CS FOR SENATE BILL NO. 308(FIN)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SECOND LEGISLATURE - SECOND SESSION

BY THE SENATE FINANCE COMMITTEE

Offered:
Referred:

Sponsor(s): SENATOR THERRIAULT

A BILL

FOR AN ACT ENTITLED

1 "An Act relating to the Alaska coastal management program and the responsibilities of
2 the Alaska Coastal Policy Council; and providing for an effective date."

3 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

4 * Section 1. AS 46.40.030 is amended by adding a new subsection to read:

5 (b) In developing statements of policies and regulations under (a) of this
6 section, a coastal resource district may not incorporate by reference statutes and
7 administrative regulations adopted by state agencies.

8 * Sec. 2. AS 46.40.094 is amended by adding a new subsection to read:

9 (d) Notwithstanding any other provision of this section, for a natural gas
10 pipeline project from the Alaska North Slope following a route that parallels the Trans
11 Alaska Pipeline System and the Alaska Highway to the Canadian border or a route
12 that runs south to Alaska tidewater, any agency responsible for the consistency
13 determination with respect to proposed uses or activities involved in the project may,
14 in its discretion, conduct the review and make the consistency determination in

1 separate phases in a manner that promotes review of proposed uses and activities
2 based upon the project's design, construction sequence, and schedule.

3 * Sec. 3. The uncodified law of the State of Alaska is amended by adding a new section to
4 read:

5 MODIFICATION OF APPROVED COASTAL MANAGEMENT PROGRAM
6 PLANS. (a) In a municipality or coastal resource service area for which the Alaska Coastal
7 Policy Council has approved a district coastal management program that is not consistent with
8 the prohibition of AS 46.40.030(b), added by sec. 1 of this Act, the municipality or coastal
9 resource service area shall submit to the Alaska Coastal Policy Council, within one year after
10 the effective date of this Act, program modifications to conform the program to the
11 requirements of AS 46.40.030(b), added by sec. 1 of this Act.

12 (b) If a municipality or coastal resource service area does not comply with (a) of this
13 section, the Alaska Coastal Policy Council may enter an order deleting the incorporation by
14 reference of statutes and administrative regulations in violation of AS 46.40.030(b), added by
15 sec. 1 of this Act.

16 * Sec. 4. This Act takes effect immediately under AS 01.10.070(c).

Senate District Q

Senate Bill 308—Revised 3/20/2002

"An Act relating to the Alaska Coastal management program
and the responsibilities of the Coastal Policy Council."

SPONSOR: Senator Gene Therriault

SPONSOR STATEMENT:

Alaska's permitting system is broken. Industries from across the state have stepped forward to ask for clarity, consistency, and timeliness. Central to the confusion of this broken system is the Coastal Zone Management program (CZM) and its underlying consistency determination process. It is confusing and often misunderstood by the public and permit applicants alike. Senate Bill 308 takes steps to address some of the problems associated with CZM and keep Alaska and its resource-dependent economy moving forward.

Alaska chose to participate in the federal voluntary Coastal Zone Management program by creating the Alaska Coastal Management Program (ACMP) in 1977. The ACMP requires that all permits issued by state agencies for a project within the coastal zone be consistent with the respective plans developed by a coastal resource district. Since that time, there have been many state and federal laws such as the clean water act, clean air act, spill prevention laws, and wetlands legislation affecting coastal districts and further complicating the process by which permits are found to be consistent.

As local plans have been developed, the statutes and regulations of specific departments and agencies were incorporated by reference. The result has been that local officials sometimes interpret these requirements differently than the state officials who work with them on a regular basis. While these conflicts are resolved through an internal elevation process, it causes delays and frustrations among all involved.

Specifically, the bill does two things:

- Prohibits the adoption by reference of state statutes and regulations by coastal districts.
- Allows permitting agencies to make consistency determinations in separate phases for a North Slope natural gas pipeline project that parallels the Trans

Alaska Pipeline System and the Alaska Highway or a route that runs to Alaska tidewater.

While the original version and the previous committee substitute for SB 308 dealt with the petition process, a House bill (HB 439) has come over to the Senate that addresses the issue. However, the language adopted by the House may not accomplish what was intended and the title on that measure is too restrictive to allow changes. If, in order for the Senate to effectively deal with these concerns, changing the title of HB 439 proves problematic, the title of SB 308 needs to remain broad enough to deal with petitions at a later time. For that reason, the proposed CS retains a broad title.

For the foreseeable future, Alaska's economy will be dependent upon the development of our natural resources. As the policy-making body of state government, we must remove those aspects of our permitting system which cause unnecessary delay and expense without improving public input and accountability, particularly when it comes to those projects which are critical to our state's future prosperity and revenues.

Is this guide for you?

This guide is for you if you have little or no experience obtaining permits for projects in Alaska's coastal zone or you just want to learn more about the Alaska Coastal Management Program (ACMP). Here you will learn

Once you understand the permits your project will require, you can design a project that will address these requirements up front and avoid delays later during the permitting process.

How do I know if the ACMP applies to my project?

If your project meets the following two criteria, or if you are unsure, you should contact DGC. One of DGC's Project Review Coordinators will help you determine if your project requires an ACMP consistency review and guide you to the state agencies and coastal districts you may need to contact.

If your project is:

1. located in or will affect resources of the coastal zone; *and*
2. requires a state, federal, or local permit(s), your project may require an ACMP consistency review.

how to determine if your project is in the coastal zone, the 5 steps in the coastal consistency review process, answers to some commonly asked questions, and where to go for more information.

By answering the following questions, you should determine whether the Alaska Coastal Management Program applies to your project. If it does, feel assured that this booklet, the Division of Governmental Coordination (DGC), coastal districts, and state resource agencies will help you navigate your project through the ACMP consistency review process. You will find addresses, telephone numbers, and web site addresses for agencies you may need to contact at the end of this booklet.

If you are not sure about the location of your project in relation to Alaska's coastal zone or the permits required for your project, keep reading.

How do I know if my project is located in the coastal zone?

Alaska's coastal zone boundaries include more than 44,000 miles of coastline and can extend inland along river drainages as far as 250 miles. This variability can make it difficult to tell if your project is within the coastal zone. The map on pages 20-21 shows a representation of Alaska's coastal zone and coastal districts.

If your project is located within a coastal district, you should contact either DGC at (907) 465-3562 (Juneau) or 269-7470 (Anchorage), or the coastal district to determine whether your project is within its coastal zone. Coastal district contact information is located at the end of this booklet.

Please note that the ACMP also applies to projects in large areas of Prince William Sound and southeast Alaska that are in the coastal zone but not within a coastal district.

How do I know if my project will require state or federal permits?

If you are not sure what permits your project might require, fill out a Coastal Project Questionnaire (CPQ) (for your own information). Even if you don't require an ACMP consistency review, the questions in the CPQ will help you identify what permits might apply to your project and who to contact for more information. If you discover your project requires an ACMP consistency review, you will be well on your way to fulfilling the requirements in Step 1.

Keep reading to learn more about the ACMP consistency review process and how DGC, your local coastal district, and state resource agencies can be of assistance.

Questions & Answers

What is the Alaska Coastal Management Program?

In 1972 Congress passed the Coastal Zone Management Act (CZMA) to promote the orderly development and protection of the country's coastal resources. The CZMA resulted from concern spurred by the increasing demands for development of the nation's coastal areas, population increases near the coast, and declining productivity of the coastal environment. The CZMA established a voluntary partnership among the federal government, coastal states, and local governments to develop individual state programs for managing coastal resources.

The Alaska Coastal Management Program (ACMP) implements legislation passed by the State of Alaska in 1977. With this legislation, called the Alaska Coastal Management Act, Alaska joins the partnership envisioned by the CZMA.

The ACMP improves stewardship of Alaska's coastal land and water uses, and natural resources, by creating a network of local, state, federal, and applicant interests in the project approval process. The networking provided by the ACMP helps to ensure that all aspects of a project are considered during a single review and approval process. This integrated approach promotes both economic and environmental productivity of Alaska's rich and diverse coastal resources.

The ACMP requires that projects in Alaska's coastal zone be reviewed by coastal resource management professionals and found consistent with the statewide standards of the ACMP. These standards and the enforceable policies of an affected coastal district ensure that development interests observe the vision set out for the future by the state and coastal communities. It is called the consistency review process. A finding of consistency with the ACMP must be obtained before permits can be issued for the project.

Mission of the Alaska Coastal Management Program:

"The ACMP provides stewardship of Alaska's rich and diverse coastal resources to ensure a healthy and vibrant coast that sustains long-term economic and environmental productivity."

What criteria does the ACMP use to evaluate my project?

The ACMP applies to projects within or affecting Alaska's coastal zone. The statewide standards (6 AAC 80) and coastal district enforceable policies of the ACMP provide direction for coastal resources and uses, such as:

- coastal development (whether a project is water-dependent or water-related),
- habitats (such as wetlands, tideflats, or streams),
- air, land, and water quality,
- transportation and utility routes and facilities,
- timber harvest,
- mining and mineral processing,
- subsistence opportunities,
- recreation designations,
- geophysical hazard areas,
- historical and archaeological resources,
- energy facilities, and
- fish and seafood processing.

Using the statewide standards and local enforceable policies, the ACMP evaluates the effects a project will have on the above coastal resources and uses. Projects must be consistent with the requirements found in the standards and enforceable policies.

What is the Coastal Consistency Review Process?

The coastal consistency review process, or *consistency review process*, helps ensure your project meets the statewide standards and coastal district policies. It also serves as the review process for most permits you will need from state resource agencies. This 5-step process advances your project through review and approval requirements in a timely fashion.

The consistency review process is a coordinated review process that benefits applicants and project reviewers alike. Applicants have a single, primary point of contact for their projects. Reviewers benefit by comprehensively reviewing a project only once.

This booklet explains the consistency review process in more detail and how you can get your project approved with a minimum of difficulty. The Division of Governmental Coordination, as well as state resource agencies and coastal districts, are available to help you understand and navigate your project through the consistency review process.

Who is DGC?

The Division of Governmental Coordination (DGC) is home to the ACMP. Located in the Office of the Governor, DGC is responsible for the overall administration and operation of the ACMP. In this role, DGC provides assistance to applicants, coastal districts, and state agencies in carrying out their duties and responsibilities under the ACMP.

DGC has connections throughout the ACMP network.

As such, *your first ACMP contact should probably be one of DGC's helpful Project Review Coordinators.* DGC also serves as the coordinator for the consistency review process if your project requires a federal permit or permits from more than one state agency.

The staff at DGC perform a variety of other activities that support the ACMP, including

- preapplication meetings for applicants
- federal funding for the ACMP
- assistance to local districts in getting their coastal management programs approved
- assistance resolving conflicts
- appeals, elevations, and petitions
- ACMP education and training

Who are the State Resource Agencies?

The State of Alaska has three agencies primarily responsible for managing its natural resources and uses of those resources. These **resource agencies** have permitting authorities for specific activities. If your project requires a permit(s) from only one state resource agency, that agency coordinates the consistency review process.

Your project will most likely require one or more permits from at least one resource agency. The state resource agencies include:

- *Department of Natural Resources (DNR)* manages state-owned land and natural resources, including sales and leases.
- *Department of Fish and Game (DFG)* manages the state's fish and wildlife resources and their habitats.

- *Department of Environmental Conservation (DEC)* serves to safeguard the public health and environment from human uses.

What is a coastal district?

Coastal districts are generally local governments, such as cities and boroughs, that contain a portion of Alaska's coastal area. In coastal areas outside the boundaries of local government, coastal districts known as Coastal Resource Service Areas (CRSA) may be formed.

Most coastal districts develop a coastal management program that requires a rigorous state and federal approval process. A district coastal management program contains enforceable policies that guide development affecting the coastal resources within its boundaries. Once approved, a district coastal management program becomes a part of the ACMP.

During the consistency review process, an affected coastal district reviews your project against the enforceable policies of its coastal management program. By complying with its enforceable policies, your project can help the district achieve its goals and objectives for coastal development within its boundaries.

The ACMP consistency review process provides:

- *a one-stop, consolidated state response to coastal development projects and related state and federal permit applications;*
- *specific timeframes and deadlines for reviewing project applications; and*
- *a fast appeal (elevation) process.*

Step 1

Complete a Coastal Project Questionnaire (CPQ)

What is the CPQ?

The Coastal Project Questionnaire, commonly called the CPQ, serves as the application for getting your project started in the ACMP consistency review process. A project in the coastal zone must receive an ACMP consistency determination, the end product of the consistency review process, before agencies can issue permits for the project.

The CPQ also helps you identify which state and federal permits will be required for your project. In addition, your completed CPQ provides reviewers with a description of your project and serves as your certification that your project will be conducted in a manner consistent with the ACMP. The CPQ (and this guide) includes a list of state agency and coastal district contacts for your convenience.

Who has to fill out a CPQ?

Anyone proposing a project within or affecting coastal areas of Alaska must submit a CPQ, with the following exceptions:

1) **Placer miners:** submit an *Annual Placer Mining Application* to the Department of Natural Resources (DNR).

2) **Aquatic farmers:** submit a *State of Alaska Aquatic Farm Permits Application* to DNR.

Federal agencies should contact DGC for information on how the consistency review process is used to review federal activities.

How do I get a CPQ?

Copies of the CPQ are available from DGC, state resource agencies (see the back of this brochure), the

U.S. Army Corps of Engineers (toll-free at 1-800-478-2712), other federal permitting agencies, and local coastal district offices.

What else do I need to know?

One of DGC's Project Review Assistants will help you determine what you need to do and who to contact to get your project ready for the consistency review process.

If your project is located within a coastal district, be sure to contact the district's ACMP coordinator and the planning department early to find out what will be required at the local level.

Once you've determined what permits will be required, be sure to contact those agencies to learn their permitting requirements.

How do I apply for my other permits?

Alaska has streamlined the permitting process to provide developers with a single point of entry. Your CPQ packet will include applications and fees for the permits you will need.

The consistency review process also serves as the permit review process for state resource agencies.

How much does it cost?

There is no charge for the ACMP consistency review process. However, agencies issuing permits for the project may require fees.

Is there anything I can do to pave the way for my project?

Before you finalize project plans or submit your CPQ and other information necessary for a complete application packet, the state can arrange a **preapplication meeting** with you and other review participants to discuss your draft plans. This meeting identifies concerns and information needs, helps you avoid 'pitfalls', and promotes a mutual understanding of your project. To

Pave the way for your project by identifying and addressing concerns before you turn in your application packet. Ask the state for a pre-application meeting.

arrange a preapplication meeting, contact the coordinating agency. In lieu of a meeting, the coordinating agency can distribute materials to review participants for preapplication assistance.

Fill in all the blanks

To complete the CPQ, fill in all the blanks and contact agencies as directed on the CPQ. Filling out the questionnaire properly is important and helps agencies process your project application without delays. If a question is not applicable then put "N/A." If you answer yes to a question and are not applying to that agency for a permit, explain why.

Your signature on the CPQ certifies that you believe your project is consistent with the standards and enforceable policies of the Alaska Coastal Management Program. The standards and enforceable policies are available from DGC and your local coastal district. If you need assistance, contact DGC or your local coastal district.

Is your application packet complete?

Your CPQ package should include:

- The completed CPQ and signed Certification of Consistency;
- Copies of any necessary state and federal permit applications, topographic maps, and plan drawings required by the approving agency. DGC encourages you to send original applications to the state or federal agency issuing the permit. Any fees associated with these permits also go to the issuing agency.
- Any additional pertinent information. Make sure you include a complete description of your entire project to minimize the need to provide more information later.

Step 2

Coordinating agency receives packet

Where do I send the CPQ?

Once you have a completed CPQ and application packet, you should submit it to the state agency responsible for coordinating the coastal consistency review for your project, commonly referred to as the **review coordinating agency**. You can determine the review coordinating agency for your project from the following:

- If your project requires a permit(s) from only one state agency, submit your CPQ and permit applications to that state agency. That agency will coordinate the consistency review for your project.
- If your project requires permits from two or more state agencies, or a permit from a federal agency, then you should submit your CPQ packet to the Division of Governmental Coordination, which will coordinate the consistency review for your project.

If you are not sure where to send your CPQ packet, contact DGC.

What happens next?

The review coordinating agency receives the application packet, decides whether it is complete, and determines if the project needs to undergo a coastal consistency review.

Does my project qualify for expedited review?

Some projects that have no significant impact on coastal resources, or are routine activities, may be exempt from further coastal consistency review requirements. The

state maintains a list of permits and projects that qualify for expedited review in 6 AAC 50.050. The list is

referred to as the "Classification of State Agency Approvals" but is commonly known as the "ABC List."

To find out if your project qualifies for expedited review in the ABC List, contact DGC or your review coordinating agency. Projects that are in the coastal zone and not exempt from further review in the ABC List must undergo a full ACMP coastal consistency review.

Step 3

Consistency review starts

50-day coastal consistency review begins

Once your application is received by the review coordinating agency and determined to be complete, the coordinating agency initiates the required public notices. The consistency review starts once all public notices have been issued.

The coordinating agency issues a deadline for reviewer and public comments and circulates your application packet to review participants. The coordinating agency tracks the project during the review and makes sure all interested parties take the opportunity to participate within the designated time frames.

The review coordinating agency will notify you of your review's start date, review number, review schedule, and any other pertinent information. With a few exceptions, the state must complete the consistency review of your project 50 days after the start date.

Do all consistency reviews last 50 days?

Although most projects require a 50-day review, the actual time frame may be shortened or extended under certain circumstances. Alternatives to 50-day consistency reviews are identified below:

- The consistency review of your project may be expedited if your project is a routine activity identified in the ABC List. For more information, refer to *Does my project qualify for expedited review?* in Step 2.
- The 50-day review schedule for your project may be extended for specific reasons. For more information, refer to *Extensions to the review schedule* below.

50-Day Consistency Review Schedule

ACMP Consistency Review Process	Day
Step 1 – Complete CPQ	0
Step 2 – Turn in your Packet	0
Step 3 – Consistency Review Starts	1
Deadline for information requests	25
Comment deadline	34
Step 4 – Proposed Determination	44
Deadline to file for elevation or petition*	49
Step 5 – Final Determination	50

*See page 17

- If all necessary permits for your project are legally required to be issued within 30 days, the consistency review can be completed within a 30-day time frame as provided in 6 AAC 50.110 (a).
- Federal activities (projects conducted by or for a federal agency) may require a different review schedule. However, this booklet is not designed to address specific review or consistency requirements for federal activities. Contact DGC for more information at (907) 465-8794.

Who reviews the project?

The participants in the coastal consistency review process include: (1) you, the applicant; (2) state resource agencies and the Division of Governmental Coordination; (3) the affected coastal district; (4) other interested members of the public; and (5) federal agencies.

Having had a preapplication meeting can really pay off during step 3. Identifying concerns before the review begins can avoid delays and the need for additional stipulations.

Extensions to the review schedule

The review schedule may be extended for certain reasons as provided in 6 AAC 50.110(b). For example, after demonstrating a need for an extension, reviewers may request an extension:

- For you to provide additional information on your project that is needed for their analysis. The project review may be stopped within specified deadlines until that information is received. Within 7 days of receipt of the additional information, you will be notified of its adequacy.
- To perform a field review within a 10-day limit.
- To coordinate with DNR's process for disposals of interest in state land or resources.
- For a public hearing held as part of the consistency review process.

Step 4

Proposed consistency determination

What happens after reviewers submit comments?

After receiving comments from participants during the review process, the coordinating agency tries to resolve any issues that were raised. The coordinating agency then develops a **proposed consistency determination**. The proposed determination is discussed with you, state resource agencies, and the affected coastal district for concurrence.

What are stipulations?

The proposed consistency determination may include stipulations that modify your project and are necessary to bring it into compliance with the ACMP. These stipulations, or conditions of approval, are attached to permits issued for the project. Applicants and reviewers may discuss, or negotiate, the stipulations that will be included in the final determination.

What happens if I don't concur with the proposed consistency determination?

If concurrence cannot be reached by the review deadline, an elevation and/or petition can be requested by you or certain review participants. Please note that the instances of elevation are low. In fact, our statistics show that less than one percent of proposed consistency determinations receive requests for elevation or petition.

For a brief explanation of these processes, refer to *Elevations, Appeals, and Petitions* after Step 5. DGC can provide you with more information than is presented here in the unlikely event that this becomes an issue for your project.

Step 5

Final determination

When does my project get a final consistency determination?

A final consistency determination is issued when you and the project reviewers concur with the proposed determination, including the stipulations. The final consistency determination must be issued by the review deadline, generally 50 days.

When do I get my permits?

Once the final consistency determination is completed, most state agencies issue state permits covered by the determination within five days. However, an agency may find that additional time is necessary to fulfill its statutory requirements. For example, leases and other disposals of state land or resources issued by DNR generally require additional time. DGC or the permitting agency can provide you with more information on when you can expect to receive the permits for your project.

Once all your permits are in place, the real work begins.

Elevations, Appeals, and Petitions

Elevation

If you disagree with the proposed determination on your project, you may request **elevation** (further review) to division directors within state resource agencies. A resource agency or affected coastal district may also request an elevation. This request must be in writing and include a proposed alternative consistency determination that would effectively address your concerns. The directors review the proposed determination and the alternative determination included in the elevation request, then issue a director-level proposed determination.

If you do not agree with the director-level review, you may elevate the review to the commissioners of the resource agencies, who issue a final determination. This is the last step in the administrative process. Each elevation review can take up to 15 days.

Petition

Under AS 46.40.096, certain eligible parties may petition the Coastal Policy Council to review a project if the petitioner believes their comments related to the enforceable policies of an affected coastal district were not fairly considered. These parties may include the project applicant, an affected coastal district, a state agency, or a citizen of an affected coastal district. The petition process must be completed within 30 days. Contact DGC for more information.

Appeal

If your project requires a federal approval and you disagree with the state's final consistency determination, you may also appeal to the U.S. Secretary of Commerce in Washington, D.C., as provided in 15 CFR 930.125(h). DGC can provide you with information on this appeal process upon request.

Looking for more information?

Where you go to obtain more information will depend on the type of information you are seeking and your familiarity with the ACMP consistency review process. Generally, DGC can provide answers to your questions or direct you to the right person. However, before and during the application and review process, you will also likely benefit from contacting the local coastal district, and the agency or agencies that will be issuing permits.

If you are new to the ACMP or are unsure where to go, we recommend you contact the Division of Governmental Coordination (DGC). As the administrator of the Alaska Coastal Management Program, DGC's duties include helping applicants navigate the consistency review process and obtaining the information they need to succeed in getting their projects approved.

What other information can DGC provide?

The Division of Governmental Coordination (DGC) serves as the information center for the ACMP and the consistency review process. DGC can provide quick answers to whether or not your project is in the coastal zone, what permits you will need, and other questions you have about the project approval process.

DGC also retains copies of:

- all coastal district management programs,
- coastal zone boundary maps,
- ACMP statutes and regulations,
- policies, procedures, special project papers,
- ACMP history and legal opinions, and
- other documents related to the ACMP.

For projects requiring permits from two or more state agencies, or a federal permit, DGC serves as the coordinating agency for the consistency review. In addition, DGC coordinates the review for federal projects proposed in the coastal zone.

What information can other state resource management agencies provide?

The Department of Natural Resources (DNR), Department of Environmental Conservation (DEC), and the Department of Fish and Game (DFG) can provide information about the ACMP consistency review process but specialize in providing applicants with permitting requirements under their authority. For projects only requiring a permit from one of these state resource agencies, that agency coordinates the consistency review.

What information can coastal districts provide?

Coastal Districts can provide information about the ACMP consistency review process, but most importantly can share with you local permitting requirements for your project. In addition, coastal districts have expertise of local conditions and community standards, including development priorities, cultural values, and environmental conditions.

What information can I find on the Internet?

If you have access to the internet, be sure to visit the ACMP Website at:

<http://www.alaskacoast.state.ak.us/>

This new site will feature:

- a downloadable CPQ,
- more complete information about who to contact to help you through the consistency review process,
- access to DGC's project review database,
- coastal district enforceable policies,
- the ACMP statewide standards in 6 AAC 80,
- and much more.

If you need detailed information about an Alaskan community, visit the Department of Community and Regional Affairs community profiles database web page at:

http://www.comregaf.state.ak.us/CF_ComDB.htm

DGC can provide answers to your questions or direct you to the right person.
