highway. However, this prohibition does not apply to off-road vehicles necessary for oil and gas exploration, development, production, or transportation or to a person who holds a mining claim in the vicinity of the highway and who must use land within five miles of the right-of-way of the highway to gain access to the mining claim. (§ 5 ch 177 SLA 1980; am § 2 ch 77 SLA 1985)

Effect of amendments. — The 1985 amendment, in the second sentence inserted "to off-road vehicles necessary for oil and gas exploration, development, production, or transportation or" and substituted "the" for "his" following "access to."

Editor's notes. — Section 3, ch. 77, SLA 1985 made the 1985 amendments to this section retroactive to October 5, 1980.

STEVE COWPER
GOVERNOR

SHB256

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

April 7, 1987

The Honorable Ben Grussendorf
Speaker of the House
Alaska State Legislature
P.O. Box V
Juneau, AK 99811

Dear Representative Grussendorf:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill that cures some serious technical problems with the penalty provisions in AS 19 (highway laws).

The bill establishes penalties for violating a provision in existing law which prohibits driving a vehicle within five miles of the James Dalton Highway (the North Slope haul road). Existing law, while prohibiting such conduct, does not specify a penalty for violation of the law. Because of this apparently inadvertent omission, there is no practical way to ensure compliance with the law.

The passage of motorized vehicles over the fragile terrain that surrounds the Dalton Highway can cause significant and long-term environmental damage. Recognizing this problem, this bill broadens the prohibition from "off-road vehicles" (a term that is not defined in AS 19) to all "motor vehicles" as defined under AS 28.40.100. The bill also clarifies, and slightly expands, the exceptions to the general prohibition.

Because it may be difficult at times to prove a person's intent to violate this law, the attached bill makes violation of the statute a "strict liability" offense. This means that the state need not prove that the offender intended to break the law, only that he voluntarily committed an act that did violate the law. Under the bill, the offense is classified as a "violation," punishable by a maximum fine of $300; no jail time may be imposed. If it can be proved that the offender acted with "criminal negligence," however -- that is, his conduct was a gross deviation from the standard of care that a reasonable person would observe in the situation (see AS 11.81.900(a)(4)) -- his conduct would constitute a class B misdemeanor offense, punishable by up to 90 days in jail, up to a $1,000 fine, or both.

The bill also amends AS 19.45.002 to explicitly provide that the penalties set out in that section apply not only to violations of the designated chapters of the statute, but to regulations adopted under those chapters. This clarification is needed to allow the state to regain the ability to enforce existing regulations regarding commercial vehicle width, height, and weight. Although these regulations have been in effect for many years, and have been enforced under the authority of AS 19.45.002 since at least 1972, the new "bail schedule" contained in the "Vehicle and Traffic Offenses" booklet issued by the Alaska Court System on January 1, 1987 states that 17 AAC 25.020 -- 17 AAC 25.060 and 17 AAC 25.100, regarding vehicle width, height, load, road closures and restrictions, etc., "are not enforceable because there is no penalty in the statutes (AS 19) for violation of the regulations." Vehicle Booklet at 27. The new bail schedule does not include a bail amount for violations of these regulations, effectively precluding enforcement of the existing regulations. The absence of any enforceable vehicle weight, height, or width limits, or road closure provisions, will have a devastating effect on highway safety and the protection of the roadway surfaces in Alaska; this problem should be addressed as quickly as possible.

The language of AS 19.45.002 is also updated by making a violation of the designated provisions a "class B misdemeanor" offense, a cross-reference to the classification and penalty structures contained in Alaska's revised criminal code. The substance of new subsec. (b) was taken from existing AS 28.40.050(e), and makes clear that, notwithstanding the general penalty provision, the penalty for a violation of a vehicle weight limit is a fine of five cents for each pound of weight over the authorized limit.

To protect the state's roadway surfaces, the people who travel on them, and the fragile terrain along the Dalton Highway, I urge your prompt and favorable action on this measure.

Sincerely,

Steve Cowper
Governor

Title 19. Highways and Ferries.

Chapter

05. Administration (§§ 19.05.020, 19.05.040, 19.05.046, 19.05.080)
10. State Highway System (§§ 19.10.060, 19.10.070, 19.10.072, 19.10.160 — 19.10.210)
20. Cooperation by and with the State (§ 19.20.015)
25. Protection and Use of State Highways and Roads (§§ 19.25.020, 19.25.040, 19.25.200)
30. Access Roads (§§ 19.30.070, 19.30.080, 19.30.127, 19.30.131, 19.30.141, 19.30.161, 19.30.241, 19.30.260 — 19.30.320)
40. James Dalton Highway (§§ 19.40.020, 19.40.100, 19.40.200, 19.40.210)
45. Miscellaneous Provisions (§ 19.45.001)
60. Ferry Terminal Facilities (§ 19.60.010, 19.60.070)
65. Alaska Marine Highway System (§ 19.65.010)

Chapter 05. Administration.

Article

1. Department of Transportation and Public Facilities (§§ 19.05.020, 19.05.040, 19.05.046)
2. Acquisition of Property (§ 19.05.080)

Article 1. Department of Transportation and Public Facilities.

Section

20. Regulations
40. Powers of department
46. Accounting and disposition of receipts from nonstate entities

Sec. 19.05.020. Regulations [Effective July 1, 1987]. The department shall adopt regulations necessary to carry out the purpose of AS 19.05 — AS 19.25. The regulations may not conflict with AS 36.30 (State Procurement Code) or regulations adopted by the Department of Administration to implement that chapter. (§ 1 art III title I ch 152 SLA 1957; am § 10 ch 106 SLA 1986)

Effect of amendments. — The 1986 amendment, effective July 1, 1987, added the second sentence.

Sec. 19.40.200. Disposal of land or materials. (a) The state may not dispose of state land under AS 38 which is within five miles of the right-of-way of the highway.

(b) The prohibition on disposal of state land under (a) of this section does not apply to a disposal necessary for

(1) an oil and gas lease under AS 38.05.180;

(2) exploration, development, production, or transportation of oil and gas north of 68 degrees north latitude; or

(3) a state lease or materials sale for exploration, development, production, or transportation of oil and gas or reconstruction or maintenance of the highway north of 68 degrees north latitude.

(c) Before the sale of materials under (b)(3) of this section to a private entity or person or to a state agency the state shall give due consideration to the availability of materials from private sources in the area where the materials are needed. (§ 5 ch 177 SLA 1980; am § 1 ch 77 SLA 1985)

Revisor's notes. — By judgment dated March 19, 1981, in Alaska Legislative Council v. Hammond, case no. 4FA-80-1689, the superior court for the fourth judicial district upheld the validity of the enactment of ch. 177, SLA 1980. The attorney general's opinion cited in the legislative history note to this section in the main pamphlet should be disregarded.

Effect of amendments. — The 1985 amendment added subsections (b) and (c).

Editor's notes. — Section 3, ch. 77, SLA 1985 made the 1985 amendments to this section retroactive to October 5, 1980.

Legislative history reports. — For Senate letter of intent relating to (b)(3) of this section, see 1985 Senate Journal, page 264, which refers to identical language in an earlier version of the bill.

Sec. 19.40.210. Prohibition of off-road vehicles. Off-road vehicles are prohibited on land within five miles of the right-of-way of the highway. However, this prohibition does not apply to off-road vehicles necessary for oil and gas exploration, development, production, or transportation or to a person who holds a mining claim in the vicinity of the highway and who must use land within five miles of the right-of-way of the highway to gain access to the mining claim. (§ 5 ch 177 SLA 1980; am § 2 ch 77 SLA 1985)

Effect of amendments. — The 1985 amendment, in the second sentence inserted "to off-road vehicles necessary for oil and gas exploration, development, production, or transportation or" and substituted "the" for "his" following "access to."

Editor's notes. — Section 3, ch. 77, SLA 1985 made the 1985 amendments to this section retroactive to October 5, 1980.

21. Commissioner to enter compacts and reciprocal agreements

Sec. 28.05.021. Commissioner to enter compacts and reciprocal agreements. (a) The commissioner may, under terms and conditions best calculated to promote the interests of the state, enter into a compact or agreement with an authorized representative of another jurisdiction in a matter relating to driver licensing, vehicle registration, or other activity authorized under this title. A compact or agree-

Sec. 28.40.100. Definitions for title. (a) Unless otherwise specifically defined or unless the context otherwise requires, in this title and in regulations adopted under this title

(1) "cancel" means the annulment or termination by formal action of the department of a certification, registration, license, permit or privilege issued or allowed under this title or regulations adopted under this title, because of an error or defect in the document issued or the application for issuance or because the person holding the document is no longer entitled to it;

(2) "commissioner" means the commissioner of public safety;

(3) "department" means the Department of Public Safety;

(4) "driver" means a person who drives or is in actual physical control of a vehicle;

(5) "driver's license", or "license" when used in relation to driver licensing, means a license, permit or privilege, whether or not a person holds a valid license issued in this or another jurisdiction, to drive a motor vehicle under the laws of this state;

(6) "highway" means the entire width between the boundary lines of every way that is publicly maintained when a part of it is open to the public for purposes of vehicular travel, including but not limited to every street and the Alaska state marine highway system but not vehicular ways or areas;

(7) "motor vehicle" means a vehicle which is self-propelled except a vehicle moved human or animal power;

(8) "motorcycle means a vehicle having a seat or saddle for the use of the rider and designed to travel on not more than three wheels in contact with the ground; the term does not include a tractor;

(9) "motor-driven cycle" means a motorcycle, motor scooter, motorized bicycle, or similar conveyance with a motor attached and having an engine with 50 or less cubic centimeters of displacement;

(10) *[Repealed, § 88 ch 74 SLA 1985, effective January 1, 1986.]*

(11) "official traffic-control device" means a sign, signal, marking, or other device not inconsistent with this title, placed or erected by authority of a state or municipal agency or official having jurisdiction, for the purpose of traffic regulating, warning and guiding;

(12) "owner" means a person, other than a lienholder, having the property in or title to a vehicle, including but not limited to a person entitled to the use and possession of a vehicle subject to a security interest in another person, but exclusive of a lessee under a lease not intended as security;

(13) "revoke" means the termination by formal action of the department or a court of a certification, registration, license, permit or privilege issued or allowed under this title or regulations adopted under this title; the certification, registration, license, permit or privilege may not be reissued, renewed or restored during the time for which revoked; however, after that time, an application for a new certificate, registration, license, permit or privilege may be made;

(14) "roadway" means that portion of a highway designed or ordinarily used for vehicular travel, exclusive of the sidewalk, berm, or shoulder, even though the sidewalk, berm, or shoulder is used by persons riding bicycles or other human powered vehicles; and in the event that a highway includes two or more separate roadways, the term refers to each roadway separately but not to all such roadways collectively;

(15) "suspend" means the temporary withdrawal by formal action of the department or a court of a certificate, registration, license, permit or privilege issued or allowed under this title or regulations adopted under this title, effective for a period of time which must be specifically designated by the department or court;

(16) "traffic" means pedestrians, ridden or herded animals, vehicles and other conveyances either singly or together while using a highway or vehicular way or area which is open to public use for purposes of travel;

(17) "underinsured motor vehicle" means a motor vehicle licensed for highway use with respect to ownership, operation, maintenance, or use for which there is a bodily injury or property damage insurance policy or a bond applicable at the time of an accident and the amount of insurance or bond

(A) is less than the limit for uninsured and underinsured coverage of the insured's policy; or

(B) has been reduced by payments to persons other than an insured, injured in an accident, to less than the limit for uninsured and underinsured coverage of the insured's policy;

(18) "vehicle" means a device in, upon, or by which a person or property may be transported or drawn upon or immediately over a highway or vehicular way or area except devices used exclusively upon stationary rails or tracks; and

(19) "vehicular way or area" means a way, path or area, other than a highway or private property, which is designated by official traffic control devices or customary usage and which is open to the public for purposes of pedestrian or vehicular travel, and which way or area may be restricted in use to pedestrians, bicycles, or other specific types of vehicles as determined by the department or other agency having jurisdiction over the way, path or area.

(b) The commissioner shall adopt regulations to define other terms which are used in this title and in regulations adopted under this title. (§ 50-1-1 ACLA 1949; am § 3 ch 81 SLA 1973; am §§ 13, 14 ch 241 SLA 1976; am § 1 ch 135 SLA 1977; am § 14 ch 70 SLA 1984; am § 1 ch 13 SLA 1985; am § 88 ch 74 SLA 1985)

Article 6. Definitions.

Section
900. Definitions

Sec. 11.81.900. Definitions.

(a) For purposes of this title, unless the context requires otherwise,

(1) a person acts "intentionally" with respect to a result described by a provision of law defining an offense when the person's conscious objective is to cause that result; when intentionally causing a particular result is an element of an offense, that intent need not be the person's only objective;

(2) a person acts "knowingly" with respect to conduct or to a circumstance described by a provision of law defining an offense when the person is aware that the conduct is of that nature or that the circumstance exists; when knowledge of the existence of a particular fact is an element of an offense, that knowledge is established if a person is aware of a substantial probability of its existence, unless the person actually believes it does not exist; a person who is unaware of conduct or a circumstance of which the person would have been aware had that person not been intoxicated acts knowingly with respect to that conduct or circumstance;

(3) a person acts "recklessly" with respect to a result or to a circumstance described by a provision of law defining an offense when the person is aware of and consciously disregards a substantial and unjustifiable risk that the result will occur or that the circumstance exists; the risk must be of such a nature and degree that disregard of it constitutes a gross deviation from the standard of conduct that a reasonable person would observe in the situation; a person who is

unaware of a risk of which the person would have been aware had that person not been intoxicated acts recklessly with respect to that risk;

(4) a person acts with "criminal negligence" with respect to a result or to a circumstance described by a provision of law defining an offense when the person fails to perceive a substantial and unjustifiable risk that the result will occur or that the circumstance exists; the risk must be of such a nature and degree that the failure to perceive it constitutes a gross deviation from the standard of care that a reasonable person would observe in the situation.

(b) In this title, unless otherwise specified or unless the context requires otherwise,

(1) "affirmative defense" means that

(A) some evidence must be admitted which places in issue the defense; and

(B) the defendant has the burden of establishing the defense by a preponderance of the evidence;

(2) "benefit" means a present or future gain or advantage to the beneficiary or to a third person pursuant to the desire or consent of the beneficiary;

(3) "building", in addition to its usual meaning, includes any propelled vehicle or structure adapted for overnight accommodation of persons or for carrying on business; when a building consists of separate units, including apartment units, offices, or rented rooms, each unit is considered a separate building;

(4) "cannabis" has the meaning ascribed to it in AS 11.71.900(10), (11), and (14);

(5) "conduct" means an act or omission and its accompanying mental state;

(6) "controlled substance" has the meaning ascribed to it in AS 11.71.900(4);

(7) "correctional facility" means premises, or a portion of premises, used for the confinement of persons under official detention;

(8) "credit card" means any instrument or device, whether known as a credit card, credit plate, courtesy card, or identification card or by any other name, issued with or without fee by an issuer for the use of the cardholder in obtaining property or services on credit;

(9) "crime" means an offense for which a sentence of imprisonment is authorized; a crime is either a felony or a misdemeanor;

(10) "culpable mental state" means "intentionally", "knowingly", "recklessly", or with "criminal negligence", as those terms are defined in (a) of this section;

(11) "dangerous instrument" means any deadly weapon or anything which, under the circumstances in which it is used, attempted to be used, or threatened to be used, is capable of causing death or serious physical injury;

(12) "deadly force" means force which the person uses with the intent of causing, or uses under circumstances which he knows create a substantial risk of causing, death or serious physical injury; "deadly force" includes intentionally discharging or pointing a firearm in the direction of another person or in the direction in which another person is believed to be and intentionally placing another person in fear of imminent serious physical injury by means of a dangerous instrument;

(13) "deadly weapon" means any firearm, or anything designed for and capable of causing death or serious physical injury, including a knife, an axe, a club, metal knuckles, or an explosive;

(14) "deception" means to knowingly

(A) create or confirm another's false impression which the defendant does not believe to be true, including false impressions as to law or value and false impressions as to intention or other state of mind;

(B) fail to correct another's false impression which the defendant previously has created or confirmed;

(C) prevent another from acquiring information pertinent to the disposition of the property or service involved;

(D) sell or otherwise transfer or encumber property and fail to disclose a lien, adverse claim, or other legal impediment to the enjoyment of the property, whether or not that impediment is a matter of official record; or

(E) promise performance which the defendant does not intend to perform or knows will not be performed;

(15) "defense", other than an affirmative defense, means that

(A) some evidence must be admitted which places in issue the defense; and

(B) the state then has the burden of disproving the existence of the defense beyond a reasonable doubt;

(16) "drug" has the meaning ascribed to it in AS 11.71.900(9);

(17) "dwelling" means a building that is designed for use or is used as a person's permanent or temporary home or place of lodging;

(18) "explosive" means a chemical compound, mixture, or device that is commonly used or intended for the purpose of producing a chemical reaction resulting in a substantially instantaneous release of gas and heat, including dynamite, blasting powder, nitroglycerin, blasting caps, and nitrojelly, but excluding salable fireworks as defined in AS 18.72.050, black powder, smokeless powder, small arms ammunition, and small arms ammunition primers;

(19) "felony" means a crime for which a sentence of imprisonment for a term of more than one year is authorized;

(20) "fiduciary" means a trustee, guardian, executor, administrator, receiver, or any other person carrying on functions of trust on behalf of another person or organization;

(21) "firearm" means a weapon, including a pistol, revolver, rifle, or shotgun, whether loaded or unloaded, operable or inoperable, designed for discharging a shot capable of causing death or serious physical injury;

(22) "force" means any bodily impact, restraint, or confinement or the threat of imminent bodily impact, restraint, or confinement, "force" includes deadly and nondeadly force;

(23) "government" means the United States, any state or any municipality or other political subdivision within the United States or its territories; any department, agency, or subdivision of any of the foregoing; an agency carrying out the functions of government; or any corporation or agency formed under interstate compact or international treaty;

(24) "highway" means a public road, road right-of-way, street, alley, bridge, walk, trail, tunnel, path, or similar or related facility, as well as ferries and similar or related facilities;

(25) "includes" means "includes but is not limited to";

(26) "incompetent person" means a person who is impaired by reason of mental illness or mental deficiency to the extent that the person lacks sufficient understanding or capacity to make or communicate responsible decisions concerning that person;

(27) "intoxicated" means intoxicated from the use of a drug or alcohol;

(28) "law" includes statutes and regulations;

(29) "leased" includes "rented";

(30) "metal knuckles" means a device that consists of finger rings or guards made of a hard substance and designed, made, or adapted for inflicting serious physical injury or death by striking a person;

(31) "misdemeanor" means a crime for which a sentence of imprisonment for a term of more than one year may not be imposed;

(32) "nondeadly force" means force other than deadly force;

(33) "offense" means conduct for which a sentence of imprisonment or fine is authorized; an offense is either a crime or a violation;

(34) "official detention" means custody, arrest, surrender in lieu of arrest, or confinement under an order of a court in a criminal or juvenile proceeding, other than an order of conditional bail release;

(35) "official proceeding" means a proceeding heard before a legislative, judicial, administrative, or other governmental body or official authorized to hear evidence under oath;

(36) "omission" means a failure to perform an act for which a duty of performance is imposed by law;

(37) "organization" means a legal entity, including a corporation, company, association, firm, partnership, joint stock company, foundation, institution, government, society, union, club, church, or any other group of persons organized for any purpose;

(38) "peace officer" means a public servant vested by law with a duty to maintain public order or to make arrests, whether the duty extends to all offenses or is limited to a specific class of offenses or offenders;

(39) "person" means a natural person and, when appropriate, an organization, government, or governmental instrumentality;

(40) "physical injury" means a physical pain or an impairment of physical condition;

(41) "police dog" means a dog used in police work under the control of a peace officer;

(42) "possess" means having physical possession or the exercise of dominion or control over property;

(43) "premises" means real property and any building;

(44) "propelled vehicle" means a device upon which or by which a person or property is or may be transported, and which is self-propelled, including automobiles, vessels, airplanes, motorcycles, snow machines, all-terrain vehicles, sailboats, and construction equipment;

(45) "property" means an article, substance, or thing of value, including money, tangible and intangible personal property including data or information stored in a computer program, system, or network, real property, a credit card, a domestic pet or livestock regardless of value, choses-in-action, and evidence of debt or of contract; a commodity of a public utility such as gas, electricity, steam, or water constitutes property but the supplying of such a commodity to premises from an outside source by means of wires, pipes, conduits, or other equipment is considered a rendition of a service rather than a sale or delivery of property;

(46) "public place" means a place to which the public or a substantial group of persons has access and includes highways, transportation facilities, schools, places of amusement or business, parks, playgrounds, prisons, and hallways, lobbies, and other portions of apartment houses and hotels not constituting rooms or apartments designed for actual residence;

(47) "public record" means a document, paper, book, letter, drawing, map, plat, photo, photographic file, motion picture, film, microfilm, microphotograph, exhibit, magnetic or paper tape, punched card or other document of any other material, regardless of physical form or characteristic, developed or received under law or in connection with the transaction of official business and preserved or appropriate for preservation by any agency, municipality, or any body subject to the open meeting provision of AS 44.62.310, as evidence of the organization, function, policies, decisions, procedures, operations, or other activities of the state or municipality or because of the informational value in it; it also includes staff manuals and instructions to staff that affect the public;

(48) "public servant" means each of the following, whether compensated or not, but does not include jurors or witnesses:

(A) an officer or employee of the state, a municipality or other political subdivision of the state, or a governmental instrumentality of the state, including legislators, members of the judiciary, and peace officers;

(B) a person who participates as an advisor, consultant, or assistant at the request or direction of the state, a municipality or other political subdivision of the state, or a governmental instrumentality;

(C) a person who serves as a member of the board or commission created by statute or by legislative, judicial, or administrative action by the state, a municipality or other political subdivision of the state, or a governmental instrumentality;

(D) a person nominated, elected, appointed, employed, or designated to act in a capacity defined in (A) — (C) of this paragraph, but who does not occupy the position;

(49) a "renunciation" is not "voluntary and complete" if it is substantially motivated, in whole or in part, by

(A) a belief that circumstances exist which increase the probability of detection or apprehension of the defendant or another participant in the criminal enterprise, or which render more difficult the accomplishment of the criminal purpose; or

(B) a decision to postpone the criminal conduct until another time or to transfer the criminal effort to another victim or another but similar objective;

(50) "serious physical injury" means

(A) physical injury caused by an act performed under circumstances that create a substantial risk of death; or

(B) physical injury that causes serious and protracted disfigurement, protracted impairment of health, protracted loss or impairment of the function of a body member or organ, or that unlawfully terminates a pregnancy;

(51) "services" includes labor, professional services, transportation, telephone or other communications service, entertainment, including cable, subscription, or pay television or other telecommunications service, the supplying of food, lodging, or other accommodations in hotels, restaurants, or elsewhere, admission to exhibitions, the use of a computer, computer time, a computer system, a computer program, a computer network, or any part of a computer system or network, and the supplying of equipment for use;

(52) "sexual contact" means

(A) the defendant's

(i) knowingly touching, directly or through clothing, the victim's genitals, anus, or female breast; or

(ii) knowingly causing the victim to touch, directly or through clothing, the defendant's or victim's genitals, anus, or female breast;

(B) but "sexual contact" does not include acts

(i) that may reasonably be construed to be normal caretaker responsibilities for a child, interactions with a child, or affection for a child; or

(ii) performed for the purpose of administering a recognized and lawful form of treatment that is reasonably adapted to promoting the physical or mental health of the person being treated;

(53) "sexual penetration" means

(A) genital intercourse, cunnilingus, fellatio, anal intercourse, or an intrusion, however slight, of an object or any part of a person's body into the genital or anal opening of another person's body;

(B) but "sexual penetration" does not include acts performed for the purpose of administering a recognized and lawful form of treatment that is reasonably adapted to promoting the physical health of the person being treated;

(C) each party to any of the acts defined as "sexual penetration" is considered to be engaged in sexual penetration;

(54) "solicits" includes "commands";

(55) "threat" means a menace, however communicated, to engage in conduct described in AS 11.41.520(a)(1) — (7) but under AS 11.41.520(a)(1) includes all threats to inflict physical injury on anyone;

(56) "violation" is a noncriminal offense punishable only by a fine, but not by imprisonment or other penalty; conviction of a violation does not give rise to any disability or legal disadvantage based on conviction of a crime; a person charged with a violation is not entitled

(A) to a trial by jury; or

(B) to have a public defender or other counsel appointed at public expense to represent the person;

(57) "voluntary act" means a bodily movement performed consciously as a result of effort and determination, and includes the possession of property if the defendant was aware of the physical possession or control for a sufficient period to have been able to terminate it. (§ 10 ch 166 SLA 1978; am §§ 29 — 32 ch 102 SLA 1980; am §§ 12 — 14 ch 45 SLA 1982; am §§ 12 — 15 ch 143 SLA 1982; am § 2 ch 54 SLA 1983); am § 5 ch 79 SLA 1984; am § 3 ch 114; am §§ 1, 2 ch 116 SLA 1984)

Effect of amendments. — The first 1984 amendment inserted "the use of a computer, computer time, a computer system, a computer program, a computer network, or any part of a computer system or network" in paragraph (51) of subsection (b).

The second 1984 amendment inserted "including cable, subscription, or pay television or other telecommunications service" in paragraph (51) of subsection (b).

The third 1984 amendment, in paragraph (52) of subsection (b), inserted present subparagraph (A), added presented subparagraph (B), and, in subparagraph (A), divided the formerly undivided

65. Coroner's Inquest (§§ 12.65.010 — 12.65.110)
70. Uniform Criminal Extradition Act (§§ 12.70.010 — 12.70.290)
75. Habeas Corpus (§§ 12.75.010 — 12.75.230)
80. Miscellaneous Provisions (§§ 12.80.010 — 12.80.050)
85. General Provisions (§§ 12.85.010 — 12.85.020)

Revisor's notes. — The provisions of this title were redrafted in 1984 to remove personal pronouns pursuant to § 4, ch. 58, SLA 1982 and to make other, minor word changes.

For a review of the sources of some of Alaska law, see Brown, *The Sources of the Alaska and Oregon Codes* (pts. 1 and 2), 2 UCLA — Alaska L. Rev. 15, 87 (1972-1973).

Chapter 05. Jurisdiction.

Section

10. Crime commenced outside state but consummated inside

within paragraphs (4), (5) or (6) of subsection (g) the court may not impose a concurrent sentence. However, if the defendant's conduct falls within paragraphs (1), (2) or (3) of subsection (g) the court is authorized to impose concurrent sentences. (Griffith v. State, Ct. App. Op. No. 331 (File No. A-47), 675 P.2d 662 (1984).

Where defendant's various check forgery cases violated similar societal interests, he could therefore receive concurrent sentences. Winfree v. State, Ct. App. Op. No. 378 (File No. A-156), P.2d (1984).

Sec. 12.55.030. Discharge of indigents imprisoned for nonpayment of fine. [Repealed, § 16 ch 53 SLA 1973.]

Sec. 12.55.035. Fines. (a) Upon conviction of an offense, a defendant may be sentenced to pay a fine as authorized in this section or as otherwise authorized by law. In determining the amount and method of payment of a fine, the court shall take into account the financial resources of the defendant and the nature of the burden its payment will impose. No defendant may be imprisoned solely because of inability to pay a fine.

(b) Upon conviction of an offense, a defendant who is not an organization may be sentenced to pay, unless otherwise specified in the provision of law defining the offense, a fine of no more tha

(1) $75,000 for murder in the first or second degree, sexual assault in the first degree, kidnapping, or misconduct involving a controlled substance in the first degree;

(2) $50,000 for a class A, B, or C felony;

(3) $5,000 for a class A misdemeanor;

(4) $1,000 for a class B misdemeanor;

(5) $300 for a violation.

(c) Upon conviction of an offense, a defendant that is an organization may be sentenced to pay a fine not exceeding the greater of

(1) $100,000; or

(2) an amount which is three ti es the pecuniary gain realized by the defendant as a result of the c' se.

(d) If a defendant is sentenced to pay a fine, the court may grant permission for the payment to be made within a specified period of time or in specified installments. (§ 12 ch 166 SLA 1978; am § 17 ch 45 SLA 1982; am § 26 ch 143 SLA 1982)

Cross references. — For classification of offenses, see AS 11.81.250; for sentences of imprisonment for felonies, see AS 12.55.125; for sentences of imprisonment for misdemeanors, see AS 12.55.135; for sentences for violations, see AS 12.55.140.

Effect of amendments. — The first 1982 amendment, in subsection (b)(1), deleted "or" preceding "kidnapping" and added "or misconduct involving a controlled substance in the first degree."

The second 1982 amendment inserted "sexual assault in the first degree" in paragraph (1) of subsection (b).

While neither 1982 amendment gave effect to the other, both have been given effect in paragraph (b)(1), set out above.

Article 3. Effect of Statutes.

Section
70. Time statutes become law and take effect

Sec. 01.10.070. Time statutes become law and take effect. (a) All bills passed by the legislature become law upon the governor's signature or upon the governor's veto being overridden or, when the governor allows a bill to become law without signature, on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution. Acts become effective 90 days after becoming law, unless the legislature, by concurrence of two-thirds of the membership of each house, provides for another effective date.

(b) The actual effective date of an Act having no effective-date provision is determined by starting with the day after it is signed by the governor or the day after the governor's veto is overridden or the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution, and counting 90 calendar days, the Act becoming effective at 12:01 a.m., Alaska Standard Time on the 90th day.

(c) The actual effective date and time of an Act having an immediate-effective-date provision is 12:01 a.m., Alaska Standard Time, on

Quoted in
v. Tundra T

the day after it is signed by the governor or on the day after the governor's veto is overridden or on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution.

(d) An Act which specifies a definite effective date becomes effective at 12:01 a.m., Alaska Standard Time on the date specified.

(e) When the governor allows a bill to become law without signature, the governor shall give written notice of that fact to the legislature. The date of this notice has no effect upon the date the bill becomes law nor upon the date the Act takes effect.

(f) In this section

(1) "Act" means a bill which has become law;

(2) "bill" means a legislative document proposing an Act;

(3) "becomes effective" means becomes applicable; "effective date" does not mean date of enactment (or date of becoming law), although the two will coincide when a bill which has an immediate-effective-date provision is allowed to become law without the governor's signature;

(4) "becomes law" means is enacted; "enactment" occurs when any one of the following takes place:

(A) a bill which is passed by the legislature is signed by the governor;

(B) the period specified in art. II, § 17 of the Alaska Constitution expires without gubernatorial action;

(C) the legislature overrides the governor's veto of a bill;

(5) "passed by the legislature" means that the required majority of each house of the legislature has taken final action in approving the same version of a bill. (§ 5 ch 62 SLA 1962; am § 8 ch 126 SLA 1966; am § 1 ch 115 SLA 1974; am §§ 1—3 ch 6 SLA 1984)

Effect of amendments. - - The 1984 amendment substituted "Alaska" for "Pacific" near the end of subsection (b), near the beginning of subsection (c), and in subsection (d).

NOTES TO DECISIONS

Applied in Atlantic Richfield Co. v. State, Sup. Ct. Op. No. 2695 (File No. S-52), 666 P.2d 1031 (1985).

Sec. 01.10.080. Computation of time.

NOTES TO DECISIONS

Quoted in Fairbanks N. Star Borough v. Tundra Tours, Inc., Sup. Ct. Op. No. 3052 (File Nos. S-524, S-554), P.2d (1986).

BILL NO: HB 271 DATE: 4/22/87

TITLE: "An Act relating to weights and measures; and providing for an effective date.

CONTACT: James D. Vaden
Deputy Commissioner
465-4322

DEPARTMENT OF PUBLIC SAFETY

Grant authority to the Department of Commerce & Economic Development to write citations and provide penalties for weights and measures violations.

The Department of Commerce & Economic Development is responsible for scale house operations, and as such is responsible for weighing trucks; however, existing Statutes do not give them the authority to enforce size and weight limitations through the issuance of citations. This bill corrects that. In addition, it provides penalties for size and weight limitation violations.

Amendments proposed:

Add a new paragraph to Sec. 45.75.131 (4) "Equipment violations under regulations in 13 AAC.

Sec. 45.75.132(a)-(f) could be deleted and replaced with a paragraph under Sec. 45.75.131 which would read "Citations issued under this Section must be in accordance with AS 12.25.190-220." Sec. 45.75.132(g) could be adopted as sub-paragraph 6 under Sec. 45.75.131, or listed independently under a new Section number.

An amendment will need to be made to AS 12.25.190 to address the issuance of citations proposed under Sec. 45.75.131.

The Department of Public Safety supports this legislation.

April 13, 1987

Representative Bette Cato
P.O. Box V
Juneau, AK 99811

APR 2 1 1987

Subj: Senate Bill No. 146, an act relating to weights and measures

Dear Representative Cato;

We are urging your support of legislation which would give limited citation issuing authority to Scale House Operators. Currently, the authority for enforcement of all infractions, including weight and length violations, rests with the State Troopers. The budget situation has forced the Troopers to focus their limited resources on more pressing crimes than weight and height violations. The result is widespread abuse of the law.

The scale house is the appropriate place to monitor size and weight limitations and therefore would seem to be the place to issue citations for violations. There would be no addional costs involved and you would go a long way towards stopping the destruction of our roads from overweight trucks.

Sincerely;

Richard Gregory, President

This position will be required to deal with the additional activity resulting from passage of this bill.

Due to the FY83 elimination of a research position in the Anchorage office, microfiche was made available at the office for individuals to research and find their own information from motor vehicle registration records. With passage of this bill, anyone requesting vehicle information will have to be screened to verify eligibility. If the requestor is eligible, they will be provided with the necessary data.

This position will do the screening to determine eligibility, and perform the record search when necessary.

Revised Date

FY 89

BILL NO: HB 272 DATE: April 21, 1987

TITLE: An Act relating to release of motor vehicle records. CONTACT: Bill Brown 465-4335

APR 2 8 1987

DEPARTMENT OF PUBLIC SAFETY

Motor vehicle registration information is currently public. This bill would restrict who could obtain data from those files. It also prohibits disclosure of a social security number.

The main part of the bill relating to the release of data from registration files is workable, however, there are additional needs to be addressed. It will preclude certain persons now utilizing the information from having access. Some examples are: private enterprise acting through contracts to provide service to the State (ie: student loan collection); civil process servers; private investigators; collection agencies; private individuals wanting to identify vehicles abandoned on their property; attorney services; and surprisingly, private individuals who purchase cars and do not transfer appropriate paperwork, at some later time lose their paperwork, and don't even know who they bought the car from, which is not uncommon. A recommended amendment is to add an item 6 in Section 2(d) of the bill as follows: "(6) a business or person determined by the commissioner to have a legitimate need for receiving a copy of the record requested.".

The prohibition to release a social security number is opposed. It is recommended the first sentence in subsection (e), beginning on line 4 of page 2 be deleted. The SSN is not currently released to any of those persons or firms listed in subsection (d). However, it is released to governmental agencies listed in subsection (c). It is unknown why the legislature would want to take an identification tool away from these agencies, especially from the criminal justice agencies.

Due to the FY83 elimination of a research position in the Anchorage office, microfiche was made available to allow individuals in Anchorage to research the vehicle registration records themselves. In other areas of the State, DMV employees do the research to respond to inquiries. This legislation will require the department to set stricter guidelines concerning access to registration information. This will eliminate the opportunity for open individual research. Therefore, one motor vehicle representative position will be necessary in Anchorage to screen requests, determine eligibility, and perform the record search when necessary.

The department is neutral on this bill, with the exception of the first sentence beginning on line 4, page 2, which it opposes.

Rep. Bette Cato
P.O. Box V
Juneau, Alaska 99811

Dear Rep. Cato:

I'm writing regarding HB272 which would make motor vehicle information confidential.

The motor vehicle file showing ownership and liens on vehicles is the clearing house for vehicle ownership, just as the recording office is the clearing house for ownership or attachments of real property. I don't see how you can make this information confidential.

Some of the current uses of the file are:

1. Lenders check the file to see that their lien on the vehicle is properly recorded. If the vehicle they are lending on is used, they check the file to see there are no lien holders before them.
2. An individual buying a used car can check the file to make sure there are no lien holders.
3. A towing company can check the file to find out who owns the vehicle they have towed.
4. Before disposing of an unclaimed vehicle, a towing company must notify the lien holder.
5. Anyone with a judgement can check the file to see if the defendant has a vehicle that can be attached to satisfy the judgement, or check if a vehicle he is about to repossess has a lien holder.
6. By court ruling, the trustee in a foreclosure must make a diligent effort to obtain the current address of the person being foreclosed on. The motor vehicle file works well for obtaining current addresses, because most people have a vehicle and the registration must be renewed each year so the address is more current than in many other files.
7. Attorneys, investigators, and collection departments use the file for obtaining a current address for witnesses or defendants.
8. Large companies use the file to determine the owner of a vehicle in their parking lot before having the vehicle towed. This way they don't tow away the boss's second car.
9. The volume users of motor vehicle information currently get the motor vehicle file on microfiche and do their look-ups in their own office. This bill will require them to make every request in writing to the motor vehicle department; creating a tremendous increase in employee time and cost.

It is my understanding that the purpose of proposing this bill is to prevent a criminal from obtaining the address of a potential victim through the use of a

license plate number. The standard example being that a rapist can see a girl drive by, write down her license plate number and go to the motor vehicle office to get her address. While this is a situation we would all like to prevent, I doubt that HB272 would have much effect. Even if a motor vehicle clerk determined that the potential rapist at the counter was lying about his reason for needing the address of the vehicle owner or that he had false indentification, he would probably find his victim through another means or attack someone else. He probably would not reform on the spot. Money spent on policemen, police dogs, rehabilitation etcetera has got to be a better crime deterrent than money spent on motor vehicle clerks.

The passage of HB272 would probably create more criminal activity rather than less. It would make it harder to locate individuals and attach their property for such criminal activities as bad checks, non-payment of bills, or fraudulent business dealings. It is the attorneys, investigators, banks, and collection agencies that enforce these types of crimes and the motor vehicle file is one of their tools. I feel that the social security number in this file should also be made available. This is the only way to tell you have the right 'Charles Smith.' To attach a person's permanent fund check, you must give the state the person's social security number or birth date. While stealing money with a bad check is not as dramatic as in a robbery or burglary, it still has the same effect and its the civil proceedings rather than the police that are the enforcers.

If the legislature determines that this bill should be passed, I suggest that some of the following changes be made to lessen its impact on the valid users of the file:

1. Rather than make the whole file confidential, just make the license plate number confidential. The file then could not be accessed by plate number, but could still be accessed by owner name or manufacturers serial number.

2. Make provision in the bill that the volume users of the file can apply once a year to the motor vehicle department to be approved for unlimited access to the file on microfiche, magnetic tape, or online computer access such as our Public Information Access System. It seems ridiculous to have a bank or tow company fill out thousands of forms a year only to have a public employee do the work they could have done more efficiently by themselves.

Please call me if you would like a further discussion about this bill. Thank you for consideration of my remarks.

Sincerely,

Robert L. Motznik

Representative Bette Cato
Chairman
Transportation Committee
House of Representatives
P. O. Box V
Juneau, Alaska 99811

RE: HB 272, relating to Motor Vehicle Records.

Dear Representative Cato:

I am writing this letter to ask you to further consider the impact this bill will have on legitimate business.

I know the belief that this bill will prohibit some types of crime was a motivating factor behind its introduction. If, however, an individual is intent on finding who a person is or where they live, all they have to do is follow them home.

I agree that maybe some control is necessary but I feel that state licensed companies, who perform quasi government service through contracts, should not be prohibited from access to public records.

As an example, we have contracts to provide security for the protection of persons and property with the Port of Anchorage, Anchorage Telephone Utility, Department of Corrections, hospitals and banks. Frequently, this requires us to identify both persons and vehicles for trespassing, illegal parking and suspicious activity related to thefts and assaults. By restricting companies such as mine in this bill you only make it easier for the criminal element while handicapping the honest citizens.

Since we are a state licensed agency and we do in fact, act as an agent of the local, State and Federal Governments through our contracts; I am asking that you at least amend Section 1 (C) to include licensed Security Agencies as being allowed the same access to these records as the agencies with whom we are contractually bound to perform responsibilities in their stead.

Overall I see this bill as a protective blanket for every dead beat in the State and a hindrance to Alaska business.

Your earnest consideration is appreciated.

Sincerely

Richard L. Burton (Retired Commissioner of Public Safety)

House Bill 280
Fiscal Note Analysis
May 5, 1987

HB 280 amends definitions in AS 43.40.100 by correcting language usage and adding a section under the definition of motor fuel which excludes from the definition that fuel originating outside the jurisdiction of the State and brought into the State in fuel storage tanks on watercraft for the purpose of operating said watercraft, engines on the watercraft or auxiliary watercraft carried by the watercraft.

Until recently it was Department policy that watercraft of all types, whether engaged in intrastate or interstate commerce must pay the five-cent watercraft motor fuel tax on fuel consumed or used in Alaska. This policy had been conveyed to the water transportation, crude oil tanker, cruise ship and fish processing industries. This position was challenged by the industry and a formal hearing decision issued by the Department. The decision held that the Department, in asserting its policy against the interstate water transportation industry in 1985 had, in effect, changed its policy without regulatory authority. In response, the Department has requested an opinion from the Attorney General whether it is statutorily permissible to tax fuel consumed in the State, and if so, whether an amendment to the regulations is necessary.

We believe it is sound public policy to assert the tax against the interstate shipping industry. First, the levy is borne by Alaska resident shipping companies and puts them at a competitive disadvantage with foreign companies which are not taxed on their fuel purchased in other jurisdictions. Second, there is substantial revenues at stake, conservatively estimated at $3 million per year.

Suggested Amendments:

Sub-paragraph (M) exempts fuel consumed by "auxiliary watercraft carried by the watercraft." It is our understanding that the sponsors do not intend to exempt from tax fuel consumed by fish processing facilities in the State, especially fishing vessels or other smaller watercraft which enable the processing vessel to take fish in Alaskan waters. The amending language may provide a loophole for fish processors, and we suggest amending language be drafted which disallows the exemption to vessels while they are fishing in Alaskan waters.

The amendment also may permit fish processors to be exempt from tax on fuel used by on-board generators and other engines not associated with propulsion of the vessel. This may also be outside the scope of the sponsor's intention.

Senate Bill 100
Fiscal Note Analysis
February 12, 1987

SB 100 amends definitions in AS 43.40.100 by correcting language usage and adding a section under the definition of motor fuel which excludes from the definition that fuel originating outside the jurisdiction of the State and brought into the State in fuel storage tanks on watercraft for the purpose of operating said watercraft, engines on the watercraft or auxiliary watercraft carried by the watercraft.

It is current Department policy that watercraft of all types, whether engaged in intrastate or interstate commerce must pay the five-cent watercraft motor fuel tax on fuel consumed or used in Alaska. This policy has been conveyed to the water transportation, crude oil tanker, cruise ship and fish processing industries. This position has been challenged by the industry and is currently in the formal hearing process.

We believe it is sound public policy to assert the tax against the interstate shipping industry. First, the levy is borne by Alaska resident shipping companies and puts them at a competitive disadvantage with foreign companies which are not taxed or their fuel purchased in other jurisdictions. Second, there is substantial revenues at stake, conservatively estimated at $3 million per year.

Suggested Amendments:

Sub-paragraph (M) exempts fuel consumed by "auxiliary watercraft carried by the watercraft." It is our understanding that the sponsors do not intend to exempt from tax fuel consumed by fish processing facilities in the State, especially fishing vessels or other smaller watercraft which enable the processing vessel to take fish in Alaskan waters. The amending language may provide a loophole for fish processors, and we suggest amending language be drafted which disallows the exemption to vessels while they are fishing in Alaskan waters.

The amendment also may permit fish processors to be exempt from tax on fuel used by on-board generators and other engines not associated with propulsion of the vessel. This is also outside the scope of the sponsor's intention.

Continuation for Fiscal Note Analysis

SB 100

Analysis:

This legislation exempts from the $.05/gallon marine fuel tax that fuel which is purchased outside the State's jurisdiction but is brought into the state for use by a watercraft.

It is the State's contention that fuel used within the three mile limit is subject to the fuel tax. This contention is currently the subject of an administrative hearing process. Because of uncertainty over the outcome of that process current revenue estimates do not include these potential revenues.

There are three pieces of information required to estimate the revenue impact of this bill: 1) The volume of vessel traffic into and out of Alaska; 2) The amount of fuel used within the State's jurisdiction by these vessels; and 3) The portion of the fuel purchased outside the State. Unfortunately there is only fragmentary data on any of these items.

An earlier fiscal note on this topic (SB 387, 1986 Legislative Session) tried to provide a rough estimate of the impact of excluding this fuel usage from the tax. The procedure to develop that estimate is summarized below. Because there have been no further returns filed on this element of the marine fuel tax (pending the outcome of the administrative hearing process) the figures developed for that legislation remain our best estimate of the impact.

The estimate contained in the note for SB 387 was prepared by dividing potential collections into two parts:

1. Revenues from users whose tax liability could be estimated from data on the number of trips, average fuel consumption and time in Alaska waters. Also, for several of these users a full year return was available. This part of the estimate covered these major users:

   Tankers into and out of Valdez
   Cruiseships in Southeast Alaska
   Several large common carriers serving Southcentral Alaska
   Several carriers distributing petroleum products for local use.

   Our estimate for these users is $2 million annually.

2. Revenues for remaining users. This tax liability is more difficult to estimate because of the diversity of users and the fact that available returns cover only part of the year. This estimate would cover many of the common and contract carriers, freighters hauling raw materials and semi-finished products such as LNG, fish processors and a variety of other users.

   Our estimate for these users is $1 million. Because of the numbers and variety of users involved this estimate is probably conservative.

POSITION PAPER - SB 100

SB 100 is identical to CS SB 387 (Fin.) which passed the Senate but died in House Rules Committee upon adjournment in 1986.

This legislation is necessary to correct a new (1985) and onerous reinterpretation of the motor fuel tax by the Department of Revenue (D.O.R.). It concerns fuel brought into the state in a marine vessel's fuel storage tanks and consumed to operate the vessel while in Alaska waters. SB 100 would clarify that, consistent with the application of the motor fuel tax laws between 1946 and 1985, fuel brought into the state in fuel storage tanks for the purpose of operating the vessel is not subject to the motor fuel tax.

Background Information

The motor fuel tax was enacted in 1946. Marine fuel purchased or transferred within Alaska is taxable in full at $.05 per gallon.

Since its enactment in 1946 until 1985, motor fuel purchased outside Alaska and consumed in Alaska without first being stored or otherwise coming to rest in the state was <u>not taxed</u> under the motor fuel tax provisions.

In 1985, <u>without benefit of any new legislative authorization</u>, D.O.R. initiated a series of letters to certain marine cargo carriers, among others, attempting to levy a fuel tax on fuel consumed in Alaska but which was brought into the state in fuel storage tanks and used to propel and operate the vessel.

This "new interpretation" of the law has not been authorized by the Legislature or existing law and extends the tax beyond the original scope of the marine fuel tax statute.

D.O.R. contends that a 1982 amendment to its administrative regulations authorizes its "new interpretation." However, D.O.R. admits that nothing in the public notice of intent to adopt the regulations stated that D.O.R. intended to tax mere consumption of marine fuel or that it intended to change the application of the law it had used the previous 39 years.

The amendment in question consists of deletion of the word "and" used in the statute and substitution of the word "or" to define "user." The result is that the statute defines "user" as follows:

> (4) "user" means a person consuming or using motor fuel, who either
>
> (A) purchases the fuel out of the state and ships it into the state for personal use in the state;
>
> (B) manufactures the fuel in the state; or
>
> (C) purchases or receives fuel in the state that is not taxed at the time of purchase or receipt or is taxed at a rate that is less than the rate prescribed by AS 43.40.010. (emphasis added)

However, after the D.O.R. amendment, the regulations defines "user" as follows:

> (6) "user" means a person consuming or using motor fuel who purchases the fuel out of state or ships it into the state for personal use in the state, who manufactures the

fuel in the state, or who purchases or receives in the state fuel that is not taxed at the time of purchase or receipt or is taxed at a rate that is less than the rate prescribed by AS 43.40.010; (emphasis added)

The regulations are obviously inconsistent with statute and appear to be an attempt to extend the scope of the fuel tax beyond that originally intended by the Legislature. This unilateral action by an executive branch agency which attempts to make substantive changes in the law without legislative authorization is highly questionable and unfair.

SB 100 would amend the statute to prevent this "new interpretation" and clarify legislative intent to ensure that D.O.R will tailor its administrative activity consistent with the 39-year history of the motor fuel tax.

It is worthy of note that D.O.R. has said that if successful in the marine fuel area, it will extend its "new interpretation" to vehicular motor transportation and aviation fuel which raises questions similar to those in the marine transportation area.

POLICY CONSIDERATIONS IN SUPPORT OF SB 100

1. D.O.R.'s "new interpretation" would certainly increase the costs of consumer goods, construction materials and equipment, and other products shipped to Alaska and thereby increasing the cost of living to all Alaskans;
2. The "new interpretation" would result in higher tourist travel costs to Alaska as cruise ships would be subject to the new fuel tax;
3. The "new interpretation" would impose the tax on the amount of marine fuel consumed while inside the three-mile limit of Alaska waters thereby placing certain ports at a competitive disadvantage due to their location farther inside bays, harbors and inlets;
4. The "new interpretation" would also apply to tanker traffic to and from Valdez, however, this merely increases transportation costs which are "netted back" reducing the well-head value to the state of Alaska;
5. The "new interpretation" would apply to the large fishing fleet and pleasure craft which ply Alaska waters raising questions of the administrative, enforcement, and personnel costs required to adequately monitor the expansion of the tax to fuel "consumed" in transit.
6. When the "new interpretation" is applied to motor vehicle transportation, it is readily apparent that revenue agents would be necessary at the Canadian border to measure fuel in tanks of automobiles, recreation vehicles and trucks

coming into Alaska to levy and collect this tax. (Ferry travel from Seattle would require similar treatment.)

7. No other west coast state, neither Texas nor Hawaii impose a "consumption tax" such as is being proposed under D.O.R.'s "new interpretation."

8. When applied to the aviation travel, both commercial and private, similar questions of increased travel costs and administrative costs are evident.

9. Aside from the obvious administrative costs and enforcement problems, as a matter of public policy, it does not make good sense to permit this extension of the motor fuel tax which will result in more expensive consumer goods, construction equipment and materials and which would possibly discourage tourist travel to Alaska. This is an especially sensitive question at this time of economic stagnation in the state.

10. There is no revenue loss to the state of Alaska because the tax has not been levied or collected between 1946-1985.

ALASKA MOTOR FUEL TAX CHRONOLOGY

The following is a chronology of key events in the interpretation and application of the Alaska Motor Fuel Tax.

1946 — Alaska Territorial Legislature imposes motor fuel tax on (1) all fuel sold and delivered or otherwise transferred within the Territory; and (2) all fuel consumed by a "user," defined as "any person, firm or corporation consuming or using any motor fuel, who shall have purchased such fuel out of the Territory and shipped it into the Territory for his or its own use within the Territory." Laws of Alaska 1946, Ch. 18 (emphasis added).

1946 - Present — Alaska Legislature amends and reenacts motor fuel tax numerous times, without substantive change to provisions relevant here.

1946 - 1985 — Division of Audit (DOA) of Department of Revenue applies motor fuel tax in accord with constitutional and statutory limits:

A. Motor fuel purchased or transferred within Alaska was taxable in full without regard to the jurisdiction in which the fuel was actually consumed.

B. Motor fuel purchased outside Alaska and consumed in Alaska during propulsion without first being stored or otherwise coming to rest in the state was not taxed under the Motor Fuel Tax provisions.

June 3, 1982 — Governor approves House Bill 101, which amends the motor fuel tax statute without substantive change to the definition of "user" or other provisions relevant here.

July 19, 1982 — Department adopts first comprehensive motor fuel tax regulations, without prior notice. Finding of Emergency states that the regulations are necessary to implement House Bill 101. However, the regulations also purport to restate the definition of "user" as follows:

A. The statute defines "user" as a person consuming or using motor fuel who . . . purchases the fuel out of the state and ships it into the state for personal use in the state . . . AS 43.40.100(4) (emphasis added).

B. The regulations define "user" as "a person consuming or using motor fuel who purchases the fuel out of state or ships it into the state for personal use in the state . . ." 15 AAC 40.900(5) [now(6)] (emphasis added)."

July 20, 1982 — Department issues Notice of Adoption of Emergency Regulation. Nothing in the notice states that the Department adopted a different definition of "user," or that the Department intended to tax fuel merely consumed in state waters, or that DOA intended to change the way it had applied the motor fuel tax since 1946. No notice is sent to marine fuel consumers as such, or to the Taxpayers here. Extensive comments are submitted on numerous topics, but none of them mention the definition of "user" or taxation of fuel merely consumed in state waters. Nothing in the Department's file on the regulations even discusses the definition of "user" or taxation of fuel merely consumed in state waters.

Nov. 14, 1982 — The July 1982 regulations are adopted and made permanent by the Department.

1985 — DOA begins to apply the motor fuel tax differently. DOA now interprets the statute and regulations as follows:

A. Motor fuel purchased or transferred within Alaska remained taxable in full at the time of purchase, but in-state purchasers could seek a refund of tax on any fuel consumed outside Alaska. Under this interpretation, fuel both purchased and consumed in the state would be subject to only one tax.

B. Motor fuel purchased outside Alaska and consumed while in transit through Alaska would be subject to Motor Fuel Tax on the fuel actually consumed within the state, even

	though not stored or otherwise coming to rest in the state . . . without regard to whether such fuel was subject to actual or potential taxation in the state or foreign country where purchased, and without any express statutory or regulatory credit for taxes paid outside the state.
May 1985	DOA issues Questions and Answer Booklet reflecting its new interpretation as to motor fuel purchased in Alaska. DOA does not seek to comply with Alaska Administrative Procedure Act requirements in the issuance of the Booklet.
June 1985	DOA issues 200 letters applying its new interpretation of the statute to motor fuel purchased outside Alaska and merely consumed in state waters. The letters instruct the recipients, including the Taxpayers here, to file returns for the periods they had allegedly been using fuel in Alaska waters and to respond within 30 days, or else taxes, penalties, and interest would be assessed accordingly. DOA does not seek to comply with Alaska Administrative Procedure requirements in the issuance of the letters. The letters are the first written notice directed to Taxpayers or to marine fuel consumers in general regarding application of the tax to fuel merely consumed in state waters.
July - Nov. 1985	DOA requests that Taxpayers file returns as of January 12, 1985, and represents that it will not seek returns for any prior period.
Oct. Dec. 1985	DOA and Taxpayers agree on appeal procedures, under which Taxpayers file a return for one month, pay the tax for that month, and simultaneously file a refund claim. DOA agrees to stay all other reporting, collection, penalty and assessment procedures pending final administrative and judicial resolution of the matter.
Currently	The matter is now on appeal before the Department of Revenue.

Anchorage chamber issues 3 resolutions

The Anchorage Chamber of Commerce has adopted three resolutions relating to state policy and Anchorage development.

The first asks Gov. Steve Cowper for release of road funds impounded during the Fiscal Year 87 budget adjustment. These funds will continue replacement and upgrade of critical traffic thoroughfares.

The second addresses a state Department of Revenue administrative decision to collect a five percent tax on marine fuel used for ship operation within the three-mile limit, including cruise ships. Payment of the tax will impact most seriously in Alaska on goods transported into the Cook Inlet, said the chamber. The Chamber has asked the Governor and Legislature to reverse this administrative decision as not equitable.

The final action provides for supporting the proposed 3,680 acre land exchange between the Eklutna Inc. village corporation and the state of Alaska.

The Eklutna land is adjacent to Chugach State Park. The state land lies between Fifth and Sixth avenues and Cordova and A streets in Anchorage.

Each parcel of land is valued at about $9 million. The land exchange would further enhance the municipality's efforts to protect the Eagle River Greenbelt. The Chamber also asks the state to support and assist Eklutna Inc. in the development of a major resort area north of Anchorage.

The three items were recorded as resolutions and forwarded to Governor Cowper for action by the Administration. The chamber said it considers these items important to the quality of growth in Anchorage.

This Resolution has been Adopted by The Anchorage Chamber of Commerce.

RESOLUTION

WHEREAS, The Alaska Motor Fuel Tax laws have since 1946, levied a 5 cent per gallon tax on marine fuel purchased or transferred within Alaska; and

WHEREAS, for 39 years marine fuel purchased outside Alaska waters and brought into the state in fuel storage tanks on watercraft for the purpose of operating the vessel has not been taxed under the Motor Fuel Tax provisions of Alaska law; and

WHEREAS, in 1985, the Alaska Deopartment of Revenue initiated a new and different interpretation of the law as applied to marine fuel brought into the state in fuel storage tanks on watercraft for the purposes of operating the vessel and began a tax collection effort; and

WHEREAS, this effort was undertaken without new authorizing legislation or amendment; and

WHEREAS, the new interpretation of the marine fuel tax will have serious implications for the business and individual consumers in Alaska by increasing the costs of goods brought into the state by water transportation; and

WHEREAS, the new interpretation will apply to cruise ships which visit Alaska waters thereby increasing costs of such tourist travel to our state; and

WHEREAS, because the new interpretation would impose the tax on the amount of marine fuel consumed while the watercraft is inside the 3 mile limits of Alaska waters, certain Alaska ports will be unfairly placed at a competitive disadvantage due to longer travel time inside bays, habors and inlets; and

WHEREAS, in 1986 the Alaska Senate passed CS S.B. 387 (Finance) which would have specifically prevented application of the new interpretation; and

WHEREAS, the Alaska House of Representatives adjourned before S.B. 387 could reach the floor for a vote on the issue; and

WHEREAS, legislation similiar to S.B. 387 would not result in a revenue loss to the State of Alaska because such a tax was not levied or collected between 1946 and 1985;

THEREFORE BE IT RESOLVED, that the Anchorage Chamber of Commerce urges that Governor Cowper and the Alaska Legislature take action to clarify the law so that marine fuel brought into the state in fuel storage tanks on watercraft for the purposes of operating the vessel not be taxed and avoid increasing costs of business and consumer goods to Alaska consumers, increasing the costs of tourist activities in the state and avoid the competitive discrimation against certain ports which could result;

BE IT FURTHER RESOLVED, that copies of this resolution together with a letter urging Governor Cowper and the legislative delegation to support a measure similiar to S.B. 387 be sent to the appropriate state officials.

(8) "watercraft" means a ship, boat, vessel, or other structure that is capable of being moved in or on water either under its own propulsion or propelled by another craft, including a floating fish processor, a transportation barge, a drilling ship, and a semi-submersible drilling rig;

(Eff. 4/8/82, Reg. 82; am. 8/1/82, Reg. 83; am. 7/19/82, Reg. 83; am. 11/14/82, Reg. 84; am. 8/12/84, Reg. 91)

Discussion

The Taxpayers received letters from the Division in June, 1985 requiring them to file motor fuel tax returns and pay the tax based on fuel acquired outside of Alaska and consumed within the state. After quoting AS 43.40.010, the Revenue Auditor wrote:

> This tax is a user tax. The fuel purchased out of state and used or consumed within Alaska waters is subject to the Alaska Motor Fuel tax. Every user is required to remit the tax accrued on motor fuel imported into the State and used during each month. Based on our information, we believe you are required to file a monthly tax return with the Department of Revenue.
>
> I have enclosed Alaska Statutes and regulations governing motor fuel taxes. Also enclosed are motor fuel tax returns (04-541) with instructions on how to prepare these returns. We request that you file these returns for the periods that you have been using motor fuel within Alaska waters. If you need additional returns or information please contact this office.

Exs. 1 - 5, Letters to Taxpayers. The Taxpayers filed motor fuel tax returns for October, 1985, paid the taxes based on consumption and filed claims for refund. The claims were denied. F.F. 15. The Taxpayers filed appeals, F.F. 16, and an informal conference decision was issued which upheld the taxation of the motor fuel, F.F. 17.

The Taxpayers have raised several issues concerning the application of the motor fuel tax to fuel purchased outside of Alaska and consumed in Alaska waters from a vessel's fuel tanks (bunkers). The Taxpayers protest the proposed taxation method based on statutory interpretation, the Administrative Procedure Act and constitutional grounds. Because we conclude that the action by the Division violates the Administrative Procedure Act, we do not reach the statutory interpretation and constitutional issues.

I. The Taxation Of Watercraft Fuel Purchased Outside of Alaska And Consumed In Alaska Proposed By The Audit Division In June, 1985 Was Inconsistent With The Prior Course Of Conduct Of The Division Concerning The Taxation Of Such Motor Fuel.

The Division and the Taxpayers have stipulated that a single course of conduct concerning the taxation of watercraft motor fuel was followed from the enactment of the law in 1946 until 1985. Motor fuel purchased or transferred within Alaska was taxable in full without regard to the jurisdiction in which the fuel was actually consumed and motor fuel purchased outside of Alaska and consumed in Alaska without first being stored or otherwise coming to rest in the state was not taxed. F.F. 1. In other words, a vessel taking on fuel in its bunkers outside of Alaska and consuming that fuel in Alaska did not pay motor fuel tax to Alaska. This historical approach was based primarily on statutory interpretation because the first regulations concerning the motor fuel tax were not adopted until 1982. See 15 AAC 40.010 -- 15 AAC 40.900, Eff. 7/19/82, Reg. 83.

Under AS 43.40.010 there were two classifications of taxpayers, dealers and users. A dealer was a person who sold or otherwise transferred in Alaska motor fuel upon which the tax had not been paid. AS 43.40.100(1). A user paid the motor fuel tax at the same rates as a dealer and was a person who consumed or used motor fuel who either purchased the fuel outside of Alaska and shipped it into the state for personal use in the state, or who manufactured the fuel in the state or who purchased or received fuel in the state which was not taxed at the time of purchase or receipt or was taxed at less than the proper rate. AS 43.40.100(4). The tax was levied when a dealer sold or otherwise transferred motor fuel, AS 43.40.010(a) or when a user consumed motor fuel, AS 43.40.010(b).

Prior to the Division's action in 1985, the Taxpayers in this case did not pay nor did the Division require that they pay motor fuel tax. They were not "dealers" because they were not selling or otherwise transferring the fuel in this case. The Taxpayers did not manufacture the fuel and did not otherwise receive fuel in the State; therefore they could not have received it tax-free or at a reduced tax rate. See F.F. 1. Had the Taxpayers been taxable at all, it would have been because they purchased the fuel out of the state and shipped it into the state for personal use in the state. AS 43.40.100(4)(A). Though not conclusive as to the taxability of their use of motor fuel, neither the Taxpayers nor any other motor fuel consumer on watercraft filed a return and paid a tax on the consumption basis proposed in the June, 1985 letters to the Taxpayers. F.F. 19. The record contains no reference to any earlier attempt by the Division to impose or require this method of taxation on watercraft fuel use.

While the letters to the Taxpayers failed to cite authority for the Division's action in 15 AAC 40, the Division claims that its action and

change of method of taxation were authorized by properly adopted regulations. The key regulation is 15 AAC 40.900(6) which defines "user" differently than in the statute, AS 43.40.100(4). The statute defines "user" as follows:

> "user" means a person consuming or using motor fuel, who either
>
> (A) purchases the fuel out of the state and ships it into the state for personal use in the state; . . . .

AS 43.40.100(4)(emphasis added).

This definition was first enacted in 1946, § 1(c), ch. 18, Session Laws of Alaska 1946 in substantially the same form:

> "User" means any person, firm or corporation consuming or using any motor fuel, who shall have purchased such fuel out of the Territory and shipped it into the Territory for his or its own use within the Territory.

(Emphasis added). The regulation expands the definition by replacing the emphasized "and" in the statutory definition with an "or" in the regulation:

> "user" means a person consuming or using motor fuel who purchases the fuel out of state or ships it into the state for personal use in the state, ...

15 AAC 40.900(6). AS 43.40.100(4) requires the taxpaying user to purchase outside of the state and ship into the state for personal use. Under the regulation anyone purchasing motor fuel outside of the state and bringing it by any means into the state for use is taxable. This is so because the import is no longer restricted to bringing it in by "shipping." If we presume, for the sake of argument, that the regulation was properly adopted, is consistent with AS 43.40.100(4), and is constitutional, there would be authority under the regulation to tax motor fuel on watercraft which was used in Alaska waters and brought into Alaska waters as the vessel's fuel supply. However, we conclude that the regulation does not provide the Division with the authority to change the method of taxation on fuel purchased outside of Alaska and used on watercraft. The new interpretation imposed in the June, 1985 letters was not covered by this regulation, but rather amounted to a "regulation" in and of itself. As such, it was not properly adopted.

A. The Department's Notice Of Proposed Adoption Of Emergency Regulations Is Presumed To have Been Adequate To Notify The Public Of The Subject Of The Proposed Regulations.

The Division adopted 15 AAC 40.900(6), the new definition of "user" as part of a group of regulations first adopted as emergency regulations,

effective 7/19/82, Reg. 83, and then as permanent regulations, effective 11/14/82, Reg. 84. The emergency regulations were adopted in response to the passage of Conference Committee Substitute for House Bill 101 which became Chapter 82 of the 1982 Session Laws of Alaska. The newly enacted legislation, however, did not amend the definition of "user" nor did it expand the taxation of fuel consumed on watercraft. Those changes were introduced in the new regulations.

The Department's Notice of Adoption Of Emergency Regulations contained the following summary of the proposed regulations and their subject matter:

Section 010 relates to return filing requirements;

Section 020 indicates which fuel is subject to motor fuel tax and provides for exemptions from the tax;

Section 030 requires a certificate for certain tax exempt sales;

Section 040 contains licensing requirements;

Section 050 requires a bond for every qualified dealer;

Section 060 authorizes the revocation of a qualified dealers license;

Section 070 lists which records shall be kept;

Section 100 allows a refund or credit on certain sales or transfers of motor fuel;

Section 110 requires tax payments for sales of diesel fuel not used for heating purposes;

Section 200 allows a refund of tax for certain uses of motor fuel;

Section 210 requires a claim be filed in order to receive a tax refund;

Section 220 relates to recovery by the State of erroneously issued refunds;

Section 230 indicates what records must be kept in order to claim a tax refund;

Section 900 contains definitions.

Notice of Adoption of Emergency Regulations, Dept. of Revenue (Jul. 20, 1982). This notice was published three times each in the Juneau Empire, Aff. of Publication, Juneau Empire (Aug. 10, 1982), the Anchorage Daily News, Aff. of Publication, Anchorage Daily News (Aug. 6, 1982), and the Fairbanks Daily News-Miner, Aff. of Publication, Fairbanks Daily News-Miner (Aug. 31, 1982).

A notice of proposed adoption, amendment or repeal must contain an informative summary of the proposed subject of agency action. AS 44.62.200(a)(3). The standard which the notice must meet is whether the notice gave members of the public sufficient information to decide whether their interests could be affected by the agency action and thus to make their views known to the agency. State v. First Nat. Bank of Anchorage, 660 P.2d 406, 425 (Alaska 1982). The filing of a regulation by the lieutenant governor establishes the rebuttable presumption that all the requirements of adopting a regulation have been complied with, including providing adequate notice to the public. AS 44.62.100(a)(3). Thus, the notice set out above presumably was adequate to inform the public of the subject of the regulations which the Department was proposing to adopt.

In addition to the presumption that all requirements were met is the liberal construction to be given the informative summary. First Nat. Bank at 660 P.2d at 425 n. 32. Where a failure to comply with the requirements has been alleged, the failure must have been substantial before a regulation is set aside. Chevron U.S.A., Inc. v. LeResche, 663 P.2d 923, 929 (Alaska 1983).

The notice set out above gave the public notice that regulations were being proposed which would affect motor fuel tax "filing requirements," the determination of which "fuel is subject to motor fuel tax," the allowance of "a refund for certain uses of motor fuel" and the procedure for filing a refund claim. Notice of Proposed Adoption, supra. We believe the notice was adequate to notify the public of the proposed changes.

While the notice was adequate for the purposes stated, the regulation file is devoid of any intent of the Division to change the taxation method for watercraft motor fuel users. Thus, the June 1985 letters contained the first written notice of the change in the taxation of motor fuel consumed by the Taxpayers. In our opinion, no notice of the change was provided by the regulations adopted in 1982.

B. The June, 1985 Letters To The Taxpayers Imposed A New Basis For The Taxation Of The Taxpayers' Motor Fuel Which Should Have Been Adopted By Regulation.

The June, 1985 letters notified the taxpayers of the new interpretation of the motor fuel tax:

> This tax is a user tax. The fuel purchased out of state and used or consumed within Alaska waters on watercraft is subject to the Alaska Motor Fuel tax. Every user is required to remit the tax accrued on motor fuel imported into the State and used each month. Based on our information, we believe you are required to file a monthly tax return with the Department of Revenue.

Letter from John Hansen, Revenue Auditor to Taxpayers at 2 (June 7 and 10, 1985) (requesting Taxpayer to file returns and pay motor fuel tax) (emphasis added).

In writing the letter to the Taxpayers, the auditor changed the statutory requirement that a user ship motor fuel into the state for personal use, AS 43.40.100(4)(A), to import fuel into the state, Letters to Taxpayers, supra. "To ship" primarily means to "place or receive on board of a ship for transportation by water . . . [or] to cause to be transported", Webster's Third New International Dictionary, at 2096 (1976). Under this definition, we do not consider a vessel "shipping" the fuel in its fuel tanks to Alaska any more than the family car can be considered to be "shipping" fuel around the city.

On the other hand, "import" has a broader meaning, "to bring from a foreign or external source; introduce from without." Id. at 1135. "Import" goes beyond "ships into" by including all fuel brought into the state by any means from any outside source and thus includes a vessel's own fuel. The Letters introduced a new interpretation of "user" and effectively was a "regulation" as defined in the Administrative Procedure Act, AS 44.62.640(a)(3), but was imposed on the Taxpayers without going through the process for adopting regulations under AS 44.62. Although arguably consistent with the new definition of "user" adopted in the 1982 regulations, 15 AAC 40.900(6), there was no change in the enforcement of the law until the June letters, almost three years after the adoption of the regulations. The June letters constituted a new interpretation of the law, and thus were not properly adopted as regulations under the Administrative Procedure Act.

Should the Division wish to pursue the method of taxation proposed in the June, 1985 letters, it should do so only after properly adopting a regulation providing notice of the change from the prior method of taxation. In the course of adopting such a regulation, the Division should consider the arguments presented in this appeal concerning the consistency of such an approach within the existing statutes and conformity with the provisions of the United States and Alaska Constitutions cited by the Taxpayers.

Decisions

1. The June, 1985 letters to the Taxpayers asking for the filing of Motor Fuel tax returns and payment of the tax on fuel purchased outside of Alaska and consumed while operating within Alaska were inconsistent with prior interpretations of the Division.

2. The method of taxation proposed in the June 1985 letters was not properly adopted under the provisions of the Alaska Administrative Procedure Act.

3. The Taxpayers are only liable for the motor fuel tax as users where the motor fuel was purchased outside of Alaska and shipped into the state for personal use, or the Taxpayers manufactured the fuel in the state or if they purchased or received fuel in the state that was not taxed at the time of purchase or receipt or was taxed at a rate that was less than the rate prescribed by AS 43.40.010.

4. The claims for refund for taxes paid for October, 1985 and which were at issue in this appeal are granted.

If any Taxpayer in this appeal disagrees with this decision, it may, within 30 days from the date of the adoption of this decision, file an appeal in the superior court in the judicial district in which it conducts business.

This decision is dated at Juneau, Alaska this 19th day of March, 1987.

/s/
Donald M. Bullock, Jr.
Revenue Hearing Examiner

This Resolution has been Adopted by The Anchorage Chamber of Commerce.

RESOLUTION

WHEREAS, The Alaska Motor Fuel Tax laws have since 1946, levied a 5 cent per gallon tax on marine fuel purchased or transferred within Alaska; and

WHEREAS, for 39 years marine fuel purchased outside Alaska waters and brought into the state in fuel storage tanks on watercraft for the purpose of operating the vessel has not been taxed under the Motor Fuel Tax provisions of Alaska law; and

WHEREAS, in 1985, the Alaska Deopartment of Revenue initiated a new and different interpretation of the law as applied to marine fuel brought into the state in fuel storage tanks on watercraft for the purposes of operating the vessel and began a tax collection effort; and

WHEREAS, this effort was undertaken without new authorizing legislation or amendment; and

WHEREAS, the new interpretation of the marine fuel tax will have serious implications for the business and individual consumers in Alaska by increasing the costs of goods brought into the state by water transportation; and

WHEREAS, the new interpretation will apply to cruise ships which visit Alaska waters thereby increasing costs of such tourist travel to our state; and

WHEREAS, because the new interpretation would impose the tax on the amount of marine fuel consumed while the watercraft is inside the 3 mile limits of Alaska waters, certain Alaska ports will be unfairly placed at a competitive disadvantage due to longer travel time inside bays, habors and inlets; and

WHEREAS, in 1986 the Alaska Senate passed CS S.B. 387 (Finance) which would have specifically prevented application of the new interpretation; and

WHEREAS, the Alaska House of Representatives adjourned before S.B. 387 could reach the floor for a vote on the issue; and

WHEREAS, legislation similiar to S.B. 387 would not result in a revenue loss to the State of Alaska because such a tax was not levied or collected between 1946 and 1985;

THEREFORE BE IT RESOLVED, that the Anchorage Chamber of Commerce urges that Governor Cowper and the Alaska Legislature take action to clarify the law so that marine fuel brought into the state in fuel storage tanks on watercraft for the purposes of operating the vessel not be taxed and avoid increasing costs of business and consumer goods to Alaska consumers, increasing the costs of tourist activities in the state and avoid the competitive discrimation against certain ports which could result;

BE IT FURTHER RESOLVED, that copies of this resolution together with a letter urging Governor Cowper and the legislative delegation to support a measure similiar to S.B. 387 be sent to the appropriate state officials.

TESTIMONY
OF
M.R. LADNER, PUBLIC AFFAIRS
FOR
SEALAND SERVICE, FAIRBANKS, ALASKA
TO
ALASKA HOUSE TRANSPORTATION COMMITTEE
JUNEAU, ALASKA

MADAM CHAIR, MEMBERS OF THE COMMITTEE, MY NAME IS MIKE LADNER AND I AM THE PUBLIC AFFAIRS SPOKESMAN FOR SEALAND SERVICES IN ALASKA, BASED OUT OF FAIRBANKS. SEALAND SERVICES OPERATES THREE SHIPS BETWEEN SEATTLE AND THE RAILBELT AND ALEUTIAN CHAIN MARKETS OF ALASKA.

I AM TESTIFYING FOR SEALAND IN SUPPORT OF HB 280, WHICH WE STRONGLY FEEL CLARIFIES THE EXISTING LAW PASSED BY THE TERRITORIAL LEGISLATURE IN 1946. THE TERRITORIAL LEGISLATURE'S INTENT, WE BELIEVE, WAS TO STOP VESSEL OPERATORS FROM BRINGING IN BULK FUEL, FOR RESALE, THUS AVOIDING IN-STATE PURCHASED AND ALASKA TAXES.

THE ALASKA DEPARTMENT OF REVENUE IN JUNE OF 1985 CAME TO THE VESSEL OPERATORS AND STATED THEY WERE NOW GOING TO COLLECT A TAX ON FUEL BURNED, BUT NOT PURCHASED IN ALASKA'S THREE-MILE LIMIT. FOR THIRTY-NINE YEARS THIS TAX WAS NEVER COLLECTED, NOR WAS THE LAW INTERPRETED IN SUCH A WAY FOR IT TO BE ASSESSED. THE DEPARTMENT OF REVENUE ARBITRARILY, FOR REASONS OF ITS OWN, ISSUED WITHOUT CLEAR LEGISLATIVE INTENT, A NEW TAX.

THIS USER TAX WOULD COST OUR COMPANY APPROXIMATELY $150,000 PER YEAR BASED PRIMARILY ON OUR CRUISING TIME WITHIN COOK INLET, KODIAK ISLAND, CORDOVA, AND DUTCH HARBOR, AS WELL AS INTERMEDIATE POINTS. A USER TAX

IS USUALLY BASED ON SERVICES RECEIVED, BUT ON THIS "CONSUMPTION" TAX, ALL AIDES TO NAVIGATION, INSPECTIONS, SAFETY AT SEA AND PORT CHARGES ARE EITHER PROVIDED BY THE FEDERAL OR LOCAL GOVERNMENTS.

SEALAND EMPLOYS 203 PEOPLE DIRECTLY AND INDIRECTLY IN ALASKA AND WE PAY TAXES ON PAYROLL, WORKERS' COMPENSATION, PERSONAL PROPERTY, EXCISE, AND LICENSE TAX. OUR COMPANY PAYS ITS FAIR SHARE OF TAXES IN ALASKA AND FEELS WE ARE GOOD CORPORATE CITIZENS.

SINCE THE DEPARTMENT OF REVENUE HAS NEVER COLLECTED THIS TAX, THERE WOULD BE NO LOSS OF REVENUE IN PASSING THIS LEGISLATION. THE DEPARTMENT OF REVENUE HAS INITIALLY SINGLED OUT THE MARITIME INDUSTRY ON THIS TAX, BUT CHECKS FOR TRUCKS AT THE BORDER, CARS AND RECREATIONAL VEHICLES AT THE BORDER AND ON THE FERRIES AND ALL AIRLINES WHEN THEY HIT ALASKA AIRSPACE WOULD ALSO FALL UNDER REVENUES' INTERPRETATION OF THIS TAX. AS ONE MIGHT IMAGINE, THE EQUITABLE ENFORCEMENT AND STAFFING TO ENFORCE THIS TAX WOULD BE A DIFFICULT AND COSTLY UNDERTAKING, PLUS THE ACCOUNTING BURDEN FOR THE TRANSPORTATION COMPANIES WOULD BE INCREASED.

IF THIS TAX WERE APPLIED TO THE COMMON CARRIERS OF ALASKA, IT WOULD BE ADDED TO THE RATES PAID BY THE ALASKAN CONSUMER, EITHER BY ADDING TO THE RATE OR BY ADDING AN ALASKA FUEL TAX SURCHARGE TO THE BILL OF LADING.

SEALAND THEREFORE URGES PASSAGE OF HB 280. I WISH TO THANK THE CHAIR AND THIS COMMITTEE FOR ALLOWING US TIME TO EXPRESS OUR OPINION ON THIS ISSUE.

THANK YOU.

TESTIMONY OF TOTEM OCEAN TRAILER EXPRESS, INC. (TOTE)
BY LEIGHTON H. THETFORD, ALASKA GENERAL MANAGER BEFORE
THE ALASKA HOUSE TRANSPORTATION COMMITTEE IN SUPPORT
OF HOUSE BILL NO. 280
MAY 6, 1987

Mr. Chairman, members of the Committee, TOTE is testifying today on our own behalf and on behalf of other ocean carriers shipping between the states of Alaska and Washington. We wish to express our support of Senate Bill 100, which was introduced to clarify the original intent of the legislature for the Alaska Motor Fuel Tax Act, and to eliminate any ambiguity in that act in relation to fuel brought into the state in the fuel storage tanks of watercraft.

The Motor Fuel Tax Act was passed as law by the Territorial Legislature in 1946. We believe that the legislature intended to tax fuel sold in Alaska and bulk fuel shipped as cargo into Alaska for personal use in the state. The legislature intended to prevent the shipping of untaxed bulk fuel into Alaska and therefore prevent a loss of sales tax revenue. The legislature did not intend to tax fuel brought into the state in fuel storage tanks on a watercraft for the purpose of operating the watercraft.

Alaska followed this leislative intent until June, 1985. No tax was asserted or collected on fuel brought into the state in fuel storage tanks on a watercraft for the purpose of operating the watercraft. In June, 1985 the Department of Revenue arbitrarily determined to redefine the legislative intent and to collect a tax on this bunker fuel. We strongly disagree with this new interpretation and believe that, in attempting to reinterpret the law and impose a new tax, the department violated the intent of the legislature as expressed in both the Motor Fuel Tax Act and the Alaska Administrative Procedure Act.

The department has asserted this tax is a user tax. The fuel tax has not previously been based on fuel used, but on fuel purchased in state or shipped into the state. The concept of a user tax is to pay for a service. The State of Alaska itself provides virtually no service for our industry. Aids to navigation, dredging, safety at sea, inspections and vessel safety are covered by the federal government. TOTE's port and dockside facilities are paid for by dockage fees and rental payments to the Port of Anchorage which were approximately $1.9 million in 1986. In addition, TOTE is an Alaska corporation and pays substantial taxes to the State of Alaska, including income, property and payroll taxes.

A tax on bunker fuel consumed in Alaskan waters encourages carriers to avoid travel within the three-mile limit. Ports such as Anchorage, which lie further within Alaskan waters, would be discriminated against, as would carriers serving those ports. TOTE serves the Port of Anchorage only in our service to Alaska. Our ships cruise six hours in each direction through Cook Inlet. If a tax is imposed on bunker fuel, most of TOTE's tax would result from sailing through Cook Inlet to Anchorage.

Any increase in taxes would worsen the condition of the water transportation industry and increase costs to the Alaska consumer. In addition, our industry is a major source of commerce and employment in Alaska and any additional burden on the industry would be detrimental to the Alaskan economy. The past three years have been unprofitable for many carriers in our industry and several operators have been forced from the business as a result. The next three years are expected to be more difficult.

Our industry has filed an appeal with the Department of Revenue contesting this new tax. Although we expect to ultimately prevail in this matter, this arduous and expensive process can be avoided by clarifying the act through House Bill No. 280.

In summary, House Bill No. 280 was introduced to clarify the original intent of the legislature for the Alaska Motor Fuel Tax Act, and to eliminate any ambiguity in that act in relation to fuel brought into the state in the fuel storage tanks of watercraft. This bill will relieve the industry and the Department of Revenue from an expensive appeal and litigation process resulting from the department's radical new interpretation of the act. Finally, this bill will prevent a burden from being imposed on water carriers and consumers in Alaska.

I thank you for this opportunity to express the views of TOTE and of our industry. We encourage your support of House Bill No. 280 and will answer any questions you have at this time.

HOUSE LABOR AND COMMERCE COMMITTEE
ALASKA STATE LEGISLATURE
P.O. BOX V, JUNEAU 99811
(907) 465-3892

February 3, 1988

To: Representative Bette Cato, Chair
Members, House Transportation Committee

From: Representative Dave Donley, Chair
House Labor and Commerce Committee

Re: HB 305 - School Bus Drivers

HB 305, relating to wages and required experience for school bus drivers, was introduced by the House Labor and Commerce Committee and is before the House Transportation today.

I've included a brief sectional analysis of HB 305 to aid in your deliberations today. HB 305 makes three substantial amendments to existing statute: 1) raises the age to obtain a school bus drivers license from 19 to 21, 2) raises the one year requirement for having an Alaska drivers license to two years and, 3) establishes a minimum wage for drivers at no less than two and one half times the federal minimum wage law ($3.35/hour - $3.85/hour in Alaska).

The House Labor and Commerce Committee introduced HB 305 in response to concerns about the continuing reduction in wages for school bus drivers and the potential effect on the quality and availability of qualified drivers. Most school bus drivers are employees of contractors who bid for pupil transportation services. Less than twenty percent of school bus drivers in Alaska are paid directly by a school district. Since most pupil transportation costs are fixed (i.e. gas, oil, tires, insurance, heat, lights, license fees, routine maintenance, and the buses themselves), reducing wages paid to drivers may be the only way for a contractor to place the winning bid. The House Labor and Commerce Committee felt that the compensation levels of school bus drivers must not be allowed to deteriorate because wages currently paid are at an absolute minimum to expect qualified and proficient applicants.

Last year, the Committee received the results of a brief telephone survey of wages paid to school bus drivers:

CITY	CONTRACTOR	ENTRY WAGE	TOP WAGE
KENAI	LAIDLAW	$8.10/HR	$11.45/HR
MATSU/BOROUGH	TUNDRA TOURS	$8.22/HR	$10.40/HR
KODIAK	T.M.S.	$9.50/HR	$10.00/HR
FAIRBANKS	T.M.S.	$8.50/HR	$10.00/HR
ANCHORAGE	T.M.S.	$7.50/HR	$ 9.00/HR
ANCHORAGE	LAIDLAW	$8.22/HR	$ 9.75/HR

Before deciding to introduce HB 305, our Committee heard arguments that there is no correlation between wages paid to school bus drivers and a good safety record. However, the Anchorage School district has suffered three student fatalities in the last four years, in three separate school bus accidents. In each case, the contractor was T.M.S. (Transportation & Marketing Systems).

The operation of a school bus is viewed by many as nothing more difficult than driving the family car. From a mechanical standpoint this may be true. However, from a safety standpoint it is not. A much greater level of proficiency must be required of our school bus drivers than we require from drivers who do not carry passengers, let alone a bus full of children.

In recognition of the greater degree of experience and proficiency required, the legislature recently adopted measures to substantially increase the required experience and training levels for school bus drivers. While this legislation imposed considerable costs on potential drivers, it did nothing to protect their wages and therefore helped to make bus driving a substantially less attractive job. The resulting increase in the turnover rate among drivers means wasted training dollars, potentially unsafe pressure on current employees, and an overall lower level of proficiency.

In order to correct errors in the current version of HB 305, I prepared two amendments for your consideration. The first would correct the effective date so that it reads September 1, 1988 instead of September 1, 1987. The second amendment corrects a drafting oversight so that the minimum wage requirements established under HB 305 apply to all school bus drivers, whether they are paid by a school district or through an independent contractor.

The House Labor and Commerce Committee believes that HB 305 reasonably and fairly addresses an important public safety issue. We support measures to increase the proficiency and experience level for school bus drivers and feel strongly that the best way to accomplish that goal and still maintain a pool of qualified, experienced drivers, is to guarantee that they receive no less than a livable wage.

ALASKA STATE LEGISLATURE
P.O. BOX V, JUNEAU 99811
(907) 465-3892

Sectional Analysis for HB 305
"An Act relating to transportation of pupils"

Section 1:

Section 1 contains Legislative Findings that establish the public purpose behind requiring additional experience and proficiency levels for school bus drivers in Alaska.

Section 2:

Section 2 adds a new subsection (d) to AS 14.09.010 to require school districts, transportation contractors, or other recipients of state funds for pupil transportation services to establish classifications for their employees who provide transportation services in order to identify school bus drivers as employees eligible for the minimum wage established under AS 23.10.065(b). The section further requires that if the wage schedule for bus drivers established by an entity under this section is higher than the minimum wage established under AS 23.15.065 (b) then the higher wage applies to all other employees who work as bus drivers.

Section 3:

Amends AS 23.10.065 (Section of law that establishes a minimum wage for all employees in Alaska as $.50 cents above federal minimum wage) to exempt school bus drivers under AS 23.10.065(b).

Section 4:

Adds a new subsection (b) to AS 23.20.065 providing that school bus drivers be paid a minimum wage no less than two and one half times the prevailing federal minimum wage. (Current federal minimum wage is $3.35/hour nationally and $3.85/hour in Alaska. Two and one half times $3.85/hour establishes a minimum wage for school bus drivers as $9.62 and hour.

Section 5:

Section 5 amends AS 28.15.046(b) to raise the minimum age for obtaining a school bus drivers license from 19 to 21 years (AS 28.15.046(b)(1)), and raises the one year requirement for possession of a license to two years (AS 28.15.046(b)(2)).

Section 6:

Effective date clause. The effective date in the current version is September 1, 1987.

The Honorable Dave Donley
State Capital
P.O. Box V
Juneau, AK 99811

Dear Representative Donley:

I refer to your request of April 14, 1987 concerning statistics or a study which may indicate the relationship between wages paid to a school bus driver and his or her safety record.

The department does not have any information on this subject. I, therefore, called the Department of Education and the Alaska Highway Safety Council but neither of these agencies had any information on the subject. They referred me to the National School Transportation Association, in Springville, Virginia, and to the National Safety Council in Chicago, Illinois. I contacted both these organizations and they also were not aware of any studies in this area.

I am sorry I was not of more help but evidently there are no studies either on a state or national level on this subject.

Sincerely,

Richard Arab, Deputy Director
Division of Labor Standards
and Safety

IN THE HOUSE

CS FOR HOUSE BILL NO. 305 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to transportation of pupils; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS. The legislature finds that the driving conditions existing in this state are unique and require school bus drivers to have experience in driving a vehicle on the roads and under the conditions existing in the state in order to ensure that they are adequately trained. The legislature also finds that in order to properly train school bus drivers, drivers should be licensed in this state for a minimum period of one year, as required under AS 28.15.046(b)(2), as amended by sec. 6 of this Act.

* Sec. 2. AS 14.09.010 is amended by adding a new subsection to read:

(d) A school district, transportation contractor, or other recipient of state funds for pupil transportation shall establish two wage schedules for its employees who provide pupil transportation services. One wage schedule must include employees, other than drivers, paid on an hourly basis, by classification. The other wage schedule must include drivers, by classification. After an entity establishes a wage schedule required by this subsection, an employee hired by that entity to provide substantially the same pupil transportation services as an employee compensated according to the established wage schedule shall be compensated at a rate not less than that established by the wage schedule. If wages paid to the employee are higher than the rate established by the wage schedule, the wage

schedule shall be amended to conform to the higher wage rate.

* Sec. 3. AS 23.10.055(5) is amended to read:

(5) an individual employed by the United States or by the state or political subdivision of the state, except as provided in AS 23.10.065(b), including prisoners not on furlough detained or confined in prison facilities;

* Sec. 4. AS 23.10.065 is amended to read:

Sec. 23.10.065. MINIMUM WAGES. Except as provided under (b) of this section, an [AN] employer shall pay to each employee wages at a rate of not less than 50 cents an hour greater than the prevailing Federal Minimum Wage Law or $2.60 an hour, whichever is greater, for hours worked in a pay period, whether the work is measured by time, piece, commission or otherwise. An employer may not apply tips or gratuities bestowed upon employees as a credit toward payment of the minimum hourly wage required by this section. Tip credit as defined by the Fair Labor Standards Act of 1938 as amended does not apply to the minimum wage established by this section.

* Sec. 5. AS 23.10.065 is amended by adding a new subsection to read:

(b) An employer shall pay to each person employed as a school bus driver wages at a rate of not less than two and one-half times the Alaska as described in 23.10.065 prevailing Federal Minimum Wage Law, for hours worked in a pay period, whether work is measured by time, commission, or otherwise. An employer may not apply fringe benefits as a credit toward payment of the minimum wage established under this subsection.

* Sec. 6. AS 28.15.046(b) is amended to read:

(b) The department may not issue a license under this section unless the applicant

(1) is at least 21 [19] years of age;

(2) has had a license issued by the department to operate a

motor vehicle at least one year before the date of application and has had a license to operate a motor vehicle at least three years before the date of application;

(3) has successfully completed all required driving, written, and physical examinations;

(4) has submitted information sufficient to complete a background check consisting of a fingerprint check of national criminal records and state criminal records of the state or states in which the applicant has resided for the past two years;

(5) has completed a state approved school bus driver training course established under AS 14.07.020(a)(14) or has for the previous two years been licensed by the state to operate a school bus.

* Sec. 7. This Act applies to school bus driver employment contracts entered into or renewed on or after September 1, 1988.

* Sec. 8. This Act takes effect September 1, 1988.

Gordon Epperly : Juneau

1. School bus drivers are required to complete first aid and CPR classes, which takes about four hours of personal time and costs $20 for their certification cards.

2. School bus drivers are required to have physicals, costing $50 - $100, on their own time.

3. New drivers are required to attend a two week training program, at their own expense, and complete a "ground check". Certification is $10.

4. Returning drivers are required to attend eight hours of continued training per year. Own expense.

School bus drivers have been for years trying to become affiliated with a labor union, but because they are hired by a contractor, affiliation attempts have failed.

Other bus and truck drivers are paid Davis Bacon wages.

Sec. 14.09.010. Transportation of pupils. (a) The department may provide for the transportation of pupils who reside a distance from established schools, and in order to accomplish that purpose may

(1) require school districts to enter into contracts with the department for the administration, supervision, operation or subcontracting of the operation of transportation systems for students to and from the schools within their service area;

(2) require all school districts, transportation contractors and other recipients of state transportation funds to submit to the department an annual report, which includes a financial statement and other operational data required by the department;

(3) permit school districts to

(A) establish supplementary systems of student transportation for students ineligible to utilize transportation facilities paid for by the state;

(B) charge fares or fees for the supplementary transportation systems; and

(C) use local tax funds to pay, in whole or in part, the cost of the supplementary system.

(b) Each school district mentioned in (a)(1) of this section is entitled to receive reimbursement from the state for the operation of the transportation system on a unit cost basis determined by the department.

(c) The school board of a district, or the department for areas not within school districts, shall designate as hazardous those routes

which cannot be safely traveled by children not served by school bus. The designation may recognize hazards that exist only part of the time and in these instances the designation shall be applicable only during the time the hazards are found to exist. The board or the department shall provide for the transportation of pupils on routes designated as hazardous. The additional cost of the transportation in a district shall be shared equally by the district and the department. Eligibility to receive school bus service on routes designated as hazardous shall not be subject to restrictions based on the minimum distance between established schools and the residences of pupils. (§ 1 ch 39 SLA 1966; § 1 ch 98 SLA 1966)

Revisor's notes. — Subsection (c) was enacted as AS 14.10.070(c). Renumbered in 1966.

Opinions of attorney general. — Until the Alaska Supreme Court issues a decision overruling Matthews v. Quinton, Sup. Ct. Op. No. 31 (File No. 48), 362 P.2d 932 (1961), or modifying it in a significant manner, the law in the state is that public funds may not be used to provide transportation to private school children. 1978 Op. Att'y Gen. No. 23.

NOTES TO DECISIONS

Prior law. — For cases construing former similar provisions, see Tapscott v. Page, 17 Alaska 507 (1958); Matthews v. Quinton, Sup. Ct. Op. No. 31 (File No. 48), 362 P.2d 932 (1961), cert. denied, 368 U.S. 517, 82 S. Ct. 530, 7 L. Ed. 2d 522 (1962).

Borough was not acting as an agent of the state in furnishing transportation of pupils. Kenai Peninsula Borough v. State, Sup. Ct. Op. No. 1124 (File No. 2092), 532 P.2d 1019 (1975).

While the state did supervise the school transportation service insofar as it related to the funding provided by it and also had certain regulations in effect pertaining to the over-all safety of the transportation system, the actual control of the transportation services was undertaken by the borough which, on its own behalf, entered into the contract with a school bus owner to furnish transportation service for specified routes. Kenai Peninsula Borough v. State, Sup. Ct. Op. No. 1124 (File No. 2092), 532 P.2d 1019 (1975).

Department of Education discretion in awarding school busing contracts. — Although neither the Department of Education nor regional school boards were explicitly given the discretion to decide when a busing contract was to be awarded by bid or by negotiation under former AS 37.05.230(4), the authority granted to the Department of Education under this section compelled the conclusion that the department additionally had been granted the discretion to choose between bid and negotiation in awarding busing contracts. State v. Northern Bus Co., Sup. Ct. Op. No. 2899 (File No. 7079), 693 P.2d 319 (1984).

Applied in Girves v. Kenai Peninsula Borough, Sup. Ct. Op. No. 1168 (File No. 2016), 536 P.2d 1221 (1975).

Cited in Jennings v. State, Sup. Ct. Op. No. 1467 (File No. 2658), 566 P.2d 1304 (1977).

Based on Fair Labor Standards Act. — See notes under same catchline under article analysis. Webster v. Bechtel, Inc., Sup. Ct. Op. No. 2245 (File Nos. 3979, 4139), 621 P.2d 890 (1980), Notes to Decisions.

AS 23.10.050 — 23.10.150 are directed toward a situation distinct from that of the Equal Pay for Women Act. Brown v. Wood, Sup. Ct. Op. No. 1551 (File Nos. 2564, 2565), 575 P.2d 760 (1978), modified on rehearing on other grounds, 592 P.2d 1250 (1979).

Applied in Dresser Indus., Inc v. Alaska Dep't of Labor, Sup. Ct. Op. No. 2415 (File No. 5625), 633 P.2d 998 (1981).

Sec. 23.10.055. Exemptions. The provisions of AS 23.10.050 — 23.10.150 do not apply to

(1) an individual employed in agriculture, which includes farming in all its branches and, among other things, includes the cultivation and tillage of the soil, dairying, the production, cultivation, growing, and harvesting of any agricultural or horticultural commodities, the raising of livestock, bees, fur-bearing animals, or poultry, and any practices, including forestry and lumbering operations, performed by a farmer or on a farm as an incident to or in conjunction with the farming operations, including preparation for market, delivery to storage or to market or to carriers for transportation to market;

(2) an individual employed in the catching, trapping, cultivating or farming, netting or taking of any kind of fish, shellfish, or other aquatic forms of animal and vegetable life;

(3) an individual employed in the hand picking of shrimp;

(4) an individual employed in domestic service, including a baby-sitter, in or about a private home;

(5) an individual employed by the United States or by the state or political subdivision of the state including prisoners not on furlough detained or confined in prison facilities;

(6) an individual engaged in the activities of a nonprofit religious, charitable, cemetery or educational organization where the employer-employee relationship does not, in fact, exist, and where services rendered to the organization are on a voluntary basis;

(7) an employee engaged in the delivery of newspapers to the consumer;

(8) an individual employed solely as a watchman or caretaker of a plant or property that is not in productive use for a period of four months or more;

(9) an individual employed in a bona fide executive, administrative or professional capacity or in the capacity of an outside salesman or a salesman who is employed on a straight commission basis;

(10) an individual employed in the search for placer or hard rock minerals;

(11) an individual under 18 years of age employed on a part-time basis not more than 30 hours in a week; or

Sec. 23.10.065. Minimum wages. An employer shall pay to each employee wages at a rate of not less than 50 cents an hour greater than the prevailing Federal Minimum Wage Law or $2.60 an hour, whichever is greater, for hours worked in a pay period, whether the work is measured by time, piece, commission or otherwise. An employer may not apply tips or gratuities bestowed upon employees as a credit toward payment of the minimum hourly wage required by this section. Tip credit as defined by the Fair Labor Standards Act of 1938 as amended does not apply to the minimum wage established by this section. (§ 4 ch 171 SLA 1959; am § 2 ch 2 SLA 1962; am § 1 ch 41 SLA 1974)

Cross references. — For the Fair Labor Standards Act of 1938, see 29 U.S.C. 201-219.

NOTES TO DECISIONS

This section is based on the federal Fair Labor Standards Act of 1938, 29 U.S.C. §§ 201-219, and the terms used in the Alaska Statute are defined in the same way as in the federal act. McGinnis v. Stevens, Sup. Ct. Op. No. 1207 (File Nos. 2255, 2312), 543 P.2d 1221 (1975), decided prior to the 1978 amendment to AS 23.10.055(5).

Prisoners as employees of the state. — See McGinnis v. Stevens, Sup. Ct. Op. No. 1207 (File Nos. 2255, 2312), 543 P.2d 1221 (1975), decided prior to the 1978 amendment to AS 23.10.055(5).

Article not void. — The Alaska Wage and Hour Act merely requires higher minimum and overtime pay than the Fair Labor Standards Act, 29 U.S.C. §§ 201-219. Although compliance with both is more expensive than compliance with the federal act, it is not, in any sense, impossible so as to make the Alaska law void. Webster v. Bechtel, Inc., Sup. Ct. Op. No. 2245 (File Nos. 3979, 4139), 621 P.2d 890 (1980).

Concurrent coverage of minimum wage claims is not preempted by the Federal Fair Labor Standards Act. It appears that 29 U.S.C. § 218(a) was intended to allow the recovery of additional amounts under more protective state laws. It is logical that Congress contemplated that the state would allow for an action as to the whole claim, not just the increment, and, further, that Congress intended that the claims would be brought together, where possible, so that enforcement would not be costly. Webster v. Bechtel, Inc., Sup. Ct. Op. No. 2245 (File Nos. 3979, 4139), 621 P.2d 890 (1980).

Applied in Alaska Int'l Indus., Inc. v. Musarra, Sup. Ct. Op. No. 1966 (File Nos. 3652, 3676), 602 P.2d 1240 (1979).

Cited in Dresser Indus., Inc. v. Alaska Dep't of Labor, Sup. Ct. Op. No. 2415 (File No. 5625), 633 P.2d 998 (1981).

Collateral references. — Validity of minimum wage statutes relating to private employment, 39 ALR2d 740.

Sec. 23.10.070. Exemptions from minimum wage. To the extent necessary to prevent curtailment of opportunities of employment, the commissioner may by regulations or orders provide for the employment at wages lower than the minimum wage prescribed in AS 23.10.050 — 23.10.150 of

nor may the department issue the license until proper application has been made and all required driving, written, and physical examinations have been successfully completed. A license issued under this subsection expires on September 1 of the year following issuance. Application for renewal may be made by submitting to the department the results of a current physical examination and paying the required fee.

(c) A person may not drive a commercial motor vehicle until the person applies for and is issued a license for that purpose under (a) of this section. The department may not issue a license under this subsection unless the applicant is at least 19 years of age, has held a valid driver's license at least one year, and has successfully completed all required driving tests and written and physical examinations. In this subsection, "commercial motor vehicle" has the meaning given in AS 28.32.900. (§ 19 ch 178 SLA 1978; am § 2 ch 104 SLA 1985; am § 2 ch 19 SLA 1986)

Effect of amendments. — The 1985 amendment added subsection (c).

The 1986 amendment deleted "school bus transporting school children, or a bus transporting school-age children or another" preceding "motor vehicle" in the first sentence of subsection (b).

TITLE 28: MOTOR VEHICLES CHAP 15 DRIVERS LICENSES

Sec. 28.15.046. Licensing of school bus drivers. (a) In addition to the requirements of AS 28.15.041(a), a person may not drive a school bus transporting school children, or a bus transporting schoolage children until the person has applied for and has been issued a license for that purpose under this section.

(b) The department may not issue a license under this section unless the applicant

(1) is at least 19 years of age;

(2) has had a license to operate a motor vehicle at least one year before the date of application;

(3) has successfully completed all required driving, written, and physical examinations;

(4) has submitted information sufficient to complete a background check consisting of a fingerprint check of national criminal records and state criminal records of the state or states in which the applicant has resided for the past two years;

(5) has completed a state approved school bus driver training course established under AS 14.07.020(a)(14) or has for the previous two years been licensed by the state to operate a school bus.

(c) The department may not issue a license under this section to an applicant who has been convicted of any of the following offenses within 20 years of the time of application:

(1) sexual abuse of a minor in any degree (AS 11.41.434 — 11.41.440);

(2) sexual assault in any degree (AS 11.41.410 or 11.41.420);

(3) incest (AS 11.41.450);

(4) unlawful exploitation of a minor (AS 11.41.455);

(5) contributing to the delinquency of a minor (AS 11.51.130);

(6) a felony involving possession of a controlled or imitation controlled substance (AS 11.71 or AS 11.73);

(7) a felony or misdemeanor involving distribution of a controlled or imitation controlled substance (AS 11.71 or AS 11.73);

(8) promoting prostitution in the first or second degree (AS 11.66.110 or 11.66.120).

(d) The department may not issue a license to an applicant who has been convicted of driving while intoxicated (AS 28.35.030) within two years of the time of application or to an applicant who has two or more convictions for driving while intoxicated within 10 years of the time of application.

(e) For purposes of determining whether an applicant has been convicted of an offense listed under (c) or (d) of this section, a conviction under prior state law or in another jurisdiction of an offense having elements substantially similar to those of the offenses listed in (c) or (d) of this section is considered a conviction.

(f) Costs of conducting the background check required under (b)(4) of this section shall be paid by the applicant. A license issued under this section expires on September 1 of the year following issuance. Application for renewal may be made by submitting to the department the results of a current physical examination and paying the required fee. (§ 3 ch 19 SLA 1986)

Sec. 28.15.051. Instruction permit, temporary driver's license and special driver's permit. (a) Except as provided in (b) of this section, a person who is at least 14 years of age may apply to the department for an instruction permit. The department may, after the applicant has successfully passed all parts of the examination under AS 28.15.081 other than the driving test, issue to the applicant an instruction permit. The permit allows a person, while having the permit in the person's immediate possession, to drive a specified type or class of motor vehicle on a highway or vehicular way or area for a period not to exceed two years. The permittee must be accompanied by a person at least 19 years of age who has been licensed at least one year to drive the type or class of vehicle being used, who is capable of exercising control over the vehicle and who occupies a seat beside the driver, or who accompanies and immediately supervises the driver when the permittee drives a motorcycle. An instruction permit may be renewed.

(b) The department, upon receiving proper application, may issue a restricted instruction permit effective for a school year or for a more restricted period to an applicant who is at least 14 years of age and who is enrolled in a driver education program which includes practice

HOUSE LABOR AND COMMERCE COMMITTEE

ALASKA STATE LEGISLATURE P.O. BOX Y, JUNEAU 99811
Chairman - Representative Dave Donley (907) 465-3892

March 2, 1988

M E M O R A N D U M:

To: Representative Bette Cato, Chair
House Transportation Committee

From: Representative Dave Donley, Chair
House Labor and Commerce Committee

Re: HB 305 - School bus drivers

A proposed committee substitute for HB 305, relating to school bus drivers, is before the House Transportation Committee for consideration today. The changes in the proposed CS are:

1. The minimum wage established for school bus drivers in HB 305 has been amended to be defined as two and one half times the federal minimum wage plus 50 cents ("Alaska" minimum wage).

2. The troublesome Section 2 from the previous version of HB 305 is deleted entirely.

3. Provisions have been added to provide that any change in the federal minimum wage (on which the minimum wage under HB 305 is based) does not apply during the contract period but only upon renewal or for a new contract.

The proposed CS for HB 305 represents good public policy that should go a long way in improving the experience and proficiency levels of Alaska's school bus drivers by protecting their wages and working conditions. The House Labor and Commerce Committee urges you to support the proposed House Transportation Committee Substitute for HB 305.

IN THE HOUSE

CS FOR HOUSE BILL NO. 305 ( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to transportation of pupils; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS. The legislature finds that the driving conditions existing in this state are unique and require school bus drivers to have experience in driving a vehicle on the roads and under the conditions existing in the state in order to ensure that they are adequately trained. The legislature also finds that in order to properly train school bus drivers, drivers should be licensed in this state for a minimum period of one year, as required under AS 28.15.046(b)(2), as amended by sec. 5 of this Act.

(previous section now deleted)

* Sec. 2. AS 23.10.055(5) is amended to read:

(5) an individual employed by the United States or by the state or political subdivision of the state, except as provided in AS 23.10.065(b), including prisoners not on furlough detained or confined in prison facilities;

* Sec. 3. AS 23.10.065 is amended to read:

Sec. 23.10.065. MINIMUM WAGES. Except as provided under (b) of this section, an [AN] employer shall pay to each employee wages at a rate of not less than 50 cents an hour greater than the prevailing Federal Minimum Wage Law or $2.60 an hour, whichever is greater, for hours worked in a pay period, whether the work is measured by time, piece, commission or otherwise. An employer may not apply tips or gratuities bestowed upon employees as a credit toward payment of the

minimum hourly wage required by this section. Tip credit as defined by the Fair Labor Standards Act of 1938 as amended does not apply to the minimum wage established by this section.

* Sec. 4. AS 23.10.065 is amended by adding new subsections to read:

(b) Subject to the limitation under (c) of this section, an employer shall pay to each person employed as a school bus driver wages at a rate of not less than two and one-half times the minimum wage established under (a) of this section, for hours worked in a pay period, whether work is measured by time, commission, or otherwise. An employer may not apply fringe benefits as a credit toward payment of the minimum wage established under this subsection.

(c) Notwithstanding (b) of this section, an employer who contracts with the Department of Education or a school district to provide school bus transportation services is not required to adjust school bus driver wages under (b) of this section, except when entering into or renewing the contract.

* Sec. 5. AS 28.15.046(b) is amended to read:

(b) The department may not issue a license under this section unless the applicant

(1) is at least <u>21</u> [19] years of age;

(2) has had a license <u>issued by the department</u> to operate a motor vehicle at least one year before the date of application <u>and has had a license to operate a motor vehicle at least three years before the date of application</u>;

(3) has successfully completed all required driving, written, and physical examinations;

(4) has submitted information sufficient to complete a background check consisting of a fingerprint check of national criminal records and state criminal records of the state or states in which

the applicant has resided for the past two years;

(5) has completed a state approved school bus driver training course established under AS 14.07.020(a)(14) or has for the previous two years been licensed by the state to operate a school bus.

* Sec. 6. This Act takes effect September 1, 1988.

HOUSE LABOR AND COMMERCE COMMITTEE

ALASKA STATE LEGISLATURE P.O. BOX Y, JUNEAU 99811

Chairman - Representative Dave Donley (907) 465-3892

Sectional Analysis for CS HB 305 (Transportation)
"An Act relating to transportation of pupils"

Section 1:

Section 1 contains Legislative Findings that establish the public purpose behind requiring additional experience and proficiency levels for school bus drivers in Alaska.

Section 2:

Amends AS 23.10.055(5) to add school bus drivers to the list of exceptions from standard minimum wage requirements.

Section 3:

Amends AS 23.10.065(a) which is the section of law that establishes a minimum wage for all employees in Alaska as $.50 cents above federal minimum wage) to exempt school bus drivers under AS 23.10.065(b).

Section 4:

Adds a new subsection (b) to AS 23.20.065 providing that school bus drivers be paid a minimum wage no less than two and one half times the prevailing federal minimum wage plus 50 cents. (Current federal minimum wage is $3.35/hour nationally and $3.85/hour in Alaska. Two and one half times $3.85/hour establishes a minimum wage for school bus drivers as $9.62 and hour).

3.85
3.85
7.7 5

Section 5:

Section 5 amends AS 28.15.046(b)(1) to raise the minimum age for obtaining a school bus drivers license from 19 to 21 years.

AS 28.15.046(b)(2)) is amended to require that an applicant has had a license to operate moter vehicle for at least three hears prior to application for a school bus drivers license and at least one of those years had to possess a license to operate a moter vehicle in Alaska.

Section 6:

Effective date is September 1, 1988.

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to transportation of pupils; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS. The legislature finds that the driving conditions existing in this state are unique and require school bus drivers to have experience in driving a vehicle on the roads and under the conditions existing in the state in order to ensure that they are adequately trained. The legislature also finds that in order to properly train school bus drivers, drivers should be licensed in this state for a minimum period of one year, as required under AS 28.15.046(b)(2), as amended by sec. 5 of this Act.

* Sec. 2. AS 23.10.055(5) is amended to read:

(5) an individual employed by the United States or by the state or political subdivision of the state, except as provided in AS 23.10.065(b), including prisoners not on furlough detained or confined in prison facilities;

* Sec. 3. AS 23.10.065 is amended to read:

Sec. 23.10.065. MINIMUM WAGES. Except as provided under (b) of this section, an [AN] employer shall pay to each employee wages at a rate of not less than 50 cents an hour greater than the prevailing Federal Minimum Wage Law or $2.50 an hour, whichever is greater, for hours worked in a pay period, whether the work is measured by time, piece, commission or otherwise. An employer may not apply tips or gratuities bestowed upon employees as a credit toward payment of the

minimum hourly wage required by this section. Tip credit as defined by the Fair Labor Standards Act of 1938 as amended does not apply to the minimum wage established by this section.

* Sec. 4. AS 23.10.065 is amended by adding new subsections to read:

(b) Subject to the limitation under (c) of this section, an employer shall pay to each person employed as a school bus driver wages at a rate of not less than two times the minimum wage established under (a) of this section, for hours worked in a pay period, whether work is measured by time, commission, or otherwise. An employer may not apply fringe benefits as a credit toward payment of the minimum wage established under this subsection.

(c) Notwithstanding (b) of this section, an employer who contracts with the Department of Education or a school district to provide school bus transportation services is not required to adjust school bus driver wages under (b) of this section, except when entering into or renewing the contract.

* Sec. 5. AS 28.15.046(b) is amended to read:

(b) The department may not issue a license under this section unless the applicant

(1) is at least <u>21</u> [19] years of age;

(2) has had a license <u>issued by the department</u> to operate a motor vehicle at least one year before the date of application <u>and has had a license to operate a motor vehicle at least three years before the date of application</u>;

(3) has successfully completed all required driving, written, and physical examinations;

(4) has submitted information sufficient to complete a background check consisting of a fingerprint check of national criminal records and state criminal records of the state or states in which

the applicant has resided for the past two years;

(5) has completed a state approved school bus driver training course established under AS 14.07.020(a)(14) or has for the previous two years been licensed by the state to operate a school bus.

* Sec. 6. This Act takes effect September 1, 1988.

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5164 HTRA HB 305 - HB 357

HOUSE COMMITTEE REPORT

(7)

Date referred: 5/7/87

FURTHER REFERRALS: HESS

DATE: 3-2-88

The Transportation Committee has considered HB 305

"An Act relating to transportation of pupils; and providing for an effective date."

RECOMMENDS:

[✓] replace with CS HB 305 (Trsp) [X] the same title

[ ] attached amendment(s) [ ] a new title

[X] do pass

[ ] do not pass

[ ] no recommendation

[ ] individual recommendations

[X] additional referral to the Finance Committee

ADOPTS: [ ] _____ letter of intent

ATTACHES NEW FISCAL NOTE(s):

[X] fiscal impact

2 [X] zero fiscal notes

[ ] zero with analysis

[ ] same as previous fiscal note published _____

[ ] same as previous zero fiscal note published _____

SIGNING DO PASS:

Bill Hudson

Bette Cate

Henry Springer

D.C. Barbee

SIGNING OTHER RECOMMENDATIONS:

Mike Miller No Rec

M E M O R A N D U M March 2, 1988

SUBJECT: Durational Residency Requirement
CSHB 305 (Transportation)

TO: Representative Bette Cato, Chair
House Transportation Committee

FROM: Michael F. Ford MFF LMB
Legislative Counsel

This is to bring to your attention a constitutional problem in sec. 5 of CSHB 305 (Transportation) concerning requiring school bus drivers to have an Alaska driver's license for one year. In our opinion such a requirement would be held unconstitutional as it would violate the state equal protection clause.

In Williams v. Zobel, 619 P.2d 422 (AK 1980), the Alaska Supreme Court discussed the test to be used to determine if a durational residency requirement is constitutional. Essentially the court balances the denial of the benefit or right against the government objective involved. The state must show that the residency requirement has a fair and substantial relationship to a legitimate government objective. See also State v. Erickson, 574 P.2d 1, 11-12 (AK 1978). Requiring an Alaska drivers' license for one year prior to being eligible for employment as a school bus driver does not seem to be a legitimate government objective. The argument that familiarity with Alaska driving conditions, or a general safety aspect, fails when you consider that driving conditions vary greatly across Alaska. For example, a person living in Ketchikan is probably no better prepared to drive a school bus in Fairbanks, than a person living in Montana or California.

In short, this type of residency requirement would probably not survive constitutional challenge.

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 14, 1988

The Honorable Jan Faiks
President of the Senate
Alaska State Legislature
P.O. Box V
Juneau, AK 99811

Dear Senator Faiks:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill pertaining to contracting procedures for the sale and delivery of in-bond merchandise sold at Alaska's international airports. These transactions take place in the "duty free" shops.

This bill amends existing AS 02.15.091(d) to allow the Department of Transportation and Public Facilities (DOT/PF) to award duty free contracts through the competitive proposal mechanism. Presently, the department must offer the duty free contracts only by competitive bid and then make the contract award after considering the generation of maximum revenue for the International Airports Revenue Fund (AS 37.15.430).

While generation of revenue is a critical component of any contract involving operation of the duty free shops, giving the department flexibility to use competitive proposal procedures will possibly increase revenue and assist the state to meet other valid goals. DOT/PF would like to be able to consider such factors as space layout, kind of merchandise, level of service, minority participation plans, and demonstrated experience. DOT/PF regulations in 17 AAC 40 govern that department's competitive proposal procedures.

I believe that this measure warrants your critical scrutiny. My Administration looks forward to working with legislative committees to explain this bill in greater detail. This bill has the support of the Department of Transportation and Public Facilities. Please call on Commissioner Mark Hickey if you have additional questions about this bill.

Sincerely,

Steve Cowper
Governor

Sec. 02.15.050. Miscellaneous powers and duties of department. (a) The department may confer with and hold joint hearings with agencies of the United States in connection with matters arising under this chapter or relating to the sound development of aeronautics.

(b) The department may avail itself of the cooperation, services, records and facilities of the agencies of the United States as fully as may be practicable in the administration and enforcement of this chapter. The department shall, upon request, furnish to the agencies of the United States its cooperation, services, records and facilities, insofar as may be practicable.

(c) The department or any state or municipal police officer shall report to the appropriate agency of the United States all accidents in aeronautics in this state of which it or he is informed, and shall, insofar as practicable, preserve, protect and prevent the removal of

Sec. 02.15.060. Establishment, operation and maintenance.

NOTES TO DECISIONS

Applied in Clark v. State, Ct. App. Op. No. 716 (File No. A-1840), P.2d (1987).

Sec. 02.15.090. Operation and use privileges.

NOTES TO DECISIONS

Legislative intent. — By enacting AS 02.15.120, 02.15.160, and this section, the legislature intented to insure that airport facilities would be made available, on a priority basis, to that segment of society for which those facilities are designed: Those persons operating aircraft or machinery used incidentally to the operation of aircraft. Plancich v. State, Sup. Ct. Op. No. 2902 (File Nos. S-97, S-98), 693 P.2d 855 (1985).

Sec. 02.15.091. Sale and delivery of in-bond merchandise at international airports. (a) As provided by (b) and (c) of this section, the department shall allow the sale and delivery of in-bond merchandise at an international airport only by an exclusive contract.

(b) While the exclusive contracts for the sale and delivery of in-bond merchandise at international airports that exist on June 15, 1982 are in effect, the department may not permit or confer a right on any other person to offer to sell, sell, or deliver in-bond merchandise at an international airport.

(c) After the exclusive contracts existing on June 15, 1982 are no longer in effect, the department shall enter into one exclusive contract and, on its expiration, additional successive exclusive contracts for the sale and delivery of in-bond merchandise at each international airport. Except under the existing and future exclusive contracts described in this section, the department may not permit or confer a right upon any person to offer to sell, sell, or deliver in-bond merchandise at an international airport.

(d) The department shall offer the exclusive contracts required by this section only by competitive bid and shall award the contracts after considering the generation of maximum revenues for the International Airports Revenue Fund established by AS 37.15.430.

(e) The department shall actively supervise the operations under each exclusive contract for the sale and delivery of in-bond merchandise in order to ensure the effectiveness of the operations. To supervise contract operations under this section, the department shall develop and implement guidelines that provide for review of the reasonableness of price schedules, quality and assortment of merchandise, and customer service.

(f) Nothing in this section applies to deliveries of in-bond merchandise as cargo to airlines. (§ 2 ch 111 SLA 1982)

ALASKA RAILROAD CORPORATION

P.O. Box 7-2111 • Anchorage, Alaska 99510-7069

January 19, 1988

Honorable Bette Cato, Chairman
Transportation Committee
House of Representatives
P.O. Box V
Juneau, Alaska 99811

Re: House Bill No. 349, An Act Increasing the Membership on the Board of Directors of the Alaska Railroad Corporation

Dear Bette Representative Cato,

Thank you for this opportunity to express our comments on HB 47 which proposes to add two additional directors to the Alaska Railroad Corporation ("ARRC") board.

We've carefully reviewed the bill and enclose our position paper and fiscal note.

Although we do not oppose this legislation, we respectfully request that consideration be given to adding one, not two, additional board members. As our paper explains, we fear that at nine members our board will become too large and unwieldly. By also changing the number of affirmative votes needed for board action from four to five, the problem with tie votes as you and I discussed some time ago will be avoided. This reduction of proposed appointees will also reduce our projected costs by half.

We've asked our legislative representative, Rick Urion, to attend tomorrow's hearing. Should questions or comments arise concerning our proposal which Rick cannot field, we will stand by here to supplement his responses.

Thank you very much.

Sincerely,

F. G. Turpin
President & CEO

POSITION PAPER / Alaska Railroad Corporation

January 19, 1988

HOUSE BILL NO. 349

An Act Increasing the Membership on the Board of Directors of the Alaska Railroad Corporation

I. Introduction

HB 349 proposes to add two members to the Alaska Railroad Corporation ("ARRC") Board of Directors, one from Seward and one from Fairbanks. The legislation is intended to provide additional representation for railbelt communities on the ARRC board. Although ARRC does not oppose HB 349, we respectfully request that consideration be given to adding one, not two, additional directors to the ARRC board.

II. Discussion

The powers of the Alaska Railroad Corporation are vested in its board of directors. To insure local control of the railroad's important transportation and governmental functions, ARRC's enabling legislation directs that the seven member panel primarily consist of Alaskan residents. The legislation envisions that the board collectively contain a wide range of skills and experience, including railroad management, business, and labor expertise. In addition, each judicial district directly served by the Alaska Railroad must be represented on the board. This provision ensures that railbelt representation will be broad based.

Nonetheless, concern has been raised that the current board does not include a Seward resident. ARRC and Seward community interests have been commercially, geographically, and financially intertwined for many years. Despite the participation of its representative on ARRC's Community Briefing Council which meets to consider railroad/railbelt concerns and common interests, Seward leaders have requested a permanent Seward seat on the ARRC board.

ARRC does not oppose a modification of the Alaska Railroad Corporation Act ("ARCA") which would provide smaller port communities in the railbelt a common representative on its Board of Directors. However, we request that HB 349 be amended as follows:

(7) one member shall be a resident of Seward, [,] Whittier, or Nenana.

This modification would allow other port communities located in the railbelt such as Whittier an opportunity to suggest residents for appointment.

We also request that subsection (6) be deleted. The provision would require that one board member be a resident of Fairbanks. The Fairbanks community is assured adequate representation by an existing provision which requires that all judicial districts served by the Alaska Railroad be represented. For example, Director Frank Chapados is a resident of that Interior city. We fear that at nine members the ARRC board will become too large and unwieldly. An attached fiscal note also demonstrates that the projected costs of two additional board members is $25,400. These are not insignificant costs which can be reduced by half by amending the bill.

Without other ARCA modifications, a board of eight directors would find themselves at an impasse when tie votes prevent it from taking action. However, A.S. 42.40.160(b) provides that "(f)our affirmative votes are required for board action." By increasing the number of required affirmative votes for affirmative action from four to five, such impasses will never occur. This revision also seems prudent since the pool of available board members will be increased by one should this proposal be accepted.

III. Conclusion

ARRC is not opposed to the appointment of an additional member to its board. However, as discussed above, it respectfully requests that a single director from a port community in the railbelt be added.

THE HONORABLE BETTE CATO
CHAIRMAN, COMMITTEE ON TRANSPORTATION
HOUSE OF REPRESENTATIVES
P. O. Box V
Juneau, AK 99811

Dear Madam Chairman:

The city of Seward welcomes the opportunity to offer testimony on House Bill 349, which would expand the Alaska Railroad Corporation Board from five (5) to seven (7) members, with one member being a resident of Fairbanks and one member a resident of Seward.

As you are aware, since the state has owned the Alaska Railroad, Seward has expressed the wish to have a representative from Seward on the board of directors. It is the city's position that the board should be comprised of individuals who represent the major railbelt communities. As termini of the railroad, and communities that depend in a significant economic way on the activities of the railroad, it is important that Seward and Fairbanks be represented on the board.

Your committee is aware of the wide degree of issues concerning the city of Seward relating to the Alaska Railroad Corporation. The recently published House Transportation Committee FY88 Interim Report on the Alaska Railroad Corporation summarizes the significant issues involving Seward and the Alaska Railroad. Paramount among these is Seward's lack of representation on the board of directors. The interim report well summarizes what we feel would be the benefits to Seward with direct board representation. Simply put, we would have a voice

and a vote, which we do not now have, on matters of extreme importance to Seward. We strongly recommend the committee's favorable recommendation on this Bill.

Sincerely,

CITY OF SEWARD, ALASKA

DARRYL SCHAEFERMEYER
INTERIM CITY MANAGER

Enclosures: Overview and Seward
sections of HTC FY88 Interim Report

cy: Council

OVERVIEW OF ALASKA RAILROAD CORPORATION

The Alaska Railroad has been operating in Alaska for 62 years. On January 5, 1985, it was transferred from federal to state ownership for $22.3 million. This purchase price did not include any receivables or cash and, therefore, an additional $10.0 million ($4.9 million for operating and $6 million for capital) was appropriated by the legislature to the corporation. Additional costs associated with the transfer totalled $1.2 million.

Effective January 6, 1985, the Alaska Railroad Corporation became responsible for operating the Alaska Railroad. The powers of the corporation are vested in a seven member Board of Directors. Five of these members are appointed by the Governor and confirmed by the legislature. These members serve for staggered five year terms, each at the pleasure of the Governor. The Commissioner of the Department of Transportation and Public Facilities and the Commissioner of the Department of Commerce and Economic Development make up the remaining two board members.

ARRC is a "quasi-public" corporation. It operates along the lines of a private for profit corporation and, therefore, many of the decisions made by the corporation directors are made from a business/profit approach. According to the statutes enacted for guidelines under which the corporation operates (SEC:42.40.010), the corporation is also a public corporation and an instrumentality of the state within the Department of Commerce and Economic Development. The Corporation has a legal existence independent of and separate from the state.

In 1986, House Transportation staff completed an oversight report on the ARRC. This report (attached) addressed many of the concerns expressed by residents of the state regarding the operations of the corporation. Today, many questions and concerns still linger concerning the ARRC. As a result, the following report was prepared. It addresses the present concerns of community leaders along the railbelt. Perhaps the most confusing point surrounding the ARRC is its status. The Alaska Railroad Corporation Act established the corporation as a state agency while allowing it to run as a private corporation. Many residents feel very frustrated the ARRC does not comply with many of the requirements placed on other state agencies such as the budgeting process, and others are concerned the ARRC is exempt from many of the requirements placed on private industry such as property tax.

These exemptions and benefits were afforded the ARRC to enable the corporation to run smoothly and efficiently thus greatly reducing the amount of general funds dollars required each year to run the corporation. To date, the corporation has not requested any appropriation from the legislature and it does not forsee this happening in the near future.

While the corporation is sensitive to many of the community needs expressed in this report, it is also attempting to meet the mandates layed down in the Alaska Statutes. Corporation management feels it is very difficult to adequately address both of these concerns.

In an attempt to listen to community needs and concerns and be responsive to these concerns, the ARRC established a community advisory council. This is made up of representatives from each of the rail community. This advisory council met several times during the summer, corporation management feel the initial meetings have been very successful and hope this advisory council will provide an mechanism for the ARRC and the rail communities to communicate more effectively and work toward resolving many of the community concerns.

After spending many hours listening to all sides involved, it does appear many of the frustations expressed by both parties may be related to interpretation of the statutes and the questions surrounding the "private versus state" status of the corporation.

THE CITY OF SEWARD

Since the state has owned the Alaska Railroad Corporation, the city of Seward has corresponded with the Alaska Railroad Corporation on a regular basis. In fact, before the state actually took ownership of the ARRC, the city of Seward wrote a lengthy letter to the newly appointed railraod board members to outline the areas they hoped could be addressed and agreed upon by the city and the ARRC.

The attached letter written November 1, 1984 shows the Citys concerns, suggestions and requests. Many of the points made in this letter are still the priorities expressed by the City of Seward today (3 years later)

1. Self determination
2. Seward Dock facility
3. Marketing - Seward Terminal Manager
4. Seward Board member
5. Philosophical approach of ARRC
6. Access to railroad information

All of the six points listed above are very closely intertied. The city of Seward is a very aggressive and progressive community. Much of the development and growth in recent years is directly related to the aggressive attitude of local city government. Seward is one of the few Alaskan deepwater ports. The City has the additional benefit of having much of the infrastructure such as roads, easy access etc. already in place. Seward's major immediate and long range goals include encouraging economic activity, jobs and investment in Seward. Like many other smaller Alaska coastal communities, this is a MUST if the community is to continue to grow and thrive. The Alaska Railroad plays an important part in the overall achievement of these goals and the future economic growth of Seward. WHY?

The $40 million Seward Coal dock facility is owned by the Alaska Railroad Corporation. Almost all the fraight coming into Seward moves over this dock. With a superb deepwater port, lack of effort by the railroad to aggressively market or fully utilize this port greatly frustrates Sewardites who rely on ocean going trade for their livelihood. It is obvious there have been numerous lengthy meetings between the Corporation and the city over these concerns. The corporation realises Sewards wish to obtain the Coal dock, however, corporation mangement feel this trnasfer must be in the best interests of both parties. While Seward ownership of the dock would allow Seward to aggressively compete for business, much

City of Seward (cont'd)

The city of Seward hired Mr. Chris Gates to assist Seward in the marketing and economic development of the City and the port. Mr. Gates has been working to encourage the Railroad to take advantage of its port assets in Seward. In discussions with Mr. Gates and city oficials, there is a great deal of frustration expressed at the lack of cooperation by the railroad corporation.

Mr. Gates noted as an example that in January of this year Seward longshoreman themselves went to Seattle to attempt to spur interest in and business over the Alaska Railroad dock. Seward longshoremen president, Mr. Stanley Lemas was able to interest a general cargo carrier to call at the Port of Seward on a bimonthly basis. The success of this venture was assured when the Alaska Railroad representatives pledged assistance to the carrier in the form of reduced service changes and land lease rates. This inducement by the railroad put the soliciation "over the top" and the carrier committed to call at Seward.

Alaska Cargo Transport has called at Seward since January, however, the railroad has not followed through with its pledge for reduced service charges or reduced base rates. This has obviously created hardship on the carrier who has repeatedly asked the Railroad to follow through with its original promises.

Seward feels this "type" of lack of co-operation by the ARR placed Seward in an unfair economic disadvantage.

Railroad Response

Much of the frustration experienced by the residents of Seward is shared by the ARRC. Both parties feel the city of Seward and the corporation must work together in order to resolve issues whenever possible. To this end, ARRC management has agreed to provide passenger service to Seward in spite of the fact that it loses revenue. Freight services to and from Seward are continued even though they provide no profit and barely break even. Now the ARRC is being asked to provide carriers with reduced service charges and land lease rates. The question again arises, should ARRC management decisions be made by the corporation in their role as a private entity based primarily on economics and business criteria or, should decisions be made as a public entity giving first consideration to state and local issues and concerns?

1. Self-determination

Seward overwhelmingly supports self-determination. City officials and residents feel strongly that SEWARD should have control over their own future economic growth and activity, and not the Alaska Railroad.

Seward feels this one point is vital because they question whether the ARRC can promote Seward, or can avoid discouraging Seward tonnage that might produce greater incremental return if delivered through another port. For example, the question has been raised about the willingness of the Alaska Railroad to promote general cargo use of the Seward dock to a carrier who, if successful, might rob or "deplete" tonnage currently carried by major ARRC interline carriers (i.e. hydrotrain). Seward feels the railroad appears to be less interested in dock promotion if the cargoes carried by the vessels are not discharged to rail but use a competing mode of transportation from the dock.

Railroad Response

ARRC management is currently negotiating with the city of Seward to transfer management of the Seward coal dock facility to the city. The corporation agrees that self-determination for Seward would be in the best interests of both parties. Transferring the coal dock to Seward would allow the city to aggressively market the coal dock which would directly affect the future economic growth of the city. It would allow Seward to offer incentives to industry that would encourage new trade and business to locate there. However, the corporation does not support a transfer made at ARRC expense. The corporation is concerned about retaining existing business and does not want to be put in a position of directly competing for business with the city. At this time, ARRC management does not feel its concerns have been adequately addressed. The corporation would like some assurance that the transfer of the coal dock to the city of Seward would not negatively impact current ARRC operations while at the same time greatly benefiting Seward. Until those concerns are addressed, ARRC management questions the wisdom of supporting the transfer.

2. Seward Dock Facility

The city of Seward would like the coal dock facility and a small parcel of land located along the seaward edge of the city's small boat harbor transferred to the city of Seward. Since the coal dock terminal was financed by legislative monies (over $2 million) appropriated to the city and by industrial development bonds issued by the city, Seward believes the coal dock has been improperly offered to the ARRC by the state of Alaska.

Seward feel a compromise regarding the ownership of the coal dock facilities might be reached if the ARRC would agree to a long term lease of these facilities to the city of Seward.

Railroad Response

ARRC management is currently negotiating with the city of Seward to transfer management of the Seward coal dock facility to the city. This issue of transfer of the coal dock facility is inseparable linked to the issue of self-determination for the city of Seward. Transferring the coal dock to Seward would allow the city to aggressively market the coal dock which would directly affect the future economic growth of the city. It would allow Seward to offer incentives to industry that would encourage new trade and business to locate there. However, the corporation does not support a transfer made at ARRC expense. The corporation is concerned about retaining existing business and does not want to be put in a position of directly competing for business with the city. At this time, ARRC management does not feel its concerns have been adequately addressed. The corporation would like some assurance that the transfer of the coal dock to the city of Seward would not negatively impact current ARRC operations while at the same time greatly benefiting Seward. Until those concerns are addressed, ARRC management questions the wisdom of supporting the transfer.

3. Marketing -Seward Terminal Manager

Along with the above concern, Seward is very frustrated with another "policy" type issue that directly affects the communities ability to attract new business and promote the Seward dock. The ARRC has pulled all management and supervisory people from Seward, telling the city to be satisfied instead with a zenith number for all communications to the ARRC. Seward states the ARRC has no "Seward specific" marketing plan, promotion or advertising.

When prospective new clients express an interest in Seward as a possible site for their venture, Seward officials cannot supply them with any information on shipping alternatives or freight rates, etc. Seward feel it is poor business and very negative for marketing to ask these clients to call a zenith number.

Another concern to Seward is the ARRC's recently released five year capital improvements plan. This plan contains no capital improvements for the city of Seward. With ports like Anchorage continually growing and expanding, Seward feels this shows the ARRC's intent for limited future growth of the Seward port.

The ARRC has not committed to maintaining safety and operation levels of the dock-mounted gantry cranes. Pilings, cranes and overall facility upgrading is necessary.

Railroad Response

Since the overwhelming percentage of freight moving through Seward currently passes over the coal dock, the ARRC believes that whoever controls the coal dock should address the issue of terminal manager. Should the coal dock transfer to the city of Seward, the ARRC believes it would be consistant with the city's long range goal of self-determination for the city to employ a terminal manager. If the coal dock were to remain under the auspices of the corporation, then ARRC would be willing to employ a terminal manager. ARRC management believes that until the question of transfer of the dock is resolved, the issue of establishing a terminal manager in Seward cannot be addressed.

4. ARR Board of Directors

Since the state has owned the Alaska Railroad Corporation, Seward has expressed a strong desire to have a local representative from Seward on the Board of Directors. With the lack of progress in many of the areas of concern, Seward residents feel that in order to have a listening ear they need either "representation on the Board" OR a change in what they determine as conflict of interest and board makeup.

Firstly, Seward feels one of the members of the Board has a definite conflict of interest with his appointment. Mr. Dickerson is the chairman of the Anchorage Port Commission. He is also a former member of the Anchorage Assembly and past president of the Anchorage Chamber of Commerce. Both Anchorage and Seward are competiitve ports, attracting business means jobs in Anchorage or, jobs in Seward. While Seward is very quick to commend Mr. Dickerson for this past work, it does feel that asking any board member to serve two competing masters at the same time is unhealthy to the long term interests of both master and the individual. To have the chairman of the Anchorage Port Commission maintaining his office and responsibility to maximize the interest of the ARRC's chief competing port (Anchorage) while upholding his responsibility to the citizens of the state of Alaska to increase and maximize the profitability of the Alaska Railroad corporation is a definite conflict of interest.

The remaining board makeup is of concern to Seward. A majority of the members are from Anchorage, or, have previous strong ties to Anchorage. There is no representation by Whittier or Seward, and it is very difficult for Seward or Whittier to feel they have any access or input into the decisions made by the Corporation.

SOLUTION

As the board members serve for staggered five year terms, consideration could be given to filling one of the terms with a resident from Seward. ARRC managment support this request.

A change in board makeup or the possible addition of two board members to the current seven member Board of Directors, has been offered as a solution by Seward.

Solution to this concern would go a long way in mending some of the damaged "bridges" of the past. Seward and Whittier would feel like they had some say in running the Corporation, and the question of lack of interest in Seward, its concerns, its resources and its residents would be alleviated. Local community members would have an avenue to pursue.

C. Philosophical Approach

The ARRC philosophical approach is an area of great concern to the city of Seward. Seward questions the ARRC "caretaker approach" to many vital issues affecting the city. Residents and city officials are extremely concerned because they feel very strongly that the future growth and development of the city of Seward is very closely tied to the growth and development of the ARRC. As has been stated repeatedly by Seward, the immediate short term and long range plan for the city is to increase economic development, diversify the local economy and work to promote tourism. Seward feel if the ARRC will not aggressively compete for all new business (truck, plane, ship or train), the city of Seward cannot diversify or grow. THIS IS TREMENDOUSLY FRUSTRATING TO SEWARD.

Seward officials feel the Board of Directors for the Corporation have a "caretaker approach" to running the corportion, particularly when it comes to marketing any area that does not directly benefit the corporation itself. When one considers the corporation does control the Seward coal dock facility then it becomes very clear that the corporation also largely controls the future economic development of Seward. Most new business, freight and industry to Seward will probably use the dock facility and, unless the corporation is willing to market this facility agressively, the future of Seward is very limited.

Seward would like to see a consistent and well defined philosophical approach by the ARRC Board of Directors. City officials feel corporation management wears two hats, one as a "quasi" legal private corporation mandated by the legislature to make a profit and, the other as a state agency. While Seward understands the reasons for the legislature establishing the corporation Seward residents feel the ARRC management continually "change hats" to benefit the corporation instead of having a consistent management philosophy. Seward site as an example the fact that as a state agency the ARRC is exempt from payment of property taxes on land owned by the corporation in the city of Seward yet, as a private for profit corporation the ARRC states the corporation is manadated to make a profit and therefore must negotiate any leases with the city at fair market value. Seward feel the corporation has the best of both worlds, a private for profit corporation that is afforded all the exemptions of a state agency.

In summary Seward would like to see a clear, well defined philosophical approach adopted by the corporation. This approach should state what the corporation intends to do in the future. This would go a long way to answering Sewards concern that ARRC management and the state of Alaska's main objective is to have the financial records and books of the corporation look very positive to attract a buyer for the ARRC within the next five years. Seward feels that if continues to be the approach of the ARRC the future economic develoment of Seward looks very bleak.

Railroad response

Alaska Railroad Corporation management state the corporation is being run closely following the Alaska Statutes. 42.40 On several occassions ARRC management has asked questions regarding the legislatures intent for the ARRC. Management has also expressed its concern of not knowing what the future plans for the Corporation are, AS 42.40.260 (b) states every 5 years the annual report by the A . shall include an analysis and documentation of at le st three offers to sell the corporation. Management state it is difficult to define long range plans when the future of the ARRC itself is unknown.

6. Accessibility to Railroad records

Seward officials feel that since the state has acquired the ARRC the records and information available from the corporation have been much less accessible.

On numerous occassions Seward has requested information from the railroad which has not been available. While the Alaska Railroad Corporation has by statute been given the authority to designate information as "confidential", the city of Seward feel the corporation has taken this authority to extremes. Under federal ownership information such as the amount of freight hauled on a monthly basis to and from Seward and other areas was available, under state ownership this is no longer available. Seward feel information such as this would be very beneficial in helping them assess the amount of freight movement to and from Seward and would greatly benefit prospective clients in estimating their freight costs.

In summary, Seward officials do not object to the corporations right to withhold information that is of a proprietary or privileged nature however, Seward does feel that as the corporation is an instrumentality within the state the records of the corporation, its budgets, finances and overall fiscal records should be much more accessible to individuals requesting this information.

Railroad response

AS 42.40.220 (b) states: Records of the corporation are, in general, public. However, the corporation may designate by rule and withhold public disclosure of matters of a privileged or proprietary nature. These matters include personnel, records, communications with and work product of legal counsel, and, consistent with the standards and practices of the United States Interstate Commerce Commission for the protection of these matters, other information including proprietary information associated with specific shippers, divisions and contract rate agreements.

This is an area that has received a great deal of comment. Many complaints have arisen regarding competitive rates set by the Alaska Railroad Corporation.

While the state auditors must be allowed access to all ARRC financial records for the purpose of the audit, information designated by the corporation under the Public Disclosure section may not be released by the state auditors. The auditors report may include a summary and facts and findings however, no specific reference to any information designated to be withheld from public disclosure may be released.

Article 1. Establishment and Organization.

Section
10. Establishment of the corporation
20. Board of directors
30. Term of office
40. Vacancies
50. Compensation and expenses
60. Board officers

Sec. 42.40.010. Establishment of the corporation. There is established the Alaska Railroad Corporation. The corporation is a public corporation and is an instrumentality of the state within the Department of Commerce and Economic Development. The corporation has a legal existence independent of and separate from the state. The continued operation of the Alaska Railroad by the corporation as provided in this chapter is considered an essential government function of the state. (§ 2 ch 153 SLA 1984)

Sec. 42.40.020. Board of directors. (a) The powers of the corporation are vested in the board of directors. The board consists of the commissioner of commerce and economic development, the commissioner of transportation and public facilities, and five members appointed by the governor. The five appointed members must be registered voters in the state except as provided in (1) and (2) of this subsection. Except for the commissioners and the member appointed under (5) of this section, a member may not be a state officer or employee. Appointed members shall have the following qualifications:

(1) one member of the board shall be a person who has at least 10 years of experience in railroad management; a person who is not a resident of the state may be appointed under this paragraph;

Article 3. Effect of Statutes.

Section
70. Time statutes become law and take effect

Sec. 01.10.070. Time statutes become law and take effect. (a) All bills passed by the legislature become law upon the governor's signature or upon the governor's veto being overridden or, when the governor allows a bill to become law without signature, on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution. Acts become effective 90 days after becoming law, unless the legislature, by concurrence of two-thirds of the membership of each house, provides for another effective date.

(b) The actual effective date of an Act having no effective-date provision is determined by starting with the day after it is signed by the governor or the day after the governor's veto is overridden or the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution, and counting 90 calendar days, the Act becoming effective at 12:01 a.m., Alaska Standard Time on the 90th day.

(c) The actual effective date and time of an Act having an immediate-effective-date provision is 12:01 a.m., Alaska Standard Time, on

the day after it is signed by the governor or on the day after the governor's veto is overridden or on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution.

(d) An Act which specifies a definite effective date becomes effective at 12:01 a.m., Alaska Standard Time on the date specified.

(e) When the governor allows a bill to become law without signature, the governor shall give written notice of that fact to the legislature. The date of this notice has no effect upon the date the bill becomes law nor upon the date the Act takes effect.

(f) In this section

(1) "Act" means a bill which has become law;

(2) "bill" means a legislative document proposing an Act;

(3) "becomes effective" means becomes applicable; "effective date" does not mean date of enactment (or date of becoming law), although the two will coincide when a bill which has an immediate-effective-date provision is allowed to become law without the governor's signature;

(4) "becomes law" means is enacted; "enactment" occurs when any one of the following takes place:

(A) a bill which is passed by the legislature is signed by the governor;

(B) the period specified in art. II, § 17 of the Alaska Constitution expires without gubernatorial action;

(C) the legislature overrides the governor's veto of a bill;

(5) "passed by the legislature" means that the required majority of each house of the legislature has taken final action in approving the same version of a bill. (§ 5 ch 62 SLA 1962; am § 8 ch 126 SLA 1966; am § 1 ch 115 SLA 1974; am §§ 1—3 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment substituted "Alaska" for "Pacific" near the end of subsection (b), near the beginning of subsection (c), and in subsection (d).

NOTES TO DECISIONS

Applied in Atlantic Richfield Co. v. State, Sup. Ct. Op. No. 2695 (File No. S-52), 666 P.2d 1031 (1985).

Sec. 01.10.080. Computation of time.

NOTES TO DECISIONS

Quoted in Fairbanks N. Star Borough v. Tundra Tours, Inc., Sup. Ct. Op. No. 3052 (File Nos. S-524, S-554), P.2d (1986).

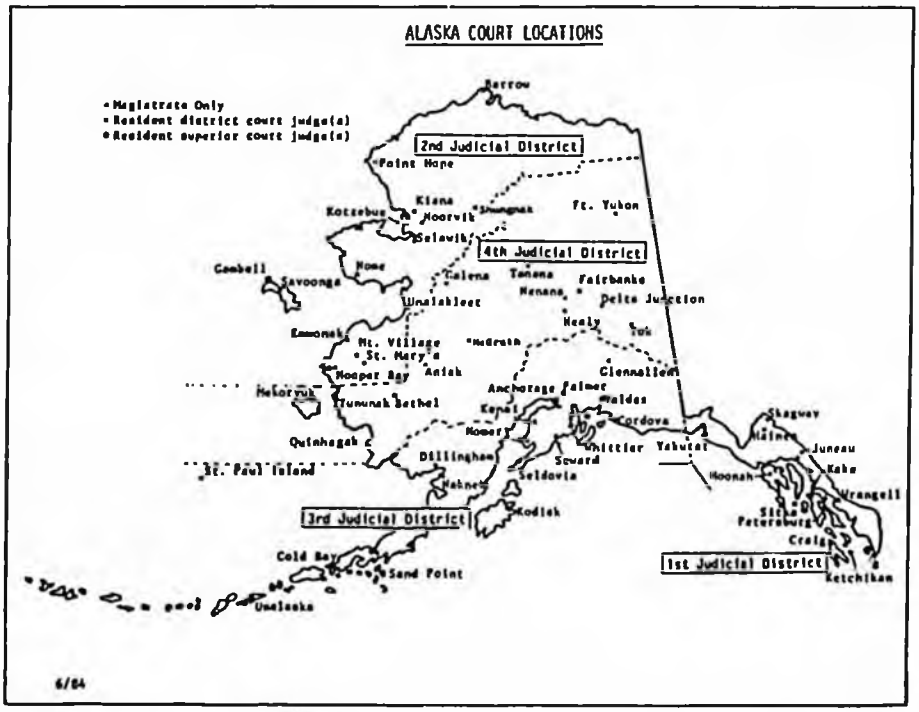
Born in 1940, is a graduate of the University of California, Hastings College of Law. Engaged in private practice in Fairbanks in 1971, Anchorage in 1972, and San Rafael, California in 1973. Returned to Alaska in 1973 to serve as Public Defender in Anchorage. Is a member of several bar associations and served on the Alaska Criminal Rules Committee, the Sentencing Guidelines Committee, the Alaska Criminal Code Revision Commission as well as the Governor's Commission on the Administration of Justice. Appointed to present post in December 1980.

MILTON SOUTER

Born July 17, 1942, in Norwich, Conn; holds a BA from Washington State University, 1964; J.D., University of Washington Law School, 1967; was engaged in private practice of law in Anchorage and Kodiak, 1967-78. Appointed to Superior Court in June, 1978.



HOUSE BILL 349 - AN ACT INCREASING THE MEMBERSHIP ON THE BOARD OF DIRECTORS OF THE ALASKA RAILROAD CORPORATION; AND PROVIDING FOR AN EFFECTIVE DATE.

WHEN THE ALASKA RAILROAD CORPORATION WAS FORMED IN 1985, THE GENERAL POWERS OF THE CORPORATION WERE VESTED IN A 7 MEMBER BOARD OF DIRECTORS. WE SPENT CONSIDERABLE TIME DRAFTING THE ACT TO ENSURE THE ALASKA RAILROAD BOARD MEMBERSHIP PROVIDED FOR REPRESENTATION FROM THE PRIVATE INDUSTRY, JUDICIAL DISTRICTS AFFECTED BY THE RAILROAD, UNIONS, EXPERIENCED RAILROAD MANAGEMENT AND THE COMMISSIONERS FROM THE DEPARTMENT OF TRANSPORTATION AND THE DEPARTMENT OF COMMERCE.

LIKE ANY NEWLY FORMED CORPORATION, THERE NEEDS TO BE YEARLY EVALUATIONS AND OVERSIGHT TO PINPOINT ANY PROBLEMS AND ALSO TO LOOK AT AREAS WHERE IMPROVEMENTS CAN BE MADE.

AFTER THREE YEARS OF OVERSIGHT AND EVALUATION OF THE ALASKA RAILROAD CORPORATION, I FEEL STRONGLY THAT A GREAT DEAL OF THE RECENTLY DISCUSSED COMMUNICATION CONCERNS WITH THE RAIL COMMUNITIES COULD BE OVERCOME IF THESE COMMUNITIES HAD REPRESENTATION ON THE ALASKA RAILROAD BOARD OF DIRECTORS.

THE HOUSE TRANSPORTATION COMMITTEE INTERIM REPORT COMPLETED THIS PAST INTERIM EVALUATED THE ALAKSA RAILROAD CORPORATIONS RELATIONSHIP WITH THE RAIL COMMUNITIES. THIS REPORT CLEARLY

DEMONSTRATES A NEED FOR INCREASED INPUT FROM SEVERAL RAIL COMMUNITIES AND, A REAL NEED FOR A MORE OPEN LINE OF COMMUNICATIONS BETWEEN THE RAILROAD AND THE RAIL COMMUNITIES.

HB 349 WOULD ADD TWO ADDITIONAL MEMBERS TO THE CURRENT SEVEN MEMBER BOARD OF DIRECTORS. ONE OF THESE MEMBERS WOULD BE A RESIDENT OF SEWARD AND THE OTHER A RESIDENT OF FAIRBANKS.

AS YOU WILL NOTE FROM THE CURRENT BOARD MEMBERSHIP LIST ENCLOSED IN YOUR FOLDERS, THE CURRENT BOARD MEMBERSHIP PROVIDES VERY ADEQUATE REPRESENTATION FROM AREAS SUCH AS ANCHORAGE. THERE IS CURRENTLY NO REPRESENTATIVE FROM EITHER WHITTIER OR SEWARD, TWO COMMUNITIES WHOSE GROWTH AND DAILY OPERATIONS ARE GREATLY INFLUENCED AND AFFECTED BY THE ALASKA RAILROAD.

HB 349 WOULD HAVE NO FISCAL IMPACT TO THE STATE.

I FEEL HB 349 WOULD HELP ELIMINATE MANY OF THE COMMUNICATION CONCERNS THAT CURRENTLY EXIST AND WOULD ALSO PROVIDE FAIR AND ADEQUATE REPRESENTATION FROM ALL RAIL COMMUNITIES.

I DO ASK YOUR SUPPORT FOR HB 349. OF THE SEVEN SEATS

FOR THIS MEETING, YOUR PACKET INCLUDES:

Item #1: HB 357
#2: a letter from Governor Cowper
#3: fiscal notes: Dept. of Comm. & Regional Affairs
DOT/PF
#4: a comparison of the 50/50 split vs. the 70/30
#5: district allocations based on the 70/30 split
#6: district allocations based on the 50/50 split
#7: two letters; one supporting, one opposing

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 13, 1988

The Honorable Ben Grussendorf
Speaker of the House
Alaska State Legislature
P.O. Box V
Juneau, AK 99811

Dear Representative Grussendorf:

Under the authority of art. III, sec. 18, of the Alaska Constitution, I am transmitting a bill pertaining to local service roads and trails. This measure would alter the existing formula for allocating money for acquisition and construction of these roads and trails.

Basically, this measure will allow rural areas to receive more funding for service roads and trails. The change will not be particularly dramatic in terms of actual dollars but will benefit rural areas.

I am making this proposal because local service road and trail funding is extremely important for rural portions of our state. Urban areas have a significantly greater opportunity to acquire financial resources from various sources to construct roads, highways, and transportation systems. Rural communities often lack this advantage.

I realize that this measure may generate some initial concern that certain portions of our state are benefiting at the expense of other communities or regions. This is not my intent. I simply want to ensure that vital local service roads and trails are designed, funded, and built in areas where they provide the greatest benefit. Other programs benefit urban Alaskans. The local service road and trail program needs to be weighted toward rural areas.

This bill has the support of the Department of Transportation and Public Facilities and the Department of Community and Regional Affairs. I believe that this measure merits your favorable action. Please call upon Commissioner Hickey if you have additional questions regarding the mechanics of this proposed change or the operation of AS 19.30.127 -- 19.30.241 in general.

Sincerely,

Steve Cowper
Governor

Honorable Bette Cato, Chairman
House Committee on Transportation
P. O. Box V
Juneau, AK 99811

RE: House Bill No. 357

Dear Representative Cato:

I urge your rejection of HB 357 for the following reasons:

1. As proposed, HB 357 virtually eliminates all possible funding for local service roads and trail construction for First Class Cities throughout the State. It should be noted that the structure of the wording of the legislation does not indicate that first class cites are being deleted from existing law as eligible participants in the program. Perhaps the omission is an oversight but must be corrected in any event.

2. I oppose the intent of the general philosophy of the legislation in that directing a greater portion of the state's resources to benefit a smaller portion of the population is not in the best interest of the state. The need for development and economic incentives are as urgently required in the densely populated areas of the state as in the sparsely populated areas.

Your assistance in rejecting House Bill 357 will be appreciated and if that is not possible, please insure that first class cities continue to be eligible for program participation.

Sincerely,

John C. Stein
Mayor, City of Wasilla

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 357

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to grants for local service roads and trails; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 19.30.131 is amended to read:

Sec. 19.30.131. ALLOCATION OF MONEY [FUNDS]. (a) During each fiscal year the commissioner shall allocate money [SUMS] appropriated or otherwise designated for expenditure upon local service roads for that fiscal year among the five allocation districts in the following manner: 70 percent [ONE-HALF] in the ratio which the area of each allocation district bears to the total area of the state and 30 percent [ONE-HALF] in the ratio which the population of each allocation district bears to the total population of the state as shown by the latest available federal or state census or other census approved by the Department of Community and Regional Affairs.

(b) The commissioner shall also further allocate the money [SUMS] in each allocation district to the boroughs and unified municipalities within each allocation district in the following manner: 70 percent [ONE-HALF] in the ratio which the area of each organized borough or unified municipality (excluding salt water areas) within that district bears to the total area of the allocation district and 30 percent [ONE-HALF] in the ratio which the population of each organized borough area or each unified municipality within that district bears to the total population of the allocation district as shown by the latest available federal or state census or other census approved

by the Department of Community and Regional Affairs.

(c) The commissioner shall also further allocate portions of the money [SUM] allocated to any organized borough and to any home rule or first class city within the organized borough in the following manner:

(1) 70 percent [ONE-HALF] in the ratio which the area of each home rule or first class city bears to the total area of the organized borough excluding salt water areas; and

(2) 30 percent [ONE-HALF] in the ratio which the population of each home rule or first class city bears to the total population of the organized borough as shown by the latest available federal or state census or other census approved by the Department of Community and Regional Affairs.

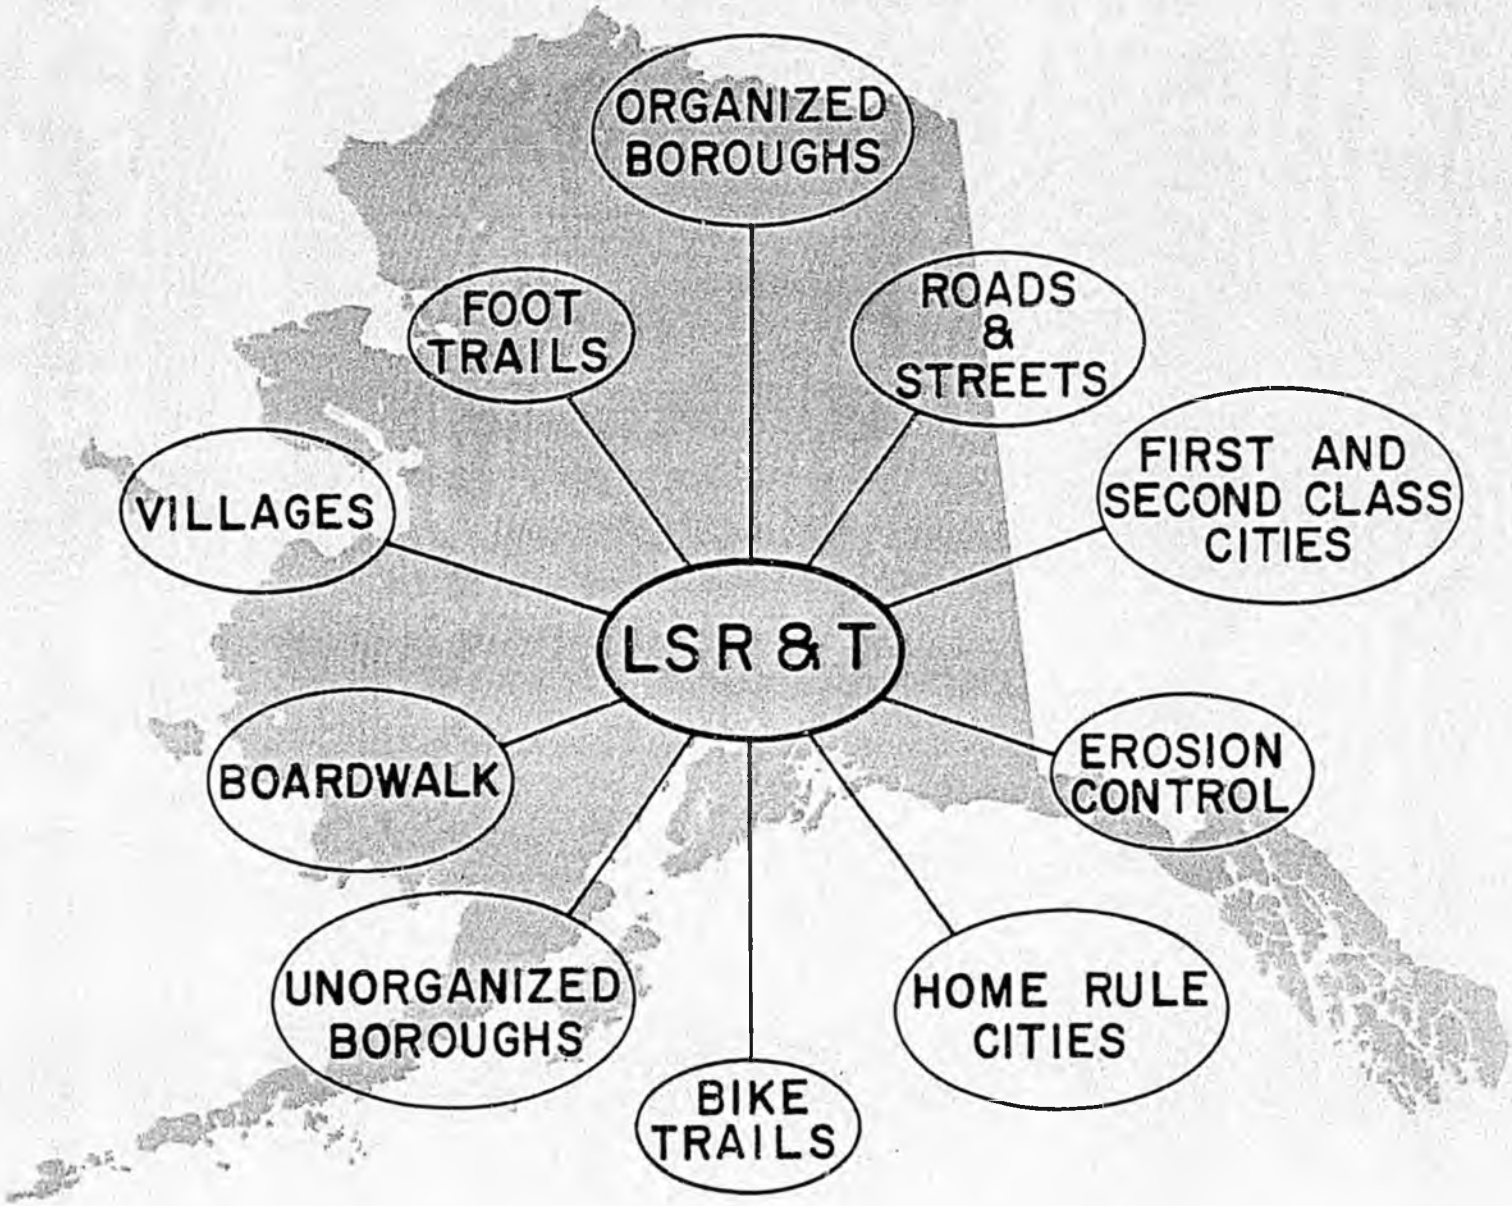
(d) The money [SUMS] not allocated within each district to a local government under (b) and (c) of this section shall be allocated to the unorganized borough and administered by the department.

* Sec. 2. This Act takes effect immediately under AS 01.10.070(c).

Item # 8

FIVE YEAR LOCAL SERVICE ROADS AND TRAILS PROGRAM

1985 - 1989



STATE OF ALASKA
DEPARTMENT OF TRANSPORTATION
AND PUBLIC FACILITIES

BILL SHEFFIELD
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

January 2, 1985

Fellow Alaskans:

It is my pleasure to submit for your review the Five Year Local Service Roads and Trails Program for FY85 through FY89.

This is a long-range planning document of the Department of Transportation and Public Facilities, and, as with all such plans, changing conditions may require modification of the plan in future years.

This program provides for the construction of transportation-related projects such as trails, boardwalks, roads, streets, sidewalks, and drainage facilities, requested by local governments. It serves as a much-needed supplement to the federal aid highway program.

The widespread support shown by Alaskans for the program is gratifying and indicates the commitment of the public to the program's objectives.

Sincerely,

Bill Sheffield
Governor

NARRATIVE

LOCAL SERVICE ROADS & TRAILS PROGRAM

The Local Service Roads and Trails Program provides for construction of local roads and trails which are not included in the federal-aid primary, urban or interstate highway systems.

Under the Local Service Roads & Trails Act, funds for home rule and first class cities, municipalities and organized boroughs are allocated by strict formula. These local governments then establish their own project scheduling; therefore, this publication is merely a listing of their individual programs as submitted. Project priorities and scheduling in the unorganized boroughs are based primarily on requests and recommendations of village councils and residents. Personal contact with the communities is established by LSR&T representatives from the Department's regional offices. Community needs are thus determined first-hand, along with approximate costs. Since the cost of requested projects usually exceeds the funds available, priorities must be established based on need. Local communities often participate in project costs with their own funds.

Local labor and equipment are utilized wherever practical in the construction of these projects. Not only is this beneficial to the economy of the communities, but it normally reduces the overall cost of the project. A side benefit is the training of local residents who will, in many cases, be maintaining the completed project.

This five year LSR&T Program is based on funds from a recent allocation of $3,500,000 for fiscal year 1985 and with proposed allocations of $7,000,000 for fiscal years 1986 through 1989.

It is anticipated that the funding shown in this program will be used by the end of fiscal year 1985. Therefore, projects shown for fiscal years beyond 1985 can only proceed if additional funds are made available.

MEMORANDUM

State of Alaska

Department of Transportation & Public Facilities

TO: Bruce Freitag
Maintenance & Operations Engineer
Headquarters

DATE: February 25, 1987

FILE NO:

TELEPHONE NO: 789-6247

FROM: Ole Bartness
Group Construction Chief
Southeast Region

SUBJECT: Southeast Region
Local Service Roads & Trails
Project Listing

In accordance with your request, attached is a listing of projects constructed in Southeast Alaska through the LSR&T program.

Also listed are projects currently under construction. It is anticipated that all projects, with the exception of the Ketchikan Secondary Bypass, will be completed by July 15, 1987. This will, in effect, complete the LSR&T program in this region as all funds have been encumbered.

1/19/88 LSR&T PROGRAM

DISTRICT	50/50	% TOTAL	30/70	% TOTAL	DELTA	% CHANGE
I. ANCHORAGE	$2,031,000	33.9%	$1,357,800	22.6%	($673,200)	-11.2%
II. FAIRBANKS	$1,464,000	24.4%	$1,696,800	28.3%	$232,800	3.9%
III. SOUTHEAST	$618,000	10.3%	$567,600	9.5%	($50,400)	-0.8%
IV. WESTERN	$1,629,000	27.2%	$2,059,800	34.3%	$430,800	7.2%
V. VALDEZ	$258,000	4.3%	$318,000	5.3%	$60,000	1.0%
TOTAL	$6,000,000	100.0%	$6,000,000	100.0%	$0	0.0%

The table above shows how a theoretical $6 million LSR&T Program would be allocated under the present statutes which divides the funds to each district 50% by population and 50% by area (square miles). It also shows how the allocation would change under the proposed housekeeping bill allocation formula of 30% by population and 70% by area. This would tend to favor the rural districts. The concept appears to be to help the rural areas that do not have the tax base to support their own program, but anomalies such as the North Slope Borough with a large area, small population, and a superior tax base are not addressed.

This allocation concept is complicated by the fact that the allocation districts do not conform to Regional boundries. For example the large Western District encompasses both Nome and Bethel.

If the funds were allocated to the three DOT&PF Regions on either a 50/50 or 30/70 split, the program would look like the table below. It is difficult to compare the two tables as it is not known how the Western District allocation would be suballocated between Central and Northern Regions.

REGION	50/50	% TOTAL	30/70	% TOTAL	DELTA	% CHANGE
CENTRAL	$2,966,400	49.4%	$2,515,913	41.9%	($450,488)	-7.5%
NORTHERN	$2,416,500	40.3%	$2,917,667	48.6%	$501,167	8.4%
SOUTHEAST	$617,100	10.3%	$566,421	9.4%	($50,679)	-0.8%
TOTAL	$6,000,000	100.0%	$6,000,000	100.0%	$0	0.0%

Chairman Bette Cato
House Transportation Committee
P.O. Box V
Juneau, AK 99811

Dear Representative Cato:

This letter supports House Bill 356 "An Act relating to grants for local service roads and trails, and providing for an effective date." Rural areas need funding for service roads and trails. HB 357 would allocate monies for much needed road improvements to the community of Rampart.

Short-term jobs would be created in a down economy. It would also assist in the future development of both land development within the community of Rampart along the perimeter of the existing roadway, and expansion of fish processing to support both fresh and frozen products.

I think HB 357 should receive favorable comments from the Transportation Committee to the Legislature.

Thank you.

Sincerely,

TANANA CHIEFS CONFERENCE, INC.

ALASKA DEPARTMENT OF EDUCATION
Position Paper - SB 375
2/10/88

The Department of Education strongly supports training and licensing of drivers who transport large groups of students to or from school or school activities.

We agree with the requirements of this bill for training and special licensing of drivers who transport school children to or from school or school activities on school buses, or who transport school age children to or from school on buses.

While the department takes no position on the intent of the bill to delete training and special licensing of drivers of non-school buses transporting school age children on activity trips, we believe that school districts should provide these drivers with training in at least the following areas: pre-trip inspection, defensive driving, emergency situations, and passenger management.

SCHOOL BUS DRIVERS' LICENSES

POSITION PAPER
AS 28.15.046(A)

I. Statutory requirement

Effective Sept 1, 1987 a person may not drive a school bus, or a bus transporting school age children, until that person has been issued a school bus driver's license.

II. Impact on District

Since the new licensing requirements apply to persons driving any bus transporting school age children, many more people are required to possess school bus driver's licenses than in the past. Anyone who drives school age children in a vehicle capable of transporting 11 or more students must now obtain a school bus driver's license.

This change impacts primarily the extra curricular programs of the District. It also effects the use of the District van by FAJHS staff to transport students. District activities will be impacted as follows:

1. Schools may not rent vans to transport teams to and from events unless the sponsor/driver possesses a valid school bus driver's license. This applies to renting vans in Fairbanks to drive to another town. It also applies to renting vans in Anchorage (or any other town) to travel around town after flying from Fairbanks.

   This restriction on the use of vans will increase the cost of transporting teams. Teams will have to either rent smaller capacity vans, rent school buses, or arrange for sponsors to obtains bus driver's licenses. Each of those alternatives increases activity costs, possibly to the point of making it too expensive to travel out of district for certain groups.

2. Schools may no longer charter buses from common carriers (e.g. Westours, Sturgeon, etc.) unless the drivers of those motor coaches possess school bus driver's licenses. These drivers do not generally possess school bus driver licenses, so the district cannot presently use common carriers on long haul charters.

3. The FAJHS must either lower the capacity of its van (presently a 15 passenger van) to less than 10 passenger capacity, or the staff at FAJHS must obtain school bus driver's permits.

III. Potential Solutions

The District has several options available to address the problems created by these new licensing requirements. They are as follows:

1. Hire all transportation of students to school bus contractors.

2. Arrange for all coaches/sponsors travelling with students to obtain school bus driver's permits.

3. Only rent/lease vehicles of 10 passenger or less.

4. Pursue amendment to AS 28.15.046(a) that will change the persons required to possess a school bus driver's license.

The district is presently using a combination of alternatives 1-3 in an effort to comply with the new law. This changes the way students transportation has occurred in the past, making it both more expensive and more difficult to arrange.

IV. Recommended Solution

The alternative of amending the law should be considered. The new law, designed to standardize school bus driver training requirements, has created a new class of persons required to obtain this license. These people will probably never drive a yellow school bus, but are still required to possess a school bus driver's permit.

To suggest that only drivers of school buses should need school bus driver's licenses is not unreasonable. The District supports a change in the law that will limit the application of the statute to those drivers who actually transport students on school buses.

Section

21. Commissioner to enter compacts and reciprocal agreements
41. Commissioner to prescribe forms, examine applications, and administer oaths

nor may the department issue the license until proper application has been made and all required driving, written, and physical examinations have been successfully completed. A license issued under this subsection expires on September 1 of the year following issuance. Application for renewal may be made by submitting to the department the results of a current physical examination and paying the required fee.

(c) A person may not drive a commercial motor vehicle until the person applies for and is issued a license for that purpose under (a) of this section. The department may not issue a license under this subsection unless the applicant is at least 19 years of age, has held a valid driver's license at least one year, and has successfully completed all required driving tests and written and physical examinations. In this subsection, "commercial motor vehicle" has the meaning given in AS 28.32.900. (§ 19 ch 178 SLA 1978; am § 2 ch 104 SLA 1985; am § 2 ch 19 SLA 1986)

Effect of amendments. — The 1985 amendment added subsection (c).

The 1986 amendment deleted "school bus transporting school children, or a bus transporting school-age children or another" preceding "motor vehicle" in the first sentence of subsection (b).

Sec. 28.15.046. Licensing of school bus drivers. (a) In addition to the requirements of AS 28.15.041(a), a person may not drive a school bus transporting school children, or a bus transporting schoolage children until the person has applied for and has been issued a license for that purpose under this section.

(b) The department may not issue a license under this section unless the applicant

(1) is at least 19 years of age;

(2) has had a license to operate a motor vehicle at least one year before the date of application;

(3) has successfully completed all required driving, written, and physical examinations;

(4) has submitted information sufficient to complete a background check consisting of a fingerprint check of national criminal records and state criminal records of the state or states in which the applicant has resided for the past two years;

(5) has completed a state approved school bus driver training course established under AS 14.07.020(a)(14) or has for the previous two years been licensed by the state to operate a school bus.

(c) The department may not issue a license under this section to an applicant who has been convicted of any of the following offenses within 20 years of the time of application:

(1) sexual abuse of a minor in any degree (AS 11.41.434 — 11.41.440);

(2) sexual assault in any degree (AS 11.41.410 or 11.41.420);

(3) incest (AS 11.41.450);
(4) unlawful exploitation of a minor (AS 11.41.455);
(5) contributing to the delinquency of a minor (AS 11.51.130);
(6) a felony involving possession of a controlled or imitation controlled substance (AS 11.71 or AS 11.73);
(7) a felony or misdemeanor involving distribution of a controlled or imitation controlled substance (AS 11.71 or AS 11.73);
(8) promoting prostitution in the first or second degree (AS 11.66.110 or 11.66.120).

(d) The department may not issue a license to an applicant who has been convicted of driving while intoxicated (AS 28.35.030) within two years of the time of application or to an applicant who has two or more convictions for driving while intoxicated within 10 years of the time of application.

(e) For purposes of determining whether an applicant has been convicted of an offense listed under (c) or (d) of this section, a conviction under prior state law or in another jurisdiction of an offense having elements substantially similar to those of the offenses listed in (c) or (d) of this section is considered a conviction.

(f) Costs of conducting the background check required under (b)(4) of this section shall be paid by the applicant. A license issued under this section expires on September 1 of the year following issuance. Application for renewal may be made by submitting to the department the results of a current physical examination and paying the required fee. (§ 3 ch 19 SLA 1986)

Sec. 28.15.051. Instruction permit, temporary driver's license and special driver's permit. (a) Except as provided in (b) of this section, a person who is at least 14 years of age may apply to the department for an instruction permit. The department may, after the applicant has successfully passed all parts of the examination under AS 28.15.081 other than the driving test, issue to the applicant an instruction permit. The permit allows a person, while having the permit in the person's immediate possession, to drive a specified type or class of motor vehicle on a highway or vehicular way or area for a period not to exceed two years. The permittee must be accompanied by a person at least 19 years of age who has been licensed at least one year to drive the type or class of vehicle being used, who is capable of exercising control over the vehicle and who occupies a seat beside the driver, or who accompanies and immediately supervises the driver when the permittee drives a motorcycle. An instruction permit may be renewed.

(b) The department, upon receiving proper application, may issue a restricted instruction permit effective for a school year or for a more restricted period to an applicant who is at least 14 years of age and who is enrolled in a driver education program which includes practice

Section
41. Classification of drivers' licenses
46. Licensing of school bus drivers
51. Instruction permit, temporary driver's license and special driver's permit
71. Application of minors

Sec. 28.15.011. Drivers must be licensed.

NOTES TO DECISIONS

Subsection (a) construed. — The provisions of subsection (a) constitute a broad statement of the legislature's intent, in enacting the motor vehicle code, to adopt a statutory scheme that deals with the licensing of Alaska drivers in a comprehensive and uniform manner; this subsection is not a legislative commitment to the philosophical concept of an innate privilege to drive. Roberts v. State, Ct. App. Op. No. 478 (File No. A-342), 700 P.2d 815 (1985).

Sec. 28.15.041. Classification of drivers' licenses. (a) The commissioner shall provide by regulation for the classification of drivers' licenses. The regulations shall specify license classifications which are reasonably necessary for the safe operation of the various types, sizes and combinations of motor vehicles. The regulations shall also establish medical standards, standards of driving conduct and proficiency, and other standards governing the issuance, renewal, or denial of these licenses. The department may examine each applicant to determine the applicant's qualifications according to the class of license applied for, and upon issuing a driver's license the department shall indicate on the license the classification for which an applicant for a license has qualified by examination. The regulations and any subsequent modifications under this section become effective only if approved by a concurrent resolution adopted by a majority vote of each house of the legislature.

(b) A person may not drive a motor vehicle when in use for the transportation of persons for compensation until the person has applied for and has been issued a license for that purpose under (a) of this section. The department may not issue a license under this subsection unless the applicant is at least 19 years of age, has had at least one year of driving experience, and the department is satisfied as to the applicant's good character, competence and fitness to be licensed;

nor may the department issue the license until proper application has been made and all required driving, written, and physical examinations have been successfully completed. A license issued under this subsection expires on September 1 of the year following issuance. Application for renewal may be made by submitting to the department the results of a current physical examination and paying the required fee.

(c) A person may not drive a commercial motor vehicle until the person applies for and is issued a license for that purpose under (a) of this section. The department may not issue a license under this subsection unless the applicant is at least 19 years of age, has held a valid driver's license at least one year, and has successfully completed all required driving tests and written and physical examinations. In this subsection, "commercial motor vehicle" has the meaning given in AS 28.32.900. (§ 19 ch 178 SLA 1978; am § 2 ch 104 SLA 1985; am § 2 ch 19 SLA 1986)

Effect of amendments. — The 1985 amendment added subsection (c).

The 1986 amendment deleted "school bus transporting school children, or a bus transporting school-age children or another" preceding "motor vehicle" in the first sentence of subsection (b).

Article 3. Effect of Statutes.

Section
70. Time statutes become law and take effect

Sec. 01.10.070. Time statutes become law and take effect. (a) All bills passed by the legislature become law upon the governor's signature or upon the governor's veto being overridden or, when the governor allows a bill to become law without signature, on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution. Acts become effective 90 days after becoming law, unless the legislature, by concurrence of two-thirds of the membership of each house, provides for another effective date.

(b) The actual effective date of an Act having no effective-date provision is determined by starting with the day after it is signed by the governor or the day after the governor's veto is overridden or the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution, and counting 90 calendar days, the Act becoming effective at 12:01 a.m., Alaska Standard Time on the 90th day.

(c) The actual effective date and time of an Act having an immediate-effective-date provision is 12:01 a.m., Alaska Standard Time, on

the day after it is signed by the governor or on the day after the governor's veto is overridden or on the day after expiration of the period allowed for gubernatorial action by art. II, § 17 of the Alaska Constitution.

(d) An Act which specifies a definite effective date becomes effective at 12:01 a.m., Alaska Standard Time on the date specified.

(e) When the governor allows a bill to become law without signature, the governor shall give written notice of that fact to the legislature. The date of this notice has no effect upon the date the bill becomes law nor upon the date the Act takes effect.

(f) In this section

(1) "Act" means a bill which has become law;

(2) "bill" means a legislative document proposing an Act;

(3) "becomes effective" means becomes applicable; "effective date" does not mean date of enactment (or date of becoming law), although the two will coincide when a bill which has an immediate-effective-date provision is allowed to become law without the governor's signature;

(4) "becomes law" means is enacted; "enactment" occurs when any one of the following takes place:

(A) a bill which is passed by the legislature is signed by the governor;

(B) the period specified in art. II, § 17 of the Alaska Constitution expires without gubernatorial action;

(C) the legislature overrides the governor's veto of a bill;

(5) "passed by the legislature" means that the required majority of each house of the legislature has taken final action in approving the same version of a bill. (§ 5 ch 62 SLA 1962; am § 8 ch 126 SLA 1966; am § 1 ch 115 SLA 1974; am §§ 1—3 ch 6 SLA 1984)

Effect of amendments. — The 1984 amendment substituted "Alaska" for "Pacific" near the end of subsection (b), near the beginning of subsection (c), and in subsection (d).

NOTES TO DECISIONS

Applied in Atlantic Richfield Co. v. State, Sup. Ct. Op. No. 2695 (File No. S-52), 666 P.2d 1031 (1985).

Sec. 01.10.080. Computation of time.

NOTES TO DECISIONS

Quoted in Fairbanks N. Star Borough v. Tundra Tours, Inc., Sup. Ct. Op. No. 3052 (File Nos. S-524, S-554), P.2d (1986).

CHAPTER 40.
GENERAL PROVISIONS

Section
10. Definitions

13 AAC 40.010. DEFINITIONS. In chapters 02, 04, 06, and 08 of this title, and in AS 28, unless otherwise provided

(1) "alley" means a street or highway intended to provide access to the rear or side of lots or buildings in urban districts and not intended for use by through vehicular traffic;

(2) "arterial street" means a U.S. or state numbered route, controlled-access highway, or other major radial or circumferential street or highway designated by a municipality within its respective jurisdiction as part of an interlocking system of streets or highways;

(3) "authorized emergency vehicle" means a vehicle equipped as required by 13 AAC 04.090, 095 and 210 and which is used by a publicly maintained fire or police department, airport security police, a public or private ambulance service, a vehicle of a federal agency which is designated as an emergency vehicle by that agency, or other vehicles designated by the commissioner; the term does not include a person's private vehicle equipped as provided by 13 AAC 04.100;

(4) "authorized flagman" means every person who is directing or regulating traffic as required by statute, regulation or ordinance, or by contract or agreement, and who is wearing and equipped with the warning devices set out in the Alaska Traffic Manual, published by the Department of Transportation and Public Facilities;

(5) "bicycle" means a vehicle propelled exclusively by human power upon which a person may ride, having two tandem wheels or three wheels in contact with the ground, except scooters and similar devices;

(6) "bus" means every motor vehicle designed for carrying more than 10 passengers and used primarily for the transportation of passengers, and every motor vehicle designed and used for the transportation of persons for compensation, except a taxicab or school bus;

(7) "business district" means the territory contiguous to and including a highway, other than a controlled-access highway, when within any 600 feet along the highway there are buildings in use for business or industrial purposes, including, but not limited to, hotels, banks, office buildings, railroad stations or public buildings other than schools which occupy at least 300 feet of frontage on one side or 300 feet collectively on both sides of the highway; however, if the highway is physically divided into two or more roadways, only those buildings facing each roadway separately may be regarded;

(8) "centerline" means the line, marked or unmarked, parallel to and approximately equidistant from the sides of a roadway or highway, or a plainly marked dividing line on a roadway between lanes of traffic traveling in opposite directions which may or may not be equidistant from the sides of the roadway or highway;

(9) "controlled-access highway" means every highway, street, or roadway where access to or from the highway is determined by the public authority having jurisdiction over the highway, street or roadway;

(10) "cowling" means the forward or rear portion of a snowmobile surrounding the motor and clutch assembly;

(11) "crosswalk" means that portion of a roadway at an intersection which is between an extension of a sidewalk which ends on the opposite side of the roadway or, in the absence of a sidewalk, that portion of the roadway which is an extension of the edge of the roadway to the opposite side of the roadway and between a parallel line 10 feet from that extension in a direction away from the intersection, except as modified by a marked crosswalk on a portion of a roadway at an intersection or elsewhere which is distinctly indicated by lines or other markings on the surface of the roadway;

(12) "dazzle" means to cause a person to lose clear vision due to the effect of a brilliantly shining light;

(45) "safety zone" means the area of space officially set apart within a roadway for the exclusive use of pedestrians, and which is protected or marked by signs which are plainly visible at the time it is used as a safety zone;

(46) "school bus" means every motor vehicle that complies with the color and identification requirements set forth in the edition of Minimum Standards for School Buses and Minimum Standards for Alaska School Buses, which is in effect on the effective date of this section, and is used to transport children to or from school or in connection with school activities; it does not include buses operated by common carriers for the urban transportation of school children;

(47) "semitrailer" means a vehicle with or without motive power, other than a pole trailer, designed for carrying persons or property, drawn by a motor vehicle, and constructed so that part of its weight rests upon or is carried by another vehicle;

(48) "sidewalk" means that portion of a street between the curblines or the lateral lines of a roadway and the adjacent property lines, and intended for use by pedestrians;

(49) "snowmobile" means a motor vehicle designed to travel over ice or snow, and supported in part by skis, belts, cleats, or low-pressure tires;

(50) "solid rubber tire" means a tire of rubber or other resilient material which does not depend upon compressed air for the support of the load;

(51) "specially constructed vehicle" means a vehicle required to be registered under AS 28.10, which is not originally constructed under a distinctive name, make, model, or type by a generally recognized manufacturer of vehicles and which is not materially altered from its original construction;

(52) "special mobile equipment" means a vehicle which is not designed or used primarily for the transportation of persons or property and only incidentally operated or moved over a highway, including but not limited to ditch digging apparatus, well boring apparatus, construction and [illegible] as asphalt spreaders, [illegible] loaders, tractors, [illegible] ditchers, leveling [illegible] motor graders, [illegible] earthmoving carry[illegible] shovels and drag lin[illegible] and earthmoving equip[illegible] house trailers, [illegible] vehicles, dump [illegible] mixers, cranes, [illegible] designed for the [illegible] property to which m[illegible]

(53) "stand" or "[illegible] of a vehicle, wheth[illegible] temporarily for [illegible] actually engaged [illegible] passengers;

(54) "stop" or "[illegible] cessation from move[illegible] momentarily, of a veh[illegible] not, except when ne[illegible] with other traffic [illegible] directions of a pol[illegible] sign or signal;

(55) "street" mea[illegible] AS 28;

(56) "through hi[illegible] portion of highway [illegible] has preferential rig[illegible] which vehicula[illegible] highways is requ[illegible] right-of-way to [illegible] obedience to a [illegible] official traffic-cont[illegible]

(57) "tow car" [illegible] is equipped for [illegible] crane, hoist, or [illegible] used primarily [illegible] assistance to oth[illegible]

(58) "trailer" [illegible] without motiv[illegible] persons or prop[illegible] motor vehicle, [illegible] trailers;

(59) "transp[illegible] business of deliv[illegible]

[illegible] and designated [illegible] of ident[illegible] an en[illegible] by its [illegible] department [illegible] another juris[illegible]

[illegible] wrecked [illegible] to disable [illegible] used for it [illegible] repair [illegible] Reg. 70)

8/27/87

STATE OF ALASKA
DEPARTMENT OF EDUCATION

Regulations on School Bus Driver Training
DRAFT

The following regulations were adopted by the State Board of Education at its regular meeting held on August 17, 1987:

4 AAC 27 is amended by adding new sections to read:

4 AAC 27.200. APPROVED SCHOOL BUS DRIVER TRAINING COURSES. (a) Upon application by a district on forms prescribed by the department, the department may approve a school bus driver training course that is required by a pupil transportation contract which was awarded pursuant to 4 AAC 27.085. Courses approved under this subsection are approved until the expiration of the transportation contract under which the approval was made.

(b) Upon application on forms prescribed by the department and until June 30, 1988, the department may approve a school bus driver training course which includes at least 10 hours of training in the following subjects: pre-trip inspection; seat and mirror adjustment; defensive driving; driving skills; loading and unloading procedures; student management; and safety and emergency procedures. Courses approved under this subsection are approved until June 30, 1988 unless otherwise authorized in writing by the department.

(c) Upon application on forms prescribed by the department, the department may approve a school bus driver training course that:

(1) is conducted by a school bus driver training instructor certified under 4 AAC 27.210;

(2) meets the minimum standard training requirements of 4 AAC 27.220; and

(3) except as otherwise authorized in writing, by the department, follows the Minimum Course Content for Pre-Service Training of Alaska School Bus Drivers, 1987 Edition, issued by the department.

(d) Courses approved under subsection (c) are approved for a period of three years.

4 AAC 27.210. CERTIFICATION OF INSTRUCTORS. (a) The department will certify a person holding a school bus driver permit as a school bus driver training instructor if the person:

(1) has a minimum of two years' school bus driving experience; and

(2) satisfactorily completes a school bus driver training instructor certification program conducted by the department.

(b) A school bus driver training instructor certificate issued under (a) of this section expires three years from the date of issuance or whenever the holder fails to continue to hold a school bus driver permit, whichever comes first.

(c) A certificate issued under (a) of this section may be renewed any number of times if the holder submits an application on a form prescribed by the department and

(1) has conducted at least one state approved training course annually during the life of the certificate; or

(2) has prior approval of the department to enter and satisfactorily completes a school bus driver training instructor refresher program conducted by the department.

4 AAC 27.220. MINIMUM STANDARDS FOR SCHOOL BUS DRIVER TRAINING COURSES. (a) In order for a person to be certified by a department approved instructor as having met the requirements of a school bus driver training course approved under 4 AAC 27.200(c), the person must successfully:

(1) identify the major mechanical component parts of a school bus;

(2) complete a pre-trip inspection of a school bus;

(3) adjust the driver's seat of a school bus so that all controls can be reached easily;

(4) adjust the mirrors of a school bus for optimum visibility;

(5) demonstrate starting and stopping the bus smoothly using proper coordination of accelerator, clutch where applicable, and brakes;

(6) stop a school bus a specified distance from another object or point using over the hood, rear and curb reference points;

(7) where applicable, shift gears on a moving school bus in a manner which provides a safe ride to passengers and avoids damage and unnecessary wear to the bus components;

(8) where applicable, demonstrate the use of shifting in slowing and stopping the bus;

(9) turn a corner in a school bus while keeping the bus in the correct lane of traffic;

(10) back up a school bus in a straight line, and turn the bus around by backing into a side street under conditions of both ample and limited space;

(11) explain and demonstrate defensive driving skills which may help prevent accidents in school buses in spite of incorrect actions of others;

(12) demonstrate procedures for properly loading and unloading students;

(13) explain techniques for managing the behavior of pupils on a school bus in a positive way;

(14) explain proper actions to take during driving emergencies;

(15) locate and explain how to use emergency equipment found on school buses;

(16) explain and demonstrate procedures for safely positioning a school bus on a road after a mechanical breakdown or emergency situation;

(17) demonstrate procedures for safely evacuating passengers of a school bus; and

(18) demonstrate procedures for properly crossing railroad tracks in a school bus.

4 AAC 27.230. ISSUANCE OF SCHOOL BUS DRIVER CERTIFICATES; RECORDKEEPING REQUIREMENTS. (a) An instructor certified under 4 AAC 27.210 may issue a certificate certifying that a person has completed a state approved school bus training course under AS 14.07.020(a)(14) only if the person has completed a course approved under 4 AAC 27.200 using the Minimum Course Content for Pre-Service Training of Alaska School Bus Drivers, 1987 Edition, issued by the department, and has demonstrated to the instructor's satisfaction that the driver has met each of the minimum standards set forth in 4 AAC 27.220.,

(b) An instructor must keep records available for inspection by the department for a period of three years for each person to whom he or she has given instruction in school bus driving indicating:

(1) the objectives on which training was given, including when the training was given, and the amount of training given on each objective; and

(2) evaluation sheets, dated and signed by the instructor and driver, documenting that the driver has met each of the minimum standards set forth in 4 AAC 27.220.

(c) The instructor must furnish a duplicate of each certificate issued under (a) of this section to the department within 5 days of its issuance.

4 AAC 27.240. REVOCATION OF INSTRUCTOR CERTIFICATE. A certificate issued under 4 AAC 27.210 may be revoked for the following reasons:

(a) fraudulent certification of training;

(b) failure to follow department regulations and instructions concerning school bus driver training;

(c) negligence in driving or instructional techniques;

(d) revocation of school bus driver permit;

(e) failure to properly document training as required by 4 AAC 27.230; or

(f) willful failure to submit duplicate certificate to the department as required by 4 AAC 27.230.

KENAI PENINSULA BOROUGH SCHOOL DISTRICT

February 10, 1988

Representative Bette Cato
House of Representatives
P.O. Box V
Juneau, AK 99811

Dear Representative Cato:

I am corresponding with you in regard to two items:

1. Licensure of occupational therapists.
2. Necessity to hold a school bus driver's license to operate a school van.

Licensure of occupational therapists. There has been considerable confusion regarding this issue. You will recall that this item was before the legislature last year. It is our belief that an occupational therapist need not hold a license from the state in order to provide occupational therapy services to school children in an educational setting. They simply must hold state certification through the Department of Education. HB 368 clarifies this situation and clearly exempts school employed occupational therapists from a requirement of holding licensure from the State of Alaska. We support this provision and encourage your passage of this amendment.

School bus drivers license. Again, there has been confusion regarding this item. There have been various interpretations as to what type of requirements must be met by individuals who drive school vans to transport youngsters for extracurricular activities. HB 397 and SB 375 address this issue. We encourage your passage of SB 375 and HB 397 if amended to 19 feet. These bills would would clearly stipulate that it is not necessary for a person to hold a "school bus driver's license" in order to operate a school van transporting youngsters for extracurricular activities.

Thank you for your attention to these items as they come before you.

Sincerely,

Fred

Fred Pomeroy
Superintendent

IN THE HOUSE BY THE TRANSPORTATION COMMITTEE

CS FOR HOUSE BILL NO. 397 (Transportation)

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to licensing of school bus drivers; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 28.15.046(a) is amended to read:

(a) In addition to the requirements of AS 28.15.041(a), a person may not drive a school bus transporting school children to or from school to enable them to participate in class or a school activity, or a bus transporting school [SCHOOL-AGE] children to or from school for classroom studies until the person has applied for and has been issued a license for that purpose under this section. This subsection does not apply to a person or a motor vehicle exempted under regulations adopted by the commissioner.

* Sec. 2. This Act takes effect immediately under AS 01.10.070(c).

HOUSE BILL 397

GOOD AFTERNNON. I AM HERE TODAY TO EXPLAIN MY REASONS FOR INTRODUCING HB 397 AND PROVIDE YOU WITH SOME BACKGROUND AND CONCERNS IN THE AREA OF SCHOOL BUS DRIVER LICENSING.

IN 1986 THE LEGISLATURE PASSED HB 409 WHICH WAS SIGNED INTO LAW BY THE GOVERNOR APRIL 30, 1986.
HB 409 IMPOSED STRICTER REQUIREMENTS ON SCHOOL BUS DRIVERS TO HELP ENSURE THE SAFETY OF OUR CHILDREN. THE NEW LAW REQUIRES ALL SCHOOL BUS DRIVERS TO BE ISSUED A SCHOOL BUS DRIVER'S LICENSE. IN ORDER TO OBTAIN THIS LICENSE, DRIVERS MUST COMPLETE A SCREENING PROCESS WHICH INCLUDES A BACKGROUND CHECK, FINGERPRINTING PROCESS TO IDENTIFY SEXUAL OFFENDERS AND DWI OFFENDERS, THE BILL ALSO REQUIRES ALL DRIVERS TO COMPLETE A 40 HOUR TRAINING PROGRAM.

WHILE I STRONGLY SUPPORT THIS THESE REQUIREMENTS, I HAVE INTRODUCED HB 397 TO MORE CLEARLY DEFINE THE SEVERAL AREAS OF CONCERN WITH THE CURRENT REGULATIONS.

THE EXISTING LICENSING REQUIREMENTS APPLIES TO PERSONS DRIVING

A "BUS TRANSPORTATING SCHOOL AGE CHILDREN". WHILE THIS LANGUAGE WAS DESIGNED TO ENSURE THAT ALL PERSONS, INCLUDING VOLUNTEERS, WHO TRANSPORT CHILDREN TO AND FROM SCHOOL MEET THE

NEW LICENSING REQUIREMENTS. IT ALSO UNINTENTIONALLY INCLUDED MANY ORGANIZATIONS AND GROUPS SUCH AS GIRLS AND BOYS CLUBS, WHO USE PARENTS AND CHAPERONES TO TRANSPORT CHILDREN TO EVENTS. SCHOOL DISTRICTS HAVE EXPRESSED FRUSTRATIONS BY THE REQUIREMENT FOR SCHOOL COACHES TO OBTAIN A SCHOOL BUS DRIVERS LICENSE TO TRANSPORT A TEAM (debate) TEAM TO AN EVENT.

HB 397 MORE CLEARLY DEFINES THIS 'GREY' AREA.

SECTION 1. LINE 11 STATES: A PERSON MAY NOT DRIVE A SCHOOL BUS TRANSPORTING SCHOOL CHILDREN TO OR FROM SCHOOL TO ENABLE THEM TO PARTICIPATE IN CLASS OR SCHOOL ACTIVITY, OR A BUS TRANSPORTING SCHOOL CHILDREN TO OR FROM SCHOOL FOR CLASSROOM STUDIES;

A SCHOOL BUS IS DEFINED AS EVERY MOTOR VEHICLE THAT COMPLIES WITH THE COLOR AND IDENTIFICATION REQUIREMENTS SET FORTH IN THE MINIMUN STANDARDS FOR SCHOOL BUSES AND IS USED TO TRANSPORT CHILDREN TO OR FROM SCHOOL OR IN CONNECTION WITH SCHOOL ACTIVITIES. THEREFORE, ANY PERSON DRIVING A SCHOOL BUS (MANY OF YOU HAVE SEEN THE YELLOW AND BLACK BUSES WITH THE WARNING LIGHTS) TO OR FROM SCHOOL FOR CLASS OR "SCHOOL' ACTIVITY WOULD BE REQUIRE TO HAVE THIS LICENSE. THIS WOULD INCLUDE 'ANY ACTIVITY' THAT THE SCHOOL WAS INVOLVED WITH.

IN ORDER TO MORE CLEARLY UNDERSTAND THIS BILL, ONE POINT SHOULD BE NOTED, THE TERM SCHOOL BUS HAS A DIFFERENT DEFININATION THAN THE WORD BUS AS DEFINED BY THE DEPARTMENT OF PUBLIC SAFETY.

LINE 13 STATES: ANY PERSON DRIVING A BUS TRANSPORTING SCHOOL CHILDREN TO OR FROM SCHOOL FOR CLASSROOM STUDIES.

A BUS IS DEFINED AS EVERY MOTOR VEHICLE DESIGNED FOR CARRYING MORE THAN 10 PASSENGERS AND USED PRIMARILY USED FOR TRANSPORTING OF PASSENGERS. IN THIS SECTION A DRIVER WOULD BE REQUIRED TO HAVE A SCHOOL BUS DRIVERS LICENSE IF HE/SHE WERE DRIVING A BUS (VAN) TRANPORTATING 10 PASSENGERS OR MORE AND THESE PASSENGERS WERE BE TRANSPORTED TO OR FROM SCHOOL FOR CLASSROOOM STUDIES.

THIS WOULD NOT INCLUDE ANY PERSON TRANSPORTING SCHOOL CHILDREN IN A BUS/VAN TO SCHOOL ACTIVITIES OTHER THAN CLASSROOM STUDIES. THIS WOULD ALLOW A PARENT/CHAPERONE TO TRANSPORT A SMALL BUS/VAN OF CHILDREN TO A PLAY OR CONCERT ETC. WITHOUT THE FRUSTRATION OF THE LICENSING REQUIREMENT. IT WOULD ALSO ALLOW A PERSON TO TRANSPORT THE GIRLS SCOUT OR THE BOY SCOUTS TO A COOKOUT OR OTHER FUNCTION WITHOUT THIS LICENSING REQUIREMENT IMPAIRING THIS TRIP.

SB 375:

SB 375 CORRECTS A PROBLEM CREATED IN 1986 WHEN THE LEGISLATURE IMPOSED STRICTER REQUIREMENTS FOR SCHOC BUS DRIVERS, AND THE ENSUING REGULATIONS ENCOMPASSED ALL VAN DRIVERS REGARDLESS OF THE PURPOSE OF TRANSPORTATION OF CHILDREN. MANY SCHOOL DISTRICTS ARE ADVERSELY AFFECTED, PARTICULARLY IN SMALLER COMMUNITIES AS THOSE SCHOOLS FREQUENTLY USE "SCHOOL ACTIVITY VANS" DRIVEN BY A VARIETY OF STAFF, COACHES OR TEACHERS. TO COMPLY, ALL WOULD HAVE TO UNDERGO THE TRAINING AND OTHER REQUIREMENTS WHICH CAN BE COSTLY TO THESE DISTRICTS.

"BUS" IS DEFINED IN EXISTING DEPARTMENT OF PUBLIC SAFETY REGULATIONS 13 AAC 40.010 (6): "BUS" MEANS "EVERY MOTOR VEHICLE DESIGNED FOR CARRYING MORE THAN 10 PASSENGERS AND USED PRIMARILY FOR THE TRANSPORTATION OF PASSENGERS, AND EVERY MOTOR VEHICLE DESIGNED AND USED FOR THE TRANSPORTATION OF PERSONS FOR COMPENSATION, EXCEPT A TAXICAB OR SCHOOL BUS."

BY THAT DEFINITION, CURRENT LAW REQUIRES THAT A DRIVER OF A VAN DESIGNED TO CARRY MORE THAN TEN PASSENGERS MUST POSSESS A SCHOOL BUS DRIVER'S LICENSE. IN ORDER TO COMPLY, THE DRIVER MUST COMPLETE A STATE APPROVED SCHOOL BUS DRIVER TRAINING COURSE; SUPPLY DPS WITH SUFFICIENT INFORMATION TO COMPLETE A NATIONAL CRIMINAL RECORDS CHECK AND BACKGROUND

CHECK; PASS A WRITTEN AND ROAD EXAM AND UNDERGO A PHYSICAL EXAMINATION.

SB 375 MORE CLEARLY DEFINES THAT SCHOOL BUS DRIVER'S LICENSES ARE REQUIRED ONLY WHEN TRANSPORTING CHILDREN TO AND FROM SCHOOL, OR WHEN A "SCHOOL BUS" IS BEING USED TO TRANSPORT CHILDREN TO AND FROM SCHOOL. ALL OTHERS WOULD NOT BE REQUIRED TO OBTAIN A "SCHOOL BUS " DRIVER'S LICENSE.

CS SB 375 (RULES) ADDS MINOR CHANGES WHICH FURTHER CLARIFY WHICH DRIVERS ARE AFFECTED BY REPLACING "SCHOOL-AGE" WITH "SCHOOL", AND BY PROVIDING A DEFINITION OF "CLASSROOM STUDIES."

GIRL SCOUTS

Farthest North
Girl Scout Council, Inc.
946 Cowles, Suite 210
Fairbanks, Alaska 99701
(907) 456-4782

February 10, 1988

Senator Bettye Fahrenkamp
515 7th Avenue Room 130
Fairbanks, Alaska 99701

Dear Senator Fahrenkamp;

The Farthest North Girl Scout Council supports Senate Bill 375.

The Council owns a twelve passenger van which is used extensively in our program delivery i.e.; resident camp, day camp, canoe trips. In the past we had been able to loan our van to Girl Scout leaders for transporting their troops to special outings. However, the law which requires a bus driver's license, made it impossible for our volunteer leaders to borrow the van. Programs have and will continue to be changed or deleted if vans transporting children require a bus driver's license.

Thank you for introducing this bill. Please convey our concern on these issues to the committees working on this issue.

Sincerely,

Janice M. Jenitis

Salcha, Alaska 99714
(907) 488-3987 or 488-3012

February 10, 1988

Senator Bettye Fahrenkamp
Alaska State Senate
P.O. Box V
Juneau, Alaska 99811

Dear Senator Fahrenkamp:

I am writing to express the complete support of our organization (all 114 members) for your Senate Bill 375. This bill will remedy the transportation problems caused by current regulations which have forced us to leave behind team members who would ordinarily have travelled with us to ski races in Anchorage.

As an organization on a limited budget, run completely by volunteer help, we do not have the time or financial resources to obtain school bus driver's licenses for our drivers. Nor do we think that such licensing would improve the quality or safety-consciousness of our drivers.

Would you please pass along this letter to other members of the senate and also the Department of Transportation so that they will know of our problems with current regulations and our support for your Senate Bill 375. Thank you.

Sincerely,

James F. Ostlind

FEB. 12, 1988

REPRESENTATIVE BETTY CATO,

THE SCHOOL BUS DRIVERS OF THE KENAI/NIKISKI AREAS ARE EXPOSED DAILY TO SAFE AND NOT SO SAFE CONDITIONS AROUND OUR PUBLIC SCHOOLS. AS A RESULT OF THAT EXPOSURE, WE WISH TO ADDRESS SOME AREAS WHERE POTENTIAL DANGER EXISTS. NIKISKI ELEMENTARY, KENAI CENTRAL HIGH SCHOOL, KENAI JUNIOR HIGH SCHOOL AND MOUNTAIN VIEW ELEMENTARY ARE LOCATED ALONG A HIGH TRAFFIC HIGHWAY WHERE SPEED (55MPH) AND SCHOOL BUSSES HAVE TO MIX. OUR OBSERVATIONS AND CALLS FROM THE GENERAL PUBLIC CONFIRM OUR OPINION THAT THE INSTALLATION OF SCHOOL ZONE "FLASHING YELLOW" SIGNALS WOULD BEST SERVE OUR COMMUNITY SCHOOL AGE CHILDREN.

OUR BASIC PROBLEM STEMS FROM HAVING TO ENTER THE FLOW OF TRAFFIC FROM A DEAD STOP, CROSSING A FAST MOVING LINE OF TRAFFIC AND DOING THIS WITHOUT INTERFERING WITH TRAFFIC FLOW. "SCHOOL ZONE.. 20MPH WHEN CHILDREN ARE PRESENT" SIGNS ADDS LIMITATION FOR TRAFFIC SPEED, BUT ONLY WHEN CHILDREN ARE PRESENT ALONG THE ROADSIDE OR CROSSING THE ROADWAY. THIS IS IMPORTANT OF COURSE BUT A 35' BUS (ON A ICY ROAD SURFACE) FILLED WITH UP TO 72 CHILDREN, FINDS IT ALMOST IMPOSSIBLE TO BLEND WITH 55 MPH TRAFFIC. AS WE ENTER THE TRAFFIC, WE MUST CHANCE THE SAFETY OF OUR STUDENTS, OTHER MOTORIST AND OURSELVES BECAUSE OF LOST TRACTION WHICH MAKES FOR A SLOW START AND POOR ACCELERATION.

ONLY WHEN THESE FLASHING YELLOW SIGNALS ARE IN PLACE DO WE FIND THE ABSENCE OF HIGH SPEED AND THE PRESENCE OF MOTORIST SHOWING MORE CONCERN FOR LAW, BUSSES AND SAFETY IN GENERAL.

NIKISKI ELEMENTARY SCHOOL NEEDS THE INSTALLATION OF STREET LIGHTS ON THE ENTRANCE AND EXIT OF THE SCHOOL. AS THIS SCHOOL IS LOCATED ON A CURVE IN THE HIGHWAY, WE HAVE WITNESSED MANY "CLOSE CALLS" OF HEAD ON COLLISIONS, SIDESWIPES AND SKIDDING. PROPER LIGHTING WILL ASSIST IN WARNING MOTORIST OF THE SCHOOL AREA, ILLUMINATE WALKING AND BIKE RIDING STUDENTS AND MAKE SLOW MOVING VEHICLES MORE VISABLE.

EACH YEAR WE ALSO EXPERIENCE 'HEART-FAILING' MOMENTS WHEN WE ARE FORCED TO DRIVE OUR BUSSES DOWN A ROADWAY BESIDE BIKE RIDING STUDENTS ENROUTE TO SCHOOL. THIS PRACTICE (IN THE ABSENCE OF BIKE PATHS) HAS CAUSED MANY DRIVERS TO QUESTION THEIR EMPLOYMENT AS A SCHOOL BUS DRIVER.

IF YOU CAN ASSIST OUR COMMUNITY BY LENDING YOUR SUPPORT TO THE MATTERS MENTIONED ABOVE WE THANK YOU AND WILL CONTINUE OUR COMBINED EFFORT TO PROVIDE THE MOST ACCIDENT FREE ENVIRONMENT FOR OUR CHILDREN.

SINCERELY YOURS,

TED CARMICHAEL

Ted Carmichael

The Honorable Bettye Fahrenkamp
Alaska State Legislature
P.O. Box V
Juneau, Alaska 99811

Dear Senator Fahrenkamp:

As sponsor of SB 375, An Act Relating to Licensing School Bus Drivers, I wanted to let you know that a concern has been raised regarding availability of training for drivers of school buses transporting children to and from private schools. I would appreciate your sharing the following information with House members:

1. Training programs are available to private schools. A private school may apply directly to the Department of Education for approval of a program, or may enroll drivers in other programs already approved by the department.

2. Approved programs exist in many locations in the state. A list of programs is attached. At least two private schools in Anchorage - Anchorage Christian Schools and Abbott Loop Christian School - have applied for and received approval of programs. Additionally, Harvester Christian Academy sent a trainer to the state sponsored school bus driver instructor workshop last year.

3. School bus contractor training programs are open to private school drivers. Tundra Tours, Inc. of Mat-Su Valley, TMS of Anchorage, Fairbanks and Kodiak, and Laidlaw Transit, Inc. of Anchorage are examples of companies that will train private school drivers.

4. The state is developing a plan to reimburse private schools for a reasonable registration fee if a school bus driver successfully completes an approved training program.

Sincerely,

William G. Demmert
Commissioner

Re: CS SB 375 (Rules), An Act Relating to School Bus Licensing

SB 375 corrects a problem created in 1986 when the legislature imposed stricter requirements for school bus drivers and the ensuing regulations encompassed all van drivers regardless of the purpose of transportation of children. Many school districts are adversely affected, particularly in smaller communities as those schools frequently use "school activity vans" driven by a variety of staff, coaches or teachers. To comply, all would have to undergo the training and other requirements which can be costly to these districts.

"Bus" is defined in existing Department of Public Safety regulations 13 AAC 40.010 (6): "bus" means "every motor vehicle designed for carrying more than 10 passengers and used primarily for the transportation of passengers, and every motor vehicle designed and used for the transportation of persons for compensation, except a taxicab or school bus".

By that definition, current law requires that a driver of a van designed to carry more than ten passengers must possess a school bus driver's license. In order to comply, the driver must complete a state approved school bus driver training course; supply DPS with sufficient information to complete national criminal records check and background check; pass a written and road exam and undergo a physical examination.

SB 375 more clearly defines that school bus driver's licenses are required only when transporting children to and from school, or when a "school bus" is being used to transport children to and from school. All others would not be required to obtain a "school bus" driver's license.

CS SB 375 (Rules) adds minor changes which further clarify which drivers are affected by replacing "school-age" with "school", and by providing a definition of "classroom studies".

Analysis of HB 401

Prior to July, 1984, the Department of Revenue did not issue motor fuel tax refunds to in-state purchasers, such as fishermen and fish processors that used the fuel outside the state's 3-mile taxing jurisdiction. In July, 1984 the Department began issuing the refunds, and at the same time assessing the motor fuel tax against out-of-state fuel purchasers that imported untaxed fuel and used the fuel in state waters. Several recent U.S. Supreme Court decisions allowing a properly apportioned tax were the basis for the change in the Department's watercraft tax policy. This policy, which placed the incidence of the tax on the use of the fuel in-state was overturned by a Departmental Hearing Decision #87-07 dated March 20, 1987. This decision required the Department to amend its regulations prior to authorizing the assessment of tax against the importer/consumers of marine fuel. Later in September of 1987, the Attorney General's office advised this Department that additional statutory authority was necessary to support the tax refunds to those purchasing fuel inside but consuming it outside the 3-mile limit.

HB 401 would provide the necessary authority for the Department to issue refunds of tax to out-of-state consumers. The legislation, however, does not provide a mechanism for taxing fuel imported and consumed by a vessel in this state. Passage of this legislation without consideration of the importation issue is not advised.

Department's Position on HB 401

The Department does not support passage without amendment for the following reasons:

1) The legislation further narrows the state's tax base by approximately $2 million per year.
2) The recipients of these refunds are, by an overwhelming majority, non-resident individuals and businesses. Based upon our 18 month refunding project, only 14% of the claimants listed in-state addresses.
3) Purchasers of out-of-state fuel do not pay the 5¢ tax and thus have a competitive advantage over their Alaska resident competitors.
4) We have not seen evidence showing that without the refund legislation, motor fuel purchasers will move off-shore to make their fuel purchases. It is not clear to us that fuel sold on the high seas is significantly cheaper than fuel sold on-shore.
5) The watercraft tax account in the general fund has historically been used as a benchmark for appropriations to harbor facilities around the state. A decrease in marine fuel tax may reduce funding for these essential services and facilites.

M E M O R A N D U M January 22, 1988

SUBJECT: Sectional analysis, W.O. 5-1622B: Rebates of motor fuel taxes for fuel used in certain watercraft

TO: Senator Fred Zharoff

FROM: Jack Chenoweth
Legislative Counsel

This bill proposes to authorize rebates or refunds of motor fuel taxes when the fuel is used or consumed in the operation of watercraft outside the state.

Bill section 1 adds a new section, AS 43.40.033, authorizing the refund of watercraft motor fuel taxes, and directing the Department of Revenue to adopt necessary regulations and to prescribe forms to assure proper operation of the refund program.

Bill section 2 amends an existing section, AS 43.40.050(b), limiting to one year the filing period for refund claims for watercraft motor fuel taxes; the one year limitation is currently applicable to the department's other refund and credit programs.

Section 5 gives the Act a July 1, 1988 effective date. By section 3, the watercraft motor fuel rebate program, established by this Act, is made applicable to motor fuel sold and delivered in the state, and used and consumed in watercraft outside the state after June 30, 1988.

As I understand, between 1985 and March, 1987, the Department of Revenue made refunds of watercraft motor fuels (within the limits of and in a manner substantially similar to what is being proposed in this bill). The department stopped that program apparently after it was advised by the Department of Law that there was no legal basis for the refund program.

Bill section 4, in a sense, "ratifies" those payments that were apparently made in error by declaring that the attorney general and the Department of Revenue may not recover these refunds. The provision is drafted in a manner that recognizes the payments that have already been made; it does not authorize any additional refunds to persons who might have applied under that defunct program.

ALASKA STATUTES

Title 43
Revenue and Taxation

OCTOBER 1983

Sec. 43.35.140. Gambling not legalized. AS 43.35.100 — 43.35.150 do not legalize gambling. (§ 4 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Cross references. — For limitations on authorized gaming activities, see AS 05.15.180.

Sec. 43.35.150. Violations and penalties. (a) It is unlawful for a person to (1) distribute in the state a punchboard for which the license tax provided in AS 43.35.100 — 43.35.150 is not paid; or (2) maintain for use, or permit the use of, in a place or premises occupied by the person a punchboard upon which the license stamp is not affixed.

(b) A person violating a provision of AS 43.35.100 — 43.35.150 is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $500. (§ 5 ch 116 SLA 1949; am § 1 ch 53 SLA 1951)

Chapter 40. Motor Fuel Tax.

Section

10. Tax on transfers or consumption of motor fuel and expenditure of proceeds
30. Refund for nonhighway use
35. Other refunds and credits
50. Refund claim by affidavit
60. Separate invoices
70. Refund warrants
80. Examination of books and records
85. Preservation of books and records
100. Definitions

Collateral references. — 71 Am. Jur. 2d, State and Local Taxation, §§ 616 — 634; 53 Am. Jur. 2d, Licenses, §§ 30, 46 — 58.

State tax on or in respect of goods shipped in interstate commerce to consignee for sale on consignor's account without previous sale or order for purchase, 4 ALR2d 244.

Loading or unloading interstate freight in performance of obligation resting upon one other than interstate carrier as interstate commerce as regards local taxation, 10 ALR2d 651.

State taxation of motor carriers as affected by commerce clause, 17 ALR2d 421.

Power of legislature to remit, release, or compromise tax claim, 28 ALR2d 1425.

Financial hardship or inability to pay taxes as rendering inapplicable statutes denying remedy by injunction against assessment or collection of tax, 65 ALR2d 550.

Sec. 43.40.010. Tax on transfers or consumption of motor fuel and expenditure of proceeds. (a) There is levied a tax of eight cents a gallon on all motor fuel sold or otherwise transferred within the state, except that

(1) the tax on aviation gasoline is four cents a gallon,

(2) the tax on motor fuel used in and on watercraft of all descriptions is five cents a gallon, and

(c) The department shall establish the necessary regulations and prescribe the appropriate forms to prove that the motor fuel is taken to and used in foreign countries.

(d) If a person obtains motor fuel on which the tax levied by this chapter has been paid and the motor fuel is exempt from the tax, the person is entitled to a refund of the tax paid. (§ 2 ch 47 SLA 1955; am § 3 ch 27 SLA 1957; am § 2 ch 136 SLA 1961; am § 4 ch 158 SLA 1970; am § 3 ch 124 SLA 1971; am § 4 ch 125 SLA 1971; am § 4 ch 116 SLA 1977; am §§ 35, 36 ch 113 SLA 1980; am § 5 ch 82 SLA 1982)

Effect of amendments. — The 1980 amendment substituted a reference to this chapter in subsection (b), and added subsection (d).

The 1982 amendment substituted "the tax has been" for "duty is" in subsection (b).

Sec. 43.40.035. Other refunds and credits. (a) A person who resells fuel on which the tax under AS 43.40.010(a) or (b) was previously paid is entitled to a credit or refund of the tax if (1) the resold fuel is not motor fuel and the requirements of AS 43.40.010(*l*) have been fulfilled; or (2) the amount of tax previously paid exceeds the tax due on the resale. The amount of the credit or refund under this section is equal to the amount of tax previously paid on the resold fuel less the amount of tax prescribed by AS 43.40.010(a) or (b).

(b) A reseller may elect, with the express written consent of the supplier of the resaler, to receive the credit or refund under this section directly from the supplier rather than by filing a claim for the credit or refund with the department. When an election is properly made under this subsection, the supplier may claim the credit or refund from the department. To be effective an election under this subsection must be signed in quadruplicate by the reseller and by the supplier. The reseller and the supplier shall each file one copy of the election, with original signatures, with the department. The reseller and supplier shall each retain a copy of the election with original signatures for audit review by the department. If an election is made under this subsection, it may not be revoked without the express written consent of the supplier. (§ 6 ch 82 SLA 1982; am § 3 ch 87 SLA 1983)

Effect of amendments. — The 1983 amendment substituted "the requirements of AS 43.40.010 (*l*) have been fulfilled" for "a certificate of use is acquired under AS 43.40.010(*l*)" in the first sentence of subsection (a).

Sec. 43.40.040. Applications and permits for refund. [Repealed, § 45 ch 113 SLA 1980. For current law, see AS 43.40.050(a).]

Sec. 43.40.050. Refund claim by affidavit. (a) A person who claims a refund under AS 43.40.030 shall present the claim for the refund to the commissioner of revenue by affidavit upon a form provided by the commissioner. The claim shall include the name, address

and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the machinery or equipment in which the motor fuel for which the refund is claimed was used. The claim shall be accompanied by each invoice issued to the claimant at the time the motor fuel was purchased. The commissioner may require any additional information which the commissioner considers necessary for the administration of this subsection.

(b) A claim for refund under AS 43.40.030 or 43.40.035 shall be filed within one year from the date of the purchase of the motor fuel as indicated on the invoice, and failure to file within the one-year period is a waiver of the right to the refund. A claim is considered to be filed when the claim is mailed or personally presented to an office of the department.

(c) A reseller who claims a refund or credit under AS 43.40.035 shall present the refund claim to the department or to the supplier of that reseller by affidavit on a form provided by the department. The claim shall include the name, address, and occupation of the applicant, the nature of the business of the applicant, and a description sufficient to identify the reason for the refund or credit. The claim shall be supported by documentation required by the department. (§ 4 ch 47 SLA 1955; am § 1 ch 139 SLA 1960; am § 37 ch 113 SLA 1980; am §§ 7 — 9 ch 82 SLA 1982)

Effect of amendments. — The 1980 amendment in subsection (a), changed a reference to this chapter at the beginning and at the end of the subsection, substituted the present second sentence for the former material, which read: "with the information the commissioner requires", and substituted "was" for "is" preceding "purchase" at the end of the present third sentence.

The 1982 amendment substituted "under AS 43.40.030" for "as provided in AS 43.40.010 — 43.40.100" and "the claim for the refund" for "his claim" in the first sentence of subsection (a), substituted "the commissioner" for "he" and "this subsection" for "AS 43.40.010 — 43.40.100" in the last sentence of subsection (a), inserted "under AS 43.40.030 or 43.40.035" in the first sentence of subsection (b), and added subsection (c).

Collateral references. — 53 C.J.S., Licenses, § 62.

Sec. 43.40.060. Separate invoices. The department may require the issuance of separate invoices for fuel sold, distributed, or transferred when the invoices will be the basis for a refund claim. (§ 6 ch 47 SLA 1955)

Sec. 43.40.070. Refund warrants. Upon approval of a refund claim by the department, a warrant shall be drawn on the highway fuel tax account in the general fund in favor of the applicant in the amount of the claim. (§ 7 ch 47 SLA 1955; am § 5 ch 131 SLA 1962)

Sec. 43.40.080. Examination of books and records. (a) To determine the validity of a claim for refund, the department may examine the books and records of the claimant and the books and records of a distributor of motor fuel. The department may cancel the refund permit

Article 4. Recovery of Money or Property Illegally Paid or Diverted.

Section
90. Action by attorney general
100. Costs of action and disposition of amount recovered

Sec. 37.10.090. Action by attorney general. Whenever money, funds, or property of a city, school district, municipal government, or the state are illegally paid or are diverted for an illegal purpose or paid to a person not authorized by law to receive them, they may be recovered by an action instituted by the attorney general. When it appears to the attorney general that it is more advantageous to begin or conduct the action with additional counsel, the attorney general may choose and authorize additional counsel to bring the suit in the name of the proper party. (§ 12-5-1 ACLA 1949)

Sec. 37.10.100. Costs of action and disposition of amount recovered. (a) The necessary and reasonable costs of the suit and of the additional counsel shall be advanced by the state, and a sum recovered in the suit shall be deposited in the state treasury.

(b) However if the sum recovered belongs to a city, school district, or municipal government, the sum shall be transferred to it, less sums advanced by the state in the suit, and not already repaid to it. The Department of Administration may pay to the city, school district or municipal corporation the sums belonging to it, upon warrants drawn as provided by law. The warrants shall be based upon vouchers approved by the attorney general. (§ 12-5-2 ACLA 1949

ALASKA DEPARTMENT OF REVENUE
DEC 15 1987
OFFICE OF THE COMMISSIONER

DRAFT POSITION PAPER

RE: State of Alaska Marine Fuel Tax Rebates

I. HISTORICAL BACKGROUND

In 1985 the Alaska Department of Revenue (DOR) instituted a rebate program for taxes paid on marine fuel purchased from shoreside fuel facilities in Alaska but consumed in waters beyond the State of Alaska three-mile territorial limit. By filing appropriate documents with DOR a consumer would receive a pro-rated rebate of the $0.05 (five cent) per gallon tax. In other words the consumer paid the tax at the time of purchase but the tax was later refunded on that portion of the fuel estimated to be consumed beyond State of Alaska jurisdiction. In establishing the rebate procedure the state adopted the position that where the fuel was consumed took precedence over where the fuel was purchased.

Another pertinent provision of Alaska law provides an exemption from the marine fuel tax at the time of purchase. This exemption applies to marine fuel sold in Alaska and transported as "cargo out of the state into international waters if the fuel is sold or otherwise transferred to watercraft which operate exclusively in international waters and which do not enter state territorial waters, ports or facilities". This exemption allows high seas bunkering suppliers, which primarily are foreign flag tankers, to purchase marine fuel tax-free and refuel the fishing and processing fleet as long as the consuming vessels do not enter state waters.

Functioning together, the rebate procedure and the tax exemption for high seas bunkering activities created a tax structure whereby American based fisherman and fuel suppliers were treated on the same basis as high seas bunkering operators.

In April 1987 an internal assessment by DOR resulted in first a temporary suspension which in September 1987 became permanent after the Attorney

General reviewed the legality of the rebate program. In essence the Attorney General confirmed DOR lacked the statutory authority to rebate marine fuel taxes. Without the rebate program significant economic inequities resurfaced which penalized the shore-based fuel supplier and American flag vessels either operating in or re-entering state waters.

II. THE PROBLEM

Fundamentally, Alaska now has a marine fuel tax structure which tends to discourage the high-seas fleet from entering Alaska waters and simultaneously increases the operating expenses of the Alaskan based fishing operators to a level above their foreign competitors. Additionally, there is substantial basis for asserting that the tax generates an economic disincentive to establish shore-based fishing operations in Alaska. In essence this particular tax discourages the high seas fleet operators from calling on Alaska ports as they then lose the tax exempt status on fuel purchased beyond the three-mile limit. The net effect is that Alaskan ports and the Alaskan economy lose the benefits generated through the harvestation of our fish resources. These benefits include food purchases, crew changes, port berthing fees, tug assists, pilotage, repairs, maintenance supplies, personal purchases and in general all of the expenses vessels incur when calling on one of our coastal communities.

III. DISCUSSION

While Alaska continues to be in the throes of a devastating recesssion there is a bright light on our economic horizon. The shining star is the most traditional of Alaska's basic resources, commercial fishing, and specifically the bottom and intermediate trawl fishery. There is a consensus among those knowledgeable of the industry that if this resource is properly managed and regulated to the best interests of Americans this fishery will become the very mainstay of the seafood industry.

The Cowper Administration is undertaking an enormous effort to Alaskanize the bottom fish industry. The Governor has appointed a fisheries minicabinet to draft a fisheries policy which consists of goals and strategies for developing Alaska's seafood industry. One of the specific charges to this group is to examine and identify tax impediments to attracting shoreside processing. Unquestionably, the suspension of the rebate program has created an impediment and accordingly appears to be inconsistent with the Cowper Administrations commitment to the industry.

The North Pacific Fisheries Management Council is gradually phasing in a larger percentage of their recommended guide line harvest allocations to American fishing and processing firms. Organized groups such as the Southwest Municipal Conference are working diligently to encourage more shore based participation so Alaska can share in the economic benefits derived from the fish resources within our 200-mile Exclusive Economic Zone (EEZ).

The domestic fishing industry has been, historically, under capitalized and, of consequence, the additional fuel cost generated by the marine fuel tax may be a determining factor in decisions such as shore based plants vs floater and whether or not to base, re-supply and even repair vessels in Alaska. For example, the total amount of fuel consumed in U.S. waters by foreign flag vessels is estimated to be 160 million gallons annually. Purchases of fuel by these vessels operating within our waters from shore side fuel suppliers is estimated to be less than 10% or 16 million gallons. At sea refueling is a common practice not only for foreign flag vessels but also for American joint venture trawlers.

IV. POSSIBLE SOLUTIONS

There are two obvious solutions to the problem.

One is to repeal the exemption on fuel purchased in Alaska and consumed exclusively in international waters. This policy would subject all

purchases of fuel in Alaska to the fuel tax and place the domestic based fishing vessels and the high seas bunkering operator on equal terms. Under the aforementioned situation we are assuming the high seas foreign flag refueler purchased fuel from an Alaskan based supplier rather than importing the fuel from a foreign country or transporting the fuel from another state. In reality, this approach would accomplish very little in terms of encouraging either the domestic or foreign consumer to utilize shoreside fuel suppliers.

The second option is to simply reinstate the rebate program. This procedure requires the legislature to enact a statute specifically authorizing DOR to implement a rebate system. Based on reasonable assumptions this approach would result in approximatley 1.5 to 2 million dollars less revenue to the state treasury. The potential loss in revenue is a bonafide concern, however, this loss may well be more than offset by increased economic benefits associated with attracting the fishing industry shoreside.

The latter approach is consistent with the efforts of the Cowper Administration, North Pacific Fisheries Management Council, Southwest Municipal Conference and Alaska businesses all of who are attempting to create a positive business environment in Alaska.

item # 7

For the record, I am Rep. Bette Cato, prime sponsor of HB 401.

HB 401 has two purposes. It reinstates a marine fuel tax refund program that existed from 1984 through early 1987, and it clarifies the fact that refunds made under the previous program were legal, and legal action may not be taken to recover them.

The marine fuel tax refund program allows a purchaser of marine fuel to apply for a tax refund on the marine fuel consumed outside of state waters.

The refund program provides two distinct benefits.

First of all, it attracts more commercial fishing vessels to Alaska's coastal communities to not only purchase fuel, but also to purchase groceries, clothing, minor repair work, and other products and services. It would help the economies of our coastal communities.

Secondly, it establishes a more equitable tax structure that will help our Alaskan shore based fuel suppliers compete with high seas suppliers. High seas fuel suppliers do not pay the tax because they operate outside state waters. In fact, under current law and regulations, a high seas fuel supplier can come into port, purchase tax-exempt marine fuel, take it outside the state's three mile limit and then sell it without the tax. State regulations provide this exemption apparently because of the U.S. Constitution's commerce clause. This creates a situation where people who fish who purchase their fuel in

port, from Alaskan sources, end up paying the tax, while people who fish who purchase their fuel from high seas fuel suppliers that operate beyond the three mile limit do not.

Alaska's fishing industry has changed with the development of long distance bottom fishing fleet. This fleet works mainly in areas outside the jurisdiction and control of the state of Alaska. Alaska's challenge is to attract this fleet to do business in Alaskan ports, and to allow the suppliers of products and services in our Alaskan ports, such as fuel suppliers, to operate effectively against their competitors outside the three mile limit. HB 401 establishes a tax structure which will help accomplish that goal.

Mt. Dale Lindsay, the president of Harbor Enterprises, Inc., is here today. He can provide the committee with specific details about the problem this legislation addresses.

Thank you.

TESTIMONY OF DALE R. LINDSEY
HARBOR ENTERPRISES, INC.
HOUSE BILL 401
HOUSE TRANSPORTATION COMMITTEE

GOOD AFTERNOON. MY NAME IS DALE LINDSEY AND I AM THE PRESIDENT OF HARBOR ENTERPRISES, INC. TO PROVIDE YOU WITH A BIT OF BACKGROUND ON THE COMPANY, MYSELF AND MY SUPPORT OF HOUSE BILL 401, I OFFER THE FOLLOWING INFORMATION FOR YOUR ASSIMILATION.

HARBOR ENTERPRISES, INC. (HEI) WAS FOUNDED IN SEWARD IN 1936 AND IS ONE OF THE OLDEST PETROLEUM MARKETING FIRMS IN ALASKA. OUR COMPANY CONTINUES TO BASE ITS OPERATIONS IN SEWARD. WE PRESENTLY HAVE BULK PLANT FACILITIES LOCATED AT NIKISKI, WHERE WE HAVE THREE EMPLOYEES; KODIAK, 6 EMPLOYEES; DUTCH HARBOR, 11 EMPLOYEES; AND SEWARD, 15 EMPLOYEES. IN ADDITION, WE HAVE MARKETING OFFICES LOCATED IN ANCHORAGE, 4 EMPLOYEES AND SEATTLE, 1 EMPLOYEE. WE ALSO DISTRIBUTE PETROLEUM PRODUCTS TO COASTAL COMMUNITIES LOCATED IN SOUTHCENTRAL ALASKA, KODIAK ISLAND, ALASKA PENINSULA, ALEUTIANS AND BERING SEA VIA BARGE. IN A POLL CONDUCTED BY ALASKA BUSINESS MONTHLY, WE RANKED 14TH IN ALASKA IN TERMS OF FISCAL 1986-87 GROSS SALES REVENUE. HEI IS ALSO THE LARGEST ALASKAN OWNED AND ALASKAN BASED FUEL DISTRIBUTOR.

AT THE PERSONAL LEVEL, I WAS BORN AND RAISED IN SEWARD AS WAS MY WIFE, CAROL AND OUR FOUR CHILDREN. AFTER A BRIEF STINT AS A LOCOMOTIVE FIREMAN AND ENGINEER WITH THE ALASKA RAILROAD, I

ACQUIRED A HEATING FUEL DISTRIBUTORSHIP IN SEWARD IN 1959 AND HAVE OVERSEEN ITS GROWTH AND EXPANDED OPERATIONS SINCE. IN ADDITION TO HEI, I OWN TWO CRAB FISHING VESSELS WHICH CURRENTLY OPERATE OUT OF DUTCH HARBOR. LET ME ASSURE YOU THAT ALTHOUGH I AM BOTH A SELLER OF FUEL AND A CONSUMER OF FUEL, MY PREFERENCE LIES IN SELLING THE STUFF RATHER THAN IN BUYING IT! IRRESPECTIVE OF WHICH SIDE OF THE FENCE THAT PERIODICALLY WE FIND OURSELVES ON, WE ARE WITHOUT QUESTION ALASKAN AND WE ARE QUITE PROUD OF THIS FACT.

HEI MARKETS AND OPERATES AS PETRO MARINE SERVICES. AS OUR TRADE NAME INDICATES WE ARE A MARINE ORIENTED COMPANY. ACCORDINGLY, WE FOCUS A GOOD DEAL OF OUR MARKETING EFFORT TOWARD SERVING THE MARINE INDUSTRY IN ALASKA OF WHICH A MAJORITY IS COMMERCIAL FISHING RELATED AND THIS BRINGS US TO THE REASON THAT I AM APPEARING BEFORE YOU TODAY.

IN JUNE 1985 I CAME TO JUNEAU TO DISCUSS SPECIFIC INEQUITIES IN THE STATE'S MOTOR FUEL TAX REGULATIONS WITH OFFICIALS IN THE DEPARTMENT OF REVENUE. THE CRUX OF THE ISSUE THEN AND NOW AGAIN, IS THE $0.05 (FIVE CENTS) PER GALLON TAX CHARGED ON SALES OF MOTOR FUEL FOR MARINE USE CONSUMPTION. WHAT PROMPTED THESE DISCUSSIONS WAS A PROVISION IN THE STATUTES WHICH ALLOWED FOREIGN FLAG TANKERS TO PURCHASE FUEL FROM ALASKAN REFINERS EXEMPT ALL TAXES. THESE FOREIGN TANKER OPERATORS WOULD THEN TRANSPORT THIS FUEL BEYOND THE STATE'S THREE-MILE JURISDICTION AND SELL TO FOREIGN AND DOMESTIC FISHING VESSELS EX THE FIVE CENTS MARINE FUEL TAX WHICH WE SHORESIDE DISTRIBUTORS WERE SUBJECT TO. WHILE I WAS UNSUCCESSFUL IN CONVINCING REVENUE OFFICIALS THAT THEY

OUGHT TO EITHER CLOSE THE EXEMPTION TO THE FOREIGNERS OR REPEAL THE TAX ALTOGETHER, THEY DID MENTION THAT A REFUND WOULD BE ALLOWED ON TAXED FUEL PURCHASED WITHIN ALASKA BUT CONSUMED IN WATERS OUTSIDE THE STATE'S THREE-MILE LIMIT. IN ESSENCE THE REBATE PROCEDURE REPRESENTED A SIGNIFICANT DEPARTURE FROM THE DEPARTMENT OF REVENUE'S TRADITIONAL POSITION THAT THE PLACE OF DELIVERY TAKES TAX PRECEDENCE OVER WHERE THE FUEL IS CONSUMED. THE NET RESULT OF THIS DECISION WAS THAT APPROXIMATELY 95% OF THE TAX REVENUE GENERATED FROM FUEL SOLD TO THE HIGH SEAS FLEET OPERATING IN WATERS OUTSIDE ALASKA'S JURISDICTION WAS REFUNDED BETWEEN JANUARY 1, 1985 AND MAY 1, 1987.

FOLLOWING A DEPARTMENT OF REVENUE INTERNAL POLICY REVIEW IN THE SPRING OF 1987, THE REBATE PROGRAM WAS PLACED IN TEMPORARY SUSPENSION. THIS WAS FOLLOWED WITH PERMANENT SUSPENSION IN SEPTEMBER 1987 AFTER A LEGAL OPINION BY THE ATTORNEY GENERAL STATED DEPARTMENT OF REVENUE HAD EXCEEDED THEIR STATUTORY AUTHORITY WHEN THEY IMPLEMENTED THE REBATE PROGRAM.

UNFORTUNATELY, BY VIRTUE OF THE AFOREMENTIONED OPINIONS, THE INEQUITIES TO THE SHORESIDE FUEL DISTRIBUTOR WHICH EXISTED PRIOR TO JUNE 4, 1985 ARE PREVALENT ONCE MORE. IN VIEW OF THIS FACT MY RECOMMENDATION IS THAT THIS COMMITTEE SUPPORT HOUSE BILL 401 AS DRAFTED AND INTRODUCED BY REPRESENTATIVES CATO, NAVARRE AND SWACKHAMMER. THE IMPACT OF THE MARINE FUEL TAX NOW FALLS DISPROPORTIONATELY ON ALASKA FISHERMEN AND OTHER FISHERMEN WHO CHOOSE TO DO BUSINESS WITH ALASKA SHORESIDE SUPPLIERS. I WOULD LIKE TO UNDERSCORE THIS POINT. <u>THOSE WHO PARTICIPATE IN THE ALASKAN ECONOMY BY HOME-PORTING HERE OR OPERATING IN ALASKA</u>

WATERS, BEAR THE BURDEN OF THE TAX. WITHOUT QUESTION, THE REBATE PROGRAM TENDED TO PROVIDE SOME RELIEF FOR FISHERMEN WHO PATRONIZED ALASKA SHORESIDE BUSINESSES, BUT HAD TO COMPETE WITH THE HIGH SEAS OPERATORS. THE CURRENT SITUATION--WITHOUT REBATES--TENDS TO PENALIZE THOSE FISHING VENTURES FROM WHICH ALASKANS BENEFIT THE MOST. IT TENDS TO INCREASE THE COSTS ASSOCIATED WITH DOING BUSINESS IN ALASKA.

IT SHOULD BE KEPT IN MIND THAT THE REBATE PROGRAM WAS SUSPENDED BECAUSE OF UNANTICIPATED LEGAL CONSIDERATIONS...NOT BECAUSE IT WAS POOR PUBLIC POLICY OR LACKED MERIT. IN FACT, TO THE BEST OF MY KNOWLEDGE, THE POLICY CONSIDERATIONS WHICH PROMPTED THE DEPARTMENT OF REVENUE TO BEGIN THE REBATES REMAIN THE SAME NOW AS THEY WERE IN 1985.

I HAVE DISTRIBUTED TO YOU, WITH MY WRITTEN TESTIMONY, A LIST OF PRACTICAL AND ECONOMIC REASONS THAT THE REBATE PROGRAM CONTINUES TO BE SOUND PUBLIC POLICY. IT CERTAINLY SEEMS CONSISTENT WITH THE MANY EFFORTS TO "ALASKANIZE" THE OFF-SHORE FISHERY. FOR EXAMPLE, THE LEGISLATURE IS NOW CONSIDERING SJR 51 AND HJR 45. THESE RESOLUTIONS EMBODY IMPORTANT POLICY STATEMENTS URGING THE NORTH PACIFIC FISHERIES MANAGEMENT COUNCIL TO ADOPT REQUIREMENTS THAT ALASKAN SHORE-SIDE SUPPORT SERVICES BE UTILIZED.

GOVERNOR COWPER HAS APPOINTED A FISHERIES MINI-CABINET TO ENSURE MAXIMUM PARTICIPATION BY ALASKANS IN THE SEAFOOD INDUSTRY. THIS GROUP WILL BE STUDYING IMPEDIMENTS TO SHORE-SIDE INFRASTRUCTURE DEVELOPMENT, INCLUDING STATE AND LOCAL TAX POLICY.

THE DEPARTMENT OF COMMERCE STUDY OF BERING SEA SUPPORT

SERVICES WAS RELEASED LAST FALL. IT NOTES THAT THE MANNER IN WHICH THE OFFSHORE FISHERIES ARE BEING DEVELOPED IS NOT MEETING THE EXPECTATIONS OF MANY ALASKANS. I QUOTE:

"AMERICANIZATION FROM FOREIGN TO DOMESTIC PRODUCTION IS TAKING PLACE AT A PACE NO ONE ENVISIONED, LARGELY THROUGH EXPANSION AT OVER-THE-SIDE JOINT VENTURES AND FACTORY TRAWL HARVESTS. THIS HAS BEEN A FRUSTRATING EXPERIENCE FOR ALASKANS BECAUSE MUCH OF THIS ECONOMIC ACTIVITY LEAVES ONLY MINIMAL IN-STATE ECONOMIC BENEFIT."

THE STUDY ALSO CONCLUDES THAT AVAILABILITY OF FUEL IS THE SINGLE MOST IMPORTANT REASON FOR CHOICE OF PORT. IT ALSO FOUND THAT OWNERS DID NOT HESITATE TO COMPARE AT-SEA PRICES WITH THOSE SHORESIDE IN DUTCH HARBOR. I HAVE ALSO FOUND THIS TO BE TRUE. FOR EXAMPLE, LAST YEAR (WHILE THE REBATE PROGRAM WAS IN EFFECT) THE HIGH-SEAS PRICE FOR #2 MARINE DIESEL WAS $0.71 PER GALLON. WE SOLD FUEL IN DUTCH HARBOR FOR $0.69 PER GALLON. WITH THE MARINE FUEL TAX OF $0.05 PER GALLON WE HAVE TO CHARGE $0.74; HOWEVER, AS LONG AS THE REBATE PROGRAM WAS AVAILABLE OUR COMPANY COULD BE MORE COMPETITIVE, WHICH IS CRUCIAL TO OUR ECONOMIC SURVIVAL.

I APPRECIATE HAVING THIS OPPORTUNITY TO PRESENT MY VIEWS TO THE HOUSE TRANSPORTATION COMMITTEE. ONCE AGAIN, I RESPECTFULLY URGE YOUR SUPPORT OF THIS LEGISLATION.

I WOULD BE PLEASED TO ANSWER ANY QUESTIONS THAT YOU MAY HAVE CONCERNING MY POSITION AS THIS RELATES TO HOUSE BILL 401.

Item # 9

PETRO MARINE SERVICES

A HARBOR ENTERPRISES COMPANY

P.O. Box 389 • Seward, Alaska 99664 • (907) 224-3190

Anchorage (907) 278-7586

Nikiski (907) 776-8000

Kodiak (907) 486-3421

Dutch Harbor (907) 581-1350

WHY THE REBATE PROGRAM MAKES SENSE
IS GOOD PUBLIC POLICY AND SHOULD BE REINSTATED.

I. THE REBATE PROGRAM REMOVES A SIGNIFICANT COMPETITIVE DISADVANTAGE EXPERIENCED BY ALASKA FISHERMEN AND FISHERMEN DOING BUSINESS WITH ALASKA SHORE-SIDE SUPPLIERS.

   A. HIGH SEAS FUEL SUPPLIERS ARE NOT SUBJECT TO THE TAX...ONLY ALASKA-BASED FISHERMEN AND USERS OF ALASKA SUPPLIERS PAY THE TAX, WHICH TENDS TO INCREASE THEIR EXPENSES COMPARED TO EXCLUSIVELY HIGH SEAS FISHING ENTERPRISES.

II. BECAUSE THE REBATE PROGRAM TENDS TO EQUALIZE THE COSTS OF AT SEA FUEL WITH SHORE-SIDE FUEL, IT REMOVES A DISINCENTIVE FOR DOING BUSINESS WITH ALASKA SHORE-SIDE SUPPLIERS OF FUEL, SHIP REPAIRS, PROCESSING, TRANSPORTATION, AND COLD STORAGE (SEE SJR 51).

   A. LOWER SHORE-SIDE FUEL COSTS RESULTING FROM REBATES MAY CREATE GREATER OPPORTUNITIES FOR ALASKA BUSINESSES, EMPLOYMENT, IMPROVED INFRASTRUCTURE AND COMMUNITY TAX REVENUES.

III. PASSAGE OF SB366 AND HB401 SHOULD NOT BE CONSIDERED AS "SPECIAL INTEREST LEGISLATION". ALL END-USE CONSUMERS AND SHORESIDE FUEL DISTRIBUTORS WILL BENEFIT ALONG WITH THE STATE BY VIRTUE OF ATTRACTING SIGNIFICANTLY MORE FISH PROCESSING AND RAW FISH LANDING ACTIVITY TO SHORE WHICH, IN TURN, WILL ENHANCE SERVICE AND SUPPLY BUSINESSES. IF A REVENUE LOSS SITUATION DID NOT EXIST THE REBATE PROGRAM BILL WOULD ESSENTIALLY BE NON-ISSUE LEGISLATION.

IV. THE REBATE PROGRAM MAY HELP MAKE ALASKA PROCESSED FISH PRODUCTS MORE COMPETITIVE BY REMOVING AN EXPENSE WHICH HIGH SEAS OPERATORS DO NOT NECESSARILY INCUR.

V. THE REBATE PROGRAM SHOULD HELP ENCOURAGE DEVELOPMENT OF AN ALASKA-BASED CATCHER-PROCESSOR FLEET AND CAPTURE A LARGER PORTION OF THE OFF-SHORE RESOURCE.

   A. BRINGING THE ON-SHORE FUEL COSTS INTO A BETTER COMPETITIVE POSITION WITH HIGH SEAS COSTS WILL HELP

ALASKA COMMUNITIES SECURE HOME-PORTING OF CATCH-PROCESSORS. (FOR EXAMPLE, THE CITY OF HOMER'S EFFORTS TO SECURE HOME-PORTING OF "OCEAN TRAWL" VESSELS.)

VI. THE REBATE PROGRAM IS CONSISTENT WITH THE GOALS OF THE COWPER ADMINISTRATION, THE ALASKA LEGISLATURE, THE FISHING INDUSTRY, THE ALASKA BUSINESS COMMUNITY, AND MUNICIPAL GOVERNMENTS.

A. GOVERNOR COWPER HAS APPOINTED A FISHERIES MINI-CABINET TO FORMULATE A FISHERIES DEVELOPMENT POLICY± DESIGNED TO MAXIMIZE ALASKA OWNERSHIP AND EMPLOYMENT IN THE SEAFOOD INDUSTRY AND TO PROMOTE SUPPORT SERVICE DEVELOPMENT IN ALASKA COMMUNITIES. IMPORTANT ASPECTS OF THIS UNDERTAKING INCLUDE IDENTIFICATION OF CONSTRAINTS TO SHORE-SIDE INFRASTRUCTURE DEVELOPMENT AND POTENTIAL METHODS TO MITIGATE THE NEGATIVE ASPECTS OF STATE AND LOCAL TAX POLICY. THE REBATE PROGRAM IS CONSISTENT WITH THESE OBJECTIVES.

B. THE LEGISLATURE'S STATED POLICY IS SIMILAR IF NOT IDENTICAL TO THE EXECUTIVE BRANCH. IN 1987, THE LEGISLATURE PASSED A FISHERIES BUSINESS TAX CREDIT PROGRAM DESIGNED TO FACILITATE GREATER ON-SHORE PROCESSING CAPACITY. CURRENTLY PENDING BEFORE THE LEGISLATURE ARE SJR 51 AND HJR 45, WHICH ARE IMPORTANT POLICY STATEMENTS RELATIVE TO INCREASING ALASKA'S PARTICIPATION IN THE ECONOMIC BENEFITS OF OFF-SHORE FISHING ACTIVITIES.

C. THE NORTH PACIFIC FISHERIES MANAGEMENT COUNCIL IS REVIEWING A RECENT PROPOSAL, SPONSORED BY THE SOUTHWEST MUNICIPAL CONFERENCE, TO REQUIRE USE OF SHORE-SIDE FUEL SUPPLIERS, PROCESSORS, TRANSPORTATION COMPANIES AND THE LIKE.

D. THE REBATE PROGRAM COMPLIMENTS ALL OF THESE EFFORTS AND SHOULD BE REINSTATED IN LAW.

FOOTNOTES;

1. IN 1986, 500 FOREIGN FLAG VESSELS SPENT 34,000 VESSEL DAYS IN U.S. EEZ, BUT USED ONLY MARGINAL AMOUNTS OF U.S. SHIPPING CAPACITY AND OTHER SUPPORT SERVICES (SJR 51 AND HJR 45.)

2. THE AMOUNT OF BULK FUEL CONSUMED IN U.S. EEZ BY FOREIGN FLEETS IS ESTIMATED TO EXCEED 160 MILLION GALLONS ANNUALLY. PURCHASES OF FUEL BY FOREIGN VESSELS FROM U.S. FIRMS IS ESTIMATED TO BE LESS THAN 10 PERCENT OF THE FUEL CONSUMED. AT-SEA REFUELING IS A COMMON PRACTICE NOT ONLY FOR FOREIGN OPERATORS BUT FOR U.S. JOINT VENTURE TRAWLERS (SOUTHWEST

MUNICIPAL CONFERENCE PROPOSAL TO NPFMC).

3. THE ALASKA DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT, DIVISION OF BUSINESS DEVELOPMENT, RECENTLY PUBLISHED A STUDY OF BERING SEA SUPPORT SERVICES FOR 1985. IT REACHED THE FOLLOWING CONCLUSIONS.

A. "THE MOST IMPORTANT REASONS FOR CHOICE OF PORT ARE, IN ORDER, FUEL, VESSEL MAINTENANCE AND REPAIR FACILITIES."

B. "PORTS INTERESTED IN ATTRACTING THESE SHIPS MUST HAVE SUBSTANTIAL FUEL AVAILABLE AND REPAIR FACILITIES, AS WELL."

C. "OWNERS TEND TO COMPARE AT-SEA FUEL PRICES WITH THOSE IN DUTCH HARBOR."

Mr. Bob Evans
Legislative Liaison
Office of the Governor
P. O. Box A
Juneau, Alaska 99811

Dear Bob:

This is to follow up our recent conversation regarding watercraft fuel taxation issues now under consideration by the Legislature.

There are two separate matters of concern which have shifted back and forth from the Administration to the Legislature due to 1987 AG opinions:

(1) Does the State have the authority to tax fuel purchased out-of-state, but consumed in Alaska? As a matter of policy, should the State seek statutory authority if it does not now possess it?

(2) Does the State have the authority to issue rebates of the State fuel tax for fuel purchased in Alaska but consumed out-of-Alaska? If not, is this a good policy?

With respect to fuel purchased out-of-State, the State has historically taken the position that no tax should be levied on fuel purchased out-of-State but consumed in-State. By "historically", I mean from territorial days until 1985, when the Department of Revenue used creativity to interpret its statutory authority to permit the collection of such a tax. Various marine carriers filed suit against the Department in 1985 regarding its authority to levy the tax by regulation, and won a procedural

victory last year. The AG's office then opined that the Department should not attempt to reimpose the tax without specific legislative authorization. (Before the Ag's opinion, two bills had been introduced (SB 100/HB 280) to clarify the statutes to make it clear that the State did not have the authority to levy the tax.)

This issue has been resting peacefully until recent legislation (SB 366/HB 401) was introduced dealing with rebates for fuel purchased in-State, but consumed out-of-State. Historically, the State has been granting these rebates, but discontinued them last year when the AG's office told Revenue it lacked the statutory authority to do so. In the first hearing on SB 366, the Department of Revenue suggested to the Senate Resources Committee that it would support recontinuation of the rebates if the Legislature would give it the specific authority to tax out-of-State fuel. In a subsequent hearing on HB 401, the Department indicated it was drafting a bill to accomplish this.

Before the Governor's office makes a decision on whether to introduce the Department of Revenue's proposed legislation, I urge you to consider the following arguments in opposition to the concept:

(1) The tax would add a "surcharge" to virtually all food and basic goods transported by water to Alaska. All the marine transportation companies would be forced to pass this new charge along to the "customer", which is all of us.

(2) The tax could not be fairly applied, since it would catch major carriers, but miss charter operations, private vessels, etc. The State has no way of monitoring such trips to Alaska, so it would not be likely to collect the tax.

(3) The same tax has also been considered by Revenue for aviation fuel purchased for aircraft flying into Alaska, as the same logic would apply to the State's tax jurisdiction over activities in air space as in the water. Such a tax would run counter to DOT and CED efforts to attract more air traffic into Alaska's major airports, particularly Anchorage.

(4) There is no clear relationship between the proposed tax and public services rendered to those being taxed. The marine carriers operate to and from private facilities, and receive no State services that I can think of.

On the other hand, providing a rebate for fuel purchased in-State but consumed out-of-State does make sense, because it encourages more business for shore based facilities which would otherwise go to offshore supply ships. This incentive for attracting business is widely used in other coastal states. Those states (i.e., Washington) which offer rebates, do not generally collect taxes on fuel purchased in neighboring states but consumed en route to their home ports. This would clearly serve as a dis-incentive to interstate commerce and diminish the impact of their port marketing programs.

For these reasons, I believe that the Administration should not link the two issues (i.e., the revenue from one pays the cost of the other) because they are separate and distinct issues. Further, I urge you to maintain the State's historic position on fuel taxation for sound public policy reasons.

Sincerely,

/S/

STATE OF ALASKA

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER

STEVE COWPER, GOVERNOR

P.O. BOX S
JUNEAU, ALASKA 99811-0400
PHONE: (907) 465-2300

February 12, 1988

The Honorable Bette Cato
Alaska State Legislature
P.O. Box V
Juneau, Alaska 99811

Dear Representative Cato:

At the recent hearing on HB 401, the Transportation committee requested additional information from this Department.

(1) Is there documentation which substantiates the difference in fuel prices between shorebased and floating/foreign distributors?

Foreign sellers are not required to file tax returns with this Department. We have unconfirmed reports that the offshore price is only a few cents per gallon cheaper than the onshore price.

(2) Does the watercraft tax receipts correspond with the docks and harbor appropriation levels?

The watercraft motor fuel tax presently generates revenues of $5 million per year. Correspondingly, the following budget request items relating to harbors and docks will exceed the revenue estimates:

St. Paul Island - Completion of harbor project	$4 million
Governor's Jobs Bill - Harbor projects	2 million
Annual Debt Service on existing facilities	$4.9 million ('87) $4.1 million ('88)

(3) What is the breakout of refunds (old program) by (a) country (b) state?

Marine Fuel Tax Refunds

$4,229,375.06 total refunded 18 month period

Alaska	94	- 14%
Washington	447	
California	27	
Oregon	28	
Texas	7	
Ohio	11	- 86%
Maryland	2	
Virginia	1	
Canada	22	
Japan	4	
England	1	
	644	

(4) Does the 86% nonresident figure represent the number of claims or the dollar amount?

86% of the claims were filed by nonresident businesses.

Sincerely,

Hugh Malone
Commissioner of Revenue

Marine fuel tax rebate pushed

By SUE CROSS
THE ASSOCIATED PRESS

A Kodiak senator backed by the fishing industry is launching a drive to bring back Alaska's marine fuel tax rebate, a program that returned about $2 million a year to fishermen before it was halted in September.

Sen. Fred Zharoff, D-Kodiak, says the measure he introduced Monday (SB366) would boost business in coastal towns that supply the Gulf of Alaska's international fishing fleet.

"When a vessel comes in to purchase fuel, it buys more than fuel, – also groceries, clothing, etcetera," said Zharoff, a fisherman himself. "If we can offer this incentive, we'll be able to offer not only fuel, but other services as well."

The bill would rebate Alaska's 5-cents-per-gallon marine fuel tax for vessels that burn the fuel more than three miles offshore, outside Alaska's territorial limit.

Revenue officials say the state may not be able to afford the rebate anymore.

It was suspended in September and subsequently dropped.

FISCAL NOTE ATTACHMENT

(Replace Parks Highway Signs with Mitchell Expressway Signs)

ANALYSIS:

The name change of this section of highway from Parks Highway to Mitchell Expressway will require replacing the old signs with 271 square feet of new signs. The contract price for the new signs will range between $40 to $50 per square foot, placing the cost of the change between $8,688 to $10,880.

It may be necessary to replace some of the support structures, as the new signs are larger than the old, due to the increase in the number of letters in the legend.

Several of the signs are located on signal mast arms and the increased size of the sign will necessitate checking the structural adequacy of the signal poles and mast arms with new signs. If the signal poles are not adequate for the new sign legend, it may become necessary to decrease the size of the legend below what is considered acceptable in the Federal Manual on Uniform Traffic Control Devices.

AMENDMENT

ROBERT J. MITCHELL
Pioneer Memorial Service

First United Methodist Church
Fairbanks, Alaska
February 27, 1980
1:00 p.m.

Brother Robert J. Mitchell, known to his many friends as "Mitch" was a life-long Alaskan. He was born in Fairbanks on November 2, 1918, the son of Eliza and Charles Mitchell. His mother, Eliza Hatch Mitchell, attended school in Fairbanks and later worked in the Fairbanks Postoffice for many years. His father, Charles, was associated with Waetcher Brothers and was a member of Igloo #4, Pioneers of Alaska, Roll Call number 1597. Mitch and his sister, Dorothy Hardy, grew up in Fairbanks and attended local schools. On occasions, in reminiscing about his school days, Mitch would grin and remark "what a difficult time Benji Adler had with him in her English class." During high school he played basketball, a game in which he maintained an active interest throughout his life. After graduating from Fairbanks High School in 1936, he continued to play basketball as a member of "Sticky" Griffins Wolverines in a league that had players such as John Butrovich, Joe Franich, Bill Stroecker, Jack Wilbur and the Ringstad brothers. When queried about the success of his team, his answer was, "We played a lot of games but Johnny Butrovich's team always seemed to come out ahead."

Like many other local boys, Mitch worked for the Alaska Road Commission during high school summer vacations and later he was employed full-time in the various highway camps in the Fairbanks District. He did his job with enthusiasm and was always interested in learning more about his work from experienced fellow workers.

The result was that he developed a knowledge of heavy-duty equipment, construction and transportation that would serve him well in the years to come. His sense of detail and balance also came into focus while working with the road commission. About 1937, Bob, after receiving a paycheck, decided that he was being under paid for the period. He went to Frank Nash with his analysis and Frank took him to the time-keeper who showed "Mitch" that he was credited with all the hours that he had worked. The offsetting feature was that "Mitch" was attending too many meal sittings and that his account was being deducted for every one of them.

After service in the Army during World War II in Alaska, Canada and Montana, he returned to Fairbanks and his stories of the "Fighting 83rd" provided amusement for his associates--but often left the conclusions to their imagination.

The happiest day of Mitch's life was on January 20, 1945, when he married Mary Maureen Ludvigson, a vivacious, petite girl who had come from Barron, Wisconsin, to work for Metcalf, Hamilton Kansas City Bridge Company at Ladd Field during World War II. Bob and Mary continued to live in Fairbanks and were blessed with three children, Gregory Charles Mitchell, Janelle Lois Weaver and Judith Louise Jasperson, all, who with their respective spouses, Jacquelyn, Tom and Jim, ~~all~~ reside in Fairbanks. Grandchildren are Joann and Douglas Weaver, Peggy Jasperson, Roberta and Gregory Mitchell II.

After returning to Fairbanks, Mitch, with his life-time friend Clyde Geraghty, formed Mitchell Truck and Tractor, Inc.
The Company was one of the early pioneer trucking companies hauling over the Richardson Highway from Valdez. The two partners were forward looking and always searching for more efficiency that resulted in such innovative equipment as a booster engine and drive

train for hill climbing--a unit that was installed under the flat bed of a 30-foot semi-trailer.

In 1952, Bob Mitchell, together with Clyde Geraghty, Carl Heflinger, Carl Erickson and Harvey Marlin, Jr., formed GHEMM Company, Inc. This company started out in earth work and equipment rental and has grown over the years, performing general contract work throughout central, northern and western Alaska, including construction of the Alyeska pipeline-highway Yukon River Bridge jointly with the Monson-Osberg group of Seattle, Washington. Good friend Conrad Frank joined Ghemm Company in 1959.

In 1957, Bob formed Tip Top Chevrolet, together with other longtime Fairbanks associates such as Bob Ginther and Clyde Geraghty and was President of this company. He was also a partner in Metro Company and Tria Company and was President of New State Lands, Inc.

In the early 1960's, GHEMM Company performed several difficult construction jobs jointly with Guy and Dick Rivers and also one fairly large bridge job across the Susitna River at Sunshine on the Parks Highway jointly with the Rivers Brothers and Bill Vehmier of Fairbanks.

One of the original Mitchell Truck and Tractor employees, Willis Lundberg, is still with GHEMM Co., Inc. Bob and Willie always worked together through thick and thin to make things come out for the company.

Bob Mitchell was an enthusiastic Fairbanks booster with an outgoing personality that gave an air of welcome and confidence to those with whom he came in contact. He was instrumental in the development of many beautiful residental subdivisions and the industrial area of South Fairbanks and Metro Field including its

airport and the rail spur to the International Airport. Mitchell Truck and Tractor participated in the development of Mitchell Subdivision, Lemeta, Aurora and Westgate. Later, GHEMM Company, Inc. was involved with New State Lands in Fairwest and Edanella.

"Mitch" was especially proud of Metro Airport and the Railroad Spur to the International Airport. His associates often joked that when a tanker train went by or a Herc or other large airplane landed, Mitch was probably out there standing at attention in salute.

During these years, Bob was an instrument rated pilot and would fly personnel and needed parts and equipment to the projects to help keep the jobs on schedule.

Mitch was always dedicated to leading young people and from him many fortunate young men and women learned skills in the operation of equipment and most of all, the value of hard work, a positive approach to all endeavors and attention to detail. The young people who worked for him were very concerned about performing their job correctly as he had directed but all too frequently when he would be away from the scene, some unfortunate event would happen, such as a tractor getting stuck. They would try with feverish desperation to correct the problem but invariably he would return before recovery had been made, would quickly survey the problem, then simply climb on the tractor and walk it out or do some sort of thing "so apparently simple" to overcome the problem. Many of these young people are here now and will be carrying on for the good of the community and future generations.

Bob was a special person who was enthusiastic and energetic in all of his activities. More often than not he could be found on a tractor at 4:30 - 5:00 a.m. catching up on work that needed

to be done to assure continuity of projects. Also, he was a man of action and has been known to stimulate activities of others by throwing a full bucket of ice water on a partner enjoying a leisure shower. You can imagine the results.

His excellent personality and sense of humor were catching and, as a result, he was highly respected by his fellowman in all walks of life and those who came in contact with him were that much better off because of the association.

Mitch's philosophy of life can be summarized to a degree by the following thoughts.

1. There is far more time and money lost by indecision than by wrong decision and his success proved the point.

2. No matter how difficult or adverse a problem, treat it as an opportunity.

3. When the going gets tough, the tough get going.

Brother Robert J. Mitchell, Roll Call Number 2194, joined Igloo #4, Pioneers of Alaska on October 2, 1951. He passed away in Palm Springs, California on February 23, 1980 while in the company of his friend and partner of long standing, Clyde Geraghty. He is survived by his widow, Mary, who resides at the family home at 665 - 10th Avenue, Fairbanks and his children and grandchildren. His sister, Dorothy, preceded him in death.

The outstanding contributions that Brother Robert J. Mitchell has made to family, friends and colleagues will be long remembered. Fairbanks and Alaska are that much richer for his having come this way and pioneered on various fronts for the benefit of society in the true tradition of Alaskan Pioneers.

"Independent in All Things . . . Neutral in None"

Other opinions expressed on this page do not necessarily reflect those of the Daily News-Miner.

The Mitchell touch

One doesn't have to look far to see the marks Robert J. Mitchell left on Fairbanks, and we'll all miss his brand of full-speed-ahead promotion for a long time.

Bob Mitchell was born here in 1918 and devoted his whole life to his belief that Fairbanks has a big place in Alaska's future. He had a contagious enthusiasm for the future of the Interior, and he never avoided the hard work necessary to make his efforts pay off.

All of Mr. Mitchell's work was important to him, but perhaps his biggest dream was the development of industrial property south of Fairbanks. He's the man who convinced other businessmen to finance and donate the materials and labor necessary to build the rail spur to Fairbanks International Airport. It might have been done eventually, but his efforts got it in time to serve through the trans-Alaska pipeline years and provide low-cost jet fuel shipping from the North Pole Refinery now.

He and his partners also invested their own labor and encouragement in Metro Field and some of the industries that have grown up around it after this industrial air park opened. This was Mr. Mitchell's way—he never waited for things to happen; he made them happen.

That's the way things were ever since he came back from his World War II hitch to get married and form Mitchell Truck and Tractor, a pioneer name in Richardson Highway transportation. He was also president of Tip-Top Chevrolet, one of the founders of Ghemm Co., a partner in Metro Company and Tria Company and president of New State Lands Inc. Both his family and his businesses are still here, and still thriving.

But perhaps Mr. Mitchell's greatest contribution was the lasting spirit he left here through his work and inspiration for young people in Fairbanks. He was as devoted to our community as he was to the business world, and because of that we'll never forget Bob Mitchell and the special touch he had in making our town a better place to live.

seen in a bar, drinking and moving from his residence without notifying his parole officer. He said the last point was not true.

Still another inmate, in for selling marijuana, said he has refused to go before the parole board and will instead serve his full three years rather than play games with a parole hearing.

"I had Rev. Lyons say that I'm an insult to come up for parole," one inmate said.

"This is my first adult offense," one man testified, but the board dwelled on

thought the board should have professional members, and several said yes.

Inmates also said they would like to have halfway houses to help them re-integrate into society.

"We have a lot of people in here for three and four years because they got drunk or left their areas of residence without the parole board's permission. It costs the state $26,000 a year to keep a man in here--over a drunk? It's pretty serious," one inmate said.

Robert Mitchell rite Wednesday

A memorial service for Robert J. Mitchell, president of Tip-Top Chevrolet and one of the founders of Ghemm Co., will be Wednesday at 1 p.m. at the United Methodist Church, 915 Second Ave.

The service will be conducted jointly by the church and the Pioneers of Alaska.

Mitchell, 61, died Saturday while vacationing in Palm Desert, Calif.

He was born in Fairbanks Nov. 2, 1918, to Eliza and Charles Mitchell and had lived here all his life.

Mitchell attended grade school and high school in Fairbanks, graduating in 1936. He was active in basketball and played with "Sticky" Griffins' Wolverines in the same league as John Butrovich, Joe Franich, Bill Stroecker, Jack Wilbur and the Ringstad brothers.

After serving in the U.S. Army during World War II in Alaska, Canada and Montana, he formed Mitchell Truck and Tractor Inc. with Clyde Geraghty.

He married Mary Maureen Ludvigson on Jan. 20, 1945. Their three children, Gregory Charles Mitchell, Janelle Lois Weaver and Judith Louise Jasperson, live in Fairbanks.

The Mitchells' grandchildren are Joann and Douglas Weaver, Peggy Jasperson, Roberta Mitchell and Gregory Mitchell II.

Mitchell Truck and Tractor was one of the early trucking companies hauling over the Richardson Highway from Valdez.

It built such innovative equipment as a booster engine and drive train for climbing hills that was installed under the flatbed of a 30 foot semi trailer.

In 1952 Mitchell formed Ghemm Co. with Geraghty, Carl Heilinger, Carl Erickson and Harvey Marlin Jr.

Ghemm began in earth work and equipment rental and expanded over the years to perform general contract work throughout Alaska. In a joint effort with a Seattle company, Ghemm built the Yukon River Bridge.

In 1957 Mitchell founded Tip Top Chevrolet along with other longtime Fairbanks residents. He was also a partner in Metro Company and Tria

ROBERT MITCHELL

Company and was president of New State Lands Inc.

He was instrumental in developing several subdivisions and the industrial area south of Fairbanks.

"Mitch," as he was known to his friends, was dedicated to leading young people and instilling in them the value of hard work and a positive approach to life.

The family asks that memorials be given to the Alaska Special Olympics, 1024 Kellum St., or to the United Methodist Church.

Honorary pallbearers are Peter Eagan, Randy Frank, Steve Frank, Mike Geraghty, Steve Geraghty, Robbie Gunther, Bill Gordon, Harvey Marlin III, Gary Norrgard, Gary Wilken, Carl Erickson, Con Frank, Clyde Geraghty, Harvey Marlin Jr., Bob Bettisworth, Jack Cook, Jim Dieringer, Dan Eagan, Bob Gunther, Bud Meyeres, Francis O'Connor, Ralph Paden, Mark Ringstad, Jack Wilbur, Clyde Hovik, Gene Rogge, Gene Miller, Harry Porter, Cliff Burglin, Wally Burnett, Tom Miklautsch and Leo Scholtfeldt.

Text from Public Hearing in Fairbanks

Thursday, March 27, 1986

On House Bill 664, Senate Bill 461

12 Noon to Two P.M., Noel Wien Public Library

Senator Coghill

"Okay, we will bring our public hearing to order and its 12:10 p.m. and its the 27th of March 1986. The purpose of the hearing today is to discuss and gather opinions on House Bill 664 and Senate Bill 461, Both entitled an act relating to naming the Robert J. Mitchell Expressway. My name is Jack Coghill and I am chairman of the Senate Transportation Committee. It is my responsibility to hold the hearing. In order for us to name a road or a expressway after a person using federal funds we have to have a public hearing in the area in which it is going to effect.

I have known Bob Mitchell for as long as I can recall, I remember when he was working with the old road commission. After we all got out of the service he had already started his truck and tractor business. A lot of us boys, when we got out of the service, the first place that we went was to work with Bobby Mitchell. We were either greasing cats or working in one way or another. It was his way of keeping the home town boys going. After he expanded to the point that he had a freight service and got involved with Ghemm Company and was involved and was a tremendous supporter of the Interior of Alaska...the purpose of projecting this name forward as far as the transportation committee is concerned is that it is time that we in Alaska start naming some of our road and rights-of-ways after our old timers that are our contemporaries. We have people signing up, and as you come in we would like you to come forward and sit on one of the front seats so that we can tape you and put you in the record."

Senator Coghill read the letter from Bruce Stacer, dated March 26, 1986.

Testimony Given

Francis Erickson
1205 10th Avenue
Fairbanks, AK 99701
456-5358

"I am also a life long Alaskan, I have lived in Fairbanks for 64 years. I believe that this is very fine and very commendable, however, there are a lot of other pioneer truckers in this country that have not had much recognition, like Gezzy (spelling?) and Roggy (spelling?) just to name two. I think that it is about time that we get these older timers in. As far as a pioneer trucker, of course, Bobby started in 1945-46 after the war; and his partner Gerhatty, and his family, are certainly well know here. They have extended themselves over quite some expanse. Clyde is going to be the grand president of the grand igloo here in a couple of years. I think that he deserves some recognition also.

There are quite a few here, and as far as the Railroad Spur and the Mitchell race way and so on, there are other partners in that enterprise that never have received some recognition either. I don't know if you have to be deceased to receive recognition, but it kind of seems that way. I think that it is about time that we turned to some of the others here. Don't misunderstand, I was a friend of Bob Mitchell's and knew him all my life, but you people have a little more say so and when you get behind all of these things, it seems that when I read in the paper it has already been done. By the time that we get here and get to the hearing...this is the first time we heard of it. I didn't have time for...well to get background on some others that I would have named probably, because I just read it in the paper yesterday. So sometimes, I feel that we need a little more advanced warning of these hearing too."

Joe Tremarello
Box 80974
College, AK 99753

"I am a forty year resident of the Fairbanks area and I feel that it is very appropriate, and certainly support, House Bill 664 and Senate Bill 461 as stated. Not only for Bob's contribution to the area of construction, but as a parent raising his family here and his support to my background in teaching. His support to the schools and the staff over the years has been commendable. He did a lot for youth and I feel that it would be very appropriate to name this expressway after Bob."

Ken Fanning
Box 80292
College, AK 99708

"I would like to comment on the previous comments. I appreciate the fact that you are considering naming something after somebody of recent generation who, in fact, has left a strong family unit that is continuing on that way. I think, personally, that it is a good idea to consider naming this road after people that are continuing to support the community."

Oliver Backlund
No Address Given
President of the Fairbanks Pioneers Igloo

"I support this bill, I think that there is going to be a lot of other roads that we can name a lot of other Alaska pioneers after. I think Robert Mitchell was really active in the area and a respected local businessman. I really support this bill."

Joe Balch
7665 Salcha Road
Salcha, AK 99714

"I like Mitchell, although that was a few years ago, to tell you the truth. I would like to see the roads named after a man that was so industrial instead of some politician. He has seen his schooling through the school of hard knocks, actually, and I think that this is an appropriate name for it."

Shirley Demientieff
1205 Kennicott
Fairbanks, AK 99701

"I have been in Fairbanks for twenty years in all and I was born and raised in Nenana, as you know Mr. Coghill. I have no problem with naming roads after people. That does not bother me at all. I like the idea of the South Expressway, I think that it is long overdo, I think that it is something that we really needed. But my problem, Jack, is that when I first heard the name I said 'who is Robert Mitchell?' So far I heard...I don't even know if he is dead or alive...with no disrespect, I have no idea of his contributions have been. I am assuming that he is someone who is a good guy. My idea is a little bit different. I would think that...Natives make a population of 10-15% of the statewide population now and there is really nothing named after Native people in the interior...

What I would like to see is that the expressway be named after our champion dog racer. George Attla, seven time winner of the North American, eleven time winner of the Rondevue in Anchorage. He is a Huslia Hustler, he lives in North Pole, he will be using that road. That would be something that would be current, that is well known; when you ask who George Attla is, nobody is going to say 'who is George Attla?' they are going to know who he is. It would be something that I would be extremely proud of and that other people could be extremely proud of too. I just heard about this early this week but I have been able to get these names of people. This is strictly grass roots, not going anywhere other than FNA and Tanana Chiefs. Those are over a hundred names of people that feel the same way that I do about this expressway. (Ms. Demientieff brought a petition to the table and presented it to Senator Coghill) That (the petition) is in support of the name "George Attla Expressway."

Pete Eagan
P.O. Box 1170
Fairbanks, AK 99701
456-4793

"My name is Pete Eagan, I was born and raised here in Fairbanks and I have known Bob Mitchell since I was a child. He was a real good friend of my family's. Later on I had the honor to have worked for Bob when I was in high school and college. I learned a great deal from Bob. He was a very fine man, well liked by everyone in town. He had a terrific sense of humor, and he was definitely from the old school, where your word was your bond. If Bob told you he would do something, he would do it. He was very involved in the whole development of the South Fairbanks, Industrial area and I think that this would be a very fitting tribute to Bob to name this new expressway after him. Thank you."

Harold R. Herning
Box 1792
Fairbanks, AK 99701
488-2291

"I knew Bob for 43 years up until the time of his death. I think Bob, of all the people in Fairbanks, probably is one our truest Alaskans we have ever had. He was truly Alaskan in every sense and the naming in appropriate. This is his home ground. That is his life, to develop that area and I think that it is no more than appropriate that a man of his caliber be recognized. There is nothing that can be said about Bob that is wrong. The only thing that can be said is praise as far as Bob is concerned. I thank you."

Jim Desmond
No Address Given

"I would certainly like to testify for the bills to name the Expressway the Robert J. Mitchell. I knew Bob for years and years. A wonderful man, and inspiration to all the people that were my age when I was a teenager when we interacted with Bobby a lot. And I certainly feel that he is worthy of the honor."

Terry P. McLean
1907 Capital
Fairbanks, AK 99709

"Yes, Jack, I would like to testify in favor of the Robert J. Mitchell Expressway. I personally owe a great deal to Robert Mitchell and his partners in Ghemm Company. I was able to complete my education at the University of Alaska due to their summer and winter employment. Bobby Mitchell was always a friend as well as the boss. Although when he made up his mind to do something it was often difficult to get him to change his mind, he would always hear you out or listen to your suggestions and ideas. Although Air North is no longer flying it provided jobs for many many people and pilots that are today flying jets all over the United States and the World. Bobby Mitchell worked thousands of hours to building the runway at Metro Field and was always able to help people, no matter what the situation. Thousands of people have enjoyed stock car racing because Bobby Mitchell and Ghemm company allowed GFRA to build the race way across from the float pond at Metro Field. Many of the roads that were built that will intertie with the Expressway were built by Bobby Mitchell or people that he helped provide employment for. I feel that it really makes sense to honor those that have helped build the community and the character of the people living in the Fairbanks area."

Mark Ringstad
502 Monroe Street
Fairbanks, AK 99701
456-5734

"I knew Bob Mitchell all my life, was raised with him here in Fairbanks. Bob was in the construction industry and trucking industry all of his adult life. He was one of the prime movers for the railroad to go to the South Fairbanks area. He was one of the major developers of the entire Van Horn Road area. I think that it is most fitting and most appropriate to name that expressway after him."

Gary Wilken
2600 Riverview Drive
Fairbanks, AK 99701

"I carry with me some written testimony, Senator, from Bill Gordon and a letter from Pete Eagan Sr. and Dan Eagan, they are out of town and wanted to be sure that they heard today. Just a couple of things...it is difficult for me to talk about Bob Mitchell, he was such a big part of my life, Bob, as far as the South Fairbanks area, we all know, was one of the leaders in developing that area. I went to work with Bob in the early sixties when there was nothing but a dirt road and he lead us off into the muskeg and said 'this shall be a airport.' So, we know that he was one of the people that was instrumental. To name that highway after him is very fitting. I appreciate the opportunity to provide testimony and look forward to bills passing. Thanks, appreciate the opportunity."

Nancy Lee Baker
49 Timberland Drive
Fairbanks, AK 99701

"I would like to comment, and I am going to comment before I read the bill, my idea is that the road should be called the Parks Highway Extension, because that is what it logically is. That is what people will call it naturally. One reason that I am a little concerned is that I happen to make a small map myself (in the record). To put another name on it, for map makers and for tourists it seems to me that it would be utter confusion. Logically it is the Parks Highway extension. I have a lot of respect for the person named here, but that is beside the point. I don't think that we have a right to go around confusing the public."

Walley Burnett
1901 Crosson
Fairbanks, AK 99701

"Senator Coghill, it is nice to be here. Yesterday I talked to a couple of people and they mentioned that there was a possibility that they would be naming the South Fairbanks Expressway. Bob Mitchell was a long time Fairbanksan from a long time Fairbanks family. He was very instrumental in developing the Van Horn and Peger Road, in which this road will be passing through. If you will recall in the early days of the pipe line, Bob Mitchell was one of the main people involved in the development of the Railroad that went into the South Fairbanks area. He moved lots of gravel and made lots of roads, often with out pay. I feel that when we drive back and forth on Airport Road, Van Horn and Peger, and we do go through the expressway, we do think of our good friend Bob Mitchell. I whole heartedly would like to give my approval of putting his name into naming it the Mitchell Expressway."

Harvey Marlin
665 10th Ave.
Fairbanks, AK 99701

"I have lived in Fairbanks since 1929 and have know Bob Mitchell from that day forward. Not only as a classmate, but as a good and personal friend. When it came to my attention that this expressway was to be named, perhaps anyway, in memory of Bob Mitchell, I was very definitely impressed and I still am. I think that it is a very wise move. Bob was a gentleman that promoted for the City of Fairbanks all of his working years. As a matter of fact, he began his working career with the Alaska Road Commission. Both he and his partner began a trucking operation from Valdez to Fairbanks with the assistance of the veterans aid. There again they continued on in to the highway program, Clyde previous to that was a master mechanic to the road commission. Bob Mitchell has always been associated with the road system and has always done a great amount over and above walking the extra mile to make the roads within our community better, not always for pay, by the way. I think that this is a very wise choice and I am one thousand percent in favor of it."

Con Frank
200 Gold Dust Drive
Fairbanks, AK 99707
479-2828

"Well, I would like to say that I would endorse the naming of this section of highway for Robert Mitchell. I have known him almost forty years since I came to Alaska. He was one of the first people that I met when I came here. I have been a partner with him and closely associated with him for twenty years. He was a very positive person and dedicated a lot of his efforts to the development of Fairbanks, and especially the South Fairbanks area. He started out on South Cushman, he and his partner, started in there in 1948-49 and then gradually moved further south there to the Van Horn Road area. I would just like to say that I would endorse this naming."

Senator Coghill

"Thank you very much Mr. Frank, is there anyone else that would like to make a statement? If not, then our public hearing is closed. This will be transcribed and will be put into the record. It will be used in the deliberation of both the House and Senate. They may want to have more hearings. If that is the case, then this will be part of that record."

Let's call the extension the Parks Highway

Guest Opinion

By NANCY LEE BAKER

The four-mile extension of the George Parks Highway will end by joining the Richardson Highway near the old 30th Street exit. The work is scheduled for completion in September 1988.

A move to call this four-mile section the Robert J. Mitchell Expressway began in February 1986, when Sen. Jack Coghill and Rep. Steve Frank initiated Senate Bill 461 and an identical House bill. They got through most committees but not to both floors due to pressures of the closing days.

The same legislators are in the process of introducing the bills again this year. Since there was some opposition from individuals two years ago (which did not keep them from trying to hustle the bills through in 1986), the approach this year appears to be to go directly to large bodies such as the city council, borough assembly, Chamber of Commerce and its transportation committee for their public endorsement. These endorsements are intended to convey the broad approval of Fairbanksans for this move.

In "talking around," however, I find almost no individual support for the resolutions these bodies endorsed, except from some personal friends of the late Robert Mitchell. The consensus was to maintain the same name.

It is understandable that at "first thought" it might seem like a good idea to name a new piece of road after a friend, but the result of suddenly changing the name of a highway that thousands of people will have been traveling on for 358 miles at speeds in excess of 50 mph is not an inconsequential thing to be taken lightly. It deserves serious "second thoughts." Some of them follow:

Confusion: The bottom line is, calling the last four miles anything but the Parks Highway would be confusing. It is one continuous highway, doesn't turn, get wider, narrower, or change in any way. A sign proclaiming you are all of a sudden on a different highway spells instant confusion to a visitor to our area. This could precipitate slowing down, changing lanes, conversations with the "co-pilot" about how we got "off course." Any one of these reactions are a basis for possible accidents.

We are a tourist dependent economy. We spend hundreds of thousands of dollars attracting visitors. Shouldn't we be more considerate of them? Many of them are older citizens, with slower reactions in some cases, and driving less maneuverable vehicles with the poor visibility that RV's often offer.

A different name could offer problems and expense to mapmakers, as well as map readers who see a different name (if there is room to print it) on what appears to be obviously the same highway.

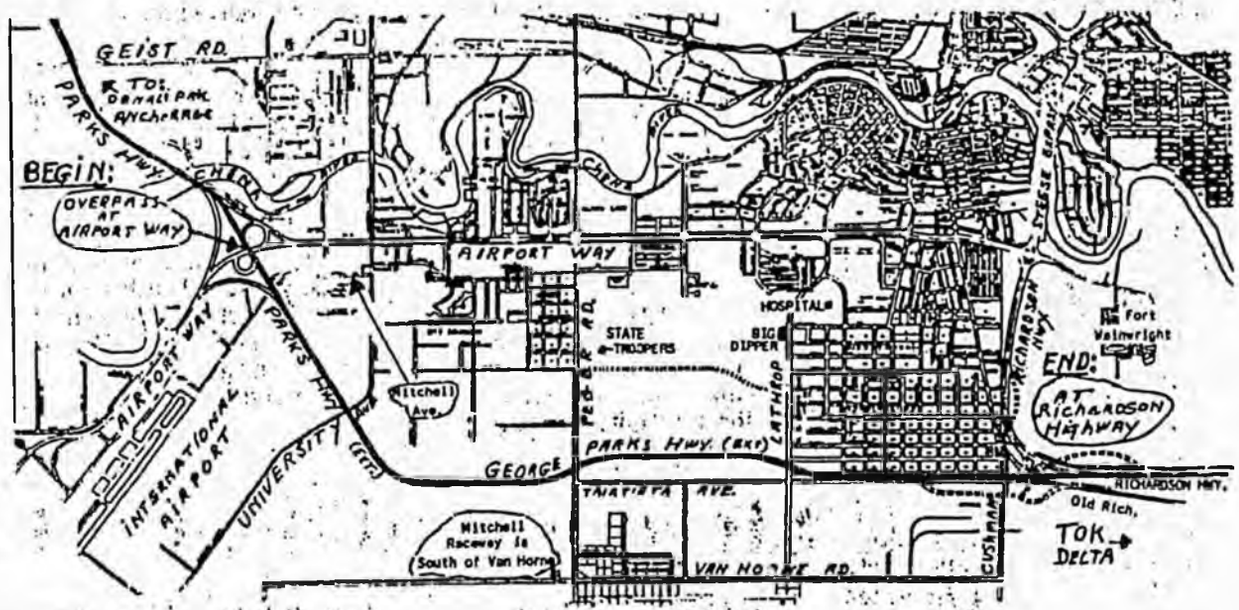
Where would the highway signs be placed to tell drivers they are now on a different highway? Driving to the airport from town, a motorists would see a sign announcing the exit to "Highway 3, Parks Highway." A few hundred feet later on a sign would say "Highway 3," with a different name.

Think seriously (until it becomes funny and you start laughing) of various possible confusions in giving directions about how to get "from here to there" when it requires getting on or off the new portion of road should it have a different name.

It is worth noting that the engineer who designed the highway is also "seriously concerned about the confusion that would result if the name of the new portion were to be anything other than the Parks Highway."

Cost: It will cost at least $10,000 to remove the dozen or more signs that are already up at University, Peger, and Lathrop intersections and replace them with another name. If the new name has many more letters they will have to be made smaller in order to fit the signs. The $10,000 could probably be better used for maintenance! Signs at University Avenue have been there for two years. It would be nice if they had squatter's rights!

In answer to my "confusion concerns," some legislators said the public would get used to it. The *visitors* will not get used to it, and why should the local people have to go through the process? There are better ways to commemorate people than to confuse the public.



Map shows the route of the Parks Highway extension through South Fairbanks.

Map courtesy of Nancy Lee Baker

Another consideration, in view of the recent attempt to avoid duplicate street names in town. There is a Mitchell Avenue, named after the same Mitchell. It runs off University Avenue, next to Erickson Avenue, also named after a partner in the Ghemm Co. of which Mitchel was a partner.

The new portion of the highway can only be named by legislative action. This has not happened yet but it is in the brewing stage. Let's hope some legislator, with grass roots encouragement, will speak up and propose a bill to name it the Parks Highway.

Nancy Lee Baker is a 37-year reside with an interest in mapmaking.

THE GRANGE

AMERICA'S FAMILY COMMUNITY FRATERNITY

Two Rivers Grange No. 3

Feb ruary 2, 1988
6128 Chena Hot Springs Road
Fairbanks, AK., 99712

Representative Steve Frank
Pouch V
Juneau, Alaska, 99811

Dear Representative Frank:

Members of the TWo Rivers Grange #3 urge you to reconsider your plans to introduce legislation to name the Parks Highway extension the "Robert Mitchell Highway". Our objection is to the confusion this will create especially for tourists. Many of us have traveled into cities where streets on one side of the road are one name and a different name on the other side. Fairbanks doesn't need that sort of confusion. We urge you to propose a bill to name the extension the "Parks Highway".

Yours truly,
Two Rivers Grange #3

Alice H. McKee, Sec.

February 1, 1988

Senator John (Jack) Coghill,
Alaska State Legislature
Juneau, Alaska

Dear Jack,

At our Chamber lunch meeting last week, we were given some information regarding a bill you are co-sponsoring--to rename a portion of the George C. Parks Memorial Highway, for Robert Mitchell.

Now you know as well as I, that highways, roads, streets and by-ways in Alaska are not all that easy to follow because of lack of signing or poor signing. (the Lower '48 is not much better in many places). Why further confuse our dear folks, visitors and residents alike, by changing the name of a highway right in the middle of things.

I have no quarrel with naming something after Bobby Mitchell. He was a GOOD ball player, worked hard at his chosen profession, and I have known him ever since I can remember. However, there are a couple of memorials to him already: a street named Mitchell Place, and the Mitchell Raceway off Van Horn Road.

We want to encourage visitors and Alaskans to visit us in the Interior, and not drive them crazy with highways that have no name continuity.

Surely you and Steve can think of something else much less disconserting if you wish to further memorialize Bobby Mitchell. Please reconsider and withdraw this bill.

Thanks for taking the time to read this letter.

March 25, 1986.

To Whom It May Concern:

As a property owner and life-long resident of Alaska, I wholeheartedly support the naming of the "30th Avenue Bypass", the Robert J. Mitchell Expressway.

Bob Mitchell has made a lasting impact on the development of our community. More specifically, Bob contributed to much of the growth in South Fairbanks and the area south of Van Horn Road. His very business located along Cushman Street, along with his development of Metro Industrial Airport, inspired many others to follow. Without his dedication and early belief in Fairbanks' future the need for this bypass would probably be many years yet in the future.

It would be most fitting to ' this highway in honor of one of Alaska's pioneers who ga') much of his time to his community. Please designat ' "30th Avenue Bypass" the Robert J. Mitchell Expressw

Sincerely,

Bill Gordon

March 26, 1986

Senator Jack Coghill
Alaska State Legislature
Pouch V (MS 3100)
Juneau, Alaska 99811

Dear Senator Coghill:

It has come to my attention that there is a bill or resolution before the legislature regarding the naming of the new South Fairbanks Expressway. As proposed, this expressway between the Airport Road overpass and the proposed Richardson Highway overpass would be named the "Bob Mitchell Memorial Expressway."

I knew Bob since I was a child, and later on had the great fortune of working for him during my high school and college years: I learned a great deal about life and the value of good hard work during this time. Bob was a very fine man, and was heavily involved in the development of this South Fairbanks industrial area, rail spur, and road system.

I think that the naming of this expressway after Bob would be a very fitting tribute to a fine, highly-regarded individual. I would welcome and appreciate your support in this matter.

Sincerely,

Pete Eagan

To Whom It May Concern:

As a life-long Alaskan, I strongly Recommend that the 30th Ave By-Pass be named ~~the~~ in honor of, and in memory of, Robert J. Mitchell. Bobby Mitchell was also a life-long Alaskan. Even more importantly, he was truly a pioneer in the development of transportation, in particular, the highway system in and around Fairbanks. I knew him personally since 1937. He was a life-long resident of Fairbanks. After WWII, he used his GI loan to buy a Caterpillar. Before the war (WWII) he worked ~~on~~ with the Alaska Highway Commission. He developed a trucking operation with Clyde Geraghty that serviced Valdez and Fairbanks. He was one of the founding partners in GHEMM Construction Co. and built many roads and bridges throughout Alaska. Bobby Mitchell devoted all 63 years of his life and his boundless energy and optimism to ~~the~~ his Alaskan Gold Select in the future of Fairbanks. He deserves to be remembered.

RESOLUTION NO. 2918

A RESOLUTION TO MEMORIALIZE AND NAME THE ROBERT J. MITCHELL EXPRESSWAY.

WHEREAS, Robert J. Mitchell, a life-long Alaskan and resident of the interior, was in early adulthood an employee of the Alaska Road Commission and a founder of Mitchell Truck and Tractor, an early interior Alaska transportation company; and

WHEREAS, Mitchell was one of the founders of GHEMM, Inc., an important Alaska construction firm, and was one of the first persons to develop the potential of the current South Fairbanks industrial area; and

WHEREAS, through Mitchell's efforts a rail spur was constructed from Fairbanks through the South Fairbanks industrial area to the east side of the international airport; and

WHEREAS, the new South Fairbanks Expressway is immediately adjacent to the area developed by Mitchell and with which he was deeply involved before passing away on February 23, 1980; and

WHEREAS, Mitchell left behind a legacy of the strong family unit, friendship to all, knowledge of the value of positive thought and undaunted faith in the future of Fairbanks and Alaska; and

WHEREAS, the City of Fairbanks wishes to remember Robert J. Mitchell's positive contribution to the people of the interior and to the development of the South Fairbanks industrial area.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF FAIRBANKS, ALASKA, that the section of the Alaska Highway System from the new Airport Road Interchange to the Richardson Highway is to be named the **Robert J. Mitchell Expressway.**

PASSED and APPROVED this 21st day of December, 1987.

FEB 12 1988

February 8, 1988

The Honorable Betty Cato
Chairperson, Transportation Committee
Alaska State Legislature
Juneau, AK 99801

Dear Ms. Cato:

This letter is written to strongly support the naming of the new 30th Avenue by-pass in Fairbanks after Robert J. Mitchell.

As a property owner in South Fairbanks which is the area served by this road and as a 2nd generation Alaskan, I can think of no more appropriate person to remember by this road. Bob Mitchell devoted much of his adult life to pioneering the development of Fairbanks - especially the area in south Fairbanks which is crossed by this expressway.

I believe it is necessary to provide a descriptive name to the couplet which joins the Parks Highway to the Richardson Highway. It is most appropriate to give this roadway the name of the Mitchell Expressway in honor of this great Alaskan. I hope your committee will act favorably on this resolution.

Sincerely,

Bill Gordon

cc: Gary Wilken

15 Feb 1988 FEB 1 8 1988

Ms Betty Cato, Chairperson, House Transportation Committee

Pouch V

Juneau, Alaska 99811

I am taking this opportunity to endorse the naming of what is now referred to as the 30th Avenue by-pass in Fairbanks to be permanently named the Mitchell Expressway.

My first point is that Bob Mitchell represents history in Fairbanks. Bobs father, Charlie came to Fairbanks in 1906, was married to Liza Hatch in 1914, and Bob was born, raised and died a resident of Fairbanks. Bob married and raised a family after World War II, and their three children all married and are living here together with their children also. This family does represent considerable history in the city of Fairbanks.

Bob Mitchell always referred to Fairbanks with pride. Any of us that knew him heard many times the expressions of satisfaction and pride when "Mitch" would refer to a project that was completed, be it road, bridge, or building, and he would say " isn't it great to know you had a part in building or doing that." Oftentimes while driving from one place to another "Mitch" would remark out of a clear sky " isn't this a great place to live in." Bob truly loved his Fairbanks.

My main point is that "Mitch" made things happen. He was not afraid to risk his assets, starting first with a GI loan after World War II. He, and lifelong friend and partner Clyde Geraghty, developed Mitchell Truck & Tractor Service doing land clearing, digging basements, moving houses, freighting from Valdez to all road points North, and you name it. From that organization numerous other activities were developed in South Fairbanks, and the "Mitchell Expressway", if you will, cuts right through the middle of much that "Mitch" worked so hard for.

What better name could there be for an Expressway than to remember one so dedicated to his community.

Thank you very much for your consideration,

Harvey Marlin

Mrs. Betty Cato, Chairman
House Transportation Committee
Juneau, Alaska

Dear Mrs. Cato,

The suggestion has been made to rename that part of the new Parks highway extension inside the Farbanks city limits for Bob Mitchell. This is a well-intentioned but very silly idea. We do not need more streets that change their names as they wander about Fairbanks. In fact, an excellent suggestion would be a bill requiring that cities and buroughs refrain from this idiocy in the future and that they must coordinate names where they cross city limit lines so they do not change at these locations.

I am sure we can find a whole street to name for Bob Mitchell. He deserves better than a chunk of street and the cuss words of confused tourists, new residents and out-of-town visitors.

Sincerely,

Michael V McGee

Dear Representative Cato:

I am very much in favor of renaming the portion of the Parks Highway between Airport Road and the Richardson Highway for Robert Mitchell.

This man was like a second father to me. He was a visionary teacher, and his dreams for the South Fairbanks area are coming true.

Robert Mitchell will long be remembered as an ardent promoter of the potential of the South Fairbanks area, even without a highway named after him. However, I think he should be properly honored for his efforts to make Fairbanks a better place to live.

Thank you.

Sincerely,

Randall C Frank

PO Box 83750
Fairbanks, AK 99708
February 15, 1988

Ms. Betty Cato, Chair
House Transportation Committee
Juneau, AK 99801

Dear Ms. Cato,

I wish to comment on the proposal to name the extension of the Parks Highway through Fairbanks in honor of Robert J. Mitchell. While I support the idea that Mr. Mitchell's efforts in behalf of Fairbanks are worthy of recognition, I feel that naming this section of highway after him will do more harm than good.

Names of objects such as highways are used by many people every day to assist in orientation. We use these terms to communicate how and where to find different places. Building confusion into the system, by taking one highway and changing its name in mid-stream (in this case at as it crosses Airport Road) is a disservice to the community which Mr. Mitchell helped to build.

Fairbanks is heavily dependent on the tourism industry, which brings thousands of visitors to the area each year. We need to make it as simple and straight forward as possible for these people to find their way around our city. Emergency vehicles attempting to respond to fires, accidents and other catastrophes are often hampered by vague and ambiguous directions. We shouldn't make their job even tougher by building confusion into the system from the start.

I am all in favor of honoring Mr. Mitchell, but let's find some complete entity that can bear his name without needlessly adding confusion to the map of our city.

Sincerely,

Tom George

Mrs. Betty Cato- Chair person

House Transportation Committee

Dear Lady Cato;

Your invitation for contributors to mr. Robert mitchell's life history of his outstanding achievements during his too short life was too much for me to resist paying him the respects he so richl deserves in naming The Richardson Inter chang in his honor.

He began his adult life while still young in years in aincere effort to to assit his widowed mother with her various problems. naturally this required money, which was his cue for going to work at the initial construction of nearby Ladd Air Force Base as a Bull-dozer operator, while previously I had serving as a supervisor of Maintenance and repair crews, which brought Bobby and I into close relationship. Bobby soon became a perfectionist in his frequent reques for maintnence service which in many cases were trivial and not affecting the normal operation of his bull-dozer, much to the annoy-ance of my busy mechanics. In preparing for war misunderstanding amon workers simply could not be tolerated! So, in the intereset of re-establishing peace between Bobby and my mechanics I decided to ask Bobby he was pursuing this highly questionable practice?

His reactions and his reply will never be forgotten. He stood facing away from me seemingly dazed at my question, then turning slowly and in a strong well articulated voice said "Dick, please allow me to explain! If for any reason I might be fired from my present job, it would be impossible for me to contribute to my dear Mother's financial problems., and this would be impossible for me to accept.

With tears rolling down his pale cheeks he continued, "When my dear Mother gave me life she also gave me a part of herself, just like all mothers do. Now can you understand why insist on having my bull-dozer in top condition?" Yes- I understood, because I felt the same responsibility towards my dear Mother! Now I enjoyed a new relationship with Bobby, and so did my mechanics when the Bobby's story was heard.

Through a series of bizarre war time events I was re-assigned to the sagebrush and rattle snake voids of eastern Washington to super-vise the construction of a "top Secret" Air Base, where Japanese ball-oons were dropping fire bombs on our forest and our sage brush setting them aflame, while hundreds of construction men and women were working around the clock building the longest and widest runways in the world, Yes- they even poured concrete runways in the dead of winter when heating it was necessary. Indeed a giant project being accomplished by Americans from all walks of life., requiring four years to complete.

During those four years I maintained contact with happenings in Fairbanks, about six month before the end of World War Two, word was received of Bobby's venture into Construction of his own. Its history of success is common knowledge.

In closing this narrative of Bobby, let us not forget true inno-vators are seldom recognized as such, until after they have fulfilled their destinies. Please let us pay bobby the honors he so richly des-erves by naming the newly constructed Richardson Interchange Highway "The Robert Mitchell Highway, with an everlasting plaque identifying it as such in a conspicuous location for all motorists to enjoy.

U of A faces two significant bud

When the price of oil dropped in 1986, the University of Alaska was told to cut its statewide budget by $5.9 million. At the time, university officials called the cuts the largest any major university in the country has had to face in a single year since the 1940s or 1950s.

Though the restructuring is mostly complete, the budget cuts have hit the university with a double whammy: many senior level instructors— anticipating budget and salary cuts—quit or retired from the university last year.

And, university officials say, the reduced budget has left the school unable to compete with salaries offered by Lower 48 institutions, making it difficult to replace the top-level professors and instructors who left with people of equal caliber.

Gov. Steve Cowper alluded to this problem in his Jan. 25 State of the State message, and pushed for the creation of a science and technology foundation to help make sure Alaska doesn't get left behind in the areas of physical science and technology.

The University of Alaska Fairbanks' more technical departments—such as the schools of management, engineering and biochemistry—are among those hardest hit, according to Karen Cedzo, UAF's public information officer.

"The school of mechanical engineering lost two of its senior people and, so far, has only been able to replace one of them," Cedzo said. "We made an offer to a highly qualified woman in Texas but she turned it down, primarily because of the salary," Cedzo said.

Four senior positions were lost civil engineering, she said, and replacement has been found f only one of those. The four positio make up 40 percent of the top ci engineering slots at UAF. Li mechanical engineering, an of was made to a highly-qualified p son in North Carolina. She, t turned it down, claiming the sala wasn't competitive with offers s had received from universities the Lower 48.

Electrical engineering also l four senior people, and only one h

Stevens confident '91 bill will become law

News-Miner Bureau

WASHINGTON—Sen. Ted Stevens, R-Alaska, said today he is confident a key bill sought by Alaska Natives will become law this year, even if Congress has to override a presidential veto.

The measure, passed by Congress last December, outlines a series of options to Alaska Natives for dealing with their stock after 1991, when it becomes publicly available.

President Reagan has until midnight Tuesday to decide whether to sign or veto the bill. If he neither signs nor vetoes it, it becomes law without his signature.

Stevens said he has talked briefly with White House Chief of Staff Howard Baker, a former senator, about the issue. The measure is a top priority of the all-Republican Alaska delegation and the Alaska Federation of Natives.

"He (Baker) knows he has to talk to me before he makes a recommendation of a veto to the president," said Stevens. "I fully expect the recommendation to be on Baker's desk today."

Interior Secretary Donald P. Hodel, the lead administration official on the issue, has recommended a veto. He argues that the bill is unconstitutional and could set a precedent for the treatment of Indian tribes in the Lower 48.

"I disagree with that," said Stevens of Hodel's objections. "We have a unique situation. There is no other Indian corporation created by an act of Congress. There is no precedent."

Stevens said, "It is an Alas issue, not a federal issue, and ought to become law. I think will."

The bill cleared the House l December by 379-3, a margin m than sufficient to override a veto then passed the Senate by vo vote.

If necessary, the delegation v ask for a meeting with Presid Reagan to discuss the bill.

Let's call the extension the Parks Highway

Guest Opinion

By NANCY LEE BAKER

The four-mile extension of the George Parks Highway will end by joining the Richardson Highway near the old 30th Street exit. The work is scheduled for completion in September 1988.

A move to call this four-mile section the Robert J. Mitchell Expressway began in February 1986, when Sen. Jack Coghill and Rep. Steve Frank initiated Senate Bill 461 and an identical House bill. They got through most committees but not to both floors due to pressures of the closing days.

The same legislators are in the process of introducing the bills again this year. Since there was some opposition from individuals two years ago (which did not keep them from trying to hustle the bills through in 1986), the approach this year appears to be to go directly to large bodies such as the city council, borough assembly, Chamber of Commerce and its transportation committee for their public endorsement. These endorsements are intended to convey the broad approval of Fairbanksans for this move.

In "talking around," however, I find almost no individual support for the resolutions these bodies endorsed, except from some personal friends of the late Robert Mitchell. The consensus was to maintain the same name.

It is understandable that at "first thought" it might seem like a good idea to name a new piece of road after a friend, but the result of suddenly changing the name of a highway that thousands of people will have been traveling on for 358 miles at speeds in excess of 50 mph is not an inconsequential thing to be taken lightly. It deserves serious "second thoughts." Some of them follow:

Confusion: The bottom line is, calling the last four miles anything but the Parks Highway would be confusing. It is one continuous highway, doesn't turn, get wider, narrower, or change in any way. A sign proclaiming you are all of a sudden on a different highway spells instant confusion to a visitor to our area. This could precipitate slowing down, changing lanes, conversations with the "co-pilot" about how we got "off course." Any one of these reactions are a basis for possible accidents.

We are a tourist dependent economy. We spend hundreds of thousands of dollars attracting visitors. Shouldn't we be more considerate of them? Many of them are older citizens, with slower reactions in some cases, and driving less maneuverable vehicles with the poor visibility that RV's often offer.

A different name could offer problems and expense to mapmakers, as well as map readers who see a different name (if there is room to print it) on what appears to be obviously the same highway.

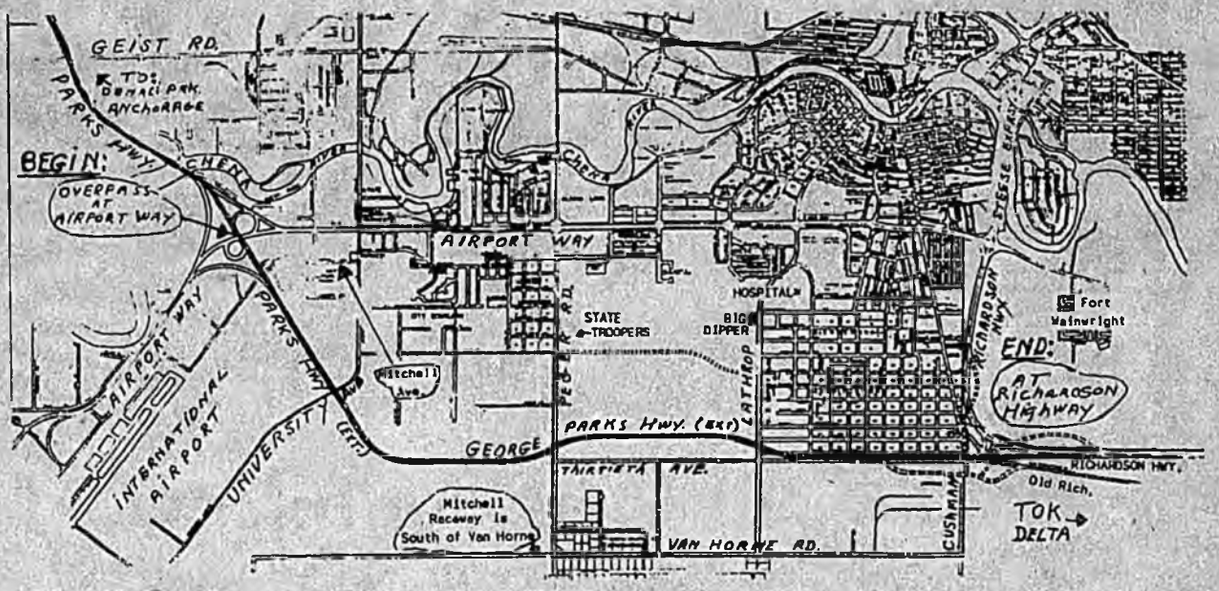
Where would the highway signs be placed to tell drivers they are now on a different highway? Driving to the airport from town a motorists would see a sign announcing the exit to "Highway 3, Parks Highway." A few hundred feet later on a sign would say "Highway 3," with a different name.

Think seriously (until it becomes funny and you start laughing) of various possible confusions in giving directions about how to get "from here to there" when it requires getting on or off the new portion of road should it have a different name.

It is worth noting that the engineer who designed the highway is also "seriously concerned about the confusion that would result if the name of the new portion were to be anything other than the Parks Highway."

Cost: It will cost at least $10,000 to remove the dozen or more signs that are already up at University, Peger, and Lathrop intersections and replace them with another name. If the new name has many more letters they will have to be made smaller in order to fit the signs. The $10,000 could probably be better used for maintenance! Signs at University Avenue have been there for two years. It would be nice if they had squatter's rights!

In answer to my "confusion concerns," some legislators said the public would get used to it. The *visitors* will not get used to it, and why should the local people have to go through the process? There are better ways to commemorate people than to confuse the public.



Map shows the route of the Parks Highway extension through South Fairbanks.

Map courtesy of Nancy Lee Baker

Another consideration, in view of the recent attempt to avoid duplicate street names in town. There is a Mitchell Avenue, named after the same Mitchell. It runs off University Avenue, next to Erickson Avenue, also named after a partner in the Ghemm Co. of which Mitchell was a partner.

The new portion of the highway can only be named by legislative action. This has not happened yet, but it is in the brewing stage. Let's hope some legislator, with grassroots encouragement, will speak up and propose a bill to name it the Parks Highway.

Nancy Lee Baker is a 37-year resident with an interest in mapmaking.

Feb. 17, 1988

Dear Ms Cato;

Enclosed is a very informed opinion on the naming of the Parks Highway Extension. Many people I have spoken to favor this opinion & I'm sure if bias is kept out of the Committee's thinking they will see it this way too.

For some reason pressures seem to being to be brought to bear on the Comm. Please look at this realistically!

Sincerely

Frances J. Erickson

RE: House Bill 448 - "An Act relating to outdoor political advertising"

DATE: March 7, 1988

House Bill 448 would change the law and stiffen the penalties for illegal placement of political advertising signs.

Each election year a large number of political campaign signs can be found along most of our major roadways in violation of law. Existing statute prohibits signs along federal aid highways as well as primary and secondary roads, but enforcement of this law seldom occurs.

Under current statute, the Department of Transportation gives 30 days for compliance to the owner of the land where the sign in violation is placed and at the end of 30 days, if the sign is still in violation, "...the department shall remove it at the expense of the owner of the land."

This bill would change the existing statute in four (4) ways. It would:

1) require candidates filing for political office to sign a statement acknowledging that they are aware of the law related to political advertising signs;

2) eliminate the 30 day period that a sign can be illegally placed and charge the department with immediate removal upon discovery of that sign;

3) increase the minimum penalty for violation from $50 to $250 per count; and

4) shift the burden of responsibility from the owner of the land to the person or group advertising.

This bill is aimed at violations by candidates who knowingly place their political advertising signs in prohibited areas and "buy time" through the notice period which allows the sign to remain fixed for 30 days after the owner of the land is asked to remove it. It would <u>not</u> change existing laws regarding other types of signs.

Thank you for your consideration.

STATE OF ALASKA
THE LEGISLATURE

POUCH Y · STATE CAPITOL
JUNEAU, ALASKA 99811
907-465-3800

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 8, 1988

SUBJECT: Outdoor political advertising
(Work Order No. 5-0633)

TO: Representative Steve Frank

FROM: Richard A. Bradley
Legislative Counsel

Rick Solie has requested a sectional analysis of the above described bill.

As a preliminary matter, note that a sectional analysis or summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1 amends AS 15.25.030(b). It provides that at the same time that a candidate for the elective political office files a declaration of candidacy, the candidate will file a statement prepared by the Department of Transportation and Public Facilities that the candidate is familiar with the provisions of law regulating "outdoor political advertising."

Section 2 of the bill adds a new Sec. 19.25.115. Sec. 19.-25.115(a) provides that a candidate or group may place advertising on private property so long as the private property is not within the zone where advertising is prohibited under AS 19.25.105(a): "within 660 feet of the nearest edge of the right- of-way and visible from the main-traveled way of the interstate, primary, or secondary highways in this state".

Section 19.25.115(b) directs the Department of Transportation and Public Facilities to remove summarily posters or signs erected in violation of AS 19.25.105(a) and bill the

candidate or group named on the poster or sign for its actual costs from the removal.

Section 3 amends AS 19.25.130, PENALTY FOR VIOLATION. The amendment leaves the existing penalty ($50 to $1,000) in place for existing violations of the section covered. It signals that there is a different penalty for a violation of Sec. 19.25.115.

Section 4 establishes a new Sec. 19.25.130(b). The section adds a new penalty of $250 to $1,000 for a violation of the new section on political advertising, Sec. 19.25.115.

Section 5 of the bill amends AS 19.25.150 to carve out from the application of this section the political advertising; the political advertising is covered under Sec. 19.25.115 added at bill sec. 2.

Section 6 of the bill amends AS 19.25.160(1). The existing law section defines "outdoor advertising." The amendment to the definition excludes political advertising.

The bill contains no effective date clause. It is, therefore, effective 90 days after enactment. Art. II, sec. 18, Alaska Constitution.

RAB;bb
wkb2/058

AMENDMENT

TO: House Bill 448 - "An Act relating to outdoor political advertising."

House Bill 448 is amended by adding two new sections to read:

Section 7.
Section 1 of this act takes effect January 1, 1989.

Section 8.
Sections 2 through 6 of this act take effect immediately under AS 01.10.070 (c).

IMPORTANT INFORMATION ABOUT CAMPAIGN TREASURERS AND POLITICAL SIGNS

The Alaska Public Offices Commission and the Department of Transportation and Public Facilities are responsible for administering Alaska law with regard to the subjects below. Should you have any questions about these requirements or wish additional information, please contact the appropriate office as indicated.

APOC, Anchorage, 276-4176

Section 15.13.060. CAMPAIGN TREASURERS.

(a) Each candidate and group shall appoint a campaign treasurer who is responsible for receiving, holding, and disbursing all contributions and expenditures, and for filing all reports and statements required by law. A candidate may be a campaign treasurer.

(b) Each group shall file the name and address of its campaign treasurer with the commission at the time it registers with the commission under §.050 of this chapter.

(c) Each candidate for state office shall file the name and address of the campaign treasurer with the commission, or submit, in writing, the name and address of the campaign treasurer to the lieutenant governor for filing with the commission, no later than 15 days after the date of filing his declaration of candidacy or his nominating petition. Each candidate for municipal office shall file the name and address of the campaign treasurer with the commission no later than seven days after the date of filing his declaration of candidacy or his nominating petition. If the candidate does not designate a campaign treasurer, the candidate is the campaign treasurer.

(d) In the case of the death, resignation or removal of a campaign treasurer, the candidate shall appoint a successor as soon as practicable and file his name and address with the commission within 48 hours of the appointment. The candidate is disqualified when he has been found to have been in wilful violation of this subsection.

(e) A campaign treasurer may appoint as many deputy campaign treasurers as he considers necessary. The candidate shall file the names and addresses of the deputy campaign treasurers with the commission.

(f) The candidate is responsible for the performance of his campaign treasurer, and any default or violation by the treasurer also shall be considered a default or violation by the candidate if he knew or had reason to know of the default or violation. (§ 1 ch 76 SLA 1974; am § § 16-19 ch 189 SLA 1975; am § 1 ch 133 SLA 1977)

Section 15.13.090. IDENTIFICATION OF COMMUNICATION (Effective January 1, 1981). All advertisements, billboards, handbills, paid-for television and radio announcements and other communications intended to influence the election of a candidate or outcome of a ballot proposition or question shall be clearly identified by the words "paid for by" followed by the name and address of the candidate, group or individual paying for the advertising. In addition, candidates and groups must identify the name of their campaign chairman. (§ 1 ch 76 SLA 1974; am § 22 ch 189 SLA 1975; am § 36 ch 100 SLA 1980)

Department of Transportation & Public Facilities

AS 19.25.080-180, AS 19.25-200-250 and 17 AAC 20.010 govern the placement of political signs. Political signs placed within 660 feet of the right-of-way of primary or secondary highways are illegal. Political signs placed more than 660 feet outside the right-of-way with the purpose of the message being read from the traveled way of a primary or secondary highway are illegal.

The placing of a sign in violation of the state statutes is a misdemeanor and upon conviction is punishable by a fine of not less than $50 nor more than $1,000 (Sec. 19.25.130). Political signs placed within the right-of-way of highways are illegal encroachments under AS 19.25.220 and 17 AAC 20.010, and may be summarily removed pursuant to AS 19.25.240, Outdoor Advertising.

Private landowners placing signs, allowing signs to be placed, or allowing signs to remain on property along State primary or secondary highway rights-of-way are in violation of the law and could also have civil liability. Private landowners could find themselves in court and liable for damages caused by a sign on their property which contributed to a vehicle accident.

Confiscated signs may be recovered from the nearest field maintenance facility after payment for man and equipment hours expended in the removal. In all cases the minimum charge will not be less than $50. Confiscated signs not recovered will be destroyed after thirty (30) days.

If you are in doubt concerning the state right-of-way in a given area, please contact the appropriate regional office of the Department of Transportation and Public Facilities for information: Anchorage Regional Office - 266-1440; Fairbanks regional Office - 451-2294; Juneau Regional Office - 789-6221.

Candidates should check with municipal officials for local ordinances regarding sign placement.

DECLARATION OF CANDIDACY
DISTRICTWIDE OFFICE

RETURN TO:
DIRECTOR OF ELECTIONS
OR ELECTION SUPERVISOR

☐ $30 filing fee must accompany this Declaration.

My Conflict of Interest Statement is:
☐ Enclosed with this Declaration;
☐ On file with the Alaska Public Offices Commission.

GENERAL INFORMATION (Please Print or Type)

I, _____, am a qualified voter and declare myself to be a resident of, and a candidate for nomination to the office of

☐ State Senator
☐ State Representative

representing Election District _____ Seat _____. I am registered under and a candidate of the _____ political party in the primary election to be held on August _____, 19_____.

I have been a resident of Alaska since _____, 19_____, and a resident of the Election District in which I am seeking office since _____, 19_____.

My current residence address is: _____
(Use street #, mile post, plat #, or other physical location description.)

I have lived at this address since _____, 19_____.

(If less than one year, prior address: _____.
I lived at my prior address from _____, 19_____ until _____, 19_____.)

My full mailing address is: _____.

I request that my name appear on the ballot in the following manner:**

_____

** (The Director of Elections may not include on the ballot, as part of candidate's name, any honorary or assumed title or prefix, but may include in the candidate's name any nickname or familiar form of a proper name of the candidate. AS 15.15.030(4).)

CERTIFICATION

I, the undersigned, certify that the information in this Declaration of Candidacy is true and complete, and that I meet the specific residency and citizenship requirements of this office. I further certify that I shall meet the age requirements upon taking the oath of office, if elected. I am not a candidate for any other office to be voted upon at the primary or general election and have not filed another Declaration of Candidacy or nominating petition for the office for which this Declaration is filed. I also acknowledge that should I choose to withdraw my candidacy, my withdrawal must be submitted to the Director of Elections in writing over my signature.

HOUSE BILL NO. 448
NEUTRAL SUMMARY
Prepared by the Division of Elections

The Division of Elections has reviewed House Bill No. 448, "An Act relating to outdoor political advertising," that would require a political candidate to be familiar with the provisions of the law that regulates outdoor political advertising, and to simultaneously file a statement to that fact at the time he or she files a declaration of candidacy. The Division is neutral on the intent of HB 448.

Sandra J. Stout
Director

POSITION PAPER

BILL NO: House Bill No. 448

TITLE: An act relating to outdoor Political Advertising

APPROVED: Mark S. Hickey
Commissioner

DATE:

The Department of Transportation and Public Facilities supports this bill as control of political signs has become a controversial and increasing problem within the state. This bill would assist in the enforcement of political signs in that:

(1) The candidate must acknowledge that they are familiar with the provisions of law regulating outdoor political advertising.

(2) Responsibility has been identified as the candidate or group owning the signs.

(3) The 30 day notice ordering the owner to remove an unlawful political sign is eliminated, thereby making enforcement more effective.

(4) The penalty for a violation is increased from $50 to $250.

For further information call Susan Fleischhauer at 465-3900

STATE OF ALASKA
HOUSE OF REPRESENTATIVES

M E M O R A N D U M

DATE: February 26, 1988

TO: Representative Bette Cato
Chair, House Transportation Committee

FROM: Representative Peter Goll

SUBJECT: HB 479

HB 479, is an appropriation bill for the Alaska Marine Highway System, using $4,897,100 in ferry program receipts to restore lost services. This legislation is a step toward restoration of ferry service to its FY 86 levels.

The Alaska Marine Highway is the only surface transportation system linking Southeast communities to one another and to the mainland road system. It is the only safe and affordable transportation available to citizens of rural communities.

The system is necessary to the economy of Southeast Alaska and other coastal regions, providing the connections needed to maintain freight service, private transportation, and tourism.

I have provided for your information:

1. A spreadsheet showing the service reductions that have been made as a result of budget cuts since FY 86, including the winter service cuts to Alaskans.

2. A spreadsheet showing the funds necessary to restore service to the FY 86 levels, and the revenue sources for the appropriation. Noted are revenues generated through fares.

3. An excerpt from the Executive Summary of the Southeast Conference report on the importance of the Marine Highway to the safety, health and economy of the region.

4. Resolutions and letters from elected officials, local governments, organizations, and health professionals, detailing need for adequate surface transportation.

5. Service complaints from the tourism industry.

SOUTHEAST CONFERENCE

ALASKA MARINE HIGHWAY SYSTEM

THE COMMUNITY PERSPECTIVE

"Working For All Alaska"

EXECUTIVE SUMMARY

This report describes the importance of the Alaska Marine Highway System (AMHS) from the community perspective. It has been developed to show how the economy and way of life of the people in Southeast Alaska has evolved in concert with the ferry system. It points out that budget and other decisions regarding the AMHS should take into consideration the importance of the ferry system in other than strictly economic terms; most particularly the sense of real security, reliability, and the affordable transportation which it offers to the traveling public. It explains the reality that dismantling this billion dollar infrastructure would be a severe blow not only to Southeast Alaska but to the entire state. The report shows how the ferry system is so interwoven in the economic fabric and well-being of Alaska that it deserves a fresh look; a commitment to efficient management and direction through prudent budget decisions. Furtner, it offers specific recommendations and findings to improve the system.

The ferry system is a vital component of the economy of Southeast Alaska. Therefore, any decision that may result in a general service reduction should be approached with great caution. It is an unfortunate reflection of our government that the rationale to reduce service seems based on the assumption that communities must suffer before management can become effective or labor brought to the table as a full partner in resolving the problems. As a matter of fact,

in most cases it costs at least 50% of vessel expense to lay-up. For example, the Bartlett cost 90% of operating expense to be put into lay-up. Therefore, it needs to generate only 10% of costs in revenue to be more cost effective to operate.

As this study began, the focus of the effort was that of discovering the relative ways in which the AMHS is important to each respective community served by the system. The inter-relationships developed with the rest of the State as a result of the ferry system were also explored. It was learned that not only is the system important in a general way for transportion of people, vehicles, and goods, but in particular ways. That is, a particular major component of a local economy has often developed with the ferry service, and vice versa.

The major component in some communities may be a single business, such as the case with the Hoonah Cold Storage. Hoonah Cold Storage depends on the ferry to ship out 100% of its fish products. This was almost two million pounds of salmon in 1986, and the business expects a 30% increase this year. In Sitka, a winter 'turnaround' run is the primary boost to the retail trade. It is an economic convenience, as well as being key to the delivery of important human services, for those who do not live in Sitka. The economy of the City of Skagway in recent years has become almost entirely based on tourism. Of course, the ferry system plays a very important role in bringing tourists to Skagway. The

AMHS brought 36,000 visitors to Skagway in 1986. Ketchikan faces a double-edged sword when the State considers reductions in ferry service. The mainline runs are extremely important because of the tourist trade, export of fisheries products, and the import of goods and supplies to furnish the area's retail demands. But the feeder ferries are critical for retail and commercial trade, fish transport, and winter economic activity. The economies of the people of Ketchikan would be severely impacted by a reduction in either mainline or feeder ferry service. There is one community, however, which appears to have an even deeper dependence on the ferry system: the City of Haines. There are so many business functions in Haines which have evolved with, and depend upon the ferries, it clearly would suffer the most immediate and significant effects of reductions in service. Haines is still the main embarkation and disembarkation point for people and goods destined for the interior or travelling south from the interior. Without the ferry system, Haines would simply be a place at the end of a very long spur road. These are but a few examples of the community perspectives of the AMHS. The more enlightening and detailed reports are found in the Community Section. Reading that section is imperative in understanding the AMHS's relationship to developing economies. The particular ways the communities have used the ferries to develop and stafilize the economy of Southeast must be recognized.

Of course, the communities served by the ferry system are dependent on it in numerous general ways. These include the delivery of food, particularly fresh produce and dairy products; mail delivery; school travel; tourist travel; and the transportation of vehicles, equipment and general freight. In some cases, practically 100% of the fresh produce is delivered by ferry. In addition, all second and third class mail and surface parcel post from the lower 48 travels by ferry. The mail is ferried to Haines, Skagway, Petersburg, Wrangell, Sitka, Ketchikan, and Juneau, then shuttled to smaller communities.

During the school year, all school districts make use of the ferry system for student travel to a remarkable degree. Petersburg, Juneau, Wrangell, and Ketchikan report that a student group (averaging 30 students) from their high schools is going somewhere on the ferry system virtually every week of the school year. For purposes of school travel, both safety and cost considerations combine so that schools schedule events around the ferry schedule. And as funding for education decreases, the cost of flying is not a reasonable alternative for student travel.

The AMHS is also important to the health, welfare and safety of Southeast residents. Residents of the smaller communities depend on the system for transportation to larger communities to meet shopping, business, medical, and recreational needs. The selection of goods and services is extremely

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5168 HTRA HB 479 - HB 485

limited in some small communities, making travel to larger communities a necessity. Thirteen of the nineteen SE communities we surveyed have no resident doctor; fourteen have no hospital. Travel by ferry to the larger communities is often the preferred mode of transportation, due to its safety, dependability, and people's fear of flying. The senior citizens of Southeast rely on the ferry system to a great degree, perhaps more than others. For them the ferries are safer, more accessible, and more dependable; as well as providing a far less costly means of transportation.

It is safe to say that almost all Southeast communities served by the AMHS are positively affected by the ferry transport of tourists into their community. Communities as small as Pelican notice an increase in business brought about by the arrival of a ferry. The Southeast communities, through the Southeast Alaska Marketing Council (SAMC), have been doing a great deal to encourage use of the AMHS. They have invested $400,000. in advertising to encourage the 'independent traveller' to visit SE Alaska. To date they have received 12,000 responses to their ads; 57% of these were interested in ferry travel as their means of transport. The SAMC supplies travel information to the respondents based on their interest.

The degree of general dependence on the ferry system by the various communities appears to rise in inverse proportion to the size of the community. The smaller the community, the more dependent it is likely to be on the ferry system for its

transportation needs. However, a reduction in service would adversely impact elements of all local economies.

In addition to the individual and general ways in which the various Southeast communities are dependent on the ferries, the system is an important source of jobs. The system employs approximately 900 people and there are more than 5,000 other people that depend on the system for their jobs. Table 5 which is appended to this report details the number of people directly employed by the AMHS in each community. Ketchikan is home for the largest number of employees of the ferry system: 294 employees.

It is also important to note that the system is not only important to the economy of Southeast, but to the state's overall economy - more important than is generally thought. In all, the Southeast system carried 313,071 passengers during 1985, the latest year for which figures are available. That same year the system transported 79,780 vehicles. The "Alaska Tourism Handbook," published by the Division of Tourism reveals that 60% of the summer travelers on the ferry system visit Anchorage and 59% visit Fairbanks. In addition, 40% of all winter traffic on the Southeast ferries is headed for the interior. Each year the AMHS carries thousands of tons of freight and millions of dollars of visitor revenues to the northern regions of the state. Each week semi-vans loaded with goods and supplies head for interior Alaska. Even more vans flow from the rest of the state, especially Anchorage to

CITY OF HAINES

RESOLUTION 87/88-10

A RESOLUTION OF THE CITY OF HAINES, ALASKA, IN SUPPORT OF FRIDAY FERRY SERVICE TO HAINES AND SKAGWAY.

WHEREAS, the City of Haines is seeking to promote winter visitation to our community, and the Chilkat Bald Eagle Preserve for the benefit of the economy of the area; and,

WHEREAS, the State of Alaska, Marine Highway system is not planning to operate a ferry on Fridays to the upper Lynn Canal this winter; and,

WHEREAS, the communities of Haines and Skagway both provide highway access to the interior for all residents of Southeast Alaska, allowing them access to Anchorage, Fairbanks and Whitehorse for the purpose of trade and travel; and

WHEREAS, the Alaska Marine Highway has in serve the M/V Chilkat, which could be used for this Friday ferry service;

NOW THEREFORE BE IT RESOLVED by the Council of the City of Haines, Alaska, that the City of Haines supports the use of the M/V Chilkat on a special Friday trip from Juneau to Haines and Skagway for the mutual benefit of both communities as they seek to promote winter visitors to the Upper Lynn Canal.

PASSED AND APPROVED THIS 21ST DAY OF OCTOBER, 1987.

CITY OF SKAGWAY, ALASKA

RESOLUTION 87-26R

A RESOLUTION OF THE CITY OF SKAGWAY, ALASKA, IN SUPPORT OF FRIDAY FERRY SERVICE BETWEEN SKAGWAY, HAINES, AND JUNEAU

WHEREAS, the Alaska Marine Highway is the only surface transportation link between communities in southeast Alaska, and

WHEREAS, Skagway is the northern terminus of the Marine Highway, and

WHEREAS, the Klondike Highway, linking Skagway to Whitehorse, Y. T., and interior Alaska is now open year-round, and

WHEREAS, continued economic viability for the northern panhandle communities is based on a year-round transportation link, and

WHEREAS, the primary travel days between communities for the purpose of recreation and visitation are Fridays and Sundays, and

WHEREAS, new recreation facilities for winter sports are attracting more and more potential visitors, and

WHEREAS, the State of Alaska, Division of Tourism has committed more funding for Fall/Winter/Spring promotion, and

WHEREAS, the State of Alaska Marine Highway service to Skagway and Haines this Winter has ferry dockings two days in a row on Sundays and Mondays, another ferry on Wednesday, and then no ferry until the next Sunday.

NOW THEREFORE BE IT RESOLVED that the Skagway City Council urges the Marine Highway System to restore Friday ferry service between Juneau, Haines and Skagway by March 1, 1988 at the latest.

PASSED AND APPROVED BY THE SKAGWAY CITY COUNCIL ON THE 19TH DAY OF NOVEMBER, 1987.

Skip Elliott

Skip Elliott, Mayor

ATTEST:

Lorene S. Gordon, City Clerk

PRINCE OF WALES COMMITTEE
FOR IMPROVED SERVICE
TO THE ISLAND

Senator Richard Eliason
Box v
Room 417
Juneau, Alaska 99811

Dear Senator Eliason,

We would like to thank you in advance for the work that you are doing for the people of Southeast.

We have formed a committee for improved service to the people of Prince of Wales via the Alaska Marine Highway. We have a definate need here for improved service.

We are enclosing a packet of information concerning the efforts that are being made to further this project. We will have an open meeting February 14, 1988 at that time petitions will be generated and taken in a door to door Island wide campaign. The petitions will be forthcoming.

Please take the time to review our concerns and offer what help you are able to afford to us.

Thank you again for your consideration of our concerns.

Sincerely,
Waunita Pannell
Charlie Calton

pc: Gov. Cowper
Peter Goll
Bette Cato
Lloyd Jones
Robin Taylor

WAUNITA PANNELL - BOX 157 - KLAWOCK, AK.
755-2296
CHARLIE CALTON - BOX 49 - CRAIG, AK.
826-3756

The people of the Prince of Wales Island are generating the introduction of a petition to the Alaska Marine Highway System for the purpose of requesting:

1) A regular daily schedule for the service to the Prince of Wales Island, directed at the present winter scheduling.

2) A look at a proposal for the early haul-out of the M V Aurora (during the winter months) for the proposed improvement of the winter scheduling.

3) Installing an elevator (or incorporating a chair-lift in the existing stairwell) for all handicapped persons traveling the Alaska Marine Highway System.

This letter is a request to your organization for a letter of endorsement of this petition.

We firmly believe the more endorsements we have to this petition, the better the chances for the improvement of the services to the Prince of Wales Island will be.

This petition will be formalized and approved by an Island Committee on February 14th, and the following Monday, February 15th, will be sent to you for your perusal and, very hopefully, your organizations endorsement.

If you have any questions on this matter, or any other suggestions that will enhance or substantiate this petition, please feel free to contact us with your suggestions and/or recommendations.

Waunita Pannell 755-2296 P. O. Box 157 Klawock
Charlie Calton 826- 3756 P. O. Box 49 Craig

Thank you for your considerations toward this effort.

The POW Committee for Improved
Service to the Island VIA
The Alaska Marine Highway

PROPOSAL

WHEREAS, The Prince of Wales Committee for improved service to the Island via Alaska Marine Highway System.

WHEREAS, The Island population is approximately 4700 to 5200 persons and the embarking - dis-embarking statistics of the Alaska Marine Highway usage for 1986 was above and comparable to larger ports.

WHEREAS, Our present schedule (especially during winter months) does not meet the direct needs of the people of Prince of Wales Island.

WHEREAS, The lack of daily schedules hinder the people from using the services of Physicians, Medical facilities, Attorneys and other professionals without the additional expense of having to make use of the airline services rather than the ferry system.

WHEREAS, The ferry does not allow for travelers who would like to utilize the weekend in Ketchikan to do so without loss of time from work.

WHEREAS, Ketchikan City and Borough and the State of Alaska are losing daily revenue,as money is being spent on mail order services, that would otherwise be directed to the city.

WHEREAS, With a regular daily schedule there would be more participation on the Marine Highway between families of Prince of Wales and Ketchikan. also, the possiblity of added tourism to the island.

WHEREAS, With the daily schedule the school systems of Prince of Wales would be able to participate in more activities to benefit the students and also increase ridership rather than being forced to utilize the airline system, which is sometimes cost prohibitive and impossible due to weather conditions.

WHEREAS, An early haul-out of the M.V. Aurora (during the winter months) causes an extra burden on those leaving for the winter, or taking vacations during the holidays.

WHEREAS, The handicapped do not have access to special care and handling such elevators for the ill, aged or wheel chair confined.

THEREFORE, Be it resolved that the Prince of Wales Commitee for Improved Service to the Island via Alaska Marine Highway system urges the Department of Transportation and the Legislature to upgrade and improve the present service to the island in accordance with the above mentioned items to ensure regular guaranteed daily scheduling that the people of Prince of Wales can rely upon.

Mr. George Davidson, System Director
Alaska Marine Highway
Pouch R
Juneau, Alaska 99811

Dear Mr. Davidson:

Thank you for your letter of November 16. There are some other points that should be brought up, however.

The Aurora makes 3 trips per week from Metlakatla to Hollis and back. All these are within a 38 hour period. Perhaps one of these trips could be removed in favor of Juneau to Skagway.

Secondly, the new road being opened from Skagway to Whitehorse has opened up new oppurtunities for recreation and commerce that were just beginning last year. The Skagway Inn for example became very popular with Juneau people, and it made people aware of quality skiing that was thought to be available only out of state or in the Interior. I'm sure the number of users this year would have been much higher if the ferries would have made it possible. With the warmer winter weather we have been experiencing, there is very little available to Juneau residents in the form of winter activities.

Thank you for your cooperation.

Yours truly,

Kim C. Smith, M.D.

907-983-2297

November 16, 1987

Commissioner Mark Hickey, DOTPF
Representative Peter Goll
Senator Dick Eliason

We are writing to ask for your help in restoring the Friday ferry service between Juneau / Haines and Skagway.

We understand the budgetary constraints facing the Alaska Marine Highway, however, both Skagway and Haines are connected to the Marine Highway by year-round highways. In Skagway's case, the Klondike Highway is the only surface connection between the capital of the Yukon Territory, Whitehorse, and the capital of the State of Alaska, Juneau (via ferry from Skagway). As we as a state develop more and more economic ties with the Yukon, it becomes imperative that we have the necessary transportation links in place.

The weekend traffic between Skagway / Haines / Juneau and Whitehorse provides economic benefit to all the communities, as residents make the trips not only for recreation, skiing, downhill in Juneau, cross-country between Skagway and Whitehorse, but for shopping trips, visits to doctors and dentists, and to see friends and relatives.

We believe that by reinstituting the Friday ferry service in mid-February or early March at the latest, it will provide residents of the Northern Panhandle with economic benefits needed for our communities to remain healthy and strong and to continue to be viable participants in the overall growth our state so dearly needs.

The Skagway Convention & Visitors Bureau urges you to reconsider the Marine Highway's winter ferry schedule and appropriate the necessary funding to continue our transportation corridor between interior Alaska, the Yukon and Southeast Alaska, on the days when traffic has the greatest potential.

Thank you.

Sincerely,

Gary C. Danielson,
Executive Director
Skagway Convention & Visitors Bureau

cc: Representative Bill Hudson
Senator Jim Duncan
George Davidson, Director, Marine Highway System
Juneau Convention & Visitors Bureau

Skagway, Alaska
Nov 7, 1987

Mark Hickey, Director
Dept of Marine Transportation
Juneau , Alaska

Dear Mr. Hickey,

I am writing to add my voice to those urging you to make a stronger effort to provide weekend ferry service to Skagway and Haines during the winter months. The present scheduling, with a three-day gap in service between Wed. and Sunday, hampers traffic in our area all winter long, when winter weather makes air travel much more uncertain, and the ferry alternate more needful.

By spring, by which I mean February, when days are getting longer, many people not only in Skagway and Haines, but in Juneau and Whitehorse also, are feeling ready for a weekend jaunt up or down the channel for a day or two in another town, Ski weekends, winter Carnivals, musical events and other attractions are among the enticements for such traffic. For us in Skagway especially, every little bit of winter traffic is a measurable contribution to the survival of our town. High school sports and music events need this weekend service also.

The Friday ferry, which we have had in the past, and during summer months, gets cut down to a shorter and shorter schedule every year, and is now slated to stay off until April 1 of 1988. We have been told that the ferry system gets more traffice on the southern end, between Ketchikan and Hollis which is why they get the Le Conte now. We can accept this, but it is our understanding that you do have vessels idle during the winter, and we'd surely like to see one of them, even if only in Feb. and March. As you well know, this is our Highway. Please give us more service, and more traffic will come to use i

It would be nice to see the long-range plan for ferry service completed, and to see that it included fuller winter scheduling for Lynn Canal. We'd like to see a smaller high-speed vessel available to add extra service available to add extra service to supplement mail-line ferry service, which we certainly wish to keep up here in Lynn Canal. With the Klondike Highwa now open for the winter, Skagway is getting a share to the very substatial auto traffic to and from the Alaska Highway.

Sincerely,

Barbara D. Kalen

Mr. Robert Hale
1683 North 14th Street
Coos Bay, Oregon 97420

Dear Mr. Hale:

Your letter has been received and reviewed. You did, apparently write to us in November, seeking reservations which included 2-berth rooms.

We had received some 300 requests for reservations by November and when your reservation request was processed, in the order which it was received, there were no 2-berth rooms available.

A four berth room was substituted in one case and a three berth in the other. These were the only choices available!

If the substitution does not meet with your approval, we will cancel them. We will not, however, provide three or four berth rooms at the two berth rate. If you wish, we can place you on the waitlist for a 2-berth cabin, but there are few 2-berth cabins on these vessels and the odds on having one cancelled are poor.

Your request for a price adjustment is denied.

Sincerely,

Sherman D. Burton
Customer Services Manager

STATE OF ALASKA
DEPT OF TRANSP AND PUBLIC FACILITIES
ALASKA MARINE HIGHWAY SYSTEM - RESERVATIONS
BOX R, JUNEAU, ALASKA 99811

Re: Itinerary Number #0310271
Mr. & Mrs. Hale

Since November 2, 1987 arrangements for our transportation schedule to and from Alaska have been negotiated with you. Our agent, Mrs. Arthur May, phoned you on November 2, 1987 asking how and when to request ferry reservations. As per your instructions Mrs. May mailed in our request soon after November 2, 1987.

On December 7, 1987 you acknowledged our request for reservations and indicated that the schedule would be mailed to us as soon as possible, indicating that reservations are available generally in January. Our agent was told to check with you by January 4, 1988.

On January 4, 1988 our agent attempted to phone you all day and received no response. Also on January 5, 1988 our agent phoned you all day and received no response. On January 6, 1988 our agent completed a phone call to you. You indicated that reservations would be arranged in a couple of days. Reservations were received that week. They were dated January 5 and January 6, 1988.

Departing Malaspina May 20, 1988 SEA-HNS we request
a 2 berth facility for $184.00
Our reservation now shows billing for a 4-berth facility for $271.00
184.00
Overcharge $ 87.00

Columbia
Departing July 5, 1988 JNU-SEA we request
a 2 berth facility for $175
Our reservation now shows billing for a 3-berth facility for $205.00
175.00
Overcharge $30.00

TOTAL OVERCHARGE 117.00

We confirm our request for 2-berth cabin at the 2-berth price or a price adjustment on the more expensive facilities you have reserved for us.

Please advise.

Robert Hale

Ms. Cheryl Erickson
Sales Manager
Pioneer Inn
9830 100th Avenue
Fort St. John, British Columbia
CANADA V1J 1Y5

Dear Ms. Erickson:

In response to your thoughtful letter concerning the Circle Tours cancellations with your lodging establishment, I wish to offer the following.

The Alaska Marine Highway System (AMHS) provides transportation for passengers and vehicles. One connection to the continental land highway system is at Prince Rupert. Some of the vessels calling at Prince Rupert have berths in limited numbers.

During the summer months, requests for berths, from individuals as well as tours, exceed the number available. Many individuals travel without berths, as do some tours. Many tours choose not to travel without berths. The AMHS has a limited number of ships, thus the AMHS cannot provide berths to all who desire them in the peak summer period and the tours seldom wish to travel except in the peak summer period.

We wish to accommodate everyone, unfortunately we can't. We will keep trying.

Sincerely,

Sherman D. Burton
Traffic Manager

FORT ST. JOHN

June 10, 1987

Alaska Marine Highways Ferries
Box R
Juno, Alaska
99811

Dear Sirs:

We are writing with regards to Circle Tours 5 bus tour cancellations with our hotel. These were for: June 10, July 01, 05, 19 and August 02.

These 5 tours were cancelled due to the Alaska Marine Ferries inability to provide space. No alternate dates to the ones requested were offered to Circle Tours office, according to our contact there.

We are very disappointed with your handling of this tour company. It represents 200 tourists lost to our City and frankly we are very upset. You obviously do not give buses, with 45 passengers per bus, much priority. Why not? They have the ability to put through a thriving tourist trade, if treated appropriately.

Alaska has become a very popular destination. If your services are not at present able to keep up with the tourist demands, perhaps a revamping is in order, however this lost business cannot continue.

We sincerely hope that the 1988 tourist season is not marred with a repeat of the above situation.

Yours truly,

Cheryl Erickson
Sales Manager

Alaska Marine Highway
Box "R"
Juno, Alaska 99811
U.S.A.

Ladies & Gentlemen:

It has been brought to the attention of the Fort St. John & District Chamber of Commerce that your Company is apparently no longer allowing space for buses on your Ferries. This has resulted in the loss of a great deal of Tourist Trade not only to our Community, and all the lodges and Communities located along the Alaska Highway, but also to yourselves. We have been advised of a large number of bus tours that have been forced to cancel their tours to Alaska after advice from your Company that there was no space available on the Ferries and no alternate dates to accommodate them were offered.

Alaska is becoming a very popular destination point and from all indications to date through our office, your state will see almost double the visitors over last year and at least half that number want to take the Ferry trip down the coast. The majority of those who visit Alaska and take the Marine Highway originate from the United States.

A great deal of promotion for the State of Alaska and your Company is done by our office to visitors all over the world. The trip up the Alcan Highway and the Ferry trip down the coast are, for many, a very exciting prospect.

Perhaps our efforts should instead be concentrated on the alternate route up the Alaska Highway to the B. C./Yukon border, down the Stewart/Cassiar Highway to Prince Rupert and then aboard a B. C. Ferry for a gorgeous trip down the coast of B. C. to Vancouver. There is no problem obtaining space on the B. C. Ferries as more Ferries and frequencies are added during the peak Tourist season.

continued . . . . . .

Is it possible for your Company to consider the same increases? These Visitors mean dollars spent at each and every stop along the way including those in your State. They are of an Economic Benefit to all of us.

Kindly advise our office if you foresee a solution to this problem of non-availability of space on your Ferries in the near future.

Thank You for your time and consideration and we look forward to your early response.

Yours truly

Ms. Donna Spear, Vice-President
Transportation & Communications Director

Milwaukee, WI. 53202

Dear Senator Proxmire:

I write this letter because I am frustrated. It is tough doing business out in this world, but when bureaucracy gets fouled up it makes things twice as hard.

My reason for writing: I own and run a charter, travel and tour business. A small company here in Wisconsin. I incorporated in I969 as a bus company here in Wisconsin. I now have I0 over the road coaches with ICC authority in 49 states and Canada.

My problem? I cannot get to the Alaskan Marine Highway. I have "run" tours (one each summer) to Alaska via motorcoach the last 3 years. Each year I cannot get reservations on the ferry between Skagway and Prince Rupert, B.C.. Berths are required due to 36 hours on the ferry and all are senior citizens.

I fully understand the fact that they only have so many berths. My concern is how come I can buy a ready made tour from several Canada tour companies with guaranteed berths on the ferry? The point being, how can Canadian's get the berths and we can't when the U.S. are the people who own the boats and it is a U.S. state?

Is there any help you can give me in this matter? Your prompt attention would be appreciated.

Very truly yours,

Philip T. Jones

Philip T. Jones

March 18, 1987

Mr. Geoffrey Rogers, Director
Office of Informal Inquiries
and Complaints
Federal Maritime Commission
Washington, D.C. 20573

Dear Mr. Rogers:

In response to your letter of March 11, 1987, the following information is provided.

The Alaska Marine Highway provides transportation, food, beverage and sleeping accommodations. Requests for these services exceeds the supply in many instances, particularly during the busy summer months.

Many tour bus operators contact us to secure transportation during the summer. Virtually all desire cabins for their trip. The Alaska Marine Highway does not have enough cabins to meet this demand and therefore, some tour bus operators as well as some individual travelers are unable to travel with cabins. Many choose to travel without cabins, sleeping in the reclining chairs or in sleeping bags in the heated solarium. Some choose not to travel.

Being unable to provide cabins to all the tour bus operators that desire them, the Alaska Marine Highway is forced to select those to receive cabins. This is done based upon past performance with the Alaska Marine Highway. Many Canadian companies utilize the Marine Highway as do many Canadian citizens, as one might expect since we share a great deal of common border. If the past performance of a Canadian tour bus operator was adequate, the Alaska Marine Highway would consider that company eligible to receive space in the future. We have not established priorities based upon nationality.

I trust this answers the questions posed and I wish you a pleasant summer.

Sincerely,

Sherman D. Burton
Traffic Manager

SDB/wld

Dear Mr. Burton:

Thank you for responding so promptly about the inquiry we received from Senator Proxmire. Your letter, dated March 18, 1987, was helpful in clarifying the State's policy in respect to allocating sleeping accommodations.

Understandably this is not an easy task considering the short supply and strong demand. Since the problem experienced by the Senator's constituent stems from that task, we wonder how his bus tour can expect to receive space. Said in another way, without having the experience of their patronage, how can James Coach Travel provide you with a record of past performance.

Mr. Burton, we would appreciate your advices and your continued cooperation. Thank you.

Sincerely,

Geoffrey Rogers, Director
Office of Informal Inquiries

4.P1

April 8, 1987

Mr. Geoffrey Rogers
Director
Federal Maritime Commission
Washington, D.C. 20573

Dear Mr. Rogers:

There are a number of things that "James Coach Travel" could do, that would be of benefit, if they wish to make a trip to Alaska with large numbers of people desiring sleeping accommodations.

First, they could make the trip at a time when the demand is less. With respect to Marine Highway services, traveling southbound earlier in the year, or northbound later in the year would serve this purpose.

Another method would be to stop in one or more, communities along the way, utilizing their sleeping accommodations, thus lessening the need for sleeping accommodations on the vessels.

Traveling without cabins is something that many people do. This might be a possibility.

Since it is important, to the Alaska Marine Highway, that blocked space be allotted to bonafide enterprises that will fullfill their obligation to produce the agreed upon number of passengers and meet their financial obligations, it would be of assistance to accompany the request for space with promotional brochures, or any descriptive documents that might reflect the organizations background.

The Alaska Marine Highway encourages private enterprise to promote travel during non peak periods and any brochures or information indicating an effort in that direction would certainly be of interest.

James Coach Travel can continue to request space in competition with others, during the very peak travel period and request berths for some forty travelers. Their continued requests will serve to lend credibility and sincerity to their status and when space becomes available they will receive every consideration.

We certainly want James Coach Travel to be able to visit Alaska as often as they desire and I hope the preceeding discussion will allow them to do so.

Sincerely

Sherman D. Burton
Traffic Manager

HB 481

The Geist Road Extension will be built under five projects between 1987 and 1995. The first project is now under contract and the second and third projects will be ready for construction in approximately one year. The first project (now under contract) does not include any "Geist Rd" signs.

All signs are eligible for federal highway funding, however, the department is concerned that road signs do not become too large. Letter sizes are set by standards for the type of facility and for this project 8 to 13 inch letters will be common. If all signs must read "Woodrow Johansen Expy," some signs will be very large, require special structures to support, and may be difficult to place at some locations. A compromise of "Johansen Expy" would be appreciated where sign sizes become a problem.

There may also be some community concerns with the discontinuity between the existing Geist Road west of University Avenue and the proposed renaming to the east.

VICE-CHAIR:
Transportation

MEMBER:
Resources

TO: Transportation Committee

SUBJECT: House Bill 481

From 1963 to 1975 I have worked under Mr. Johansen's supervision in various functions with the Department of Highways and from 1975 to 1979 (the time of his retirement) as his colleague when he was District Engineer at Fairbanks and when I was District Engineer at Nome.

There is no other man in Alaska whom I admire more. He has dedicated his whole life to the transportation matters in Alaska. The attached biographical sketch and the data contained in the bill show this very clearly. I have no doubt that it is warranted to honor him in this way.

This bill differs in some aspects from other similar ones:

1. The highway has not been built yet and is in various stages of implementation: the western segment is ready for construction, the eastern end is still in the location - approval - and design stage.

2. The highway will connect with 2 major highways through an urban area and therefore there is no confusion or duplication of designation.

3. I do not know of any controversy over the name of "Woodrow Johansen".

The early designation has three advantages:

a) the name can be incorporated early enough in planning, design and contract plans and documents and eliminate the possibility of duplication;

b) the signs and markers can be purchased and installed in the usual process and extra cost is avoided; and

c) name usage is assured from the start, avoiding a problem often experienced with renaming facilities.

I have not encountered any opposition. The bill has the support of the Fairbanks legislators both in House and Senate, DOT/PF and the Governor's Office, City Mayor Bill Wally of Fairbanks, Borough Mayor Juanita Helms Fairbanks North Star Borough and numerous people.

I have also contacted Ms Nancy Lee Baker who expressed reservations on House Bill 437 (Mitchell Expressway; although she thought it may be too early to name the route she had no problem in principal.

It is appropriate to remember and honor Woodrow Johansen through future generations and I hope this bill moves from Committee and through the legislature this session.

WOODROW JOHANSEN

Biographical Sketch

Born November 24, 1913 in Eyak, Alaska (near Cordova)

Spent childhood years in the Cordova area. As a young man, worked on construction crew for the Copper River Northwestern Railway. Originally aspired to be an engineer for the railroad.

Graduated from Cordova High School in 1932.

Attended the University of Alaska in Fairbanks under then university president, Dr. Charles Bunnell.

Was listed in "Who's Who Among Students in American Universities and Colleges" in 1939.

Graduated with a B.S. degree in civil engineering in 1940. By this time the Kennicott Copper Mine had ceased operation and the Copper River Northwestern Railroad was shut down.

Went to work for the U.S. Army Corps of Engineers, then joined the University of Alaska engineering faculty in 1942.

Taught at the University of Alaska from 1942 to 1952 as an associate professor of civil engineering.

Earned an M.S. degree in Civil Engineering from the University of Illinois in 1949.

Joined Alaska Road Commission in 1951 as assistant district engineer of the Fairbanks district.

Was district engineer with the Valdez district from 1952 to 1954.

Became professor of civil engineering and head of the civil engineering department at the University of Alaska in 1954.

Returned to the Alaska Road Commission as Fairbanks district engineer in 1955. Remained in that position when the A.R.C. became the U.S. Bureau of Public Roads.
Accepted post as Interior District Engineer for the State Department of Highways when that agency took over responsibility for Alaska's highway system in 1960. Remained in the position of Interior Regional Engineer when the Dept. of Highways was incorporated into the Department of Transportation & Public Facilities in 1977.

Retired from state service in 1979.

Married the former Carolyn Haggstrom, also Alaskan born, in 1942. Carolyn graduated from the University of Alaska with a bachelors degree in Business Administration. She also has a bachelors and a masters in Education and taught for many years in the Fairbanks school system. The Johansens have four children.

Throughout his career, Woody Johansen has distinguished himself as an outstanding engineer and administrator. As the Interior District Engineer he headed up the largest highway district in the state for over twenty years.

Under his stewardship, a number of noteworthy highway engineering projects were completed, including:

The northern half of the George Parks Highway, providing a new and shorter route between Anchorage and Fairbanks.

The Dalton Highway, the only overland access to the Prudhoe Bay oil fields.

The Yukon River Bridge, the first bridge to span the Yukon River in the state of Alaska.

The Moody Bridge, which carries the Parks Highway across the Nenana River gorge near Healy.

The Hurricane Gulch Bridge, which provided the final connection between the northern and southern portions of the Parks Highway.

Numerous projects to rebuild, widen, straighten and otherwise upgrade all of the major highways, both urban and rural, in the Interior district.

Took a strong interest in the encouragement and development of engineering students at the University of Alaska. Provided opportunities for summer employment for students to give them exposure to the practical applications of civil engineering knowledge and skills.

Was named the University of Alaska Distinguished Alumnus in 1976.

THE ALASKA RAILROAD CORPORATION

The decision to purchase the Alaska Railroad from the federal government was made in 1984 however, discussions on this subject took place from 1980 onward. Numerous bills and resolutions were introduced regarding the railroad purchase.

- SCS CSHB 512 (fin) was signed into law by the Governor July 5, 1984. This act established the Alaska Railroad Corporation to manage and operate the Alaska Railroad and provided for an effective date of July 6, 1984.

- January 5, 1985, the Alaska Railroad was transfered from federal to state ownership.

- Purchase price $22.3 million. This price did not include any receivables or cash, therefore the legislature appropriated an additional $10.9 million ($4.9 million for operating and $6 million for capital)

- Effective January 6th, 1985 the Alaska Railroad Corporation became responsible for management and operation of the Alaska Railroad. A seven member Board of Directors appointed by the Governor are responsible for the overall management of the Corporation. The Corporation is a public coporation and is an instrumentality of the state within the Department of Commerce and Economic Development. The corporation has a legal existence independent of and separate from the state.

- The first year of operations, the ARRC posted a profit of $7.133 million. In 1986, railroad revenues declined. This, coupled with several unexpected catastrophies caused the ARRC to record a $985,000 loss. With 1987 year end recently completed, the ARRC has recorded a $3.017 million profit for the year.

- Actual revenues for 1987 still show a significant reduction 1985 - $67.234 (million)
  1986 - $58.133
  1987 $53.703

  However, actual expenses have been reduced significantly
  1985 - $58.085
  1986 - $56.068
  1987 - $45.604

- Several areas have changed substantially since the first year of operations of the ARRC. The major income producers have shifted:

Decrease	% 1987 vs 1985	Increase	% 1987 vs 1987
Pipe	- 77.9%	Passenger	+ 25.1%
Gravel	- 65.0%	Real Estate	+ 20.5%
Interline	- 41.6%	Coal	+ 19.1%

- Over the past 3 years of state ownership the ARRC has to upgradeD services. In 1985 the ARRC spent $12.5 million on capital improvements and upgrades. In 1986 $9.2 million was spent and in 1987 $6.3 million in capital expenditures was incurred. These upgrades have included new locomotives, new intermodal cars, new bulletproof passenger service cars, additional bud cars, as well as many many capital dollars being spent to upgrade the exist track and rail bed.

- The Corporation has also capitalized on land leasing Total land holding of the Alaska Railroad is 39,292 acres. Of this 13,759 acres is used for right of way and, 8,124 is used for operating. The ARRC currently leases 2,077 acres of land throughout the state for a total income of $5.206 million. This is a 20.5% increase over 1985.

- The Alaska Railroad transfer act provided specific language regarding the direction for the state owned railroad to follow.
Sec. 3 Chapter 153 SLA 84 (SCS CSHB 512 Fin)
Sec. 42.40.260 states. Every 5 years the annual from the ARRC to the Governor and legislature shall include potential sale arrangements whereby the corporation may be transfered to private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation. This report would be be required in the ARRC annual report year end 1989 and would be presented to the legislature in January 1990.

To date no sale offers have been solicited and railroad management state the necessary sale package has not yet been prepared by the corporation.

MEMORANDUM

TO: Representative Bette Cato

ATTN: Wendy Chamberlain

FROM: Penelope Weyhrauch
Legislative Analyst

RE: Exemptions to and Sale Provision of the Alaska Railroad Act
Research Request 87.057

You asked for a discussion of the Alaska Railroad Act exemptions and what effect repealing the exemptions might have on the Alaska Railroad Corporation. You also asked for a discussion of the requirement relating to offering the railroad for sale, and whether or not the Alaska Railroad Corporation is complying with this requirement.

Alaska Railroad Act Exemptions

I contacted the Alaska Railroad Corporation (ARRC) and asked them to discuss how the corporation would be affected by repealing the exemptions listed in AS 42.40.920. I asked Tad Lewis, General Counsel for the ARRC, what specific effect on the corporation's revenue and operations the repeal of each of the statutory exemptions would have. Mr. Lewis' letter of response is attached. You will note that the response is very general.

Offering the Alaska Railroad for Sale

Alaska Statutes 42.40.260(b) states that "Every five years the [corporation's] annual report shall include an analysis of potential sale arrangements whereby the corporation may be transferred into private ownership. The analysis shall include documentation of at least three offers to sell the corporation initiated by the corporation during the last five years."

According to Jack McGee, Assistant Alaska Attorney General, AS 42.40.260(b) provides all the guidelines available for ARRC to follow to meet the offer-to-sell requirement. Mr. McGee said that the first five-year period began on January 5, 1985, at the time ownership for the railroad passed from the

federal government to the State. The ARRC is required to offer the railroad for sale three times before January 5, 1990.

Mr. McGee said that he interprets the statutory offer-to-sell requirement to mean that the ARRC must actively solicit offers and not just advertise that the railroad is for sale. Mr. McGee said that if the corporation does not comply with the statutory requirement, the legislature would probably take action, the severity of which would depend on how strongly they believed that the railroad should be transferred to private ownership.

I asked Mr. Lewis if the ARRC has taken any steps to begin complying with the statute. He said that at the last corporation board meeting, the board asked the ARRC's legal counsel to begin looking at different ways the corporation could approach complying with the requirement. Mr. Lewis mentioned that the board discussed the form in which offers should be conducted and how a sale will be most advantageous to the State. Mr. Lewis said that an offering to sell will probably be in the form of a solicitation of proposals to buy the railroad.

Mr. Lewis referenced federal restraints (included in the Alaska Railroad Transfer Act) in regard to selling the railroad. He said that one restraint is that if the railroad were sold within five years of the transfer of the railroad to State ownership, any profit from the sale reverts to the federal government. This restraint was included in the act because the federal government wanted the State to operate the railroad for at least five years. Mr. Lewis said that this restraint makes it more beneficial for the State to retain the railroad until after 1990.

* * * *

I have attached the Alaska Railroad Corporation Act (AS 42.40.010-980) for your information. If you would like the ARRC to provide more specific information on each of the exemptions, please let me know and I will write a second letter to the corporation.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM February 2, 1988

SUBJECT: Solicitation of offers to purchase the Alaska Railroad (W.O. 5-1769)

TO: Representative Bette Cato
Chairperson
House Transportation Committee

FROM: George Utermohle
Legislative Counsel

Enclosed is the draft bill relating to solicitation of offers to purchase the Alaska Railroad requested by Wendy Chamberlain of your staff.

The bill establishes a schedule for the Governor to solicit offers for the purchase of the Alaska Railroad and then to report back to the legislature on the results of the solicitation. The bill achieves its purpose by imposing the duty upon the Governor under his authority under AS 42.40.940, rather than upon the Board of Directors of the Alaska Railroad under the provisions of AS 42.40.260(b).

The contents of the solicitation is left to the discretion of the Governor. The bill takes this approach rather than list all the things that must be included in the solicitation, because it would be difficult to anticipate all of the kinds of information that a prospective buyer may need in order to make a decision whether to pursue the issue further. Also a detailed listing of the contents of a solicitation for offers would require the assistance of experts familiar with privatization of government enterprises, and the sale of large corporations. In the absence of such expertise, the bill relies on the Governor to develop a meaningful solicitation for offers and gives the Governor ample time in which to develop and release the solicitation.

If I can provide further assistance, please advise.

Enclosure

4. Powers and Duties (§§ 42.40.250 — 42.40.310)
5. Corporation Property (§§ 42.40.350 — 42.40.450)
6. Financial Provisions (§§ 42.40.500 — 42.40.540)
7. Bonds (§§ 42.40.600 — 42.40.700)
8. Personnel and Labor Relations (§§ 42.40.705 — 42.40.890)
9. General Provisions (§§ 42.40.900 — 42.40.990)

Cross references. — For legislative findings and purpose in enacting this chapter, see § 1, ch. 153, SLA 1984 in the Temporary and Special Acts; for special reports required, see § 3, ch. 153, SLA 1984 in the Temporary and Special Acts.

Legislative history reports. — For legislative letter of intent relating to ch. 153, SLA 1984 (SCS CSHB 512 (Fin) am S), see 1984 Senate Journal, p. 3221.

Article 1. Establishment and Organization.

Section

10. Establishment of the corporation
20. Board of directors
30. Term of office
40. Vacancies
50. Compensation and expenses
60. Board officers

Sec. 42.40.010. Establishment of the corporation. There is established the Alaska Railroad Corporation. The corporation is a public corporation and is an instrumentality of the state within the Department of Commerce and Economic Development. The corporation has a legal existence independent of and separate from the state. The continued operation of the Alaska Railroad by the corporation as provided in this chapter is considered an essential government function of the state. (§ 2 ch 153 SLA 1984)

Sec. 42.40.020. Board of directors. (a) The powers of the corporation are vested in the board of directors. The board consists of the commissioner of commerce and economic development, the commissioner of transportation and public facilities, and five members appointed by the governor. The five appointed members must be registered voters in the state except as provided in (1) and (2) of this subsection. Except for the commissioners and the member appointed under (5) of this section, a member may not be a state officer or employee. Appointed members shall have the following qualifications:

(1) one member of the board shall be a person who has at least 10 years of experience in railroad management; a person who is not a resident of the state may be appointed under this paragraph;

(2) one member of the board shall be or have been an executive official of a United States railroad and shall be selected in accordance with any requirements imposed under 49 U.S.C. (Interstate Commerce Act); a person who is not a resident of the state may be appointed under this paragraph;

(3) at least one member shall be from each judicial district directly served by the Alaska Railroad;

(4) one member shall have at least five years experience as an owner or manager of a business in the state;

(5) one member shall be an employee who is a member of a bargaining unit representing employees of the corporation.

(b) Except for the commissioners, the members of the board shall be confirmed by a majority of the members of the legislature in joint session. A member appointed by the governor has the full powers and responsibilities of a confirmed board member until the member is rejected by the legislature or the legislature adjourns without confirming the member. (§ 2 ch 153 SLA 1984)

Cross references. — For terms of initial members of board, see § 4, ch. 153, SLA 1984 in the Temporary and Special Acts.

Sec. 42.40.030. Term of office. Except for the commissioner of commerce and economic development and the commissioner of transportation and public facilities, members of the board serve for staggered terms of five years each at the pleasure of the governor. (§ 2 ch 153 SLA 1984)

Sec. 42.40.040. Vacancies. (a) Except for the commissioner of commerce and economic development and the commissioner of transportation and public facilities, a vacancy on the board is filled by appointment by the governor, and the appointment must be confirmed by the members of the legislature in joint session. A member appointed to fill a vacancy holds office for the balance of the term for which the member's predecessor was appointed.

(b) A vacancy on the board does not impair the authority of a quorum of members to exercise the powers and perform the duties of the board.

(c) A member of the board whose term has expired shall serve until a successor has been appointed. (§ 2 ch 153 SLA 1984)

Sec. 42.40.050. Compensation and expenses. (a) An appointed member of the board is entitled to compensation at a rate of $400 for each day the member is engaged in the actual performance of duties as a member of the board. The board may provide by rule for compensation for partial days during which an appointed member is engaged in actual performance of duties as a member of the board.

(b) In addition to compensation under (a) of this section, an appointed member of the board is entitled to per diem and travel expenses authorized by law for state boards and commissions. (§ 2 ch 153 SLA 1984)

Sec. 42.40.060. Board officers. (a) The board shall elect from its membership a chairman and vice-chairman and prescribe their duties by rule.

(b) The board shall appoint a secretary and prescribe the duties of the secretary. (§ 2 ch 153 SLA 1984)

Article 2. Management.

Section
100. Management by the board
110. Executive officers
120. Delegation

Sec. 42.40.100. Management by the board. The board is responsible for the management of the corporation but shall delegate certain powers and duties to the chief executive officer in accordance with AS 42.40.120. In managing the corporation the board shall

(1) be responsible for the management of the financial and legal obligations of the Alaska Railroad;

(2) operate the Alaska Railroad as a common carrier subject to the jurisdiction of the United States Interstate Commerce Commission consistent with 45 U.S.C. 1207;

(3) generally manage the corporation on a self-sustaining basis;

(4) apply to the legislature for an appropriation with the concurrence of the governor to be used to provide a particular service that is not otherwise self-sustaining if a subsidy is required to maintain that service;

(5) provide for safe, efficient, and economical transportation to meet the overall needs of the state;

(6) raise needed capital by issuing bonds of the corporation upon approval by the legislature while ensuring that borrowing by the corporation does not directly or indirectly endanger the state's own borrowing capacity;

(7) review all state and other land disposal proposals to aid in planning for future development or expansion of transportation services;

(8) ensure that the procurement procedures of the corporation meet accepted railroad industry standards;

(9) ensure that the accounting procedures of the corporation meet generally accepted accounting principles consistent with industry standards for comparable railroads. (§ 2 ch 153 SLA 1984)

Sec. 42.40.110. Executive officers. (a) The board shall appoint the chief executive officer of the corporation who serves at the pleasure of the board. The board shall fix compensation for the chief executive officer.

(b) The chief executive officer of the corporation shall appoint and fix the compensation for other executive officers. The compensation for an executive officer appointed under this subsection is subject to board approval. (§ 2 ch 153 SLA 1984)

Sec. 42.40.120. Delegation. (a) The board shall by rule delegate to the chief executive officer powers and duties necessary or appropriate for the management of the daily affairs and operations of the corporation. The board may by rule require the exercise of a delegated power or duty to be subject to board approval.

(b) Within 60 days after its first meeting, the board shall delegate the following activities of the corporation to the chief executive officer or other executive officers designated by the board:

(1) leasing subject to AS 42.40.285 and 42.40.350(b) and (d), granting easements in, issuing permits for the use of, or conveying other interests in property that do not constitute a transfer of the corporation's entire interest in land;

(2) establishing specific rates, tariffs, divisions, and contract rate agreements;

(3) making routine changes in service levels;

(4) establishing procurement and accounting procedures for the corporation; and

(5) performing procurement activities.

(c) Notwithstanding (a) and (b) of this section, specific board approval is required for the following:

(1) issuing bonds upon approval by the legislature;

(2) mortgaging or pledging corporation assets;

(3) donating property or other assets belonging to the corporation;

(4) acting as a surety or guarantor;

(5) adopting a long-range capital improvement and program plan;

(6) adopting annual reports;

(7) effecting general, comprehensive increases and decreases in rates;

(8) expanding or reducing services in a major way;

(9) expanding the main or branch rail lines including spur, industrial, team, switching or side tracks, other than performing routine track alignment as necessary to maintain existing service levels;

(10) selecting independent auditors and accountants;

(11) entering into collective bargaining agreements;

(12) adopting annual budgets;

(13) beginning a capital project with an estimated completion cost of more than $500,000 or an estimated completion time of more than one year;

(14) exchanging, donating, selling, or otherwise conveying its entire interest in land subject to approval by the legislature;

(15) exercising the power of eminent domain. (§ 2 ch 153 SLA 1984)

Article 3. Administrative Provisions.

Section
150. Meetings of the board
160. Quorum and voting
170. Executive sessions
180. Rules
190. Emergency rules
200. Validity of rules
205. Application
210. Previously adopted rules and orders
220. Public disclosure of information
230. Conflicts of interest

Sec. 42.40.150. Meetings of the board. (a) The chairman of the board shall call meetings of the board at least once every three months. The chairman or a majority of the members of the board may call other meetings of the board as necessary. The chairman shall preside at meetings.

(b) Except for executive sessions, the meetings of the board are public. The board shall provide by rule for a method of providing reasonable notice to the public of its meetings.

(c) The board shall keep minutes of each meeting. (§ 2 ch 153 SLA 1984)

Sec. 42.40.160. Quorum and voting. (a) Four voting members of the board constitute a quorum for the transaction of business.

(b) Four affirmative votes are required for board action. The board shall provide by rule for the manner of voting, except that the board may not provide for voting by proxy. The rules may provide for voting and conferring by telecommunication devices. (§ 2 ch 153 SLA 1984)

Sec. 42.40.170. Executive sessions. (a) The question of holding an executive session shall be determined in accordance with AS 42.40.160. A subject may not be considered at an executive session unless it is mentioned in the motion calling for the executive session or is auxiliary to a subject mentioned. An action may not be taken at an executive session.

(b) Only the following subjects may be discussed in an executive session:

(1) matters, the immediate knowledge of which would clearly have an adverse effect upon the finances of the corporation;

(2) unless the person has requested to have the subjects discussed in public, subjects that tend to prejudice the reputation and character of a person;

(3) matters that, by law or municipal charter or ordinance, are permitted to be kept confidential from public disclosure;

(4) matters pertaining to personnel;

(5) matters pertaining to the corporation's legal position;

(6) land acquisition or disposal; and

(7) proprietary or other information of a type treated as confidential under the standards and practices of the United States Interstate Commerce Commission, including practices that protect information associated with specific shippers, divisions, and contract rate agreements. (§ 2 ch 153 SLA 1984)

Sec. 42.40.180. Rules. (a) The board shall adopt rules to carry out its functions and the purposes of this chapter, including rules to safeguard property owned, managed, or transported by the corporation and to protect employees and persons using the corporation's property or services. At least 15 days before the adoption of a rule, the board shall give public notice of the proposed action by publishing a notice in at least three newspapers of general circulation in the state and by mailing a copy of the notice to each person who has requested notice of proposed changes to rules. The notice must state the time, place, and nature of the proceedings and must contain a summary of the subject of the proposed rule.

(b) On the date and at the time and place designated in the notice required under (a) of this section the board shall provide each interested person an opportunity to present statements in writing concerning the proposed rule and shall give members of the public an opportunity to present oral statements for a total period of at least one hour.

(c) The board shall consider all relevant matters presented to it before adopting a rule. The board may take action on a rule that varies in content from the summary provided with the notice of the proposed rule if the subject of the rule was reflected in the summary and it provided reasonable notice to the public as to whether their interests could be affected by the board's action on that subject.

(d) The board shall establish in the bylaws of the corporation additional procedures for adopting rules if necessary. (§ 2 ch 153 SLA 1984)

Sec. 42.40.190. Emergency rules. (a) The board shall establish in the bylaws of the corporation a procedure for the adoption of a rule on an emergency basis. An emergency rule may be adopted only when necessary for the orderly operation of the corporation's facilities or programs. The requirements of AS 42.40.180 do not apply to actions taken under this section. However, within 10 days after the adoption of a rule on an emergency basis the board shall give notice of its action that substantially complies with the notice requirements of AS 42.40.180(a).

(b) An action taken under this section remains in effect for not more than 120 days. To prevent an emergency rule from lapsing the board may adopt the same rule under AS 42.40.180 before the end of the 120-day period. (§ 2 ch 153 SLA 1984)

Sec. 42.40.200. Validity of rules. (a) Failure to mail notice to a person under AS 42.40.180(a) or 42.40.190(a) does not invalidate an action taken by the board.

(b) An interested person may challenge a rule adopted by the board by bringing an action in the superior court. In addition to other grounds, a court may declare a change invalid

(1) for substantial failure by the board to comply with AS 42.40.180 or 42.40.190; or

(2) if the rule was adopted under AS 42.40.190, upon the grounds that the emergency rule was not necessary for the orderly operation of the corporation's facilities or programs. (§ 2 ch 153 SLA 1984)

Sec. 42.40.205. Application. Adoption of a rule is not subject to AS 42.40.180 or 42.40.190 if it

(1) relates only to the internal management of the corporation;

(2) relates to specific rates, tariffs, divisions, and contract rate agreements;

(3) relates to service schedules of the railroad;

(4) is directed to a specifically named person or to a group of persons and does not apply to the general public; or

(5) relates to the use of public works under the jurisdiction of the corporation if the effect of the order is indicated to the public by means of signs or signals. (§ 2 ch 153 SLA 1984)

Sec. 42.40.210. Previously adopted rules and orders. The board may provide by resolution that rules and orders in effect on the date of transfer remain in effect until amended or repealed by the board. AS 42.40.180 does not apply to actions taken under this section. (§ 2 ch 153 SLA 1984)

Sec. 42.40.220. Public disclosure of information. (a) Except as provided under (b) of this section, information in the possession of the corporation is public and is open to public inspection at reasonable times.

(b) The corporation may by rule designate and withhold public disclosure of matters of a privileged or proprietary nature. Those matters include personnel records, communications with and work product of legal counsel, and, consistent with the standards and practices of the United States Interstate Commerce Commission for the protection of these matters, other information including proprietary information

associated with specific shippers, divisions and contract rate agreements. (§ 2 ch 153 SLA 1984)

Sec. 42.40.230. Conflicts of interest. (a) Except as provided in this section, a board member or executive officer of the corporation may not participate in a decision of the corporation in which that person or a member of that person's immediate family has a direct or indirect financial interest unless the financial interest is a remote financial interest and participation is approved under (b) of this section.

(b) A board member or executive officer may participate in a decision if that person or a member of that person's immediate family has only a remote interest, the fact and extent of the interest is disclosed to the board in a public meeting and is noted in the minutes of the board before any participation by the member or in the decision, and thereafter in a public meeting the board by vote authorizes or approves the participation. If the person whose participation is under consideration is a board member, that person may not vote under this subsection. For purposes of this subsection, "remote interest" means an interest that in good faith is defined as remote by rules adopted by the corporation.

(c) A board member or executive officer is not considered to be financially interested in a decision when the decision could not affect that person in a manner different from its effect on the public.

(d) Within 120 days of the first meeting of the board, the board shall adopt and may subsequently amend rules implementing this section, providing additional conflict of interest and ethical rules it considers appropriate.

(e) The board may recommend to the governor the removal of a board member or executive officer who intentionally violates this section or a rule adopted under this section.

(f) For purposes of this section

(1) "participate in a decision" includes all discussions, deliberations, preliminary negotiations, and votes;

(2) "immediate family" means

(A) spouse;

(B) dependent, parent, parent-in-law, child, son-in-law, daughter-in-law, sibling, uncle, aunt, niece, or nephew. (§ 2 ch 153 SLA 1984)

Article 4. Powers and Duties.

250.	General powers	290.	Long-range capital improvement and program plan
260.	Annual report	300.	Use of corporation assets
270.	Audits	310.	Indemnification
280.	State oversight reports		
285.	Legislative approval required		

Sec. 42.40.250. General powers. In addition to the exercise of other powers authorized by law, the corporation may

(1) adopt a seal;

(2) adopt bylaws governing the business of the corporation;

(3) sue and be sued;

(4) appoint trustees and agents of the corporation and prescribe their powers and duties;

(5) hire legal counsel to represent the corporation;

(6) make contracts and execute instruments necessary or convenient in the exercise of its powers and duties;

(7) acquire by purchase, lease, bequest, devise, gift, exchange, the satisfaction of debts, the foreclosure of mortgages, or otherwise, personal property, rights, rights-of-way, franchises, easements, and other interests in land, and acquire by appropriation water rights that are located in the state, taking title to the property in the name of the corporation;

(8) hold, maintain, use, operate, improve, lease, exchange, donate, convey, alienate, encumber, or otherwise grant a security interest in, or authorize use or dispose of, land or personal property, subject to other provisions of this chapter;

(9) contract with and accept transfers, gifts, grants or loans of funds or property from the United States and the state or its political subdivisions, subject to other provisions of federal or state law or municipal ordinances;

(10) undertake and provide for the management, operation, maintenance, use, and control of all of the property of the corporation, including all land and personal property of the Alaska Railroad transferred under 45 U.S.C. 1203(a) and described in the report dated July 14, 1983, as amended, submitted to Congress and the legislature under 45 U.S.C. 1204(a);

(11) recommend to the legislature and the governor any tax, financing, or financial arrangement the corporation considers appropriate for expansion or extension and operation of the Alaska Railroad;

(12) maintain offices and facilities at places it designates;

(13) apply to the state, the United States, and foreign countries or other proper agencies for the permits, licenses, rights-of-way, or approvals necessary to construct, maintain, and operate transportation and related services, and obtain, hold, and reuse the licenses and permits in the same manner as other railroad operators;

(14) prescribe rates to be charged for services provided by the Alaska Railroad consistent with 45 U.S.C. 1201 — 1214 (Alaska Railroad Transfer Act of 1982);

(15) determine the routes, schedules, and types of service to be provided by the Alaska Railroad;

(16) enter into contracts, leases, and other agreements with connecting carriers, shippers, and other persons concerning the services,

designating an appropriate organization for State ownership, operation and management of the Railroad after the transfer.

SECTION 4 -- TRANSFER AUTHORIZATION

This section establishes the primary transfer components. Under subsection (a), the Secretary of Transportation is required to transfer the rail properties of the Alaska Railroad to the State as soon as possible after five specified certifications are made.

Subsection (b) requires the Secretary of Transportation after consultation with the Secretary of the Interior to simultaneously deliver to the State the following documents on the date of transfer; (1) a bill of sale conveying title to all personal rail properties of the Alaska Railroad; (2) an interim conveyance of the real properties of the Alaska Railroad which are not subject to unresolved claims of valid existing rights; (3) an exclusive license to use rail properties not conveyed above pending resolution of claims of valid existing rights in accordance with the review, settlement and final adjudication procedures established in section 6 (b); (4) an exclusive-use easement for Railroad purposes and other existing uses to right-of-way lands located with the Denali National Park and Preserve and title to the improvements within the right-of-way. All other rail properties located in the park are transferred to the Department of the Interior for administration as part of the park.

Lands subject to an interim conveyance (including lands to be conveyed following the review, settlement and adjudication process discussed above), must be surveyed by the Department of the Interior within five years after the date of enactment pursuant to section 606 (b)(2). Following completion of the survey, the Secretary is required to issue a patent to the State.

Subsection (c) provides that interim conveyances and patents issued to the State must transfer all U.S. reservations for the Alaska Railroad except unexercised reservations for future rights-of-way under the 1914 Alaska Railroad Act. In addition, there shall be reserved to the Secretaries of the Interior, Defense and Agriculture as appropriate existing easements for administration identified in the closing report. The appropriate secretary may also obtain future easements with State consent. Existing and future easements may not interfere with operations and support functions of the Alaska Railroad.

The Park Service will continue to use and occupy through the Secretary of the Interior a small tract at Talkeetna, Alaska, currently used for certain park activities so long as this use or occupation does not interfere with Railroad operations.

With respect to the required certifications, subsection (d) directs the Secretary of Transportation to find that the State will operate the

SECTION 5 -- TRANSITION PERIOD

This section sets forth the activities which are to occur, or are not to occur, during the period of enactment of the legislation and the date of transfer. Subsection (a) provides for joint submission by the Secretary of Transportation and the Governor of Alaska, no later than six months after enactment, of a report that describes in detail the rail properties of the Railroad, the liabilities and obligations to be assumed by the State, and the sum of money, if any, in the Alaska Railroad Revolving Fund to be used by the Federal Government in carrying out its remaining responsibilities.

Under subsection (b), the State shall have access to properties of, and records pertaining to the Railroad in order to evaluate and prepare for the transfer. Also the Secretary is directed not to take certain actions such as transfer, sale or lease of the Railroad properties or the obligation of Railroad monies, without the consent of the State.

Subsection (c) directs the Secretary prior to transfer to ensure that the Railroad's accounting practices and systems conform to reporting standards set by the ICC. This action will facilitate the transition of the Railroad to its status as a regulated carrier in intrastate and interstate commerce.

Finally, subsection (d) provides that within nine months after the date of enactment the United States Railway Association must determine the fair market value of the Railroad applying generally accepted procedures, methods and standards. This determination must include an appraisal of the real and personal property to be transferred to the State which considers the current fair market value and potential future value of this property if used in whole or in part for other purposes. The determination must also take into account all obligations imposed by this act and other applicable law upon operation and ownership of the Railroad.

SECTION 6 -- LANDS TO BE TRANSFERRED

This section sets forth the status of the rail properties to be transferred and provides for the orderly adjudication of claims of valid existing rights to those properties. Subsection (a) specifies that the property to be transferred is excluded from selection or conveyance provided under amendments to ANCSA relating to the Cook Inlet Region, Inc., the Chugach Natives, Inc. and certain future Eklutna Village Corporations selections provided for ANILCA.

Subsection (b) reinforces the Department of the Interior's existing responsibility to adjudicate third party claims and to issue written opinions and appropriate documents of title. Specifically, the Secretary of the Interior is directed to complete the determination of "smallest practicable tract" under section 3(e) of ANCSA within three years of the enactment of this legislation. Prior to initiating these adjudications, a ten month

ALASKA RAILROAD TRANSFER LEGISLATION
SECTION-BY-SECTION ANALYSIS

SECTION 1 -- TITLE

This section provides that the legislation may be cited as "Alaska Railroad Transfer Act of 1982."

SECTION 2 -- FINDINGS

This section states the reasons that the Alaska Railroad should be transferred to the State of Alaska. While the Railroad has served the interest of the Federal Government in the past, today it primarily serves residents and businesses of the State. Further, the transfer is consistent with the Federal Government's efforts today to transfer programs to the states whenever appropriate. Finally the transfer is necessary in order to insure that in the future the Railroad will be operated and its services expanded to meet the needs of the State and the Railroad users.

SECTION 3 -- DEFINITIONS

This section defines the major terms used in the legislation. Among those described is "rail properties of the Alaska Railroad." This definition is important because it describes the rail properties to be transferred. As defined in the legislation, rail properties means all right, title and interest to real and personal properties held by or for the Alaska Railroad as of the date of enactment with limited exceptions, as follows: (1) The unexercised reservation to the United States in all patents to lands as provided for the construction of future rights-of-way; (2) the right of the Secretary of Transportation to exercise the power of eminent domain; (3) any money in the Alaska Railroad Revolving Fund that the Secretary and the State agree is needed to pay certain Federal obligations arising from operation of the Railroad, which are not assumed by the State; (4) certain properties that the Secretary determines, with the consent of the State, to be necessary to carry out Federal functions after the transfer; and (5) certain properties in Denali National Park and Preserve.

This section defines "exclusive-use easement" as a surface easement for transportation, communication and transmission purposes and support functions together with the right to use the subsurface if necessary for such purposes. The definition further guarantees subjacent and lateral support and entitles the easement holder to fence, afix track fixtures and structures to and exclude persons from the land subject to the easement.

This section also defines the terms "State" and "State-owned Railroad." The definitions are broadly worded to give the State maximum flexibility in

designating an appropriate organization for State ownership, operation and management of the Railroad after the transfer.

SECTION 4 -- TRANSFER AUTHORIZATION

This section establishes the primary transfer components. Under subsection (a), the Secretary of Transportation is required to transfer the rail properties of the Alaska Railroad to the State as soon as possible after five specified certifications are made.

Subsection (b) requires the Secretary of Transportation after consultation with the Secretary of the Interior to simultaneously deliver to the State the following documents on the date of transfer; (1) a bill of sale conveying title to all personal rail properties of the Alaska Railroad; (2) an interim conveyance of the real properties of the Alaska Railroad which are not subject to unresolved claims of valid existing rights; (3) an exclusive license to use rail properties not conveyed above pending resolution of claims of valid existing rights in accordance with the review, settlement and final adjudication procedures established in section 6 (b); (4) an exclusive-use easement for Railroad purposes and other existing uses to right-of-way lands located with the Denali National Park and Preserve and title to the improvements within the right-of-way. All other rail properties located in the park are transferred to the Department of the Interior for administration as part of the park.

Lands subject to an interim conveyance (including lands to be conveyed following the review, settlement and adjudication process discussed above), must be surveyed by the Department of the Interior within five years after the date of enactment pursuant to section 606 (b)(2). Following completion of the survey, the Secretary is required to issue a patent to the State.

Subsection (c) provides that interim conveyances and patents issued to the State must transfer all U.S. reservations for the Alaska Railroad except unexercised reservations for future rights-of-way under the 1914 Alaska Railroad Act. In addition, there shall be reserved to the Secretaries of the Interior, Defense and Agriculture as appropriate existing easements for administration identified in the closing report. The appropriate secretary may also obtain future easements with State consent. Existing and future easements may not interfere with operations and support functions of the Alaska Railroad.

The Park Service will continue to use and occupy through the Secretary of the Interior a small tract at Talkeetna, Alaska, currently used for certain park activities so long as this use or occupation does not interfere with Railroad operations.

With respect to the required certifications subsection (d) directs the Secretary of Transportation to find that the State will operate the

Railroad as a carrier in intrastate and interstate commerce. In addition, the Secretary is to certify that the State will assume the rights, liabilities and obligations of the Railroad. However, the State will not be responsible for claims or causes of action accruing on or before the date of transfer, or judgements rendered before the transfer, except those tort actions which result in claims of less than $2,500.

The Secretary must also find the State has established specified employee protection arrangements to apply during the two year period after the date of transfer. For those employees who are not officers and who choose to transfer to the State-owned Railroad, the State must ensure that they are retained in their same position, and unless otherwise agreed to, at least at the same level of compensation in effect at the time of transfer. These provisions are not to apply to those employees who are reassigned, retired or separated for cause or lack of work.

Under this subsection, the State is to continue existing collective bargaining agreements during this two year period unless otherwise agreed to. This subsection further provides that these agreements are to be renegotiated during this period unless otherwise agreed to, and that they are to expire at the end of the two year period.

Finally, with respect to these employees, the State is to ensure that certain Federal benefits are retained. These include accrued leave, insurance, seniority rights and cost of living increases. Also those employees who are transferred to the State-owned Railroad but terminated or laid off, during the transition period, shall be entitled to priority of reemployment in the railroad and prior Federal service is to be counted in determining seniority for such purposes.

For officers of the Railroad including the General Manager, Assistant General Manager, Assistant to the General Manager, Chief of Administration and Chief Consel, the Secretary must also certify that the State has agreed to retain those officers for at least one year from the date of transfer (except where separated for cause, resignation, retirement or lack of work), at or above their base salary in effect on the date of transfer in such positions as the State may determine. As an alternative, the State may remove these employees upon payment of lump sum severance pay equal to their base salary for one year diminished pro-rata for employment by the State-owned Railroad within one year of the date of transfer prior to separation. Benefit guarantees discussed above for officers are in effect for one year only.

The fifth certification requires the Secretary to find that the State has agreed to compensate the U.S. at the value, if any, determined under Section 605 (b) below.

SECTION 5 -- TRANSITION PERIOD

This section sets forth the activities which are to occur, or are not to occur, during the period of enactment of the legislation and the date of transfer. Subsection (a) provides for joint submission by the Secretary of Transportation and the Governor of Alaska, no later than six months after enactment, of a report that describes in detail the rail properties of the Railroad, the liabilities and obligations to be assumed by the State, and the sum of money, if any, in the Alaska Railroad Revolving Fund to be used by the Federal Government in carrying out its remaining responsibilities.

Under subsection (b), the State shall have access to properties of, and records pertaining to the Railroad in order to evaluate and prepare for the transfer. Also the Secretary is directed not to take certain actions such as transfer, sale or lease of the Railroad properties or the obligation of Railroad monies, without the consent of the State.

Subsection (c) directs the Secretary prior to transfer to ensure that the Railroad's accounting practices and systems conform to reporting standards set by the ICC. This action will facilitate the transition of the Railroad to its status as a regulated carrier in intrastate and interstate commerce.

Finally, subsection (d) provides that within nine months after the date of enactment the United States Railway Association must determine the fair market value of the Railroad applying generally accepted procedures, methods and standards. This determination must include an appraisal of the real and personal property to be transferred to the State which considers the current fair market value and potential future value of this property if used in whole or in part for other purposes. The determination must also take into account all obligations imposed by this act and other applicable law upon operation and ownership of the Railroad.

SECTION 6 -- LANDS TO BE TRANSFERRED

This section sets forth the status of the rail properties to be transferred and provides for the orderly adjudication of claims of valid existing rights to those properties. Subsection (a) specifies that the property to be transferred is excluded from selection or conveyance provided under amendments to ANCSA relating to the Cook Inlet Region, Inc., the Chugach Natives, Inc. and certain future Eklutna Village Corporations selections provided for ANILCA.

Subsection (b) reinforces the Department of the Interior's existing responsibility to adjudicate third party claims and to issue written opinions and appropriate documents of title. Specifically, the Secretary of the Interior is directed to complete the determination of "smallest practicable tract" under section 3(e) of ANCSA within three years of the enactment of this legislation. Prior to initiating these adjudications, a ten month

period is provided whereby all affected parties are directed to make a good faith effort to review and settle as many of these claims as possible. This subsection specifies that until settlement or final adjudication, interim management of the Railroad lands subject to claims of valid existing rights shall be in accordance with standards agreed to in the Memorandum of Understanding between the FRA, the State, Cook Inlet Region, Inc. and village corporations. In recognition of the importance of maintaining exclusive control over right-of-way lands to ensure sufficient protection for safe and economic operation of the Railroad, the final part of this subsection provides a process whereby village corporations are allowed to relinquish any claims to railroad lands within the right-of-way for subsequent transfer to the State. This provision further provides that failure to make such a relinquishment shall result in the conveyance to the State of all right, title and interest of the United States in the right-of-way free and clear of such claims.

Under subsection (c), any decision by the Secretary of the Interior pursuant to this section is open to review only by an action brought in Federal District Court of Alaska and is to be expedited. The State is allowed to participate in such an appeal as well as in any agency proceeding. To ensure that the goals of this legislation are not frustrated, this section further provides that no injunctive or other relief can delay the transfer of the Railroad or impede its operations.

Lands among the rail properties are expressly excluded by subsection (d) from selection by Cook Inlet Region, Inc. (CIRI) and Chugach Natives, Inc. under 43 U.S.C. 1611 and sections 1425 and 1430 of P.L. 96-487 (ANILCA); although CIRI claims can be revitalized with State consent if the Railroad is transferred to Alaska. If there is no transfer, the State may still exercise "a public purpose" veto over lands proposed to be included in the selection pool. Federal DOT also has veto power so long as the Railroad is not under State ownership. Since the passage of P.L. 94-204 (ANSCA) in 1976, incorporating the Cook Inlet Land Exchange Agreement (exchange agreement), the Secretary of the Interior and the State of Alaska have been attempting to ensure the land entitlement of CIRI under that complex provision is fulfilled in a manner consistent with the interests of the State, environmental concerns and concerns of other public and private entities.

In one of the integral parts of the exchange agreement, the "in-region pool" provision, the Secretary of the Interior in conjunction with the General Services Administrator, was charged with promptly identifying and creating a selection pool of Federal lands within the Cook Inlet Region. The transfer of the Alaska Railroad through this legislation would exclude rail properties from possible placement in the "in region" selection pool, unless the State or Secretary of Transportation consent to its inclusion.

ANILCA amended ANCSA to allow for "in-region pool selections to occur out of State. Since the existing exchange agreement allows the Secretary of

the Interior discretion to enlarge the "in region pool" using out of region entitlement. The objective of this section is to reaffirm this secretarial discretion and to make clear that out-of-state properties can be placed into the "in region pool." This subsection also allows CIRI to negotiate with local governments to obtain the properties being selected.

Utilization of CIRI's current statutory rights to obtain Federal surplus property wherever located will be essential for fulfillment of its entitlement. Therefore, a more detailed provision is needed to insure the properties will be made available. This section adjusts CIRI's current statutory right by specifically requiring that both the Secretary of the Interior and CIRI obtain early notice of potentially available properties. The amendments also clarify the Secretary of the Interior's authority to offer properties under his jurisdiction to CIRI as partial fulfillment of CIRI's entitlements.

In addition, to increase to properties within Alaska that can be placed into the "in region pool," section 6 extends CIRI's "in-region" priority statewide.

The amount of property within the "in-region pool" has been for various reasons less than the minimum amount required. On three separate occasions the original deadline on January 15, 1978 has had to be extended to recognize this fact. To ensure fulfillment, section 6 lifts the deadline until the pool is complete but in no event later than July 15, 1987.

Subsection (e) expressly provides that the State shall be liable to a party receiving a conveyance of land among the rail properties for damage resulting in use by the State in a manner not authorized under the license provided in section 4.

SECTION 7 -- EMPLOYEES OF THE ALASKA RAILROAD

Subsection (a) of this section provides that those employees who transfer to the State-owned Railroad and who presently participate in the Federal Civil Service System, may continue to participate in this system for as long as they continue to work for the State-owned Railroad. However as an alternative, the State-owned Railroad may provide such employees either in or substantially equivalent to those benefits the State provides its employees under the State Retirement System. This section provides an exemption to the State alternative program for those transferred emoloyees who are entitled to retire under the Federal retirement system within five years of the date of transfer. These employees may elect to remain participants in the Federal system even if the State chooses to provide other benefits.

Subsection (b) of this section provides that those Federal emplcyees who choose not to transfer to the State-owned Railroad at the time the Railroad

is transferred to the State shall be entitled to all normal rights and benefits under Federal law for discontinued employees.

Subsection (c) provides for similar protections for transferred employees whose employment with the State-owned Railroad is involuntarily terminated during the two year period following the transfer.

SECTION 8 -- STATE OPERATION

Subsection (a) of this section provides that after the transfer, the State-owned Railroad shall be subject to the same Federal laws, with some limited sections, as are other railroads, including the Interstate Commerce Act, the Federal Antitrust Laws (unless the State acts otherwise to invoke an exemption), and the Railroad Safety Laws. The limited exemptions are the Railroad Retirement Act, the Railway Labor Act, the Federal Employer's Liability Act and the Railroad Unemployment Insurance Act. All FRA memoranda which sanction noncompliance with Federal railroad safety regulations ineffect on the date of transfer shall continue in effect according to their terms as "waivers of compliance."

In addition, subsection (a) exempts the State-owned Railroad from any state or local statute specifying a minimum number of crew members that must be employed in connection with the operation of its trains.

Subsection (a) specifies that the State-owned Railroad shall retain and manage its own revenues. The purpose of this provision is to avoid the need for annual appropriations by the State for the Railroad.

Subsection (b) of this section requires the ICC to promulgate an expedited, modified procedure for providing the State-owned Railroad a certificate of public need and necessity.

This subsection also exempts ICC actions under this subsection from the National Environmental Policy Act and the Energy Policy and Conservation Act in order to ensure an expeditious process.

Subsection (c) of this subsection provides that the State-owned Railroad shall be eligible to participate in Federal assistance programs on the same basis as other railroads. including that provided for by the Railroad Revitalization and Regulatory Reform Act.

Subsection (d) of this section provides that the railroad properties within the Denali National Park and Preserve and Chugach National Forest shall be subject to applicable Federal laws and regulations established for the protection of forest and park values. In making this determination, the appropriate secretary is to consult with the Governor of Alaska. Moreover, any determination by the Secretaries must be designed to avoid unreasonable interference with Railroad operations. This subsection also requires that

any decision to fence the right-of-way within Denali shall be subject to the concurrence of the Secretary of the Interior.

SECTION 9 -- FUTURE RIGHTS-OF-WAY

This section contemplates future rights-of-way for expansion of the Railroad. Subsection (a) provides that the State or State-owned Railroad may request the Secretary of the Interior, or the Secretary of Agriculture as appropriate, in consultation with the Secretary of Transportation to approve expeditiously pursuant to existing law, a right-of-way over Federal lands and applications for terminal and station grounds and material sites.

Subsection (b) specifies that any rights-of-ways and grounds and sites granted under this section must conform to the extent possible to the standards established in the Alaska Railroad Act of 1914.

Subsection (c) provides that a right-of-way granted under this section is subject to reversion in accordance with section 10 below.

SECTION 10 -- REVERSION

This section provides for the reversion to the United States of the properties of the Alaska Railroad if within 10 years of the transfer such properties are converted to a use that would prevent the State-owned Railroad from continuing to operate. As a alternative to the actual reversion of the properties, the State at its option, may pay the United States an amount determined to be the value of the properties at the time they were converted to a use preventing the Railroad from operating.

Subsection (b) specifically provides that if the State discontinues use of any land within the right-of-way for a continuous period of 18 years, or upon a formal notification of discontinuance from the State, the State's interest in these lands will revert to the United States.

Subsection (c) further states that upon such reversion, these lands will be conveyed by patent to abutting land owners, except as specified in subsection (d). This latter subsection provides that the portion of the right-of-way within the Denali National Park and Preserve and the Chugach National Forest will revert to the Department of the Interior and the Department of Agriculture, as appropriate, for administration as part of these units.

Subsection (e) provides that if the State sells or transfers the Railroad within five years after the date of transfer, the proceeds from the sale or transfer that exceed the cost of any rehabilitation and improvements and any liabilities incurred by the State shall be paid to the United States.

SECTION 11 -- OTHER DISPOSITION

To ensure that the Railroad is transferred from Federal ownership, this section authorizes the Secretary of Transportation to otherwise dispose of the Railroad if satisfaction by the State of the five conditions under section 4 cannot be certified within a year of the delivery of the report mandated under section 5. Consistent with the concern for continued rail service, this section directs the Secretary to give preference to a prospective owner who will continue to operate rail service.

SECTION 12 -- DENALI NATIONAL PARK AND PRESERVE

All rail properties within the Denali National Park and Preserve are transferred to the Department of Interior for administration as part of the park subject to the exclusive-use easement discussed above.

SECTION 13 -- APPLICABILITY OF OTHER LAWS

This section exempts actions taken under the legislation from the requirements of a number of Federal statutes, including the National Environmental Policy Act and those provisions of the Administrative Procedures Act not pertaining to judicial review. The reasons for these exemptions is to ensure that the transfer process is not delayed.

This section also clarifies that actions taken under this legislation do not constitute a disposal of surplus Federal property or a revocation of withdrawals made from or confirmed for the Alaska Railroad under a number of specifically named and generally referenced land laws, including the Federal Land Policy and Management Act. These clarifications are necessary in order to ensure that the rail properties do not become available for entry or selection by third parties as a result of action taken under the legislation.

SECTION 14 -- CONFLICT WITH OTHER LAWS

This section provides that this legislation shall govern in the event in any conflict between this legislation and any other law.

SECTION 15 -- REPEAL AND AMENDMENT OF EXISTING LAWS

This section repeals the Alaska Railroad enabling act and other related laws, and makes conforming changes to other Federal laws that mention the Alaska Railroad. These changes would become effective at the times of transfer or other disposition or at the time of any other disposition of the Railroad pursuant to Section 11 of this legislation.

SECTION 16 -- SEPARABILITY

This section provides that if any section is held invalid, other sections shall not be affected.

(2) a person who is able to assure that adequate transportation will be provided over a substantial portion of the feeder line described in subsection (a) of this section for a period of not less than 3 years; or

(3) any combination of members of the classes of applicants described in paragraphs (1) and (2) of this subsection.

Alaska Railroad Transfer Act of 1982.

TITLE VI—ALASKA RAILROAD TRANSFER

SHORT TITLE

45 USC 1201 note.

SEC. 601. This title may be cited as the "Alaska Railroad Transfer Act of 1982".

FINDINGS

45 USC 1201.

SEC. 602. The Congress finds that—

(1) the Alaska Railroad, which was built by the Federal Government to serve the transportation and development needs of the Territory of Alaska, presently is providing freight and passenger services that primarily benefit residents and businesses in the State of Alaska;

(2) many communities and individuals in Alaska are wholly or substantially dependent on the Alaska Railroad for freight and passenger service and provision of such service is an essential governmental function;

(3) continuation of services of the Alaska Railroad and the opportunity for future expansion of those services are necessary to achieve Federal, State, and private objectives; however, continued Federal control and financial support are no longer necessary to accomplish these objectives;

(4) the transfer of the Alaska Railroad and provision for its operation by the State in the manner contemplated by this title is made pursuant to the Federal goal and ongoing program of transferring appropriate activities to the States;

(5) the State's continued operation of the Alaska Railroad following the transfer contemplated by this title, together with such expansion of the railroad as may be necessary or convenient in the future, will constitute an appropriate public use of the rail system and associated properties, will provide an essential governmental service, and will promote the general welfare of Alaska's residents and visitors; and

(6) in order to give the State government the ability to determine the Alaska Railroad's role in serving the State's transportation needs in the future, including the opportunity to extend rail service, and to provide a savings to the Federal Government, the Federal Government should offer to transfer the railroad to the State, in accordance with the provisions of this title, in the same manner in which other Federal transportation functions (including highways and airports) have been transferred since Alaska became a State in 1959.

DEFINITIONS

45 USC 1202.

SEC. 603. As used in this title, the term—

(1) "Alaska Railroad" means the agency of the United States Government that is operated by the Department of Transportation as a rail carrier in Alaska under authority of the Act of

March 12, 1914 (43 U.S.C. 975 et seq.) (popularly referred to as the "Alaska Railroad Act") and section 6(i) of the Department of Transportation Act (49 U.S.C. 1655(i)), or, as the context requires, the railroad operated by that agency;

Definitions.

(2) "Alaska Railroad Revolving Fund" means the public enterprise fund maintained by the Department of the Treasury into which revenues of the Alaska Railroad and appropriations for the Alaska Railroad are deposited, and from which funds are expended for Alaska Railroad operation, maintenance and construction work authorized by law;

(3) "claim of valid existing rights" means any claim to the rail properties of the Alaska Railroad on record in the Department of the Interior as of the day before the date of enactment of this Act;

(4) "date of transfer" means the date on which the Secretary delivers to the State the four documents referred to in section 504(b)(1) of this title;

(5) "employees" means all permanent personnel employed by the Alaska Railroad on the date of transfer, including the officers of the Alaska Railroad, unless otherwise indicated in this title;

(6) "exclusive-use easement" means an easement which affords to the easement holder the following:

(A) the exclusive right to use, possess, and enjoy the surface estate of the land subject to this easement for transportation, communication, and transmission purposes and for support functions associated with such purposes;

(B) the right to use so much of the subsurface estate of the lands subject to this easement as is necessary for the transportation, communication, and transmission purposes and associated support functions for which the surface of such lands is used;

(C) subjacent and lateral support of the lands subject to the easement; and

(D) the right (in the easement holder's discretion) to fence all or part of the lands subject to this easement and to affix track, fixtures, and structures to such lands and to exclude other persons from all or part of such lands;

(7) "Native Corporation" has the same meaning as such term has under section 102(6) of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3102(6));

(8) "officers of the Alaska Railroad" means the employees occupying the following positions at the Alaska Railroad as of the day before the date of transfer: General Manager; Assistant General Manager; Assistant to the General Manager; Chief of Administration; and Chief Counsel;

(9) "public lands" has the same meaning as such term has under section 3(e) of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(e));

(10) "rail properties of the Alaska Railroad" means all right, title, and interest of the United States to lands, buildings, facilities, machinery, equipment, supplies, records, rolling stock, trade names, accounts receivable, goodwill, and other real and personal property, both tangible and intangible, in which there is an interest reserved, withdrawn, appropriated, owned, administered or otherwise held or validly claimed for the Alaska Railroad by the United States or any agency or instrumentality

E-2

thereof as of the date of enactment of this Act, but excluding any such properties disposed of, and including any such properties acquired, in the ordinary course of business after that date but before the date of transfer, and also including the exclusive-use easement within the Denali National Park and Preserve conveyed to the State pursuant to this title and also excluding the following:

(A) the unexercised reservation to the United States for future rights-of-way required in all patents for land taken up, entered, or located in Alaska, as provided by the Act of March 12, 1914 (43 U.S.C. 975 et seq.);

(B) the right of the United States to exercise the power of eminent domain;

(C) any moneys in the Alaska Railroad Revolving Fund which the Secretary demonstrates, in consultation with the State, are unobligated funds appropriated from general tax revenues or are needed to satisfy obligations incurred by the United States in connection with the operation of the Alaska Railroad which would have been paid from such Fund but for this title and which are not assumed by the State pursuant to this title;

(D) any personal property which the Secretary demonstrates, in consultation with the State, prior to the date of transfer under section 604 of this title, to be necessary to carry out functions of the United States after the date of transfer; and

(E) any lands or interest therein (except as specified in this title) within the boundaries of the Denali National Park and Preserve;

(11) "right-of-way" means, except as used in section 609 of this title—

(A) an area extending not less than one hundred feet on both sides of the center line of any main line or branch line of the Alaska Railroad; or

(B) an area extending on both sides of the center line of any main line or branch line of the Alaska Railroad appropriated or retained by or for the Alaska Railroad that, as a result of military jurisdiction over, or non-Federal ownership of, lands abutting the main line or branch line, is of a width less than that described in subparagraph (A) of this paragraph;

(12) "Secretary" means the Secretary of Transportation;

(13) "State" means the State of Alaska or the State-owned railroad, as the context requires;

(14) "State-owned railroad" means the authority, agency, corporation or other entity which the State of Alaska designates or contracts with to own, operate or manage the rail properties of the Alaska Railroad or, as the context requires, the railroad owned, operated, or managed by such authority, agency, corporation, or other entity; and

(15) "Village Corporation" has the same meaning as such term has under section 3(j) of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(j)).

TRANSFER AUTHORIZATION

SEC. 604. (a) Subject to the provisions of this title, the United States, through the Secretary, shall transfer all rail properties of the Alaska Railroad to the State. Such transfer shall occur as soon as practicable after the Secretary has made the certifications required by subsection (d) of this section and shall be accomplished in the manner specified in subsection (b) of this section. 45 USC 1208.

(b)(1) On the date of transfer, the Secretary shall simultaneously:

(A) deliver to the State a bill of sale conveying title to all rail properties of the Alaska Railroad except any interest in real property;

(B) deliver to the State an interim conveyance of the rail properties of the Alaska Railroad that are not conveyed pursuant to subparagraph (A) of this paragraph and are not subject to unresolved claims of valid existing rights;

(C) deliver to the State an exclusive license granting the State the right to use all rail properties of the Alaska Railroad not conveyed pursuant to subparagraphs (A) or (B) of this paragraph pending conveyances in accordance with the review and settlement or final administrative adjudication of claims of valid existing rights;

(D) convey to the State a deed granting the State (i) an exclusive-use easement for that portion of the right-of-way of the Alaska Railroad within the Denali National Park and Preserve extending not less than one hundred feet on either side of the main or branch line tracks, and eight feet on either side of the centerline of the "Y" track connecting the main line of the railroad to the power station at McKinley Park Station and (ii) title to railroad-related improvements within such right-of-way.

Prior to taking the action specified in subparagraphs (A) through (D) of this paragraph, the Secretary shall consult with the Secretary of the Interior. The exclusive-use easement granted pursuant to subparagraph (D) of this paragraph and all rights afforded by such easement shall be exercised only for railroad purposes, and for such other transportation, transmission, or communication purposes for which lands subject to such easement were utilized as of the date of enactment of this Act. In the event of reversion to the United States, pursuant to section 610 of this title, of the State's interests in all or part of the lands subject to such easement, such easement shall terminate with respect to the lands subject to such reversion, and no new exclusive-use easement with respect to such reverted lands shall be granted except by Act of Congress.

(2) The Secretary shall deliver to the State an interim conveyance of rail properties of the Alaska Railroad described in paragraph (1)(C) of this subsection that become available for conveyance to the State after the date of transfer as a result of settlement, relinquishment, or final administrative adjudication pursuant to section 606 of this title. Where the rail properties to be conveyed pursuant to this paragraph are surveyed at the time they become available for conveyance to the State, the Secretary shall deliver a patent therefor in lieu of an interim conveyance.

(3) The force and effect of an interim conveyance made pursuant to paragraphs (1)(B) or (2) of this subsection shall be to convey to and vest in the State exactly the same right, title, and interest in and to the rail properties identified therein as the State would have received had it been issued a patent by the United States. The

Secretary of the Interior shall survey the land conveyed by an interim conveyance to the State pursuant to paragraphs (1)(B) or (2) of this subsection and, upon completion of the survey, the Secretary shall issue a patent therefor.

(4) The license granted pursuant to paragraph (1)(C) of this subsection shall authorize the State to use, occupy, and directly receive all benefits of the rail properties described in the license for the operation of the State-owned railroad in conformity with the Memorandum of Understanding referred to in section 606(b)(3) of this title. The license shall be exclusive, subject only to valid leases, permits, and other instruments issued before the date of transfer and easements reserved pursuant to subsection (c)(2) of this section. With respect to any parcel conveyed pursuant to this title, the license shall terminate upon conveyance of such parcel.

(c)(1) Interim conveyances and patents issued to the State pursuant to subsection (b) of this section shall confirm, convey and vest in the State all reservations to the United States (whether or not expressed in a particular patent or document of title), except the unexercised reservations to the United States for future rights-of-way made or required by the first section of the Act of March 12, 1914 (43 U.S.C. 975d). The conveyance to the State of such reservations shall not be affected by the repeal of such Act under section 615 of this title.

(2) In the license granted under subsection (b)(1)(C) of this section and in all conveyances made to the State under this title, there shall be reserved to the Secretary of the Interior, the Secretary of Defense and the Secretary of Agriculture, as appropriate, existing easements for administration (including agency transportation and utility purposes) that are identified in the report required by section 605(a) of this title. The appropriate Secretary may obtain, only after consent of the State, such future easements as are necessary for administration. Existing and future easements and use of such easements shall not interfere with operations and support functions of the State-owned railroad.

(3) There shall be reserved to the Secretary of the Interior the right to use and occupy, without compensation, five thousand square feet of land at Talkeetna, Alaska, as described in ARR lease numbered 69-25-0003-5165 for National Park Service administrative activities, so long as the use or occupation does not interfere with the operation of the State-owned railroad. This reservation shall be effective on the date of transfer under this section or the expiration date of such lease, whichever is later.

(d)(1) Prior to the date of transfer, the Secretary shall certify that the State has agreed to operate the railroad as a rail carrier in intrastate and interstate commerce.

(2)(A) Prior to the date of transfer, the Secretary shall also certify that the State has agreed to assume all rights, liabilities, and obligations of the Alaska Railroad on the date of transfer, including leases, permits, licenses, contracts, agreements, claims, tariffs, accounts receivable, and accounts payable, except as otherwise provided by this title.

(B) Notwithstanding the provisions of subparagraph (A) of this paragraph, the United States shall be solely responsible for—

(i) all claims and causes of action against the Alaska Railroad that accrue on or before the date of transfer, regardless of the date on which legal proceedings asserting such claims were or may be filed, except that the United States shall, in the case of

E-5

any tort claim, only be responsible for any such claim against the United States that accrues before the date of transfer and results in an award, compromise, or settlement of more than $2,500, and the United States shall not compromise or settle any claim resulting in State liability without the consent of the State, which consent shall not be unreasonably withheld; and

(ii) all claims that resulted in a judgment or award against the Alaska Railroad before the date of transfer.

"Accrue."

(C) For purposes of subparagraph (B) of this paragraph, the term "accrue" shall have the meaning contained in section 2401 of title 28, United States Code.

(3)(A) Prior to the date of transfer, the Secretary shall also certify that the State-owned railroad has established arrangements pursuant to section 607 of this title to protect the employment interests of employees of the Alaska Railroad during the two-year period commencing on the date of transfer. These arrangements shall include provisions—

(i) which ensure that the State-owned railroad will adopt collective bargaining agreements in accordance with the provisions of subparagraph (B) of this paragraph;

(ii) for the retention of all employees, other than officers of the Alaska Railroad, who elect to transfer to the State-owned railroad in their same positions for the two-year period commencing on the date of transfer, except in cases of reassignment, separation for cause, resignation, retirement, or lack of work;

(iii) for the payment of compensation to transferred employees (other than employees provided for in subparagraph (E) of this paragraph), except cases of separation for cause, resignation, retirement, or lack of work, for two years commencing on the date of transfer at or above the base salary levels in effect for such employees on the date of transfer, unless the parties otherwise agree during that two-year period;

(iv) for priority of reemployment at the State-owned railroad during the two-year period commencing on the date of transfer for transferred employees who are separated for lack of work, in accordance with subparagraph (C) of this paragraph (except for officers of the Alaska Railroad, who shall receive such priority for one year following the date of transfer);

(v) for credit during the two-year period commencing on the date of transfer for accrued annual and sick leave, seniority rights, and relocation and turnaround travel allowances which have been accrued during their period of Federal employment by transfered employees retained by the State-owned railroad (except for officers of the Alaska Railroad, who shall receive such credit for one year following the date of transfer);

(vi) for payment to transferred employees retained by the State-owned railroad during the two-year period commencing on the date of transfer, including for one year officers retained or separated under subparagraph (E) of this paragraph, of an amount equivalent to the cost-of-living allowance to which they are entitled as Federal employees on the day before the date of transfer, in accordance with the provisions of subparagraph (D) of this paragraph; and

(vii) for health and life insurance programs for transferred employees retained by the State-owned railroad during the two-year period commencing on the date of transfer, substantially

E-6

equivalent to the Federal health and life insurance programs available to employees on the day before the date of transfer (except for officers of the Alaska Railroad, who shall receive such credit for one year following the date of transfer).

(B) The State-owned railroad shall adopt all collective bargaining agreements which are in effect on the date of transfer. Such agreements shall continue in effect for the two-year period commencing on the date of transfer, unless the parties agree to the contrary before the expiration of that two-year period. Such agreements shall be renegotiated during the two-year period, unless the parties agree to the contrary. Any labor-management negotiation impasse declared before the date of transfer shall be settled in accordance with chapter 71 of title 5, United States Code. Any impasse declared after the date of transfer shall be subject to applicable State law.

5 USC 7101 *et seq.*

(C) Federal service shall be included in the computation of seniority for transferred employees with priority for reemployment, as provided in subparagraph (A)(iv) of this paragraph.

(D) Payment to transferred employees pursuant to subparagraph (A)(vi) of this paragraph shall not exceed the percentage of any transferred employee's base salary level provided by the United States as a cost-of-living allowance on the day before the date of transfer, unless the parties agree to the contrary.

(E) Prior to the date of transfer, the Secretary shall also certify that the State-owned railroad has agreed to the retention, for at least one year from the date of transfer, of the offices of the Alaska Railroad, except in cases of separation for cause, resignation, retirement, or lack of work, at or above their base salaries in effect on the date of transfer, in such positions as the State-owned railroad may determine; or to the payment of lump-sum severance pay in an amount equal to such base salary for one year to officers not retained by the State-owned railroad upon transfer or, for officers separated within one year on or after the date of transfer, of a portion of such lump-sum severance payment (diminished pro rata for employment by the State-owned railroad within one year of the date of transfer prior to separation).

(4) Prior to the date of transfer, the Secretary shall also certify that the State has agreed to allow representatives of the Secretary adequate access to employees and records of the Alaska Railroad when needed for the performance of functions related to the period of Federal ownership.

(5) Prior to the date of transfer, the Secretary shall also certify that the State has agreed to compensate the United States at the value, if any, determined pursuant to section 605(d) of this title.

TRANSITION PERIOD

Report to Congress and State legislature. 45 USC 1204.

SEC. 605. (a) Within 6 months after the date of enactment of this Act, the Secretary and the Governor of Alaska shall jointly prepare and deliver to the Congress of the United States and the legislature of the State a report that describes to the extent possible the rail properties of the Alaska Railroad, the liabilities and obligations to be assumed by the State, the sum of money, if any, in the Alaska Railroad Revolving Fund to be withheld from the State pursuant to section 603(8)(C) of this title, and any personal property to be withheld pursuant to section 603(8)(D) of this title. The report shall separately identify by the best available descriptions (1) the rail properties of the Alaska Railroad to be transferred pursuant to

section 604(b)(1) (A), (B), and (D) of this title; (2) the rail properties to be subject to the license granted pursuant to section 604(b)(1)(C) of this title; and (3) the easements to be reserved pursuant to section 604(c)(2) of this title. The Secretaries of Agriculture, Defense, and the Interior and the Administrator of the General Services Administration shall provide the Secretary with all information and assistance necessary to allow the Secretary to complete the report within the time required.

(b) During the period from the date of enactment of this Act until the date of transfer, the State shall have the right to inspect, analyze, photograph, photocopy and otherwise evaluate all of the rail properties of the Alaska Railroad and all records related to the rail properties of the Alaska Railroad maintained by any agency of the United States under conditions established by the Secretary to protect the confidentiality of proprietary business data, personnel records, and other information, the public disclosure of which is prohibited by law. During that period, the Secretary and the Alaska Railroad shall not, without the consent of the State and only in conformity with applicable law and the Memorandum of Understanding referred to in section 606(b)(3) of this title—

(1) make or incur any obligation to make any individual capital expenditure of money from the Alaska Railroad Revolving Fund in excess of $300,000;

(2) (except as required by law) sell, exchange, give, or otherwise transfer any real property included in the rail properties of the Alaska Railroad; or

(3) lease any rail property of the Alaska Railroad for a term in excess of five years.

(c) Prior to transfer of the rail properties of the Alaska Railroad to the State, the Alaska Railroad's accounting practices and systems shall be capable of reporting data to the Interstate Commerce Commission in formats required of comparable rail carriers subject to the jurisdiction of the Interstate Commerce Commission.

(d)(1) Within nine months after the date of enactment of this Act, the United States Railway Association (hereinafter in this section referred to as the "Association") shall determine the fair market value of the Alaska Railroad under the terms and conditions of this title, applying such procedures, methods and standards as are generally accepted as normal and common practice. Such determination shall include an appraisal of the real and personal property to be transferred to the State pursuant to this title. Such appraisal by the Association shall be conducted in the usual manner in accordance with generally accepted industry standards, and shall consider the current fair market value and potential future value if used in whole or in part for other purposes. The Association shall take into account all obligations imposed by this title and other applicable law upon operation and ownership of the State-owned railroad. In making such determination, the Association shall use to the maximum extent practicable all relevant data and information, including, if relevant, that contained in the report prepared pursuant to subsection (a) of this section.

(2) The determination made pursuant to paragraph (1) of this subsection shall not be construed to affect, enlarge, modify, or diminish any inventory, valuation, or classification required by the Interstate Commerce Commission pursuant to subchapter V of chapter 107 of title 49, United States Code (49 U.S.C. 10781 et seq.).

45 USC 712.

(e) Section 202(a) of the Regional Rail Reorganization Act of 1973 is amended—

(1) by striking "and" at the end of paragraph (9);

(2) by striking the period at the end of paragraph (10) and inserting in lieu thereof "; and"; and

(3) by adding at the end thereof the following new paragraph:

"(11) determine the value of the Alaska Railroad, as required by section 605 of the Alaska Railroad Transfer Act of 1982.".

LANDS TO BE TRANSFERRED

45 USC 1205.

SEC. 606. (a) Lands among the rail properties of the Alaska Railroad shall not be—

(1) available for selection under section 12 of the Act of January 2, 1976, as amended (43 U.S.C. 1611, note), subject to the exception contained in section 12(b)(8)(i)(D) of such Act, as amended by subsection (d)(5) of this section;

Post, p. 2568.

(2) available for conveyance under section 1425 of the Alaska National Interest Lands Conservation Act (Public Law 96-487; 94 Stat. 2515);

(3) available for conveyance to Chugach Natives, Inc., under sections 1429 or 1430 of the Alaska National Interest Lands Conservation Act (Public Law 96-487; 94 Stat. 2531) or under sections 12(c) or 14(h)(8) of the Alaska Native Claims Settlement Act (43 U.S.C. 1611(c) and 1613(h)(8), respectively); or

(4) available under any law or regulation for entry, location, or for exchange by the United States, or for the initiation of a claim or selection by any party other than the State or other transferee under this title, except that this paragraph shall not prevent a conveyance pursuant to section 12(b)(8)(i)(D) of the Act of January 2, 1976 (43 U.S.C. 1611, note), as amended by subsection (d)(5) of this section.

(b)(1)(A) During the ten months following the date of enactment of this Act, so far as practicable consistent with the priority of preparing the report required pursuant to section 605(a) of this title, the Secretary of the Interior, Village Corporations with claims of valid existing rights, and the State shall review and make a good faith effort to settle as many of the claims as possible. Any agreement to settle such claims shall take effect and bind the United States, the State, and the Village Corporation only as of the date of transfer of the railroad.

(B) At the conclusion of the review and settlement process provided in subparagraph (A) of this paragraph, the Secretary of the Interior shall prepare a report identifying lands to be conveyed in accordance with settlement agreements under this title or applicable law. Such settlement shall not give rise to a presumption as to whether a parcel of land subject to such agreement is or is not public land.

(2) The Secretary of the Interior shall have the continuing jurisdiction and duty to adjudicate unresolved claims of valid existing rights pursuant to applicable law and this title. The Secretary of the Interior shall complete the final administrative adjudication required under this subsection not later than three years after the date of enactment of this Act, and shall complete the survey of all lands to be conveyed under this title not later than five years after the date of enactment of this Act, and after consulting with the Governor of the State of Alaska to determine priority of survey with

regard to other lands being processed for patent to the State. The Secretary of the Interior shall give priority to the adjudication of Village Corporation claims as required in this section. Upon completion of the review and settlement process required by paragraph (1)(A) of this subsection, with respect to lands not subject to an agreement under such paragraph, the Secretary of the Interior shall adjudicate which lands subject to claims of valid existing rights filed by Village Corporations, if any, are public lands and shall complete such final administrative adjudication within two years after the date of enactment of this Act.

(3) Pending settlement or final administrative adjudication of claims of valid existing rights filed by Village Corporations prior to the date of transfer or while subject to the license granted to the State pursuant to section 604(b)(1)(C) of this title, lands subject to such claims shall be managed in accordance with the Memorandum of Understanding among the Federal Railroad Administration, the State, Eklutna, Incorporated, Cook Inlet Region, Incorporated (as that term is used in section 12 of the Act of January 2, 1976 (Public Law 94-204; 89 Stat. 1150)), and Toghotthele Corporation, executed by authorized officers or representatives of each of these entities. Duplicate originals of the Memorandum of Understanding shall be maintained and made available for public inspection and copying in the Office of the Secretary, at Washington, District of Columbia, and in the Office of the Governor of the State of Alaska, at Juneau, Alaska.

(4) The following procedures and requirements are established to promote finality of administrative adjudication of claims of valid existing rights filed by Village Corporations, to clarify and simplify the title status of lands subject to such claims, and to avoid potential impairment of railroad operations resulting from joint or divided ownership in substantial segments of right-of-way:

(A)(i) Prior to final administrative adjudication of Village Corporation claims of valid existing rights in land subject to the license granted under section 604(b)(1)(C) of this title, the Secretary of the Interior may, notwithstanding any other provision of law, accept relinquishment of so much of such claims as involved lands within the right-of-way through execution of an agreement with the appropriate Village Corporation effective on or after the date of transfer. Upon such relinquishment, the interest of the United States in the right-of-way shall be conveyed to the State pursuant to section 604(b)(1)(B) or (2) of this title.

(ii) With respect to a claim described in clause (i) of this subparagraph that is not settled or relinquished prior to final administrative adjudication, the Congress finds that exclusive control over the right-of-way by the Alaska Railroad has been and continues to be necessary to afford sufficient protection for safe and economic operation of the railroad. Upon failure of the interested Village Corporation to relinquish so much of its claims as involve lands within the right-of-way prior to final adjudication of valid existing rights, the Secretary shall convey to the State pursuant to section 604(b)(1)(B) or (2) of this title all right, title and interest of the United States in and to the right-of-way free and clear of such Village Corporation's claim to and interest in lands within such right-of-way.

(B) Where lands within the right-of-way, or any interest in such lands, have been conveyed from Federal ownership prior to

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5169 HTRA HB 485

741

the date of enactment of this Act, or is subject to a claim of valid existing rights by a party other than a Village Corporation, the conveyance to the State of the Federal interest in such properties pursuant to section 604(b)(1)(B) or (2) of this title shall grant not less than an exclusive-use easement in such properties. The foregoing requirements shall not be construed to permit the conveyance to the State of less than the entire Federal interest in the rail properties of the Alaska Railroad required to be conveyed by section 604(b) of this title. If an action is commenced against the State or the United States contesting the validity or existence of a reservation of right-of-way for the use or benefit of the Alaska Railroad made prior to the date of enactment of this Act, the Secretary of the Interior, through the Attorney General, shall appear in and defend such action.

(c)(1) The final administrative adjudication pursuant to subsection (b) of this section shall be final agency action and subject to judicial review only by an action brought in the United States District Court for the District of Alaska. Review of agency action pursuant to this title shall be expedited to the same extent as the expedited review provided by section 1108 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3168).

(2) No administrative or judicial action under this title shall enjoin or otherwise delay the transfer of the Alaska Railroad pursuant to this title, or substantially impair or impede the operations of the Alaska Railroad or the State-owned railroad.

(3) Before the date of transfer, the State shall have standing to participate in any administrative determination or judicial review pursuant to this title. If transfer to the State does not occur pursuant to section 604 of this title, the State shall not thereafter have standing to participate in any such determination or review.

43 USC 1611 note.

(d)(1) Section 12(b)(7)(i) of the Act of January 2, 1976 (Public Law 94-204) is amended—

(A) by striking "subsection 12(b)(6)" and inserting in lieu thereof "section 12(b) (5) and (6)";

(B) by striking "12(b)(7)(ii)" and inserting in lieu thereof "12(b)(7)(iv)";

(C) by striking "crediting" and inserting in lieu thereof "using";

(D) by striking "this subsection 12(b)(7)(i)(b)" and inserting in lieu thereof "these subsections 12(b)(7) (i)(b) or (ii)";

(E) by striking "State" in the last sentence and inserting in lieu thereof "state"; and

(F) by striking the penultimate sentence.

(2) Section 12(b)(7) of such Act is amended—

(A) by redesignating subsections (ii) through (iv) as subsections (iv) through (vi), respectively; and

(B) by inserting immediately after subsection (i) the following:

"(ii) Subject to the exceptions stated in section 12(b)(9), and notwithstanding the foregoing subsection 12(b)(7)(i) and any provision of any other law or any implementing regulation inconsistent with this subsection, until the obligations of the Secretary and the Administrator of General Services under section 12(b) (5) and (6) are otherwise fulfilled:

"(A) concurrently with the commencement of screening of any excess real property, wherever located, for utilization by Federal agencies, the Administrator of General Services shall

notify the Region that such property may be available for conveyance to the Region upon negotiated sale. Within fifteen days of the date of receipt of such notice, the Region may advise the Administrator that there is a tentative need for the property to fulfill the obligations established under section 12(b) (5) and (6). If the Administrator determines the property should be disposed of by transfer to the Region, the Administrator or other appropriate Federal official shall promptly transfer such property;

43 USC 1611 note.

"(B) no disposition or conveyance of property under this subsection to the Region shall be made until the Administrator, after notice to affected State and local governments, has provided to them such opportunity to obtain the property as is recognized in title 40, United States Code and the regulations thereunder for the disposition or conveyance of surplus property; and

"(C) as used in this subsection, 'real property' means any land or interests in land owned or held by the United States or any Federal agency, any improvements on such land or rights to their use or exploitation, and any personal property related to the land.

"Real property"

"(iii) If the Region accepts any conveyance under section 12(b)(7)(i) or (ii), it shall be in exchange for acres or acre-equivalents as provided in subparagraph I(C)(2)(e) of the document referred to in this section, except that, after the obligation of the Secretary and the Administrator under subparagraph I(C)(2)(g) of that document has been fulfilled, the acre-equivalents under subparagraph I(C)(2)(e)(iii)(A) shall be one-half the valued increment therein stated. The entitlement of the Region under section 12(b) of this Act shall be reduced by the number of acres or acre-equivalents attributed to the Region under this subsection. The Secretary and the Administrator are directed to execute an agreement with the Region which shall conform substantially to the 'Memorandum of Understanding Regarding the Implementation of Section 12(b)(7)', dated September 10, 1982, and submitted to the Senate Committee on Commerce, Science, and Transportation. The Secretary, the Administrator and the Region may thereafter otherwise agree to procedures to implement responsibilities under this section 12(b)(7), including establishment of accounting procedures and the delegation or reassignment of duties under this statute.".

(3) Section 12(b)(7)(iv) of such Act, as so redesignated by paragraph (2) of this subsection, is amended—

43 USC 1611 note.

(A) by striking "surplus" the first place it appears therein;

(B) by inserting immediately before the period at the end of the first sentence the following: "or paying for the conveyance of property pursuant to subsections (i) or (ii)";

(C) by inserting immediately after "account shall be" the following: "the sum of (1)";

(D) by striking "I(C)(2)(e)" and inserting in lieu thereof "I(C)(2)(e)(iii)(A)";

(E) by striking "the effective date of this subsection", and inserting in lieu thereof "December 2, 1980";

(F) by striking "and shall be adjusted" and inserting in lieu thereof "and (2) one-half the acre or acre-equivalent exchange value under subparagraph I(C)(2)(e)(iii)(A) of ten townships fewer than the unfulfilled entitlement of the Region on the same date to acres or acre-equivalents under paragraph I(C)(1)

of the document referred to in this section. The balance of the property account shall be adjusted in accordance with subsection 12(b)(7)(iii)"; and

(G) by striking "subsection 12(b)(6)" and inserting in lieu thereof "section 12(b) (5) and (6)".

43 USC 1611 note.

(4) Section 12(b)(7)(v) of such Act, as so redesignated by paragraph (2) of this subsection, is amended by striking "subsection (iii)" and inserting in lieu thereof "subsection (iv)".

43 USC 1611 note.

(5) Section 12(b)(8) of such Act is amended to read as follows:

"12(b)(8). Subject to the exceptions stated in section 12(b)(9), and notwithstanding any provisions of law or implementing regulation inconsistent with this section:

"(i) The deadlines in subparagraphs I(C)(2) (a) and (g) of the document referred to in this section shall be extended until the Secretary's obligations under section 12(b) (5) and (6) are fulfilled: *Provided*, That:

"(A) the obligation of the Secretary under subparagraph I(C)(2)(a) of such document shall terminate on such date, after July 15, 1984, that the Secretary has fulfilled his obligation under subparagraph I(C)(2)(g) of that document: *Provided*, That the obligation of the Secretary under subparagraph I(C)(2)(g) of such document shall be fulfilled at such date, after July 15, 1984, that the sum of the acres or acre-equivalents identified for and placed in the pool and the acres or acre-equivalents used by the Region in purchasing property under section 12(b)(7) equals or exceeds 138,240 acres or acre-equivalents;

"(B) the authority of the Secretary under subparagraphs I(C)(2)(b) and I(C)(2)(g)(ii) of such document to contribute to the pool created under subparagraph I(C)(2)(a) of such document shall terminate (a) on July 15, 1984, if, by that date, the Secretary has fulfilled his obligation under subparagraph I(C)(2) (g), or (b) if not, on such date after July 15, 1984 as such obligation is fulfilled, or (c) if such obligation remains unfulfilled, on July 15, 1987;

"(C) the concurrence by the State as described in subparagraphs I(C)(2)(a)(vi) and I(C)(2)(c) of the document referred to in this section shall be deemed not required after the Secretary has fulfilled his obligation under subparagrapn I(C)(2)(g) of that document, but in no event after July 15, 1987. In lieu of such concurrence, after 1984 as to military property, and after the Secretary has fulfilled his obligation under subparagraph I(C)(2)(g) of that document or July 15, 1987, whichever is earlier, as to any other property, except property of the Alaska Railroad which is governed by subsection 12(b)(6)(i)(D) of this Act, the Secretary shall not place any lands in the selection pool referred to in subparagraphs I(C)(2) (a) and (g) of the document referred to in this section without the prior written concurrence of the State. Such concurrence shall be deemed obtained unless the State advises the Secretary within ninety days of receipt of a formal notice from the Secretary that he is considering placing property in the selection pool, that the State, or a municipality of the State which includes all or part of the property in question, requires the property for a public purpose of the State or municipality; and

"(D) notwithstanding section 906(a)(2) of the Alaska Railroad Transfer Act of 1982, the Secretary may include property of the Alaska Railroad in the pool of lands to be made available for selection to the extent that he is authorized to do so under a provision of section 12(b) of this Act if the State consents to its inclusion, which consent is not subject to any limitation under subsection 12(b)(8)(i)(C) herein: *Provided*, That, while the Alaska Railroad is the property of the United States, the Secretary shall obtain the consent of the Secretary of Transportation prior to including such property: *And provided further*, That, if the transfer of the Alaska Railroad to the State does not occur pursuant to the terms of the Alaska Railroad Transfer Act of 1982 or any amendments thereto, the State's consent shall be deemed obtained unless the State advises the Secretary in writing, within ninety days of receipt of a formal notice from the Secretary that he is considering placing such property in the selection pool, that the State, or a municipality of the State which includes all or part of the property in question, requires the property for a public purpose of the State or the municipality.

Ante, p. 2564.

Ante, p. 2568.

Ante, p. 2556.

"(ii) In addition to the review required to identify public lands under section 3(e) of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(e)), the Secretary shall identify for inclusion in the pool all public lands (as such term is used under section 3(e) of the Alaska Native Claims Settlement Act (43 U.S.C. 1602(e)), as described in subparagraph I(C)(2)(a)(v) of the document referred to in this section, and shall, in so doing, review all Federal installations within the boundaries of the Cook Inlet Region whether within or without the areas withdrawn pursuant to section 11 of the Alaska Native Claims Settlement Act (43 U.S.C. 1610) or by the Secretary acting under authority contained in that section: *Provided*, That no such additional review under such subparagraph shall be required of military installations or of such other installations as may be mutually excluded from review by the Region and the Secretary: *And provided further*, That the Secretary shall not review any property of the Alaska Railroad unless such property becomes available for selection pursuant to subsection 12(b)(8)(i)(D).

"(iii) The concurrence required of the State as to the inclusion of any property in the pool under subparagraph I(C)(2)(b) of the document referred to in this section shall be deemed obtained unless the State advises the Secretary in writing, within ninety days of receipt of a formal notice from the Secretary that the Secretary is considering placing property in the selection pool, that the State, or a municipality of the State which includes all or part of the property in question requires the property for a public purpose of the State or the municipality.

"(iv) The deadlines in subparagraph I(C)(1)(b) of the document referred to in this section shall be extended for an additional twenty-four months beyond the dates established in the Act of July 17, 1980 (Public Law 96-311; 94 Stat. 947).

"(v) On or before January 15, 1985, the Secretary shall report to the Congress with respect to:

Report to Congress.

"(A) such studies and inquiries as shall have been initiated by the Secretary and the Administrator of General Services, or have been prepared by other holding agencies,

to determine what lands, except for lands held by the Alaska Railroad or the State-owned railroad, within the boundaries of the Cook Inlet Region or elsewhere can be made available to the Region, to the extent of its entitlement;

"(B) the feasibility and appropriate nature of reimbursement of the Region for its unfulfilled entitlement as valued in subsection 12(b)(7)(iv) of this Act;

"(C) the extent to which implementation of the mechanisms established in section 12(b)(7) promise to meet such unfulfilled entitlement;

"(D) such other remedial legislation or administrative action as may be needed; and

"(E) the need to terminate any mechanism established by law through which the entitlement of the Region may be completed.".

43 USC 1611 note.

(6) Section 12(b) of such Act is amended by adding at the end thereof the following:

"12(b)(9). No disposition or conveyance of property located within the State to the Region under section 12(b)(6), 12(b)(7) and 12(b)(8), as amended, shall be made if the property is subject to an express waiver of rights under the provisions of subparagraph I(C)(2)(f) of the document referred to in this section, or if such disposition or conveyance violates valid rights, including valid selections or valid authorized agreements, of Native Corporations (as such term is used in section 102(6) of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3102(6)) or the State existing at the time of such disposition or conveyance under section 6 of Public Law 85-508, as amended (excepting section 906(e) of the Alaska National Interest Lands Conservation Act), sections 12(a), 12(b), 16(b) or 22(f) of the Alaska Native Claims Settlement Act, section 12(b) of the Act of January 2, 1976 (Public Law 94-204; 89 Stat. 1154), or sections 1416, 1418 through 1425 (inclusive), 1427 through 1434 (inclusive), or 1436 of the Alaska National Interest Lands Conservation Act: *Provided, however*, That nothing within this subsection 12(b)(9) shall diminish such rights and priorities as the Region has under section 12(b) of the Act of January 2, 1976 (Public Law 94-204; 89 Stat. 1151), as amended by section 4 of the Act of October 4, 1976 (Public Law 94-456; 90 Stat. 1935), section 3 of the Act of November 15, 1977 (Public Law 95-178; 91 Stat. 1369), section 2 of the Act of August 14, 1979 (Public Law 96-55; 93 Stat. 386), the Act of July 17, 1980 (Public Law 96-311; 94 Stat. 947), and section 1435 of the Alaska National Interest Lands Conservation Act.

"12(b)(10). For the purpose of its incorporation into this section, paragraph I(C)(1) of the document referred to in this section is amended as follows: (1) by striking 'withdrawn' and inserting in lieu thereof 'withdrawn or formerly withdrawn'; (2) by striking '17(d)(1)' and inserting in lieu thereof '17(d)(1) and (2)'; and (3) by striking the last sentence of subparagraph I(C)(1)(a) and inserting in lieu thereof the following: 'Cook Inlet Region, Incorporated shall not nominate any lands within the boundaries of any conservation system unit, national conservation area, national recreation area, national forest, defense withdrawal, or any lands that were made available to the State for selection pursuant to sections 2 and 5 of the State-Federal Agreement of September 1, 1972.'.

E-15

"12(b)(11). Notwithstanding the provisions of section 906 of the Alaska National Interest Lands Conservation Act and section 6(i) of the Alaska Statehood Act (72 Stat. 339): 43 USC 1635. 48 USC note prec. 21.

"(i) The State is hereby authorized to convey to the United States for reconveyance to the Region, and the Secretary is directed to accept and so reconvey, lands tentatively approved for patent or patented to the State, if the State and the Region enter into an agreement that such lands shall be reconveyed to the Region to fulfill all or part of its entitlement under paragraph I(C)(1) of the document referred to in this section: *Provided*, That the acreage of lands conveyed to the United States under this provision shall be added to the State's unfulfilled entitlement pursuant to section 6 of the Alaska Statehood Act, and the number of townships to be nominated, pooled, struck, selected and conveyed pursuant to paragraph I(C)(1) of the document referred to in this section shall be reduced accordingly.

"(ii) The Secretary is directed to convey to the Region lands selected by the State prior to July 18, 1973 or pursuant to sections 2 and 5 of the State-Federal Agreement of September 1, 1972, if the State relinquishes such selections and enters into an agreement with the Region that such lands shall be reconveyed to the Region to fulfill all or part of its entitlement under paragraph I(C)(1) of the document referred to in this section, and the number of townships to be nominated, pooled, struck, selected and conveyed pursuant to paragraph I(C)(1) of the document referred to in this section shall be reduced accordingly.

"(iii) The Secretary, in the Secretary's discretion, is authorized to enter into an agreement with the State and the Region to implement the authority contained in this section 12(b)(11), which agreement may provide for conveyances directly from the State to the Region. Conveyances directly conveyed shall be deemed conveyances from the Secretary pursuant to the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.).".

(e) The State shall be liable to a party receiving a conveyance of land among the rail properties of the Alaska Railroad subject to the license granted pursuant to section 604(b)(1)(C) of this title for damage resulting from use by the State of the land under such license in a manner not authorized by such license. 45 USC 1205.

EMPLOYEES OF THE ALASKA RAILROAD

SEC. 607. (e)(1) Any employees who elect to transfer to the State-owned railroad and who on the day before the date of transfer are subject to the civil service retirement law (subchapter III of chapter 83 of title 5, United States Code) shall, so long as continually employed by the State-owned railroad without a break in service, continue to be subject to such law, except that the State-owned railroad shall have the option of providing benefits in accordance with the provisions of paragraph (2) of this subsection. Employment by the State-owned railroad without a break in continuity of service shall be considered to be employment by the United States Government for purposes of subchapter III of chapter 83 of title 5, United States Code. The State-owned railroad shall be the employing agency for purposes of section 8334(a) of title 5, United States Code, and shall contribute to the Civil Service Retirement and Disability 45 USC 1206. 5 USC 8331.

Fund a sum as provided by such section, except that such sum shall be determined by applying to the total basic pay (as defined in section 8331(3) of title 5, United States Code) paid to the employees of the State-owned railroad who are covered by the civil service retirement law, the per centum rate determined annually by the Director of the Office of Personnel Management to be the excess of the total normal cost per centum rate of the civil service retirement system over the employee deduction rate specified in section 8334(a) of title 5, United States Code. The State-owned railroad shall pay into the Federal Civil Service Retirement and Disability Fund that portion of the cost of administration of such Fund which is demonstrated by the Director of the Office of Personnel Management to be attributable to its employees.

(2) At any time during the two-year period commencing on the date of transfer, the State-owned railroad shall have the option of providing to transferred employees retirement benefits, reflecting prior Federal service, in or substantially equivalent to benefits under the retirement program maintained by the State for State employees. If the State decides to provide benefits under this paragraph, the State shall provide such benefits to all transferred employees, except those employees who will meet the age and service requirements for retirement under section 8336(a), (b), (c) or (f) of title 5, United States Code, within five years after the date of transfer and who elect to remain participants in the Federal retirement program.

(3) If the State provides benefits under paragraph (2) of this subsection—

(A) the provisions of paragraph (1) of this subsection regarding payments into the Civil Service Retirement and Disability Fund for those employees who are transferred to the State program shall have no further force and effect (other than for employees who will meet the age and service requirements for retirement under section 8336(a), (b), (c) or (f) of title 5, United States Code, within five years after the date of transfer and who elect to remain participants in the Federal retirement program); and

(B) all of the accrued employee and employer contributions and accrued interest on such contributions made by and on behalf of the transferred employees during their prior Federal service (other than amounts for employees who will meet the age and service requirements for retirement under section 8336 (a), (b), (c) or (f) of title 5, United States Code, within five years after the date of transfer and who elect to remain participants in the Federal retirement program) shall be withdrawn from the Federal Civil Service Retirement and Disability Fund and shall be paid into the retirement fund utilized by the State-owned railroad for the transferred employees, in accordance with the provisions of paragraph (2) of this subsection. Upon such payment, credit for prior Federal service under the Federal civil service retirement system shall be forever barred, notwithstanding the provisions of section 8334 of title 5, United States Code.

(b) Employees of the Alaska Railroad who do not transfer to the State-owned railroad shall be entitled to all of the rights and benefits available to them under Federal law for discontinued employees.

(c) Transferred employees whose employment with the State-owned railroad is terminated during the two-year period commencing on the date of transfer shall be entitled to all of the rights and benefits of discontinued employees that such employees would have had under Federal law if their termination had occurred immediately before the date of the transfer, except that financial compensation paid to officers of the Alaska Railroad shall be limited to that compensation provided pursuant to section 604(d)(3)(E) of this title. Such employees shall also be entitled to seniority and other benefits accrued under Federal law while they were employed by the State-owned railroad on the same basis as if such employment had been Federal service.

(d) Any employee who transfers to the State-owned railroad under this title shall not be entitled to lump-sum payment for unused annual leave under section 5551 of title 5, United States Code, but shall be credited by the State with the unused annual leave balance at the time of transfer.

STATE OPERATION

SEC. 608. (a)(1) After the date of transfer to the State pursuant to section 604 of this title, the State-owned railroad shall be a rail carrier engaged in interstate and foreign commerce subject to the jurisdiction of the Interstate Commerce Commission under chapter 105 of subtitle IV of title 49, United States Code, and all other Acts applicable to rail carriers subject to that chapter, including the antitrust laws of the United States, except, so long as it is an instrumentality of the State of Alaska, the Railroad Retirement Act of 1974 (45 U.S.C. 231 et seq.), the Railroad Retirement Tax Act (26 U.S.C. 3201 et seq.), the Railway Labor Act (45 U.S.C. 151 et seq.), the Act of April 22, 1908 (45 U.S.C. 51 et seq.) (popularly referred to as the "Federal Employers' Liability Act"), and the Railroad Unemployment Insurance Act (45 U.S.C. 351 et seq.). Nothing in this title shall preclude the State from explicitly invoking by law any exemption from the antitrust laws as may otherwise be available. 45 USC 1207.

(2) The transfer to the State authorized by section 604 of this title and the conferral of jurisdiction to the Interstate Commerce Commission pursuant to paragraph (1) of this subsection are intended to confer upon the State-owned railroad all business opportunities available to comparable railroads, including contract rate agreements meeting the requirements of section 10713 of title 49, United States Code, notwithstanding any participation in such agreements by connecting water carriers.

(3) All memoranda which sanction noncompliance with Federal railroad safety regulations contained in 49 CFR Parts 209–236, and which are in effect on the date of transfer, shall continue in effect according to their terms as "waivers of compliance" (as that term is used in section 202(c) of the Federal Railroad Safety Act of 1970 (45 U.S.C. 431(c))).

(4) The operation of trains by the State-owned railroad shall not be subject to the requirement of any State or local law which specifies the minimum number of crew members which must be employed in connection with the operation of such trains.

(5) Revenues generated by the State-owned railroad shall be retained and managed by the State-owned railroad for railroad and related purposes.

(6)(A) After the date of transfer, continued operation of the Alaska Railroad by a public corporation, authority or other agency of the

State shall be deemed to be an exercise of an essential governmental function, and revenue derived from such operation shall be deemed to accrue to the State for the purposes of section 115(a)(1) of the Internal Revenue Code of 1954 (26 U.S.C. 115(a)(1)). Obligations issued by such entity shall also be deemed obligations of the State for the purposes of section 103(a)(1) of the Internal Revenue Code of 1954 (26 U.S.C. 103(a)(1)), but not obligations within the meaning of section 103(b)(2) of the Internal Revenue Code of 1954 (26 U.S.C. 103(b)(2)).

(B) Nothing in this title shall be deemed or construed to affect customary tax treatment of private investment in the equipment or other assets that are used or owned by the State-owned railroad.

(b) As soon as practicable after the date of enactment of this Act, the Interstate Commerce Commission shall promulgate an expedited, modified procedure for providing on the date of transfer a certificate of public convenience and necessity to the State-owned railroad. No inventory, valuation, or classification of property owned or used by the State-owned railroad pursuant to subchapter V of chapter 107 of title 49, United States Code (49 U.S.C. 10781 et seq.) shall be required during the two-year period after the date of transfer. The provisions of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.) and section 382(b) of the Energy Policy and Conservation Act (42 U.S.C. 6362(b)) shall not apply to actions of the Commission under this subsection.

(c) The State-owned railroad shall be eligible to participate in all Federal railroad assistance programs on a basis equal to that of other rail carriers subject to the jurisdiction of the Interstate Commerce Commission under chapter 105 of subtitle IV of title 49, United States Code.

(d) After the date of transfer to the State pursuant to section 604 of this title, the portion of the rail properties within the boundaries of the Chugach National Forest and the exclusive-use easement within the boundaries of the Denali National Park and Preserve shall be subject to laws and regulations for the protection of forest and park values. The right to fence the exclusive-use easement within Denali National Park and Preserve shall be subject to the concurrence of the Secretary of the Interior. The Secretary of the Interior, or the Secretary of Agriculture where appropriate, shall not act pursuant to this subsection without consulting with the Governor of the State of Alaska or in such a manner as to unreasonably interfere with continued or expanded operations and support functions authorized under this title.

FUTURE RIGHTS-OF-WAY

45 USC 1208.

SEC. 609. (a) After the date of enactment of this Act, the State or State-owned railroad may request the Secretary of the Interior or the Secretary of Agriculture, as appropriate under law, to expeditiously approve an application for a right-of-way in order that the Alaska Railroad or State-owned railroad may have access across Federal lands for transportation and related purposes. The State or State-owned railroad may also apply for a lease, permit, or conveyance of any necessary or convenient terminal and station grounds and material sites in the vicinity of the right-of-way for which an application has been submitted.

(b) Before approving a right-of-way application described in subsection (a) of this section, the Secretary of the Interior or the

Secretary of Agriculture, as appropriate, shall consult with the Secretary. Approval of an application for a right-of-way, permit, lease, or conveyance described in subsection (a) of this section shall be pursuant to applicable law. Rights-of-way, grounds, and sites granted pursuant to this section and other applicable law shall conform, to the extent possible, to the standards provided in the Act of March 12, 1914 (43 U.S.C. 975 et seq.) and section 603(6) of this title. Such conformance shall not be affected by the repeal of such Act under section 615 of this title.

(c) Reversion to the United States of any portion of any right-of-way or exclusive-use easement granted to the State or State-owned railroad shall occur only as provided in section 610 of this title. For purposes of such section, the date of the approval of any such right-of-way shall be deemed the "date of transfer".

REVERSION

45 USC 1209.

SEC. 610. (a) If, within ten years after the date of transfer to the State authorized by section 604 of this title, the Secretary finds that all or part of the real property transferred to the State under this title, except that portion of real property which lies within the boundaries of the Denali National Park and Preserve, is converted to a use that would prevent the State-owned railroad from continuing to operate, that real property (including permanent improvements to the property) shall revert to the United States Government, or (at the option of the State) the State shall pay to the United States Government an amount determined to be the fair market value of that property at the time its conversion prevents continued operation of the railroad.

(b) If, after the date of transfer pursuant to section 604 of this title, the State discontinues use of any land within the right-of-way, the State's interest in such land shall revert to the United States. The State shall be considered to have discontinued use within the meaning of this subsection and subsection (d) of this section when:

(1) the Governor of the State of Alaska delivers to the Secretary of the Interior a notice of such discontinuance, including a legal description of the property subject to the notice, and a quitclaim deed thereto; or

(2) the State has made no use of the land for a continuous period of eighteen years for transportation, communication, or transmission purposes. Notice of such discontinuance shall promptly be published in the Federal Register by the Secretary, the Secretary of the Interior, or the Secretary of Agriculture, and reversion shall be effected one year after such notice, unless within such one-year period the State brings an appropriate action in the United States District Court for the District of Alaska to establish that the use has been continuing without an eighteen-year lapse. Any such action shall have the effect of staying reversion until exhaustion of appellate review from the final judgment in that action or termination of the right to seek such review, whichever first occurs.

Publication in Federal Register.

(c) Upon such reversion pursuant to subsection (b) of this section, the Secretary of the Interior shall immediately convey by patent to abutting landowners all right, title and interest of the United States. Where land abutting the reverted right-of-way is owned by different persons or entities, the conveyance made pursuant to this

E-20

subsection shall extend the property of each abutting owner to the centerline of the right-of-way.

(d) If use is discontinued (as that term is used in subsection (b) of this section) of all or part of those properties of the Alaska Railroad transferred to the State pursuant to this title which lie within the boundaries of the Denali National Park and Preserve or the Chugach National Forest, such properties or part thereof (including permanent improvements to the property) shall revert to the United States and shall not be subject to subsection (c) of this section. Upon such reversion, jurisdiction over that property shall be transferred to the Secretary of the Interior or the Secretary of Agriculture, as appropriate, for administration as part of the Denali National Park and Preserve or the Chugach National Forest.

(e) Except as provided in subsections (a) through (d) of this section, if, within five years after the date of transfer to the State pursuant to section 604 of this title, the State sells or transfers all or substantially all of the State-owned railroad to an entity other than an instrumentality of the State, the proceeds from the sale or transfer that exceed the cost of any rehabilitation and improvement made by the State for the State-owned railroad and any net liabilities incurred by the State for the State-owned railroad shall be paid into the general fund of the Treasury of the United States.

(f) The Attorney General, upon the request of the Secretary, the Secretary of the Interior, or the Secretary of Agriculture, shall institute appropriate proceedings to enforce this section in the United States District Court for the District of Alaska.

OTHER DISPOSITION

45 USC 1210

SEC. 611. If the Secretary has not certified that the State has satisfied the conditions under section 604 within one year after the date of delivery of the report referred to in section 605(a) of this title, the Secretary may dispose of the rail properties of the Alaska Railroad. Any disposal under this section shall give preference to a buyer or transferee who will continue to operate rail service, except that—

(1) such preference shall not diminish or modify the rights of the Cook Inlet Region, Incorporated (as that term is used in section 12 of the Act of January 2, 1976 (Public Law 94-204; 89 Stat. 1150)), pursuant to such section, as amended by section 606(d) of this title; and

Ante, p. 2564.

(2) this section shall not be construed to diminish or modify the powers of consent of the Secretary or the State under section 12(b)(8) of such Act, as amended by section 606(d)(5) of this title.

Any disposal under this section shall be subject to valid existing rights.

DENALI NATIONAL PARK AND PRESERVE LANDS

45 USC 1211.

SEC. 612. On the date of transfer to the State (pursuant to section 604 of this title) or other disposition (pursuant to section 611 of this title), that portion of rail properties of the Alaska Railroad within the Denali National Park and Preserve shall, subject to the exclusive-use easement granted pursuant to section 604(b)(1)(D) of this title, be transferred to the Secretary of the Interior for administration as part of the Denali National Park and Preserve, except that a

transferee under section 611 of this title shall receive the same interest as the State under section 604(b)(1)(D) of this title.

APPLICABILITY OF OTHER LAWS

SEC. 613. (a) The provisions of chapter 5 of title 5, United States Code (popularly known as the Administrative Procedure Act, and including provisions popularly known as the Government in the Sunshine Act), the Federal Advisory Committee Act (5 U.S.C. App. 1 et seq.), the National Historic Preservation Act (16 U.S.C. 470 et seq.), section 4(f) of the Department of Transportation Act (49 U.S.C. 1653(f)), and the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.) shall not apply to actions taken pursuant to this title, except to the extent that such laws may be applicable to granting of rights-of-way under section 609 of this title. 43 USC 1212. 5 USC 500 et seq.

(b) The enactment of this title, actions taken during the transition period as provided in section 605 of this title, and transfer of the rail properties of the Alaska Railroad under authority of this title shall be deemed not to be the disposal of Federal surplus property under the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 484) or the Act of October 3, 1944, popularly referred to as the "Surplus Property Act of 1944" (50 U.S.C. App. 1622). Such events shall not constitute or cause the revocation of any prior withdrawal or reservation of land for the use of the Alaska Railroad under the Act of March 12, 1914 (43 U.S.C. 975 et seq.), the Alaska Statehood Act (note preceding 48 U.S.C. 21), the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.), the Act of January 2, 1976 (Public Law 94-204; 89 Stat. 1145), the Alaska National Interest Lands Conservation Act (Public Law 96-487; 94 Stat. 2371), and the general land and land management laws of the United States.

(c) Beginning on the date of enactment of this Act, the ceiling on Government contributions for Federal employee health benefits insurance premiums under section 8906(b)(2) of title 5, United States Code, shall not apply to the Alaska Railroad.

(d) Nothing in this title is intended to enlarge or diminish the acreage entitlement of the State or any Native Corporation pursuant to existing law.

(e) With respect to interests of Native Corporations under the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.) and the Alaska National Interest Lands Conservation Act (16 U.S.C. 3101 et seq.) except as provided in this title, nothing contained in this title shall be construed to deny, enlarge, grant, impair, or otherwise affect any judgment heretofore entered in a court of competent jurisdiction, or valid existing right or claim of valid existing right.

CONFLICT WITH OTHER LAWS

SEC. 614. The provisions of this title shall govern if there is any conflict between this title and any other law. 43 USC 1213.

REPEAL AND AMENDMENT OF EXISTING STATUTES

SEC. 615. (a) On the date of transfer to the State (pursuant to section 604 of this title) or other disposition (pursuant to section 611 of this title), whichever first occurs, the following provisions are repealed:

(1) The Act of March 12, 1914 (43 U.S.C. 975 et seq.). 16 USC 353a.

45 USC 801a.

(2) The Act of June 24, 1946, to authorize certain expenditures by the Alaska Railroad (60 Stat. 304).

(3) The Act of July 19, 1932, concerning mining of coal adjacent to the Alaska Railroad (30 U.S.C. 208a).

(4) Section 6(i) of the Department of Transportation Act (49 U.S.C. 1655(i)).

(b) On the date of transfer to the State (pursuant to section 604 of this title) or other disposition (pursuant to section 611 of this title), whichever first occurs, the following provisions are amended as follows:

(1) Title 5, United States Code, is amended—

(A) in section 3105(a), by striking paragraph (3), and by redesignating paragraphs (4)–(8) as paragraphs (3)–(7), respectively;

(B) in section 3401(1), by striking clause (iii), and by redesignating clauses (iv)–(viii) as clauses (iii)–(vii), respectively;

(C) in section 5102(aX1), by striking clause (iii), and by redesignating clauses (iv)–(ix) as clauses (iii)–(viii), respectively;

(D) in section 5342(aX1), by striking subparagraph (C), and by redesignating subparagraphs (D)–(J) as subparagraphs (C)–(I), respectively; and

(E) in section 7327, by striking subsection (a), and by striking the subsection designation "(b)".

(2) Section 102(7) of the Railroad Revitalization and Regulatory Reform Act of 1976 (45 U.S.C. 802(7)) is amended by striking "and the Alaska Railroad".

(3) Section 10749(b) of title 49, United States Code, is amended—

(A) by inserting "or" at the end of paragraph (1XB);

(B) by striking "; or" at the end of paragraph (2) and inserting in lieu thereof a period; and

(C) by striking paragraph (3).

(4) Section 324(aX1) of the Public Health Service Act (42 U.S.C. 251(aX1)) is amended by striking "employees of the Alaska Railroad and".

(5) Section 202(3Xa) of the Alaska National Interest Lands Conservation Act (16 U.S.C. 410hh-1(3Xa)) is amended by striking the third sentence.

(6) Section 1(o) of the Railroad Retirement Act of 1974 (45 U.S.C. 231(o)) is amended by inserting immediately after "National Transportation Safety Board," the following: "the State-owned railroad (as defined in the Alaska Railroad Transfer Act of 1982), so long as it is an instrumentality of the State of Alaska,".

SEPARABILITY

45 USC 1214.

SEC. 616. If any provision of this title or the application thereof to any person or circumstance is held invalid, the remainder of this title and the application of such provision to other persons or circumstances shall not be affected thereby.

E-23

TRANSFER OVERVIEW

This overview summarizes the basic statutory scheme for the proposed transfer of the Alaska Railroad to the State of Alaska, describes the anticipated timetable for the transfer and discusses a series of major issues that were considered in the development of ARTA.

The Act was signed into law by President Reagan on January 14, 1983. It authorizes transfer of the Alaska Railroad to the State of Alaska subject to several specified conditions, including the requirement that the State compensate the United States for the value, if any, of all rail properties transferred. Other important conditions include State commitments to continue railroad operations, to assume existing obligations, to provide employee protection for at least two years, and to protect retirement benefits.

Two key provisions, each tied to the date of enactment, establish an orderly process for State consideration of the transfer offer. Within six months from the date of enactment, this Report is required to be prepared by the Governor of Alaska and the Secretary of Transportation and submitted to the Alaska State Legislature and the Congress. Within nine months from the date of enactment, the railroad's fair market value must be determined by USRA.

Following delivery of this Report, the Secretary of Transportation has 12 months within which to certify that the

State has agreed to all conditions for transfer specified by ARTA. Actual transfer of the railroad is to take place "as soon as practicable" after these certifications are made. Within three months of certification, the Secretary and the State will agree on the actual date of transfer, which the parties hope will be no later than six months following certification. Although both parties are committed to proceeding expeditiously, a longer period may be needed to ensure an orderly process. If the State has been unable to satisfy the transfer conditions within the 12-month time period, ARTA permits the Secretary to dispose of the railroad and to give preference to a buyer or transferee who will continue to operate rail services.

Certification Process.

As noted, ARTA sets out a series of conditions that the State must meet to allow transfer certification by the Secretary. The legislation does not, however, attempt to specify how the State is to satisfy the conditions. Much will depend upon the State's decision concerning the nature of the entity it will designate or create to operate the railroad under State ownership. The working assumption of the State during development of ARTA was that State enabling legislation would be enacted to resolve this fundamental issue, and that such legislation would either satisfy the outstanding certification requirements or empower the operating entity to do so.

As a precondition to transfer, the Secretary is required to certify that the State has agreed:

(1) to operate the railroad as a rail carrier in intrastate and interstate commerce;

(2) to assume all rights, liabilities, and obligations of the Alaska Railroad on the date of transfer, with some limited exceptions regarding claims and causes of action;

(3) to protect retirement benefits and to establish acceptable arrangements for continued employment during a two-year period following date of transfer;

(4) to allow representatives of the Secretary of Transportation adequate access to railroad employees and records when needed in relation to the period of Federal ownership; and

(5) to compensate the United States at the value, if any, determined by the valuation exercise being performed by the USRA.

Reversion.

If transferred to the State under Section 604, the railroad may revert, in whole or in part, to the United States under three separate reversion provisions in ARTA:

(1) Under Section 610(e), any proceeds in excess of the cost of any rehabilitation and improvement and any

net liabilities from the State's sale or transfer of "all or substantially all" of the railroad within five years of transfer to an entity other than a State instrumentality are to be paid to the United States Treasury.

(2) Section 610(a) requires the reversion to the United States, or the payment by the State of the fair market value, of all or part of the railroad's real property "converted to a use that would prevent the State-owned railroad from continuing to operate" within ten years after transfer.

(3) Section 610(b) requires reversion to the United States generally for conveyance to the abutting owners of any land within the right-of-way if its use for transportation, communication or transmission purposes is discontinued by the State for an uninterrupted period of 18 years.

Claims Against Railroad Lands.

Approximately 4,000 acres of the railroad's non-right-of-way lands are subject to claims by Native Village Corporations under the Alaska Native Claims Settlement Act. Article II and Appendix D of this Report provide more detail regarding the lands involved. During the ten month period following the date of enactment of ARTA, the State, the Department of the Interior, and all affected Native Village Corporations are

directed to undertake a good faith effort to negotiate settlements for as many outstanding claims as possible.

If any of these claims cannot be settled within the ten-month period, they must be adjudicated by the Secretary of the Interior within two years of the date of enactment of ARTA, or 14 months after completion of the review and settlement process. All other unresolved claims against railroad lands on record in the Department of the Interior, as of the day before the date of enactment must be adjudicated within three years from the date of enactment. Resolution of claims to railroad land is not a precondition to transfer.

Survey Requirement.

ARTA requires the Secretary of the Interior to survey within a five-year period all lands among the rail properties conveyed to the State. The parties emphasize the importance of meeting the deadline and will continue to work with the Department of the Interior to do so. Article II, Appendices B-E and Exhibit 1 of this Report provide more detail about the lands involved.

Railroad Right-of-Way.

ARTA requires the transfer to the State of all right, title, and interest of the United States to all rail properties of the Alaska Railroad, including all railroad rights-of-way. ARTA also provides that where lands or any interests within the right-of-way have been conveyed out of Federal

ownership prior to enactment, the State shall receive, at minimum, an exclusive-use easement. These two provisions are intended to ensure that the State will receive all of the interest necessary to maintain viable railroad operations.

Future Rights-of-Way.

ARTA provides for expeditious review of any future right-of-way requests by the State across Federal lands. The Act requires that such rights-of-way conform, to the extent possible, to the standards provided by the Alaska Railroad Enabling Act of 1914 and the exclusive-use easement definition contained in ARTA. Responsibility for reviewing and granting such future rights-of-way is vested by existing law in the Secretary of the Interior or the Secretary of Agriculture, with the participation of the Secretary of Transportation as appropriate, particularly with respect to the interest to be granted for operation and economic growth of the railroad.

Denali National Park and Preserve Lands.

On the date of transfer, the Secretary will deliver to the State a deed that conveys to the State (a) an exclusive-use easement for that portion of the rights-of-way within Denali National Park and (b) title to the railroad-related improvements within such right-of-way. All other railroad holdings and improvements within the Park are to be transferred to the Secretary of the Interior for administration as part of the Park. Rail properties within the boundaries of the Chugach

National Forest and the Denali National Park and Preserve will be subject to laws and regulations for the protection of forest and park values. Implementation of those regulations will be subject to prior consultation with the Governor and may not unreasonably interfere with continued or expanded operation of the State-owned railroad.

Real Property Conveyance.

Articles II and III, related to real and personal property and supported by lengthy appendices and exhibits, are the most detailed parts of this Report. The transfer from the Federal Government of its only commercial operating railroad present property questions of first impression. This transfer is further complicated by the peculiar status of many Federal lands located in Alaska. The impact of competing claims to such lands on the transfer process accounts for the complex statutory scheme provided in ARTA and for the detailed treatment of the railroad lands in Article II.

The Act provides for four different types of conveyance documents to be issued to the State on the date of transfer. Each document will convey interests in land based on the status of the affected parcel on that date.

First, the State will receive an "interim conveyance" of lands that, like the patented lands, are free of claims by others but, unlike the patented lands, are not yet surveyed. When these lands have been surveyed after the date of

transfer, the interim conveyances will be converted into patents.

Second, the State will receive a patent for railroad lands that are surveyed and are not subject to unresolved claims made by third parties under a variety of Federal laws.

Third, the State will receive an exclusive-use easement, as defined in ARTA, for right-of-way lands within Denali National Park and Preserve.

Fourth, the State will receive a license allowing it the exclusive right to use the railroad lands that are subject to claims of third parties (such as Native Corporations) on the date of enactment but which have not been resolved by the date of transfer. As these claims are settled or decided, the lands in the license category will either be placed in the interim conveyance category (if the third party's claim is denied) or conveyed to the claimant (if the claim is approved). The real property conveyance provisions of ARTA thereby require that certain railroad lands be held in escrow (i.e., under license) until their ultimate ownership is determined through settlement or by adjudication.

Employee Protection.

The work force of the Alaska Railroad (described in the "Profile" section) remains one of its most valuable assets. The employee protection provisions of ARTA, more fully discussed in Article VI, testify to the continuing interest

of the State and the United States in protecting the employees' well-being in the face of the proposed transfer to the State. The provisions also are intended to facilitate and indeed encourage the transfer of the Alaska Railroad work force to the State-owned railroad, in recognition of its critical importance to the ongoing viability of the railroad. Although care has been taken to preserve employee options to elect not to transfer and to protect their rights in the event they decide to separate from the railroad upon transfer, the Secretary and the Governor hope that the vast majority of employees will remain with the State-owned railroad.

ARTA REQUIREMENTS

Transfer Terms and Conditions

ARTA establishes a series of conditions the State must meet to obtain certification from the Secretary of Transportation. The legislation does not, however, specify how the State is to satisfy these conditions. Much depends on our decision about the mechanism we select to operate the railroad.

Prior to transfer, the Secretary is required to certify that the State has agreed:

(1) to operate the railroad as a rail carrier in intrastate and interstate commerce;

(2) to assume all rights, liabilities and obligations of the ARR on the date of transfer, except for some claims and causes of action;

(3) to protect retirement benefits and to establish acceptable arrangements for continued employment for all employees during a two-year period following the date of transfer;

(4) to allow representatives of the Secretary of Transportation adequate access to railroad employees and records; and

(5) to compensate the United States at the fair market value, if any, as determined by the United States Railway Association.

Other chapters of this report explain some of these conditions in greater detail, particularly those relating to employee protection and retirement benefits.*

* Additionally, the first section of the Transfer Report, entitled "Transfer Overview," provides information about other key aspects of the federal transfer legislation. This includes those provisions dealing with reversion requirements, native claims against railroad lands, and the type of interest to be obtained in the railroad's right-of-way.

Provisions Affecting Continued Operations

The following discussion analyzes the effect of ARTA's requirements (other than employee protection obligations which are addressed elsewhere), on continued operation of the railroad following acquisition. Several observations should help eliminate confusion regarding ARTA's continued rail service requirements.

First, it is important to remember that most of the federal transfer statute was structured on a premise of the so-called "no-cost transfer." The compensation requirement was a last minute compromise to obtain Congressional passage, and was merely added to the already established conditions. Consequently, certain provisions are not consistent with the purchase provision of ARTA; particularly the reversion clauses which remain in effect for a certain period of time after acquisition.

Another important consideration is the requirement that the State agree to operate the railroad as a common carrier engaged in intrastate and interstate commerce. Some interpretations suggest that when read in context with the reversion clauses under Section 610 of ARTA, there is a prescribed ten-year period for ensuring continued rail operations. However, this is not the case. The State is not required to continue rail services for any specific period.

Some also suggest that ARTA requires all existing services be continued, including passenger service. This also is not the case. The reversion requirement under Section 610 merely states that if, within the first 10 years after transfer, the State converts all or part of the real property to "a use that would prevent the State-owned railroad from continuing to operate," then the State shall be subject to a requirement to repay the United States for these holdings, or revert such property at our option.

However, under full regulation by the Interstate Commerce Commission (ICC), the State will be subject to some ICC oversight in any abandonment proceedings. Generally, these proceedings are strictly based on economic considerations related to operating history. Assuming a history of highly marginal performance, it is doubtful that ICC oversight would prevent discontinuance of service at some point in the future.*

* The Transfer Team, however, is not suggesting th. service be discontinued.

Other key ARTA provisions that have a bearing on continued rail operations are primarily located in Section 608, including the following:

(1) full and formal regulation by the Interstate Commerce Commission as a rail carrier engaged in intrastate and foreign commerce;

(2) full jurisdiction under federal antitrust laws, although the State may invoke by law any exemptions otherwise available;

(3) exemption from the following laws so long as the State-owned railroad remains an instrumentality of the State of Alaska: the Railroad Retirement Act of 1974, the Railroad Tax Act, the Railroad Labor Act, the Federal Employers' Liability Act, and the Railroad Unemployment Insurance Act;

(4) a clarification that ICC regulation is intended to confer on the State-owned railroad "all business opportunities available to comparable railroads, including contract rate agreements";

(5) clarification that train operations by the State-owned railroad shall not be subject to any state or local laws specifying minimum crew size;

(6) a specific requirement that all revenues generated by the State-owned railroad are to be retained and managed by the State-owned railroad for railroad and related purposes;

(7) a statement by Congress that continued operation of the ARR by "a public corporation, authority or other agency of the State" is an exercise of an essential governmental function and qualifies under the Internal Revenue Code for tax-exempt status, which also would apply to obligations issued by this entity;

(8) a requirement that rail operations within the boundaries of Chugach National Forest and Denali National Park will be subject to laws and regulations for the protection of forest and park values so long as such regulation does not "unreasonably interfere with continued or expanded operations and support functions";

(9) guarantees that the State will receive the full federal interest in the right-of-way, but nothing less than an exclusive-use easement for transportation, communication and utility purposes in all areas, except within the Denali National Park, where the railroad is to receive an exclusive-use easement for rail purposes only; and

(10) no guarantees for future rights-of-way across federal lands, but language which encourages the Secretary of the Interior to expeditiously review applications for that purpose.

CERTIFICATE OF APPRAISAL

CHARLES F. SEYMOUR, RUSSELL E SNYDER, AND ARNOLD S. TESH

DO HEREBY CERTIFY THAT UPON REQUEST FOR VALUATION BY:

THE UNITED STATES RAILWAY ASSOCATION
955 L'ENFANT PLAZA NORTH, S.W.
WASHINGTON, DC 20595

THEY HAVE PERSONALLY EXAMINED THE FOLLOWING DESCRIBED PROPERTY:

ALASKA RAILROAD REAL ESTATE TO BE TRANSFERRED
UNDER THE ALASKA RAILROAD TRANSFER ACT

AND THAT THEY ARE OF THE OPINION THAT AS OF OCTOBER 1, 1983

THE MARKET VALUE OF THE PROPERTY

MORE FULLY DESCRIBED HEREIN, WILL BE AS FOLLOWS:

$58,000,000

THIS MAY BE ALLOCATED AS FOLLOWS:

OPERATING PROPERTY:	$ 7,000,000

CERTIFICATION, ASSUMPTIONS, LIMITING CONDITIONS, AND CONTINGENCIES

Your appraiser, whose signature appears on the Certificate of Appraisal, does hereby certify that, except as otherwise noted in this appraisal report:

1. He has no present or contemplated future interest in the real estate that is the subject of this appraisal report.

2. He has no personal interest or bias with respect to the subject matter of this appraisal report or the parties involved.

3. To the best of his knowledge and belief, the statements of fact contained in this appraisal report, upon which the analyses, opinions, and conclusions expressed herein are based, are true and correct.

4. This appraisal report sets forth all of the limiting conditions imposed by the terms of the assignment or by the appraiser affecting the analyses, opinions and conclusions contained in this appraisal.

5. This appraisal report has been made in conformity with and is subject to the requirement of the Code of Professional Ethics and Standards of Professional Conduct of the American Institute of Real Appraisers of the National Association of Realtors.

6. No one other than the appraiser prepared the analyses, conclusions and opinions concerning real estate that are set forth in this appraisal report.

7. The American Institute of Real Estate Appraisers conducts a voluntary program of continuing education for its designated members. MAI's and RM's who meet the minimum standards of this program are awarded periodic educational certification. I am certified under this program through December 31, 1983.

This appraisal is to be used in whole and not in part. No part of it shall be used in conjunction with any other appraisal.

No responsibility is assumed by the appraiser for matters which are of legal nature, nor is any opinion on the title rendered herewith. Good title is assumed. Management is assumed to be competent and the ownership to be in repsonsible hands.

This property has been appraised as though free of liens and encumbrances, except as herein described.

The appraiser herein, by reason of this report is not required to give testimony in court with reference to the property appraised, unless arrangements have been previously made therefore.

Disclosure of the contents of this appraisal report is governed by the By-Laws and Regulations of the American Institute of Real Estate Appraisers of the National Association of Realtors.

Neither all nor any of the contents of this report (especially any conclusions as to value, the identity of the appraiser of the firm with which he is connected, or any reference to the American Institute of Real Estate Appraisers or to the M.A.I. or R.M. designation) shall be disseminated to the public through advertising media, public relations media, news media, sales media or any other public means of communication without the prior written consent and approval of the appraiser(s)

SPECIAL ASSUMPTIONS AND INSTRUCTIONS UNDER THE ALASKA RAILROAD TRANSFER ACT (ARTA)

In accordance with the advice and counsel of the United States Railway Association, Jackson-Cross has assumed the following in its appraisal of the Alaska Railroad:

1. Fair market value of the railroad to the State of Alaska is the price the State, as a prudent purchaser, would pay for the rights transferred under ARTA. The State is constrained by all existing state law that would affect it or any other purchaser of the railroad's property. Accordingly, we do not consider potential actions which the State might take which would affect fair market value.

2. The purchaser will operate the railroad for ten years, at a level of service that approximates current projections and in its present configuration.

3. All real estate classified as operating property would be available for transfer for non-rail use in 10 years after the date of the appraisal on October 1, 1993.

4. Upon transfer, the State will acquire full title to only those portions of the property identified by USRA as owned in fee simple by the Alaska Railroad.

5. The purchaser will be permitted to make any use of the operating property immediately after transfer of the properties to the State as long as such uses do not interfere with rail operations.

6. All non-operating property would be available for disposition immediately after transfer of the properties to the State.

7. All revenues from real estate transactions during the first ten (10) years must be used for railroad or other related purposes. Other related purposes can include transportation budget items relating in some way to the Alaska Railroad.

8. There would be no added costs to a purchaser for environmental, subdivision or zoning actions beyond that which is reflected in comparable sales.

9. The purchaser is required to assume all existing leases on the property, but will renegotiate them at fair market value upon their expiration or at the earliest date permissible under the terms of such leases.

10. USRA has provided the appraiser with the inventory of Alaska Railroad property and with its allocation between operating and non-operating real estate.

11. The analysis of real estate taxes has been performed in accordance with the normal real estate market practices, i.e. the purchaser is responsible for normal real estate taxes during the holding period and for disposition taxes normally paid by the seller when sales are consummated.

12. The purchaser is entitled to utilize all financing instruments normally available, including mortgages.

13. The discount rate reflects the cost of money attributable to a typical acquisition in the private sector.

14. Theoretical social costs and benefits associated with the transferred property are not considered within the purview of fair market value.

15. The railroad is considered a single property to be owned and controlled by a single entity.

16. The date of the appraisal is October 1, 1983.

17. No special allocation is made in this report for parcels subject to Native claims. At USRA's request, Jackson-Cross supplied a total value for such parcels. That value is $3,200,000.

18. Corridor value for the right-of-way is not considered.

19. The Section 605(a) Closing Report is considered to the extent that information contained therein affects the real estate value.

20. No specific studies are performed to determine the existence of semi-precious and precious minerals located within the subject. Mineral rights and their potential value are only considered to the extent as reported and reflected in the real estate market transactions in the private sector.

21. Income from leases located on property designated by USRA as operating property, pipeline permits, and trackage charges, are excluded from the real estate valuation. USRA advises that this income has been considered in its projections of railroad operating income.

PURPOSE AND FUNCTION OF THE APPRAISAL

The purpose of this appraisal is to estimate the market value of the subject property, more fully described herein, as of October 1, 1983.

As used herein, market value may be defined as:

> The price which a well-informed buyer acting intelligently, voluntarily, and without necessity would be warranted in paying, and a well-informed seller acting intelligently, voluntarily, and without necessity would be warranted in accepting for the property as of a certain date.

The function of this appraisal is to provide USRA with an estimate of market value of the real estate for incorporation in its report on the market value of the Alaska Railroad properties to be conveyed under the Alaska Railroad Transfer Act (A.R.T.A.).

The subject property is valued in fee simple, subject to A.R.T.A. restrictions as interpreted by USRA.

ACKNOWLEDGEMENT

All of the judgements and conclusions contained within this report are those of the appraisers for which they assume full professional responsibility. However, the appraisers wish to acknowledge the assistance of David W. Anderson, Douglas S. Butcher, Joseph R. Dugan, Alf Moody, and Frederick J. Williams of Jackson-Cross Company in the preparation of various facets of this report.

SUMMARY OF VALUATIONS BY MARKET AREA

Market Area	Operating Property			Non-Operating Property			Total Property
	Land	Improvements	Subtotal	Land	Improvements	Subtotal	
Anchorage	$5,883,223	$ 766,688	$6,649,911	$39,282,728	--	$39,282,728	$46,932,639
Fairbanks	327,441	332,132	659,573	6,184,764	--	6,184,764	6,844,337
Seward	188,618	83,666	272,274	1,393,082	--	1,393,082	1,667,356
Whittier	102,661	130,113	232,776	922,717	--	922,717	1,155,293
Valdez	--	--	--	365,631	--	365,631	365,631
Other	68,374	23,616	91,990	2,783,183	116,000	2,899,183	2,991,173
Totals	$6,770,109	$1,136,215	$6,906,324	$50,933,925	$116,000	$51,049,925	$57,956,249
Rounded	$6,770,000	$1,160,000	$6,910,000	$50,930,000	$120,000	$51,050,000	$58,000,000

SUMMARY OF SALIENT FACTS AND CONCLUSIONS

PROPERTY APPRAISED:	All Alaska Railroad real estate holdings held in fee simple by the Alaska Railroad.	
OWNER:	The Alaska Railroad (United States Department of Transportation).	
LAND:	The total land area valued is 28,416.31 acres, based on maps and other documents provided to the appraisers by USRA and the Alaska Railroad. USRA has allocated 3,913.61 acres to Operating property and 24,502.7 acres to Non-operating property.	
IMPROVEMENTS:	Numerous structures located throughout the Alaska Railroad land holdings are more fully described herein. Improvements containing a total of 512,000± square feet of building area owned by the Alaska Railroad have value consistent with the highest and best uses of the properties under the assumptions provided by USRA.	
PRESENT USE:	Operating property is devoted to rail operations. The uses of Non-Operating properties range from undeveloped wilderness to land leases for industrial, commercial, residential, agricultural, institutional, and recreational.	
HIGHEST AND BEST USE:	A separate highest and best use conclusion was made for each of the Valuation Units described herein. With respect to Operating property, highest and best use conclusions are based on the assumption, provided by USRA, that rail operations will cease on October 1, 1993.	
MARKET VALUE OF OPERATING PROPERTY:	Land	$ 5,770,000
	Improvements	1,140,000
	Total	$ 6,910,000
MARKET VALUE OF NON-OPERATING PROPERTY:	Land	$ 50,930,000
	Improvements	120,000
	Total	$ 51,050,000
TOTAL MARKET VALUE:	Land	$ 56,700,000
	Improvements	1,260,000
	Total	$ 57,960,000
	Rounded to	$ 58,000,000

VALUATION

After considering all the facts and circumstances in connection with the subject property, it is our opinion that the market value of the land and improvements, as of October 1, 1983, will be:

--- FIFTY EIGHT MILLION DOLLARS ---
($58,000,000)

This may be allocated as follows:

Land	$56,740,000	This is equivalent to 28,416.31 acres at $1,997 per acre.
Improvements	$ 1,260,000	This is equivalent to 512,002 square feet of building area at $2.46 per square foot.

OBJECTIVE AND VALUATION METHODOLOGY

The final adoption of a methodology for appraising the non-rail use fair market value of the Alaska Railroad (ARR) real estate results from comprehensive consideration of the Alaska Railroad Transfer Act of 1982 (ARTA) which defines assumptions and limiting conditions. Market factors were also considered in formulating the process.

It has been the practice of the ARR to lease its real estate, rather than sell it. Jackson-Cross assumes a continuation of this practice regardless of ownership. Valuation theory assures that proper capitalization of an income stream results in a value conclusion synonymous with an appraisal assuming sale of the leased fee interests.

To arrive at a fair market value to the State of Alaska, the basic methodology comports with conventional real estate approaches and techniques.

Two major steps are required to estimate the fair market value of the Alaska Railroad.

> First, the base values are determined. Each base value represents the estimated price for a single parcel as of October 1, 1983, assuming that it is sold on that date, that it is the only piece of Alaska Railroad property on the market in that area at the time, and that there are no restrictions or encumbrances preventing the sale.
>
> Second, the net revenues, if any, likely to be received from non-rail use leasing of the subject property are estimated; the period of time it is likely to take to realize those net revenues are estimated; and, the present value is appraised as of October 1, 1983, of the expectation of those future net revenues, considering the cost of money over time and the risk of uncertainty that the projected net revenues will, in fact, be realized.

BASE VALUE

The first two major valuation phases involves a determination of base value, or the total of all gross proceeds to be received for the real property if it were sold in marketable parcels on October 1, 1983. Base value assumes that each parcel is the only parcel being marketed at the subject property on October 1, 1983.

Property Categories

The Alaska Railroad property is comprised of both operating and non-operating property. The United States Railway Association supplies Jackson-Cross with the configuration between these categories. They are distinguished by the following assumptions:

1. Operating property is not marketable for non-rail use for a period of ten years.

2. Non-operating property is immediately marketable for non-rail use.

Both categories of property are appraised by Jackson-Cross under the aforementioned conditions, except where the railroad lacks title. Jackson-Cross relies upon USRA for instructions regarding the extent to which properties should be included or excluded due to title problems.

Market Areas

All Alaska Railroad real estate is examined by market area. Those parcels sharing economic, social, and geographic characteristics tend to have their values influenced by the same local phenomena. For instance, changes in population, real estate supply, industrial growth, property taxes and transportation, among other possibilities, may influence the property within a market area and have no direct measurable effect upon neighboring communities or jurisdictions. Most importantly, from a valuation standpoint, is that within a market area properties of similar utility compete for existing demand. Obviously, no market is totally immune to what occurs outside its borders, but whatever macro-economic impact may occur it is best to measure it with local market data if it exists.

Valuation Unit

For all of the Alaska Railroad real property assigned for valuation, Jackson-Cross analyzes each of the permissible uses and determines which uses are most profitable and likely as of the date the property can be marketed for non-rail use.

All property in each market area is divided into valuation units. Property within a unit is of consistent highest and best use and value level. The valuation unit is different from a marketable parcel. It is a method of reporting value results only. The valuation unit may consist of one or more marketable parcels.

A review of the subject property along with sales and leases identified in the market enables the appraiser to assign preliminary parcelization. During the base valuation phase it is often necessary to modify the valuation units.

Valuation Analysis

For each valuation unit a detailed study of market data is utilized to determine unit values. This analysis includes consideration for marketable parcel location, highest and best use, size, shape, topography, soil conditions, access, and any other variables which may have an impact on value.

The resulting base unit value for each valuation unit is multiplied by the size of the valuation unit to equal the total base value. For example, a 10,000 square foot valuation unit with a square foot value of $2.00 results in a total Base Value of $20,000.00. The unit value applied reflects the gross unit price likely to be received for the optimum sized marketable parcels within the valuation unit. To properly reflect market data, a 10,000 square foot valuation unit is not valued as a 10,000 square foot parcel if the standard marketable lot is 5,000 square feet. Instead, it is valued as two 5,000 square foot lots, each of which are assumed not to compete with the other.

Base Value Limitations

As mentioned earlier, Base Value for the Alaska Railroad real estate is the sum of all of the individual marketable parcel gross selling prices on October 1, 1983. It assumes that none of these parcels are encumbered by the requirement to operate a railroad, or by the existence of leases which are not in conformity with the market. It also assumes that no other property within the subject portfolio is available for sale or lease on that date.

PORTFOLIO MARKET VALUE

The second major phase of this valuation involves the discounting of future proceeds to a present worth. This discounted cash flow process arrives at a value for the entire Alaska Railroad real estate portfolio as a single property. The discounting technique's applicability to the subject assignment is explained below.

Applicability of Discounted Cash Flow Technique

The discounted cash flow technique is a standard valuation tool for determining the present value of cash flows to be realized over a period of time from the disposition or use of assets. In the subject case where it is likely a purchaser would continue the practice of the Railroad to lease the property, discounted cash flow analysis is an appropriate valuation practice. As a practical matter, the same present value should be realized from leasing property at market rates or from selling the assets free of encumbrances.

The discounted cash flow technique is necessary because the amount of the Alaska Railroad's real estate holdings, the different geographic markets where that property is located and the diversity of highest and best uses cannot be directly compared to a single "comparable" sale in the market.

The subject property is especially conducive to discounted cash flow due to the:

1. Long term nature of the existing leases.
2. Diversity of the real estate inventory.
3. Heterogenous nature of the business entity which includes operating a railroad and managing a real estate portfolio.
4. Lack of a stabilized income stream or level annuity.

The procedure of performing a discounted cash flow analysis involves a projection of:

1. Periodic actual gross income likely to be received.
2. The periodic management, marketing and holding costs likely to be incurred.
3. The relative risk and time-cost of money in realizing the projections.

Pace of Absorption

An important element of the discounted cash flow analysis is the time when the potential benefits (i.e., proceeds of sale or lease) are likely to be realized. A timetable for realizing lease income from the Alaska Railroad properties results from a detailed analysis in each of the major market areas.

Within each market area property is categorized by highest and best use. Each highest and best use category is then analyzed for quality characteristics which may affect the pace at which the property is likely to be leased. For major markets a study of existing market activity along with socio-economic factors supplies the appraiser with the basic data necessary to project the likely rate of absorption that would be predicted by an investor as of October 1, 1983.

With regard to non-operating property in Anchorage, approximately 80% of the dollar value is currently under lease; similarly, in Fairbanks approximately 60% of the dollar value of the non-operating railroad property is currently leased. Jackson-Cross considers these properties, and those under lease in other markets, to have been already absorbed into the market, and to remain under lease for the term of the existing contracts. The appraiser, using real estate market and other economic data, then estimates the rate at which the unleased property would be leased, including the effect of re-leasing property after the termination of existing contracts. While he considered that any terminating leases could be renewed immediately, because start-up time would be necessary for a new owner, Jackson-Cross assumed that no other new leases would be entered into for at least one year. The appraiser also estimates the rate at which the operating property could have been leased for alternative uses under the hypothetical assumption that railroad operations terminate after ten years.

Rents

A review of real estate practices in both Anchorage and Fairbanks reveals that land leases generally provide for the escalation (or reduction) of rents every five years. This five-year cycle, which is contained in most of the existing leases of Alaska Railroad property, is assumed to continue for new leases. Accordingly, rents would be set at new market rents only when:

1. The escalation is due;
2. The lease expires and a renewal at market rental value is anticipated;
3. A vacant property is leased.

Capitalization Factor

To determine market rent, a capitalization or rental factor is derived from rentals of parcels similar to subject marketable parcels. A study of property sold and leased indicates a range of 9% to 11%. An overall factor of 9.75% is considered appropriate for the individual subject properties. Both overall quality and diversity of the inventory constitute the prime consideration for the proposed factor.

Management and Leasing Expense

A study of the major market areas indicates management fees for income producing properties ranging between 4% to 6½% of gross income. This range does not include separate brokerage commissions paid when a lease is arranged. In light of the amount of property involved here, and the extent of management and leasing activity available to a competent firm, an overall figure of 5% of the effective gross income is considered adequate. This, of course, includes any reasonable combination of in-house costs and outside commissions.

Holding Expense

The ownership of the Alaska Railroad real estate carries certain expense obligations regardless of whether it is totally or only partially leased. The expenses include real estate taxes, administration, insurance, special legal and accounting functions, maintenance, security and supplies. The total estimated annual allowance for holding is 1½% of base value.

Terminal Value

Both Non-operating and Operating properties have ten year earnings projections. To take into account the perpetual nature of lease income, during the tenth year of each projection, values are stabilized and discounted to October, 1983. This is known as valuing the final reversion. The procedure takes into account that proceeds will be generated beyond the lease income projection period.

Discount Rate

Since the sum of all projected net income is not to be received on October 1, 1983 a rate for discounting the proceeds to that date is required.

A prudent investor demands a return for his investment including a real rate of interest, compensation for inflation factors and for risk associated with a proposed

investment. Also required in a real estate transaction is compensation for the relative non-liquidity of the investment. The discount rate represents the rate at which the market would take all of these factors into consideration with respect to future earnings and pay a fair price for the right to receive such future earnings.

There are no projects which can be compared directly with the valuation of approximately 28,416 acres of Alaska real estate. On individual transactions for parcels in the region, Jackson-Cross has determined that the market is currently demanding rates of return on equity before taxes of 15% to 20%. The size and complexity of the subject transaction lead to a conclusion that a higher rate of return would be necessary to attract equity capital. A prudent investor would likely structure the acquisition on the assumption of 75% debt and 25% equity mix and would require a 25% return for the equity component.

The cost of debt capital is a barometer of minimum requirements for discount. Major Alaska projects with tangible development plans are attracting mortgage capital at 1.5% to 2.5% above prime on a floating basis. Fixed rates require 13% to 14% and are subject to a typical 20 to 25 year term. Fixed rate mortgages are currently subject to call every five to six years. Mortgage constants range between 14% and 14.5%. Since the Alaska Railroad has a significant portion of undeveloped property, the portfolio as a whole would not meet prevailing standards for institutional investors. Since other lenders in such circumstances demand higher returns, it is concluded a debt cost of 16% would be appropriate.

Overall, therefore, a capitalization consisting of 75% debt at 16% cost and 25% equity at cost of 25% leads to an 18% total property return to acquire the portfolio.

Each major market area in the Alaska Railroad region has different investment characteristics. In this analysis the overall portfolio discount rate adequately considers these differences.

Special Considerations

How the market reacts today is the best indicator of its perception of the future. Current prices, rents and absorption reflect investors' anticipations of profit and use. Current financing practices are an excellent indication of that market's anticipation of future real and inflationary trends. For these reasons much weight was placed on market data. However, due to the twenty years required for realizing optimum proceeds, Jackson-Cross also takes into account:

1. Trends in government sponsored economic programs which are likely to affect the real estate market in Alaska. These include, but are not limited to, public land sales, public financing, permanent fund projections, and legislation restricting expenditures.

2. Projections for production and revenues and their impact upon employment, price changes, and ultimately real estate supply and demand.

3. Demographics, including where in Alaska growth has occurred, and where it is expected in the future. How such growth may affect prices and absorption varies by ages, occupations, and income levels.

4. New or expanding industries, such as the recent influx of service and professional businesses. This is likely to contribute towards the continuing economic growth of the state.

5. Defense spending, which is likely to continue as a major contribution to the Alaska economy.

SUMMARY OF VALUATION PROCEDURE

Within the body of the report are computerized summaries of the valuation process. The steps taken in the appraisal calculation are as follows:

1. Total Base Value is determined for October 1, 1983.

2. For each period Total Base Value is escalated at a rate of 3% to 5% depending on the market area.

3. A rental factor of 9.75% is applied to each total periodic Base Value to arrive at a maximum potential gross income.

4. The maximum potential gross income is then modified to reflect:

   a. Current leases which are not at market levels; and

   b. Property which is not yet projected as leased.

5. Management and leasing expense is subtracted at a rate of 5% of effective gross income each period.

6. Holding expense is subtracted at a rate of 1½% of base value each period.

7. The period net income is calculated.

8. The net income is discounted at an annual rate of 18% each period.

9. During the tenth year for non-operating property and the twentieth year for the operating property a single reversion is calculated against the total of the capitalized value for each of those years' net incomes, plus the base value of property remaining unleased. The reversion factor applied is 18%.

ALASKA RAILROAD ROUTE MAP

Showing connecting carriers

FOREWORD

Description of the Alaska Railroad

In 1914, Congress authorized construction of the Alaska Railroad to open up Alaska's interior and to facilitate commerce through Alaska's ports. After the arduous job of building a railroad through the wilderness was completed in 1923, President Harding dedicated the railroad and a new era began in Alaska's history. The railroad went on to play a significant role in the development of Alaska's interior and as an armed forces supply link during World War II.

It has been operated by the Federal government since its inception, and today it is administered by the Federal Railroad Administration as part of the Department of Transportation. It currently operates over 525 route miles serving the principal Alaska cities of Anchorage and Fairbanks, the ports of Whittier and Seward, and natural attractions such as Denali National Park. Both freight and passenger service is offered year round. Interline rail freight traffic is interchanged at Whittier with barge lines linking the railroad with Seattle and Prince Rupert, B.C. Principal freight commodities carried include gravel, coal, aviation fuel, pipe, building materials and piggyback.

While the Alaska Railroad performs an important function within the State of Alaska, its operations and patronage are modest when compared with railroads in the lower 48 where it would be classified as a medium-sized "short-line" carrier with below average freight traffic density. Historically, the

railroad has been subsidized by Congressional appropriations. Since 1939, the appropriations have been used almost exclusively for capital and maintenance projects. Since 1975, appropriations have ranged from a low of $3.0 million in 1978 to a high of $12.6 million in 1981.

In fiscal year 1983, which ends September 30, it is estimated that the railroad will have carried 82,000 carloads and 204,000 passengers. Projected fiscal year 1983 revenues are $55.5 million with operating expenses estimated at $50.8 million. As shown in Table 1, this continues a trend begun in fiscal year 1981, the first time since the Alaska pipeline construction years that the railroad's operating revenues exceeded expenses.

Table 1

THE ALASKA RAILROAD
Financial Results

Fiscal Year (1)	Revenue Millions	Expenses (Inc. Dep.) $ Millions	Surplus (Shortfall) $ Millions	Expense/ Revenue Ratio	Feder Appro priati $ Mill
1973	17.7	20.7	(3.0)	117	-
1974	21.5	22.6	(1.1)	105	-
1975	42.3	36.5	5.8	86	6.0
1976(1)	53.7	49.6	4.1	92	9.0
1977	35.0	36.0	(1.0)	103	6.0
1978	29.1	33.6	(4.5)	115	3.0
1979	25.2	31.8	(6.6)	126	9.3
1980	28.9	34.7	(5.8)	120	6.5
1981	43.9	40.6	3.3	92	12.6
1982	58.8	49.2	9.6	84	6
1983	55.5	50.8(2)	4.7	92	

1) Year end changed from June to September in 1976. Transition quarter ignored.

2) For comparison with previous years, excludes $2.3 million of engineering expense previously treated as capital.

3) $7.6 million was appropriated in the continuing resolution, Public Law 97-377 in December 1982. The DOT appropriations bill for fiscal year 1983 contained no funding for the Alaska Railroad.

INTRODUCTION AND SUMMARY

The Alaska Railroad Transfer Act of 1982, P.L. 97-468 (ARTA) was signed into law on January 14, 1983. In that Act, Congress found that while continuation of the Alaska Railroad is necessary to achieve Federal, State and private objectives, continued Federal control and financial support are no longer required to accomplish those objectives. Congress further found that the Alaska Railroad was primarily benefitting Alaska residents and businesses and concluded that the Federal government should offer to transfer the Railroad to the State of Alaska.

ARTA establishes the terms and conditions for transferring the Railroad, sets forth the timetable and procedures for accomplishing the transfer, and authorizes the Secretary of Transportation to effect the transfer upon certification that the State has complied with the Act's terms and conditions. As part of the transfer process, ARTA Section 605(d)(1) directs the United States Railway Association (USRA) to determine the Railroad's fair market value. This report fulfills that requirement.

On July 15, 1983, pursuant to ARTA Section 605(a), the United States Department of Transportation and the State of Alaska submitted a Joint Report (605(a) Report) describing the assets and liabilities to be transferred. As directed by ARTA, USRA has used information contained in that report to the extent relevant to determining the Railroad's fair market value.

In directing USRA to value the Alaska Railroad, ARTA provides three specific instructions concerning that valuation. First, Section 605(d)(1) states that USRA

> "shall determine the fair market value of the Alaska Railroad under the terms and conditions of this title, applying such procedures, methods and standards as are generally accepted as normal and common practice."

Second, the Act provides that

> "[s]uch determination shall include an appraisal of the real and personal property to be transferred to the State pursuant to this title. Such appraisal by the Association shall be conducted in the usual manner in accordance with generally accepted industry standards, and shall consider the current fair market value and potential future value if used in whole or in part for other purposes."

Finally, the Act requires that

> "[t]he Association shall take into account all obligations imposed by this title and other applicable law upon operation and ownership of the State-owned railroad."

In reaching its determination of value, USRA used the normally accepted definition that fair market value is "what a willing buyer would pay . . . to a willing seller."* In the appraisal field, the valuation of property at fair market value "means merely an attempt to estimate the price for which the

---

*United States v. Miller, 317 U.S. 369, 374 (1943); United States v. 564.54 Acres of Land, 441 U.S. 506, 511 (1979). While the willing buyer/willing seller definition of fair market value ordinarily focuses on the loss to the seller (i.e., the loss to the United States in disposition of the railroad), ARTA Section 605(d)(1) mandates a focus on the obligations imposed by the buyer under ARTA (i.e., "obligations imposed by this title . . . upon operation and ownership of the State-owned railroad"). Consequently, to be consistent with ARTA's direction, the valuation concentrates on the present value of the property rights to be received by the purchaser under ARTA.

property could be sold by some stipulated seller to anyone else, . . ."*

Thus, fair market value is based on economic value in the marketplace. It assumes that both buyers and sellers act rationally. It ignores the special desire of any particular buyer for the property and any unique value which the property may have to that particular buyer.

This means that the fair market value of the Alaska Railroad properties is not the subjective or special value of those assets to the State of Alaska. The price which the State would have to pay to acquire the rail properties should be based upon how much it would have to pay to outbid any other potential purchaser, subject to ARTA's terms and conditions.

Consistent with ARTA's direction that USRA apply "standards as are generally accepted as normal and common practice", USRA has determined the amount which a rational buyer might pay in the marketplace for the properties to be transferred to the State of Alaska considering both (1) the "terms and conditions" of ARTA that will apply to the State's acquisition of the Alaska Railroad, and (2) all obligations imposed by ARTA and other applicable law upon operation and ownership of the State-owned railroad.

*1 Bonbright, Valuation of Property, p. 65 (1937); accord, American Institute of Real Estate Appraisers, The Appraisal of Real Estate, pp. 23-24 (7th ed. 1978); 1 Orgel, Valuation Under Eminent Domain, Section 20, pp. 90-96 (2nd ed. 1953).

Since ARTA's terms and conditions require the State to operate the Railroad for at least ten years (or railroad properties would revert to the United States under ARTA Section 610(a)), determining the Railroad's fair market value begins with estimating the present value of continuing railroad operations for ten years, including the present value of the Railroad's non-operating real estate.* The next step is to estimate and compare

(1) the present value of continuing rail operations beyond ten years in perpetuity, with

(2) the present value of putting the Railroad's assets in whole or in part to other uses after ten years.

These alternative estimates of fair market value require analyses of the Railroad's operations, its physical plant and equipment, its real estate assets, the costs which the buyer will incur incident to the transfer, and the proceeds and costs that would be incurred if the Railroad's assets were converted to other uses.**

These analyses are described in the sections which follow. They were assembled to determine the Railroad's present fair market value under two alternative hypotheses -- (1) continued rail operations in perpetuity, and (2) rail operations for ten

---

*Any losses from continued operations could be offset by rents from the non-operating real estate, since ARTA Section 608(a)(5) requires that all railroad revenue "be retained and managed . . . for railroad and related purposes." The term "related purposes" is considered broad enough that this condition would not so restrict the State's use of railroad revenues as to materially affect fair market value.

**USRA was assisted in determining the scope and nature of its analysis under ARTA by the law firm of Nossaman, Guthner, Knox & Elliott.

years followed by putting the Railroad's assets to their highest and best alternative uses. Results of these two scenarios are summarized in Table 2.

	Continued Rail Operations Scenario	Alternative Use Scenario
Real Estate	$ 47,800*1	$ 54,800*2
Rail Operations	(25,529)*3	(35,430)*4
	$ 22,271	$ 19,370

*1) Present value of the Railroad's non-operating real estate.

*2) Present value of the Railroad's non-operating real estate plus present value from alternate use of Railroad's operating real estate after 10 years.

*3) Includes all start-up costs.

*4) Includes all costs associated with rail operations during the first 10 years including start-up costs, plus labor protection costs associated with discontinuing rail operations. Also includes net proceeds from assumed liquidation of facilities and equipment.

The fair market value of both the continued rail operations scenario and the alternative use scenario consists of two components: a real estate component and a rail operations component. The fair market value of the Alaska Railroad under these two valuation scenarios was determined by reducing the cash flows from each of these two components to a present value as of October 1, 1983.

Continued Rail Operations Scenario

The real estate component of value was derived by projecting future lease income from the non-operating real property. The Alaska Railroad's historical practice has been to lease to others the property not required for rail operations, and an investor would likely continue this practice. Accordingly, it was assumed that the property presently under lease would continue to be leased and that other property would be leased to the extent possible. The net cash flows were discounted to produce a present value of $47,800,000. This amount does not include the real estate which has been selected by Native corporations. However, for the reasons discussed in Appendix A, Native Claim Selection Analysis, USRA concluded that a prudent buyer would pay nothing for the possibility that significant portions of the lands subject to Native claims might eventually be conveyed.

The value of the rail operations was derived from a forecast provided by the Alaska Railroad and adjusted by USRA. The 605(a) Report was used as a beginning point for the derivation of start-up costs, and estimates of capital requirements were made by

consultants to USRA. These constant dollar cash flows were then discounted to produce a negative value of $25,529,000,* which was then subtracted from the $47,800,000 value of the non-operating real estate to yield an October 1, 1983 fair market value of $22,271,000.

Alternative Use Scenario

In the alternative use scenario, the Railroad is assumed to cease operations at the end of the tenth year, the facilities and equipment removed and sold, and the operating real estate made available for leasing and development in the same fashion as the non-operating real estate. The cash flows generated by this additional real estate were valued in the same manner as the non-operating real estate and increased the 1983 present value of the real estate by $7,000,000 to $54,800,000.**

The value of the rail operations in this scenario is (1) the present value of the cash flow from rail operations for ten years (2) plus the present value of the net proceeds that would be received from dismantling and selling the Railroad's facilities

*It was necessary to estimate the value of the cash flows after the tenth year (the last year of the USRA projection). This was done by calculating a normal year cash flow that could be expected after the tenth year and capitalizing that amount by 16 percent and then discounting the capitalized flows back to present value.

**While the $7 million value may seem small in relation to the real estate involved, it must be kept in mind that the cash flows from alternative use of the operating real estate do not begin until the eleventh year (1994) which causes the present value to be relatively small.

and equipment starting in the eleventh year, (3) less the present value of labor protection payments attendant to discontinuing rail operations. These cash flows, which were all stated in constant dollars, were discounted at the same rate as was used to discount the cash flows in the continued rail scenario. The present value of these flows was a negative $35,430,000 and was deducted from the $54,800,000 real estate value to yield an October 1, 1983 fair market value of $19,370,000 for the alternative use scenario.

Based on these valuation studies, USRA concluded that there was no persuasive evidence that a buyer would be willing to pay more than the present value of continued railroad operations for the speculative possibility that an eventual conversion of some or all of the Railroad's assets to alternative uses would produce greater value. Therefore, USRA determined that the fair market value of the Alaska Railroad pursuant to Section 605(d)(1) of ARTA is $22,271,000.

CONTINUED EARNINGS VALUATION

The purpose of this analysis was to examine the earnings which could reasonably be expected to flow from a continuation of rail service. It was based on revenue and expense forecasts developed by the Alaska Railroad along with a projection of capital requirements to support that level of operations.

These forecasts were reviewed and validated by USRA staff, and adjustments were made as necessary. The validation process included an examination of historic performance levels and trends, field inspections, interviews with railroad and other knowledgeable personnel, and a review of proposed capital projects.

In general, the forecasts made by the Railroad were accepted as presented. As discussed later in this section, adjustments were made to projected operating expenses for some additional maintenance of way expenses. Adjustments were also made to forecasted productivity improvements, since it was USRA's judgment that a potential investor would be unwilling to pay for as yet undemonstrated cost reductions. The projected capital program was modified as well.

Other cost increases resulting from the transfer of the Railroad, identified in detail in the 605(a) report, were also reviewed and adjusted. These items include legal and administrative expenses, tort claims, working capital and employee retirement obligations. Additionally, the cost of compliance with Federal OSHA requirements and State or local

building codes not now applicable to the Railroad were estimated and included, as well as one-time transfer costs.

The resulting modified revenue, expenses, and capital requirements from operations were reduced to a single present value as of October 1, 1983.

Revenue

Revenue is based on an Alaska Railroad passenger and freight traffic forecast for the fiscal years 1984 through 1989 (see Table 3). Passenger revenue is projected to increase 59 percent from fiscal 1984 to 1989, with freight revenue rising 34 percent. Most commodities show a gain over the period with only petroleum products declining. Gravel traffic, which has been increasing over the past several years, is expected to remain at 1983 levels as is coal moving to local Alaska destinations. The commodity showing the largest increase is pipe because of renewed activity on the North Slope and a greater need for replacement pipe.

Of particular importance is the projection of an export coal movement beginning with a test shipment in 1984. This coal would be moved in unit trains from Healy to the port of Seward for shipment to Korea. It would be handled in shipper-owned equipment and would represent a significant addition to the Railroad's traffic base. Planning for this movement has been going on for some time. However, recognizing that the necessary port facilities have not yet been built, the uncertainty of current world coal markets and the possibility of increased costs, USRA modified the Railroad's forecast by delaying the

estimated start-up date by one year. We believe that a prospective purchaser would view the uncertainties associated with the projected export coal movement as being significantly higher than the uncertainty inherent in other elements of the Railroad's forecast.

Neither the Railroad nor USRA has forecast any traffic improvements that are purely speculative. For example, there are major mineral reserves in the area which are a source of potential new traffic. However, additional facilities would be required, probably including substantial extensions of the Railroad's lines.

All elements of revenue are stated in constant 1983 dollars. This means that the average revenue per carload changes only as traffic (commodity) mix or length of haul changes. It was assumed that rate increases will be made in a timely fashion in response to cost increases. To the extent that the Railroad should prove unable to do this, operating margins would be reduced from forecasted levels.

Expenses

USRA adopted most of the Railroad's forecast of operating expenses. The most important modifications were additional maintenance of way expenses, the previously discussed adjustment to projected productivity improvements, and additional legal and administrative expenses attributable to the transfer itself.

Asset Condition and Maintenance Expenses

Since the condition of the Railroad's plant and equipment has been of major concern in the past and could be responsible for major shifts in expense levels, USRA physically inspected facilities and equipment as necessary to make a careful assessment of future requirements.*

Maintenance of Way. The Railroad consists of approximately 650 active track miles in main and branch lines, yards and sidings. The main lines from Seward to Fairbanks and from Portage to Whittier consist of 115 pound rail on wood ties. The branch line and yard rail generally varies from 70 to 90 pounds. New rail was installed on the main line from 1948 to 1952 to overcome deterioration from heavy traffic during the war. Although precise numbers are not known, major tie renewals were also done at that time. The extremely large rebuilding effort during that five-year period and the relatively low traffic levels since have reduced the subsequent need for large program expenditures for tie and rail renewal.

In order to evaluate the Railroad's condition and estimated future needs, the property was inspected by observing the track structure and ride qualities from trains, hi-rail vehicles and selected walking inspections. Some tie renewal and surfacing work was observed in progress, and records for defective rails, derailments, slow orders and other engineering data were

*USRA was assisted in this analysis by Frank S. King and Jackson R. Bell, experts in railway engineering and equipment.

reviewed. This review clearly showed that the Railroad is currently in satisfactory condition to handle present and projected traffic levels. In 1982, the Railroad's highest traffic density was 8 million gross tons (MGT) on the 40-mile segment between Anchorage and Matanuska. The balance of the main line handled less than 4 MGT for the year. These statistics reflect a low-density railroad as compared with other railroads where density may often be over 40 MGT per year for single track lines.

Over the past three years 1981-83, the Railroad will have replaced an average of about 21,000 ties and renewed about 2.75 track miles of rail per year. The Railroad has projected some increases in program levels predicated on increased traffic, but future expense increases are partly offset by projected cost reductions due to greater efficiency.

In its analysis, USRA determined that the maintenance of way costs projected by the Railroad should be increased to assure a track structure adequate for the expected traffic. The magnitude of this adjustment varies from about $800,000 annually to nearly $1.5 million annually, or a total $10.8 million for the ten years, 1984-93. This funding will provide for tie replacements of 35,000 in 1984 rising to 50,000 by 1990. Rail renewal will similarly increase from about 4.5 track miles in 1984 to 10 track miles in 1993. These program increases reflect not only traffic growth but also the age of many ties and much of the rail. Ties and rail installed in the post-war period, 1948-52, will have provided forty years of service within the next ten years.

this should require increased replacement rates from current levels.

Maintenance of Equipment. The Railroad currently owns 62 locomotives, 46 passenger cars and 1,642 freight cars. In addition, various vehicles, maintenance and shop equipment are also maintained. The demand for equipment is high throughout the summer due to tourism and the construction season. During the winter, demand is low, providing time for programmed equipment repair. Total expenses in this category were about $9.5 million last year, and they are projected to remain at about that level through 1984. After that, consistent with traffic growth, expenses are projected to increase each year, reaching $11.5 million in 1989.

This projected spending should be adequate to provide the necessary level of locomotive overhauls and heavy repairs as well as running and heavy repair to freight cars. Maintenance of passenger equipment has also been provided for, premised on the current scheduled level of trains.

A part of the locomotive fleet is old and expensive to maintain, and much of the freight car fleet is or soon will be over 40 years old. However, the overall condition of the fleet should improve over the ten-year period due to the projected acquisition of new or good used locomotives and freight equipment as provided for in the capital plan.

The need for additional or replacement freight cars will have to be continually re-evaluated as traffic develops. The Railroad

has had some success in getting shippers of bulk commodities to obtain and finance needed equipment. Currently one of the major gravel shippers provides hopper cars for regular unit train moves, and the potential coal exporter has agreed to provide not only the necessary cars, but also the locomotives.

The opportunity for additional shipper equipment agreements will depend on future traffic developments. Surplus freight equipment in the lower forty-eight states may provide an economical source for some of the Railroad's future needs. In summary, based on the projected traffic and expected equipment acquisitions, the expense levels projected should be adequate not only to maintain the current fleet condition but to permit some improvement.

Forecasted Capital Requirements

Historically, capital spending has varied widely, and government appropriations have been required to permit any reasonable capital program. According to data provided by the Railroad, since 1975, capital spending has ranged from a low of $2.8 million to a high of $11.8 million.* Uncertain funding and resulting wide swings from year to year made effective capital planning difficult, often leading to last-minute decisions on project approvals.

*Alaska Railroad annual reports have reported capital expenditure totals that included the cost of major track work such as tie replacement, rail renewal, track surfacing, bridge repairs, etc. Under ICC accounting, these costs properly belong in operating expenses. The spending totals shown reflect this adjustment.

The Railroad provided USRA with a capital plan averaging $14 million annually from 1984 to 1988 funded by the Railroad's cash flow. After reviewing that plan and a proposed project list, discussions with management and on-site inspections, a yearly allocation of $12 million was considered adequate to continue operations and to handle forecasted traffic growth.

Approximately half of this amount is allocated for acquiring and upgrading locomotives, cars and other equipment. The remaining amounts provide for rehabilitation of bridges and tunnels, track construction to serve new and existing customers, stabilization of the roadbed in the Healy Canyon and elsewhere, realignment work to reduce curvature, and other plant requirements.

Start-up Costs

In Appendix L of the 605(a) Report, the State of Alaska and the Department of Transportation identified 15 items which they considered to be potential start-up obligations under the Act. The Report characterized these as "'start-up' responsibilities, because they are new undertakings by the railroad, not previously imposed on the railroad because of its Federal status." For the most part, these responsibilities are not "one-time"; rather, they affect ongoing expenses and result from various changes in access to Federal government resources. USRA treated these issues as follows.

(1) Vehicle Leasing. Under Federal ownership, the General Services Administration assigns vehicles to the Railroad for a

monthly lease payment which includes maintenance. The State, the Department of Transportation, and the General Services Administration have not yet resolved whether the existing leased vehicles will be transferred. In the event the Railroad acquires the existing fleet of older leased vehicles, it will be required to make other arrangements for maintenance. USRA determined that the Railroad could most likely continue to lease vehicles at terms and conditions equivalent to those currently in effect. Regardless of the final outcome, there would be no significant change in net costs to the Railroad for vehicles, and USRA's analysis includes no adjustment to the Railroad's projected expenses for this item.

(2) Supplies and Materials. After transfer, the Alaska Railroad can no longer acquire supplies through Federal government supply depots. However, USRA's valuation assumes that the purchasing power of the State-owned railroad will offset the loss of the ability to purchase through the Federal government. USRA did include increased administrative costs associated with an additional purchasing agent.

(3) Legal Fees. Currently, much of the Railroad's legal work is performed by United States government attorneys. After transfer, this will no longer be the case, and the Railroad will have to do more of its own legal work as well as retain outside counsel. After consultation with the Alaska Railroad and with others, USRA concluded that an additional $600,000 per year is an appropriate additional cost to factor into the valuation.

(4) Additional Administrative Expense. USRA has assumed that, as a result of the loss of certain administrative support currently provided by various Federal agencies, the Railroad will incur an additional annual expense of $108,000 representing three person years to handle this work.

(5) Tort Claims. Currently, all tort settlements or awards in excess of $2,500 are paid by the Federal treasury. After transfer, these will all be the responsibility of the Railroad. Over the four-year period 1980-83, the Federal treasury paid a total of $288,000, an average of $72,000 a year. From this experience, USRA assumed an additional average cost of $75,000 per year.

(6) Working Capital. As with all businesses, the Railroad will require working capital. USRA assumed that none of the revolving fund will be transferred to the State because pre-conveyance claims and contingent liabilities that must be paid are likely to consume the entire fund. After reviewing the working capital requirements of other railroads, it was USRA's judgment that one month's worth of operating expenses would be adequate working capital for the Alaska Railroad. This amounts to approximately $4.4 million in the first year, varying over the forecast period as operating expenses vary.

(7) Lack of Access to Federal Surplus Equipment. After transfer, the Railroad's access to excess Federal equipment will be greatly diminished. In our judgment, this should not increase the Railroad's costs.

(8) ARTA Section 604(d)(3) Employee Protection Obligations. Section 604(d)(3) requires the Secretary of Transportation to certify that the State-owned railroad has established arrangements to protect the employees of the railroad for the two years immediately following the transfer. This provision requires continuation of current labor agreements, retention for two years of all employees (other than certain officers) who elect to transfer to the Railroad, continuation of compensation at current levels, re-employment priority, and maintenance of benefit programs, as well as other items. The essence of these provisions is to continue the employees' current status. Since the forecast calls for maintaining rail operations at current levels, USRA assumed that all present employees would be offered jobs by and would transfer to the State-owned railroad. Since USRA's forecast of cash flows also assumes the continuation of current compensation levels, no protection payments would be required under these assumptions.*

(9) Section 607 Retirement Obligations. ARTA Section 607 requires that, after transfer to the State, the Railroad must provide retirement benefits substantially equivalent to current levels for all employees who elect to transfer. As stated in the 605(a) Report, the Department of Transportation asked the Office of Personnel Management (OPM) "to calculate retirement costs and

*If, in fact, there are large numbers of employees who elect not to transfer, then this could cause significant disruptions to the smooth operation of the railroad which could prove to be costly. USRA has no way of directly quantifying either the likelihood of this occurring or its cost.

benefits for existing employees who participate in the Federal retirement system and to prepare an estimate of the financial consequences if all of those employees transferred to the State-owned railroad at this time" (605(a) Report, pp. 69-70). The 605(a) Report further states (at page 70) that:

> "[i]n preparing its calculations, OPM assumed that if transferred employees remain in the Federal retirement system pursuant to Section 607(a)(1), the language of that provision governing the amount of the State-owned railroad's employer contributions . . . would require the State-owned railroad to pay, as the employer contribution, 29.06 percent of basic payroll for those transferred employees into the Federal retirement fund to fully fund retirement benefits that accrue for those employees after transfer. OPM's calculation assumes the current seven percent employee contribution would remain unchanged.
>
> This is an increase of 22.06 percent over the amount the Alaska Railroad has contributed as a Federal agency and reflects the manner in which the Federal retirement system is normally funded, which for Federal agencies includes other payments from the U.S. Treasury."

The ultimate resolution of this issue will not occur until after the date of this report. Indeed, in the 605(a) Report, the Department of Transportation and the State of Alaska acknowledge that an "accurate estimate of the retirement obligations that would be imposed on the State-owned railroad pursuant to Section 607(a) cannot be calculated at this time." However, for purposes of completing this valuation in a timely manner, USRA has been required to make assumptions as to the cost of this provision to the Railroad.

USRA's analysis assumes that all permanent employees would transfer to the State-owned railroad and would be included in a plan that will have an annual cost to the Railroad equivalent to the cost that OPM has suggested -- that is, a 22.06 percent

additional contribution over and above the 7 percent contribution which the Railroad is currently paying. USRA assumed all new employees hired after the date of the transfer would be covered under a new pension plan that would require the Railroad to contribute 12 percent of the new employees' base salary.

USRA's analysis of the additional pension costs used the actuarial base developed by OPM which listed current employees, by sex, for each year until the last Railroad employee currently in the Federal retirement system has left the payroll. These data were costed using the 1983 average wage levels to yield the total wage base for each year. This wage base was multiplied by an additional 22.06 percent to arrive at the additional pension costs.

As each current employee leaves the payroll, USRA assumed a replacement would be added, but that the replacement's pension expense would be only 5 percent in addition to the current 7 percent contribution. This approximates the contribution now required for employees of the State. These cash flows were then included with all other expenses, and the first 10 years of additional pension expense is shown on Table 3.

The Department of Transportation and the State acknowledge that "the exact number of employees who will transfer and the value of their retirement benefits will not be known until the date of Transfer". Thus, the assumptions which USRA has made could be significantly different from the actual outcome. However, we believe the estimates provided by our assumptions are

reasonable and fair to both the Federal government and the State, as well as to any other buyer.

(10) Section 607 Severance Obligations. The severance obligations imposed upon the Railroad by Section 607 of the Act require the Railroad to pay certain compensation to employees whose employment is terminated without cause during the first two years after transfer. Because of the activity levels forecasted, we have assumed that no employees will fall into this category and, therefore, no upward adjustment to the Railroad's projected operating expenses is necessary.

(11) Non-Availability of Statutory Exemptions if the Railroad Ceases to be a State Instrumentality. If, after transfer, the Railroad ceases to be an instrumentality of the State, then the Railroad would lose its exemption from Federal income taxes, the Railroad Retirement Act, the Railway Labor Act, and the Federal Employer's Liability Act. Because of the nature of the projected cash flows, no tax liability would accrue even if a private purchaser, and not the State, acquired the Railroad. USRA also assumed that there would be no significant changes in cash flow if the labor related statutes were applied. Therefore, we have made no adjustments for these provisions.

(12) Section 608(a)(1) Antitrust Applicability. After transfer, the exemption which the Railroad enjoys from certain antitrust laws will be lost. While this may become an issue in the future that could adversely affect the Railroad's revenues, USRA has no way of quantifying what the long-range effect might be.

(13) ICC Regulation. Currently the Railroad is subject only to partial regulation by the ICC under Executive Order 12434. After transfer, ARTA Section 608(a) provides that the Railroad will be fully regulated by the ICC in a manner similar to other railroads of the same class (most likely Class II). While there will be some additional costs, they are not significant enough to quantify separately. However, as previously stated, upward adjustments were made to both legal and other administrative costs to cover these as well as other contingencies.

(14) Compliance With Various Safety Statutes and Regulations. USRA considered three separate categories of potential expenses -- OSHA, State and local building codes, and facility condition.

* OSHA. Based on an updated study provided by the Alaska Railroad, which indicates approximately $2.5 million additional funding will be required to eliminate the remaining deficiencies, we have included $500,000 per year for five years. These funds will be utilized to correct problems associated with buildings, facilities and equipment beyond expenditures budgeted elsewhere.

* State and Local Building Codes and Existing Condition of Facilities. A recent report prepared for the State estimated the total cost to correct building deficiencies to be about $85 million. Condition problems accounted for about 62 percent or $53 million with the balance of $32 million being related to code violations. Repairs, additions or replacement costs

were based on bringing the existing buildings into compliance, regardless of current use.

In the future, the Railroad will have to correct some code violations and improve the condition of some buildings. However, the Railroad will certainly conduct a careful review of current and future railroad operating needs before any large expenditures are made. Some buildings are no longer required, and some consolidations may be possible. If replacement is necessary, a much smaller and more efficient facility might be adequate. The Railroad currently has an on-going program to correct some of these deficiencies. In addition, there is some overlap with the funding required to correct OSHA deficiencies reported earlier. After consideration of these factors, discussions with the Railroad and the State, and on-site inspections, the following future needs were considered reasonable and are reflected in USRA's analysis:

-- Building code deficiencies -- an allocation of $1.5 million per year for ten years for a total of $15 million. This allows for items such as fire separation, fire resistance in wall coverings, ventilation, lighting, electrical deficiencies, handicapped access, and other code related items.

-- Condition discrepancies -- Justified projects in this category would be funded under the Railroad's normal capital budgeting process. As discussed

previously in this section, this total budget is forecast at $12 million per year for ten years.

(15) Transition Expenses. Upon transfer to the State, there will be certain one-time costs that will have to be incurred. These would include such things as legal costs, filing fees, consulting fees and administrative costs as well as costs to the Railroad ranging from remarking equipment to indicate the new ownership to printing stationery. We estimate these one-time costs to be $1,750,000.

Present Value of Future Cash Flows

As previously discussed, the fair market value of the Alaska Railroad is the amount which the State would have to pay to outbid (e.g., by one dollar) any competing potential purchaser. To determine the maximum bid of a competing non-government purchaser, the estimated future cash flows must be discounted to present values at a rate equal to the cost of capital that the private purchaser would employ in valuing this railroad.

In arriving at a weighted average cost of capital to use as the discount rate in this valuation, numerous factors were considered. Among these were railroad debt-equity ratios, the cost of debt, the average real return on equities, and risk premiums used in other rail valuations. The resulting constant dollar discount rate was then compared to discount rates used in various other railroad related valuations as well as to the cost of capital for the nation's railroads as found by the ICC in Ex Parte 436. These comparisons served as a check on the reasonableness of the rate used in the Alaska Railroad valuation.

USRA determined that the appropriate constant dollar discount rate to use in this analysis was 16 percent as applied to the projected cash flows expressed in constant dollars.* The

*This discount rate is not comparable to the rate used in the real estate analyses for two reasons: (1) As noted above, the continued earnings valuation was performed in constant dollars. In contrast, the real estate analysis considered the effects of appreciation in value of the real property, and was performed in inflated dollars. (2) Different special considerations were relevant to the real estate analysis than to the continued earnings valuation.

development of this discount rate required weighing the special considerations attendant to the Alaska Railroad. Elements of these special considerations include:

* The possibility of not realizing cash flows that, in turn, are based on estimates, not on historical evidence,
* The change from Federal ownership,
* The onset of full regulation by the ICC upon the change in ownership, and
* The uncertainties on the world energy markets.

Measuring Potential Alternative Use Value

To measure the possible alternative use value of the Alaska Railroad's assets under the terms and conditions of ARTA, USRA hypothesized that, beginning in the eleventh year, there would be an immediate cessation of all rail operations to permit the Railroad's operating assets to be placed in their highest and best alternative uses.* To assess the effect of such an option on value, USRA performed the following analyses.

*In determining possible alternate uses for the Railroad's real estate, it was USRA's judgment that it would be highly speculative to assume that any operating real estate could be otherwise developed under a continued operations scenario, particularly during the early years following transfer to the State. Not only would such development require relocation of existing yards or other facilities, but it is also uncertain that any major redevelopment plan could easily obtain the required approvals of various disparite interests. Further, any assembling of operating and non-operating real estate would most likely be affected by existing leases. In light of these factors which would affect both the timing and costs of any partial alternative development of the operating real estate, USRA concluded that its consideration of the alternate use value of these parcels in a liquidation scenario after ten years was a fair method of measuring their value for other purposes.

Rail Operations

If the Alaska Railroad were planning to totally cease operations, it might well cut back dramatically on all its expenses before the eleventh year. It is also true that shippers would begin to find alternative modes of transportation; consequently, the Railroad's revenues would also drop dramatically. For purposes of this analysis, we have assumed that revenues would drop by the same dollar amount per year as expenses. We have used the cash flows generated by the Railroad for the continued operations scenario (as adjusted by USRA) as being representative of the cash flows that the Railroad would generate in the liquidation scenario.

Labor Protection

As a result of discontinuing rail operations, USRA has assumed that there would be imposed on the owners of the Alaska Railroad labor protection conditions similar to those commonly known as "New York Dock". These conditions essentially require employees (depending on seniority) to be paid their full salary and benefits for six years, unless they find other jobs. In the case where an employee finds another job at a lower rate of pay than the one he had on the railroad, that employee is entitled to the difference in pay between his new job and what he received on his old job. Protected employees also have the option of taking a one-time lump sum payment equivalent to one year's pay.

In order to calculate the cost to the State of these labor protection conditions, USRA assumed that all permanent employees

would be eligible to receive labor protection payments. Of these employees, based on the current age profile of the Railroad's employees, USRA assumed that (1) all those 55 and older would choose to retire, (2) 25 percent of the eligible employees would take the lump sum settlement, and (3) 25 percent of the remaining work force would find new employment each year.

FACILITIES AND EQUIPMENT ASSETS

USRA selected Frank S. King and Jackson R. Bell, experts in railway engineering and equipment, to assist in determining the alternative use value of the Railroad's facilities and equipment; they determined the net value that could be realized from disposition of these assets taking into consideration all of ARTA's terms and conditions. Their analysis is described in greater detail in their report to USRA.

USRA first assembled and validated the Railroad's inventories of track, equipment, and other facilities. These assets include approximately 650 track miles,* yards and port facilities, shops, buildings, bridges, communications facilities, 1,642 freight cars, 46 passenger cars and 62 locomotives, as well as maintenance and shop machinery. Physical inspections were made as required to determine the condition of the assets,** and a determination was made as to which asset categories would be sold as scrap and which could be sold to others for re-use.

*This figure represents the total of all the Railroad's track including not only its 460-mile main line from Seward to Fairbanks, but also its branch lines as well as passing tracks and yard tracks.

**USRA also relied on this condition assessment to determine the Railroad's maintenance and capital requirements for use in determining the Railroad's continued operations value, previously discussed.

USRA estimated the range of market prices for resale and for scrap, dismantling costs, shipping costs from Alaska, and costs to comply with environmental or other regulations.* In making these estimates, USRA considered various market data such as the demand for scrap and the supply and demand for used railroad equipment and used rail.

Since ARTA requires that the State must continue to operate the railroad for at least ten years or suffer reversion, the state could not realize any alternate value from liquidating these assets until ten years after transfer.** USRA estimated that an orderly dismantling and liquidation program would require 2 1/2 years, beginning in 1994 and finishing in 1996.

USRA determined that the net proceeds from sale of the Railroad's track and facilities plus its equipment would be $11.6 million in 1983 constant dollars.

---

*USRA was assisted in these areas by Mr. Michael V. Cody.

**Indeed, based on the Railroad's forecast, the positive earnings projected for 1994 and later years, if realized, would prevent the Railroad from obtaining authority to abandon under the applicable provisions of the Interstate Commerce Act. This represents a major uncertainty that any purchaser would weigh heavily before paying a price based in part on asset values to be received many years in the future and only if rail operations could be discontinued.

REAL ESTATE ASSETS

USRA selected Jackson-Cross Company, a nationwide real estate appraisal firm, to assist in valuing the Alaska Railroad's real estate assets. Jackson-Cross determined the present value, as of October 1, 1983, of the Railroad's real estate taking into consideration all of ARTA's terms and conditions. Their analysis is described in greater detail in their appraisal report to USRA.

To consider the ARTA Section 610(a) requirement that the State must continue to operate the railroad for at least ten years or suffer reversion, USRA instructed Jackson-Cross to consider the Alaska Railroad's real estate assets in two categories:

* "Non-operating" property -- land which is not necessary for the railroad's operations. This is essentially real estate which is leased to third parties, or which is available for development.

* "Operating" property -- all other property, such as the right-of-way, yards and other facilities, including the port facilities at Whittier and Seward.

Because the Railroad's "non-operating" property is not required for rail operations, it is not affected by the continued rail operation requirement. However, because of ARTA's restrictions, USRA assumed that no value could be realized from alternate use of the Railroad's operating real estate until ten years after transfer to the State.* Jackson-Cross was instructed to determine

*In some locations, the Railroad is presently earning income from easements or permits on operating property which do not interfere with rail operations. This income was considered in USRA's
(Continued)

/ the present value of the cash flow which can reasonably be projected from continued development of the Railroad's non-operating real estate, and (2) the present value of the cash flow which could reasonably be projected from alternate use of the Railroad's operating real estate beginning ten years after transfer.

Most of the Alaska Railroad's real property not required for rail operations is currently leased to others, and there was no reason to assume that a purchaser of the property would change this practice. Jackson-Cross, therefore, based its appraisal upon the assumption that the Railroad's real estate would be leased rather than sold. To the extent that any current rents are below market levels, the lease assumption explicitly considers that fact. USRA assumed that the State will be required to honor the terms and conditions of these leases. They were thoroughly reviewed and analyzed, and USRA has considered their effect in determining the value of the Railroad's real estate.

Jackson-Cross then assumed that, except as prevented by existing leases, rents would be set at market levels. It

---

(Continued)
continued operations valuation. As discussed later, the Railroad lacks clear title to much of the right-of-way so that it would no longer be entitled to income from such property upon conversion to alternate uses. As to right-of-way properties where the State will acquire clear title under ARTA, it was not considered feasible to attempt to ascribe any separate value to this potential income, since the highest and best alternate use might well either (1) preclude the continuance of the easement or permit or (2) result in the lessee, rather than the fee owner, collecting such easement or permit income.

continued operations valuation. As discussed later, the Railroad lacks clear title to much of the right-of-way so that it would no longer be entitled to income from such property upon conversion to alternate uses. As to right-of-way properties where the State will acquire clear title under ARTA, it was not considered feasible to attempt to ascribe any separate value to this potential income, since the highest and best alternate use might well either (1) preclude the continuance of the easement or permit or (2) result in the lessee, rather than the fee owner, collecting such easement or permit income.

estimated the net revenues that most likely would be realized from a normal leasing and management program as well as the period of time an investor would perceive as necessary to realize those net revenues. Jackson-Cross then discounted these projected net revenues to consider the cost of money over time and the risk of uncertainty that those projected net revenues would, in fact, be realized.*

USRA classified the Railroad's real estate into "non-operating" and "operating" based on current railroad operational requirements with reasonable estimates for operational expansion. All land presently leased to others was classified as non-operating, including lands leased to tenants who are also shippers on the railroad.

There is no definitive inventory available of exactly what constitutes the property of the Alaska Railroad. USRA compiled maps from the Railroad's records to correspond with an inventory estimate which had been prepared by the Department of Transportation in 1981. Additional inventory information was contained in the 605(a) Report. However, despite the best efforts of all parties involved to assemble whatever inventory data are available, substantial questions still remain.

*In practice, the lease assumption produces the same value as an assumption that the real estate would have been sold over a period of years, subject to the existing leases. This is because the prices investor(s) would be willing to pay are a function of the rental income that could be earned, taking into consideration both present rents and projected future rent increases.

Most notable of these questions is the definitio. of exactly what rights will ultimately be conveyed to the State of Alaska. Depending on future adjudication or negotiation, there are many instances where the State may receive less than fee title to portions of the Alaska Railroad's real estate, particularly its right-of-way. Exhibit 1 to the 605(a) Report summarizes existing claims against the property. According to that exhibit, prepared by the Anchorage office of the Bureau of Land Management, more than half of the Alaska Railroad's right-of-way passes through lands which were patented to private parties or to the State without a specific reservation for the Railroad's right-of-way.* In a limited number of areas, mining claims have also been filed which are near to or encroach upon the right-of-way. Further, in other locations, ARTA provides that the State will only receive an "exclusive use easement" to certain portions of the right-of-way.

Therefore, in an alternative use scenario, the Railroad would have no legal interest to transfer in considerable portions of its right-of-way. Accordingly, in determining the value of the Railroad's operating real estate for alternate uses after ten years, Jackson-Cross was instructed not to include value for any parcels where ownership would disappear upon cessation of rail

*Of a total of 619.11 miles of right-of-way, 142.34 miles have been patented to individuals; 137.87 miles have been patented to the State; and 91.25 miles have been tentatively approved for patent to the State upon survey. An additional 85.92 miles have been selected by the State, and another 1.3 miles appear to have been patented to both private parties and to the State.

operations. Further, because clear title existed for very little of the right-of-way, Jackson-Cross was also instructed not to consider "corridor value" for the Alaska Railroad's right-of-way in its alternate use determination.

Additionally, significant portions of the right-of-way, as well as certain parcels of land adjacent to or away from the right-of-way, are subject to claims under the Alaska Native Claims Settlement Act of 1971 (ANCSA) and the 1906 Native Allotment Act. These claims will not have been settled prior to the issuance of this report. It is not possible for USRA to know the final outcome with respect to these parcels. Therefore, as further discussed in Appendix A, USRA has analyzed the value of these parcels separately and has evaluated their impact on the Railroad's fair market value.

Jackson-Cross determined the present value of the Railroad's non-operating real estate to be $47.8 million. Jackson-Cross determined that the present value resulting from alternate use of the Railroad's operating real estate after a hypothetical discontinuance of rail operations is $7 million.

APPENDIX A

NATIVE CLAIM SELECTION ANALYSIS

The Alaska Railroad's real estate inventory includes certain parcels which are subject to claims under the Alaska Native Claims Settlement Act of 1971 (ANCSA) and the 1906 Native Allotment Act. Section 606(b)(1)(A) of ARTA directs that "[d]uring the ten months following the date of enactment of this Act, . . . the Secretary of the Interior, Village Corporations with claims of valid existing rights, and the State shall review and make a good faith effort to settle as many of the claims as possible." Failing settlement, ARTA Seccion 606(b)(2) further directs that the "Secretary of the Interior shall complete the final administrative adjudication required under this subsection not later than three years after the date of enactment of this Act."

According to data furnished by the Alaska Railroad and the Anchorage Office of the Bureau of Land Management, Native claims have been filed for the following ten parcels.

LOCATION	ACRES	GRAVEL RESERVE	ROCK RESERVE
EAGLE RIVER	1596	Yes	No
BIRCHWOOD	978	Yes	No
EKLUTNA	605	Yes	Yes
MATANUSKA	238	No	No
PITTMAN	140	Yes	No
BROAD PASS	561	Yes	No
HEALY	123	No	No
NENANA	231	No	No
HOLY CROSS	60	No	No

No negotiated settlements have been reached, and the ultimate disposition of these parcels cannot be known at this time. However, despite these unresolved issues affecting the basic inventory to be valued, ARTA directs that USRA report one number representing the Railroad's fair market value.

At this time, there are considerable uncertainties as to whether any of these parcels will ultimately be conveyed to the State. The possibilities range from conveyance of all or a substantial portion of these parcels, which would suggest an upward adjustment to value of as much as $3.2 million,* to conveyance of only operating real estate and the loss of access to currently used rock and gravel reserves, in which case a reduction in value approximating $1.8 million** would be appropriate. If the status quo was maintained -- that is, if the Railroad was conveyed lands underlying rights-of-way and facilities and the continued right to withdraw rock and gravel as needed from currently utilized reserves -- no adjustment to value would be appropriate. Moreover, some parcels may be conveyed

---

*Jackson-Cross estimated the fair market value of the Railroad's total real estate inventory with and without the parcels subject to Native claim selection. From this analysis, USRA determined that the Railroad's fair market value would be increased by $3.2 million if all parcels subject to Native claim selection were conveyed to the State. This estimate assumes all the previously described ARTA terms and conditions.

**USRA also considered the impact on value if the Railroad were to lose all of its present rights to withdraw gravel or rock from these parcels. While precise estimates are not available, increased costs for using alternate sources of rock and gravel would reduce the Railroad's fair market value by about $1.8 million.

only if, in subsequent negotiations, the State agrees to exchange other State lands for such parcels.

In light of this broad spectrum of unknown and virtually unpredictable future events, USRA can find no basis for assuming that a prudent investor would pay for the speculative possibility that significant portions of the Native claim parcels would be conveyed in the future. Therefore, we consider that it is inappropriate for our fair market value determination to include any amount ascribed to these parcels. We feel that this conclusion is a fair balancing of both the downside risk that the Railroad might lose access to the gravel and rock reserves and the upside possibility that at least some of these parcels beyond those directly utilized in support of current rail operations might ultimately be conveyed to the Railroad in fee.

HOLY CROSS

EXECUTIVE SUMMARY

The results of our examination of the fixed facilities and equipment of The Alaska Railroad, including analysis of the data provided by the United States Railway Association and The Alaska Railroad, and information obtained by on-site inspections and interviews with officials of The Alaska Railroad, are summarized as follows:

The inventory of the fixed facilities has been prepared using The Alaska Railroad records and information furnished verbally by knowledgeable railroad personnel. This information was supplemented by sample inspections, but actual physical counts were beyond the scope of this effort. The track chart, yard maps, timetable and certain estimated counts furnished by the railroad are the basis for the inventory of track materials. The total quantities of this material are reasonably accurate, although there may be some insignificant variations in sub-total quantities of the smaller weight rail and associated track materials. Total counts of rail in track are within 0.7 percent of the reported total mileage of the railroad. Bridge, trestle, culvert, tunnel, building, marine facility and highway crossing schedules or summaries were prepared from lists furnished by the railroad. Communication and signal information was furnished in part verbally and from records furnished by the Engineering Department of the railroad.

The track structure of the railroad appears to be in relatively good condition for present day tonnages and train speeds. Most of the 115 lb. RE rail laid on the main line and Whittier subdivision is in relatively good condition with only minor wear and would be suitable for cropping, welding and relaying in Class 1 railroad branch lines or even low tonnage mainline tracks. However, except for some 115 lb. turnout material and a relatively few 13 inch double shoulder tieplates, other track materials would probably not be reusable on railroads in the "lower 48." The bridges including the wood trestles are in good condition. Most railroad communications are transmitted through a modern micro-wave system, including but not limited to, radio equipped locomotives, maintenance of way and automotive equipment supplemented by approximately 150 portable type radio receiver-transmitter sets.

Spending in recent years for rail, ties, ballast and surfacing appears to have been adequate to properly maintain this railroad. However, because of the overall age of the crossties and the lighter weight rail, it appears that some increase in spending is warranted for the installation of these materials. Both capital and expense spending have been adequate to properly maintain bridges, trestles and culverts, marine and communication facilities. Operating expenses for these facilities should continue at about the same level. However, capital spending will have to be increased somewhat if the railroad should be

transferred from Federal ownership. Additional expenditures will be required to correct OSHA and State of Alaska building code violations.

To estimate the Railroad's alternate use value, costs have been estimated in 1983 dollars to dismantle the tracks, to load the material (excluding crossties and ballast) into cars, and to transport it to the port at Whittier. At current scrap prices, the cost of picking up, loading, moving to port and shipping to a location of a quantity buyer would exceed the sale value of all types of steel scrap. Therefore, this report provides two options; one for handling only that material, 115 lb. reusable rail, turnouts and tieplates, with a positive resale value, and the second for reclaiming all track materials (including all steel scrap) except crossties, timber and ballast, regardless of value. Because the cost of dismantling the bridges, trestles and culverts and moving the reclaimed material to a marketplace would exceed the sale value, it is assumed that these structures would remain in place (except for the Tenana River Bridge discussed in detail at page 64). The micro-wave communication system would probably be of value to some public body or a private communications company "where is, as is."

The inventory of equipment has been prepared using The Alaska Railroad records, supplemented by on-site inspections and interviews with selected officials of the Railroad's Mechanical Department. Representative samples of each general category of

equipment were inspected and formed the basis for judging the condition of equipment.

The fleet of 62 locomotives, excepting the five GP-40-2 locomotives delivered in May 1983, is generally in poor to fair condition. Locomotives are maintained on an as needed immediately basis or on an as funded basis. Due to the relatively low annual mileage, the Railroad has managed to maintain locomotives without any major planned maintenance/ overhaul/rehabilitation programs.

The passenger fleet of 52 cars is generally in fair condition with the exception of the recently rehabilitated all-electric cars which are in very good condition and which represent 20 percent of the fleet. The passenger car fleet is well maintained, but again without planned maintenance/rehabilitation programs.

The freight car fleet of 1,642 cars ranges in condition from new to not fit for service or too old for interchange. By the end of 1983, 46 percent of the fleet will be prohibited in interchange. These cars are also maintained on an as needed basis.

The highway vehicles, most of which are owned by the General Services Administration and leased to The Alaska Railroad, are generally in good condition and well maintained. Miscellaneous equipment such as snow plows, locomotive cranes and spreaders are

generally in fair condition and maintained/repaired as required. The cabooses have all been rebuilt and are in good condition.

The maintenance of way equipment is generally in fair to good condition and well maintained. Formal records for equipment maintenance are not kept by individual piece of equipment; therefore, maintenance history of equipment is difficult to determine.

The shop equipment, such as turret lathes, wheel machines, armature extractors, boring mills and drill presses, is in fair to good condition. Shop overhead cranes need general overhaul and repair and the drop pit needs total rehabilitation. The Alaska Railroad is just beginning to develop planned maintenance programs for shop equipment.

We assessed equipment condition from the point of view of service life and maintainability to provide the required service for the continuing operation analysis, and we have categorized equipment by type, quantity, scrap or reusability based upon current condition and age for the alternative use scenario.

Conclusions

The following table summarizes our analysis of projected operating expenses and capital expenditures which will be required from 1984 through 1993 to maintain the railroad's fixed facilities and equipment in adequate condition for the forecasted traffic.

PROJECTED OPERATING EXPENSES
AND CAPITAL EXPENDITURES

Facilities & Equipment
(Millions of 1983 Dollars)

Year	Operating Expenses*		Capital Expenditures**
	Engineering	Equipment	
1984	10.56	9.38	14.00
1985	10.58	10.71	14.00
1986	10.68	10.92	14.00
1987	10.76	11.11	14.00
1988	10.96	11.30	14.00
1989	11.06	11.50	13.50
1990	11.16	11.50	13.50
1991	11.12	11.50	13.50
1992	11.28	11.50	13.50
1993	11.45	11.50	13.50
Totals	109.61	110.91	137.50

* Excluding depreciation.

** Includes expenditures required for compliance with OSHA as well as state and local codes.

The following describes the results of our analysis of the net liquidation value of the fixed facilities and equipment of The Alaska Railroad. These results are provided in two options:

Option No. 1----------$13,925,000
(does not include any scrap track materials)

Option No. 2----------$11.639,000
(includes all metallic scrap track materials)

INVENTORY AND CONDITION ASSESSMENT

Rail

Track materials comprise the major element of the fixed facility inventory, of which the biggest and most valuable item is the 115 lb. RE rail. Most of this rail was rolled by Colorado Fuel and Iron Company in the early 1950's and laid during the same period. Although much of this rail has now been in track for over thirty years, wear, except on the sharper curves, has not been appreciable due to the low tonnages handled. See Traffic Density Charts, Appendix II, Exhibit 41. A sampling of rail head wear measurements were taken on both heavy and light tonnage lines which carried 7.90 and 2.60 million gross tons respectively in 1982. These measurements indicate relatively light wear except on the sharper curves where flange wear is appreciable. See Appendix I. Exhibit 1.

The detected defective rail history is relatively good and presents no problem. Prior to 1978 the Alaska Railroad operated rail defect detector equipment over its lines once every five years, but since that time they have been operated annually except for 1978 when two inspections were made and 1979 when none was conducted. During the five-year period from 1978 through 1982, these inspections detected a total of 147 115 lb. rail defects which includes 23 defects caused by outside sources, i.e., engine burn fractures, defective welds and broken bases.

See Appendix I, Exhibit 2. For this period an average of 5.17 defective rails per year were detected per 100 miles of main track, laid with 115 lb. rail, including the Whittier subdivision. This history does not adversely affect the suitability of this rail in its present service or for relying on light tonnage tracks.

On-the-ground inspections revealed that, except for rail laid on curves of four degrees or more, the main line 115 lb. rail is in good condition with very little bending at the joints. See Appendix II, Track Pictures. Some chipping of the rail head running surface at the joints was observed which can be corrected by welding for its present usage or by cropping1/ for relayer use. The railroad is turning and renewing rail on curves as required. Much of this worn reclaimed rail is then relaid in yard, industrial and storage tracks.

This 115 lb. rail laid on the main line and the Whittier Subdivision is in such condition that, with the projected program, it will adequately carry present and projected traffic levels with spot renewals on curves and replacement of defective rails as they occur. However, some of this rail will be removed from the main line in the next ten years in order to replace light rail in yard and siding tracks. Most of this 115 lb. rail

---

1/ Cropping a rail means sawing off approximately 18 inches on each end which eliminates the worn joint area.

is of such quality that, if it were to be removed, it could be cropped, welded into long strings and relaid in light tonnage main tracks, branch lines, sidings or yard tracks.

The inventory of rail was developed by using the track chart, the timetable, yard valuation maps, actual lengths of track and quantities of rail by section all furnished by The Alaska Railroad. Since the lengths of all tracks other than the main were provided from clearance point to clearance point or end, a factor was applied to account for the rail used on the turn-out side to the clearance point. See Appendix I, Exhibit 3. Half of this turnout rail is considered scrap to allow for worn stock rails and curved lead rails. Also, most of the rail on curves of four degrees or more is considered not reusable, and, therefore, is classified as scrap. Those scrap rail assumptions for turnouts and curves including spirals should adequately compensate for the occasional other rails with engine burns or other defects disqualifying them for main or branch line use.

The calculated length of all rail presently in track is 658.0 track miles. Inasmuch as there is no market for large quantities of rail sections of 90 lbs. or less, all rail other than the 115 lb. is considered scrap which amounts to a total of about 15,900 net tons including an estimated 238 in storage on the ground. There is approximately 14,800 net tons of 115 lb. scrap rail which is about 14.1 percent of the total of this rail presently in track. In addition, there is an estimated 435 tons of

reusable, hereafter referred to as "fit," rail in storage. The method used for calculating tonnage figures is shown in Appendix I, Exhibit 4. The fit 115 lb. rail in track and in storage amounts to approximately 90,400 net tons. A breakdown for all rail by section and track is shown in the Appendix I, Exhibit 5.

In addition, there is a small quantity of new 115 lb. rail stored on the ground principally at Anchorage. Fit and scrap material in storage was estimated by the Railroad which provided the quantities of stored fit and scrap rail. As of February 23, 1983 there was $701,699 worth of new rail, other track material (OTM) and turnout material on hand. See Appendix II, Exhibit 42. For the purpose of this study, it is assumed that this material would, in general, be used prior to any hypothetical date of cessation of service and that scrap sales would continue so that, at that date, new material would be exhausted and scrap and fit materials on hand would be at approximately the same level as today. This same assumption is made regarding all other new maintenance of way materials now in stock.

In the latter part of 1982, the Alaska Railroad began buying and using a chrome alloy (Chroma) rail in 78-foot lengths to reduce curve wear and rail joint maintenance. At this time, the quantity of this rail, which has all been used to replace worn out curve rail, is relatively small and is, therefore, not singled out as an individual inventory item. Depending upon wear it will either be fit or scrap and fall into its proper category as described above.

Other Track Material (OTM)

The OTM used with all rail sections is generally in good condition for its present usage. However, most of it is obsolete or of too small a size and weight to be considered reusable by another railroad. Therefore, for the purpose of this inventory, with several exceptions, most of this material is classified as scrap.

Several years ago, The Alaska Railroad changed their standards for both 115 lb. tieplates and splice bars. The new tieplates are 13 inch, double shoulder punched for both rail and hold-down or anchor spikes. These tieplates replace 11 inch double shoulder plates punched only for four rail holding spikes. Thirty-six inch, six hole splice bars replace 24 inch, four hole bars. The track between Portage and Girdwood, 10.3 miles, is equipped with the new bars and plates. Approximately another 2,000 pairs of these bars and 100,000 each of the 13 inch tieplates are scattered over the main line.

Splice bars on this railroad are well maintained including periodic oiling to prevent corrosion. Most of the 24 inch bars and all of the new 36 inch bars are in good condition, but none have any value as reusable. Any railroad buyers of the 115 lb. rail would weld it into long continuous strings eliminating

the need for the conventional splice bars. This railroad does not presently have in place any continuous welded rail except for short strings through grade crossing.

No major railroad would buy and spend the money to install small 11 inch plates including those showing any interest in the 115 lb. rail. However, the 13 inch plate punched for anchor spikes should be marketable and they are, therefore, considered as fit for resale and reuse. There are relatively few of these, numbering about 159,000. The Seattle, Washington, price of this fit material is $2.80 each2/ or $286 per net ton.

Although the other 115 lb. OTM including rail anchors, spikes, bolts and nutlocks is in adequate condition for its present use, none has a resale value for reuse. Rail anchors are not as effective after the first application and not worth a reasonable price plus the costs of distributing and applying. Bolts and nutlocks are not required for the same reason that splice bars have no market as described above. Spikes once driven and then pulled are usually bent making them undesirable for further use. See the Appendix I, Exhibit 6 for additional information on the inventory of other track material (OTM).

2/ Mr. Michael Cody, a consultant retained by USRA, furnished all values and prices of fit and scrap track materials in his report to USRA dated September 1, 1983.

Other Track Material (OTM)

The OTM used with all rail sections is generally in good condition for its present usage. However, most of it is obsolete or of too small a size and weight to be considered reusable by another railroad. Therefore, for the purpose of this inventory, with several exceptions, most of this material is classified as scrap.

Several years ago, The Alaska Railroad changed their standards for both 115 lb. tieplates and splice bars. The new tieplates are 13 inch, double shoulder punched for both rail and hold-down or anchor spikes. These tieplates replace 11 inch double shoulder plates punched only for four rail holding spikes. Thirty-six inch, six hole splice bars replace 24 inch, four hole bars. The track between Portage and Girdwood, 10.3 miles, is equipped with the new bars and plates. Approximately another 2,000 pairs of these bars and 100,000 each of the 13 inch tieplates are scattered over the main line.

Splice bars on this railroad are well maintained including periodic oiling to prevent corrosion. Most of the 24 inch bars and all of the new 36 inch bars are in good condition, but none have any value as reusable. Any railroad buyers of the 115 lb. rail would weld it into long continuous strings eliminating

the need for the conventional splice bars. This railroad does not presently have in place any continuous welded rail except for short strings through grade crossing.

No major railroad would buy and spend the money to install small 11 inch plates including those showing any interest in the 115 lb. rail. However, the 13 inch plate punched for anchor spikes should be marketable and they are, therefore, considered as fit for resale and reuse. There are relatively few of these, numbering about 159,000. The Seattle, Washington, price of this fit material is $2.80 each2/ or $286 per net ton.

Although the other 115 lb. OTM including rail anchors, spikes, bolts and nutlocks is in adequate condition for its present use, none has a resale value for reuse. Rail anchors are not as effective after the first application and not worth a reasonable price plus the costs of distributing and applying. Bolts and nutlocks are not required for the same reason that splice bars have no market as described above. Spikes once driven and then pulled are usually bent making them undesirable for further use. See the Appendix I, Exhibit 6 for additional information on the inventory of other track material (OTM).

2/ Mr. Michael Cody, a consultant retained by USRA, furnished all values and prices of fit and scrap track materials in his report to USRA dated September 1, 1983.

Turnouts

The Alaska Railroad utilizes three different size turnouts in basically two rail sections. They are No. 7's and No. 9's in the 70 lb. ASCE and 115 lb. RE sections (one No. 7, 75 lb. ASCE) and 115 lb. No. 11's used in the main tracks primarily at passing sidings. Sample on-the-ground inspections revealed the 115 lb. turnout components; switches, frogs, guard rails, etc., to be in good condition although some worn and chipped switch points, a few worn stock rails and slightly worn frogs were noted. The 70 lb. turnouts were, generally, in fair condition with a few found to have well worn switch points, loose braces and other worn components.

It is estimated that 85 percent of the 115 lb. No. 11 turnouts and 80 percent of 115 lb. No. 9's in the main track are fit for reuse, and approximately 75 percent of the 115 lb. No. 9's in use in other than in main tracks are considered reusable. For the purpose of classifying fit turnout material, this report considers only turnout packages.3/ No tabulation has been made of individual switch points, frogs, guard rails, plates or other turnout components. These turnout packages for 115 lb. rail are presently being purchased new by the railroad.

3/ "Turnout packages" include switch points, rods, plates, braces, heel blocks, frogs, frog plates, guard rails and all bolts associated with complete switches, frogs and guard rails if needed. They do not include any rail including the stock rails, regular tieplates, rail splice bars, track bolts, track nutlocks, anchors, switch stands or any switch timber.

Similar to the handling of 70 lb. rail and OTM all reclaimed 70 lb. turnout material is considered scrap and so tabulated in tons. Although approximately 77 No. 7-115 lb. turnout packages are in good condition and fit for reuse, there would be no buyer. Most railroads prefer No. 8 turnouts as a minimum size and use the shorter, sharper turnouts only for special unique situations. The Alaska Railroad is now replacing worn out No. 7's with No. 9's whenever possible and also avoiding the use of No. 7's in new construction. There are a total of 208 No. 9 and 93 No. 11 115 lb. turnout packages considered saleable for reuse. See Appendix I, Exhibit 6.

Crossties and Switch Timber

There are approximately 2,092,000 crossties and approximately 690,000 lineal feet of switch timber in track. The ties are soft wood, for the most part hemlock and fir. All ties are creosote treated and those installed in recent years and at the present time measure 7 in. x 9 in. x 8 ft. 6 in. Both ties and switch timber are generally in good condition.

These ties and timber would have little value in the alternative use scenario. It is, therefore, assumed that they would be left in place. There may be opportunities to sell a modest number of these ties and timber on a "where is-as is" basis after track removal, but the net proceeds would be negligible. Other railroads would not spend the money to buy and install used softwood ties.

Ballast

For many years the ballast used on this railroad was pit run gravel with the grading ranging from sand to river stones as large as a man's head. In recent years the railroad has been crushing this gravel to a maximum size of about two to two and one-half inches. This has made a considerable improvement in track conditions and expedited surfacing and lining with modern track maintenance equipment. Although in many areas, but not all, this ballast is clean and dry, any reuse value would be difficult to estimate and would be less than the cost of salvaging.

Bridges, Trestles and Culverts

There are 76 undergrade steel bridges of various types, all in good condition. See Appendix II, Bridge Pictures. These bridges are listed by location and type in Appendix II, Exhibit 43. Sample inspections were made of 17 of these structures. Although many have not been painted for some time, there was no evidence of oxidation or corrosion. Abutments and piers appeared to be in good condition with little or no spawling or undercutting. Most of these bridges have open decks. A considerable amount of bridge timber has been renewed in recent years so that the decks, in general, are in good condition. The

only component of these structures with any value is the steel as scrap. However, the cost of dismantling these bridges and loading and transporting the steel to a market would far exceed the sale price.

There are 129 wooden trestles on this railroad as of February 28, 1983; a schedule of these trestles is shown in Appendix II, Exhibit 44. Sample inspections were made of 34 of these structures. All were found to be in good condition. The Chief Engineer stated that all of the other trestles were in a similar condition. All decks, except three with ballast, are of the open type. The bridge timber on the open deck trestles, as on the steel bridges, is in good condition. Two of the ballast deck trestles were inspected and no exception could be taken. The structure condition is good, the ballast clean and dry. The track condition is good including rail, ties, surface and line. All timber including piling, caps, cross bracing, stringers and decking is treated and in good condition. Even though this timber is in good condition, its market value would be far less than the cost of dismantling.

A listing of all culverts by location, type, size and length, dated July 31, 1983, indicates a total of 1,506 scattered over the entire railroad. There are at least twelve different types including open top wooden track boxes, built with logs, built with lumber, corrugated metal pipe, concrete pipe, and multi-plate. Sizes vary from concrete and metal pipe 12 inches in

diameter to twin ten foot diameter multiplate with lengths varying from eight to 216 feet. A summary of this listing can be found in Appendix II, Exhibit 45.

Sample inspections of two multiplate and 12 corrugated metal pipe culverts were made and these facilities were found to be in good condition, open at both ends with adequate length and grade suitable for the physical characteristics of the location. There were 49 open top track boxes installed between 1949 and 1968 of which most were built in 1953 and 1958. The railroad has an ongoing program to replace these boxes with below grade pipe culverts, and by the end of this 1983 fiscal year there will be a significant reduction in their number. There are four culverts in service constructed of logs between 1935 and 1938 which will probably require replacement within the next few years. Also, of importance when considering maintenance and capital expenditures are the 226 culverts constructed with lumber or timber between 1937 and 1967.

Tunnels

There are eleven tunnels on the railroad ranging in length from 136 feet to two and one-half miles. See Appendix II, Exhibit 46. None of these tunnels is lined. The seven tunnels between Seward and Portage are in relatively poor condition. The portals are poor to fair and the tunnels are seeping with water and have poor drainage causing serious problems. In the winter it is a seven day a week job to control the ice using bulldozers

to keep these tunnels passable for train movement. Two tunnels, one about 3/4 mile and the other one about 2-1/2 miles long, are located between Portage and Whitter. Of the 11 tunnels, these appear to be in the best condition, although they are unlined and do seep some water. Track surface and alignment appeared good and the drainage was adequate. In both cases the portals are well built and in good condition. The other two tunnels located in the vicinity of Healy appeared to be in better condition than the Seward to Portage tunnels insofar as water seepage and drainage is concerned. Track surface and alignment are adequate for the maximum authorized speed.

A wooden snow shed 225 feet long is located just south of tunnel No. 11.35. This shed is of timber construction and is in relatively poor condition. Drainage, water and track conditions within the shed are deplorable. At the time of our inspection, there was one location in this shed where 10 inch shims were in place between the ties and the rails. See Appendix II, Shim Pictures. A large diameter metal pipe is programmed to replace this shed, and also the former 460 foot snow shed north of this tunnel which was removed in the Spring of 1983.

Buildings

See Appendix II, Exhibit 47 for a list of the buildings now in use by, or on the operating property of, the railroad. Sample inspections of these buildings indicate that most of them are in relatively good condition and well maintained. There are a few buildings requiring exterior refinishing or painting and some roof work. However, there appears to be a surplus of building space. For example, warehouse #4 in Anchorage, formerly leased out, is practically vacant. A truck storage shed was found to be empty and a B. and B. Butler building was loaded with military surplus, electrical and mechanical equipment. Building consolidations could result in savings in maintenance and capital spending.

A $2,300,000 project is presently underway to change heating methods and conserve energy in the major buildings including shop facilities in Anchorage. This project will result in an improved environment within the buildings and a return on the investment of 10 percent.

In general these buildings compare well with similar railroad structures in the "lower 48."

Marine Facilities

A description and listing of the major marine facilities is in Appendix II, Exhibit 48. With the exception of rail barge slip #1 and the transit shed at Whittier, these facilities

appear, from a overall general inspection, to be in fair condition. The #1 slip at Whittier is presently out of service due to electrolysis of the steel piling in the foundations under the towers.

Signals

Except for three dragging equipment detector (DED) signals, the only signals on this railroad are for highway grade crossing protection. However, there are only four sets of these automatic flashing light crossing signals owned and maintained by the railroad. Two sets are over 20 years old and the other two were installed during the past six years. There are a number of other crossing signal sets owned by the State, City of Anchorage or armed services for which the railroad is reimbursed for all maintenance costs.

Communications

The Alaska Railroad utilizes a modern micro-wave communication system with the exception of two short segments, i.e., the Whittier Subdivision and on the main line between Moose Pass and Portage where communications are handled through open wire and seven miles of underground cable. The original micro-wave system was installed between Portage and Anchorage in 1957 and 1958, and is being rebuilt this year using all new modern solid state components replacing vacuum tube equipment at

a cost of $200,000. See Appendix II, Exhibit 49 for a more detailed inventory of this communication equipment.

Transmitter-receiver radio equipment is installed in the following types of equipment: locomotives, rail-highway vehicles, track mounted maintenance of way machinery, motor cars, and certain automobiles assigned to the Transportation, M. of W., M. P. & E., Administrative and Security Departments. In addition, there are 120 portable handheld and 30 portable lunch box radios. A list of this equipment is also shown in Appendix II, Exhibit 49. All of these transmitter-receiver sets are in fair to good condition, many of which are relatively new. The entire system operates on FRA assigned frequencies.

The railroad is presently dismantling the open wire pole lines replaced by the micro-wave system. Most of this work should be completed by the end of the next year.

Locomotives

The Alaska Railroad's locomotive fleet currently consists of sixty-two (62) diesel-electric locomotives, summarized as follows:

Alaska Railroad Locomotive Fleet

Quantity	Type	Horsepower
13	F-7's	1500
10	GP-7's	1800
3	GP-35's	2500
2	E-8's	2400
2	MRS-1700's	1600
11	RSD-4's	1600
21	GP-40's	3000
62		

Source: The Alaska Railroad

Eight (8) of these locomotives are currently out-of-service due to various major repair needs.

The F-7's, GP-7's, GP-35's and RSD-4's are generally in poor condition, needing substantial rehabilitation and repair of electrical wiring, rotating equipment and engines.

Sixteen (16) of the GP-40's are in fair to good condition, needing some engine work and basic truck overhaul. Five (5) of the GP-40's, the GP-40-2's, received by The Alaska Railroad in May, 1983, are in very good condition.

The maintenance history of the E-8's and MRS-1700's is unknown.

The Alaska Railroad will take delivery of four (4) new GP-49 diesel-electric locomotives in October, 1983.

The locomotive fleet is detailed in the Appendix I, Exhibit 7, by number, manufacturer, class/type, date built/rebuilt, date received by the Alaska Railroad, original owner, current condition and comments. The information contained in this Exhibit was compiled from railroad data, interviews with the railroad's equipment managers, and by actual inspection of available units.

The locomotive fleet, though able to handle the traffic, will require substantial planned maintenance and rehabilitation to maintain current and meet increased traffic requirements. Tradeoffs of cost to repair and rehabilitate many of the Railroad's locomotives will likely result in "buy new" decisions. The following provides some detail on locomotive condition and required repair/overhaul and rehabilitation:

The 1500 Series, F-7 locomotives which were built between 1949 and 1953, were purchased new from General Motors Corporation, Electro-Motive Division. Miscellaneous upgrading has been done on these units over the years. The general condition of these locomotives is poor as they are in need of rewiring, truck overhaul, electrical rotating equipment rehabilitation and engine rebuild.

The GP-7, yard and freight service locomotives, were built in 1951 and acquired from the Army in 1960. These locomotives were rebuilt in 1975, 1976 and 1977, and are currently in need of truck, intermediate engine, and electrical rotating equipment overhaul.

The 2500 series, GP-35 locomotives, were purchased new from General Motors, EMD Division, in 1963 and 1964 and have had no major repairs since new. They are currently in need of intermediate engine, truck and electrical rotating equipment overhaul.

The E-8 passenger service locomotives were purchased from AMTRAK in 1981, and they are currently being upgraded for operation on the Alaska Railroad.

The MRS-1700 work train service locomotives were built in 1952 and acquired from the Navy in 1977. The maintenance history of these locomotives is unknown.

The RSD-4 series, yard switcher locomotives which were built in 1953 by General Electric/ALCO and acquired from the Army in 1974 and 1975, have not had major repair work done on them since they were new. Five (5) of these units are currently stored with bad order engines and the remaining units are in poor condition requiring considerable repair/rehabilitation.

The GP-40 freight service locomotives were bought new from General Motors in 1964, 1975, 1976 and 1978 and are generally in fair condition. Five (5) of these will need intermediate engine overhaul and all units will require truck overhaul in the near future.

The GP-40-2, freight service locomotives purchased from Chrome Crankshaft (out of a Conrail lease), are in very good condition.

Photographs of some typical Alaska Railroad owned locomotives are included in Appendix II.

Passenger Equipment

The Alaska Railroad passenger fleet currently consists of 52 cars, 46 of which are owned by the Railroad and six of which are leased from AMTRAK.

The Railroad owned passenger equipment is generally in fair condition with the exception of the recently rehabilitated all-electric cars which are in like new condition. The all-electric cars include six chair cars, one lunch counter/cafe lounge, one dome car and two baggage cars. The average age of the passenger car fleet is 29 years.

The passenger car fleet is detailed in Appendix I, Exhibit 8, by manufacturer, class/type, date built/remanufactured, date received by the Railroad, original owner, current condition, and comments/repairs needed. The information detailed in this Exhibit was obtained from The Alaska Railroad data, the railroad's equipment managers and by visual inspection of available equipment.

Photographs of typical Railroad owned passenger cars are included in Appendix II.

Freight Cars

The Alaska Railroad currently owns 1,642 freight cars of the following types:

Quantity	Type
386	Gondolas
320	Hoppers
315	Flats
131	Boxes
123	Tanks
106	Ballast
76	Air Dump
56	Insulated Box
27	Hy-Cube Box
23	URB Flats
21	Bulkhead Flats
19	Covered Hoppers
15	Reefers
14	Shuttle Flats
10	TOFC Flats
1,642	

Source: The Alaska Railroad

Of the 1,642 freight cars owned by the Alaska Railroad, 197 cars are presently prohibited in interchange due to age. By the end of 1983, a total of 752 cars will be prohibited in interchange due to being over forty years old.

Thirty-six hopper cars and 51 tank cars are operating in restricted service, exclusively on the Alaska Railroad, until December 31, 1983 under a waiver granted by the Federal Railroad Administration.

There are 114 cars in service that are over 50 years old, 87 operating under FRA waiver and 27 in maintenance of way service.

The average age of The Alaska Railroad owned freight car fleet is approximately 31 years.

The freight car fleet is detailed in Appendix I, Exhibit 9, by type, date built/age, capacity, quantity, current condition and comments/repairs needed. This information was obtained from The Alaska Railroad supplied status reports, interviews with the railroad's equipment managers and by on-site inspections of available equipment.

Photographs of typical Railroad owned freight cars are included in Appendix II.

Highway Vehicles-Owned and Leased

The Alaska Railroad owns a fleet of 33 highway vehicles, 24 of which are equipped with hy-rail gear, and leases 106 highway vehicles from the General Services Administration. A complete listing of the leased vehicles, including lease rates, is detailed in Appendix II, Exhibit 51. The highway vehicle fleet is generally in good condition.

A schedule of Railroad owned highway vehicles, including vehicle condition, is contained in Appendix I, Exhibit 10.

A photograph of a typical hy-rail equipped highway vehicle is included in Appendix II.

Snow Plows, Cranes and Miscellaneous Equipment

The Alaska Railroad currently maintains 45 pieces of miscellaneous equipment including three snow plows, 11 locomotive cranes and ditchers, three spreaders, 27 cabooses and a business car.

The snow plows, cranes and miscellaneous equipment condition is described in Appendix I, Exhibit 11.

The three snow plows are in fair condition, six of the locomotive cranes/ditchers are in good condition and five are in poor condition. One of the spreaders is in poor condition and two are in good condition.

The general condition of the caboose fleet is good as they have been recently refurbished.

The Alaska Railroad business car, "Denali", was recently rebuilt and is in good condition.

Photographs of representative spreaders, locomotive cranes, cabooses and the business car are included in Appendix II.

Maintenance of Way Equipment

The maintenance of way equipment is summarized in Exhibit 12 of Appendix I by type, quantity, current condition and comments and is detailed in Appendix II, Exhibit 50. This information was supplied by The Alaska Railroad and was supplemented and updated by the railroad's equipment managers and by actual inspection of available equipment.

The general assessment of the maintenance of way equipment is fair to good and it is well maintained.

Typical photographs of snow removal equipment and maintenance of way cranes are included in Appendix II.

Shop Equipment

The Alaska Railroad shop equipment is detailed in Appendix I, Exhibit 13, by equipment description, quantity, capacity, location and condition.

The shop equipment, with the exception of overhead cranes and some speciality items such as drop tables, is generally in fair to good condition.

The listing of equipment and its general condition was provided by The Alaska Railroad and has been supplemented by discussions with the railroad's equipment managers.

Photographs of typical shop equipment are included in Appendix II.

Fixed Facilities Assessment

The condition of track components, bridges, tunnels, buildings, marine facilities, signals and communication equipment has been briefly described, but it is appropriate to elaborate on track conditions.

Samples of all types of track, main line, branch line, sidings, yard, shop, storage and industrial were inspected by hy-rail vehicle and/or on foot. A walking inspection was made of the full length of the Anchorage yard with spot inspections of most of the tracks and all ladder tracks. Spot walking inspections usually consisted of a minimum of 20 rail lengths. In addition, an overall inspection was made of the main line in both directions between Anchorage and Fairbanks from a special train.

These inspections indicated the rail to be in relatively good condition for the use intended, i.e., main track, siding, yard, etc. Traffic on the sharper curves on the main line is causing considerable head wear. However, worn rail is turned4/ or renewed well before the occurrence of any problems. In fact, curve worn rail is turned or renewed well before it is worn to the extent

4/ Turning means reversing a rail in the same location so that the gauge or inside becomes the field or outside, and the unworn field side becomes the gauge side.

that eastern United States heavy tonnage railroads would take similar action. When it is decided to relay this rail, it is renewed with a chrome alloy (Chroma) rail in 78 foot lengths.

On siding and yard tracks the light 70 lb. ASCE rail is generally in fair condition. Because no rail anchors are used on this rail, it is running (moving longitudinally) and, in certain instances, skewing ties at joints. A few poor conditions were noted on the auxiliary tracks at Birchwood and in Anchorage yard, involving defective and skewed ties together with poor surface and line. But, generally, surface is fair with some bent joints in certain locations, and for the most part this is not a problem. This rail, undoubtedly, would not hold up under heavy tonnage conditions. It is being replaced with second hand (S.H.) or fit 115 lb. rail as it becomes available from main line renewals.

The 90 lb. rail is in two sections, ASCE and RA of which there is a total of 17.8 track miles. Approximately 37 percent of this track was laid without tieplates. Stretches laid with tieplates and rail anchors, i.e., the Fairbanks Airport Spur, are in good line and surface. The 75 lb. ASCE rail laid only on the Eielson Branch is in fair condition. Light rail, 65 and 70 lb., is laid on the tracks in the out-of-service Valdez facility and not a factor.

For the past six years they have averaged about 20,200. See Appendix I, Exhibit 15. For this year, 40,000 were originally programed, but this number has been reduced to a projected 25,000. At present, 50,000 are programmed for 1984. Sample spot track inspections seem to indicate that a level of tie renewals somewhat more than presently projected for 1983, but less that programmed for 1984 should be adequate for the next five years. Beyond that, renewals will probably have to be increased significantly.

The Alaska Railroad has been pursuing an ambitious reballasting and surfacing program with excellent results. With the exception of certain locations, the greater portion of this railroad, including branch lines, sidings and yards, is well surfaced and lined on clean dry ballast. The crushed gravel now in use is a vast improvement over the pit run gravel. During the past two years, an average of about 77,000 cubic yards of ballast were dumped and 180 miles of track surfaced. This means that about 55 percent of the actual total mileage on the railroad was surfaced in this two year period.

Because of many factors peculiar to the Alaskan climate and the primitive methods of sub-grade construction (by today's standards) used on the original lines, there are significant miles of track that must be surfaced every year after the surface frost is gone to remove shims and long stretches of slow orders. It appears that the level of this type of work performed during the past two years is adequate. However, an increase in

The railroad projects the renewal of 31,200 feet of rail in 1983 and is presently programming 52,800 feet for 1984. Considering present and projected traffic volumes together with the present relatively good rail conditions, the Railroad's 1983 and 1984 levels appear adequate. However, in future years, new rail quantities should increase to account for increased curve wear and the need to use some main line rail to replace worn light rail in yards and sidings.5/

Even though the crossties are softwood with many of them now in track approaching or over 30 years, they are in very good condition. A few inspections revealed as few as one defective tie per 20 rail lengths (780 feet). There was no instance found where the ties did not meet the FRA Class 3 track standards on the main line or Class 2 on sidings and in yards with the few exceptions at Birchwood and Anchorage yard. Some replaced ties were inspected of which many did not appear defective as defined in the FRA Track Safety Standards. It is apparent that the tie renewals during the past five years have been adequate to properly maintain this railroad.

The railroad estimates average tie life at 37 years so that normal tie renewals should average approximately 56,000 annually.

5/ The Railroad developed a "Normal Capital Program" (see Appendix 1, Exhibit 14) covering all desired projects if cash flow and traffic warranted. That program would provide for 20 miles of new rail per year. However, future needs may not necessarily increase to the levels projected in that "Normal Capital Program".

ballast is programmed for this year and next, with a moderate increase in miles of surfacing. Regardless of depth, all ballast is charged to capital. The following table provides a comparison.

Actual and Projected Ballast and Surfacing
1981 Through 1984

	Actual Average 1981 & 1982	1983	Inc. vs 81 & 82		1984	Inc. vs 81 & 82	
			Actual	%		Actual	%
Ballast-Cu. Yds.	77,000	120,000	43,000	56	160,000	83,000	10
Surfacing-Trk. Mi.	180	200	20	11	200	20	1

Source: The Alaska Railroad

There are many other conditions causing problems with expensive solutions. Maintaining banks to hold the subgrade along the Turnagain Arm against the tides and along rivers against the current requires continual dumping of rip-rap or armor rock. In 1981, approximately 3,800 cubic yards of this material was placed followed by 2,000 in 1982. This work continues this year and must continue in future years to keep the line in service.

Since frost heaves during the severe winters are a major problem, continual shimming is required to keep operating even under slow order conditions. Special track fastenings to permit shims up to 10 inches thick were found in the snow shed at mile post 11.3, and at mile post 151.3, concrete ties have been

installed with threaded fastenings permitting the use of "slotted" steel shims up to six inches thick. See Appendix II, Shim Pictures. At this location both sides of a short stable stretch heave every winter requiring the shimming of the rails across the stable or "low spot." Then, as the frost thaws the track must be closely watched in order to remove these shims at the right time to avoid unsafe surface or cross level conditions. After the shims are removed surfacing and lining is usually required to restore the track to a normal speed operation. These are just two examples of an expensive frost and shimming problem on this railroad. There are 27 buildings each containing 96 sq. ft. of which the only purpose is to store shims, and they are referred to as shim sheds.

Some stretches of the main line are adjacent to hills on which there are mud slides. This mud pushes up against the track and in instances over it. See Appendix II, Slide Pictures. Drainage ditches are blocked and in some cases the track is moved from its alignment. All this results in considerable expense to move this mud out either to the opposite side of the track or to another location via dump cars. At some locations, the railroad has actually driven rail piling at the toe of the slope of the hill or mountain to reduce the pressure of these slides against the track in an attempt to preserve the alignment.

The timetable lists 35 slide areas covering a total 39.65 miles. Of these, 23 are for snow, 11 for mud and dirt and 25 for rock. (This totals more than 35 because in some slide areas more than one type of material is involved.) All types of slides can, and some do, cause disruption to train operations and considerable cost to remove the material and restore the track to service.

Conditions on the line between Seward and Portage, specifically between mile posts 40 and 54, result in severe operating problems and high maintenance expense. This stretch of track winds its way through and over the mountains around curve after curve of up to 14 degrees and up and down steep grades, including the ruling grades, southbound, 3.0 percent and northbound, 2.0 percent. Six of the poorest unlined rock tunnels with continual seeping and dripping water with poor drainage further compound the problem. In the winter large icicles as big as stalactites form and ice fills the track to over the rail. All of this must be continually removed to keep trains operating.

Between the tunnels there are rock cliffs or one side with attendant winter snow slides and falling rock at any time, with 5.7 miles of this stretch designated as "Slide Area." A steel deck truss bridge is located immediately south of the south portal of the first tunnel, another steel bridge between the first and second, and a third between the fourth and fifth tunnel. During the winter it is a seven day per week job, using

heavy equipment, to keep the track through this area open for rail traffic.

Another critical stretch of track is located in the Healy Canyon between mile posts 348.5 and 357. In this area the railroad is built on the side of the mountain along the west side of the twisting Nenana River. This stretch of track is practically all curves up to 10 degrees. The mountain rises sharply along the west side of the track, and the sub-grade on the east side drops steeply to the river over 100 feet below. Although there are rock slides on the mountain, the biggest problem is the slipping or subsidence of the sub-grade into the river. Piling has been driven along the east side of the track in many areas in an effort to stabilize the track. See Appendix II, Healy Canyon Pictures. As a result of subsidence and continual changes in alignment, no record of the degree of some curves in this area is recorded on the track chart.

Maintaining a railroad under these conditions is a most expensive undertaking. Ballast and fill materials must be repeatedly dumped, and the track surfaced and lined even for a 20 mile per hour maximum speed for passenger trains and 15 for freight. But even more critical is the fact that under the right conditions with a large volume of water draining off the mountain into the sub-grade, a slip might occur sending a stretch of the track structure down into the Nenana River. Railroad personnel are continually on the alert for such an occurrence and are, of

course, protecting the movement of all trains. If the railroad is to continue to increase its traffic and train movements and operate a reliable service, reconstruction or relocation of the track structure through this area appears to be a necessity.

Severe Alaskan winters bring heavy accumulations of snow and ice over the entire railroad resulting in abnormally high costs, considering winter traffic volumes, for removal to keep the railroad operating. The following table shows these costs for the past five years as reported by the railroad.

Costs - Snow and Ice Removal*
FY 1978 to FY 1983

1983	$936,789	(to May)
1982	941,130	
1981	703,140	
1980	657,925	
1979	660,919	

* The costs for 1981 through 1983 were furnished by the Engineering Department. Those for 1979 and 1980 are from the Financial Statements, Maintenance of Way Operating Expense, captioned "Removing Snow, Ice and Sand and Car Cleaning." (Maintenance of Way performs no car cleaning.)

Equipment Assessment

The general condition of locomotives, passenger cars, freight cars, highway vehicles, snow plows, cranes and miscellaneous equipment, maintenance of way and shop equipment has been described in the Inventory and Condition Assessment section of this report. However, for purposes of the continued operations

analysis, the condition assessment is looked at from the point of view of the service life and maintainability of the equipment to provide the required service.

To establish the maintainability of equipment, we inspected the Railroad's shops and shop facilities and had discussions with The Alaska Railroad personnel responsible for equipment maintenance.

These inspections and interviews indicated that the rolling stock has generally been maintained on an "as needed repair" basis rather than on a programmed rehabilitation/overhaul basis. However, the railroad is now establishing certain programmed maintenance, such as F-7, GP-7 and GP-40 locomotive rehabilitation and shop overhead crane overhaul.

The passenger car fleet is in fair condition and maintained to meet service requirements. Major overhaul/rehabilitation of passenger equipment has not been done on the Railroad. The all-electric passenger train overhaul/conversion was contracted to General Electric's overhaul/rehabilitation facility in Hornell, New York.

The highway vehicle fleet, including the vehicles equipped with hy-rail gear, is in good condition. However, should the ownership of The Alaska Railroad be transferred from the Federal Government, the leased vehicle fleet may no longer be available from the General Services Administration. If this fleet were no

longer available to the railroad, these vehicles could be leased from other sources at similar costs. For the detailed listing of these leased vehicles, see Appendix II, Exhibit 51.

The freight car fleet has been maintained as necessary without particular consideration for preventive/programmed maintenance.

The large number of cars prohibited in interchange, a total of 752 cars by the end of 1983, and the average age of the fleet, approximately 31 years, point out the need for The Alaska Railroad to invest in new freight cars to meet current traffic needs and future projections, even though freight car requirements for the projected export coal market will be met by the shipper.

The snow plows, cranes and miscellaneous equipment are in fair to good condition. Some overhaul work will be required on the locomotive cranes and ditchers to support increased traffic projections. The caboose fleet has recently been overhauled and is in good shape.

The heavy equipment shop, which maintains most of the Maintenance of Way equipment, is large enough and well equipped to handle the maintenance and repair of the railroad's maintenance of way equipment. Planned maintenance programs such as engine and crawler track replacements are in place and effective. Major rehabilitation/remanufacturing plans such as

repowering forklifts and graders are also in place. The number one problem of the heavy equipment shop is obtaining parts.

The shop overhead cranes are in need of general repair, primarily because they are "worn out," and crane rails need to be aligned.

The drop pit is in very bad shape, needing general repairs, and a new truck assembly.

The locomotive machine shop equipment, consisting primarily of military surplus, is generally in fair condition. The boilermaker shop equipment is about 50 percent good and 50 percent poor. The blacksmith shop is an antique, and the carpenter shop is good. The wheel shop machines are generally in fair to good shape, with a good boring mill, which is currently out of service awaiting parts from Germany. The equipment in the tin shop is old, but in fairly good condition.

The railroad has just begun a planned shop equipment maintenance program (previously equipment was maintained only if it needed immediate repair), beginning with a budget allotment for the rehabilitation of overhead cranes and the drop pit.

The heavy maintenance and running repair facilities are currently adequate, but crowded.

The diesel repair shop is overcrowded and consideration is being given to extension of the facility to provide space for two additional locomotives.

In general, expenditures for maintenance over the past five (5) years have been adequate to provide the required service. However, to maintain the same level of service, and particularly to meet the demands of the projected increases in traffic, increases in capital expenses for new purchases, programmed maintenance, and increased facility space will be needed.

For each of the major categories of freight traffic, the following table displays an index of how the traffic in each category actually changed between 1978 and 1982 and how the railroad projects traffic to change in the next five years.

Freight Traffic - 1978-87

(Revenue tons)

Fiscal Year	1978	1979	1980	1981	PU=1 1982	1983	1984	1985	1986	1987
Sand, Gravel & Mud	.26	.23	.14	.65	1	1.37	1.37	1.37	1.37	1.37
Coal	.91	.80	.90	1.00	1	.97	.96	1.63	1.82	1.94
Petroleum Prods.	.85	.63	.57	.86	1	1.31	1.34	1.31	1.34	1.41
Mfgrs. & Misc.	.68	.62	.65	.60	1	.81	.87	.99	.79	.83
TOFC/COFC	.81	.72	.75	.92	1	.88	.97	1.05	1.02	1.07
Forestry Prods.	.88	.72	1.41	1.31	1	1.44	1.63	1.93	1.93	2.00
Other	1.21	1.04	1.46	1.06	1	.69	.73	.77	.82	.75

Source: The Alaska Railroad

From these projections, the freight traffic will increase by 37 percent in Sand, Gravel and Mud, 94 percent in Coal, 41 percent in Petroleum Products, and 100 percent in Forestry Products by 1987, while TOFC/COFC, Manufacturers and Miscellaneous will remain fairly constant, and Others will decrease by 24 percent over the 1982 level. The 94 percent increase in coal traffic is The Alaska Railroad's projection of export coal. Locomotives for line haul and freight cars will be provided by the shipper. However, The Alaska Railroad will maintain the locomotives and provide helper locomotives as required.

These increases could probably be met with the current freight car fleet, except hopper cars for the increased coal traffic, if the current fleet were in good condition and available. However, the large number of cars that will be unavailable to the Alaska Railroad by the end of 1983 due to age (prohibited in interchange) will require substantial investment in freight cars over the next five (5) years.

The railroad passenger traffic is projected to increase between 1983 and 1987. This traffic increase will overburden the old and obsolete steam powered portion of the passenger car fleet.

The locomotive fleet, though able to handle the traffic, will require substantial planned maintenance and rehabilitation to maintain current and meet increased traffic requirements. Trade-offs of cost to repair and rehabilitate many of the Railroad's locomotives will likely result in "buy new" decisions.

Operating Expenses-Fixed Facilities

This investigation and study concludes that operating expenditures for Engineering, which includes maintenance of way and communications, should be modestly increased during the next ten years if the railroad is to be maintained at its present levels for present and projected traffic volumes. As a result of a change in certain accounting procedures effective this year, some types of roadway work formerly handled as a capital cost are now charged to operating expenses. It appears that the impact of this change may be somewhat greater than presently forecasted.

Furthermore, in ten years, the rail now in the main track will have been in service for over 40 years, with the lighter rail in the branch lines, auxiliary tracks and yards much older in service years, some rolled in 1915. Obviously annual rail renewals should be increased above present levels during the next ten years, but not necessarily to the 20 miles as contained in the previously mentioned "Normal Capital Program." The renewal of crossties as compared with past years must also be increased in future years particularly in the latter half of the next decade when most of the ties now in track will be between 35 and over 40 years old.

The following table compares actual engineering operating expenditures for the past five years with the Railroad's projections for this year and the next six.

Engineering Operating Expenses

(Excluding Depreciation)

Year	$000	Notes
1978	5,065	Actual*
1979	4,068	
1980	3,946	
1981	5,419	
1982	7,417	
1983	9,800	Projected 9/1/83
1984	9,340	Program in 1983 Dollars
1985	9,770	
1986	9,830	
1987	9,890	
1988	9,950	
1989	10,010	

* Due to the previously discussed accounting change, these years are not directly comparable with 1983 and beyond.

Source: The Alaska Railroad

Except for its projected rail and crosstie renewals, we determined that other costs making up the Railroad's projected engineering operating expenses appear reasonable. Using 1983 as a base year, we modified the Railroad's tie and rail projections to arrive at what we consider would be an adequate program to support the railroad's traffic projections over the next ten years. We determined that an increase in the railroad's tie and

rail projections was appropriate (See Appendix I, Exhibit 16). We also considered that the railroad should be able to achieve a two percent productivity improvement commencing in fiscal year 1984.

A comparison of our modified projected expenses with the railroad's projections appears in the following table.

Projected Engineering Operating Expenses

(Excluding Depreciation)
Thousands of 1983 Dollars

Year	ARR	Modified	Difference
1983	9,800	---	---
1984	9,340	10,560	1,220
1985	9,770	10,580	810
1986	9,830	10,680	850
1987	9,890	10,760	870
1988	9,950	10,960	1,010
1989	10,010	11,060	1,050
1990	10,010	11,160	1,150
1991	10,010	11,120	1,110
1992	10,010	11,280	1,270
1993	10,010	11,450	1,440
Totals (excluding 1983)	98,830	109,610	10,780

The railroad prepared a report in January 1983 entitled "Deferred Maintenance" showing a total of $88,200,000. See Appendix I, Exhibit 17. Seven of the 13 items on this list relate to capital and perhaps should be considered as "Deferred Capital Spending." The other items are in the maintenance

category. The tie and rail numbers in that analysis are based on a theoretical life rather than actual present condition. Our modified projections for ties and rail for the next ten years appear quite adequate. On the ground inspections did not reveal any conditions of deferred maintenance in connection with the three items: yards, turnout renewal or rail joints. However, it did appear that there may be an excessive number of chipped rail heads (surface) at the joints which could be considered deferred maintenance. The railroad's report provides $600,000 for rail end welding which appears reasonable. The railroad has accelerated this activity this year and anticipates a continuation in coming years within projected operating expenses.

The Engineering department leases 38 pieces of automotive equipment from the General Services Administration. This equipment includes automobiles and trucks from pick-ups to diesel tractors. The monthly lease rate varies from $127 to $372 and totals $6,172. The State, the Department of Transportation, and the General Services Administration have not yet resolved whether these vehicles will be transferred. However, the impact of losing this equipment on engineering operating expenses would be insignificant. Similar equipment can be leased at comparable prices from other sources or purchased as a part of the capital program resulting in a slight reduction in these expenses.

Operating Expenses-Equipment

This investigation and study indicates that the railroad's projected expenditure for motive power and equipment is sufficient for current and projected operations.

The Alaska Railroad is projecting passenger service annual mileage to remain constant at approximately 1,750,000 miles through 1989, freight service annual mileage to increase by approximately 38 percent by 1989 and locomotive mileage to increase by approximately 57 percent by 1989. These locomotive and freight train projected mileage increases are primarily the result of the anticipated export coal market.

Currently The Alaska Railroad is operating a fleet of locomotives and freight cars that are generally in fair to poor condition resulting in high maintenance cost per mile. The following table delineates the locomotive, passenger car and freight, private and leased equipment maintenance cost per mile for fiscal years 1981 and 1982, the forecasted cost for 1983 and the projected cost for 1984 through 1993.

Maintenance Cost/Mile

Fiscal Year	Locomotives	Passenger Equipment	Freight, Private & Leased Equipment
1981	$1.73	$0.26	$0.27
1982	1.23	0.24	0.23
1983	1.36	0.25	0.23
1984	1.35	0.24	0.21
1985*	1.15	0.24	0.17
1986	1.12	0.23	0.16
1987	1.16	0.23	0.16
1988	1.09	0.22	0.16
1993	0.95	0.22	0.14

* Start of substantial export coal traffic as projected by The Alaska Railroad.

Source: The Alaska Railroad

The Alaska Railroad locomotive fleet currently contains 13 F-7 locomotives and 11 RSD-4 locomotives with average annual maintenance of costs of $1.76 per locomotive mile. In October, 1983, the Railroad will take delivery of four new GP-49 locomotives with average annual maintenance cost of $0.55 per locomotive mile. Upon receipt of 12 additional GP-49 locomotives in 1984, 1985 and 1986, the Railroad plans to scrap the 11 RSD-4's and eight of the F-7 locomotives, thereby reducing the locomotive fleet maintenance cost per mile.

The Alaska Railroad passenger car fleet currently contains ten recently rehabilitated and upgraded all-electric passenger cars and the Railroad plans to have ten additional cars

rehabilitated and converted to all electric by 1986, thus reducing the passenger car fleet maintenance cost per mile.

The Alaska Railroad's Capital Expenditure Plan calls for the replacement of approximately 15 percent of the freight car fleet by 1986, which should reduce the freight, private and leased equipment maintenance cost per mile.

Although increased track maintenance will be required to meet the needs of projected increased traffic, the purchase of new and more advanced track work machinery should offset increases in maintenance of way equipment maintenance. Engineering equipment estimated cost of repairs for November, 1982 to May, 1983 is detailed in Appendix II, Exhibit 52.

The reduction in maintenance cost per mile of locomotives, passenger and freight cars due to the purchase of new and the rehabilitation/upgrade of older equipment, the purchase of new and more advanced track work machinery, and the projected productivity gain of 2 percent a year after 1984, should permit The Alaska Railroad to operate effectively within the following projected operating expenses for equipment.

Projected Operating Expenses
Equipment
Excluding Depreciation
Thousands of 1983 Dollars

Fiscal Year	Expenses
1983	$ 9,440
1984	9,380
1985	10,710
1986	10,920
1987	11,110
1988	11,300
1989	11,500
1990	11,500
1991	11,500
1992	11,500
1993	11,500
Totals (excluding 1983)	$110,920

Source: The Alaska Railroad

Capital Expenditures

The railroad provided USRA with a capital plan averaging $14 million annually for fiscal years 1983 and 1987 funded by the railroad's projected cash flow. See Appendix I, Exhibit 18. That plan did not include much of the work which will be required incident to the transfer of ownership to comply with OSHA and state and local codes. Conversely, that plan included at least one questionable item in our opinion; namely, installing double track between M.P. 105 and M.P. 114.

The railroad also provided a master listing of potential capital projects which might be considered depending on future earnings and traffic levels. These projects total $723 million. See Appendix I, Exhibit 19. Obviously, a prudent investor would not undertake any of these projects unless he could be assured of a reasonable return on investment, or unless they were absolutely required to continue operating the railroad. However, the listing was useful in defining the possible range of requirements which might be considered in the future depending on traffic, earnings, or external factors.

Discussions with the railroad management indicate a consensus that $12 million per year for the next ten (10) years would adequately cover capital requirements based on present traffic projections. This amount would provide, generally, for the following:

Item	Millions-1983 Dollars
Purchase Locomotives	1.50*
Purchase Freight and Passenger Cars	2.90*
Purchase Shop Equipment	0.30*
Modify and Upgrade Motive Power	0.50*
Modify and Upgrade Passenger Cars	0.50*
Purchase M/W Equipment	0.75*
Energy Conversions	1.00*
Ballast and Riprap	0.75
Building Improvements	0.70*
Bridges and Tunnels	0.75
Line Changes	0.60*
Communications and Signals	0.50
Drainage Improvements	0.25
Contingencies	1.00
Total	12.00

* These projected capital expenditures are based on an average of the total amount projected for the ten year period, not the amount projected for each year of the ten year period.

This program will generally permit the railroad to handle its forecasted traffic; however, it will not significantly increase the railroad's utility. Further, this program provides some but not all funding to correct OSHA violations and state code deficiencies.

The revised OSHA report, prepared by the railroad, shown in Appendix II, Exhibit 53, lists 78 deficiencies at a total estimated cost to correct of $5,991,000. However, after an analysis of this list and present work programs, it was found that $3,850,000 has already been committed with work that is in progress or is in the 1984 capital program. This leaves an

estimated total of $2,141,000 to complete the necessary improvements. After providing for a contingency of $350,000, we determined that this work could be completed in five years at an additional capital expenditure of $500,000 per year.

The State of Alaska retained a consortium of consultants to study state codes, OSHA, and other building deficiencies on The Alaska Railroad. Two independent and separate estimates were made to correct the conditions found. These estimates both totaled between 85 and 90 million dollars. The results of these studies were made available about September 1, 1983.

A complete review was made of the three volumes which provides a description of each violation or deficiency and an estimated cost to correct. Our study developed the following:

1. Although the total cost of the two estimates are approximately the same, estimates for individual items and buildings vary widely, in some instances as much as 1,000 percent.

2. These listings almost completely overlap the OSHA list previously discussed.

3. The overheads as they are applied actually total 109 percent. This appears too high, and our investigation indicates that 80 percent would be a reasonable total overhead for the State of Alaska. This is for work

performed by outside contractors with no consideration given to performing any of the work by railroad forces. Quite likely, much of this work would be done by railroad forces, particularly in the outlying areas, with significantly lower overheads.

4. All improvements are estimated on an "in kind" basis. In other words, no consideration was apparently given to eliminating any facilities on which it would be expensive to make the required improvements, by building new or by moving present occupants to another facility. In one case approximately $1,000,000 is estimated to improve a building that is practically vacant.

5. Many of the cited deficiencies are not code or OSHA violations, but desirable improvements which would be handled as required in the annual capital programs.

6. No accounting is made of work now in progress or programmed which will rectify some of these violations.

After taking all of the above factors into consideration together with our knowledge of the facilities and discussions with railroad representatives, it appears that about $15,000,000 in addition to present commitments and the previously projected OSHA expenditures should support the required improvements to meet these code violations. For additional details regarding these calculations, see Appendix I, Exhibit 20.

If this work were to be completed over the next ten year period, another $1.5 million per year would be added to the capital program as shown in the following table.

Summary of
Projected Capital Spending
Millions of 1983 Dollars

Year	ARR	OSHA	Code Violations	Total
1984	12.0	.5	1.5	14.0
1985	12.0	.5	1.5	14.0

Totals	120.0	2.5	15.0	137.5

ALASKA
REVIEW OF SOCIAL AND ECONOMIC CONDITIONS

UNIVERSITY OF ALASKA INSTITUTE OF SOCIAL AND ECONOMIC RESEARCH FEBRUARY 1982 Vol. XIX No 1

THE ALASKA RAILROAD: OVERVIEW AND OPERATIONAL ALTERNATIVES

INTRODUCTION

This Review takes a look at the federally owned Alaska Railroad in the context of its apparent pending transfer to the State of Alaska. After describing the history of the railroad—its present physical plant, rolling stock, and its operations—we analyze the most important issues with which the state must deal: railroad land, employees, finances, competitive environment, and passenger service. We also review organizational structures that might be applied to the railroad following the end of federal control and make recommendations for further action. (See box on page 3 for a brief summary of study findings.)

The Alaska Railroad (ARR) is unique in that it is (1) the only railroad in North America that is a federal agency, (2) the farthest north railroad in North America, and (3) considered (by some) as a frontier development tool. It has enjoyed a varied history and has alternately been the recipient of intense criticism and extensive federal grants. Originally conceived as a development project in the grand style of the Panama Canal (from which it received much of its early equipment), it quickly fell into disrepute, emerged as a military implement, was converted from pauper to spoiled child, and then allowed to sink into an anonymity which has plagued it to the present day.

The Alaska Railroad is an operating agency of the United States Department of Transportation, Federal Railroad Administration (FRA). As such it is subject to all the obscure federal policies visited upon such agencies, and its operational motivations are both political and economic. However, it has also become an important overland transport link in Alaska and a central element in the state's economic development process.

Changing Federal Policy

During the past decade, FRA has become increasingly interested in transferring ownership of the property to a nonfederal entity. The agency first introduced draft federal legislation to facilitate the transfer in 1971. However, the momentary prosperity of the ARR during the Alyeska pipeline construction project diminished federal interest in disposing of the property.

With the return of "normal" economic conditions in 1978, however, FRA was once again motivated to explore means of relieving itself of the ARR. The economic downturn also coincided with a shift in FRA policy, mainly due to its increasing involvement with Conrail and Amtrak.[1] By 1979, it was apparent that both organizations had become major fiscal and political liabilities for FRA, leading the agency to both a fear of and disinterest in attempts to operate any railroad. Thus, FRA's policy tended toward the dissolution of any rail property which

[1] Federally controlled railroad properties that had been unsuccessfully managed in the private sector.

This article was adapted from a report prepared for the Alaska Department of Transportation and Public Facilities, Division of Planning and Programming, by the Institute of Social and Economic Research and Bivens and Associates, Inc.

The Alaska Railroad: Overview and Operational Alternatives

During the preparation of this article John T. Gray was an assistant professor of transportation with the Institute of Social and Economic Research in Anchorage; he has since resigned to take the position of Manager of Marketing and Sales with the Alaska Railroad. John A. Bivens is a transportation consultant and president of Bivens and Associates, Inc., of Phoenix, Arizona.

appeared to be economically marginal, including those controlled by FRA.

This policy, as it pertains to the Alaska Railroad, was first published in ARR's 1979 annual report (in mid-1980):

> Since the Government of the State of Alaska has substantial surplus funds because of the growth of oil revenues, the Federal Government believes that ownership of the Alaska Railroad should be with the State Government. The Federal Government believes the Alaska Railroad exists primarily for the benefit of the residents and shippers of Alaska; they need and deserve a much larger voice in determining the role they want the railroad to play.

This policy received additional emphasis when the Reagan administration took office in January 1981. The transfer of the ARR was consistent with emerging federal orientation in several areas, including (1) replacing a federal function with a local entity, (2) reducing federal employment, and (3) reducing FRA's funding requests.

The policy also supported FRA perceptions that (1) the ARR no longer served the function of a frontier development tool, but had become part of a more mature transportation and economic system, (2) Alaska could afford to operate and subsidize the railroad if necessary, (3) future prospects suggested that private enterprise might find the railroad an increasingly attractive investment, and (4) the ARR could more effectively support public and private objectives under a revised organizational and institutional structure.

To implement these views, FRA once again prepared draft legislation to authorize transfer of the Alaska Railroad to the state. This legislation was introduced into the U.S. Senate on July 17, 1981.

History of the Alaska Railroad

The ARR came into existence through an act of Congress on March 12, 1914. This legislation empowered the President to acquire and (or) construct a railroad, not to exceed 1,000 miles in length, to connect Alaska's interior navigable waterways and one or more coal fields with an ice-free harbor on the Gulf of Alaska. The Alaska Engineering Commission, which had previously located several potential routes, was directed by President Wilson to purchase the 71-mile Alaska Northern Railway and to extend its line from Seward to the head of navigation of Cook Inlet

and northward up the Susitna and Chulitna river valleys to a crossing of the Alaska Range near the headwaters of the Nenana River. From that point the railroad was to be built to the confluence of the Nenana and Tanana rivers and upriver to Fairbanks. Two branches were also constructed to tap coal deposits. One branch extended eastward up the Matanuska Valley and the other eastward from the juncture of the Healy and Nenana rivers. This basic system, with minor additions and deletions, has remained intact from its official completion in 1923 to the present (see Figure 1).

Deterioration and Rehabilitation

The decline of placer mining in the Tanana Valley prior to the completion of the railroad, the conversion of naval vessels from coal to oil soon after completion, and the general lack of economic activity along the line combined to produce operating deficits during the first decade and a half of ARR's operation. From 1924 to 1945, the railroad received no operating or capital appropriations from Congress. This resulted in a continuing deterioration of an already marginal physical structure. During the years before World War II, the railroad was maintained to only

SUMMARY OF ISSUES INVOLVED IN ARR TRANSFER

- Pending Transfer of the Alaska Railroad. The Federal Railroad Administration (FRA) is presently taking steps to transfer the Alaska Railroad (ARR) from the federal government to the State of Alaska. The FRA proposes to transfer the ARR to the state without charging a direct acquisition cost. However, FRA's proposed legislation also transfers all ARR's liabilities and obligations, which have not yet been clearly defined.

- ARR Lands. Lands required for effective railroad operation extend beyond the ARR's rights of way, yards, terminals, and ports, since the railroad requires not only materials-source lands, but also needs to lease lands to traffic-producing tenants. However, much of ARR's land holdings are presently uncertain, because Native claims have been filed on certain portions of it under the 1971 Alaska Native Claims Settlement Act.

- Railroad Finances. A 1980 ICC freight rate study of the ARR concluded that the present rates exceed the variable cost of transportation and fully compensate the carrier. In fact, in the past 3 years, even with poor economic conditions nationally and in Alaska, freight transport on the ARR fully met all out-of-pocket costs and some capital costs.

Passenger service, however, has long required subsidization by the freight traffic, and even this subsidy has not been enough. While an increase in passenger fares seems warranted, fares cannot be raised enough to fully meet the cost of passenger service without driving away passengers. This problem would be somewhat alleviated by separating revenue and cost accounting for passenger and freight service. Management needs to establish an aggressive passenger marketing program, moderately increase passenger fares, and request a public subsidy to cover remaining costs of service.

- Outlook and Benefits of the ARR. The ARR's freight service, available from Seward and Whittier all the way through Anchorage to Fairbanks, serves the needs of a majority of Alaskans. It is, and will continue to be, an important element in Alaska's transportation system. Not only is it essential to development of many of Alaska's resources, but by competing with normal carriers, the ARR assures competitive rates for shippers. Without the rail service alternative, costs of moving commodities would be much higher. And some products, such as large bulk shipment of coal, steel, sand and gravel could not be economically moved at all.

- ARR Employees. The ARR has for several years been reducing the numbers of its employees, and a hiring freeze has been in effect since January 20, 1981. As of mid-April 1981, the ARR had 679 employees and 785 authorized positions, a vacancy rate of 17 percent. Freight-user service could suffer should present employment levels persist in an expanding market.

As Department of Transportation personnel, the employees of the ARR have all the privileges and rights of other federal agency personnel. In addition, most ARR employees are members of various labor unions. Enjoying such double protection under existing agreements, employees will not likely wish to relinquish any of their existing rights. As a result, transferring these employees to the state could involve several complex problems.

Meeting all employer retirement and fund contributions for ARR employees will cost about $38 million during the next 20 years (1981 dollars). Or, if we include inflation and salary increases of 10 percent per year (compounded), the cost will total about $195 million, or an average annual contribution of $8.7 million. However, ARR now realizes and could expect to continue to realize adequate revenues from freight service to provide funds for this contribution. Freight revenues could also pay for employee sick leave ($4.3 million) and annual leave ($1.5 million).

- Condition of Railroad. The track, structures, and rights of way of the ARR are generally in good condition and well maintained. For the most part, the lines meet or exceed FRA Class IV standards.

The rolling stock and locomotives are generally well maintained and adequate for the traffic carried. However, much of the locomotive and car fleet is old, being previously well used by the military or other railroads. A fleet modernization program may be needed if traffic increases significantly.

Passenger cars are generally well maintained but are old and in need of substantial modernization.

The ARR is generally capable of servicing its equipment; its mechanical and electrical shops are well equipped and adequately support effective maintenance and modification of locomotives and rolling stock.

minimal branchline standards. This condition was aggravated by the fact that "official" completion in 1923 had still left a great deal of work to be done before the system could be considered technically adequate.

World War II provided ARR with a rush of traffic and much-needed income, as well as the now-important link with a second ice-free port, at Whittier. However, the war also accelerated deterioration of the property. Even with military assistance between 1942 and 1945, the railroad was almost physically exhausted by the end of the war. This

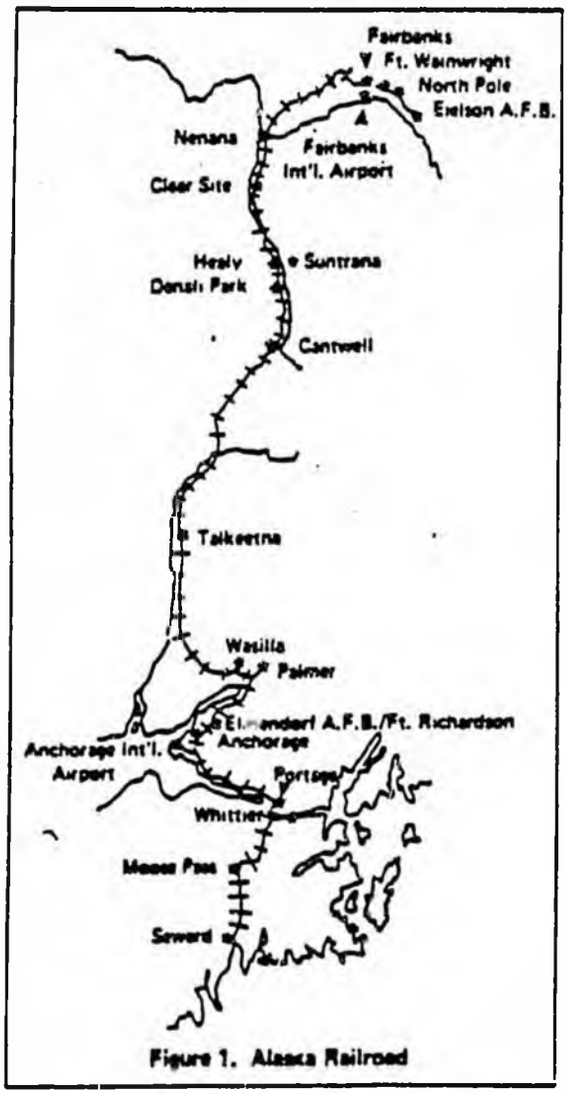

Figure 1. Alaska Railroad

situation demanded a decision on whether to abandon the railroad or rebuild it. The Federal Government decided to rebuild.

This decision resulted in a project that was to last 30 years and become one of the most controversial episodes in the ARR's history. Actual expenditures began in 1946 and over the construction term amounted to almost $95 million. The actual value of these improvements, however, was considerably greater since much property was transferred at nominal cost from other federal agencies. The rehabilitation included strengthening the roadbed; laying new track; replacing bridges and buildings; buying new locomotives, rolling stock, and maintenance equipment; and building new shops, as well as terminals at Anchorage, Fairbanks, and Seward.

Most of the work, from Whittier to Fairbanks, was completed by 1952; however, the main line to Seward, begun in 1953, was not completed until 1958, and only after a special appropriation was requested by the Defense Department. By the end of the rehabilitation period, the railroad would finally be considered complete and was basically in its present form.

The 1964 Earthquake

Total damage to the Alaska Railroad from the 1964 earthquake amounted to approximately $27 million, of which $25.4 million was obtained through Congressional appropriations.[2] Of the total, almost $11.7 million was required to reconstruct the line from Portage to Seward and the Seward Terminal. Records of the controversy over whether or not the Seward reconstruction should be undertaken indicate that it could not be justified on the basis of capital and future operating costs. However, the Alaska Railroad and its owner, the Department of the Interior, presented funding appeals based on a combination of economic and social factors. One letter stated:

> The decision on reconstruction is not restricted to economic considerations alone; in many respects humane and equitable factors assume even greater significance. The essential fact is that failure to restore rail service means that Seward will disappear as an important factor in Alaska life.

[2]These appropriations should be clearly distinguished from other federal funds invested in the ARR. The railroad's earthquake rebuilding monies were only a small part of the $400 million in disaster relief assistance provided to Alaska. The vast majority of this money went to individuals, private companies and local governments through a variety of assistance programs. Thus, for policy purposes, the funding of the ARR reconstruction should be treated in the same light as one would all other economic entities of the state, rather than as a federal agency appropriation.

C-4

Given the information available at the time, the decision to rebuild to Seward may or may not have been economically sound. The important point is that as a federal agency, the railroad based a major part of its argument to rebuild the line on factors which were not necessarily in its own economic best interest. A private firm, confronted with the same circumstances, would not likely have used the same reasoning nor have made the same decision.

Railroad Barges and the Port of Anchorage

Shortly before the earthquake, two other events occurred which, together with the subsequent loss of Seward, caused a long-term change in the character of both the railroad's traffic patterns and those of Alaska's entire railbelt region. These were (1) the initiation of railcar barge services between Alaska and both Canada and the continental United States and (2) the opening of the Port of Anchorage to year-round container ship service. Of the two, the most important was the barge service—not in terms of movement volumes, but rather in the options made available to Alaska shippers. The action of the railroad and its barge connections made it possible for the first time to ship directly from the manufacturer or major distributor, wherever his location, directly to an Alaska location without reloading in Seattle and Alaska ports. The economic independence from Seattle wholesalers offered by this service forced steamship companies, particularly Alaska Steamship and Sea-Land Service, to establish similar options.

Construction of the Trans-Alaska Oil Pipeline

The final set of events which shaped the present Alaska Railroad were those surrounding its participation in the construction of the trans-Alaska pipeline. During the years 1974 through 1977, the railroad probably moved the largest, most lucrative volumes of traffic since World War II, and the physical system underwent a similar, although somewhat milder, strain. Once again, the only possible solution, given the federal agency status of the railroad, was to transfer property from other federal organizations (most notably locomotives from the military) and to use Congressional appropriations for capital improvements and major maintenance. Twenty-four million dollars in appropriations, in addition to $13 million in improvements financed through earnings, permitted the railroad to emerge, for the first time, from a period of heavy usage in better physical condition than it entered.

THE PHYSICAL PLANT

The Main Line and Branches

The Alaska Railroad (ARR) today has a single track mainline of 419 miles from Whittier to Fairbanks via Anchorage, Wasilla, Healy, and Nenana. In addition, there are six branches with an aggregate total of 115 miles. These include the 28-mile branch from Fairbanks to Eielson, the 10-mile Fairbanks International Airport spur from Ft. Wainwright to the airport, the 4-mile coal branch from Healy to Suntrana, the 7-mile line from Matanuska Junction to Palmer, the 3-mile Anchorage International Airport spur, and the 63-mile line from Portage to Seward.[3]

The mainline has only mild gradients along the water level route between Whittier and Anchorage and up the Susitna Valley as far north as Gold Creek (about 150 miles from Anchorage). However, the severe grades on the next 35 miles to the summit of the pass through the Alaska Range reduce the tonnage ratings of locomotives by about 40 percent. The grades on the north side of the range are much easier, being similar to the water level line in the lower Susitna Valley, with the exception of a single short five-mile stretch. The mainline north of the range to Fairbanks and the Eielson branch pass through generally rolling country with mild gradients.

The most severe portion of the railroad is the line from Portage to Seward, which crosses two mountain barriers with steep gradients. Both restrict southbound traffic, reducing the tonnage a locomotive can handle by 75 percent and 65 percent, respectively, when compared with what can be moved between Anchorage and Portage. Northward grades are slightly milder but still are more demanding than any of the line north of Portage.

Passing sidings are spaced about every 7-to-10-miles so that trains may meet and pass. However, sidings long enough to accommodate most freight trains are less frequent. In addition, there are tracks at various points along the line which serve industries not located at a major yard. Table 1 summarizes the physical features of the mainline and principal branches.

Track Conditions

The track structure of the Alaska Railroad is currently in excellent condition, particularly considering the relatively light traffic. The main line and the line to Seward are maintained to FRA Class IV quality standards which permit freight trains speeds up to 60 miles per hour and passenger trains to 80 miles per hour, if certain safety conditions are met. In fact, the Alaska Railroad must limit its train speeds

[3] It should be noted that the railroad considers the line to Seward as part of the main line, and it is maintained to these standards. However, it has the lightest traffic of the entire system (about 300,000 gross tons annually).

Table 1

Summary of Alaska Right-of-Way Characteristics

Line Segment	Distance	Tonnage Rating Northbound[a]	Tonnage Rating Southbound[a]	Passing Sidings over 3000 ft.	Industrial Tracks Between Stations[b]

for freight and passenger trains to 49 and 59 miles per hour, respectively, since it has no automatic block signal system, one of the FRA safety requirements for higher speeds. In addition, the number of sharp curves places further speed limitations on some sections of the line. These allow the railroad to follow the contour of the land in more mountainous areas so that the relatively mild gradients (which are extremely important to efficient operation) can be maintained.

Tracks, Bridges, and Yards

The track and bridges of both the main line and the Seward line are maintained to accommodate cars carrying a load of up to 100 tons, although the Eielson and Suntrana branches have lower loading limits. Present operation plans call for limiting 100-ton capacity cars to 80 tons when they are used to move bulk products, such as coal and gravel. This is due to the excessive track wear caused by trains composed entirely of 100-ton capacity cars.

The railroad also operates and maintains a number of yards to serve local industries, sort cars, and to maintain its equipment. These vary considerably depending on the purpose for which they are used. The yard at Seward serves the railroad-owned port facilities at that location and includes a number of car marshalling tracks, a small equipment maintenance facility, the dock facilities, and several tracks to local industries. Whittier is designed and used differently; since it is the interchange point for railcar service, the facility is primarily designed to serve the two railroad-owned car-barge slips. Secondarily, facilities in Whittier include those for the Whittier-Portage passenger-auto shuttle service and those for the military dock and petroleum terminal.

Anchorage has the railroad's major classification yard, locomotive and car maintenance shops, headquarters, and some car storage facilities. The yards also serve a number of major and minor indus-

tries including the Anchorage Port, Elmendorf Air Force Base, and Fort Richardson. There are also container-on-flatcar and trailer-on-flatcar facilities in Anchorage.

Healy has a small yard and locomotive service facility and exists primarily to serve the nearby coal mines. The Nenana yard exists solely to serve the railroad's small river port in that town and several other local industries. Fairbanks contains a small classification yard, limited locomotive and car shops, and trackage to serve local industrial facilities. The yard is also the base for service to Fort Wainwright and Eielson Air Force Base, as well as the North Pole Refinery.

Equipment

The Alaska Railroad uses a variety of equipment to produce revenue and maintain the property. The largest and most costly units are the locomotives—the railroad has sixty-five, with an average age of 18.7 years. The most modern of the units are the fifteen 3,000-horsepower road-switcher locomotives built by General Motors between 1975 and 1978. These are comparable to the most modern equipment on any railroad. Ten older 1,600-horsepower road-switcher locomotives were completely rebuilt in 1977 and have a useful efficient life at least through 1992. Four other 2,500-horsepower road switchers acquired in the mid-sixties are old enough to be eligible for complete rebuilding, and one has already been rebuilt. Of the remaining thirty-six units, most were built between 1951 and 1953, and only about ten to twelve are usually in service under present traffic conditions.

Seven of the older car-body type locomotives are used in passenger and mixed train service between Anchorage and Fairbanks, while several ex-military road switchers are used in Anchorage yard service and as backup yard engines around the system. Several of the car-body types might be usefully rebuilt if passenger service is continued. However, the ex-military units are probably near the end of their useful lives. Several of the older locomotives of both types are being cannibalized to provide parts for the others.

The freight car fleet numbered 1,754 units in 1980, with an average age of 32 years. Table 2 shows the distribution of freight cars by functional type. Clearly, the freight car roster is dominated by the open types, including the flat cars, gondolas, open hoppers, and dump/ballast cars. This is consistent with the types of traffic being handled with most of the tonnage consisting of bulk materials, such as coal, gravel, logs, and pipe along with trailer- and container-on-flat-car (TOFC/COFC) service. Another important component of the car fleet available to ARR are the tank cars, particularly the privately owned cars leased to oil companies served by the railroad and used for petroleum product distribution throughout the railbelt.

Source. Alaska Railroad 1980 Annual Report and Alaska Railroad Equipment Summary.

Of particular concern is the age of much of the ARR's own fleet and the limited capacity of many of the units. Only 340 cars have been purchased new since 1960 and only 140 cars since 1970. Even though the fleet has been well maintained, maintenance will become more costly as the cars continue to age. The aging problem also creates problems in ARR's interchange of traffic with other railroads. Federal safety standards limit the age of equipment which may be used in interline service. Some of ARR's equipment is already prohibited from participating in this traffic, while other cars are allowed to operate only with waivers.

The limited capacity of some cars could be detrimental to the railroad, particularly for transportation of some future bulk shipments. This is also a difficulty with ARR's tank car fleet (although the private cars assigned to ARR are modern units). With a few exceptions, however, this factor does not appear to limit service of existing traffic.

Source: FY 1980 Annual Report, The Alaska Railroad.

The passenger car fleet consists of 48 units owned by the ARR and 6 leased from Amtrak for supporting the increased 1981 summer service. Table 3 shows the types and ages of the present equipment. Although not as old as the railroad's freight fleet, the passenger cars are an aging asset which will require a complete rebuilding if the present level of service is to be continued. Twenty-eight of the cars were acquired from the Union Pacific Railroad in 1971, eight came from the Southern Railway in 1980, and the remainder were rebuilt from surplus military hospital cars. In recognition of the need to extensively rebuild the current fleet, if passenger service is to continue, the railroad currently has ten cars being rebuilt under contract to General Electric.

In addition to revenue-producing equipment, the ARR also has 205 units of maintenance and emergency equipment. This includes such items as snow plows, cranes, and cars for housing mobile maintenance forces. This is supplemented by a considerable fleet of on- and off-track machinery used in maintenance and in-house construction work. Also, sufficient shop facilities and machinery are available to perform any level of maintenance required by the car and locomotive fleets; however, space and personnel limitations sometimes preclude programming a large volume of heavy repair or rebuilding work over a short period. Therefore, large projects, such as the previously mentioned passenger car rebuilding may be contracted to outside firms.

OPERATIONS

Clearly, the purpose of ARR's equipment is to provide train service to the railroad's customers. Since rail operations provide the ARR's largest proportion of revenues, they are thus of special interest to this study. Table 4 lists the types of trains operated by the ARR and the number operated in the years 1976-1980; Table 5 indicates the total train miles produced by these trains on each segment of the railroad. Currently, the service can be categorized as follows:

1. Anchorage—Fairbanks — Passenger and mixed train service
2. Anchorage—Fairbanks — Freight service
3. Healy—Fairbanks — Coal trains
4. Anchorage—Palmer — Gravel trains
5. Anchorage—Whittier — Freight service
6. Anchorage—Whittier — Passenger shuttles
7. Anchorage—Seward — Freight service
8. Anchorage and Fairbanks industrial switching trains

Table 6 summarizes the present frequency of these operations along with the winter schedules for the same services. As can be seen, frequency of operation can vary considerably, particularly for the passenger and gravel trains. This leads to equipment utilization problems in that a sufficient number of cars and locomotives must be on hand to meet peak conditions but some can be expected to be surplus during slack seasons. This is aggravated by the difficulty that ARR, as a federal agency, has in

Table 4

leasing supplemental equipment, a strategy common throughout the rail industry in such circumstances.

Also of interest is the changing traffic pattern that has been occurring during the past 5 years (Table 4). Since costs to operate additional trains (above some minimum level) do not rise as fast as the number of trains and while revenues tend to increase directly with the number of revenue trains, it is evident that the cyclic nature of Alaska's economy very directly affects ARR's net income. Table 4 graphically illustrates the difficulties faced by the railroad's management during the last 3 years of declining and stagnating economic activity.

Table 5 also shows the large part that passenger service plays in ARR operations. With passenger and mixed train service accounting for 48 percent of the 1980 train miles, it is obviously an important element in the cost structure of the railroad.

The length of ARR trains varies considerably by type of service. Freight trains to Seward generally comprise 40 to 60 cars while those to Whittier are 45 to 50 cars, depending on which barges they are meeting. The unit gravel trains between Anchorage and Palmer consistently have either 60 or 80 hopper cars each. The Anchorage-Fairbanks freights range between 60 to 100 cars, and the Healy-Fairbanks freights range between 40 to 60 cars. The mixed trains between Anchorage and Fairbanks will have 2 to 6 passenger and 20 to 25 freight cars while summer passenger trains have 6 to 10 cars. In a particular circumstance, maximum train length may be dictated by length of passing sidings, traffic demands, locomotive availability, union agreements, grades, barge capacity, or climate.[4]

Traffic Base

The ARR transports only a few commodities between a small number of origins and destinations. ARR traffic logically divides itself into two basic components: local and interline. Of the two, the local movements (strictly ARR origins and destinations) generate the most tonnage but relatively low levels of revenue per ton-mile. The interline traffic is that interchanged between ARR and either Alaska Hydro-Train or Canadian National Railway through the car-barge facility at Whittier or the trailer and container movements through the Port of Anchorage that are forwarded by the railroad.

Local

Tables 7 and 8 show the revenue tons transported by the railroad and the resulting revenues. As can be seen, the two consistently largest movements are (1) the coal moved from Healy to power plants at Clear Air Force Station, the University of Alaska in Fairbanks, Fairbanks, Fort Wainwright, and Eielson Air Force Base and (2) the gravel moved from Palmer to the three largest aggregate companies in Anchorage. Both are fairly short hauls and involve

[4]In the winter, decreased airbrake response time and increased train friction may limit length.

commodities of relatively low value.

Petroleum products represent the most lucrative of the larger, local movements. Since the construction of the North Pole refinery, this traffic has consisted principally of gasoline moving from Anchorage to Fairbanks. However, there has recently been a growth in the opposite direction in movements of jet and diesel fuel supplies from North Pole refinery to distributors in Anchorage and to the Anchorage International Airport. The railroad also delivers fuel to Fairbanks International Airport and the Anchorage Airport from sources other than North Pole.

The other significant intrastate movements include logs from Nenana to Seward,[5] cement from Anchorage to Fairbanks, pipe from either the Seward or Anchorage ports to Fairbanks for forwarding to the North Slope, and a limited amount of local trailer-on-flatcar business between Anchorage and Fairbanks.

Interline Traffic

Interline traffic differs considerably from local traffic. A major component is trailer-on-flatcar and container-on-flatcar traffic forwarded by the railroad on substitute service agreements with Totem Ocean Trailer Express and Sea-Land Service Company between Anchorage and Fairbanks. While this traffic amounts to only 90,000 to 100,000 tons annually, it carries a premium rate because of its time sensitivity and long distance. This traffic produces almost as much revenue as the much larger coal movement. It is time competitive with over-the-road movements and generally carries a lower tariff than motor carriers offer.

The railroad port at Whittier receives the larger part of the interline business. This traffic is composed of all types of consumer and industrial goods including building products, furniture, chemicals, oil field service equipment, fertilizers, machinery, vehicles, foodstuffs, and other goods. Most of those cars with west coast origins arrive aboard Alaska Hydro-Train (AHT) barges from Seattle. However, cars from mid-western, eastern, and Canadian origins tend to move through Prince Rupert via Canadian National Railway (CNR) and the barges they operate. The AHT movements total 200,000 to 300,000 tons annually while CNR moves about 30,000 to 40,000 tons. While these two comprise only 10 to 15 percent of ARR's total traffic tonnage, they generate between 30 to 40 percent of the revenues because of the value of traffic and the proportion of the total that moves fairly long distances. Presently about 50 percent goes to Anchorage while the remainder goes to Interior or Kenai Peninsula points.

Several characteristics of ARR traffic are important to understand because they define both the present and likely future markets which the railroad will serve. The railroad, as an instrument of mass movement, is generally oriented toward industrial rather than consumer customers; it provides most of its services to a limited clientele which has direct siding access to the system. It should be remembered that rail service is attractive to a relatively limited number of shippers; however, these shippers usually comprise the basic elements of Alaska's economy, such as petroleum production and refining, mining, construction; timber; the military; wholesaling;

[5]This movement ceased in early 1981 with the collapse of the Japanese housing market.

and, potentially, heavy manufacturing, agriculture, and chemicals. Thus, the railroad tends to serve only those organizations which ship in sufficient quantity to make use of the discounts offered by carload, multi-carload, or trainload tariffs. For local traffic, this implies that the primary shippers will be the very largest industries in the railbelt, particularly those related to energy, construction, and resource development. This is particularly true given the small size of Alaska's heavy manufacturing and agriculture sectors. Should these two traditionally rail-oriented groups develop into a significant force in the state, they would become important revenue sources for ARR.

The interline traffic, particularly the railcar movements, is a bit more complex. For these movements several factors are important in determining the appeal of rail service. While the ability to order in carload or greater amounts is important, several other factors also influence the shippers' choice of mode. An important characteristic of many of these movements is that they involve commodities which are either not produced or wholesaled in the Seattle area or which can be procured more inexpensively by going beyond Seattle and dealing in sufficiently large quantities. This is particularly important for the Canadian National traffic. Another important feature of these movements is that they usually involve commodities which normally move by rail on the continental rail system, thus, making it attractive to avoid an additional set of loading and unloading changes at the port of embarkation. A fourth characteristic of considerable importance is the distance of a shipper's plant or warehouse from a rail siding. Only 5 to 10 percent of railcar shipments are distributed to their consignee from a central public warehouse or forwarding facility by truck, and these usually to the smaller, more infrequent shippers.

Together, these factors define a fairly narrow market to which ARR's interline service can appeal. However, as noted earlier, it is a very important market. It is also a fairly volatile one which varies considerably with the levels of activity in specific industrial economic sectors (i.e., construction), rather than being oriented toward the more stable consumer sector. While innovative marketing can stabilize these patterns somewhat and also potentially increase market share, it is unlikely that it can penetrate more than 30 percent of the U.S.-Railbelt Alaska trade without a significant shift in the texture of the Alaska economy or a dramatic change in competition. It is also notable that ARR's ability to enlarge its share of the market is limited by the capability and number of railcar barges which private operators have available and are willing to commit to the service.

Outlook

During the next 3 to 5 years the railbelt economic prospects provide considerable encouragement for the stabilization of the railroad's freight operations at a sufficiently high level to keep it viable. There are enough moderate-to-large-scale construction projects to provide firm prospects for a continuing high level of traffic. In addition, the prospect of moving 800,000 metric tons of coal annually from Healy to a Seward export terminal provides an important long-term, as well as seasonal, element of stability. It is also the type of movement for which the railroad is ideally suited. It adds significantly to revenues without proportionally increasing costs by utilizing already existing capacity and capabilities.

MAJOR RESTRUCTURING ISSUES

Clearly, there is much more to the Alaska Railroad than simply the enumeration of the physical and operational features indicated above. Its land holdings, employees, finances, competitive and regulatory environment, and passenger service must also be considered in any restructuring of the property. These issues have emerged as being the most critical now being faced by the state or any new potential owner or operator of the Alaska Railroad.

Land

The following discussion down through "Native Village Selection Area Claims" page 14 was prepared by the Office of General Counsel of the Federal Railroad Administration

Land is perhaps the most valuable fixed asset currently controlled by the Alaska Railroad (ARR). It is also an extremely important asset for operation, maintenance, and traffic development purposes. The total lands under control of the railroad are about 38,000 acres. The ARR has acquired its land through executive order, public land order, purchase, trade, and BLM trust deed. The earliest acquisitions were in 1914—the latest (.2 acres), in 1970. While these holdings are not extensive, they are among the most valuable industrial lands in Alaska. Of the total lands, about 12,000 acres are used for the right-of-way. The remaining 26,000 acres are used or reserved for marine and rail terminals, gravel resources, right-of-way erosion protection, industrial leases, gravel and rock reserves, railroad administration, and future development and facility expansion. Since the Alaska Native Claims Settlement Act of 1971 (ANCSA), both the ownership and use of these lands has been clouded. Table 9 indicates the location and quantities of land and the Native villages that have filed claims against particular parcels.

The railroad land holdings fall within seven

Native village selection areas and four Native regions that were established by ANCSA. Approximately 8,035 acres of railroad land, or 21 percent of the total holdings, are located in Native village selection areas and are potentially subject to claims by Native village corporations. Substantially all railroad land, whether or not located in a Native village or regional area, may ultimately be claimed by Cook Inlet Region, Incorporated (CIRI) under the special authorization that allows CIRI to select land outside its regional boundaries.

Right-of-way Lands

The main line right-of-way from Seward to Fairbanks was established by executive order in 1915.[6] The right-of-way lands of two small, private railroads were purchased to form the first 70 miles north from Seward and part of the right-of-way approaching Fairbanks. The balance of the original right-of-way was reserved from public domain by the Alaska Engineering Commission under authority of the Alaska Railroad Act and the 1915 executive order. Other public lands have been acquired over the years and now provide branch line connections to Palmer, Whittier, and other towns. Spur lines have been constructed to provide access to airports and coal fields along the railbelt. Defense lands have been transferred to the railroad for construction of rail lines into several defense installations. The railroad has also purchased some right-of-way lands from private individuals or from state and local governments. The right-of-way is mostly 200 feet wide, with some variations. The right-of-way is wider at several locations where needed for control of washouts and for steep cuts and fills. Narrower rights-of-way are common on several spur lines where the railroad passes through military reservations or where other factors hindered the acquisition of a full 200-foot right-of-way.

Non-Right-of-Way Lands

The 26,521 acres of railroad land other than right-of-way lands were acquired by executive orders, public land orders, transfers, purchases from private owners, and by trade for other lands with state and local governments. These land parcels range in size from 0.4 acres up to 5,830 acres at twenty-seven locations adjacent to the right-of-way and three smaller locations off the railbelt. These lands were acquired to support operation of the railroad. About 1,000 acres were leased to businesses which provide lease revenue and generate rail traffic for the railroad. Another 9,000 acres are used as active gravel and rock quarries or 425 held for the railroad's future gravel and rock needs. Other parcels are used for storage, maintenance, and terminals. About 100 acres are used for the operation of the Yutana Barge Line at Nenana and another 570 acres are part of the Seward and Whittier port and terminal facilities. The largest three parcels are located in the remote areas of Curry (4,970 acres), Midway (3,811 acres), and Healy (5,830 acres). These large parcels are mostly vacant and are held by the railroad for controlling watershed, providing gravel resources, and allowing future development or expansion of the railroad.

The three pieces of land not adjacent to the right-of-way are a presently leased 50-acre parcel in Valdez that was used to handle railcars from ocean-going barges in support of the Alaska oil pipeline construction and two parcels totaling 60.4 acres (60 acres at Holy Cross and 0.4 acres at Tananal that are leased as docking and storage areas by Yutana Barge Lines.

Native Village Selection Area Claims

Table 9 shows railroad lands that are located within Native village selection areas. Claims have been filed by Native village corporations for virtually all railroad lands that lie within these areas. The extent to which these lands will ultimately be conveyed to the village corporations will depend on determinations made by the Department of the Interior as to which lands are actually used by the railroad and, therefore, exempt from selection under section 3(e) of ANCSA. The Department of the Interior published final 3(e) regulations that went into effect in late 1980, setting narrow standards for determining which lands are actually used by the railroad. Under the regulations, the railroad would not retain any leased land or gravel reserves claimed by a Native corporation, and the railroad's right-of-way would be converted into a limited easement right across land that would be conveyed to the Native claimants. In the first major claim for railroad land within a village selection area, the Federal/State Land Use Planning Commission (LUPC), an advisory body established by ANCSA, recommended that 90 percent of the railroad's land holdings claimed by the Eklutna Village Corporation should be conveyed. This recommendation includes all leased lands, all right-of-way lands, and substantially all gravel reserves and would leave the railroad with only a small storage yard and one gravel pit in this area. The railroad would retain only 240 acres out of its present 2,700 acres in this area. Although the 3(e) regulations are now final, the Department of the Interior has neither formally ruled on

[6] Executive Order No. 1, April 10, 1915.

the Eklutna claim nor begun to process other claims. However, Department of the Interior officials in Alaska and Washington, D.C. have indicated a willingness to accept the bulk of the LUPC's recommendations. Selections of railroad land in other village areas are expected to follow the outcome of the Eklutna claims. If the result for all railroad land located in village selection areas follows the LUPC recommendation, the railroad would lose up to 90 percent of its lands located in village selection areas. This could mean the loss of 7,554 acres, or 19.8 percent of the railroad's total land holdings, the loss of 19 million cubic yards of gravel and rock reserves; and the direct loss of $230,000 per year in lease revenue.

Cook Inlet Regional Corporation Selection of Railroad Land

A problem that could affect virtually all railroad lands is the special selection authority of Cook Inlet Region, Incorporated. CIRI considers substantially all railroad land holdings, whether located in Native village selection areas or not, to be eligible for selection. CIRI has formally asked that all railroad lands, except those conveyed to village corporations, be placed into the selection pool that was created by the special statutory authority for CIRI to select lands outside its regional boundaries. To date, CIRI's broad interpretation of the law has not been accepted by the Department of the Interior, which maintains that the CIRI selection pool cannot include railroad lands outside the village selections areas. However, CIRI is expected to challenge the Department of the Interior's view. If CIRI is successful in reversing the Department of the Interior's opinion either administratively or in court, substantially all railroad lands would be subject to CIRI selection. It would then be necessary for the Department of the Interior to make a 3(c) actual-use determination for all railroad lands selected, not just railroad lands located within village selection areas. The narrow standards in the final 3(e) regulations would then be applied to all railroad lands and could result in the loss of virtually all ARR's leased lands, gravel reserves, and other properties along the railbelt.

The Uses of Railroad Lands

The authors feel that the railroad's lands are as essential to its operations as are any of the other ARR assets. They believe that if the ARR is to act as a part of the market economy of the state, it must be capable of exercising some degree of control over the lands with which it is associated. Such control ranges from absolute and perpetual surface control over some of the land to more limited powers over other types of real property.

Lands now under the jurisdiction of the ARR may be categorized as follows:

1. Main line and branch line rights-of-way.
2. Terminals and ports.
3. Lands leased to traffic-producing tenants.
4. Material source lands (for example, gravel deposits).
5. Lands leased to nontraffic-producing tenants.
6. Lands held for future operations and traffic development.
7. Former rights-of-way.
8. Other holdings.

In the authors' opinion, each of these types of land requires specific protection if it is to continue supporting the railroad in its role as a functional participant in the state transport network.

Requiring the most protection are the main line and branch line rights of way. The nature of railroad operations requires that these lands be under complete control of the railroad, including at a minimum the right to:

1. Have complete freedom to add to or delete from the land any structures, roadbed, adjacent rocks, or gravel or to recontour the land as necessary.
2. Move track within the right-of-way or to add or delete track.
3. Provide loading and unloading facilities for railroad customers or for railroad purposes.
4. Add structures as may be necessary for operation.
5. Remove any vegetation which may be required to operate or expand the railroad's services.
6. Fence the right-of-way.
7. Operate any and all trains necessary.
8. Restrict or grant access to persons or vehicles as it sees fit.
9. Construct and maintain any drainage facilities necessary to preserve the right-of-way.
10. Make any provisions necessary to protect the operational capability of the right-of-way even if this requires access to and control of lands beyond the normal right-of-way limits (e.g., avalanche, flood control).
11. Take such action as may be necessary to safely operate in situations where conflicts with other transport modes may exist.

12. Place all necessary communications and signal devices within the right-of-way or to maintain separate rights-of-way for these items where necessary.

The authors believe that all of these elements must be available to enable the railroad to maintain the property, provide for safe operations, protect the public, meet public regulatory requirements, operate efficiently, and be responsive to economic opportunities and influences. The normal mechanism required to exercise these responsibilities is fee ownership of the property by a railroad. In those relatively unusual circumstances in which a railroad cannot obtain fee ownership, then it occupies a land parcel via a railroad easement. This gives the railroad complete control of all surface rights to the property, including the right to exclude the fee owner from the property and to exercise all of the functions noted above. The usual railroad right-of-way is 100 feet to either side of the center line of the main line. It is very unusual for less than this width of land to be available; however, wider rights-of-way are not uncommon. The Alaska Railroad's enabling legislation specifies a right-of-way width of 200 feet total with a supplement of 50 feet for purposes of operating a communications system where necessary. Terminal or port lands usually have no specific width related to track location. Rather, they are specified in the more traditional types of descriptions used generally in real property.

Lands Providing for Railroad Traffic Development

This category of land is second in importance to that of rights-of-way and terminals. The importance of this category goes beyond the lease income generated by the property to the very essence of railroad traffic and marketing. An analysis of the Alaska Railroad's traffic indicates that only a very small portion of operating revenues are derived from customers whose businesses are not directly adjacent to the railroad's right-of-way.[7] The efficient loading or unloading of carloads requires a customer to have direct access to railroad facilities. This factor is of such importance that it is usually quite difficult to serve a customer who is not directly linked to the railroad. One of the primary tools available to a railroad to solicit this type of traffic is land adjacent to its right-of-way on which a shipper can locate his facilities or store his goods. Thus, the lands available for leasing to traffic-producing customers contribute much to the ability of the railroad to sustain its present operation and to be economically viable. Likewise, those lands which are available for future lease to traffic-producing customers represent the long-term capability of the railroad to continue its existence as an economic enterprise.

In the authors' view, the only mechanism which will permit the railroad to manage these lands effectively is complete control of their use. While there is a clear obligation in ANCSA legislation to honor existing leases whether the landowner is the railroad or another party, the only manner in which a continuing commonality of interest between the railroad and future lease holders can be maintained is by providing ownership of those parcels for the railroad or by requiring any future owner to use them for rail traffic purposes so long as the railroad exists. It is not at all likely that the land development interests of the railroad and a future, non-railroad owner would coincide since land sale or lease for non-railroad purposes would frequently generate much higher income than would typical railroad uses.

Lands, Improvement, and Construction

This category includes those properties from which materials such as gravel and rock are obtained for maintenance and improvement. The authors feel that a railroad must have long-term access to such land as well as a fairly unrestricted right to remove materials as required. These needs are basic to the continuing operation of a railroad, because any railroad's roadbed and track will deteriorate rapidly if not regularly maintained and ballast renewed periodically. This renewal requirement is particularly critical in Alaska where the amount of moisture during spring breakup can, if not controlled, make track unusable within a single year. In addition to regular maintenance, there may be very large short-term demands for rock and gravel to repair damage from floods, avalanches, and earthquakes. The ARR annually requires an estimated 200,000 tons of gravel and 40,000 tons of rock for normal maintenance. In addition to this amount are requirements for emergencies and for track improvements, industry access, and alignment improvements. The latter items result from changing demands of railroad traffic and operation patterns. These are produced by such factors as changes in car types and commodities (such as bulk commodities requiring more substantial track), frequency of operations (more traffic requires more frequent attention regardless of commodity), types of operations (need to improve transit times to attract or keep time-sensitive traffic), or the need to improve operating efficiency (lower maintenance costs or operating costs by realigning track).

Unlike the previous land categories, there is no

[7] See "Traffic Base," page 9.

absolute requirement for ownership of the property if the railroad has the access and extraction rights mentioned previously or has access to commercial gravel. However, without railroad ownership of the materials, the costs of maintenance and improvement will be increased in two ways. One will be the commercial cost of gravel and rock. Having to purchase gravel at the current cost of $13 per ton would cost the ARR a minimum of $2,600,000 annually for normal maintenance. These costs would amount to an additional charge of $1.49 for each revenue ton carried by the Alaska Railroad (in 1980 dollars). In addition to this would be any aggregate demands for emergencies, new construction, or rebuilding. These additional costs would either have to be passed to shippers (and, thus, largely to consumers) by freight rate increases or would have to be supported by a public subsidy. Should increased freight rates be chosen, they will probably make the railroad less competitive and result in higher subsidy demands.

Lands Leased to Nontraffic-Producing Tenants

The lands leased to nontraffic-producing tenants are not necessary to the continued operation of the railroad, except where the lands can be converted to traffic-producing properties either by lease to customers for plant location or by exercise of mineral rights. How much these holdings may assist the railroad in its future operations will largely depend on location in relation to commercial opportunities. Even though the presently leased properties are not essential to the operational survival of the railroad, they do provide a major source of income which permits lower freight rates than might otherwise be the case. Should the railroad lose control of this land, the lost revenue would have to be obtained from other sources—either higher freight rates or public subsidy.

Former Rights-of-Way Land

This final land category is probably important only in terms of the future resource development role that policymakers may wish the railroad to play. Specifically, the railroad currently controls the land of a former right-of-way extending eastward up the Matanuska Valley approximately 30 miles past the Sutton, Eska, and Jonesville coal fields to Chickaloon. This right-of-way provides access to coal resources and will be an essential ingredient in any scheme to export coal from the Matanuska Valley.

According to ARR management, any railroad depends almost entirely upon the way it can use its lands if it is to operate effectively and to market that operation reasonably. Without this ability to utilize lands, any railroad is clearly an unattractive investment. Therefore, without a satisfactory resolution of the current questionable status of Alaska Railroad lands, any potential owner should be hesitant about becoming involved with the railroad. If he should do so without obtaining the types of guarantees specified above, it should be with the clear understanding that this course of action may well lead to a large and continuing drain upon his treasury.

Employee Concerns and Obligations

Present Situation

The Alaska Railroad (ARR) is a federal agency under the Federal Railroad Administration (FRA), U.S. Department of Transportation. Few of the positions held by employees of the Alaska Railroad, the only railroad operated by the federal government, are found in other federal agencies since the majority are unique to railroad operations. The ARR employees, having significant railroad operational experience and knowledge, represent one of the railroad's most valuable assets. In addition, the ARR employees have knowledge of the special railroad operational requirements for Alaska, with its difficult climatic conditions and associated maintenance requirements.

Declining Work Force. After the completion of the pipeline, the Alaska Railroad experienced declining traffic and revenues until the 1981 fiscal year (June 1980). Since that time, significant traffic and revenue increases have occurred despite high interest rates, inflation, and generally poor national economic conditions. In the face of increasing costs and declining revenues and traffic, the Alaska Railroad has annually reduced its work force over the last 5 years. For example, in FY 1976, the railroad employed an average of 1,025 persons, but by April 1981, this workforce totaled only 629 employees, including both permanent and temporary workers.[8]

The following table demonstrates the personnel levels by department in mid-April 1981, according to a railroad manning report (see Table 10).

Organized Labor and the ARR. As regards organized labor for its employees, the Alaska Railroad is similar to private railroads in the continental United States. Unlike private sector railroads, however, most labor agreements with the Alaska Railroad

[8] Because the Alaska Railroad is a federal agency, there is substantially larger lag between the acknowledgment of declining revenue traffic and a reduction in the number of employees than would be experienced in private railroad operations.

Table 10

Authorized vs. Actual Numbers of ARR Employees

Department	Authorized Position	Total Employees	Permanent Employees	Temporary Employees
Administration	86	82	77	5
Transportation	236	218	202	16
Engineering	270	181	137	44
Mechanical	142	138	130	8
Marketing	14	10	9	1
Total	757	629	555	74

are perpetually in effect until either organized labor or the railroad management wishes to open the labor agreements for renegotiation. This factor has interesting long-range implications in view of the potential transfer of the railroad's ownership and operations.

At the present time, five unions represent the Alaska Railroad employees. These are listed in Table 11 along with the number of employees which each represents.

The Full-Crew Law. An additional area of concern regarding employee operating agreements and a change from federal status involves a current Alaska statute, the full crew law—the only one left in the United States. It requires a five-man train crew, including a locomotive fireman, for all trains. Currently, because it is a federal agency, the ARR is exempt from this law and operates its trains on the basis of agreements negotiated with labor organizations. Usually, these require only three- or four-man crews for each train. If Alaska does not repeal this law during the course of any restructuring, it is unlikely that the railroad would ever be a self-supporting operation. If the present full crew law continues in force, the state should be prepared to pay several million dollars annually in subsidy for unnecessary labor.

Thus, the Alaska Railroad's employee situation is more complex than that of other railroads since its employees are generally not only members of various labor unions (similar to other railroads) but are also federal employees with all of the rights and benefits which are afforded participants in the federal government's civil service system. The implications of these double protection rights and benefits for the proposed transfer are far reaching and significant.

Financial Implications

Another significant consideration in the potential transfer of the Alaska Railroad from the federal government to the State of Alaska is the financial implications of employee protection, including federal retirement benefits.

The current employees of the Alaska Railroad have participated in and contributed to the federal Civil Service Retirement and Disability Fund. The Alaska Railroad has matched the contributions made by each employee during their employment to date, and these contributions have been made out of railroad revenues. The federal Civil Service Retirement System is under the jurisdiction of the U.S. Office of Personnel Management.

The Civil Service Retirement and Disability Fund is the accumulation of money held in trust by the U.S. Treasury for the purpose of paying annuity, refund, and death benefits to persons entitled to them. The present Alaska Railroad employees are among the persons entitled to these benefits.

The identified federal commitments which were made by the Alaska Railroad to employees at the time of employment include the total cost of relocation back to the point of recruitment of any employee and family recruited from outside Alaska when they choose to return. Other employee commitments include participation in the Federal Employees Group Life Insurance Program, health insurance benefits, accrued sick and annual leave, credit for time served as federal employees, turnaround trips to the point of recruitment every two years (as distinguished from relocation), and protection against arbitrary dismissal by the Merit Systems Protection Board.

There are many unanswered questions related to the employees and protection of their rights. These questions can best be answered and the problems

Table 11

5171 HTRA HB 485 - HB 525

743

solved by the federal government since it is their system and not Alaska's which has given the employees their protection. Failure to solve these obligations prior to the transition phase may well lead to lengthy and costly litigation as well as to excessive employee turnover. Thus, careful consideration of these factors as part of the federal transfer legislation would benefit all concerned.

We should also note that several of the existing labor agreements will continue in force until either the labor organizations or the railroad management wishes to open negotiations. It is probably best that these agreements remain in force for a specified time, after which they would be subject to new negotiations. The transfer legislation could provide for such negotiations and establish the framework for setting labor agreements.

In summary, ARR's legal obligations to its employees are extensive, and the federal government is in a much better position than the state to provide them with a proper transitional program. Such a program would protect the employees, the State of Alaska, and the federal government.

Finances

Its status as a federal agency complicates the financial condition of the Alaska Railroad. For example, none of the traditional measures of financial health such as price-earning, debt-equity, or even revenue-expense ratios properly portray the condition of the operation. In addition, the burden of passenger service (about 35 percent of all trains operated in 1980) distorts even the traditional railroad operating efficiency measures which might otherwise be employed. Financial reporting is done by methods and for reasons which differ from private practice and which are not even entirely consistent with federal government standards. Similarly, public sector capital budgeting and justification is not organized or presented using the methods of the rail industry. The differences result both from conflicting management objectives and requirements for management information which are dictated as much by federal control as by the need to manage operations.

The ARR receives operational funds from four primary sources:

1. Revenues earned by transporting freight and passengers.
2. Income from property leased to others.
3. Reimbursable services performed for others.
4. Congressional appropriations for acquiring capital assets and for major maintenance.

This income is all placed into a single revolving fun account with the U.S. Treasury against which th railroad draws to support its day-to-day operation and fund capital expenditures. Income placed in th account remains available until extended by ARR either for operations, capital expenditures, or o work authorized by appropriation.

While the revenue from the railroad's ow operations is largely independent of external con trol,[9] those resources obtained by Congressiona appropriation are subject to many of the sam restraints common to the budgets of all federa agencies. These requirements dictate a budgetar process which may have both revenue-based fundin and appropriated funding used for similar purposes while justification for their use may be quite dif ferent. The justification for appropriated fundin is similar to that seen for other agencies whic seek money to maintain the existing property and operations and to comply with federal guidelines This is somewhat different from the approach usec on most private rail systems where budg[illegible]re developed and justified on the basis of the [illegible] bility of operations and the investment [illegible]ng funded.

With this background, let us look in more d at the railroad's financial situation. This analysis will deal with the *financial statements, revenues and expenses, assets and liabilities, and capital budgets.* We will review both the information available from this material and its limitations. In addition, where possible, we will explain the future implications of these items.

Reporting Financial Information

The Alaska Railroad prepares three public financial documents. One of these, the *capital budget and appropriation request*, will be dealt with in another part of this section. The other two are the *annual report* and the *monthly financial statements*. While both provide useful information, they are limited in scope when compared to similar documents prepared by private railroads.

Annual Reports. The annual reports are prepared following the end of each federal fiscal year (September 30). They summarize the previous year's financial performances and contain a limited amount of operational data as well as a narrative outline of the previous year's events. The financial information includes a brief income statement, balance sheet, and

[9]The only restraint upon expenditures of these revenues is that they must be used for a function authorized the railroad in its enabling legislation, as amended.

a statement of changes in financial position. None of these are entirely consistent with private practice in stockholder reports, principally due to the federal status. The differences are most clearly apparent in the balance sheet where liabilities include only a limited number of current items and neither long-term liabilities nor stockholders' equity. The long-term liabilities do not exist since the railroad is debt free and need not provide for taxes. Substituted for stockholder's equity is an item termed "Proprietary Interest of the United States Government," which is the sum of all federal appropriations plus retained earning from operations.

The income statement varies from that of private practice in that it does not account for fixed charges other than depreciation. It is important to note that the ARR, as is common with most railroads, does not capitalize and depreciate its track structure. Rather, it uses the practice known as betterment accounting, which charges any replacement material regardless of the amount of expenditure, to current maintenance expenses and capitalizes only the improvements. While the result of this practice for a private railroad is to present the financial status in a more conservative light, the effect on the Alaska Railroad is slightly different. Because the ARR seeks federal appropriations to perform some major track maintenance (which becomes part of the proprietary interest), this work is effectively capitalized (whether it involves replacements or improvements) and is then not depreciated. Effectively, this practice tends to understate the long-term capital requirements to maintain an adequate track structure while at the same time, it overstates current maintenance expenditures.

Table 12 shows the changes in fixed asset values which have taken place in the 1976-1981 period. The increase is due primarily to additions to equipment (mostly fifteen new locomotives) and to structures.

A difficulty on the asset side of the balance sheet involves establishing the value of assets. It should be remembered that a considerable portion of the ARR properties were transferred from other federal agencies, often at a cost of only transport charges or salvage value. The entire line from Whittier to Portage is in this category. To what extent this type of accounting for the assets understates their true value is not certain. For present day-to-day operational purposes, it is not of great importance except that it understates the depreciation charges and thus the capital reserve requirements. Any restructuring will necessitate the identification of appropriate asset values for rate-making and other purposes.

Table 12

End of Fiscal Year Fixed Assets

*Only purchased lands are included in this statement. See Table 9 for values of all lands.

Source: Alaska Railroad Financial Statements

The lands controlled by the railroad are also not included in assets, except for those directly purchased by the ARR, because most of the land was transferred to the railroad at no cost by executive order or public land order.

Monthly Financial Statements. The monthly financial statements are much more detailed than the annual reports. They provide both an income statement and a balance sheet in the same format as the annual report. However, each line item is further broken down into relevant details. Conceptually, the same limitations apply to these statements as to the annual reports. This investigation, however, discovered an additional serious limitation: the inability to isolate passenger- from freight-service costs. While revenues are separately reported, costs are separated in only a few categories. Those that are recognized appear to be only a few of the short-term, out-of-pocket costs. This clearly does not reflect the full, direct cost of providing the passenger service, which constitutes 30 to 40 percent of all train miles operated. Because of the importance of this function of the ARR, we allocated the costs left unassigned by the financial statements and present them later in this section.

Another important difference between the ARR and normal industry reporting occurs in the area of operational statistics, which allow the analyst to prepare efficiency measurements. While the annual report contains limited data on operations, the financial statements have none. Those in the annual report are not equivalent to those required of private railroads in their annual reports to the ICC or even to

many of those prepared for stockholders. This area represents an important deficiency in the ARR's public reports.

With these explanations in mind, it is appropriate to look at the financial performance of the Alaska Railroad during the past several years.

Financial Performance

The Alaska Railroad has experienced rather varied financial circumstances over the past decade. It experienced some of its best years during 1975 and 1976 and some of its worst in 1979 and 1980. The ARR's cyclic performance during these years is representative of the entire financial and operational history of the railroad. It also indicates the sensitivity of the railroad's financial performance to traffic changes which would be considered minor on most railroads.

Table 13 summarizes the income and expense performance between October 1975 and September 1981. As can be seen, revenues had fallen by 1979 to half their 1976 level; expenses stabilized after 1977 and remained so through 1980. This indicates the sensitivity of the profit or loss to changes in revenue rather than to cost factors. This is a basic fact for all light-density railroads; they must operate at certain minimum levels if they are to handle available traffic and maintain certain operable levels. That is what has occurred on the Alaska Railroad. To retain traffic, it has had to maintain and operate the property at a certain level. However, it would cost only marginally more to operate at a considerably higher level, generating much more revenue. The 1981 results further illustrate this problem. As noted below, the composition of costs and revenues provides significant insight into the various cost factors.

Tables 14, 15, and 16 provide a more detailed analysis of 1978, 1979, and 1980 revenues and expenses distributed to freight and passenger service and to other activities. It is important to note that the method used by this analysis develops fully allocated costs.[10] That is, the method allocates both the direct, short-term, out-of-pocket costs and the various types of joint costs and overhead to the appropriate service. This estimates the resources used to supervise the passenger trains' operation and maintenance, to market and administer them, to provide the incremental track maintenance required by them, to service and supply them, and to control their activities. It should be realized that if the passenger trains were eliminated, many of these joint and common costs would remain. However, over the long term, it would be possible to eliminate them

or to divert the resources they represent to more productive uses.[11]

The analysis indicates that the nonrail activities have consistently shown a positive net income. The freight service has shown a positive cash flow (net income before deduction of depreciation) in 1978 and 1980, but 1979 indicates a $1.02 million cash loss. For the 3 years, the total cash gain on freight operations was $2.48 million. While this is not sufficient to cover all depreciation charges, it does represent an impressive performance, particularly when considered in relation to the weak Alaska economy during this period. With freight and other activities combined, the cash flow is positive for all 3 years, and total net income is positive (or zero) in 1978 and 1980. This leaves the passenger service as the principal source of the substantial losses shown in the annual reports. Such a result is consistent with the problems experienced by other North American railroads during the past 30 years.

[11] Where ARR accounting records did not specifically allocate costs to either freight or passenger service, they were so allocated using methods prescribed by the Interstate Commerce Commission to the extent that the required operating statistics were available. See Code of Federal Regulations, Title 49, Part 1242.

There are two possible causes for the passenger service's poor financial situation: excessive expenses or inadequate revenues. An examination of the various expense categories indicates that they are not excessive considering the substantial proportion of the operations represented by passenger service. Given the nature of passenger train operations, this is in fact a substantial compliment to the ARR management. This result is confirmed by comparing the ARR passenger service to that of the Denver and Rio Grande Western (D&RGW) passenger service for comparable periods. During 1978 to 1980, approximately the same number of passenger train miles were operated by both railroads. Expenses were also comparable; however, the D&RGW revenues were 50 percent to 100 percent greater, resulting in a significantly smaller loss attributed to passenger service. ARR revenues, on the other hand, were not large enough to be comparable to the proportion of total operations represented by passenger service.

A more detailed discussion of the passenger problem is contained in the following section (Competitive and Regulatory Environment). It appears, however, that it would be impossible to generate enough passenger traffic to make the net income from passenger operations positive. This is the basis of a substantial long-term public policy question. It

is also important to realize that, except for a modest depreciation charge against passenger service, this analysis has not included any capital costs.

Since it appears that freight service is a fairly stable income source even in economically depressed years, it is useful to examine the effects of adding a major additional long-term movement. For purposes of this discussion, it is assumed that the recently announced pending coal movement from Healy to Seward for export saw its initial operation in 1980. The revised income statement is shown in Table 17 based on the proposed 800,000 metric tons moving at a rate of $10.10 per ton. Operation expenses are based on data supplied by ARR, and depreciation costs are computed at current rates based on the assumption that all new equipment is used for the movement. For this analysis, only freight and other activities are considered. The changes in performan due to this single movement are considerable overall net income of $0 becomes a positive $1 million, and total cash generated goes from $3 million to $5.37 million. This clearly indicates bo the dependence of a light-density railroad on sm movements and, more importantly, the positi effects of a substantial traffic source with long-te prospects.

Thus, the overall indication is of a property th has undergone substantial financial changes over th past 5 years. Although it has seen serious diminutio in the volume and ton-miles of avaiuable freig traffic, there has been sufficient control of costs t maintain an overall positive cash flow each year aft the passenger service is deducted from the results high-revenue, moderate-cost movement such as th proposed for coal could add stability to the perfor ance.

Source: Table 16 and Alaska Railroad records.

Unlike private railroads, the Alaska Railroa does not have access to capital markets. It cannot borrow funds for equipment and cannot mortgage property to generate capital. These factors mean th the only methods of obtaining funds for capit improvements are through internal generation of de[illegible]ed charges or financial surpluses or appropriation. It also means that it must be sufficiently profitable to pay cash for improvements.[12]

Table 18 lists the capital and major mai tenance expenses between July 1975 and Septem ber 1980 along with the source of funds. Clearly about 75 percent of the funding came from appro priations rather than from earnings. As noted in th previous section, it appears that the principal reaso for this is the negative impact of passenger service o income. It also indicates that without passenge service, the ARR would have produced $7.79 millio internal capital between 1978 and 1980 instead o the $1.2 million actually available. This would hav reduced the necessary appropriation from $17.3 mi lion to $9.51 million, even assuming that no mone had been retained from earlier, more prosperou years. Clearly, the recognition of passenger service a a public good requiring public support could have major impact upon the railroad's capital budge flexibility.

Capital Budgets

[12]The usual method used by private railroads to purchase rai equipment is through the "Philadelphia Plan," in which th down payment is 20 percent of purchase price, with th balance paid over 15 years. Because rail equipment offer excellent security, the interest rates are usually substantially below the prime rate.

Source: Alaska Railroad 1980 Annual Report.

It is in capital budgeting that the Alaska Railroad differs the most financially from private operations. This difference results from, and is evident in, several features of the budget, including the distribution among expenditure types, the budget process and line item justifications, and the types of programs included in the budget. As noted earlier, many of the budgeting objectives, fund sources, and utilization capabilities differ. These variations are reflected in the documents themselves.

The budget tends to be heavily weighted toward improving facilities and light equipment rather than purchasing rolling stock. In private industry, the reverse tends to be true. There are three reasons for the difference. One is the ease with which private industry can finance equipment. This ease permits a relatively modest cash flow to leverage substantial amounts of equipment purchases, particularly when used in conjunction with reasonable interest rates and tax advantages related to interest, investment tax credits, and accelerated depreciation. Obviously, the ARR cannot take advantage of any of these. A second reason that equipment expenditures receive less emphasis, particularly in marginal years, is that individual items are so expensive. A locomotive costs $750,000 to $900,000, while cars run $40,000 to $50,000 each. Thus, if an ARR budget is cut by FRA, OMB, or the Congress, an event which occurs regularly, it is easier to reduce the size of track programs than equipment purchases, since the former tends to comprise a large number of smaller items and personnel requirements. With track or structure programs, at least some of the improvement can usually be made, but an equipment acquisition program must often be written off entirely even if a portion of the funding is not approved. A third reason for these budget priorities is that it is easier to repair older equipment and to keep it operating than it is to operate over track which has not been properly maintained. Ultimately, the differences in budget priorities provide for physical facilities maintenance in the manner of most federal agencies, but they do not necessarily respond to marketplace influences.

The next difference between ARR's budget and those of private capital arises in the budget development process and the basis for project selection and justification. On private railroads, the projects for a capital improvement plan are developed on the basis of either rate of return or net present value of the proposal. The ability to contribute to the profitability (usually long term) of the organization is the primary criteria of selection. On the Alaska Railroad, this does not appear to be strictly the case. ARR budgeting documents must conform to U.S. Department of Transportation requirements. These requirements rarely reflect a need to operate profitably. Thus, the justification for projects in the ARR budget is almost inevitably based on cost minimization criteria or satisfaction of federal requirements. While cost minimization is an important part of developing an efficient operation, it may or may not reflect the most profitable use of resources. Such an approach also fails to consider the opportunity costs of alternative uses of capital. Between the 1978 and 1982 budget requests, that of 1979 was the only one which contained a cost-benefit analysis and a computation of internal rate-of-return for individual projects. In no case was there an attempt to estimate overall returns for groups of projects. These overall numbers may be considerably different from the sum of individual returns due to various project interdependencies and timings. It should be emphasized that the majority of these problems result from the requirement that the ARR follow federal budgeting procedures rather than allowing its management to develop programs, as much as possible, on the same basis as private firms.

The final difference between ARR and private budgeting practices is the type of projects incorporated into the capital budget. The ARR's budget includes both strict capital items and major maintenance, which would be part of ordinary expenses under ICC accounting rules and within most private organizations. This causes the income requirements to be understated. This problem is exacerbated by

the use of betterment accounting for track structure as explained earlier. The proportion of the budget which is actually devoted to maintenance rather than to capital expenditures is difficult to estimate from available data. However, the FY 1982 budget, at the minimum level, lists such items as cross-tie replacement, track surfacing, vegetation control, equipment repair and refurbishing, and building repair, none of which appear to be normal capital items. Once again, the requirement to conform with federal budgeting (this time coupled with railroad betterment accounting) distorts the financial picture of the railroad.

The final capital budgeting item which requires review is the question of deferred maintenance. ARR defines deferred maintenance as:

> "... the accumulated maintenance that would have to be performed in order to bring the physical plant up to the material condition and capacity considered necessary to accommodate the level of freight and passenger traffic expected."

In 1977, the ARR estimated deferred maintenance at $58.9 million, with this increasing to $63 million by 1980. Of the 1977 total, $38.7 million was considered to be delayed capital expenditures.[13] Table 19 shows the breakdown of the 1977 total by functional area. It is important to realize that these areas do not represent items which make it unsafe or difficult to operate the railroad. These are items which should be programmed projects but have had implementation delayed. It is not unusual practice in the rail industry to adopt this strategy when revenues are not at an adequate level. Since much of the programming is on a cyclical basis and the items are long-term assets, the practice becomes critical only when it is continued over an extended period. It is also possible to "trade" capital expenditures in exchange for higher current maintenance expenditures. Both are part of the situation at the ARR. This is particularly true for the roadbed and track category where many of the charges are for subgrade which should be upgraded to eliminate future maintenance demand. However, the principal result of not performing the work will be higher current costs, not unsafe conditions or major operational problems. This is the nature of many of ARR's problems, particularly the delayed capital expenditures, although a good deal of the tie renewal appears to be true deferred maintenance.

Thus, it appears that while deferred maintenance

[13] Once again, the effect of betterment accounting for track is to increase the apparent level of deferred maintenance. Actually, many track-related deferred-maintenance items are delayed capital expenditures.

may become a long-term difficulty if there is a ve large traffic increase (more than the currently pr jected coal traffic), it does not seem to be a mai current problem. The solution of the r e remains difficult to project until the type of s structure under which this railroad will be t can be determined. If structured corre. projected organization may provide consi. potential to address the problem, certainly more tha the present federal structure.

Competitive and Regulatory Environment

The Alaska Railroad both competes and coo erates with Alaska motor carriers and, through barge connections, with marine carriers operati between Alaska and the United States. Because t local freight carried by ARR is unsuitable for roa haulage due to its bulk, the railroad is relatively fre from local competition. The exceptions to this a some petroleum products movement and the loc TOFC/COFC service between Anchorage and Fai banks, which amounts to less than 10 percent of th total traffic between these two points.

However, there are numerous examples of loc tariffs which represent cooperative arrangements. I fact, the Anchorage-Fairbanks TOFC/COFC repre sents one such tariff, while others include gra between Delta and rail points, pipe from Seward t Anchorage to Prudhoe Bay, cement from Anchora to interior points, and petroleum products between variety of places. Table 20 lists several Alask Railroad tariffs which include through rates involvin both the Alaska Railroad and motor carriers. Moto carriers also provide drayage services in Anchorag

Table 20

Alaska Railroad Tariffs Involving Joint Rail-Motor Rates

and Fairbanks for the railroad. Table 21 provides a partial list of motor carriers involved in joint arrangements.

It is the interline traffic which brings the railroad into the most direct competition with private carriers. However, even here, ARR is functioning in cooperation with other private firms. The nature of the commodities moved makes the interline traffic more competitive than the local.[14] The marine competitors in this service are Sea-Land Service and Totem Ocean Trailer Express, who operate container ships and roll-on-roll-off trailer ships, respectively, between Puget Sound ports and Anchorage. Both also have through tariff arrangements with motor carriers, as well as with the railroad.

The importance of this traffic is in the volumes available and its high value. The total container, trailer, and railcar traffic through Anchorage and Whittier is presently about 1,350,000 tons annually. Of this, the railroad hauls about 250,000 tons. Some of this is not subject to alternate routings (like heavy machinery, many chemicals, heavy structural shapes); however, most could move by any carrier.

The shipper's choice of carrier is usually based on a combination of price and service characteristics depending on value of cargo and delivery requirements. The most recent innovation used to influence market share was the introduction of contract rates by the railroad. These require the shipper to provide a certain minimum number of carloads in exchange for certain long-term rate maximums and service guarantees. This type of rate was authorized by federal legislation in 1976 and has begun to gain fairly wide acceptance nationally only in the last 2 years. It has created considerable controversy in Alaska, principally because of its success. It has also been the subject of court action and a congressionally mandated ICC investigation to determine whether the prices in the railroad's contracts are in conformance with statutory requirements. Preliminary results indicate that the rates exceed the minimum levels allowed by law and are well below maximum allowable levels.[15]

It is the Interstate Commerce Commission which is responsible for regulation of the economic relations of the various Alaska motor, rail, and water carriers. Executive Order 11107 of April 25, 1963, placed the Alaska Railroad partially under the jurisdiction of the ICC for rate-setting purposes. There were two exceptions which have created difficulties in the railroad's relationship with its competitors, both in terms of marketing and in rate making. These two sections provided that:

1. "The Secretary . . . shall allocate . . . a proper portion of the capital investment of the railroad . . . to the national public purposes for which it had originally been built." (This part of the railroad's valuation was to be excluded from the costs on which rates were based.)
2. " . . . Rates and charges shall not be deemed to be unjust or unreasonable by reason of failure to yield sufficient revenues to cover any amounts for taxes not actually required by law to be paid or provide a return on capital investment."

Effectively these two provisions allowed the railroad to retain most of its rate-making freedom. This situation remained basically unchanged until 1980 when passage of the Staggers Rail Act (and the subsequent appropriation bill) mandated an investi-

[14] See "Traffic Base," pages 9-11 for a description of the competitive commodity types.

[15] It should also be noted that the ICC investigation has, for the first time, included a cost of capital for the federal investment in the railroad as a part of the basis for determining the legality of rates.

gation of the Alaska Railroad's rail-water rates (the competitive interline movements) to determine whether they were in conformance with the provisions of the act. This represented a substantial change in policy, since the Staggers Act contains very specific provisions regarding the allowable cost basis for rates. The statutory language of the Act makes it clear that the railroad is expected to meet these cost-based tariff requirements, which now form much of the basis for the interline rate making.[16]

Provisions of the Staggers Rail Act provide the basis for marketing and management of rail service delivery. They provide for a good deal of latitude in implementation; however, they do require that economic efficiency be a basic consideration in developing any service and pricing package. They also place a number of restrictions on the relationships between carriers.

Establishing a clear set of pricing rules for the Alaska Railroad is probably the most important function of the new regulatory legislation and the subsequent ICC investigation. These rules define an area of marketing flexibility not previously available. These statutory bounds for pricing also allow the railroad to compete more freely, and they protect its competitors from predatory pricing. However, it is important that they be applied as outlined in the statute if they are to be effectively implemented. Artificial restrictions on the ARR do not appear to be in the best interests of either the state, the ARR's competitors, or the railroad. If Alaska is to develop a financially viable transport system, all participants must become active competitors rather than relying on artificial constraints.

---

[16]The Staggers Rail Act of 1980 was enacted following a long period of dissatisfaction with results of ICC regulatory activity and its effect on the financial viability of the rail industry. It had been preceded 3 months earlier by the Motor Carrier Act of 1980 which withdrew most of the economic regulations applicable to the trucking industry. The goals of the rail act were:

1. "To assist the railroads of the nation in rehabilitating the rail system in order to meet the demands of interstate commerce and the national defense.
2. To reform federal regulatory policy so as to preserve a safe, adequate, economical, efficient, and financially stable rail system.
3. To assist the rail system to remain viable in the private section of the economy.
4. To provide a regulatory process that balances the needs of carriers, shippers, and the public.
5. To assist in the rehabilitation and financing of the rail system."

The regulatory environment of the Staggers Act provides a setting for both the competitive and cooperative arrangements between the Alaska Railroad and other carriers. The whole regulatory structure is still in the implementation stage, and the precise application procedure for the new system is not yet known with any degree of certainty. However, it is certain that the new regulations, if imaginatively applied by management, will provide the railroad with considerable opportunity to improve its profitability while simultaneously forcing improvement in the quality of management data and its use. They provide a basic framework for establishing the Alaska Railroad as an integral competitive segment of the state's transport system.

Passenger Service

The Alaska Railroad provides regular scheduled passenger service and special passenger trains. There are two distinct parts of the scheduled passenger service: the long-distance service between Anchorage and Fairbanks and the specialized shuttle service between Portage and Whittier.

The Anchorage-Fairbanks service includes express trains daily in each direction with stops at Talkeetna and Denali Park during the summer tourist months (May-September). In addition, there are three local mixed trains (passenger and freight cars) per week during the summer. The local trains stop as necessary for passengers along the route and permit hunters, fishermen, and hikers to reach parts of Alaska inaccessible by road. The mixed trains are limited by union agreements to a maximum of twenty-five freight cars per train unless granted a special exemption. The express trains operate with coaches, a dining car, a lounge car, a dome car, and a baggage car for checked luggage. In the winter, there is mixed train passenger service once per week. Mixed trains in both summer and winter have coaches and a diner for passenger service. The summer trains represent one of the most salable tourist attractions in Southcentral and Interior Alaska.

Additional passenger service is offered by the Alaska Railroad in the form of a shuttle train between Portage and Whittier, a distance of 12.4 miles. The train moves autos, trucks, buses, (with passengers allowed to remain in their vehicles) on special quick-loading flat cars and also carries passengers in coaches for the 35-minute trip, which includes three-and-one-half miles of tunnels.

This shuttle train provides access to the state ferry service between Whittier and Valdez and access for the private and commercial boat owners who moor their craft at Whittier. The railroad is the only

means of overland transportation to and from Whittier. The equipment originates out of Anchorage and returns to Anchorage each night. The shuttle train from Portage to Whittier provides a summer schedule of three round trips three days per week, four round trips two days per week, and two round trips on the remaining two days of the week. In the winter, the shuttle makes two round trips between Portage and Whittier on Sunday, Wednesday, and Friday, returning to Anchorage each night.

Table 22 indicates the total numbers of passengers carried by the Alaska Railroad during the ten fiscal years from 1971 to 1980. Passenger traffic has been increasing annually since 1975. There were about 154,000 passengers carried in 1953, making it the highest year in passenger service on the railroad. The passengers carried in 1979 reached the second highest level (151,045) followed in 1980 by almost as many (150,678).

Table 22

Alaska Railroad Passengers Carried
FY 1971-1980

Fiscal Year	Passengers
1971	84,000
1972	102,000
1973	74,000
1974	84,000
1975	81,000
1976	84,500
1977	103,632
1978	126,277
1979	151,045
1980	150,678

Source. Alaska Railroad records.

Table 23 shows the passenger service in the last 2 years. While the Anchorage-Fairbanks run suffered a traffic loss, there was a substantial gain on both the Portage-Whittier shuttle and special trains. The railroad operates excursion train services for special events such as the Alaska State Fair in Palmer and scenic trips to Seward.

It is important for the State of Alaska and the railroad to focus on the purpose and function of the passenger service. The State has already provided financial subsidy to assist in meeting some of its operational deficit and in providing improved shuttle service. The passenger equipment now in service is old and will soon have to be substantially rehabilitated to compete in the marketplace. The passenger cars are, in general, well-maintained, but are now in need of modernization, including installation of all-electric heating and air conditioning. The interiors have not been refurbished except for upholstery. According to a memorandum by AMTRAK evaluating the Alaska Railroad passenger service, dated November 21, 1979, the estimated cost to rehabilitate passenger equipment would be about $6 million. The railroad, in the next few years, can keep sufficient equipment in service, particularly with the recent acquisition of eight long-distance coaches from the Southern Railway. In the long term, however, the form, style, and mechanical aspects of passenger train service in Alaska must be re-evaluated.

Table 23

Alaska Railroad Passenger Service
FY 1979–1980

Service	FY 1980	FY 1979	Percent Change
Anchorage-Denali Park-Fairbanks	84,186	81,207	−11.5%
Anchorage-Portage-Whittier (Shuttle)	57,357	64,730	+ 2.1
Special	9,135	5,108	+79.2
Total	150,678	151,045	− 0.2%

Source. Alaska Railroad Annual Reports.

It should be clear from previous portions of this report that if the State of Alaska is to have passenger train service on the Alaska Railroad, it will require a substantial public operational and capital subsidy. The freight and other revenues of the railroad have, in the past, been used as a subsidy supplement to the passenger revenue. This is known as "cross-subsidy"—taking freight income to pay for passenger operating expenses. However, the authors feel that such cross subsidization is not in the best interest of the ARR, if the railroad is to function efficiently as a business enterprise within the state's total transportation system.

In the "Finances" section of this report, we attempted to ascertain more accurately the revenue and expenses of freight and passenger service (page 20). Our analysis indicated that the cost of passenger service is reasonable when comparing the number of passenger trains operated to the total number of trains. Therefore, the operational costs for passenger service appear to be appropriate. The problem is that there are simply an insufficient number of passengers to pay operational costs. Raising fares to provide revenue equal to such operational costs would reduce the number of passengers served, leading to a continu-

ation of the deficit.

Revenue and expenses have been allocated between passenger and other categories. The results of these allocations may be found in Table 24. In each of the past 3 years, passenger service has shown a substantial loss while freight and other railroad services have shown a gain. This is true even in the light of unfavorable economic conditions and low traffic volumes during these years. The financial losses in passenger service have been sufficient to cause the Alaska Railroad to have an overall loss. Thus, cross-subsidization of passenger service by freight service clearly is detrimental to the railroad. The subsidy required for each passenger carried was as follows: 1978—$38.41; 1979—$27.87, 1980—$36.57.

It should also be noted that in this analysis the passenger service received credit for revenue from the vehicles as well as the passengers hauled on the Portage-Whittier shuttle service and for mail and baggage revenues.

Table 24

Alaska Railroad Revenue and Expenses
FY 1978–1980
($ in millions)

	FY 1978	FY 1979	FY 1980
Passengers			
Revenue	$1.50	$1.96	$2.09
Cash Expenses	6.35	6.17	7.60
Gain (Loss)	(4.85)	(4.21)	(5.51)
Freight and Other			
Revenue	27.46	23.19	26.80
Cash Expenses	23.97	22.10	23.59
Gain (Loss)	3.49	1.09	3.21

Note: Depreciation is not included but may be found elsewhere in the report.

Sources: Alaska Railroad reports; Interstate Commerce Commission investigation; computed by Institute of Social and Economic Research, University of Alaska, and Givens and Associates, Inc.

Passenger service is important to Alaska. It is a service that can and should be provided by the ARR. However, the interests of the railroad and the state would best be served if passenger and freight service were separated both operationally and by cost accounting. In that way, passenger service would still be provided as required and requested, but with the understanding that the service requires public subsidy.

RESTRUCTURING ALTERNATIVES

Congress may soon pass legislation for the transfer of the Alaska Railroad from the Federal Railroad Administration, U.S. Department of Transportation, to the State of Alaska. Before such a transfer can take place, the State of Alaska must determine the organizational structure it will use to own and operate the railroad. This organizational structure will most probably become the basis for state legislation.

A potential approach to the state's ownership and operation of the ARR in the period of transition is discussed on pages 34 and 35 of this report ("Alaska Railroad Transition"). The purpose of this section is to describe various organizational alternatives for the state to consider before it selects the most appropriate organization for the Alaska Railroad.

Existing Organizational Limitations

In selecting an appropriate organization for a state-owned and/or state-operated Alaska Railroad, policymakers must understand the limitations of the existing organizational structure in order to avoid perpetuating them. These limitations are best described below:

- Inability to Obtain Adequate Capital Investment Funds. Although the Alaska Railroad, like any rail property, is capital intensive, the ARR has no continuing means for obtaining adequate funds for essential capital investments. All capital funds for the Alaska Railroad have been obtained out of the revenue generated by the railroad or from Congressional appropriations. The railroad is debt free, which is advantageous. However, the funds available from the two current capital sources, revenue and appropriations, have been insufficient to modernize much of the car fleet and other equipment including passenger cars. The process for obtaining the needed capital appropriations is difficult and usually political, providing the railroad with little assurance that the required funds will be available when necessary. The funding mechanisms presently available also make it impossible for the ARR to realistically plan and budget more than a year in advance. There is a need for the Alaska Railroad to be able to borrow capital investment funds and/or to raise such funds from a variety of public and private sources.
- Marketing is Difficult Because of Competitive Issues. As a federal agency, the Alaska Railroad faces difficult marketing conditions. If the railroad markets aggressively, other transportation firms allege that the reason for the railroad's traffic

success is public financial support. On the other hand, the lack of adequate marketing may result in the need for public subsidy. The Interstate Commerce Commission (ICC) was mandated by the Staggers Rail Act of 1980 to investigate such allegations. The ICC study has been completed and found that the questioned rates charged by the Alaska Railroad are compensatory and do not constitute predatory pricing, as was alleged by some of its marine and highway competitors. The Alaska Railroad needs the freedom to agressively market its transportation services.

- **Management Does Not Have Required Flexibility.** Alaska's economic activity is dynamic, which means that rail service needs also change frequently. Under its federal agency status, the Alaska Railroad management does not have the flexibility required to be responsive to changing rail service needs. Even though the railroad has enjoyed a certain autonomy through the years, there are endless federal regulations which must be followed in the transactions of daily business. The ARR management needs flexibility in operating the railroad if they are to make it a self-sufficient component of Alaska's economy and if the ARR is to contribute its full capability to Alaska's overall development.

- **Employees are Unsure of Their Status.** Most of the employees of the Alaska Railroad belong to unions in addition to being federal agency personnel. Therefore, the employees are uncertain whether they work for a railroad or for a federal agency. In effect, the railroad personnel have two sets of rules by which personnel matters are settled, and often these regulations conflict, causing confusion and sometimes hampering performance. They certainly make administration of the property difficult.

- **Needs for Rail Services Have Changed.** The Enabling Act for the Alaska Railroad established as primary purposes for the railroad the connection of Interior Alaska with open Pacific Ocean harbors and the stimulation of development. These purposes have either been fulfilled or are no longer applicable. There has not been a recent policy evaluation or a determination for various aspects of rail service in Alaska based on the changes which have occurred. These include such changes as:

  1. Statehood.
  2. Energy development in Alaska.
  3. Changes in Alaska ports and port development.
  4. Marine transportation interface changes.
  5. Railroad deregulation and availability of contract rates.
  6. Less reliance on rail transport for defense installations.
  7. Improvements in nonrailroad transportation in Alaska.

  Due to these circumstances, the state must clearly determine the role that the Alaska Railroad should now play as part of the Alaska transportation system.

- **Alaska Railroad is Burdened with Federal Agency Requirements.** The Alaska Railroad, in addition to the requirements placed on other common carriers by federal regulations, must also meet various federal agency requirements. Because it is a federal agency, numerous reports are required of the railroad that do not conform to railroad practices or procedures. The railroad must, therefore, spend time trying to force its operation into a format which was designed for other federal agencies. This results in nonproductive time and increased documentation either in preparing reports of no significant management value, explaining why the Alaska Railroad cannot comply with federal requirements, or explaining what was reported in an attempt to comply with external demands.

- **Procurement is Cumbersome and Slow.** The Alaska Railroad must follow federal procurement regulations. Since the Alaska Railroad is the only railroad owned and operated by the federal government, the equipment, materials, and supplies for the railroad are not common federal agency purchases. There are unnecessary delays in obtaining essential supplies and equipment which often limit the railroad's ability to either anticipate or react to market opportunities. The procurement process is also a public process which tends to preclude negotiated purchases and requires direct cash outlays, thereby increasing the costs.

- **Passenger Service is Subsidized by Freight.** Railroad passenger service is more of a social service than a business. Fares (which could be higher than they currently are) cannot be raised sufficiently to cover the true cost of the service. However, rail passenger service is publicly subsidized throughout the United States and the rest of the world. Since the rail freight service is used to subsidize passenger service in Alaska, the public has had to provide the Alaska Railroad with tax revenues for its operation, maintenance, and rehabilitation from

time to time. The accounting system on the Alaska Railroad does not adequately separate the freight and passenger costs for railroad expenses. There is a need to separate the freight and passenger costs and to allocate the passenger cost to the public as a social service.

- **Alaska Railroad Cannot Negotiate Solutions to its Problems.** As a federal agency, the Alaska Railroad has a high degree of public visibility. This tends to preclude the ARR's negotiating solutions to its problems or taking advantage of business opportunities. In the past, the railroad has been able to make certain business decisions without the necessity of Washington approval. Recently, however, there appears to be a shift toward centralization of decision making which prevents negotiations for business within Alaska.

Railroad Perspective: Public Service or Business?

The history of the Alaska Railroad bears out this split perspective of the railroad, is it public service or business? Viewed historically from a public service perspective, the Alaska Railroad has been a success. It has generally accomplished its public service mission by connecting Interior Alaska with open Pacific Ocean ports. The railroad has assisted in developing the urban communities in what has been called the "Railbelt" of Alaska. The ARR serves Alaska's coal fields; it has opened up the Matanuska Valley agricultural areas; it has fostered settlement of public lands. In addition, the ARR has moved large volumes of commodities to and from Alaskan communities and between them at a reasonable cost. Products have been made available at affordable transportation costs. The movement of military personnel and material by rail has aided the national defense structure. The railroad has also provided passenger trains as a public service function.

However, the view of the Alaska Railroad from the business perspective has been less clear and more intermittent. The business perspective involves railroad economics—meeting fully allocated costs plus a return on the investment. The Alaska Railroad has generally not been a profitable business enterprise, except for a few years of substantial traffic resulting from the war or pipeline construction.

This dichotomy between public service and business railroad operation has been reflected in the management and personnel of the Alaska Railroad. Marketing of the railroad's services, as previously mentioned, has also reflected this conflict of perspective. The management decisions which have been made on the railroad have, on occasion, reflected both the public service and the business perspectives.

Faced with the prospect of state ownership and (or) operation of the Alaska Railroad, the decision-makers in the State of Alaska must decide whether the property is to be governed from a public service or a business orientation. The long-range implications of this decision for the people of Alaska are significant. Much debate, discussion, and careful consideration will be required to determine this policy, and the state must also consciously decide where to draw the line between the public service and business sectors of the enterprise.

One major implication of the state's railroad perspective is in the selection of the organizational alternative for the Alaska Railroad. The organizational structure chosen by the state will not assure that the railroad will be operated from the perspective selected, but the appropriate organization can help to facilitate its operation within the framework established by the State of Alaska.

Finally, the transfer of the ARR to the state will provide Alaska with an opportunity to benefit from the railroad's past experience under federal government operation and resolve the uncertainty and conflicts of running the railroad as a public service versus a business operation.

Assumptions and Criteria for a State Railroad Organization

The following assumptions concerning the railroad and its relationship to the state were used to develop the criteria and proposals for an organization to operate a state-owned railroad:

1. The Alaska Railroad is to be transferred to the State of Alaska without direct compensation of the federal government, but with indirect costs to the state for existing liabilities and any requirements for capital investments.
2. The State of Alaska wishes to operate the railroad in the most efficient manner, minimizing the cost to the taxpayers of the state.
3. The Alaska Railroad is an important element of the state's transportation system, and any state investments relating to transportation will be made with full recognition of the importance and intermodal nature of the railroad.
4. The Alaska Railroad can and will be responsive to changing needs and opportunities for transportation services.
5. The railroad revenues are to be used to provide essential rail service, maintain and

improve railroad property, and meet operational expenses.

6. The public's capital investments are to be protected.
7. The rail service rates are to remain competitive.
8. Public railroad operational subsidies are to be minimized.
9. Rail users are to receive good service, including adequate service frequency, an adequate number of cars, and appropriate car types.
10. The Alaska Railroad is to cooperate with the state, local governments, ports, businesses, industries, and other transportation modes within established policies and legal constraints.

Establishing criteria designed to meet the rail service needs of Alaska will enable the state administration and legislature to evaluate the organizational alternatives subsequently described. Each organizational structure can be measured by the extent to which it satisfies the following criteria:

1. Ability to obtain access to public and private capital funds.
2. Freedom of management to make the railroad's operational decisions within established policies.
3. Clear-cut lines of management responsibility and accountability for decisions.
4. Marketing freedom within established policies and budgetary constraints.
5. Clear decision-making authority without a cumbersome and bureaucratic process.
6. Separation of freight and passenger service functions and accounting.
7. Ability to efficiently procure necessary supplies, equipment, services, and materials within appropriate policies and budgetary authority.
8. Management capability to make long-term commitments within established policies.
9. Management freedom to negotiate solutions to problems and to take advantage of service opportunities.
10. Industrial development capability on Alaska Railroad land.
11. Performance-based personnel management, including the direct ability to hire, fire, promote, train, supervise, and direct required railroad employees.
12. Ability to provide financial and other incentives for performance.

We recognize that it may not be possible or acceptable to have a state organization which fully meets all of these criteria. However, these criteria are important in defining the long-term objectives for the Alaska Railroad. The State of Alaska should seek an acceptable organizational structure which will enable the railroad to operate as effectively as possible within these areas.

Organizational Alternatives Considered

When we began this study, various alternatives were considered possible. Among these were:

- Keeping the status quo—letting the ARR continue to operate as a federal agency.
- Allowing the ARR to operate as a federal agency corporation like the Consolidated Railroad Corporation (Conrail) or Amtrak.
- Selling the ARR to private investors.

However, during the early stages of this study the federal government made clear its intentions to divest itself not only of the ARR, but also of Conrail and Amtrak, which precluded the first two alternatives. Further, the difficulty a private investor would have in financing the marginally profitable ARR, in addition to the complex issue of unresolved land-transfer problems, effectively precluded the third alternative. Thus, there emerged but three remaining alternatives that seemed to offer workable opportunities for the ARR. These included the state (1) operating the ARR as a line agency of the state, (2) operating it as a state public corporation or authority, or (3) leasing it out for operation by a private party. We examine these three alternatives in the following paragraphs.

Three Possible Alternatives

The Railroad as a State Line Agency

Under this approach, the state would take title to the railroad in a manner similar to state ownership of such other transportation facilities as airports, the Marine Highway System, and state highways. However, we should note that the long-term availability of railroad assistance funding from the federal government, either for capital or operating purposes, is very uncertain. There currently exists no trust fund for railroads as there is for airports or highways.

Under this alternative, the Alaska Railroad would logically be made a division or some other unit of the Alaska Department of Transportation and Public Facilities. The railroad personnel would therefore become employees of the state with all of the benefits available to other state employees.

Policy direction for the Alaska Railroad as a

state line agency would come from the governor, from the legislature through normal legislative processes, and from the commissioner of the department involved.

There are several advantages to establishing the Alaska Railroad as a state line agency. The management lines of authority and responsibility would be clear. The institutional structures and resources of the State of Alaska could be readily available for use on the railroad. Alaska Railroad employees would have the fringe benefits and other advantages of state employment, including reasonable job protection. Since the railroad already has a cadre of experienced and trained operational personnel, the transition from federal agency status to state agency status would be easier than other alternatives.

However, there are also significant disadvantages in organizing the railroad as a state line agency. The ARR would encounter most of the same limitations as a state agency as it now does as a federal agency. One of the most critical limitations would be the inability to obtain essential capital investment funds except by state appropriations. The competitive issues related to marketing, management flexibility, state agency regulations, procedures and requirements; the potential for even more direct political influence on operational decisions; and the public-service-versus-business-orientation questions are all disadvantages of this approach.

While the state agency alternative should be considered, it clearly does not meet most of the criteria established for a viable railroad organization. If the Alaska Railroad is to adequately fulfill its transportation role within its technological limitations, a state agency organizational structure is the least desirable of the three alternatives discussed in this report. It would be unfortunate if the State of Alaska were to place the Alaska Railroad in an organizational structure that perpetuated the limitations of federal agency status.

The Railroad as a State Public Corporation or Authority

There are precedents for this approach, both nationally and internationally. The West Virginia Railroad Maintenance Authority and the British Rail Corporation, with some variations, will serve as examples.

The West Virginia Railroad Maintenance Authority. The State of West Virginia has since 1975 owned and operated a railroad[17] similar in some ways to the ARR. The West Virginia Maintenance Authority (WVMA) consists of seven part-time members, including the governor as an ex-officio member. The other six members are appointed by the governor, with the consent of the state senate, for staggered 6-year terms. The authority selects its own officers and appoints an executive director (the chief administrative officer). The employees of the authority in West Virginia work for the state and are non-union.

The WVMA has all the powers needed to own and operate a railroad. These powers include the ability to plan, carry out projects, acquire property, sell or transfer property, contracts, and sue or be sued. The WVMA may raise capital via railroad authority revenue bonds. It may also acquire railroad rights in other states. In addition, the authority has the power of eminent domain.

The railroad experience in West Virginia has been generally successful, and with some modification, lessons learned there may be applicable to Alaska.[18]

The British Rail Corporation. Since its inception in the late 1940s, British Rail has operated as a profit-oriented transportation company, providing both freight and passenger service. A government-appointed chairman and an autonomous board of directors provide general policy for running the corporation, with each director responsible for a particular facet of the operation (passenger, maintenance, capital investment, etc.).

British Rail's chief executive is responsible to the board and the chairman, at the same time serving as a member of the board. The principal officers of British Rail serve at the pleasure of the Chief Executive.

The levels and nature of British Rail's passenger service are negotiated between the government and the corporation, with the government paying for passenger service provided.

British Rail's capital investment package overseen by the Minister of Transport includes a 5-year plan, the first 3 years of which are fixed. This establishes the capital limits, within which investments must fall. British Rail can only borrow through the government, and major projects must be approved by the Minister of Transport.

The ministry of Transport, through its Railways Division, oversees the capital investment program of British Rail. It also has some safety responsibilities. Regulation is not institutionalized. The marketplace drives most policy decisions of British Rail.

[17] The West Virginia Railroad carries no commercial passengers.

[18] A copy of the West Virginia Maintenance Authority Act is on file at the Alaska Department of Transportation and Public Facilities.

Like the West Virginia Railroad Authority, the British Rail Corporation offers a potential organizational model for the Alaska Railroad. If the Alaska Railroad, under state jurisdiction, were organized as an authority or public corporation under carefully worded state legislation, most of the federal agency limitations could be removed. Properly established under this approach, the Alaska Railroad could meet all of the criteria previously outlined for a state railroad organization.

The principal advantages of a public corporation or authority alternative are an ability to obtain access to required capital funds and freedom to manage and operate the railroad within policies established by a board. Management can be given flexibility and responsibility and can also be held accountable for its decisions. Passenger service can be accounted for separately and not subsidized by freight service. The state could determine the appropriate levels, locations, and other areas of passenger train service in accordance with their willingness to pay for the service selected. The freight rail service could be marketed and required to meet fully allocated costs. Thus, under this organizational scheme, it might be possible to reach a compromise between the public service and business purposes of the railroad.

A State Railroad with Private Operations

A third alternative would be for the State of Alaska to own the railroad and contract with private enterprise to provide for operations. The main difference between this and the other alternatives is the operation of the Alaska Railroad by a private organization.

Several states, such as South Dakota and Oklahoma, are using this approach. These states, among others, have experienced abandonment of significant rail lines that they considered essential to their economy and transportation systems. These are using state and federal funds to acquire and rehabilitate extensive rail lines. The Department of Transportation, as a representative of the state, takes title to the rail property (usually excluding rolling stock). The state then selects a private railroad with the required management experience, skills, and interest in operating its equipment over the line to furnish shippers and receivers with rail service. An operating agreement is negotiated with the private common carrier for rail service. The operational limitations of the railroad can be whatever the state and the railroad agree upon.

The negotiated operating agreement can include such provisions as the assignment of maintenance responsibilities; liabilities; frequency, level, and type of rail service; car supply; revenues; and costs. Thus, all of the appropriate criteria for a state railroad organization can be reflected in the operational agreement. This can even extend to the provision of required capital.

A major advantage of this approach is that once the operating agreement has been negotiated, the state has only a supervisory or overseer responsibility, plus whatever financial requirements have been determined by the negotiations. The railroad operations can include public service rail requirements as well as being performance based.

A substantial difficulty with this alternative for the Alaska Railroad is that no private railroad carrier is operating within the state. Too, there is the problem of the existing Alaska Railroad personnel. While the present railroad employees have the necessary knowledge of railroad operational peculiarities in Alaska, these are federal agency employees, with long-term rights rather than private employees whose rights are subject to negotiation. This could present such a significant liability to prospective private operators that it might be difficult to find interested parties. This approach, therefore, may be impractical unless the responsibility for the current Alaska Railroad personnel is assumed by the Federal Railroad Administration, while a private carrier, with the necessary qualifications, can be attracted as the operator. However, no one knows at this time whether or not such a private operator exists.

One variation to the alternatives described above is a concept under consideration in Iowa. It is an old concept which has proved successful in other organizations but which is new in its application to railroading. It involves the use of a general partner and limited partnerships.

A limited partnership is a very flexible institutional arrangement which could potentially attract substantial private capital. A major consideration in developing this institutional approach is the designation of the general partner. In order to legally establish a limited partnership, at least one financially responsible general partner must be found or established. The State of Alaska could establish an organization which could become the general partner for this railroad venture. Although limited partners are not subject to liability beyond their investment in the partnership, there is usually no limit to the liability of the general partner.

A limited partnership is, by law, a nontaxable entity. All gains or losses from the venture flow directly back to the investors (partners) for tax purposes. Partnerships are thus attractive because (1) there is no double taxation of income as with

corporations and(2) partners can take full tax advantage of losses, depreciation allowances, and tax credits. The ability to take advantage of depreciation allowances will become more important if the Reagan Administration's accelerated depreciation proposal is enacted. It would be necessary, of course, to examine legal constraints in Alaska for public involvement in limited partnerships. In Iowa, there is no apparent constitutional prohibition against public involvement in such arrangements.

It may be possible in such a limited partnership to attract rail users, businessmen, private individuals, and Alaska Railroad employees, among others. Thus, it would be advantageous to those with direct rail interests to see the Alaska Railroad succeed as a business venture while offering only limited individual liability. The idea and concept may be worthy of further consideration.

Alaska Railroad Transition

Transition Legislation and Problems

As noted earlier, the Federal Railroad Administration (FRA) has determined that the original intent of the Enabling Act for establishing and operating the Alaska Railroad has been met and federal responsibilities discharged. Thus, for the past several years, several federal administrations and the Department of Transportation have discussed divestiture of the Alaska Railroad by the federal government. However, it has only been since January 1981 that the decision was made to prepare legislation for such a divestiture and implementation steps taken.

The FRA has shown some urgency in getting the transfer legislation introduced and passed. This urgency results from a reduction of employees in the Federal Railroad Administration, as well as desire to cut the capital fund request of the Alaska Railroad. FRA's schedule calls for passing the legislation this fiscal year. The legislation proposes that the State of Alaska meet the transfer conditions within one year of enactment of the legislation. The draft legislation also provides for transferring the Alaska Railroad to other interested parties should the State of Alaska not meet the conditions for transfer within this time period.

The proposed legislation further embodies a number of discretionary "strings" attached to the transfer which would enable the federal government to ensure that the State of Alaska own and operate the Alaska Railroad in a manner commensurate with FRA's preconceived ideas. Failure by the state to conform to the provisions of the Act would be grounds for the FRA to reclaim the railroad within a 10-year period. The rationale for the continuing federal interest in the Alaska Railroad is predicated upon the offer of a no-cost transfer to the state.

In summary, there are numerous problems associated with the transfer of the Alaska Railroad from federal to state ownership. Federal transfer legislation will likely be passed by Congress before these problems have been resolved. The U.S. Department of Transportation has not determined the land, the structures, the right-of-way, nor equipment to be included in the transfer. Arrangements have not yet been made to provide for an orderly transfer of the employees from federal agency status. There is no organizational framework established within Alaska to accept the ownership, operation, or employees of the railroad. The FRA is anxious to relinquish ownership, operation, employee, and funding responsibilities of the Alaska Railroad. This could potentially result in postponement of major ARR operational decisions. Such postponement could jeopardize the smooth long-range operation of the railroad and perhaps result in lost traffic—an event not in the best interest of Alaska. In addition, the employees are left in a state of "limbo," not knowing for whom they will work, if they will have a job, how the transition will occur from federal employment, or what happens to the benefits received as a federal employee. The employees lack information, and many of their questions cannot be satisfactorily answered at this time.

State legislation will probably be required to accept the transfer of the Alaska Railroad. The state, however, has made no decision on the transfer question or on the organizational structure required to own and/or operate the railroad. The current railroad assets, obligations, and liabilities have not clearly been defined, which leaves the state with inadequate information on the short- and long-term financial and other requirements accompanying the proposed transfer.

The railroad needs to continue operation without disruption, since disruption would detrimentally affect the state's economy and economic development. And this would come when economic activity is quickly increasing.

These are some of the more important transitional problems. Unfortunately, these problems have not yet received the attention needed to determine their full implications. Time and additional efforts are required to provide the Alaska decision-makers with the information necessary to act in the best interest of the state. The complexities and extent of these transitional problems are likely to result in legal actions and court adjudication. A transitional bridge is needed to facilitate the smooth transfer of the Alaska Railroad from the federal government.

An Orderly Transition

Even if we assume that satisfactory federal legislation can be drafted and passed by Congress for the transfer of the Alaska Railroad from federal to state ownership, there will remain a significant period for transition. Along with land, employee, competition, and various obligation problems, the smooth transition to state ownership and operation is a most perplexing problem. How the transition is handled will have either a positive or adverse impact—long term as well as short term—on the railroad and its operations as well as on the State of Alaska.

During this transitional period, certain needs must be met if the railroad is to fulfill its important and special transportation function in Alaska. These include the need to:

- Continue the freight and passenger operation of the Alaska Railroad.
- Preserve as many potential operational and organizational alternatives for the state as possible.
- Provide adequate legal protection for the Alaska Railroad throughout the transitional period.
- Provide interim protection and transitional assistance for the employees of the Alaska Railroad.
- Provide adequate time for adjudicating the legal issues which have been raised by the transfer question, such as land title, equipment and railroad property, employee rights and benefits; existing or pending court cases, railroad agreements, contracts, and obligations.
- Establish an orderly process and procedure for solving problems which have been identified or which may arise during the transition.
- Provide the time required for the state administration and the legislature to consider the issues, to seek solutions to problems, and to deliberate carefully on the implications of each proposed state legislative bill without being faced with a stringent schedule and a crisis-type atmosphere.

Given the general mood of the Reagan Administration and the Congress to reduce federal expenditures and the federal perception of great Alaskan wealth, it is quite possible that Alaska Railroad transfer legislation will be passed this year. The State of Alaska will probably be faced with the need for a package of legislation which sets the tone and organizational framework for state ownership of the railroad if Congress passes transfer legislation. Under these circumstances, there is a genuine need to provide for an orderly transition from federal to state ownership. Sufficient time must be allowed to work out the myriad transitional problems.

HOUSE BILL 485

I HAVE INTRODUCED HB 485 -" AN ACT AMENDING PROVISIONS RELATING TO A SOLICITATION FOR OFFERS TO PURCHASE OR OPERATE THE ALASKA RAILROAD AND PROVIDING FOR AN EFFECTIVE DATE" TO CLARIFY SOME QUESTIONS REGARDING THE ALASKA RAILROAD CORPORATION ACT.

ON JULY 6, 1984, SCS CSHB 512 (FIN) WAS SIGNED INTO LAW. THIS ACT ESTABLISHED THE ALASKA RAILROAD CORPORATION TO MANAGE AND OPERATE THE ALASKA RAILROAD. THE CORPORATION OFFICIALLY TOOK OVER THIS RESPONSIBILITY ON JANUARY 6, 1985, ONE DAY AFTER THE ALASKA RAILROAD WAS TRANSFERED TO STATE OWNERSHIP.

THE STATE OF ALASKA PURCHASED THE ALASKA RAILROAD FOR $22.3 MILLION. AN ADDITIONAL $10.9 MILLION WAS APPROPRIATED BY THE LEGISLATURE FOR OPERATING AND CAPITAL EXPENSES. THIS VALUE WAS DERIVED BY DETERMINING:

A. THE PRESENT VALUE OF THE RAILROAD'S NON OPERATING REAL ESTATE, THIS WAS VALUED AT $47.8 MILLION

B. THE PRESENT VALUE OF CONTINUING RAIL OPERATIONS BEYOND TEN YEARS IN PERPETUITY (INCLUDING START UP COSTS) THIS WAS DETERMINED TO BE A NEGATIVE VALUE OF $25.5 MILLION.

QUESTIONS CONCERNING THE REVERSION CLAUSES BOTH IN THE STATE AND FEDERAL ACT OFTEN ARISE.

SECTION 610 (a) TITLE 6 OF THE FEDERAL ALASKA TRANSFER ACT STATES:

IF WITHIN TEN YEARS AFTER THE DATE OF TRANSFER TO THE STATE ANY OR ALL OF THE REAL PROPERTY TRANSFERRED TO THE STATE IS CONVERTED TO A USE THAT WOULD PREVENT THE STATE OWNED RAILROAD FROM CONTINUING TO OPERATE, THAT REAL PROPERTY INCLUDING PERMANENT IMPROVEMENTS TO THE PROPERTY SHALL REVERT TO THE UNITED STATES GOVERNMENT, OR, THE STATE SHALL PAY TO THE UNITED STATES GOVERNMENT AN AMOUNT DETERMINED TO BE THE FAIR MARKET VALUE OF THAT PROPERTY AT THE TIME OF CONVERSION.

IF WITHIN 5 YEARS AFTER THE DATE OF TRANSFER THE STATE SELLS OR TRANSFERS ALL OR SUBSTANTIALLY ALL STATE OWNED RAILROAD TO AN ENTITY OTHER THAN AN INSTRUMENTALITY OF THE STATE, THE PROCEEDS FROM THE SALE OR TRANSFER THAT EXCEED THE COST OF ANY REHABILITATION AND IMPROVEMENTS MADE BY THE STATE AND ANY NET LIABILITIES INCURRED BY THE STATE, SHALL BE PAID INTO THE GENERAL FUND OF THE TREASURY OF THE UNITED STATES.

SECTION 610 - THE FEDERAL REVERSION CLAUSES ALSO PROVIDES FOR REVERSION REQUIREMENTS IF THE STATE DISCONTINUES USE OF RIGHT OF WAY LAND, OR LAND WHICH LIES WITHIN THE BOUNDARIES OF DENALI NATIONAL PARK OR THE CHUGGACH NATION FOREST BOUNDARIES.

THESE ARE THE FEDERAL REVERSION REQUIREMENTS. THE ALASKA RAILROAD CORPORATION ACT SEC. 42.40.260 (B) STATES: EVERY FIVE YEARS THE ANNUAL REPORT OF THE ALASKA RAILROAD CORPORATION SHALL INCLUDE AN ANALYSIS OF POTENTIAL SALE ARRANGEMENTS WHEREBY THE CORPORATION MAY BE TRANSFERRED INTO PRIVATE OWNERSHIP. THE ANALYSIS SHALL INCLUDED DOCUMENTATION OF AT LEAST THREE OFFERS TO SELL THE CORPORATION INITIATED BY THE CORPORATION DURING THE LAST FIVE YEARS.

COMMITTEE SUBSTITUE HOUSE BILL 485 (TRANSPORTATION) DELETES THE REQUIREMENT FOR THE ANALYSIS TO INCLUDE DOCUMENTATION OF AT LEAST THREE OFFERS TO SELL THE CORPORATION. RAILROAD MANAGEMENT HAS STATED SEVERAL CORPORATIONS HAVE EXPRESSED AN INTEREST IN PURCHASING THE ALASKA RAILROAD. TO DATE, NO FORMAL REQUEST FOR PROPOSALS HAVE BEEN REQUESTED BY THE CORPORATION. BY DELETING THE REQUIREMENT TO DOCUMENT AT LEAST THREE OFFERS TO SELL THE CORPORATION, WE ARE OPEN TO CONSIDER ALL OFFERS. IN ORDER TO DETERMINE WHETHER OR NOT WE WOULD CONSIDER CERTAIN OFFERS, WE NEED TO KNOW WHAT SORT OF OFFERS ARE OUT THERE. MANY TIMES IN NEGOTIATING SUCH SALES WE LIMIT OURSELVES TO A NARROW CRITERIA WE FEEL WE NEED TO MEET. INSTEAD, THIS WOULD ALLOW US TO VIRTUALLY SAY, "BRING ALL OFFERS YOU HAVE RECEIVED IN THE LAST FIVE YEARS TO US FOR CONSIDERATION". WHILE ONE PARTICULAR OFFER MAY NOT MEET SOME OF THE NARROW CRITERIA WE INITIALLY THOUGHT WAS NECESSARY, IT MAY OFFER US SEVERAL OTHER VALUABLE ALTERNATIVES WE HAD NOT CONSIDERED.

AS THE ALASKA RAILROAD IS A VALUABLE IN-STATE TRANSPORTATION MODE, WE NEED TO NOT ONLY LOOK AT THE "BOTTOM LINE" BUT WE MUST ALSO LOOK AT IN STATE TRANSPORTATION NEEDS AND ALTERNATIVES. WE MUST CONSIDER IF ANY PROPOSED SALE IS TRULY IN THE STATE'S BEST INTEREST OVERALL. TO DO THIS WE NEED TO EVALUATE ANY AND ALL OFFERS, AND WEIGH THE ADVANTAGES AND DISADVANTAGES IN ALL AREAS.

HOUSE BILL 485 PROVIDES US THIS OPPORTUNITY. THE ORIGINAL TRANSFER ACT REQUIRES AN ANALYSIS FOR POTENTIAL SALE ARRANGEMENTS TO BE CONSIDERED WITHIN 5 YEARS OF THE TRANSFER DATE. HOUSE BILL 485 ESSENTIALLY BROADENS THE LANGUAGE TO ALLOW US TO CONSIDER ALL OFFERS RECEIVED WITHIN THE FIVE YEAR PERIOD.

I FEEL THIS WILL ENABLE US TO PROPERLY EVALUATE POTENTIAL SALE OFFERS IN ALL AREAS AND THUS MAKE A DEICISION THAT IS IN THE STATE'S BEST TRANSPORTATION AND FINANCIAL INTERESTS

THANK YOU FOR LISTENING. I URGE YOUR SUPPORT OF HB 485.

FOR ALL MEMBERS ON THE HOUSE

FACT SHEET - BETTE CATO Bette Cato

HOUSE BILL NO. 485

An Act Amending Provisions Relating to a Solicitation for Offers To Purchase or Operate the Alaska Railroad; and Providing for An Effective Date.

1. WHAT THIS BILL DOES.

HB 485 deletes the second sentence of AS 42.40.260 (b) which is part of the 1984 Alaska Railroad Corporation Act ("ARCA"). Although every five years the Alaska Railroad Corporation's ("ARRC") annual report would continue to analyze potential sales arrangements to private owners, it would not be required to document at least three offers to sell its assets during the same period of time. This provision of the current law would be repealed.

2. IS THIS LEGISLATION REALLY NECESSARY?

Yes. When the State purchased the Alaska Railroad in January, 1985, it agreed to many sale terms. Those terms included a provision in the federal Alaska Railroad Transfer Act ("ARTA") which requires the State to turn over any profits of a subsequent sale to the United States, if the sale occurs within the first five years of State ownership. This period ends on January 5, 1990. Despite this onerous penalty, State law presently requires ARRC to make attempts to sell all or part of its assets during the same period of time! Since it is extremely unlikely that the legislature would approve an early sale under these circumstances, the huge and probably unnecessary cost related to researching, preparing, soliciting, and negotiating meaningful sale arrangements should be avoided by repealing this portion of AS 42.40.260(b).

3. WILL THIS MODIFICATION PREVENT SALE OF THE RAILROAD OR DISCOURAGE ACTIVE SOLICITATION AND CONSIDERATION OF SALES POSSIBILITIES?

No. ARCA's section 940 will remain unchanged. It permits the governor to sell or lease the Alaska Railroad under certain conditions at any time. A sale must be approved by the legislature. In addition, the modification will not eliminate the legislature's original desire that ARRC pursue a disposal of its assets. Every five years, the corporation will continue to analyze transfer opportunities for the legislature's consideration.

4. IS A MODIFICATION WHICH SIMPLY EXTENDS THE TIME PERIOD FOR SOLICITATION OF SALES OFFERS A MORE ATTRACTIVE ALTERNATIVE?

No. Although the ARTA early sales penalty can certainly be avoided by extending the first deadline for solicitation of sales offers by ARRC beyond January, 1990, total repeal of the "three offers" requirement is preferable to continuing an artificial and wasteful stimulus to sales efforts. Instead, potential sales arrangements should be initiated by market opportunities and State needs. Sales profits should not be needlessly diminished by huge costs related to premature sales preparations. Additionally, in the interest of economy, efficiency, and fairness to those involved, only those offers which will clearly serve State needs and fulfill its expectations should be solicited. Unless HB 485 is passed, the railroad will be required to mechanically solicit disposal offers before the State has had an opportunity to consider what long-term railroad operations and operational alternatives will best serve its needs. Direction must be provided to those involved in the disposal process explaining how the railroad will be operated and under what terms and conditions it will be sold. Much time, money, and effort will be expended in the inventory and evaluation of railroad assets and operations, analysis of profitability projections, selection of sales alternatives and terms, identification of acceptable buyers and their qualifications, and negotiation of operating restraints and conditions.

BILL NO: HB 511

DATE: March 15, 1988

TITLE: "An Act relating to motor vehicle windshields and windows."

CONTACT: Col. Robert E. Jent
269-5641

DEPARTMENT OF PUBLIC SAFETY

There is a concern among the public and the law enforcement community that vehicles with deeply tinted windows will inhibit the operator's vision and thus impair his/her ability to safely operate the vehicle. Further, law enforcement officers are concerned about approaching motor vehicles when they can not clearly see the operator from outside of the vehicle.

This well intentioned bill addresses a serious concern of the law enforcement community in Alaska. Unfortunately, difficulties are anticipated with the wording used in this legislation. Specifically Sec. 28.35.165(b)(1), (c)(1), and (c)(2). Without a clear, reasonable and sophisticated testing procedure, the percentage of light transmission capacity and luminous reflectance could not be adequately identified and thus the proposed statute would be unable to withstand a court challenge.

Other states have been attempting to deal with the concerns that are being addressed by this legislation. Resolution is unclear at this time. Problems exist related to achieving a balance between officer safety, privacy of citizens, and interference with interstate commerce. It is suggested that a thorough review be performed by the Department of Law relative to the complicated legal issues involved.

Arthur English, Commissioner
Department of Public Safety

MEMORANDUM

March 9, 1988

TO: Rep. Bette Cato, Chair,
House Committee on Transportation

FROM: Rep. John Sund

RE: House Bill 511

This bill was introduced at the request of a member of the Ketchikan Police Department as a safety measure. (See attached letter from Corporal. James Janke.)

The bill would add a new section to AS 28.35 (Motor Vehicles -Miscellaneous Offenses,) to prohibit operating a motor vehicle with windshields or windows that obstruct the driver's clear view.

I have attached an amendment which would set the penalty at an infraction, (non-criminal, maximum fine $300.-); if no penalty is specified, the offense would become a Class B Misdemeanor (90 maximum jail; $1000 maximum fine).

This legislation would contribute to motor vehicle safety in three ways. First, it would prohibit operation with windshields that obstruct a driver's view in a manner that interferes with safe operation. Second, it would protect the police officer stopping a vehicle by allowing him or her to see inside the vehicle and spot potential trouble. Third, as Officer Jenke points out, it will allow a pedestrian to tell if the approaching driver is alert to his or her presence.

FEB [illegible] 88

February 6, 1988

The Honorable John Sund
Alaska Legislature
P.O. Box V
Juneau, AK 99811

Dear Mr. Sund,

I am writing this letter to you regarding a matter I feel is of grave importance to me and my fellow Police Officers. As you know, John, I am a Police Officer with the City of Ketchikan and have been for the past eight years. In recent years, I have noticed more and more vehicles being driven on our streets and highways with all or most of their windows tinted. The density of the tint varies from slight to completely dark.

My primary concern deals with the vehicles that do not allow one to see inside the vehicle, due to the tint. As a Police Officer, my life depends on my ability to view what is going on inside of a vehicle should I have to make contact with the occupants. Should I have occasion to stop a driver for suspected Driving While Intoxicated, I must know that the occupants in the vehicle have not exchanged drivers. The disadvantages of a Police Officer not being able to view what is going on inside a vehicle while it is on our streets and highways are endless, and obvious.

While describing my dismay of this problem to a concerned citizen one day, she pointed out to me that she also has a major concern about this problem. She went on to tell me that she refuses to cross a street when a vehicle is passing by her, when she cannot see the driver. She stated that is she can't see the driver, how does she know he can see her?

My own personal vehicle has factory tinted glass, but it is not so dark that you cannot see everything inside, this includes in the dark of night. Like I mentioned earlier, my major concern is vehicles with the "mirror" or "one way" tinted windows.

I telephoned your office earlier this week about this matter and talked to a very helpful John Hartle. I informed him at that time that I thought California has a law in effect regarding the "tinted window" issue. He advised me that your staff would research this issue and by the time you receive this letter, they should have some more information for you on this matter.

Mr. Sund, I would appreciate your time and effort on this matter, and hope that it can be resolved in a timely manner. I believe that this is a matter of grave concern to other Police Officers in our state and that they feel the same way I do.

In anticipation, thank you for your help.

Respectfully,

James C. Janke

525

4-24-87

Dear Senator Hanley,

I don't usually complain much but this recent article in the Anchorage paper really gauled me; so much so that I cancelled a trip to Seattle next month.

Several years ago it seems our legislature in Juneau complained to the airlines about singling out Alaskans for higher fares to the states and they lowered them for awhile but it didn't last long.

Also, why do I have to pay a full month in advance to get any break at all?

Hope you can help us out.

Sincerely,

Gordon Halkett
3103 Brookside Dr.
Apt. 5
Anchorage, Ak 99517

Air fare wars to continue this summer

But won't apply to Alaska

By BILL MENEZES
The Associated Press

NEW YORK — Several major airlines said Monday they would extend their lowest discount fares through the end of summer, but the tickets would be more expensive and carry more restrictions than the cut-rate fares unveiled earlier this year.

The lower fares will not apply to travel between Alaska and the Lower 48, a local travel agency spokesman said.

"It's fair to say that in the current pricing environment that the relatively high fares between Anchorage and the Lower 48 help offset losses from fare wars in the Lower 48," said Scott McMurren of Easy Travel.

Also Monday, Continental Airlines said it had asked the Department of Transportation to require U.S. airlines to routinely disclose service information such as on-time performance, complaints about lost luggage, and the time it takes for answers on telephone reservation lines.

Continental and Eastern Airlines, both units of Texas Air Corp., said they would continue offering the special "Maxsaver" fares previously slated to end May 20.

Those non-refundable fares, which were matched by other major airlines when introduced in late January, are discounted as much as 80 percent from regular fares and are less than the supersaver fares that previously were the industry's lowest.

Northwest Airlines said it would match the discount fare extension. United and Delta and American representatives said their companies were studying the fare announcements.

Industry analysts said they expected the major airlines to follow the move, noting the summer fares would be higher to reflect the peak travel season and the advance purchase requirements would be slightly greater.

"Those are two positives," said Louis Marckesano, of Janney Montgomery Scott Inc. in Pittsburgh. "We were hoping they would modify pricing upward and or increase the minimum stay involved."

Thomas G. Plaskett, Continental's president, told a news conference the Maxsaver fares had proven "extremely popular," and some 3 million passengers had bought the fares since Feb.1.

The fares good through May 20 — intended to fill seats that otherwise would go empty on many flights — could be purchased at any time up until two days before the flight. Passengers changing or canceling their reservations forfeited the entire ticket price.

The summer fares will cost more than the earlier Maxsavers and the advance purchase requirement was stretched to seven days. They also require a Saturday night stayover and a roundtrip purchase.

The summer Maxsavers are priced from $38 to $278 roundtrip, compared with a range of $38 to $198 roundtrip before May 20. A Maxsaver flight from New York to Los Angeles, for example, would be $129 one-way this summer, compared with $89 each way before May 20.

Continental also said it was trimming the advance purchase restriction on its regular supersavers to seven days from 30 days, while reducing the cancellation penalty to 25 percent from 50 percent.

New logo suggested for Alaska Airlines

Juneau Empire 2/12/88

Dear Editor:

While watching television last night I saw a commercial on one of the Seattle TV stations for Alaska Airlines. This ad was for roundtrip airfare to San Diego – 2,100 air miles, plus two nights' hotel accommodations for a total of $267. The cheapest roundtrip airfare from Juneau to Seattle, 1,818 air miles, is $340 and includes nothing extra.

Seeing this commercial brought to mind the Great Logo Crisis of Alaska Airlines that has been in the news so much during the past few weeks. My suggestion is to get rid of the Eskimo and replace him with a picture of Jesse James – gun, mask and all. This would better represent the highway robbery we all face buying an airline ticket in Southeast Alaska.

Thank you,
Dean Nordenson
Auke Bay

Juneau Empire 1/21/88

Lower fares would create happy faces

Dear Editor:

I think concerns are being misplaced about Alaska Airlines' advertising symbol. While this issue has been capturing headlines and legislators' attention, Juneauites continue paying air fares that are among the highest in the country.

I'm currently planning a trip to Boston. The round-trip air fare for the approximately 900 miles from Juneau to Seattle is $340.60. The round-trip fare for the approximately 3,000 miles from Seattle to Boston is $238. I've lived in Juneau for 14 years and I've yet to talk to anyone who hasn't shared my ill feelings about air fares from Juneau. I really cannot believe that costs here justify fares two or three times greater per mile than typical Lower 48 fares. I'd at least feel a lot better about paying higher air fares from Juneau if those fares could be justified and that justification be publicized with the same vigor as the recent logo switch.

I do have empathy for the airline business here in that I don't think it's reasonable to expect healthy competition in such a confined market. I believe it would be good for the public and the airline industry if an appropriately sanctioned monopoly could be granted to one airline to serve all of Southeast Alaska. I'm thinking of this in similar terms of the monopolies that utility companies now operate under. In the case of air service we would have the opportunity to nationally solicit bids to obtain the best service for the best price over a specified time.

In this manner, the public would benefit from expanded competition and the winning airline would be assured the highest possible volume to allow the lowest possible cost per passenger mile. This would bring air fares down and I suspect Juneau would see more tourists while the state and private sector would save on travel costs.

I appreciate having the opportunity to share my views and I encourage others to share their opinions about this. I think we need everyone to work honestly together on this so we will all be winners and fly with a happy face.

Sincerely,
Mark J. Miller

MEMORANDUM

TO: All House Members

FROM: Representative Alyce Hanley

SUBJECT: Resolution relating to the cost of air travel and to competition in the airline industry; and a bill relating to unfair trade practices of air carriers and ticket agents.

I have prepared for introduction this morning the attached House Resolution and Bill concerning the high cost of airline travel not only within the State of Alaska but to and from Alaska. A similar resolution was introduced during the 14th Legislature and the cost of commercial passenger fares continues to increase. In addition I have also introduced a bill to add a new section to Title 2 called Unfair Trade Practices. This section outlines who can file complaints and adds penalties for participating in restriction of competition in air commerce.

I would welcome your co-sponsorship of this resolution. If you have any questions please do not hesitate to contact my office.

5-1972A

IN THE HOUSE BY HANLEY

HOUSE RESOLUTION NO. 12

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

Relating to the cost of air travel and to competition in the airline industry.

BE IT RESOLVED BY THE HOUSE OF REPRESENTATIVES:

WHEREAS airline travel is an essential means of transportation for the people of the state; and

WHEREAS the competitive market forces in many other states have caused a decline in commercial passenger air fares; and

WHEREAS there are no competitive forces in the state to cause a significant decline in commercial air fares; and

WHEREAS commercial passenger air fares are higher today and continue to escalate upward; and

WHEREAS the cost of air travel in the state has become prohibitively expensive in many rural areas; and

WHEREAS passengers traveling to and from Alaska pay a significantly higher fare per air mile than passengers traveling between other states; and

WHEREAS the commercial air carriers appear to be engaging in setting mutually beneficial fare rates that restrict a free and open competitive market;

BE IT RESOLVED that the House of Representatives urges the Governor, the Attorney General, and the commissioner of transportation and public facilities to investigate and report to the legislature any barriers to an open and competitive airline industry and pursue every avenue that will reduce the cost of airline travel for passengers traveling to and from the State of Alaska.

5-1971A

IN THE HOUSE BY HANLEY

HOUSE BILL NO. 525

IN THE LEGISLATURE OF THE STATE OF ALASKA

FIFTEENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to unfair trade practices of air carriers and ticket agents."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 02 is amended by adding a new chapter to read:

CHAPTER 07. AIR COMMERCE TRADE PRACTICES.

Sec. 02.07.010. UNFAIR TRADE PRACTICES. (a) The department, upon its own initiative or upon complaint by an air carrier, ticket agent, or a member of the public, shall investigate and determine whether an air carrier or ticket agent has been or is engaged in unfair or deceptive practices or unfair methods of competition in air commerce or the sale of air commerce.

(b) If the department finds, after notice and opportunity for hearing, that the air carrier or ticket agent is engaged in unfair or deceptive practices or unfair methods of competition, it shall order the air carrier or ticket agent to cease and desist from those practices or methods of competition.

(c) The department may enforce this section and adopt procedural regulations necessary to implement this section.

(d) In addition to other penalties and remedies provided by law, a person who violates a provision of this section is subject to a civil penalty not to exceed $100,000 for each violation.

(e) In this section

(1) "air carrier" means a person engaged in air commerce, directly or indirectly, by lease, contract, or other arrangement, and

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: CSHCR 36 TRANS

TITLE: Intrastate Air Travel

APPROVED: [illegible]
Commissioner

DATE: 2/12/86

The Department supports the goals of this bill which we assume to be a concern for reducing, insofar as practicable, the costs for air travel within the State of Alaska. However, there is some question as to how involved the State should get in private industry decisions in a deregulated environment.

The DOT&PF has undertaken a cursory review of air fares for one airline only. This paper (attached) indicates that for one air carrier serving in and out of Alaska, the per mile fare is higher for routes within the State. In evaluating this information, however, it is crucial to consider the different characteristics of the individual routes involved (traffic loads, staging length, competition, etc.)

Part of this analysis also compared costs for in-State routes with costs for routes of comparable length in the lower 48 states. In general, it appeared that the in-State routes were quite comparable and, in some cases, lower than the lower 48 routes of comparable length.

This information is very cursory and cannot be viewed as conclusive, but it does indicate that if there is unfair pricing within the State, it will likely be very difficult to prove.

The DOT&PF will administer the study suggested in HCR 36 if the Legislature deems it advisable. A description of the study is shown on the accompanying fiscal note.

For further information call Susan Fleischnauer at 465-3900.

- D R A F T -

ALASKA/LOWER 48 STATES AIR FARES

DOT&PF - STATEWIDE AVIATION

December 2, 1985

I. INTRODUCTION

This paper conducts two analyses of air fares. The first is a comparison of Alaska Airlines' (ASA's) air fares over three types of routes:

(1) routes between points in Alaska,
(2) routes between points in Alaska and points in the Lower 48 States, and
(3) routes between points in the Lower 48 States.

The intent is to determine how ASA's air fares in Alaska compare to their air fares in the Lower 48 States. For ease of comparison and data collection, only coach and SuperSaver fares of ASA have been used.

The second analysis is a comparision of several of ASA's air fares and air fares of other airlines for trips of comparable length in the Lower 48 States. The intent of this analysis is to determine how ASA's air fares compare to fares of other airlines. Only coach fares have been compared, again for ease of comparison and data collection.

II. ALASKA AIRLINES' FARES; Within Alaska, Alaska to Lower 48 States, and Within the Lower 48 States

Table I compares average ASA fares for three types of routes in Alaska and the Lower 48 States.

TABLE 1
ASA's
AVERAGE COACH AND SUPERSAVER
FARES/MILE

ASA's Routes	ASA's Coach Fares/Mile	ASA's SuperSaver Fares/Mile
Within Alaska	$.30	$.22
Alaska to Lower 48	.21	.15
Within the Lower 48	.22	.15

The Table shows that fares for travel within Alaska far exceed other fares. There may be a variety of explanations for this. Higher labor and operation costs and shorter stage lengths (flight distances) for ASA routes within Alaska compared to the Lower 48 States could be one cause of the differential. In addition, traffic densities and load factors are likely to be lower in Alaska. The low traffic in Alaska also results in fewer carriers competing with ASA compared to the relatively stiff competition for heavier traveled routes between Alaska and the Lower 48 States and between points in the Lower 48 States.

Table 1 also shows that ASA's fares for travel between Alaska and the Lower 48 States are comparable to their fares for travel within the Lower 48 States. Some fares are higher than others, but on the average, they are comparable.

Actual fares for travel between points in Alaska are shown in Table A-I in the Appendix. Only fares from Anchorage to outlying communities were used because ASA routes to the outlying communities originate in Anchorage. For example, to fly Fairbanks to Deadhorse would require a flight from Fairbanks to Anchorage and another flight from Anchorage to Deadhorse.

Fares range from the highest fare/mile for service to Cordova which has low traffic, a short stage length and only air taxi competition, to the lowest fare in the Anchorage to Fairbanks market which has higher traffic, heavier loads, and greater competition. It should be noted that fares to points in Southeast Alaska are as much as three cents/mile less than the average fares for other routes within Alaska. These fares may be slightly artificially low due to subsidies provided through the Essential Air Service (EAS) program.

Actual fares for travel between Alaska and the Lower 48 States are shown in Table A-II in the Appendix. Fares have been shown from Anchorage, Fairbanks, and Juneau because most routes originate from these points. Coach and SuperSaver fares from Anchorage average about one cent/mile less than fares from Fairbanks and Juneau. The highest fares/mile are for routes to Seattle and Portland while the lowest fares/mile are for the longer routes to Phoenix and Tucson.

Actual fares for travel between points in the Lower 48 States are shown in Table A-III. Fares have been shown for travel from Seattle and Portland since most of the ASA routes in the Lower 48 States arrive or depart from these cities.

III. AIR FARES; ALASKA AIRLINES - OTHER AIRLINES

This analysis compares air fares for several of ASA's routes to fares of other airlines for routes of comparable length in the Lower 48 States. Only coach fares are compared and none of ASA's routes entirely within the Lower 48 States were examined.

Table II summarizes the results of this comparison. This table shows that, except for routes from Fairbanks to Seattle and Anchorage to Deadhorse, ASA's flights were consistently cheaper per mile than routes of comparable length by other airlines.

This data has limitations in that only 5 or 6 Lower 48 routes were used for each comparison. In addition, in the case of comparisons of routes within Alaska to routes in the Lower 48 States, in some instances the aircraft flown in the Lower 48 are different from aircraft flown in Alaska. Furthermore, many routes within Alaska utilize 737 aircraft equipped for cargo and passenger loads. In general, however, it appears that ASA's fares are generally lower than fares of other airlines in the Lower 48 for routes of comparable length.

TABLE II
COMPARISON OF ASA's FARES TO OTHER AIRLINES' FARES

ASA's Route	Approximate Stage Length	ASA's Coach Fare/Mile	Other Airlines' Average Coach Fare/Mile for Lower 48 Routes of Comparable Length
Anchorage-Seattle	1450 miles	$.22	$.24
Fairbanks-Seattle	1550 miles	.25	.23
Juneau-Seattle	900	.25	.29
Ketchikan-Seattle	650	.27	.36
Anchorage-Deadhorse	627	.38	.36
Anchorage-Petersburg	677	.29	.36
Anchorage-Sitka	592	.29	.36
Anchorage-Wrangell	709	.27	.36
Anchorage-Bethel	500	.25	.42
Anchorage-Fairbanks	509	.21	.42
Anchorage-Nome	539	.37	.42
Anchorage-Kotzebue	549	.36	.42

The Lower 48 States routes used to compare to Alaska Airlines fares are shown in Tables A-IV-AIX.

IV. CONCLUSIONS

The data presented in this paper suggests three conclusions, based on a fare per mile comparison.

(1) ASA's air fares for travel within Alaska are substantially higher than its fares for travel to and within the Lower 48 States. Higher labor and operations costs in Alaska and lower stage lengths and load factors may be the primary reasons for the higher fares for travel in Alaska.

(2) ASA's air fares for travel from Alaska to the Lower 48 States are, on the average, comparable to ASA's fares for travel within the Lower 48 States.

(3) ASA's fares for travel within Alaska and from Alaska to the Lower 48 States are usually lower than fares of other airlines for routes of comparable length in the Lower 48 States.

TH/sg

STATEMENT

OF

LARRY MERCULIEFF

CS FOR HOUSE CONCURRENT RESOLUTION 36

HOUSE FINANCE COMMITTEE

March 27, 1986

Mr. Chairman, Members of the Committee, my name is Larry Merculieff, representing the City of St. Paul and the St. Paul Trust. My primary task, as an economic development advisor for the City and the Trust, is to seek means by which the community of St. Paul can be economically self-sufficient before Trust funds (which support critical island services) are depleted. I also serve as chairman of the Western Alaska Fishery Loan Board of CEDC which administers a million dollars of revolving loan funds to support developing small boat fisheries in western Alaska.

I wish to speak in support of the committee substitute for HCR 36. As you all know, marine and air transportation to rural Alaska is extremely important for good economic development. In the west coast of Alaska, the primary means by which the communities can develop meaningful entre into the Bering Sea fisheries is by transporting product by air to the markets. In developing coastal fisheries, we have a chicken or egg syndrome. Efficient, low-cost marine transportation cannot financially justify stop-over in a community with low volumes of fish product

to transport. By the same token, developing fisheries communities cannot develop their full potential until low-cost and efficient marine transportation is available and local cold storage facilities are available. This requires, initially, that such communities transport product by air. Obviously, the more cost-efficient the air transportation, the more competitive such communities will be in the various fish markets, and thus, the more likely the developing fisheries will expand.

Needless to say, air transportation costs for passengers and cargo to and from rural communities is costly, affecting every aspect of community economic development. I believe the State of Alaska needs to obtain a clear picture of these costs and the factors which affect them in order to begin addressing the development of integrated and comprehensive plans which achieve the goal of lowering air and marine transport costs in rural Alaska. For example, one factor affecting air transport cost is the method of tendering the mail to the airlines by the U.S. Post Office. Should the U.S. Post Office consider changing their present policies (of what is called equitable tender of mail) to eliminate certain categories of air carriers or somehow make such categories less competitive in their tendering policies, many rural communities may receive less service or experience higher costs, or both, due to a lessening of competition. We understand that at least one special interest group is seeking just such policy changes within the U.S. Post

Office. The point is, the more aware we are of major factors affecting air transport costs, the more able we are to direct efforts to control such factors - and/or to develop plans to lower costs. Certainly we cannot make any impacts on costs without reliable information. We believe that the studies and analyses proposed by CS for HCR 36 is a good step in the right direction.

Thank you.

RE: HCR 36, RELATING TO AIR TRAVEL INTRASTATE

I WISH TO EXPRESS MY VIEWS ON HCR36. TRANSPORTATION COSTS IN THE BRISTOL BAY AREA ARE AT AN ALL TIME HIGH. ALTHOUGH WE ARE ENJOYING A REDUCED FARE PRESENTLY, THIS IS A TEMPORARY AND TIMELY FIXED RATE. IN A COUPLE OF WEEKS, WE AGAIN, WILL HAVE TO PAY THE INFLATED SCHEDULED RATES WHICH, FIRSTLY MAKES TRAVEL BY SMALL CHARTER AIRLINES MORE ATTRACTIVE WHICH IS PLACING MORE OF A RISK TO TRAVELERS. SMALL PLANES ARE MORE SUSCEPTIBLE TO THE HARSH WEATHER AND TERRAIN CONDITIONS BETWEEN THE ANCHORAGE AND BRISTOL BAY AREA.

SECONDLY, TRAVEL BETWEEN ANCHORAGE AND OUR AREAS IS COMPARED TO TRAVEL COAST TO COAST OUTSIDE. MANY PEOPLE ARE LIMITED TO TRAVEL OUTSIDE THE METROPOLITAN AREA BECAUSE OF THE HIGH COST OF AIRFARE LIMITING THE AVAILABILITY AND ACCESS TO LESS EXPENSIVE PRODUCTS FORCING US TO PAY THE HIGH COST LOCALLY. WE ARE A CAPTIVE AUDIENCE AND AT THE MERCY OF THESE AIR PIRATES.

Adelheid Herrmann
Pouch V
Juneau, AK 99811

Dear Representative Herrmann:

I have lived in Naknek for the past 11 years and have seen airline prices and air freight rates go up steadily. We now have two "competing" airlines and three freight haulers all charging to the penny the same rate. For the price of a round trip ticket to Anchorage I could go to Seattle from Anchorage, five times the distance.

Southeast Alaska gets subsidized transportation via the Marine Highway. Most people of the state can at least drive to major shopping areas. We only have the choice air transportation.

This means that all food, household goods and the like needed for living have to come by air and transportation of a family to Anchorage is not a matter of jumping into a car but buying seat fare for each.

Hopefully you can look into this matter.

Kurt Jaehning

Low air fares extended to Anchorage

11/13/85 Anch. Daily News

Daily News staff and wire services

The low Thanksgiving air fares being offered in the Lower 48 were extended Tuesday to travelers from Anchorage.

Western Airlines announced Tuesday it will offer $158 round-trip "Turkey fares" from Anchorage to anywhere Western flies in the continental United States.

Travel must take place on Nov. 28, 29 and 30, and the return flight must begin by noon on Nov. 30, according to Rachel Cavitt, sales manager for Western Airlines in Alaska.

Tickets also must be purchased within three days of reserving the seat and they are nonrefundable. The last day to purchase tickets is Nov. 26, Cavitt said.

"This is definitely just for the impulse traveler," said one Anchorage travel agent. "But it's just about the cost for two people to go out and have a fancy dinner and drinks."

The Turkey fare offers up to 85 percent savings on some of Western's tickets, Cavitt said.

Western flies to numerous West Coast cities and other destinations across the country including Salt Lake City, Boston, New York, Washington D.C. and Texas.

The Turkey fare is less than half the cost of an ultimate supersaver fare to Los Angeles, which now is about $398.

Two more airlines joined in the Thanksgiving fare war Tuesday, and the carriers reported a surge of telephone queries and bookings for the steep discounts that are designed to fill empty holiday flights.

"It's been very heavy. There are some markets selling out rapidly," said Linda Johnson, spokeswoman for American Airlines. She said Florida routes were practically booked for the 60-hour period covered by American's offer.

United Airlines spokesman Chuck Novak said the number of phone calls to its reservation centers was up 50 percent. Jim Ewing, a spokesman for Delta Air Lines, said: "The volume of calls has increased drastically, I'd say by 15, 20 percent. We've got to put supervisors on the phones."

American was the first to offer the sharply reduced fares in a Monday announcement aimed at luring travelers who otherwise would stay home during Thanksgiving. United and Delta quickly followed with their own plans, and Northwest Airlines and Eastern Airlines announced sales 24 hours later.

American and Eastern are offering discounts of up to 35 percent on round-trips in the 48 continental states from Thanksgiving Day, Nov. 28, through noon Nov. 30, when passenger traffic traditionally is very light. Thanksgiving eve and the following Sunday have been heavily booked for months.

United matched American's offer on routes they both fly. United, American and Eastern require round-trip bookings and payment within three days of making reservations. Their sale deadline is Nov. 26 and tickets

For a New Stuyahok pair, it wasn't good day to fly

by Mitch Lipka
Times writer

After visiting her sick son in an Anchorage hospital, all Annie Gumlickpuk wanted to do was go home to the Bristol Bay village of New Stuyahok.

It all seemed simple enough and it had been done time and time before. All they had to do was get on a plane to Dillingham, catch a Bush plane up the Nushagak River and they would be home.

She and about 10 others boarded a SeAir flight Monday afternoon knowing there was good weather in Anchorage and good weather in Dillingham.

Bad weather is the bane of Bush flying — the major variable people there must learn to cope with.

Off went the SeAir flight and back it came. Mechanical difficulties, the passengers were told.

After a plane switch and more than a hour more on the ground, a second SeAir flight speeded down the runway for the 300-mile trip. Back it came.

Mechanical difficulties, they say.

That's when things began to get bad. Gumlickpuk and her elderly father-in-law, Johnuk Gumlickpuk were informed by the carrier with the next flight out, AirPac, that their tickets would not be honored.

To make the situation still worse, Johnuk Gumlickpuk speaks only Yupik, and had to sit off to the side not understanding what was happening.

It seems that the $163 weekender fare tickets the Gumlickpuks had purchased may only be used on the airline that issued them, even if that airline can't get them where they are going. The Gumlickpuks did not have the money on hand to buy $160 one-way tickets for other carriers.

All things considered it's probably just as well the Gumlickpuks didn't get on the AirPac flight because it too returned to Anchorage and was cancelled. The problem — mechanical difficulties, the passengers were told.

"I don't like being stuck here," Annie Gumlickpuk said. "If they had been courteous and at least put us up for our meals it would have at least made us feel better."

"We don't have to take somebody's room and board and all of that," said Irene Bonner, director of customer services for SeAir. An airline flying a plane with fewer than 60 seats is not required to put up stranded passengers, she said.

"Most people who fly in Alaska understand the hassles with the weather conditions flying to these places," Bonner said. "We do accommodate them any way we can."

Bonner said ticket agents were not able to reach her Monday night, and if they would have, she would have given the Gumlickpuks a ticket on another airline.

"I've been flying all my life but this is the worst it has been," Annie Gumlickpuk said.

"We're so unlucky today," Johnuk Gumlickpuk said with Annie translating. "And it's not our fault."

Janet Schichnes and her family managed to be aboard both SeAir planes and the AirPac plane that were brought back to Anchorage.

"We got on every plane but MarkAir got us here," she said for her Dillingham home this morning. "It's absolutely insane.

"It took us about seven hours to get from Anchorage to Dillingham (normally a one hour flight) and we don't even have our bags."

Repeated calls to AirPac were not returned.

January 25, 1985

The Honorable Norman Gorsuch
Attorney General
State of Alaska
Pouch K
Juneau, Alaska 99811

Dear Mr. Attorney General:

As you know, Alaska Airlines has announced substantial fare increases for coach class passengers.

Advertising has indicated that each of the other interstate carriers (United Airlines, Northwest Airlines and Western Airlines) has followed the new Alaska Airlines fare schedule with virtual exactitude.

Before the new increases took effect, the one-way coach class fare between Anchorage and Seattle, on each of the carriers, amounted to a cost of 22 cents per mile. Alaska Airlines charged a one-way fare of $324.90. Two other carriers (Northwest Airlines and Western Airlines) were three cents cheaper, at $324.87. United Airlines charged $5.90 less than Alaska Airlines, or $319.00. This is an obviously miniscule "spread", and, as noted, each of the carriers is charging 22 cents per mile in fact.

The route between Anchorage and Juneau is extremely important to State government, inasmuch as many passengers are flying either on state business, at state expense, or because they are exercising their right or duty of citizenship to visit and speak with officials of the government. The fare over this route, where no competition exists, is 33 cents per mile.

For the purpose of this inquiry, however, I will not concern myself with the Anchorage-Juneau route, because only one carrier serves the route. Instead, I will confine my comparisons to the interstate route between Anchorage and Seattle, and other destinations in the continental United

States, on the one hand, and other American routes, not involving an Alaska airport, on the other. The comparisons are based upon the old fares before this month's increases took effect.

Between Anchorage and Seattle, passengers in coach class (disregarding "super saver" passengers) paid 22 cents per mile, as noted. This cost per mile is twice the cost per mile between Salt Lake City, Utah, and Washington, D.C. The distance between Salt Lake City and the nation's capital is 413 miles greater than the distance between Anchorage and Seattle. The fare is $109.00 less than the Anchorage-Seattle fare before the new increase!

If Alaskans were able to travel for 11 cents per mile, they would pay a one way fare to Seattle of $162.45, not $319.00 to $324.90, or the higher fares now in effect.

Another example -- and the examples are endless, obviously -- is the flight between Kansas City and Seattle, a distance of 1,851 miles (slightly farther than the distance from Anchorage to Seattle). Western Airlines offers a one-way fare of $185.00, or 12 cents per mile, between Kansas City and Seattle.

Because "super saver" fares are offered virtually everywhere, and have many restrictions, including a requirement for round trip purchases, I have not attempted to calculate their effect. Our research is particularly interesting, I think, in its showing that the four carriers in the Alaska trade follow virtually equivalent coach class fares, as well as super-saver fares, and are also identical in their failure to offer any type of other discount fares (except senior citizens' discounts offered by Alaska Airlines and United Airlines).

Many Alaskans expected that deregulation of the industry would result in lower fares. Many Alaskans expected that the entry into the Alaska trade of United Airlines would enhance competition and result in savings to the consumer. As shown by the two newspaper clippings I enclose (article from the Anchorage Daily News of January 17, 1985 and editorial from the Anchorage Times of January 18, 1985), the fare increases are of interest and concern to Alaska residents.

The problem of the cost of travel is exacerbated for Alaskans because of the absence of rail or other surface travel modes that can be reasonable alternatives for many, given the distances to be covered and the climate that prevails during most of the year.

The inability of Alaskans to travel out-of-state means diminished opportunities for contact with family and friends in "the lower 48", and diminished opportunities for education, professional seminars, and other activities important to the development and fulfillment of the individual Alaskan in his or her personal life and career.

With all of these considerations in mind, I would be grateful for any reflections you and your Department may have, and would like to know particularly:

1. The elements of proof that would normally be required to show an unlawful "contract, combination or conspiracy" in restraint of trade, or other violation of the state anti-trust law. (AS 45.50.562 et. seq.)

2. Whether there may be a possible application of state anti-trust laws, for restraint of trade or price fixing by agreement or conscious parallelism, in this context.

3. Whether state anti-trust laws apply to interstate air carriers.

4. If not, whether state anti-trust statutes could be changed in a constitutional manner to provide such applicability and to establish state court jurisdiction.

5. Whether there is any precedent for anti-trust suits against air carriers in interstate commerce, either under federal or state anti-trust statutes, brought by attorneys general on behalf of state governments or their people, for alleged price-fixing and restraint of trade.

6. Whether there are any other statutory remedies that can be considered or developed to deal at the state level with the problem.

7. Whether the state has been given any data from the carriers which might justify either the apparent coincidence in their respective fare structures or the recent round of fare increases.

Because the matter I have raised is of great importance to the Alaska tourism industry and Alaska business in general, I am sending a copy of this letter to the Honorable Loren H. Lounsbury and I am inviting him and the Department

...man Gorsuch
..., 1985
...our

of Commerce and Economic Development, which he heads, to share with me any comments or ideas that they may have. At a minimum, it would be my hope that state officials in the executive branch will express to the carriers some of the concerns I have voiced here, and encourage fare competition and lower fares.

One of the puzzling factors in all of this is that it would appear to me to be evident that if fares were lower, more passengers would fill the airlines' seats. I am wondering whether the government or the industry has any information or studies, such as studies for the Division of Tourism of the Department of Commerce and Economic Development, which could help us (and the carriers) estimate what the passenger load factor would be if fares were lower.

Today, Alaskans pay more than 100 percent above what ...ach class travelers pay, on a per mile basis, elsewhere in ... nation. Alaskan travelers appear to be subsidizing ... velers on other routes.

All of this occurs at a time when the rate of inflation ...laska is less than the rate of inflation acros... ...he ...n. In the past several years, the federal gover... ...t noted on many occasions that the cost-of-li...ng ...ential between Alaska and the rest of the count...y is ...ing, not growing. And airline fuel cost... are ...dly stabilizing, too. Some airlines, as we ...now, negotiated union agreements to reduce labor costs. ... as I have noted above, we are in a deregulation ...ent that is a supposed benefit to the consumer.

... assistance and advice would be very welcome, so ...of us in state government, working together, can ...g down the cost of airplane travel, absent ... justifications from the carriers showing good ... prior rates and recent increases have been ...d good reasons why all the carriers are charging ...he same fares.

Sincerely,

Joe P. Josephson.

Joe P. Josephson

Re: Airline Ticket Prices
A.G. File 166-312-85

Dear Senator Josephson:

Your recent inquiry concerning the high prices Alaskans are forced to pay for airline tickets has been reviewed in detail by my department. This is a matter of substantial public concern, as air travel costs impact Alaskans in many different ways.

My office has been monitoring the situation for sometime. In particular, the nearly identical prices charged by the carriers for travel between Anchorage and Seattle caught our attention. We did initiate an inquiry to find out how and why Alaska Airlines, United, Western, and Northwest all charge essentially the same prices on this heavily travelled route.

Our investigation revealed that the airlines are able to keep track of each others prices, and proposed price increases, through several computerized information networks. The main network is the Airline Travel Publishing Company's computer service (ATPCO). The ATPCO system publishes routes, schedules, fares, and proposed fare changes nationwide, and is apparently updated daily. This system is used by travel agents as well as by the airlines, and allows its subscribers to know -- to the penny -- what any given airline is charging on its routes.

We are informed that airlines generally "move in packs" when it comes to prices. That is to say, as a general rule, no one airline wants to offer a fare that is much higher than any other airline, for fear of losing business. Air travel is a particularly price-sensitive industry. Consumers will fly the airline that offers the best price, with other factors (schedule, quality of in-flight service, etc.) running far behind price as a factor in selecting which airline to choose. If one airline lowers its prices, its competitors follow suit quickly.

We are informed that when an airline decides to raise its prices, it will publish the planned increase through the ATPCO system with an effective date of one to two months after the initial announcement. Thus, its competitors are given notice of any up-coming price rise. The competitors are in a position to follow the leader and file corresponding price increases. Unless one airline does not go along, we are told, the upward change is likely to happen. By closely following the proposals of their competitors, and responding to the changes as they occur, airlines are able to keep their prices within a few percentage points of each other. This process is what is known as "conscious parallelism" in antitrust law. It is not illegal, under either the Alaska Restraint of Trade Act or the Federal Sherman Act, to closely follow and to respond to a competitor's prices.

Your letter asks for my thoughts on how the state antitrust laws apply, and whether they ought to be changed, in this situation. The problem is not one of jurisdiction, nor is it, in my opinion, one which can be remedied easily by changes to the law. If it could be shown by direct evidence that the airlines actually met, and agreed to charge any particular fare on Alaska routes, this office would be able to intervene and seek redress on behalf of consumers. But to prove pricefixing, we need evidence which we do not have, and which our initial inquiry does not indicate we would find. Nor would it be wise policy to seek a change in the law making it illegal for a business to watch a competitor's prices and respond to them -- consumers benefit when businesses cut prices in response to competition.

I join with you in expressing concern for the high prices Alaskans have to pay for airfare, in a time when the cost of air travel elsewhere in the country has declined dramatically. I certainly hope that consumers will express their concerns to the airlines. Perhaps one or more of the air carriers serving Alaska may respond by reducing its fares.

Sincerely yours,

Norman C. Gorsuch
Attorney General

SENATE CHAIR, ANCHORAGE CAUCU

OFFICE OF MINORITY WHIP

February 6, 1985

Mr. Bruce Kennedy
President
Alaska Airlines
P.O. Box 68900
Seattle, Washington 98188

Dear Mr. Kennedy:

As a state senator from Anchorage, I have asked why air fares have increased in Alaska this year, at the same time that significant new discount fares are offered elsewhere. My inquiries have resonated in the Alaska community, because Alaskans know that fares charged for flights to and from Alaska were high, both in relative and absolute terms, even before the latest increases took effect.

I am enclosing a copy of my letter to the Attorney General of Alaska dated January 25 and a copy of the press release which I issued at that time. I am also enclosing three other newspaper clippings on this subject, including a recent editorial and a recent travel column, which show the existence of widespread community concern.

This office has received many messages from constituents, and there has been a proliferation of letters to the editor on this subject. For example, I also enclose some letters to the editor of the Anchorage Daily News which appeared in that paper recently.

Alaskans who travel know that the fares now available between points in the continental United States tend to be far lower than the fares available between Anchorage and Seattle, on a cost-per-mile basis. From a traveler's standpoint, as the enclosed newspaper clippings make manifest, there does not appear to be an obvious rationale for the existing fare structures, and there is certainly no discernible relationship between distance and cost.

I need not detail here the very serious consequences to us Alaskans of the high airplane fares. We have no rail alternative. Buses and cars do travel over the Alaska

Highway, but considerations of climate, distance and time make these modes all but useless for most business and vacation travelers.

On the other hand, there is an alternative to the high fares now charged Alaskans on the Anchorage-Seattle route: Alaskans can stay home. Their relatives and friends in the "lower 48", and potential tourists, can stay home, too, rather than visit the 49th State.

That alternative is bad for the airlines. It is bad for Alaskans. It is bad for family relationships. It is bad for tourism. It is bad for commerce. It is bad for those who want to pursue educational curricula and professional seminars in other states. It is bad for community morale. It is bad for the relationship between the airlines and their customers. It is bad for the taxpayers of Anchorage who have invested in a new convention center, a sports arena, and other amenities designed to enhance tourism.

Alaskans are educated and sophisticated. They ask me:

1. Why are airline fares going up here while fares in other places are going down?

2. Why do all airlines consider the high fares to be more profitable, even though they compel many would-be travelers to stay put?

3. What are the justifications for the higher Alaska route fares? Are Alaska state airport landing fees higher than elsewhere? Is jet fuel bought for travel to and from Alaska more expensive? Is there a wage differential paid to employees working in Alaska? Are load factors so low that the costs of operation per seat, relative to revenues, are very high? If so, why do four carriers compete over the market, and why wouldn't lower fares build profits, at least on certain flights, or at least on designated flights off-season? Or, conversely, are load factors so high that it matters not to the carriers whether some Alaskans choose to be price-resistant?

4. Why has deregulation not led to price competitiveness here?

ALASKA LEGISLATURE COMMITTEE FILES 1987-1988 8672
5172 HTRA HB 525 - HCR 6

I am considering introducing legislation on this subject, and as a member of the Senate Transportation Committee, I have requested public hearings on this question. The Chairman of the Transportation Committee, I am informed, has scheduled such hearings.

I have also received a response from the Attorney General of the State of Alaska to my inquiry about possible anti-trust violations. The reply of the Attorney General indicates that an element in any anti-trust litigation would be evidence of actual consultations among the carriers to set prices; it does appear that such evidence is difficult to obtain, if it exists at all. The Airline Travel Publishing Company computer service gives every carrier access to detailed fare schedules from every competitor, and so a consciously-parallel fare policy can be set without direct communication among competitors on the subject.

The remedies for Alaskans in this environment would appear to be limited to a spontaneous or concerted abstinence or boycott from air travel; consultations with the Alaska delegation in Congress to explore inducements or sanctions at the federal level; utilization of the state's bargaining position as a major customer to bring about price concessions benefiting all Alaska travelers; encouragement of a new entrant in the Alaska market; and public relations rewards and honors to that carrier which is imaginative enough to be the first to give Alaska travelers some overdue relief.

I solicit your comments and suggestions so that Alaskans can begin to get some of the price benefits deregulation was supposed to bring. I have written in an identical vein to your three counterparts at the other interstate air carriers. In my judgment, imaginative leadership in this regard will inure to the short-range and long-range benefit of the company displaying it, and will certainly earn the recognition and gratitude of the legislature and the people of Alaska.

Sincerely,

Joe P. Josephson
State Senator

RECEIVED

FEB 22

Josephson,

M E M O R A N D U M

TO: Vince O'Reilly, Deputy Commissioner

DATE: February 12, 1985

FROM: Orhan M.Yildiz
Economic Analysis Section

SUBJECT: Airline Industry

THROUGH: Committee of Directors, Economic Analysis Section

In response to your request concerning determinants of airline travel demand we performed a literature search on the subject. Not surpisingly, there is no relevant information specifically for the Alaska market. However, from the limited literature that is available locally I have put together the following discussion, which may shed some light on the questions raised by Senator Josephson.

The 1978 Airline Deregulation Act has increased competition in most of the U.S. airline markets. Consequently, consumers have, in general, benefited from lower fares. In the Alaska market, however, steady price increases in recent years above the inflation rate indicate that Alaskans might not have benefited from the industry deregulation equally. Finding the reasons behind this would require an analysis of the local market characteristics and the airline industry structure in Alaska.

In spite of the increase in competition in the U.S. air travel market, the industry earnings in the post deregulation years have been good, except around the 1980 recession period, and were exceptionally good in 1984. Earnings are expected to increase in 1985. (This information was given by Albert Khan, the man responsible for the deregulation of the airline industry, on the KTOO TV show "Firing Line" on Feb. 9, 1985.) This may imply a price elastic (or price responsive) demand for air travel — i.e., a decrease in fares is more than offset by an increase in demand so that the industry revenues in fact increase. Why, then, is this experience in the lower 48 not transferable to Alaska?

First, the Alaska market has little competition compared to markets elsewhere in the U.S. Even the national market is not entirely competitive, since it is still dominated by the large Trunks, although their market share decreased considerably after the deregulation. In Alaska not only are the alternative modes of travel practically absent, but few airlines operate within the state boundaries. The existence of a small number of operators with similar cost structures and nearly identical products makes

the disadvantage of rivalry clear. This does not necessarily imply collusion. When the market is dominated by one large airline that airline could act as the leader and set the market price, which would be adapted immediately by the smaller airlines. Thus, it is likely that the Alaska market gravitates toward a monopolistic structure or toward an oligopoly with joint profit-maximizing behavior.

Where the air fares are set depends on how easy it is for other airlines to enter the market and the elasticity of demand for air travel. If barriers to entry were low, fares would not be much above those found in a "competitive market," for otherwise new airlines would enter the market to share profits. Thus, one question to be answered is how difficult it is to open the Alaska market to further competition.

If demand for air travel is not responsive to price changes the industry can pass most of the general operating cost increases on to the customers. The existence of monopoly conditions would further exacerbate the situation, because costs due to inefficiencies would be added to the overall costs -- while in a competitive market the inefficient airline would be forced to drop from the market. If the demand responds elastically to price changes cost increases would be born mostly by the industry. Hence, any price increase due to increasing costs would cut revenues drastically. Conversely, a decrease in price would increase revenues but not necessarily the profits of a monopolist. Therefore, the second question that would need to be answered is whether the demand for airline travel in Alaska is responsive to changes in prices.

Whether the Alaska market can become more competitive depends on several factors. Entering into the Trunk business involves economies of scale. Literature indicates that "... a carrier would have to supply at least two billion available ton miles ... in order to achieve unit costs comparable to those of the typical Trunk;" beyond this level of operation economies of scale disappear.1 In this situation the economical alternative would be the entry of an existing airline company, not a new carrier, to the Alaska market. This way the airline would pick the revenue

---

1/ Paul Biederman, "The U.S. Airline Industry: End of an Era," Praeger Special Studies, 1982.

Ton miles is the available tons multiplied by mileage flown.

passenger miles of travelers destined to other locations within th U.S. The market share of a carrier also depends on the frequency of service (number of flights per day), although as length of trip increases this becomes less of a factor.2/ In Alaska, trip length between Anchorage and Seattle, Southeast and Seattle, and Southeas and Anchorage would make it feasible to capture a reasonable share of the market with few flights per day.

Obviously, each carrier does not have the same cost structure, since there are other determinants of cost than size. One indicator of carrier efficiency is employee productivity, whic could be measured as revenue ton miles per employee.3/ Total operating expenses of a carrier depends on total employment, age o aircraft fleet (affects maintenance), type of aircraft (technology and cargo revenue. Since the two major airlines operating in Alaska are lower 48 based their employee costs in routes between Alaska and Seattle are probably not much higher than an average U.S. carrier. Of course, airlines have to maintain ground crews (for maintenance and service) at every airport. In addition, the cost of providing service within Alaska would be higher. One factor of great importance for the Alaska market is the cargo revenues of carriers. These work to reduce operating costs considerably. In all likelihood airlines in Alaska receive considerable cargo revenues, which lower operating costs and increase total revenues. Consequently, it is not clear whether operating cost of air carrier service to Alaskans is overall costlier than elsewhere. If further work in the airline cost area is sought, Financial data for Alaska carriers could be obtained from the Federal Aviation Administration (FAA). Such reporting is a requirement of FAA.

In addition to operating costs, a major obstacle to entry into the Alaska market would be fixed depreciation and amortizations costs of investment. Airlines with the monopoly power could easily undercut the prices, even below the level of a competitive market, to drive out a new entrant to the market. A carrier with high financing costs might not survive such rivalry unless it is protected by a parent corporation.

2/ Geaorge C. Eads, "The Local Service Airline Experiment," The Brookings Institute.

3/ A revenue ton mile is the revenue generated from carrying one ton a distance of one mile.

passenger. For a new carrier to enter the Alaska market it is important to know whether Alaska travelers are sensitive to price reductions. If they are not, utilization of additional carrier capacity offered by the new carrier may require deep price cuts, which would also reduce the total revenue earnings of the industry. On the other hand, if there are barriers to entry into a market, companies with the monopoly advantage benefit from inelastic demand. When demand is not responsive to price the reduction in demand would be proportionately less than the price increase, resulting in an increase in revenues.

The results of demand elasticity analysis in the U.S. carrier market has mixed results. In general, demand for business travel is relatively insensitive to price, whereas the reverse is true for vacation travel. Nevertheless, it is not clear that these conclusions apply to the Alaska market. It is possible that even the vacation travel might be inelastic, considering that few substitutes for air travel exist. Besides, demand for travel is derived from demand for other things, such as business, vacation, visiting family or friends. It is generally acknowledged that the geographical conditions here necessitate occasional vacations to outside. Also few Alaskans may spend their annual leaves at a touristic location of Alaska. There is also the fact that most people here have relatives in the lower 48, whom they may need to visit occasionally. Without specific analysis of the market we can not draw definitive conclusions, although these arguments point to a market with low price responsiveness to air travel. However, acknowledging the price sensitivity of vacation travelers, air carriers offer price discounts. Thus, the existence of different fare categories in Alaska indicate that nonbusiness travelers still have a more price elastic demand curve, but this is likely to be a matter of degrees.

A study for the airline travel in the North Atlantic market seems to give some, albeit shaky, evidence to the hypothesis of inelastic demand in Alaska. Cigliano has analyzed the effect of price and income elasticity of airline travel between the U.S. and Europe, and also between Canada and Europe.4/ The total demand (aggregate of different fare classes) was responsive to personal income in both markets, responsive to price in the U.S. market but unresponsive to price in the Canada market. The author attributes

---

4/ J. M. Cigliano, "price and Income Elasticities for Airline Travel: The North Atlantic Market," Business Economics, 1980.

the price inelastic demand in Canada to a different mix of travelers — e.g., more first class or business travelers. It is also possible that the special relationship of Canada to England requires a level of governmental and business interaction which is less sensitive to price. Alaska's remote geographical location to the mainland U.S. could easily be likened to the Canadian situatio Cherington, who did the first comprehensive, but subjective, revie of airline pricing concluded that price changes of less than 10 percent produced an inelastic response.5/ This study is now out dated, but for a new entrant to the market this figure gives an idea of the type of strategy required in order to be competitive.

In conclusion, the position of the State of Alaska shoul be the encouragement of competition in the Airline industry by making entry to the market easier. This can take the form of low interest business loans, tax legislation, or contract bidding. By opening the fiscal year air travel to a bidding process the government would be acting as a monopsonist (a monopolist of the user of services). If the size of government related travel is large the bidding process may prove to be very effective and may even lure a new carrier to enter the Alaska market.

DEPARTMENT OF PUBLIC SAFETY

The Alaska Wing Civil Air Patrol (CAP) has an "aircraft safety inspection program" now in place which is part of their objective to improve public awareness of aerospace safety. This program is staffed by CAP members as volunteers which involves presentation through flight instruction schools and safety workshops.

This bill provides qualified volunteers with a degree of civil protection. The Department of Public Safety supports this legislation.

Arthur English
Commissioner

from Rep. Barnes' Office

SUBJECT: Immunity from civil liability for voluntary aircraft inspections.

TO: Transportation Committee

The objective of this bill is to encourage qualified personnel to participate in a voluntary, complimentary aircraft safety inspection program. Each Spring, various groups of individuals visit airports across the State to perform complimentary aircraft inspections. The purpose of these inspections is to seek out winter damage to frames, struts, etc., and to inform the pilots and owners of the potentially dangerous situations involving their aircraft. As the situation now stands, as a result of these Good Samaritan efforts, should one of these persons miss a potentially hazardous situation and an injury result, the resulting liabilitites would be ruinous to the person performing the complimentary inspection, even though there was no charge for the inspection and it was performed at the request of the aircraft owner.

The only solution to this problem would seem to be introduction and passage of Good Samaritan legislation protecting such endeavors. Failing this remedy, the only alternative seems to be some form of State funded insurance program, which is economically impossible at this time, and extremely unsound under any conditions.

TO: REP. BETTE CATO, CHARIPERSON

HOUSE TRANSPORTATION COMMITTEE

RE: HB 544

Formerly, the FAA conducted a "Spring Break" safety inspection program, but this has been discontinued. Currently the only program being conducted in Alaska is an educational safety program conducted by the Alaska Aviation Safety Foundation. This program is presented on public television on Thursday nights. The program features interviews with various persons, ranging from FAA employees to private pilots, and deals with various phases of safety training.

In 1987, the Foundation conducted in excess of 400 tests on Emergency Locator Transmitters, and found approximately one-half of them to be defective. The Foundation also conducted approximately 40 Educational Safety Programs for pilots. These programs were presented from Bethel to Glen Allen and from Barrow to Ketchikan. There have been over 500 pilots reached through this program. Additionally, the Foundation has produced a video entitled "Passenger Safety In Alaska" which has been shown all over the State.

To conduct a voluntary or complimentary inspection such as the Foundation has in mind would require a team of qualified persons and would be performed at the aircraft owner's request. This is not being done at the present time, due to the liability factor. The objective of this bill is to extend freedom from liability to these persons under the Good Samaritan theory. There would be no exemption from liability for intentional or wilful acts, or ommissions.

Dept. of Transportation & Public Facilities

Position Paper

BILL NO: HCR 1

TITLE: Relating to the Highway between Eklutna and Palmer

APPROVED: Rocky Gutierrez
Commissioner

DATE: January 26, 1987

The DOT&PF agrees that widening the Glenn Highway from Eklutna to the Parks Highway is a much needed project, and in fact, has included it as a high priority in the Six Year Capital Improvement Program.

Specifically, this project would widen the Glenn Highway to four lanes from Eklutna to the Parks Highway with interchanges at the Parks and Old Glenn Highways. The first phase of the project (widening to four lanes) is estimated to cost $59,000,000. The total cost with interchanges is estimated to be $142,000,000.

A community meeting was held in Wasilla on October 29, 1985 to introduce the project and explain the development process of a federal aid project. One of the major hurdles, the Draft Environmental Impact Statement (DEIS), was submitted to the FHWA on December 18, 1986. Following approval of the DEIS by the FHWA, the project will proceed to design. We anticipate that right-of-way acquisition could begin as early as 1989 and construction could be completed by 1991. At this time there is no reason to believe this project cannot be developed in a timely manner.

Wetlands and wildlife habitat impacts are part of the social and environmental issues being addressed in the DEIS. We do not anticipate any problems with the wetlands as the Alaska Legislature exempted the right-of-way for the project from legislation establishing the Palmer Hay Flats Game Refuge (AS 16.20.032), and the U.S. Fish and Wildlife Service and the Corps of Engineers have cooperated with our development efforts. There will of course be some required wetland mitigation. The extent of which will not be known until the DEIS has been accepted by the FHWA.

Once the above are complete, the final design, right-of-way acquisition and utility relocation will be initiated. The construction phase is expected to begin in the autumn of 1989.

Rep Menard.

At the request of Mayor Edna DeVries

MATANUSKA-SUSITNA BOROUGH

RESOLUTION SERIAL NO. 84-107

A RESOLUTION SUPPORTING WIDENING OF GLENN HIGHWAY TO FOUR LANES FROM EKLUTNA TO THE JUNCTION OF THE PARKS HIGHWAY.

WHEREAS, most of the Glenn Highway from Anchorage to the Parks Highway junction has already been constructed to a four lane standard, and

WHEREAS, the near doubling of Borough population since 1980 has caused increasing congestion along the Glenn Highway between Eklutna and the junction of the Parks Highway and the Palmer-Wasilla Highway, and

WHEREAS, population growth, increases in traffic count and development trends are sufficiently clear and well established to justify a four lane highway,

NOW THEREFORE, the Matanuska-Susitna Borough Assembly urges the State of Alaska to commence the design for widening the Glenn Highway to four lanes between Eklutna and the junction of the Parks Highway so that the necessary highway right-of-way acquisition and construction can begin at the earliest possible date, and

BE IT FURTHER RESOLVED, the Matanuska-Susitna Borough urges the State of Alaska to seek an allocation of federal aid monies for a four lane highway based upon need, existing and projected traffic count, and

The Matanuska-Susitna Borough directs that a copy of this resolution be forwarded to the Governor of Alaska, to

Senator Jalmar Kerttula, to Representatives Ronald Larson and Barbara Lacher, to Richard J. Knapp, Commissioner Department of Transportation and Public Facilities, to David Haugen, Deputy Commissioner Central Region, Department of Transportation and Public Facilities and to the Mayor Municipality of Anchorage.

PASSED AND APPROVED by the Borough Assembly of the Matanuska-Susitna Borough this 7th day of August, 1984.

assembly memorandum

20-5

no. TM 84-

from: Department of Public Works date: 11/6/84

subject: Glenn Highway Four Lane Improvement from Eklutna to the Parks Highway Intersection

A number of estimates have been stated publicly over the past several months regarding the cost of construction for the additional two lanes between the Eklutna Flats and the Parks Highway. The Department of Transportation and Public Facilities has two estimates for the four lane work within the limits described above. One estimate is in the amount of $58,000,000, which would include design, right of way, utilities, construction and contract administration for four-lane highway construction, bridges, etc. between Eklutna and the Parks Highway with signalized intersection at the Parks-Glenn intersection.

A second estimate includes the four-laning with bridges, utilities, right of way design and construction for the project referenced above, except for the intersection at the Parks-Glenn Highway, which would include the ultimate design of an interchange for free traffic flow instead of the signalized intersection in the estimate above. The cost estimate for this work is $104,548,000.

Respectfully submitted,

Rodger Wm Lewerenz

Rodger Wm. Lewerenz, P.E.

Gentlemen:

Re: Glenn Highway, Eklutna to Parks

The Matanuska-Susitna Borough supports upgrade of the Glenn Highway - Eklutna to the Parks Highway.

We attended sessions where the various environmental consequences of the project have been discussed. We have also evaluated various statements by various public agencies having an interest in the project. In our opinion the various environmental concerns can be dealt with. Since you are dealing with parallel bridges and a parallel causeway, you are dealing with as few environmental variables as you will ever have occasion to deal with on a major project.

We have some minor recommendations which should not appreciably affect the cost of the project. We urge DOT/PF to consider the attached comments of the Borough Planning Department in the design of the project.

The traffic congestion on this route is severe and the threat to safe and efficient vehicle operation will increase with time. The widening to first four and then eventually six lanes is vital. The 1984 ADT (average daily traffic) was approximately 15,500 vehicles. There were 250 traffic accident on this section of the Glenn Highway between 1982 and 1984.

We believe the project should receive the highest priority possible for a timely upgrade.

PROJECT DESCRIPTION

The Glenn Highway is the primary highway route between Anchorage and the rapidly growing Palmer/Wasilla area. Improvements to the Glenn Highway are considered necessary to provide for the existing and projected traffic demand.

The proposed project begins near the railroad overcrossing at Eklutna where the existing four-lane facility terminates. The proposed project ends at a point on the Parks Highway approximately two miles northwest of the Glenn/Parks intersection, and at a point on the Glenn Highway approximately 1.4 miles northeast of the Glenn/Parks intersection. The total length of the project is approximately 13 miles.

The portion of the Glenn Highway to be improved by this project is presently a two-lane rural highway. The proposed improvement would provide a six-lane divided highway. The existing two-lane highway would be widened to three lanes and would be used for northbound traffic. Three new lanes for southbound traffic would be constructed to the west of the existing road.

Access to the new highway would be fully controlled to allow for the most efficient traffic flow. As a result, certain roads and driveways that currently intercept the Glenn Highway would be closed, or rerouted to frontage roads and other access roads that would feed into proposed interchanges. Three interchanges would be constructed: one at the Old Glenn Highway, one at the Glenn/Parks intersection, and one at the proposed New Trunk Road.

Various methods of providing access to the boat launching area at the Knik River are being investigated.

Bridges

Bridges for the southbound lanes of traffic would be constructed downstream of the existing Knik River and Matanuska River bridges. The existing bridges would be widened to serve the northbound lanes.

The three proposed interchanges: Glenn/Parks Interchange, Old Glenn Highway Interchange, and the Trunk Road Interchange would require bridges for grade separations (i.e. overpasses for railroad crossings, etc.).

Frontage Roads

1. A proposed frontage road may provide access to the property served by the driveway at the old FAA towers near Eklutna; this frontage road would funnel traffic to existing roads in Eklutna Village.

2. Access to Rabbit Slough and private property west of the proposed Glenn/Parks Interchange may be provided by a frontage road system. This frontage road system would be accessible via the Parks Highway.

3. Access to Kepler-Bradley State Park and properties north of the proposed Glenn/Parks Interchange may be provided by a frontage road system. This frontage road system would extend from the Old Trunk Road to the Kepler-Bradley Lakes area.

Right-of-Way

Additional right-of-way would be required for the proposed Glenn/Parks Interchange, the proposed Old Glenn Interchange, the proposed Trunk Road Interchange, and portions of the proposed frontage roads. Some businesses and private property may be impacted by right-of-way acquisition.

Wetlands

Approximately 160 acres of wetlands may be filled by the project as presently proposed. These wetlands provide habitat for salmon, moose, waterfowl, and a variety of small mammals.

Floodplains

Fill, rip-rap, portions of the highway, and the new river bridges would be placed in the 100 year floodplain of the Knik and Matanuska Rivers.

Your comments on this proposal are needed to ensure that all factors are considered in the preparation of the Environmental Impact Statement and that our final recommendations are in the best overall interest of the public. Transmittal of any information you may have concerning environmental, economic, or social concerns and land use issues would be appreciated, and any comments or suggestions regarding the proposed roadway alignment or other project related concerns are welcomed.

For further information about the project and scoping meetings contact Melanie Caltrider, Environmental Analyst, Central Region ADOT&PF at 266-1507.

Sincerely,

Merlyn L. Paine
Environmental Coordinator
Central Region ADOT&PF

Attachments: Project Map
Agency Scoping Meeting Agenda

My name is Barbara Hunt and I am a legislative aide to Representative Larson. I wish to testify on behalf of House Concurrent Resolution No. 1--relating to the highway between Eklutna and Palmer.

As a past Planning Commissioner for the Mat-Su Borough and a current member of The Commuter Advisory group, I feel I can speak to the need for widening this inadequate 2-lane highway.

In the past 6 years I have spent approximately 3,120 hours commuting on this road. This equates to my logging in 156,000 miles. Although these numbers may be unscientific, I still believe they have validity.

Although Representative Menard has many statistics for your perusal, I would just like to say that I share the two lane with 6,930 other commuters during the peak hours of travel. Those numbers coupled with 3 narrow bridges, uncountable moose, and unpredictable ice fog has made this trip appropriately titled " the dance of death". (That was the name given this highway by the local paper more than two years ago.) Things have not become easier since then. If one accident happens on the two lane--during peak hours, you can be assured of atleast a 1/2 hour or hour delay. Emergency vehicles have the same problems as commuters, because in many cases an alternative is not availiable.

In my discussion with Mayor Jones of the Mat-Su Borough, I understand that this project remains one of the most important projects for the Mat Su Valley. Representative Menard has an assembly resolution to that effect.

I would be glad to answer any questions.

Fiscal Note Analysis

HCR No. 6

1. ANALYSIS OF FISCAL IMPACT ON EXISTING PROGRAMS.

DOT&PF has assumed IARF funding. Airport tenants and airlines pay fees sufficient to meet the costs of operating and improving the international airport system. At current total landed weight levels, each $250,000 in expenses equals roughly $.01 added to the landing fee. A $750,000 increase in operating expenses could increase current landing fees by $.03 per 1,000 pounds of aircraft takeoff weight.

Under the operating agreement between the Department and the airlines any material change in the operating and any change in the capital budget should be reviewed by the signatory airlines.

2. ANALYSIS OF FISCAL IMPACT ON NEW PROGRAMS.

A successful marketing plan should generate increased revenues. In this instance, anticipated revenue increases are impossible to predict because much of the marketing focus is to attract traffic to replace existing international traffic forecasted by the resolution to overfly Alaska because of new long-range aircraft technologically making the Alaska stop unnecessary.

3. ANALYSIS OF EXPENDITURES

The contractual costs for FY 87 represent estimated costs for developing a marketing plan. FY 88 - 90 contractual costs represent estimated marketing program costs based on the Portland maketing budget. Portland and Seattle appear to be analagous to Anchorage since both are targeting worldwide markets. The Port of Seattle spends approximately $1.2 million annually for tourism, cargo marketing and airport public relations. Assuming the Air Cargo Feasibility Study currently underway defines much of the cargo market potential, the tourism and public relations needs at Anchorage and Fairbanks may be able to be addressed with the $750,000 annually --Portland's annual budget for marketing. Until further development work is done the mixture of direct staffing versus contractual activities cannot be determined.

4. OTHER INFORMATION

DOT&PF is in the process of gathering information on other airport marketing programs. Many of them are coordinated efforts with multimodal port authorities, municipal and state tourism agencies, local Chamber of Commerce groups, etc. Typically, a <u>destination</u> is marketed -- not an <u>airport</u> per se. DOT&PF envisions the same basic approach for Anchorage and Fairbanks airports. The marketing program needs to be a coordinated one with the IARF contributing to the overall efforts to market the State and promote broadbased economic development. The approrpriate financial commitment for the airports will undoubtedly be a subject of negotiation with the other parties involved in promoting Alaska.

Trade, tourism linked

By DEAN FOSDICK
The Associated Press

Alaska's chances of selling its resources to Pacific Rim nations would be greatly enhanced if it could step up tourist trade with that region, a spokesman for Japan Airlines says.

Mitsuo Kitamoto, a JAL vice president and head of the company's Anchorage office, said trade follows tourism, and Alaska is missing out on a good thing by not promoting vacation opportunities to people passing through the airport's international terminal.

"After vacations, businessmen often go back to their offices and are more receptive to (trade) offers — especially if those offers are competitive," Kitamoto said.

"Australia and Alaska have many of the same things to offer — coal, ore — and they both have good locations for the (Pacific Rim) market. But Australia changed its tourism policy about two years ago and there's been a rapid increase in the number of (Japanese) tourists there.

"After tourism comes business," Kitamoto said.

Anchorage International Airport is the Alaska gateway for people crossing between Asia and Europe, he said.

But technology and international politics may reduce the number of people passing through the airport, Kitamoto said in an interview.

"Long-range jets are coming that can fly non-stop between Tokyo and Europe ... Paris," he said. "And already last year we started flying a polar route over Siberia.

"Businessmen are asking for more non-stops, for additional flights. And we're looking at it."

What that means for Anchorage is unclear, but it could cut into the transient traffic from Japan, which for JAL means about 4,500 passengers a year, Kitamoto said.

"There's been almost no change in the number of Anchorage-destined passengers in the last two years," he said. "A lack of promotion here has been one problem."

Kitamoto said JAL has agreed to help promote Alaska to its Japanese passengers this year. Alaska should do the same for overseas visitors, he said, an idea he has been pushing over the past several weeks during speeches before civic groups.

"The state needs some selling. We get the same questions (from Japanese) about Alaska we do about Africa. What kinds of shoes and gear are required? Is there any kind of shopping here?

"Why should they buy in Europe when they can buy in Alaska? Why not open a corner of the (airport) duty free shop to Alaska crafts?

"Having resources isn't enough," he said.

Time to

Protecting the future of Anchorage'

Editor's note: this column is excerpted from remarks made by Sheffield Enterprises president Al Parrish to the Dec. 18 membership luncheon of the Anchorage Convention and Visitor's Bureau. Mr. Parris is chairman of the Anchorage Business Council's airport subcommittee.

Comments
by Al Parrish

ANCHORAGE International Airport, as a state-owned facility, began in the early 60's as a principal transfer point for travelers making connections to points within and outside Alaska. In addition, the airport was a refueling and an entry and exit point for international flights, principally on routes between Europe and the Far East.

Today, 26 years later, Anchorage International still serves those primary functions. The plant, however, has grown to include two passenger terminals encompassing 295,000 square feet of total floor area, three runways, extending up to 10,900 feet, 36 aircraft gates, and six baggage claim areas. All of this is contained within approximately 2,600 acres. The airport is serviced by 16 major carriers, nine of which are international, five commuters and approximately 25 non-scheduled airlines.

According to a Department of Transportation study conducted in 1983, the airport contributes more than $1.5 billion to the Anchorage economy. Over 13,000 residents counted on the airport's operation for their jobs, earning a total of $375 million dollars.

HOW WOULD you like your business to have a financial statement like this: In FY '86, the airport took in $45 million dollars, showing a profit of $21 million. Let's take it one step further: image having a business that made a profit of $21 million a year, and that it achieved this profit without any advertising, any public relations, or any marketing studies whatsoever!

Anchorage's strategic location could easily enable it to serve as a platform for business between Europe and Asia. The possibilities are limitless. For example, if Anchorage were to become a foreign trade zone, goods from around the world could be stored here, processed, used in manufacturing other items, exhibited, repackaged, sold or handled in numerous ways. Imports could be used with domestic parts to manufacture new items within the zones — all without paying any customs duties or excise taxes. It would be a tremendous catalyst for development within our business community.

In addition, by expanding the duty free zone at the airport to allow foreign shoppers a much wider range of retail exposure than just gifts and liquors, we could create, in essence, regional shopping centers for stop-over travelers. They could tour duty free trade complexes and showrooms without the necessity of having to go through customs.

More and more, we're seeing international airports taking an active role in marketing their facilities and services. For example, Seattle-Tacoma Airport, together with the Port of Seattle, which owns the airport, has developed an aggressive campaign to attract the expanding transpacific market, the international tourist market and the air cargo industry.

They've produced numerous brochures and an audio-visual presentation. They have a staff of marketing representatives which actively calls on transpacific clients, touting Sea-Tac's excellent international services on the airport premises, such as banks, customs brokers, freight forwarders, warehouses, foreign consultates, plentiful terminal space, excellent ground access, ample runway capacity and minimum environmental concerns.

Sea-Tac's programs and policies have helped to establish it as one of the top 20 airports in the United States for passenger-traffic volume. In 1982, over 9.2 million passengers and 148,000 metric tons of air freight were handled by Sea-Tac. By 1985, the number of passengers at Sea-Tac increased to 11.5 million passengers, up 25 percent. Freight went up to 210,000 metric tons, up 42 percent.

Freight went up
t.

THE NEED, then, to make our presence known is going to become increasingly important in the years ahead. And not just because others are doing it. At this time, Anchorage International faces a very critical challenge, that being the advancement of aviation technology.

I'm sure most of you have heard abou the new Boeing 747-400 series aircraft. This aircraft is an advanced version of the B-747's which have served Anchorage International Airport for the past 15 years. Howevr, the new 400-series requires only a two-person flight crew, compared with the three crew members required on all other 747's. It will be able to carry between 400 and 600 passengers, and will be able to fly approximately 8,000 miles nonstop. This will allow the aircraft to fly between Tokyo and Frankfurt, Singapore and Paris, or Hong Kong and London without refueling in Anchorage.

OUR WINDOW of opportunity is slowly closing, and we can't afford to wait. We need to sell Anchorage International as a place the airlines will want on their route schedules — whether it be for passengers, cargo or simply refueling. And the most direct way to go about this task is to mount a marketing campaign, promoting our plant and its services to the world.

Funds for marketing the airport are already available. Revenues from the airport's operation go into a reserve account. The money is there.

Once a line item dedicated to marketing the airport is budgeted by the state, a cooperative effort can be developed, whereby funds from private and public sources would be combined to develop a generic campaign. We believe it will take approximately $3-$5 million to develop and implement a comprehensive marketing plan for the airport. This seems like a reasonable amount to launch a program to reach the world's markets.

Which revenue streams need to be protected and developed?

Obvious ones are, of course, those passengers who are stopping over in Anchorage, on their way to or from a primary destination. Our research shows that 84 percent of those on flights stopping over in Anchorage would be interested in a stay of four to seven days. One-half of those would have stopped on the trip they were on if they would have known they could.

One good example of a stopover program was developed by the Port Authority of New York and New Jersey for passengers transitting through the three major airports: Kennedy International, Newark International and LaGuardia. They call it, "On Your Way Over, Stopover." The package includes one-night hotel at a choice of hotels, sightseeing, VIP shopping service at Macy's or Bloomingdales with language assistance, a choice of Broadway theatre tickets, a welcome kit, etc., all at a low package price. They've advertised this program in periodicals all over Europe.

Other international passengers of great interest to us are those on either end of the transpolar route who could be persuaded to use Alaska as a visitor destination. New research by the state of Alaska shows that the potential for Japanese and German visitors selecting Anchorage as a visitor destination nearly equals the potential for visitors coming from the U.S. If we do our job right in selling our destination, it is possible that we could attract an additional 200,000 visitors a year from Germany and Japan, or a 50 percent increase in vacation or pleasure travel.

WHILE PASSENGERS are important, air freight offers even greater potential for growth. By increasing freight handling at AIA, we would see an increase in landing revenues (which are based on the gross takepoff weight of the aircraft) and fuel revenues for the airport.

International air freight is a rapidly growing market. In recent years, international air cargo shipments have increased at twice the rate of passenger travel.

The most cost-effective freight for air transportatoin is low-volume, high-value, and relatively low-weight products, such as electronic components, mini-computers, and precision instruments. Other less obvious air freight products are those with time-sensitivity, such as high-fashion apparel, pharmaceuticals, animals, produce, seeds and flowers. These markets need to be actively developed.

I mentioned fuel fees, and I'd like to stress that fuel is an important revenue stream. The airport operates a fuel storage farm and many operators have underground storage tanks. On an average day, approximately 1.2 million gallons are pumped. This means approximately $24,000 a day, or $9 million annually in fuel flowage fees.

Who is backing the plan to market the International Airport? This idea was further advanced by the Anchorage Business Council's Airport Committee, which I happen to co-chair, and others. The council, by the way, was formed by Mayor Tony Knowles with the mission of spurring economic development in Anchorage. Both the municipality and the Anchorage Business Council have endorsed our committee's recommendation. The Greater Anchorage Chamber of Commerce has since given the idea its full support, along with the Anchorage Convention and Visitors Bureau.

We'd like to invite your support as well, because as residents of Alaska and users of the airport, you have a stake in its future operation. We presently have the lead time to plan for the decade ahead. But we can't afford to wait. We need to plan for the 21st Century now.

Anchorage International Faces Uncertain Times Ahead

Concerns range from the present domestic traffic drop-off from the oil industry's slump, to the future effects of longer-range aircraft that won't need to refuel at Anchorage. An occasional moose on the runway is just part of the job.

By Bruce Johnson

Anchorage—International flight stopovers, Alaska's dependence on air transportation and the deregulation of the domestic airline industry all are making Anchorage International Airport a much busier place than the area's population of about 250,000 persons would suggest.

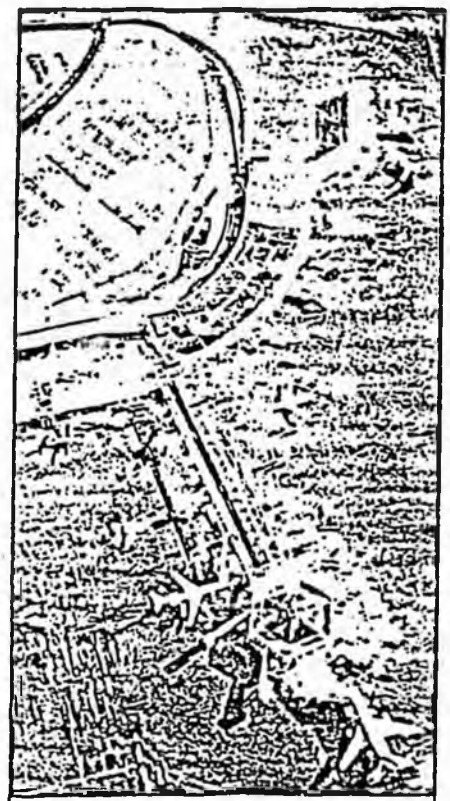
Among the nation's 36 medium-sized air traffic hubs, Anchorage ranks second in number of revenue passengers. Indeed, last year more than 4.6 million passengers were handled at the airport.

But unlike in many communities as large as or even much larger than that of the Anchorage vicinity, there is real meaning behind the "international" portion of the Anchorage airport's name. Of its 4.6 million passenger total last year, more than 1.6 million were classified as through passengers—largely visitors to the airport during refueling/reprovisioning of aircraft flying between the Orient and Europe. No less than ten international carriers have stopover operations at Anchorage International. The latest to join the list is Swissair, operating between Tokyo and Zurich.

Because of Anchorage's central position between Europe and Asia on the polar route, Anchorage International ranks seventh in the United States in terms of international operations. Flights take about nine hours between Anchorage and Europe and about seven hours between Anchorage and Tokyo. The longest nonstop flight between Anchorage and Asia is flown by China Airlines to Taiwan—almost 10 hours.

"We average 40 to 55 widebody aircraft per day here," said Guy Russo, airport director. "Most of those widebody visits involve international stopovers, including freighters."

In order to more effectively accommodate this heavy international side of the business, the airport authority recently added five remote fueling pits. The airport now has eight such parking positions—all dedicated to international stopovers. In addition, three years ago the airport completed construction of an international terminal that serves passengers while their planes are being refueled and reprovisioned. The terminal contains a duty-free shop that Russo unabashedly claims is "one of the nicest in the world."



With prices so low, at least half of the oil industry's Alaska exploration activity has been halted, resulting in a reduction of personnel and freight moving through the Anchorage airport.

The airport's main terminal—dedicated to domestic traffic—accommodates intrastate commuter operations as well as the half-dozen airlines that link Anchorage with the "Lower 48," primarily through Seattle-Tacoma International Airport.

"We run around 6000 seats a day going south from here," Russo said. That capacity includes a daily United Airlines flight direct to Chicago and a Northwest Airlines flight to Minneapolis.

Extremely air-dependent

Deregulation, as well as this giant northern state's extreme dependence on air transportation, is responsible for a marked increase in the number of seats (and decrease in rates—see separate story) being experienced in the Seattle-Anchorage corridor, in particular.

In March, AirCal extended its regional operations to Anchorage and quickly expanded the schedule there to four flights daily. Another newcomer is TWA, with one domestic flight per day out of Seattle.

Anchorage International—state-owned and the largest airport in the state—serves as the main hub for persons flying to or from most places in Alaska, which has a total population of little more than twice that of the Anchorage area. In-state destinations include Fairbanks (which has the second largest airport, also state-owned) in the interior, the Prudhoe Bay oil field area on the North Slope, and remote fishing and other communities in the Kenai Peninsula, Gulf of Alaska mainland, Kodiak Island, western Alaska and the Aleutian Islands areas.

The popular tourist region of Southeast Alaska, also containing the state capital of Juneau, is served directly out of Anchorage as well as from Seattle.

Traffic tied to oil

Although Lower 48 domestic and in-state commuter business remains strong this summer at Anchorage International, the airport is likely to see a

An airport economic impact study last year revealed that airlines paid for nearly 69,000 hotel rooms in Anchorage due to crew and unscheduled passenger layovers.

greater-than-normal drop in business this fall and winter following the summer peak season of tourists, fish processors and fishermen. This is due to the dramatic downturn earlier this year in world crude oil prices. With prices so low, at least half of the oil industry's Alaska exploration activity has been halted, resulting in a reduction of personnel and freight moving through the Anchorage airport.

Also beginning to adversely affect air travel, particularly of business people, is a downturn in North Slope oil revenues flowing into the state government coffers, and the adverse spinoff impact that this is starting to have on Alaska business and individuals in general.

The dominant carriers in the highest-volume portions of the intrastate markets are MarkAir, a relatively new carrier that is solely an in-state operator, and Alaska Airlines, which also is the highest-volume scheduled carrier between the Lower 48 and Anchorage. In addition, United, Northwest, AirCal and TWA compete, as does Western Airlines, a veteran, high-volume operator of the Lower 48-Anchorage trade.

Russo is a longtime Western hand. The airport's director, who has been working in Alaska since 1955, retired as Western's Alaska regional director in January 1983. A year later, he was appointed director of Anchorage International.

Weakening stopovers

During his many years at Anchorage, Russo has seen a dramatic increase in international stopover business. In 1973, he recalled, the airport logged little more than 700,000 international passengers. "That segment of the airport's business surpassed the one-million-person mark for the first time in 1978," he noted.

International stopovers are good business for the Anchorage community. Besides refueling (32.5 million gallons last April, for example) and reprovisioning, fresh flight crews are accommodated for two to four days at a time at Anchorage, depending on flight and personnel schedules. Indeed, an airport economic impact study conducted last year by Applied Economics Associates (AEA), revealed that airlines paid for nearly 69,000 hotel rooms in Anchorage due to crew and unscheduled passenger layovers.

Unfortunately, this lucrative international stopover business is showing signs of weakening somewhat.

Because Asians appear to be traveling to Europe as well as other destinations in increasing numbers, the slight slowdown in Anchorage's international business does not appear to be linked to the terrorism-caused falloff in American travel to Europe. Rather, the slight weakening of Anchorage's international activity could be related to a rise in increased competition from the Asia-Europe route via northern Siberia.

In 1983 Anchorage International handled half of total tonnage flowing through all of the nation's medium-sized airports—an air freight volume only slightly less than that passing through LAX or JFK.

Alaska Airlines carries highest Alaska-Lower 48 volume.

The AEA report noted that at least two international carriers—JAL and SAS—have exercised transit rights through Soviet airspace and that some other carriers are contemplating route changes via Russia.

Of longer term concern at Anchorage is the possible adverse effect on international stopovers that Boeing Co.'s development of the longer-range 747-400 will have.

"We're now in a unique position, I guess, similar to what Gander was during the prop aircraft days across the Atlantic; but I suppose we're going to be faced with some loss of business when the Boeing 747-400 comes on line," Russo reflected.

He observed that the 747-400 will be capable of flying 8000 statute miles—enough to fly the plane nonstop between Asia and Europe via the American and Canadian airspace polar route.

"Not all of the airlines of Europe are going to afford the luxury of having a 747-400," Russo reasoned, but he admits that "some" 747-400-caused deterioration of international stopover business is anticipated during the next decade after the new model enters service.

Reacting to the recent downturn in Alaska's economy caused by the collapse of crude oil prices, the state is intensifying its efforts to attract tourists—international as well as domestic visitors. As part of these efforts, it is focusing increased attention on marketing Alaska as a destination—not just a stopover—for Asian and European tourists. Presently, only about 25,000 international passengers disembark each year at Anchorage to spend some time in Alaska.

"We get quite a few (big-game) hunt-

ers from Austria, Germany and other European countries, and the Japanese like to fish," Russo observed. But he said there is considerable untapped potential for attracting international visitors on the basis of Alaska's spectacular scenery of mountains, glaciers and fjords as well as its cultural and other attractions.

"The long-haul seats are what the airlines are going to fill first," Russo acknowledged concerning the superior revenues generated by Asia-Europe traffic as opposed to Asia-Alaska or Europe-Alaska traffic. But because of the state's international promotion efforts, he is optimistic that more international passengers will disembark at Anchorage.

Heavy traffic, plus floats

Anchorage International, which had 36,738 jet aircraft landings last year, has three 11,400-foot runways—two of which are parallel east-west runways that are instrumented. The third, a north-south runway, is not instrumented. Simultaneous landings and takeoffs occur routinely at the airport. Because of prevailing winds, landings usually are from west to east and takeoffs are from south to north.

Air traffic is heavy in the Anchorage area. Not only do the northerly takeoffs encroach on military plane approaches at Elmendorf Air Force Base, but Anchorage International itself has a large general aviation facility for both wheeled and float planes.

The FAA-operated tower at the airport coordinates commercial and general aviation traffic, each of which has separate traffic patterns.

One of the more interesting aspects of the Anchorage International operation is its base for float planes. Two natural lakes—connected through dredging—are located adjacent to the airport and are ideal for float plane operations. In addition, next to one of the lakes is a general aviation dirt strip.

"We have at least a thousand, maybe 1200, general aviation airplanes around the airport here," Russo related. "People jump into their airplanes here on weekends like people in the Lower 48 jump into their cars."

As far as airliner operations are concerned, the only congestion occurs when, as the airport director puts it, the planes are scheduled to "fly out of here in formation."

Anchorage International has the usual morning (7:30 to 9) and late afternoon (4 to 6:30) peaks in traffic. But in a departure from the norm, the airport also has a peak period between midnight and 2 a.m. This is due to the desire of many passengers wanting red eye flights to Seattle for catching early morning Lower 48 flights there.

Because the airport is getting close to

"We're now in a unique position, I guess, similar to what Gander was during the prop aircraft days, but I suppose we're going to be faced with some loss of business when the Boeing 747-400 comes on line."

gate capacity during those three periods, continued redevelopment and expansion of terminal facilities is being planned.

Extensive changes coming

The airport, which went on line in 1953 in part to accommodate international refueling stopovers between Europe and Asia, has been undergoing extensive facility changes in recent years.

Last September, a commuter carrier wing was added at Concourse C, and domestic carrier gates were added and renovations were accomplished at Concourse B—at a total cost of about $25 million. Anchorage International now has eight widebody gates at the international terminal and 20 domestic and five commuter gates at the main terminal. Concourse A has eight gates, but only three are equipped with jetways because of extensive use of combi planes (with freight forward) into Anchorage. Newly renovated Concourse B has 12 gates, all with jetways. Seven of the airport's domestic gates handle widebody aircraft.

In order to keep up with market demand, construction is underway on a $25 million, 1200-vehicle parking garage with an underground connection to the terminal building lobby. In addition, plans are being made for demolishing the original, 1953-vintage section of the terminal and building another concourse that will be designed for eventual development of a wing stretching between the domestic and international terminals.

When this new building—Concourse C—comes on stream several years from now, there will be a major reassignment of gates at the airport. Said Russo, "Operating efficiency will be enhanced significantly. All commuter flights will be consolidated in one area, narrowbody planes are moved into their own area, and widebody domestic flights will be accommodated out of the new and enlarged Concourse C."

"We have at least a thousand, maybe 1200, general aviation airplanes around the airport. People jump into their airplanes here on weekends like people in the Lower 48 jump into their cars."

Although state owned and operated, Anchorage International has not shared in the spending spree for capital improvements and other projects undertaken by the state government, whose coffers became swelled with oil revenues. All of Anchorage International's expenditures have been supported by operational revenues, Russo reported.

"We didn't benefit from the (state government financial) upturn, and we're not getting hurt by the downturn," he observed.

Freight—the airport's ace

Besides being an important hub for passengers, Anchorage International is a major factor in the movement of air freight.

In fact, the facility ranks first (among the nation's 36 medium-sized air traffic hubs) in the amount of revenue freight handled. Last year alone the airport logged nearly 316.8 million pounds of freight. In 1983, the AEA economic impact study noted, Anchorage International handled a half of total tonnage flowing through all of the nation's medium-sized airports and that the air freight volume at Anchorage was only slightly less than that passing through LAX or JFK that year.

Lots of time-sensitive general freight flows into or through Anchorage airport as belly and freighter traffic from the Lower 48. Most of the freight flow is one way, although fresh fish is a strong backhaul during summers.

Interestingly, the Anchorage airport traditionally has more departing air freight than arriving air freight. This is mainly due to certain freight arriving on express steamship services operating between Washington state and the Port of Anchorage, from where the freight is trucked to the airport for fast distribution by air to in-state destinations.

Milder than Minneapolis

To someone on the "outside"—a term commonly used is Alaska to denote the Lower 48—Alaska is seen as a state plagued with heavy snow and intense cold. But Anchorage, adjacent to saltwater at the head of Cook Inlet, usually has milder winter weather than is often experienced by cities in the northern tier of the Midwest and the Northeast, Russo observed.

Two feet of snowfall is about average during the winter at Anchorage. Usually, the snow comes only a few inches

at a time, although snowstorms—including an 18-inch snowfall last March—are not uncommon. Twenty degrees below zero is about the coldest the temperature gets at Anchorage, with zero being the usual low temperature during the winter, according to Russo. Average low temperatures in the winter are 15 to 20 degrees.

With winter weather usually being milder than at Minneapolis, for example, Anchorage International does not experience abnormal snow removal problems. The airport authority has about 100 pieces of equipment that can be used for snow removal, including graders, grader-towed sweepers, blowers and trucks, plus front-end loaders for hauling snow to remote areas of the airport.

Even during heavy snowfalls, "we're able to keep at least one runway open at all times," Russo said. "It takes us 45 minutes to an hour to get a runway totally clean and back in operation."

Visitors: VIPs and moose

Actually, moose—not snowfalls—create the biggest runway operation problem at Anchorage International.

"A big concern is keeping moose off the runways in the fall and spring," Russo said. "They're capable of going *through* the fence or they can jump *over* the fence."

"A big concern is keeping moose off the runways in the fall and spring; they're capable of going through the fence or they can jump over the fence."

The airport perimeter has an eight-foot-high chain link fence topped with barbed wire, but each year eight to 10 moose—which Russo terms "very stubborn animals"—either are detected near the fence or have broken through or jumped over the fence.

"If we can't herd them out, we have permission from (state) Fish and Game to destroy the moose," Russo said. "We give the meat to a charitable organization."

Besides patroling for moose, airport security personnel occasionally have extra work to do because of stopovers by international dignitaries, whose planes are being refueled. Japan's Prime Minister Nakasone is a frequent visitor. Also a familiar personality is Great Britain's Margaret Thatcher.

The international terminal has a VIP lounge to accommodate those and certain other international visitors, but frequently international dignitaries desire a trip to and from downtown Anchorage—little more than four miles from the airport.

Russo noted that the U.S. Secret Service has personnel based at Anchorage and that Secret Service people from West Coast states are flown north when necessary to augment the Alaska contingent.

The eruption last Easter weekend of Mt. St. Augustine, a volcano about 150 miles from Anchorage, also has made life interesting lately for Russo.

"We never closed the airport, but some of the carriers chose not to come in," he said. "They were concerned about volcanic ash in the air and the effect it would have on jet engines."

So, for several days while the wind blew some ash into Anchorage, flight schedules were seriously disrupted. During that time, the airport lost about 75 percent of its overall traffic load. Ironically, that disruption was far greater than the airport has ever experienced from winter weather. ■

With respect to the resolution before you, I would like to clearly state that the airlines are not opposed to the concept of the promotion and marketing of Anchorage and Fairbanks International Airports. Such programs, which are in place at various other airports throughout the United States, are sometimes, but not always, beneficial in stimulating additional traffic. Many of these programs are in conjunction with and financially supported by other local agencies and organizations, so that the destination is being marketed, not just the airport. Anchorage and Fairbanks Airports both have excellent airfield and terminal facilities and services; and it is very doubtful that an airline management, anywhere in this country or the world, would necessarily be convinced to fly to one of these airports if there are not operational, technical, market-related, or other business reasons to do so. In other words, there is no assurance that an airport marketing program will bring any new traffic.

The airlines are extremely concerned by the current airport marketing proposals, because, at this point, they lack any definition of how a marketing program would be organized and implemented. We know nothing about the scope of the effort, its management, and overall control. The only information we have heard in recent weeks is the proposal to spend anywhere from $3 million to $5 million per year on an airport marketing program. These amounts are incredibly high compared with other airports and seem to have no basis or solid rationale.

The airlines recommend that in considering the current resolution, the Legislature request that the Department of Transportation and Public Facilities work cooperatively with other interested agencies in first developing a coordinated marketing plan with specific tasks identified, goals set, and a realistic budget supported not only by the IARF, but all involved organizations.

The airlines are willing to participate in some manner, but only if we are convinced that a prudent and cost-effective approach is being followed.

Thank you.

STATEMENT OF ANCHORAGE/FAIRBANKS AIRLINES AIRPORT AFFAIRS COMMITTEE

TO STATE OF ALASKA LEGISLATURE, FEBRUARY 20, 1987

My name is Clifford T. Argue, and I am Staff Vice President of Properties and Facilities for Alaska Airlines. However, I am appearing before you today as Chairman of the Anchorage/Fairbanks Airlines Airport Affairs Committee, which is an organization representing some 22 international and domestic airlines serving Anchorage and Fairbanks airports. These airlines have signed the recently negotiated Airline/Airport Lease and Operating Agreement.

The relationship between the airport operator, in this case the State of Alaska, and the carriers is a partnership. We must continually work together in a spirit of cooperation to ensure the best possible and most cost effective air transportation facilities serving a particular community. Our business relationship has been documented in the operating agreement, which was signed last year following almost two years of intensive negotiation.

This relationship is simple. The airlines are responsible for paying the majority of the costs of the construction, operation, and maintenance of the Anchorage and Fairbanks airports. While there are Federal grants, concession revenues, and other sources of income, our agreements provide that the airlines will make up any difference between revenues and expenses through the rates, fees, and charges we pay to the Department of Transportation and Public Facilities. The burden does not fall back on the general fund of the State.

With respect to the resolution before you, I would like to clearly state that the airlines are not opposed to the concept of the promotion and marketing of Anchorage and Fairbanks International Airports. Such programs, which are in place at various other airports throughout the United States, are sometimes, but not always, beneficial in stimulating additional traffic. Many of these programs are in conjunction with and financially supported by other local agencies and organizations, so that the destination is being marketed, not just the airport. Anchorage and Fairbanks Airports both have excellent airfield and terminal facilities and services; and it is very doubtful that an airline management, anywhere in this country or the world, would necessarily be convinced to fly to one of these airports if there are not operational, technical, market-related, or other business reasons to do so. In other words, there is no assurance that an airport marketing program will bring any new traffic.

The airlines are extremely concerned by the current airport marketing proposals, because, at this point, they lack any definition of how a marketing program would be organized and implemented. We know nothing about the scope of the effort, its management, and overall control. The only information we have heard in recent weeks is the proposal to spend anywhere from $3 million to $5 million per year on an airport marketing program. These amounts are incredibly high compared with other airports and seem to have no basis or solid rationale.

Because of the business relationship noted earlier in my remarks, the airlines also are extremely uneasy about a funding proposal of this magnitude, if it is contemplated to come from the International Airports Revenue Fund. Contrary to some reports, there is not a big fund of unallocated money in the IARF, nor do the airports produce a large "profit." Any apparent "profit" is, in reality, money that is already committed to planned capital projects. Therefore, wherever in the IARF marketing money is budgeted, it will, by necessity, place an additional burden on the airlines through increasing our landing fees paid to the State. Every one million dollars in additional annual cost would require an additional four cents per one thousand pounds of aircraft takeoff weight in landing fees.

We have already seen substantial increases in our landing fees in the past two years to support the extensive construction at both airports, and additional increases can only be counterproductive and burdensome. Such additional costs must be passed on to the consumer through higher air fares and air freight rates; or, as in the recent examples of Boston, Las Vegas, and Florida, recovered through a surcharge on each ticket stated separately. For example, an additional five million dollars in annual costs would cost Alaska Airlines $436,000 and Japan Air Lines $989,000. These are not the types of costs that can be just absorbed by the airlines. Such additional costs might also have the negative effect of causing airlines to curtail service to Anchoarge and Fairbanks and seek lower-cost locations. This would certainly be the exact opposite of what is desired in a marketing program.

The airlines recommend that in considering the current resolution, the Legislature request that the Department of Transportation and Public Facilities work cooperatively with other interested agencies in first developing a coordinated marketing plan with specific tasks identified, goals set, and a realistic budget supported not only by the IARF, but all involved organizations.

The airlines are willing to participate in some manner, but only if we are convinced that a prudent and cost-effective approach is being followed.

Thank you.

ANCHORAGE CONVENTION & VISITORS BUREAU

INTERNATIONAL AIRPORT MARKETING

1987

ACVB LEGISLATIVE & COMMUNITY RELATIONS PRIORITIES

Governmental

1. Cargo and passenger marketing program to protect the future revenue streams of the Anchorage International Airport.

1. $8.2 Million Alaska Division of Tourism Budget.

2. Creation of a Legislative Committee on Tourism.

3. Year-round operation of the Begich Boggs Center At Portage Glacier.

4. Visitor related improvements and enhancements on state highway projects to include but not be limited to pull outs, interpretive displays and signage.

5. Whittier access toll road.

Community

1. Continue joint meetings between the ACVB and AVA Board of Directors at least twice each year to communicate and understand respective legislative goals.

2. Encourage combined monthly membership meetings by the ACVB and the local AVA Chapter.

ANCHORAGE BUSINESS COUNCIL
AIRPORT COMMITTEE
MARKETING PROPOSAL
January 14, 1987

Problem

Alaska's International Airports presently generate enough revenues to be self-supporting. Last year, even after accounting for the deficit at FIA, the airports had an income of $14 Million. However, competitive and technological changes threaten to undermine Alaska's traditional airport revenue streams within five years.

There is clear evidence Alaska is losing its position as a re-fueling stop for Transpolar and Trans Pacific flights. This raises at least two concerns. If the trend continues, eventually domestic carriers and passengers will be required to pick up the slack which will dramatically impact domestic tourism, the cost of shipping and "lower 48" travel. Even more significantly, Alaska will begin to lose undeveloped opportunities for International Trade.

Solution

Since the late 1970s, de-regulation and other developments have increasingly required airports to proactively market themselves in order to remain competitive and hold market position. Newark, Kennedy, LaGuardia, Baltimore/Washington, Atlanta/Harsfield, Miami, and Seattle/Tacoma are good examples.

Following the successful example of these airports, Alaska's International Airports should establish a marketing function as a standard part of their mission and operation. The marketing funds should come from airport operating reserves. The airport marketing effort should protect existing revenue streams and seek to attract and facilitate new ones working in cooperation with economic development partners in each airport location.

Marketing Partners

Airport marketing efforts aimed at passenger development are customarily mounted in conjunction with community convention and visitor bureaus and those aimed at cargo and land development are mounted in conjunction with local economic development coalitions involving communities, utilities, transportation companies, resource development corporations, foreign trade zones, chambers of commerce etc. Partnerships such as these permit airport marketing efforts to stretch and avoid duplication.

Programs

Marketing the airport will involve research and target identification, direct sales, advertising, publicity, trade shows, promotions, and tools including brochures, audio visuals etc. Quantitative measurement in the short term will be carrier, passenger, cargo retention and growth and airport land and new businesses development. In the long term, measurement will include self supporting income and overall position in the world market.

Funding

Based on formulas used in private sector marketing, the airports should initially devote a greater percentage of gross sales or margin to marketing and then lower the rate when marketing effort and positioning are well established. Based on the size of the airports and the urgency of the problem, it makes sense to transfer at least $5 Million from "International Airport Fund" reserves to establish an annual marketing line item for the two International Airports.

PROTECTING THE AIRPORT'S FUTURE

Al Parrish, Speaker
President, Sheffield Enterprises, Inc.
Anchorage, Alaska

Speech Prepared for the **ACVB Membership Luncheon**
December 16, 1986

Thank you. It's good to see so many friends in the audience today and to see such a good turn-out of those in our community who share a growing concern over the future of the Anchorage International Airport.

Before I begin, I'd like to tell you an aviation story: Some time ago, I was on a flight into Kennedy Airport, one of a plane's engines died while flying over Pennsylvania. In a reassuring voice, the captain spoke to the passengers, "I'm sorry to say that our outside port engine has stopped functioning. There is no cause for alarm. However, we'll be about twenty minutes late reaching Kennedy Airport."

A little later, the captain spoke over the intercom again, announcing that a second engine had failed, and again he said there was no cause for alarm -- the other two engines were more than sufficient. "However," he said, "we'll now be about an hour late in landing."

A few minutes later, the captain reported a third engine had conked out, but that the remaining engine would get us down safely. "Now,

however," he said, "our estimated arrival time will be about two hours later than scheduled."

"Ye gods!" cried a lady sitting next to me, who happened to be on her first flight, "if that fourth engine goes, we may be up here all night!"

As the story points out, it is one thing to recognize that a challenge exists, but making a correct interpretation of that challenge is another matter.

Today, I will focus on the challenges facing Anchorage International Airport. First, I'll discuss the growth of the airport since it began operating; next, I'll point to opportunities that await international airports willing to market their facilities and services; third, I'll talk about the advance of aviation technology and how it may effect Anchorage's airport; fourth, I will provide recommendations as to how we may market our airport, to which likely targets, and finally, who supports the marketing of Anchorage International.
