1/09 OVERVIEW: PATRICK TAYLOR FOUNDA-TION

September 30, 2008

Mr. Dan Bockhorst, Borough Manager
Ketchikan Gateway Borough
144 Front Street
Ketchikan, AK 99901

Dear Mr. Bockhorst:

This is in response to your July 8 letter to Governor Palin regarding restoring public trust in government as it relates to state assistance to local governments. I appreciate the thorough and comprehensive documentation of laws creating borough governments, challenges that have come from the current structure and also providing options for relief. Please accept my apology for the delay in responding.

The Governor has asked the departments of Law; Commerce, Community, and Economic Development; and Education and Early Development to review your material. As you know, significant work has been done over the past year to address education funding and work is continuing that may address some of the challenges you highlight in your letter. You also raise important questions regarding Title 29 of Alaska Statutes. These are complex policy questions that will require careful analysis to ensure that any changes result in a system that is in the best interests of all Alaskans.

We are working with state agencies to develop the budget and legislative package for consideration by the 26th Alaska State Legislature. We look forward to working with legislators and communities to address critical issues in Alaska.

Sincerely,

s/s

Lynne Smith
Special Staff Assistant

HAILROOM

The Honorable Sarah Palin
Governor
State of Alaska
P.O. Box 110001
Juneau, AK 99811-0001

RE: **Restoring Public Trust in Government**

Dear Governor Palin:

The Palin administration is closely identified with the issue of public trust. In fact, an internet search for the words "Governor Palin public trust" yields, amazingly, "about 316,000" results (see enclosure). The Ketchikan Gateway Borough commends you for your commitment to that important value.

The Ketchikan Gateway Borough respectfully invites you to consider the need to restore public trust in the context of keeping a crucial promise made by the State of Alaska to its citizens.

Forty-five years ago, the Alaska Legislature passed a bill mandating the creation of borough governments in Ketchikan and seven other regions of Alaska. At the time, the bill was considered by its sponsor, Representative John Rader, to be the most controversial bill ever passed by the Legislature. To defuse the contentious nature of that legislation (i.e., imposition of a form of local government having significant duties on selected Alaskans without the consent of those affected), the Alaska Legislature offered the following promise in Section 1 of the bill:

> **No area incorporated as an organized borough shall be deprived of state services, revenues, or assistance or be otherwise penalized because of incorporation.**

The bill ultimately passed the Legislature by a narrow margin. As such, it can be stated with reasonable certainty that a veto by then-Governor William Egan would have ended the legislative mandate to incorporate boroughs. However, Governor Egan neither vetoed

the bill nor simply allowed it to become law without his signature. Instead, he embraced the action of the Legislature and signed the bill into law as Chapter 52, SLA 1963.

By signing the bill, Governor Egan joined the Alaska State Legislature in promising that organized boroughs would not be deprived of state services, revenues, or assistance, and that boroughs would not be otherwise penalized by the State of Alaska.

Regrettably, the 1963 promise by the legislative and executive branches of the State of Alaska was breached in a serious manner more than two decades ago. The greatest impact is felt with respect to funding for public education – a constitutional duty of the State of Alaska that has been delegated to borough governments in those parts of Alaska where boroughs exist.

In the current fiscal year alone, the Ketchikan Gateway Borough will be deprived of nearly $9.5 million in State funding for schools compared to what it would receive had the 1963 promise been upheld. Other mandates applied to the Ketchikan Gateway Borough will add nearly $2.3 million in additional burdens during the current fiscal year (see enclosure for details). For a community of 13,160 residents, the fiscal impact of the penalties and unfunded mandates is enormous.

When the legislative and executive branches of State government failed to honor the 1963 promise in relation to education funding, the Matanuska-Susitna Borough and its citizens turned for relief during the mid-1980s to the third branch of State government – the Alaska Court System.

Following an 11-year appeal initiated in 1986, the Alaska Supreme Court denied a petition for justice in terms of unequal treatment of borough governments and taxpayers by the State of Alaska. In rejecting the appeal, the Court stressed that "[b]oroughs are not entitled to equal protection under the Alaska Constitution" because "[t]he purpose of the Alaska due process and equal protection clauses is to protect people from abuses of government, not to protect political subdivisions of the state from the actions of other units of state government."[1]

With respect to borough taxpayers, the Court concluded in the same case that, "any disparate impact on taxpayers . . . does not rise to the level of an equal protection violation."

[1] *Matanuska-Susitna Borough School Dist. v. State*, 931 P.2d 391, FN2 (Alaska 1997).

Many elected State officials today appear to be either unaware of or unmoved by the breach of the promise made by their predecessors 45 years ago. The 1963 promise has been dismissed by some on the basis that it was "merely a statement of intent" rather than a binding obligation on the part of the State of Alaska. Others have pointed out that even if it were an obligation of the State at the time the law was passed, the 1963 Legislature could not legally bind future legislatures. Still others seem to be willing to accept the status quo simply because the promise has not been honored for such an extended period of time. As noted above, the Alaska Supreme Court dismissed the concerns by concluding that our Constitution does not protect boroughs from abuse by the State and that any disparate treatment of taxpayers is not serious enough to warrant intervention. While any of those arguments may be technically accurate, they certainly do not absolve the legislative and executive branches of government from the moral obligation expressed in 1963.

The effect of the breach of public trust has been chilling in terms of the achieving the constitutional goal of borough formation. On the eve of the 50th anniversary of statehood and 45 years after the Mandatory Borough Act, more than half the geographic area of Alaska remains outside organized boroughs.

Study after study in the post-mandatory-borough era has indicated that the biggest deterrent to voluntary formation of boroughs is the financial penalties that result. The late Jay Hammond expressed the matter well when he stated:

> Attractive enough on paper, in practice, the organized borough concept had little appeal to most communities. After all, why should they tax themselves to pay for services received from the state, gratis?[2]

Less than one year ago, residents in the Deltana region of interior Alaska were among the latest to prove the validity of Governor's Hammond's candid observation. Although the Deltana region has fiscal resources that would be the envy of the Ketchikan Gateway Borough and most every other organized borough, Deltana area voters rejected, by a margin of more than nine to one, a proposal initiated by local voters to incorporate a borough. The following sentiments expressed on the record by one Deltana citizen are apparently shared by many in the region:[3]

[2] *Tales of Alaska's Bush Rat Governor*, page 149.

[3] *Final Report to the Local Boundary Commission Regarding the Deltana Borough Proposal*, page 33.

> The people here did not promise to pay for the educational system that we currently have. The State has paid for most of that. I think it's great that we have it. We could pay a head tax. There are different ways to take care of the necessities that we have as a community other than having a borough. A borough is not the answer to taking care of the community's needs. It might be the State's answer. With a borough, you have borough taxes. I don't want to be that stupid.

Those areas of the state that were compelled by the legislative and executive branchs to organize boroughs have, of course, suffered huge fiscal impacts because the 1963 promise was not upheld. With the fiscal burden imposed by the State, the Ketchikan Gateway Borough and many other borough governments in Alaska are hard pressed today to fund needed facilities and services. In stark contrast, the State Treasury is bulging.

Relief could take different forms, including any of the following three options:

1. Repeal laws that provide for disparate education funding for boroughs. AS 14.17.410(b)(2) reduces the level of State education aid to the Ketchikan Gateway Borough by more than $5 million annually.[4] Additionally, AS 14.11.008 requires the Ketchikan Gateway Borough to pay 30 percent of major maintenance costs for schools while unorganized areas are required to pay only 2 percent. Moreover, AS 14.11.100 requires the Borough to pay 30 percent of debt service for school construction. School construction in unorganized areas is fully funded by the State.

2. As an alternative to permanently repealing the disparate-funding laws, the Legislature could appropriate funds to compensate boroughs for inequitable funding during times when the State enjoys large-scale surplus revenues as it does today.

3. When evaluating State capital funding requests and appropriations, take into consideration the impact on boroughs that has resulted from the failure to uphold the 1963 promise. In other words, recognize that boroughs would be far better able to fund capital projects in their communities through local appropriations if they were not obligated to close the fiscal gap resulting from the breach of the 1963 promise for equitable funding for boroughs.

[4] From 1969 to 1986, the State fully funded each district's basic need (*see Public School Financing in Alaska*, pages 5 and 9, House Research Agency, February 1987). However, when State revenues dropped precipitously in the mid-1980s, the State reduced education aid to boroughs by an amount equal to a 4-mill tax levy or 35 percent of basic need (increased later to 45 percent of basic need), whichever was less.

Your leadership in addressing this matter would be most welcome. The citizens of the Ketchikan Gateway Borough look forward to your consideration of the concerns raised here. We hope you will share your thoughts concerning this matter.

Respectfully,

Dan Bockhorst
Borough Manager

- Details of $9.5 million penalty regarding FY 2009 State education funding for the Ketchikan Gateway Borough

Summary of Penalties Imposed on the Ketchikan Gateway Borough Regarding Fiscal Year 2009 Funding by the State of Alaska

1. State Funding for Operation of Schools

Education is a fundamental responsibility of the State of Alaska as reflected in Article VII, Section 1 of the Constitution of the State of Alaska, which provides that the State must "establish and maintain a system of public schools."

State law (AS 29.35.160) mandates that the Ketchikan Gateway Borough provide public education on an areawide basis. Moreover, State law (AS 14.17.410(b)(2)) mandates that the Ketchikan Gateway Borough pay a significant portion of the cost of education that would otherwise be borne by the State of Alaska. The requirement in AS 14.17.410(b)(2) is imposed only on organized boroughs and home rule and first class cities in the unorganized borough. Nineteen of the fifty-three school districts in Alaska (35.8 percent) are not subject to the requirement.

In the current fiscal year, the penalty in terms of State funding for operation of schools within the Ketchikan Gateway Borough will amount to $5,003,574.

2. Major Maintenance Grants for Schools

State law (AS 14.11.008) mandates that the Ketchikan Gateway Borough pay 30 percent of the cost of major maintenance grant projects for its schools. Here again, the nineteen regional school districts in the unorganized borough are treated differently. Those districts are required to contribute only 2 percent of the cost. The contribution required of the Ketchikan Gateway Borough is 15 times greater.

In the upcoming fiscal year, the Ketchikan Gateway Borough will be mandated to pay $2,885,810 for two major maintenance projects; while the State will pay $6,733,557. If Ketchikan received education services from a regional educational attendance area, the required local payment would be only $192,387, while the State payment would be $9,426,979. Thus, the penalty in this case amounts to $2,693,422 for FY 2009.

3. School Construction Debt

State law (AS 14.11.100) mandates that the Ketchikan Gateway Borough pay 30 percent of the costs of school construction debt. In the current year, that local share is projected to

be $1,794,578. In contrast to municipal school districts, no local contribution is required for construction of new schools in regional school districts in the unorganized borough.

4. Property Tax Exemptions

State law mandates a number of exemptions with respect to property taxes levied by local governments. For example, AS 29.45.030(e)) mandates that the Ketchikan Gateway Borough exempt from taxation the first $150,000 of the assessed value of real property owned and occupied as the primary residence and permanent place of abode by a resident 65 years of age or older; a disabled veteran; or a resident at least 60 years old who is the widow or widower of a person who qualified for an exemption. At one point, the State substantially reimbursed local governments for the fiscal impact of that mandate. However, no reimbursement is currently offered. The fiscal impact to the Ketchikan Gateway Borough of the mandate in AS 29.45.030(e) is projected to be approximately $635,000 in the current fiscal year.

5. Assessment and Collection of Taxes

State law (AS 29.35.170) mandates that the Ketchikan Gateway Borough assess and collect property, sales, and use taxes that are levied in its boundaries, subject to AS 29.45. In the current fiscal year, $607,175 has been appropriated to carry out property assessment functions in the Ketchikan Gateway Borough. That cost is separate from the expense of collecting property, sales, and other taxes. The cost of collection, while not identified as a discrete component of the Finance Department, is estimated to be in excess of $300,000 annually.

6. Planning, Platting, and Land Use Regulation

State law (AS 29.35.180) mandates that the Ketchikan Gateway Borough provide for planning, platting, and land use regulation in accordance with AS 29.40. In the current fiscal year, $743,063 has been appropriated to carry out planning, platting, and land use regulation in the Ketchikan Gateway Borough.

Summary of Penalties in Terms of FY 2009 State Funding for the Ketchikan Gateway Borough	
Mandate	Penalty
Mandatory contribution for schools (does not include $3,030,000 voluntary contribution)	$5,003,574
Disparity in funding for major maintenance for schools (figure may vary sharply from year to year)	$2,693,422
School construction debt	$1,794,578
Property tax exemptions	$635,000
Assessment and collection of taxes	$907,175
Planning, platting, and land use regulation	$743,063
Total	$11,776,812

STUDENT BASED FORMULA

District Adjusted Average Daily Membership (ADM)

Step 1. Adjust: ADM for School Size
Step 2. Apply: District Cost Factor
Step 3. Apply: Special Needs Factor
Step 4. Add: Intensive Services Count
Step 5. Add: Correspondence Student Counts
= **District Adjusted (ADM)**

ADM Reporting Requirements

ADM – is the average number of enrolled students during the 20-school day count period. The 20-school day count ends the fourth Friday of October.
Reports are due within two weeks after the end of the 20-school day count period.

School Size Adjustment [Step 1]

For each school in the district subtract from the ADM **all** correspondence counts. Adjust the remaining ADM of each school using the school size factor table.

1. A community with an ADM under 10:
   Added to the smallest school with an ADM greater than 10.
2. A community with an ADM from 10 - 100:
   Grades K-12 ADM combined and adjusted once, adjusted as one school.
3. A community with an ADM from 101 – 425:
   ADM for grades K-6 and 7-12 are adjusted separately; adjusted as two schools.
4. A community with an ADM greater than 425:
   - Each facility administered as one school, counted as one school, ADM is adjusted as one school.
   - Alternative schools with an ADM of less than 200 combined are adjusted with the school with the greatest ADM in the district.
   - If an alternative school ADM is greater than 200 and administered as a separate facility, the ADM will be adjusted separately.
   - A Charter school with an ADM of 150 or greater will be adjusted as separate facility.

Using the proper formula from the school size factor table, calculate the adjusted ADM for each school.

School Size Table

Reference:	School Size:	Formula:
1.	10-19.99	39.60
2.	20-29.99	39.60 + (1.62 * (ADM - 20))
3.	30-74.99	55.80 + (1.49 * (ADM - 30))
4.	75-149.99	122.85 + (1.27 * (ADM - 75))
5.	150-249.99	218.10 + (1.08 * (ADM - 150))
6.	250-399.99	326.10 + (.97 * (ADM - 250))
7.	400-749.99	471.60 + (.92 * (ADM - 400))
8.	Over 750	793.60 + (.84 * (ADM - 750))

Correspondence student counts are not adjusted for size.

Hold Harmless [Step 1a]
House Bill 273 established a Hold Harmless [HH] provision for those districts experiencing a reduction in enrollment. To determine eligibility for this provision the district's sum total of the adjustment for school size is compared against the prior fiscal year [FY] to see if a decrease of five percent or greater has occurred. The HH provision is available to eligible districts for up to three years provided the total school size adjustment continues to stay below the base year. The district uses the fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

- 75% of the school size adjustment difference between the current FY and the base FY.
- 50% of the school size adjustment difference between the second FY and the base FY.
- 25% of the school size adjustment difference between the third FY and the base FY.

District Cost Factors [Step 2]
- Cost factors are specific to each school district.
- With the implementation of ISER in HB273, District cost factors will range from 1.000 to 1.948. [FY09 = 50% ISER with 12.5% added each subsequent year for next four years.]
- The department monitors the district cost factors and submits a report to the legislature on January 15 every other fiscal year, beginning in FY01.

The districts school size adjusted ADM is multiplied by the district cost factor.

Special Needs Funding [Step 3]
Vocational education, special education (except intensive special education), gifted/talented education, and bilingual/bicultural education are block funded. A district must file a plan with the department indicating the special needs services that will be provided, Section 14.17.420(2)(b), to qualify for special needs funding.

The districts' previously adjusted ADM is now multiplied by the Special Needs factor of 1.20.

Intensive Services Funding [Step 4]
A school district receives funding for intensive special education students that:
- Are receiving intensive services, and;
- Are enrolled on the last day of the 20 school day count period, and;
- Have an established Individual Education Plan (IEP).
- The districts intensive student count is multiplied by 11. [FY09 is multiplied by nine]

The district's Intensive count is added to previously adjusted ADM.

Correspondence Programs [Step 5]
Funding for correspondence programs is calculated by multiplying the correspondence ADM by 80%.

The district's correspondence count is now added to the previously adjusted ADM to arrive at the Final Adjusted ADM.

Basic Need
Multiply the district Final Adjusted ADM by the Base Student Allocation [BSA] to determine Basic Need. The BSA is $5,580 for FY10. [FY09 BSA is $5,480]

PUBLIC SCHOOL FUNDING ELEMENTS
The components of Public School Funding are *State Aid, Required Local Contribution,* and *Title VIII Impact Aid.*

State Aid Entitlement
Basic Need minus a required local contribution minus 90% eligible Federal Impact Aid plus the amount of funding 'Floor' plus Quality School Grants equal State Aid Entitlement.

Required Local Contribution
The equivalent of a 4-mill tax levy on the Full and True Value of the taxable real and personal property in the district not to exceed 45% of the district's Basic Need for the preceding fiscal year. *However*, beginning in FY02, only 50% of the *increase* in real and personal property over the 1999 Full and True Value is used for the 4 mill equivalent calculation. If the latest Full and True Value doesn't exceed the 1999 Full and True Value, then the latest value is utilized.

Title VIII Impact Aid
Federal Impact Aid provides funds to school districts for children of parents living and/or working on federal property "in-lieu of local tax revenues." 90% of the eligible funds are used in the calculation of state aid.

ADDITIONAL FUNDS ABOVE BASIC NEED

Maximum Local Contribution

If the City or Borough would like to contribute more than Required then the Maximum Local Contribution applies. To calculate this use the Required Local Contribution plus 23% of Basic Need **or** a 2-mill equivalent of the Full and True Value of the taxable and real property within the district, whichever is *greater*. The additional amount is added to the Required Local Effort to reach the Maximum Local Contribution.

For Example:

Nome's: *23% of Basic Need = $2,096,229* OR
.002 of Full & True Value = $571,848

RESULT:

Required Local Effort:	$ 955,700
Additional Local Contribution:	+$2,096,229 *[23% of Basic Need]*
Maximum Local Contribution:	$3,051,929

Quality School Grants

The districts adjusted ADM multiplied by $16 generates the amount the school district is eligible to receive.

Example: *Nome School District*			**Column**
I. Basic Need Calculation			
Projected ADM		676.50	L
Determining School Size Adjustment			
[Utilizing Table from page 4]	ADM

HB273 & Formula Changes

In addition to the hold harmless provision that was implemented, HB273, enacted in 2008, changed three other components of the formula over a period of five years.

Fiscal Year	District Cost Factor	Intensive Multiplier	Base Student Allocation
FY2009	50% of ISER	x 9	$5.480
FY2010	62.5% of ISER	x 11	$5.580
FY2011	75% of ISER	x 13	$5.680
FY2012	87.5% of ISER		
FY2013	100% ISER		

Area Cost Differential Table FY09 FY10 FY11 FY12 FY13

	Education Task Force District Cost Factors				
District	50% ISER	62.50% ISER	75.0% ISER	87.50% ISER	100% ISER

Taylor Plan History

Mr. Patrick F. Taylor conceived the idea of the Taylor Plan in 1988 when he was asked to speak to 183 underachieving inner-city seventh and eighth-grade students at Livingston Middle School in New Orleans East. These students had been held back in school, many more than once. They were not expected to make it past the eighth grade, let alone enter high school. Most had lost all hope in themselves and were planning to drop out of school.

When Mr. Taylor asked the Livingston students whether they wanted to go to college, every hand in the room went up. Curious about this paradox, Mr. Taylor soon learned that the students' parents had given up on their children. Since the parents could not afford to send their children to college, they were not pushing their children to do well in school. Mr. Taylor challenged these middle school kids (who became known as "Taylor's Kids"): if they maintained a B average in school in a college prep curriculum and stayed out of trouble, he would make sure they could go to college.

Approximately half of these original "Taylor's Kids" graduated from high school, and half of those students entered college. Five of the original Taylor's Kids were selected for *Who's Who Among American High School Students.*

The students' response to his challenge caused Mr. Taylor to examine the status of access to higher education in the late 1980s. He discovered numerous national reports and surveys showing that more than 80% of American parents felt they could not afford to send their children to college. Yet survey after survey showed that if kids were given an opportunity to break the financial barrier, many would strive for a college education.

In 1989, Mr. Taylor gathered data on college performance and costs. He learned that virtually every university in Louisiana had an open admissions policy. As a result, students came to college unprepared and dropped out in alarming numbers. This proved an expensive proposition for both the students and the state taxpayers footing the bill for the higher education system in the state. He also found the ACT was below the national average, and students graduating from high school needed remedial instruction in virtually every basic subject at the college level.

After much hard work, Mr. Taylor convinced the Louisiana Legislature to adopt what the news media named the "Taylor Plan." It guaranteed access to college for low and moderate-income students based on their academic achievements, and not on their ability to pay. The first Taylor Plan was signed into law on July 10, 1989.

The original 1989 Taylor Plan required that students earn a 2.5 GPA in a 17.5 unit college prep curriculum and score of 18 on the ACT. Because the program was implemented initially for low-and moderate-income students, the legislature capped the family income requirement at $25,000 (two year adjusted gross) for families with one dependent child, increasing it by $5,000 for each additional child up to a maximum of $35,000. The Taylor Plan awarded qualified students with tuition and fees at any four-year public college or university of their choice in Louisiana.

When longtime CBS newsman Mike Wallace featured Mr. Taylor with the Taylor's Kids on a *60 Minutes* segment in September 1989, Mr. Taylor's mission took on a national scope, as other states called wondering how to implement a similar program. That same year, Mr. Taylor convinced New Mexico to enact a version of the Taylor Plan program. In 1990, Texas, Florida, and Indiana, voted for state-paid college tuition assistance programs for their children. In 2005, Wyoming became the 22nd state to enact a Taylor Plan.

In Louisiana, the current version of the Taylor Plan is known as "TOPS" (Tuition Opportunity Program for Students). TOPS requires a 2.5 GPA, a 16.5 unit college prep curriculum while in high school and a minimum score of 20 on the ACT. In 1997, at Mr. Taylor's urging, the Louisiana Legislature eliminated family income as a requirement.

To obtain more information on TOPS, students should contact their high school counselor, or the Louisiana Office of Student Financial Assistance at (800) 259-5626, ext. 1012. Students may also visit www.osfa.state.la.us

Patrick F. Taylor

1937-2004

President, Chairman, CEO, and sole owner of the Taylor Energy Company in New Orleans
Creator of the Taylor Plan (TOPS)

In Louisiana, Texas, and throughout this great nation, the name "Patrick F. Taylor" is synonymous with access to quality education. A successful oilman, inspiring leader, and a prominent citizen in his community, Mr. Taylor wholly committed himself to the ideal that every young person should have the opportunity to achieve a quality college education in the United States.

Mr. Taylor was born in Beaumont, Texas, on June 12, 1937. He received a full scholastic scholarship from the Kinkaid School in Houston and completed school, despite leaving home at age 16. After high school, he left Texas to attend Louisiana State University. Because LSU did not charge tuition, Mr. Taylor was able to receive a college education. During his sophomore year at LSU, Mr. Taylor joined the Marine Corps PLC Officer Training Program. Unfortunately, a heart condition prevented the completion of his senior course, and Mr. Taylor was honorably discharged from the Corps on October 16, 1959.

After graduating from LSU with a degree in Petroleum Engineering, Mr. Taylor worked for Texas oilman John Mecom, Sr. until 1966. He then formed his own consulting and production company. In 1974, he joined with Mr. Mecom and started Circle Bar Drilling Company. That very successful drilling contracting company was sold in 1979, at which time Mr. Taylor formed Taylor Energy Company in New Orleans. Today, Taylor Energy Company is one of the larger independent oil companies in the Gulf of Mexico and remains solely owned. Taylor Energy Company LLC is the only individually owned company ever to explore for and produce oil and natural gas in federal offshore waters in the Gulf of Mexico. Mr. Taylor was the Chairman, President, and CEO of Taylor Energy Company LLC until his death on November 5, 2004. Mr. Taylor died of complications due to bacterial endocarditis.

In March of 1988, Mr. Taylor was asked to speak to 183 underachieving and troubled inner-city 7th and 8th grade students who planned to drop out of school. Remembering the significance of his own college opportunity, Mr. Taylor decided that he would not give a typical "role model" speech. Instead, he promised the kids that he would see to it that they went to college. They would be required to stay in school, stay out of trouble, and complete a college preparatory high

school curriculum with a B average. The response from the students and their parents was overwhelming. Many went on to college, and five of those students were recognized in *Who's Who Among American High School Students*.

During the course of these efforts, Mr. Taylor realized for the first time that an entire generation of America's low-income youth was growing up thinking that college was "for other folks." Mr. Taylor initiated research in Louisiana to determine the reason for this belief. That study confirmed that a full three-quarters of Louisiana families could not afford college for their children. Moreover, this was not limited to Louisiana.

Convinced that all children are entitled to the opportunity to achieve success, Mr. Taylor conceived and prepared legislation for Louisiana to address the issue. The first bill introduced provided for state-paid college tuition for academically qualified students from families with less than a $25,000 annual income (income cap has since been removed). Applicants had to complete an advanced high school core curriculum with a 2.5 grade point average and receive a minimum score of 18 on the American College Test (raised to 20, effective Fall 1999). After a ferocious battle in the Louisiana Legislature, this bill became ACT 789, and the first "Taylor Plan" was signed into law on July 10, 1989. In Louisiana, a college education for all children was now based on their ability to learn rather than their ability to pay.

In the meantime, the national media coverage of Mr. Taylor's unique offer to the original 183 "Taylor's Kids" had attracted the attention of Mike Wallace, longtime CBS newsman. Mr. Wallace had CBS cover the legislative battle during the summer of 1989, and he personally interviewed the kids and their parents. In September of that year, *60 Minutes* ran a feature on the "Taylor's Kids," the Taylor Plan, and Mr. Taylor. The national attention caused by the *60 Minutes* feature led to a flood of invitations for Mr. Taylor to carry his message around the nation.

What began in Louisiana as the first state-paid, merit-based tuition program has now spread to include 22 states with Taylor Plan programs. Today, thanks to Mr. Taylor, millions of American children have the opportunity to go to college based on their ability to learn, and not their ability to pay.

In 1985, Mr. Taylor founded the Patrick F. Taylor Foundation, a philanthropic organization benefiting education, law enforcement, military, charitable community organizations, and other humanitarian efforts.

Mr. Taylor established an endowment of more than a $1,000,000 to carry the college opportunity message to students and their families in Louisiana. Each student in grades 7th through 12th who has completed the school year with 2.5 or higher grade point average is rewarded with a year's membership to New Orleans Audubon Aquarium and Zoo, as well as the New Orleans Museum of Art. Since its inception, over 1,000,000 Louisiana students have received Taylor/Audubon/NOMA Students and Scholars Program awards. Mr. Taylor's endowment guarantees that the program will continue in perpetuity.

Mr. Taylor received awards and honors from many organizations, including the United States Marine Corps, Marine Forces Reserve, Marine Corps League, Department of the Navy, Veterans of Foreign Wars, U.S. Olympic Committee, Horatio Alger Association of Distinguished Americans, National Brotherhood of Christians and Jews, NAACP, Urban League, Society of Petroleum Engineers, Caring Institute, Kiwanis International, Rotary International, Volunteers of America, Freedoms Foundation of Valley Forge, and the National Football League. Pope John Paul II bestowed upon him the Medal of Benemerente, the highest award given by the Vatican to a non-Catholic. Numerous local, state, and Federal law-enforcement agencies, including the Federal Bureau of Investigation, the U.S. Customs Service, and the U.S. Secret Service have cited Mr. Taylor's efforts. In addition to his numerous awards and honors, Mr. Taylor received several Honorary Doctorates from colleges and universities. He served on various boards of national charitable foundations, as well as the National Petroleum Council.

Mr. Taylor was recognized as the first and only billionaire from Louisiana by *Forbes* magazine's 400 Richest Americans list (October 2004 issue). As a poor kid from East Texas, he had never chosen to publicly emphasize his wealth, but preferred to be recognized for his contributions to education, law enforcement, the military, and his community.

AWARDS/HONORS

- The 1986 Horatio Alger Award.
- The 1988 35th Annual Weiss Award from the New Orleans Chapter of the National Conference of Christian and Jews.
- The 1988 Young Leadership Council Role Model Honoree.
- The 1989 Outstanding Business Leader Award from Northwood University.
- The 1989 Benemerente Medal from Pope John Paul II, February 26, 1989.
- Received the Distinguished Service Medal (Gold) awarded by the Marine Corps League on April 13, 1989. This is the League's highest honor and was awarded for the first time to a citizen outside the military.
- The 1990 NAACP Louisiana Man of the Year.
- The Freedom Foundation National Service Medal, March 1990.
- Urban League of Greater New Orleans 1990 Whitney M. Young, Jr. Memorial Award.
- Louisiana Federation of Republican Women's 1991 American Hero Award.
- The Department of the Navy's 1993 Meritorious Public Service Award from the Commandant of the Marine Corps.
- Society of Petroleum Engineers' 1993 Public Service Award.
- Louisiana State University Foundation's 1993 Foundation President's Award for Lifetime Support.
- 1993 National Caring Award from the Caring Institute of Washington, D.C.
- 1995 Louisiana Citizen of the Year Award from the Louisiana Association of Student Councils.
- 1998 Volunteers of America (VOA National), Outstanding Community Service Award.
- Mayor's 1998 Medal of Honor, City of New Orleans, October 1998.
- New Orleans Police Department, Commendation Award, January 1999.
- Top 10 Businessmen in New Orleans, WYES-TV 15th Annual "Informed Sources" Show, March 1999.

- Louisiana State University, the College of Engineering Hall of Distinction, April 1999.

- Honored with "Patrick F. Taylor Day" in Louisiana as designated by Governor Foster to honor Mr. Taylor on July 10, 1999, on the Taylor Plan's 10th Anniversary.

- Honored by Proclamation by the New Orleans City Council for the Taylor Plan's 10th Anniversary, August 5, 1999.

- Honored by the New Orleans Hilton, Walk of Fame, for Taylor Plan/TOPS, October 6, 1999.

- Honored by the Mayor's Military Advisory Committee of Greater New Orleans, Outstanding Achievement Award, November 4, 1999.

- Honored by Network '99, Humanitarian of the Century Award, November 26, 1999.

- Honored by the Kiwanis International Foundation, the George F. Hixson Fellowship, January 26, 2000.

- Honored by Rotary Foundation International, the Paul Harris Fellow Award, February 2000.

- Honored by the National Football League Alumni Association, Caring for Kids Award, February 2, 2002.

- Honored by the New Orleans Museum of Art, the Isaac Delgado Award, April 4, 2002.

- Honored by the Kingsley House, the Beverly Warren Award, May 2002.

- Honored by Kappa Delta Pi, Points of Excellence, October 16, 2002.

- Honored by United Daughters of the Confederacy, Jefferson Davis Historical Gold Medal Certificate, January 19, 2003.

- Honored by the Republican Professional Women of St. Tammany, Carol Beck Scholarship Award, May 6, 2003.

- Selected as 1 of 70 outstanding leaders throughout the world to receive the Toastmasters International Communications and Leadership Award, May 17, 2003.

- Honored by the New Orleans Regional Chamber of Commerce, Stephen Ambrose Esprit de Corps Award, May 29, 2003.

- Honored by National Council of Negro Women of Greater New Orleans, Bethune Trailblazer Award, November 15, 2003.

- Honored by the Executive Women International/New Orleans Chapter, Executive of the Year, November 18, 2003.

- Honored by Urban League of Greater New Orleans, Equality Award, December 4, 2003.

- Honored by Memorial Hall Foundation of New Orleans, Frank T. Howard Award, January 24, 2004.

- Honored by the Sons of Confederate Veterans, Horace L. Huntley Award, January 24, 2004.

- Named Part-time Superintendent of the New Orleans Police Department by Chief Eddie Compass, Superintendent NOPD, February 5, 2004.

- Honored by the Child Welfare League of America in Washington D.C., Champion for Children Award, February 25, 2004.

- Honored by Minerals Management Service, New Orleans District Safety Award for Excellence, April 15, 2004.

- Streetcar named in his honor by Regional Transit Authority, May 18, 2004.

- Honored by Big Brothers/Big Sisters, Tribute of Excellence Award, November 6, 2004.

- Posthumously honored by the Louisiana Legislative Black Caucus, Pinkie Carolyn Wilkerson Humanitarian Award, November 27, 2004.

- Posthumously honored by the Louisiana American Italian Sports Hall of Fame, Civic Recognition Award, January 15, 2005.

- Posthumously honored by the City of New Orleans/Martin Luther King Holiday Planning Commission, Quiet Hero Award, January 15, 2005.

- Posthumously honored by the Pelican State Pachyderm Club of Louisiana, 2004 Pachyderm Republican Achievement Award, February 15, 2005.

- Posthumously honored by Minerals Management Service, Corporate Leadership Award, April 26, 2005.

HONORARY DEGREES

- Doctor of Science, University of New Orleans.
- Doctor of Laws, Northwood University.
- Doctor of Humanities, Northwestern State University.

- Doctor of Science & Humane Letters, Louisiana State University.

APPOINTMENTS

- Board of Supervisors of the LSU System, 1983-1986.
- The National Petroleum Council, an advisory committee to the U.S. Secretary of Energy, 1990-1997.
- Executive Professor, Graduate School of Business Administration, Northwood University, 1992.
- Honorary Director, Lajos Markos Art Foundation, 1996-1997.
- Member of the Tobacco Settlement Financing Corporation Board, appointed by Governor Foster, August 21, 2001.
- Member of the Marine Corps Heritage Foundation, 2000-2004.
- Board of Directors, National College Access Network, 2002-2003.

CIVIC, EDUCATIONAL, AND POLITICAL ACTIVITES

- Louisiana Olympic Committee.
- Chairman Republican State Finance, 1986.
- Member of Louisiana State University Board of Supervisors, 1983-1986.
- Chairman LaFete Prelude, 1985.
- Chairman March of Dimes "Team Walk" for New Orleans, 1985-1990.
- Member of Board of Directors of the University of New Orleans Foundation, 1987-1999.
- Member of Board of Directors for March of Dimes, 1987.
- Co-Chairman March of Dimes Gourmet Gala, 1987.
- Finance Chairman of the New Orleans Commission on the Bicentennial of the Constitution.
- Chairman of the Greater New Orleans Convention Fund.
- Member of the Board of Directors of Junior Achievement of Southeastern Louisiana, 1989-1991.
- Founding Member of the World War II Museum.
- Member of Louisiana Maritime Museum.
- Member of the Board of Directors of the U.S. Coast Guard Foundation, 1988-1996.
- Member of the Board of Directors of the Louisiana Association of Business and Industry, 1989-1992.
- Established the Taylor Scholarships for National Merit/National Achievement Finalists at University of New Orleans, March 2, 1988.
- Established "Taylor's Kids" program to provide a college education for 183 under-achieving students at Livingston Middle School in New Orleans, March 16, 1988.
- Created the Taylor Plan to achieve equal opportunity of college education for qualified Louisiana youth statewide. A bill based on the plan was passed by the Louisiana legislature and signed into law on July 10, 1989.
- Featured on the September 24, 1989 and the September 2, 1990 telecasts of *60 Minutes* in a documentary on Mr. Taylor by Mike Wallace.

- The Taylor Plan became law in 20 states, including Louisiana with several others considering such action, 1989 to current date.
- Member of the Board of The National Conference of Christians and Jews, 1989.
- Chairman of the 1989 Greater New Orleans Area Unit Crusade for the American Cancer Society, Louisiana Division, Inc.
- Member of the Dean's Advisory Council of the College of Arts and Sciences at Tulane University, 1990.
- President and Chairman of the Board Project New Orleans, founded with the cooperation of 18 corporate entities, which committed $2 million to cover living and personal expenses to Taylor Plan students from poverty and low-income families.
- Appeared on February 6, 1991 telecast of the *700 Club* in an interview with Dr. Pat Robertson.
- Member of the National Petroleum Council, an advisory committee to the U.S. Secretary of Energy, 1990-1997.
- Associate Lifetime Member of the Military Order of Foreign Wars, Louisiana Chapter, July 30, 1998.

MILITARY INTERESTS AND ACTIVITIES

- Participated in the Marine Corps PLC Program as a student attending Louisiana State University.
- Attended the U.S. Naval War College Current Strategy Forum in Newport, Rhode Island, in June 1985-1988.
- Participated in Exercise Black Bird, an anti-terrorist training exercise with the U.S.S. Forrestal (CV59) in the Atlantic, April 1986 in his offshore race boat, Tiger Tayl.
- Participated in the Launching of the U.S.S. San Juan (SSN 751) in Groton, Connecticut, and in August 1988 in its commissioning in Groton.
- Selected by the United States Secretary of Defense to participate in the 53rd Joint Civilian Orientation Conference on a nationwide tour of U.S. Military activities in May 1988, in recognition of his achievements, support, and as a distinguished American citizen.
- Attended the Defense Orientation Conference Association seminar in Colorado Springs, Colorado, July 15-17, 1989.
- Received the 1993 Meritorious Public Service Award from the Commandant of the Marine Corps on April 17, 1993.
- Member of the Board of Directors of the U.S. Coast Guard Foundation.
- Received an Associate Lifetime Membership to the Louisiana Chapter of the Military Order of Foreign Wars on July 30, 1998.
- Actively supported the United States Marine Corps and Young Marines Program.

HOUSE EDUCATION COMMITTEE

Representative Paul Seaton, Chairman

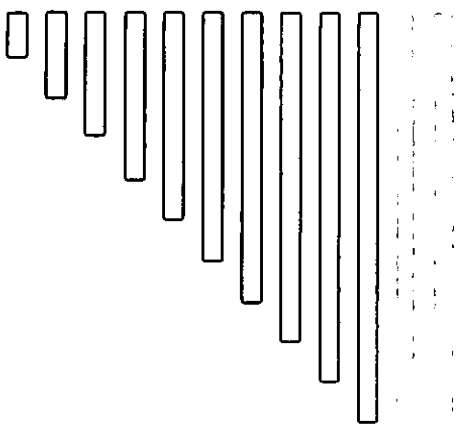
Memorandum

From: Representative Paul Seaton, Chairman
To: House Education Committee Members
Date: January 26th, 2009
RE: Letter between Ketchikan Gateway Borough and Governor's office regarding Required Local Effort

---

The attached letter from the Governor's office in response to the Ketchikan Gateway Borough (KGB) letter mentions that the issue raised by the KGB has been referred to the Departments of Law, Commerce, and Education. We have not at this point received a response from the departments on this issue, and won't be taking action on this issue at this time. The inclusion of these materials in your packet is to make the committee aware of the issue. Further discussion of the issue will take place when we receive responses from departments.

Taylor Plan Overview



State of Alaska

January 2009

Patrick F. Taylor Foundation ◊ One Lee Circle ◊ New Orleans, LA 70130
(504) 589-0555
www.TaylorPlan.com
Dr. James Caillier, Executive Director
Bill Schilling, Special Representative
President, Wyoming Business Alliance / Wyoming Heritage Foundation
(307) 262-5990

Taylor Plan Philosophy

- No qualified student turned away
- 2.5 G.P.A.; core college preparatory curriculum; state average on ACT test
- Tuition "earned;" not an entitlement
- Post – secondary tuition / up to four years of college / continuous
- Incentive based / reward concept—better you do, greater the scholarship

Benefits

Better Preparation = Better Success

- Greater parental involvement
- Increased high school graduation rates
- Better preparation for college and post-secondary education
- More high school graduates going to college in the state
- Less remedial education / Increased college completion rates
- A competitive workforce for the future

Origin and History

Taylor's Three Questions in 1988/183 New Orleans inner city kids

1.) "Would you like to go to college?"

All of the students raised their hands and said "yes".

2.) "Can you go to college?"

Not one of them raised their hands.

3.) He again asked, "How many of you would like to go to college if you could?"

All raised their hands and said "yes".

Continues

Origin and History

Patrick Taylor

- Billionaire oilman from New Orleans
- Founder of Taylor Energy and Taylor Foundation
- Featured on 60 Minutes twice
- Died in November 2004
- Taylor Foundation Commitment Continues

"Taylor Plan's" First Class

- Louisiana "TOPS"—first merit based scholarship program
- Five listed in Who's Who for High School Graduates
- 100 of 183 went to college
- Completion rate better than nation's
- Yearly ranch gathering

"Taylor Plan" States

- 1989 – Louisiana
- 2005 – Wyoming

Wyoming Legislative Process

2004	Wyoming Forum "How Are the Children"
2005	Concept Approval / Funding Mechanism
2006	Scholarship Categories / Levels
2006	Constitutional Amendment
2007	Success Curriculum

Wyoming "Hathaway Plan" Model

- 4 Scholarship Categories
- 3 Tuition Levels
- Success Curriculum / Graduation Requirements
- $400 million endowment / $15 million yearly interest income
- University of Wyoming / Community Colleges
- Administrator: Department of Education
- Named after former Governor Stan Hathaway

Scholarship Categories / Levels

- Honors – 3.5 G.P.A. / 25 Act / 100% Tuition ($1600 per semester);

  Performance – 3.0 G.P.A. / 21 ACT / 75% Tuition ($1200 per semester);

  Opportunity – 2.5 G.P.A. / 19 ACT / 50% Tuition ($800 per semester); and

  Career – 2.5 G.P.A. / 17 ACT or 12 cumulative WORKKEYS score / 50% Tuition ($800 per semester);

- Applicable for community colleges and the University of Wyoming for full-time students for four years
- Career scholarship is for technical degrees
- Need based scholarship available for unmet need greater than $2000

Success Curriculum

- **Honors and Performance**

  Four years math, science and language arts; three years social studies; and two years foreign language

- **Opportunity**

  Four years math and language arts; four years science and three social sciences; and proficiency for state standards in foreign cultures

- **Career**

  Two years math, state standards for foreign cultures proficiency, and state standards required for language, science and social sciences for graduation

Endowment

- 4 Year ramp-up
- 2009 – Fully operative
- 2006 – 1500 Scholarships / $3 million
- 2009 – 8000 Scholarships / $15 million

Wyoming's Challenges

- Energy Boom
- Least diversified state
- Declining K – 12 population / aging population
- Number one in K – 12 and higher education funding:
  - Average, not great, educational quality
  - Four year degrees / below national average
  - 28th in high school graduation rate
  - Class 2007 dropouts / $460 million cost
- $10 million yearly in remedial education

U.S. Challenges

- World is flat / new centers of influence
- Intellectual capital / resource wealth
- Of the 29 OECD countries: reading literacy, 15th; mathematics, 24th; science, 19th; and problem solving, 15th.
- Graduation rates, 18th of 23; top seven / graduation rates of over 90%
- College attainment—2% increase in the U.S. while 11% in OECD countries / three generations
- High School dropouts over a lifetime earn $260,000 less than graduates.

  The class of 2007 drop-outs will cost the nation $329 billion in lost wages, taxes, and productivity.

Policy Questions

- Target audience / kids or parents / "haves" versus "have nots"
- Need based or merit based
- Small schools / curriculum requirements
- C+ launch pad / reachable for most
- Supporter and opponent landscape
- Institutional resistance / acceptance
- Grassroots support: parents, business and community
- Affordability and funding mechanism / General Fund or endowment
- Return on investment
- State advocate(s)

2431

Taylor Foundation Role

- Multi-state involvement nationwide
- Presenting and consulting
- Meeting convener
- Research
- "Taylor Plan" models / variations

Taylor Plan

Louisiana TOPS Education Backgrounder

May 21, 2008

Education is essential for a strong economy and individual advancement. Louisiana's commitment to education and the TOPS program is a testament to the belief that despite horrendous hurricanes and economic setbacks, progress and hope for the future persist.

Louisiana was hit by four major hurricanes between 2003 and 2005. Hurricanes Rita and Katrina in 2005 were devastating. Of the top ten U.S. disasters, Katrina at $30 billion was three times greater the 9/11/01.

Louisiana's population decreased by 250,000 after the 2005 hurricanes. The state's population in 2005 was 4,507,331; in 2007, 4,293,204, including the return of some 50,000 residents. Louisiana for a number of years has had minimum population growth. Between 1990 and 2005 the population increased by 287,358 a scant 6% in 15 years.

In the 2004-2005 school years, there were 42,450 TOPS (Taylor Plan / Tuition Opportunity Program for Students) students enrolled in Louisiana's two year, four year and technical schools. In the 2007-2008 school year, the number was 41,949, a slight decline from the 2004-2005 mark because of the 2005 hurricanes. For this academic year (2007-2008), the total scholarship expenditure is set for $116,068,652—the average payment being $2767. Between 1998 and 2007, the number of TOPS students grew from 23,509 to 41,949—78%.

Baseline Summary

- Despite a population growth of just 4% between 1998 and 2005 (pre-Katrina / Rita), the number of TOPS students increased from 23,509 to 42,450—an increase of 81%.
- Hurricane Katrina and Rita resulted in the displacement of 96,631 K-12 students.
- In 2007 66% of high school graduates completed the Core success curriculum for college (27,230 of 41,370 graduates); in 2003, 56% (25,546 of 45,226).
- The high school graduation rate has increased from 61% in 1991 (48th in the nation and 11% below the national rate of 72%) to 69.4% in 2004 (39th and 5% below the nation). In 2006 it dropped to 64.8%--no doubt a hurricanes causal factor.
- College readiness improvement between 1991 and 2002—from 22% to 35%--was second best in the nation.
- High School graduates eligible for and enrolled with TOPS has improved since Katrina—91% in 2004 (pre-Katrina) – 83% in 2005 (years of Katrina) – 88% year after Katrina.
- ACT average scores for first-time post-secondary freshman increased from 19.4 in 1996 to 20.1 in 2006—above the minimum ACT standard of 19 for college preparedness.

2432

- Persistence of TOPS students is much better than non-TOPS students—4th year for the class that entered 2003 is 77%--well above the national average. It was 42% for non-TOPS students.

- The TOPS program is administered by the Louisiana Office of Student Financial Assistance. According to Richard Ordal, (225) 922-1043, TOPS has 14 employees. Its operational budget of $1.296 million ($31 per TOPS student) represents 1% of TOPS' $119,121 million budget for the current school year. TOPS' has two additional employees for the Go Grant Program and Dual Enrollment Program.

High School Performance

High School enrollment in Louisiana declined by 4% between 1990 and 2000. The percent of minority students for the school year 1999-2000 was 51%, versus a national rate of 38%; percent of children under 18 years in poverty (1999) was 26% versus 19% nationally. College readiness increases for Louisiana high schoolers has surpassed the national rate—35% versus 34%.

Core Curriculum

- 66% of 2007 high school graduates took the more rigorous Core curriculum versus 56% in 2003.

- 64% of Louisiana students scored a 3 or higher on the advanced placement exam versus 61% nationally.

ACT Scores

- **Louisiana** 1991 – 19.4; 1999 – 19.6; 2006 – 20.1; **U.S.** 1991 – 20.6; 1999 – 20.0; 2006 – 21.1.

- 79% of all Louisiana high schoolers took the ACT test in 2007; Montana's rate in 2004 was 56%; the national rate 40%.

- Over the past 5 years Louisiana's state composite has risen .5 points versus nationally .4.

- 71% of Louisiana's ACT test takers in 2001 completed ACT's Core curriculum versus 60% nationally.

Graduation Rate

- Louisiana: 1991 – 61%; 2003/2004 – 69.4%.
  U.S.: 1991 – 72%; 2003/2004 – 74.3%.

- For the time frame, Louisiana's improvement of 7.4% was one of the best in the nation.

- All young adults with a high school diploma or GED: 82% Louisiana; 85% U.S

- **By Sector**

White		African-American Graduation Rates	
Louisiana	1997 – 63%; 2002 – 69%	Louisiana	1997 – 52%; 2002 – 56%
U.S.	1997 – 76%; 2002 – 78%	U.S.	1997 – 54%; 2002 – 56%

College Readiness

- Louisiana 1991 – 22%; 2002 – 35 %
  U.S. 1991 – 25%; 2002 – 34%
- Louisiana's improvement of 13%--from 22% to 35%--was the second best in the nation

College Preparation

- 56.5% of high school graduates in 2003 took the Core versus 65.8 in 2007
- The number taking the Core has increased despite devastating hurricanes, loss of student population and minimum state population growth.
- Eligibility for TOPS awards continues to grow – from 14,797 in 2003 to 15,273 in 2005. It declined slightly in 2006 due to Katrina.

College Performance

The number of college students in Louisiana with TOPS Scholarships continues to grow—despite devastating hurricanes, overall population decreases, and increases in Core curriculum rigor. ACT scores have increased from 19.4 to 20.7—to a level above the minimum predictor for college success and yet another positive attribute of the core high school success curriculum. Almost 90% of high school graduates eligible for TOPS stay in Louisiana for their college education.

Enrollment Growth

- Between 1989 and 1999 the percentage of adults earning post-secondary and technical degrees increased by 24% in Louisiana versus 7% in the U.S.
- Between 2004 and 2005, higher education enrollment in Louisiana declined by 19.7% due to Katrina and Rita.
- In 2004 Louisiana had 214, 144 students in higher education; in 2006 195, 380—a decline of 18, 764, or 9%, as a result of the hurricanes.

Admissions Criteria

- 81.9% of the Fall 2004 entering class met 2005 admission criteria.

- Anticipated even better preparation for Fall 2005 according to the Board of Regents.

Student Retention

- Between the 1996-1997 school year and 2001-2002 year, freshman to sophomore year retention increased from 71% to 75%.
- For students who enrolled in post-secondary in 2003, 88% returned for their second year versus 60% for those without TOPS.
- For fourth year students in 2007, 77% were still in college versus 42% for non-TOPS counterparts.

Degrees Awarded

- Between 1994-1995 school year and 2003-2004, the number of degrees and certificates awarded annually increased from 22,904 to 26,449—a 15% increase.
- 59% TOPS students at four year institutions graduate within six years, versus only 25% of non-TOPS students.

Funding

- Between 1983 and 1993 Louisiana ranked 48th in the nation in percentage of post-secondary funding increases. For the years 1994-2002, the state was second in the nation.

Brain Drain

Louisiana's challenges in terms of keeping college graduates in the state are no different than other historically slow growth and traditional industry (i.e., moderately dependent economy versus diversified economy) states across the country, including Montana. Since the 1980's Louisiana has struggled with mediocre population growth and image problems. That has changed, and continues to change as evidenced by efforts to restructure the economy and higher education endowed chairs (33) and professorships (265) at LSU.

- The 2005 hurricanes decreased jobs in the state to 1997 levels. By the end of 2007 the state was within 3700 jobs of 2005.
- By mid – 2008, with a projected increase of 37,700 jobs (1.9%), the state will set new employment records.
- A unique program through Louisiana State's E.J. Ourso College of Business promotes jobs for Louisiana graduates—www.LouisianaGrads.com
- The oil and gas industry is booming and is hiring college graduates.

- According to Cathy Breaux (Louisiana Economic Development Department (225) 342-5375) TOPS graduates want to stay in Louisiana, but jobs for graduates continue to be a problem.
- Louisiana (43rd place), like Montana (38th) and nine other states, has a moderately dependent economy versus states like Georgia (11th) and Texas (13th) which have moderate diversification.

Report prepared by Bill Schilling, Taylor Foundation Representative, Casper, Wyoming, 307-262-5990.

† Not applicable.

Rounds to zero.

[1]Local revenues include intermediate revenues.

[2]U.S. totals include the 50 states and the District of Columbia.

[3]Both the District of Columbia and Hawaii have only one school district each; therefore, neither is comparable to other states. Local revenues in Hawaii consist almost entirely of student fees and charges for services, such as food services, summer school, and student activities.

NOTE: Detail may not sum to totals because of rounding.

Components of Basic Need (Who Pays?)

⇦ Required Local Contribution

⇦ Federal Impact Aid

⇦ State Aid

SB 174 Full & True Value/Local Effort Calculation

As a result of Senate Bill 174: (enacted in 2001)

Beginning FY2002, half of the increased current year full & true value over 1999 (base year), is added to 1999 base year to determine the full & true value for the purposes of calculating Required Local Effort for education.

(If the full & true value did not increase over the 1999 base year, then the current full & true value stands and is multiplied by .004 mills to reach local effort.)

Calculating Nome's Full & True Value

Nome's 2008 Full Value	285,923,800
Nome's 1999 Full Value	191,926,100
Full Value Increase Difference	93,997,700
Divided in Half	46,998,850
Half of the Increase is Added to 1999 Value	
191,926,100 + 46,998,850 =	**238,924,950**

Required Local Contribution

Example: Nome City Schools

The **Lesser** or minimum of 4 mills of the education full & true value, but not to exceed 45% of the school districts prior year basic need.

.004 of Tax Base: (*Education Full & True Value*)

.004 x $ 238,924,950 = **$955,700**

45% of Prior Year Basic Need:

.45 x $8,972,788 = $4,037,755

(Shown on Column C, page 9)

- The Alaska Student Loan Corporation (ASLC), created by the legislature in 1988 to provide a source of financing for state-administered education loans, has successfully issued bonds from 1988 through 2007. ASLC's tax-exempt bond issues have been structured using education loans as collateral.

- In 2008, due to the extended disruption in the capital markets, ASLC was unable to issue bonds. One reason for that was contagion from the sub-prime mortgage-backed bond market had spread to student loan-backed bonds—particularly in regards to non-federally guaranteed education loans such as the Alaska Supplemental Education Loans (ASELs). Rating agencies, financial partners and investors have substantially altered their level of scrutiny and qualitative standards for asset-backed bonds, resulting in ASELs being viewed as sub-prime loans.

- In short, ASELs as they exist today are no longer of sufficient quality to be effectively used to back bonds. In order for ASLC to be able to efficiently use ASELs to back bonds in the future, the credit standards applied to borrowers of these loans must be strengthened.

- Failure to make the proposed changes will seriously compromise ASLC's ability to finance its programs and operations in the capital markets. In that event the options will be 1) the State of Alaska will have to directly fund the ASEL program at an annual cost of approximately $50 million, or 2) ASLC will substantially cease originating ASELs effective in 2009.

- In addition to the proposal to raise the credit standard for the ASEL, because in the increases in the costs of financing the loan program, there is also a need to alter the interest rate on the Alaska Family Education Loan (FEL). That loan rate is currently set in statute at 5%. The proposal is to set the FEL rate at the same rate charged on the ASEL—currently that rate is 7.3% and is capped in statute at 8.25%. Proposal would allow the Corporation to set the rate on these loans using the same program-costs based formula used for the ASEL.

- The timing of a change in the ASEL credit standard is fortunate in that it coincides with the 2008 increase in the federal Stafford loan limits.[1] Stafford loans, also offered by ASLC for Alaska students, are a federal entitlement to any student attending an accredited institution and no credit standard is considered in making these loans (except that the borrower may not be in default on an existing federal education loan). Furthermore, in January 2009 congress introduced a stimulus bill which provides for an additional increase in the Stafford loan limits of $2,000 per year for an undergraduate program.

The actions described above are proposed at the recommendation of ASLC Executive Officer and Alaska Commission on Postsecondary Education Executive Director Diane Barrans. She is available to respond to questions or concerns and can be contacted at diane.barrans@alaska.gov or 465.2113.

---

[1] Annual Stafford borrowing limits are for dependent and independent students respectively: 1) $5,500 and $9,500 (freshman), 2) $6,500 and $10,500 (sophomore), 3) $7,500 and $12,500 (junior/senior), and 4) $20,500 (all graduate).

BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to eligibility for the Alaska Supplemental Education Loan Program; relating to the establishment of the interest rate for Alaska Family Education Loan Program; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.43.172(c) is amended to read:

(c) In addition to the provisions of (a) of this section, a borrower is eligible for a loan under AS 14.43.170 - 14.43.175 if the borrower

(1) is not delinquent in payment on a loan previously awarded by the commission;

(2) at the time of application or loan disbursement, does not have a past due child support obligation established by court order or by the child support services agency under AS 25.27.160 - 25.27.220;

(3) has not, within the previous five years, had a loan discharged or written off by the commission for any reason;

(4) does not have a status, at the time of application for a loan or disbursement of loan money, that would prevent the borrower from repaying the loan as it becomes due;

(5) has not, within the previous five years, defaulted on another loan made to the borrower by a lending entity unless the borrower can show good faith efforts to repay the loan and extraordinary circumstances that led to the default;

(6) **has** [DOES NOT HAVE] a credit history, at the time of application for a loan, that demonstrates **an ability and willingness** [CHRONIC INABILITY OR UNWILLINGNESS] to pay an extension of credit or loan as it becomes due; and

(7) has complied with the military selective service registration requirements imposed under 50 U.S.C. App. 453 (Military Selective Service Act), if those requirements were applicable to the person.

*** Sec. 2.** AS 14.43.740(c) is repealed and reenacted to read:

(c) The interest rate on a loan made under AS 14.43.710 - 14.43.750 shall be set by the corporation, but the annual rate may not exceed 8.25 percent.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The legislature finds that the changes made by sec. 1 of this Act constitute an emergency under AS 44.62.250, and that the adoption of emergency regulations under AS 44.62 is necessary for the immediate preservation of the general welfare in order that loans under the Alaska Supplemental Education Loan Program will constitute assets the quality of which is such that they may be used as security for bonds issued by the Alaska Student Loan Corporation to finance the operations of its education loan programs. Therefore, the Alaska Commission on Postsecondary Education may adopt as emergency regulations under AS 44.62 the regulations necessary to implement the changes made by this Act.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: APPLICABILITY. This Act applies to loans made under AS 14.43 for the 2009 through 2010 loan year and for subsequent loan years. This Act does not apply to loans made under AS 14.43 before the 2009 through 2010 loan year.

*** Sec. 5.** This Act takes effect immediately under AS 01.10.070(c).

The Taylor Plan lays the
groundwork for high school students
to achieve their goals
by motivating them to earn a
state-funded, merit-based opportunity
to further their education
and realize their ambitions.

The Plan is a contract between students
and state - students can earn their
college tuition in high school
if they meet specific core curriculum,
standardized test scores, and
grade point average requirements.

The Taylor Plan

"Students are not dropping out because it's too hard, but because it's too easy."

Patrick F. Taylor

Objective:

The Taylor Plan sets the standards for student achievement in high school, offering students a state-funded, merit-based opportunity to attend college or vocational/technical school. The Plan is a contract between students and state - students can earn up to a four-year, state-paid college tuition if they meet specified criteria.

Criteria:

The Taylor Plan is three-pronged: Students must take a specific core curriculum, make the required standardized test score, and meet grade point average requirements.

1. Curriculum

A college preparatory high school core curriculum, one both rigorous and appropriate, is necessary to fully prepare students for the challenges of college. The goal is to ensure high school graduates are college ready and graduation oriented.

The ideal high school core curriculum will include:

Units	*Courses*
4	***English***
4	***Mathematics***
4	***Social Studies***
4	***Science***
2	***Foreign Language***
1	***Fine Arts***
.5	***Computer Science***
19.5	***Total***

2. Standardized Test Scores

The Taylor Plan requires a student's ACT or SAT composite score to be at or above the state average.

3. Grade Point Average

A student's high school grade point average must demonstrate reasonable academic success. Therefore, the Taylor Plan requires a minimum 2.5 grade point average.

4. Vocational/Technical School

Students interested in pursuing careers requiring vocational or technical training are also able to earn a state-funded, merit-based opportunity to attend vocational/technical school.

College Eligibility:

The main focus of the Taylor Plan is college graduation, not simply enrollment. Therefore, to remain eligible, a student must achieve an appropriate level of academic success in college.

- ***Students must maintain full-time status.***
- ***At the end of year one, a student must earn a 2.3 minimum cumulative grade point average.***
- ***At the end of years two through four, a student must earn a 2.5 minimum cumulative grade point average.***
- ***Students must earn a minimum of 24 credit hours per academic year.***
- ***The plan encourages students to graduate in four years (eight semesters).***

"We cannot today celebrate the life of our children
if we are not prepared to both guarantee their opportunity and defend it.
We can do no less."

Patrick F. Taylor

Patrick F. Taylor Foundation Beneficiaries

The following is a list of some of the organizations that have received contributions from the Patrick F. Taylor Foundation

- Academy of the Sacred Heart, New Orleans
- Adopt-A-Family School Uniform Campaign
- Advocates for Science and Math
- Agenda for Children
- American Cancer Society
- American Heart Association
- American Red Cross
- Archbishop's Community Appeal
- Archdiocese of New Orleans
- Arts Council of New Orleans

Vice Admiral Diego E. Hernandez, (U.S.N. Retired)

His many distinguished military assignments include serving as Commander of the U.S. Naval Forces Caribbean and Deputy Commander in Chief U.S. Space Command. He joined the Board in 1997.

Donald P. Hodel, J.D.

He served under President Ronald Reagan as Secretary of the Interior and Secretary of Energy. His honors include the Presidential Citizens Medal. He joined the Board in 1997. After a two year leave of absence, he rejoined the Board in 2002.

Marvin L. "Buddy" Jacobs

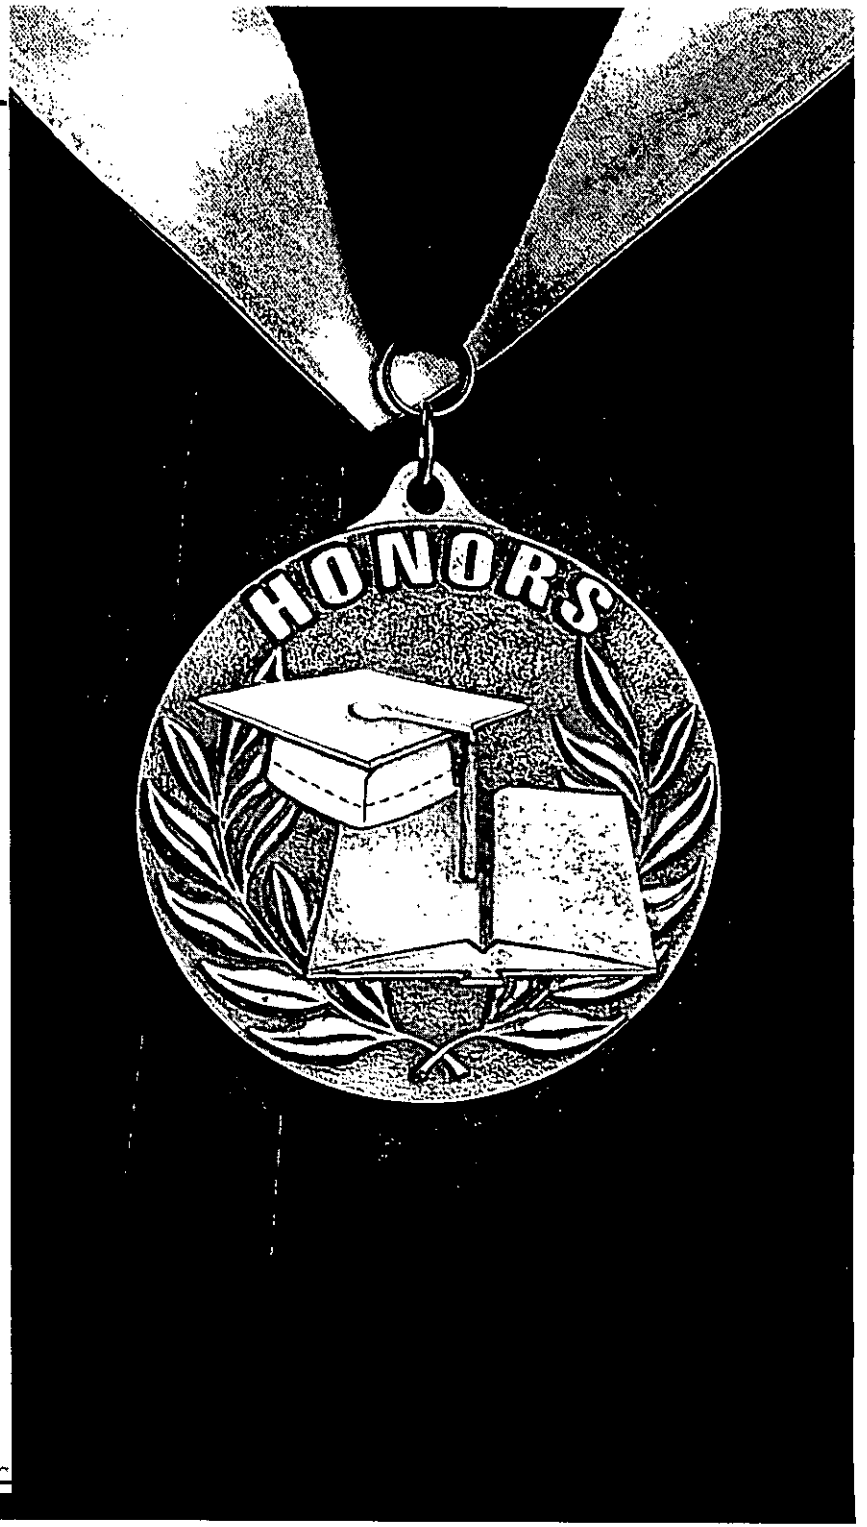
A prominent commercial real estate developer, he has been General Manager or Managing Partner of several companies. He joined the Board in 1985.

Carroll W. Suggs

Former Chairman of the Board and Chief Executive Officer of Petroleum Helicopters, Inc., she also serves on many corporate and charitable boards. She joined the Board in 1999.

Dr. James H. Wharton

He served as Chancellor of Louisiana State University and Agriculture & Mechanical College from 1981 to 1989. He remains a highly regarded professor and is Chancellor Emeritus of Louisiana State University. He continues a long tradition of volunteer service to the state and the university. He joined the Board in 2003.



Patrick F. Taylor Foundation Board of Trustees

Phyllis M. Taylor, LL.B.
Chairman and President

Mrs. Taylor has served as Chairman and Chief Executive Officer of Taylor Energy Company LLC since the death of her husband in 2004. Always involved in her husband's ventures, Mrs. Taylor was Executive Vice President and Board Member to Taylor Energy Company since its founding in 1979.

A graduate of Tulane University School of Law, Mrs. Taylor's law career began as a clerk for the Supreme Court of Louisiana and the Orleans Parish Civil District Court. Her move into the oil and gas industry began in 1972 when she accepted the position as in-house counsel for Texas oilman John W. Mecom, Sr. Always a partner in her husband's ventures, Mrs. Taylor became Vice President and Board Member to Taylor Energy Company in 1979. She held those positions until 2004.

Dedicated to philanthropy, Mrs. Taylor has been an active board member to numerous non-profit organizations. At the present, she serves on the Board of the Family Recovery Corps, the Greater New Orleans Foundation, the Women's Leadership Initiative of Greater New Orleans United Way, the Catholic Cultural Heritage Center, the Marine Corps Heritage Foundation, the New Orleans Business Council, the New Orleans Museum of Art, and the Congressional Medal of Honor Foundation. She is also a lifetime member of the Board of the New Orleans Ballet Association.

She has been awarded the Beverly Warner Award, the Dr. Robert McClean Award, the Governor's Arts Award, the Mayor's Arts Award, the Northwood Institute Distinguished Woman Award, the TOPS Award for the Institution of Human Understanding, and New Orleanian of the Year. She was a Top 50 Women of the Year recipient by New Orleans City Business, an honored guest of the U.S. Marine Corps Sunset Parade, a Young Leadership Council Role Model Honoree, a Contemporary Arts Center Sweet Arts Honoree, a Volunteer Activist for St. Elizabeth's Home, and the 1989 Philanthropist of the Year from the National Society of Fund Raising Executives.

Morrison C. Bethea, M.D.

Staff physician at Ochsner Hospital and Clinic and Clinical Professor of Surgery at Tulane School of Medicine and Health, Dr. Bethea is a leader in the field of cardiovascular disease, a consultant for Medical Affairs at Freeport-McMoRan Copper & Gold, Inc., a member of the Advisory Board of Directors to McMoRan Exploration Company, and co-author of *The New York Times* bestseller *Sugar Busters!* He joined the Board in 1994.

General Walter E. Boomer (U.S.M.C. Retired)

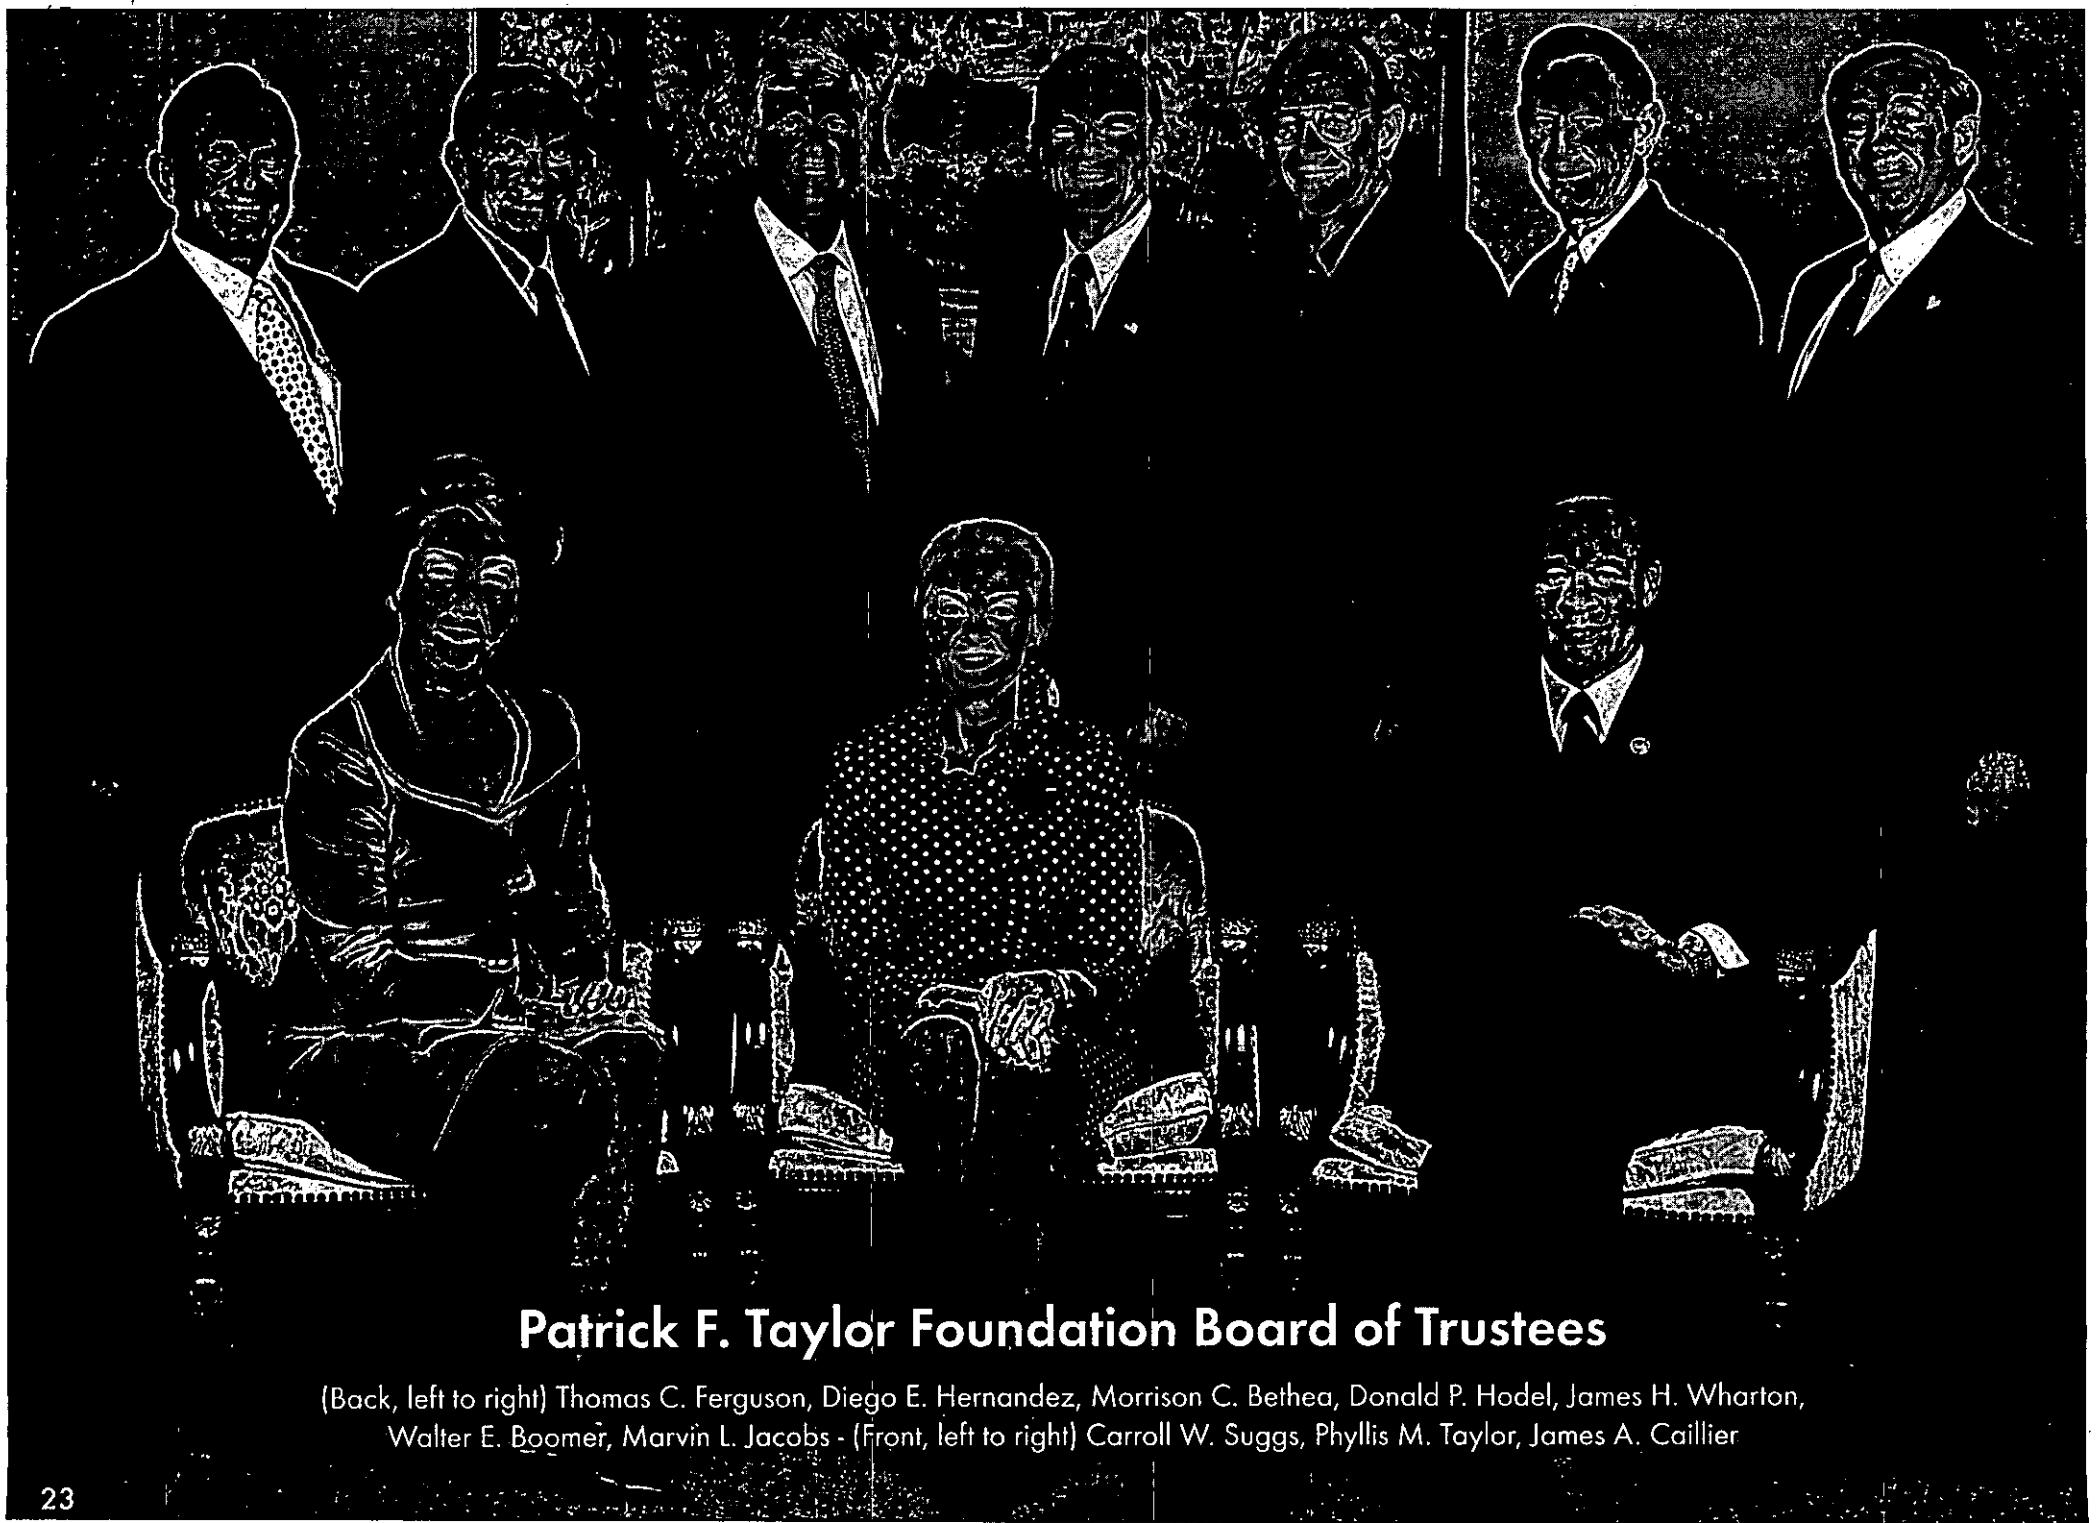
His distinguished military career spanned 34 years, until his retirement in 1994. He commanded all Marines in Operations Desert Shield and Desert Storm. General Boomer served as Chairman of the Board of Directors and CEO of Rogers Corporation from April 2002 until his retirement in 2004. He joined the Board in 1997.

Dr. James A. Caillier

Executive Director of the Patrick F. Taylor Foundation, Dr. Caillier is President Emeritus of the Louisiana University System. He joined the Board in 1997.

Former U.S. Ambassador Thomas C. Ferguson, J.D.

He served the Reagan and Bush Administrations as Ambassador to Brunei and Chief Operating Officer of the Immigration and Naturalization Services. He has been a Board Member since 1997.



Patrick F. Taylor Foundation Board of Trustees

(Back, left to right) Thomas C. Ferguson, Diego E. Hernandez, Morrison C. Bethea, Donald P. Hodel, James H. Wharton, Walter E. Boomer, Marvin L. Jacobs - (Front, left to right) Carroll W. Suggs, Phyllis M. Taylor, James A. Caillier

Patrick F. Taylor Foundation and the Armed Forces

National Museum of the Marine Corps at Quantico, Virginia

During his sophomore year at Louisiana State University, Patrick F. Taylor joined the Marine Corps PLC Officer Training Program. Unfortunately, a heart condition prevented his continued service, and he was honorably discharged in 1959. But Taylor's loyalty remained with the Marines. Throughout his life, he acted on the conviction that as citizens, we are bound to honor the men and women dedicated to protecting America's freedom.

In memory of Mr. Taylor's commitment to the Marines, the Foundation has funded a Patrick F. Taylor Observation Point at the National Museum of the Marine Corps in Quantico, Virginia. The Point serves as a reminder to future generations that as citizens, we, too, should honor the men and women of the U.S. armed forces.

Mrs. Taylor meeting with New Orleans Police Superintendent Warren Riley at a patriotic concert held in New Orleans after Hurricane Katrina.

Patrick F. Taylor Foundation and Law Enforcement

Patrick F. Taylor Foundation and Law Enforcement Appreciation Day

Since 1989, Mr. and Mrs. Taylor have hosted an annual celebration for Louisiana and Mississippi law enforcement officers at their ranch in Foxworth, Mississippi. The day is intended to thank officers for their loyal service and to provide an opportunity for them to come together in celebration of work well done. In addition to a congratulatory meal, the 1,500-plus officers are given an opportunity to test new weaponry and hear presentations about law enforcement advancements.

Patrick F. Taylor Foundation and Louisiana State Trooper Awards

During the late 1980s, Mr. Taylor, through the Foundation, pledged to honor state troopers who demonstrated exemplary service or performed extraordinary acts of bravery by awarding them a U.S. savings bond.

Patrick F. Taylor Foundation and the New Orleans Police Department

In 1987, when Mr. Taylor learned the New Orleans City Council could no longer afford to fund the New Orleans Police Department Awards, he began to purchase the officers' medals through the Foundation. To further honor the officers, U.S. savings bonds were also given. The Foundation continues the program today.

Pat Taylor Mobile Kitchen

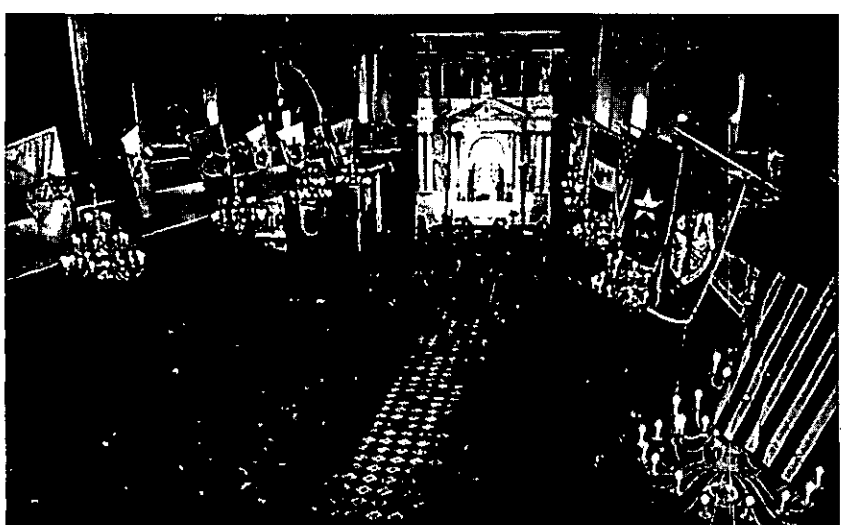
In the days and weeks that followed Hurricane Katrina, Mississippi troopers and other first responders struggled to protect and serve, often without the benefits of electricity, vehicles, communications, and other essential needs, including food. Now, to make certain Mississippi has the means to provide meals for the men and women serving during crisis, the Patrick F. Taylor Foundation has donated funds to the Mississippi Law Enforcement and Firefighter Katrina Relief Fund to create the Pat Taylor Mobile Kitchen. The Pat Taylor Mobile Kitchen and its ancillary equipment create a contained Special Emergency Response Ground Operations Unit for the Mississippi Department of Public Safety that will feed between 800 and 1,000 first responders at least two hot meals a day during a time of crisis.

The kitchen will be used in Mississippi and in other states in times of natural disaster and other catastrophic events.

Patrick F. Taylor Foundation and Hurricane Katrina Recovery Efforts

"New Orleans is more than a city; she is our home. It is up to us, her citizen-children, to restore her beauty and recreate her character. We must also recognize the tremendous opportunity before us to rebuild a city where equality of opportunity exists for all."

Phyllis M. Taylor



Post-Katrina patriotic concert held for New Orleans citizens in St. Louis Cathedral.

Following Hurricane Katrina, the Patrick F. Taylor Foundation and Taylor Energy Company LLC temporarily relocated to Lafayette, Louisiana. Although grateful for the hospitality extended by the Lafayette community, the Foundation was anxious to return to New Orleans and contribute to the city's rebuilding efforts. In the words of Mrs. Taylor, "We have a debt to pay." A debt she takes very seriously.

In January, Mrs. Taylor, her Company, and the Foundation returned to the city. In addition to making financial contributions to non-profit organizations engaged in rebuilding efforts, Mrs. Taylor encouraged New Orleans, a city rich in culture, to hope again. The Foundation sponsored a patriotic concert for citizens in St. Louis Cathedral, re-landscaped historic Lee Circle, and helped a charter school meet its payroll.

Under her leadership, the Patrick F. Taylor Foundation also ensured educational programs extant before the hurricane were available afterward. At a press conference held post-Katrina, New Orleans students came forward to express gratitude to the Patrick F. Taylor Foundation for ensuring the Taylor Scholars Awards Programs continued.

In the words of one student, "For years, [we] have utilized our Taylor Scholars Awards, taking for granted the opportunity to experience some of the most significant attractions our city possesses. It seemed on August 29th these indispensable gifts would be lost. . . . However, in only eight months [the Audubon Zoo, the Aquarium, and the New Orleans Museum of Art] are reopened, and the Taylor Scholars Awards live on. The award for the 2006-2007 year is more consequential than ever."

The students thanked Mrs. Taylor for the opportunity to witness firsthand the rebuilding of New Orleans' cultural centers.

Patrick F. Taylor Foundation and the City of New Orleans

Patrick and Phyllis Taylor have always held deep affection for the City of New Orleans and have long made the city their home. During his life, Mr. Taylor made significant contributions to New Orleans. Following his death in 2004, Mrs. Taylor furthered their commitment to New Orleans, continuing programs begun by her husband and incorporating new initiatives of her own. *Listed below are some of the Foundation's major projects.*

Patrick F. Taylor Foundation and the Riverfront Streetcar Project

In 1988, the City of New Orleans began the Riverfront Streetcar Project. The project aimed at reinstituting streetcars along the Riverfront in time for the Republican National Convention which New Orleans was set to host later that year. At that time, the city also hoped to bring streetcars back to historic Canal Street.

As a committed New Orleanian, Patrick Taylor took particular interest in the project. But as months passed, the utility poles ordered to complete the project failed to arrive. Taylor put the project back on track with a donation valued at $1.2 million dollars. He provided poles made out of oil well casing. These "Taylor Poles" could support almost 600,000 pounds, perfect for the busy streetcars. The Riverfront streetcars ran in time for the convention, and the Canal streetcars followed. A streetcar was named after Mr. Taylor in gratitude for his donation.

Patrick F. Taylor Foundation and the Greater New Orleans Foundation

The Patrick F. Taylor Foundation, in addition to donating to the Greater New Orleans Foundation (GNOF) itself, places many of its personal endowments in the care of the GNOF. The GNOF is a community foundation whose funding comes from gifts from citizens. In return, the GNOF invests in deserving nonprofit organizations, thereby enhancing the quality of life of all citizens, both now and in the future, by building endowments. Because of that special community relationship, the Taylors have always supported the GNOF with their personal funds. In addition, Mrs. Phyllis Taylor serves on the Board of Directors.

Patrick F. Taylor Foundation and the Louisiana Endowment for the Humanities

Although this New Orleans organization sustained damage during Hurricane Katrina, the Louisiana Humanities Center will offer a Patrick F. Taylor Educational Center on its first floor. The Center encourages excellence in the humanities by offering teacher institutes, literacy courses, and other programs aimed at bringing the richness of the humanities to the State of Louisiana.

Patrick F. Taylor Foundation and the Sybil P. Gayman Endowment

In 2001, the Foundation established the Sybil P. Gayman Endowment in honor of Patrick F. Taylor's late mother. The endowment benefits WRBH Reading Radio 88.3 FM, a station for the blind. Mrs. Gayman, who died at age 91, suffered for 20 years with macular degeneration and eventually lost her vision. The Foundation honors Mrs. Gayman by helping others who suffer from blindness to continue to remain aware of current news and enjoy the arts through high-quality radio programming.

Patrick F. Taylor Foundation and the United Way for the Greater New Orleans Area's "Success By 6" Program

Research indicates the more enriched a child's environment, the greater the odds of future academic success. Therefore, the United Way, funded in part by the Patrick F. Taylor Foundation, has begun the "Success by 6" program. The program works to improve New Orleans childcare centers by moving instructors toward accreditation by the National Association for the Education of Young Children.

Patrick F. Taylor Foundation and Louisiana State University

Patrick F. Taylor always felt grateful to his alma mater, Louisiana State University and Agricultural & Mechanical College, for allowing him the opportunity to earn a degree in petroleum engineering. Consequently, Taylor made significant contributions to LSU and was a member of the LSU Board of Supervisors.

The Patrick F. Taylor Foundation recognizes the contributions of the flagship university to the state of Louisiana. The Foundation applauds Louisiana State University for excellence in teaching, research, and service.

The Foundation provides scholarships for LSU students, endowments for LSU professors, and funding for LSU research.

Patrick F. Taylor Endowments at Louisiana State University

The Foundation understands the importance of good teachers. Therefore, the following endowments for LSU professors have been established:

Patrick F. Taylor LSU Endowment Chair for the Environmental Impact of Hazardous Waste

In 1989, the Foundation established an endowment for the LSU Chair for the Environmental Impact of Hazardous Waste. The Foundation supports the university's plan to thrust LSU's Environmental and Coastal Programs into the national spotlight.

Phyllis M. Taylor Professorships in French at LSU

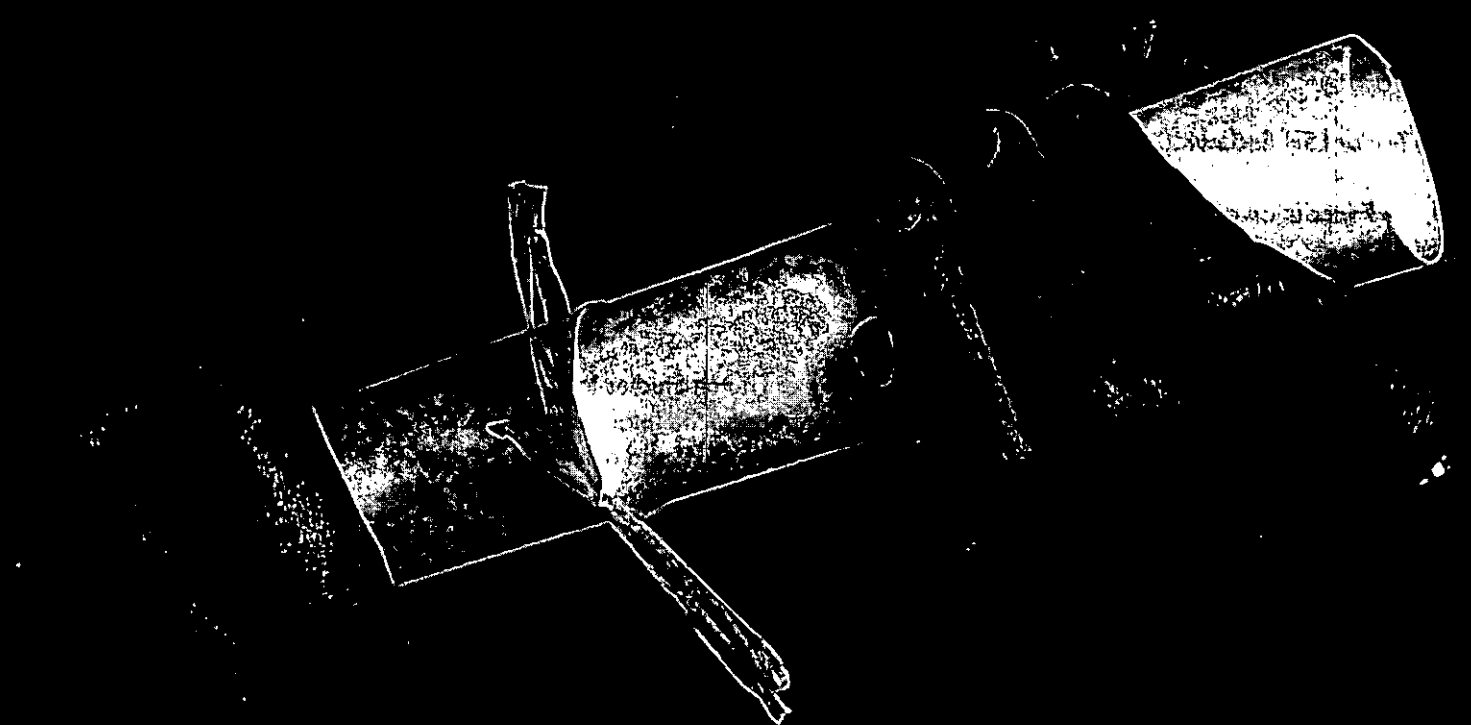
In 2001, the Foundation provided funds to the LSU Department of French Studies to endow 10 Phyllis M. Taylor Professorships in French. The State, through the Board of Regents Support Fund, provided a matching grant to bring the total endowment to $1 million (present value $1,134,000). The endowment provides funds to bring top faculty members to the LSU French Department and results in high-quality programming for students.

Patrick F. Taylor Scholarships at Louisiana State University

The Foundation applauds students striving for academic success. Upon the recommendation of each college's scholarship advisory board, the Foundation funds the following LSU student scholarships:

- ***Patrick F. Taylor Scholarship in Chemistry at LSU***
- ***Patrick F. Taylor Scholarship in Engineering at LSU***
- ***Patrick F. Taylor Scholarship in Geology & Geophysics at LSU***

Patrick F. Taylor believed any kid with drive
could "become somebody."
Students across the nation feel they are Taylor's greatest
legacy. The oilman from Texas understood
we cannot just ask students to work hard in school -
we must give them a reason why.



Patrick F. Taylor Foundation Student Scholarships

Patrick F. Taylor Scholarship for New Mexico's Taylor's Kids

In 1994, Mr. Taylor conceived and implemented a college scholarship program for students at Hondo Elementary in Hondo, New Mexico. Thirty-five 3rd and 4th graders from the class of 1993-1994 were selected for the program. Students who maintained a B cumulative grade point average at the end of each academic year throughout high school became eligible in this college scholarship program. Upon high school graduation, qualifying students received funds to pay for tuition and other related educational expenses.

Patrick F. Taylor Scholarship at Hondo High School

In 2006, the Patrick F. Taylor Foundation established a new scholarship program for graduating seniors from Hondo High School. In continuation of Mr. Taylor's vision, the scholarships award college tuition to students who have earned a 2.5 grade point average or better, a minimum ACT composite score of 20, and completed an advanced core curriculum.

Patrick F. Taylor Scholarship at Cabrini High School

Since 1988, two sophomores at Cabrini High School in New Orleans who have earned a 2.5 grade point average or better are awarded a $1,500 need-based scholarship. The scholarship continues through the students' senior years as long as they maintain their eligibility.

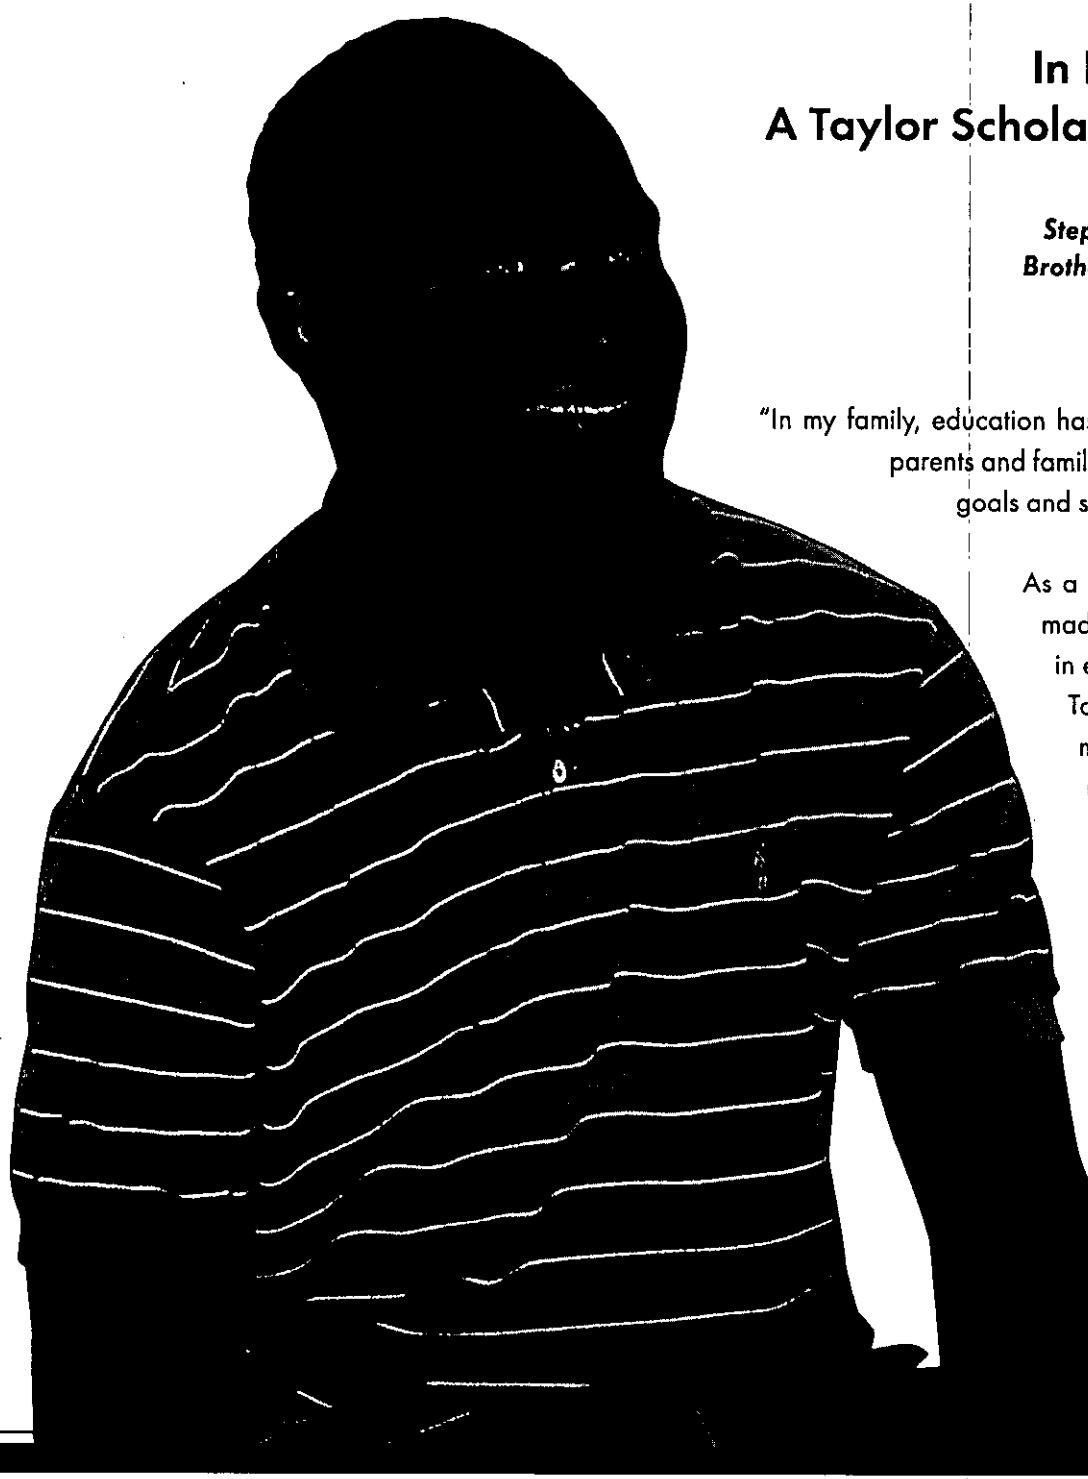
Patrick F. Taylor Scholarship at Cuero High School

In 1999, Lacey and Bridget Griffin, daughters of Taylor Energy Company employee Charles Russell, were tragically killed in an automobile accident. In honor of the girls, the Patrick F. Taylor Foundation established the Lacey and Bridget Griffin Scholarship in 2000.

The girls were honor students at Cuero High and Cuero Junior High Schools in Cuero, Texas. The Lacey and Bridget Griffin Scholarship is awarded annually to a graduating senior from Cuero High School who has earned a 2.5 grade point average or better, a minimum composite score of 20 on the ACT, and completed an advanced core curriculum. It is a one-time award given to the recipient upon high school graduation.

Individual Scholarships and Grants

The Patrick F. Taylor Foundation provides individual scholarships and grants to deserving students upon the recommendation of the Patrick F. Taylor Foundation Education Committee and approval by the Patrick F. Taylor Foundation Board of Trustees. All requests are submitted in writing and reviewed based on merit and need.



In His Own Words:
A Taylor Scholar Recipient – Stephen Chaisson

Stephen Chaisson is a 2006 graduate of Brother Martin High School in New Orleans.

"In my family, education has always been paramount. But I realize that my parents and family were not the only ones who helped me develop goals and standards for success.

As a recent high school student and now graduate, I made the decision to study for exams, get involved in extracurricular activities, and attend college. The Taylor Scholars Awards motivated me throughout my high school career through immediate rewards, such as free admission to the Audubon Zoo, Aquarium of the Americas, and the New Orleans Museum of Art. But also, the long-term goal of qualifying for TOPS (Louisiana's Tuition Opportunity Program for Students) encouraged me to work diligently in my studies.

I thank Mr. Patrick Taylor for kindling my desire and rewarding my drive for success."

Patrick F. Taylor Scholars Awards Programs

The Foundation is committed to providing students with a comprehensive educational experience. Therefore, the Taylor Scholars Awards Programs were created to offer "early scholars," Louisiana middle and high school students, enriched educational opportunities.

In addition, these programs act as tangible reminders to students—continued academic achievement will result in a state-paid college education.

- Both programs are fully funded and endowed by the Patrick F. Taylor Foundation to continue in perpetuity.
- All public, private, and parochial school students in Louisiana are eligible for participation in the programs.

Taylor/Audubon Students and Scholars Program

Created in 1996, the Taylor/Audubon Students and Scholars Program provides Louisiana students in grades seven through twelve with a grade point average of 2.5 or higher with a one year membership to the Audubon Aquarium of the Americas in New Orleans.

Students who earn a grade point average of 3.0 or higher also qualify for a one year membership to the New Orleans Audubon Zoo.

Taylor/New Orleans Museum of Modern Art Scholars Program

Created in 1997, the Taylor/New Orleans Museum of Arts (NOMA) Scholars Program provides Louisiana students in grades seven through twelve who earn a grade point average of 2.5 or higher with a one year membership to the New Orleans Museum of Art.

"This program continues to grow and touch the lives of many more young people. The educational opportunities that they will receive from their visits to the New Orleans Museum of Art and the Audubon facilities will expand their horizons and encourage them to continue their education."

Patrick F. Taylor

Mr. and Mrs. Patrick F. Taylor
shared a common vision
for building
a better America.

Patrick F. Taylor Foundation

Mr. and Mrs. Patrick F. Taylor started the Patrick F. Taylor Foundation in 1985
as a gesture of thanks to the nation that had given them so much.
The Patrick F. Taylor Foundation strives to build a better America.
Although best known for its work in education
through promotion of the Taylor Plan,
the Foundation also supports law enforcement,
the military, and other humanitarian efforts.

"There is no better way to raise the expectations of our families,

to motivate our kids, and to enthuse our teachers

than to offer hope in the form of a future."

Patrick F. Taylor

In Her Own Words: A Taylor Plan Success Story – Suzanne Le Breton

Suzanne Le Breton is Assistant Managing News Editor for the St. Tammany News, a paper in Covington, Louisiana. The following excerpt from her article "The Gift of a Stranger" appeared in The News Banner on December 26, 2001.

"It's funny how a complete stranger can impact someone else's life without even knowing it.

One particular stranger had a great impact on my life—an impact that I took for granted until just recently. I recently reported on a speaker the Rotary Club had at its meeting. This speaker meant more than a story to me.

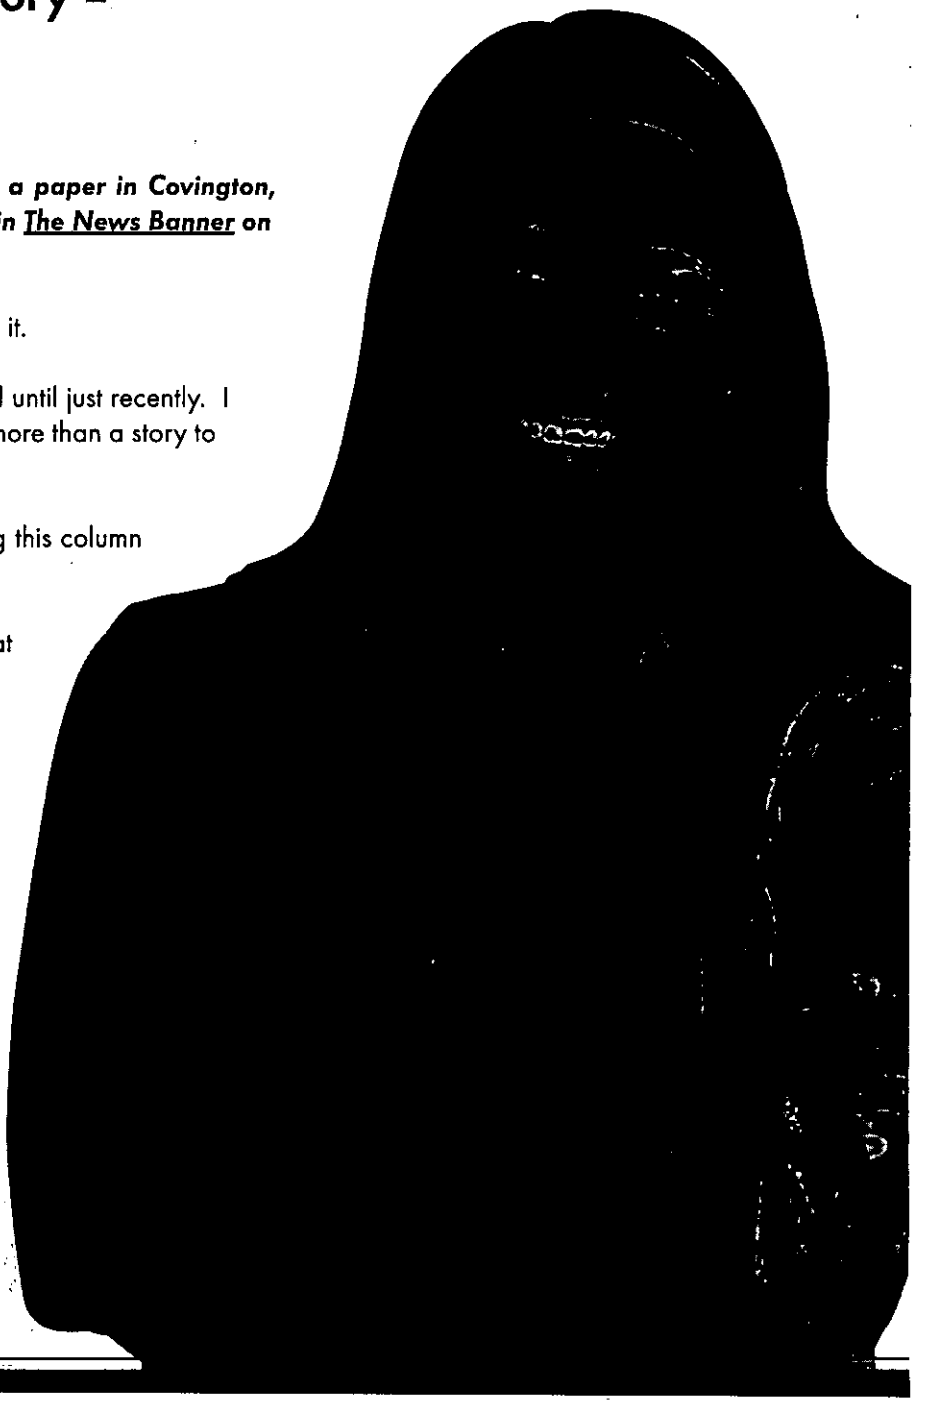
The speaker was Pat Taylor. If it weren't for Mr. Taylor, I probably would not be writing this column right now. I probably would not have my husband or have had my baby.

In March 1988, Patrick Taylor told 183 underachieving 7th and 8th grade students at Livingston Middle School in New Orleans East that if they maintained a B average and stayed out of trouble, he would see to it they attended college.

In March of 1988, I was in 5th grade, and I promise you, how I was going to pay for my college was the last thing on my mind. But thankfully, how Louisiana kids were going to pay for their college was the first thing on Mr. Taylor's mind.

In 1989, he convinced the Louisiana Legislature to pass a bill adopting the 'Taylor Plan.' ... I could not have afforded college without it. Oh, I could have applied for loans, but for fear of going into debt, I probably wouldn't have. My parents have three kids, and they wanted the best for us. These days the best involves getting a college education. I could not have gotten this job without my education, and I would not have met my husband if I had not gone to college.

As I sat there listening to Mr. Taylor speak, all of these things flashed through my mind. And all I can say is thank you for helping the many faceless children in Louisiana, and I promise to use the education that Mr. Taylor fought so hard for me to have."



The Taylor Plan's Record of Success

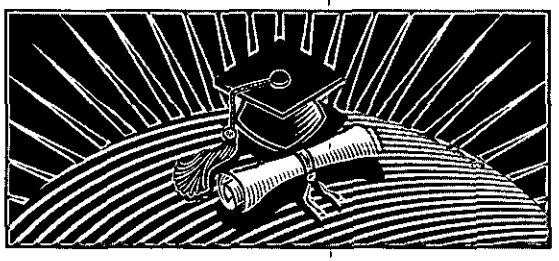
The first Taylor Plan was initiated in Louisiana in 1989. The Louisiana Taylor Plan, known in the state as TOPS (Tuition Opportunity Program for Students), has a proven track record of success.

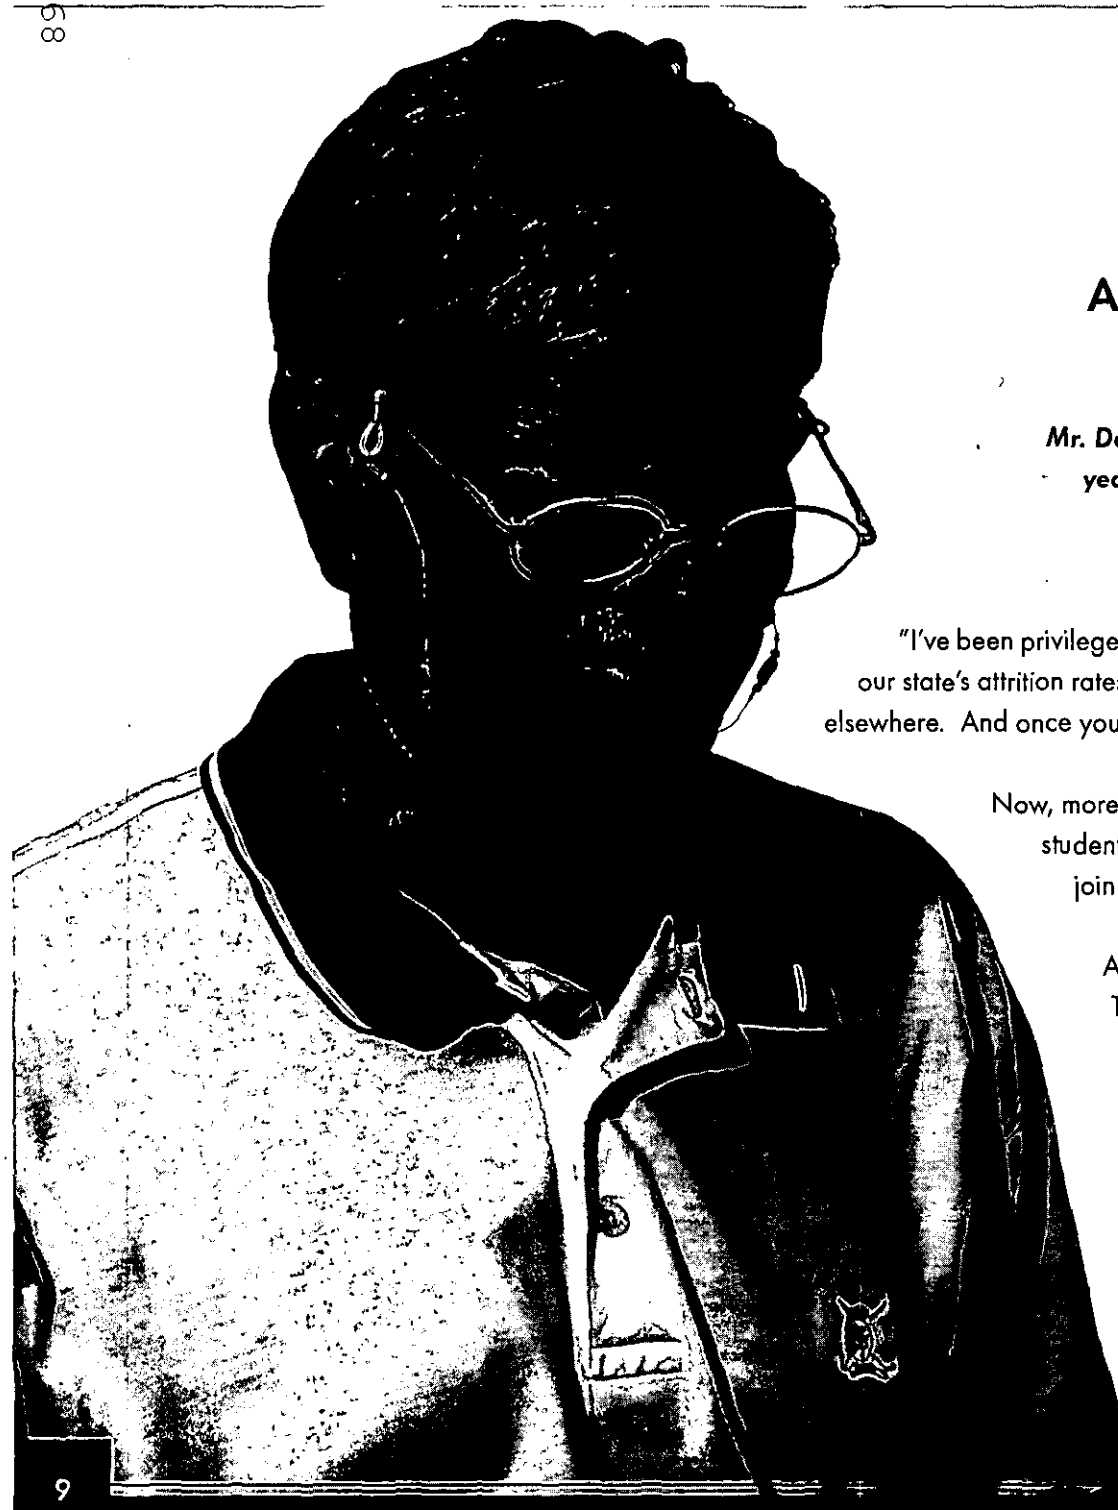
Research conducted by the Louisiana Board of Regents indicates:

- Students who take the TOPS core curriculum in high school score significantly better on standardized tests.
- The number of first-time freshmen with TOPS enrolling in public postsecondary institutions has increased.
- The number of high school graduates leaving Louisiana for postsecondary education has decreased.
- A large number of students with higher standardized test scores are remaining in Louisiana to attend college.
- Students receiving a TOPS award persist in college at a higher rate than non-TOPS students.
- More students with TOPS graduate from college in a shorter period of time than non-TOPS students.

Additionally,

- College entrance requirements have increased across the state.
- Louisiana's flagship school, Louisiana State University and Agriculture & Mechanical College, no longer offers remedial courses, saving the state thousands of taxpayer dollars.
- When the Taylor Plan was initiated in 1989, the average ACT score of entering LSU freshmen was a 19. Today, LSU freshmen average a 24.
- LSU has gone from open enrollment to requiring a 3.0 high school grade point average and an ACT score of 22.





In His Own Words:
A Louisiana Teacher – Mr. Doug Taylor

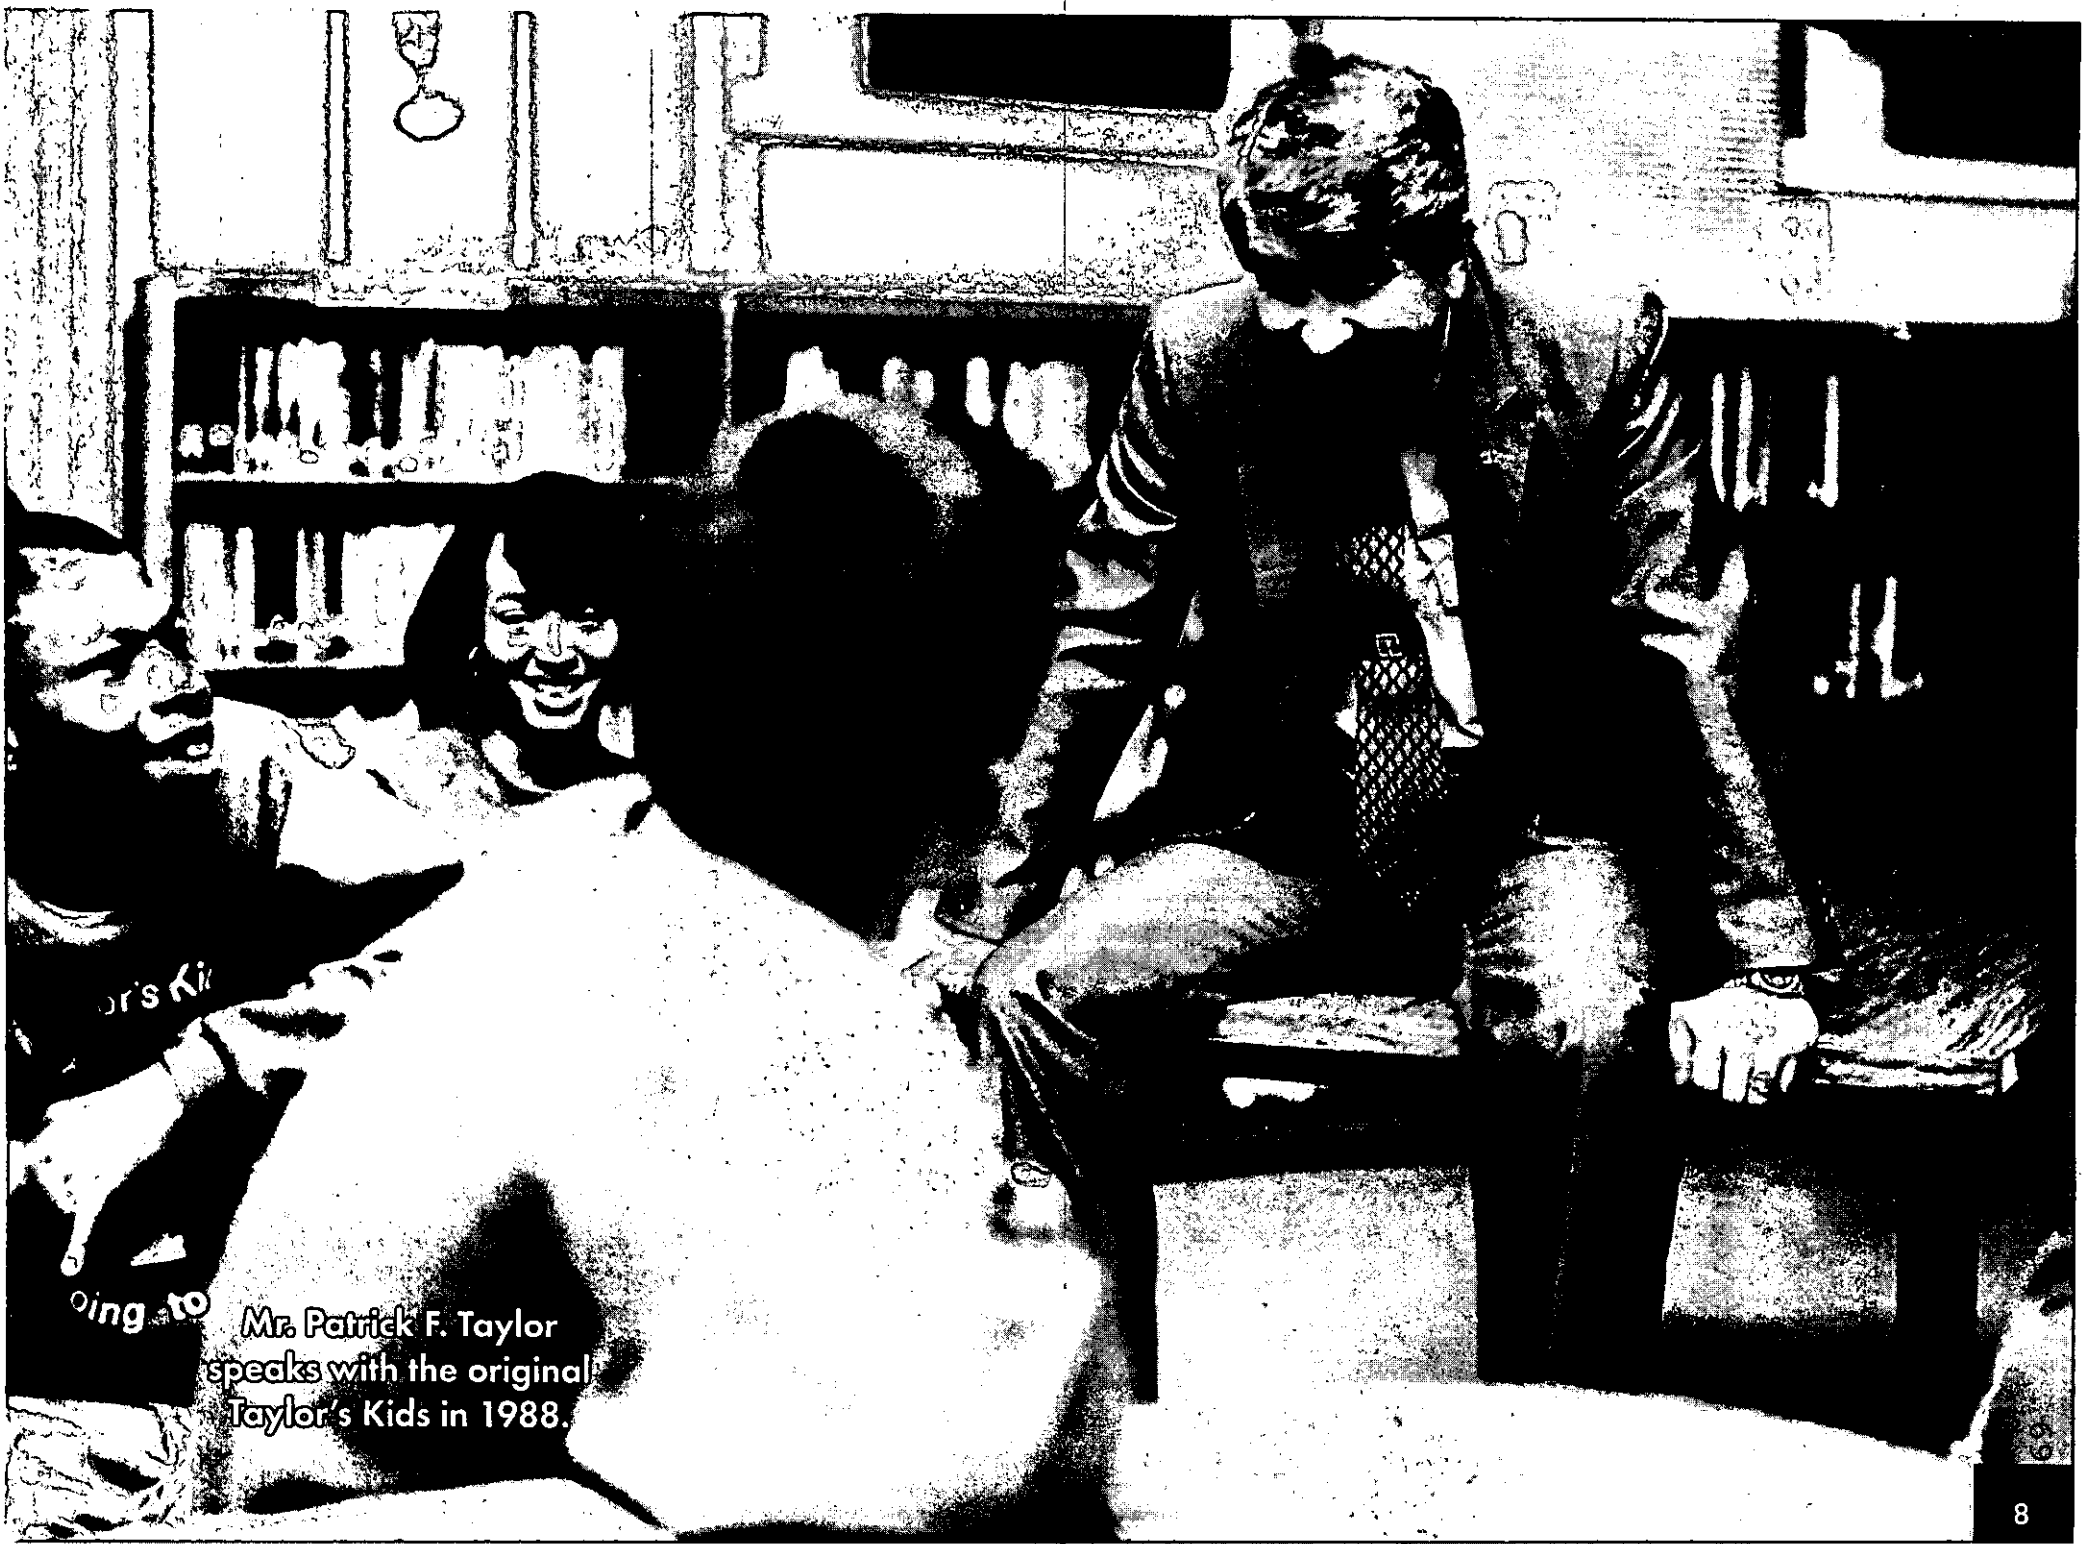
(no relation to Patrick F. Taylor)

Mr. Doug Taylor has been a Louisiana teacher for over 25 years. Most of his years as an educator have been spent at St. Thomas More High School in Lafayette, Louisiana, as an instructor of history.

"I've been privileged to be in the classroom with Louisiana students for over 25 years. Before TOPS, our state's attrition rates were awful. Our brightest students were leaving to pursue college educations elsewhere. And once you lose them, they don't come back.

Now, more and more students remain in Louisiana for college. Our smartest, most diligent students are more likely than ever before to stick around after university training and join our state's workforce. The bottom line: TOPS keeps students at home.

Another TOPS' benefit - my high school seniors are more motivated than ever. They know what they have to do to attain the award. Seniors have a tendency to slack off toward the end, but if they know they have to keep their grades up to get TOPS, they work hard all the way to graduation. Parents, too, are aware of the academic requirements. Attaining TOPS is a household goal. And then, when students get to college, they must continue to achieve. TOPS is keeping our students on task."



Mr. Patrick F. Taylor speaks with the original Taylor's Kids in 1988.

The Taylor Plan

"Students are not dropping out because it's too hard, but because it's too easy."

Patrick F. Taylor

Objective:

The Taylor Plan sets the standards for student achievement in high school, offering students a state-funded, merit-based opportunity to attend college or vocational/technical school. The Plan is a contract between students and state - students can earn up to a four-year, state-paid college tuition if they meet specified criteria.

Criteria:

The Taylor Plan is three-pronged: Students must take a specific core curriculum, make the required standardized test score, and meet grade point average requirements.

1. Curriculum

A college preparatory high school core curriculum, one both rigorous and appropriate, is necessary to fully prepare students for the challenges of college. The goal is to ensure high school graduates are college ready and graduation oriented.

The ideal high school core curriculum will include:

Units	*Courses*
4	*English*
4	*Mathematics*
4	*Social Studies*
4	*Science*
2	*Foreign Language*
1	*Fine Arts*
.5	*Computer Science*
19.5	*Total*

2. Standardized Test Scores

The Taylor Plan requires a student's ACT or SAT composite score to be at or above the state average.

3. Grade Point Average

A student's high school grade point average must demonstrate reasonable academic success. Therefore, the Taylor Plan requires a minimum 2.5 grade point average.

4. Vocational/Technical School

Students interested in pursuing careers requiring vocational or technical training are also able to earn a state-funded, merit-based opportunity to attend vocational/technical school.

College Eligibility:

The main focus of the Taylor Plan is college graduation, not simply enrollment. Therefore, to remain eligible, a student must achieve an appropriate level of academic success in college.

- ***Students must maintain full-time status.***
- ***At the end of year one, a student must earn a 2.3 minimum cumulative grade point average.***
- ***At the end of years two through four, a student must earn a 2.5 minimum cumulative grade point average.***
- ***Students must earn a minimum of 24 credit hours per academic year.***
- ***The plan encourages students to graduate in four years (eight semesters).***

The Taylor Plan Is Born

March 16, 1988, should have been an ordinary day for Patrick Taylor. In addition to performing the regular tasks associated with running a major oil and gas company, he was scheduled to address a group of students from inner city New Orleans. Although the invitation to speak at Livingston Middle School was certainly an honor, Patrick F. Taylor, a man generous to the community, had delivered many "role model" speeches before. But call it fate, providence, or even luck, March 16th would alter the course of Patrick Taylor's life and the lives of students across the nation.

It started with a question: How could Patrick Taylor motivate his audience, a group of 183 underprivileged, underachieving 7th and 8th graders? He knew he had to do more than flash a Rolex and talk about his own impoverished background and current oil field success. He had to make the kids a deal. Pat Taylor was good at making deals.

He decided "to offer them the only choice that I felt they could not refuse, the only choice that works—the choice of whether or not they could go to college." After all, these were not just any 7th and 8th graders. These were largely repeat 7th and 8th graders; these were largely 15- and 16-years-old 7th and 8th graders; these were largely kids who had given up on education because they believed education had given up on them.

Taylor was convinced America's low-income youth were growing up thinking that college was "for other folks." After researching further, he discovered that three-quarters of Louisiana families could not afford a college education for their children. He also knew those statistics were not unique to the state. And so, Patrick Taylor, once just a penniless student himself, decided to act.

It started with an offer to the original 183 "Taylor's Kids." He promised to pay their way through college if they would take college preparatory courses, maintain a B average, and stay out of trouble. It evolved into a statewide legislative campaign to ensure all Louisiana students had access to a free college education.

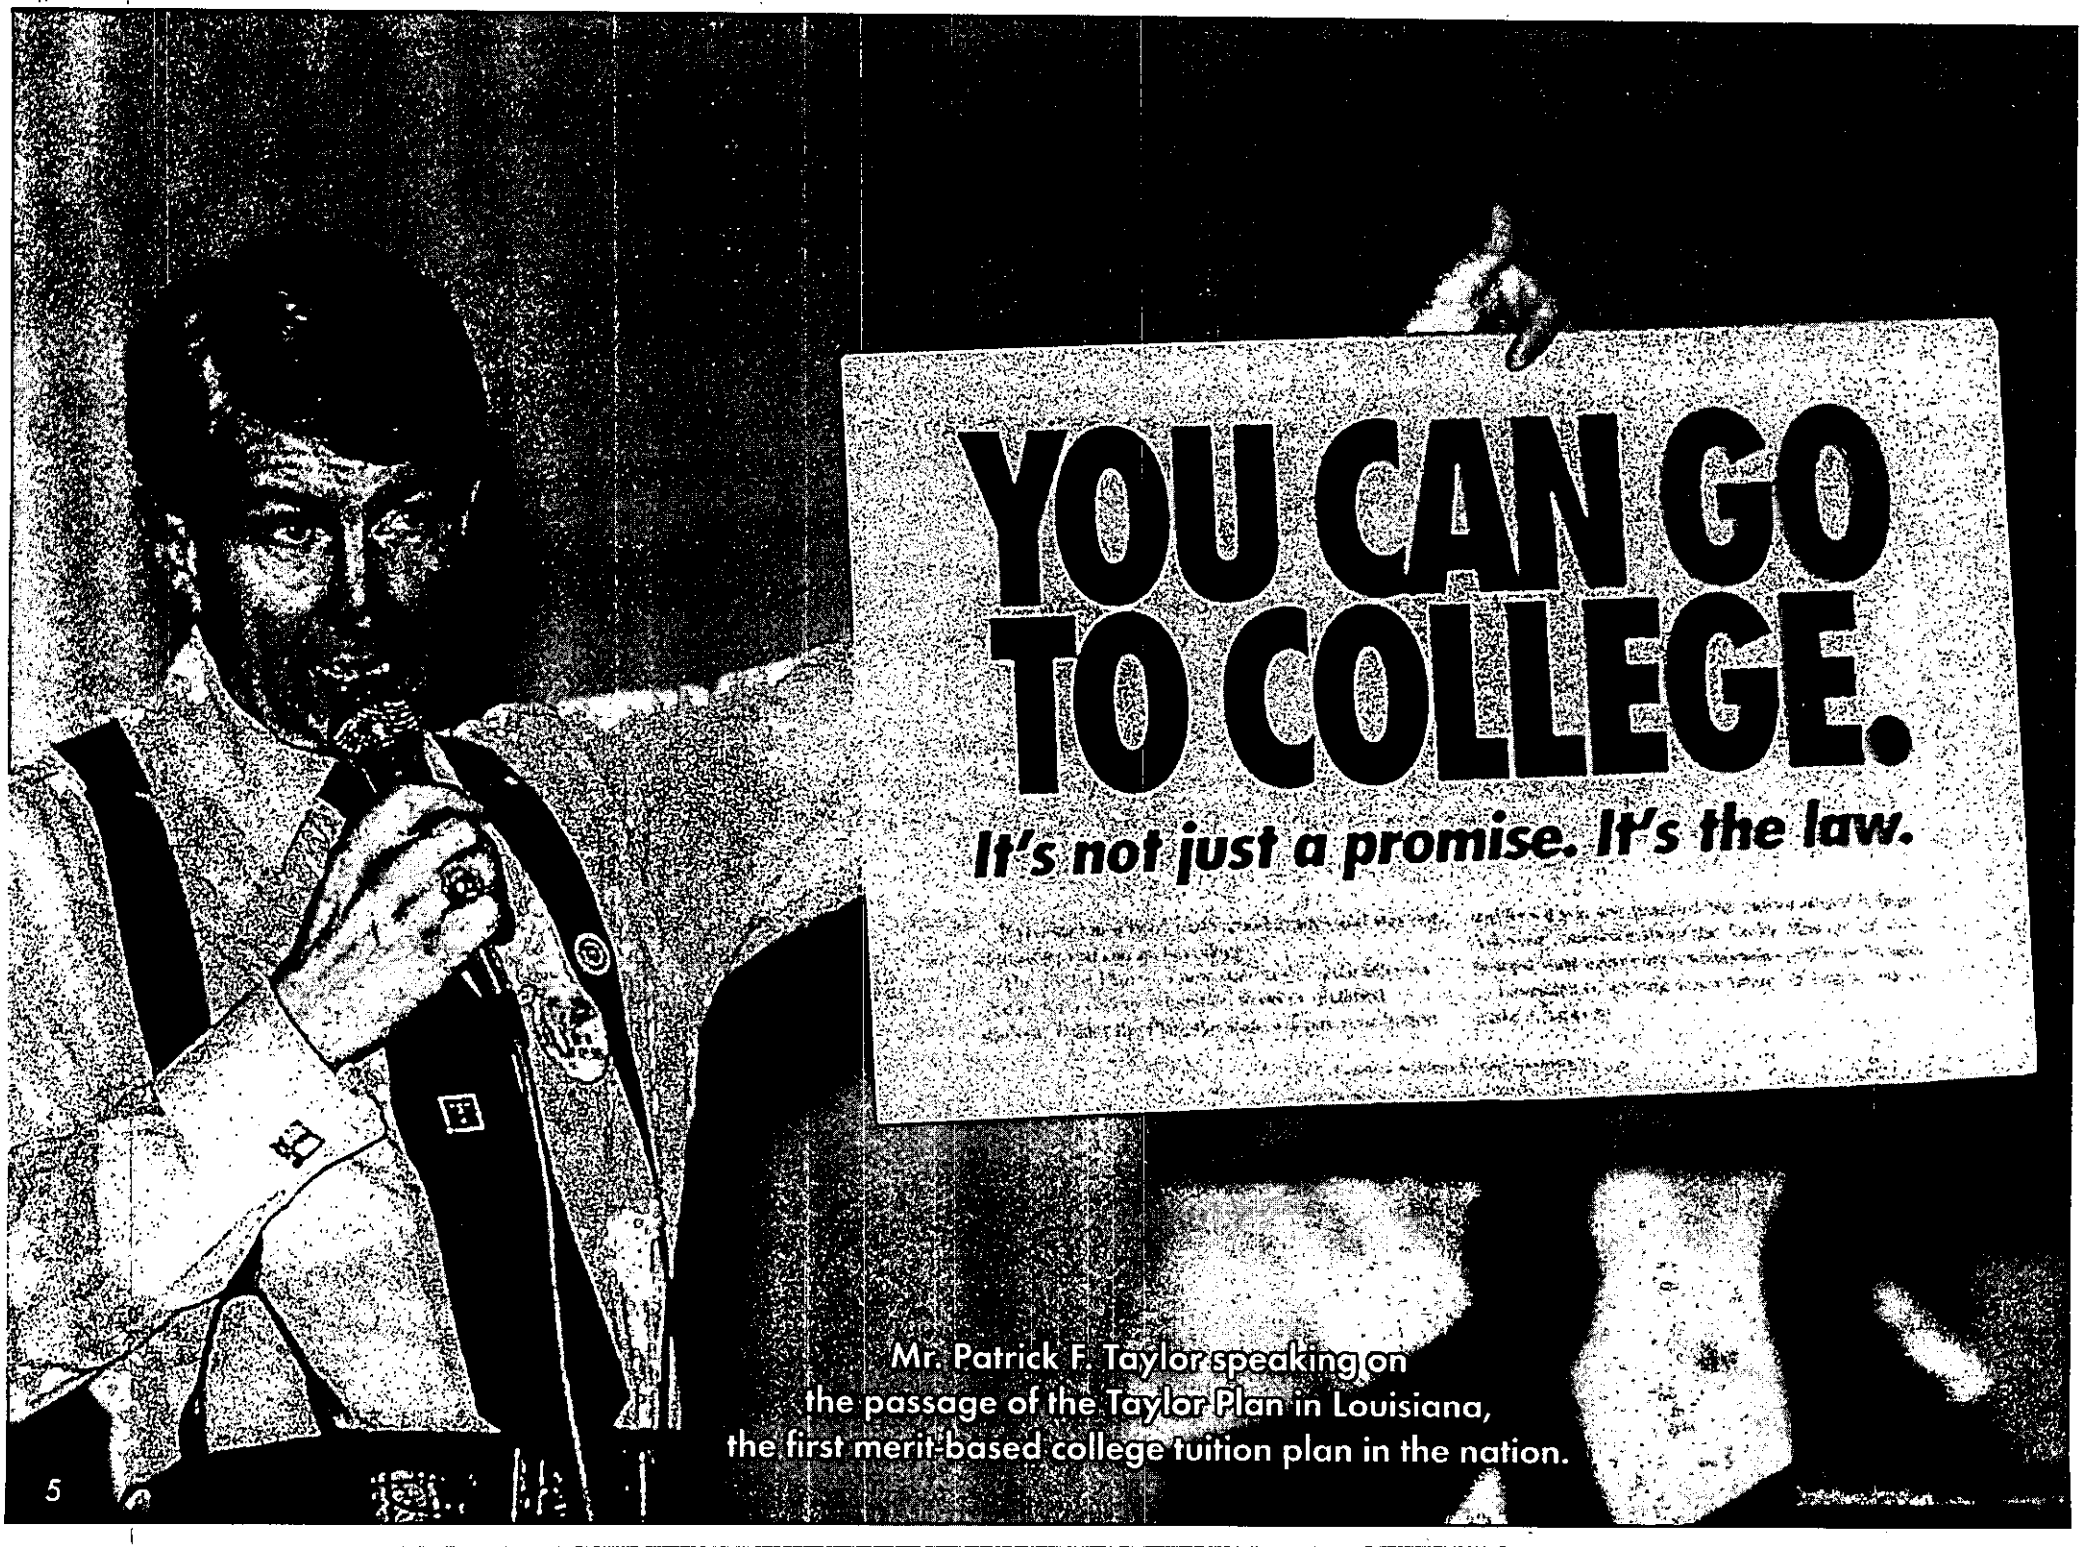
The "Taylor Plan," always merit based, proposed state-paid tuition at any Louisiana public university for students who earned a sufficient ACT score and a 2.5 grade point average in specified core courses. Convinced the scholarship should be based on merit alone, Taylor pushed successfully for the income requirement to be removed.

Although the Louisiana legislative battle was fierce, Act 789 (Tuition Assistance Program), was signed into law on July 10, 1989. No one fought harder or felt prouder than Patrick F. Taylor. His new "role model" message: You can go to college. It's not just a promise. It's the law.

The original Taylor Plan was known as TAP (Tuition Assistance Program) in Louisiana. It was a merit-based tuition program for students whose annual family income did not exceed $25,000 (with provisions for additional children). In 1997, all academic award programs were combined under TOPS (Tuition Opportunity Program for Students), and the income cap was removed. Today, every student in Louisiana has the opportunity to earn college tuition while in high school, regardless of family income.

State-paid, merit-based aid is now well accepted and supported in the United States as a means of challenging students to work harder and meet higher standards. By qualifying for the Taylor Plan, students are prepared for college, graduate in larger numbers and in a shorter period of time.

Taylor's revolutionary approach caught the attention of *60 Minutes* correspondent Mike Wallace. Wallace featured Taylor and his "Kids" twice, in 1989 and 1990, prompting other states to find out what was happening down South. Patrick Taylor was only too happy to bring his ideas elsewhere. By the time of his death in 2004, more than 40,000 Louisiana students were attending college on TOPS, and more than 20 states had adopted versions of the Taylor Plan.



Mr. Patrick F. Taylor speaking on
the passage of the Taylor Plan in Louisiana,
the first merit-based college tuition plan in the nation.

The Patrick F. Taylor Story

"You will understand me better if you look upon me not as a rich man, but as a poor boy."

Patrick F. Taylor

In 1955, a poor young man from Texas was given an incredible opportunity–the chance to attend Louisiana State University tuition free. That young man, Patrick F. Taylor, graduated three-and-a-half years later with a degree in petroleum engineering, an eye for oil, and a mission to ensure all young people have an opportunity for a college education.

Although his life was in many ways the American Dream come true, Patrick Taylor did not believe in the self-made man. Keenly aware of the important role others had played in his own success, Taylor felt instead that individual achievement was the product of personal drive blessed by good fortune. He sought to be a bit of that good fortune for others.

True, Patrick Taylor was a modern-day pioneer in the petroleum industry. The company he started in 1979, Taylor Energy Company, remains the only independently owned oil company ever to explore for and produce oil and natural gas in federal waters, but his real passion was always with America's children.

Burdened by the knowledge that many young people believed the system had forgotten them, Patrick Taylor sought opportunities to make a difference in the lives of America's kids. That mission received national attention when he promised to send 183 underprivileged, underachieving 7th and 8th graders, affectionately dubbed "Taylor's Kids," to college if they engaged in rigorous study, maintained a B average, and stayed out of trouble. A man of integrity, he was true to his word.

But Patrick Taylor never thought small. What began as a promise to 183 inner city New Orleans students became a statewide legislative campaign to ensure all Louisiana young people had the opportunity to attend college. And after the first "Taylor Plan" became law in Louisiana in 1989, Mr. Taylor took his Plan to other states. By the time of his death in 2004, the children of more than 20 states thanked oilman Patrick Taylor for guaranteeing their opportunity to a college education.

The Patrick F. Taylor Foundation honors the legacy of its founder, a true American hero, who sought equality of opportunity for all.

Mission

The mission of the Patrick F. Taylor Foundation
is to promote the common good and well-being of all people of our nation,
primarily by promoting universal and unlimited educational opportunities
based solely on each individual's demonstrated ability and willingness to learn.

Building a Better America

At the Patrick F. Taylor Foundation, we celebrate the promise of America, a nation still rich in courage, valor, and grit. We are a land of dreamers whose vision of the future is ripe with opportunity. And as always, in the dreams of our children, we find the most beauty.

Patrick F. Taylor, an oilman who once had dreams of his own, believed in America's youth. He understood that bright futures stand on the sturdy legs of education. And so he worked to guarantee that the opportunity to go to college be based on a child's ability to learn, not the ability to pay.

His vision, known as the Taylor Plan, became law in Louisiana in 1989. By the time of his death in 2004, 20 additional states had adopted merit-based college tuition plans.

We at the Foundation are proud of my late husband's legacy, but we recognize that his work is far from finished. Barriers still remain between our children and the attainment of their goals. It is our duty to raze these walls and to create equality of opportunity for all.

It begins with a pledge to our children: If you will study, if you will take challenging courses, if you will succeed, then you will have access to college and a meaningful future.

We begin with our children, but we do not end there. The Patrick F. Taylor Foundation works with America's leaders to ensure America's law reflects America's promise. The communities we call home must be resilient, vibrant, and strong. To harvest prosperity we must plant opportunity, integrity, diligence, justice, and soul.

The Foundation's attention, therefore, reaches beyond the classroom to centers of art and history, law enforcement, and the armed forces. We work to ensure that America grows better, safer, and stronger with each passing hour.

Our duty is clear, our resolve is strong, and our path is lit by the hope that together, we will make a difference.

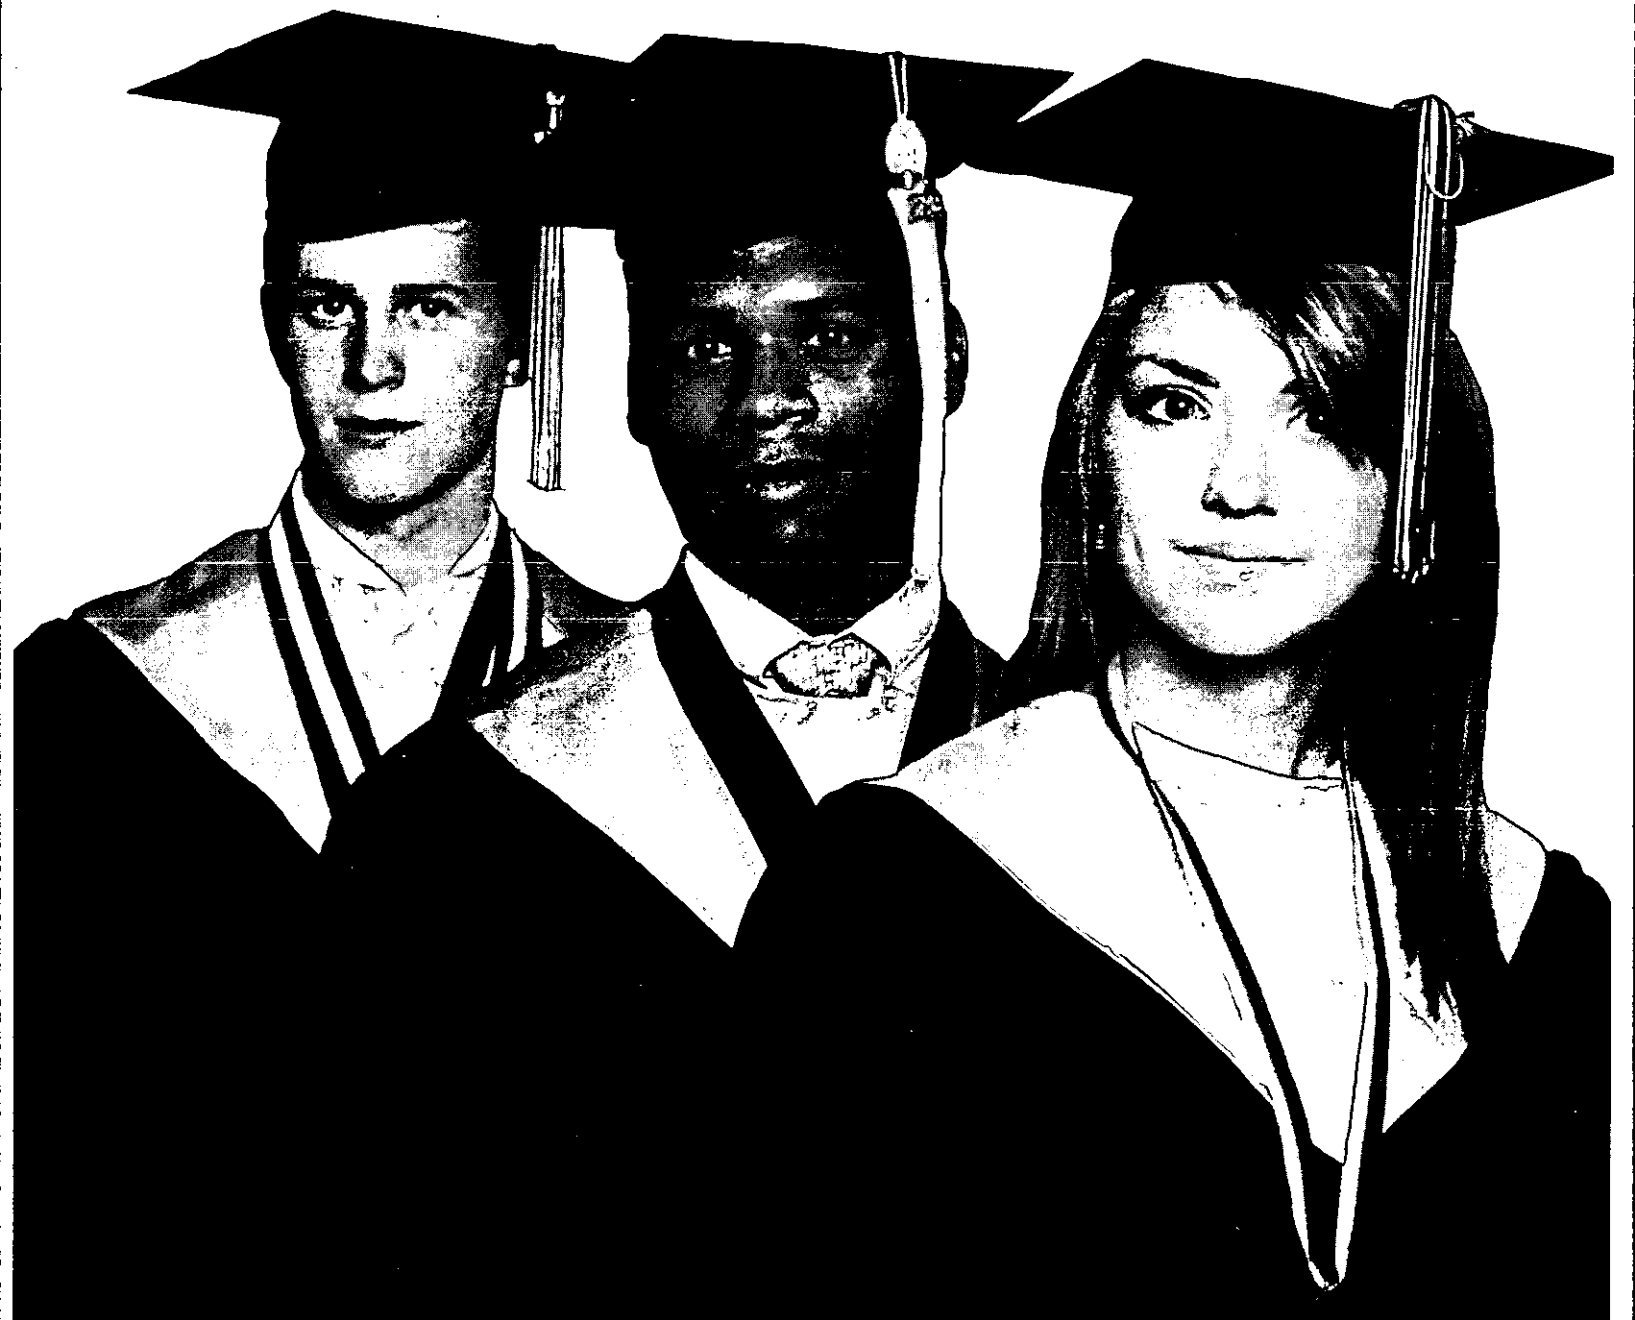
Patrick F. Taylor Foundation

Think "Tops"



February 2008

PATRICK F. TAYLOR FOUNDATION
TOPS FACTS

In 1989, the original Louisiana Taylor Plan became law as a result of Mr. Patrick F. Taylor's educational initiatives. Governor Roemer signed ACT 789 into law creating the first state-funded, merit-based college tuition program in the country called the Louisiana College Tuition Plan (LCTP). Students were required to earn 17.5 units in the core curriculum, score a minimum 18 composite score on the ACT, and earn a 2.5 grade point average. In 1992, the program was renamed the Tuition Assistance Plan (TAP) by ACT 887 and ACT 718. Both programs had an income cap.

In 1997, Governor Foster signed into law ACT 1375 and ACT 287 changing TAP to the Tuition Opportunity Program for Students (TOPS). The income cap was removed, the program was broadened and the core curriculum was adjusted to 16.5 units. With this law all Louisiana students became eligible for awards based on their academic performance.

In 2001, Governor Foster signed ACT 1202 which provides the Governor, Legislature, and public with an annual evaluation of the TOPS Program. In addition, the data collected provides indicators on how effective individual high schools are preparing their graduates for college or entry into workforce training.

WHAT IS TOPS?

Louisiana's Tuition Opportunity Program for Students (TOPS) is a comprehensive program of state scholarships and one of the most innovative and progressive student assistance programs in the nation.

CRITERIA FOR ELIGIBILITY:

- Students must take a specific core curriculum (17.5 units)
- Make the required standardized test score (20 ACT or 940 SAT)
- Meet grade point average requirements (2.5 minimum GPA in core curriculum)
- Students enrolled in technical and community college are also eligible under different criteria
- TOPS recipients must meet certain established requirements to maintain award

BEFORE TOPS:

- Open admissions to all public universities (LSU in 1988)
- Over 50% entering freshmen required remedial courses
- Low college graduation rate and excess time to graduate

PURPOSE OF TOPS:

- To provide financial incentives as a reward for good academic performance
- To promote academic success by requiring completion of a rigorous high school core curriculum
- To keep Louisiana's best and brightest in the state to pursue postsecondary educational opportunities

Eligible for TOPS

HS Graduating Year	Graduates	With TOPS Core	Eligible for TOPS	% Enrolled with TOPS
2003	45,226	25,546	14,797	83%
2004	44,569	26,111	14,961	91%
2005	43,012	26,951	15,273	83%
2006	40,981	26,487	15,115	88%
2007	41,370	27,230		

- Of the 44,569 high school graduates in the 2004 graduating class, 26,111 graduates (58.6%) completed the TOPS core curriculum
- 14,961 of the graduates (33.6%) were eligible to receive a TOPS award.
- 13.2% of the entering college class left Louisiana in 1996. Only 9% left in 2002
- The number of first time freshmen with TOPS enrolling in public postsecondary education continues to increase

	ACT AVERAGE		
2003 Graduates	19.6	19.8	2004 Graduates
Less than core	16.2	16.5	Less than core
With core	21.1	21.7	With core
Met TOPS requirements	23.8	23.8	Met TOPS requirements

Note: Not including TOPS Tech core/requirements

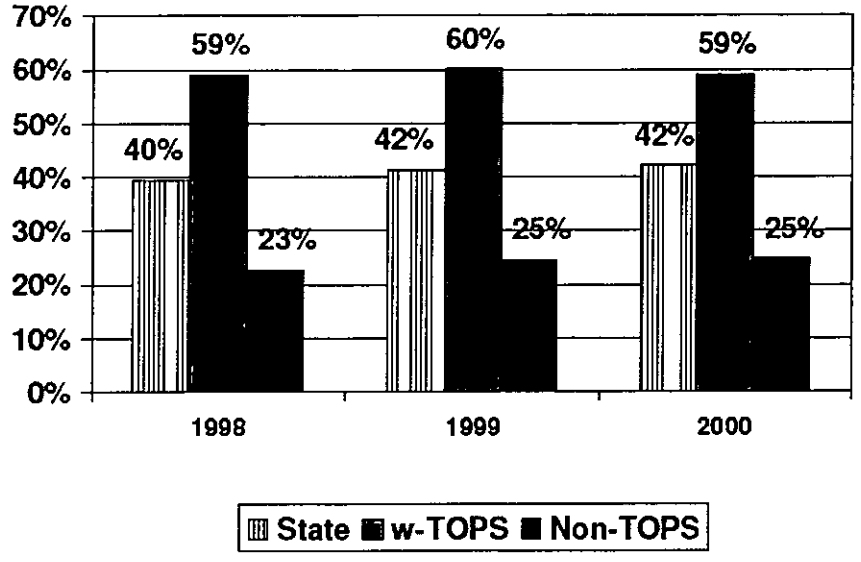
- TOPS students score significantly higher than non-TOPS students on the ACT
- ACT composite score increases are the result of increased number of students completing the core and increased numbers meeting the TOPS requirements
- A larger number of students with higher ACT scores are remaining in Louisiana to attend college

TOPS RECIPIENTS VS. NON-TOPS STUDENTS:

According to the 2007 TOPS Reporting System to the House Education Committee by the Board of Regents

- 59% of TOPS students at four-year institutions graduate within six years
- Non-TOPS students graduate at a 25% rate within six years

Graduating: 6-year Rate Baccalaureate Degrees



TOPS Opportunity, Performance, or Honors Award
Not including TOPS Tech

Source: LOSFA, Regents
Public 4-year Universities

- Students who enrolled with TOPS in 2003 remained in school for the second year at a rate of 88%
- Students who enrolled without TOPS in 2003 remained in school for the second year at a rate of 66%
- 77% of those enrolled in 2003 TOPS students were still in college by the fourth year, as opposed to only 42% of their non-TOPS counterparts.
- Students receiving a TOPS award persist in college at a higher rate than non-TOPS students
- Students receiving TOPS graduate from college at a higher rate and in a shorter period of time than non-TOPS students

COST OF TOPS:

Statistics are from TOPS Payment Summary on www.osfa.state.la.us

TOPS EXPENDITURES BY YEAR

Academic Year	Number of Students	General Fund	Tobacco Fund	Total Expenditures
1989-1990	528	$782,280	-0-	$782,280
1990-1991	1,152	$1,966,232	-0-	$1,966,232

2000-2001	35,726	$90,021,795	$222,786	$90,244,581
2001-2002	40,856	$102,228,429	$1,779,677	$104,008,107
2002-2003	40,114	$90,920,887	$13,684,158	$104,605,045
2003-2004	41,042	$98,594,051	$11,897,686	$110,491,738
2004-2005	42,451	$102,882,735	$14,149,050	$117,031,785
2005-2006	42,468	$101,642,413	$15,136,282	$116,778,695
2006-2007	43,534	$103,302,239	$17,146,878	$120,449,117
TOTAL	**355,807	**$844,800,397**	**$74,016,517**	**$918,816,916**

** TAP changed to TOPS. Income cap was removed enabling all eligible students to receive TOPS*
*** Duplicated count*

Total number of students who have received TOPS since its inception: **148,500**
(5,623 are students whose scholarships converted to TOPS scholarships at the inception of TOPS)

Please note that the Tobacco Fund continues to grow causing a decrease in the state General Fund Contributions. Also note that the number of TOPS students is increasing slowly, almost to a level number.

AFFORDABILITY:

According to Measuring Up 2006: The State Report Card on Higher Education a study conducted by The National Center for Public Policy and Higher Education.

The affordability category measures whether students and families can afford to pay for higher education, given income levels, financial aid, and the types of colleges and universities in the state.

- Louisiana received an F in affordability

A CLOSER LOOK AT FAMILY ABILITY TO PAY	Average family income	Community colleges		Public 4-year colleges/universities		Private 4-year colleges/universities	
		Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost
Income groups used to calculate 2006 family ability to pay							
20% of the population with the lowest income	$9,668	$4,474	46%	$5,191	54%	$22,168	229%
20% of the population with lower-middle income	$24,000	$5,202	22%	$6,190	26%	$22,060	92%
20% of the population with middle income	$38,967	$5,845	15%	$7,363	19%	$21,772	56%
20% of the population with upper-middle income	$60,460	$6,005	10%	$7,399	12%	$21,520	36%
20% of the population with the highest income	$104,300	$6,040	6%	$7,418	7%	$22,008	21%
40% of the population with the lowest income	**$16,834**	**$4,838**	**29%**	**$5,691**	**34%**	**$22,114**	**131%**

*Net college cost equals tuition, room, and board, minus financial aid.

- TOPS reduces the unmet financial need
- TOPS has contributed significantly to increasing the number of college graduates per year which provides much greater productivity per unit cost for the tax payers of the state
- If Louisiana's goal is to increase the number of college graduates, we need better prepared students and to keep tuition at an affordable cost

*Please note that in 2006 the **Go Grant** was approved to address the unmet needs of post secondary students. However, the **Go Grant** needs to be revisited; it has no academic requirements, it is too broad, and lacks accountability.*

PAR RECOMMENDS:
LOUISIANA CONTINUES FULLY FUNDING TOPS TO KEEP PACE WITH TUITION INCREASES

According to the May 2007 Report by Public Affairs Research Council of Louisiana, Inc.

PAR states: "TOPS was designed as a program to fully cover the cost of tuition and some fees for each eligible student regardless of the expense. At its inception, TOPS was designed to grow with increased student enrollment and increases in tuition and required fees. However, as it has evolved, not all required fees have been covered. Nearly all new fees that have received legislative approval in recent years have been exempted from TOPS. Continuing this practice would limit growth in TOPS funding, but also would seem to dilute the original intent of the program."

TOPS SUMMARY:

According to the 2007 TOPS Reporting System to the House Education Committee by the Board of Regents

TOPS is challenging students to work harder in high school and making them better prepared for college. Parents are paying greater attention to school work and grades. Universities are now in a position to establish fixed admission requirements; therefore, reducing the need for remedial courses.

- Students who take the core curriculum score significantly better on the ACT.
- More students in the recent graduating class took the core and more have been determined eligible for TOPS.
- TOPS has contributed significantly to the reduction in remedial courses.
- The majority of students receive an Opportunity Award and enroll in a public four-year university.
- The number of first time freshmen with TOPS enrolling in public postsecondary education has increased.
- 91% of the entering college class stays in Louisiana to pursue their college education.
- A larger number of students with higher ACT scores are remaining in Louisiana to attend college.
- More students with TOPS graduate from college in a shorter period of time than non-TOPS students ultimately saving the cost of tuition and state support.
- TOPS eligible students are attending universities with higher admission standards in greater numbers than institutions with lower admission standards. *(see appendix)*

Consideration of the increased access to college, the reduction in remedial enrollment, the reduced time to graduate and the increased number of graduates strongly indicates the TOPS Program is a major success story, one in which Louisiana leads the nation.

Appendix

TOPS Reporting System: Report to the House Education Committee, *November 16, 2004, Board of Regents.*

- Minimum 17 on the ACT.
- Minimum 2.25 postsecondary cumulative grade point average.

Award:
- Full tuition at any participating Wyoming community college for four semesters.
- $800 per semester if full-time status (12 hours) is maintained*.
- An additional four semesters to be awarded if a student earns a certificate with a 2.25 cumulative grade point average, provided that student also meets other eligibility requirements and the limit of six years or the equivalent of eight full-time semester hours is not exceeded.
- The additional Career Hathaway Scholarship may also be used to pursue either a second certificate or a degree at a participating Wyoming community college.

2. ***The Hathaway OPPORTUNITY Scholarship***

Requirements:
- Minimum 2.5 cumulative grade point average in high school.
- Minimum 19 on the ACT.
- Minimum 2.25 postsecondary cumulative grade point average.

Award:
- Full tuition at participating Wyoming postsecondary institutions for the equivalent of eight semesters and within the limit of six academic years.
- $800 per semester if full-time status (12 hours) is maintained*.

3. ***The Hathaway PERFORMANCE Scholarship***

Requirements:
- Minimum 3.0 cumulative grade point average in high school.
- Minimum 21 on the ACT.
- Minimum 2.5 postsecondary cumulative grade point average.

- Minimum 2.5 postsecondary cumulative grade point average.

Award:

- Full tuition at participating Wyoming postsecondary institutions for the equivalent of eight semesters and within the limit of six academic years.
- $1600 per semester if full-time status is maintained*.

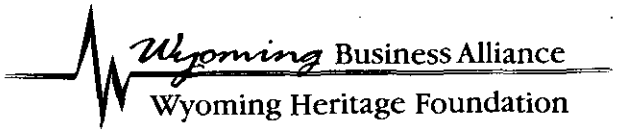
5. The Hathaway NEED-BASED Scholarship

- The Hathaway Need-Based Scholarship is intended to supplement the Hathaway Merit Scholarships for qualifying students to provide additional aid for unmet needs.
- First, a student must meet eligibility requirements for one of the Hathaway Merit Scholarships. Next, the student must qualify for financial aid on the FAFSA form.
- Calculations of unmet need for the Hathaway Need-Based Scholarship:

    1. Determine postsecondary cost of attendance.
    2. Subtract estimated family contribution as determined by the FAFSA analysis.
    3. Subtract Hathaway Merit Scholarship Award amount.
    4. Subtract all grants/scholarships received by student.
    5. Subtract $2,000 (Hathaway Scholarship Program requirement for financial commitment of the student).

- If a student's annual unmet need is greater than $2,000, the student will receive additional money, not to exceed $750 per semester.

*Remedial coursework hours do not apply toward the minimum 12 semester hours needed to retain the award.



Bill Schilling

Mission

The mission of the Division of Teaching and Learning Support (TLS) is to improve student performance. TLS is home to staff who administers a variety of state, federal, and private programs that provide support to school district staff across the state.

TLS is responsible for the federal programs providing support to districts and monitoring for those programs. The education specialists are certified teachers.

Staff in the TLS perform the following duties on behalf of the state:

Analyze and stay up-to-date with state and federal legislation and regulations, educational trends, standards and assessment activities, school improvement strategies, and research bases programs and strategies that will help improve student achievement--and then share information with the field.

Directly provide or arrange for technical assistance or professional development related to any of the aforementioned program areas, school improvement and reform, or standards and assessment.

Conduct meetings, institutes, conferences and work sessions to help school staff meet the goals of various state and federal programs.

Write grants applications for additional educational funding for the state and for school districts.

Collaborate with other state agencies, postsecondary educational organizations, non-profit agencies, business and community groups, and school districts to create and implement programs that help all students meet high standards.

Issue Requests for Proposals/Applications for funding and issue grants and contracts.

Process Teacher Certification applications and issue certificates.

Conduct monitoring visits or paper monitoring of district programs to ensure compliance.

Programs within the Division

Title I/NCLB Team

The mission of the Title I/NCLB unit is to support equitable student access

To high-quality education and increased student achievement through efficient and appropriate provision of federal resources from the Elementary and Secondary Education Act (ESEA).

The unit implements federal grant programs under ESEA; provides technical assistance to district staff applying for federal funds; reviews and approves applications for federal funds and monitors district use of funds on a five year cycle. The following programs are under this umbrella:

Title I A provides funding to districts to implement supplemental programs to improve student performance of low achieving students in schools with the highest concentration of low-income families.

Title IC Migrant Education funding for programs to assist migratory children in meeting high standards

Title I Part D Neglected Delinquent and at rsik Provide funding

Unit staff is comprised of an Education Administrator, five Education Specialists, two Education Program Assistants for the Migrant Program, two Education Associates for the Migrant Program, an Education Program Assistant and an Administrative Clerk.

Special Education/Early Learning/Head Start

The mission of the Special Education team is to ensure quality, standards-based instruction to improve academic achievement and social and behavioral skill development opportunities for all students

Unit staff ensures that the State and school districts comply with state and federal guidelines for the delivery of Head Start and Special Education services and provides direct assistance to districts when requested.

Unit staff includes an Education Administrator, three Education Specialists for Special Education, two Education Specialists for Early Learning/Head Start; an Education Associate for early learning; an Education Associate, two Education Program Assistants and an Administrative Clerk.

Title II and Teacher Quality – Highly Qualified teachers
Math Science Partnerships competitive funds

high needs dist

Higher Education Grants to improve provide prof devel

Transition to Teaching alt route to cert

Title II D Technology

Provide resources to school districts on a formula and compoetive basis to update existing technology and integrate the use of technology in instruction.

Career and Technical Education

Provides leadership and support to local career and technical education programs that prepare students for further education without the need for remediation and that result in family supporting careers.

The unit staff consists of three Education Specialists, an Administrative Clerk, an Education Associate, an Education Program Assistant and is responsible for implementation and monitoring of Carl Perkins funding, implementing the Alaska Career Ready initiative, and vocational education in Alaska's schools.

Child Nutrition Services

The purpose of the work done by Child Nutrition Services is to provide administrative oversight, ensuring that federal regulations are met by programs eligible to receive federal meal reimbursements. The annual federal block grant funding is over $40,000,000.

Child Nutrition Services (CNS) offers USDA meal programs to school districts, residential child care institutions, family day care homes, child & adult care centers, and summer food programs.

There are approximately 70,000 meals served daily at over 1,000 locations statewide.

CNS also distributes USDA Commodity Foods statewide to schools, and provides temporary emergency food assistance through food banks, and congregate feeding sites across the state. In 2009, CNS will distribute more than 3,316,499 pounds of USDA surplus food to Alaska.

Unit staff includes a School Food Coordinator, a Project Coordinator, three Project Assistants, three Education Program Assistants, and an Administrative Clerk.

Grants and Contracts

All federal and state funds for Teaching and Learning Support come through the grants and contracts. Unit staff work with program

managers and district staff to ensure that all state and federal funds are expended according to state and federal guidelines.

The grants staff consists of four grants administrators, one of whom who is the unit supervisor; an administrative assistant and a grants clerk.

Health/Safe and Drug Free Schools

The mission of this unit is to provide leadership and support to schools and communities in their implementation of a variety of federal programs designed to improve student performance and health and safety.

This unit administers a variety of health related programs under NCLB, the Youth Risk Behavior Survey, as well as Quality Schools grants. The unit has created and maintains an Elearning virtual resource library that serves 5,000 learners a year, freeing up limited inservice days for other critical professional development.

Unit staff consists of two Education Specialists, an Education Associate and an Education Assistant.

Teacher Certification

Responsible for accepting, analyzing and evaluating certification applications and issuing certificates to teachers, administrators and special service providers who are qualified.

Review teacher preparation programs to ensure the programs meet national accreditation standards and are approved by the state board.

Responsible for implementing the highly qualified provisions of NCLB including determining and reporting on the number of core courses taught by highly qualified teachers.

Assessment, Accountability & Information Management

Teaching and Learning Support Results Delivery Unit

Contribution to Department's Mission

This Results Delivery Unit supports the mission of the Department of Education & Early Development as defined in the department level performance management model. Please refer to the information provided under the Department of Education & Early Development.

Core Services

- Provide leadership and technical assistance to schools related to state and federal education requirements and strategies that will result in improved student success
- Provide assistance to parents, families and schools to achieve greater involvement in students' education
- Administer statewide testing and assessment; provide technical assistance to district staff, and collect and analyze data
- Provide ongoing and daily technical assistance to grantees related to increased student achievement, educational improvement, school health and safety
- Administer and provide technical assistance to schools on school choice options, such as Statewide Correspondence Programs and Charter Schools
- Issue and administer state and federal grants, contracts and Reimbursable Services Agreements for the provision of direct student instruction and professional development
- Administer Teacher Certification, National Council for Accreditation of Teacher Education (NCATE), and assure quality of in-state teacher preparation programs
- Administer Youth in Detention and Special Schools

FY2010 Resources Allocated to Achieve Results

FY2010 Results Delivery Unit Budget: $214,356,800

Personnel:	
Full time	87
Part time	0
Total	87

Key RDU Challenges

- The No Child left Behind (NCLB) Act requires a Statewide Accountability Plan. This plan includes all statewide assessments, whether state or federally mandated, data collecting and reporting requirements, a system for designating schools in need of improvement and schools that are highly successful. Amendments to the Accountability Plan now include reporting school results for making Adequate Yearly Progress both through the status model (percent of students meeting the annual targets) and through the growth model (the percent of students not proficient who are on track to be proficient in 4 years).

- NCLB requires a new and higher level of monitoring and accountability for school district programs, student achievement, and teacher and paraprofessional qualifications.

- NCLB requires that schools and districts be identified annually to determine if they meet Adequate Yearly Progress (AYP). Required actions increase the longer a school or district fails to meet AYP. Providing meaningful assistance to help schools and districts develop plans and implement strategies that will result in higher student achievement and meeting AYP continues to be a challenge.

- NCLB requires that school districts with schools identified as needing improvement provide supplemental

educational services and/or school choice options for students in the school improvement site. This is a challenge for Alaska's rural and remote schools, where these providers and options are limited.

- NCLB requires that all limited English proficient (LEP) students in grades K-12 be tested each year for English language proficiency. It also requires LEP students to be tested on the Standards Based Assessments (SBAs) in reading, writing and math in grades 3-10. These assessments are in English and can present difficulty to newly arrived immigrant LEP students as well as to Alaska Native students in immersion programs who are being taught in their Alaska heritage language in the early grades.

- NCLB requires that teachers and paraprofessionals meet the federal "highly qualified" requirements. The deadline for all teachers to be highly qualified in core content courses they teach was June 30, 2007. Every district must have a Highly Qualified Teacher Plan to show that if teachers are still not highly qualified they are being provided training to become highly qualified. This is a challenge for teachers in small rural schools. Many paraprofessionals are also required to take a rigorous state-administered test that demonstrates competency in key subject areas such as reading, writing and mathematics.

- NCLB requires the department to review teacher preparation and reading endorsement programs in the state to ensure compliance and alignment with NCLB. This is an ongoing challenge.

- NCLB requires the state to offer alternative routes to teacher certification. This will require significant regulation changes.

- Reauthorization of the Individuals with Disabilities Education Act (IDEA) now requires the department to align state regulations related to special education with the new act.

- The reauthorization of the federal Head Start Act in December 2007, and the Carl Perkins Vocational Education programs in 2006 and has created many new requirements for grant recipients and the state.

Significant Changes in Results to be Delivered in FY2010

Improve student results through focus on instruction, curriculum, professional development, and assessments aligned to state standards and grade level expectations (GLEs).

Major RDU Accomplishments in 2008

- Developed test items for Standards Based Assessments in reading, writing, and mathematics for grades 3-10 including content and bias review with statewide committees

- Field-tested Standards Based Assessments and field-tested future test items for the High School Graduation Qualifying Examination (HSGQE)

- Administered the Alaska Standards Based Assessments in grades 3 through 10, and the High School Graduation Qualifying Examination in grade 10, and the High School Graduation Qualifying Examination retake exam in grades 11, 12, as well as for adults

- Distributed, administered, scored, and reported results of the new Alternate Assessment in grades 3-10

- Administered an alternative assessment program for students with disabilities who are on a diploma track. This program includes the Modified HSGQE and the Non-standardized HSGQE

- Implemented a science assessment in grades 4, 8 and 10

- Implemented the third year of testing for students who are Limited English Proficient

- Administered the TerraNova (CAT 6) examination in grades 5 and 7

- Statewide administration of the Kindergarten Developmental Profile, and continued the development of a new developmental profile based on the new Early Learning Guidelines and the K-2 Standards
- Improved and continued to implement an individualized student identification system to measure student assessment results more accurately
- Continued the development of classroom assessments that will be highly aligned to the state's grade level expectations and statewide standards-based assessments
- Continued implementation of the Alaska Statewide Mentor Project, including mentoring for beginning teachers and coaching for principals (see new Statewide Mentoring Program component)
- Added Special Education Component to the Alaska Statewide Mentor Project. This was accomplished by a Federal State Professional Development (SPDG) Grant. These activities provide mentoring to beginning special education teachers and administrators (see Statewide Mentoring Component)
- The Special Education Continuous Improvement Monitoring Process continued to be refined and improved. This system of self-monitoring by the state will ensure better student outcomes for students with disabilities
- In compliance with the Individuals with Disabilities Education Improvement Act (IDEIA-2004) the department developed the special education State Performance Plan (SPP). This set of 20 indicators provides specific measures required by the USDOE Office of Special Education and IDEIA. The SPP spans a set of years from 2005 to 2010.
- In compliance with the Individuals with Disabilities Education Improvement Act (IDEIA-2004) the department developed the special education Annual Performance Report (APR). This set of 20 indicators provides specific measures required by the USDOE Office of Special Education and IDEIA. The report is required annually and is presented on the special education website.
- In conjunction with the annual Special Education Directors Conference conducted the following annual training for Alaska Special Education Due Process Hearing Officers;; Alaska Special Education Complaint Investigators; Alaska Special Education Mediators
- Conduct federal and state compliance monitoring activities with 12-15 district per year (on a 5 year rotating schedule)
- Held the annual Winter Education Conference for school district staff, with a focus on data driven decision-making, using formative assessments, and using researched based instructional strategies. Technical assistance and up-to-date information about the provisions of NCLB were provided to approximately 250 staff
- Provided standards-based professional development to approximately 2,000 Alaska educators
- Provided resources to school districts to assist in program evaluation and student intervention programs relating to meeting performance standards in reading, writing, and math
- Completed the initial phases to implement the Alaska Statewide Longitudinal Data System for federal and state data collection and reporting to provide quality data to stakeholders and policy makers

1/23/09 –

House Education Committee

Topics

① Assessment & Accountability office operations

② Technical Assistance to districts under my role as deputy Commissioner

③ Then, I will turn to Cyndy Curran, director of Teaching & Learning Support to provide an overview of that division.

Assessment & Accountability office

A) Left. Erick McCormick, director (Recent)

B) 2 Major functions Assessment
Accountability

My role for 5+ years

C) Assessment & Statewide Assessment Programs.

- Dev. Profile
- HSGQE
- SBA R-W-M-S
- Norm-Ref.
- NAEP
- ELP
- ALT

D) Largest is our Accountability tests, ~~Which were Completed~~

- Completely Redesigned over the past 5 years ... moved to a new contractor @ a savings of approx 2.4 million in 2008 alone,
- And we receive additional services w/ new contract
- Just renewed contract through FY 15

FY09 6.1m
operating w/o S&I
8.6m

Those to few increments requests, but this year ~~and for~~ we are asking for $ to address this contract.

2) Accountability
- Data Collections and reporting for state and federal reporting.

- School and district accountability incl. -
  a) AYP ... ~~growth calculations~~
  b) Accountability related to SB285 – Moore v. Ak
  c) Alaska School Perf. Incentive.

Questions on PIP – few factors
1) Schools who won tended to be those already performing high, PIP didn't cause imp. performance.
2) Lack of support in education community
3) We have surveyed and talked to principals – Outside of some effort to look at growth data, no innovation ~~was~~ beyond activities already done, were present,

* Do gain value from the growth calculation
* Current fed Admin may support new exam

1) Stakeholder Inv.
2) [illegible]

F) As deputy Commissioner
Significant focus is school & district accountability and technical assistance.

- Activities to improve student achievement, and in part in response to Moore v. Alaska.
- Provide oversight to activities related to actions resulting from SB 285 that passed last year,
- I'll provide oversight to activities that relate to our request of 800.0 additional funds for district T.A. re again today actions in response to Moore, and actions that make sense for learning.
- Coordination of all dept. initiatives to effect school & district Imp. —
  - Teacher mentor
  - Principal Coaching
  - other TLS activities

2502

⟹ Cont.

Alaska Department of Education & Early Development
Unity
January, 2009

Funding: 10/06 to 10/09 - $3.5 million federal grant (U.S. D.O.E NCES/IES) SPENT $2.5m
SFY [redacted] - $610.0 (FY09) Remain $770.0

Mission of Unity:
To provide accurate, timely and accessible student data to stakeholders.

Successes/achievements:

- EED took delivery on the data warehouse structure.
- 22-member stakeholder group met and selected 23 reports they would have access to via the web reporting portal. The reporting portal skin is completed and report data is being reviewed internally at EED.
- Seven pilot districts (see list below) successfully piloted the State Report Manager with the Fall 2008 OASIS collection.
- The School Interoperability framework (SIF) was put in place at the State EED level. This included successful installation, testing, and implementation of a hardware server, zone integration server (ZIS) software, and the student locator adapter to link with the Alaska Student ID system.
- Hardware servers and ZIS have been provided to pilot districts and installed and configured. The system will be piloted with the Spring 2009 OASIS collection.
- SIF adapter has been written for the Alaska Student ID system and is currently being tested.
- Security plan has been written and submitted to State ETS for approval.

Description of Unity (See attached brochure):

Phase I – Data warehouse – Completed Contract Cost: $60, 462

Phase II – Web based portals – Completed and being tested. Contract Cost: $433,368

Phase III – Vertical reporting utilizing the Schools Interoperability Framework (SIF); State Report Manager data validation tool, and Student ID Locator Framework (utilizing SIF) – In process. Completion estimated Oct. 2010. Contract Cost: $955,725

SIF- Prescribed set of data elements

Pilot Districts:

Fall OASIS 2008 collection piloted the State Report Manager (SRM) solution:

Juneau, Sitka, Kodiak, Delta-Greely, Mat-Su, Anchorage, Fairbanks

Spring OASIS 2009 collection districts pilot the SRM and SIF vertical reporting, and Student locator framework:

Juneau, Sitka, Kodiak, Delta-Greely, Mat-Su, Fairbanks, Northwest Arctic, Galena, Wrangell, Copper River

School District bandwidth:
The bandwidth requirements for unity are minimal. SIF Transactions use XML (plain text). The reporting portal gets query requests and returns the aggregate data after the calculation. It is the Unity EED servers that have the full data base and handle all the processing. The SRM submission files may be large for some of the districts, but these are the same OASIS files they have been submitting via e-mail in other formats. Instead of e-mail they upload data to a web page but the network load is the same. In fact SRM can accept a Zip file, so network bandwidth requirements could go down from what is currently being required under the old system.

Security: Security is addressed in all phases based on FERPA and student level data is protected in such a manner as to allow access to student level data only to school districts where that student is enrolled. Data to other stakeholders will be in aggregate only and no drillable to student level data. State suppression and small cell rules apply to all data.

Expansion: Unity anticipates adding specific program data collections, staffing/certification data, finance data, and school facilities data and geo-coding to the warehouse for web portal reporting access. Currently this expansion is unfunded. Estimated cost: $1,600,000.

Ongoing annual maintenance cost of Unity:

A. On-going annual maintenance/administration costs: $832,300

a. Personnel (Salary + Benefits + Loading Factor (taxes/SBS etc;): $620,000
   i. 1 Data Manager – $130,000
   ii. 1 Program Coordinator – $80,000
   iii. 1 Database Specialist - $90,000
   iv. 4 Analyst Programmers – $320,000

b. Software/Hardware (including maintenance agreements/licensing): $212,300
   i. 4 Servers on Next Business Day HP Support - $15,000
   ii. 2 Enterprise SQL licenses annual maintenance - $25,000
   iii. 2 SharePoint Server licenses annual maintenance - $2,500
   iv. Performance Point server licenses and annual maintenance - $10,300
   v. State Report Manager (ESP) maintenance: $60,000
   vi. Student ID solution (ESP) maintenance: $30,000
   vii. SIF annual maintenance (unrestricted ZIS) $30,000
   viii. Adapter for student ID system (ASIS): $8,000
   ix. DataSpecs online: $17,000
   x. ESP Project Management: $14,500

Component: Student and School Achievement

Contribution to Department's Mission

To provide resources to school districts to ensure that special populations of students meet the state's high academic standards, to improve performance through professional development, school accountability, standards, and assessments, and to provide school districts and stakeholders with high quality information to aid in data driven decision making processes and reporting.

Core Services

- Special Education - Maintain compliance with state and federal laws governing students with disabilities, through technical assistance to school districts, distribution of grant funding, development of pre-service and in-service training programs, complaint investigation, mediation, due process hearings, and compliance reviews. (Federal funds)
- Preschool Handicapped - Provide funding to school districts for special education services to disabled preschool children ages 3 to 5 years. (Federal funds)
- Special Education State Personnel Development Grant integrates teacher recruitment with mentoring. This project is responsible to design and implement a highly innovative and timely strategy addressing, problems of recruitment and retention of special educators in Alaska. A key project component is the recruitment and training of special education field mentors matched with special education teachers in their first or second year of teaching.
- Title I, Part A Disadvantaged - Provide funding to school districts to implement supplemental education programs or school-wide reforms to improve student performance of low-achieving students in schools with the highest concentrations of low income families; provide resources for improvement to schools failing to meet state standards and reward schools exceeding those standards; provide resources for activities to increase parent involvement and improve the quality of instruction.
- Title I, Part C Migrant Education - Provide funding to school districts to implement supplemental assistance programs or school-wide reforms that will assist migratory children in meeting high standards; provide resources for coordination activities, parent involvement, staff development and support services to migrant children and families. (Federal funds)
- Title I, Part D Neglected/Delinquent/At-Risk - Provide funding to state-operated institutions, coordination and transition services, improve quality of instruction; provide funding to school districts with the highest concentrations of delinquency to develop cooperative service agreements with agencies for instructional improvement, coordination activities, drop-out prevention services, voc-ed and support services; and coordinate further integration between spec. education and Title I programs.
- Title III English Language Acquisition – Provide grants and technical assistance to eligible school districts applying for funding aimed at increasing English language acquisition of limited English proficient students. (Federal funds)
- Title IV, Drug and Violence Prevention - Provide resources, technical assistance and grant assistance to school districts to develop comprehensive alcohol and drug abuse prevention and intervention programs. (Federal funds)
- Title IV Governor's Drug Prevention - Provide grants to local schools and communities for prevention programs. (Federal funds)
- Title IV 21st Century Community Learning Centers – Provide grants to districts and non-profit educational agencies to provide before and after-school programs based on academic standards and related school subjects. (Federal funds)
- Counseling - Provide funding for staff development, training and programmatic activities related to healthy life skills, suicide prevention, and at-risk students, in support of safe schools and the Quality Schools Initiative.
- HIV Prevention - Provide technical and financial support for school districts to develop HIV/AIDS prevention curriculum, obtain classroom materials, receive teacher training, conduct assessments, and develop local policies and procedures related to HIV/AIDS Education. (Federal funds)
- Reading First – Provide funding for schools whose students need assistance in reading, professional development in literacy and reading for teachers, and work toward making every child a strong and independent reader by the end of third grade. (Federal funds)

- Fetal Alcohol Syndrome (FAS) – Provide support for locally based FAS teams to address the needs of children with Fetal Alcohol Syndrome or Fetal Alcohol Effect.
- Robert Byrd Student Scholarships - Provide scholarships to approximately 50 students per year to further their educational goals. New students are selected annually through a competitive statewide process. Scholarships are renewable for four years.
- Senate Youth Scholarships - Two student government students are selected annually, through a competitive, statewide process, to receive a monetary scholarship and to participate in a week long program at the nation's capital.
- Career and Technical Education - Provides resources to school districts to prepare students for employment through the development of occupational skills, integrating vocational and academic education, addressing the vocational educational needs of special populations, and providing education and training that allows students to compete in the world of work in a modern, technology-based economy. (Carl D. Perkins Career and Technical Education Act of 2006 Federal funds)
- Charter Schools - Provide resources for the development of Charter Schools in Alaska. (Federal funds)
- Statewide Assessment System that demonstrates accountability and results in accurate measurements of student success. This includes statewide standards-based assessments, HSGQE assessment , English language proficiency assessment, norm-referenced assessments, the National Assessment of Educational Progress, the Alaska School Performance Incentive Program, the AYP reporting system, and the school designator system.
- Title IID Educational Technology - Provide resources to school districts on formula and competitive bases to update existing technology and integrate the use of technology in instruction. (Federal funds)
- Title V Innovative Programs - Provide resources to school districts for school improvement and innovation. (Federal funds)
- School Accreditation - Assist schools with the school accreditation process, works closely with the Northwest Association of Schools and Colleges, and assists in developing school accreditation standards.
- Alaska Statewide Longitudinal Data System – A comprehensive statewide longitudinal data system that will contain high quality, research-ready data that meet the multiple information needs of key stakeholders and will increase learning and improve accountability, both now and in the future. (State funds)
- Statewide Correspondence Programs - Issue, collect and approve applications to operate statewide correspondence programs.
- WorkReady / College Ready - A program to ensure Alaska students have the foundational skills required for post-secondary education and all careers. Foundational skills are defined and assessed by the WorkKeys® job skills system, developed, researched, and validated by ACT. Also, the program provides training targeted to those skills by means of a statewide public school site license for the WIN for WorkKeys® courseware. and offers students the opportunity to document their foundational skills.
- Title VI REAP - Provides additional flexibility in the use of certain Federal funds to small rural districts and provides eligibility for funds from the SRSA program awarded directly by the US Department of Education. Rural Education Achievement Program (REAP) initiatives are designed to help rural districts to compete effectively for Federal competitive grants and that often receive grant allocations in amounts that are too small to be effective.

FY2010 Resources Allocated to Achieve Results

FY2010 Component Budget: $165,517,800

Personnel:	
Full time	70
Part time	0
Total	70

Key Component Challenges

- Providing professional development and technical assistance to school districts to help them better prepare students to meet state standards and pass the state assessments;
- Assisting school districts with the implementation of the No Child Left Behind legislation. NCLB adds many new

OVERVIEW: AK PUBLIC SCHOOL FUNDING FORMULA

Alaska Public School Funding Formula Overview

Presented by
Eddy Jeans, Director
Division of School Finance
Eddy.Jeans@alaska.gov
(907) 465-2891

Senate Bill 36

The current state public school funding formula was adopted under SB 36 in 1998. And was implemented in 1999.

The public school funding formula is defined in Alaska Statute 14.17

This presentation provides an overview of:

1. Calculation of Adjusted Average Daily Membership (ADM)
2. Calculations of Basic Need ~ (*Entitlement*)
3. Components of Basic Need ~ (*Who Pays*)
4. Additional Funds above Basic Need
5. Components of State Aid

Average Daily Membership

ADM Reporting Requirements

- Average Daily Membership - is the number of **enrolled** students during the 20-school-day count period ending on the fourth Friday of October.
- Reports are due within two weeks after the end of the 20-school-day count period.
- Projected student count reports are due November 5.

Who Qualifies as a Student?

Eligibility for State Foundation Funding:

- A child who is 6 years of age before September 1st, and under the age of 20, and has not completed the 12th grade. (AS 14.03.070)
- A child who is 5 years of age before September 1st, following the beginning of the school year, may enter kindergarten. (AS 14.03.080 (d))
- A child with a disability and an active Individualized Education Program (IEP) may enter school at the age of 3 and under the age of 22. (AS 14.30.180 (1))

5 Steps to District Adjusted ADM

USED TO CALCULATE ENTITLEMENT

Step 1.	Adjust:	ADM for School Size
Step 1a.	Review:	Hold Harmless eligibility
Step 2.	Apply:	District Cost Factor
Step 3.	Apply:	Special Needs Factor
Step 4.	Add:	Intensive Services Counts
Step 5.	Add:	Correspondence Student Counts

= District Adjusted ADM

Step 1. Adjust the ADM for School Size

ADM under 10:

Added to the smallest school with an ADM greater than 10

A Community with an ADM of 10 through 100:

Grades K-12 ADM is combined and adjusted once; adjusted as one school.

A Community with an ADM of 101 through 425:

ADM for grades K-6 and 7-12 are adjusted separately; adjusted as two schools.

A Community with an ADM greater than 425:

The ADM of each facility administered separately as one school is adjusted.

* *Alternative* schools with an ADM of less than 200 shall be counted as a part of the school in the district with the *highest* ADM.

* If the ADM is greater than 200 and administered as a separate facility the ADM will be adjusted separately.

* *Charter* school with an ADM of 150 or greater is adjusted as a separate facility

Step 1. *Example*: Nome City Schools Projected FY10 ADM by School

- Nome Elementary School.....355.00
- Nome-Beltz Jr/Sr High School.....255.00
- Anvil City Science Academy.....44.00
- Nome Youth Facility.....14.00

- **Total ADM..... 668.00**

Step 1. *Example*: Nome City Schools
Adding ADM's to the appropriate School in the District

School Size Adjustment

- The alternative schools ADM are added to the highest ADM school in the district before adjusting for size
- A school with a population under 10 should be added to the smallest school in the district.

Nome Elementary + Anvil

355 + 44 = **399.00**

Step 1. *Example*: Nome City Schools

Reference:	School Size:	Formula:
1.	10-19.99	39.60
2.	20-29.99	39.60 + (1.62 * (ADM - 20))
3.	30-74.99	55.80 + (1.49 * (ADM - 30))
4.	75-149.99	122.85 + (1.27 * (ADM - 75))
5.	150-249.99	218.10 + (1.08 * (ADM - 150))
6.	250-399.99	326.10 + (.97 * (ADM - 250))
7.	400-749.99	471.60 + (.92 * (ADM - 400))
8.	Over 750	793.60 + (.84 * (ADM - 750))

K-6 Adjusted ADM's

(Ref. 6) *326.10 + {.97 * (**399.00** – 250)}* 470.63

7-12 Adjusted ADM's

(Ref. 6) *326.10 + {.97 * (**255.00** – 250)}* 330.95

(Ref. 1) *Youth facility's* **ADM 14** + 39.60

School Size Adjusted ADM **841.18**

Step 1a. Hold Harmless Provision

As a result of House Bill 273: [enacted in 2008]

This establishes a Hold Harmless provision for those districts experiencing a reduction in enrollment. To determine eligibility the district's sum total of the *School Size Adjustment* is compared against the prior fiscal year, to see if a decrease of 5% or greater has occurred. If there is decrease of 5% the prior fiscal year becomes the base.

Available up to 3 years provided district stays below the base year.

⇨1st year 75% of difference to the base year retained.

⇨2nd year 50% of difference to the base year retained.

⇨3rd year 25% of difference to the base year retained.

NOME Hold Harmless

FY09 Projected ADM	798.00	FY09 School Size Adj. ADM	**965.08**
FY10 Projected ADM	668.00	FY10 School Size Adj. ADM	**-841.18**
		DIFFERENCE	**123.90** / 965.08
			= 12.84%

Eligible for Hold Harmless

75% of difference is added back to current School Size Adjustment.

Difference *123.90 x 75%* =	92.93
FY10 School Size ADM =	+ 841.18
New School Size ADM =	**934.11**

Step 2. District Cost Factors

The Department monitors District Cost Factors and submits a report to the Legislature on January 15th every other fiscal year, beginning January 2001.

- Cost factors are specific to each school district.
- Lowest District Cost Factor is 1.000 and the highest is 1.948.

Multiply the School Size Adjusted ADM by the District Cost Factor for Nome:

934.11 x 1.402 = 1,309.62

Step 3. Special Needs Funding

- All categorical programs; special education (except intensive), vocational education, gifted/talented and bilingual/bicultural are block funded at 20%.

- To qualify for funding under this section school districts must file a plan with the department indicating special needs services that will be provided.

AS 14.17.420 (b)

Step 3. *Example*: Nome City Schools

Multiply the adjusted ADM (from Step 2)

by the Special Needs Factor

1,309.62 x 1.20 = **1,571.54**

(Shown on Column R, page 8)

Step 4. Intensive Services Funding

A school district will receive funding for intensive services students that:

1. Are receiving intensive services and are;
2. Enrolled on the **last day of the 20** school-day count period and who have;
3. Established Individual Education Plan (IEP) for each intensive services student.

In FY10, An Intensive Services student generates $61,380.

[*FY09 intensive generate $49,320.*]

(Intensive Student Count) x 11 = Intensive Student Funding

Step 4. *Example*: Nome City Schools

Multiply the Intensive Student Count by 11

& add to the adjusted ADM (from Step 3)

[FY09 Intensives are multiplied by 9.]

~Nome City Schools has 5 Intensive Student~

5 x 11 = 55

1,571.54 + 55 = 1,626.54

(Shown on Column U, page 8)

Step 5. Correspondence Programs

Districts offering correspondence programs receive funding based on 80% of correspondence ADM.

Each correspondence student generates $4,464 as of FY10.

(Correspondence ADM) x .80 **= Level of Correspondence Funding**

Step 5. *Example*: Nome City Schools

Multiply the Correspondence Student ADM by 80% and add to the Adjusted ADM to get Final District Adjusted ADM. (from Step 4)

~Nome City Schools has 8.50 Correspondence Students~

8.50 x .80 = 6.80

1,626.54 + 6.80 = 1,633.34

(Shown on Column V, page 8)

BASIC NEED
Entitlement

<u>Multiply</u> the district adjusted ADM by the base student allocation [BSA] = BASIC NEED

* FY09 BSA is $5,480
* FY10 BSA is $5,580

1,633.34 x *$5,580* = $9,114,037

(Shown on Column B, page 9)

NOME: Summarized
District Adjusted ADM & Basic Need

Projected ADM for Nome:	668.00 + 8.5 corresp. = 676.50
Step 1. Adjusted ADM for School Size:	841.18
Step 1a. Adjusts for Hold Harmless	934.11
Step 2. Apply the District Cost Factor:	x 1.402
	1,309.62
Step 3. Apply the Special Needs Factor:	x 1.20
	1,571.54
Step 4. Add Intensive Service Counts:	+ 55.00
(5.00 x 11 = 55)	1,626.54
Step 5. Add Correspondence Student Counts:	+ 6.80
(8.5 x .80 = 6.80)	
= District Adjusted ADM	1,633.34
Multiply by $5,580 – the FY10 base student allocation	x $5,580
BASIC NEED:	**$9,114,037**

Components of Basic Need (Who Pays?)

⇦ Required Local Contribution

⇦ Federal Impact Aid

⇦ State Aid

SB 174 Full & True Value/Local Effort Calculation

As a result of Senate Bill 174: **(enacted in 2001)**

Beginning FY2002, half of the increased current year full & true value over 1999 (base year), is added to 1999 base year to determine the full & true value for the purposes of calculating Required Local Effort for education.

(If the full & true value did not increase over the 1999 base year, then the current full & true value stands and is multiplied by .004 mills to reach local effort.)

Calculating Nome's Full & True Value

Nome's 2008 Full Value	285,923,800
Nome's 1999 Full Value	191,926,100
Full Value Increase Difference	93,997,700
Divided in Half	46,998,850
Half of the Increase is Added to 1999 Value	
191,926,100 + 46,998,850 =	**238,924,950**

Required Local Contribution

Example: Nome City Schools

The **Lesser** or minimum of 4 mills of the education full & true value, but not to exceed 45% of the school districts prior year basic need.

.004 of Tax Base: (*Education Full & True Value*)

.004 x $ 238,924,950 = **$955,700**

45% of Prior Year Basic Need:

.45 x $8,972,788 = $4,037,755

(Shown on Column C, page 9)

Title VIII Federal Impact Aid Payments

- Title VIII Federal Impact Aid Payments received from March 1 through the last day of February are used for calculations of state aid.

- The dates on the payment vouchers are used to indicate that a school district has received Title VIII Payments

Title VIII Federal Impact Aid Payments
Example: Nome City Schools

Payments received by the Nome City Schools from March 1 through the end of February.

$81,920

(amount eligible for Deduction)

(Shown on Column D, page 9)

Impact Aid Percentage

Required Local Contribution
divided by
Budgeted Local Contribution

Budgeted Local Contribution, for the purposes of calculating the Impact Aid percentage is found in the Budgets submitted on July 15th of each year and may consist of:

- **-Appropriations**
- **-Investment Earnings**
- **-In-Kind Services**
- **-"Other Local"**

Title VIII Percentage
Example: Nome City Schools

Required Local: $ 955,700 = **50.14%**
Budgeted Local: $1,905,874

(This percentage is only derived for City & Boroughs)

(Shown on Column E, page 9)

Impact Aid
Example: Nome City Schools

90% of the Impact Aid received by a school district is multiplied by the Impact Aid Percentage

Nome's Deductible Impact Aid Calculation:

$81,920 x 50.14% x 90% = $36,967

Eligible Impact Aid **x** *Title VIII %* **x** *90%* **=** *Deductible Impact Aid*

(Shown on Column D, E, F; page 9)

STATE AID
Nome City Schools

Nome's State Aid:

Basic Need	$ 9,114,037
Less Required Local	(955,700)
Less Impact Aid	(36,967)
State Aid	**$ 8,121,370**

(Shown on Column G, page 9)

Additional Funds Above Basic Need

⇦ Additional Local Contribution

⇦ Quality Schools Grant

Additional Local Contribution

Example: Nome City Schools

The **greater** of 2 mills of the tax base **or** 23% of the district's current year Basic Need can be contributed but not exceeded.

.002 of Full & True Value Tax Base:

.002 x $285,923,800 = $571,848

23% of Basic Need:

.23 x $9,114,037 = **$2,096,229**

Maximum Local Contribution

Example: Nome City Schools

Required Local Contribution plus

Additional Local Contribution

Required Local Contribution:	$ 955,700
Additional Local Contribution:	+ $2,096,229
Maximum Local Contribution:	**$3,051,929**

Quality Schools Grant

AS 14.17.480 explains a district is eligible to receive a quality school funding grant not to exceed the district's Adjusted ADM multiplied by $16.

Example: Nome City Schools

1,633.34 x $16 = **$26,133**

(Column W, page 8 and Column I, page 9)

Components Of State Aid

A Permanent Funding Component of State Aid

Nome's Total State Aid equals:

Calculated **State Aid**	$8,121,370
plus **the Quality Schools Grant**	$ 26,133
TOTAL STATE ENTITLEMENT	**$8,147,503**

Please Note:

Prorating the Public School Funding Formula

If insufficient funds are appropriated by the legislature to meet the total entitlement, then all components of the Public School Funding Formula Program will be reduced by the same percentage.

AS 14.17.400 (b)

STUDENT BASED FORMULA

District Adjusted Average Daily Membership (ADM)

Step 1. Adjust: ADM for School Size
Step 2. Apply: District Cost Factor
Step 3. Apply: Special Needs Factor
Step 4. Add: Intensive Services Count
Step 5. Add: Correspondence Student Counts
= **District Adjusted (ADM)**

ADM Reporting Requirements

ADM – is the average number of enrolled students during the 20-school day count period. The 20-school day count ends the fourth Friday of October.
Reports are due within two weeks after the end of the 20-school day count period.

School Size Adjustment [Step 1]

For each school in the district subtract from the ADM **all** correspondence counts. Adjust the remaining ADM of each school using the school size factor table.

1. A community with an ADM under 10:
   Added to the smallest school with an ADM greater than 10.
2. A community with an ADM from 10 - 100:
   Grades K-12 ADM combined and adjusted once, adjusted as one school.
3. A community with an ADM from 101 – 425:
   ADM for grades K-6 and 7-12 are adjusted separately; adjusted as two schools.
4. A community with an ADM greater than 425:
   - Each facility administered as one school, counted as one school, ADM is adjusted as one school.
   - Alternative schools with an ADM of less than 200 combined are adjusted with the school with the greatest ADM in the district.
   - If an alternative school ADM is greater than 200 and administered as a separate facility, the ADM will be adjusted separately.
   - A Charter school with an ADM of 150 or greater will be adjusted as separate facility.

Using the proper formula from the school size factor table, calculate the adjusted ADM for each school.

School Size Table

Reference:	School Size:	Formula:
1.	10-19.99	39.60
2.	20-29.99	39.60 + (1.62 * (ADM - 20))
3.	30-74.99	55.80 + (1.49 * (ADM - 30))
4.	75-149.99	122.85 + (1.27 * (ADM - 75))
5.	150-249.99	218.10 + (1.08 * (ADM - 150))
6.	250-399.99	326.10 + (.97 * (ADM - 250))
7.	400-749.99	471.60 + (.92 * (ADM - 400))
8.	Over 750	793.60 + (.84 * (ADM - 750))

Correspondence student counts are not adjusted for size.

Hold Harmless [Step 1a]

House Bill 273 established a Hold Harmless [HH] provision for those districts experiencing a reduction in enrollment. To determine eligibility for this provision the district's sum total of the adjustment for school size is compared against the prior fiscal year [FY] to see if a decrease of five percent or greater has occurred. The HH provision is available to eligible districts for up to three years provided the total school size adjustment continues to stay below the base year. The district uses the fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

- 75% of the school size adjustment difference between the current FY and the base FY.
- 50% of the school size adjustment difference between the second FY and the base FY.
- 25% of the school size adjustment difference between the third FY and the base FY.

District Cost Factors [Step 2]

- Cost factors are specific to each school district.
- With the implementation of ISER in HB273, District cost factors will range from 1.000 to 1.948. [FY09 = 50% ISER with 12.5% added each subsequent year for next four years.]
- The department monitors the district cost factors and submits a report to the legislature on January 15 every other fiscal year, beginning in FY01.

The districts school size adjusted ADM is multiplied by the district cost factor.

Special Needs Funding [Step 3]

Vocational education, special education (except intensive special education), gifted/talented education, and bilingual/bicultural education are block funded. A district must file a plan with the department indicating the special needs services that will be provided, Section 14.17.420(2)(b), to qualify for special needs funding.

The districts' previously adjusted ADM is now multiplied by the Special Needs factor of 1.20.

Intensive Services Funding [Step 4]

A school district receives funding for intensive special education students that:

- Are receiving intensive services, and;
- Are enrolled on the last day of the 20 school day count period, and;
- Have an established Individual Education Plan (IEP).
- The districts intensive student count is multiplied by 11. [FY09 is multiplied by nine]

The district's Intensive count is added to previously adjusted ADM.

Correspondence Programs [Step 5]
Funding for correspondence programs is calculated by multiplying the correspondence ADM by 80%.

The district's correspondence count is now added to the previously adjusted ADM to arrive at the Final Adjusted ADM.

Basic Need
Multiply the district Final Adjusted ADM by the Base Student Allocation [BSA] to determine Basic Need. The BSA is $5,580 for FY10. [FY09 BSA is $5,480]

PUBLIC SCHOOL FUNDING ELEMENTS
The components of Public School Funding are *State Aid, Required Local Contribution,* and *Title VIII Impact Aid.*

State Aid Entitlement
Basic Need minus a required local contribution minus 90% eligible Federal Impact Aid plus the amount of funding 'Floor' plus Quality School Grants equal State Aid Entitlement.

Required Local Contribution
The equivalent of a 4-mill tax levy on the Full and True Value of the taxable real and personal property in the district not to exceed 45% of the district's Basic Need for the preceding fiscal year. *However*, beginning in FY02, only 50% of the *increase* in real and personal property over the 1999 Full and True Value is used for the 4 mill equivalent calculation. If the latest Full and True Value doesn't exceed the 1999 Full and True Value, then the latest value is utilized.

Title VIII Impact Aid
Federal Impact Aid provides funds to school districts for children of parents living and/or working on federal property "in-lieu of local tax revenues." 90% of the eligible funds are used in the calculation of state aid.

ADDITIONAL FUNDS ABOVE BASIC NEED

Maximum Local Contribution

If the City or Borough would like to contribute more than Required then the Maximum Local Contribution applies. To calculate this use the Required Local Contribution plus 23% of Basic Need **or** a 2-mill equivalent of the Full and True Value of the taxable and real property within the district, whichever is *greater*. The additional amount is added to the Required Local Effort to reach the Maximum Local Contribution.

For Example:

Nome's: *23% of Basic Need = $2,096,229* OR
.002 of Full & True Value = $571,848

RESULT:

Required Local Effort:	$ 955,700
Additional Local Contribution:	+$2,096,229 *[23% of Basic Need]*
Maximum Local Contribution:	$3,051,929

Quality School Grants

The districts adjusted ADM multiplied by $16 generates the amount the school district is eligible to receive.

Example: *Nome School District* **Column**

I. Basic Need Calculation

Projected ADM		676.50	L
Determining School Size Adjustment			
[Utilizing Table from page 4]	ADM		
Nome Elementary School	355		
Anvil City Science Academy	+ 44	*[Anvil (Alt.) School is adjusted with Greatest ADM see pg. 3]*	
	399	326.10+(.97x(**399**-250)) = 470.63	
Nome/Beltz Jr. & Senior High =	**255**	326.10+(.97x(**255**-250)) = 330.95	
Nome Youth Facility =	**14**	**14** = 39.60	
		FY10 School Size adjusted ADM	**841.18**
Hold Harmless Provision:		Less FY09 School Size adjusted ADM	965.08
		loss in School Size adjustment over PY	(123.90)
Determine 5% eligibility			
Divide difference by the base FY09		123.90/965.08 = 12.84% [eligible]	
75% of difference added back to FY10 School Size		841.18	
123.90 x 75% = 92.93		+ 92.93	
New Adjusted ADM-School Size		934.11	O
Apply District Cost Factor		x 1.402	
		1,309.62	Q
Apply Special Needs Factor		x 1.20	
		1,571.54	R
Add Intensive Service Counts		55.00	T
(5 x 11) = 55.00		1,626.54	U
Add Correspondence Counts		6.80	V
(8.5 * .80) = 6.80			
District Adjusted ADM		1,633.34	W
Multiply by $5,580 base allocation		x $5,580.00	
Basic Need:		**$ 9,114,037**	**B**

II. Nome's State Aid

Basic Need	$9,114,037	B
Required Local Contribution	(955,700)	C
Impact Aid	(36,967)	F
State Aid	$8,121,370	G

III. Quality Schools Grant

District adjusted ADM x $16	1,633.34	
	x $16.00	
	$26,133	I

IV. Components of State Aid

State Aid	$8,121,370	G
Quality Schools Grant	26,133	I
Total State Aid Entitlement	**$8,147,503**	J

2566

HB273 & Formula Changes

In addition to the hold harmless provision that was implemented, HB273, enacted in 2008, changed three other components of the formula over a period of five years.

Fiscal Year	District Cost Factor	Intensive Multiplier	Base Student Allocation
FY2009	50% of ISER	x 9	$5,480
FY2010	62.5% of ISER	x 11	$5,580
FY2011	75% of ISER	x 13	$5,680
FY2012	87.5% of ISER		
FY2013	100% ISER		

Area Cost Differential Table FY09 FY10 FY11 FY12 FY13

1/30/09 OVERVIEW: DEED WORKKEYS PROGRAM

Mr. Chairman and members of the committee, my name is Marcia Olson. I am a Career & Technical Education Program Specialist for the Department of Education, and I've been asked to give you a brief overview of the Alaska Career Ready program.

Alaska Career Ready is

- a program to ensure that Alaska students and job-seekers have the applied academic skills – sometimes called foundational skills -- that are required in various careers. These include skills such as Applied Math, Reading for Information, and Locating Information in graphical formats.
- The program provides the opportunity for students and job-seekers to do 4 main things: 1. assess their foundational skill levels; 2. practice and improve those skills; 3. learn what foundational skills are required by various careers; and 4. document their skills by earning a nationally-recognized certificate, called a Career Readiness Certificate.
- The program is a joint effort between the Department of Education and the Department of Labor.

Alaska Career Ready is based on the WorkKeys system.

- WorkKeys is a job skills analysis and assessment system developed by the ACT Company. ACT is probably better known for its college entrance exam, the ACT test. The WorkKeys system is housed in the Workforce Development Division of the ACT company, and is geared specifically towards foundational skills as they are used in the workplace.
- The WorkKeys system sets out specific skills and levels of skills so that employers, students, and job seekers are all speaking the same language and using the same measurement system to talk about these skills. The system gives students, in particular, a way to see the connection between what they learn in school and what skills they will actually need to use on a job.
- To determine the skills to be included in the WorkKeys system, ACT has analyzed or "profiled" over 15,000 specific jobs, and they continue to profile thousands more each year. Through these profiles, they have determined several skill areas that are important in most careers, including the 3 areas I mentioned earlier (Applied Math, Reading for Information, and Locating Information in visual formats. *(Teamwork, Observation, Writing, Business Writing, Applied Technology, and Listening.)*
- Within each skill area, they have determined varying complexities or "levels" for the skill. Each job profile reports the level of each skill that is recommended for success in that type of job.
- The results of all job profiles are kept in a database that is accessible on the WorkKeys website. This provides students and job-seekers with an easy way to find out what levels of skills are recommended for success in hundreds of different careers.
- So the job profiling is the first part of the WorkKeys system. Then, based on these profiles, the ACT company has developed assessments for each of these skill areas, so that individuals can find out where their skills are and compare them to the skills required for a different careers.
- If a person scores at least the minimum level on each of the three assessments (Reading, Math, and Locating), he/she will earn a nationally recognized "Career Readiness Certificate" issued by ACT, which lists the skills the person demonstrated.
- The WorkKeys system is used in approximately 25 states, and by employers, schools, and job training programs across the country, such as Subaru, Dow Chemical, Northrop Grumman, Chicago Public Schools, Syracuse University, Aims Community College, New Jersey State AFL-CIO, British Petroleum, and many others.

Alaska Career Ready also has an instructional component.

- There is a web-based instructional program that students and job seekers may use in order to practice and improve their skills. This software is not provided by the ACT company, but by an independent curriculum company called WIN. The lessons are based directly on the WorkKeys skills.
- The software provides practice tests, or "placement tests", to determine initial skill levels; tens of thousands of lessons to practice and improve these skills; and a built-in management system that records each learner's progress.

Education regulations

- Current regulations require assessments be given starting with the 2009-2010 school year.
- 11th graders—WorkKeys® Assessment in each of 3 areas (Applied Math, Reading for Information, and Locating Information).
- 6th and 8th graders—informal placement test in each of the same 3 areas. These are not the WorkKeys tests; they are practice tests available from within the instructional software.
- The Department of Education is providing training and technical support for schools to provide the assessments.

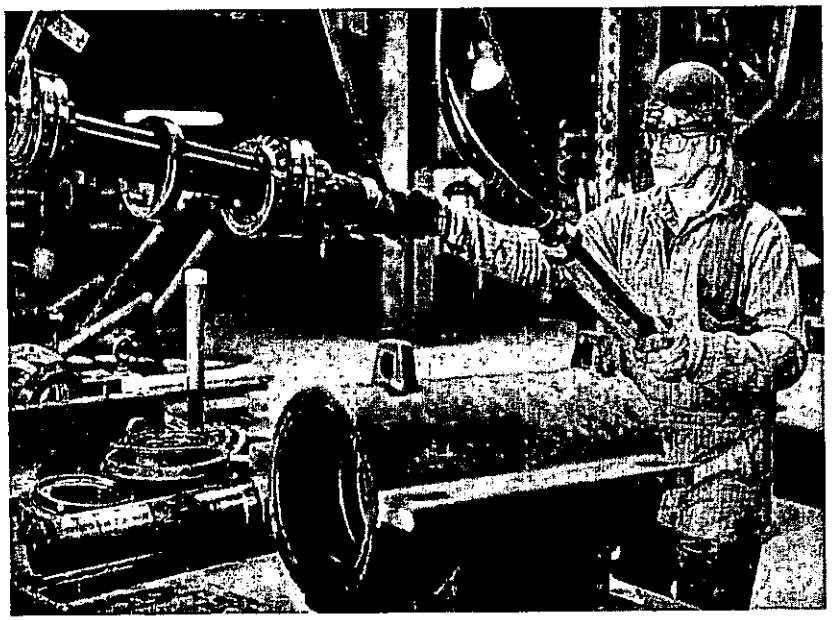
JAN. 29. 2009 4:44PM MEHS ADMIN OFFICE NO. 977 P. 3



Alaska Department of Labor and Workforce Development

House Education Committee
Click Bishop, Commissioner
January 30, 2009

Our Mission

- Provide safe and legal working conditions and advance opportunities for employment.
  - Workforce Development
    - Labor market information (Research & Analysis Section)
    - Employment assistance (Employment Security Division)
    - Worker training and education (Business Partnerships and Alaska Vocational Technical Center)
    - Unemployment compensation (Employment Security Division)
    - Assisting people with disabilities to obtain and maintain employment (Vocational Rehabilitation Division)
  - Regulatory
    - Assuring fair compensation for work performed (Labor Standards & Safety, Wage and Hour)
    - Assuring a safe workplace (Labor Standards & Safety, Occupational Safety & Health)
    - Assuring fair workers' compensation claim adjudication (Workers' Compensation Division and Appeals Commission)
    - Unemployment insurance tax collection/fraud detection (Employment Security Division)

2577

Alaska's Dynamic Labor Market

- Aging workforce—18% of Alaskans (124,500) are between the ages of 51 and 65.

During 2007 Alaska had both –

- **Unemployed Alaska Workers**: Approximately 22,000 unemployed each month (a 6.2% average annual unemployment rate), and

- **Imported workers:** nearly 20% of Alaska's workers -- 78,700 individuals -- were nonresidents.

Nonresident Workers - Resident opportunities

In 2006 nonresidents –

- Earned over $1.7 billion, just over 13% of total wage and salary earnings.
- Accounted for over 29% of the oil industry workers – down from 31% in 2006.
- Received $364.7 million in oil industry earnings – up from $327.6 million in 2006.

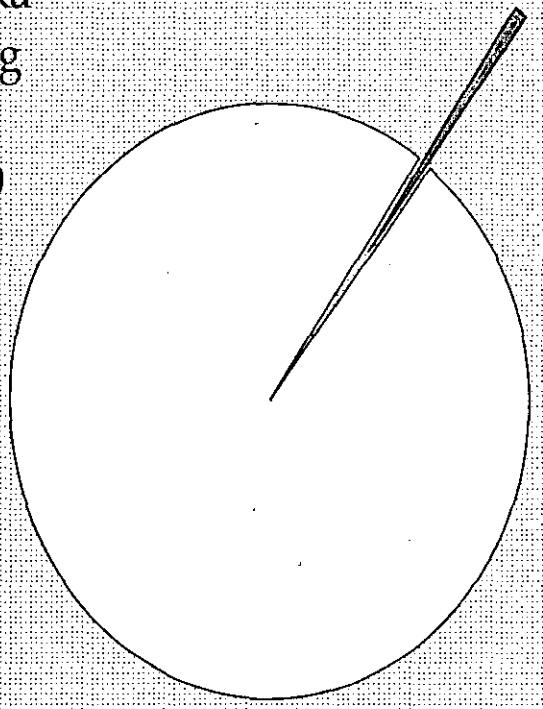
Alaska's Youth

- 11,000 new Alaskan 18 year olds each year.
- 4,000 Alaskans ages 16-19 are not in school and not working.
- 62% of Alaska students who were freshmen in 2001 graduated high school in 2006 (does not include GED's).
- Only 62% of Alaskan high school graduates remain for training or employment; the rest leave the state.
- 2000 Census—over 57,000 Alaskans age 18 and over with no high school diploma.

Alaska Youth First goal -- in school, engaged and prepared for Alaska jobs…

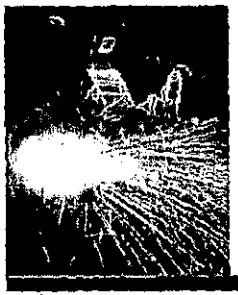
FY 10 Operating Budget is $175.2 million…

State of Alaska GF Operating Budget $4,564,039.9

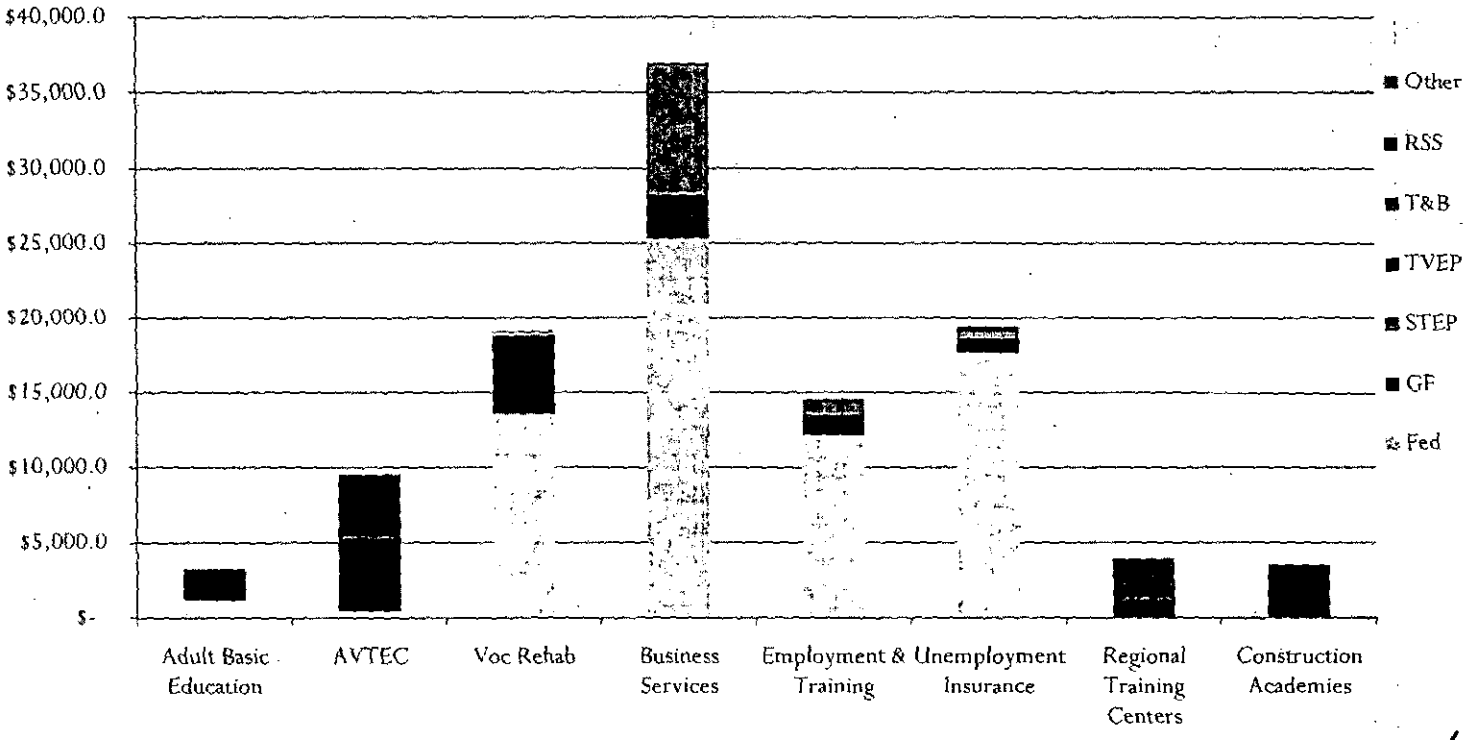


Department of Labor GF Operating Budget $31,001.0 (0.68%)

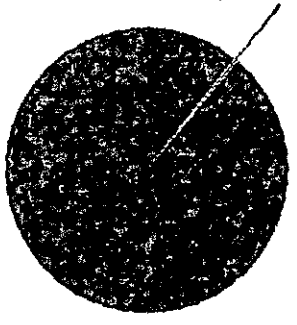
DOLWD Non-General Funds	
Federal:	$85,751.6
Other:	$58,432.5



Workforce Development Program Funding - $110.5 Million

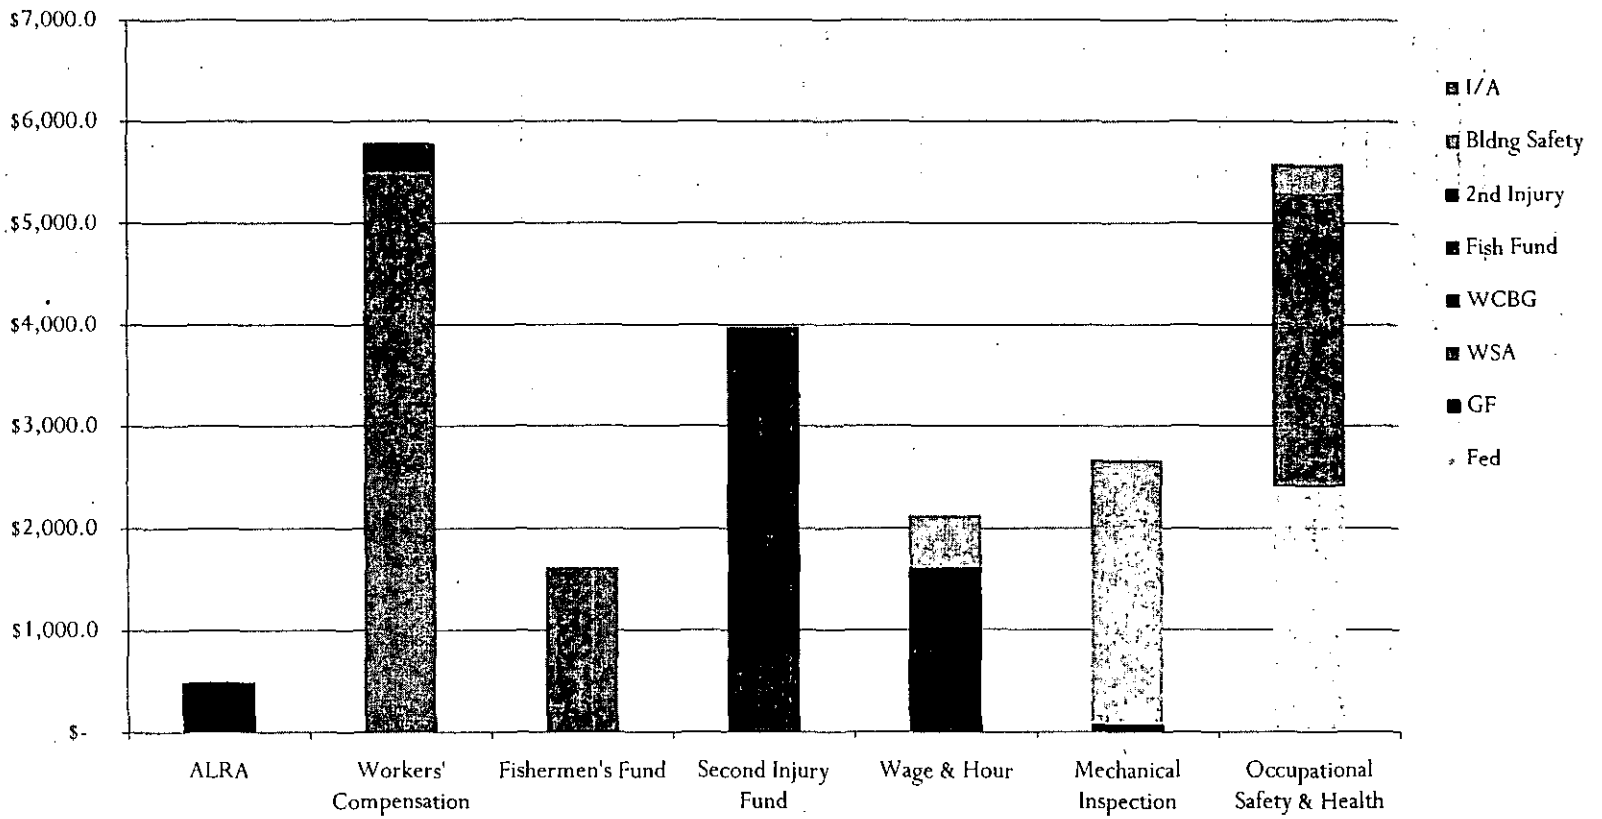


RSS - Receipt Supported Services
T&B - Training and Building Fund
TVEP - Technical Vocational Education Program
STEP - State Training and Employment Program
GF- General Funds
Fed - Federal



- State GF Operating Budget $4.56 Billion
- DOLWD Training & Support GF $22.22 Million

Regulatory Program Funding – $22.2 Million Total Funds/$2.2 Million GF



I/A: Interagency Receipts
WCBG: Workers' Compensation Benefit Guaranty Fund
WSA: Worker Safety Account
GF: General Fund
Fed: Federal Funds

Grantees

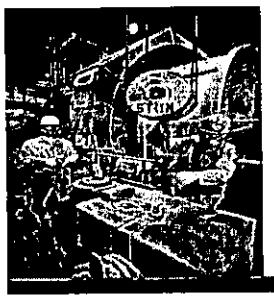
- Competitive Selection

State Entity Partnerships

- **University of Alaska**
  - Sharing of workforce data and projections
  - Training program performance report
  - Coordination of training and articulation agreements
- **Education and Early Development**
  - Career and Technical Education
  - Work Keys & Alaska Career Ready Certificate
- **Commerce, Community and Economic Development**
  - Meet the workforce needs of economic development projects
- **Transportation and Public Facilities**
  - Apprentice utilization on public construction projects

Private Sector Partnerships

- **Workforce Investment Board**
  - Private sector dominated; sets workforce development policy
  - Regional Advisory Councils provide region-specific input
- **Gasline Training Plan Steering Committee**
- **Alaska Construction Academies**
  - Partnership with School Districts, Association of General Contractors and Home Builders Association to employ trainees; industry financial contributions in FY 08 totaled over $600 thousand.
- **State Training and Employment Program Partners**
  - Private sector partners in STEP contributed over $5 million to training efforts in FY 08
- **Alaska Occupational Safety and Health**
  - Successful efforts to enhance employer compliance vs. enforcement activity;
  - Voluntary Protection Program and SHARP
  - OSH Board Reviews Appeals
- **Workers' Compensation**
  - Medical Services Advisory Committee
  - Board and Appeals Commission



FY 08 Key Program Accomplishments

Workforce Development

- Alaska job center network connected 31,274 Alaskans with jobs.
- 6,673 individuals received employment and/or training services for jobs. 94% of trained participants entered employment.
- 529 Vocational Rehabilitation Division consumers were employed
- Issued 1,540 General Education Development Diplomas.
- AVTEC trained nearly 900 Alaskans.
- Published a gasline workforce training plan.

Regulatory

- Occupational Safety: 21% reduction in the rate of lost workday accidental injuries and illness – from 2.02 to 1.59 per 100 employees.
- Wage & Hour: Wage claim resolution time is 4.5 months, 1.5 months less than the target of 6 months.
- Workers' Compensation: 169 uninsured employers were detected and there were 60 uninsured injuries .

A Note About Apprenticeship

- A registered program providing
  - on-the-job-training at wages commensurate with skills attained
  - enhanced through courses of related instruction
- Goal: increase the number of apprentices to improve Alaska hire and give hope to our youth that there are job opportunities in Alaska.
  - Data sharing agreement with U.S. Dept. of Labor
  - Apprentice Coordinator hired—partnership with federal apprenticeship office
  - Working with mining and other industries to develop registered apprenticeships
  - 25 local job center staff trained as apprenticeship liaisons; working directly with employers to establish registered apprenticeship programs

* **10 year result: over 91 percent (3,144) of the 3,439 active or completer apprentices are Alaska residents .**

FY 10 General Fund Continuation Increments

- **Construction Academy continuation--$3.5 Million GF***
  - Construction career training for youth and adults in Anchorage, Fairbanks, Mat-su, Juneau, Kenai, and Ketchikan.
- **On-the-Job Training and Registered Apprenticeship Incentives--$ 585.0 GF***
  - 200 participants targeted for industry related occupational training.
- **Coordinator to integrate Vocational Education/Set Standards--$130.0 GF***
  - Consistent standards for training programs/Program Accreditation.
  - Connect Education and Workforce Development.
- **Regional Economic Data Gathering--$95.0 GF***
  - Research & Analysis' support regional/local workforce planning.
- **Training Program Guide--$50.0 GF***
- **Continue designated grant to SAVEC--$195.0 GF***
- **Vocational Rehabilitation lease cost increase--$130.0 GF**

* **Funded in FY 09 but counted as one-time items and removed from the budget base. Year over year GF change from FY 09 Authorized to FY 10 Request is $214.6.**

Workforce Training Related Programs and FY 10 Expected Funding Amount

	The Training Continuum			
	Secondary	**Postsecondary Training**	**On the Job**	**Reemployment Assistance**
Private Training System	Build-up Program and other programs in the schools	Employer paid tuition	Match state funding for training programs. Apprenticeships and Training Programs.	
Gasline Training Plan $860.0 GF		Training System Coordination focusing on Accreditation and Skills Standards. Regional economic data gathering.	Apprenticeship and OJT Incentives to Expand Skilled Opportunities. Increase registered apprentices and trainees. *Number Served: 200*	
Construction Academies $3.5 million GF	Train in and out of school youth as well as young adult workers in basic construction, welding, and other skills. *Number served: 1,000 High School/300 Adults*			
Youth First $2,321.8 GF	Secondary School Youth Career Awareness, Preparation and Job Experiences. Now working in tandem with DEED's Work Ready/College Ready . Captures all kids--not just those identified as "high risk" *Number served: 2,000*			
AVTEC $10,326.2 Total $4,852.9 GF		Vocational Training for in-demand occupations. *Number Served: 893*		
TVEP $9,447.0 TVEP		Allocated to various training entities and the University of Alaska to support operations and training programs.		
STEP $8,568.1 STEP	Used through the Job Center Network and Competitive Grant Awards to Train Workers who are Unemployed or face the threat of Unemployment. Fills funding gaps not met by WIA programs. *Number served: 2,000 to 2,500*			
Gasline Worker Federal Grant $2.5 million Federal	Summer Camps for College Bound Students *Number Served: 100*	Regional Training Center/AVTEC Targeted Training *Number Served: 350*	Apprenticeship and OJT Incentives to Expand Skilled Opportunities/Fairbanks Pipeliner Training *Number served: 350*	
Denali Training Fund $3.15 Million Federal	Denali Training Fund includes a $1 million per year allocation for competitive youth employment grants in rural Alaska, preferably connected with Denali Commission projects. *Number served: 1,000*		Denali Training Fund offers approximately $2.15 million in competitive grants for rural workforce development projects, preferably connected with Denali Commission Projects. *Number served: 250*	
Workforce Investment Act $12.7 Million Federal	Youth Funding focuses on at-risk in-school and out of school youth (ages 14 to 21) *Number Served: 500*		- Adult Program focuses on Job Center Services to unemployed individuals including counseling, assessments, job referral, and training. *Number Served: 530* - WIA Dislocated Worker program focuses on Job Center services to workers unemployed by virtue of business downsizing or closure. *Number served: 560*	

Alaska Department of Labor and Workforce Development Capital Projects

Project	Priority	Amount	Notes
AVTEC Deferred Maintenance	1	$ 1,500.0 GF	Facility Deferred Maintenance
AVTEC Dormitory Replacement	2	$ 20,000.0 AHCC	Replace existing 120 bed dormitory that has numerous ADA and code deficiencies.
AVTEC Heavy Equipment/Diesel/Pipe Welding Training Facility	3	$ 12,000.0 AHCC	Add a 16,000 square foot steel fabricated to AVTEC's Applied Technology campus to replace the current facility, which has numerous code and safety issues.
Workers' Compensation .Net Upgrade and Rewrite	4	$ 3,092.2 WSA	Replace outdated Workers' Compensation system
AWP—Fairbanks Pipeline Training Center Equipment	5	$ 2,310.5 AHCC	Funding to equip the Center to include large diameter pipe, sideboom and welding equipment.
DVR MIS Interface	6	$ 275.4 GF	Interface between DVR Management Information System and Social Security and Unemployment Insurance databases to improve services to clients.

UA Private Sector Partnerships in Workforce Training

- Alaska Workforce Investment Board
  - Identify state's priorities for workforce needs
  - Establish policies and guidelines
  - Support Regional Advisory Councils
- Alaska Commission on Postsecondary Education
  - Maintains Alaska Learning Exchange System - ALExSys
  - Distributes Student Loans
- Alaska Process Industries Careers Consortium
  - Promotes careers in Alaska process industries including oil, gas, mining, power generation, and associated industries
  - Systemically supports curriculum review of UA-related programs with UA faculty and industry representatives
  - Promotes student internships, teacher externships, and employability skills training
  - Provider of the North Slope Training Cooperative safety training program
- Putting Alaska's Resources to Work
  - Promotes policies, extracts data, and industry interests for the oil, gas, and mining industries in Alaska
- Organized Labor
  - UA developed an Apprenticeship Technology program to recognize these quality training programs
  - Organized labor has recognized UA programs that support entry-level apprenticeship training
- Native Corporations
  - Working closely with Native Corporations to support their training efforts regionally and statewide
- Private Businesses and Industries
  - Meeting the specific needs of businesses and employers through professional development and regulatory training

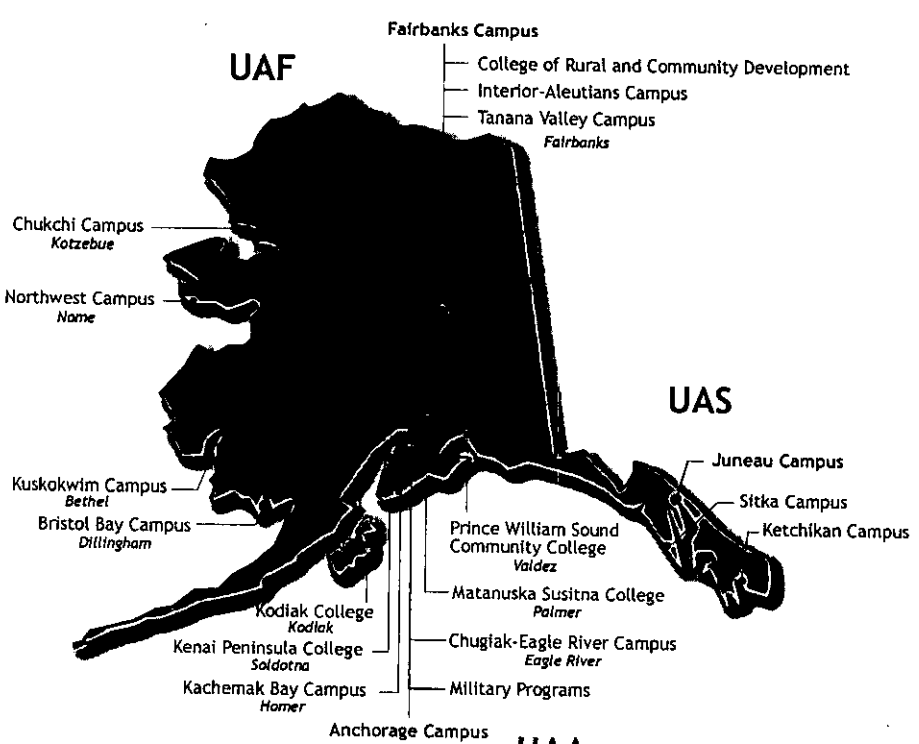
UA provides leadership and resources to create business-education consortiums in:

- health
- construction
- oil & gas
- teacher education
- information technology
- transportation & logistics

Community Campuses

Workforce Training Centers



Over 4,600 students are enrolled in workforce programs at UA campuses right now—programs that respond directly to the state's industry and business needs.

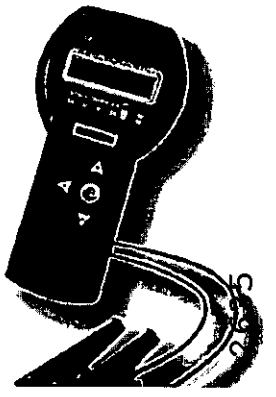
Students who complete the training have the competitive edge for some of the state's most in-demand jobs.

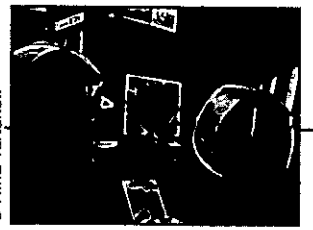
Return on investment is substantial. Earning power increases an average of 17 percent by taking a single class. According to the U.S. Bureau of Labor Statistics, 80 percent of the fastest-growing jobs in the United States require some level of higher education training after high school.

That's why UA takes workforce training so seriously. It's what our students want and what our state needs.

Over 200 of our career programs take two years or less to complete. They include:

- Nearly 40 occupational endorsements
- 30 one-year certificates
- 58 two-year certificates
- 75 associate of applied science degree programs
- And more





© Nina Tarfakoff

The Chukchi Campus of UAF serves the residents of the Northwest Arctic Borough, covering more than 36,000 square miles and 11 villages. Chukchi's close ties with community organizations provide the education and training needed for numerous aspects of rural life. One of its workforce success stories is with Maniilaq Association. Certification and retention of village-based substance abuse and mental health counselors in the region's villages witnessed a dramatic improvement once the training was offered in Kotzebue. This has had a multiplier effect by increasing the payroll in the region and promoting healthier lives.

Chukchi supports students with courses, equipment, tutors, advising or classroom space in the following programs:

- Social work
- General associate and bachelor's degrees
- Native language (Iñupiaq) education
- Veterinary science
- Construction trades technology
- Health programs, including nursing degrees and certificates
- Rural human services
- Aviation
- Community health
- Rural development
- Teacher certification and elementary education degrees
- Business administration, applied business and accounting

© Evan Frankovich

The Bristol Bay Campus of UAF serves a 55,000-square-mile area and 32 communities including Dillingham, where the campus is located, Ivanof Bay, Port Alsworth, Togiak and King Salmon. The campus offers bachelor's degrees, associate degrees and certificates.

Bristol Bay works collaboratively with surrounding communities to meet local needs in vocational and technical education and to prepare students for the workforce.

Job readiness and basic computer skills in partnership with local village organizations have allowed training in Ekwok, New Stuyahok and Togiak. Training in New Stuyahok in preparation for construction of a new school focuses on plumbing, construction safety, hand and power tools and carpentry skills, all of which can lead to a UAF certificate.

Exploration of various career pathways for youth include camps in aviation, health care, fine arts, culinary arts and early childhood education. Students attending the medical camp spend three days job shadowing nurses. They earn CPR certification and train with the Dillingham Volunteer Fire Department. Students in the culinary arts camp work in commercial kitchens preparing actual meals and earn safe food handling certificates from the state of Alaska.

UAF Tanana Valley Campus

© Darcy Duvlea

UAA's Community & Technical College is the community college arm of UAA, similar to the relationship between Tanana Valley Campus and UAF. Each year, CTC's 40 programs produce almost 300 graduates.

CTC meets learners where they are, and guides them with their next step along an educational pathway to a bright future. CTC offers occupational endorsements, associate degrees, baccalaureate degrees and master's degrees. CTC serves students by listening to industry and community partners first, and provides developmental courses for students needing additional preparation for college or work readiness.

CTC provides a portal to education for numerous fields of study across UAA and provides important outreach to military educational services at Eielson Air Force Base and Fort Richardson.

CTC graduates:

- Manage medical laboratories and health providers' offices, and work in local hospitals, dental and medical clinics.
- Work as technicians, pilots, administrators and air traffic controllers.
- Install, maintain and support business computer networks and telecommunications systems.
- Serve as career and technical educators and advisors in the K-12 systems.
- Prepare, serve and assure the safety of food served in commercial dining establishments.
- Work as technicians and managers

2637

Partnering

King Career Center and Hutchison High School – High school vocational technical education programs are aligned with local UA community campuses to prepare students for success in high-growth job industries such as automotive technology and construction.

Organized Labor – UA programs prepare students for union apprenticeships, provide credit and share curriculum and instructors.

School Districts – Our Tech Prep program gives over 1,200 students at more than 50 Alaska schools the opportunity to obtain high school and college credit for successfully completing the same class.

Corporate Programs – University of Alaska Corporate Programs (UACP) is business and industry's one-stop portal to UA. Educational and training programs are customized to an organization's business objectives. Clients include Alyeska Pipeline Service Co., Alaska Airlines, Boeing, Alaska Department of Transportation, the Municipality of Anchorage and Weidner Investment Services Inc.

Alaska Vocational Technical Education Center – UA works in partnership with AVTEC in Seward to address health care industry needs for certified nursing assistants and licensed practical nurses.

Southwest Alaska Vocational Education Center – UAF's Bristol Bay Campus works in partnership with Southwest VOC-ED in Dillingham to address regional workforce needs in natural resource development and technical training.

CAREER PATHS

chnology

Mining and Petroleum Training

MANUFACTURING

Culinary Arts

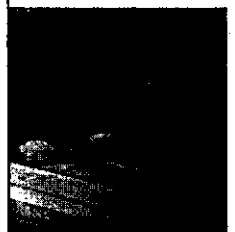
Construction – Newly developed construction management programs are at maximum capacity for enrollment.

Education – The K-12 Teacher Mentor project provides support and resources for 400 beginning teachers in 190 schools across the state.

Engineering – Anchorage and Fairbanks show enrollment growth of 38 percent (250 students) in the last three years.

Health – Health programs enrollment increased 61 percent during the past five years and the number of graduates rose 41 percent.

Resource Development – Process Technology program trains replacement workers on the North Slope in close collaboration with industry.



Diesel/Heavy Equipment Technology

careers

for Success

Alaska Works – This statewide consortium works in close collaboration with UA's community campus programs to contribute to the value of our graduates in apprenticeships for the skilled trades.

Delta Partners for Progress – This consortium of educational partners includes UAF's Cooperative Extension Service and Tanana Valley Campus to provide technical training programs in construction, heavy equipment operation, mining and natural resource development, welding and workplace safety.

Kotzebue Technical Center – In partnership with UAF's College of Rural and Community Development and the Chukchi Campus, UA works with Kotzebue Tech Center to support and provide college credit for the certified nurse's assistant program in Kotzebue.

North Slope Training Cooperative – In partnership with the Alaska Process Industry Careers Consortium, UA is a service provider for the environmental, occupational health and safety training required to work in the oil and gas sector on the North Slope and along the trans-Alaska pipeline.

Elitnaurviat, People's Learning Center – In partnership with UAF's College of Rural and Community Development and the Kuskokwim Campus, UA partners with Elitnaurviat to provide training and education opportunities for the people of the Yukon-Kuskokwim Delta Region by offering culturally relevant and regionally responsive training programs.

UAS Juneau, located in the state's capital city within the temperate coastal region of Southeast Alaska, serves 2,800 students. UAS provides quality, career-oriented workforce development programs in health, transportation, construction and natural resources. These programs attract and retain Alaska students by offering one- and two-year technical education designed to prepare them for high-demand occupations.

Many programs are delivered via distance to the region's island communities, whose students are not able to access their program-of-choice via the road system.

These and other workforce efforts include:

- Pre-engineering program in collaboration with UAA and UAF Schools of Engineering.
- Construction technology in collaboration with mining and construction industries, as well as other public and private partners.
- Award-winning automotive technology program.
- Diesel technology endorsement recognized by the International Union of Operating Engineers Local 302 for apprenticeship.
- Apprenticeship Fair in collaboration with Alaska Works Partnership, providing education about apprenticeships and training for 800 youngsters in 8th through 12th grade.

© Kevin Myers

UAS Sitka contributes to workforce development efforts for the Southeast region and Alaska by responding to community and statewide needs. On-site programs and exceptional distance delivery of courses are available for those seeking occupational endorsements, two-year degrees and continuing education.

In addition to training in welding and construction, other workforce programs include:

- Asbestos abatement
- Retail/grocery training
- Accounting for nonprofit organizations
- Pharmacists' training and certification
- Health information management
- Environmental technology
- Community wellness advocates
- Elder care training
- Alaska naturalist courses
- Rural water and wastewater operations

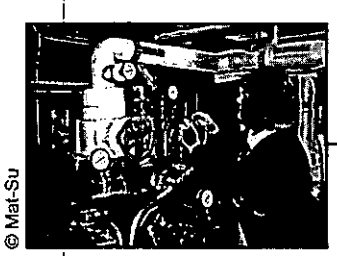
© Kevin Myers

UAS Ketchikan contributes to its workforce and economic development by offering a variety of short courses, community education and vocational training in response to local needs. These programs provide specific job-related skills that enable graduates to function effectively in a technology-dependent society. Some courses may only be one- or two-day workshops, others meet more frequently throughout the semester.

Business owners are encouraged to contact UAS Ketchikan directly for training needs. UAS Ketchikan has the ability to coordinate and develop coursework that is industry specific.

UAS Ketchikan's strengths include:

- A professional faculty focused on student success and learning. Faculty members are effective instructors capable of meeting the needs of a diverse student body face-to-face or via distance delivery.
- A support staff dedicated to helping students complete their educational goals.
- Strong bonds with the community as evidenced by over a dozen business and educational partnerships.



© Mat-Su

Mat-Su College offers associate degrees, certificates, occupational endorsements, and the first two years of a bachelor's degree for 1,600 students in the vast Matanuska-Susitna Borough region north of Anchorage.

Students at Mat-Su advance seamlessly to UAA to complete a bachelor's degree.

Mat-Su offers the only heating and refrigeraton training facility in the state. Other programs include:

- Computer-aided design and drafting (CADD) training.
- Architectural and engineering technology, associate degree and certificate programs in civil, mechanical, electrical, structural and architectural drafting.
- Accounting, computer information and office systems, computer systems technology, human services, small business administration and two-year associate degrees.

Through partnerships with other UA campuses, Mat-Su students earn two-year degrees in early childhood development, nursing, information technology, or a bachelor's degree in human services (UAA) or natural resources management (UAF).

In partnership with the Mat-Su Borough School District, Mat-Su College serves more than 300 high school students each year through the Tech-Prep program.

© Kodiak

Kodiak College [illegible] and educational needs of residents in the [illegible] Kodiak Archipelago with degree, certificate and endorsement qualification programs. These programs prepare students for current and future employment and economic opportunities in an ever-changing workforce environment.

Program highlights include:

- Associate of Arts degree [illegible] transfer degree and Associate of Applied Science degrees in accounting, general business, computer information and office systems and computer systems technology.
- Applied technology, which includes concentrations in welding, construction and occupational safety and health.
- Certificate programs in computer information and office systems, and applied graduate technology, career specific certificates in welding, construction and occupational safety.

Kodiak College in collaboration with private and public partners also provides an assessment of Industrial training and employment needs of the local workforce. Available courses and certifications include hazardous waste and emergency response, hazardous material operations, Environmental Protection Agency certifications, electrical technology, refrigeration technology, AWS welding certifications, home maintenance, small engine and outboard repair.

Prince William Sound Community College serves 44,000 square miles throughout Prince William Sound and the Copper Basin region, via the Valdez main campus and extended sites in Cordova and Glennallen. Prince William Sound Community College is under the UAA umbrella.

Workforce training includes:

- Oil spill response training: In partnership with Alyeska Pipeline Service Co. and UA Corporate Programs, training is provided to more than 350 commercial fishing vessels and 1,200 crew members and captains in Prince William Sound, Homer, Seward and Kodiak.
- Safety training: Hazardous Waste Operations and Emergency Response, asbestos abatement and first aid/CPR.
- Wheel of Learning millwright program: In partnership with industry and the Valdez City School District, the program for machine shop workers and managers starts in high school, continues with college courses, follows up with industry internships and results in a two-year degree.
- UAA Bachelor of Science in technology program, designed for the working professional, can be customized to suit individual workforce needs.

Nome's Northwest Campus is the service hub for 15 villages in the Bering Strait region. Working in collaboration with community and business partners, Northwest Campus provides access to workforce training and occupational certificates.

Program highlights include:

- **Health care:** The new certified nursing assistant program provides instruction via distance delivery audio conferences, intensive face-to-face classes in Nome and a clinical setting in Fairbanks.
- **Workforce development for rural high school students:** Career exploration in construction trades, welding, veterinary technician, early childhood education and aviation, for college credit.
- **Professional development:** Continuing education for teachers and preparation for teacher aides. As a result of this training program, 100 percent of Bering Strait School District's full-time paraprofessionals are now considered "highly qualified" under the federal No Child Left Behind Act.
- **Computer continuing education:** Web page design, desktop publishing, hardware and software troubleshooting.
- **High-latitude range management:** This occupational endorsement leads to employment in natural resources management with regional agencies, corporations, reindeer herders and the reindeer industry in western

The Kuskokwim Campus in Bethel serves the unique needs of southwest Alaska and its 49 surrounding villages in an area roughly the size of Illinois, with the nearest road 400 air miles away. The Yup'ik and Athabascan cultures of the region are in transition from a traditional subsistence lifestyle to a mixed subsistence and cash economy. This makes workforce development critical to the area.

Kuskokwim Campus Adult Basic Education (ABE) program has more graduates than any other rural high school program in Alaska.

Workforce training includes:

- High school training
- Associate of Applied Science and Engineering Technology (AAS/AET)
- Allied health programs including nursing
- Small business development
- High school dual credit and technical preparatory programs
- Eight [illegible] certificate programs and AAS, BA and MA degrees
- Community and professional development courses
- Occupational endorsements
- Statewide training [illegible] technology certification and workplace basic skills

Workforce Training and Professional Development

UAA Kenai Peninsula College

College Partners with State on Proposed Corrections Program

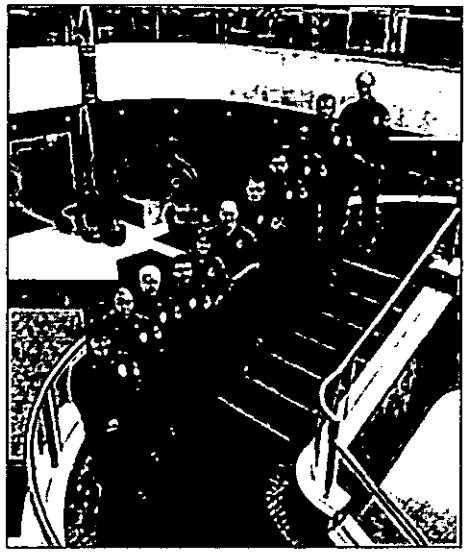
In an effort to assist the Alaska Department of Corrections (DOC) in meeting their recruitment and retention needs, UAA's Kenai Peninsula College (KPC) is preparing to offer two new programs – an undergraduate certificate in corrections and an occupational endorsement certificate in corrections. The programs, which will be available online, are still in the development and approval phase. KPC hopes to make them available to students starting in fall 2009.

Corrections is an area of high demand, according to the Alaska Department of Labor, which estimated there would be a 31 percent increase in the number of correctional officer positions during the period of 2001–2010. Compounding the challenge is the fact that, within the next five years, 27 percent of the State of Alaska's entire workforce, including corrections, will be eligible for retirement, according to the state's division of personnel.

> "This is a great example of an elected official learning of workforce training needs, then approaching the college, and the college responding. This is the way it is supposed to work."

"The university is trying to satisfy the workforce demand of Alaska's industries, and there is clearly a high demand in this industry," says Gary Turner, director of KPC. "This program will help meet the statewide demand for corrections officers, and will offer professional development opportunities for those already employed."

The idea for the new programs was first presented to KPC by Alaska Representative Paul Seaton (District 35 – Homer), who learned of the need through discussions with DOC. After approaching KPC, Rep. Seaton arranged an initial meeting between Turner, KPC's Kachemak Bay Campus director Carol Swartz and DOC deputy commissioner Dwayne Peeples to kick off the planning process. He also supported the effort to obtain $50,000 in state funds to develop the new programs as a pilot project.



▲ *A group of corrections employees pose for a recruitment video.*

"This is a great example of an elected official learning of workforce training needs, then approaching the college, and the college responding. This is the way it is supposed to work," Turner says.

The program development process, which is a partnership between KPC and DOC, is being co-led by Randy Rosencrans, an adjunct professor at the KPC Kachemak Bay Campus and a lieutenant with the Homer Police Department, and Ruben Foster, an adjunct professor at KPC's Kenai River Campus, who serves as the district supervisor for DOC's Kenai Probation/Parole Office.

"We are working hand-in-hand with the industry to create something they need," Turner says. "We are fortunate to have people at the college who know the system inside and out."

▲ *Probation officers transport and book a probationer/parolee into the Anchorage Correctional Complex following arrest. Probationers/parolees have certain terms and conditions they must comply with; if they break those conditions, it can result in their return to custody.*

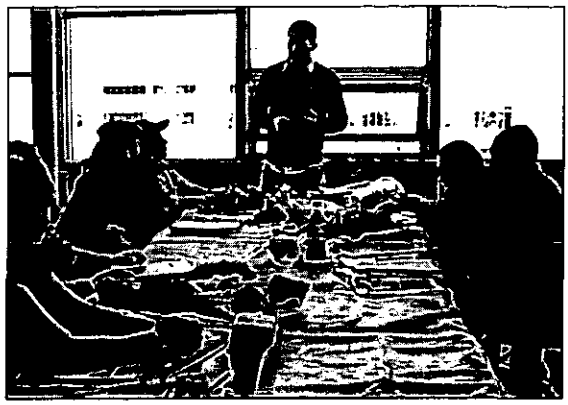
UAF Interior-Aleutians and Chukchi Campuses

New Program Treats Shortage of Veterinary Care in Rural Alaska



▲ *Veterinary sciences students participate in an anatomy lab intensive held in Fairbanks in May 2008. Photo by Frank Francis-Chythlook.*

When thinking of the challenges of living in rural Alaska, access to veterinary care may not be top-of-mind, but the need is still very real. A new veterinary sciences program offered through UAF's Interior-Aleutians (IAC) and Chukchi Campuses aims to address the need for primary and crisis care for animals in Alaska's rural areas.

"Due to the geography of rural Alaska, the availability of veterinary care can be sparse. We are giving students the knowledge, tools and skills to address the needs in their communities," says Suzanne Nolan, veterinary sciences program manager and faculty member at IAC.

The new program offers a veterinary sciences certificate, which was approved by the UA Board of Regents in spring 2007, and an associate of science degree with an emphasis in veterinary sciences, which was approved in spring 2008. The credits from the associate's degree will transfer to a bachelor's degree for students who wish to continue their education in the veterinary field.

"The associate's degree gets people well on their way to obtaining a bachelor's degree. It provides a nice pathway for someone who wants to go all the way to Doctor of Veterinary Medicine," Nolan says.

Additionally, the university is in the process of developing a veterinary technician track for the associate's degree. The proposed track would prepare individuals to take the Veterinary Technician National Examination, which is a requirement to become a licensed veterinary technician.

The proposed track is also being developed to meet the requirements for American Veterinary Medical Association (AVMA) accreditation. In some states, students must have graduated from an AVMA-accredited program to sit for the licensure test. While that is not the case in Alaska currently, Nolan says it will be a requirement in the future.

"The challenge is there aren't any AVMA-accredited programs in Alaska currently, so anyone who wants to sit for the test would have to leave the state," she says. "Having an AVMA-accredited program would be a real benefit to the state. That's our biggest focus right now."

"Due to the geography of rural Alaska, the availability of veterinary care can be sparse. We are giving students the knowledge, tools and skills to address the needs in their communities."

Nolan says the program has received a lot of support from the local veterinarian community. For example, an emergency animal clinic in Fairbanks recently opened its doors to students, who were able to tour the inside of a working vet clinic and familiarize themselves with the machines and equipment.

"This is not just an Alaska issue. There is a nationwide shortage of veterinarians and veterinary technicians. The local veterinarians recognize this and are very supportive of our efforts," Nolan says.

The program is also receiving funding support from a number of sources, including a grant from the U.S. Department of Agriculture, which is helping to pay for program and course development, as well as tuition, fees and travel for Alaska Native students enrolled in the program.

Veterinary continued on p. 4

▲ *Veterinary sciences students visit UAF's Large Animal Research Center in fall 2007 as part of the basic animal husbandry for veterinary science course.*

▲ *Students in the veterinary sciences program discuss the different feed types necessary to provide a complete balance diet for rabbits.*

Veterinary continued from p. 3

"Part of the goal is to bring more Alaska Native students into higher degree-seeking fields," Nolan says, adding that the grant can fund 10 students per semester.

To meet the needs of students who are spread across Alaska, most of the veterinary sciences classes are offered through distance delivery, using the Internet and audio conferences. Selected courses, such as anatomy laboratory or animal husbandry, also have hands-on, face-to-face, intensive laboratory and practical sessions, held in Fairbanks, at rural campus centers or other appropriate locations.

Graduates of the program have many career opportunities available to them, including working in an animal clinic or hospital, wildlife disease management, public health, research, military service, food safety and food production.

"Students who graduate from the program are not limited to working in an animal hospital," Nolan says. "This is a great knowledge base that would allow people to expand into many different career fields."

Spotlight

Suzanne Nolan

In her new position at UAF's Interior-Aleutians Campus, Suzanne Nolan gets to do two things she enjoys the most.

"I love being able to combine veterinary technology and teaching," says Nolan, who is a faculty member and program manager for the new veterinary sciences program offered by UAF's Interior-Aleutians and Chukchi Campuses.

Nolan initially joined the university in January 2008 as the program administrative assistant and veterinary technician. In her new position, which she assumed in August, Nolan is responsible for the organization and logistics for the new veterinary sciences program, which offers a certificate and an associate's degree. She maintains inventory, advises students, assists in curriculum development, teaches courses, and ensures the program is aligned with American Veterinary Medical Association standards.

Before moving to Fairbanks in 2002, Nolan earned a bachelor of science degree in zoology from the University of Idaho and worked in emergency veterinary hospitals in Oregon and Anchorage. After making Fairbanks her home, she worked at the Chena Ridge Veterinary Clinic and the After Hours Veterinary Emergency Clinic, where she still works part-time.

After several years, Nolan decided to expand her horizons and become a middle school science teacher. After obtaining her teaching credential at UAF, she taught at the Star of the North Charter School in North Pole for several years.

"I loved the community of learners and structure at the school. Phenomenal teachers and awesome students," she says. "However, I missed the veterinary medicine experience, so I decided to come back to the field."

Following her decision, Nolan sat for the Veterinary Technician National Examination and became a licensed veterinary technician in January 2008.

"Now I am able to interact with students and pass on my love for veterinary medicine and life-long learning," says Nolan, who is a member of the National Association of Veterinary Technicians and the Alaska Veterinary Technician Association.

Nolan's parents and grandparents were public school teachers, "so my involvement in education may be genetic," she says. "I thank my family for instilling in me a love of learning and a desire to share knowledge with others."

Nolan, who was born and raised in central Idaho, "always felt a pull to the North." She moved to Anchorage in 2001, then on to Fairbanks in 2002.

"I have been happy here ever since," says Nolan, who enjoys all types of outdoor activities, ranging from hiking and biking to kayaking and camping, as well as traveling and "spending time with critters of all shapes and sizes."

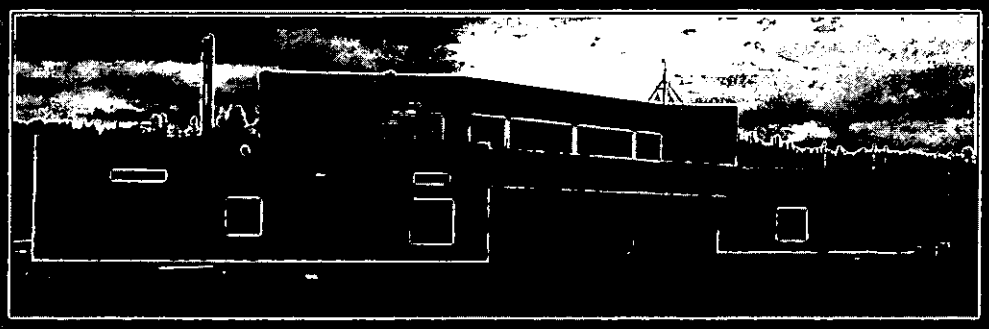
UAF Interior-Aleutian Campus

Clara Johnson, Director



UAF's Interior-Aleutians Campus (IAC) recently celebrated its 20-year anniversary of striving toward its mission to integrate life-long educational opportunities with rural Alaska and Alaska Native communities, cultures and ways of life.

IAC is a decentralized branch campus of the UAF College of Rural and Community Development. It serves Interior Alaska, a geographic area the size of France, as well as communities along the Aleutian Chain, a territory encompassing more than 200,000 square miles of primarily road-less area.

Through rural learning centers and a blended delivery system, IAC delivers coursework to more than 58 rural communities. The campus provides learning opportunities and scheduling to meet the needs of rural, mostly Alaska Native, students who have a lifestyle that incorporates subsistence hunting, fishing and gathering, and who also contend with extremes of weather and other challenges unique to life in rural Alaska.

In addition to serving an expansive area, IAC serves an Alaska Native population that is culturally and linguistically diverse. Nine of the 11 Athabascan language groups and the two distinct Aleut dialects are spoken within the campus' service area.

To meet the unique needs of its students, IAC has developed courses for credit, certificate and associate degree programs that are place-appropriate and career-based. For example, IAC's tribal management program was developed to meet the need of local tribal governments and private employers for skilled fiscal, programmatic and administrative staff. IAC's newest program in veterinary science will meet locally-identified needs for personnel trained to provide basic care for animals.

IAC has put a special emphasis on increasing enrollment in Science, Technology, Engineering and Math (STEM) and Education. With the help of a National Science Foundation-funded project, rural Alaska enrollment in STEM degrees at IAC increased by 1,080 percent – up from 5 students to 59.

All IAC programs have one critical, unique feature – a strong connection to Alaska's tribal people. All programs were developed through consultation with IAC's Council of Elders and aligned with the campus' mission, goals and status as an Alaska Native Serving Institution.

As to the future, IAC plans to continue to develop new programs and partnerships, and continue its history of innovation to overcome the challenges of delivering education in rural Alaska.

UAF Interior-Aleutian Campus Degrees and Programs

- Access to College of Rural and Community Development courses and programs
- Community Health (Certificate, A.A.S.)
- Construction Trades Technology (Certificate, A.A.S.)
- Early Childhood (Certificate, A.A.S.)
- Educator: Para-Professional (Certificate, A.A.S.)
- General Program (A.A., A.S.)
- Human Services (Certificate, A.A.S.)
- Rural Development (B.A, M.A.)
- Rural Human Services (Certificate)
- Tribal Management (Certificate, A.A.S.)
- Veterinary Science (Certificate, A.S.)
- Veterinary Technician (under development)
- Rural Nutrition Science (under development)

Other IAC Programs

- Alaska Tribal Technical Assistance Center – Transportation Training and Support
- Ten Hunee Daal'oye Upward Bound Program
- Early College Program
- Reach to Teach – Bachelors of Arts in Education Support
- Tribal Management Projects (Tribal Justice, Tribal Natural Resource Management, Tribal Government)

UAS Juneau

Automotive Technology Program Receives National Re-certification

The automotive technology program at UAS in Juneau has received a five-year re-certification by the National Automotive Technicians Education Foundation (NATEF) and the National Institute of Automotive Service Excellence (ASE).

NATEF, a nonprofit foundation responsible for the evaluation of automotive programs nationwide, offers certification in eight subject areas. UAS' automotive program, which received its initial certification in 2003, was re-certified in all eight areas, including engine repair, automatic transmissions/transaxles, manual drive train and axles, suspension and steering, brakes, electrical/electronic systems, heating and air conditioning, and engine performance.

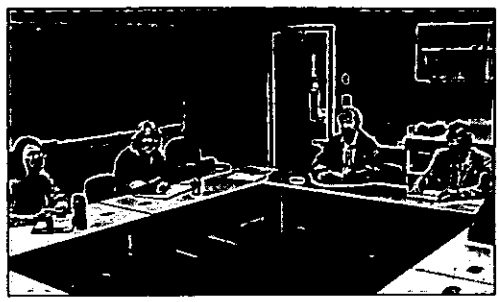
"This is great news for automotive-minded young people and their parents," says Donald Seyfer, chair of NATEF. "Because this program increases cooperation between local education and industry leaders, it gives added assurance that UAS' graduates will be employable entry-level technicians. As a result of the quality education provided by UAS, the motoring public will also benefit since better repair technicians will join the work force."

The UAS automotive technology program, which offers a certificate in automotive technology and an associate's degree in power technology with automotive emphasis, works closely with local industry in Juneau to train students to enter the local work force. The program also assists those already employed with furthering their technical skills.

"Because this program increases cooperation between local education and industry leaders, it gives added assurance that UAS' graduates will be employable entry-level technicians."

"During the past few months, we have worked closely with NATEF to make certain our program continues to meet strict industry standards," says Tony Martin, automotive technology program head. "We are very excited that we have been re-certified to continue the program. Students will be assured of a quality education and shop owners will be assured of getting quality job applicants."

▲ *Tony Martin, UAS assistant professor of automotive technology, shows a group of junior high school students a Dodge Magnum that acts as a training aid in the UAS auto lab.*



▲ *Pictured left to right are Kristy Smith, UAS career education administrative manager; Karen Schmitt, UAS dean of career education; Darrin Marshall, evaluation team member and UAA automotive instructor; and Jerry Million, NATEF evaluation team leader and automotive instructor at North Pole High School. Photo by Tony Martin*

To achieve this coveted recognition, UAS' automotive technology program underwent a rigorous evaluation process, including an extensive self-study followed by a site visit. In April 2008, after UAS submitted its application and self-evaluation materials to the NATEF office, an evaluation team visited UAS to review the self-study documents, inspect the facility and instructional aids, and meet with Martin and members of the administrative team.

The evaluation team, which used nationally accepted standards of excellence in areas such as instruction, facilities and equipment, was led by Jerry Million of the automotive program at North Pole High School, along with team members Darrin Marshall from UAA's automotive program and Sam Russell from Mendenhall Auto Center.

Upon completion of the evaluation, NATEF recommended

"We are very excited that we have been recertified to continue the program. Students will be assured of a quality education and shop owners will be assured of getting quality job applicants."

that UAS be re-certified by the ASE, which is a national nonprofit organization that tests and certifies repair technicians, in addition to certifying automotive training programs. There are more than 2,000 NATEF and ASE-certified programs at secondary and post-secondary institutions across the nation.

Karen Schmitt, dean of career education at UAS, gives credit to Martin for the strong program and successful re-certification.

"Tony (Martin) is dedicated to making the UAS automotive technology program an area of excellence for UAS. The re-certification of the program rewards Tony's dedication," she says.

▲ *Pictured left to right are Tony Martin, UAS assistant professor of automotive technology; Jerry Million, NATEF evaluation team leader and automotive instructor at North Pole High School; and Darrin Marshall, evaluation team member and automotive instructor at UAA. Photo by Tony Martin.*

UAF Tanana Valley Campus

Program Trains Paralegals to Meet Local Need

In the early 1990s, around the time the paralegal studies program was in development at UAF's Tanana Valley Campus (TVC), a local law firm had just hired a paralegal from the Midwest after completing a nationwide search.

"All of a sudden, people realized we were importing people for jobs," says Ed Husted, paralegal studies program coordinator at TVC. "They started asking 'why can't we train them here?'"

▲ *Melonie Robinett, the recipient of UAF's 2007 Ruth Lister scholarship, plans to graduate from TVC's paralegal studies program at the end of the fall 2008 semester. Photo by Todd Paris, UAF Marketing and Publications.*

Jump forward to present day, and TVC's paralegal studies program is the main source of paralegal employee candidates for Fairbanks-area law offices.

"If you need a paralegal, you don't need to go to the Midwest anymore," Husted says. "Just give me a call."

The program, which offers an associate's of applied science degree in paralegal studies, trains students for employment as paralegals in both private and government law offices. Upon graduation, students are qualified to work under the supervision of a lawyer, performing rudimentary legal research; producing drafts of letters, office memoranda, pleadings, contracts, wills and similar documents; conducting client and witness interviews; engaging in basic fact-finding and investigation; and assisting in trial preparation and discovery.

"Our goal is to give students practical skills and get them into the job market," Husted says, adding that, in addition to training students to enter the field, the program also provides opportunities for currently practicing paralegals to continue their education or upgrade their existing skills.

The program, which graduates an average of 12 – 15 students per year, enjoys an almost 100 percent job placement rate. Husted, along with the eight adjunct faculty members and the program advisory committee, actively assists graduates in locating employment through frequent contact with the law firms and government offices that make up the local job market. Husted says many students find work even before they complete the program.

> "If you need a paralegal, you don't need to go to the Midwest anymore. Just give me a call."

Husted credits part of the job placement success rate to the fact that the program size is kept in line with current community needs.

"We're careful to graduate an appropriate number of students to meet the needs of the community. People don't want to get a degree that doesn't lead to employment," Husted says, adding that the program is focused on meeting the needs of the Fairbanks area, but that students are prepared to work anywhere.

While many students go directly from graduation to employment, others use the degree as a stepping stone to obtain higher degrees. One of these students is Melonie Robinett, who recently completed her required paralegal internship and plans to graduate from the paralegal studies program at the end of the fall 2008 semester. Robinett, the recipient of UAF's 2007 Ruth Lister scholarship, recently told Husted she may decide to pursue a bachelor's degree in political science or justice at UAF prior to entering the job market.

When she does seek employment, Robinett and all of the other paralegal graduates will find the program's American Bar Association (ABA) approval is a valuable asset.

"ABA approval carries credibility and opens doors. If you have a degree that is ABA approved, that will get you the interview. That will get you the job over the guy who doesn't have an ABA-approved degree," Husted says, adding that ABA approval is a distinction enjoyed by only approximately 25 percent of the paralegal programs in the nation.

The TVC program, which was last approved in 2001, is currently in the re-approval process, which includes an in-depth application and a site visit. Husted says he expects the program to be re-approved after the site visit in September.

In addition to the TVC paralegal studies program, the UAA justice department also offers a paralegal certificate program that is approved by the ABA.

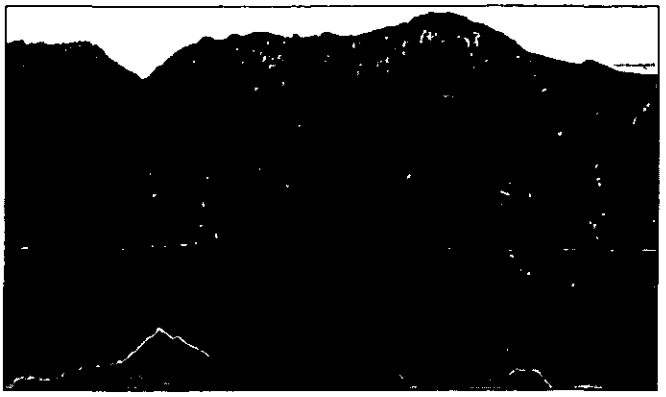
UAF Geophysical Institute

Alaska Volcano Observatory Marks 20th Anniversary



▲ *The former crater lake on Kasatochi Island in the Aleutians. Photo by Brie Drummond, courtesy of U.S. Fish and Wildlife Service.*

When officials decided this summer to cancel dozens of flights in and out of Alaska because of volcanic ash in the flight routes, they relied on information from the Alaska Volcano Observatory (AVO). Reports from AVO also prompted scientists to be evacuated from Alaska's Kasatochi Island because of an impending eruption at the volcano in August. These are just two examples of efforts made by AVO, which marked its 20th anniversary of volcano hazard mitigation and research in Alaska this year.

AVO, which is a collaborative project between the UAF Geophysical Institute, the U.S. Geological Survey, and the Alaska Division of Geological and Geophysical Surveys, was formed in 1988, in response to the 1986 Augustine Volcano eruptions. Those eruptions, which caused significant disruptions to air travel in southcentral Alaska and raised concerns among residents of nearby communities, uncovered a lack of tools and infrastructure to monitor and warn officials and the public about volcanic activity and risks.

▲ *Looking down on the former crater lake on Kasatochi Island in the Aleutians. Photo by Dave Schneider, copyright Digital Globe.*

Since its founding, AVO has sought to fill that need, focusing its efforts on three primary objectives – to monitor and study Alaska's hazardous volcanoes; to assess, predict and record volcanic activity; and to provide information and warnings of volcanic hazards to officials and the general public.

Working closely with the Federal Aviation Administration, National Weather Service, other response agencies, and the public and private sector, AVO has responded to more than 40 volcanic eruptions in Alaska over the past 20 years, including three this summer alone. One notable eruption was Mount Redoubt in 1989 and 1990 – the first major eruption AVO responded to. That eruption, which nearly caused the catastrophic crash of a passenger jet that encountered airborne ash, underscored the importance of AVO's work in Alaska.

"The impact of volcanic activity on the aviation industry is significant, and the stakes are high," says Steve McNutt, a UAF research professor and the coordinating scientist at AVO.

Today, AVO continues its important work in Alaska, where there is volcanic activity almost daily at more than 100 volcanoes in the region. AVO is now recognized worldwide as a leader in the monitoring, research and education of volcanoes and volcanic hazards. In fact, AVO has the world's largest volcano monitoring network, incorporating seismic, GPS, Web cameras and infrasonic sensors. While the monitoring network has come a long way in 20 years, McNutt says there is an ongoing effort to expand and improve.

"The job is not done," he says. "We've taken on a big job and we're trying to do it right."

In addition to research, hazard assessment and eruption monitoring, AVO is also playing a key role in educating and training future volcanologists. Volcanology students at UAF have the opportunity to work side-by-side with research scientists at UAF's Geophysical Institute, as well as with professionals at other AVO partner agencies.

"Students are involved in all phases of operation. They take classes, do research projects, analyze data, and assist with crisis response," McNutt says. "Here, it's not just hypothetical work in a classroom. This is a real operating volcano observatory, which gives students the extra elements of reality and rigor."

In AVO's first 20 years, more than 65 past and current students have been involved in the program. This includes students who already earned advanced degrees at UAF, and students currently working on AVO-related projects. AVO graduates have gone on to prestigious positions within government and academia, both in and out of Alaska. Of those who stay in the state, many continue their careers at AVO, where they carry on the tradition of research and education begun 20 years ago.

UAA Center for Human Development

Alaskans with Disabilities Benefit from Workforce Development Efforts

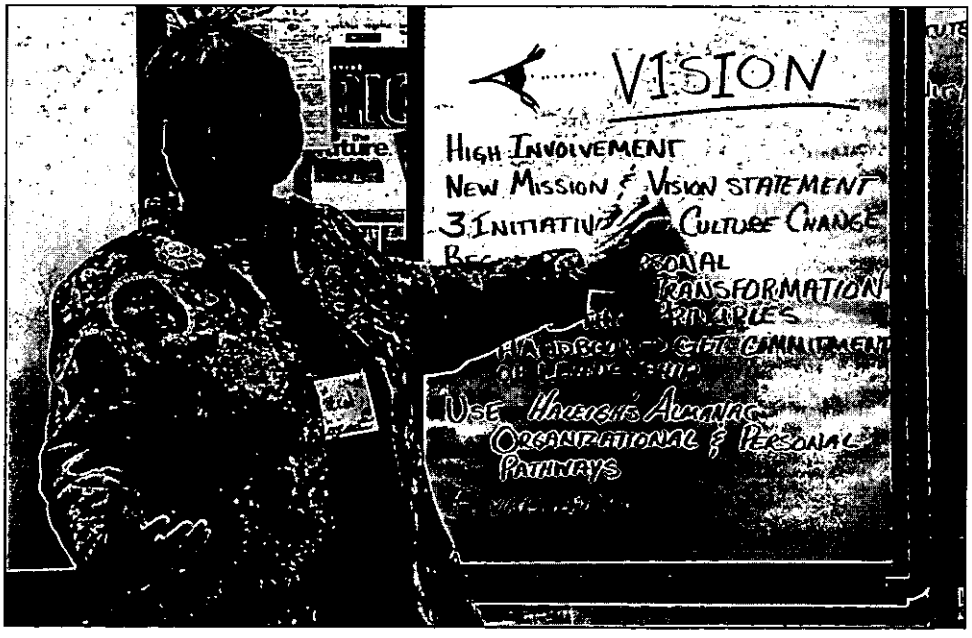
More than 85,000 individuals and families in Alaska experience disabilities, and serving a population of this size takes a considerable number of employees. Developing this workforce – and making sure the workforce is adequately trained – is a main priority at UAA's Center for Human Development (CHD).

CHD, which is housed in UAA's College of Health and Social Welfare, is a University Center for Excellence in Developmental Disabilities Education, Research and Service, and is authorized by the Developmental Disabilities Assistance and Bill of Rights Act of 2000. There are 67 such centers across the U.S., at least one in every state and territory, and CHD is the only one serving Alaska.

CHD's mission is to improve the quality of life for people who experience disabilities and their families, explains Kelly Donnelly, director of CHD's Community Supports Training Network. Part of achieving that mission, Donnelly says, is workforce development, with an overall goal of building capacity and increasing professionalism of the direct service workforce in disability and human services.

"For people who are already working, we want to provide opportunities for them to build on existing skills, while also training those just entering the workforce," Donnelly says. "We can also be a resource for employers in the areas of recruitment and retention, apprenticeships, training and staff development, and informal and formal recruitment networks."

CHD's numerous workforce development efforts currently include the Learn as You Earn program, the Trust Training Cooperative, the Long-Term Care Apprenticeship program, and Children's Behavioral Services projects, among others.



▲ *Carol Switzer, one of CHD's community faculty who works at Denali Center in Fairbanks shares the importance on having a "vision."*

Learn as You Earn

Learn as You Earn, a statewide, distance-delivered program offered in partnership with Prince William Sound Community College, allows students to pursue an associate's degree or certificate in disability services, while continuing to live and work in their home community.

"This program was started because social service agencies were finding that too many staff were getting training, but it never added up to anything. No degree, no certificate, no occupational endorsement," says Dr. Marjorie Kassier, associate director of CHD.

Learn as You Earn is directed at people who provide community, familial, workplace, educational or respite support to children or adults with disabilities. Approximately 98 percent of the students are already working.

"The goal is to provide skills and knowledge to people who are already working in the profession, but who may have been hired with little or no prior knowledge or training," Kassier says, adding that more than 3,000 disability services credit hours have been delivered since the program's inception 12 years ago.

All of the Learn as You Earn coursework is delivered via distance, using audio conferences, videos and printed materials. This fall, the program will also begin delivering classes online for the first time. In addition to the classes, students must also complete 250 hours of supervised fieldwork, which takes place where the student is already living and working.

While holding the certificate or degree is certainly a benefit, Kassier says many students come away from the program with something even more important.

"The message most students receive is that what they are doing is a profession. They realize it's more than

just being a nice, caring person. There are skills and knowledge to be learned, and what they do has incredible impact on people with disabilities," Kassier says. "That's a big deal, because employers have trouble retaining people who don't feel proud of what they are doing."

Trust Training Cooperative

The Trust Training Cooperative, a new workforce development undertaking for CHD, is an effort to coordinate and provide training, education and career development opportunities for people working with the beneficiaries of the Alaska Mental Health Trust Authority.

The Alaska Mental Health Trust Authority, often referred to as simply "the Trust," is an Alaska organization dedicated to assisting people with mental illness, developmental disabilities, chronic alcoholism, Alzheimer's disease and related disorders, and traumatic head injury resulting in permanent brain injury.

"The Trust works to identify areas of service needs, put programs in place, and work with the university and the state to coordinate services so they are more effective," says Beverly Tallman, CHD associate director.

One of the major issues identified by the Trust was a lack of access to education and training for staff serving Trust beneficiaries, especially those at small agencies or in rural areas. In response to this issue, the Trust worked together with CHD to develop the Trust Training Cooperative last summer.

Through the cooperative, CHD is now in the process of setting up two new programs – a learning management system, which will allow staff to track all trainings completed, and a learning content management system, which will enable agencies to easily develop and share trainings. Both will be launched as pilot programs this fall.

▲ *Learn as You Earn students utilize distance-delivery technology to pursue associate's degrees or certificates in disability services.*

"We expect the result will be better-trained employees, improved employee recruitment and retention, and better outcomes for the consumers who receive support services," Tallman says.

Long-Term Care Apprenticeship Program

Similar to apprenticeships in other industries, CHD's new Long-Term Care Apprenticeship program accepts people who are already employed, provides them with training, and places them alongside an experienced mentor to learn a trade.

The apprenticeships program offers two focus areas – one for certified nursing assistants (CNAs) working in long-term care facilities, and one for in-home and community-based service providers.

Through the CNA apprenticeship, students select from one of four specialty areas, including dementia care, restorative care, geriatrics and leadership. They then complete 10 weeks of distance-delivered classes through Prince William Sound Community College, as well as 1,000 hours of on-the-job learning for each specialty. At the end of their apprenticeship, they receive a nationally recognized certificate of apprenticeship from the U.S. Department of Labor.

The second apprenticeship, directed toward in-home and community-based service providers, includes 240 hours of classes, plus 3,000 hours of on-the-job learning. Students who successfully complete the program earn a direct service specialist occupational endorsement offered through Prince William Sound Community College.

In addition to coordinating the apprenticeship program, CHD also helps students find scholarship money.

"We work to find pockets of resources so people can have their training paid for," Tallman says. "We're focusing on how to get training to the least-trained and lowest-paid employees."

Children's Behavioral Services

CHD is involved in numerous workforce development projects in the area of children's behavioral services, including a certificate program for people who work in children's residential services, efforts to recruit more Alaska Natives into the profession, a network to connect certified person-centered planners with consumers needing their services, and several others.

Disabilities continued on p. 12

Disabilities continued from p. 11

In just one example, CHD is providing administration and training activities for the State of Alaska's Fetal Alcohol Spectrum Disorder (FASD) and Severe Emotionally Disturbance (SED) Demonstration Project, also called the 3M Project.

The goal of the project, which was launched in October 2007, is to reduce the number of youth who are dual-diagnosed with FASD and SED, and are being treated in residential psychiatric treatment centers. Specifically, the project focuses on modeling desired behaviors, mentoring youth, and monitoring them as treatment is delivered.

"We're trying to show there is a viable alternative to residential psychiatric treatment centers for youth who are diagnosed with FASD and SED," says Donnelly.

The project, which allows the state to use Medicaid money that was formerly spent on residential psychiatric treatment on new home and community-based services, is one of only 10 states chosen for the demonstration.

As part of the project, CHD is coordinating a conference, which will be held October 7 – 10, 2008 at the Anchorage Hilton Hotel. The conference, which will present FASD education and highlight innovative research, practices, programs and partnerships, is targeted at advocates, direct service professionals and paraprofessionals, clinicians, employment support providers, parents, state agency personnel, and others serving youth with FASD and SED.

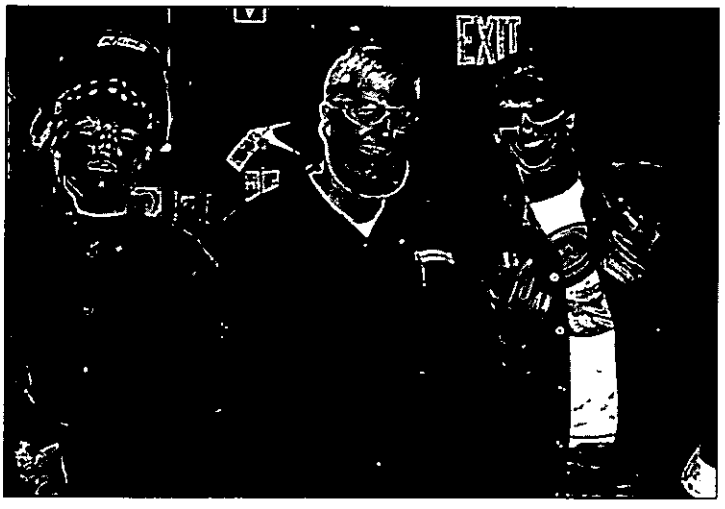
UAA Kodiak College

High School Students Get Head Start on Welding Career Education



▲ *Curt Sather (middle), a certified welding inspector and adjunct instructor at Kodiak College, recently provided certification testing to high school students participating in the welding tech prep program in Kodiak. Sather is pictured here with tech prep students Eli Baker (left) and Caleb Heinrichs (right), after Heinrichs successfully passed a certification test.*

When the students at Kodiak High School accept their high school diplomas next spring, several of them will likely also be graduating with a certificate in welding from UAA's Kodiak College.

Through the tech prep welding program, which is a partnership between Kodiak College, the Kodiak Island Borough School District and local industry, students can earn college credit and industry certifications while still in high school. Upon completion of the certificate requirements, students can graduate with not only their high school diploma, but with an undergraduate technology career specialty certificate in welding, as well.

Preparing students to meet employment demand in the construction industry is a high priority for Kodiak College. According to the State of Alaska Department of Labor, job opportunities in the construction industry are expected to grow 21.2 percent between 2004 – 2014. In addition to the 3,750 new jobs that will be created by that growth, a total of 4,001 employees will also be needed to replace a retiring workforce.

"This clearly demonstrates the urgency to develop and provide training and education opportunities that will prepare Alaskans with the knowledge and skills necessary to support future workforce needs within Alaska's construction industry," says Lorraine Stewart, career and technical program coordinator at Kodiak College.

According to the State of Alaska Department of Labor, job opportunities in the construction industry are expected to grow 21.2 percent between 2004 – 2014. In addition to the 3,750 new jobs that will be created by that growth, a total of 4,001 employees will also be needed to replace a retiring workforce.

The tech prep program began delivery in fall 2007, and a total of four high school students are on track to finish the program requirements and obtain the certificate in spring 2009, Stewart says. Even if all of the students do not complete the program requirements, she adds, they will have earned college credit and industry

"These programs reflect the college's interest in providing high-quality, relevant programs that support community partnerships and prepare Kodiak students for career opportunities locally and statewide."

certifications that provide a valuable head start in their future academic careers and in obtaining employment.

In addition to the high school students participating in the tech prep program, there are also numerous students pursuing the welding certificate at the college level.

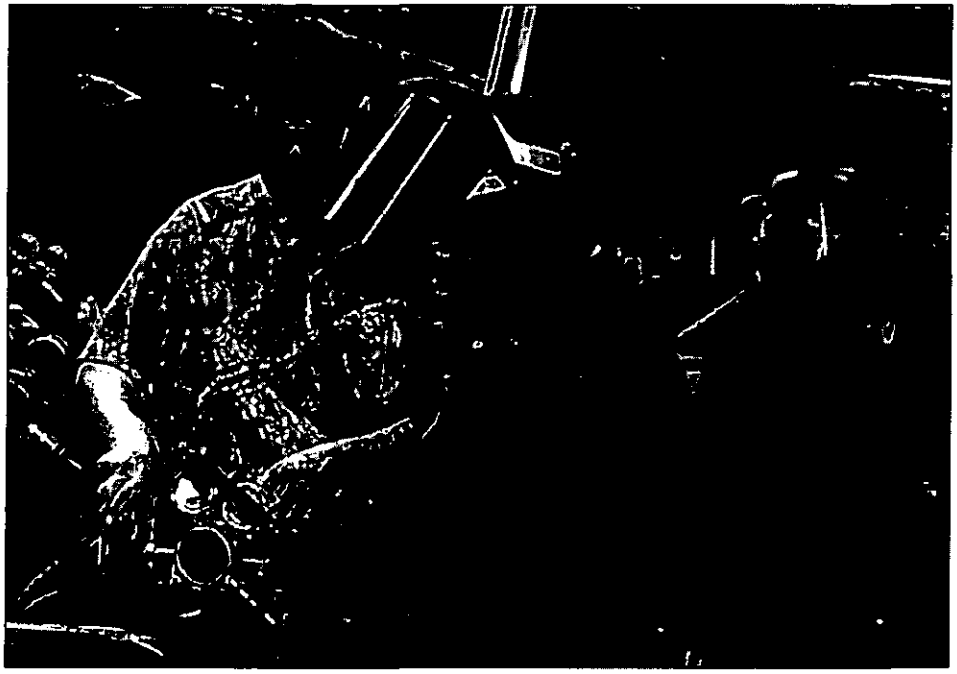
To obtain the welding certificate, students must complete nine classes, plus an internship. Through the tech prep program, high school students can complete five classes at the high school for dual credit, and take the remaining four courses at the college. In addition, students must complete an internship. This summer, several high school students are participating in welding internships at local businesses.

"From the feedback we've received, (employers) are very happy with the students' work. Employers are seeing that students are coming out prepared and that they have the foundational skills. The students are setting a good precedent for the future," Stewart says.

In addition to classes and an internship, both high school and college students can complete testing for welding certifications. During 2008, there were 28 successful tests, which included 10 by high school students.

"The certifications help when an applicant goes to apply for a position. It helps them get the job over someone who doesn't have the certification," says Anthony Cavan, who teaches welding at Kodiak High School and is also an adjunct welding instructor at Kodiak College.

The response from local business and industry to the welding program has been very positive, Cavan says.



▲ *Anthony Cavan (left), the Kodiak High School welding instructor and adjunct instructor at Kodiak College, explains how to safely operate an oxy-acetylene torch to Benjamin Watkins (right), a Kodiak College student.*

"We've gotten great support from the local business community," he says. "The local businesses are not only supporting students with employment, but also with time, supplies and materials."

Stewart adds that several businesses and organizations have also stepped up to help pay for welding courses for the high school students.

Kodiak College plans to continue promoting, enhancing and increasing capacity of the welding program, Stewart says. For example, the college recently received funding to purchase a welding simulator that will provide training opportunities to students living in rural villages surrounding Kodiak Island.

"The purchase of new, up-to-date equipment and portable training materials is important because it expands teaching capacity and increases student enrollment both on the local campus and in rural locations," Stewart says.

In addition to the certificate in welding, Kodiak College also offers an associate of applied science technology degree and an undergraduate technology career specialty certificate in industrial safety and construction technology. The new certificate in construction technology will be offered starting this fall, and Stewart says the college hopes to build a construction tech prep program with the high school, using the successful welding program as a guide.

"As designed, the technology degree and certificate programs at Kodiak College will prepare Alaskans to meet future workforce and economic opportunities within the construction industry throughout the state of Alaska," Stewart says. "These programs reflect the college's interest in providing high-quality, relevant programs that support community partnerships and prepare Kodiak students for career opportunities locally and statewide."

UAA & UAF Engineering Programs

University Ramps Up Efforts to Double Engineering Grads by 2012

Hearing the cries from across the state for more engineers, UAF and UAA have made a joint commitment to double the number of engineering graduates by the year 2012, bringing the total number of UA graduates to at least 200 per year.

The move came in response to the needs of an industry looking forward to consistent growth, while also battling high vacancy rates, often high turnover rates due to out-of-state hires, and a wave of imminent retirements.

"There are steady drivers, like retirements and general growth of the industry. Then, there are the big things that make major regime shifts. The gas pipeline is one of those. If the gas pipeline goes through, it'll have a huge impact on the demand for engineering professionals," says Doug Goering, dean of UAF's College of Engineering and Mines.

According to Rob Lang, dean of UAA's School of Engineering, there are already hundreds of engineering positions open in Alaska – and that doesn't include new projects on the horizon.

"No matter where you go, there are lots of vacancies that companies haven't been able to fill, and that will continue to increase with new projects," he says. "Whether it is the gas pipeline, wind projects or coal gasification, the number of projects potentially out there will increase the need for engineers. Companies want us to respond by getting more students into the engineering programs."

The university is meeting the challenge head-on, implementing plans that combine recruitment initiatives with retention techniques, and culminating with efforts to match students with the right jobs.

"We want to get more students in, and then make sure they're successful," Goering says.

Recruitment efforts at both UAA and UAF focus on outreach to local high schools, as well as building awareness and interest in engineering amongst high school students. One of the major efforts is the university's support of an engineering career academy that is being launched as a pilot project at two Alaska high schools this fall. The academy, which is being tested at Lathrop High School in Fairbanks and Dimond High School in Anchorage, provides students with the opportunity to take pre-engineering courses at the high school level.

"No matter where you go, there are lots of vacancies that companies haven't been able to fill, and that will continue to increase with new projects. Companies want us to respond by getting more students into the engineering programs."

"It's a special project designed to increase the level of awareness of high school students, and help them be better prepared to pursue an engineering degree in college," says Goering, adding that the university is doing everything it can to support the new project.

Faculty and staff at both UAA and UAF are also involved in numerous engineering-related activities at the middle and high school level. For example, staff members have mentored teams competing in robotics competitions at the state, national and even international level, and have also volunteered for events such as Math Counts, a nationwide math program for middle school students.

"These kinds of activities generate excitement and enthusiasm, and that translates into interest in pursuing engineering," Lang says. "Once students get involved, they often realize it's an interesting, challenging, fun career path."

Another strong recruitment tool for the university is the Alaska Native Science & Engineering Program (ANSEP), which is a program that seeks to increase the number of Alaska Natives in the field by working with students from the time they are freshmen in high school all the way through graduate school.

The university recognizes that recruiting students into an engineering program is only the first step, though.

"Once we get students to the institution, we do everything we can to make sure they're successful," Goering says. Retention efforts at UAF include better advising, opportunities for engineering students to live in close proximity in the dorms, more social activities, and enhanced engineering labs, where students can go to get help with their classwork.

"We want to show students what they're supposed to do, give them the extra help, make them feel welcome, and help them have an enjoyable time. It makes a big difference. We have a very good retention rate," says Goering, adding that about 80 percent of freshmen in the engineering program return for their sophomore year. "We believe these initiatives to help support students once they are here will have a significant impact on graduation rates."

At UAA, retention efforts include

a design competition, which allows students to design, build and demonstrate a project exemplifying something they've learned in class. Faculty members also make a conscious effort to engage undergraduate students in research projects.

"We want to make learning more exciting, more project-based. We want students to actually use what they learn, and get them engaged beyond just the classroom," Lang says. "It seems to be very effective."

The final piece of the puzzle is connecting students with internship opportunities and, eventually, employment in the real world.

"Because there are so many vacancies, there are lots of internship opportunities for students. We try to help them find work opportunities that allow them to put their skills into practice. That translates directly into what they will be doing as an engineer," Lang says, adding that faculty members work closely with UAA's Career Services Center to assist students with internships and employment.

"Because there are so many vacancies, there are lots of internship opportunities for students. We try to help them find work opportunities that allow them to put their skills into practice. That translates directly into what they will be doing as an engineer."

Even though the effort to grow the number of engineering graduates is in its early stages, both campuses are already seeing an impact. For example, UAA's program has grown 20 percent a year for the past three years. And UAF has seen a large surge of incoming freshman engineering students – an 85 percent increase in fall 2007 alone.

With this kind of growth, there are always growing pains. At UAA, for example, the issue is space.

"The challenge now is that we're out of space with the students we have," Lang says. "But it's a wonderful challenge to have."

Both Lang and Goering say the UA statewide system has placed a significant emphasis on engineering, especially when it comes to funding. For example, Lang says the UAA School of Engineering recently hired seven new faculty members, and a new engineering facility is at the top of UAA's new capital priorities.

"UA has really gotten behind funding the facilities and staff we need," he says.

Chevron

Chevron Donates $1 Million
to Benefit UA Workforce Programs

Chevron, one of the world's leading energy companies, has donated $1 million to support UA's Alaska Native Science and Engineering Program (ANSEP), and the Process Technology, Instrumentation and Computer Electronics programs located at UAA's Kenai Peninsula College (KPC) Kenai River Campus. This gift is the largest single corporate gift that KPC has received in its 44-year history.

Chevron has recently increased its activity within Alaska. Currently, Chevron has over 400 employees in Alaska and produces 34,000 barrels of oil equivalent daily. With this increase comes the need for a larger workforce, particularly in the fields of engineering, process technology and instrumentation.

"Chevron is committed to support the communities where we work," says John Zager, Chevron Alaska manager. "We believe in recruiting and training locally, and we want to be an active contributor in helping to grow Alaska's workforce for the future."

Process technology is one of the fastest growing programs at UA. "Chevron's generous commitment to our programs will have an incredible impact on our current and future students," says Gary Turner, director of KPC. "We plan to use the funds to upgrade teaching labs, to purchase industry-standard training equipment, and to establish a scholarship program in these areas of study."

ANSEP, another fast-growing program at UA, increases recruitment and retention rates among Alaska Natives at the university level. ANSEP students at UAA will benefit from Chevron's gift through expanded program and support opportunities.

UAA Kachemak Bay Campus' Writers' Conference

Inspiring Setting Draws Diverse Writers for Eighth Annual Conference

▲ *Best-selling author Anne Lamott, who penned the nonfiction "Bird by Bird," is the keynote speaker at the eighth annual Kachemak Bay Writers' Conference, which takes place June 6 - 10 in Homer. (Photo by Mark Richards)*

From June 6 - 10, a diverse group of accomplished authors, aspiring writers, literary enthusiasts, students, teachers and professionals will gather in Homer for Alaska's premier statewide writing event – the eighth annual Kachemak Bay Writers' Conference.

The nationally recognized conference, which is held at the Land's End Resort in Homer and is sponsored by UAA's Kenai Peninsula College – Kachemak Bay Campus, features five days of workshops, readings, craft talks and panel presentations focused on fiction, poetry, nonfiction and other genres, as well as delving into the business of writing.

"This conference brings writers, students, literary enthusiasts and others from across the U.S. to discuss the art, process and techniques of writing, along with related topics, such as publishing," says Carol Swartz, director of the Kachemak Bay Campus. "Participants refine their writing and gain new ideas and inspiration. They leave this conference with new friends, renewed energy and insights, as well as a refreshed sense of themselves within a greater community of writers."

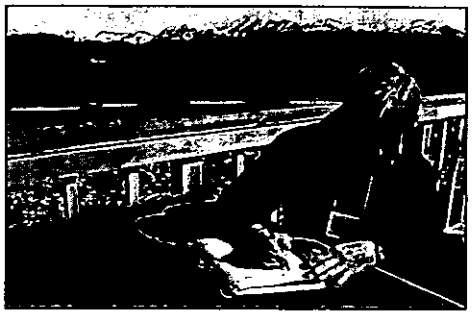
The conference – the only one like it in the state – also provides a valuable professional development opportunity for writers and teachers, including UA faculty members, and is an educational opportunity for creative writing students. Many previous participants have gone on to have their work published, Swartz says.

Homer certainly offers an inspirational locale for the conference, which strives to create an environment that fosters and promotes creativity.

"This conference brings writers, students, literary enthusiasts and others from across the U.S. to discuss the art, process and techniques of writing."

"The community of Homer is such an inspiring setting for the literary and visual arts," Swartz says. "We want to create a nurturing atmosphere for people to connect and learn."

Each year, approximately 150 participants, plus 15 to 20 presenters, attend the conference, which usually sells out by the early registration deadline in May. An additional 200 to 300 people attend the "Festival of Readings," which are public readings held throughout Homer during the conference. This year's "Festival of Readings" will be held on Saturday, Sunday and Monday evenings.



▲ *The conference's location, in Homer on the shores of Kachemak Bay, provides an inspiring location for conference participants to connect, create and learn.*

While many of the conference attendees are from Alaska, there are a growing number who come from the lower 48.

"All year long, I get e-mails from people who are interested in attending or presenting at the conference," says Swartz, who adds that, as of April, more than a dozen registrants from Outside had already registered for this year's conference. "It's definitely on the map for writers' conferences."

This year's conference features 20 presenters, including keynote speaker, Anne Lamott, the best-selling author of the nonfiction books "Bird by Bird," "Operating Instructions," "Traveling Mercies" and "Plan B." Lamott, who has been honored with a Guggenheim Fellowship, has also authored six novels and recently published an essay collection titled "Grace (Eventually)."

While a number of noted writers from Outside participate in the conference, the majority of presenting faculty are Alaska-based.

"One of the conference goals is to feature Alaska writers," Swartz says.

This year's line-up of Alaska presenters include John Straley, a poet, private investigator and novelist from Sitka, who was appointed as the twelfth Alaska Writer Laureate in 2006, and Jo-Ann Mapson, a best-selling novelist and assistant professor with UAA's creative writing and literary arts department.

The conference also features industry experts including Jeff Kleinman, a literary agent and intellectual property attorney, who will participate in panel discussions, such as "Publishing Books in the Digital Age," and lead workshops on topics like "Secrets to Query Letters" and "Agent 101."

The popular, present-day conference grew out of a well-received visiting writers series hosted by the campus in the past. About eight years ago, after the campus received a donation to support and enhance writing skills, it was decided to use some of the funds to organize a writers' conference.

"Initially, it wasn't planned as an annual conference. But there was a tremendous response, and it met the needs of aspiring writers, published authors and literary enthusiasts, and also strengthened the Alaska community of writers. So we've kept doing it and it's grown every year," Swartz says.

The success of the conference, Swartz says, is due in large part to its sponsors, including the Alaska Humanities Forum, Alaska State Council on the Arts, UA BP/ConocoPhillips Fund, Alaska Community Foundation, ConocoPhillips Alaska, Era Aviation, First National Bank of Alaska, KBC Caroline Coons Writers' Endowment, Land's End Resort, Usibelli Foundation, Alaska Airlines and many other agencies and private donors.

"Without them, we could not hold this conference," Swartz says. "The in-kind and direct funding is what makes this possible."

UAF Career Services

Career Services: Your Future is Not Set in Stone

By Megan Otts, UAF Student

Labor statistics indicate the average American will change jobs more than 10 times between the ages of 18 and 40.

Patti Picha, director of UAF Career Services, says that's where her department comes in. Career Services is a free resource available to all UAF students, staff and alumni. The department helps people explore career options, improve job search techniques, sharpen interviewing skills, design and prepare resumes, and ultimately find fulfilling employment. Career Services counselors can also assist with selecting and applying for graduate school.

Taking the first step

Picha says she regularly deals with people who are unhappy with their current jobs and would like to change careers, but are unsure of where to start. Picha recommends taking the STRONG inventory, an assessment tool that matches a person's interests with a specific career field.

Once clients have settled on a career field, counselors help them to identify jobs that sound appealing. Picha recommends O*Net, an online system that matches keywords or skill sets with 10 possible occupations.

Perfecting the professional package

In 2004, Rory O'Neill, a 2001 UAF graduate, became frustrated with his search for a new job in the engineering management/information technology field. According to O'Neill, he was applying for positions, but was not offered many interviews. He scheduled an appointment with Career Services.

"We attacked the resume first, then I received coaching on interviewing and they conducted mock interviews," he says. "I was amazed how well that employment landscape was mapped and understood by Career Services counselors."

Within a few months, a project manager job two pay grades above O'Neill's current position opened up and, after two interviews, he was offered the position. Seven months later, he was appointed to an interim position and, in August 2006, O'Neill beat out a national pool of candidates to become executive director of the department.

Applying for your dream job

Ty Keltner, a 2002 UAF alumnus, came to Career Services last fall with a specific corporate job in mind.

"Career Services helped me formulate a resume to address the direct needs listed in the job description," he says. "They also helped me get in contact with past people who held the position to learn more about the company's expectations and the requirements of the job."

According to Picha, the most important thing to consider when applying for a job is what the company wants and what is expected from applicants.

"I always take the job description, put it next to the potential cover letter and resume, and make sure that the documents they are handing in reflect the job description," she says.

Keltner says he is waiting to hear back on the job, but thanks to Career Services, he feels confident that he submitted a quality resume.

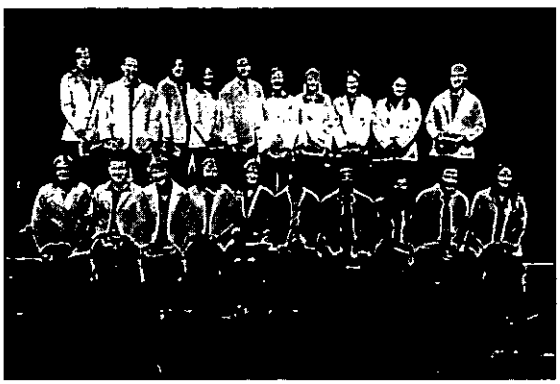
UA WWAMI Program

Alaska's Medical School Grows to Help Meet Need for Physicians

Alaska's population is growing. The number of Alaskans over 65 is estimated to triple during the next 20 years. One-third of Alaska's currently practicing physicians are expected to retire in the next 10 to 15 years. And the new generation of physicians want a more balanced life, with fewer work hours and more stable schedules.

According to the Alaska Physician Supply Task Force, all of these factors combined mean Alaska will need to add 1,100 practicing physicians to the workforce over the next 20 years – nearly double the 1,347 physicians currently practicing in the state.



▲ *Pictured above is the 2007 Alaska WWAMI class – the first class of 20 students and the largest class ever in the Alaska WWAMI program's history. In the back row, left to right, are Rebekah Smith; Adam Schwarz; Linnaea Schuttner; Elizabeth Hankinson; Kenneth Foerster; Tania Deisher; Dana Kerr; Tiffany Kelly; Ileana Bembenek; and Christopher Davis. In the front row, left to right, are Sophie Spencer; Zachary Kaltenborn; Jodie Totten; Summer Engler; Kristin Eastman; Daniel Norfleet; Zachary DeBoard; Claire Doran; Cody Augdahl; and Amanda Beery.*

The task force, which released its report in August 2006, had a number of recommendations for meeting this need. One of the recommendations was to increase the number of students in the Alaska WWAMI Biomedical Program from 10 students per year to 30. The program, which is based at UAA and billed as "Alaska's medical school," took a significant step toward this goal when it doubled its class size from 10 students to 20 this year. Plans for continued growth are underway.

"We're looking to further increase the class size as funding is provided and facilities are available," says Dennis Valenzeno, PhD, director of Alaska's WWAMI program. He adds that the proposed UAA health sciences building, which is currently in the planning phase, would include classroom space to accommodate 30+ WWAMI students.

WWAMI, which stands for Washington, Wyoming, Alaska, Montana and Idaho, is a collaborative education program designed to provide medical school opportunities in states without their own four-year medical schools.

> "WWAMI is Alaska's medical school and we're training physicians here in Alaska."

Through the state-subsidized program, Alaska students can earn their doctor of medicine (MD) degree through the University of Washington (UW) School of Medicine, while only paying UW's in-state tuition. Students are admitted to the program through UW, and become part of a class of more than 180 students from all five WWAMI states.

Although the WWAMI program is accredited through UW, Alaska students are able to complete three of their four years of medical school in Alaska. Students from Alaska spend their first year completing basic medical science courses at UAA. Students from all five WWAMI states spend their second year at UW. They are then able to complete their third and fourth year clinical clerkships in any of the WWAMI states, including Alaska. Alaska's clerkships are offered at a variety of clinics and hospitals throughout the state.

"WWAMI is Alaska's medical school and we're training physicians here in Alaska," Valenzeno says. "Students can complete up to three of their four years of medical school here in the state."

By increasing the time spent studying in Alaska, program organizers hope to maintain the high percentage of WWAMI graduates who return to Alaska to practice medicine. Since Alaska joined the WWAMI program in 1971, 50 percent of the Alaska graduates have returned to practice in their home state. When including graduates from other WWAMI states who come to work in Alaska, the number increases to 85 percent.

To successfully increase the number of physicians in Alaska, Valenzeno says there also needs to be a focus on building a "pipeline" of future students who are interested in the profession, aware of the WWAMI program, and qualified to apply.

"Due to the time it takes to produce a physician, we need to be planning ahead and anticipating 10 to 20 years in the future," he says. "We need to be educating future students about the opportunities to go to medical school in Alaska. We also need to make sure they are making themselves as eligible and competitive as possible, by taking the right classes in high school and during their undergraduate years."

To accomplish this, WWAMI offers a number of community outreach programs, such as the Della Keats/U-DOC Summer Enrichment Program. Through the six-week,

summer program, disadvantaged, minority high school students explore health care careers and get an introduction to college life by living and studying on campus.

The concurrently held Short-term Education Program for Under-represented Persons (STEP-UP) Program is similar, but has more of an emphasis on research. At the end of the summer, STEP-UP students travel to Washington DC, where they present their research findings at the program's national conference.

"Both of these programs encourage minority, disadvantaged students to prepare for and enter health careers," Valenzeno says.

WWAMI also hosts the annual Alaska PreMed Summit, a one-day event designed to educate potential students about the WWAMI program and prepare Alaskans to enter health careers. Approximately 200 students, parents and teachers attended the third annual summit, which was held at UAA in March.

In addition to training physicians, WWAMI also assists with a physician assistant training program, called MEDEX, and a dental health aide therapist training program, called DENTEX, which is a program of the Alaska Native Tribal Health Consortium. Both MEDEX and DENTEX are offered in partnership with the UW School of Medicine.

Beyond these programs, WWAMI is also working to develop more research opportunities.

"Through WWAMI, we are trying to fill the mission of a medical school in Alaska, which means we must meet the needs of more than just medical students," Valenzeno says.

UA Statewide Corporate Programs

UACP Moves to New Location

UA Statewide Corporate Programs (UACP), the educational organization established in 1999 to serve the training and education needs of Alaska business and industry, recently moved its offices to the former Alyeska Pipeline Service Company building at 1815 Bragaw Street in Anchorage. UACP was previously located in the University Lake Building on the UAA campus.

▲ *UACP's Anchorage offices are now located at the corner of Bragaw and Reka, near East High School.*

UACP's move was part of the relocation of all of the Anchorage-based UA Statewide offices. In addition to UACP, UA's Land Management, Office of Risk Services, Office of Human Resources, Alaska Distance Education Consortium, UA Foundation, Video Conferencing Services and Network Operations are now all located in the Bragaw building.

Prior to occupying the new office space, the building underwent a complete remodel, including updated lighting, interior design and the addition of an elevator. UACP's office, which is three times larger than before, features a state-of-the-art classroom and a large conference room that can hold up to 20 people. Both the classroom and conference room will be available at competitive rates for use by UACP clients, university groups and other users, based on availability.

"Statewide Corporate Programs now has new offices, with larger, more flexible facilities that will enable us to grow and serve our clients better," says Duane Heyman, UACP executive director. "Those familiar with the old building will not believe the transformation."

Both the classroom and the conference room are located close to the main entrance on the ground floor, have convenient restrooms facilities, and offer plenty of parking.

The modern classroom, which can accommodate up to 40 people, also features Wi-Fi and floor-accessible Internet access; convenient wall and floor power sockets; magnetic white boards/projection screens on all four walls; modular tables to accommodate a wide variety of configurations; comfortable chairs for all-day use; and special lighting.

The conference room may be booked now; the classroom will be available in early June. To make a reservation, contact 907.786.1531 or corporateprograms@alaska.edu.

UAA Department of Anthropology

Master's Program Prepares Alaskans for Anthropology Careers

Anthropology – it may not be a career field that makes headlines very often, like construction or health care, but it is a high-demand field, all the same. Just ask UAA's department of anthropology.

"Agencies in Alaska seem to ask on a yearly basis how many new graduates we will have, because they need the work done now," says Kerry Feldman, UAA anthropology professor who teaches in the department's master's degree program. "Our students are often hired even before completing their master's theses."

▲ *A UAA anthropology professor and student work on excavating a pre-historic site on the Kenai Peninsula, as part of a climate change research project.*

The department established its anthropology master's degree program in 1999, with the support of about 20 federal, state and private agencies and organizations in Alaska.

"The missions and goals of these organizations require that they have employees trained in social science research methods and theory, especially regarding knowledge of Alaska Native cultures, history and pre-history," Feldman says.

The degree offers an emphasis in either general or applied anthropology. Within the applied anthropology emphasis, students can follow specialized tracks, including applied cultural anthropology and cultural resource management. Diane Hanson, coordinator of the graduate program in anthropology, notes that the UAA program is the only applied anthropology training program in Alaska, and one of only 17 programs in the entire U.S. with a cultural resource management track.

"Potential clients have been told that the most popular cultural resource management consultants are already booked two years ahead. Plus, most of the established companies are run by people who will be retiring within the next five to 10 years."

The demand for graduates in the areas of applied cultural anthropology and cultural resource management is increasing, Feldman says, due to the retirement rate of the current workforce, and the growth of agencies and organizations that require employees with these types of skills.

For example, applied cultural anthropology, which focuses on current social issues, is an increasingly high-demand area in Alaska, due to the state's growing diversity.

"Alaska's increasing diversity will require expertise to deliver quality services to diverse populations in health, education, welfare, economic advancement, legal issues and more," Feldman says. "Applied cultural anthropologists can provide this expertise."

The demand for graduates in the area of cultural resource management, which involves the inventory, assessment and conservation of archaeological sites and remains, is also growing. These experts, who are often an important part of project planning and compliance with environmental laws, can educate a client about cultural sites and potential problems, and assist with negotiations and navigating federal regulations.

"Potential clients have been told that the most popular cultural resource management consultants are already booked two years ahead," Hanson says. "Plus, most of the established companies are run by people who will be retiring within the next five to 10 years. Either this will cause Outside companies to move into Alaska to fill the void, or under-qualified individuals will start doing the work."

UAA's program is working to fill that void. In the first eight years of the program, 18 students completed their master's theses. Four of those

▲ *A UAA graduate student in applied cultural anthropology participates in ecological study. This student has now gone on to the PhD program in anthropology at UAF.*

students have gone on to pursue PhD programs, while the other 14 have gained employment with diverse organizations including the U.S. Army Corps of Engineers, Alaska Department of Fish and Game – Division of Subsistence, Alaska Office of History and Archaeology, National Park Service, Environmental Protection Agency, and private research and consulting firms.

All of the employed anthropology graduates, except two, currently work in Alaska, Feldman says. This high rate of Alaska job placement is due, in large part, to the department's successful internship program, which all master's degree students in the applied track are required to complete.

Through the internship program, students receive on-the-job training with organizations including the U.S. Army Corps of Engineers, National Park Service, U.S. Fish and Wildlife Service, Alaska Department of Health and Social Services – Division of Public Health, USDA Forest Service, Alaska Office of History and Archaeology, and private firms.

"The students from our program are often sought after for full-time employment by the organizations they were introduced to as interns," Feldman says.

Feldman adds it's important to note the anthropology program goes beyond providing training to get students a job – it prepares students for life-long careers.

"Our program does not simply train students for a particular job, but provides them with the theoretical, methodological and practical experience needed for a career in their ever-changing fields," he says.

UAS and the Ketchikan Construction Academy

UAS Partners with Construction Academy to Build Local Workforce

Ketchikan, like the rest of Alaska, is facing a daunting challenge caused by the increasing demand for workers in the construction industry – and the inadequate number of interested, qualified employees. Currently across the state, 1,000 new construction workers are needed each year to replace retiring workers – and that number is expected to grow significantly over the next several years.

▲ *The inaugural group of 10 adult students recently completed the first class of the Ketchikan Construction Academy. Pictured left to right in the first row are Nick Chatham, instructor Charles "Chas" Edwardson, John Gabriel and Crispulo Zamora. In the back row are Ben Jensen, Josh Spromberg, Steve McNabb, Christopher Ruecker and Gary Townsend. (Not pictured are students Karl Cox and Richard Nemanic.) (Photo by Wendy Gierard)*

"The workforce is aging, the number of jobs is growing, and the construction industry is struggling to find ways to entice people to come into the industry. We need to find qualified employees," says Pamela Roth, executive director of the Southern Southeast Alaska Building Industry Association (SSEABIA).

These factors were the driving force behind the creation of the Ketchikan Construction Academy, one of six construction academies in the state. In 2006, the Alaska Legislature awarded a $1 million grant to create the Anchorage Construction Academy, a pilot project to recruit, train and place young people and adults into construction jobs.

The success of the Anchorage academy led to a $3.5 million legislative appropriation in 2007 to expand the academies to Fairbanks, Juneau, Kenai, the Mat-Su Valley and Ketchikan. With the support of local chapters of the Alaska State Home Building Association, the statewide academies are expected to provide construction training to 1,000 high school students and 300 adults this year.

"Our ultimate goal is to meet the needs of the construction industry in Ketchikan and have the people we train become employed."

"It's a great way to train a workforce in the community where they'll live and work," says Wendy Gierard, assistant director of workforce development at UAS–Ketchikan, which is a partner in the Ketchikan Construction Academy.

In Ketchikan, the inaugural group of 10 adult students recently completed the academy's first class,

(Construction cont. p.8)

Phone: 907.786.1531 Fax: 907.786.1181 E-mail: corporateprograms@alaska.edu Website: www.alaska.edu/uacp

UNIVERSITY of ALASKA

Addressing Alaska's workforce issues, collaborating with business and industry representatives, and providing solutions for more than 80 years.

(Construction cont. from p.7)

held at the UAS-Ketchikan campus. The three-credit, 50-hour class, called basic construction techniques, used classroom teaching and hands-on experience to provide an overview of tool usage, building procedures and codes, jobsite planning, layout, and foundation, floor, wall and roof framing methods.

"We're teaching them what is expected from an entry-level laborer on the job," says Charles "Chas" Edwardson, a UAS adjunct professor and a local builder.

As a follow-up to the class, the SSEABIA is working to place the students into on-the-job training opportunities with local builders this summer. With support from the grant, the participating builders will receive a financial incentive to help cover wages, in return for hiring, mentoring and training academy participants.

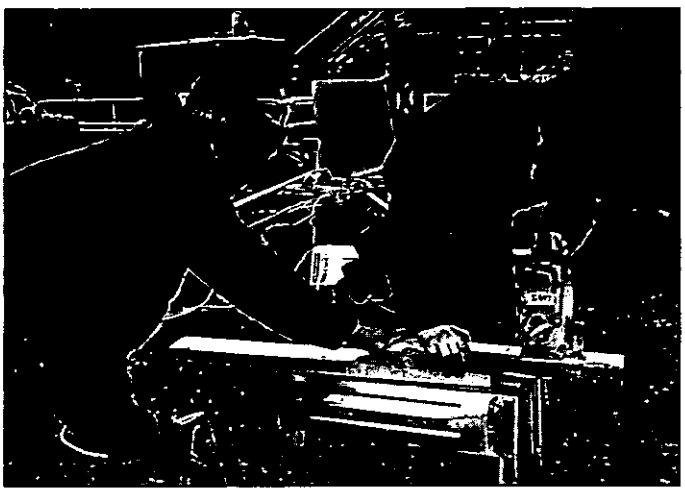
As a next step, the academy plans to offer a series of other courses at UAS-Ketchikan this fall.

"We want to encourage students to take additional courses to round out their skills, so they can pursue an area they're really interested in. There are all kinds of different pathways students can go and we want to share those pathways with them," Gierard says. "Our plan is to provide training that will give students the foundation they need to get into the career of their choice."

A unique aspect of the academy is that there is no cost to the participants – the academy pays for all tuition, books, tools and other supplies.

"It's a nice way for people to get their foot in the door without putting out a lot of money," Gierard says.

The adult training is just one component of the academy. Like the other academies in the state, Ketchikan's construction academy reaches out to high school students, as well as adult learners.



▲ *Ketchikan Construction Academy students Josh Spromberg (left) and Christopher Ruecker (right) work on a project for their basic construction techniques class. The three-credit, 50-hour class used classroom teaching and hands-on experience to provide an overview of tool usage, building procedures and codes, jobsite planning, layout, and foundation, floor, wall and roof framing methods. (Photo by Wendy Gierard)*

"We're working in partnership with the Ketchikan Gateway Borough School District to make sure the curriculum being taught meets the needs of the local industry. We want to make sure students come out with the skills needed to be employed in Ketchikan," Roth says.

Specifically, grant funding is being provided to hire an additional instructor to teach construction trades at the high school. The academy is also working to set up a "tech-prep agreement" with the high school, which allows students to receive high school credit at the same time they are earning college credit for their coursework.

"Our goal is to have the kids coming out of the high school be able to step into the program at the university," Roth says.

Edwardson, who has operated a general contracting business in Ketchikan for the past 14 years, believes the focus on high school students is especially important.

"We're getting older and the younger people are not stepping in," he says. "We need to focus more on vocational training in the high schools. Hopefully, the academy will help generate more students from the high school."

Plus, by piquing the interest of local students and preparing them with the basic skills to enter the workforce, the academy will address another important issue – providing Alaskans for Alaska's jobs.

"If we don't provide Alaskans for Alaska jobs, we'll have a transient workforce," Edwardson says. "Transient workers don't buy homes, cars or boats, or put their kids in our schools. The stability of the local economy depends on us providing Alaskans for Alaska jobs."

In addition to the SSEABIA, UAS-Ketchikan and Ketchikan Gateway Borough School District, other Ketchikan Construction Academy partners include the Associated General Contractors of Alaska, Ketchikan Job Center, Ketchikan Indian Community, Ketchikan Youth Initiatives, and Alaska Works Partnership, Inc.

"Our ultimate goal is to meet the needs of the construction industry in Ketchikan and have the people we train become employed," Roth says.

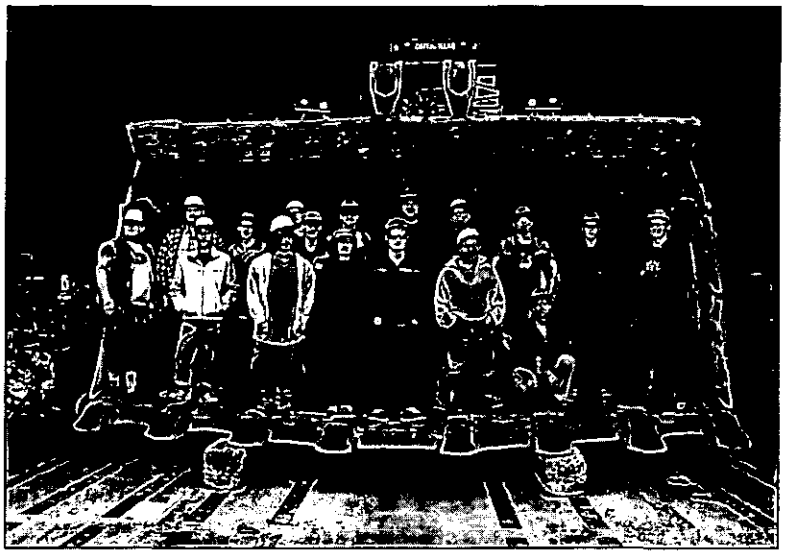
UAF Tanana Valley Campus

Fast Track Training Gets High Marks from Employers, Grads

Since launching the Fast Track Training program two years ago, UAF's Tanana Valley Campus (TVC) has trained 42 students in high-demand job areas, and expects to graduate 57 more this spring. During the third year of the program, which is also the last year students can receive free tuition, program organizers hope to graduate 90 more. The priority application deadline for 2008 – 2009 was in April, and classes begin this summer.



▲ *Fast Track students during a field trip to Fort Knox Gold Mine. (Photo by Nina Tartakoff)*

The primary goal of the Fast Track Training program, which debuted in June 2006, is to meet interior Alaska's workforce needs by providing students with intensive certificate programs in high-growth, high-demand areas. The program offers nine- to 12-month certificate programs in six areas, including diesel/heavy equipment, automotive, instrumentation, health/safety/environmental awareness, drafting/CADD, and power generation.

A quick look at the employment of Fast Track graduates indicates the program is working. Nina Tartakoff, Fast Track Training program coordinator, says many graduates are now working in jobs directly related to their training, with companies such as CH2M Hill, UAF, NANA Services, Warbelows Air Ventures, Flint Hills Resources and Northern Alaska Tour Company. Meanwhile, other students have chosen to continue their education by pursuing higher degrees.

> "With today's shortage of skilled automotive technicians, TVC's Fast Track Training program is a great resource for us."

"Employers have been giving us feedback that they are very happy with the skills students are learning in the program," Tartakoff says.

Seekins Ford is just one company seeing the benefits of the training program.

"With today's shortage of skilled automotive technicians, TVC's Fast Track Training program is a great resource for us," says Al Haynes, parts and service director at Seekins Ford.

The program has also been a success with students like Doug Chichester, who received a certificate in instrumentation through the Fast Track Training program, and also obtained an associate's degree in process technology from TVC.

"There are lots of places to use these skills. You could be working at pump stations on the pipeline, in the gold mining industry monitoring crushers, or at fish processing plants making sure all the systems are functioning at optimum levels. This program is teaching us things on the leading edge of a worldwide technological expansion," says Chichester, who now works as an instrumentation technician for BP.

The Fast Track program was initially funded through a three-year, $1.99 million grant from the U.S. Department of Labor, which allowed TVC to offer free tuition to students for the first three years.

While the free tuition will only be available through the 2008 – 2009 academic year, the six certificates will continue to be offered, but in a less intensive time frame. Future students will be able to take a few courses at a time, rather than committing to complete the entire program in nine to 12 months.

"Many students found it difficult to complete the certificate in a year, while working and taking care of their families," Tartakoff says. "The more flexible timetable for taking courses will be a benefit to some students, though many students liked being able to complete the certificate and get on to further training or out to work in the field."

UAF International Arctic Research Center

UAF Hosts Ninth International Conference on Permafrost

From June 29 – July 3, 2008, approximately 800 people from 30 different countries will gather at UAF for the Ninth International Conference on Permafrost (NICOP). Professors, post-doctoral fellows, graduate students, engineers and other professionals, and government agency representatives are expected to attend the conference, which was convened by the U.S. Permafrost Association, and is themed "permafrost on a warming planet: impacts on ecosystems, infrastructure and climate."

"This meeting is important because it is drawing attention and participation from scientists and engineers around the globe who are all struggling with similar issues."

"The goal of the conference is to bring together a large group of scientists and engineers, so that information can be shared on current topics of interest relating to permafrost in a changing climate," says Elizabeth Lilly, NICOP coordinator. "Gathering individuals from so many countries in one place fosters an environment for sharing and cooperation, which will help all of us prepare and better deal with changes that do occur."

"This meeting is important because it is drawing attention and participation from scientists and engineers around the globe who are all struggling with similar issues," adds Larry Hinzman, director of UAF's International Arctic Research Center and a professor of civil and environmental engineering at UAF.

"Permafrost affects every aspect of our lives in the north," he says. "Our permafrost is warming and, in many places, degrading. This is initiating a myriad of problems for infrastructure stability, but it also initiates changes in ecosystem dynamics. It is important that we share information on our understanding of the changes and our ideas to mediate or adapt to these changes."

The five-day conference will feature daily plenary sessions on a variety of topics, including "living in Alaska: a permafrost-dominated region," "thermal state and fate of permafrost," "engineering challenges in the 21st century," "hydrology and terrestrial processes" and "alpine and polar periglacial processes."

In addition, there will be approximately 400 oral and poster presentations, and a public lecture titled "Mountain Hazards," featuring Andi Kaab. The conference will also include local field trips to the U.S. Army's Cold Region Research and Engineering Laboratory Permafrost Tunnel, the Cold Climate Housing Research Center, Caribou-Poker Creeks Research Watershed, Creamer's Field Migratory Waterfowl Refuge, and other areas with permafrost features.

Two short courses, including a graduate-level course on permafrost and an educational outreach class for K – 12 teachers, and a one-day technical workshop on permafrost foundation construction methods will be held prior to the official start of the conference. Optional field trips, to destinations such as the Dalton Highway, Pogo Mine, Seward Peninsula, Denali National Park, and Arctic Coastal Plain, will also be offered before and after the conference.

This will be the second time the conference has been hosted at UAF; the Fourth International Conference on Permafrost was held in Fairbanks in 1983. This year's conference is significant, as it marks the 25th anniversary of the first conference at UAF, as well as the 25th anniversary of the formation of the International Permafrost Association. Plus, this year's conference coincides with International Polar Year, a two-year initiative focusing international research efforts and public attention on the Earth's polar regions.

In addition to the university, the conference has a number of major sponsors, including Arctic Foundations, Inc., Alyeska Pipeline Service Company, Duane Miller & Associates, and BP Alaska.

While the deadline for paper submissions has already passed, conference registrations continue to be accepted. Registration and cost information, as well as a calendar of events and field trip details, may be found at www.nicop.org.

UAF Interior-Aleutians Campus

New Program Feeds Growth of Nutrition Education in Rural Alaska

UAF's Interior-Aleutians campus (IAC) recently received a $1 million, three-year grant to launch a nutrition education program in rural Alaska. The Troth Yeddha' Nutrition program, which is currently recruiting students for fall 2008, will combine education and outreach efforts with the goal of increasing the number of Alaska Natives working in the nutrition field. In the words of Aleut elder and advisory council member Alice Petrivelli, the program will ultimately "help us to help our people stay healthy."

▲ *IAC students participate in a one-credit, intensive nutrition course offered in collaboration with Tanana Chiefs Conference in March 2008 in Nenana. (Photo by Sarah McConnell)*

The program addresses both industry and health needs in Alaska. According to a post-secondary nutrition education needs assessment prepared for UA in 2005, 64 percent of all Alaskans are overweight or obese – conditions that increase health risks, such as diabetes, kidney problems and high blood pressure.

Alaska Natives are at no less risk for the development of obesity and other health-related challenges. In fact, this population is experiencing the greatest increase of diabetes in all of North America. This is attributed, in part, to the replacement of traditional foods with convenient snacks and highly processed staples.

In addition to outlining health challenges, the 2005 needs assessment identified that additional educational opportunities were needed to train workers to fill vacancies in Alaska's nutrition-related occupations.

"IAC's interest is in providing nutrition education, combined with cultural relevance, to our rural Alaska workforce and students that want to enter this workforce," says Clara Johnson, IAC director.

Currently, the nutrition-related education available in Alaska is limited. UAS's Community Wellness Advocate program offers a nutrition concentration, and the UAA Culinary Arts, Hospitality, Dietetics and Nutrition department offers a minor in nutrition. However, there are no certificates, associate's degrees or four-year degrees in nutrition offered in Alaska.

"Post-secondary nutrition science education is a significant gap in Alaska. Our project will create multiple new entry points to nutrition science education."

"Post-secondary nutrition science education is a significant gap in Alaska," says Sarah McConnell, Troth Yeddha' program coordinator. "Our project will create multiple new entry points to nutrition science education, designed for Alaska Natives and rural Alaskans."

Through the Troth Yeddha' program, students can take the one-credit nutrition and lifestyle change course; the seven-credit, one-semester rural nutrition leadership academy; or rural nutrition services courses that may be used as an area of concentration or for an occupational endorsement that is currently being designed. A certificate and an associate's of science degree in nutrition will also be developed in the future, McConnell says.

With its multiple points of entry, the program truly offers something for everyone. For example, the one-credit class is "for anyone in the community who wants to improve their health," McConnell says.

Meanwhile, the leadership academy is designed for students who are already working in the community and want to use the information in their current jobs, and the rural nutrition services area of concentration and occupational endorsement is targeted at students who are just entering the workforce or are exploring a new career.

The program is currently recruiting students for the first

(Nutrition cont. p.12)

(Nutrition cont. from p.12)

leadership academy, which will begin this fall. A total of 10 scholarships, which cover tuition, books, travel and other expenses, are available for the fall academy. The scholarships are funded through the $1 million grant, which was awarded by the U.S. Department of Agriculture, Cooperative State Research Education and Extension Service's National Research Initiative, Human Nutrition and Obesity Program.

A total of 40 scholarships, including 20 for the leadership academy and 20 for the area of emphasis and/or occupational endorsement, will be awarded over the next three years. Students from the more than 50 communities served by IAC have priority in the scholarship selection process.

"Our dream is to have one student from each village served by the Interior-Aleutians campus complete the program," McConnell says.

Courses, all which were developed specifically for the program, will focus on topics such as nutrition for the generations, nutrition and lifestyle change, Alaska Native food systems, rural nutrition counseling, community nutrition interventions, and current issues in rural Alaska nutrition. The courses will be offered through "blended delivery," which includes face-to-face classes and audio conferences.

All of the courses incorporate outreach efforts, which McConnell says may include elder interviews to discover and share traditional knowledge, or the unique use of community talking circles.

"Our idea is to work in partnership with the community to combine Native knowledge and traditional skills with new wellness knowledge and skills," Johnson says.

UAS and UAA School of Nursing

UAS Partners with UAA to Train Nurses Locally

Not long ago, students in Southeast Alaska who wanted to become registered nurses (RNs) had very limited opportunities to train locally. Meanwhile, local health care providers were importing nurses from Outside, and the entire state was facing a critical nursing shortage.

▲ *Ami Reifenstein, right, a recent graduate of the UAA School of Nursing's associate degree outreach delivery program at UAS, receives instructions in working the equipment in the Bartlett Regional Hospital obstetrics ward from her preceptor, Sandy Frickey, Alaska March of Dimes 2006 Maternal/Child Care Nurse of the Year. (Photo by Michael Penn)*

While Alaska continues to grapple with the need for nurses, a partnership between UAS and the UAA School of Nursing's associate degree outreach delivery program is starting to make a difference for students and the health care industry in Southeast. UAA's outreach delivery program is also making an impact statewide.

"Nurses are needed in very large numbers," says Karen Schmitt, dean for the career education program at UAS. "This program has definitely made a dent. UA partnered with the health care industry to set a goal of doubling nurse graduates within five years, and we've done better than that, going from slightly under 100 to more than 200 RN graduates per year statewide."

Through UAA's outreach delivery program, students in 10 communities across the state who wish to obtain associate's degrees in nursing can be admitted into the UAA program, but complete much of their education in their hometown at local UA campuses. Classes are primarily delivered via the Internet, and the students obtain most of their clinical experience locally. In addition to the 10 outreach sites, students can also pursue the associate's degree at the main UAA campus in Anchorage.

"In the past, students who wanted to become nurses had to go to Anchorage or leave the state. By offering this program, people can get the education they need and find employment in their hometown."

The outreach delivery program was established in 2002, after a task force comprised of members of the health care industry, UA and the UAA School of Nursing was developed to explore ways to increase the number of RN grads in Alaska. One of the task force's recommendations was to expand UAA's associate's degree

program through distance delivery to other UA campuses.

Partnering with UAA's highly regarded nursing program makes the most sense for UAS, Schmitt says.

"It is much more cost-effective and efficient for us to be in partnership with UAA," she says. "Building a program from scratch in Juneau would take more than money – it would take years before such a program would be accredited. The nursing shortage in Alaska requires immediate attention."

The outreach delivery program was first delivered in Fairbanks and Kodiak. In January 2004, it was expanded to Bethel, Juneau and Ketchikan. Kenai and Sitka were added the next year, and in 2006, Homer, Kotzebue and the Mat-Su campuses joined as program partners. Valdez was added as an outreach site in January 2008, and additional sites may be added in the future.

In Juneau, where 10 students are accepted into the program every two years, a total of 16 students have graduated with associate's degrees in nursing to date – nine from the first cohort in 2005 and seven from the second cohort in 2007. A third cohort of 10 students began in January 2008; they are expected to graduate in December 2009.

"In the past, students who wanted to become nurses had to go to Anchorage or leave the state. By offering this program, people can get the education they need and find employment in their hometown. People who want to stay here can stay here," says Chris Urata, UAA assistant professor of nursing at the UAS-Juneau campus.

In addition to the benefits for students, local health care providers are also seeing the value of the program.

"The program has provided our community and our hospital with nurses who are from the region and want to continue to live and work here," says Bartlett Regional Hospital's education services manager, Dianne Bigge, who adds that the hospital has hired several of the graduates from the last two cohorts at UAS-Juneau.

Partnerships with local health care providers, such as Bartlett Regional Hospital, are a central component of the success of the program, which requires students to gain work experience in clinical settings.

For example, in Juneau, students gain work experience through local clinical rotations at Bartlett Regional Hospital, Wildflower Court long-term care facility, Hospice and Home Care of Juneau, Reifenstein Dialysis Center, and Southeast Alaska Regional Health Consortium, as well as local physicians' offices. During their third and fourth semesters, students also spend time in Anchorage, where they obtain clinical experience at places such as the Children's Hospital at Providence and Alaska Psychiatric Institute.

Following completion of the program, graduates take the National Council Licensure Examination (NCLEX-RN) to obtain their RN licensure. They are then eligible to work in hospitals, physicians' offices and home care. Students interested in furthering their education may also pursue a bachelor's degree in nursing, through UAA's RN to BS program.

UA Increases Graduates in High Demand Areas by 50 Percent

The number of University of Alaska graduates system-wide with degrees or certificates in high-demand jobs areas (including technology, engineering, health and transportation) increased by 50 percent between 1999 and 2007, according to a forthcoming report by ISER. The report, entitled "University of Alaska: How Is It Doing? Understanding Alaska Research Summary No.12," will be available on the ISER Web site at www.iser.uaa.alaska.edu/.

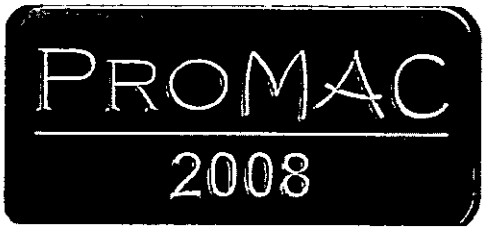
UAA Engineering, Science and Project Management

UAA Hosts Project Management Conference September 15 – 18



With major projects, such as a natural gas pipeline, on the horizon in Alaska, the need for qualified project management professionals is becoming more and more apparent. That makes the ProMAC 2008 conference, which will be held September 15 – 18 at the Captain Cook Hotel in Anchorage, a very significant and timely event.

"The project management discipline is a fundamental requirement for companies interested in improving their productivity, effectiveness and bottom line, and UAA's Engineering, Science and Project Management (ESPM) department is poised to change how technology-oriented projects are managed in the state of Alaska and the Pacific Rim," says Dr. Jang Ra, chair of the ESPM department, which is hosting ProMAC 2008 for the Japan-based Society of Project Management.

ProMAC 2008 will be the fourth international project management conference; previous conferences have been held in Singapore, Japan and Australia.

"The conference will serve as an important forum for the exchange of ideas and experiences to revolutionize today's project management knowledge and techniques for the future," says Danny Elmore, project manager for ProMAC 2008. "Holding this prestigious, international forum in Anchorage provides Alaska's elected officials, leaders of business and industry, and project-minded executives with the opportunity to engage in productive dialog with their international colleagues, and to share ideas and develop relationships that will benefit their own organizations and the state of Alaska."

"The conference will serve as an important forum for the exchange of ideas and experiences to revolutionize today's project management knowledge and techniques for the future."

Approximately 400 people from around the globe, including Japan, Korea, China, Taiwan, Australia, Singapore and Canada, as well as from across Alaska and the U.S., are expected to attend the conference. Elmore says he expects attendees to include senior executives, program and project managers, project team members, customers and other stakeholders, educators, consultants and other specialists, trainers and researchers.

While there is sure to be a large number of international attendees, Elmore says he hopes there is a good turn-out of Alaskans at the conference, as well.

"The importance of a strong Alaskan presence at the conference is a stepping stone for Alaska to become a mecca for project management professionals," Elmore says.

The four-day conference will feature plenary speeches by national and international leaders in the field of project management. Confirmed speakers to date include Kazuhiko Hanaoka, corporate vice president of the corporate IT unit for Fujitsu, Limited; Jong-Shin Kim, president/CEO of Korea Hydro & Nuclear Power Co., Ltd.; Satoshi Kurishima, senior vice president and senior executive manager of the financial systems sector at NTT DATA Corporation; Mark Nelson, president/CEO of ASRC Energy Services; Anand Vadapalli, senior vice president of network and IT at Alaska Communications Systems; and Samar Walther, capital projects manager at ConocoPhillips Alaska, Inc.

The conference will also include approximately 300 presentations, ongoing poster sessions, and exhibitors including the Association for the Advancement of Cost Engineering, Project Management Institute Alaska Chapter, Society of Project Management, and UAA's ESPM department.

Additional events, such as bus trips to Seward and the Matanuska Glacier, dinner at the Anchorage Museum, and trips to tour the North Slope, are also planned. The full conference schedule may be found at www.uaa.alaska.edu/promac.

Registrations are currently being accepted online at www.uaa.alaska.edu/promac; the early registration deadline is July 10, although registrations will be accepted after that date. The deadline for speakers to submit abstracts and biographies is May 15.

ProMAC 2008 Organizing Committees

A total of 70 individuals on six organizing committees are involved in planning ProMAC 2008. Local organizing committee members include:

- Chair, Danny Elmore, UAA
- Jon M. Ah You, Alyeska Pipeline Service Company
- Chris Block, Captain Cook Hotel
- Robert Bulger, PMI Alaska Chapter
- Paula Donson, Alaska Railroad Corporation
- Joyce E. Douglas, State of Alaska
- Mike Fisher, Northern Economics
- Steve Gebert, Alaska Communications Systems
- Teresa Helleck, PMI Alaska Chapter
- James Hemsath, Alaska Industrial Development and Export Authority
- Ki Kim, UAA
- Patricia Opheen, U.S. Army Corps of Engineers
- LuAnn Piccard, UAA
- Burt Rosenbluth, ConocoPhillips
- Tom Sheffrey, AACEI Alaska Section
- Bill Thompson, CH2M Hill
- Charles Wagner, U.S. Department of Transportation
- Heather Wagner, GCI
- Michael Wortham, BP
- Roshelle Wright, Anchorage Convention and Visitors Bureau

AlaskAdvantage™ Programs

Alaska Commission on Postsecondary Education/ Alaska Student Loan Corporation

House Education Committee Briefing

February 2009

Briefing Topic Areas

- Organizational Overview: History, Organization, Management, Objectives, and Current Environment
- AlaskAdvantage Programs Overview
- ACPE/ASLC Financial Context
- Alaska's Current Non-Loan Financial Aid Programs

Organizational Overview: History, Organization, Management, Objectives, and Current Environment

Agency History

- 1968 – Undergraduate loan program created
- 1974 – Alaska Commission on Postsecondary Education (ACPE) established as State coordinating and financial aid agency
- 1981 – State loans of up to $7,000 per year with 50% forgiveness
- 1987 – Oil drops below $10 per barrel—Alaska Student Loan Corporation (ASLC) established as new financing source
- 1988 – Loan terms begin to change to reflect new financing model
- 1995-98 – Significant program changes made to reverse financial losses; (1996) HELMS successfully implemented

Agency History

- 2001 – Financial improvements reflected in annual payment to the State
- 2002 – AKAdvantage legislation creates new suite of federal/state education loans; new duties encompass delivery of outreach and early awareness services under agency mission and goals
- 2003 – Alternative consolidation loan added to suite of programs
- 2004 – Receive Lumina Foundation Grant for College Goal Sunday, CASHE founded (Coalition of Alaskans Supporting Higher Education)
- 2005 – Alaska legislature establishes AkAdvantage Education Grant Program
- 2008 – Designated by Governor as Alaska's College Access Challenge Grant agency
- 2009 – Peer Mentor pilot program on track for launch

Organizational Structure

- Partner entities

  ACPE develops and delivers higher education access and support services

  ASLC underwrites the costs of mission-related services

- 14-member ACPE board with representation from:
  - University of Alaska Board of Regents (2)
  - Private higher education (1)
  - Proprietary postsecondary education (1)
  - Alaska State Senate (1)
  - Alaska State House of Representatives (1)
  - General Public (4)
  - Student (1)
  - Alaska Workforce Investment Board (1)
  - Community College (1)
  - Alaska Department of Education and Early Development (1)

Organizational Structure

- Five-member ASLC Board
  - Commissioner of Administration represented by Deputy Commissioner Kevin Brooks (4-year member)
  - Commissioner of Commerce, Community and Economic Development represented by Investments Director Greg Winegar (9-year member)
  - Commissioner of Revenue represented by Deputy Commissioner Jerry Burnett (1-year member)
  - Two ACPE members appointed by the Governor

Management and Staffing

Diane Barrans, 14 years as CEO; 26-year tenure at ACPE

Charlene Morrison, CPA, 6 years as ACPE CFO; 19 years in private and public accounting/finance

Stephanie Butler, CIA, 7 years as Director of Operations; 10-year tenure at ACPE

Kenneth Dodson, 14 years as Information Support Services Director; 21 years in education lending IT

Lora Jorgensen, 2 years as Outreach Director; previously with community-based non-profits

Frank Love, 12 years as Human Resources and Admin.Officer; 30 years in HR management—USCG, retired

102 full-time employee positions

- Average management tenure – 13 years
- Average staff tenure – 7.5 years

Organizational Objectives

- Deliver on public service mission to promote, support, and provide access to postsecondary education in Alaska and for Alaskans
- Mission-centered core services to:
  - Provide postsecondary education and training access product and services
  - Promote postsecondary education participation in Alaska
  - Protect consumers through regulation of postsecondary education institutions in Alaska and investigation of related consumer complaints

Organizational Objectives

- Ensure long-term sustainability of programs and services
- Foster key institutional and organizational partnerships to improve the continuity and connectivity of Alaska's education pipeline
- Implement robust suite of performance metrics for internal and external audiences
- Continue to grow loan portfolio while containing administrative costs by leveraging new technologies
- Increase public utilization of ACPE/ASLC resources

ASLC/ACPE Environment

- Long-term, recognized effective leadership
- Strong organizational culture and core values
- Record of positive performance as public enterprise agency
- Integrated ASLC/ACPE oversight
- Longstanding bipartisan legislative support of current management and programs and services. ACPE/ASLC viewed as very successful
- Alternative loan program is in its 41st year

AlaskAdvantage Programs Overview

Alaska State Education Loans: 1968-1987

- **Student Loans Structured as a state entitlement program:**
  - Fully financed by the State General Fund
  - Any State resident, age 16 or older, could borrow
  - Minimal Alaska institutions' requirements
  - Extremely generous loan terms, set by statute
  - Borrowers entitled to 50% loan forgiveness
  - No credit reviews, cosigners or collateral required
  - 0% interest during school, grace and deferment; 5% simple interest during repayment
  - 12-month grace period prior to repayment; 6-month grace period after a deferment.
  - Loans serviced internally, using limited resources
  - Minimal collections and due diligence activity
  - Program focus was providing funds to the students, not collecting loans for the State

These attributes led to a perception that Alaska student loans were not serious financial obligations, and repayment performance clearly reflected that perception. In addition, a vocational school "cottage industry" grew quickly, since funding was so easily available to prospective students.

Alaska State Education Loans: 1988-1993

- Program evolves from state entitlement into a troubled enterprise
- With creation of ASLC in 1987, modest changes were made to reflect the migration from a state funded model to a capital markets funded model
- Loan program changes were more symbolic than substantive, and did not improve credit quality or loan performance:
  - A 1% loan origination fee was imposed
  - Interest rates were raised to 8% during repayment (0% in school interest rate)
  - Grace period before repayment reduced to 6 months
  - Monthly bills replace repayment coupon books in the early 1990s
  - In 1992 an ACPE servicing system conversion failed catastrophically
  - Following the devastating servicing audit performed by Deloitte & Touche, ASLC was denied bond insurance in 1993

Net of State appropriations, ASLC incurred annual losses in each of its first 10 years of operation, and by the mid-1990s had an equity deficit approaching $50 million.

Alaska State Education Loans: 1994-2001

- **Program changes needed to transform the troubled entity into a self-supporting student loan provider are made**
- **ACPE hired its first executive director with education loan expertise in 1993. New ASLC executive began addressing areas of deficiency related to loan eligibility and repayment terms, management capacity, servicing systems, operations and corporate culture**
- **Key program and staffing changes during this transitional period included:**

- A series of legislative changes to loan terms and collection tools—loan rates tied to program costs, admin. collection methods were authorized, and modest credit standards were added to eligibility criteria. (1994-1998)
- In 1995 IT and Operations management was reorganized, and a due diligence unit was established and equipped with appropriate technological tools and office hours
- Institutional Program Participation standards were implemented (1998)
- Credit reporting was implemented for the entire loan portfolio (2000)
- Automated payment option was rolled out to borrowers (2001)
- Staffing was stabilized, and employee turnover was reduced 60%, from 27% to 11% (1998 – 2001)

By the end of this transitional period, ASLC had completed its transformation from a government funded/administered program to a self-sustaining business enterprise.

Alaska State Education Loans: 2002-Present

- **Heightened standards and oversight of Alaska's institutions led to a drop in loan program participation from 140 to fewer than 40**
- **Consistent, improved performance results:**
  - ASLC's equity deficit was erased by 2000
  - ASLC on solid financial and administrative platform
  - Modest dividend payments made to the State, based upon annual net income
- **ASLC enters the FFEL program to efficiently bundle Federal and State aid**
- **New, combined program authorized by the Alaska State Legislature in 2001**
- **2002 to Present: the AlaskAdvantage Years:**
  - ACPE and ASLC now offer a "one-stop" financial aid alternative
  - Serving Alaska residents and non-Alaskan students attending school in the State

AlaskAdvantage Loan Programs

Federal Family Education Loan Program

- ASLC enters FFEL Program in 2002
- ASLC qualify as state agency/nonprofit lender
- Alaska's #1 lender for seven consecutive years
- $34.5 million program FY08 loans awarded
- $40.6 million FY09 loans awarded thru 12/26/08
- 51% volume growth over prior YTD

AlaskAdvantage Loan Programs

Alaska Supplemental Education Loan (ASEL) Program

- Program supplemental to funding available through federal program
- Terms and conditions controlled by State statute and regulations
- Loans are fixed rate based on:
  - Municipal Market Data Insured AMT Revenue Bond Yield Curve plus 30 bps and administrative costs
  - Minimum rate is the unsubsidized Stafford fixed rate plus 50 bps
- Interest reset announced each July 1; 008/09 rate is 7.3% (minimum rate)
- $43.9 million for FY08
- $34.9 million for FY09 loans awarded thru 12/26/08
- Decrease of 6.8% of prior YTD

AlaskAdvantage Loan Programs

Borrower Benefits (08/09 academic year):

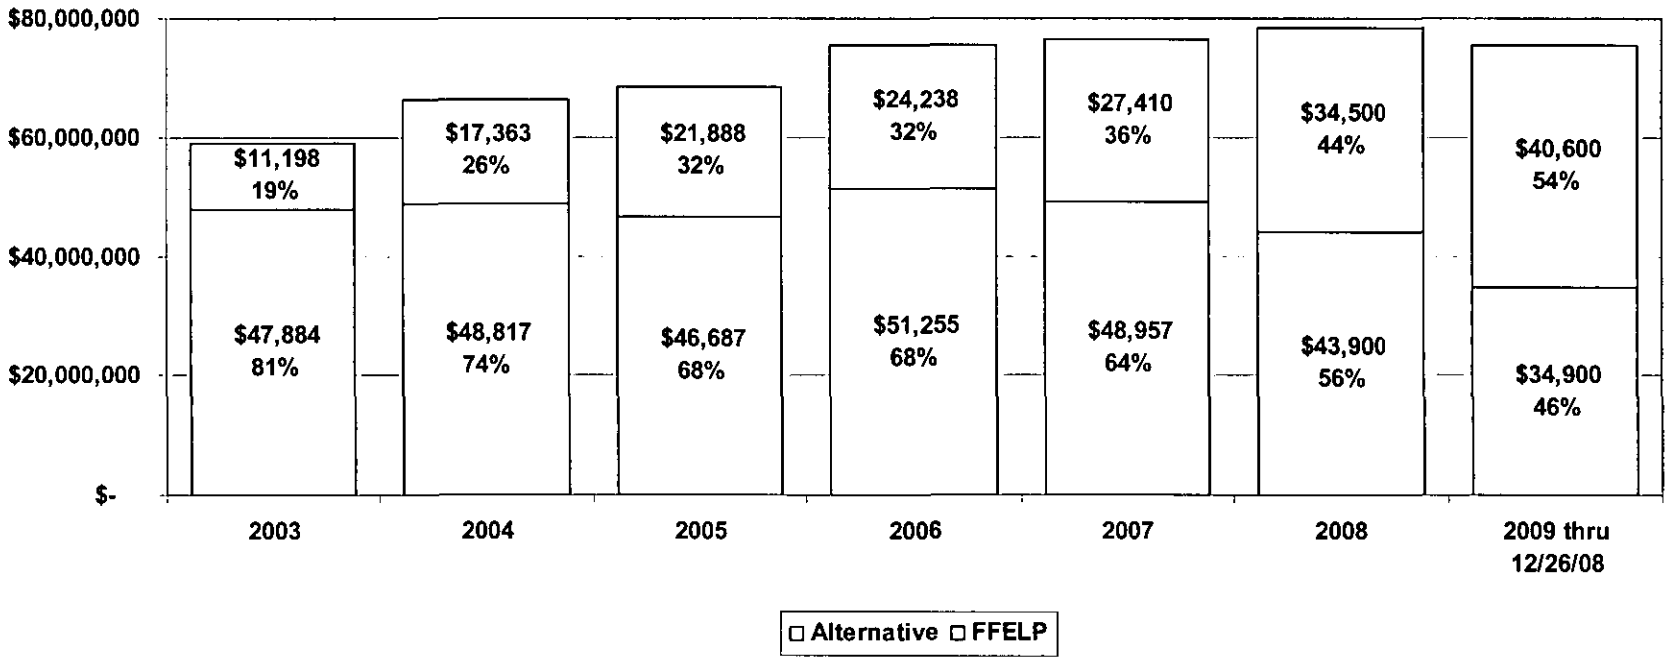
	Stafford		PLUS	FFELP Consol.	ASEL	ALT Consol.	Loan Elig Percent [2]	Elig Loan Utilization[2]
Fee Subsidies:								
Origination Fee	1.00%		—	—	—	—	33%	100%
Default Fee	1.00%		1.00%	—	—	—	13%	100%
Rate Subsidies:								
In-School Status								
General Benefit	0.80%	[1]	—	—	—	—	31%	98%
Alaska Presence	1.00%	[1]	—	—	0.50%	—	76%	67%
Repayment								
General Benefit	0.50%		1.00%	1.00%	—	—	31%	98%
Alaska Presence	1.00%		1.00%	1.00%	0.50%	0.50%	76%	67%
First 48 On-Time Payments	2.00%		1.00%	1.00%	2.00%	1.00%	3%	8%
Direct Payment Option	0.25%		0.25%	0.25%	0.25%	0.25%	34%	23%

[1] Not applicable to subsidized loans.
[2] Applicable to loans pledged to the 2002 Trust only.

Note: A borrower benefit not shown in the table above is the Borrower Cost Reduction. This benefit reduces the interest rate on legacy program Alaska Student Loans from the original fixed rate to 8.3%. Six percent or $23.9 million of loans in the 2002 Trust are eligible for this benefit and 71% or $17.0 million of those eligible are receiving the benefit. Five percent or $6.8 million of loans not pledged to a trust are eligible for this benefit and 67% or $4.5 million of those eligible are receiving the benefit.

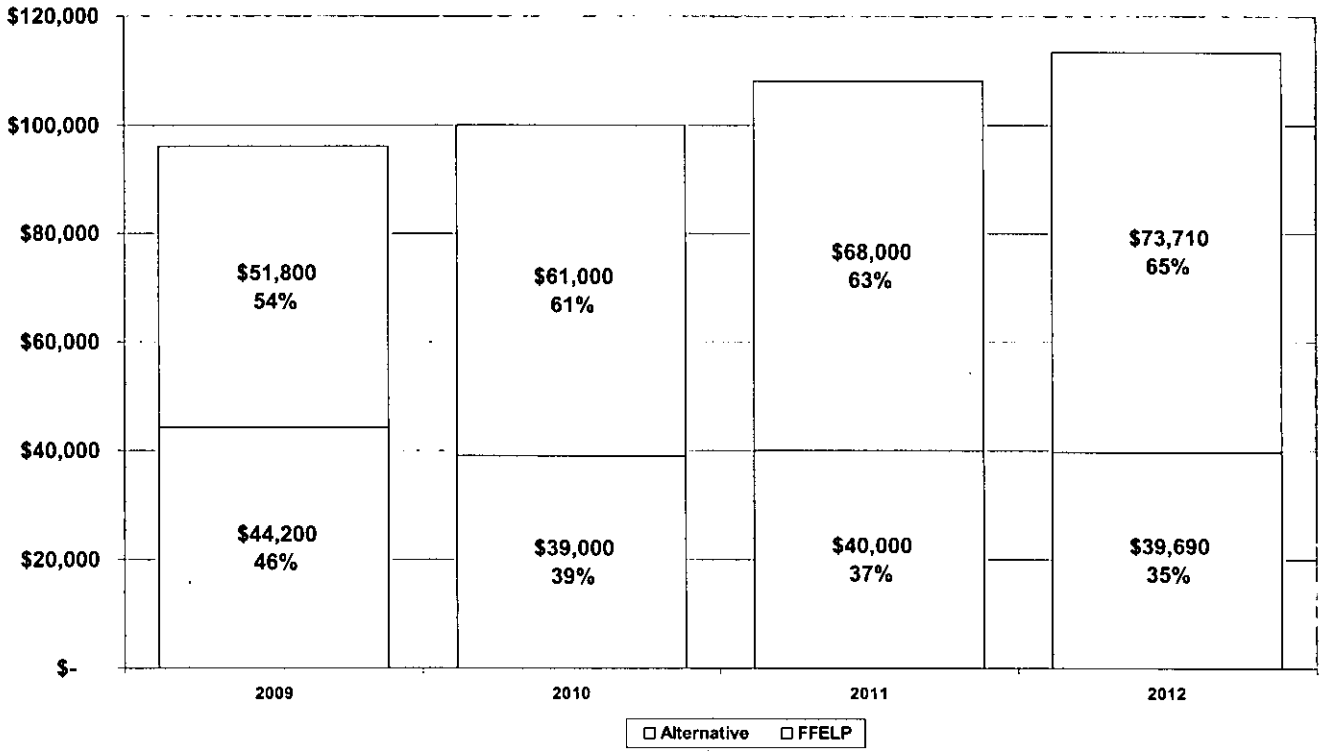
AlaskAdvantage Loan Programs

Gross loan awards by school year (in thousands and excluding consolidation loans):



AlaskAdvantage Loan Programs

Projected loan demand through 2012 (in thousands and excluding consolidation loans):



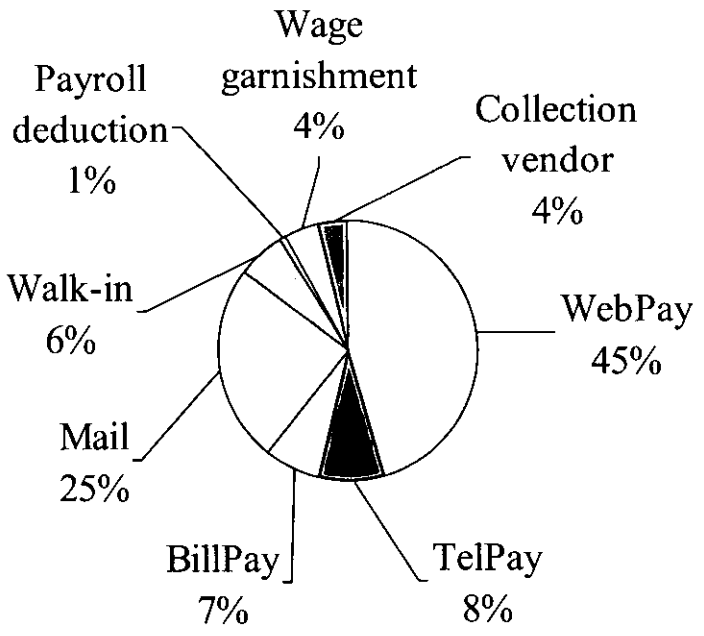
Loan Servicing

- ACPE originates, holds and internally services all ASLC loans
- System upgrades and ongoing maintenance ensure FFELP compliance and quality servicing
- Standard lending activities:
  - Application and origination
  - Loan forbearance or deferment
  - Loan repayment support and debt management counseling
  - Default aversion activities
  - Collection enforcement and activities
  - Business continuance planning
- Ongoing internal process analysis on all service processes has assisted in achieving a culture of quality control and improvement

Payment Processing

Payments are collected in many different ways. Typically sixty-four percent of payments received are processed electronically.

Payment Statistics by Delivery Method



Credit Enhancement/Collection Levers

- Mitigating loss risk through:
  - Credit review
  - Co-signer requirements
  - Institutional default rate management
  - Origination fee collected on alternative loan
- Unique administrative collection tools (applied to borrower or co-signer):
  - Permanent Fund Dividend (PFD) garnishment ($95 million since FY98)
  - Administrative lien authority
  - Administrative wage garnishment authority ($11million since FY01)
  - Status reporting to national credit bureaus
  - Litigation, including filing of court judgments
  - Authority to deny occupational or professional license renewals
- Skiptrace tools and resources:
  - Access to mine State databases: Labor, PFD, vehicle licensing, Fish and Game licensing, etc.
  - Industry standard resources: Experian and Accurint-type search engines

Institutional Authorization

- Institutional Authorization Programs
  - Approval of postsecondary education institutions & programs operating in Alaska
  - Investigation of student complaints
  - Institutional closure rules enforcement
  - Statewide liaison with accrediting bodies & USDOE (OPE, IPEDS, PEPS, etc.)

Additional Mission-Related Agency Activities

- ACPE developed and deployed a statewide outreach and early intervention unit to promote Alaskans' participation in postsecondary education
- ACPE focuses on developing a college-going culture in Alaska
- Advise and assist State Legislature relative to programs and services in support of workforce development

Outreach Programs

Programs and services to increase awareness of benefits of higher education and our ability to access those benefits

- Age-Based Sequenced Outreach
- Community Visits and Presentations
- College Goal Sunday
- AKCIS & Career Planning Awareness
- Community Mentors (new)
- Policy Projects (Ex: *Making Alaska More Competitive*)

Outreach Strategies

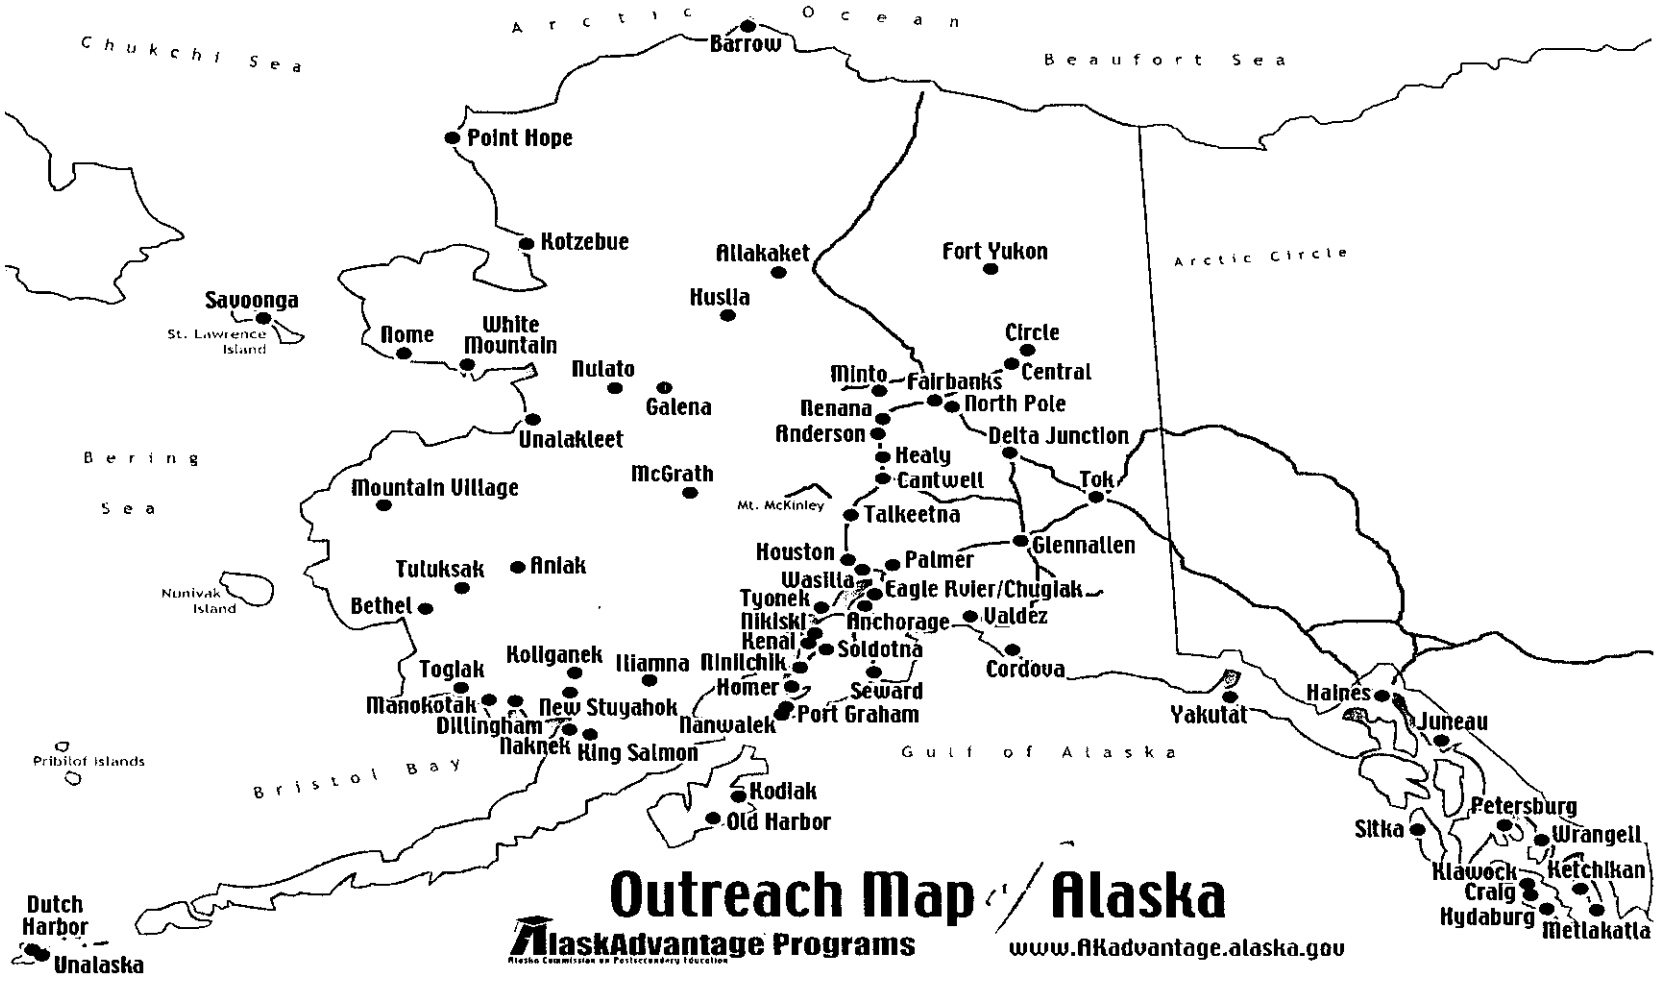
Age-Appropriate Sequenced Information & Activities

- 2nd grade, classroom reading with UA
- 5th grade, *I'm Going to College* orientation and campus visits
- 5th- 8th grade, promotional posters & newspapers
- 11th grade, *Going to College in Alaska*
- 12th grade, *Got Dates?* HS senior year calendar

Outreach Partnerships

- *College Goal Sunday* – free FAFSA help
  - ACPE, UA, ANSCA, ALASFAA
  - 30 locations statewide
  - February 8, 2009
  - www.alaskacollegegoalsunday.com
- AKCIS – Alaska Career Information System
  - ACPE, AKDOLWD & EED partnerships
  - Free to school districts and Job Centers
  - www.akcis.org
- *I'm Going to College*—thru partnerships now in: Barrow, Bethel, Valdez, Fairbanks, Juneau, Ketchikan, Kodiak, Palmer and Anchorage
- *I Know I Can*
  - ACPE and UA
  - Introduces second graders to concepts of college and career
  - Programs in Anchorage, Bethel, Fairbanks, Galena and Juneau

Community Connections



21st Century Stats

- Working together, ACPE and ASLC provide Alaskans with increased access to the benefits of higher education:
  - Provide Alaskans with extensive direct-service outreach programs and support for counselors and teachers
  - Offer Alaskans lowest cost financial aid package in the nation, including
    - Grants for needy students
    - Federal loans with additional state subsidies
    - Lowest-cost state supplemental programs in the nation
    - Extensive exchange program options
  - Coordinate statewide access programs and advisory bodies
  - Returned >$160 million to SOA for capital projects

2008 Accomplishments

- Provided **$24 million** in cumulative borrower benefits thru 12/08
- Provided > **$500,000** in grants to over 500 needy Alaska students
- Made AKCIS available at no cost to schools and mentors statewide
- Expanded grant program to add priority for students pursuing careers in process & natural resources extraction industries
- Offered federal and state supplemental loans with rates ranging from 2.25% to 7.3%
- Provided free higher education outreach to almost 40,000 Alaskans and hosted or participated in 491outreach events in communities statewide
- Provided >1,600 Alaska students access to the Western Undergraduate Exchange, saving their families ~ $11.6 million in tuition without forgoing their Alaska residency
- Provided a cumulative dividend to the Alaska General Fund of >$32 million
- Attracted almost $6 million to Alaska's higher education system by offering financial aid to non-residents who invest their higher education dollars in Alaska

2009 Goals & Challenges

- Continue to offer Alaskans lowest-cost financial aid in the nation
  - Despite federal cut-backs
  - Despite upheavals in financial markets
- Implement strategies to avoid disruption of ASLC lending activities
- Support of program expansion w/o jeopardizing ability to self-sustain
- Expand access through grant programs
  - Federal GAP and Challenge Grants
  - AlaskAdvantage Education Grant Program
- Advocate for federal HEA recognition of state financial aid programs and services

Alaska's Current Non-Loan Financial Aid Programs

The *UA Scholars Award* is an $11,000 scholarship for eligible expenses (undergraduate tuition, fees, room, board, books, supplies and other educational costs) incurred for attendance at University of Alaska.

UA Scholars are designated by their high schools at the end of their junior year if they are in the top 10% of their graduating class.

The award is paid out in increments of $1,375 for every semester the UA Scholars is eligible, for up to eight semesters.

Scholars are required to maintain a full time status and keep their cumulative GPA at a 2.50 or higher.

The AlaskAdvantage Grant is a last-dollar, need-based grant for up to $2,000 per year for attendance on at least a half-time basis at any accredited institution in Alaska.

Alaska's Current Non-Loan Financial Aid Programs

Through 2008 the AlaskAdvantage Grants were funded with a mix of federal LEAP and ASLC funding totaling approximately $625,000 per year.

Program objectives do overlap in some regards—statewide application, Alaska-centered, and designed to incent behaviors.

Both programs are tenuously funded by UA and ASLC.

Neither program requires specific college-prep agenda.

Neither program ensures broad-based access to non-loan aid for Alaska students.

A Message from Governor Palin

Dear Fellow Alaskan,

I am extremely pleased to invite you to explore the opportunities for postsecondary education and training offered by Alaska's own vocational and higher education institutions. These institutions have developed Alaska-centered programs to prepare our citizens for the exciting challenges and to reap the rewards which lie ahead for the Great Land.

As you plan for your career and seek to acquire the education and skills that are increasingly in demand by employers, carefully consider the quality institutions that are right here at home.

Alaska schools, colleges, and universities, in addition to offering work skills and academic programs, have established relationships with key Alaska employers to insure that their certificate and degree programs are tailored to ongoing and emerging workforce needs. Through the efforts and support of the Alaska Commission on Postsecondary Education's AlaskAdvantage® Programs of financial aid and educational outreach, we are working together to make college education and technical training affordable and accessible.

As your Governor, education is among my administration's top priorities and we are working hard to ensure that every Alaskan has the opportunity to contribute to and benefit from our statewide community. Together, we share an opportunity to grow a robust, expanding economy with good-paying jobs to provide you with attractive and exciting career opportunities right here at home. We are here to work with you in planning and preparing for educational success beyond high school. Together, achieving these endeavors will translate to a dynamic workforce and strong economy, in which you play a vital role.

Best wishes for your future success,

Sarah Palin, Governor

(907) 465-2962

Going to College in Alaska is published under contract with Nautilus Publishing Company's Educational Custom Publishing Division.

A MESSAGE FROM THE ALASKA COMMISSION ON POSTSECONDARY EDUCATION EXECUTIVE DIRECTOR

Dear Higher Education Consumer and Stakeholder,

Welcome to the 2008 edition of ***Going to College in Alaska***! The Commission on Postsecondary Education and its partners are very pleased to provide you with this publication containing current profiles, information and photographs of Alaska's featured postsecondary education institutions.

ACPE, its partner, University of Alaska, and its other partner organizations are fully committed to Governor Palin's goal of promoting, delivering and supporting higher education and training in the state. We understand that wise development and use of Alaska's human capital is critically important to our future, as individuals and as a state community. We further understand that you need access to current information and higher education resources to make the best choices for your future.

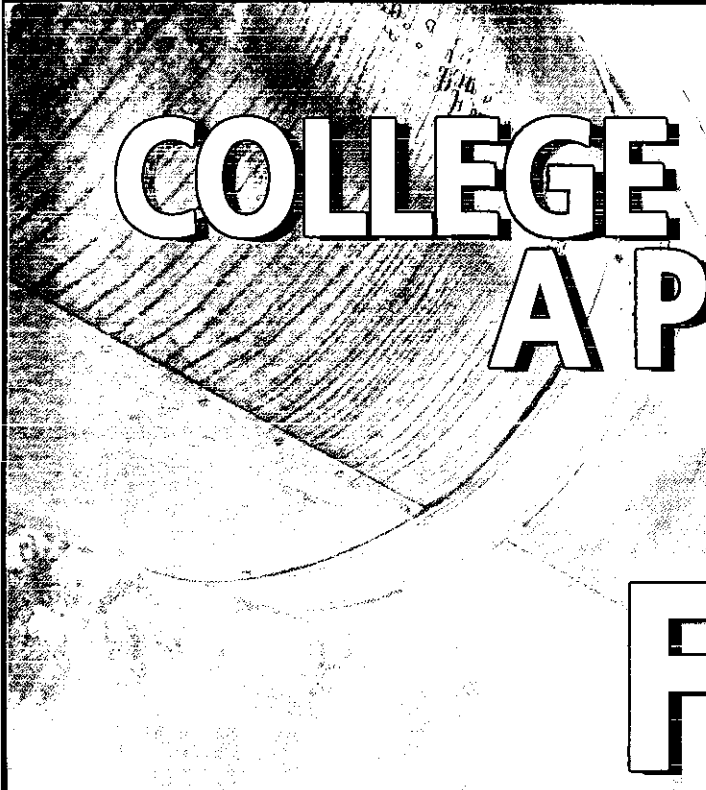
Please use this publication to identify your postsecondary options here at home. The institutions, colleges, and universities highlighted in this publication offer career and degree programs varying from short-term vocational training to world-class, doctoral degree programs which are second to none—all available to you without leaving your home state. Each school has its own unique strengths, and all share a strong tradition of offering Alaska-centered programs of study.

If you choose to attend school in Alaska, through ACPE, and funded by the Alaska student loan corporation, your state offers you the lowest cost financial aid packages in the nation with our **AlaskAdvantage®** state and federal financial aid programs. We're here to ensure that higher education is accessible and affordable for all Alaskans.

Become an important, productive, and financially successful part of Alaska's future by making smart choices. Take advantage of Alaska's exceptional educational resources. ACPE is here to help make your dreams a reality. Your future is in your hands.

Best wishes for success,

Diane Barrans
Executive Director



COLLEGE IN ALASKA A PIPELINE TO YOUR FUTURE

Some students may question why education after high school is important. The answer is simple. Higher education, either college or vocational training, provides you with opportunities and choices that other high school graduates may not have.

For many high school students, the thought of "cashing in" on immediate income with a job after graduation is very exciting. But will that job provide the kind of lifestyle you will want five to ten years from now? Will you be able to live in the house you want to live in and drive the kind of car you'd like to be seen in? More importantly, will your mind be the kind of mind that is appealing to employers?

You may have heard this a million times: High school graduates today are unable to get the number of high-paying jobs that were once available to generations past. It's still true! The importance of a college education today can be compared to that of a high school education forty years ago. Higher education serves as the pipeline to better options and more opportunities.

With all qualifications being equal, higher education will, more often than not, provide you with a greater promotion opportunity.

The choice is yours.

Whatever your preferences, you may not need to look further than your home state to find a college or training program that's right for you. Alaska offers a powerful flow of opportunities for higher education.

Going to College in Alaska profiles accredited colleges, universities, and vocational schools to give you greater insight into academic and vocational opportunities and campus life right here in this great state.

Always keep your career goals in mind when considering colleges.

The cost of higher education may be a consideration in your search, but keep in mind that college is a wise investment in your future. Statistics show that college graduates can expect to earn at least $1,000,000 more in their lifetime those without a degree. In addition, Alaska is committed to ensuring college access and affordability. Did you know that tuition at many schools in Alaska is among the lowest in the nation? Alaska's higher education agency also offers a variety of financial aid programs, including grants for needy students and the lowest-cost student loans in the nation.

Once you determine which schools top your list, be sure to write, phone, visit their web sites, or take a tour. May your choice in the end be the one that leads to success in your future.

AFTER HIGH SCHOOL

In Alaska, students have access to a variety of postsecondary institutions that offer vocational programs, certificates, two-year degrees, four-year degrees, and graduate programs. Our institutions provide highly diverse programs of study designed to meet the individual needs of students as they prepare for future careers and to meet work-force demands of our state.

Community Colleges

These schools usually serve city, borough, or region residents. They typically offer vocational certificates and associate degrees and they have open admissions, meaning no entrance exams required.

EXAMPLE: Ilisagvik College in Barrow provides postsecondary academic, vocational and technical education training in an environment designed to strengthen Inupiat culture, language, values, and traditions and enable local residents to thrive and succeed.

Vocational Schools

Vocational schools offer career and technical training in a "hands on" environment.

EXAMPLE: Alaska Vocational Technical Center (AVTEC) in Seward, is a public school within the Alaska Department of Labor and Workforce Development specializing in job training for Alaskans entering the workforce or advancing in their current occupation.

A private vocational school is also referred to as proprietary school. These institutions are privately owned businesses.

EXAMPLE: Career Academy is an accredited private vocational school offering specific courses to meet the requirements of the growing tourism and hospitality industries.

Four-Year Colleges & Universities

These schools grant bachelor's degrees, also called the baccalaureate (Bachelor of Arts or Bachelor of Science). Many also offer vocational certificates, associate and master's degrees.

EXAMPLE: University of Alaska Anchorage, University of Alaska Fairbanks, University of Alaska Southeast, Alaska Pacific University, Wayland Baptist, Charter College

CHOOSING A COLLEGE

CONSIDER:

- **Location -** Close or far from home?
- **Academic Strengths & Weaknesses -** Do you prefer "hands on" training or academic learning?
- **Classroom/Student body Size -** Large or small?
- **Costs**
- **Other Goals / Interests** - Do they offer extracurricular activities of interest?

Applying to College/Training

Apply to the schools that most suit your interests and offer programs which match your objectives. You can obtain applications by contacting the college or school or apply online through the school's web site.

You may be required to complete an application for each school in which you have an interest.

Tip! Your application may be your introduction to an institution, and you want to make a good impression. Make sure your forms are clean, neat and thoroughly completed. Make note of deadlines and submit your application well in advance. Proofread your application and your essay, if asked to submit one. Make a copy of your application and any attachments for your records. You may want to complete your application on blank paper first, so you can make corrections before entering your information on the actual form.

College application forms may ask for:

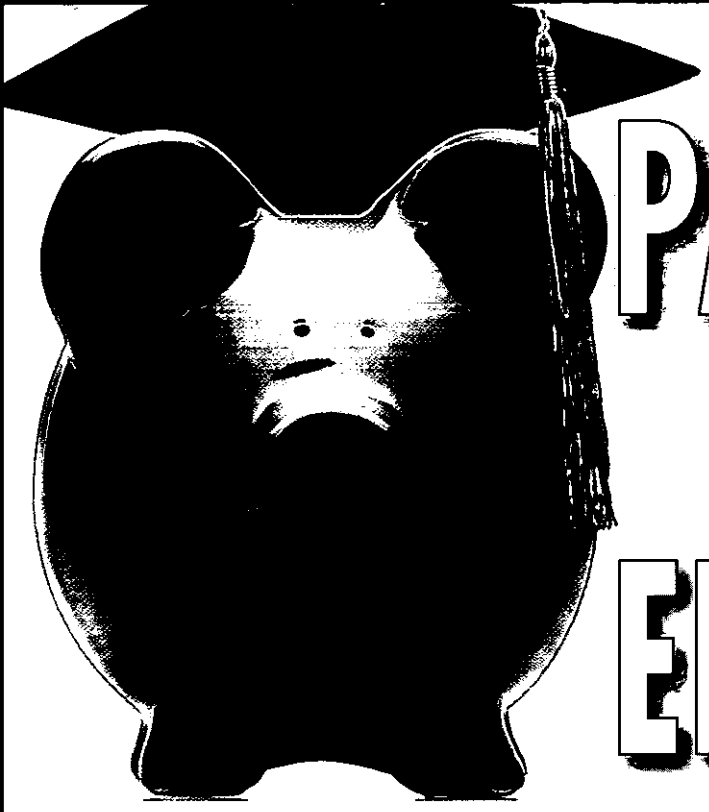
- ■ personal information
- ☐ educational experience
- ■ high school transcript
- ☐ standardized test scores
- ■ class rank
- ☐ letters of recommendation
- ■ awards and honors
- ☐ extracurricular activities
- ■ work experience
- ☐ essay, if needed

Getting Admitted

Institutions have admissions requirements, which vary by school. To make an acceptance decision, institutions will carefully review the information you provide on your application and may require a personal interview.

Open Admissions

Many colleges and vocational schools have open admission policies. This means if you have a high school diploma or a general educational development certificate (GED), or if you are at least 18 years old, you may qualify to begin taking classes without being admitted. Consult each school for specific admissions policies. Vocational schools may not need an application.



PAYING FOR EDUCATION

Student financial aid can help you reach your goals!

WHERE TO BEGIN:

Fill out a FAFSA (Free Application for Federal Student Aid) from the U.S. Department of Education. (*www.fafsa.ed.gov*) regardless of your family's income.

WHEN:

Beginning Jan 1 (or shortly after) of every year

WHY:

A FAFSA determines your eligibility for financial aid programs such as grants, scholarships, work-study, and loans.

- Grants and scholarships do not have to be paid back.
- Work-Study provides part-time jobs for students
- Student loans are borrowed money that must be paid back

HOW:

It's easy. Apply on online at: *www.fafsa.ed.gov.* If you need one-on-one help attend Alaska College Goal Sunday on February 8, 2009, for information on college goal sunday sites visit *alaskacollegegoalsunday.org.*

THEN WHAT?

Four to six weeks after submitting the FAFSA you will receive a SAR or Student Aid Report. The SAR details your family's eligibility for aid and your Expected Family Contribution toward your college expenses

TYPES OF GRANTS:

- Federal Pell Grant
- Federal Supplemental Educational Opportunity Grant (SEOG).
- Academic Competitiveness Grant (ACG)
- Science Mathematics Access to Retain Talent (SMART)
- Teacher Education Assistance for College and Higher Education (TEACH)
- AlaskAdvantage Education Grant

Award amounts for all grants are based on your eligibility and the cost of your school.

TIP **Every college you apply to will also have their own financial aid deadlines.** Make sure you meet them. The FAFSA is a free application and you should not be charged a fee. If a fee is requested chances are you have logged on to the incorrect web address. Try again at *www.fafsa.ed.gov.*

If you think you will not be eligible for grants or work-study, it is still import to fill out a FAFSA to ensure that any loans you apply for are those with the lowest interest rates possible. If you need a loan, research your lender options to find the lowest interest rates and costs. Always choose a federally guarateed loan over a private loan.

SCHOLARSHIPS:

Scholarships are usually awarded for academic achievement, talent, skill, community service, leadership, school activities, or your affiliation with a particular club or organization. Scholarships can be awarded by your school or college or by any organization sponsoring the scholarship. Be aware that many online scholarships may try to charge you a fee. There is no need to pay a fee as there are several free searches available. For a free scholarship search try: *www.fastweb.com.*

TYPES OF LOANS:

> STUDENT

FEDERAL

- ☐ Perkins - Based on your need (Offered by qualifying school)
- ☐ Stafford Subsidized - Based on need. The government pays the interest on this loan while in school.
- ☐ Stafford Unsubsidized - Not based on need. Any student can apply.

STATE

- ☐ AlaskAdvantage Federal Stafford (Subsidized or Unsubsidized). You get a lower costs on your Federal Stafford when you borrow from your Alaska Higher Education Agency.
- ☐ Alaska Supplemental Education Loan (ASEL)

SPECIALIZED ALASKA STATE LOANS

- ☐ Teacher Education Loan (TEL)
- ☐ A.W. Winn Brindle - Fisheries Loan
- ☐ Michael Murphy - Law Enforcement Loan

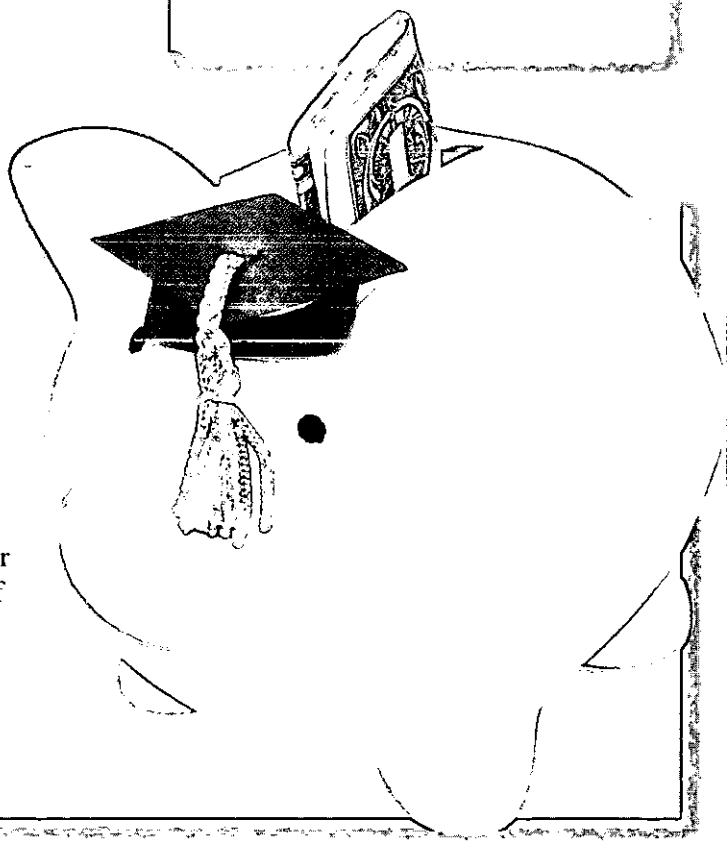
> PARENT AND FAMILY

- ☐ Federal - PLUS
- ☐ State - Alaska Family Education Loan (FEL)

HOW TO APPLY?

Complete a FAFSA on line at:
www.fafsa.ed.gov
or call
(800) 4-FED-AID

Contact the Alaska Commission on Postsecondary Education (ACPE) at:
AKadvantage.alaska.gov
or
AlaskaCollegeGoalSunday.org
or call
(800) 441-2962



ADDITIONAL SOURCES OF AID

- ☐ Personal savings
- ☐ Community and corporate grants and scholarships
- ☐ Service programs such as AmeriCorps, a domestic Peace Corps
- ☐ Employer-sponsored tuition assistance programs

There are also state and federal student assistance opportunities for Military veterans, dependents of veterans who died or became disabled as a result of active duty, and dependents of military service personnel who were officially declared prisoners of war or missing in action. If you think you may be eligible, consult the veterans coordinator or financial aid office at your target institutions for more information.

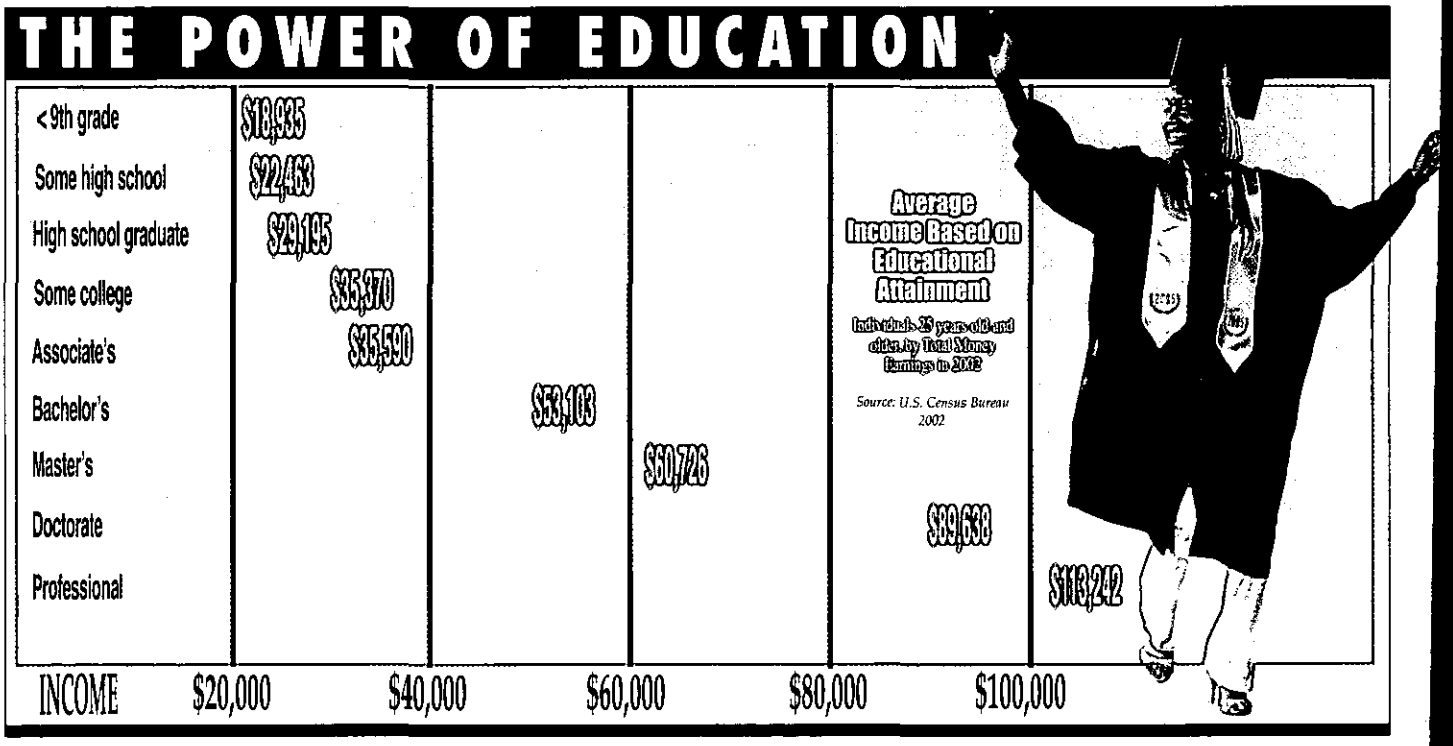
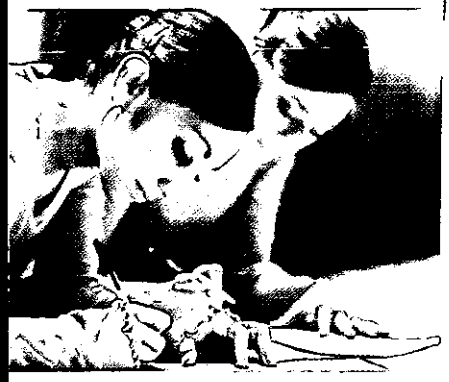
THE POWER OF EDUCATION



WHAT TO DO WITH YOUR LIFE?



NEED A LITTLE HELP DECIDING?

The Alaska Career Information System (AKCIS) is an interactive Web-based education and career planning system that provides comprehensive information and career exploration tools specifically for Alaskans.

■ **Aren't sure what your career goals are?** AKCIS contains interest assessments and interactive tools, and searchable descriptions of nearly 500 occupations.

■ **What's the best career fit for your skills and interests?** AKCIS lets you find the perfect match.

■ **Aren't sure what school is the right one for your major field of study?** AKCIS provides custom search options with more then 4,000 accredited two- and four-year colleges, universities, and technical schools, in Alaska and nationwide.

■ **Need a little help on job search skills?** AKCIS provides tools and information to assist you in your job search, including tips on completing application forms, help with creating resumes and cover letters, and tips on practicing for interviews.

AKCIS also lets you create a personal portfolio to store assessment results, use the resume-writer tool, map a sequenced education/career plan, and save education/career research results.

Check out the "Real Life Interviews" to discover why individuals from a variety of careers chose the fields they did. They'll tell you what they like most and least about their jobs, and offer advice to others who may be thinking of pursuing these careers.

AKCIS is a service to Alaskans made available through a partnership between the Alaska Commission on Postsecondary Education, the Alaska Department of Labor and Workforce Development, and the Alaska Department of Education and Early Development.

Ask your school counselor about using AKCIS at school or contact **AlaskAdvantage® Programs at (800) 441-2962** for more information.

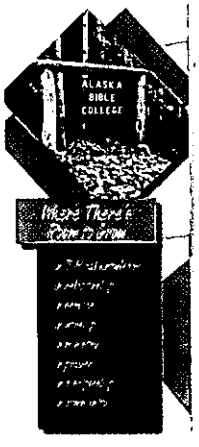
- *Degrees Offered: BA, AA, Certificate*

FIELDS OF STUDY:
- *Biblical Studies*



Explore His Word, Follow His Steps. Surrounded by miles of wilderness and just west of the largest National Park in the United States (Wrangell-St. Elias), Alaska Bible College offers a unique location for study. Class sizes are small so there is greater opportunity for more individualized instruction. Because we are a Bible college, we focus on teaching the Bible and applying it while building relationships in the community. Glennallen is a small community with plenty of opportunity for students to minister in a variety of ways to children, youth, and adults, and become familiar with village ministry. Students often find that life in rural Alaska is a good introduction to the mission field. While our environment is casual, students can expect academic standards as high or higher than other colleges, and ABC welcomes home-schooled students.

After a short time attending ABC, faculty and staff and students become friends and family. Each student is paired with a mentor who they meet with throughout the year. Both new high school graduates and older more experienced students, some with families, attend ABC. This variety of students often leads to life-long friendships that follow students into graduate school, full-time church ministries, missions, and lay ministry.

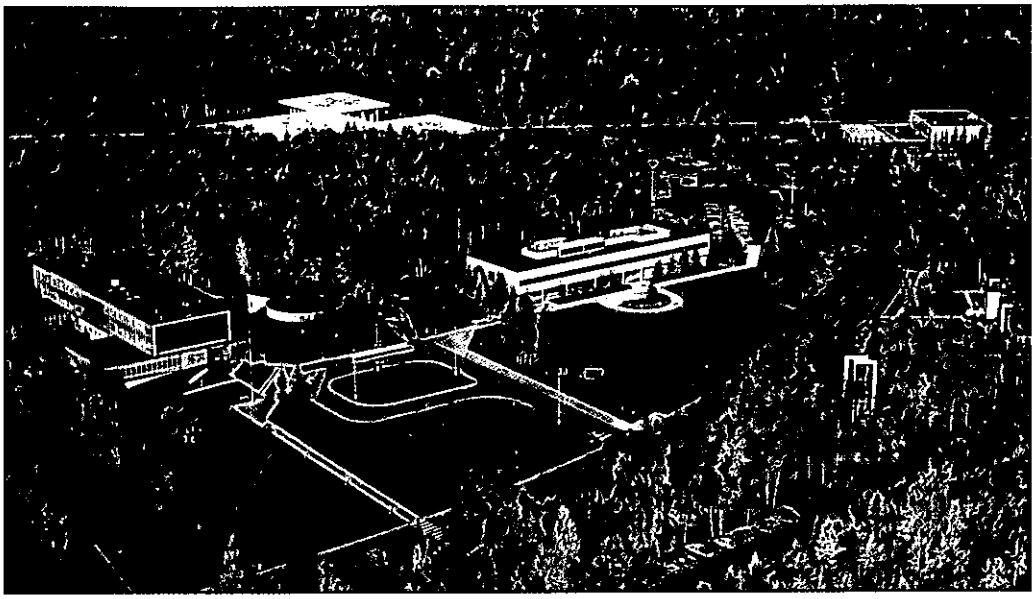
ALASKA PACIFIC UNIVERSITY

4101 University Dr. | Anchorage, Alaska 99508 | www.alaskapacific.edu



Look to Alaska Pacific University for high quality in education and personal attention in every course. U.S. News and World Report magazine ranks APU as the #1 masters-level university in Alaska! APU is also cited by the magazine as a national leader in maintaining small and personal class size.

A special scholarship of up to $4000 a year for Alaskans, plus other generous financial aid options, makes APU affordable for the qualified student who wants to learn in a smaller classroom setting that emphasizes Active Learning — that is, hands-on, experiential learning.

Alaska Pacific recognizes that many Alaskan students want to experience life outside Alaska as part of their college education. A partnership with five other colleges and universities stretching from Arizona to Maine makes it possible for APU students to attend two semesters — one sophomore year, one junior — at any of these colleges, while retaining APU's Alaska scholarships. Stay inside Alaska; experience college Outside. Discover Active Learning.

AVTEC has been training Alaskans for good jobs and rewarding careers in business and industry for over 30 years. AVTEC is a component of the Alaska Department of Labor and Workforce Development and responds to the needs of Alaska with industry approved certifications and/or licenses. Placing 93% of its graduates in jobs, AVTEC works with more than 200 business partners around the state. Every AVTEC training program offers small classes with hands-on instruction, close faculty supervision, and the use of the latest technology. Students come from across Alaska, and AVTEC is proud to have trained more women and minorities than any other vocational school in Alaska. AVTEC is a friendly and caring school, dedicated to helping all students achieve the highest level of technical knowledge and workplace skills.

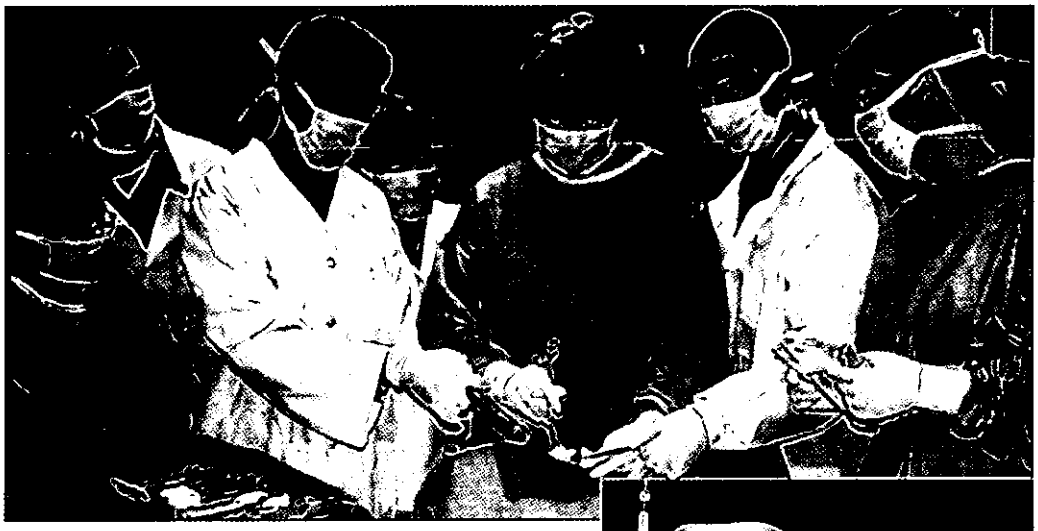
CAREER ACADEMY

1415 E. Tudor Rd. | Anchorage, Alaska 99507 | www.careeracademy.edu



Career Academy was founded in 1985 by Jennifer and Don Deitz as the Travel Academy, to meet the demand for skilled employees prepared to work in Alaska's growing tourism and aviation industries. In 1987 Career Academy became accredited by the Accrediting Commission of Career Schools and Colleges of Technology (ACCSCT). Since 1985 Career Academy has expanded to include the industries of health care, business and computer technology.

As a private career institution, Career Academy offers the highest standard of hands-on education that is responsive to both employer needs and market demands. Empowering students for the global workforce, Career Academy offers professional day, evening and weekend programs including: Medical Assisting, Phlebotomy Technician, Therapeutic Massage, Insurance Coding & Billing, Business & Computer Technology and Aircraft Dispatching.

Career Academy is a crossroads for a wide spectrum of people of all ages, especially those with goals to meet the challenges of today's and tomorrow's job market. Curriculum is tailored for community need and interests, the length of programs varies, but average 4 to 13 months. Average classroom size is 15 to 30 students with a 15 to 1 student to instructor ratio in allied health, therapeutic massage, and computer laboratory classes. Each graduate from Career Academy is assisted with nationwide job placement assistance, armed with a professional resume and career portfolio. Career Academy's 20th anniversary celebration with service to students, employers and the community began with a massive campus-wide expansion and the grand opening of the Therapeutic Massage Specialist program with a student clinic where the focus is on physical and rehabilitation medicine.

Charter College is a private institution established to offer an alternative choice for both young and mature people who are seeking an efficient means to enhance their social and economic condition. It is a present and future oriented college committed to the value and utility of state-of-the-art information technology. Charter offers only those programs for which there are excellent career opportunities in Alaska and throughout urban America. Charter's fast-track calendar, consisting of five ten-week quarters annually, permits students to complete a bachelor's degree in two and one-half years, and an associate's degree in fifteen months. Charter offers both day and evening schedules. It has structured its facilities into thirteen classrooms. Four are used for lecture and manual accounting, eight for instruction using microcomputers, and one as a digital electronics laboratory. The College has a total of 190 new Dell Optiplex Pentium 4 computers. In addition, Charter purchases more than 200 Pentium or equivalent computers annually, one for each student enrolled in the computer hardware courses. After meeting certain requirements, students will own and take home their respective computers.

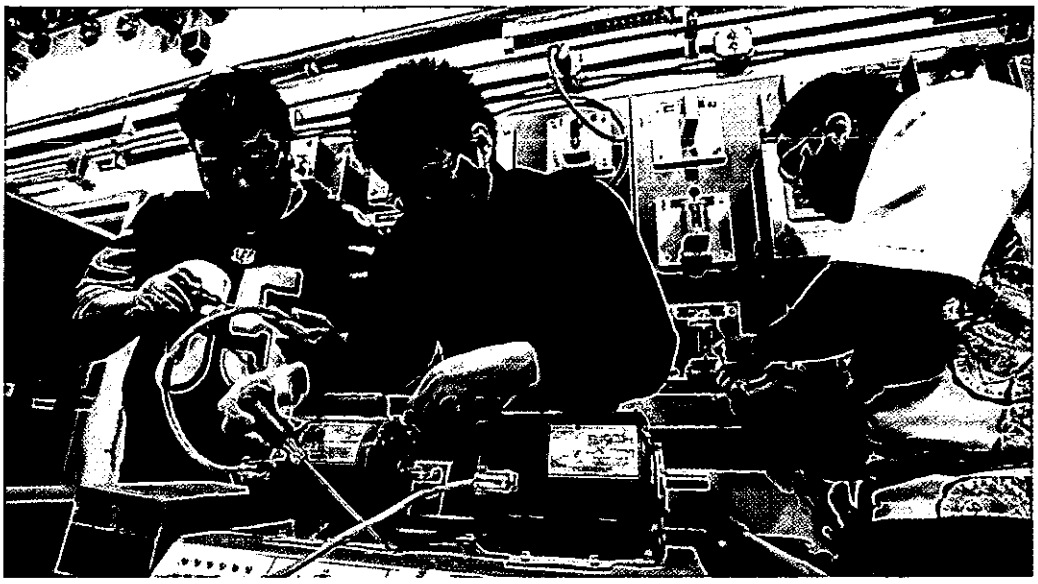
ILISAGVIK COLLEGE

P.O. Box 749 | Barrow, Alaska 99723 | www.ilisagvik.cc



Located within the heart of Alaska's beautiful North Slope, Ilisagvik College is a center for both scientific research and industrial training. As Alaska's only tribal college, and one of only 35 tribal colleges nationwide, Ilisagvik is dedicated to offering Native Alaskans the training and education they need to successfully enter the workforce of the twenty-first century as true professionals. Grounded within the Iñupiaq culture and featuring a highly popular Iñupiaq Studies program, Ilisagvik's spirit is best captured in its motto: Honor Your Past; Train for Your Future.

Whether it's working on the job with health care specialists, in the field with scientists, or driving a Vac Truck in Prudhoe Bay, an Ilisagvik education is designed to prepare students for career success in numerous fields. Accredited by the Northwest Commission on Colleges and Universities, Ilisagvik offers vocational certificates, endorsements and two-year associates degrees as well as the short-term NSTC training required for all jobs within the North Slope oil complex. For students considering higher degrees, Ilisagvik credits are fully transferable. National studies show that Native students who start their careers at tribal colleges are four times more likely to succeed in obtaining advanced degrees.

Located in the heart of Alaska's largest city is the University of Alaska Anchorage, the state's largest postsecondary institution. The campus is nestled in the middle of a greenbelt, surrounded by ponds, lakes and wildlife, and connected to a citywide trail system perfect for students' active lifestyles.

UAA offers many career pathway programs featuring associate's, baccalaureate and master's degrees, as well as vocational and professional certificates in more than 150 major study areas, including: arts, sciences, business, education, human services and health sciences. Through UAA's comprehensive curriculum, students learn practical job skills and develop a strong educational foundation that prepares them for graduate or professional schools and the workplace.

UAA has a Greek system that enhances the campus environment, enriches students' lives, encourages scholastic achievement and is a positive force in the community. In addition, the university offers more than 110 clubs and organizations in which students can become involved. UAA also hosts the annual Carrs/Safeway Great Alaska Shootout, featuring some of the best men's and women's basketball teams in the nation.

UAA is large enough to offer many choices, yet small enough to recognize students as individuals, not numbers. The university is connected to Alaska's unique culture and dedicated to student success – UAA is the place for you!

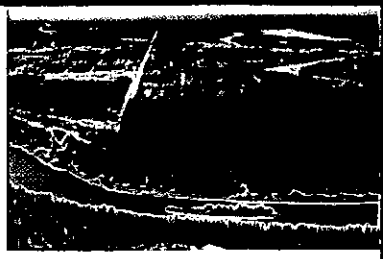
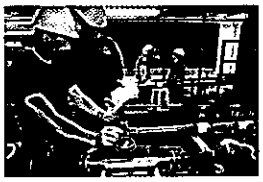
KENAI PENINSULA COLLEGE



Kenai River Campus | 156 College Road (NEW) | Soldotna, Alaska 99669 | www.kpc.alaska.edu
Kachemak Bay Campus | 533 E. Pioneer Ave. | Homer, Alaska 99603 | www.homer.alaska.edu



With an enrollment of almost 2,000 students each semester and highly qualified faculty, KPC prides itself on small class size and personalized attention for all students. There are no "typical" students at KPC. All ages, educational backgrounds and ethnicities are represented. The Kenai Peninsula College (KPC) system, a unit of the University of Alaska Anchorage, has locations throughout the Peninsula and in Anchorage. KPC is comprised of: Kenai River Campus in Soldotna; Kachemak Bay Campus in Homer; Mining and Petroleum Training Service (MAPTS) in Soldotna and Anchorage; Resurrection Bay Extension Site in Seward; and, the Anchorage Extension Site at the University Center.

KPC offers two-year Associate of Arts and Associate of Applied Science degrees, as well as courses leading to vocational certificates. KPC also offers University of Alaska Anchorage baccalaureate degrees in Liberal Studies, Elementary Education,Psychology and Fine Arts. Other four-year degree programs are available at KPC via distance delivery through other University of Alaska campuses. The college is greatly increasing its distance course offerings with 40 online classes this fall and more projected for Spring 2009. MAPTS offers non-credit courses in oil, gas, safety and mining, throughout the state of Alaska and is the largest such training provider in North America.

Kodiak College invites you to explore an exciting array of educational options, from transfer degrees to technical training and personal enrichment courses. Kodiak College is a public, two-year campus of the University of Alaska Anchorage, situated in the Gulf of Alaska on the second largest island in the United States. Our unique coastal environment and culturally diverse community offer a wide variety of opportunities both in and out of the classroom.

Located in the spruce forest about one and a half miles from downtown Kodiak, the College boasts state-of-the-art learning labs and computer facilities, friendly technical support, and a comprehensive library. Curriculum is designed to meet industry standards and highly trained faculty understand the rapidly changing needs of today's job market. Small class size coupled with outstanding academic advising and career counseling ensures that students receive the level of personal attention they need to excel. Six associate degrees as well as certificate and occupational endorsement programs introduce students to a variety of ideas and disciplines, whether the goal is to transfer to a four year college, to be a welder, an accountant, or a computer technician. Courses at Kodiak College provide knowledge, skills, and ethics for entry-level professional careers in high demand areas or for continuing education for the goal of pursuing higher degrees. The faculty and staff at Kodiak College look forward to welcoming you to our island learning community.

"Classes are interactive, interesting, fun. My instructors are very enthusiastic."

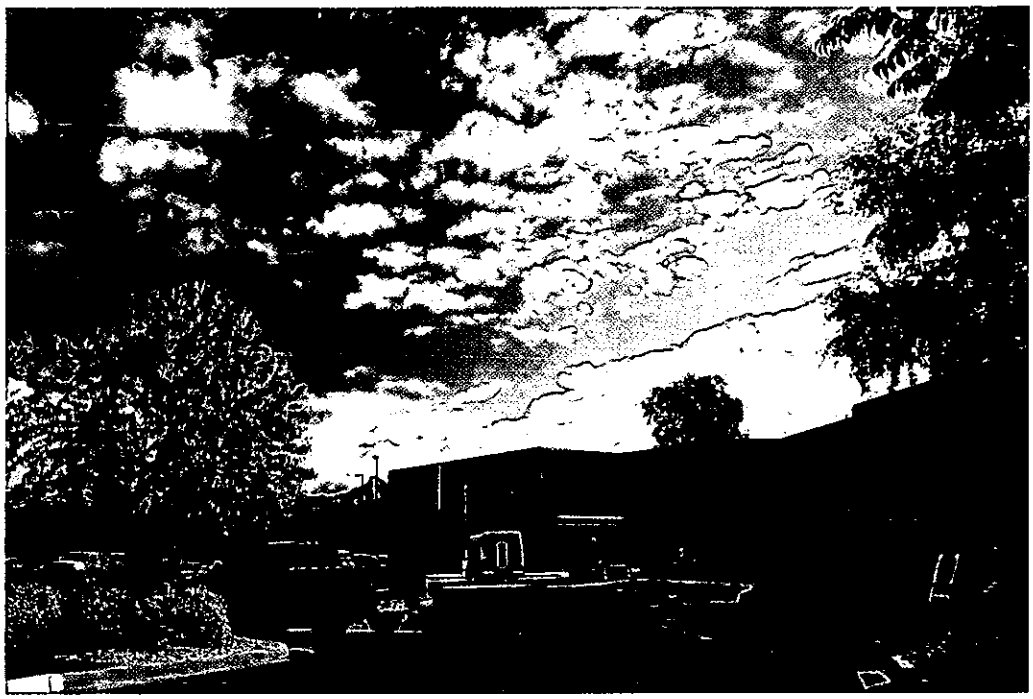
MATANUSKA-SUSITNA COLLEGE

P.O. Box 2889 | Mile 2 Trunk Road | Palmer, Alaska 99645 | www.matsu.alaska.edu



Matanuska-Susitna College (MSC) is a community campus of the University of Alaska Anchorage (UAA) located on a 950 acre site on Trunk Road between Palmer and Wasilla. The Mat-Su Valley is a beautiful area of rivers and mountains and is the fastest growing area of the state.

MSC serves approximately 1500 students per semester with approximately 90 degrees and certificates awarded each year. Its modern 102,676 square foot facility houses a public library, computer labs, student advising center, learning resource center, testing center, science and technology labs, general classrooms, campus store, an art gallery, and a cafeteria/snack bar.

MSC offers a general program leading to the Associate of Arts and offers Associate of Applied Science degrees in Accounting, Architectural & Engineering Technology, Fire & Emergency Services Technology, Computer Information & Office Systems, Computer Systems Technology, Human Services, Refrigeration & Heating Technology (the only such AAS program in Alaska), and Small Business Administration. Occupational certificates are available in the same disciplines. Many students enrolled in baccalaureate degree programs at UAA are able to take much of their coursework on the Mat-Su campus. Non-credit Work Force training and personal enrichment courses, continuing education courses, and selected upper division courses are also offered as demand warrants. MSC offers professional development courses and provides selected college level classes to area high school students through the Tech Prep agreement with the Matanuska-Susitna Borough School District.

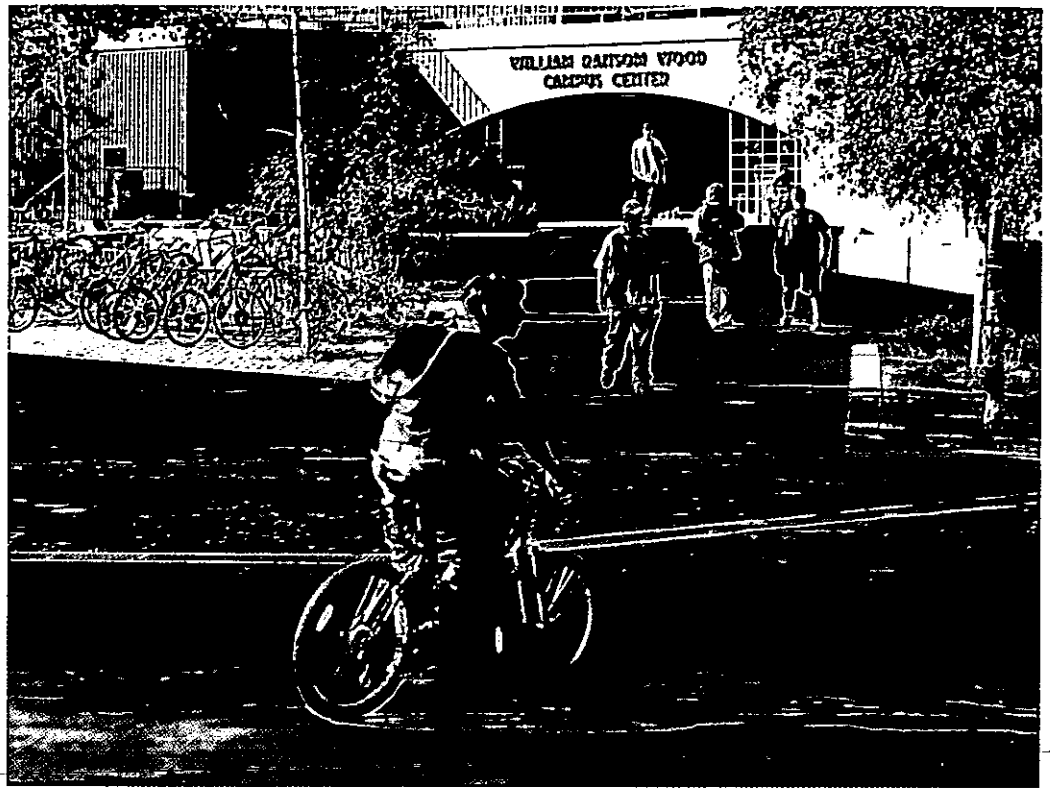
UAF
UNIVERSITY OF ALASKA FAIRBANKS



Choose UAF and you begin a college career that can lead you in any professional direction. UAF graduates become firefighters, bankers and anthropologists; they start their own businesses, work for large corporations and make public policy. Alumni work all over Alaska, the United States and the world. UAF's 9,687 students represent many ethnic, religious and language groups and come from a variety of cultures.

Nearly 600 full-time faculty teach most classes, even introductory-level courses. It's a hot spot for scientific research and is the only university in Alaska to offer doctoral degrees. It also has primary responsibility for Alaska Native education and study and provides a wide range of humanities programs. UAF offers more than 160 degrees and 28 certificates in 120 disciplines ranging from agriculture and engineering to liberal arts and construction trades.

When you graduate with a degree from UAF, the world is yours to discover. Whether you continue to explore the 360-million-acre classroom that is Alaska or take your education and skills somewhere else, you'll be ready to succeed.

BRISTOL BAY CAMPUS

P.O. Box 1070 | Dillingham, Alaska 99576 | www.uaf.edu/bbc/

The University of Alaska Fairbanks Bristol Bay Campus helps students discover and achieve their dreams, from earning a certificate or degree to just taking a class that enhances the job skills they already have. BBC is the region's educational hub, and serves more than 32 rural communities in Southwest Alaska. Students can attend class at the main campus in Dillingham, the two learning centers in King Salmon and Togiak, or by distance-delivery from anywhere in Alaska.

With classes ranging from information technology to renewable resources, and elementary education to rural development, students have a wide range of choices to help them find the career that's right for them. And because so many classes are offered in the evenings, students who work part time or even full time can still get the education they want, with a schedule they need.

Getting a good education doesn't have to mean leaving home. Students can live in their own communities and earn college credit. BBC lets you stay and save in Bristol Bay!

COLLEGE OF RURAL AND COMMUNITY DEVELOPMENT

Thanks to state-of-the-art technology, students who are dedicated to their communities can pursue one of the many certificates or associate and baccalaureate degrees available through the University of Alaska Fairbanks Chukchi Campus. CC is specifically equipped and prepared to serve residents of the Northwest Arctic who aspire to a career in the region and want to earn a degree or certificate without having to leave home.

CC houses a student advisor, registrar, business office, Internet trainer and a library. NANA resource technicians are located in each of our regional villages and are well prepared to assist students with registration, financial aid, accessing tutor services and other support services. Taking college prep courses and earning your degree from home is affordable and fully supported.

Achieve your educational goals at Chukchi Campus!

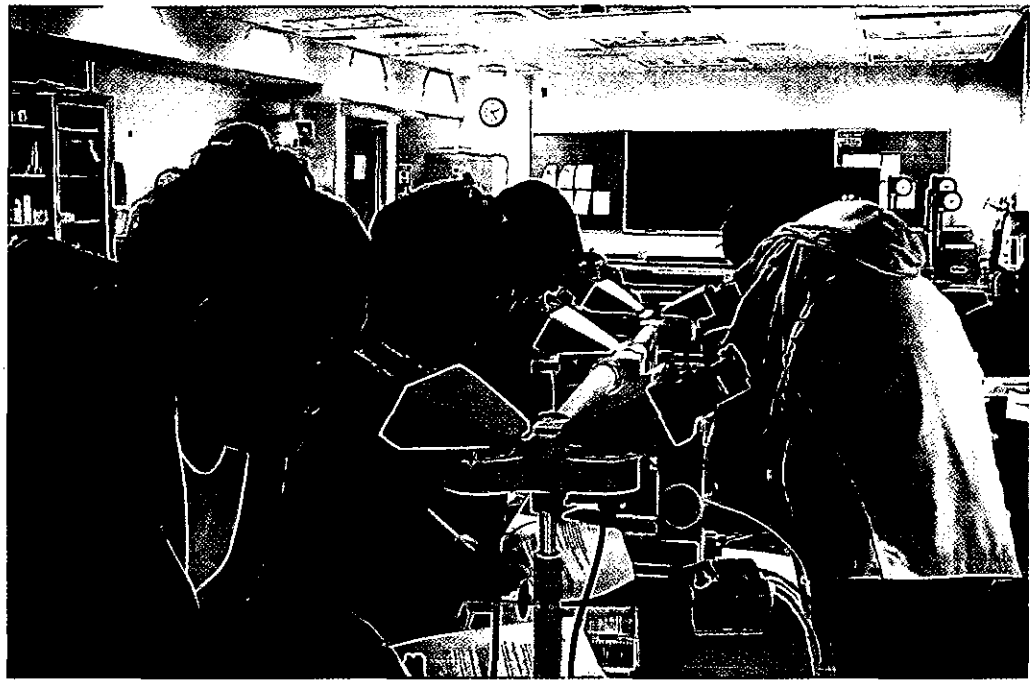
INTERIOR-ALEUTIANS CAMPUS

P.O. Box 756720 | Fairbanks, Alaska 99775 | www.uaf.edu/iac/



The Interior-Aleutians Campus of the University of Alaska Fairbanks serves an area of Interior Alaska the size of France and an additional 13,000 square miles along the Aleutian chain. I-AC mainly serves an Alaska Native population that is culturally and linguistically diverse. Nine of the 11 Athabascan language groups and two distinct Aleut dialects are spoken within our service area.

I-AC integrates lifelong educational opportunities with rural Alaska and Alaska Native communities, cultures and ways of life. I-AC brings the university to people who cannot attend classes in Fairbanks, focusing on the specific needs of the communities it serves. Six rural centers serve about a dozen satellite communities with a mix of on-site classroom and long-distance audioconference, telecourse and correspondence courses.

Getting an education shouldn't have to mean leaving home. From helping rural high school students prepare for college to offering associate and bachelor's degrees, I-AC is committed to students' success, wherever they are and wherever their dreams may lead them.

COLLEGE OF RURAL AND COMMUNITY DEVELOPMENT

The Kuskokwim Campus of the University of Alaska Fairbanks offers degrees, courses, seminars and workshops delivered in face-to-face classroom settings and through distance delivery. Earn a 30-credit certificate in such disciplines as early childhood education, rural human services, community health, information technology and Yup'ik language. Or, earn a degree in one of 13 disciplines.

KuC is on the delta of the Yukon and Kuskokwim rivers in Bethel, the hub for 47 communities with 56 tribes of primarily Yup'ik/Cup'ik culture, with some Athabascans in communities in the upper reaches of the delta. The largest rural campus in the UAF system, it is the only one with a residential dorm, which houses up to 38 students.

In addition to gaining a college education and professional skills, students can also participate in many programs that provide special events and activities, including: Emerging Scholars, Alaska Native Science and Engineering Program, Talent Search, Science and Technology Academy, summer camps and internships with regional employers. KuC can do wonders for your future!

Kuskokwim Campus
UNIVERSITY OF ALASKA FAIRBANKS

NORTHWEST CAMPUS

Pouch 400 | Nome, Alaska 99762 | www.nwc.uaf.edu

Northwest Campus is located in the heart of Beringia, a crossroads of cultures and an exciting place to call home. For the past three decades, NWC has been helping students achieve their education and workforce training goals. Because NWC is a branch of the University of Alaska Fairbanks, students can earn university credit and degrees while staying close to home.

Our High Latitude Range Management Certificate Program is unique in the United States. Created in cooperation with employers and area reindeer producers, the program prepares students for natural resource-related jobs or further education in related fields. Ten full-tuition scholarships are available; please call (907) 443-8402 for information.

NWC works with area school districts to offer dual-credit courses, giving high school students a preview of college. The Nome campus features two computer labs, a library, science lab, ceramics studio and videoconferencing capabilities. NWC advisors work closely with students to develop individual learning plans. Whether pursuing a degree, mastering job skills, or learning just for the joy of it, students can expand their horizons at Northwest Campus.

COLLEGE OF RURAL AND COMMUNITY DEVELOPMENT

The University of Alaska Fairbanks Tanana Valley Campus is a leader in academic preparation, lifelong learning and developing a quality local workforce. TVC meets the needs of first-time college students, nontraditional students, military students and those seeking job training. TVC plays an important role in Interior Alaska and across the state in building a workforce for Alaska's future.

TVC offers more than 40 one-year certificate and two-year associate degree programs in a student-friendly environment with personalized, responsive and supportive services. Many classes are offered in the evenings or on the weekend to accommodate the needs of students with families and full-time jobs.

At TVC, faculty members bring a wealth of education and experience to the classroom. Students' educational experiences transcend textbook and theory. TVC offers a real-world approach to learning by bringing in part-time faculty who, when they're not teaching, have their own careers in the fields in which their students will soon be working.

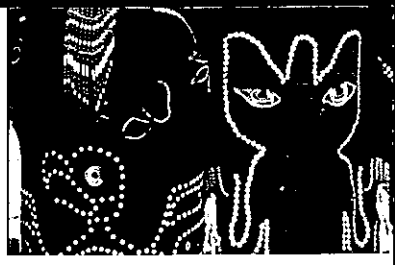
TANANA VALLEY CAMPUS-UNIVERSITY OF ALASKA FAIRBANKS

UNIVERSITY OF ALASKA SOUTHEAST



11120 Glacier Highway | Juneau, Alaska 99801 | www.uas.alaska.edu

The University of Alaska Southeast offers opportunities to grow and learn in a supportive and intimate learning community amidst unparalleled natural beauty. Cutting edge undergraduate field research makes the most of our spectacular setting in the Tongass National Forest along the Inside Passage and the Juneau Ice Field.

UAS students can cruise the waters of Glacier Bay National Park for archeological research, hop into a helicopter to document the glacial flow of the Juneau Icefield, SCUBA dive to study king crab, study ceramics or painting on the shores of a mountain lake, be part of a unique literature and the environment program or become involved in productions with a world-class regional theatre company.

UAS also provides career development training and degrees in outdoor studies, business, health care, construction, diesel, marine, automotive, fisheries, welding or mining technology.

No matter what career path you choose, UAS is designed to strengthen your problem-solving skills, enhance your ability to communicate effectively, and teach you how to work collaboratively – all things employers want. Small class sizes insure a rich educational experience with top-notch instructors who choose to live and work in a place where dramatic natural vistas inspire scientific, artistic and work force pursuits.

Start your life adventure...at UAS. Learn. Engage. Change.

The ocean and mountain scenery around Ketchikan has been described as profound and soul-nourishing; such terrain is the backdrop against which the UAS-Ketchikan campus is located. Outdoor activities in the region are available year-round, as Ketchikan lies in the maritime climate zone noted for its warm winters and cool summers.

Students at the UAS-Ketchikan campus enjoy the advantage of taking classes at a small campus where the student-instructor ratio is low. The one-on-one interaction facilitates learning for all students, including non-traditional, of which there is a good-sized population (average age at the campus is 30). From faculty, administrators, and business office personnel to the on-site Learning Center and library, the focus is on serving students in a way that encourages their success.

UAS-Ketchikan awards a variety of one-year certificates and two-year associate degrees. Through collaboration with other UAS campuses and the University of Alaska in Fairbanks and Anchorage, UAS-Ketchikan also provides the opportunity to earn a number of bachelor's and master's degrees via distance delivery methods. We invite you to consider improving your future through classes taken in Alaska's First City at UAS-Ketchikan!

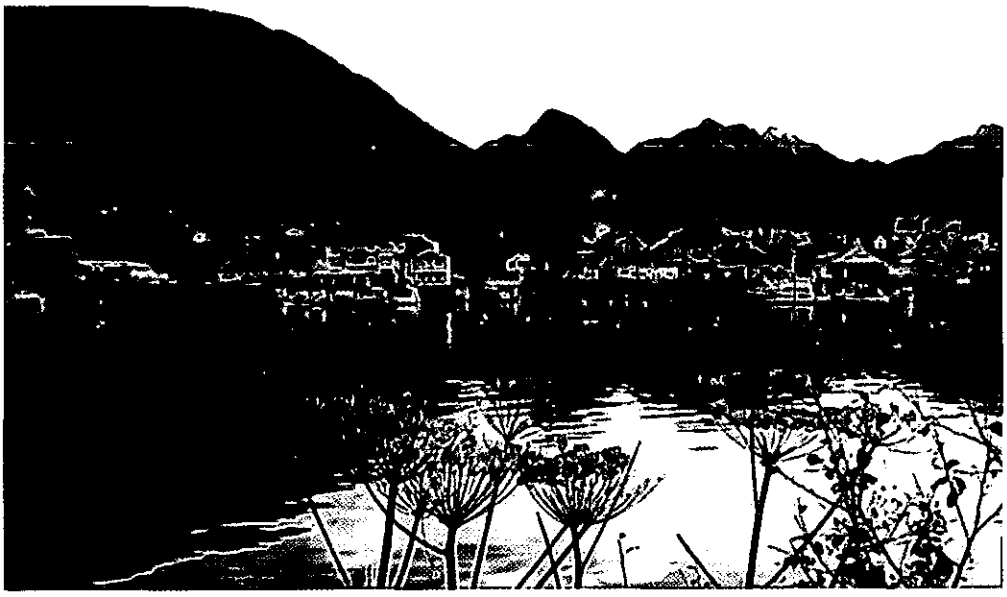
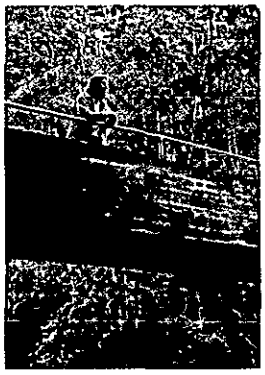
UAS SITKA CAMPUS

1332 Seward Avenue | Sitka, Alaska 99835 | www.uas.alaska.edu/sitka





Learn and live in a place like no other. The beautiful and historic city of Sitka is home to UAS Sitka Campus, a vital, growing institution that serves just under a thousand students every year. Sitka, the fifth largest city in the state (population 8,947), is situated on Baranof Island, on the outer coast of Southeast Alaska. The campus is a short, breathtaking walk across the O'Connell Bridge, and fits uniquely into the education choices in Alaska. Sitka is home to WhaleFest where students can learn about and observe humpback whales in their natural environment and participate in research.

The Sitka campus is an important part of the statewide University of Alaska system and a recognized leader of innovative technologies to deliver education. Wireless connections and campus printing are available for all students. The campus also provides free software to students and computer tutoring in our state-of-the-art lab. Other benefits include core education classes that cost a fraction of what you would pay elsewhere, and faculty who pride themselves on preparing students for advanced studies while providing warm, personal attention. The UAS Sitka campus is well known for its outstanding student support system, friendly and helpful staff, and inclusive environment – all in beautiful Southeast Alaska. *Come join us and dive into learning!*

Prince William Sound Community College provides academic, developmental and vocational education, training, community interest courses and services to the residents of Prince William Sound and Copper Basin regions. PWSCC is located in Valdez, also known as the "Switzerland of Alaska" because of the rugged, snow-clad peaks which surround the city. Its mission is to provide an academically sound and transferable liberal arts and general education curriculum. PWSCC provides entry-level and continuing vocational education to meet the needs of evolving job markets. It also seeks to promote cultural and personal enrichment opportunities to the people of the service area and cross-cultural experiences involving individuals from a variety of ethnic, generational and international groups.

PRINCE WILLIAM SOUND COMMUNITY COLLEGE

ALASKA Campuses of Out-of-State Schools

Alaska's students may also choose to meet their education needs at an institution that has a main campus elsewhere but offers a local Alaska campus and program or programs. These campuses and programs are often designed specifically to meet the needs of members of the military or working adult students.

Embry-Riddle Aeronautical University has two residential campuses in Daytona Beach, Florida and Prescott, Arizona. Wayland Baptist University's main campus is in Plainview, Texas; and Central Texas College's main campus is found in Killeen. All three colleges offer degree completion programs for transferring students.

EMBRY-RIDDLE AERONAUTICAL UNIVERSITY - WORLDWIDE

Anchorage and Fairbanks campuses

If you have the ambition to continue your education, to strive for your goals, then nothing should stand in your way. That's why Embry-Riddle Aeronautical University - Worldwide has reached out around the world with more than 130 locations and across the Internet with online academic programs to give everyone the opportunity to receive an incredible education. With Embry-Riddle's Anchorage and Fairbanks locations, work responsibilities, family obligations, and transportation are no longer obstacles in fulfilling your dreams. We offer Bachelor's and Master's programs specializing in Management, Aviation Safety, Occupational Safety & Health and Logistics. The leaders of tomorrow are studying with Embry-Riddle today! To contact our Anchorage Campus, call (907) 753-9367 or email: anchorage.center@erau.edu. To contact our Fairbanks Campus, call (907) 356-7773 or email: fairbanks.center@erau.edu.

WAYLAND BAPTIST UNIVERSITY: A Degree of Difference

Anchorage campus and Anchorage and Fairbanks military campuses

When education is a priority, it's vital that you choose a university that is not only convenient but also provides challenging academic opportunities in an environment that encourages learning. At Wayland Baptist University, we offer more than just a diploma. Here, you'll find a faculty and staff who are eager to help you meet your career and educational goals and take a personal interest in your success. Our quarterly terms and evening and weekend classes are designed with the working adult in mind. Working toward a degree while maintaining a full-time job and other responsibilities is easier with Wayland's class schedules. WBU offers both undergraduate and graduate degree programs in class and online. Above all, you'll find yourself at home in Wayland's distinctively Christian environment, where you are valued as a part of the family. That's Wayland's Degree of Difference! In Anchorage, call (907) 333-2277. In Fairbanks, call (907) 377-4398.

CENTRAL TEXAS COLLEGE

Anchorage and Fairbanks military campuses

Central Texas College is a community college which began in Killeen, Texas in 1965. Central Texas College is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools to award associate degrees and certificates of completion. It serves military and civilian personnel throughout the world and has an open-door admission policy. Students enrolled in Central Texas College may select a degree plan from Associates' of Arts, Associates' of Science, Associates' of Applied Science and Associates' of General Studies. Programs vary from location to location. For complete information on programs offered at the Fort Richardson and Elmendorf AFB, Alaska sites, you may contact Margaret I. Pylant, Site Director at (907) 428-1317, or email us at centraltexascollege@acsalaska.net. For more information on Fort Wainwright, contact Tamatha Zavodsky at (907) 356-3863. For information on Central Texas College's program world wide, you may contact CTC at www.ctcd.edu.

The UA College Savings Plan

UAF Photo by Todd Paris, UAF Marketing and Communications.

A Small Investment Starts Something Big

For more than 17 years, we have been helping Alaska families save for college. If your PFD is one of the 93,000 we've received since 1991, you have a head start toward paying for your education!

Ready to begin using your account? You can request a distribution by calling 1-800-478-0003. If you're attending UA, we can even transfer the funds to your campus electronically!

The UA Scholars Program

Building Alaska's Future

Think you may be eligible for the scholarship? Contact your school counselor today!

Here is what some of our recent alumni have said of the Program and their experiences at the University of Alaska:

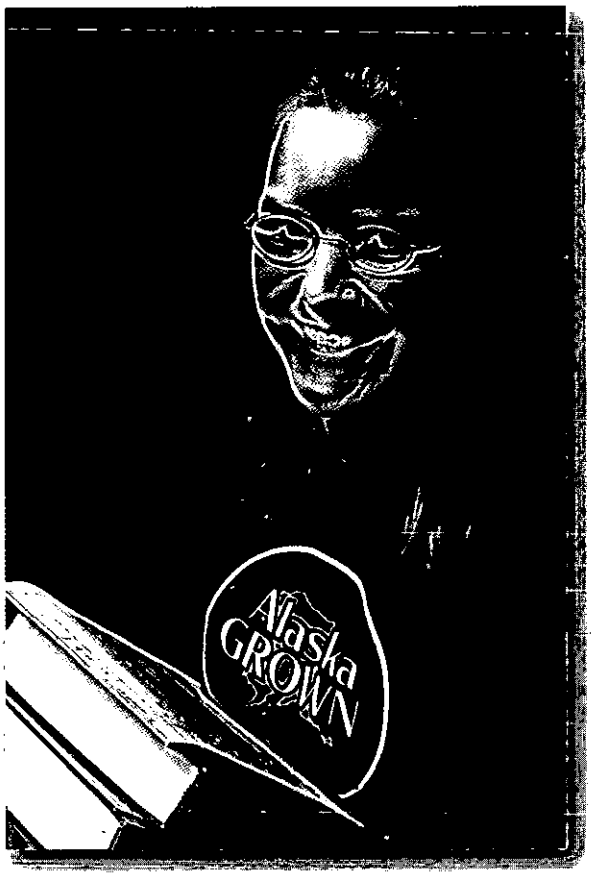
"I had opportunities I never imagined. It was a great foundation for my education."

"The UA Scholars Program was a great way to start my freshman year in college."

"I couldn't have accomplished a post-secondary education without this scholarship. It encouraged and motivated me to continue my education."

"It's a wonderful program that not only made it possible for me to go to college, but to do it debt free, so thanks!"

"I'd do it all over again if I had the chance."



Kimberly Balster,
UA Scholar.

Photo by Todd Paris, UAF Marketing and Communications

UA Scholars are offered an $11,000 scholarship to use at the University of Alaska. Eligible students are those ranked in the top 10% of their class at the end of the junior year, as designated by a qualified high school.

CHART YOUR COURSE

Vol. 4, No. 1 THE NEWSPAPER FOR ALASKA'S MIDDLE SCHOOLERS 2008

I want to be a Marine Biologist

I was born in Anchorage and attend Polaris K-12 School. My favorite things at school are literature and the Marine Biology Intensive class. For this class, we went to Kachemak Bay (Homer) and saw all kinds of invertebrates I didn't know existed. Outside school, I like to bike, do Tae-kwon-do, and have fun with my friends at the park.

I'd like to be a marine biologist or archaeologist (and possibly a martial artist). I met some people in Homer at the Center for Alaska Coastal Studies who helped and encouraged me.

To be successful at one of these careers, I have to learn to write about things I discovered. I'll need math and science classes, too. To prepare for this, I'm saving my money for college and working hard in classes.

PREPARE FOR COLLEGE IN MIDDLE SCHOOL

Most students don't start thinking of college until they enter high school. If you start planning now, you'll be a step ahead of the crowd.

- ✓ Tell your parents you want to attend a college
- ✓ Take algebra and a foreign language THIS year
- ✓ Study hard and strive for A's
- ✓ Visit college Web sites for information on their requirements
- ✓ Plan a high school class schedule with a college preparatory track
- ✓ Develop skills that are valuable for high school and essential in college: word processing, online research, and study skills

Lisa Hartman: "Get experience by volunteering..."

I grew up in Seward doing everything I could to keep up with my two older brothers. I played basketball, volleyball, and baseball, and ran cross-country.

Growing up near the ocean, I always had a strong interest in marine science. During my first few years in college I considered physical therapy as a career, and I found a facility that offered dolphin therapy swims. I volunteered for a summer and learned I was more interested in working with animals than as a physical therapist. After completing my natural sciences degree, I got an entry-level position at the SeaLife Center and now, 9½ years later, I am a Mammal Husbandry Coordinator.

"Each day offers something new and challenging."

I primarily train and care for the harbor seals and Steller sea lions that participate in research projects. My typical day involves feeding and training the animals, helping with educational tours and talks, as well as massive amounts of cleaning—scrubbing pools, diving in the exhibits, scrubbing floors, and keeping everything free of fish scales, which can be challenging when you feed fish all day!

Each day offers something new and challenging, such as setting goals for the animals and seeing them achieve those goals.

If you think you'd like training marine mammals, volunteer at your local zoo or aquarium when you're in high school or college. This job requires a lot of stamina and energy, but I enjoy not sitting at a desk all day.

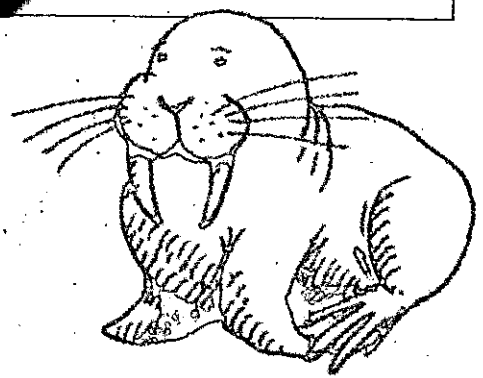
University of Alaska Anchorage

Current Career:
Mammal Husbandry Coordinator,
Seward SeaLife Center, Seward, AK



I want to be an Animal Biologist

I was born in Bangkok, Thailand, and moved to Alaska when I was 3½ years old. My favorite subjects at North Pole Middle School are English and science. I also belong to the school Running Club, and to Boy Scout

and enjoy Tae-kwon-do and bike riding, rain or shine. Ever since I watched the show "Planet Earth," I've wanted to become an animal biologist. Biologists can travel the world and to unknown lands to get information on various creatures. I know I'll need higher education in science (to learn about the environments), math (for calculating the coordinates for other scientists), and biology (the most obvious).

My parents, grandparents, aunts and uncles, and teachers all encourage me. They help me by telling me when I'm right and wrong, and by getting me science kits to improve my skills. What I admire most is that they all pitch in and help.

WHAT KINDS OF JOBS CAN YOU GET WITH A COLLEGE EDUCATION?

One of the best things about getting a college education is that it gives you more choices. As you explore possible careers, find out what kind of education is needed for them.

You might change your mind several times about the type of job you want to have. Changing your mind is okay – but not planning ahead is not okay. For more information about the education needed for specific jobs, talk with your school counselor or librarian or visit a college. You might even want to talk to other adults who have jobs you think are interesting.

2-Year College (Associate Degree)

- Medical Lab Technician
- Computer Technician
- Car Mechanic

- Veterinarian
- Zoologist
- Doctor
- Geologist
- Lawyer
- Psychologist

Shea Winterberger: "If you want it enough, you can achieve anything."

I grew up in Anchorage and graduated from Polaris K-12 in 2005. My favorite activities were swimming, dancing, and playing the trombone. I also spent a lot of time hiking, camping, canoeing, and enjoying the outdoors with my family. One of my favorite places to go during the summer was Kenai Fjords, where I went out on boats and saw all the wildlife that Alaska waters have to offer. Beginning at five, my career goal was to be a marine biologist.

When I started my senior year in high school, it hit me. What was I going to do? I really didn't have any idea where I was going to go. It was like being on a boat at sea in the middle of a fog bank. Were there rocks ahead? Was there a nice calm ocean? Every year before, I had had another year of school to look forward to. Now, as a senior, it was up to me what I did the next year. It was scary.

After being accepted by several colleges, I decided to go to the Coast Guard Academy in New London, Connecticut. Currently I am a 2nd-class Cadet (Junior). When I graduate, I will be an officer in the U.S. Coast Guard and have a degree in Marine and Environmental Science. I study how the ocean works, how weather works, and how pollution affects the ocean. We've taken field trips on boats. Other classes have taken me to the beach and to the underside of a boating pier, all in the name of science!

SHEA WINTERBERGER

High School:
Polaris K-12, Anchorage, AK

Current Student at:
U.S. Coast Guard Academy

Major:
Marine and Environmental Science

I like learning, but I make sure that even if I don't really like the subject or the teacher, I still study hard. I try to relate it to something that I do enjoy. Colleges look at your grades in high school, but don't give up hope if you don't have good grades now! Just find study habits that work for you, find a mentor (teacher or another student), and work hard.

"Get involved in school, in sports, in a club."

It isn't all about grades either. The most important thing to remember is to get involved in school, in sports, in a club. Here at the Academy, I am a member of the CGA varsity swim team, the drum and bugle corps (where I play baritone), the jazz band (where I play trombone), and the Sustainability Club (a reduce-reuse-recycle club). Try new things and work hard to overcome obstacles. If you want it enough, you can achieve anything.

The most important thing to realize about finding the right college and career is finding something you like to do. It won't feel like work or school if you enjoy what you're doing; it will just be fun.

Marine Science

What is the Center for Alaska Coastal Studies?

CACS has been learning and teaching about the marine and coastal ecosystems of beautiful Katchemak Bay, on the Kenai Peninsula, since 1982. The Center holds Junior Naturalist Summer Camps, Alaska Whale Camps, and WSI (Wildlife Scene Investigation) Teen Naturalist Camps each summer.

Learn more about the Center and these summer opportunities for students at *www.akcoastalstudies.org*.

Marine: having to do with the sea, salt-water.

Ecosystem: a natural unit consisting of all the plants, animals, and micro-organisms (living things) in an area functioning together with all of the non-living physical elements of the environment.

Andrea Wilson: "Believe in yourself."

My mother was a single parent who raised me and my brother on her income as a poetry writer and ivory sculptor. I was mostly raised in Anchorage, but we moved so often that I attended six different elementary schools. Eventually we settled down and I graduated from Hanshew Middle School and later East High School.

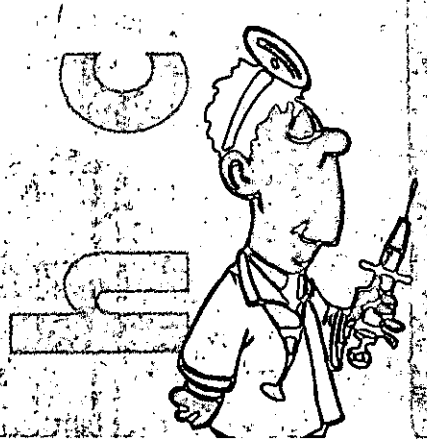
When I was younger I loved going to school. I would show up early and leave late. I was one of those students who always raised their hand to answer questions, and I was also one to stay after school to help tutor others. I was very personable and had a lot of friends, but I especially bonded with those with mental and/or physical disabilities. I always knew I wanted to stay involved with younger kids when I grew up, but I just didn't know exactly how.

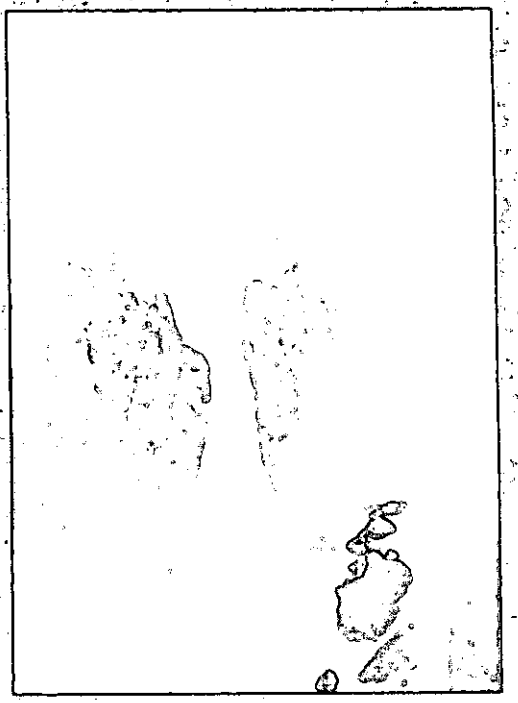
"When you surround yourself with successful people... it opens your eyes to a whole range of possibilities."

Today I am a dental assistant at the Alaska Native Medical Center, specializing in Pediatric Dental Assisting - I assist doctors who mainly deal with small children and those with disabilities. I obtained this job right before I graduated from high school and I am grateful I did because working here inspired me to go to college. When you surround yourself with successful people, like doctors in my case, it opens your eyes to a whole range of possibilities. Suddenly, going to college and graduate school isn't something I felt defeated by; it became something I wanted to conquer.

Currently I am a student at the University of Alaska Anchorage. I am aspiring to become a dentist someday so I am working on a bachelor's degree in biology.

The advice I offer to all those who are considering college is to believe in yourself. College takes a certain amount of courage and independence in order to get through it. Personally, I had to see that it was possible for me to finish it before I even began.





ANDREA WILSON -

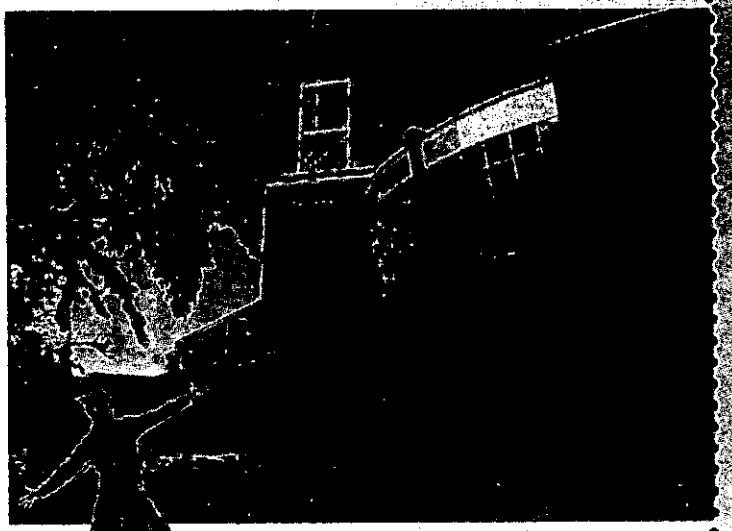
High School:
East Anchorage HS, Anchorage, AK

Current Student at:
University of Alaska Anchroage

Current Career:
Dental Assistant, Alaska Native Medical Center, Anchorage, AK

Major:
Biology / Dentistry

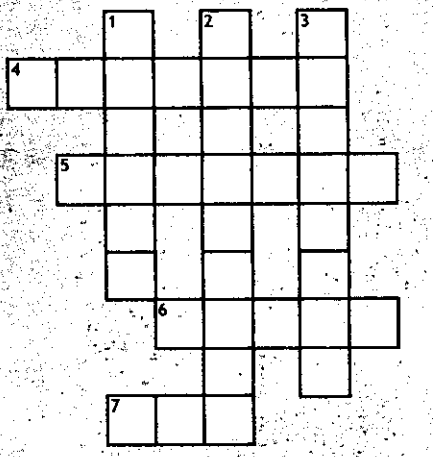
DO YOU KNOW
which Alaska college campus this is?



Answer: University of Alaska Anchorage

Can you picture yourself here?

Crossword Puzzle



Down:

1. Providence Lifeguard Alaska uses helicopters, jets, and turboprop _____ for transport.

2. Andrea Wilson's current major is biology and eventually will be _____.

3. Studies show if you take algebra and _____ early you are more likely to go on to college.

Across:

4. No one in my family ever went to _____.

5. David Skidmore was fascinted by human _____ and physiology.

6. Begin.

7. Don't be afraid to _____ new things.

Dave Skidmore: "Don't be afraid to try new things."

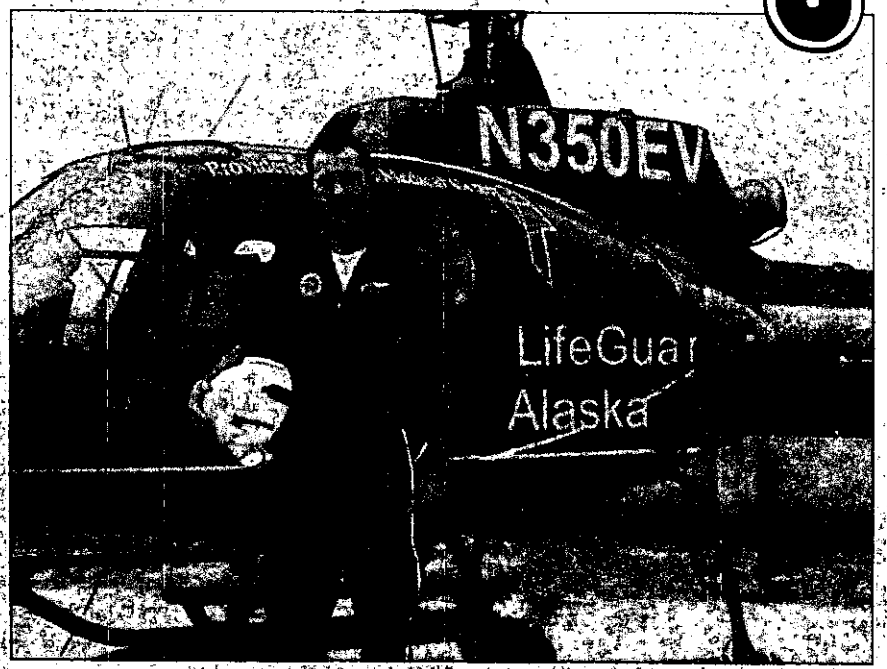
I grew up in Fairbanks and Anchorage and loved the outdoors from early childhood. In high school I became particularly interested in climbing, mountaineering, skiing, and mountain-biking. After graduating from Service High School, I traveled around Europe, Africa, and the U.S. for two years and then completed six years of college. I was fascinated by human anatomy and physiology and settled on nursing as a career. I graduated with bachelor's degrees in both Nursing and in Parks and Recreation Management. I also continued to enjoy backpacking, climbing, and paragliding. After college, I was accepted into a three-year-long critical care externship at a 500-bed teaching hospital in Texas.

DAVE SKIDMORE -

High School:
Service HS, Anchorage, AK

College:
University of Alaska Fairbanks

Current Career:
Providence Lifeguard Alaska Flight Nurse, Anchorage, AK



I now work as a flight nurse for Providence Lifeguard Alaska, based in Anchorage. We use helicopters, jets, and turboprop planes for transport. I love the variability of flight nursing. I might be called to travel anywhere in Alaska or the Northwest, transporting patients for medical care. In one shift I might be hiking to an injured person in Hatcher Pass and transporting someone with a heart condition from Barrow. We also do daily equipment checks, meet with the off-going crew, and make rounds in the hospital.

Providing care to sick or injured people is rewarding, but flight nursing requires a significant commitment of time and effort from both myself and my family. The long shifts, little sleep, and need for flexibility can be challenging.

There are usually many different perspectives and solutions to any problem. My advice to students is to be open to a variety

I graduated with bachelor's degrees in both Nursing and Parks & Recreation

WHY IT'S SMART TO TAKE CHALLENGING COURSES

Studies show that if you take algebra and geometry early – starting in the eighth and ninth grade – you are more likely to go on to college than students who don't. Algebra and geometry are the foundation for many advanced math and science courses (such as chemistry and physics) that some colleges want high school students to take. Also, plan to take a second language, art or Advanced Placement course. Making good grades in tough courses can be a big plus in helping you get into college.

Here are two of the most important things you can do right now to prepare for college:

- Sign up for the right

people and makes the world a better place. Also, avoid unnecessary risks but don't be afraid to try new things.

I want to be a Pediatric Nurse or Doctor

I was born in Juneau and have lived here all my life. I'm part of a very big Filipino family. My mom is one of ten siblings. Family is one of the most important things to me.

At school I like Spanish, language arts, and math. I also do ballroom dancing after school, which is fun. I plan to try out for the volleyball team, and I'm also interested in joining student council. For fun, I like to go shopping or to the movies with my friends, and also watch football and soccer on TV.

I would love to become a pediatric nurse or doctor when I grow up. My mom works as a Certified Nursing Assistant (CNA) at the Juneau Pioneer Home. She's one of my biggest inspirations. I'd like to do something where I can help the world, just like my mom does. Also, my aunt works in obstetrics at Bartlett Regional Hospital in Juneau. Her face just lights up when she talks about working in pediatrics and with babies. I really like the idea that every day I'd be helping someone and making their life easier or better and also that I'd be contributing to my community.

My family always sees the glass as half full rather than half empty. Their support and encouragement, and knowing their outlook on life, helps me keep pushing toward my goals.

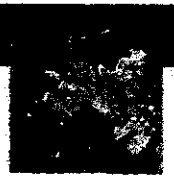
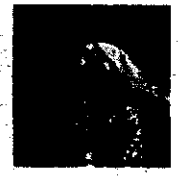
Dzantik'I Heeni Middle School
Juneau, AK

No One in My Family Ever Went to College...





Even if no one in your family ever went to college, that doesn't mean that no one will. All it takes is for one person in a family to act upon that dream, and by their example others can follow. That first person can be YOU!

It takes a lot of courage and determination to be the first in anything. Talk to your teacher, counselor or principal about what college is and how to prepare. Ask questions!

Find out what you can do to get ready now by taking classes in middle school that will prepare you! Ask if your school has a mentor program to help you succeed in education after high school.

Look around you for role models.
Find people like you who have succeeded.
Ask them how they did it!

Be the best you can—Life is an amazing opportunity!
Anything is possible if you try hard enough!

Wendie Marriott: "To have a positive impact on someone is one of the best feelings in the world!"

I sort of fell into the field of Parks and Recreation by accident. I didn't realize that you could actually major in this area of study!

As a lifelong Alaskan, I chose Western Washington University because it has the same environmental feel Southeast Alaska does. A lot of Alaskans go to Western so it was easy to find a familiar face among the 10,000 students.

Some of my classes involved rock climbing, snow camping, white water rafting, and planning group camping trips. It was the first time in my life that I woke up each morning and actually couldn't wait to go to school!

"Some of my classes involved rock climbing, snow camping, white water rafting, and planning group camping trips."

Since graduation from Western Washington, recreation has become my passion. I truly believe in the work we do and its importance in a community's quality of life. I have worked as Sports Programmer for the City of Ketchikan; Recreation Programmer and Youth Center Manager for the City and Borough of Juneau; and as Director of the Parks, Culture, and Recreation Department for the City of Unalaska. Right now, I am Manager of Centennial Hall Convention Center in Juneau.

WENDIE MARRIOTT -

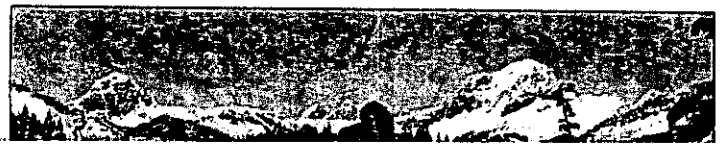
High School:
Juneau-Douglas HS, Juneau, AK

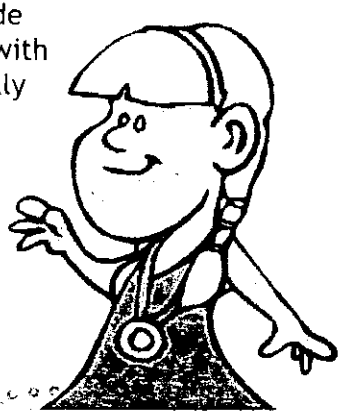
College:
Western Washington University

Current Career:
Centennial Hall Convention Center Manager, Juneau, AK

For students interested in this field, I recommend starting out taking any small, part-time or volunteer job available. These include coaches, playground aides, lifeguards, and gym supervisors with your local Parks and Recreation Department. Alaska is actually short on qualified Parks and Recreation professionals.

Imagine a profession where your job is to help people become healthy, learn new skills, enjoy the great Alaska outdoors, get their lives in order, and laugh and enjoy themselves—where you are teaching people how to play! To have a positive impact on someone is one of the best feelings in the world!





I want to be a Masseuse

My name is Victoria Adams. I was born in Portland, Oregon where I lived until I was five. I am now 12 and a 7th grade homeschooler. I've been homeschooled all my life. My favorite subjects are math and science. I have two brothers and two sisters, and my favorite hobbies are swimming, volleyball, and skiing.

When I grow up, I would like to be a masseuse. I know one woman who does this; she makes it sound very fun. She likes her work because she can meet new people every day. Of course, I need to go to a school and learn more about the career I want to pursue. Accordingly, I must study very hard so I can make it to college.

Victoria Adams
Homeschooled
Anchorage, AK

Be Smart - Be Ready! You might qualify for the ACG!

There are many reasons to take challenging academic classes in high school. Now there is another good reason: to be eligible for the federal Academic Competitiveness Grant (ACG)!

The ACG is free money for college for students with great financial need. Eligible students can receive up to $750 their first year as a college freshman and up to $1,300 as a college sophomore.

One of the determining factors for eligibility is that a student has completed a rigorous high school curriculum.

This includes:

- ✓ Four years of English
- ✓ Three years of math (including Algebra 1 and a higher level course)
- ✓ Three years of science (including at least two courses from biology, chemistry, and physics)
- ✓ Three years of social studies
- ✓ One year of a foreign language

Ask your teachers and counselors to help you select challenging classes that meet these guidelines.

College may seem a long way off, but planning now, as you enter high school, helps you keep all your options open. Then, no matter what you decide to do in your life, you'll be ready.

"rigorous" means "demanding"
"curriculum" means "the subjects taught at an educational institution"

SHASTA MILLER -

High School:
Ketchikan HS and Palmer HS, AK

Current Student at:
Alaska Pacific University

Major:
Health and Physical Education

Shasta Miller on her way to becoming a Physical Therapist...

I was born in Ashland, Oregon, the eldest of five children. I went to elementary school in Gold Beach, Oregon, ninth grade in Ketchikan, tenth grade in Oregon, then back to Palmer, Alaska for eleventh grade—and my senior year of high school at Alaska Pacific University in the Early Honors Program, which I loved!

I love rock climbing, hiking, dancing, riding horses, reading, and writing, and I'm very competitive. I also love "active traveling"--visiting other countries to learn the language, help build a house, or go rock climbing, not just sightseeing.

"I love rock climbing, hiking, dancing, riding horses, reading, writing, visiting other countries to learn the language or help build a house..."

My parents and siblings have been the main influence in my life. My parents always asked me what college I wanted to go to, not whether I wanted to go.

I'm working on a bachelor's degree in health and physical education with an emphasis on the health sciences; I plan to become a physical therapist. My favorite classes this year are African Dance and Biomechanics and Kinesiology—the first because I can use my body, and the second because it helps me understand movement and exercises my mind. Here at college, I think I've been most surprised by the amount of change in myself and my friends.

Biomechanics: The study of the mechanical bases of muscular activity
Kinesiology: The study of human motion and movement, and the body structures and muscles that are involved.

Shasta's Tips to Succeed in School and Life!

- ★ Know your grammar: it may be boring to learn, but it will save your papers from professors' red pens.
- ★ Join only one thing at a time and devote your energy to it; otherwise, you will become spread too thin.
- ★ Write thank-you notes, especially when you receive scholarships.
- ★ If you don't understand something, ask. You may feel silly, but chances are other people are just as lost as you are and they will be glad you asked.
- ★ Keep up some kind of sport or activity. Not only will you appear well-rounded on a resume, but you will gain peace of mind and all the health benefits. Sports are also a great way to meet people.
- ★ If possible, visit the schools you hope to attend, and talk with alumni. It will give you a good idea of what the school is

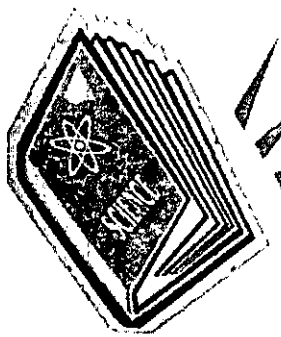
Careers, Careers, Careers... Find them all on AKCIS!

Do you know what a phlebotomist does? How about a hydrologist? (Okay, that one is easier—"Hydro" refers to water, and "ology" usually means the study of something.) There are many, many occupations and careers that you have probably never heard of—but one of them may be just right for you!

A great place to learn all about these careers, and hundreds more, is AKCIS—the Alaska Career Information System.

Ask your teacher if your school is connected to AKCIS. It's available free to all Alaska schools! If your teacher or principal needs information on how to offer this outstanding resource to you, tell them they can call ACPE at (907) 269-7976 to find out.



A phlebotomist is someone trained to draw blood samples in a clinical or hospital setting.

Some geologists work as hydrologists. Hydrologists study the properties, distribution, and circulation of fresh water on land, in the earth, and in the atmosphere.

AKCIS is made available through a partnership between the Alaska Commission on Postsecondary Education, the Alaska Department of Labor and Workforce Development, and the Alaska Department of Education and Early Development.

Don Ellis: "Surround yourself with positive people who build up your dreams and don't tear them down."

I grew up in Fairbanks with my mother and older sister. Fairbanks is a very small city where you need to stay active and involved with positive people so you don't go down the wrong path. I stayed busy playing football, basketball, and hockey. I also enjoyed collecting and trading sports cards, and listening to and writing music and playing the keyboard to make beats.

My mom got me started in food and cooking when I was 14 years old. I got my first job in the industry as a dishwasher at Café de Paris in Fairbanks. I fell in love with the atmosphere of working in a kitchen and have loved it ever since.

I earned an Associate Degree in Culinary Arts from UAA in 2004. Currently, I work as kitchen manager at the Anchorage Hilton Hotel. I oversee the day-to-day operations of the hotel kitchen and manage a staff of 35-42 people. Some days I work in my office all day planning menus, scheduling, and ordering food. When we do large parties or are short-staffed, I help out in the bakery or in the kitchens. I love the fact that each day is different. As well as the actual cooking, I love working with people.

"Be willing to start at the bottom and work your way to the top."

No matter what career field you choose, be willing to start at the bottom and work your way to the top. The best way to get to the top is to do all the things you are asked to do in the very best way you can. If you have to wash dishes, then wash dishes. If it's taking out the trash, then take out the trash. I learned all parts of our operation, and it's helped me become a much better manager.

DON ELLIS -

High School:
West Valley HS, Fairbanks, AK

College:
University of Alaska Anchorage

Current Career:
Kitchen Manager/Chef, Anchorage Hilton Hotel, AK

Going to school now can be tough. Often we try to fit in to the "right" crowds, and sometimes peer pressure makes us do the wrong things. I strongly believe that if you seek good counsel and surround yourself with positive people who build up your dreams and don't tear them down, you'll go far in life.

{Culinary Arts}

Jeren Hunt: "If there is something you really love doing, explore how you can find a career doing that."

Welding, Computers, Baking, and more!

Check out AVTEC!

I grew up in Kenai, the eldest of five children. I was homeschooled through middle school, and then went to Nikiski High School.

I knew when I was five years old that I wanted to be a chef. I loved working in the kitchen with my mom and sister. But by the time I was 18, I had forgotten how much I loved this. I put myself through a few years of college by working at restaurant jobs, and I finally remembered what I really wanted to do.

"I'm enrolled in a Pastry Arts course in Florence, Italy!"

I researched some culinary schools outside Alaska, but found I could get similar training and the same certification here in Alaska at AVTEC at a lot lower cost. In fact, I'm taking classes at AVTEC and obtaining concurrent credits toward my associate degree at UAA.

This year I'm enrolling in a four-month-long Pastry Arts course in Florence, Italy!

I remember struggling in middle school and high school, trying to figure out what I wanted to do as a career. I finally came back to what I had known at five I really loved and wanted to do. I would tell students, if there is something you really love doing, explore how you can find a career doing that.

Ben Olson: "Explore all your options."

My family moved from North Dakota to Juneau when I was one year old. I graduated from Juneau-Douglas High School, where I took wood shop, metal shop, and as many welding classes as I could. That's when I knew welding was what I wanted to do.

I first went to AVTEC for the Maritime classes for my 100-ton license, which I now have. Then I returned for AVTEC's Structural Welding program. I hope to get a job on the Slope, but I'd like to return to AVTEC for the Pipe Welding class eventually.

My advice to students is first and foremost, stay away from drugs. Also, explore all your options before deciding what you want to do.

"I took wood shop, metal shop, and as many welding classes as I could."

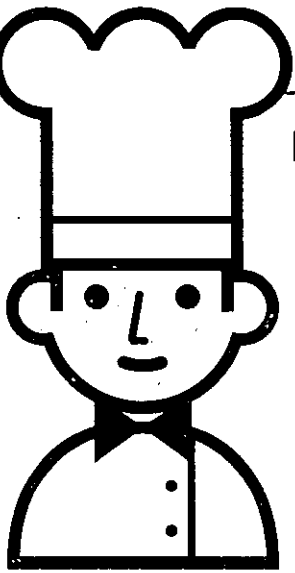
I want to be a Chef

I was born in Anchorage and have lived here all my life. I go to Goldenview Middle School. Besides cooking and baking, I like playing hockey and golf and riding my Go-Kart and RipStik. In school, I like science classes best.

I think I would like to be a chef because I like to cook and make a lot of different things by myself. I like making desserts best—this brownie recipe is fast and easy and tastes delicious! I like making desserts because I like to make things that taste sweet and everybody likes them. It's fun to make adjustments to the recipes to make them taste better. I believe I started cooking around the age of four or five, helping my mom and dad make birthday cakes. I mainly helped my mom cook because my dad really only cooks at the fire station. I started cooking by myself around the age of ten, I think.

Everyone expects me to go to college, and I definitely will go. I'd love to attend Colorado State or Denver University on a hockey scholarship! I'm not sure what education I would need to become a chef, but I'll find out and work that into my plans.

Peyton Briggs
Goldenview Middle School
Anchorage, AK



Peyton's Microwave Brownies

- 2/3 cup butter
- 1/2 cup sugar
- 1/2 cup brown sugar, packed
- 2 large eggs
- 1 teaspoon vanilla extract
- 1 cup flour
- 1/2 cup unsweetened cocoa
- 1/2 teaspoon baking powder
- 1/8 teaspoon salt

Coat an eight or nine-inch square microwaveable pan with non-stick spray. Put butter in a medium-sized microwaveable bowl. Microwave, uncovered, at 100% power for 20-30 seconds, until softened. Stir in sugar and brown sugar until blended. Add eggs and vanilla and beat until well-blended. Add flour, cocoa, baking powder, and salt. Stir until just moistened. Spread batter evenly in pan. Microwave, uncovered, at 100% power for three minutes. Cut into squares when cool and sprinkle tops with powdered sugar before serving.

Paying for College or Training after High School

Yes, there is money available—and now is the time to start planning!

Financial Aid—the money you can use to pay for your education after high school graduation—comes in many forms. Here are just a few of the terms you need to understand to ask the right questions and find the funding you need to make your aspirations become your life!

Free Application for Federal Student Aid—completing the FAFSA is the first step you and your family take to find out how much financial aid you will be able to receive. You complete the FAFSA in your senior year of high school.

Grant—grants are "gift" money (money you don't have to pay back). Most grants are "need-based," meaning you qualify for them based on your family's financial need and income level.

Take the right courses!

To prepare for college, you should take the following courses: Mathematics, English, Science, and History or Geography. These courses make up the "core" courses you should take every year.

✓ Mathematics

Types of classes:

Algebra I
Geometry
Algebra II
Trigonometry
Precalculus
Calculus

✓ History or Geography

Types of classes:

Geography
U.S. History
U.S. Government
World History
World Cultures
Civics

✓ Science

Types of classes:

Biology
Earth Science
Chemistry
Physics

✓ English

Types of classes:

Composition
English Literature
American Literature
World Literature

You want to take algebra and geometry as soon as possible.

Foreign Language

Two years are recommended

Language skills show that you can learn basics and you're preparing to work in the global economy. Many colleges require high school students to take at least two years of a foreign language, and some prefer three.

Computer Science

Arts Courses

Take the arts as an essential part of your education

Arts courses broaden your understanding and appreciation of the world and develop your skills to see differences, figure out patterns, and examine how you make decisions.

Types of classes:

Art
Music

Do the Math—Saving Matters!

No matter what financial assistance may be available in the future, you can take action now to make a difference.

Alaskans are extremely fortunate to have a potential source for saving every year. Investing part or all of your Permanent Fund Dividend in a savings account or college savings program is a great financial step to achieving your education and career goals.

Just think—if you start in 5th grade and put just half of your PFD into an investment account you can have approximately $7,000 when you are ready to start college. If you invest the entire dividend you'll have approximately $15,000 to get you on the road to success.*

For more tips on saving smart for college visit Alaska's college savings plan on-line at *www.uacollegesavings.com*.

***Assumes an annual PFD of $1,400 based on most recent ten-year average with 5% interest compounded annually.**

DO YOU KNOW

Answer: Alaska Pacific University in Anchorage

2/4/09 OVERVIEW: DEED EARLY CHILDHOOD PROGRAMS

BEST BEGINNINGS

Alaska's Early Childhood Investment

›››› REPORT TO ALASKA 2008 ››››

››› Best Beginnings Vision

All Alaska children begin school ready to succeed.

››› Key Objectives

Best Beginnings will have succeeded when:

›› Parents and extended family are engaged in their children's learning from birth on.

›› Most Alaskans know that early learning and literacy are important to society.

›› Most Alaskans understand that investments in early learning pay big dividends to the state as a whole.

›› Sufficient funds are committed – from public and private sources – to ensure that every Alaska child has the opportunity to begin school ready to succeed.

››› From the executive director

A movement is underway. While many Alaskans are not yet aware of it, they soon will be, as the movement bubbles to the surface in communities across the state.

Books for babies? You bet.

Businesses care whether children start school prepared to succeed? Some do and more are joining their ranks.

Right from birth, babies and young children are primed to learn. When a baby's brain is nurtured by the adults in her world through reading, play, singing, and other forms of interaction, her brain develops in amazing ways at phenomenal speed.

Children aren't blank slates when they start school. There's a multitude of skills and knowledge they need if they're to succeed. To borrow from a speech by Bill Gates, Sr., we're not talking about 5-year-olds who can analyze the use of metaphor in Mark Twain's lesser works. We're talking about the basic building blocks of making sure a child is ready to learn in a school setting. Can she cooperate with other children? Can he recognize colors? Can she follow simple rules and instructions? Is he curious and eager to learn?

"

... Alaska is on its way to becoming a place where all children have the opportunity to succeed in life and, in the process, build a healthy and thriving state.

"

Preparing children for school is far more than just a family matter. Numerous studies have demonstrated an incontrovertible truth: early learning and literacy is a powerful determinant of success in school and success in life. Children who start school with a solid foundation of early learning contribute more to society. They go farther in school, they get better jobs, are far less likely to go on welfare, or go to jail. Early learning and literacy is everybody's business.

Alaskans are getting engaged in this critically important issue. Best Beginnings is both a reflection of that engagement and an accelerator of it. Thanks to the vision of Best Beginnings' founders and supporters, Alaska is on its way to becoming a place where all children have the opportunity to succeed in life and, in the process, build a healthy and thriving state.

Alaska will have what it needs to make sure all children are prepared for school when Alaskans expect and insist that our public and private institutions support whatever investments are needed to finance and sustain early learning and literacy.

That's called a cultural shift. It won't come easily and it won't come quickly – all the more reason to stoke it through advocacy, collaboration, and plenty of drum-beating.

That is precisely the charge of Best Beginnings.

Within that context, I am pleased to present the first comprehensive report of Best Beginnings. As you will see in the pages that follow, Best Beginnings has taken on an imposing amount of work since this public-private partnership got underway in late 2006. We are fully engaged and hope you'll join with us in this critical but formidable challenge – there's a role for every Alaskan to play.

Abbe Hensley
June 2008

2798

> Children who have access to quality learning opportunities, at home or in away-from-home programs, are more likely to graduate from high school, get better paying jobs, avoid spending time in jail, and lead more productive lives.

››› Why early learning matters

A large and growing body of research provides persuasive evidence of four related tenets. From birth to age 6, brain development occurs at an astonishing pace. Nurturing and brain stimulation during those years has a profound impact on how children fare in school. A child's readiness for school is a powerful determinant of how he or she will fare in life. And investments in early childhood development yield extraordinary returns to the workforce and the economy.

Economists say there is a profound link between a child's early exposure to learning and literacy and his or her success in later life as a contributing member of society.

Children who have access to quality learning opportunities, at home or in away-from-home programs, are more likely to graduate from high school, get better paying jobs, avoid spending time in jail, and lead more productive lives. They are more likely to develop critical thinking skills, pay higher taxes, and raise healthy families. They are less likely to go on welfare or be incarcerated.

Yet now nearly half of Alaska children enter school unprepared to become successful readers or learners. Alaska's children lag behind their peers nationally in reading and math skills. And declining pre-kindergarten trends contribute to Alaska's low scores on standardized third-grade tests, poor performance on the High School Graduation Qualification Exams, and high school drop-out rates.

The situation has serious implications for children's own prospects and for Alaska's. When children are not prepared for school, they rarely really catch up. They are far less likely to have the skills employers need, to contribute to a thriving economy, and to provide the highly trained workforce essential to compete in the global economy.

Economists and national business leaders agree that the most important step a state can make to strengthen its economy is to invest in early childhood education. That's why it matters.

2799 . Library test . 0002

››› Origin of Best Beginnings

The seeds for Best Beginnings were planted in 2003, when the Alaska Humanities Council, United Way of Anchorage, the Rasmuson Foundation, The CIRI Foundation, and the Alaska State Library began to focus attention on the need for coordinated efforts in early childhood literacy in Alaska.

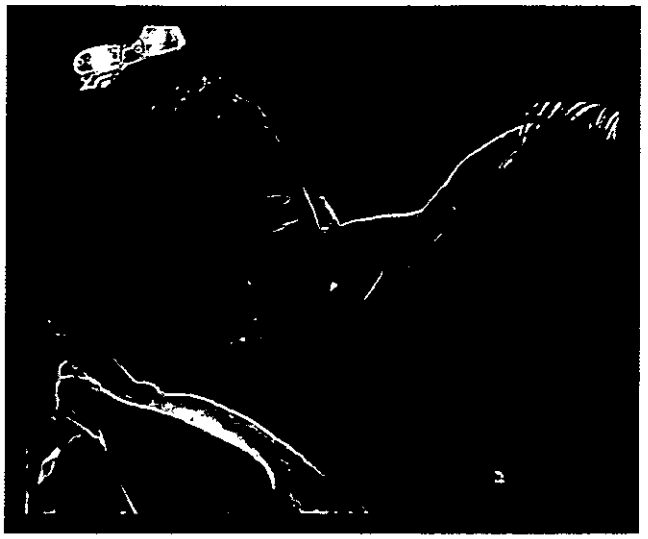
A nationwide movement on early education and literacy was triggered in large part by the publication in 2000 of "Neurons to Neighborhoods: The Science of Early Childhood Development." This report cast a spotlight on the gap between scientific knowledge about early childhood and actual practices in society.

The study put the nation on alert about the need to address early learning and literacy as a social and economic imperative with far-reaching implications. Initiatives began popping up across the nation, but in Alaska the efforts were isolated and uncoordinated.

In 2004, the Alaska Humanities Forum, with encouragement and funding from the Rasmuson Foundation and The CIRI Foundation, convened a gathering of professionals from myriad entities engaged in early childhood literacy. This first conference lead to several more gatherings and conferences where the importance of early learning was seen in tandem with early literacy. A steering committee composed of entities concerned about these issues created the Ready to Read, Ready to Learn Task Force.

The 27 members of Alaska's Ready to Read, Ready to Learn Task Force included leaders in business, civic organizations, philanthropy, nonprofits, education, and government. Over the course of 10 months, the group gathered input from Alaskans and national experts.

The Task Force released its report and recommendations in September 2006. Best Beginnings emerged from the Ready to Read, Ready to Learn Task Force as a public-private partnership charged with pursuing the task force recommendations.



››› Activities and Accomplishments

The work of Best Beginnings falls generally into three areas.

Because parents are their child's first and most important teachers, Best Beginnings promotes early learning and literacy, family literacy, and education.

Because so many young children spend time in care away from home, Best Beginnings is a catalyst for high quality, affordable, accessible, child care and early learning programs for all families who want them.

Because preparing all children for success in school has such profound implications for the state as a whole, Best Beginnings is accelerating a cultural shift of Alaskans' expectations and priorities. We will know this cultural shift has taken root when Alaskans expect and insist on the investments required to finance and sustain early learning and literacy.

> The Inupiat of the Northwest Arctic have always known that singing and purposeful baby talk – called *nuniaq* – are good for a baby's brain.

›››Supporting parents as a child's first and most important teachers

Supporting local initiatives

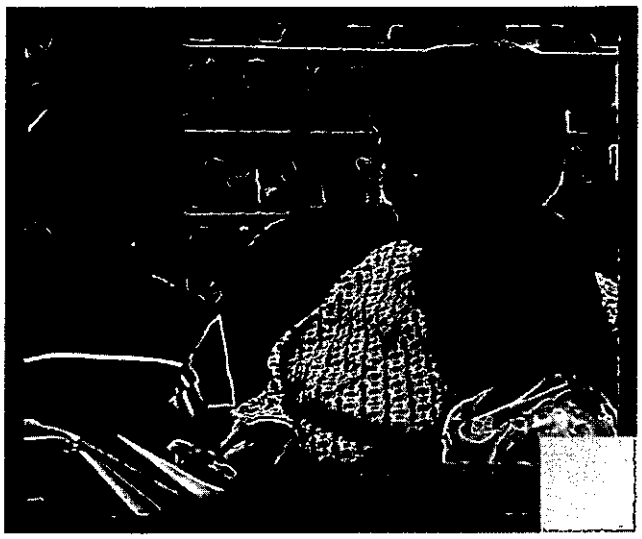
As more and more people engage in the drive for early learning and literacy, exciting initiatives are cropping up in communities all over Alaska. Best Beginnings is supporting them.

Best Beginnings provides ongoing assistance to the Anchorage-based early literacy project "ABC Read and Talk With Me."

Best Beginnings is helping the Fairbanks Early Childhood Development Commission build a Web site with information for parents and others who care for young children.

The Inupiat of the Northwest Arctic have always known that singing and purposeful baby talk – called *nuniaq* – are good for a baby's brain. Best Beginnings partnered with local groups in Kotzebue and funded a public awareness campaign to reinforce *nuniaq* through posters, bookmarks, and radio public service announcements.

In April 2008, Best Beginnings committed to help local Alaska communities that are launching Dolly Parton's Imagination Library, a national program that provides a free book every month to young children in subscribing communities.



> “Being prepared for school requires certain knowledge and skills acquired in the first five or six years of life.”

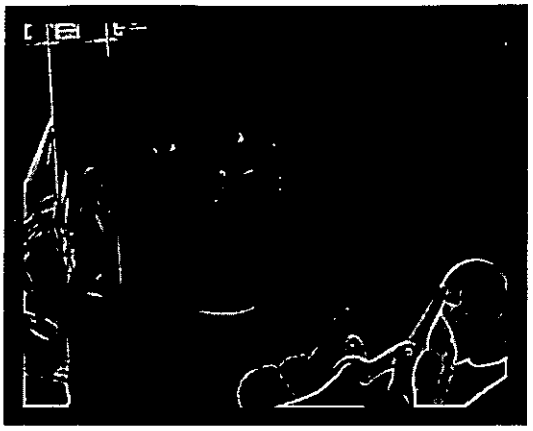
Family-Friendly Activity Booklets
Parents want to teach their children early and well, but they don't always know which activities best prepare their young children for school. And for those families whose home language is not English, it is difficult to find materials that can help.

Best Beginnings is creating family-friendly activity booklets, based on the state's Early Learning Guidelines, in languages other than English. The first two are in Spanish and Yup'ik. Advisory groups are organized for each language community to ensure the activities are culturally relevant and appropriate. This project is supported by a multi-year grant from the Alaska Children's Trust.

Books for young Alaskans
Children need to see themselves in books. Too often, the books available to children in our state are neither geographically nor culturally consistent with the lives of young Alaskans. Best Beginnings developed an annotated bibliography of books for young children that reflect Alaska people and their communities.

Spreading the word
To help spread the word among parents about the importance of early learning and literacy and to highlight the best practices for parents and extended family, Best Beginnings produces and distributes public service announcements for television and radio. These spots are broadcast in communities all over the state.

In addition, Best Beginnings partnered with KTUU Channel 2, seen in most of the state, in a six-week campaign promoting early learning and literacy. The campaign included two TV spots about easy, fun interactions between a parent and child, and taped segments of news personalities reading selected children's books. The segments were posted on the Channel 2 and Best Beginnings Web sites. The campaign ran in late 2007 and may be repeated in 2008.



››› *Advocating for high quality, affordable, accessible child care*

Ratings and standards for child care

How do parents compare and evaluate early learning programs and child care facilities? What criteria do they use to determine which program is best for their child? For that matter, how do child care and early learning professionals know how they stand up against their colleagues and competition? Most child care and early learning professionals know what it takes to improve the quality of their programs but lack the resources to pay for them.

To help meet those needs the state contracted with Best Beginnings to develop the plan for a standards-based "Quality Rating and Improvement System." The system will be voluntary in that participation by child care and early learning programs won't be required, but there will be financial incentives to do so. The system will also offer financial incentives for quality improvements. Programs that earn high ratings would be strong candidates for any state-supported pre-kindergarten effort.

Such rating and improvement systems are used in 16 other states and are designed to assess, improve, and communicate the level of quality of early care and early learning programs outside the home.

The plan produced by Best Beginnings includes a budget for field-testing and phased-in implementation. The project was funded by a grant from the Alaska Department of Health and Social Services. The next step is to obtain funding in the FY 2010 state budget for field-testing. Field-testing will take about two years.

Early Learning Guidelines

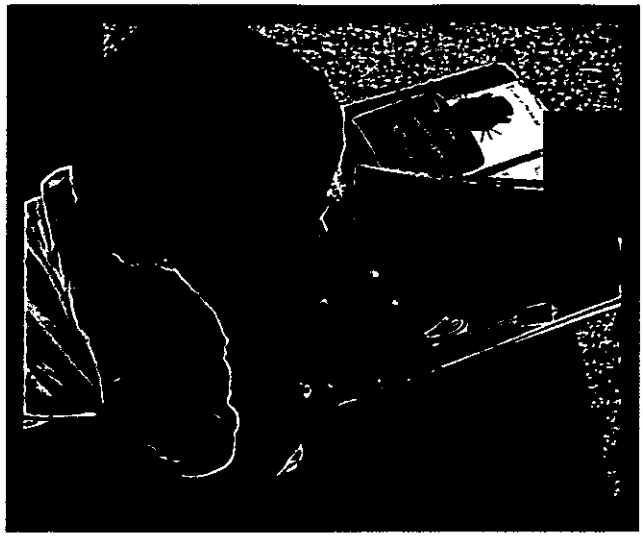
Being prepared for school requires certain knowledge and skills acquired in the first five or six years of life. What should babies and young children know and be able to do – and when?

In 2007, the State of Alaska published Alaska's Early Learning Guidelines, a resource document describing what young children from birth to age 5 should know, understand, and be able to do at different stages.

The guidelines help parents and other adults who work with young children understand both child development and their own roles in providing appropriate learning opportunities for children.

Best Beginnings is involved with the Early Learning Guidelines in three ways. To make the guidelines easier to use and more accessible, Best Beginnings is creating family-focused activity books based on the guidelines, in languages other than English. This project is supported by a grant from the Alaska Children's Trust.

Because the guidelines aren't much good sitting on a shelf, Best Beginnings is helping to publicize and distribute the guidelines by making them available on its Web site and talking about them at every opportunity. Best Beginnings is also working with other agencies and organizations to develop and coordinate training of parents and early childhood educators in how to use the guidelines.



Adapting programs that work in other states
Best Beginnings is coordinating plans for a multi-year Alaska Native Head Start Literacy Project using the successful PBS program "Between the Lions" and locally adapted curriculum. As of May 2008, funds were being sought to support programs at selected Head Start sites. Once funding is secured, it will take about two years to implement and evaluate those first programs. After the evaluation, the curriculum and related materials will become available throughout Alaska.

The project has been very successful at 11 tribal Head Start programs in New Mexico and similar outcomes are expected for Alaska. In the New Mexico programs, children at risk for reading failure dropped from 39% to 12% and children scoring above average increased from 23% to 64%.

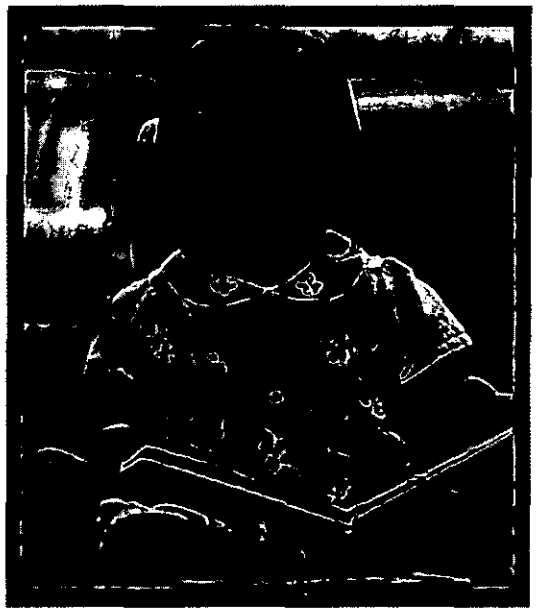
Best Beginnings' partners in this effort include WGBH Boston, The CIRI Foundation, BP, RurAL CAP, Southcentral Foundation Head Start, Bristol Bay Native Association Head Start, the Alaska Head Start Collaboration Office, the Alaska State Library, Northwest Regional Education Laboratory, and the Institute of Social and Economic Research (ISER).

››› *Accelerating the cultural shift*

Alaska will have what it needs to make sure all children are prepared for school – paving the way for a vibrant workforce and thriving economy – when most Alaskans expect and insist on the investments required to finance and sustain early learning and literacy.

Communications
Accelerating a cultural shift includes, among many other elements, finding ways to enter the public consciousness. All of Best Beginnings' work contributes to that end, but Best Beginnings is also disseminating information through electronic media, with a Web site and electronic newsletter, as well as press releases when appropriate.

> “Best Beginnings views bringing people together as one of its most important functions.”



Engage, convene, mobilize

Many agencies and groups in Alaska are actively pursuing early learning and literacy in myriad ways, but there has been little coordination and communication. To help make the most of the various efforts, Best Beginnings organizes formal conferences, such as the Governor's Summit on Early Learning, as well as impromptu, informal meetings of groups with related interests.

Best Beginnings views this role of bringing people, groups, and organizations together as one of its most important functions. Government, private, and nonprofit sectors must be partners in the drive for early learning and literacy. To increase awareness among leaders in these sectors, Best Beginnings collaborated with the Governor's Office and others to coordinate a two-day conference in December 2007. The summit was funded by the National Governors Association and Alaska partners.

The conference brought together more than 150 Alaskans – including elected officials, business and nonprofit leaders, child care professionals, and education leaders – to address three goals: improve access to early literacy and learning opportunities for children most in need of such services at home and away from home; improve coordination of these services; and increase the engagement of parents and extended family in young children's learning by providing support, resources, and incentives.

Work is underway on four of the five highest priority recommendations. All the recommendations have been presented to Governor Palin.

Learning from the best

Several other states are further along than Alaska in their early learning initiatives and Best Beginnings is taking advantage of what others have learned. Best Beginnings was one of two initiatives in the country to receive a two-year technical assistance grant in 2008 to learn from North Carolina's Smart Start initiative, one of the nation's leading programs. Best Beginnings is the 12th initiative nationwide to tap the experience of Smart Start.

The technical assistance grant gives Best Beginnings access to resources, meetings, conferences, and expertise.

> All Alaskans have a stake in building a statewide system that provides and supports quality early learning at home and in away-from-home programs.

››› Collaborators

All Alaskans have a stake in building a statewide system that provides and supports quality early learning at home and in away-from-home programs. Many of our most prominent corporations and nonprofit and philanthropic organizations understand both the implications of success and the consequences of inaction.

These entities are collaborating on the unique public-private partnership that is Best Beginnings. Without them, it would not be possible. With them, everything is possible.

››› *Major Supporters*

The major supporters below have made multi-year commitments of funding or other resources.

Alaska Public Telecommunications, Inc.
BP
ConocoPhillips
Smart Start's National Technical Assistance Center
State of Alaska
United Way of Anchorage

››› *Friends & Allies*

The following organizations provide financial assistance or other valuable forms of support to Best Beginnings. Their collaboration is essential to the success of our shared mission.

Alaska Association for the Education of Young Children
Alaska Child Care Resource & Referral Network
Alaska Children's Trust
Alaska Democratic Party
Alaska Head Start Association
Alaska Humanities Forum
Buster Consulting & Communications
Child Care Connection, Inc.
First Alaskans Institute

››› Ready to Read, Ready to Learn Task Force

The work of Best Beginnings is guided by the recommendations of Alaska's Ready to Read, Ready to Learn Task Force. The Task Force recommendations fall into three categories: home, outside the home, and looking ahead:

In the Home

- ›› Increase the engagement of parents, grandparents, and extended family in their child's learning by providing resources and incentives.
- ›› Develop and increase access to quality, culturally engaging reading materials.
- ›› Increase access to proven, family centered literacy programs by partnering with other organizations.

Out of the Home in Child Care & Early Education Programs

- ›› Distribute Alaska's Early Learning Guidelines (ELGs) in family friendly formats.
- ›› Implement a quality rating system (QRS) to help parents evaluate child care and early learning programs and to guide program improvement.
- ›› Increase the professional development opportunities and qualifications for early childhood educators and provide appropriate compensation.
- ›› Develop a statewide system of voluntary and affordable early childhood education with options available for children and families in all communities.

Looking Ahead

- ›› Create a commission, council, public-private consortium, or other entity to implement Task Force recommendations.
- ›› Develop a multi-year work plan for implementing recommendations.
- ›› Educate Alaskans about the social imperative of preparing children from birth to age 6 to be ready to read and learn.
- ›› Ensure future funding from private, nonprofit, foundation, and government sources.

Support Brings Success!

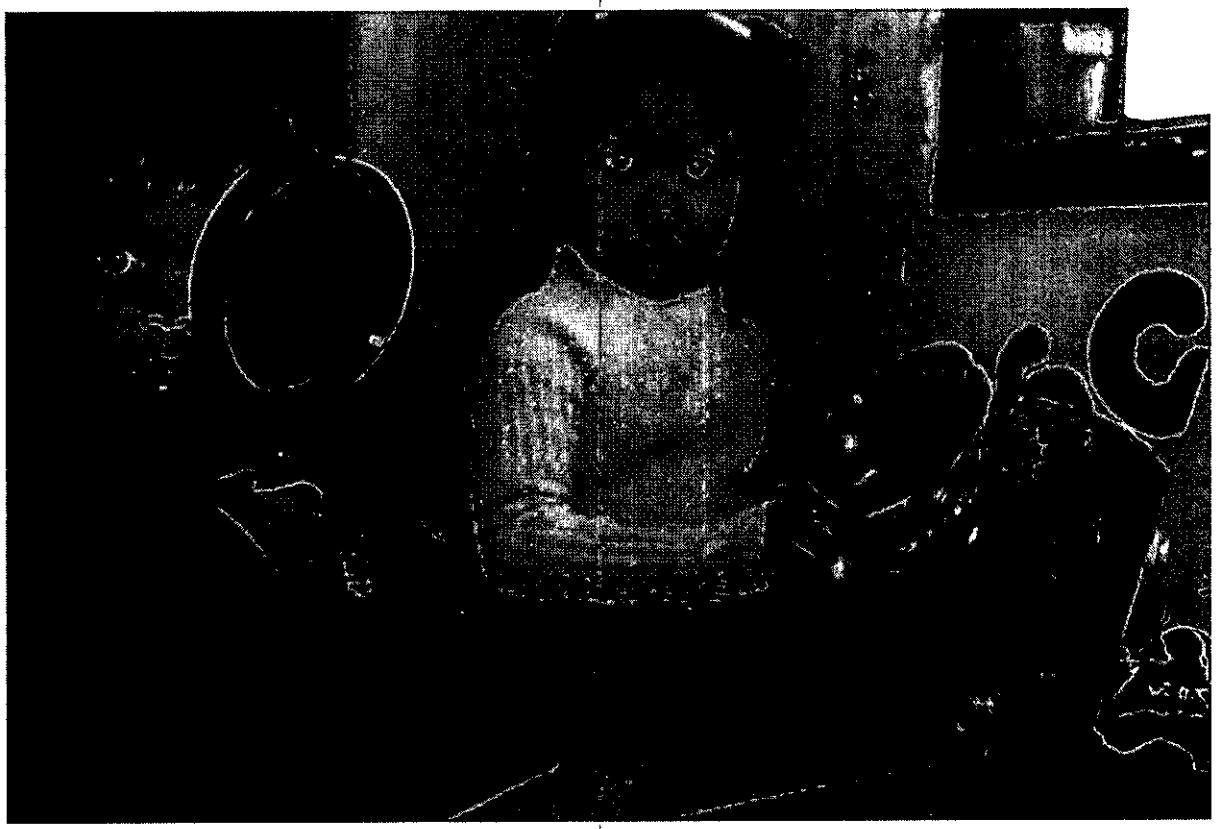
Let's take a look...



What is Head Start?

- Federal Program started in 1965
- All Head Start Grantees must meet and abide by Federal Performance Standards
- Governed by Board of Directors (Community Members) and Policy Council (Parents)
- All Head Start services (education, family, disabilities, health, etc) provided at no cost
- Comprehensive focus on both child and family
- Early health and developmental screenings are required for all children

What is Head Start?

- Monitoring and reporting is extensive
  - Over 5000 regulations associated with Head Start
  - Early Alert System to discuss individual program challenges and to make improvement plans
  - Triennial on-site program reviews by the Office of Head Start (OHS)
  - Annual Program Information Report (PIR)
  - Monthly enrollment reporting
  - Each grantee is required to create and publish an annual report
  - Annual self assessment required – participation and oversight by both policy council and governing board

Alaska Head Start Association

Support Brings Success!

Who is Eligible for Head Start Services?

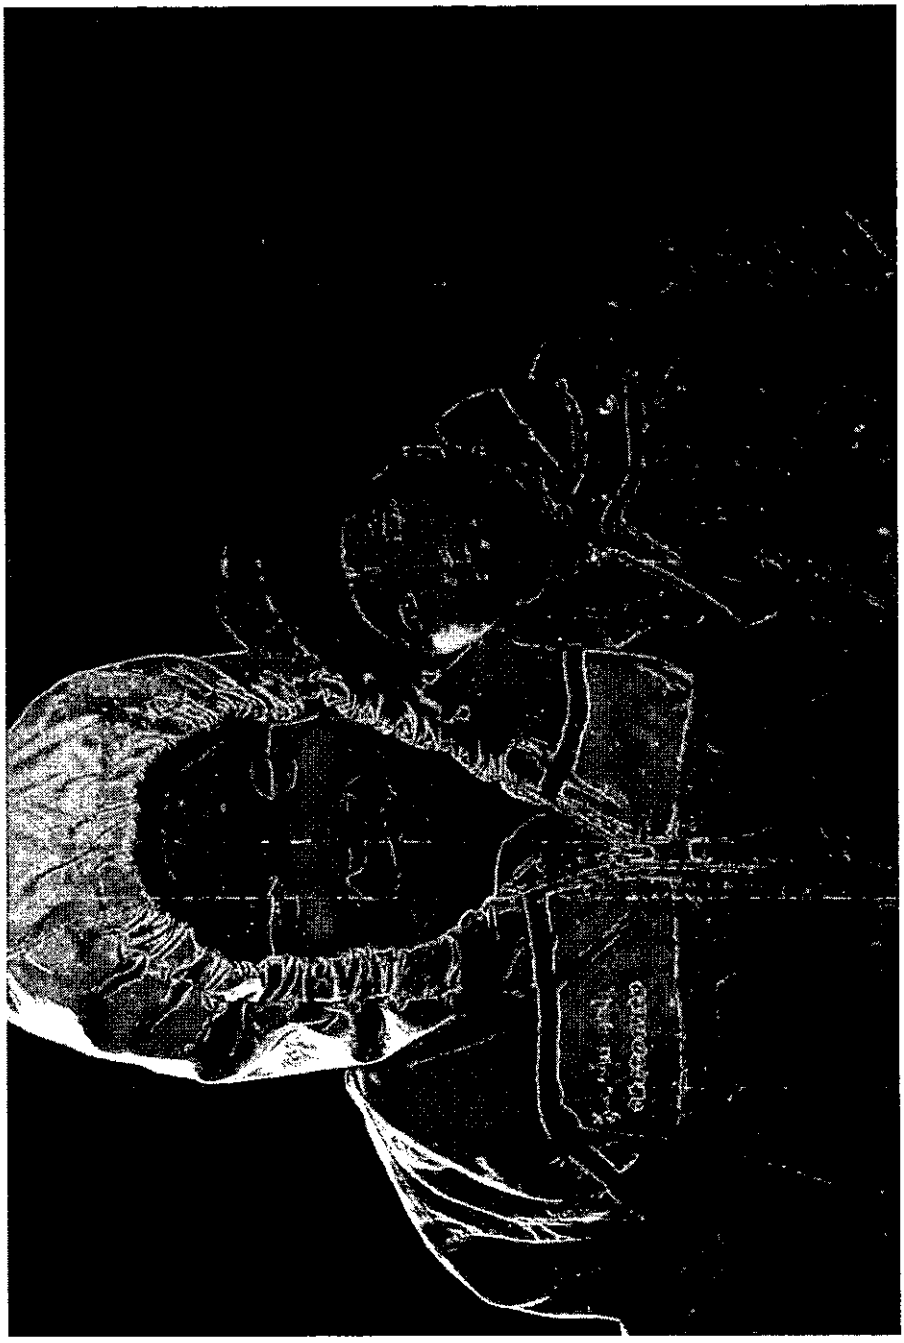
- Priority is given to:
  - Children from low income families

2009 Income Guidelines

Family Size	Income
2	$18,210
4	$27,570
6	$36,930
8	$46,290

Who is Eligible for Head Start Services? (continued)

- Priority is also given to:
  - Children with special needs
  - Homeless children
  - Foster children
  - Children who will attend kindergarten the following year
  - Returning Head Start children



Alaska Head Start Association · Parents · Staff · Friends · Directors

Support Brings Success!

How Many Children Do We Serve?

- 17 Grantees provide services in 100 Alaskan communities
- There are just over 3,100 Head Start slots available statewide in FY 2009
- A conservative estimate is that over 7,700 children in our state are currently eligible but are not served

For more details please refer to:
Alaska Head Start Association
Fact Sheet 2008-2009 Program Year

What Services Do We Provide?

- Educational Services
  - Pre-Literacy
  - Pre-Math
  - Social and Emotional Development
    - Violence Prevention
  - Language Development
  - Creative Arts
  - Physical Health & Development

What Services Do We Provide?

continued

- Family Education & Empowerment
  - Home visits are made by the child's teacher
    - Family goals are set and assistance is given to help meet these goals
    - Referrals to other community resources or agencies
  - Family Advocacy is provided for families that need additional assistance

What Services Do We Provide?

continued

- Health, Dental, Mental Health and Nutritional Services
  - Immunizations required
  - Physical exam (including vision and hearing) required
  - Dental exam required
  - Health, Mental Health and Nutrition consultations are provided
  - Head Start is required to follow up on all identified concerns

The Private Pilot Course is a one semester- long classroom, simulator, lab and practical course leading the students towards taking their Private Pilot License exam set by the FAA. Instruction consists of theory, lab, computer-based learning and training in a FAA certified flight simulator [available to all students]. Students will also have an opportunity to log flight hours in Galena in a fully equipped training Cessna 150?. The GCSD owns a C150 which is used for flight training purposes.

Instrument Rating Ground School and Commercial Rating Ground School (with associated flight training) is also offered in the forthcoming semesters: allowing students to prepare towards entry-level qualifications in the aviation industry.

Institutional Course Costs
[Tuition, Enrollment, Simulator Fees]

Courses	Length	EXCLUDES FLIGHT COSTS	Next Enrollment
Private Pilot Ground School*	**One semester**		

(* Covers ONLY Ground School courses. It excludes flight training cost listed below)

Flight Training in Cessna 150 $150/hr: Dual flying $110/hr Solo flying $40/hr Pre-Post flight Preparation Time
(FAA minimum requirement for PPL: 20 hrs of dual flying plus 15 hrs of solo flying: although normally a student requires about 35 hrs of dual flying and 15 hrs of solo flying).

Instrument Rating Ground School* **One semester**
(* Covers ONLY Ground School courses. It excludes flight training cost listed below)

Flight Training in Cessna 172 $170/hr: Dual flying $130/hr Solo flying $40/hr Pre-Post flight Preparation Time
(FAA minimum requirement for IR: 35 hrs of dual flying.
** Student must meet FAA enrollment requirements

Commercial Rating Ground School* **One semester** **call for costs** **TBA**
Flight Training call for details.
** Student must meet FAA enrollment requirements

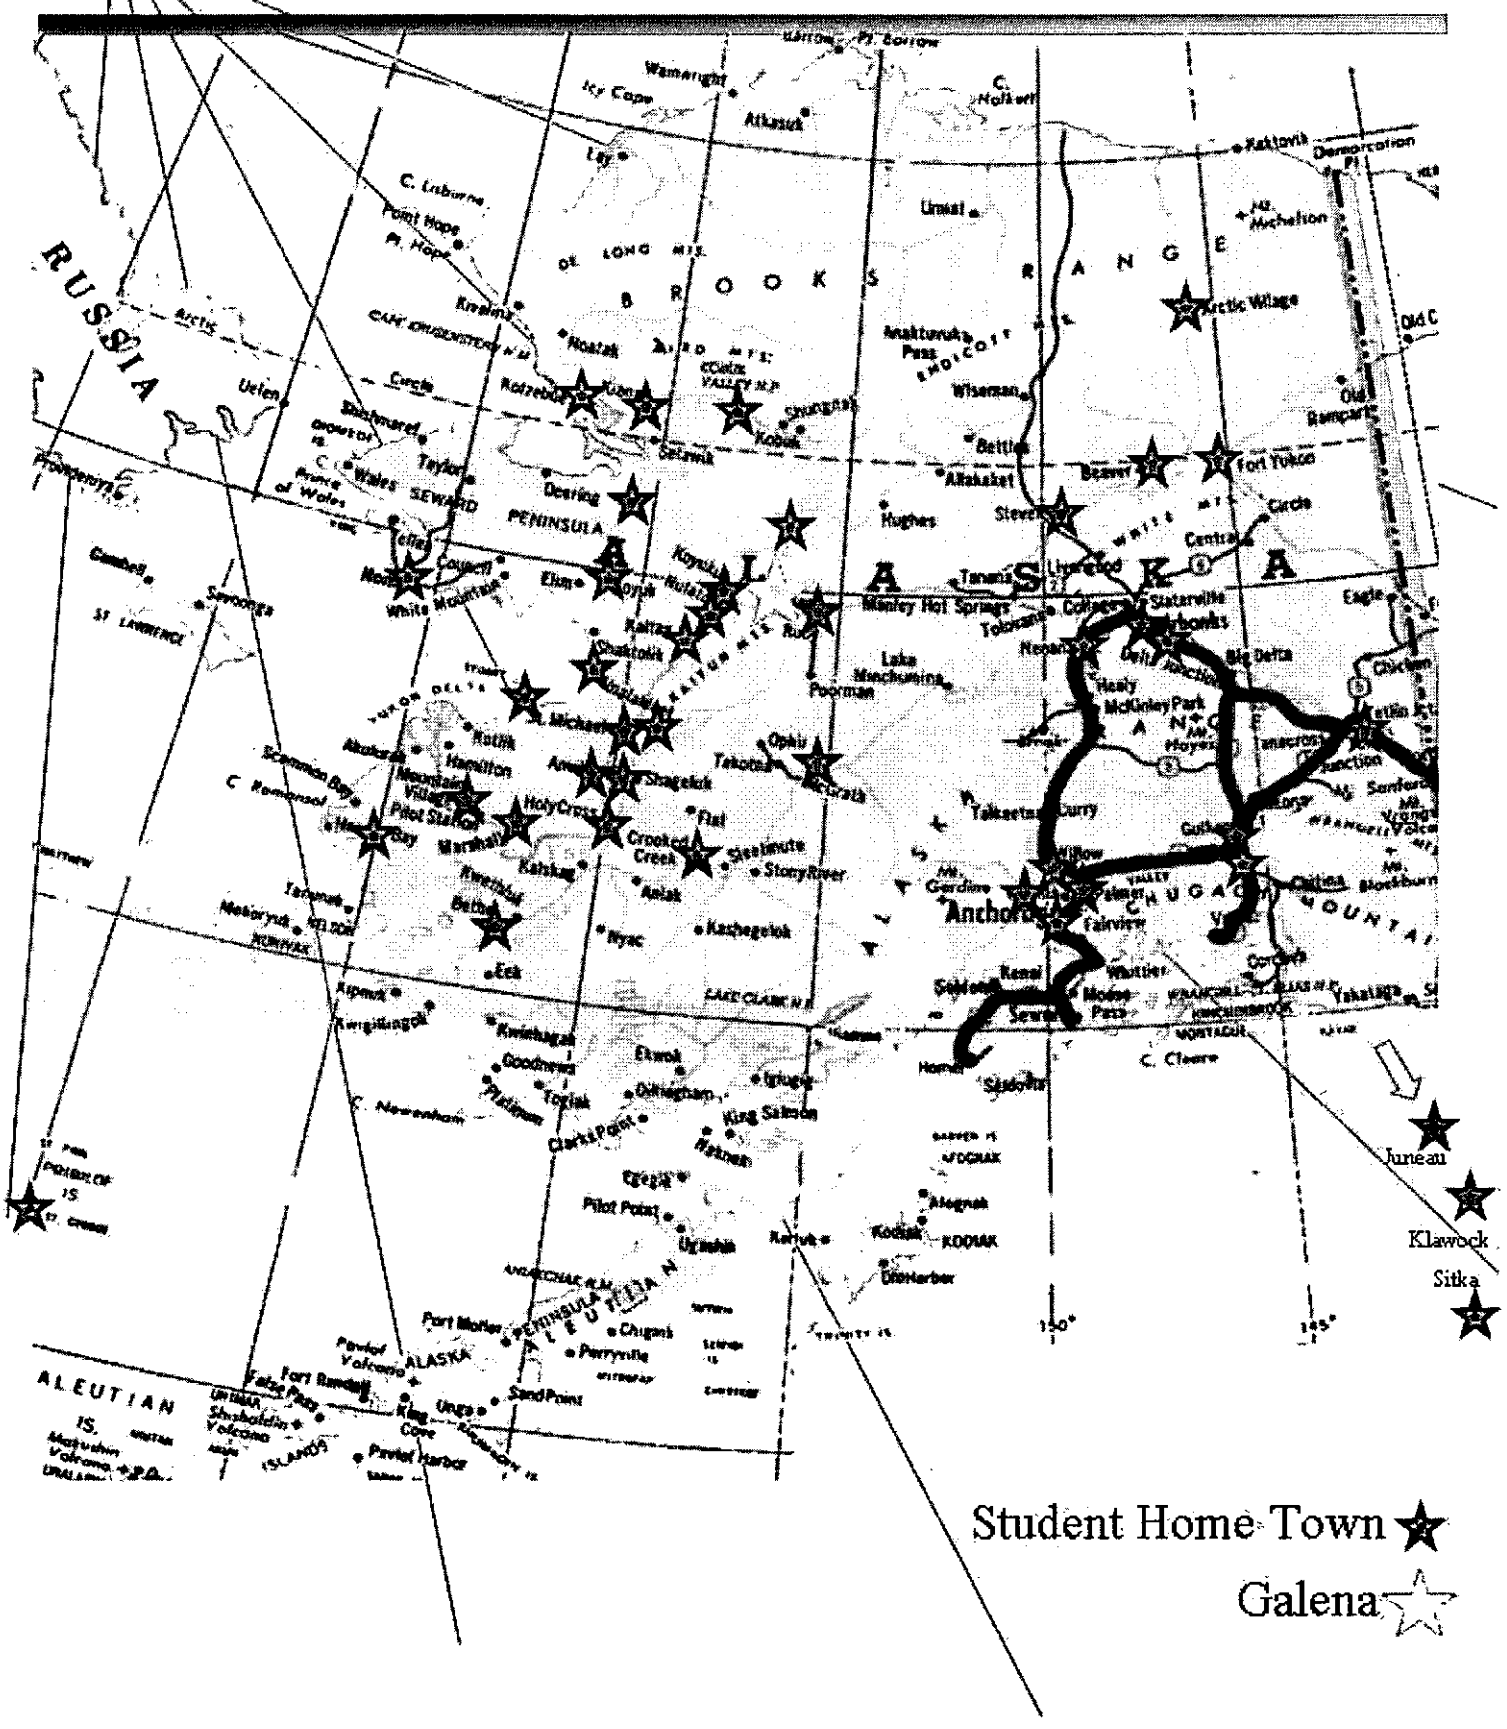
GILA Student Home Town



November 2008

GALENA INTERIOR LEARNING ACADEMY

UNIQUE PROGRAM FEATURES

Galena Interior Learning Academy, a statewide boarding school for grade 9 -12 students that are seeking another choice, is Alaska's longest operating residential secondary vocational school. It is accredited by the "Northwest Association of Accredited Schools".

GILA offers High School age students the opportunity to gain industry standard vocational-certification in aviation, automotive technology, cosmetology and culinary arts while achieving the academic skills necessary to succeed in post secondary studies. Students enroll in these programs receiving many hours of instruction which may lead to continuation after graduation there by leading to certification and future employment. This opportunity provides motivation for undergraduates to excel academically allowing more time for the vocational career pathways. Vocational and technical teachers are hired from industry for upper level career pathways, validating the programs meeting the standards required by industry.

GILA is located in Galena, a village in Interior Alaska. It attracts students from all over the state, ranging from the Pribilof Islands in the West, to Prince of Wales Island in the South, Northway in the East and Arctic Village to the North. For the 2008 school year, 52 villages and communities were represented at GILA. It appeals to the lifestyle of the rural students but it is also accessible to students from urban communities who desire to pursue an education more focused to their individual needs. As Alaska Native families are forced to relocate because of the high cost of living in the villages, we as a boarding school are receiving greater numbers of applications each year, thus proving to be a more viable educational option.

The GILA campus is located on a former U.S. Air Force Base and offers modern residential and educational facilities. The Air Force has officially turned over many buildings to Galena City School District and will complete the process on September 30, 2008, allowing GILA to expand further in to more facilities. Future remodeling will allow for greater numbers of classrooms to accommodate for the increased number of applications. The strong partnership with the Air Force, City of Galena, Louden Tribal Council, University of Alaska Fairbanks, Alaska School Boards Association, local organizations and businesses contributes to a first class education for students.

ENROLLMENT

GILA started FY 2008 with 128 students and ended with 124, a 97% retention rate. Homesickness and family needs are the main reasons why students leave during the school year. As these departing students chose other options, we at GILA assist them in enrollment into another educational institution to continue their educational endeavors.

Enrollment interest remains strong with more classroom space being necessary each year. Since the BRAC (Base Realignment and Closure) decision occurred, opportunities and challenges are being faced with great success. The Air Force's departure provides space for more programs and students while adding costs to the physical operations. In 2007-2008, enrollment increased to 128 students creating the challenges which were changed to opportunities for greater programs with the required expansions to accommodate the numbers. More content area classes and electives were added with an increase of 4 required class offerings and 6 electives being added to the class schedule.

Anticipated GILA enrollment:

FY 2006-07 110 students (actual 112)
FY 2007-08 130 students (actual 128)
FY 2008-09 150 students (actual 117)
Continued increased in enrollment is expected in 20 to 30 student increments each year until maximum capacity is reached at approximately five years.

The 2006 Alaska State Legislature provided an additional boost for GILA in the form of financial assistance for room and board. This act supported by the Governor, State Board of Education, and the Alaska Association of School Boards, brought recognition of the public support for "boarding schools of choice" in today's Alaskan economy. A strong emphasis is placed on student resiliency and the "assets" program shared with Alaska Association of School Boards.

The staff at GILA works hard to maintain a cohesive relationship with the diversity of its students. A majority of underclassmen return each school year, with over 50 new students adding to the increased numbers. This includes replacing the graduation senior class as well as the increase in total student numbers.

Many systems are used to advertise the opportunities at GILA; however the most prevalent is word of mouth with recommendations among friends and family. State-wide publicity via newspaper, radio and TV has been recently implemented in order that families are aware of the opportunity which GILA affords. With many families being required to move toward more urban areas for employment or reduced cost of living, attending GILA is an opportunity that allows their high school aged children to continue their education while remaining in rural Alaska. These efforts resulted in many applicants, of which 128 were invited to attend for the 2008 school year.

Twenty two seniors graduated on May 16, 2008, 100% of which passed all portions of the Alaska High School Graduation Qualifying Examination. This class was 94% Alaska Native, exceeding the graduation rate of this group in most rural and urban schools in Alaska.

The graduation featured distinguished speaker Senator Albert Kookesh JD., our Senator for Interior Alaska. His strong message to Alaska Native students was very well received. An additional surprise visit from Todd Palin, the First Gentleman was a great treat as well. As a pilot in his own rite, Mr. Palin was invited to pin the wings on four graduates, two of which had achieved the Private Pilot status and two who had achieved Instrument Pilot Status.

ACHIEVEMENTS

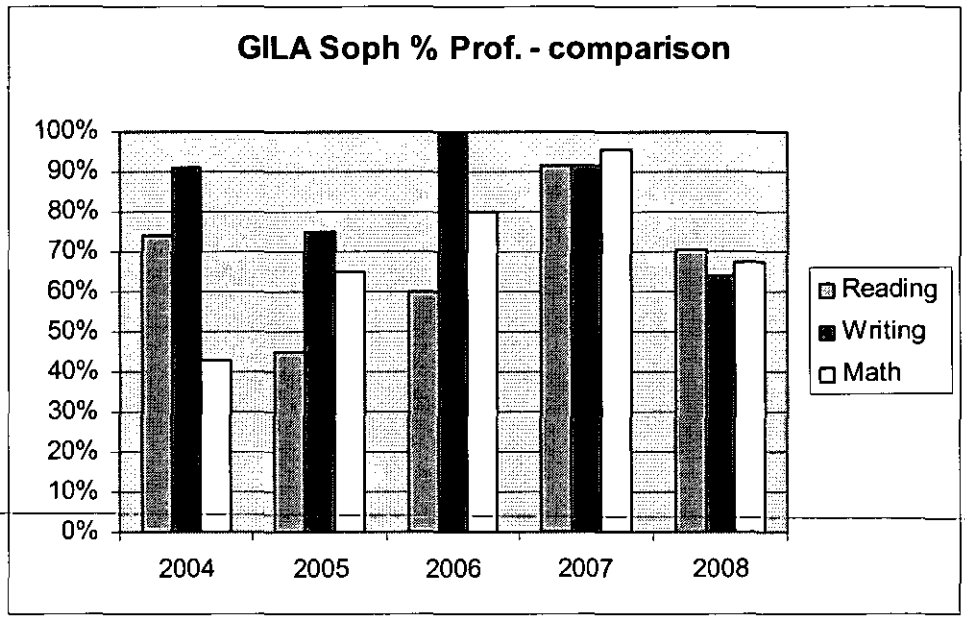
All GILA students grades 9 through 12 were administered the Terra Nova test, with grades 10 through 12 also taking the AHSGQE. The Standards Based Assessments was administered to the freshman as well as being imbedded in the sophomore AHSGQE. The results of those assessments follow.

ALASKA HIGH SCHOOL GRADUATION QUALIFYING EXAM

For the past three years over 90% of Galena Interior Learning Academy graduates have passed all three portions of the Alaska High School Graduation Qualifying Exam, with 100% passing rate for the 2008 graduates.

A high percentage of the sophomore class achieved great success on their first attempt at the AKHSGQE . In the content area of reading, 70.7% of Sophomores were proficient, in Writing 64.2% were proficient and in Math 67.4% were proficient on their first attempt.

Although sophomores have been enrolled at GILA from one to 15 months in our program at this assessment date, our rigorous educational system provides exceptional learning opportunities as indicated by these scores.



Soph % Proficient					
	2004	2005	2006	2007	2008
Reading	74%	45%	60%	91%	71%
Writing	91%	75%	100%	91%	64%
Math	43%	65%	80%	96%	67%

ADEQUATE YEARLY PROGRESS

Adequate yearly progress is determined by 31 categories on the 9th and 10th grade Standards Based Assessment at GILA.

Although our assessment scores for 2008 show a slight reduction, reflecting that we did not make AYP for that calendar year, we have made great strides with hiring an additional math teacher and a special education teacher to improve on the learning of our students and subsequently those scores.

As seen, GILA students are showing great improvement, which are directly proportional to the number of years in the GILA educational system. This information is especially important with data showing 89% of GILA seniors, 93% of the juniors and 88% of the sophomores and 96% of freshman are Alaska Natives. This provides a total of 92% of GILA students being Alaska Native on the end of the year count.

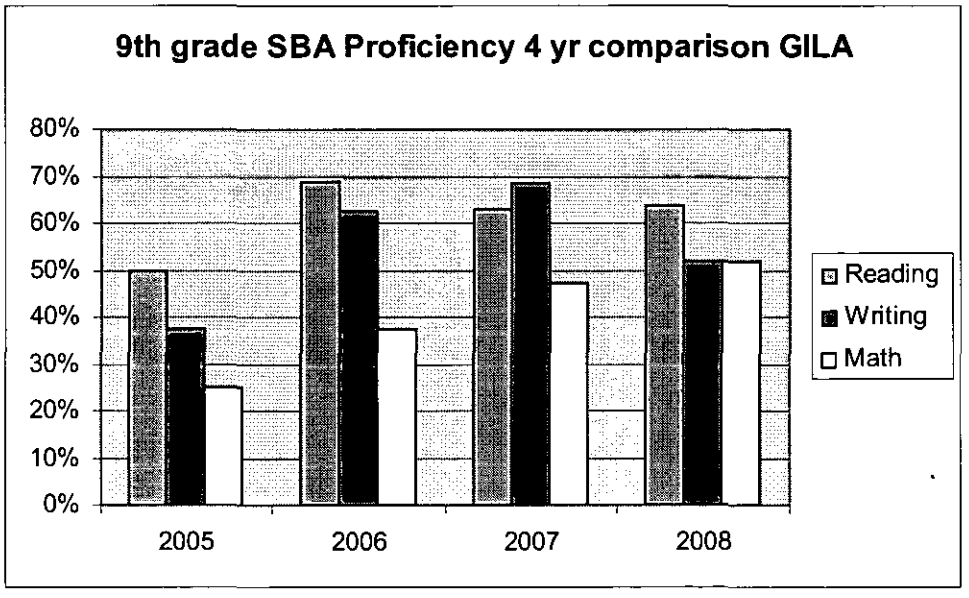
GILA STANDARDS BASED ASSESSMENTS (SBA)

The Alaska Standards Based Assessments are scored based on the percentage of student's proficient on each test. The Alaska Standards Based Assessments measure how well students have mastered the Alaska academic standards in reading, writing, and mathematics, each of which has their own subcategory. These tests are designed specifically to assess the Alaska standards with Alaska students. Test results are reported in terms of level of mastery, that is, the percentage of correct answers. These assessments are then used to determine AYP for each school and district.

A primary goal of GILA is to provide an academic and vocational education opportunity where the students can take advantage of their abilities. The longer the students stay at GILA, the greater their academic progress. In the data below, you will notice increasing scores each year students attend the school.

Grade 9 Standards Based Assessments

As you will observe in the data below, the freshman at GILA are showing constant improvement in all subject areas. It should be noted that upon acceptance of students into GILA at this beginning grade level, academic ability is discounted completely.



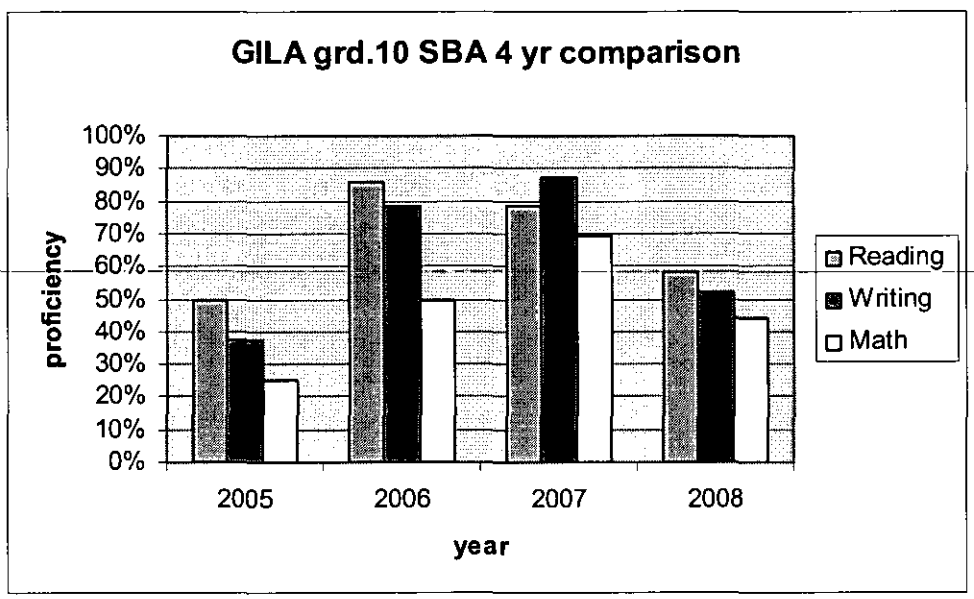
SBA 9th Proficient				
	2005	2006	2007	2008
Reading	50%	68.%	63.%	64%
Writing	38%	63%	68%	52%
Math	25%	38%	47%	52%

We feel with our staff development system the staff provides the opportunity for education that will give all students learning opportunities which are essential to success. Freshman students have been involved from one to 6 months in our educational system at this first state assessment date.

We require 480 minutes of monitored education 5 days per week which compares to 300 minutes required by DEED. The success of our model shows in the assessments scores.

Grade 10 Standards Based Assessments

Over the four years the SBA questions have been imbedded in the Qualifying Exam, GILA students have shown regular improvement as documented in the graph below. Although we feel improvements are needed, the scores remain similar between the students 9th grade SBA and a more difficult 10th grade SBA.



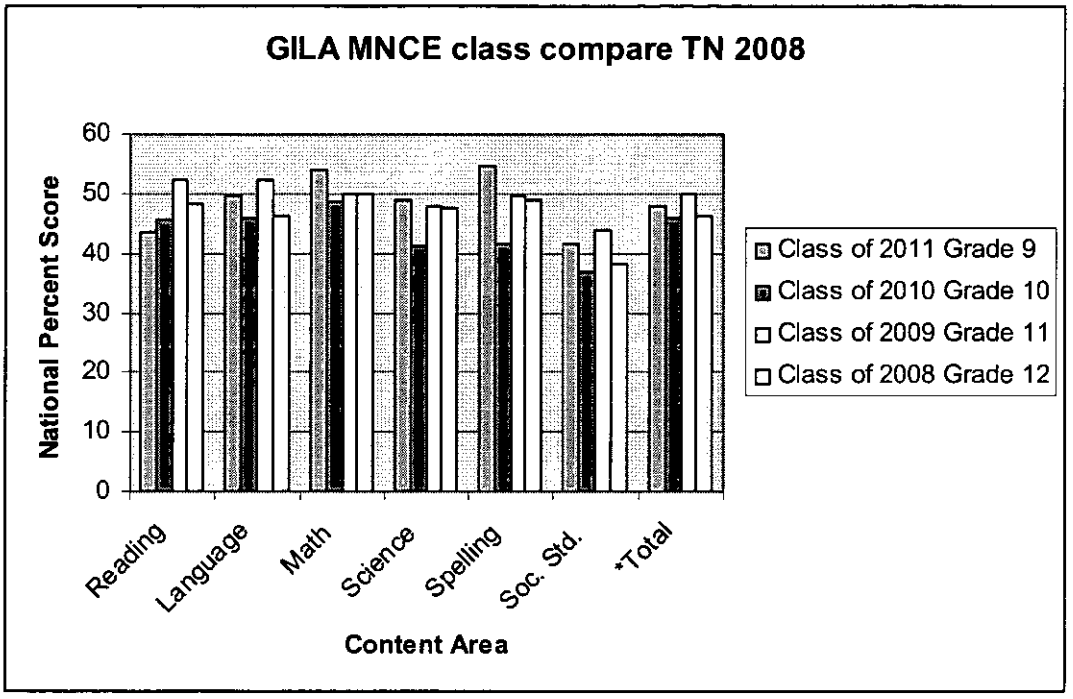
SBA grade 10	4 year comparison			
	2005	2006	2007	2008
Reading	50%	86%	78%	59%
Writing	38%	79%	87%	52%
Math	25%	50%	70%	44%

Sophomore students have been involved in our system from one to 15 months at this assessment date. This data provides evidence of the high number of sophomores who were invited with in the last few months while students who previously attended kept the scores from dropping excessively.

GILA: TERRA NOVA ASSESSMENTS

The Terra Nova is a norm-referenced test which means that the scores presented are comparative. The Mean Normal Curve Equivalent is computed by adding the Normal Curve Equivalent scores of all students in a group, then dividing by the number of students in that group. The Mean Normal Curve Equivalent scores show how well Galena students at each grade and in each subject area compare to their grade level peers around the country.

The Terra Nova Mean Normal Curve Equivalent Scores in the spring of 2007 are shown in the table and graph below. Virtually all Terra Nova scores are within the National Averages and are grade appropriate. The data shows scores are remaining within the national percentile in virtually all areas.



Total Score MNCE by Grade Level 2/08/08 testing								
MNCE	Reading	Language		Math	Science	Spelling		Soc. Std.
*Total								
Class of 2011	Grade 943.5	49.6	54	48.9	54.5	41.4	47.9	
Class of 2010	Grade 10	45.6	46	48.5	41.1	41.7	36.8	46
Class of 2009	Grade 11	52.3	52.2	49.8	47.8	49.7	44	49.8
Class of 2008	Grade 12	48.3	46.3	50	47.5	49.1	38.1	46.4

STAFF

All certified staff at GILA has accomplished "Highly Qualified" status. The vocational staff is certified professionals who have had additional training in educational techniques. GILA enjoyed 100% teacher retention rate this year among core academic staff however one of our vocational instructors moved into retirement at age 68. The instructional team consists of six core academic teachers, four industry-certified vocational instructors, a counselor and a native culture arts instructor. To that, we are adding two additional core teachers, one for Math/Technology and one for Special Education to accommodate the higher numbers of students.

Certified staff development is through 'Performance Excellence for All Kids' (PEAK) methodology. Each new staff attends a week long workshop in the summer. The district offers up to 18 days of additional training for all teachers, which includes ten days of Assessment Writing Workshops, half of which are on Saturdays.

The teaching staff is very dedicated. They work with those students who make a grade "C" or less in the after-school and Sunday evening tutoring sessions. All students attend a one hour home work session before dinner. Principal Harry White feels that the twenty minutes of daily "Silent Sustained Reading" for students and staff, vocabulary instruction in all classes and the cross curriculum teaching of Reading, Writing and Math attributed to the achievement of AYP.

The residential hall staff is responsible to supervise students all hours outside the school day and reside in the same building with them. They build a unique bond with the students, assist them in their homework, provide activities and regulate their schedules in off school hours supporting a successful learning environment. Resiliency and "assets building" training are provided for all residential hall staff.

The residential staff members are predominately graduates of university programs in residential living. This year four of the staff held degrees in education, where one was actually a certified teacher. Others are hired for their understanding and expertise in cultural needs, medical experience and activity organizational training.

NO CHILD LEFT BEHIND REQUIREMENTS

Highly Qualified Staff

One Hundred Percent of our staff are Highly Qualified.
According to "No Child Left Behind" each parent has the right to know whether their students are being taught by a federally defined "highly qualified" teacher. Any parent who wishes to inquire about the qualifications of their child's teacher is encouraged to contact Mr. Harry White, Principal of GILA and/or refer to the district web site listed above.

For further information regarding what defines a "highly qualified" teacher please refer to the federal definition

http://www.eed.state.ak.us/nclb/pdf/teacher_and_paraprofessional_requirements.pdf"
http://www.eed.state.ak.us/nclb/pdf/teacher_and_paraprofessional_requirements.pdf
2006 Goals & Accomplishments

ACHIEVEMENT OF PAST GOALS

The goals for 2009 and for the future include continuing our academic success while raising assessment scores in all areas. We also plan to more completely develop our vocational enrollment by improving on the quantity and enrollment of short courses with the post secondary program. Searching for funding in order to afford the increasing cost of increased enrollment and new on line buildings will remain an on going challenge until GILA becomes a fully funded boarding school for rural Alaskan Native students.

Student academic achievement, measured by the Terra Nova, Standards Based Assessments and Alaska High School Graduation Qualifying Examination continues to improve. Although our students come to us with various and at times undetermined academic abilities, the data on all assessments show marked improvements every year of continuous attendance at GILA.

Vocational job opportunities in our nation comprise over 75% of all employment opportunities for young people today. We are continuing to explore additional vocational options for GILA students, having provided four additional short courses this year which have both led to summer jobs and potential permanent employment upon graduation. These courses consist of Industrial Electrical training, Plumbers and Construction/Maintenance with a focus on Carpentry. In all three courses together we have trained in excess of 30 post secondary students. An additional Content Course for students involves the medical profession. Our high school Health teacher is teaching an Allied Heath course for college credit. From this course students may enroll at UAF in their medical field.
Drivers Education is an additional course which is more complete this year. In past years, we have offered the academic portion of Drivers Education, leading to success on the written portion of the state test. For this year, we have acquired a vehicle for students to practice driving. Our course is now approved with all facets of the program for students to succeed in getting their drivers license and possibly move on to CDL and equipment operating licensures which will be required for the Gas Pipeline.

Research indicates that students cannot read if they do not first comprehend the vocabulary words within the passage they are reading. Our staff receive ongoing extensive training to implement vocabulary in their content areas allowing them to move beyond the normal vocabulary instruction to teach students methods to digest prefixes, suffixes and root words. This allows the students to break apart words which they may not have ever come in contact with, and realize their meaning. Vocabulary words are discussed in assemblies and students are challenged in recreational settings with new words. Our reading scores are improving, however other academic areas are improving greatly which we feel is in large part due to the ability of the student to read and comprehend the material in those areas.
With these concepts in mind, twenty minutes of daily "Silent Sustained Reading" remains for all students and staff. Students and staff have spoken loudly to keep this system in place for years in the future. Students are now sitting and reading casually on their own time. They are now reading more and understanding what they read at a higher level. The improved State Assessment scores in all areas show that this approach is successful.

2008 PROGRAM HIGHLIGHTS

School:
The 2008 school year provided evidence that GILA continues to provide exceptional educational opportunities for Alaskan youth. Our student retention rate remained the highest of Alaska's three 9-12 boarding schools. Although achievement of ADEQUATE YEARLY PROGRESS was not accomplished , we have added new positions in Math and Special Education to address those needs. All program and teaching adjustments, staff development increases, and changes were implemented to increase student learning.

Vocational course adjustments were made with additional classes offered in each area. Participation in these career pathways continues to increase with the job markets demand.

The aviation program had thirty students, with two achieving their FAA approved Private Pilot Licensure and two achieving their Instrument Licensure. Several took the written portion of the FAA exam as well as building hours for completion of the Private Pilot License.

Cosmetology had great success with three students completing their 1650 hours of instruction, have passed all state testing requirements and presently working in the industry. Cosmetology continues to grow with two future instructors in the program to complete their training, thus making the program triple in size to three instructors. New equipment has been purchased to also increase the square footage of that training area by 100%.

The automotive program participation is continuing to grow with reorganization of class structures. Our new instructor just completed all areas of the ASE certification over the summer, allowing the statement that he has accomplished the highest level of certification possible. Additionally the Automotive program has added two sections of Drivers Education to meet the on going demand for CDL operators.

Success continues to be our goal and we are achieving it. Biweekly staff meetings are held in collaborative groups through out the school year to discuss classroom assessments, homework, distributed practice, corrective loops and other areas. Our student success is the result of this team concept among the staff. Reading, writing and math are included in each subject area with additional content areas beginning to receive increased emphasis. Data driven decision making is the basis for all staff development and class offerings.

A fantastic year was experienced in the area of student health and safety. Many evening activities augment those offered through the school including wrestling, volleyball, basketball, cross country running, cross country skiing, academic decathlon, Battle of the Books, science fair and more. These opportunities provide healthy choices to students. A Saturday Cultural day was held during spring where students could learn to snowshoe, cross country ski and complete in races. It was a great way to shake off the winter cabin fever.

Residential Hall: (Resiliency project)

Galena Interior Learning Academy Resiliency Project
This project is a project of Galena City Schools. The GILA Resiliency Project focuses on building and sustaining assets in Alaska Native students attending the Galena Interior Learning Academy (GILA), a public boarding school. This project supports the Fund for the Improvement of Education Appropriation Act which authorizes this project to "support operation of its (Galena City School District) boarding school for low-performing Native Students from remote villages

across Western Alaska." This project will start serving 130 students but will grow to serve up to 300 Alaska Native students as the school grows over the next three years.

The goal for this project is to increase the assets of Alaska Native students to help them successfully complete their education in Galena Interior Learning Academy.

The objectives of this project are:

1. **To train all staff in asset development and engage them as a team in strategies that develop positive development of the Alaska Native teens they serve**
2. **To implement out of school component of Reconnecting Youth, a nationally proven program that results in increased decision-making and problem-solving skills, teamwork, cooperation and trust**
3. **To provide culturally relevant activities that provides avenues for students to understand and practice traditional Native values.**
4. **To increase ways that families can communicate and support students in the boarding school.**
5. **To increase local community connection and support for boarding school students.**

Learning from previous grant projects and boarding school history that know that we must focus on not only the academic skills of our students, but also their social and emotional foundations for success. The activities of this project are:

1. Train all staff including residential hall staff, teachers, administrators and support staff on assets development in youth and how they can contribute to the three elements necessary for student success.
2. Implement Reconnecting Youth, a program of classroom and out of classroom lessons and activities for students deemed at-risk for school failure.
3. Increase the Alaska Native culturally relevant activities through collaboration with Louden Tribal Council.
4. Increase local community connections for students including churches, organizations and community service activities.
5. Increase the connections with families in remote villages through use of the Internet.
6. Increase recreational and outdoor experiential learning activities for students paying particular attention to activities that promote resiliency, youth development and leadership.

Through this project we expect the following outcomes:

- Students will increase their achievement levels and lower negative or risky behaviors such as substance use, negative behaviors, and disciplinary actions.
- Student academic achievement will increase
- Students will feel more comfortable and bonded with the school and residential halls

There will be a decrease of students who leave the school due to homesickness, substance use, mental health issues or disciplinary actions

2008 STUDENT HIGHLIGHTS

GILA students again participated with the Galena City School athletes and completed a very successful sport season. The Girls and Boys teams which were comprised of both Sidney Huntington School and GILA, won the Basketball regional championships and went on to compete at state level. The Boys team won the State 2A title at those competitions with the girls placing 4th. Success was also exceptional in mixed six volleyball with them attending state competition as well, ending in 4th place. Wrestling ended with six students completing at state, coming out with one champion and various other placings. Academic Decathlon performed very well, with a third place finish. Several students won individual medals and notoriety. Participating students not only were required to adhere to state and local eligibility requirements,

but also complete all residential life chores and maintain a high level of citizenship at the boarding school. While completing in numerous extra curricular activities, our teams received first place honors for their Academic Achievements at the state Basket Ball Tournament with highest GPA.

Students participated in the 'Student of the Month' program, 'Spirit of Youth' competitions and state wide pageants. Each month a boy and girl are chosen by staff to receive a 'Student of the Month' award and recognition; from which a 'Student of the Year' is selected. This student receives recognition and gifts at the end of the year. Although this program started with donations, the district has adopted it financially. Again this year GILA had a student who won the 'Spirit of Youth' for the State of Alaska. This comes with financial and personal opportunities in their academic studies after high school.

All these positive accomplishments were achieved by students while complying with the challenges of residential life and being far from their families. Sacrifices are made for a better education not often available at home. Student applications continue to increase, although we have the highest credit requirement in the state at 26 and exceed the number of minutes required by the state per day by 150%.

GOALS FOR 2008-2009

The 2009 school year will be the eleventh year that GILA is operating. We have improved in our assessment scores each and every year.

Our major goal will be to continue the improvement in our academic areas while adding to our already well attended vocational areas. Our goal for the upcoming year is a Reconnecting Youth Health course as a pilot for at risk students. Implementation of Peer Helpers in conjunction with Sidney Huntington School is planned to give students not only another extracurricular activity, but to assist in at risk behaviors. Staff has been trained in both the reconnecting youth health class and peer helper leadership with a follow up refresher next fall.

Reading remains a nation-wide challenge and will also remain a targeted area for GILA. Reading comprehension is a crucial skill for all educational endeavors and all content areas. With emphasis on reading and vocabulary in the past, we have raised all other content area scores on the state assessments. We plan to continue this focus and concentrate on Science more completely as that content area is added to the state exams.

With one of the most intensive staff development models in the state, our staff rise to the occasion to give more than expected each year. We meet a minimum of every two weeks through the school year for collaboration with colleagues. Increasing the abilities of certified staff to develop effective assessments and distributed practice in their areas of expertise is a priority. Regular assessments, with varied methods of distributed practice will be a focus area. Corrective loops will be an area for further learning to allow increased units to be covered each year successfully. This will be patterned after research-based instructional and assessment strategies directly affecting our students in a positive educational profile.

"No Child Left Behind" (NCLB) has increased accountability with all of the school systems in the nation. One of our goals to continue to lead the charge handed down by the federal government, continue to provide and improve our educational system, and to remain a model for others to follow. We appreciate the leadership of our school district, state and nation who has taken this charge and assisted in the improvement of the educational structure. We have 100% of our staff "Highly Qualified" in their major content area. We plan to increase that by encouraging staff to receive greater training and achieving "Highly Qualified" in a more broad range of

curricular areas. Meeting AYP consistently is a large goal. We now plan to improve on the reading, writing and math scores, adding science to that mix, while adhering to all 31 subgroups for AYP.

Our mission at GILA has been and will continue to be a school of CHOICE for students who seek greater opportunities than are available in their village. As long as we have the ability to continue to be that safety net for the children of Alaska, showing the success ratios that we have provided in this report, we will move forward with even greater expectations for ourselves and the students we serve. The challenge provided as we increase in facilities and students shows the dedication of Galena, Louden tribal council, ,Galena City School District and Alaska State Legislature to assist students of this Great State of Alaska by stepping up to the plate and assist the youth in their educational endeavors.

Within the next four years, we have the opportunity to grow from one hundred and twelve students to three hundred students, providing greater opportunities than presently available. We have moved into a larger residential hall and diner this year, and remain challenged with securing more classroom space for the students in a boarding school setting.

THANK YOU FOR YOUR SUPPORT
"Our Kids are Worth What Ever it Takes"

Early Childhood

Within the department there are two areas of focus: Head Start Grants and Early Learning Programs.

The 3 person team working with this area:

- issues grants to Head Start and Early Head Start grantees serving Alaskan children
- provides technical assistance and resources to grantees in the areas of early childhood education, school readiness, health, nutrition, early development and administration
- partners with other systems development initiatives to address specific issues for young children, birth to 5 years and their families, through the federally-funded Alaska Head Start Collaboration Project
- increases early literacy skills, family literacy skills, early learning skills and parenting skills for all populations in Alaska
- increases access to voluntary, affordable and quality early care and education
- establishes a sustainable early childhood literacy and learning system with accountability for outcomes

BEST BEGINNINGS

Alaska's Early Childhood Investment

Priorities for 2008-2009

The Best Beginnings Early Learning Council has identified seven priorities for July 2008 – June 2009. All of the priorities support recommendations made by the Ready to Read, Ready to Learn Task Force.

Imagination Library: Best Beginnings is the statewide umbrella organization for Dolly Parton's Imagination Library in Alaska, working closely with participating communities and technical assistance partners. Imagination Library mails a brand new, age appropriate book each month to all children from birth to age 5 who sign up for the program in their community, regardless of their family's income. The community pays for the books and mailing, promotes the program, registers children, and enters the information into the database. The Dollywood Foundation manages the system to deliver the books to the home.

Local Partnerships: Local communities are in the best position to determine the needs of their young children, so Best Beginnings will pilot local early learning partnerships in several locations around the state this year. Each local partnership will develop an action plan that identifies current needs and resources, encourages collaboration, and seeks to fill gaps. Best Beginnings will provide small grants and technical assistance to these partnerships.

Public Engagement Campaign: To encourage all Alaskans to join the effort to ensure all children begin school ready to succeed, Best Beginnings engages the public through radio and television PSAs, a Web site and e-newsletter, and print materials.

Early Learning Guidelines (ELGs): The Alaska Children's Trust awarded Best Beginnings a four-year grant to develop family-friendly booklets of activities based on the ELGs, in languages other than English. Materials in Spanish are completed, and work has begun on a version in Yup'ik. Additionally, the Department of Education & Early Development has contracted with Best Beginnings for an English version. The ELGs have been endorsed by the State Board of Education and are aligned with the new Alaska Developmental Profile and the K-2 Standards, ensuring seamless transitions for children. Alaska's ELGs help parents and adults who work with young children understand child development and their role in helping provide appropriate learning experiences for children.

Quality Rating and Improvement System (QRIS): With a grant from the Department of Health & Social Services, Best Beginnings developed a QRIS for Alaska and recommendations for standards, budget, and phased-in implementation. The QRIS provides the framework for a standards-based early care and learning system for out-of-home programs. It is a method to assess, improve, and communicate the level of quality in those programs. Highly ranked programs would be good candidates for any state-supported pre-kindergarten effort. The next step is a field test of the QRIS.

Early Learning System: Best Beginnings works with partners in both the private and public sectors to develop a culturally responsive, comprehensive and accessible statewide early childhood system that empowers families, links service providers, and engages communities on behalf of young children.

"Between the Lions" Alaska Native Head Start Literacy Initiative: This initiative centers on the award-winning PBS children's literacy series Between the Lions, adapting taped segments, a curriculum, and resources to make them culturally responsive to Alaska Native children in both rural and urban communities. Partners include WGBH Boston, The CIRI Foundation, BP, RurAL CAP, Southcentral Foundation Head Start, Bristol Bay Native Association Head Start, the Alaska Head Start Collaboration Office, the Alaska Library, ISER, and the Northwest Regional Educational Laboratory (NWREL). UAA submitted a grant proposal to the Institute of Education Sciences in September 2008.

Family Services

Supporting and empowering families to raise healthy children and to find quality child care.

New brain development research shows that the brain has the highest rate of neural connections between the ages of birth through six. The importance of providing high quality early childhood education programs that support and work with families is imperative to the brain development of young children. Staff members at Child Care Connection are dedicated to helping families make informed choices about child care quality, financial options when paying for child care, and how to best work with child care providers in order to support the overall development of young children.

We support families by:

- Educating families about Quality Indicators when interviewing, selecting, and monitoring a child care program
- Informing families of the different Types of Care (i.e. approved, licensed, accredited, center-based)
- Providing families with an individualized list of child care programs, with current vacancies, that meet their specific care, financial needs, and transportation needs through our Referral Service
- Assisting families of children with disabilities in finding quality specialized child care through our Alaska IN! Project
- Referring families to Community Resources
- Providing Positive Parenting Support Classes
- Answering questions and supporting families through our Warm-Line staffed by Early Childhood Specialists
- Maintaining a family and Professional multi-dimensional library
- Providing temporary child care while guardians/parents are actively searching for long-term employment through The Children's Place, located at the Gambell St. Job Center in Anchorage

EITC Tax Credit

ChildCareAware
America's most trusted child care resource.

Healthy Child Care

United Way is helping low-income working families increase their financial stability and self-sufficiency by making sure they receive the federal tax credits they're eligible for - in particular the EITC, or Earned Income Tax Credit.
Please visit http://www.uway.ak.org/content/gethelp/index.cfm for more information.

The decision to stay at home or return to work is not easy. Child Care Aware's *Accessing Support for All Parents (ASAP)* project will help families look at factors involved in making decisions about child care.

The ASAP Decision Making Tool allows families to:

- Consider critical areas of your lives impacted by child care decisions
- Examine feelings regarding child care options
- Seek the most appropriate resources and support for those choices

For more information, log on to:
http://www.childcareaware.org/ en/ASAP/decision_tool.html

Provider Services

Assisting child care providers with their professional development and enhancing the overall quality of early care and education programs.

Research indicates that the quality of care a child receives is directly related to the education and training of his/her provider. Child Care Connection provides multiple training and educational opportunities to individual providers and programs. We provide both on-site and classroom based trainings, to enrich early care and education experiences for children and families. Recognizing the complexity of issues involved in Early Childhood Education, Child Care Connection is committed to working with individuals, centers and homes to improve the overall quality of their services by:

- Educating professionals about child development and early childhood education through CCC Training which counts towards licensing hours, CDA credits, or college credit
- Offering Financial Support to child care providers for professional development pursuits.
- Assisting centers and homes to become licensed, accredited, or improve their overall quality through On-site Services (technical assistance, training and consultation)
- Providing a clear professional development framework for early educators through the Alaska System for Education and Early Development, Alaska SEED
- Advising individuals about the Child Development Associate Credential, CDA
- Maintaining the Parent and Professional Library where providers can check out books, resources and materials to use in their programs or for their personal use
- Tracking individual's professional development through our Training Registry
- Providing financial assistance to providers who care for children with special needs through the Alaska IN! project
- Answering questions and supporting child care professionals through our Warm-Line staffed by an early education specialist
- Providing marketing services to child care programs by giving Referral Services to families when programs have vacancies
- Linking providers with CPR/ 1st Aid Classes in the community

Community Services

Supporting communities to create responsive early childhood systems and to generate resources that will ensure the supply of quality child care.

According to the McDowell Group's report released in 2006 titled, "Economic Impact Report on Early Education and Child Care Services in Alaska," 63% of children under the age of six live in a household where all available parents are in the workforce (based on 2004 Department of Labor records.) These children reside in 29,400 Alaska households which are potentially in need of child care services.

To view the full economic impact report, go to http://seed.alaska.edu/support docs/McDowell report final.pdf

The state of Alaska does not have the capacity to meet the child care needs of our working families. Currently there are fewer than 17,000 licensed child care spaces available around the state. Child Care Connection collaborates with individuals, businesses, churches, and other entities to increase the number of child care spaces. Specifically CCC does this by:

- Collaborating with the community to increase the resources and funding to the early care and education industry.
- Increasing the supply of child care in the community by recruiting, training, and supporting individuals to become family child care providers by offering courses such as "Making Caring Your Business." See CCC Training calendars.
- Providing assistance to businesses and their employees regarding child care issues, parenting skills, and balancing work- family life.
- Providing research and statistical data on the state of child care in our communities
- Participating on the Alaska System for Early Education Development (SEED) to develop a professional development framework for the field and to coordinate training opportunities and supports throughout the state.
- Providing drop-in child care services to individuals using the Gambell Job Center in Anchorage at The Children's Place
- Educating the community about the importance of early childhood education through a collaborative United Way community initiative entitled Success By 6

Are you an employer interested in providing work-family supports? CCC can help by...

- Consulting with businesses, nonprofits, or governmental agencies around ways to provide child care support for their employees.
- Conducting lunchtime presentations or brown bags to assist businesses on finding quality child care, parenting skills, or balancing work-family life.
- Supporting the Success By 6 Work-Family Awards given annually to businesses with the best family friendly policies.

BEST BEGINNINGS

Why Books?

For want of a book...

60% of kindergartners in neighborhoods where children did poorly in school did not own a single book.

4th graders with fewer than 10 books in their home had lower average reading scores than their peers with more

Children who have not developed some basic literacy skills ***by the time they enter school*** are three to four times more likely to drop out in later years.

And right now, too many Alaska children, about 40%, are entering kindergarten without those skills.

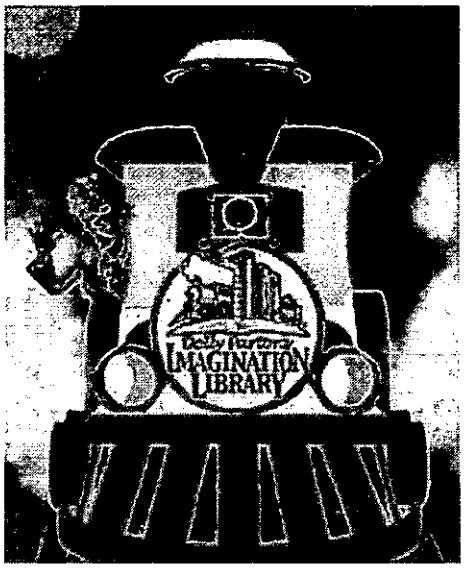
BEST BEGINNINGS

Alaska's Early Childhood Investment

Best Beginnings' Three Top Priorities:

1. promoting parents as their children's first and most important teachers;
2. making quality child care and early learning opportunities available to all families who want them; and
3. making early learning a priority in Alaska.

How Imagination Library works...



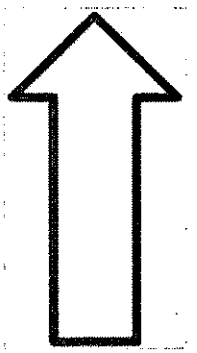
- Parents can sign up their child at any time before the child turns 5, even as early as birth.
- A book is mailed every month to that child.
- Donations support the program, so there is no charge to the families.
- The age-appropriate books are chosen by experts, starting with *The Little Engine That Could.*

What Imagination Library Books Do...

In Juneau

Before Imagination Library (2005) → only 50% of Juneau parents were reading daily with their preschoolers

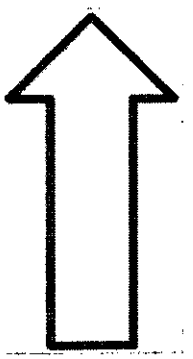
After Imagination Library (2007) → 76% of parents are now reading an average of a book a day or more



In Hawaii

Before: → 51.7% of parents read to their Children

After: → 81.3%
98% of parents went up from once a week, and 52% of them went to once *a day*



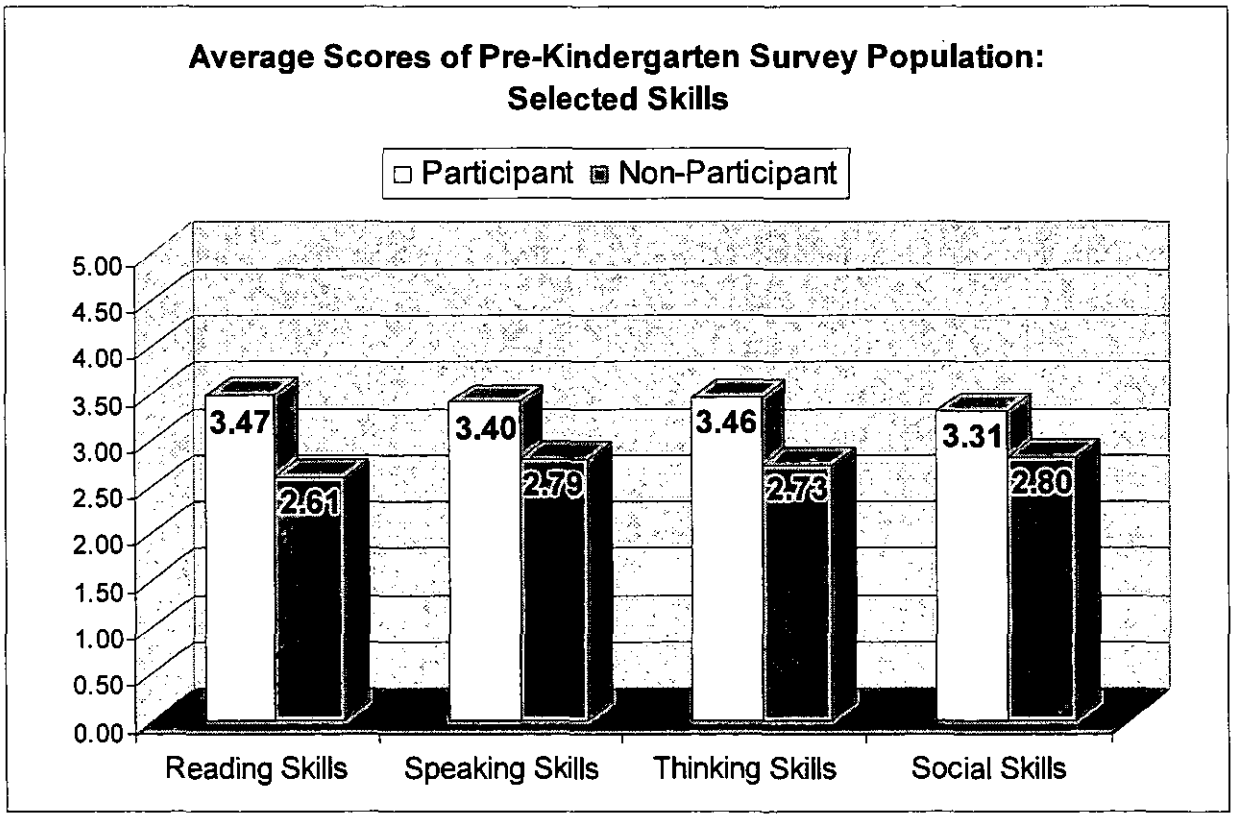
In Michigan

76% of parents surveyed report that their child is **more enthusiastic about books**

62% of parents report that **their child asks to be read to** more often

70% of parents report that their child **spends more time looking at or playing with books** by themselves

In Tennessee



Tennessee Board of Regents, January 2008

Next Steps...

Define your geographic area (zip code, school district, village, region)

Identify your Local Champions, people or organizations who will take on:

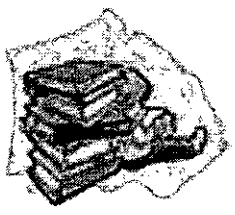
- Enrollment of children
- Fund raising
- Publicity
- Data entry and database management
- Family programs to add value to the books

501(c)3

Identify a non-profit organization to meet postal regulations.

American FactFinder

Determine how many children in your community are under five years old.
Census information: http://factfinder.census.gov



The cost per child per year is $30 for 12 books and postage. Decide how many children you can register. The goal is usually 20% of eligible children the first year.

What is Head Start

Head Start is a national program that promotes school readiness by enhancing the social and cognitive development of children through the provision of educational, health, nutritional, social and other services to enrolled children. The program engages parents in their children's learning and helps them in making progress towards their educational, literacy and employment goals. Significant emphasis is placed on the involvement of parents in the administration of local Head Start programs. Over forty years of experience in delivering high quality early childhood services makes Head Start stand out as one of the most successful demonstration programs in the nation.

The Head Start program provides comprehensive child development services to economically disadvantaged children and families, with special focus on helping preschoolers develop the early reading and math skills they need to be successful in school. The Early Head Start program was established to serve children from birth to three years of age in recognition of the mounting evidence that the earliest years of development are very important.

Why is Head Start Important in Alaska

- Alaska Head Start is the largest early childhood program serving over 3,000 young children ages birth to age five in 100 Alaskan communities.
- Head Start and Early Head Start grantees insure that thousands of children receive health and dental screenings each year. In many communities where medical and dental care choices are limited or non-existent, Head Start programs play a vital role in helping families access treatment for their children.
- Research shows that well-trained teachers are a key component of high quality child development programs. In spite of funding and distance challenges, Alaska's Head Start grantees have increased the number of teachers with BA degrees in Early Childhood Education and significantly increased the number of teachers with AA degrees since 2003. This achievement not only has raised Head Start program quality but also has helped Alaska address its statewide shortage of trained early childhood educators.
- Over 10% of enrolled children have a diagnosed disability and are receiving coordinated services
- Children transition from Head Start to Kindergarten with increased literacy, math and social skills.
- Parents of Head Start and Early Head Start children are involved in their child's program. Parent involvement is directly related to children's cognitive growth and social outcomes.
- In 2007, Head Start programs employed over 900 people across the state. If Head Start were a private company, it would be among the top 20 of the state's largest employers. In many smaller communities, the Head Start program is an important source of employment and local economic activity.
- Demonstrated collaborative relationships with local and regional resources support and strengthen services to children and families in the State.
- According to an Economic Opportunity Institute report from 2002 entitled "The Link between Early Childhood Education and Crime and Violence Reduction", investments in early childhood education lead to large economic savings. For every $1 invested $7 is saved in special education services, correctional system services, and long term societal effects of delinquency.

What Resources are needed: INCREASE STATE OF ALASKA INVESTMENT IN HEAD START

- Expansion of services to include all income eligible children ages 0 to 5
- Adequate funding to keep pace with increasing energy costs
- Workforce development funds to meet degree requirements for teachers
- Capital investment to maintain and repair aging Head Start facilities
- Accessible and available health care for children and families
- Collaboration between State Departments concerning early childhood services

Alaska Head Start Association
Fact Sheet 2008-2009 Program Year

There are 17 Head Start grantees in Alaska providing comprehensive child development services in 100 communities. The Alaska Head Start Association's two year funding plan proposes expanding enrollment by 195 children in FY 2010 (see below) and 80 children in FY 2011.

Head Start Programs in Alaska

Program	Estimated # of Eligible Children	Enrollment (FY 2009)	Estimated # of Eligible Children Not Served	Proposed Enrollment for FY 2010	Communities Served
Aleutian-Pribolof Islands Association	51	50	1	50	King Cove, Sand Point, Unalaska, St. Paul

ALASKA HEAD START ASSOCIATION
Critical Issues
2009

- **INCREASE STATE OF ALASKA INVESTMENT IN HEAD START BY $2,000,000**

During the summer of 2008 the Alaska Head Start Association worked to put together a comprehensive two-year Head Start expansion plan to present to the Department of Education and Early Development. This plan called for $1.8 million in new funding from the state of Alaska to serve approximately 200 new children in the upcoming fiscal year, and for $200,000 to assist grantees to maintain existing slots that would otherwise be eliminated due to increased operating costs. While AHSA supports and appreciates the Governor's proposal for a Head Start expansion of $800,000, this amount will only allow grantees to serve 60-80 new children. In addition, programs across the state have struggled to maintain the same quality and quantity of services available because appropriations have failed to keep pace with rising costs. Since 2003, Alaska Head Start programs have eliminated services to 361 children, closed services in six communities, reduced classroom hours, changed program options, scaled back transportation services, frozen staff wages, deferred on-going maintenance and repairs to facilities, and relied more heavily on in kind donations from the communities for the provision of essential services. In addition, the recent spike in energy costs continues to be a serious concern for programs.

ACTION NEEDED: Increase Head Start funding by a total of $2,000,000. This will allow approximately 200 additional children in Alaska to receive Head Start services and prevent additional Head Start slots from being eliminated.

- **DEVELOP A COMPREHENSIVE STATE-WIDE PLAN TO ENSURE THAT ALL EARLY CHILDHOOD EDUCATIONAL SYSTEMS AND SERVICES ARE COORDINATED AND COMPLEMENTARY**

The Alaska Head Start Association strongly supports implementation of a Pilot Preschool Program. AHSA believes that the need for Early Childhood Education in our state far exceeds what our existing systems can provide. However, the association also believes that the state has a responsibility to ensure that all publicly funded systems, existing and new, are working together to provide services in a coordinated and complementary manner. Written agreements addressing eligibility, enrollment, and recruitment need to be in place between all early childhood systems that are providing services in a common area.

ACTION NEEDED: Ensure that a comprehensive state-wide plan addressing how early childhood services will be delivered is developed and implemented. Any new legislation should require written coordination agreements between early childhood systems to eliminate duplication or competition in early childhood service delivery.

- **DEDICATE WORKFORCE DEVELOPMENT FUNDS TO SUPPORT HEAD START TEACHER QUALIFICATIONS**

The "Improving Head Start for School Readiness Act of 2007" has established the following professional development requirements for Head Start:

- By September 30, 2011 100% of Head Start teachers must have an associates degree in early childhood education
- By September 30, 2013 50% of Head Start teachers nationwide must have a bachelor's degree in early childhood or a bachelor's degree and course work equivalent to major in early childhood education.
- By September 30, 2013 100% of Head Start Education Coordinators and Curriculum Specialists must have a bachelor's degree.
- By September 30, 2013 100% of Head Start teaching assistants must have a CDA and be enrolled in a degree program.

Alaskan Head Start grantees have made significant progress over the past five years to try and meet the existing professional development requirements. However to meet these new requirements by the timeframes outlined we will need to have a coordinated statewide response. Obtaining degrees takes time, especially when staff are taking classes via distance delivery and working full time jobs. Often this means that early childhood educators are only able to take classes in the evenings and during the summer.

ACTION NEEDED: ***The Department of Labor and Workforce Development must designate workforce development funds for early childhood education because it is an under-developed profession.***

- **SUPPORT INCREASED HEALTH CARE ACCESS FOR ALASKAN FAMILIES WITH YOUNG CHILDREN**

The Alaska Head Start Association strongly supports an increase in funding for the Denali KidCare Program. By taking this action our state will restore and expand eligibility criteria for health care coverage for the children of Alaska's working families. The primary goal of Head Start is to make sure children are prepared for success as they enter their school years. A vital piece of this preparation is insuring that families have affordable, adequate health insurance coverage for their children, which Denali KidCare provides.

ACTION NEEDED: ***Increase the income eligibility guidelines for Denali KidCare to at least 200% of Alaska's federal poverty level.***

Position Paper

Author: AnneMarie Mattacchione Alaska Head Start Association President

Support Brings Success!

On behalf of:

The Alaska Head Start Association:

Membership organization dedicated to meeting the needs of Head Start children and their families in Alaska.

Endorsed by:

Fairbanks Association for Education of Young Children:

Membership organization serving and acting on behalf of the needs and rights of all the children ages 0-12 years, with special emphasis on developmental and educational services and resources and fostering the growth and development of the membership in their work with, and on behalf of, young children.

Development and Implementation of a Voluntary Pre-K in Alaska

The development and implementation of a voluntary Pre-K in Alaska is critical for the continued economic success of our state. In addition, reliable research demonstrates that quality early childhood programs, such as Head Start, are effective as part of a smart workforce development strategy and as anti-poverty tools. [i]Early childhood education and child care play a critical, measurable role in Alaska's economy. Alaskans across the state place a high priority on state funding for early education and child care. Alaska is one of only 10 states without a state-funded, statewide early childhood education system.[ii] Assurance of a high quality, developmentally and culturally appropriate preschool experience should be the foundation from which Alaska's Pre-K programs are developed. Pre-K programs are best implemented in the context of relationships and collaborations with other preschool and child care programs and in conjunction with statewide early learning systems.

Statement #1:

One common misunderstanding is that an appropriate preschool educational approach is similar to the education of children K-12. In reflecting upon all that we know about young children, how they think and learn, we have found there are four characteristics that are of the utmost

importance for educators and that underlie much of what we believe is best for preschool children.

1. Young children are theory builders.
2. Young children need to build a foundation of physical knowledge.
3. As they mature, young children become increasingly autonomous and independent, both intellectually and morally.
4. Young children are social beings, influenced by and influencing others around them[iii]

This approach requires that young child's educational experiences emphasize the construction of knowledge, not its transmission.[iv] Transmission of knowledge is a frequent occurrence in the practice of public education. Constructivist educational settings provide the context in which the learner constructs knowledge-contexts that encourage self-direction, experimentation, problem solving and social interaction. When comparing the readiness and qualifications of teachers in classroom settings, the preschool environment requires a specific skill set that is not adequately taught in a typical Educational Degree program. Preschool education requires teachers to have a high degree of competency in the areas of social-emotional development, group management, constructivist theory and practice as well as family development. A thorough understanding of developmental stages of children, birth-five, is predicated on nurturing and meaningful relationships between child and teacher and therefore academic success.

Our recommendation:

- Ensure that teachers selected for Pre-K programs have an adequate Early Childhood education. At minimum teachers should have education in the areas of: child development, course work that focuses on children birth-preschool years as well as social-emotional development, constructivist and group management practices.
- Ensure the Pre-K setting reflects the constructivist approach to learning in curriculum development and the learning environment, as well as the teacher's disposition.

Statement #2:

Head Start represents our country's best effort to develop a nationwide, comprehensive program for economically disadvantaged young children and their families. In 44 years, Head Start has improved the lives of millions of children and families, expanded our knowledge of how to best serve these children and families, and developed a proven approach for delivering cost-effective services. Head Start is widely recognized as a successful comprehensive program.

The Head Start approach to working with children and families provides a foundation upon which

to expand early education and childcare. The lessons and expertise drawn from 44 years of operation make Head Start and local Head Start programs invaluable ingredients in the expansion of quality services for children and families. We believe that the need for Early Childhood Education in our state far exceeds what our existing systems provide. However, the state has a responsibility to ensure that all publicly funded systems, existing and new, are working together to provide services in a coordinated and complementary manner. Written agreements addressing eligibility, enrollment, and recruitment need to be in place between all early childhood systems providing services.

Not only are coordinated and complementary services a good idea they are federally mandated:

> In accordance with Section 642(e)(5) of the Head Start Act, Head Start agencies (grantees) are required, no later than December 12, 2008, to enter into a memorandum of understanding (MOU) with the appropriate local entity responsible for managing publicly funded preschool (pre-kindergarten) programs in their service area.
>
> Many states have designated local entities to be responsible for managing publicly funded preschool programs. These include local educational agencies (LEAs), and in some cases city and county governmental agencies. Head Start agencies should identify and work with the appropriate LEA, city or county agency to either expand the scope of processes and agreements already in place or to develop new processes that will result in an MOU(s). In either case, the MOU(s) must include coordination plans that address the ten subjects described in Section 642(e)(5)(A) of the Act.

The primary focus of Pre-K programs, across the nation, has been the preparation of children for Kindergarten. For many years Head Start programs, across the state of Alaska, have provided comprehensive services to children and families far beyond provision of quality early childhood education. Head Start provides services that include developmental, health, mental health screenings, referrals and education that have greatly enhanced the quality of life for children and families that persistently hover at or below the poverty line. Head Start services also include a family development approach that ensures referral to community resources as well as teaching parents the importance of goal setting and active involvement in their child's education. Head Starts are well known for actively engaging in communities and as originally intended, alleviating poverty.[v] We have successfully partnered with local LEAs to support the development of IFSPs, IEPs, preparation and transition into Kindergarten. We would like to continue these important partnerships by making the following recommendations:

- Ensure that communities without a source of preschool or Head Start programming acquire state funded Pre-K services first.
- Ensure that local school districts work with Head Start programs in their communities to ensure full enrollments in Head Start.
- Encourage local school districts to take advantage of partnerships with Head Start programs. Such partnerships can stretch state dollars in support of the Pre-K effort thus serving more children, offering family development services, critical health screening

activities and expertise in Early Childhood Education. Possibilities range from shared space to contracting state Pre-K services to Head Start programs. Currently, many excellent models of school district collaborations with Head Start programs exist in the lower 48.

Statement #3

Alaska's early learning services and activities are fragmented. Successful early learning programs are predicated on a comprehensive system that includes private and publicly funded programs. Currently in our state we offer private and non-profit infant, toddler and preschool, child care, family child care, Montessori programs, Early Head Start and Head Start programs, Home-based Parents As Teachers services, and the military child development programs. As the state continues to develop a Pre-K program, it is critically important to do so not in a vacuum, but to share resources and prevent duplication of services within the early learning community. We agree that families require a wide range of options to meet their family's needs for quality early learning opportunities. Voluntary Pre-K programming that does not consider current services will fail to meet the needs of our youngest children and their families. Determining what is best for our youngest children in our state requires the same careful consideration as other important state issues such as economic development and the education of children K-12.

Our Recommendations:

Establish a public-private governance structure that creates and maintains a culturally responsive, comprehensive, and accessible statewide early childhood system that empowers families, links service providers, and engages communities on behalf of young children.

Economic Development:

The importance of the role of the state's early learning community in shaping Alaska's economic future must not be underestimated. The economic impact of early education and child care, for example, is often overlooked. Yet it has been found that at least 6,500 Alaskans are employed in the early learning sector workforce. The size of this workforce is comparable to other significant industries in Alaska such as the air transportation sector and residential and nonresidential building construction.[vi]

Finally, experts estimate that, investment in early childhood development programs brings a real public return of 12% and a real total return, public and private, of 16%. We would be hard pressed to find any other economic development effort that has such a public return. [vii] The investment in Head Start has been shown to lead to increased earnings, employment, and family stability, and to decrease welfare dependency, crime, grade repetition, and special education. [viii]

Conclusion

Alaska's vision for its youngest children is a work in progress. Such a vision is best developed in collaboration with other infant, toddler, preschool and child care programs and in conjunction with statewide early learning systems.

Alaska Head Start Association

Why Head Start Matters

Alaska's Head Start programs prepare young children for success in school and life.

1. **Head Start children are healthier than their peers from similar socio-economic backgrounds who are not enrolled in Head Start. Healthy children learn better.**

FACTS*
(The following figures refer to Head Start only. Early Head Start is not included.)

- 78% of Alaska's Head Start children received health screenings that meet Early Periodic Screening, Diagnosis and Treatment (EPSDT) standards. (EPSDT is Medicaid's well child check up program.) This compares to a 50% EPSDT medical screening rate for eligible 2-5 year olds statewide**.

- Of the 2,152 Head Start children who received health screenings, 356 were diagnosed as needing treatment for a variety of potentially serious conditions, including hearing & vision problems, anemia and asthma.

CONCLUSION
Without Head Start, we estimate that 100 or more children would enter kindergarten by 2009 with significant undiagnosed and untreated health problems.

**Based on federal 2007 Program Information Reports (PIR) for Alaska grantees.*
***For 2003, reported in the National Health Policy Forum issue brief #819, 11/20/2006.*

FACTS*
(The following figures refer to Head Start only. Early Head Start children are not included.)

- 88% of Alaska's Head Start children received dental exams. This compares to a 25% EPSDT dental screening rate for eligible 3-5 year olds statewide**.

- Of the 2,425 Head Start children who received dental exams, 586 were diagnosed as needing dental treatment. 376 of these children (64%) received treatment.

CONCLUSION
Without Head Start, we estimate that 270 or more children every year would live with untreated oral health needs. These conditions place a child's speech development, nutritional well-being, overall health and future oral health at risk.

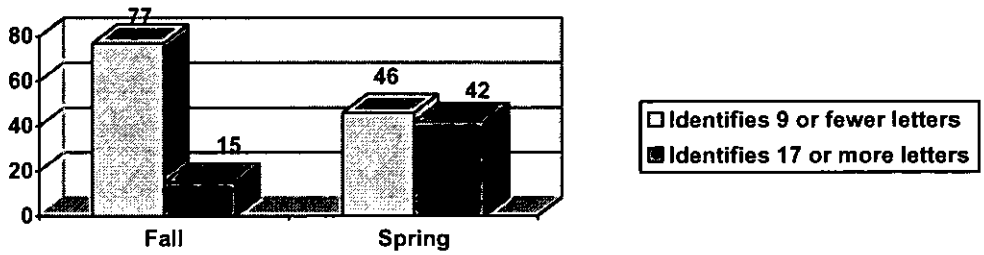
**Based on federal 2007 Program Information Reports (PIR) for Alaska grantees.*
***For 2003, reported in the National Health Policy Forum issue brief #819, 11/20/2006.*

2. **Participation in Head Start improves literacy and math skills for many children who are at risk of starting kindergarten behind their better off peers in these areas.**

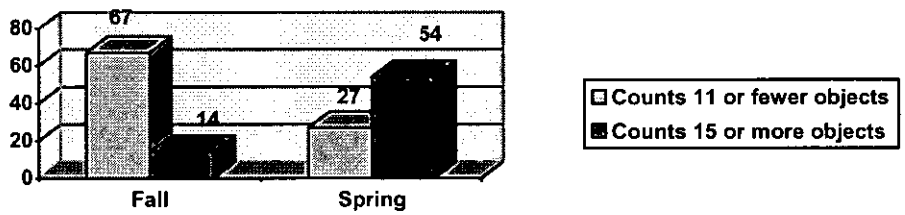
The following graphs are based on information taken from the National Head Start Reporting System (NRS) results of 11 Alaska grantees during the 2006-2007 program year. The NRS assesses only children who were going to kindergarten in 2007. The graphs include only those children assessed in both fall and spring— a total of 352 children in Region X programs and 329 children in AIAN programs.

2879

Letter Recognition
(Percentages)



Early Math Skills
(Percentages)



Alaska's Head Start programs achieved results that approach national norms even though program characteristics differ from national averages in several significant ways.

- Alaska has fewer full day programs
- Alaska has fewer teachers with a Bachelor's degree

Program Characteristic	Alaska Program Averages	National Head Start Averages
Percentage of teachers with Bachelor's degree or higher	20%	44%
Percentage of children enrolled in full day programs	10%	53%

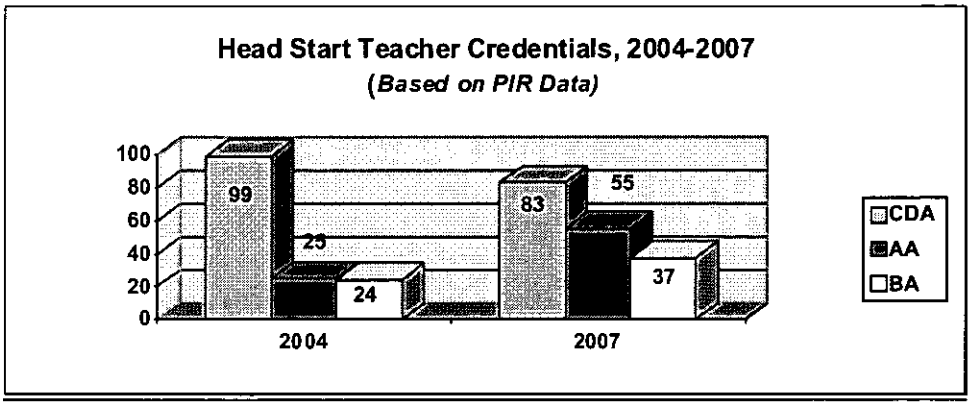
3. **Participation in Head Start increases the likelihood that children with previously undiagnosed disabilities will receive diagnosis and therapy for their disability before they enter kindergarten.**

FACTS*
(The following figures from the federal 2007 Program Information Report for Alaska grantees refer to Head Start only. Early Head Start children are not included.)

- 95% of Alaska's Head Start children received developmental screenings exams.
- Of the 2,600 Head Start children who received developmental screenings, 276 were eventually diagnosed with a disability.

CONCLUSION
Without Head Start, hundreds of Alaska's children would enter kindergarten every year with undiagnosed disabilities.

4. **The quality of Head Start teachers continues to improve in spite of funding and distance learning challenges.**



5. **Head Start provides economic benefits for all of Alaska.**

Federal Head Start grants injected over 27 million dollars into Alaska's economy in FY 2007. This sum does not include the many other sources of federal revenue, such as Child and Adult Care Food Program (CACFP) reimbursements, which Head Start programs attract. This investment provides an important source of economic activity and employment in many of the rural communities listed on page one. For example, Head Start programs employed 927 people in 2006.

The Future of Head Start in Alaska

Many studies link high quality early child development programs to large and long term economic savings. We believe that the early intervention, health, and school readiness results described above testify to the high quality of Alaska's Head Start programs.

R.S. No. 71

The Cost of Crime: Could The State Reduce Future Crime and Save Money by Expanding Education and Treatment Programs?

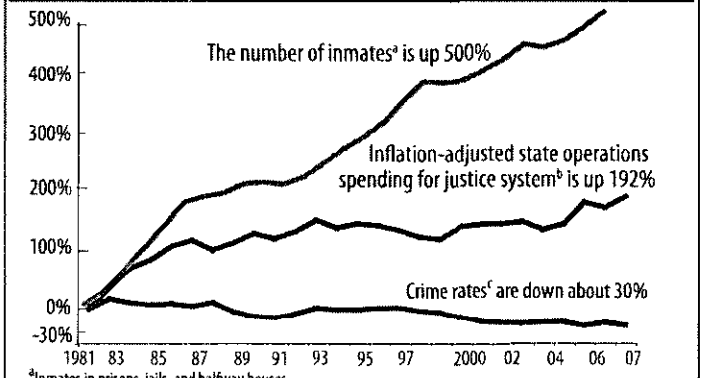
By Stephanie Martin and Steve Colt

Alaska's prison population is among the fastest-growing in the U.S., with five times more inmates in 2007 than in 1981. Spending for the state justice system has nearly doubled since 1981—but the crime rate has dropped only about 30%.

Here's the dilemma for the state, given the pattern shown in Figure 1: what can it do to hold down the number of inmates and stem the rising costs—while at the same time keeping the public safe and using tax dollars effectively?

Senator Hollis French asked ISER to project growth in the number of Alaska inmates and the associated costs—and then evaluate whether the state could reduce that growth by expanding intervention and prevention programs for people already in prison or at risk of ending up there. Alaska currently spends about $17 million a year for such programs, but they aren't available to many of those who might benefit from them.

Figure 1. Percentage Changes in Alaska Crime Rate, Spending for Justice System, and Number of Inmates, 1981-2007



[a]Inmates in prisons, jails, and halfway houses
[b]Spending for Departments of Corrections, Public Safety, and Law; court system; Division of Juvenile Justice; Public Defender Agency; and Office of Public Advocacy. Does not include capital spending or payment on debt.
[c]Rates per 100,000 for murder, rape, robbery, aggravated assault, burglary, larceny, and motor vehicle theft.
Sources: U.S. Department of Justice; state budget documents; Alaska Department of Corrections

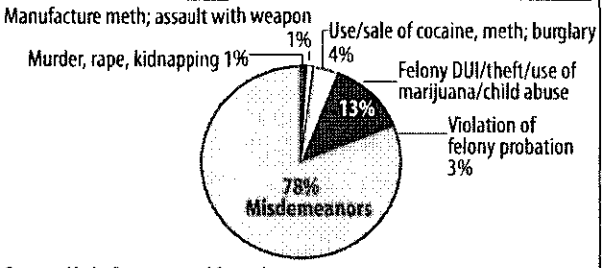
There are a wide range of such programs. But it is programs for adults who are already in prison or jail that have the most potential to save money and reduce crime in the next 20 years. That's because they can reach the most people.

We know that without any intervention, about two-thirds of those who serve their sentences and are released commit new crimes. Stopping at least some of them from committing more crimes would not only help improve public safety but also reduce growth in both the number of inmates and in spending.

Also, most of those released committed misdemeanors (Figure 2). Those who commit the most serious crimes serve long sentences and make up a small share of those released in any given year.

To analyze which programs have the most potential to reduce crime *and* save the state money, we worked with the Alaska Criminal Justice Working Group and the Washington State Institute of Public Policy. That institute did a similar analysis for Washington state and provided us with data it collected from program evaluations nationwide (see back page). What did our study show?

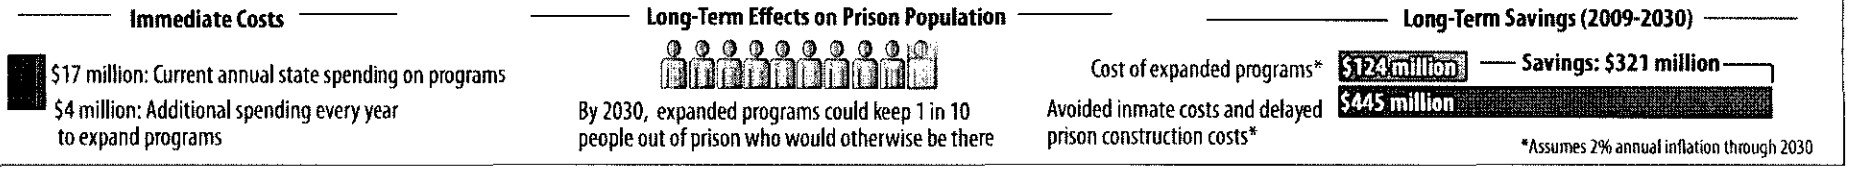
Figure 2. Who Gets out of Jail or Prison in Alaska?
(Total Releases, 2002-2007: 82,339)



Source: Alaska Department of Corrections

- *With no change in policies, the number of Alaska inmates is likely to double by 2030,* from 5,300 to 10,500.
- *If the state spent an additional $4 million a year to expand programs it already has, the prison population in 2030 might be 10% smaller* than projected—about 1,050 fewer inmates.
- *The state would spend about $124 million for expanded programs through 2030 but would avoid $445 million in costs—a savings of $321 million.* It would save money by incarcerating fewer people and by delaying prison construction costs. (Figures 3 and 8).
- *Education and substance-abuse treatment programs—in prison, after prison, and instead of prison—save the state two to five times* what they cost and reach the most people. Programs for teenagers are also very effective at reducing crime and saving money, but they reach fewer people.

Figure 3. Potential Effects, Costs of, and Savings from Expanded Prevention or Intervention Programs



Why Consider Expanding Programs?

In 1980, 2 in 1,000 Alaskans were behind bars; today that share is approaching 10 in 1,000. The sharp increase started in the 1980s, when the state government began collecting large oil revenues. The state used some of that money to expand police agencies, courts, and other parts of the criminal justice system statewide. Also in the 1980s, it made sentencing for the most serious felonies more uniform and stiffened sentences.

The crime rate in Alaska has declined since the 1980s. But the number of Alaskans in prisons, jails, and halfway houses has increased much faster, as have costs for the state justice system. Alaska's prisons are full, and the 1,500-bed prison scheduled to open in 2012 is projected to be full soon after it opens.

Locking people up is expensive, whether their crimes are major or less serious. Alaska spends on average $44,000 a year per inmate in prisons, jails, and halfway houses. Adjusted for inflation, that's actually less than in the 1980s—but it's still a lot (Figure 4).

Studies in other states have shown that some intervention and prevention programs can help cut both costs and crime, either by keeping people who have served their sentences from committing new crimes after they're released, or preventing some people from going to prison in the first place.

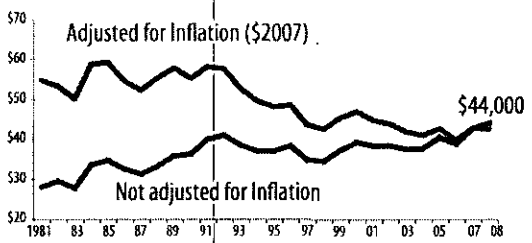
What Programs Did We Analyze?

The Alaska Criminal Justice Working Group gave us a list of programs to analyze. We looked for programs with the biggest potential payoff for the state—those that could reduce growth in both numbers of inmates and in spending for corrections, at a reasonable cost for the state.

Alaska already has a number of programs in place, and we found that expanding some of those would be most cost-effective. Table 1 lists the programs in our final analysis. As a guideline for what was a "reasonable" expansion, we used 10% to 20% of the eligible people not already served—except for very small programs that can't easily be expanded that much.

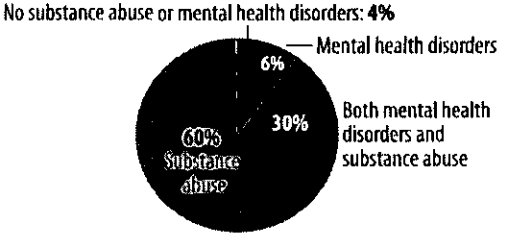
These programs would serve inmates, at-risk juveniles, and young children. They are all intended to reduce future crime in some way. Programs that treat substance-abuse or mental heath disorders have been shown to reduce recidivism—and as Figure 5 shows, almost all current inmates have those disorders.

Figure 4. Annual State Costs Per Inmate,* 1981-2008
(In Thousands of Dollars)



*Average cost of incarcerating people in prisons, jails, and halfway houses.
Source: Alaska Department of Corrections

Figure 5. How Many Alaska Inmates Have Substance Abuse or Mental Health Disorders?



Sources: Alaska Department of Corrections; Alaska Mental Health Trust

Table 1. Current Size and Potential Expansion of Intervention and Prevention Programs[a]

Programs	Currently serve	Reasonable expansion	Potentially eligible (2008)
Prison-based programs			
Education (adult basic; vocational)	More than 1,000	500	Almost all inmates (4,500)
Substance-Abuse (residential; intensive outpatient)	Close to 500	500	90% of inmates (approximately 4,000)
Sex-offender treatment[b]	0	50	10% of 500 eligible inmates
Transition from prison			
Transition for inmates with mental health disorders (Institutional Discharge Project)	70	100	36% of inmates (1,600)
Alternatives to Incarceration	500	500	Approximately 5,000[c]
Mental health, drug, alcohol courts; electronic monitoring; residential substance-abuse treatment			
Juvenile offenders	Approximately 500	1,000	Approximately 3,000
Aggression replacement training; family therapy; residential treatment; institutional transition			
Prevention	3,025	450	Approximately 8,000[e]
Head Start for 3- and 4-year olds from low-income families[d]			

[a]Programs included in our final analysis are those for which we found evidence that expansion would have significant pay-offs for the state at a reasonable cost. We evaluated additional programs not included here, either because there wasn't sufficient evidence to assess their effectiveness or because they weren't feasible to implement in Alaska at this time.
[b]To effectively reduce crime, sex offender treatment programs need to be offered in both prison and the community. Treatment is currently available only in the community, so the number served in prison is currently zero—but there are proposals to add treatment in prison.
[c]People facing low-level charges and with substance-abuse problems.
[d]Head Start is a federal program, but the state supplements federal money and Governor Sarah Palin has proposed additional state funding.
[e]We assume all children from families with up to double the poverty-level income would be eligible.

We looked at but excluded other programs from our final analysis. The criminal justice working group decided that a few programs, while effective elsewhere, wouldn't be feasible to implement in Alaska at this time. For other programs, there wasn't enough available evidence to judge how effective they were in saving money or reducing crime, or the available evidence showed them to be largely ineffective.

How Do the Programs Compare?

As Figure 3 (front page) shows, expanding programs to serve more of the eligible people would save the state about $321 million and reduce the projected number of inmates 10% by 2030. Figures 6 and 7 show how the various programs contribute to costs, savings, and reductions in the number of Alaskans behind bars.

- *Education and substance-abuse treatment programs for inmates save two to four times what they cost*, reduce recidivism by about four percentage points, and can reach the most people.

- *Intervention programs for juveniles who have committed crimes are very effective* at saving money and reducing recidivism, but they serve a much smaller number of people.

- *Programs that set up transition services for inmates with mental-health disorders* coming out of prison are among the most effective—but they can't readily be expanded to serve the many people who could benefit from them.

- *Alternatives to prison for some people charged with lesser offenses save the state money right away, and almost all reduce recidivism*. The exception is electronic monitoring, which is inexpensive but hasn't been shown to reduce future crime.

- *Treatment programs for sex offenders do reduce crime*, but they are very expensive and so don't save the state money.

- *Programs that prevent future crime by helping very young at-risk children are the most effective*. But the effects of spending for those programs aren't apparent until many years later.

Figure 6. How Effective Are Various Programs at Saving Money and Reducing Crime?

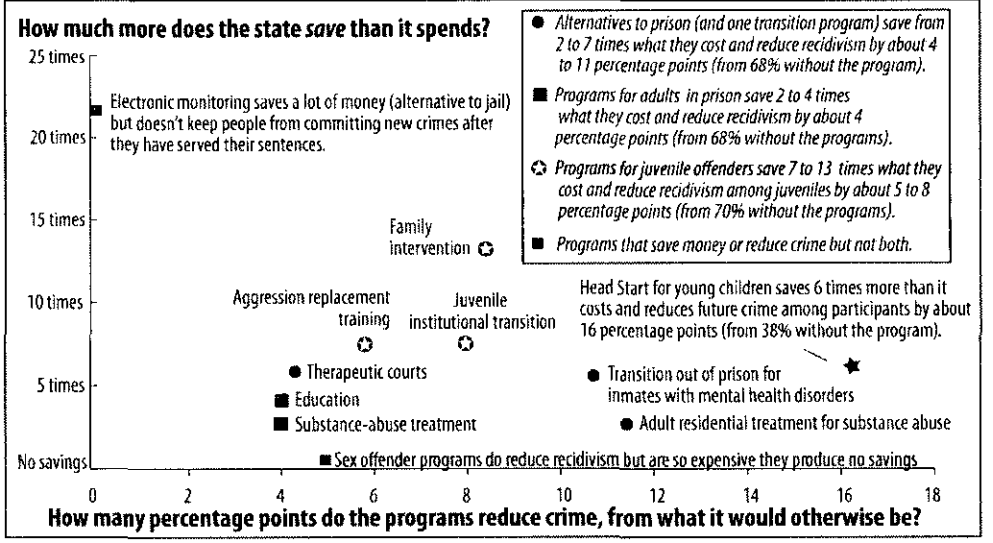


Figure 7. How Would Expanding Specific Programs Contribute to Reducing Growth in Numbers of Inmates?

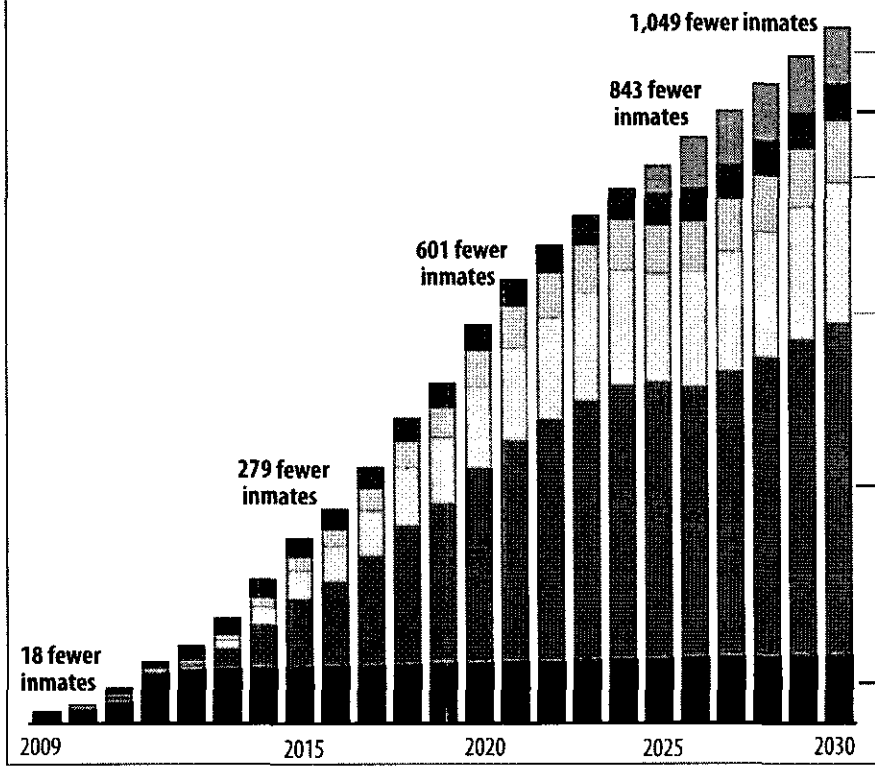


Pre-school programs for at-risk children cost about $1,000 per child but save many times that much, by reducing future crime. The effects of the spending aren't apparent for years, until the children grow up.

Programs for juveniles offenders cost an average of about $2,500 per person, but save almost 10 times that much by keeping kids out of prison. They serve only a subset of the population of 12- to-17-year-olds.

Transition programs for people with mental health disorders are extremely effective, add about $2,000 per person to inmate costs, and save about four times that much. But the programs currently serve very few people and can't readily be expanded to serve large numbers.

Programs that treat inmates for substance abuse add about $2,000 a person to inmate costs, but over time save about twice as much. They are effective, but can't readily be expanded to reach all the people who need them.

Education and job training programs in prison add about $1,000 to inmate costs, but they reach the most people and save about four times more than they cost. Because they are offered in every facility, they can easily be expanded and can reach more people. (Reductions in the number of inmates as a result of the sex-offender treatment program are also included here, but are only one or two people a year.)

Programs that keep people out of prison save the state money right away, because they cost much less than the $44,000 per person the state spends to lock people up. They include therapeutic courts for substance abuse and mental health disorders, electronic monitoring, and residential substance-abuse treatment.

Conclusion

In conclusion, Figure 8 shows how Alaska's corrections system got where it is and where it's likely to go—if intervention and prevention program are kept at their current levels, and if the most effective programs are expanded to serve more of the eligible people.

We found that the state could both reduce the number of Alaskans in prison or jail and save considerable money over the next 20 years, by adding about $4 million a year to the $17 million it currently spends to keep people from returning to prison— or prevent them from ever going there at all.

Spending more for these programs even as oil prices and state revenues are falling may not seem like a good idea. But Alaska also needs to look to the future—and over time the benefits of strategically expanding those programs that reduce crime and keep more Alaskans out of prison far outweigh the costs.

Method of Analysis

Our job was to assess whether specific programs could reduce long-term state spending for corrections by reducing growth in the number of inmates. As a starting point, we needed evaluations of how effective various programs are at reducing future crime.

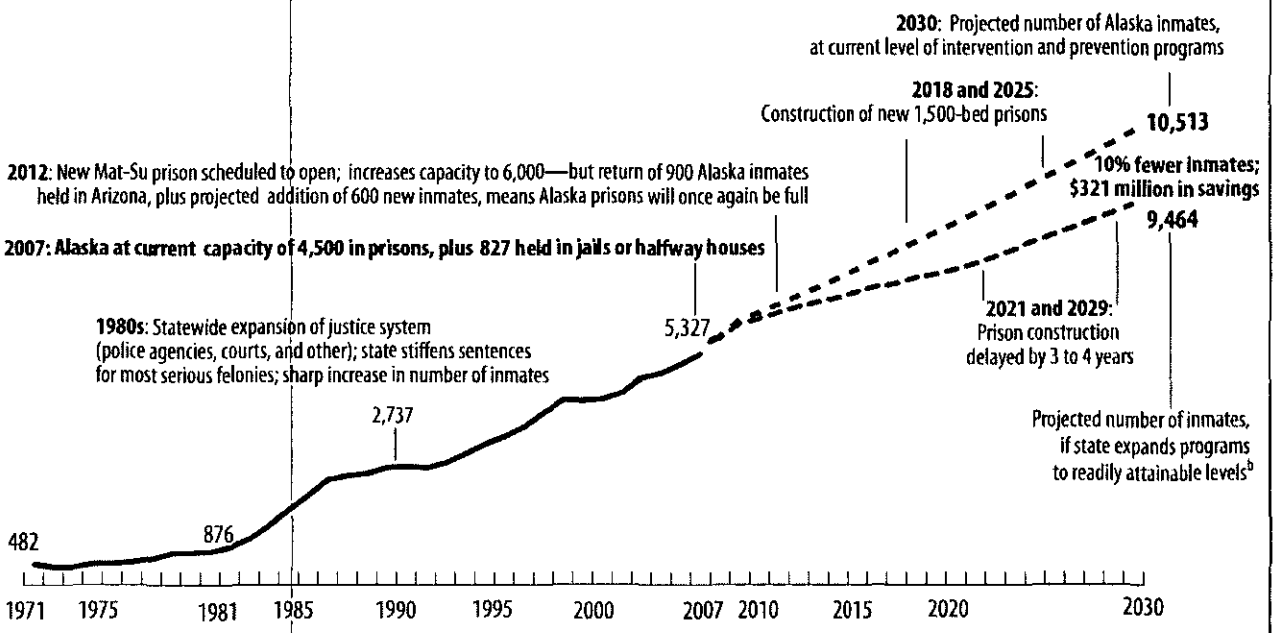
But except for some of the therapeutic court programs, most programs in Alaska have not been rigorously evaluated. Therefore, we used results of a Washington state assessment that systematically reviewed 571 program evaluations from around the country.

To be included, evaluations had to have carefully designed control groups, replicable results in multiple settings, and long-lasting effects. This method is evidence-based public policy, which merges research and practice. It is similar to clinical trials in medicine. Keep in mind that this is a new field, and only about 10% of programs in place nationwide have been evaluated at this standard.

With data from rigorous evaluations, the Washington State Institute of Public Policy created a model that estimated the effects of programs on recidivism—and then combined those results with a cost-benefit analysis to estimate the long-term effects on state spending and inmate populations.

We combined the institute's estimates of recidivism with Alaska data on program costs, eligible groups, and state population to estimate long-term effects on crime and state spending.

Figure 8. Average Number of Alaska Inmates,[a] 1971-2007, and Projected Number, 2008-2030



[a]Average daily number of people in prisons, jails, and halfway houses. [b]The number of people who could be readily added to program rolls varies considerably by program; see Table 1.

The authors thank the members of the Alaska Criminal Justice Working Group for their help in identifying programs to evaluate and for comments on drafts of this publication. The Alaska Legislature funded this group in 2007 and authorized the Alaska Judicial Council to act as its staff.

The group is chaired by a justice of the Alaska Supreme Court and Alaska's lieutenant governor. Other members include top policymakers from the departments of Corrections, Public Safety, Health and Social Services, and Law, as well as the Alaska Mental Health Trust Authority; the heads of the Alaska Public Defender Agency and the Office of Public Advocacy; the administrative and deputy directors for the Alaska Court System; the executive director of the Judicial Council, the U.S. attorney, and Anchorage's police chief.

This group meets monthly to talk about long-term justice issues, as well as to resolve any inter-branch issues that come up among the many agencies and organizations that deal with aspects of Alaska's justice system.

The authors also thank Elizabeth Drake and Steve Aos of the Washington State Institute of Public Policy for developing the methods and models we used and for helping us apply them to Alaska. For more information go to www.wsipp.wa.gov.

This research summary and many other publications on a wide range of topics are available on ISER's Web site:

OVERVIEW:

NO CHILD LEFT BEHIND

Louie Flora

From: Louie Flora
Sent: Friday, February 13, 2009 11:10 AM
To: 'Herman, Marcy J (EED)'; 'Jeans, Eddy (EED)'; 'les.morse@alaska.gov'; 'cyndy.curran@alaska.gov'
Subject: RE: NCLB Presentation

As noticed on Basis here is what the committee wants to hear on NCLB:

1. **What it is**
2. **What it requires**
3. **What it funds**
4. **What it doesn't fund**
5. **How it works in Alaska.**

Please be sure the overview addresses those topics in some detail, in that order. Thank you.

The committee will have in front of them two items:

1. No Child Left Behind memo discussing the different federal Title programs. Dated February, 5th.
2. FY 2010 Operating and Capitol Budget Document

From: Herman, Marcy J (EED) [mailto:marcy.herman@alaska.gov]

Subject: FW: NCLB Presentation

Louie,

Here is what Deputy Commissioner Morse will cover on NCLB.

Marcy Herman
Special Assistant
Commissioner's Office
Alaska Department of Education & Early Development
P.O. Box 110500
Juneau, AK 99811-0500
907-465-2803 (voice)
907-465-4156 (fax)

What is NCLB?
The Elementary and Secondary Education Act as reauthorized by the No Child Left Behind Act of 2001

Prior to NCLB the federal law was IASA or
Improving American's Schools Act of 1994, reauthorizing the programs under the Elementary and Secondary Education Act of 1965

What is the focus of NCLB?
Provide students equitable access to high quality education and increase student achievement. The federal law is focused on ensuring students of low socio-economic status have equitable and quality education.

I will give a very high level explanation of the accomplishments of the program in Alaska.

I will respond to questions

I will use the hand out that Ms. Curran provided last week, and the budget document if necessary, to outline the programs. I will verbally provide examples of programs supported by different titles.

No Child Left Behind [federally funded]

Title I Improving the Academic Achievement of the Disadvantaged
Supports equitable student access to high-quality education and increased student achievement through efficient and appropriate provision of federal resources from the Elementary and Secondary Education Act (ESEA).

- **Title I A** provides funding to districts to implement supplemental programs to improve student performance of low achieving students in schools with the highest concentration of low-income families.

- **Title IC** Migrant Education provides funding for programs to assist migratory children in meeting high standards

- **Title I Part D** Neglected Delinquent and at Risk provides funding to state operated institutions, coordination and transition services so that students can meet the same standards as other students; provides funding to school districts with the highest concentration of delinquency to develop cooperative agreements with agencies for instructional improvement, coordination activities, drop-out prevention services, voc-ed and support services; and coordinate further integration between special education and Title I programs

Title II Preparing, Training and Recruiting High Quality Teachers and Principals

- **Title II Part A Teacher and Principal Training and Recruiting Fund** [Higher Education Partnerships] Provide competitive grant funds for higher education and eligible partnerships to increase student academic achievement

- **Title II Part B Mathematics and Science Partnership Grants** Provide competitive grant funds to improve student achievement in math and science.

- **Title II Part C Innovation for Teacher Quality** Provides federal funding for Troops to Teachers, Transition to Teaching programs

- **Title II D Technology** Provide resources to school districts on a formula and competitive basis to update existing technology and integrate the use of technology in instruction

Title III English Language Acquisition Provide grants and technical assistance to eligible school districts applying for funding aimed at increasing English language acquisition of limited English proficient students.

Title IV 21st Century Schools

- **Title IV Part A Safe and Drug Free Schools and Communities** Provides federal funds to support programs that prevent violence in and around schools; that prevent the illegal use of alcohol, tobacco and drugs; that involve parents and communities and that are coordinated with related Federal, State , school, and community efforts and resources that foster a safe and drug free learning environment that supports student academic achievement
- **Title IV Part B 21st Century Community Learning Centers** provides grants to districts and non-profit educational agencies to provide before and after school programs based on academic standards and related school subjects

Title V Innovative Programs Provide resources to school districts for school improvement and innovation [program has been zeroed out]

2/11/09 OVERVIEW: BRING THE KIDS HOME PROGRAM

Bring (& Keep) the Kids Home (BTKH)

An update related to Education

February 2009

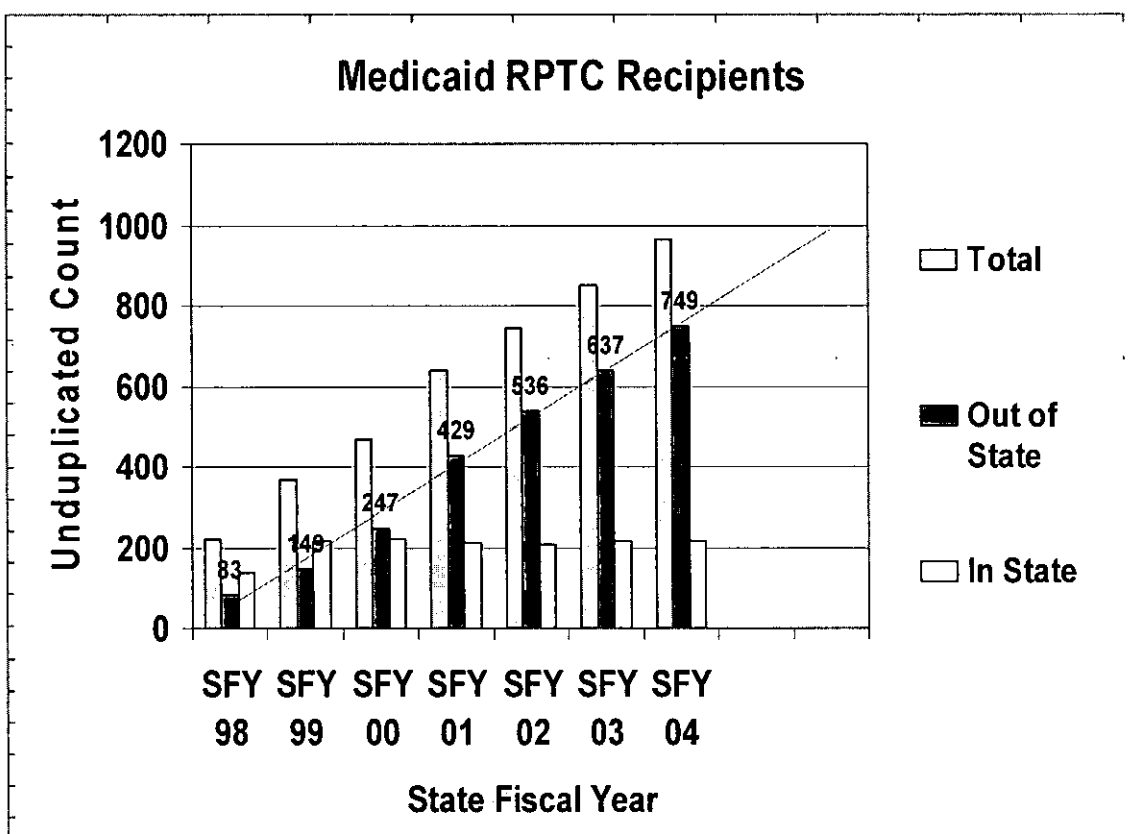
Develop integrated, seamless, culturally competent, least restrictive services, close to home

A collaboration of Department of Health and Social Services, Alaska Mental Health Trust Authority & partner boards, Denali Commission, Rasmuson Foundation, Alaska Native health providers & other service providers, parents, advocacy groups

The Alaska Mental Health Trust Authority

Exponential Growth In Use of Out-of State Residential Psychiatric Treatment Centers (RPTC)

Between 1998- 2004, out-of-state RPTC placements for children with severe emotional disturbances (SED) grew by nearly 800%

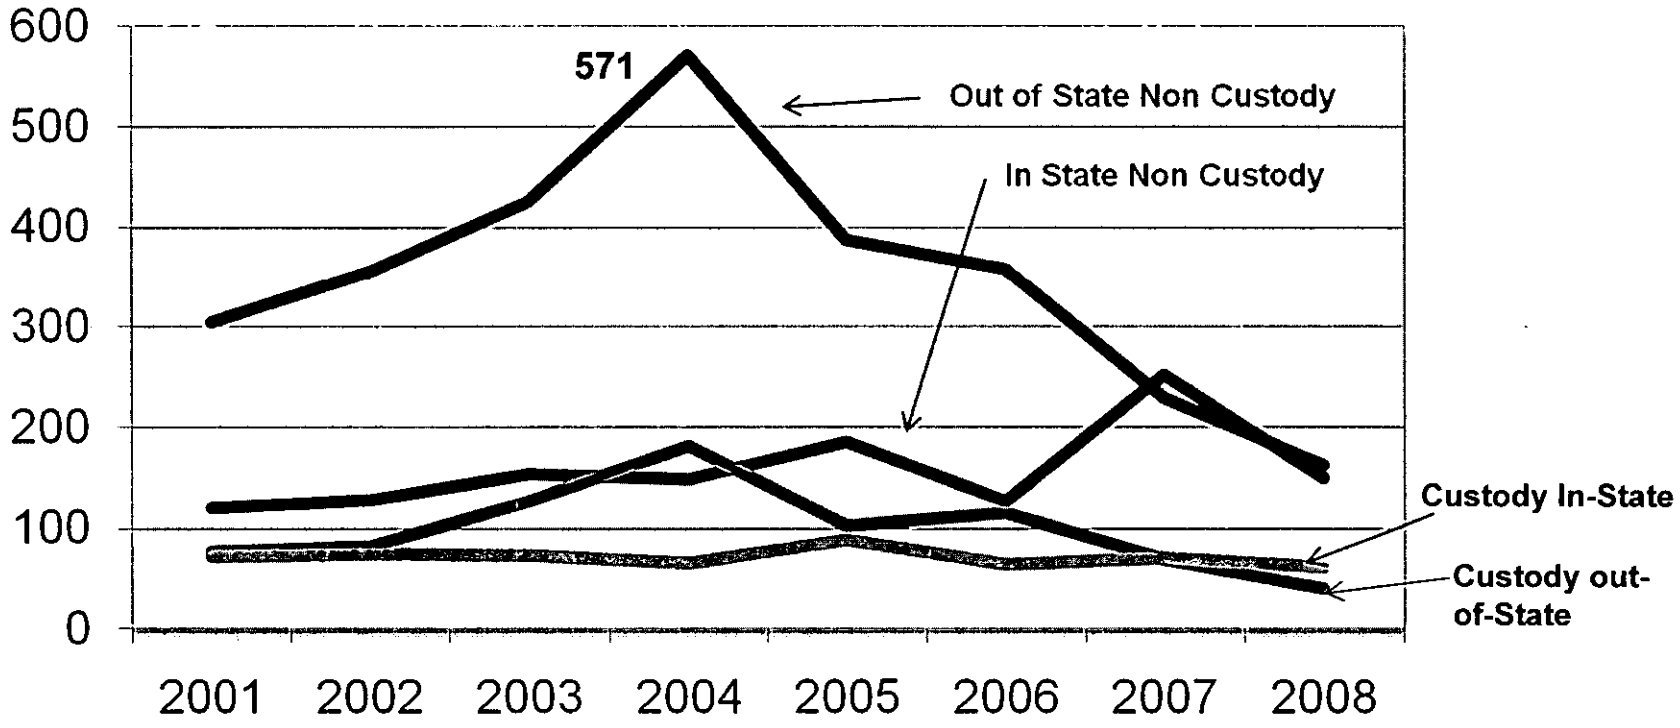


Data are from Behavioral Health (DBH), Policy and Planning based on Medicaid claims paid for unduplicated RPTC recipients. Recipients include all children served per fiscal year – including those admitted in a previous year but served during the current year.

Progress: Decrease in RPTC Admissions

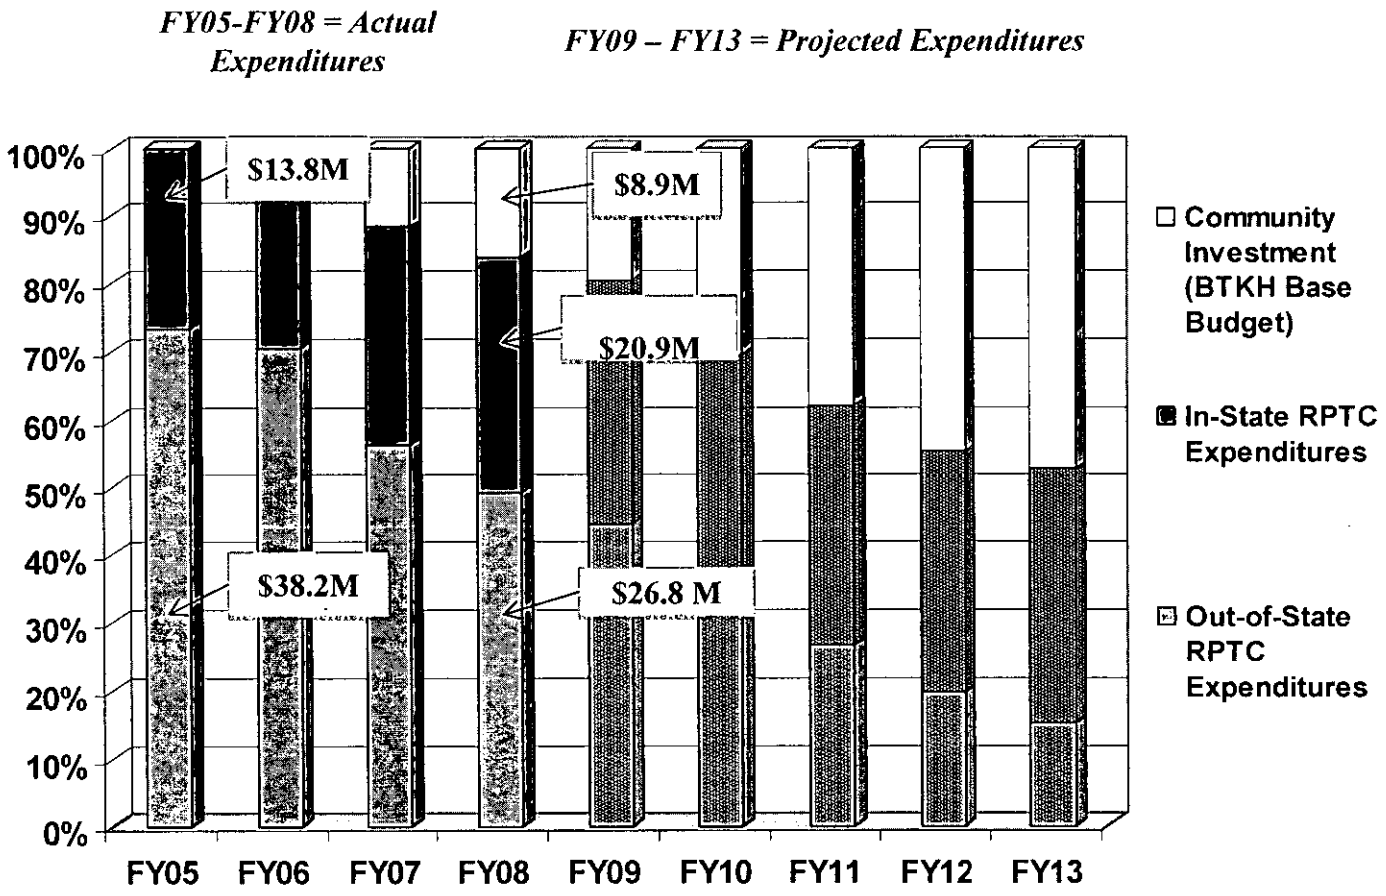
(Youth who enter RPTC during each fiscal year)

Drop of 73% in out-of-state admissions between FY04 and FY08



Data are from Behavioral Health, Policy and Planning based on Medicaid claims paid for unduplicated RPTC admissions. Includes only those admitted during the current year.

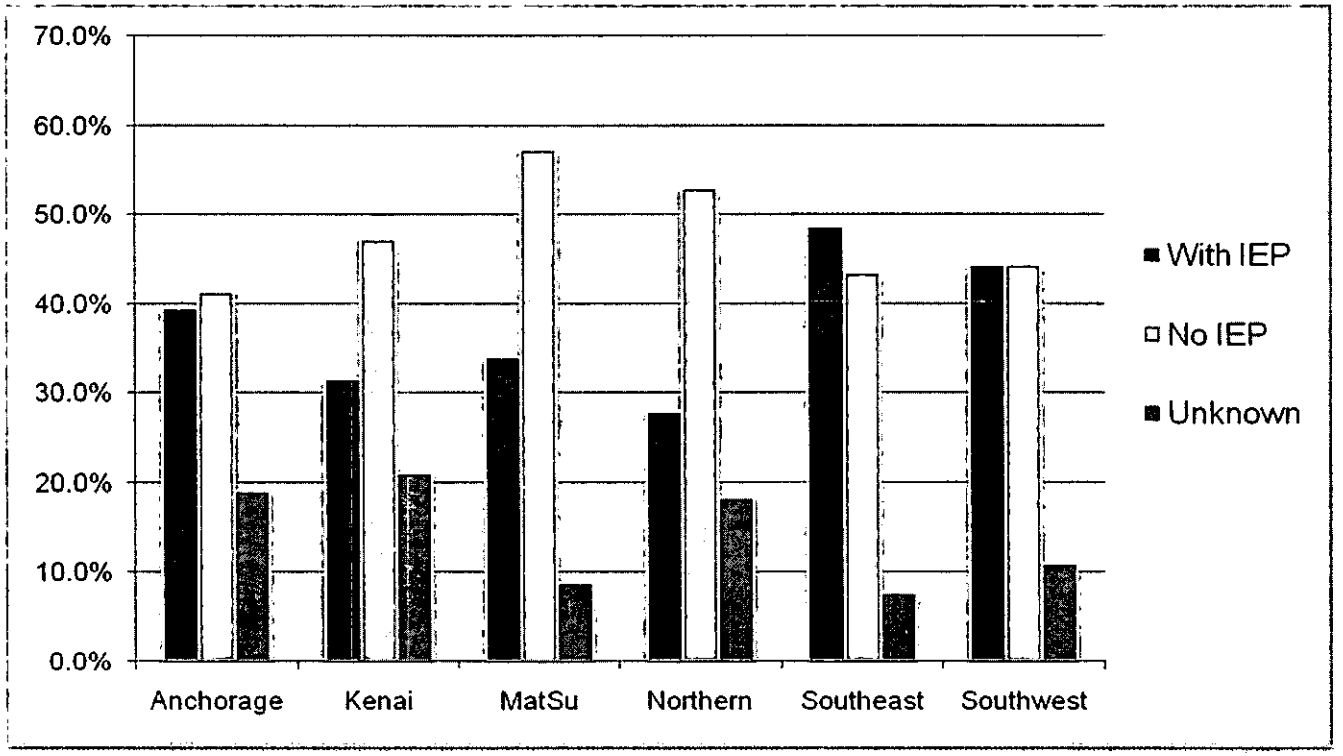
Progress: Projected BTKH Reinvestment



Data for FY05-07 are from Behavioral Health based on paid claims for Medicaid data. Expenditure data for FY08 are from Finance Management Services and includes all claims incurred and paid in FY08 and claims incurred in FY08 and paid in the first quarter of FY09.

Back to their Home School:

Hundreds of youth with special needs



Data source: Qualis Health, as of 7/31/08, **437 Active Cases**

IEP = Individual Education Plan for Special Education Youth

BTKH Education Subcommittee

Established in March 2007

- Co-Chairs: DHSS & DEED Commissioners
- GOALS:
  - Unite two systems
  - Gather data to understand needs
  - Identify best practices & appropriate funding
  - Implement keys for success:
    - Monitor current efforts ($450.0)
      1. Medicaid funding support for school interventions
      2. Create a safe school environment for recovery
      3. Ensure returning youth are supported in schools
    - Develop new initiatives as needed

Membership

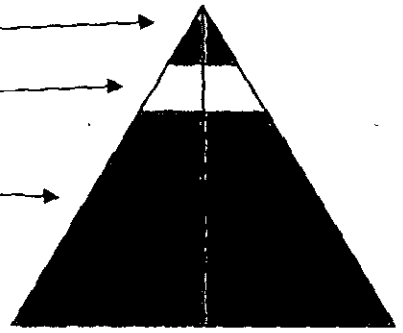
Progress: Enhancing Supports at School and in the Community

- **Positive Behavioral Supports**

  UAA Center for Human Development

  - Intense Individual Interventions (intense needs, 1-5%)
  - Targeted Group Interventions (at-risk, 5-10%)
  - Improve School-wide Environment (80-90%)
  - Results for schools:
    - *Better environment, better interventions*
    - *Community provider support*
    - *Enhanced collaboration between school, family and community*



Progress: Enhancing Supports at School and in the Community

- **School-Based Medicaid Services**
  - Assist schools in billing
  - Projected new revenue = **$3.3 million**

- **Educational Transition Support Project**

  Special Education Service Agency
  - *Schools are unaware of youth returning from RPTCs*
  - *Records transfer: often does not occur*
  - ***Approach**: Track discharges & assist schools in being prepared*

Progress: Enhancing Supports at School and in the Community

- **School-Based "Little Tykes"** ($41,000 annual grant)

  Anchorage Community Mental Health Services

  – SED ROOT CAUSES

• Sexual abuse	20%
• Physical abuse	65%
• Neglect	100%
• Witness to DV	100%
• Family substance abuse	95%
• Complex trauma	100%

  – Implements Evidenced Based Practices

  – FY09 Impact: 19 children served (3-5 yrs. old)

  – 7 graduated to regular care

Ahead in FY 2010: Support for On-going Efforts

2/13/09 OVERVIEW: MINIMUM EXPEND. FOR INSTRUC-TION

ALASKA DEPARTMENT OF EDUCATION & EARLY DEVELOPMENT

Resolution of The State Board of Education & Early Development

Minimum Expenditure for Instruction

Resolution 01-2009

WHEREAS, the State of Alaska now has in place an extensive system of accountability, approved by the federal government, for schools and school districts; and

WHEREAS, the accountability system uses assessments to measure school and school district progress in reading, writing and mathematics in nine subgroups of students and in the student body as a whole in grades 3 through 10; and

WHEREAS, the accountability system is accompanied by regulations specifying actions that schools and districts must take to improve; and

WHEREAS, the Alaska Department of Education & Early Development has in place programs and services designed to assist schools and districts to improve; and

WHEREAS, the state administers a high school graduation qualifying examination in accordance with state law and aligned with statements of legislative intent; and

WHEREAS, since 1998 Alaska Statute 14.17.520 requires that at least 70 percent of school districts' operating fund expenditures be spent on instruction; and

WHEREAS, the assessment data since 1998 does not demonstrate there is a relationship between student achievement and the percentage of districts' operating funds spent on instruction; and

WHEREAS, districts consume valuable staff time each year to prepare requests for waivers of the minimum expenditure requirement, when needed, from Alaska Statute 14.17.520; and

WHEREAS, the department consumes valuable staff time each year reviewing districts' instructional budgets, expenditures and requests for waivers, and preparing an annual report to the legislature; and

WHEREAS, the minimum expenditure requirement also places a burden on the Legislative Budget & Audit Committee to review the districts' waiver requests and forward recommendations to the State Board of Education & Early Development; and

WHEREAS, the department has seen that nearly all districts that request waivers have small budgets that are heavily affected by rising fixed costs in necessary non-instructional areas such as heating;

THEREFORE, BE IT RESOLVED, the State Board of Education & Early Development respectfully requests the Alaska Legislature to reconsider or amend the statute that requires districts to spend a minimum of 70 percent of their operating funds on instruction, in acknowledgement that a system of accountability directly tied to student achievement is now in place.

Esther Cox, Chair
On behalf of the State Board of Education
& Early Development

December 5, 2008

Sec. ⏭14.17.520⏮. Minimum expenditure for instruction.

(a) A district shall budget for and spend a minimum of 70 percent of its school operating expenditures in each fiscal year on the instructional component of the district budget.

(b) The commissioner shall reject a district budget that does not comply with (a) of this section and, unless a waiver has been granted by the board under (d) of this section, shall withhold payments of state aid from that district, beginning with the payment for the second full month after rejection and continuing until the school board of the district revises the district budget to comply with (a) of this section.

(c) The commissioner shall review the annual audit of each district for compliance with the expenditure requirements of (a) of this section. If the commissioner determines that a district does not meet those requirements, the commissioner shall advise the district of the determination, calculate the amount of the deficiency, and deduct that amount from state aid paid to the district for the current fiscal year. A deduction in state aid required under this subsection begins with the payment for the second full month after the determination, unless a waiver has been granted by the board under (d) of this section.

(d) A district that has been determined by the commissioner to be out of compliance with the requirements of this section may, within 20 days of the commissioner's determination, request a waiver by the board of the imposition by the commissioner of any reduction in state aid payments under (b) or (c) of this section. The request must be in writing and must include an analysis of the reasons and causes for the district's inability to comply with the requirements of this section. The board may grant the waiver if the board determines that the district's failure to meet the expenditure requirements of this section was due to circumstances beyond the control of the district. The request must also be submitted to the Legislative Budget and Audit Committee, which shall review the district's request and forward the committee's recommendations on it to the board.

(e) The commissioner shall submit an annual report on actions taken by the commissioner or the board under this section to the Legislative Budget and Audit Committee by April 15 of each year.

(f) In this section, "instructional component" includes expenditures for teachers and for pupil support services.

2/13/09 OVERVIEW: SPECIAL EDUC. & INTENSIVE NEEDS

Training Materials for Determining Eligibility of Intensive Needs Students

Published September 22, 2008

Table of Contents

INTRODUCTION 1

SECTION 1: Regulation 4AAC 53.700 Public School Foundation Program 2

SECTION 2: Regulation Explanation and Examples 5

SECTION 3: EED Reviewer's Checklist 12

SECTION 4: Individual Education Program (IEP) 14

INTRODUCTION

The Department of Education & Early Development (EED) has developed the *Training Materials for Determining Eligibility for Intensive Needs Students* to provide assistance to school districts in correctly identifying and documenting students who may qualify for intensive needs funding.

These training materials contain four sections that will assist school district staff in understanding how the regulations concerning intensive needs students are interpreted and applied. In addition, this document includes a copy of the verification checklist EED staff and/or special education contractor's use when reviewing students who are claimed for intensive needs funding.

This document is intended to provide the reader with a general familiarity with the requirements for funding of intensive special education students. This document is not binding and does not have the force of law. All decisions related to intensive funding will be governed by the relevant statutes and regulations.

SECTION 1

Regulation 4AAC 53.700 Public School Foundation Program

The following are the regulations as they appear in the Alaska Administrative Code as of 9/22/08 for determining eligibility for students for intensive needs funding. Included in this section are the relevant sections from the definitions section.

4 AAC 52.700. Public school foundation program

(a) Each district that files a plan under AS 14.17.420 (b) to provide special education and related services to children with disabilities is eligible for state financial aid under AS 14.17.300 - 14.17.490.

(b) Public school foundation reports must be submitted, on forms provided by the department, to the department's division of education support services.

(c) A student is eligible for funding as an intensive student if the student has been identified for special education and the student needs and receives individual attention and services that are significantly more complex and frequent, and require significantly more resources to provide, than the services received by other special education students. The services received by an intensive student will include services necessary to meet a critical medical need, services necessary to provide for the student's health, safety, and educational needs, and special education and related services provided by qualified staff for the entire school day both in and out of the classroom setting. A student who is able to function independently, with limited or no supervision, for a substantial period of time, inside or outside the classroom setting, is not an intensive student. Intensive services do not include new services due to discipline, alcohol or illegal drug use, or criminal activity that were not already provided to the student for educational purposes. For funding purposes under AS 14.17.420 , a student will not be counted as receiving intensive services unless the student needs and receives intensive services and the -

(1) student's IEP provides for the following:

(A) direct daily instruction by a certified special education teacher with an endorsement under 4 AAC 12.330 or special education alternate program certificate under 4 AAC 12.340;

(B) multiple services, including related services;

(C) that all services not provided by a certified special education teacher be supervised by at least one certified special education teacher or related service provider;

(D) continuous special education programming;

(E) assistance and training in two or more basic self-help, daily living, or adaptive skills, appropriate to the age of the student;

(F) that individual care will be provided to the student for the student's entire school day by staff who are trained to meet the student's individual needs;

(G) special transportation when the student needs transportation, except that this transportation requirement does not apply in the case of a student who has received special transportation for at least a year and no longer needs it; or

(2) student experiences deaf-blindness, must read Braille, or needs and receives full-time the services of a deaf education interpreter or tutor;

(3) student's IEP team determines that out-of-state residential placement is necessary; or

(4) student has a disability that prevents the student from attending a regular or special education program even with the aid of special transportation, and the IEP team's evaluation and the IEP, itself, indicate that a home-based or health-care-facility-based instructional program is

appropriate to meet the student's needs; however, a student may not be counted under this paragraph as receiving intensive services if the student is placed in a detention facility, or is receiving home-based or health-care-facility-based instruction solely because of a disciplinary problem.

(d) A district may seek a department waiver, for one year, from one or more of the requirements of (c) of this section if the district needs additional money for a student whose IEP team has determined that the student's educational program includes high-cost services that do not meet the funding criteria in (c) of this section. The department will grant the waiver if the requested funding is consistent with AS 14.17.420 and this section and in the public interest. An application for a waiver must be in writing and include -

(1) a statement of the component or components to be waived and the reason why the waiver is sought;

(2) the student's IEP; and

(3) any additional information that the department determines is necessary to address a particular student's needs.

(e) The department will notify a district of the action taken on a public school foundation report after receipt of the report.

(f) A district may not receive state financial aid under this section for special education or related services provided by the department.

(g) If, after an entitlement review under 4 AAC 52.780, or otherwise, the department determines that an overpayment has occurred, the department may require repayment or withhold all or part of one or more future payments. The decision to do so is subject to appeal under 4 AAC 52.750.

History: Eff. 7/1/83, Register 86; am 11/26/93, Register 128; am 8/22/2001, Register 159; am 8/29/2004, Register 171; am 9/29/2005, Register 175; am 1/17/2007, Register 181; am 3/24/2007, Register 181
Authority: AS 14.07.060, AS 14.17.420, AS 14.30.180

4 AAC 52.790. Definitions

As used in 4 AAC 52.090 - 4 AAC 52.790, unless the context requires otherwise,

(10) "IEP" means individualized education program;

(15) "related services" has the same meaning given that term in AS 14.30.350 ;

(20) "basic self-help, daily living, or adaptive skills" means rudimentary facility, as appropriate to the age of the student, in eating, toileting, dressing, grooming, personal hygiene, communication, and other basic essential skills;

(21) "multiple services" means more than one special education service or related service;

(23) "appropriate to the age of the student" means with consideration of the wide range of ages during which children develop skills, particularly children under six years of age for whom a basic skill may be developing or emerging;

(24) "individual care" means providing for the health, safety, and educational needs of the student with personal attention by a certified special education teacher, a special education aide, or another trained person; for purposes of this paragraph, "personal attention" means

(A) full-time one-on-one attention; or

(B) attention provided on other than a one-to-one basis if

(i) one-on-one care is not required for a particular intensive student;

(ii) the district has provided the level of care necessary to protect the health and safety of the child; and

(iii) the teacher, aide, or another trained person attends to no more than three intensive students at a time.

History: Eff. 8/22/2001, Register 159; am 8/29/2004, Register 171; am 1/17/2007, Register 181; am 8/30/2007, Register 183; am 9/23/2007, Register 183

Authority: AS 14.07.060, AS 14.30.180, AS 14.30.186, AS 14.30.193, AS 14.30.194, AS 14.30.250, AS 14.30.255, AS 14.30.272, AS 14.30.285, AS 14.30.325, AS 14.30.350

SECTION 2

Regulation Explanation and Examples

Section two of this document breaks regulation *4 AAC 52.700* down and provides the reader with questions to consider when claiming a student for intensive needs funding. Examples are provided, but the reader is cautioned that the examples are **not** all inclusive and will require some judgment on the school district's part. Additionally, the reader is provided direction as to where EED staff will expect to find documentation in the student's IEP to support a claim for intensive needs funding.

EED has separated regulation 4 AAC 52.700(c) into four sections for discussion because it establishes the basic criteria a school district must follow in order to correctly identify an intensive needs student. **The basic criteria outlined in 4 AAC 52.700(c) must be met before moving to the additional seven criteria outlined in 4 AAC 52.700(c)(1)(A)-(G).**

Below, each section of the regulation is underlined and italicized for easy reference followed by some basic questions and examples pertaining to each section. If the reader is still unsure about the eligibility of a student for intensive funding, they are encouraged to contact EED special education staff for additional clarification.

4 AAC 52.700 Public school foundation program.

(a) Each district that files a plan under AS 14.17.420(b) to provide special education and related services to children with disabilities is eligible for state financial aid under AS 14.17.300-14.17.490.

- School districts have completed this requirement.

(b) Public school foundation reports must be submitted, on forms provided by the department, to the department's division of education support services.

- This is an annual reporting requirement.

(c) A student is eligible for funding as an intensive student if the student has been identified for special education and the student needs and receives individual attention and services that are significantly more complex and frequent and require significantly more resources to provide than the services received by other special education students.

- Students must be eligible for special education under one of the 14 state categories - 4 AAC 52.130.
- The IEP documents this criteria in this place:
  - ✓ The student identification information section under "Eligibility Category".
- Students must need and receive individual attention as defined by the IEP team and there must be evidence that these services are being delivered.
- The IEP documents this criteria in this place:
  - ✓ Special Education & Related Services page (Section XIV of the IEP)
- Students must receive services that are significantly more complex and frequent than those of a typical special education student. What makes the services significantly more complex and frequent?
- The IEP documents this criteria in one or both of these places:
  - ✓ Present Levels of Academic Achievement and Functional Performance (Section V of the IEP)

2930

- ✓ Measurable Academic and Functional Annual Goal (Section XI of the IEP)

- Students must require more resources than other typical special education students to access needed services. What are the financial, staff and environmental resources? Why does the student require more resources?
- The IEP documents this criteria in one or both of these places:
  - ✓ Present Levels of Academic Achievement and Functional Performance (Section V of the IEP)
  - ✓ Measurable Academic and Functional Annual Goal (Section XI of the IEP)

-- *The services received by an intensive student will include services necessary to meet a critical medical need, services necessary to provide for the student's health, safety, and education needs, and special education and related services provided by qualified staff for the entire school day both in and out of the classroom setting.*

- Students must require services necessary to meet a critical medical need. What individual care is required for this student to meet a critical medical need? For example: tracheotomy care, wound care, tube feeding, ventilator care, psychotropic medication managed by school personnel, etc.
- The IEP documents this criteria in one or both of these places:
  - ✓ Special Education & Related Services page (Section XIV of the IEP)
  - ✓ Program Modifications/Accommodations for student (Section XIII of the IEP)

- Students must require services necessary to provide for the students health, safety, and educational needs. What individual services are provided to meet the health, safety and educational needs of the student that are different from those of a typical special education student?
- The IEP documents this criteria in one or both of these places:
  - ✓ Special Education & Related Services page (Section XIV of the IEP)
  - ✓ Program Modifications/Accommodations for student (Section XIII of the IEP)

- Students must require services necessary to provide special education and related services provided by qualified staff for the entire school day both in and out of the classroom setting. What services and supports are needed in all environments while this student is attending school?
- The IEP documents this criteria in one or more of these places:
  - ✓ Present Levels of Academic Achievement and Functional Performance (Section V of the IEP)
  - ✓ Measurable Academic and Functional Annual Goal (Section XI of the IEP)
  - ✓ Program Modifications/Accommodations for student (Section XIII of the IEP)

-- *A student who is able to function independently, with limited or no supervision, for a substantial period of time, inside or outside the classroom setting is **not** an intensive student.*

- Can this student function independently with limited supervision in or out of school? For example: driving a car , driving a 4 wheeler, driving a snow machine, attending social or sports functions by self or with peers, shops independently, has a job, etc.

-- *Intensive services do not include new services due to discipline, alcohol or illegal drug use, or criminal activity that were not already provided to the student for educational purposes.*

- Is the student placed in a rehabilitation facility or detention facility due to discipline, alcohol or illegal drug use, or criminal activity unrelated to education services?

For example, a placement of a student made by an entity other than the IEP team does not make the student eligible for intensive funding.

-- *For funding purposes under AS 14.17.420, a student will not be counted as receiving intensive services unless the student needs and received intensive services and the*

*(1) Student's **IEP** provides for the following:*

4 AAC 52.700(c)(1)(A) Student's IEP provides for the following:

(A) Direct daily instruction by a certified special education teacher with an endorsement under 4 AAC 12.330 or special education alternate program certificate under 4 AAC 12.340.

- Is there evidence in the IEP that the Sped teacher is providing direct daily instruction to the student?
- Are the services identified in the IEP being provided?
- The IEP documents criteria A in one or both of these places:
  - ✓ Special Education & Related Services page – provider needs to say SPED teacher not Sped staff (Section XIV of the IEP)
  - ✓ Measurable Academic and Functional Annual Goal – provider needs to say SPED teacher not SPED staff (Section XI of the IEP)

4 AAC 52.700(c)(1)(B) Student's IEP provides for the following:

(B) Multiple services, including related services;

- Is there evidence in the IEP that the student is receiving multiple services including related services?
  - ➢ This means that in addition to special education and special transportation, the child must also be receiving **at least one** related service involving instruction. (i.e. speech and language services, audiology services, psychological services, physical therapy, occupational therapy, recreation, therapeutic recreation, early identification and assessment of disabilities in children, counseling services, rehabilitation counseling, orientation and mobility services, medical services for diagnostic or evaluation purposes, school health services and social work services in schools)
- Are the services identified in the IEP being provided?
- The IEP documents criteria B in one or both of these places:
  - ✓ Special Education & Related Services page (Section XIV of the IEP)
  - ✓ Measurable Academic and Functional Annual Goal (Section XI of the IEP)

4 AAC 52.790 (15) AS 14.30.350: "Related Service" has the same meaning given that term in AS 14.30.350;

AS 14.30.350 (7): "Related Service" means services described in 34 C.F.R. 300.24.
4 AAC 52.790 (21): "Multiple services" means more than one special education service or related service.

4 AAC 52.700(c)(1)(C) Student's IEP provides for the following:

(C) That all services not provided by a certified special education teacher be supervised by at least one certified special education teacher or related service provider.

- Is there evidence in the IEP that services not being provided by the special education teacher or related service provider are supervised by a special education teacher or related service provider?
- Are the services identified in the IEP being supervised?
- The IEP documents criteria C in one or both of these places:
  - ✓ Special Education & Related Services page (Section XIV of the IEP)
  - ✓ Measurable Academic and Functional Annual Goal (Section XI of the IEP)

4 AAC 52.700(c)(1)(D) Student's IEP provides for the following:

(D) Continuous special education programming;

- Is there evidence in the IEP that the student is receiving continuous special education programming?
  - ➢ This means that the child has specially designed instruction for the entire school day.
  - ➢ Regular education time needs to say 0 hours or specify that special education support person is with the student
- Are the services identified in the IEP being provided?
- The IEP documents criteria D in this place:
  - ✓ Special Education & Related Services page (Section XIV of the IEP)
    - ➢ Regular Education needs to say 0 hours or specify that special education support person is with the student (Section XIV of the IEP)

4 AAC 52.700(c)(1)(E) Student's IEP provides for the following:

(E) Assistance and training in two or more basic self-help, daily living, or adaptive skills, appropriate to the age of the student;

- Is there evidence in the IEP that the student is receiving assistance and training in two or more basic self-help, daily living, or adaptive skills, appropriate to the age of the student?
- Is the assistance and training identified in the IEP being provided?
- The IEP documents criteria E in one or more of these places:
  - ✓ Present Levels of Academic Achievement and Functional Performance (Section V of the IEP)
  - ✓ Statement of Needed Transition Services for ages 16-21 (Section VIII of the IEP)
  - ✓ Measurable Academic and Functional Annual Goal (Section XI of the IEP)
  - ✓ Program Modifications/Accommodations for student (Section XIII of the IEP)

Definition 4 AAC 52.790 (20): "Basic self-help, daily living, or adaptive skills" means rudimentary facility, as appropriate to the age of the student, in eating, toileting, dressing, grooming, personal hygiene, communication, and other basic essential skills;

1) As set out in regulation, when defining basic self help, daily living or adaptive skills consider large domain areas. They are not meant to be broken down into separate areas. (Separate objectives under each goal are not considered a single domain area.)

2933

For example:

a. Utensil use, chewing, tongue thrusting, and swallowing, are not four separate domains areas. They fall under the single domain of eating.
b. Receptive language, expressive language and articulation are not three separate domain areas. They fall under the single domain of communication.
c. Verbal aggression and physical aggression are not two separate domain areas. They fall under the single domain of behavior.

Definition 4 AAC 52.790 (23): "Appropriate to the age of the student" means with consideration of the wide range of ages during which children develop skills, particularly children under six years of age for whom a basic skill may be developing or emerging;

4 AAC 52.700(c)(1)(F) Student's IEP provides for the following:

(F) That individual care will be provided to the student for the student's entire school day by staff who are trained to meet the student's individual needs;

- Is there evidence in the IEP that individual care is provided to the student for the student's entire school day by staff who are trained to meet the student's individual needs?
  1) The expectation is that individual care means 1-1 attention.
  2) The only exceptions to 1-1 care is when the district can justify through documentation that:
     I. one-on-one care is not required for a particular intensive student;
     II. the district has provided the level of care necessary to protect the health and safety of the child; and
     III. the teacher, aide, or another trained person attends to no more than three intensive students at a time.
- Is individual care being provided to the student?
- The IEP documents criteria F in this place:
  - ✓ Present Levels of Academic Achievement and Functional Performance (Section V of the IEP) (4AAC 52.790 (24) (A-B))

Definition 4 AAC 52.790 (24): "Individual care" means providing for the health, safety, and education needs of the student with personal attention by a certified special education teacher, a special education aide, or another trained person for purposes of this paragraph, "personal attention" means:

(A) full time one-on-one attention; or
(B) attention provided on other that a one-to-one basis if
  (i) one-on-one care is not required for a particular intensive student;
  (ii) the district has provided the level of care necessary to protect the health and safety of the child; and
  (iii) the teacher, aide, or another trained person attends to no more than three intensive students at a time.

4 AAC 52.700(c)(1)(G) Student's IEP provides for the following:

(G) Special transportation when the student needs transportation, except that this transportation requirement does not apply in the case of a student who has received special transportation for at least a year and no longer needs it; or

- Is there evidence in the IEP that the student needs and receives transportation or no longer needs transportation services?
- Are the transportation services identified in the IEP being provided?
- The IEP documents criteria G in this place:
  - ✓ Special Education & Related Services page (Section XIV of the IEP)
    - ➢ If services are not being provided by the district the provider line should say person responsible (e.g., parent)
  - ✓ In the case of the student who has received special transportation for one year and no longer needs it. The district will provide a Prior Written Notice stating the changes and conditions of transportation

4 AAC 52.700(c)

(2) Student experiences deaf-blindness must read Braille, or needs and receives full time the services of a deaf education interpreter or tutor;

- This includes a deaf student who needs an interpreter or needs a tutor
- This includes a blind student who reads or are learning to read Braille or needs a tutor
- This includes a dual sensory impaired (deaf/blind) student
- The IEP documents this exemption in one or more of these places:
  - ✓ Present Levels of Academic Achievement and Functional Performance (Section V of the IEP)
  - ✓ Measurable Academic and Functional Annual Goal (Section XI of the IEP)
  - ✓ Program Modifications/Accommodations for student (Section XIII of the IEP)
  - ✓ Special Education & Related Services page (Section XIV of the IEP)

(3) Student's IEP team determines that out of state residential placement is necessary; or

- Placement is recommended by the IEP team and is paid for by the school district.
- The IEP documents this exemption in this place:
  - ✓ Justification for Placement (Section XVI of the IEP)

(4) Student has a disability that prevents the student from attending a regular or special education program even with the aid of special transportation, and the IEP team's evaluation and the IEP, itself, indicate that a home-based or health-care-facility-based instructional program is appropriate to meet the student's needs; however, a student may not be counted under this paragraph as receiving intensive services if the student is placed in a detention facility, or is receiving home-based or health-care-facility-based instruction solely because of a disciplinary problem.

- If a student is prevented from attending a regular or special education program due to the student's disability and the IEP team recommends and places the child in a home based or health care facility based instructional program they are eligible for intensive funding.
  - ➢ Home-school/correspondence is not synonymous with home-based or health-care-based instructional program.
- Intensive services do not include new services due to discipline, alcohol or illegal drug use, or criminal activity that were not already provided to the student for educational purposes.
- Is the student placed in a Residential Treatment Placement Center (RTPC), rehabilitation facility or detention facility due to discipline, alcohol or illegal drug use, or criminal activity unrelated to education services? For example, a placement of a student made by an entity other than the IEP team does not make the student eligible for intensive funding.

- The IEP documents this exemption in one or more of these places:
  - ✓ Justification for Placement (Section XVI of the IEP)
  - ✓ Present Levels of Academic Achievement and Functional Performance (Section V of the IEP)

4 AAC 52.700(d)
A district may seek a department waiver, for one year, from one or more of the requirements of (c) of this section if the district needs additional money for a student whose IEP team has determined that the student's education program includes high-cost services that do not meet the funding criteria in (c) of this section. The department will grant the waiver if the requested funding is consistent with AS 14.17.420 and this section and in the public interest. An application for a waiver must be in writing and include

(1) A statement of the component or components to be waived and the reason why the waiver is sought;
(2) The student's IEP; and
(3) Any additional information that the department determines is necessary to address a particular student's needs.

Sec. 14.17.600. Student counting periods.

(a) Within two weeks after the end of the 20-school-day period ending the fourth Friday in October, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that counting period and other student count information that will aid the department in making a determination of its state aid under the public school funding program.

Example: District A submits its waiver request for Sally P. in January. The intensive funding for District A has already been processed and Sally P. was not approved as intensive. The waiver request is denied because it was not timely under AS 14.17.600 and 4 AAC 09.015(b).

INTENSIVE REVIEW BY:_____ **Type of Review:** ☐I ☐R ☐A ☐W

District: _____ **Student Name:** _____
School/Site: _____ **Student ID Number:** _____
Grade: _____ **Eligibility:** _____
Date: _____ **Observation: Date** _____ **Who** _____

___ A student is eligible for funding as an intensive student if the student has been identified for special education and;
- ___ the student needs and receives individual attention and;
- ___ services that are significantly more complex and frequent, and;
- ___ require significantly more resources to provide, than the services received by other special education students.

___ The services received by an intensive student will include services necessary to meet a critical medical need,
- ___ services necessary to provide for the student's health, safety, and educational needs, and;
- ___ special education and related services provided by qualified staff for the entire school day both in and out of the classroom setting.

___ A student who is able to function independently, with limited or no supervision, for a substantial period of time, inside or outside the classroom setting is not an intensive student.

___ Intensive services do not include new services due to discipline, alcohol or illegal drug use, or criminal activity that were not already provided to the student for educational purposes.

___ A student will not counted as receiving intensive services unless the student needs and receives intensive services and the students IEP provides for the following:

Notes

Criteria:

A) ☐Y ☐N Direct daily instruction by a certified special education teacher.

B) ☐Y ☐N Provision of multiple services including related services. (This means that in addition to special education and special transportation, the child must also be receiving at least one related service involving instruction. (i.e. speech and language services, audiology services, psychological services, physical therapy, occupational therapy, recreation, therapeutic recreation, early identification and assessment of disabilities in children, counseling services, rehabilitation counseling, orientation and mobility services, medical services for diagnostic or evaluation purposes, school health services and social work services in schools)

C) ☐Y ☐N All services not provided by a certified special education teacher are supervised by at least one certified special education teacher or related service provider.

D) ☐Y ☐N Continuous special education programming. (This means that the child needs specially designed instruction for the entire school day.)

E) ☐Y ☐N Assistance and training in two or more basic self help, daily living, or adaptive skills, appropriate to the age of the child;

F) ☐Y ☐ N That individual care will be provided to the student for the student's entire school day by staff who are trained to meet the student's individual needs;

G) ☐Y ☐ N When the student needs transportation, (the student will receive special transportation), except that this transportation requirement does not apply in the case of a student who has received special transportation for at least a year and no longer needs it;

Automatic Exemptions to Criteria:
☐ Student experiencing deaf-blindness, must read Braille, and needs or receives full-time the services of a deaf education interpreter or tutor.
☐ Student's IEP team has determined that out-of-state residential placement is necessary.

☐ Student has a disability that prevents the student from attending a regular or special education program even with the aid of special transportation, and the IEP team's evaluation and the IEP, itself, indicate that a home-based or health-care-facility-based instructional program is appropriate to meet student's needs; however, a student may not be counted under this paragraph as receiving intensive services if the student is placed in a detention facility, or is receiving home-based or health-care-facility-based instruction solely because of a disciplinary problem.

*** If any agency identified by the IEP team fails to provide services, the IEP team must reconvene as soon as possible to identify alternate strategies and amend the IEP as necessary. The team should document date of reconvened IEP meeting and results.**

INDIVIDUAL EDUCATION PROGRAM (IEP)

Student's Legal Name: **IEP Date:**

IX. SPECIAL FACTORS IEP TEAM MUST CONSIDER:

1. In the case of a student whose behavior impedes his/ her learning or that of others, consider, if appropriate, strategies, including positive behavioral interventions, strategies, and supports to address that behavior.

   [ ] Concern addressed in IEP [ ] Not a concern

2. In the case of a student with limited English proficiency, consider the student's language needs as they relate to the student's IEP.

   [ ] Concern addressed in IEP [ ] Not a concern

3. In the case of a student who is blind or visually impaired, provide instruction in Braille and the use of Braille unless the IEP team determines, after an evaluation of the student's reading and writing skills, needs, and appropriate reading and writing media (including an evaluation of the student's future needs for instruction in Braille or the use of Braille), that instruction in Braille or the use of Braille is not appropriate for the student.

   [ ] Concern addressed in IEP [ ] Not a concern

4. The communication needs of the student and, in the case of a student who is deaf or hard of hearing, consider the student's language and communication needs, opportunities for direct communications with peers and professional personnel in the student's language and communication mode, academic level, and full range of needs, including opportunities for direct instruction in the student's language and communication mode.

   [ ] Concern addressed in IEP [ ] Not a concern

   Whether the student requires assistive technology devices and services.

   [ ] Concern addressed in IEP [ ] Not a concern

X. PROGRESS REPORTS

Part XI, with progress appropriately noted, may serve as a Progress Report to parents. Parents of children with disabilities must be notified of progress at least as often as parents of children without disabilities. Progress reports must answer two questions:

1. What is the student's progress toward the annual goal?

2. Is progress sufficient for the student to achieve the annual goal by end of IEP period? *(If not, IEP Team must review and revise IEP goals and objectives/benchmarks)*

Progress reports will be provided each: **[ ] Quarter** **[ ] Trimester** **[ ] Other** _____

XII. STATE AND DISTRICT-WIDE ASSESSMENTS:

The student will:

1. [ ] Participate in state and district-wide assessments (grades 3 through 10) without accommodations
2. [ ] Participate in state and district-wide assessments (grades 3 through 10) with the following accommodations (refer to *The Participation Guidelines* booklet for the list of accommodations).

1. _____ 2. _____

3. _____ 4. _____

5. _____ 6. _____

Comments:

3. [ ] Participate in a modified High School Graduation Qualifying Exam (HSGQE) with the following modifications (refer to *The Participation Guidelines* booklet for the list of modifications and Appendix L of the State Special Education Handbook for parental guidance). **Requires application and Department approval.**

1. _____ 2. _____

3. _____ 4. _____

5. _____ 6. _____

Comments:

4. [ ] Participate in a nonstandardized High School Graduation Qualifying Exam (HSGQE) (refer to *The Participation Guidelines* booklet for guidance). **Requires application and Department approval.**

Non-Diploma Track

5. [ ] Participate in the statewide Alternate Assessment for grades 3 through 10.

The Alternate Assessment is based on alternate achievement standards and is a non-diploma track assessment. The team must provide a statement of why regular assessment **is not** appropriate and why the Alternate Assessment **is** appropriate.

Reason(s): _____

_____

_____

Parent Signature: _____

(Note: The parent's signature acknowledges participation in a non-diploma track assessment)

INDIVIDUAL EDUCATION PROGRAM (IEP)

Student's Legal Name: _____ **IEP Date:** _____

XIII. Program Modifications/Accommodations for Student

to:	Supports for School Personnel:
Advance appropriately toward annual goals	What supports/training do school personnel need?
Be involved in and progress in the general education curriculum	What supports/training do school personnel need?
Participate in extracurricular and other nonacademic activities	What supports/training do school personnel need?

Please address all areas listed above.

***Extended School Year*:**

Extended School Year services must be considered for each child with a disability. Justification for the team's decision must be stated below.

[ ] A review of the child's educational program indicates that extended school year services are required.

[ ] A review of the child's educational program indicates that extended school year services are not required.

[ ] The team needs to collect further data before making this determination and will meet again by: _____. (mm/dd/yy)

Justification: _____

XV. FEDERAL REPORTING REQUIREMENT FOR EDUCATIONAL ENVIRONMENTS

[ ] This child is 3-5 years old

Check the appropriate educational environment for this student: (only check one)

For students ages 3-5 in Early Childhood education environments the student receives:

[ ] Regular education, special education and related services **Inside** the regular early childhood program at least 80% of time.*
[ ] Regular education, special education and related services **Inside** the regular early childhood program 40% to 79% of time.*
[ ] Regular education, special education and related services **Inside** the regular early childhood program less than 40% of time.*
[ ] Regular education, special education and related services In a Separate Class. (do not include children who attend a regular EC program)
[ ] Regular education, special education and related services In a Separate School. (do not include children who attend a regular EC program)
[ ] Regular education, special education and related services In a Residential Facility (do not include children who attend a regular EC program)
[ ] Regular education, special education and related services In a Home
[ ] Not attending special education and related services, but receiving services (do including children who receive services at home)

* When determining which environment to report you must calculate the percentage of time the child spends in a regular early childhood program. The numerator for this calculation is the amount of time per week the child spends in a regular early childhood program. The denominator for this calculation is the total number of hours the child spends in a regular early childhood program PLUS any time the child spent receiving special education and related services outside of a regular early childhood program. The result is multiplied by 100.

Divide # of hours per week inside regular childhood program by the total #hours in regular EC program plus anytime spent receiving SPED and Related Services outside a regular EC program.

INDIVIDUAL EDUCATION PROGRAM (IEP)

Student's Legal Name: _____ **IEP Date:** _____

[ ] This child is 6-21 years old

Check the appropriate educational environment for this student: (only check one)

For students ages 6-21 educational environments the student receives:

[ ] Regular education, special education and related services **Inside** the regular classroom at least 80% of time.*
[ ] Regular education, special education and related services **Inside** the regular classroom 40% to 79% of time.*
[ ] Regular education, special education and related services **Inside** the regular classroom less than 40% of time.*
[ ] Regular education, special education and related services In a Separate School. (do not include children who attend a regular classroom)
[ ] Regular education, special education and related services In a Residential Facility (do not include children who attend a regular classroom)
[ ] Regular education, special education and related services In a Homebound/Hospital environment
[ ] Regular education, special education and related services In a Correctional Facility
[ ] Regular education, special education and related services In a **Parentally Placed** Private school

*To calculate the percentage of time INSIDE the regular classroom, divide the number of hours the youth spends inside the regular classroom by the total number of the hours in the school day (including lunch, recess, and study periods). The result is multiplied by 100. Time spent outside the regular classroom receiving services unrelated to the youth's disability (e.g., time receiving LEP services) should be considered time inside the regular classroom.

Divide # of hours INSIDE the regular classroom _____
by the total # of hours in a school day.....multiply answer by 100 = % of time INSIDE the regular classroom.

**** For further clarification:**

See OASIS Data Handbook Appendix A for Schools and Districts
See OASIS Data Handbook Appendix C for environments

INDIVIDUAL EDUCATION PROGRAM (IEP)

Student's Legal Name: _____ **IEP Date:** _____

JUSTIFICATION FOR PLACEMENT

XVI. Teams must consider the first placement option and, if rejected, explain why. Do the same for each succeeding placement option until the most appropriate is selected. If a child's IEP requires multiple settings, choose the placement option that best describes the child's placement and then describe any variations in the justification box. (See Appendix E Data Handbook for Schools & Districts)

Placement	Justification
1. Regular education classroom 80% or more of the day. [ ] Selected [ ] Rejected	
2. Regular education classroom no more than 79% of day and no less than 40% of the day [ ] Selected [ ] Rejected	
3. Regular education classroom less than 40% of the day. [ ] Selected [ ] Rejected	
4. Full –time instruction in a separate day school. Separate school- a public or private day school [ ] Selected [ ] Rejected	
5. Residential facility- lives in residential facilities and rec's instruction for greater than 50% of the school day. [ ] Selected [ ] Rejected	
6. Homebound/Hospital [ ] Selected [ ] Rejected	
7. Correctional facilities [ ] Selected [ ] Rejected	
8. At a Service Provider Location (for 3-5 year olds) [ ] Selected [ ] Rejected

Alaska's Public School Special Needs Funding
Prepared 2/7/09

Alaska's public school funding formula provides block funding for students with special needs. The special needs adjustment provides public school districts with funding to support special education, bilingual/bicultural, vocational and gifted and talented programs. In addition to the special needs block grant, school districts can apply for funding for high cost special education students identified as "intensive needs students". Below are the amounts that have been generated through the public school funding formula for the most recent five years.

FY06	
Special needs	$157,801,815
Intensive needs	45,008,850
FY06 Total	$202,810,665

FY07	
Special needs	$172,215,141
Intensive needs	44,142,900
FY07 Total	$219,358,041

FY08	
Special needs	$169,740,668
Intensive needs	50,679,600
FY08 Total	$220,420,268

FY09	
Special needs	$180,643,104
Intensive needs	97,998,840
FY09 Total	$278,641,944

FY10 Projected	
Special needs	$186,813,769
Intensive needs	118,033,740
FY10 Total	$304,847,509

Special Education

Within the Division of Teaching and Learning Support this team:

- Operates under various state and federal statutes and regulations regarding the education of students with special needs.

- Maintains compliance with state and federal laws governing students with disabilities through technical assistance to school districts, distribution of grant funding, development of pre-service and in-service training programs, complaint investigation, mediation, due process hearing and compliance reviews. [Federal funds]

- Provides or arranges for technical assistance or professional development related to any department activity as needed

- Conducts district monitoring on a 5-year cycle to verify compliance with state and federal regulations related to special education

- Conducts meetings, work sessions, conferences to help school staff and administrators meet the goals of the district and the department

- Ensures that children receive early screening and intervention for health developmental and learning needs

- Collaborates with other agencies to ensure students have access to necessary supports and services:
    - Health (general, oral, mental, and behavioral)
        - Part C and Early Intervention services
        - Headstart and Daycare services
    - Assistance and supporting Autism Resource Center
    - Assistance and supporting Secondary Transition Supports and Services as well as Department of Vocational Rehabilitation activities
    - University of Alaska Statewide System—Alaska Teacher Placement
        - Special Educators for Alaska Project: Statewide Mentor Program

- Assists with and supports:
    - The Alternate Assessment
    - Response to Instruction initiatives
    - Positive Behavior Interventions and Supports initiatives
    - McKinney-Vento initiatives
    - Correspondence and Home School initiatives

- Preschool handicapped: Provides funding to school districts for special education services to disabled preschool children ages 3 to 5 years. [Federal funds]

- Special Education State Personnel Development Grant: Integrates teacher recruitment with mentoring. The project's purpose is to design and implement a highly innovative and timely strategy addressing problems of recruitment and retention of special education teachers in Alaska. A key project component is the recruitment and training of special education field mentors matched with special education teachers in their first or second year of teaching.

- In order to help districts and others understand Special Education a guidance document Alaska Special Education Handbook has been published and is reviewed yearly and updated as necessary. This document is located on the EED website:

  http://www.eed.state.ak.us/tls/sped/Handbook.html

- Intensive needs

  The Department of Education & Early Development developed the *Training Materials for Determining Eligibility for Intensive Needs Students* to provide assistance to school districts in correctly identifying and documenting students who may qualify for intensive needs funding.

  The training materials contain four sections that will assist school district staff in understanding how the regulations concerning intensive needs students are interpreted and applied. In addition, this document includes a copy of the verification checklist EED staff and/or special education contractor's use when reviewing students who are claimed for intensive needs funding.

  The link to the Training Materials may be found on the EED website:

  http://www.eed.state.ak.us/tls/sped/

IDEA is up for reauthorization during 2009.

Special Education District Data Profile

State of Alaska > Department of Education & Early Development > Special Education District Data Profile

Read This Before Printing! Print This Page

District Name: **Anchorage School District** **2006-2007 School Year**

Total Enrollment: **49230**
Child Count (students with disabilities) Total: **6,661**
Child Count Aged 3-5: **692**
Child Count Aged 6-21: **5969**

In accordance with the Individuals with Disabilities Education Improvement Act (IDEA), each state must have in place a State Performance Plan (SPP) to evaluate the state's efforts to meet the requirements and purposes of the implementation of IDEA. The SPP is a six-year plan which describes Alaska's performance on 20 indicators. The Office of Special Education Programs (OSEP) in the U.S. Department of Education requires that states report annually to the public on the performance of each local education agency (LEA) on 16 of the 20 indicators.

KEY			
*	Results cannot be published without releasing personally identifiable information.	**N/A**	No students were reported in this population.
~	Did not meet the States' AYP minimum N (21 or more students with disabilities enrolled and 26 or more meeting full academic year requirements).	**NR**	Not required to report this year.
<=	Less than or equal to	>=	Greater than or equal to
^	New Indicator, No Data **(2005-2006 reporting ONLY)**	**Not Collected**	Not required to report by district. **(2005-2006 reporting ONLY)**

ALASKA STATE PERFORMANCE PLAN INDICATORS

Indicator 1: Graduation Rates

	District	State	State Target	Met State Target Y/N
% of Students w/Disabilities Who Graduated	42.0%	39.4%	>= 42.1%	No
% of All Students Who Graduated	65.0%			

Indicator 2: Drop-Out Rates

	District	State	State Target	Met State Target Y/N
% of Students w/Disabilities Who Dropped Out	5.2%	6.1%	<= 4.5%	No
% of All Students Who Dropped Out	5.1%			

Indicator 3: Assessment

		District	State	State Target	Met State Target Y/N
A.	District meet AYP for Students w/Disabilities	No			
B.	Participation Rate in Math for students w/Disabilities	97.8%	97.4%	>= 95.2%	Yes
B.	Participation Rate in Reading for students w/Disabilities	97.8%	97.2%	>= 95.2%	Yes
C.	Proficiency Rate in Math for students w/Disabilities	39.2%	37.8%	>= 34.1%	Yes
C.	Proficiency Rate in Reading for students w/Disabilities	48.0%	45.5%	>= 43.8%	Yes

Indicator 4: Suspension/Expulsion

		District	State	State Target	Met State Target Y/N
A.	Did the district have a significant discrepancy in suspension/expulsion rates for students w/disabilities?	No			

A.	Percent of Students w/disabilities being suspended for greater than 10 days in a school year.	2.5%	1.9%	<= 2.6%	Yes
A.	Percent of Students wo/disabilities being suspended for greater than 10 days in a school year.	1.0%			

Indicator 5: School Age Least Restrictive Environment (LRE)				
	District	State	State Target	Met State Target Y/N
Percent of students aged 6-21 with disabilities outside the regular class <21% of the day	40.9%	55.4%	>= 58.2%	No
Percent of students aged 6-21 with disabilities outside the regular class <60% of the day	16.2%	13.3%	<= 12.7%	No
Percent of students aged 6-21 served in separate schools, residential, homebound, or hospital placements	3.7%	1.8%	<= 1.8%	No

Indicator 6: Preschool LRE				
	District	State	State Target	Met State Target Y/N
Percent of preschool students with disabilities in setting with typically developing peers.	NR	NR	NR	NR

Indicator 7: Preschool Outcomes				
	District	State	State Target	Met State Target Y/N
Percent of preschool students who demonstrate improved positive social-emotional skills.	NR	NR	NR	NR
Percent of preschool students with disabilities who demonstrated improved acquisition and use of knowledge and skills.	NR	NR	NR	NR
Percent of preschool students with disabilities who demonstrate improved use of appropriate behaviors to meet their needs	NR	NR	NR	NR

Indicator 8: Parent Involvement				
	District	State	State Target	Met State Target Y/N
Percent of parents with a child receiving special education services who report that schools facilitated parent involvement as a means of improving services and results for children with disabilities.	28.9%	29.3%	>= 29.3%	No
Percent of parents surveys returned	8.8%	9.1%		

Indicator 9: Disproportionality - Child with a Disability	
	Inappropriate Identification Yes/No
Does the district have a disproportionate representation of racial and ethnic groups in special education and related services that is the result of inappropriate identification?	No

Indicator 10: Disproportionality - Eligibility Category	
	Inappropriate Identification Yes/No
Does the district have a disproportionate representation of racial and ethnic groups in specific disability a category that is the result of inappropriate identification?	No

Indicator 11: Child Find				
	District	State	State Target	Met State Target Y/N
Percent of children with parental consent to evaluate, who were evaluated and eligibility was determined within 45 school days	89.4%	88.4%	= 100%	No

Indicator 12: Early Childhood Transition				
	District	State	State Target	Met State Target Y/N
Percent of children referred by Part C and found eligible for Part B whose IEP's were completed on or before their 3rd birthday	81.3%	81.9%	= 100%	No

Indicator 13: Secondary Transition				
	District	State	State Target	Met State Target Y/N
Percent of youth aged 16 and above with an IEP that includes coordinated, measurable, annual IEP goals and transition services that will reasonably enable the student to meet the post-secondary goals	97.7%	96.9%	= 100%	No

Indicator 14: Post School Outcomes					
		District	State	State Target	Met State Target Y/N
Percent of youth who had IEP's, who are no longer in secondary school, and who have been:					
A.	Competitively employed within one year of leaving high school	NR	NR	NR	NR
B.	Enrolled in some type of post-secondary school within one year of leaving high school	NR	NR	NR	NR

Indicator 15:General Supervision				
	District	State	State Target	Met State Target Y/N
Percent of noncompliance corrected within one year for:	100.0%	99.7%	= 100%	Yes
Indicators 1, 2, 13, 14	100.0%			
Indicators 3, 7	100.0%			
Indicators 5, 6	100.0%			
Indicator 8	100.0%			
Indicators 9, 10	100.0%			
Indicator 11	100.0%			
Indicator 12	100.0%			
Indicator 4a	100.0%			
Confidentiality	100.0%			
Interagency Agreement	100.0%			
Miscellaneous	100.0%			
Personnel	100.0%			
Procedural Safeguards	100.0%			
IEP Process	100.0%			
Dispute Resolution	100.0%			

Indicator 20: State Reported Data			
Data Collection	Timely	Complete	Accurate
Fall Oasis (Tables 1 & 3)	Yes	Yes	Yes
Summer Oasis (Table 4)	Yes	Yes	Yes
Supplement Workbook (indicators 7, 11, 12, 13)	Yes	Yes	Yes
Participation Rate (Table 6)	Yes	Yes	Yes
Suspensions Expulsion Data (Table 5)	Yes	Yes	Yes
Personnel (Table 2)	Yes	Yes	Yes
Monitoring Noncompliance	Yes	Yes	Yes
Fiscal Reports (EDGAR)	Yes	Yes	Yes

Subject: FW: RE: Answers due From Christensen and Jones

Attachments: image002.jpg; Thinking and Learning Style Teaching Styles.pdf; Thinking and Learning Style Characteristics.pdf; Thinking and Learning Style Survey.pdf; Post-Residential Standards on Mentoring.pdf

Louie, here are the answers to the questions from the Joint Education Committee as well as some attached supporting documents.
Thanks!

McHugh Pierre
Director of Public Relations & Legislative Liaison
Alaska Department of Military and Veterans Affairs
907-321-2179 cell
907-465-4402 Juneau office

The House Education Standing Committee would like a follow up from AMYA to these questions:

1) What is the name of the company/assessment tool used to determine learning styles for incoming cadets?

Learning styles are determined by administering the Thinking and Learning Style Preference Survey, originally created by Dr. Virginia R. Johnson Ed D. (circa 1993). She was the head of the education department at UAA where AMYA Principal "Tom" Hamill, pursued his Master of Arts in Teaching (MAT) degree in 1996. The Academic Section has utilized this tool with great success since that time. The classroom teachers administer the test after cadets are instructed with a Microsoft PowerPoint presentation.

2) How do you match a cadet up with a mentor?

We accomplish the Mentor – Cadet matching using the following NGB-Challenge guidelines:

Standard 4: Mentor Qualifications
Prospective mentors:

a. At least 21 years of age.

b. Same gender (Cross-gender matches are allowed on a case-by-case basis if approved by the Director and documented in the cadet/mentoring case file.)

c. Geographic proximity acceptable to both the mentor and cadet.

d. Not of same household, immediate family (mother, father, stepmother, stepfather, brother, sister, step brother, step sister, foster parent, legal guardian), or ChalleNGe staff or spouses.

Generally, this is done with the Cadets and parent/guardian involvement. Cadets must have a mentor application filled out when applying for AMYA. For those who

do not have anyone that can pass the background checks, live outside the Municipality of Anchorage or Mat-Su Borough, the Recruiting, Placement, and Mentoring (RPM) staff assists them with volunteers from the local area. Staff has a basic questionnaire for both the volunteer Mentors and the Cadets. Using this questionnaire, RPM staff attempts to match Cadets with Mentors who have similar interests, when possible. If at any time, a Cadet-Mentor match is not compatible, RPM staff works to help find them a more compatible Mentor. If a Cadet leaves the program and the Mentor returns to the volunteer pool until they are needed. Mentors must be at least 21 years of age, of the same gender, an not an immediate family member.

High School Dropout Facts

- **Three-quarters (3/4) of dropouts say that if given a "second-chance" they would have stayed in school.**

  Bridgeland, John M. et al. The Silent Epidemic: Perspectives of High School Dropouts. Civic Enterprises. March 2006

- **The Bureau of Labor statistics projects that by 2020, US labor demand will exceed the American labor supply by 20 million.**

  Cartnevale, A. ASTD Training + Development. American Society for Training & Development, January 2005.

- **Of the 3.4 million dropouts age 16-24 in Oct. 2006 who had not reenrolled in school, only half were employed.**

  College Enrollment and Work Activity of 2006 High School graduates. U.S. Department of Labor Bureau of Labor Statistics. April 26, 2007.

High School Dropout Facts

- **These youth are more likely to be living in poverty, receiving public assistance, in prison, on death row, unhealthy, divorced, and single parents of children who drop out.**

Bridgeland, John M. et al. The Silent Epidemic: Perspectives of High School Dropouts. Civic Enterprises. March 2006

- **Federal investment in dropout recovery and youth empowerment programs has dropped from $15B in the late 1970's to just $3B today.**

Barton, Paul E. One-Third of a Nation: Rising Dropout Rates and Declining Opportunities. Educational Testing Service. Princeton, NJ. February 2005

Dream. Believe. Achieve.

Facts·at·a·Glance

National Guard Youth Challe*NG*e Program (NGYCP)

The Need

- 1.2 million students drop out of high school each year, costing the nation more than $309 billion in lost wages, revenues and productivity over the students' lifetimes.
- 33 million Americans ages 16 to 24 do not have a high school degree.
- 21 percent of students reported they were in gangs in their schools.

High School Dropouts

- Have a life expectancy 9 years less than a high school graduate
- Can expect to earn about $17,000 per year compared to $27,000 for a high school graduate
- Nearly 30 percent are unemployed and 24 percent are on welfare compared to only 10% of those with a high school degree.
- 1 in 4 babies is born to high school dropouts.
- The prison system has grown by 187% over the last decade to 2.2 million Americans. Approximately 68% are high school dropouts.

The Program

- The NGYCP was founded by the National Guard with Congressional mandate in 1993.
- NGYCP is a 17 month voluntary program with a 51/2 month residential phase and a 12 month mentoring phase.
- NGYCP is open to 16-19 year old male and female high school dropouts.
- 32 NGYCP program sites are located in 28 states and Territories, and two state partnerships; District of Columbia and Nevada.
- NGYCP enhances students' life skills, education levels, employment potential and prospects for the future.

The Results

- Over 84,700 students have graduated the program as of December 2008.

Last Year:

- 60% earn their general equivalency degree (GED), nearly double the pass rate of other adult education programs.
- 28% of graduates continued their education.
- 14% of graduates joined the military
- 2007 Test of Adult Basic Education (TABE) gains during the Residential Phase include an estimated 1.6 overall grade level improvement.

NATIONAL GUARD YOUTH FOUNDATION

Dream. Believe. Achieve.

The Benefits

- An average of $109 million in juvenile correction savings each year, based on an annual cost of $14,000 per NGYCP enrollee vs. an annual cost of $40,000 per youth in a correction facility.
- An average of $31.7 million in taxpayer savings each year based on students receiving their GED vs. on-going educational costs.
- $109.6 million in community service hours, based on over 5.8 million hours of community service performed by program participants since 1993.
- Decrease in Federal Assistance (20 percent of 16-18 years olds enrolled in the program are taken off Federal Assistance programs).
- Increase in voter registration (99 percent of program graduates register to vote).
- Savings of $10,000-$15,000 on education costs per cadet.

About the National Guard Youth Foundation

The National Guard Youth Foundation is a non-profit 501(c)(3) organization formed to support the work of the National Guard Youth Challe*NG*e Program through public awareness, scholarships, higher education assistance, mentoring and job development programs for graduates. The Foundation also works to expand the number of states and sites per state to accommodate growing demand for the program. The Honorary Board of Directors is co-chaired by President George H.W. Bush and Senator Mary Landrieu (D-LA). For more information about the National Guard Youth Foundation, please visit **www.ngyouthfoundation.org**.

ALASKA MILITARY YOUTH ACADEMY
"ChalleNGe Program"
28 January 2009

The Alaska Military Youth Academy (AMYA) is a National Guard Youth ChalleNGe Program, which helps at-risk youth focus and get back on track with their lives. The Academy produces graduates with the values, skills, education and self-discipline necessary to succeed as adults. The Youth ChalleNGe Program is a 17 ½ month program that consists of a 22-week Residential Phase based on the traditional military training model, followed by a year long Post-Residential Phase. The Alaska Military Youth Academy serves the needs of 16 to 19 year-old Alaskans who have dropped out of High School. The program is located at Camp Carroll on Fort Richardson.

Facts to Consider:

- AMYA ranks #1 in the nation, per capita, with regard to contact and recruitment of High School dropouts.
- AMYA ranks in the top three ChalleNGe Programs nationally for resident program graduates, based on graduation targets and funding.
- AMYA ranks in the top three ChalleNGe Programs nationally for the successful placement of students at the end of the 17 ½ month program. Placement involves students being gainfully employed, attending school, or being positively engaged as measured by a prescribed set of standards.
- In January 2009, AMYA received a national level award, recognizing the Academy as the "Most Progressive ChalleNGe Program in the Nation in 2008".
- In August 2008, AMYA exceeded 2,630 graduates who are demonstrating exceptional success in their lives and futures.
- As of August 2008, AMYA has awarded more than 1,647 High School Diplomas or GED credentials since 1994. The AMYA ChalleNGe Program is one of only five existing National Guard ChalleNGe Programs (33 total) accredited to award High School Diplomas.
- AMYA's overall success rate at the end of the 12-month Post-Residential Phase (Class 06-2 & 07-1) exceeds 80%. Measured success in prior years has been shown to exceed 90%.
- The last four graduating classes with 154, 140, 123, and 143 graduates respectively, were the largest graduating classes in AMYA's 15 year history.

- Classes 08-1 & 08-2 performed 19,400 hours of service to the community at a combined value of $138,794 to the community.

- AMYA entered students in the Statewide GCI Academic Decathlon in 2008, 2007, 2005 and 2004; where they won first place in the small schools division each year the Academy was entered.

  In 2008, Cadet Ryan Joe, a native student from Anchorage, AK; was recognized as the recipient of the Statewide GCI Academic Decathlon Kristin Caperton Award for excellence as a member of the winning team in the small schools division. He was subsequently designated to participate on the Alaska Academic Decathlon Team which competed in California later in 2008. At the California competition, Cadet Ryan Joe was recognized as the recipient of the Kristin Caperton Award for excellence at the national level. Cadet Joe is presently in the Post-Residential Phase of the ChalleNGe Program. He has completed the Covenant House Rights of Passage Program and was recently employed as a property manager in Washington State by an Alaska Native corporation.

- In January 2009, AMYA will experience its 15th year Anniversary and is on track to produce the largest graduating class in the Academy's history.

2/18/09 UNIV. OF AK REPORT ON TEACHER PREP...

Narrative
February 18, 2009

Good morning!

Through the Chair I would like to thank the members of the Education Committee, both House and Senate for your time today.

My name is Pat Jacobson and I am from Kodiak, having lived there nearly 39 years. I taught there for many years and then was elected to the local school board. I am a member of the University of Alaska Board of Regents and chair of the Academic and Student Affairs committee. I am here today to share with you the "Alaska's University for Alaska's Schools" Report per SB241, which was passed in the 25th Legislative session in 2008 and sponsored by my hometown senator, Gary Stevens.

I testified before you last year, on behalf of the University Regents, when you were considering passing this bill into law. The University has always been in support of this bill and the Academic and Student Affairs committee has had frequent updates about what the University was doing, with regard to SB241, roughly every 2 months since the bill's passage.

Before we get started, I would like to ask the Chair if I could take a moment to recognize members from the University who are here to provide any assistance, as well as other distinguished guests.

Mrs. Cynthia Henry, educator, former school board member and borough assembly member from Fairbanks, who is the chair of the University of Alaska Board Of Regents. I can assure you, both she and I, as former educators, care a great deal about this topic and look forward to an ongoing dialog with you.

Chancellor John Pugh from UAS. He is leading the deans of education in development of a 3-5 year plan for teacher preparation.

Mrs. Melissa Hill, Director of Alaska Teacher Placement and, among other duties, in and with the office of K-12 outreach programs at the University of Alaska Statewide in the office of academic affairs.

Mr. Pete Kelly, University of Alaska State Relations. I am sure most of you

know him.

In addition I would like to recognize and thank members from the Department of Education and Early Development for their willingness to openly collaborate and work with the University of Alaska. As the report will indicate, the issues around education are complex and require this kind of synergy between the two leading education entities in the state. I believe Mr. Eddy Jeans, with whom I am sure you are familiar, is also in attendance.

Unless there are other questions, and at the discretion of the chair, we can begin. I trust you have all received copies of the report? I would also like to ask the Chair if I can call on others or if they can interject to provide supplemental information, for the good of the order.

First, I want to assure you of the following:

1. The University's and the president's commitments to education and K-12 Outreach.

2. Staff at UA have taken tremendous care to ensure that the data before you is accurate and reflects the information you requested

As you know this report is in accordance with an act to report on the University of Alaska's efforts on preparing teachers. I am not going to read the report to you, though I will reference some of the information pages as I go through it.

I anticipate taking about 20 minutes to go through the report, provide insights as to the University's next steps and offer recommendations; I hope that will answer many of your questions regarding the report.

First, near the beginning of the actual SB241 bill, it speaks about the desire by the Task Force to improve the dialogue between two of our state agencies with key roles in education delivery. It has been my observation that the relationship between the University and EED has, indeed, taken a dramatic turn for the better in working together. I believe that could be attributed, in part, to SB241, but, frankly, I believe it would have occurred anyway. As I understand it, the collaborative relationship between the Dept. of Labor and the University began to improve after the appointment of Commissioner of Labor Click Bishop, a couple of years ago. And, the relationship between EED and the University began to improve greatly after the appointment of Commissioner of Education Larry LeDoux last summer. I

believe these two commissioners, as well as University of Alaska President Hamilton have a genuine desire to have a positive, collaborative working relationship with each other and that that should be the case – it's an obvious, necessary fit that just hasn't happened to this extent, to my knowledge, ever before.

The Commissioner of Education hit the ground running and embarked on a statewide Education Summit in November, bringing in a wide array of stakeholders from around the state, including people from the Department of Labor. The University had a large presence at that summit and in assisting with it. It was a huge undertaking and I've heard nothing but glowing reports about it – I attended myself and felt it was very worthwhile. I can also tell you that our president and two other regents were also there, and actively participated in the dialog and planning.

With that I would like to begin with an overview of the report.

Through the Chair, the report is broken into the specific areas per the language in SB241. On page 1 you can review the highlights of the report. This will give you a quick overview of key elements I am prepared to cover with you today.

You'll note a couple of key bullets I would like to point out to you in that Highlights Section:

1. Teacher recruitment and retention in Alaska is a complex issue with no magic bullet. I'll explain that a bit more in just a second.

2. If we are to increase the number of Alaskan prepared teachers, more Alaskan students must go to college. I believe it was the president who said we need to create a culture that values education. The University Board Of Regents recognizes and embraces this fact, which is why K-12 Outreach is currently a top priority of the University of Alaska. I'm told it is very unusual for a university to make K-12 a priority in their proposed budget. We have done just that!

Starting on Page 3, you can see the report is divided up into four sections.

The first section is the TEACHER EDUCATION GRADUATION DATA, shown in detail on page 4

This provides an overview of the output or supply; the number of teachers the University is graduating each year in core content areas. Bottom line, there is an average of 190 graduates per year eligible to enter the K-12 teacher workforce. Slightly more than 1/2 are elementary. The University produces an average of 35 special education teachers each year. Special Ed also has a higher rate of turnover and is a federally designated teacher shortage area. And there is an average of 11 certificates in math and 24 in science awarded annually.

The second section is the GAP ANALYSIS: SHORTAGES IN THE TEACHING WORKFORCE, shown in detail on page 7

The data in your report provides an overview of the gap between what the University is turning out and what the needs are. I am pleased to support the fact that we have taken extensive steps to address some of those challenges in collaboration with the Alaska Department of Education and Early Development, one of them being the Alaska Statewide Mentor Project mentioned earlier; another is the Alaska Teacher Placement office. In areas where we may fall short in producing teachers, we do have highly effective programs in place to address recruitment and retention of teachers.

- Teacher shortage areas in Alaska include: special education, mathematics, and science. Each year Alaska school districts hire about 900 to 1100 teachers, the majority of vacancies being in special education and secondary core content areas. The vast majority of the vacant positions is a result of teachers exiting the system, and the minority is from a group referred to as "movers". In 2010 roughly 34% of current teachers will be eligible for retirement. Nearly 2/3 of Alaska's teachers are over age 40.

It was rather disheartening, although not actually surprising to me, as a former teacher, to read that after four years of entering a teaching position, 49% of special education teachers weren't teaching special education any more, and of those, only 8% remained in the Alaska system, but were teaching outside of special education; 35 produced each year, but districts need to hire 100 new special education teachers annually. That number has improved dramatically with an additional 35 special education teachers coming from UAS. You may wish to ask Chancellor Pugh to elaborate later.

It should be noted that simply producing more teachers in these areas may not address the issue of retention. The Alaska Statewide Mentor Project reported that, 'through grant funding, the Mentor Program has been able to increase focus on mentoring special education teachers by pairing special education certified mentors with early career special education teachers. Working with a sub-sample of about a third of all new special education teachers, the Mentor Program has retained over 80% each year.' That's encouraging.

An additional complexity, regarding secondary-math and science teachers, is that there is considerable competition, and, thus, opportunity for these folks elsewhere, as well as in the field of education. As we all know, not everyone who earns a degree goes on to use that degree in that field. As the report indicated 11 math teachers graduate each year, but 48 are needed; 24 science teachers graduate each year, but, 41 are needed across the districts in the state.

Recruitment efforts need to increase, but, ultimately, even if all University of Alaska education graduates took jobs with Alaska schools, districts would still need to recruit from outside the state to fill the gap.

A further complication is that the number of high school students peaked in 2008 and is expected to decline over the next decade. Consequently, as the number of candidates available for postsecondary degrees and training declines, it will become even more challenging for UA to produce a trained workforce for key Alaska jobs.

The third section is EFFORTS TO ATTRACT, TRAIN, AND RETAIN QUALIFIED SCHOOL TEACHERS and begins in detail on page 10 of your report

To increase the number of teachers prepared in Alaska, more Alaskan students will need to enroll and complete degree programs in education. The University has a wide array of programs and activities designed to support teacher recruitment and retention of K-12 educators – you have a listing in your report. And, I repeat, the University has made K-12 Outreach and Bridging Programs a priority for future operating requests to the legislature.

In the category of Teacher recruitment and retention, you will see that the University has over 120 programs in one of three areas including:

1. K-12 Student Outreach and Bridging Efforts
2. Teacher Professional Development

3. Educational Resources and Teacher Recruitment and Retention.

K-12 Outreach and Bridging programs support efforts to attract and prepare more K-12 students for college. These are expansive and again, the University is committed to seeing more Alaskan graduates becoming life long learners. There's another, significant challenge: many of Alaska's high school graduates are not prepared to meet this challenge. The university must expand current efforts to ensure that students who enter the institution accomplish what they set out to do, and in a timely manner. Helping students early is a key step.

Teacher Professional Development is expansive, there are a variety of programs for science and math teachers, and professional collaborations taking place through out the university system.

One area that would warrant some attention is in educational resources and teacher recruitment and retention. We can and need to look for ways to grow our own teachers. This is important because studies suggest that teachers trained in Alaska stay in Alaska, and preliminary research is promising in that it suggests Alaska trained teachers demonstrate positive gains in student achievement.
Yet, we still need more opportunities for rural training.

The fourth section is THREE TO FIVE YEAR PLAN FOR TEACHER PREPARATION and is found on p 13

Senate Bill 241 (2008) reads, "*The report must include an outline of the university's current and future plans to close the gap between known teacher employment vacancies in the state and the number of state residents who complete teacher training. The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[1]

Our system-wide teacher education planning group is new this past year. The Deans of Education, lead by Chancellor Pugh, and with support and coordination

[1] Source: Sec. 2. AS 14.40.190(b) Laws of Alaska (2008) Source Chapter No. HCS CSSB 241(HES) of the 25th Legislative Session.

from Melissa Hill, have been meeting for the past year with K-12 administrators to talk about ways the University and K-12 can align workforce needs and collaborate on priorities in the area of workforce.

What we know:

Teaching in rural Alaska will continue to have higher rates of turnover, due in part to limited housing, assimilation, etc.. Data also suggests that those teachers and principals trained in state stay longer, as I've indicated, and those trained in rural areas stay longer there, too.

Our University can and must do a better job of recruiting and growing our own teachers. The Alaska Statewide Mentor project is a proven, positive influence and expansion of the program could help to ensure that all teachers receive the support they need in the first two years. There are still factors which are out of the realm of the University, such as compensation, housing and technology infrastructure.

Our workforce, Alaska's workforce and the quality of that workforce rests on the shoulders of our educational institutions; from Early Childhood through K-12 to higher education, but we cannot do it alone. Communities and parents play a vital role and collectively we can all do our part to promote the teaching profession, to recognize the workforce that is training our workforce right out of the gate.

The University's budget request includes funding for supplemental instruction for "gateway" or preparatory college courses, undergraduate research, early alert programs and increased remediation.

Bottom Line: The University needs more resources to help students succeed. We did include a section at the end of your report, which has recommendations and a fiscal note request, which I will address briefly now.

One recommendation would be to invest in education studies and research, which could allow for expanding and updating data collection systems and workforce development studies. Education is an important issue in Alaska. I applaud our state leaders in their effort to have a standing committee on education. Both EED and policymakers require studies and research in education. We fully expect to be leading this effort; however, existing resources are limited and without fully funding the University of Alaska budget and per the legislative language of SB241 of the 25th session, it is evident that current resources do not fund existing staff to conduct such studies – I can assure you that UA will focus on any effort to

improve teacher training and related workforce development to meet the state's needs

Another recommendation would be to invest in Special Education Teacher Preparation, specifically, funding to support adding special ed teacher prep programs at UAF, the only school of education in the university system that does not have a special education program.

Another recommendation is for Expansion of Scholarship Opportunities for Education Majors, having specific emphasis on shortage areas, as well as a review of current loan forgiveness programs, and sustaining and increasing funding for programs that are effective in preparing and supporting teacher recruitment and retention.

I received the final report just a few days before you did. I can tell you that the Board of Regents Academic and Student Affairs Committee will be reviewing it in detail and looking at all of our options. Immediate steps will include having a meeting with the chancellors, provosts and deans to discuss where we go from here. It is evident that change is needed. Important University outcomes include:

1. better cooperation and coordination with EED
2. better outreach and engagement with K-12 educational professionals
3. increasing the numbers of education graduates!!!!

In Next Years Report – here is what you can expect to see

-expansion of the quantified efforts in K-12 outreach
-reports on the effectiveness of specific programs such as the the mentor project
-a fully developed 3-5 year education plan for teacher preparation
-overall larger picture --- a university system that can meet the needs of the newly formed standing committees on education.

In conclusion,

As I stated at the beginning, the University embraced this bill from its infancy and has worked hard and seriously on fulfilling the requirements for this, the first annual report to you. We believe it was and is a very good bill and look forward to reports to and interactions with you in future years. This was just the first year and,

while I believe it was an informative report, I also believe future reports will get better. It was well worth our effort and time.

We would be happy to answer any questions you have.

Thank you.

Article 10. TEACHER EDUCATION LOAN PROGRAM

Sec. 14.43.600. Findings and intent.

(a) The legislature finds that there is a wide and unacceptable disparity between the distribution of Native teachers and Native students in rural elementary and secondary schools in the state. Many rural schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:

(1) there is a serious weakness in the ability of teaching staffs in rural schools to foster a sense of Native traditions and cultures in the Native students;

(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;

(3) almost no Native students return to rural schools to teach, continuing the imbalance and exacerbating its effects; and

(4) there is an annual turnover of 40 percent among teachers in regional educational attendance areas in the state.

(b) The legislature further finds that existing programs have failed to increase the proportion of Natives teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher education loan program to encourage rural high school graduates to return to rural schools as teachers and relieve the conditions described in this section.

Sec. 14.43.610. Program established.

There is established the teacher education loan program to provide an incentive for rural high school graduates to pursue teaching careers in rural elementary and secondary schools in the state.

Sec. 14.43.620. Teacher education revolving loan fund.

(a) There is created a teacher education revolving loan fund. The fund shall be used to make education loans to students selected under AS 14.43.600 - 14.43.700. Unless the instrument evidencing the teacher education loan has been sold or assigned to the Alaska Student Loan Corporation, repayments of principal and interest on a teacher education loan shall be paid into the teacher education revolving loan fund and shall be used to make new teacher education loans. If estimated funds available are inadequate to fully fund estimated teacher education loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.

(b) The commission may sell or assign notes and other instruments evidencing teacher education loans to the Alaska Student Loan Corporation and enter into agreements with the corporation relating to loans, the administration of the education loan fund created under AS 14.42.210 and the payment of and security for bonds of the corporation. Proceeds from the sale or assignment of the notes or other instruments shall be deposited in the teacher education revolving loan fund.

Sec. 14.43.630. Administration.

(a) The teacher education loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall

(1) allocate the loan awards available for teacher education loans annually to local school boards giving a preference to rural school districts; and

(2) develop and distribute to the local school boards an application form for teacher education loans; the form must include a requirement that the applicant supply a high school academic transcript and a statement of intent to enter a teaching career at the elementary or secondary school level in the state.

(b) The local school boards shall select the recipients of the teacher education loans according to the criteria in AS 14.43.650.

Sec. 14.43.640. Conditions of and limitations on loans.

(a) To the extent that they are not in conflict with the provisions of AS 14.43.600 - 14.43.700, the provisions of AS 14.43.100 - 14.43.160 are applicable to loans made under AS 14.43.600 - 14.43.700.

(b) If a borrower meets the conditions provided in (a) of this section and is employed as a teacher in a rural elementary or secondary school, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:

(1) one year employment, 15 percent; = 15%
(2) two years employment, an additional 15 percent; = 30%
(3) three years employment, an additional 15 percent; = 45%
(4) four years employment, an additional 25 percent; = 70%
(5) over four years employment, an additional 30 percent. = 100%

(c) A loan may not exceed $7,500 in a school year, exclusive of loan guarantee fees.

(d) Proceeds from a teacher education loan may be used only for undergraduate expenses of books, tuition, required fees, loan guarantee fees, room and board, and the transportation expense for two round trips between the loan recipient's home and school.

(e) Teacher education loans made to a student may not exceed a total of $37,500.

(f) Notwithstanding (b) of this section, a borrower who fails to qualify for loan payment by the state because the borrower is required to reside in an urban area of the state in order to receive medical treatment is still entitled to receive loan payments by the state under (b) of this section if the medical condition for which the borrower is receiving treatment did not exist before the borrower received the teacher education loan and the borrower is employed as a teacher in an urban elementary or secondary school.

Sec. 14.43.650. Selection criteria.

(a) To be eligible for a teacher education loan, a student must

(1) be a graduate of a public or private high school in the state, with sufficient credits to be admitted to an accredited college or university;

(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level;

(3) meet the conditions set by the student's local school board with respect to the district's requirements for teachers in particular subject areas;

(4) submit to the local school board an application provided by the commission under AS 14.43.630(a)(2); an application may be submitted six months before graduation from high school; and

(5) not have a past due child support obligation established by court order or by the child support services agency under AS 25.27.160 - 25.27.220 at the time of application.

(b) A local school board shall award teacher education loans giving a preference to applicants from rural schools who meet the qualifications for a loan and taking into account the

applicants' academic records.

(c) A student may not be awarded a teacher education loan under AS 14.43.600 - 14.43.700 if the student receives a loan under AS 14.43.170 - 14.43.175 for the same period of attendance.

Sec. 14.43.700. Definition.

In AS 14.43.600 - 14.43.700, "rural" means a community with a population of 5,500 or less that is not connected by road or rail to Anchorage or Fairbanks or with a population of 1,500 or less that is connected by road or rail to Anchorage or Fairbanks.

AS 14.43.600. Findings and Intent.

(a) The legislature finds that there is a wide and unacceptable disparity between the distribution of Native teachers and Native students in rural elementary and secondary schools in the state. Many rural schools have virtually no Native teachers and no non-Native students. The undesirable effects of this disparity include the following:
(1) there is a serious weakness in the ability of teaching staffs in rural schools to foster a sense of Native traditions and cultures in the Native students;
(2) many rural students are forced to exist in two entirely separate situations: the essentially traditional atmosphere of many Native homes, and the essentially modern atmosphere of the classroom;
(3) almost no Native students return to rural schools to teach, continuing the imbalance and exacerbating its effects; and
(4) there is an annual turnover of 40 percent among teachers in regional educational attendance areas in the state.
(b) The legislature further finds that existing programs have failed to increase the proportion of Natives teaching in rural schools. Therefore, it is the intent of the legislature to establish the teacher education loan program to encourage rural high school graduates to return to rural schools as teachers and relieve the conditions described in this section.

AS 14.43.610. Program Established.

There is established the teacher education loan program to provide an incentive for rural high school graduates to pursue teaching careers in rural elementary and secondary schools in the state.

AS 14.43.620. Teacher Education Revolving Loan Fund.

(a) There is created a teacher education revolving loan fund. The fund shall be used to make education loans to students selected under AS 14.43.600 - 14.43.700. Unless the instrument evidencing the teacher education loan has been sold or assigned to the Alaska Student Loan Corporation, repayments of principal and interest on a teacher education loan shall be paid into the teacher education revolving loan fund and shall be used to make new teacher education loans. If estimated funds available are inadequate to fully fund

estimated teacher education loans for any fiscal year, additional funding from the general fund may be requested and appropriated for that year.
(b) The commission may sell or assign notes and other instruments evidencing teacher education loans to the Alaska Student Loan Corporation and enter into agreements with the corporation relating to loans, the administration of the education loan fund created under AS 14.42.210 and the payment of and security for bonds of the corporation. Proceeds from the sale or assignment of the notes or other instruments shall be deposited in the teacher education revolving loan fund.

AS 14.43.630. Administration.

(a) The teacher education loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall
(1) allocate the loan awards available for teacher education loans annually to local school boards giving a preference to rural school districts; and
(2) develop and distribute to the local school boards an application form for teacher education loans; the form must include a requirement that the applicant supply a high school academic transcript and a statement of intent to enter a teaching career at the elementary or secondary school level in the state.
(b) The local school boards shall select the recipients of the teacher education loans according to the criteria in AS 14.43.650 .

AS 14.43.640. Conditions of and Limitations On Loans.

(a) To the extent that they are not in conflict with the provisions of AS 14.43.600 - 14.43.700, the provisions of AS 14.43.100 - 14.43.160 are applicable to loans made under AS 14.43.600 - 14.43.700.
(b) If a borrower meets the conditions provided in (a) of this section and is employed as a teacher in a rural elementary or secondary school, the portion of the loan that shall be paid by the state is the following percentages of the total loan received plus interest up to a total of 100 percent of the total loan:
(1) one year employment, 15 percent;
(2) two years employment, an additional 15 percent;
(3) three years employment, an additional 15 percent;
(4) four years employment, an additional 25 percent;

(5) over four years employment, an additional 30 percent.
(c) A loan may not exceed $7,500 in a school year, exclusive of loan guarantee fees.
(d) Proceeds from a teacher education loan may be used only for undergraduate expenses of books, tuition, required fees, loan guarantee fees, room and board, and the transportation expense for two round trips between the loan recipient's home and school.
(e) Teacher education loans made to a student may not exceed a total of $37,500.
(f) Notwithstanding (b) of this section, a borrower who fails to qualify for loan payment by the state because the borrower is required to reside in an urban area of the state in order to receive medical treatment is still entitled to receive loan payments by the state under (b) of this section if the medical condition for which the borrower is receiving treatment did not exist before the borrower received the teacher education loan and the borrower is employed as a teacher in an urban elementary or secondary school.

AS 14.43.650. Selection Criteria.

(a) To be eligible for a teacher education loan, a student must
(1) be a graduate of a public or private high school in the state, with sufficient credits to be admitted to an accredited college or university;
(2) be enrolled in or show evidence of intent to enroll in a degree program directed at a teaching career at the elementary or secondary school level;
(3) meet the conditions set by the student's local school board with respect to the district's requirements for teachers in particular subject areas;
(4) submit to the local school board an application provided by the commission under AS 14.43.630 (a)(2); an application may be submitted six months before graduation from high school; and
(5) not have a past due child support obligation established by court order or by the child support services agency under AS 25.27.160 - 25.27.220 at the time of application.
(b) A local school board shall award teacher education loans giving a preference to applicants from rural schools who meet the qualifications for a loan and taking into account the applicants' academic records.
(c) A student may not be awarded a teacher education loan under AS 14.43.600 - 14.43.700 if the student receives a loan under AS 14.43.170 - 14.43.175 for the same period of attendance.

In AS 14.43.600 - 14.43.700, "rural" means a community with a population of 5,500 or less that is not connected by road or rail to Anchorage or Fairbanks or with a population of 1,500 or less that is connected by road or rail to Anchorage or Fairbanks.

The Alaska Legislature established the Teacher Education Loan (TEL) to encourage Alaska high school graduates to pursue teaching careers and to teach in Alaska rural elementary and secondary schools.

- **0%** (1.63% APR)[1] in-school interest, **7.2%** (7.2% APR)[1] repayment rate
- Low **3%** origination fee
- Up to **100%** forgiveness benefits to qualifying borrowers
- $7,500 annual limit

Eligibility

- Nominated by a qualifying Alaska school district
- Must meet criteria set by the nominating school district
- No adverse credit history
- Graduate of an Alaska public or private high school
- Enrolled or intend to enroll in a four-year bachelor degree program in elementary or secondary teacher education, or enrolled in a fifth-year teacher certification program on a full-time basis

How to Apply

Rural school districts annually nominate Alaskans for TEL based on high school academic performance and the students' intent to teach in a rural Alaska school. TEL application forms are sent only to qualified nominees. Applications must be completed and returned by July 1st. Remember:

1. Only rural school districts nominate students.
   Rural is defined as A) a community having a population of 5,500 or less, and not on the road or rail system to Anchorage or Fairbanks; OR B) a community having a population of 1,500 or less, and connected by road or rail system to Anchorage or Fairbanks.
2. If you have any questions about Teacher Education Loans, call us toll free at (800) 441-2962.

[1]The APR assumes a principal loan amount of $7500, origination fee of 3%, freshman borrower, and a repayment term of 10 years. The APR does not include the effects of borrower benefits.

UNIVERSITY
of ALASKA

Many Traditions One Alaska

Alaska's University for Alaska's Schools
Prepared for the State of Alaska

In Accordance with:
Senate Bill 241 (2008) 25th Legislative Session
Source Chapter No. HCS CSSB 241 (HES)

AN ACT
Relating to a report to the legislature on teacher preparation, retention, and recruitment by the Board of Regents of the University of Alaska

Prepared by:
Melissa Hill, Director UA Alaska Teacher Placement
Alexander Hill, UAA Research Analysis Institute of Social and Economic Research
Diane Hirshberg, Assoc. Professor of Education Policy Institute of Social and Economic Research
Gwen White, Director UA Institutional Research and Planning

In collaboration with:
John Pugh, Chancellor of UAS
Larry Harris, Dean of the School of Education UAS
Eric Madsen, Dean of the School of Education UAF
Mary Snyder, Dean of College of Education UAA

Presented by:
The University of Alaska Board of Regents
Regent Cynthia Henry, Chair of the Board
Regent Patricia "Pat" Jacobson, Chair of the Academic & Student Affairs Committee

On February 18, 2009

PURPOSE STATEMENT

In 2008, the 25th Alaska State Legislature passed Senate Bill 241. This legislation required the University of Alaska Board of Regents to deliver a report titled "Alaska's University for Alaska's Schools" no later than the 30th legislative day of the first session of each legislature, which for the 26th Legislature is on or before February 19, 2009.

OVERVIEW

The following report describes the efforts the university is making to attract, train, and retain qualified public school teachers. This report includes information on teacher graduation data; a gap analysis documenting the shortage areas in the teaching workforce; a three to five year plan outlining the university's priorities to address the gap; and existing efforts to attract, train, and retain school teachers for Alaska.

HIGHLIGHTS

Teacher preparation, retention, and recruitment at the University of Alaska

- The University of Alaska (UA) on average produces 190 new teachers each year, about half of whom are certified in elementary education, and half in secondary education.
- Teacher recruitment and retention in Alaska is a complex issue not limited to simple solutions that one single entity or agency can resolve; there is no magic bullet.
- The University of Alaska offers a combination of over 120 programs dedicated to K-12 Outreach, including college preparation, professional development, or teacher recruitment and retention.
- To increase the number of Alaska prepared teachers will require more Alaska students going to college. Thus, the University of Alaska has made K-12 Outreach a top priority.

Alaska's Teacher Workforce

- 8,902 public school classroom teachers currently work in Alaska.
- Teacher shortage areas in Alaska include special education, mathematics, and science.
- Each year, Alaska school districts hire roughly 900 to 1,100 teachers.
- Roughly 800 to 900 vacant positions are a result of teachers exiting a teaching position.
- The average teacher salary in Alaska is $56,757.
- In 2010, roughly thirty-four percent (34%) of current teachers will be eligible for retirement.
- Sixty-five percent (65%) of Alaska's teachers are currently over the age of 40.
- Alaska Native teachers make up six percent (6%) of the teaching workforce.
- Forty-one percent (41%) of special education teachers exit the Alaska school system after four years.

3010

RECOMMENDATIONS

Invest in Special Education Teacher Preparation

Invest in growing the special education teacher preparation programs at the University of Alaska Fairbanks. Currently, UAF is the only school of education in the university system without a special education program. Funding to support this effort would expand the universities' teacher preparation capacity and provide a new source for teachers in a high-demand area for Alaska.

Invest in Education Studies and Research for the State of Alaska

Invest in expanding and updating data collection systems, and workforce development studies in education for the State of Alaska. Expanding the universities' capacity to conduct studies and research in education will enable the following:

- Provide valuable ongoing information and data analysis for the standing Senate and House Education Committees, and ensure future reports meet state expectations.

- Support the State Education Plan prepared by the Alaska Department of Education & Early Development, including the following goals and activities:

  Collaborate with Alaska's postsecondary institutions to ensure that education-related degree programs and staff development programs reflect research, best practices, Alaska's diverse cultures, and alignment to academic standards, and are sufficient in scale and scope to meet the public school workforce needs.

  Develop a staff development infrastructure that is collaborative, need-based, research proven, and provides opportunities for continuous growth for new and experienced teachers.[1]

Expand Scholarship Opportunities for Education Majors

Expand scholarship opportunities for students in high-demand job areas such as education with specific emphasis on shortage areas. Re-evaluate loan forgiveness programs, and sustain and increase funding for programs that demonstrate efficacy in preparing and supporting teacher recruitment and retention.

3011

TEACHER EDUCATION GRADUATION DATA

This section of the report includes aggregate data on University of Alaska graduates eligible to enter the K-12 education workforce as licensed teachers, administrators, counselors, or district office administrators. The data reflects three-year trends in graduate rates reported by Academic Year (AY) starting in 2006 and ending in 2008.

GAP ANALYSIS: SHORTAGES IN THE TEACHING WORKFORCE

The Gap Analysis on the teacher workforce is based on survey data collected from K-12 school administrators. It also includes hiring data for the K-12 education system made available through collaboration between the University of Alaska Anchorage Institute for Social and Economic Research (ISER), the Alaska Department of Labor (DOL), the Alaska Department of Education & Early Development (EED), and the Alaska Teacher Placement (ATP). It provides a general overview of the K-12 education work and highlights turnover data in specific shortage areas.

EFFORTS TO ATTRACT, TRAIN, AND RETAIN QUALIFIED SCHOOL TEACHERS

Programs and activities that directly impact K-12 teachers employed in Alaska include professional development, curriculum and resources, mentoring, and research efforts sponsored through the University of Alaska system. This section highlights many of the programs UA offers.

THREE TO FIVE YEAR PLAN FOR TEACHER PREPARATION

Senate Bill 241 (2008) reads, "*The report must include an outline of the university's current and future plans to close the gap between known teacher employment vacancies in the state and the number of state residents who complete teacher training. The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[2]

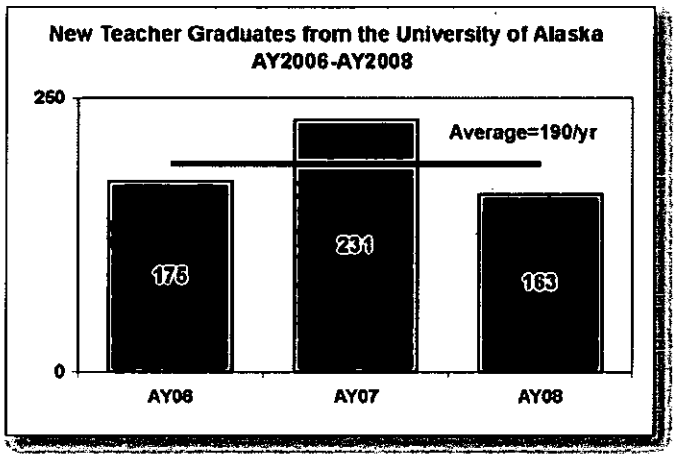
3012

TEACHER EDUCATION GRADUATION DATA

New Teachers for Alaska

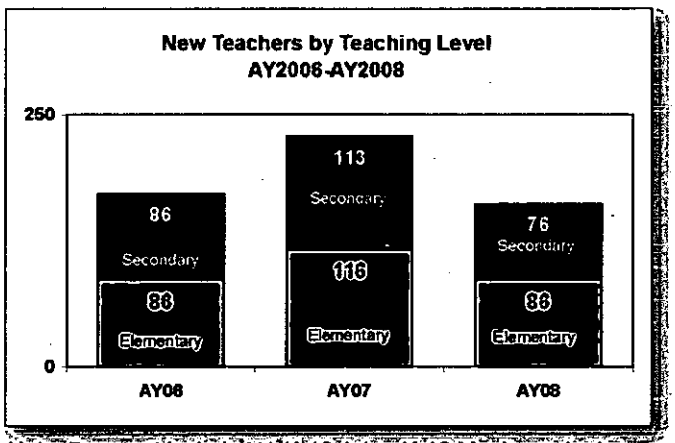
The University of Alaska graduated 175 new teachers in Academic Year (AY) 2006, 231 in AY07, and 163 in AY08. This number reflects bachelor's degrees, master's degrees, and licensure degrees in elementary, secondary, and early childhood for the three universities: University of Alaska Anchorage, University of Alaska Fairbanks, and University of Alaska Southeast. The increase from AY06 and AY07 reflects a variance due in part to the use of the start and end dates necessary to eliminate duplicate counts of graduates.



The three-year average of 190 graduates per year reflects the most accurate number of graduates eligible to enter the K-12 teacher workforce each year.

Of the teacher graduation count, the total breakdown by grade level shows that annually the University of Alaska graduates slightly more elementary teachers than secondary teachers each year. This trend may be the result of several factors, including that students can earn a bachelor's degree in elementary education in four years. A degree in elementary education is also offered at all three campuses and is available onsite or via distance delivery.

The majority of the secondary degree programs in education typically require five years of college before a student is eligible to teach. Most secondary programs require students to transfer into a master's program with a bachelor's degree in a core content area. Students with advanced degrees in mathematics and science in Alaska have many more employment opportunities in the state compared to a student graduating with a degree in elementary education.

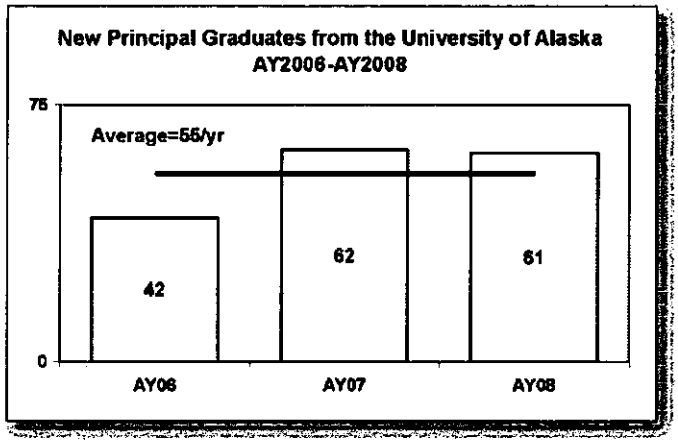


Note: Does not include UA K-12 Art or K-12 Music graduates

3013

New Principals for Alaska

The University of Alaska graduated 42 new principals in Academic Year (AY) 2006, 62 in AY07, and 61 in AY08. The average number of graduates completing a licensure program for administration is 55. However, not all graduates seek an administrative position following graduation; some continue as classroom teachers, mentors, or pursue district office positions.



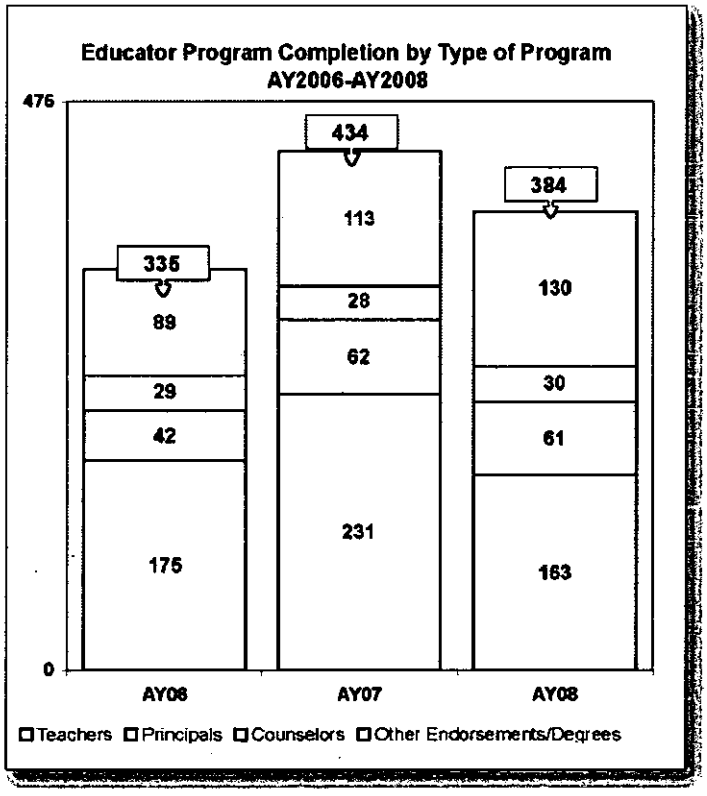
The University of Alaska Anchorage is currently the only campus offering a principal licensure program. The University of Alaska Southeast in Juneau will be launching a new program in 2009. The summer cohort has 20 new applicants, some of whom are former and current Alaska Statewide mentors.

Other Endorsements & Degree Programs

Each campus offers a variety of endorsement programs that lead to an advanced degree or, in some cases, a certificate of completion. Some of these programs are designed for current teachers who seek to add an endorsement and/or complete a master's degree while also fulfilling requirements for state certification.

The University of Alaska Anchorage offers degree programs in Special Education, Reading, and the state's only Superintendent degree program. UAA also has an affiliated speech language pathology program with East Carolina University (ECU). UAA provides the preparatory coursework via distance delivery to candidates applying to the ECU graduate program to become a speech-language pathologist.

The University of Alaska Southeast Masters of Arts in Teaching prepares teachers statewide, and enrollment in that program has increased 24% between 2006 and 2008. In addition, UAS expect to graduate in AY09 an additional 30 special education teachers.

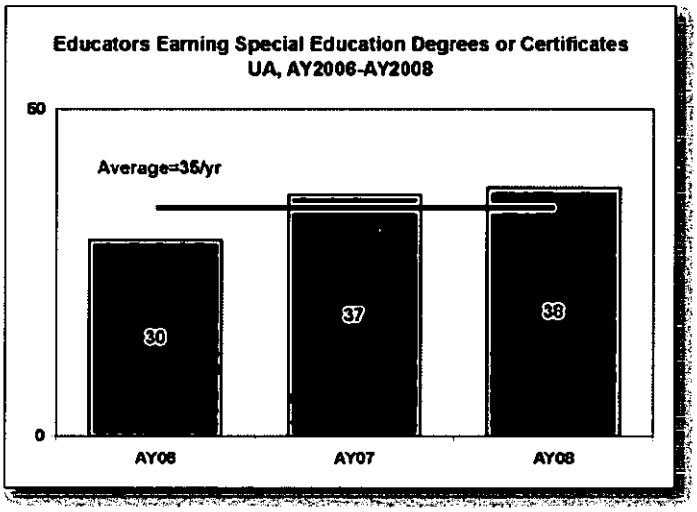


The University of Alaska Fairbanks offers the only terminal degree for educators through the Interdisciplinary Studies Ph.D. program. The UAF Elementary Licensure Program is a post baccalaureate, year-long elementary licensure program. UAF also offers Masters of Education degrees in Curriculum and Instruction, Cross-Cultural Education, Language and Literacy, Guidance and Counseling, and Reading. UAF is seeking to expand their teacher preparation program to include Special Education. The University of Alaska campuses in both Fairbanks and Anchorage offer degrees in Counseling and Guidance. Over the three-year average, collectively they graduate 29 counselors a year.

Over half, fifty-three percent (53%) of the University of Alaska education graduates are new teachers. According to trend data, each year the state of Alaska can expect 190 new teachers prepared to enter the K-12 education teacher workforce. However, not all students enroll in high demand teacher certification areas, nor do all graduates go on to teach after completing a degree in education.

New Special Education Teachers

The University of Alaska produces an average of 35 special education teachers each year. Special education teachers have a higher rate of turnover compared to other teaching positions; thus, administrators must replace teachers who leave a district or the teaching profession, and replace vacant positions in special education when teachers move from a special education position to a regular classroom teacher position within their district. As a result, special education teachers are in high demand each year. According to the Alaska Department of Education and Early Development, Special Education is also a federally designated teacher shortage area. Additional information is provided in the following sections on special education teacher turnover rates in Alaska. Enrollment in special education programs at UA is growing.



New Math & Science Teachers

Secondary teaching degrees awarded by the University of Alaska in mathematics and science over the three-year period averages out to 11 mathematics certificates and 24 science certificates a year.

Number of UA Graduates in Mathematics and Science UA, AY2006-AY2008

	AY06	AY07	AY08	3 Year Average
Mathematics	9	14	9	11
Science	23	35	13	24

3015

GAP ANALYSIS: SHORTAGES IN THE TEACHING WORKFORCE

Understanding the Alaska Teaching Workforce

- 8,902 public school classroom teachers currently work in Alaska.
- Teacher shortage areas in Alaska include special education, mathematics, and science.
- Each year, Alaska school districts hire roughly 900 to 1,100 teachers.
- Roughly 800 to 900 vacant positions are a result of teachers exiting the system.
- The average teacher salary in Alaska is $56,757.
- In 2010, roughly thirty-four percent (34%) of current teachers will be eligible for retirement.
- Sixty-five percent (65%) of Alaska's teachers are currently over the age of 40.
- Alaska Native teachers make up six percent (6%) of the teaching workforce.

Annually, Alaska districts hire roughly 900 to 1,100 teachers for vacant positions in every teaching subject. However, special education and secondary content areas are in disproportionately high-demand. Of the estimated 1,000 new positions, roughly 150-200 reflects "movers" – teachers who leave one school district for another, rather than exiting the system. Movers are common in Alaska as teachers migrate from district to district. The majority of vacancies are often in rural Alaska, yet the majority of the Alaska teachers live in urban areas.

Average Number of Teachers by School District Region FY06 to FY08

Number of Teachers by Region	Number of Teachers
Urban	5,580
Southeast	411
Road System/Other	236
Off the Road System/Rural	1,864
Total	8,091

Source: ISER tabulations of DEED Certified Staff Accounts.
Urban: Anchorage, Fairbanks, Kenai, Juneau, and Mat-Su
Southeast: All districts from Yakutat to Ketchikan (including Haines and Skagway)
Road System/Other: Denali, Alaska Gateway, Copper River, Delta Greeley, Nenana, and Valdez
Off the Road System/Rural: All other districts, typically accessible only by air

The Economics of Education in Alaska

In 1998 the Alaska Department of Labor Economic Trends reported, "*Jobs with local school districts in kindergarten through 12th grade number over 20,000— nearly seven percent of all wage and salary jobs in Alaska. No other industry in Alaska is more ubiquitous than education. Often local education is the single largest employer in a community. In fact, two of the state's 10 largest employers are school districts. In many communities, one of the few employers is the local school district.*"[3]

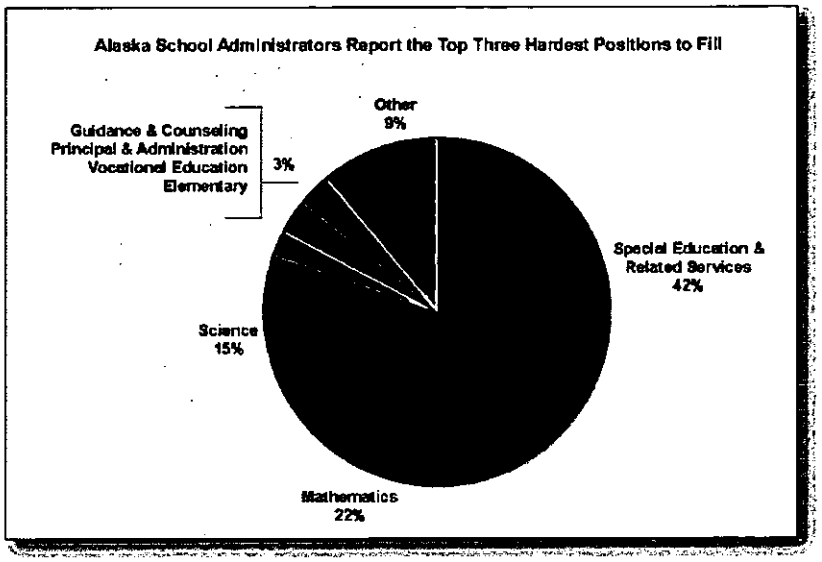
Further, the report finds education dollars represent economic activity in the state and in all of the communities education is present. Local education spending in Alaska is not only an investment in education but also has immediate economic impacts statewide. Ten years later, the report's findings still hold true, however the analysis needs to be updated to reflect the current economic impact of education accurately.

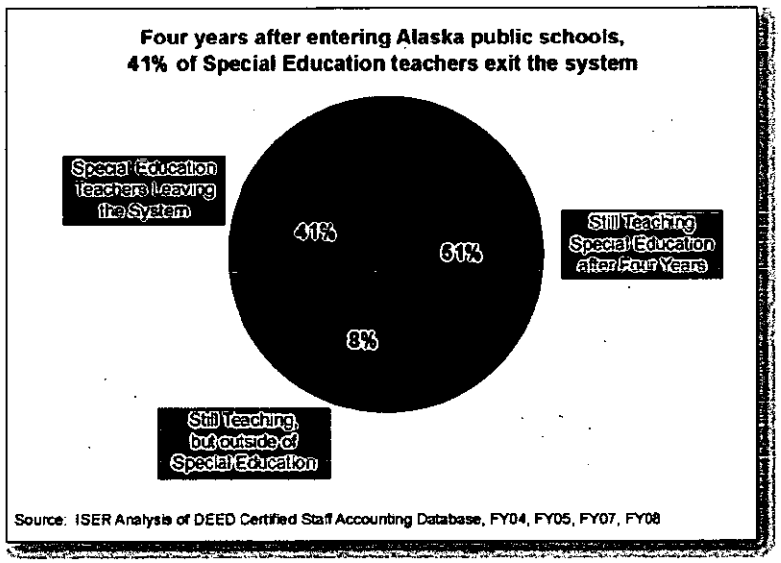
[3] Alaska Economic Trends (1998) Kelm, Diana, Editor Alaska Dept. of Labor. February 1998, Volume 18, Number 2

3016

Gap Analysis for Special Education, Mathematics, and Science

Special education vacancies are unquestionably the hardest to fill. This trend is equally common on a national level. While the need for special education teachers is not unique to Alaska, teaching in Alaska, especially rural Alaska, remains unique compared to the rest of the United States. In a recent survey conducted by Alaska Teacher Placement (M. Hill, 2008) school administrators reported the hardest K-12 education positions to fill include special education and related services at forty-two percent (42%) of the total responses, followed by mathematics (22%) and science (15%). Additional studies could be conducted to better understand the complexities of these trends.





According to a recent report by the Institute of Social and Economic Research at UAA, (A. Hill & Hirshberg, 2008) special education teacher turnover is higher compared to statewide turnover. Four years after entering a teaching position, forty-nine percent (49%) of special education teachers were no longer teaching special education, and of those, only eight percent (8%) remained in the Alaska system, but teaching outside of special education. However, simply producing more teachers in these areas may not address the issue of retention. The Alaska Statewide Mentor Project (ASMP) reported, "*Through grant funding, ASMP has been able to increase focus on mentoring special education teachers by pairing mentors with special education certifications to work with early career special education teachers. Working with a sub-sample of about a third of all new special education teachers, ASMP has retained over 80% each year.*"[4]

[4] Source: Alaska Statewide Mentor Project Research Summary 2004-08, Barbara L. Adams, Ph.D. Fall 2008

3017

The table below shows the average number of teaching positions, vacancies, and filled vacancies from 2006 to 2008 in the following three key shortage areas: special education, mathematics, and science. The average number of new University of Alaska graduates prepared in those fields (last row in the table), coupled with the difference between the average number of new teachers needed and the supply (UA graduates) shows that even if every University of Alaska graduate takes a job with Alaska schools, districts across the state would still need to recruit from outside the state to fill the gap.

Special Education Gap

After accounting for the teachers who move within the state, districts need to hire about 100 new special educators each year. UA graduates, based on a three year average, account for roughly 35 new special educators each year; – thus, districts need to find at least 64 teachers from outside of Alaska.

Mathematics Gap

Mathematics shows the greatest percentage gap. Districts need an average of 48 new mathematics teachers each year, and the University of Alaska prepares roughly 11, which equates to one-fourth the number needed.

Science Gap

The science numbers, aggregated across all science areas, demonstrates the universities' capacity to prepare teachers. Across the state, districts need to hire 41 new science teachers, and the University of Alaska graduates 24. However, Superintendents report their hardest-to-fill fields includes the physical sciences. Again, for a variety of reasons, many outside of the university's sphere of influence, newly prepared teachers might not accept a position after completing a teacher preparation program

Shortage Teacher Assignments in Alaska
Average, AY2006-AY2008

	Special Education	Math	Science
Average Number of Teaching Positions Districts Must Fill			
Total Teacher Positions	1,068	593	494
Filled by:			
Teachers Continuing in their Districts	907	516	432

Filled by:			
Experienced Teachers New to Alaska	47	16	16
New Teachers	51	32	25
The number of University of Alaska Graduates			
Average Number of UA Teacher Graduates	**35**	**11**	**24**

3018

EFFORTS TO ATTRACT, TRAIN, AND RETAIN QUALIFIED SCHOOL TEACHERS

To increase the number of teachers prepared in Alaska, more Alaska students will need to enroll and complete degree programs in education. The University of Alaska has an array of programs and activities designed to support teacher recruitment and retention of K-12 educators. In addition, the university has made K-12 Outreach and Bridging Programs a priority for future operating requests to the legislature. This section lists over 100 programs, activities, and initiatives underway at the university in this area. Expansion of the data collection methods for future reports will include a more comprehensive analysis of these efforts.

THREE TO FIVE YEAR PLAN FOR TEACHER PREPARATION

The University of Alaska is committed to meeting the workforce needs of Alaska public schools. Producing quality teachers and administrators for Alaska who are likely to remain teaching in Alaska is the primary concern for the Teacher Education Planning Group. Additionally, the Teacher Education Planning Group is tasked with development and implementation of a three-to-five year plan. This group has established the following priorities to be addressed in the UA Teacher Education Statewide Plan for Teacher Preparation. This effort will maximize resources and increase collaborations internally and system-wide. The group has engaged stakeholders in education, industry, and state agencies in this effort. Collaborations are focused around the workforce needs of Alaska.

Senate Bill 241 (2008) states, "*The report must include an outline of the university's current and future plans to close the gap between known teacher employment vacancies in the state and the number of state residents who complete teacher training. The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[5]

Members of the Teacher Education Planning Group

- John Pugh, Chancellor of UAS, Lead
- Melissa Hill, Director of ATP at Statewide Office of Academic Affairs
- Dean Larry Harris, School of Education UAS
- Dean Eric Madsen, School of Education UAF
- Dean Mary Snyder, College of Education UAA

Priorities for the Teacher Education Planning Group

The following priorities are to be addressed over the next three to five years under SB241.

1. Expansion of Special Education Teacher Preparation Program
2. Recruitment of New Teacher Through Outreach
3. Program Access Through Distributed Teaching and Learning
4. Focus Efforts in Science, Technology, Engineering and Mathematics, STEM
5. Early Childhood Education

[5] Source: Sec. 2. AS 14.40.190(b) Laws of Alaska (2008) Source Chapter No. HCS CSSB 241(HES) of the 25th Legislative Session.

1. Special Education

According to data collected through the statewide supply and demand studies and school district administrators, special education is the hardest position to fill and has the highest turnover rate. The Teacher Education group will work collaboratively to implement a cross-MAU endorsement and degree program in special education system-wide offered via distance. Funding for Special Education would provide a faculty member at UAF to ensure that each program has the capacity to support the needs of school districts. UAF is the only campus that does not have a special education program in the school of education. This funding will respond to the highest need identified by former Fairbanks Northstar Borough School District Superintendent Ann Shortt, current Superintendent Nancy Wagner, and virtually all other Alaska superintendents.

2. Recruitment Efforts

It has become apparent schools and colleges of education need to focus more on recruiting students in high-demand jobs as early as intermediate grades to encourage college and high school students to become teachers. Education units need to connect with other departments on campus and with school districts to set up recruitment activities. Each campus may need to look at their existing recruiting resources and engage their enrollment and student services offices in this effort. The MAUs will work collectively to develop a system-wide marketing effort that each of the schools of education would implement.

3. Program Access Through Distributed Teaching and Learning

Serving students in rural areas where the need for teachers is greater due to teacher turnover is a priority for the State and University. Data suggests that teachers trained in their region have a higher retention rate. Providing access to education to students in rural areas will require resources from distance education programs and school districts to build infrastructure to deliver courses and monitor practicum students via distance.

4. STEM Resources

Science and Mathematics are core areas under No Child Left Behind. Additionally, those positions are the second "hardest to fill" according to survey data from K-12 school administrators. Meeting the needs in secondary core content areas will require increased faculty awareness and the capacity to engage STEM colleagues across the campuses in a dialog about ways to produce more STEM teachers. This effort will require the campus administration to enlist the assistance of the appropriate deans and directors who supervise faculty and researchers in the STEM areas.

5. Early Childhood Education

Better coordination and alignment is needed to develop career paths in programs, and increase the university's involvement in early childhood education. This alignment and articulation will provide students with programs that will meet their needs, as well as those of the State. However, compensation is a barrier the state may want to examine to increase recruitment and retention of early childhood providers. The University of Alaska applauds the State's effort to increase the number of children receiving early childhood services, and welcomes collaboration with the Alaska Department of Education & Early Development on this very important issue.

3023

Long Term Goals of the Planning Group

1. Establish the UA Teacher Education consortium or taskforce, which will continues to meet with school districts and industry representatives to engage these stakeholders in the planning effort.

2. Develop an ongoing, long-range planning process for Teacher Education based on the priorities identified by stakeholders and the University of Alaska Board of Regents.

3. Work with school districts and policymakers to research current recruitment and retention challenges, best practices, and alignment of K-12 and college ready.

4. Develop an integrated, cross-MAU marketing campaign to recruit students into the teaching profession with the goal of increasing enrollment in and awareness of the advantages of completing a teacher preparation program. Similar to the "Hot Jobs" and other industry career guides, education needs to develop resources and materials for education.

RECOMMENDATIONS & FISCAL NOTE REQUEST

Invest in Education Studies and Research for the State of Alaska

Invest in expanding and updating data collection systems, including workforce development studies in education for the State of Alaska. Expanding the university's capacity to conduct studies and research in education will enable the following:

- Provide ongoing valuable information and data analysis for the standing Senate and House Education Committees, and ensure future reports meet state expectations.

- Support the State Education Plan prepared by the Alaska Department of Education & Early Development, including the following goals and activities:

  Collaborate with Alaska's postsecondary institutions to ensure that education-related degree programs and staff development programs reflect research, best practices, Alaska's diverse cultures, and alignment to academic standards, and are sufficient in scale and scope to meet the public school work force needs.

  Develop a staff development infrastructure that is collaborative, need-based, research proven, and provides opportunities for continuous growth for new and experienced teachers.[6]

3024

Invest in Special Education Teacher Preparation

Invest in growing the special education teacher preparation programs at the University of Alaska Fairbanks. Currently, UAF is the only school of education in the university system that does not have a special education program. Funding to support this effort would increase the number of special education teachers for the state of Alaska.[7]

Expand of Scholarship Opportunities for Education Majors

Expand scholarship opportunities for students in high-demand job areas such as education with specific emphasis on shortage areas. Re-evaluate current loan forgiveness programs, and sustain and increase funding for programs that demonstrate efficacy in preparing and supporting teacher recruitment and retention.

University Receipts Received in One Year and Expended in the Succeeding Fiscal Year

Regarding the request, "The University of Alaska shall, in the report required under 24 AS 14.40.190(a) [AS 14.40.190], report the amount of university receipts received in one year and expended in the succeeding fiscal year. The University of Alaska shall, in the report required under 24 AS 14.40.190(a) [AS 14.40.190], report the amount of university receipts received in one year and expended in the succeeding fiscal year."[8]

This information can be found in Note #7 of the Financial Statements submitted by the University of Alaska finance department.

Requests for Additional Information

For additional copies of the report, information on specific items, or questions, please contact Melissa Hill at the University of Alaska at (907) 450-8400.

2/20/09 OVERVIEW: ALASKA CHARTER SCHOOLS

Charter School Funding
Relevant Statutes

Sec. 14.03.260. Funding for charter school.

(a) A local school board shall provide an approved charter school with an annual program budget. The budget shall be not less than the amount generated by the students enrolled in the charter school less administrative costs retained by the local school district, determined by applying the indirect cost rate approved by the Department of Education and Early Development. The "amount generated by students enrolled in the charter school" is to be determined in the same manner as it would be for a student enrolled in another public school in that school district.

Sec. 14.17.905. Facilities constituting a school.

(a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six; and

(B) one secondary school, which includes students in grades seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than 200 shall be counted as a part of the school in the district with the highest ADM.

(b) Notwithstanding (a)(3) of this section, a charter school shall be counted as a separate school if the charter school has an ADM of at least 150 students.

Sec. 14.17.450. School size factor.

(a) For purposes of calculating a school's ADM to determine state aid, the ADM of each school in a district shall be computed by applying the following formula:

If the student count In a school is			The adjusted student count is			
At least		But less than	Base		Multiplier	The number of Students in excess of
10	-	20	39.6			
20	-	30	39.6	+	(1.62 x	20)
30	-	75	55.8	+	(1.49 x	30)
75	-	150	122.85	+	(1.27 x	75)
150	-	250	218.1	+	(1.08 x	150)
250	-	400	326.1	+	(0.97 x	250)
400	-	750	471.6	+	(0.92 x	400)
750 or over			793.6	+	(0.84 x	750).

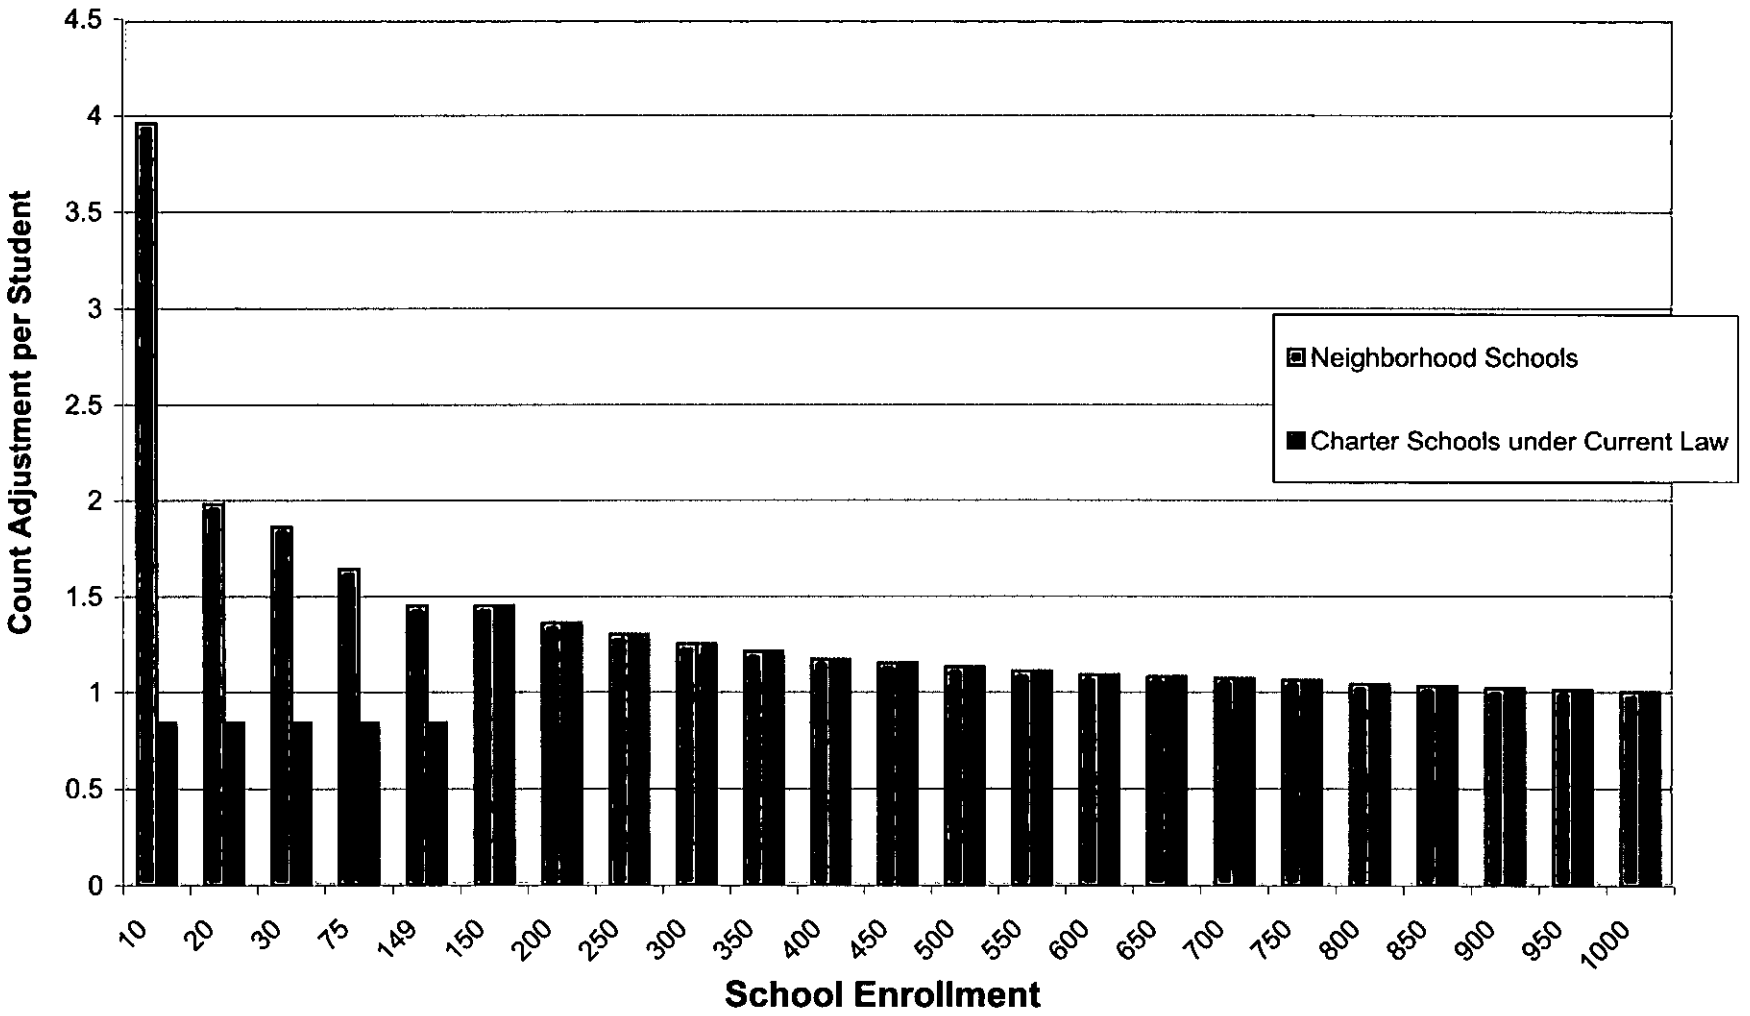
(b) If the ADM in a school is less than 10, those students shall be included in the ADM of the school in that district with the lowest ADM as determined by the most recent student count data for that district.

**Note:

The adjusted student count for charter schools with fewer than 150 students is based on the same formula as the largest school in the district (AS 14.17.905). Since urban districts generally have a high school with more than 750 students, their smaller charter schools receive .84 (84%) of the base student allocation for each of their students. This is the lowest rate for any non-correspondence school in the state.

Adjusted Student Count for Charter Schools vs. Neighborhood Schools

The adjusted student count of each school is the basis of state funding. The number of students enrolled in a school is increased or decreased according to the formula in AS 14.17.450, to determine the school's adjusted student count. That adjusted student count is then multiplied by the district cost factor, the special needs factor and, finally, by the base student allocation to determine the amount of funding.



* This chart assumes that a charter school with fewer than 150 students has a student count adjustment of .84 under current law, because it is located in a district that contains a school with over 750 students, such as Anchorage, Fairbanks, Mat-Su or Juneau. A charter school in a community such as Kenai, Bethel, Ketchikan or Nome would have a student count adjustment of .92 or .97.

Senator Joe Thomas
January 29, 2009

The Role of the "Adjusted Student Count" in School Funding

The adjusted student count of each school is the root of state funding for school districts. The number of students enrolled in a school is increased or decreased according to the formula in AS 14.17.450, to determine the school's adjusted student count. That adjusted student count is then multiplied by the district cost factor, the special needs factor and, finally, by the base student allocation, to determine the amount of funding.

Student Count (school enrollment)		----------	***Becomes***	----------		**Adjusted Student Count**	***Equals***	**Student Rate** (per-student adjustment)
At least	**But less than**	**Base**	**plus (**	**Multiplier**	**times**	**Students in Excess of Column 1)**		
10 students to 20 students		39.6	+	0			10 students = 39.6 adjusted student count	=	3.96 per student
							19 students = 39.6 adjusted student count	=	2.08 per student
20 students to 30 students		39.6	+	(1.62	x	students over 20)	20 students = 39.6 adjusted student count	=	1.98 per student
							29 students = 54.18 adjusted student count	=	1.87 per student
30 students to 75 students		55.8	+	(1.49	x	students over 30)	30 students = 55.8 adjusted student count	=	1.86 per student
							74 students = 121.36 adjusted student count	=	1.64 per student
75 students to 150 students		122.85	+	(1.27	x	students over 75)	75 students = 122.85 adjusted student count	=	1.64 per student
							149 students = 216.83 adjusted student count	=	1.46 per student
150 students to 250 students		218.1	+	(1.08	x	students over 150)	150 students = 218.1 adjusted student count	=	1.45 per student
							249 students = 325.02 adjusted student count	=	1.31 per student
250 students to 400 students		326.1	+	(0.97	x	students over 250)	250 students = 326.1 adjusted student count	=	1.30 per student
							399 students = 470.63 adjusted student count	=	1.18 per student
400 students to 750 students		471.6	+	(0.92	x	students over 400)	400 students = 471.6 adjusted student count	=	1.18 per student
							749 students = 792.68 adjusted student count	=	1.06 per student
750 or more students		793.6	+	(0.84	x	students over 750).	750 students = 793.6 adjusted student count	=	1.06 per student
							1,000 students = 1003.6 adjusted student count	=	1.00 per student

Example Adjusted Student Count Calculations

Student Count (school enrollment)							**Adjusted Student Count**
	Base	**plus**	**Multiplier**	**times**	**Students in Excess of bottom of the bracket**		
100 students in neighborhood school	122.85	+	1.27 multiplier	X	100 – 75 = 25	1.27 X 25 = 31.75	122.85 + 31.75 = **154.6**
*100 students in Anc/Fbnks/Jun/ charter school	No base	+	.84 multiplier for district's largest school	X	all 100 students	*.84 X 100 = 84*	*0 + 84 =* ***84***

**Charter schools with enrollments under 150 students do not go through the adjusted student count formula as individual schools. Instead, their students are added to the enrollment of the largest school in their district. Therefore, the adjusted student count of these charter schools is based on just the "multiplier" for additional students at large schools.*

Follow Up Flag: Follow up
Flag Status: Blue

Dear Representative Seaton,

Thank you for holding the meeting regarding SB 57, equitable funding for charter schools in Alaska. Fireweed Academy here in Homer is providing quality education that meets the needs of our 6th grader who learns by doing. They also did a remarkable job with our daughter, who is currently at Homer High School taking accelerated math and science classes. Our entire family will miss Fireweed dearly and will continue to do what we can to support its continued success, when our son moves on to the Homer Middle School next year.

Sincerely,
Cynthia Morelli

Charter school profiles are on the following pages.

CHARTER SCHOOL PROFILES

Alaska Native Charter School

Students Enrolled: 153
Grade Levels: K-6
Type: Citizen/Community
State Board of Education Approval: March 28, 2007
Date Charter Expires: March 28, 2010

Mission: The mission of the Alaska Native Cultural Charter School is to realize the reality of our unique urban environment with its rich Alaska Native traditions including cultural corporations and organizations, and with their partnership develop well prepared Alaska Native students who are able to contribute to the community. The school will bring Elders, Alaska Native Leaders, youth, parents, and teachers together to infuse Alaska Native values, cultures, and languages into active learning experiences. A curriculum that utilizes traditional ways of knowing and methods of instruction will successfully transition rural Alaska Native students into urban community while fostering pride and a strong sense of cultural identity. The school engages in educational research and serves as a demonstration school for other teachers and administrators who wish to develop effective methodologies and approaches for working with Alaska Native and Native American students and their families.

Purpose: Alaska Native Cultural Charter School builds student excellence through traditional cultural learning.

Academy Charter School

Students Enrolled: 231
Grade Levels: K-8
Type: Citizen/Community
State Board of Education Approval: April 28, 1997
Date Charter Expires: July 1, 2015

Mission: Our mission is to create a learning system that encourages and develops students' inherent abilities to be competent, confident, productive and responsible young adults. We will strive to produce a generation of young people who possess the habits, skills and attitudes necessary to empower them to succeed as life long learners and outstanding citizens.

Purpose: The primary focus of the Academy Charter is on the well-being of the children of our community. It is the goal of the approximately 10 currently active members (project designers) to create a purposeful, living laboratory, which will operate in a caring, supportive and closely monitored environment. As an integral part of the Matanuska-Susitna School District, the Charter's successful innovations will be transferable to other schools in the District and to the larger world community, thus benefiting all of our children. Charter Community members seek to make education a community passion.

Aquarian Charter School

Students Enrolled: 351
Grade Level: K-6
Type: Language & Arts
State Board of Education Approval: April 28, 1997
Date Charter Expires: July 1, 2012

Mission: The Aquarian Charter school is dedicated to providing Anchorage area children freedom to achieve their human potential by endeavoring to: celebrate each child's uniqueness and diversity; provide a stimulating academic program with high expectations in a joyful, stress-free atmosphere; assure there is a safe and nurturing environment to instill well-being for all students; empower thinking, understanding individuals to communicate and live in a challenging and changing world; pique interest, awareness and involvement in the neighborhood and global community; facilitate creative expression through language, drama, art, music and sports; stimulate continual family interaction with children and their educational development.

Purpose: The Aquarian Charter School is designed for bright, high-achieving children from families with working parents.

Anvil City Science Academy

Students Enrolled: 44
Grade Level: 5-8
Type: Science
State Board of Education Approval: June 9, 1998
Date Charter Expires: October 1, 2013

Mission: "Through a cooperative network of parents, teachers and community members, ACSA will provide a safe, nurturing, family-oriented, multi-age learning environment supporting a highly rigorous academic program for higher education preparation with high standards of responsible citizenship. Current technology will be incorporated in all aspects of the students' education. ACSA will promote academic excellence, character development and educational enthusiasm resulting in responsible, productive citizens."

Purpose: Anvil City Science Academy was created and shaped by a small nucleus of like-minded parents, teachers, and community members interested in a family-oriented, character-developing, highly rigorous academic education as well as concern for the future of their own and community children. It is an expectation that all students will have a high achievement, for each has great potential. Technology and scientific research methods are an integral part of the curriculum, as it will be an integral part of every child's future.

Aurora Borealis Charter School

Students Enrolled: 178
Grade Levels: K-8
Type: Individual Learning Styles
State Board of Education Approval: April 28, 1997
State Board of Education Approval: July 1, 2012

Mission: To provide teachers and parents with the opportunity, responsibility, and accountability for the management and control of the total school curriculum and environment; to produce a flexible set of learning outcomes measured with different and authentic forms of assessment; to provide students with an educational opportunity of the highest quality; and to foster student, parent, and community involvement through the use of community resources and partnerships.

Purpose: The purpose of Aurora Borealis School is to offer the finest academic program possible that will provide for increased learning opportunities for all students in an environment designed to meet the unique needs of each student by providing opportunities consistent with their learning styles [and] to improve pupil learning by creating a school with high and rigorous standards for pupil performance.

Ayaprun Elitnaurvik

Students Enrolled: 145
Grade Levels: K-6
Type: Yup'ik Immersion
State Board of Education Approval: June 5, 1999
Date Charter Expires: June 1, 2009

Mission: Ayaprun Elitnaurvik Yup'ik Immersion School is committed to providing a public school option where all members, students, staff, and parents, function democratically. Students are valued as unique individuals who are encouraged to learn both independently and collaboratively. A hands-on approach is emphasized integrating the arts and the appreciation of the natural world. The School Community embraces diversity, creating small, mixed-aged, and family-oriented environments, which exhibit mutual respect, and caring.

Purpose: Ayaprun Elitnaurvik Yup'ik Immersion School is a public school operating under the auspices of the Lower Kuskokwim School District Board of Education. Ayaprun Elitnaurvik Yup'ik Immersion School offers a choice for students who might benefit from an integrated, thematic approach to education using the arts, the environment, and culture in a small, intimate learning community.

Chinook Montessori Charter School

Students Enrolled: 155
Grade Levels: K-8
Type: Montessori
State Board of Education Approval: April 16, 1996
Date Charter Expires: July 1, 2011

Mission: Chinook Montessori Charter School, a school of choice, will strive to create a dynamic educational environment, which fosters educational excellence and cultivates personal, intellectual, and emotional growth and responsibility. We will provide this through an alliance formed through a seamless web of educators, parents, businesses and community members.

Purpose: The philosophy of Chinook Montessori Charter is grounded in the belief that learning is interwoven with life. The community serves as our campus with Chinook Montessori School acting as our headquarters. The school offers a nurturing multi-age environment, which supports a highly rigorous academic program. Integrated teaching encourages students to make connections between ideas and concepts in different content areas. Chinook Montessori School values time. The flexibility of time allows for small group seminars, grand conversations and investigations with teachers and students. Chinook Montessori is a professional development site, which values innovation, teacher research and excellence in teaching.

Eagle Academy Charter School

Students Enrolled: 165
Grade Levels: K – 6
Type: Spalding
State Board of Education Approval: December 7, 2004
Date Charter Expires: December 6, 2009

Mission: Eagle Academy offers an academically challenging educational program requiring students to master Eagle Academy's performance standards before progressing to the next level of curriculum.

Purpose: The Spalding method of teaching is the basis for instruction across curriculum in all grade levels, employing a multi-sensory approach to learning. Teaching of core subjects is given priority in scheduling and other areas of school operation. Students are placed at their appropriate instructional level for Language Arts and Math based on results of standardized tests, along with classroom grades and assessments. For all other subjects (Social Studies, Science, Art, Music, PE and Technology) students are grouped by grade level.

Rewards, incentives, effort grades, and discipline are individual, based on each student's own behavior, participation and performance. Each family is required to fulfill a 16 hour service commitment per year

Curriculum: Language Arts instruction is based on Spalding's The Writing Road to Reading. Saxon Math is structured in incremental learning steps, which is effective for retaining and applying mathematical concepts. The Core Knowledge History and Geography textbook series is utilized for Social Studies. Scott Foresman Science offers a combination of content and hands-on learning. Students receive one hour each of PE, Technology, Art and Music instruction weekly.

Effie Kokrine Charter School

Students Enrolled: 102
Grade Levels: 7-12
Type: Conversion/At-Risk/Native
State Board of Education Approval: June 10, 2005
Date Charter Expires: July 1, 2015

Mission: The mission of Effie Kokrine is "to provide educational opportunities for students to succeed in the world by developing a strong sense of purpose, identity, place and community through cultural and academic empowerment."

Purpose: The school's vision "is a place of support, development and learning for the whole child. It uses their cultural background as the foundation of who they are."

Fronteras Spanish Immersion Charter School

Students Enrolled: 189
Grade Levels: K-8
Type: Spanish Immersion
State Board of Education Approval: June 10, 2005
Date Charter Expires: July 1, 2015

Mission: Fronteras Charter School is a Spanish Immersion K-8 academic center that promotes high academic success in a nurturing, creative multiage environment; and foster increased cultural understanding, communication and citizenship in our community, nation and world.

Purpose: Expanding the spectrum of thought and the ability to communicate in today's evolving world makes the goal of acquiring a second language profoundly important. Being immersed part of each day in Spanish, each child will be nurtured; gaining well rounded personal development through meaningful and creative academic and social exploration. Fronteras Charter School utilizes the partnership of parents, community resources, technology, skilled instructors' service, and stimulating curriculum to realize high academic success, language acquisition, critical thinking, good citizenship, and the development of healthy, global minded individuals.

Family Partnership Charter School

Students Enrolled: 494
Grade Levels: K-12
Type: Home School
State Board of Education Approval: April 28, 1997
Date Charter Expires: July 1, 2012

Mission: The charter school is committed to a framework in which mankind's first and most basic school, the home, is supported by the community as a viable education alternative. The charter school is a non-sectarian partnership school between students, parents, professional educators and community members where as many families as desire will customize an education for their children. It utilizes a school without walls wherein parents are to bear the primary responsibility for the management of their children's education.

Purpose: We live in an ever-changing world. Every day we discover new opportunities for learning. New tools, technology, methods and ways of thinking demand a more flexible and open model for educational program development. The Family Partnership Charter School provides a framework for the responsible use of public resources in which students, parents and educators can make the most of these opportunities.

Fireweed Academy

Students Enrolled: 72
Grade Levels: 3-6
Type: Theme Immersion
State Board of Education Approval: April 28, 1997
Date Charter Expires: July 1, 2012

Mission: To provide a compassionate learning environment that gives students, parents, teachers and community members opportunities to develop self-reliance, cooperation, creativity, reasoning ability, personal growth and academic achievement.

Purpose: The Fireweed Academy Charter School recognizes many different styles of learning. Many students do well in a traditional classroom, yet some students learn best when they have more choices and when lessons are individualized and tied to real-world applications. To accommodate such students, the Fireweed Academy Charter School implements the following teaching methods: Theme Immersion Studies, Socratic Practice, Experiential Learning, Project-based Curricula, and Interdisciplinary Education. The establishment of Fireweed Academy not only benefits individual students, but also provides the Homer area community with more options for tested activities, methods, and curricula.

Frontier Charter School

Students Enrolled: 364
Grade Levels: K-12
Type: Home School
State Board of Education Approval: March 20, 2003
Date Charter Expires: June 30, 2013

Mission: Frontier Charter School is a resource for curriculum, technology and community. Frontier serves full-time home schooling families in the Anchorage School District who are pursuing academic excellence.

Purpose: Frontier's program philosophy states: One of the primary reasons parents choose to home-school their children is their belief that they can help each of their children achieve academic excellence. This belief stems from the fact that they are willing and able to give education top priority and that they can build an individualized education program that meets the needs of each child. Frontier Charter School provides qualified instructors and community resources including guidance to parents, books and supplies, online courses, one-on-one tutoring, distance learning courses, classes offered by local vendors, and access to facilities as necessary.

Highland Tech High

Students Enrolled: 272
Grade Levels: 7-12
Type: Technical
State Board of Education Approval: March 20, 2003
Date Charter Expires: August 31, 2013

Mission: To equip our students with the academic, social, and technical skills to excel in today's world and contribute positively to our society and the future.

Purpose: Highland Tech High was developed for students in grades 7 through 12 interested in an alternative educational environment that combines interdisciplinary, real world, project-based learning with rigorous academic expectations. The program focuses on four key principles: individualization, project-based studies, comprehensive assessments, and community immersion. Students will meet district and state standards, as well as those incorporated in the HTH curriculum.

Kaleidoscope School of Arts & Sciences

Students Enrolled: 159
Grade Levels: K-4
Type: Arts/Science
State Board of Education Approval: March 16, 2004
Date Charter Expires: December 4, 2018

Mission: "Kaleidoscope School of Arts & Sciences is a public elementary charter school that develops student academic and life skills through the integrated study of arts and sciences. Like all Alaskan charter schools, the KSAS offers a free, public, and unique choice within the Kenai Peninsula Borough School District system for innovative instruction focusing on student achievement, creative problem solving, life-long learning, and parent involvement. We have chosen the name Kaleidoscope as the image reflects what we want to accomplish: to use multiple 'lenses' to create new patterns of understanding."

Purpose: KSAS combines current magnum classroom concepts from Sears Elementary by centering all lessons on science and the arts, using the philosophy that students learn best through hands-on practice.

Juneau Community Charter School

Students Enrolled: 68
Grade Levels: K-6
Type: Arts/Music
State Board of Education Approval: April 28, 1997
Date Charter Expires: July 1, 2016

Mission: The Juneau Community Charter School provides a balanced education using developmentally appropriate techniques, which tap into the child's need to explore and create in all fields of learning. Our strong connection with parent and community resources gives students diverse perspectives and unique learning opportunities.

Purpose: The Juneau Community Charter School's core identity includes a structure consisting of multi-age classrooms and an overall small school size; teaching methods which address the whole child, are arts-integrated and use constructivist methods and curricula; a cooperative school model in which parental involvement and engagement is paramount; frequent interaction with individuals and institutions in the larger Juneau community; long-term relationships of students, staff and families; and a high degree of teacher autonomy.

Ketchikan Charter School

Students Enrolled: 175
Grade Levels: K-8
Type: Core Knowledge
State Board of Education Approval: April 28, 1997
Date Charter Expires: July 1, 2012

Mission: Through the cooperation of parents, teachers, and students, Ketchikan Charter School creates a learning environment that fosters growth of character, high academic achievement, and the love of learning, resulting in responsible, productive citizens.

Purpose: The Ketchikan Charter School Committee sees a need to offer parents another choice in educating their children in this District. A structured and more challenging curriculum that includes specific and sequential content, skills, and knowledge is wanted and needed. Regular assessment and early remediation must be available. The Charter School Law enables students, parents, teachers and administrators to accept responsibility for the education of children.

Midnight Sun Family Learning Center

Students Enrolled: 162
Grade Levels: K-8
Type: Technology/Citizenship
State Board of Education Approval: April 28, 1997
Date Charter Expires: July 1, 2015

Mission: Through a cooperative network of parents, teachers, and community members, Midnight Sun Family Learning Center will provide a safe, nurturing, family-oriented, multi-age learning environment supporting a highly rigorous academic program for higher education preparation with high standards of responsible citizenship. Current technology is incorporated in all aspects of the students' education. Midnight Sun Family Learning Center promotes academic excellence, character development, and educational enthusiasm resulting in responsible, productive citizens.

Purpose: Midnight Sun Family Learning Center was created and shaped by a small nucleus of like-minded parents, teachers, and community members interested in a family-oriented, character-developing, highly rigorous academic education as well as concern for the future of their own and community children. It is an expectation that all students will have high achievement, for each has great potential. Technology is an integral part of the curriculum as it will be an integral part of every child's future.

Soldotna Montessori Charter School

Students Enrolled: 161
Grade Levels: K-6
Type: Montessori
State Board of Education Approval: November 30, 2006
Date Charter Expires: June 30, 2012

Mission: Soldotna Montessori will treat each child with respect in a nurturing, supportive, academic environment. The school is setting a high level of expectation for the quality of work and will give each child the opportunity to explore and discover on their own. They expect each child to become a self-confident life long learner.

Purpose: The focal points of the Soldotna Montessori School are to: create a prepared environment in which each child is able to develop self discipline and individual strengths; to develop the child's ability to work individually or with a group to solve problems; to accept the unique nature of each child; to encourage the child to learn to live and work responsibly within the classroom, school, and community; to promote and support parental involvement; and to help each child develop responsible attitudes toward self, others and the environment and to become a socially conscious individual.

Star of the North Secondary School

Students Enrolled: 207
Grade Levels: 7-12
Type: Conversion/At-Risk
State Board of Education Approval: March 16, 2004
Date Charter Expires: March 16, 2014

Mission: To positively intervene on the behalf of young people at risk for not earning a high school diploma.... and provide a wider base for alternative education in the Fairbanks North Star Borough School District.

Purpose: "The Career Education Center (CEC) and the North Pole Leadership Academy (NPLA) are currently successfully serving the needs of 150 FNSBSD students for whom the traditional high school model has failed. Star of the North Secondary School views creating a Charter and gaining the fiscal autonomy allowable under such a contract as a sensible way to guarantee that the needs of our students at most risk for school failure will be addressed. We will continue to work closely with the school district in order to help disengaged students recover their dreams of earning a high school diploma."

Tongass School of Arts & Sciences

Students Enrolled: 152
Grade Levels: K-6
Type: Arts/Science
State Board of Education Approval: March 20, 2003
Date Charter Expires: August 31, 2011

Mission: To provide an educational experience for students that includes real-life and real-world experiences and builds on themes related to the arts and sciences; creates an educational environment that provides positive relationships within the classroom; and develops respect and appreciation for the diversity of people, cultures, ideas and perspectives.

Purpose: A meaningful education includes an instructional program that develops a foundation of skills and knowledge and provides students, according the their developmental levels, the freedom to ask important questions and to seek answers; to analyze, investigate, and synthesize information and to develop independent opinions and conclusions through inquiry, dialogue, and reflection.

Twindly-Bridge Charter School

Students Enrolled: 214
Grade Levels: K-12
Type: Home School
State Board of Education Approval: March 11, 2005
Date Charter Expires: August 31, 2010

Mission: "...will provide a meaningful education and encourage a strong bond to develop between students, families, teachers, staff, our district, and our community. Students will develop a solid core of skills using creativity as they develop critical thinking skills." Our mission is to provide an instructional program that builds on students' interests. We believe that this approach promotes creativity and critical thinking.

Purpose: The school will stress the Multi-Intelligences Theory and Problem-Based Learning in a home school format. The educational approach of TBCS is to focus on the individual student and his/her own interests, weaknesses and strengths, completing independent study at home and in supplementary classes held in the school's classrooms and labs.

Winterberry Public School

Students Enrolled: 185
Grade Levels: K-8
Type: Waldorf

Mission: "Our mission is to nurture and promote the development of healthy, responsible, and creative human beings. We aim to enliven and support families in our local community. Specially trained teachers use developmentally attuned approaches and the arts to encourage academic achievement and creativity, social intelligence and ecological awareness."

Purpose: Winterberry School provides an innovative, standards-based education, enhancing the growth of student creativity and imagination through the arts. Our aim is to provide a holistic learning environment and demonstrate that all children are natural and inspired learners who can achieve. To do this, we will use the Whole Child Curriculum, based on the Waldorf educational philosophy.

magnet school

Dictionary: magnet school

n.

A public school offering a specialized curriculum, often with high academic standards, to a student body representing a cross section of the community.

US-History-Encyclopedia: Magnet Schools

Top

Magnet Schools gained popularity in the 1970s, when the federal courts accepted such schools as a method of desegregation, as in *Morgan v. Kerrigan* (1976). They were proposed in an effort to make desegregated schools more attractive to parents, educators, and students. Magnet schools, the most widespread form of public school choice, are typically characterized by four qualities: a thematic curriculum (such as arts or technology) or unique method of instruction (such as Montessori); admission to facilitate voluntary desegregation; choice of school by families; and access to pupils beyond neighborhood attendance zones.

Magnet schools are typically established in urban school districts with large student enrollments (over 10,000). Fifty-three percent of large urban school districts include magnet school programs as part of their desegregation plans. More than half of all magnet programs are located in low socioeconomic districts. School districts establish admission processes for magnet schools because they usually have more students than spaces. Most districts use a lottery format, while others rely upon a first-come, first served arrangement. Magnet schools have been supported with considerable investments of resources to serve as incentives for parental choice. On average, expenditures per student are 10 percent higher in districts with magnets. Magnet schools are funded through state desegregation funds and grants through the federal Magnet Schools Assistance Program (MSAP).

Magnet schools have met with mixed success. They attract students of different racial and socioeconomic backgrounds with similar educational interests, provide unique sets of learning opportunities, encourage innovation, and promote academic gains for some students. Critics charge that magnets tend to select the most motivated and academically able students as well as the most innovative and effective teachers, lead to socioeconomic segregation because middle-class parents are more motivated and more informed regarding the availability of educational options and choices, and divert resources that should be used for systemwide improvements.

Alaska Native Cultural Charter School

Alaska Native Cultural Charter School opens Fall 2008

The Alaska Native Cultural Charter School will open in August 2008. The school is open to students in kindergarten through sixth grade and offers a curriculum focused on Alaska Native cultures and lifestyles including elders, native languages, and many cultural activities.

For more information, contact Principal **Tim Godfrey** at 907-575-6195

Charter School Statutes: AS 14.03.250 – 14.03.290

Article 02. CHARTER SCHOOLS

Sec. 14.03.250. Establishment of charter schools.

(a) A charter school may be established as provided under AS 14.03.250 - 14.03.290 upon the approval of the local school board and the state Board of Education and Early Development of an application for a charter school. The state Board of Education and Early Development may not approve more than 60 charter schools to operate in the state at any one time.

(b) A local school board shall prescribe an application procedure for the establishment of a charter school in that school district. The application procedure must include provisions for an academic policy committee consisting of parents of students attending the school, teachers, and school employees and a proposed form for a contract between a charter school and the local school board, setting out the contract elements required under AS 14.03.255 (c).

(c) A local school board shall forward to the state Board of Education and Early Development applications for a charter school that have been approved or denied by the local board.

Sec. 14.03.255. Organization and operation of a charter school.

(a) A charter school operates as a school in the local school district except that the charter school (1) is exempt from the local school district's textbook, program, curriculum, and scheduling requirements; (2) is exempt from AS 14.14.130 (c); the principal of the charter school shall be selected by the academic policy committee and shall select, appoint, or otherwise supervise employees of the charter school; and (3) operates under the charter school's annual program budget as set out in the contract between the local school board and the charter school under (c) of this section. A local school board may exempt a charter school from other local school district requirements if the exemption is set out in the contract. A charter school is subject to secondary school competency testing as provided in AS 14.03.075 and other competency tests required by the department.

(b) A charter school shall

(1) keep financial records of the charter school;

(2) oversee the operation of the charter school to ensure that the terms of the contract required by (c) of this section are being met;

(3) meet regularly with parents and with teachers of the charter school to review, evaluate, and improve operations of the charter school; and

(4) meet with the academic policy committee at least once each year to monitor progress in achieving the committee's policies and goals.

(c) A charter school shall operate under a contract between the charter school and the local school board. A contract must contain the following provisions:

(1) a description of the educational program;

(2) specific levels of achievement for the education program;

(3) admission policies and procedures;

(4) administrative policies;

(5) a statement of the charter school's funding allocation from the local school board and costs assignable to the charter school program budget;

(6) the method by which the charter school will account for receipts and expenditures;

(7) the location and description of the facility;

(8) the name of the teacher, or teachers, who, by agreement between the charter school and the teacher, will teach in the charter school;

(9) the teacher-to-student ratio;

(10) the number of students served;

(11) the term of the contract, not to exceed a term of 10 years;

(12) a termination clause providing that the contract may be terminated by the local school board for the failure of the charter school to meet educational achievement goals or fiscal management standards, or for other good cause;

(13) a statement that the charter school will comply with all state and federal requirements for receipt and use of public money;

(14) other requirements or exemptions agreed upon by the charter school and the local school board.

(d) A charter school may be operated in an existing school district facility or in a facility within the school district that is not currently being used as a public school, if the chief school administrator determines the facility meets requirements for health and safety applicable to public buildings or other public schools in the district.

Sec. 14.03.260. Funding for charter school.

(a) A local school board shall provide an approved charter school with an annual program budget. The budget shall be not less than the amount generated by the students enrolled in the charter school less administrative costs retained by the local school district, determined by applying the indirect cost rate approved by the Department of Education and Early Development. The "amount generated by students enrolled in the charter school" is to be determined in the same manner as it would be for a student enrolled in another public school in that school district.

(b) The program budget of a charter school is to be used for operating expenses of the educational program of the charter school, including purchasing textbooks, classroom materials, and instructional aids.

(c) The charter school shall provide the financial and accounting information requested by the local school board or the Department of Education and Early Development and shall cooperate with the local school district or the department in complying with the requirements of AS 14.17.910 .

(d) The expenses of housing nonresident students who attend the charter school, including room, board, and other reasonable housing expenses, may not be paid for with state money but may be paid for with funds contributed by sources other than the state.

Sec. 14.03.263. Charter school grant program. [Repealed, Sec. 1 ch 100 SLA 2003].

Repealed or Renumbered

Sec. 14.03.265. Admission.

(a) The program of a charter school may be designed to serve

(1) students within an age group or grade level;

(2) students who will benefit from a particular teaching method or curriculum; or

(3) nonresident students, including providing domiciliary services for students who need those services, if approved by the board.

(b) A charter school shall enroll all eligible students who submit a timely application, unless the number of those applications exceeds the capacity of the program, class, grade level, or building. In the event of an excess of those applications, the charter school and the local school board shall attempt to accommodate all of those applicants by considering providing additional classroom space and assigning additional teachers from the district to the charter school. If it is not possible to accommodate all eligible students who submit a timely application, students shall be accepted by random drawing. A school board may not require a student to attend a charter school.

(c) In addition to other requirements of law, a charter school shall be nonsectarian.

Sec. 14.03.270. Teacher or employee transfers, evaluations, and negotiated agreements.

(a) A teacher or employee may not be assigned to a charter school unless the teacher or employee consents to the assignment.

(b) All provisions of an existing negotiated agreement or collective bargaining agreement applicable to a teacher or employee of a district apply to that teacher or employee if employed at a charter school in that district, unless the district and the bargaining unit representing the teacher or employee agree to an exemption.

(c) A teacher in a charter school shall be evaluated in an equivalent manner as all other teachers in the district, except that if there is no administrator assigned to the charter school, the local school board, with the agreement of the charter school, shall designate a school district administrator in that district to evaluate a teacher in a charter school.

Sec. 14.03.275. Contracts; duration.

A contract for a charter school may be for a term of no more than 10 years.

Sec. 14.03.280. Regulations.

The state Board of Education and Early Development may adopt regulations under AS 44.62 (Administrative Procedure Act) necessary to implement AS 14.03.250 - 14.03.290.

Sec. 14.03.290. Definitions.

In AS 14.03.250 - 14.03.290,

(1) "academic policy committee" means the group designated to supervise the academic operation of a charter school and to ensure the fulfillment of the mission of a charter school;

(2) "charter school" means a school established under AS 14.03.250 - 14.03.290 that operates within a public school district;

(3) "local school board" means a borough or city school board or a school board of a regional educational attendance area;

(4) "parent" means a biological, adoptive, or foster parent, or an adult who acts as guardian of a child and makes decisions related to the child's safety, education, and welfare;

(5) "teacher" means a person who serves a school district in a teaching, counseling, or administrative capacity and is required to be certificated in order to hold the position.

CS FOR SENATE BILL NO. 57(FIN)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE FINANCE COMMITTEE

Offered: 4/1/09
Referred: Rules

Sponsor(s): SENATORS THOMAS, Elton, Stevens, Davis

A BILL

FOR AN ACT ENTITLED

"An Act relating to charter and alternative school funding."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.450 is amended by adding new subsections to read:

(c) Except as provided in (d) of this section, if the student count in a charter school is less than 150, the adjusted student count for the school shall be calculated by multiplying the student count by the student rate for a school that has a student count of 400.

(d) If a charter school has a student count of more than 120 but less than 150 for the current year and is in the first year of operation or had a student count of 150 or more in the previous year of operation,

(1) the adjusted student count for the school shall be calculated by multiplying the student count by 95 percent of the student rate for a school that has a student count of 150; and

(2) not later than February 15, the charter school shall submit for approval of the governing board of the district a plan for the following school year that

includes a statement about whether the school will continue to operate if the student count remains the same that year and, if so, a projection of the funding anticipated from the state and other sources, a proposed budget, and a description of anticipated changes to the school staff, program, and curriculum; if the school intends to close if the student count remains the same the following year, the plan must describe transfer plans for students, staff, facilities, and materials.

(e) If an alternative school has a student count of more than 120 but less than 175 for the current year and is in the first year of operation, or had a student count of 175 or more in the previous year of operation, the adjusted student count for the school shall be calculated by multiplying the student count by 95 percent of the student rate for a school that has a student count of 175.

(f) In (c) - (e) of this section, "student rate" is calculated by adding the base and the multiplier provided under (a) of this section and dividing the sum by the student count.

*** Sec. 2.** AS 14.17.905 is amended to read:

Sec. 14.17.905. Facilities constituting a school. (a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six; and

(B) one secondary school, which includes students in grades seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than **175** [200] shall be counted as a part of the school in the district with the highest ADM.

(b) Notwithstanding (a)(3) of this section **and for purposes other than**

calculations under AS 14.17.450, a charter school shall be counted as a separate school if the charter school has an ADM of at least 150 students.

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Sectional Analysis
SB 57

Section 1

Subsection (c) states that charter schools with fewer than 150 students will have their student count adjusted by the same per-student rate as neighborhood schools with 400 students.

Under the school size factor statute, AS 14.17.450(a), the per-student rate of adjustment for 400-student neighborhood schools is 1.18, which means their student enrollment is multiplied by 1.18 to determine their "adjusted student count." The adjusted student count is the basis for the calculation of state funding provided to school districts.

Subsection (d) is an exception to subsection (c) for charter schools that are either in their first year of operation or had more than 150 students the previous year. It grants these charter schools a one-year hold-harmless period, during which they will receive 95% of the per-student rate of neighborhood schools with 150 students.

Under the school size factor statute, the per-student rate of adjustment for 150-student neighborhood schools is 1.45, and 95% of that rate is 1.38. Charter schools in the hold-harmless year will have their enrollment multiplied by 1.38 to determine their adjusted student count.

Subsection (d) requires charter schools that are in the hold-harmless year to submit a plan for the following year to their local school board. The plan must describe what will happen the following year if the school again has fewer than 150 students and no longer qualifies for the hold-harmless provision.

Subsection (e) defines the term "student rate." The student rate is the base plus the multiplier under AS 14.17.450(a) divided by the student count.

Section 2:

This is a technical amendment creating the exception from the existing requirement that charter schools have at least 150 students to have their own adjusted student count calculation. Without this amendment, the Department of Education would continue to calculate school funding as if the students at charter schools under 150 attended the largest school in their district.

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Sponsor Statement
SB 57

SB 57 corrects a flaw in the school funding law as it applies to charter schools with fewer than 150 students. Current law results in these charter schools receiving 30% to 45% less state funding than neighborhood schools of their same size. SB 57 funds these charter schools at a per-child rate closer to that of average, urban elementary schools.

Charter schools are public schools that provide valuable education options to Alaska families. They increase learning opportunities and encourage parent and community involvement in our schools. Charter schools are designed and managed by parent-elected boards, under contract with their local school district. In 1995, the legislature passed Alaska's initial charter school law, authorizing local school districts to approve charter schools in their communities. However, the funding system has limited communities' ability to use the law to create and sustain these innovative programs.

SB 57 solves the funding problem in an equitable, fiscally responsible manner. It will support our schools and districts as they carry out the legislature's intent in creating the charter school law.

<u>The Current Funding System</u>

The root of the problem is the way the foundation formula calculates the "adjusted student count" for charter schools versus neighborhood schools.

The adjusted student count is the basis of state funding for all schools in Alaska. The funding a school district receives is calculated by multiplying the adjusted student count by the district cost factor, the special needs factor and, finally, by the dollar amount in the base student allocation.

The adjusted student count is determined by the school size formula in AS 14.17.450. The formula recognizes that economies-of-scale make it less expensive to operate a large school than a small school. Therefore, the enrollment of small schools is increased by a factor much higher than the adjustment for large schools. For example, the enrollment of a school with 75 students is adjusted to 123, a school with 400 students is adjusted to 472, and a school with 1,000 students is adjusted to 1,004.

Charter schools with an enrollment of less than 150 students are not treated as separate schools for the purpose of the adjusted student count calculation. Instead, the Department of Education adds

the charter students to the students attending the largest school in their district, and calculates the adjusted student count for the combined enrollment. This system makes the adjusted student count of the charter schools lower than their actual enrollment, while almost all other schools are adjusted upwards.

The Consequences

The impact of this system on charter schools is shown in the attached graph. The consequences include:

1. School districts can be penalized for allowing school choice.
The adjusted student count calculation for charter schools with fewer than 150 students can result in districts receiving less state funding than they would if their charter school students attended their neighborhood schools. The state will spend more if these charter schools close.

2. The law provides an inadequate amount of money for charter schools with fewer than 150 students to survive. Charter schools with fewer than 150 students in Anchorage, Fairbanks and Juneau have a count adjustment of .84, which is lower than even the largest high schools in those communities, and is close to the .80 rate the state provides to correspondence programs that do not have to pay for school buildings and teachers.

3. There is a dramatic decrease in funding when a charter school's enrollment drops from 150 students to 149. The loss of that one student costs a school district $500,000 - $700,000. The unanticipated funding cut occurs in November, when it is too late to significantly reduce costs. In the past five years, this has happened to the Anchorage School District, the Fairbanks North Star Borough School District and the Lower Kuskokwim School District.

The Solution

SB 57 states that charter schools with fewer than 150 students will have their student count adjusted by the same per-student rate as neighborhood schools with 400 students. Under the school size factor statute, the per-student rate of adjustment for 400-student neighborhood schools is 1.18.

SB 57 also contains a one-year, hold-harmless provision for charter schools that are either in their first year of operation or had more than 150 students the previous year. These schools will receive 95% of the per-student rate of neighborhood schools with 150 students. Under the school size factor statute, the per-student rate of adjustment for 150-student neighborhood schools is 1.45, and 95% of that rate is 1.38.

Finally, SB 57 requires charter schools that are in the hold-harmless year to submit a plan for the following year to their local school board. The plan must describe what will happen the following year if the school again has fewer than 150 students and no longer qualifies for the hold-harmless provision.

Senator.Joe.Thomas@legis.state.ak.us

Senator Joe Thomas
February 18, 2009

Charter School Funding: Senate Bill 57

- This legislation is about supporting school choice and doing away with the charter school penalty.

- The existing school funding law results in charter schools that enroll fewer than 150 students receiving 30% to 45% less state funding than neighborhood schools of their same size.

- There is a dramatic decrease in funding ($500,000 - $700,000 loss) when a charter school's enrollment drops from 150 students to 149, which creates a financial crisis for both the school and its host district.

- The root of the problem is the way the foundation formula calculates the "adjusted student count" for charter schools versus neighborhood schools. Almost all schools have their enrollment adjusted upward by a formula in the state education law.

- The BSA is not really the amount we fund districts to educate kids. The true funding per student is much higher due to the enrollment adjustment – except at charter schools that have fewer than 150 students.

- Charter schools with an enrollment of fewer than 150 students do not have their enrollment adjusted upward like other schools. Instead, their enrollment is adjusted downward. This provides too little money for these charter schools to survive.

- Senate Bill 57 fixes the funding problem in an equitable, fiscally responsible manner.

- SB 57 funds charter schools with fewer than 150 students at the same per-student rate as neighborhood schools with 400 students. This requires charter schools to be significantly more efficient than other schools, but it is a manageable funding level.

- SB 57 also contains a one-year, hold-harmless provision for charter schools that are either in their first year of operation or had more than 150 students the previous year. This provision reduces the financial harm to their districts from the unexpected decrease in their student count adjustment.

- SB 57 is supported by the Alaska Association of School Boards, and many superintendents have testified in support. The bill has been co-sponsored by Senators Thomas, Stevens, Elton, and Davis. In addition, Senators Olson and Huggins voted "do pass" in the Senate Education Committee.

Cost of SB 57:

- The fiscal note for SB 57 is $714,000.

- However, the predictable, ongoing cost to the state will be $365,000, because that is the impact of SB 57 on the three schools that consistently have fewer than 150 students.

  The fiscal note anticipates a fourth school, Effie Kokrine, enrolling fewer than 150 students in FY10. Although Effie Kokrine had an average of 140 students during the October, 2008 count period, the school was above 150 last year and has 150 students today. Effie Kokrine is working to maintain its150 student enrollment during the 2009 count period, which would remove that school from the effects of the bill.

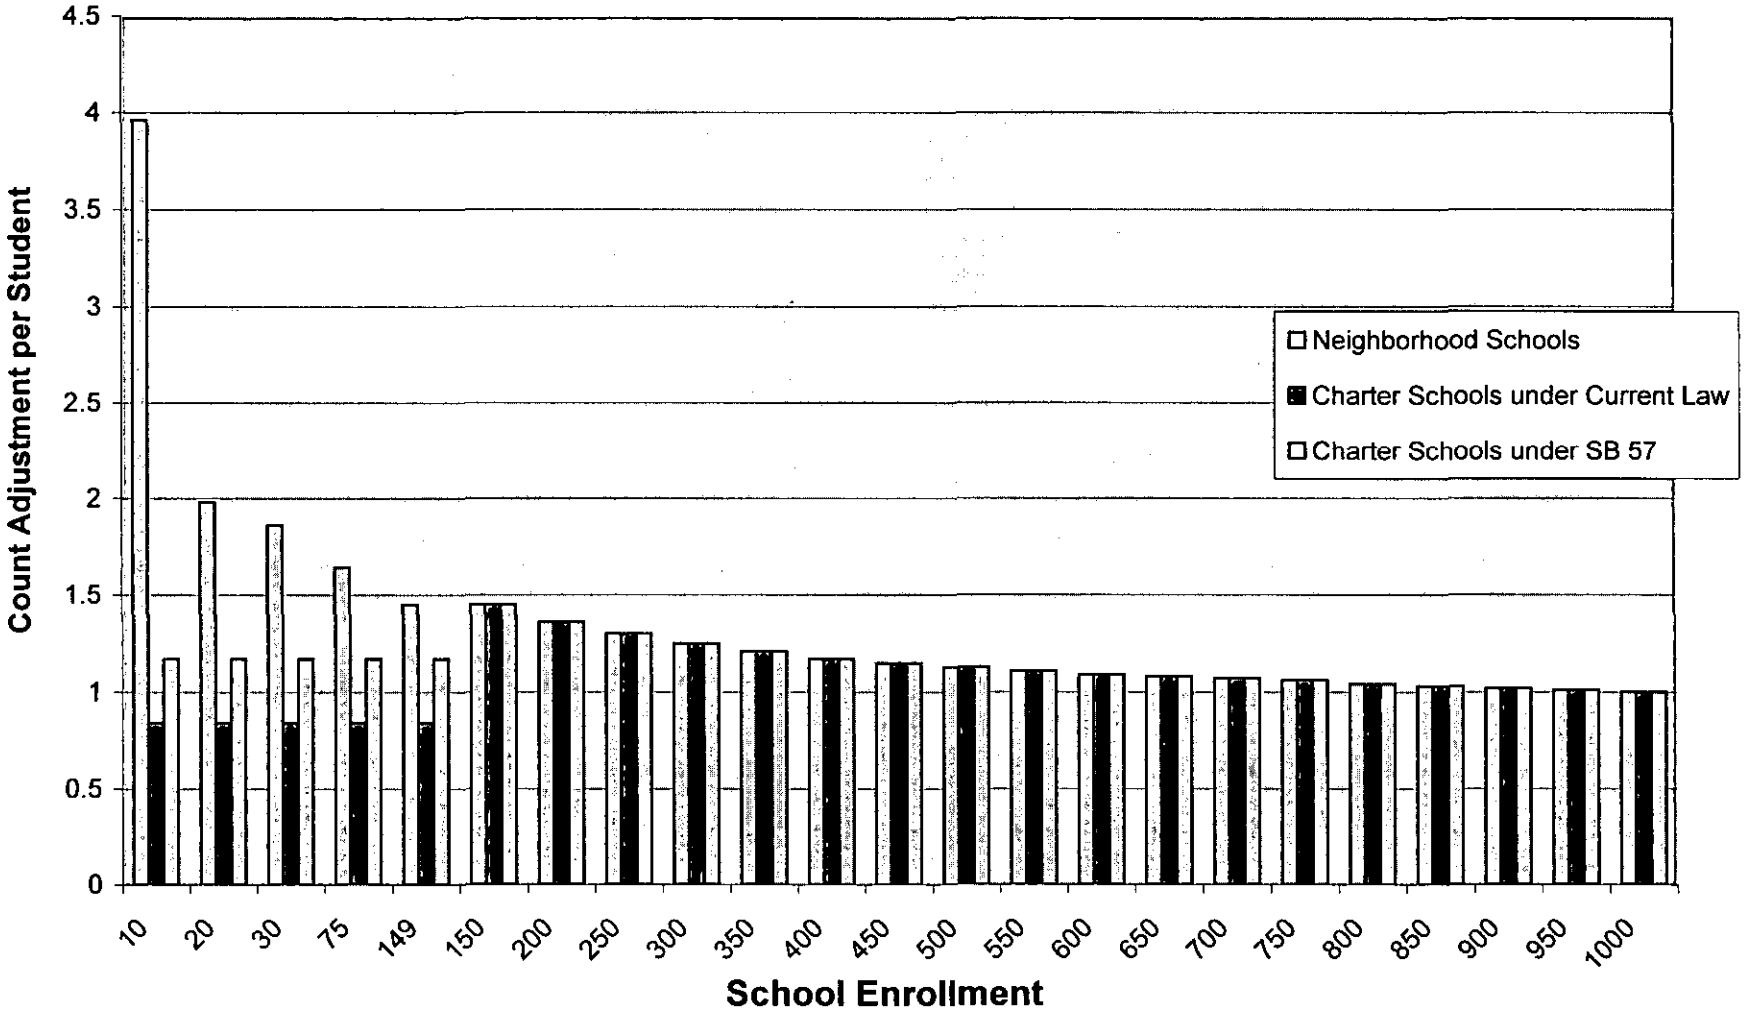
- $714,000 is less than one thousandth of the $1 billion the state spends on schools, and is well within the margin of error when we predict how much to appropriate each year. SB 57 will change state education expenditures by .000714 or less.

- SB 57 does not create a new program; it simply corrects an error in the current law which results in under-funding a few schools and penalizing districts for allowing school choice.

- SB 57 is a compromise. Affected charter schools will still receive significantly less money per student than neighborhood schools of the same size. However, the funding gap between charter and neighborhood schools will be smaller, and the new funding level will be sufficient for these charter schools to survive.

Adjusted Student Count for Charter Schools vs. Neighborhood Schools

The adjusted student count of each school is the basis of state funding. The number of students enrolled in a school is increased or decreased according to the formula in AS 14.17.450, to determine the school's adjusted student count. That adjusted student count is then multiplied by the district cost factor, the special needs factor and, finally, by the base student allocation to determine the amount of funding.



* This chart assumes that a charter school with fewer than 150 students has a student count adjustment of .84 under current law, because it is located in a district that contains a school with over 750 students, such as Anchorage, Fairbanks, Mat-Su or Juneau. A charter school in a community such as Kenai, Bethel, Ketchikan or Nome would have a student count adjustment of .92 or .97.

2/23/09 OVERVIEW: GOV'S PRE-K BUDGET PROPOSAL

22 January 2009

To: Paul Seaton
Louie Flora

I am writing to you as a professional in the Early Childhood field, as well as a parent of a soon-to-be-three-year-old who attends a home childcare facility. I have been teaching preschool and toddlers in the Kenai area for years, and am proud that my son is able to get the private care that is best for him. I am aware of impending changes in the education required of childcare professionals, and I am absolutely on-board with that decision. However, I feel that this community, and all the communities on the Kenai Peninsula, need the funding to help with these education requirements.

I feel that the money available for early childhood should be spent in the private sector. There are many local childcare facilities that provide quality services to the youth in the community. Those facilities should recieve money, to continue providing the quality that the children deserve.

I am asking that you seriously consider where you place early childhood funds. Please consider distributing the money among the private sector, so we can continue to provide quality care for our children!

Thank You,

Michelle Seaman

Dear Mr. Paul Seaton,

I'm writing to express my concern over recent law changes introduced to local child care providers at a meeting held by the Childcare Division of the Department of Education (CCPO). The new requirements appear as a push to place childcare preschool programs to the local school districts.

A new representative for CCPO, whose responsibilities are to be an advocacy and represent

providers "to the people and for the people," acted not as an advocate or representative for us, but rather threatened our livelihood by suggesting that if we did not unite as individual business owners we would "lose our funding."

We "Early Childhood Professionals" were surprised by the information presented and the apparent lack of resources or remedy for us. Our state-appointed advocate delivered dismal news: without acquiring teaching education for our current employees, our preschoolers would be incorporated into the local school system for their preschool needs. The reality for us is that our facilities may not continue to operate without the pre-school programs that we offer to the public.

The new education requirements call for "Teaching Education" for current staff or replacement of current staff, placing centers in the position of having unanticipated financial and resource burdens to meet the new department standard. Educated teachers would require higher salaries than child care providers, and the possibility of assistance in meeting these new requirements was not addressed at the meeting. The potential cost for hiring teachers or educating staff beyond the 75% the child care connection may or may not fund, is not guarantee enough for a business to undertake the burden to fulfill these requirements if they will be closed base on the non-compliance of its competitors.

At the meeting, CCPO gave Seward as an example of a city that could not meet the burden of the new requirements. The real effect of the changes was centers closing completely rather than taking the financial risks involved in compliance. Before the same result happens in the Kenai/Soldotna area, we would like to fully examine the possible affects on the community, economy and the children.

In the past licensing was a partner with centers for the children's best interest in our area. Now I feel as though there is a breach in our relationship, or a cold shoulder, as we have no advice from them merely a distant "I hope you guys unite" approach, without giving us the tools to be successful at meeting the new requirements.

My experience of local child care providers is that we are not millionaires, but we are in this field because we care. Children are in pre-school because they are trying to achieve a development level adequate for school (the word is Pre-School). Children cannot take on a concept of school at a pre-school age developmentally. This is why our program is there for the people and children.

Our appointed advocate is not advising or representing us in the upcoming changes in regulations. $4,359 is the current monthly salary for a starting teacher in our area, it is not clear whether the individual daycares can cover these new costs or whether the community has the resources in qualified applicants to fill the positions. Without proper advocacy, daycare providers are forced to unite as they did advise us to do at the chat in February. Why is our advocate not advocating us?

Parents achieving Self Sufficiency through the PASS program (7AAC 41.012) is not funding daycare providers enough yet it is asking for more of our programs. The families do not have the freedom of choice of care and the facilities do not have advocacy or all the information to comply.
7AAC 41.025 Program rates should change and our "advocates" should advise us on how we are to meet requirements with the current funding.

Conflicts with new cost of teaching and education standards (7AAC 41.025 (A)). The program does not fund enough for us to comply especially with no advocate

Pre –K Pilot Guidelines

The Department will offer funds for selected pilot Pre- Kindergarten programs that reflect the following approaches and requirements:

Alaska's voluntary pre-kindergarten programs will work with children and families living in poverty, children with disabilities, children who are learning English as a second language, or otherwise at risk. They will focus on all domains of each child's development as expressed in the Alaska Early Learning Guidelines.

- Program curriculum, assessment and learning opportunities will be based on use of the Alaska Early Learning Guidelines
- Programs will demonstrate growth through specific child outcomes in all developmental domains as expressed on the Alaska Developmental Profile, the Dial-3, and the PPVT.

Emphasis will be placed on school readiness, language development, literacy, mathematics, and cognition through a balance of teacher directed and child initiated activities

- Programs will provide opportunities and experiences for learning through exploration
- Programs will provide Mediated Learning Experiences
- Programs will provide direct instruction for three, four and young five year olds.

Each program will maintain professional qualifications for teachers and classroom staff.

- teachers will meet the requirements of 4 AAC 12.331
- All additional staff working with children will meet NCLB standards by 2010. Until then they will meet the preschool certification requirements.

Each program will prioritize family and community engagement and involvement, and will develop and implement:

- A written plan for ongoing communication with families to be included in the parent handbook
- Communication with parents in conversation or writing at least weekly
- Parent--teacher conferences to review child progress and set goals at least twice per year
- Staff knowledge of community resources and ability to make appropriate referrals
- Recourses available for families that home school their children.
- And at least 3 of the following: regular parent newsletter, additional parent-teacher conferences, daily report of activities, family social gatherings, educational events on topics chosen by families, opportunity to be on governing board or other policymaking body, community resource handbook

Each program will provide a safe and appropriate learning environment that meets the preschool certification requirements.

- Complete a self-assessment of each classroom using an appropriate Environment Rating Scale for the ages of children in the classroom.

Each program will maintain high educational expectations for staff and children

- Each program will provide a minimum of three hours of planed activities daily.
- Each program will provide a minimum of four child contact days per week.

Program management and leadership will insure:

- each program will meet preschool certification requirements
- fiscal and programmatic accountability

Each program will provide several means of communication among staff and between staff and management including:

- Staff meetings are held at least quarterly
- Staff participates in developing agendas for regularly held staff meetings
- A written annual performance appraisal is conducted by supervisor for all teaching staff using objective criteria

February 22, 2009

Mr. Louie Flora:

This letter is in reference to our phone conversation this past week in involving educational funds for childcare and pre-schools.

As I mentioned, my wife Adele and I are very strong believers in the free enterprise system and with the private sector providing professional services to the communities that they serve. We currently are a licensed childcare center in the state of Alaska providing services to the central Kenai Peninsula.

We personally believe that there is no reason for funds to be spent in the Kenai Peninsula School District for pre-school childcare students. The private pre-schools are providing that service to the community in a professional manner and have done so for many years.

As a former Mayor of Soldotna, it has always been my belief that government is there to assist with providing in areas that the private sector are not able to cover and if there is an urgent need for that service. In our case, we have very qualified people that serve as administrators, teachers and assistants in our daycares and pre-schools.

I truly believe that we should not over burden our current school system with additional students that the schools are not prepared to take in. There are many concerns involving the idea of having the schools start pre-schools at their facilities. Some of which are the transportation of the students and the startup cost to the taxpayer.

My suggestion is to provide additional funding to the professional childcare facilities that are providing a tremendous service to their local communities and the people that they serve. We, as a professional group believe that the love and teaching that we are providing to the children, entrusted to us is exactly what these children need to have in their lives.

The professional childcare providers on the Peninsula continue to believe that what they are doing is so important that they are eager to get additional childcare training so that they can give the best that they can to the children that are in their care.

Thank you for your time and consideration in this matter. Please feel free to contact me in the event that you have any further questions.

Sincerely,

Pastor Tom Bearup

Subject: Grant for Pre-Schools

To Whom It May Concern:

I recently heard there is a huge grant, ear marked for preschools.

Preschool targets a small age range of children. I am a 24/7 Group home childcare facility. I do have a CDA in child development. The age range of my facility is birth to 12 years old.

My childcare facility may not be called a preschool, but the function of it is the same with a lot more amenities. I have laundry facilities, I also have bedrooms where a sick child can stay so the parents don't miss work. What preschool has that??

I had a little boy from 18 months to 6 1/2 years, by the time I put him in kindergarten, he was spelling 4 letter words, adding subtracting, he also understood the concept of multiplication.

I have a 3 1/2 little girl since birth, she knows her colors, shapes, she recognizes 90% of her alphabets, she can count to 20, 10 in Spanish. She also can add simple numbers.

I have a little boy who did come from a local preschool 5 months ago. Mama said he was always tired and stressed out when picking him up there. She indicated how noisy it was there. Here, he seams much more rested and happy. And the atmosphere is more relaxed and quiet. She wished she changed long ago.

I had a child who got off the but from Kenaitze Pre School. He was tired and hungry. They did not give him a needed nap, nor did they feed him lunch.

Most of the parents I get do not like the atmosphere of large facility, the child does not get the one-on-one contact they so very much need for proper brain development.

If a parent calls me for an opening and is enrolled in a preschool facility, which would put him on a part time enrollment with me, I would not enroll him and many other facility will not enroll him part time either. Preschools do not cover the full working hours some parents needs.

The childcare facilities on the peninsula are the lowest paid in the state.

With a good size grant, I could build an extension on the back of my house for a extra play room/home workroom for after school children. I could get some professional heavy-duty playground equipment.

So please allocate the money for the small business owners like me. It would be for the children.

Thank you for your time in this matter. If you have any other questions that I may help you out with please contact me. Thank you

HAMILTON

U OF AK

Institutional Health

- 32,000 student headcount
- 9 out of 10 high school students rate UA quality of education as good or very good
- 63% of college bound high school graduates will attend UA schools
- Charitable giving to UA at record levels – $31 million from 6450 donors
- Research providing record amount of jobs. Alaskan research brining into state 150 million annually from out-side private and public sources.
- Retaining Alaska scholars keeping Alaska's best and brightest in the state.
- UA responsible for 90% of all state workforce training

FY08 report card reported from 1999 (SB281)

- High Demand Degrees awarded – up 38%
- First-Time Full-Time Undergraduate Under-graduate retention – up 10%
- Student Credit hours – up 16%
- Externally Funded Research – up 97%
- University Generated Revenue – up 90%

UA and the Economy

- Generates $1billion in direct and indirect economic activity in the state.
- UA Research activities produce a statewide payroll of $80 million per year employing 2300 people paid for with outside money
- UA generates over $6 of revenue for every $1 invested

Changing nature of education

- 23% 4 year degree 1951
- 23% 4 year degree 2008

Alaska higher education and Alaska Hire

- 1.7 billion
- 80 billion since completion of pipeline

Recruiting, Retention, Travelers

- Healthcare alone spends $24 million per year according to Providence Hospital

Workforce Development/Health

- 2800 graduates per year in workforce
- 1300 graduates per year in healthcare

- 120 programs 80% of which are 2 years or less
  - Refer to list
- List is generated from SB 281
  - SB 281 "thou shalt create high demand jobs and you will be judged on your ability to deliver them

Subject:

University of Alaska
Academic Program Offerings

In the last ten years, the University of Alaska (UA) system has expanded academic offerings by more than 120 programs. This number does not include about 60 occupational endorsement certificates (OEC). These OECs are about the quickest way to get someone credentialed and into Alaska's workforce with a marketable skill. They are not counted because they are usually created from courses and faculty already available.

OECs allow students (who may already be enrolled) to receive short-term, focused workforce development training in a declared major. Financial aid eligibility and recognized credentials are significant benefits to students who make the choice to enter an OEC program.

With the added degrees and certificates, UA now has about the same breadth of associate and certificate level programs as other small western states, but, only about two-thirds the number of four-year programs, half the graduate programs, and less than a quarter of the doctoral level programs.

Our comparative lack of four year and graduate degrees is not necessarily considered a deficiency by the Board of Regents or the Administration of the University. It is consistent with the direction given by the legislature in 2000. The legislature directed UA to deliver an increase in degrees awarded in the high demand job areas. In fact, in SB 281, the legislature said UA would be judged by its performance in this and other areas.

By far, most of the added degree, certification, and credential programs are in high demand areas. Designating what programs are high demand and best meet the needs of the state is arrived at by consulting the Department of Labor and Workforce Development and industry. These degrees are very expensive to deliver, but because industry and government are clamoring for personnel in these areas, graduates are almost guaranteed employment upon completion. These expensive programs have only been possible through internal reallocation as well as state and industry support, and tuition increases.

To add a program the Board of Regents requires a high level of justification from the requesting department or school. All degree and certificate programs with the exception of OECs must be approved by the Board. The attached appendix provides the required regulations regarding the evaluation criteria for adding or deleting degree and

certificate programs. Typically this process starts with closing new applications.

Keep in mind that case law and contract law restrict our ability to delete programs quickly. Students enter degree or certificate programs in good faith assuming the university will provide the needed courses so they can follow through to the completion of their degree. UA refers to this as a "teach out". It simply refers to the time it takes to carry the participants through a program to the point where UA can end it without impact on their lives. Again, this is case law, but it is also just good business to do so.

Contract law comes into play mostly because of tenure. Agree or disagree with tenure, it is a legal fact of life at universities and often requires extra hoops through which a university must jump to end a program. The point is: it takes more time to delete programs because of legal constraints.

The addition of these new programs has resulted in significant increases in the number of students enrolled in programs leading to a degree. In fall 2008, degree-seeking students totaled 20,002 (62% of system enrollment); this is more than at any time in UA's history. Today's students take more credits per semester, on average, than those of the past.

Though UA has experienced a few notable funding years lately, most of those years were followed by shortfalls – some so significant they wiped out any previous year's gain. UA has only had its adjusted base funded and been given money for new programs about 4 times in the last 20 years. To follow the mandate of the legislature in an erratic funding environment UA has had to redirect funding from the lower enrollment programs shifting it to the higher enrollment, high demand programs. We have also sought and been successful in acquiring private funds to start these programs.

Since 2000 UA has been successful in shifting funding away from state GF. In 2000 UA received 60% of its funding from the state and in 2008 received only 40% from the state. A perfect example of this was the expansion of the nursing program which was begun with 8 different sources of funding – none of which was state. Unfortunately, UA has about run out of outside funding options for the short term and needs a higher level of state participation to keep up with the legislative mandate to pursue high demand programs.

Appendix

UA Board of Regents Regulation 10.04.020. Degree and Certificate Program Approval

Guidelines for the presentation of proposals to the Board of Regents to add, delete, or make major revisions in degree and certificate programs or to offer existing programs outside the State of Alaska are as follows.

A. Proposals will be submitted to Statewide Office of Academic Affairs at least 60 days prior to a scheduled Academic and Student Affairs Committee meeting in order to allow for statewide review and lead time for distribution in the committee meeting agenda. Review of program proposals will focus on Alaska's need for the program, effective use of resources, and consistency with institutional mission and program priorities. The nature and extent of program duplication and coordination of delivery among the universities and community colleges will also be evaluated.

B. Proposals for occupational endorsements and workforce credentials will be forwarded to SAC on a SAC approved summary form for review. All approved endorsements and credentials will be reported to the VPAA.

C. New degree or certificate program proposals must address the following points:

1. degree or certificate title, university or community college unit responsible for program (e.g. Bachelor of Arts in English, UAA);

2. catalog descriptions of the program and of new or modified courses that constitute the major field of study;

3. rationale for the new program and educational objectives, student learning outcomes and plan for assessment;

4. relevance to the university or community college mission, goals, and objectives;

5. collaboration with other universities and community colleges;

6. demand for program (citing manpower studies or similar statistics), relation to state of Alaska long-range

development, relation to other programs in the University of Alaska that may depend on or interact with the proposed program;

7. effects of program on other academic units (e.g. GER course requirements)

8. availability of appropriate student services for program participants.

9. opportunities for research and community engagement for admitted graduate and undergraduate students;

10. outline of schedule for implementation of the program;

11. projection of enrollments (FTE (full-time equivalent) and headcount) and graduates over next five years;

12. availability and quality and/or requirement for new faculty and/or staff to support the program;

13. library, equipment, and similar resource requirement, availability, appropriateness, and quality;

14. new facility or renovated space requirements;

15. projected cost of of all required resources, revenue from all sources and a budgetary plan for implementing and sustaining the program;

16. other special needs or conditions that were considered in the program's development (e.g. delivery mode, special faculty appointments, shared facilities, collaboration with other institutions);

17. consultant reviews, reports from visitations to other institutions, or names and opinions of personnel consulted in preparing the proposal;

18. concurrence of appropriate advisory councils; and

19. A Program Approval Summary of two pages in a form acceptable to SAC.

D. Program deletion proposals address the following points:

1. degree or certificate title, university or community college unit responsible for program;

2. rationale for deleting the program (lack of relevance, drop in enrollment, loss of quality, cost containment, etc., as determined through program review); and

3. concurrence of appropriate advisory councils.

UNIVERSITY
of ALASKA
Many Traditions One Alaska

Major Renewal and Renovation
Background Information

Magnitude of Facilities: The University of Alaska maintains over 400 buildings with more than half exceeding 30 years of age. The buildings have an estimated gross square footage of 6.7 million and an asset value of over $1.7 billion. The asset value does not represent building replacement value, which would be over $2.5 billion. UA requires an annual investment of over $50 million for facility renewal and renovation (R&R). Each year that the annual R&R investment goes un-funded or under-funded adds to UA's backlog of deferred projects.

Prior Funding: State funding for UA's R&R projects totaled $161 million in the ten-year period 2000 to 2009 averaging $16 million annually, while UA required an annual average investment of $50 million. The only years in this decade that UA has received adequate state funding for R&R projects was in 2007 ($48.7 million) and 2009 ($45.8 million). Due to the significant shortfall in funding coupled with the rising cost of construction, UA's deferred maintenance and R&R inventory has grown to over $800 million as of August 2008. An acceptable level of deferred maintenance and R&R for UA would be between $250 million and $300 million.

Maintenance/Maintenance and Repair (M&R): M&R also referred to as simply maintenance is the routine work required to preserve the functionality of a building. This is an operating budget requirement. The university dedicates about $31 million per year of its operating budget to this category. M&O and M&R are sometimes used interchangeably (they should not be) but the important fact to remember about them is that they are the day-to-day operating budget items addressing facilities.

Maintenance and Operation (M&O): M&O is similar to M&R, but is an expanded category that includes the operations of facilities such as janitorial, security, related staff, utilities, etcetera. This is an operating budget requirement, which when added to the amount spent on M&R, increases UA's annual physical plant expenditures to approximately $80.3 million.

Renewal and Renovation (R&R): This category represents the scheduled replacement of worn out building components that extend the useful life of a facility. R&R is nationally recognized as a capital budget item versus M&R recognized as an operating budget item. Projects that would fall under R&R include upgrading for code, replacement of heating and ventilation systems, roof repair or replacement, flooring replacement, and renovating and remodeling of space to meet program needs.

Deferred Maintenance: This is the cumulative effect of major repair, renewal, replacement, and renovation projects that have not been carried out. Usually this category represents the backlog of facility maintenance needs that result when M&R and R&R have been neglected for several years. The Board of Regents' has mandated full funding, through the operating budget, for regular maintenance and repair, so this backlog has come from the under funding of R&R needs in the capital budget.

FY10 UA Capital Budget Request
$82.2 million general fund/$20.6 million nongeneral fund

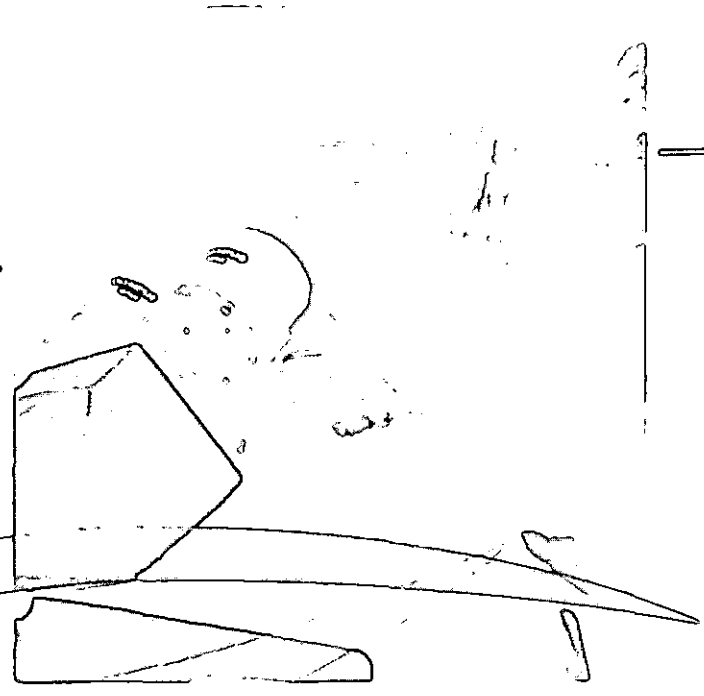
UAF Life Sciences Innovation and Learning Facility

Background

Nearly 600 undergraduate and graduate students are enrolled in UAF's biology and wildlife programs, making it one of the largest degree programs in the entire UA system. Yet most of UAF's existing biology teaching labs were built before 1960.

Our students are not being served when we try to teach them in antiquated biology laboratories. Our state is not being served when we don't have the proper space to conduct biological research in areas of vital importance to Alaskans, from avian influenza to sudden infant death syndrome, and from climate changes to emerging diseases.

The Life Sciences Innovation and Learning Facility is the University of Alaska's top priority for new construction, and understandably so when you consider the statewide impact of the teaching and research that will take place in the facility.



Life Sciences = teaching for Alaska

UAF's biological sciences program prepares students for *high-demand* careers and *advanced* degrees in all areas of biological sciences including animal and human health, wildlife management, physiology, ecosystems studies and others. Graduates of the program go on to careers across the state – and beyond – in jobs that affect all Alaskans.

All of UAF's biology teaching facilities date from the 1960s or earlier. Although there have been some renovations, they have not been adequate to accommodate the 25 percent growth in enrollment over the past decade, or to adapt to the dramatic changes in the subject matter covered by biology courses.

The Life Sciences Innovation and Learning Facility will provide modern instructional laboratories and classrooms for studying biological sciences, wildlife management and the effects of climate change, providing students with sufficient learning space and close proximity to the faculty and their research.

UAF's research success depends on immediate funding for the Life Sciences Innovation and Learning Facility.

Alaska's First University

3106

Life Sciences = Research for Alaska

Lack of sufficient research space continues to hamper UAF life sciences research programs. Since 2001, research expenditures in this area have increased nearly three-fold, yet there have been almost no new facilities constructed with state capital dollars to meet that growth. UAF's research success depends on immediate funding for the Life Sciences Innovation and Learning Facility.

UAF life sciences research focuses on:

- diseases of public health importance to the state, such as the avian influenza virus and diabetes.
- neuroscience studies on preventing sudden infant death syndrome and protecting against brain injury following heart attack or stroke.
- ecological and wildlife research to better understand climate change effects on Alaska and other northern ecosystems, and the occurrence and risk of contaminants in wildlife and in subsistence food.

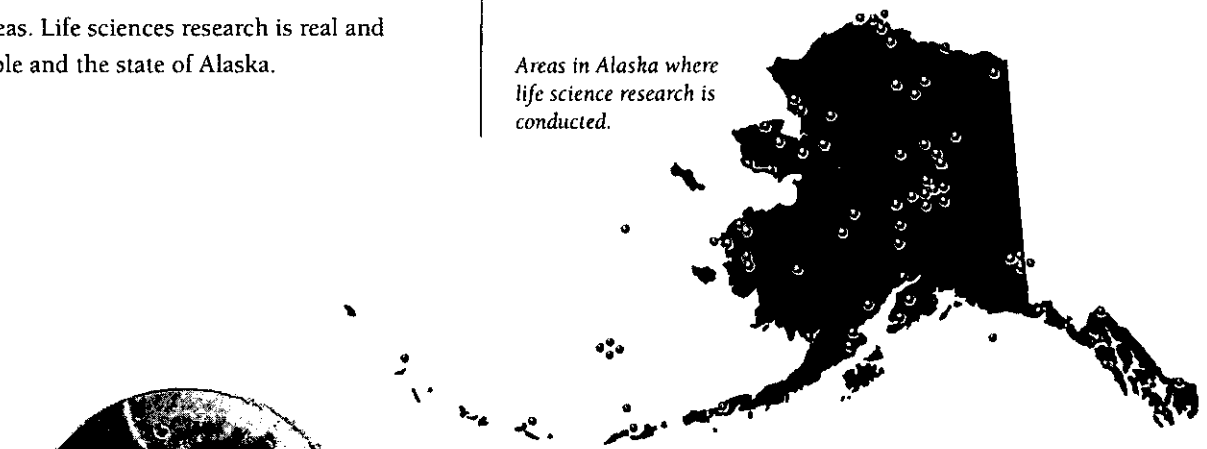
Additionally, the co-location of research with the teaching component of life sciences allows for better collaboration between the two areas. Life sciences research is real and relevant to the people and the state of Alaska.

One project. Two components. Hundreds of opportunities for Alaska

Life Sciences Innovation and Learning will feature modern academic space for more than 600 biology and wildlife degree students and more than 1,200 students who take biology courses each year. Research space will feature a series of labs for as many as 12 lead researchers who will also employ seven to 10 scientists each.

The facility's proposed location on UAF's West Ridge will allow for connectivity to the Biological Research and Diagnostic (BiRD) building and the new state virology laboratory. This location is integral to the collaborative research effort between the state and the university.

Life Sciences will utilize a two-component approach to provide flexibility for construction. The solution will connect 37,200 square feet of academic space with 50,000 square feet of research space. Once complete, space in other buildings will become available for renovation and reassignment for other programs, creating a domino effect that will benefit all students, staff and faculty at UAF.



Areas in Alaska where life science research is conducted.

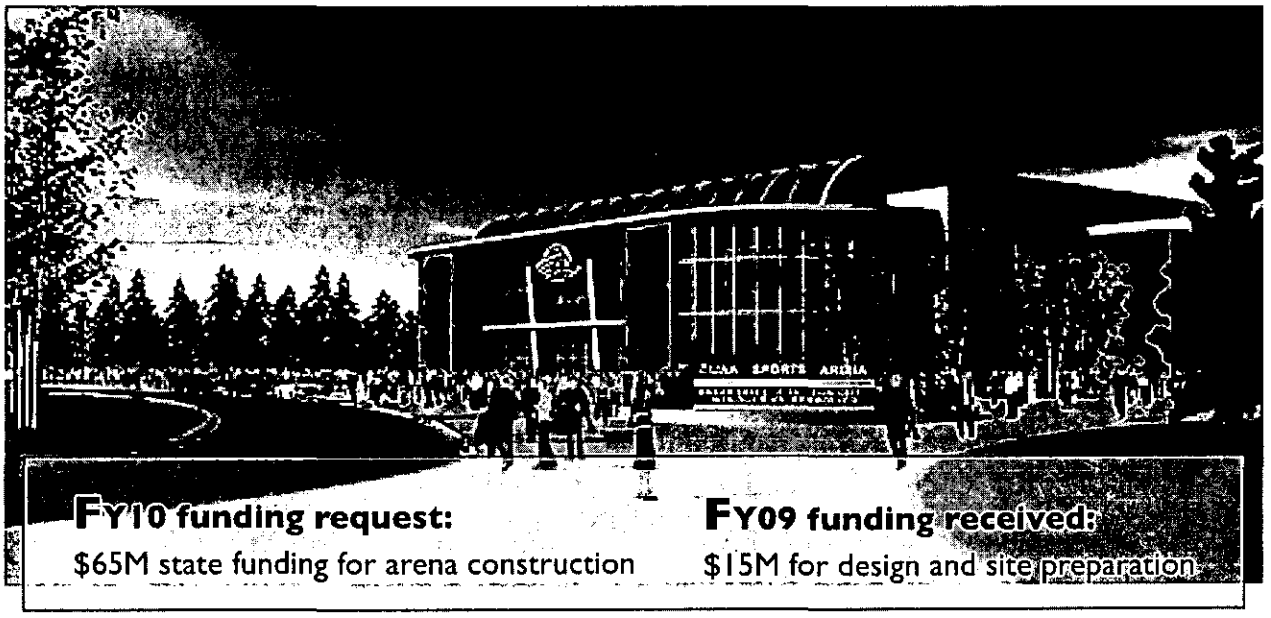
Sports Arena



FY10 funding request:
$65M state funding for arena construction

FY09 funding received:
$15M for design and site preparation

In FY09 the Alaska legislature provided the University of Alaska Anchorage (UAA) with $15M for a new sports arena. This funding is being used for project design and site preparation. Our FY10 request of $65M will be used for the arena's construction, which would begin during the summer of 2010.

The on-campus student recreation activities and varsity athletics currently share space in the Wells Fargo Sports Complex (WFSC) on the Anchorage campus. Built more than 30 years ago for a much smaller student population, the WFSC does not provide adequate classroom, recreation or spectator-sports space for UAA's rapidly growing student body. With the support of the Alaska legislature, community members and business partners, UAA is moving forward with its plan to address these deficiencies in the construction of a new on-campus sports arena.

What the new sports arena will do for UAA

- Provide support for UAA's athletics teams
- Help to attract and retain students
- Improve campus life
- Provide adequate spectator seating for athletic events
- Create a sustainable on-campus facility
- Help to support UAA's health, physical education and fitness curricula
- Enhance UAA's competitive edge in student-athlete recruitment
- Provide additional student recreation space
- Enhance academic programs

Proposed sports arena floor plan

Performance gymnasium

- Spectator seating for approx. 3,500
- Concession stands

Athletic administration and team support facilities

- Locker rooms for UAA's athletics teams
- Locker rooms for officials
- Locker rooms for visiting teams
- Fitness and training facilities
- Offices for coaches and athletic administration
- Auxiliary gym
- Equipment storage and laundry facilities
- Meeting rooms
- Academic support space
- A/V production space

Gymnastics facility

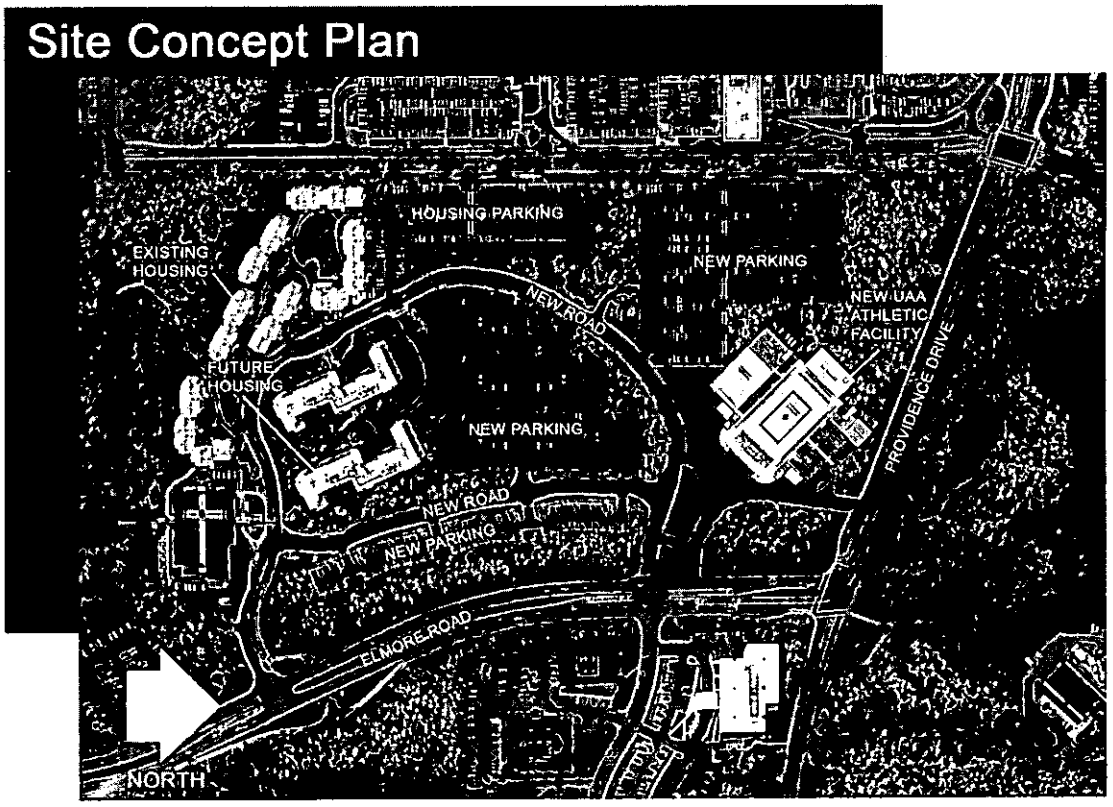
- Practice and performance gym
- Spectator seating

Construction timeline and specs

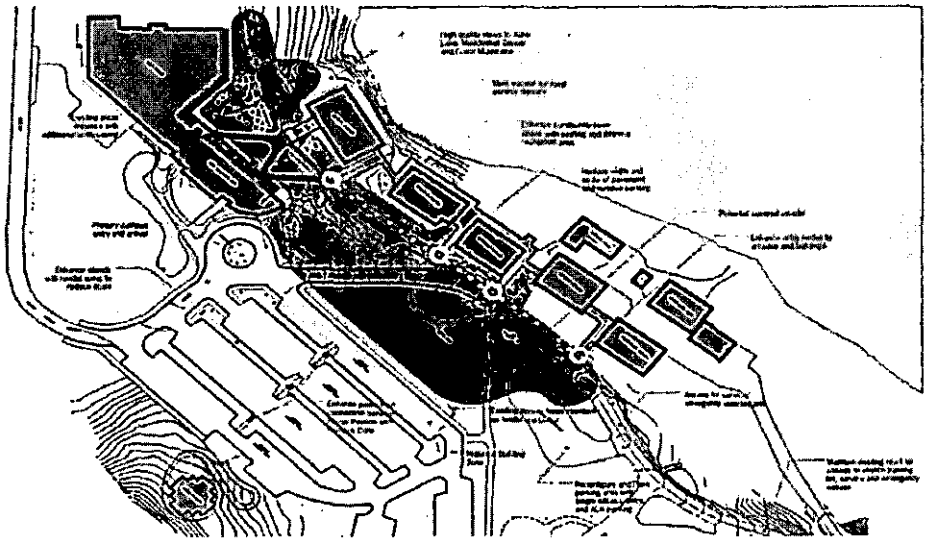
- 2008-09: design and site preparation
- 2010-11: facility construction
- Building area: approx. 130,000 gross square feet
- Total project budget: $80M

What the new sports arena will do for the community

- Expand high school sports and extracurricular activities
- Provide an additional Anchorage venue for concerts and other arts events
- Serve as a space for conferences and large meetings
- Provide additional training and testing space for fire, police and other city/state organizations
- Serve as a space for community athletic camps
- Serve as an additional venue for large high school athletic competitions
- Serve as an additional community venue for graduations and assemblies

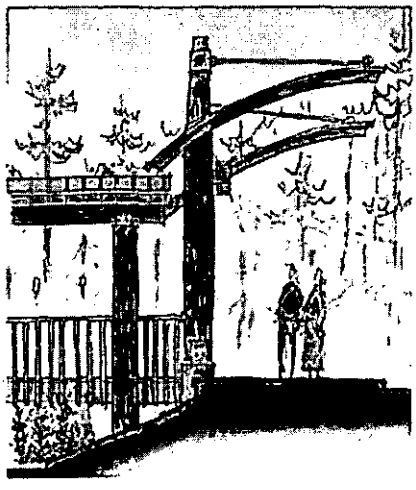


Auke Lake Way
Campus Entry Improvements & Road Realignment



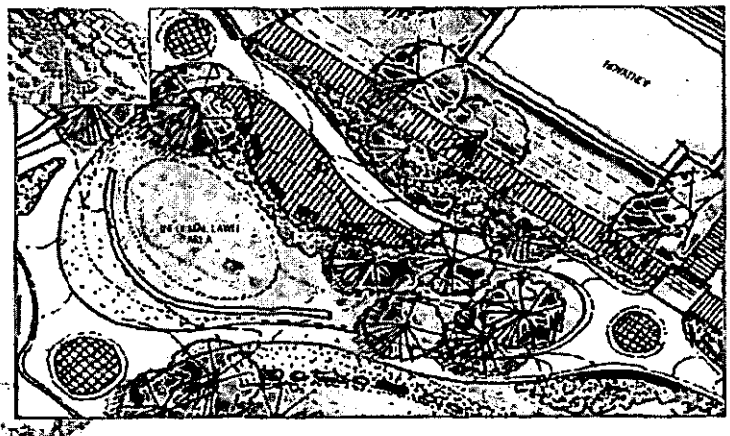
Need:

- Provide Service/Emergency Access
- Reduce pedestrian / vehicle conflicts
- Enhance the pedestrian environment
- Improve site drainage
- Accommodate future building development
- Connect existing pedestrian sidewalks and trails
- Establish new entry circulation routes



Features:

- Enhanced building entry nodes
- New covered pedestrian spine
- New informal gathering /recreational areas within a "campus green"
- New energy efficient site lighting
- Celebration of the culture and environment of the region
- Enhanced access to Auke Lake views



Funding:

FY10 Capital Request: $4.13 M

Background Information

Magnitude of Facilities: The University of Alaska maintains over 400 buildings with more than half exceeding 30 years of age. The buildings have an estimated gross square footage of 6.7 million and an asset value of over $1.7 billion. The asset value does not represent building replacement value, which would be over $2.5 billion. UA requires an annual investment of over $50 million for facility renewal and renovation (R&R). Each year that the annual R&R investment goes un-funded or under-funded adds to UA's backlog of deferred projects.

Prior Funding: State funding for UA's R&R projects totaled $161 million in the ten-year period 2000 to 2009 averaging $16 million annually, while UA required an annual average investment of $50 million. The only years in this decade that UA has received adequate state funding for R&R projects was in 2007 ($48.7 million) and 2009 ($45.8 million). Due to the significant shortfall in funding coupled with the rising cost of construction, UA's deferred maintenance and R&R inventory has grown to over $800 million as of August 2008. An acceptable level of deferred maintenance and R&R for UA would be between $250 million and $300 million.

Maintenance/Maintenance and Repair (M&R): M&R also referred to as simply maintenance is the routine work required to preserve the functionality of a building. This is an operating budget requirement. The university dedicates about $31 million per year of its operating budget to this category. M&O and M&R are sometimes used interchangeably (they should not be) but the important fact to remember about them is that they are the day-to-day operating budget items addressing facilities.

Maintenance and Operation (M&O): M&O is similar to M&R, but is an expanded category that includes the operations of facilities such as janitorial, security, related staff, utilities, etcetera. This is an operating budget requirement, which when added to the amount spent on M&R, increases UA's annual physical plant expenditures to approximately $80.3 million.

Renewal and Renovation (R&R): This category represents the scheduled replacement of worn out building components that extend the useful life of a facility. R&R is nationally recognized as a capital budget item versus M&R recognized as an operating budget item. Projects that would fall under R&R include upgrading for code, replacement of heating and ventilation systems, roof repair or replacement, flooring replacement, and renovating and remodeling of space to meet program needs.

Deferred Maintenance: This is the cumulative effect of major repair, renewal, replacement, and renovation projects that have not been carried out. Usually this category represents the backlog of facility maintenance needs that result when M&R and R&R have been neglected for several years. The Board of Regents' has mandated full funding, through the operating budget, for regular maintenance and repair, so this backlog has come from the under funding of R&R needs in the capital budget.

Life Sciences = Research for Alaska

Lack of sufficient research space continues to hamper UAF life sciences research programs. Since 2001, research expenditures in this area have increased nearly three-fold, yet there have been almost no new facilities constructed with state capital dollars to meet that growth. UAF's research success depends on immediate funding for the Life Sciences Innovation and Learning Facility.

UAF life sciences research focuses on:

- diseases of public health importance to the state, such as the avian influenza virus and diabetes.
- neuroscience studies on preventing sudden infant death syndrome and protecting against brain injury following heart attack or stroke.
- ecological and wildlife research to better understand climate change effects on Alaska and other northern ecosystems, and the occurrence and risk of contaminants in wildlife and in subsistence food.

Additionally, the co-location of research with the teaching component of life sciences allows for better collaboration between the two areas. Life sciences research is real and relevant to the people and the state of Alaska.

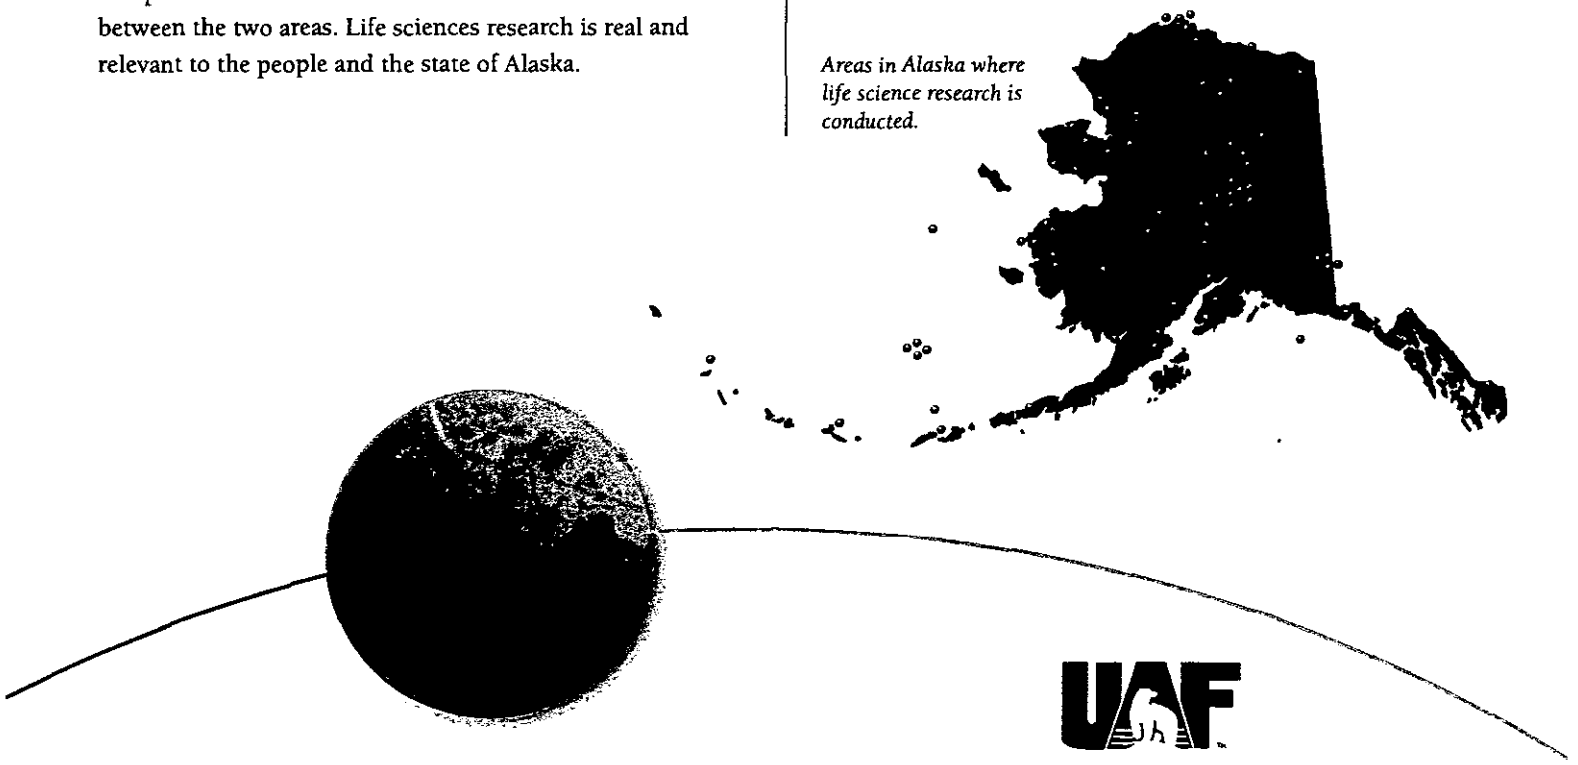
One project. Two components. Hundreds of opportunities for Alaska

Life Sciences Innovation and Learning will feature modern academic space for more than 600 biology and wildlife degree students and more than 1,200 students who take biology courses each year. Research space will feature a series of labs for as many as 12 lead researchers who will also employ seven to 10 scientists each.

The facility's proposed location on UAF's West Ridge will allow for connectivity to the Biological Research and Diagnostic (BiRD) building and the new state virology laboratory. This location is integral to the collaborative research effort between the state and the university.

Life Sciences will utilize a two-component approach to provide flexibility for construction. The solution will connect 37,200 square feet of academic space with 50,000 square feet of research space. Once complete, space in other buildings will become available for renovation and reassignment for other programs, creating a domino effect that will benefit all students, staff and faculty at UAF.

Areas in Alaska where life science research is conducted.



UNIVERSITY OF ALASKA FAIRBANKS
Alaska's First University

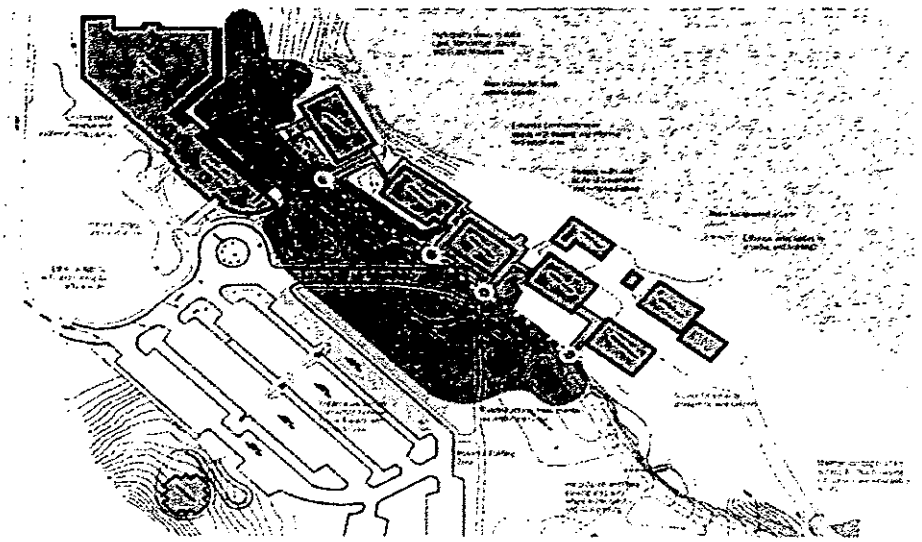
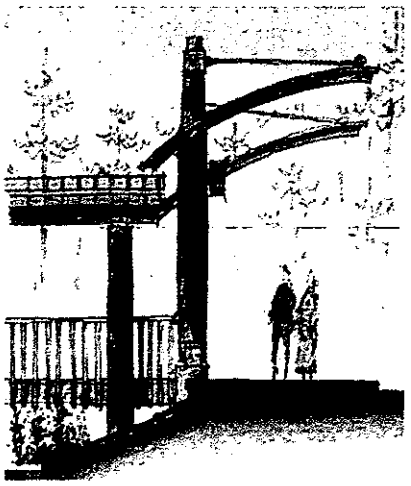
Auke Lake Way
Campus Entry Improvements & Road Realignment



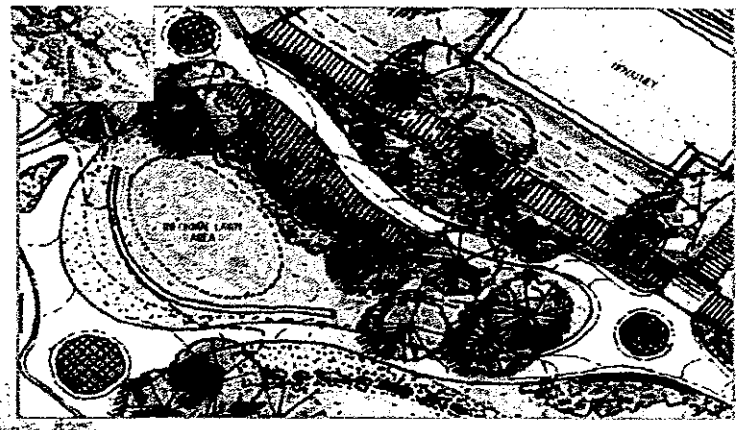
Need:

- Provide Service/Emergency Access
- Reduce pedestrian / vehicle conflicts
- Enhance the pedestrian environment
- Improve site drainage
- Accommodate future building development
- Connect existing pedestrian sidewalks and trails
- Establish new entry circulation routes



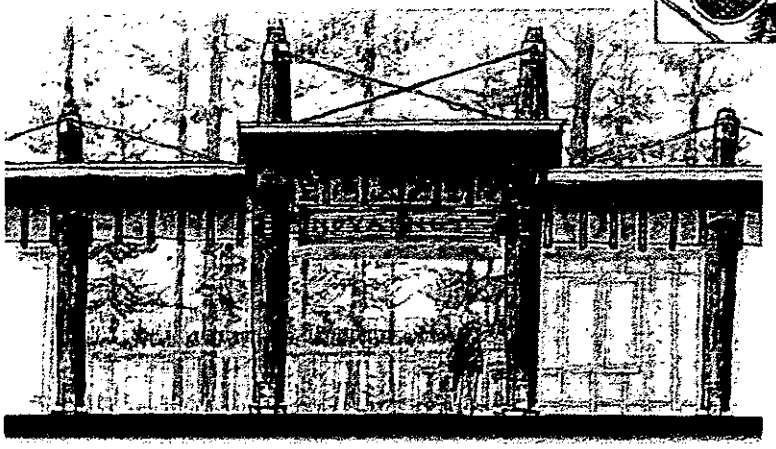
Features:

- Enhanced building entry nodes
- New covered pedestrian spine
- New informal gathering /recreational areas within a "campus green"
- New energy efficient site lighting
- Celebration of the culture and environment of the region
- Enhanced access to Auke Lake views



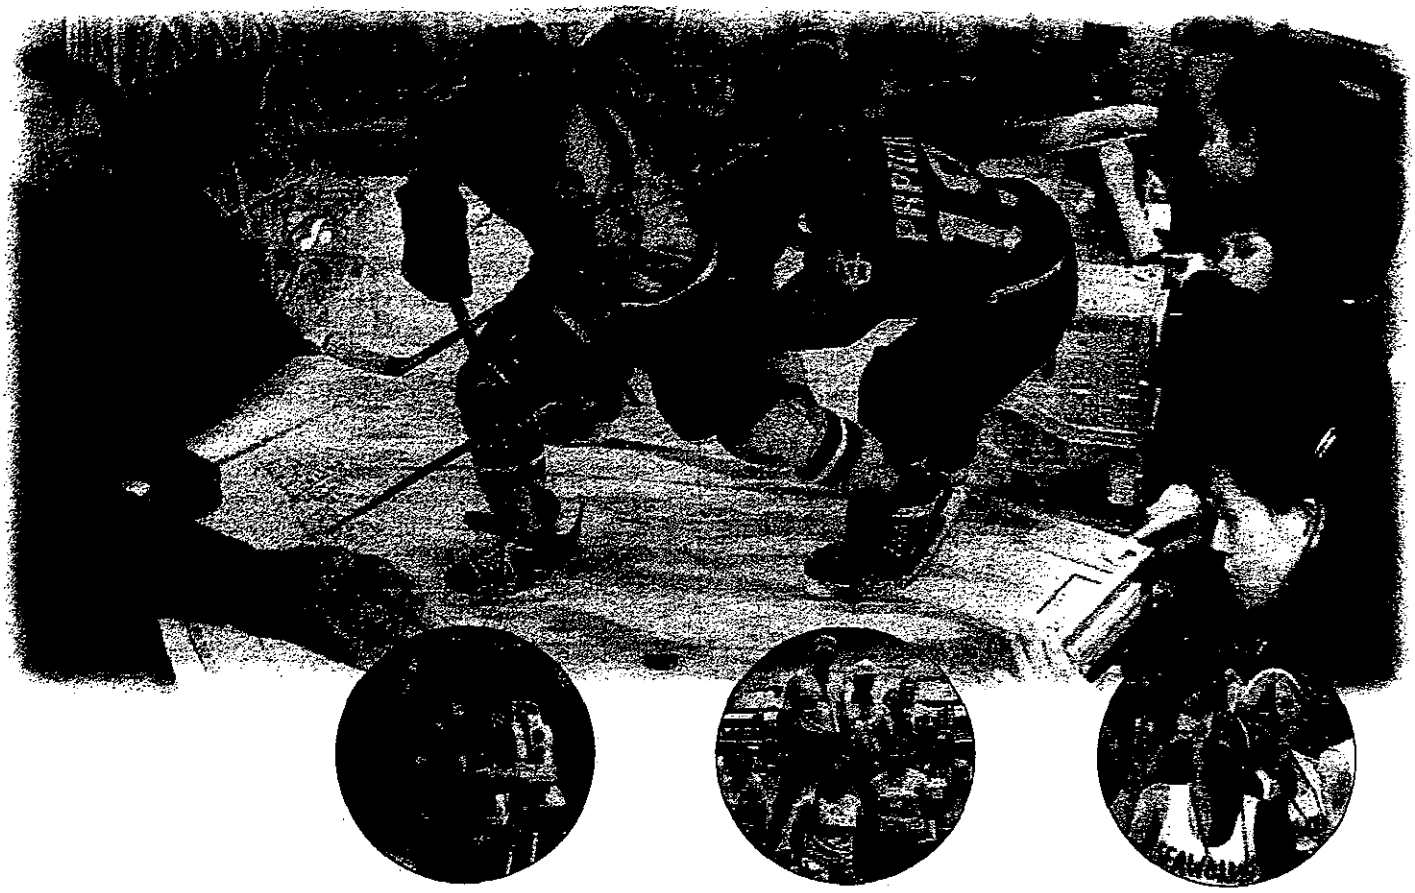
Funding:

FY10 Capital Request: $4.13 M



UNIVERSITY OF ALASKA
SOUTHEAST

FY10 **UAA Capital Projects Request**



- ***Sports Arena, construction***
  UAA request, $65M

This funding request will allow for the construction of a desperately needed new sports arena that will serve multiple needs from academic instruction to intramural and community recreational use to intercollegiate competition. The arena will include a 3,500-seat performance gymnasium for university and community events that will convert to three multi-use courts. There will also be a gymnastics facility and an additional two-court auxiliary gym. A one-eighth-mile running track will circle the main gymnasium. This new facility will provide significant support space for teams, faculty, staff and community use. This project received $15M of funding for design and site development in FY09.

- ***Engineering building, planning and design***
  UAA/UAF request, $25M

The engineering enrollment at UAA has nearly doubled in the past five years, and as a result, the current facility (built in the 1980s) is inadequate for the student population. This funding request is for facilities necessary to accommodate instruction and research program growth, campus services and to improve energy efficiency. These funds are proposed for a number of facilities including engineering instruction buildings at UAA and UAF, and an energy technology building at UAF. These projects are critical to meeting industry demand for Alaska engineers and the UA goal of doubling the number of graduating baccalaureate engineers.

- ***Co-generation plant, planning and design***
  UAA request, $2M

This funding request would provide for the initial planning and conceptual design of a 10-megawatt Central Heating and Power Plant as a joint venture between UAA, Providence Hospital and Anchorage Municipal Light and Power (ML&P). UAA would provide the site and building, Providence would provide staffing, and ML&P would provide the natural-gas-fired turbine

generators. The use of the exhaust heat from the generators will result in a significant cost savings to the University and would reduce its carbon footprint. Co-generation, a simultaneous production of thermal energy and electric power from a single fuel source, is more efficient than producing electric power and thermal energy (steam/hot water) from separate fuel sources. UAA has also submitted a proposal for a State of Alaska Renewal Energy grant to help with this project.

- ***Feasibility studies for community campuses new facilities (includes all campuses) UAA/UAF/UAS request, $4M***

This funding for feasibility studies on possible new facilities requested by UAA's, UAF's and UAS's community campuses would help define the projects' size, scope and future funding requirements.

- ***Maintaining existing facilities and equipment renewal & renovation annual requirement, UAA's community campus funding request, Distribution (Annual: $1,922.7, Backlog: $6,848.3)***

This funding request is for necessary major campus renewal and renovation projects on UAA's community campuses, including:

- Kenai Peninsula College Kenai River Campus water connection to city water system;
- Community campus fire systems upgrade;
- Community campus code/Americans with Disabilities Act projects;
- Community campus telephone and data network cable plant renewal, phase II;
- Prince William Sound Community College Wellness Center/Student Life Renewal;
- Mat-Su Campus HVAC, boiler and exhaust fan replacement.

- ***Anchorage campus maintaining existing facilities and equipment renewal & renovation, annual requirement funding request total, Distribution (Annual: $11,400.0, Backlog: $32,136.6)***

This funding request is for necessary major campus renewal and renovation projects, including:

- Renovation of the existing Science Building for classrooms, laboratories and offices, among other facility upgrades;
- Backfill renovation and renewal for the Beatrice McDonald Building for occupation by the Environment and Natural Resources Institute;
- Backfill renovation and renewal for the Engineering Building to provide much-needed offices, classrooms and instructional labs for the School of Engineering;
- Consortium Library overhaul or replacement of all HVAC equipment including boilers, supply/exhaust fans, heating/cooling coils and humidification systems;
- Fire Alarm Panel Upgrade;
- Fine Arts Building refurbishment/replacement of the HVAC systems;
- Campus Roof Replacement for its 5 percent/year plan;
- Campus replacement of boilers, fans, VAV boxes and building automation system controls in a number of campus buildings on the West Campus and the Administration Building. Air-conditioning in the Allied Health Sciences Building and many of the student computer labs will be resized and replaced to meet the needs of these areas;
- EM1 and EM2 Piping Replacement;
- Repair and resurfacing of roads, resurfacing and/or expansion of existing sidewalks and curb/gutters, as well as additional construction where required by traffic, new construction or code.

The UA Board of Regents' annual facility renewal, renovation (R&R) and code compliance request of $50 million from state funds represents approximately 3 percent of UA's facilities adjusted value. UA's deferred maintenance backlog request of $150 million is necessary to reduce the deferred maintenance and R&R backlog. The $50 million annual funding and the $150 million backlog funding enables UA to begin addressing projects to bring UA's facilities to appropriate standards, codes, and programmatic needs. Governor Palin's proposed budget includes a portion of UA's R & R request, of which $2,599,000 is for UAA.

The UA Board of Regents' total new capital project request for was $198,625,000, of which $96,000,000 was UAA. Governor Palin did not include any new capital project funding in her proposed budget.

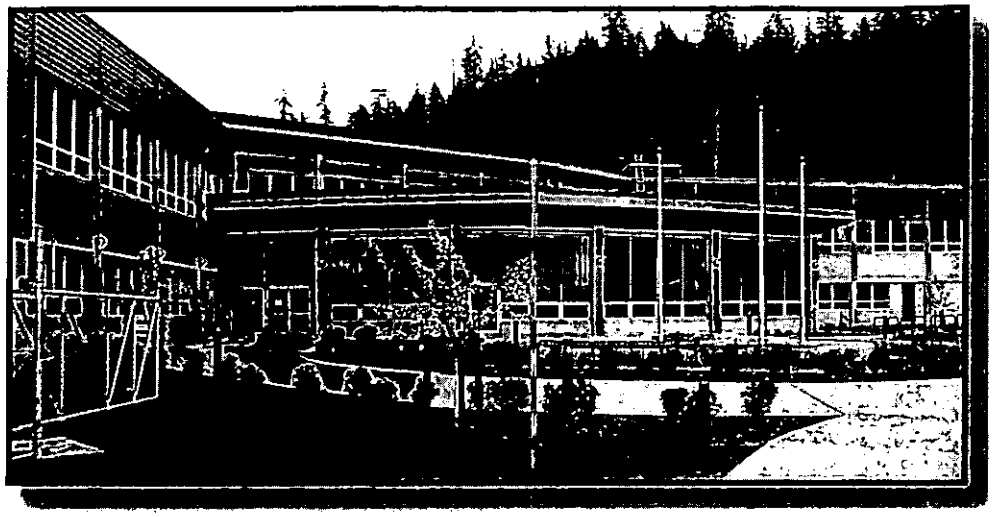
UA Request Compared to Actual Appropriation

FY	UA's Requested GF* Increase	State Appropriated GF* Increase		Salary and Fixed Cost Obligations	
				GF*	NGF
2000	$16.3 m	$6.0 m	3.6%	$12.9 m	$2.5 m
2001	$16.9 m	$15.7 m	9.0%	$11.7 m	$3.7 m
2002	$16.8 m	$10.7 m	5.6%	$10.7 m	$7.1 m
2003	$16.9 m	$9.7 m	4.8%	$10.3 m	$8.6 m
2004	$13.6 m	$4.6 m	2.2%	$9.9 m	$9.3 m
2005**	$19.3 m	$15.5 m	7.2%	$18.6 m	$13.6 m
2006**	$19.5 m	$17.1 m	7.4%	$18.8 m	$17.6 m
2007**	$40.5 m	$34.3 m	13.8%	$29.9 m	$18.7 m
2008	$27.8 m	$10.0 m	3.5%	$12.9 m	$15.8 m
2009	$28.4 m	$20.5 m	7.0%	$14.5 m	$13.9 m
Total	$216.0 m	$144.1 m	7.1%	$150.2 m	$110.8 m

* GF includes GF/MHT/TVEP/ASTF/BLic

** Includes extraordinary PERS/TERS retirement increases for FY05 $8.8m GF; FY06 $6.9m GF; FY07 $7.9 m GF

Bottom Line: In only four of the last 20 years have general fund increases covered the salary and fixed cost obligations and allowed for state-funded



UA Facilities Need Investment

- UA requires annual capital funding of $50 million for major renewal and renovation (R&R), plus an additional annual investment to begin to address the R&R backlog known as "deferred maintenance."
- This investment is in addition to operating funds UA dedicates each year ($31 million in FY09) to maintain 400 buildings – 6.7 million square feet across the state.
- When capital R&R funding falls below $50 million annually, UA's maintenance backlog grows.
- Every year, UA's highest priority capital budget request is major R&R. Since FY2000, UA's annual request has averaged $75 million. State appropriations have averaged $16 million.
- UA's R&R inventory now exceeds $800 million--a critical level.

FY08 REPORT CARD

From FY07		From FY99
↑ Up 1%	High Demand Job Area Degrees Awarded	↑ Up 38%
↓ Down 1.5 points	First-Time Full-Time Undergraduate Retention	↑ Up 9.5 points
↕ No Change	Student Credit Hours	↑ Up 16%
↓ Down 4.6%	Grant-funded Research Expenditures	↑ Up 97%
↕ No Change	University-Generated Revenue	↑ Up 90%

UA's Impact on Alaska

Completion of at least one workforce training course at UA leads to an average 18 percent increase in earnings.

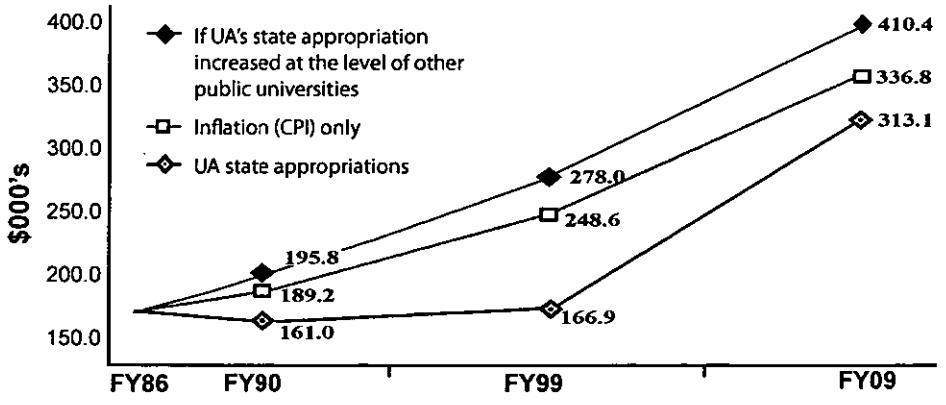
The UA Scholars Program keeps young Alaskans in state. More than 4,250 Scholars have enrolled since 1999, earning more than 1,200 degrees and certificates to date. More than 90 percent of them stay in Alaska to work, raise families and contribute to the economy.

New Occupational Endorsement and Workforce Credential tracks are tailored toward non-traditional students who have a specific career goal, like a promotion.

UA freshmen in baccalaureate engineering programs have doubled since 2004, with a 30 percent increase in the last year. State labor economists predict strong employment opportunities in engineering and related fields.

UA graduates in health programs have increased over 20 percent in the last five years. The latest enrollment figures, at nearly 3,450 students, are up an incredible 86 percent since 2000. Health-care workers are highly sought for employment, with demand even higher in rural Alaska.

State Appropriation Comparison



Where We Could Be: If state funding increased at the average for Lower 48 public universities

Where We Should Be: If state participation was adjusted for inflation (CPI)

Where We Are: Nearly $24.6 million is consumed by extraordinary increases in state retirement

Bottom Line: State support for UA has not kept pace with the average of Lower

Strengthening Alaska's Economy

- The University of Alaska leaves an economic footprint in the state of nearly $1 billion annually, including:
  - Direct and indirect payroll
  - Student and visitor spending
  - And millions in goods and services paid to 1,200 Alaska businesses in 70 communities
- Nine out of 10 recent high school graduates rate the quality of education at UA as good or very good, a dramatic improvement since 1999.
- UA research brings over $150 million to the state each year, employs nearly 2,400 people and has a total payroll of $92 million. Future growth in UA research will require a state investment in new facilities.
- Charitable donations to the UA Foundation reached a record $31 million in FY08, with nearly 6,450 people, businesses and foundations supporting the university's programs, scholarships and students.
- UA now attracts 63 percent of college-bound high school graduates in Alaska, up from 45 percent in the mid-1990s.

Bottom Line: Students, parents, employers, alumni and citizens support the UA system.

Funding Analysis Comparison

University of Alaska Compared to Western States

	U of A	WICHE
	FY06	FY06
State Appropriation to Higher Education	9.8%	11.6%
State Grant Aid per Student	$28	$416
Ratio : Instruction Expenditures per Student FTE	$9,373	
2-year, 4-year and Graduate Institutions		$6,545
4-year and Graduate Institutions only		$9,813
Ratio : Appropriation per Student FTE	$14,090	
2-year, 4-year and Graduate Institutions		$7,073
4-year and Graduate Institutions only		$15,613
Staff per 100 FTE Students*	13.9	12.9
Research Generated per Faculty**	$118,734	$54,283

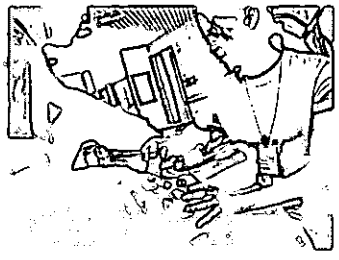
Note: * UA Peer Institutions with less than 35,000 student FTE.

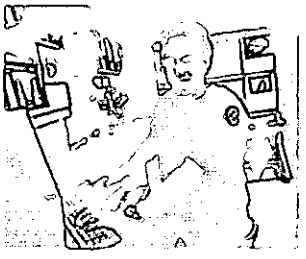
** Only FY05 Faculty figures were available on WICHE website: http://www.wiche.edu/policy/factbook/

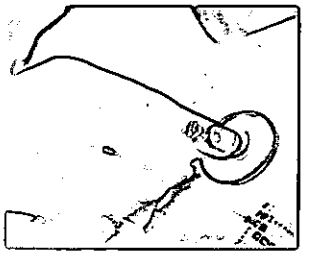
Bottom Line: UA instructional costs and state appropriations, per student, are in line with our Western neighbors.

UNIVERSITY of ALASKA

Many Traditions One Alaska







University of Alaska Health Programs

2008 - 2009

The State of Alaska is in great need of well-prepared graduates in the health care workforce. Shortages abound as health care needs increase and current workers look toward retirement. As one of the largest and fastest growing sectors of Alaska's economy, the health care industry makes up more than one in every 12 jobs in Alaska.

The University of Alaska stands ready to help meet the needs of Alaska's health care workforce. With new and expanding programs, and a new Health Sciences Building on the horizon, there are many programs and job prospects for health students to look forward to at UA.

This University of Alaska Health Programs publication will guide you through many of the health programs offered at the University of Alaska, from medical laboratory technology to psychology, and nursing to dental hygiene.

- **UA has experienced nearly 70 percent growth in health care students and graduates since 2002.**
- **One in every 12 jobs in Alaska is in the health care industry.**
- **Between UAA, UAF and UAS, health students in more than 200 locations across Alaska are taking classes in their discipline.**
- **Alaska will need nearly 50 percent more behavioral health professionals by 2010.**
- **The Alaska WWAMI Program has doubled its enrollment from 10 to 20 students to help meet Alaska's critical physician shortage.**
- **More than 90 percent of nursing graduates intend to remain in Alaska for their first jobs.**
- **The School of Nursing's capacity doubled from 96 admission slots in 2002 to 223 slots in the 2008 academic year.**
- **Enrollment in the University of Alaska's allied health programs has grown by about 130 percent since 2002.**

From the Associate Vice President, Health Programs

The University of Alaska has a pivotal role to play in meeting the significant health and human service workforce needs of Alaska. State labor projections show a continued strong job forecast for virtually every health care profession. Employers report significant shortages in qualified personnel.

Recent studies show that over $24 million in costs are added each year to Alaska's health care system from vacancies and the need to import temporary health workers.

The University has responded by producing thousands of new graduates and creating many new degree programs. Program expansion has been based on a number of principles, including:

- Strategic planning and cooperation between all campuses to enhance offerings and eliminate duplication.
- Export of programs, like nursing, to many sites from a centralized center of excellence through use of distance technology.
- "Grow our own" philosophy, which brings articulated career ladder programs to students in rural and urban settings and at mid-career.
- A focus on students who are place-committed to their local community, and who are more likely to stay upon graduation and practice locally.

I hope you will share my excitement about the future of health workforce development as you read this publication. We have a strong team of health and human services faculty, administrators and staff at the University of Alaska who will continue to push for increasing the quality and quantity of our offerings.

Karen Perdue
Associate Vice President, Health Programs
Academic Affairs, University of Alaska System
karen.perdue@alaska.edu

From the Vice Provost, Health Programs

It's exciting to see the incredible growth of Alaska's health care industry. However, this does create a burgeoning demand for health care workers, and challenges the University to respond vigorously to address state needs.

The University of Alaska has a growing reputation for offering quality education in many arenas, especially health care. More people are turning to UA for health care-related training and education. In excess of 70 percent of health-related jobs in 2014 will require at least an associate's degree or significant postsecondary vocational training, and almost 30 percent of those will require a bachelor's degree or higher.

The University will work hand-in-hand with industry, governmental and community entities, and collaborate closely with public and private sector partners, to maintain and develop our programs supporting workforce development and high-demand careers. Specifically, the University of Alaska Anchorage, which educates over 75 percent of UA health students, has prioritized the development of new health care training opportunities.

I hope you enjoy reading this updated University of Alaska Health Programs publication to get all the latest on what UA is doing to help meet our students' interests and state's health care needs.

Jan Harris

UA Steps Up...

The need for trained workers in the health care industry has never been greater.

The health care industry is one of the largest and fastest growing sectors of Alaska's economy. More than one in every 12 jobs in Alaska is in the health care industry. The fastest-growing group of health care-related occupations includes home health aides, paramedics, medical assistants and dental assistants.

A significant number of job openings across the state reflects the demand for new workers, and retirements from the workforce play a major role in the future need for workers in the industry. That's where the University of Alaska comes in.

University of Alaska responds

The University of Alaska has stepped up vigorously to address the state's health care needs. Shortages have been identified in many critical occupations, some at crisis stage. There are significant state and national shortages in the fields of nursing, medicine, pharmacy, physical and occupational therapy, behavioral health, public health, management, and a number of allied health occupations.

UA has experienced nearly 70 percent growth in health care students and graduates since 2002. Between the fall semesters of 2001 and 2007, there was a 68 percent increase in students majoring in a health field, with a growth in numbers from just over 2,000 to more than 4,000. The numbers of degrees and certificates awarded grew from more than 700 in 2001 to nearly 1,300 in 2007, a 66 percent increase.

Distance delivery: Reaching more students in more places

University of Alaska's health programs are available via distance delivery to many Alaska communities, allowing more students access to the education they need to enter into or advance their health careers.

"We've been very aggressive in using distance education for things that people wouldn't normally think could be taught by distance," said Sally Mead, Director of UA's Expanding Access to Health Programs project.

Old models of instruction required students to travel away from their homes – sometimes for several years – to gain the education necessary to become a nurse, pharmacy technician or social worker.

Left: Sue Miller and Nina Mehegak are limited radiography students participating in an "Elluminate Live" session at the Yukon-Kuskokwim Health Center in Bethel.

Right: Alexia Wassilie, Clinical Lab Assistant student in Bethel.

Photo by Mike Dinneen

Distance education now allows Alaskans to prepare for established, well-paying jobs in or near their home communities, previously out of reach for place-committed rural residents.

Distance-delivered courses and programs take many forms. Many have a statewide reach while others are organized regionally. Because students may take courses from more than one campus, or might move from one part of the state to another, aligning courses and programs has become critical in the distance education arena.

The UA Health Programs initiated the Health Distance Education Partnership (HDEP) to increase the number of distance-delivered programs offered through UAA, UAF and UAS. "The success of this initiative depends on a 'hub and spoke' structure that recognizes the importance of community campuses around the state," said Mead. "The partnership between these campuses is essential." During its first three years, the HDEP supported faculty to create or improve 50 courses, including 14 certificates or degrees in nursing, allied, behavioral and public health.

UAA partners with Creighton University to offer distance-delivered Occupational Therapy program

One of the University's newest distance-delivered programs is a joint Occupational Therapy program with Nebraska's Creighton University. Started in August 2008, a group of eight students are participating in Alaska's first student cohort. This distance-delivered pilot program is aimed at addressing Alaska's critical shortage of occupational therapists.

"This partnership responds to the lack of educational opportunity for occupational therapists in Alaska and the shortage of OTs available to practice in this state," said Cheryl Easley, Dean of UAA's College of Health and Social Welfare. "The program increases the likelihood that the graduates will remain in Alaska to work."

Alaska Area Health Education Center

The Alaska Area Health Education Center (AHEC) is a statewide university-industry partnership focused on strengthening Alaska's health workforce that:

- Encourages Alaskans from disadvantaged backgrounds into health careers;
- Coordinates clinical rotations to help students secure employment in underserved areas and with underserved populations; and
- Improves access to continuing education for health professionals in underserved areas.

The Alaska AHEC Program has four partners: the Yukon Kuskokwim AHEC at Yukon Kuskokwim Health Corporation, the Interior AHEC at Fairbanks Memorial Hospital, the Southcentral AHEC at the Providence Alaska Learning Institute and the Southeast AHEC at the Southeast Alaska Regional Health Consortium. The AHEC Program Office and its partner organizations work to synergistically bridge the gap between professional training schools and underserved populations.

Allied Health

"The majority of our students already have jobs, and our programs allow them to advance their careers."

People who work in allied health fields make the health care industry tick. According to the Alaska Department of Labor and Workforce Development, four of the 10 fastest-growing occupations in Alaska are in allied health.

The University of Alaska has ramped up its offerings to respond to the critical demand for allied health workers throughout Alaska. Formed in 2002, the University of Alaska Allied Health Alliance, a cross-campus planning and coordination group made up of leaders of the allied health programs, works to expand allied health course offerings across the University's 16 campuses. The group meets regularly to evaluate offerings and brainstorm ideas on how to address the allied health workforce needs of our state.

In the last seven years alone, enrollment in the University of Alaska's allied health programs has grown by about 130 percent, and the number of degrees awarded has increased by 86 percent.

The University of Alaska Anchorage's (UAA) Allied Health Sciences

James Munn graduated from UAA in 2007 with two degrees: an AAS in Radiologic Technology and an AAS in Human Services. After graduation, James moved to Bethel to work as a Radiologist Technician in the Diagnostic Imaging Department at the Yukon-Kuskokwim Health Corporation.

Right: Students at UAF's Kuskokwim Campus in Bethel take notes in their anatomy and physiology class.

Division, a part of the Community and Technical College, is home to eight allied health program areas including Dental Assisting, Dental Hygiene, Fire and Emergency Services/Paramedic, Medical Assisting, Medical Laboratory Technology, Pharmacy Technology, Radiologic Technology and Therapeutic Massage.

The University of Alaska Fairbanks' (UAF) Tanana Valley Campus (TVC) offers seven allied health programs: Certified Nurse Aide, Dental Assistant, Dental Hygiene, Emergency Medical Services/Paramedic, Health Care Reimbursement, Medical Assistant, Medical/Dental Receptionist and Phlebotomy. The University of Alaska Southeast (UAS) delivers training in Certified Nurse Aide, Health Information Management, and Personal Care Attendant, in addition to offering UAA's Medical Laboratory Technology, Pharmacy Technology and Radiologic Technology via distance delivery.

The College of Rural and Community Development (CRCD) Health Programs office at UAF delivers certificates in Health Care Reimbursement to help individuals enter the field of health care, and serves as university liaison to the Community Health Aide/Practitioner Program.

Torie Foote, Director of CRCD Health Programs, explains, "We're continuing to work with tribal health corporations to make sure we're meeting their workforce needs. The majority of our students already have jobs, and our programs allow them to get the training needed to advance their career."

"By offering distance-delivered programs, we are providing greater access to higher education to all Alaskans," said Sally Mead. "Between UAA, UAF and UAS, allied health students in 213 locations across Alaska are working toward an education to better themselves and the communities they live in. Our distance-delivered programs use several methods of course delivery including web-based courses, audio and video conferencing and hands-on clinical experience."

Growing dental programs keep Alaskans smiling

The UAF Tanana Valley Campus recently added an Associate of Applied Science degree in Dental Hygiene to its program offerings. "The demand for dental hygienists in the Fairbanks area is significant," said Marsha Sousa, Allied Health Programs Coordinator, UAF Tanana Valley Campus. "The support of our local dental community was essential in developing this program, and they continue to help us by teaching and mentoring students in our state-of-the-art dental clinic. The presence of our dental hygiene clinic has increased access to care for our underserved population in particular."

UAA's dental programs have also experienced some major changes. Students and faculty are enjoying their recently remodeled UAA Dental Clinic, featuring 21 dental operatories (14 for hygiene, seven for assisting), a lab, a large classroom and faculty offices. Because of the remodel, the Dental Hygiene program can now enroll 14 students a year.

"We are excited to see how our new facility can change the treatment we give patients and the way our students learn," said Lynda Hernandez, Student Success Coordinator for UAA's Allied Health Division.

Left: A recent remodel of the Tanana Valley Campus Center includes a state-of-the-art dental clinic with six full operatories, three x-ray suites, dental materials lab, sterilization room and dark room. The clinic is home to UAF's dental assisting and dental hygiene programs.

Southcentral Paramedical Technology Program

After a successful start at UAA's Kenai Peninsula College (KPC), the Paramedical Technology Program is growing and will be offered at the Mat-Su College and the Anchorage campuses in the coming years. Paul Perry, a 23-year paramedic and KPC's paramedic instructor, says that Alaska's paramedic shortage is part of a nationwide need for paramedics and other health care professionals. The program's expansion to Anchorage and the Mat-Su Valley will help fill the paramedic positions that are in such high demand in Alaska.

Courtesy of Kenai Peninsula College

KPC students practice immobilizing and transporting an injured patient.

The Southcentral Program offers the 2-year Associate of Applied Science degree, which requires 68 credits including a number of general education courses, many of which are available via distance delivery. At the end of the program, students are required to participate in a 2-3 month field internship at an emergency services organization in the Lower 48.

Students enrolled in this program work with state-of-the-art training tools to gain the hands-on experiences they need to be successful in the paramedic field. KPC has partnered with the Kenai Peninsula Central Emergency Services and the Nikiski Fire Department in a variety of ways resulting in a strong community-supported program. The college has its own ambulance that was donated by the Nikiski Fire Department and is used as a training and recruiting aid. University vocational equipment funds have enabled KPC to purchase a high-tech SimMan mannequin for students to monitor blood pressure, lung sounds and 2,500 different cardiac rhythms.

UAF Tanana Valley Campus Emergency Medical Services/Paramedic Program

The Tanana Valley Campus Emergency Medical Services/Paramedic program is designed to prepare students for an entry-level position as a paramedic within the EMS community. Students can pursue the program at the certificate or associate's degree level, or can take individual EMT courses to meet the Alaska requirements for certification as an Emergency Medical Technician. The certificate program takes three semesters to complete, which includes a 2-3 month field internship with a Lower 48 emergency services operation.

The associate's degree expands upon the certificate program, and includes general education courses.

"The intense, practice-oriented program brings real issues to the table and teaches students to work with community partners..."

Public Health

Public health can be defined as "the science and art of protecting and improving the health of communities through education, promotion of healthy lifestyles, and research for disease and injury prevention." Public health focuses on a population as a whole, rather than the individual. Professionals in public health work to prevent health problems before they occur, and strive to improve the health and well being of people locally, nationally and globally.

Master of Public Health

The Master of Public Health (MPH) program at UAA focuses on public health issues specific to Alaska and the north. It is designed to enhance health in Alaska's diverse communities and the circumpolar north by preparing leaders to identify, prevent and solve health problems.

Many students are practicing professionals from all corners of the world who bring their broad range of expertise to class discussions. The intense, practice-oriented program brings real issues to the table and teaches students to work with community partners to develop innovative approaches to both current and emerging public health problems.

More than 70 students are engaged in the MPH program, and 21 people now call themselves alumni. Three additional full-time faculty members have recently joined the team, and community-based affiliate faculty now number more than 25. The program also welcomed Presidential Professor Dr. Richard Windsor in 2007.

Progress is being made toward achieving national accreditation from the Council on Education for Public Health (CEPH), with anticipated accreditation by Fall 2009.

"Everything we've done with this program to date has been with national standards of excellence in mind," said Dr. Rhonda Johnson, Department of Health Sciences Chair and MPH Coordinator. "CEPH accreditation, while voluntary, will confirm we are a program of excellence."

Culinary Arts and Hospitality, Dietetics and Nutrition program seeks funds to grow its Nutrition program

Alaska is the only state in which a bachelor's degree in nutrition is not offered. There is a growing demand for nutrition education leading to licensure as a registered dietician. The UAA Culinary Arts and Hospitality, Dietetics and Nutrition program currently offers an AAS in Culinary Arts and a BA in Hospitality Restaurant Management, with a minor in Nutrition. Due to increasing enrollment, the program is seeking funds for a full-time Dietetics and Nutrition assistant professor. This additional funding would make it possible for the program to maintain its excellence and offer baccalaureate education in nutrition sciences.

Health and Fitness Leadership Program

The Bachelor of Science in Physical Education with emphasis in Health and Fitness Leadership, offered through the Department of Health, Physical Education & Recreation produced its first graduates in May 2006. This career pathway has more than 100 active majors and prepares students for employment in clinical-based health; education and fitness programs; fitness facilities; worksite health promotion programs; or further studies in physical therapy, coaching and teaching, exercise and sport science, exercise rehabilitation or other health-related areas.

Nursing

School of Nursing chips away at nursing shortage, continues to grow

Growth seems to be a common theme in the School of Nursing. After meeting its goal to double the number of basic nursing graduates, the School of Nursing is continuing to grow with plans to accept an additional 16 students into its AAS program in Anchorage.

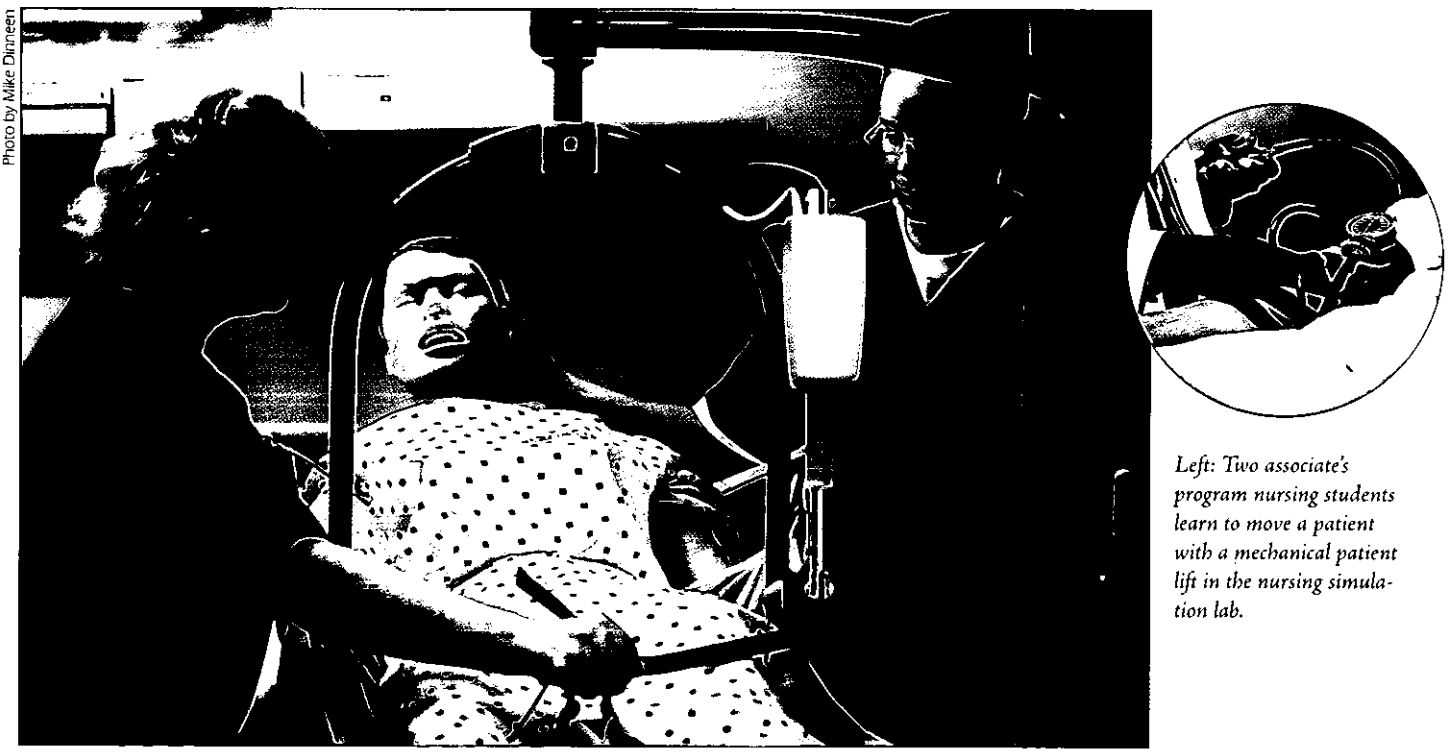
In 2002, the University/Industry Nursing Education Task Force established the goal of doubling the number of basic nursing graduates (AAS and BS programs) from the UAA School of Nursing by 2006. That goal was reached, and the School's capacity doubled from 96 admission slots in 2002 to 223 slots in the 2008 academic year. The baccalaureate nursing program increased the number of students in each admission cohort from 32 to 40, and admits three cohorts a year, instead of two.

"We're continuing to increase our capacity by hiring more faculty members and admitting more students," said Jean Ballantyne, Director of UAA's School of Nursing.

The School of Nursing offers Associate of Applied Science, Bachelor of Science in Nursing and Master of Science degrees. The School also offers an LPN to AAS option and an RN to BS option to help Licensed Practical Nurses and Registered Nurses transition into the next phase of their careers.

The Associate of Applied Science prepares students to provide direct nursing care to individuals in inpatient settings and structured outpatient settings. Students gain clinical experience in hospitals, nursing homes and clinics. The program is offered via distance delivery to 12 communities across Alaska.

Photo by Mike Dinneen



Left: Two associate's program nursing students learn to move a patient with a mechanical patient lift in the nursing simulation lab.

By 2020, the U.S. will be short more than 800,000 RNs.

Photo by Mike Dinneen

Courtesy of Kenai Peninsula College

Right: Kenai Peninsula College nursing student Cindy Miller examines a "practice" patient's ear.

By expanding the number of communities where students can enroll in the AAS program, the School of Nursing plans to eventually graduate about 240 to 250 students each year, according to Jackie Pflaum, Associate Director of the School of Nursing.

"That's the number of new nurses the health care industry in Alaska has indicated it can absorb on an annual basis," she said.

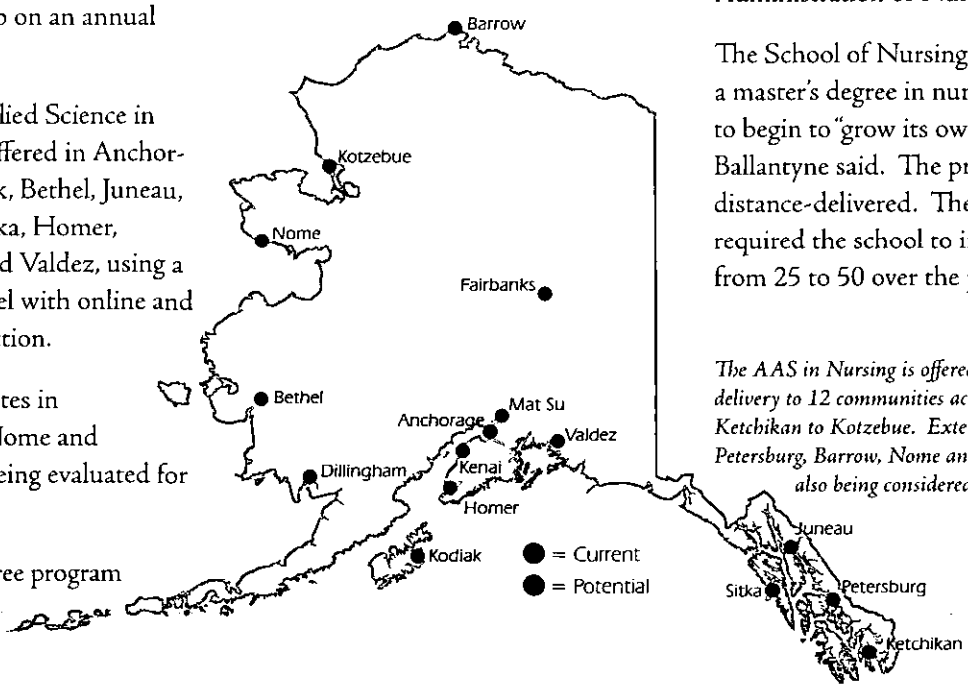
The Associate of Applied Science in Nursing program is offered in Anchorage, Fairbanks, Kodiak, Bethel, Juneau, Ketchikan, Kenai, Sitka, Homer, Mat-Su, Kotzebue and Valdez, using a blended delivery model with online and on-site clinical instruction.

Ballantyne said that sites in Petersburg, Barrow, Nome and Dillingham are also being evaluated for future offerings.

The baccalaureate degree program provides students with both theory and clinical experiences to enable them to assess, plan, implement and evaluate health care to meet the needs of individuals, families, groups and communities. Students may choose from two options: the Basic Student Option and the Registered Nurse Option.

For those who seek to further their nursing education, the School of Nursing offers a Master of Science in Nursing. Graduate studies at the master's level place primary emphasis upon advanced professional nursing practice, theory, research and health care delivery systems. Students may select one of four specialty tracks: Family Nurse Practitioner, Psychiatric-Mental Health Nurse Practitioner, Health Care Administration or Nursing Education.

The School of Nursing has developed a master's degree in nursing education to begin to "grow its own" faculty, Ballantyne said. The program is fully distance-delivered. The expansion required the school to increase faculty from 25 to 50 over the past four years.



The AAS in Nursing is offered via distance delivery to 12 communities across Alaska, from Ketchikan to Kotzebue. Extension sites in Petersburg, Barrow, Nome and Dillingham are also being considered for future offerings.

"With the nationwide nursing faculty shortage, we need to prepare the educators of the future, too," she said.

Even with the expanded programs, nursing vacancy rates in Alaska have held steady at around 8 percent for the past four years, she said, but coming retirements are anticipated to greatly increase the need for nurses worldwide.

By 2020, the Health Resources and Services Administration estimates the U.S. will be short more than 800,000 RNs.

"The best news for Alaska is our preliminary data shows more than 90 percent of our graduates intend to remain in Alaska for their first jobs," Pflaum said.

Shara Sutherland, Chief Nurse Executive for Providence Alaska Medical Center, says that 40 of the 50 nurses they've hired over the past year are graduates of UAA's School of Nursing. "There's no doubt that we'll exceed the number of nurses we hired last year," she said. "Providence offers many opportunities for new graduates to strengthen their skills through externships, internships and fellowships."

Similarly, the Alaska Native Medical Center has added 25 new nurses in 2008. "About 95 percent of our new nurses come from UAA," said Julie McNulty, ANMC Nursing Internship Coordinator.

Ballantyne adds, "Nursing education can't stand alone. We rely heavily on our community partnerships to provide students with the clinical experiences they need to be successful in this field."

As long as the Alaska health care industry can continue to hire the new graduates, university officials expect these numbers to stay up over time. The School of Nursing also is looking ahead by updating its comprehensive strategic plan to address the continued expansion and development of its programs, while also improving communication, student responsiveness, and faculty recruitment, retention and development.

Nursing Workforce Diversity Program

The School of Nursing started the Nursing Workforce Diversity Program (NWDP) in 2006 to address the lack of diversity in Alaska's nursing workforce. Since its inception, 35 people have graduated from the program. NWDP is designed to increase the number of ethnic minorities in the nursing workforce to match that of Alaska's diverse population, and to increase the opportunities for educationally and economically disadvantaged students.

RRANN is about building a community to help support students so they're more likely to succeed.

Recruitment and Retention of Alaska Natives into Nursing - RRANN

The Recruitment and Retention of Alaska Natives into Nursing (RRANN) program, housed within the School of Nursing, is designed to increase the number of Alaska Natives and American Indians who graduate with Associate of Applied Science or Bachelor of Science degrees in nursing.

The program offers an extra level of support to students through advising, college preparation counseling, admission planning, and providing information about degree programs and course requirements. RRANN provides free tutoring, student-led study sessions, weekly social meetings with cultural themes and guest speakers, financial assistance and on-campus housing. Formal mentoring is also available to eligible students in partnership with the Alaska Native Medical Center.

"We're here to help students transition into college," said Randi Madison-Jacobs, RRANN Coordinator. "Many of our students come to us educationally and financially underprepared, and are experiencing culture shock. RRANN is about building a community to help support students so they're more likely to succeed."

Courtesy of RRANN

Bethel students: Gracie Nelson, Mary Devlin, Evelina Achee.

Alaska Natives/American Indians comprise approximately 16 percent of the state's population. RRANN hopes to increase the number of Alaska Natives/American Indian nurses in Alaska to match that percentage.

"If we increase the number of Alaska Native nurses in our state, it will make a huge impact on the quality of care for Alaska Native patients," said Madison-Jacobs. "They speak the language and understand the philosophies – there's a level of trust involved."

Since RRANN's beginning in 1998, 90 students have graduated from the program. A 10-year anniversary party was held on April 25, 2008 to celebrate the program's many accomplishments and service to our community.

Medical Education

Alaska WWAMI Biomedical Program, Alaska's Medical School, doubles students to address physician shortage

The Alaska WWAMI Biomedical Program at UAA is an affiliate of the University of Washington School of Medicine and is part of a collaborative medical school agreement among the states of Washington, Wyoming, Alaska, Montana and Idaho.

WWAMI, an acronym for the participating states, has teaching sites for medical students in more than 100 towns and cities across the five-state region. Six state universities, and more than 4,500 volunteer physicians and other clinicians in the region, join in educating and training WWAMI medical students. Alaskans can complete three of the four years of medical school in Alaska through WWAMI.

The Alaska WWAMI Program began at the University of Alaska Fairbanks in 1971 and moved to the University of Alaska Anchorage in 1989. Historically, only 10 Alaska residents have been admitted to the Alaska WWAMI Program each year, but through the combined efforts of the Alaska WWAMI Program, the University of Alaska, physician and health care communities, and the Alaska legislature, the program now accepts 20 students per year.

Alaska WWAMI students complete their first year of medical school at UAA. Students from all five WWAMI states take second year classes at the University of Washington School of Medicine. The series of six-week clinical clerkships that comprise the 3rd and 4th years of the curriculum can be taken throughout the five-state region. The Alaska Track is a means to complete nearly all of these in Alaska.

The program was again ranked No. 1 in Primary Care education in *U.S. News & World Report's* 2009 list of America's Best Graduate Schools for the 15th consecutive year. WWAMI was also ranked No. 1 in Rural Medicine and Family Medicine for 17 consecutive years.

For more information:

http://biomed.uaa.alaska.edu/

Dennis Valenzeno
Director, WWAMI Biomedical Program, UAA
afdpv@uaa.alaska.edu

Courtesy of Alaska WWAMI Biomedical Program

The WWAMI program makes it possible for medical students to complete three of their four years of medical school in Alaska.

In the next decade, Alaska will need approximately 100 new physicians per year.

Courtesy of Alaska WWAMI Biomedical Program

Starting in Fall 2007, 20 Alaskans were admitted to the Alaska WWAMI Biomedical Program, doubling its class size from 10 per year since 1971. A report released by the Alaska Physician Supply Task Force predicts that in the next decade, Alaska will need approximately 100 new physicians per year.

Physician Assistant Program

Expanded program to reduce primary care shortages across Alaska

UAA's Bachelor of Science in Health Sciences Physician Assistant (PA) Program is growing dramatically this coming year. The first year class of 18 to 24 Physician Assistant students begins in Anchorage in Summer 2009. This doubles the volume of Alaskans served, and allows all training to be completed in Alaska. The two-year program is a collaborative effort with the University of Washington MEDEX Northwest Physician Assistant Program, developed in response to the need for practitioners in rural and underserved communities.

This program has been training PAs for Alaska's communities since 1972. Students entering the program are required to have significant health care experience prior to application. This training model creates opportunities for second career students with prior health care experience (e.g. community health aides and practitioners, paramedics and emergency medical technicians, military medics, nurses, allied health workers) to move up into the health care practitioner role. Over half of the practicing PAs in Alaska have been trained in the MEDEX Program.

The first year classroom portion of the program will be delivered in Anchorage and the second year will consist of clinical rotations throughout Alaska and the Northwest region.

After completing the PA program, students are eligible to sit for the National Certifying Examination for Physician Assistants. The University of Washington School of Medicine also grants a Physician Assistant Certificate upon successful completion of the program.

The Physician Assistant is one of the top 10 fastest growing positions in the United States. Physicians and institutions are expected to employ more PAs to provide primary care and to assist with medical and surgical procedures, as they are cost-effective and productive members of the health care team.

This more robust program will also allow additional opportunities for rural health professionals to continue their professional development and increase the retention of those who have a higher likelihood of returning to their home communities.

Behavioral Health

UA - addressing Alaska's behavioral health needs through education, training and research.

Alaska, being a largely rural state, has historically had difficulties recruiting and retaining an effective behavioral health workforce. As Alaska's public university, the University of Alaska has a responsibility to address the state's behavioral health needs through education, training and research.

The University of Alaska is the premier educator of Alaska's behavioral health workforce, with educational pathway programs ranging from non-degree trainings and certificates to doctoral programs. The University of Alaska graduates roughly 300 social workers, psychologists and human services professionals each year.

However, the need far exceeds the supply. Karen Ward, Director of the Center for Human Development, said that Alaska will need nearly 50 percent more behavioral health professionals by 2010.

According to Cheryl Easley, Dean of the College of Health and Social Welfare at the University of Alaska Anchorage, behavioral health professionals work in a wide variety of fields, such as psychology, human services, rehabilitation, nursing and social work, that provide mental health, behavioral health and substance use disorder services to individuals (children and adults), families and communities. Activities can include prevention and treatment of mental illness and substance abuse, and assistance with solving problems associated with mental or physical disabilities, Easley said.

"Alaska has significant behavioral health issues that demand attention," said Easley. "There is a high rate of substance abuse and suicide in our state, and we need to prepare for the high number of war veterans returning home who may be experiencing post-traumatic stress disorder."

Behavioral Health Initiative Partnership

The Behavioral Health Initiative Partnership was established to address the severe workforce shortages in the behavioral health field at all levels of licensure and credentialing. The University of Alaska, Alaska Mental Health Trust Authority (AMHTA) and State of Alaska Department of Health and Social Services joined forces to address current and future demand for behavioral health professionals.

In May 2004 a summit was held to develop a strategic plan for addressing the supply of behavioral health workers in Alaska. Policy direction from that meeting included:

- Increase the supply of workers at all degree levels;
- Improve course and program articulation across all campuses;
- Increase cultural competence skills of the workforce; and
- Ensure curriculum reflects new practice trends including integration of substance abuse and mental health practices.

In the last year, the AMHTA has assumed a greater leadership role by establishing a more focused effort on workforce. This has brought more partners, such as the Western Interstate Commission on Higher Education (WICHE) and the Annapolis Coalition, a national university-based organization focused on workforce.

Statewide comprehensive efforts revolve

■ = Offered via Distance Delivery

around education and training, recruitment and retention.

Some new efforts at the University include:

Ph.D. Program in Clinical-Community Psychology with Rural, Indigenous Emphasis

The Ph.D. Program in Clinical-Community Psychology with Rural, Indigenous Emphasis is jointly delivered and administered by the Departments of Psychology at UAF and UAA. The program is designed to prepare scientist-practitioners who join theory, practice and research to meet behavioral health needs and improve the well-being of Alaskans. It combines the spirit of clinical, community and cultural psychology, placing strong emphasis on non-traditional service delivery and social action, as well as clinical service delivery to individuals, groups, families and communities. The first students will graduate in 2011.

Specialties in Children's Mental Health

Several programs have been developed to meet the growing need of serving the special needs of children in Alaska, rather than sending those children outside of Alaska for care. Faculty are being trained in working with very young children and their families, and a special certificate in children's behavioral health has been established.

The certificate is a series of five courses that focus on issues related to children in out-of-home care. Completion of the program leads to an occupational endorsement from UAA.

Distance MSW Program

The Distance MSW Program was created between UA and AMHTA in 2003. In an effort to increase the number of graduate prepared social workers statewide, the distance MSW program was expanded in 2005 by adding a second cohort to the program, doubling the number of MSW students. A total of 18 students have completed their degrees thus far, with 18 due to graduate in 2009.

BSW Social Work Cohort

The UAF Social Work Cohort is a unique group of 25 rural Alaska students who are working toward a bachelor's degree in social work (BSW) through a combination of face-to-face and audio-conference modalities. The program's overall mission is to "grow our own" practitioners from rural communities. This method of instruction is highly successful, as students form a bond with fellow classmates, and receive course instruction from university instructors and Alaska Native Elders, incorporating both Western and traditional approaches to learning.

UAA and UAF Human Services

The UAA and UAF Human Services behavioral health workforce development programs will continue their efforts to increase the number of skilled Alaskans prepared to work within Alaska's behavioral health agencies and to enter the behavioral health workforce pathway. UAA and UAF Human Services are working to grow clinicians and program managers across Alaska that will work with Trust beneficiaries and at-risk youth and their families.

Trust Training Cooperative

The Trust Training Cooperative was developed and funded to implement a statewide cooperative that serves as a training clearinghouse designed to broker and coordinate existing trainings and when needed, provide training, education and career development opportunities, for the current and future workforce engaged with Alaska Mental Health Trust beneficiaries. With staff located in Anchorage, Fairbanks and Sitka, the cooperative is able to work with local service providers to coordinate and share training opportunities to address workforce issues.

Alaska Rural Behavioral Health Training Academy

The Alaska Rural Behavioral Health Training Academy works to identify and respond to the needs of rural behavioral health providers. The Academy provides learner-centered continuing education courses for degree providers, academic credit for non-degree providers, Alaska Native cultural attunement workshops for non-Native providers, tele-behavioral health education for rural providers and their urban counterparts, a workplace-based learning program and several conferences each year.

Strategic Partners

In the last year, Alaska's three main behavioral health partners have taken their partnership to a new level. The University of Alaska, the Trust and the Department of Health and Social Services have hired a coordinator to further develop the strategic direction of their work together. Kathryn Craft began her role as the Behavioral Health Workforce Coordinator in July 2008. Kathy is detailed to the University of Alaska System, but remains also an employee of the State under the direction of Commissioner Bill Hogan. She plays a pivotal role in formulation of the Alaska Mental Health Trust Workforce efforts, under the direction of Delisa Culpepper, COO of the Trust.

Facilities

The new Health Sciences Building on UAA's campus will help meet tremendous industry need.

Demand for health care workers in Alaska is expected to grow faster than any other employment sector over the next decade. University of Alaska enrollments in all health programs, the majority of which are housed at UAA, have grown dramatically in the last few years. Although the need for and enrollment of health care students has skyrocketed, UAA currently lacks the proper facilities to house these programs. But that will soon change.

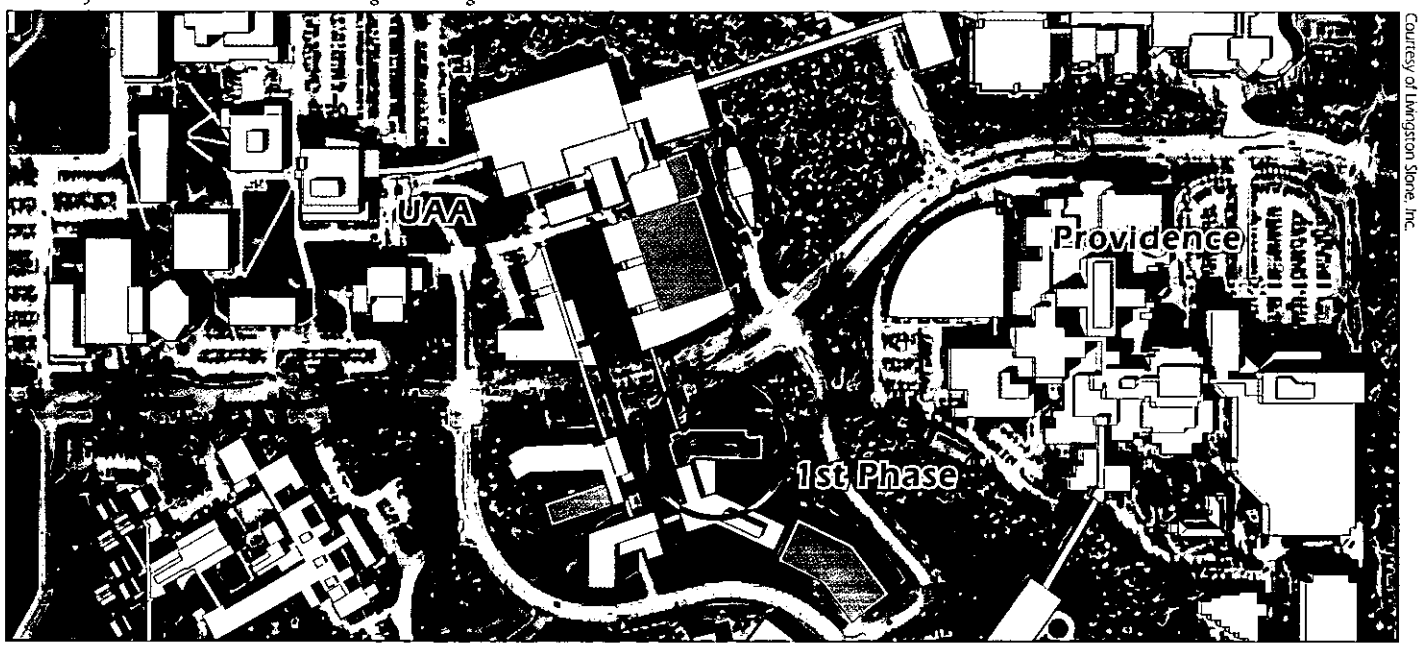
The University received funding from the State of Alaska in June 2008 for $46M to build a new Health Sciences Building on UAA's campus. This building is essential in moving the University forward in addressing Alaska's health care workforce needs. FY09 funding provides $40M for construction of the building and $6M for infrastructure development.

Phase I of this project is the 62,500 gross-square-foot building, which will be situated across Providence Drive from the main campus. UAA is a major institution in the U-Med District and is conveniently situated among some of Anchorage's major medical facilities.

The building's location is ideal for UAA to continue strengthening its partnerships with nearby U-Med District partners – and others in the health care industry – to deliver state-of-the-art training to students.

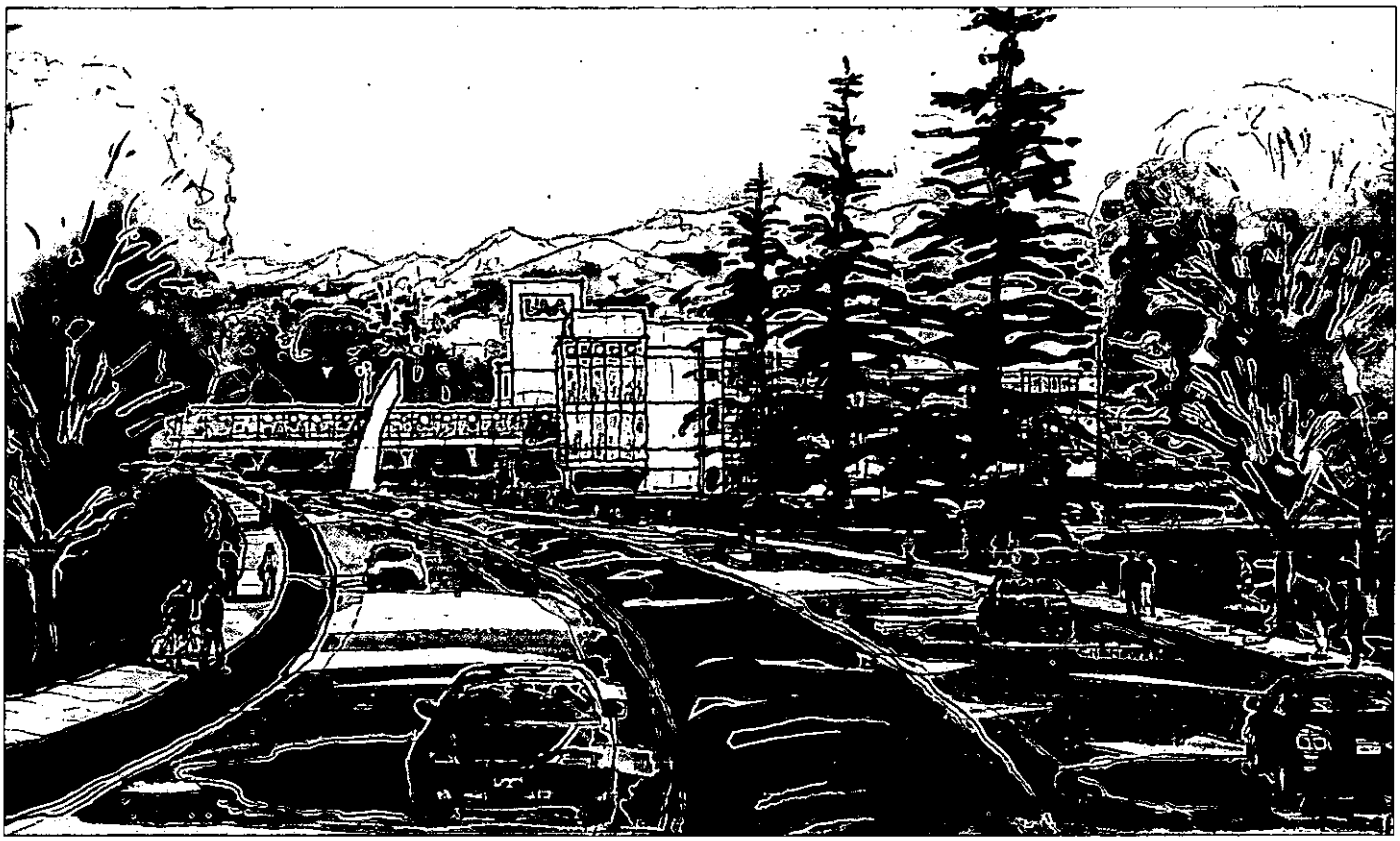
The proposed Health Sciences Building will be three stories, and will house the medical, nursing, clinical laboratory and physician assistant programs. Classrooms and student services will be located on the ground floor, instructional laboratories will be located on the second level, with faculty and staff offices on the top floor.

View of the existing UAA and Providence Hospital campuses (yellow) with the proposed Health Sciences Complex site plan. Phase I of the new Health Sciences Building is in orange.



Courtesy of Livingston Slone, Inc.

University of Alaska enrollments in all health programs have grown dramatically in the last few years.



An artist's rendering of the proposed UAA Health Sciences Building.

Master planning is occurring for future development of the health sciences campus, with a second phase of the initial building to accommodate many additional programs, and room on the campus for further growth. It is expected that pedestrian bridges will link the building to future buildings on the health sciences campus and to the main UAA campus.

Some of the building's features will include:

- Distance classrooms to connect students from rural communities
- Clinical and instructional laboratories and classrooms
- Instructional spaces designed for interactive learning and collaborative hands-on experiences

Development of the Health Sciences Complex was included in the UAA Master Plan and is in keeping with UA's Strategic Plan, focusing on student success, educational quality, faculty and staff strength, and responsiveness to Alaska's needs, technology and facility development.

Interactive Simulation Labs

A simulation center is, "a replication of a clinical setting that allows the learner an opportunity to integrate theory and practice, think critically and ensure patient safety." Technology is integral to all aspects of health education. Instructional space in Phase I of the Health Sciences Building will provide increased opportunities for use of simulation in the educational process. An interdisciplinary simulation laboratory planned for Phase II of the building will create a dynamic place for collaborative scholarship and discovery.

UAA's new labs will:

- Promote collaborative, interdisciplinary learning;
- Replicate real-life clinical situation settings;
- Allow students an opportunity to integrate theory and practice, think critically and ensure patient safety;
- Increase confidence in skills prior to clinical experience; and
- Provide training in physical assessment, medical/surgical, maternity/pediatrics, critical care and operating rooms.

The use of human simulators in health curricula has increased greatly over the past decade. They present students with problem-solving encounters that require real-time assessment of a problem. A student's experience with simulation is rewarding and helpful in increasing their self-confidence prior to entering a clinical unit.

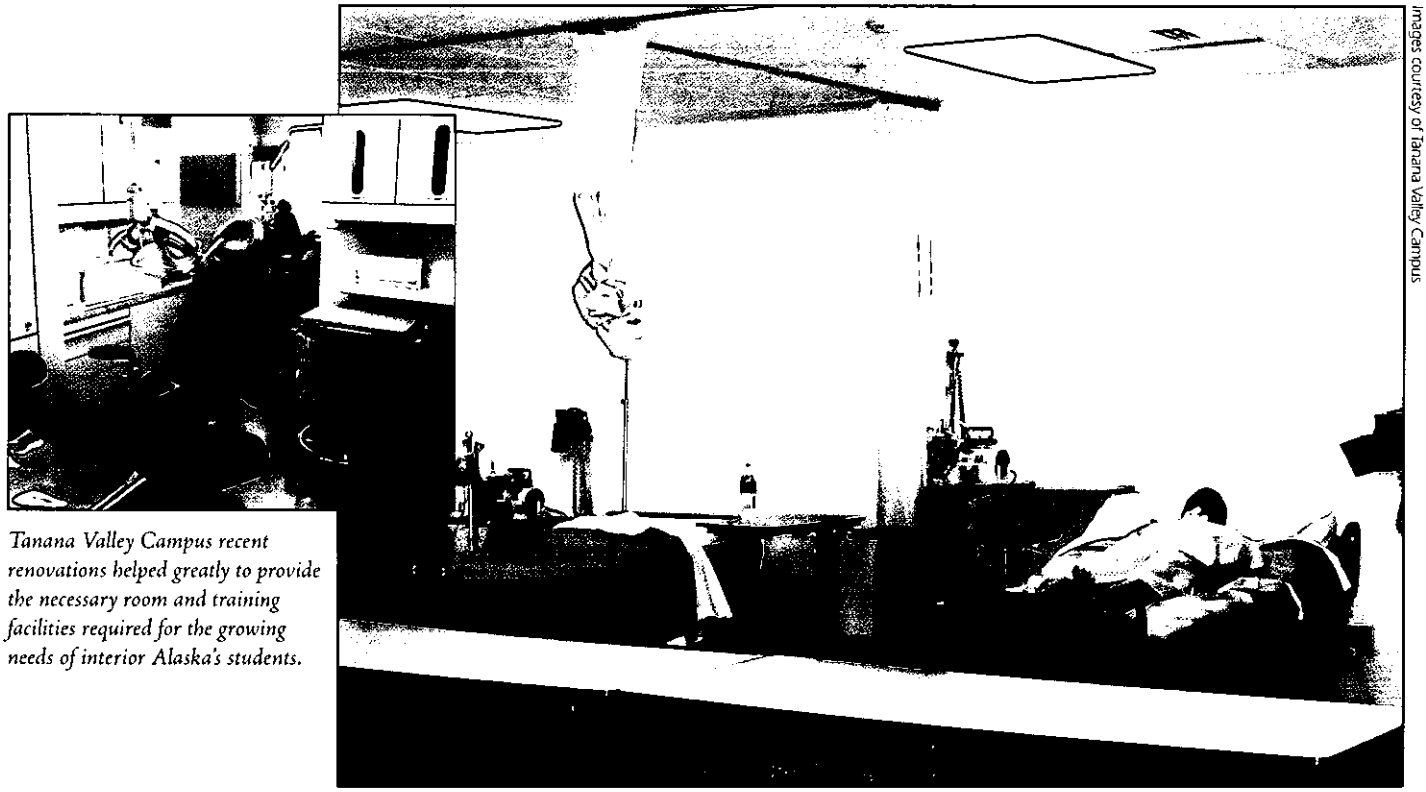
UAF's Tanana Valley Campus seeks additional funding to complete remodel of the Tanana Valley Campus Center

In 2004 the Tanana Valley Campus (TVC) was awarded a $1.5M grant from the Denali Commission to begin partial renovations on the 4th floor of the Tanana Valley Campus Center to be used for the TVC Allied Health Learning Center.

The 4th floor remodel resulted in:

- A state-of-the-art dental clinic with six full operatories, three x-ray suites, dental materials lab, sterilization room and dark room. The clinic is home to UAF's dental assisting and dental hygiene programs.
- One nursing lab with four beds for training UAA nursing students.
- One multi-use classroom

TVC is seeking an additional $5M from the Alaska State Legislature to convert un-renovated space into up-to-date labs and a medical assisting clinical space, a multi-use classroom, a phlebotomy and clinical sciences teaching facility, and another nursing lab for training Certified Nurse Aide students.



Tanana Valley Campus recent renovations helped greatly to provide the necessary room and training facilities required for the growing needs of interior Alaska's students.

Images courtesy of Tanana Valley Campus

The University of Alaska would like to thank the following donors who made contributions of $500 or more between June 1, 2007 and July 30, 2008 to support health programs at any UA campus. The generous support of community partners like these is helping UA health programs to grow and meet with community need for qualified and well trained allied health, nursing and medical professionals.

Thank you!

About Us

Join our over 1,100 member families in Alaska in defending our freedoms and affecting public policy issues concerning families in Alaska. Eagle Forum Alaska was formed in 2003 when **Phyllis Schlafly of Eagle Forum** appointed Debbie Joslin to head our Alaska affiliate. Eagle Forum Alaska has no paid employees, only volunteers. Every dollar donated to Eagle Forum Alaska is put to work for the families of Alaska.

Eagle Forum Alaska (EFA) has led the fight for such legislation as the Woman's Right to Know bill, the Laci and Connor bill, toughening the penalty for sex offenders crimes against children, stopping expansion of gambling in Alaska, the battle to defend marriage by forming **Vote YES For Marriage** grassroots organization in 2007. We are at the forefront of the battle to pass the partial birth abortion ban and the parental consent for abortion bill. We informed Alaskans about the deceptive language in the gambling ballot measure and stopped this initiative from forming a gaming commission that would have had a blank check for instituting new gaming in Alaska. We are in communication with the Governor's office and key legislators making sure the issues important to us all get the attention they deserve.

Eagle Forum Alaska President **Mrs. Debbie Joslin** resides in Delta Junction, Alaska with her husband and their four children. She is a homemaker, a home schooling mom, and businesswoman. She served two years as public member on the state medical board. Mrs. Joslin is the National Committeewoman for Alaska on the Republican National Committee and sits on the Republican Party of Alaska Central and Executive Committees.

Alaska's History of Home School
Charter & Statewide Correspondence

Highlights from …

Home Schooling in Alaska by Terje Hanson

1899 - During the Gold Rush era, the Federal Bureau of Education was responsible for educating Alaska's children. They were unable to keep up with the growth of communities. The Douglas Island News recommended home education and exhorted parents to read to their children. p11-12

1905 - Federal Bureau of Education assumed control of education of all Natives while the incorporated towns, comprised mostly of white people, supported their own schools. In 1905, the Nelson Act created the Alaska Fund (from license fees outside of incorporated towns). The Nelson Act allotted 25% of this fund for education and the establishment of a school district and school board. p 13

1917 - Ex-officio Territorial Board of Education (comprised of Governor Strong and four senators) was appointed by the Territorial legislature. p 14

1933 - Eleventh AK Legislature created the Board of Education, removed the public school system from the Territorial Board of Education & delegated $8000 for use of newly created Division of High School Correspondence

1933-1934 - Extreme changes in education funding: Funding cuts for transportation funds for children in outlying areas (It was thought this would encourage residents in rural areas and non-incorporated districts to incorporate and levy taxes • Abolishment of rural school boards • Elimination of funds for rural high schools.

1936 - Territorial Board requests $4000 for correspondence ed. (for those in "isolated" places). Legislature did not adopt this recommendation.

3151

1939 – The Territorial Board recommended that the Legislature provide $8000 for the education of students in isolated areas. The legislature denied the $8000 but directed the Commissioner to use funding from the Schools Outside Incorporated Cities Fund. The Territory ordered 11 Calvert Correspondence School Courses saving the State $933/student (Calvert cost $520/student vs. rural school cost $1453.44/student) p21-22

1941 - Territorial Board decides remote students should be offered the option of high school correspondence.

1955 - Ak Dept or Education begins developing courses and providing correspondence grading services for high schools

1959 - Statehood

1969 - Alaska Dept of Education hires Alaska certificated teachers to develop and grade courses

1970 (to 1976) - Students enrolled in state correspondence study

1971 - Five Kivalina Native families file suit wanting to receive secondary education in Kivalina.

1972 - Suit (similar to Kivalina) - Twenty-eight rural Native students file suit (Hootch vs. State Operated School System (4 years court time).

1973 - Improvements in 10 yr old curriculum—Board of Education cites that "quality of education received [in correspondence study] should be as nearly as possible on par with the levels of students attending public school." p42

1974 - SB35 set up Regional Education Attendance Areas decentralizing education across the state. Dept of Education sought to decentralize correspondence education.

1975 – State Board of Education (March minutes) determines it was the Dept. of Educations duty to give responsibility and funding to the districts for teaching students. The services that can not be provided will be taken care of by departments. The Department should not be in the business of directly operating programs for school districts. (Correcting papers, giving grades) The Department should be more concerned with providing leadership and training to the districts.

1975- SB 367/ HB 443 – Correspondence Study through district or state – Homeschoolers had a choice (no two mile limit) Correspondence for everyone.

1975-77 - CCS helped many Districts with Correspondence Study – contracting with some.

1977 – (Sept) CCS (Central Correspondence Study) hosted 1st annual Correspondence Conference

1983 - "private exempt school" only requirement is to provide attendance records 1/yr, meet immunization requirements and administer tests gr, 4, 6, 8

1984 - 26 of 53 school districts operated correspondence study programs

1985 - Interwest Applied Research of Portland Oregon points out contradiction between In-district School Board AS 14.14.090 (2) and State Dept. of Ed. AS14.070.020(9) statutes as related to correspondence students.

1993 - CCS becomes Alyeska Correspondence

1994 - Cordova School District asked Chugach School District to serve correspondence students outside of Cordova city limits.

1995 - There are 995 students homeschooling under private exempt status

1995 – Charter school pilot program

1996 – SCR 25 (Senator Mike Miller) extols benefits of a viable home school community and encourages "cooperation with parents who are teaching their children at home." Oct 13-19, 1996 is Alaska Home Education Week

1996 – Chugach School District offers cross district program serving 12 students in Anchorage.

1997 – SB 134 (Loren Leman) passes both houses – complete deregulation of homeschooling in Alaska. (Independent homeschoolers)

1997 – 1999 - Birth of other statewide correspondence programs - so many that Dept of Ed caps # of programs possible.

Terje Ann Hanson, M.A. ~ Fairbanks, Alaska

Terje's history ends with the year 2000

2001-2008 – The Alaska State Board of Education and Early Development, the Department of Education and Early Development, the Legislature, Administrators of Homeschool programs and homeschoolers have survived a period of growth with many birthing pains. Homeschoolers are very fortunate that the Legislative body has always listened and supported us. In 2002, Legislature supported homeschoolers' rights to use privately owned materials SB345 signed into law: AS 14.07.050. In 2004, homeschoolers, independent and affiliated with homeschool programs, joined together to form the Alaska Home Educators Alliance: AHEA. In November several of our members were honored to be invited and attended the Alaska Education Summit.

Interior Distance Education of Alaska

IDEA

IDEA is the homeschool support program of the Galena City School District, serving the needs of students throughout Alaska since 1997. We are privileged to partner with homeschooling parents, providing resources and support to committed parents who individualize education for each child.

Galena City School District

Superintendent: James Smith

P.O. Box 299

Galena, Alaska 99741

Historical Background

IDEA (Interior Distance Education of Alaska) was created by the Galena City School District in 1997 to support homeschooling families. The enrollment that first year surprised us all when it went to 1157 and then tripled the following year. Of the students enrolled in the first year of IDEA, 88% of them had never attended public or private school, which confirmed to us that IDEA was meeting a need among Alaskan students. Our mission is to provide resources and support to parents who have elected to educate their children at home; to achieve a partnership with families that honors the efforts and dedication of homeschooling parents. Presently our enrollment stays steady at around 3500 students in kindergarten through 12th grade. We operate offices in Juneau, Soldotna, Anchorage, Wasilla and Fairbanks.

Current Student Enrollment

Our enrollment at the end of the count period this fall was 3449.65 FTE. This represented a drop of 95.45 students from the previous school year. We are presently involved with our reenrollment process for current students and we have opened our online forms for enrollment for new families for next year. The 08-09 school year represented the first year that we were required to remain open for enrollment year around. Presently we have enrolled 107 new students since the end of the count period. In the past we had closed enrollment after the count period. The following chart shows our current demographic profile of our students.

Grade Level	TOTAL IN GRADE	Caucasian (White)	African-American (Black), Not Hispanic	Hispanic	Asian	American Indian	Alaskan Native	Two or more races (not Hispanic)	Native Hawaiian or Pacific Islander	Unclassified
-1	187 87 / 100	157 76 / 81	7 2 / 5	3 2 / 1	2 0 / 2	2 1 / 1	13 4 / 9	1 1 / 0	1 1 / 0	1 0 / 1

TOTAL	3625 1803 / [illegible]	3090 1553 / [illegible]	104 50 / [illegible]	75 39 / [illegible]	75 24 / [illegible]	42 20 / [illegible]	220 110 / [illegible]	12 4 / [illegible]	6 5 / [illegible]	1 0 / [illegible]

Because IDEA is a statewide program, our students are spread across the state. We have structured IDEA by regions; our enrollment in each region is presented below.

Student Enrollment by Region	
Region A (Anchorage area)	872
Region F (Fairbanks area)	903
Region MS (Mat-Su Valley)	894
Region K (Kenai Peninsula)	441
Region SE (Southeast)	297
Region G (off the road system)	216

Based upon employment and economic trends and military deployments our enrollment by regions varies. To more clearly understand the movement of students within the various districts and programs throughout the state I have attached the enrollment comparison that we do each year based upon the numbers reported by DEED after the fall count period is complete. Funding for correspondence programs is governed by AS 14.17.430 which states that we receive 80% of the base student allocation and we do not receive funds for special education or federal programs.

Public School Funding for All Correspondence Schools FY Comparison				Base of $5,480; using $4,384

Special Education Services

The IDEA program works very hard to meet the needs of all enrolled students. We follow all federal and state guidelines to provide appropriate special education services. Each student has an IEP team that meets to determine the Least Restrictive Environment. We strive to meet the individual needs of the student through co-operative agreements with the local school district or by specialized training by our special education staff. We presently serve 140 special education students with 7 certified and 1 classified staff member and also employ speech services through SERRC to meet our needs outside of our staffing ability. Presently we provide service to 11 of the 13 disability categories within special education; we respect the boundaries of the local school districts and do not provide direct services to our students.

Staffing

To meet the needs of our student body, we employ 30 certified teachers and 28 classified support staff. All of our certified teachers are highly qualified in one or more areas and a few are highly qualified in as many as 8 areas. Having a strong and varied staff allows us to meet the HQ requirement.

Student Performance

Families enter into homeschooling for a variety of reasons and with a student turnover rate of close to 1/3 some years our performance has its up and downs. The most important factor that contributes to our success is parental involvement. This one factor has the most impact on our continued high student performance.

To compare our students against other schools' performance is problematic. It is very difficult to find a program with similar demographics. As the largest program in the state, we have a Herculean task to see that all IDEA students participate in the state testing in the spring. Last year we tested 2076 students at 72 different testing sites around the state. The following graphs display our student performance in the SBA's for grades 3 – 10 over the last four years, showing the comparison between IDEA test scores and the state average in each subject area.

As a program we strongly encourage the families to use the GLE's and state standards as we work with them to develop their students' Individual Learning Plan (ILP) each school year. We have discovered that materials favored by the one-on-one teaching environment of the homeschooling family often presents information in a different order than is laid out in the state guidelines, particularly in the primary years. However, as the students progress through the years, student achievement levels increase.

Graduation rates and dropout rates are a topic of much conversation lately. Last year we started a program within IDEA which we call I-Grad. I-Grad is a dropout recovery program designed for students who have been unsuccessful in other school settings and for whom the regular IDEA program would not be a good fit. I-Grad helps students finish their high school education by taking online classes and through credit recovery. Presently we have 105 students enrolled in I-Grad. This past year we found that our graduation rate had fallen. After analysis of the reasons for this, we put some changes into effect within IDEA to address the problem. The following graph tracks our performance since 1999.

School Year	Graduation Rate	Dropout Rate	Enrollment
07-08	42.5%	6.1%	3566
06-07	63.1%	3.3%	3525
05-06	79.1%	1.3%	3457
04-05	72.9%	1.8%	3554
03-04	90.2%	1.6%	3769
02-03	49.6%	0.8%	3612
01-02	100.0%	1.0%	3453
00-01	100.0%	0.1%	3104
99-00	98.8%	1.0%	3487

IDEA is currently at level 5 2nd year for AYP. Because of our size we have found this a difficult target to reach in all areas. We are currently providing tutoring opportunities and

workshops to the families around the state where we have identified lower performing students.

Conclusion

The Galena City School Board has supported and been actively engaged in the development and operation of the IDEA program from its inception. They believe in diversity and educational opportunities for all students. In addition to providing oversight and direct involvement in program decisions, the school board brings a group of IDEA parents to Galena itself for a few days each year, with the goal of increased communication and understanding between the parents in IDEA and the school board members.

The IDEA program will continue to recognize and validate the families in their belief in choice and their desire/ability to homeschool their children. We have found that most parents who commit to homeschooling also commit themselves to their own education and apply themselves to learning about the materials and teaching techniques that will best meet the needs of their students. We offer a huge range of materials that parents can use, and provide regular workshops on teaching tips and techniques. Our students participate in statewide educational events such as Spelling Bee, Geography Bee, Academic Decathlon, Close Up in both our state and nation's capitals, and others. As a matter of fact, we just finished the state Battle of the Books yesterday. IDEA students took first in high school and grades 5-6, were part of the three-way tie for second in grades 7-8, and were third in grades 3-4.

Homeschooling is not the answer for everyone, but it is a viable alternative with proven success. Tailoring education to each student's needs provides for a great deal of flexibility, which allows each student to excel in his or her own way while still meeting the expectations of the state. We are proud of our support of homeschoolers these past twelve years and look forward to our continuing partnership with them.

Alaska Home Educators Alliance

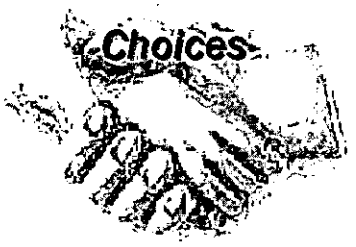
A Partnership for Educational Choices



Overview: Homeschooling in Alaska

- 1996 - SCR 25 extols homeschooling
- 1997 - SB134 deregulates homeschooling
- 1997-2002 - statewide programs— recognized doing more with less; saves state resources
- 2002 - Dept. of Education halts funding if privately purchased, faith-based materials are used (*not* state purchased)
- 2002 - SB345 allows use of privately purchased, faith- based materials
- 2003-4 - Dept. of Education places 15% cap of allotment for art, music, PE for statewide programs (to halt perceived abuses)
- 2004— Audit interpretation: more restrictions on statewide programs if using privately purchased, faith-based materials
- 2005 - Memo from Deputy AG regarding SB345 distorts intent of bill; yields more restrictions
- 2006 - Candidate Palin supports educational options. Positive answers to all AHEA survey questions
- 2006-2007 - Governor Palin recognizes homeschool as educational option
- 2008 - Dept. of Education board attempts to equalize disparity between state-wide and in-district programs (Results in restricting in-district programs)
- 2008— Governor Palin and Board of Education appoints Larry LeDoux as new Commissioner of Education

~ ONE SIZE DOES NOT FIT ALL ~

Alaska Home Educators Alliance: Our Mission

It is the express purpose of AHEA to ensure that families who choose to educate their own children are supported in their endeavor, with attention to SAFETY, EQUITY, PERFORMANCE, and RESPONSIBILITY.

About APHEA

Purpose
The Alaska Private and Home Educators Association is a membership-based coalition of parents and others who have banded together for the furtherance of educational excellence through alternatives to the government-operated public schools.

Administration
APHEA is governed by a board of directors consisting of seven members. The President and one-third of the directors are elected each year at the convention.

Activities

APHEA promotes home education on two levels:

1. **Supportive Inter-relationships**

- Provides means to foster contact between home school groups in Alaska. This is done through publications and the presentation of seminars.
- Conducts an annual convention which encourages family participation and includes the following:
  - At least one keynote speaker who is well-known in the field of home education.
  - Workshops conducted by the keynote speaker and by local teachers and parent educators.
  - Curriculum displays. This is an excellent opportunity to obtain information from vendors knowledgeable in various curricula and to get a hands-on look at curricula and supplementary materials.

2. **Political Involvement**

Fosters and protects a climate of non-interference for home education in Alaska by direct involvement in the political process. This is accomplished by providing information on issues and candidates and by acting as a liaison between home education and the Alaska legislature. Keeps APHEA members informed through bulletins concerning pertinent legislation and Department of Education activities.

APHEA Position Statement

Whereas it is a fact recognized by the Supreme Court of these United States that children are not the mere creatures of the state, and;

Whereas it is the first responsibility of parents to care for their children and that part of this responsibility is the training and educating of their children, and;

Whereas we recognize the high duty and right of all parents to direct the education of their children without unreasonable restrictions by the state, and;

Whereas we affirm the fundamental right of parents to provide for their children religious training without interference from the state, and;

Whereas it is a violation of the most basic concept of liberty for the state to standardize children by forcing upon them and their parents state-directed instruction;

WE, THE MEMBERS OF **APHEA**, DO HEREBY DECLARE:

1. Our intention to execute faithfully our parental duty to the best of our God-given abilities;
2. Our intention to cooperate together to attain excellence in private education for our children;
3. Our intention to resist any attempt by the government of these United States or the State of Alaska to disallow the freedom to exercise our parental rights in education; and
4. Our willingness to collaborate to improve the climate of educational freedom in Alaska through public information as well as through legislative means.

Alaska Law

Alaska State Statute: This statute describes the compulsory attendance requirements and includes the exception (12) to compulsory attendance that apply to Homeschool students.

Sec. 14.30.010. When attendance compulsory.

(a) Every child between seven and 16 years of age shall attend school at the public school in the district in which the child resides during each school term. Every parent, guardian or other person having the responsibility for or control of a child between seven and 16 years of age shall maintain the child in attendance at a public school in the district in which the child resides during the entire school term, except as provided in (b) of this section.

(b) This section does not apply if a child...

(12) is being educated in the child's home by a parent or legal guardian.

Welcome to AHEA

"We cannot do everything at once, but we can do something at once."
~ Calvin Coolidge

Welcome and thank you for your interest! The Alaska Home Educators Alliance, (AHEA) is a developing alliance uniting Alaskan homeschoolers who choose to partner with public schools (Affiliated Homeschoolers),those who have remained independent of public schools (Independent Homeschoolers), and includes Alaskans who support their dedication. Our long term mission is to promote an understanding of the benefits of home education alternatives in Alaska, and to serve as a clearinghouse for information pertaining to both affiliated and independent homeschoolers.

- **Weigh-in on Homeschool Issues - Take our 3 minute survey**
- **Super Tuesday and Election Info for Kids**
- **Perfect Time to Contact 2008 Candidates - Contact List**
- **Candidate Responses - Homeschool Issues - Educational Improvement Plans**

Why AHEA? Why now? **To promote home education choices for families:** independent, in-district affiliated and statewide affiliated with public schools.

The initial cause was inequity between in-district and statewide correspondence programs. This past year, through the efforts of many homeschoolers and administrators who work with homeschoolers, statewide correspondence (homeschool) programs were able to see some relief in the area of use of allotment funds for music, art and P.E.; however, the same regulations that promise some relief to statewide families are imposing regulations never before required of in-district correspondence and homeschool-charter programs.

The current Department of Education and Early Development's (the DEED's) interpretation of long standing regulations in regards to privately-purchased curricula that are aligned to state standards and the Deputy AG memo to Senator Dyson and Senator Lyda Green on Sept. 20, 2005 continues to be a concern and a reason to unite all supporters of home education and speak up for common issues.

Your neighbors and your legislators need to understand the importance of choice in resource availability, curricular materials (both privately-purchased and state-fundable) and methodology, as well as the value of parental commitment. Each child deserves a fair chance at a good education. **We truly believe that one size does not fit all .....and no child should be left behind!**

Please join us as a concerned homeschooler!

When it comes to education, there's no place like home.

Annie Dougherty, her husband Dennis, and sons John and Daniel are all strong advocates of home schooling. In addition to educating her children at home, Annie is a certified teacher, serving home school families across the state. She has worked for Chugach School District as an advisory teacher and the head teacher of the Chugach Extension School program for the past eight years. She has been a long time advocate of parental rights and involvement in the education of their children, even during her prior 15 years as a classroom teacher.

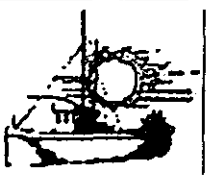
Chugach School District

Voyage to Excellence



Chugach School District Shared Purpose

Empowering Student Ownership of Learning and Success

Mission

The Chugach School District is committed to developing and supporting a partnership with students, parents, community and business which equally shares the responsibility of empowering students to meet the needs of the ever changing world in which they live. Students shall possess the academic and personal characteristics necessary to reach their full potential. Students will contribute to their community in a manner that displays respect for human dignity and validates the history and culture of all ethnic groups

Chugach Extension School (CES) was established in the 1980's as a way to meet the educational needs of families residing in remote communities within CSD boundaries. In 1994, CES responded to a growing need to offer its services to home schooling families living in remote communities surrounding Prince William Sound. Currently, CES students across Alaska represent 60% of CSD students.

During the enrollment process, home school parents describe their alignment with the educational philosophy of CSD. Prospective parents and students are interviewed to determine whether CES is the best educational choice for their family. When students are accepted in CES, they are placed at their individualized levels in 10 content areas. These CSD levels reflect the student's current level of performance in each content area rather than using a grade level based on the student's age. Student Learning Profile tests may be given to provide information about each student's strengths and preferred learning styles.

Measures of CES program quality

CES students represent 2.5% of the home school students in Alaska. CES has the lowest student-teacher ratio compared to the other statewide correspondence schools in Alaska. On average, the student-teacher ratio in the two largest statewide programs since 2005 has been more than two times greater than the consistent ratio of 50 to 1 in CES.

CES has met all AYP requirements for 4 out of the last 5 years. In 2008, the only factor out of compliance was the graduation rate based on a small number of potential graduates for that year. In contrast, the two largest statewide programs are currently in their second year of level 5 status based on not meeting AYP requirements for the past 6 years.

In CES, parents and students collaborate with teachers in designing and delivering the CSD standards-based educational program. Throughout the year, CES provides home school teacher trainings in academic content areas such as math, language arts, and science.

Measures of CES Student Achievement

The data for CES students shows a high degree of academic achievement and overall satisfaction with the program. For the past 3 years, CES students have exceeded the required SBA score requirements for AYP. The percentage of CES students scoring proficient or advanced in language arts has ranged from 89% in 2005/06 and 90% in 2006/07 to 77% in 2007/08. The percentage of CES students scoring proficient or advanced on math SBA tests has increased from 70% in 2005/06 and 68% in 2006/07 to 86% in 2007/08.

Since 2001, the number of students enrolled in CES has grown slowly from 138 students in 2001 to 163 students in 2008. For the past 5 years, there has been an average 65% of CES students who returned to the program in the following year. CES has chosen to maintain a low student-teacher ratio in order to focus on its performance-based, individualized education program for each student.

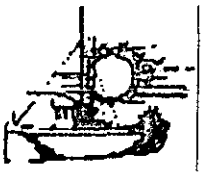
Chugach School District
Voyage to Excellence



The Chugach School District (CSD) has been pursuing educational excellence since 1994 when leadership and stakeholders came together to collaborate on an innovative educational model based on shared leadership and vision, a continuous improvement cycle and a standards-based instructional design.

Currently, CSD is a leader in standards-based educational reform. The district was awarded one of the first Baldrige awards in the Education category in 2001. The CSD Quality Schools Model is now used in six school districts in Alaska.

The Chugach School District is located in Southcentral Alaska and includes most of the Prince William Sound coastline and islands. CSD employs 22 certified teachers who deliver instruction to 253 students in PreK to 12th grade. CSD teachers deliver highly effective standards-based instruction in

- three community schools (in Tatitlek, Chenega Bay and Whittier)
- the "Voyage to Excellence"(VTE) work-to-life residential program and month-long EXCEL summer program in Anchorage
- the statewide Chugach Extension school with offices in Valdez, Fairbanks and Anchorage.

CSD is the lead partner in numerous grants that benefit students and staff in other school districts. Six school districts in rural Alaska send their students to the VTE program and EXCEL camp. The VTE has a long-standing partnership with over 70 business organizations, educational programs and Native organizations in Alaska.

Chugach School District Shared Purpose

Empowering Student Ownership of Learning and Success

Mission

The Chugach School District is committed to developing and supporting a partnership with students, parents, community and business which equally shares the responsibility of empowering students to meet the needs of the ever changing world in which they live. Students shall possess the academic and personal characteristics necessary to reach their full potential. Students will contribute to their community in a manner that displays respect for human dignity and validates the history and culture of all ethnic groups.

The standards-based instructional design and delivery in CSD are based on the belief that individuals learn and develop at different rates while using their preferred learning styles. Students in CSD are allowed the flexibility to grow and achieve at their own pace, with guidance from highly trained and qualified staff. The expectation is that all students will master the rigorous requirements for graduation established by the School Board in ten curriculum areas, as well as the passage of all three sections of the state-mandated HSGQE. It is possible for a student to be academically prepared for high school graduation by age 16 while students who require more instruction are encouraged to stay enrolled up to age 21 if necessary.

The ten curriculum areas include traditional academic subjects as well as innovative areas such as personal/social/service learning, career development, technology and cultural studies. These content areas were developed in response to input from community members and business partners. Students demonstrate their mastery of these standards in a variety of assessments developed by Chugach staff members, including content-specific tests and real-life applications of skills. An extensive review and revision of the Chugach standards in all ten content areas was completed in 2008 with collaboration from students, parents and community members.

VTE Program Accomplishments:

2003-2008 VTE High School Graduation Rate = 98%
(Predominantly At-Risk Students)

Of those graduates today:

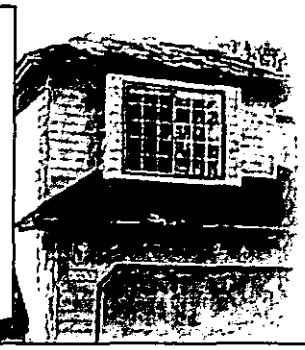
- 39% in College
- 53% in the workforce (the majority in Alaska)

2003-2008 Voyage To Excellence program student data:

- 43% still attending High School
- 55% have graduated from High School
- 2 % have dropped out*

  * dropouts chose not to complete VTE Program.

Currently the VTE program has waiting lists in with partnering districts, which ranges from 6-18 students per phase, as well as two other districts wanting to partner. This indicates a great need to expand our facility to accommodate our rural Alaskan students.



Student Accomplishments:

Students earned the following during EXCEL Summer Camp:

- 125 UAF credits total
- 40 national certificates
  - 8 – Alaska Career Readiness Certificates
  - 15 – National SafeServe Certificates
  - 17 – NCCER National Center for Construction

Education & Research

- 2 four-week internships in education & business

Students earned the following during VTE Program Phases:

- UAF credits for each phase successfully attended
- NCCER Certificates for our construction phases
- Alaska Career Readiness Certificates with successful completion of tests
- First aid and cold water certificates
- Summer internships in construction

The VTE program is **more** than a Career and Technical program. The focus is on skills **all** students need for a successful transition:

- Employability Skills
  - Basic Skills
  - Work attitudes
  - Work values
- Character Education
- Life Skills
- Post Secondary Skills
- WorkKeys Training
- Dual CTE Credits UAF
- National Career Certificates
  - NCCER
  - WorkKeys Career Readiness
  - Certified Nursing Asst.
  - Emergency Trauma Tech.
  - ServeSafe Certificate
- Cold water survival training

Voyage To Excellence (VTE) has a long-standing partnership with over **70** organizations including -

Local Businesses:

- Davis Constructors & Engineers
- Providence Hospital
- Conoco Phillips
- Alyeska Resort
- Captain Cook
- Associated General Contractors
- Associated Builders and Contractors
- Wells Fargo
- Totem Ocean Trailer Express

Partner Districts:

- Lower Yukon
- Lake & Peninsula
- Kuspuk
- Bering Strait

Education:

- NACTEC
- Anchorage Youth Court
- Alaska Job Center
- Job Corp
- UAA
- APU
- UAF

Native Organizations:

- Chugachmiut
- Chenega Corporation
- Tatitlek Corporation
- Chugach Alaska Corporation
- Cook Inlet Tribal Council
- Bristol Bay Native Corporation

*Our partners provide workplace tours, job shadows, and possible apprenticeships.

Raven is the choice for homeschooling families!

"Families are ravin' about Raven"

"As a 17-year homeschooler I have appreciated Raven's trust in me, the support for finding the right products and programs to teach and enrich each student's education, and for minimizing the paperwork that is necessary."

"I chose Raven because one of the goals is to keep paper work down...they created a website where I can post reports online, which is very easy! I feel completely supported and empowered by all of Raven's help and appreciate the trust they feel for me."

"Before Raven, I was nervous about homeschooling, even though my child was struggling in school and I felt we needed an alternative...Raven gave me the confidence with their support and advice and my child is now excelling...Thank you, Raven!"

"My Raven teacher is very knowledgeable--the first person I ask when searching for resources; and Raven is the best program for keeping paperwork to a minimum."

Working together for our Children

We are committed to maintaining a high quality program that encompasses the best elements of individualized education and meets the needs of all students. We support the role of parents in educating their children. We will continue to provide educational choice that includes academically sound curriculum and extra-curricular programs to produce independent learners who will become contributing members of society.

Enrollment Options

Raven offers several options for students:

- Full-time - enrolled only in Raven
- Part-time - enrolled in 1-3 courses
- Dual enrollment-enrolled full or part-time to take enrichment, remedial, advanced placement, and/or general education courses
  - Private School
  - Public School

Raven offers many benefits:

- Certified Advisory Teacher support
- Student allotment provided for curricular materials, instruction, supplies, tutoring and activities
- Choice in curriculum
- Parent designed courses to individualize and meet student needs
- Individualized Learning Plan
- Standardized testing provided for students grades 3 – 12

High School Support

- High school plan and transcript
- Online and traditional courses
- Dual credit classes available
- K-12 Counselor: Academic reviews, scholarships, career and post-secondary planning and workshops
- Alaska Scholars Program
- Travel opportunities for high school credit-Classroom with a View, EF Tours, and Close-Up programs

Resources/Technology

- Online record keeping tools
- Media center with extensive resources/subject kits for check-out
- Online resources including: DORA/DOMA Reading & Math assessments, Aleks Math, WorldBook Online, Cosmeo, Enchanted Learning, Online Homework Helper, BrainPop, and INET Classroom & Library

Computer Options

Computer options available to meet the educational needs of our full-time students:

- Computer Assistance Program
- Computer Reimbursement Program
- Monthly Internet Stipend

Specialized Programs

- YKSD Distance Education Courses
- HSGQE Prep-Courses/Workshops
- Video Conferencing Courses
- Lets Go Learn: Online Reading and Math Assessments

Enrichment/Activities

- ASAA activities including individual music, art and sports opportunities
- Activities and events including Virtual Science Fair, Battle of the Books, Free Book Programs: Book-It and River Readers
- Local area workshops and talent shares

Eligibility Requirements

- A child who is five years of age before September 1 following the beginning of the school year and who is under the age of 20 and has not completed the 12th grade is of school age and is eligible for enrollment.

Students receive state funding based on the following formula:

Kindergarten – 3rd Grades
Full-time (4+ classes) $1,600

4th – 8th Grades
Full-time (4+ classes) $1,800

9th – 12th Grades
Full-time (4+ classes) $2,000

At least 50% of classes must be core classes: English, math, social studies, science, technology, or world languages.

HOME SCHOOLING
on the Threshold

A SURVEY OF RESEARCH AT THE DAWN OF THE NEW MILLENNIUM

BRIAN D. RAY, Ph.D.

Introduction

Education has been a crucial concern of parents and society since the genesis of culture. Educational issues are passionately debated in America today, at the dawn of the new millennium. And at this unique point in history, it has become clear that home schooling will play an ever-increasing role in the fracas that surrounds educational debates, reforms, and choices. What some observers thought would be a passing fad—home schooling—has become a visible movement motivated by capable leaders and a robust mix of parents and children.[1]

The home-school movement will likely exert influence in society that is disproportionate to its size. Why? A key reason is its successes. Research has made it apparent that the home educated are doing well in terms of academic achievement, socialization, and success in adulthood.[2] Multiple references will be provided later to support this statement and other conclusions made in this publication. In addition, these families are becoming a respected part of society that is politically active, savvy, and successful.[3]

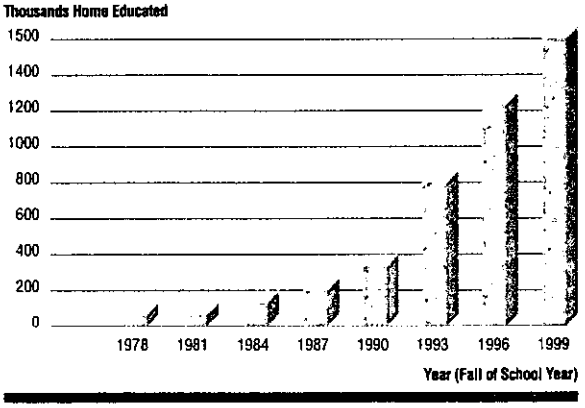
Although home-school parents and their children are bucking the conventional practice of relying on typical educational institutions beginning at the age of 5 or 6 in groups of same-age peers with state-certified and largely state-trained teachers, the growing cadre of home-school parents are practicing what cultures have believed and practiced for centuries. That is, parents, families, and closely-tied social groups should be the ones to transmit culture, beliefs, and literacy (in reading and writing) with the utmost care and dedication.[4]

Both noble and ignoble persons in many countries value education. They recognize that the education (including indoctrination) of children—a country's future citizens—is the key to the path a nation will follow.[5] Adolph Hitler, V. I. Lenin, and Benito Mussolini are known for their plans to use schools to advance their own base purposes. Martin Luther wanted to use schools to impress on children the word and mind of God. In America, educators such as John Dewey, Horace Mann, and Jane Addams, business leaders, and many other social leaders knew that if they were to be able to enculturate, indoctrinate, and mold the thinking and behavior of the next generation then they would have to design and control the curriculum of the schools.[6]

Today, social thinkers, social tinkerers, and some parents still recognize the battle that exists for children's hearts and minds that is played out in their education. Some call for institutional schools to exert even more influence in and control over the lives of children.[7] Contrariwise, others are sounding a clarion call that urges parents to be in charge, knowledgeably and intimately, of their offspring's education.

As one response, people of many cultural heritages, skin colors, and religious worldviews are moving quickly to engage their children in home-based education—for a broad array of reasons. By the end of the first decade of the 21st century, there may be well over two million children being home schooled in the United States alone (see Figure 1).[8] Meanwhile, this educational practice is also resurgent in many other countries such as Mexico, South Africa, the United Kingdom, Canada, and Germany.[9]

FIGURE 1
GRADES K-12 CHILDREN HOME EDUCATED IN THE U.S.
(estimated)



This booklet is designed to review important and representative research on home schooling to date. The review covers the topics that are generally the most important to parents, educators, policy makers, and society at large. For those who desire to conduct an in-depth examination of the methodology and quality of the cited studies, full citations are provided.

Why Are People So Curious About Home Schooling?

Many cultures throughout history have practiced home- and family-based education, and some still do. Even people during the past few centuries of western civilization have practiced forms of education that are clearly parent-controlled or parent-led. Dr. Edward and Elaine Gordon make it clear, in *Centuries of Tutoring: A History of Alternative Education in America and Western Europe*, that education centered in and around the home and family has played a key role in society throughout history.[10] The Gordons' brief comments dedicated to home schooling at the end of the 20th century puts into perspective that today's home education has a rich heritage and is one more significant expression of the importance of the historical concept and practice of home- and family-based learning throughout western civilization.

An examination of education in America also indicates that home education, in one form or another, was prevalent until the late 19th century. "In general, then, seventeenth and eighteenth century parents—particularly the father—bore the primary responsibility for teaching their children... Christian doctrine, vocational skills, and how to read and, to a lesser extent, write and figure..."[11] Renowned historian Dr. David Tyack pointed out that during the 19th century "...the school was a voluntary and incidental institution: attendance varied enormously from day to day and season to season..."[12] Further, the parents and community controlled the school during this period of history. Schooling or book learning was only a small and often incidental part of the total education of a child since he "...acquired his values and skills from his family and from neighbors of all ages and conditions."[13] The growth in popularity of compulsory school attendance at the end of the 19th and the early 20th centuries, along with the idea that trained professionals could best teach children, decidedly moved the education of children into the hands of school personnel as the 20th century began.

An examination of education in America also indicates that home education, in one form or another, was prevalent until the late 19th century.

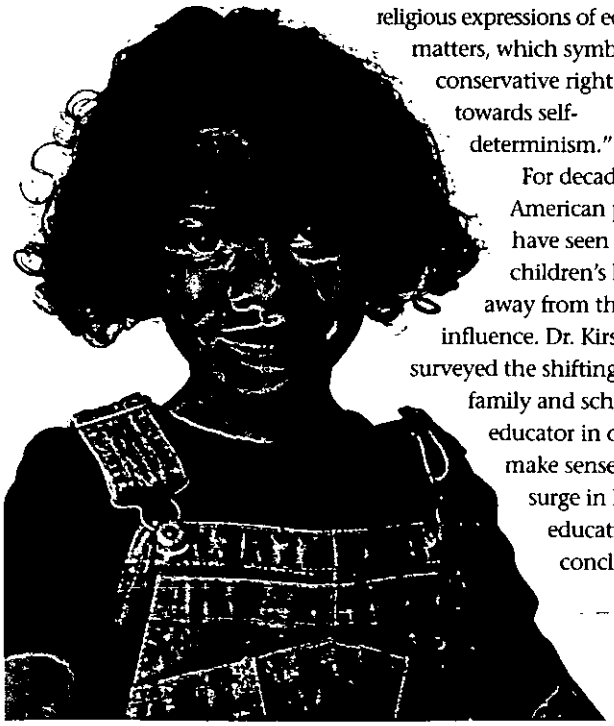
Home education has always existed in spite of the prevalence of classroom school attendance since 1900. Although it is difficult to know the numbers of students taught primarily at home by their parents during the period of 1875 to 1975, the practice continued to a limited extent. For example, the situation of great distances between homes and schools in Alaska led to the creation in 1940 of the government-sponsored Centralized Correspondence Study (CCS) which is still essentially home schooling. Those involved in home education across the country today, however, include students far removed from any government-operated program.

Stimuli for the Renewal

The late 1970s and the 1980s witnessed a sudden growth in the occurrence of home education.[14] A number of factors might account for this phenomenon. One study of early published material on home education noted the frequent mention of names such as John Holt, Ivan Illich, and Jonathan Kozol, and inferred a direct link between the public issues of alternative schools, community control, and deschooling that were raised in the 1960s and the emergence of modern home education;[15] "...the early jargon of home education made use of the arguments of the prominent educational reformers" of the 1960s and early 1970s.[16] In a similar vein, Dr. Michael Shepherd surveyed the social activism, the public's declining regard for public schools, and the concepts of deschooling and alternative schooling that were prevalent in the 1960s and early 1970s. Shepherd concluded, "Several people who promoted alternative schools in the 1970s would come to advocate home schooling..."[17] Dr. Joseph Kirschner's historical account, likewise, links the work of John Holt and others to the beginnings of modern home education.[18]

For decades, American parents have seen their children's lives slip away from their influence.

Since the 1970s, many new home-school "...advocates found and espoused Biblical and religious rationales. ...Home schools became grounds of and for ideological, conservative, religious expressions of educational matters, which symbolized the conservative right's push towards self-determinism."[19]



For decades, American parents have seen their children's lives slip away from their influence. Dr. Kirschner surveyed the shifting roles of family and school as educator in order to make sense of the surge in home education. He concluded that "...we find many Americans turning to 'family values' and scriptural religion in a search for stability and something to believe in. ...In the home-school movement one finds a hint of optimism in this age of cynicism not seen in quite a while."[20] Even the secular media came to the realization by the 1990s that they had to address the breakdown of the traditional, biblical family that had occurred during the preceding three decades.[21]

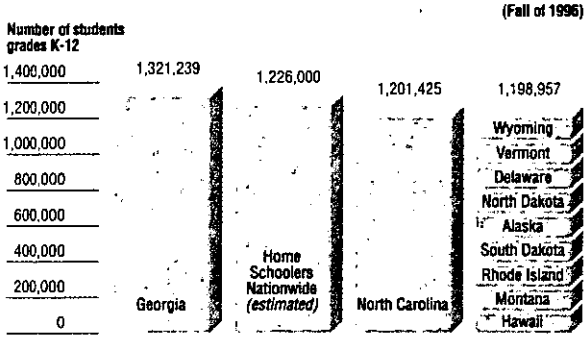
Dr. Maralee Mayberry, a sociologist, also perceives home education as a way for parents to regain control of their children's and their own lives, a way to make the impact they want on the next generation.[22] This choice is being made by a wide variety of people. For example, despite the unfounded claim of some critics (e.g., a representative of the National Education Association) that many parents choose home schooling due to their racism,[23] it appears that an increasing proportion of Blacks, Hispanics, and other minorities are choosing home education.[24]

This educational life that integrates parents and children is, however, contrary to the modern trend toward the institutionalization and professionalization of education. In 1980, close to 100 percent of children and youth of ages 6 to 18 were in institutional schools; about 88% of these were in state-operated (public) schools.[25] Over the course of just two decades, America has changed to the point where 1.2 to 1.6 million school-aged children and youth are home schooled.[26] In the fall of 1996, it is estimated that there were more home-school students than public-school students in nine states combined (see Figure 2).[27] Further, the home-school population is now about 24% of the size of the private-school student population.[28] This represents a very notable change in the educational choices of parents and students. If this trend were to continue at a modest 7% annual growth rate,[29] about 3 million students would be home educated during the fall of 2010.

A quickly growing number of government-run school systems are so alarmed about the growth of home schooling that they are instituting new tax-funded home-school programs to get these families into public schools. Some government-school personnel claim that they are starting these programs simply to help students. Much debate surrounds these programs.

The media, public and private educators, policy makers, politicians, and parents are fascinated with home schooling.

FIGURE 2
HOME SCHOOL STUDENTS NATIONWIDE COMPARED TO SELECTED STATE PUBLIC SCHOOL POPULATIONS
(Fall of 1996)



It contradicts the norm; ordinary parents are taking the mystery out of professional teaching; it seems to be working. In addition, home-based education appears to embody many things that parents and families have desired throughout the ages, and perhaps especially at this point in time in a highly technological age: high levels of parental involvement in children's lives, community-oriented education, success in academics, and an emphasis on the transmission of culture and values by family, friends, and religious communities rather than by society at large or a select group of educators.

Who Is Home Schooling and Why?

The stereotypes are crumbling regarding who home schools. In the mid-1980s, Dr. Jane Van Galen categorized home-school parents as either pedagogues or ideologues.[30] Pedagogues were those who said that whatever public schools could do in terms of teaching and learning, they could do better. Ideologues were those parents driven more by a desire to pass on to their children a particular set of values, worldview, and religious beliefs. They often expressed the idea that God had called them to home educate their little ones. As Dr. Van Galen pointed out, however, there was not always a clear cleavage between these two groups. That is, any given set of parents might have a mixture of reasons in mind for home educating their children.

Multiple studies make clear what the main reasons for home schooling. The most frequently cited reason has to do with wanting to teach and transmit a particular set of values and beliefs and a worldview to children. Parents also frequently talk about five other important reasons for home schooling. First, they want their children to accomplish more academically than they would in schools. Related to this, they want to individualize the curriculum and learning environment to meet the unique strengths and needs of each child. Third, they want to enhance family relationships between children and parents and amongst siblings. Fourth, these parents want to provide guided and reasoned social interactions with youthful peers and adults rather than taking their chances with what will occur in an institution. Finally, an increasing number of parents are concerned about the safety of their children (e.g., regarding physical violence, drugs and alcohol, psychological abuse, and sexuality).[31] Research also shows that many parents' and youths' reasons for home schooling change or mature over time.[32]

GENERALIZATIONS

After two strong decades of a renaissance of home- and family-based education, the variety of families involved has greatly increased. Generalization about them leads to a paradox. An attempt to homogenize home-school families in order to understand them may lead a person further from fully understanding the richness of the many dimensions that are so much a part of the home-schooling community. It is important, therefore, to first mention a few other things that are known about home schooling. Bolick's observation in 1987 is perhaps even more salient today:

> *"Many home schoolers are rigidly traditional and scrupulously law-abiding, while others are long-time practitioners of civil disobedience. Some are fervently religious and have removed their children from mainstream schools because they are too secular, while others are nonbelievers who consider the public schools too religious."*[33]

Many researchers and this author's years of experience corroborate this wide and increasing diversity within home schooling.[34] With the preceding thoughts and nuances in mind, a synthesis of many studies produces the following principal characteristics of home-education families:

1. Both parents are actively involved in home-based education with the mother/homemaker as the main academic teacher most of the time; fathers do about 10% of the formal teaching of the children. Research suggests that 25,000 or more single-parent families were home schooling in the fall of 1998 and the number is increasing.[35]

2. The learning program is flexible and highly individualized, involving both homemade and purchased curriculum materials. Some families purchase complete curriculum packages for their children while others approach home schooling with a small degree of pre-planned structure; this is often called "lifestyle of learning" or "unschooling."

3. Children are formally "schooled" three to four hours per day and often spend extra time in individual learning endeavors. The amount of formal or structured learning time is directly related to the student's age.

4. The median amount that families spend per child per year for home education (e.g., textbooks, tuition for part-time classes, field trips, and special resources) is about $450 (with a mean of about $575).

5. Home-educated students have relatively little interaction with public schools or their services. A minority participate in interscholastic activities like sports and band in the public schools or occasionally take an academic course in local schools.

6. Children study a wide range of conventional subjects with an emphasis on reading, writing, math, and science. Many students take advantage of home schooling's flexibility to participate in special studies and events such as volunteer community work, political internships, travel, missionary excursions, animal husbandry, and national competitions.

7. Children are taught at home for at least 4 to 5 years, and most parents intend to home educate them through the high school years.

8. Home education is chosen for various reasons, including concerns for the cognitive development (e.g., to accomplish more academically, to individualize learning, and to teach a particular worldview), the affective development (e.g., to learn selected philosophical, religious, or cultural values and traditions, to be in a preferred moral environment, to avoid unnecessary peer pressure, to have greater parent-child contact, and to enhance self-concept), and safety (e.g., regarding physical violence, drugs, and sexuality).

9. On average, there are 3.0 to 3.3 children in the family; male and female students are equally represented; at least 95% of the families are headed by a married couple.

10. Formal instruction typically begins at 5 to 6 years of age. The individualized nature of home schooling allows parents to begin formal instruction at whatever point their child is ready and to whatever extent they think is most suitable for the child.

11. About 70% of the students are 7 to 13 years old. Research suggests that the age distribution is beginning to approximate that of the general population.

12. The "typical" parent has attended or graduated from college. About half of home educators have earned a bachelor's degree or higher in terms of formal education; there are, however, significant numbers of home-school parents who themselves simply have high school educations.

13. The total annual household income is under $25,000 for about 18% of the families, $25,000 to $49,000 for about 44% of the families, $50,000 to $74,000 for about 25% of the families, and $75,000 and above for about 13% of the families.

14. Over 75% regularly attend religious services; the large majority are of the Christian faith and place a strong emphasis

on orthodox and conservative biblical doctrine. Significant and increasing numbers of agnostics, atheists, Buddhists, Jews, Mormons, Muslims, and New Agers also home school their children.

15. It appears that currently over 90% are White/not-Hispanic in terms of racial/ethnic background. A rapidly increasing number of minorities are engaging in home-based education.[36]

The median amount that families spend per child per year for home education is about $450.

How do some of the preceding "average" characteristics compare to the nation's population at large? The average number of children in married-couple families in the United States was 1.8 in 1990. Home-school families, therefore, have significantly more (about 70%) children than the average. In 1990, only 73% of children under the age of 18 in the United States lived with a married couple while it appears at least 95% of home-school children do so.[37]

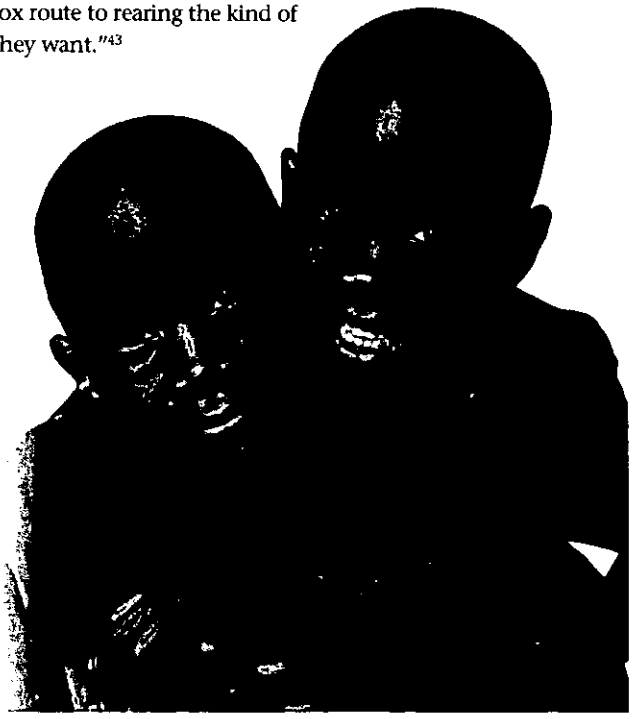
About half of home-school parents have completed a 4-year college degree or higher. In contrast, only about 24% of the general public does so.[38] The population of home educators has a somewhat higher level of educational attainment than that of the general public.

The median annual family income of home-school families appeared to be between $38,000 and $43,000 in 1996. The median income for all married-couple families in the United States in 1995 was $47,062.[39] Home-education families apparently have median incomes that are lower than those of all married-couple families across America, but are higher than those of married-couple families with the wife not in the paid labor force.[40]

While home-school parents spend, out of pocket, a median of about $450 (mean of about $575) per child per year on education, state schools (i.e., public schools) spent an average of $5,325 per student (pre-kindergarten through the 12th grade) during school year 1993-94.[41] This cost in state schools did not include construction, equipment, and debt financing. The highest per-pupil expenditure was $9,075 in New Jersey; the lowest was $3,206 in Utah. It is clear that the direct, out-of-pocket costs of public (government-run) schooling in the United States are about 10 times as much as what the home-education families spend on educational materials and services.

In summary, a wide variety of individuals are involved in home schooling, just as the United States is comprised of a pluralistic population. Home-based education includes (but is not limited to) atheists, Christians, and Mormons; conservatives, libertarians, and liberals; families with 5-, 10-, and 17-year-old children; low-, middle-, and high-income families; Black, Hispanic, White, and Asian people; parents with Ph.D.s, parents with bachelor's degrees, and parents with no degrees; and families containing 1, 5, and 10 children. Furthermore, there is nothing in the research literature to suggest that home-school families are, as a group, outlandish with respect to the characteristics previously summarized. That is to say, they are part of mainstream America in many ways.

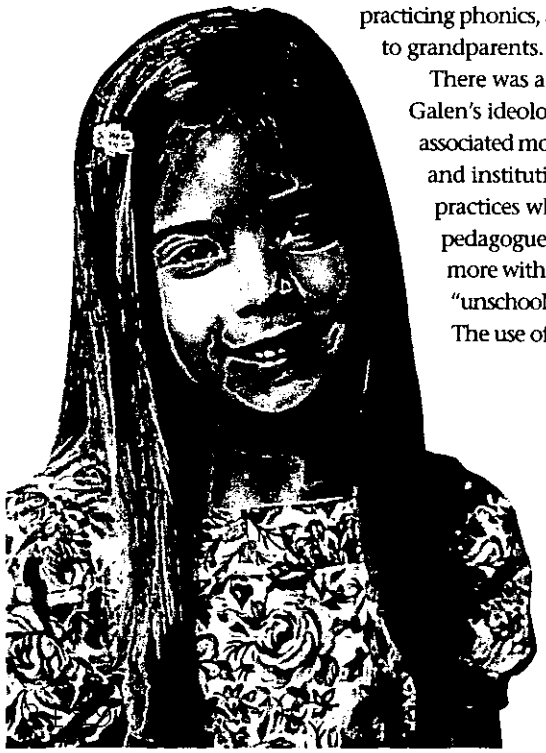
It has already been explained that the literature suggests home-school parents and families are not drastically different from most Americans. They must be different in some ways, however, since they are home schooling. Despite the apparently increasing pluralism of the home-schooling movement with respect to many variables, the vast majority seem to share at least one common belief—the education of children is primarily the responsibility and the right of parents. In addition, there is one trait that is usually implied and occasionally explicit in the literature: parents who home school their children are extremely interested in and concerned about the total education of their children.[42] "And they are willing to be different, to take a socially unorthodox route to rearing the kind of children they want."[43]



A Day in the Life of a Home-School Family

Although stereotypes and touted formulas abound, there is no one best system for home schooling. Advocates and practitioners alike maintain that this is one of the most important aspects of home-based education. The approach that is chosen by parents and students may be based upon a unique blend of their worldview, philosophy of education, the child's particular academic interests, strengths, and weaknesses, the nature of the local community, the laws of the family's state, the parents' traits and interests, and the family's special character. The claim that all children in America (or in any nation) need a common educational and social experience is not central to the thinking of home educators.

The variety of day-to-day pedagogy and activity within home-schooling homes is remarkable, researchers have found.[44] Some children may start the day with breakfast then are off to their desks in a "schoolroom" where they recite the Pledge of Allegiance and then promptly dig into a series of sequential workbooks. Children in other families begin the day by feeding the chickens and livestock, then prolonged conversation around the breakfast table, then a gradual shift into a minimally-planned mixture of reading novels, practicing phonics, and writing letters to grandparents.



There was a time when Van Galen's ideologues were associated more with structured and institutional-school practices while the pedagogues were associated more with unstructured and "unschooling" approaches.[45] The use of such stereotypes, however, is now essentially fruitless. Many families have the "flavor of institutional school"[46] while many avoid almost all appearance of what goes on in public and private schools. For example, while "religious" parents were at one time associated more with school-like practices, an increasing number of Christian speakers and writers are advocating "relaxed home schooling,"[47] a "lifestyle of learning,"[48] and a focus on "eternal and practical time"[49] rather than schooling *à la* conventional practice. As Dr. Lesley Taylor noted, some families are practicing home schooling in a way that keeps biblical truths firmly in place while giving less attention to "...all the criteria by which institutional schools and thus the wider culture measure what is truly of value in education."[50]

In general, children who are taught by their parents score above national averages on standardized achievement tests.

The variety in the thinking and practice of home educators is no different, in some ways, than the variety found among theorists and teachers who are associated with institutional public and private schools. Many believe that the vast potential of home-based education is yet to be rediscovered.

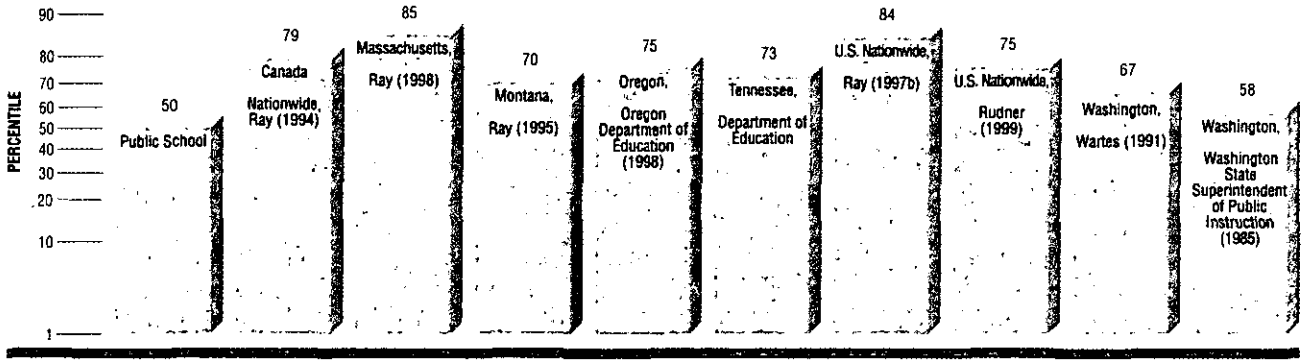
Does It Work?

ACADEMICS

The public and researchers began asking 20 years ago: Does it work? Is it possible for parents, who are not professionally trained teachers, to successfully teach and guide their children's education? Dozens of studies have now been completed. Often such studies involve an analysis of standardized achievement test scores of home-educated students. It should be pointed out, therefore, that the national average on such tests is the 50th percentile for students in institutional schools. For example, if Johnny scores at the 50th percentile in mathematics, that means he did better than 50 percent of the general population of students taking that mathematics test. For another example, if Lucinda scores at the 82nd percentile in science, she performed better than 82 percent of the other students.

In general, children who are taught by their parents score above national averages on standardized achievement tests (Figure 3). Following are descriptions of several representative studies.

FIGURE 3
HOME SCHOOL AND PUBLIC SCHOOL ACADEMIC ACHIEVEMENT (GRADES K-12, AVERAGE SCORES)



Jon Wartes, a public high school counselor, has studied the *Stanford Achievement Test* scores of hundreds of home-educated students, grades K-12, in Washington State for several years. He has found that these students consistently score above the national average in various academic areas (e.g., reading, language, math, science), with the median score at about the 67th percentile on national norms.[51]

A study in California by Dr. Mona Delahooke compared the intelligence and achievement of home-school and private-school nine-year-olds. She found no significant differences between the two groups in terms of intelligence and achievement test scores.[52]

Students in Alaska's Centralized Correspondence Study (CCS), a state-managed form of home education, have consistently scored significantly higher than conventional-school students nationwide on the *California Achievement Test* in math, reading, language, and science.[53] These students also score higher on achievement tests than do conventional-school Alaskans.[54]

State departments of education, such as those in Oregon and Tennessee, often report that the home-educated students (for whom they have scores) in their states are scoring well above average on standardized achievement tests.[55]

The most in-depth nationwide study to date examined, among other things, the achievement of home-educated students.[56] Dr. Brian Ray's 1997 study included a variety of families from all over the United States. Data were collected on 1,657 families and their 5,402 children. These students scored, on the average, at high percentiles on standardized academic achievement tests: (a) total reading, 87th, (b) total language, 80th, (c) total math, 82nd, (d) total listening, 85th, (e) science, 84th, (f) social studies, 85th, (g) study skills, 81st, (h) basic battery (i.e., reading, language, and mathematics combined), 85th, and (i) complete battery (all subject areas in which student was tested), 87th. Notably, the home educated did quite well in areas that skeptics often consider to be too difficult for the untrained to teach (e.g., math and science) and areas in which skeptics think home educators would not be interested (e.g., other cultures, social studies).

Dr. Ray's 1990 nationwide study, the largest of its kind at that time, involved a more limited population of home schoolers. The findings on the approximately 1,500 families and 4,600 children were, however, similar to those of his 1997 nationwide study. The home-educated students averaged at or above the 80th percentile on standardized achievement tests in all subject areas.[57]

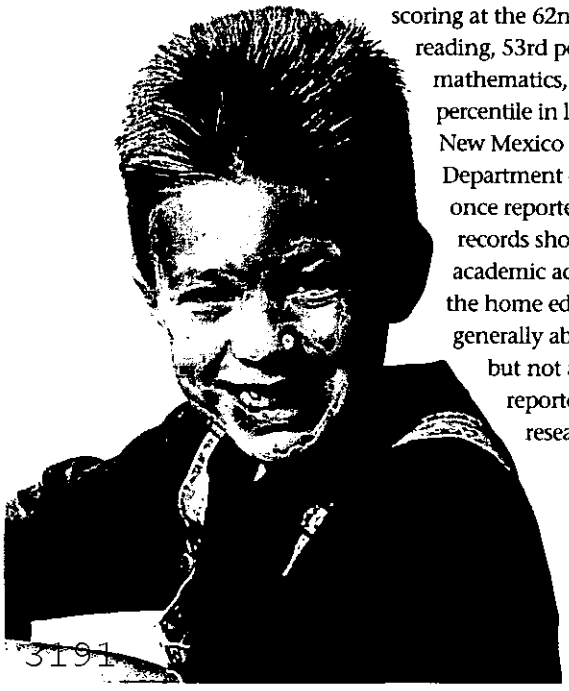
Ray's nationwide 1990 and 1997 findings may be compared to the achievement test data reported by the Home School Legal Defense Association (HSLDA) in 1994.[58] *The Iowa Test of Basic Skills (ITBS)* scores, for several subjects, of 16,311 home-educated students in grades K through 12 were obtained from a national testing service. The basic battery scores, by grade level, ranged from a low of the 62nd percentile to a high of the 87th percentile, with a majority of the percentile scores in the 70s. Perhaps the volunteer nature of participation in Ray's nationwide studies tended to include students whose achievement scores were slightly higher than those in the general home-education population which this HSLDA report might have represented.

More recently, Dr. Larry Rudner examined the *ITBS* scores of about 21,000 home-educated students, nationwide. He found that the students' average percentiles were in the mid-60s to mid-70s percentiles. At each grade level, the percentile corresponding to the median scaled score was typically in the 70th to 80th percentile range.[59]

A number of other studies have resulted in findings similar to those just mentioned: home-educated students in Indiana averaged at the 86th percentile on the basic battery;[60] Massachusetts students were at the 85th percentile on basic battery;[61] Montana students were at the 72nd and 70th percentile on basic battery;[62] North Dakota students taught at home had averages at about the 85th percentile;[63] those taught by their parents in Oklahoma scored, on average, at the 88th percentile in the combination of their reading, language, and mathematics performance;[64] the home educated in Pennsylvania scored from the 60th to 74th percentiles.[65]

Home-school Parents "...armed to the teeth with educational materials and technology."

Not all studies, however, show home-educated students scoring above average. Dr. Jennie Rakestraw found 1st and 4th grade home-education students to be scoring below the national average in mathematics, while the home educated in grades 2, 3, 5, & 6 were above average, and average reading scores for the 1st through 6th grade students were at the 54th through 97th percentile.[66] The Washington State Superintendent of Public Instruction also found scores that were not particularly high, with the home educated scoring at the 62nd percentile in reading, 53rd percentile in mathematics, and the 56th percentile in language.[67] The New Mexico State Department of Education once reported that their records showed that the academic achievement of the home educated was generally above average, but not as high as reported in most research studies.[68]



Overall, the research clearly indicates that home-school students perform at least as well as their conventional-school counterparts in the subject areas considered to be the "basics" of American education and the essential tools for success in college and in American society.

ARE THE COLLEGE-BOUND PREPARED?

ACT and *SAT* tests are the best-known test predictors of success in college. The *ACT* publisher reported the scores of 1,926 home-school students from the high school graduating class of 1997. The home schooled scored, on average, in English at 23.0 compared to 20.3 for the national average; in math, 20.2 versus 20.6; in reading, 24.4 compared to 21.3; in science reasoning, 22.0 versus 21.1; and the home-schooled composite average was 22.5 compared to the national average of 21.0. According to statistical rules of thumb, these home-school youth who were interested in college outperformed the national average in English, reading, and on the overall composite of the *ACT*, but there was little to no difference in terms of reasoning skills.[69] The *SAT* scores of 75 home-school students in Pennsylvania were reported for the 1995-1996 school year. "The middle PA Homeschooler scored 600 (80th percentile) in verbal and 550 (65th percentile) in math."[70] Increased research will soon reveal more on this subject.

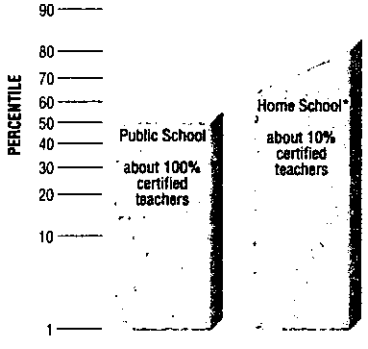
ARE THEY BECOMING TECHNOLOGICALLY LITERATE?

Some research has implicitly addressed the computer literacy of the home educated. Dr. Gregory Marchant explored home-education families' usage of on-line computer services. He concluded that these parents were "...armed to the teeth with educational materials and technology. They all have computers and use them."[71] Eighty-six percent of the families in a recent nationwide study had a computer in their home and computers were used for the education of children in 84% of these families.[72] By comparison, only about 34% of all United States families owned computers at the time.[73] Limited research and news reports suggest that technology, including computers, the Internet, and distance-education courses, are commonly used by home schoolers and available technology will significantly increase the numbers of families home schooling in America.[74]

CORRELATIONS BETWEEN ACADEMIC ACHIEVEMENT AND OTHER VARIABLES

A number of researchers have explored whether the academic achievement of the home educated is related to selected variables that might be of particular interest to policy makers and others. One of these factors of interest is whether the parents are government-certified teachers (see Figure 4). Studies in Alabama, Oklahoma, Pennsylvania, Texas, nationwide twice, and nationwide in Canada all revealed that there was no significant relationship between student achievement and the teacher certification status of their parents.[75] Dr. Steven Duvall and his colleagues, on two occasions, have found that even special needs children were successfully home educated by parents who were not certified teachers.[76] One study in Montana found that whether the father was a certified teacher was not significant while the mother's certification status was significant.[77] Dr. Richard Medlin, on the other hand, found a weak relationship between achievement and whether the mother was a certified teacher.[78]

FIGURE 4
IS TEACHER CERTIFICATION NESSESSARY FOR HIGHER ACHIEVEMENT?
Average scores on standardized achievement tests

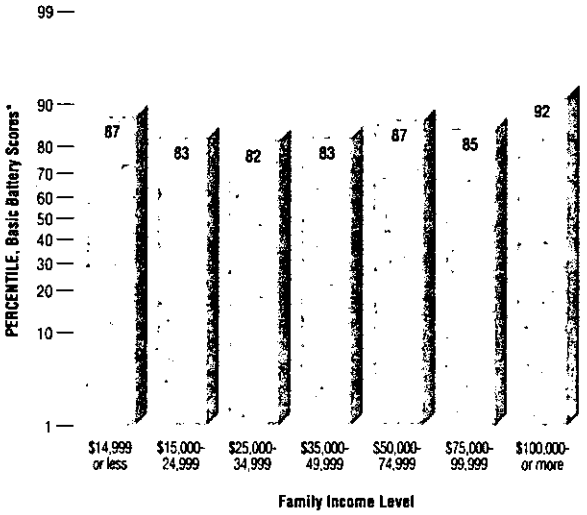


*Home-school students of both non-certified and certified parents score in the 65th to 80th percentile range.

The educational attainment of parents is another factor that is of interest to policy makers and some researchers. In four separate studies, Dr. Havens, Dr. Rakestraw, and Dr. Ray found no relationship between parents' educational attainment and the academic achievement scores of their home-educated children in Texas, Alabama, Oklahoma, and nationwide.[79] On the other hand, Dr. Ray found weak to moderate relationships between parents' educational attainment and their children's achievement scores in his North Dakota and earlier nationwide studies.[80] Likewise, Jon Wartes found weak to moderate relationships in his Washington research.[81] Even with these correlations, which do not necessarily indicate a causal relationship, the home educated still tended to score above average on achievement tests.

The relationship between family income and student achievement has been of interest to policy makers and researchers. "Within the general school population,...The children of parents who earn more money tend to do better than those where the parents earn less."[82] There was no significant relationship between family income and student achievement in home-school studies done in North Dakota, in most comparisons in an Oklahoma study, in Washington, and in one nationwide study (see Figure 5).[83] On the other hand, Jon Wartes and Dr. Brian Ray found weak relationships between income and test scores in Washington and in a nationwide study.[84] Even with these weak correlations, which do not necessarily indicate a causal relationship, the home educated tended to score above average.

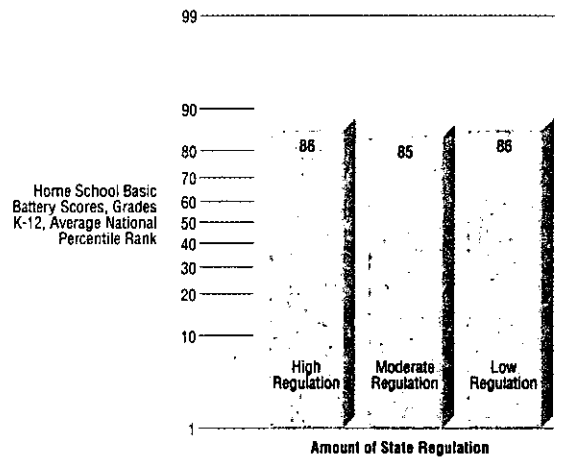
FIGURE 5
IS FAMILY INCOME A PREDICTOR OF ACADEMIC ACHIEVEMENT FOR HOME SCHOOLERS?



*Based on data from Ray, 1997b.

FIGURE 6
IS GOVERNMENT REGULATION NECESSARY FOR HIGH ACHIEVEMENT?

STATE REGULATION: No impact on home-school achievemnt*

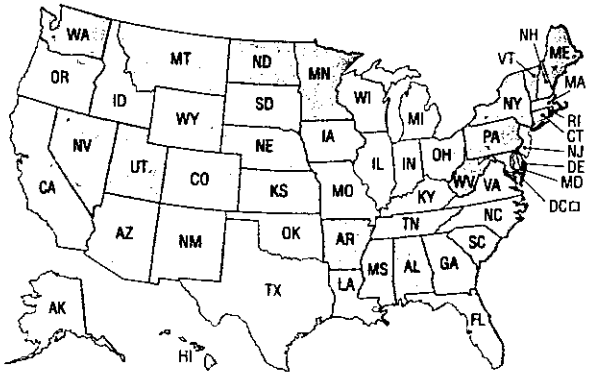


BREAKDOWN OF STATES BY REGULATORY POLICY

LOW REGULATION
No state requirement for parents to initiate any contact with the state.

MODERATE REGULATION
State requires parents to send notification, test scores, and/or professional evaluation of student progress.

HIGH REGULATION
State requires parents to send notification or achievement test scores and/or professional evaluation, plus other requirements (e.g. curriculum approval by the state, teacher qualifications of parents, or home visits by state officials).



*Based on data from Ray, 1997b.

FIGURE 8
RELATIONSHIP BETWEEN VARIOUS INDEPENDENT VARIABLES AND ACADEMIC ACHIEVEMENT TEST SCORES OF HOME SCHOOL STUDENTS.
This is a summary of many studies.

Variable of Interest	Related to Academic Achievement in Home Schooling?
Money Spent on Education	No Relationship
Family Income	No Relationship Most Studies; a few studies found weak positive
Degree of State Regulation	No Relationship
Legal Status of Family	Typically No; one study found underground performed better
Father's Formal Education Level	Mixed Results
Mother's Formal Education Level	Mixed Results
Father Been Certified Teacher	Typically No Relationship; few studies found weak positive
Mother Been Certified Teacher	Typically No Relationship; few studies found weak positive
Gender of Student	No Relationship
Years Student Home Educated	Typically No Relationship; few studies slight positive
Time Spent in Formal Instruction	No Relationship
Age Began Formal Instruction	No Relationship
Use of Libraries	Typically No Relationship; occasional slight positive
Use of Computer	Typically No Relationship; occasional slight positive
Who Administered Test to Student	Typically No Relationship; occasional slight

3193

Many policy makers are interested in whether home schoolers should be regulated more heavily by the state. Research to date has shown little to no relationship between degree of regulation by the state and students' academic achievement (see Figure 6).[85]

Sociologists and policy makers also wonder whether the money spent on home education is related to student achievement. Research findings suggest there is no relationship (see Figure 7).[86]

Various researchers have studied many factors and their relationships to the academic achievement of the home educated. Figure 8 provides a summary of these relationships. While examining Figure 8, it should be kept in mind that a statistical relationship does not necessarily establish cause and effect.

The hidden curriculum affects the psychological and spiritual development of a child.

But What About Socialization?

It is well known among educators, and many others, that there is a "hidden curriculum" in the schools.[87] It has more to do with values and acculturation than with the three R's. It has to do with how people behave and what understanding of reality and society guides their thinking. The hidden curriculum affects the psychological and spiritual development of a child. While some have tried to argue that the public-school environment and curriculum are value- and religion-neutral, most scholars and educators have come to recognize this is not true. Dr. Warren Nord of the department of philosophy of the University of North Carolina concluded, "Indeed, I will argue that at least in its textbooks and formal curriculum students are *indoctrinated* into the modern (secular) worldview and against religion."[88] All of this is part and parcel of socialization.

When someone asks of home education, "What about socialization?," he or she usually means, "How will these children learn to get along with others when they are not in large, age-segregated groups of their peers the majority of the day?" He might mean, "How will this home-educated child learn to accept the American way of thinking and living?"

Of course, the questioner presupposes a number of unspoken assumptions. For example, she assumes that a conventional-school classroom is the best setting for learning how to get along with others, that a child in such a classroom will learn best how to stand on his own, that an age-segregated situation with a government-certified teacher is best for learning how to function and think in society, and that the conventional classroom setting is the healthiest setting for the psychological development of a child who is trying to become a mature adult in a democratic republic.

"What about socialization?" is a perennial question asked of home educators and their children. Several researchers have explored the self-perceptions, which are related to socialization, of the home schooled. Dr. John Wesley Taylor focused on self-concept as one significant aspect of the psychological development of children. His nationwide study revealed that the self-concept of home-school students was significantly higher than that of public-school students for the global scale and all six subscales of the *Piers-Harris Children's Self-Concept Scale (PHCSCS)*.[89]

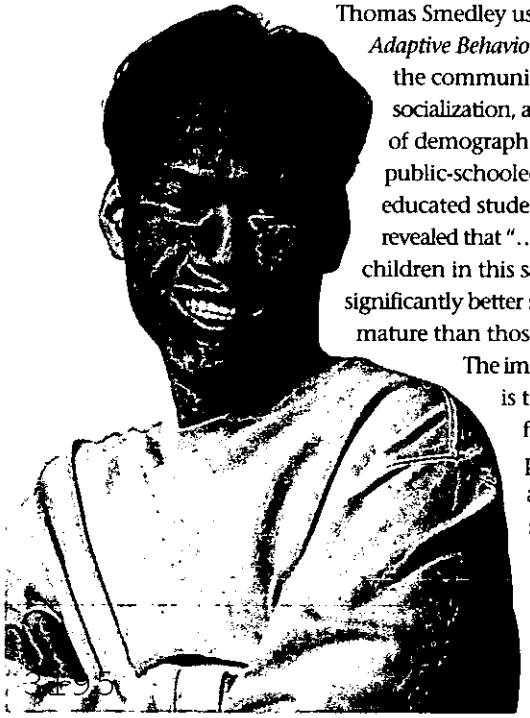
Dr. Norma Hedin also examined the self-concept of home-educated children using the *PHCSCS*. She only studied children from Baptist churches in Texas. She compared those who were educated in public, Christian, and home schools and found no difference in self-concept between these three groups. The self-concept of all of them as a group, however, was higher than that of the public-school population.[90]

Dr. Steven Kelley also used the *PHCSCS* and concluded: "The self-concept of home schooling children in suburban Los Angeles was significantly higher...than the norms of conventionally schooled children. ...A low anxiety level could be a contributing factor,... More contact with significant others, parental love, support, and involvement, peer independence, and a sense of responsibility and self-worth may be other contributing factors."[91]

Self-perceptions also relate to academic achievement. Dr. Richard Medlin examined the predictors of home schoolers' achievement and concluded that their academic self-concept, at the 72nd percentile, was above the national average and was positively related to achievement.[92]

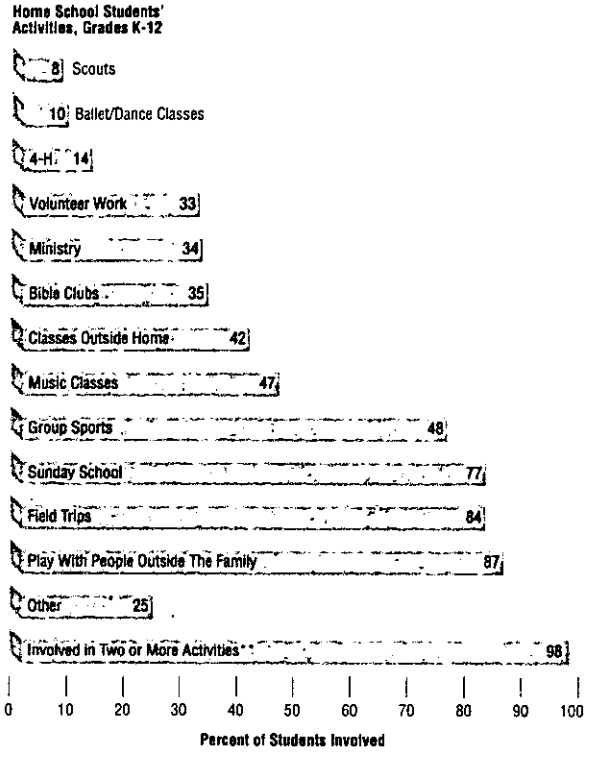
Findings of Vicki Tillman "...show that these home schoolers are not isolated but active, contributing members of society, even in childhood. Ninety-eight percent are involved in weekly church meetings and other activities which require interfacing with various ages and settings. ...As rated by the *SEI* [*Self-Esteem Index*], these home schoolers have above-average self-esteem."[93]

Dr. Mona Delahooke studied the social and emotional development of nine-year-olds from private schools compared to those who were home schooled. The only significant difference was that "...private school subjects appeared to be more influenced by or concerned with peers than the home-educated group."[94] It appeared that home-educated children perceived their parents as primary authority figures more often than did the private-school children.



Thomas Smedley used the *Vineland Adaptive Behavior Scales* to evaluate the communication skills, socialization, and daily living skills of demographically matched public-schooled and home-educated students. The data revealed that "...the home-educated children in this sample were significantly better socialized and more mature than those in public school. The immediate implication is that home school families are providing adequately for socialization needs."[95]

FIGURE 9
WHAT ABOUT SOCIALIZATION?
Home Schoolers' Activities and Community Involvement*



* Based on data from Ray, 1997b.
** Participation in two or more of the 12 activities does not include "other activities." See Table 8 of Ray 1997b.

The research of Dr. Larry Shyers has received the most media attention regarding the socialization of the home educated. He compared those who were solely home educated to the solely public-schooled students in terms of their social adjustment. Both groups of children received positive self-concept scores. The only significant differences were in their actual observed behaviors—institutionally schooled students received significantly higher problem behavior scores than did their home-educated agemates. The conventionally schooled tended to be considerably more aggressive, loud, and competitive than were the home educated. Dr. Shyers noted that his findings draw into question the assumption made by many people that traditionally educated children are more socially well-adjusted than those who are home educated.[96]

As far as researchers have found, the home educated are doing well in terms of social, psychological, and emotional development. Perhaps the fact that most of these children have siblings and are engaged in a variety of social activities makes the research findings on socialization not surprising.

Researchers in several other studies have examined various aspects of the social activities and emotional characteristics of home-school children. Their research has established that these children are actively involved in myriad activities outside the home with peers, children of different ages, and adults (see Figure 9). The data from this research suggest that home schoolers are not being socially isolated nor are they emotionally maladjusted.[97]

As far as researchers have found, the home educated are doing well in terms of social, psychological, and emotional development.

On the other hand, Dr. Steven Smith and his colleagues discovered some negative findings regarding the home educated. They studied 6- to 10-year-old home-school and conventional-school children in Michigan. The researchers found that both groups were lower in motor performance than children nationwide; the home educated were somewhat lower in motor performance (e.g., galloping, running, and kicking objects) scores than the children in conventional schools. Also, the home educated were significantly lower in some of the self-perception domains tested when compared to the conventional-school group. The authors pointed out, however, the fact that their findings regarding perceived competence seemed to contradict findings by a number of other researchers.[98]

Sonia Gustafson studied families drawn from the directory of one nationally circulated home-school magazine. One fifth of the parents said there was some form of social isolation involved, but many of these parents explained that the problem was not isolation itself—the problem was the challenge of the effort parents needed to expend to provide an acceptable type and degree of social contact. It should be noted, further, that the parents did not say that this isolation resulted in children with poor social skills.[99]

What About Special-Needs and Talented-and-Gifted Children?

Some people would concede, based on research findings, that home schooling works for "normal" or "near-typical" children but they maintain that it cannot work for those with special needs or those who are talented and gifted. Is there any research on this? So far, very little; but the little there is speaks well of home schooling's effects.

First, some work has been done on children with special needs, those who have mental or physical delays or disabilities. Dr. Duvall and his colleagues studied elementary and junior high students with learning disabilities in both home schools and public-school special education programs "...to determine whether parents, who were not certified as professional educators, provided students with instructional environments that facilitated the acquisition of basic skills."[100]

Home-school students were involved in academic engaged time (AET) 59% of the time versus 22% of the time for public-school students. The "... home school students made more [academic achievement] gains in comparisons involving reading, the one involving math, and three of four in written language. The remaining written language comparison...involved equivalent home school and public school gains."[101] "Generally, the measures of classroom ecology and achievement showed that home schools, when compared to special education programs, provided equal if not more advantageous instructional environments for children with learning disabilities."[102]

Another study involved home-school and public-school elementary and junior high students with Attention-Deficit/Hyperactivity Disorder (ADHD).[103] The general purpose of the study was to determine whether parents provided students with instructional environments that facilitated the acquisition of basic skills. "...Homeschool students were academically engaged about 1-1/2 [1.5] times as often as public school students. Furthermore, homeschool students made more progress in reading and math, and about equal gains in written language. It was concluded that parents could create powerful instructional environments for their children at home."[104]

While researchers use conservative terms to state the success that parents have in home schooling their learning disabled children, a rapidly increasing number of families with special needs children are eagerly choosing home schooling.[105]

Another group of students, the talented and gifted (TAG), also appear to be a part of the swelling ranks of the home-education community. In 1984 Katheryn Kearney, now an instructor at Iowa State University, wrote, "No less a gifted inventor than Thomas Edison was taught at home by his mother, after she removed him from school when his teacher said he was 'addled.'"[106] Kearney interviewed two families with gifted children to explore what they did and why, perhaps, they were successful. She found: "Both families designed an extensive, individualized curriculum for their children, taking into account special abilities and interests."[107]

"No less a gifted inventor than Thomas Edison was taught at home by his mother, after she removed him from school when his teacher said he was 'addled.'"

Dr. Jacque Ensign studied both special needs and gifted students who were home educated and concluded:

> *"The hallmarks of the educational philosophies and pedagogies of the homeschoolers in this study are 1) focus on the whole child rather than primarily on the child's disability or extreme ability, 2) individualized attention, and 3) care, patience, and respect for the child to lead the teacher in both the timing and the content of what the child is ready to be taught. ...The educational outcomes for these homeschooled special education students are self-confident students who have developed academic skills at very uneven rates but who have usually achieved academic excellence by the end of high school."*[108]

In addition to this limited research on TAG students, numerous writers in the field have listed the names of famous gifted people who were home schooled, and have suggested that home schooling is a good option for many gifted children.[109]

How Will They Do in the Real World?

Although the research evidence supports the claim that home schooling has positive effects on children and students, serious questions still remain. One question is framed like this: These children may do well in the three R's and in basic social skills while they are young—and maybe into their teen years—but how are they going to do in the "real world" as adults?

Dr. Linda Montgomery was one of the first to look to the future and adulthood of the home educated. She did this by investigating the extent to which home-school students were experiencing conditions which foster leadership in children and adolescents. Her findings on 10- to 21-year-olds suggested that the home educated are certainly not isolated from social and group activities with other youth and adults. They were quite involved in church youth group and other church activities, jobs, sports, summer camps, and music lessons and recitals. She concluded that it appears home schooling "...nurture[s] leadership at least as well as does the conventional system."[110]

Susannah Sheffer's book on her study of home-schooled adolescent girls is replete with these girls' own words and interpretive comments by the researcher. Sheffer begins her report by citing the work of Dr. Carol Gilligan and her colleagues in the Harvard Project on Women's Psychology and Girls' Development who, lamenting, "...have written about girls' 'loss of voice' and increasing distrust of their own perceptions."[111] Sheffer suggests that the great difference in structure and function—the way things work, the relationships people have, expected behaviors, and the roles people play—between home schooling and conventional schooling may explain why she found so many of these home-educated adolescents to have not lost their personal voice and personal sense of identity.

Meredith, a 14-year-old, said, "I was worried that I would become a typical teenager if I went to school" and "I think some people would have seen [school] as my opportunity to 'be like everybody else.' But I didn't want to be like everybody else."[112] Sheffer concludes, "Throughout this book the homeschooled girls I've interviewed have echoed these statements. They have talked about trusting themselves, pursuing their own goals, maintaining friendships even

when their friends differ from them or disagree with them."[113] Finally, these home-educated girls maintain their self-confidence as they pass into womanhood.

Sheffer's findings regarding adolescent girls might explain some of the successes that other researchers have found regarding young adults who were home schooled. For example, Dr. Rhonda Galloway and Dr. Joe Sutton categorized college students as either home, public, or private schooled and examined their aptitude for and achievement in college English.[114] They found, "...the home schooled students in this study demonstrate similar academic preparedness for college and similar academic achievement in college as students who had attended conventional schools."[115]

Dr. Paulo Oliveira and his colleagues found: "Although the [college] students who were educated in home schools had a slightly higher overall mean critical thinking score... than that of students who were from public schools, Christian schools, and ACE schools, the [statistical] ... test revealed that there were no significant differences among the groups on this critical thinking score..."[116]

Researchers in another study used academic, cognitive, spiritual, affective-social, and psychomotor criteria for measuring success at a university. Among other things, they found that the home schooled held significantly more positions of appointed and spiritual leadership and had more semesters of leadership service than did the private-school group, although they were not significantly different from the public-school group.[117]

Although some college and university personnel show animosity or hostility toward the home-schooling process, it appears that most are now interested in welcoming the home educated.[118] A fast-growing list of now over 750 colleges and universities admit the home educated.[119] Dr. Irene Prue's nationwide survey of college admissions personnel revealed, "Home schoolers are academically, emotionally, and socially prepared to succeed in college..."[120] In addition, several colleges think so well of the home educated that they have been actively recruiting them for several years. Another survey of college admissions officers found the Dartmouth College admissions officer saying, "The applications [from home schoolers] I've come across are outstanding. Home schoolers have a distinct advantage because of the individualized instruction they have received."[121]

Dr. J. Gary Knowles was the first to focus on older adults who were home educated. He collected extensive data from a group who were home educated an average of about 6 years before they were 17 years old. He found that they tended to be involved in occupations that are entrepreneurial and professional, and that they were fiercely independent and strongly emphasized the importance of family. Furthermore, they were glad they had been home educated, would recommend it to others, and had no grossly negative perceptions of living in a pluralistic society.[122]

Along a different vein, Patricia Lines, of the United States Department of Education, asked whether home-school parents and their children are withdrawing from the larger public debate about education and, more generally, from social discourse that is an integral part of a liberty-loving republic. In a sense, she addressed whether these children and youth are being prepared to be a significant part of society. Lines concluded:

> *"Although they [home school parents] have turned their backs on a wide-spread and hallowed practice of sending children to a school located in a particular building, adhering to a particular schedule and program, they have not turned their backs on the broader social contract as understood at the time of the Founding [of the United States]. ...Like the Antifederalists, these homeschoolers are asserting their historic individual rights so that they may form more meaningful bonds with family and community. In doing so, they are not abdicating from the American agreement. To the contrary, they are affirming it."*[123]

Similarly, Charles Clark's report confirmed the involvement of home educators, who are models for their children, in vigorous legislative lobbying.[124] Others have also discussed how home educators and their children receive an alternative education and stay involved in the larger political and social processes of America.[125] Although limited in terms of the number and the scope of studies, research to date suggests that the home educated are doing well in adulthood.

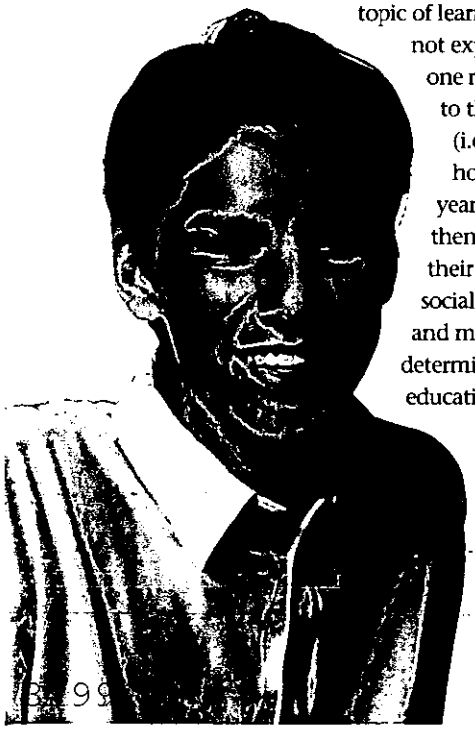
The Generational Effect

Not only does home schooling affect youth who are becoming adults, the practice also significantly affects the older generation, their parents. It is well known that having children forces adults, if they have not already done so, to clarify their beliefs about many things, including education. Considering and practicing home schooling causes parents to think about their own educational experiences, evaluate available alternatives, change their relationships with their children, critically analyze societal norms, and learn anew or improve in academic subjects. Fundamentally, they must become lifelong learners if they are not already.[126]

Limitations of the Research

Does this research present an accurate picture of its subject, home-based education and its results? First, with respect to home schooling, researchers find it challenging to obtain samples that are representative of all home schoolers in the populations of interest. This uncertainty should be kept in mind while evaluating any social science study about human populations.

Second, one of the main problems with drawing firm conclusions from the research described above on the specific topic of learner outcomes is that it is not experimental.[127] That is, no one randomly assigns children to three types of education (i.e., public, private, and home), lets them live for ten years in those environments, then measures and compares their academic achievement, social and emotional maturity, and motor skills, all in order to determine whether the type of education *caused* differences in the measured factors. The reality is that researchers have to deal with intact groups and research situations that entail complex and confusing factors. This is a challenge in almost all social science research, not just that on home schooling. More causal-comparative studies are needed that simultaneously and carefully control for various background variables in order to more clearly determine whether home schooling causes positive, or negative, effects.



Another limitation of the research to date is that not much of it has investigated the effect of home education on other aspects that are important to home educators.[128] Sparse research has been done to address such long-term outcomes as close family relationships and mature, home-educated adults who hold true to certain values and ways of living.[129] Research along these lines will add greater richness to the current body of research on home education.

In Conclusion

It is clear that home- and family-based education has firmly grabbed hold of Americans' attention during the last two decades of the 20th century. Researchers, trend watchers, and reporters for major news magazines all indicate that the movement will continue to grow in numbers and cultural influence well into the 21st century. Dr. James Carper of the University of South Carolina wrote in 1992, "How it [home education] relates to changing family roles and structures and the way we educate children now and in the future begs the attention of scholars of all stripes."[130] He was correct, and scholars have descended upon the phenomenon. Their research indicates that the home educated are doing favorably in terms of academic achievement, participation in nonacademic activities, measures of social, emotional, and psychological development, and success in college and adulthood.

There have been times when many, even advocates of home schooling, have cautiously stated, "Home schooling is not for everyone." Only the future will tell, however, to what extent home schooling will appeal to and serve the briskly expanding variety of social, cultural, ethnic, and educational groups who have already gained a hearty interest in it. The evidence suggests that these families and children will experience the same successes had by home schoolers of the 1980s and 1990s. Therefore, the growth in the movement's ranks and its impact on society may be peculiar and remarkable through the threshold of the new millennium.

ABOUT THE AUTHOR

Brian D. Ray, Ph.D., is president and founder of the National Home Education Research Institute (Salem, Oregon, U.S.A.), a nonprofit research and educational organization dedicated to serving all educators and the public by conducting research on home-based education, maintaining a network of researchers, and educating the worldwide public about home- and family-based education. Dr. Ray has conducted numerous studies on home schooling, founded and serves as editor of the academic, refereed journal *Home School Researcher* (ISSN 1054-8033), speaks widely to the media, professional meetings, and home-school conferences, and provides expert testimony before many courts and legislatures.

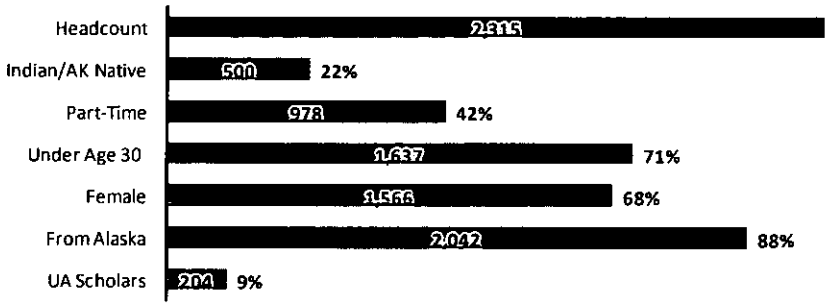
Dr. Ray earned his Ph.D. in science education from Oregon State University (Corvallis, Oregon, U.S.A.), has served as a professor at the undergraduate and graduate levels at colleges and universities in the areas of research methodology, science, education, and statistics, has taught at the elementary and secondary levels in public and private schools, has published many articles, is author of *Strengths of Their Own—Home Schoolers Across America* and is co-author of *Home Schooling: Parents as Educators*. Dr. Ray is considered a leading expert on home education both in the United States and internationally.

3/4/09 OVERVIEW: U OF AK REGIONAL CAMPUSES

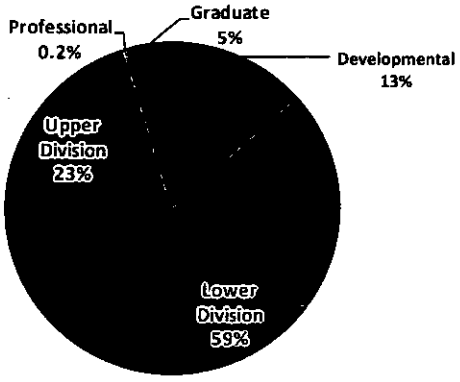
Campus Profile: *Rural College*

The University of Alaska Fairbanks (UAF) Rural College is a centralized component of UAF's College of Rural and Community Development (CRCD). It facilitates statewide delivery of academic and vocational education and outreach with an emphasis on Alaska Natives and underserved communities, and also serves as the center for support and development of distance delivery of education throughout the university. CRCD geographically serves nearly two-thirds of the state, representing more than 160 primarily Native Alaska communities.

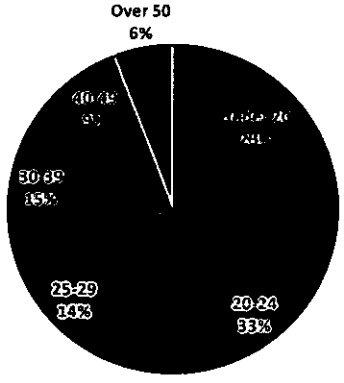
Student Profile, Fall 2008



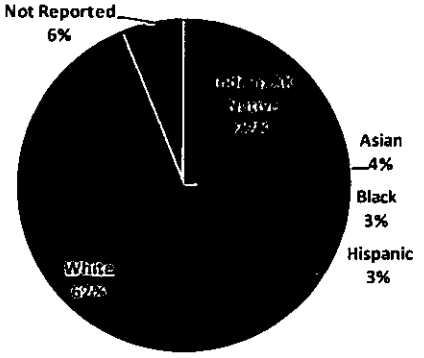
SCH by Course Level



Age



Ethnicity



SCH by Degree-Seeking Status

- Almost 25 percent of UAF students took a course from the Rural College in fall 2008, with more than 2,300 students enrolled for credit.
- Rural College enrolled more than a quarter of UA Scholars (204) attending UAF in fall 2008.
- Almost sixty percent of students taking a class at the Rural College were enrolled full-time at the UA system level.
- More than 20 percent of enrolled students were Alaska Native/Indian.
- The number of degree-seeking students reached 1,250 in fall 2008, nearly three times as many as in fall 2000.
- In fall 2008 the number of UA first-time freshmen attending Rural College (389) was 5 times higher than in fall 2000.
- The number of minority students enrolled (732) has more than tripled since fall 2000.
- More than 1,330 Rural College students were enrolled full-time across UA in fall 2008, representing an additional 780 full-time students beyond the fall 2000 level.
- Rural College delivered 9,814 student credit hours (SCH), excluding auditors, in fall 2008, with over 70 percent delivered in lower division and developmental level courses.
- Nearly seventy percent of FY08 graduates completed programs that qualified them to work in High Demand Job Area careers.

Source: Data Supplied by MAUs via UA Information Systems: Banner SI Closing Extracts FY01-FY08. Compiled by Statewide Planning & Budget in conjunction with campus.

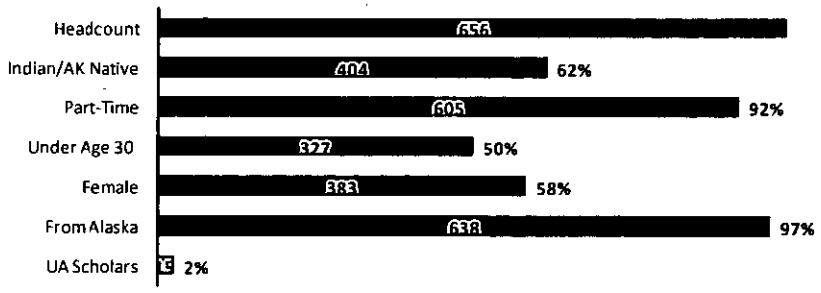
Headcounts are unduplicated at the reporting level and students often enroll at more than one campus or MAU in a semester, therefore the sum of headcount across multiple campuses often adds to more than the MAU totals.

Campus Profile: *Bristol Bay*

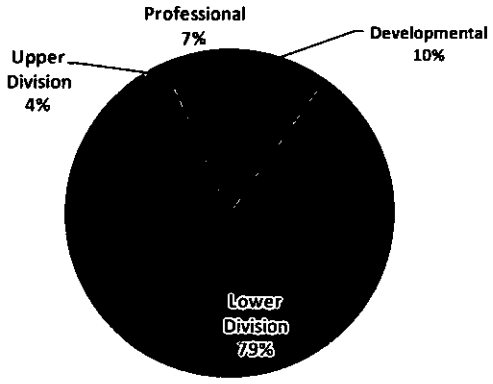
The Bristol Bay Campus of UAF is located in Dillingham on the northern coast of Bristol Bay, one of the world's largest producers of sockeye salmon. The campus serves an area of 55,000 square miles and a total of 32 communities.

Bristol Bay Campus
university of alaska fairbanks

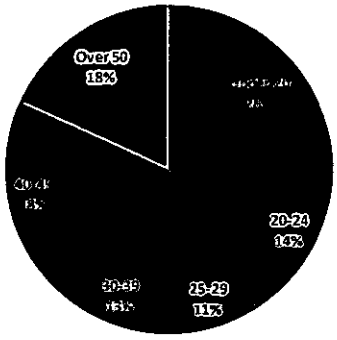
Student Profile, Fall 2008



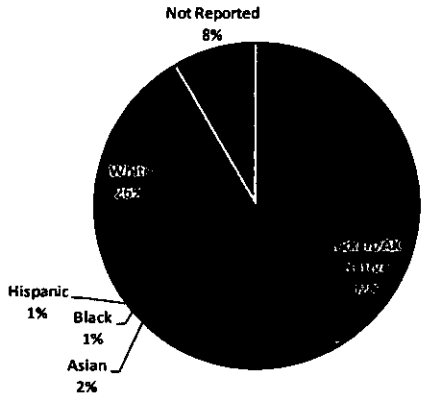
SCH by Course Level



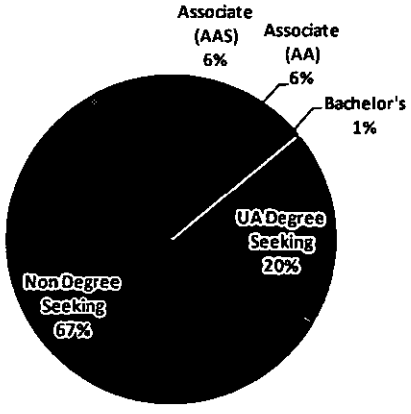
Age



Ethnicity



SCH by Degree-Seeking Status



- The Bristol Bay campus accounted for more than 5 percent of UAF students in fall 2008, with almost 660 students enrolled for credit.
- Among all students enrolled in fall 2008, more than 60 percent were Alaska Native.
- Enrollment of minority students increased 50 percent since fall 2000, to 430 in 2008.
- Nearly half of all enrolled students were under age 30 and the average student age was 34 in fall 2008.
- Nearly all students (97 percent) attending Bristol Bay originated in Alaska, with another 2 percent from out-of-state and 1 percent from other countries. .
- Almost 90 percent of student credit hours (SCH) were delivered in lower division and developmental level courses.
- One-third (160) of Bristol Bay students were pursuing a degree.
- Degrees, certificates and credentials awarded by the Bristol Bay campus in fall 2008 amounted to twenty five, a 25 percent increase since FY01.
- One of every three students was enrolled in a distance or technology delivered course, accounting for about forty percent of fall 2008 student credit hours.

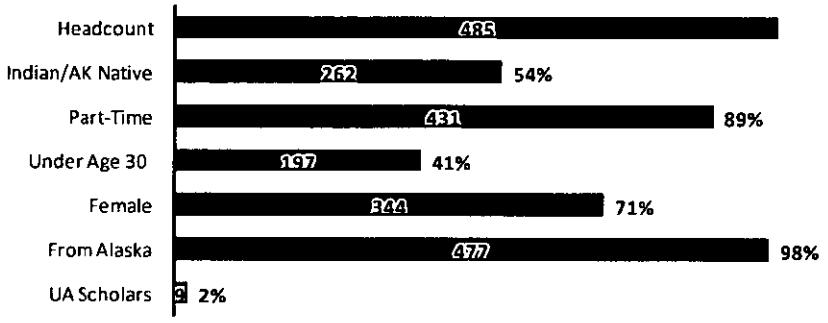
Source: Data Supplied by MAUs via UA Information Systems: Banner SI Closing Extracts FY01-FY08. Compiled by Statewide Planning & Budget in conjunction with campus.

Headcounts are unduplicated at the reporting level and students often enroll at more than one campus or MAU in a semester, therefore the sum of headcount across multiple campuses often adds to more than the MAU totals.

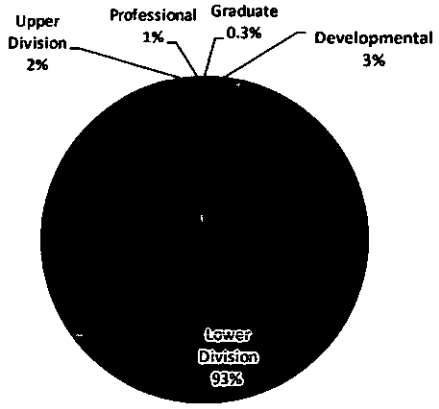
Campus Profile: *Interior-Aleutians*

The Interior-Aleutians Campus (I-AC) serves Alaska's Interior region, an area larger than France, and extends its service area to the Aleutians, a total area of about 200,000 square miles. With the largest land base of any rural campus, the area served by I-AC includes eleven separate school districts; several state government service areas; and three regional Native corporations. This campus is an Alaska Native Serving Institution that develops culturally relevant and place-based programs and serves a culturally and linguistically diverse Alaska Native population through its six rural education centers in Fort Yukon, Galena, McGrath, Tok, Unalaska and Nenana.

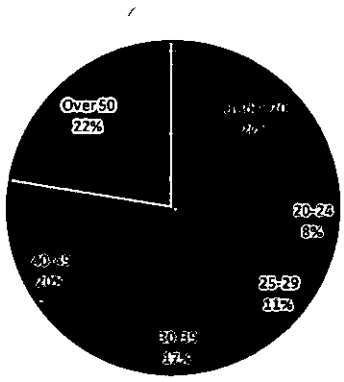
Student Profile, Fall 2008



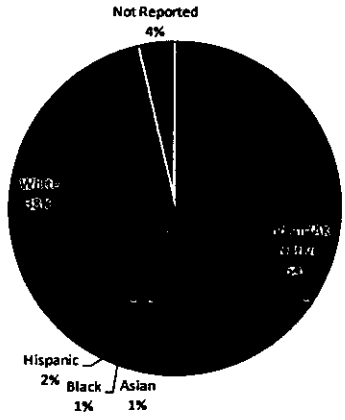
SCH by Course Level



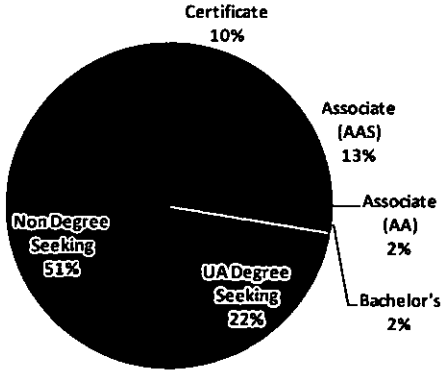
Age



Ethnicity



SCH by Degree-Seeking Status



- The Interior-Aleutians campus accounted for 5 percent of UAF students in fall 2008, with almost 500 students enrolled for credit.
- Fifty degrees, certificates and credentials were awarded by the Interior-Aleutians campus in FY08, more than triple the number awarded in FY01.
- Almost 95 percent of FY08 degrees and credentials awarded by Interior-Aleutians were in programs qualifying recipients to work in High Demand Job Area careers.
- Almost 55 percent of students were Alaska Native/Indian, one of the highest proportions among all UA campuses.
- Nearly sixty percent of enrolled students were over 30 years of age, with an average age of 36 in fall 2008.
- Students from Alaska accounted for ninety-eight percent of enrollment, out-of-state students for one and a half percent and students from other countries the remainder.
- The Interior-Aleutians campus delivered 1,810 student credit hours (SCH), excluding auditors, with more than ninety-five percent in lower division and developmental level courses.

26 February 2009

To the Members of the Alaska State Legislature.

My name is Leonard G. Benson. I am currently enrolled in the University of Alaska Fairbanks classes in Galena for an Applied Sciences Associates Degree. I am taking levels one and two Residential housing at the Interior-Aleutians Campus. I am writing you to tell you the reason why I think that it is important for us to have these classes. This class is important to Native Alaskans because we, the young people of this state, are the future for this state. Without an education, the people of bush Alaska would not survive because of the very high food prices, fuel prices, and housing bills in the bush. Most of the jobs throughout the state go to the out of state people because of the education requirements for most jobs in Alaska. This education is important because we need to keep our money in the state, instead of going to the 48 states. This is another reason we have very high-priced food and fuel. These classes are important to the students of Alaska because it will help our towns in the bush.

Sincerely,

Leonard G. Benson

Leonard G. Benson

Feb. 25, 2009

To the members of the Alaska State Legislature:

My name is Curtiss Carlo. I was born and raised in the rural village of Ruby, and I am writing this letter for the future benefit of other students who would like to be able to stay at home and still get an Applied Sciences Associates Degree through the University of Fairbanks in Construction Trade Technology. Here in the rural interior, as the prices in transportation, house rental, food, and fuel cost increase, student's chances of going to college in the city steadily decreases. More and more frequently I see graduates coming back home, because they could not afford living in the city. I truly believe in the University's program to go where the students are. This program encourages them to continue their education and get a degree while staying home. I was going to apply to the Alaska Vocational Technical Center;{AVTEC}instead, this program provided me the same trade and a better opportunity of living at home with my family without having to pay rent and providing for my wife and son moving there too. Now, I am able to go to college, and continue watch over my elderly Auntie, because she likes living in the rural area. The cost to attend AVTEC was amazingly great, in the thousands. But thanks to the University's Interior-Aleutians Campus/Yukon-Koyukuk Center here in Galena, Alaska, and with your help, other students can continue to get back to higher education learning.

Sincerely,

Curtiss Carlo
Student at Yukon-Koyukuk Center
P.O. Box 285
Galena, Alaska 99741

26 Feb. 2009.

To the members of the Alaska State Legislature:

My name is Tom Esmailka, and I am writing to you to let you know about the Construction Trades Technology program that is being run by the University of Alaska at Fairbanks, Interior Aleutians Campus. The program consists of carpentry, electrical, and plumbing. In order To graduate we need to complete college English and carpentry, electrical, and plumbing to receive an A.A.S. degree. The more funding the program receives, the more successful it will be. People will use their degrees to gain employment and be upstanding citizens. The course lasts for about three years.

In our villages along the Yukon river, people are becoming stressed and turning to alcohol and drugs. If we can fund more schools like the CTT—A.A.S. degree program in Galena, AK., we can put our people into training for one of the many trades out there. After being trained, they can be productive citizens at home or out in the real world.

Sincerely,

Tom Esmailka

Student at UAF, Yukon-Koyukuk center

P.O. box 57

Galena, AK 99741

February 26, 2009

To the members of the Alaska State Legislature:

My name is Chris Kriska I am originally from Koyukuk, Alaska, but live in Galena 30 miles up the Yukon River from there. I have been attending the Applied sciences associates Degree program with UAF/ Interior-Aleutians campus for the last two years, and I am excited to be working towards getting an associate's degree in the Construction and Technology trades. I found this program to be very challenging; however, with the support of my fellow classmates and my family, I find myself learning at a high rate and I am pleased with my performance as a college student. I sacrificed a lot by taking this class; it's hard to be away from family. I just recently became a father for the second time, and this program keeps me away from her all day long, but I am sticking with it, and I am going to keep on going until the program is finished. The whole community of Galena is supporting us, and without Larry Hausmann this all wouldn't be possible. So I just want to thank everyone that helped get this program started, and hope other villages get the same opportunity to get the same education that we acquired.

Sincerely,

Chris Kriska

Chris Kriska

February 26, 2009

To the members of the Alaska State Legislature:

My name is Stewart Solomon and I live in Galena, Alaska. I am writing this letter in regards to the University's Construction and Trades Technology Applied Sciences Associates Degree Program. I am a student taking this program from the comfort of my hometown. I really enjoy taking this program here. It gives me the opportunity to go to school and stay in my own house. When I heard that this program was coming to Galena, I jumped at the opportunity. It gives me great pride to be taking classes here. I would just like to say that I wish everyone in different villages would have the same opportunity that I have. I urge you to support this program and other programs like this to give people the same kind pride that I have. Just today my aunt Elaine Settle said to me, "I'm proud of you and all the other students for working hard." This is just the kind of pride that it gave me; I wish everyone can have this kind of pride.

Sincerely,

Stewart Solomon

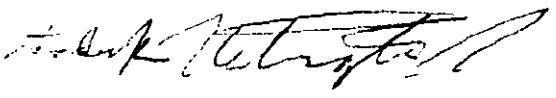
February 26, 2009

To the members of the Alaska State Legislature:

My name is Frederick Huntington Jr. I live in Galena, Alaska. I am currently attending the University of Alaska Fairbanks through the Interior-Aleutian Campus. I love staying in my own home and attending regular classes based on the Construction Trades Technology Applied Sciences Associates Degree program. The opportunity of taking these classes here at home saved me thousands of dollars. Plus I am getting an education that will lead to a career that will help me for the rest of my life. With the program here in Galena, my friends and I can enjoy our culture and lifestyle here in rural Alaska while at the same time earning University degree. I would like to see more of our young men and women who live in the rural areas to have the same opportunity as I have. Give Alaskans a chance to better themselves. I ask you, the Legislature, for additional funding for programs like this and other programs that help Alaskans improve their chances to find work. Just the other day, I heard that some citizens of Galena are proud of the students taking the first step toward higher learning. This make me feel very proud, being a Koyukon Athabascan raised in a village earning my degree. I feel accomplished. I would like to see more people getting a college education here in rural Alaska. So please help fund additional programs that will invest in Alaska's future.

Sincerely,



Frederick Huntington Jr

Student at UAF, Yukon-Koyukuk Center

1 Mile Tiger Fwy. Galena, Alaska 99741

February 26th, 2009

To the members of the Alaska State Legislature:

My name is Jack Nickoli from the village of Kaltag, AK which is located 90 miles inland from Unalakleet. I am writing this letter in regards to the University's Construction and Trades Technology of Applied Sciences Associates Degree Program. I am a student that began this program on January 20th, 2006 in Kaltag and will complete it in Galena, graduating this May 2009.

I think one very important issue facing young native men in the interior of Alaska is the lack of jobs and training. The unemployment rate in rural Alaska is very high due to very poor prospects for a job, and not enough economic businesses.

The only way to break the cycle of natives being jobless is to get vocational training in a trade and or get a college degree. I am so happy I had this opportunity to work on my college degree. I thank the University of Alaska Fairbanks, staff, and teachers for helping me to succeed in the construction industry. I have never dreamed of becoming a college graduate of the University of Alaska Fairbanks. I hope other young natives in rural Alaska get the same opportunity that I have.

Sincerely,

Jack Ramah Nickoli

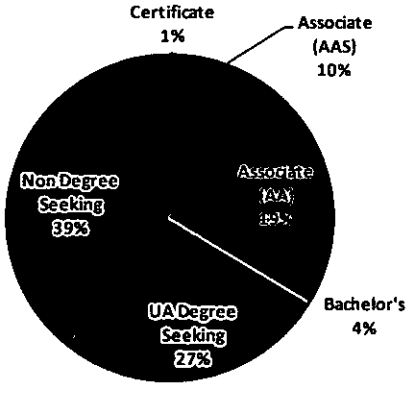
SCH by Degree-Seeking Status



Source: Data Supplied by MAUs via UA Information Systems: Banner SI Closing Extracts FY01-FY08. Compiled by Statewide Planning & Budget in conjunction with campus.

Headcounts are unduplicated at the reporting level and students often enroll at more than one campus or MAU in a semester, therefore the sum of headcount across multiple campuses often adds to more than the MAU totals.

- With greater than 300 students enrolled, Kuskokwim accounted for 3 percent of UAF students in fall 2008.
- The number of degree-seeking students grew to nearly 160 in fall 2008, reflecting growth of nearly 15 percent over the last eight years.
- In fall 2008 nearly 40 of UA first-time freshmen attended the Kuskokwim campus, up almost 20 percent since fall 2000.
- Most of students (80 percent) taking a class at Kuskokwim enrolled part-time at the UA system level.
- Seventy percent of students were Alaska Native/Indian, the highest proportion of any UA campus in fall 2008.
- More than a half of enrolled students were over 30 years of age, with an average age of 35.
- The campus delivered 1,820 student credit hours (SCH), excluding auditors, in fall 2008. Nearly 95 percent were in lower division and developmental level courses.
- The Kuskokwim campus awarded nearly 60 degree certificates and credentials in FY08, about two and half times the number in FY01.
- Almost 65 percent of FY08 graduates received degrees or credentials in programs qualifying them to work in High Demand Job Area careers.

Campus Profile: *Northwest*

The Northwest Campus (NWC) is a branch campus of the University of Alaska Fairbanks (UAF) and is part of UAF's College of Rural and Community Development. The Northwest Campus serves 15 Alaska Native villages in the surrounding 36,000 square miles, an area the size of the state of Indiana. NWC and its service villages are entirely off the road system requiring commercial airline or private charter for the majority of travel, even between villages. The nearest major airport is in Anchorage, 550 air miles from Nome. Travel to or from the surrounding villages requires an additional flight in and out of Nome via small commercial aircraft.

MEAT PRODUCTION

with GREG FINSTAD

Greg Finstad is a range ecologist and runs the Reindeer Research Program at the University of Alaska Fairbanks. He has been working with reindeer herders in the Bering Strait region for many years.

Monday, Tuesday & Friday
March 2, 3 & 6

Two 7-hour sessions (March 2 & 3 • 9 a.m.-5 p.m.) +
Two 3-hour sessions (Mar 3 • 6-9 p.m. + Mar 6 • 9 a.m.-noon) +
Follow-up audioconfrence sessions (TBA)
Cost: $274 • 2 credits • HLRM F160
LIMITED SCHOLARSHIP FUNDS AVAILABLE

Learn about the meat animal processing sequence in this class! You'll study the production of reindeer and game meat in Alaska and the science and technology of their conversion to food, value-added products and by-products. Students will review state regulations and methods of proper field slaughtering, and learn about the preparation, handling and storage of meat.

Register by Monday, February 23: Info: 443-2201 • www.nwc.uaf.edu

UAF NORTHWEST CAMPUS • Pouch 400 • Nome, AK 99762

MEAT-CUTTING WORKSHOP

with GREG FINSTAD

Greg Finstad is a range ecologist and runs the Reindeer Research Program at the University of Alaska Fairbanks. He has been working with reindeer herders in the Bering Strait region for many years.

Tuesday, March 3 • 6-9 p.m.

One 3-hour session • Cost: $30 non-credit workshop fee
Workshop meets at Nome Eskimo Community
LIMITED TO 25 PARTICIPANTS

Learn about cutting and cooking reindeer meat in this special workshop! You'll learn how to cut a reindeer carcass, which cuts to use for various reindeer dishes, and the best ways to cook the cuts. The workshop will cover how muscle is converted to meat, and some of the do's and don'ts of meat production. Learn how long to age and roast reindeer and moose meat, and some of the nutritional differences between the meat from these animals.

Register by Tuesday, February 24. Info: 443-2201 • www.nwc.uaf.edu

UAF NORTHWEST CAMPUS • Pouch 400 • Nome, AK 99762

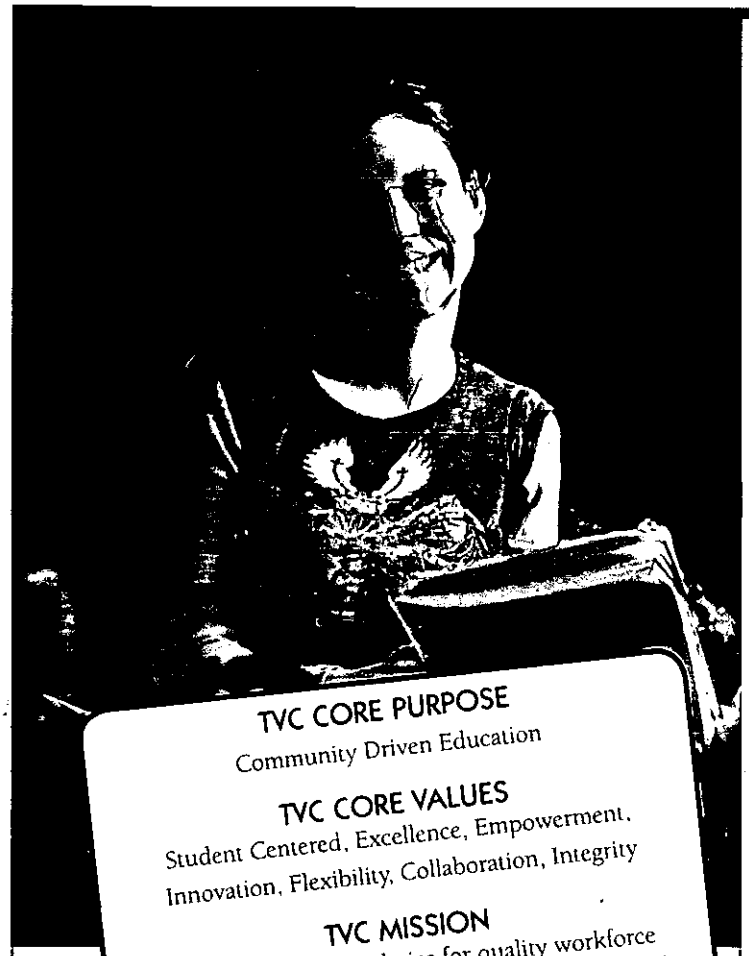
UAF is an affirmative action/equal opportunity employer and educational institution

UAF TANANA VALLEY CAMPUS
TVC AT A GLANCE: SPRING 2009



TVC CORE PURPOSE
Community Driven Education

TVC CORE VALUES
Student Centered, Excellence, Empowerment, Innovation, Flexibility, Collaboration, Integrity

TVC MISSION
TVC is Alaska's first choice for quality workforce development, academic preparation, & lifelong learning.

TVC IS PRODUCTIVE
- 38% of UAF's student headcount.
- 22% of UAF's credit hour production.
- 281 degrees awarded in 2008.
- 3,000+ students served every semester.
- Offers over 40 certificate and degree programs.
- Hires 300+ adjuncts each year.

TVC IS EFFICIENT
- TVC's budget is nearly $11M.
- TVC's instructional efficiency of faculty is near the highest of all UAF campuses.
- TVC effectively using nine different facilities:
  - UAF Tanana Valley Campus Center
  - TVC Downtown Center/2nd Avenue
  - Hutchison Institute of Technology
  - University Park
  - Bunnell House Lab School
  - TVC Automotive Technology Center
  - Fort Wainwright
  - Eielson Air Force Base
  - Delta Career Advancement Center

TVC IS RESPONSIVE TO COMMUNITY

Construction Management Program:
- Strong support from local construction industry.
- Outstanding locally-experienced faculty.
- Program aligned with BA program at UAA.
- Received $25,000 donation from Associated General Contractors of Fairbanks to create a scholarship endowment.

Dental Hygiene Program:
- Granted initial accreditation by American Dental Association.
- State-of-the-art dental training facility.
- First cohort of six students began Spring 2008.

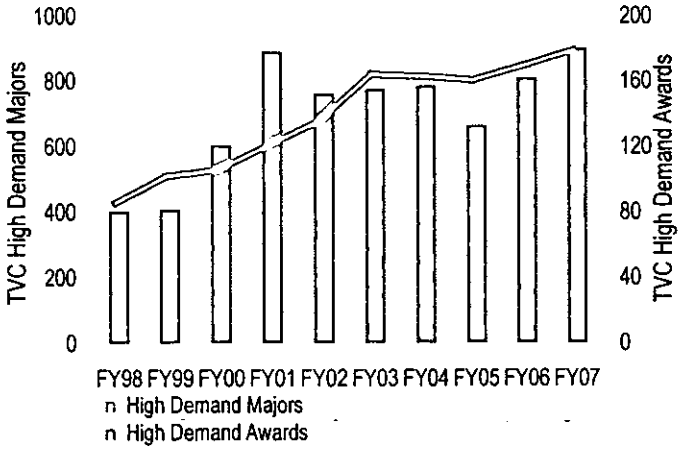
Automotive Technology Program:
- Modern automotive facility at 3202 Industrial Ave.
- Paid student internships with local employers.

Northern Military Programs:
- Serving armed forces personnel and families at Fort Wainwright, Eielson AFB, Fort Greely and Clear AFS.
- New testing center located on Eielson AFB.

TVC STUDENTS LIKE WHAT WE DO:
- Students surveyed like quality faculty-student engagement and collaborative learning.
- 95% would recommend TVC to family or friend.

TVC GRADUATES ARE GOING TO WORK
- Allied Health graduates-Tanana Valley Clinic, Fairbanks Memorial Hospital, and numerous clinics.
- Process Tech graduates - BP, ConocoPhillips, Flint Hills Resources, and Alyeska Pipeline Service Company.
- Paralegal graduates have a 100% rate of finding employment with local law firms.
- TVC awards over 70% of all UAF community campus degrees (occupational endorsements, certificates, AA, AAS).

UAF Tanana Valley Campus Trends in High Demand Jobs



University of Alaska Fairbanks
FY10 Capital Funding Request--$5M

Project: UAF Tanana Valley Campus Center (TVCC) Space Revitalization-Phase 4
604 Barnette Street, Downtown Fairbanks

Project Abstract:

The UAF Tanana Valley Campus Center located at 604 Barnette Street is in critical need of continuing major upgrades to ensure the reliable, safe, and efficient delivery of TVC programs focused on key Alaskan industries. The facility was designed and constructed in 1962-63. Since taking ownership in 2003, the University has accomplished two State funded projects and two additional projects funded by the Denali Commission. The State funded Phase 3 Exterior Envelope project is scheduled for 2009 construction. The FY10 request will complete the fourth floor revitalization for Allied Heath programs, upgrade antiquated elevator lift systems, and continue revitalization of interior spaces, exterior grounds and parking.

Project Overview:

UAF's FY10 capital funding request for Tanana Valley Campus Center (TVCC) seeks to improve education and training facilities for high-growth, high-demand occupations in Allied Health, Nursing, and related fields. The FY10 request for $5M will fund renovation of TVCC's fourth floor; it builds on recent phased renovation work to complete training facilities for Allied Health programs leading to jobs in fields like Nursing, Certified Nurse Aide, Medical and Dental Assisting, Dental Hygiene, Phlebotomy, and more. Students in these programs will have use of new training labs and classrooms. The renovation will also include upgrades to the antiquated 1960s-era elevator and other interior spaces.

Allied Health is one of TVC's fastest growing program areas; Alaska's graying workforce both increases demand for health-care services and job opportunities as current workers in the field retire. Graduates have little difficulty in finding productive employment in the field through employers such as Fairbanks Memorial Hospital and Denali Center, Fairbanks Imaging Center, Bassett Army Community Hospital, Tanana Valley Clinic, Fairbanks Clinic, and other local employers.

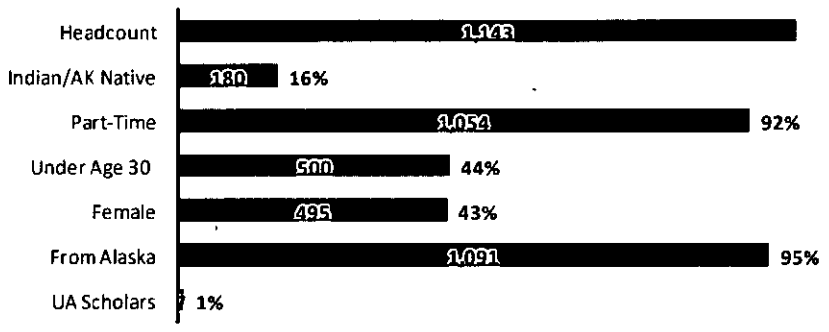
The FY10 request will complete revitalization of this floor, to include upgrades to the antiquated elevator systems (cars, electric motors, control and safety systems) plus ensure ADA compliance. The project builds on other recent phased work already funded and/or completed. This includes $4M for heating and cooling plus electrical systems and $7M for replacement of the building's exterior skin (improving insulation efficiency from R4 to R21).

UAF is an affirmative action & equal opportunity employer and educational institution.

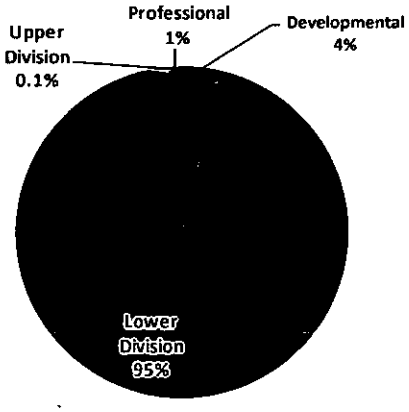
Campus Profile: *PWSCC*

The Prince William Sound Community College (PWSCC), an affiliate college of the University of Alaska Anchorage (UAA), is located in the historic community of Valdez with extensions in Cordova and the Copper Basin. Located in South-central Alaska, the College services a geographic area of more than 44,000 square miles.

Student Profile, Fall 2008



SCH by Course Level



Age

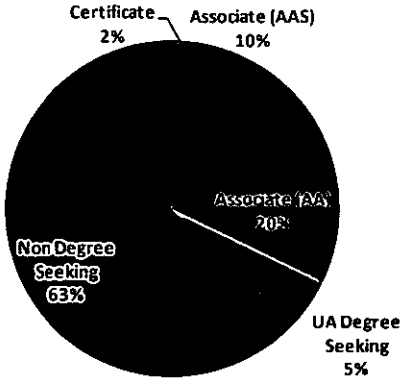
SCH by Degree-Seeking Status



Source: Data Supplied by MAUs via UA Information Systems: Banner SI Closing Extracts FY01-FY08. Compiled by Statewide Planning & Budget in conjunction with campus.

Headcounts are unduplicated at the reporting level and students often enroll at more than one campus or MAU in a semester, therefore the sum of headcount across multiple campuses often adds to more than the MAU totals.

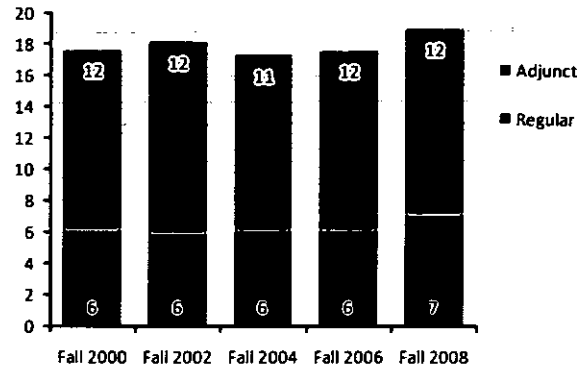
- Five percent of UAA students took one or more courses from PWSCC in fall 2008, with more than 1,140 enrolled for credit.
- The vast majority of students enroll part-time.
- PWSCC had the highest proportion of male student enrollment (57 percent) of any campus in the UA system.
- The majority of students were over the age of 30, with an average age of 36.
- More than 95 percent of students were from Alaska.
- Nearly 3,700 student credit hours (SCH) were delivered in fall 2008, excluding auditors. Virtually all SCH were delivered in lower division and developmental level courses.
- PWSCC provided non-credit Adult Basic Education training to more than 100 students in preparation for the GED exam.
- About five percent of fall 2008 students were enrolled in a PWSCC distance delivery course.

Campus Profile Trends: *PWSCC*

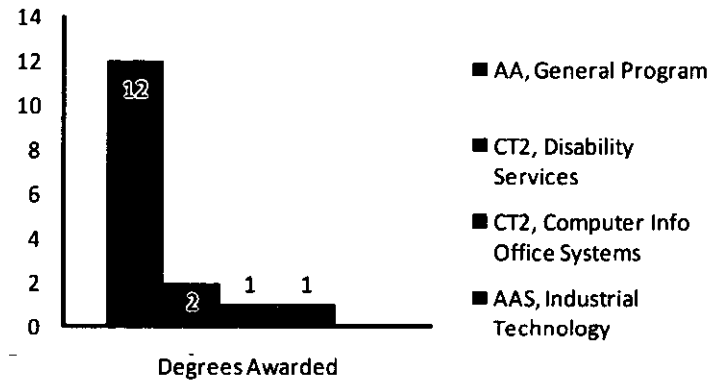
- PWSCC employed 7.0 regular, instructional faculty full-time equivalents (FTE) and 12 instructional adjunct FTE* in fall 2008. The campus employed another 1.0 regular faculty FTE on restricted funding in fall 2008.
- The number of degrees, certificates and credentials awarded can vary by year and has averaged more than 20 awards annually since FY01.
- A quarter of all academic program credential awards by PWSCC in FY08 were in programs qualifying recipients to work in High Demand Job Area careers.

** 1 adjunct FTE=3 adjuncts*

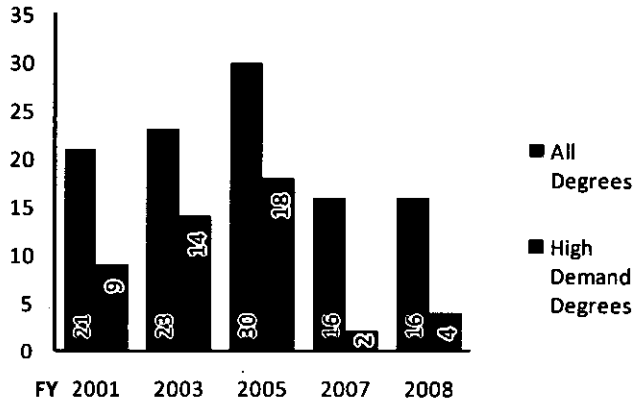
Instructional Faculty FTE, Fall 2000 - Fall 2008



Top Graduating Programs, FY08



Degrees and Credentials



Enrollment Trend	Fall 00		Fall 08		Change
Headcount	**1,459**	**(100%)**	**1,143**	**(100%)**	-22%

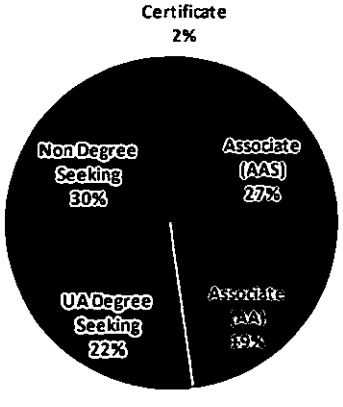
SCH by Degree-Seeking Status



- Ten percent of all UAA students took at least one class from KPC, with nearly 1,700 students enrolled in fall 2008.
- KPC enrolled 33 UA Scholars in fall 2008
- The majority of students (>70 percent) taking a class at KPC were enrolled part-time at the UA system level.
- About two in three students enrolled were under 30 years old, however the average age was 32 in fall 2008.
- More than 95 percent of enrollment originated from within Alaska, three percent from out-of-state and one percent from other countries.
- KPC delivered nearly 10,140 student credit hours (SCH) in fall 2008, excluding auditors, with ninety-six percent in lower division and developmental level courses.

Source: Data Supplied by MAUs via UA Information Systems: Banner SI Closing Extracts FY01-FY08. Compiled by Statewide Planning & Budget in conjunction with campus.

Headcounts are unduplicated at the reporting level and students often enroll at more than one campus or MAU in a semester; therefore the sum of headcount across multiple campuses often adds to more than the MAU totals.

Campus Profile Trends: *Kenai Peninsula College*

- KPC employed 31.5 regular, instructional faculty full-time equivalents (FTE) in fall 2008, an increase of about 11 since fall 2000. The campus also employed 3.2 regular, non-instructional faculty FTE in fall 2008.
- The number of adjunct faculty FTE* employed has been relatively steady at around since 2000
- Degrees, certificates and credentials awarded by KPC reached 110 in FY08, more than twice the number awarded in FY01.
- More than 70 percent of KPC's FY08 graduates were from programs qualifying recipients to work in High Demand Job Area careers.

**Counts any UA first-time freshman taking at least one course from the campus. Student maybe considered a non-degree student at the campus.*

From fall 2000 to fall 2008:

- The number of degree-seeking students increased more than 80 percent, equivalent to an additional 400 students.
- UA first-time freshmen enrollment increased by more than 45 percent, reaching 150 in fall 2008.
- The number of students less than 25 years of age grew more than 70 percent from fall 2000 to fall 2008, and accounted for slightly less than half of all fall 2008 students enrolled at KPC.
- The number of minority students enrolled grew by more than 50 percent over this time, to more than 220 students in fall 2008.
- Twenty-five percent more UA full-time students attended KPC in fall 2008 than in fall 2000, equivalent to an additional 95 UA level full-time students.
- KPC attracted almost 30 percent more male students in fall 2008 than in 2000 with the total headcount reaching more than 700 students.

Headcounts are unduplicated at the reporting level and students often enroll at more than one campus or MAU in a semester, therefore the sum of headcount across multiple campuses often adds to more than the MAU totals.

- Kodiak is the smallest UAA campus and enrolls more than 550 students for credit.
- Fourteen UA Scholars attended Kodiak campus in fall 2008, an all time high.
- Most students enroll part-time.
- Women account for 70 percent of enrollment, the highest proportion among UAA campuses.
- More than half of students are at least 30 years old, with an average age of 35 in fall 2008.
- More than 90 percent of students were from Alaska, five percent from out-of-state and three percent from other countries.
- Kodiak delivered nearly 2,400 student credit hours (SCH) in fall 2008, excluding auditors. Nearly 90 percent of SCH were delivered in lower division and developmental level courses.

Campus Profile Trends: *Kodiak*

- Kodiak employed 6.4 regular, instructional faculty full-time equivalents (FTE) and 9 adjunct FTE* in fall 2008. An additional 2.2 regular faculty FTE, paid from restricted or non-instructional funds, were also employed in fall 2008.
- The number of degrees, certificates and credentials awarded by the Kodiak campus can vary by year, with an annual average of 17 since FY01.
- In FY08, more than a quarter of all academic program credential awards by Kodiak were in programs qualifying recipients to work in High Demand Job Area careers.

Headcounts are unduplicated at the reporting level and students often enroll at more than one campus or MAU in a semester, therefore the sum of headcount across multiple campuses often adds to more than the MAU totals.

- The Ketchikan campus accounted for more than 15 percent of UAS students in fall 2008, with 525 students enrolled for credit.
- More than 10 percent (10) of the UA Scholars attending UAS in fall 2008 enrolled at the Ketchikan campus.
- The majority of students (60 percent) taking a class at Ketchikan enrolled part-time at the UA system level.
- Women represented more than 65 percent of the student population.
- The average age for students enrolled last fall was 32, the youngest among all three UAS campuses. Overall, 57 percent of enrolled students were under 30 years of age.
- Ninety-one percent of enrollment headcount was from Alaska residents, eight percent from out-of-state students, and one percent from international students.
- More than eighty five percent of student credit hours (SCH) were delivered in lower division and developmental level courses.
- Continuing education and other non-credit educational activities are a growing part of Ketchikan's offerings, with nearly 13 percent growth in non-credit enrollments in the last year.
- Ketchikan serves many students seeking degrees from other UA campuses, accounting nearly half of fall 2008 SCH.

Campus Profile Trends: *Ketchikan*

- Ketchikan campus employed 10 regular instructional faculty full-time equivalents (FTE) in fall 2008, an increase of 3 FTE* from fall 2000.
- Eight adjunct faculty FTE were employed in fall 2008.
- Degrees, certificates and credentials awarded by the Ketchikan campus increased 57 percent during this period.
- In FY08 the programs qualifying recipients to work in High Demand Job Areas accounted for forty-five percent of all academic program credential awards by Ketchikan.
- Ketchikan offers 18 degree, certificate or credential programs. Seven are available by distance delivery.**

Physician Assistant Program Offers More Opportunities, Closer to Home

Becoming a physician assistant in Alaska just got a little easier, with the expansion of the UAA MEDEX physician assistant training program. The program, which is offered in collaboration with the University of Washington (UW) School of Medicine, will double its class size and offer all training in Alaska starting next fall.

The MEDEX program, which is a two-year bachelor's degree program, has been offered at UAA since 2002. In the past, students spent their first year in Washington completing classroom education before returning to Alaska for a year of clinical rotations. With the expansion, students may now complete all two years of training in Alaska, marking the first time the entire program has been offered outside of Washington.

The expansion also increases the opportunities for students to get into the program. Previously, six to nine students were accepted each year. Beginning next year, the program will accept up to 20 students annually.

"We're excited. We're remodeling new space and hiring new faculty, so we'll be ready for the students," says John Riley, physician assistant program coordinator. He adds that the program is currently preparing classroom space on the third floor of UAA's Diplomacy Building, and will be hiring two full-time faculty members and one part-time faculty this spring.

The MEDEX program prepares students to become physician assistants, who are licensed to practice medicine under the supervision of a physician. This occupation is among the top 10 fastest growing positions in the United States. In the coming years, physicians and institutions are expected to employ even more physician assistants to provide primary care and to assist with medical and surgical procedures, as they are cost-effective and productive members of the health care team.

In Alaska, physician assistants are especially important. According to the Alaska Physician Supply Task Force, physician assistants are a critical component of delivering health care services in Alaska, especially in rural areas.

Having an adequate number of physician assistants will also help address the growing need for health care in Alaska. The task force recommended that Alaska maintain a higher ratio of physician assistants and other mid-level providers than the national average, saying that will make it more feasible to provide high-quality, timely care to Alaskans.

▲ *MEDEX students practice their skills in a casting lab.*

"The MEDEX training model creates opportunities for second-career students with prior health care experience to move up into the health care practitioner role."

The MEDEX program is unique in that it is designed for people already working in the field. Before being accepted into the program, applicants must complete a rigorous set of prerequisites and have significant health care experience.

"The MEDEX training model creates opportunities for second-career students with prior health care experience, such as community health aides and practitioners, paramedics and emergency medical technicians, military medics, nurses and allied health workers, to move up into the health care practitioner role," says Riley, adding that nearly half of the physician assistants currently working in Alaska were trained through the MEDEX program at UAA.

After completing the program, students are awarded a bachelor of science degree in health sciences from UAA and a physician assistant certificate from UW. Students are also eligible to sit for the National Certifying Examination for Physician Assistants.

In addition to the bachelor's program expansion, MEDEX is also launching a master's program in 2009. Students who have completed the physician assistant training and become certified may choose to complete a master's degree through the new MEDEX extended master's in clinical health services degree option.

Going the Extra Mile to Deliver Workforce Training

Melanie Burtis is an assistant professor at UAF's Northwest Campus in Nome, but on any given day, you may find her teaching classes in small communities throughout the Bering Strait region.

Since joining the Northwest Campus as the assistant professor of applied business last year, Burtis has traveled to Elim, Golovin, Teller, White Mountain, Shishmaref, Stebbins, Wales and Unalakleet, where she has led intensive, multi-day classes on topics including QuickBooks and grant writing.

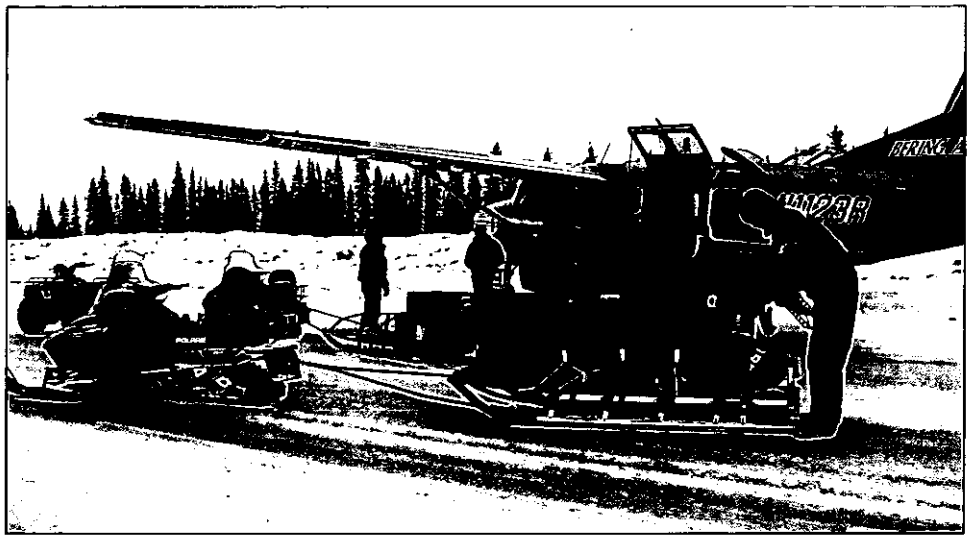
The classes are the result of a concerted effort by Northwest Campus to offer more workforce training opportunities within the remote villages of the region.

"When I was hired three years ago, one of our goals was to deliver more courses and better training opportunities to Bering Strait villages on a regular basis," says Lee Haugen, the Northwest Campus director. "In the past, if employers needed to train an employee, they had to send them out. The result was a lot of travel, but no real improvement of skills."

"We want to provide more opportunities for individuals to train without traveling out of their village," she continued. "This contributes to the overall economic stability of the region, and results in a larger labor pool of highly skilled individuals who live and work at home."

The campus' efforts are supported in large part by Kawerak, Inc., a nonprofit, Alaska Native corporation that serves 20 tribes in 16 communities throughout the Bering Strait region. Through the partnership, Kawerak pays for the course instructor's travel and per diem; lodging is usually provided by the local community. Kawerak will also cover the cost of tuition, if a student does not have the means to pay.

"It is costly for students to travel; and is much more cost-efficient for the instructors to come to the villages," says Dawn Salesky, Kawerak's vice president of employment and training. "Plus, students can learn in their own communities. We've found if students take classes at home, they are more successful."



▲ *Computers for a class taught in White Mountain last spring are off-loaded from a plane before being transported to the class site.*

"We want to provide more opportunities for individuals to train without traveling out of their village. This contributes to the overall economic stability of the region, and results in a larger labor pool of highly skilled individuals who live and work at home."

In addition to Kawerak, the campus also receives funding support from the U.S. Department of Education's Title III grant, as well as other grant sources. For example, Burtis applied for and received a $25,000 grant from UAF last year, which she used to purchase 13 notebook computers and software for her village-based QuickBooks and other computer classes.

The classes offered are in direct response to requests made by organizations within each village. Northwest Campus and Kawerak organized a series of educational forums in several villages last year to elicit feedback about what types of courses were needed in each community.

"We asked for ideas on what was needed, and the applied business courses, especially QuickBooks, received the highest responses," Haugen says. "It's been terrifically successful. Over the past year, we've trained 127 students in eight villages in basic courses like QuickBooks, and we're anticipating training close to 100 more in the coming year."

"These courses are definitely filling a big need. There are lots of office jobs in rural Alaska, and many of them use QuickBooks," Salesky adds.

In addition to last year's community forums, the campus also relies on feedback from the Northwest Campus advisory council, input from Kawerak's education and training committee, and direct requests from the community to guide its course offerings.

Northwest Campus continued on p. 4

UNIVERSITY of ALASKA

Addressing Alaska's workforce issues, collaborating with business and industry representatives, and providing solutions for more than 80 years.

Addressing

▲ *Melanie Burtis of UAF's Northwest Campus leads a QuickBooks class in Stebbins in September 2008.*

Northwest Campus continued from p. 3

While the village-based courses are a large part of the campus' workforce development efforts, the work doesn't end there. For example, in response to requests from numerous local employers, the campus offered a supervisory skills course in Nome last fall. This spring, the campus will also offer a public speaking course for paraprofessionals in the Bering Straits School District, to ensure they have the skills required by the No Child Left Behind legislation.

As part of its workforce development activities, the campus is also in the process of developing several occupational endorsements, which are programs ranging from nine to 30 credit hours that provide training in a specific field. At the top of the list is an occupational endorsement in office administration.

"Last year, we gathered leaders from many community organizations to brainstorm what they needed, what skills employees are lacking, and what they wanted to see. We're now developing the occupational endorsement in partnership with those organizations," Burtis says.

"Often, people try to get into a position, but they don't have basic skills like dressing for work, phone etiquette and basic computer skills. This occupational endorsement is something we've wanted for a long time," Salesky says.

Northwest Campus continued on p. 5

Spotlight

Melanie Burtis

As long as she can remember, Melanie Burtis wanted to live in Alaska, but it took a job at UAF's Northwest Campus in Nome to finally bring her here. Burtis, who is originally from Pennsylvania and has also lived in California, Oregon and Idaho, moved to Nome last summer to accept the position of assistant professor of applied business at the Northwest Campus.

For the past year and a half, Burtis has taught business and computer application courses, such as supervisory skills, accounting, Microsoft programs, intro to PCs, QuickBooks and grant writing for community development. While some of her courses take place at the campus in Nome, Burtis also spends a lot of time traveling to the remote villages throughout the region, where she delivers workforce training.

"I work with our local partners and other local organizations in developing workforce training programs. I teach many of my classes by request – local leaders request certain classes for their employees and I do my best to plan and fit them into my schedule," Burtis says.

"I came on three years ago, and it was my goal to get out into the villages on a regular basis. We hired Melanie to help us do this," says Lee Haugen, campus director. "We got lucky. We found someone who had the education and wanted to come to Alaska. We have a fantastic faculty in Melanie."

Burtis, who has a PhD in education from the University of Idaho, and a master's in education and a bachelor of science from Idaho State University, spent about 15 years in the information technology field prior to joining the faculty of Northwest Campus. She worked as a computer operator, computer programmer, network engineer and IT manager for a variety of industries, ranging from steel to a ski resort, and health care to a regional airline. Burtis also taught at the University of Idaho, Idaho State University and College of Southern Idaho.

The travel and working with the local people are the two things Burtis enjoys most about her work. Outside of her job, Burtis does community presentations, including one on her recent trip to Peru and an upcoming presentation on her travels in India. She also serves on the editorial board for the Journal of Ethnographic and Qualitative Research, and takes the opportunity to volunteer in the community, as she is able.

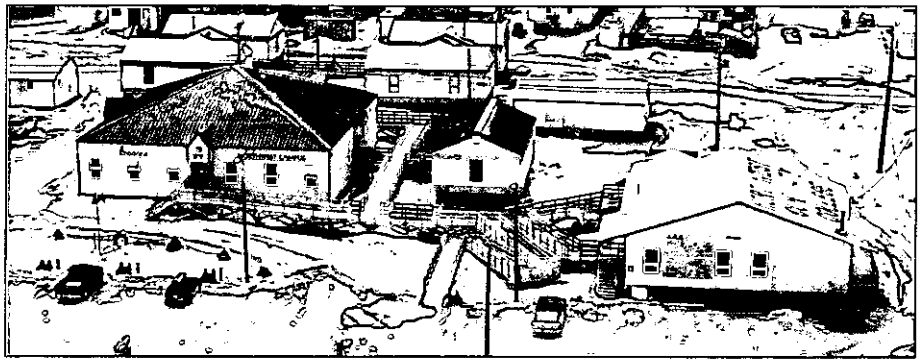
Burtis also enjoys dog mushing, and is currently working with a team of 13. She says she hopes to participate in some major events, like the Serum Run, in the future. Burtis also likes to travel and continue her own education.

"I take full advantage of my tuition waiver benefit, and have taken enrichment courses such as sign language, framing and matting, mold-making for sculpture, and ceramics," she says.

Spotlight

UAF Northwest Campus

Lee Haugen, Director



▲ *Photo by Todd Paris*

Northwest Campus (NWC), which was originally established as Northwest Community College in 1976, is now a community campus of UAF and part of the College of Rural and Community Development.

Located in Nome, NWC serves a population of 10,000 people in 15 villages in the Bering Strait region, a 44,000-square-mile area that is approximately the size of Indiana.

NWC and the villages it serves are entirely off the road system, requiring residents to rely primarily on air travel, even for travel between villages. Therefore, attending college on campus with face-to-face instruction is out of the question for most of the region's residents.

To address the unique needs of its region, NWC utilizes both traditional and distance delivery methods for its courses. In addition to the main campus in Nome, there are also learning centers located in St. Michael, Savoonga, Shishmaref and Unalakleet.

NWC responds to the vocational, academic and community needs within the Bering Strait region. Many courses, programs and degrees are offered in cooperation with regional health and tribal organizations, school districts and corporations.

NWC offers certificates, associate's degrees, bachelor's degrees and master's degrees in areas of study including allied health, applied business, education, high latitude range management, human services, information technology, rural development, and social work. NWC and regional partner agencies are also currently working to make Nome an outreach site for the UAA School of Nursing associate degree program.

The campus' high latitude range management certificate program is unique in the United States. Created in cooperation with employers and area reindeer producers, the program prepares students for natural resource-related jobs or further education in related fields.

In addition to these degree programs, NWC works with area school districts to offer dual-credit courses, giving high school students a preview of college. The campus also partners with local businesses and organizations to offer needed workforce training both in Nome and throughout the region.

Beyond academics, NWC also offers extracurricular activities including Iditarod week festivities, a travel slideshow series, and the International Polar Year Speaker Series.

- nwc.info@uaf.edu
- www.nwc.uaf.edu

Northwest Campus continued from p. 4

In addition to office administration, the campus is also developing small business and leadership/supervisory skills occupational endorsements. While meeting the needs of local employers, Burtis says the occupational endorsements will also benefit employees by upgrading their skills and offering increased opportunities for employment, pay raises and promotions. Burtis says local employers may also offer to pay the tuition for employees wishing to obtain an endorsement.

Everyone involved is excited about the expansion of the Northwest Campus' workforce development efforts – and the positive effect it is having on the region.

"The employers we are working with represent a wide range of industries like health, natural resources and seafood processing. By helping to train people for jobs within their communities, we are directly impacting these industries," Haugen says.

"I don't know what we'd do without the Northwest Campus," Salesky adds. "We totally support them in their educational role."

New Program Prepares Dental Hygienists to Enter Workforce

UAF's Tanana Valley Campus (TVC) launched its new dental hygiene program in January 2008, and the first class of six students is now only months away from entering the workforce. After receiving their degrees in May, the graduates will likely have no trouble finding work, as dental hygiene has been identified as a high-demand career field in Alaska.

For example, according to an article in the October 2004 issue of Alaska Economic Trends, the Alaska Department of Labor and Workforce Development predicted a more than 40 percent increase in the need for dental hygienists – one of the highest rates of anticipated need among the occupations tracked by the state.

"The demand for dental hygienists is great in Fairbanks, as well as in the rural communities. It is a strong job market and predicted to remain that way in the future," says Rena Bower, dental hygiene program coordinator and assistant professor at TVC. "Our program was developed to address the current shortage of dental hygienists."

TVC's two-year program, which is accredited by the American Dental Association's (ADA) Commission on Dental Accreditation, awards graduates with an associate of applied science degree in dental hygiene. It also prepares students to take the ADA National Dental Hygiene Board examination, and the Western Regional Examining Board's clinical examination and anesthesia examination, which are required to obtain a license and practice in Alaska.

"The students are given the skills and knowledge that allow them to enter the profession of dental hygiene with confidence," Bower says.

Through the classroom curriculum, students study anatomy, embryology, histology, pathology, pharmacology, periodontics, radiography, dental hygiene techniques, nutrition, current periodontal therapies, dental health, and oral pain control.

▲ *Students in TVC's dental hygiene program put their skills to work at TVC's on-site dental hygiene clinic. Photo by Todd Paris.*

"The demand for dental hygienists is great in Fairbanks, as well as in the rural communities. Our program was developed to address the current shortage of dental hygienists."

In addition to the classroom, students also put their skills to work through clinical practicums at TVC's on-site dental hygiene clinic. The clinic, which is open to the general public, allows patients to receive dental hygiene services at a greatly reduced fee. Under the direct supervision of an Alaska-licensed dentist and dental hygienist, the students complete medical history reviews, take x-rays, assess patients' oral health, perform teeth cleanings, administer therapies like scaling and root planing, apply sealants and fluoride treatments, practice oral pain control, and provide patient education.

"Educating the patient is the biggest part of the dental hygienist's responsibility. The students provide the patient with information to improve their oral health and their overall health," Bower says.

In addition to the patient benefits, such as quality dental hygiene care at a reduced cost, the clinic also offers great benefits to the students – and their future employers.

"The clinic is state-of-the-art. We strive to provide the most current products and equipment to the students, so they will be familiar with a broad spectrum of instruments and procedures once they graduate and enter the profession," Bower says.

"Students get to practice their dental hygiene skills under direct supervision, in a safe and controlled environment," she adds. "There are several dedicated dentists who provide the supervision, and it is very beneficial for the students to have exposure to different concepts and practice methods when treating patients."

Bower says the dental community has been very supportive of the new program. In addition to supervising students at the TVC clinic, local practitioners have also welcomed students into their offices for observations, willingly answered questions, and generously donated time and materials to the program.

After the first class graduates in May, TVC will be gearing up for the next class, which will begin in fall 2009. Bower says a new class of six students will be accepted into the dental hygiene program each fall.

In addition to the program at TVC, UAA also offers a dental hygiene program, which graduates approximately 12 students per year.

TVC to Host Career Tech Expo 2009 in February

UAF's Tanana Valley Campus (TVC), in partnership with the Fairbanks North Star Borough School District and James T. Hutchison High School, will host Career Tech Expo 2009 on Saturday, February 21, from 11 a.m. to 2 p.m. at the James T. Hutchison Institute of Technology at 3750 Geist Road in Fairbanks. The event is free and open to the entire community.

"This is a great event that allows all ages to explore and become aware of the different career opportunities available to them in technical fields," says Amy Bristor, professional development and community outreach coordinator at TVC.

The expo, which coincides with National Career and Technical Education Month, will highlight career and technical education opportunities available through TVC. Attendees can meet program faculty, as well as local business, industry and labor representatives, and learn about education, training, apprenticeships and jobs in Fairbanks and Interior Alaska. Participants can also win door prizes and enjoy hands-on activities.

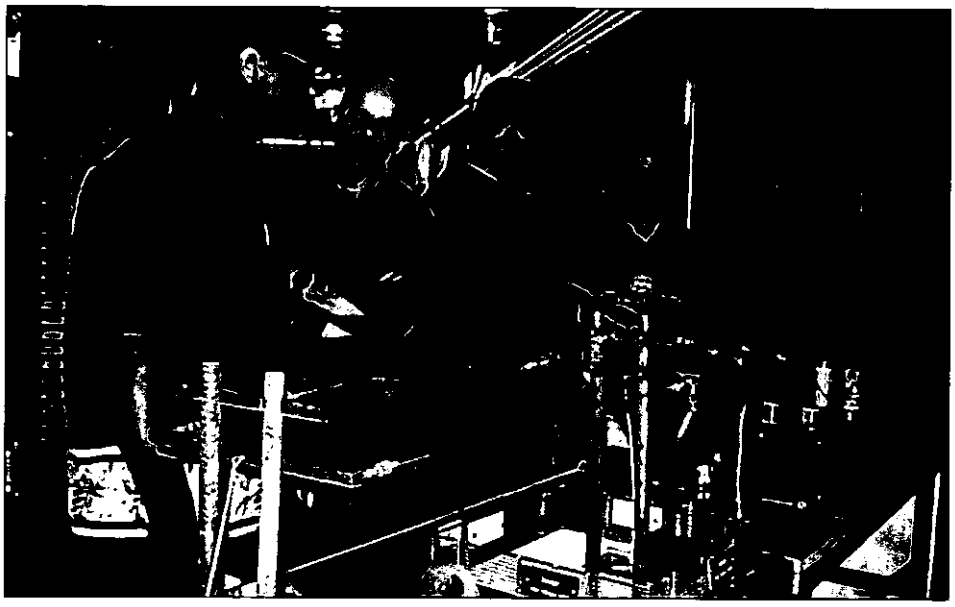
▲ *The Career Tech Expo, which coincides with National Career and Technical Education Month, highlights education opportunities available through TVC, including TVC's allied health programs.*

"This event brings awareness to our programs and to the connection that we have with industry partners across the state of Alaska," Bristor says. "It also helps make the connection between our programs and jobs in related fields. For example, participants are able to talk to TVC allied health faculty about their program, and then talk to Fairbanks Memorial Hospital about what they are looking for in possible employees."

"This is an opportunity for everyone from middle school students to adults to explore the kinds of career and technical education options that are available to them."

This is the fourth year TVC has organized the expo, which typically draws 500 to 600 attendees.

"This is an opportunity for everyone from middle school students to adults to explore the kinds of career and technical education options that are available to them," Bristor says.



▲ *Attendees of the Career Tech Expo can learn about training and educational programs at TVC, while also talking with local business, industry and labor representatives about current employment opportunities.*

Growing Geology Program Garners Industry Support

▲ *Private support of the geology department helps fund student and faculty research projects, such as LeeAnn Munk's investigation of the Nome River.*

In just its fourth year of offering a geology degree, the department of geological sciences at UAA is already proving to be a valuable resource for Alaska students and industry alike – and Alaska companies are returning the favor by showing support of the blossoming program.

The department, which offers a bachelor's in geological sciences, with a focus in either general geology or environmental geology, is one of only two schools in the state offering a geology degree. UAF also offers a geology degree, although UAA is the only school with an environmental geology track.

"The degree was developed primarily for two reasons. The first was student demand and the second was community demand, due to the large number of geology-related jobs in the state in oil and gas, mining and environmental industries," says LeeAnn Munk, department chair. Geology is considered a high-demand job area by the UA statewide system, she adds.

When the program was launched in 2004, there were just 12 students enrolled. By the beginning of fall 2007, there were more than 58 declared geological sciences majors at UAA – a nearly five-fold increase in just three years. With continued student interest, as well as the projected growth of Alaska industries, participation in the program is expected to remain high.

▲ *A generous contribution from TeckCominco allowed UAA geology students to visit the Red Dog Mine, where they observed the mine in operation and learned about the geology of nearby mountain ranges.*

To accommodate the growth of the program, an additional faculty member was recently hired, bringing the total number to five full-time faculty and two part-time, adjunct faculty members. The department is also scheduled to move into the new ConocoPhillips Integrated Science Building when it is completed in fall 2009. In the new facilities, the program will have additional, updated laboratory space for both instruction and research.

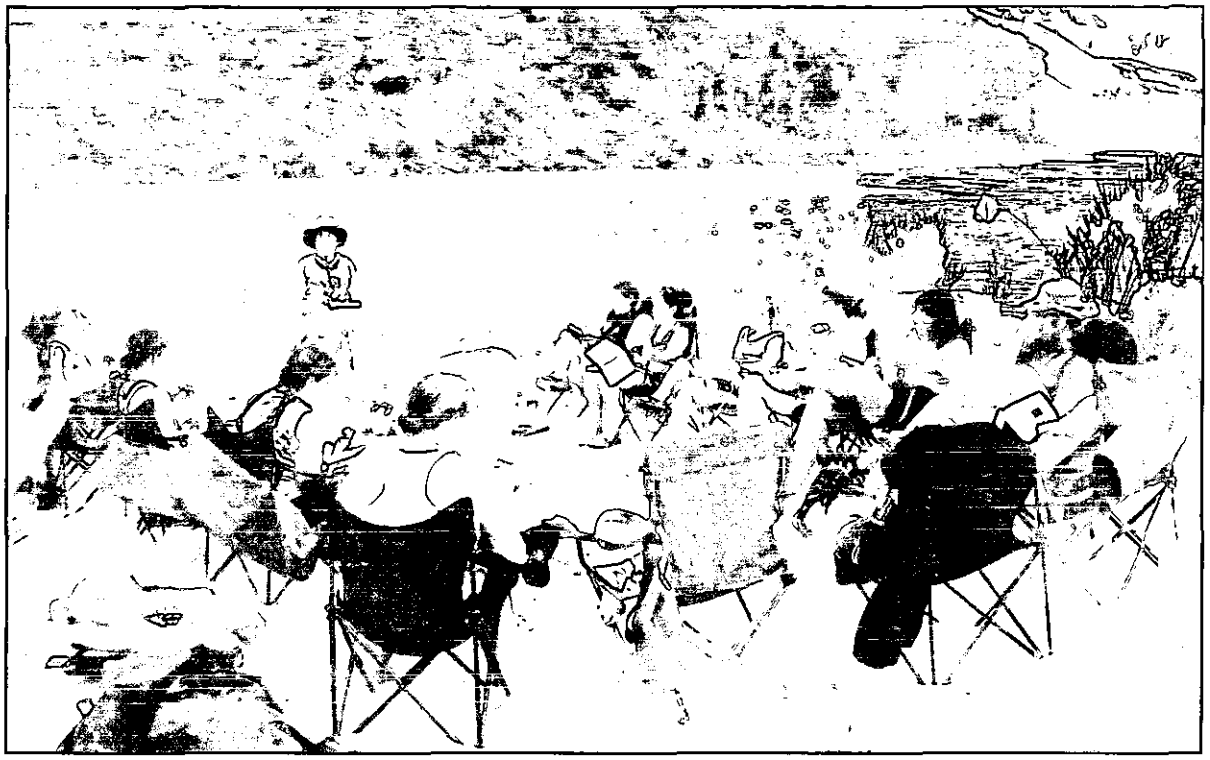
Through a curriculum that incorporates Earth materials, geologic Earth history, Earth surface processes, and Earth's environmental systems, the program prepares students for any Earth science-related job or graduate studies.

Munk says the minerals and mining industry and environmental industry are benefiting most from the program's students. Graduates also find work with state agencies, such as the Department of Transportation and the Department of Natural Resources, as well as federal agencies, including the Bureau of Land Management, U.S. Geological Survey (USGS), and U.S. Army Corps of Engineers.

"Previously, employers in Alaska had to rely heavily on employees from out of state because they could not find enough appropriately trained geologists in Alaska, particularly those ready for the minerals- and environmental-related jobs," Munk says.

Industry support of the program is apparent by the financial

to educational resources



◂ *Last year, funds from private donors helped to underwrite a week-long field course for 12 UAA geology students to visit the Grand Canyon.*

contributions and opportunities provided to students. For example, during the 2007 – 2008 academic year, funds from private donors helped to underwrite a week-long field course for 12 students to visit the Grand Canyon, where they learned about the geologic history of the canyon and hydrology of the Colorado River.

That same year, a generous contribution from TeckCominco allowed UAA geology students to visit the Red Dog Mine, where they observed the mine in operation and learned about the geology of the DeLong Mountains, Brooks Range and the nearby Seward Peninsula.

Private support also helps fund student and faculty research projects, such as UAA student Jessequa Parker's study of the glacial history of the Matanuska Valley and Munk's Nome River investigation, which seeks to better understand the sources, means of transportation and fate of metals in the watershed.

"These field courses and research projects are an integral part of the undergraduate education in geology at UAA. They give students hands-on experience that helps prepare them for jobs and graduate school. Many of these experiences are what inspire students to become scientists," Munk says.

"These field courses and research projects are an integral part of the undergraduate education in geology at UAA. They give students hands-on experience that helps prepare them for jobs and graduate school. Many of these experiences are what inspire students to become scientists."

Donations are also assisting the department with major equipment acquisitions, including the purchase of six reflected light microscopes, which will be used to help student geologists better understand the composition and origin of various types of ores, minerals and rocks.

"The UAA department of geological sciences is honored by the support of so many generous donors to help enhance the educational offerings provided to UAA students," Munk says. "Private support helps to make possible the many extras not otherwise available to students at a public institution. This margin of excellence will help to prepare Alaska's next generation with the skills and experience they need to succeed in Alaska's workplace."

Munk says the department plans to expand upon industry support and involvement in the program by developing a community advisory board, comprised of representatives from the oil and mining industries, environmental consulting companies, the USGS and UAA geology alumni.

"The advisory board is designed to help the department develop additional community partnerships, while ensuring that our curriculum is relevant and meaningful to both private and public employers," she says.

Students Jumpstart Careers with Tech Prep Programs

Through the efforts of the Alaska Tech Prep Consortium, Alaska high school students are figuring out their career plans, getting a head start on their post-secondary education, and increasing their chances for success with academic performance, graduation and employment. Meanwhile, Alaska's businesses and industries are starting to see an influx of young, interested potential employees, prepared to enter high-demand career fields.

The Alaska Tech Prep Consortium is a statewide initiative that links secondary and post-secondary career and technical education programs into an integrated program, which allows students to earn college credit for courses they take in high school. Tech Prep programs enable students to transition smoothly from high school to college, avoid duplication of courses, successfully attain post-secondary credentials and enter high-skilled, high-demand, high-wage jobs in Alaska.

"Tech Prep works to improve academic rigor, reduce remediation and connect students' education to employment through a sequential course of study," says Diane Maples, statewide Tech Prep coordinator.

The consortium, which is funded by a federal grant through the Carl D. Perkins Act and is administered by UAA, was formed in May 2004 as a result of discussions among Alaska's vocational/technical education providers (VTEP) to build a statewide system.

"Our goal is to expand Tech Prep programs and the understanding of what Tech Prep is in Alaska, by building dynamic partnerships between schools, business and industry, families and community leaders, and local, state and federal agencies," Maples says.

The consortium's work is facilitated by the statewide coordinator, located in Anchorage, and two Tech Prep specialists, located in Petersburg and Fairbanks, who work with other Tech Prep staff at UA campuses around the state. To guide its efforts, the consortium also has a nine-member advisory board comprised of secondary and post-secondary educators, as well as business and industry representatives.

▲ *Members of Klawock's Tech Prep carpentry class include (left to right) Mr. "C," Kyle Packer, Cody Williams, Steven Roberts, Nate McNeil and James Sharp. Photo by Mike Cleary.*

"Alaska Tech Prep programs focus on subjects that are vital to Alaska employers, and seek to prepare students for technical careers in fields with strong employment growth and earnings potential."

"Our advisory board includes a wide array of business representatives, from hospital directors to construction managers and trainers. They are an integral part of the Tech Prep program," Maples says.

Alaska Tech Prep programs focus on subjects that are vital to Alaska employers, and seek to prepare students for technical careers in fields with strong employment growth and earnings potential.

In fiscal year 2008, there were more than 24 articulated programs at UA, in areas including accounting, allied health, architecture, automotive, aviation maintenance, business administration, computer and network technology, construction, culinary arts, diesel technology, dietetics and nutrition, drafting, early childhood education, fire and emergency services, fisheries, health care assisting, information technology, logistics operations, medical assisting, refrigeration and heating, and welding.

Last year, more than 3,000 secondary students were enrolled statewide in Tech Prep programs, which included 182 UA courses. An additional 445 post-secondary Tech Prep students were enrolled in UA during 2008.

In the coming year, Maples says the consortium plans to expand the use of educational technology and distance delivery methods; work with secondary, post-secondary, apprenticeship and educational

careers, increasing productivity

▲ *Tim Carl, a student enrolled in the Tech Prep welding courses offered through the Career and Technical Education program at Klawock High School, is planning to attend a post-secondary welding program or join the union after graduation. Photo by Mike Cleary.*

institutions to develop K-14 Tech Prep programs; provide equal access to special populations; and expand Tech Prep programs statewide, among other objectives.

As the Tech Prep system matures, the consortium expects to see results similar to those of the Rio Grande Valley Tech Prep system, where Tech Prep students graduated from high school at a rate of 93 percent, compared to 65.1 percent for non-Tech Prep students. Rio Grande Tech Prep students also had a college graduation rate of 26 percent, more than twice the 11 percent college graduation rate for other students.

"Through Tech Prep, many students have the opportunity to develop employability skills that are not always offered at the general high school level. Tech Prep also offers students the opportunity to both eliminate and identify a career pathway of choice, gain the confidence necessary to pursue their goal, and attain the academic skills, abilities and tools needed to be successful in the workplace," Maples says.

Anthony Kaplanis is just one of many Tech Prep success stories. Kaplanis earned eight computer and networking technology Tech Prep credits in high school at the King Career Center, and is currently pursuing an associate's degree in telecommunications, electronics and computer technology at UAA. In addition, he works full-time as Alaska Regional Hospital's diagnostic imaging administrator, where he is in charge of all of the hospital's digital radiology images.

In addition to these benefits, Tech Prep programs also allow students to save time and money for college. For example, in 2006 – 2007, college students paid $120 per credit, while Tech Prep students paid just $25 – a $95 savings. The consortium also awards scholarships; since 2006, more than $11,000 was awarded to 239 students.

"All of the (Tech Prep) classes that I took transferred to UNC ... (saving) over $12,000 for tuition, personal expenses, room and board, books ... I can graduate a year sooner and start working in my career," says Luke Schafer, a former Tech Prep student who is currently enrolled at the University of North Carolina (UNC).

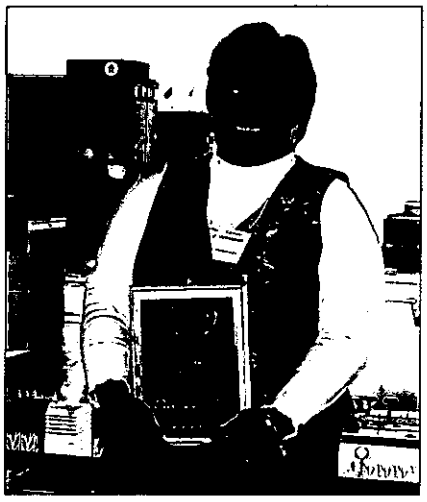
Alaska Tech Prep Specialist Receives Promising Practices Award

Cynthia Jacobsen, the Alaska Tech Prep Consortium's Tech Prep specialist for the Southeast region, recently received the 2008 Promising Practices Award, which is sponsored by UAS.

Jacobsen is credited for her instrumental role in developing the Southeast's first regional Tech Prep program. Since arriving in 2005, Jacobsen has fostered many Tech Prep partnerships and worked diligently with area school districts to create and renew Tech Prep agreements. UAS currently has Tech Prep agreements with seven of the school districts in the region, and Jacobsen has finalized articulation agreements for 46 UAS courses in the areas of construction, health sciences, welding, fisheries technology, automotive technology, and early childhood education.

Working from her office in Petersburg, Jacobsen collaborates with faculty at UAS' Juneau, Ketchikan and Sitka campuses to bring the benefit of Alaska Tech Prep to all the communities across Southeast. For example, with Jacobsen's assistance, UAS and Ketchikan High School had 60 students taking a total of 180 early childhood Tech Prep credits in fall 2008.



"Cynde is a professional educator with extensive teaching experience in both secondary and post-secondary systems in Alaska and in the lower 48," read a press release announcing the award. "This unique background, combined with her energy and enthusiasm to support students and promote career and technical education, have resulted in significant progress in building a regional Tech Prep program for UAS."

Growing Alaska's Forest Products Industry Through Research and Education

Growing the forest products industry in Alaska is the focus of the Forest Products Project, which is administered by UAF's School of Natural Resources and Agriculture Sciences.

The Forest Products Project is funded through a U.S. Department of Agriculture special grant for Wood Utilization Research (WUR). Authorized and funded by Congress, WUR is tasked with stimulating innovation and generating new knowledge and technologies, which are necessary to balance the sustainable use of U.S. forest resources with the need to maintain a strong forest products industry.

"Our goal is to promote the wood products industries in a positive way. Many people don't like to see trees cut down. We promote the facts that there is enough timber, forests are sustainable, and we can harvest in ways that can work for everyone," says Dr. Valerie Barber, director of the Forest Products Project.

WUR currently supports research and outreach through 13 land grant university partners at 11 centers across the country. At UA, the project is operated through the Agricultural and Forestry Experiment Station at the Palmer Research and Extension Center.

"Originally, the Forest Products Project was focused on Southeast Alaska due to the closure of the pulp and paper mills, and the subsequent collapse of the wood products industry," Barber says. "The project has shifted focus to promote the forest products industry throughout Alaska."

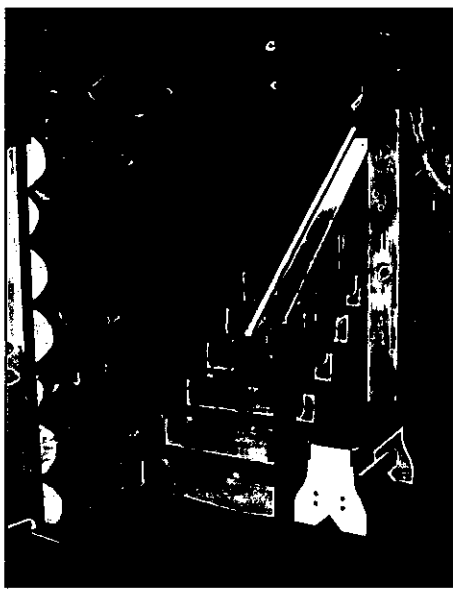
The Forest Products Project utilizes a mix of research, education and outreach to promote the forest products industry. In one example, the project was involved in a large, in-grade testing project with research partners Dr. Kevin Curtis at the Ketchikan Wood Technology Center and Dr. Allen Brackley at the USDA Forest Service-Sitka Forest Products Program. The project evaluated the strength of several Alaska species, including cedar, hemlock and spruce, and resulted in new design values for Alaska lumber.

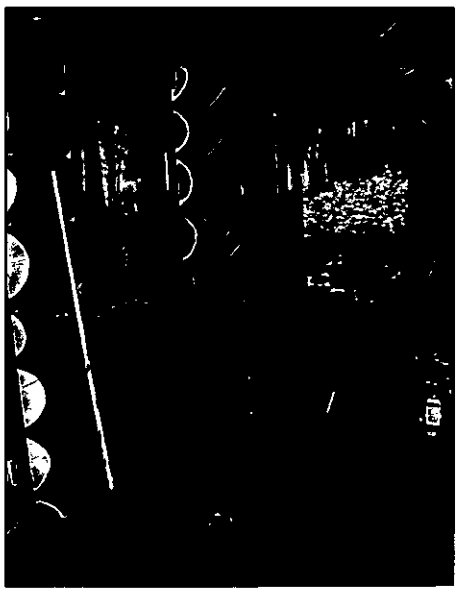
"This new knowledge provides confidence in Alaska lumber as a replacement for imported lumber," Barber says. "Through the in-grade testing, we were able to add value to Alaska wood."

Among the project's new initiatives is a research project, led by Dr. Andy Soria, to discover potential bio-fuel and bio-based products from the chemistry of Alaska trees. Soria, a pioneer in the liquefaction of wood using supercritical fluids, is building a new bio-fuel laboratory at the UAF Palmer Research and Extension Center to develop and test bio-fuels made from low-grade wood, woody biomass, and fire and insect-killed trees. These bio-fuels may offer alternatives to petroleum products and help alleviate the high energy costs experienced across the state.

The project's education outreach efforts include educational workshops, which range from marketing to log cabin construction. Last May, the project sponsored a log cabin-building workshop in Sitka. Led by two master log builders from Fairbanks, 12 students built a log cabin, which will be used as a handicapped-accessible recreational facility by the U.S. Forest Service.

During the workshop, participants learned each step of the building process, from selecting and harvesting the logs to de-barking and





▲ *Last May, the UAF Forest Products Project sponsored a log cabin-building workshop in Sitka. Led by two master log builders from Fairbanks, 12 students built a log cabin, which will be used as a recreational facility by the U.S. Forest Service.*

construction. The workshop was so successful that several participants are now looking into starting a log cabin business in Sitka.

Barber says the project plans to offer another log cabin-building workshop within the next year, where students will build two log cabins at the UAF Palmer Research and Extension Center. In addition to learning how to build a cabin, the workshop also presents the opportunity to study the effect of newer, greener technology that will be used in the construction process. Once completed, the cabins will be used to house instructors, researchers and students interested in visiting the station.

This spring, Barber says the project also plans to launch the "OneTree" project. Held in three different Alaska communities, the project will bring together students, artists, scientists and teachers who will work to use every single part of a tree – from roots to bark to leaves – to make an array of products, from syrups and baskets to firewood and flooring.

"OneTree is designed to showcase the distinctive qualities of Alaska birch, and the people and communities who use and value it," Barber says.

After eight years in operation, Barber says the project has many more untapped areas for investigation. Future projects are being designed to bridge the gap between applied research and the local community needs to promote the re-birth of wood products industries and provide alternative sources of income, while maximizing the use of locally available, natural, renewable resources.

ANSEP Partners Permanently Endow Chair for Alaska Native Science and Engineering Students

Industry partners and Native corporations have stepped up with the Rasmuson Foundation to create the Herbert P. Schroeder Endowed Chair of the Alaska Native Science & Engineering Program (ANSEP). The endowment, with pledged gifts in excess of $4 million, will ensure stable funding for a full-time, year-round faculty member dedicated to students enrolled in ANSEP.

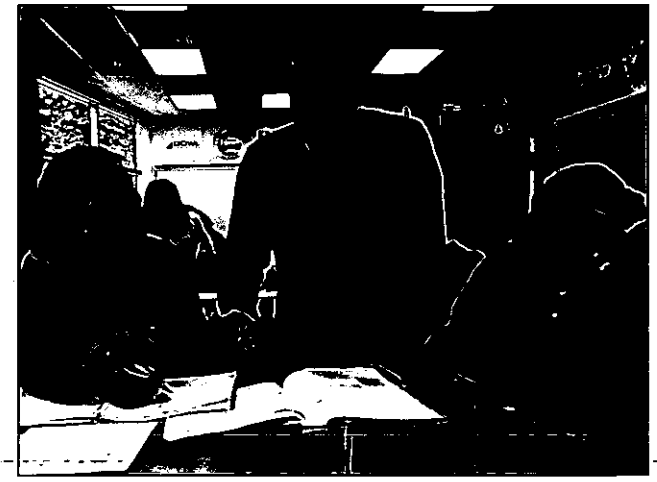
In December 2007, the Rasmuson Foundation contributed a $2 million challenge grant to fund the creation of the endowed chair position. The Rasmuson Foundation has been a long-time supporter of ANSEP because of its tremendous success in recruiting and retaining Alaska Native science and engineering students.

"ANSEP has made a lasting difference for Alaska Native students," says Diane Kaplan, president and CEO of the Rasmuson Foundation. "This program has created a supportive learning community, allowing students to excel and graduate at unprecedented levels."

Alyeska Pipeline was the first to step up to the challenge in September. Seven other partners followed their lead by donating to the chair, exceeding the amount of funds needed for the match. Commitments include Alyeska Pipeline Service Company, ASRC Energy Services, BP, Chevron, CIRI, ConocoPhillips, Rasmuson Foundation, Shell Oil and Udelhoven Oilfield System Services.

"These contributions to the endowed chair ensure that there will be a faculty advocate for Native students on our campus in perpetuity," says Herb Schroeder, ANSEP founder and executive director. "Together with our partners, we are having a profound and positive impact on the lives of our students, their families, their communities, our partner organizations, and the state that will endure for generations to come."

The Herbert P. Schroeder Chair of ANSEP will oversee and provide strategic direction for ANSEP and the related partnerships with other universities. The chair will be the key individual identified with ANSEP, responsible for building awareness and support of the program both within Alaska and throughout the United States.



◀ *Dr. Herb Schroeder, founder and executive director of ANSEP, started the program in 1995 with one Alaska Native student. ANSEP now has more than 1,000 students enrolled in eight universities and two community colleges in seven states, and an additional 400 students in 50+ high schools. In May 2008, UA graduated the largest number of Alaska Native engineering and science graduates ever in the history of the university. Photo courtesy of Mike Dinneen.*

Mat-Su College Joins Johnson Controls' CareerConnect Program

Johnson Controls

Textbooks, curriculum and possibly even equipment for the college. Training opportunities for instructors. Tuition assistance and guaranteed jobs for students. And a pipeline of well-qualified potential employees for the company. These are just some of the many benefits stemming from a recent partnership developed between UAA's Matansuka-Susitna College and Johnson Controls.

After about a year of discussions, the relationship was finalized last September, when Mat-Su College became a participant in Johnson Controls' CareerConnect program.

"CareerConnect is Johnson Controls' vehicle to help develop, recruit and retain the top new talent that is coming into the job market," says Shannon Lippold, the CareerConnect program manager with Johnson Controls. The company, which is a global leader in automotive component manufacturing, building efficiency systems and power solutions, has 140,000 employees in more than 1,300 locations around the world.

"There is a national shortage of skilled technicians in the HVAC (heating, ventilation, air-conditioning and refrigeration) industry. Johnson Controls has taken a proactive approach to recruiting."

Mat-Su College is now the 14th partner in the CareerConnect program, joining colleges in Wisconsin, Minnesota, Illinois, South Carolina, Arizona, California, Massachusetts, New York, Oklahoma, Georgia, Nevada, Pennsylvania and Canada.

The CareerConnect program, which specifically targets the refrigeration and heating technology program and the computer systems technology program at Mat-Su College, has four primary goals – to enhance student curriculum, promote faculty development, increase community awareness and develop a pipeline of recruits.

Johnson Controls and its partner colleges work toward these goals in a number of ways. For example, to help enhance student curriculum, the company donates learning materials and sometimes equipment to the partner schools. To promote faculty development, instructors at partner colleges have access to discounted training opportunities offered through Johnson Controls. And to develop a pipeline of recruits, the company participates in campus career days and conducts on-site recruiting events.

Through the partnership, students in Mat-Su College's refrigeration and heating technology program and computer systems technology program are also eligible to apply for Johnson Controls' Future Hires program. If selected, the students are guaranteed a job with Johnson Controls upon graduation, and also receive $1,500 to put toward their education costs. Up to five Mat-Su College students may be selected each year for the program.

"There is a national shortage of skilled technicians in the HVAC (heating, ventilation, air-conditioning and refrigeration) industry," says Dan Mielke, assistant professor of refrigeration and heating technology at Mat-Su College. "Johnson Controls has taken a proactive approach to recruiting. They're connecting with students when they are entering a program and assisting them through the program, with the goal of selecting the best of the students."

"It gives them the opportunity to look at students ahead of time and see who they would like to have work for them, which results in a more stable workforce," adds Dennis Clark, director of Mat-Su College. "Companies like Johnson Controls are going to need a lot of employees in the not-too-distant future. This is a way to ensure they have employees ready and willing to go to work, and that those employees have the knowledge they need."

Recruiting tools like this are important for companies in the HVAC industry, as the total number of HVAC-related, skilled trade positions is expected to grow nearly 10 percent nationwide by the year 2016, resulting in 77,000 new job openings, according to the U.S. Department of Labor Statistics.

To date, two Mat-Su College students have already applied for the Future Hires program, and additional applications are expected early this year. Nationwide, Lippold says Johnson Controls has already hired nearly 30 employees through the Future Hires program, and expects to recruit an additional 60 to 75 students this spring.

While the CareerConnect and Future Hires programs offer multiple benefits to Johnson Controls, students are also reaping the benefits, which include access to the latest technology, learning tools and industry experts, reduced student debt, and the promise of employment once they successfully

with business and industry

complete their education.

"It's a real advantage for students to know they will be part of a successful company after graduation. It gives students a focus," Mielke says.

The win-win partnership is also good for Mat-Su College.

"Johnson Controls is an excellent resource for training materials. They don't require us to use those materials, but it's available. They also donate equipment, as the need arises and as equipment is available. They're very supportive," Mielke says.

"The total number of HVAC-related, skilled trade positions is expected to grow nearly 10 percent nationwide by the year 2016, resulting in 77,000 new job openings."

"Arrangements like this help keep our faculty current," Clark adds. "It also provides us with support, so we can give our students hands-on knowledge of what's out there right now."

Lippold says there were numerous reasons why a partnership between Johnson Controls and Mat-Su College made sense.

"First of all, Mat-Su's and University of Alaska's strategic direction were well-aligned with the CareerConnect program," she says. "Additionally, some of the strengths that Mat-Su brought to the table were its diverse population, strong recruiting practices with local schools, (and) multiple degree programs of interest. Most importantly, we have a strong need to hire talented people to fill key roles in Alaska! All of the pieces fit together nicely."

UNIVERSITY of ALASKA
Many Traditions One Alaska

UA is an affirmative action/equal opportunity employer and educational institution. Paid for with private funds contributed to the University of Alaska Foundation.

Easy, Effective, Affordable Training for Harbor Personnel

Through a new online training program offered through UAS–Sitka, employers at ports, marinas and harbors now have an easy, effective and affordable way to train their employees. The program, called Career Training for Ports and Marinas, launched its first online course in October 2007. To date, three courses are available and more are in development.

The training program, which is a partnership between UAS, the Pacific Coast Congress of Harbormasters and Port Managers (PCC), Alaska Association of Harbormasters and Port Administrators, and the Harbour Authority Association of British Columbia, was originally proposed by Ray Majeski, the harbormaster in Sitka and the president of PCC.

"In the past, harbors may have just hired people off the street," Majeski explains. "But as the years have gone on, the job has become far more technical. A harbor is not simply a place to park a boat. You have to maintain clean water and maintain the facilities. You have to know how to deal with customers and keep computerized records. Now, it's really big business and it's more necessary than in the past that harbor personnel are knowledgeable."

"Ray approached UAS to see if it was possible for the university to do something about the incredible need for training within his industry," says Mary Purvis, Title III director at UAS.

To address this need, the university requested – and received special permission – from the U.S. Department of Education to use Title III grant funds to develop non-credit, continuing education courses for the new program.

"We worked very closely with Ray and other harbor personnel on what employers need, and then made a plan for meeting those needs," Purvis says. "It's a good partnership. We know education, and they know harbors."

"It works for UAS and it works for us. It's like a marriage made in heaven," Majeski adds. "UAS has been a phenomenal group to deal with."

▲ *Ray Majeski, the harbormaster in Sitka and the president of the Pacific Coast Congress of Harbormasters and Port Managers, spearheaded the Career Training for Ports and Marinas program at UAS. He is pictured here in front of Thomsen Harbor, one of the five harbors in Sitka.*

"A harbor is not simply a place to park a boat. Now, it's really big business and it's more necessary than in the past that harbor personnel are knowledgeable."

The program offers a very attractive alternative to employers, who previously had to pay hundreds – if not thousands – of dollars for airfare, food, lodging and tuition for their employees to attend on-site training sessions. Comparatively, UAS' training courses cost only $150 each and are offered completely online – allowing the student/employees to complete courses whenever and wherever is most convenient.

"Harbors are getting a bargain because they don't have to send people out. Before, they would have had to pay for airfare, food, a hotel. Now, employees can get trained in a subject for $150," Majeski says.

Through the program, UAS is currently offering courses in facility safety, which teaches marina employees about the major safety issues they will deal with on a day-to-day basis; oil spill prevention, preparedness and response, which focuses on the nature of oil spills and their consequent environmental and economic impacts; and marine structures and materials, which covers major structures and building materials found in harbors and small ports. The courses take an estimated 15 to 20 hours each to complete, and students are given a three-month period to finish the work.

UAS is currently working with content experts to develop additional courses, including operations and maintenance planning, harbor administration, fire safety, hazardous materials and waste removal, dockside cranes and straddle hoists, electrical and water systems, future developments in harbor operations, and customer service and community relations.

Following completion of the three currently available courses, students are eligible to receive a basic certificate in port, harbor and marina management from the PCC. As additional courses are offered, more advanced PCC recognition certificates will be made available.

"We wanted to create a certificate program for harbor personnel, so they have a vehicle to move up the career ladder. This way, they have documentation to prove they're educated in this career field. It shows they are knowledgeable about the business they have been hired for. It also gives people the opportunity to move up, and improve themselves economically and educationally," Majeski says.

"When you have a certificate and walk in the door to apply for a job, you'll have an edge over the other applicants," Purvis adds.

To date, approximately 50 people have registered for courses. During the first year, all of the students were based in Alaska – from Dutch Harbor to Kodiak and Sitka to Haines. This year, the program has expanded nationally and even internationally, drawing students from California, Washington, Oregon and British Columbia.

The training program is expected to continue growing and becoming more successful – a fact that brings a deep sense of personal accomplishment to Majeski, who plans to retire this spring.

"I'm on fire for this. This is the legacy I wanted to leave behind for PCC and their personnel," he says.

"This all happened because of Ray and his involvement with PCC. He was dedicated to finding a way to get training," Purvis adds. "It's exciting to be working on something that means so much to people."

CITC Partners with UACP to Offer Workforce Training

Cook Inlet Tribal Council (CITC), a nonprofit subsidiary of Cook Inlet Region, Inc. that provides social, educational and employment services to Alaska Natives and Native Americans living in the Cook Inlet region, wanted to offer training to help job-seekers become more competitive for positions involving customer service and leadership roles.

To accomplish this, CITC partnered with UA Corporate Programs (UACP) to develop and deliver a customized training program at the CITC building in Anchorage. The first two-week training session, led by an instructor from UAA's Matanuska-Susitna College, was held in June 2008, and a second session took place in September. Three additional training sessions have been tentatively scheduled for January, March and June of this year.

To date, approximately 29 people have completed the training, which is available to individuals receiving services through the Alaska's People Career Center at CITC and CITC's Tribal Temporary Assistance for Needy Families program (TANF). According to Richard Perry, career center coordinator at CITC, a majority of the participants have either found work or are seeking additional training or education.

"With this effective level of training and support, I believe we are meeting our goals and are also able to refine our future objectives to better match the dynamic needs of our participants," Perry says.

The two-week, interactive training, which included presentations, discussions, small-group breakouts, exercises and case scenarios, was specifically developed to meet CITC's objectives and the anticipated needs and interests of the participants.

"UACP is the single point of contact for CITC. We help to identify CITC's needs and opportunities, and then connect them with appropriate resources within university."

Week one of the training focused on customer service, including workplace communications skills, employment readiness, conflict resolution, teamwork, effective meetings, workplace conduct, enhancing a professional image, and performance improvement strategies.

Week two of the training focused on an introduction to management training, and incorporated topics such as supervisory training, effective business writing, dollars and sense, managing projects, understanding organizational culture, and developing leadership skills.

As part of the training, instructor Sara LaForest invited members of the business community to present on appropriate topics. For example, Wells Fargo staff gave a presentation on handling money and fraud prevention, and a Lowe's representative spoke on managers' perceptions of hiring needs and priorities. Both organizations also presented on career opportunities in their industries.

"From the beginning, I felt it was important to include key community

CITC continued on p. 18

Empowering Disadvantaged Youth to Succeed in Education, Employment

The Youth Job Training Program at UAA's Kachemak Bay Campus (KBC) of Kenai Peninsula College in Homer is having a tremendous impact on disadvantaged youth, as well as benefitting local employers.

"This program allows us to keep young people from falling through the cracks or choosing a less healthy path. It also provides employers with employees who have great work skills," says Carol Swartz, director of KBC. "We're very proud of what we do."

The program, which is funded through a Workforce Investment Act grant from the Alaska Department of Labor and Workforce Development, serves eligible, low-income youth, ages 16 to 21, who face barriers to employment, such as lack of job experience, disabilities, economic disadvantages and homelessness.

Established in 2002, the program provides a wide range of services designed to prepare youth for success in employment and/or post-secondary education or training. There is a focus on providing participants with the skills necessary for careers in high-growth, high-demand industries.

For participants, the program offers "a safety net for youth trying to catch up. It gives them an equal shot at training and becoming contributing citizens in their local community," Swartz says.

For employers, the program provides employees "who know they are supposed to be on time and dressed appropriately, who call in if they are sick or late, who have the basic skills and who are able to learn," says David Lewis, program coordinator.

Youth Job Training continued on p. 19

CITC continued from p. 17

stakeholders and help participants really understand the lens of the employer. Partner entities may grow in the future," LaForest says.

While the primary goal of the training was to provide participants with customer service and leadership skills, organizers believe it did much more than that.

"A lot of the people in these trainings come from challenging backgrounds and came into the training with very low self-confidence. This training has gotten folks to focus on what they can do. It gave them the self-confidence to walk into an interview and walk out with the job," says Bruce Rowe, UACP manager.

The participants' improved self-confidence was apparent during the graduation ceremonies that were held at the end of each training session.

"Participants each received their certificate of completion and provided a personal presentation on the value of their participation. This is a very touching event, which we plan to build upon," LaForest says.

To offer continued assistance after completion of the training, CITC initiated an alumni peer group, which offers professional and personal support to participants while they look for employment, transition into their jobs, or work toward achieving other goals.

"A wonderful byproduct of the trainings is that the participants created sincere, positive relationships, which they continue to maintain," LaForest says. "This support will be invaluable in assisting folks to continue to move forward."

With one successful project underway, the partnership between CITC and UACP is poised to continue and possibly grow. For example, according to Perry, CITC is now looking to supplement the customer service and leadership training, by partnering with UACP to offer additional training in areas like Microsoft Office.

"We're working with CITC to develop other training and expand opportunities," Rowe says. "UACP is the single point of contact for CITC. We help to identify CITC's needs and opportunities, and then connect them with appropriate resources within university."

"This program allows us to keep young people from falling through the cracks or choosing a less healthy path. It also provides employers with employees who have great work skills."

Youth Job Training continued from p. 18

"Most communities in Alaska have challenges finding young people to move into skilled positions," adds Swartz. "This project provides employers with local, trained employees. We've developed quite the reputation for making sure this project will be able to provide a labor force."

The program takes a very individualized approach to each youth participant. After youth are accepted into the program, the first step is an in-depth assessment that looks at their current skill sets, interests and needs. After the assessment is complete, program coordinators work with the youth to develop a personalized action plan. Case management services are then provided to ensure youth participants make progress toward their goals.

Depending on the specific needs of each youth, they may receive services including help earning a GED or completing a high school diploma, applying for classes or job training programs, tutoring, resumé writing, interviewing, leadership, teamwork, customer relations and communication skills. Other services may include career guidance, financial planning, mentoring, help finding employment, and opportunities for work experience. All services are provided free of charge.

Funding is also available to help pay for GED costs, tutoring, job training programs or college courses, and job-related expenses like uniforms, glasses, driver's licenses and health care. Once a week, the program also offers a job club, which features presentations on different professions, led by members of the local business community.

"It's very individualized. Some of the youth are just figuring out what they want to do. Some are already enrolled in classes. Many are just getting the basic skills," Swartz says.

After youth attain their job training goals, they may receive follow-up services for one year. Follow-up services provide continued support and job-related funding for youth to continue with their post-secondary education, training and/or employment. At the end of the program, youth receive a basic certificate of completion.

To date, the program has served a total of 105 students. Currently, the program is serving 38 youth, including 21 active participants and 17 in the follow-up phase.

According to a recent review by the Department of Labor, the program is far exceeding expectations. For example, program organizers estimated that 37 percent of the youth participants would attain a degree or certificate. In actuality, 92.3 percent accomplished this goal. Organizers also estimated that 73 percent of participants would enter into employment. That number was actually 100 percent.

▲ *A participant in KBC's Youth Job Training Program, who graduated from the certified nursing assistant program, displays her certificate of completion.*

"We've exceeded all requirements," Swartz says. "I think we're successful in contributing to the quality of life in our community."

The program's success is dependent on a number of collaborations with other KBC programs, local agencies and businesses, including Homer Job Center/One Stop Center, Independent Living Center – TALENTS/YES program, Homer High School, Kenai Peninsula Borough School District, Homer Flex Alternative High School, Alaska Housing Authority, public health and public assistance agencies, and local mental health and general health providers.

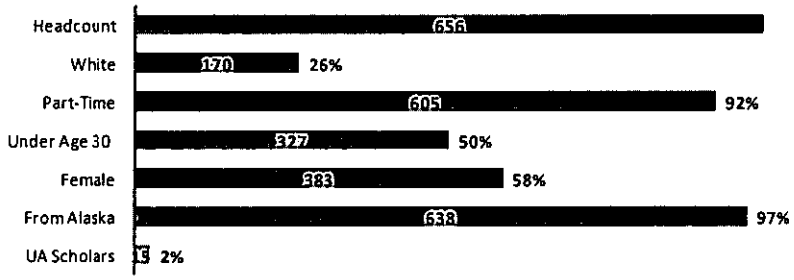
6. **Tanana Valley**

Campus Profile: *Bristol Bay*

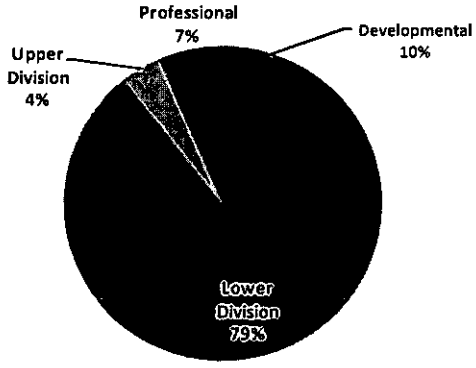
The Bristol Bay Campus of UAF is located in Dillingham on the northern coast of Bristol Bay, one of the world's largest producers of sockeye salmon. The campus serves an area of 55,000 square miles and a total of 32 communities.

Bristol Bay Campus
university of alaska fairbanks

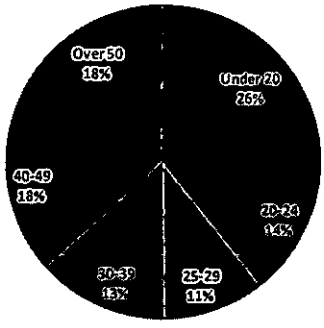
Student Profile, Fall 2008



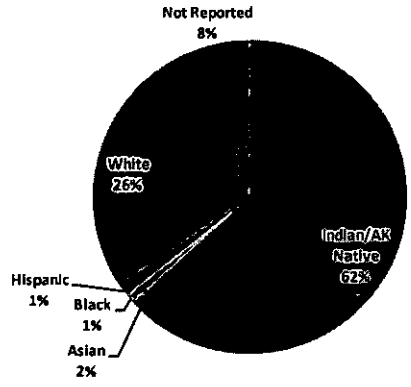
SCH by Course Level



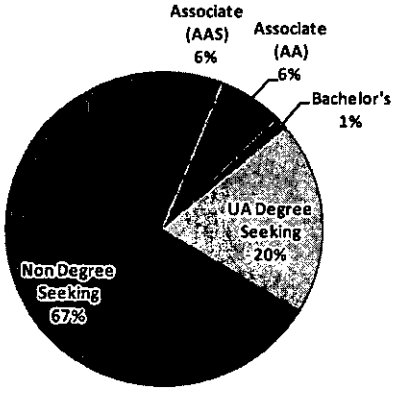
Age



Ethnicity



SCH by Degree-Seeking Status



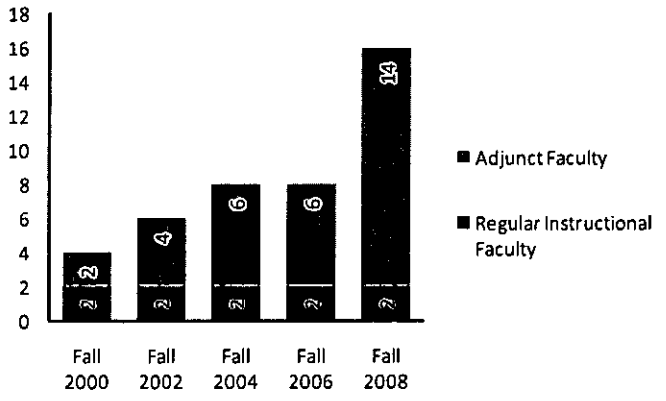
Source: Data Supplied by MAUs via UA Information Systems: Banner SI Closing Extracts Fall 2000, Fall 2008. Compiled by Statewide Planning & Budget in conjunction with campus.

- The Bristol Bay campus accounted for more than 5 percent of UAF students in fall 2008, with almost 660 students enrolled for credit.
- More than 1 percent of the UA Scholars attending UAF in fall 2008 enrolled at the Bristol Bay campus.
- Most of the students (>90 percent) taking a class at Bristol Bay enrolled part-time at the UA system level.
- Women represented nearly 60 percent of the student population.
- A half of enrolled students were under 30 years of age. In fall 2008 the average age for students enrolled was 34.
- Alaska residents accounted for 97ninety-seven percent of enrollment headcount, out-of-state students for two percent and international students for one percent.
- Almost 80 percent of student credit hours (SCH) were delivered in lower division and developmental level courses.

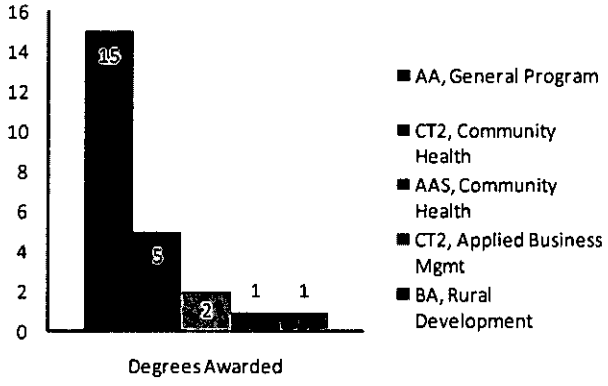
Campus Profile Trends: *Bristol Bay*

- The number of regular faculty teaching one or more courses at Bristol Bay has remained the same since fall 2000.
- The number of adjunct faculty employed at the Bristol Bay campus have grown in response to (new activity) to 14 in 2008.
- Degrees, certificates and credentials awarded by the Bristol Bay campus are up by 25 percent since FY01.
- Forty percent of all academic program credential awards by Bristol Bay in FY08 were in programs qualifying recipients to work in High Demand Job Area careers, however this varies year to year and is often higher.

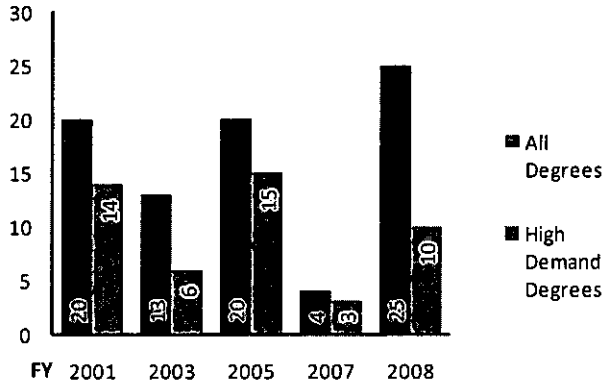
Faculty Headcount



FY08 Top Graduating Programs



Degrees and Credentials



Enrollment Trend	Fall 00	Fall 08	Change
Headcount	531	656	24%
Male	156 (29%)	273 (42%)	75%
Traditional Age (18-24)	66 (12%)	166 (25%)	152%
Ethnic Minority	286 (54%)	430 (66%)	50%
Degree Seeking Students	144 (27%)	160 (24%)	11%
UA Full-Time Students	55 (10%)	51 (8%)	-7%
UA First-Time Freshman*	13 (2%)	13 (2%)	0%

**Counts any UA first-time freshman taking at least one course from the campus. Student maybe considered a non-degree student at the campus.*

- Degree-seeking students have grown 11 percent over the last eight years.
- The number of male students experienced a significant increase of 75 percent over this time, amounting to almost 275 in fall 2008.
- Headcount of students less than 25 years of age amplified 2.5 times from fall 2000 – fall 2008.
- Since fall 2000 the Bristol Bay campus attracted 50 percent more ethnic minority students.

Source: Data Supplied by MAUs via UA Information Systems: Banner SI Closing Extracts Fall 2000, Fall 2008. Compiled by Statewide Planning & Budget in conjunction with campus.

Campus Profile Trends: *Bristol Bay*

4-Does your campus work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

We work closely with the four local districts: Dillingham City School District, Southwest Region School District, Bristol Bay Borough School District and the Lake and Peninsula School District and have a robust dual credit program. Students, parents and school districts decide on courses for the dual credit process. In Fall 2008, 137 high school, home school or alternative school students worked on gaining university credits including but not limited to courses in mathematics, science, early childhood, vocational training, applied business and alternative energy.

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

Major funding is provided by an Alaska Department of Education grant. The grant is not sufficient to provide an optimal level of service for the entire region so the campus has obtained supplemental funding for the GED portion of the program from the Bristol Bay Native Association, Housing & Urban Development, Alaska Department of Health and Social Services, and the Bristol Bay Economic Development Corporation.

Staffing for FY 09 includes one full time employee, 11 part time ABE/GED instructors, and 3 GED examiners. Services are provided in 32 communities in Bristol Bay region.

GED-related Activity FY 04 to 08

Activity	FY 04	FY 05	FY 06	FY 07	FY 08
GED Instruction	35	51	51	60	52
GED awarded	5	15	22	20	14
Contact hours	n/a	342	1,986	2,598	2,147

6-Challenges

- Rural communities need adequate and affordable broad band access to provide adequate education and economic opportunities.

7-Anything else you want to discuss or make the committee aware of?

- Bristol Bay Campus has established the Bristol Bay Environmental/Sustainable Communities Science lab in Dillingham. Recently received microbiology (bacteria) state certification.
- Strong collaborative partnerships with local entities make "Stay and Save in Bristol Bay" possible.

UA Community Campus Profile Prepared for House Education Committee
UAF Chukchi Campus Overview
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.

Chukchi Campus—University of Alaska Fairbanks

Located in Kotzebue; serving the villages of the Northwest Arctic Borough: Deering, Buckland, Selawik, Kiana, Noorvik, Ambler, Shugnak, Kobuk, Noatak, and Kivalina.

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/9/08).

Spring '09 numbers are continuing to grow. In our region we offer many intensive and special training sessions that start later in the semester. Our final Spring '08 numbers are included so you can understand to what extent we might continue to grow in Spring '09.

	Spring 08	Fall 08	Spring 09
Headcount Unduplicated	379	393	173
Student Credit Hours	987	1489	581

← Ethnicity

3-Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.

-Degree seeking in F'08—26.7
-Non-degree seeking in F'08—79.2
-Full time students (12 or more credits)—42
-Part time students (less than 12 credits)—131

NOTE: Above numbers portray CC students who are seeking a degree in some UA (UAA, UAF, UAS) program, not necessarily a CC program. These figures exclude students under the age of 18 who cannot be degree seeking, per University policy.

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

Yes, we work closely with the Northwest Arctic Borough School District. All of our college prep courses can be taken by high school students for dual credit. Last year we offered college prep courses that were designed to fit within the region wide high school schedule. We plan to continue the program next year. For these 3 crt courses we have an agreement with the school district: the district pays for one third tuition; CC covers one third; and the parents or student pay one third tuition plus materials & fees. We use this opportunity to introduce our students and their parents to the importance of financial aid applications and deadlines.

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

No. The Alaska Technical Center provides our regional ABE and GED programs. They are very successful. Their numbers have exceeded the number of region wide HS graduates.

6-Challenges

Chukchi was hit hard during the 1990 university "drought years". We seem to have had a larger percentage of positions eliminated than other campuses. Presently this campus depends upon federal funding sources to provide adequate levels of service to our regional students. If these funds should fail to be renewed we will be one of a number of UA's Alaska Native Serving Institutions (20% or higher) that will need more funding help.

Chukchi works very closely with the CRCD Allied Health Program. Their distance delivered health courses serve our regional students and our regional health corporation, Maniilaq Association. The UAF Allied Health Program services to our region will suffer if the Work Force Program funds are cut.

-Gov. Palin only included $10 million for Renewal and Renovation for UA and no new construction capital projects for the entire University.

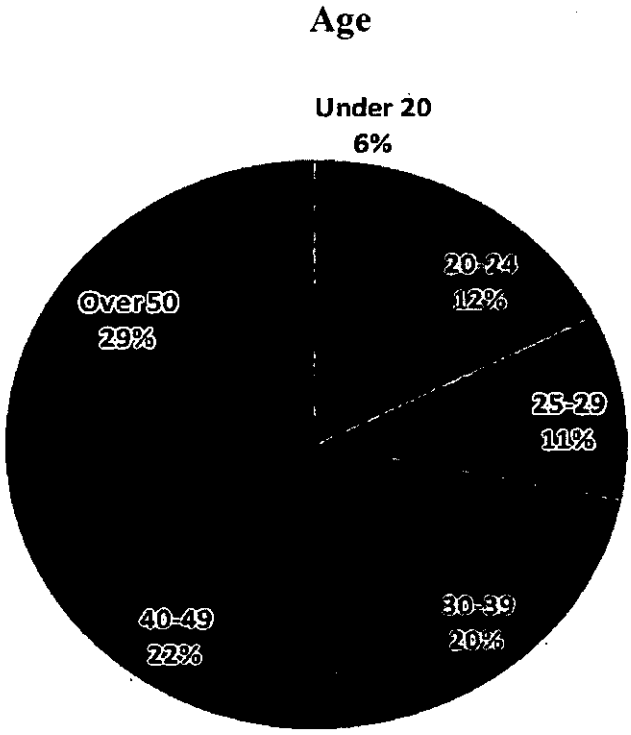
-Capital budget priorities for Chukchi Campus

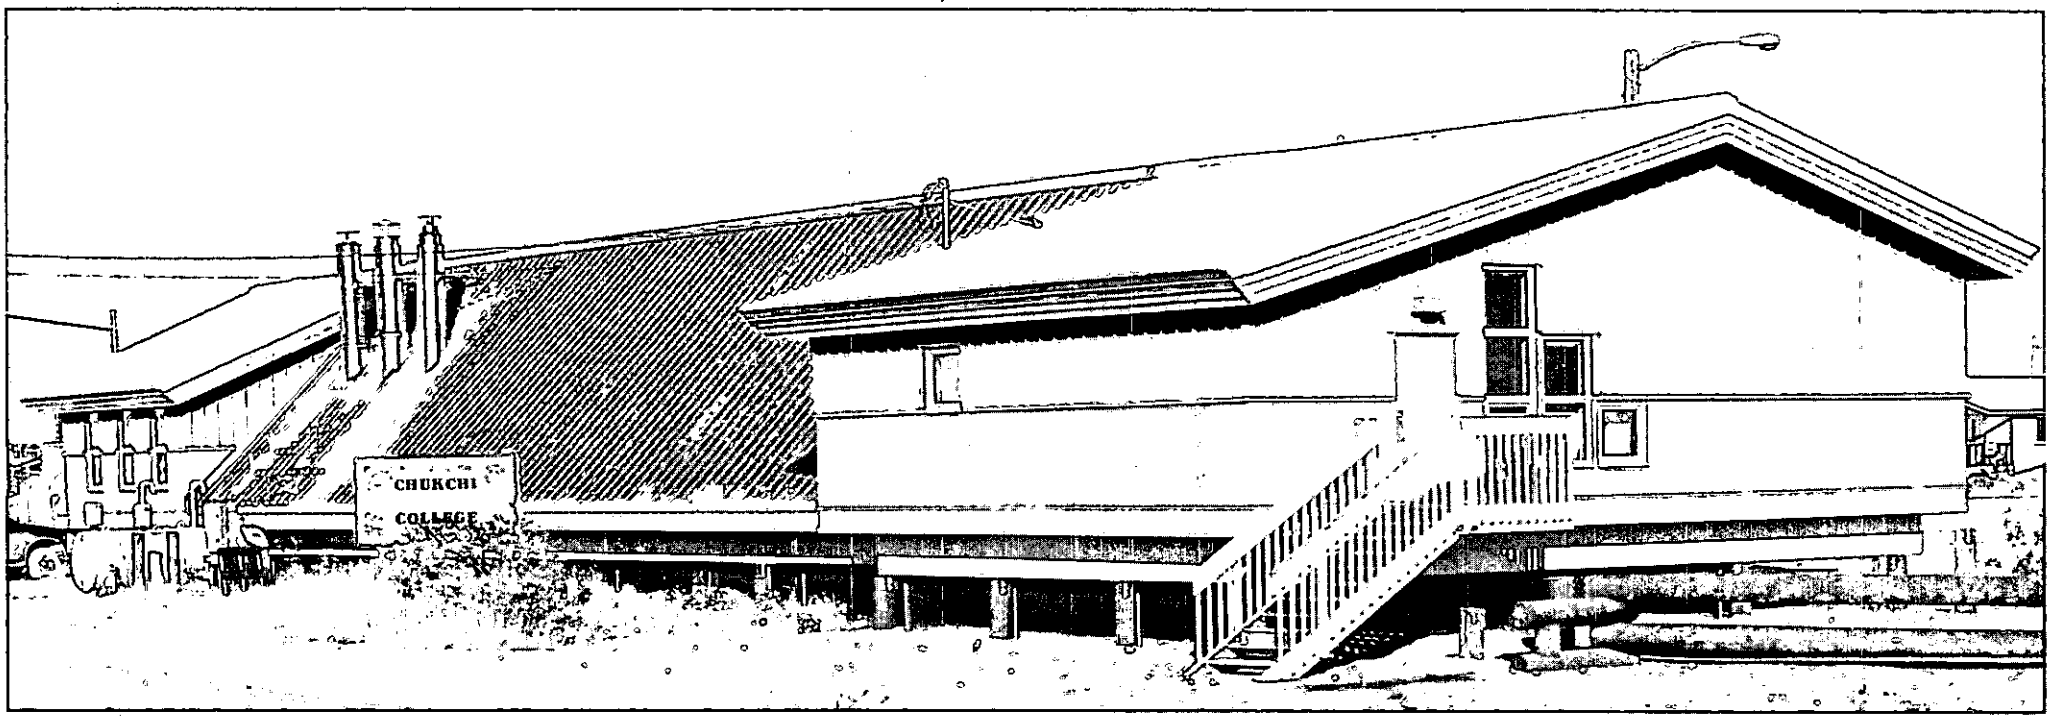
Consortium Library addition	$6 M
-Design & Planning	$0.6 M

7-Anything else you want to discuss or make the committee aware of?

- In higher education: where a student graduates from is where the student will live. UA President Hamilton found that 80% of our Alaska HS graduates, who graduated from universities in the lower 48, stayed and lived in the lower 48. The Board of Regents have supported the allocation of funds to maintain the UA Scholars Program. This is where the top 10% of our Alaska HS graduates receive a tuition free scholarship. This Program promotes keeping our best young Alaskans here in our state. It would be wonderful to see our state government fund this one program. Our best young Alaskans have the greatest potential to take care of our Alaskan businesses, corporations, schools, colleges, and cities. This is because our young people possess the background to understand our traditions, to understand and respect our history, and to know and appreciate our leaders. They know and love our land and waters. The state government should pluck this cherry of a program and make it your program that keeps our best young Alaskans in our state. Remember: where they graduate from will be where they will live.

- Higher education in rural Alaska is very similar. When our rural Alaskan students re-locate to our cities to attend college and to graduate, most all of them remain in the cities or return to raise their families in the cities. In rural Alaska a much higher percent of the students we serve are parents. This fall over 50% of our students were over the age of 40 and over 70% of them were over the age of 30! Most of the students that we serve want to remain in rural Alaska. Quality distance education programs allow them to remain in their communities, keep their jobs, receive the support of their extended family, use their local resources in their studies, apply accredited research strategies inside their own community, and to inspire their children, nieces and nephews. High quality distance education is very important to the well being of rural Alaska. Please continue to support it.



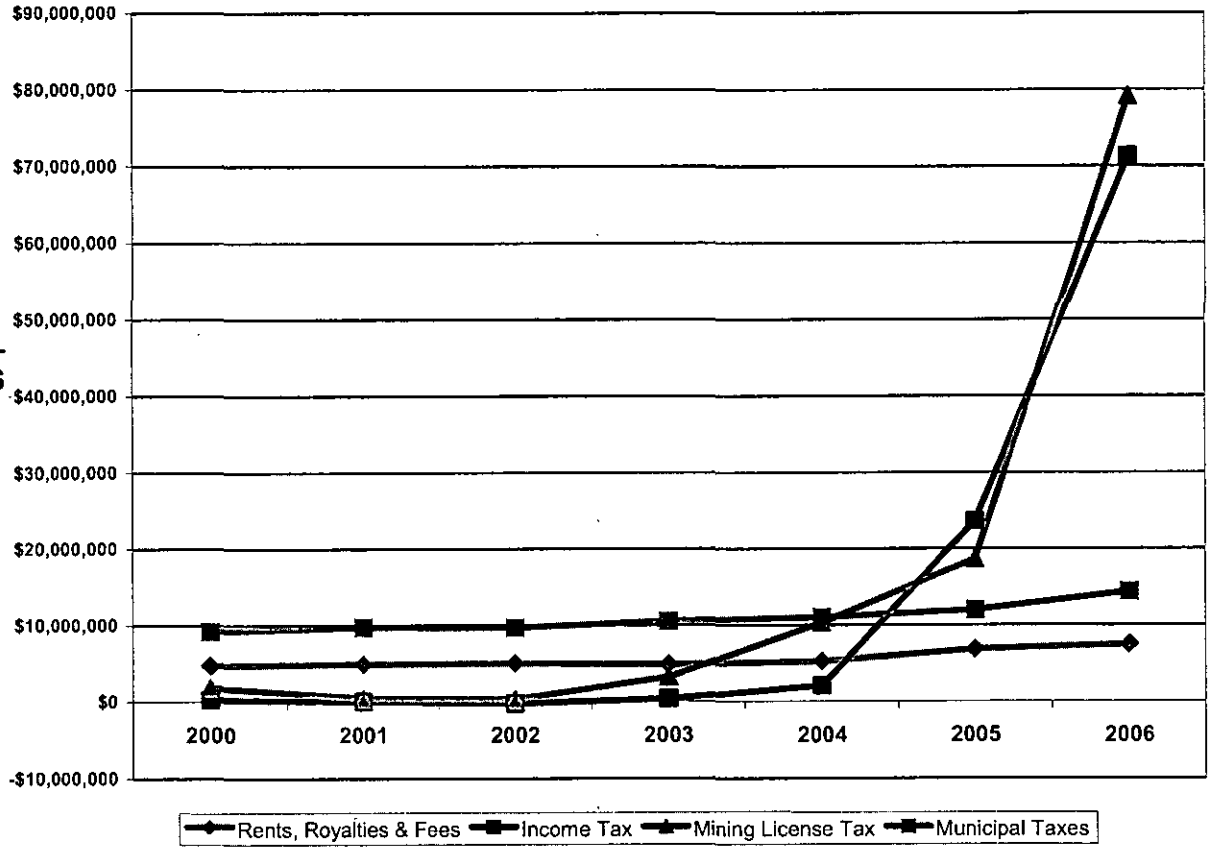


CHUKCHI
COLLEGE

TOTAL STATE & MUNICIPAL REVENUES 2000 TO 2006

Source: Office of Economic Development

STATE & MUNICIPAL REVENUES



UA Community Campus Profile Prepared for House Education Committee
Interior Aleutians Campus
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.

Interior Aleutian Campus (IAC) is part of the College of Community and Rural Development at the University of Alaska Fairbanks. The Campus strives to integrate life long educational opportunities with Rural Alaskan and Alaskan Native communities, cultures and ways of life. Our campuses are located in the following places:

- Interior Aleutians Campus – Harper Building Fairbanks
- Aleutian-Pribilof Center – Unalaska, Alaska
- McGrath Center – McGrath, Alaska
- Nenana Center – Harper Building Fairbanks
- Tok Center – Tok, Alaska
- Yukon Flats Center – Fort Yukon, Alaska

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/18/08).

IAC Headcount and Credit hours

IAC Location	Fall 08 HC	Fall 08 SCH	Spring 09 HC	Spring 09 SCH
IAC TOTAL *	505	1911	322	1668.5

HC=Headcount—number of students enrolled in IAC Courses SCH=Semester credit hours

Over 90% of these SCH were delivered in lower division and developmental courses.

* NOTE: IAC is a decentralized campus with six rural centers throughout the service area. These centers offer local classes that start at various times through the semester. At the time of this report IAC still has 40+ courses for Spring 2009 that have not begun and headcount/credit hours for those courses is not reflected above. (Spring 2008 HC was 569, SCH was 2514)

3-Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.

- Degree seeking 176 or 67 % of total student body *
- Non-degree seeking 86 or 33% of total student body
- Full time students (12 or more credits) - 62
- Part time students (less than 12 credits) - 61

Degrees, certificates and credentials awarded by the Interior Aleutians campus have more than tripled since FY01. The number of degree seeking students has grown more than 10 percent over the last eight years, while the number of UA first time freshman attending IAC has increased by 53 percent.

3261

* NOTE: Above numbers portray IAC students who are seeking a degree in a University of Alaska (UAF, UAA, UAS) program, not necessarily an IAC program. In a given semester a student might be taking a course through another MAU, but IAC provides student support services for those students. Students can take classes locally through an IAC Center or via audio/online through any UA campus and yet be a degree seeking student at any of the other 16 UA campuses. These figures exclude high school students, who cannot be degree seeking, per University policy.

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

Yes, we do work with local high schools to offer approximately 16 dual credit programs throughout Alaska. Through the Tech Prep program, we have agreements set up currently with Unalaska City School District, Nenana City School District, Alaska Gateway School District, Yukon Flats School District, Yukon-Koyukuk School District, Denali Borough School District, Galena City School District, and Effie Kokrine Charter School located in Fairbanks. Under these agreements, students are allowed to take courses that usually fulfill a high school requirement, and also earn them college credit at the same time. Some of the courses that have been offered or will be offered within the next semester include:

CIOS 233 Desktop Publishing
CTT 106 Construction Mathematics
EMS 152 Emergency Trauma Training First Responder
HLTH 105 Introduction to Health Careers
CIOS 100 Introduction to Personal Computers
DEVS 101 Skills for College and Career Success
DEVS 110 College Success Skills
ATVY 231 Arctic Survival
WMT 103 Welding I
CTT 100 Construction Technology Core
ABUS 256 Small Hotel, Bed and Breakfast and Lodge Operations
ABUS 199 Practicum in Applied Business

Other courses being offered dual credit at Effie Kokrine Chart School through the Early College Program include:

English 111 Introduction to Academic Writing
English 211 Academic Writing about Literature
Math 103 Concepts and Contemporary Applications of Mathematics
COMM 141 Fundamentals of Oral Communication: Public Context

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

Several of our centers do provide ABE/GED services to people in their communities. These services are usually funded by Adult Learning Programs (ALPA) and they provide services, we provide the space in Fort Yukon at the Yukon Flats Center, in Tok at the Tok Center and in Galena at the Yukon-Koyukuk Center and we also proctor tests and find volunteers to tutor students. The numbers varies per semester, we approximate that there are 5 to 15 students during any given timeframe.

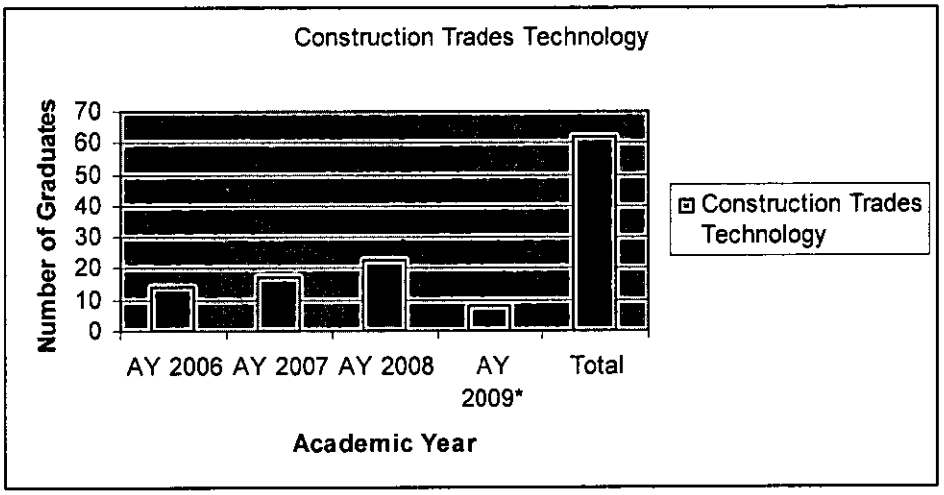
6-Challenges

- **Rural Students** – Our students are most often part-time and work in subsistence time frames that are outside of the traditional academic semesters. This limits their access to traditional funding sources. Our programs span vast distances to remote locations which creates challenges with travel, severe weather, and Alaskan lifestyle.
- **Growth** - All of our campus growth has been through federally funded grants and sustainability of funding is a challenge. Our most important external funding source has been Title III. We are completing an extensive 10 year evaluation of the Title III funding which we hope will provide the foundation for an additional Title III grant. At this time our regular faculty teaching one or more courses here at IAC has increased from 3 to 8.
- **Technology** – This is always an ongoing issue, our student's battle with access and connectivity daily.

7-Anything else you want to discuss or make the committee aware of?

IAC Accomplishments

- 4-year sustained increase in performance resulting in a 54 percent surge in student credit hour production, 141 percent jump in high demand job program enrollment, and a 255 percent increase in high demand job degrees and certificates awarded (UAF PBB 2007).
- 480 students have completed 6764 credit hours in Construction Trade Technologies since Fall 2003. The average age of these students was 33, 74% of whom were Native, and 299 of them were Native Alaskan males. There have been a total of 62 graduates.
- 12 students have been admitted into the newly approved Associate of Science Degree, from which 4 students are graduating this spring.
- 15 students have been admitted into the Veterinary Science Certificate and there will be two graduates in May 2009.
- Involvement in our own program evaluation has led IAC to explore the need for evaluation in an Alaska Native Cultural Context. Indigenous people across the Nations are working on new paradigms for programs and evaluation. Therefore Ukk'aa – Alaska Native Evaluation Framework is being developed and over the last four months five Alaskan Natives have undertaken the journey to become evaluators which meets a huge underdeveloped workforce area.
- IAC programs provide practical new skills which support healthy lifestyles. Extending education to remote, Alaskan villages creates opportunities for increasing the health of individuals, families and communities. The communities we service are small and close knit – one person learning calculus helps everyone by creating a math resource person.



Interior Aleutians Campus offers degrees in these areas:

Bachelors Degrees:

- BA in Education (UAF SOE)
- BA in Child Development and Family Studies
- BA in Social Work (UAF CLA)
- BA in Rural Development

Associate of Arts

Associate of Science

Associate of Applied Science Degrees:

- Community Health
- Construction Trades Technology
- Early Childhood Education
- Educator: Para Professional
- Tribal Management

UAF Community Campus Profile Prepared for House Education Committee
Kuskokwim Campus Overview
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.

Kuskokwim Campus (KuC)—University of Alaska Fairbanks, UA

- **Service area 57,000 square miles**
  - **400 air miles west of Anchorage/80 miles inland from Bering Sea**
  - **located in Bethel, population 6,000**
  - **47 remote Alaska Native Yup'ik and Cup'ik villages with 56 tribes**
  - **off the road system**
  - **on the banks of the Kuskokwim River**

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/9/08).

HC=Headcount—number of students enrolled
SCH=Semester credit hours

	Fall 08 HC	Fall 08 SCH	Spring 09 HC	Spring 09 SCH
KuC Campus	503[1]	2028	343[2]	1644

3-Number of degree-seeking vs. non degree-seeking students—students currently enrolled this spring.

-Degree seeking—169 or 49% of total student body
-Non-degree seeking—174 or 51% of total student body
-Full time students (12 or more credits)—67
-Part time students (less than 12 credits)—276

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

Kuskokwim Campus provides dual credit opportunities both on-campus and via distance delivery.

Dual credit offerings for Spring 2009 :

- HLTH F100 Medical Terminology
- ECE F245 Early Childhood Development
- HLTH F110 Professional Skills for the Workplace
- DEVS F150 Life Work Planning

High School students are integrated into the following courses:

- PHYS F115X Physical Science I
- ANTH F100 Individual, Society and Culture
- ENGL F271 Intro to Creative Writing-Fiction
- MATH F107X Functions for Calculus

[1] Enrollment figures are unduplicated headcount but do not differentiate between 3 and 1 credit course enrollment or the types of courses enrolled in.
[2] Enrollment is up 17 % from Spring 2008.

- MATH F200X Calculus I
- MATH F201X Calculus II

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

Yes, KuC's ABE and GED programs consistently graduate one of the largest high school classes in rural Alaska.

Communities served: Bethel and the 47 villages in the Calista region. We partner with the Association of Village Council Presidents to provide a part-time facilitator in 13 villages and serve the other villages by distance.

Total students served: 200 students region wide every year.

Total GEDs awarded: Average 65 per year.

Total # contact hours: 5,000+ on average

Funding:

Alaska Department of Labor and Workforce Development	$241,000
Orutsararmuit Native Council	$ 17,000
Support from KuC (salaries, space, computers, etc.)	$ 26,756

KuC's ABE has had to start a waiting list for the first time ever due to increased demand and decreased resources.

6-Challenges

- Increased operational costs, especially, Maintenance and Operations, not covered in a flat-funded budget.

- KuC had a 50% utility increase from 2008 to 2009

-TVEP (Technical/Vocational Education Program) budget cuts mean we lose grant funded position:

- Allied Heath position $100,000

- As Renewal-Restoration funds decrease, the physical plant gets more costly to maintain.

- Deferred maintenance is very expensive

- US Department of Education Title III funding will no longer be available.

- Title III was instrumental in developing critical programs like the Emerging Scholars Program that assists with student retention and success.
- There may be plans to provide similar funds in the new College Cost Reduction Act.

7-Anything else you want to discuss or make the committee aware of?

-KuC appreciates the $4 million appropriation received last year for a new roof and exterior siding

- Continually leaking walls and roof routinely damaged or destroyed equipment and degraded the structural integrity of our buildings. Remaining funds will assist with the energy efficiency of the dorm.

- KuC is in the 4th year of a 5 year $2,266,444 Title III grant under the U.S. Department of Education's Strengthening Institutions Program.

- The grant focuses on increasing student retention through improved access to financial aid, campus community and student support systems and personal counseling resources, provides for a major infusion of new library materials, the creation of a student information database and new alumni and community outreach.

-KuC's distance education program is growing exponentially:

- Headcount: 258 students touched –unduplicated
    * 40 students from other regions
    * 218 KuC students (unduplicated)
- 19 Distance Delivered courses = 635 credit hours/224 students
- 11 Blended courses = 231 credit hours/143 students

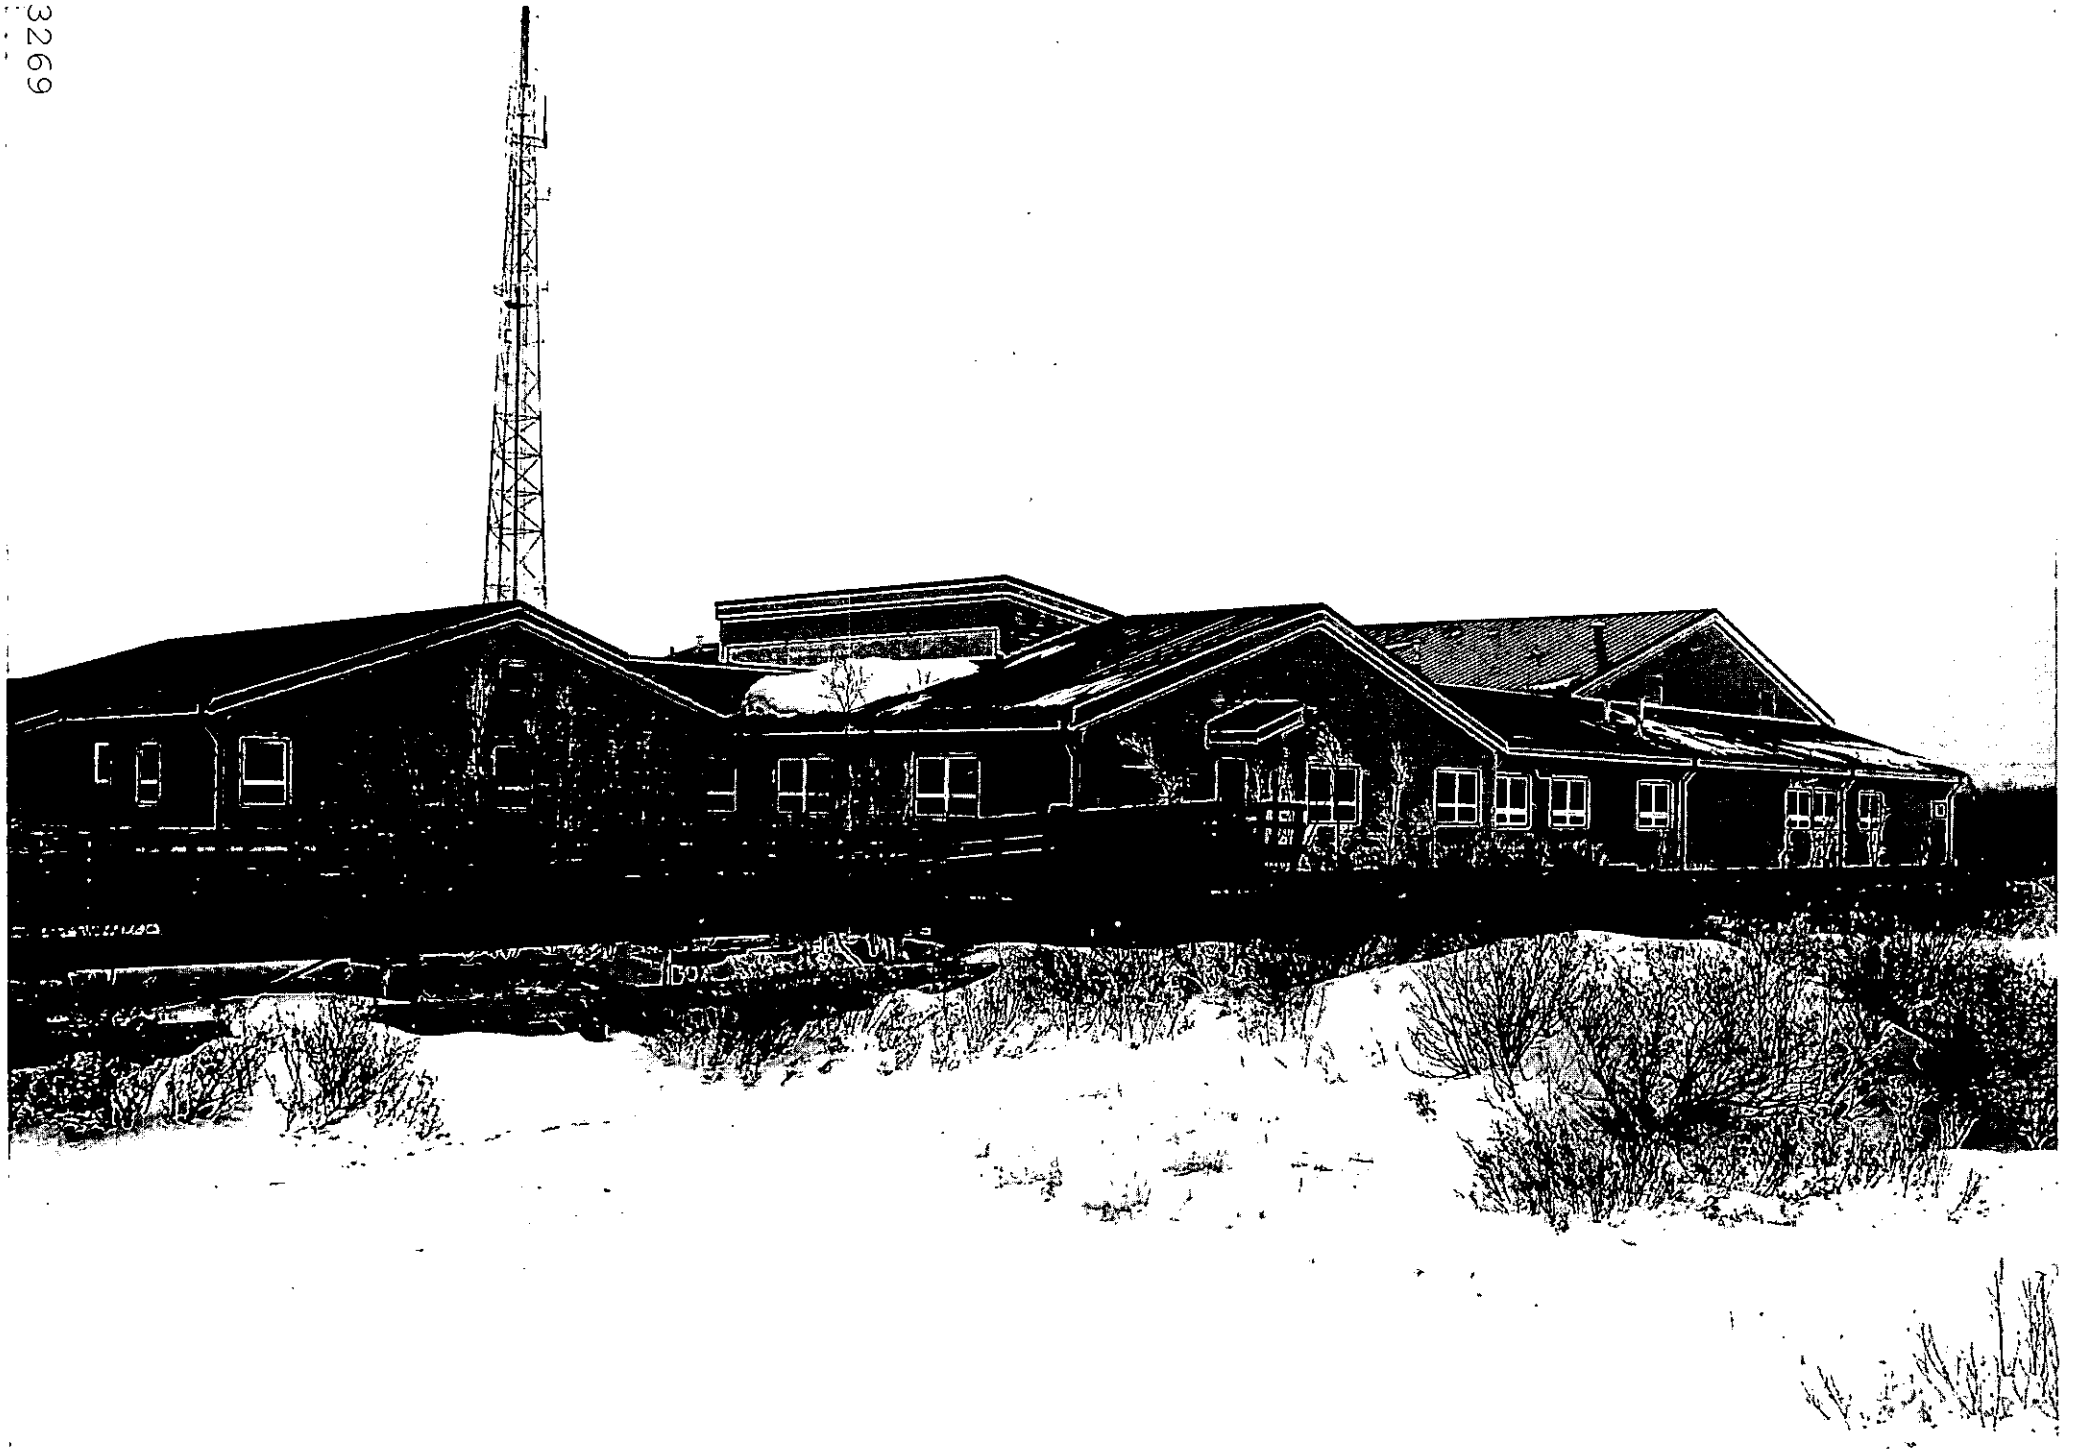
-KuC offers/facilitates the following special programs and courses:

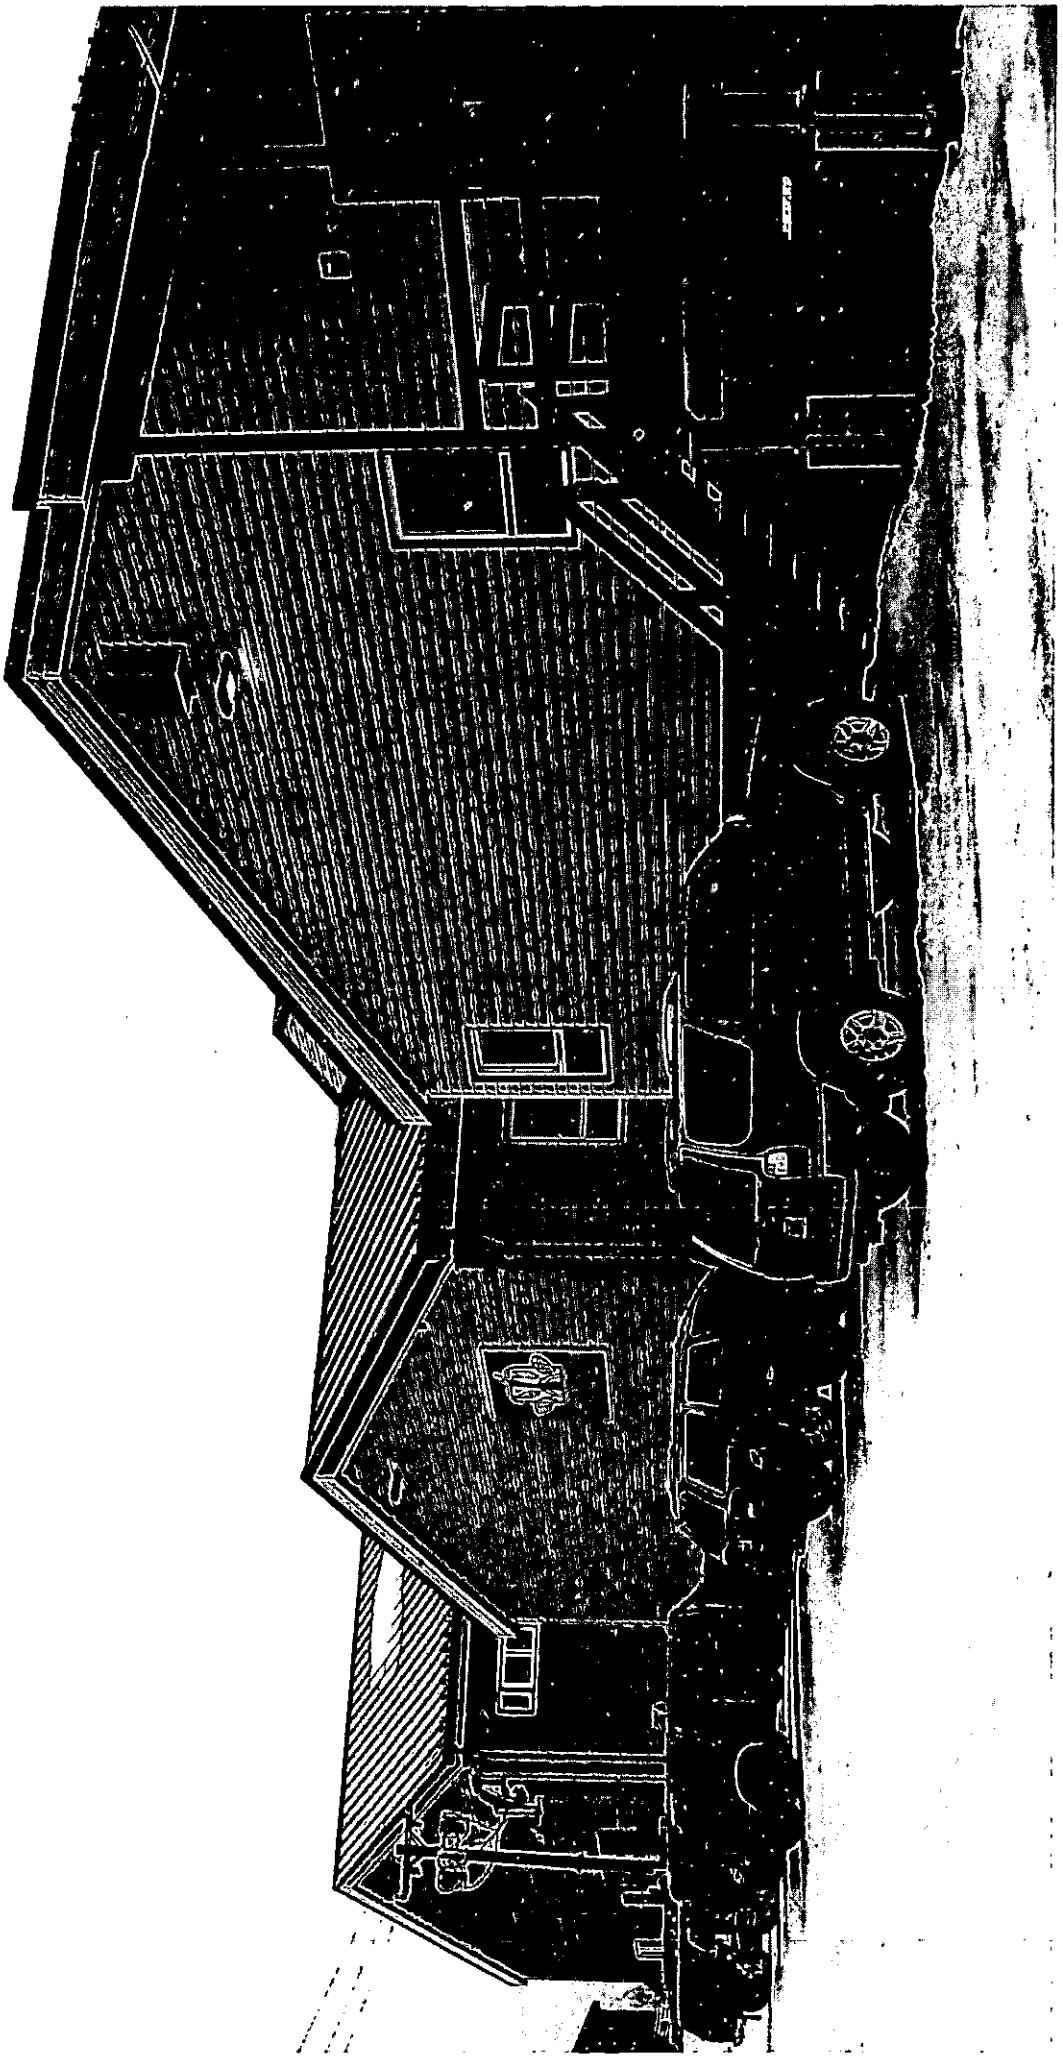
- Business workshops for small business development/Alaska Marketplace
- Saturday Markets for regional artists
- UAF/KuC courses teach traditional crafts/proximately 10 per year
- Web site development and blogging
- Annual Dog Shows
- Yup'ik dance classes each semester
-Community Theatre
- Festival of Arts and Academics/800 student entries
- Summer Youth Art Camp
- Bite of Bethel community Potluck

- KuC has developed a faculty-staffed Writing Center with extended hours to assist students in curriculum-wide writing skills development

Unique KuC offerings:

- Ethnobotany Certificate
- Yup'ik Language and Studies Bachelor's Degree
- Forensic Technology vocational certificate programs in development





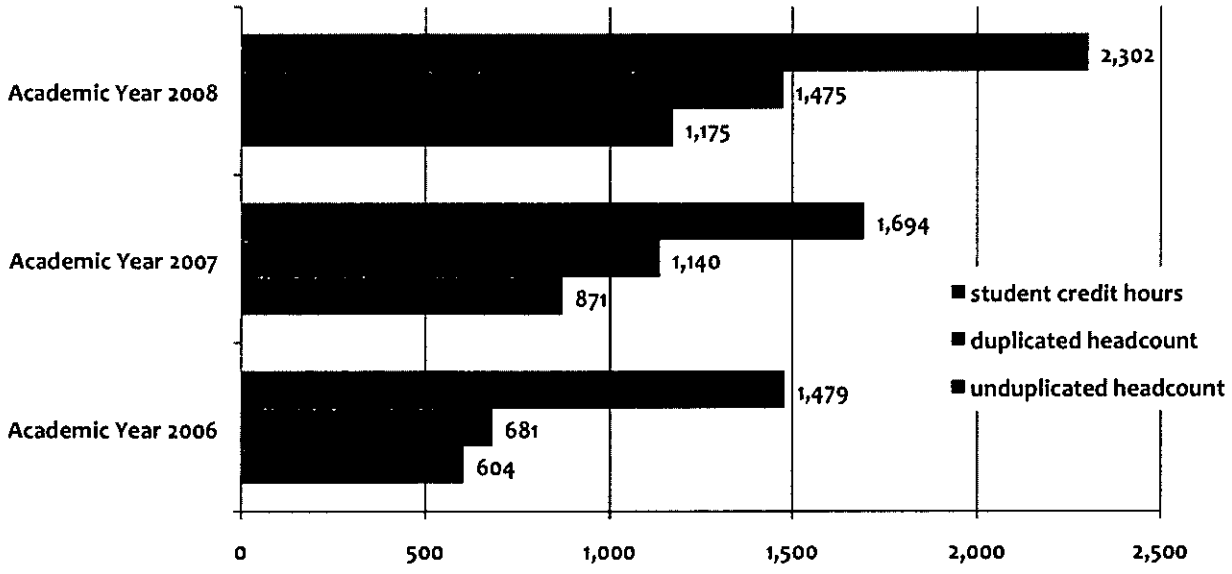
Northwest Campus Overview
Prepared for House Education Committee
February 2009

1. Name of campus and University of Alaska Major Administrative Unit (MAU). Description of campus–where located and how many locations.

Northwest Campus–College of Rural and Community Development, University of Alaska Fairbanks.

Facilities consist of one administrative building, library, and six classroom buildings that were built in 1970s. UAF Cooperative Extension Service has an office and classroom building.

2. Headcount and semester credit hours produced in Fall 2008 and Spring 2009.

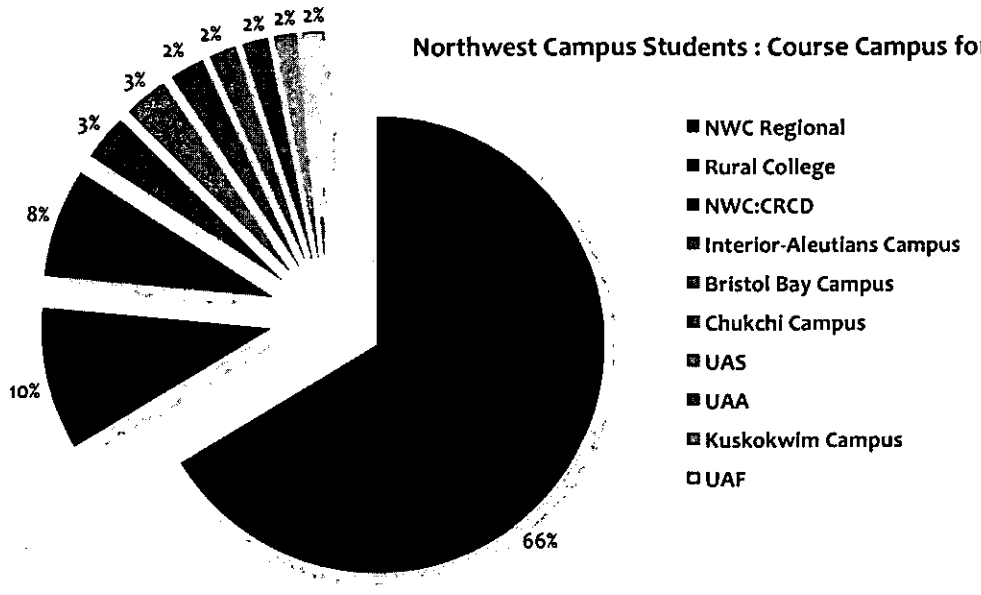


For contextual purposes, the 1,175 people enrolled last academic year represent a 20% penetration rate into the region's 18 years and older population (6,027).

Specifically, Fall 2008 headcount is 490 (7.5% increase from 2004) and 1,194 student credit hours (.7% increase from 2004). Early Spring 2009 semester reports indicate headcount is up 10.8% from last spring and 2% increase in student credit hours.

3. Number of degree-seeking vs. non-degree-seeking students.

Based on UA Institutional Research reports, 8% of Northwest Campus students are degree-seeking, and they account for 20% of NWC's total student credit hours. As is typical of our students who enroll in courses, degrees, and programs throughout the UA System, 83% (177) of the total (212) degree-seeking students are in a degree/program from another campus.



4. Does your campus work with local high schools by offering dual credit courses?

Yes, NWC is fortunate to have two school districts, Nome Public Schools and Bering Strait School District, who are very close partners.

- Both districts work cooperatively to provide vocational education opportunities through the Northwestern Alaska Career and Technical Center (NACTEC). Students received dual credit with NWC where appropriate. Some courses available this year are: Introduction to Legal Careers, Fundamentals of Aviation, Field Biology, Emergency Trauma Training (ETT), Certified Nurse Assistant (CNA) Training, Early Childhood Education, and welding.
- Nome-Beltz High School students also participated in a pilot Tech Prep program with the UA Statewide Early Childhood Education (ECE) Program that offered two ECE courses via the UA Videoconference Network.
- Northwest Campus also offers courses specifically for Bering Strait School District (BSSD) students, offered by distance and arranged with their school schedule. The courses offered this year are: Developmental Math (Beginning and Intermediate Algebra), Developmental Studies (English composition and College Success Skills), and MSL F111X, The Oceans, which is extended through the entire school year.

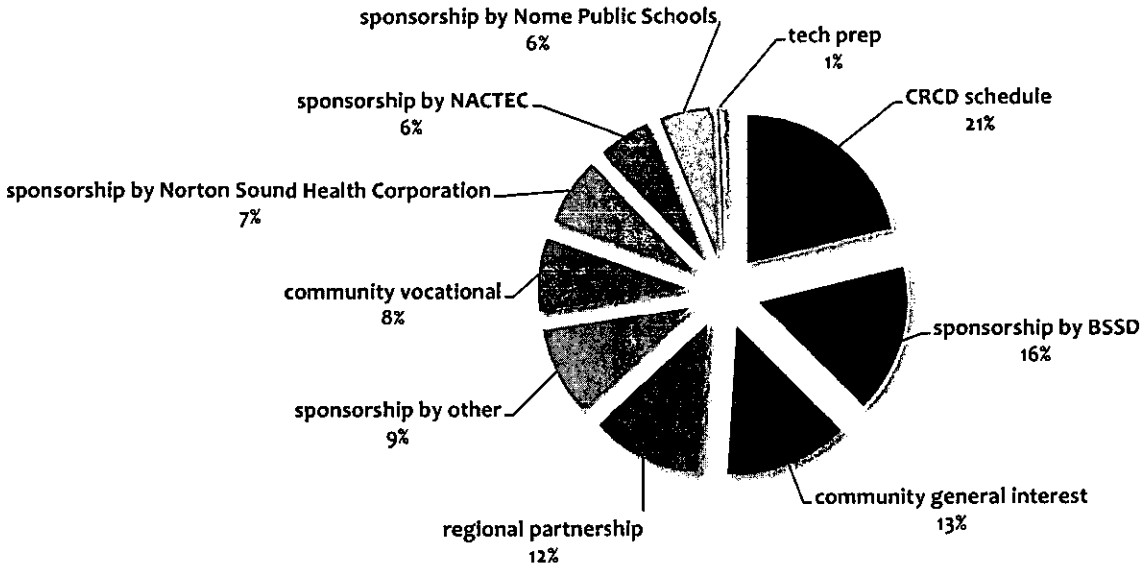
- Northwest Campus uses its authority to give departmental tuition waivers to subsidize one-third of the tuition cost for courses offered to high school students.

5. Does your campus provide Adult Basic Education/GED services to people in your community?

Kawerak, Inc., the regional non-profit, provides these services to our region. However, NWC supports their program by sharing campus office and classroom space with them. Our agreement connects their services with NWC's post-secondary support and instruction. We also share our students' accomplishments together at a joint commencement ceremony.

7. Anything else you want to discuss or make the committee aware of?

Source of NWC Courses by Credit Hours : AY 2008



Northwest Campus considers partnerships as our "life blood." This chart reflects where our productivity is generated and how NWC responds to local, regional demands.

Some highlights are–

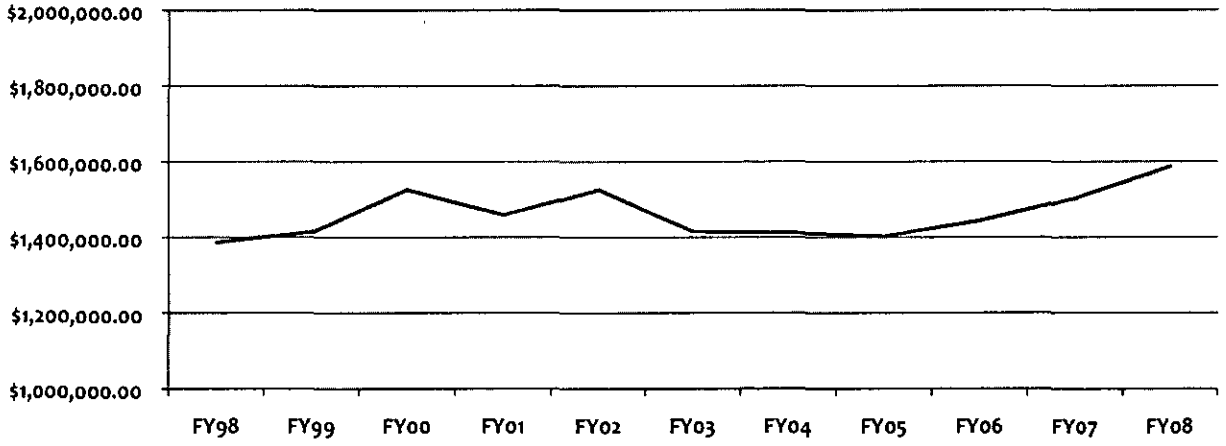
- Certified Nurse Assistant Program offered in conjunction with Kawerak, Inc., NACTEC, Nome Job Center, and numerous other scholarship organizations. Practicum is done in Fairbanks with Tanana Valley Campus faculty. Program includes both high school and adult students who received extensive classroom work and tutoring prior to practicum.
- High Latitude Range Management continues to expand its impact with increased partnership with Kawerak Reindeer Herders and UAF. With USDA funding, NWC has purchased a portable slaughter plant to use in developing meat science, which will result in certifying meat cutters in communities with herds.

- Applied Business Program is in response to regional and community plans developed by Kawerak. Courses are offered in communities with the support of Title III and partnership with Kawerak Education, Employment and Training Division. It is highlighted in UA@Work publication.
- Cultural documentation and localized Inupiaq language instruction is occurring in various regional communities. Of special interest is the effort to offer language instruction in dialects specific to Wales and Unalakleet. These courses are offered in partnership with UAF Alaska Native Language Center and Norton Sound Economic Development Corporation (NSEDC).
- International Polar Year (IPY) lecturers and guest instructors have brought expertise and connection to NWC's region over the last two years. It has brought over twenty talented, experts who have given presentations, taught courses, and conversed with the public, students, and regional high schools and communities. Presentations are delivered over audioconference and videoconference to region and high schools. Partnership with UAF Marine Advisory Program and Nome Community Schools.
- Pre-Nursing program with Norton Sound Health Corporation (NSHC) and UAA Nursing Program. NSHC funding clinical portion of training in Nome facility with UAA faculty/coordinator with NWC building student recruitment with all other instruction and student service support.

6. Challenges

Northwest Campus is working "at capacity." Critical aspects of student support services and workforce instruction are dependent on outside funding, such as Title III or USDA. Performance measures must recognize realities of campus funding and economic stability of region and constituents.

Northwest Campus : State Appropriation Adjusted for Inflation



UA Community Campus Profile Prepared for House Education Committee

UAF Tanana Valley Campus (TVC)

Serving the Greater Fairbanks Area, Delta Junction & surrounding areas
www.tvc.uaf.edu
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to?

- **UAF's Tanana Valley Campus is the largest community campus in the state. Its core purpose is *Community Driven Education* with an emphasis on workforce development, academic preparation and lifelong learning. Its major focus is on meeting education and training needs in the greater Fairbanks area and in northern Alaska. It makes up over 50% of UAF's College of Rural & Community Development.**

- **TVC comprises nearly 40% of all UAF headcount and 22% of all student credit hours and is nearly as big as all of UAS. It produces nearly 300 graduates each year, with growing numbers in high-growth, high-demand occupations.**

- **TVC serves the greater Fairbanks area in nine facilities**
  UAF Tanana Valley Campus Center, 604 Barnette, Downtown Fairbanks
  Downtown Center/2nd Avenue (Chena Building)
  Hutchison Institute of Technology (shared facility)
  UAF University Park Building
  TVC Bunnell House Early Childhood Learning Center
  TVC Automotive Technology Center, 3202 Industrial Avenue, Fairbanks
  Fort Wainwright Educational Center
  Eielsen AFB Educational Center
  Delta Career Advancement Center (regional training center)

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/9/08).
HC=Headcount—number of students enrolled SCH=Semester credit hours

	Fall 08 HC	Fall 08 SCH	Spring 09 HC	Spring 09 SCH
TOTALS	3,280	15,833	2,996	14,822
% of all UAF	35%	21%	37%	21%

3-Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.

- **1,692 degree-seeking students (FY08)**
- **46% full-time; 54% part-time**
- **Student FTEs 1,058 (Fall 08)**

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

- **TVC partners with Fairbanks North Star Borough School District (FNSBSD) and Delta-Greely School District (DGSD) in providing secondary-postsecondary career pathways. This includes Tech-Prep agreements and dual credit.**
- **Hutchison Institute of Technology in Fairbanks is a joint use facility including both Hutchison HS (a CTE magnet school) and TVC Industrial Arts and Technologies programs.**
- **TVC sponsors the Interior Alaska Career Academy—high school career exploration in CTE (dual credit) with community partners from industry and labor**
- **We are partners with DGSD in Partners for Progress in Delta, Inc—an innovative non-profit that is a recognized "regional training center" providing workforce training for the Delta and Upper Tanana areas.**

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

- **In Fairbanks these services are provided by Adult Learning Programs of Alaska (ALPA) and by Tanana Chiefs Conference**
- **TVC works closely with these providers and offers a wide array of developmental education courses, including Math for the Trades**

6-Challenges

- **Funding for student tuition and fees**
  - Alaska's tuition at the community campus level is high in comparison to US community colleges. Most community campus students are non-traditional. Many have families and are first-generation college students. Funding a college education remains a major challenge for most students.
- **Facilities for high-growth, high-demand job training**
  - Funding is needed to renovate Tanana Valley Campus Center, a 45-year old facility that is needed to offer up-to-date Allied Health and Nursing, Information Technology, Construction Management, and Applied Business programs; FY10 BOR capital request--$5M; additional anticipated funding need $19.5M
  - Facilities limitations cramp expansion of workforce training programs in Diesel/Heavy Equipment, Automotive Technology, Welding, and Process Technology—all vital to gasline development, oilfield operations, and mining; anticipated funding need $30-40M
- **Targeted funding for programs in Industrial Arts and Technologies**
  - Maintaining and developing state-of-the-art shop facilities is essential but expensive. Designated funding is needed to ensure students gain current training and education
- **Competitive salaries and benefits for experienced CTE faculty**
  - The UA system must be able to provide respectable salaries and benefits to prospective faculty who have industry experience, especially in CTE. Current salaries and benefits are nowhere near those in the private sector so recruitment is very challenging.

7-Anything else you want to discuss or make the committee aware of?

- TVC is proud of the nearly 300 graduates it produces each year, most of whom are focused on high-growth, high-demand occupations.
- TVC has a very engaged TVC Community Advisory Council (CAC) made up of representatives from industry, labor, school districts and community organizations.
- TVC prides itself on being nimble and responsive to needs of community and employers, highly focused on providing quality education and training, and fully accountable and transparent in its use of resources.

THANK YOU!

UA Community Campus Profile Prepared for House Education Committee
College of Rural and Community Development
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.
The College of Rural and Community Development is a college within the University of Alaska Fairbanks and includes 5 rural community campuses (Bristol Bay, Chukchi, Interior-Aleutians, Kuskokwim and Northwest) and one urban community campus (Tanana Valley). Campus reports for these 6 campuses are provided separately by their respective campus directors. The College of Rural and Community Development also houses a number of non-campus based units and programs:

- **The Center for Distance Education and Independent Learning** - designs, develops, and delivers courses, instructional materials, and student services for university departments and external organizations to support their local, rural, and global learners.
- **The Department of Alaska Native and Rural Development** – statewide innovative degree program that build effective community leadership in Rural Alaska and the Circumpolar North.
- **Distance Early Childhood Education** - provides services that allow students to earn certificates, AAS, or Bachelor of Arts degrees in Early Childhood Education while remaining in their home communities.
- **Rural Health Programs** – provides education opportunities to village-based health care industry workers through rural delivery of various classes and programs.
- **The Department of Developmental Studies** - offers programs and services to address academic preparedness, assessment and placement, barriers to learning, and development of general and discipline specific learning strategies for all students. This Department serves all of UAF.
- **Rural Student Services** - provides services to Native and rural students on the Fairbanks campus.
- **Rural Alaska Honors Institute** - a bridging program that assists students in Rural Alaska in making the academic and social transition between high school and college by providing relevant college preparation activities and classroom experiences.

CRCD's administrative office also provides support to these units and the 6 community campuses in the areas of academics, student services, business and finance functions, and human relations/labor relations.

CRCD's main offices and several units are located in the Brooks Building on the Fairbanks campus. Other units are located throughout the Fairbanks area as well as in Anchorage.

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/9/08).
Headcount and student credit hours generally accrue to the campus from which the class is offered. Headcount and student credit hours reported under the "rural college" designator in UA in Review include primarily courses offered through the Center for Distance

Education, the Department of Alaska Native and Rural Development, and Distance Early Childhood Education.

HC=Headcount—number of students enrolled
SCH=Semester credit hours

"Rural College" unit	Fall 08 HC	Fall 08 SCH	Spring 09 HC	Spring 09 SCH
CDE&IL	638	1886	665	1993
Distance Early Childhood	95	193	62	137
Rural Health[1]	39	99	46	151
DANRD	89	272	114	356
Other[2]	172	502	241	681
"Rural College" TOTAL	**760**[3]	**3184**	**719**	**3318**

3-Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.

As most of the headcount and credit hours that fall under the "rural college" designation denote students in programs housed at a specific campus, MAU, or, in the case of CDE possibly another University, this information is not particularly relevant. Below are some statistics for DANRD, Rural Health Programs and Distance Early Childhood that may be of interest.

Department of Alaska Native and Rural Development:

- **BA – 12 full-time, 23 part-time, and 22 not currently enrolled for spring.**
- **MA – 9 full-time, 17 part-time, and 6 not currently enrolled for spring.**

Rural Health Programs:

	HUMS	RHS	AH	SWK
-Degree seeking—	**12**	**33**	**63**	**7***
-Non-degree seeking—	**4**	**3**	**28**	**0**
-Full time students (12 or more credits)—	**0**	**4**	**7**	**2**
-Part time students (less than 12 credits)—	**16**	**32**	**84**	**5**

NOTE: Above numbers portray *Rural* Health students who may be seeking a degree in UA (UAA, UAF, UAS) program, not necessarily a UAF Rural Health program. These figures exclude students under the age of 18 who cannot be degree seeking, per University policy.
* We only counted the 7 students we are directly supporting; this overall contingent is bigger.

[1] Most Rural Health Programs accrue to campuses so the total for Rural Health Programs across CRCD would be higher.
[2] Includes UAF program courses offered through CRCD such as Education and Social Work.
[3] This is a non-duplicated headcount. The total count is lower than the column adds up to since students are enrolled at more than one program or unit.

Distance Early Childhood:

- **ECE AAS – 43 total students enrolled**
- **CDEV BA – 15 total students enrolled**
- **Non-declared or other majors enrolled in Distance ECE courses – 47**

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?
This is best answered at the campus level. However, Rural Health Programs is building a rural Tech Prep program for the rural campus sites (and beyond) and offers 2 summer camps a year that offer rural high school students 6 credits and ETT certification. Rural Alaska Honors Institute is specifically intended to bring rural high school students into Fairbanks and provide them with a college experience. Students receive college credit for the classes they complete over their 6 week RAHI experience.

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?
Best answered at the campus level.

6-Challenges
One of the challenges facing CRCD is obtaining stable funding for high quality workforce development programs. This year no UA BOR workforce development requests were included in the Governor's budget for FY10. Workforce development is a core area for all CRCD campuses and essential to our mission of developing a local workforce throughout Alaska. Below are the CRCD workforce requests that were not included for FY10.

Campus	Request	Amount
Interior-Aleutians	Tribal Management	$90,000
Interior-Aleutians	Construction Trades Technology	$100,000
Interior-Aleutians	Alaska Roads Scholar	$99,000
Northwest Campus	Workforce Training Coordination	$111,900
Tanana Valley Campus	Law Enforcement Academy	$98,600

Another challenge is providing coordinated services, particularly student services to such a large area of the state. Currently student services are predominantly grant funded. Federal grants made up from 25 to 45 percent of rural campus total budgets in FY08 and Rural Health Programs and Distance Early Childhood are also primarily grant funded.

University of Alaska Anchorage
Regional Campuses

1. Kenai Peninsula
2. Mat-Su
3. Kodiak
4. Prince William Sound

UA Community Campus Profile Prepared for House Education Committee
Kenai Peninsula College Overview
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.

Kenai Peninsula College—University of Alaska Anchorage

-Kenai River Campus (KRC)—309 acres along Kenai River in Soldotna
-Kachemak Bay Campus (KBC)—downtown Homer, two sites located a mile apart
-Anchorage Extension Site (AES)—University Center in Anchorage
-Resurrection Bay Extension Site (RBES)—operates from Seward High School

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/9/08).

HC=Headcount—number of students enrolled
SCH=Semester credit hours

KPC Location	Fall 08 HC	Fall 08 SCH	Spring 09 HC	Spring 09 SCH
Kenai River	1439	7871	1407	8333
Kachemak Bay	422	1884	427	1596
Anchorage	94	563	131	897
Seward	49	145	32	94
KPC TOTAL	**1944**[1]	**10,463**	**1927**[2]	**10,920**[3]

3-Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.

-Degree seeking—990 or 59.7% of total student body
-Non-degree seeking—662 or 40.3% of total student body
-Full time students (12 or more credits)—301
-Part time students (less than 12 credits)—1,435

NOTE: Above numbers portray KPC students who are seeking a degree in some UA (UAA, UAF, UAS) program, not necessarily a KPC program. These figures exclude students under the age of 18 who cannot be degree seeking, per University policy. Many students can be degree seeking, taking courses face-to-face at one campus or online and yet seeking a degree from another campus. Many students enrolled at KPC are pursuing other UA degrees.

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

We work closely with the Kenai Peninsula Borough School District and have a robust dual credit program. Virtually all 3-credit courses at KPC can be taken by high school students for dual credit. KPC also participates in the TechPrep program with 11 courses offered at the high schools eligible for college credit.

[1] This is a non-duplicated headcount. The total count is lower than the column adds up to since students are enrolled at more than one KPC location.
[2] This is a non-duplicated headcount.
[3] Largest number of credit hours in KPC's 45-year history. Fall 08 semester was largest fall semester ever. SCH this semester is up 11% and HC is up 15% compared to the same time last year.

High school seniors attend KPC and pay $43/credit versus the normal $134/credit for up to six credits per semester (including the summer they become seniors) for a total of 18 credits. Called JumpStart, the program is funded through monies provided by the Kenai Peninsula Borough.

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

Yes, KPC's ABE and GED programs are very active per the data below.

Communities served: Kenai, Ninilchik, Soldotna, Tyonek, Homer, Seldovia, Port Graham, and Voznesenka.

Total students served: 299—August 2007-June 2008. Presently this semester, 191 students are participating in ABE/GED at KPC (KRC-139, KBC-52).

Total GEDs awarded: 99

Total # contact hours: 5,040

Funding: Borough funding in FY09 was $84,300; state funding through an ABE grant was $176,500. Funds pay for personnel, travel to rural villages and materials.

6-Challenges

-KPC operational budget items cut in Gov. Palin's budget

Workforce Programs—2 Process Technology faculty, one program coordinator $375K
-#2 priority in UA Board of Regents budget
-Not included in Gov. Palin budget

K-12 Outreach—Kachemak Bay Campus student success coordinator $80K
-#4 priority in UA Board of Regents budget
-Not included in Gov. Palin budget

-Gov. Palin only included $10 million (cut to $8 million on Feb. 18) for Renewal and Renovation for UA and no new construction capital projects for the entire University.

-Lack of funding for community campus new construction capital projects. A $4 million "Feasibility Studies Community Campuses New Facilities" was submitted by the Regents this year, but not included in Gov. Palin's budget. "Funding for this project would allow for a feasibility study on new facilities requested by community campuses. There were several new facilities requested by community campuses in FY10. Given the high cost of construction, maintenance and utilities, and the changing demographic at many of these sites a more through analysis of the facility needs is warranted."[4]

-Capital budget priorities for KPC not included in the BOR new construction capital list

Kenai River Campus Career and Technical Ed Center $13M
Kachemak Bay Campus Classroom Bldg (vs City Hall) $7.5M
Kenai River Campus Student Housing $17.5M
-Design--$1.8M

[4] Taken from the Board of Regents Capital Budget Request.

7-Anything else you want to discuss or make the committee aware of?

-Since 1991, KPC has received borough funding through a 1/10th-mill tax levy assessed on borough residential property. For FY10, we anticipate receiving $611,401. Since 1991, we have received $5,706,885. These KPC programs and positions are paid with these funds:

-JumpStart tuition waivers for high school seniors (all sites, but Anchorage since it is not in the Kenai Peninsula Borough)
-Service learning/community engagement programs (all sites)
-ABE/GED (both campuses)
-Funding for Resurrection Bay Extension Site, which allows courses with lower enrollments.
-Computer technician (KBC)
-Career Center coordinator (KRC)
-Evening coordinator (KRC)
-Library clerk (KBC)
-Operating and lease costs for KBC West Campus paid to City of Homer
-Registration Clerk (KBC)
-Tutors (both campuses)
-Financial aid clerk (KRC)
-Student advisor (partial staff support at KBC)

-In October, the college was awarded a five-year $1,996,319 Title III grant under the U.S. Department of Education's Strengthening Institutions Program. The grant focuses on KPC increasing student success/retention rates through technology-enhanced advising and tutoring services, development of distance delivered courses in technical fields and general education requirements (GER), and faculty development and training in classroom technology and distance delivery.

-KPC's distance education program is growing exponentially:

-Offered 42 distance courses in F08 with 402 students enrolled taking 1,232 credit hours, a 138% increase since S07. In S09, these numbers have increased to 45 courses, and 645 students taking 1,812 credits—a 60% increase in students and 47% growth in credits in one semester.

-This semester, courses delivered via distance comprise 17% of KPC credit hours and 30% of students are taking at least one distance class. In summer 08, distance courses accounted for 48% of all credit hours taken through KPC.

-KPC offers the following special programs and courses:

-Kachemak Bay Writers Conference at the Kachemak Bay Campus—a 4-day conference that attracts 150+ people from Alaska, Lower 48 and internationally.
-Kenai River Guide Academy at the Kenai River Campus—a state-required 40-hour certification course for all Kenai River fishing guides.
-Kenai Fishing Academy at the Kenai River Campus—a week-long program that teaches people how to fish and respect the natural resources on the Kenai Peninsula.

-KPC offers six programs that are available at no other UA campus.

UA Community Campus Profile Prepared for House Education Committee
Matanuska-Susitna College Overview
March 2009

1-***Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.***

Matanuska-Susitna College – University of Alaska Anchorage
950 acre campus located on Trunk Rd half way between Wasilla and Palmer
Currently developing an extension program in Willow

2-***Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/17/09).***

Fall 2008:
Unduplicated headcount (HC) – 1753
Student Credit Hours (SCH) – 10,971

Spring 2009:
Unduplicated headcount (HC) – 1351 (as of February 17)
Student Credit Hours (SCH) – 9,155

3-***Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.***

Degree seeking – MSC 524	UAA 481	UAF/UAS 12
Non-degree seeking – MSC 265	UAA 58	UAF/UAS 11

4-***Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?***

Mat-Su Borough School district does accept college course work for high school credit. We have a process for registering these students in our classes. All classes offered at Mat-Su College are available for dual enrollment, if pre-requisites are met, but the School District determines if the course will be accepted for high school credit. Dual enrollment students pay the same fees and tuition as all other students.

5-***Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?***

We do not provide Adult basic Education through Mat-Su College

6-***Challenges***

1. Many of the students who apply for admission are not prepared for college-level work. For example, 92% of the incoming students who took our math placement test during the fall 2007 and spring 2008 semesters did not score high enough to enroll in the lowest college-level math course.

2. We are also challenged by the need to attract and retain qualified instructors for our students. There are chronic shortages in math, science, communications, and English.

3. The Matanuska-Susitna Borough is changing rapidly as new businesses and residents locate here. As they do, our community's needs are changing. The courses and programs we offer have to change with them. Identifying and responding to those needs in a timely manner is critical. Developing, cultivating, and maintaining connections with the companies who will employ our graduates is critical to identifying needs. Promoting good communication, local empowerment, and teamwork within the university is critical to responding to them.

4. MSC is experiencing technology requirements that remain unfunded over time. As a result our level of service to students suffers because of the inadequate infrastructure. We face a critical bandwidth shortage which affects staff and faculty effectiveness and student success.

7-Anything else you want to discuss or make the committee aware of?

Mat-Su College is developing three new programs this year that we anticipate will be ready for the fall 09 semester. The first is Paramedic Technology which is an AAS Degree program funded in part by the Mat-Su Borough. There is high need within the Borough for trained paramedics as the Borough EMS transitions to a paid vs. volunteer staff. The second program is an Occupational Endorsement in Renewable Energy. This is an academic program that will provide students with the understanding to work in any area of the energy sector with the specifics coming from the manufactures or employers at the end of the program. We will provide the curriculum and many of our partners will provide the laboratory and research components. The third program is also an Occupational Endorsement in Veterinary Assisting. For many years we have heard that there is need for trained professionals to work in Veterinary Offices. Many would like a Veterinary Technology Program, but that would be an Associate of Applied Science Degree and we are not ready to implement that at this time. The Occupational Endorsement is a cost effective approach to get to where the community wants us to be.

We have developed several partnerships to bring critical factors to bear on the programs we are developing. Here are a few examples:

Johnson Controls
Last year Johnson Controls, a Fortune 500 Company, contacted us about a partnership opportunity that would boost our Refrigeration & Heating and Computer Network Technology Programs while providing excellent opportunities for our students. The Company will interview any of our students who are willing to participate in the program. They will at that time select five students to make offers of a provisional employment contracts. If the student completes the first school year with a satisfactory grade, the company will provide them $1,500 toward their final year's expenses. Upon successful program completion and graduation the student will be offered employment with Johnson Controls within Alaska. Mat-Su College will receive much needed equipment for our labs free of charge. Our faculty will also be permitted to attend company training at a reduced rate.
There have been no problems in placing our students during the past few years. This partnership is expected to be an excellent recruiting tool.
School of Land Resource and Agricultural Sciences/Palmer Experimental Farm
Soon after the November meeting of the MSC Energy Group, we were contacted by the School of Land Resources and Agricultural Sciences at UAF and asked if we would be willing to partner with them on energy. Our agreement with them will have them provide laboratory space and faculty resources and MSC will provide the curriculum and lecture space. We will help them promote their research on Bio-Mass using locally available hardwoods to produce energy in rural Alaskan communities that do not have other viable sources of energy. Their hope is that students

educated at our facility will take the knowledge back to their villages and replicate what they have learned here.
After much discussion, we have determined that by working together we can each do what we are good at and at the same time strengthen both programs. They will provide the research and subject matter expert and we will provide the curriculum, degree and lecture space. We believe the Mat-Su College Energy Training Center will become a focal point for research and training throughout the state.

Alaska Center of Energy and Power

The Alaska Center for Energy and Power (ACEP) is a recent addition to the UAF Campus. Their primary purpose is to do research on alternative energy sources for rural Alaska. Through the combined efforts of ACEP and the Alaska Energy Authority a Wind Energy Coordinator will be placed at the Mat-Su Campus in the near future to provide direction to our academic program as well as determine research and training needs for the state with particular emphasis on the South Central Region. The position may only be available for one year, but the partnership will be ongoing.

Matanuska-Susitna Borough

The relationship between the Mat-Su Borough and the College extends back to the 1960's when the borough donated land for the college building site. Most recently the borough has allocated $100,000 per year to fund our new Paramedic Program. The expansion of the college and the addition of specific programs to enhance the community have been high priorities for the Borough Assembly for several years. The Assembly has indicated an interest in increasing the amount they allocate to the college by $100,000 per year for the next several years. The recent decline in tax revenues may affect future commitments.
For the past two years the borough has partnered with us on the planning and development of the Valley Center for Art and Learning. This project features a 1000 seat auditorium and two libraries, one each for the borough and the college. This item did not make it into the Regent's Budget this year, but we have hope that our continued partnership can stimulate this noteworthy undertaking.

Valley Community for Recycling Solutions

We have recently begun discussions with the Valley Community for Recycling Solutions (VCRS) to utilize space in their new $6.5M building that scheduled to begin construction this summer. We plan to house some of our Renewable Energy courses in their classroom. The VCRS site will also house some MSC undergraduate research. Our property has a common boundary with the Mat-Su Landfill near the site of the new building. This may be convenient in the future if we decide to build a road to connect that area with the campus. Our agreement with them is not yet finalized, but we expect it to be affirmed before the end of the semester.

The college is developing what we call a "Family Campaign" to encourage our faculty and staff to donate money for scholarships. Because there are so few need based scholarships that are open to all students regardless of their program of choice, we are developing such a scholarship for MSC students. This campaign will eventually be expanded to our alumni and the community at large.

KODIAK COLLEGE CAMPUS PROFILE
Prepared for House Education Committee
March 2009

1. Name of campus and to which University of Alaska Major Administrative Unit (MAU) it reports; where located and how many locations:

Kodiak College – University of Alaska Anchorage
No additional campuses, but courses are offered on site at the Senior Citizens Center of Kodiak (SCOK), the USCG Base (including aboard ships underway), Kodiak High School (including dual credit courses), at an three village communities (Old Harbor, Ouzinkie, and Port Lions)

2. Headcount (HC) and Student Credit Hours (SCH) produced in Fall 2008 and Spring 2009 semesters:

Fall 2008 HC	Fall 2008 SCH	Spring 2009 HC*	Spring 2009 SCH*
656	2456	487	1988

* Spring 2009 data drawn on February 12 and does not include subsequent enrollment for late-starting courses

3. Number of students who have declared intent versus those who have not declared intent:

	Fall 2008		Spring 2009 TD	
	Students	Percent	Students	Percent
Degree	135	*23.85%*	130	*31.03%*
Certificate/Occupational Endorsement	9	*1.59%*	10	*2.39%*
Non Declared Intent	422	*74.56%*	279	*66.59%*

The figures above represent unduplicated totals for students seeking degrees, certificates, or occupational endorsements at Kodiak College. The totals exclude students under age 18 who, per University policy, cannot be degree-seeking. Spring 2009 data was mined on February 11 and does not include subsequent enrollment for late-starting courses.

4. Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

Since 1999 Kodiak College has offered 13 - 16 Dual Credit and Tech Prep classes per year in Kodiak area High Schools. Students in these classes earn both college and high school credit upon successful course completion. Kodiak College works closely with the Kodiak Island Borough School District (KIBSD) to encourage students and their families to become familiar with the variety of options available for earning college credit before graduating from high school. College Student Service staff visit high school classes annually to review and approve the offerings, discuss financial aid and registration. Students in this program pay $25 per credit hour. Borough funding ($72,000 annually from 2005-2008) is used to offset tuition for these classes

In addition to Tech Prep and Dual Credit courses, Kodiak College provides fee-waived early Accuplacer Testing (placement) and advising for high school juniors and seniors during Spring

semester. Kodiak College works with the counseling staff at the local high schools to offer high school students as early as their junior year the placement testing, as well as academic advising, so college attendance becomes a goal and to start the early planning to attend and be academically prepared.

Another option for young students to get college credits while still in HS is the **JumpStart** program. Tuition for these classes is supplemented by Borough funding, reducing the cost to $50 per credit hr. This is nearly a 60% savings over the current tuition rate. The **JumpStart** program is supplemented by funding from the Kodiak Island Borough.

5. Does your campus provide Adult Basic Education and GED services to people in your community? If so, how many students on average do you provide these services to each semester?

YES: ABE/GED services include tutoring, academic preparation, GED testing, and English instruction for English language learners (ELL) -which make up half of current ABE students served.

Service area: city of Kodiak and 7 villages on Kodiak island. Rural Access Coordinators (RACs) are currently placed and working with students in the villages of Port Lions and Ouzinkie; RACs are being recruited in the villages of Akhiok and Old Harbor. A volunteer is working with students in Larsen Bay. In addition, a correspondence student living at a lodge in remote Uganik Bay gets services from the ABE via mail and email. The ABE coordinator works with school district and Job Service personnel to identify HS dropouts needing additional training and education for employability.

ABE (GED and ESL)	FY 07	FY 08	Spring 09 TD
Number of Students	149	155	87
Student Hours	4437.75	5234.7	not available
GEDs Awarded	30	48	--

Funding: Kodiak College receives $102,000 from the state and $16,000 from the Borough to support ABE/GED programs.

6. Challenges:

- Outdated/limited/unsafe technological facilities make program delivery of high demand WFD programs difficult at a time when K12 and HE partnerships are just taking hold
- Lack of affordable housing and recent high transportation, heating oil, and energy prices have made island living less affordable -island rents average $1,000 per month due to demand

- Census data indicate island population declines of approximately 3-4% per year since 2004 and may be a reason to investigate new service delivery models such as Distance Delivered courses, which require additional training and professional development

- Expense of providing professional development for staff and faculty due to high travel costs

7. Is there anything else you want the Committee to know about?

- For the first time, a 2009 high school student will receive both a high school diploma and a college welding certificate at his graduation ceremony

Keeping Kodiak Island Residents Working

- Technology Program -
  - ✓ First AAST Degree in Welding/OSHA to be awarded in 2009

  students in progress toward goal who were able to get new jobs or promotions in current jobs as a result of new skills:
  - ✓ 28 certificates awarded last year; 22 eligible for testing later this year
- Accounting and General Business Programs - 90% of graduates are working in the fields for which they trained either in new jobs, or with promotions in their original jobs, as a result of new skills
- Computer Netwok Technology -- 100% of IT students working in the IT field, either in new jobs, or promotions in current jobs as a result of new skills
  - ✓ All IT positions on island (City, Borough, KIBSD, hospital) currently staffed by KOC students or graduates
- Certified Nursing Assistants—100% placement rate for graduates of the program, many with multiple job offers
- Nursing -100% of 2008 graduates received offers of employment before or immediately upon receiving diplomas
- Internships and Service-Learning -Requests have increased from industry for student interns and courses including internship opportunities to prepare students for work site activities after graduation have been developed

Jump Start, Smart Start, and other Learning Communities - More than a dozen students have successfully transitioned from developmental level courses to regular college-level courses, and on to graduation;

- ABE - GED and ELL successes -- Steady increases in numbers of students, contact hours, and GED diplomas earned; students have successfully transitioned from lower-level ESL instruction, to GED, to Smart Start and other developmental courses, ultimately to experience success in regular college-level courses and programs, e.g. CNA, Business and Nursing

- Percent of Minority Students - has increased from 15% in 2004 to 30 and 33% in 08-09 ethnic minorities each semester, including 12% Native Alaskans and American Indians (the same proportion as in the general population)

FAFSA College Goal Sunday successes -- Successful fourth annual event; participants report high levels of satisfaction and increased knowledge
Classes on site - At the US Coast Guard Base, aboard ships at sea, and at the Kodiak Senior Citizens Center

Other Service to Community

- 48 hrs of open Computer Information and Office Systems (CIOS) Lab
- The Learning Center- 50+ hrs. of tutoring per week available for HS and College students
- Testing Center providing PRAXIS, FAA, Microsoft, CISCO and other industry proctored exams to public and students
- Dedicated Distance Education office space
- Library with 27,000 volumes and linkage to Interstate Consortium Library
- WiFi internet access
- Affordable meeting space
- Free "Taking Care of Business" series of customer service workshops sponsored by College
- Cultural and Arts events

FAFSA College Goal Sunday successes -- Successful fourth annual event; participants report high levels of satisfaction and increased knowledge
Classes on site - At the US Coast Guard Base, aboard ships at sea, and at the Kodiak Senior Citizens Center
Percent of Minority Students - about 30 to 33% ethnic minorities each semester, including 12% Native Alaskans and American Indians (the same proportion as in the general population)

UA Community Campus Profile Prepared for House Education Committee
Prince William Sound Community College Overview
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.

-Prince William Sound Community College- Valdez main campus
Campus Housing available/ three buildings = 24 apartments
-Copper Basin Campus- Glennallen 110 miles from Valdez
-Cordova Campus- Centrally located in Cordova, 30 minute flight from Valdez

PWSCC is a separately accredited Community College by the Northwest Commission on Colleges and Universities. PWSCC is listed as an affiliate College in the UAA Catalog. The Colleges service area is 44,000 square miles (the size of the State of Ohio)

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/16/09).

HC=Headcount—number of students enrolled
SCH=Semester credit hours

PWSCC Location	Fall 08 HC	Fall 08 SCH	Spring 09 HC	Spring 09 SCH
Valdez Campus	957	2850.7	395	1592.2
Glennallen Campus	141	373	65	238
Cordova Campus	78	746.5	82	428
PWSCC TOTAL	**1176**	**3,970.2**	**542**	**2,258.2**

3-Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.

-Degree seeking- 10% of total student body
-Non-degree seeking—90% of total student body
-Full time students (12 or more credits)—50
-Part time students (less than 12 credits)—492
-Non-credit students 625 as of 2/16/09
-92% of students both degree and non-degree achieved educational goal

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

Yes, Prince William Sound Community College works closely with all three school districts in our service area, Valdez, Glennallen and Cordova. The dual credit program began in 1995.

High school students are charged a $25 fee for a three credit semester length course. The number of dual credit courses offered between fall and spring semesters varies.

The College has twenty three dual credit courses currently being offered (spring 2009). A total of 260 high school students are taking dual credit courses. Ten of the twenty three dual credit courses are recognized as Tech Prep.

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

Yes, Prince William Sound Community College ABE and GED programs are very active in our service area.

14 Communities served: Valdez, Cordova, Tatitlek, Whittier, Glennallen, Copper Center, Tazlina, Chistochina, Slana, Nabesna, Mentasta Lake, Kenny Lake, Chitina and McCarthy.
Total students served: 156 students Fulltime and part time (full time is 12 contact hours or more—July 2007-June 2008. FY 2009 presently serving 123 full and part time students.
Total GEDs awarded: 26 to date, currently 14 students in some level of testing, in addition to 41 students on record to fulfill GED goals.
Funding: State ABE Grant $84,371 and FY 10 United Way Grant $13,000.
Contact Hours to date: 1,632

6-Challenges

-PWSCC funding for support of new programs
-Increased cost of utilities, fuel oil and electricity
-Declining population in the service area
-Fixed cost increase and appropriations not meeting the increases
- lack of funding for two year campuses new construction capital projects.

-Capital budget priorities for PWSCC

PWSCC Wellness Center/ Student Life Renewal	**$3.6M**
PWSCC Housing Renewal	**$5.0M**
PWSCC Deferred Maintenance	**$3.9M**
PWSCC parking and security upgrades	**$1.67M**
PWSCC Doors and Locks Upgrade	**$555,00**

7-Anything else you want to discuss or make the committee aware of?

PWSCC has received funding from the City of Valdez since 1979. Since 1979 the College has received 16,774,832. In 2008, the City of Valdez voted to increase the amount of funding from 634,731 to $700,000 the largest contribution to date. These dollars stay in Valdez and support the overall Community College budget.

The Maxine and Jesse Whitney Museum opened in May 2008. The collection was a gift from Maxine Whitney and has over 1,000 pieces on display of Alaskan wildlife and Native artifacts.

The PWSCC Wellness Center opened in 1998. Last year the College celebrated the 10th Anniversary. The facility is open to the community and has both cardio and weight training equipment. The Wellness Center has over 600 members annually.

DATE: February 19, 2009

TO: House Education Special Committee

FROM: Jeff Johnston, Director

SUBJECT: UAS-Sitka Campus Overview

1. *Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.*
   a. **University of Alaska Southeast—Sitka Campus**
      i. **Address:** 1332 Seward Ave, Sitka, AK 99835
      ii. **Website:** http://www.uas.alaska.edu/sitka/
      iii. **The Sitka campus (founded as Sitka Community College in 1962) shares in Sitka's heritage of being the former capital of Russian America. Sitka, Alaska's fifth-largest city is rich in history and a popular tourist destination. Mt. Edgecumbe, known as Alaska's Mount Fuji, dominates the horizon across the water from the campus. Located on Japonski Island along with the Southeast Alaska Regional Health Consortium, Mt. Edgecumbe High School and the U.S. Coast Guard, just across the bridge from town, the Sitka campus has maintained its community campus role while serving the needs of students from across the region and the State.**

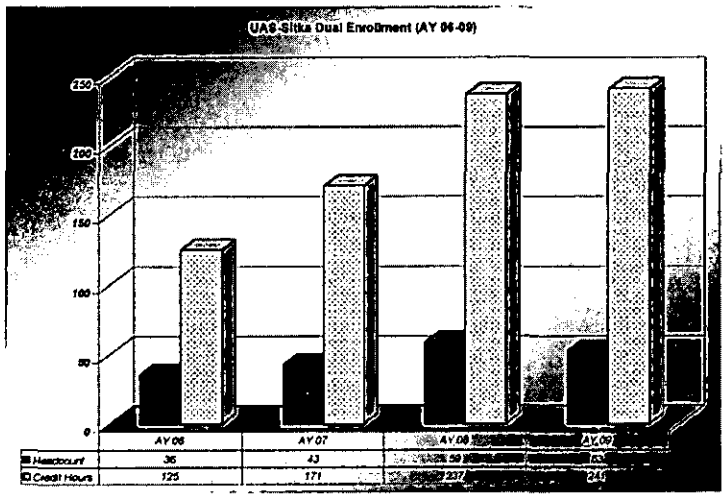
2. *Headcount and semester credit hours produced in Summer & Fall 08 and Spring 09 (as of 2/17/09).*

Summer 08 HC*	Summer 08 SCH**	Fall 08 HC	Fall 08 SCH	Spring 09 HC	Spring 09 SCH
271	*971*	*861*	*3756*	*845*	*3689*

***HC=Headcount—number of students enrolled**
****SCH=Semester credit hours**

3. *Number of degree-seeking vs non degree-seeking students—Fall 2008*
   a. **Degree seeking—499 or 58% of total student body**
   b. **Non-degree seeking—362 or 42% of total student body**
   c. **Full time students (12 or more credits)—230**
   d. **Part time students (less than 12 credits)—631**

4. *Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?* **Yes--**



We work closely with the Sitka School District and Mt. Edgecumbe High School. Our Career and Technical Education classes (Welding, Construction, Certified Nurse Aide (CNA) and Marine Technology) and courses that will serve to fill general education requirements (English, Math, Psychology and Geography) are the most frequently offered dual enrolment courses. UAS-Sitka also participates in the TechPrep program with five courses offered at the local high schools for college credit.

5. *Does your campus provide Adult Basic Education/GED services to people in your community?* **Yes--50 students/term and 12-15 graduates per year.**

6. *Challenges*: **The Sitka campus faces a number of challenges in its effort to ensure that it provides high quality postsecondary education to a diverse student body:**

   a. **Providing the necessary support staff for programs funded by restricted funds.**
   b. **Funding for renovation projects focused on "code correction."**
   c. **The need for multiple year funding streams for career and technical education program development e.g. difficult to recruit a certified welding instructor for a one-year grant funded position.**

7. Anything else want to discuss?

Title III funding has allowed the Sitka Campus to build a reputation as a center for excellence, a pacesetter in the application of technology for innovative, student friendly instructional design. Our Fast Track program development of partnerships with governmental agencies and private industry is now generating interest statewide. Our partners are happy with the results of our efforts and are talking across the state. Our registrations are increasing steadily as we provide training to a diverse student group ranging from harbormasters and EMTs to log cabin builders.

UA Community Campus Profile Prepared for House Education Committee
UAS Ketchikan
March 2009

1-Name of campus and which University of Alaska Major Administrative Unit (MAU) do you report to? Description of campus—where located, how many locations.

The Ketchikan branch of the University of Alaska Southeast is located in Ketchikan, Alaska. It was the first community college in Alaska and is now 55 years old. There are two campuses in Ketchikan – one that houses the business operations, learning center, library, and most academic program faculty and students and one that is the technical training center where workforce development programs and their faculty reside. There are two educational outreach centers located on Annette and Prince of Wales Islands that are student service centers created through Title III funding to serve Alaska Native and rural students.

2-Headcount and semester credit hours produced in Fall 08 and Spring 09 (as of 2/9/08).

UAS KETCHIKAN	Fall 08 HC 525	Fall 08 SCH 2,616	Spring 09 HC 497*	Spring 09 SCH 2,387*

HC=Headcount is number of students enrolled SCH=Semester credit hours
***Spring HC/SCH are as of February 16, 2009 – those numbers will increase with the delivery of Marine Transportation courses that are offered mainly in the spring.**

3-Number of degree-seeking vs non degree-seeking students—students currently enrolled this spring.

Degree seeking students enrolled in Ketchikan programs = 98
Non-degree seeking Ketchikan NODS (undeclared) = 191
Other campus degree seeking students/NODS students = 285

Full time students (12 or more credits) = 33**
Part time students (less than 12 credits) = 541
****This represents students taking 12 credits from Ketchikan and does not include those that may be taking 9 credits from Ketchikan and 3 credits from UAA, UAF, or the Juneau campus. Those students are still considered fulltime, but just not in Ketchikan's count.**

4-Does your college work with local high school(s) by offering dual credit courses? If yes, approximately how many courses can be taken for dual credit?

We work closely with the Ketchikan Gateway Borough School District to facilitate Tech Prep agreements with all the campuses in the UA system and for dual enrollment in workforce development courses on the Ketchikan campus. KGBSD has advanced placement courses so rarely do high school students come to UASK for those courses. Student over the age of 18 are welcome to enroll in any course offered locally or via distance and students under the age of 18 may enroll with appropriate counseling, parental consent and faculty approval.

5-Does your campus provide Adult Basic Education/GED services to people in your community? If so, how many students on average do you provide these services to each semester?

Yes, UASK is the sub recipient of the adult basic education grant administered from Southeast Alaska Regional Resource Center. With those grant funds we are able to offer GED preparation classes and GED testing services to Ketchikan and surrounding communities. Adult basic education courses and ESL courses continue to be on the list of desired course offerings, however due to a lack of resources we are unable at this time to offer ABE and ESL courses.

6-Challenges

The ongoing challenge continues to be a lack of resources for program growth and development. The Ketchikan campus adheres to the regional strategic plan, identifying specific strategies appropriate for the community, and implements curriculum and programs according to the identified priorities that meet the needs of students and the community. This focus provides for allocation of resources to implement the priorities but when growth is needed due to success in the existing program the resources do not allow for additional staff and faculty to continue to meet the demand of the growing student population.

Of particular need is in student services for off campus students. The Ketchikan campus has used Title III and other grant funding to build outreach centers in rural communities and online students services programs to support off campus students. These programs will continue in a reduced capacity at the termination of the grant funding but really should be expanded regionally as they have successfully engaged students in the rural areas of southern southeast Alaska.

7-Anything else you want to discuss or make the committee aware of?

The Ketchikan campus has grown the delivery of distance online courses over the past five years and as a result has met the needs of students statewide and has experienced significant growth. Other campuses are growing their distance offerings as well, however it is done without much encouragement of collaboration and causes great confusion for our students. The university has struggled with this distance dilemma for a long time and awaits a report from the department of legislative audit on the UA distance program. I am hopeful that through your increased knowledge of this issue and the collaborative disposition of the campus directors the university can create a robust distance program that serves students to the best capacity possible.

Elementary School

2nd grade: "I Know I Can"
UA College Savings Plan, ACPE

This in-classroom activity brings college graduates into elementary school classrooms to read the "I Know I Can" storybook. This event is intended to connect higher education to career paths while instilling the message that college is possible.

6th grade: "Dream Big" poster
UA College Savings Plan

This poster encourages students to "dream big" and to start thinking about college and career paths. It is distributed to every sixth grade student and classroom in the state.

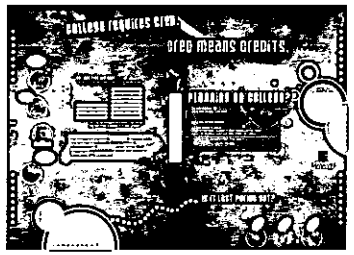
Middle School

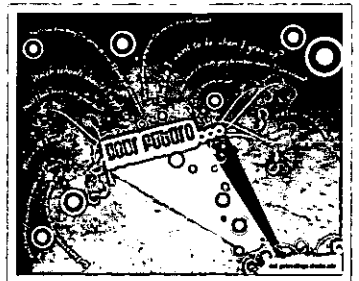
5th – 6th grade: "I'm Going to College"
ACPE, UA, NELA

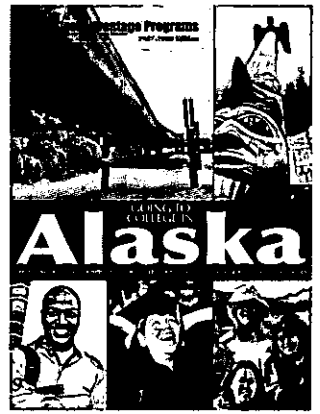
This program is designed to give last-year elementary students a chance to learn how to become a college student – and see firsthand what it will be like. In their classrooms, students explore different types of colleges, financial aid and careers throughout the 12-session curriculum. Then students are given the opportunity to become a college student for a day. UAA, UAF and UAS all sponsor "I'm Going to College" events in partnership with Northwest Education Loan Association (NELA) and ACPE.

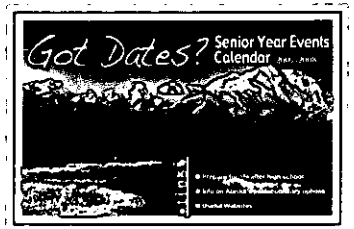
5th – 8th grade: "College is for YOU!" classroom poster
ACPE

This poster encourages late elementary and middle school students to visualize themselves as "college material." It is distributed to classrooms across the state.









High School

8th grade: "Chart your Course" newspaper
ACPE

This annual publication, authored in part by middle school students and mailed to eighth graders and their parents, illuminates the K-16 pathways and highlights careers in Alaska.

9th grade: Book cover
UA

This book cover emphasizes taking college preparatory courses and assessment tests while in high school. It is delivered to all high schools for distribution to every freshman in the state.

9th grade: Viewbook, gotocollege website, Parent Companion Piece
UA

The viewbook, mailed to all 9th graders, highlights the benefits of higher education, what to do to prepare for college and explores career pathways.

11th grade: "Going to College in Alaska" magazine
ACPE

This magazine promotes the higher education options available right here in Alaska. It is mailed to every high school junior in the state.

12th grade: "College Goal Sunday" program
ACPE, UA, The Coalition of Alaskans Supporting Higher Education (CASHE)

This two-hour event, held in early February throughout Alaska, helps students and their families fill out the Free Application for Federal Student Aid (FAFSA).

12th grade: "It's My Life" senior planner
ACPE

This publication includes tips on preparing for life after high school, going to college, career planning tools, important testing dates and information on Alaska colleges, universities and technical schools.

THE UNIVERSITY OF ALASKA COLLEGE SAVINGS PLAN

AlaskAdvantage
Alaska Commission on Postsecondary Education

The university's largest early outreach program, the UA College Savings Plan and Alaska's higher education agency, the Alaska Commission on Postsecondary Education, are dedicated to promoting and supporting higher education for all Alaskans. Each year thousands in Alaska are impacted by their awareness efforts which span early elementary, middle and high school. The primary initiatives and publications implemented by these organizations are highlighted in this brochure.

Education in Alaska is at a critical juncture –

Alaska's youth graduate from high school and go to college at a lower rate than their peers in other states. Working to change this disturbing trend are the University of Alaska, the UA College Savings Plan and the Alaska Commission on Postsecondary Education (ACPE).

Our efforts ensure that every young Alaskan hears early and often the benefits of staying in school and earning a high school diploma, and the difference that higher education will make to their future. These programs instill in them the knowledge that higher education is within their reach, even if they are the first in their family or community to take that step. Our outreach programs communicate to the youth of Alaska that for them and financial aid is available. It is our hope that these programs make a positive impact on their future.

Representative Paul Seaton, Chair
House Education Subcommittee
State Capitol
Room 102
Juneau, AK 99801-1182

March 10, 2009

Dear Representative Seaton,

I appreciated the opportunity to represent the Bethel, Alaska, Kuskokwim Campus of the University of Alaska Fairbanks at the House Education Subcommittee last week in Juneau during the Community Campus Directors' Conference.

Enclosed are some letters composed by several students who are involved in the placed faculty UAA School of Nursing program here at KuC in Bethel. As you can see from their letters, having a program such as this in their home communities made it possible for them to realize their dreams and secure their futures by obtaining training for good, competitive jobs. Most articulate that they would not have been able to do this without a local rural campus to attend.

I know you are a firm supporter of the University of Alaska rural campuses and their missions. If these letters will help in your efforts to bring others in the legislature into the fold, feel free to use them.

If I can assist you in any other way, please contact me.

Sincerely

Susan M. Baird

I am greatly appreciative of the ability to study nursing through UA whilst still remaining at home in Bethel. Were it not for the nursing program through UA I would not be able to study nursing as I have a young family and would be unable to move to Anchorage. I have been able to take my nursing prerequisites for nursing right here in Bethel also.

My goal is to graduate nursing school and work in some nursing capacity in the YK Delta. Once again, were it not for the UA system I would be unable to achieve this goal.

Sincerely,

Kevin Phelan

February 16, 2009

To whom it may concern:

My name is Nikki Pollock, I live in rural Alaska, and I am a student in the University of Alaska system. I believe that if it were not for the community college in Bethel, I would not benefit from the college education I have received.

I was introduced to the Kuskokwim Campus during the Fall semester of 2007. I was enrolled as a part time student taking 6 credits. These classes were comprised of Oral communication and Introduction to Psychology. I received a wonderful education, these classes expanded my thinking process, and my perception to cultures.

The next semester Spring of 2008 at, KUC was still part time, however I was taking 9 credits. I was able to take English, Life Span Development Psychology and Anatomy and Physiology. During the summer vacation of 2008, I took Health and Nutrition. I am grateful that these classes. They are a part of my pre-requirements in the Associates of Applied Science Nursing Degree.

I am currently enrolled in the University of Alaska Anchorage School Of Nursing. I am so grateful that the University of Alaska has distant branches, where students have the ability to stay close to home and receive a college education. I am positive, that if there was not a community college in Bethel, I would *not* be enrolled in nursing cohort.

The University of Alaska system has done wonders for the people of Alaska. The system has produced cognitive, well educated people, who are a asset to the community. If you have any questions concerning the University of Alaska, please feel free to contact me by mail.

Respectfully Submitted

Nikki Pollock, NS

February 13, 2009

To Whom It May Concern:

My name is Kristen Kinegak and I am attending school here in Bethel. I am taking an audio conference course out of the University of Alaska-Fairbanks. I am also a nursing student with the University of Alaska-Anchorage School of Nursing Program which is Bethel based.

I have been taking classes for over ten years on and off. I live here in Bethel, but am originally from Akiachak. I am very fortunate to attend school here as well as other students from the YK-Delta. It is close to home and I don't have to travel abroad to attend college. The staff at the Kuskokwim Campus is very helpful and very friendly.

Since I started the Nursing program, I have learned a lot. I am so exuberant that it is Bethel based. Having a nursing program in Bethel is excellent! Students who want to pursue a nursing degree or any kind of degree can come to Bethel and be a part of the University of Alaska system. They don't have to go to Anchorage or out of state to pursue it. When I am finished with nursing school, I plan on working for the hospital here in Bethel and I will continue to live here as well.

I currently work as a Certified Medical Assistant. My goal was to further my education to pursue nursing which I am able to do it here at the local college. If I weren't able to further my education here, I would have to take my family and leave Bethel which I would not want to do. It is with great pleasure that University of Alaska system has a college in Bethel, great pleasure!

K Kinegak

February 13, 2009

To Whom It May Concern:

I am an Alaskan Native woman from the Yukon Kuskokwim Delta Region. Since I was a young girl, I have always wanted to become a nurse. My younger sister passed away from a rare liver disease and ever since then I knew I wanted to be part of the health care system.

I started my health care career with UAA in 2003, with the passion of becoming a Registered Nurse. I have yet to obtain my degree in Nursing, and although, I have to say that I could not have done it without UAA's nursing outreach programs.

UAA has several outreach Nursing programs though out the state of Alaska, and I think it helped me tremendously, because all of my family is from around the Bethel area.

Besides that, when I was going to school at UAA in Anchorage, I found out that the Nursing program there had a three year waiting list, and I couldn't afford to wait three years to get into the program. I was so lucky to be accepted to the Nursing program at the Bethel Site. I am finished with the Nursing program here, if I waited in Anchorage, I would have not started the Nursing program until next year.

UAA is doing their part in helping rural Alaskans to obtain their degree without traveling to Anchorage to get their degree. I am very grateful that UAA has outreach programs through out Alaska.

Please let UAA continue to get funding for education purposes. We, the people from the rural communities need UAA continuing support for higher education.

Gracie Nelson, former UAA and graduate from UAA

3/9/09 AVANT-GARDE LEARNING FOUNDA-TION

Testimony to the House Education Subcommittee
By Don Shackelford
Vice President Avant-Garde Learning Foundation
March 9, 2009

Mr. Chairman and members of the sub-committee, my name is Don Shackelford and I am vice president of the Avant-Garde Learning Foundation. I'm a former high school English teacher, principal, assistant professor at UAA and director of the Alaska Partnership for Teacher Enhancement at UAA. I graduated from West Anchorage High School and Alaska Methodist University and received my master's degree at UAA. I have lived in Alaska for 47 years.

Thank you for inviting me to speak to you today about the Foundation and the work we are doing in our state. We are first and foremost an educational foundation, devoted to improving teaching and learning in Alaska. Avant-Garde, since its inception as a nonprofit organization in January of 2006, is committed to improving public education through the use of innovative, scientifically based practices and processes and by forming strong partnerships with school districts, colleges and universities and corporations.

Recently, our Board of Directors voted to make Kameron Holloway Perez-Verdia our Chief Executive Officer. Kameron was raised in Barrow and has extensive experience working with and running several nonprofit organizations, both in Alaska and Outside. We are pleased to have him return to Alaska to take the leadership at Avant-Garde.

Our founder and President, Dr. Shirley Holloway, is someone many of you know from her years of public service to Alaska's children as a teacher, principal, superintendent, college president, commissioner of education and member of the state school board. Her vision for the Avant-Garde Learning Foundation was to create a nonprofit organization that would help fill in the gaps in our educational system and find innovative ways to leverage our

strengths, to work together collectively, and to experiment with pilot programs that could conceivably become permanent aspects of our educational system if they were proven to be effective. Our efforts, then, have been devoted to creating educational programs and initiatives, several examples of which members of the subcommittee have before you in the packet that was provided for this testimony. Please allow me to speak to some of our efforts.

Our largest project is the Alaska Native Teacher Initiative. Shell Oil contacted Avant-Garde two years ago and asked us what sort of community support they could provide in several geographic areas of interest to Shell in our state. Dr. Holloway visited communities in rural Alaska and asked Elders, mayors, school district superintendents, community leaders and others about their needs and what most needed to be done to improve the lives of those who reside in rural Alaskan communities such as theirs. Without exception, communities reported that there was an urgent need for more Alaska Native teachers in their schools. Community members mentioned the need for appropriate role models for their children and superintendents talked about the high turnover of teachers in their schools.

From that, Dr. Holloway put together a group of thirty educators, several of whom were Alaska Native, and community members as a Design Team that held its meetings from January to May 2008. The Design Team became the vehicle for creation of the Alaska Native Teacher Initiative. Five school districts - Aleutians East, Bristol Bay, Lake and Peninsula, North Slope and Northwest Arctic and five institutions of higher learning – Alaska Pacific University, Bristol Bay Community College, Chukchi Community College, Ilisagvik College, and the University of Alaska Southeast – became our original partners in the Initiative. After months of meeting and working together, the design team crafted an initiative that supports rural Alaskans in their efforts to become teachers. As a result of the Design Team's work, and through generous financial support from Shell, Avant-Garde now

supports a cohort of 33 students who are currently taking their first course together this spring. We are also indirectly supporting some 97 students in our partner higher education schools through funds devoted to giving teacher candidates the supports the Design Team designated as essential to recruiting and retaining Native and other rural Alaskans.

Our Design Team found several previous teacher education programs that were designed for rural Alaskans, and two current programs, RANA at APU and PITAAS at UAS. These programs produced many Alaskan teachers, including many who are still on the job, and several who were on our Design Team. We found that a highly focused and clearly intentional process whereby teacher candidates receive a great deal of support – financial, personal, cultural and educational – maximizes the candidates' chances of becoming certificated Alaska teachers. If you are at all familiar with the UAA ANSEP program, with its focus on strong and consistent supports for its engineering candidates, you have some idea of what we mean. However, Avant-Garde's Alaska Native Teacher Initiative is de-centralized and divided between our five partner school districts and institutions of higher learning, and thus literally spread across the state.

We have contracted with the Institute of Social and Economic Research (ISER) at UAA as our evaluator for this and all our projects. ISER will help us monitor the progress of the Initiative by following our students all the way through the first years of their teaching. Our intent is to create a data-driven profile of our Initiative and to analyze the impact our students make on their students in the public schools. If we are correct in our assumption that people from a culture who are well trained and prepared as teachers will have a positive impact on student performance, and that these teachers will remain on the job in village schools for the duration of their careers, or certainly far beyond the tenure of most teachers from outside the village, then we will be back before this subcommittee and the legislature talking about how we can expand this Initiative.

This fall, we hope to add the University of Alaska Anchorage to our Alaska Native Teacher Initiative. We are currently seeking Federal funding for our second cohort of teacher candidates. Many of our candidates are paraprofessionals who are currently working in their village schools. Avant-Garde also wants to reach down into the middle and high schools of rural Alaska to encourage and support young people who want to become teachers. We also plan to include two new school districts this fall, Southwest and Dillingham City Schools, as partners. The Alaska Native Teacher Initiative is an exciting effort and we are dedicated to making it a success. Our students and our communities deserve the very best in the field of education.

Another effort with which Avant-Garde is involved is the Alignment Study that was conducted for us by ISER. Part One of the Study, which was paid for by Shell Oil, was published in time for the Commissioner of Education's Summit last November. The question we asked ISER to explore was: What are the gaps in Alaska's public education system that are holding students back from academic success? The Alignment Study found two major areas of concern. The first was the fact that many young people enter school already behind their peers in terms of academic readiness. The need for quality early childhood education would seem to be the answer to this issue although there are obvious fiscal implications. The second problematic area identified by ISER was in high school and the apparent disconnect between high school graduation and college entry. The Study found that after passing the High School Graduation Qualifying Exam, many students consider their high school career over. The fact is, the HSQE is essentially an eighth grade test taken by tenth graders, who upon passage of the test are not adequately prepared for post-secondary education. High school students need to be challenged to take more demanding courses, tackle difficult subjects like another language and be counseled to become better prepared to enter college or the workforce. Moreover, the University of

Alaska's academic expectations for entering freshmen are often murky and difficult to fathom. A stronger connection needs to be made between high schools and our institutions of higher learning. Too many of our high school graduates are required to take non-credit "developmental" courses as freshmen in order to meet the minimal requirements for college-level English and mathematics courses.

Avant-Garde is interested in data-driven discussions that move us beyond educational decisions that may not be based in fact. We also want to help create a dialogue between educators, citizens and policymakers that will help us creatively and decisively address issues of common concern. This is why we commissioned the Alignment Study and why we are seeking funding from this legislature for the second part of the study so that we can look more closely at the identified problem areas and help clarify where we need to go as a state.

Another of Avant-Garde's projects is an online essential skills program for students in primary through high school called Skills Alaska. It employs two pieces of technology, Skills Assessment and Skills Tutor. Skills Assessment is an instrument used by students, parents and teachers to accurately assess students' math and language arts skills. Skills Tutor is a program that provides skill-building lessons for students in math and language arts. Over forty percent of Alaska's public school students in seven school districts have access to Skills Alaska, and over the years we have gathered data that show significant improvement in students' skills when they faithfully utilize the programs. Teachers who utilize Skills Alaska report favorably on the diagnostic tools and the flexibility that allows them to create class, small group and individual lessons for students in need of building their skills. Funding for Skills Alaska is currently being provided through United States Department of Education sources. The school districts involved with Skills Alaska are Aleutians East,

Anchorage, Bristol Bay, Galena, Kenai, Kodiak, Lower Kuskokwim and Nome.

These are examples of Avant-Garde's current work. We are excited by the positive reception we have gotten from other Alaskans and the amount of cooperation we continue to receive from our partners in education. We are optimistic about helping improve teaching and learning in our state. By forging partnerships between institutions and entities with common aims and concerns, we are creating a new way of looking at and solving our educational problems. Avant-Garde's clients are the students of Alaska. Our pledge is to help them receive a first-rate education, no matter where they live, rural or urban. Our commitment is to continue finding ways to leverage our state's strengths in order to address our educational weaknesses. This is why Avant-Garde was created, and this is why we hope to continue to play a pivotal role in public education in Alaska.

Thank you, once again, for this opportunity to brief you on our work at the Avant-Garde learning Foundation.

AVANT·GARDE
Learning Foundation

The Alaska Native Teacher Initiative

Recognizing that Alaska faces unique challenges in recruiting and retaining quality teachers, and given that nearly twenty-five percent of our students are Alaska Native, yet only five percent of our educators are, the Avant-Garde Learning Foundation, through funding from Shell Oil, has designed an initiative that addresses these critical issues. In January of 2008, thirty-five Alaskan educators from around the state, including several distinguished Native educators, began work as a design team that would eventually create the Alaska Native Teacher Initiative. The group's charge was to build a path for rural Alaskans to become teachers in their communities with as much support and as few obstacles as possible. The Initiative's first pool of candidates would be drawn mostly from paraprofessionals already working in rural schools. The design team focused on ways to recruit and support teacher candidates effectively, in full recognition of the candidates' unique situation as Native community members living in rural Alaska and often as mature heads of households.

Working in conjunction with five rural school districts and five of Alaska's institutions of higher education, the design team created an approach that supports teacher candidates and that recognizes and honors their Native knowledge and their prior learning. The Initiative takes advantage of lessons learned from previous Native teacher efforts and has incorporated valuable information from teacher recruitment and retention data in its design. In addition, Avant-Garde commissioned a parallel Alignment Study, which provided timely information on gaps in Alaska's overall public education approach, with particular emphasis on the need for strong universal pre-school programs and the urgent need for a better transition from high school to college. Particularly disturbing were data indicating a student dropout rate of epidemic proportions. Rural schools face unique challenges, not the least of which is the need for qualified teachers from the villages who understand students in ways only those who live there can, and who are, naturally, committed themselves to living in the villages.

In January of 2009, the first group under the Alaska Native Teacher Initiative, a cohort of thirty-seven candidates, met in Anchorage for a week to begin or continue their journey toward becoming teachers. Thirty-two of those candidates were Alaska Native and all of them live in rural Alaska. This cohort will continue their initial course through the spring, utilizing both face-to-face and distance learning. The candidates will receive continuing support through their districts, from their local colleges and universities, and from Avant-Garde, as they progress toward the day when they will join the ranks of Alaska's teachers. More cohorts are planned for the future with an eye toward recruiting young people who are currently in school through Future Teacher clubs and other endeavors that will begin to attract Alaska's youth to the teaching profession.

This Initiative is possible only as a result of a strong collaboration between school districts, institutions of higher learning and the communities in which it is working. This collaborative effort is itself a model of how to achieve change in Alaska's educational system. The mutual needs that are shared leads to a high level of cooperation and only through this dynamic could the Alaska Native Teacher Initiative have become a reality.

Performance-Based Teacher Preparation Program

Capitalizing on Opportunities of Rural Alaska Education

Løisaurriŋŋuġluataġniq

Elitnauristekegcaraurcaraq

The process of becoming the very best educator

Program Points of Difference

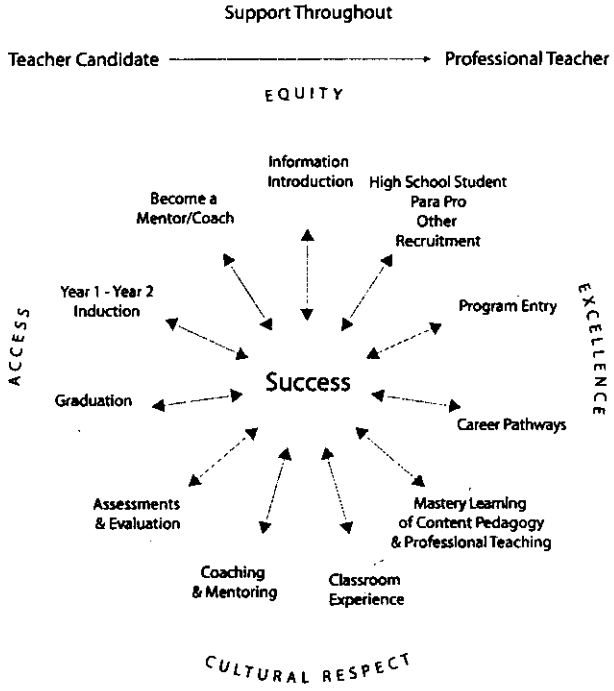
The teacher preparation program is unique in several aspects. First, it acknowledges many students will already have amassed work, life or school experience, and provides student candidates with credit for prior learning.

The program also recognizes the challenge many rural students face in having to travel to obtain an education, which is why an emphasis is placed on delivering the program in the candidate's home community.

The program also strives to be culturally respectful and responsive to the needs of Alaska Native teacher candidates.

Finally, mentorship and advising is a key component of the program. The chart below visually demonstrates the continuum of support offered to students throughout their journey from teacher candidate to professional teacher.

The Learning Circle



Capitalizing on Opportunities of Rural Alaska Education

Rural Alaska is facing serious challenges when it comes to education. Teacher turn-over is high. The number of Alaska Native teachers is low. And teacher recruitment is increasingly difficult.

Avant-Garde Learning Foundation believes the solution to this challenge involves increasing the number of teachers from rural Alaska, which is why Avant-Garde is leading an effort to create a student-centered, performance-based, Alaska teacher preparation program.

By increasing the number of Alaska Natives and rural residents who become teachers, the program is expected to help reduce teacher turn-over, improve student academic performance, be more culturally respectful, and decrease the student drop-out rate.

This collaborative effort involves five Alaska school districts, including North Slope Borough, Northwest Arctic Borough, Aleutians East Borough, Lake and Peninsula Borough, and Bristol Bay Borough, as well as higher education institutions and other agencies. Funding support is generously provided by Shell Oil.

About the Program

OBJECTIVE: To create a student-centered, performance-based, Alaska teacher preparation program based on a strong partnership between school districts and higher education.

VISION: A culturally embedded teacher preparation process built upon access, equity, excellence and success.

MISSION: Grow, nurture and sustain Alaska Native educators to serve Alaskan communities.

VALUES:

- Cooperation
- Collaboration
- Communication
- Personal growth and development
- Respect
- Honor cultural values
- Innovation
- Acceptance

Developing the Program

As a first step in the development of the performance-based teacher preparation program, Avant-Garde has established a program design team, which is comprised of a diverse group of individuals, including teachers, school administrators, university faculty and rural Alaska community leaders.

With input from the leadership team and steering committee, the program design team is in the process of developing phase one of the teacher preparation program, which will be implemented for the 2008 – 2009 school year.

To track the progress of the design team, please visit www.avantgardealaska.org/teacher.html.

Get Involved

If you are interested in supporting or participating in the performance-based teacher preparation program, please contact Don Shackelford at (907) 301-1927 or agfoundation@gci.net, or Shirley Holloway at (907) 250-5618 or shirleyjean58@gci.net.

The enclosed Alignment Study was commissioned by Avant-Garde Learning Foundation and performed by the Institute of Social and Economic Research (ISER) in order to begin the investigation of student preparedness in Alaska. The goal was to create a foundation document for educators, policy makers and the general public that would ask questions about student performance and the gaps that exist in our education system, pre-K through 16.

As a foundational document, it will continue to grow as we learn more about the nature of the problem and possible solutions. The Research Summary was presented in its original form to the Education Summit held in Anchorage, November 13 and 14, 2008.

AVANT-GARDE
Learning Foundation
Leading Edge Resources for Alaska

November 13, 2008

Dear Colleague:

The following Alignment Study was commissioned by the Avant-Garde Learning Foundation in order to investigate troubling questions regarding young Alaskans', readiness for entry into school and preparedness for high school graduates' postsecondary work and college. Conducted by the Institute of Social and Economic Research (ISER) at UAA, and paid for by a generous grant from Shell Oil, this is a first look at critical educational alignment problems in our state. Couched in the necessarily cautious language of prudent social science, the report nevertheless discovers crucial alignment problems in our public school system K through 16 that need to be addressed.

Too many of our pre-school aged children are arriving in kindergarten or first grade unprepared. These early years are the most crucial in a child's learning development. Educators and policy-makers in our state need to take a close look at the data concerning early readiness, recent early childhood research, and successful efforts made in other states to institute quality early childhood education.

Too many of our high school graduates are unprepared for work and careers or for postsecondary education. The data clearly indicate a failure on the part of public education in Alaska to adequately prepare students for life beyond high school. Conversely, the expectations of colleges and universities as to what qualifies as prepared for our graduates varies. The data raise questions such as: What are the academic expectations of high school students in 11th and 12th grade beyond passing the High School Qualifying Exam, accruing credits or reaching district standards? How well are schools assisting students academically to meet the expectations of the world beyond high school? What are the academic expectations of employers, colleges and universities? How do we align these expectations so that students receive the full benefit of a public school education?

Only by answering an educational call to arms can we do the work that is required to answer these and many other questions regarding student readiness and preparedness. The various institutions must begin to work more cooperatively and closely if we are ever going to satisfactorily address the alignment issue. Only through concerted effort, and through a selfless commitment to our students, can this work be done. And there is much that needs to be done. Work groups with specific tasks and missions need to be established. Substantive meetings between P-12, postsecondary education and employers need to be held with the expectation that a tangible plan and product will be the result. Action plans need to be formulated and carried out. Assessment of our progress should be formative in order to guide us with data and analysis regarding the effectiveness of our efforts. Alignment must be an educational priority in Alaska.

This effort will only be possible if the state's leaders and educational policymakers make it a priority. Other states have understood the urgent need to commit to educational alignment and to support the necessary changes with appropriate funding and political capital. This is Alaska's chance to do the right thing for our young people and for the future of our state.

Above all, we need to be results oriented. Our students, be they four years old or eighteen, deserve a seamless quality education second to none. It is our job to provide that to them. Let us begin that work now.

Sincerely,

Shirley J. Holloway, Ph.D.

RESEARCH SUMMARY

R.S. No. 70 University of Alaska Anchorage • November 2008

Connecting a Disjointed System: A First Look At Aligning Education in Alaska

By G. Williamson McDiarmid and Alexandra Hill

We've heard it before, but it's still true: too many Alaska students don't have the skills they need to move on to the next stage of education or to get good jobs. Too many drop out of high school, and too few of those who graduate go on to college or other post-secondary education—and among those who do go on to post-secondary education, many don't graduate within four or even six years.

Employers report that young people entering the work world directly after they graduate from high school (or right after they drop out) don't have the reading, writing, and math skills necessary for many of today's jobs, even entry-level ones.

Alaska is not alone in these problems, but the high-school dropout rate is higher than the U.S. average and fewer graduates go to college. A third of Alaska's high-school students don't even graduate, and only about a third graduate and start college right away (Figure 1).

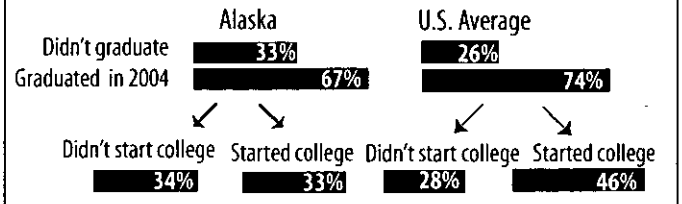
Many states have begun to address these problems by looking at education *alignment*—that is, coordinating the policies, programs, and mechanisms needed to support students as they move through the system from pre-school to elementary and high school and on to higher education or work.

Ideally, education levels would be coordinated so all students were prepared for the next step. In practice, many students—from kindergarten through college, vocational training, or work—enter without the knowledge and skills their teachers, professors, or employers expect. The students and their families are often frustrated that—despite indications to the contrary—they haven't been prepared for the next level. This frustration contributes significantly to the high dropout rates in both high school and college.

This publication summarizes a longer paper on the scope of alignment problems in Alaska and identifies areas where more research is needed or there are no data at all. It concludes with suggestions about steps the state should consider for improving alignment.

To move toward alignment, educators would synchronize their learning goals, curricula, and expectations. K-12 and early-childhood educators would agree on the skills children need entering kindergarten and first grade and how best to assess those skills. Likewise, businesses, higher education institutions, and schools would jointly determine the skills required for high-school graduates entering the workforce or college. To ensure that policies and resources supported such alignment, policymakers would need to collaborate in the process, working with educators from various education levels.

Figure 1. Students Who Started High School in 2000



Source: Digest of Education Statistics 2006

Transitioning to School: Early Childhood Education

We'll talk first about early childhood education—that is, education children receive before entering kindergarten. This is important, because several longitudinal studies have shown that children who receive high-quality early education are less likely to need special education or drop out, and as adults earn more and are less likely to commit crimes and receive welfare.

Alaska is one of only 12 states with no state-funded early education. It has federally mandated special education pre-school and federally funded Head Start programs in many communities. These programs together enroll about 16% of Alaska's 3-year-olds and 22% of 4-year-olds. Many more students in urban areas are enrolled in private pre-schools.

Overall, about two-thirds of Alaska children attend some sort of pre-school, according to the 2007 State Preschool Yearbook. But there is little information on how well these various programs prepare students to enter school.

How Many Alaska Children Aren't Ready for School?

The main source of data on Alaska children's readiness for school is the Developmental Profile. Teachers administer this assessment when children enroll for the first time in public school, usually kindergarten but sometimes first grade. The profile includes information on many aspects of development—physical and social, language and literacy, and cognitive.

Teachers rate children as "routinely," "inconsistently," or "never" exhibiting 11 measures of school readiness.

Data from recent profiles show that fewer than 5% of children rate "no" in physical well-being and social development. But about 10% fail to demonstrate the requisite skills in each of the areas of language and literacy development and cognitive development. Between 20% and 50% demonstrate these behaviors "inconsistently."

ISER and Avant-Garde Learning Foundation jointly carried out this research, funded by a grant from Shell Exploration and Production Alaska.

These statewide results mask wide variations among districts. In many, more than one-third of entering students don't meet some of the readiness measures, and in a few 60% or more don't. Those districts lose valuable time trying to catch children up, and some children never catch up.

What are the Limits of the Data?

We don't know how effective Head Start programs are. Some school districts with communities served by Head Start have Developmental Profile results similar to the state average, while in others the majority of children are rated as deficient on one or more measures. Little research has been done on what approaches are most effective for preparing Alaska Native children for school. Also, we lack data on the extent to which Head Start grantees coordinate with local school districts or with each other.

Districts report Developmental Profile results to the state without identifying individual children. Although the profile is a useful tool for teachers and parents, the lack of identifying information means the data cannot be disaggregated by student characteristics such as ethnicity, gender, or socio-economic status. Therefore, the profiles are not useful for tracking efforts to improve Alaska children's school readiness or for exploring the effectiveness of different programs.

Transition From High School To College or Work

What is the Issue?

Many Alaska high-school students graduate unprepared for post-secondary education or work. Alaska's colleges and universities find that many of their entering students—even those with good grades in high school–aren't ready for college-level work.

A 2006 national survey of 431 employers, published by Partnership for 21st Century Skills, reported that 42.4% of the respondents rated new entrants with high-school diplomas as "deficient" in their overall preparation for the entry-level jobs they typically fill, and 45.6% rated their preparation as "adequate" Almost no one (0.2%) rated their preparation as "excellent." Anecdotal information from Alaska employers suggests that Alaska's high-school graduates are no different from their counterparts Outside.

Available data also indicate that many of Alaska's high-school graduates are not prepared for college—but even within Alaska, what constitutes "prepared" can differ among institutions.

How Prepared Are Students for College?

The majority of Alaska students who enroll in college in the state go to one of the three University of Alaska campuses—Fairbanks (UAF), Anchorage (UAA), or Southeast (UAS). All three require students to demonstrate they're prepared for introductory level courses in English and math, through previous test scores (such as the SAT) or university placement tests.

Some requirements are similar across all campuses, but others are quite different. Table 1 shows (in abbreviated form) requirements to place into "freshman level" English. The information in the table raises two issues. First, it's neither easy to find nor to interpret. While academic advisors at the universities certainly know and can explain the requirements, prospective students, their parents, and teachers may be unable to get any clear sense of the actual skills and knowledge students need, or how they will demonstrate their proficiency. The other notable point is the difference in SAT/ACT scores required for entry into English 111 at UAA and UAF: SAT of 530 versus 430, ACT of 22 versus 17. That means students must score a bit above the mean (about 59th percentile) at UAA, but in the 20th to 30th percentile range at UAF.

Table 1. Prerequisites for ENGLISH 111 at University of Alaska

Campus	ACT	SAT	Accuplacer*	Other
UAF	17	430	Not mentioned	COMPASS (52) ASSET (45) HS GPA 3.0 or higher and permission
UAA	22	530	180 combined reading and sentence skills, including at>=85 reading, >=95 sentence skills	
UAS	n/a	n/a	454 combined essay, reading, sentence skills, including >=92 in both reading and sentence skills	Not mentioned

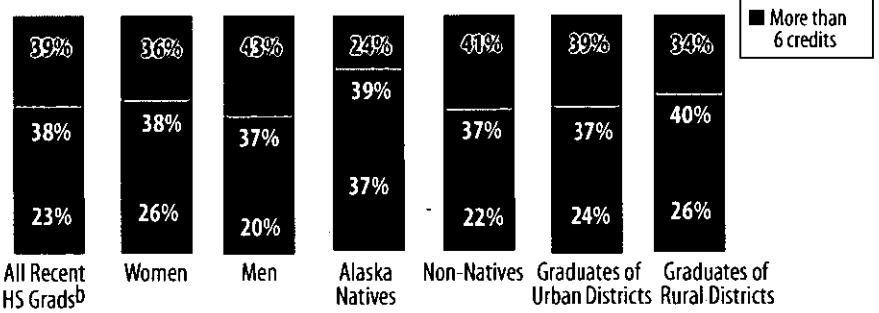
*Accuplacer scoring is not a simple cut-off score, but rather a set of minimum total score and subtest scores, simplified here for comparison.

Students assessed as unprepared are directed into "developmental" courses—which often don't count towards their degrees.

Data available at UAA allow us to see how many entering students had to take developmental courses. Among recent high school graduates enrolling at UAA for the first time, 60% take at least one developmental course. Almost one-quarter take more than 6 credits of developmental courses (Figure 2).

This analysis includes all students who enrolled at UAA for the first time in the fall semesters from 1998 through 2007. Further, we focused on "recent high-school graduates," defined as those who had graduated from high school either the same year as they enrolled at UAA or one year earlier. Thus, for example, students entering in fall semester 2007 were considered recent graduates if they had graduated in 2007 or 2006. Over the 10 fall semesters we examined, 15,713 recent high-school graduates enrolled.

Figure 2. Developmental Course Credits Taken by Recent High-School Graduates at UAA[a]



[a] Students who enrolled at UAA for the first time in fall semesters 1998 to 2007

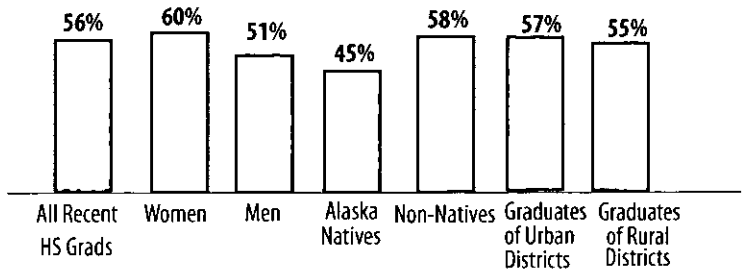
[b] Those who graduated from high school either the same year or one year before they enrolled at UAA

Source: UAA Office of Institutional Planning, Research, and Assessment

We disaggregated the data on recent high-school graduates to look at the numbers of Alaska Natives and non-Natives, men and women, and graduates of urban or rural Alaska high schools. Ethnicity was self-reported. Urban graduates are those who graduated from high schools in the Anchorage, Fairbanks, Juneau, Mat-Su or Kenai school districts; rural graduates are those from all the other districts. (About 15% of recent graduates were from other states or countries, or the location of their high school was unknown.)

It's worth emphasizing that all but one of these sub-groups averaged high-school grade point averages (GPAs) of 3.0 or better. Men's average GPA was 2.98. We looked at the number of developmental credits these students took, categorizing these as none, 1 to 6 credits, or more than 6 credits.

Figure 3. Percent of Recent Alaska High-School graduates Who Passed Developmental Courses They Took (By Course Type and Credit)



See Notes, Figure 2. Source: UAA Office of Institutional Research, Planning, and Assessment

Figure 2 shows that men are somewhat less likely to take developmental courses than women and to take fewer credits if they do. This may mean that men score better on placement tests (despite their slightly lower GPAs), or that they disproportionately enroll in programs that don't require college-level English or math (e.g., certificate programs in vocational fields). It's also possible that they are more likely to find ways around enrolling in recommended developmental course work—such as getting the professor's permission to enter a college-level course.

Alaska Natives are about 30% more likely than non-Natives to take at least one developmental course, and about 70% more likely to take more than 6 developmental credits. Graduates of rural high schools are somewhat more likely (about 8%) than graduates of urban high schools to take developmental courses.

How do the thousands of UAA students who take developmental courses do? Unfortunately, they're not highly successful. Overall, recent high school graduates pass just over half the developmental courses they attempt (Figure 3). Women are more successful than men and non-Natives more successful than Alaska Natives. There is little difference between students from urban and rural high schools.

How Prepared are High-School Graduates for Work?

Alaska's students may graduate from high school unprepared for today's careers as well as for college. Although we lack comprehensive data for the state, we do know that employers often report they can't find qualified applicants for their openings. They also report that many of today's technical careers require as much mathematics or writing as entry-level college work.

A 2003 report on vocational education in Alaska noted that as accountability mandates and high-stakes testing were instituted between 1997 and 2003, the resources available for and participation in career and technical education in secondary schools declined. But no systematic data are available on how well prepared Alaska high-school graduates are to enter the workforce.

Do Current Requirements Prepare Students?

We've reported evidence that many of Alaska's students leave school unprepared for either college or work. But since many of these students did graduate from high school, does that imply that meeting the current graduation standards isn't enough to prepare students for college or work?

Alaska's state standards in English and math stop at the 10th grade level; science standards include 11th grade. The High School Graduation Qualifying Examination (HSGQE) is also the 10th grade level Standards-Based Assessment. Most districts require, in addition to the HSGQE, specific courses for graduation, without specifying the expectations of those courses. Others require students to demonstrate a particular level of proficiency in several areas.

The published high-school graduation requirements of the districts we reviewed (Anchorage, Bristol Bay, Aleutians East, Lake and Peninsula, Northwest Arctic, North Slope and Chugach) didn't make it clear whether those requirements went beyond the state's 10th grade standards. Although it was beyond the scope of this study to review all 53 districts in the state, we interviewed superintendents of four districts (Chugach, Aleutians East, Lake and Peninsula and Bristol Bay) and four principals in two of those districts. We asked them about their academic expectations for 11th and 12th graders, and whether they believed their graduation requirements ensured that graduates would be to be prepared for post-secondary education, job training, or work.

The superintendents and principals expect 11th and 12th graders to have passed the HSGQE and to be on track to graduate. They also expect those students to begin focusing on preparing themselves either for college or for work. They emphasized that students need to go beyond the graduation requirements to be fully prepared for college or work.

Some districts reported that teachers tell their students the minimum graduation level of work is equivalent to about 10th grade and will not prepare them for college-level coursework. And all the respondents said students have opportunities to learn far more than the minimum—and that too few students take advantage of those opportunities.

Summary and Recommendations

Reviewing national research and available data on Alaska, we see that:

- Up to one-third of Alaska children enter the public schools with no pre-school experience.
- In some school districts, more than half the entering children don't demonstrate all dimensions of school readiness educators expect to see.

• Research predicts that these students are more likely to need special education services and to drop out of high school.

• In the small sample of districts we canvassed, just meeting the high-school graduation requirements does not guarantee graduates that they are prepared for college or for technical training.

• Many high-school graduates who do enroll in Alaska universities find they are not prepared for college-level work.

• Employers report that they find many recent high-school graduates unprepared to embark on careers.

To address these problems—especially lack of alignment—effectively will require coordinated efforts among parents, educators, policymakers, and researchers. One approach that many states (30 as of 2006) are using is formal councils established to address problems from pre-school through college. A review by the Education Commission of the States found that while the specific membership, funding structures, and goals differ, such organizations typically aim to:

• Expand access to early learning for children ages 3 to 5, and improve their readiness for kindergarten

• Smooth student transitions from one level of learning to the next

• Close the achievement gap between white and minority students

• Upgrade teacher education and professional development

• Strengthen relationships between families and schools

• Create a wider range of learning experiences and opportunities for students in the final two years of high school

• Improve college readiness and college success

The commission also reported several states' successes, including reducing achievement gaps, increasing success on advanced placement testing, and raising higher education enrollment.

To be effective, councils need to work within a shared vision of the total system and commit to long-term efforts and real change. Andrea Venezia, a noted education researcher, cautions that, "convening a commission and holding cross-system discussions may be helpful, but these steps alone will not create meaningful K-16 reform. To be lasting and effective, the deliberations must be anchored in policy and finance reform and must reflect each state's culture and history." Any effort that hopes to be successful will have to convene key stakeholders, determine what additional data and analyses are necessary, undertake those research efforts, identify potential solutions, and make recommendations for change.

In our discussion we've identified both problems in the education system and gaps in the Alaska data. What don't we know?

• We need better data on children who enter school unprepared: numbers, areas of unpreparedness, pre-school experience, and progress in elementary school. The new Developmental Profile assessment, aligned with the state's early learning standards, has the potential to provide some of this information, if the Department of Education and Early Development is authorized and funded to link profile information with later student data and analyze it.

• We need better information on dropouts: numbers, demographics, and subsequent educational experiences and GED completion.

• We need to understand what districts expect of their 11th and 12th graders, and how they convey those expectations to students and parents. Do students and parents realize that the minimum graduation requirements will leave graduates unprepared for most post-secondary education and training and for many jobs? Do teachers understand what students need to succeed in college level work?

• We need to consider how to collect data about the success of high school and college graduates. If we want to hold high schools and universities accountable for preparing their students, we must be able to measure how well they do so. The state is creating a data system for tracking students in the public schools, from entry through high school graduation. What's missing is the capability to link P-12 data with university data with workforce data. Legal safeguards on data use present a challenge, but it's not insurmountable.

Finally, we hazard a few recommendations.

1. Alaska should create publicly funded, high-quality early childhood education that would be available to all families but voluntary. That would expand enrollment and help ensure that all students are prepared for kindergarten and first grade. Investing in school readiness will save money in the K-12 system and beyond.

2. We need to ensure that our high-school graduates are prepared for college or careers. Whether this should be through more rigorous high-school graduation requirements, better counseling, increased investments in career and technical education, or some combination of these and other approaches is not clear. But too many of our high-school graduates are unprepared for life.

3. The University of Alaska must be involved. UAF, UAS and UAA should communicate, as a single entity, their academic expectations for entering students. Increases in the number and quality of distance-delivery courses mean that students anywhere in the state can take classes, especially at the introductory level, from any campus. They should be able to do so without discovering they are unprepared for beginning college-level work.

4. The state should support these efforts and muster the resources to overcome the inevitable difficulties. Because change across so many institutions and interests is required, leaders should be prepared to persist over the long haul. Establishing a council to coordinate education at all levels is a step in the right direction.

5. Alaska is ahead of many states in developing its longitudinal student data system. It needs to continue to develop that system and improve links with other data systems.

This summary is based on a longer working paper of the same title. It will be available on ISER's Web site, www.iser.uaa.alaska.edu, under Education Studies. That paper includes full references for research cited here.

The authors thank Gary Rice and Yuan-Fang Dong of UAA's Office of Institutional Planning, Research, and Assessment; Diane Erickson of UAA; and the public school superintendents and principals who gave us their time.

Alignment Phase Two

The second phase of our Alignment Study will focus on deepening our knowledge of the gaps that we described in our Phase One report, and building a consensus for action. Specifically, Phase Two will focus on two key areas: early childhood the transition from high school to the work world. It is clear the state faces challenges in both of these areas; however, we need better information on the scope and details of both of these challenges in order to craft effective policy responses.

Research has shown that among education reforms, early childhood education holds the greatest promise of return on investment, from reduced expenditures on remedial and special education in the K12 years to reduced welfare and corrections expenditures in the future. Our Phase 1 study recommended expanding early childhood education opportunities, but there are thee areas we need to understand more fully in order to do so effectively and efficiently. First, we believe there are at-risk children without access to early childhood education, but we don't know how many, or where. We propose to compile the available data on at-risk populations and program enrollment, and supplement that with information collected from Head Start providers in order to quantify the scope of the unmet need. Second, although research demonstrates effectiveness of early childhood education in general, and Head Start in particular, there is no research specific to Alaska on this topic. There are 17 Head Start providers located in all parts of the state, and while data from these programs is compiled nationally, it is not reported at the state level. We propose to help the largest Alaska Head Start providers to compile and analyze their data to show the skills and knowledge levels of children as they enter the program, the gains they make, and their abilities when they exit Head Start for public schools. The third area we need to explore is the alignment between what children know as they exit early childhood programs, and what they are expected to know entering kindergarten. Results of Alaska's Kindergarten Developmental Profile suggest that in some communities there is a disconnect. We will take the results of our exploration of children's growth in Head Start to public school districts, and rxplore the extent of this disconnect and possible ways to improve early childhood-K12 alignment.

The other area where systematic research is lacking is around the readiness of Alaska's high school graduates for the work force. There is substantial and convincing anecdotal information that indicates that many Alaska high school graduates are not prepared to enter the workforce or technical job training. What is less clear is how many of our high school graduates are unprepared, and in what areas. As the state invests in workforce development programs and assessments, we need to better understand both the problem, and how programs and policies in place might address ...

We will look at both sides of this issue. We will draw on national research around the skills employers need and those they find in their new employees reported in "Are They Really Ready To Work?"[1] We propose to interview hiring professionals in Alaska's largest businesses about the skills identified in that report, and the extent to which their new hires have or lack those skills. While our survey will not be large enough to represent all Alaska employers and locations, it will begin to more clearly define the problems to be addressed.

As efforts are already underway to improve high school graduates' work-readiness, the state has chosen the WorkKeys® tool from ACT to help Alaska's high school students, parents and educators assess skills and career readiness. Current state regulations mandate that students in sixth and eighth grades take three of the WorkKeys® assessments, starting with the 2009-2010 school year. Proposed

regulatory changes would delay that to the 2010-2011 school year.

We propose to examine this tool in depth to help the state determine how best to implement it. How do WorkKeys® levels relate to Alaska Standards? What additional information do the tests provide beyond other assessments? How do Alaska's employers view the WorkKeys® assessments and the Career Readiness Certificate™? How do districts plan to incorporate the curriculum and assessments into their counseling and instructional programs? How would middle schools use the sixth-grade results? We will interview personnel at ACT, EED, DOL, and school districts involved in implementing the pilot that is underway to answer these questions.

Phase two will produce two short (2 to 4-page) research summaries, one on early childhood education and one on high school graduates' work-readiness, targeted at policy makers, stakeholders and the general public. In addition we will produce a background report with more detailed information, incorporating the findings from both phases of the study. Both the research summaries and the background report will be available on ISER's web site.

3/11/09 ROUND-TABLE: SCHOOL DROPOUT...

4 AAC 06.075. High school graduation requirements

(a) Each chief school administrator shall develop and submit to the district board for approval a plan consisting of district high school graduation requirements. The plan must require that, before graduation, a student must have earned at least 21 units of credit.

(b) Specific subject area units-of-credit requirements must be set out in each district plan and must require that, before graduation, a student must have completed at least the following:

(1) language arts - four units of credit;

(2) social studies - three units of credit;

(3) mathematics - two units of credit;

(4) science - two units of credit;

(5) health/physical education - one unit of credit.

(c) Transfer students who have earned 13 units of credit while in attendance outside the district may, at the discretion of the district, be excused from the district subject area units-of-credit requirements.

(d) Beginning January 1, 2009, the three units of credit in social studies required under (b)(2) of this section must include one-half unit of credit in Alaska history or demonstration that the student meets the Alaska history performance standards. The provisions of this subsection do not apply to a student who

(1) transfers into an Alaska public school after the student's second year of high school; or

(2) has already successfully completed a high school state history course from another state.

(e) In this section, "unit of credit" means the credit that a student is awarded for achieving a passing grade in a course of study by meeting the performance standards for a course of study as prescribed by a local school board.

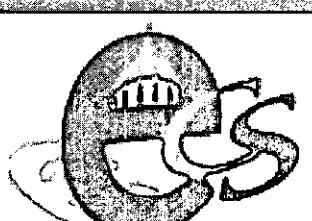
Dropout Prevention: Recent Research and State Policy Responses

Jennifer Dounay
Education Commission of the States

Presentation to Ready for Life Nevada Dropout Prevention Summit
Las Vegas, Nevada
November 12, 2008



Education Commission of the States

About ECS

- 50-state education compact est'd 1965
- Nonpartisan, nonprofit
- Serves all state-level education policymakers and their staffs:
  - Governors
  - Legislators
  - State board members
  - State superintendents
  - SHEEOS and higher education boards

Research (and common sense) — and state policy responses

- Middle grades
- HS curriculum: Rigor and relevance
- Curricular supports: Remediation and adolescent literacy
- Structure of day/week/year
- Push/pull: Parental involvement
- Adult advocates for at-risk students
- Early warning systems and use of data

Middle grades

- Balfanz, Herzog, MacIver 2007 study
- Four grade 6 indicators:
  - Failing English
  - Failing math
  - Attendance 80% or below
  - One or more out-of-school suspension (= failing "behavior" grade)

State policy responses

- RI, LA: Supp. ed. programs/coaching for students below grade level in reading, math
- GA: Graduation coaches in middle schools

Rigor and relevance

- Numerous studies (and common sense)
- Rigor: higher expectations (+ supports)
- Rigor + relevance
  - Dual enrollment
  - Early/middle college high school
  - Academics integrated in career/tech. courses
  - Proficiency-based credit
- Relevance: Individual grad. plans

Rigor: Higher expectations (and supports)

- "College/work ready" core = Min.
  - 4 English
  - Algebra I, geometry, Algebra II
  - 3 lab sciences
  - 3 social studies
- At least 8 states to require
- Alignment with college admissions reqts (some states)

College/work-ready core

- Key to consider:
  - End-of-course or other means to demonstrate attainment of standards
  - High quality, targeted remediation
  - Opportunity for integrated academic/CTE
  - Teacher preparation, professional devt.
  - Public awareness of, support for need
  - **Backmapping from HS to earlier grades!**

Dual enrollment

- RI: Poss. intervention for dist. w/ dropout rate > 15%
  - Course fee waivers for free/reduced lunch
- OR: "Priority" for districts to inform dropouts of Expanded Options
- LA: Articulated credit pilot
- IN: Fast Track to College

Early/middle college HS

- Early college HS: diploma + AA in 5 yrs.
- Middle college: Some PS credits on PS campus
- ECHS: State-level policies in 6 states (CO, MI, NC, PA, TN, TX)
- No ECHS in Nevada?
- Model ECHS policy components:
  - ECS October 2008 report: "Improving Outcomes for Traditionally Underserved Students Through Early College High Schools"
  - search doc 7863 on www.ecs.org

Academics in CTE

- "Math in CTE" program
  - CTE students better than controls
  - Perf. same on CTE skills
- 2001 study of NELS data:
  - Dropout lowest: 3 CTE units: 4 academic units
  - Esp. for at-risk students
  - Dropout increased when CTE ratio rose above this ratio

Academics in CTE (cont'd)

- Key state policy components:
  - Include CTE courses as option in fulfilling grad. reqts.
  - Content stds. (reading/writing/math) that can be integrated into CTE courses
  - Allow demonstration of mastery of stds. via CTE in lieu of academic courses
  - PD for CTE and academic teachers to team teach

Curricular supports: Remediation

- Key state policy components:
  - Students ID'd early in school year, HS career
  - Schools/dist. required to provide
  - Students required to attend
  - Individual learning plan for every ID'd student
  - Program must be evaluated regularly, improved based on evaluation
- October 2008 ECS report: "HS Remediation"
- ECS database

Curricular supports: Adolescent literacy

- Little focus on literacy after grade 3
- Obvious: Literacy is key to success in core academics

Adolescent literacy (cont'd)

- Some key policy components:
  - Students grades 4-12 ID'd for diagnostic reading assts.
  - Literacy stds. aligned with curricula and assts.
  - State supports for local literacy plans
  - Teacher cert. includes adolescent literacy
  - Teacher mentoring/induction in adolescent literacy
  - Teacher PD in meeting adolescent literacy needs
  - Principal incentives to build leadership in adolescent literacy
- ECS 50-state policy database: www.ecs.org/hsdb-al

Alternative pathways to standard diploma

- August 2008 ECS report: "Beyond the GED"
- Key state policy components:
  - Increasing upper statutory age
  - Alternative means to demonstrate competency
  - Flexible (but equally rigorous) credit recovery
    - Online or computer-based
    - Targeted to student need
  - Flexible scheduling and courseloads
    - Indiana School Flex program
  - Funding systems to accommodate flexibility

Push/pull: Parental involvement

- HS parents don't always know what involvement matters
- Areas of policy
  - Developing formal policy
  - Reaching out on academic expectations
  - Accommodating parents' needs
  - Building staff capacity
  - Building parent capacity
  - Developing benchmarks, evaluating impact, revising policies as needed
- August 2008 ECS report (search doc 7848 on www.ecs.org)

Adult advocates for students

- Georgia: Graduation coaches
  - ID at-risk students, keep on track academically
  - AL now piloting program
- Colorado: School Counselors Corps Grant Program
  - Priority to schools w/above avg. dropout rates

Early warning systems/ use of data

- RI: State uses data for program improvement:
  - HS suspensions related to truancy
  - # students re-enrolled in flexible schedule/CC prog.
  - # freshmen with personal literacy plans
  - # students repeating Algebra I or 9th grade math
  - # students repeating 9th grade
  - # students receiving remediation in 9th grade
- RI SEA annual report:
  - Outcomes of district strategies to date
  - How strategies will be modified, based on data

Did you know that we're battling an epidemic* . . . ?

- Almost one-third of all high-school students fail t graduate with their class; among minorities, the dropout rate is almost 50 percent.
- Dropouts are more likely than their peers to be unemployed, live in poverty, have poor health, depend upon social services, and go to jail.
- The combined loss of income and revenue to th American economy from a single year's dropout about $192 billion.

*From *The Silent Epidemic* (Bridgeland, Dilulio, Morrison, 2006)

But there *is* a solution to the dropout crisis that is prover effective, replicable, and sustainable! Communities In Schools (CIS) reaches more than one million at-risk students and their families annually in more than 3,000 American schools. These kids would fall far below the national average for every measure of student success. *98 percent of CIS-tracked students stayed in school.* Wt What makes the difference?

The Last Dropout offers nine key principles that Communities In Schools has tested over three decades. Interwoven are the dramatic life stories of CIS founder E

Introduction 1

The What Works Clearinghouse standards and their relevance to this guide 3

Dropout Prevention 4

Overview 4

Scope of the Practice Guide 8

Checklist for carrying out the recommendations 10

Recommendation 1. Utilize data systems that support a realistic diagnosis of the number of students who drop out and that help identify individual students at high risk of dropping out (diagnostic). 12

Recommendation 2. Assign adult advocates to students at risk of dropping out (targeted intervention). 17

Recommendation 3. Provide academic support and enrichment to improve academic performance (targeted intervention). 22

Recommendation 4. Implement programs to improve students' classroom behavior and social skills (targeted intervention). 26

Recommendation 5. Personalize the learning environment and instructional process (schoolwide intervention). 30

Recommendation 6. Provide rigorous and relevant instruction to better engage students in learning and provide the skills needed to graduate and to serve them after they leave school (schoolwide intervention). 34

Conclusion 39

GATEWAY to COLLEGE

Essential Elements of the Gateway to College Model

All funded replication sites have agreed to replicate the program based on the following essential elements:

- Gateway to College serves dropouts or near dropouts from the age of 16 until their 21st birthday (or as allowed by state law). Replication sites must establish firm criteria for eligibility describing the maximum number of high school credits allowed and other parameters (such as attendance and grades) to avoid offering Gateway to College to students who are not truly at risk.
- Similarly, the program is not designed for students who are so far behind in credits in relation to their age that they could not possibly complete a high school diploma prior to aging out of the program. Students must have the expressed goal to complete a high school diploma.
- Students must meet an eighth grade reading equivalency to enter the Foundation term. Student reading, writing, grammar, and basic math skills must be assessed prior to their acceptance into the program.
- Because Gateway to College is funded through K – 12 per-pupil funds, all students must obtain school district permission to be enrolled, and comply with school district policies for participation. Attendance, student progress, and other measures as required by the K - 12 district must be provided in a timely manner, in order to support effective relationships with the school district and the smooth flow of operating funds.
- Portland Community College will provide tools and objectives for student outreach, orientation, and student selection. These tools and objectives must be used unless different tools and plans are submitted for review and are accepted by the Gateway to College team at PCC.
- The philosophy of Gateway to College is that dropouts deserve a real second chance for educational success. The program is designed so that many doors can lead to Gateway to College, but students who are not yet ready should be directed to better options, so that no student is set up for failure. Gateway to College replication sites must prepare a list of referral options for interested students who are not yet ready to benefit from Gateway to College. These options may include GED programs, ESL/ELL programs, K – 12 alternative program, and community-based programs.

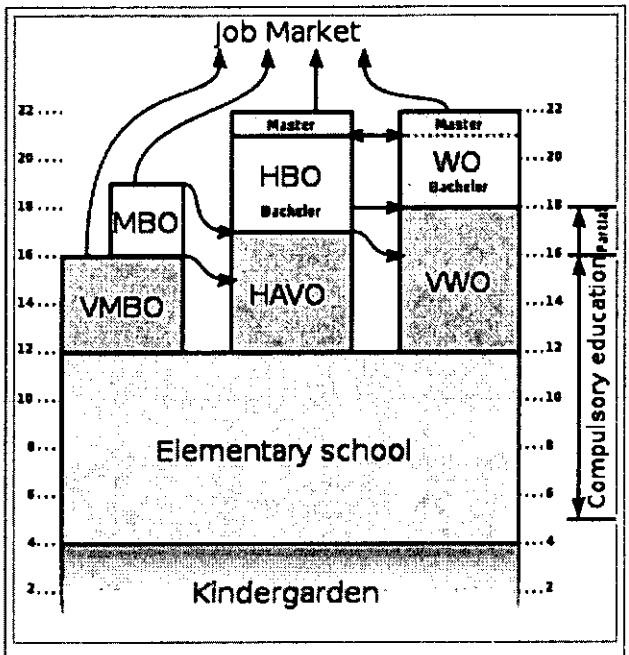
Education in the Netherlands

From Wikipedia, the free encyclopedia

Education in the Netherlands is characterized by division: education is oriented toward the needs and background of the pupil. Education is divided over schools for different age groups, some of these in turn divided in streams for different educational levels. Schools are furthermore divided in public and special (religious) schools. The Programme for International Student Assessment, coordinated by the OECD, ranks the education in the Netherlands as the 9th best in the world as of 2008, being significantly higher than the OECD average.[1]



The different levels of education in the Netherlands

General overview

Education policy is coordinated by the Dutch Ministry of Education, Culture and Science, together with municipal governments.

Compulsory education (*leerplicht*) in the Netherlands starts at the age of five, although in practice, most schools accept children from the age of four. From the age of sixteen there is a partial compulsory education (*partiële leerplicht*), meaning a pupil must attend some form of education for at least two days a week [2]. Compulsory education ends for pupils age eighteen and up.

Life in the Netherlands

Culture [show]

Economy [show]

Society: [show]

There are public, special (religious), and private schools. The first two are government-financed and officially free of charge, though schools may ask for a *parental contribution* (*ouderbijdrage*).

Government [show]
Policies [show]

Public schools are controlled by local governments. Special schools are controlled by a school board. Special schools are typically based on a particular religion. There are government financed Catholic, Protestant, Jewish and Muslim elementary schools, high schools, and universities. In principle a special school can refuse the admission of a pupil if the parents indicate disagreement with the school's educational philosophy. This is an uncommon occurrence. Practically there is little difference between special schools and public schools, except in traditionally religious areas like Zeeland and the Veluwe (around Apeldoorn). Private schools and public schools both receive equal financial support from the government if certain criteria are met.

There is also a considerable number of publicly financed schools which are based on a particular educational philosophy, for instance the Montessori Method, Pestalozzi Plan, Dalton Plan or Jena Plan. Most of these are public schools, but some special schools also base themselves on any of these educational philosophies.

In elementary and high schools the students are assessed annually by a team of teachers, who determine whether the pupil has advanced enough to move on to the next grade. If the pupil has not advanced enough he or she may have to retake the year (*blijven zitten*, English: *stay seated*); this is an uncommon occurrence. Gifted children are sometimes granted the opportunity to skip an entire year, yet this happens rarely and usually in elementary schools.

All school types (public, special and private) are under the jurisdiction of a government body called *Onderwijsinspectie* (Education Inspection) and can be asked (forced) to make changes in educational policy or risk closure.

Schools

Elementary School

Between the ages of four to twelve, children attend *basisschool* (elementary school; literally, "basic school"). This school has eight grades, called *groep 1* (group 1) through *groep 8*. School attendance is compulsory from group 2 (at age five), but almost all children commence school at four (in group 1). Groups 1 and 2 used to be called *kleuterschool* (nursery). From group 3 on, children will learn how to read, write and do maths. In group 7 and 8 many schools starts teaching English to their students. In group 8 the vast majority of schools administer the *Citotoets* (Cito test, developed by the *Centraal instituut voor toetsontwikkeling*[3] (Central Institute for Test-development)) to recommend what type of secondary education should be followed. In recent years this test has gained authority, but the opinion of the group 8 teacher has remained a crucial factor in this recommendation.

High School

After attending elementary education, children aged 12 years old attend *voortgezet onderwijs* (high school; literally "continued education"). Depending on the advice of the elementary school and the score of the Cito test, pupils are assigned to either vmbo, havo or vwo.

The first year of all levels is referred to as the *brugklas* (litt. *bridge class*), as it connects the elementary school system to the secondary education system. During this year, pupils will gradually learn to cope with differences such as dealing with an increased personal responsibility.

When it is not clear which type of secondary education best suits a pupil, there is an orientation year for both vmbo/havo and havo/vwo to determine this. In addition, there is a second orientation year for havo/vwo when inconclusive.

Furthermore it is possible for pupils who have attained the vmbo diploma to attend two years of havo-level education and sit the HAVO-exam, and for pupils with a havo-diploma to attend two years of vwo-level education and then sit the VWO exam.

Vmbo

The vmbo (*voorbereidend middelbaar beroepsonderwijs*, literally, "preparatory middle-level applied education") education lasts four years, from the age of twelve to sixteen. It combines vocational training with theoretical education in languages, mathematics, history, arts and sciences. Sixty percent of students nationally are enrolled in vmbo. Vmbo itself has four different levels, in each a different mix of practical vocational training and theoretical education is combined.

- *Theoretische leerweg* (literally, "theoretical learning path") is the most theoretical of the four, it prepares for middle management and vocational training in the mbo-level of tertiary education and it is needed to enter havo.
- *Gemengde leerweg* (literally, "mixed learning path") is in between the *Theoretische-* and *Kaderberoepsgerichte Leerwegen.*
- *Kaderberoepsgerichte Leerweg* (literally, "middle management-oriented learning path") teaches theoretical education and vocational training equally. It prepares for middle management and vocational training in the mbo-level of tertiary education.
- *Basisberoepsgerichte Leerweg* (literally, "basic profession-oriented learning path") emphasizes vocational training and prepares for the vocational training in the mbo-level of tertiary education.
- *Praktijkonderwijs* (literally, "practical education") consists out of mainly vocational training. It is meant for pupils who would otherwise not obtain their vmbo-diplomas. After obtaining this diploma pupils can enter the job market without further training.

For all of these levels there is *Leerweg Ondersteunend Onderwijs* (literally, "learning path supporting education"), which is intended for pupils with educational or behavioural problems. These pupils are taught in small classes by specialized teachers.

Havo

The havo (*hoger algemeen voortgezet onderwijs*, literally, "higher general continued education") has five grades and is attended from age twelve to seventeen. A havo diploma provides access to the HBO-level (polytechnic) of tertiary education.

The first three years together are called the *Basisvorming* (literally, "basis forming"). All pupils follow the same subjects: languages, mathematics, history, arts and sciences. In the third year pupils must choose one of four profiles. A profile is a set of different subjects that will make up for the largest part of the pupil's timetable in the fourth and fifth year, that are together called the *Tweede Fase* (literally,

"second phase"). A profile specializes the pupil in an area, and some hbo and wo studies therefore require a specific profile. Students must also choose one to three additional subjects. Furthermore, Dutch and one foreign language (most often English), as well as some minor subjects, are compulsory. In all profiles mathematics is compulsory, but the level of difficulty differs for each profile. Pupils still have some free space, which is not taken by compulsory and profile subjects: here they can pick two subjects from other profiles. Sometimes pupils choose more than two subjects, this can result in multiple profiles.

profiles

- *Cultuur en Maatschappij* (literally, "culture and society") emphasizes arts and foreign languages (French, German and less frequently Spanish, Russian, Arabic and Turkish). In the province of Friesland, West Frisian is also taught. The mathematics classes focus on statistics and stochastics. This profile prepares for artistic and cultural training at the hbo.
- *Economie en Maatschappij* (literally, "economy and society") emphasizes social sciences, economics, and history. The mathematics classes focus on statistics and stochastics. This profile prepares for social science and economics training at the HBO.
- *Natuur en Gezondheid* (literally, "nature and health") emphasizes biology and natural sciences. The mathematics classes focus on algebra, geometry and calculus. This profile is necessary to attend medical training at the HBO.
- *Natuur en Techniek* (literally, "nature and technology") emphasizes natural sciences. The mathematics classes focus on algebra, geometry and calculus. This profile is necessary to attend technological and natural science training at the HBO.

Vwo

The vwo (*voorbereidend wetenschappelijk onderwijs*, literally, "preparatory scientific education") has six grades and is attended from age twelve to eighteen. A vwo diploma provides access to wo training, although universities may set their own admittance criteria (e.g. based on profile or on certain subjects). The vwo shares the profiles system described above with the HAVO route. The distinctions that can be made are that the difficulty level is higher, and that the Tweede Fase lasts three years instead of two.

The vwo is divided in *Atheneum* and *Gymnasium*. A **Gymnasium** programme is similar to the Atheneum, except that Latin and Greek are typically compulsory until the third year. Not all schools teach the ancient languages throughout the entire Basisvorming. Latin may start in either the first or the second year, while Greek may start in second or third. At the end of the third year, a pupil may decide to take either or both languages in the Tweede Fase, where the education in ancient languages is combined with education in ancient culture. The subject that they choose, although technically compulsory, is subtracted from their free space.

Vwo-plus, which is also known as Atheneum-plus, Vwo+ or Lyceum, offers extra subjects like philosophy, extra foreign languages and courses to introduce students to scientific research.

Some schools also have TVWO (tweetalig VWO, bilingual VWO) this means that the pupils get 50% of the lessons in English. In some places they get 50% in German instead of English.

Vavo

Vavo (*voortgezet algemeen volwassenen Onderwijs*, literally, "prolonged general adult education") is ghvmbo, havo or vwo taught for adults.

Tertiary Education

Mbo

Mbo (*middelbaar beroepsonderwijs*, literally, "middle-level applied education") is oriented towards vocational training. Many pupils with a vmbo-diploma attend mbo. Mbo lasts one to four years. After mbo (4 years!), pupils can enroll in hbo or enter the job market.

Hbo

With an mbo (4 years!), havo or vwo diploma, pupils can enroll in hbo (*Hoger beroepsonderwijs*, literally "higher applied education"). It is oriented towards higher learning and professional training, which takes four to six years. The teaching in the hbo is standardized as a result of the Bologna process. After obtaining enough credits (ECTS) pupils will receive a 4 years (professional) Bachelor's degree. They can choose to study longer and obtain a (professional) Master's degree in 1 or 2 years.

Wo

See also: List of universities in the Netherlands
See also: Academic Degree

With a vwo-diploma or a propedeuse in hbo, pupils can enroll in wo (*wetenschappelijk onderwijs*, literally "scientific education"). Wo is only taught at a university. It is oriented towards higher learning in the arts or sciences. The teaching in the wo, too, is standardized due to the Bologna process. After obtaining enough credits (ECTS), pupils will receive a Bachelor of Arts, Bachelor of Science or Bachelor of Laws degree. They can choose to study longer in order to obtain a Master's degree of different fields. At the moment, there are four variants: Master of Arts, Philosophy, Sciences, and Master of Laws. A theoretical Master typically lasts one year, however the majority of practical (e.g. medical), technical and research Masters require two or three years.

History of education

Compulsory education for children was implemented in the Netherlands in 1901. The main purpose of the law was to counter child labour, the first moves for which are credited to legislator Samuel van Houten, whose *kinderwetje* (literally, "children's little law") of 1874 made child labour under the age of 12 illegal.

The original law of 1900 only affected children aged 6 to 12, but in 1969 the law was expanded to 9 years of compulsory education, and in 1975 it became 10 years.

Before 1968 the system was different and consisted of:

- *Kleuterschool* - kindergarten (ages 4 to 6)
- *Lagere school* - primary education, (ages 6 to 12) followed by either;
  - *ITO* (invidual technical education) - now *VMBO - praktijkonderwijs* (ages 12 to 16)
  - *Ambachtschool* (vocational training) - comparable with *VMBO - gemengde leerweg* , but

there was more emphasis on thorough technical knowledge (ages 12 to 16)
    - *ULO* - now *VMBO - theoretical learning path* (ages 12 to 16)
    - *MULO* - now *VMBO* (ages 12 to 16)
    - *HBS* (*Hogere Burgerschool* - mixed) - comparable *VWO - Atheneum* (ages 12 - 17)
    - *MMS* (*Middelbare Meisjesschool* - girls only) - comparable with *HAVO* (ages 12 - 17)
    - *Gymnasium* - secondary education - comparable with *VWO - Atheneum with compulsory Greek and Latin added (ages 12 to 18)*
- *MTS/HTS* - middle and higher level applied/technical training, similar to a polytechnic college
- University - only after completing *HBS/MMS/Gymnasium/HTS*

This was all changed that year with the *Wet op het Voortgezet Onderwijs* (literally, *law on secondary education*), better known as the *Mammoetwet* (literally, "*mammoth act*"). This piece of legislation got its peculiar name after ARP-MP Anton Bernard Roosjen[1] was reported to have said „Let that mammoth remain in fairyland". This law passed in 1963 at the initiative of legislator Jo Cals and created a system on which the current one is based.

Before the *Mammoetwet* a student wanting to complete *gymnasium-β* would have to pass exams in;

- 6 languages (all consisting of three separate parts, an oral book report, a written essay, and a written summary);
    - Ancient Greek
    - Latin
    - French
    - German
    - English
    - Dutch
- 5 sciences
    - Physics
    - Chemistry
    - Biology
    - Mathematics - consisting of two out of the following three sub-fields; (a student would be exempted from one based on a draw)
        - analytic geometry and Algebra
        - trigonometry
        - solid geometry

Next to these courses history and geography were also compulsory courses and taught until the final year, but students would not take exams in them.

The Mammoetwet introduced four streams (LTS/VBO, MAVO, HAVO and VWO), of which VBO and MAVO were fused into VMBO in 1999.

The Mammoetwet was reformed significantly in the late 1990s. *Basisvorming* standardized subjects for the first three years of secondary education and introduced two new compulsory subjects (technical skills and care skills). The remainder of secondary school training was reformed with the Tweede Fase, which gave rise to the HAVO and VWO *profiles* described above; specific aims of this reform were also the introduction of information management skills and integration between different subjects.

Grading

In The Netherlands, grades from 1.0 up to 10.0 are used, with 1 being worst and 10 being best. Generally one decimal place is used and a +/– means a quarter, rounded to either 0.8 or 0.3. Thus, a 6.75 could be written as 7– and count as an 6.8, whereas a 7+ would be a 7.25 and count as an 7.3.

The grade scale with the labels:

- 10 (perfect)
- 9 (excellent)
- 8 (very good)
- 7 (more than sufficient)
- 6 (sufficient)
- 5 (insufficient)
- 4 (strongly insufficient)
- 3 (very strongly insufficient)
- 2 (bad)
- 1 (very bad)

Depending on the grade, several honors are available: total average of grades 8 with no grade under 7 and finishing in time: *cum laude*. For an average better than 7, but not meeting the criteria for *cum laude*, *met genoegen* (with honor), is sometimes awarded. This honor system is typically only used at universities.

Usually 5.5 and up constitute a pass whereas 5.4 and below constitute a fail. If no decimal places are used, 6 and up is a pass and 5 and below a fail. Sometimes, when no decimal place is used, an additional grade, 6–, is used as "barely passed". This is what would have been a 5.5 if a decimal place were used.

Grading systems compared

Converting the numbers of the Dutch grading system into the letters of systems such as those used in the United States and Great Britain, is difficult. It can really only be done if one can compare the frequency distribution of grades in the two systems.

The grades 9 and 10 are hardly ever given on examinations (on average, a 9 is awarded in only 1.5%, and a 10 in 0.5% of cases).

As the incidence of a 9 or 10 in *hoger algemeen voortgezet onderwijs* (literally: "higher general continued education") (HAVO) examinations is considerably lower than that of the top marks in the American or British grading system, it would be a mistake to equate a 10 to an A, a 9 to a B, and so forth. If the 8, 9 and 10 are taken together, as in the table above, they represent the top S to 15% of examination results. If, in a grading system based on letters, the A represents the top 10% or thereabouts, grade A may be regarded as equivalent to grades 8 and above.

It also has to be noted, very clearly, however that the HAVO represents the second level in the Dutch secondary education system that is tiered from an early age. The UK for example has no real equivalent to this, and is organised completely differently, with many candidates who would most likely have been sent through the HAVO system either doing A-levels and scoring relatively modest grades, or taking a more vocational path via the GNVQ system that introduces a less academic tone already at age 16. A thorough exploration of other systems is not warranted here, but care must be taken not to assume too

much in the equivalences of qualifications that play different roles, in different systems, in the context of different traditions.

The conversion of the lowest passing grade may present another problem. A grade of 4 is a clear fail, although one 4 at the examination is acceptable if high grades are obtained in all the other subjects. A 5, on the other hand, is 'almost satisfactory'. For purposes of assessing a pupil's progress throughout the year, a 5 is usually considered to be good enough, provided the pupil does better on the next test. For examinations, a 5 is unacceptable only as an average, but is condoned in one or two subjects. Its use is comparable to that of the D in many systems: a weak pass, but as an average too low for admission into a higher cycle of education. Note again that the "gearing" of the education system need not be the same. There is no reason to expect the overall difficulty to be the same, or to expect systems to favour the exact same types of candidates, it is also not reasonable to assume that lowest-passing-grades will always equate, because, amongst more obvious reasons, the Dutch system allows resits and considers them more normal, whereas sundry other systems tend to send candidates away with whichever grade they obtain however comparitively unsatisfactory that may be.

Taking the A-Level system applied in much of the UK and commonwealth as an example, grades E for A-level are in principle fairly unimpressive, and although they correspond to a "pass" would not constitute a passing level in a Dutch VWO class (the equivalent grade for HAVO could be debated, while philosophies and methods are still completely different). The class of candidates obtaining grades D and E for their A-levels would not be likely to pass their VWO examinations and be admitted to Universities in The Netherlands. This said, they would be more likely to return and retry, while British candidates would be more likely to simply proceed to a lower level of further/vocational education. This raises arguments about how well less able candidates may have done in a course more geared to their level.

For the award of the HAVO diploma, the average final grade should be a 6. In view of the high frequency of 6s, coupled with the fact that it is the minimum requirement for admission into a higher cycle of education, there are good grounds for equating a 6 with a C, which has a similar frequency and purpose.

Bill would allow Minnesota high school seniors to get diplomas despite failing state graduation tests

3-year exemption on state exams gets first OK from House panel

By Megan Boldt
mboldt@pioneerpress.com

Posted: 03/12/2009 12:01:00 AM CDT

A proposal to give Minnesota students their high school diplomas even if they fail graduation tests got its first legislative green light Wednesday.

The bill, which would allow students to graduate in the next three years without passing the tests, was approved in the House K-12 Education Policy and Oversight Committee.

There are a few caveats. Students could graduate only if they get remediation, retake a failed test at least twice and meet other graduation requirements.

"Frankly, until we get things right in our K-12 system, I'd rather move kids forward ... than kick them to the streets without a diploma," said Rep. Carlos Mariani, DFL-St. Paul, author of the bill.

Lawmakers gave the state Education Department the go-ahead in 2005 to create more rigorous graduation tests.

What has educators and lawmakers most worried is that only 35 percent of last year's juniors passed the tougher math test. This year's juniors are the first required to pass it in order to get their high school diplomas next spring.

The reading and writing exams have not raised as much alarm — 71 percent of students passed the reading exam last spring, and 90 percent passed writing.

"I don't think the problem is in the school," said Rep. Tim Faust, DFL-Hinckley. "I think the problem is in the test."

Some lawmakers and business representatives said exempting students from passing the graduation tests sends the message that Minnesota is not serious about its academic expectations.

They also argued the exemption does nothing to promote the ultimate goal of creating a world-class work force in the state.

"Is it fair to give students a diploma when we know they don't have the preparation they need?" asked Jim Bartholomew, education policy director for the Minnesota Business Partnership.

Supporters of the exemption argue it is just a short-term solution to work out the kinks in the new tests and say standards will not be lowered.

Addressing the short-term concerns and not the long-term vision for Minnesota's assessment system has Gov. Tim Pawlenty and the state Education Department worried.

But supporters of the temporary exemption say any changes to the testing system will cost money, and the Legislature likely will not make financial decisions until the end of the legislative session in May.

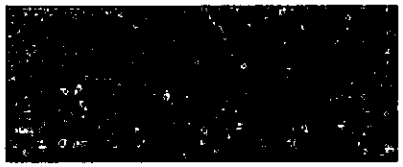
WorkKeys®

Secondary Education Guide

ACT®



"WorkKeys has helped us overcome the communication gap that exists between education and business. It has allowed businesses to communicate what kind of skills they need from our students."

Melanie Gray, Perkins and School-to-Career Coordinator, Delta-Montrose Area Vocational-Technical Center and Delta County School District, Colorado

What Employers Want

As jobs in the United States continue to become more complex, employers are asking their employees to have command of increasingly higher skills. Employers provide specific on-the-job training to nearly 80 percent of the workforce, according to the American Society for Training and Development. That's why employers are looking for job candidates who possess the foundational skills that make them easier to train on the job.

Educators teach students foundational skills through daily classroom instruction. The challenge for educators is to teach the application of these foundational skills. Students who have abilities in Applied Mathematics, Reading for Information, and Locating Information are the type of highly trainable candidates that employers seek. These candidates have more success on the job and are able to learn job-specific skills faster.

The best way for students to achieve higher skills on the job is to have strong foundational workplace skills. WorkKeys® helps ensure that individuals are ready for work—and for life.

Work and College Readiness

If students are going to be adequately prepared for the workforce, they need to understand the requirements for jobs they are considering. WorkKeys helps students determine the skill levels and education required for various jobs. The chart below shows information for three of the more than 13,000 job profiles in the WorkKeys database. To see more jobs and skill levels go to **www.act.org/workkeys/education/index.html**.

	Receptionist	Machine Operator	Accountant
Education	High school	High school and training or AA degree	4-year degree
Salary	$22,090	$30,430	$57,310
WorkKeys Skill Levels			
Math	3 4 5 6 7	3 4 5 6 7	3 4 5 6 7
Reading	3 4 5 6 7	3 4 5 6 7	3 4 5 6 7
Locating Information	3 4 5 6	3 4 5 6	3 4 5 6

Benefits for Educators

Educators use WorkKeys to:

- ☐ Identify gaps between student skills and employment needs
- ☐ Develop more rigorous coursework to improve workforce readiness
- ☐ Align curricula to address the job skills employers need
- ☐ Develop more efficient teaching strategies
- ☐ Analyze and report their institution's success in preparing students
- ☐ Build a foundation for counseling students about courses and employment interests

Teachers play a vital role in helping students understand the importance of acquiring solid workplace skills. They also can guide students in selecting rigorous courses based on the students' interests and career goals. WorkKeys helps educators ensure that students enter the work world with the foundational skills needed in any field they choose.

Benefits for Students

- Enables students to realize the importance of their studies
- Increases chances that graduates will be hired
- Improves students' success in entry-level and subsequent jobs
- Builds students' confidence that skills meet the needs of local employers
- Determines skill improvement and training needs
- Enables students to rank above other job applicants who do not have needed skills
- Improves chances of better entry-level salaries through increased skills
- Shows prospective employers concrete proof of skills achieved

Benefits for Guidance Counselors

Guidance counselors use WorkKeys to:

- ☐ Tailor counseling to individuals by focusing on their skills and realistic employment opportunities
- ☐ Compare students' skill levels with those required for occupations
- ☐ Connect information about the requirements of local jobs with education and training services available in the community
- ☐ Establish business/education partnerships that enable students to gain practical experience and training in the workplace

How Educators Implement the WorkKeys System

Pre/Post Testing

WorkKeys scores are a useful tool to help educators demonstrate their students' ability to benefit from education and training. Students can take WorkKeys assessments when they begin high school, typically in 9th grade. Teachers and counselors can identify the appropriate coursework and training for the students based on their pre-testing scores.

WorkKeys post-testing can be done with students in 11th or 12th grade. The same assessments should be used in pre- and post-testing to show the direct relationship of curriculum impact and learning. The WorkKeys Scale Scores are sensitive to subtle score changes and can be used to show growth over time and to provide group comparisons in outcomes measurement.

WorkKeys in the United States

Many states and school districts throughout the United States use the WorkKeys system. In Illinois and Michigan, every high school junior is required to take two WorkKeys tests as part of a statewide assessment program. In Kentucky, WorkKeys is an optional, state-paid assessment for students in grades 10, 11, and 12. Virginia accepts WorkKeys Reading for Information as one of the assessments required to receive a high school diploma. Other states are considering statewide testing programs that incorporate WorkKeys into their testing. And many high schools have aligned curricula in their programs to meet the WorkKeys skill levels needed for immediate job placement upon graduation.

National Career Readiness System

WorkKeys also is the foundation for the nationwide Career Readiness System that links qualified individuals with employers who recognize the value of skilled job applicants. This comprehensive employment tool—available via the Internet—offers four components.

Certification: The National Career Readiness Certificate verifies that an individual has the foundational skills necessary to be successful entering employment or a training program.

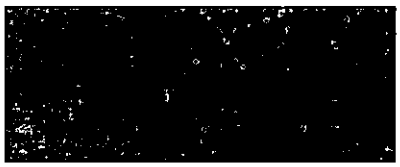
Certificate Registry: This Internet-based system at **www.MyWorkKeys.com** allows an individual to view WorkKeys scores, apply for a certificate, and order paper copies, as well as enabling employers to verify that an individual has a certificate.

Talent Bank: Individuals who qualify for a National Career Readiness Certificate can use the Talent Bank to post credentials for employers and search job postings in a national job database.

Job Bank: Employers who use the National Career Readiness Certificate can post job opportunities and search for qualified candidates.

For more information, go to **www.NationalCareerReadiness.org**.

NATIONAL CAREER READINESS SYSTEM



"In West Michigan, students in 64 high schools take WorkKeys Applied Math and Reading for Information to demonstrate their ability to apply what they've learned in a work setting. If they scored well on these tests but are unable to apply their knowledge in the workplace, Kent ISD provides remedial education free of charge to fulfill our commitment to 'guarantee' the basic math and reading skills of graduates. Now, with ACT's National Career Readiness Certificate, our schools are committed to creating a career-ready workforce to improve the earnings potential of graduates and the economic vitality of our region."

Ronald Koehler, APR
Assistant Superintendent,
Organizational and
Community Initiatives,
Kent Intermediate School
District

What is WorkKeys?

WorkKeys is a job skills assessment system measuring "real world" skills that employers believe are critical to job success. These skills are valuable for any occupation—skilled or professional—and at any level of education.

Students who use WorkKeys to document their readiness for work have an edge with the growing number of employers nationwide who accept or require that job applicants have WorkKeys scores. Several states also have adopted WorkKeys to ensure that students have needed skills.

WorkKeys Assessments

Foundational Skills

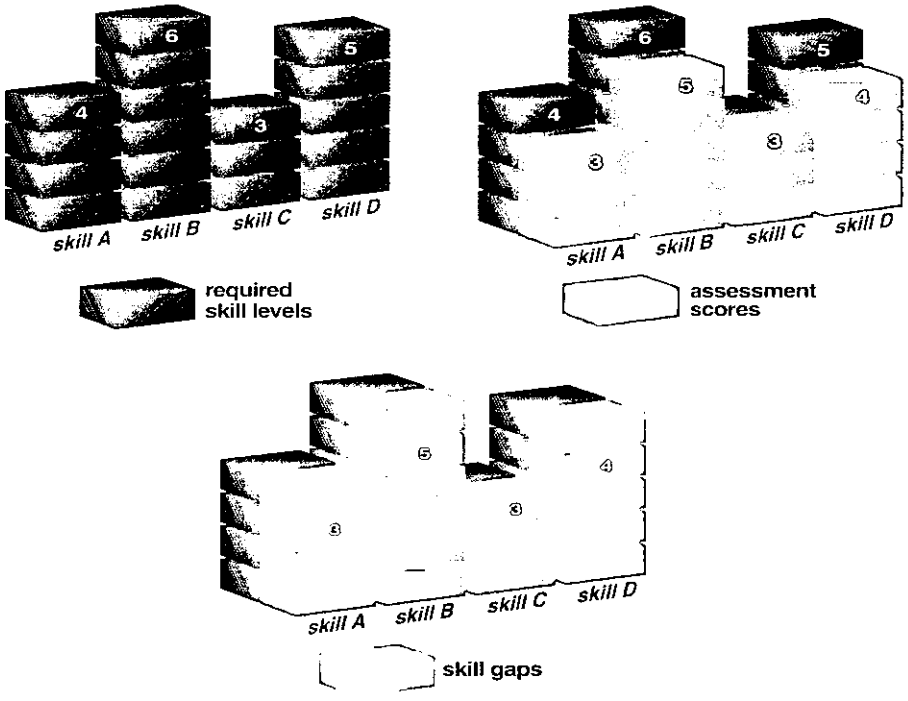
- Applied Mathematics
- Applied Technology
- Business Writing
- Listening
- Locating Information
- Reading for Information
- Observation
- Teamwork
- Writing

Personal Skills

- Performance
- Talent
- Fit

How WorkKeys Works

Students can use their WorkKeys scores to determine how their skills measure up to those required in the workforce. And, educators can use the scores to see how well they are preparing graduates for different occupations. The example below identifies where an individual's skills do not match those needed for a particular job.



Test Administration and Scoring

Millions of WorkKeys assessments are administered through high schools and other educational institutions each year. The criterion-referenced assessments can be used singly or in combination, and each takes about one hour to complete. Standard scoring is included in the price of the tests. Results for paper-and-pencil tests are usually available from ACT within ten working days and instant score reports are available for computer-based tests.

Schools receive both individual and group WorkKeys reports following each test administration. The individual report indicates a student's skill level for each assessment administered, along with a description of the tasks associated with the skill level and strategies to improve performance in that skill. Group reports help the school track performance for all students who took the assessments.

WorkKeys and ACT

WorkKeys has been developed by ACT, an international leader in educational assessment and workforce development services for more than forty years, best known for the ACT® college entrance exam. WorkKeys is used by thousands of companies and schools across the United States and internationally.

For more information about WorkKeys, call 1-800/WORKKEY (967-5539) or visit our website at **www.workkeys.com**.

Using your ACT WorkKeys® Scores

What is the WorkKeys® System?

The Workkeys system, developed by ACT:
- Describes job skill requirements
- Measures an individual's skills
- Matches people to jobs

The WorkKeys skills are transferable skills – those commonly needed on jobs. The skill areas include:

- Applied Mathematics
- Applied Technology
- Business Writing
- Listening
- Locating Information
- Observation
- Reading for Information
- Teamwork
- Writing

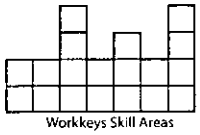
There is a separate assessment for each skill area. Tasks on the assessments are based on workplace situations, but do not require job-specific knowledge.

Each WorkKeys skill area has a separate measurement scale divided into levels. These scales are used for scoring assessments and for profiling jobs and occupations.

The System in Action

To determine what skills are needed for a job or occupation, employees actually doing the job list their tasks and identify the skill levels required for completing them. This process is called job profiling.

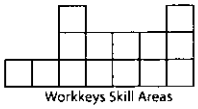
Job Skill Profile



Workkeys Skill Areas

An individual's skill levels are measured by WorkKeys assessments.

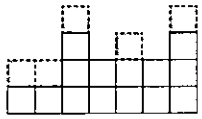
Individual Skill Profile



Workkeys Skill Areas

By comparing profiles and scores, skill gaps can be identified and targeted instruction can be used to decrease those gaps.

Focus Instruction to Fill the Gaps



Workkeys Skill Areas

What are your scores?

Reading for Information	Applied Mathmatics	Locating Information

Plan for Your Future

In today's high performance workplaces, no skill = no job.

How do your skills stack up to those required for careers you want to explore?
If you are satisfied with your skill levels, then use your skill reports to:
- Tell employers what you can do
- Describe your strengths in terms of skills that are important in the workplace

Would you like to improve your skills? Then use your skill reports to:
- Plan education and training to fill in your skill gaps
- Focus your education on reachable goals

Remember, your scores are used to compare your skills to those needed for jobs.
They are not used to compare you to other people.

Entry Level Occupations: NOW

Occupation Title	O*NET #	AM	LI	RI	US Median Wage	Alaska Median Wage
Bakers	51-3011.00	4	4	4	$21,510.00	$32,500.00

WorkKeys® Applied Mathematics Skills

Level 3
- Solve problems that require a single type of mathematics operation (addition, subtraction, multiplication, and division) using whole numbers
- Add or subtract negative numbers
- Change numbers from one form to another using whole numbers, fractions, decimals, or percentages
- Convert simple money and time units (e.g., hours to minutes)

Level 4
- Solve problems that require one or two operations
- Multiply negative numbers
- Calculate averages, simple ratios, simple proportions, or rates using whole numbers and decimals
- Add commonly known fractions, decimals, or percentages (e.g., 1/2, .75, 25%)
- Add up to three fractions that share a common denominator
- Multiply a mixed number by a whole number or decimal
- Put the information in the right order before performing calculations

Level 5
- Decide what information, calculations, or unit conversions to use to solve the problem
- Look up a formula and perform single-step conversions within or between systems of measurement
- Calculate using mixed units (e.g., 3.5 hours and 4 hours 30 minutes)
- Divide negative numbers
- Find the best deal using one - and two - step calculations and then comparing results
- Calculate perimeters and areas of basic shapes (rectangles and circles)
- Calculate percent discounts or markups

Level 6
- Use fractions, negative numbers, ratios, percentages, or mixed numbers
- Rearrange a formula before solving a problem
- Use two formulas to change from one unit to another within the same system of measurement
- Use two formulas to change from one unit in one system of measurement to a unit in another system of measurement
- Find mistakes in questions that belong at Levels 3, 4, and 5
- Find the best deal and use the result for another calculation
- Find areas of basic shapes when it may be necessary to rearrange the formula, convert units of measurement in the calculations, or use the result in further calculations
- Find the volume of rectangular solids
- Calculate multiple rates

Level 7
- Solve problems that include nonlinear functions and/or that involve more than one unknown
- Find mistakes in Level 6 questions
- Convert between systems of measurement that involve fractions, mixed numbers, decimals, and/or percentages
- Calculate multiple areas and volumes of spheres, cylinders, or cones
- Set up and manipulate complex ratios or proportions
- Find the best deal when there are several choices
- Apply basic statistical concepts

WorkKeys® Locating Information Skills

Level 3
- Find one or two pieces of information in a graphic
- Fill in one or two pieces of information that are missing from a graphic

Level 4
- Find several pieces of information in one or two graphics
- Understand how graphics are related to each other
- Summarize information from one or two straightforward graphics
- Identify trends shown in one or two straightforward graphics
- Compare information and trends shown in one or two straightforward graphics

Level 5
- Sort through distracting information
- Summarize information from one or more detailed graphics
- Identify trends shown in one or more detailed or complicated graphics
- Compare information and trends from one or more complicated graphics

Level 6
- Draw conclusions based on one complicated graphic or several related graphics
- Apply information from one or more complicated graphics to specific situations
- Use the information to make decisions

WorkKeys® Reading for Information Skills

Level 3
- Identify main ideas and clearly stated details
- Choose the correct meaning of a word that is clearly defined in the reading
- Choose the correct meaning of common, everyday workplace words
- Choose when to perform each step in a short series of steps
- Apply instructions to a situation that is the same as the one in the reading materials

Level 4
- Identify important details that may not be clearly stated
- Use the reading material to figure out the meaning of words that are not defined
- Apply instructions with several steps to a situation that is the same as the situation in the reading materials
- Choose what to do when changing conditions call for a different action (follow directions that include "if-then" statements)

Level 5
- Figure out the correct meaning of a word based on how the word is used
- Identify the correct meaning of an acronym that is defined in the document
- Identify the paraphrased definition of a technical term or jargon that is defined in the document
- Apply technical terms and jargon and relate them to stated situations
- Apply straightforward instructions to a new situation that is similar to the one described in the material
- Apply complex instructions that include conditionals to situations described in the materials

Level 6
- Identify implied details
- Use technical terms and jargon in new situations
- Figure out the less common meaning of a word based on the context
- Apply complicated instructions to new situations
- Figure out the principles behind policies, rules, and procedures
- Apply general principles from the materials to similar and new situations
- Explain the rationale behind a procedure, policy, or communication

Level 7
- Figure out the definitions of difficult, uncommon words based on how they are used
- Figure out the meaning of jargon or technical terms based on how they are used
- Figure out the general principles behind policies and apply them to situations that are quite different from any described in the materials

Public high school dropouts, by race/ethnicity and state: 2003-04

---Not available.

\1\Alabama, Arizona, Florida, Illinois, Maryland, New Jersey, New York, Tennessee, and Vermont reported data on an alternative July through June cycle, rather than the specified October through September cycle for dropout data.

\2\High school graduate counts include estimates for nonreporting states, based on 2003 12th-grade enrollment racial/ethnic distribution reported by state. Event dropout rate totals are totals for reporting states only.

\3\Data differ slightly from figures reported in other tables due to varying reporting practices for racial/ethnic survey data.

NOTE: Race categories exclude persons of Hispanic ethnicity. Event dropout rates measure the percentage of public school students in grades 9 through 12 who dropped out of school between one October and the next (except where noted). DoD = Department of Defense.

Representative Paul Seaton

Memorandum

From: House Education Committee Chair, Paul Seaton
To: House Education Committee members
Date: March 13, 2009
RE: Drop-out prevention ideas

As we proceed with discussions on drop-out prevention I would like to offer up two ideas for the committee to consider as ways to help alleviate the problem.

1. As we have discussed, there is a disconnect between seat-time and competency for purposes of high school graduation. The Department of Education and Early Development currently has requirement that all 11th graders take the WorkKeys Assessment. We could build on this by requiring that the WorkKeys Assessment be taken before exiting high school, and having those competency evaluations be placed on the graduation certificate. This would be an attempt to not just base a diploma on seat time, but would be a measure of competency as well.

2. If students take and pass all three sections of the High School Qualifying Exam prior to graduation, school districts will pay for these students to take college credits or vocational school credits. This could allow students to be on their way to an associate degree or vocational education certificate by the time they have graduated high school. The High School Qualifying Exam has been identified as a problem because students interpret that passing exam means they have met their high school qualifying criteria, leading to students losing interest in school afterward.

Mr. Tom Morgan, State Director / Communities In Schools of Alaska
Summary Testimony for the U.S. Senate Health, Education, Labor, and Pensions Committee (HELP)
Field Hearing, November 15, 2008

Chairman Seaton

Good morning ~~Senator Murkowski~~, members of the panel, witnesses and attendees. I am honored to join you today and thank you for your contribution to Alaska's young people. Thank you to the Senator's educational and support staff and Karen McCarthy (who specifically did not want me to mention her) for helping to make today's event happen, and the Senator's job easier! It is with great respect, Senator Murkowski, that I recognize your outstanding leadership to our great state and our nation.

I am truly pleased to be here today to represent Communities In Schools (CIS) of Alaska and our role in making a positive difference in the drop out epidemic. National research has shown that students who do not finish high school earn less, pay less tax, rely more on public health, are more involved in the justice system, and are more likely to use the welfare system. I know that you all share the concern about the drop out crisis, a topic that touches all Alaskans, particularly Alaska Native students at a disproportionally higher rate.

CIS of Alaska strives to work closely with school districts around the state. We offer an integrated student support delivery system; providing schools with prevention services and individual students with case management and intervention services. Like glue, we mobilize and connect resources with schools, better enabling students to "stick with it" and stay in school. As a statewide network in dropout prevention, we are committed to success through collaboration.

How do we know that we are helping kids learn, stay in school, and prepare for life? We evaluate our efforts by tracking indicators of student success like: attendance and stay-in-school rates, improved academic performance and improved behavior. Since our inception, we have worked with thousands of students at risk to dropping out; the majority of those students have stayed in school and improved their attendance, behavior and academic achievement.

House Education CTE

Chairman Seaton

3391

Preliminary results from the Communities In Schools National Evaluation initiative (an independent, third-party evaluation) indicated that the CIS model does make a positive difference in:

- Decreasing the dropout rate
- Increasing the graduation rate
- Improving student achievement

These results are based on an in-depth analysis of 1,766 CIS schools and comparative analysis of outcomes for more than 1,200 CIS and non-CIS comparison schools over a three-year period.

We are not another social service agency. We broker and mobilize in an effective and coordinated way, EXISTING community services through the schools, saving valuable dollars while improving efficiencies of delivery of services to children and youth. During the 2007/2008 year, in just five affiliates, Anchorage, Bethel, Juneau, Mat-Su and Nome, our minimum leveraged services and resources were estimated at $1.5 million dollars. In-kind contributions in revenue from other sources (last year) were approximately $882,000. The amount of dollars for support is very small when compared to the successful outcomes it provides and the resources we are able to leverage! Through school-based affiliate programs and statewide initiatives, CIS of Alaska is creating a network of social services, businesses, community resources and volunteers that work together to break down barriers to ensure even the most vulnerable of our children have access to these basics and core needs.

Our statewide initiatives, Career Exploration Opportunities (CEO), an interactive distance learning career exploration program targeted at rural youth and the [redacted] Imagination Library, an early literacy program for children birth to five, are being well received.

Our dream, our call to action, is to formulate support to implement the CIS model and provide a ~~"drop-out prevention specialist"~~ in every school in Alaska; whereas, children's needs can be met to help keep them in school and teachers are free to teach.

CIS coordinator / Graduation Coach

We believe youth do not drop out of school necessarily because of the school. We believe, and research supports; youth drop out due to pressures outside of school. Educators cannot and should not be expected to have knowledge of the many resources available to help them and help their students stay in school. That is where CIS comes in. As one principal told me – *You allow me and my teachers to teach. We need to clone the CIS coordinator.* As stated earlier, like glue, we mobilize and connect resources with schools, better enabling students to "stick with it" and stay in school.

Support by the federal (and state) government will allow us to expand our existing sites and offer the opportunity for many more communities, especially rural communities, the ability to experience the positive outcomes we can provide for youth.

We have a program that has proven success in preventing dropouts. For every dollar invested, through building collaboration, brokering services and leveraging community assets, CIS of Alaska adds value to build return on investment.

For a more in depth look at CIS of Alaska programs and initiates, please review the information provided for the record and visit www.cisalaska.org.

Dollar for dollar, CIS of Alaska offers the right investment in our children's future. We look forward to partnering with you, doing what we do best; connecting the dots, coordinating and leveraging existing resources to keep youth in school and prepare them to succeed in life.

Mr. Tom Morgan, State Director / Communities In Schools of Alaska
Written Testimony for the U.S. Senate Health, Education, Labor, and Pensions Committee (HELP)
Field Hearing, November 15, 2008

Subject: "Improving High School Graduation Rates and Postsecondary Success in Alaska and Nationwide – What Can the Federal Government Do?

Opening:

Good morning Senator Murkowski and staff. I am honored to be here today on behalf of Alaska's young people. It is with great respect, Senator Murkowski, that I extend my deep appreciation of and support for your outstanding leadership to our great state, and our nation.

I. Statement of Need/Dropout Problem Definition:

I am truly pleased to be here today to represent Communities In Schools (CIS) of Alaska and our role in making a positive difference in the drop out epidemic. National research has shown that students who do not finish high school earn less, pay less tax, rely more on public health, are more involved in the justice system, and are more likely to use the welfare system. I know that you all share the concern about the drop out crisis, a topic that touches all Alaskans, particularly Alaska Native students at a disproportionally higher rate.

II. *Our Solution / Our Model & Results*

CIS of Alaska strives to work closely with school districts around the state to address the alarmingly high rate of high school drop outs. We offer an integrated student support delivery system; providing schools with prevention services and individual students with case management and intervention services. Like glue, we mobilize and connect resources with schools, better enabling students to "stick with it" and stay in school. As a statewide network in dropout prevention, we are committed to success through collaboration.

How do we know that we are helping kids learn, stay in school, and prepare for life? We evaluate our efforts by tracking indicators of student success like: attendance and stay-in-school rates, improved academic performance and improved behavior to determine the impact of our programs. Since our inception, we have worked with thousands of students at risk to dropping out; the majority of those students have stayed in school and improved their attendance, behavior and academic achievement. In the last three years, Communities In Schools has helped to put developmentally appropriate books directly in the hands of

thousands of children and families across the state. (For a more in depth look at CIS of Alaska programs and initiatives, please visit www.cisalaska.org)

III. ***Program Specific Information***

CIS of Alaska is part of the nationwide network of Communities in Schools. Nationally, CIS is the largest provider of integrated student services in the country and has an opportunity to both serve 1.2 million students with high quality services, as well as make the policy case for including integrated student services as a fundamental part of the solution to lowering dropout rates and improving graduation rates in America. Preliminary results from the Communities In Schools National Evaluation initiative (an independent, third-party evaluation) indicated that the CIS model does make *a positive difference in:*

- ***decreasing the dropout rate,***
- ***increasing the graduation rate*** *(specifically, the "on-time" graduation rate, meaning within the traditional four year schedule) and,*
- ***improving student achievement*** *[*Generally speaking, the more "high implementing" the school site (meaning incorporating all aspects of the CIS model in a mid to high degree at the school site), the higher the outcomes.]

These results are based on an in-depth analysis of 1,766 CIS schools and comparative analysis of outcomes for more than 1,200 CIS and non-CIS comparison schools over a three-year period. The CIS National Evaluation concludes that:

- Among dropout prevention programs using scientifically-based evidence, the CIS Model is one of a very few in the United States proven to keep students in school and is the *only* dropout prevention program in the nation with scientifically-based evidence to prove that it increases graduation rates.
- When implemented with high fidelity, the CIS Model results in a higher percentage of students reaching proficiency in fourth- and eighth-grade reading and math.
- Effective implementation of the CIS Model correlates more strongly with positive school-level outcomes (i.e., dropout and graduation rates, achievement, etc.) than does the uncoordinated provision of service alone, resulting in notable improvements of school level outcomes in the context of the CIS Model.

The CIS National Evaluation is being conducted by ICF International, known for its high standards of rigor and comprehensive research designs. (Source: "CIS National Evaluation Policy – Communities In Schools and the Model of Integrated Student Services: A Proven Solution to

America's Dropout Epidemic". For further information on this report, view it on the website at www.cisalaska.org, under What We Do/Results.)

Organized in 2003 to serve at-risk students in rural Alaska, CIS of Alaska is founded on the recognition that most students who drop out of school are dealing with a variety of obstacles that present barriers to their education, and that only a few of these are school-related. Most stem from overarching family and community issues like poverty, alcohol and drugs and violence. We recognize that numerous public and private services already exist in our communities to help children and their families overcome these obstacles. However, given the difficulty of deciphering the maze of resources available, and, the time and transportation necessary to reach them, services are nearly inaccessible for those children and families who need them most.

We are not another social service agency. We broker and mobilize in an effective and coordinated way, EXISTING community services through the schools. Through school-based affiliate programs and statewide initiatives, CIS of Alaska is creating a network of social services, businesses, community resources and volunteers that work together to break down barriers to ensure even the most vulnerable of our children have access to these basics and core needs.

CIS of Alaska also provides a cutting-edge, distance learning Career Exploration Opportunities (CEO) program (aligned with State Educational Standards), targeted at rural high school students. CEO is a blended learning program, combining videoconferencing and Internet connectivity. Alaskan business executives interact with students face to face via the videoconference twice each month, providing students with information regarding careers and preparation beyond their communities. Students are focused on the 16 High Needs Alaskan Career Clusters including resource development (oil industry), construction trades, technology, health service and others. They learn about opportunities, career preparation and application/interviewing skills. Students are also responsible for job shadows, career projects and presentations and developing leadership skills.

Additionally, CIS of Alaska works in a coordinated effort with Best Beginnings and partners with the Dollywood Foundation to facilitate replication of Dolly Parton's Imagination Library to interested communities statewide. [Best Beginnings has evolved from the Alaska Ready to Read; Ready to Learn Task Force.] As you may know, the Imagination Library Program is an early literacy program that puts quality, age-appropriate books directly in the hands of our children ages birth to five and their families across the state.

With CIS of Alaska sites in Bethel, Anchorage, Mat-Su, Nome, and Juneau, we are making remarkable progress in positively affecting the high school dropout rate. With greater support, evidence demonstrates that this success can be implemented across the state.

Consider the following specific examples of our programs and results:
Last year, the CIS of Alaska network served 5,279 children/youth.

- CIS of Bethel is working with the District Court, the community of Bethel and its neighboring villages to address tremendous issues with underage drinking.

- CIS-Juneau has been operating a very successful care coordinator program that provides at-risk students with needed services to help them stay in school. Since the inception of the program 2003/2004, we served over 500 students through 2007/2008. 90% of our students are Alaska Native. Of those students, less than 5% dropped out of school. The program works!

- CIS of Mat-Su referred to the *Mat-Su Day School's Alternative to Suspension (ATS)* program. Last year, 31 students were referred to CIS/Mat-Su Day School's Alternative to Suspension (ATS) program due to long term suspension or expulsions – of those, 27 students enrolled. Of the suspended or expelled students who enrolled, only 2 dropped out. This group of 27 is at very high risk of dropping out of school. We were successful in helping them continue their education and worked to transition them back to their boundary school.

- Reading is fundamental. Dolly Parton's Imagination Library, an early prevention program to combat illiteracy, started with a pilot program in Nome. The Nome elementary principal stated that children were reporting to Kindergarten unprepared, especially in the area of reading. The program quickly spread to Juneau who has signed up over 600 children where there are 2000 additional children eligible but lack of funds has slowed signups. Wainwright, Wrangell, Ketchikan and Fairbanks also have active IL programs with Mat-Su, Mt. View, Petersburg and Girdwood poised to come on line. Statewide, almost 4,000 children birth to five are enrolled, including the First Family's newest addition, Trig Palin. A recent survey (in Juneau) saw the number of parents reading to their children jump from 50% to 75% in one year! The Imagination Library is a proven effective program that helps children start school ready to learn.

The Imagination Library has been adopted by Best Beginnings as a component of their early learning program, and CIS of Alaska is excited to be working in alignment with Best Beginning to expand the great work accomplished to date. Tennessee has implemented a statewide Imagination Library initiative through their Governor's Books from Birth Foundation. Results are showing clear improvements in the average scores of pre-K and kindergarten children whom are enrolled in the Imagination Library, including increases in reading skills, speaking skills, thinking skills, and social skills, as compared to the non-enrolled children. Based on results to date, the belief is as more children are enrolled in the Imagination Library at the *earliest possible opportunity* (ideally at birth), the abilities gained from participating in the program, already apparent in their 2007 findings, will be ever more noticeable. (*Source: Impact of Tennessee's Imagination Library on Pre-K and Kindergarten Students from a Fall 2007 Survey of Teachers Administered by the Tennessee Board of Regents.)*

For as little as $30/year per child, we could be making remarkable progress in engaging our families to better prepare our children to be ready to learn and be successful in school.

- CEO (Career Exploration Opportunities) has grown this year to eight different school districts and 12 school sites across the state and has served nearly 400 students (predominantly rural youth) since coming under the umbrella of CIS of Alaska in 2006.

Communities In Schools of Alaska is focused on the priorities of the federal and state government: Education, Literacy, Graduation, and Career Readiness. CIS of Alaska is making a difference.

IV. *How the Federal Government Can Help:*

Our dream, our call to action, is to formulate support to implement the CIS model and provide a "drop-out prevention specialist" in every school in Alaska; whereas, children's needs can be met to help keep them in school and teachers are free to teach and children are present, in a viable state to learn, are motivated to stay in school through graduation, and are ready to pursue the immense career opportunities Alaska has to offer them.

CIS brokers existing services and resources, saving valuable dollars while improving efficiencies of delivery of services to children and youth. While we do not yet have numbers for the present year, during the 2007/2008 year, in just five sites, our minimum leveraged services and resources estimated $1,476,459. In-kind contributions in revenue from other sources (last year) were approximately $882,000. The amount of dollars for support is very small when compared to the successful outcomes it provides and the resources we are able to leverage!

Support by the federal (and state) government will allow us to expand our existing sites and offer the opportunity for many more communities, especially rural communities, the ability to experience the positive outcomes we can provide for youth.

We have a program that has proven success in preventing dropouts. For every dollar invested, through building collaboration, brokering services and leveraging community assets, CIS of Alaska adds value to build return on investment.

Dollar for dollar, CIS of Alaska offers the right investment in our children's future. We look forward to partnering with you, doing what we do best; connecting the dots, coordinating and leveraging existing resources to keep youth in school and prepare them to succeed in life.

Respectfully Submitted,

Tom Morgan
Communities In Schools of Alaska, State Director

Dropout Rates in Alaska
Fact Sheet

The Dropout Rate is computed by dividing the number of dropouts in the current school year by the number of students enrolled in grades 7-12 on October 1 of the current school year. School year is defined as the12-month period beginning with July 1 and ending June 30.

A **Dropout** is defined as a student who was enrolled in the district at some time during the school year and whose enrollment terminated. This does not include an individual who:

- graduated from high school or completed a state or district approved education program, as evidenced by receipt of formal recognition from school authorities;
- transferred to another public school, private school or state or district approved education program;
- is temporarily absent due to suspension;
- is absent due to illness or medical condition;
- died.

The statewide Dropout Rate has decreased as well as the number of dropouts for three consecutive years:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	6.0%	3,791
2006	5.8%	3,642
2007	5.5%	3,434
2008	5.2%	3,232

The Alaska Native/American Indian Dropout Rate has not reflected the proportionate decrease over the same time period:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	8.2%	1,276
2006	8.4%	1,333
2007	8.3%	1,299
2008	8.5%	1,224

In 2007-2008 Alaska showed a wide range in difference with district by district comparisons of Dropout Rates. Four districts reported 0 dropouts. Two districts reported over 25% Dropout Rates. Both districts with the highest rates, Delta/Greely School District and the Nenana City School District, had a large percentage of dropouts reported in the statewide correspondence schools.

7.

Graduation Rates in Alaska
Fact Sheet

The Graduation Rate is reported as a fraction. The numerator is the sum of the number of graduates receiving a regular diploma before June 30. The denominator is the sum of the number of graduates, plus the number of dropouts in grade nine three school years prior, plus the number of unduplicated dropouts in grade ten two school years prior, plus the number of unduplicated dropouts in grade eleven in the prior school year, plus the number of unduplicated dropouts in grade 12 during the current year, plus the number of grade 12 continuing students.

A **graduate** is defined as a student who was received a regular diploma from a state- or district-approved education program, as evidenced by receipt of a secondary school diploma from school authorities. Any student who receives a diploma under a waiver from the competency examination required under AS 14.03075 (a), as specified by the state board is considered to be a graduate. This does not include an individual who:
- receives a certificate of completion;
- receives a certificate of attendance;

The statewide Graduation Rate has remained relatively consistent over the last five years, however the number of graduates has increased for four consecutive years:

School Year	Graduation Rate	Graduate Count
2004	62.9%	7,290
2005	61.4%	6,905
2006	61.6%	7,361
2007	63.0%	7,666
2008	62.6%	7,855

The Alaska Native/American Indian Graduation Rate has shown improvement over the same five year time period:

School Year	Graduation Rate	Graduate Count
2004	46.1%	1,327
2005	43.2%	1,233
2006	45.1%	1,442
2007	51.2%	1,689
2008	48.1%	1,523

Please note that the new Graduation Rate required by the Final Title 1 Regulations under NCLB will use a different calculation. The new Graduation Rate, also known as the Four-Year Adjusted Cohort Rate, will follow an actual group of students across four years of high school. Alaska will no longer be incorporating prior years' counts of dropouts to calculate the Graduation Rate.

Dropout Prevention

Continuing previous work on improving graduation rates in Alaska, Commissioner LeDoux convened a group of stakeholders to discuss issues around Alaska's graduation rate. The group met on February 19-20 at the Talking Book Library in Anchorage.

The group examined data on Alaska's graduation rates and dropout [leaver] rates and then discussed what Alaska's data means. The group listed possible reasons why students aren't graduating and discussed strategies for recovering and retaining leavers. The group also brainstormed ideas for immediate and long-term strategies to address the issue on the student, classroom, school, family and the community levels.

Ronalda Cadiente-Brown from Juneau School District shared what her district has done to increase the graduation rates in the district.

The next meeting of the group will be in April in conjunction with ASDN's Dropout Prevention Conference.

Hi Louie.

Sorry for the delay. I was absorbed into a meeting.

Attached are some of my notes from the recent Dropout Prevention meeting. These were all recorded from chart pack sheets in brainstorm sessions. They are raw and are yet to be edited.

The following two documents were topics that were brainstormed on the first day of the meeting under Commissioner LeDoux's facilitation.

Group 1 Why do Students Leave.doc
Group 2 Why do Students Leave.doc

The remaining two documents were topics brainstormed from the second day under my facilitation.

Brainstorm - Ideas for Immediate Strategies.doc
Immediate Strategies draft.doc

The *Brainstorm* document was the initial conversation discussing how to recover and retrain student leavers. The *Immediate Strategies* document identifies ideas for possible specific strategies to be discussed at the next meeting.

Please let me know if you have any further questions.

In a second e-mail I will share with you documents distributed to those attending the meeting.

Thank you.
Erik

Subject: Dropout summary

Dear Representative Munoz,

I brought the Dropout issue up at the Native Issues Forum yesterday and with Senator Elton being Chair of the Senate Education Committee, he asked that I send him the responses to my email.

I have attached the full summary for your information and I already sent a copy to Rep. Kerttula.

Gunalchéesh
Bradley J. Fluetsch, CFA
ANB Grand President

Dear Mr. Fluetsch,
I am a recent high school dropout from the Juneau School District. I hate the term "drop out" because it suggests that I do not adhere to values and aspirations of society. I prefer if you call me a bright potential GED candidate. It is in this regard that I respond, albeit anonymously, to the Grand Camp President's request for information.
I am a Native student and hope to help you understand better the issues and my reasons for leaving JDHS. First, most white teachers are racists in background, teaching style and student preference. Second, I find that they demonstrate this bias in their indifference to many important aspects of being Native. For instance they treat my membership in Native Corporations as if I was a member of a gang. They also seem to resent the fact that my family and I receive our health care from SEARHC. Third, the day to day administration of the public school system in Juneau leaves much to be desired and is not acceptable when the alternative to pursuing a GED exists. The following comments hopefully illustrate my points and will help you as a leader to make necessary changes.
I understand that teachers in Alaska are paid very well and have very good benefits, but when I hear my teachers talking, they seem to be more focused on their retirement and how it is being managed by the State than actually doing their work. How stupid is that? I do not like to think of myself as a racist, but thinking that someone as dumb as the teachers I have can teach me anything is just plain stupid. Also, my teachers touch me when other people aren't looking. No one believes me. Do you?
I hope you will also gather information from white, black, Asians and Mexicans who drop out. Some of them are very smart and hard working with very good values that they try to protect in school. Which brings up another thing? Most of the "popular "girls at JDHS are really mean. They wear outfits trying to show off their bodies and I find this most distracting and I get embarrassed when they laugh at me. Because my body is changing quickly I find it more comfortable not to be walking around in the halls between classes but rather outside of school. It would be better for me if the campus was closed and we had one class room all day. Also, if we could get rid of the football players walking around the halls pushing the Native kids around it might be more fun to be in school.
You know that it is not only Natives that drop out. Another reason I chose to drop out is because there are too many drugs at school; some teachers even smoke. The sodas and the food the other children eat are bad so I can catch fish and hunt instead of going to school and I get to work in my girlfriend's garden during the day (this is really fun.) I think this better prepares me for a future particularly if the same people who work for the State now continue to manage this state and its subsistence resources.
The thing you need to know is that I can spend more time with my girlfriend in her apartment now. So, the food is better, no stupid teachers and my girlfriend can spend all day with me before she goes to work in the evening at the hospital.
I am interested in why you want to know my reasons for dropping out. Can you tell me?
I think dropping out is something everyone should try. The earlier the better as it prepares you to find a less stressful life among not so stupid people. I can read magazines, listen to the news, work on the computer and get ready to ace the GED. Dude, life is good, too short and I don't want to hang out with bullies, mean people, dumb teachers and counselors who talk about suicide all the time.
Gunalchéesh,
Hopefully a future Grand Camp President

Thank you to all who respond to this.

It is my sincere belief that alcohol and drug abuse in the home, learning disabilities, forms of victimization (physical, sexual or emotional), poverty, lack of identity and even shame at being Native are just some of the things at the core of this issue. Many children who come from this environment experiment with marijuana, alcohol, cigarettes and other drugs at an alarmingly early age. Some even before pre-teen years. The effects on the brain at such an early age of development are devistating. And if these individuals have FASD, low self-esteem or any combination of the myriad behavioral disorders out there, those effects increase exponentially. It would seem dropping out for these kids is only a matter of when. I am speaking from personal experience, as I got kicked out of high school. All of the reasons I just listed were contributing factors.

I did get my GED and went on to get a college education. But when I dropped out of high school, I simply didn't care to go to school. I didn't care about my future. I couldn't recognize the relationship between cause and effect. I lacked social skills and felt out of place in school. While I was bright, and when I applied myself I received exemplary grades, I lacked motivation and follow-through. I had a loving immediate family, but we were all experiencing our own dysfunctions, which made objectivity impossible. In short, my feeling was "why bother?"

I agree that early detection and intervention is essential.

Feel free to use my example, Brother Brad. I hope it helps shed some light onto the reasons for this tragic statistic. Please let me know any other way I can assist you. Also, please keep me informed as to the progress LAT is making.

Is it possible to organize an LAT in Ketchikan? I went to the Local chapter of T&H regular meeting yesterday. I plan on attending those as I am able. We could collaborate with them to get this going.

I am cc-ing this to our ANB/ANS camp here. Brother Rob Sanderson is on the T&H Board and he is ANB Sergeant-at-Arms.

Thnak you.

Bill Bird
ANB Grand Sergeant-at-Arms

Hi,

That's a good point Mary. ☺ I believe that the foundation that my children had were a very big part of their success later on.

When I was living in Juneau, my daughter was attending JDHS, if you all dont know my daughter, she is very quiet. The challenge that we faced, when she nearly dropped out was.
Going from being an honor student with a lot of potential, and then being in a school where she was barely passing, there were several things that effected how she did. She was ready to drop out, and we moved, when we moved back, her grades improved and she ended up graduating with her classmates but she also did what she needed to go on to college.

1) Not feeling recognized, not only in the mainstream education system but also the native
community.

2) We didnt feel like we (because I am so involved in my childrens education) were being taken serious.

3) Location, we didnt have the resources to deal with the extreme weather conditions, She missed a whole month of school, due to the weather , there was no bus service. When the weather first hit us, it took me an hour and a half to dig out.

4) Very little support to deal with the issues.

5) lack of income-our housing rent was so high, that we couldnt even affored to buy things we needed for her success. when you cant affod clothes, this really affects how we feel)

6) Communication with the teachers, Oftentimes I wasnt even called back and it took us awhile to let them know, that she was there. It felt like they "Labeled" her a failure.

7) Not all native students were included in the activities, but then when you can barely get to school, these other programs that were there, we never heard of or it was "too late" to register. I believe my children missed out on 2 activities that would have helped them. These were culture camps and school programs.

When we moved, and she had this, we ended up in school districts where the teachers worked hard to help her catch up. I was very fortunate that her advisor worked hard and diligently. He would call us late, late at night and made sure that ALL HIS STUDENTS had information regarding all the opportunities. So, she was able to catch up and by that time she was an honor student her Senior year. So, the most important thing for her success was that we had one person who worked as a liason to help us set goals and not only that but helped us to reach them by informing us.

Juneau is not that big, and for the size I think they can improve their communication to improve Student success. I know of programs in other cities in Alaska and in Washington that are able to pull together more students with varying backgrounds. The key was, unity as well as recognizing different backgrounds.Let us be who we are, and take pride in that. Not all Indians are from the same tribe.

For this reason, I ask that my name be anonymous, because this is my daughter I am speaking of.

Once you overcome these obstacles, I believe any native student can succeed. But, had we stayed there, I believe she would have been a drop out, but also she would have ended up not wanting to be a part of our native community.

Roby, please do not. share my name on this. But, these are all based on facts. If it helps to improve their services then it was worth speaking up.
A Mom

Brad, I have an idea for addressing the issue of Native droup-outs, or any drop-outs for that matter. It has to do with establishing non-profit writing learning centers for kids 6 to 18, where they could learn how to write and other essential skills, in a unique and exciting environment, from professional volunteers (journalists, lawyers, teachers, etc.). Writing is a base skill, according to some research, that's essential for helping kids keep up with homework, understand complex material, remain excited about learning new things, develop imaginations - and stay in school, and prepare/get accepted to good colleges after graduation. Such non-profit centers will also have for-profit store extensions to support their own activities, and a publishing capability (to publish student work) - an important element of the learning process. I have several sections of a business plan put together (I was hoping to apply for a grant, but now have another priority, and won't have much time for this project). I don't know what your plans are for the ANA grant opportunity (or any other opportunity), or whether you can apply for the ANA grant, but if you are interested and have time for it, I can share what I have with you, to see if you would be interested applying for the ANA grant this week, to establish a pilot project center here in Juneau. If you are interested, please let me know. It's a proven innovative approach that has been tested in several cities in the lower 48 and it works. Andrei

Dear Roby

I'm very interested in this discussion about schooling and the history of schools in Alaska. Education is something different and much bigger. Education is whatever you learn or teach that is useful, relevant or meaningful to a person's life. Education has been here for thousands of years. Schooling is something new.

Schools were established across the USA in the 1800's to teach immigrants and later Native Americans how to assimilate into the dominant White Anglo-Saxon, Protestant Christian culture. The melting pot was not an equal sharing of many cultures, but the domination, the supremacy of one form of European culture, into which all the others were expected to adapt. It was an English-only, punctuality and hygene-obsessed, cloaked in divine authority environment. The message to children was: this is the right, God-given way to speak, to think to believe, to behave. And for millions of immigrant families, who had decided to come to America and fit in, public schools were a blessing. They offered exactly what the immigrant parents wanted for their children.

But for Native Americans, who had not decided to leave their homeland, the imposed curriculum carried a message of hostility and represented a threat to cultural survival. The more Natives assimilated the faster their own culture died, disappeared. So there was and continues to be resistence to the school, its mission, methods and meaning. But schooling is compulsory, so we feel we have not choice but to send our kids there, to learn whatever it is they're teaching.

But how much of it is education? How much of what we do in school proves to be useful, meaningful, relevant to the lives of these students? For those who are seeking professional careers, for the minority whose talents are linguistic and mathematical, school may offer exactly what they want. And we do have many successful graduates, who are our leaders and our heroes. We thank and honor them.

But for every survivor, I would estimate we have five or more catastrophes. I'd like even that minority of highly successful alumni to think back to their kindergarden class and list how many of them finished eighth grade, how many graduated from high school, how many continued on to college or any post-secondary training. And then consider how many have alcohol or drug problems, how many are or have been incarcerated, how many have perished in accidents and how many took their own life. The numbers, in

any village I know, would be frightening.

I would compare the school to a ship. The teachers are the crew, maintaining the order and efficiency of the
vessel, or perhaps better yet, rowing it. When you get aboard the ship, you recognize how hard they are
rowing. But the ship is headed in a direction where very few, even none of the passengers want to go. The
destination is the elimination of their culture, their language, even their community. If eveyone who gets
on board stays to the end of the trip, they will have jobs that will take them away from their families and
hometowns, into the cities and institutions of America, and the life of the village will be impoverished, and
eventually become extinct. But the rowers keep rowing, because they have no power or authority to change
course.

The captains (superintendents) and admiral (Commissioner) are content with the direction. They set this course
a hundred years ago and know how to pilot the ship successfully on that course. They do not want to think
about changing this course, because they are familiar with it and do not want to risk change.

So the passengers are jumping overboard. Some are drowning. Others are getting drunk in their state rooms.
There is also something toxic aboard the ship. Some passengers are dying from the internal poisons in the
ship. They are being suffocated by the fumes. The internal environment on board is harmful, like too much
second-hand smoke in the air. Some people die while their still on board, others perish soon after they
leave the ship. No one on the crew wants to examine this tragedy. They are too busy rowing, full steam ahead!

Why is schooling lethal to so many Native American children? Research tells us that there are seven ways, perhaps
now more, of being smart. There are children who are artistically and musically and mechanically and kinesthetically
intelligent. Their gifts are not only in math or reading. But the school only values and uses these two kinds of
intelligence, so many, perhaps most of our kids learn in school that they are not smart. That is a poisonous
lesson. It destroys a child from within. The message, the toxic fumes on board the ship, arise from a contempt
for the many ways, other than in math and literacy, that our children are gifted. There is simply no appreciation
for the natural, God-given talents many of our children possess, but they get the impression and then the message
loud and clear: unless you are smart in the ways for which we test, you are stupid, and you will never amount
to anything. You have no future in a world where only mathematical or literary talent

is rewarded.

Now this is a lie. There are other ways of being smart, and society does, in fact, value them. But that is not what kids learn in most schools. They seem to learn that neither they as individuals, nor their culture, their tribe, their ancestral heritage, has any value in the modern world. This is a deadly message. We should stop sending it to our children. Schooling, as we now conduct it, is killing our kids.

We need schools that allow each child to develop his/her unique talents, interests and abilities. The curriculum that was imposed over a hundred years ago was designed to assimilate immigrant children into the Anglo-America culture into which they had immigrated--and it worked for them. Alaska Natives have never been given the opportunity to design a curriculum for what they think would be useful, meaningful, or relevant to their children in their community. What would school that offered real Education to Alaska Native children look like? What topics would be central, what courses would enhance and even delight the elders and parents, so that everyone would be eager to be involved, supporting, encouraging and embracing the school?

Who would be teaching in that school? Would we continue to import educators from outside the state and place them in classrooms filled with children they could not fully understand, and too many, in ignorance, would treat disrespectfully? Why do we hire out-of-state teachers and provide little or no orientation to them about our histories and cultures? How can they appreciate the richness of our lives if they know and learn nothing about them?

The System does not train the rowers, the ship's crew, to appreciate the passengers. It just tells them to keep on rowing. The rowers cannot change the direction of the ship. And they are too busy to get acquainted with the passengers, who have no choice but to board the ship, whether they want to go to that destination or not. The Law requires them to get aboard. But if people had the freedom to decide whether or not to go on this voyage, most, after hearing about how rude the crew treated the passengers, and how many passengers died on board or jumped overboard, would never buy a ticket.

If we want to end this deadly voyage, we need to clean the ship of the toxic fumes and substances on board. And we need to set a new course for the ship. We need to look at radical curriculum reform, so that all students can develop their innate gifts and talents and become happy, healthy, productive citizens, grounded in their ancient heritage, confident in their personal and collective identity and capable of becoming contributing members of society.

We need to be sure that those who work with our children care deeply about them, love them. I am convinced you cannot effective teach those whom you do not love. And you cannot teach well subjects you do not enjoy. So we want teachers who

love our kids, love our villages, and love what their doing.

The goal of the school must
be the enhancement of life in the community in which it operates, not its ultimate destruction.

And that community needs professional leadership, teachers, principals, lawyers, accountants, doctors, nurses, engineers and architects. It also needs
plumbers and carpenters, heavy equipment operators, mechanics, handymen, painters, electricians and storekeepers. And it will need artists, musicians, poets, writers, singers, dancers, athletes, hunters, fishermen,
visionaries, philosophers, authors, scholars, tradition bearers, linguists, weavers, carvers, artists.

We need to transform schooling into Education.

I don't think this means spending more money on schools. I think it requires a total overhaul, a complete rethinking of what we are doing and why we are doing it.

Change, I believe, will not come from aboard the ship. The rowers are rowing very hard, and cannot change course. The captains and Admiral have no interest or desire to change the direction of the ship. It will be for the sea itself
to rise up, as a great tidal wave, to demand a reconsideration of our goals, a change of course. We need a
tidal of wave of parental and community outrage, a demand from the passengers aboard the ship, that we
change our direction. There are too many kids jumping overboard into anti-social and self-destructive behaviors.
We are losing too many children. The village may not have the leadership or the resources to change, to purify itself
of the toxins already accummulated there, but the school system is staffed with intelligent, well-educated
and committed professionals. It seems the likely place for reform to begin.

Kux woos gaax
Rev. Dr. Michael J. Oleksa

Hey Brad --- your survey request has yielded a response that I am forwarding to you. I have some of my own suggestions as to what we should be doing about this

Better prepare students for high school
Put uniforms on students
Require each student to have an approved book-bag with minimum school supplied supplies. It should be clear plastic organized --- no cell phones, I pods, handguns, etc.
Get rid of campus approach and kids wandering off to Food Land and other places for lunch
Need longer school days with homework to be completed in school
Make Capital City Transit the official school bus for a number of reasons – technical issues need be resolved.
Test only that which is taught in classroom ---
AP classes are after school and cost more
Police should get to know kids in town and their job duties should include helping resolve the truancy issues we face.
Teachers should get to know kids in school and their job duties should include helping resolve the truancy issues we face.
At a policy level a new performance standard on drops out should be adopted by the School Board

e.g. -- If XX% (say 10%) of an entering class drops out the Principal will be fired and all teachers will be demoted a pay grade.

Sports should be put into perspective – on weekends and not school sponsored
Letter jackets should be outlawed
Physical Education needs to be mandatory through out school ---
Back to basics with public school so that rational kids choose the option of staying in school and the public gets its monies worth.
Unions should be forced to deal with the solution ---

I don't know how to get this done.
Education specialists have said if a child isn't up to par by the third grade, he/she never caches up. That may have changed, but I feel it is most important to zero in on how grade school children are doing with complete follow-through. When Ed Thomas was director of the Indian Ed Program here, the one outstanding educational program was the Early Childhood Program, and we had two certified teachers administering the program. Grade school principals were elated to report seeing the improvement in our children coming out of the Early Childhood Program into preschool, kindergarten then grade school. One of the teachers in this program was a local Native teacher whose original teaching ground was the Indian government school. Then he developed a counselor and four tutor positions. Our counselor was a young, college-degreed,, Haida gal who supervised the tutors. After Ed left Ketchikan, the program slowly declined. I believe you have made Bill Bird chairman of grand camp education? I'll cc this to him as well. I hope this adds to the concerns of the LAT committee. Much & continued success.
Thanks. Mary

I think a big reason students drop out is that school content is often inane, useless, repetitive, and ultimately designed to fit us into an American capitalism, where you have to be really good at nagging, bureaucratic manuevering, zoned-out multitasking, and all things that make us efficient at building an economic superpower but have little to do with knowledge.

Eventually, adults have to look in the mirror, stop being a victim, and stop blaming the system. But we're talking kids. My brother was tested for special ed. Turns out he was smart enough to be in Gifted and Talented. Can you imagine the many gifted young people in our Native community who are targeted by teachers (who, by and large, have been tested to have the same personality type, the kind most opposite to traditional Native) as slow, disabled, etc.? Targeted by peers and attacked, verbally, physically, on a daily basis? When I was a first grader, a white older "friend" told me about this scraggly homeless Native man she saw earlier in the day, and she told me that was exactly the image she had of me as I got older.

Lots of rich kids take a load of drugs. I've seen it. They drink, have parties at their homes, drink and drive. But why do they get away with it? Why do most of them still go to college?

I say let's give Native youth useful things to do, relevant things. We should trust our traditional knowledge works; it'll serve us in the modern world just as much as any cultural sphere we come across. Literate knowledge, and the worldview that comes with it, is a very useful tool, practical and important. But there's a difference between a tool and the very thing that makes your core.

Gunalcheesh,
Ishmael

I would like to add to Mary's comments. I just retired from working with Alaskan Native students in a high school. Many of them are doing well, taking advanced classes, earning big scholarships, applying to internships, staying close to their family and culture. But many are not. Each one has their own story, and I am glad that you are asking them to tell it.

It's very painful to see a student drop out, and they drop out for many reasons. Sometimes family and personal situations are so overwhelming that school takes a back seat. Sometimes there is no one in their life to encourage them, mentor them, make sure that they get up in the morning and do their homework at night, show that they care and make sure that they do what they need to do. Despite their many capabilities, they still think like kids and need that support.

A major problem is that students who don't do well in the lower grades are still passed along until they come to high school where the stakes are much higher. Many of them cannot make it in high school due to situations that should have been addressed, as Mary said, in third grade. Some of these situations are: undiagnosed learning disabilities, ADHD, lack of effective study habits, inability to read well, and lack of academic preparation.

If you really didn't learn math, for example, in the lower grades, skipping homework and cruising along with D's and F's, high school math is a rude awakening. Other students in the class have been doing math for many more hours per week for 5 years or more, and it's tough to catch up. (read Malcolm Gladwell's new book, Outliers, for a clear example of how the number of hours a young person practices a skill affects the outcome of their life.)
If a student does not do well in school, yet is passed to the next grade, they learn two things: doing school work doesn't matter, this is the best that they can do. Students arrive in high school without the tools or the confidence to do the job.

At the high school level, I have seen many students who should have had the support of an individual education plan (IEP), who should have been receiving instruction appropriate to the way that they learn, but because of moving around a lot, or parents who did not advocate for them or assumed that they were just lazy or had attitude, or schools who chalked up poor performance to excessive absences, "family doesn't care", etc, they are now 17 years old, have failed some classes and earned too few credits to make it through high school in four years, and are headed out the dropout door. Coming to school is painful for them. It reminds them of their inadequacies, and at this point, they don't want other students to know how dumb they feel, so they hide it by clowning around, etc. The students are not the failures. The system is failing them. They have the potential, and our schools are not helping them reach it.

There are programs that tribes and schools in Alaska and other states have instituted to address some of these factors. For your consideration, I'll list the features of them, in no particular order:

Tribally-funded social workers in the schools, to help students deal with situations that are affecting their lives and getting in the way of concentrating on school work.

Tribally-funded social workers available to families to help support them through situations that prevent them from being able to concentrate on what's happening with their children.

Study halls, and study skills classes that teach skills such as: efficient reading of a textbook, test-taking, vocabulary, and allow time to do homework in school, so that it does not have to be taken home.

Academy classes for high school freshmen and sophomores, to help bring them up to speed in subjects like English and math.

Intense short courses in the lower grades, to help students gain, for example, basic math skills. (one Canadian tribe pulls students out of 4th-6th grades for 2 weeks and sends them back to rejoin their class when they have developed the math skills.)

Cultural programs and cultural support in schools so that students can maintain this important link and be proud of who they are, and so that the student body as a whole respects and honors the culture of the people who were here first. This includes making sure that the curriculum as a whole recognizes and includes local cultural information.

Specific tribally or federally funded counselors who mentor, encourage and advocate for Alaskan Native students, are vigilant against bullying, racism and discrimination, bring in speakers, do career programs, and help students find a direction and plan for what they will do after graduation.

Tribal truancy officers who make sure that students come to school.

Alaska Native Education attendance and dropout prevention coordinators who contact families when students do not come to school, and help make sure that students get there.

School district support programs for students who are living on their own, or who are dealing with gender identity issues.

Tribes who link payouts to academic performance. One Arizona tribe withholds payments, or fines families whose children have poor attendance. They provide cash rewards for high school and college graduation, including advanced degrees. They keep dividends/cash payouts in escrow for the young people, who do not receive the money until they earn a diploma or GED, even if it takes them to age 20 or older. Graduation rate is over 90% and the tribal leaders are not going to rest until it is 100%.

Transportation provided so that students can participate in school clubs and sports, and attend after-school tutoring programs.

School district programs that help provide school supplies, clothing and other items that help students to not only have what they need, but to fit in with other students.

Orientation programs for new students, especially those who are coming from a village, through foster care or out of a treatment program.

Early intervention when students are not doing well in school. Summer and after school programs for students who are not doing well in third-eighth grades. Programs to make sure that students catch up before they enter the next grade. One state has mandatory summer school for any student who does not achieve proficiency in reading, writing or math. If they cannot attend, then they must repeat the previous grade.

Mentors and role models, such as high school athletes, tutoring and working with young boys.

Active outdoor recreation programs, Native youth olympics and male-oriented cultural skills offered as part of the regular curriculum and after school.

Role models and mentors for boys.

Hands-on learning, place-based education, teaching using individual learning styles.

"School within a school" at the middle and high school levels. Unified school concept. Students stay in the same class and can do more project-based education. This type of school can do more learning by doing, have elders come in and teach skills, etc.

People from the community speaking out and letting students know that they care about them, and their education. Leaders visiting schools and eating lunch with students.

Sports programs for students who do not have the grades to play on the school team. Tutoring programs tied to these sports programs, so that the students will be able to have those grades in the future.

++

The students are watching us. If we encourage them, stand up for them, and work to make things better, we send them the message that learning is important, that they are important, and they keep going. If we stop trying, if we say that the "system" won't allow us to do something, if we ignore their needs, they see us giving up and they give up too.

Jill

Brad,

I am happy to see that you are doing this. I hope it goes well.

My adopted brother dropped out of Sitka High School at the end of his sophmore year. He was made fun of a lot in his early years of school because he learned to talk late. His birth mother was raising him alone and just didn't know to talk to him, so he didn't have that exposure to english.

He also was beat up many times in school. He wanted to end his life at age 12. He told my mother that he would do it, but chose not to because he didn't want to hurt her heart. He could have been a great student if he was given a chance. He is very bright and quick. He catches on quick and has a lot of common sense. He has had a lot of social problems and is difficult to work with. He has an anger problem due to his past.

He has a very tender heart and shows compassion for his disabled niece.

If he could have any job he chooses, he would be a truck driver. That is all he has wanted to do. He was told that he would have to have a diploma. Later, he was told that it wasn't necessary. I would love to see him do something that he enjoys.

Thank you,

Anonymous

Brad,
Perhaps an on-line survey could be constructed to collect this data. Can this be done on the ANB website? If so, it would be great if a webmaster could monitor the intake so confidentiality is respected as well as ensure that the comments are constructive.

I read this note of yours with interest. These children are everywhere. In fact, you can probably find them in the ANB Hall café around lunch time if you are interested in talking to them. I hope that you will continue to follow this problem until a solution is implemented. We seem to take a partial look at the problem, and then get busy with our lives. Good luck.

FROM THE PRESIDENT

New leadership–Change is in the Air

Sammy Crawford

As 2009 begins we are excited and eager to usher in a new era and year. There are changes in officials and elected leaders at the local, state and national level and as always with a new year and new administration we are looking forward to having a more positive future for ourselves and most importantly, for our children.

At the local level new school board members, city council members and borough assembly members & mayors have taken office. We look forward to working with them. At the state level there are new legislators as well as a new leadership coalition in both the House & Senate. We look forward to working with the 26th Alaska Legislature and their leadership. We also are proud of our Governor and are willing, ready and able to work with her and her administration in advancing the causes of our youth.

On the national level we have a new President who has made improving public education a top priority in his administration. His challenge to parents to become more engaged in their children's education is laudable as well as his recognition that all children must have access to highly effective teachers. His interest in pre-kindergarten and early childhood education programs will help to make it possible for all children to arrive at school ready to learn. President Obama has encouraged all of us to have higher expectations for our children, our local communities, and our nation. Working together we can achieve these goals.

One goal all of us in public education share is reducing the number of students who leave school prematurely. Districts are using a variety of programs and interventions to work with students who are not connected to school and on the verge of leaving. Graduation coaches, summer school offerings, career related classes as well as more access to digital learning are making the difference for some of our students. We know that early intervention is important and that the gap in vocabulary between students from middle-income homes compared to those from low-income homes is evident and nearly irreversible by third grade.

The solutions are many and must involve all of us. We must work individually with all of our young people early and often and help them feel welcome and connected. We must continue high expectations for all of our children and let them know we believe in them and their abilities. We must help them believe that education is important and it truly is the "more you learn the more you earn". We must teach our students that knowing the past is important and facing challenges of an unknown future is exciting and full of opportunities. We all need to take responsibility and work to ensure all young people are supported and mentored. All young people need to feel valued and respected. We can change our attitudes that some children deserve to be left behind. We must inspire others to help and make our state and country that history has shown to be "the beacon on the hill". Together we can make and shape the changes to make our future bright.

FROM THE EXECUTIVE DIRECTOR

AASB Statement on Dropout Prevention

Carl Rose

(Editor's Note: At a hearing of the Senate, Health, Education and Pensions Committee on Nov.15, 2008, Carl Rose submitted the following testimony).

Thank you, Senator Murkowski, for holding this field hearing and for this opportunity to provide written testimony to the Senate Health, Education, Labor and Pensions Committee. I appreciate your bringing us together to focus on what we can and must do not only to reduce the number of dropouts, but to ensure that ALL our young people graduate with the skills, knowledge, and opportunity to succeed in the 21st century There is nothing more important to Alaska's, and the nation's, long-term success. I especially welcome your invitation to discuss AASB's Initiative for Community Engagement.

The Problem

We have all seen the statistics about dropout rates and the staggering costs to society when we fail, not only in dollars, but in human terms. A new study by The Education Trust indicates that today's high school students are less likely than their parents to graduate from high school. The U.S. is the only industrialized nation where that is the case.

Nationally, high school dropouts:

- comprise 75% of state prison inmates
- comprise an overwhelming proportion of Medicaid recipients and a substantial proportion of welfare recipients
- are disproportionately minority, poor, come from fatherless homes, and have disabilities
- made significantly less in wages in 2002 than in the early 1970s (in constant 2002 dollars): males $35,087 (1971) and $23,903 (2002); females $19,888 (1972) and $17,114 (2002)
- commit more crimes than graduates (one economist estimated increasing graduation rates by only one percent would produce 100,000 fewer crimes per year, with an associated cost savings to society of $1.4 billion per year)

In Alaska, in the 2006-07 school year:

- 3,434 (5.5%) 7-12th grade students dropped out
- 1,299 (38%) were Alaska Native (25% of Alaska's school population is Alaska Native)
- 1,274 (37%) were classified as economically disadvantaged
- 1,850 (54%) were male
- the graduation rate was 63% (70% nationally)

But those are abstract numbers. In human terms, these are the young people who live in our homes, in our neighborhoods, in our communities; they are going to be parents of the next generation of Alaskans. Each child who doesn't reach his or her full potential is a tremendous loss to our state.

What these dropout statistics reflect is that too many young people cannot envision a successful future for themselves when they consider their past experience in school and home environments; they can't see the immediate and future path to success. They fail to see viable options for themselves and get very little encouragement and support to pursue and complete their high school diploma.

I think we can all acknowledge that dropping out is not the root problem. It is simply the end result

Inside AASB

Getting the most of your insurance dollars

By Jeff Bush, *Executive Director*
Alaska Public Entity Insurance

Alaska school districts pay on average over $300,000 annually for workers' compensation, property and casualty insurance. With that much money at stake, it is critical that each district maximum insurance benefits at a minimum cost. Here are a few simple ways to squeeze a few more dollars out of the insurance budget line:

1. *Issue an RFP for insurance broker services.* Although your district's insurance broker may be doing a great job, it never hurts to ensure that he or she is charging you a competitive rate for services. Broker fees and service vary considerably from broker to broker in Alaska. Remember, broker fees are not set in stone and can be negotiated, so decide how much service you want and negotiate a reasonable price for it. Also consider the possibility of paying the broker a set fee rather than a commission – it may save you more in the future, as insurance rates inevitably go up.

2. *Investigate various coverage options.* In many cases, a district can afford to take on more risk, in the form of higher deductibles, in order to save on insurance premiums.

3. *Make sure your property and vehicle schedules are accurate.* Every year, the value of most vehicles decline. In the case of an accident, the maximum amount an insurer will pay is the actual value of the vehicle at the time of the accident, so that is the amount it should be insured for. If the vehicle is only worth $5,000, it makes no sense to continue to insure it at its purchase price, which may have been 4-5 times higher.

4. *Establish and maintain a comprehensive loss control program.* A poor loss history can more than double a district's insurance premiums. Talk with your broker or insurer about how to create a culture where employees identify and eliminate risky situations and losses are reduced.

5. *Take advantage of premium credit programs.* Most insurers give credits or grants for activities designed to reduce risk. Talk with your broker about taking advantage of those programs, which will save money both through the credit/grants and through a reduction in losses.

AASB Statement on Dropout Prevention (from page 3)

of a process over time of students disengaging from school and often, but not always, failing academically and floundering socially and emotionally.

In Alaska, we need look no further than the third grade benchmark to identify the young people who are testing at or beyond grade level to determine their ability to cope with an increasingly complex curriculum. Those students who test below grade level are at risk simply because they are not prepared for an accelerating curriculum. Put another way, students at grade level in the third grade will have the benefit of our educational system. Those who test below grade level will experience a remedial system, one that too often devalues their unique qualities and gifts, and replaces them with labels, negative reinforcement and disapproval.

To address the dropout rates, we need to address school readiness and healthy development for the children who are most at risk:

- Before entering kindergarten, the average cognitive scores of pre-school age children in the highest socioeconomic group are 60% above average scores of children in the lowest socioeconomic group.
- At age 4 years, children who live below the poverty line are 18 months below what is normal for their age group; by age 10 that gap is still present. For children living in the poorest families, the gap is even larger.
- By the time children from middle-income families with well-educated parents are in third grade, they know about 12,000 words. Third grade children from low-income families with undereducated parents who don't talk to them very much have vocabularies of around 4,000 words, one-third as many words as their middle-income peers.
- Thirty-two percent of young children are affected by one risk factor (e.g., low income, low maternal education, or single-parent status), and 16% are in families with two or more socio-demographic risks.

One hears with some frequency that professionals in our schools have stated: "You can identify the kids entering kindergarten who will not make it in school." I do not believe this entirely, however, if there is a shred of truth to it, why would that teacher and the system not intervene with needed supports and assistance at the point of identification? Why would a system wait until the third grade benchmark to verify what we knew was a possibility as many as three years earlier? Why would we, as Alaskan leaders and community members, not take action earlier to ensure that all children enter school ready to learn?

Sadly, by the time young people drop out of school, many have en-

Association of Alaska School Boards, 1111 West 9th St., Juneau, Alaska 99801-1510 Tel: (907) 586-1083 FAX: (907) 586-2995. The Association of Alaska School Boards is a not-for-profit organization whose primary mission is to advocate for children and youth by assisting school boards in providing quality public education, focused on student achievement, through effective local governance. AASB represents school boards' interests before the legislature, state agencies, Congress and other state and national regulatory bodies. Founded in 1954. Commentary is published monthly by the Association of Alaska School Boards, Carl F.N. Rose, Executive Director. Articles or suggestions should be sent to John Greely, Chief Editor, AASB 1111 West 9th St., Juneau, Alaska 99801. For change of address write to AASB or call 907-586-1083.

AASB Statement on Dropout Prevention (from page 3)

dured years of struggle, disappointment, and disengagement.

The Solutions

The solutions mostly lie way upstream from the final step of leaving school. And they must involve all of us—students, families, educators, schools, school boards, businesses, community organizations, health and social service providers, public policy makers, and everyone of us—each of us has both an individual role and a professional role to play. WE need to take a shared responsibility for the successful development of our community's young people...there is no THEY to whom we can point as being responsible. It has to be WE, and it has to involve changing how our institutions work together, how our communities support young people, and how each of us behaves in our daily lives as community members, parents, and role models.

It will take institutional and individual action to change the environment for our young people into one where they are and feel supported, where they feel valued and respected, where some young children don't start school behind their peers.

I think we know what the solutions are. We know they need to include the continuum from early childhood to post-graduate; families, schools and communities; education, health, social services and workforce development.

Each of us whom you have invited here today has a responsibility for a particular part of this continuum, and if we align our efforts, we will all see greater impact on the success of our young people.

I believe we need to focus our efforts all along this continuum--not just on preventing problems, but more on providing the skills, knowledge, supports and opportunities that our kids need to succeed. As Karen Pitman of the Forum for Youth Investment says: "Problem-free is not fully prepared, and fully prepared is not fully engaged."

Our goal must be fully engaged and fully prepared youth who can thrive in our fluid 21st century environment. Our goal should be broad and holistic; it goes beyond passing benchmark tests, or avoiding risk behaviors. It must be the healthy development of each and every young person so they have the academic and work force skills, and the healthy life skills needed to succeed and thrive. And this means we must have high expectations for all our young people, and we must enlist entire communities in support of them.

I am heartened to see an increased focus across a growing number of disciplines on a strength-based approach to positive youth development. It is what lies at the foundation of AASB's Initiative for Community Engagement, or Alaska ICE.

Engaging Our Communities

I know you have seen this little book, Helping Kids Succeed—Alaskan Style, and you will find it all over Alaska...in schools, in doctors' offices and public health clinics, in parenting classes, in homes, in airport waiting rooms, in businesses. It was literally created in 1998 'by and for Alaskans' through a series of community visits, where everyday Alaskans described what they wanted for their kids, and they very eloquently described what kids need from adults in order to succeed. These can be called 'assets' or protective factors, resiliency, traditional Native values...they have many names but the principles are the same. How are assets built in children and youth? Through positive relationships with caring adults. What kids need is the time, attention, respect, encouragement, support, and high expectations of the adults around them in their families, their schools, and their communities.

Born out of this little book was a far-reaching initiative that set out to change the environment for Alaska's young people, and to enlist all Alaskans in building healthy communities that provide what kids need to succeed. Alaska ICE is a statewide initiative of AASB that encourages and supports youth success through a statewide network of partners and local community initiatives. Federal support of this initiative through the Alaska Native Education Program in No Child Left Behind has enabled us to work with school districts, communities, organizations, and individuals throughout the state to promote the shared responsibility that each and every one of us has to help kids succeed.

Community engagement is the intentional action of groups and individuals working together to create healthy environments that support the growth and education of children and youth.

Our Alaska ICE initiative has many strands and facets; I will provide you with a copy of our 2007 Progress Report that reflects how those many partnerships and collaborations create a web of support for Alaska's young people. Community engagement will look a little different in every community as people and organizations tailor it to their priorities and goals.

A few snapshots from Alaska ICE's community partners, made possible because of our funding support through NCLB's Alaska Native Education Program, show how the simple principles of asset-building, healthy and supportive youth-adult relationships, and intentional community engagement can flourish in every community.

- Parenting classes in Yup'ik and English in Lower Kuskokwim School District, through a partnership with the tribe
- Community-school art projects that build supportive youth-adult and school-community partnerships in Yukon Flats villages
- Weekly asset messages developed by youth and adults and delivered in English and Russian by teens over the community radio station in Delta, and youth-adult community choir and theatre productions
- Student-produced TV shows addressing substance abuse issues in Unalaska, and targeted efforts to improve school and community climate
- Schools that are more welcoming to parents and community members in the Pribilofs, and collaborative school, tribe and community efforts to build culturally responsive social and emotional learning skills and positive peer climate among students

As part of our overall efforts to effectively engage adults in positively supporting young people in Alaska's communities, we also put significant focus on improving the school environment by helping school apply these same principles. Today I want to focus in on creating school environments where all children can succeed.

Student Achievement and Engagement

Over the last five years, AASB has aligned our school improvement initiative (Quality Schools/Quality Students, or QS2) and our community engagement initiative (Alaska ICE). Begun as separate initiatives, it became apparent that to make the greatest impact on academic achievement, we needed to target both efforts towards assisting school districts and communities in improving supports for youth in both environments.

Through QS2, we assist school districts in improving their leadership and governance capacity, aligning their curricula with state standards, and targeting resources effectively towards identified priorities. Through Alaska ICE, we engage individuals, families, schools, organizations, businesses, faith communities, and young people themselves in building sustainable community networks to support, encourage, and provide meaningful opportunities to our young people that will prepare them to thrive in the 21st century.

When young people feel connected to school and have support from family, teachers, and other caring adults, academic achievement improves and risk behaviors decrease.10 When students have strong social-emotional learning skills11, they do better in school and life. There is a growing body of national research to support this, and we now have data to show this in Alaska. AASB has developed a student and staff survey to gauge student and staff perceptions of climate and connectedness, and an increasing number of schools are participating, including 242 schools in 33 districts in 2008, comprising

AASB Statement on Dropout Prevention (from page 4)

over 30,000 students and almost 5000 staff.

Districts that have worked with AASB on community engagement and school improvement have shown:

- greater academic achievement as measured by Standards Based Assessment (SBA) proficiency gains than the statewide average
- even greater proficiency gains by Native students in those districts, and greater gains than Native students statewide
- persistent improvements in student ratings for school climate and student connectedness over the last three years across all aspects of climate and connectedness
- improved overall staff ratings of school climate across most subscales

Other key findings of AASB's School Climate and Connectedness Survey include:

- Key factors of school climate and connectedness are related to student performance on Alaska's SBAs: high expectations, school safety, parent and community involvement, and social-emotional learning were found to have significant positive relationships with scores on reading, writing and mathematics.
- Staff ratings for school climate were consistently and strongly related to student performance in reading, writing and mathematics SBAs.
- There have been significant negative relationships between student risk behaviors and school climate and connectedness ratings each year: the more students reported that there was a positive climate at their school and that they felt connected to school, the lower the number of incidents of delinquent behavior and drug and alcohol use they reported seeing among peers at school or school events.
- Students who reported that they had someone available outside of school to help them with homework and students who had an adult who knew what they did with their free time gave consistently higher ratings for connectedness to school and more favorable ratings of their school climate than did students without outside support and supervision.

As more districts participate in the survey and use the results to improve school climate and increase student connectedness, we are seeing growing interest in the area of social and emotional learning, and how schools, after-school programs, and families can work together to promote social and emotional development. A 2008 meta-analysis of over 700 studies of family, school and community interventions found a broad range of benefits for students:

- 9% decrease in conduct problems (e.g., classroom misbehavior, aggression)
- 10% decrease in emotional distress (e.g., anxiety, depression)
- 9% improvement in attitudes about self, others, and school
- 23% improvement in social and emotional skills
- 9% improvement in school and classroom behavior
- 11% improvement in achievement test scores

A growing number of Alaska school districts are focusing on improving students' social and emotional learning as an effective way to improve student success. The Anchorage School District is viewed as being at the leading edge of this national effort, and AASB is assisting a number of other Alaska districts.

Federal Support

It is clear that lowering high school dropout rates is necessary, and that it will only be accomplished if we align our various efforts to support children and families more effectively. We need to actively enlist families, schools and our communities to ensure that some children don't start out behind, and that if they do, we have effective ways to very quickly close that early gap so they can all get the benefit of our education system. We need to ensure our schools offer engaging, rigorous, and relevant curricula, provide safe, caring environments where students feel connected, have high expectations for all students, and provide the appropriate supports that will enable students to meet those expectations. We need to make sure that our communities provide a positive environment where young people feel valued and have meaningful opportunities for involvement.

Through initiatives like Alaska ICE we need to help people understand the important role we each can play in our homes, in our neighborhoods, in our schools, in our businesses, in our communities. We need to encourage adults to feel and then act on a shared responsibility for creating the kind of supportive environment that young people need. Every one of us has opportunities in our daily lives to interact with young people, and what both common sense and research tell us is that the cumulative impact of those small interactions is profound. We can each decide to be intentional in those interactions, and use them to engage positively with kids, to be interested in them and what they think, and to give them opportunities to be a valuable part of our communities.

The federal government can't do these things. But there are many ways that it can support the people who can do these things:

Continue long-term funding for the Alaska Native Education Equity Program in NCLB. AASB's Alaska Initiative for Community Engagement is an example of how federal funding can be used effectively to spark the initiative and capacity in each of our communities to actively work together to better support young people. The Alaska Native Education Equity funding targets Alaska Native student achievement, dropout reduction, and school readiness. There is improvement, but significant disparities persist.

Target early intervention and support towards the children most at risk of starting school behind. This should include intentional, sustained strategies (statewide, districtwide, and communitywide) that start at an early age, include families, and continue into preschool and early elementary school. When we do that in an intentional and coordinated way, we will vastly simplify the other steps we can and should take to improve schools to meet the needs of older students.

Hold steadfastly to the ideal put forward in NCLB that all children should get the best education we can give them. As we go forward with improvements in NCLB, we should retain accountability for all the subgroups that we know are lagging behind. If we focus our attention on supporting these children, and preparing all children for school, we will address the root causes of the dropout problem.

Conclusion

AASB is working with partners across Alaska to change the environment in which children and youth live. Engaging individuals, organizations and communities is long-term work and sometimes requires starting at a basic level of capacity-building. The great thing is that when people understand how their personal, everyday actions, however small, can positively impact a young person, they are very willing to do it over the long term. And those small actions, repeated across the state, will help build healthy communities and in turn healthy young people.

We know a lot about what we need to do. We need to gather the collective will and commitment to do it before another generation of our children drift off to underachieving lives.

Senator Murkowski, thank you for your time. I know I am preaching to the choir here. I want to thank you for your strong and sustained support for Alaska's children, for education, and for our community engagement initiative. I invite you to call on me and the Association of Alaska School Boards to assist in this effort in whatever way would be helpful.

House Education Committee
State Capitol
Juneau, AK 99802

Re: Alaskan Drop Outs – Untapped Resource for Economic Growth

Dear Representative Seaton and Members of the House Education Committee:

Recently, the federal government (noted in a report by the National Drop Out Prevention Center) commended Alaska for realistically reporting our graduation rate – at 67%. Other figures (Alaska Department of Labor) state that only 65% of our high school students graduate. In rural Alaska and in certain populations the drop out rate is near 50%! **Alaska is ranked fifth in the nation for teens not in school and not working!**

In the 2000 US Census it was determined that over 57,000 Alaskans over age 18, did not have a high school diploma. The current number of drop outs in Alaska is estimated at 4,000 – per year! Thus, every four years we could easily have another 20,000 individuals unprepared for adult living and gainful employment.

A recent report (www.nchems.org/pub/detail.php?id=85 - May 2007 WICHE) "The Emerging Policy Triangle: Economic Development, Workforce Development and Education" makes it clear that human capital is what drives our current economy. Alaska can never reach its' full potential until we have the human capital (driven by education) to meet our labor needs.

Even if we leave out the economic factor, we must still realize the costs of prison inmates (75% are drop-outs), the unemployed and those on public assistance and other types of subsidized programs.

Alaska has few true alternatives for the young student who has not completed high school and is not work-ready.

The Alaska Department of Education does their best to support drop-out programs and alternative schools. The Alaska Workforce Investment Board has repeatedly put youth first in their economic and workforce initiatives. The Alaska Department of Labor is aggressively seeking ways to develop pre-training programs for those who are not prepared. The AGIA Training Task Force looked at ways to involve dis-engaged youth in career and technical training at earlier stages. But to date there has never been a large dedicated fund for the this

under-served population. It must be comprehenisive funding, not a piece meal approach.

The Education Commission of the States presented to Alaska on October 9, 2008 in a session facilitated by Senator Bettye Davis. (a copy of the report should be available in the LIO library or from Jennifer Dounay of the Education Commission – jdounay@ecs.org or #303 299 3689) The report highlighted how other states are moving forth with great success, including alternative pathways to a standard diploma and career "majors" during high school.

Obviously I could go on, and present many more convincing facts about why Alaska has to make drop out prevention one of our top priorities. We could also spend another 20 years reasearching strategies. I can recall most of those reports and meetings over the past 30 years. But right now, Alaska has enough data and plenty of experts (I would be happy to provide names) on this problem to move forth – **with funding**.

I can tell you that career and technical education is one of the top strategies for drop out prevention. The Gateway to College program through the Gates foundation provides a way for drop outs to complete high school and attain college credit at the same time. Programs such as Job Corp, Youth Build and the Regional Learning Centers are essential. Funding must be increased for career academies and work-based learning. Youth who enroll in early work-based programs are 30% less likely to drop out. Other states have increased the age in which to complete high school to 21 yrs. This permits formula funding to be extended for those who need more time to become work/college ready.

There are many other things that we can do to prevent our high drop-out rate, but if you want the biggest bang for the buck in the shortest amount of time, start with the 4,000 young people who will drop out this year or who dropped out last year. Track them down, recruit them and get them into programs that will help them complete a diploma or GED, receive employment training and gain the life skills necessary to be independent and work-ready!

And then begin to move on the other strategies required to prevent drop outs.

Please feel free to contact me at any time.

Respectfully,

Karen Martinsen

Karen Martinsen, M.A.
Parent, teacher, student

note: I use the term "drop out" , not because I find it appropriate but because it seems to be a language that people understand. Personally, I do not see these students as "drop-outs", but rather as students who we under-serve, or dis-engage. Certainly all of these students are individuals who have incredible potential – it is just untapped. Untapped youth is what I experience, not failures.

State Higher Education Gets Some Low Grades

FAIRBANKS, Alaska (AP) — Alaska's higher education system has not made the grade, according to a recent national study.

The state fell short in three of five areas examined, according to a report by the National Center for Public Policy and Higher Education.

This group evaluates how well higher education is serving the public.

The study covered:

— Affordability.

Alaska joined 48 other states in receiving failing grades. Only California received a passing grade, a C.

Alaska undergraduates borrow on average $5,427, one of the highest amounts nationally. For every Federal Pell Grant dollar, Alaska funded 6 cents.

— Preparation.

The study gave Alaska a C plus saying the state made improvements in preparing its students.

By the time they reach age 24, about 89 percent of the Alaskans earn a high school diploma or a GED diploma. That's up from 87 percent since the early 1990s.

— Participation.

Better preparation has not translated into a passing participation grade, however. Alaska was one of three states to earn a failing assessment.

This was because 18 percent of the state's residents who are between 18 and 24 go on to higher education.

— Completion.

The study found that 67 percent of freshmen return for a second year, but 22 percent of first-time, full-time college students finish work toward a bachelor's degree within six years.

Saichi Oba, the University of Alaska's assistant vice president of student and enrollment services, said it's not easy to gauge Alaska's higher education system to other states because Alaska incorporates community colleges into the UA system.

"So our community college tuition appears high when compared to community college Outside; it's the premium we pay for proximity," Oba said in an e-mail. "Because of this, UA always gets marked down for affordability along with the lack of adequate needs-based aid in the state."

— Benefits.

Alaska recorded a C. The category examines how a state benefits by having more people pursue higher education.

In UA's case, the number of degrees awarded to Native students doubled from fiscal year 2001 to fiscal year 2007.

Alaska's Dropout Rate Double U.S. Average

ANCHORAGE, Alaska (AP) — Alaska's high school dropout rate far outpaces the national average. In fact, it was double the national average from 2005 to 2006, or 8 percent, according to U.S. Department of Education figures.

In Alaska, the Commission on Postsecondary Education says 38 percent of today's ninth-graders will have no high school diploma in 10 years. That puts Alaska last in the nation for the number of ninth-graders who will likely have a four-year college degree in 10 years.

The road to failure can start early.

Some educators say they can see which kids aren't going to make it on the first day of kindergarten. Some children show up knowing how to read, while others come not even knowing their colors.

Alaska educators gathered for a third day on Saturday to brainstorm how to stop the epidemic of kids quitting school. They called dropping out a result of an accumulative failure, which can start before kids even enter school.

"This is a social issue, one we all own," said Association of Alaska School Boards executive director Carl Rose. "We all need to take some responsibility in this."

Part of the issue, according to University of Alaska president Mark Hamilton, is cultural. Parents and families are not valuing education. They need to realize even skilled labor fields, like plumbing or construction, require training that depends on knowledge, such as math, learned in high school.

"We have to stop saying, 'College isn't for everyone,'" he said. "Postsecondary education is for nearly everyone unless your goal is to be the head fry guy at McDonald's."

Republican U.S. Sen. Lisa Murkowski convened the Saturday hearing. She asked state and national education experts what the federal government could do to help fix the problem.

Among the suggestions for federal help was to fund more pre-kindergarten programs; to support more vocational and technical classes in high schools; and to continue to provide special grants for the education of Alaska Natives, who have among the highest dropout rates.

"We are failing our kids and we should be ashamed of ourselves," said Tina Michels-Hansen, of Cook Inlet Tribal Council, which offers tutoring and other schooling help for Anchorage School District Alaska Natives.

"Schools have become factories that communities passively accept," she said.

New approaches may cut into the nation's dropout rate.

BY SUNNY DEYÉ

A little experimentation may be the path to increasing high school graduation rates.

Career technical education, dual enrollment, early college high schools, and after-hours high schools are all approaches states are looking at to increase the value of their high school diploma and decrease dropout rates.

While there is no direct connection between these innovative approaches and a reduction in the dropout rate, research supports the notion that some of these different programs do reduce the likelihood that kids will leave school before graduating.

The search for new approaches is crucial as lawmakers and educators grapple with a new federal formula that, in many states, will likely show far fewer students are graduating on time with a regular diploma than was previously thought.

A top complaint of employers is that graduating students lack "soft skills"—the ability to solve problems creatively, communicate well, and interpret and evaluate information. The high school career academy—there are 2,500 of them across the country—is one popular approach to prepare kids for both college and work. The academies blend regular academic content with career-related studies, including mentoring and internships.

SENATOR DARRELL STEINBERG CALIFORNIA

"Career academies are really about relevance," says researcher James Kemple of the public policy research organization MDRC, who wrote a 2008 report on career academies.

In California, incoming Senate President Darrell Steinberg wants to give grants to emerging green businesses that will join with public schools to establish "green career academies." He'd like to see partnerships with health care, high tech, biotech and other industries as part of the drive to change high school education.

"We must link education reforms to the new economy," says Steinberg. "The green economy is an example of an opportunity to

Sunny Deyé tracks high school requirements and graduation rates for NCSL.

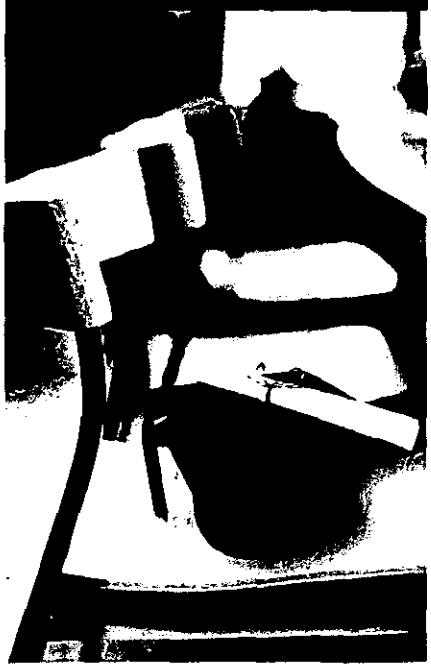
DROPOUTS ARE A BIGGER PROBLEM WHEN SCHOOLS CHANGE HOW THEY COUNT GRADUATES.



Time for a test. Here's a multiple choice question that might be harder than it looks:

Which states had the highest 2007 graduation rate:
A) Indiana: 76.5 percent
B) South Dakota: 88.4 percent
C) North Carolina: 68.1 percent
D) Not enough information to decide

The correct answer is "D."

That's because comparing high school graduation rates from state to state—and even school to school—is nearly impossible. States use four methods to calculate graduation rates, and many of them grossly overestimate the number of students graduating on time with a regular diploma.

That led U.S. Education Secretary Margaret Spellings to announce in April that the U.S. Department of Education will publish new rules this year requiring all states to calculate graduation rates using the same federal formula by the 2012-13 school year. She said the new approach means we "will not only better diagnose the dropout crisis, we'll be on our way to ending it."

The new formula is expected to be a calculation based on the number of kids who enter ninth grade and graduate with a standard diploma four years later. Some legislators are concerned that the plan requires building new databases and systems to analyze the information, all of which will cost money. States that do not comply will be in violation of the No Child Left Behind Act.

Using this method, the graduation rate tends to be considerably lower than most states now report. According to *Education Week's* EPE Research Center, about 71 percent of all U.S. public school students in 2005 graduated from high school on time with a regular diploma.

The results in the 17 states that have changed to the new formula have been dramatic. Indiana's rate went from nearly 90 percent to 76.5 percent. In North Carolina, the rate dropped to 68.1 percent from 96.1 percent.

As states start applying the new formula, there will be tremendous pressure to decrease the number of dropouts.

And there is a lot more at stake than bookkeeping. Dropouts earn far less than high school or college graduates and can be a significant financial burden on society.

STARTING EARLY

Students drop out of school for many reasons: family demands, poverty, friends who drop out, schools that do little to encourage them to stay. Students also drop out because they are bored and don't see how their classes relate to their future. A 2005 survey found that most dropouts had passing grades, big career dreams and were confident they would have graduated. More than 80 percent said their chances of staying in school would have increased if classes were more interesting and encouraged real-world learning.

Research shows schools can identify as early as eighth and ninth grade the students most likely to drop out. Kids who are failing classes in middle school and skipping classes top the list, according to Elaine Allensworth, director of the Consortium on Chicago School Research at the University of Chicago.

Despite those early signs of trouble, schools do poorly at preventing dropouts. "Past strategies for dropout prevention have not been well-targeted, nor have they been based on how students have done in their classes," says Allensworth.

Across the nation, legislators are trying to find ways to keep kids in school. They've considered providing better equipment, changing the curriculum so it prepares students for college or work, and offering different ways to graduate.

But the key is finding and funding proven programs.

"Education is one of those fields where we have a long history of trying something based on a whim or anecdote rather than on strong evidence," says James Kemple, author of a 2008 report on career academies. "Too often, investment in a program or intervention comes first with research running from behind, trying to catch up."

State lawmakers need evidence that a program works if they expect to make the case to the public, he says.

Senator Darrell Steinberg, the incoming president of the California Senate, says reform of middle and high schools is the state's No. 1 priority.

"Data are key," says Steinberg. Good information gives lawmakers and educators a clear picture of what's happening in schools and which strategies are working.

ONE SIZE DOESN'T FIT ALL

Solving the dropout problem takes a two-prong approach that seems largely driven by common sense, says Russ Rumberger, director of the California Dropout Research Project.

"Dropouts are concentrated. Some schools have large numbers of kids dropping out, while others have just small subpopulations," says Rumberger, who has worked closely with Steinberg's committee to study high school graduation.

The best approach is to use small-scale programs for the schools with few kids at risk, and take a more systematic approach in districts with deep-seated problems.

"States don't have a great track record of dealing with systemic problems," Rumberger says. "Money alone is not a promising strategy. Schools must be provided with proven strategies, guidance and oversight."

CHECK OUT the four different ways graduation rates are calculated at www.ncsl.org/magazine.

3469

REPRESENTATIVE MARK ANDERSON ARIZONA

SENATOR CYNTHIA NAVA NEW MEXICO

meet environmental goals, create lots of jobs, and create a pipeline now from high school to the economy, while also making a dent in our dropout problem."

Updating traditional career and technical education curricula to provide clear paths to success in school and on the job is another approach. In Arizona, for example, lawmakers created online vocational exams in 2000 that students can take to earn credentials in areas such as aircraft mechanics, bioscience, engineering and carpentry.

"This type of education is extremely valuable," says Representative Mark Anderson, chair of Arizona's Public Education Committee. "There are a number of students who really 'plug into' vocational courses."

Arizona is challenging the old model of vocational education geared mainly to kids who can't advance academically. Instead, students in these programs often end up going to college and see the vocational training as one more tool to further their academic careers.

DIFFERENT APPROACHES

A panel in North Carolina charged with investigating the dropout problem found that numerous programs trying to grapple with the problem were small and poorly funded.

"We wanted to find the programs that have been successful so that they could be duplicated and properly funded," says Joe Hackney, speaker of the North Carolina House. The Legislature appropriated $7 million for programs in 2007 and another $15 million in 2008.

North Carolina's approach reflects the state's growing awareness that increasing graduation rates—only 68 percent of students graduate on time—will require new ideas and investments.

It's a notion that resonates in New Mexico, where educators and lawmakers are grappling with one of the worst high school graduation rates in the country. Just 54.1 percent of students graduate in four years with a regular diploma.

The state recently passed legislation requiring high school students to complete either an advanced placement or honors course, a dual-credit course offered in cooperation with an institution of higher education, or a distance learning course in order to graduate.

"We gave a lot of thought to what kind of programs would add both rigor and relevance to the high school curriculum," says Senator Cynthia Nava, vice-chair of the Legislative Education Study Committee. "By requiring students to take at least one course that demands a significantly different way of thinking and learning, we hope to engage and challenge all of them."

HELPING DROPOUTS

States also are trying to help students who are older or have already dropped out of school. Many left school because they had to work or be at home during the day.

In Texas, Representative Scott Hochberg visited a high school in his district that offers classes on nights and weekends. The school helps students graduate with a high school diploma, rather than a GED.

"These kids clearly had made a choice to return to school to get their high school diplomas, and to continue to pursue higher education. The high school diploma was the missing link, because they knew they could attend community college at night," says Hochberg.

When he learned that the school didn't receive extra funding for these students—they weren't even counted in the state's attendance system because they weren't there for morning roll call—he pursued a bill to allow schools to count nontraditional students in dropout recovery programs.

"Kids who receive a high school diploma, rather than a GED, are getting real courses and real coursework," say Hochberg. "We heard from industry that they'd much rather have an employee who finished high school than one with a GED. Also, these kids are much more likely to be successful in college."

NORTH CAROLINA JOE HACKNEY SPEAKER

REPRESENTATIVE SCOTT HOCHBERG TEXAS

THE HIGH COST OF DROPPING OUT

Most high school dropouts face grim employment prospects and a lifetime of low-paying jobs. Several studies have found dropouts also have far-reaching effects on the rest of society.

- The average annual income for a high school dropout in 2005 was $17,299, compared to $26,933 for a graduate.
- More than 1.2 million students did not graduate from American high schools in 2008. The lost lifetime earnings for that class alone totals nearly $320 billion.
- America would save more than $17 billion in health care costs over the lifetimes of each class of dropouts had they earned their diplomas.
- American households would have more than $74 billion in additional accumulated wealth if all heads of households had graduated.
- More than $310 billion would be added to the American economy by 2020 if students of color graduated at the same rate as white students.
- The American economy would see a combination of savings and revenue of more than $7.7 billion in reduced crime spending and increased earnings each year if the male high school graduation rate increased by just 5 percent.

The Honorable Senator Bettye J. Davis
Alaska State Legislature
State Capitol, Room 30
Juneau, AK 99801-1182

Dear Senator Davis,

Communities in Schools of Alaska (CIS) offers to school districts an evidence based integrated educational support delivery system which provides schools with general prevention services and individual students with case management/intervention services. CIS works to reduce school dropout rates by identifying youth needs and gaps in services, promoting community engagement, coordinating partnerships, brokering and mobilizing existing resources that help to keep our kids in school. By connecting the dots and providing the glue, CIS increases the chances for student success by helping meet core needs and focusing on the kids in most need.

CIS of Alaska is requesting funding support as follows in the amount of $1,574,000. This will be enhanced by funds from other sources, in-kind contributions, volunteer support, leveraged resources and other community fundraising.

Communities In Schools of Alaska Network

CIS of Anchorage (AVAIL)	$58,000
CIS of Bethel	$77,000
CIS of Fairbanks	$810,000
CIS of Juneau	$184,000
CIS of Mat-Su	$106,000
Dolly Parton Imagination Library (IL) *	$95,000
Career Exploration Opportunities (CEO)	$25,000
Statewide Technical Assistance & Training	$35,000
Statewide TQS/Evaluation	$60,000
Statewide Management Administration & Coordination	$124,000

Senator Davis, we are not asking the State of Alaska to fully fund these very important projects. The amount requested represents only a portion of the CIS network budget. CIS is a sound business decision for legislative dollars.

CIS of Alaska is a non-profit 501.c.3 agency (Tax I.D. #06-1689908) dedicated to removing barriers to education for youth, working to increase graduation rates and reducing drop-out rates.

CIS is focused on the priorities and needs of Alaska and Alaskans to include early learning, literacy, workforce development and dropout prevention. We are requesting that the State partner with us so that we might build upon the progress made thus far. I submit that the amount of dollars we are requesting pale when measured against the dollars we can, and are, leveraging and is an incredible return on investment; an investment in our most valuable resource: The Children of Alaska!

We were pleased to join the hundreds of concerned leaders at the Alaska Department of Education sponsored Summit held in November and participate as a panel member of select leaders invited to testify before Senator Murkowski's Field Hearing of the Senate Health, Education, Labor & Pensions Committee, on education issues, specifically the alarming number of youth dropping out of school. Innumerable media articles, administration comments, and Senate President Gary Stevens' priorities for this session all focus on one issue: **finding ways to reduce and curb the dropout epidemic among high school kids in Alaska.**

We can stop the epidemic; we must stop the epidemic! Communities In Schools of Alaska is evidence based, time tested and a vital element to the solution.

Thank you for your valuable time and thank you for your service to the great state of Alaska.

As always, if you or your staff desire additional information, you need only ask.

Sincerely,

Tom Morgan
State Director

WE GET RESULTS!
CIS of Alaska Network Outcomes (2007-2008)

- The network served ***5,279*** *children and youth* statewide
- Of the CIS students tracked for attendance - *86% improved* in attendance
- Of the CIS students tracked for behavior - *83% improved* in behavior
- Of the CIS students tracked for academic improvement - *80% improved* academically
- Of the CIS students tracked for promotion - *95% promoted* to the next level
- Of the CIS eligible seniors tracked (targeted to graduate) - *94% graduated* on time.
- 134 students, primarily from rural areas, participated in career exploration and readiness activities through the CEO program.
- As a result of support by CIS of Alaska, an additional 2,372 children are enrolled in new Imagination Library programs in Fairbanks and Wainwright in addition to the 875 children participating through Nome and Juneau Affiliate hosted IL programs, totaling 3,247 Alaskan children! Mat-Su and Mountain View are developing IL programs.

Success Through Partnerships and Collaboration

Representing the local/community level, CIS Affiliates had *102 community partnerships*, *222 local volunteers* and *51 locally engaged board members* whom provided *3781 volunteer hours.* Additionally, the State Office, CIS of Alaska, benefited greatly by and expanded our impact through the support of over *50 local, state and national partnerships.*

Dollar for dollar, the right investment in our children's future.

Communities In Schools Alaska

With sites in Anchorage/AVAIL, Bethel, Juneau, Mat-Su and Fairbanks (and Nome pending), **Communities In Schools of Alaska is** making **remarkable progress** in positively affecting the **high school dropout rate, early literacy** and **career development. Highlights from the current 2008-2009 year include:**

- **CIS of Anchorage/AVAIL** is serving 81 students that were dropouts. Students are now learning, earning credit and preparing for their HSGQE, with an average of 65-70% attendance rates. This demonstrates great improvements from their past truant behaviors which resulted in their prior dropout.
- **CIS of Bethel** is working creatively with the District Court, the community of Bethel and its neighboring villages to address underage drinking. So far this year, it has served 75 youth and families and has received 31 referrals from court or Juvenile Justice. Additionally, it recently graduated its first Youth Court official.
- **CIS of Fairbanks** is the newest affiliate to our network and represents participation of over 30 school sites and 18 "graduation coaches" in the graduation success program in the North Star Borough School District.
- **CIS of Juneau** has been operating an effective and very successful care coordinator program that provides at-risk students with needed services to help them stay in school. Since the inception of the program five years ago it has served over 500 students ranging from pre-kindergarten through twelfth grade. The majority of students that were served were in high school. Out of all those students, less than 10% of students dropped out. This is where the CIS motto of "A Personal One-On-One Relationship with a Caring Adult" is a proven truism. Additionally, CIS of Juneau has recently implemented a new Ethics and Leadership After School Program for students from elementary through high school.
- **CIS of Mat-Su** The CIS of Mat-Su site, the Mat-Su Day School, provides education, mental health counseling, evaluation, and case management services on campus and also uses a "running team" to provide outreach to students in regular schools who are in need of support to keep them in school. By serving students with emotional problems, CIS of Mat-Su is focusing directly on the heart of the dropout problem because this group has the highest dropout rate of all students, exceeding 50% nationwide. So far this year, we have served 64 of our highest risk youth.
- **Career Exploration Opportunities** (CEO) a statewide initiative, works to expand career opportunities to Alaskan youth, specifically targeting rural high school students through providing a blended learning program with video-conferencing as an integral component. This year, CEO has enrolled approximately 100 High School students, grades 9 - 12 from eight school districts and 12 school sites, including: Iditarod School District – McGrath, Takotna, Grayling, Holy Cross & Shageluk; Nome School District – Nome High School; Yupiit School District – Tuluksak; Lower Yukon – Scammon Bay; Valdez – Valdez High School; Dillingham – Dillingham Alternative School; ASD – AVAIL Alternative School; and Juneau High School.
- **Dolly Parton's Imagination Library**, another statewide initiative and an early intervention program to combat illiteracy, started with a pilot program in Nome in response to the Nome elementary principal's observation that children were reporting to kindergarten unprepared, especially in the area of reading. The program quickly spread to Juneau where over 800 children have enrolled with another 2000 additional children eligible, but lack of funds has slowed sign-ups. Wainwright, Wrangell, Ketchikan and Fairbanks also have active IL programs with Mat-Su poised for implementation. Anchorage's new IL has already enrolled approximately 1000 children and has a goal to double that number of enrollments. By the end of this year, over 5,000 children birth to five will be enrolled statewide, including the First Family's newest addition, Trig Palin. Reading is fundamental. A recent survey saw the number of parents reading to their children jump from 50% to 75% in one year! The Imagination Library is a proven effective program that helps children start school ready to learn and has been adopted by Best Beginnings.
- **And, CIS is evidence-based--our model works!** The CIS Model is proving very effective. Research shows that comprehensive, integrated student services are necessary components of effective, school-based efforts to increase graduation rates and improve student achievement.

Communities In Schools of Alaska is focused on the priorities of this State: Education, Literacy, Graduation and Career Development. CIS of Alaska is making a difference.

CIS of Alaska is a non-profit 501 (c) 3 agency (Tax I.D. # 06-1689908) dedicated to removing barriers to education for youth, working to increase graduation rates and reducing drop-out rates.

UNIVERSITY of ALASKA
Many Traditions One Alaska

202 Butrovich Building
910 Yukon Drive
P.O. Box 755000
Fairbanks, AK 99775-5000

February 2, 2009

Representative Les Gara
State Capitol, Room 500
Juneau, AK 99801-1182

Dear Representative Gara,

An educated and prepared workforce is critical to the success of Alaska's future. The University of Alaska provides hundreds of robust programs at campuses across the state, with certificates and degrees geared to meet the current needs of Alaska – petroleum technicians, teachers, engineers, nurses, and more.

However, there is insufficient financial aid available to help these students achieve their goals. The current economy is widening that financial divide. Access to education is especially critical for Alaska's first generation and low-income college students. Unfortunately, Alaska is 51st among other states and the District of Columbia in college-bound rates of low-income youth (FY 1994 to FY2005).

This year the University has responded to this tremendous need by awarding $818K from its annual budget in grants to students. In addition the Alaska Student Loan Corporation and, through your advocacy, the State of Alaska has funded ACPE's program – the *AlaskaAdvantage* education grant with total funding of approximately $1.25 million. This is a good start; however for Alaska to reach the average needs-based grant expenditure of other states, nearly $7 million is required annually. Alaska must continue to invest in need-based financial aid programs.

The Alaska Achievers' Incentive Scholarship Program (HB 94) was developed by the Coalition of Student Leaders at the University of Alaska. Enjoying the full support by both the students and administration of the university, this program would offer substantial need-based relief to eligible, high-achieving students. By directing funds to those students earning a B average or higher, this program will not only provide access to those with economic need, but it will also serve to shore up the future leadership of our state. If they graduate from the University of Alaska, they most always stay in Alaska.

If I can answer any questions or be of any further service, please contact me.
Thank you,

Mark R. Hamilton, President
University of Alaska System

February 23, 2009

The Honorable Paul Seaton
Chair, Education Committee
Alaska House of Representatives
State Capitol, Room 102
Juneau, AK 99801-1182

Dear Representative Seaton,

I am writing in response to your recent request that I *provide the Education Committee with recommendations on the best practices and needs for a needs- and merit-based scholarship program that would best serve Alaskan students.*

Because multiple factors impact access to and success in postsecondary education, any thoughtful response must consider the most fundamental factors. Based on my review of relevant research on the issue of student access and success, there appears to be consensus that key factors are: 1) academic preparedness (career or college readiness); 2) family financial capacity; and 3) student and parent access to critical information and support resources to complete secondary education, transition to, and succeed in postsecondary education programs. Finally, another factor appears to be a lack of recognition, particularly within Alaska's low-income population, of the importance of and need for youth to aspire to postsecondary education or training as an essential step for workforce and career readiness.

As the committee heard earlier this session from Taylor Foundation representatives, one approach in which many states are now engaged is the early commitment model. This model is predicated on the understanding that 21st century workforce and college preparation must begin no later than middle school if states are to increase the education pipeline's production of students who leave high school career- or college-ready.

One of the earliest such statewide programs is Indiana's 21st Century Scholars Program, established by the state legislature in 1990. In addition to reviewing outcome data for the IN program, I contacted Stan Jones, the executive officer of the Indiana Commission for Higher Education. Their program goals are:

- Reduce the high school dropout rate
- Prepare students for the workforce
- Increase opportunities for low-income students to attend college

printed on recycled paper

- Improve individual economic productivity and the quality of life for all Indiana residents

Indiana's program was implemented targeting students (and their families) in the 6th through 8th grade. To have a chance at program funding, students must have signed on to the program no later than 8th grade. The potential pool of participants was established based on their eligibility for free or reduced lunch at the time of enrollment in the program. Participants agreed to fulfill a pledge which included meeting certain academic performance standards, not using illegal drugs or alcohol or committing a crime, and applying for admission and federal financial aid at a state institution. In return, the student would receive the cost of four years of tuition at any public college or university in the state. Both parents and students would be provided support resources during high school, and participating college and universities are required to provide academic and social support resources to assist in the transition to and success in postsecondary education.

As early as 1995, positive results for Indiana began to emerge as their confirmed Scholars were completing high school and continuing to postsecondary education not only at higher rates (82%) than other low-income students (60%) but also at higher rates than all other students without regard to socio-economic status (77%). Commissioner Jones reports that another trend, in this instance concerning, was noted relative to scholars—even thought they were meeting the minimum grade requirements, they still required remediation at quite high rates upon entry into college. It was in the mid-1990s that Indiana business leaders, K-12 educators and higher education faculty worked together to establish a high school curriculum designed to prepare students for higher education (IN's Core 40). The Core 40 curricula constitute those courses which, if successfully completed in high school, all sectors agreed would produce high school graduates prepared for college or workforce success. The initial statewide implementation of the curriculum was voluntary with parents having the ability to "opt out" their child. However, effective with the high school graduating class of 2011, all Indiana secondary school graduates will be required to have completed the Core 40. Commissioner Jones states that they are experiencing reductions in remediation rates at the public institutions.

Having presented Indiana's relatively mature program as a model of best practices and integrated strategies which, when fully implemented, adequately resourced and sustained, are most likely to effect the greatest outcomes, we must acknowledge that designing, implementing, and sustainably funding such an initiative statewide would necessarily require key stakeholder involvement and input. Additionally, the reality in Alaska today is that a large number of our fellow residents, who are very much in need of workforce training or re-training, are no longer within the education pipeline. Because of our long history of low rates of college-going, any broad-based statewide program would need to have a mechanism for low-income adults to participate and prepare for high-skills, high-wage occupations.

Based on my perception of your committee members' concerns, I believe your key objectives are to 1) ensure any scholarship funds are targeting the neediest students, who 2) can also demonstrate their capacity to succeed in a program of study or training that results in them becoming career-ready. The universal availability of the Free Application for Federal Student Aid (FAFSA) provides a uniform means of assessing and sorting applicants by financial need. It is important, to most efficiently use (stretch) available program funding, to ensure that applicants exhaust all other sources of non-loan aid before receiving additional funds. In terms of assessing applicants' preparedness to succeed academically, that is more complex because there is no single assessment that is appropriate to the various types of postsecondary training. However, the American College Testing (ACT) organization has deployed its online assessment tool, WorkKeys, which is used in at least one state, Michigan, to determine qualification for their state merit aid program. With the caveat that I have no personal expertise in competency assessment, WorkKeys is one option to explore as an alternative to solely relying on a high school grade point average. WorkKeys is an assessment tool the Department of Education and Early Development is currently promoting to Alaska districts as a means of assessing student competencies.

I hope you find this information helpful. I have tried to provide a high-level response to your inquiry. If there are other program elements relative to which you would like specific recommendations or advice, I will do my best to produce additional information.

Sincerely,

Diane Barrans
Executive Director

NEED-BASED GRANT AID AT UNIVERSITY OF ALASKA: AN INDEPENDENT ANALYSIS

MAY 2005

Report prepared by Derek V. Price, Ph.D.
DVP-PRAXIS
Under contract to University of Alaska

EXECUTIVE SUMMARY

The University of Alaska system operates 16 campuses serving more than 30,000 students. The enrollment profile for UA students is more typical of community colleges rather than four-year institutions; for example 52 percent of non-degree seeking and undergraduate Fall 2004 enrollment were adult students 25 years of age and older compared with 38 percent of Fall enrollment nationally. According to the National Center for Education Statistics, 53 percent of enrollment nationally in public two-year colleges were adults 25 years of age and older. Moreover, 62 percent of all UA students enrolled part-time – the national figure was 40 percent. Thus, the University of Alaska primarily serves adult students who enroll part-time, which is *atypical* according to national data. In addition, unlike most public four-year colleges and universities, the University of Alaska enrolls a large number of Native Alaskans and American Indians – for Fall 2004, more than 4,000 (13%) Native Alaskans and American Indians were enrolled at UA.

Due to the unique characteristics of the University of Alaska system, the Statewide Office of Student and Enrollment Services wanted a comprehensive independent analysis of student financial aid and how UA students pay for college. Both quantitative and qualitative research techniques were used for the analysis. First, almost thirty faculty, students, staff, financial aid professionals, and community representatives were interviewed about student financial aid, the University of Alaska mission, and the possibility of new resources to support a need-based grant program. Several national experts on student financial aid and state grant programs were also interviewed. These stakeholder and expert interviews provide a broad picture of the support for an expanded need-based grant program as well as a general consensus perspective on the focus for such a program. *The stakeholders interviewed believe that total financial aid is insufficient and that finding additional resources for financially needy students is important. They are concerned about loan reliance for all students. They are also concerned about the lack of need-based financial aid for part-time students and for students who do not qualify for the federal Pell Grant. Overall, these stakeholders would support a need-based grant program that expanded opportunity for students with financial need and was consistent with the open admissions mission of the University of Alaska.*

Second, the Statewide Office of Institutional Research extracted a cross-sectional database of all students enrolled at the University of Alaska for Fall 2004. This database provided information on almost 33,000 students, including demographics, enrollment status, financial aid awards by type of aid, and the major academic unit (MAU) at which the student is enrolled. Using these data, several research questions were pursued concerning student financial aid:

- How much student aid was awarded to UA students and what was the type and source for this aid?
- What type of UA students received financial aid and what was the ratio between gift aid and loan aid?
- Who receives gift aid and is it need-based?

The data indicate that more than $34 million in student financial aid was awarded to UA students for Fall 2004. Almost 90 percent of this aid was awarded to non-degree seeking and undergraduate students, and 81 percent was awarded to full-time undergraduates. UA students borrowed more than $23 million for Fall 2004 and received more than $11 million in gift aid. The federal government is the largest provider of financial aid for UA students: 45 percent of total gift aid was provided through the Pell Grant and Supplemental Education Opportunity Grant; 63 percent of total loan financial aid was borrowed through the Stafford loan and PLUS programs. The University of Alaska provided more than $4 million in gift aid for Fall 2004; less than 3 percent of this gift aid was clearly need-based. Rather, 42 percent of UA gift aid was awarded to UA Scholars, 22 percent was awarded through tuition waivers, and 33 percent was awarded through employee waivers. *These data show that the Pell Grant is virtually the only form of need-based gift aid awarded to UA students.*

Undergraduate students at University of Alaska receive the lion's share of financial aid, especially full-time undergraduates. Although more than half of all UA undergraduates received some form of financial aid, the national figure of 62 percent is much higher. About 67 percent of the total aid received by 8,500 UA undergraduates for Fall 2004 was from federal Stafford, Alaska and private loans. Federal grant aid made up another 16 percent of total aid received, and external grants and scholarship aid made up 6 percent of total aid received. Gift aid from the University of Alaska represented 11 percent of total financial aid received by undergraduates. *Among UA undergraduates receiving any financial aid, UA undergraduates relied on student loans to finance college; loan reliance is especially true for part-time undergraduates who borrowed 77 percent of the total aid they received for Fall 2004.*

Almost 14,000 UA students were enrolled as "other," which means they were not classified as degree-seeking; however, many of these "other" students may be pursuing certificates of competence that do not require a postsecondary degree. More than 93 percent of the "other" students enrolled part-time, and 71 percent were adults 25 years of age and older. Only 7 percent of "other" students received slightly more than $550,000 in financial aid for Fall 2004; more than two-thirds of this aid was from the University of Alaska through the employee waiver. *Because "other" enrollment typically disqualifies students from receiving federal financial aid, the UA employee waiver and personal or private loans are virtually the only sources of financial aid to help these students pay for college. In other words, the majority of adult students 25 years of age and older enrolled at UA currently do not receive student financial aid.*

Several types of gift aid were awarded to UA students for Fall 2004; these include institutional aid from the University of Alaska (UA Scholars, tuition waivers, employee waivers, and the need-based tuition assistance grant), the federal Pell Grant and Supplemental Education Opportunity Grant, and grants and scholarships from private sources. About one-third of the almost 10,000 UA non-degree seeking and undergraduate students who received any financial aid received a Pell Grant, and 14 percent received a federal SEOG. About 18 percent of non-degree seeking and undergraduate students received an

3483

employee waiver and 13 percent received private scholarships. Less than 5 percent of non-degree seeking and undergraduate students received a tuition waiver and slightly more than 5 percent received a need-based tuition assistance grant. More than 13 percent received UA Scholars' awards. Among the non-degree seeking and undergraduate students who received UA gift aid, average annual amounts were about $2,000; part-time students received much smaller awards that averaged about $950 annually. *Pell Grant recipients received less than $300 in annual UA gift aid, on average, as did financially needy students who borrowed a subsidized Stafford loan. By design, the UA tuition assistance grant targeted students who just missed the Pell eligibility threshold; thus, the approximately 500 recipients of the TAG received more than $650 in average annual gift aid from the University of Alaska. In contrast, students who did not receive federal need-based aid or the UA tuition assistance grant received almost $1,800 in average annual gift aid from the University of Alaska – this amount is 6 times higher than the average for Pell Grant recipients and 3 times higher than tuition assistance grant recipients. In short, gift aid from the University of Alaska overwhelmingly flows to students who did not qualify for federal need-based aid or who had no financial need at all.*

CHART A

SUMMARY OF POSSIBLE NEED-BASED GRANT PROGRAMS FOR NON-DEGREE SEEKING AND UNDERGRADUATE STUDENTS AT UNIVERSITY OF ALASKA

Target Student Population	*Estimated # of Students Served*	*Annual New Grant Amount*	*Estimated Annual Cost*
"Other" Part-Time Adult Students Seeking Certificates of Competence	3,200 – 4,200	$525 (3 credits/term) $1,050 (6+ credits/term)	$2.1 million – $2.7 million
Part-Time Adult Undergraduates (Pell Grant and TAG eligible)	725	$600 (TAG eligible) $1,400 (Pell eligible)	$875,000
Full-Time Undergraduate Pell Grant Recipients	2,400	$500 (50-50 grant to loan ratio) $1,400 (60-40 grant to loan ratio)	$1.1 million $3.4 million
Financially Needy Undergraduates – Tuition and Fees Equity Model (Pell Grant and TAG eligible)	Full-Time 400 Part-Time 950	$675 - $1,200 (part-time) $2,175 (full-time)	$1.5 million

This analysis indicates that additional need-based grant aid is necessary to help UA students pay for college. Because the federal Pell Grant and Supplemental Educational Opportunity Grant are authorized and appropriated by the United States Congress, new resources for a need-based grant program would need to come from the state of Alaska, the University of Alaska system, or private sources. Chart A shows the potential impact and cost of four types of need-based grant programs.

The largest group of students not currently served by financial aid at the University of Alaska is adults 25 years of age and older enrolled as "other" part-time students. Many of these students may be seeking certificates of competence that do not require a postsecondary degree. *A new need-based grant program targeted to financially needy adults pursuing certificates of competence could benefit between 3,000 and 4,000 students with average annual maximum grants of $525 for students taking 3 credits per term and $1,050 for students enrolled in at least 6 credits. This type of program should be capped at no more than 3 terms and would require enrollment in a program leading to a certificate of competence. The average annual cost for such a program is estimated between $2.1 million and $2.7 million. This type of program to benefit working adults pursuing occupational and technical certificates could be described as a workforce development initiative. Because of the new and expanded skills of the adult workforce that would result from such a program, the University of Alaska could seek resources from key employers in the state that would benefit from a more skilled workforce. If the state of Alaska expanded tax credits for employers who invested in an initiative to provide need-based grants to working adults, many employers may be willing to support such a program. One way to fund a need-based grant program for working adults would be for the University of Alaska to allocate $750,000 annually for such a program and seek $1.5 million annually in matching funds from employers who would most likely benefit from the program.*

A second possible need-based grant program could target part-time adults 25 years of age and older who are enrolled as undergraduates. These adults are eligible for federal financial aid if they make satisfactory progress toward a degree objective; in fact, part-time adult undergraduates received more than $500,000 in federal gift aid and work-study awards for Fall 2004 and borrowed more than $2.6 million through federal Stafford, Alaska and private loan programs. About 725 adults enrolled as part-time undergraduates for Fall 2004 received a Pell Grant or a UA tuition assistance grant. *A new need-based grant program targeting part-time adult undergraduates with financial need could provide average annual additional grants ranging from $600 for TAC eligible students to $1,400 for Pell eligible students, and cost about $875,000 annually. The University of Alaska would most likely need to reallocate existing resources to fund this type of program. However, less than 20 percent of the $500,000 UA allowed for the tuition assistance grant was awarded for Fall 2004; thus, approximately $300,000 should be available from this tuition waiver authorization. An additional $575,000 could be added to the TAC program and the new need-based grant program could supplement gift aid for Pell eligible part-time adult undergraduates and further complement financial aid for part-time adults eligible for the current TAC program.*

A third option for a new need-based grant program is to focus on the most financially needy full-time undergraduate students – that is, those who are eligible for a federal Pell Grant. These students tend to be traditional-age students between 17 and 24 years old. Pell Grant recipients are more likely to be Alaskan Natives and American Indians, Blacks and Hispanics. Of the almost 2,400 full-time undergraduate Pell Grant recipients, 57 percent of the total financial aid they received was in the form of student

3485

loans. Most financial aid administrators nationally award between 60 and 65 percent of aid to the neediest students in the form of grants and only 35-40 percent in the form of loans. A new need-based grant program to reduce the 57-43 current loan to grant financial aid ratio for full-time undergraduates would require a supplemental grant from the University of Alaska of $500 annually to achieve a 50-50 grant to loan ratio, and $1,400 annually to achieve a 60-40 grant to loan ratio. *To achieve a balanced ratio of 50-50 would require an additional $1.1 million annually; a target of 60-40 would align a need-based grant program with most financial aid programs nationally, and require $3.4 million annually. This level of investment would likely require new resources from the state of Alaska. One possible revenue source for a state investment in a need-based financial aid program for full-time Pell Grant recipients is the annual "return on capital" payment from the Alaska Commission on Postsecondary Education – this payment was $5.6 million in FY 2005, from which only $450,000 was allotted to the University of Alaska. In addition, the federal Leveraging Educational Assistance Partnerships (LEAP) program, if it is reauthorized in the Higher Education Act, provides matching funds for states that invest new resources in need-based gift aid. The state could receive as much as a dollar-for-dollar grant through the LEAP program – that is, a $1.7 million dollar investment by the state of Alaska could leverage as much as $1.7 million in matching dollars from the federal government.*

A fourth possibility for a new-need based grant program is to target all financially needy undergraduates and guarantee them a minimum equity grant equal to 100 percent of annual tuition and fees (approximately $3,500 currently). Full-time Pell Grant recipients already receive gift aid, on average, that exceeds this threshold. However, almost 400 full-time UA tuition assistance grant recipients would need additional average gift aid of $2,175 annually to achieve the equity threshold. Almost 1,000 part-time undergraduates would need supplemental grants between $675 and $1,200 annually to achieve the equity threshold. *This type of need-based grant program targeted to financially needy undergraduates would require approximately $1.5 million in additional resources annually. The "return on capital" annual payment to the state from the Alaska Commission on Postsecondary Education and the federal LEAP program are also possible revenue sources for this type of program. Alternatively, the University of Alaska could specify that 100 percent of all authorized tuition waiver programs be directed for a new equity grant for financially needy students. For Fall 2004, almost $1 million was awarded to UA students through tuition waivers. Thus current foregone tuition through waivers is currently sufficient to fund an equity grant model with no new resources. However, this approach may face stiff resistance from college deans, department chairs and faculty who have considerable autonomy in awarding tuition waivers under the current program.*

Although several approaches for a need-based grant program were examined in this report, University of Alaska stakeholders and leaders need to grapple with the desired objectives for a new need-based grant program before designing, funding, and implementing such a program.

For example,

- Does UA want to increase full-time enrollment for students currently enrolled less than full-time?
- Does UA want to reduce the extent of borrowing for all students, or a specific group of students?
- Does UA want to provide an equity threshold or minimum level of grant financial aid for all students with financial need?
- Does UA want to complement existing financial aid programs to better serve part-time students?

However, the analysis found that many UA students would benefit from additional need-based grant aid, and that support for additional need-based grants and a corresponding reduced reliance on student loans is widespread among stakeholders of the University of Alaska.

Introduction

In 2003-04, the University of Alaska provided the ability for its campuses to waive up to $500,000 in tuition to provide support for students with an Expected Family Contribution (EFC) exceeding the threshold for Pell Grant eligibility. This need-based tuition assistance grant (TAG) can provide complementary financial aid grants between $200 and $300 per term to eligible students. In addition, the state of Alaska recently announced the *AlaskAdvantage Education Grant Program* to provide grants of up to $2,000 per academic year for Alaska residents with financial need. To apply for a grant, students must complete the Free Application for Federal Student Aid (FAFSA) no later than April 15th prior to the beginning of the academic year they intend to enroll. The state legislature appropriated $500,000 for this new need-based grant program to begin Fall 2005; this new investment was matched with $103,000 from the federal Leveraging Educational Assistance Partnerships (LEAP) program. This new state grant program is a "last dollar" program, meaning it provides assistance to those students who have exhausted all other grant and scholarship aid and still demonstrate substantial financial need to gain access to higher education. The state legislature has emphasized that financially needy students with strong academic performance and those pursuing careers in Alaska workforce shortage fields be eligible for a larger award from the new grant program.

The implementation of these two need-based programs by the UA system and the state of Alaska indicate broad political and institutional support for the expansion of need-based grant aid for Alaska residents who attend college. More than $1 million is available for need-based aid through these two programs. Although national reports indicate that students in Alaska face significant financial hurdles to gain access to college, the University of Alaska's Statewide Office of Student and Enrollment Services wanted an in-depth analysis of student financial aid among UA students in order to yield more accurate information on the extent to which student financial need is (or is not) being met by existing federal, state, institutional and private sources. Accordingly, they contracted an independent researcher to conduct both quantitative and qualitative analysis of student financial aid. The following report represents the culmination of a six-month review of need-based financial aid among students in the UA system.

The National Perspective: College Affordability in Alaska

The economic and political environment for college access issues continues to be dominated by the budget crisis facing most of the 50 states. State budget deficits lead to lower appropriations for colleges and universities, rising tuitions, and an increased reliance on student loans. According to a national research study on college costs conducted for the National Center for Education Statistics, state appropriations to public colleges and universities are the single most important factor in determining tuitions and fees charged to students (NCES, 2002). During the previous two decades, state appropriations grew far less rapidly than the cost of college,

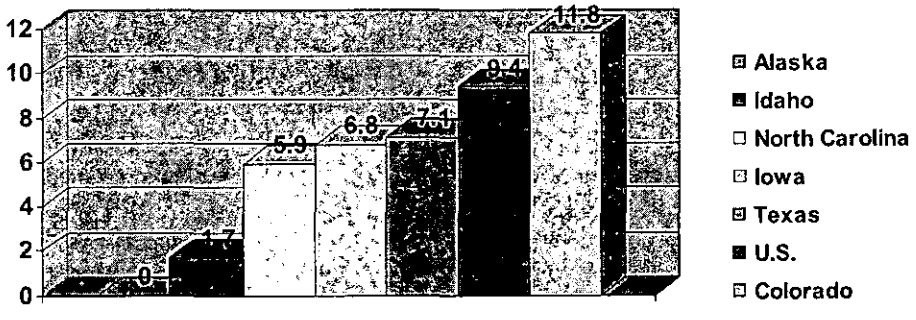
and the share of state appropriations that cover general and educational expenditures at colleges and universities declined by 25 percent (Price and Wohlford, 2005).

During the last few years, several national reports have indicated that colleges are increasingly less affordable for low- and middle-income students. According to the *Measuring Up 2004* report card, 17 states have declined on every indicator of college affordability since 2002, and only 2 states improved on more than half of the affordability indicators (National Center for Public Policy and Higher Education, 2004). Alaska fared poorly in this report card, receiving a failing grade (F), which represents a steady decline from a 'C' in 2000 and a 'D' in 2002. Three reasons explain Alaska's failing grade:

- The lack of a need-based grant financial aid program,
- The reliance on student loans to provide financial aid, and
- A 10 percent average annual tuition increase during the past two years.

According to a 2002 report from Lumina Foundation, *Unequal Opportunity: Disparities in College Access Among the 50 States*, the Anchorage and Fairbanks units of the University of Alaska system were affordable for low-income dependent students only after the use of federal Stafford loans; all three units of the University of Alaska system (Anchorage, Fairbanks and Southeast) were unaffordable for low- and median-income independent students (Kipp III, Price and Wohlford, 2002).

FIGURE 1
STATE GRANT AID AS A PERCENTAGE OF HIGHER EDUCATION OPERATING EXPENSES



Source: NASSGAP, 2004

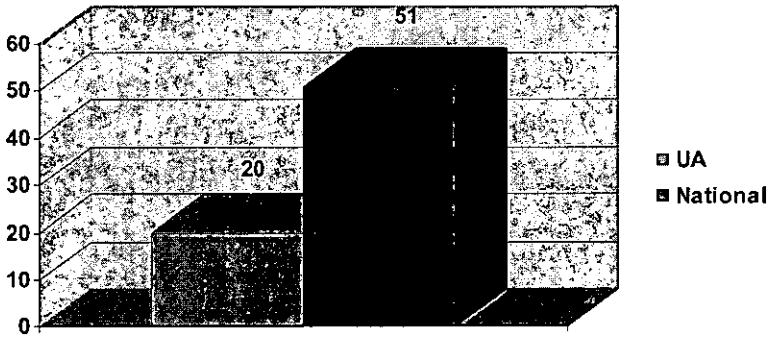
The annual survey from the National Association of State Student Grant and Aid Programs (NASSGAP, 2004) underscores the negligible investment in need-based grants by the state of Alaska: in 2002-03, Alaska was one of only two states without a need-based grant program (South Dakota). Put another way, Figure 1 illustrates that zero percent of Alaska's $212 million state appropriation for higher education operating expenses were allocated to grant aid in 2002-03 compared to a national average of 9.4 percent (NASSGAP, 2004). The only need-based state aid program in Alaska provides student loans to help pay for college ($56 million in 2002-03). Thus financially needy students in Alaska are forced to use loans to pay for higher

3493

education. The lack of a state grant program of any type places Alaska in a distinct minority of states. Among all states, in 2002-03, 71 percent of state financial aid consisted of need-based grants, 22 percent consisted of non-need-based grants, and only 3 percent consisted of student loans (NASSGAP, 2004). In contrast, 100 percent of Alaska state financial aid was in the form of student loans.

According to a recent internal report from the University of Alaska Statewide Office of Institutional Research (June 2004), the $661 average UA grant for degree-seeking undergraduates in 2002-03 is considerably lower than the national average of $2,400. Grant aid for UA represents only 20 percent of the average tuition and fees for resident undergraduates while the national average grant aid for undergraduates represents 51 percent of average tuition.

FIGURE 2
GIFT AID AS PERCENTAGE OF TUITION, UA AND THE NATION



Source: University of Alaska Statewide Office of Institutional Research, 2004

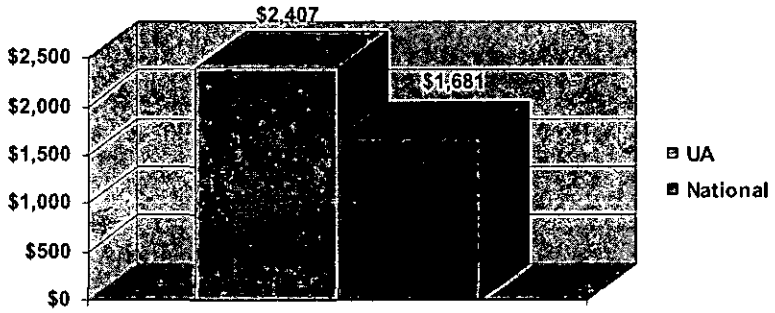
The Alaska fact book from the Western Interstate Commission on Higher Education (WICHE, November 2002) illustrates that tuition and fees for Alaska's public two-year campuses increased significantly faster than tuition in WICHE states between 1992-93 and 2002-03, and remains much higher than both the national average and the WICHE state average.[1] Although Alaska's public four-year institutions have relatively low tuition and fees, the lack of need-based grant aid results in higher net prices for UA students. According to the University of Alaska Statewide Office of Institutional Research (2004), net tuition after grants was 43 percent higher than the national average in 2002-03 (see Figure 3).

National reports have also raised awareness of the growing demand by working adults for postsecondary education opportunity, and the limited financial resources available for adult students (25 years and older) to help pay for college. For example, the American Council on Education (2004) estimates that 40 percent of the adult undergraduates or 2.5 million students

[1] WICHE state members include Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, and Wyoming.

nationally, are from low-income families (e.g., annual income less than $25,000). Another report, *Held Back: How Student Aid Programs Fail Working Adults* estimates that less than 8 percent of low-income working adults enrolled in college receive any federal, state or institutional aid (FutureWorks, 2002).

FIGURE 3
NET TUITION AFTER GRANT AID, UA AND THE NATION



Source: University of Alaska Statewide Office of Institutional Research, 2004

Research has repeatedly demonstrated that tuition levels affect college enrollment, and that low-income students, African-Americans and Hispanics are more price-responsive than are upper-middle-income students and white students (Heller 2001). In other words, higher tuitions are more likely to discourage low-income students and students of color from attending college, or divert these students to lower-priced community colleges. Research also indicates that grant aid is more effective than loans and work-study in terms of helping financially needy students enroll and succeed in college. For example, a recent Lumina Foundation for Education research report, *Expanding College Access: the Impact of State Finance Strategies*, concluded that state need-based grants have a stronger influence on college enrollments than do non-need-based grants (e.g. merit scholarships) or tuition levels (St. John et al. 2004).

The lack of need-based grant aid in Alaska coupled with rising tuitions and a reliance on student loans does not translate into affordable postsecondary education opportunity. The following report analyzes data on 33,000 students enrolled at UA campuses in Fall 2004, including demographic information, enrollment status, and financial aid information. This analysis was undertaken on behalf of the Statewide Office of Student and Enrollment Services to ascertain the extent to which financial need is (or is not) met for UA students.

Institutional Perspective: Financial Aid Investments at UA

Enrollment Profile

For the Fall 2004 term, UA enrolled 32,711 students; almost two-thirds of these students enrolled part-time while 38 percent enrolled full-time. Only 39 percent of students enrolled

3495

were men and 61 percent were women. About 55 percent of students were adult students 25 years and older. Approximately 9 out of 10 students enrolled were from Alaska, 8 percent were from out-of-state and 2 percent were foreign nationals. This broad picture of Fall 2004 enrollment suggests that the typical UA student is an adult woman who resides in Alaska and enrolls part-time.

Table 1 provides data indicating the wide variation of campuses where students enroll. Approximately 14 percent of UA students are enrolled at more than one campus. Overall, the 32,711 total unduplicated student enrollment for Fall 2004 were distributed among the three MAUs as follows: 53 percent were mapped to Anchorage, while 35 percent were mapped to Fairbanks and 12 percent were mapped to Southeast (or Juneau).

TABLE 1
TOTAL FALL 2004 ENROLLMENT BY MAU AND CAMPUS[2]

MAU	CAMPUS	ENROLLMENT
UAA		**19,428**
	Anchorage	14,221

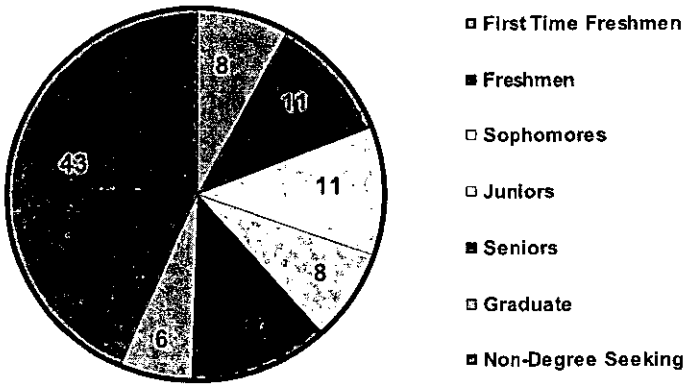
Source: University of Alaska Statewide Office of Planning and Budget Development

[2] Campus headcount totals add up to more than MAU totals and MAU headcounts add up to more than the system total of 32,711, because it is common for students to be concurrently enrolled at multiple campuses and/or in multiple MAUs during the same semester.

A little more than half of Fall 2004 enrollment consisted of undergraduate students; 43 percent of enrollment consisted of students classified as "other" (generally meaning non-degree seeking), and 6 percent of enrollment consisted of graduate students. Figure 4 illustrates the distribution of enrollment by class level.

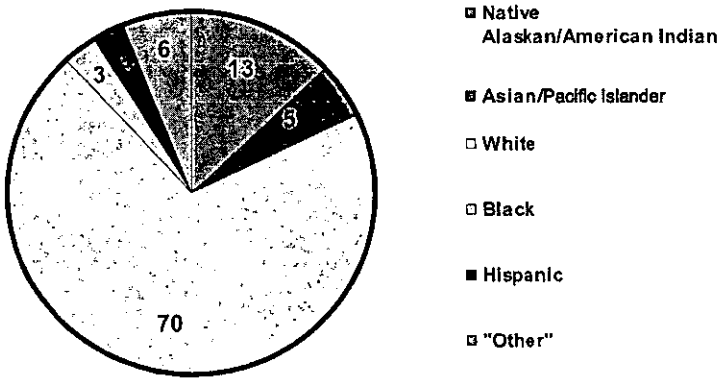
FIGURE 4
ENROLLMENT PERCENTAGES BY CLASS LEVEL, FALL 2004



N=32, 711

Figure 5 illustrates the race and ethnic distribution of Fall 2004 enrollment. Although 70 percent of total enrollment consisted of students identified as white, UA nonetheless has a diverse student population: 13 percent are Native Alaskan or American Indian, 5 percent are Asian/Pacific Islanders, and 3 percent each are black or Hispanic.

FIGURE 5
ENROLLMENT PERCENTAGES BY RACE AND ETHNICITY, FALL 2004

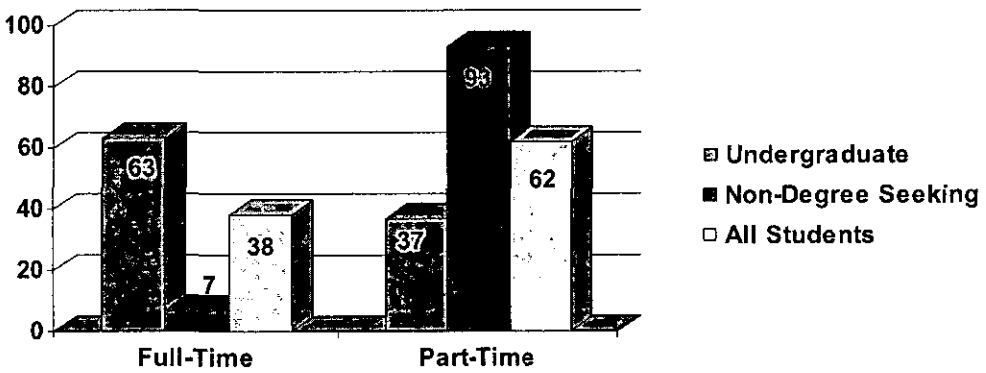


N = 32, 711

3497

An important distinction of enrollment status is that students classified as "other" enroll overwhelmingly part-time, while undergraduate students are primarily enrolled full-time (see Figure 6). In fact, 93 percent of students categorized as "other" in Fall 2004 attended part-time. Many students enrolled as non-degree seeking may be pursuing certificates of competence to improve their skills for the workforce and are not classified as degree-seeking. In contrast, two-thirds of undergraduates are enrolled full-time toward an associate's or bachelor's degree.

FIGURE 6
FULL-TIME AND PART-TIME ENROLLMENT PERCENTAGES BY UNDERGRADUATE AND NON-DEGREE SEEKING STATUS, FALL 2004



Two groups were analyzed for this report: students enrolled as undergraduates and students enrolled as "other" (i.e., non-degree seeking). These two groups did not vary in terms of race and ethnicity or gender. That is to say, the percentage distribution of enrollment illustrated in Figure 2 and described above are basically identical among these two groups.

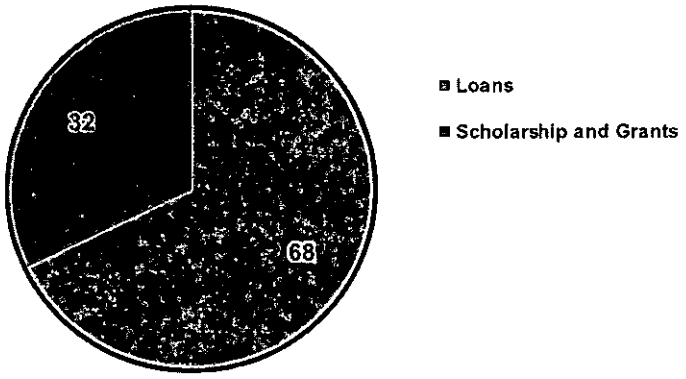
Financial Aid for UA Students

For Fall 2004, UA students received more than $34 million in total financial aid, including federal student loans, Alaska loans, private loans, Pell Grants, Supplemental Education Opportunity Grants, other scholarships, UA scholarships, tuition waivers, UA Tuition Assistance Grants, and employee tuition waivers.

As Figure 7 illustrates, 68 percent of this financial aid was in the form of loans: UA students received about $11 million in grant and scholarship gift aid, and borrowed more than $23 million. Of the $11 million in gift aid, 45 percent originated from the federal Pell Grant and Supplemental Education Opportunity Grant. These grants are need-based. Another 17 percent of gift aid came from other scholarships and grants; the data file does not indicate if these outside scholarships and grants were need-based or non-need-based.[3]

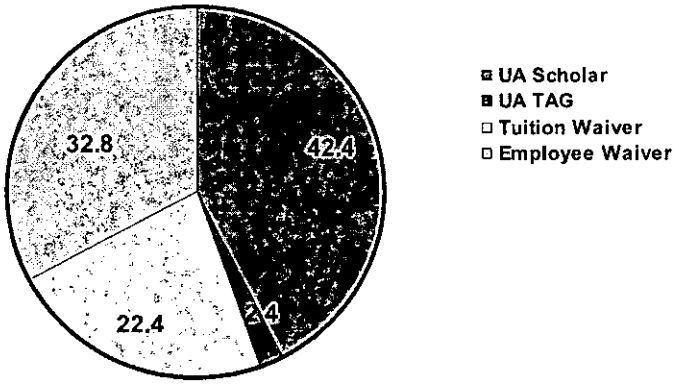
[3]Many of the scholarships indicate that they are either need preferred or there is a need component to the selection. However, decisions have traditionally been made on student statements of need in essays rather than FAFSA EFC data.

FIGURE 7
PERCENTAGE OF GIFT AND LOAN FINANCIAL AID, FALL 2004



TOTAL = $34,166,987

FIGURE 8
PERCENTAGE OF UA GIFT AID BY SOURCE, FALL 2004



TOTAL = $4,111,959

The remaining 38 percent of gift aid came from UA in the form of employee waivers, tuition assistance grants, UA scholars, and tuition waivers. Figure 8 illustrates the source of UA student gift aid for Fall 2004. Overall, UA provided more than $4 million in gift aid to students, but less than 3 percent was unambiguously need-based. Rather, the bulk of UA gift aid was awarded to UA scholars (~$1.74 million), and through tuition waivers (~$920,000) and employee waivers (~$1.35 million). In contrast, less than $100,000 was awarded through the need-based UA tuition assistance grant.

3499

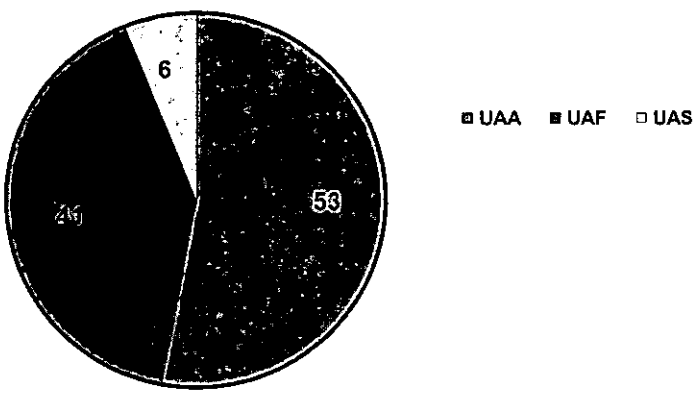
TABLE 2
PERCENTAGE DISTRIBUTION OF UA GIFT AID AMOUNT BY TYPE OF AID AND MAU, FALL 2004

	UAA	UAF	UAS
Employee Waiver	41%	51%	8%
Tuition Assistance Grant	80%		20%
Tuition Waiver	55%	40%	5%
UA Scholar	59%	36%	5%

TOTAL = $4,111,959

Table 2 shows the percentage distribution of UA gift aid by MAU. With the exception of employee waivers, the majority of UA gift aid is awarded to students enrolled in the Anchorage MAU. Figure 9 illustrates the percentage of UA gift aid awarded to students by MAU. For Fall 2004, 53 percent of UA gift aid was awarded to students enrolled in the Anchorage MAU, 41 percent was awarded to students enrolled in the Fairbanks MAU, and 6 percent was awarded to students in the Southeast MAU.

FIGURE 9
PERCENTAGE OF UA GIFT AID AMOUNT BY MAU, FALL 2004



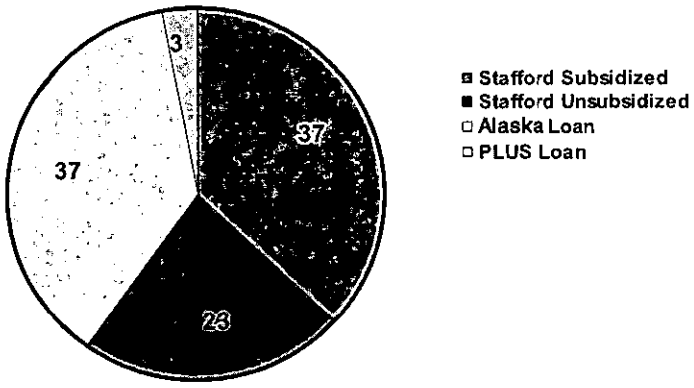
TOTAL = $4,111,959

Based on Fall 2004 enrollment and financial aid data, students who receive financial aid at UA are primarily using the Alaska loan program and federal Stafford Loan programs (both subsidized and unsubsidized) to borrow for college. As mentioned earlier, students borrowed more than $23 million for Fall 2004. Figure 10 illustrates the distribution of student loans by source. Students borrowed approximately $8.6 million from the federal Stafford subsidized loan program and approximately $8.6 million from the Alaska loan program. Students also borrowed about $5.25 million in unsubsidized Stafford loans.

Through the Alaska loan program, the state of Alaska contributed about 25 percent of the total financial aid awarded for 2004-05. The federal government contributed 55 percent of total financial aid, including need-based grants and loans as well as the non-need-based unsubsidized Stafford Loan. About 8 percent of financial aid was contributed by external sources in the form of scholarships, grants and loans.

UA contributed about 12 percent of the total financial aid awarded (both loans and gift aid) to students for Fall 2004. In terms of need-based grants, UA awarded less than $100,000 for Fall 2004 – a negligible amount of the more than $4 million in total gift aid awarded by UA. In short, based on the dollar value of loan and gift financial aid for Fall 2004, it does not appear that need-based grant aid is a current institutional priority for the UA system, nor is it a statewide policy priority.[4]

FIGURE 10
PERCENTAGE OF TOTAL STUDENT LOANS BY SOURCE, FALL 2004



TOTAL = $23,234,112

[4] Although the University did not intentionally award institutional financial aid based on need, a report from UAF indicated that 41 percent of institutional financial aid recipients who completed the FAFSA did have financial need; however, the number of students was not provided and these data were not verified by the author of this report.

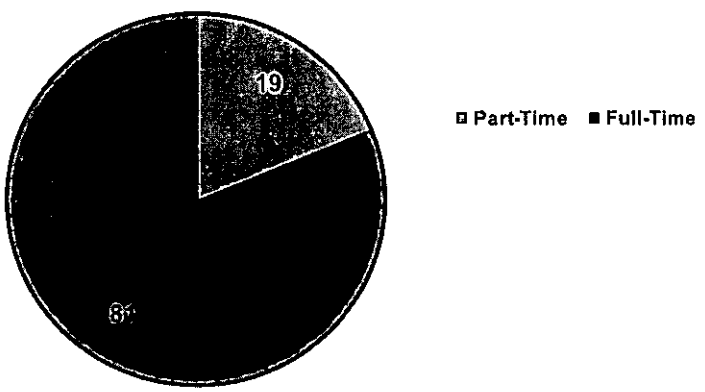
3501

Student Perspective: Financing College with Grants and Loans

Students are more concerned with the type of aid they receive individually and how this aid helps them pay for college, than with aggregate amounts and sources of aid available. This section examines the types of financial aid students receive to enroll in the UA system.[5]

Figure 11 illustrates the percentage of financial aid students received based on full-time or part-time status. For Fall 2004, 81 percent of financial aid awarded went to full-time students. Of this aid, approximately $18.6 million was borrowed and $9.2 million was scholarship and grant gift aid. In contrast, less than 20 percent of financial aid was awarded to part-time students. Of this aid, about $4.6 million was borrowed and $1.7 million was scholarship and grant gift aid. As expected, the significant majority of financial aid consisted of student loans for both full-time and part-time students enrolled in the UA system.

FIGURE 11
PERCENTAGE OF TOTAL FINANCIAL AID AMOUNT AWARDED BY ENROLLMENT STATUS, FALL 2004



TOTAL = $34,165,542

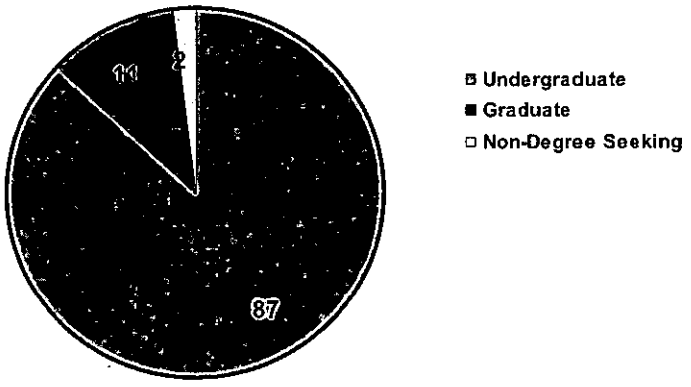
As Figure 12 shows, financial aid was awarded primarily to undergraduates. About 87 percent ($30 million) of total financial aid awarded for Fall 2004, was awarded to undergraduates; that is, freshmen (including first-time), sophomores, juniors and seniors. Graduate students received about $3.9 million in total financial aid. Students classified as "other," who make up

[5] For this section, we excluded students who had negative values for tuition and fees in the UA database. This step reduced the sample size to 32,678, and reduced the total amount of financial aid used to calculate percentages and ratios by $1,445.

43 percent of total UA enrollment, received less than 2 percent of the total financial aid awarded totaling a little more than half a million dollars. Importantly, students classified as "other" may not be eligible for federal financial aid.

Given this stark contrast of financial aid awarded between undergraduates and non-degree seeking students, data for these two groups were analyzed independently.

FIGURE 12
PERCENTAGE OF TOTAL FINANCIAL AID AMOUNT AWARDED BY CLASS LEVEL, FALL 2004



TOTAL = $34,165,542

Financial Aid for Undergraduates

More than 16,500 students were enrolled Fall 2004 as undergraduates in the UA system; 63 percent were enrolled full-time and 37 percent were enrolled part-time. A significant majority (61%) of these students were between 17 and 24 years of age; the remaining 39 percent were adult students 25 years and older. Consistent with overall enrollment demographics, 62 percent of undergraduates were women. Table 3 provides the distribution of total undergraduate enrollment according to selected demographic characteristics.

A big-picture view of financial aid reveals that slightly more than half (51%) of all undergraduates received financial aid for Fall 2004. This figure is much lower than the national average of 62 percent for public four-year colleges and universities (NCES, 2001). About 67 percent of the total aid received by the 8,500 aid recipients was from federal Stafford, Alaska and private loans. Federal grant aid made up another 16 percent of total aid received and external scholarships and grant aid made up 6 percent of total aid received. UA institutional aid (e.g., waivers, UA scholars and tuition assistance grants) represented 11 percent of total aid received by undergraduates. Other than federal grants and work-study, less than $100,000 in need-based grant aid (UA TAG) was awarded to undergraduates.

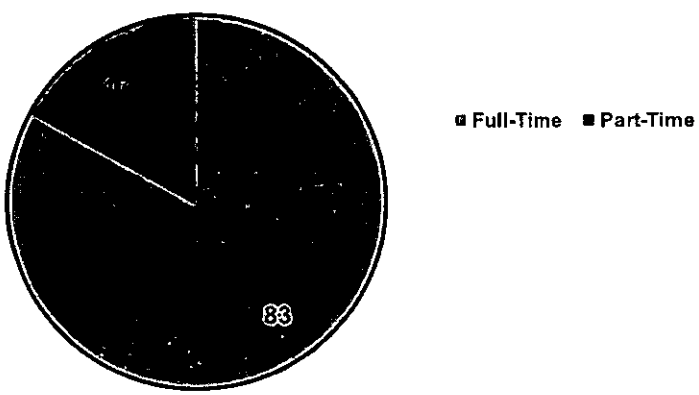
FIGURE 13
PERCENTAGE OF TOTAL FINANCIAL AID AMOUNT AWARDED TO UNDERGRADUATES BY ENROLLMENT STATUS, FALL 2004



TOTAL = $29,907,793

The majority of financial aid awarded to UA undergraduates went to full-time students. Figure 13 shows they received 83 percent of total financial aid awarded, or about $25 million, while part-time undergraduates received slightly more than $5 million. Table 4 shows the percentage of total financial aid awarded to full-time and part-time students by type of aid. For all types of aid, full-time undergraduates receive significantly more dollars than do part-time undergraduates.

TABLE 4
PERCENTAGE OF TOTAL FINANCIAL AID AMOUNT AWARDED TO UNDERGRADUATES BY ENROLLMENT STATUS AND TYPE OF AID, FALL 2004

TYPE OF FINANCIAL AID	PART-TIME	FULL-TIME	AMOUNT
UA Employee Waiver	25%	75%	$782,162
UA Tuition Assistance Grant	19%	81%	$99,357
UA Tuition Waiver	3%	97%	$680,506
UA Scholarship	1%	99%	$1,742,125

Stafford Unsubsidized Loan	27%	73%	$4,507,842
Alaska Loan	13%	87%	$7,765,421
PLUS Loan	9%	91%	$645,961
Private Loan	—	100%	$64,532

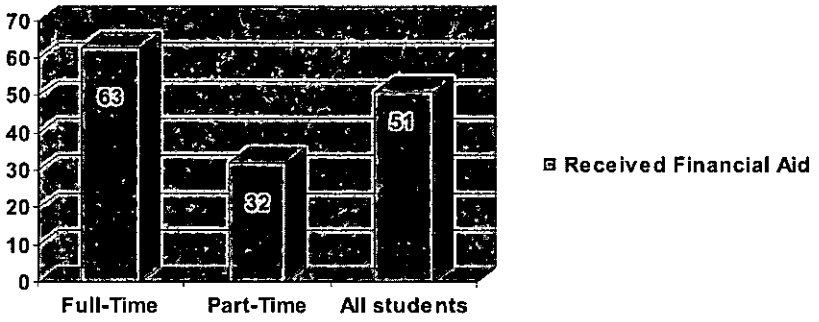
N = 8,468 *TOTAL = $29,907,793*

Because part-time students attempt fewer credits and thus pay lower prices overall, it is expected that the amount of financial aid would flow disproportionately to full-time students. Figure 14 provides an alternative view of financial aid awards by enrollment status; it is statistically significant that full-time students at UA are more likely to receive financial aid. Overall, 51 percent of undergraduates received financial aid; however, 63 percent of full-time students received some form of financial aid compared with only 32 percent of part-time students.

Another way to examine the distribution of financial aid is to compare the loan and grant percentages of total aid awarded for both full-time and part-time students. For full-time students, loans represented 65 percent of total financial aid awarded while scholarship and grant gift aid represented 35 percent of total financial aid awarded. Financial aid for part-time students was more heavily weighted toward loans: 77 percent of all financial aid awarded to part-time undergraduates was in the form of loans while only 23 percent of aid for part-time undergraduates was in the form of gift aid. Figure 15 illustrates this imbalance between loan and gift aid by enrollment status.

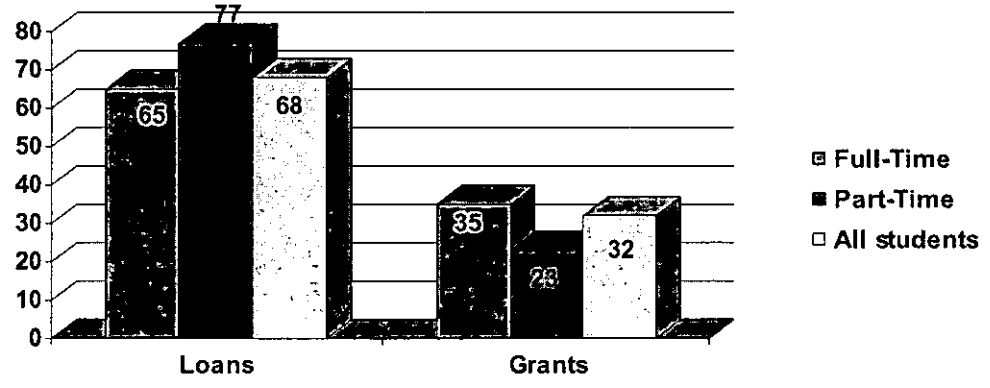
3505

FIGURE 14
PERCENTAGE OF UNDERGRADUATES RECEIVING ANY FINANCIAL AID BY ENROLLMENT STATUS, FALL 2004



N = 16,572

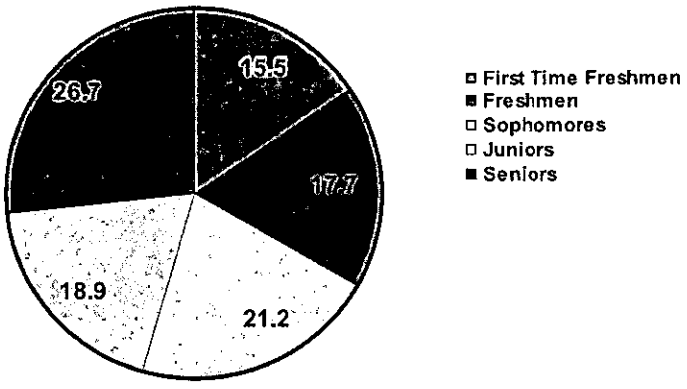
FIGURE 15
PERCENTAGE OF LOAN AND GRANT FINANCIAL AID AMOUNT AWARDED BY ENROLLMENT STATUS, FALL 2004



Part-time undergraduates are less likely to receive financial aid, and if they are awarded financial aid, it is more likely to be in the form of student loans. At the same time, other than federal need-based grants, both full-time and part-time undergraduates receive very little need-based grant aid from the UA system or other scholarship and grant sources.

Figure 16 illustrates the breakdown of total financial aid according to the class level of undergraduates. Freshmen undergraduates received one-third of all financial aid in Fall 2004 and seniors received about 27 percent. The remaining 40 percent was shared between sophomores (21.2%) and juniors (18.9%).

FIGURE 16
PERCENTAGE OF TOTAL FINANCIAL AID AMOUNT AWARDED BY CLASS LEVEL FOR UNDERGRADUATES, FALL 2004



TOTAL = $29,907,793

TABLE 5
PERCENTAGE OF TOTAL FINANCIAL AID AMOUNT BY AID TYPE AND CLASS LEVEL FOR UNDERGRADUATES, FALL 2004

	Federal Need-Based Grants	Private Scholarships and Grants	UA Gift Aid (including waivers)	Loans (federal and Alaska)
Class Level				
First-Time Freshmen	15.7%	6.3%	19.2%	53.6%
Freshmen	21.4%	4.3%	8.2%	64.9%
Sophomores	15.6%	5.5%	11.6%	65.5%
Juniors	13.8%	5.8%	10.6%	69.3%
Seniors	13.9%	6.0%	7.3%	71.2%

Table 5 suggests that the proportion of financial aid UA students receive through student loans increases as they flow through the undergraduate years.[6] By the senior year, more than 71 percent of financial aid received by UA students is through student loans. Put another way, almost 1 of every 3 dollars in financial aid received by freshmen (including first-time freshmen) at UA are from federal grants and UA gift aid; the share of federal need-based grant aid declines to 14 percent in the final two years of college while the share of UA gift aid declines to 10 percent of all financial aid in the junior year and to 7 percent in the senior year. Part of this decline may be the result of higher borrowing limits in the federal Stafford loan program in the final two years of college.

[6]A longitudinal analysis would allow more precise conclusions about the trend in loan reliance for UA students.

3507

Given the differences in financial aid awarded by enrollment statuses, the distribution of loan and gift aid for part-time undergraduates only was also examined. Only 22 percent of the undergraduate students who received any financial aid were part-time and they were more likely than full-time students to get loans. Table 6 indicates that loans represented an even higher proportion of total financial aid received by part-time undergraduates compared with all undergraduates. For example, federal and Alaska loans represent between 67 percent and 80 percent of all financial aid awarded for part-time undergraduates. In fact, these data indicate that part-time undergraduate students (except seniors) receive a slightly higher proportion of federal grant aid compared with all undergraduates, but they receive a negligible amount of gift aid (both grants and scholarships) from private sources and from UA. One reason is that, by awarding a tuition waiver for an undergraduate with financial need, the total price for college is reduced; therefore, a student's financial aid eligibility could fall below the amount of a federal Pell Grant for which they would have otherwise qualified. Put simply, the awarding of gift aid through tuition waivers may inadvertently replace federal need-based aid for which a student is eligible.

TABLE 6
PERCENTAGE OF TOTAL FINANCIAL AID AMOUNT BY AID TYPE AND CLASS LEVEL FOR PART-TIME UNDERGRADUATES, FALL 2004

Class Level	Federal Need-Based Grants	Private Scholarships and Grants	UA Gift Aid (including waivers)	Loans (federal and Alaska)
First-Time Freshmen	25.9%	.5%	5.6%	66.7%
Freshmen	22.4%	1%	3.6%	72.8%
Sophomores	17.5%	1.6%	3.6%	77.0%
Juniors	13.1%	2.2%	4.7%	80.0%
Seniors	10.8%	2.3%	7%	78.9%

The financial aid data for undergraduates show that UA students pay for college primarily through borrowing, which is especially true for part-time undergraduates. At any point along the undergraduate pipeline for part-time undergraduates, it appears that loans represent between 70 and 80 percent of all financial aid received. The percentage of total financial aid from loans for full-time students is still quite high, ranging from 65 to 71 percent. The only variation from this pattern is for first-time, full-time freshmen: about 54 percent of the total financial aid amount awarded to this group is in the form of loans.

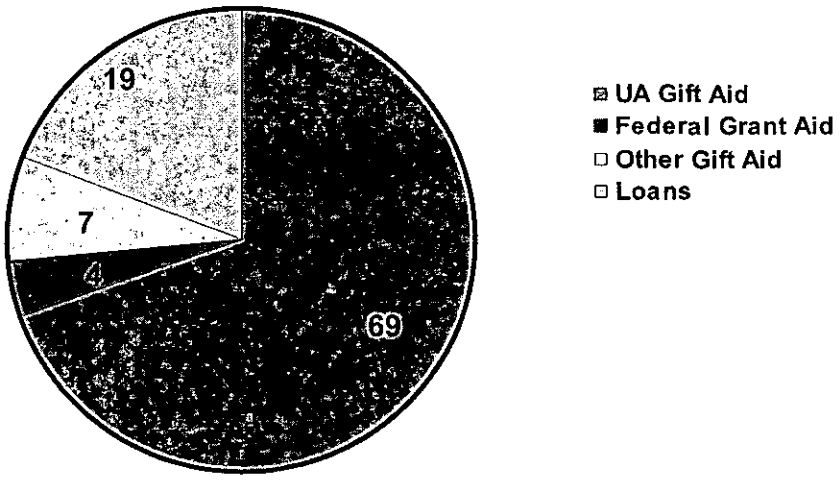
One reason part-time undergraduates are borrowing a relatively larger share of their total financial aid is the scarcity of gift aid they receive from private and UA sources. For example, total UA gift aid (including UA scholars, tuition assistance grant, and employee and regular tuition waivers) for part-time undergraduates in Fall 2004 totaled slightly more than $250,000 – a negligible amount of the more than $5 million in total aid awarded to

part-time undergraduates in the UA system. The amount of private scholarships and grants was also minimal for part-time undergraduates: less than $90,000. Thus, part-time undergraduates at UA rely on federal loans and grants and the Alaska student loan to pay for college.

Financial Aid for Non-Degree Seeking UA Students

In Fall 2004, 13,937 UA students were classified as "other" in the UA database - 93 percent of students were part-time (see figure 4); many of these students may be pursuing certificates of competence related to employment opportunities. About 7 percent of these students received financial aid, which totaled $566,000 for Fall 2004. This amount represented less than 2 percent of all the financial aid awarded to UA students. Figure 17 illustrates that more than two-thirds of financial aid for non-degree seeking students comes from UA institutional aid, particularly the employee waiver. In fact, $380,000 of the $391,000 in UA gift aid awarded in Fall 2004 was through the employee waiver. It is clear that loans and the UA employee waiver are virtually the only sources of financial aid to help students who are not classified as degree-seeking and enroll part-time pay for college.[7]

FIGURE 17
PERCENTAGE OF TOTAL FINANCIAL AID AWARDED BY TYPE OF AID FOR NON-DEGREE SEEKING UA STUDENTS, FALL 2004



TOTAL = $566,297

[7] Non-degree seeking students may receive National Guard tuition waivers or other employer aid, but these awards are not reported within the UA database.

3509

UA students with Financial Aid: Demographic and Enrollment Characteristics [8]

For Fall 2004, 31 percent of the almost 31,000 non-degree seeking and undergraduate students enrolled received some form of financial aid. The vast majority of these students were enrolled as undergraduates. This section of the report analyzes the impact of financial aid on students who received different types of financial aid.

Table 7 provides data on the percentage of financial aid recipients who received different types of financial aid. Consistent with the large volume of borrowing by UA students, it is not surprising that almost 42 percent of students who received any financial aid borrowed a subsidized federal Stafford loan. Of the almost 9,500 students who received any financial aid for Fall 2004, 23 percent borrowed an unsubsidized federal Stafford loan (these loans are not need-based), and 23 percent borrowed an Alaska loan. More than one-third of financial aid recipients received a federal Pell Grant and almost 14 percents received a federal Supplemental Education Opportunity Grant.

TABLE 7
PERCENTAGE OF NON-DEGREE SEEKING AND UNDERGRADUATE UA STUDENTS RECEIVING DIFFERENT TYPES OF FINANCIAL AID AMONG THOSE RECEIVING SOME FORM OF AID, FALL 2004

TYPE OF FINANCIAL AID	PERCENTAGE RECEIVING THIS TYPE OF FINANCIAL AID
UA Employee Waiver	17.5
UA Tuition Assistance Grant	5.5
UA Tuition Waiver	4.1
UA Scholar	13.4
Pell Grant	33.8
Supplemental Education Opportunity Grant	13.6
College Work Study	1.1
Subsidized Stafford Loan	40.7
Unsubsidized Stafford Loan	23.2
PLUS Loan	1.6
Alaska Loan	22.9
Private Loan	0.2
Other Scholarship	12.9
Other Grant	3.4
N = 9,466	

In terms of UA institutional financial aid, the employee waiver was used by almost 18 percent of financial aid recipients. About 13 percent of financial aid recipients were UA scholars, 4 percent of students received a tuition waiver, and 5 percent received the tuition assistance

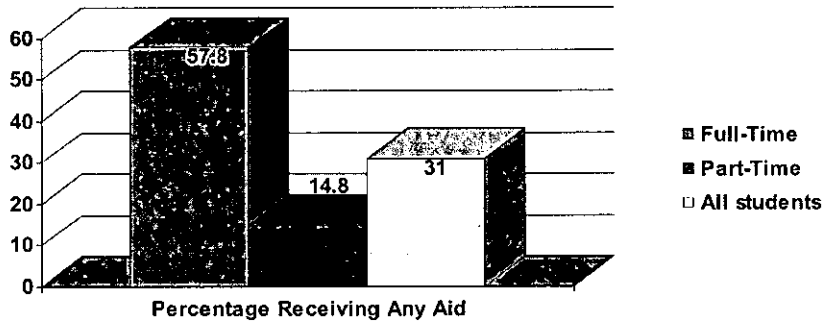
[8] We did not analyze financial aid among graduate students for this section.

3510

grant. Of these forms of institutional aid, only the tuition assistance grant is targeted to financially needy students; and less than 1 percent of UA students who received financial aid received this award that ranged between $200 and $400.

Figure 18 illustrates the statistically significant difference between students who received any financial aid for Fall 2004 and enrollment status. About 31 percent of all UA students received some form of financial aid, but 58 percent of full-time students and only 15 percent of part-time students received any financial aid. Thus enrollment status has an impact on whether students receive financial aid.

FIGURE 18
PERCENTAGE OF NON-DEGREE SEEKING AND UNDERGRADUATE UA STUDENTS RECEIVING ANY FINANCIAL AID BY ENROLLMENT STATUS, FALL 2004*



*$p < .001$ $N = 30,509$

TABLE 8
PERCENTAGE OF NON-DEGREE SEEKING AND UNDERGRADUATE UA STUDENTS RECEIVING SOME FORM OF FINANCIAL AID BY GENDER, RACE, ETHNICITY AND AGE, FALL 2004*

DEMOGRAPHIC CHARACTERISTIC	% RECEIVING ANY AID
Men	29.1
Women	32.2
Native Alaskan/American Indian	29.3
Asian/Pacific Islander	34.5
Black	44.7
Hispanic	34.9
White	30.9
25 years of Age and Older	24.6
Between 17 and 24 years of Age	40.4
All Students	31.3

* $p < .001$ $N = 30,509$

3511

Table 8 shows that women were slightly more likely than men to receive some form of financial aid. Blacks, Hispanics, and Asian/Pacific Islanders were also more likely to receive some form of financial aid; however, Native Alaskans/American Indians were slightly less likely to receive some form of financial aid for Fall 2004. These data also indicate that less than 26 percent of students 25 years and older, compared with 40 percent of students between 17 and 24 years of age, received some form of financial aid. These comparisons are statistically significant, which means that a relationship exists between students' racial, ethnic, gender and age characteristics, and the receipt of financial aid.

A similar relationship exists between race, ethnicity, age and the receipt of need-based grant aid. As Figures 19 and 20 show, among both full-time and part-time UA students who received any financial aid for Fall 2004, Native Alaskans and American Indians, Blacks and Hispanics were more likely than Whites to receive need-based gift aid, and women were slightly more likely than men to receive need-based gift aid. However, for adult students 25 years of age and older, their enrollment status matters; on the one hand, adult students 25 years of age and older enrolled full-time were more likely than traditional-age students between 17 and 24 to receive need-based gift aid from the federal government or from the University of Alaska. This pattern is opposite for part-time adult students 25 years of age and older, who were less likely than traditional-age students between 17 and 24 to receive need-based gift aid.

FIGURE 19

* $p < .001$

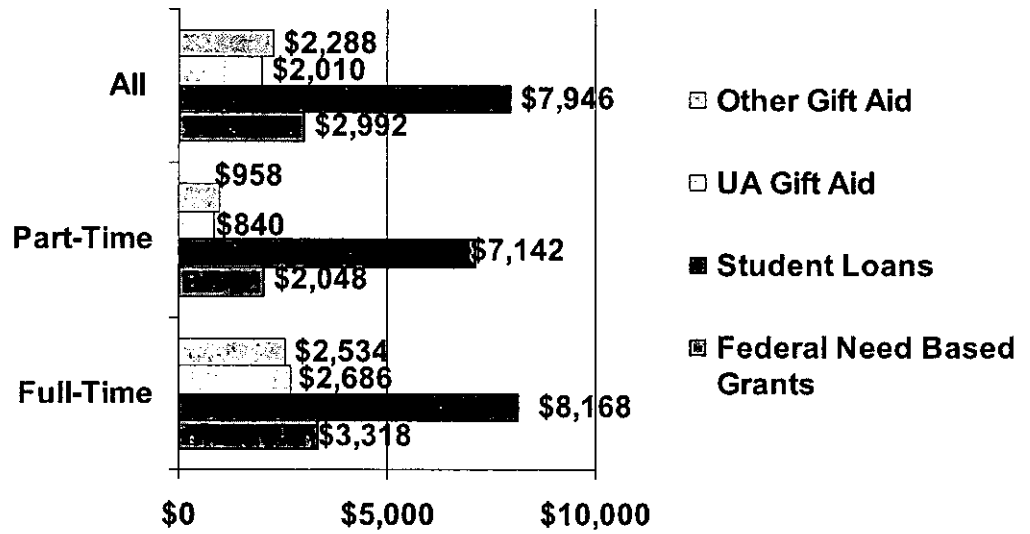
$N = 2,820$

Figure 21 provides the average total amount of each type of financial aid for full-time and part-time students. As expected, full-time students received larger awards across all types of financial aid. Among students who received federal-need-based grants, award amounts for full-time students were 62 percent higher than for part-time students. Among students who received scholarships and grants from private sources, award amounts for full-time students were more than twice as large as the amounts for part-time students. And for students who received UA gift aid, award amounts were more than three times higher for full-time students than for part-time students.

In contrast to the large differences in average gift aid awards between full-time and part-time students, average loan amounts for full-time students were only 14 percent higher than for part-time students (about $1,000). These data indicate that students borrow relatively similar amounts to pay for college regardless of enrollment status; however, full-time students receive much higher gift aid awards from federal, private, and UA sources than do part-time students.

3513

FIGURE 21
ANNUAL AVERAGE FINANCIAL AID DOLLARS AWARDED AMONG NON-DEGREE SEEKING AND UNDERGRADUATE UA STUDENTS WHO RECEIVED EACH TYPE OF FINANCIAL AID BY ENROLLMENT STATUS, 2004-05[9]



Because this study is focused on need-based financial aid, the following two charts illustrate the average total amount of each type of financial aid for full-time and part-time financially needy students. A student is defined as financially needy if they received at least one of the following three types of aid: (1) Pell Grant, (2) Subsidized Stafford Loan, or (3) UA tuition assistance grant.

Figure 22 shows that, among full-time students who received the federal Pell Grant, total average annual financial aid awards were about $9,300. In comparison, among students who received the UA tuition assistance grant, total annual financial aid awards averaged about $7,000, primarily because this grant was targeted to students whose financial need was just beyond the federal threshold for Pell Grant eligibility. TAG recipients also borrowed more, on average, than did Pell Grant recipients ($6,184 vs. $5,316). Students who borrowed a subsidized Stafford loan received the highest average annual financial aid awards overall ($10,368); however, 79 percent of this aid consisted of federal, state and private loans.

[9] These data are an estimate that assumes students will receive the same average awards for Spring 2005 as they did for Fall 2004.

FIGURE 22
AVERAGE ANNUAL FINANCIAL AID AMOUNT RECEIVED FOR FULL-TIME NON-DEGREE SEEKING AND UNDERGRADUATE STUDENTS, 2004-05[10]

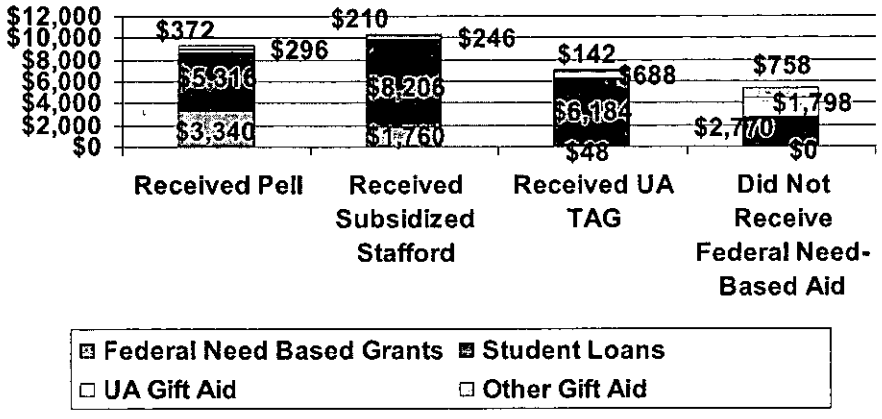


Figure 22 also indicates that Pell Grant recipients received annual average financial aid awards much greater than the average for students who received any financial aid. Pell Grant recipients' financial aid packages were 75 percent higher than the average for students who did not receive federal need-based financial aid ($9,324 vs. $5,326). The average loan amount for Pell Grant recipients was also higher; however, Pell Grant recipients received less than $300 in UA institutional aid of any type (waivers, UA scholarships or tuition assistance grants) compared with almost $1,800 among students who did not receive federal need-based aid. These data suggest that UA institutional aid is not targeted to the neediest students, who qualify for larger Pell Grants, but rather to students with more modest financial need or none at all.

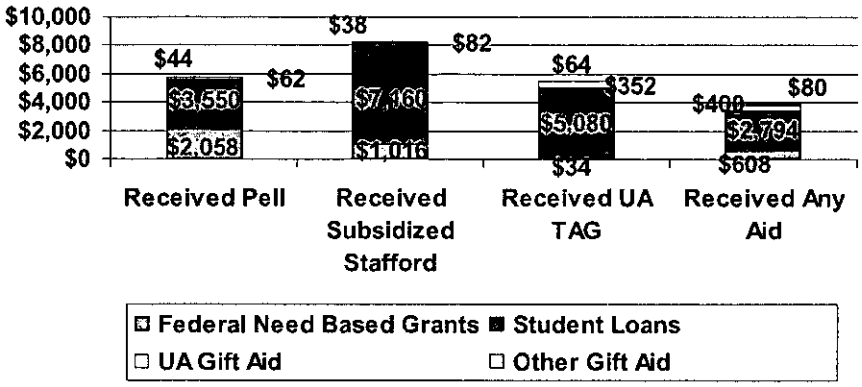
Figure 23 shows average annual financial aid awards for part-time students who received need-based financial aid. Part-time students who received a federal Pell Grant received an average annual award of $2,058. These students also borrowed more than part-time students who received any financial aid ($3,550 vs. $2,794). Among part-time students who received any financial aid, the average annual financial aid package was about $3,900 – 72 percent of this aid was in the form of federal, state and private loans. Pell Grant recipients received average annual financial aid packages of $5,714. This amount is 43 percent higher than the average for part-time students who received any financial aid; moreover, part-time students who were eligible for the Pell Grant received average gift aid of more than $2,100 which is twice as much as the average gift aid received by part-time students overall. Given the limited amount of institutional and private financial aid awarded to part-time students, applying for federal financial aid appears to be a good strategy to receive more financial aid overall, and to receive a need-based federal grant.

[10] These data are estimates that assume students will receive the same average awards for Spring 2005 as they did for Fall 2004.

3515

FIGURE 23
AVERAGE FINANCIAL AID AMOUNT RECEIVED FOR PART-TIME NON-DEGREE SEEKING AND UNDERGRADUATE STUDENTS, 2004-05[11]



Analysis of these data from UA leads to the following conclusions. First, very little need-based financial aid is awarded to part-time students with the exception of the federal Pell Grant and Supplemental Education Opportunity Grant. This is especially true for part-time students categorized as "other" in the UA database who are unlikely to be eligible for federal need-based financial aid. Second, full-time undergraduate students receive much higher amounts of loans relative to grants as they progress through their undergraduate years. Third, UA institutional aid is not typically targeted to financially needy students and generally is awarded to full-time undergraduates. The one exception is the employee waiver that many students receive to enroll part-time. Fourth, student financial aid for UA students is primarily in the form of student loans; the pattern of loan reliance holds for full-time and part-time students, whether categorized as undergraduates or non-degree seeking in the UA database.

The following section summarizes the perspective of UA stakeholders who were interviewed before the quantitative analysis was completed.

Stakeholder Interviews

Group and individual stakeholder interviews were conducted in November and December of 2004, and in January 2005. Among all persons interviewed, including faculty, students, financial aid professionals, staff, and administrators as well as financial aid professionals at peer-institutions and other UA stakeholders, the consensus perspective on need-based aid was:

[11] These data are estimates that assume students will receive the same average awards for Spring 2005 as they did for Fall 2004.

3516

(1) *A need-based aid program should expand opportunity for students with financial need to attend college, and*

(2) *A need-based aid program should be consistent with the open admissions mission of the UA system.*

Although a few stakeholders emphasized targeting specific career pathways or including a merit component, these deviations from the general consensus were rare. Issues and comments raised by specific groups of stakeholders are addressed below.

Faculty [N =6]
Faculty interviews were conducted via the web-based meeting center, Genesys. Despite repeated attempts by the University of Alaska Statewide Office of Student and Enrollment Services, faculty at UAA was unable to schedule interviews. Most of the comments from faculty were from the UAF, but a faculty member from Juneau was also interviewed.

Faculty emphasized access to college and students' ability to pay. They specified Alaskan natives, first-generation students and rural students as groups with high financial need. All faculty interviewed perceive student financial aid as inadequate; one faculty mentioned Native Corporation resources and the federal Pell Grant specifically in her comment that these sources of financial aid were insufficient at UA. Faculty also expressed concern over loan reliance because of a perception of financial hardship that accompanies high amounts of borrowing.

Faculty also discussed the importance of graduate student eligibility for need-based aid, especially to keep Alaskans in state for graduate education and in high priority areas like teaching. In this context, a merit-component was suggested as a filter for the distribution of need-based aid, especially given the limited resources at UA for a new financial aid program.

Lastly, faculty did not identify areas where UA could reallocate resources for need-based aid; instead they recommended the state invest resources in financial aid.

Students [N=5]
Initial student interviews were conducted in December via the web-meeting software, Genesys; because of the end of the semester and limited participation in the initial meeting, a second student group interview was scheduled in January 2005. Based on information from a student questionnaire provided by me to the Statewide Office of Student and Enrollment Services, Table 1 provides summary information for students who filled out the questionnaire (N = 16).

Unfortunately, only 5 students participated in four group interviews scheduled. Of these students, 3 were part-time and 2 full-time; all but one student received some type of financial aid. Full-time students borrowed but part-time students did not; one student stated that she

3517

would not enroll if loans were needed to pay for college. The students stated that the price of college affected the number of credits they could attempt, but after enrolling they felt that UA met their financial need in terms of tuition and fees. All but one student mentioned books as an area where they struggled to cover the costs; the student who did not mention books specifically takes only one course at a time because otherwise college is not affordable.

TABLE 9
SUMMARY INFORMATION FROM STUDENT QUESTIONNAIRE

Native American/Alaskan Native	37%
Bi-racial	13%
Gender	
Men	6%
Women	94%
Total Credits	
Less than 30	44%
More than 30	56%
Work during school	69%
Enrolled directly from high school	56%
First-generation	44%

UA Financial Aid Professionals [N=4]
The consensus among UA financial aid officers is for need-based aid to focus on access - consistent with the mission of UA. All respondents expressed concern about increased loan reliance among students, but UAF and UAS were especially concerned about this issue. UA financial aid officers also emphasized the importance of eligibility for part-time students.

Two different perspectives on *complementary* and *supplemental* approaches to need-based financial aid were provided. On the one hand, existing financial aid is perceived as inadequate for the neediest students, which in conjunction with a desire to reduce loan burden, suggested that a new need-based aid program should supplement aid for these students. On the other hand, Pell Grant and Native Corporation scholarships are perceived to provide a good foundation of need-based aid for the neediest students, so expanding eligibility to complement these programs was also suggested.

UA financial aid officers were asked about potential resources to fund a new need-based aid program. In particular, they were asked about the 4% tuition waiver set aside, of which 1% was intended to support a need-based TAG during the 2003-04 academic year. All respondents expressed interest in using the 4% tuition waiver set aside for need-based financial aid, but

indicated that faculty and administrative resistance would be significant. Additional probing found that college deans, department chairs, and faculty had considerable autonomy in awarding tuition waivers under the current program, which they would not necessarily want to relinquish. Regardless of the source for a new UA need-based aid program, financial aid officers emphasized accountability for the program be explicit – that is, they expect to administer these programs according to central eligibility guidelines (with some campus flexibility) without interference from college faculty and administrators. Unused need-based aid resources should be returned by MAUs and reallocated where need is greater, or should "carry-over" to subsequent terms.

Staff and Administrators [N=5]
The consensus perspective among UA staff and administrators was for need-based aid to focus on access and to help students pay for college. The need to include part-time students, especially adults who are working but want to improve their labor market skills, and to reduce loan reliance was also emphasized.

Most staff and administrators indicated that supplementing existing aid for the neediest students was important, especially in the context of reducing loan burden. However, complementing need-based aid for adults and for part-time students taking 6 or fewer credit hours was also encouraged. In general, staff and administrators want to broaden eligibility to help more students and expand available aid for the neediest students.

One respondent made specific mention of Alaska natives as an important population to target need-based aid, especially those living in rural villages. Another respondent emphasized first-generation students, and expressed an interest in front-loading need-based grant aid during the first year and avoiding student loans for this group. Finally, one respondent suggested that the 4% tuition set aside was too unstructured and did not necessarily meet the needs of the system in expanding access – this person recommended these resources be used exclusively for need-based financial aid.

Other UA Stakeholders [N=3]
Three additional stakeholders were interviewed, including a high school counselor, Native Corporation Executive, and a staff person of the Alaska Commission on Postsecondary Education. These stakeholders brought unique perspectives to questions on need-based financial aid; however, one area with strong consensus was the need to reduce loan reliance for students who enroll at UA. In addition, all three respondents want to increase need-based financial aid for existing aid recipients (e.g., Pell Grant recipients) and expand eligibility to more students.

Broadly speaking, it was suggested that UA understand who is not currently served by financial aid, but who have need, as well as understand the extent to which students are being served inadequately. One suggestion was for a new UA need-based aid program to set aside a portion of resources for Pell Grant recipients (especially zero EFC) but also allocate a portion of resources for non-Pell eligible students with financial need. Another suggestion was for a new

3519

UA need-based aid program to determine eligibility based on free and reduced lunch participation (FARL) in high school rather than use the FAFSA. Lastly, first-generation Alaskan natives were specifically mentioned as an important target group in order to overcome the "generational hurdle" that negatively affects educational attainment among Alaskan natives.

When asked about resources to fund a new need-based aid program, respondents were skeptical that UA had available resources, especially in light of two years of 10 percent tuition increases. However, one person speculated that the state government could support need-based financial aid by using the annual "return on capital" payment from the Alaska Commission on Postsecondary Education. The "return on capital" payments represent principle and interest paid by student borrowers currently in repayment. This payment was $5.6 million for FY 2005.

Financial Aid Professionals at Peer Institutions [N=5]
Financial aid professionals at the University of North Carolina, University of Nebraska, University of Maine, University of Houston, and University of Idaho were also interviewed. Each of these institutions has a need-based aid program, and all but one institution is located in a state that also provides need-based grant financial aid. As a whole, these five institutions target financial aid packages to emphasize need-based grant aid, but most also expect students to work and/or take out Stafford loans. The exception is the Carolina Covenant program at the University of North Carolina- Chapel Hill, which guarantees eligible students will not borrow for college. All peer institutions target an "equity" threshold for students with financial need. This threshold is typically 60-65 percent grants and 35-40 percent work-study and loans; financial need is based on total budget less expected family contribution. At the University of North Carolina, the Carolina Covenant assures all eligible students 80 percent grant aid and 20 percent work-study and other self-help. In Fall 2004, 225 students were designated Carolina Covenant Scholars at a cost of $1.4 million; The Associate Provost & Director of Scholarships and Financial Aid at University of North Carolina emphasized that the Carolina Covenant would <u>not</u> have been possible without both federal Pell Grant and state grant investments.

The University of Nebraska set an "equity" threshold at $7,150 in 2004-05. This threshold is roughly equivalent to 30 hours of tuition and 100 percent of this amount is guaranteed for Pell Grant recipients. Pell Grant, state tuition assistance grant, and institutional opportunity grant assistance are used to meet the $7,150 grant aid target. Because the institutional grant program and tuition guarantee supplement existing federal and state investments, one staff person from the University of Nebraska Office of Scholarship & Financial Aid expressed concern about the "cliff effect" for students that just miss the Pell eligibility cutoff. These students do not qualify for state and institutional grants, and thus are expected to borrow money to cover the gap between grant awards and the $7,150 threshold. Students are also expected to meet financial need beyond the $7,150 threshold with work-study and student loans.

The University of Idaho targets institutional aid to first-time freshman from Idaho with at least $5,000 in financial need (budget less student/family contribution). The maximum award is $1,500 annually and is renewable for four years. The University of Houston invests $600,000 for

a grant-in-aid program to complement existing Texas state grant programs and the federal Pell Grant. The "equity" model seeks 65 percent of grant aid and 35 percent loans and/or work-study. The 150% tuition guarantee for Pell Grant recipients requires a 2.5 cumulative GPA and results in about one-third of students losing additional grant aid each year. The University of Maine invests $2 million annually from the institution budget to meet a 60-40 grant to self-help ratio for all students. Institutional grant awards complement the state grant of $500 per student, which basically covers books. In addition, University of Maine expects students to take a full federal Stafford loan and accept work-study awards.

The common thread among these five peer institutions is that need-based grant financial aid should meet at least 60-65 percent of a student's budget less expected family contribution. Where state and institutional investments in need-based aid are significant, institutions seek to provide grant aid equal to 100 percent of tuition and/or 80 percent of total budget. In all cases, institutional aid supplements existing federal and state financial aid. However, several financial aid professionals expressed concern for students with financial need who just miss the Pell eligibility threshold. In one case, University of North Carolina established an alternative eligibility threshold pegged to the federal poverty threshold. This eligibility threshold includes Pell Grant recipients, but also allows the Carolina Covenant to complement federal and state financial aid programs by expanding the institutional aid eligibility pool.
