The stakeholders interviewed for this project believe that total financial aid is insufficient and that finding additional resources for financially needy students is important. They are concerned about loan reliance for all students. They are also concerned about the lack of need-based financial aid for part-time students and for students who do not qualify for the federal Pell Grant. Importantly, the perspectives provided by UA stakeholders are supported by the quantitative analysis in this report. That is, need-based financial aid should be increased for UA students; however the design and implementation of a need-based grant program could serve several purposes. The next section describes three possible models for a need-based grant program.

Designing a Need-based Grant Program

Before they design a new financial aid program, or expand the UA tuition assistance grant or the just announced *AlaskaAdvantage* grant, UA stakeholders and leaders need to grapple with the objectives of a need-based grant program. At a policy-level it is imperative for the University of Alaska to identify the purpose (goal) for a need-based grant program?[12] For example,

- Does UA want to increase full-time enrollment for students currently enrolled less than full-time?
- Does UA want to reduce the extent of borrowing for all students, or a specific group of students?

12 For an overview of state grant program objectives and subsequent design, see Jerry S. Davis (September 2001), Designing a State Student Grant Program: A Framework for Policy-Makers. Indianapolis, IN: Lumina Foundation for Education. Available online — http://www.luminafoundation.org/publications/synopsis/studentgrantprogram.pdf

3521

- Does UA want to provide an equity threshold or minimum level of grant financial aid for all students with financial need?
- Does UA want to complement existing financial aid programs to better serve part-time students?

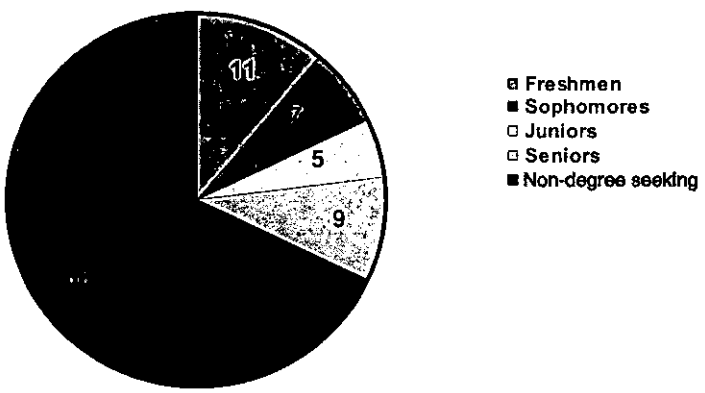
Each of these objectives is meritorious; however, UA stakeholders should identify what a need-based aid program should accomplish before moving forward.

Based on the stakeholder and expert interviews as well as an analysis of existing financial aid resources for UA students, a new need-based grant program could focus on one or all of the following areas:

1. Part-time adult students, who make up more than half of UA enrollment and often are non-degree seeking;
2. Full-time undergraduates with financial need, who rely on loans to pay for college;
3. Financially needy undergraduates who receive very little gift aid from UA.

Chart A in the Executive Summary provides an overview of these approaches for a need-based grant program, which are described in the next section of the report.

FIGURE 24
PERCENTAGE OF PART-TIME STUDENTS BY CLASS LEVEL, FALL 2004



N = 19,018

Focus on Part-Time Adult Students

Most part-time students are categorized as "other" in the UA database, which means they are not classified as degree seeking (see Figure 24). These non-degree seeking part-time students are overwhelmingly adults 25 years of age and older; many of these students enroll part-time as non-degree seeking students because they work full-time and are seeking a certificate of competence from UA to improve their workforce skills. A consequence of this "other" enrollment status is an inability to qualify for federal need-based grants. Based on Fall 2004

UA data, non-traditional adults 25 years of age and older represent more than two-thirds (71%) of "other" enrollment - slightly more than 900 of these adults (or 7%) receive any financial aid. In contrast, 51 percent of all UA students receive some form of financial aid, including 65 percent of undergraduates.

Part-time adult students at UA are not served well by existing federal, state, institutional and private financial aid programs. More than 50 percent of the almost 31,000 non-degree seeking and undergraduate UA students enrolled Fall 2004 were adults 25 years of age and older – 81 percent of these adults were enrolled part-time. Almost 10,000 adults were enrolled as "other" part-time. Yet part-time adult students received only $3.7 million of financial aid for Fall 2004, which is about 12 percent of the total financial aid awarded to UA students. Moreover, 72 percent of this aid was in the form of loans.

Although part-time adult students have much lower tuition and fees because they take fewer credits, indirect costs for college can still be significant. For example, books for a single class can cost a few hundred dollars, and driving to campus for one class or for three classes requires the same amount of fuel. In addition, living expenses (i.e., housing and food) tend to be constant regardless of enrollment status. Thus, financial need for part-time adults can often be a function of indirect costs, including housing, meals, books and transportation.

If UA decides to target need-based financial aid for non-degree seeking part-time adult students, several parameters need to be defined to estimate the potential cost of such a program. First, about one-third of undergraduates received the need-based Pell Grant and 41 percent received the need-based subsidized federal Stafford loan. It seems reasonable to assume that between 35 percent and 45 percent of "other" part-time adult students would also meet the eligibility threshold for federal need-based financial aid.

Second, many "other" students enroll part-time as the first step toward getting a degree or certificate, because they are uncertain of their ability to succeed and/or they cannot afford to stop working and attend college full-time; but adult students also enroll as "other" part-time with the goal of obtaining a certificate of competence. It seems practical to limit a need-based grant program to part-time "other" adult students who are enrolled in a program to obtain a certificate of competence; these adults could receive a need-based grant for up to three semesters. Adult students who eventually "transferred" into a degree seeking undergraduate program would retain eligibility for need-based financial aid and may also qualify for federal grant aid.

Third, federal financial aid is available for part-time adult students if they make satisfactory progress toward a postsecondary credential. However, to receive federal financial aid students must fill out the FAFSA. The recently announced *AlaskaAdvantage* state grant program requires students to complete this form; thus it would be consistent with current policy in the state to require "other" part-time students to complete the FAFSA to be eligible for a new need-based grant program. A few caveats are important:

3523

1. Adult students eligible for financial reasons may still not qualify for federal financial aid due to other reasons, but by filling out the FAFSA these students can find out how much federal aid they could qualify for if they enrolled differently;

2. The FAFSA is a very complicated application; many adult students will need help completing the form so additional outreach to these adults will be necessary. For example, College Goal Sunday could purposively target adult students to help them complete the FAFSA.

Fourth, given the competing responsibilities of many adults (e.g., work and child care), an alternative eligibility formula for adults with dependent children could be qualification for the free and reduced lunch program in public schools. If an adult's kids receive free or reduced lunch, the adult could automatically qualify for the new need-based grant program.

TABLE 10
MAXIMUM ANNUAL COST ESTIMATES FOR NEED-BASED FINANCIAL AID TARGETING PART-TIME ADULT STUDENTS

NUMBER OF ADULT STUDENTS IN EACH TARGETED GROUP	ANNUAL COST ESTIMATES
"Other" part-time adults who are financially needy (N= 3,200-4,200)	$2,100,000 - $2,756,000
Part-time adult undergraduates who are Pell eligible (N=550)	$770,000
Part-time adult undergraduates eligible for complementary UA TAG (N=175)	$105,000
Total Estimated Annual Cost	**$2,975,000 - $3,631,000**

Table 10 provides a range of estimates for supplemental financial aid for part-time adults who are Pell-eligible or who are financially needy. The largest group of part-time adult students is categorized as non-degree seeking in the UA database (N=9,191); 73 percent are enrolled in 3 or fewer credits. A need-based program that included "other" part-time adults could target only those adults who were Pell-eligible. The estimate in Table 10 assumes that between 35 percent and 45 percent of non-degree seeking part-time adults would qualify for Pell, or approximately 3,200 to 4,200 students. If "other" part-time adults received a grant equal to 65 percent of tuition and fees (i.e., $525 annually if they enrolled for up to 3 credit hours per term and $1,050 annually if they enrolled for 6 credit hours), this component of a need-based grant program would cost between $2.1 million and $2.7 million annually.

For Fall 2004, about 542 part-time adult undergraduates received a Pell Grant – the average annual value of this grant was approximately $1,400 less than the average annual Pell Grant for full-time adult undergraduates. In order to establish an "equity threshold" for adult undergraduates equal to the average Pell Grant award for full-time adult undergraduates, UA would need to allocate $770,000 and expect to award a supplemental need-based grant to about 550 adult undergraduates enrolled part-time.

3524

Slightly more than 80 part-time adult undergraduates, but more than 150 full-time adult undergraduates, received a UA tuition assistance grant for Fall 2004. If an expanded TAG program served an equal number of part-time and full-time adult undergraduates, and awarded the maximum annual grant of $600 to all eligible part-time adults, $105,000 in additional resources would need to be invested by UA.

In sum, a new need-based grant program targeting part-time adult students 25 years of age and older – including both undergraduates and non-degree seeking adults - would require between $2.9 million and $3.6 million annually. The bulk of the cost for this program would support part time "other" adults enrolled in programs that lead to certificates of competence. This focus would expand need-based grant aid to more than 3,000 adults currently enrolled as "other" part-time, and cost between $2.1 million to $2.7 million annually. Table 10 also shows estimates for a need-based grant program to benefit part-time adult undergraduates who are financially needy. A much smaller number of part-time adults are enrolled as degree seeking undergraduates; a new need-based grant program to supplement financial aid for Pell-eligible adult undergraduates who enroll part-time, and complement financial aid for part-time adult undergraduates through an expanded UA TAG would cost less than $1 million annually and benefit about 700 adult students. If all three of these components were implemented at UA, approximately 4,000 adult students could benefit from this type of need-based grant program

Focus on Full-Time Undergraduates

This analysis found that full-time students borrow large amounts of money primarily from federal and state sources to pay for college at UA, and that Pell Grant recipients still face high net prices after all financial aid is awarded (see Appendix A). Full-time undergraduates also receive the lion's share of total financial aid among UA students and reflect a population quite different from part-time students overall. For example, more than 70 percent of full-time undergraduates are traditional college students 17 to 24 years of age. Although the gender, race, and ethnic diversity of full-time undergraduates reflect the overall student population at UA, full-time undergraduates represent a minority of total UA enrollment.

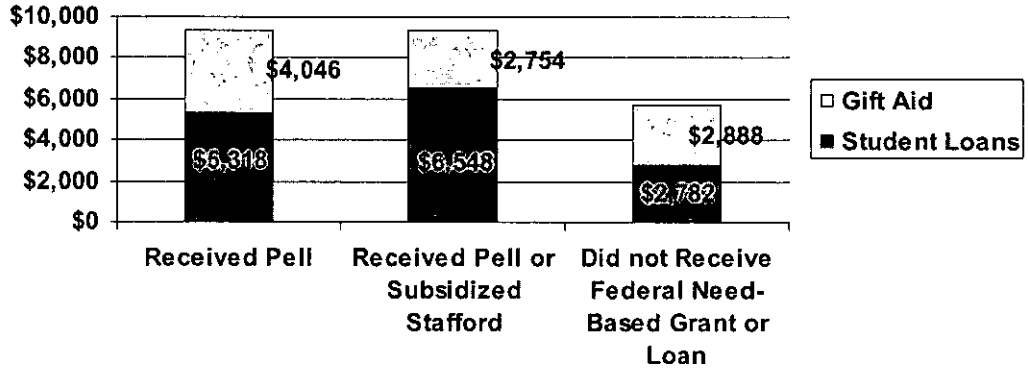
One approach for a new UA need-based program to benefit full-time undergraduates would be to reduce loan reliance so that student loans do not exceed 50 percent of all financial aid awarded. In other words, UA could choose to maintain a consistent loan to grant financial aid ratio for all full-time undergraduates across all class levels. This supplemental program could target full-time undergraduates who qualify for federal need-based financial aid; that is, who received a Pell Grant or subsidized Stafford loan. For Fall 2004, 36 percent of full-time undergraduates received a Pell Grant, and 45 percent borrowed a subsidized Stafford loan. Overall, 57 percent of full-time undergraduates who received any financial aid (more than 3,700 students) were awarded a Pell Grant or borrowed a subsidized Stafford loan.

Figure 25 illustrates the estimated average annual loan and gift financial aid amounts for full-time undergraduates who received any financial aid. Two conclusions are readily apparent.

3525

First, Pell Grant recipients received almost $4,000 more, on average, in overall financial aid awards than did aid recipients who did not receive federal need-based grants or loans. Second, the percentage of loan financial aid received by full-time undergraduates who received federal need-based grant or loan aid is much higher than the percentage for full-time undergraduates who did not receive federal need-based aid. About 70 percent of total average financial aid awarded to full-time undergraduates who received the federal Pell Grant or subsidized Stafford loan was in the form of student loans. In addition, full-time undergraduates who received the Pell Grant borrowed 57 percent of the total financial aid they received. In contrast, less than half (49%) of total average financial aid awarded to full-time undergraduates who did not receive federal need-based aid was in the form of loans. These data suggest that full-time undergraduates with financial need borrow more than full-time undergraduates who receive non-need-based forms of financial aid.

FIGURE 25
AVERAGE ANNUAL LOAN AND GIFT AID AMOUNTS FOR FULL-TIME UNDERGRADUATES, 2004-05[13]



N = 6,563

Table 11 provides estimated amounts of grant financial aid in order to reduce the grant to loan ratio for full-time undergraduates who received any need-based financial aid from 70-30 to 50-50. Scenario 1 assumes the students will borrow the same amount to pay for college; in this case, the supplemental need-based grant increases the overall financial aid award for each student, thus reducing the remaining price students need to pay through work and/or family contribution. Scenario 2 assumes the new need-based grant will replace an equivalent amount of student loans so the overall financial aid package remains the same and students are borrowing less. However, this scenario does not reduce the net price for full-time undergraduates.

[13] These data are an estimate that assumes students will receive the same average awards for Spring 2005 as they did for Fall 2004.

TABLE 11
ANNUAL COST ESTIMATES FOR NEED-BASED GRANT PROGRAM TO TARGET LOAN TO GRANT RATIO OF 50-50 FOR FULL-TIME UNDERGRADUATES WHO QUALIFY FOR FEDERAL NEED-BASED FINANCIAL AID

	CURRENT	SCENARIO 1	SCENARIO 2
Loan Average Amount	$6,548	$6,548	$4,651
Gift Average Amount	$2,754	$6,548	$4,651
Total Average Aid	$9,302	$13,096	$9,302
Total Estimated Cost	—	**$14,193,354**	**$7,096,667**

N = 3,741

If UA decided to target a need-based grant program to full-time undergraduates, this type of program might cost between $7.1 million and $14.2 million annually. To reduce the overall cost of this type of program, UA could focus only on Pell eligible students and reduce their loan to grant ratio from 57-43 to 50-50 or 40-60. Table 12 provides cost estimates for an approach that reduces student borrowing for the most financially needy full-time undergraduates.

TABLE 12
ANNUAL COST ESTIMATES FOR NEED-BASED GRANT PROGRAM TO REDUCE LOAN RELIANCE FOR FULL-TIME UNDERGRADUATES WHO RECEIVED THE PELL GRANT

	CURRENT	50-50 RATIO	60-40 RATIO
Loan Average Amount	$5,318	$4,862	$3,889
Gift Average Amount	$4,406	$4,862	$5,835
Total Average Aid	$9,724	$9,724	$9,724
Total Estimated Cost	—	**$1,079,352**	**$3,382,443**

N = 2,367

This more targeted approach to benefit full-time undergraduates with the most financial need could benefit about 2,400 students. UA could award full-time Pell Grant recipients between $500 and $1,400 in additional need-based grant aid annually. The estimated annual cost for this type of need-based grant program is between $1.1 million and $3.4 million. This approach would not increase the overall amount of financial aid awarded to Pell Grant recipients, but would increase the share of gift aid – and reduce the share of loans - awarded to the most financially needy full-time undergraduates at UA.

Implement Equity-Model for Financially Needy Undergraduates

Given the level of concern about student indebtedness among UA stakeholders, and the fact that financially needy students receive very little UA gift aid, a third option for a new need-based grant program is to develop a minimum equity threshold of grant aid that all financially needy undergraduates would receive. More than three-fourths (78%) of undergraduates who

3527

received any financial aid enrolled full-time, and 22 percent enrolled part-time. UA undergraduates who received any financial aid were typical of all UA students in terms of race, ethnicity and gender; however, only 37 percent were adult students 25 years of age and older.

Table 13 shows percentages of total gift and loan financial aid awarded to UA undergraduates who received any financial aid. For Fall 2004, UA undergraduates awarded the Pell Grant received more than $5.6 million in gift aid from federal, institutional and private sources, or 54 percent of the total gift aid awarded. These students also borrowed more than $7.7 million, which was 39 percent of the total amount borrowed by UA students. UA undergraduates who received federal need-based grant or loan aid borrowed more than $15 million for Fall 2004 – almost 80 percent of the total amount borrowed by UA undergraduates. In contrast, UA undergraduates not awarded federal need-based grant or loan aid received more than $4.3 million in gift aid from federal, institutional and private sources, or 42 percent of the total gift aid awarded. These students borrowed only $4.5 million for Fall 2004, which was less than one-fourth of the total amount borrowed by UA undergraduates.

TABLE 13
PERCENTAGE OF TOTAL AMOUNT OF GIFT AND LOAN AID AWARDED TO UA UNDERGRADUATES, FALL 2004

	Received Pell Grant	Received Pell Grant or Subsidized Stafford Loan	Received Financial Aid, but not Federal Need-Based Grant or Loan
Percent of Total Loan Aid Awarded To:	39%	78%	23%
Percent of Total Gift Aid Awarded To:	54%	58%	42%
Percent of Total Financial Aid Awarded To:	44%	71%	29%
Percent of Total Undergraduates Who Received Any Aid	38%	59%	40%

N = 8,468

Figure 26 illustrates the average amount of loan and gift aid for all UA undergraduates who received financial aid. This graph clearly indicates that average gift aid is slightly lower for undergraduates who received federal need-based grant or loan aid compared with undergraduates who did not receive federal need-based financial aid. Pell Grant recipients received average gift aid of more than $3,500, which was 40 percent higher than average gift aid for undergraduates who did not receive federal need-based financial aid. However, students who received federal need-based grant or loan aid borrowed significantly more than other students who received financial aid but did not necessarily have financial need. Put another way, 63 percent of the total average financial aid amount received by Pell Grant recipients was in the form of student loans. In addition, UA undergraduates who received federal need-based grant or loans borrowed 72 percent of the total aid they received. These percentages contrast sharply with the targeted loan to grant ratios of UA peer institutions (see section on stakeholder interviews).

Most UA peer institutions target a grant to loan financial aid ratio of 60 to 65 percent gift aid and 35 to 40 percent loan aid.

FIGURE 26
AVERAGE ANNUAL LOAN AND GIFT AID AMOUNTS FOR UNDERGRADUATE UA STUDENTS, 2004-05[14]

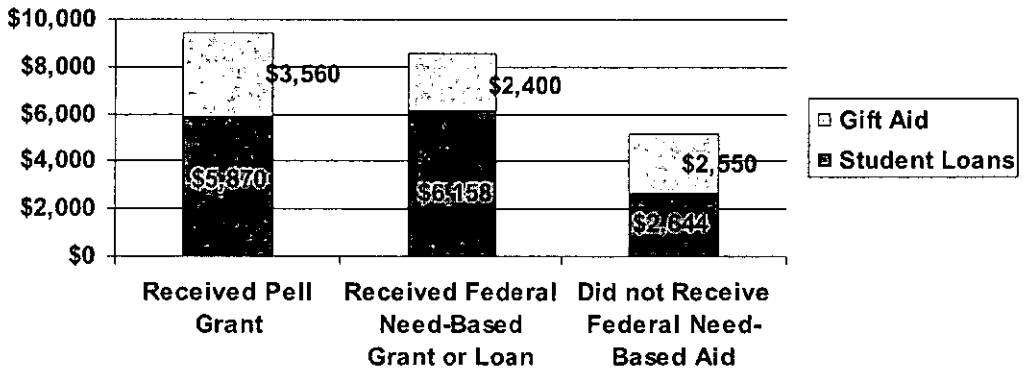


Table 14 provides cost estimates for a new need-based grant program to increase gift aid for financially needy UA undergraduates. The models reflect an equity threshold of gift aid that all financially needy undergraduates would receive. UA would make up the difference between the equity threshold and the current amount of gift aid received by undergraduates. The equity threshold could be set at 100 percent of tuition and fees for full-time enrollment ($3,500) or it could be set at the maximum Pell Grant ($4,050). The equity threshold model reduces loan reliance for financially needy undergraduates, and it lowers the net price UA students pay for college. Part-time financially needy undergraduates would receive one-half of the equity grant award. As Table 14 shows, the most expensive component of the equity grant aid model is to include undergraduates who borrowed a subsidized Stafford loan but were not eligible for a Pell Grant. To reach the equity threshold for this group of undergraduates would cost approximately $5 million annually.

A more narrow approach could target undergraduates who currently receive the Pell Grant or who are eligible for the UA tuition assistance grant. Based on Fall 2004 financial aid data, Pell Grant recipients received annual average gift aid of $4,046 – this amount is roughly equivalent to the maximum annual Pell Grant. Establishing an equity threshold for Pell Grant recipients would complement gift aid for part-time students, but would not provide supplemental gift aid

[15] These data are an estimate that assumes students will receive the same average awards for Spring 2005 as they did for Fall 2004.

3529

for full-time Pell Grant recipients. Part-time undergraduates who received the Pell Grant would receive additional gift aid from UA between $675 and $1,000 annually. This approach would benefit more than 800 part-time undergraduates – 67 percent of whom are adults 25 years of age and older – and cost between $550,000 and $775,000 annually.

TABLE 14
ANNUAL COST ESTIMATES FOR AN EQUITY MODEL FOR NEED-BASED GIFT AID FOR UA UNDERGRADUATES WITH FINANCIAL NEED[15]

	Current Average Gift Aid	Current Total Financial Aid	New Equity Grant (A)	New Equity Grant (B)	Additional Gift Aid from UA	**Estimated Annual Cost**
SCENARIO 1:						
Equity Model for Undergraduates with Pell Grant N = 2,367 full-time N = 813 part-time	FT $4,046 PT $1,074	FT $9,412 PT $2,871	FT N/A PT $1,750	FT N/A PT $2,025	FT No Change PT $676-$951	$550,000 $775,000
SCENARIO 2:						
Equity Model for Undergraduates eligible for federal need-based loans N = 1,372 full-time N = 495 part-time	FT $528 PT $140	FT $9,234 PT $7,614	FT $3,500 PT $1,750	FT $4,050 PT $2,025	FT $2,972-$3,522 PT $1,610-$1,885	$4.8 million $5.7 million
SCENARIO 3:						
Equity Model for undergraduates eligible for UA TAG N = 382 full-time N = 134 part-time	FT $878 PT $538	FT $7,060 PT $5,562	FT $3,500 PT $1,750	FT $4,050 PT $2,025	FT $2,172-$2,722 PT $1,212-$1,487	$990,000 $1.2 million

If UA decided to include students who did not receive a Pell Grant but were awarded a tuition assistance grant (TAG), an additional 500 students would benefit at a cost of about $1 million annually. The new equity grant awards for TAG recipients would cost between $1,200 for part-time undergraduates and $2,500 for full-time undergraduates. Combined, an equity grant program targeting part-time Pell Grant recipients and full- and part-time TAG recipients could benefit more than 1,300 students and cost approximately $1.75 million annually (i.e., scenarios 1 and 3).

[15] These data are an estimate that assumes students will receive the same average awards for Spring 2005 as they did for Fall 2004. New equity grant A is set at 100 percent of tuition and fees, or $3,500; new equity grant B is set at the maximum Pell Grant, currently $4,050.

3530

Conclusion: Expanding Need-Based Financial Aid at University of Alaska

This six-month analysis of financial aid at UA included interviews with 34 UA stakeholders and financial aid professionals, and a quantitative analysis of financial aid awards, student budgets and student demographics for almost 33,000 students enrolled at UA in Fall 2004. The analysis demonstrates two core conclusions:

1) *Many UA students would benefit from additional need-based grant aid; and*
2) *Support for additional need-based grants and a corresponding reduced reliance on student loans is widespread.*

More specifically, this analysis found three areas in which need-based financial aid could make a large impact and meet the potential objectives of a new need-based grant program. First, part-time adult learners 25 years of age and older represent more than half of all UA students, and yet receive very little financial aid. One reason for the lack of aid for adult students is their enrollment tendencies; adults tend to enroll part-time, often as non-degree seeking "other" students so they do not qualify for federal and state financial aid programs. A new UA need-based grant could target part-time adult learners.

Second, full-time undergraduate students receive the bulk of the financial aid awarded to UA students; however, about two-thirds of this aid is in the form of student loans. Only first-time freshmen receive less than 65 percent of their aid through borrowing. A new UA need-based grant program could target full-time undergraduates and lower the reliance on borrowing, especially for students who continue after their freshmen year. This type of program would generally benefit traditional-age students 17 to 24 years old.

Third, financially needy undergraduates at UA receive very little gift aid from the institution. A new UA equity grant program could target all Pell-eligible undergraduates (i.e., generally dependent students who come from families with less than $40,000 in annual income, or independent students whose income is at or below the federal poverty threshold) to increase their gift aid. This approach would benefit undergraduates who enroll part-time and receive a Pell Grant, especially adult students 25 years of age and older. An additional 500 undergraduates could benefit if TAG recipients were also eligible for an equity grant.

Based on this analysis, three specific types of programs were highlighted:

- A need-based grant program targeted to "other" part-time adult students 25 years of age and older who are pursuing a certificate of competence could provide more than 3,200 students with average grants between $525 and $1,050 at an annual cost of approximately $2.4 million.
- A need-based grant program targeted to full-time Pell-eligible undergraduates to reduce loan reliance and establish a 50-50 loan to grant financial aid ratio could provide more

3531

than 2,300 students with $500 average supplemental gift aid at an annual cost of about $1.1 million.

- A need-based grant program with an equity gift aid threshold equal to 100 percent of tuition and fees (or $3,500 for a full-time undergraduate) could provide about 800 part-time Pell Grant recipients and about 500 full-or part-time TAG recipients with additional gift aid between $675 and $2,175 annually at a cost of about $1.5 million each year.

These three need-based grant programs, as well as the other approaches discussed in this report, represent a limited set of possibilities for a new need-based grant program. Ultimately, UA must determine its objective for a new need-based grant program before proceeding. However, this analysis indicates that a new need-based grant program is warranted at UA and could benefit several thousand students.

3532

APPENDIX A

Net Price Analysis for Undergraduates who Received Any Financial Aid, Fall 2004

An important measure of affordability is the net price of college students are expected to pay through work and/or personal and family contribution after all financial aid is awarded. The Statewide Office of Institutional Research extracted a database of 9,445 students enrolled for Fall 2004 with data on their housing arrangements. In order to conduct a net price analysis, the total financial aid received by students is subtracted from the total price charged; total price includes tuition, fees, room and board, transportation, books and living expenses. The total price varies based on full-time or part-time status, and based on where a student lives. Table A1 shows the total price for each MAU according to the living arrangements of students: on-campus, off-campus, or with parents.

TABLE A1
TOTAL ANNUAL BUDGET FOR FULL-TIME UA STUDENTS, 2004-2005

MAU	On Campus	Off Campus	With Parents
Anchorage	$14,729	$17,165	$10,338
Fairbanks	$12,869	$16,740	$12,050
Southeast	$11,442	$14,061	$7,191

Source: Statewide Office of Institutional Research, UA Offices of Financial Aid

Among the almost 9,500 students in this database, approximately 36 percent received some form of financial aid; this percentage is higher than the 31 percent of all UA students who received financial aid. In addition, about 20 percent of students for whom UA had data on living arrangements received a federal need-based grant or college work-study. In comparison, only 10 percent of all UA students received a federal need-based grant. Thus, in terms of financial aid awards, the database with information on living arrangements is not representative of the total Fall 2004 enrollment at UA. Consequently, the net price analysis is not representative of all UA students who received financial aid; rather, it provides a general impression of net price according to data from students for whom living arrangement data was available.

Table A2 shows the demographic characteristics for students with financial aid in this database and data for all UA students who received financial aid for comparison purposes. The students in the database used for net price analysis were disproportionately undergraduates compared to total UA enrollment for Fall 2004; moreover, 52 percent of the students were enrolled full-time – a stark contrast to the 38 percent of all students enrolled full-time at UA. Further, about 87 percent of the students in this database who received any financial aid were undergraduates - 69 percent were full-time undergraduates (see Table A3). Because the database with students for whom living arrangement data was available included only about one-third of all UA students who received some form of financial aid, and because more than two-thirds of these students were full-time undergraduates, the following net price analysis was conducted only for Fall 2004 full-time undergraduates. Net-price information for traditional-age students less than 25 years old and non-traditional adult learners 25 years of age and older are provided.

3533

TABLE A2
PERCENTAGE OF STUDENTS WITH SELECTED CHARACTERISTICS, FALL 2004

	Students with living arrangement data	All UA Students
Received Any Financial Aid	36.3%	31.3%
Received Federal Need-Based Grants	19.4%	10.0%
Received Institutional Aid	13.9%	12.1%
Gender		
Men	39.5%	39.0%
Women	60.5%	61.0%
Race and Ethnicity		
White, Non-Hispanic	70.1%	69.6%
Black, Non-Hispanic	2.9%	3.0%
Asian/Pacific Islander	5.3%	4.9%
Alaskan Native/American Indian	12.6%	13.1%
Hispanic	3.3%	3.2%
Other	5.8%	6.1%
Age		
Less than 25	54.3%	45.4%
25 and Older	45.7%	54.6%
Class Level		
Undergraduate	61.2%	50.7%
Graduate	6.6%	6.6%
"Other"	32.2%	42.6%
Sample Population	N = 9,407	N = 32,678

TABLE A3
PERCENTAGE OF STUDENTS WHO RECEIVED SOME FORM FINANCIAL AID AND FOR WHOM UA HAD LIVING ARRANGEMENT DATA, FALL 2004

Full-Time Undergraduate	69.4%
Part-Time Undergraduate	17.4%
Graduate	6.3%
"Other" Enrollment	6.9%
Age Less than 25 Years	63.4%
Age 25 Years and Older	36.6%
N = 3,416	

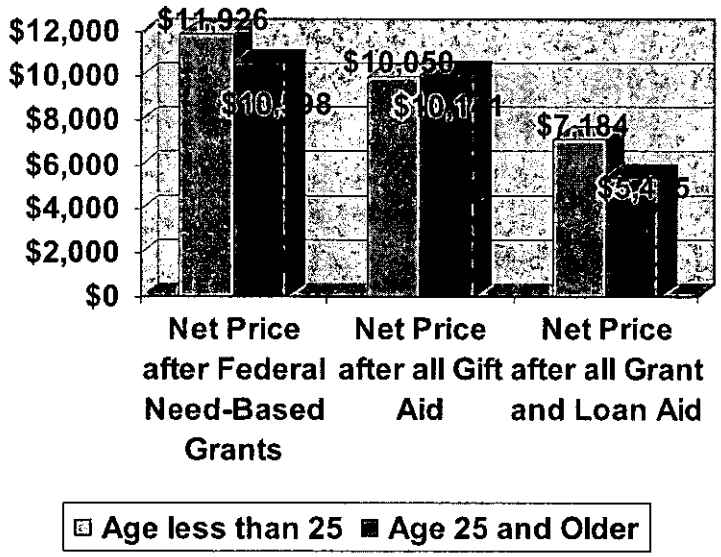
Figure A1 illustrates the net price for full-time undergraduates in three ways: 1) net price after federal need-based grants; 2) net price after all gift aid; and 3) net price after all loan and grant aid.[1] According to Fall 2004 data (adjusted to represent the full year of financial aid),

[1] After calculating net price for the 2,371 full-time undergraduates for whom necessary data was available, approximately 481 students had net prices significantly less than zero. These data are inaccurate and were excluded from the analysis. The net-price analysis was conducted on 1,890 full-time undergraduates.

3534

the net price for traditional-age full-time UA undergraduates, is almost $12,000 after federal need-based grants, and more than $10,000 after all gift aid. After traditional-age full-time undergraduates borrow, the net price for one year of college is about $7,200. Non-traditional adults fare slightly better because federal need-based grant aid reduced their net price considerably. In addition, because adults 25 years and older can borrow larger amounts through the federal Stafford loan program, the net price after all aid for full-time adult undergraduates at UA was about $5,400. The net price for students must be paid through work, personal and family contributions, additional borrowing, or with other sources not captured in the UA database.

FIGURE A1
AVERAGE NET PRICE FOR FULL-TIME UNDERGRADUATES AT UA, FALL 2004



N = 1,890

For comparison, Table A4 provides estimates from the National Center for Education Statistics (2004): net-price after federal grant aid was $10,500 for full-time dependent undergraduates (typically 24 years of age and younger) enrolled in public four-year colleges and universities in 1999-2000; average net price after federal grants and loans was $8,000.[2] These data suggest that traditional-age full-time undergraduates at UA have lower net prices after all grant and loan aid than do students nationally, but the lower net price is the result of additional borrowing and, to a lesser extent, institutional gift aid.

[2] This report from NCES focused only on full-time dependent undergraduates; comparable data for non-traditional adult undergraduates were not provided in the report.

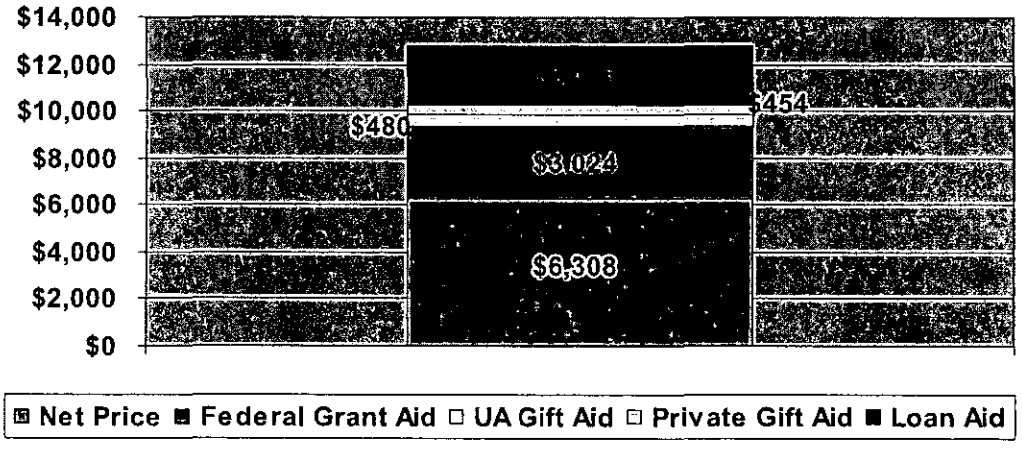
TABLE A4
NET PRICE AFTER FINANCIAL AID FOR FULL-TIME TRADITIONAL AGE STUDENTS, UA AND THE NATION

	Net Price after Grants	Net Price after all Grants and Loans
UA Students	$11,926	$7,184
Public 4-Year Students (NCES)	$10,500	$8,000

Source: Statewide Office of Institutional Research; National Center for Education Statistics

These data can also be used to analyze net price for the most financially needy undergraduates. Figures A2 and A3 illustrate the net price for full-time UA undergraduates who received a federal Pell Grant. As Figure A2 shows, traditional-age full-time UA undergraduates who received a Pell Grant had a net price of about $6,300. A majority of financial aid was in the form of gift aid from federal, institutional and private sources (61%). According to the National Center for Education Statistics (2004), the net price for full-time dependent undergraduates from families in the lowest quartile of income enrolled at public four-year colleges and universities was $5,200 in 1999-2000. This simple comparison suggests that traditional-age UA undergraduates who enroll full-time and receive a Pell Grant have a higher net price than comparable students nationally. An additional grant of $1,100 annually for the most financially needy full-time undergraduates would bring net price for traditional-age full-time UA students down to the national average.

FIGURE A2
AVERAGE NET PRICE AND GRANT AND LOANS RECEIVED FOR TRADITIONAL AGE FULL-TIME UNDERGRADUATES AT UA WHO RECEIVED A PELL GRANT, FALL 2004

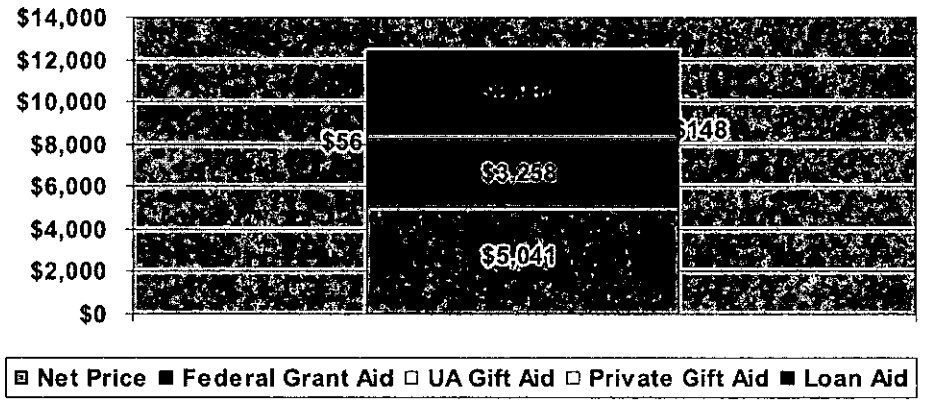


N = 345

3536

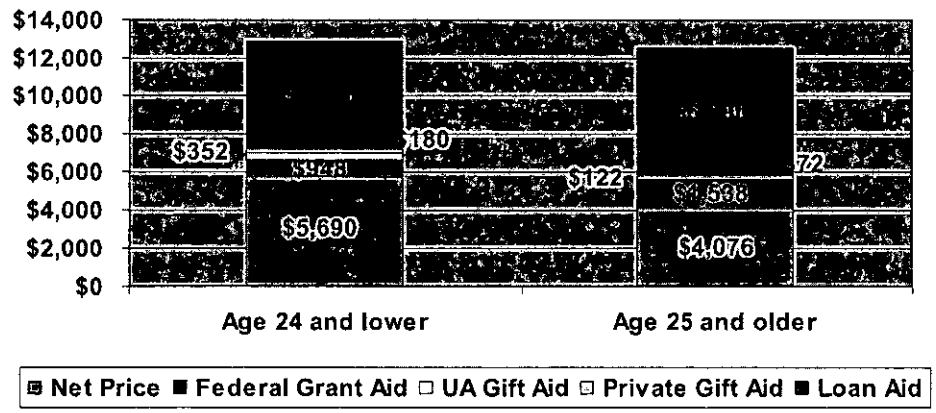
Figure A3 shows data for adult students 25 years of age and older who received a federal Pell Grant; these students can borrow larger amounts for college, which significantly reduces their net price. Among full-time adult undergraduates at UA who received a federal Pell Grant, net price was about $5,000. These data also show that the majority of financial aid received by these students was in the form of student loans (54%), and that average annual UA gift aid was slightly more than $50. These data suggest that non-traditional adults enrolled as full-time undergraduates and who received a Pell Grant primarily borrow for college, and are awarded negligible UA gift aid.

FIGURE A3
AVERAGE NET PRICE AND GRANT AND LOANS RECEIVED FOR NON-TRADITIONAL ADULT FULL-TIME UNDERGRADUATES 25 YEARS OF AGE AND OLDER AT UA WHO RECEIVED A PELL GRANT, FALL 2004



N = 207

FIGURE A4
AVERAGE NET PRICE AFTER ALL GRANT AND LOAN AID FOR FINANCIALLY NEEDY FULL-TIME UNDERGRADUATES AT UA WHO DID NOT RECEIVE A PELL GRANT, FALL 2004



N = 678

Figure A4 provides comparable net price and average financial aid data for full-time undergraduates who received a need-based Stafford loan or the UA tuition assistance grant. Approximately 40 percent of these students received a federal Pell Grant. The data suggest that this group of financially needy students had lower net prices after all grant and loan aid; however, the lower net prices are primarily the result of significant student borrowing. In short, full-time undergraduates with financial need (but who did not receive a Pell Grant) borrowed 79 percent of the total financial aid they received for 2004-05.

In sum, this limited net price analysis suggests four conclusions about financial aid for full-time UA undergraduates:

- *Full-time traditional-age UA undergraduates who receive financial aid had relatively* lower *net prices than comparable students nationally;*
- *Full-time traditional-age UA undergraduates who received the federal Pell Grant had relatively* higher *net prices than comparable students nationally;*
- *Non-traditional adult undergraduates enrolled full-time had lower net prices because they* borrowed larger amounts *of money to pay for college; and*
- *Financially needy students enrolled as full-time undergraduates – about 40 percent of whom received a Pell Grant –* borrowed almost 80 percent of all financial aid they received in 2004-05, *and their net prices ranged from almost $4,100 for adult students to about $5,700 for traditional-age students.*

3538

APPENDIX B

Project Methodology

Phase 1

The qualitative phase of the need-based financial aid project commenced in November 2004. Phase I included a series of one-on-one and group interviews structured around issues of need-based financial aid with stakeholders of the University of Alaska system. The participants represented a convenience sample. The results of the interviews provide a set of perspectives and conclusions that reflect the individuals interviewed, but these conclusions may not be generalizable to the larger population. Even so, the participant perspectives are consistent with the research literature on need-based financial aid and also reflect the typical practice of financial aid professionals. In total, 34 individuals were interviewed between November 2004 and January 2005. Published reports were also reviewed to situate the state of Alaska and the University of Alaska postsecondary education system in a comparative context with national and peer-state data on college access.

The University of Alaska Statewide Office of Student and Enrollment Services set up the initial interviews: 12 individual interviews and 4 group interviews were conducted. The 23 interviewees included faculty, students, financial aid professionals, staff, administrators and other UA stakeholders. Individual interviews were conducted via telephone during December 2004 and January 2005. Group interviews were conducted via telephone and the web-based Genesys meeting center during December 2004 and January 2005. Participants in these interviews were assured *confidentiality* so individuals are not attributed specific quotes or ideas in this report.

In addition to the stakeholder interviews, in November interviews with six national experts on federal, state and institutional financial aid programs were conducted.[17] These experts informed the development of a structured interview questionnaire used during the interviews with UA Stakeholders. This questionnaire is included as Appendix C. Interviews with five financial aid professionals among University of Alaska peer institutions were also conducted in January 2005.[18]

3539

Phase 2

Phase 2 of the need-based financial aid project commenced in February 2005. UA financial aid staff extracted a cross-sectional data file of all students enrolled in the UA system for Fall 2004. These data included information on student demographics, financial aid awards by type, full-time and part-time enrollment status, and MAU where student was enrolled. The student-record data was stripped of personal identification information to protect students' rights of privacy.

The quantitative analysis made the following assumptions:

- Students would maintain Fall 2004 enrollment status in Spring 2005;
- Financial aid awarded for the academic year would be distributed as awarded without changes between the Fall and Spring semesters;
- The variable "other loans" in the database means the Alaska Loan Program;
- Private gift aid is considered non-need-based because data was not provided to suggest otherwise.

The report provides national, institutional and student perspectives on financial aid. The national perspective consists of a review of several widely-known reports that compare college affordability among the 50 states. The institutional perspective consists of an analysis of how student financial aid was distributed to students by enrollment status, by campus, by type of aid, and in total. The student perspective consists of an analysis on how different types of financial aid helped the student pay for college. A net-price analysis was conducted for full-time undergraduates using a separately-extracted data file that included information on student living arrangements (see Appendix A).

The quantitative and qualitative analyses informed the report's discussion of how UA might design a need-based financial aid program to better meet students' financial need. This part of the report examined three potential models for a need-based financial aid project and included estimates for the amount of financial resources necessary to fund each program.

3540

APPENDIX C

Stakeholder Interview Questionnaire
December 2004

1. What should the purpose be for a need-based aid program? What outcome do you expect... for students? Institutions? The state? Others?

2. Which students do you most want to help with the need-based aid program?

3. Do you want to help students who would otherwise not enroll without the aid access a low-price institution? Do you want to expand the choices for students to attend higher-priced four-year colleges?

4. Do you want to increase the retention of students already enrolled? Do you want to increase full-time enrollment, or the number of credits attempted by students?

5. Do you want to encourage students to enroll and complete specific postsecondary education programs where employer demand is growing?

6. Do you want the need-based aid program to *complement* or *supplement* federal financial aid programs, like Pell and SEOG?

7. Do you want the need-based aid program to reduce the reliance on federal and private loans by your students?

8. What resources are available to finance the need-based aid program? Can you reallocate existing institutional or system revenues? Can you seek state or private resources?

9. Who do you think should administer the new program—-a state agency, the students' institutions, or maybe a contractor?

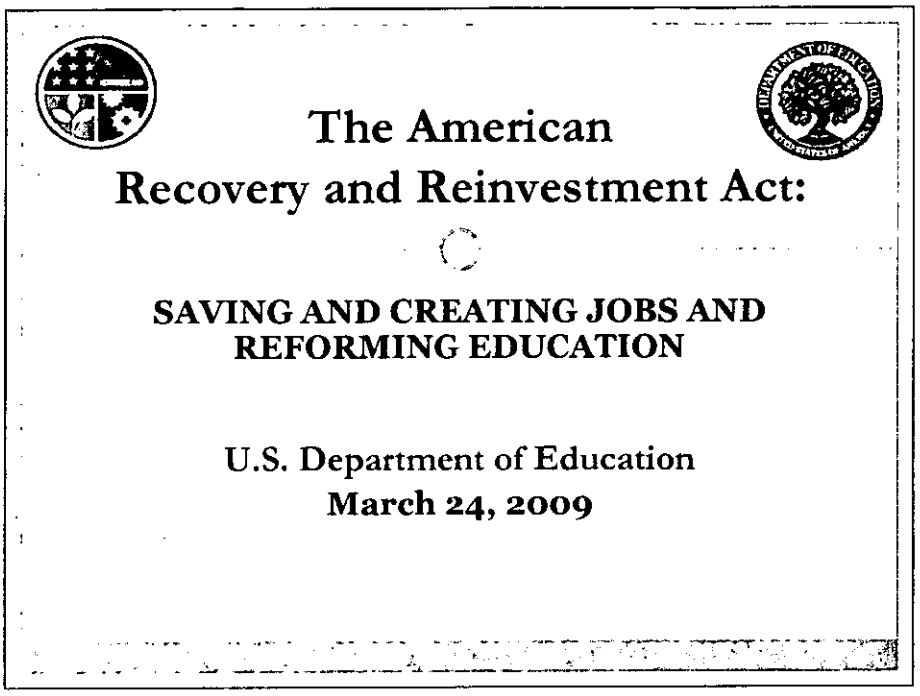
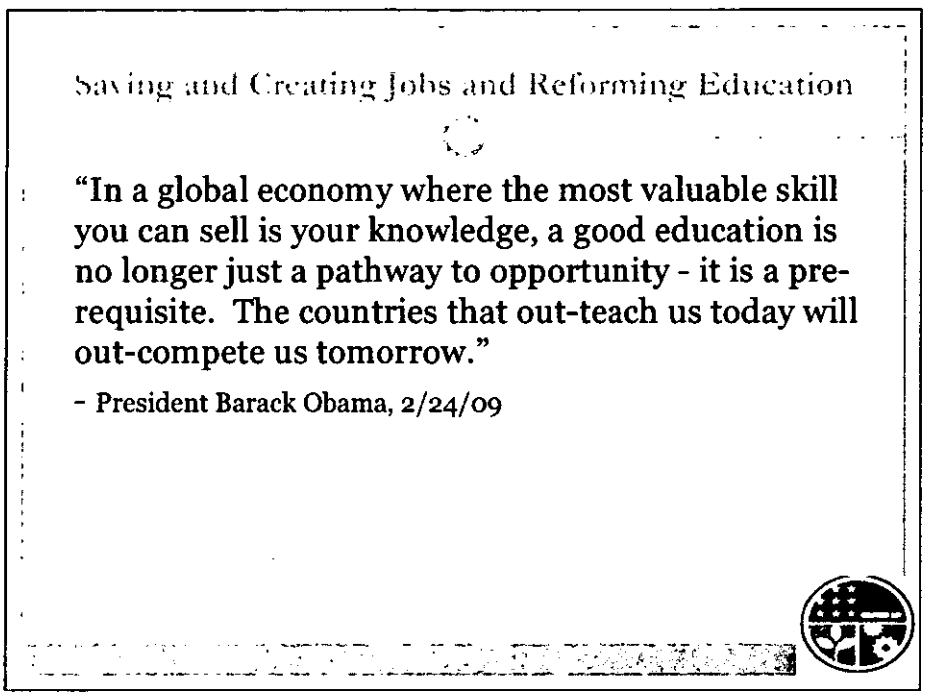
3/25/09 OVERVIEW: FEDERAL STIMULUS FUNDS FOR EDUC.



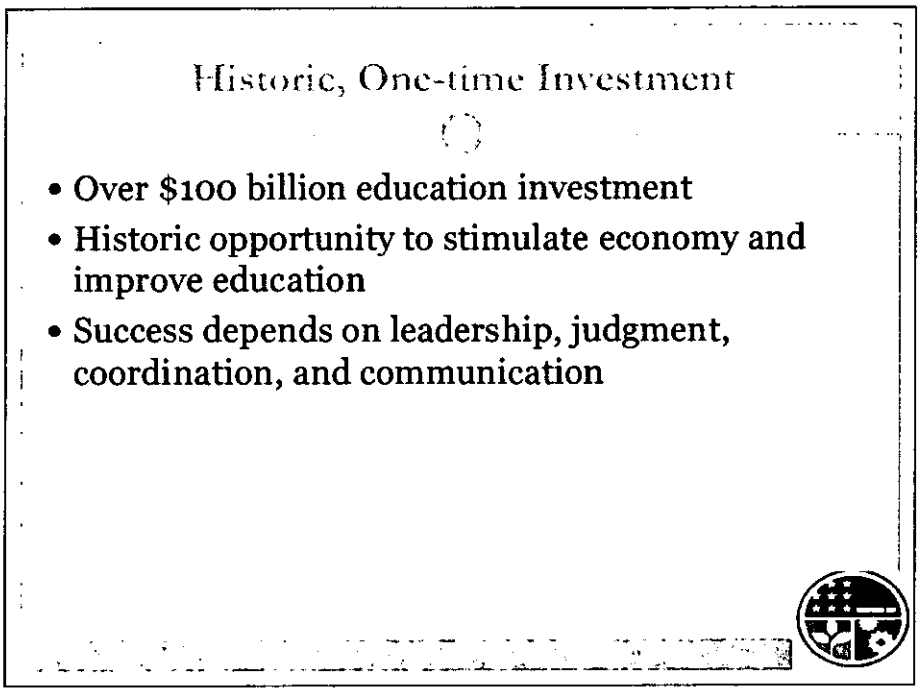
The American Recovery and Reinvestment Act:
Saving and Creating Jobs and Reforming Education
U.S. Department of Education



Saving and Creating Jobs and Reforming Education

"In a global economy where the most valuable skill you can sell is your knowledge, a good education is no longer just a pathway to opportunity - it is a pre-requisite. The countries that out-teach us today will out-compete us tomorrow."

- President Barack Obama, 2/24/09



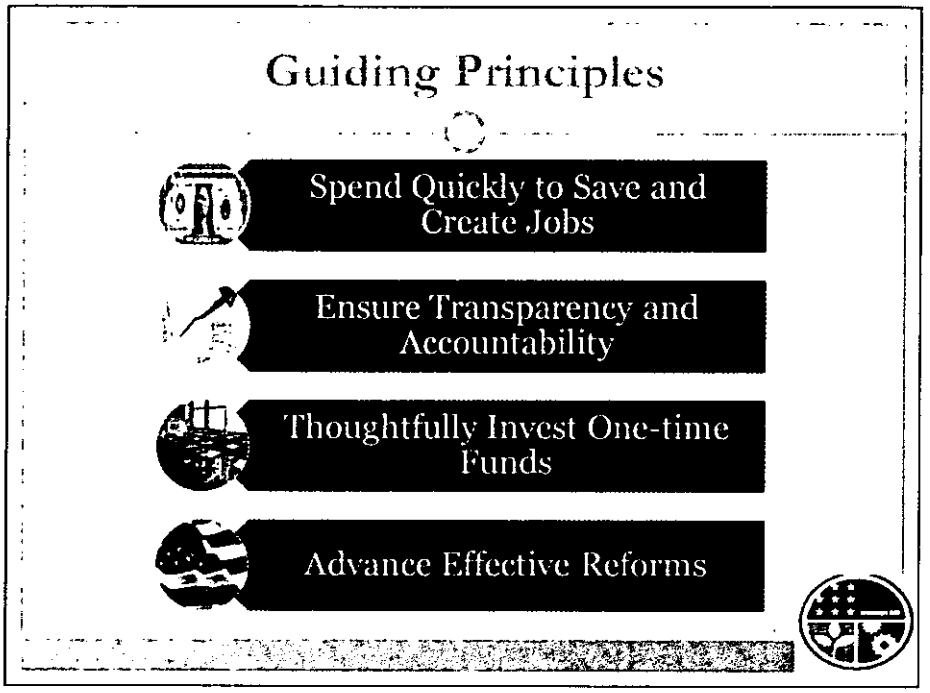
Historic, One-time Investment

•Over $100 billion education investment

•Historic opportunity to stimulate economy and improve education

•Success depends on leadership, judgment, coordination, and communication

The success of the education part of the ARRA will depend on the shared commitment and responsibility of students, parents, teachers, principals, superintendents, education boards, college presidents, State school chiefs, governors, local officials, and federal officials. Collectively, we must advance ARRA's short-term economic goals by investing quickly, and we must support ARRA's long-term economic goals by investing wisely, using these funds to strengthen education, drive reforms, and improve results for students from pre-kindergarten through college.

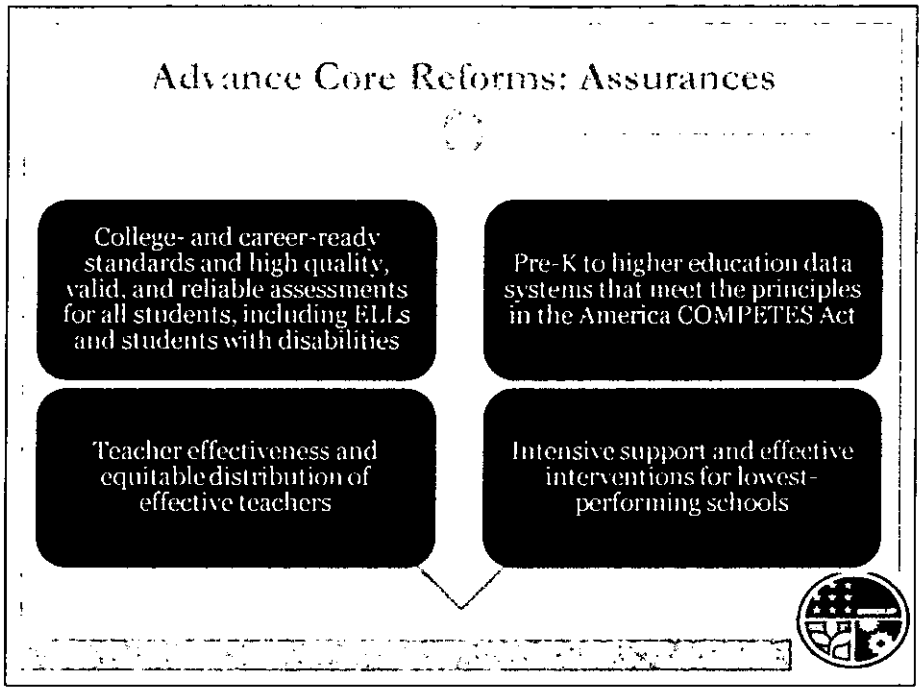


Guiding Principles

The overall goals to stimulate the economy in the short-term and invest wisely, using these funds to improve schools, raise achievement, drive reforms and produce better results for children and young people for the long-term health of our nation.

Four principles guide the distribution and use of ARRA funds:

- **Spend funds quickly to save and create jobs.** *ARRA* funds will be distributed quickly to States, local educational agencies and other entities in order to avert layoffs, create and save jobs and improve student achievement. States and LEAs in turn are urged to move rapidly to develop plans for using funds, consistent with the law's reporting and accountability requirements, and to promptly begin spending funds to help drive the nation's economic recovery.
- **Ensure transparency, reporting and accountability.** To prevent fraud and abuse, support the most effective uses of *ARRA* funds, and accurately measure and track results, recipients must publicly report on how funds are used. Due to the unprecedented scope and importance of this investment, *ARRA* funds are subject to additional and more rigorous reporting requirements than normally apply to grant recipients.
- **Invest one-time *ARRA* funds thoughtfully to minimize the "funding cliff."** *ARRA* represents a historic infusion of funds that is expected to be temporary. Depending on the program, these funds are available for only two to three years. These funds should be invested in ways that do not result in unsustainable continuing commitments after the funding expires.
- **Improve student achievement through school improvement and reform.** To close the achievement gap and help students from all backgrounds achieve high standards.



Advance Core Reforms: Assurances

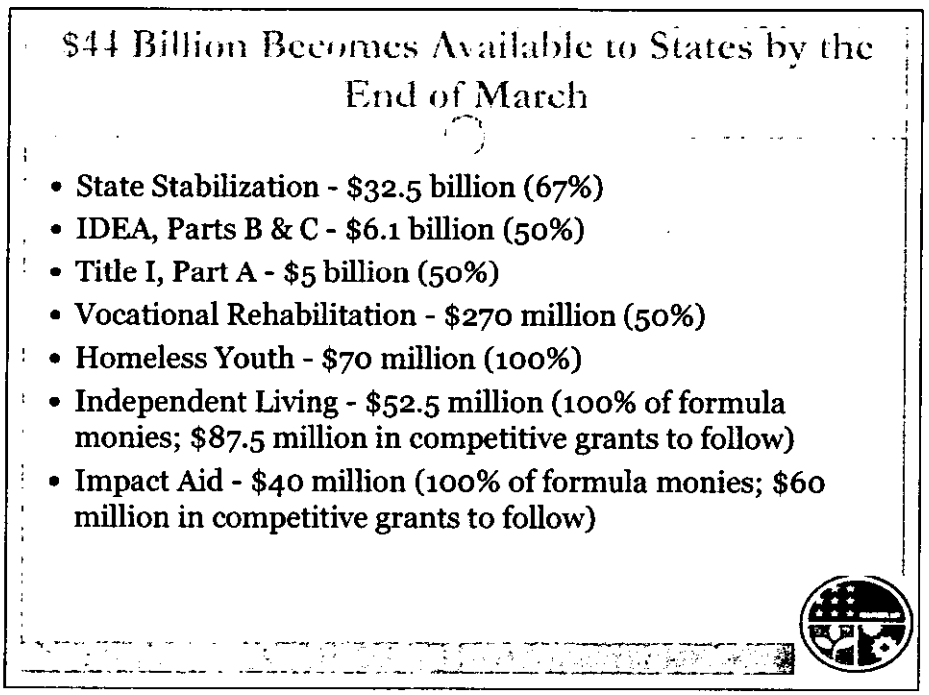
States must address four specific areas identified in ARRA that evidence shows make a critical contribution to student results:

•Making progress toward rigorous college- and career-ready standards and high-quality assessments that are valid and reliable for all students, including English language learners and students with disabilities;

•Establishing pre-K-to college and career data systems that track progress and foster continuous improvement;

•Making improvements in teacher effectiveness and in the equitable distribution of qualified teachers for all students, particularly students who are most in need;

•Providing intensive support and effective interventions for the lowest-performing schools.



$44 Billion Becomes Available to States by the End of March

•State Stabilization - $32.5 billion (67%) – Percentages are based on the total amount available

•IDEA, Parts B & C - $6.1 billion (50%)

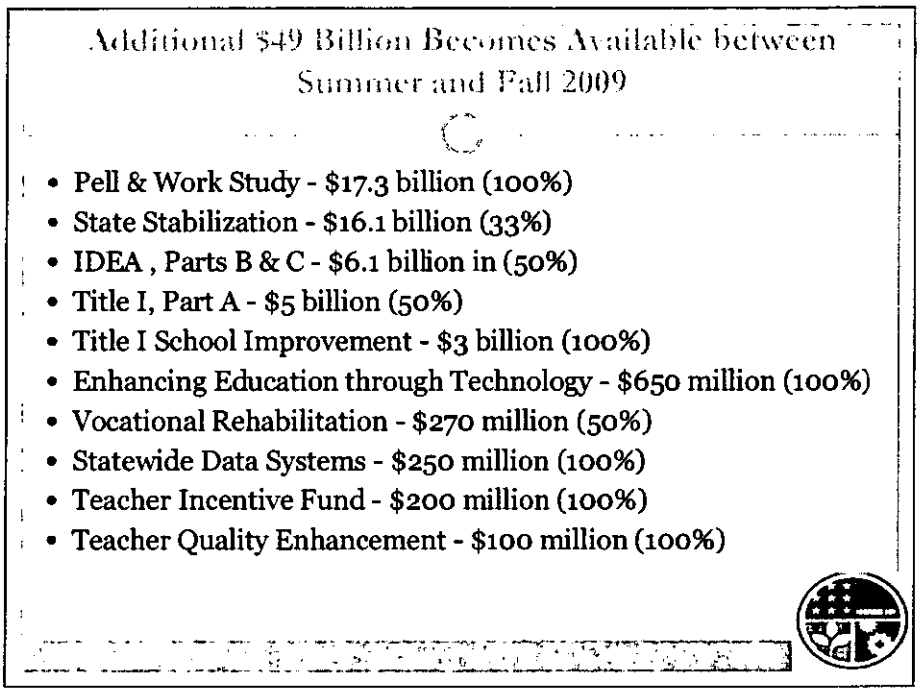
•Title I, Part A - $5 billion (50%)

•Vocational Rehabilitation - $270 million (50%)

•Homeless youth - $70 million (100%)

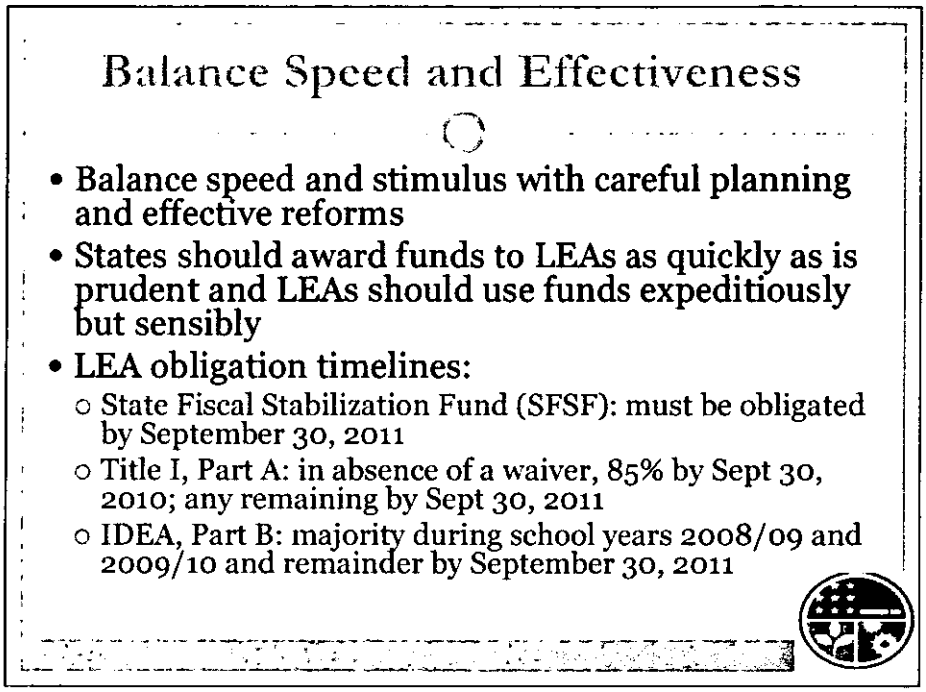
•Independent Living - $52.5 million (100% of formula monies; $87.5 million in competitive grants to follow)

•Impact Aid - $40 million (100% of formula monies; $60 million in competitive grants to follow)



Additional $49 Billion Becomes Available between Summer and Fall 2009

•Pell & Work Study - $17.3 billion (100%)
•State Stabilization - $16.1 billion (33%)
•IDEA , Parts B & C - $6.1 billion in (50%)
•Title I, Part A - $5 billion (50%)
•Title I School Improvement - $3 billion (100%)
•Enhancing Education through Technology - $650 million (100%)
•Vocational Rehabilitation - $270 million (50%)
•Statewide Data Systems - $250 million (100%)
•Teacher Incentive Fund - $200 million (100%)
•Teacher Quality Enhancement - $100 million (100%)



Balance Speed and Effectiveness

•Balance speed and stimulus with careful planning and effective reforms

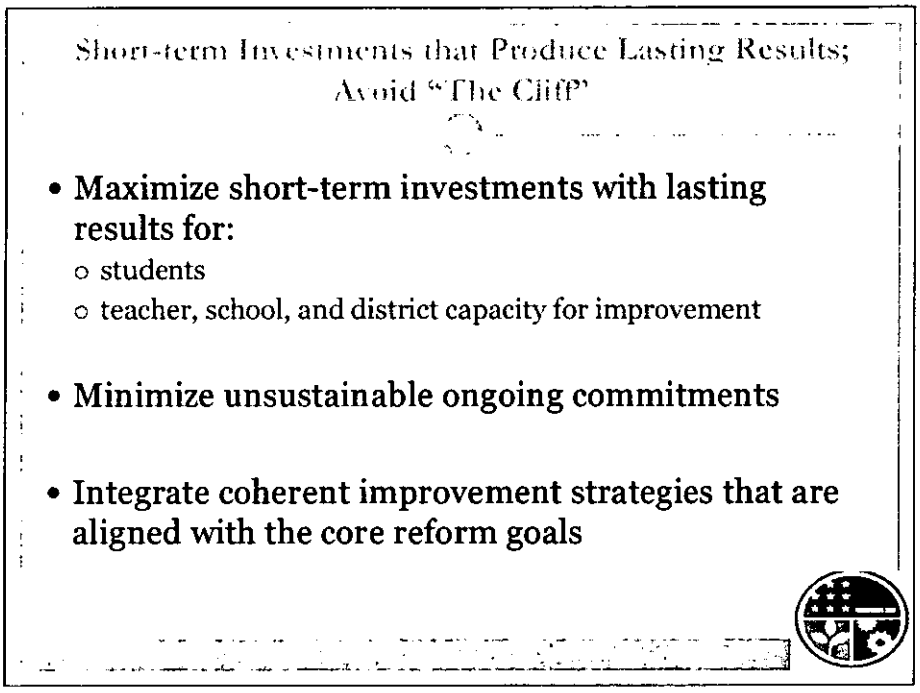
•States should award funds to LEAs as quickly as is prudent and LEAs should use funds expeditiously but sensibly

•LEA obligation timelines:

•SFSF - the Department strongly encourages governors to award or otherwise commit program funds as soon as possible after receipt of their grant awards. However, funds are available for obligation at the State and local levels until Sept. 30, 2011.

•Title I - the Department encourages States to award Title I, Part A recovery funds to their LEAs as quickly as possible, consistent with prudent management, so that LEAs can begin using the funds. Similarly, an LEA should use its Title I, Part A recovery funds expeditiously but sensibly. Note that, in the absence of a waiver, an LEA must obligate at least 85 percent of its total FY 2009 Title I, Part A funds (including *ARRA* funds) by Sept. 30, 2010. Any remaining FY 2009 Title I, Part A funds will be available for obligation until Sept. 30, 2011.

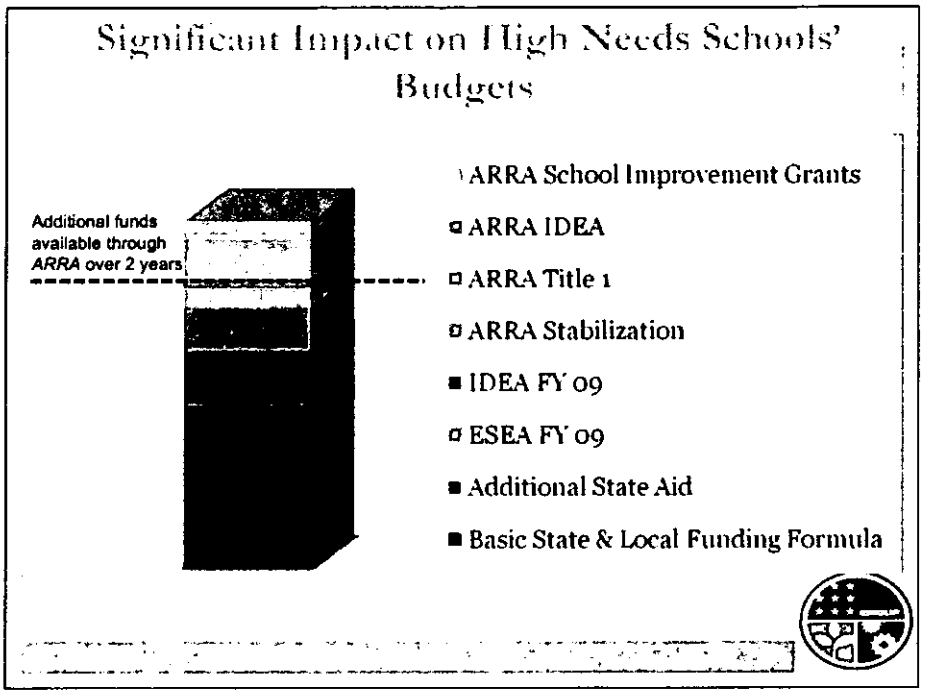
•Similarly, an LEA should use the IDEA recovery funds expeditiously. A State should make the Part B Grants to States and Preschool Grants recovery funds that it receives in March available to LEAs by the end of April 2009. Similarly, an LEA should use the *IDEA* recovery funds expeditiously. An LEA should obligate the majority of these funds during school years 2008–09 and 2009–10 and the remainder during school year 2010–11. States may begin obligating *IDEA*, Part B recovery funds immediately upon the effective date of the grant. All *IDEA* recovery funds must be obligated by Sept. 30, 2011.



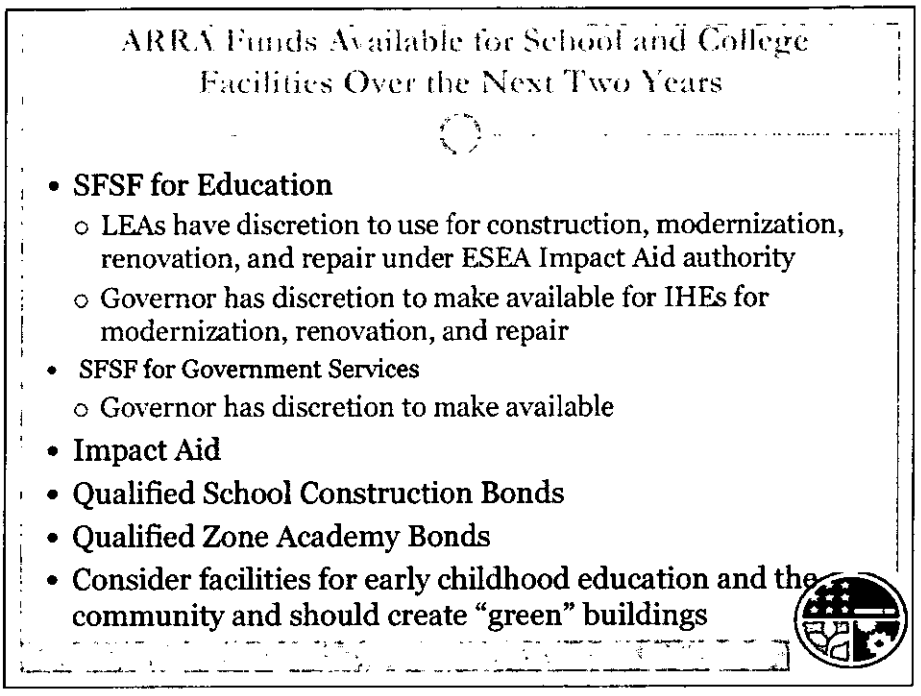
Short-term Investments that Produce Lasting Results; Avoid "The Cliff"

- Maximize short-term investments with lasting results for:
  - students
  - teacher, school, and district capacity for improvement
- Minimize unsustainable ongoing commitments
- Integrate coherent improvement strategies that are aligned with the core reform goals

ARRA represents an historic infusion of funds that is expected to be temporary. Depending on the program, these funds are available for only two to three years. To the maximum extent possible, these funds should be invested in ways that do not result in unsustainable continuing commitments after the funding expires.



Significant Impact on High Needs Schools' Budgets
ARRA funds provide significant additional funds to LEA FY 09 budgets
•This chart shows estimated amounts of funding for a high needs schools' budgets. ARRA represents a potentially substantial supplement to FY 09 budgets though ARRA School Improvement Grants, ARRA IDEA, ARRA Title I, and ARRA Stabilization



ARRA Funds Available for School and College Facilities Over the Next Two Years

•SFSF for Education

- •LEAs have discretion to use for construction, modernization, renovation, and repair under ESEA Impact Aid authority
- •Governor has discretion to make available for IHEs for modernization, renovation, and repair

• SFSF for Government Services

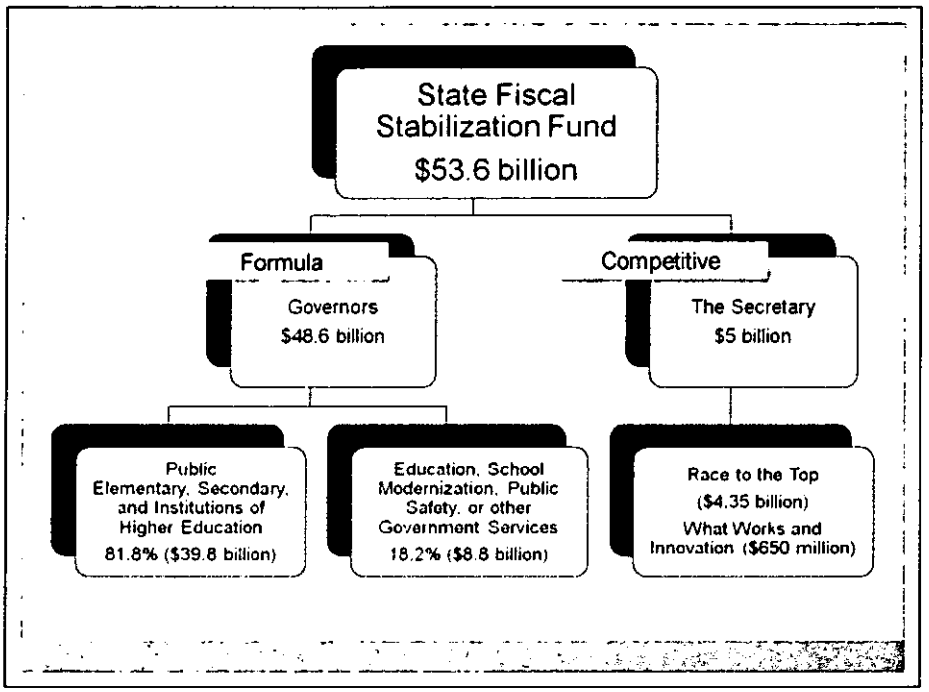
- •Governor has discretion to make available

•Impact Aid - $100 million

•Qualified School Construction Bonds – $22B – $11B per year for 2 years – tax credits for construction bonds

•Qualified Zone Academy Bonds – $2.8B – $1.4B per year for 2 years – can be used for school renovations and repairs as well as other improvements (any use except new construction)

•Consider facilities for early childhood education and the community and should create "green" buildings

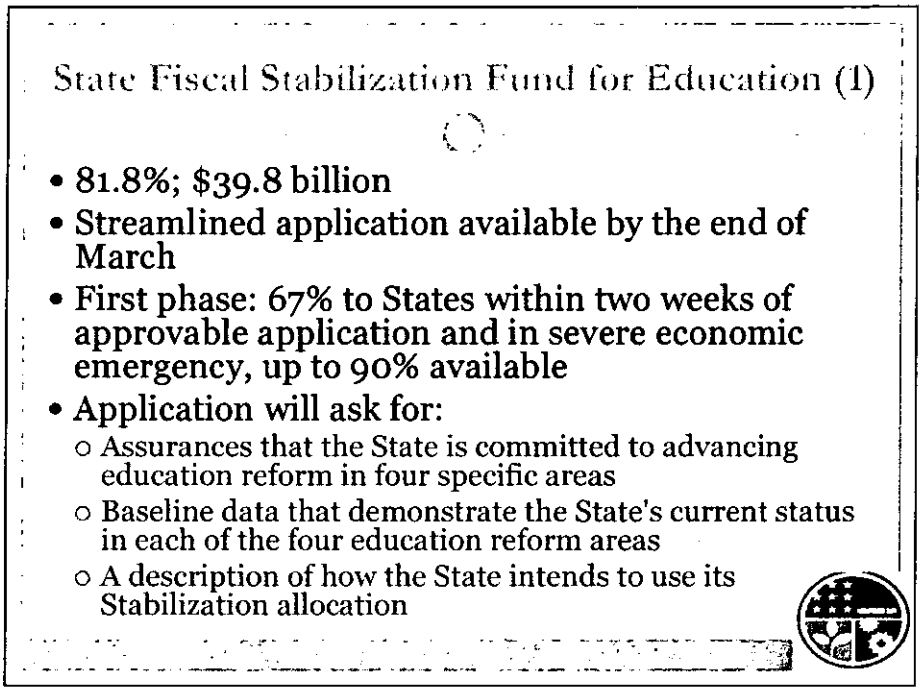


The State Fiscal Stabilization Fund (SFSF) program

•Is a new one-time appropriation of $53.6 billion under the *American Recovery and Reinvestment Act of 2009* (*ARRA*). Of the amount appropriated, the U. S. Department of Education will award governors approximately $48.6 billion by formula under the SFSF program in exchange for a commitment to advance essential education reforms to benefit students from early learning through post-secondary education.

•These funds will help stabilize State and local government budgets in order to minimize and avoid reductions in education and other essential public services. The program will help ensure that local educational agencies (LEAs) and publicly funded institutions of higher education (IHEs) have the resources to avert cuts and retain teachers and professors. The program may also help support the modernization, renovation, and repair of school and college facilities. In addition, the law provides governors with significant resources to support education (including school modernization renovation, and repair), public safety, and other government services.

•The Department will award the remaining $5 billion competitively under the "Race to the Top" and "Investing in What Works and Innovation" programs.



State Fiscal Stabilization Fund for Education (1)

•81.8%; $39.8 billion

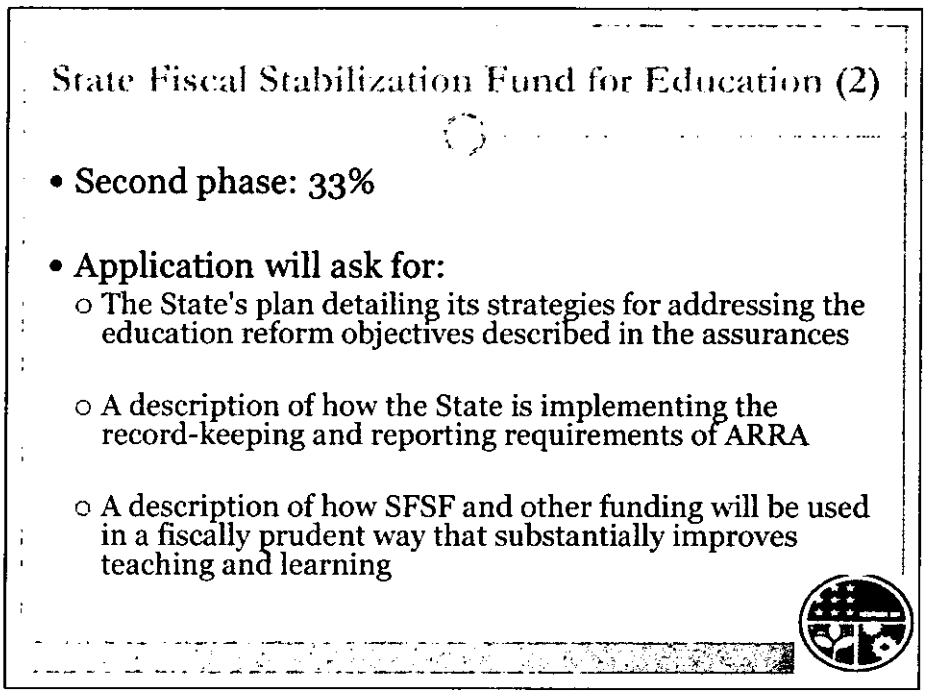
•In order to help alleviate the substantial budget shortfalls that States are facing, the Department has developed a streamlined, user-friendly process for expeditiously providing to States SFSF allocations:

> •Sixty-one percent of a State's allocations will be on the basis of their relative population of individuals aged 5 to 24, and 39 percent will be based on relative shares of total population.

•The Department will award SFSF funds to governors in two phases. To receive its initial SFSF allocation, a State must submit to the Department an application that provides (1) assurances that the State is committed to advancing education reform in four specific areas; (2) baseline data that demonstrates the State's current status in each of the four education reform areas; and (3) a description of how the State intends to use its stabilization allocation.

•Within two weeks of receipt of an approvable SFSF application, the Department will provide a State with 67 percent of its SFSF allocation.

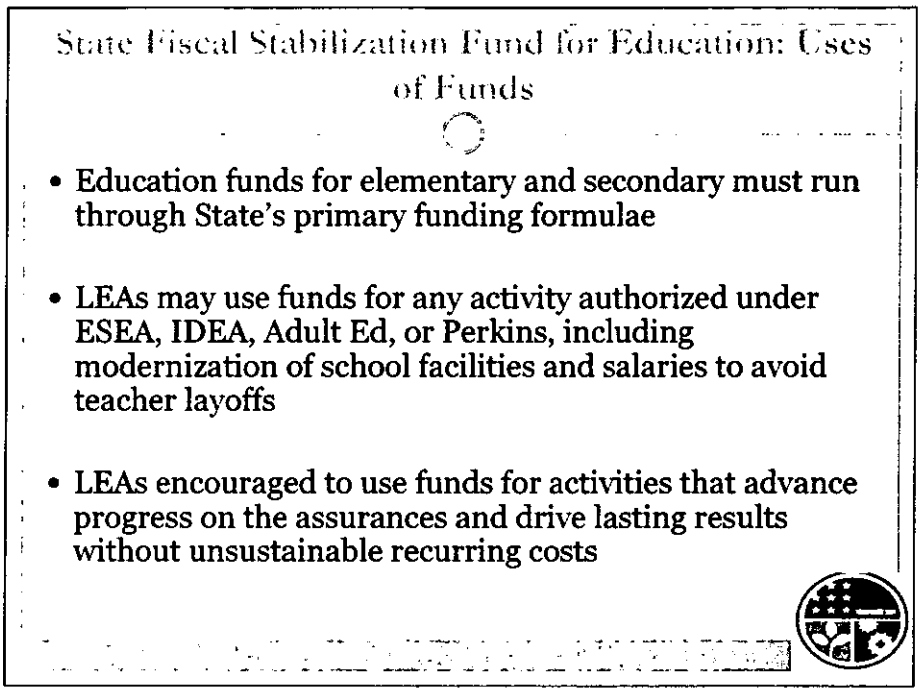
•If a State demonstrates that the amount of funds it will receive in phase one (67 percent of its total stabilization allocation) is insufficient to prevent the immediate layoff of personnel by LEAs, State educational agencies, or publicly funded institutions of higher education, the Department will award the State up to 90 percent of its SFSF allocation in phase one.



State Fiscal Stabilization Fund for Education (2)

•A State will receive the remaining portion of its SFSF allocation after the Department approves the State's plan detailing its strategies for addressing the education reform objectives described in the assurances. This plan must also describe how the State is implementing the record-keeping and reporting requirements under *ARRA* and how SFSF and other funding will be used in a fiscally prudent way that substantially improves teaching and learning.

•In the near future, the Department will issue guidance on the specific requirements that a State must meet to receive its phase two allocation. The Department anticipates that the phase-two funds will be awarded beginning July 1, 2009, on a rolling basis.



State Fiscal Stabilization Fund for Education: Uses of Funds

•States must use 81.8 percent of SFSF funds for the support of public elementary, secondary, and higher education, and, as applicable, early childhood education programs and services.

•States must use their allocations to help restore for FY 2009, 2010, and 2011 support for public elementary, secondary, and postsecondary education to the greater of the FY 2008 or FY 2009 level. The funds needed to restore support for elementary and secondary education must be run through the State's primary elementary and secondary education funding formulae. The funds for higher education must go to IHEs.

•If any SFSF funds remain after the State has restored State support for elementary and secondary education and higher education, the State must award the funds to LEAs on the basis of the relative Title I shares but not subject to Title I program requirements.

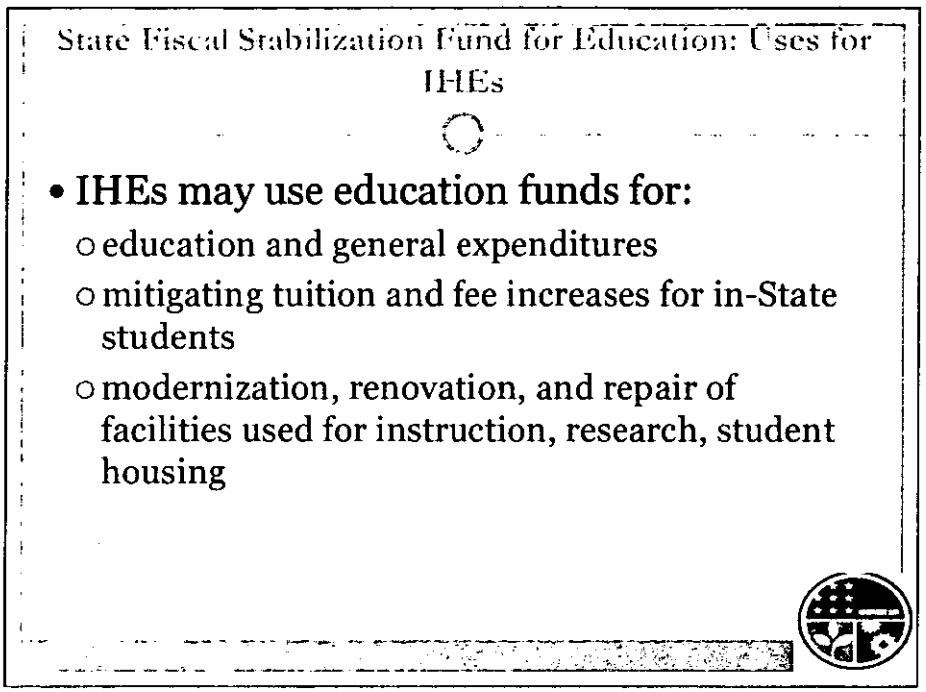
•Subject to limited restrictions in *ARRA* as defined in further guidance LEAs may use their share of 81.8% of the SFSF education funds for any activity authorized under the *Elementary and Secondary Education Act of 1965* (*ESEA*) (which includes the modernization, renovation, or repair of public school facilities), the *Individuals with Disabilities Education Act* (*IDEA*), the *Adult Education and Family Literacy Act* (*Adult Education Act*), or the *Carl D. Perkins Career and Technical Education Act of 2006* (*Perkins Act*).

•LEAs and IHEs should use funds consistent with the intent and overall goals of *ARRA*: to create and save jobs and to advance the education reforms set forth in the assurances section so as to produce lasting results for students from early learning to college. LEAs and IHEs are also encouraged to consider uses of funds that create lasting results without creating unsustainable recurring costs.

•Any funds that an LEA receives from the 81.8 percent of the SFSF program (whether distributed through the State's primary funding formulae or on the basis of the relative Title I, Part A) may be used for any activity listed in the above paragraph.

•LEAs may use SFSF to pay salaries to avoid having to lay off teachers and other school employees.

•To the extent LEAs use funds for modernization, renovation or repair, they should consider the use of facilities for early childhood education and for the community and should create "green" buildings.



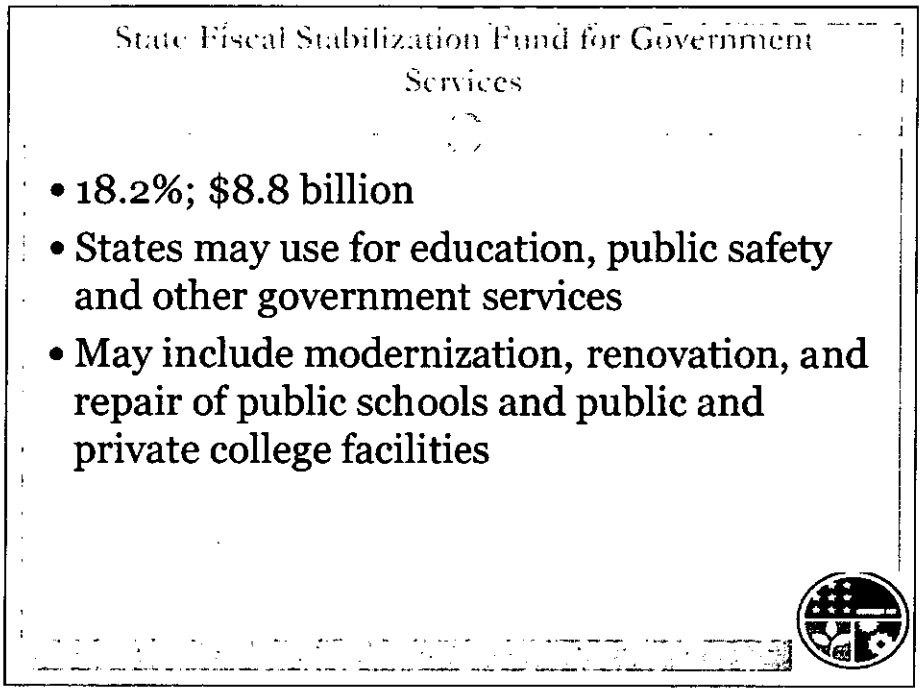
State Fiscal Stabilization Fund for Education: Uses for IHEs

•Subject to limited restrictions in *ARRA*, IHEs may use program funds for:

(1)education and general expenditures,

(2)and in such a way as to mitigate the need to raise tuition and fees for in-State students; or

(3)the modernization, renovation, or repair of IHE facilities that are primarily used for instruction, research, or student housing. IHEs may not use funds to increase their endowments.

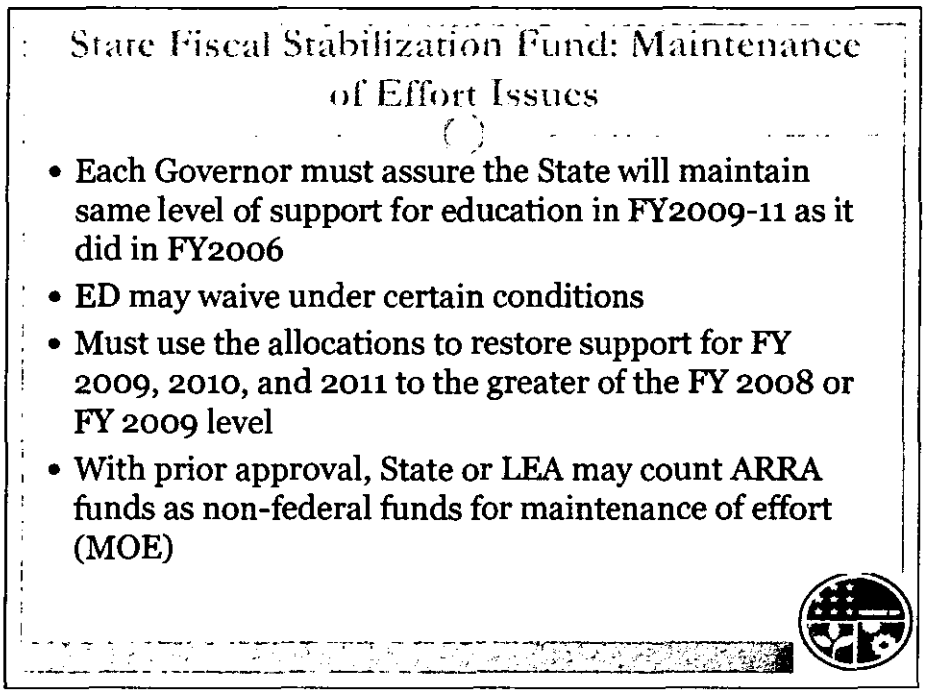


State Fiscal Stabilization Fund for Government Services

•18.2%; $8.8 billion

•States may use for education, public safety and other government services

•May include modernization, renovation, and repair of public schools and public and private college facilities



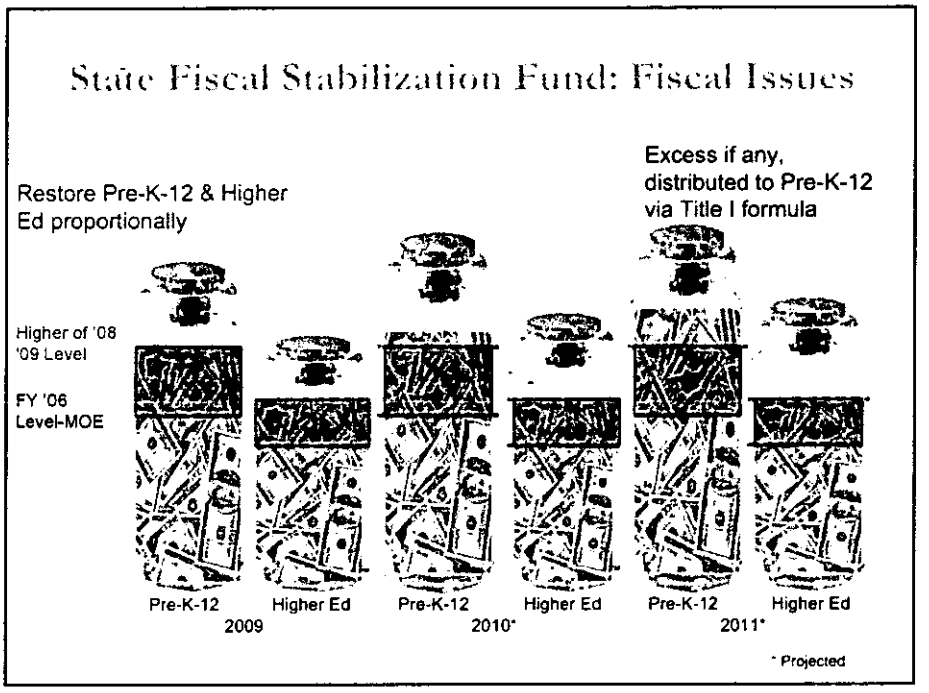
State Fiscal Stabilization Fund: Maintenance of Effort Issues

•States must use their allocations to help restore for FY 2009, 2010, and 2011 support for public elementary, secondary, and postsecondary education to the greater of the FY 2008 or FY 2009 level. The funds needed to restore support for elementary and secondary education must be run through the State's primary elementary and secondary education funding formulae.

•The Department strongly encourages Governors to award subgrants or otherwise commit program funds as soon as possible after receipt of their grant awards. However, funds are available for obligation at the State and local levels until September 30, 2011.

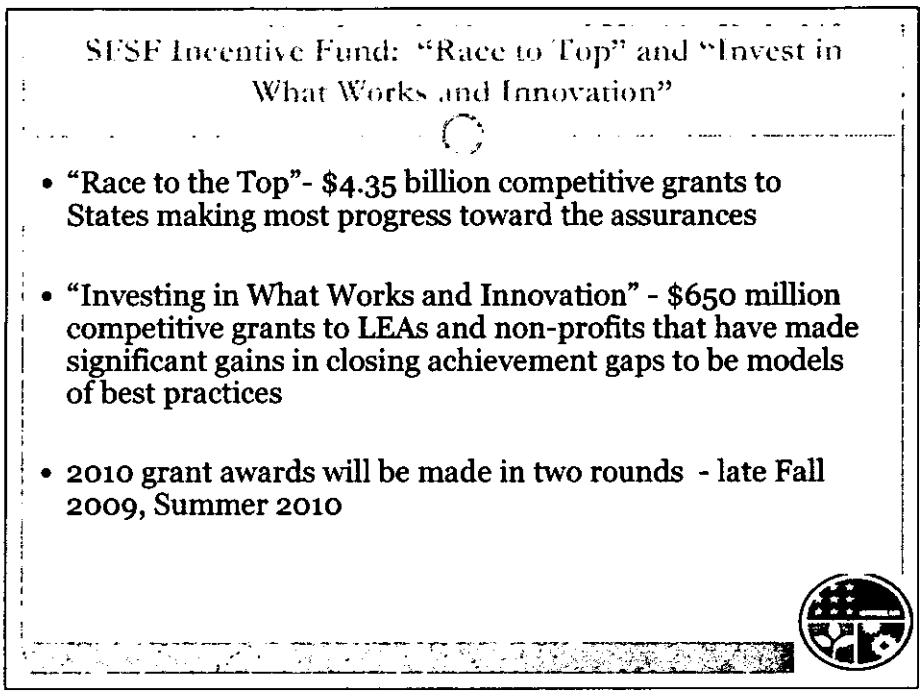
•As part of the State's application, each Governor must include an assurance that the State will maintain the same level of support for elementary, secondary, and postsecondary education in FYs 2009 through 2011 as it did in FY 2006. However, the statute authorizes the Department to waive this maintenance-of-effort requirement under certain conditions.

•With prior approval from the Secretary, a State or LEA may count program funds used for elementary or secondary education as non-federal funds to maintain fiscal effort under ED programs that have maintenance-of-effort requirements.



State Fiscal Stabilization Fund: Fiscal Issues

•This chart graphically represents how SFSF Education funds are allocated between Pre-K-12 and higher education. The bottles display budgets for 2009, 2010, and 2011 for Pre-K-12 and higher education in each of these years. The blue lines represent 2006 levels of spending. The red lines represent the higher level of spending for 2008 or 2009. States are to use funds proportionally to restore budgets to fund Pre-K-12 and higher education in each of these three years. The shaded areas represent the difference between 2006 and the higher of 2008 and 2009. If a state is able to fund in all three years both Pre-K-12 and Higher Education to their 2008 or 2009 level (whichever is higher) the remaining funds should be distributed to Pre-K-12 via the Title I formula.

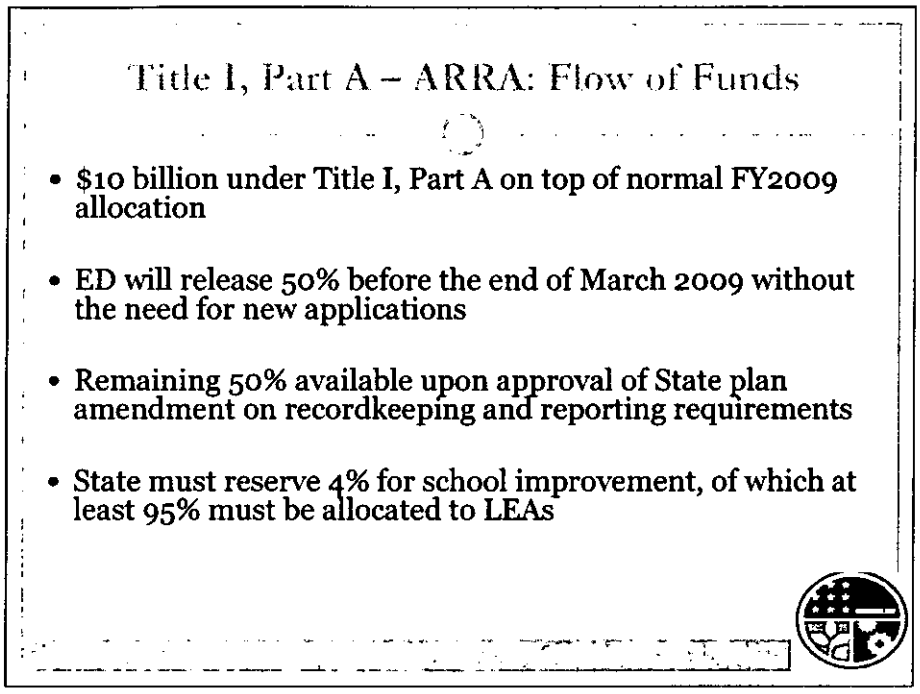


SFSF Incentive Fund: "Race to Top" and "Invest in What Works and Innovation"

•Of the amount appropriated for the SFSF, the Department will use at least $4.35 billion to make competitive grants under the "Race to the Top" fund. These grants will help States to drive significant improvement in student achievement, including through making progress toward the four assurances.

•The Department will use up to $650 million to make competitive awards under the "Invest in What Works and Innovation" fund. These awards will reward LEAs or nonprofit organizations that have made significant gains in closing achievement gaps to serve as models for best practices.

•2010 grant awards will be made in two rounds - late Fall 2009, Summer 2010



Title I, Part A – ARRA: Flow of Funds

•The Department plans to award 50 percent of each State's Title I, Part A recovery funds by the end of March 2009. These funds will be awarded under each State's existing approved *Elementary and Secondary Education Act of 1965* (*ESEA*) Consolidated State Application. No new or amended application will be required to receive this portion of the funds. However, in order to receive the remaining Title I, Part A recovery funds, a State must submit, for review and approval by the Department, an amendment to its Consolidated Application that addresses how it will meet the recordkeeping and reporting requirements of the *ARRA*.

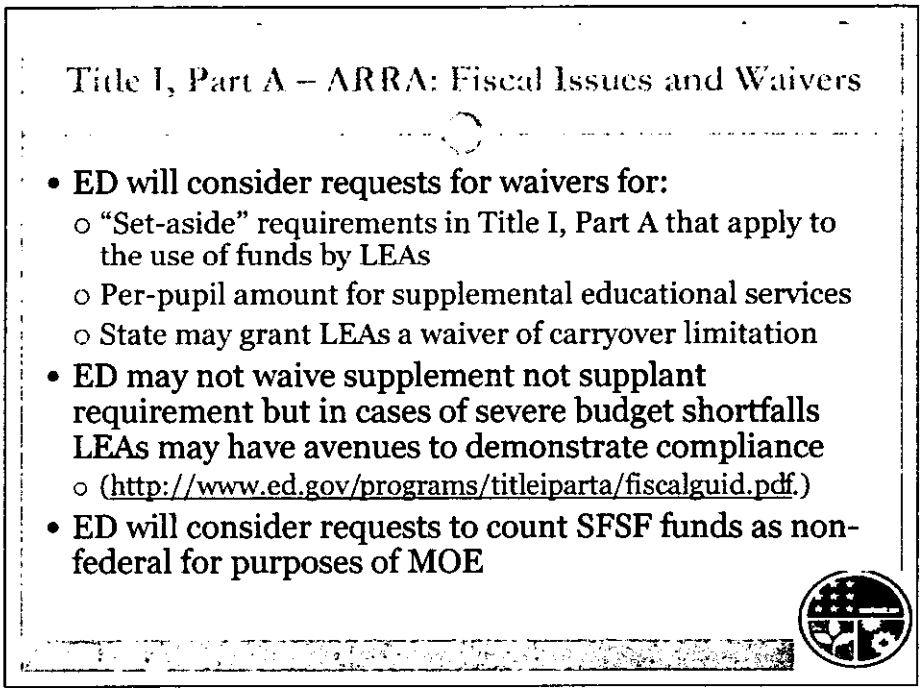
•The Title I, Part A *ARRA* awards will be in addition to the regular FY 2009 Title I, Part A grant awards that the Department plans to make on July 1 and Oct. 1, 2009. Together, these four grant awards (i.e., the two phases of the Title I, Part A recovery funds, and the two phases of the regular FY 2009 Title I, Part A funds) will constitute a State's total FY 2009 Title I, Part A allocation.

•The fact that Title I, Part A recovery funds are FY 2009 funds does not preclude a State from awarding some or all of these funds to an LEA on the basis of existing, approved LEA applications.

•In accordance with the goals of the *ARRA*, the Department encourages States to award Title I, Part A recovery funds to their LEAs as quickly as possible, consistent with prudent management, so that LEAs can begin using the funds. Similarly, an LEA should use its Title I, Part A recovery funds expeditiously but sensibly. Note that, in the absence of a waiver, an LEA must obligate at least 85 percent of its total FY 2009 Title I, Part A funds (including *ARRA* funds) by Sept. 30, 2010. Any remaining FY 2009 Title I, Part A funds will be available for obligation until Sept. 30, 2011.

•A State must reserve 4 percent of its Title I, Part A recovery funds for school improvement activities under section 1003(a) of the *ESEA*. Of this 4 percent of funds, at least 95 percent must be allocated directly to LEAs for school improvement activities.

•Except as noted above concerning the 4 percent reservation, a State would need a waiver to reserve any portion of its Title I, Part A recovery funds for State administration, because section 1004(b) of the *ESEA* limits the amount that a State may reserve for the administration of Title I. As it did last year, the Department will provide a table showing the base each State should use in determining the amount it may reserve for State administration.



Title I, Part A – ARRA: Fiscal Issues and Waivers

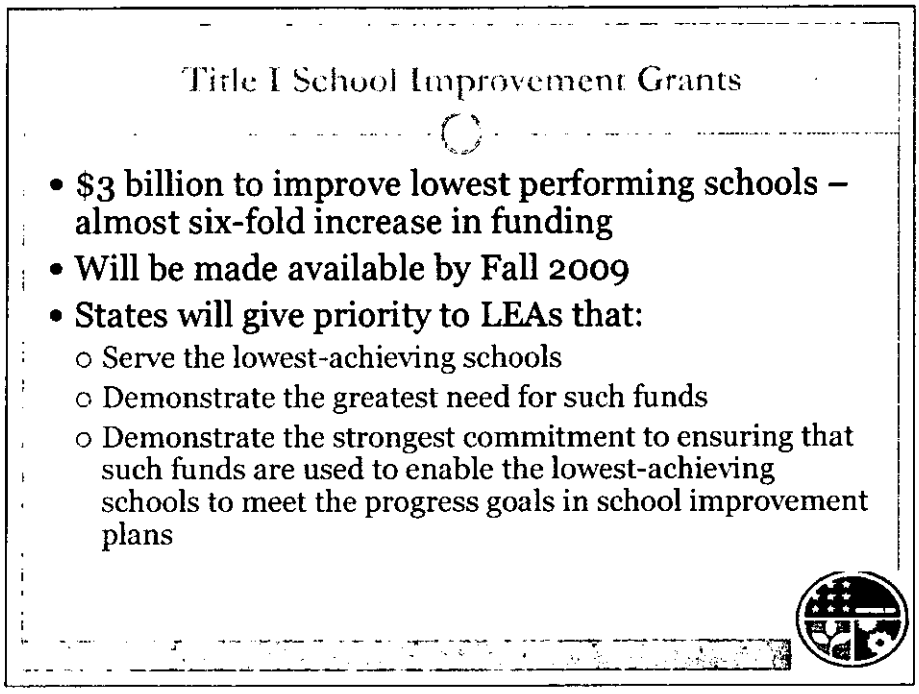
•The Secretary of Education will consider a request for a waiver with regard to the use of *ARRA* Title I funds:

- •of one or more of the "set-aside" requirements in Title I, Part A that apply to the use of funds by LEAs;
- •to calculate the per-pupil amount (PPA) for supplemental educational services (SES) based on an LEA's FY 2009 Title I, Part A allocation without regard to some or all of the recovery funds;
- •to allow a State to grant its LEAs a waiver of the carryover limitation in section 1127 of Title I, Part A more than once every three years; or of the Title I, Part A maintenance-of-effort requirement

•ED may not waive supplement not supplant requirement but in cases of severe budget shortfalls LEAs may have avenues to demonstrate compliance

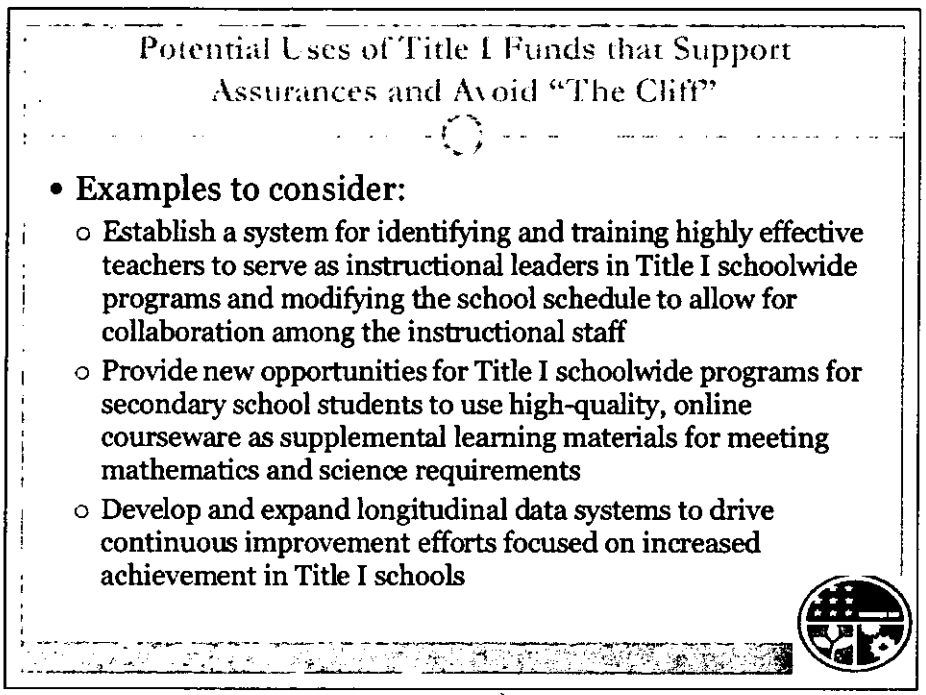
- •(http://www.ed.gov/programs/titleiparta/fiscalguid.pdf.)

•ED will consider requests to count SFSF funds as non-federal for purposes of MOE



Title I School Improvement Grants

- $3 billion to improve lowest performing schools
- Will be made available Fall 2009
- States will give priority to LEAs that:
  - Serve the lowest-achieving schools
  - Demonstrate the greatest need for such funds
  - Demonstrate the strongest commitment to ensuring that such funds are used to enable the lowest-achieving schools to meet the progress goals in school improvement plans



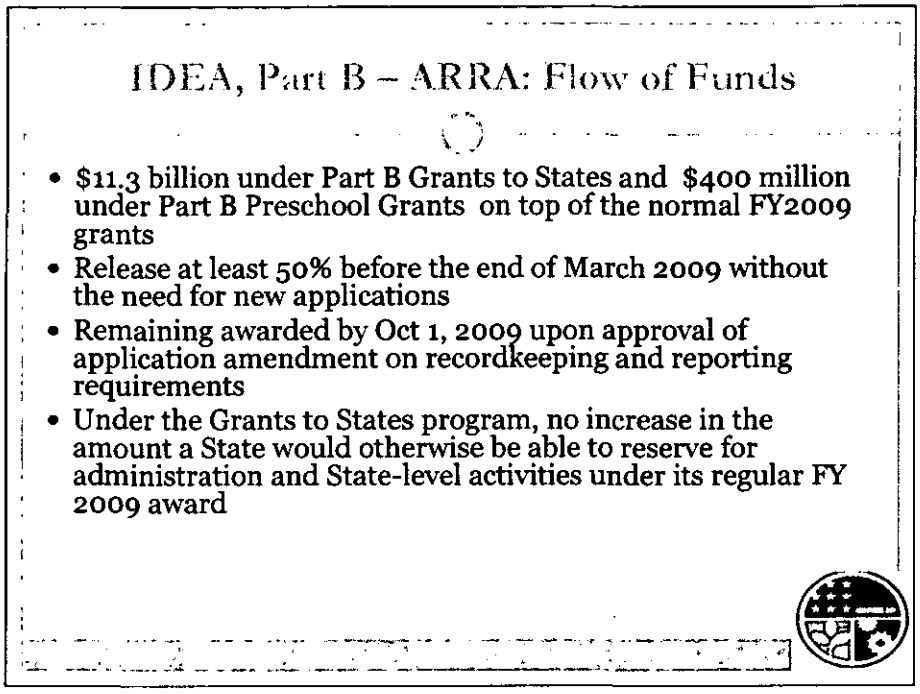
Potential Uses of Title I Funds that Support Assurances and Avoid "The Cliff"

Examples of potential uses of the Title I, Part A recovery funds that are allowable under Title I and consistent with ARRA principles:

•Establish a system for identifying and training highly effective teachers to serve as instructional leaders in Title I schoolwide programs and modifying the school schedule to allow for collaboration among the instructional staff

•Provide new opportunities for Title I schoolwide programs for secondary school students to use high-quality, online courseware as supplemental learning materials for meeting mathematics and science requirements

•Develop and expand longitudinal data systems to drive continuous improvement efforts focused on increased achievement in Title I schools



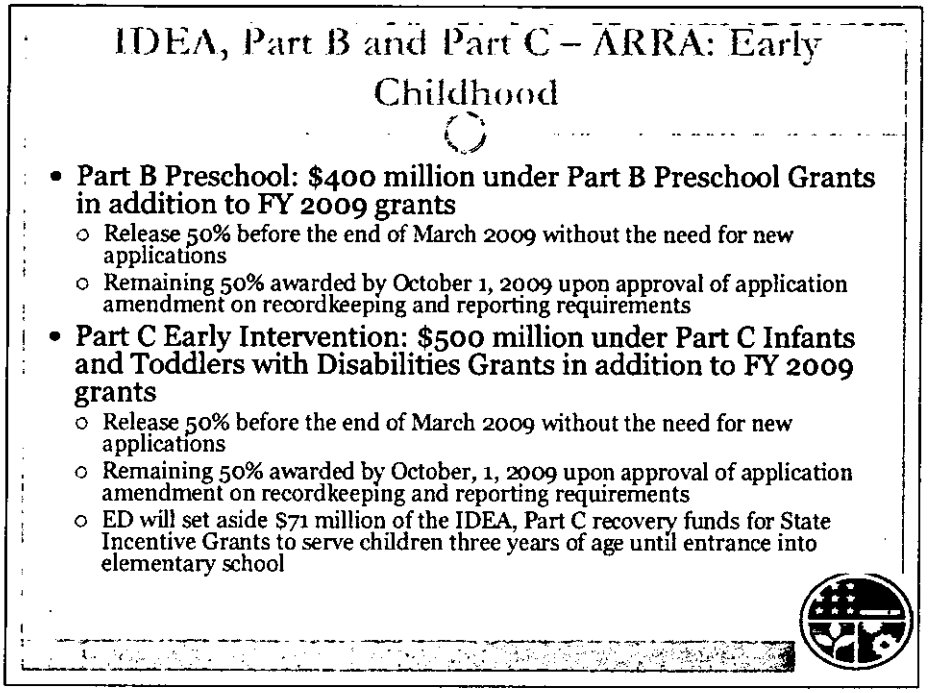
IDEA, Part B – ARRA: Flow of Funds

•The *IDEA* recovery funds are provided under three authorities: $11.3 billion is available under Part B Grants to States; $400 million is available under Part B Preschool Grants; and $500 million is available under Part C Grants for Infants and Families.

•The Department of Education plans to award at least 50 percent of the *IDEA*, Part B Grants to States and Preschool Grants recovery funds to SEAs by the end of March 2009. The remaining funds will be awarded by Oct. 1, 2009. These awards will be in addition to the regular Fiscal Year (FY) 2009 Part B Grants to States and Preschool Grants awards that will be made on July 1 (Grants to States and Preschool Grants) and Oct. 1, 2009 (Grants to States only). Together, these grant awards will constitute a State's total FY 2009 Part B Grants to States and Preschool Grants allocations.

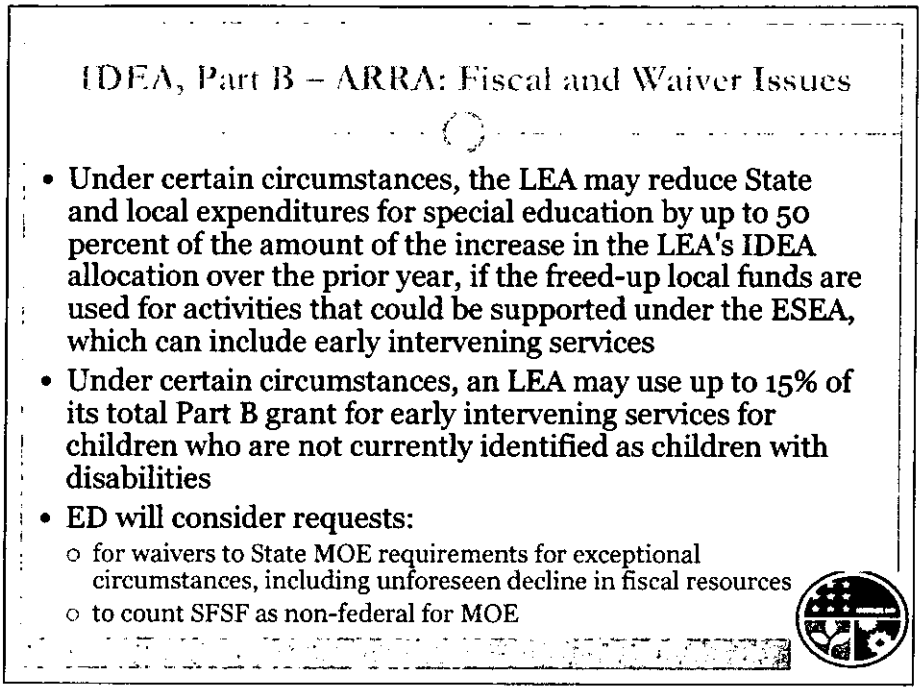
•A State does not need to submit a new application to receive the first 50 percent of the Part B Grants to States and Preschool Grants recovery funds because these funds will be made available to each State based on the State's eligibility established for FY 2008 Part B funds. The assurances in the State's FY 2008 application will apply to these recovery funds. In order to receive the remaining 50 percent of *IDEA*, Part B recovery funds, a State must submit, for review and approval by the Department, an amendment to its FY 2009 application to address the recordkeeping and reporting requirements under the *ARRA*.

•The additional *IDEA* funds provided under the *ARRA* do not increase the amount a State would otherwise be able to reserve for State administration or other State-level activities under its regular grants to States FY 2009 award.



IDEA, Part B and Part C – ARRA: Early Childhood

- Part B Preschool: $400 million under Part B Preschool Grants in addition to FY 2009 grants
  - Release 50% before the end of March 2009 without the need for new applications
  - Remaining 50% awarded by October 1, 2009 upon approval of application amendment on recordkeeping and reporting requirements
- Part C Early Intervention: $500 under Part B Infants and Toddlers with Disabilities Grants in addition to FY 2009 grants
  - Release 50% before the end of March 2009 without the need for new applications
  - Remaining 50% awarded by October, 1, 2009 upon approval of application amendment on recordkeeping and reporting requirements
  - ED will set aside $71 million of the IDEA, Part C recovery funds for State Incentive Grants to serve children three years of age until entrance into elementary school



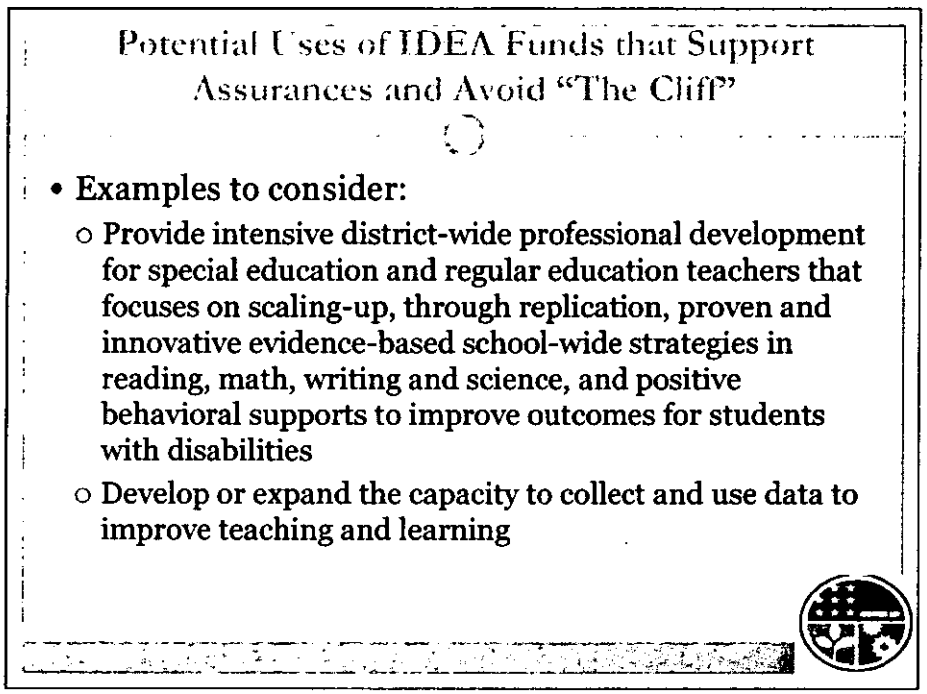
IDEA, Part B – ARRA: Fiscal and Waiver Issues

•An LEA may be able to reduce the level of State and local expenditures otherwise required by the *IDEA* LEA maintenance of effort (MOE) requirements. Generally, under section 613(a)(2)(C), in any fiscal year that an LEA's *IDEA* allocation exceeds the amount the LEA received in the previous year, under certain circumstances, the LEA may reduce the level of State and local expenditures by up to 50 percent of the amount of the increase, as long as the LEA uses those freed-up local funds for activities that could be supported under the *ESEA*. If an LEA takes advantage of this provision, the required MOE for future years is reduced consistent with the reduction it took, unless the LEA increases the amount of its State and local expenditures on its own. SEAs should encourage LEAs that can and do take advantage of this flexibility to focus the freed-up local funds on one-time expenditures that will help the State make progress on the goals in the SFSF program, such as improving the equitable distribution of effective teachers and the quality of assessments. SEAs will be expected to collect and report information on the use of the freed-up funds.

•Alternatively, an LEA may (or in some cases must) use up to 15 percent of its total *IDEA*, Part B Grants to States and Preschool Grants for early intervention services for children in grades K through 12 who are not currently identified as children with disabilities, but who need additional academic and behavioral support to succeed in a general education environment. However, an LEA may use only up to 15 percent of its allocation minus any amount (on a dollar-for-dollar basis) by which the LEA reduced its required State and local expenditures under section 613(a)(2)(C).

•State-level MOE may be waived under Part B of the *IDEA* by the Secretary of Education on a State-by-State basis, for a single year at a time, for exceptional or uncontrollable circumstances, such as a natural disaster or a precipitous and unforeseen decline in the financial resources of a State. LEA-level MOE may not be waived.

•With prior approval from the Secretary of Education, a State or LEA may count SFSF (but not *IDEA* recovery funds) under the *ARRA* that are used for special education and related services as non-federal funds for purposes of determining whether the State or LEA has met the *IDEA*, Part B MOE requirements.

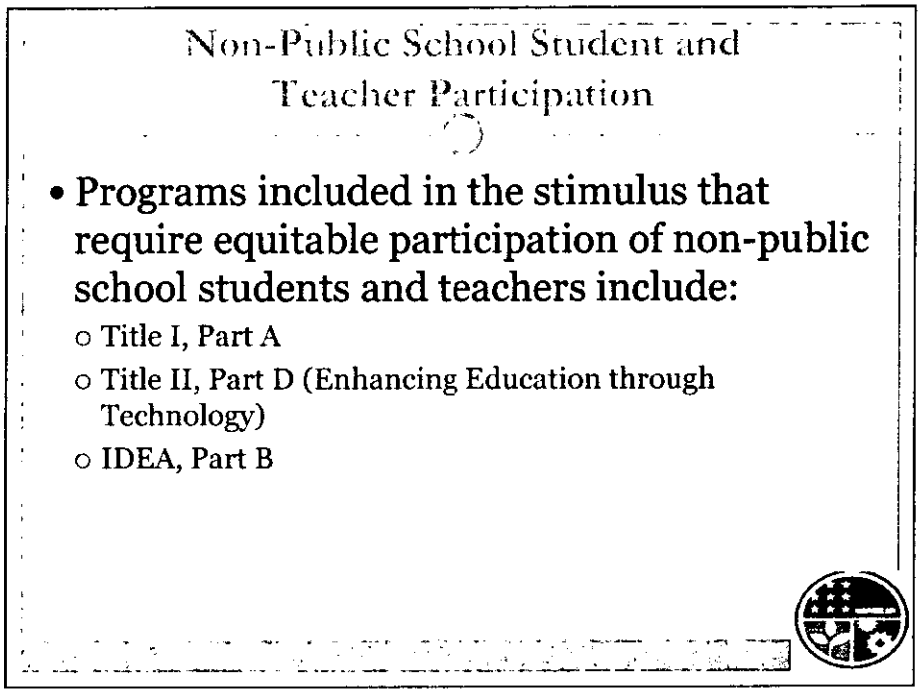


Potential Uses of IDEA Funds that Support Assurances and Avoid "The Cliff"

Some possible uses of these limited-term *IDEA* recovery funds that are allowable under *IDEA* and aligned with the core reform goals for which States must provide assurances under SFSF include:

•Provide intensive district-wide professional development for special education and regular education teachers that focuses on scaling-up, through replication, proven and innovative evidence-based school-wide strategies in reading, math, writing and science, and positive behavioral supports to improve outcomes for students with disabilities

•Develop or expand the capacity to collect and use data to improve teaching and learning



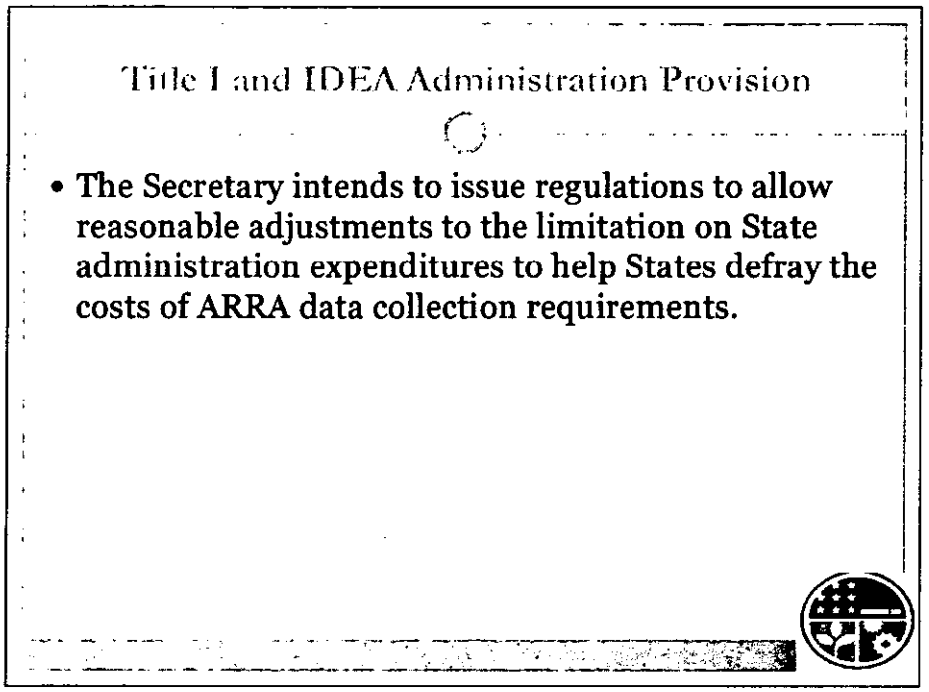
Non-Public School Student and Teacher Participation

Programs included in the stimulus that require equitable participation of non-public school students and teachers include:

•Title I, Part A

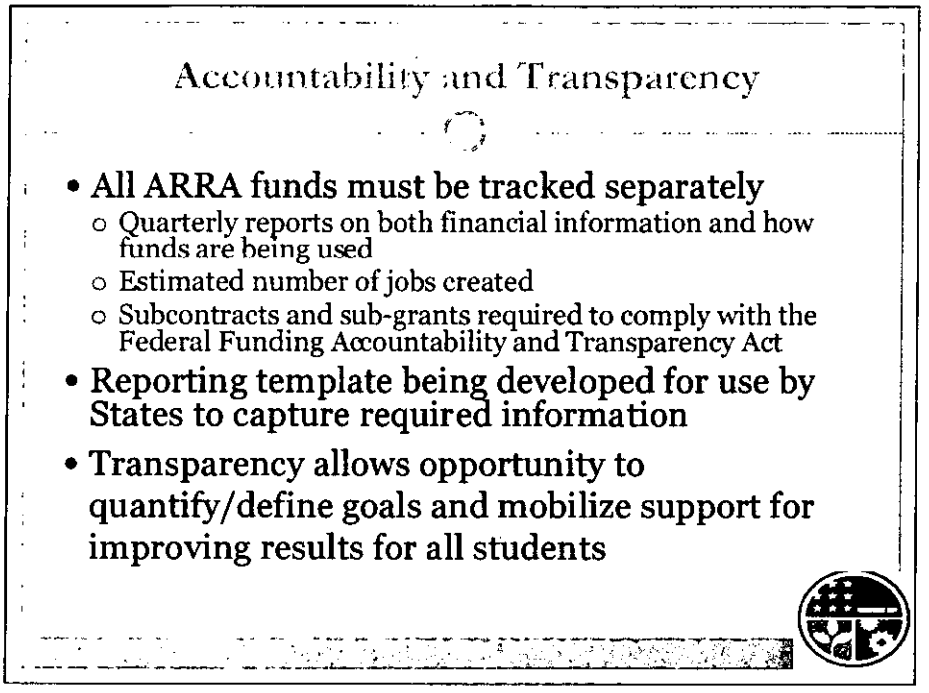
•Title II, Part D (Enhancing Education through Technology)

•IDEA, Part B



Title I and IDEA Administration Provision

The Secretary intends to issue regulations to allow reasonable adjustments to the limitation on State administration expenditures to help States defray the costs of ARRA data collection requirements.



Accountability and Transparency

The President and Congress are committed to ensuring that ARRA dollars are spent with an unprecedented level of transparency and accountability. Therefore, States and LEAs that receive recovery funds should expect to report on how those funds were spent and the results of those expenditures.

- All ARRA funds must be tracked separately
  - Quarterly reports on both financial information and how funds are being used
  - Estimated number of jobs created
  - Subcontracts and sub-grants required to comply with the Federal Funding Accountability and Transparency Act
- Reporting template being developed for use by States to capture required information
- Transparency allows opportunity to quantify/define goals and mobilize support for improving results for all students

Items Not Included in the March 19 Economic Stimulus Bill

	ARRA Page Ref.	FY	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
Operating Items													
1	p. 314-316	FY2009 - FY2010 Operating	Administration	Finance				This provides for a federally funded subsidy for COBRA health insurance coverage to assistance eligible individuals (AEIs). AEI is defined as an individual who is involuntarily terminated from employment between September 1, 2008 and December 31, 2009, who elects to receive COBRA coverage and pays 35% of the premium due as of March 1, 2009. The employer pays the remaining 65% of the premium and is reimbursed by the federal government by withholding premiums paid from payroll taxes reported on the quarterly 941 employer tax form.		1,489.0			1,489.0
2	p. 16	FY2009 - FY2010 Operating	Administration	Violent Crimes Compensation Board				Funding will be used to pay claims for assistance received from Alaskans and visitors to Alaska that suffer financial losses that are the direct result of violent crimes. Categories of expenses covered include mental health counseling, medical expenses, lost wages, funeral expenses, and other expenses as authorized by statute.		149.4			149.4
3	p. 70	FY2009 - FY2010 Operating	Commerce	Alaska State Community Services Commission				Funding will provide grants to existing AmeriCorps grantees for performing volunteer programs.		1,500.0			1,500.0
4	p. 67	FY2009 - FY2010 Operating	Education	Student and School Achievement				ESEA Title I-A Grants to LEAs and School Improvement Grants will help school districts mitigate the effect of the reduction in local revenues and State support for education by distributing funding to schools and school districts with a high percentage of students from low-income families, and by providng funding for academic assessment, LEA and school improvement.		40,000.0			40,000.0
5	p. 68	FY2009 - FY2010 Operating	Education	Student and School Achievement				ESEA Title II-D Education Technology Grants will improve student achievement through the use of technology in elementary and secondary schools.		3,210.0			3,210.0
6	p. 68	FY2009 - FY2010 Operating	Education	Student and School Achievement				McKinney Vento Homeless assistance Grants to ensure that homeless children, including preschoolers and youth, have equal access to free and appropriate education.		328.0			328.0
7	p.68	FY2009 - FY2010 Operating	Education	Student and School Achievement				IDEA Part B (611 and 619) Grants to States, Preschool Grants to provide services to students with disabilities ages three through twenty-one who are enrolled in special eduation programs. The state will receive the allocation as a grant and pass-through to LEAs based on the number of children with disabilities who are receiving special education and related services. Funding will also be provided for services to children with disabilities ages three through five (and optionally to two-year olds who turn three during the school year). The state will receive the allocation as a grant and pass-through to LEAs based on population, including consideration for the number of children living in poverty.		34,300.0			34,300.0
8	p. 168	FY2009 - FY2010 Operating	Education	Student and School Achievement				State Stabilization Funds (base) will be distributed by the department to LEAs based on their relative share of funding under Title I-A grants for 2009. LEAs may use the funds for activities authorized by ESEA, IDEA, Adult Family Literacy Act, Carl D. Perkins Career and Technology Act, or for the repair, modernization or renovation of public school facilities that is consistent with State law.		93,043.0			93,043.0
9	p. 5	FY2009 - FY2010 Operating	Education	Child Nutrition				Temporary Emergency Food Assistance Program will provide funding for the emergency food assistance program, allocated as a grant to the State distributing agency who then distributes to public or private nonoprofit organizations that provide food and nutrition assistance to the needy.		50.0			50.0
10	p. 5	FY2009 - FY2010 Operating	Education	Child Nutrition				National School Lunch Program Grants provides funding to the state for National School Lunch Program equipment assistance in proportion to the State's administrative expense allocation. In turn, the state will provide competitive grants to school food authorities based on the need for equipment assistance in participating schools. Priority given to schools in which at least 50% of the students are eligible for free or reduced priced meals.		286.0			286.0
11	p. 57	FY2009 - FY2010 Operating	Education	Alaska State Council on the Arts				National Endowment for the Arts Funding to provide an additional distribution to State Art Agencies. The Arts Council submitted an application for the additional funds by the March 13, 2009 deadline.		300.0			300.0

Items Not Included in the March 19 Economic Stimulus Bill

	ARRA Page Ref.	FY	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
12	p. 369	FY2009 - FY2010 Operating	Health & Social Srvcs	Health Care Services/Medical Assistance Administration	4			This request will allocate funds for Medicaid provider Health Information Technology (HIT) adoption and Electronic Health Records (EHR) payments. Administrative funding is to be used to coordinate with other state or local HIT projects, national standards setting, and coordinate with other agencies to assure interoperability of systems and avoid duplicate provider payments.	40.0	2,000.0			2,040.0
13	p. 61	FY2009 - FY2010 Operating	Health & Social Srvcs	Public Assistance/Child Care Benefits				Child Care Development Block Grants - increased funding to improve the quality of child care and provide for the expansion of child care services. These funds cannot be used to supplant state funding. Of this allotment, $333.7 is targeted for quality expansion and $193.2 is for improving the quality of infant and toddler care.		3,153.1			3,153.1
14	p. 5	FY2009 - FY2010 Operating	Health & Social Srvcs	Public Assistance/Public Assistance Administration			4	Supplemental Nutrition Assistance Program (SNAP) - formerly Food Stamps - funding for increased administrative costs beginning April 1, 2009. This expands the benefit but is not an expansion of the program. Includes funding for 4 non-perm staff to assist with increased caseload, outreach and administrative process revisions for greater efficiency.		462.0			462.0
15	p. 5	FY2009 - FY2010 Operating	Health & Social Srvcs	Public Assistance/Women, Infants and Children				Additional funds to support Women, Infants and Children (WIC) operations and establish, improve or administer WIC management information system. Funds are to be used for extension and expansion of programs.		777.7			777.7
16	p. 63	FY2009 - FY2010 Operating	Health & Social Srvcs	Public Health/Chronic Disease Prevention and Health Promotion				Increased funding for immunization, prevention and wellness and infection reduction grants. The department assumes that current Health and Human Serviecs (HHS) requirements apply.		2,000.0			2,000.0
17	P. 65	FY2009 - FY2010 Operating	Health & Social Srvcs	Children's Services/Infant Learning Program Grants				Expand Infant Learning Program grants established as part of the Individuals with Disabilities Education Act, Part C.. Department will focus on one-time infrastructure improvements; any service expansions are intended to be backfilled with enhanced Medicaid claiming through program changes.		1,000.0			1,000.0
18	p. 62	FY2009 - FY2010 Operating	Health & Social Srvcs	Senior and Disabilities Services/ Senior Community Based Grants				Administration on Aging, Home Delivered Meals and Congregate Meals Continue and enhance food security for current eligible groups. These funds are limited to senior meal programs only.		485.0			485.0
19	p. 59-60	FY2009 - FY2010 Operating	Labor	Employment Training Services	8			These funds will be used to hire an additional 8 full time, front-line service delivery staff to assist with the increased volume of labor exchange customers and unemployment insurance claimants. Six Employment Security Specialist II positions (qualified in case management) will provide job search assistance, labor market information, case management, and other reemployment services in the job centers. Two Community Development Specialist positions will provide career support and training services to unemployment insurance claimants who need training to upgrade skills in order to obtain employment. Funding will also be used to support salary and benefit costs of existing staff, travel for trainers, enhancements to the Alaska Labor Exchange System (ALEXsys) and equipment replacement and upgrade to support the federal Stimulus effort. These efforts include continuing to provide front-line employment and reemployment services, and career support and training services, to an increased volume of labor exchange customers. The outcome will be to increase the number of customers receiving staff assisted services by approximately 2,250		4,304.7			4,304.7
20	p. 59	FY2009 - FY2010 Operating	Labor	Employment Training Services				Funding will support additional training and employment opportunities for unemployed low-income seniors. Grantees will expand the number of Senior Community Service Employment Program (SCSEP) participants assigned to community service work, especially in those growth industries emphasized in the Recovery Act (e.g., health care, child care, education, green jobs, energy efficiency and environmental services) and in expanded public service activities that utilize Recovery Act funds. The funds will be used to provide high quality job training, on-the-job training and employment assistance to an estimated 80 low income older workers and will assist employers that are faced with the challenges of today's workplace.		507.3			507.3

Items Not Included in the March 19 Economic Stimulus Bill

	ARRA Page Ref.	FY	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
21	p. 329	FY2009 - FY2010 Operating	Labor	Unemployment Insurance				Funds will be used to upgrade computers on the department's annual replacement schedule, UI tax and benefit program enhancements, software and associated data processing costs, and office equipment. The funds will support a UI claim center phone call routing software package along with licensing and installation charges. They will also purchase a Tax auditing software package; web based Quality Control audit software; software to record and retrieve claim center calls for staff performance review; software for managing UI workflow and documentation processes; and computer enhancements to existing Employment Security Division on-line systems integration.		1,115.7			1,115.7
22	p. 58-59	FY2009 - FY2010 Operating	Labor	Business Services				Additional funding will be utilized to increase workforce development training opportunities in the Workforce Investment Act programs for Adult $1,679.5, Dislocated Worker $3,546.4, and Youth $3,936.1. It will be used for personal services to support existing staff engaged in Stimulus related activities, travel to monitor grantees, commodities and contractual services for normal office and staff related costs, and contractual services and grant funds to provide training. It is estimated to provide training opportunities to an additional 729 Adult, 733 Dislocated Worker and 1,681 Youth participants.		9,161.9			9,161.9
23	p. 69	FY2009 - FY2010 Operating	Labor	Client Services				Funding will provide vocational rehabilitation services and grants to disabled individuals. These services include assessment for determining eligibility for services, job development, orientation and mobility services, and supported employment services.		1,800.0			1,800.0
24	p. 266	FY2009 - FY2010 Operating	Labor	Employment and Training Services				The ARRA reauthorized and permanently expanded the Trade Adjustment Assistance program. Eligibility was expanded to include workers in the services sector. The funds will be utilized to support salary and benefit costs of existing staff to provide employment and case management services to increased participants to include comprehensive and specialized assessment of skill levels and service needs; development of an individual employment plan; information on how to apply for financial aid; information on training available in local and regional areas; short-term prevocational services; individual career counseling; employment statistics information; and information relating to local occupations that are in demand and the earnings potential of such occupations. In addition, the Trade Adjustment Assistance database will need to be upgraded as mandated by new federal regulations. The estimated outcome is 115 participants will utilize Trade Adjustment Assistance program benefits such as job search activities, relocation benefits, training, health care tax credits and trade readjustment allowance benefits.		350.0			350.0
25	p. 69	FY2009 - FY2010 Operating	Labor	Independent Living Rehabilitation				These funds will be granted to the four Centers for Independent Living (CILs) to support activities that lead to competitive employment, independent living and business ownership by Alaskans with disabilities. Activities include providing home accessibility modifications, adaptive equipment and/or services that allow people to remain in their homes and communities. Funds will also be used to expand independent living services statewide, including rural and remote areas of the state, by encouraging partnerships, collaborative efforts, training and outreach. The funds will also support operations of the State Independent Living Council (SILC), examining the State Plan for Independent Living resource plan to determine if it needs to be updated.		246.2			246.2
26	p. 16	FY2009 - FY2010 Operating	Public Safety	Alaska State Troopers/Special Projects				Funds are to be used to enhance law enforcement's response to online child victimization and child pornography cases. The department will use the funds to cover personal services costs of investigators and associated supplies and equipment. The Anchorage Police Department is the only eligible applicant in Alaska and is expected to subgrant these funds to the department.		50.0			50.0
27	p. 16	FY2009 - FY2010 Operating	Public Safety	Alaska State Troopers/ Narcotics Task Force	6			Justice Assistance Grant (JAG) will be used to cover the personal services costs of new trooper positions, travel, training, supplies and sub-grants to other state agencies and to units of local government to fund projects supporting approved JAG purpose areas.		5,821.0			5,821.0

Items Not Included in the March 19 Economic Stimulus Bill

	ARRA Page Ref.	FY	Department	RDU/ Component	PFT	PPT	NP	Description	General Funds	Federal Funds	Other Funds	Fund Source	Total Funds
28	p. 16	FY2009 - FY2010 Operating	Public Safety	Council on Domestic Violence and Sexual Assault/Council on Domestic Violence and Sexual Assault				Victim compensation and assistance. These federal funds may be used to provide services to victims of criminal violence. The funds will be sub-granted to approved victim services programs to provide immediate safety and support to victims of domestic violence and sexual assault in Alaska.		545.0			545.0
29	p. 15	FY2009 - FY2010 Operating	Public Safety	Council on Domestic Violence and Sexual Assault/Council on Domestic Violence and Sexual Assault				Services*Training*Officers*Prosecutors (STOP) Grant. These funds may be used to provide for law enforcement, prosecution and victim services enhancements such as training public safety and court-related personnel, expanding specialized units and enhancing technology. Funds will be sub-granted to law enforcement and prosecutorial agencies, courts and approved victim services programs.		803.6			803.6
30	p. 335, Sec. 2104	FY2009 - FY2010 Operating	Revenue	Child Support Services Division				The division had originally requested a $1.9 million fund source change from RSS to GF Match. Neither the House or Senate Finance Subcommittee budgets include that change. The combination of a change in federal policy that now allows federal incentive funds to be used as match and the unexpected level of FY10 carryforward due to high PFD collections now result in just $400.0 GF Match being required. The $400.0 GF Match is necessary to collect the federal funds.	400.0	612.5	(1,012.5)	Receipt Supported Services	0.0

* Directed by States to LEAs based on need

** 50% Competitive within States for LEAs

American Recovery and Reinvestment Act of 2009

Teacher Incentive Fund

- $200 million total
- Fall 2009
- Competitive grants
- LEA.s, states, or partnerships of one or more LEAs or states and at least one non-profit organization
- Ideas promoted include:
  - Performance-based teacher and principal compensation
  - High needs schools (30% of its enrollment low-income)
  - Must consider gains in student achievement
  - Multiple classroom evaluations
  - Incentives for educators to take on additional responsibility
- I.E.S. must evaluate rigorously

Longitudinal Data Systems

- $250 million (Up to $5m may be used to fund Data Coordinator for States), FY 09 money
- Fall 2009 (50% June/July, 50% Sept/Oct) – Audio conferences already taking place on first round of RFPs
- Competitive grants to SEAs
- Link P-16, teacher ID linked to student data, and workforce information
- Work toward meeting the America COMPETES act
- Institute of Educational Sciences at USED will Administer

State Fiscal Stabilization Fund (SFSF)

- 48.6 billion total nationally
- 67% upon receipt by USED of States application
- Remaining after approval of application, or fall '09

Assurances that must be agreed upon to accept SFSF –

1. Making progress toward rigorous college- and career-ready standards and high-quality assessments that are valid and reliable for all students, including English language learners and students with disabilities;
2. Establishing pre-K-to college and career data systems that track progress and foster continuous improvement;
3. Making improvements in teacher effectiveness and in the equitable distribution of qualified teachers for all students, particularly students who are most in need;
4. Providing intensive support and effective interventions for the lowest-performing schools.

States application must include;

(1) assurances that the state is committed to advancing education reform in four specific areas (described below);

Assurances

(a) increase teacher effectiveness and address inequities in the distribution of highly qualified teachers;

(b) establish and use pre-K-through-college and career data systems to track progress and foster continuous improvement;

(c) make progress toward rigorous college- and career-ready standards and high-quality assessments; and

(d) support targeted, intensive support and effective interventions to turn around schools identified for corrective action and restructuring.

(2) baseline data that demonstrates the state's current status in each of the four education reform areas; and

(3) a description of how the state intends to use its stabilization allocation.

A. Base Stabilization Fund

- 81.8% of the funding – 39.8 billion total nationally
- $93 million in Alaska

Process

Funds to Restore Support for Education

- States must use 81.8 percent of SFSF funds for the support of public elementary, secondary, and higher education, and, as applicable, early childhood education programs and services.
- States must use their allocations to help restore for FY 2009, 2010, and 2011 support for public elementary, secondary, and postsecondary education to the greater of the FY 2008 or FY 2009 level. The funds needed to restore support for elementary and secondary education must be run through the state's primary elementary and secondary education funding formulae. The funds for higher education must go to IHEs.
- If any SFSF funds remain after the state has restored state support for elementary and secondary education and higher education, the state must award the funds to LEAs on the basis of the relative Title I shares but not subject to Title I program requirements.
- LEA Use: to create and save jobs and to advance the education reforms set forth in the assurances section so as to produce lasting results for students from early learning to college. An LEA can use the funds, while advancing the four assurances required to accept the SFSF money, for the following programs:
  - ESEA
  - IDEA
  - Adult Family Literacy Act
  - Perkins
  - Repair, modernization or Renovation of Public School Facilities

Discretionary Stabilization Fund

- 18.2%
- $20.7 million in Alaska
- Governor can utilize for education, safety or other government services

B. Incentive Grants

- $4.35 billion total nationally
- Competitive grants
- Secretary is referring to grants as "Race To The Top" grants
- Fall 2009 (FY 2010) – 30% in December '09 and 70% in May/June/July '10
- Application
    - Status on assurances
    - How groups not meeting AYP will make progress toward targets
    - Achievement and graduation rates
    - How will funds be used to improve achievement
    - Evaluation plan
- For a state that seeks and receives funding 50% of funding will be provided via grants to LEAs based on Title I-A formula for most recent year
- USED wants to pick 10-15 states or consortia (consortia strongly encouraged)
- USED is looking for states who do something dramatically different

C. Innovative Funds

- $650 million total nationally
- Fall 2009 and spring 2010
- Expand work and serve as models for best practices; allow work with the private sector; document best practices – and take to scale; invest in What Works and Innovation
- States not eligible
- Eligible applicants include L.E.A.s, other Agencies or Consortia – with strong track records of results
- Application
    - Significantly closing achievement gaps or increase student achievement
    - Exceeding states AMO
    - Significant improvement in other areas, such as graduation rates, recruitment, placement of HQT and school leaders
    - Partnerships with private sector, including philanthropic that will provide match to help bring results

Reporting Requirements under SFSF–

- Annual Report
    - fund distribution
    - jobs saved or created
    - taxes averted
    - states progress on assurances

American Recovery & Reinvestment Act (ARRA)

Education Title I & NCLB Stimulus Overview for Alaska

March 16, 2009

Title I, School Improvement 1003(g), Education Technology, & McKinney-Vento Education for the Homeless

Purpose: The overall goals of the *ARRA* are to stimulate the economy in the short term and invest in education and other essential public services to ensure the long-term economic health of our nation.

All funds under ARRA should be spent according to the following principles:

a. Spend funds quickly to save and create jobs.
b. Improve student achievement through school improvement & reform.
c. Ensure transparency, reporting, & accountability.
d. Invest one-time ARRA funds thoughtfully to minimize the "funding cliff." These funds should be invested in ways that do not result in unsustainable continuing commitments after the funding expires.

Title I ARRA Funds

a. About $29,480,000 to Alaska. This is almost as much as the 2008-2009 allocation to the state which was $38,846,309. The estimate for regular Title I for Alaska is $40,130,523.
b. Distributed based on two parts of the Title I formula – EFIG & Targeted, not all 4 parts.
c. First distribution to states by end of March (50% of the funding).
d. Second distribution to be determined, probably early fall, after state revises application to USDOE.
e. Will be considered as additional funding for 2009-2010 school year. Funds will be available until 9/30/2011.
f. Formula for district allocations will be generated using regular Title I funding rules, including the 4% state set-aside for School Improvement funds under 1003(a).
g. Waiting on final guidance from USDOE about possibility of waivers of Title I requirements including 20% for SES/choice, per pupil amount required for SES, and 15% limitation on carryover.
h. Districts must report a school-by-school listing of per-pupil educational expenditures from state and local sources to EED by December 2009.
i. EED reviewing ways to distribute the funding, the district will probably be able to apply for the total Title I funding through the NCLB 2009-2010 application, but may need to receive the funding through a separate grant award and create separate budgets for ARRA funds to meet the reporting and accountability requirements.
j. A district that would like to receive its portion of the Title I ARRA funds prior to July 1 may submit a budget request to EED once EED has received the funding from USDOE. It is anticipated that EED will be able to create a grant award for July 1, 2009 with authority to spend funds during the pre-award period.
k. District estimated amounts provided based on 2008-2009 data (current data), but *will change* with the actual distribution from USDOE.
l. Link to the US Department of Education fact sheet for Title I ARRA funds: http://www.ed.gov/policy/gen/leg/recovery/factsheet/title-i.html

School Improvement 1003(g) ARRA Funds

a. About $9.8 million to Alaska. This is 6 times more than the $1,578,096 that Alaska received in 2008-2009. The state is also expected to receive about $1.6 million for FY 2009-2010 in regular 1003(g) funding.
b. The state must submit a revised application to the USDOE for these funds. They must be distributed to Title I schools in improvement, corrective action, or restructuring according to the approved state application in amounts of at least $50,000 per school with a maximum of $350,000 per school.
c. Funds will probably be distributed to states in September, 2009. Funds will be available for use until 9/30/2011.

Enhancing Education through Technology (Title IID)

a. About $3.2 million to Alaska. This is about 2.5 times the funding that Alaska received in 2008-2009.
b. The funds will be split 50% through formula funding to districts, 50% through competitive grants.
c. USDOE is expected to distribute the first half of the funds in June or July and the second half in early fall. The funds will be available for use until 9/30/2011.

McKinney-Vento Homeless Education

a. No estimate available yet for Alaska, but could be about $190,000. Alaska received $177,203 in 2008-2009 and is estimated to receive $177, 939 in 2009-2010 in regular McKinney-Vento funds.
b. States will distribute funds either through competitive grants or through a formula.
c. EED is awaiting further guidance on whether these funds can be distributed with the regular funding through the normal competitive grant process.
d. Funds will be allocated to states based on the number of homeless students reported for 2007-2008. That data was just submitted to USDOE in final form on Friday, 3/13.
e. Funds will be distributed to states in April, and must be awarded by states within 120 days. The funds will be available for use until 9/30/2011.

Alaska Special Education Funding for 2009-2010
And
The American Recovery and Reinvestment Act of 2009

- Current Federal Funding for Title VI-B and Section 619 Preschool Disabled
  - The Application is on-line
  - DEED provided a "NOTICE of Grant Application" on 3-10-2009
    - Funding amounts are "estimated" at 80% of the district's 08-09 funding levels.
    - The funding for 09-10 will likely be the same as 08-09
  - Must abide by general assurances.
  - USE OF FUNDS defined by state and federal regulations.

- Additional funding from the American Recovery and Reinvestment Act (ARRA)
  - The best information available can be found at http://www.ed.gov/recovery/
    - This information was provided to district in a 3-11-2009 email from Erik Stimpfle
    - These documents are Preliminary Guidelines by the USDOE regarding the use of ARRA funding.
      - The American Recovery and Reinvestment Act of 2009: Saving and Creating Jobs and Reforming Education (Mar 7, 2009)
      - State Fiscal Stabilization Fund (Mar 7, 2009)
      - Title I, Part A Recovery Funds for Grants to Local Educational Agencies (Mar 7, 2009)
      - Individuals with Disabilities Education Act (IDEA) Recovery Funds for Services to Infants, Toddlers, Children and Youth with Disabilities (Mar 7, 2009)
      - The American Recovery and Reinvestment Act of 2009: Education Jobs and Reform (Feb 18, 2009)
      - Budget Information, Including State Allocations

  - IDEA Funding
    - Likely to be nearly the same as 08-09 funding. ***See attached schedules for Title VI-B and Section 619 Preschool Disabled.***
    - Alaska DEED must determine HOW TO Award
      - Notification by USDOE by 3-31-2009
      - Notification by AK DEED to Districts by 4-15-2009
        - Districts will likely add the ARRA funding to the 2009-2010 grant application and award with separate funding codes as appropriate.
    - Districts should be aware of and familiar with the Assurances as noted in the US-DOE guidance documents (above)
    - Districts should be aware of appropriate USE of FUNDS

USE OF FUNDS:

- These ARRA funds constitute a large one time increment in IDEA Part B funding
- Generally these funds should be used for short term investments that have the potential for long term benefits.
- These funds are allowable under IDEA and aligned with the core reform goals that states and LEAs must provide assurances.

Four principles guide distribution of the ARRA funds.

a. **Spend funds quickly to save and create jobs.** *ARRA* funds will be distributed quickly to states, LEAs and other entities in order to avert layoffs and create jobs. States and LEAs in turn are urged to move rapidly to develop plans for using funds, consistent with the law's reporting and accountability requirements, and to promptly begin spending funds to help drive the nation's economic recovery.
b. **Improve student achievement through school improvement and reform.** *ARRA* funds should be used to improve student achievement, and help close the achievement gap. In addition, the SFSF requires progress on four reforms previously authorized under the bipartisan Elementary and Secondary Education Act and the America Competes Act of 2007:
    1. Making progress toward rigorous college- and career-ready standards and high-quality assessments that are valid and reliable for all students, including English language learners and students with disabilities;
    2. Establishing pre-K-to college and career data systems that track progress and foster continuous improvement;
    3. Making improvements in teacher effectiveness and in the equitable distribution of qualified teachers for all students, particularly students who are most in need;
    4. Providing intensive support and effective interventions for the lowest-performing schools.
c. **Ensure transparency, reporting and accountability.** To prevent fraud and abuse, support the most effective uses of *ARRA* funds, and accurately measure and track results, recipients must publicly report on how funds are used. Due to the unprecedented scope and importance of this investment, *ARRA* funds are subject to additional and more rigorous reporting requirements than normally apply to grant recipients.
d. **Invest one-time *ARRA* funds thoughtfully to minimize the "funding cliff."** *ARRA* represents a historic infusion of funds that is expected to be temporary. Depending on the program, these funds are available for only two to three years. These funds should be invested in ways that do not result in unsustainable continuing commitments after the funding expires.

Some possible USE of Funds:

1. Obtain state-of-the art assistive technology devices and provide training in their use to enhance access to the general curriculum for students with disabilities. ***Use Assistive Technologies of Alaska (ATLA) or SESA as a resource for these types of materials an interventions.***
2. Provide intensive district-wide professional development for special education and regular education teachers that focuses on scaling-up, through replication, proven and innovative evidence-based school-wide strategies in reading, math, writing and science, and positive behavioral supports to improve outcomes for students with disabilities. ***RTI, PBIS, are critical areas of need.***
3. Develop or expand the capacity to collect and use data to improve teaching and learning. ***School-Wide Information Systems and systems to do self and focused monitoring.***
4. Expand the availability and range of inclusive placement options for preschoolers with disabilities by developing the capacity of public and private preschool programs to serve these children.
5. Hire transition coordinators to work with employers in the community to develop job placements for youths with disabilities. ***Develop stronger coordinated or collaborative effort with DVR.***

Subject: Education funding

Education funding

There are several pockets of education funding in the economic stimulus package, totaling at least $194 million for Alaska that can be spread over state fiscal years 2009, 2010 and 2011.

But the law imposes requirements on states to accept the biggest piece of that money ($114 million in Fiscal Stabilization Funds for Alaska). States must provide several assurances to get the money. Here is the easy one:

- The state shall maintain its financial support of elementary, secondary and university education through 2011 at least at 2006 levels. (Considering the steady increase in state aid to education in recent years, this should not be a problem.)

And here are the harder ones. The state must describe in its request for funds how it will use the money to:

- Improve teacher effectiveness and equity in teacher distribution between high- and low-poverty schools (ensuring that low-income and minority children are not taught at higher rates than other children by inexperienced, unqualified, or out-of-field teachers).
- Establish a "longitudinal data system" (individual student data / progress tracking system) covering students in preschool through four years of college.
- Enhance the quality of academic standards and assessments.
- Support academically struggling schools.

The Education Secretary has stated that education reform is a major focus of the Fiscal Stabilization Funds.

I can't say with certainty whether any changes in state statute and/or regulation will be required to meet the above assurances – I know the state Department of Education is hard at work, analyzing the bill and its implications – but the requirements could impose additional burdens on some school districts. The good news is the economic stimulus bill has grant money available to help meet the requirements.

As for the deadline to provide the assurances, the law provides no specifics – states need to wait for the Education Secretary to provide guidance. The law

states: "The governor of a state desiring to receive an allocation ... shall submit an application at such time, in such manner, and containing such information as the Secretary may reasonably require."

Here's the breakdown of the $194 million in education funding:

Fiscal Stabilization Funds: $113.75 million (calculated on a formula in the law, based on each state's population between the ages 5 and 24 and on total population)

- 81.8% of that pot – about $93 million – must go to early childhood, K-12 and postsecondary education. Since Alaska does not need to use the money to restore budget cuts of recent years, the law says the state shall distribute the money to local school districts according to the distribution formula of the Title I program (based on the number of students from low-income households). The funds are available to states immediately and must be spent within two years of receipt by the state. The money can go toward most anything in the schools, including "modernization, renovation or repair" of classrooms and student housing. The money CANNOT go toward maintenance expenses or toward work on athletic facilities that charge an admission fee. The money cannot be spent on school district central office administration or support buildings (that same prohibition does not apply to the university). I'm sorry, but I do not have an estimated breakdown for distribution of the $93 million. I expect we will see one from the state Department of Education before too long.
- 18.2% of the money – about $20.7 million – can go toward anything education-related, or public safety-related, or any other government service. The distribution is up to the states. The money can go toward most anything in the schools, including "modernization, renovation or repair" of classrooms and student housing. The money CANNOT go toward maintenance expenses or toward work on athletic facilities that charge an admission fee. And the money cannot go toward school district central office administration or support buildings (that same prohibition does not apply to the university). The funds are available to the state immediately and must be spent within two years of receipt by the state.

Incentive Grants and Innovation Fund grants

The stimulus bill instructs the Education Secretary to reserve as much as $5.65 billion in stimulus money to award to states to assist in their efforts to meet the assurances required for receiving Fiscal Stabilization Funds (teacher effectiveness, data tracking, enhance academic standards, etc.). The money will be awarded based on a grant selection process, not by formula.

The law states that $5 billion shall be distributed as State Incentive Grants: "The Secretary shall determine which states receive grants under this section, and the amount of those grants, on the basis of information provided in state applications ... and other such criteria as the Secretary determines appropriate, which may include a state's need for assistance to help meet the objectives (of the Fiscal Stabilization educational aid). ..."

States that receive grants shall distribute at least half the money to local school districts based on the formula in Title I (low-income students).

The law says up to $650 million shall be distributed nationwide as Innovation Fund Grants to local school districts and partnerships between a nonprofit organization and one or more school districts (these grants do not go to the states). These grants are to assist schools in expanding their "best practices" aimed at closing the achievement gap between students.

Special Education funding: $36.4 million

This breaks down as $33 million for K-12 special ed, with $1.3 million for preschool-age children and $2.1 million for infants and toddlers. These allocations under the stimulus bill are almost exactly the same dollar amounts as the state received in FY2008 – showing this is a significant boost in funding spread over two years.

The law says the funds will be made available for the 2009-2010 and 2010-2011 school year as grants to states and school districts, but I have not been able to determine a breakdown for the district-by-district funding in Alaska. The law says states shall pass through the money to local school districts based on the number of children with disabilities who are receiving services.

It appears districts may use this new money to supplant other funds, but there are limits. This note from the National Association of School Boards: "There is no clear language in the final bill to ease the supplement / not supplant requirements that school districts must meet currently under No Child Left Behind and the Individuals with Disabilities Education Act. For example, school districts can only supplant ... local funds with federal funding by an amount no greater than 50% of the increase in IDEA funds in a given year. *(All of the special education money in the stimulus bill appears to count as IDEA funding.)* The school boards association will continue to work with Congress and the administration to provide greater flexibility that allows the additional federal funding to offset a greater level of local funding for school districts." The result would be local budget savings rather than increased services that cannot be maintained when the stimulus money runs out in two years.

One warning about the increased aid for special-education services: Some have advised that districts need to be careful if they increase services to individual students, as that higher level of service could become the new standard for that student in subsequent years. I'm no expert at this issue, but I wanted to pass on the cautionary note as worthy of further discussion.

Title I (Disadvantaged) Student Funding: $39.1 million

This appears to break down as $29.5 million in grants to local school districts and $9.6 million available for School Improvement Grants.

The law requires the state to distribute the $29.5 million to school districts according to Title I funding formulas. The U.S. Department of Education has prepared the following estimated breakdown of these funds for Alaska: http://www.ed.gov/about/overview/budget/titlei/fy09recovery/alaska.pdf The funding formula provides higher allocations to districts with increasing numbers and percentages of low-income children. However, you will note that the estimate shows no money for several school districts, including Aleutian Region, Galena, Unalaska and others. I'm told that's in error. The law allows states to use alternate poverty data for small districts, but the Education Department did not factor in that optional method for these estimates. I'm told by Sen. Murkowski's office that state officials would recalculate the district-by-district distributions under the alternate data rules.

The School Improvement Grants will be targeted to help districts that have been indentified as "in need of improvement" under No Child Left Behind. The money ($9.6 million) will go to the state to distribute as grants to school districts. At least 40% of the money must go toward middle and high schools, and the grants shall be in amounts between $50,000 and $500,000, renewable for two years. The state will distribute the grants.

Education Technology Grants: $3.2 million

The federal money will be distributed to states by formula, with states to distribute the grants.

Vocational Rehabilitation Grants: $1.8 million

The federal money will be distributed to states by formula, with states to distribute the grants.

Pell Grants

And, separate from increased federal aid for state education efforts and local school districts, the bill includes an estimated $6.1 million in additional funding over 2008 levels for Pell Grants for Alaska college students. The stimulus bill raises the limit for Pell Grants by as much as $1,000 per student per year, to about $5,300. The grants are based on financial need. The Department of Education's estimate of increased financial for Alaska college students is just that; the actual number will depend on the number of qualifying students and their grant amounts.

Subject: Legal opinion

I have obtained a copy of a March 17 legal opinion from the Congressional Research Service, addressing the issue of legislative acceptance of economic stimulus funds in lieu of a governor rejecting any such funds. I will get you a more complete review soon, but here is the quick summary:

While a Legislature, by concurrent resolution, can request any economic stimulus funds not requested by a governor, there is nothing in the stimulus law to waive or amend any other steps in the process of requesting and accepting specific federal funds to or for the state. Meaning, "the legislature's acceptance ... would have little or no effect on the power of a governor, state or local official to choose whether or not to seek and administer these funds." The key word here is "administer."

What it means is that you could have a situation where the legislature, by resolution, asks for the stimulus funds, but then a governor (or executive branch departments) refuses to fill out the paperwork to apply for, certify and administer a particular pot of money – and there is nothing in the stimulus bill to fix the problem. The Legislature's resolution could become a hollow authority, absent the administration's consent to follow the will of the resolution.

More to come.

Subject: April 3 deadline and governors vs. legislatures

April 3 deadline

The federal Office of Management and Budget this week advised state legislatures wanting to request federal stimulus funds in lieu of a governor's decision that they have sort of an open-ended deadline to make their request. OMB's advice relies on the fact that while the stimulus bill mandates an April 3 deadline for governors to decide whether to request the funds, the act does not provide a deadline or any guidance for a legislative deadline. So rather than administratively make up a deadline for legislatures, OMB has opted to say there is no real deadline – other than specific application deadlines for specific pots of money.

Section 1607 of the stimulus act states:

(a) Certification by Governor - Not later than 45 days after the date of enactment of this Act, for funds provided to any State or agency thereof, the Governor of the State shall certify that: (1) the State will request and use funds provided by this Act; and (2) the funds will be used to create jobs and promote economic growth.

(b) Acceptance by State Legislature - If funds provided to any State in any division of this Act are not accepted for use by the Governor, then acceptance by the State legislature, by means of the adoption of a concurrent resolution, shall be sufficient to provide funding to such State.

The 45-day deadline for governors is April 3. After several meetings with OMB officials, the National Conference of State Legislatures this week issued the following explanation: "There is no timeline in which the legislature needs to act."

NCSL staff went on to explain that there are certain deadlines for specific pots of money in the act, such as the requirement that half of statewide transportation funds must be obligated by mid-June, and that a legislature must be aware of those deadlines so that its state does not miss out on any funds. The safest bet, of course, is for any legislature considering a resolution in lieu of a governor's decision to adopt its resolution by April 3 and then proceed to the next step, which is putting the federal stimulus funds into an appropriations bill, passing the bill, and directing the administration to start the work of obtaining and spending the money.

It is important to note, however, that the April 3 certification does not mean the state consents to every requirement and every promise of every program in the stimulus bill. It is merely certification that "the state will request the funds and use funds provided by the act to create jobs and promote economic growth," according to NCSL. Consenting to the more precise requirements of individual pots of money comes later, with the application and certification for each particular program.

One other note: The stimulus act does not say where states should send their certification. Federal departments are now advising states that one letter to the director of OMB will be sufficient; states do not need to send a letter to every federal department.

NCSL also pointed out that a legislature can submit its resolution for the funds at any point in time – there is no such thing as too early. This is exactly what the Montana legislature is considering:

Montana Legislative Leaders Defy Governor on Stimulus

HELENA (AP) – Top legislative leaders continue to buck against the governor's deadline for allocating stimulus dollars, promising March 12 to vouch for the federal funds on their own if the governor proves unwilling.

A joint resolution sponsored by Democratic House Speaker Bob Bergren, Republican Senate President Bob Story and Democratic Senate Minority Leader Carol Williams comes in response to the governor's demand that legislators pass a stimulus bill by April 3.

"With this resolution in process, we can focus on our real duty, which is to appropriate the money properly," Story, R-Park City, said.

The NCSL also reminded legislatures that their certification to the federal OMB is just the first step in the process: "This would not change requirements as it relates to the necessary applications that may need to be made by a governor for receipt of ARRA funds. Governors would still need to make these applications."

Which takes us to the legal issues addressed in the March 17 memo from the Congressional Research Service, discussing what happens in those states where the governor declines economic stimulus funds and the legislature decides otherwise.

The memo (attached) clearly states that a legislative resolution accepting stimulus funds "would not otherwise reallocate power within the state." A legislative resolution, according to the legal opinion, does not waive any application or other statutory requirements in the stimulus bill, nor does it trigger any provision in the stimulus act to change the delegation of administrative or appropriation authority between a governor and legislature. To interpret the stimulus act otherwise – that is, to argue that a legislative resolution to accept stimulus funds could grant new powers to a legislature over state agencies or even municipal governments – "would arguably be a commandeering of those entities for a federal purpose," which would violate the U.S. Constitution.

All of which means, even if a legislature requests funds in lieu of a gubernatorial request, there is nothing in the stimulus bill to require a reluctant governor to fill out applications and provide required assurances to federal agencies for compliance with individual programs. The stimulus bill, the legal opinion says, was not "intended to significantly reallocate powers between a state legislature and a state executive branch."

All of which means – to me, at least – that cooperation between a state's governor and legislature is key to successful implementation of the stimulus bill's provisions. Moving in that direction, Alaska OMB Director Karen Rehfeld on Friday directed all state agencies to proceed with filing all pre-applications, applications and other necessary paperwork to ensure that Alaska holds its place in line and does not miss any early deadlines for specific stimulus funds. This was the message from OMB: "Please continue to complete the necessary paperwork and applications to be eligible to receive funds once the policy and appropriations debate is concluded."

So Alaska's place should be protected for any and all stimulus funds while the legislature and the

administration discuss (debate?) the merits of specific pots of money, leading up to a gubernatorial decision by April 3 or a legislative resolution.

Any questions? Please give me a call.

Congressional Research Service

MEMORANDUM March 17, 2009

To: Hon. Lindsey Graham
Attention: Laura Bauld

From: Kenneth R. Thomas
Legislative Attorney
American Law Division

Subject: **Analysis of § 1607 of the American Recovery and Reinvestment Act of 2009**

This memorandum has been prepared in response to your request to analyze the language contained in §1607 of the American Recovery and Reinvestment Act of 2009 (Recovery Act),[1] which provides that federal funds can be made available to a state by the federal government either after certification by a governor that such money will be requested and spent or after the adoption of a concurrent resolution by a state legislature. You requested an analysis as to whether, under this language, a state legislature can, by concurrent resolution, provide for the acceptance of federal funds.

Background

Section 1607 may be a congressional response to statements by several state governors who indicated a disinclination to have entities in their state seek and receive funds provided under the Recovery Act.[2] The Act requires that, in order to be eligible for such funds, a governor must first either certify that such funds will be requested, or, if that does not occur, then a state legislature may fulfill the same condition by passing a concurrent resolution (which does not generally require a governor's signature).[3] Specifically, § 1607 of the Recovery Act provides that:

---

[1] Pub. L. 111-5.

[2] Melinda Deslatter, *Some US governors may turn down stimulus money*, Associated Press Wire (February 19, 2009) ("A handful of Republican governors are considering turning down some money from the federal stimulus package . . .").

[3] CRS Report 98-728, *Bills, Resolutions, Nominations, and Treaties: Characteristics, Requirements, and Uses*, by Richard S. Beth at 2. At the federal level, this legislative vehicle is used principally for internal procedural matters such as adjournment sine die, to provide for joint session or joint committee, or to express a "sense of Congress." The exception to this is a concurrent resolution, passed by two-thirds of both houses, which is used to send a constitutional amendment to the states. U.S. Const. Article V. CRS Report 98-706, *Bills and Resolutions: Examples of How Each Kind Is Used*, by Richard S. Beth at 2. It is beyond the scope of the memorandum to survey the use of concurrent resolutions at the state level.

> (a) Certification by Governor- Not later than 45 days after the date of enactment of this Act, for funds provided to any State or agency thereof, the Governor of the State shall certify that: (1) the State will request and use funds provided by this Act; and (2) the funds will be used to create jobs and promote economic growth.
>
> (b) Acceptance by State Legislature- If funds provided to any State in any division of this Act are not accepted for use by the Governor, then acceptance by the State legislature, by means of the adoption of a concurrent resolution, shall be sufficient to provide funding to such State.
>
> (c) Distribution- After the adoption of a State legislature's concurrent resolution, funding to the State will be for distribution to local governments, councils of government, public entities, and public private entities within the State either by formula or at the State's discretion.

The language of § 1607 contains significant ambiguities, and the terms used may not be easily reconciled with either other portions of the Act or with existing statutory law. Section 1607(a) for instance, requires a governor to, within 45 days, "certify" that the state will, at some unspecified future time, request and use funds provided by this act to create jobs and promote economic growth. The language does not specify to whom such certification shall be made;[4] nor does it specify whether, in making the certification, the state will be accepting all the funds that the state is eligible for under the Act, or only some portion of the funds. Further, this subsection does not specify whether a governor's office will be the political entity requesting the funds at some time in the future, or whether such a request will come from a state agency, a local government, councils of government, or public private entities within a state.

Section 1607(b) provides that if funds "in any division of the Act" are not "accepted" for use by a governor, then it "shall be sufficient to provide funding to the state" for a state legislature to "accept[]" such funds by a concurrent resolution. However, the term "concurrent resolution" is not defined, and some states do not appear to have this legislative vehicle.[5] Further, "accepting" funds is not a precise term of art, and it would appear to be a description of only a portion of the process usually used to allocate federal funds. Finally, it is not clear if the language which provides that a concurrent resolution shall "be sufficient" to provide funding to the state is intended only to fulfill the "certification" requirement of § 1607(a), or whether it is intended to be: 1) a waiver of all the requirements for receiving grant monies, such as making a grant application or providing supporting data or required assurances, and 2) a direction to state and local officials to accept and spend these monies.

Finally, section 1607(c) provides that, after the adoption of a state legislature's concurrent resolution, funding to the state "will be for distribution to local governments, councils of government, public entities, and public private entities within the State either by formula or at the State's discretion." Federal funds may be distributed by formula or at a state's discretion, depending upon the criteria specified in federal law governing a particular grant program. It is not clear if this language is intended to supplant existing federal and state law regarding the application for and distribution of federal funds, or merely to indicate that this process may move forward after a state's adoption of a concurrent resolution.

---

[4] Certification by the state of Texas was apparently made by a letter from Governor Rick Perry to President Obama, which provided "On behalf of the people of Texas, please allow this letter to certify that we will accept the funds in H.R.1 and use them to promote economic growth and create jobs in a fiscally responsible manner that is in the best interest of Texas." Dave Montgomery & Kevin Lyon, *Perry says Texas will take stimulus money*, Fort Worth Star-Telegram, February 18, 2009 (available at http://www.star-telegram.com/804/story/1212448.html).

[5] Nebraska, for instance, has a unicameral legislature, and consequently is unlikely to have a legislative vehicle referred to as a "concurrent resolution."

Alternative Interpretations

Although many of the terms and phrases used above are imprecise, perhaps the most significant ambiguity is the meaning of the phrase in § 1607(b) that "acceptance . . . shall be sufficient to provide funding." Without considering the context of the rest of the Act, the language in §1607(b) might at first appear to authorize the state legislature, by concurrent resolution, to waive all federal requirements which would otherwise need to be followed for a state or local entity to apply for and receive federal funds. As noted, it might even be argued that this language could be interpreted to require state entities to receive and spend such monies consistent with a state legislature's concurrent resolution. As will be explored below, however, this more expansive interpretation is difficult to reconcile with the rest of the Recovery Act, with canons of statutory interpretation, or with constitutional doctrine.

A more likely interpretation of this language is that an "acceptance . . .[which] shall be sufficient to provide funding" would only trigger the authority of federal agencies to grant federal funds, but would not otherwise reallocate power within the state. Under this interpretation, "acceptance" by a state legislature by concurrent resolution under § 1607(b) is merely the functional equivalent of the "certification" that can be made by a governor under § 1607(a). Either of these actions would appear to be nothing more than preliminary conditions which must be met before a state becomes eligible to apply for and receive federal funds under the Recovery Act. In effect, §1607(a) gives a governor the opportunity to exercise a veto over receipt of federal funding under the Act by failing to make such certification within 45 days, but then § 1607(b) gives the state legislature the opportunity to act to negate the effect of this veto.

The problems with the more expansive interpretation of the phrase "acceptance . . .[which] shall be sufficient to provide funding" become more clear when the language is considered in conjunction with other provisions of the Recovery Act. Provisions of the Act which would be useful to analyze would include those where: 1) funds allocated by a formula are to be made available only upon application of a governor, 2) discretionary state grant funding is available only upon application of a governor, and 3) local grant funding is made available upon application by a subordinate government agency.

Authority under Title § 14001(d) To Receive Allocated Stabilization Funds

For instance, one can evaluate how the broader interpretation of the phrase "acceptance . . . [which] shall be sufficient to provide funding" would be reconciled with Title XIV of the Recovery Act. Under § 14001(d) of the Act, the United States Department of Education is given authority over a "State Fiscal Stabilization Fund" (Stabilization Fund) of $53.6 billion. After providing for certain reserve funds, the Secretary of Education is directed to determine how much of these funds will be allocated to each state based on a population-related formula.[6]

Section 14005(a) & (b) provide that, in order for a state to receive its allocation from the Stabilization Fund, a state governor must do, among other things, the following:

[6] The formula for allocation is (1) 61 percent on the basis of their relative population of individuals aged 5 through 24, and (2) 39 percent on the basis of their relative total population. Recovery Act, § 14001.

- Submit an application to the Department of Education, containing such information as the Secretary of the Department may reasonably require.[7] In that application, a governor shall provide assurances regarding "maintenance of effort" for elementary and higher education schools,[8] address the issue of inequitable distribution of high quality teachers,[9] establish a longitudinal data system,[10] and enhance the quality of academic assessments.[11]
- Provide baseline data that demonstrates the state's current status in each of the areas described in such assurances;[12]
- Describe how the state intends to use its allocation, including whether the state will use such allocation to meet maintenance of effort requirements under the Elementary and Secondary Education Act[13] and Individuals with Disabilities Act[14] and, in such cases, what amount will be used to meet such requirements.

Thus, the question arises as to whether, under the broader interpretation of the phrase "acceptance by the State legislature . . .shall be sufficient to provide funding to such State" would give a state legislature the authority to "accept" the allocations from the Stabilization Fund, even if a governor did not make the necessary application complying with the statutory requirements.[15] The term "acceptance" does not appear to be defined in the statute, nor does it appear to be a term of art in the context of federal funding. Under contract law, however "acceptance" is generally considered to be the final approval necessary to make a binding contract after a completed offer has been made. By analogy, the meaning of the term would suggest that under Title XIV, a state legislature, without the cooperation of a governor, would be allowed to accept a completed offer by the federal government of federal funds.

Under this interpretation, a completed offer of funds to be allocated under the Stabilization Fund will be made by passage of the Recovery Act and by the Secretary's determination of a state's allocation. Under this interpretation, the phrase "acceptance by the state legislature . . . shall be sufficient to provide funding to such State" would have to be interpreted as waiving both the application requirements and other

---

[7] Recovery Act, § 14005(a).

[8] Recovery Act, § 14005(b) & (d)(1) require that states "maintain State support for elementary and secondary education at least at the level of such support in fiscal year 2006" and "maintain State support for public institutions of higher education (not including support for capital projects or for research and development or tuition and fees paid by students) at least at the level of such support in fiscal year 2006."

[9] "The State will take actions to improve teacher effectiveness and comply with section 1111(b)(8)(C) of the ESEA (20 U.S.C. § 6311(b)(8)(C)) in order to address inequities in the distribution of highly qualified teachers between high- and low-poverty schools, and to ensure that low-income and minority children are not taught at higher rates than other children by inexperienced, unqualified, or out-of-field teachers." Recovery Act, § 14005(b) & (d)(2).

[10] This data system must include the elements described in section 6401(e)(2)(D) of the America COMPETES Act, 20 U.S.C. § 9871. Id. at § 14005(b) & (d)(3).

[11] Id. at § 14005(b) & (d)(4)

[12] Recovery Act, § 14005(b)(2).

[13] 20 U.S.C. § 6301, *et. seq.*

[14] 20 U.S.C. § 1400, *et. seq.*

[15] It should be noted that nothing in Title XIV appears to authorize a Governor to "accept" its allocation from the "Stabilization Fund." Rather, Title XIV speaks to a relatively elaborate application process which must be completed prior to federal funds being disbursed. Thus, a Governor who does not wish to receive Title XIV funds would not generally refuse to "accept" funds - rather, he would just not apply. It is unclear, under the more expansive interpretation of §1607, when the state legislature's power (which can be implemented only after a Governor refuses funds) could be exercised.

statutory conditions and requirements such as the provision of necessary data and assurances.[16] While it may be possible to make this argument in instances where funds have already been allocated, this interpretation becomes more unlikely under other provisions of the Recovery Act where monies are not allocated ahead of time.

Authority under § 14006 To Receive State Incentive Grants

The Secretary is directed, under § 14001(c), to reserve certain funds from the Stabilization Fund for "State Incentive Grants" to the states. In order to receive a state incentive grant, a governor must submit an application which documents the status of the state's progress in a variety of different areas.[17] A governor must also describe the status of the state's progress in implementing various existing federal standards.[18] Finally, a governor must submit a plan for evaluating the state's progress in closing achievement gaps.[19] At that point, the Secretary will determine which states receive grants and the amount of those grants on the basis of information provided by the states and such other criteria as the Secretary determines appropriate.[20]

The argument that the term "acceptance by the State legislature . . . shall be sufficient to provide funding to such State" actually means "waiver of the application and other statutory conditions and requirements" appears less likely in this context. For instance, it is not clear how grants could be made when the Secretary only has the authority to make grants based on specified criteria and assurances to be provided by a governor. Absent a governor making a grant application, the Secretary would have no basis under which it could distribute the state incentive grants. So, the ability of a state legislature to "accept" funds could not logically mean "waiver of the application and other statutory conditions and requirements," since those requirements must be fulfilled in order for the Secretary to make a determination of the amount of funds to be made available to the states.

---

[16] Another possible interpretation would be that any concurrent resolution passed by a state legislature will include a completed grant application and all supporting data, which is required to be provided to the federal government. This does not appear to be a reasonable interpretation § 1607(b), as the phrase "shall be sufficient to provide funding to the state" would seem to imply that the federal agency will have no discretion in allocating these funds. Consequently, any application and supporting documentation provided in the concurrent resolution would be superfluous, and thus this interpretation would disfavored.

[17] These areas include, under §§ 14005(c) and 14006, "maintenance of effort," inequitable distribution of high quality teachers, development of a longitudinal data system, and the quality of academic assessments.

[18] For instance, the Governor must ensure that students in the subgroups described in section 1111(b)(2)(C)(v)(II) of the ESEA (20 U.S.C. § 6311(b)(2)(C)(v)(II)) who have not met the State's proficiency targets continue making progress toward meeting the State's student academic achievement standards; describe the achievement and graduation rates (as described in section 1111(b)(2)(C)(vi) of the ESEA (20 U.S.C. § 6311(b)(2)(C)(vi)) and as clarified in section 200.19(b)(1) of title 34, Code of Federal Regulations) of public elementary and secondary school students in the State, and the strategies the State is employing to help ensure that all subgroups of students identified in section 1111(b)(2) of the ESEA (20 U.S.C. § 6311(b)(2)) in the State continue making progress toward meeting the State's student academic achievement standards; and describe how the State would use its grant funding to improve student academic achievement in the State, including how it will allocate the funds to give priority to high-need local educational agencies.

[19] Recovery Act, Section 14005(c)(5).

[20] Recovery Act, Section 14006(b).

Authority under § 14007 To Receive Innovation Fund Awards

Finally, in some instances, an expansive interpretation of the language in § 1607 would appear to run counter to existing facts. For instance, § 1607(b) envisions exercise of the state legislature's authority regarding "any division of this Act . . . not accepted for use by the Governor." However, a governor does not appear to have underlying authority to "not accept" funds under all divisions of the Act. For instance, under § 14007 the Secretary is given the authority to reserve up to $650,000,000 to establish an Innovation Fund, which shall consist of academic achievement awards. These awards may only go to a local educational agency or a partnership between a nonprofit organization and either one or more local educational agencies or a consortium of schools.[21] These awards will go to entities that have made gains in closing certain specified achievement gaps.[22]

Although this section does not specify an application process, it would not appear that a governor of the state would either make the application for, or provide supporting data to justify, such awards. Further, it may be the case that, under state law, a governor has no role in determining whether the local education agency will apply for or accept such awards.[23] Only under § 1607(b) does a governor appear to have the authority to control, through certification, whether federal funds would be provided under this portion of the Act. Since the authority of the state legislature to accept funds under "all divisions" would seem to only be possible if a governor had the power to reject the funds in "all divisions" (a power only found in § 1607(a)), the expansive interpretation of § 1607 would again be disfavored.

Tenth Amendment Concerns

Even if the term "acceptance by the state legislature . . . shall be sufficient to provide funding to such State" were to be interpreted broadly as to provide for a waiver of requirements regarding applications and other statutory conditions, this might not be effective in providing that the federal monies actually be spent by a state. For instance, in some cases, a governor might have direct control over the administrative apparatus under which a federal grant might be administered, and might decline to spend any monies received. In other instances, a governor may have significant indirect control over many aspects of state agencies, mostly exercised by his power to appoint or dismiss persons of authority in the Executive Branch, by which he could dissuade state officials from spending such monies. Finally, many local governments, councils of government, public entities, and public private entities which accept and utilize federal funds might have independent authority to decline to spend any monies received.

In order for the state legislature to actually force these entities to spend federal monies, one would need to interpret the phrase "acceptance . . . shall be sufficient to provide funding to such state" to essentially authorize the state legislature, by concurrent resolution, to direct the activities of local governments, councils of government, public entities, and public private entities. On its face, §1607(b) is not consistent with such an interpretation, as the language addresses "provid[ing] funding" (which is done by federal agencies), not spending monies (which would be done by state entities). But even more importantly, an

---

[21] Recovery Act, § 14007(a)(1).

[22] Recovery Act, § 14007(b).

[23] Cynthia Dickers, *Stimulus Plan Ties the Hands of Reluctant Governors, MinnPost.com* (available at http://www.minnpost.com/stories/2009/02/19/6785/stimulus_plan_ties_the_hands_of_reluctant_governors) (noting that some federal programs allow cities to apply directly for federal money).

interpretation of § 1607 which provided that a state legislature could, by concurrent resolution, direct the activities of a governor, state, and local entities would appear to violate the Tenth Amendment.

The Tenth Amendment provides that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." In *New York v. United States*,[24] Congress had attempted to regulate in the area of low-level radioactive waste. In a 1985 statute, Congress provided that states must either develop legislation on how to dispose of all low-level radioactive waste generated within the state, or the state would be forced to take title to such waste, which would mean that it became the state's responsibility. The Court found that although Congress had the authority under the Commerce Clause to regulate low-level radioactive waste, it only had the power to regulate the waste directly. Here, Congress had attempted to require the states to perform the regulation, and decreed that the failure to do so would require the state to deal with the financial consequences of owning large quantities of radioactive waste. In effect, Congress sought to "commandeer" the legislative process of the states. In the New York case, the Court found that this power was not found in the text or structure of the Constitution, and it was thus a violation of the Tenth Amendment.

A later case presented the question of the extent to which Congress could regulate through a state's Executive Branch officers. This case, *Printz v. United States*,[25] involved the Brady Handgun Act. The Brady Handgun Act required state and local law-enforcement officers to conduct background checks on prospective handgun purchasers within five business days of an attempted purchase. This portion of the act was challenged under the Tenth Amendment, under the theory that Congress was without authority to "commandeer" state executive branch officials. After a historical study of federal commandeering of state officials, the Court concluded that commandeering of state executive branch officials was, like commandeering of the legislature, outside of Congress's power, and consequently a violation of the Tenth Amendment.

In the instant case, if the statutory language in question were interpreted to mean that state or local public entities could be directed by the state legislature to accept and utilize federal funds, this would arguably be a commandeering of those entities for a federal purpose, which would violate the principles of the cases cited above. One might argue that since the directions were not coming from the federal government, but from the state legislature, that federalism concerns were diminished. However, this distinction would not appear relevant if the power being exercised by the state legislature arose out of the Recovery Act, and not state law.[26] If Congress does not have the power to require a state to spend federal funds in furtherance of a federal program, then it would not appear to have the authority to delegate such power to others.

Statutory Interpretation

As noted, a broad interpretation of the phrase "acceptance by the State legislature. . . .shall be sufficient to provide funding to such State" might imply that Congress intends that all statutory requirements for the receipt of federal funds, such as submitting an application and complying with grant conditions, can be

[24] 505 U.S. 144 (1992).

[25] 521 U.S. 898 (1997).

[26] Generally, a legislature would not be authorized by a state constitution to exercise significant legislative authority by a concurrent resolution.

waived by a state legislature. The Recovery Act, however, provides funding both in the forms of funds allocated by formula and by the application of state grants.[27] As noted above, the phrase under consideration could only logically be implemented in the case of allocated funds, since waiving the requirement of application and provision of necessary data in the context of discretionary grants would leave no basis for funds to be allocated. Thus, in order for the language of § 1607 to take on the broader meaning in the context of allocated funds, the language "shall be sufficient to provide funding under this Act" would have to mean something different in relation to state grants. However, under general rules of statutory construction, the same words of a statute cannot not interpreted differently in different contexts.[28]

Instead, a statute should be read as a harmonious whole, with its various parts being interpreted within their broader statutory context in a manner that furthers statutory purposes.[29] As noted, the narrower interpretation suggested for § 1607(b) appears to complement the gubernatorial certification scheme established in § 1607(a). Further, this interpretation would allow the terms in question ("acceptance," "sufficient to provide funding") to take on a natural meaning closer to apparent meaning of the terms used.

And finally, to the extent that one interpretation of a statute were to raise constitutional concerns, this interpretation would generally be disfavored.[30] An interpretation of § 1607(b) that authorized a state legislature to use federal law to commandeer state or local entities to administer federal funds would appear to violate the Tenth Amendment. Consequently, such an interpretation would be unlikely to be adopted by a court.

Conclusion

Section 1607(a) of the Recovery Act provides that, in order for a state to be eligible for the federal funds in the Recovery Act, a governor must certify that (1) a state will request and use funds in the future, and (2) the funds will be used to create jobs and economic growth. This language does not appear to bind a

---

[27] Section § 1607 specifically provides that the language of § 1607(b) shall apply to "funds provided to any State in any division of this Act."

[28] Where the same term is used several places in statutory text, it is generally presumed to have the same meaning in every instance, Ratzlaf v. United States, 510 U.S. 135, 143 (1994). See also Gustafson v. Alloyd Co., 513 U.S. 561, 570 (1995); Wisconsin Dep't of Revenue v. William Wrigley, Jr. Co., 505 U.S. 214, 225 (1992). This presumption is particularly strong when the term is used within the same sentence, Brown v. Gardner, 513 U.S. 115, 118 (1994); Reno v. Bossier Parish Sch. Bd., 528 U.S. 320, 329-30 (2000), and this conclusion seems inevitable when the different meanings are sought in the same word.

[29] United Savings Ass'n v. Timbers of Inwood Forest Associates, 484 U.S. 365, 371 (1988) ("Statutory construction . . . is a holistic endeavor. A provision that may seem ambiguous in isolation is often clarified by the remainder of the statutory scheme — because the same terminology is used elsewhere in a context that makes its meaning clear, or because only one of the permissible meanings produces a substantive effect that is compatible with the rest of the law." (citations omitted)). United States v. Boisdoré's Heirs, 49 U.S. (8 How.) 113, 122 (1850) (opinion of Court)("In expounding a statute, we must not be guided by a single sentence or member of a sentence, but look to the provisions of the whole law, and to its object and policy"). A related canon of statutory construction is that statutes should be construed "so as to avoid rendering superfluous" any statutory language. Astoria Federal Savings & Loan Ass'n v. Solimino, 501 U.S. 104, 112 (1991). See, e.g., Sprietsma v. Mercury Marine, 537 U.S. 51, 63 (2003) (interpreting word "law" broadly could render word "regulation" superfluous in preemption clause applicable to a state "law or regulation").

[30] Under the doctrine of constitutional doubt, courts will construe statutes, "if fairly possible, so as to avoid not only the conclusion that it is unconstitutional but also grave doubts upon that score." United States v. Jin Fuey Moy, 241 U.S. 394, 401 (1916).

governor to request or accept any particular level of governmental funding, nor does it appear that the certification must be based on the governor's future acceptance of funds, as such request or acceptance can sometimes be made by state or local officials.

Forty-five days after passage of the Recovery Act, if a governor has not provided the necessary certification, then § 1607(b) would appear to provide a state legislature the authority to step in to "accept" state funds by concurrent resolution, achieving the same result as would have been achieved by the certification. However, it seems clear that such acceptance, while "sufficient" to trigger the availability of federal funds under the Recovery Act, does not free a state from any other conditions of receiving funds, such as filling out applications, justifying needs, and providing assurance of compliance with program requirements.

Although the language of § 1607 is arguably ambiguous, it does not appear likely that it was intended to significantly reallocate powers between a state legislature and a state executive branch. Thus, once either a governor's certification or the legislature's acceptance has been made, § 1607 would have little or no apparent effect on the power of a governor, state or local official to choose whether or not to seek and administer these funds. The language of § 1607(b), while adding an additional requirement to the federal funding process, does not otherwise appear to supplant or replace existing federal requirements, nor does it appear to change the allocation of power within a state to make decisions regarding the application, acceptance and use of such federal funds. Any interpretation of this language which did provide authority to a state legislature, by concurrent resolution, to direct the acceptance and spending of federal monies, would likely raise Tenth Amendment issues. Consequently, such an interpretation would be disfavored.

Subject: questions on the Governor's Performance Scholarship
Attachments: 2008 Wyoming Hathaway Scholarship Report.pdf

Hello,

Representative Seaton asked me to write in advance of the Joint House and Senate Education Committee meeting in Anchorage on November 24th to seek further information on the Governor's Performance Scholarship (GPS) proposal. Specifically, we would like information on the merit component of the scholarship and analysis from the administration on the impact of this proposal as far as the anticipated effects and the purpose of the merit-only scholarship.

1. Is it the anticipation that the GPS will increase participation of students or it will serve to lower costs for currently participating students at UA?

2. What population is it anticipated that the GPS will influence? Since the population of the University of Alaska appears to be quite similar to population of two year colleges in the lower 48, and since the Hathaway plan only has 4.7% of the Community College scholarship recipients also receiving the needs based award, how is it anticipated the GPS program will expand the student population in AK universities?

3. Since our college population has a major component of older and returning non-traditional students, how will the GPS address this large population of non-tradition students?

4. Please provide us with analysis on remediation. Does the University of Alaska have information on A students, B students and C students in high school to determine if these groups and in what proportion need remediation. What percent had to take some remediation when they went to college?

5. Can we look at the current UA Scholars program model to determine if current scholarships led to remediation not being required?

6. On the Governor's Web-site a series of course completion qualifications for receipt of the GPS are listed. I understand the purpose is having GPS students not require remediation. Is data available on students that have been attending the University of Alaska to determine if the proposed GPS qualification of four years of math, science, and English will be effective tools for eliminating remediation?

7. For those students who don't have independent economic resources to cover those costs above tuition, how does this plan that only addresses tuition expense enable them to go to college?

8. What is the percentage of students who are going to college in Alaska under the existing AK Scholars merit program compared to the anticipated number who will stay in Alaska because of a Hathaway style plan?

9. Please cite data from Hathaway and Taylor plans on how they were effective in addressing the goals of the GPS as stated on the Governor's web-page and how these results are superior to the current Alaska Scholars plan:

The GPS will accomplish many goals. These include:

- Improved high school graduation rates
- Increased parental involvement
- Higher college entrance exam scores
- Help to make college and job training affordable
- Position Alaska's economy for growth with a better prepared workforce
- Help to keep our best, brightest students in Alaska after college.
- More opportunities for job training
- Fewer remedial classes needed in college
- More students completing their post-secondary degree in a timely manner

Thank you for your attention to these questions.

Senator Huggins

Joint House and Senate Education Committee meeting November 24th from 1 p.m. to 5 p.m. at Anchorage LIO conference room

Agenda and presenters:

1. Department of Education and Early Development **Commissioner Larry LeDoux** presents Governor Parnell's proposed Governor's Performance Scholarship (GPS)
2. In the audience or on-line to answer questions on the proposal, and on current AK financial aid offerings including the UA Scholars program are **Eddy Jeans, Director of School Finance and Facilities, Diane Barrans, Executive Director of the Alaska Commission on Postsecondary Education** and **Linda English, Director of the UA Scholars program** at University of Alaska, as well as **Saichi Oba, Assistant Vice President, Student Services & Enrollment Management at UA**
3. Break

4. **David Longanecker, President, Western Interstate Commission for Higher Education (WICHE),** Boulder, CO presents on The Pros and Cons of Need-based and Merit Based Financial Aid Programs.

Documents in Committee packet in the following order:

1. Governor's Performance Scholarship white paper
2. Diane Barrans e-mail including Heller and Ferrel Merit Impact papers
3. Wyoming Hathaway Scholarship materials
4. UA Scholars letter
5. WICHE Policy Exchange
6. College Access Report 2007 (entitled "Making Alaska More Competitive...")
7. David Longanecker WICHE PowerPoint

Subject: UAA Chancellor's office report Seawolfweekly

USUAA invited Alaska legislators to lunch on campus to talk about important issues including the need for needs-based scholarships. Legislators who visited included **Sen. Johnny Ellis, Sen. Hollis French, Sen. Fred Dyson, Rep. Sharon Cissna, Rep. Berta Gardner, Rep. Bob Lynn, Rep. Pete Petersen, Rep. Mike Doogan and staff from the offices of Rep. Max Gruenberg, Rep. Lindsey Holmes, Rep. Charisse Millett, and Sen. Con Bunde.** Thank you to students for hosting this luncheon!

3619

I recently attended a two day workshop as a member of the Western Interstate Commission for Higher Education (WICHE) legislative advisory panel. I want to share some of the most interesting topics for Alaska with you.

College completion rates

In the late 60's Alaska had one of the highest proportions of college graduates. Recent data shows that 31.4% of Alaskans between the ages of 25 and 34 have completed either an associates or bachelors degree. This compares with a nation-wide average of 37.1%, 47.9% in the top 5 states, and 52.8% in the most educated countries. This is a sobering statistic when we consider that a major criterion for industry and business to locate in an area is the quality of the workforce.
Obviously we need to consider the effectiveness of our institutions and how their productivity in producing graduates can be enhanced. Specifically, how can we:

1. Enhance the degree completion rate of students.
2. Directly address the critical non-completion factors.
3. Increase degree completion among "nontraditional" (older) students who may already have up to three years of college credit. With only one year of scholarship they can become college graduates.

Merit and Needs-based scholarships

Alaska has an effective merit scholarship design. The Alaska Scholars program awards a scholarship for the University of Alaska to high school students in the top 10% of their graduating class. Other states have experienced a high school "grade inflation" problem with scholarships based on grade point average (as opposed to percent of graduating class) as high schools attempt to advantage their graduates.

A significant number of Alaska students have to take remediation courses when they reach college. Remedial courses contribute to lowering the graduation success rate by adding an additional semester or year of schooling. The Alaska Scholars program does entice more high-performing students to remain at Alaskan institutions. However, to increase the number of college graduates we need to expand the cohort of college entrants beyond just high school graduates.

On November 24th the House and Senate Education Committees will be receiving an overview on the Governor's Performance Scholarship which is an alternative merit–based proposal. A WICHE staffer has agreed to come to Alaska to help us understand successful scholarship plans in other states and how they can be modified to work for Alaska.

Of particular interest is the Oregon Plan which incorporates a strong student/parent based responsibility component and could be modified to include a high school or entering student commitment to be prepared without remediation.

Other items of interest

Things like a late deadline to drop a class can affect graduations as well. Since some scholarships require maintaining a high GPA, recipients may drop classes late in the semester if they are not performing well. An uncompleted credit costs the State just as much as a completed credit and often deprives another student of the class slot. Perhaps basing financial support on completed credits instead of enrolled credits would be the proper incentive.

The new WICHE Internet Course Exchange (ICE) program will allow virtual correspondence courses from any of the 15 states at the resident tuition rate. This will allow institutions to focus on their core courses instead of trying to offer such a diversity of courses that are noneconomic because of the size of the student population needing that course. WICHE ICE will also allow traditional and 'non-traditional' students the scheduling flexibility needed to enable 'on time' completion of a degree or certificate. Other materials on increasing the productivity of post-secondary education - defined as the most completed degrees and certificates for the money invested - are available through the WICHE website at http://www.wiche.edu/info/lac/2009/Jones.pdf .

Alaska must effectively invest to increase both workforce certifications and college graduations if we are going to be competitive in the 21st Century.

Rep. Paul Seaton

To: Louie Flora
Cc: Rep. Paul Seaton; Herman, Marcy J (EED)
Subject: Info on Merit programs

Good morning, Louie,

On our recent call Rep. Seaton inquired about any literature/research on the impacts of merit aid (vs needs-based or a hybrid) on attendance rates of lower income students. The concern he expressed was that a merit only program may result in the awarding of funds to students who already were intending to go on to postsecondary ed and would not increase the overall percent of AK students going on to college.

Attached are excerpted portions of two papers which are available in their entirety at www.eric.ed.gov , a repository of education-related literature. I didn't want to bury you in paper so I pulled the sections that were particularly on point to Paul's area of inquiry.

While there are limited data related to this question, it does appear that the concern is a valid one. Having said that, I would note that there are other valid policy objectives to bear in mind relative to a merit only criteria. Alaska's historical performance relative to access, persistence, and completion at the postsecondary level only goes from bad to worse with each of these separate metrics. Although only about 28% of our college age students go on to college, over half of those students need remedial education, they have high attrition rates, and, only about a quarter of those entering postsecondary ed actually have their credential in 150% of the normal time to degree for their program. By designing a program that focuses on a core secondary curriculum and associates strong academic performance with a meaningful financial award, the expectation is that all boats will lift in a rising tide. My understanding is Governor Parnell's intention is to propose a fundamentally strong basis for a statewide program that will go a long ways toward creating a college going culture in Alaska.

It is also interesting to note, in looking at the early data available from my colleagues in WY, although they do have a needs component in their program, they have not experienced high participation rates by low income students. In FY09, only 18.5% and 4.7% of scholarship recipients at UWY and the Comm. Col. system, respectively, qualified for the needs-based awards provided for in the Hathaway Plan. That outcome

strongly suggests that for low income students, other interventions and strategies (in addition to financial aid) are needed to ensure increasing rates of participation in postsecondary education.

I hope this information is helpful. As always, give me a ring if I can be of assistance. BTW, I'm ccing Marcy Herman as EED's leg. liaison. She is very involved in supporting the Commissioner's activities around this proposal.

Diane

Do Merit Scholarships Promote College Access? Evidence From Two States

Introduction

Publicly-funded scholarships in the United States historically have been awarded based on the financial need of the student and his or her family, and with the goal of increasing access to college. Beginning with passage of the Higher Education Act of 1965, and in particular, establishment of Basic Educational Opportunity Grants in the 1972 Amendments, federally-funded student aid has been used in order to help achieve equality of postsecondary educational opportunity (Mumper, 1996). The State Student Incentive Grant program, also part of Title IV student aid programs, encouraged the development of state-funded scholarships. These state programs historically also used financial need as the primary criterion for awarding grants, and have grown to the extent that they now award almost $1 in aid for every $2 awarded in the federal Pell Grant program.

Since the 1980s, however, the use of financial need as the basis for awarding scholarships by the states has been eroding. Between 1982 and 2000 spending on need-based scholarships for undergraduates by the states increased 7.4 percent annually, while spending on merit programs increased at a 13.6 percent annual rate. The proportion of state grants awarded based on merit has risen from 9 percent to 22 percent during this period (Heller, in press, 2002; National Association of State Student Grant & Aid Programs, 2001).

TABLE 4
Scholarship Rates by High School Free Lunch Quintile

Quintile	Florida	Michigan
1st quintile (schools with fewest students receiving free lunch)	28.4%	45.6%
2nd quintile	24.1	43.7
3rd quintile	20.3	38.9
4th quintile	19.1	30.2
5th quintile (schools with most students receiving free lunch)	11.1	16.4
Correlation of school free lunch percentage and school scholarship rate	-0.58 (p<.001)	-0.54 (p<.001)

Note: The analyses were weighted by the number of graduating seniors in each high school.

Data on the number of students who continued on to postsecondary education after graduating from high school were used to estimate the postsecondary attendance rate in each public high school for the academic year before implementation of the merit scholarship program (1995-96 in Florida, averages of the 1996-97 through 1998-99 rates in Michigan).

To further explore this relationship, we divided the high schools into quintiles, based on their college attendance rates before implementation of the merit scholarship programs. We then compared the scholarship rates of the schools in each group. Table 5 presents the scholarship rates for the high schools in each state, arranged by the high school's college participation quintile.[5] Schools with the highest proportion of students attending college (before implementation of the

[5] The Michigan data are based on high schools' report of their graduates status in the fall following graduation from high school. Because the high schools do not report the data every year, we took the average rate from a three-year period. The Florida data are based on student-level enrollment

state's merit scholarship program) had the highest percentage of students receiving a scholarship.

TABLE 5
Scholarship Rates by High School College Participation Rate Quintile

Quintile	Florida	Michigan
1st quintile (highest college participation rate)	26.1%	44.0%
2nd quintile	20.4	37.5
3rd quintile	17.4	39.1
4th quintile	9.6	34.7
5th quintile (lowest college participation rate)	5.2	25.4
Correlation of school free lunch percentage and school scholarship rate	0.58 (p<.001)	0.34 (p<.001)

Note: The analyses were weighted by the number of graduating seniors in each high school.

Discussion

The data presented here demonstrate that a very strong relationship exists between socioeconomic characteristics and the rate at which students qualify for merit scholarships in Florida and Michigan. In both states, African Americans and Hispanics qualify for the scholarships at rates well below those of White and Asian American students. There is also a strong relationship between the income levels in the communities in which students attend school, as measured by the proportion of students who qualify for free lunch, and the probability that a student would earn a scholarship.

records in public and private universities in Florida, and thus exclude students attending college outside of the state.

The groups of students least likely to be awarded these scholarships are the populations who have traditionally been under-represented in higher education. Data on college participation rates by race indicate a large disparity between White and Asian American students, who have higher college-going rates, and African Americans and Hispanics, who attend college at lower rates (Heller, 1999b; Koretz, 1990). Other studies have demonstrated the gap in college participation by income level (Advisory Committee on Student Financial Assistance, 2001; Ellwood & Kane, 1999; Mortenson, 2000).

There do not appear to be large differences in the criteria used for awarding the scholarships in the two states, and the resulting distribution of the awards. Overall, a higher percentage of students in Michigan than in Florida were awarded scholarships, but the distributional effects within the two states were very similar. The difference between the use of a statewide criterion-referenced test (in Michigan) and the use of high school grades and national standardized tests (in Florida) was negligible.

Our final research question asked about the relationship between the distribution of scholarship awards and the college attendance patterns of high schools in the state. This question addresses the core issue of whether these programs are likely to have much impact on college access in each state. Because the greater proportion of the awards have been distributed to students in high schools with higher college-participation rates (before implementation of the merit scholarship programs), we conclude that the impact is likely to be much less than

those scholarship programs that target their awards to students based on financial need.

A few sample high schools can help to illustrate this conclusion. Table 5 shows the college participation rates for Michigan high schools (before implementation of the Michigan Merit Award Scholarship Program), and the scholarship award rates for those schools. For example, Grosse Ile High School, located in a wealthy suburb of Detroit, sent 94 percent of its students on to some form of postsecondary education before the scholarship program was implemented. Thus, the scholarship program could have induced at *most* the remaining 6 percent of the graduates in that school to attend college.[6] However, 64 percent of the students in this school qualified for scholarships, indicating that at *least* 58 percent of the scholarships went to students who would likely have been college-bound anyway.[7]

---

[6] This assumes, of course, no large behavioral changes in the college-going patterns of the students in this school due to other factors in the first year the program was implemented.

[7] It should be noted here the possibility that the scholarships could have had some impact on college choice among these students. For example, the $2,500 award may have induced a student who otherwise would have enrolled in a community college to enroll instead in a 4-year institution. But increasing college *choice* was not a legislated goal of the program; increasing college *access* was.

ARE STATE NON-NEED, MERIT-BASED SCHOLARSHIP PROGRAMS IMPACTING COLLEGE ENROLLMENT?

Abstract

This study examines whether non-need, merit-based scholarship programs are effective in encouraging students to enroll in postsecondary education and, more specifically, attend an in-state college. National residence and migration data from 1992 to 2004 (alternating even years) were used within a fixed effect regression framework. This approach, combined with interaction terms that capture different program implementation periods, is an attempt to enhance the current understanding of scholarship programs on college enrollment. The results suggest that these programs have a significant impact on college enrollment after controlling for state-level factors, but the effect depends on when the program was implemented, who is eligible to receive aid, and how much aid these students are awarded.

1. INTRODUCTION

In today's competitive economic environment, individuals have realized that acquiring additional education beyond high school is critical in gaining access to well-paying and stable employment. As a result, first-time, full-time freshmen enrollments in college increased 8 percent between 1992 and 2004.[1] Yet despite the overall increase in college attendance, certain states continue to struggle with persistently low high school graduation and college participation rates, which may leave them at a competitive disadvantage compared with other states. Recognizing the relationship between a strong public higher education system and future economic prosperity (ACSFA 2001; Carnevale and Fry 2001), several state governments have taken steps to encourage their high school graduates to enroll in postsecondary education by establishing non-need, merit-based scholarship programs.[2]

Historically, a high priority among states was to support and expand need-based financial aid programs for undergraduates (Schmidt 2002). However, in the early 1990s, the invention of merit scholarship programs signaled a sudden shift in state public policy—from concentrating on serving the most economically disadvantaged through need-based financial aid to rewarding and alluring high academic achievers through non-need, merit-based financial aid (Heller 2002; Linn 1998; Longanecker 2002; Parsons 1997). Presently, fourteen states have implemented non-need, merit-based scholarship programs. As shown in table 1, they are Alaska, Florida, Georgia, Kentucky, Louisiana, Massachusetts, Michigan, Mississippi, Missouri, Nevada, New Mexico, South Carolina, Tennessee, and West Virginia. The first state to implement a merit scholarship program was Arkansas in 1991, but two years later the state applied an income cap to the scholarship. In 1993, Georgia crafted a state lottery for the specific purpose of funding its new HOPE (Helping Outstanding Pupils Educationally) scholarship program, which is widely acknowledged as the first broad-based scholarship program (Heller 2002). Massachusetts and Tennessee have implemented their programs within the past four years.

These scholarship programs are based only on academic achievement without taking into consideration family financial need or income cap. There are other notable differences, namely: (1) *scholarship amount coverage*, that is, as a lump sum, tuition only, or tuition plus fees; (2) *program eligibility criteria*, determined by academic performance during high school and/or college; (3) *college choice restrictions* control whether the scholarships can be used at public or private institutions, or both; and (4) *enrollment eligibility*, available to either

1. Authors' calculations based on National Center for Education Statistics (NCES) Integrated Postsecondary Data System (IPEDS) first-time, full-time freshmen migration data, 1992 to 2004.
2. In the remainder of the article, "state non-need, merit-based scholarship programs" will be referred to as "state merit scholarship programs."

3633

Table 1. State Non-need, Merit-Based Scholarship Programs

State	Year Implemented and Funding Source	Eligibility Criteria	Award Amount and Postsecondary Criteria
Alaska Scholars	1998 Land lease and sales	High school class rank	Public: Four years tuition ($11,000) at one of the University of Alaska system schools Private: No
Florida Bright Futures scholarship	1997 State lottery	GPA and SAT or ACT	Can attend half time Public: Four years tuition + educational allowances Private: Comparable amount based on Florida's public institution tuition
Georgia Helping Outstanding Pupils Educationally scholarship (HOPE)	1993 State lottery	GPA	Can attend half-time Public: Four years tuition and fees + stipend for books Private: $3,000 per academic year
Kentucky Educational Excellence Scholarship (KEES)	1999 State lottery	GPA and ACT	Public and private: Up to $1,000 a year at any accredited approved institution for up to four years
Louisiana Tuition Opportunity Program for Students awards (TOPS)	1998 General revenues	GPA and ACT	Public: Up to four years tuition and fees Private: Comparable tuition at a private institution
Massachusetts John and Abigail Adams scholarship program	2004 General revenues	State test (MCAS)	Public: Tuition Private: No
Michigan Michigan merit award	2000 Tobacco settlement	State test (MEAP)[a]	Public and private: $2,500 scholarship lump sum for in-state approved institutions
Mississippi Eminent Scholars Grant	1996 General revenues	GPA and SAT or ACT	Public and private eligible Mississippi institution: Four-year scholarship up to $2,500 per year for tuition, fees, and books
Missouri Bright Flight scholarship	1997 General revenues	SAT or ACT	Public and private: $2,000 per year for four years
Nevada Millennium scholarship	1999 Tobacco settlement	GPA and state test	Public: Up to $80 per credit up to $10,000 or 120 credits Private: $80 per credit up to $10,000 or 120 credits at eligible independent institutions
New Mexico Lottery Success scholarship	1997 State lottery	College GPA	Public: Four years tuition and fees Private: No
South Carolina Legislative Incentive for Future Excellence (LIFE)	1998 General revenues and state lottery	GPA, SAT, or ACT, and class rank	Public: Up to $6,700 per year for four years and book stipend Private: Comparable tuition at eligible private institution
Tennessee Education Lottery scholarship program	2004 State lottery	GPA or SAT/ACT	Public and private: Up to $4,000 at a four-year and $2,000 at a two-year institution

3634

Table 1. Continued.

State	Year Implemented and Funding Source	Eligibility Criteria	Award Amount and Postsecondary Criteria
West Virginia Promise scholarship (Providing Real Opportunities for Maximizing In-state Student Excellence)	2002 State lottery and taxes on amusement devises	GPA and SAT or ACT	Public: Four years tuition + mandatory fees Private: Comparable tuition

[a]Michigan merit award was increased to $3,000 in 2005. In 2007, the name changed to the Michigan Promise scholarship, and awardees will receive $4,000 after successfully completing two years of college (Michigan Government 2006).

full- and part-time students or only those attending full time. In general, all but the second characteristic are examined in this study.[3] Support for these scholarship programs comes from four primary sources: state lotteries, general state revenues, land leases, and the national tobacco settlement fund. The majority of programs cover students' full tuition costs for up to four years at a public, in-state, postsecondary institution, and a few of the states allow students to enroll part time (Farrell 2004a).

Unlike more traditional need-based financial aid, merit scholarship programs invariably target the state's "best and brightest," who are already more likely to attend college without such inducements. So while expanding college enrollment in the aggregate is desirable, from the perspective of state policy makers the primary goal of merit scholarship programs is to improve in-state college attendance.[4] Another objective is to retain the students upon graduation from college. States make this scholarship program investment because they assume that these students, as graduates, will stay and contribute to the economy and help develop a high-quality workforce. This strand of research is conspicuously absent. Thus, to better understand the economic efficiency of these programs, additional research is needed on the production of degrees and the migratory patterns of merit scholarship recipients (Heller 2003). However, as mentioned by Longanecker (2002, p. 35), "State policy makers have only a modest capacity to influence the human capital levels of their population by investing in higher education degree outputs." It should be noted that the

3. There are almost as many program eligibility criteria as there are states that offer merit scholarship programs. Thus it would be difficult to disentangle individual state attendance patterns from the unique program eligibility criteria.
4. Preferably, students would attend one of the state's public institutions, but in some states the scholarships can be used to support enrollment in a private postsecondary institution.

3635

focus of this study is on the proportion of high school graduates who enroll in college—in particular, an in-state college—the following fall semester and not whether students complete a degree and/or stay in the state for employment. These ancillary questions are left for future consideration.

Thus far few studies have analyzed whether states with such merit scholarship programs have experienced improvements in the college enrollment rates and, in particular, whether a greater percentage of high school graduates choose to stay in-state compared with those states that do not offer such merit scholarship programs. This study uses the most recent data available to determine the extent to which these policy goals are being met. Additional tests are conducted to determine whether the amount of aid or various restrictions, such as eligible institutions and enrollment intensity thresholds, have a differential effect on college enrollment. The article unfolds as follows. The next section reviews the recent literature on college-going behaviors and state merit scholarship programs, followed by a discussion of the methodology used in the study. The article concludes with a summary of the major findings, limitations of the analysis, and possible policy implications and next steps.

2. LITERATURE REVIEW

A vast majority of the college financial aid literature points to a variety of economic and social factors as influencing high school graduates' college enrollment and choice patterns. This section begins with summaries of a few notable studies that use human capital for the study's framework and ends with highlights from previous merit scholarship program studies that, while limited in their scope to a single state or group of states, motivate the current study.

Financial Aid and College Enrollment

The relationship between financial aid and enrollment in college is a lot more complex than just looking at tuition. One would assume that financial aid is a discount to the tuition rate, and students should react to the same increase in financial aid or decrease in tuition, which would result in the same net cost to students (Heller 1999). Unfortunately, this is not the typical case for most students. Research consistently has demonstrated that all else being equal, higher levels of costs, resulting from less aid or greater tuition and other costs, tend to reduce the likelihood of a student and family making an investment in higher education and enrolling in college (Becker 1992; Manski and Wise 1983; Paulsen 1998).

Perna and Titus (2004) studied individual data from the third follow-up of the National Education Longitudinal Survey (NELS) and found that state funding policies, such as appropriations for public postsecondary institutions, tuition, and K–12 education, influence the distributions of college

3636

enrollments within a state. A larger gap in the average tuition at public and private postsecondary institutions is associated with an increased likelihood of enrolling in a public four-year institution. In addition, state need-based financial aid programs with relatively large awards per member of the traditional college-age population appear to be particularly effective at promoting enrollment in private four-year institutions within the state.

When states are the unit of analysis, a common finding from the college choice literature is that when tuition increases at public four-year institutions, their enrollments decrease and those at public two-year institutions increase (Kane 1995). In an analysis of High School and Beyond (HS&B) and NELS data, Kane (1999) found that enrollment rates were lower in states with higher than average tuition costs for postsecondary education, especially in states with high two-year institution tuition. However, the decline in public two-year enrollments can be offset through need-based financial aid (Heller 1999; Perna and Titus 2002) and non-need financial aid (St. John et al. 2004).

State Non-need, Merit-Based Scholarship Programs

Given that most state-sponsored, non-need, merit-based scholarship programs are relatively new, few studies have been conducted on the programs, and the studies thus far have focused on one state or compared a specific state with these scholarship programs to neighboring states without such programs. Eight of the merit scholarship programs are located in states that are members of the Southern Regional Education Board (SREB), where many of the states were experiencing low high school graduation and college participation rates. These states have therefore created a perfect natural experiment to study the effect of merit scholarship programs over time.

For instance, in one of the first studies on state merit scholarship programs, Dynarski (2000) compared Georgia's HOPE scholarship program with a group of southern states that did not offer a merit scholarship program. Using Current Population Survey data, she found that students in Georgia are more likely to attend college in state compared with students in the neighboring states. Specifically, the attendance rates of eighteen- to nineteen-year-olds in Georgia increased between 7 and 8 percentage points from 1989 to 1997. In particular, she found that the Georgia HOPE scholarship had a greater impact on college choice than college access—students were choosing four-year colleges over two-year institutions and two-year institutions over no college at all. The latter result was also found by Cornwell and Mustard (2002), who estimated the effect of Georgia's HOPE program on in-state college enrollment. They found that the number of students enrolling in four-year and private institutions

3637

5. CONCLUSION

This study's findings illustrate the complex relationship between financial aid and college enrollment, and the fact that policy makers do not have full control over their states' socio-educational and economic characteristics. First, to answer the policy question posed earlier, the analysis provides evidence that state merit-based scholarship programs are having a positive impact on college enrollment and keeping students in state for college. Over the twelve-year period, in-state college enrollment for states with merit scholarship programs were on average 4.6 percentage points higher than states without such programs. This difference in college in-state enrollment is meaningful because, of the fourteen states that offer merit scholarship programs, seven are located in states where high school graduation and college attendance rates are quite low.

Nevertheless, a few words of caution are needed based on the different dimensions of these state merit scholarship programs. Although such programs meet their stated policy objectives, implementing a merit aid scholarship program will not magically fix all the systemic barriers to college access and in-state enrollment. The findings point to a spike in college and in-state college enrollment when the programs are implemented, but the percentage of college goers flattens out over time, especially for in-state enrollment. Taking into consideration the state merit award amount, college choice restrictions, and enrollment eligibility in the estimates, we begin to understand why in-state enrollment flattens over time despite the significant impact of these programs on college enrollment after controlling for state-level factors.

The first dimension analyzed was the amount of the award by the state. The findings indicate that the largest gains in college enrollment were experienced by states that have provided generous merit award amounts. In general, states offering merit aid amounts in the top quartile—near to full tuition scholarships—experienced a 5.5 percent increase in college participation and a 6.7 percent increase in first-time freshmen staying in state for college. Conversely, states such as Michigan and Missouri that are not as generous as the other merit scholarship states because they do not cover full tuition have not experienced the same gains in college enrollment as some of the other states. The implication of this finding for state policy makers is clear. If the objective of establishing a merit scholarship program is to improve the rate of college enrollment, the evidence suggests that the merit awards need to be substantial in order to improve in-state college enrollment. Within the past few years, a few of the states (e.g., Florida, Kentucky, Louisiana, New Mexico) had to increase funding for the programs because of greater numbers of awardees over time. This finding may therefore discourage certain states from exploring merit-based scholarship programs as a means of

3638

improving economic competitiveness because they may not have the financial resources to support such programs at the level necessary to reap the greatest benefits.

Another dimension of the state programs analyzed was college choice restrictions. Overall, states that allow merit scholarships to be used only at public four- and two-year institutions experienced the largest improvements in college participation. One can argue that these programs should be used only at public institutions because of the funding sources, especially those funded through state general revenues or a state lottery. The states that offer comparable tuition or a set award at private institutions are Florida, Louisiana, Nevada, South Carolina, and West Virginia. Georgia provides a set amount to attend a private institution compared with offering full tuition at public institutions. But when the time-varying aspect and state control variables are factored into the equation, the findings indicate that states will benefit from offering a choice between public or private institutions, especially for keeping the "best and brightest" in state for college. For example, New Mexico restricts the award to public institutions, but there are few choices of public higher education institutions for the "best and brightest." Initially, New Mexico experienced an increase in in-state enrollment, but over time the students started migrating to out-of-state institutions. In addition, there are few private higher education opportunities in New Mexico for the best and brightest. Lastly, Alaska, Nevada, and New Mexico are members of the Western Interstate Commission on Higher Education (WICHE), and WICHE states offer opportunities for students in these states to attend colleges in other member states. This could also be the case for the high migration of Alaska students.

Enrollment eligibility was also studied, and the evidence suggests that allowing student awardees to enroll part time in college is beneficial. The argument can be made that allowing students to enroll part time is increasing access to college for many students. On the other hand, one can argue that this is not financially beneficial for the state because it prolongs the time in college, thereby increasing the likelihood that a student will drop out prior to attaining a degree.

The goal of this research study was to provide evidence-based results that could help policy makers and researchers understand the impact of merit-based scholarship programs on college enrollment. While it accomplishes this policy objective, states also need to consider other factors, such as the strength of the state's higher education and K–12 system and economic growth, state need-based financial aid, and state funding formulas for higher education institutions. For example, states need to consider need-based aid, which can have an impact upon high-achieving students who are from lower socioeconomic families enrolling in college. The fourteen states that have merit scholarship

3639

programs, on average, have not increased their need-based funding. As a result, the study's findings illustrate the complexity of these state merit scholarship programs, including how K–12 and higher education funding and state policy are intertwined.

Future research by the authors includes developing an event history model to analyze whether there are significant time-since-implementation effects of merit scholarship programs on college enrollment. Implementation effects will include changes to the merit scholarship program policy, funding, and scholarship amounts. In addition, longitudinal studies on the current fourteen-state merit scholarship programs need to continue, as does research on individual changes to enrollment and financial aid policies at institutions within these merit scholarship states.

The authors would like to thank Drs. James S. Fairweather and David D. Arsen for starting them on the path of this important research, as well as Dr. Donald E. Heller, Dr. Laura W. Perna, and Kenneth E. Redd for insight and suggestions on our earlier work.

GOVERNOR'S PERFORMANCE SCHOLARSHIP

Q&A: Governor's Performance Scholarship

Q: What must high school students do to meet the requirements of the GPS program?

A: To qualify, students will be required to meet GPA requirements and pass a rigorous high school curriculum, which may include:

- Four years of math
- Four years of science
- Four years of language arts
- Three years of social studies

Q: Is the GPS needs-based?

A: No. The award will be based on merit. The higher grade-point average a student achieves, the higher his or her scholarship will be. *(See next question)*

Q: Will students with a higher GPA earn a higher scholarship?

A: Yes. Students who earn a 2.5 GPA or higher in high school will qualify for a 50 percent tuition scholarship. A 3.0 GPA or higher will earn a scholarship equal to 75 percent of tuition. And students who earn a 3.5 GPA or higher will qualify for a scholarship equal to 100 percent of tuition. (Tuition amounts will be benchmarked against the current University of Alaska in-state tuition amounts. More details to come.)

Q: Can the scholarship be used for vocational education?

A: Yes.

Q: Will students be able to attend outside institutions using the GPS?

A: No. The GPS will be awarded only to students who attend accredited, Alaska post-secondary institutions,

including colleges, universities, and job-training programs.

Q: Where did the idea for GPS come from?

A: The idea originated with the late Patrick Taylor, a businessman from Louisiana who personally challenged a handful of young people to greater educational achievement – and paid their way to post-secondary education. Mr. Taylor's vision took root in Louisiana's merit scholarship program and later spread to 21 other states. One of these is Wyoming's Hathaway Plan, which the Governor's Performance Scholarship is patterned after.

Q: How will this program be paid for?

A: Alaska has about $8 billion in savings between the Constitutional Budget Reserve Fund and the Statutory Budget Reserve Fund. Governor Parnell is calling on the Legislature to set aside five percent ($400 million) of these State dollars in savings. The interest and earnings from that money will pay for the scholarships.

Q: Is this program costing the State $400 million?

A: No. The $400 million will not be spent. It will be used to produce earnings that fund the scholarships. Years from now, Alaska will still have the $400 million in the bank, plus we'll have a better trained and prepared Alaska workforce.

Q: What is the goal of the Governor's Performance Scholarship?

A: The GPS will accomplish many goals. These include:

- Improved high school graduation rates
- Increased parental involvement
- Higher college entrance exam scores
- Help to make college and job training affordable
- Position Alaska's economy for growth with a better prepared workforce
- Help to keep our best, brightest students in Alaska after college.
- More opportunities for job training
- Fewer remedial classes needed in college
- More students completing their post-secondary degree in a timely manner

Q: Why is the Governor's Performance Scholarship important to Alaska?

A: Alaska employers are crying out for highly qualified and better educated workers. We are losing many of our young people to opportunities in the Lower 48 and abroad; and Alaskans need jobs. The GPS program addresses all these issues. This scholarship will promote economic growth and opportunity for Alaska's families.

Governor Parnell will be releasing more details about the GPS program in the coming weeks. He has pledged to work closely with the Legislature to make this program a reality. For more information, please bookmark the governor's web site, www.gov.state.ak.us, or subscribe to the Governor's Report e-newsletter by clicking here.

Hathaway Scholarship Application Procedures

Students who meet the eligibility requirements should apply directly to the eligible Wyoming community college or the University of Wyoming.

- ✓ Students must make application for the Hathaway Scholarship at the time they apply for admission or prior to the beginning of the semester. Each community college has its own application; the university requires no separate application.
- ✓ Students must submit their most current transcript with cumulative GPA and ACT, SAT or WorkKeys scores to the college or university.
- ✓ Final scholarship eligibility is determined by the college or university.

Hathaway Scholarships are available to attend the following Wyoming post-secondary institutions:

- **Casper College (CC), Casper; www.caspercollege.edu**
- **Central Wyoming College (CWC), Riverton; www.cwc.edu**
- **Eastern Wyoming College (EWC), Torrington; www.ewc.wy.edu**
- **Laramie County Community College (LCCC), Cheyenne; www.lccc.wy.edu**
- **Northwest College (NWC), Powell; www.northwestcollege.edu**
- **Sheridan College (SC), Sheridan; www.sheridan.edu**
- **Western Wyoming Community College (WWCC), Rock Springs; www.wwcc.wy.edu**
- **University of Wyoming (UW), Laramie; www.uwyo.edu**

Hathaway Need-Based Scholarship

The Hathaway Need-Based Scholarship is intended to supplement the Hathaway Merit Scholarship by providing additional assistance for students with unmet financial need, as determined by the financial aid offices at the Wyoming community colleges and the University of Wyoming. Contact the college or university financial aid office for further information.

Calculation of Unmet Need for Hathaway Need-Based Scholarship

College Cost of Attendance (COA)	COA used by schools for federal need determination
- Expected Family Contribution	Amount determined by FAFSA analysis
- Hathaway Merit Award	$1,600; $2,400; or, $3,200 annual award
- Grants/Scholarships	Other grants/scholarships received by the student
-$2,000	Hathaway Scholarship-required student commitment
Unmet Need	Amount used to determine need-based scholarship

If the student's annual unmet need is less than $2,000, he/she is not eligible for the need-based Hathaway Scholarship.	
HONORS	If the student's annual unmet need is greater than $2,000, he/she will receive the full amount of unmet need which is greater than $2,000, half awarded each semester; minimum award $100.
PROVISIONAL OPPORTUNITY, OPPORTUNITY or PERFORMANCE	If the student's annual unmet need is greater than $2,000, he/she will receive 25% of annual unmet need which is greater than $2000, half awarded each semester not to exceed $750 per semester; minimum award $100.

Hathaway Scholarship Levels and Eligibility Requirements

Scholarship Level	Provisional Opportunity *(Students must begin at a Wyoming community college)*	Opportunity • Performance • Honors *(May be used for a certificate or degree at a Wyoming community college or a degree program at the University of Wyoming)*		
Merit Award Amount (for full-time enrollment of 12 hours or more per semester; awards are pro-rated for students attending part-time of 6-11 hours)	**$800/semester**	**$800/semester**	**$1200/semester**	**$1600/semester**
Eligibility Criteria				
• **Minimum High School GPA (cumulative)***	**2.50**	**2.50**	**3.00**	**3.50**
• **Minimum GED**	**500**	**500**	**540**	**575**
• **Minimum ACT score** ***(composite score, does not include writing section)***	**17 *or* WorkKeys score of 12 points**	**19**	**21**	**25**
• **High School Curriculum**	Equal to requirements set by the Wyoming Department of Education (Success Curriculum)	Equal to requirements set by the Wyoming Department of Education (Success Curriculum)	Equal to requirements set by the Wyoming Department of Education (Success Curriculum)	Equal to requirements set by the Wyoming Department of Education (Success Curriculum)
Length of Award	Equivalent of 4 full-time semesters with the option of 4 additional semesters	Equivalent of 8 full-time semesters; no more than 4 may be used at a WY community college	Equivalent of 8 full-time semesters; no more than 4 may be used at a WY community college	Equivalent of 8 full-time semesters; no more than 4 may be used at a WY community college

*There is no high school GPA requirement for home-based education programs or for students who receive a GED. Students who receive a home-based education must submit to their post-secondary institution a list of classes they successfully completed and their ACT or WorkKeys score. Students who complete high school through a GED must submit to their post-secondary institution their GED score and their ACT or WorkKeys score.

Continued Eligibility Requirements

	Provisional Opportunity*	Opportunity	Performance	Honors
• Minimum College GPA *(cumulative)*	2.25	2.25	2.50	2.50
• Enrollment Status	Enrolled for minimum of two semesters per academic year	Enrolled for minimum of two semesters per academic year	Enrolled for minimum of two semesters per academic year	Enrolled for minimum of two semesters per academic year
• Evidence of satisfactory academic progress (SAP) as measured by the completion of the minimum number of semester hours				

*May be extended based on eligibility requirements and pursuit of an additional certificate or degree up to four (4) additional full-time semesters.

Q & A

1. Q. Who is eligible for a Hathaway Scholarship?

A. Students who

- graduate from an eligible high school; or
- successfully complete a home-based education program; or
- receive a GED after April 1, 2006 while residing in Wyoming and attended a Wyoming high school prior to receiving their GED; and
- apply within two years of the students' high school graduation date; and
- comply with the U.S. selective service system registration requirements (if applicable); and
- are US citizens or permanent resident aliens

Next, students must meet the scholarship specific eligibility requirements for each level of the scholarship. There are additional requirements that vary depending on whether the student is a high school or home school graduate. Home schooled graduates must meet all eligibility requirements except GPA, apply for the award and enroll at an eligible college prior to age 21. Graduates from eligible high schools must apply for the award and enroll at an eligible institution within two years of graduation. All students must be Wyoming residents and have graduated no sooner than 2006. Students must declare they are not in default on a federal Title IV education loan, do not owe a refund on a federal Title IV student aid program, and have not been convicted of a felony.

2. Q. What is the Wyoming residency requirement?

A. In addition to specific Hathaway Merit Scholarships eligibility requirements, a student must demonstrate Wyoming residency which is determined by the post-secondary institution. A student whose custodial parent or legal guardian is a Wyoming resident at the time the student graduates from high school or is in active military service and maintains Wyoming as their domicile state is considered a Wyoming resident.

3. Q. If a student attends an out-of-state college and returns to Wyoming, can the student apply for a Hathaway Scholarship?

A. Yes, if the student meets all the initial eligibility requirements and applies within two years of his/her high school graduation date.

4. Q. What if a student wants to enter the military before beginning post-secondary education?

A. A two-year timeframe from high school graduation is allowed to apply for the Hathaway. The timeframe may be extended if the student enters active military duty in the U.S. Armed Forces and is honorably discharged. This same extension is granted for those who choose to engage in religious service for a period of time (i.e. missionary work). Initial eligibility requirements for the scholarship must be met.

5. Q. Can the GPA or ACT score be waived? What if a student took the SAT instead of ACT?

A. The minimum GPA and ACT scores must be met. SAT scores equivalent to the ACT as determined on The College Board conversion tables is allowed. See the post-secondary institution for more information.

6. Q. If a student graduates early from high school, can he/she be eligible for the Hathaway?

A. The student becomes eligible based on the graduation date provided by the school district.

7. Q. If a student already has a state-funded scholarship from a Wyoming community college or the University of Wyoming, is he/she eligible for a Hathaway Scholarship?

A. Yes; Furthermore, Need-Based Hathaway Scholarships will not be affected as long as the student is not awarded more than the cost of attendance.

8. Q. If a student gets a higher GPA in college, can he/she move up to a higher award level of the Hathaway Scholarship?

A. No, Hathaway awards are based on academic performance in high school; certain academic standards in college are required to continue eligibility for the scholarship, but cannot be used to earn a higher scholarship level than was originally awarded.

9. Q. Can a Hathaway Merit Scholarship be used during the summer term?

A. Yes, it may be used at an eligible institution. However, summer does not count as part of the academic year, so the student must also attend the fall and spring semesters of the academic year. The summer term does count toward the student's total scholarship eligibility for an equivalent of eight (8) full time semesters or 96 credits.

10. Q. Can a student receiving a Hathaway Merit Scholarship transfer between eligible institutions?

A. Yes, the transcript will need to be transferred and the credits at all eligible institutions that are earned while receiving the scholarship will be counted in the cumulative GPA requirements.

11. Q. What happens if a student doesn't maintain the minimum Hathaway GPA requirement?

A. A student must maintain at least a 2.25 GPA for the Provisional Opportunity and Opportunity levels and at least a 2.50 GPA for the Performance and Honors levels of the scholarship. If a student doesn't maintain the appropriate Hathaway GPA, all Hathaway Scholarship eligibility is lost. Once a student restores his/her Hathaway GPA, he/she is eligible to regain the Hathaway Scholarship.

"Will I Qualify for the Hathaway Scholarship Program?"

Student _____

I hope you will "Make College a Reality" and take advantage of the Hathaway Scholarship if you plan on attending one of our Wyoming community colleges or the University of Wyoming!

Below are the general criteria required to determine your eligibility for one of the Hathaway Merit Scholarship levels. Each community college has its own application; the University of Wyoming requires no separate application. You can view their web sites or call them for information.

The Hathaway Need-Based Scholarship is also available for eligible students. It provides additional financial assistance for students with unmet financial need. This is calculated by the financial aid office at the college or the university.

Please visit with me if you have any questions. I will be glad to discuss your eligibility and assist you in completing your application. Don't miss this opportunity!

_____ *Counselor/Advisor*

****

GPA _____ **ACT Score** _____ **HS Graduation Date** _____

Wyoming College or University: _____

Planned enrollment: ___ **Part time** ___ **Full time**

Merit Eligibility*: ___ **Provisional Opportunity** ___ **Opportunity** ___ **Performance** ___ **Honors**

Amount per semester: $ _____

*In addition to your high school cumulative GPA and ACT score, eligibility for each level of the Hathaway Scholarship is based on completing a Hathaway Success Curriculum. The Success Curriculum covers five content areas: math, language arts, science, social studies and foreign language.

Persistence and Retention Rates

WYOMING HATHAWAY SCHOLARSHIP PROGRAM
Make College A Reality

Cohort 1 ("Juniors")
Students who Initiated the Scholarship in 2006-07

Persistence Rates
by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(iii)

Persistence Rate means for each cohort of students, receiving Hathaway Scholarships in a given fall or spring term, the proportion continuing to receive Hathaway Scholarships the following fall term at any eligible institution. This report shows the percentage of the first Cohort of Hathaway students receiving the scholarship in fall-08 (excludes students who reached 48 hours at a community college or received a degree during the 2007-08 school year). A student not receiving the scholarship in fall-08 does not necessarily mean he/she did not enroll.

Students are assigned to the last institution he/she attended prior to the 2008-09 school year.

Make College A Reality

Cohort 1 ("Juniors")

Students who Initiated the Scholarship in 2006-07

Retention Rates

by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(i)

Retention Rate means the measure of the rate of continuous enrollment of a cohort of students from one semester to the next.

In this report, the fall enrollment counts include students who did not receive the scholarship but used the semester to regain eligibility. It excludes students who graduated in the fall, or students who "used up" their 48 Hathaway hours at a community college at the end of the fall semester and did not continue.

The students are assigned to the college they were enrolled in during the fall semester. However, they did not necessarily enroll in the same institution in the spring.

WYOMING HATHAWAY SCHOLARSHIP PROGRAM
Make College A Reality

Cohort 1 ("Juniors")
Students who Initiated the Scholarship in 2006-07

Loss of Eligibility - Credit Hours Not Met
by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(ii)

This report includes students who lost eligibility due to not meeting the required credit hours during the academic year (2008-09).

For reporting purposes, students who had not yet regained eligibility, or students who discontinued receiving Hathaway after receiving a certificate/degree, or after "using up" their 48 scholarship hours at a community college, are not considered students who can lose eligibility.

A student enrolling in more than one institution during the year is only counted once and is assigned to the last institution he/she enrolled in within the school year.

Due to confidentiality, individual rates not provided due to low group counts. Individual rates will be provided to stakeholders upon request.

Certificate/Graduation Rates

by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(iv)

This report shows the number and rate of students who received a certificate or degree within the first 3 years of initiating the scholarship.

The percentage is based on the original number of enrolled students from the first year of the program. A student who graduated is accounted for under the institution where the student received the certificate or degree.

Persistence and Retention Rates

WYOMING HATHAWAY SCHOLARSHIP PROGRAM

Cohort 2 ("Sophomores")

Students who Initiated the Scholarship in 2007-08

Persistence Rates

by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(iii)

Persistence Rate means for each cohort of students, receiving Hathaway Scholarships in a given fall or spring term, the proportion continuing to receive Hathaway Scholarships the following fall term at any eligible institution. This report shows the percentage of the second Cohort of Hathaway students receiving the scholarship in fall-08 (excludes students who reached 48 hours at a community college or received a degree during the 2007-08 school year).A student not receiving the scholarship in fall-08 does not necessarily mean he/she did not enroll.

Students are assigned to the last institution he/she attended prior to the 2008-09 school year.

WYOMING HATHAWAY SCHOLARSHIP PROGRAM

Cohort 2 ("Sophomores")

Students who Initiated the Scholarship in 2007-08

Retention Rates

by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(i)

Retention Rate means the measure of the rate of continuous enrollment of a cohort of students from one semester to the next.

In this report, the fall enrollment counts include students who did not receive the scholarship but used the semester to regain eligibility. It excludes students who graduated in the fall, or students who "used up" their 48 Hathaway hours at a community college at the end of the fall semester and did not continue.

The students are assigned to the college they were enrolled in during the fall semester. However, they did not necessarily enroll in the same institution in the spring.

Loss of Eligibility

WYOMING HATHAWAY SCHOLARSHIP PROGRAM Make College A Reality

Cohort 2 ("Sophomores")

Students who Initiated the Scholarship in 2007-08

Overall Loss of Eligibility After 2nd Year

by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(ii)

For reporting purposes, students who had not yet regained eligibility, or students who discontinued receiving Hathaway after receiving a certificate/degree, or after "using up" their 48 scholarship hours at a community college, are not considered students who can lose eligibility.

A student enrolling in more than one institution during the year is only counted once and is assigned to the last institution he/she enrolled in within the school year.

Loss of Eligibility - Credit Hours and GPA Not Met

by Instructional Program

Statutory Reference: 21-16-1308(c)(ii)

This report includes all students who lost eligibility due to not meeting the required credit hours and GPA during the academic year (2008-09).

For reporting purposes, students who had not yet regained eligibility, or students who discontinued receiving Hathaway after receiving a certificate/degree, or after "using up" their 48 scholarship hours at a community college, are not considered students who can lose eligibility.

Due to confidentiality, individual rates not provided where there are low group counts. Individual rates will be provided to stakeholders upon request.

Graduation Rates

WYOMING HATHAWAY SCHOLARSHIP PROGRAM
Make College A Reality

Cohort 2 ("Sophomores")
Students who Initiated the Scholarship in 2007-08

Certificate/Graduation Rates
by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(iv)

This report shows the number and rate of students who received a certificate or degree within the first 2 years of initiating the scholarship.

The percentage is based on the original number of enrolled students from the first year of the program. A student who graduated is accounted for under the institution where the student received the certificate or degree.

Applicants and Enrollment

WYOMING HATHAWAY SCHOLARSHIP PROGRAM

Cohort 3 ("Freshmen")
Students who Applied for the Scholarship in 2008-09

Wyoming Graduates vs. Hathaway Applicants
by School District

Statutory Reference: 21-16-1308(c)(vi)

For the 2008/09 academic year, institutions executed either a standard application process for the Hathaway Scholarship, or they applied automatic screening of all students that were admitted. For this reason, and for purposes of this report, WDE defined an applicant as " a 2006, 2007, or 2008 Wyoming High School graduate, or a Wyoming Home Schooled or GED student, who was admitted to an eligible institution during the 2007-08 school year". Each institution provided a list of students that met this definition to comply with this reporting requirement.

In this report, the Hathaway applicants are a subset of all applicants and includes 2008 Wyoming High School graduates only.

An applicant is only counted once if the student "applied" to more than one institution.

As of 10/30/2009, three non-Hathaway enrollment applicant file submissions are pending from the post secondary institutions. This report will be updatd upon receipt of those records.

Due to confidentiality, individual rates not provided if graduate count is less than 6. Counts will be provided to stakeholders upon request.

Each institution provided a list of students that met this definition to comply with this reporting requirement.

An applicant is only counted once if the student applied to more than one institution.

As of 10/30/2009, three non-Hathaway enrollment applicant file submissions are pending from the post secondary institutions. This report will be updatd upon receipt of those records.

Cohort 3 ("Freshmen")
Students who Applied for the Scholarship in 2008-09

Hathaway Applicants vs. Hathaway Enrolled
by School District

Statutory Reference: 21-16-1308(c)(vi)

For the 2008/09 academic year, institutions executed either a standard application process for the Hathaway Scholarship, or they applied automatic screening of all students that were admitted. For this reason, and for purposes of this report, WDE defined an applicant as " a 2006, 2007, or 2008 Wyoming High School graduate, or a Wyoming Home Schooled or GED student, who was admitted to an eligible institution during the 2007-08 school year". Each institution provided a list of students that met this definition to comply with this reporting requirement.

An applicant is only counted once if the student applied to more than one institution.

As of 10/30/2009, three non-Hathaway enrollment applicant file submissions are pending from the post secondary institutions. This report will be updatd upon receipt of those records.

WYOMING HATHAWAY SCHOLARSHIP PROGRAM

Cohort 3 ("Freshman")

Students who Initiated the Scholarship in 2008-09

Retention Rates

by Institution and Scholarship Level

Statutory Reference: 21-16-1308(c)(i)

Retention Rate means the measure of the rate of continuous enrollment of a cohort of students from one semester to the next.

The students are assigned to the college they were enrolled in during the fall semester. However, they did not necessarily enroll in the same institution in the spring.

UNIVERSITY of ALASKA
Many Traditions One Alaska

Statewide Planning &
Institutional Research
PO BOX 755260
910 Yukon Drive Ste. 108
Fairbanks, AK 99775-5260

October 25, 2009

Mr. Louie Flora
Office of Representative Seaton
State Capitol, Room 102
Juneau, AK 99801-1182

Dear Mr. Flora:

Thank you for your questions regarding the UA Scholars program. I am pleased to provide the following information.

Of the roughly 2,100 UA Scholars enrolled at the University of Alaska (UA) in aid year 2007-08 (fall 2007, spring 2008, and summer 2008) about 74 percent (1,332 students) took the UA Scholars scholarship. The university tracks UA Scholars for eight years regardless of whether scholarship funding for the student has been exhausted.

The highly successful UA Scholars program costs about $3.6 million each year, and is solely funded by the university with earnings distributions from UA's Land Grant Trust Fund. High school graduates designated as UA Scholars must commit to attend UA by the fall semester following graduation to redeem the eight-semester award. The university does not set aside funds for eligible high school graduates who do not accept the award.

The number of eligible UA Scholars attending UA has increased over the past three years and as the number of scholars increase, the cost of the program will increase accordingly. In fall 2008, 41 percent of the eligible 1,062 Alaska high school seniors (434 students) went on to attend UA after graduation. In fall 2009, 1,072 Alaska high school seniors are eligible for the scholarship and, based on the 5-year average, 42 percent (450 students) are expected to attend UA. With this upward trend the cost of the program could reach $3.8 million in FY10.

The University receives information on the residency and employment of UA Scholar graduates through the State Department of Labor and Workforce Development. Employment data* for 2008 indicates that of the 271 UA scholars graduating in 2007, 100 percent remained in state in 2008 and of those 230 (85%) were working in state in 2008.

It is important to note that the UA Scholars scholarship is no longer sufficient to provide the amount of financial aid students need to complete their degree(s) at the University of Alaska. In aid year 2007-08, in addition to the UA Scholars scholarship, 620 scholars (30%) received other types of scholarships, 582 (28%) took out loans and 54 (25%) received grants, waivers or participated in work study.

Please let me know if you would like any further information.

Sincerely,

Gwen White

Western Policy Exchanges

October 2009

The **College Access Challenge Grant (CACG) Program** is a federal formula grant designed to foster partnerships among federal, state, and local governments and philanthropic entities to increase the number of low-income students who are prepared to enter and succeed in postsecondary education. Created by the College Cost Reduction Act of 2007, the CACG Program provides $66 million per year for two years to state agencies or organizations designated by each state's governor. Recently introduced federal legislation would expand and continue the program for an additional five years as part of the proposed College Access and Completion Fund.

CACG is a formula grant program based on state population and poverty levels, with a minimum grant of $330,000. Each state is required to provide matching funds totaling half of the grant award it receives through in-kind or cash contributions. States received CACG funds if their proposed projects met specified grant criteria, which include providing information to students about the college application and financial aid processes, conducting outreach and professional development activities, and offering student loan cancellation or repayment options. In an effort to bring states together to share promising practices and learn from common challenges, the Western Interstate Commission for Higher Education (WICHE) invited its 15 Western state members to join its CACG Consortium and Network.

CACG Consortium members – Alaska and Nevada – receive a variety of WICHE services, including grant development and management, program implementation and evaluation, and ongoing expert consultation and guidance. The consortium states are also members of the CACG Network, which includes North Dakota and Washington. Idaho is considering joining the network in the coming year. The CACG Network provides a forum in which staff involved in developing, implementing, and maintaining state CACG efforts can share and discuss issues related to the administration of their programs. Through two annual network meetings and an interactive Website, state leaders and policymakers share promising practices and common obstacles.

This issue of *Exchanges* highlights the challenges and accomplishments of state CACG projects and presents lessons learned across the four states that were part of the network in the first year. If the grant is extended – a very real possibility – states will have an opportunity to develop sustainable programs that greatly increase postsecondary participation and success for low-income students. Having the chance to learn from each other will help states improve their own programs and develop sustainable initiatives.

Alaska

For far too many Alaskans, education and training beyond high school is not a priority. The state's college-going and completion rates are among the lowest in the nation, and policymakers face significant obstacles as they attempt to increase college access and success, particularly among low-income or first-generation students and their families. A 2007 Institute for Higher Education Policy (IHEP) report commissioned by the state noted that Alaska's younger population was not educationally prepared to sustain or enhance the state's economy and workforce in the coming years as the baby boomer generation begins to retire. The report also recommended the establishment of a peer mentor program in the state as one strategy to increase college access.[1]

In response to the findings and recommendations of IHEP's report, the Alaska Commission on Postsecondary Education (ACPE) used the state's CACG award to partner with the Anchorage School District (ASD) and the University of Alaska (UA) to develop and implement a pilot peer-mentoring program. Basing its program on the National College Advising Corps "near peer" model, Alaska has successfully recruited, hired, trained, and integrated two college/career guides into Robert Service High School in Anchorage.

Project Overview

Alaska's CACG project is housed in the outreach division of ACPE, which is tasked with early awareness and intervention activities for Alaska youth. The goals of Alaska's CACG project include fostering college awareness; increasing the rate of enrollment in postsecondary education for all students, with an emphasis on underserved populations; and developing strategies for program sustainability.

Funds from the CACG Program allowed Alaska to continue the coordination of college access services that were already underway. The state created the College Access Advisory Team in 2007 for the purpose of identifying gaps in Alaska's college pipeline and formulating a strategy for creating a college-going culture. Once Alaska was awarded CACG funds, an internal workgroup composed of key stakeholders was established to guide CACG project development and implementation.

An extensive planning process preceded the implementation of Alaska's CACG project. ACPE convened an internal workgroup of 15 key stakeholders, including state and national partners, who met every two weeks for the purpose of guiding and refining the development and implementation of the pilot program. Alaska's CACG project director also reconvened the statewide College Access Advisory Team, which was instrumental in the creation of the initial CACG project design. This group of key business, community, education, and government leaders continues to play a major role in the program's expansion and sustainability.

Outcomes

Services to students at Robert Service High began on March 2, 2009, and the program is already making an impact after only a few months of operation. The college/career guides are both recent University of Alaska Anchorage graduates and offer a unique perspective that supplements and enhances current counseling activities. To date, 1,208 students at Service High have received outreach services, ranging from individualized college and career advising to information about financial aid and college entrance exams.

The program boasts several other achievements. The college/career guides administered the Universal Encouragement Program online survey, which provides school leadership and counselors with vital information for individual guidance on career and educational pursuits. The survey also provides a student body profile which will be used to establish program baseline data about students' attitudes, values, and planning for education or training beyond high school. During the six week survey period, a total of 444 students, or 24 percent of the student body, responded. The guides also assessed over 50 percent of the high school's seniors regarding their current education and career plans. Student body surveys and interviews will continue during year two, producing ongoing data that will help to track college access and success at the pilot location as the project moves forward.

Additionally, the guides provided information about postsecondary preparation, planning, and career exploration during classroom presentations, program marketing, and a financial aid night organized by ACPE

and hosted by Service High. The guides reached out to a wide range of students – including those who weren't on the college prep track and 180 English as a Second Language (ESL) students – to explain the importance and benefits of college participation and completion. In addition, the guides exposed Service High students to the Alaska Career Information System (AKCIS), a Web-based information tool designed to help teens and adults explore career and educational opportunities in Alaska and throughout the U.S.

Onsite coordination with existing programs and activities was crucial to project success and also helped to avoid duplication of current counseling efforts at Service High. Prior to program implementation, ACPE met with school leadership, as well as the entire Service High counseling staff to establish how to best integrate CACG project activities with existing services. Once the college/career guides were in place, they were able to supplement and enhance college access efforts throughout the school with the aid of key school personnel.

Alaska's CACG work has led to several additional outcomes that will play a role in sustaining this and related efforts in the state. One example: A comprehensive database to track program activity and success, created by ACPE. This database could possibly serve as a template for a tool capable of tracking college participation and completion across the entire state.

In the future the University of Alaska System will play an increasingly important role in creating program capacity and sustainability, helping ACPE coordinate the training of future college/career guides and assisting with the development of program infrastructure.

Challenges

In addition to the general lack of a college-going culture in the state of Alaska, the demographics of Service High pose significant obstacles to the goal of increasing college enrollment during the pilot phase of the project. Service High has the most diverse student body in the Anchorage School District, and current data show a steady decline in postsecondary enrollments over the past three school years – from roughly 70 percent in 2005-06 to 55 percent in 2007-08. Reversing this trend is going to be a challenge, but the alignment of CACG and ACPE college access goals has the potential to change current attitudes and values towards education beyond high school, not only at Service High but across the entire state.

Nevada

Nevada faces unique challenges in raising the level of college awareness and participation within the state. Recent studies have shown that while the number of jobs requiring some form of postsecondary education in the state is expected to rise, Nevada consistently ranks near the bottom in college access and attainment.[2] Far too many state residents lack basic knowledge about the college preparation process, not to mention the different types of support available to students and their families.

Governor Jim Gibbons designated the Nevada P-16 Advisory Council to have executive oversight over the state's CACG program. The Nevada P-16 Advisory Council was created in statute during the 2007 legislative session and consists of K-12, higher education, and business representatives appointed by the governor, the Nevada Assembly, and the Nevada Senate. In an effort to increase college awareness and participation, the Nevada P-16 Advisory Council partnered with the Nevada System of Higher Education (NSHE) and WICHE to expand and further implement NSHE's existing Go To College program. The centerpiece of Nevada's CACG plan is a public information campaign designed to foster a college-going culture in the state, while communicating college and workforce readiness expectations. The campaign's core message is that college is a necessary and attainable goal for all students.

Project Overview

The state's P-16 Advisory Council – which is charged with strengthening coordination between elementary, secondary, and higher education systems to ensure that pupils in the 12th grade are adequately prepared to make the transition from high school to college or careers – oversees Nevada's CACG activities. Council members are expected to take advantage of their contacts in the K-12, higher education, and business communities to push the college access goals outlined in the CACG Program. NSHE serves as the program's fiscal agent, while WICHE administers Nevada's grant on behalf of the P-16 Advisory Council.

Nevada's CACG project goals include increasing the number of students who pursue education and training beyond high school; creating a statewide college access network of education professionals and stakeholders; and developing organizational methods and capacity to sustain program activities.

Nevada's information campaign consists of three distinct yet complementary pieces. Classroom visits targeted at students in the 3rd, 6th, and 8th grades in low-income schools will feature representatives from the business and higher education communities, who will stress the importance of continuing education beyond high school. College access workshops for counselors and other education professionals will be held in Reno, Elko, and Las Vegas in an attempt to create a sustainable statewide network of education stakeholders to share best practices and coordinate efforts. In addition, an intensive marketing campaign, aimed primarily at high school students, uses television ads, print materials, social networking, and a campaign Website to spread the message that college is for everyone.

Nevada's Go To College campaign complements and expands upon existing NSHE initiatives designed to create a college-going culture in the state. NSHE already publishes "The College Journey" brochure for students, parents, and counselors, detailing the requirements for college attendance in Nevada. Further, the goals of the Nevada's CACG project fit well with NSHE's other college access activities, including TRiO programs at the University of Nevada's Las Vegas and Reno campuses, the statewide GEAR UP initiative (and the program at the University of Nevada, Las Vegas), the Dean's Future Scholars and Silver Scholars program, and the Millennium Scholarship Program.

Outcomes

Nevada's primary outcome during the first year of the grant related to the careful planning and coordination of its CACG activities. This will allow the campaign's three phases to aggressively unfold in year two. The state collected GEAR UP data from 2006-07 to measure college attitudes and awareness among Nevada students and their parents. This baseline data will be compared with future GEAR UP data to see if Nevada's public information campaign has had a positive effect on college awareness levels.

As part of the effort to recruit classroom speakers, NSHE developed a CACG frequently asked questions (FAQ) sheet and a speaker invitation form to distribute to business leaders and postsecondary professionals across the state, encouraging them to participate in Nevada's Go To College information campaign. NSHE also identified a strategy for increased distribution of "The College Journey" informational brochure to schools, counselors, students, and parents across the state. Additional brochures have been printed and will reach a wider audience as the grant moves forward.

KPS|3, an advertising agency located in Reno, was selected to assist with the development of an effective marketing campaign that will increase college awareness in the state. In addition to creating a Go To College Website, which will serve as the campaign's focal point, KPS|3 developed two television spots aimed at low-income students and their parents, created targeted Facebook ads, and designed a trifold Go To College brochure, which will be widely distributed across the state. Nevada's CACG advertising campaign will continue throughout the fall 2009 school semester and will, it is hoped, translate into increased college enrollment.

After Reno, Elko, and Las Vegas were selected as the sites of the first college access workshops, planning of the meetings began. The goal of the workshops is to introduce the Go To College campaign to school counselors and other education stakeholders and help them to better understand and take advantage of the numerous college access resources available to their students as a result of the state's CACG project. Further, these workshops will foster the creation of a sustainable statewide college access network that will continue after the CACG project comes to an end.

Challenges

To date, the greatest challenge facing Nevada's CACG project has been one of geography. Nevada is composed of several distinct regions, including two very urban communities – Clark County in the South, which includes Las Vegas, and Washoe County in the North, which includes Reno – and a number of sparsely populated rural communities scattered throughout the state. Trying to coordinate efforts between these areas has proved somewhat problematic, but full implementation of the state's information campaign

in the coming year should allow each region to better manage college access efforts in the future.

After the project's meticulous planning process was complete, the Go To College information campaign commenced at the beginning of the 2009 fall semester. With classroom speakers lining up to visit low-income schools and the multimedia advertising campaign already underway, year two of Nevada's grant promises to be a busy and successful time. More importantly, because the college access activities and priorities of the P-16 Advisory Council and NSHE align well with the goals of the CACG Program, Nevada's Go To College campaign has the potential to change current attitudes and create a college-going culture throughout the state.

North Dakota

North Dakota ranks in the top 10 nationally in college-going rates and high school completion, indicating that the state has been relatively successful in promoting a college-going culture. In designing its proposal for the CACG Program, the state elected to focus on developing a coordinated statewide college access network to reach students who may still be missing out on postsecondary opportunities.

Project Overview

North Dakota Governor John Hoeven chose the North Dakota University System (NDUS), which is the state's higher education agency, to implement the CACG project. NDUS is partnering in this effort with public and private postsecondary institutions, including the state's five tribal colleges, which serve predominantly American Indian students.

The partnership with the tribal colleges is crucial, as one of the emphases of the project is to improve postsecondary access and success for American Indian students. These students are four times more likely than the white students to live in poverty and two times less likely than Asian-American and white students to meet ACT benchmarks for English composition.

The state launched its project with three central goals:

- To establish a statewide college access network.
- To assess statewide progress toward increasing college access and factors surrounding accessibility.
- To develop a state college access strategic plan.

North Dakota's access network, similar to the effort underway in the state of Washington (see below), was designed to foster coordination and collaboration among the diverse organizations and programs that provide college access services throughout the state. Currently, North Dakota lacks a mechanism to assess gaps in services, provide opportunities for networking and collaboration, and provide state-level leadership to the college access effort, particularly for low-income students. The network's overarching goal is to improve the state's capacity to work with underrepresented students and their parents in order to increase student enrollment and improve student success in postsecondary education.

To establish the network, the state invited a diverse group of public, private, and tribal higher education organizations, along with community agencies, to form a College Access Challenge Grant Steering Committee, which provides guidance for the overall project and forms the foundation of its college access network.

The project convened the first of what is planned to be an annual state college access conference to bring together the access providers, institutions, and students from across the state. Following this meeting the steering committee met to plan the direction of state college access efforts.

Outcomes

By reaching out to diverse stakeholders to form its steering committee, the project has laid a strong foundation for the development of an effective college access strategic plan in the second year. Project leaders have worked hard to build statewide momentum for collaboration and coordination by heavily involving many of the different stakeholders. These leaders anticipate that this bottom-up approach will likely result in an effective state college access strategic plan, which will be developed in the second year of the project.

NDUS also worked to bring effective partners on board early in the planning process. For example, the project included tribal colleges and engaged them in the strategic development of the project, which will likely prove to be an important step in improving access and success for American Indian students.

Additionally, the state reached out to the Bank of North Dakota, which was identified as a key partner at the outset of the process and provided funds for the state

3755

matching portion of the grant. The project is using these funds to purchase off-the-shelf Web technology to launch a college access Web portal (www.nd-can.com), which provides information to parents, students, and school counselors, as well as career exploration, planning, and test preparation resources for high schools (some of these features are still being developed but are expected to launch soon). Using out-of-the-box technologies enabled the project to get its college access Website up and running relatively quickly, without the technical headaches that can delay "homegrown" Web projects.

In addition, as mentioned above, the project hosted a college access network conference. This statewide conference did not draw as many student attendees as organizers had hoped, but it did attract many school counselors and others who influence students, and it received positive media coverage, as well. As the project continues, the state is looking to reevaluate ways to stage the event in order to gain the maximum benefit. The event also provided an opportunity for members of the steering committee to convene to discuss future plans for the state's college access network.

The state is also beginning the process of gathering data via student surveys to accomplish its second goal: assessing its progress toward increasing college access and studying factors surrounding accessibility. Survey results will inform the strategic planning process and help guide North Dakota's college access effort.

Challenges

Like many of the other states, North Dakota lacked some of the baseline data necessary to evaluate the effectiveness of its efforts to reach and educate the target population about the importance of postsecondary education. Although broader measures of college-going and college success rates were available, it will take time to develop metrics that can accurately assess the project's impact. In addition, North Dakota's large CACG Steering Committee proved slightly unwieldy when it came to managing the grant. In response, the project team created an executive committee to handle this function, improving grant management without losing the broader input of the group. North Dakota's dedication to building an energized and broadly based foundation to drive the policy and practice changes will make the coming years of the effort more successful.

Washington

The CACG effort in Washington began in an extremely favorable policy environment. In 2007 the state enacted the College Bound Scholarship Program, which promises to provide scholarships to low-income students to cover the tuition, fees, and a $500 stipend for books (at public institution rates) as long as they promise to graduate from high school, demonstrate good citizenship, and enroll in a college or university. Students must sign up for the program in the 7th or 8th grade.

With the College Bound Scholarship as the centerpiece of the state's efforts to improve access and success in postsecondary education for low-income students, Washington chose to leverage its CACG funds to support this program as well as to expand other existing efforts and campaigns.

Project Overview

The governor designated the state's Higher Education Coordinating Board (HECB) to design and implement the state's CACG project. HECB identified these primary goals for the project:

- Increasing the sign-up rate of low-income families for the College Bound Scholarship.
- Increasing college awareness and financial aid opportunities for low-income students.
- Providing college preparation activities (for instance, activities related to College Goal Sunday), tools, and resources for low-income students.

In developing Washington's proposal for the CACG Program, HECB elected to enter into partnerships with non-profit organizations by holding a subgrant competition. The general goal of the subgrant competition closely matched that of the CACG Program: to increase participation in the College Bound Scholarship Program, develop successful support models, and expand the capacity of existing services. HECB selected four organizations: The College Success Foundation, the Northwest Education Loan Association, the Metropolitan Development Council (Tacoma), and the Community Foundation of North Central Washington. The subgrantees have used CACG funds to stage events and otherwise publicize the scholarship opportunity, reaching out to low-income 7th and 8th

graders and their families to encourage them to sign up for the program. The subgrantees have leveraged the CACG funding to develop and implement myriad models that provide support services to students from 6th grade to 12th grade.

Outcomes

Washington was able to launch its program more quickly and with fewer challenges than other states due to its extensive preplanning process and the decision to utilize the services of existing organizations rather than building a new one from scratch. By the time the state's CACG application was submitted to the U.S. Department of Education, the project team had already concluded the subgrant competition and received all proposals. The state announced the four winners in September 2008, only two weeks after the federal awards were granted. While other states had understandable difficulties in starting new programs, Washington's decision to take advantage of existing capacity in the nongovernmental sector allowed direct activities for students to begin relatively quickly.

The subgrantees were able to raise awareness about the College Bound Scholarship by partnering with public school systems to host events for 7th, 8th, and 9th graders and their families. Subgrantees also increased the number of College Goal Sunday events held throughout the state and expanded GEAR UP and TRiO activities in eligible schools while pushing eligible students to enroll in the scholarship program and support those who signed up.

The CACG funding came at a crucial time when the state was set to expand its outreach and implement the College Bound Scholarship program. The timeliness of the funding gave the state such an opportunity to elevate its services and outreach to a higher level, which has resulted in nearly doubling the sign-up numbers from the previous year.

The state set an ambitious goal of increasing participation of eligible students by 10 percent each year. The project has now gathered baseline participation information from school districts across the state. In the coming years it will be possible to more clearly evaluate progress toward this goal.

The next year of the grant should again proceed smoothly in Washington as the subgrantees continue their work. The project requires each subgrantee to evaluate their efforts thoroughly, and this should provide a wealth of information about the strategies used – both successful and unsuccessful ones – and help the state refine its approach to improving college access.

Challenges

In general, HECB avoided many of the challenges and difficulties that other states faced in starting their projects by engaging in an extremely detailed preplanning process and by taking advantage of already existing infrastructure in the form of subgrantees. The state and its partners have completed many activities that will likely lead to accomplishing its outcomes. As with other states' programs, however, it is difficult to evaluate the impact that these efforts will have on the broader goal of increasing access and success for low-income students this early in the program. As more data become available – documenting changes in the percent of the target population that signs up for the scholarship program and assessing student and family knowledge of college and financial aid options – the state will have a clearer picture of whether its outcomes have been achieved.

The nationwide economic downturn provided the biggest challenge to the HECB's CACG efforts. As noted earlier, the state could not develop and launch its one-stop college access Internet portal due to fiscal restrictions that resulted from the downturn. Project managers could do little to overcome this challenge, but the project expects to begin developing the portal in the second year of the grant. In fact, the state legislature has authorized the HECB to lead the development of a single, coordinated student access portal in the 2009 session, and the work is currently under way.

Lessons Learned

The first year of the CACG Program has seen the creation of widely varied initiatives designed to accomplish the common goal of increasing the number of low-income students who are prepared to enter and succeed in postsecondary education. Although the four states discussed here have embarked on different projects, several common themes emerged that can benefit access programs as the grant continues.

Extensive planning is time-consuming but critical to success. All four projects discussed here invested significant time and resources in the planning process. In some cases, this delayed the beginning of project activities, but engaging in a robust planning process with a wide range of stakeholders resulted in smoother implementation.

CACG efforts can't be fairly evaluated after two years. As states began to implement their project activities during the first year of the grant, it became clear that the effectiveness of efforts to reach out to high school (and in some cases younger) students would not be known for several years. In many cases, the target population will not have graduated from high school during the grant period, and some students may not even reach high school until well after the project's end. Evaluating efforts to improve low-income students' success in postsecondary education may take even longer.

Flexibility in using grant funds benefits states. The CACG Program offers relatively broad criteria for using grant funds. This has been important, as states with vastly different contexts have worked to improve outcomes for low-income students. Though state initiatives need to be consistent with the goals of the CACG Program, this freedom has allowed them to target the different low-income populations in ways that make the most sense for them and their students.

Data are crucial for evaluating program success. Few would argue with the importance of using data to drive public policy. The CACG Program is no different. In fact, it requires more and perhaps different types of data than most states currently collect in order to evaluate program effectiveness. States should actively examine their data needs before implementing their projects and ensure that appropriate measures are taken to collect and analyze data as the effort progresses.

Strategic partnerships can produce opportunities. All four of the states discussed here have benefited from partnerships with other organizations within their states. Particularly in the current climate, most state agencies lack the human and financial resources, as well as the organizational capacity, to engage students directly. Developing partnerships with organizations that have this capability allows grant projects to reach individual students and help to foster their success.

EXECUTIVE SUMMARY

Alaska consistently ranks at the bottom in educational performance indicators. Our "student pipeline" is the leakiest in the U.S: For every 50 ninth graders, 31 graduate from high school; 14 go to college; nine return for their sophomore year; and only three receive a degree within six years.

This leaky pipeline produces Alaska citizens who, in large numbers, are foregoing the collective and individual rewards of postsecondary education:

1. **Public Benefits:** greater workforce productivity and flexibility, decreased demand for government financial assistance programs, increased tax revenue, reduced crime rates, and increased community service and civic participation.
2. **Private Benefits:** high wage and benefit jobs, less unemployment, higher savings levels, improved health and life expectancy, and improved quality of life for families.

The Alaska Commission on Postsecondary Education (ACPE) has partnered with the National College Access Network (NCAN) to survey the postsecondary access and success climate in Alaska. The major findings of this research are that 1) a college-going culture does not exist, and 2) the link between Alaska's workforce needs and postsecondary education is not widely known.

This report offers five recommendations as a comprehensive strategy to address these findings:

1: **Develop Strategies that Create a Statewide College-Going Culture.**

Address the root cause for low educational achievement by providing the support counselors, teachers, and family members need to encourage students to see themselves as "college material" and prepare for college accordingly.

2: **Establish a K-16 Partnership Environment among Postsecondary, K-12, Business, and Community groups.**

Hold high schools and postsecondary institutions jointly accountable for a seamless alignment of high school standards with college/workplace expectations—starting in kindergarten and continuing through postsecondary education credentials.

3: **Establish a Peer Mentoring Program to Enhance College Access.**

Assist low-income, first generation, and underrepresented students to enroll and succeed in postsecondary education through a program new to Alaska, but with proven national success.

4: **Build on AlaskAdvantage Programs to Increase Awareness of Postsecondary Opportunities.**

Ensure widespread comprehension that higher education is not only attainable but essential by expanding these established and successful age-specific early awareness programs statewide.

5: **Request the Governor to Focus Cabinet-level Attention on the Issue of Access to Postsecondary Education for Alaskans.**

Leverage the existing Postsecondary Education Access Advisory Team to develop and present to the Governor specific plans to expand access to higher education for Alaskans.

This investment can, and will, reap significant rewards for individual Alaskans and the state's overall economic and social health. Each recommendation is eminently doable and affordable. The cost of doing nothing far exceeds the relatively modest cost of implementing these recommendations.

3761

Introduction

A quarter of a century ago, a prominent report titled *A Nation at Risk*, written by the National Commission on Excellence in Education (1983), lamented that the educational foundations of the society were being eroded by a rising tide of mediocrity that threatens the very future of the nation with regard to its unchallenged preeminence in commerce, industry, science, and technology innovation. In promoting a learning society, the Commission noted the following: "At the heart of such a society is the commitment to a set of values and to a system of education that affords all members the opportunity to stretch their minds to full capacity." In many ways, this report could have been written about Alaska today. Paraphrasing the admonishment from the report, if an unfriendly power had attempted to impose on Alaska the mediocre educational performance that exists today, we might well have viewed it as an act of aggression.

If an unfriendly power had attempted to impose on Alaska the mediocre educational performance that exists today, we might well have viewed it as an act of aggression.

This report provides compelling evidence that expanding access to postsecondary education, both collegiate and vocational, is key to a strong future for Alaska citizens. With pending gasline development and attraction of new investment from industry, Alaska is at the dawn of a new era of economic growth. However, without the education and training that prepares Alaska citizens for critical career fields, Alaska will miss the opportunity to maximize related benefits.

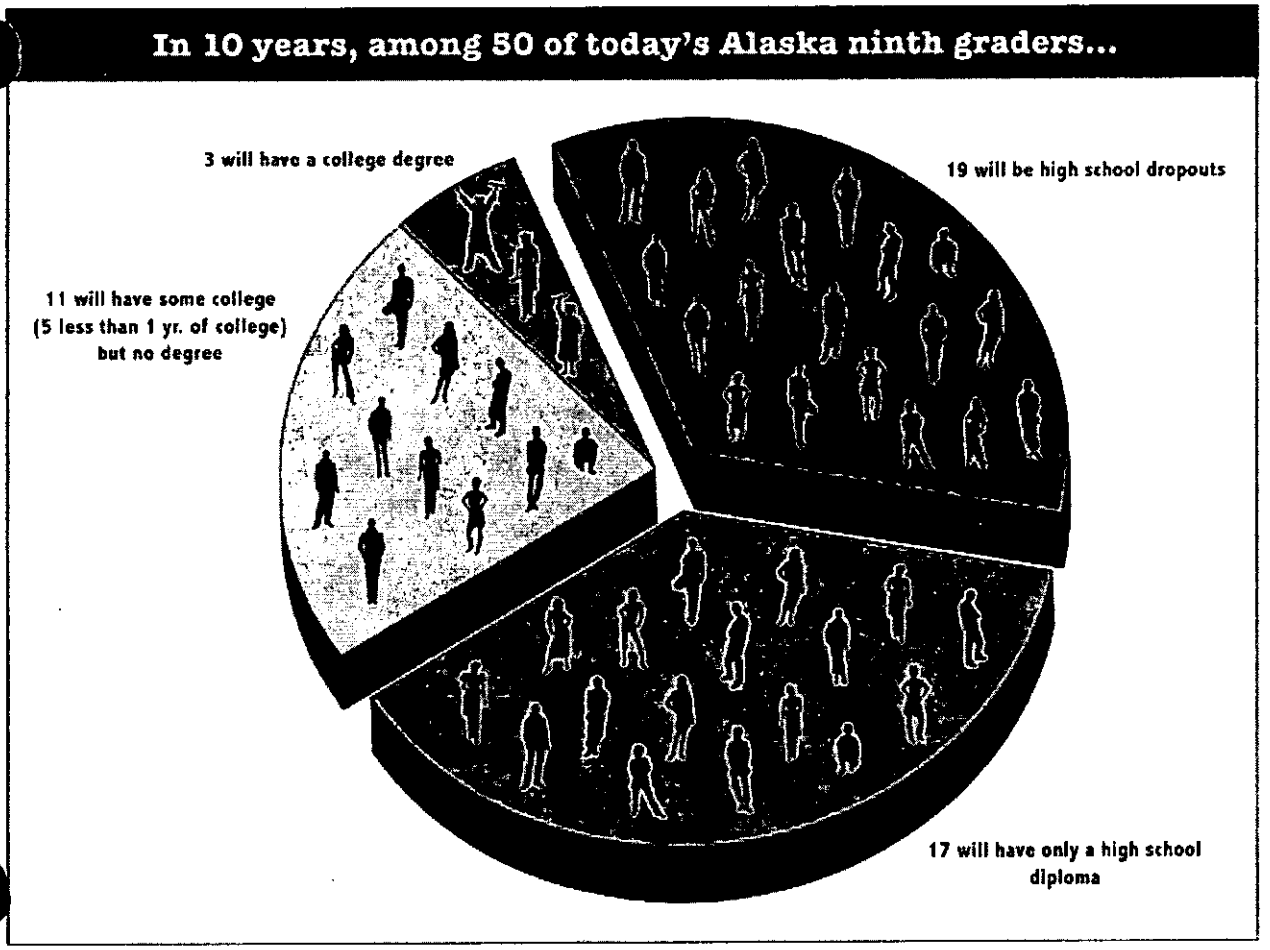
How Well is Alaska Educating its Citizens?

One way to understand how well Alaska is educating its citizens is to compare it with the other forty-nine states. What state in the entire United States ranks eighth from the bottom in the number of ninth graders graduating four years later? The answer is Alaska, with a high school graduation rate of only 62.5 percent in 2004. What state ranks third from the bottom among all the 50 states regarding the chance of ninth graders attending college? The answer is Alaska. A little over one-quarter (28.1 percent) of fall first-time college freshmen in Alaska enrolled anywhere in the U.S. in 2002 were ninth graders four years earlier. What state ranks fourth from the bottom regarding high school seniors going directly to college? Alaska. A little over 40 percent (44.9) of Alaska high school seniors attended college anywhere in the U.S. in the following fall semester. According to the National Center for Higher Education Management Systems (2006), what state ranks last in first-time college freshmen returning for their second year? Alaska. Alaska ranks last in the number of freshmen receiving a bachelor's degree within 150 percent of the normal program length. In 2005, only one Alaska student in five (20.3 percent) achieved a bachelor's degree within six years. As shown by Figure 1, the student pipeline in Alaska looks like this: For every 50 ninth graders, 31 will graduate from high school, 14 will go to college, nine will still be enrolled in their sophomore year, and three will graduate from college within six years (NCES, 2004).

In 2005, Alaska was dead last (5 percent) in the ratio of degrees and credentials awarded to the number of students enrolled. In 2004, Alaska ranked third from the bottom in the percentage (7.2 percent) of the population, 18 to 64 years old, enrolled in college. Finally, according to the National Report Card on Higher Education, when compared internationally, Alaska does not fare well in the proportion of students who complete certificates or degrees. With only nine out of 100 students in 2004 completing certificates or degrees, Alaska lags behind such countries such as Mexico, the Czech Republic, and Turkey (National Center for Public Policy and Higher Education, 2006).

The evidence is crystal clear that the state of Alaska needs to improve its performance in educating its youth. As the well-educated baby boomer generation begins to retire, the young population that will replace it does not appear prepared educationally to maintain or enhance the state's economic position. College and career preparation is the fulcrum that will tip this emerging cohort of Alaska youth toward becoming part of the solution or part of the problem. Alaska's underperformance in educating its citizens can be expected to restrict the state's access to a competitive workforce, limit its ability to attract business and industry investment, and weaken its economy over time.

Figure 1



Why Do We Care?

What difference does it make that Alaskans are consistently at the low end of the scale with regard to educational indicators? Does it really matter? Perhaps the following can shed some light. The Institute for Higher Education Policy surveyed the extensive literature and compiled benefits of postsecondary education (Institute for Higher Education Policy, 1998 and 2005). More recently, the College Board provided detailed evidence of the public and private benefits of continuing education beyond high school (Baum and Ma, 2007). The following is a summary of their impressive findings, including some Alaska-specific data.

Public Economic Benefits

Public economic benefits are those benefits for which there can be broad economic, fiscal, or labor market effects. In general, these benefits result in the overall improvement of the economy as a result of citizens' participation in postsecondary education.

- **Greater Productivity.** Worker productivity is typically measured as output per worker or per hour worked. According to the U.S. Department of Labor, rising levels of educational attainment were responsible for about 14 percent of the growth in output per hour worked in the private sector. In fact, several studies have estimated that increases in educational attainment have offset what otherwise would have been a serious decline in the growth in U.S. productivity (Decker, et al. 1997).
- **Increased Workforce Flexibility.** Postsecondary education contributes to increased workforce flexibility by educating individuals in foundational skills—critical thinking, writing, interpersonal communication—that are essential to the state's ability to retain its competitive edge in a global economy. Workforce flexibility is particularly critical to business and industry, which is continually trying to adapt to a rapidly changing economic environment.

3763

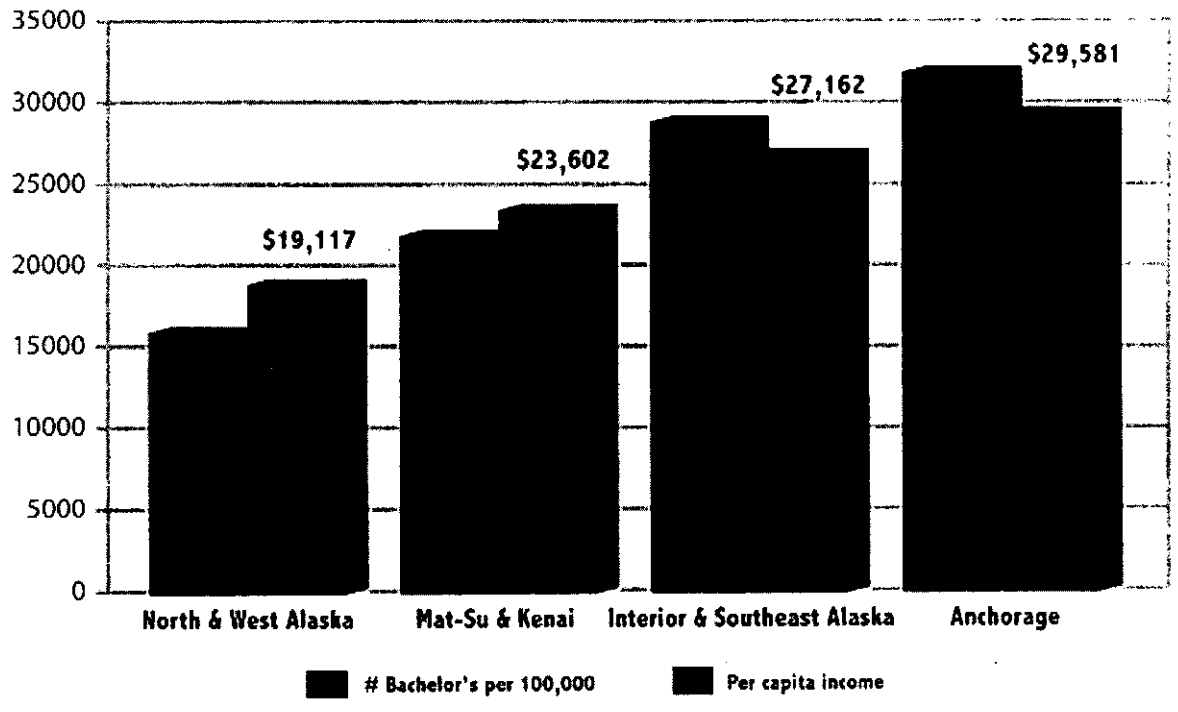
- **Decreased Burden on Governmental Financial Support.** Those who have attended postsecondary education require government assistance programs at substantially lower rates than high school graduates. In 2005, 19 percent of high school graduates, 15 percent of those with some college but no degree, 12 percent of those with an associate degree, and six percent of bachelor's degree recipients lived in households that participated in Medicaid. Eight percent of high school graduates, six percent of those with some college, five percent of those awarded an associate degree, and only one percent of bachelor's degree recipients lived in households in the National School Lunch Program. Also, six percent of high school graduates, five percent of those with some college but no degree, four percent of those with an associate degree, and only one percent of those with a bachelor's degree lived in households that received food stamps.

  In Alaska, 5.3 percent of those without a high school diploma relied on some form of public assistance--compared to a 2.1 percent national average for those at the same educational level, as did 3.5 percent with a high school diploma—compared to a 0.9 percent national average for that educational level. These are the second highest and highest rates in the nation for reliance on public assistance for those educational levels.

- **Increased Tax Revenues.** Citizens with higher education levels generally contribute more to the tax base as a result of their higher earnings. In 2005, the typical college graduate working full-time paid 134 percent more in federal income taxes and almost 80 percent more in total federal, state, and local taxes than the typical high school graduate. Those who hold professional degrees paid almost $19,000 more in total taxes in 2005 than high school graduates.

Figure 2

Per capita income rises with college education...



Geographic Distribution based on Public Use Microdata Areas (PUMAs) of the 2005 American Community Profiles. Descriptors approximate. For precise geographic distribution, please refer to PUMA map available from the Alaska Department of Labor and Workforce Development.

- **Economic Benefits to Others.** Workers with lower education levels earn more if others in the same metropolitan area are more educated. Controlling for other factors, a one percentage point increase in the proportion of the population holding a college degree leads to a 1.9 percent increase in the wages of workers without a high school diploma and a 1.6 percent increase in the wages of high school graduates. Further, a one percentage point in the proportion of the population holding a four-year college degree leads to an increase of about 1.2 percent in the wages of workers with some college and an increase of 0.6 percent in the wages of college graduates. As illustrated in Figure 2, data from the 2005 American Community Service Profiles demonstrates how the per capita income of geographic regions rises with the number of bachelor's degree holders in that region (Alaska Department of Labor and Workforce Development).

Private Economic Benefits

Private economic benefits are those benefits that have economic, fiscal, or labor market effects on the citizens who have participated in postsecondary education.

- **Higher Salaries and Benefits.** In both lifetime and average annual income terms, individuals earn more as a result of their higher levels of education. In 2005, for example, the typical full-time worker in the United States with a four-year college degree earned $50,900, 62 percent more than the $31,500 earned by the typical full-time worker with only a high school diploma. Those with master's degrees earned almost twice as much, and those with professional degrees earned over three times as much per year as high school graduates. Median earnings with some college but no degree were 18 percent higher than those for high school graduates, and adults with associate degrees earned 29 percent more than high school graduates. In Alaska, a bachelor's degree will result in an average salary 47 percent higher than a high school diploma alone.

  Focusing upon lifetime earnings, the typical bachelor's degree recipient can expect to earn about 61 percent more over a forty year working life than the typical high school graduate earns over the same period. Compared to those without a high school diploma, a bachelor's degree recipient can expect to earn well over 100 percent more over a lifetime. Also, those individuals who have attended college receive better fringe benefits, including vacation time and health care.

- **Employment.** Citizens who have gone to college are employed at higher rates and with greater consistency than those who have not attended college. This gap between unemployment rates occurs between those with differential educational attainment regardless of whether the economy is booming or having a downturn. Compared nationally, Alaska has the 2nd highest rate of non-employed persons without high school diplomas, at 17.3 percent, and the highest rate of non-employed persons with a high school diploma, at 12.4 percent. On the other hand, Alaskans with bachelor's and advanced degrees had rates of non-employment below the national average for those educational levels.

- **Higher Savings Levels.** Those with bachelor's degrees or more have higher value interest-earning assets, home equity, and financial assets. College-educated citizens contribute at higher rates to retirement plans, mutual funds, and other savings devices. Also, among full-time workers ages 25 and older, 69 percent of four-year college graduates were offered pension plans by their employers in 2005. Employer-provided pension plans were available to 66 percent of associate degree recipients, 59 percent of some college with some college but no degree, 53 percent of high school graduates, and only 32 percent of those who didn't finish high school.

- **Improved Working Conditions.** The working conditions of persons who have gone to college have been found to be substantially better than those of individuals who did not attend college. College educated citizens tend to work more in white-collar jobs, in office buildings or other facilities with controlled environment conditions and with conveniences—ranging from computers, to on-site child care, to consistent work hours—that improve the quality of their lives.

Public Social Benefits

Public social benefits accrue to groups of people, or to society broadly, that are not directly related to economic, fiscal, or labor market benefits.

- **Reduced Crime Rates.** Incarceration rates in state prisons in 1993 show there were 1,829 prisoners with one to three years of high school per 100,000 population, compared to 290 prisoners per 100,000 for those who graduated from high school and 122 per 100,000 for those with at least some college. Alaska's incarceration rates mirror the national figures with approximately 1,900 prisoners with less than a high school diploma per 100,000 population, compared to about 120 per 100,000 for those who graduated from high school and around 30 prisoners per 100,000 for those with at least some college (Harlow, C.W. 2003).
- **Community Service.** Higher levels of education are associated with higher levels of participation in volunteer activities. In 2006, about 27 percent of adults volunteered through an organization. Among college graduates, the volunteer rate was 43 percent—over twice the 19 percent for high school graduates. Also, among those who volunteered, the median number of volunteer hours increased with educational attainment.
- **Increased Quality of Civic Life.** Regardless of age group, adults with higher levels of education are more likely to vote than those with less education. For example, in the 2004 presidential election, 76 percent of U.S. citizens who were college graduates between ages 25 and 44 reported voting, compared to 49 percent of high school graduates. Among older citizens between ages 45 to 64, 83 percent of college graduates reported voting compared to 63 percent of high school graduates. In Alaska, 61 percent of those 25 years and older with a high school diploma vote, compared to 82 percent of those with a bachelor's degree.
- **Attitudes.** Adults with higher levels of education are more likely than others to be open to differing opinions. In 2004, 79 percent of adults with advanced degrees and 73 percent of individuals with bachelor's degrees believed it was very important (6 or 7 on a scale ranging from 1 to 7) to try to understand the reasoning behind the opinions of others. This compares to 67 percent of associate degree holders, 64 percent of high school graduates, and 59 percent of adults who did not complete high school.

Private Social Benefits

Private social benefits accrue to individuals or groups that are not directly related to economic, fiscal, or labor market effects.

- **Improved Health and Life Expectancy.** Within every age group, the percentage of adults perceiving themselves as very healthy increases with higher levels of education. For example, 68 percent of four-year college graduates between ages 55 and 64 reported being in excellent or very good health in 2005, compared to 53 percent of associate degree recipients, 51 percent of those with some college but no degree, 44 percent of high school graduates, and 28 percent of those who did not complete high school. Surveys by the Public Health Service indicate that those with a college education exercise or play sports at higher rates than non-college participants. Also, 14 percent of those with a bachelor's degree smoke cigarettes, compared to 23 percent of those with some college, 30 percent of high school graduates, and 37 percent of those with less than a high school diploma. Finally, life expectancies are higher for those who have attended college than for those who have not. In Alaska, less than half without a high school diploma report being in good, very good, or excellent health, compared to 95 percent of those with a bachelor's degree.
- **Improved Quality of Life for Offspring.** Children whose parents have attended college have a considerably higher quality of life. Evidence of these improved life conditions is ample. Children of college-educated parents are more likely to graduate from high school and continue on to postsecondary education. They are more likely to have higher cognitive development. Daughters of college-educated mothers are substantially less likely to become unmarried teen parents. The children of college graduates are more than three times as likely as the children of high school graduates to participate in scouting and arts-related after-school activities.

- **Better Consumer Decision-making.** Citizens with higher education levels have increased capacity to make informed decisions as consumers. For instance, individuals make better decisions about how to choose a physician appropriate to their medical needs, financial resources, and geographic location.

Although these benefits of increasing educational attainment are listed in a catalog fashion, it is important to understand that the combination of benefits can be described as a "cascade" of both private and public benefits. Kramer (1993) illustrates this cascade of benefits in discussing literacy. The presence of literate people in society creates advantages for others as well. People can rely on the literacy of others in designing production processes and reaching markets with advertising. Therefore, general literacy becomes a public benefit. More to the point, benefits of participating in postsecondary education can be public and private, or a combination of the two. Any single benefit, public or private, could also lead to further public and private benefits--the cascade of benefits that result from education.

A Word About Cultural Barriers to Education

If education is so beneficial and the lack thereof is so costly, why does not everyone pursue it? The levels of educational attainment and academic aspirations are often dependent on income, health, socioeconomic status, parental educational history, and geographic location. A combination of all these factors influences an individual's perception of the value and accessibility of college and career education and can become an obstruction to education, the so-called "cultural barrier."

A culture is a society's or an organization's underlying values, beliefs, and meanings that are deeply held and enduring. Cultural barriers reflect the family history, attitudes and values of an individual's social environment. Cultural barriers exist because of the lack of role models, absence of values and attitudes that demonstrate the importance of attending a postsecondary educational institution, or a perceived lack of the social knowledge and skills required for continuing education by the student. Students from low socioeconomic status (SES) backgrounds have lower educational aspirations, persistence in college, and educational attainment than their peers from high SES backgrounds prior to and during college (Walpole, 2003). These differences begin at a young age, are cumulative, result from many forces, and are shaped by SES differences such as parental interaction styles and expectations, school structure, school experiences and expectations, college costs, and financial aid availability. Parental expectations and definitions of success are particularly important for pursuing or continuing college and career preparation. These expectations vary with SES. Low SES parents are more likely to view a high school diploma as the norm for their children than high SES parents, to whom a bachelor's or advanced degree is considered the norm (Walpole, 2003).

A major challenge facing policy makers in Alaska is to break down the cultural barriers to college and career education by changing deeply entrenched beliefs and perceptions.

In states such as Alaska, where the level of educational attainment is relatively low, academic aspirations and the value ascribed to college and career preparation will be relatively low. Education beyond high school is not a priority and not a part of the culture overall. A major challenge facing policy makers in Alaska is to break down the cultural barriers to college and career education by changing deeply entrenched beliefs and perceptions.

Considerable research has been performed on cultural barriers. Patricia McDonough (October 2007) notes that key determinates to college attendance are (1) having college plans at least by 7th grade, (2) attending a college-focused high school, and (3) having families who expect their children to go to college. Several strategies have been suggested to decrease cultural barriers to education. They include:

- ✓ Lowering financial barriers to college affordability;
- ✓ Ensuring sound academic preparation for postsecondary education;
- ✓ Encouraging counselors to advise students for college and focus schools on their college preparatory mission;
- ✓ Increasing the quality and quantity of college entrance and financial aid information; and
- ✓ Engaging families as college preparation partners, preferably early in the educational process.

What is Alaska Doing to Enhance Access to Postsecondary Education?

Does Alaska have the infrastructure capacity in place to address the issue of access to and success in postsecondary education at the statewide level? The answer is an unequivocal yes. Many dedicated and knowledgeable citizens throughout the state in high schools, universities, business, communities, and state government are working to enhance the educational process. As will be discussed later, many of these people are volunteering their time to serve on an advisory group that is focused on promoting college and career education for all of Alaska's citizens. In addition, Alaska has an existing state agency, the Alaska Commission on Postsecondary Education (ACPE), dedicated to promoting, supporting, and providing access to education beyond high school for Alaskans.

Established in 1974 by the Legislature, ACPE has a long history of helping students realize their postsecondary education goals. Particularly in 2002, the Legislature took significant steps to addressing higher education access issues by authorizing the Commission and the Alaska Student Loan Corporation (ASLC) to put into place the AlaskAdvantage Programs, which comprise a suite of outreach and educational financial aid products and services designed to increase access to the benefits of postsecondary education. Specific areas of focus include (1) early awareness programs for children, teens, and parents, (2) tailored outreach programs throughout the state, (3) programs in support of adult learners and Alaska's workforce, (4) financial aid programs, (5) promotion and support of Alaska postsecondary education institutions, and (6) postsecondary education consumer protection.

The Commission partnered with the National College Access Network (NCAN), a nationally recognized organization committed to improving access to and success in postsecondary education for first-generation, underrepresented and low-income students. NCAN actively supports state and local non-profit college access programs that provide counseling, advice, and financial assistance designed to increase the number of students who pursue college and career education beyond high school. NCAN also shares best practices among the network, provides leadership and technical assistance, helps communities create new college access programs, and advocates for public policy in support of the students the organization serves.

To determine the postsecondary access and success climate in Alaska, ACPE and NCAN, through a process called "gap analysis," gathered information through NCAN's toolkit surveys and one-on-one structured interviews with seventeen of Alaska's prominent education stakeholders. The selected interviewees were not only recognized as leaders or experts in their field, but represented the five major sectors: postsecondary institutions, secondary schools, community organizations, state government, and the business community. In addition to conducting their interviews, ACPE has brought these stakeholders together to form an Alaskan Postsecondary Education Access Advisory Team, which is serving as the gap analysis project workgroup as well as consultants to other postsecondary education access programs across the state.

The survey portion of the gap analysis was designed to help identify postsecondary access activities or programs in four types of institutions: (1) high schools, (2) postsecondary education institutions, (3) business-education partnerships, and (4) community-based organizations. The surveys were not intended to measure the breadth and depth of all programs, but to provide an overview of what programs and services are provided to whom and to create an inventory of providers offering postsecondary access services. Postsecondary access refers to all educational programs beyond high school, including apprenticeship and certificate programs, vocational and trade schools, and two- and four-year colleges and universities.

The following is a summary of the observations gleaned from the structured interviews (Swedlow and McFadden, 2007).

Quality of Secondary Schools: Rating the academic quality of secondary schools in Alaska on a scale of 1 to 10 (with 1 being poor and 10 being excellent), the interview respondents noted that the urban schools are doing a much better job with an average of 6.6, primarily because they have more resources. Rural schools were rated much lower at 5 because of the immense challenges they face. Home schooling was rated very effective at 7.5.

Quality of Preparation for Postsecondary Education: Chugach School District was cited as heading reform in developing a standards-based system, along with the Anchorage School

District in using technology to encourage overall learning. Other areas that are receiving attention include (1) small learning communities, (2) accountability of No Child Left Behind, and (3) curriculum improvement, especially in math and science. Aligning the objectives of education reform with a strong dedication to a college-going culture may be the best prescription for improving high school graduation rates, postsecondary participation rates, and narrowing achievement gaps.

Barriers to Postsecondary Education: The barriers to participation in postsecondary education cited by interviewees were consistent with other communities throughout the nation, though Alaska is faced with additional challenges because of its large numbers of remote or sparsely populated communities. The largest barriers to postsecondary education access and success cited by respondents were social and cultural issues, lack of awareness of available financial resources and the fact that many students are not prepared academically. It was critically noted that education beyond high school is not a priority and not part of the culture overall.

Education beyond high school is not a priority and not part of the culture overall.

Tracking Students Beyond High School: All of the structured interview participants agreed that tracking students beyond high school is very difficult to do. In general, respondents noted that rural students tend to stay in their communities and urban students pursue military careers or continue working the job they held during high school. In addition, underserved students who do go to college do not often persist.

Cause of Low Educational Aspirations Among Alaska Natives: Several issues were cited related to low educational aspirations among Alaska Natives. Among them, strong family and community ties were prominent and related circumstances—including fear of the children leaving the community completely and the rejection of students upon their return to the communities. Lack of information regarding postsecondary opportunities contributed to low educational aspirations along with the cyclical impact of poverty. For example, students who have experienced a life exposed to alcohol, drugs, violence or suicide may repeat the pattern in their adult lives. Lack of employment opportunities was another cause cited as extending the poverty cycle.

Availability of Higher Education: Interviewees provided a wide range of answers to this topic. Reponses ranged from "very affordable" to "it's expensive and there is no financial aid." There seemed to be limited awareness of ACPE's AlaskAdvantage Education Grant Program, though all respondents referred to the Alaska Scholars Program as a source of aid. There appears to be some concern and lack of information about the cost of postsecondary education and the financial aid options available to students in Alaska.

Business Involvement in Higher Education: The respondents noted that the business community is generally very interested and supportive of higher education. However, the level of support depends on how the leadership within a specific company values higher education. Several interviewees stated that the Native Corporations provide scholarships for the Alaska Native populations.

College Access Service Providers: Structured interview participants identified several organizations that provide college access services. They included:

- ✓ Alaska Commission on Postsecondary Education (AlaskAdvantage Programs)
- ✓ GEAR UP Statewide Grant Program
- ✓ TRIO Programs (Talent Search, etc.)
- ✓ Native Corporations (CIRI, Chugach AK Corp.)
- ✓ Junior Achievement
- ✓ Alaska Department of Labor and Workforce Development
- ✓ Tribal Government (Native Village-Kotzebue)
- ✓ Nine Star Enterprises

In addition to the structured interviews, the surveys provided information that helped to shed additional light on the efforts to increase access and success in postsecondary education. The following is a summary of the results.

Business-Education Partnership Survey: Of the eleven respondents to the survey, 82 percent reported active partnerships with several school districts in their area. The primary focus of the partnerships appears to be with high schools, with a concentration on students in 9th through 11th grades. Almost half of the businesses reported partnerships specifically with high school seniors. The activities for these partnerships varied from donations for school events, to the provision of college scholarships, to employees serving as guest speakers. The business community in general favors the provision of funding for services such as the awarding of scholarships and donations of supplies to schools. To a lesser extent, businesses participate in career days and job shadowing activities. Finally, the organizations that responded to the survey indicated that most of their partnerships occur with the general student population rather than the students with the greatest need.

Community-Based Organization Survey: It is important to note that the overwhelming majority of community-based organizations were tribal. Over two-thirds of the community-based organization respondents indicated that they participated in "outreach activities for students and families in the community/state." When asked to specify programs that focus on college access, programs dedicated to providing information about postsecondary education opportunities and a variety of individual programs focused on providing financial assistance to students received considerable attention, with lesser focus on tutoring and mentoring services for middle and/or high school students.

Community-based organizations in Alaska provide most of their services to high school seniors. Their focus appears to be on low-income and first-generation college-going students with significant attention to the Alaska Native population. Community-based organizations also appear to specifically target students with the greatest need.

Postsecondary Survey: Of the twelve respondents to the postsecondary survey, ten noted that they provide college access outreach activities for Alaska's students and their families. Four indicated serving students across the state, rather than focusing on one or more specific communities. Most of the services are pre-college and university-based programs and may serve as a recruiting tool for a specific institution or program as opposed to college access and success tools. A little more time is spent with high school seniors than with underclassmen. It is unclear whether this time with seniors is spent encouraging higher education in general or advocating for enrollment at a specific institution. However, a strong career exploration component was emphasized. Scholarship support services, financial aid nights, college visits, and academic enrichment activities were also frequent activities for close to half of the respondents. A majority of the postsecondary respondents indicated serving the general population with an emphasis on the Native American population.

High School Survey: All of the high school survey respondents, most of which came from Anchorage School District, reported that college access services were available to their students. The services are spread among local college campus-based programs (especially with the University of Alaska Anchorage), to some school district programs (Career Resource Rooms and Advisors), and several national programs (especially TRIO-related programs). It was unclear from the survey data as to the breadth and depth of the program offerings, or the impact of offerings on student college participation rates. Information campaigns and college financial aid were activities that were provided by most high schools, in addition to tutoring, mentoring, college selection, application assistance, and career exploration. Services appear to be provided to all populations, with Alaska Native populations receiving the most attention. Ninety percent of the respondents indicated that another person besides the guidance counselor was a key resource person for college access services. Since the Anchorage School District dominated the responses, it could have an advantage over school districts in other communities where guidance counselors are expected to provide college access services in addition to their other responsibilities like scheduling of classes and handling disciplinary problems.

These observations can be summarized by the following major findings:

- A college-going culture needs to be developed and increased throughout the state to transform secondary schools and to reform their orientation and budget toward the goal of preparing Alaska students to access and benefit from postsecondary education opportunities.

- The benefits of college and career education need to be made widely known, with special emphasis on the relationship between Alaska's workforce/economic needs and access to postsecondary education for Alaskan citizens. Postsecondary education access efforts and academic preparation need to work hand-in-hand to ensure that every student has opportunities.
- The true cost of education is not being conveyed effectively. Students need considerable help to understand the cost of college and career education as well as the cost of being uneducated.
- There is significant business sector involvement in Alaska that could be better integrated so students and parents know what is taking place in workplace development and what work opportunities will be available to students. Information should begin to be available as early as the elementary school years.

What Needs to be Done?

This paper has provided compelling evidence that Alaska needs to improve its performance in educating its populace. Without a change in the status quo, the state is limited in its ability to attract and diversify business and promote economic development, in addition to competing both nationally and internationally. In short, the competitive global market along with the information, service, and technology-based economy propels a growing need for postsecondary-educated citizens. Six out of every ten jobs in the economy depend on highly trained workers with the advanced skills that are available with postsecondary education. The state simply cannot stand by and let this situation continue.

Without a change in the status quo, the state is limited in its ability to attract and diversify business and promote economic development.

The NCAN/ACPE survey results have shown that a variety of activities are being utilized by businesses, community organizations, high schools and colleges to enhance access and success in postsecondary education. Yet, it is apparent that more needs to be done if the state is serious about encouraging more of its citizens to pursue education beyond high school. Existing programs could be both more effective and cost-efficient if integrated at a statewide level. The cost of doing nothing is much greater than the relatively modest cost of the following recommendations, which are presented here for policy makers to consider.

Recommendation 1:
Develop Strategies that Create a Statewide College-Going Culture.

As noted earlier in this paper, academic aspirations and the value ascribed to college and career education are relatively low in the state. Thus, as a foundation for all of the recommendations, this one attempts to address what could be called a root cause for low educational achievement. There are several strategies that build a culture that emphasizes pursuing postsecondary education (McDonough, October 2007). It is important to note that the following principles are interrelated and tend to reinforce each other.

- **College Talk:** There is clear ongoing communication within the high school that encourages students to develop a college-going identity. Some indicators of this include newsletter, newspapers, and posters; a college club for middle school students, and an essay contest based on college application questions.
- **Clear Expectations:** Explicit goals of college preparation should be defined and communicated clearly, consistently, and in a variety of ways by families and school personnel. Students can be encouraged to develop four-year plans. Parents can be encouraged to support their children's postsecondary education goals and given the informational resources necessary to do so.
- **Information and Resources:** Students must have access to up-to-date comprehensive postsecondary information and schools must build college knowledge infrastructure. This information could include college-related materials, PSAT/SAT/ACT materials, college catalogs, financial aid materials, and college choice guides. Also, workshops on test

preparation, financial planning, and high school coursework planning can be offered on a systematic basis.

- **Comprehensive Counseling:** All counselors should be college counselors and all student interactions with counselors should be postsecondary education advising opportunities. Counselors should distribute college and career preparation information to all students, faculty, and staff.
- **Testing and Curriculum:** Students should be informed about necessary tests. They should be given the opportunity to prepare for these tests and testing fees should be taken into account. The PSAT should be given on a school day to all 10th graders, with fees waived for needy students. College preparatory classes should be readily available.
- **Faculty Involvement:** Faculty should be active, informed partners with counselors, students, and families. Professional development opportunities should be available to the faculty. Some activities could include classroom decorations and "college corners," postsecondary education discussions during class time, and mathematics teachers working with PSAT-takers.
- **Family Involvement:** It is imperative that family members have opportunities to gain postsecondary education knowledge and understand their role. Parents should be supported to communicate the belief that, with the right preparation and planning, their children can and should be "college material." College fairs for students and their families should be scheduled along with evening and weekend parent workshops to learn about college preparation and financial planning.
- **College Partnerships:** Having active links between K-12 schools and local colleges and universities that can lead to field trips, college fairs, and academic enrichment programs is vital. Students at all grade levels can visit college campuses. Also tutoring programs and pen pal programs with college students can enhance these partnerships.
- **Articulation:** Students should have a seamless experience from kindergarten to high school graduation, with ongoing communication among all schools. Students should hear a consistent message at all grade levels; as early as kindergarten, students should see themselves as college material.

Recommendation 2:
Establish a K-16 Partnership Environment among Leadership from Postsecondary Education, K-12, Business and Community-based Organizations.

The purpose of a K-16 partnership environment is to create a seamless web for students from kindergarten to the completion of the bachelor's degree or other postsecondary education credentials. As discussed earlier, in Alaska, the pipeline of students moving through the educational system is leaking badly. Twenty-two other states have recognized that they have a similar problem and have established K-16 partnerships to proactively address the problem. Four fundamental strategies are being used in many of these states that show great promise (Achieve, Inc. 2007).

- **Align high school standards with real-world expectations:** Aligning high school standards with college and work place expectations can be accomplished only with the dedicated involvement of postsecondary and business communities. In collaboration with K-12 educators, postsecondary education systems must clearly define the skills that high school graduates need to succeed in credit-bearing non-remedial courses. Likewise, business leaders must articulate the skills that graduates need to be successful and advance in their careers. Once the expectations at the end of high school are aligned with the expectations of the postsecondary community and employers, the state can then "back-map" their standards from the end of high school through the lower grades to ensure that their K-12 standards are vertically aligned. The goal is to have a system of standards that reflects a steady progression of knowledge and skills culminating in college and work readiness.

  Alaska has already identified and invested the resources to develop a good foundation for this initiative. Alaska's Work Ready/College Ready Program is a statewide project designed to ensure that all Alaska students and job-seekers have the basic, or transitional skills

required by all post-secondary education and virtually all careers. The program provides the means for students and job-seekers to document their skills by earning a "Career Readiness Certificate," which is recognized nationwide. Administered by the Alaska Department of Education and Early Development (EED) in cooperation with the Alaska Department of Labor & Workforce Development (DOLWD), the program utilizes WorkKeys assessments—a product of ACT, Inc. Students are able to participate in web-based, individualized, self-paced training available from any computer with Internet access, which is specifically targeted to the skills measured by WorkKeys.

- **Require all students to take a rigorous college and work-ready curriculum:** Whether high school students go directly into postsecondary education or the workforce after graduation, they need a common core of knowledge and skills, especially in English and mathematics. High school students need to take four years of challenging mathematics—at least through Algebra II or its equivalent—and four years of rigorous English aligned with college and work-ready standards. States implementing this requirement are met with the challenge of unprepared students. One strategy to address this issue is to set a rigorous high school curriculum as the "default" diploma option. With the default option, students automatically enroll in the college- and work-ready curriculum but may "opt out" of their requirements only if their parents first sign a waiver. In contrast, students in states without a default rigorous high school curriculum are at risk of unwittingly "opting out" of access to postsecondary education simply as a result of course choices made as early as 9th grade, without understanding the potentially life-long consequences of those choices.

  As Alaska raises course requirements, safeguards will need to be put in place to ensure that courses taught in high schools through the state are consistently rigorous and aligned with the state standards. There are at least two approaches to ensuring consistent course content and rigor. One approach is to develop end-of-course testing to measure whether students have mastered the essential knowledge and skills in core courses. Another approach is to produce course-level standards, model curricula or other instructional materials for schools to guide classroom instruction.

  Align high school and postsecondary assessments: Assessments need to be rigorous enough to measure college and work readiness. However, most high school tests, particularly those used for graduation, measure those knowledge cores and skills that students learn early in high school. Without sufficient emphasis on the advanced high school content that students will need to be successful in college and the work-place, state assessments fall short of measuring readiness for postsecondary pursuits. Thus, Alaska needs to go beyond its existing tests. A component of the high school assessment system can be added that measures the more advanced skills valued by postsecondary education institutions and the business community.

  The experience of other states can be instructive as a number of strategies are emerging with regard to assessment. The most widely pursued strategy is end-of-course tests. Other states are considering modifying their existing high school tests to make them better measures of post-high school readiness. Also, a number of states are incorporating the ACT or SAT into their assessment systems and requiring all students to take those exams.

- **Hold high schools and postsecondary education institutions accountable for student success:** High schools are tasked to prepare all students for college, careers, and citizenship. Yet, preparedness is barely a factor in high school accountability systems. Usually, accountability models are driven by attendance, graduation rates, and performance on high school assessments that often are not reflective of college and work readiness. In addition to more robust high school assessments, a longitudinal data system with the capacity to track student progress from high school through postsecondary education is required. This capacity will allow the state to trace a student's postsecondary success or failure back to his or her high school experience and use that data to inform and improve the experience for the next class of students. In essence, an effective longitudinal data system would enable policymakers to compare high-school course taking, grades and assessment results with college course-taking patterns, success in first-year college courses and persistence and completion rates.

The Alaska Department of Education and Early Development (EED) has begun to address the issue of developing a single authoritative data structure for education data in Alaska. In November 2005, EED was awarded a grant by the U.S. Department of Education to implement a statewide longitudinal data system. The initiative is comprised of three distinct phases of a larger seven phase project dubbed the Unity Project. Upon completion of these three phases, it will provide accurate, timely, and accessible student-level data to all stakeholders.

It is important to note that any longitudinal system must be cognizant of the federal Family Education Rights and Privacy Act (FERPA) to protect student privacy. Although FERPA safeguards student privacy, it by no means prohibits states from building a robust K-16 longitudinal data system and using it to improve teaching and learning in high schools.

Recommendation 3:
Establish a Peer Mentoring Program to Enhance College Access.

In recent years, one issue has resonated loud and clear: ensuring access to low-income, first generation, and underrepresented students is a bigger job than high school guidance counselors or financial aid administrators can do alone. Thus, mentoring programs have gained immense popularity as a means of assisting these types of students to enroll and succeed in postsecondary. Mentoring is defined as a sustained relationship between a youth and adult. Through continued involvement, the adult offers support, guidance, and assistance as the younger person faces new challenges. Mentoring programs are established to match a suitable adult or older youth—the mentor—with a younger person. Research on college programs indicates the single most important feature of those that are purported to be successful with individual students is a close, caring relationship with a knowledgeable adult who monitors the student's progress (Pathways to College Network, 2007).

In addition to early exposure, a consistent message that college is possible is necessary throughout the entire secondary education experience.

There are several benefits to mentoring. Students in mentoring programs are more likely to attend and graduate from college. They are less likely to skip classes and they tend to have a better attitude toward school and teachers. They are less likely to experiment with drugs and alcohol and less likely to be violent or arrested. Also students in mentoring programs maintain better relationships with parents, teachers, and peers. A key similarity in all successful mentoring programs is a strong relationship between the mentor and the student being mentored. A good example of a mentoring program is GEAR UP, which is a federal program designed to increase the number of low-income students attending and succeeding in college. Students enter the program in middle school and are followed through high school. The program focuses on academics and postsecondary preparation. Another example is the National College Advising Corps, which places recent college graduates into high schools as near-peer guides to college resources and information. It is believed that high school students can relate better to these college graduates because of their relative young age and because they recently successfully completed the college processes themselves.

Recommendation 4:
Build on the AlaskAdvantage Programs to Increase Awareness of Postsecondary Education Opportunities.

Since 2002, the Alaska Commission on Postsecondary Education, funded by the Alaska Student Loan Corporation (ASLC) has administered AlaskAdvantage Programs, which are outreach and educational financial aid products and services designed to increase access to college and career education. Among the areas of focus are early awareness programs for children, teens, and parents. This strategy includes actual classroom curriculum components integrated with hands-on learning activities. After five years of experience delivering the AlaskAdvantage Programs, early awareness initiatives appear to have the most promise. In addition to early exposure, a consistent message that college is possible is necessary throughout the entire secondary education experience.

Three programs, which are consistent with strategies for creating a college-going culture found in the first recommendation, are recommended to be expanded. The first, *I Know I Can*, is a

story book specifically designed for 2nd and 3rd grade students to begin career exploration and see its connection to postsecondary education. Through this motivational story line, children learn that college is possible. A pilot *I Know I Can* program is currently being offered by a partnership between ACPE and the University of Alaska.

The second program is designed for upper elementary and/or early middle school students, and creates an awareness of higher education while also instilling the idea that going to college is an attainable goal. Called *I'm Going to College*, a twelve session curriculum along with a visit to a local college campus promotes early encouragement of postsecondary education and serves to involve parents, counselors, and teachers. Feedback from this initiative has been very positive.

The third program offers individual assistance to those who come into the "Success Center" located in one administrative location. Usually those who need assistance the most are less apt to visit the center and the program would be more effective if offered in several venues. In conjunction with the mentoring program outlined in Recommendation 3, the services offered by a success center should be available in schools throughout the state.

Recommendation 5:

Request the Governor to Focus Cabinet-Level Attention on the Issue of Access to Postsecondary Education for Alaskans by Creating a Statewide Governor's K-16 Advisory Council.

The ACPE Postsecondary Education Access Advisory Team already exists and has been very effective in guiding the development of these recommendations. Leveraging this existing body with an initial charge to develop plans for the implementation of these recommendations for presentation to the Governor would be an effective way to expand statewide benefit from the advisory body, without adding any demand on state financial resources.

As noted earlier in this report, the Advisory Team, coordinated through ACPE, is comprised of a group of diverse Alaskan citizens with considerable knowledge and experience in all aspects of education. In addition to exhibiting dedication to the education of the citizens of the state of Alaska, they contain those talents, understandings, and skills needed to address the myriad issues outlined in this report. They also represent all five segments of society related to education: high schools, postsecondary education institutions, business and industry, community-based organizations, and state government. To maximize efficiency, the charge to the body should be specifically limited in time to that period necessary to identify where linkages exist and where they need to be built or reinforced, and to develop a strategic plan for the governor's consideration. ACPE leadership of the advisory body ensures a statewide focus, informed by resources already located within or available to the Commission, and also provides for advisory body mission-centered activities to be funded through the Alaska Student Loan Corporation, without cost to the state's General Fund.

****

These five recommendations represent a comprehensive strategy for attacking the conundrum of enhancing the educational aspirations of Alaskans and, at the same time, providing the wherewithal to achieve those goals. To a large degree, the recommendations are interrelated and tend to reinforce each other. Each is eminently doable and can be achieved at a modest cost to the state. This investment can, and will, reap significant rewards to not only individual Alaska citizens but to the state's economic and social health. And there is no better time to move ahead than right now!

Alaska State Legislature: House Education Committee

November 24, 2010

David Longanecker
President, Western Interstate Commission for Higher Education (WICHE), Boulder, CO, USA

What We Know About The Impact of Financial Aid

The Pros and Cons of Need-based and Merit Based Financial Aid Programs.

The Imperative First Slide

- Financial Aid Policy Does Not Stand Alone
- A Triad
  - Institutional Support through Appropriations
  - Tuition Policy and Practice
  - Financial Aid Policy and Practice
- They Interact to Impact Student & Institutional Success – Whether Intentional or Not

So What Makes For Good Financial Aid Legislation?

- Five key factors

1. Clear rationale/philosophy
2. Clear Goals
3. A program that supports the goals & rationale
4. A winning coalition to sell the program
5. A program the state can afford (today & tomorrow)

Two Generally Perceived Rationales

- To assure financial affordability for those who can't afford college without assistance (need-based aid)
- To reward the meritorious (merit-based aid)

- And passionate believers in both
- But there is more to the story

Merit-based aid in perspective

- New guy on the block or not?
- Usually focused on covering tuition or a portion, thereof.

- But a myriad of goals
  - Reward those who achieve at the highest levels (National Merit Scholarships)
  - Encourage students to prepare better for college
  - Increase college participation rates overall
  - Attract the best and brightest to stay in state

So, How Do Merit Programs Measure Up on These Goals?

- Rewarding those who achieve at the highest levels -- *It Depends*
  - If focused on these, it is a clear reward
  - If spread broadly, it is not perceived as a reward
  - Also tends to diminish, with "aid packaging", both with Alaska & at competing schools

How Do Merit Programs Measure Up on These Goals? (2nd Goal:) Encourage students to prepare better for college --

- Taking a ***Rigorous Curriculum*** more important than getting high grades
  - The Georgia Experience – remedial went up
  - Regarding Grades
    - Decent grades are important
    - But high grades are not as important
  - The Source of Best Evidence: *The Toolbox Revisited*; Cliff Adelman, U.S. Department of Education, 2006

How Do Merit Programs Measure Up on These Goals? (3rd Goal: Increase college participation rates overall --

- Nationally, very little "price elasticity for demand", except for low-income students.

- In lay language:
  - Middle-income and High-income students go to college, or don't, irrespective of price
- Some contrary evidence in Georgia – from 30% to 37%
  - Most able low-income student
  - Some middle-income students
  - Didn't "change the ethic," but did have a measurable impact
- Similar impact in Nevada – from 40% to 47%
  - But then fell off.

How Do Merit Programs Measure Up on These Goals? (4th Goal: Attract the best and brightest to stay in state--

- If the Goal is to Keep them in-state for college
  - *Impact is significant, at least at first*
    - Worked well for Institutions – ie, Oklahoma
    - Worked well for Georgia
      - Before Georgia Hope: 23% of high SATs stayed
      - After Georgia Hope: 75% stayed
    - Nevada; not so much:
      - Before Millennium Scholars: 59% of eligibles stayed
      - After Millennium Scholars: 63% eligibles stayed
      - Today, has dropped below original figures (anecdotal)

How Do Merit Programs Measure Up on These Goals? (4th Goal: Attract the best and brightest to stay in state--

- If the Goal is to Keep them in-state after college – *Impact is not so clear*
  - National Bureau of Economic Research: "only a modest relationship . . ."
  - Recent West Virginia study – Well educated most likely to migrate
  - An alternative may be to attract them back after – Dakota Roots

How Do Merit Programs Measure Up on

- Pay a lot for modest impact
  - Most recipients already attend in-state.
- Regarding Affordability
  - Does increase affordability for the most-needy who qualify for merit.
    - But comparatively few do.
  - Reduces burden for others – but doesn't increase financial access

How Do Merit Programs Measure Up on

- Beware of unintended consequences
  - Effect on Price
    - University of Georgia: Tuition skyrocketed – increases "passed through" to state
    - Louisiana State University: Tuition kept to noncompetitively low, eroding institutional quality, because State couldn't afford TOPS increases if tuition increased. (President Lombardy has published paper requesting change in TOPS)
    - West Virginia & New Mexico: need-based suffer to sustain merit-based aid.
  - Excludes essential students
    - Adults
    - Military and Veterans
    - Late achievers
  - Can leave federal tax-credits on the table

Need-based aid in perspective

- Goals
  - Original purposes: Expand access
  - More recent thrust: Expand access to success.

So, How Do Need-based Programs Measure Up on The Goal of Expanding Access?

- Quite Successful in Expanding Success
  - Price elasticity of Demand Studies
    - 5% to 9% increase for low-income students per $1,000 reduction in price
    - Recently confirmed:
      - Bowen & McPherson; David Mundel; Tom Kane
- Less successful in Achieving Student Success
  - Drop out rates continue at high levels for low-income students
- Not as politically popular

The New Model: Blended Programs

- These come in three variations
  - The need add-on to merit
  - The merit add-on to need
  - Truly blended need and merit components

Blended Programs -- Type I: Need Add-on to Merit

- Wyoming's Hathaway Scholars Program
  - To qualify:
    - Take the rigorous Hathaway Scholars curriculum in high-school
    - Achieve specified GPA and ACT (amount varies by status – up to $3,200)
    - Maintain specified GPA while in college
  - All qualified students receive initial scholarship.
  - Needy students available for a supplement, as well.
  - But must qualify for scholarship to receive need award.

Blended Programs -- Type I: Need Add-on to Merit

- Wyoming's Hathaway Scholars Program
  - Strength of Program:
    - Rewards strong preparation and assists with affordability for most needy
    - Fixed amount, so not dependent upon actual tuition amounts – also presents a "cost of choice"
    - Funded with a trust fund approach, so eventually will not be a financial constraint on the state
    - Fits Wyoming well.
  - Limitations:
    - Available only to traditional students

Blended Programs -- Type II: Merit Add-on to Need

- Federal Academic Competitiveness and SMART Grants
  - Academic Competitiveness Grants
    - Pell Grant recipients who take a rigorous high-school curriculum (so certified by the State) receive an additional $750 in the first year and $1,300 in the second year.
  - National Science & Mathematics Access to Retain Talent (SMART) Grants
    - Pell Grant recipients majoring in science, math, or technology disciplines, with at least a 3.0 GPA and in their third or fourth year of studies receive an additional $4,000

Blended Programs -- Type II: Merit Add-on to Need

- Federal Academic Competitiveness and SMART Grants
  - Strengths of the programs
    - Rewards students for preparing well for College
    - Encourages students to major in areas of National need
    - Focused on those students most underrepresented in desired STEM fields
  - Limitations of the program
    - Excludes students from high schools that don't offer a rigorous curriculum
    - Not permanently authorized, so programs' sustainable questionable

Blended Programs -- TypeIII: Blended Merit and Need

- These programs include intentional and non-separable merit and need components.

- The new standard model: (Examples: Indiana 21st Century Scholars Program and Oklahoma Promise Scholarship)
  - Require core curriculum, reasonable grades, and assessed need.

Blended Programs -- Type III: Blended Merit and Need

- The Oregon Shared Responsibility Model.

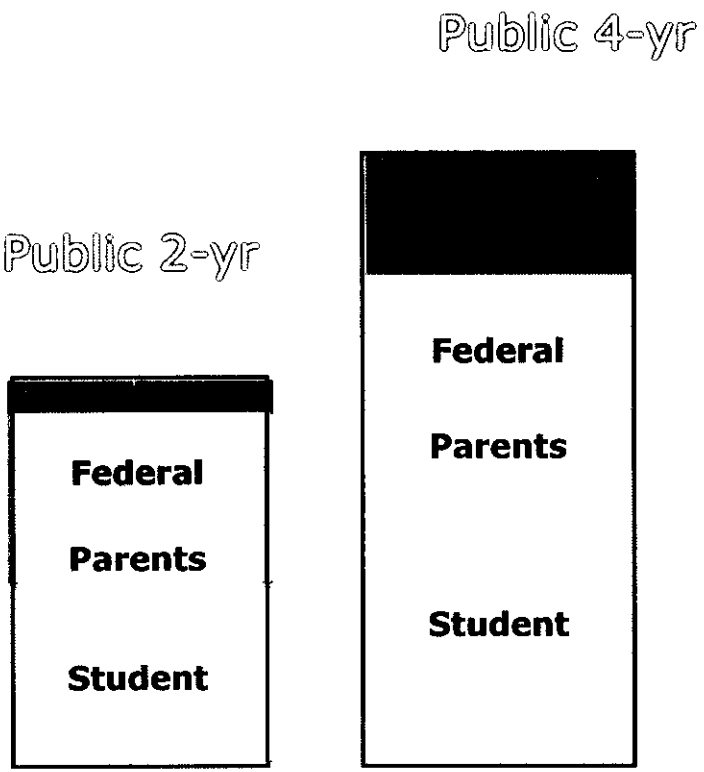
Shared responsibility partners

Student share as principal beneficiary
- X% or a fixed amount
- from work, savings, scholarships, and/or borrowing

Parents share
- determined using federal methodology

Federal share
- includes Pell & tax credit/deduction

Oregon share
- filling the gap



3800

What's Best for Alaska Depends on What You Want

- If it is to *reward* the best & brightest
  - Merit is the approach
  - But it will not address affordability
  - Where maybe, but not whether
- If it is to *retain* the best & brightest
  - Merit is an approach, but an expensive one
  - Better would be to attract them on academics
  - Or entice them back after college

What's Best for Alaska Depends on What You Want

- If it is to *expand access* through lower cost, need based will get the students in the door
  - But it won't greatly increase their likelihood of completing
  - And it doesn't send the message about the importance of working hard to prepare

- If *increase success* is your highest priority
  - The Blended model holds the most promise
  - And, it is the most cost-effective for the State

1/20/10 OVERVIEW: GRADUA-TION RATE WORKING GROUP

Tutors work to boost Native students

Dropout rates are higher, test scores are lower than for students overall

By MEGAN HOLLAND
mholland@adn.com

(04/09/09 21:13:18)

Shafts of sunlight stream through the windows and illuminate the four sixth-graders gathered around the table with Kerri Wood.

Wood is working to solve a vexing problem: Get these kids up to grade level.

Wood is the Indian-education tutor at Tyson Elementary in Mountain View. She is part of a multi-pronged effort involving the Anchorage School District, nonprofits and tribal groups to close the test-score gap between Anchorage's 4,200 Native students and the rest of the district's 48,000 kids.

It's not just poorer test results. Native students have also historically had the highest dropout rate in Anchorage.

Wood works for the school district but her salary is funded by federal Indian Education Act money. The district spends about $2 million of federal money a year on tutors like her. And while administrators say modest gains have been made, the gap is still big.

Last year, scores took a dive. Results in math, reading and writing lagged behind all students by some 15 percentage points.

In December, with the district saying more Native kids are moving into the city from rural Alaska, the School Board tapped the district's own general fund for the first time to increase the number of tutors by a third.

"The needs of Alaska Native/American Indian students are profound," the district said.

STRADDLING TWO WORLDS

Among the grim statistics from last school year's data:

• By the end of ninth grade, only 58 percent of Native students had enough credits to be on track to graduate in four years, compared with 77 percent of all students.

• Only 1 percent of Natives took higher-level high school courses compared with 8 percent of all students.

• Two-thirds of Native students didn't get their diplomas after four years of high school.

The problem starts at a young age.

Many education experts, including former Alaska education commissioner Roger Sampson, say that if a student is not reading at grade level by the third grade, the student's chances of ever catching up are slim. It is an indicator of the future dropout rate, he has said.

Last year, 67 percent of Native third-grade students in Anchorage read at grade level compared with 81 percent of all students.

Educators don't know exactly what's wrong.

The problems are varied, they say. Teachers who reward the most animated students, when Native children are taught to be demure. Kids who show up at school without breakfast. Westernized curriculum that teaches young children unfamiliar words like teacup, cow and sailboat.

In a grant application to fund an upcoming program for Native boys, whom the district consider to be the most vulnerable, the district wrote that many Native homes are not highly verbal. Another problem may be how the students are being taught. Native boys, in particular, are not reached by many of the usual instructional methods, the grant application says.

"We are not understanding the home culture," said Doreen Brown, the district's Indian Education supervisor, who has the job of solving the puzzle. "We are so good at the academic culture we don't understand the home culture. We don't understand the home language. We, as educators, don't understand the experiences that these kids are coming to us with, and it's very different than white middle class. It's not bad, it's just very different."

Brown, who is Yup'ik, knows many of these kids are straddling two worlds, just as she did growing up in Anchorage and graduating from Service High in the 1980s. "My people have been educated for thousands of years, tens of thousands of years. We've been educated, we've survived in the harshest environments. And I can look at my own life and I'm technically only the third generation to go to school. That's not a large amount of time," she said.

Brown is in charge of 45 employees, including Wood. She runs summer enrichment programs and after-school tutoring. She works on dropout prevention. She does crisis-intervention. And she secures federal grant money, or any grants she can find, to make it all happen.

"What are we not doing right? I think one of the strongest components is that we're not making (education) culturally responsive," she said.

"A lot of Native students don't want to be the center of attention. They don't want to raise their hands, 'I know the answer! I know the answer!' "

Before she became supervisor, when she worked directly with Native students, she would have kids practice raising their hands, she said.

Brown says there's not enough money to reach every kid. She has to be selective. In the end, tutors are placed at the schools with the highest population of Natives, and within those schools, it's the kids who score the worst who are tutored.

Brown says there are about 9,000 Natives and part-Natives who are eligible for the Indian Education services. She says her staff is reaching about 30 percent of them.

Asked if she thinks the tutoring is making a difference, she paused. "It can be effective. I think that our students and our parents need a point of contact. ... I would say most of my staff are very overwhelmed."

Research shows that if tutoring is to make a difference, students need to see their tutors at least three times a week for 30 minutes, she said. That's the formula. But sometimes, Brown says, that isn't happening.

Wood, at Tyson, said Native fifth-graders at the school aren't being tutored because of scheduling conflicts, and some of her sixth-graders get tutoring only twice a week.

SAFE LEARNING

Back in her classroom, Wood, who is Athabascan, asks sixth-grader La-Vera Wise about the noun she is looking at on the textbook page. "Is it a person, place or thing?"

She moves from one child to the next, reviewing each of the children's work as they locate proper nouns and common nouns. The four sixth-graders are too big for the undersized plastic chairs and low-hung table.

Wood works with 45 of Tyson's 140 Native kids.

She points to a sentence. "Can you find one here? Can you show me?" she asks, goading La-Vera.

Later, Wood explains she circles the children and watches over their shoulders to catch mistakes as they happen. She also prefers to correct them one-on-one, not in a group setting. "You need to create a safe learning environment," she says.

Sometimes Wood re-teaches what the children's teachers have already covered. Other times, she pre-teaches so kids are ready with answers and concepts.

"Sometimes it's setting them up for success," Brown explained of the tactical ego boosts. "It feels good."

Every month, the children are tested and their scores combed over.

"Looking at the data and making adjustments to teaching style is something that we take very seriously here," Wood said. "If things aren't working, we have to change it. And if it's still not working, we need to change it again."

She said the goal is to get the kids up to grade level so they don't have to see her anymore.

La-Vera, who is 13, lives in Anchorage with her stepsister while the rest of her family lives in the Western Alaska village of Upper Kalskag. Her father, Andrew Wise, said he thinks the tutoring is making a difference -- it's one of the reasons he lets her live in the city.

It is important that his daughter graduate from high school, he said. "I put myself through school," he said of getting his diploma. "It made a difference."

Find Megan Holland online at adn.com/contact/mholland or call 257-4343.

Editor's Note: *This is the first in an occasional series examining the education of Alaska Native students in Anchorage public schools. Native students have some of the lowest standardized test scores in the city, and the highest dropout rates.*

Helping Native students

Series at a glance

Today: Hands-on help -- In-classroom tutoring of Native students.

Thursday: A unique experiment -- A private nonprofit takes over some classrooms.

April 17: It starts at home -- Trying to get parents more involved.

Counting Native students

Test score results for ethnic groups are based on how students self-identify. In October, the number of Anchorage School District students who said they are Native on district forms was 4,200.

However, the number of students eligible for Native education services is 9,000. This larger number includes the students who are part Native. On school district forms, some of the additional students might self-identify as multiethnic.

Separate classes create comfort zone for Native students

Tribal nonprofit pays for Anchorage public school program

By MEGAN HOLLAND

mholland@adn.com

(04/23/09 21:28:26)

Walk into this Bartlett High School classroom and it may seem just like any other class in Anchorage. The teacher demonstrates math problems on the white board. The students look as if they need more sleep. The room is decorated in the chaos of inspirational quotes, posters and bric-a-brac.

But look more closely and you'll see that unlike the rest of the building where there's a rainbow of ethnicities, in here the students are all Native. And there's something else different about this classroom that's not easy to see: Unlike other teachers who work for the Anchorage School District, this teacher is privately employed.

This instructor and the ones in the adjacent rooms are from Cook Inlet Tribal Council Inc. and the students they teach at Bartlett are some of Anchorage's most at-risk of failing. The tribal nonprofit has taken on a unique role by persuading the school district to let it offer Native-only classes to tackle the problem of too many Native students falling behind or dropping out.

It is one of several efforts across the city by the district, nonprofits and tribal groups to raise the lagging test scores and high dropout rates of the district's 4,200 Native students. Last year, 64 percent of Native students were at grade level for reading and writing, compared with the district average of 81 percent of all students. In math, 58 percent were at grade level, while the district's average was 73 percent.

By the end of four years of high school, only a third of Natives graduate.

Those who work with the students say there's no clear answer why the statistics are so grim. Some of the reasons often cited are poverty, cultural differences, and parents who don't get involved because they are intimidated by the education system.

The Cook Inlet program, called Partners for Success, is at several middle and high schools. And it isn't alone in seeing the value of separating Native kids from other students. The district-run Elitnaurvik program at East High is doing the same.

The idea behind the separation is to create classrooms where lifestyle differences don't block Native kids' paths to success.

Anchorage school administrators acknowledged this cultural divide in a recent application for a grant to help Native boys. "Traditional values of modesty, cooperation, and sharing sometimes impede success in school," wrote administrators. "Calling attention to self and even eye contact with elders are bad manners. The rapid response expected in modern classrooms is unnatural."

Program administrators say they are creating environments where these traits are helpful, not harmful.

QUIET STUDENTS, LOUD STUDENTS

Bartlett has 320 Natives among its 1,700 students and most take at least one class in the Cook Inlet program, which is primarily funded by federal education grants.

Kids sign up for several reasons, administrators say. More of the staff are Native, which brings a level of comfort and familiarity in dealing with the adults. Classes are half the size of other classes in the high school, giving students more face-time with teachers. And the program emphasizes Native pride, boosting kids' self-esteem and making them feel more connected to the curriculum.

This means that in English class, poet and novelist Sherman Alexie is read.

In science class, tools and techniques of survival used by the first Alaskans are studied. And after school, traditional Native sports are practiced.

In one biology class, a moose heart was studied, then the teacher cooked it up for everyone to eat.

Another reason the kids sign up: Cook Inlet teachers have the reputation of being some of the best in the city.

On a recent visit to Mary Moran's algebra class, it seemed that reputation was earned on the basis of her ability to entertain her students while, perhaps slyly, teaching them something about math.

Bartlett principal Dan Gallego later explained that Moran uses humor to connect with the kids. She makes corny math jokes and exhibits an obsession with math that the students enjoy rolling their eyes at. One sign of the obsession: A 5-foot-long replica of a pencil with the engraving "Fractions are our friends" that hangs over her desk.

Moran began the class with an exercise on permutations and combinations. The students, mostly 10th and 11th graders, put their pencils to paper while she ambled around the class checking their progress.

Her classroom is adorned with evidence of another obsession: Elvis Presley. Photos of the King blanket the walls, and multiple life-size cutouts pose in the corners.

From the quiet boy slumped in his chair to the girl who sits straight up and asks lots of questions, each gets Moran's attention. She calls them "honey" and "babe" and often corrects their work by going to the dry-erase board to demonstrate. Then she says, "Are you with me?" and makes sure they are. She tells them to help each other.

What she's doing, program administrators say, is giving attention to each student regardless of how vocal or gregarious they are, creating an environment where quieter students can be right just as much as the louder students, and encouraging shared learning. It's a style of teaching that works well with these kids, administrators say.

"We see big growth, both socially and with their confidence," Moran later said. Kids come out of their shells, she said.

Tawni Whitinger, an 18-year-old senior, said she started taking Cook Inlet classes after she struggled her freshman year. "It doesn't really make a difference if you're Native or not. You come in here and you get more help. Instead of one teacher for 30 kids, you have half that."

LOST AND FOUND

Program administrators say they are seeing results since Partners for Success started in the city schools in the early 2000s. The Cook Inlet students attend class more, drop out less, and have a better chance of graduating on time.

While about 11 percent of Anchorage Native students not participating in the program drop out each year, only 2 percent who take the Cook Inlet classes do. And while only a third of Native students are earning a high school diploma in four years, about 7 in 10 Natives who are in the program are.

Sheila Randazzo, a Cook Inlet family advocate at Bartlett, said some of the success may be because the program shrinks the size of the East Anchorage school, where a student can walk the crowded halls and see a sea of unknown faces day after day.

She believes that Natives, regardless of how long they've been in the city, do better in smaller schools that create an intimacy between students and teachers. Otherwise, she said, "Alaska Native people and students get lost."

The program is especially good for students who have recently moved into the city from the Bush, said principal Gallego. "When you come in from a village which has 90 kids in the school, then go to a school with 1,700 students, that is a huge deal," he said. "Some kids can cope with that. Some cannot."

A PEP TALK

On another recent school day, as Moran presided over a catch-up day in her algebra class, Cook Inlet counselor Gail Weinstein walked in with five minutes left before the bell.

Weinstein, who has an assertive but motherly tone, told the few seniors in the class that they needed to see her to review their after-graduation plans. To the others, she said, "It's time to really start to think about what you might want to do later on."

The students shuffled their papers, stretched their arms, and yawned, but listened. She had their attention.

In rapid-fire succession, she told them about summer opportunities with Native corporations and the Alaska Native Heritage Center. She reminded them of an upcoming Native arts summit.

Then she slowed down.

She talked about college. "Do not let the financial issues get in the way," she said, looking around the room. She reminded them of Native corporation scholarships and national funding sources for Natives.

Seconds before the bell rang, she made successive eye contact with as many kids as she could, and said: "You kids are our leaders."

Raising a Graduate

It's Everybody's Business

Everyone is a role model—be a good one.
Read with children.
Show you care. Smile at youths and say hi.
Help youths develop a vision for their future.
Get involved in your schools.
Catch youths being good and recognize them.
Help youths explore their pathways to graduation.
Provide positive challenges for youths.
Involve youths in decision-making.
Create opportunities for youths to volunteer.
Provide a safe and supportive home.

Graduation Opens the Doors to Future Opportunities

Subject: RE: student/teacher advisory programs

Louie,
Below is listed some brief descriptions of advisory programs in the ASD.
Mike Henry

Service- The ***Connections Program*** within the Service High School Freshman Academy is a vital component of our smaller learning community. The purpose of this program is two-fold. One outcome of the program is to facilitate better connections among students and between students and staff while building an environment of mutual respect and community within the Freshmen Academy. The second outcome of the program is to devote time to assisting students in building success skills. Success skills are a broad range of skills students need in both their personal, academic, and eventually their professional lives and include communication skills, appreciating diversity, time management, problem solving, decision making and citizenship. The program was developed in partnership with district SEL personnel. We meet once a week for 50 minutes.

> Chugiak-The student/teacher advisory program is set up for students identified by counselors and the Graduation coach. The focus is with 9th and 10th grade students with rare exception for 11th and 12th graders. All students are placed based on academic performance and not through behavioral issues. This is a program in which the advisor is able to work with classroom teachers and students to help with homework and study skills. The advisor spends part of the 52 minute period with the students working on study skills and personal choices they make for themselves. This component uses the Ripple Effects and "7 Habits of Highly Effective Teens" to help students understand the choices that they make and to create changes in their behaviors that will improve their academic performance.

Bartlett High School:
Our purpose is to insure that each student is known well by at least one adult in the building, an adult to whom the student can turn for help with both school related and personal issues. At BHS we are attempting to personalize school in order to better meet the needs of students. Statistically, reports indicate that ninth graders are failing at alarming rates. In general, comprehensive high schools are large and can be overwhelming for any student. An advisory program allows for a closer relationship to be made between a teacher and a student. The intent of advisory is to create a safety net to prevent our students from falling through the cracks or getting lost in the shuffle. For this school year, due to the structure of the 9th grade academy 9th graders do not have advisory. All other grade levels meet with an advisor every Tuesday. A curriculum addressing social emotional learning standards has been provided to each advisor as a guide.

> At Dimond, we do not have a formal, dedicated advisory period; however, we have taken the typical advisory elements—unit on plagiarism, note-taking and other study skills, planners, good decision making, etc.—and woven them into the ninth grade house program. These units and policies are all outlined in the 9th grade handbook and taught across content areas throughout the year.

Subject: FW: student/teacher advisory programs

Schools in Kenai Peninsula Borough School District with advisory programs:

Homer High School
Skyview High School
Soldotna High School
Kenai Central High School
Nikiski High School
Seward High School

Three of these schools have adopted a student driven advisory program where students meet with a faculty member a few times per week and the students discuss their interests with the teacher, both in school and career related and work on goals pertinent to the student's interests. Students are surveyed at the beginning of the year to determine their interests

Student Driven Advisory schools:

Homer High School
Skyview High School
Nikiski High School

Three of the schools have adopted a more formal curriculum driven program where a student and teacher get together for 15 minutes per day and do various activities focusing on postsecondary planning, and meeting high school curriculum goals.

Curriculum Driven Advisory schools:

Soldotna High School
Kenai Central High School
Seward High School

For the smaller schools in the district the thought is that the teachers are able to have relationships and do outreach with individual students more easily, and do not need the advisory program setting.

In some of the advisory program schools the faculty generates a list of all students to determine which are known and which are not known by teachers. Then a second list of students that are not well known by any of the teachers is formed and individual faculty members will do outreach with these individual students. This is known as the "Adopt a Star" program and the teachers hold themselves accountable for the success of the "adopted" not well known student.

These Advisory programs have been in place for the past five years. Before the implementation of the program KPBSD was sitting at about 65% graduation rate and has increased its graduation rate since then to about 73%.

This year KPBSD will be engaged in a focus group on why kids drop out and attempting to get some profiles of drop-outs by interviewing the former students.

3813

Ideas for Eliminating Push outs

Push Out Category	Push-out	Possible Solutions
School-wide/District-wide	Condition of facility: School Building and classrooms aren't welcoming or are in disrepair; school grounds have trash around them	1) Teachers and students can monitor their classrooms at the end of class period and pick up trash, arrange room so it is ready for next class period. 2) Individual classes could volunteer or be assigned to clean up around the building on a rotating basis 3) Hold a clean-up, fix-up, paint-it weekend where parents and students can work on making the building and classrooms a more inviting place to be
	Grading: No retakes, no make-up, no partial credit	Intervention Conference Define better Change grading policy Student understanding of evaluation How we use grades Use of Tools: Power School; Pinnacle Link with teacher evaluation
	Discipline	Consistency w/common sense and flexibility Fitting the "crime" Learning from sanction Better job orientation De-escalate bad behavior/training Sensitivity/awareness to cultural issues Involving the family

	Zero tolerance	Moving away from zero tolerance (except firearms) Using community service/service learning Done in steps – progressive
	Attendance: Why is this policy – where did it come from? Count period Need focused effort to keep in touch Fallen behind Loss of seat time Notify advisor	
	Retention	Analyze first/reasons for failure Use of current options (career tech) Teach in a different way Summer learning opportunities or after hours
	Transportation for extended hour activities/sports/alternative schools	Creative use of time & partnering Could use special education buses? Federal issue?
	Participation fees	Waivers Sharing methods of raising money

		Promoting scholarships
Statewide	ASAA Eligibility [drugs, alcohol, tobacco]	Could change statewide District policy Promote healthy life styles
	HSGQE [passing, not passing]	Change its name – remove the high stakes Continuous improvement model
	Carnegie Unit	Competency testing for placement by knowledge vs. grade level Be more flexible "get rid of the box" Competency based
Social/Emotional Issues	Staff Acceptance[non-judgmental]	Put personal issues aside Training staff cultural sensitivity behavior/health addressing suicide/depression
	Safety: Recognition that school is more than academics	Use counselors as counselors
	Pregnancy	

	Gay/Lesbian	
Teachers	Students lack personal connection	Advisory Making eye contact/kids & parents Name recognition
	Individual teaching consistency	Teacher absences detrimental Stay all year(s)

1/22/10 ANCH. SCHOOL DISTRICT MEMO #96

ANCHORAGE SCHOOL DISTRICT
ANCHORAGE, ALASKA

ASD MEMORANDUM #96 (2009-2010) September 28, 2009

TO: SCHOOL BOARD

FROM: OFFICE OF THE SUPERINTENDENT

SUBJECT: COMPREHENSIVE STUDY OF THE PREDICTORS OF HIGH SCHOOL OUTCOMES

ASD Mission: *To educate all students for success in life.*

PERTINENT FACTS:

The purpose of this study is to explore the factors that are associated with high school students' outcomes. The goal is to identify the characteristics that distinguish high school students who graduate in four years from high school students who drop out.

ASD adopted an additional reporting direction of an on-track indicator under the goal of increasing the graduation rate in 2005-2006. This reporting direction was based upon the research conducted by the University of Chicago and released in June 2005, indicating that students who completed enough credits by the end of their freshman year to be promoted to tenth grade, and who failed no more than one semester of a core subject area, were very likely to graduate on time.

The ASD reporting direction is that the percentage of grade 9 students enrolled in the district who are on-track to meet graduation requirements at the end of their grade 9 year, including summer school credits, will increase each year. On-track means the student has earned a minimum of 5.5 credits and failed no more than one semester of a core subject.

This study provides the district with the opportunity to analyze whether the on-track indicator is indeed a strong predictor of high school outcomes, as well as looking at additional characteristics that distinguish who graduates in four years and who drops out.

This longitudinal study follows the cohort group of eighth graders in the 2003-2004 school year. The cohort group is tracked as eighth graders in 2003-2004, ninth graders in 2004-2005, tenth graders in 2005-2006, eleventh graders in 2006-2007, and twelfth graders in 2007-2008. Students who graduated by the 2007-

2008 school year are identified as the graduate group and students who dropped out between 2003-04 and 2007-08 are identified as the dropout group. Fifth-year seniors in the 2008-2009 school year are excluded from the study, as well as students who transferred in and out of ASD between 2003-2004 and 2007-2008.

MAJOR FINDINGS:

- The majority of students who dropped out and never returned after their last record of dropping out were white students (46.2 percent of the group).

- The percentage of Alaska Native and American Indian students who dropped out and never returned after their last record of dropping out was almost double the percentage of Alaska Native and American Indian students in the student cohort (23.7 percent compared to 13.7 percent).

- The majority of the students who dropped out and never returned after their last record of dropping out had a high school GPA of 2.00 or less when they dropped out.

- When comparing the dropout group with those who graduated in four years, the graduate group performed much better on the Alaska Benchmark assessment as eighth graders; but it is interesting to note that the majority of the students in the dropout group were proficient in reading and writing.

- On the grade 9 and 10 SBAs, students in the graduate group performed better than those in the dropout group but the majority of the students in the dropout group were proficient in SBA in reading.

- The overall proficiency rates of the graduates increased on all three subtests from the grade 9 to the grade 10 SBA while they decreased on all three subtests in the dropout group.

- The majority of the dropout group was proficient on the High School Graduation Qualifying Examination reading, writing, and math subtests.

- Determining the grade level where we see the highest number of dropouts is complex because several students who drop out do so more than once. It can be reported by those with a dropout record or those who dropped out and did not return after the last reported dropout incident. It can also be reported by the first incident or last incident of dropping out. When viewing this from the perspective of the first recorded dropout incident, 9th grade is highest for both students who have a dropout record and those with a record and did not return after the final incident.

- When looking at all incidents of dropping out, March is the month with the highest number of dropouts, followed by February.

- More students in the dropout group changed schools in grades 9-12 than the students in the graduate group.

- Among students who attended school at least 80 percent of the time that they were enrolled in ninth grade, 87.7 percent graduated on time. Among students who attended less than 80 percent of the time that they were enrolled in ninth grade, only 16.2 percent graduated in four years. Students who attend school less than 80 percent of the time that they are enrolled in ninth grade are 6.8 times more likely to drop out than students who attend school at least 80 percent of the time.

- Among the students who have less than two semester Fs in core courses in their freshmen year, 87.0 percent graduate in four years. A student with two or more semester Fs in grade 9 is six and a half times more likely to drop out than a student who receives less than two semester Fs in ninth grade.

- A student who earns less than five credits in grade 9 is nine and a half times more likely to drop out than a student who earns at least five credits.

- Earning at least five credits in grade 9 is a stronger predictor than 5.5 credits because it has better distinguishing power to separate high school outcomes of students on-track and students not-on-track to graduate.

- Through the logistic regression analysis, following predictors were statistically significant at the .01 level for predicting graduation in four years:

    - receiving less than two semester Fs in core classes in grade 9,

    - earning at least five credits in grade 9

    - attending school 80 percent of the time in grade 9

    - passing Algebra I in eighth grade or earlier.

    Another predictor significant at the .05 level was the students' GPA in ninth grade.

A Comprehensive Study of the Predictors of High School Outcomes: Why Some Students Graduate on Time While Others Drop Out

Introduction

In the 2007-08 school year, the Anchorage School District reported a dropout rate of 3.9 percent, representing 895 dropouts out of 22772 students enrolled in grades 7-12.

The purpose of the study is to explore the factors that are associated with high school students' high school outcomes. In other words, we are trying to identify the characteristics that distinguish high school students who graduate in four years from high school students who drop out. We also hope to discover some timely predictors within students' 8th or 9th grade that indicate students' progress toward high school graduation. The finding of this research may help high school teachers and administrators identify students with a high risk of dropping out and work with parents to help those students graduate.

Previous research

There have been several research studies that focused on students who have dropped out of school. For example, a study conducted by the University of Chicago revealed that students who have completed enough credits by the end of freshman year and who have failed no more than one semester of a core subject area were very likely to graduate on time. Those two indicators have also been used as the on-track indicators for Chicago public high schools.

Neild and Herzog, in their study of high school students in the Philadelphia School District, found out that 8th graders who attended school less than 80 percent of the time, or who received an F in mathematics or English had at least a 75 percent chance of dropping out of high school. Findings from the Philadelphia study also suggested important indicators of at-risk students in grade 9: attending school less than 70 percent of time, earning fewer than two credits, and not being promoted to the 10th grade on time.

Both the Philadelphia and Chicago studies pointed out that absenteeism in the freshman year was a predictor that a student will likely drop out later.

An analysis conducted by the Juneau School District studied students who dropped out from 1999-00 to 2004-05 school years. Their findings suggested that Alaska Native youth dropped out at a higher rate than other race/ethnicity groups. Other findings indicated that the majority of the dropouts were proficient in reading, writing and mathematics on the Standards Based Assessment, and that the majority of the dropouts left in grade 9 or grade 10.

A study conducted by Bridgeland, Dilulio, and Morrison in conjunction with the Gates Foundation reported that while some students dropped out because of significant challenges, most dropouts were students who could have, and believed they could have, succeeded in school.

The analysis conducted by Kennelly and Monrad has shown that students with prior behavior problems were likely to fail during transition years and eventually drop out. There appears to be a window of opportunity in reaching grade 8 and grade 9 students who show signs of poor behavior but who are not yet failing academic subjects.

A cohort study conducted by Celio for the Kent School District in the state of Washington had the following findings: middle school grades and test scores can provide early warning signs; 9th grade academic performance is a powerful predictor of at-risk students; failing a course in the first semester of 9th grade, getting Fs in 9th grade, and earning less than a 1.9 GPA in 9th grade are early indicators of at-risk students.

3823

Descriptive Statistics of the Cohort Group

The cohort group in the study

This longitudinal study follows the cohort group of 8th graders in the 2003-04 school year. The cohort group is tracked as 8th graders in 2003-04, 9th graders in 2004-05, 10th graders in 2005-06, 11th graders in 2006-07 and 12th graders in 2007-08. Students who graduated by the 2007-08 school year are identified as the graduate group and students who dropped out between 2003-04 and 2007-08 school year are identified as the dropout group. Fifth-year seniors in the 2008-09 school year are excluded from the study, as well as students who transferred in and out of ASD between 2003-04 and 2007-08. In total, 4365 students were enrolled as 8th graders in 2003-04.

Three ways to report dropouts

In this report, the dropout numbers are reported in three different ways and it is essential to understand the differences between the numbers:

1. For the student cohort, a total of 774 students dropped out of school at least once from 2003-04 to 2007-08. Some of these 774 students dropped out and never returned, but some dropped out, reentered and graduated in four years. In other words, having a dropout record does not imply that the student dropped out and never returned. These 774 students will be referred as students who have a dropout record.
2. Among the 774 students who have a dropout record, 541 students never reentered the school system after their last dropout incident. These 541 students will be referred as students who dropped out and never returned after the last incident of dropping out.
3. Among the 774 students, some dropped out only once, but others dropped out more than once. In total, there were 1082 incidents of dropping out made by the above-mentioned 774 students.
4. These three numbers: 774 students who have a dropout record, the 541 students who dropped out and never returned after the last incident of dropping out, and the 1082 incidents of dropping out, will appear multiple times in this report. It is very important to understand the differences between these three numbers.

The final high school outcomes of the cohort group

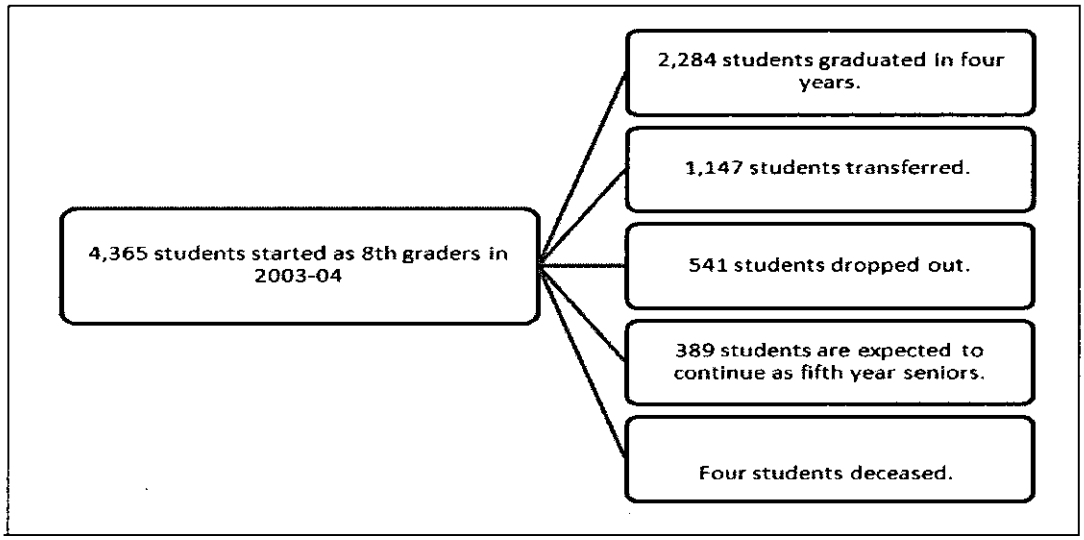
Table 1 presents an overall picture of the final high school outcomes of the 4365 students who were enrolled as 8th graders in 2003-04. This table indicates the status of the students in the cohort at the end of 2007-08 school year. Among the 4365 students, 2284 students graduated, 1147 students transferred out of the ASD, 541 students dropped out and never returned after the last incident of dropping out, 389 students were expected to continue as fifth year seniors, and 4 students deceased. Among the 389 students who were expected to return as fifth year seniors in 2008-09, 287 students actually returned.

Table 1: Final High School Outcomes of 8th Graders in 2003-04

	Number of Students	Percent of Total
Graduates	2284	52.3%
Transfers	1147	26.3%
Dropouts	**541***	**12.4%**
Continuing Students (Students Who Actually Returned in 2008-09)	389 (287)	8.9% (6.6%)
Death	4	0.1%
Total	4365	100.0%

*Students who dropped out and never returned after the last incident of dropping out.

Figure 1: Final High School Outcomes of the Students in the Study



Students who dropped out, returned and graduated

Among the 774 students who reported at least one incident of dropping out, 46 students graduated within four years, representing 5.9 percent of the group.

Table 2: Number of Students Who
Dropped out, Reentered and Graduated in Four Years

Students who dropped out, reentered and graduated in four years	46	5.9%
Total students who dropped out at least once.	774*	100.0%

*Students who have a dropout record. Some of these 774 students later reentered the school system.

Incidence rates of students who dropped out

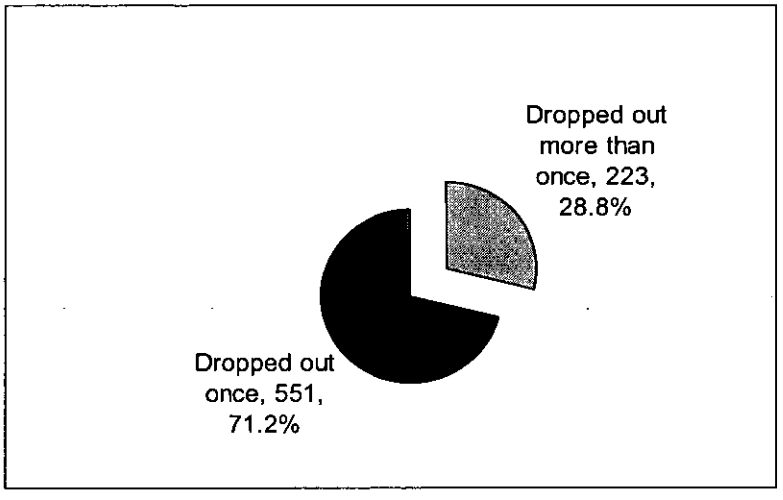
There were 1082 incidents of dropping out made by 774 students who have a dropout record. The difference reflects that some of the students dropped out more than once from the school system. Specifically, among the 774 students, 551 dropped out only once and 223 students dropped out more than once.

Table 3: Number of Students in the Cohort Group Who Dropped out from 2003-04 to 2007-08

	Number of Students	Percent of Total
Dropped out more than once	223	28.8%
Dropped out once	551	71.2%
Total students who dropped out at least once	774*	100.0%

*Students who have a dropout record. Some of these 774 students later reentered the school system.

Figure 2: Incidence Rates of Students Who Dropped out



Breakdown of the dropouts by designated student groups

Table 4 is the breakdown of the 541 students who dropped out and never returned after the last incident of dropping out by designated student groups and table 5 is the breakdown of the 774 students who have a dropout record, some of which later reentered the school system, by designated student groups. The majority of the students who dropped out and never returned after the last incident of dropping out are White students (46.2 percent of the group). It is interesting to note that 23.7 percent of the dropouts are Alaska Native and American Indian students, almost double the percentage of Alaska Native and American Indian students in the student cohort (23.7 percent compared to 13.7 percent, see table 4 and 6). This confirms the finding of the Juneau study that Alaska Native and American Indian students drop out at a higher rate than other race/ethnicity groups.

The percentage of low income students among the students who dropped out and never returned after the last incident of dropping out is also higher than the percentage of students in the grade 8 cohort (47.5 percent compared to 27.1 percent, see table 4 and 6). Table 4 also indicates

that females are slightly more likely to drop out than males, with females representing 54.3 percent of the dropouts and males representing 45.7 percent.

Table 4: Breakdown of the 541 Dropouts Who Never Returned by Designated Student Groups

Category	Count	Percent of Dropouts
Total	541*	100.0%
African American	51	9.4%
Alaska Native /American Indian	128	23.7%
Asian/Pacific Islander	63	11.6%
White	250	46.2%
Hispanic	28	5.2%
Multi-Ethnic	21	3.9%
Low Income	257	47.5%
Special Education	91	16.8%
Bilingual	77	14.2%
Migrant	22	4.1%
Female	294	54.3%
Male	247	45.7%

*Students who dropped out and never returned after the last incident of dropping out.

Table 5: Breakdown of the 774 Dropouts by Designated Student Groups

Category	Count	Percent of Dropouts
Total	774*	100.00%
African American	81	10.50%
Alaska Native /American Indian	194	25.10%
Asian/Pacific Islander	91	11.80%
White	339	43.80%
Hispanic	43	5.60%
Multi-Ethnic	26	3.40%
Low Income	375	48.40%
Special Education	124	16.00%
Bilingual	103	13.30%
Migrant	28	3.60%
Female	408	52.70%
Male	366	47.30%

*Students who have a dropout record. Some of these 774 students later reentered the school system.

Table 6: Breakdown of the Cohort of Grade 8 Students in 2003-04

Category	Count	Percent of Cohort
Total	4,365	100.00%
African American	359	8.20%
Alaska Native /American Indian	597	13.70%
Asian/Pacific Islander	496	11.40%
White	2,521	57.80%
Hispanic	264	6.00%
Multi-Ethnic	128	2.90%
Low Income	1,185	27.10%
Special Education	544	12.50%
Bilingual	441	10.10%
Migrant	105	2.40%
Female	2,223	50.90%
Male	2,142	49.10%

Final high school GPA of the 541 students who dropped out and never returned after the last incident of dropping out

Table 7 reports the final GPA of the 541 students who dropped out and never returned after the last incident of dropping out. The majority (72.8 percent) of the 541 students had a high school GPA less than or equal to 2.00 when they dropped out.

Table 7: Final GPA of Students Who Dropped out and Never Returned after the Last Incident of Dropping out

Final GPA	Count	Percent of Total
0.00-1.00	204	37.7%
1.01-2.00	190	35.1%
2.01-3.00	93	17.2%
3.01-4.00	54	10.0%
Total	541*	100.0%

*Students who dropped out and never returned after the last incident of dropping out.

Dropout categories

The dropout codes are reported by categories determined by ASD. Please note that the reporting of dropout codes has gone through some changes from 2003-04 to 2007-08. For example, starting in 2004-05 school year, summer leavers, or students who left at the end of the previous school year but did not come back in the new school year, are required to be coded as dropouts.

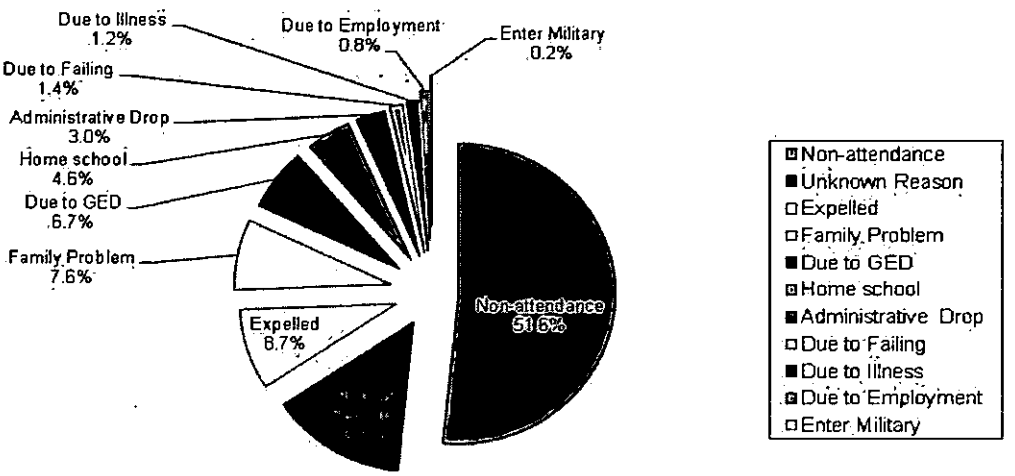
Table 8 reveals that, for the 1082 incidents of dropping out made by the 774 students who have a dropout record, the number one category for dropping out is "non-attendance" and the number two category for dropping out is "unknown reason". This supports the research indicating that dropping out of school is a gradual disengagement rather than a single event. The reasons for dropping out are multi-faceted and typically result in attendance issues to some degree. Following is a breakdown of the dropout reasons of the 1082 dropout incidents.

Table 8: Breakdown of the Dropout Categories
of the 1082 Dropout Incidents

Dropout Categories	Count	Percent
Non-attendance	558	51.6%
Unknown reason	153	14.1%
Expelled	94	8.7%
Family problem	82	7.6%
GED	73	6.7%
Home school (non-district)	50	4.6%
Administrative drop	33	3.0%
Due to failing	15	1.4%
Due to illness	13	1.2%
Due to employment	9	0.8%
Enter military	2	0.2%
Total	1,082*	100.0%

*The total incidents of dropping out made by the 774 students who have a dropout record.

Figure 3: Reasons of the 1082 Incidents of Dropping Out



Assessment results

The proficiency levels of the dropout group and graduate group on the Alaska Benchmark assessment in 2003-04 are analyzed. While students in the graduate group perform much better than students in the dropout group, it is interesting to note that the majority of the students in the dropout group are proficient in the reading and writing subtests. Students in the dropout group are not performing as well in the math subtest with 45.1 percent of the group scoring proficient or above.

Table 9: 2003-04 Grade 8 Alaska Benchmark Test Proficiency Rates
Between Students Who Dropped out and Students Who Graduated

		Reading		Writing		Math	
		Not Proficient	Proficient	Not Proficient	Proficient	Not Proficient	Proficient
		Percent	Percent	Percent	Percent	Percent	Percent
Outcome	Dropouts	45.3%	54.7%	38.6%	61.4%	54.9%	45.1%
	Graduates	17.2%	82.8%	9.8%	90.2%	19.6%	80.4%

The grade 9 and grade 10 SBA test results reveal a similar trend—students in the graduate group perform better than those in the dropout group, but the majority of the students in the dropout group are proficient in SBA reading test in both years. The dropout group does not perform as well in the SBA writing and math tests. In SBA writing, 58.5 percent of the dropout group are proficient in grade 9 and 45.7 percent are proficient in grade 10. In SBA math, 38.2 percent of the dropout group are proficient in grade 9 and 35.6 percent are proficient in grade 10. The overall proficiency rates of the graduates increase from grade 9 to grade 10 in all three subtests while the overall proficiency rates of the dropouts decrease in all three subtests.

Table 10: 2004-05 Grade 9 SBA Proficiency
Between Students Who Dropped out and Students Who Graduated

		Reading		Writing		Math	
		Not Proficient	Proficient	Not Proficient	Proficient	Not Proficient	Proficient
		Percent	Percent	Percent	Percent	Percent	Percent
Outcome	Dropouts	38.6%	61.4%	41.5%	58.5%	61.8%	38.2%
	Graduates	10.3%	89.7%	11.8%	88.2%	23.3%	76.7%

Table 11: 2005-06 Grade 10 SBA Proficiency
Between Students Who Dropped out and Students Who Graduated

		Reading		Writing		Math	
		Not Proficient	Proficient	Not Proficient	Proficient	Not Proficient	Proficient
		Percent	Percent	Percent	Percent	Percent	Percent
Outcome	Dropouts	38.8%	61.2%	54.3%	45.7%	64.4%	35.6%
	Graduates	8.3%	91.7%	10.8%	89.2%	21.6%	78.4%

The Alaska High School Graduation Qualifying Exam (HSGQE) is an essential skills test that students need to pass before they can be awarded a high school diploma. Students take the test starting in the spring of 10th grade. The majority of the dropout group were proficient in HSGQE reading, writing and math subtests.

Table 12: HSGQE Proficiency Comparison
Between Students Who Dropped out and Students Who Graduated

		Reading		Writing		Math	
		Not Proficient	Proficient	Not Proficient	Proficient	Not Proficient	Proficient
		Percent	Percent	Percent	Percent	Percent	Percent
Outcome	Dropouts	40.0%	60.0%	35.2%	64.8%	46.3%	53.7%
	Graduates	0.0%	100.0%	0.0%	100.0%	0.0%	100.0%

When dropouts leave school

Table 13-17 and figure 4 report information on when students physically leave the school district. Table 13 indicates that the majority of the students leave in grade 9, grade 10 and grade 11. Specifically, 24.5 percent of the dropouts leave in grade 9; 23.9 percent and 23.8 percent leave in grade 10 and grade 11 respectively.

Table 13 reports the percent of dropouts by grade level based upon the 1082 dropout incidents of the cohort. Grades 9, 10, and 11 have similar rates around 24 percent when reported by incidents.

Table 13: The Grade at Which Students Dropped Out*
2003-04 to 2007-08

		Gender					
		Total		Female		Male	
		Number of Students	Percent of Total	Number of Students	Percent of Total	Number of Students	Percent of Total
Grade at Time of Drop	8	105	9.7%	62	10.5%	43	8.7%
	9	265	24.5%	136	23.1%	129	26.1%
	10	259	23.9%	134	22.8%	125	25.3%
	11	257	23.8%	144	24.5%	113	22.9%

	Total	1,082***	100.0%	588	100.0%	494	100.0%

*Table 13 reports the grade level in which students dropped out for the 1082 incidents of dropping out. If a student dropped out more than once, each incident is reported separately.
**Table 13 reports that 196 incidents of dropping out occurred in grade 12 from 2003-04 to 2007-08. These incidents of drop were made by 163 students. The 2007-08 NCLB Summer Data Collection file reports that 390 students dropped out as 12th graders in 2007-08. The difference of 227 students is the students who dropped out as 12th graders in 2007-08 but who were not enrolled as 8th graders in 2003-04. Since the cohort for this study is 8th grader in 2003-04, these 227 students are not included in the study.
***The total incidents of dropping out made by the 774 students who have a dropout record.

Figure 4: Grade Level at Time of Drop

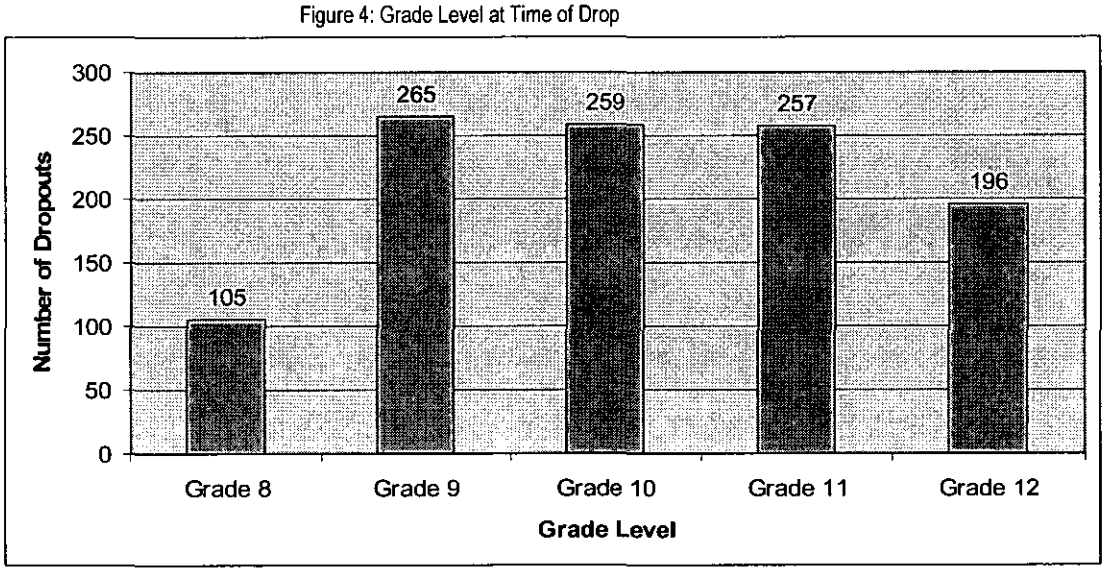

Table 14 reports, for the 541 students who dropped out and never returned after the last incident of dropping out, the percent of dropouts by grade level based upon their first reported dropout incident. Grade 9 has the highest percentage of students dropping out when reported by the first incident.

Table 14: The Grade in Which Students First Dropped Out for the 541 Students*

2003-04 to 2007-08

	Grade	Number of Students Who Dropped out	Percent of Total
Grade at Time of First Drop	8	60	11.10%
	9	137	25.30%
	10	128	23.70%
	11	106	19.60%
	12	110	20.30%
	Total	541**	100.00%

* If a student has multiple dropout records from 2003-04 to 2007-08, table 14 indicates the grade level in which the student's first dropout record is reported.

** Students who dropped out and never returned after the last incident of dropping out.

Table 15 reports, for the 541 students who dropped out and never returned after the last incident of dropping out, the percent of dropouts by grade level based upon their last reported dropout incident. Grade 12 has the highest percentage of students dropping out when reported by the last incident.

Table 15: The Grade in Which Students Last Dropped Out for the 541 Students*

2003-04 to 2007-08

	Grade	Number of Students Who Dropped out	Percent of Total
Grade at Time of Last Drop	8	20	3.7%
	9	105	19.4%
	10	117	21.6%
	11	135	25.0%
	12	164	30.3%
	Total	541**	100.0%

* If a student has multiple dropout records from 2003-04 to 2007-08, table 15 indicates the grade level in which the student's last dropout incident occurred.

** Students who dropped out and never returned after the last incident of dropping out.

Table 16 reports, for the 774 students who have a dropout record, the percent of dropouts by grade level based upon the first time the students dropped out of school. Grade 9 has the highest percentage of students dropping out when reported by the first incident.

Table 16: The Grade in Which Students First Dropped Out for the 774 Students*

2003-04 to 2007-08

	Grade	Number of Students Who Dropped out	Percent of Total
Grade at Time of Drop	8	89	11.5%
	9	219	28.3%
	10	182	23.5%
	11	150	19.4%
	12	134	17.3%
	Total	774**	100.0%

*If a student has multiple dropout records from 2003-04 to 2007-08, table 16 indicates the grade level in which the

student's first dropout record is reported.
**Students who have a dropout record. Some of these 774 students later reentered the school system.

Table 17 reports, for the 774 students who have a dropout record, the percent of dropouts by grade level based upon their last reported dropout incidents. For this cohort, the highest rate was reported at grade 11 with 26.1 percent of the total.

Table 17: The Grade in Which Students Last Dropped Out for the 774 Students*
2003-04 to 2007-08

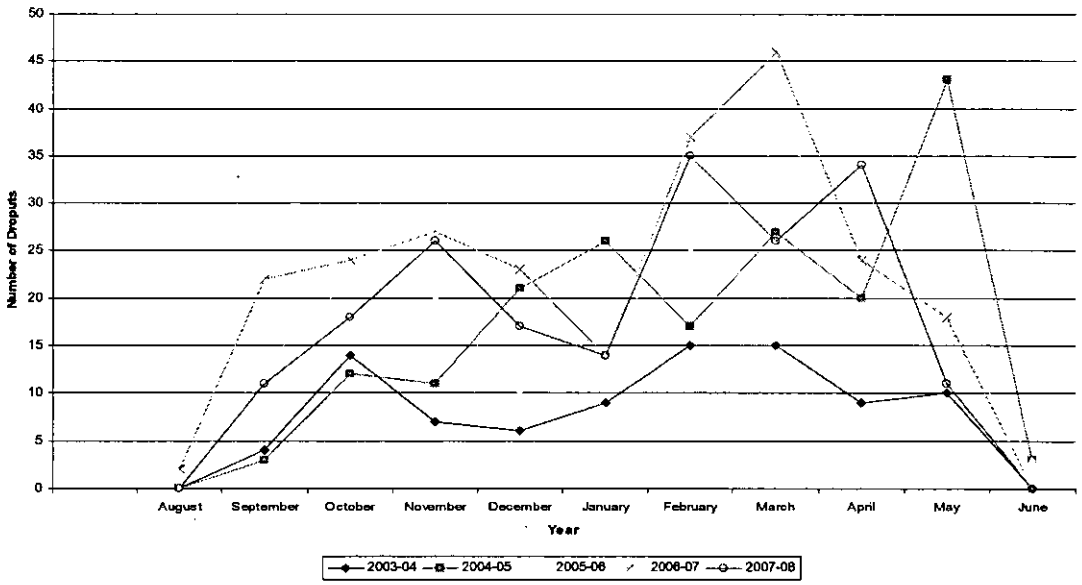
	Grade	Number of Students Who Dropped out	Percent of Total
Grade at Time of Drop	8	44	5.7%
	9	169	21.8%
	10	181	23.4%
	11	202	26.1%
	12	178	23.0%
	Total	774**	100.0%

*If a student has multiple dropout records from 2003-04 to 2007-08, table 17 indicates the grade level at which the student's last dropout record is reported.
**Students who have a dropout record. Some of these 774 students later reentered the school system.

The month in which students dropped out

The dropout data is further analyzed to illustrate the dropouts by months from 2003-04 to 2007-08 (see figure 5 below). Based on the five-year average, March is the month with the highest number of dropouts (on average 30 students drop out in March); February is the month with the second highest number of dropouts (on average 26 students drop out in February). This figure indicates all incidents of dropping out for each year reported.

Figure 5: Dropouts by Month by Year*



* Summer leavers are excluded because they do not have withdrawal date.

Number of school changes in grades 9-12

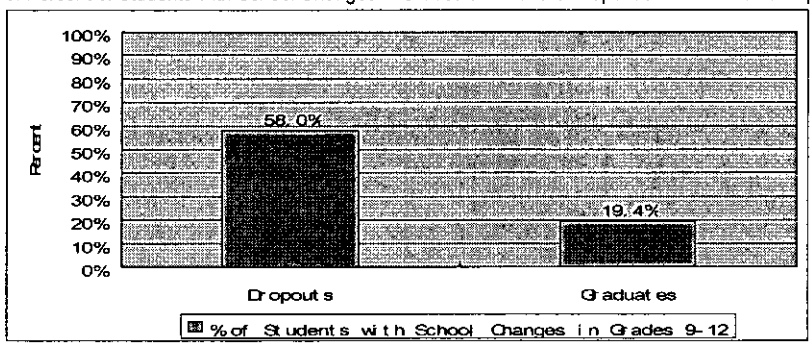
Table 18 reports the total number of school changes in grade 9-12 for the dropout group and the graduate group. The majority of the dropout group (58 percent) have changed schools in grades 9-12, and approximately 20 percent of the graduate group report school changes in grades 9-12.

Table 18: School Changes in Grades 9-12

	Number of Students	Students with School Changes in Grades 9-12	Percent of Total
Dropouts	541*	314	58.0%
Graduates	2284	444	19.4%

*Students who dropped out and never returned after the last incident of dropping out.

Figure 6: Percent of Students with School Changes in Grades 9-12 for the Dropout and Graduate Group



3835

Regression Results

Several variables are found by previous research to be important predictors of students at-risk of dropping out. For example:

- Both attendance rates in grade 8 and grade 9 are found to be predictors of at-risk students. In this study, we need to find out which one is a better predictor to be included in the regression analysis.
- Similarly, several variables related to freshmen course repeats are suggested to be predictors—course repeats in core courses, in English course, in mathematics courses, or in English and mathematics courses. Correlation analysis is conducted to identify the best predictor among these four variables.
- For the same reason, we look at several variables related to course performance--the number of semester Fs received in grade 9 in core courses, in English course, in mathematics courses, or in English and mathematics courses.

Attendance rate

Based on research findings, two attendance rates are studied to explore which would be a better predictor—attending school less than 80 percent of the time that students are enrolled in grade 8 or attending school less than 80 percent of the time that they are enrolled in grade 9. The attendance rate is computed by taking the aggregate daily attendance (sum of the days present of each individual student when school is in session) and dividing by the aggregate daily membership (sum of the days present and absent of each individual student when school is in session).

A correlation analysis suggests that student attendance rate at grade 9 is a better predictor of high school outcomes. The correlation coefficient between grade 9 attendance rate and high school outcomes is 0.538, and the correlation coefficient between grade 8 attendance rate and high school outcomes is 0.413. The interpretation for the correlation coefficient is that the higher the coefficient, the stronger the relationship. Therefore attendance rate in grade 9 is a stronger predictor.

Table 19: The Correlation Coefficient between High School Outcomes and the Attendance Records

Correlation with High School Outcomes	Correlation Coefficient*
Attendance Records in Grade 9	0.538
Attendance Records in Grade 8	0.413

* For the correlation coefficient the higher the better. A higher coefficient shows a stronger relationship.

3836

The correlation coefficient ranges from negative 1 to positive 1, where negative 1 indicates a perfect negative relationship and positive 1 indicates a perfect positive relationship. Following is the correlation coefficient categories:

Table 20: Correlation Coefficient Categories

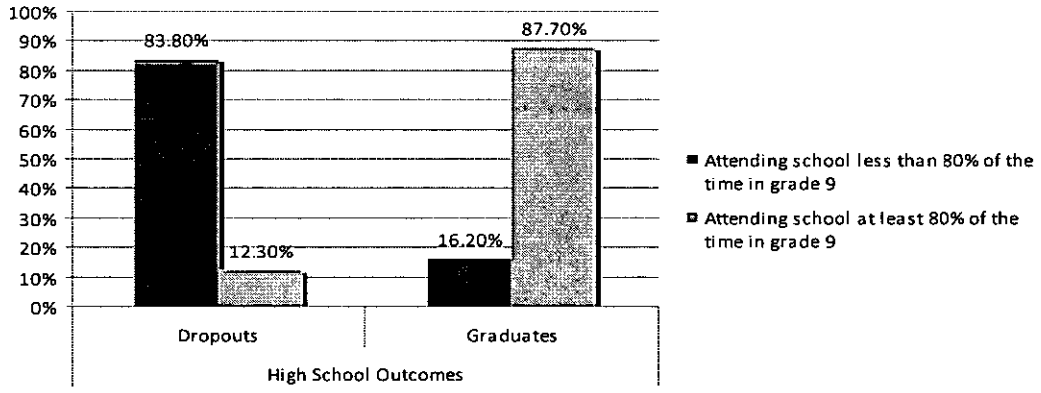
Correlation Coefficient	Category
0.9 to 1.0	Very strong positive correlation
0.7 to 0.9	Strong, high positive correlation
0.4 to 0.7	Moderate positive correlation
0.2 to 0.4	Weak, low positive correlation
0.0 to 0.2	Very weak to negligible positive correlation
0.0 to -0.2	Very weak to negligible negative correlation
-0.2 to -0.4	Weak, low negative correlation
-0.4 to -0.7	Moderate negative correlation
-0.7 to -0.9	Strong, high negative correlation
-0.9 to -1.0	Very strong negative correlation

The following table further analyzes the relationship between attendance rate in grade 9 and high school outcomes. Table 21 shows that among students attending school at least 80 percent of the time that they are enrolled in grade 9, 87.7 percent graduate on time. Among the students who attend school less than 80 percent of the time that they are enrolled in grade 9, only 16.2 percent graduate in four years. Students who attend school less than 80 percent of the time that they are enrolled in grade 9 are 6.8 times more likely to drop out than students who attend school at least 80 percent of the time that they are enrolled (83.8 percent compared to 12.3 percent).

Table 21: The Relationship between Attendance Rate in Grade 9 and High School Outcomes

Correlation with High School Outcomes		High School Outcomes	
		Dropouts	Graduates
Students attending school at least 80 percent of the time that they were enrolled in Grade 9 in 2004-05	No	83.8%	16.2%
	Yes	12.3%	87.7%

Figure 7: The Relationship between Grade 9 Attendance and High School Outcomes



3837

Failure in courses

This study looks at the relationship between the failure rate in grade 9 and the high school outcomes. Four variables--the number of semester Fs in the core courses, the number of semester Fs in mathematics and English courses, the number of semester Fs in mathematics courses, and the number of semester Fs in English courses are analyzed to see whether one is a better predictor at identifying at-risk students than the other.

Based on the findings of the correlation study, the number of semester Fs received in the core courses is the best indicator because it has the highest correlation coefficient of 0.552 among the four variables.

Table 22: The Correlation Coefficient between High School Outcomes and the Number of Semester Fs in Courses

Correlation with High School Outcomes	Correlation Coefficient*
Number of Semester Fs in Core Courses	0.552
Number of Semester Fs in Math and English Courses	0.522
Number of Semester Fs in English Courses	0.477
Number of Semester Fs in Math Courses	0.450

* For correlation coefficient the higher the better. A higher coefficient shows a stronger relationship.

The following table further analyzes the relationship between the numbers of semester Fs students receive in grade 9 and their high school outcomes. For example, among the students who have less than two semester Fs in core courses in their freshmen year, 87.0 percent graduate in four years. If the students receive at least two semester Fs in core courses in grade 9, the likelihood of graduating in four years decreases by 71.4 percentage points (15.6 percent compared to 87 percent). A student with two or more semester Fs in grade 9 is six and a half times more likely to drop out than a student who receives less than two semester Fs in grade 9 (84.4 percent compared to 13.0 percent).

Table 23: The Relationship between the Number of Semester Fs in Grade 9 and High School Outcomes

	High School Outcomes	
	Dropouts	Graduates
Students Receiving Less Than Two Semester Fs in Grade 9	13.0%	87.0%
Students Receiving at Least Two Semester Fs in Grade 9	84.4%	15.6%

Figure 8: The Relationship between the Number of Semester Fs in Core Courses in Grade 9 and High School Outcomes

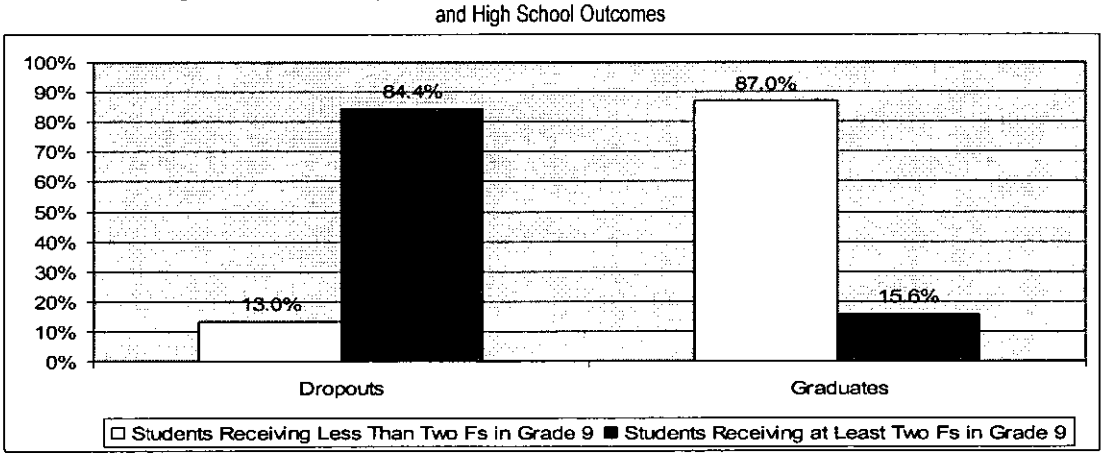


Figure 9 further analyzes the relationship between the number of semester Fs in core courses in grade 9 and whether the student graduates within four years. The relationship between number of semester Fs and graduation is very strong. The vast majority (88.2 percent) of students with no semester Fs in core courses graduate in four years. Students who receive just one F in core courses have a graduation rate 17.3 percentage points lower than students without semester Fs (70.9 percent compared to 88.2 percent). Students who receive two semester Fs in core courses are 50.2 percentage points less likely to graduate than students with no semester Fs (38.0 percent compared to 88.2 percent).

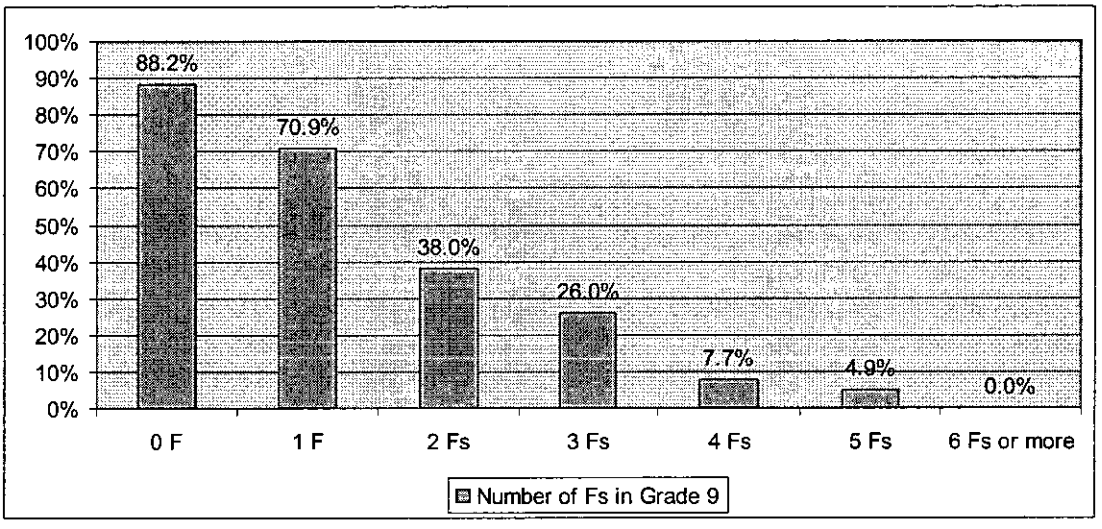
Figure 9: The Relationship between the Number of Semester Fs in Core Courses in Grade 9 and Whether Students Graduated in Four Years



Number of credits accrued in grade 9

Number of credits accrued in grade 9 has also been identified as an important predictor of high school graduation by several previous studies. The Chicago study used earning at least 5 credits in grade 9 (21 credits required for graduation) as an on-track indictor. Clearly, the more credits students earn in the freshmen year, the more likely they will graduate on time. The analysis suggest that 92.1 percent of the students who earn at least 5 credits in grade 9 graduate in four years, while 25.1 percent of the students who earn less than 5 credits in grade 9 graduate in four years. A student who earns less than 5 credits in grade 9 is nine and a half times more likely to drop out than a student who earns at least 5 credits (74.9 percent compared to 7.9 percent).

Table 24: The Relationship between High School Outcomes and Credits Earned

		High School Outcomes	
		Dropouts	Graduates
Credits Earned	Less than 5	74.9%	25.1%
	5 or More	7.9%	92.1%

Currently in the Anchorage School District, freshmen on-track are defined as students who have earned a minimum of 5.5 credits and failed no more than one semester of a core subject. To find out which is a stronger indicator--earning at least 5 credits in grade 9 or at least 5.5 credits in grade 9, we also study the relationship between high school outcomes and earning at least 5.5

3839

credits in grade 9. The results show that 93.5 percent of the students who earn at least 5.5 credits in grade 9 graduate in four years. For students earning less than 5.5 credits in grade 9, 63.2 percent drop out.

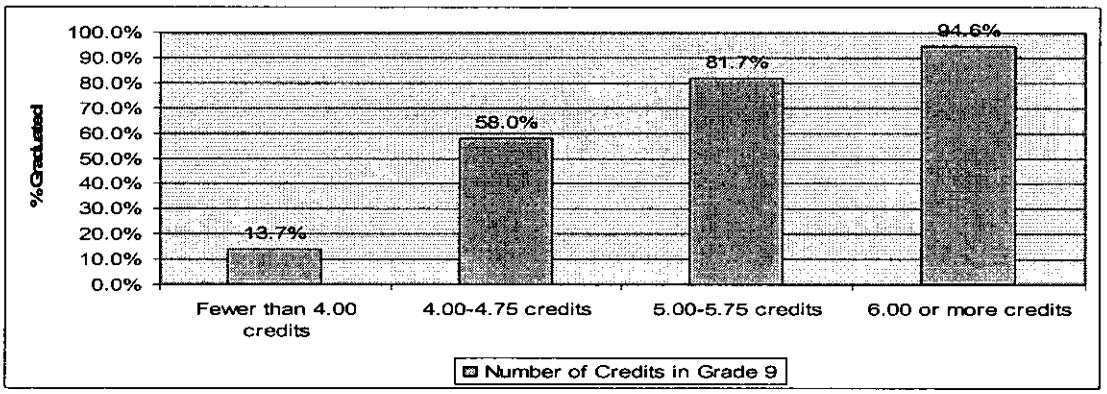
The analysis shows that earning at least 5 credits in grade 9 is a stronger predictor. The reason is that the on-track indicator is used to identify students at risk for dropping out and we need to select an indicator with a high probability of identifying at-risk students. If we use earning at least 5.5 credits in grade 9 as the predictor of students at risk of dropping out, 63.2 percent of the students that we predict as at-risk students actually drop out; if we use earning at least 5 credits in grade 9 as the predictor, 74.9 percent of the students that we predict as at-risk students actually drop out. Clearly, earning at least 5 credits in grade 9 is a stronger predictor.

Table 25: The Relationship between High School Outcomes and Credits Earned

		High School Outcomes	
		Dropouts	Graduates
Credits Earned	Less than 5.5	63.2%	36.8%
	5.5 or More	6.5%	93.5%

Using earning 5 credits in grade 9 as the predictor, students in the cohort group are further divided into four groups to look at the impact of credits earned in grade 9 and the high school outcomes. Figure 10 shows that for student with fewer than 4 credits in grade 9, only 13.7 percent graduate within four years. The graduation rate for students earning between 4 and 4.75 credits in grade 9 increases to 58.0 percent. The students who earn between 5 and 5.75 credits in grade 9 have a graduation rate 23.7 percentage points higher than students in the previous group (81.7 percent compared to 58.0 percent). For students earning at least 6 credits in grade 9, almost 95 percent graduate in four years.

Figure 10: The Relationship between the Number of Credits Earned in Grade 9 and High School Outcomes



Course repeats

We also study which variable in the number of course repeats in grade 9 is a better predictor of high school outcomes---course repeats in core courses, in mathematics courses, in English courses, or in English and mathematics courses. Based on the results of the correlation analysis, number of course repeats in math courses is the best predictor among the four with the highest coefficient of 0.108, but the relationship is not strong. Generally a correlation coefficient between 0.000 and 0.200 is considered a very weak relationship.

Table 26: The Relationship between Course Repeats and High School Outcomes

Correlation with the Student Outcome (Graduated or Dropped out)	Correlation Coefficient*
Number of Repeats in Math Courses	0.108
Number of Semester Fs in Core Courses	0.072
Number of Repeats in English and Math Courses	0.066
Number of Semester Fs in Core Courses	0.028

* For correlation coefficient the higher the better. A higher coefficient shows a stronger relationship.

Logistic regression used in this report

Generally, regression is used to study the relationship between a group of predictors and the dependent variable. The purpose of the multiple regression is to learn how much of the change in the dependent variable (high school outcomes) can be explained or predicted by the change in a group of predictors. If the dependent variable is a dichotomous, or two-level, variable such as high school outcomes, a logistic regression should be used. In our study, high school outcomes is a dichotomous variable—students either drop out or graduate. Logistic regression uses the change in a group of predictors to predict the likelihood that a student will graduate in four years.

Regression results

After determining which factors to include in the model, the following are entered into a regression model to find out which factors are statistically significant predictors of high school outcomes (graduate or drop out). In making these decisions, we have to identify factors that have data collected systematically throughout the district.

Table 27: Variables in the Regression Model

Variables in the Model
Receiving less than 2 semester Fs in core classes in grade 9
Earning at least 5 credits in grade 9
Receiving a waiver in athletics
Attending school 80 percent of the time in grade 9
Students with school changes in grade 9
Suspensions in grade 9
Passing Algebra I in grade 8 or earlier
Course repeats in grade 9
Retained in grade 8
Took performance arts courses in grades 9-12
Took career tech courses in grades 9-12
Students with school changes in grades 9-12
Students' GPA in grade 9

In educational research, statistical significance reveals how often the results would be obtained by chance. If a predictor is significant at the .01 level, there is only 1 percent probability that the influence of the predictor on the high school outcomes is due to chance (rather than "real" influence). The results of the regression reveal that four predictors are statistically significant at .01 level ($p<.01$): receiving 2 semester Fs in core courses in grade 9, receiving at least 5 credits in

grade 9, attending school at least 80 percent of the time in grade 9, and passing Algebra I in grade 8 or earlier. Another predictor is significant at the .05 level: students' GPA in grade 9.

Table 28: Regression Results

Variables	Significance	Statistically Significant
Receiving less than 2 semesters F's in core classes in grade 9*	0.000	Significant at .01 level
Earning at least 5 credits in grade 9*	0.000	Significant at .01 level
Attending school 80 percent of the time in grade 9*	0.001	Significant at .01 level
Passing Algebra I in 8th grade or Earlier*	0.003	Significant at .01 level
Students GPA in grade 9**	0.043	Significant at .05 level
Receiving a waiver in athletics	0.059	No
Suspensions in grade 9	0.085	No
Course repeats in math in grade 9	0.102	No
Retained in grade 8	0.226	No
Took performance arts courses	0.278	No
Took career tech courses	0.291	No
Students with school changes in grades 9-12	0.336	No
Student with school changes in grade 9	0.403	No

* Significant at the .01 level
** Significant at the .05 level

Although we have already determined that earning at least 5 credits in grade 9 is a stronger predictor because of its higher predictability of at-risk students, the regression analysis was also conducted using earning at least 5.5 credits in grade 9 as the predictor since 5.5 credits is what is currently used in our on-track indicator. The results show that earning 5.5 credits in grade 9 is also a statistically significant predictor (p=0.005), but earning at least 5 credits in grade 9 is a stronger predictor (p=0.000).

Table 29: Regression Results

Variables	Significance	Statistically Significant
Receiving less than 2 semesters F's in core classes in grade 9*	0.000	Significant at .01 level
Earning at least 5.5 credits in grade 9*	0.005	Significant at .01 level
Attending school 80 percent of the time in grade 9*	0.008	Significant at .01 level
Passing Algebra I in 8th grade or Earlier*	0.009	Significant at .01 level
Students GPA in grade 9**	0.049	Significant at .05 level
Receiving a waiver in athletics	0.067	No
Suspensions in grade 9	0.077	No
Course repeats in math in grade 9	0.094	No
Took performance arts courses	0.270	No
Took career tech courses	0.283	No
Retained in grade 8	0.318	No
Students with school changes in grades 9-12	0.328	No
Student with school changes in grade 9	0.395	No

* Significant at the .01 level
** Significant at the .05 level

Next, we conducted in-depth analysis to answer two research questions:

- There are four predictors significant at the .01 level. If ASD has to create an on-track indicator, how many of these four predictors should be included?
- Is the on-track indicator currently used by ASD a strong predictor for graduation outcome?

All the following analyses are done with earning 5 credits in grade 9 as the predictor because of its higher predictability power.

The top two predictors are basically the same as the on-track indicator used by the Chicago Public Schools. If we use these two predictors--receiving less than two semester Fs in core courses in grade 9 and earning at least 5 credits in grade 9 in the prediction, the results show that 92.9 percent of the students meeting these two criterion graduate in four years, and only 25.8 percent of the students not meeting these two criterion graduate in four years.

Table 30: Using the Top Two Predictors to Predict High School Outcomes

		Outcome	
		Dropouts	Graduates
Two Predictors	Students not On-Track	74.2%	25.8%
	Students On-track	7.1%	92.9%

When we include the top three predictors—receiving less than two semester Fs in core courses in grade 9, earning at least 5 credits in grade 9, and attending school at least 80 percent of the time in grade 9 in the prediction, table 31 shows that 93.6 percent of the students meeting these three criterion graduate in four years, and only 29.2 percent of the students not meeting these three criterion graduate in four years.

Table 31: Using the Top Three Predictors to Predict High School Outcomes

		Outcome	
		Dropouts	Graduates
Three Predictors	Students not On-Track	70.8%	29.2%
	Students On-track	6.4%	93.6%

When we include the top four predictors—receiving less than two semester Fs in core courses in grade 9, earning at least 5 credits in grade 9, attending school at least 80 percent of the time in grade 9, and completing Algebra I in grade 8 into the prediction, table 32 shows that 97.3 percent of the student meeting these four criterion graduate in four years, and 71.2 percent of the students not meeting these four criterion graduate in four years. The analysis indicates that the four-predictor model is not a strong on-track indicator because it does not have enough distinguishing power to separate high school outcomes of students on-track and students not on-track. Therefore the recommendation is to use either the two-predictor indicator or the three-predictor indicator.

Table 32: Using the Top Four Predictors to Predict High School Outcomes

		Outcome	
		Dropouts	Graduates
Four Predictors	Students not On-Track	28.8%	71.2%
	Students On-track	2.7%	97.3%

3843

Summary

A dropout study by Celio at the Kent School District proposes that an accurate early warning system to identify at-risk students should have the following four components:

- Use results from other research on graduation and dropping out to guide the selection of variables
- Select a single cohort and track it systematically through the schools within the district
- Map the trajectories of actual students through 6th to 12th grades and beyond
- Identify indicators of risk that are specific to the school district

We believe the dropout study conducted at the ASD follows the guideline of the four-component model. First, this dropout research uses several academic and behavior predictors suggested by studies in Chicago, Philadelphia, Kent, Juneau and other school districts to guide the selection of variables. Second, this study selects a single cohort, 8th graders in 2003-04, and tracks the cohort from 2003-04 to 2007-08. Finally, this study identifies significant indicators of at-risk students that are specific to the ASD. The major difference between the model and our study is that we track the cohort from 8th to 12th grades, while the model used by the Kent School District proposes tracking students from 6th to 12th grades.

Through correlation study and regression analysis, we are able to identify the following predictors statistically significant at the .01 level:

- Receiving less than 2 semester Fs in grade 9
- Receiving at least 5 credits in grade 9
- Receiving at least 5.5 credits in grade 9
- Attending school 80 percent of the time in grade 9
- Passing Algebra I in grade 8 or earlier

Another predictor is found to be statistically significant at the .05 level:

- Students' GPA in grade 9

Executive Summary

The central message of this report is that while some students drop out because of significant academic challenges, most dropouts are students who could have, and believe they could have, succeeded in school. This survey of young people who left high school without graduating suggests that, despite career aspirations that require education beyond high school and a majority having grades of a C or better, circumstances in students' lives and an inadequate response to those circumstances from the schools led to dropping out. While reasons vary, the general categories remain the same, whether in inner city Los Angeles or suburban Nebraska.

Why Students Drop Out

There is no single reason why students drop out of high school. Respondents report different reasons: a lack of connection to the school environment; a perception that school is boring; feeling unmotivated; academic challenges; and the weight of real world events. But indications are strong that these barriers to graduation are not insurmountable.

- **Nearly half (47 percent) said a major reason for dropping out was that classes were not interesting.** These young people reported being bored and disengaged from high school. Almost as many (42 percent) spent time with people who were not interested in school. These were among the top reasons selected by those with high GPAs and by those who said they were motivated to work hard.
- **Nearly 7 in 10 respondents (69 percent) said they were not motivated or inspired to work hard, 80 percent did one hour or less of homework each day in high school, two-thirds would have worked harder if more was demanded of them (higher academic standards and more studying and homework), and 70 percent were confident they could have graduated if they had tried.** Even a majority of those with low GPAs thought they could have graduated.
- **Many students gave personal reasons for leaving school. A third (32 percent) said they had to get a job and make money; 26 percent said they became a parent; and 22 percent said they had to care for a family member.** Many of these young people reported doing reasonably well in school and had a strong belief that they could have graduated if they had stayed in school. These students also were the most likely to say they would have worked harder if their schools had demanded more of them and provided the necessary support.

It is clear that some dropouts, but not the majority, leave school because of significant academic challenges.

- **Thirty-five percent said that "failing in school" was a major factor for dropping out;** three out of ten said they could not keep up with schoolwork; and 43 percent said they missed too many days of school and could not catch up.
- **Forty-five percent said they started high school poorly prepared by their earlier schooling.** Many of these students likely fell behind in elementary and middle school and could not make up the necessary ground. They reported that additional supports in high school that would have made a difference (such as tutoring or after school help) were not there.
- **Thirty-two percent were required to repeat a grade before dropping out and twenty-nine percent expressed significant doubts that they could have met their high school's requirements for graduation even if they had put in the necessary effort.** The most academically challenged students were the most likely to report that their schools were not doing enough to help students when they had trouble learning and to express doubt about whether they would have worked harder if more had been expected of them.

3846

As complex as these individual circumstances may be, for almost all young people, dropping out of high school is not a sudden act, but a gradual process of disengagement; attendance patterns are a clear early sign.

- **Fifty-nine to 65 percent of respondents missed class often the year before dropping out.** Students described a pattern of refusing to wake up, skipping class, and taking three hour lunches; each absence made them less willing to go back. These students had long periods of absences and were sometimes referred to the truant officer, only to be brought back to the same environment that led them to become disengaged.
- **Thirty-eight percent believed they had "too much freedom" and not enough rules.** As students grew older, they had more freedom and more options, which led some away from class or the school building. It was often too easy to skip class or engage in activities outside of school.

For those students who dropped out, the level of proactive parental involvement in their education was low.

- **Fifty-nine percent of parents or guardians of respondents were involved in their child's schooling,** with only one-fifth (21 percent) "very" involved. More than half of those parents or guardians who were involved at all were involved mainly for discipline reasons.
- **Sixty-eight percent of respondents said their parents became more involved only when they were aware that their child was on the verge of dropping out.** The majority of parents were "not aware" or "just somewhat aware" of their child's grades or that they were about to leave school.

In hindsight, young people who dropped out of school almost universally expressed great remorse for having left high school and expressed strong interest in re-entering school with students their age.

- **As adults, the overwhelming majority of poll participants (81 percent) said that graduating from high school was important to success in life.**
- **Three-fourths (74 percent) said that if they were able to relive the experience, they would have stayed in school** and 76 percent said they would definitely or probably re-enroll in a high school for people their age if they could.
- **Forty-seven percent would say that not having a diploma makes it hard to find a good job.** They wished they had listened to those who warned them of problems associated with dropping out, or that such voices had been more persistent.

What Might Help Students Stay in School

While there are no simple solutions to the dropout crisis, there are clearly "supports" that can be provided within the academic environment and at home that would improve students' chances of staying in school. While most dropouts blame themselves for failing to graduate, there are things they say schools can do to help them finish.

- **Improve teaching and curricula to make school more relevant and engaging and enhance the connection between school and work:** Four out of five (81 percent) said there should be more opportunities for real-world learning and some in the focus groups called for more experiential learning. They said students need to see the connection between school and getting a good job.
- **Improve instruction, and access to supports, for struggling students:** Four out of five (81 percent) wanted better teachers and three-fourths wanted smaller classes with more

3847

individualized instruction. More than half (55 percent) felt that more needed to be done to help students who had problems learning, and 70 percent believed more tutoring, summer school and extra time with teachers would have improved their chances of graduating.

- **Build a school climate that fosters academics:** Seven in ten favored increasing supervision in school and more than three in five (62 percent) felt more classroom discipline was necessary. More than half (57 percent) felt their schools did not do enough to help students feel safe from violence. Seven in ten (71 percent) said their schools did not do enough to make school interesting.
- **Ensure that students have a strong relationship with at least one adult in the school:** While two-thirds (65 percent) said there was a staff member or teacher who cared about their success, only 56 percent said they could go to a staff person for school problems and just two-fifths (41 percent) had someone in school to talk to about personal problems. More than three out of five (62 percent) said their school needed to do more to help students with problems outside of class. Seven in ten favored more parental involvement.
- **Improve the communication between parents and schools:** Seventy-one percent of young people surveyed felt that one of the keys to keeping students in school was to have better communication between the parents and the school, and increasing parental involvement in their child's education. Less than half said their school contacted their parents or themselves when they were absent (47 percent) or when they dropped out (48 percent).

Policy Pathways

The stories, insights and reflections from this student survey and the focus groups reveal the importance of the student voice in the discussion about what must be done to improve high school graduation rates and to prepare struggling students for successful futures. The students have spoken. It is time for us to respond. To help these students succeed, we need:

In Schools and Communities

- **Different schools for different students.** Instead of the usual "one-size fits all" school, districts should develop options for students, including a curriculum that connects what they are learning in the classroom with real life experiences and with work, smaller learning communities with more individualized instruction, and alternative schools that offer specialized programs to students at-risk of dropping out. Teachers should have high expectations for their students and try different approaches to motivate them to learn.
- **Parent engagement strategies and individualized graduation plans.** Schools and teachers should strengthen their communication with parents and work with them to ensure students show up and complete their work and develop graduation plans that are shared with parents.
- **Early warning systems.** Schools need to develop district-wide (or even state-wide) early warning systems to help them identify students at risk of failing in school and to develop mechanisms that trigger, and ensure there is follow through on, the appropriate support for the students. One clear step relates to absenteeism. Every day, schools should have a reliable list of the students who failed to attend school and should notify parents or guardians immediately and take appropriate action to ensure students attend school and have the support they need to remain in school.
- **Additional supports and adult advocates.** Schools need to provide a wide range of supplemental services or intensive assistance

3848

strategies for struggling students in schools – literacy programs, attendance monitoring, school and peer counseling, mentoring, tutoring, double class periods, internships, service-learning, summer school programs, and more – and provide adult advocates in the school who can help students find the support they need. Schools also need to provide appropriate supports to students with special needs, such as pregnant women and students with disabilities, and enhance their coordination with community-based institutions and government agencies.

In States

- **A re-examination of the compulsory school age requirements.** Students identified "too much freedom" as a key factor that enabled them to drop out of school, and attendance is a strong predictor of dropping out. States should consider raising the age at which students can legally leave school from 16 or 17 to 18. Together with well-trained staffs, more manageable caseloads, working partnerships with government agencies, and efforts to address the underlying conditions that caused students to leave school in the first place, we believe this action could have a significant effect on reducing dropout rates.
- **More accurate data from states and school districts.** Schools and communities cannot adequately address the dropout problem without an accurate account of it. There are too many ways to calculate graduation and dropout rates that disguise the problem. The National Governors Association has made good progress in getting all 50 states to agree to a common definition for calculating graduation rates. More work needs to be done to build the data systems that will allow states to collect and publish information on graduation and dropout rates and to monitor progress state by state over time.

In the Nation

- **More accurate national data from federal departments and agencies.** Just as all 50 states are working to obtain more accurate data to help schools and communities understand the extent of the dropout problem, the federal government should review the Current Population Survey and other data it collects to ensure that national data also paints an accurate picture of the problem.
- **Better incentives under federal law.** Low-performing students need more support in school. Schools should have incentives under the No Child Left Behind law to raise both test scores and graduation rates and to ensure there is a balance between the two so that proper attention is given to low-performing students. If schools are only rewarded for raising test scores, the law could have the unintended effect of giving schools an incentive to "push out" low-performing students whose test scores would bring down school averages.
- **Research on what works and dissemination of best practices.** While states and school districts have instituted many dropout prevention programs, there remains a need for federal evaluations of these programs and the sharing of the most innovative and successful programs that can be brought to scale.

Next Steps

- **A national conversation and response.** Educators, policymakers and leaders from various sectors should make addressing the high school dropout epidemic a top national priority. All avenues to invest leaders in a better understanding of the problem and common solutions should be undertaken – including congressional hearings, White House conferences, summits of state and local officials, and public forums in schools and communities. In all cases, the voices of young people who dropped out of high school should be heard.

3849

Executive Summary

The central message of this report is that while some students drop out because of significant academic challenges, most dropouts are students who could have, and believe they could have, succeeded in school. This survey of young people who left high school without graduating suggests that, despite career aspirations that require education beyond high school and a majority having grades of a C or better, circumstances in students' lives and an inadequate response to those circumstances from the schools led to dropping out. Introduction

What the best and wisest parent wants for (his/her) own child that must the community want for all its children. Any other idea . . . is narrow and unlovely.
John Dewey

Question: *Do schools need to do more to address barriers to learning so all children succeed?*

Obvious answer: *Yes, BUT . . .*

The *Yes* reflects the fact that schools have long recognized that their mission's success requires that they play a role in dealing with factors that interfere with youngsters' learning and performance.

The *BUTs* are . . . *there's too much to do already and too little to do it with . . . . There's never enough money . . . . There's never enough staff to do what needs to be done, never enough space to house all we might want to do, and never enough time.*

These concerns are all real. AND, schools still must find ways to do more and better in order to enhance educational results. Vision and commitment to new directions is essential. Also essential is using existing school and community resources in better ways.

One major way schools have attempted to play a role in addressing youngsters' problems is through providing education support programs and services. A portion of these commonly are referred to as pupil "support" services and are the province of specialists such as school counselors, psychologist, social workers, school nurses, and others. Others services are offered as part of categorical programs for compensatory and special education and safe and drug free schools and various other specially funded projects. From the perspective of the school's mission, all this activity is necessary because of its potential for enhancing educational results. Another way schools attempt to address barriers to learning and promote healthy development is to connect with community resources. Ultimately, the focus should be on weaving together all school and community resources that are concerned with development and learning.

Question: *Is it worth the effort to pursue the difficulties invovled in doing all this restructuring?*

To do otherwise is to maintain a very unsatisfactory status quo.

The Center has developed policy reports, guidebooks, and other resources on the above matters. The purpose of this report is to provide a brief overview highlighting

- why policy makers should expand the focus of school reform to encompass a reframing and restructuring of education support programs/services and school-community partnerships
- ways to go about doing so.

Ask any teacher: *On most days, how many of your students come to class motivationally ready and able to learn?* We've asked that question in conversations across the country. The consistency of response is surprising. In urban and rural schools serving economically disadvantaged families, teachers tell us they're lucky if 10-15% of their students fall into this group. Suburban public school teachers usually say 75% fit that profile.

In too many schools, the educational mission is thwarted because of many factors that interfere with youngsters' learning and performance (see Figure 1). It is for this reason that schools invest in education support programs and services. Given that the investment is substantial, it is somewhat surprising how little attention educational policymakers and reformers give to rethinking this arena of school activity.

If schools are to ensure that *all* students succeed, designs for reform must reflect the full implications of *all*. Clearly, *all* includes more than students who are motivationally ready and able to profit from "high standards" demands and expectations. It must also include the many who aren't benefitting from instructional reforms because of a host of *external* and *internal* barriers interfering with their development and learning.

Most learning, behavior, and emotional problems seen in schools are rooted in failure to address external barriers and learner differences in a comprehensive manner. And, the problems are exacerbated as youngsters internalize the frustrations of confronting barriers and experience the debilitating effects of performing poorly at school.

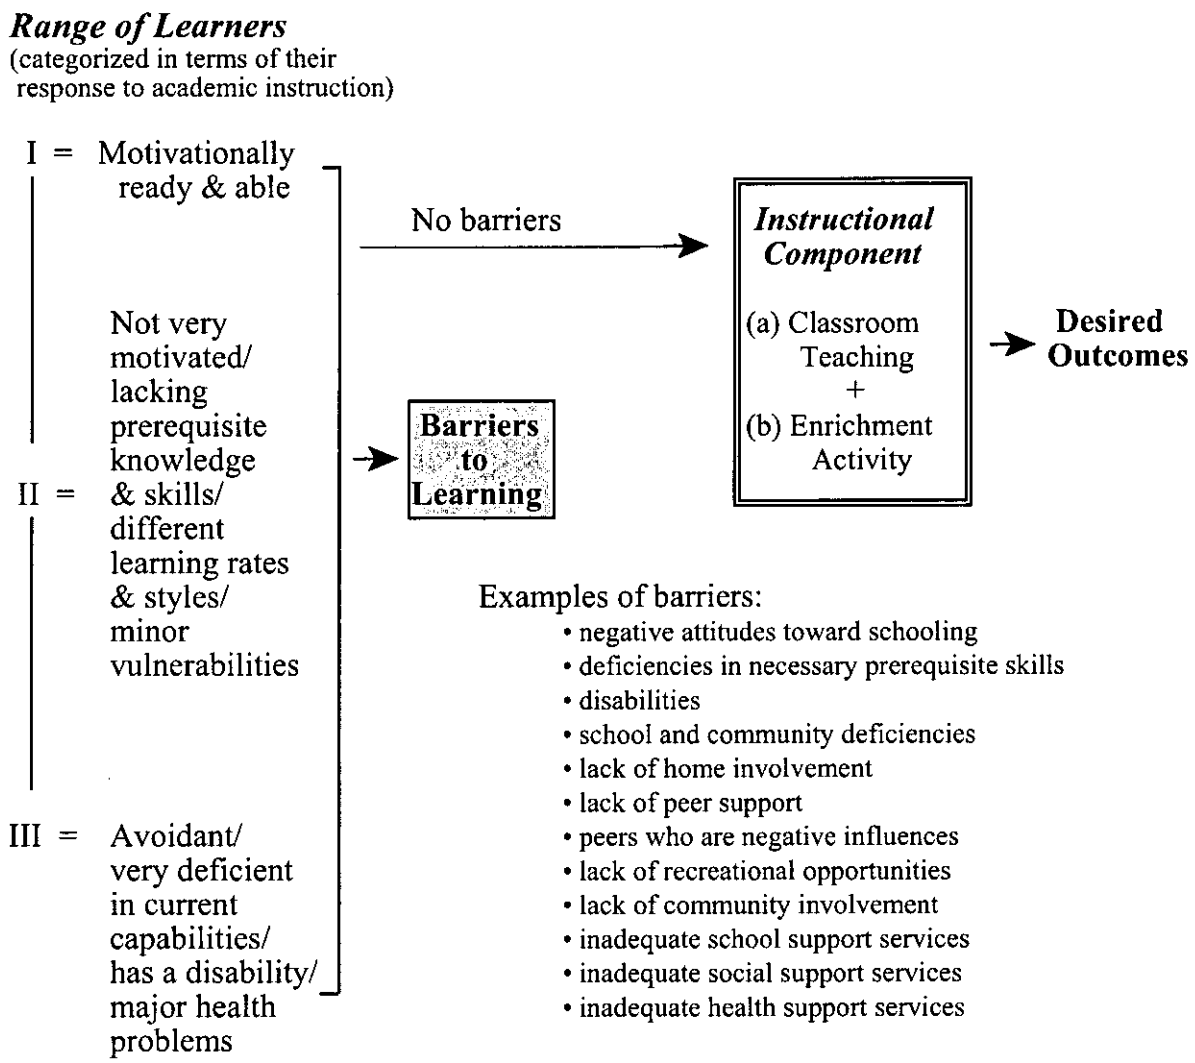
How many are affected? Figures vary. An estimate from the Center for Demographic Policy suggests that 40% of young people are in bad educational shape and therefore will fail to fulfill their promise. The reality for many large urban schools is that well-over 50% of their students manifest significant learning, behavior, and emotional problems. For a large proportion of these youngsters, the problems are rooted in the restricted opportunities and difficult living conditions associated with poverty.

The litany of barriers to learning is all too familiar to anyone who lives or works in communities where families struggle with low income. In such neighborhoods, school and community resources often are insufficient to the task of providing the type of basic (never mind enrichment) opportunities found in higher income communities. The resources also are inadequate for dealing with such threats to well-being and learning as health problems, difficult family circumstances, gangs, violence, and drugs. Inadequate attention to language and cultural considerations and to high rates of student mobility creates additional barriers not only to student learning but to efforts to involve families in youngsters' schooling. Such conditions are breeding grounds for frustration, apathy, alienation, and hopelessness.

It would be a mistake, however, to think only in terms of poverty. As recent widely-reported incidents underscore, violence is a specter hanging over all schools. And, while guns and killings capture media attention, other forms of violence affect and debilitate youngsters at every school. Even though there isn't good data, those who study the many faces of violence tell us that large numbers of students are caught up in cycles where they are the recipient or perpetrator (and sometimes both) of physical and sexual harassment ranging from excessive teasing and bullying to mayhem and major criminal acts.

3856

Figure 1. Barriers to Learning*



*Although a few youngster start out with internal problems and many others internalize negative experiences, there can be little doubt that external factors are primarily responsible for the majority of learning, behavior, and emotional problems encountered in schools.

What Do Schools Do to Address Barriers to Learning?

School policy makers have a long-history of trying to assist teachers in dealing with problems that interfere with school learning. This includes providing a variety of school-owned counseling, psychological, and social service programs. It also includes enhancing school linkages with community service agencies and other neighborhood resources. Paralleling these efforts is a natural interest in promoting healthy development. Despite all this, it remains the case that too little is being done, and prevailing approaches are poorly conceived.

School-Owned Programs and Services

Almost all schools flirt with some forms of preventive and corrective activity focused on specific types of concerns, such as learning problems, substance abuse, violence, teen pregnancy, school dropouts, delinquency, and so forth. Some programs are provided throughout a school district, others are carried out at or linked to targeted schools. The interventions may be designed to benefit all students in a school, those in specified grades, and/or those identified as having special needs. The activities may be implemented in regular or special education classrooms and may be geared to an entire class, groups, or individuals; or they may be designed as "pull out" programs for designated students. They encompass ecological, curricular, and clinically oriented activities.

Most school-owned programs and services are offered by pupil services personnel. Federal and state mandates and special projects tend to determine how many pupil services professionals are employed. Governance of their daily practices usually is centralized at the school district level. In large districts, counselors, psychologists, social workers, and other specialists may be organized into separate units. Such units straddle regular, special, and compensatory education.

. . . few schools come close to being to do the job that is needed

On paper, it looks like a lot. It is common knowledge, however, that few schools come close to having enough. Most offer only bare essentials. Too many schools can't even meet basic needs. Primary prevention really is only a dream. Analyses of the situation find that programs are planned, implemented, and evaluated in a piecemeal manner. Not only are they carried on in relative isolation of each other, a great deal of the work is oriented to discrete problems and overrelies on specialized services for individuals and small groups. In some schools, a student identified as at risk for grade retention, dropout, and substance abuse may be assigned to three counseling programs operating independently of each other. Such fragmentation not only is costly, it works against good results.

3858

School-Community Collaborations

In recent years, renewed interest in school-community collaborations has included a focus on enhancing health, mental health, and social services for students and their families. State-wide initiatives are being tested across the country. The work has fostered such concepts as *school linked services, coordinated and integrated services, wrap-around services, one-stop shopping, full service schools,* and *community schools.* Where initiatives have incorporated a wellness model, youth development concepts such as *promoting protective factors, asset-building,* and *empowerment* also are in vogue.

Not surprisingly, early findings primarily indicate how hard it is to establish collaborations. Still, a reasonable inference from available data is that school-community partnerships can be successful and cost effective over the long-run. By placing staff at schools, community agencies make access easier for students and families -- especially those who usually are underserved and hard to reach. Such efforts not only provide services, they seem to encourage schools to open their doors in ways that enhance recreational, enrichment, and remedial opportunities and greater family involvement. Analyses of these programs suggest better outcomes are associated with empowering children and families, as well as with having the capability to address diverse constituencies and contexts. Many families using school-based centers become interested in contributing to school and community. They provide social support networks for new students and families, teach each other coping skills, participate in school governance, and help create a psychological sense of community. At the same time, the problem of fragmentation is compounded in many locales as community services are brought to school campuses. This happens because the prevailing approach is to coordinate *community* services and *link* them to schools in ways that *co-locate* rather than integrate them with the ongoing efforts of school staff.

. . . the trend is to co-locate services at a school rather than integrating them with the ongoing efforts of school staff

And Everything is Marginalized!

Policymakers have come to appreciate the relationship between limited intervention efficacy and the widespread tendency for complementary programs to operate in isolation. Limited efficacy does seem inevitable as long as interventions are carried out in a piecemeal fashion. The call for "integrated" services clearly is motivated by a desire to reduce redundancy, waste, and ineffectiveness resulting from fragmentation.

Unfortunately, the focus on fragmentation ignores the overriding problem, namely that all efforts to address barriers to learning and promote healthy development are *marginalized* in policy and practice. Clearly, the majority of school counseling, psychological, and social service programs are viewed as supplementary -- often referred to as support or auxiliary services.

The degree to which marginalization is the case is seen in the lack of attention given such activity in school improvement plans and certification reviews. School policy makers deal with such programs on an ad hoc basis and continue to ignore the need for reform and restructuring in this arena. Community involvement also is a marginal concern at most schools.

In short, policies shaping current agendas for school and community reforms are seriously flawed. Although fragmentation is a significant problem, marginalization is the more fundamental concern. Yet concern about marginalization is not even on the radar screen of most policy makers.

3859

Expanding School Reform

While higher standards and accountability are necessary ingredients in the final recipe for school reform, they are insufficient for turning around most schools that are in trouble. At such schools, overreliance on raising the bar and demands for rapid test score increases may even be counterproductive because they force attention away from addressing the multitude of overlapping factors that interfere with effective learning and teaching.

. . . short shrift is given to student support programs

The present situation is one where, despite awareness of the many barriers to learning, education reformers continue to concentrate *mainly* on improving *instruction* (efforts to directly facilitate learning) and the *management and governance* of schools. Then, in the naive belief that a few health and social services will suffice in addressing barriers to learning, they talk of "integrated health and social services." And, in doing so, more attention has been given to linking sparse community services to school sites than to restructuring school programs and services designed to support and enable learning. The short shrift given to "support" programs and services by school reformers continues to marginalize activity that is essential to improving student achievement.

. . . comprehensive, multifaceted approaches are needed to enable all students to benefit from high standards and improved teaching

Ultimately, addressing barriers to development and learning must be approached from a societal perspective and with fundamental systemic reforms. The reforms must lead to development of *a comprehensive, integrated continuum of programs*. Such a continuum must be multifaceted and woven into three overlapping school-community systems: systems of prevention; systems of early intervention to address problems as soon after onset as feasible; and systems of care for those with chronic and severe problems. All of this encompasses an array of programmatic activity that must effectively (a) enhance regular classroom strategies to improve instruction for students with mild-to-moderate behavior and learning problems, (b) assist students and families as they negotiate the many school-related transitions, (c) increase home and community involvement with schools, (d) respond to and prevents crises, and (e) facilitate student and family access to specialized services when necessary. While schools can't do everything needed, they must play a much greater role in developing the programs and systems that are essential if *all* students are to benefit from higher standards and improved instruction.

Establishment of a comprehensive, integrated approach to address barriers to development and learning effectively requires cohesive policy that facilitates the blending of resources. In schools, this includes restructuring to combine parallel efforts supported by general funds, compensatory and special education entitlements, safe and drug free school grants, and specially funded projects. In communities, the need is for better ways of connecting agency and other resources to each other and to schools. The aim is cohesive and potent school-community partnerships. With proper policy support, a comprehensive approach can be woven into the fabric of every school, and neighboring schools can be linked to share limited resources and achieve economies of scale.

3860

Restructuring Support Services is Key to
Enhancing Educational Results

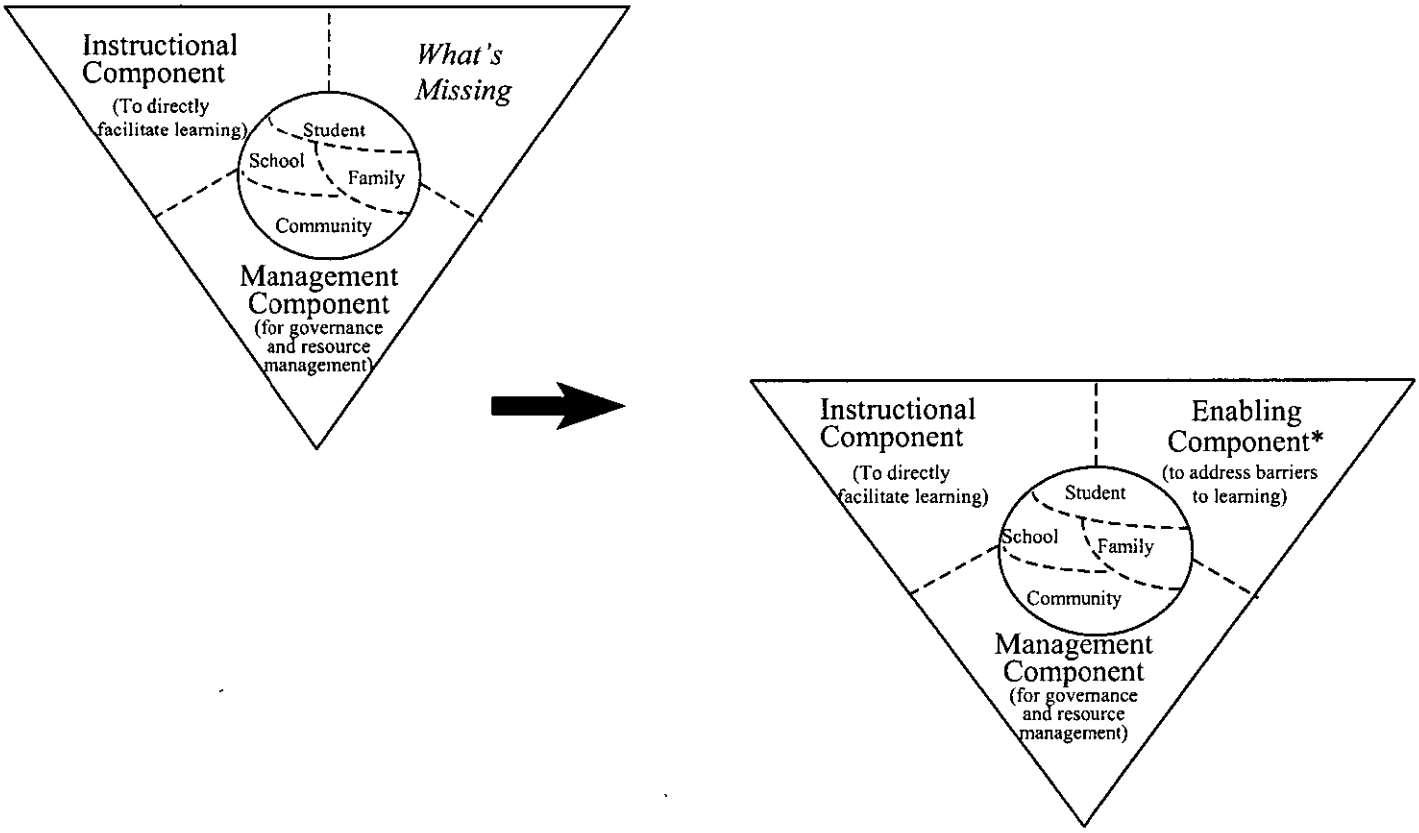
Policy makers have yet to come to grips with the realities of addressing barriers to learning and teaching. Current initiatives must be rethought, and elevated in policy status so they are on a par with the emphasis on reforming the instructional and management components of schooling. Concentrating on matters such as curriculum and pedagogical reform, standard setting, decentralization, professionalization of teaching, shared decision making, and parent partnerships clearly is necessary but certainly is not sufficient given the nature and scope of barriers that interfere with school learning and performance among a large segment of students. As long as the movement to restructure education primarily emphasizes the instructional and management components, too many students in too many schools will not benefit from the reforms. Thus, the demand for significant improvements in achievement scores will remain unfulfilled.

Clearly, there is a policy void surrounding the topic of restructuring school-operated interventions that address barriers to teaching and learning. Current policy focuses primarily on linking community services to schools and downplays a new role for existing school resources. This perpetuates an orientation that over-emphasizes individually prescribed services and results in fragmented community-school linkages. All this is incompatible with efforts to develop a truly comprehensive, integrated approach to ameliorating problems and enhancing educational results.

It is time for reform advocates to expand their emphasis on improving instruction and school management to include a *comprehensive* component for addressing barriers to learning (see Figure 2). And in doing so, they must pursue this third component with the same level of priority they devote to the other two. That is, such an enabling (or learner support) component must be a primary and essential facet of school reform. This will require shifting policy to push school reform beyond the current tendency to concentrate mainly on instruction and management. School reformers like to say their aim is to ensure *all* children succeed. We think that this third component is the key to making *all* more than the rhetoric of reform.

3861

Figure 2. Moving from a two to a three component model for reform and restructuring



*The third component (an enabling component) is established in policy and practice as primary and essential and is developed into a comprehensive approach by weaving together school and community resources.

What Are the Benefits of Enhancing the Focus on Addressing Barriers to Learning?

As with all school reform, the first and foremost concern is improving student academic performance and achievement. The reality is that the best instructional reforms cannot produce the desired results for a large number of students as long as schools do not have comprehensive approaches for addressing external and internal barriers to learning and teaching. And, it is evident that schools are not developing such approaches because current policy marginalizes and fragments the emphasis on these matters.

The most fundamental benefits to be accrued from increasing the focus on these concerns are enhanced educational results

Those who already have begun restructuring support services stress that the reforms contribute to

- formulation of a major policy framework and specific recommendations for ways to improve district efforts to address barriers to student learning and enhance healthy development
- ongoing monitoring of and pressure for progress related to district reforms for addressing barriers (e.g., early intervention as a key aspect for dealing with the problems of social promotion, expulsion, dropout, and growing numbers referred for special education)
- provision of a morale-boosting open forum for line staff and community to hear about proposed changes, offer ideas, and raise concerns
- connecting community agency resources to the district and sensitizing agency staff to district concerns in ways that contribute to improved networking among all concerned

...and there are other benefits as well

- regular access by board members and district staff, *without fees,* to an array of invaluable expertise from the community to explore how the district should handle complex problems arising from health and welfare reforms and the ways schools should provide learning supports
- expanding the informed cadre of influential advocates supporting district reforms

3863

Some Models

Several reform initiatives already are exploring the power of moving from a two to a three component framework to ensure barriers to development and learning are addressed appropriately. Such an expanded approach is seen in the exciting work underway in the Memphis City Schools and in the break-the-mold design developed by the New American Schools' Urban Learning Centers (see Figure 3 and Exhibit A). These models provide a blueprint for how schools and communities can collaborate in developing a comprehensive, multifaceted component to address barriers to learning and promote healthy development.

Such pioneering efforts offer new hope to students, parents, and teachers. They can play a major role for society by creating caring and supportive learning environments that maximize achievement and well-being for all youngsters. They can also help strengthen neighborhoods and communities. There can be little doubt that prevailing approaches to school reform are insufficient. The next step must be a total restructuring of all education support programs and services -- including counseling, psychological, social services, special and compensatory education programs, safe and drug free school programs, student assistance programs, transition programs, some health education efforts, and more. To do any less is to maintain a very unsatisfactory status quo.

Addressing Barriers *and* Promoting Healthy Development

We hasten to stress that a focus on addressing barriers to development and learning is not at odds with the "paradigm shift" that emphasizes assets, strengths, protective factors, and resilience. The value of promoting healthy development and primary prevention is both evident and in need of continuous advocacy. At the same time, we know that too many youngsters are growing up and going to school in situations that not only do not promote healthy development but are antithetical to the process.

Commitment to enhancing child and youth development and improving instruction can help redress these conditions. But, effective prevention also requires direct and comprehensive action designed to remove or at least minimize the impact of barriers -- hostile environments, individual vulnerabilities, and true disabilities and disorders. Otherwise, such barriers will continue to interfere with youngsters benefiting from programs designed to promote development and provide the best possible instruction

In addressing barriers to learning at schools, much of the intervention focus must be on enhancing the school-wide and classroom environment, and also connecting with the community to prevent problems and enhance every youngster's strengths. At the same time, for the few individuals who need something more, schools and communities, separately and working together, must provide essential supports and assistance. No paradigm shift can afford to ignore these matters or assume that they will be rectified if only schools will make a greater commitment to youth development. It's not a matter of either/or. It's not about a positive vs. a negative emphasis (or excusing or blaming anyone). And, it's not about what's wrong vs. what's right with kids. It is about developing and building on assets, strengths, protective factors, resilience. It also is about continuing to face up to the reality of major extrinsic barriers, as well as problem conditions that are intrinsic to or have become internalized by some youngsters. We all share the responsibility of promoting healthy development *and* addressing barriers.

3864

Figure 3. A model for an enabling component at a school site

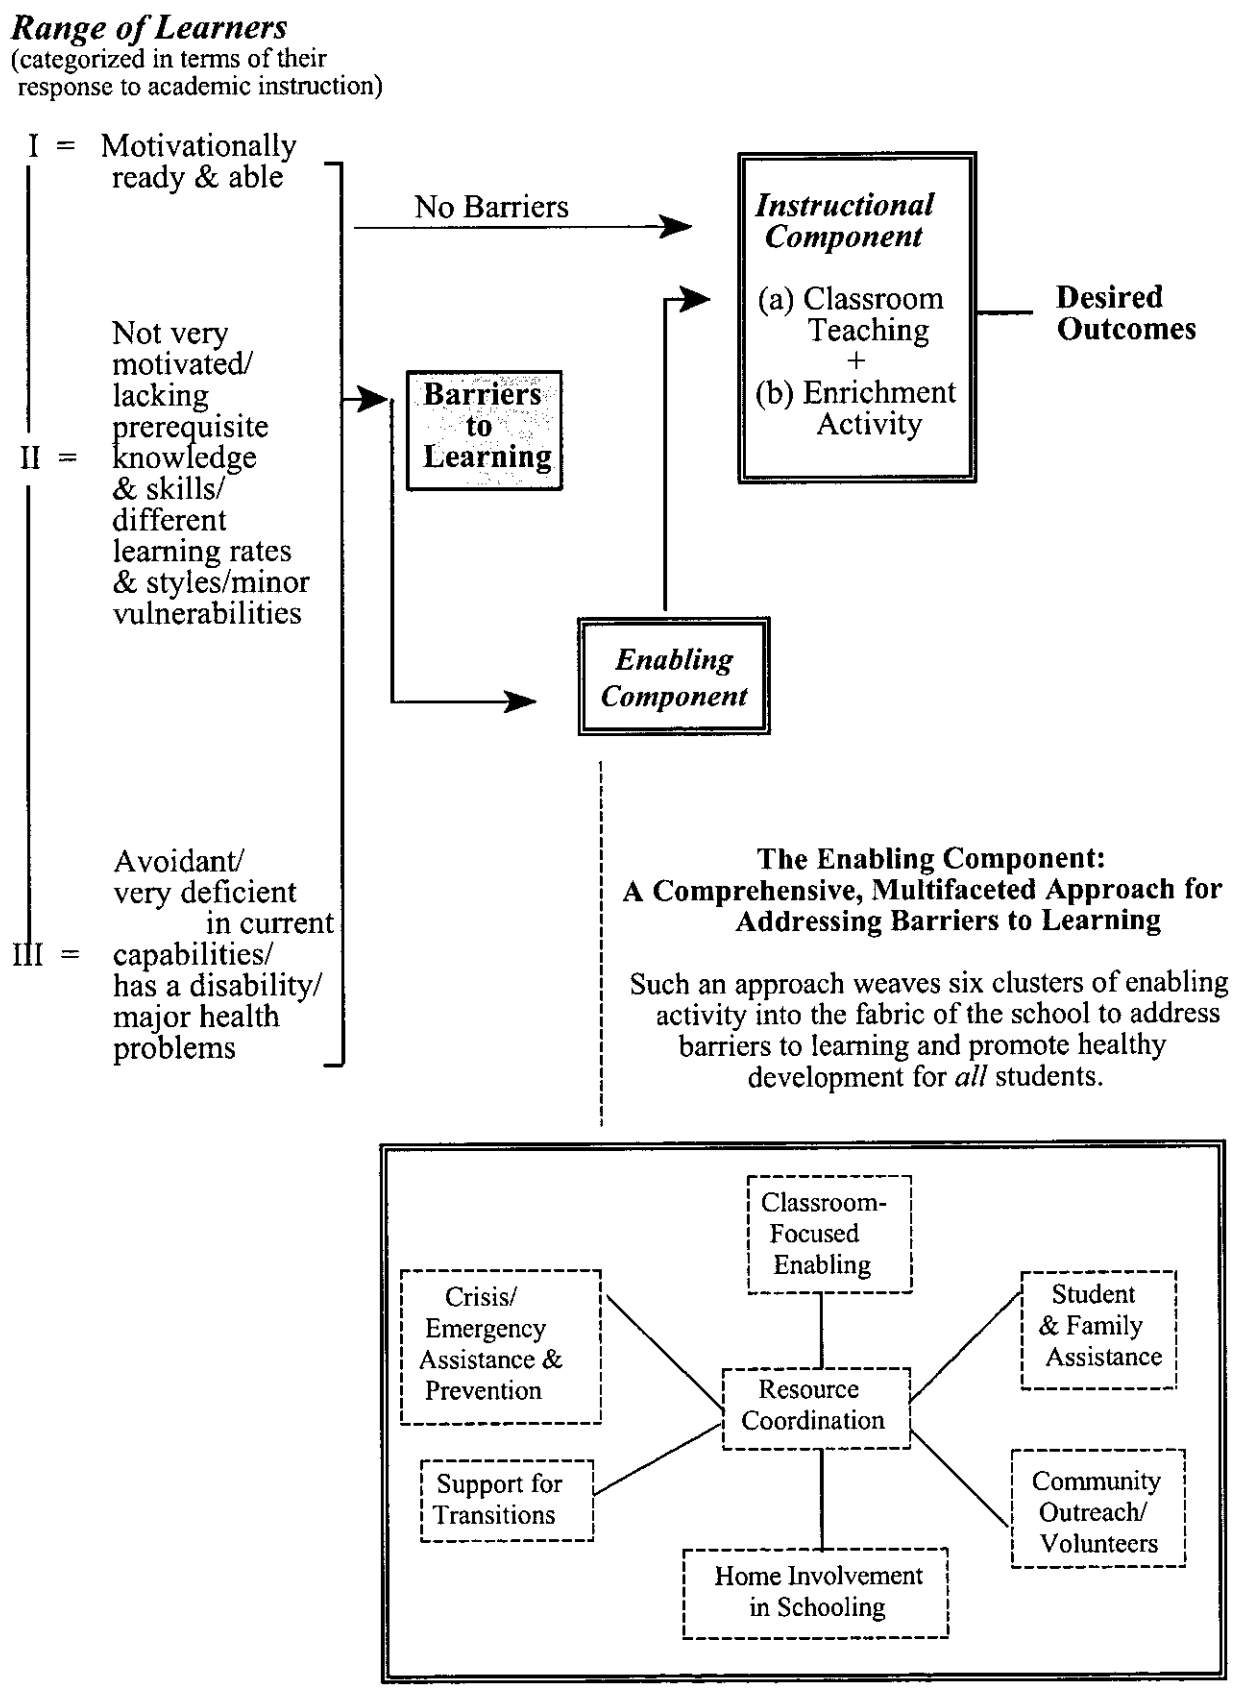


Exhibit A: School Improvement Expansion at the District Level

Having made good progress related to instruction and management concerns, districts must move on to expand the agenda for school improvement to encompass a third component to address factors interfering with students taking full advantage of academic improvements. This expansion is seen as especially critical in districts where the student population is characterized by high levels of poverty and family/community problems. In such districts, the majority of students are described as experiencing a myriad of social, economic, health, and environmental factors that present barriers to learning. As a result, too many begin school lacking necessary home supports and the emotional, social, and cognitive developmental readiness to take advantage of instructional and curricular improvements. And, with each passing day, too many manifest increasing skill deficits and negative attitudes that worsen their plight.

Recognizing the need to expand school reform, a district superintendent needs to establish a design team to develop a plan for restructuring the district's efforts to provide student and learning supports. This team can include community representatives. The task involves rethinking and reframing how internal and external resources can be restructured to help school sites develop a comprehensive, multifaceted and integrated component for dealing with factors interfering with student achievement.

An example from one district: In a plan, entitled *Adding Value, Enhancing Learning,* proposed major systemic changes build on the premise that, for all children to succeed, "... reform efforts must include the following three components: instruction, management, and enabling. Establishment of the enabling component is key to the vision of improved opportunities for students to overcome barriers to learning...."

The plan goes on to state: "...The need to ensure the success of the district's mission, goals, and on-going reforms makes it imperative that we move expeditiously to start a process of developing such a component at every school. By moving from fragmented and supplementary "support services" to a comprehensive, multifaceted and integrated component for addressing barriers to learning, schools can enhance the impact of instructional reforms and increase student achievement."

"Furthermore, for children to succeed:

- Whole communities must take responsibility for supporting families. School success must become the goal of every social system -- not just of the schools.
- Partnerships among schools, families, and community resources must support the efforts of teachers rather than create a new set of responsibilities and must also strengthen families and neighborhoods.
- Better linkages must be made between schools and all community resources in ways that foster mutual respect, flexibility, family and community focus, and attention to relationships."

As outlined in the plan: "Implementation of an enabling component to address barriers to student growth and development requires building an infrastructure which will bring resources to the school to meet the needs identified by the school staff and the community. ... Careful attention has been given to the role shift of central office from that of control to support."

The intent of such a plan, overtime, is to expand district school improvement policy, planning, and action to fully integrate development of a comprehensive system of learning supports with an enabling component at each school. The overriding aim of the systemic changes is to expedite the goals of school improvement – with the focus being, first and foremost, on fostering academic achievement, well-being, and success for **ALL** children.

Appendix A

Why Restructure Student Support Resources?*

Ultimately, there must be a focus on restructuring all school and community resources that aim at countering youngsters' learning, behavior, emotional, and health problems. From a practical perspective, restructuring the work of school-owned student support services and programs is the key to enhancing educational results. Therefore, we must begin by building around ideas for enhancing school reform policies and their relationship to initiatives to link community services to school sites.

As currently constituted school-owned support services and services in the community that are linked to schools reflect both strengths and weaknesses. Most school-based and linked services target specific types of problems, such as the need to make schools safe, disciplined, and drug free, the need to do something about youngsters who are failing or who may drop out of school, the need to provide special assistance for students who are diagnosed as exceptional children, the need to reduce teen pregnancy or assist pregnant and parenting minors to complete their education, and on and on. Such services have the potential to make things better for youngsters, their families, schools, neighborhoods, and society in general. However, this potential is undercut by serious shortcomings in prevailing policy and practice related to both arenas of activity.

*As an aid in pursuing such restructuring, the Center has developed a *Policymakers' Guide to Restructuring Student Support Resources to Address Barriers to Learning*. This guidebook is available upon request and for the cost of copying and handling.

3867

To be specific:

Current models can't provide for the many in need

- In current practice, school-owned education supports tend to overemphasize use of individual and small group interventions and underemphasize school-wide approaches and community partner-ships. Thus, specialists only are able to assist a small proportion of the large number of youngsters in poor urban and rural schools who are experiencing barriers to learning.

  With so many youngsters experiencing problems, schools should be adopting new models that use support personnel and resources more effectively. Unfortunately, despite all the emphasis on school reform, this has not happened. Policy and practice related to school owned support services have gone relatively unchanged throughout the recent reform era. This might not be much of a problem if current school reforms effectively addressed barriers to learning and teaching. They do not. School policymakers must quickly move to embrace new school-wide and community-oriented models for dealing with factors that interfere with learning and performance. Then, schools must restructure use of existing education support personnel and resources in ways that ensure the new models are carried out effectively.

Co-located services are sparse and often do not connect with school-owned programs

- Because school-owned support services are unable to meet a school's needs when large numbers of youngsters are not doing well, there has been a tendency for some advocates to espouse school-linked services as a strategy to solve the problem. Co-locating community services on campuses can provide increased access. However, given how sparse such services are in poor communities, it is clear that this approach can benefit only a relatively few youngsters at a few schools.

  Moreover, in co-locating services, community agencies often do not take adequate steps to integrate with existing school programs. This results in a "parallel play" approach to providing services at school sites that generates a new form of intervention fragmentation. Even worse, in the long run the emphasis on school-linked services may reduce the total pool of resources by encouraging use of contracted services *in place of* school-owned services.

3868

Efforts to Address Barriers to Learning are Marginalized

Underlying the shortcomings of current approaches and the problems of service fragmentation and access is an even more fundamental problem: the degree to which efforts to address barriers to learning are *marginalized* in policy and daily practice.

School reform initiatives primarily stress higher standards, higher expectations, assessment, better instruction, waivers, accountability, and no excuses. The irony is that it is widely recognized that these are insufficient considerations when a school has a large number of poorly performing youngsters . Some school reformers, albeit usually in passing, do cite the potential value of integrated health and social services and school-based centers. Nevertheless, in many districts, a school-by-school analysis will show most sites continue to have difficulty assisting more than a relatively small proportion of students. And, little serious attention is given to clarifying what is really necessary for addressing the various external and internal factors responsible for the majority of problems.

Given the marginalized status, it is not surprising that what most schools offer to address barriers to learning are discrete interventions and time-limited "soft" money projects -- often designed to respond to severe problems and crises. Early-after-onset interventions are rare. Prevention remains an unfulfilled dream. What a school needs is a *comprehensive, multifaceted, and integrated approach for addressing barriers to development, learning, parenting, and teaching.* Yet, almost no thought is given to restructuring current efforts and weaving school- and community-owned resources together to create such an approach. Most "reforms" in this arena do little more than co-locate a few community services at select schools.

As long as efforts to address barriers to learning and teaching are marginalized, reforms to reduce fragmentation and increase access are seriously hampered. Prevailing reforms are likely to produce additional piecemeal approaches, thereby exacerbating the situation. Moreover, the desired impact on learning and performance will not be achieved and desired increases in achievement test score averages will remain elusive.

3869

Needed:
A Policy Framework for Addressing Barriers to Learning and Teaching

The bottom line is that most schools are devoting relatively little serious attention to restructuring their activity for addressing barriers and do not integrate such activity with school reforms. And, this is likely to remain the case as long as new directions for developing improved approaches continue to be a low priority in both policy and practice. A major problem, then, is how to elevate the level of priority policy makers assign to establishing and maintaining comprehensive, multifaceted, and integrated approaches to addressing barriers to learning and promoting healthy development.

Policy must foster a full continuum of integrated systems to enable learning

Related to this problem is the lack of an *explicit policy framework* outlining the nature of comprehensive approaches. Such a framework must be articulated and pursued as a primary and essential component of the reform agenda at the district level and at each school and must be well-integrated with ongoing strategies to improve instruction and management. It is needed to shape development of a continuum of intervention systems focused on individual, family, and environmental barriers. Such a continuum includes systems of prevention, systems of early intervention to address problems as soon after onset as feasible, and systems of care for those with chronic and severe problems. From this perspective, a policy emphasis on developing these systems and implementing them seamlessly is the key not only to unifying fragmented activity, but to using all available resources in the most productive manner.

Policy also must delineate basic areas for developing school-wide approaches for addressing barriers to learning

As should be clear by this point, developing comprehensive, multifaceted, and integrated approaches requires *more than* outreach to link with community resources (and certainly more than adopting a school-linked services model), *more than* coordinating school-owned services, *more than* coordinating school services with community services, and *more than* creating Family Resource Centers and Full Service Schools. None of these constitute school-wide approaches, and the growing consensus is that school-wide and, indeed, community-wide approaches are essential.

Unfortunately, when it comes to addressing barriers to learning, schools have no guidelines delineating basic areas around which to develop school and community-wide approaches. Thus, it is not surprising that current reforms are not generating potent, multifaceted, integrated approaches.

3870

Getting From Here to There

Efforts to restructure how schools operate require much more than implementing demonstrations at a few sites. Improved approaches are only as good as a school district's ability to develop and institutionalize them at every school. This process often is called diffusion, replication, roll out, or scale-up.

In pursuing major systemic restructuring, a complex set of interventions is required. These must be guided by a sophisticated scale-up model that addresses substantive organizational changes at multiple levels. A scale-up model is a tool for systemic change. It addresses the question "How do we get from here to there?" Such a model is used to implement a vision of organizational aims and is oriented toward results.

Successful systemic change begins with a model that addresses the complexities of scale-up

The vision for *getting from here to there* requires its own framework of steps, the essence of which involves establishing mechanisms to address key phases, tasks, and processes for systemic change. These include creating an infrastructure and operational mechanisms for

- *creating readiness:* enhancing the climate/culture for change;
- *initial implementation:* adapting and phasing-in a prototype with well-designed guidance and support;
- *institutionalization:* ensuring the infrastructure maintains and enhances productive changes;
- *ongoing evolution*: creative renewal.

3871

Restructuring Support Services from the school outward

The focus is first on what is needed at the school-level . . .

From a decentralized perspective and to maintain the focus on evolving a comprehensive continuum of programs/services at *every school site,* it is a good idea to conceive the process of restructuring from the school outward. That is, first the focus is on school level mechanisms related to the component to address barriers to learning and teaching. Then, based on analyses of what is needed to facilitate and enhance school level efforts, mechanisms are conceived that enable groups or "families" of schools to work together to increase efficiency and effectiveness and achieve economies of scale. Then, system-wide mechanisms can be (re)designed to support what each school and family of schools are trying to develop.

. . . then on what families of schools and system-wide resources can do to support each school's approach for addressing barriers to learning and teaching

An infrastructure of organizational and operational mechan-isms for a school, multiple school sites, and system-wide are required for oversight, leadership, resource development, and ongoing support. Such mechanisms provide ways to (a) arrive at decisions about resource allocation, (b) maximize system-atic and integrated planning, implementation, maintenance, and evaluation of enabling activity, (c) outreach to create formal working relationships with community resources to bring some to a school and establish special linkages with others, and (d) upgrade and modernize the component to reflect the best intervention thinking and use of technology. At each system level, these tasks require that staff adopt some new roles and functions and that parents, students, and other representatives from the community enhance their involve-ment. They also call for redeployment of existing resources, as well as finding new ones.

Key steps involved in restructuring and specific mechanisms needed at each level are discussed. At the school level, possible mechanisms include school-based program teams, a site resource coordinating team, a site administrative leader, and a staff lead. For a group of schools working together, the essential mechanism is a multisite resource coordinating council. System-wide the need is for a district leader for the component, a leadership group, and a resource coordinating group. A cadre of "organization facilitators" provide a unique mechanism for facilitating change throughout the system. From a policy perspective, it is recommended that the district's Board establish a standing committee focused specifically on the component to address barriers. Appended discussions expand on key points, and some resource tools also are included to aid those who undertake the reforms.

Awareness of the myriad political and bureaucratic difficulties involved in making major institutional changes, especially with limited financial resources, leads to the caution that the type of large-scale restructuring described is not a straight-forward sequential process. Rather, the changes emerge in overlapping and spiraling phases.

Appendix B

*School-Community Partnerships**

Recent years have seen an escalating expansion in school-community linkages. Initiatives are sprouting in a rather dramatic and ad hoc manner.

These efforts could improve schools, strengthen neighborhoods, and lead to a marked reduction in young people's problems. Or, such "collaborations" can end up being another reform effort that promised a lot, did little good, and even did some harm. It is time to document and analyze what has developed and move forward with a renewed sense of purpose and direction.

Why School-Community Partnerships?

Increasingly, it is evident that schools and communities should work closely with each other to meet their mutual goals. Schools find they can provide more support for students, families, and staff when they are an integral and positive part of the community. Reciprocally, agencies can make services more accessible to youth and families by linking with schools, and they can connect better with and have an impact on hard-to-reach clients. The interest in working together is bolstered by concern about widespread fragmentation of school and community interventions. The hope is that by integrating available resources, a significant impact can be made on "at risk" factors. In particular, appropriate and effective collaboration and teaming are seen as key facets of addressing barriers to development, learning, and family self-sufficiency.

Policy makers must realize that, as important as it is to reform and restructure health and human services, such services remain only one facet of a comprehensive, cohesive approach for strengthening families and neighborhoods.

While informal school-community linkages are relatively simple to acquire, establishing major long-term connections is complicated. They require vision, cohesive policy, and basic systemic reform. The difficulties are readily seen in attempts to evolve a comprehensive, multifaceted, and integrated continuum of school-community interventions. Such a comprehensive continuum involves more than connecting with the community to enhance resources to support instruction, provide mentoring, and improve facilities. It involves more than school-linked, integrated services and activities. It requires weaving school and community resources together in ways that can only be achieved through connections that are formalized and institutionalized, with major responsibilities shared.

*As an aid in pursuing such partnerships, the Center has developed a guidebook entitled; *School-Community Partnerships: A Guide.* This resources is available upon request and for the cost of copying and handling.

3873

What are School-Community Partnerships?

School-community partnerships often are referred to as collaborations. Optimally, such partnerships formally blend together resources of at least one school and sometimes a group of schools or an entire school district with resources in a given neighborhood or the larger community. The intent is to sustain such partnerships over time. The range of entities in a community are not limited to agencies and organization; they encompass people, businesses, community based organizations, postsecondary institutions, religious and civic groups, programs at parks and libraries, and any other facilities that can be used for recreation, learning, enrichment, and support.

School-community partnerships can weave together a critical mass of resources and strategies to enhance caring communities that support all youth and their families and enable success at school and beyond. Strong school-community connections are critical in impoverished communities where schools often are the largest piece of public real estate and also may be the single largest employer. Comprehensive partnerships represent a promising direction for generating essential interventions to address barriers to learning, enhance healthy development, and strengthen families and neighborhoods. Building such partnerships requires an enlightened vision, creative leadership, and new and multifaceted roles for professionals who work in schools and communities, as well as for all who are willing to assume leadership.

In thinking about school-community partnerships, it is essential not to overemphasize the topics of coordinating community services and co-locating services on school sites. Such thinking downplays the need to also restructure the various education support programs and services that schools own and operate. And, it has led some policy makers to the mistaken impression that community resources can effectively meet the needs of schools in addressing barriers to learning. In turn, this has led some legislators to view the linking of community services to schools as a way to free-up the dollars underwriting school-owned services. The reality is that even when one adds together community and school assets, the total set of services in impoverished locales is woefully inadequate. In situation after situation, it has become evident that as soon as the first few sites demonstrating school-community collaboration are in place, community agencies find they have stretched their resources to the limit.

A Growing Movement

Projects across the country demonstrate how schools and communities connect to improve results for youngsters, families, and neighborhoods. Various levels and forms of school-community collaboration are being tested, including state-wide initiatives in California, Florida, Kentucky, Missouri, New Jersey, Ohio, and Oregon, among others. The aims are to improve coordination and eventually integrate many programs and enhance linkages with school sites. To these ends, projects incorporate as many health, mental health, and social services as feasible into "centers" (including school-based health centers, family and parent centers) established at or near a school. They adopt terms such as school-linked and coordinated services, wrap-around, one-stop shopping, full service schools, systems of care, and community schools. There are projects to (a) improve access to health and social services, (b) expand after school academic, recreation, and enrichment, (c) build systems of care, (d) reduce delinquency, (e) enhance transitions to work/career/post-secondary education, and (f) enhance life in school and community.

Such "experiments" have been prompted by diverse initiatives:

- some are driven by school reform
- some are connected to efforts to reform community health and social service agencies
- some stem from the youth development movement
- a few arise from community development initiatives.

For example, initiatives for school-linked services often mesh with the emerging movement to enhance the infrastructure for youth development. This growing youth development movement encompasses concepts and practices aimed at promoting protective factors, asset-building, wellness, and empowerment. Included are (a) some full service school approaches, (b) efforts to establish "community schools," (c) programs to mobilize community and social capital, and (d) initiatives to build community policies and structures to enhance youth support, safety, recreation, work, service, and enrichment. This focus on community embraces a wide range of stakeholders, including families and community based and linked organizations such as public and private health and human service agencies, schools, businesses, youth and faith organizations, and so forth. In some cases, institutions for postsecondary learning also are involved, but the nature and scope of their participation varies greatly, as does the motivation for the involvement. Youth development initiatives expand intervention efforts beyond services and programs. They encourage a view of schools not only as community centers where families can easily access services, but also as hubs for community-wide learning and activity. Increased federal funding for after school programs at school sites enhances this view by expanding opportunities for recreation, enrichment, academic supports, and child care. Adult education and training at neighborhood school sites also help change the old view that schools close when the youngsters leave. Indeed, the concept of a "second shift" at school sites is beginning to spread in response to community needs.

No complete catalogue of school-community initiatives exists. Examples and analyses suggesting trends are summarized in this document. A reasonable inference from available data is that school-community collaborations can be successful and cost effective over the long-run. They not only improve service access, they encourage schools to open their doors and enhance opportunities for recreation, enrichment, remediation and family involvement. However, initiatives for enhancing school-community collaboration have focused too heavily on integrated school-linked services. In too many instances, school-linked services result only in co-locating agency staff on school campuses. As these activities proceed, a small number of youngsters receive services, but little connection is made with school staff and programs, and thus, the potential impact on academic performance is minimized.

3875

Recommendations to Enhance School-Community Partnerships

School-community partnerships must not be limited to linking services. Such partnerships must focus on using all resources in the most cost-effective manner to evolve the type of comprehensive, integrated approaches essential for addressing the complex needs of all youngsters, families, schools, and neighborhoods. This includes a blending of many public and private resources. To these ends, a high priority policy commitment at all levels is required that (a) sup-ports the strategic development of comprehensive approaches by weaving together school and community resources, (b) sustains partnerships, and (c) generates renewal. In communities, the need is for better ways of connecting agency and other resources to each other and to schools. In schools, there is a need for restructuring to combine parallel efforts supported by general funds, compensatory and special education entitlement, safe and drug free school grants, and specially funded projects. In the process, efficiency and effect-iveness can be achieved by connecting families of schools, such as high schools and their feeder schools.

School-community partnerships require a cohesive set of policies. Cohesive policy will only emerge if current policies are revisited to reduce redundancy and redeploy school and community resources that are used ineffectively. Policy must

- move existing *governance* toward shared decision making and appropriate degrees of local control and private sector involvement -- a key facet of this is guaranteeing roles and providing incentives, supports, and training for effective involvement of line staff, families, students, and other community members

- create *change teams and change agents* to carry out the daily activities of systemic change related to building essential support and redesigning processes to initiate, establish, and maintain changes over time

- delineate high level *leadership assignments* and underwrite essential *leadership/manage-ment training* re. vision for change, how to effect such changes, how to institutionalize the changes, and generate ongoing renewal

- establish institutionalized *mechanisms to manage and enhance resources* for school-community partnerships and related systems (focusing on analyzing, planning, coordin-ating, integrating, monitoring, evaluating, and strengthening ongoing efforts)

- provide adequate funds for *capacity building* related to both accomplishing desired system changes and enhancing intervention quality over time -- a key facet of this is a major investment in staff recruitment and development using well-designed, and technologically sophisticated strategies for dealing with the problems of frequent turnover and diffusing information updates; another facet is an investment in technical assistance at all levels and for all aspects and stages of the work

- use a sophisticated approach to *accountability* that initially emphasizes data that can help develop effective approaches for collaboration in providing interventions and a results-oriented focus on short-term benchmarks and that evolves into evaluation of long-range indicators of impact. (Here, too, technologically sophisticated and integrated management information systems are essential.)

Such a strengthened policy focus would allow personnel to build the continuum of interventions needed to make a significant impact in addressing the health, learning, and well being of all youngsters through strengthening youngsters, families, schools, and neighborhoods.

3876

Guidelines and Strategies for Building and Maintaining School-Community Partnerships

Adopting a scale-up model. Establishing effective school-community partnerships involves major systemic restructuring. Moving beyond initial demonstrations requires policies and processes that ensure what often is called diffusion, replication, roll out, or scale-up. Too often, proposed systemic changes are not accompanied with the resources necessary to accomplish essential changes throughout a county or even a school-district. Common deficiencies include inadequate strategies for creating motivational readiness among a critical mass of stakeholders, assignment of change agents with relatively little specific training in facilitating large-scale systemic change, and scheduling unrealistically short time frames for building capacity to accomplish desired institutional changes. The process of scale-up requires its own framework of steps, the essence of which involves establishing mechanisms to address key phases, tasks, and processes for systemic change. These are described in Appendix E of this document. Fourteen steps for moving school-community partnerships from projects to wide-spread practice are outlined.

Building from localities outward. From a decentralized perspective and to maintain the focus on evolving a comprehensive continuum of programs/services that plays out in an effective manner in *every locality,* it is a good idea to conceive the process from localities outward. That is, first the focus is on mechanisms at the school-neighborhood level. Then, based on analyses of what is needed to facilitate and enhance efforts at a locality, mechanisms are conceived that enable several school-neighborhood collaborations to work together to increase efficiency and effectiveness and achieve economies of scale. Then, system-wide mechanisms can be (re)designed to provide support for what each locality is trying to develop.

Building capacity. An infrastructure of organizational and operational mechanisms at all levels are required for oversight, leadership, resource development, and ongoing support. With each of these functions in mind, specific mechanisms and their inter-relationship with each other and with other planning groups are explored. Key mechan-isms include change agents, administrative and staff leads, resource-oriented teams and councils, board of education subcommittees, and so forth. The proposed infrastructure provides ways to (a) arrive at decisions about resource allocation, (b) maximize system-atic and integrated planning, implementation, main-tenance, and evaluation of enabling activity, (c) outreach to create formal working relationships with community resources to bring some to a school and establish special linkages with others, and (d) upgrade and modernize the component to reflect the best intervention thinking and use of technology. At each level, these tasks require that staff adopt some new roles and functions and that parents, students, and other representatives from the community enhance their involvement. They also call for redeployment of existing resources, as well as finding new ones.

3877

Appendix C

Rethinking a School Board's Current Committee Structure*

Most school boards do not have a standing committee that gives full attention to the problem of how schools address barriers to learning and teaching. This is not to suggest that boards are ignoring such matters. Indeed, items related to these concerns appear regularly on every school board's agenda. The problem is that each item tends to be handled in an ad hoc manner, without sufficient attention to the "Big Picture." One result is that the administrative structure in most districts is not organized in ways that coalesce its various functions (programs, services) for addressing barriers. The piecemeal structure reflects the marginalized status of such functions and both creates and maintains the fragmented policies and practices that characterize efforts to address barriers to student learning.

Analyzing How the Board's Committee Structure Handles Functions Related to Addressing Barriers

Given that every school endeavors to address barriers to learning and teaching, school boards should carefully analyze how their committee structure deals with these functions. Because boards already have a full agenda, such an analysis probably will require use of an ad hoc committee. This committee should be charged with clarifying whether the board's structure, time allotted at meetings, and the way the budget and central administration are organized allow for a thorough and cohesive overview of all functions schools pursue to enable learning and teaching. In carrying out this charge, committee members should consider work done by pupil services staff (e.g., psychologists, counselors, social workers, attendance workers, nurses), compensatory and special education, safe and drug free schools programs, dropout prevention, aspects of school readiness and early intervention, district health and human service activities, initiatives for linking with community services, and more. Most boards will find (1) they don't have a big picture perspective of how all these functions relate to each other, (2) the current board structure and processes for reviewing these functions do not engender a thorough, cohesive approach to policy, and (3) functions related to addressing barriers to learning are distributed among administrative staff in ways that foster fragmentation.

> *If this is the case, the board should consider establishing a standing committee that focuses indepth and consistently on the topic of how schools in the district can enhance their efforts to improve instruction by addressing barriers in more cohesive and effective ways.*

*This is excerpted from a Center policy report entitled: *Restructuring Boards of Education to Enhance a School's Effectiveness in Addressing Barriers to Student Learning.* The report is available upon request and for the cost of copying and handling.

3878

What a Standing Committee Needs to Do

The primary assignment for the committee is to develop a comprehensive policy framework to guide reforms and restructuring so that *every school* can make major improvements in how it addresses barriers interfering with the performance and learning of its students. Developing such a framework requires revisiting existing policy with a view to making it more cohesive and, as gaps are identified, taking steps to fill them.

Mapping

Current policies, practices, and resources must be well-understood. This requires using the lens of addressing barriers to learning to do a complete mapping of all district owned programs, services, personnel, space, material resources, cooperative ventures with community agencies, and so forth. The mapping process should differentiate between (a) regular, long-term programs and short-term projects, (b) those that have the potential to produce major results and those likely to produce superficial outcomes, and (c) those designed to benefit all or most students at every school site and those designed to serve a small segment of the district's students. In looking at income, in-kind contributions, and expenditures, it is essential to distinguish between "hard" and "soft" money (e.g., the general funds budget, categorical and special project funds, other sources that currently or potentially can help underwrite programs). It is also useful to differentiate between long- and short-term soft money. It has been speculated that when the various sources of support are totaled in certain schools as much as 30% of the resources may be going to addressing barriers to learning. Reviewing the budget through this lens is essential in moving beyond speculation about such key matters.

Analysis

Because of the fragmented way policies and practices have been established, there tends to be inefficiency and redundancy, as well as major gaps in efforts to address barriers to learning. Thus, a logical focus for analysis is how to reduce fragmentation and fill gaps in ways that increase effectiveness and efficiency. Another aspect of the analysis involves identifying activities that have little or no effects; these represent resources that can be redeployed to help underwrite the costs of filling major gaps.

Formulation of a policy framework and specific proposals for systemic reforms

A framework offering a picture of the district's total approach for addressing barriers to learning should be formulated to guide long-term strategic planning. A well-developed framework is an essential tool for evaluating all proposals in ways that minimize fragmented and piecemeal approaches. It also provides guidance in outreaching to link with community resources in ways that fill gaps and complement school programs and services. That is, it helps avoid creating a new type of fragmentation by clarifying cohesive ways to weave school and community resources together.

3879

Formulate specific proposals to ensure the success of systemic reforms

The above tasks are not simple ones. And even when they are accomplished, they are insufficient. The committee must also develop policy and restructuring proposals that enable substantive systemic changes. These include essential capacity building strategies (e.g., administrative restructuring, leadership development, budget reorganization, developing stakeholder readiness for changes, well-trained change agents, strategies for dealing with resistance to change, initial and ongoing staff development, monitoring and accountability). To achieve economies of scale, proposals can capitalize on the natural connections between a high school and its feeders (or a "family" of schools). Centralized functions should be redefined and restructured to ensure that central offices/units support what each school and family of schools is trying to accomplish.

Committee Composition

The nature and scope of the work call for a committee that encompasses

- one or more board members who chair the committee (all board members are welcome and specific ones are invited to particular sessions as relevant)
- district administrator(s) in charge of relevant programs (e.g., student support services, Title I, special education)
- several key district staff members who can represent the perspectives of principals, union members, and various other stakeholders
- nondistrict members whose jobs and expertise (e.g., public health, mental health, social services, recreation, juvenile justice, post secondary institutions) make them invaluable contributors to the tasks at hand .

To be more specific:

It helps if more than one board member sits on the committee to minimize proposals being contested as the personal/political agenda of a particular board member.

Critical information about current activity can be readily elicited through the active participation of a district administrator (e.g., a deputy/associate/assistant superintendent) responsible for "student support programs" or other major district's programs that address barriers to learning.

Similarly, a few other district staff usually are needed to clarify how efforts are playing out at schools across the district and to ensure that site administrators, line staff, and union considerations are discussed. Also, consideration should be given to including representatives of district parents and students.

Finally, the board should reach out to include members on the standing committee from outside the district who have special expertise and who represent agencies that are or might become partners with the district in addressing barriers to learning. For example, in the Los Angeles Unified School District, the committee included key professionals from post secondary institutions, county departments for health, and social services, public and private youth development and recreation organizations, and the United Way. The organizations all saw the work as highly related to their mission and were pleased to donate staff time to the committee.

Ensuring the Committee's Efforts Bear Fruit

The committee's efforts will be for naught if the focus of their work is not a regular topic on the board's agenda and a coherent section of the budget. Moreover, the board's commitment must be to addressing barriers to learning in powerful ways that enable teachers to be more effective -- as contrasted to a more limited commitment to providing a few mandated services or simply increasing access to community services through developing coordinated/integrated school-linked services.

Given the nature and scope of necessary changes and the limited resources available, the board probably will have to ask for significant restructuring of the district bureaucracy. (Obviously, the aim is not to create a larger central bureaucracy.) It also must adopt a realistic time frame for fully accomplishing the changes.

Lessons Learned

Based on work in this area, it seems worth underscoring a few key problems that should be anticipated. In doing so, we also suggest some strategies to counter them. Not surprisingly, the problems are rather common ones associated with committee and team endeavors. Since most could be minimized, it is somewhat surprising how often no plans are made to reduce their impact.

Agreement about the committee's goals and timeline

Although a statement of general purpose usually accompanies its creation, such committees tend to flounder after a few meetings if specific steps for getting from here to there are not carefully planned and articulated. In the longer run, the committee is undermined if *realistic* timelines are not attached to expectations regarding task accomplishments.

> Possible strategy: Prior to the first meeting a subgroup could draft a statement of long-term aims, goals for the year, and immediate objectives for the first few meetings. Then, they could delineate steps and timelines for achieving the immediate objectives and goals for the year. This "strategic plan" could then be circulated to members for amendment and ratification.

Agenda setting

Those who set the agenda control what is accomplished. Often such agendas do not reflect a strategic approach for major policy and systemic reforms. The more ambitious the goals, the more difficult it is to work in a systematic manner. Committees have difficulty doing first things first. For example, the first step is to establish a big picture policy framework; then specifics can be fleshed out. In fleshing out specifics, the first emphasis is on restructuring and redeploying poorly used resources; this work provides the context for exploring how to enhance resources.

> Possible strategy: The committee could delegate agenda setting to a small subgroup who are perceived as having a comprehensive understanding of the strategic process necessary for achieving the committee's desired ends.

3882

Keeping on task

It is very easy to bog the committee's work down by introducing distractions and through poor meeting facilitation. Bogging things down can kill members' enthusiasm; conversely, well-run and productive meetings can generate long-term commitment and exceptional participation. Matters that can make the process drag along include the fact that committee members have a great deal to learn before they can contribute effectively. Nondistrict members often require an introductory "course" on schools and school culture. District members usually require a similar introduction to the ABCs of community agencies and resources. Staff asked to describe a program are inclined to make lengthy presentations. Also, there are a variety of immediate concerns that come to the board that fall under the purview and expertise of such a standing committee (e.g., ongoing proposals for programs and resource allocation, sudden crises).

> Possible strategy: The key to appropriately balancing demands is careful agenda setting. The key to meetings that effectively move the agenda forward is firm facilitation that is implemented gently, flexibly, and with good humor. This requires assigning meeting facilitation to a committee member with proven facilitation skills or, if necessary, recruiting a non committee member who has such skills.

Working between meetings

When committees meet only once a month or less often, it is unlikely that proposals for major policy and systemic reforms will be forthcoming in a timely and well-formulated manner.

> Possible strategy: Subgroups of the committee can be formed to work between meetings. These work groups can accomplish specific tasks and bring the products to the full committee for amendment and ratification. Using such a format, the agenda for scheduled committee meetings can be streamlined to focus on refining work group products and developing guidelines for future work group activity.

Avoiding Fragmentation

As Figure 3 highlights, the functions with which the committee is concerned overlap the work of board committees focusing on instruction and the governance and management of resources. Unless there are effective linkages between committees, fragmentation is inevitable.

> Possible strategy: Circulating all committee agendas and minutes; cross-committee participation or joint meetings when overlapping interests are on the agenda.

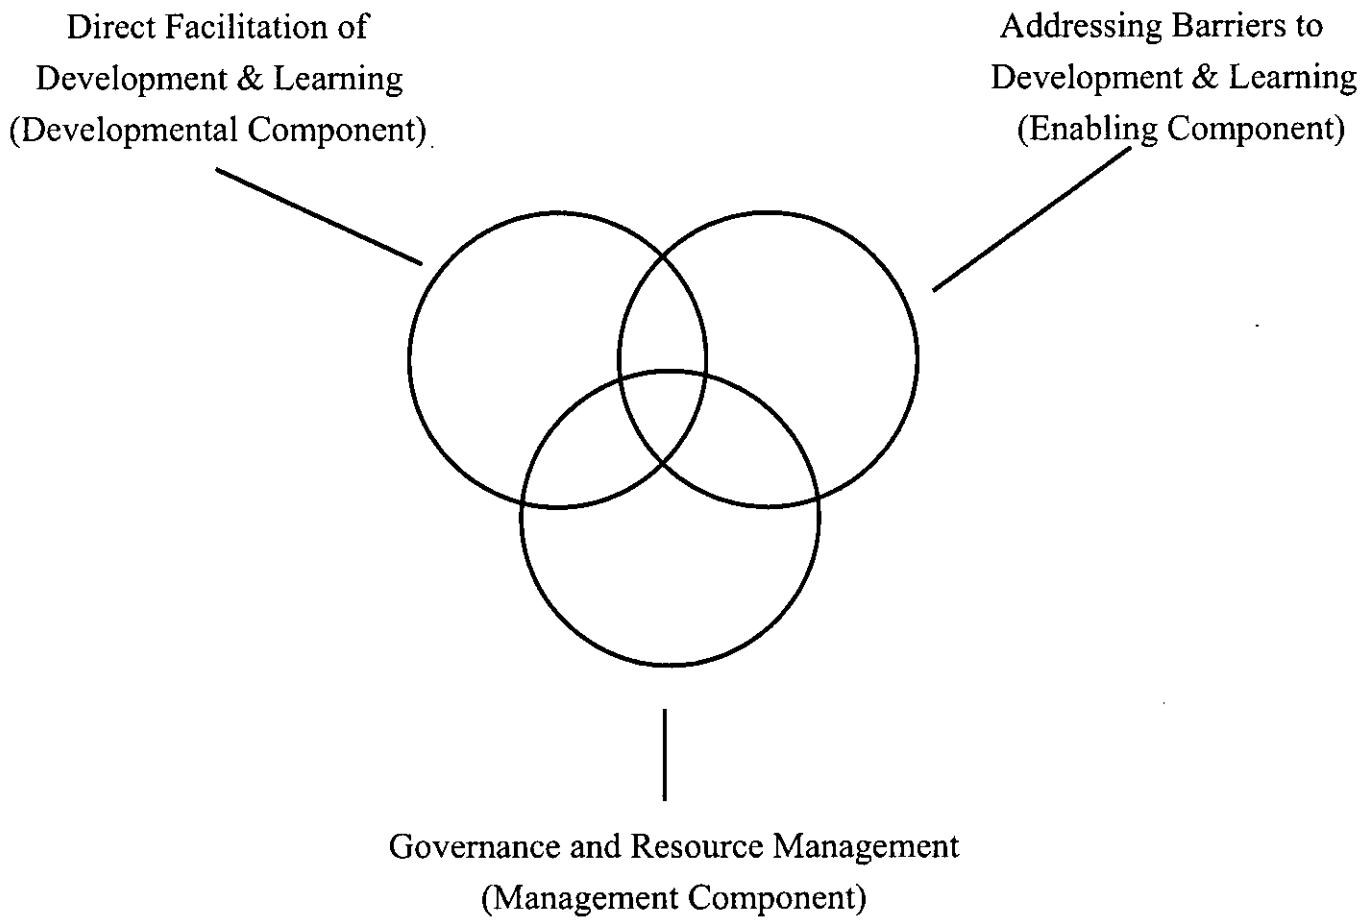
3883

Minimizing political and interpersonal machinations

Obviously, school boards are political entities. Therefore, besides common interpersonal conflicts that arise in most groups, differences in ideology and constituent representation can interfere with a committee accomplishing its goals.

Possible strategy: At the outset, it is wise to identify political and interpersonal factors that might undermine acceptance of the committee's proposals. Then steps can be taken to negotiate agreements with key individuals in order to maximize the possibility that proposals are formulated and evaluated in a nonpartisan manner.

Figure 3. Functional Focus for Reform and Restructuring



Concluding Comments

As school boards strive to improve schools, the primary emphasis is on high standards, high expectations, assessment, accountability, and no excuses. These are all laudable guidelines for reform. They are simply not sufficient.

It is time for school boards to deal more effectively with the reality that, by themselves, the best instructional reforms cannot produce desired results when large numbers of students are not performing well. It is essential to enhance the way every school site addresses barriers to learning and teaching. Each school needs policy support to help evolve a comprehensive, multifaceted, and well-integrated approach for addressing barriers and for doing so in ways that weave the work seamlessly with the school's efforts to enhance instruction and school management.

Progress along these lines is hampered by the marginalized status of programs and personnel whose primary focus is on enabling learning by effectively addressing barriers. Most school boards do not have a standing committee that focuses exclusively on this arena of policy and practice. The absence of such a structural mechanism makes it difficult to focus powerfully and cohesively on improving the way current resources are used and hinders exploring the best ways to evolve the type of comprehensive and multifaceted approaches that are needed to produce major gains in student achievement.

Researchers Call SAT Alternative Better Predictor of College Success

By Sean Cavanagh

Everybody knows that a little creativity, wedded with a good amount of common sense, can go a long way in life, whether it's in a pickup basketball game or the thorniest corporate board meeting.

Yet those attributes aren't always easy to quantify—and they aren't measured with much success in today's most widely used college admissions test, according to a prominent scholar and team of researchers working out of Yale University.

Robert J. Sternberg, a professor of psychology at Yale who has probed the norms and nuances of intelligence and wisdom for years, has completed the first phase of a project he believes could produce an admissions test that is a stronger predictor of success in college, and fairer to underrepresented minorities.

His premise is the belief that the SAT, taken about 2.6 million times by students each year, measures primarily memory and analytical ability, rather than creative or practical skills—the latter of which is usually associated with common sense.

Creative and practical talents are important for determining an individual's success in college, and in life, Mr. Sternberg contends. He directs the study, called the Rainbow Project, which is financed by the College Board, the New York City-based nonprofit group that sponsors the SAT.

"The system fails to identify kids who might succeed in ways the [current SAT] doesn't suggest they will," said Mr. Sternberg, the director of the PACE Center at Yale in New Haven, Conn. He is also the president of the American Psychological Association.

For the project's first phase, researchers designed an alternative exam, one that Mr. Sternberg believes eventually could augment, rather than replace, the SAT. The new test was given to 1,007 student volunteers at two high schools, five community colleges, and eight four-year colleges across the country, mostly from April to June of 2001.

Because researchers sought to gauge the predictability of success in college, not high school, the first phase of the study primarily used the data collected from the 793 first-year college students among the group of volunteers. Elena Grigorenko, the deputy director of the PACE center, took the lead in coordinating much of the testing process.

New Sections

The exam evaluated students in three overall areas: analytical, practical, and creative skills. It used a combination of multiple-choice questions and performance-based sections, in which the participants worked out their own answers.

Some of the sections, such as one asking students to figure out word meanings in the context of written passages, bear a resemblance to the current version of the SAT. Many other sections, though, share little with today's model.

In one section, students were given cartoons, purchased from the archives of *The New Yorker*, and were asked to write captions for them. Test-takers were also asked to write two stories, taking 15 minutes each, based on a list of fictitious titles. A team of judges rated those stories on originality, evocativeness, complexity, and descriptiveness.

Other sections presented students with various troublesome situations they might encounter in everyday life and asked them to rate numerically the best solutions.

A supervisor has assigned you to work with an employee who is "rude, lazy, and rarely does a proper job," according to one sample on the "common sense" questionnaire. Students were then asked to rate the quality of different responses, such as telling the colleague off, or working with him in a businesslike manner.

The current SAT is a good predictor of college success, Mr. Sternberg asserts, but he believes the Rainbow Project's test does even better. He also says the new test showed smaller gaps between the scores of students from different racial and ethnic groups. In theory, the new exam could offer a college-admissions test that more accurately predicts postsecondary achievement, with fewer worries that the exam was biased in favor of one racial or ethnic group or another.

Diane F. Halpern, a professor of psychology at Claremont McKenna College, in Claremont, Calif., who assisted with the project, arranged to give the exams by computer to about 150

students at the campus where she used to work, California State University-San Bernardino. She saw value in the study.

With today's technology, students have the ability to access more information more quickly than ever, Ms. Halpern noted. But the challenge in college, and in life, she said, is approaching data critically and gauging what is most important.

College-admissions tests, she argues, need to reflect the demand for those skills.

Creativity in a Can

One researcher familiar with Mr. Sternberg's study, Paul R. Sackett of the University of Minnesota, disputes some of the project's conclusions, though he says he admires its broader goal.

By giving the test to first-year college students, the Rainbow Project was evaluating an overly restricted population of test-takers, said Mr. Sackett, a professor of psychology at the university's Twin Cities campus.

And in trying to gauge the success of the participating students in college, the Yale project did not go far enough in accounting for the differences in grading at the particular schools, Mr. Sackett contends.

Overall, while he sees merit in the study, Mr. Sackett believes that its claims about predicting college success, and reducing disparities between racial and ethnic groups, are overstated.

But Mr. Sternberg counters that his test-taking population was quite diverse, since it included high school and community college students, who might not get accepted or even choose to go to a four-year college at all. And he said adjustments had been made to account for college grading.

A central question, Mr. Sackett noted, is whether the project has any value for a broad swath of the college-going population. He had doubts: The ability to assess students' creative and practical abilities could suffer from college applicants' determination to manipulate and beat the system.

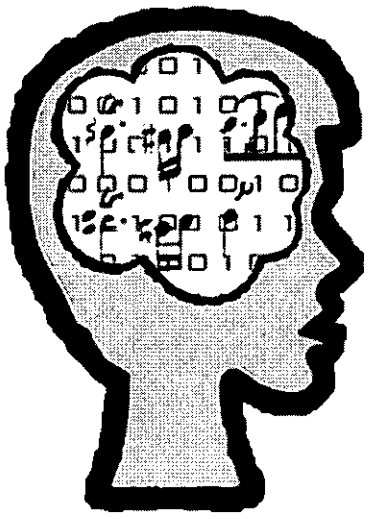
"Will it still measure creativity when people can go to two-day workshops aimed at writing cartoon captions?" Mr. Sackett said.

But Mr. Sternberg asserts that because sections of the test grade students on innovation and the novelty of their ideas, their scores would suffer if they were simply to repeat stale answers suggested by test-prep courses.

Rather than supplanting the SAT, Mr. Sternberg envisions that a portion of college-bound students could take the new test, either because certain colleges asked them to or because the students voluntarily signed up for it. The second phase of the project will focus on giving the test to a larger sample of students—anywhere between 5,000 and 10,000—and shortening its time from about three hours, among other improvements.

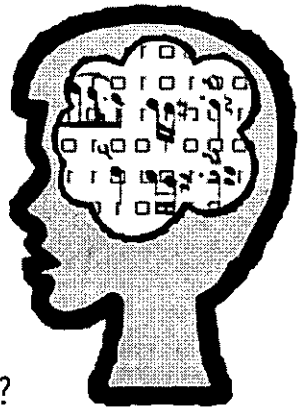
Mr. Sternberg is optimistic about where the project is headed.

"I'm very pleased," he said. "We see this as not just a project, but a step to transform education ... that will change the way we teach in the classroom."



A WHOLE NEW MIND

DISCUSSION GUIDE



FOR EDUCATORS

1. Does your classroom, school or school system promote L- or R- directed thinking? How? What is the proper balance?

2. How innate are the six abilities Pink talks about? Can these abilities be taught or strengthened in school? How?

3. What role does design have in your classroom or school? Do your students play any role in the actual design of their learning experience? Can it be incorporated into the curriculum in areas other than art class? How?

4. Is storytelling part of your curriculum? If not, should it be? How?

5. Can you teach empathy? Should you teach empathy? How?

6. Do you agree with what Pink argues about the importance of play for learning and creating? What can you do to include more play in your teaching and your students' learning?

7. Are your students learning to be symphonic thinkers? If so, how can we teach this capacity? Does the traditional means of organizing teaching by discipline interfere with students' and teachers' ability to think symphonically?

8. What do you think of the Charter High School for Art and Design (CHAD)? How could CHAD be used more broadly as a model for schooling? What are its strengths? Weaknesses?

9. Do you agree with Pink that videogames are important for developing skills like problem solving, visual perception and symphonic thinking?

10. How is Pink's notion of "meaning" a part of your teaching? Should we even broach this subject in a secular classroom? If so, how?

11. Pink talks about psychological androgyny and aligns R-directed thinking with one's feminine side. Do you agree? What do you observe in your own classroom or building?

12. How have your students been impacted by the SAT-ocracy and the culture of standardized testing that Pink describes? How has your teaching been impacted by these tests? Do these tests make it more difficult to have a whole-minded approach to teaching and learning?

13. What do you think of the Rainbow Project, the alternative SAT created by Yale Professor Robert Sternberg?

14. Is your school ready to embrace Pink's theories about R-directed thinking in the Conceptual Age? What about society as a whole? What are the consequences for students and educators if we do not?

15. What R-directed skills do you use in your work? Which of the six senses is a priority for teachers to develop? Why?

16. Which of the portfolio exercises from the book would you recommend for other educators? Which ones would you use with students?

17. How, if at all, should teacher training change in light of these ideas?

18. How do you imagine educators in Asia or other countries might react to the ideas presented in this book?

19. After reading A WHOLE NEW MIND, what is one change you would make in your classroom, school or school district? What challenges would you face in implementing this change? How would you plan to overcome those challenges?

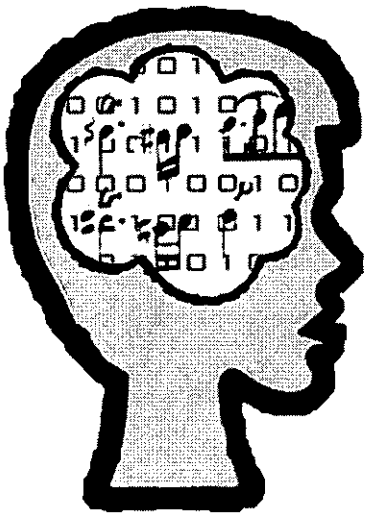
20. What in the book made you laugh? What made you angry?

Your own questions:

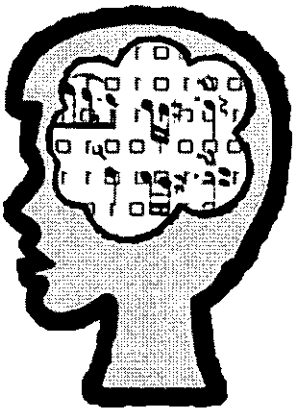
_____

_____

_____



A WHOLE NEW MIND
DISCUSSION GUIDE



FOR BUSINESS

1. In what ways does your current job involve R-directed thinking? Could your organization benefit from more R-directed thinking? Less?

2. How innate are the six abilities Pink discusses (Design, Story, Symphony, Empathy, Play and Meaning)? Which of them is your strongest? Weakest? Which is most important for your current job?

3. Consider the three questions Pink poses regarding your current work: Can someone overseas do it cheaper? Can a computer do it faster? Am I offering something that satisfies the nonmaterial, transcendent desires of an abundant age? Does your work pass this three-part test?

4. How will the three forces Pink describes be affected by the economic recession?

5. Did Pink convince you of the importance of design? In what ways could you and your colleagues instill design thinking in your organization?

6. What are the implications of Pink's argument for education? Are you yourself a product of the SAT-ocracy? If so, how did it help or hurt you?

7. What role does storytelling have in your work? What role could it have? Does your organization have a story to tell? Do your clients and customers know that story?

8. How do you use symphonic thinking in your job? How could this right-brain ability benefit your organization?

9. Is empathy an important part of your work? How could empathy be used in your organization to improve your offerings? How could empathy make your organization a better place to work?

10. What role do play and humor have in your workplace? Could play or humor improve your service to clients? Do you agree with Pink that a sense of humor can make someone a better manager? Why or why not?

11. What do you think of Pink's assertion that "meaning is the new money"? How does your organization create meaning for its customers? For its employees?

12. Does your current job pass the Collins 20-10 test that Pink outlines in the portfolio section of Chapter 9: If you had $20 million or knew that you had only 10 years to live, would you still be doing what you are doing now? What can your organization do to ensure that its employees' experiences pass this test?

13. What do you think of Pink's suggestion that spirituality should have a place in the workplace. What is your organization's approach to spirituality? Should it change?

14. Did you do any of the exercises Pink suggests in the book? Which ones would you recommend to others in your organization? Why?

15. What are some of the barriers to developing the six abilities Pink describes in your own organization?

16. How do you think workers in Asia would react to this book?

17. Pink talks about psychological androgyny and aligns R-directed thinking with one's feminine side. Do women have a comparative advantage over men in this world? Is this true in your organization? Why or why not?

18. Would you add any other abilities to Pink's list of six senses?

19. What in this book made you laugh? What made you angry. Why?

Intelligence, Creativity, and Wisdom: Assessments of Abilities for the 21st Century

Robert J. Sternberg
Dean of the School of Arts and Sciences
Professor of Psychology
Tufts University

robert.sternberg@tufts.edu

Main Message

- Current tests used for assessing abilities are narrow and do an injustice to certain groups
- We can create and have created broader, more equitable, better assessments

3897

3898

Organization of Talk

- Context
- Theory of Successful Intelligence
- The Rainbow Project
- The Tufts Kaleidoscope Project
- Related Projects
- Conclusions

Theoretical Background:

The Augmented Theory of Successful Intelligence

Students are SUCCESSFULLY INTELLIGENT, according to the theory, when they have the abilities to succeed in life according to their own standards within their sociocultural context, by:

1. *Recognizing and capitalizing* on strengths;
2. *Recognizing and correcting* or *compensating* for weaknesses.

3899

Theoretical Background

Capitalization and compensation enable people to balance:

1. *Adaptation* to existing environments;
2. *Shaping* environments to improve them;
3. *Selecting* new environments.

Theoretical Background

Via:

- Analytical abilities
- Creative abilities
- Practical abilities
- Wisdom-based abilities

Theoretical Background

Analytical skills are evoked when we

- analyze
- compare and contrast
- evaluate
- explain
- judge
- critique

Theoretical Background

Creative skills are evoked when we:

- create
- design
- invent
- imagine
- suppose

Theoretical Background

Practical skills are evoked when we:

- use
- apply
- implement
- employ
- contextualize

Theoretical Background

Wisdom-based skills are invoked when we:

- balance intrapersonal, interpersonal, and extra-personal interests
- over the long and short terms
- through the infusion of positive ethical values
- in search of a common good

Not at all Characteristic			Neither Characteristic nor Uncharacteristic			Extremely Characteristic

You are enrolled in a large introductory lecture course. Requirements consist of three term-time exams and a final. Please indicate how characteristic it is of your behavior to spend time doing the following, if your goal is getting an *A* in the course.

___Attending class regularly.

___Attending optional weekly review sessions, if there are any, with the T.A.

___Reading assigned text chapters thoroughly.

___Taking comprehensive class notes.

___Speaking with the Professor after class and during office hours.

___Talking to students who took the course last year.

___Studying regularly instead of cramming in the night before exams.

___Doing the extra credit or optional reading assignments.

___Skimming the required reading in the morning before class.

Project RAINBOW

General Workplace/Common Sense Tacit-Knowledge Inventory

1	2	3	4	5	6	7
Extremely Bad	Very Bad	Somewhat Bad	Neither Bad Nor Good	Somewhat Good	Very Good	Extremely Good

You've been assigned to work on a project for a day with a fellow employee whom you really dislike. He is rude, lazy, and rarely does a proper job. What would be the best thing for you to do?

___Tell the worker that you think he is worthless.

___Warn the worker that, if he is not "on his toes" today, you will complain to the supervisor.

___Avoid all conversation and eye contact with the other worker.

___Be polite to the other worker and try to maintain as business-like a manner as possible so that hopefully he will follow your example for the day.

___Tell your supervisor that you refuse to work with this man.

___The project is going to be impossible to accomplish with this worker, so you may as well not even try--you can always blame your bad work partner.

___See if you can convince one of your friends to take your place and work with this employee.

___Demand a raise from your supervisor; you should not have to tolerate these conditions.

- "It's Moving Backwards"
- "Not Enough Time"

Project RAINBOW

Oral Stories

SHORT STORY TASK

The following task may at first seem somewhat novel; however, I am confident that you will have no difficulty doing it. You will be presented with several sheets of paper, each containing several images. You are to choose two of these pages and to formulate a short story for each. In order to expedite the process, rather than write out each of the stories, you will dictate them to a cassette recorder. When recording: please speak clearly; state your name; spell your name; and state the page number of each story. There is no limitation in the content of the story or the manner in which you decide to present it.

Do you have any questions?....

So, if there are no [more] questions as to what we are asking you to do, please get started.

Project RAINBOW

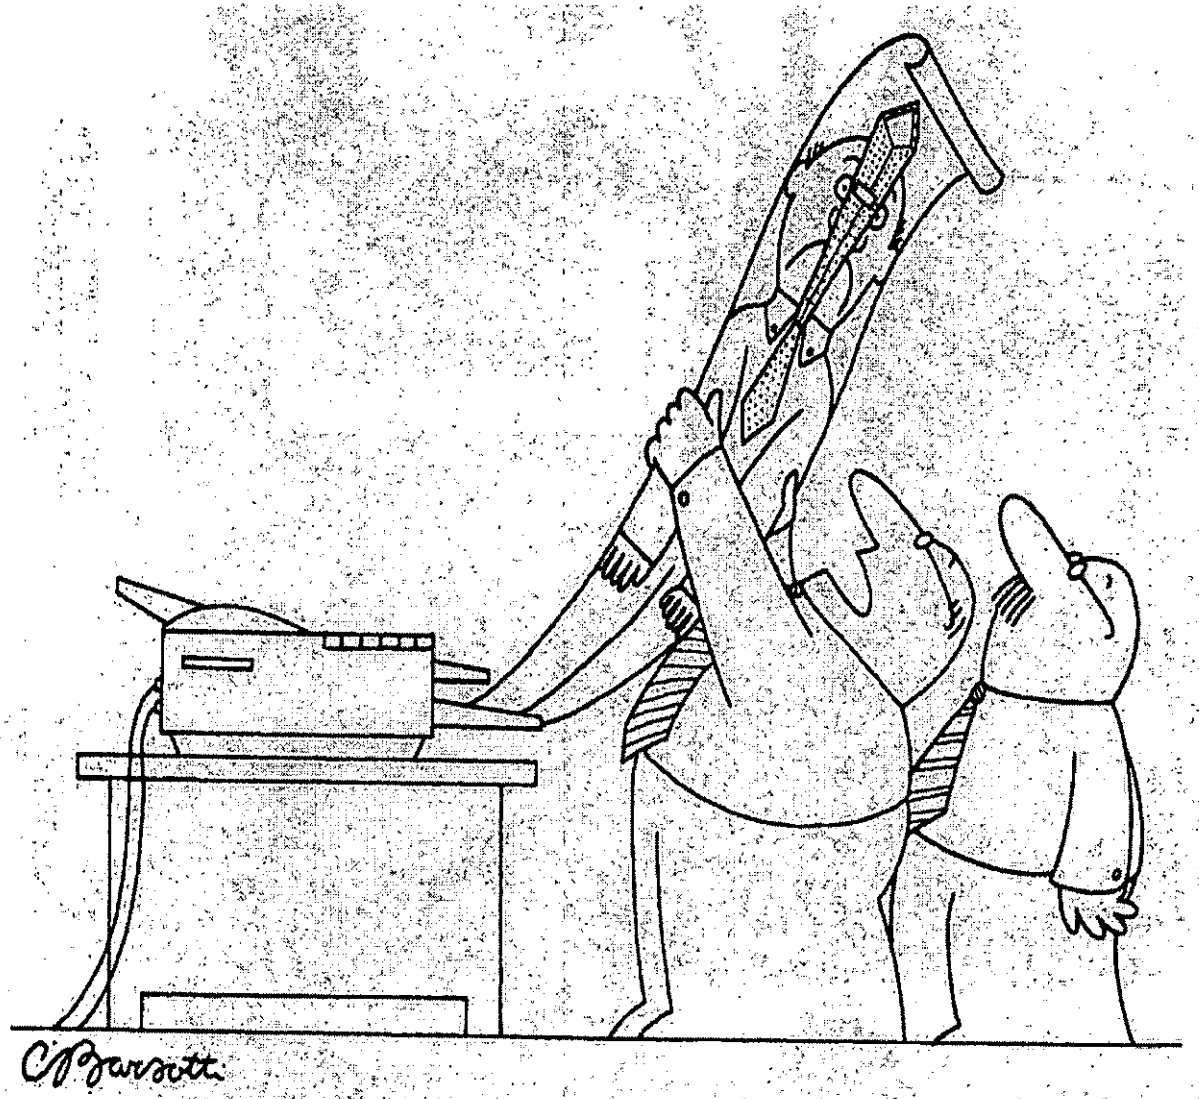
Project RAINBOW

Cartoon Titles

Examinees see five cartoons and need to provide titles for three of the five.

Project RAINBOW



3921

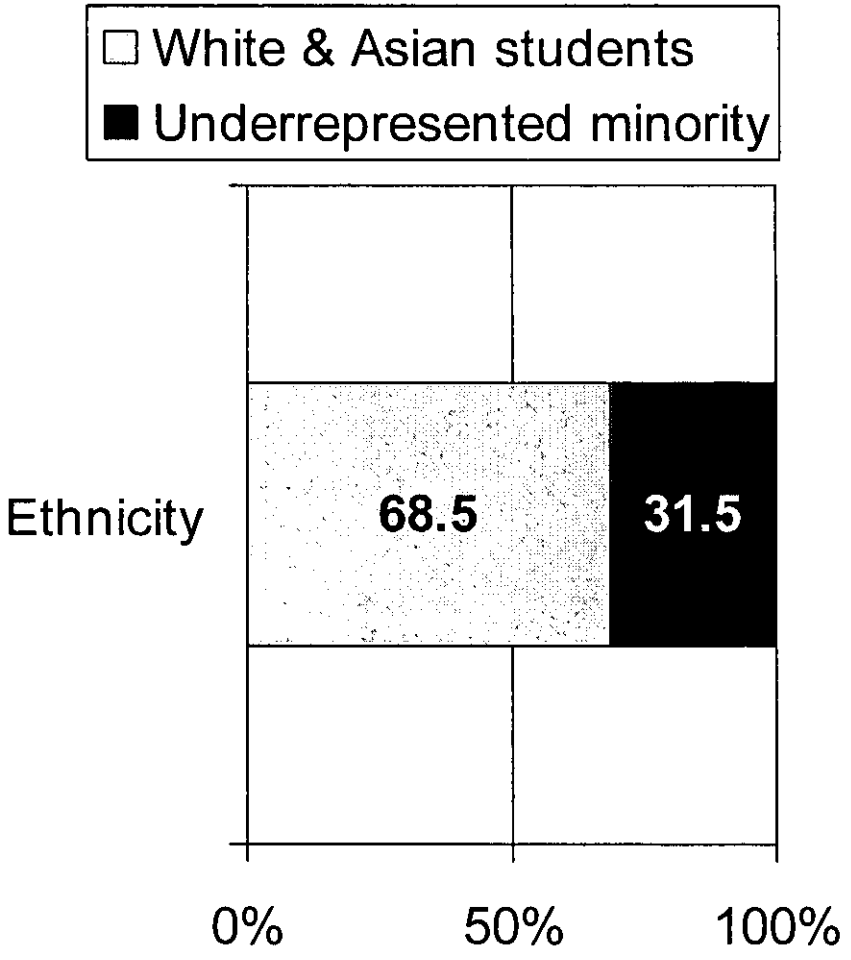
Project RAINBOW

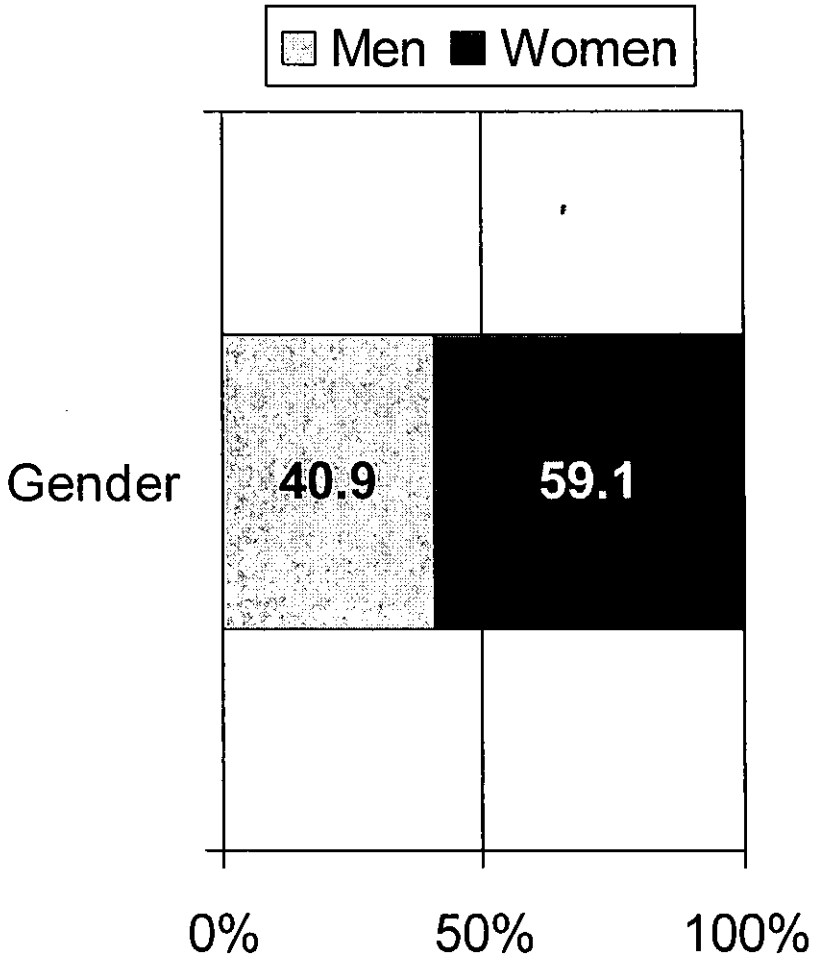
Method: Participants

- Total sample
  - Collected: n = 1013
  - Available for analyses: n = 990
  - Included in this presentation: n = 777
    - From 13 colleges and universities around the country

Project RAINBOW

College Sample Composition





Project RAINBOW

Method: Design

- Incomplete randomized design (McArdle, 1994)
- Two forms:

1. Web-based (59% of students)
2. Paper-Pencil (41% of students)

All tests were proctored by university officials.

Project RAINBOW

The Tufts Kaleidoscope Project Preliminary Results ('06-'08)

Robert J. Sternberg

and the Kaleidoscope Collaborators

Class of 2011

Goal

- Insert analytical, creative, practical as well as wisdom-based essays as part of the Tufts-specific admissions application in order to broaden the way we think about applicants
- Change categories for rating system of applicants

Tufts Admissions

- Tufts applicants complete the Common Application and (if they choose to) the Supplemental Application.
- Applications are rated on 4 dimensions:
  - Academic (AC),
  - Personal Quality (PQ),
  - Extracurricular (EX), and
  - Overall (OV).
- Final admission decision is made by a committee based on multiple criteria.

The Kaleidoscope Framework

- Kaleidoscope (Kscope) is a framework for evaluating applicants'
  - Creative (C),
  - Practical (P), and
  - Wisdom (W) skills.

- Applicants submitted optional essays.
- Admission officers were trained and asked to use a Kscope rubric to evaluate applicants.

Essay prompts

1. The late scholar James O. Freedman referred to libraries as "essential harbors on the voyage toward understanding ourselves." What work of fiction or non-fiction would you include in a **personal library**? Why?
2. An American adage states that "**curiosity** killed the cat." If that is correct, why do we celebrate people like Galileo, Lincoln, and Gandhi, individuals who thought about longstanding problems in new ways or who defied conventional thinking to achieve great results?
3. History's great events often turn on small moments. For example, **what if** Rosa Parks had given up her seat on that Montgomery bus in 1955? What if Pope John Paul I had not died in 1978 after a month in office? What if Gore had beaten Bush in Florida and won the 2000 U.S. Presidential Election? Using your knowledge of American or world history, choose a defining moment and imagine an alternative historical scenario if that key event had played out differently.

Essay prompts (cont.)

4. Create a short story using one of the following topics: a. The end of **MTV** b. Confessions of a Middle School **Bully** c. The **Professor** Disappeared d. The Mysterious **Lab**
5. Describe a moment in which you took a **risk** and achieved an unexpected goal. How did you persuade others to follow your lead? What lessons do you draw from this experience? You may reflect on examples from your academic, extracurricular or athletic experiences.
6. A high school curriculum does not always afford much **intellectual freedom**. Describe one of your unsatisfied intellectual passions. How might you apply this interest to serve the common good and make a difference in society?
7. Using an 8.5x11 inch sheet of paper, create an ad for a movie, design a house, make an object better, illustrate an ad for an object.

Creative Essay: "What if…"

- If the Trojans had heeded Laocoon's advice and thrown Odysseus' wooden horse into the sea, they would have defeated the Greeks at Troy. Aeneas would then never have had reason to flee the city, and he would never have ventured to Italy to found Rome. Without Rome, neither the Roman Republic nor a Roman Empire would have existed. Concrete, the arch, plumbing, and the sauna might never have been invented. The modern implications of Rome never having existed are indeed drastic. Lacking even concrete floors, people would resort to sleeping in the mud, and, without plumbing or saunas, they would be perpetually filthy and, generally, quite chilly. France could not have built the base of the Eiffel Tower without arches, so tourists would be unable to purchase miniature collectible Towers in Parisian convenience stores.

Good but Uncreative Essay: "What if…"

- What if the ratification of the nineteenth amendment did not pass and women were never given the right to vote? What would life for women, like me, be like in the United States? For one thing, I probably would not be writing this essay. If women were not given their right to vote, I probably would stop going to school after this year and it would be unlikely that I would receive a college education. Without suffrage, my career options would be limited, if a career were a possibility at all. My accepted practices would be limited to staying home and taking care of the family. Rather than being equals, women would be subservient to men. I might not drive, I might not dress in the way in which I choose to, and I might not be able to live my life the way that I can in the twenty-first century.

3945

3946

Kscope Pilot Study : Research Questions

- How do Kscope measures relate to other application information?
  - Academic, personal quality, extracurricular activity
- How do Kscope measure relate to admissions decision?

Data - Class of 2011

- 22% of the applicants received at least one Kscope rating (Creative, Practical and Wisdom)
- **K Group**- combined C, P, W scores
  - C = only low scores
  - B = only medium scores
  - A = one high score
  - A+ = two or three high scores

Correlations between admission measures

	Creative	Practical	Wisdom	K Group
Practical	0.41*			
Wisdom	0.34*	0.32*		
Academic	0.17*	0.06	0.11	0.10*
Personal	0.18*	0.22*	0.21*	0.25*
Extracurricular	0.45*	0.44*	0.41*	0.49*
SAT-V	0.14*	0.04	0.08	0.07*
SAT-M	0.05	-0.02	0.00	0.00
GPA	0.03	0.01	0.02	0.00

Pilot Study Data

- Kscope correlates with extracurricular and personal quality, but not with conventional academic measures.
- Kscope significantly improves post-hoc prediction of admission decisions over academic and personal quality measures.
- Interviewed admission officers and students supported the Kscope framework.

3950

Pilot Study Data

- Number of applications rose
- Bottom third of old application pool greatly diminished; many more top applicants
- Average SATs rose slightly
- African-American applications up 25%, acceptances up 30%
- Hispanic-American applications and acceptances up 15%

Pilot Study Data

- There were no significant ethnic-group differences on Kaleidoscope
- Kaleidoscope correlated weakly with a composite academic rating (.11)
- Kaleidoscope correlated moderately with rated leadership/extracurricular activities (.44)
- First-semester GPAs did not differ significantly between Kaleidoscope A's and academically comparable students admitted for other reasons

Pilot Study Data

- Kaleidoscope A's engaged in more extracurricular and leadership activities than did others
- Greater customer satisfaction
- Message to students, parents, teachers, and counselors that Tufts is looking for more than just the high-SAT, high-GPA student

Related Projects

- Choate Rosemary Hall
- University of Michigan Business School Project
- Advanced Placement Project
- Aurora Project

Conclusions

- Traditional abilities tests are narrow and limited
- Our new measures can
  - Broaden the range of skills tested for educational purposes
  - Increase predictive validity
  - Decrease ethnic-group differences
  - Increase customer satisfaction

It's Never Too Late to Learn: The Necessity of Serving Adult Students

LEGISLATIVE ADVISORY COMMITTEE
ANNUAL MEETING

SEPTEMBER 28-29, 2009

BOULDER, CO

WCHE

What is an Adult Learner?

2

- Someone 25 years of age or older involved in postsecondary learning activities (Voorhees and Lingenfelter, 2003).
- Anyone "engaged in some form of instruction or educational activity to acquire the knowledge, information, and skills necessary to succeed in the workforce, learn basic skills, earn credentials, or otherwise enrich their lives" (National Center for Education Statistics, 1999).

WCHE

What is an Adult Learner?

3

- According to NCES (2002), nontraditional students exhibit one or more of seven characteristics:
  - have delayed enrollment into postsecondary education
  - attend part time
  - are financially independent of parents
  - work full time while enrolled
  - have dependents other than a spouse
  - are a single parent
  - lack a standard high school diploma

Many Types of Adult Learners

4

Those who:

- Have a degree but no job (displaced workers)
- Are closing to having a degree (ready adults)
- Those with some college, but who aren't close to having a degree
- Those who have never gone to college
- Those who have not graduated from high school
- Those for whom English is their second language
- Are returning military personnel and veterans (2 million!)

You MUST teach an old dog new tricks

5

- **Adult learners are integral to remaining globally competitive**
  - 35 states cannot catch up to the educational attainment levels of the best performing countries by only serving traditional students
- **Adults make up a significant portion of the total postsecondary enrollments**
  - From 1970 to 2002, adult part-time enrollment at all institutions increased from 7% to 12%, and adult part-time enrollment at community colleges increased from 17 percent to 26 percent of all students.

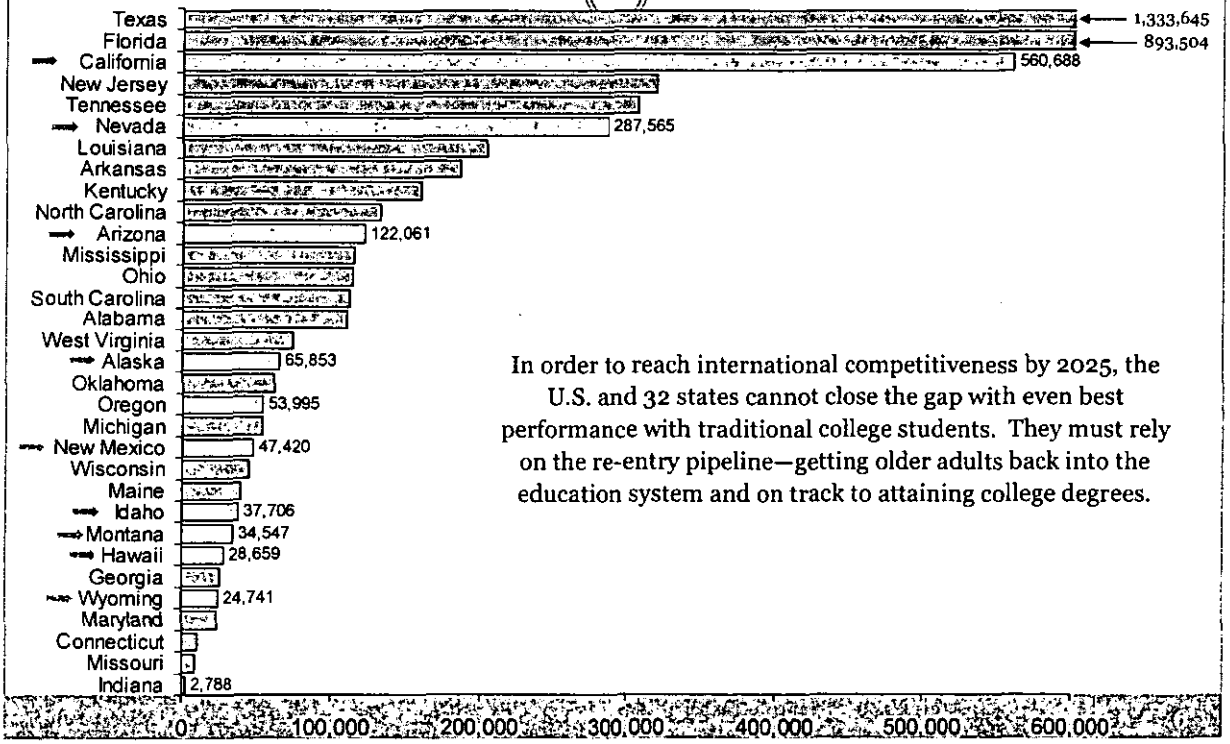
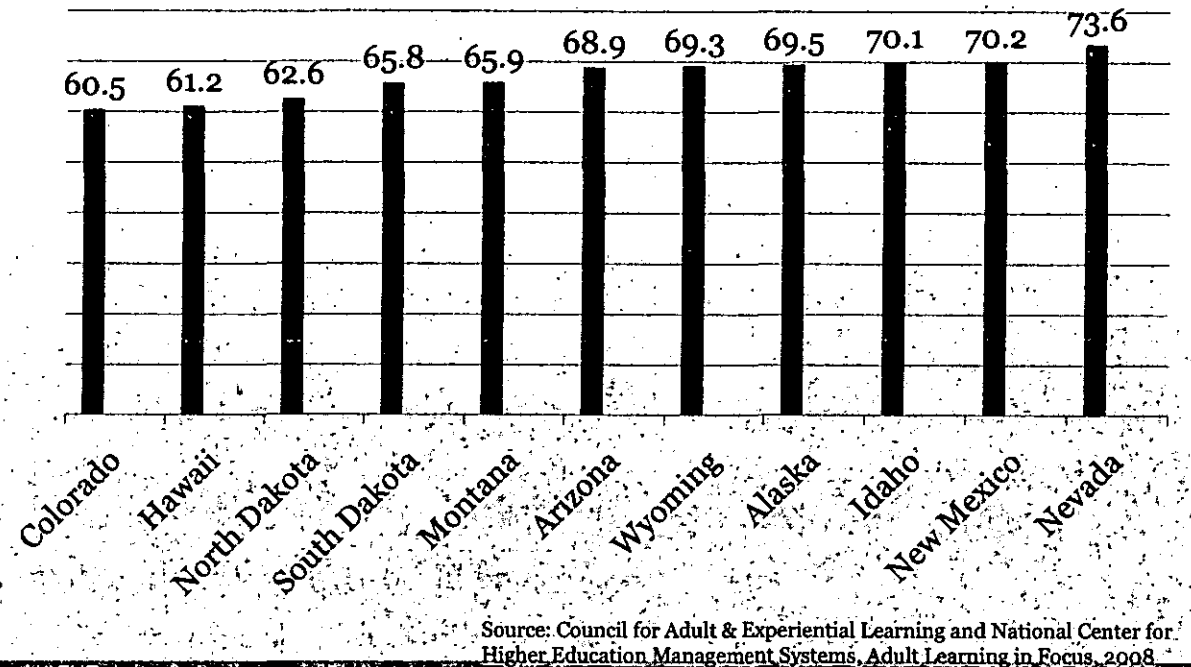
WICHE

Even Best Performance with Traditional College-Age Students at Each Stage of the Educational Pipeline Will Leave Gaps in More than 30 States



In order to reach international competitiveness by 2025, the U.S. and 32 states cannot close the gap with even best performance with traditional college students. They must rely on the re-entry pipeline—getting older adults back into the education system and on track to attaining college degrees.

Percentage of Working-Age Adults with No College Degree



Source: Council for Adult & Experiential Learning and National Center for Higher Education Management Systems, Adult Learning in Focus, 2008

WICHE

Non-traditional No More

- Two-year project funded by Lumina Foundation for Education
- To stimulate and guide policy and practice changes that will make it easier for "ready adults" – those who are just shy of having enough credits to obtain a degree but haven't yet returned to college – to earn their diplomas
- Working with Arkansas, Colorado, Nevada, New Jersey, and South Dakota
- Data, Financing/Financial Aid, Academic Affairs, Students Services, Communication

WICHE

What We We've Learned About Adult Learners

9

- You can't treat them like traditional students.
- They don't want to waste any time.
- They are often place-bound.
- They work so they can't go to class at traditional times.
- They often need child care.
- They need a place to park.
- Paying tuition in one-lump sum at the beginning of the semester is a barrier.
- They're anxious about math.

State-level Policy Issues for Consideration

10

- Conduct a state policy and practice audit.
- Consider policies that improve state data capabilities.
  - In many states, identifying adult learners (particularly those with some college and no degree) is challenging at best
- Incentivize institutions to better serve adult learners.
  - Targeted remediation
  - Transparent statewide articulation and transfer processes
  - Credit for prior learning (e.g., corporate and military)
  - Alternative modes of delivery (e.g., online learning)

State-level Policy Issues for Consideration

11

- Conduct institutional assessments of levels of adult-friendliness.
  - CAEL's Adult Learning Focused Institution
- Adjust financial aid policies to allow for part-time students and adult learners.
- Launch well-researched statewide marketing and communications efforts that are targeted to adult learners.
- Ensure that your state-level policies that affect adults are aligned with federal policy.

Discussion

12

- What is your state doing with respect to serving adult learners?
- Do you know who these students are and their characteristics?
- Are adult learners part of your current policy discussions?
- How are your institutions doing? Are the "friendly" toward adults? Do you really know?
- Is financial aid in your state available to adults?
- Has your state engaged in any statewide marketing efforts targeted toward adults?

The dreaded "P" word

An examination of productivity in public postsecondary education

By Patrick J. Kelly

Full report available — 33 pages.

Delta Cost Project white paper series

Supported by Making Opportunity Affordable, an initiative of Lumina Foundation for Education

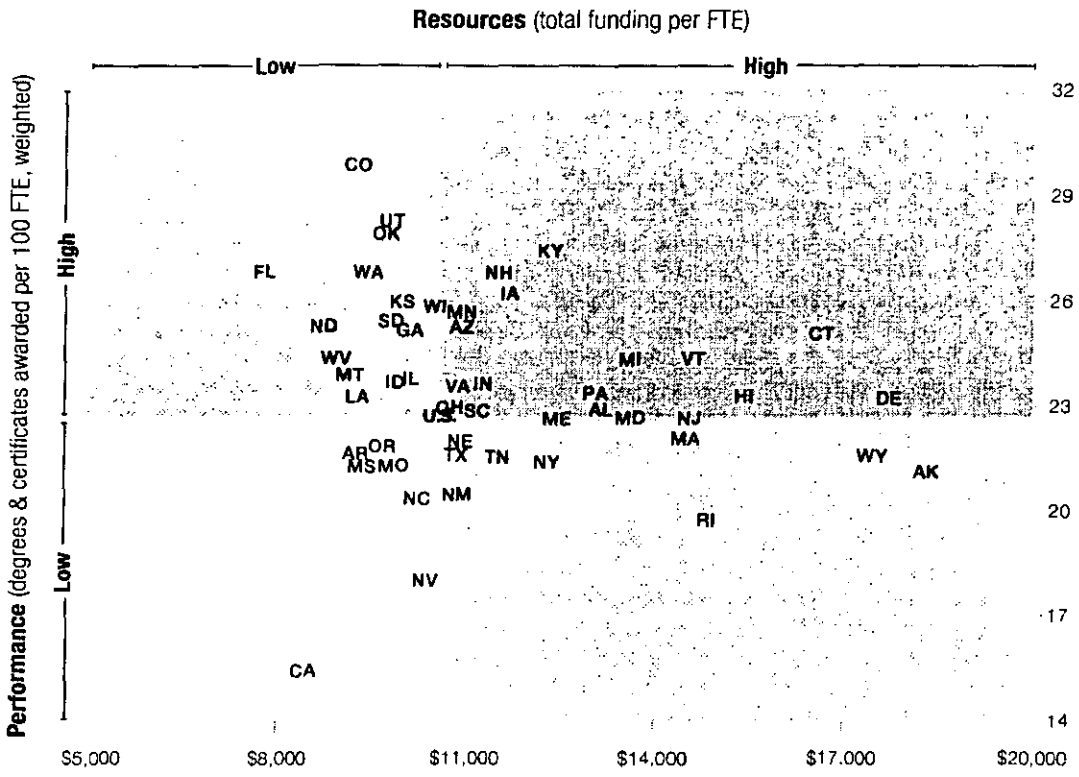
[4] Adjusted for value of degrees and certificates in the state employment market (median earnings by award type and level).

3968

Productivity: Degrees and certificates awarded per FTE vs. total funding per FTE (2006-2007)



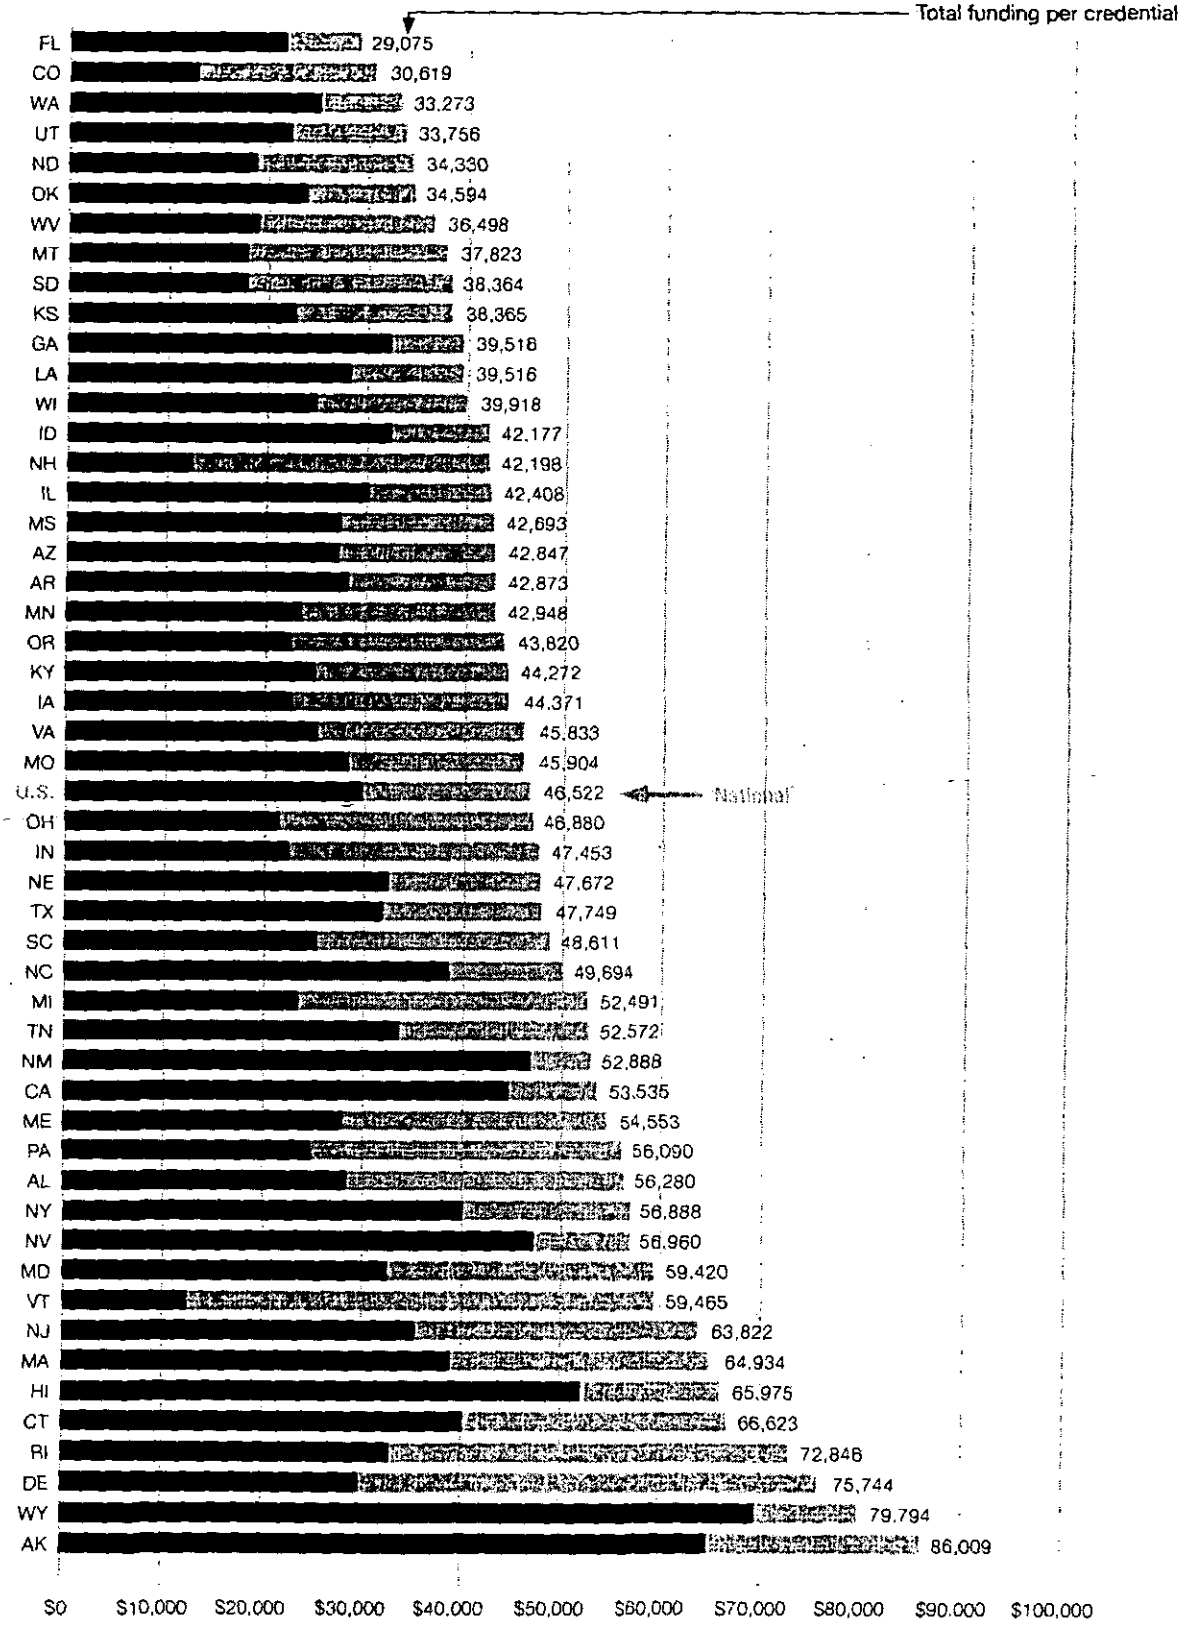
Source: SHEEO State Higher Education Finance Survey 2008; NCES IPEDS Completions Survey.

The combination of funding and certificate and degree production *(see Figure 10, next page)* is what drives the calculation of productivity: total funding per certificate/degree (weighted here by the value of various certificates and degrees). The costs per credential awarded are lowest in Florida, Colorado, Washington, Utah, and North Dakota. The least productive states—those with the highest cost per credential—are Alaska, Wyoming, Delaware, Rhode Island, and Connecticut. The differences between the weighted and the actual "total funding per certificate/degree" show that Indiana, New Hampshire, and Virginia benefit the most from weighting credentials by their market value, while Kentucky, Illinois, and Florida benefit the least *(see Appendix Figure A3, page 33)*.

To what extent do students and families directly invest in an unproductive system through the tuition and fees they pay? They contribute a great deal to the public systems in Delaware, Rhode Island, and Vermont—providing the bulk of revenues to high cost-per-degree institutions *(see Figure 10, next page)*. Conversely, the less productive systems in Alaska, Wyoming, and Hawaii are supported largely by state and local appropriations. At the opposite end of the spectrum, students and families provide a substantial portion of the revenues in the low cost-per-degree systems in Colorado, West Virginia, Montana, and South Dakota—systems that with so little state support probably have to rely on tuition and fee revenues to stay afloat.

3969

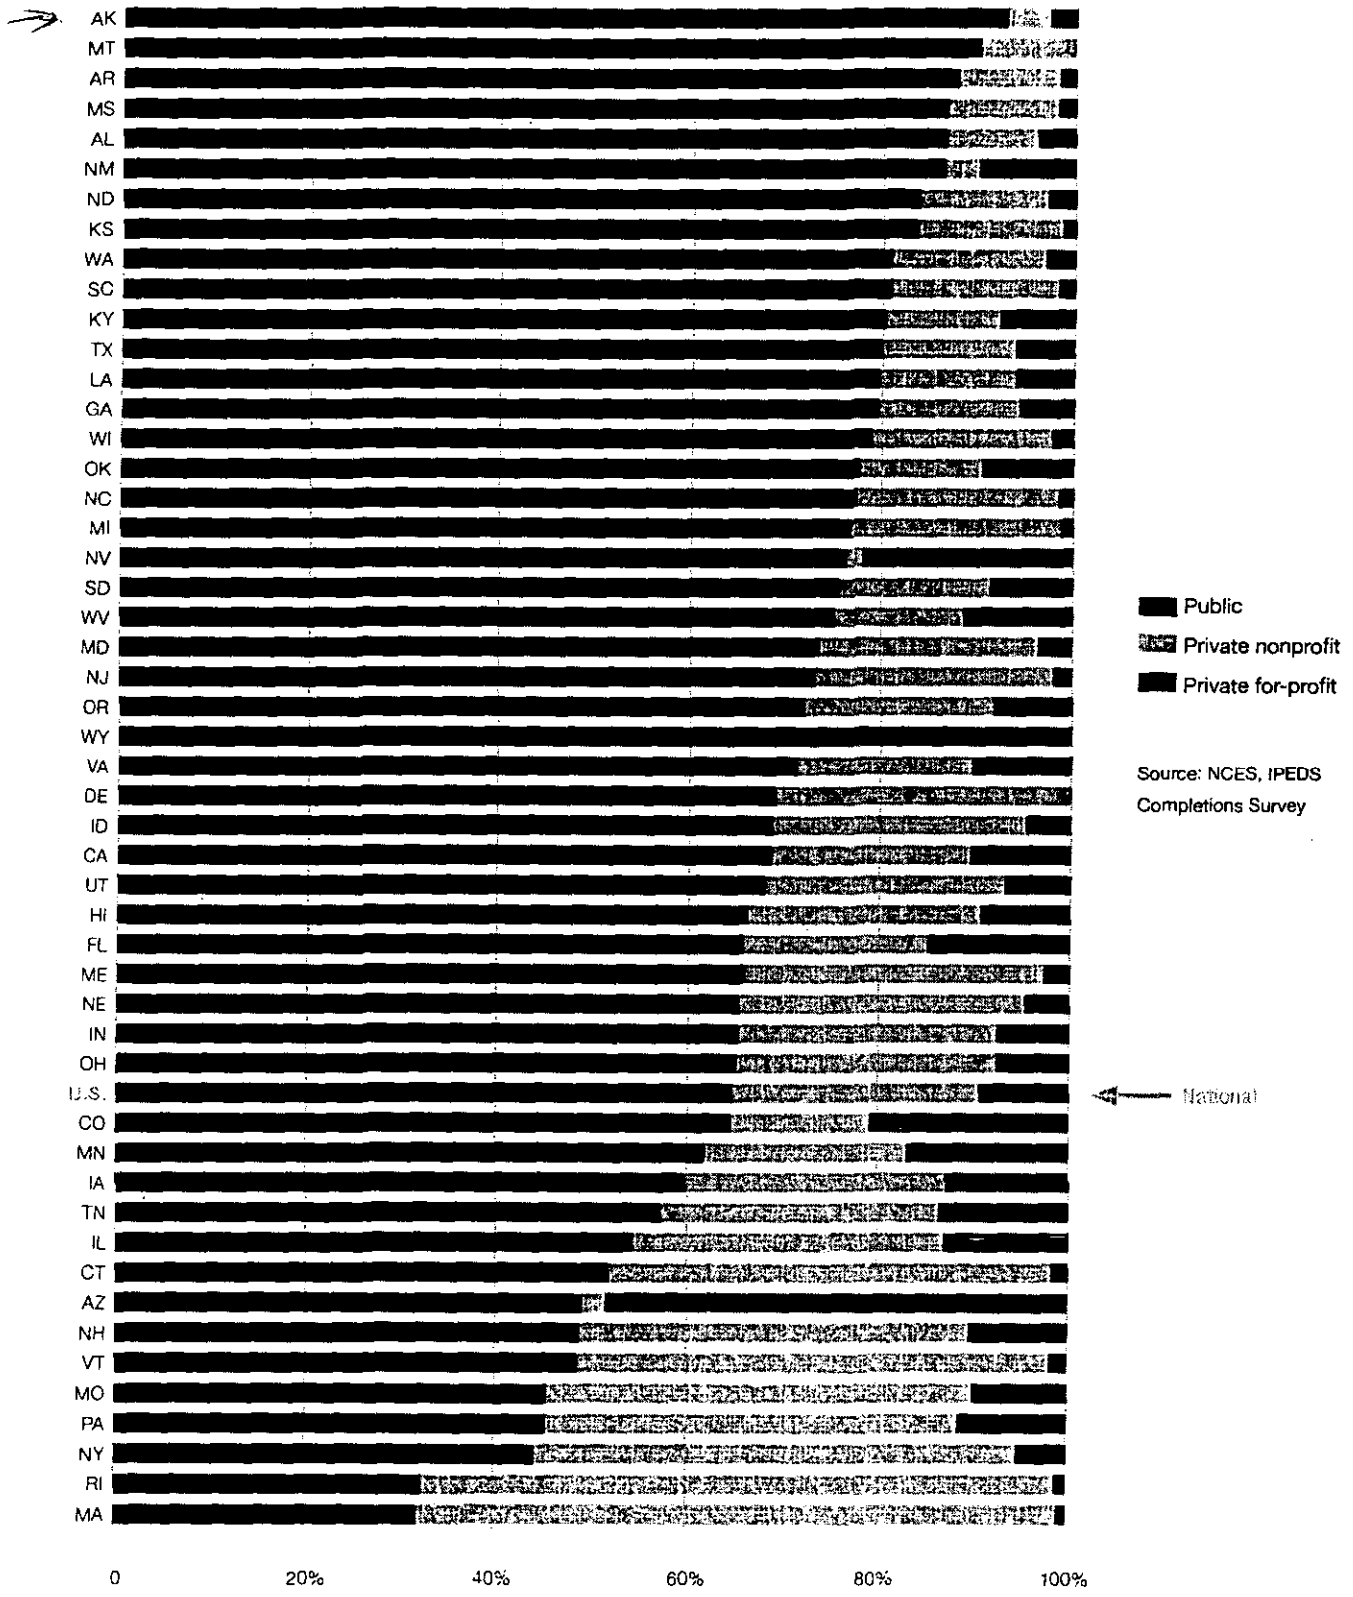
Productivity: Total funding per degree/certificate (weighted,[6] 2006–2007)



Sources: SHEEO State Higher Education Finance Survey 2008; NCES, IPEDS Completions Survey; U.S. Census Bureau, American Community Survey (Public Use Microdata Samples)

[6] Data are adjusted for value of degrees and certificates in the state employment market (median earnings by award type and level).

Annual certificates and degrees awarded (weighted) by control/sector (2006-2007)



Source: NCES, IPEDS Completions Survey

3971

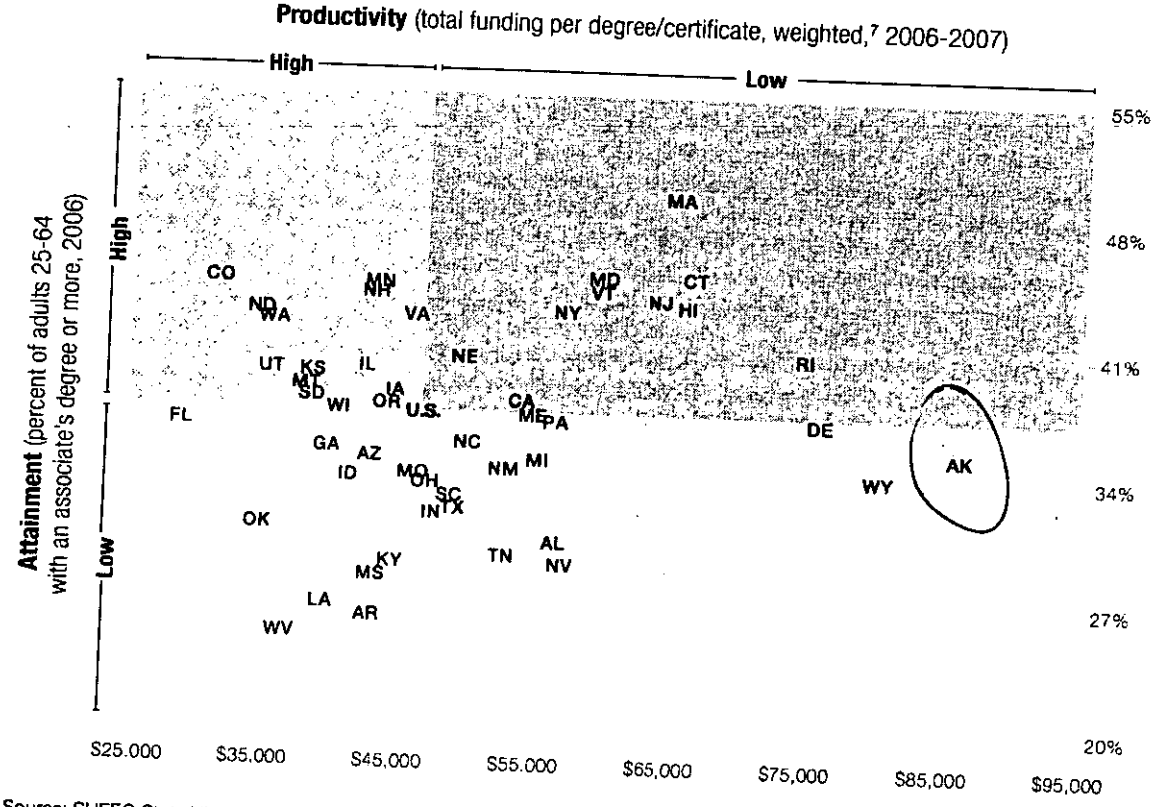
While it is impossible to draw the line precisely, some state systems need more resources in order to produce more certificates and degrees, while others need to produce more with the resources they already have. The extremes are on the top and bottom of Figure 10 respectively.

Other productivity considerations

Public systems of postsecondary education are of varying importance across states in producing the overall number of certificates and degrees *(see Figure 11, preceding page)*. In many of the New England states and New York, Pennsylvania, and Missouri, large portions of the states' production occur in the private sector. While this report does not address the productivity of private colleges and universities, many of these states have probably benefited from the contributions of the private sector to the educational attainment levels of their adult residents. However, because many private institutions are national and international in scope, the public sectors in many of these states serve the majority of in-state residents. So, the presence of highly selective private institutions does not diminish the importance of productivity within the public sector.

Figure 12

Productivity vs. educational attainment of the adult population



Source: SHEEO State Higher Education Finance Survey 2008; NCES IPEDS Completions Survey; U.S. Census Bureau, American Community Survey (Public Use Microdata Samples).

[7] Data are adjusted for value of degrees and certificates in the state employment market (median earnings by award type and level).

Overall levels of educational attainment in the young adult population are important considerations when gauging the productivity of public postsecondary education systems. States that have low levels of educational attainment can least afford to have less productive systems. Tennessee, Alabama, Nevada, Wyoming, and Alaska are states that fall into this category *(see Figure 12)*. Each has lower than average levels of educational attainment and produces relatively few degrees with the resources they have. Conversely, Colorado, North Dakota, Washington, Minnesota, and New Hampshire are among the best-educated states and exhibit high levels of productivity. Several of the least-educated states—West Virginia, Louisiana, Arkansas, Mississippi, and Kentucky—also produce large numbers of certificates and degrees relative to their resources.

One drawback associated with any approach to gauging productivity at the state and system level is the difficulty of accounting for extraneous factors that influence the level at which the state benefits from a productive postsecondary education enterprise. One of these is the state's ability to keep all of its graduates within its boundaries. While exploring factors like economic conditions, employment opportunities, tax structures, cost of living, and climate is beyond the scope of this report, the interstate movement of college degree holders is a good proxy for many of them. Figure 13 *(see next page)* presents the average annual migration rate of college-degree holders in each state from 2004-05 and 2005-06.

In recent years, Nevada, Arizona, and Washington experienced the largest rates of in-migration of college-educated adults. In these states, the pressure to produce large numbers of college graduates is somewhat alleviated by their ability to attract them from outside the state. However, policymakers in some states have relied on outside talent for decades. For example, policymakers in Colorado and Washington are beginning to realize the importance of doing a better job of educating their own residents. This realization is based partially on fairness—those who have contributed should share in the benefits—and partly arises from a concern that opportunities in historically out-migrant states will eventually reduce the flow of talent.

Despite producing a relatively large number of degrees with low levels of resources, North Dakota and West Virginia lose a substantial number of graduates to other states that have more vibrant economies. It is important to note that Louisiana's high migration rate was probably affected by hurricane Katrina. Also important to note is the fact that interstate migration has diminished in recent years with the waning economy and housing markets.[8]

Productivity in public bachelor's and master's institutions

This productivity analysis can also be applied to specific sectors within state postsecondary education systems. NCHEMS' previous work—using a slightly different methodology—has shown that certain sectors within states (e.g. two-year, bachelor's and master's, and research

[8] For more information on the migration of college-educated residents, visit www.higheredinfo.org.

3973

Average annual migration rate[9] of college graduates aged 22 to 64 (2005-2006)

[9] Net migration of adults (entrants minus exits) with college degrees per 1,000 adults with college degrees in the population.

Alaska Profile of Adult Learners 2008

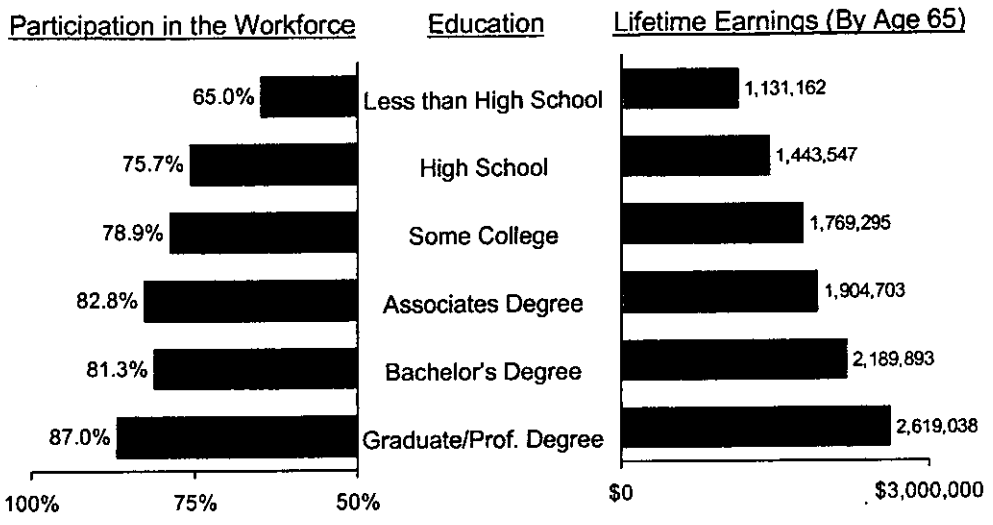
Adult Learning in Focus

How Does Education Pay Off for Alaska?

In Alaska:

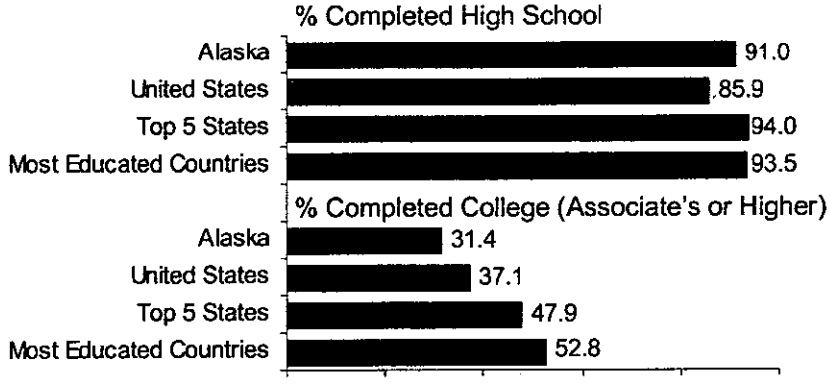
Working-age residents with college degrees are 25 percent more likely to participate in the workforce than those with less than a high school diploma.

And their earnings over a lifetime are about twice as much -- a substantial personal benefit as well as a benefit to the state with respect to more taxable resources, fewer health problems, lower rates of crime, and greater levels of civic engagement.



How Does Alaska Measure Up?

Alaska's Young Adults Compared to the U.S. and Best Performing Countries (Age 25 to 34)



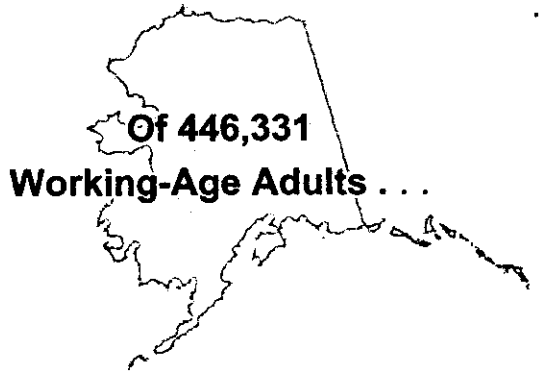
Note: The most educated countries in 2005 include Korea, Japan and Canada.

In Alaska:

A higher percentage of young adults have completed high school than the U.S. average, but lower than the top states and the most educated countries.

A lower percentage of young adults have earned college degrees than the U.S. average, and much lower than the top states and the most educated countries.

The Challenge: Alaska's Working-Age Adults (18 to 64) with No College Degree



... **310,077** have not completed college (associate's degrees or higher) — **69.5** percent of all working-age adults in Alaska. Of these:

46,885 have not completed high school (or equivalent)

135,887 have completed just a high school diploma but have not entered college

127,305 have completed some college but no degree

6,592 speak little or no English

56,210 are living in families whose combined incomes are less than a living wage (twice the level of poverty)

GETTING WHAT YOU PAY FOR

The Legislative Role in Improving Higher Education Productivity

Dennis Jones

November 2008

NATIONAL CONFERENCE of STATE LEGISLATURES
The Forum for America's Ideas

WICHE
Western Interstate Commission for Higher Education

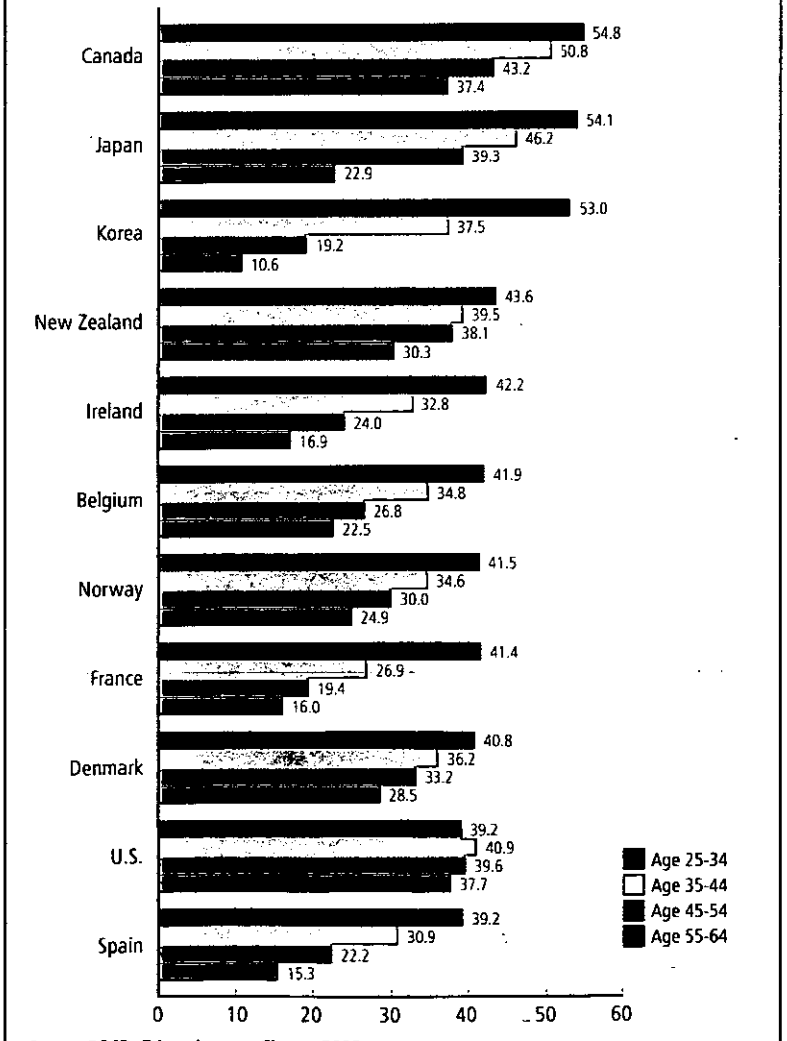
With support from

LUMINA FOUNDATION FOR EDUCATION

Introduction

There is now widespread acceptance of the fact that economic competitiveness in the global marketplace will largely be determined by the stock of educational capital embodied in a nation's workforce. Based on this yardstick, simply put, the U.S. is losing its competitive edge. While still having the second most highly educated workforce in the world (after Canada), this advantage is the result of the nation's head start in mass higher education. The edge is a function of the baby boomers attaining much higher levels of education than their counterparts elsewhere in the world. Among younger workers (ages 25-34), the picture is much different, with the U.S. lagging nine other countries in the proportion of its young workforce possessing at least an associate's degree (see Figure 1).[1] With the retirement of a highly educated portion of the workforce and their replacement with individuals who are, on average, less well educated, the U.S. will find itself in the unaccustomed position of lagging in the capital market that matters most: educational capital.

Figure 1. Percent of Adults with an Associate Degree or Higher by Age Group, U.S. and Leading OECD Countries

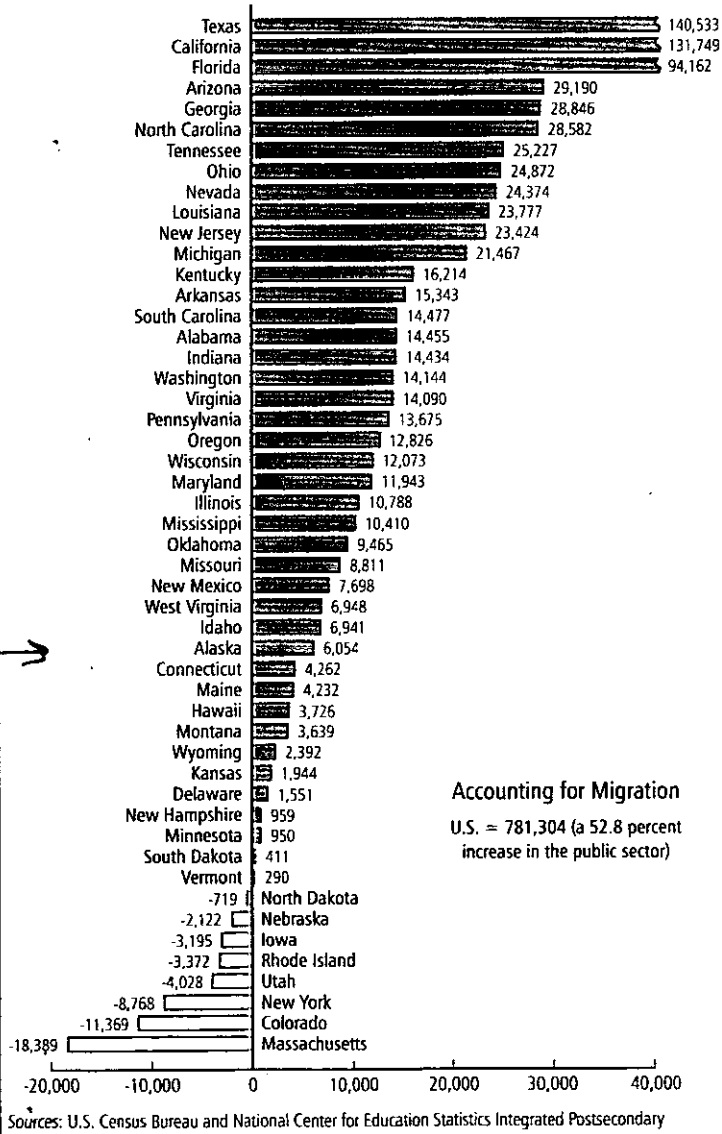


Source: OECD, Education at a Glance, 2008.

The magnitude of the challenge facing the U.S. is substantial. Estimates indicate that by 2025, 55 percent of the working-age population will need at least an associate's degree. If the nation's education enterprise continues to function as it does now – the same patterns of high school completion, college participation, and success – there will be a shortfall of about 16 million college graduates by 2025.[2] The shortfall will be even greater if the current levels of in-migration of college graduates are not sustained. This in-flow of educated talent cannot be guaranteed given the increasing opportunities now available in the countries from which talent has historically flowed.

Most states will share the problem faced by the nation. The majority will not achieve the 55 percent threshold doing business as usual. The shortfalls in the states vary dramatically (see Figure 2), but few will hit the target without a substantially increased output of degree-holders from their colleges and universities.

Figure 2. The "Gap" – Difference in Annual Degrees Produced and Annual Degrees Needed to Meet Benchmark



Sources: U.S. Census Bureau and National Center for Education Statistics Integrated Postsecondary Education Data System, 2005.

The costs of closing the gap are enormous. A rough estimate is that the states' collective support for higher education would have to increase by nearly 40 percent – an additional $32 billion on top of the $78 billion currently being invested. And this additional amount would have to be spent every year for the next 20 years; it is not a one-time infusion of operating funds that could be provided in a particularly robust economic environment. Given the health of the nation's and states' economies and the competing demands for state resources, it is impossible to envision a scenario in which this much money can be devoted to closing the education attainment gap.

The nation faces a dilemma – some would call it a crisis – regarding the demand for more graduates, and its institutions of higher education will be asked to respond to it. Since states, not the federal government, are responsible for higher education, the problem ultimately becomes one with which state legislatures must deal.

The task is vexing. States cannot reduce their expectations to meet the limitations of their budgets. Doing so would result in the equivalent of economic disarmament. Neither can they increase their budgets to meet their degree production requirements, given current institutional expenditure patterns. Taxpayers would revolt at the tax increases that would be required. If students were asked to foot the bill, so many would likely find college unaffordable that the required graduation numbers could not be achieved. So what is the solution?

Increasing Productivity

There is no single answer to this question. But a major part of the answer has to be increasing productivity – getting more output (degrees and certificates) produced for the resources being invested by states. Institutions will inevitably push back against this idea, arguing that they can't increase productivity without sacrificing quality. The evidence belies the argument. Figure 3 indicates that most state systems of higher education would

Figure 3. Undergraduate Credentials Awarded per 100 FTE Undergraduates, 2002-03

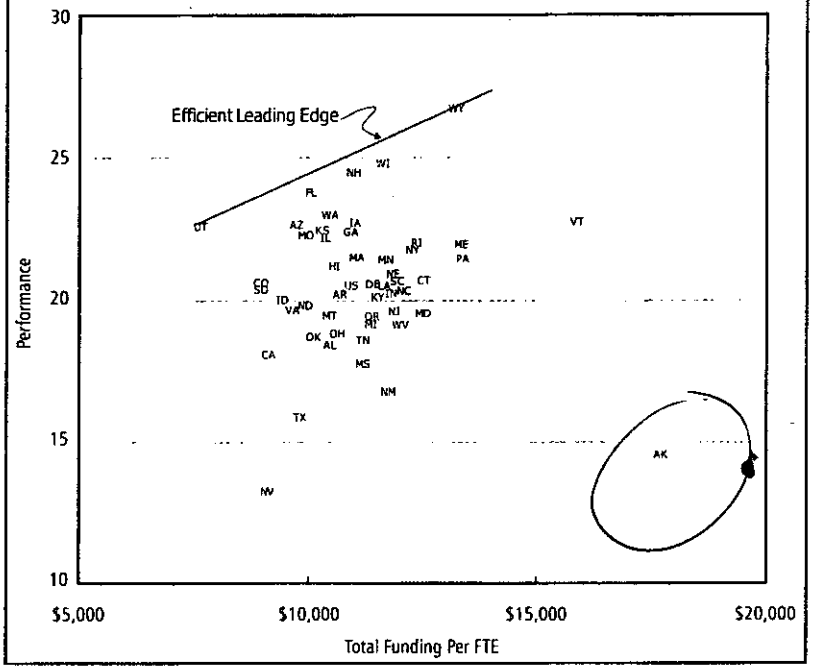


Figure 4. Undergraduate Degrees Awarded per 100 Full-Time Equivalent Students

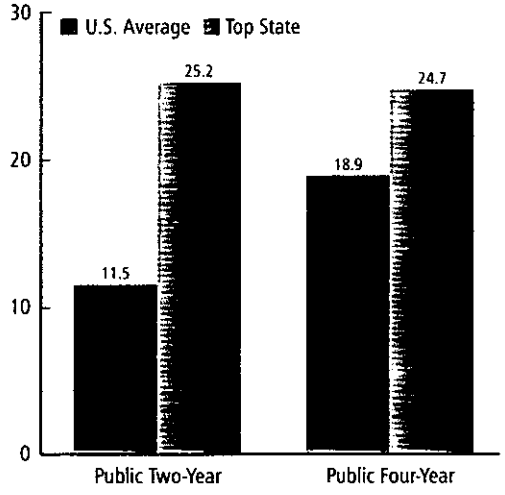

Source: National Center for Education Statistics Integrated Postsecondary Education Data System, 2005.

have to produce many more degrees to be as cost-effective as those states that get the highest degree production for an equivalent investment (moving vertically on Figure 3 to a position on the "efficient leading edge").[3]

Figure 4 shows the relationships between degrees produced and college enrollments for the best performing state and the nation as a whole. The differences are substantial.

If state systems produced at the rate of the best-performing state, savings would be an estimated $38 billion, more than enough to cover the entire $32 billion needed. This level of performance by all states is unlikely; nevertheless, these calculations indicate that productivity improvement can make a large contribution to funding the output gap. In the end, achieving the globally competitive target will require additional investments, but it will also require legislatures to raise expectations regarding outcomes produced with the resources already in hand.

The Legislature's Role

Institutions of higher education operate within a policy environment established primarily at the state level. Therefore, one can argue that underperformance is at least partially due to the state policies and the way they are implemented. They either allow underperformance to continue or limit the extent to which performance can be enhanced. Legislatures would do well to call for a "policy audit" to identify those aspects of existing policy that negatively affect the pursuit of high productivity.

It also behooves legislators to better understand the ways in which their actions affect productivity enhancement. Legislative actions affect the productivity of a state's higher education system – both directly and indirectly.

Direct effects are most evident in decisions regarding the nature of the system of higher education created in the state. The most important contribution legislatures can make is to create a system of institutions that is inherently cost effective – investing in institutions that produce a lot of graduates relative to the investments made in them. This means investing in institutions that have instruction as their mission and that are encouraged to excel at this mission. This flies in the face of enormous pressure to invest in research universities, pressure from the institutions and their well-organized alumni groups, from communities that want their local campus to become one of the research university elite, and from legislators themselves who tend to perceive higher education through the lenses of the most prominent institutions in the state. The ability to resist such temptations and place a priority on funding institutions that can produce the most graduates for the money spent – not the institutions

with the best graduation rates but those with the best graduation rates per dollar – is ultimately the primary determinant of system productivity.

It is relatively easier to heed these admonitions in states that are growing rapidly. In such instances, it is possible to add necessary capacity by investing in those institutions that specialize in undergraduate education. This was the path taken by Nevada when it chose to create Nevada State rather than further expanding its research universities. The opposite strategy has been followed in California and Washington, where the capacity added has been in the highest cost systems and institutions in the state. Such decisions let local communities advertise the presence of the University of California or the University of Washington in their midst but do little to cost effectively serve a substantially larger number of students.

In states that are not growing, the strategies are more complicated – especially in light of political realities that make it nearly impossible to adjust capacity by closing institutions. The requirement is that all institutions be helped to enroll sufficient students so that they can operate at cost-effective levels. One approach is to engage in enrollment management at the system level – raise admissions standards at the most popular institutions to spread enrollments more evenly, for example. Another approach is to change the missions of one or more institutions so that they can serve audiences not currently being served (usually adults, but it could be high school students seeking courses that can't be offered by local schools, employees of certain types of companies, etc.).

Perhaps most important, institutions need to grow enrollments by reducing dropouts. This can't be directly affected by legislative action, but improvements in this arena can be assisted indirectly by the environment created by state policy.

The ways in which legislatures indirectly affect productivity are far too numerous to catalogue here. There are a limited number of tools that can be employed by state policymakers to influence the productivity equation (other than cutting funding and exhorting institutions to do more with less). The primary tool is financial – determining the rules by which funds are allocated to institutions. In almost all states, enrollments play a key role in determining funding levels; course and program completions seldom if ever become part of the equation. However, if degree attainment is the goal, then aligning all elements of financial policy – appropriations to institutions, tuition and fees, and financial aid – with this goal is obligatory. In funding institutions the emphasis on completion can be reinforced by funding on the basis of course completions rather than course enrollments or by putting a sizeable portion of the allocation into a performance pool that is distributed on the basis of degree completions. Tuition and fee policies can help to ensure affordability and create incentives for rapid progression through the system. The same is true for student financial aid policies.

Accountability mechanisms are another device for pushing the productivity agenda. For example, it is useful to track system productivity through use of such measures as:

- Degrees produced relative to enrollments benchmarked against best-performing states.
- Credits to a degree for transfer students versus native students (are there major inefficiencies in the transfer and articulation process?).
- Degrees produced relative to costs, for the system as a whole and for each of the sectors.

Asking the right questions is a critical legislative role. Asking questions not just about the money but about results obtained from the money spent is a necessary ingredient in enhancing productivity.

Asking the right questions is a critical legislative role.

Regulatory mechanisms are the other major tool available to state policymakers. While as likely to be revealed by a policy audit as barriers to productivity (by mandating that funds be used in specified ways or establishing one-size-fits-all procedures), some regulatory actions can help enhance productivity. These include:

- Putting a cap on credits required for a degree.
- Supporting dual credit and other forms of acceleration programs.
- Mandating acceptance of an A.A./A.S. as the first two years of a baccalaureate program.

The list could go on.[4]

These regulatory actions represent examples, not recommendations for action in any particular state. The intended message is twofold:

1. The accumulation of policies creates a policy environment that can either promote or detract from efforts to improve productivity. A thorough review of existing policy with an eye toward removing those that are detrimental is a very worthwhile endeavor.
2. As part of each future policy action, the question should be asked, "Can we do this differently, in a way that would promote the productivity of the system?"

Productivity either happens or doesn't happen at the campus level. But the actions of state policymakers play a critical role in determining whether institutions will (or can) rise to the occasion.

Conclusion

This brief document has sought to make three key points.

1. **Productivity improvement in higher education is a state and national imperative.** There is no way to reach competitive education attainment levels within the limits of constrained resources if a business-as-usual approach to higher education continues.
2. **Productivity improvements are possible.** Some state systems and sectors are much more productive than others. It's a matter of doing rather than knowing what to do.
3. **Much depends on legislative actions and the policies they create.** Lack of productivity can't be blamed solely on institutions.

About the Author

Dennis Jones is president of the National Center for Higher Education Management Systems (NCHEMS), a nonprofit research and development center founded to improve strategic decision making in institutions and agencies of higher education. A member of the staff since 1969, Jones is widely recognized for his work in such areas as the changing environment for postsecondary education; the formulation of state and institutional policy in response to this change; and strategic planning for postsecondary education. Previously, Jones served as an administrator at Rensselaer Polytechnic Institute. He earned his graduate and undergraduate degrees from that institution in the field of engineering management.

GETTING WHAT YOU PAY FOR

The States and Student Financial Aid: A Mixed Bag with Mixed Results

David A. Longanecker

November 2008

NATIONAL CONFERENCE of STATE LEGISLATURES

LUMINA

Introduction

Legislators face many difficult questions when considering what to do about state-supported student financial aid. The first question, of course, is whether to support it at all. After all, doesn't the federal government take care of that adequately through its Pell Grant and student loan programs? And whether it does or not, isn't it their (and not the states') responsibility? If the state does support financial aid, should it focus on grants, loans, savings, or work-study programs? And finally, should such aid be used to increase access for financially strapped students, reward meritorious academic accomplishment, attract and retain the best and brightest, or gratify the broad electorate?

All of these questions have been in play in most states in recent years. And the inevitable increases in tuition that appear to have become simply a matter of course in public higher education will continue to force such questions onto the public agenda. This policy brief provides information that is intended to be useful to legislators who want to find the right balance in policy discussions and actions.

Evolution of State-Based Grant Programs

In the 1960s, a number of states began to recognize that simply keeping tuition low was not a viable finance strategy for an egalitarian model of higher education. Too many students, particularly those from low- and moderate-income families, simply couldn't accumulate sufficient funds for tuition and related educational costs to send their children to college without exceptional sacrifice. This brought about the evolution of state-based grant programs, beginning with traditional need-based grants, which were followed by the advent of merit-based aid, and, eventually, the creation of blended aid programs, which consider both need and merit.

Traditional need-based grant programs. In response to the realization that low tuition was no longer the most effective way to finance higher education, a few states began to develop state need-based financial aid programs, providing state aid to assure that all capable students could afford college. This general strategy built on the new federal financial aid programs, particularly the Basic Educational Opportunity Grant (BEOG) Program, subsequently renamed the Pell Grant Program. But another federal program, the State Student Incentive Grant (SSIG) Program, recently renamed the Leveraging Educational Assistance Partnership (LEAP) Program, also increased state interest by providing matching funds for state investments in such programs.

In response, most states developed modest financial aid programs to capture the federal funds. A minority of states developed substantial programs, with a number of them balancing this policy move with a greater reliance on tuition revenue. Yet most states continued to rely principally on low tuition as their primary financial affordability tool.

To some extent these two differing philosophies – which became known as *high-tuition/high-aid* and *low-tuition/low-aid* – initially fell out along regional lines, with the Northeast and Midwest beginning to

3982

move more toward the high-tuition/high-aid model and the South and West continuing to rely on a low tuition strategy. Over time, however, all states found it necessary to begin using tuition increases well above inflation as a way of expanding higher education. These increases were necessary, both to meet the increasing demand for higher education and to respond to increased operational costs, fueled in part by the expanding mission of many public institutions (see policy brief on mission creep). This left states in the South and the West at a distinct disadvantage in providing affordable higher education because most of them had very modest state need-based financial aid programs, which were insufficient to sustain true affordability. In the West, for example, only two states – California and Washington – had a strong tradition of providing adequate need-based financial aid. In the South, virtually no states had strong need-based programs.

Merit-based grant programs. In the early 1990s, a new financial aid philosophy began to catch hold, particularly in the Southern states. It focused on providing financial aid to all students who achieved at a high level academically, rather than relying on programs that only considered financial need, such as those that had evolved in the Northeast and Midwest. Georgia's HOPE Scholarship Program epitomized this movement. Although Louisiana's similar Tuition Assistance Program (TAP) predated the Georgia program, Georgia Governor Zell Miller's charismatic support of the program helped to popularize this new financial aid strategy. The program promised all high school students who achieved a 3.0 grade point average in high school (and maintained it in college) that the state would pay the students' tuition at any Georgia public college, technical institute, or university and provide an equivalent amount to any student selecting a private college or university in Georgia. Governor Miller believed that it was important to change the ethic of attending college in Georgia, which ranked relatively low in the share of high school graduates who went on to higher education and also lost many of its best and brightest students to private colleges and flagship public universities in bordering states.

The program almost immediately enhanced Governor Miller's popularity – a phenomenon easily recognized by other Southern governors – and within a very short period of time, other states began adopting the same idea. In addition to Louisiana and Georgia, Florida, Tennessee, South Carolina, Kentucky, West Virginia, Arkansas, and Mississippi adopted similar plans. Three Western states – Nevada, New Mexico, and South Dakota – followed suit.

Many policy analysts within the student aid community were quick to condemn these programs, arguing that they did little to expand educational opportunity, which many believed to be the core reason for providing student aid. Students from middle- and higher-income backgrounds disproportionately benefit from merit programs. These students attend better-resourced high schools and, on average, come from families with higher levels of education . In other words, merit programs disproportionately reward students who most likely can afford and will go to college anyway. In addition, many critics argue that providing merit aid erodes the funds available for need-based programs.

There are two problems with these often caustic castigations of merit programs. First, they presume that all financial aid programs should serve the singular purpose of expanding opportunity for the most financially needy students. While expanding opportunity is certainly the tradition of many student aid programs and is a worthy public purpose, it does not preclude a state from seeking other public benefits through the use of financial aid. Seeking to expand the ethic of college participation and inducing more of the best and brightest high school graduates to stay in their home states for college are also legitimate public purposes.

Second, the presumption that funding merit programs erodes funding for need-based programs has proven spurious. As mentioned earlier, virtually no Southern states had viable need-based programs, and most of the states that adopted significant merit-based programs were in the South. In fact, in only two states – New Mexico and West Virginia – is there any hard evidence that substantial increases in merit-based aid actually "eroded" need-based aid. While it is true that these increases could have been directed to the financially neediest student, no evidence suggests that these states had the inclination to provide substantial need-based aid. Furthermore, the neediest students did benefit considerably from these merit programs. While the merit awards didn't focus on financially needy students, many of these students did, in fact, qualify

for them. While the neediest students received a disproportionately small share of the merit awards, compared to their representation in the population, they still received substantially more than they had before the advent of the merit awards. In Georgia, for example, students with assessed financial need currently receive more than $50 million of the $350 million available through HOPE Scholarships. That is much more than the $2 million provided for need-based aid before the HOPE Scholarship Program began.

The more appropriate question is whether these merit programs achieve their intended purpose. In Georgia, the state goal was to increase overall participation and retain the best and brightest. Georgia is the only state in which a merit program has been seriously evaluated, and participation increased from 30 percent before the implementation of the HOPE Scholarship to 37 percent after five years. Prior to implementation only 23 percent of students scoring above 1500 on the SAT stayed in Georgia to attend college, whereas 76 percent were doing so five years later.

On the surface, therefore, it appears that merit scholars achieve their stated public purpose. Beware, though. Georgia had only a very modest ethic of college participation, so an initiative aimed at the middle-class made sense. In most states most middle-income and higher-income students already attend college, so merit programs are less likely to impact participation. In the language of economics, except for students from low-income backgrounds, there is very little "price elasticity of demand" for higher education.

Blended aid programs. About the same time that a number of states began adopting merit-aid programs, a small number of creative states developed another concept that wedded the principles of both the merit- and need-based programs. Indiana, through the 21st Century Scholars program, and Oklahoma, through its Oklahoma Higher Learning Access Program (OHLAP) (renamed Oklahoma's Promise), developed programs targeting low-income students in middle-school (8th grade) and promising them that the state would provide grants equal to tuition if they took a rigorous curriculum in high school, did reasonably well in that curriculum, and stayed out of trouble with the law.

These programs were designed to address two emerging realizations about the limitations of traditional financial aid programs. First, many prospective participants did not realize they would be eligible and thus abandoned higher education plans for fear of their costs. Second, many students were not succeeding once they got to college, not because of finances but because they simply were not well-prepared, due to the nonrigorous curriculum they had taken in high school. By combining a promise of state aid with a student commitment to study hard, these programs hoped to increase both awareness and preparedness for future success. Evaluations of these programs have suggested amazing success on both accounts. In both states the programs have required some adjustments, but the basic plan seems designed to address the states' purposes. As a result a number of other states have recently adopted this general concept, including Colorado and Washington.

Evolution of State-Based Student Loan Programs

Much like the state grant programs, state student loan programs have evolved primarily via federal leadership. One of the early features of the federal student loan program, known as the Stafford Federal Student Loan Program, was that the federal government would rely on state or nonprofit agencies to act as "the guarantor" for the loans. In truth, "guarantor" was a bit of a misnomer because these agencies weren't really guaranteeing the loan: the federal government provided the guarantee. These intermediaries represented the federal government in administering the guarantee on these loans. In essence, they helped banks provide and collect payment for the loans, assisted schools with managing the loans, and had primary responsibility for collecting on loans that eventually went into default. Some states chose not to establish state agencies but rather to contract for these services from nonprofit agencies. Over time, through consolidations and other actions, more and more states got out of the business of using a state agency to provide this service. In some instances, this was because a state agency was having difficulty providing good service and may have run into difficulties with the federal government. In other cases, it was because the state wanted to recoup substantial reserves that had accrued to these

3984

agencies over the years by selling or closing them. As a result, today only 28 states actually retain state guarantee agencies, and many of these actually contract out much of the loan management function to third-party servicers. Eight states recognize a single national guarantor, USA Funds, as their designated state guarantor.

In addition to establishing state guarantee agencies, many states over the years have also established state student loan programs, which are actually involved in the lending rather than the guaranteeing of loans. Some of these programs act as lenders in the federal student loan program, acting either like a lending bank or providing a secondary market to assist banks in the state by purchasing loans from them once the loans have gone into repayment.

Other state loan programs, however, actually lend loans backed by the state to supplement the loans available through the federal government. One of the first such programs was Minnesota's Student Educational Loan Fund (SELF) Program, which in the mid-1980s took the reserves it had accumulated from participating in the federal program, officially left that program, and began a state program backed by those reserves. This program operates within a state agency, the Minnesota Higher Education Services Office, but requires no direct state funding, because the loans pay fully for the program's administrative and management costs.

These various loan programs have proven popular because they provide valuable services to the state and its citizens; accrue reserves because of the largess of the federal government; and generally cost the state nothing.

With recent changes at the federal level, however, the landscape has changed significantly for these businesses. Substantial reductions in federal subsidies to guarantee agencies and lenders have greatly reduced the financial viability of these state agencies. Furthermore, the tightening of the credit markets has made it increasingly difficult for state agencies to borrow sufficient student loan capital to continue lending to students in the same fashion they have in the past.

While these changes have not placed students who borrow through the federal programs at risk of not being able to borrow (because there remain sufficient numbers of large federal lenders, including the federal government itself), the reduced subsidies do jeopardize the future viability of many guarantee agencies. And current economic conditions clearly threaten access to nonfederal student loans.

Evolution of State-Based Savings Plans

The federal government also has enticed virtually every state to establish state-recognized agencies or related entities that provide opportunities to state residents to save for their children's or their own education. These plans, called Section 529 savings plans for the section of the federal tax code that provides for them, offer two ways for people to invest. One way is to prepay your college tuition up front – a sort of "futures" investment strategy, in which the investor buys tomorrow's college at today's prices. The second is simply to invest savings for college in a tax-deferred investment fund provided by the state.

These programs have proven popular to state government for much the same reasons as the state loan programs. Three dilemmas have evolved for these programs, however. First, the prepaid tuition plans, in several circumstances, have not yielded returns on investment sufficient to cover the actual increased costs of tuition, meaning that either the state has to supplement the funds or institutions are left on the hook to accept students with the amount provided, resulting in substantial loss of tuition dollars. Second, the prepaid tuition plan turns out quite well for the student who chooses the institution for whom the tuition plan was purchased, but students take a substantial loss if they ultimately choose to attend a different institution. Third, in the standard savings plans, administrative costs and risk-averse investment strategies often provide a yield that is less than the investor would have realized through an alternative savings strategy, even with the advantage of the tax deferral.

Modest State Efforts in College Work-Study

While the federal government has had a strong college work-study program since the inception of the Higher Education Act in 1965, only 14 states have developed such programs. And only five of them – in Colorado, Minnesota, New Mexico, Pennsylvania, and Washington – are very substantial. From a student's perspective, college work-study is hardly financial assistance. It generally involves hard work, often in less than ideal circumstances,

for modest wages. Yet research on the federal program demonstrates that college work-study can contribute substantially to student success. Given that more than three-quarters of all students are employed, the question isn't whether they should work or not but what kind of work best supports their needs. Research by the American Council on Education shows that students in work-study jobs, who work 15 hours or less per week, are much more likely to succeed in completing their education than students who work in other jobs, particularly off-campus jobs.[1]

A second type of college work study, cooperative work-study, in which students work for a company in their chosen field, has also proven very successful. No states have cooperative work-study programs, although Washington allows for students to participate in cooperative work-study jobs. A number of universities, however, have offered cooperative work-study opportunities. It is curious, given the strong work ethic of today's college students and the limited availability of public financial assistance, that this clearly prudent form of assisting students to finance their education has not entered the repertoire of more state financial assistance programs.

What Makes for Good State Financial Aid Policy Today?

Given this history of student financial aid and the panoply of programs, what makes sense in today's world? What should we keep from the past, and what needs to change? Six "principles" should help guide state legislators as they consider their financial aid policy.

Principle 1: Establish a clear philosophy and identify measureable goals. Every public policymaker knows this one, right? Well, not exactly, it turns out. A review of many state financial aid programs, be they grant, loan, or savings programs, suggest that it is not at all clear what their purpose is. Too often, state statute clearly details the operation of these programs but is less clear about the goals. In great part this is because so many programs evolved from incentives provided by the federal government. Thus, these programs may serve the federal government's purposes, but it is not clear that they are well-aligned with a state's public agenda.

It is important for the state – the governor, the legislature, and the higher education community – to periodically review just why the state is invested in financial aid. Are students the focus of these programs, and if so, is the purpose to advance access, to enhance student success in completing their education, or both? Are educational institutions the focus of these programs, and if so, is it to incentivize them to serve a more diverse student body or to attract a "higher caliber" of students? Are the state and its public agenda the focus of these programs? Or are the programs intended to address all of these, and if so, in what balance?

A clear philosophy can help a broader array of legislators better understand the value of these programs as it relates to achieving the state's agenda. Oregon, for example, was struggling a few years ago with a rather modest but long-standing traditional student grant program. It was a comfortable program for the state, but was losing ground financially over time, primarily because it was the "same old/same old." The assessment of funding needs was predicated on an outdated federal need assessment methodology, and the standard argument for support seemed to be "more is better, but never enough." This did not offer a compelling case. Through survey research, a group composed of various stakeholders – including the higher education community, the business community, the legislature, and the governor's office – discovered that Oregon lacked a transparent philosophy to support the state's investment in financial aid, particularly one that "fit" Oregon. They discovered that Oregonians believed everyone should be able to go to college but that students, as the principle beneficiaries of the education, should pay the lion's share of the cost. As a result, Oregon's Access and Affordability Working Group developed a concept, deemed "shared responsibility," that expects every student to contribute a reasonable amount from earnings, savings, and borrowing before expecting the state to contribute. Then, after also tapping out the student's parents and federal aid, "shared responsibility" calls on the state to fill in the gap, as it must do, if it truly believes in broad access. This shared responsibility philosophy hit a chord in Oregon, resulting in a nearly threefold increase in state need-based grants. In its first year of implementation, enrollment jumped 17 percent in the Oregon University System.

3986

Principle 2: Align state financial aid programs with other state financing policies. It is not enough to have decent financial aid programs; these programs have to make sense in conjunction with the state's institutional financing policies and with tuition policy. Effective financial aid policies are strengthened if they are closely aligned with tuition policy. If tuition rises, on average, more than financial aid, access erodes. And percentages can be misleading in these comparisons. It is important to look at whether the net price (net price equals the gross price minus financial aid) for students is increasing or decreasing; that's the key to financial distress or redress. Furthermore, it does little good to provide a great financial aid system if institutions don't receive adequate financial support to provide a quality educational experience. Student access is a function of both demand and supply. Financial aid expands demand, as Oregon demonstrates. But the institutions must then be able to expand to serve this new demand, and that often requires additional resources.

Principle 3: Understand the significant partnership with the federal government in providing financial assistance. Many state financial aid programs evolved directly from federal incentives. Legislators need to understand the possibilities for building on these federal programs to achieve state objectives and to do so in the most cost-effective manner. For example, via the passage of the HOPE Scholarship and Lifetime Learning Credit in 1998, the federal government provided a substantial tuition tax credit for all middle-income families. But to receive a tuition tax credit, a family has to be paying tuition. Yet many states and public institutions continue to provide financial aid in the form of tuition waivers, particularly for merit scholarships, most of which go to middle-income students. Thus, many families who would be eligible for a tuition tax credit are receiving the equivalent value of this benefit at the expense of the state or institution rather than from the federal government. Simply changing the language of current policy – from "tuition waiver" to an "award" to defray a share of all educational costs – would provide an additional benefit to students' families, the institutions or states, or both. Aligning state and federal programs to better serve the states' objectives obviously makes sense.

Principle 4: Adopt clear metrics for measuring whether the goals established in Principle 1 are being achieved and assure that data is available to support these metrics. A clear guiding philosophy and accompanying goals, as described in Principle 1, are essential but not sufficient. You must also develop metrics to demonstrate movement toward accomplishing the goals. Texas, for example, has established a goal to "close the gap" in college participation and success for students of all colors within one generation.

To support good metrics, every state also needs to develop data systems that demonstrate whether the state as a whole, and the higher education institutions in it, are performing well or poorly in advancing the state's philosophy. Statewide databases are essential for achieving this objective because they are the only measurement tools that can demonstrate progress of students over time, thus allowing the state to clearly measure the consequences of performance.

Principle 5: As with all state programs, state financial aid programs must be both transparent and predictable. What exactly does this mean in the context of financial aid? Well, first it means that prospective students need to understand clearly what they are likely to be eligible to receive. Over and over, national and state surveys demonstrate that many students and their families have no idea how much college costs and how much student assistance they are likely to receive. And low-income families are the most uninformed. These prospective students and their families grossly overestimate the costs of college and greatly underestimate the likelihood of their receiving aid and the amount they're eligible to receive. Not surprisingly, many of these students presume they can't afford college and never seek to attend.

Step one is finding more effective communication and marketing strategies to help folks understand why and how the state invests in student aid. Equally important, however, is to have stable programs upon which people can rely. If funding is sometimes there and sometimes not, prospective students will assume that they cannot count on it. Similarly, colleges and universities need predictability so they can plan how to fill the financial gaps that always occur and how to expand or contract their offerings in response to the demand for higher education that financial aid drives.

3987

Principle 6: Programs must be scalable. Many small successful aid programs seem to fail when taken to scale. This occurs for various reasons: the program may require a close community of support, which is difficult to maintain at the state level; the program may require a "champion," which may be unsustainable at the state level; the program may simply be too complex to manage when expanded, and so on. Therefore, it is extremely important to make sure that new state programs have either demonstrated capacity for expansion or a strong likelihood that they can expand, based on program plans. Certain conditions clearly contribute to being able to take an effective small program to scale:

- **The program needs to be based on a good prototype.** Too often, good ideas are adopted as broad programs before proof of concept has been established. Oregon could feel confident about its shared responsibility plan because it was built upon a similar concept that had worked exceptionally well in Minnesota for nearly 20 years. On the other hand, the federal government's relatively new Academic Competitiveness Grant Program, which supplements the Pell Grant for students who have taken a rigorous curriculum in high school, has suffered on implementation because though the idea was sound, the implementation plan was not, leaving much confusion amongst the institutions that had to certify student eligibility.
- **The program must be easy to administer.** If administration isn't simple and straightforward, not only will the administering agency or institutions have difficulty and face substantial cost associated when implementing the program, but those being served by the program will not have the transparency and predictability necessary to know what they need to know.
- **The program must have sufficient support within the state.** Strong support, especially from the legislature and the governor, is necessary for the program to be sustained beyond changes in leadership, particularly beyond the leadership of those who principally championed the idea.

Exemplars and Nonexemplars

There are several very effective state financial aid programs to build on, if a legislator or legislature is interested. There are also a lot of current ideas that are quite popular but seem not to meet the criteria established above. And there are some promising ideas, including some from other countries, that have not been tried in the U.S. but may well be worth exploring.

State Grant Programs. State grant programs, especially for the neediest students, remain critically important, especially now, given the rising costs borne by students and their families due to ever-increasing tuition and other higher education costs. Grant programs also provide an effective way to target funds to some students, without having to provide an equivalent subsidy to all students.

Traditional financial aid programs serve many states well, suggesting that not all states need to change just for the sake of changing. The programs in California, Washington, Minnesota, New York, Pennsylvania, and Illinois have a long tradition of serving the students in those states exceptionally well.

The various state merit aid programs certainly provide a great deal of financial aid that is assisting many students, but serious questions remain about how well these programs truly advance the states' long-term interests and how cost-effective these relatively untargeted programs are in efficiently distributing limited public funds.

Indiana's and Oklahoma's blended aid programs and the Oregon shared responsibility plans are innovative and effective new programs. They have proven effective because they target assistance to the specific public agenda of the states involved, they rest on strong philosophies, and they comfortably fit the political culture of the states in which they exist. They could easily meet the needs of other states: indeed, a number of states are already considering replicating them. Yet states should adopt the ideas of other states only if the conditions that led to the success of these programs match their own. Blended aid programs that guarantee financial aid for college if students prepare well in a rigorous high school course of study make a lot of sense in states that don't have a requirement that all students prepare well and those where low-income students are seriously underrepresented in college. These programs, however, obviously don't address the needs of older adults returning to college or of current college students who may be facing financial barriers to their continued success. The shared responsibility model, on the other hand, helps virtually all current

3988

students, young or old, and can be designed to help middle- and high-school students better understand what will be available to them in the future. However, it does little to encourage more rigorous preparation in high school and may deter some low-income students because of the tough language about students making a significant contribution before expecting anyone else to do so. The bottom line: The culture and unique needs of various groups of students within a state should be taken into account when considering modifications to an existing grant program or the creation of a new one.

State Loan Programs. It is not clear that the traditional federal/state student loan partnership will survive the combination of recent reductions in federal subsidies and perturbations in access to credit capital in general.

In recent years, another partnership – loan forgiveness – has begun to evolve. This relationship is less reciprocally beneficial to both federal and state governments and not fully anticipated in the original federal programs. But it has become rather commonplace, with states agreeing to forgive students loans for service after graduation. A number of teaching, nursing, and other high-demand loan forgiveness programs have been created. They tend to be patterned after the original National Defense Service Loan (NDSL), which forgave federal loans for graduates who entered the field of teaching, and National Health Service loans, which forgive loans for medical services provided in medically underserved communities. These programs have intuitive appeal because they help graduates whose skills can benefit the state, and at the same time, students face less debt burden.

Unfortunately, there is little research to suggest that these programs successfully achieve their public purposes. The Lumina Foundation report *Workforce Contingent Financial Aid* examined the myriad state and federal loan forgiveness programs and found "... that very few studies evaluated the financial aid or the workforce aspects of these programs ... the growth of these programs seems to be based more on political appeal and appearances than on any real data demonstrating their effectiveness ..."[2]

While the recipients of loan forgiveness are clearly rewarded for providing a valued public service, it is not clear that the loan forgiveness was the reason these folks provided this service. Many students who receive loan forgiveness already have a predilection to serve in the field for which the loan is to be forgiven, and others end up serving the mininal requirement for loan forgiveness and then move on. What we don't know is how many actually enter the desired field and stay in that field because of loan forgiveness.

Some analysts have suggested that states should get into the business of helping students in loan repayment through programs akin to those in Australia, New Zealand, and England, in which students repay their loans through the state income tax system on an income-contingent basis. While this idea may have promise at the federal level, it would make no sense for individual states, both because state income tax structures are not well-suited for this type of scheme and because the mobility of college graduates would make it difficult to capture repayments from those who leave the state.

State Savings Programs. Recently, a clever idea has been suggested in the public policy literature, though no state has to date seriously explored it. The idea would be for the state to deposit funds into 529 savings accounts, on a matching basis, for students from low-income families; the amount would be similar to what would be provided in a blended aid grant program. This would provide a strong incentive for families to save for their children's education, even if their contributions were quite modest, and would also incent young people to stay on a college track; after all, they have savings to apply toward that college.

State College Work-Study Programs. It is surprising that more states haven't recognized the value of creating and supporting state-based college work-study programs. Perhaps the best such state program is Washington's, mentioned earlier, which helps subsidize employment for students on campus, in other public and nonprofit organizations, and in selected for-profit companies that tailor the jobs to be cooperative work-study positions. Cooperative work-study is a win/win for the state, the employer, and the student. The state benefits in a couple of ways. First, for a modest subsidy, the state can secure substantial private investment in funding the student's education. Second, because the student is getting experience in a local firm, they are less likely to migrate from the state upon graduation. The employer benefits because they receive highly capable and productive

college students and have the chance to develop a relationship they may wish to sustain after the student graduates, thus reducing their recruitment costs. The student benefits by gaining real world experience in their field of study and garnering the resources necessary to pay for their education. If a state moves into this arena, however, it must make sure that its other financial aid and financing policies work in sync with work-study. Today many financial programs, because of their lock-step allegiance to the antiquated federal need-analysis program, greatly penalize students for working.

Conclusion

This brief has described the history of state financial aid in the U.S., its strong relationship to federal financial aid, the recent evolution of new ideas, including blended aid programs and the shared responsibility concept.

As legislators contemplating the future of financial aid in your states, consider asking the following questions:

- Do you know what you want from a student financial aid program, and is that clearly reflected in the explicit goals and expectations embedded in state statute?
- Are all of the state finance policies aligned, so that financial aid policies complement the others and address state goals in a cost-effective manner?
- Do your grant, loan, savings, and work-study programs balance each other in a cogent way?
- Do current and prospective students and their families understand what it costs to go to college in your state and how they might benefit from the programs you offer?
- Do state financial aid policies take full advantage of federal programs, consistent with your state objectives?

When you can answer all of these questions in the affirmative, the future of financial aid in your state will have a much higher chance for success.

About the Author

David A. Longanecker is the president of the Western Interstate Commission for Higher Education (WICHE) in Boulder, Colorado. WICHE is a regional compact between 15 Western states created to assure access and excellence in higher education through collaboration and resource sharing among the higher education systems of the West. Previously, Longanecker served for six years as the assistant secretary for postsecondary education at the U.S. Department of Education. Prior to that, he was the state higher education executive officer (SHEEO) in Colorado and Minnesota. He was also the principal analyst for higher education for the Congressional Budget Office. Longanecker has served on numerous boards and commissions. He has written extensively on a range of higher education issues. His primary interests in higher education are: access, promoting student and institutional performance, teacher education, finance, the efficient use of educational technologies, and academic collaboration in Canada, the United States, and Mexico. He holds an Ed.D. from Stanford University, an M.A. in student personnel work from the George Washington University, and a B.A. in sociology from Washington State University.

1/27/10 OVERVIEW: DEED VIRTUAL SCHOOL WORKING GROUP

Virtual School Working Group

January 25-27, 2010 Meeting

At the request of Commissioner LeDoux, the Virtual School Working Group reconvened with the purpose of providing recommendations on: 1) standards for the Virtual School Program, and 2) ideas for the design of an Alaska Virtual School program. The working group consists of Alaska distance education teachers and practitioners, district distance education and technology coordinators, superintendents, and representatives from post-secondary education institutions.

During the January meeting, the following work was completed:

- The Virtual School Working Group (VSWG) updated the Overview of Existing Alaska Distance Education Models provided to the House Education Committee. Updates provided to the Alaska State Board of Education and the House Education Committee was shared with the VSWG. Members reviewed the work drafted during the December meeting and recommended changes to the national facilitators' summaries. New members provided valuable insight on work completed at the December meeting.
- The VSWG reviewed the drafted recommendations from the December meeting for the Institutional Standards, which address mission, governance, planning, staffing, and organizational commitment of a virtual school program. During the next meeting, the VSWG plan to finalize framework recommendations for the Institutional Standards.
- The VSWG continued to develop the framework focusing on Teaching and Learning Standards, Support Standards, and Evaluation Standards. The Teaching and Learning Standards include curriculum and course design, instruction, and assessment of student performance. The Support Standards address academic, administrative, guidance and technical services. The Evaluation Standards consider virtual school program evaluation and improvement. The VSWG will review drafted work during the February meeting.

The working group continues to use an EED e-learning site for discussion, to access resources and to provide additional information. Specifically, members are reviewing House Education Committee meeting information and drafted documents. Also, the VSWG members are suggesting other state or program funding models and making recommendations regarding online teaching issues, which will be considered by the Teacher Quality Working Group.

The VSWG will meet again Wednesday, February 24, and Thursday, February 25, after the Alaska Society for Technology in Education (ASTE) conference at the Hotel Captain Cook in Anchorage. Many VSWG members already planned to attend ASTE, the state educational technology conference, allowing the travel costs to be minimal. Although the VSWG had planned to meet virtually, due to the high level of interest in this topic, it was determined that one more face-to-face meeting would be appropriate because new participants are expected.

What Students Need to Know: 21st Century Skills and ICT Literacy

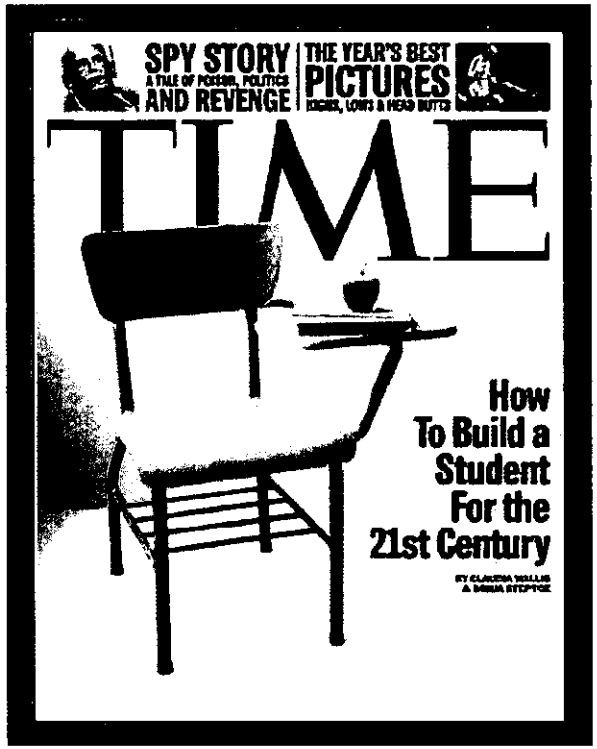
The future will demand people who can express themselves effectively with images, animation, sound, and video, solve real world problems that require processing and analysis of thousands of numbers, evaluate information for accuracy, reliability, and validity; and organize information into valuable knowledge, yet students are not learning these skills in school.

ALEC | iNACOL
International Association for K-12 Online Learning

"There is remarkable consensus among educators and business and policy leaders on one key conclusion: we need to bring what we teach and how we teach into the 21st century."

TIME Magazine,

12/18/06



ALEC | iNACOL
International Association for K-12 Online Learning

Exploring the Gaps in K-12 Education: National Overview

- Spending on K-12 education
  - Average: $9,969/per pupil in 2007-08 (more than any country in the world, except Switzerland)
- International Rankings in Science and Math (PISA 2006):
  - Science: US ranked #25 out of 30 countries
  - Math: US ranked #21 out of 30 countries
- U.S. Math curriculum: full 2 grade levels behind international counterparts by 8th grade
- High School Graduation Rates
  - Average: 70% in 4 years
  - Latino/Hispanic students: 58%
  - African-American students: 55%
- 15% of high schools produce 50% of drop outs in country

ALEC | iNACOL
International Association for K-12 Online Learning

A History of U.S. Competitiveness: Internationally

- In 1960s, the United States was #1 internationally in the adult population with a high school diploma
  - 86% of adults had a HS diploma
- In 2008, the US is 10th internationally
  - 87% of adults in the US have a HS diploma
- Compare Korea:
  - In 1950s, 35% of adults in Korea held HS Diploma
  - Today, Korea has 97% of adults with HS Diploma
- In summary, other countries are moving faster.

ALEC | iNACOL
International Association for K-12 Online Learning

Does every student in the U.S. have access to a world-class education today?

ALEC | iNACOL
International Association for K-12 Online Learning

Mexico

- 2003: Enciclomedia program - Digitized K-12 academic content provided online, CDs, every school, library and community technology center
- 2004: Every teacher in pre-service trained to use digital content to teach more effectively
- 2005: Every new teacher provided a laptop

ALEC | iNACOL
International Association for K-12 Online Learning

European Union

- International Baccalaureate (IB) Diploma Programme Online
- EU E-Learning Strategy across countries

Turkey

- 5 years ago: no students taking online courses
- 2008: 15 million students taking online courses
- Public-Private partnerships
  - Created "gold standards online courses"
  - Train teachers to teach online
  - Delivery system to provide online courses

ALEC | iNACOL
International Association for K-12 Online Learning

Middle East

- Lack "legacy" education system
- Middle East
  - Start from scratch and rebuild K-12 Education systems
- Public – Private education system

ALEC | iNACOL
International Association for K-12 Online Learning

India

- Universal Access for K-12 Education in 10 years
  - Need 200,000 more schools
  - Shortage of good teachers
  - "Leverage teachers using technology to bring to scale"
  - Educomp Program digitizing learning resources (online content) in K-12 education
    - Benchmarked to international academic standards
    - View as export opportunity
  - $10 laptop being developed

ALEC | iNACOL
International Association for K-12 Online Learning

Singapore

- Today
  - All teachers know how to teach online
  - 100% of secondary schools using online learning
  - Singapore holds E-Learning week each year
    - They close physical schools down and ensure e-learning is used for continuity of learning & disaster preparedness
- Next step?
  - All teachers in Singapore trained to use Second Life (virtual worlds) for educating youth

China

- China: 1.3 billion people
  - 20 million 18 year olds
  - 2.5 million college slots
- 10-year goal: Reach 100 million (new) Chinese students in underserved areas
- 2004: Digitized 100% of K-12 academic curriculum
- Current: Training Master Teachers to teach online
- How? Online courses taught by master teachers online
- Internet access
  - China: 4 million Internet connections in 1999
  - China: 137 million Internet connections in 2006
  - China: 250 million internet connections in 2008
- WiMax: 50 km radius of high-speed, wireless, broadband Internet (100 Mbs), 2009-2010

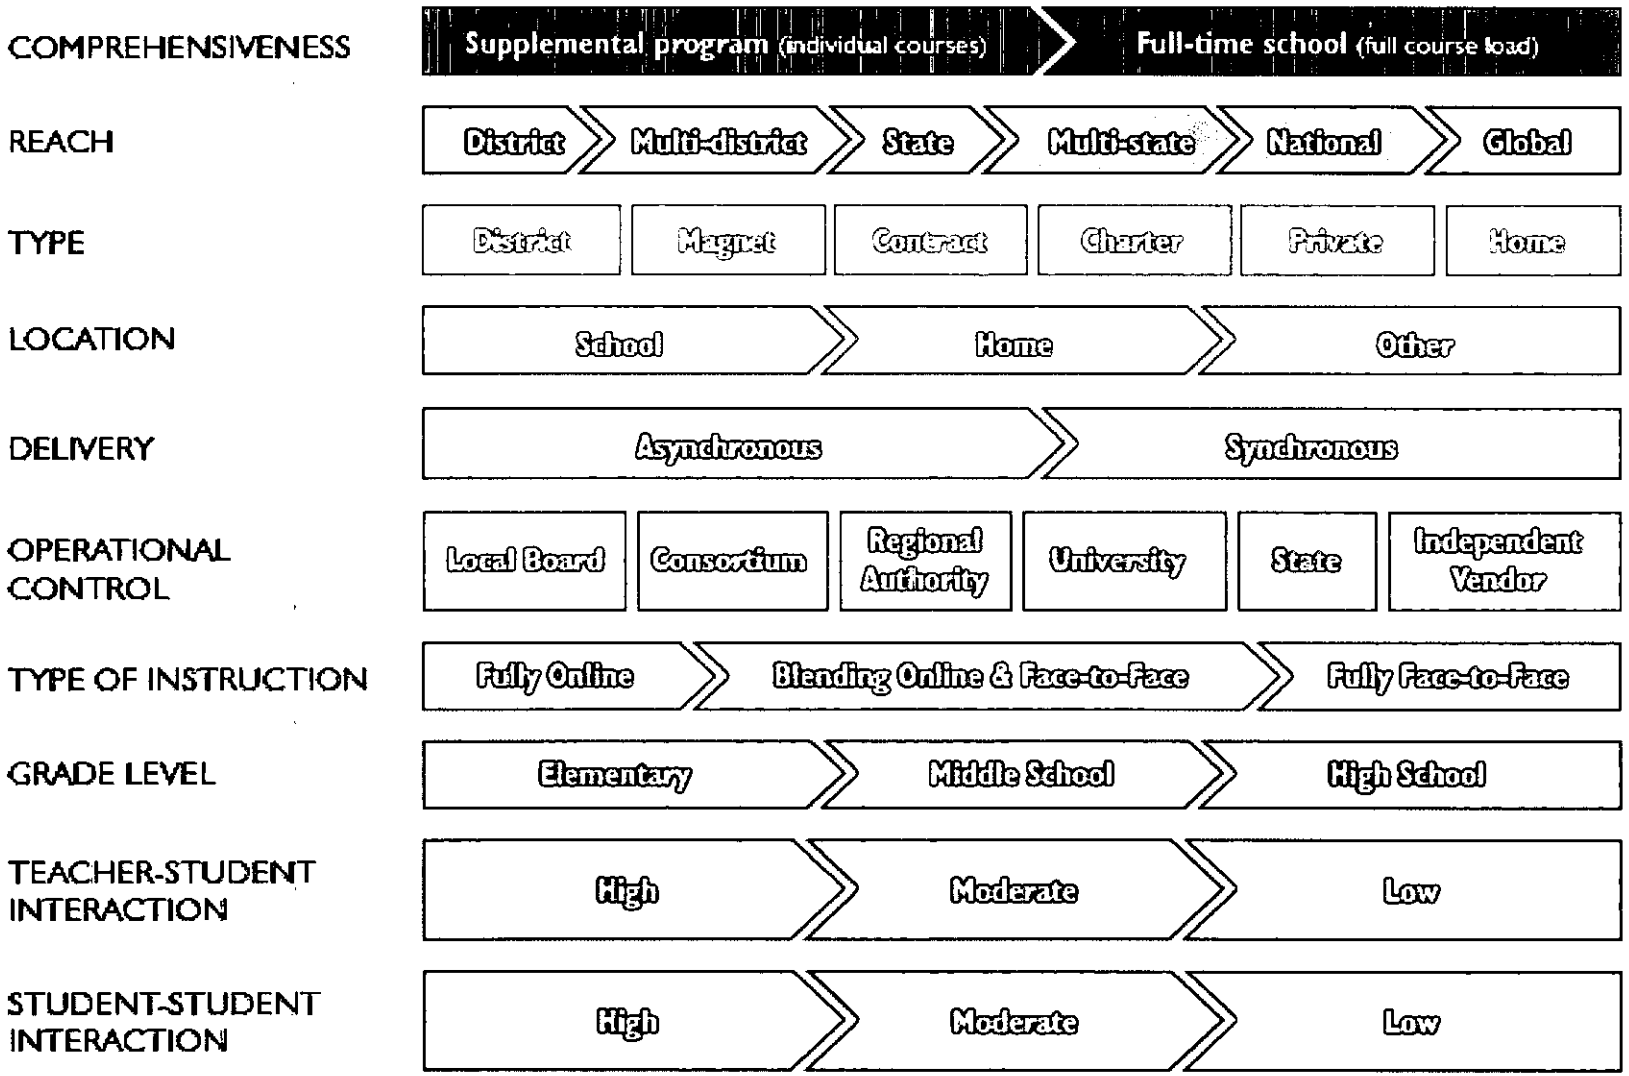
ALEC | iNACOL
International Association for K-12 Online Learning

National Online Learning Facts

- More than 70% of school districts in the United States offer online courses to students (Sloan-C)
- 35 states have state virtual schools (Keeping Pace 2009)
- 45 states have significant state policies (KP 2008)
- 25 states allow full-time virtual charter schools (CER 2009)
- 1 in 5 undergraduate and graduate student enrolls in an online course in higher education
- More universities are offering K-12 courses online
  - for K-12 students: Indiana U., Stanford, Johns Hopkins. Northwestern U.
- K-12 Online Learning enrollments growing 30% annually nationwide
  - 2000: 50,000 enrollments in K-12 online courses
  - 2003: 328,000 enrollments in K-12 online courses
  - 2005: 500,000 enrollments in K-12 online courses
  - 2008: 1,000,000 enrollments in K-12 online courses

ALEC | iNACOL
International Association for K-12 Online Learning

THE DEFINING DIMENSIONS OF ONLINE PROGRAMS

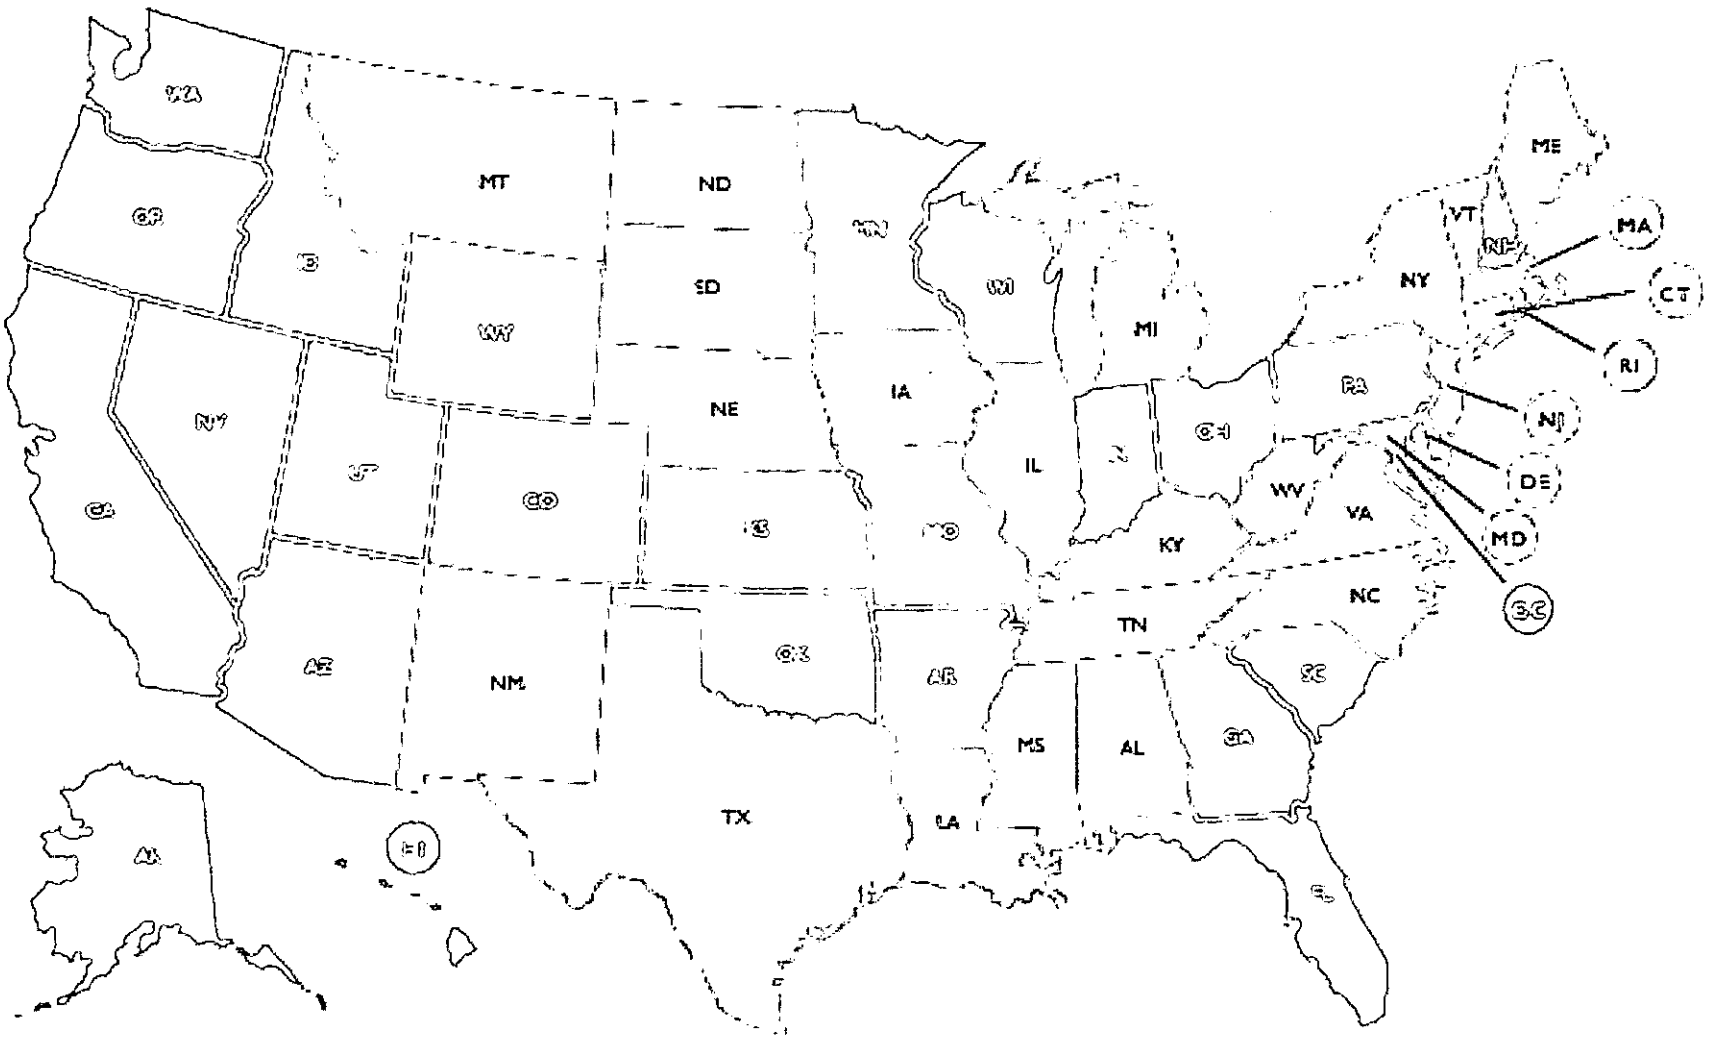


ALEC | iNACOL
International Association for K-12 Online Learning

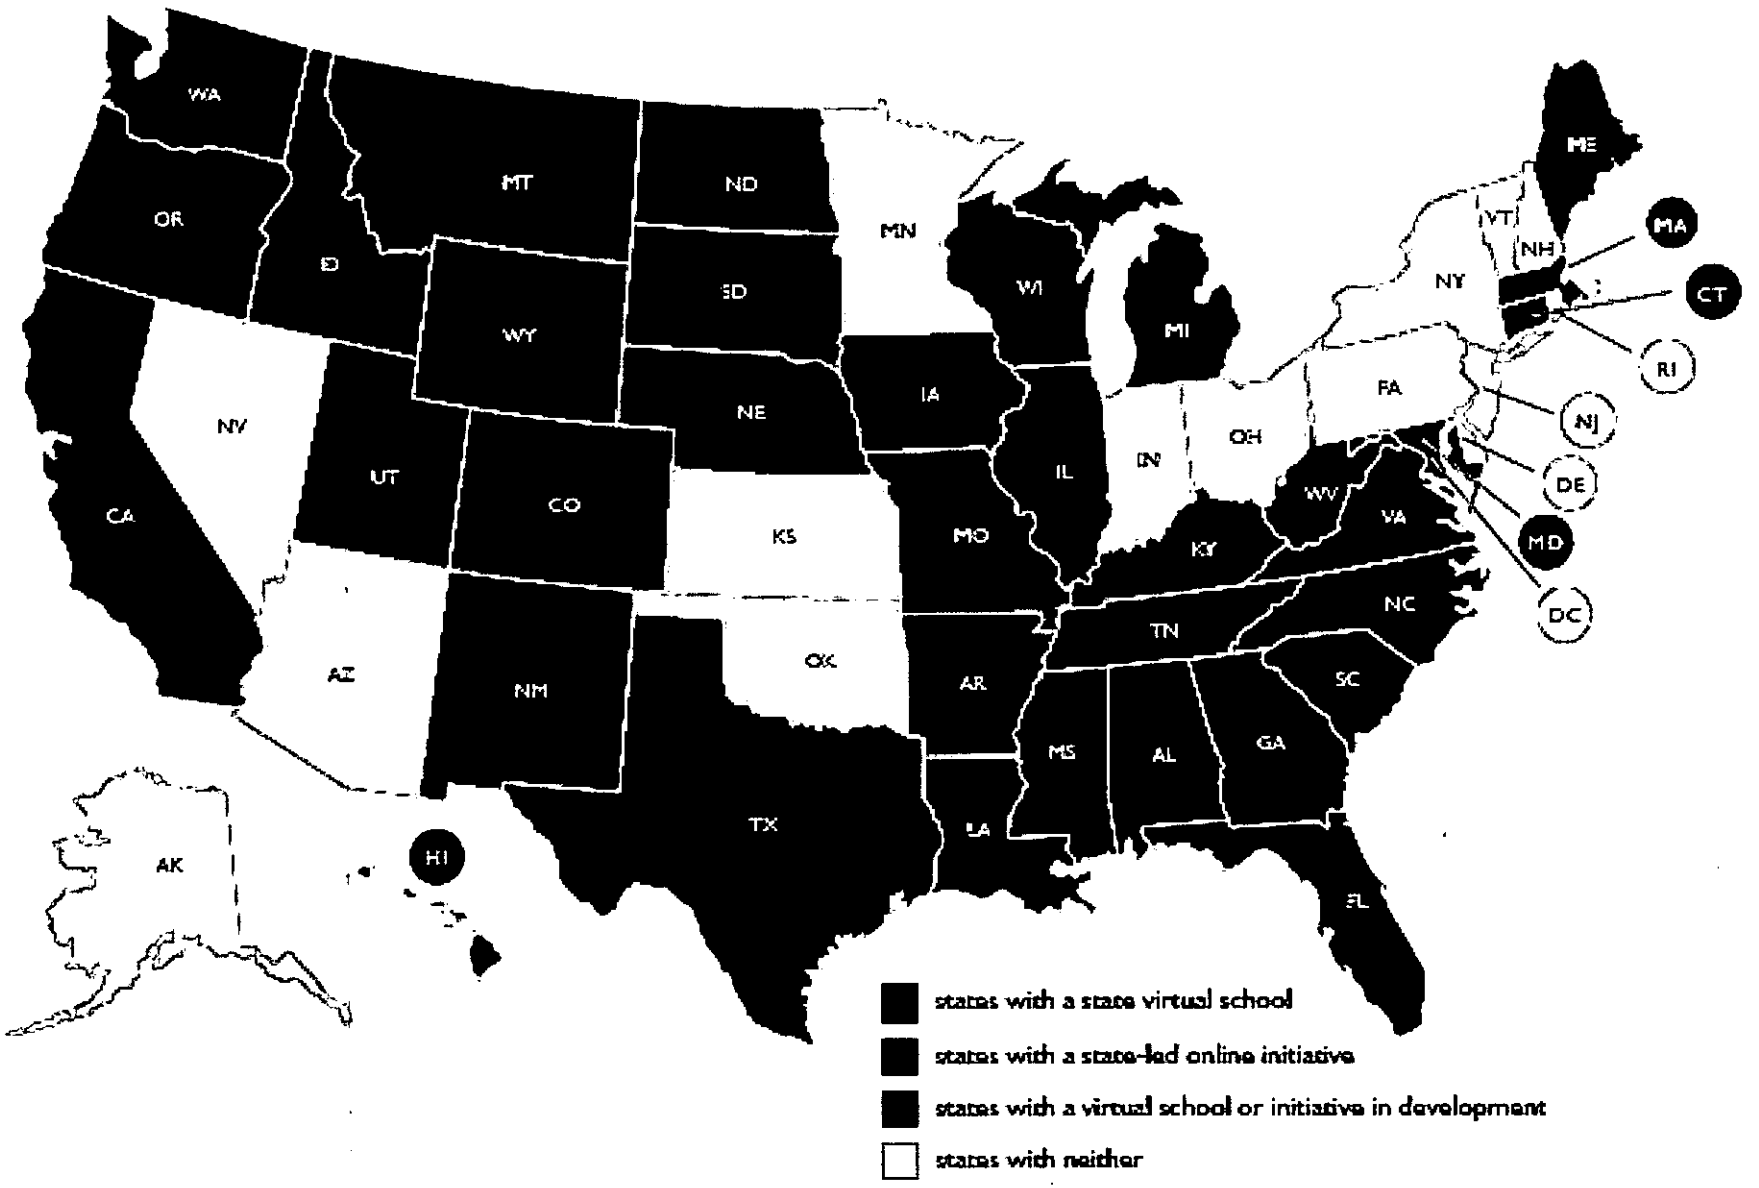
Main categories of online programs

Category	Org type/governance	Full-time/Supplemental	Funding source	Geographic reach	Examples
State virtual school	State education agency	Supplemental	State appropriation, course fees	Statewide	Fl Virtual School; MI Virtual School; ID Digital Learning Academy
Multi-district	Charter	Full-time	Public education formula	Statewide	Schools operated by K12 Inc; Insight; Connections
Single-district	District	Either or both	District funds	Single district	Los Angeles; Plano (TX); Fairfax (VA); Cobb (GA)
Consortium	Variable	Supplemental	Course fees, consortium member fees	Statewide or national	Virtual High School; Wisconsin eSchool Network
Post-secondary	College or university	Either or both	Course fees	National	U. Nebraska Independent Study HS; Brigham Young University Independent Study

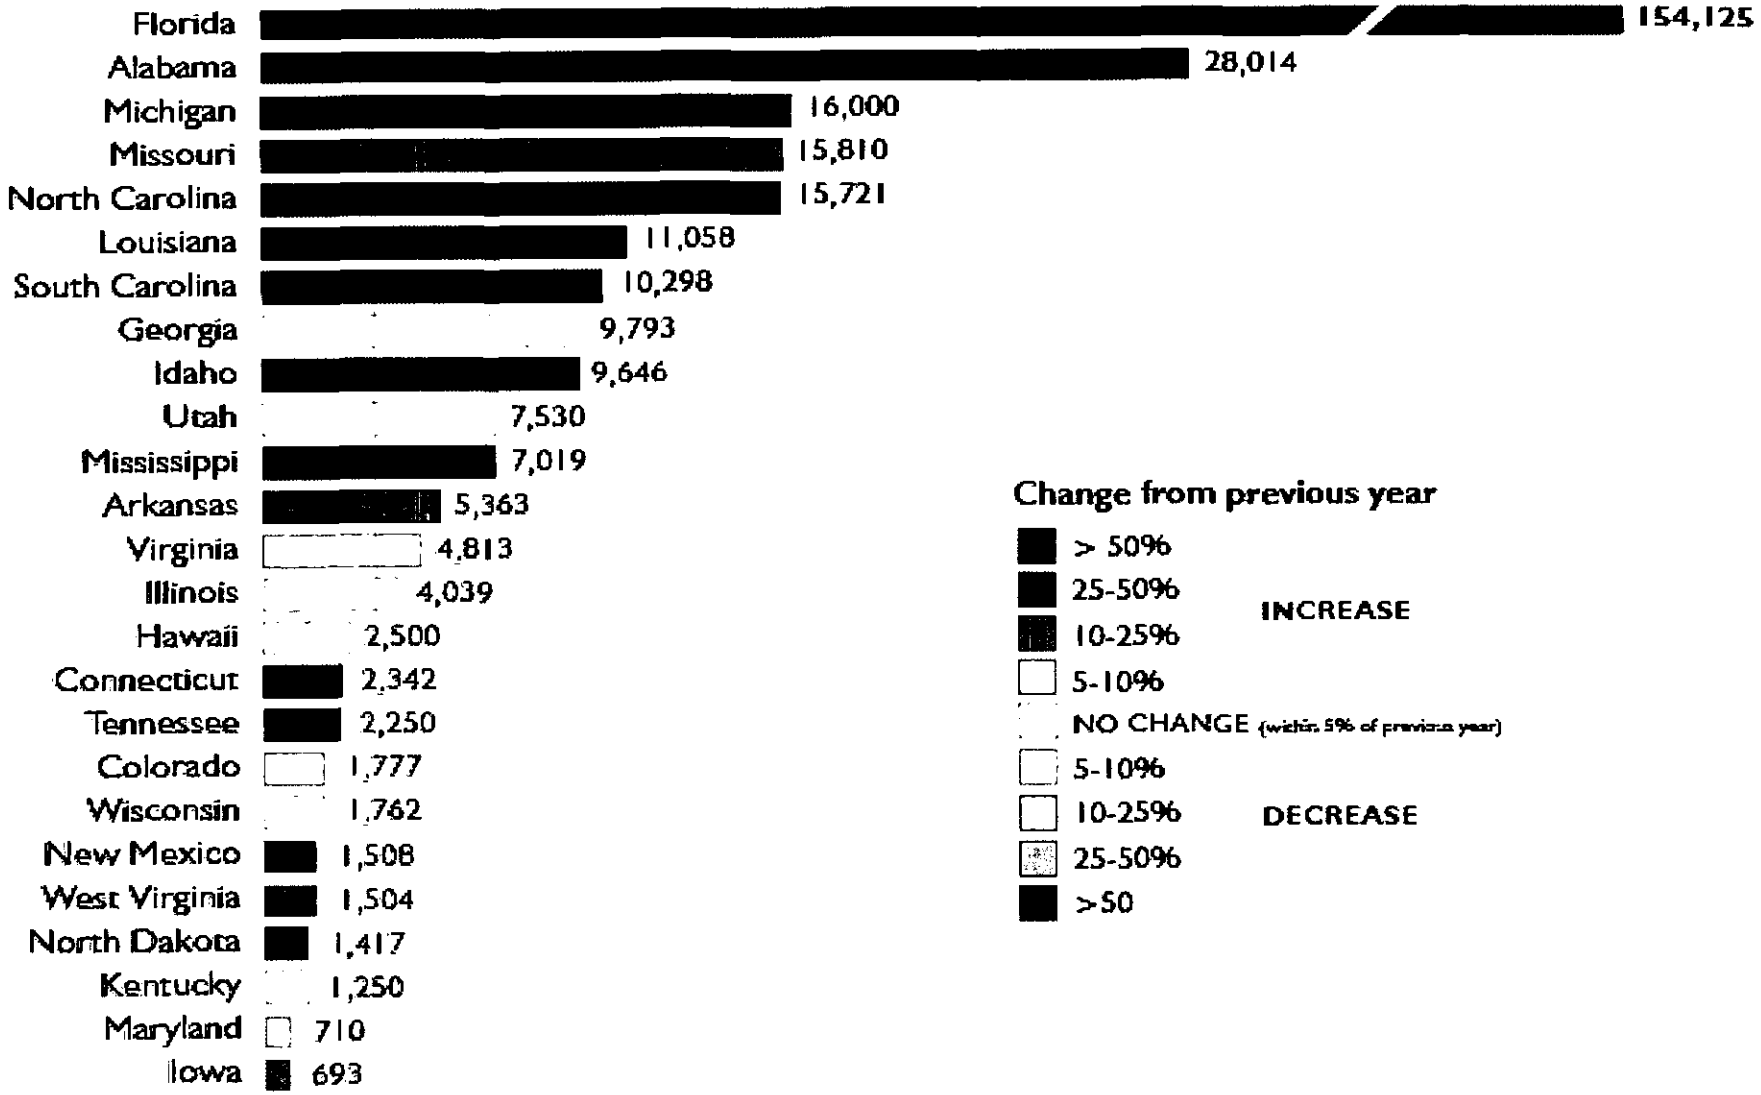
States with statewide full-time online schools



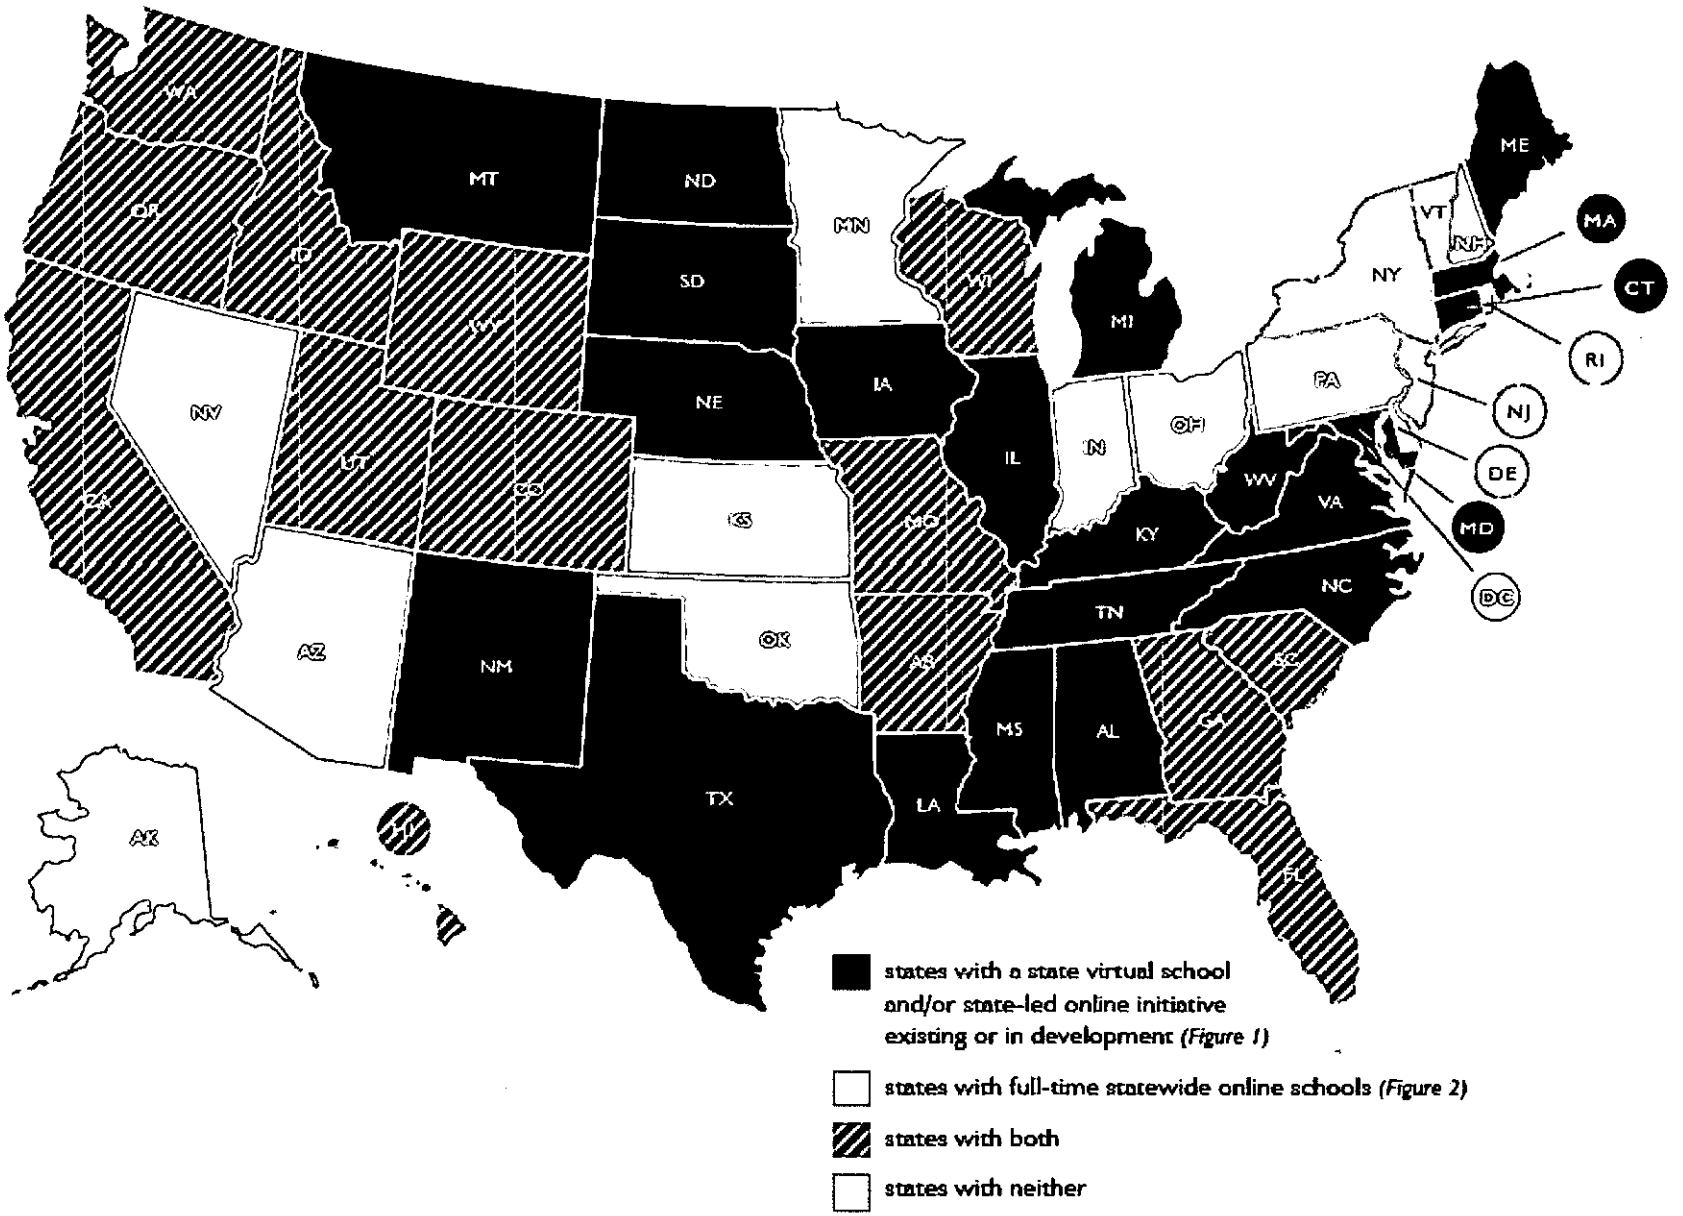
States with state virtual schools



State Virtual Schools: Size and Growth 08-09



Summary of SVS and full-time schools

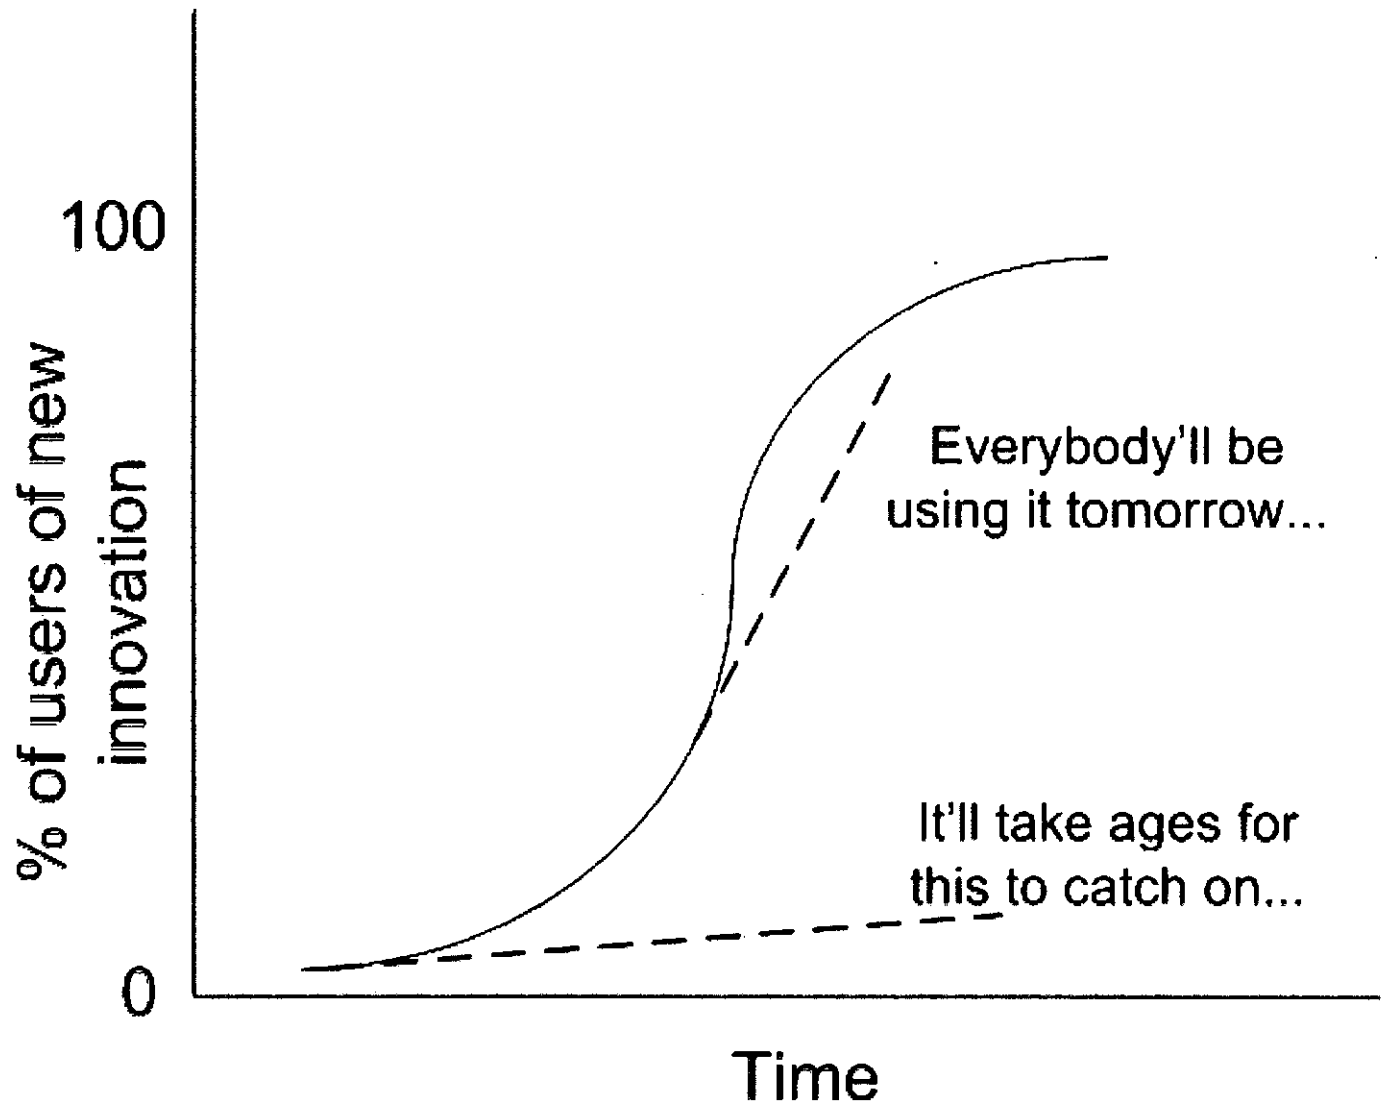


Online learning is growing rapidly

State/ org	Type	Full-time/Supplemental	2008-09 enrollment	Annual growth rate
Florida Virtual School	SVS	Supplemental	154,215	**25%**
Idaho Digital Learning Academy	SVS	Supplemental	9,646	**46%**
Alabama ACCESS	SVS	Supplemental	28,014	**48%**
Michigan Virtual School	SVS	Supplemental	16,000	**45%**
Colorado	State	Full-time	11,641	**26%**
Ohio	State	Full-time	23,037	**13%**
Arizona	State	Both	23,000	**24%**
Connections Academy	EMO	Full-time	20,000	**54%**
K12 Inc.	EMO	Full-time	56,000	**42%**

ALEC | iNACOL
International Association for K-12 Online Learning

Pace of adoption



ALEC | iNACOL
International Association for K-12 Online Learning

Trends: 2010 And Beyond

- Continued growth overall
- Shift to districts
- Increase in blended

ALEC | iNACOL
International Association for K-12 Online Learning

Continued Growth

- **Online charter schools:** Moving into new states; increasing in numbers in existing states
- **State virtual schools:** New states adding, but existing state schools threatened by budgets
- **Districts:** Focal point of most growth

ALEC | iNACOL
International Association for K-12 Online Learning

Shift To Districts

- **Varied program types:** Both full-time and supplemental
- **Not equal within and among states:**
  - Within states: more activity in affluent districts
  - Among state: more activity in states with online charters or state virtual schools
- **Blended:** Focal point of most growth

ALEC | iNACOL
International Association for K-12 Online Learning

Increase In Blended

- **Blended:**
  - Schools
  - Courses
  - Student experience

ALEC | iNACOL
International Association for K-12 Online Learning

Policy Considerations

- Enrollment
  - Increasing access
  - Student choice
- Quality & Accountability
  - Usual QC and standards inadequate
  - Reporting and transparency
  - Allowing innovation to continue

ALEC | iNACOL
International Association for K-12 Online Learning

Policies to Avoid

- Requiring onsite or face-to-face instruction
- Enrollment caps or other limits
- Funding level
- Inhibiting innovation with overly prescriptive requirements

ALEC | iNACOL
International Association for K-12 Online Learning

Next Generation Legislation

- Include accurate definitions
- Ensure adequate and sustainable funding
- Provide standards and monitoring expectations
- Create reporting and transparency requirements
- Focus on outcomes

ALEC | iNACOL
International Association for K-12 Online Learning

Funding Online Learning

- **Key Considerations:**
  - What are the **COSTS** of quality online learning?
  - How do taxpayer dollars **FLOW** to K-12 online learning?
  - How can funding be made **SUSTAINABLE** so every student who needs online can have it?

ALEC | iNACOL
International Association for K-12 Online Learning

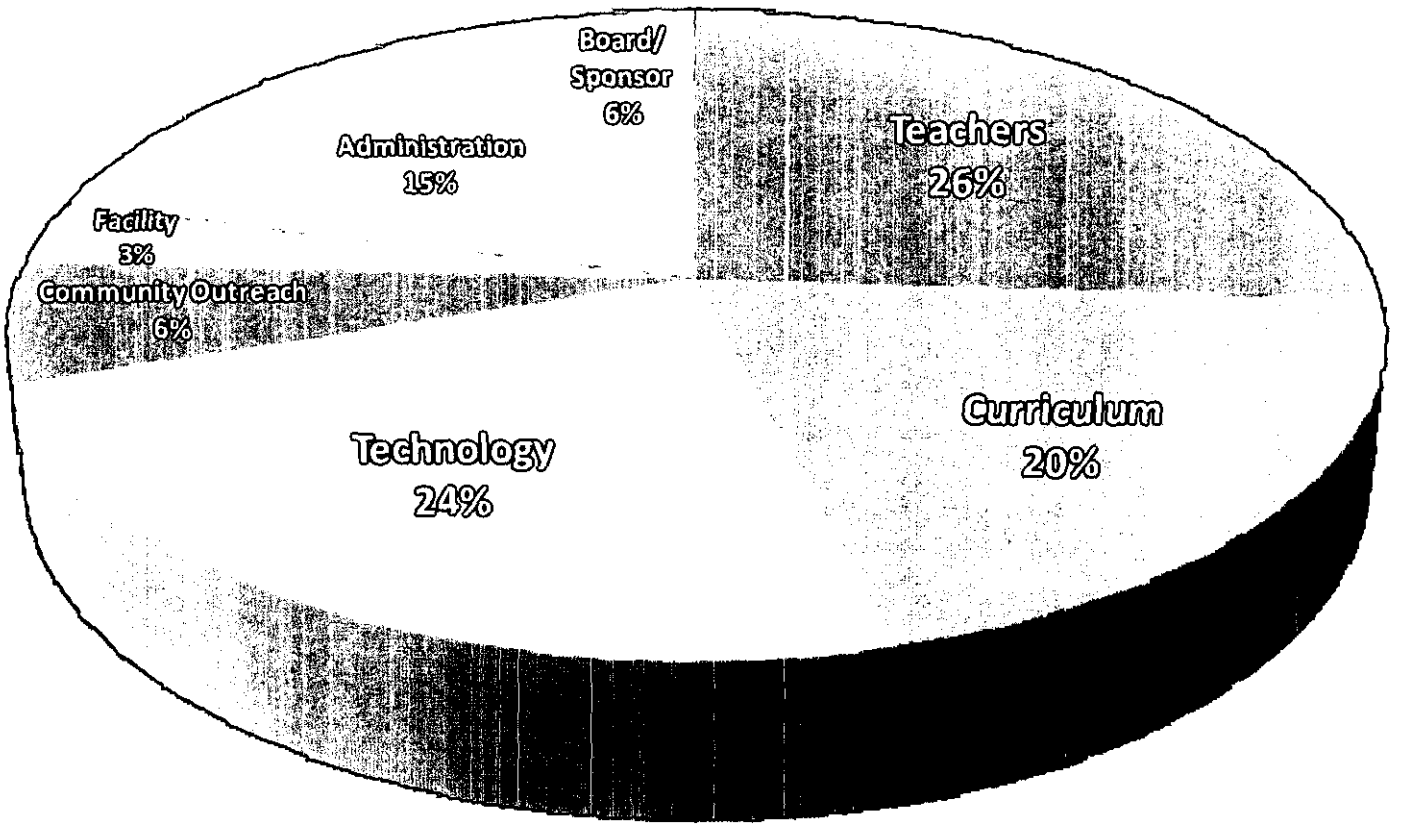
What are the COSTS?

- **Myth:** Online learning is cheap.
  - It's just a kid, a computer, and stuff on the screen – how much could that cost?
- **Reality:** Quality online learning is cost-effective.
  - Real costs include expert teachers, curriculum development/licensing, computers, course delivery and data systems PLUS special services and often physical materials

ALEC | iNACOL
International Association for K-12 Online Learning

Costs of Typical Online School

Total per-pupil expenditure = $6,500



ALEC | iNACOL
International Association for K-12 Online Learning

Wisconsin Example

Cost of serving a "virtual" student locally

Note: Average expenditure per K-12 student (08-09) $9,760.
Open enrollment tuition estimate $6,322 (FY09) per student.

	Scenario 1 (one full-time virtual student) Semester 1	Semester 2	Cost/Year	
Course Cost (6 per semester @ $325 per 1/2 credit course	$1,950	$1,950		
LEG Support approx. 1 hr per week for 36 weeks (Average teacher salary with benefits $50,000/185 days = $270/day, $270/7 periods = $39/hr.)	$702	$702		
Computer Purchase	$800	$0		Note: Computer may be provided if the student is full time virtual student at "home."
IT Support (30 min/month @$39hr/ for 9 months)	$88	$88		
Internet Stipend ($20 per month for 9 months)	$90	$90		Note: Internet access may be provided if the student is full time virtual student at "home."
Cost per semester	$3,630	$2,830	$6,460	Note: $5,660 (year two - no computer purchase)

ALEC | iNACOL
International Association for K-12 Online Learning

What are the COSTS?

"The operating costs of online programs are about the same as the operating costs of a regular brick-and-mortar school." – *iNACOL Promising Practices: Funding and Policy Frameworks for K-12 Online Learning*

Cost-effectiveness derives from:

- Ability to deliver courses that the local school could not afford to staff up for
- Ability to satisfy parent choice and serve students with unique learning needs without building a new school

ALEC | iNACOL
International Association for K-12 Online Learning

How do taxpayer dollars **FLOW**?

- **Full-time online** (e.g., cyber charter schools and contract schools) typically funded through state's per-pupil funding formula: Funding (some or all) follows the student
- **Supplemental online** (e.g., by the course) typically funded through state appropriation and/or course fees paid by districts and/or students: Fee for service

ALEC | iNACOL
International Association for K-12 Online Learning

How do taxpayer dollars FLOW?

- Accounting Considerations
  - **"Seat time" vs. mastery:** Online learning can make traditional methods of student accounting irrelevant
  - **Scale vs. control:** Open enrollment/growth across boundaries (district and state) begets efficiencies – but creates funding competition
  - **Supplement vs. supplant:** How much of online learning must be additive to traditional school program, and when can it be a substitute?

ALEC | iNACOL
International Association for K-12 Online Learning

Toward SUSTAINABLE Funding

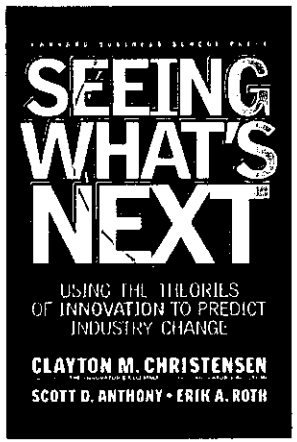
- **Near-term necessities**
  - Drive toward offering BOTH full-time and supplemental opportunities in EVERY state
  - Address barriers such as seat time, enrollment restrictions, lack of information
  - Consider flexible uses of existing funds (e.g. textbook dollars)

ALEC | iNACOL
International Association for K-12 Online Learning

Toward SUSTAINABLE Funding

- **Longer term imperatives:**
  - Integration of online learning into essential K-12 education funding process: "Part of how we educate kids in this state"
  - Public-private partnerships to achieve efficiencies, avoid re-invented wheels
  - Fractional backpacking: Funding following students down to the course level

ALEC | iNACOL
International Association for K-12 Online Learning



"Using the Internet to deliver courses seems to contain great disruptive potential. It could allow a radical transformation to happen in an incremental, rational way."

- Clayton Christensen, Harvard Business School

Louie Flora

From: bwhicker.fasttrack@gmail.com on behalf of Bill Whicker, Principal - Fast Track Virtual School [bill.whicker@kgbsd.org]
Sent: Monday, January 25, 2010 6:54 PM
To: Louie Flora
Cc: Robert Boyle
Subject: Ketchikan Online Course Information

Mr. Flora,

The Ketchikan Gateway Borough School District launched the Fast Track Virtual School in the fall of 2009. The vision of this school is to provide the additional option of quality courses that meet the needs of all students. The majority of these courses will be delivered in a virtual environment unless circumstances prevent connectivity.

We are in the beginning stages of this process, but have made good strides in delivering online courses that are meeting student need.

Current
We are using third party courses as well as the standards-based curriculum from E2020 and Compass Learning, delivered from our servers. Our next step is to fill the gap for highly qualified teachers in these classes.

Vision for the Future
Ideally, we will be developing courses that will ***be integrated with our regular student's schedules in a blended environment (online learning facilitated by face-to-face teachers)*** and taught by talented, content area teachers on our course management system. This vision will transform our brick and mortar schools into a 21st century learning environment that individualizes instruction for each student.

To date, the online courses that we are supporting and delivering to students include:

These courses cost around $120-$130 per semester plus district staff time to proctor tests and provide record-keeping.

Examples of these classes are:
BYU > Biology 1B
BYU > Art > Drawing
BYU > Computer Technology
BYU > Health Education
BYU > Automotive Basics
BYU > Critical Workplace Skills
BYU > Tenth Grade English
BYU > 11th Grade English

Classes offered through Compass Learning ($3000 per year for a 2 semester class) are spread over a 400 seat license. Teacher fees to supervise will be $75 – 125 per semester. This method of instruction give us more control over the customization of student learning. Examples include:
Odyssey > English I

Odyssey > English II
Odyssey > Biology
Odyssey > Algebra
Odyssey > US Government
Odyssey > US History II

Currently, our classes are about a 50-50 split.

I hope this answers your questions adequately. Please don't hesitate to contact me should you have any additional questions.

Respectfully,

--

Louie Flora

Subject: FW: House Education Committee Schedule for Next Week
Attachments: HS.Catalog_09-10 2.pdf

From: Woody Wilson [mailto:wwilson@wrangellschools.org]
Sent: Monday, January 25, 2010 2:55 PM
To: Louie Flora
Subject: Re: House Education Committee Schedule for Next Week

Louie,

One of the companies I am working with is K12. I have attached their course offerings. The other group I am considering is Virtual High School. Haven't worked with them yet but will in the next couple of weeks.

The estimated cost per course is $300 per semester.

One problem is the requirement for Highly Qualified teachers in some areas. For example: Chinese
How many AK certified, highly qualified teachers are there? Probably none. That rule needs to be relaxed for those critical areas that are important like foreign languages.

Thanks

Woody Wilson, Superintendent

High School Course Catalog
2009-2010 School Year

Multiple Levels for Diverse Learners

K12 provides **more than 105 high school courses** designed to help you earn your high school diploma, find your own path, and follow it to post-high school success—whether that's in college or in the workforce. With the K12 curriculum it's your education and your choice.

K12 offers Math, English, Science, and History courses in **multiple levels—Core, Comprehensive, Honors, and Advanced Placement® (AP®)**—to meet the needs of diverse learners. You can also take up to four years of a world language (depending on the language), and choose from a variety of electives, including anthropology, Web design, and digital photography.

Unlike other programs, where a student must be in a particular "academic path", the K12 program allows students to chart their own course, choosing from among the four levels of courses to match their aptitude and goals. So, if a student excels in Math and Science, they may take all Honors/AP® courses in those subjects, while choosing from among the Core and Comprehensive English and History courses. These multiple course levels prevent you from being "locked in" to one level of a particular subject, and account for natural progress and growth.

Online Courses Designed for Online Delivery

K12 serves more online courses to the K–12 market than any other online curriculum provider—and it's in large part because K12 sets the highest standard of course quality.

K12 never just scans a textbook and calls it an online course. K12 courses are designed and developed for online delivery from the outset. The K12 team of curriculum experts and course designers start from scratch, thoroughly scoping out the learning objectives for each course. They map out a strategy for how best to accomplish those objectives using online text, graphics, charts, illustrations, interactive demonstrations, offline reading materials or activities, and interactive online discussions. Then, usability testing is conducted with the intended audience to make sure students can easily navigate through the lessons and master the intended learning objectives.

K12 knows that the combination of rich, engaging content with interesting, interactive demonstrations and activities helps students absorb and retain information. The use of graded assignments and assessments further allows students to demonstrate progress toward learning objectives.

Four Levels of Core Subjects

With the K12 high school curriculum, students can harness the power of individualized learning by choosing from the following four levels of Math, English, Science, and History courses:

The K12 Core courses are similar to the standard courses offered by many other programs. They meet all academic requirements for each course area, both for graduation and for potential admission into a wide range of colleges. In K12 Core courses, topics are broken into discrete modules that are taught in tandem with the framework students need to develop strong study skills. Rich, engaging content with interesting, interactive demonstrations and activities help students in our Core courses to absorb and retain the information presented. Optional content and activities are also available to students wishing to study a particular topic in more depth.

K12 Comprehensive courses are designed for students with a strong foundational knowledge and aptitude in the subject area being covered, as well as solid study skills. As a result, students in our Comprehensive courses do more extensive writing and research projects, and tackle problems that require more analytical thinking. Course projects and activities also demand more independent thinking and self-discipline than projects in Core courses. As with Core courses, additional content and activities are provided to students wishing to delve more deeply into a topic.

K12 Honors courses hold students to a greater degree of accountability, and demand even greater independence and self-discipline than their Comprehensive counterparts. Students synthesize and evaluate information and concepts from multiple sources and read texts typically assigned in college-level courses. Students also demonstrate college-level writing in essays that require analysis of primary and secondary sources, responsible use of evidence, and comprehensive citation of sources. Successful completion of prerequisites, teacher/school counselor recommendation, and a strong interest in the subject are recommended for enrollment in a K12 Honors course.

K12 Advanced Placement® (AP®) courses are college-level courses that follow curriculum specified by the College Board. Like K12 Honors courses, AP® courses require a greater degree of self-discipline for in-depth study of the subject. These courses are designed to prepare students for success on AP® exams, providing students the opportunity to earn credit at most of the nation's colleges and universities. Successful completion of prerequisites, teacher/school counselor recommendation, and a strong interest in the subject are recommended for enrollment in an AP® course.

*This is a one-semester course.

English

ENG102: Literary Analysis and Composition I

In this course, students work on their written and oral communication skills, while strengthening their ability to understand and analyze works of literature, both classic and modern.

Literature: Students read short stories, poetry, drama, novels, essays, and informative articles. The course sharpens reading comprehension skills and engages readers in literary analysis as they consider important human issues and challenging ideas. Students also learn to read for information in nonfiction texts.

Language Skills: Students learn to express their ideas effectively. They sharpen their composition skills through focus on writing good paragraphs and essays in a variety of genres, such as persuasive and research essays. Students plan, organize, and revise written works in response to feedback on drafts. In grammar, usage, and mechanics lessons, students expand their understanding of parts of speech, phrases and clauses, sentence analysis and structure, agreement, punctuation, and other conventions. Vocabulary lessons build knowledge of Greek and Latin words that form the roots of many English words. Students use word origins and derivations to determine the meaning of new words as they increase their vocabularies.

Course length: Two semesters
Materials: *Explorations: An Anthology of Literature, Volume A; English Language Handbook; Vocabulary from Classical Roots, Book B; Julius Caesar for Young People*
Prerequisites: Middle school English/language arts

Note: This course is only for students who are new to the K12 curriculum. Students who have taken K12 Intermediate English A or B, or K12 middle school Literary Analysis and Composition courses, should not enroll in this course.

ENG103: Literary Analysis and Composition I

This course challenges students to improve their written and oral communication skills, while strengthening their ability to understand and analyze literature in a variety of genres.

Literature: Students read a broad array of short stories, poetry, drama, novels, autobiographies, essays, and famous speeches. The course guides students in the close reading and critical analysis of classic works of literature, and helps them appreciate the texts and the contexts in which the works were written. Literary selections range from classic works such as Shakespeare's *Romeo and Juliet* to contemporary pieces by authors such as Maya Angelou

Language Skills: Students broaden their composition skills by examining model essays in various genres by student and published writers. Through in-depth planning, organizing, drafting, revising, proofreading, and feedback, they hone their writing skills. Students build on their grammar, usage, and mechanics skills with in-depth study of sentence analysis and structure, agreement, and punctuation, reinforced by online activities (Skills Updates). Student vocabularies are enhanced through the study of Greek and Latin root words, improving students' ability to decipher the meanings of new words.

Course length: Two semesters
Materials: *Classics for Young Readers, Volume 8; Classics for Young Readers, Volume 8: An Audio Companion; BK English Language Handbook, Level 1; Vocabulary from Classical Roots, Book C; The Narrative of the Life of Frederick Douglass, An American Slave,* by Frederick Douglass; *Anne Frank: Diary of a Young Girl,* by Anne Frank; *Romeo and Juliet,* by William Shakespeare
Prerequisites: K12 Intermediate English A and B, or equivalent

Note: Students who have already succeeded in K12 middle school Literary Analysis and Composition should not enroll in this course.

ENG104: Honors Literary Analysis and Composition I

This course challenges students to improve their written and oral communication skills, while strengthening their ability to understand and analyze literature in a variety of genres. Students enrolled in this course work on independent projects that enhance their skills and challenge them to consider complex ideas and apply the knowledge they have learned.

Literature: Students read a broad array of short stories, poetry, drama, novels, autobiographies, essays, and famous speeches. The course guides students in the close reading and critical analysis of classic works of literature, and helps them appreciate the texts and the contexts in which the works were written. Literary selections range from the Greek tragedy *Antigone* to Shakespeare's *Romeo and Juliet* to contemporary pieces by authors such as Annie Dillard and Maya Angelou.

Language Skills: Students broaden their composition skills by examining model essays in various genres by student and published writers. Through in-depth planning, organizing,

drafting, revising, proofreading, and feedback, they hone their writing skills. Students build on their grammar, usage, and mechanics skills with in-depth study of sentence analysis and structure, agreement, and punctuation, reinforced by online activities. Student vocabularies are enhanced through the study of Greek and Latin root words, improving students' ability to decipher the meanings of new words.

Course length: Two semesters
Materials: *Classics for Young Readers, Volume 8; Classics for Young Readers, Volume 8: An Audio Companion; BK English Language Handbook, Level 1; Vocabulary from Classical Roots, Book C; The Narrative of the Life of Frederick Douglass, An American Slave,* by Frederick Douglass; *Anne Frank: Diary of a Young Girl,* by Anne Frank; *Romeo and Juliet,* by William Shakespeare
Prerequisites: Success in K12 Intermediate English A and B, or equivalent, and teacher/school counselor recommendation

Note: Students who have already succeeded in K12 middle school Literary Analysis and Composition should not enroll in this course.

ENG202: Literary Analysis and Composition II

In this course, students build on their language skills while reading classic and modern works of literature and improving their writing skills.

Literature: Students read short stories, poetry, drama, and novels, sharpening their reading comprehension skills and analyzing important human issues.

Language Skills: Students continue to work on their oral and written expression skills, writing a variety of essays, including persuasive and research essays. Students plan, organize, and revise their essays in response to feedback. They build on their skills in grammar, usage, and mechanics by studying parts of speech, phrases and clauses, sentence analysis and structure, agreement, punctuation, and other conventions. Thematic units focus on word roots, suffixes and prefixes, context clues, and other strategies help students strengthen their vocabularies.

Course length: Two semesters
Materials: *Explorations: An Anthology of Literature, Volume B; The Miracle Worker,* by William Gibson
Prerequisites: ENG102: Literary Analysis and Composition I, or equivalent

Note: Students who have taken K12 Intermediate English A or B or K12 middle school Literary Analysis and Composition courses should not enroll in this course.

ENG203: Literary Analysis and Composition II

In this course, students build on existing literature and composition skills and move to higher levels of sophistication.

Literature: Students hone their skills of literary analysis by reading short stories, poetry, drama, novels, and works of nonfiction, both classic and modern. Authors include W. B. Yeats, Sara Teasdale, Langston Hughes, Robert Frost, Edgar Allan Poe, Nathaniel Hawthorne, Kate Chopin, Amy Tan, and Richard Rodriguez. Students read Shakespeare's *Macbeth.* They are offered a choice of novels and longer works to study, including works by Jane Austen, Charles Dickens, Elie Wiesel, and many others.

Language Skills: In this course, students become more proficient writers and readers. In composition lessons, students analyze model essays from readers' and writers' perspectives, focusing on ideas and content, structure and organization, style, word choice, and tone. Students receive feedback during the writing process to help them work toward a polished final draft. In addition to writing formal essays, résumés, and business letters, students write and deliver a persuasive speech. Students expand their knowledge of grammar, usage, and mechanics through sentence analysis and structure, syntax, agreement, and conventions. Unit pretests identify skills to address more fully. Students strengthen their vocabularies through thematic units focused on word roots, suffixes and prefixes, context clues, and other important vocabulary-building strategies.

Course length: Two semesters
Materials: *Journeys in Literature: Classic and Modern, Volume B; Journeys in Literature: Classic and Modern, Volume B: An Audio Companion; Vocabulary for Achievement, Fourth Course; Macbeth,* by William Shakespeare
Prerequisites: ENG103: Literary Analysis and Composition I, or equivalent

ENG204: Honors Literary Analysis and Composition II

In this course, students build on existing literature and composition skills and move on to higher levels of sophistication. Students work on independent projects that enhance their skills and challenge them to consider complex ideas and apply the knowledge they have learned.

Literature: Students hone their skills of literary analysis by reading short stories, poetry, drama, novels, and works of nonfiction, both classic and modern. Authors include W. B. Yeats, Sara Teasdale, Langston Hughes, Robert Frost, Edgar Allan Poe, Nathaniel Hawthorne, Kate Chopin, Amy Tan, Richard Rodriguez, and William Shakespeare. Students have a choice of novels and longer works to study, including works by Jane Austen, Charles Dickens, and Elie Wiesel.

Language Skills: In this course, students become more proficient writers and readers. In composition lessons, students analyze model essays from readers' and writers' perspectives, focusing on ideas and content, structure and organization, style, word choice, and tone. Students receive feedback during the writing process to help them work toward a polished final draft. In addition to writing formal essays, résumés, and business letters, students write and deliver a persuasive speech. Students expand their knowledge of grammar, usage, and mechanics through sentence analysis and structure, syntax, agreement, and conventions. Unit pretests identify skills to address more fully. Students strengthen their vocabularies through thematic units focused on word roots, suffixes and prefixes, context clues, and other important vocabulary-building strategies.

Course length: Two semesters
Materials: *Journeys in Literature: Classic and Modern, Volume B; Journeys in Literature: Classic and Modern, Volume B: An Audio Companion; Vocabulary for Achievement, Fourth Course*
Prerequisites: Success in ENG104: Honors Literary Analysis and Composition I, or equivalent, and teacher/school counselor recommendation

ENG302: American Literature

In this genre-based course, students sharpen their reading comprehension skills and analyze important themes in classic and modern works of American literature, including short stories, poetry, drama, and novels. Students refine their skills of written expression by writing memoirs, persuasive essays, research essays, workplace documentation, and more. They develop vocabulary skills and refresh their knowledge of grammar, usage, and mechanics in preparation for standardized tests.

Literature: Students read short stories, poetry, drama, and novels, sharpening their reading comprehension skills and analyzing important themes in American literature.

Language Skills: Students continue to work on their oral and written expression skills, writing a variety of essays including memoirs, persuasive and research essays, and workplace documentation. Students plan, organize, and revise their essays in response to feedback.

Course length: Two semesters
Materials: *Explorations: An Anthology of American Literature, Volume C; Our Town,* by Thornton Wilder; *To Kill a Mockingbird,* by Harper Lee
Prerequisites: ENG202: Literary Analysis and Composition II, or equivalent

ENG303: American Literature

In this course, students read and analyze works of American literature from Colonial to contemporary times, including poetry, short stories, novels, drama, and nonfiction. The literary works provide opportunities for critical writing, creative projects, and online discussions. Students develop vocabulary skills and refresh their knowledge of grammar, usage, and mechanics in preparation for standardized tests.

Course length: Two semesters
Materials: *Journeys in Literature: American Traditions, Volume C; The Great Gatsby,* by F. Scott Fitzgerald; *The Glass Menagerie* by Tennessee Williams. Students will also read one selection of their choice from the following: *The Old Man and the Sea,* by Ernest Hemingway; *The House on Mango Street,* by Sandra Cisneros; *A Lesson Before Dying,* by Ernest Gaines; *The Red Badge of Courage,* by Stephen Crane
Prerequisites: ENG203: Literary Analysis and Composition II, or equivalent

ENG304: Honors American Literature

In this course, students read and analyze works of American literature from Colonial to contemporary times, including poetry, short stories, novels, drama, and nonfiction. The literary works provide opportunities for critical writing, creative projects, and online discussions. Students develop vocabulary skills and refresh their knowledge of grammar, usage, and mechanics in preparation for standardized tests. Students enrolled in this challenging course will also complete independent projects that deepen their understanding of the themes and ideas presented in the curriculum.

Course length: Two semesters
Materials: *Journeys in Literature: American Traditions, Volume C; The Great Gatsby,* by F. Scott Fitzgerald; *The Glass Menagerie,* by Tennessee Williams. Students will also read one selection of their choice from the following: *The Old Man and the Sea,* by Ernest Hemingway; *The House on Mango Street* by Sandra Cisneros; *A Lesson Before Dying,* by Ernest Gaines; *The Red Badge of Courage,* by Stephen Crane; and two selections of their choice from the following: *Billy Budd,* by Herman Melville, *A Connecticut Yankee in King Arthur's Court,* by Mark Twain; *Catcher in the Rye,* by J.D. Salinger; *Song of Solomon,* by Toni Morrison
Prerequisites: Success in ENG204: Honors Literary Analysis and Composition II, or equivalent, and teacher/school counselor recommendation

ENG402: British and World Literature

This course engages students in selections from British and World literature from the ancient world through modern times. They practice analytical writing and have opportunities for creative expression. Students also practice test-taking skills for standardized assessments in critical reading and writing.

Course length: Two semesters
Materials: TBD
Prerequisites: ENG302: American Literature

ENG403: British and World Literature

Students read selections from British and World literature in a loosely organized chronological framework. They analyze the themes, styles, and structures of these texts and make thematic connections among diverse authors, periods, and settings. Students complete guided and independent writing assignments that refine their analytical skills. They have opportunities for creative expression in projects of their choosing. Students also practice test-taking skills for standardized assessments in critical reading and writing.

Course length: Two semesters
Materials: TBD
Prerequisites: ENG303: American Literature, or equivalent

ENG404: Honors British and World Literature

Students read selections from British and World literature in a loosely organized chronological framework. They analyze the themes, styles, and structures of these texts and make thematic connections among diverse authors, periods, and settings. Students work independently on many of their analyses and engage in creative collaboration with their peers. Students also practice test-taking skills for standardized assessments in critical reading and writing.

Course length: Two semesters
Materials: TBD
Prerequisites: ENG304: American Literature, or equivalent, and teacher/school counselor recommendation

ENG500: AP® English Language and Composition

Students learn to understand and analyze complex works by a variety of authors. They explore the richness of language, including syntax, imitation, word choice, and tone. They also learn composition style and process, starting with exploration, planning, and writing. This continues with editing, peer review, rewriting, polishing, and applying what they learn to academic, personal, and professional contexts. In this equivalent of an introductory college-level survey class, students prepare for the AP® exam and for further study in communications, creative writing, journalism, literature, and composition.

Course Length: Two semesters
Materials: *The Norton Reader: An Anthology of Nonfiction,* 11th ed.; *Writing: A College Handbook,* 5th ed.
Prerequisites: Success in ENG303: American Literature (or equivalent) and teacher/school counselor recommendation

ENG510: AP® English Literature and Composition

In this course, the equivalent of an introductory college-level survey class, students are immersed in novels, plays, poems, and short stories from various periods. Students read and write daily, using a variety of multimedia and interactive activities, interpretive writing assignments, and discussions. The course places special emphasis on reading comprehension, structural and critical analyses of written works, literary vocabulary, and recognizing and understanding literary devices. Students prepare for the AP® Exam and for further study in creative writing, communications, journalism, literature, and composition.

Course Length: Two semesters
Materials: Required (both semesters): *The Norton Anthology of Poetry*, 5th ed.; *The Story and Its Writer: An Introduction to Short Fiction*, compact 7th ed.
Required (first semester): *Their Eyes Were Watching God*, by Zora Neale Hurston; *Hedda Gabler*, by Henrik Ibsen; *A Streetcar Named Desire*, by Tennessee Williams; *Twelfth Night*, by William Shakespeare
Required (second semester): *The Great Gatsby*, by F. Scott Fitzgerald; *Annie John*, by Jamaica Kincaid; *Jane Eyre*, by Charlotte Brontë
Prerequisites: Success in ENG303: American Literature (or equivalent) and a teacher/school counselor recommendation

ENG010: Journalism (Elective)

Students examine the development of journalism, from print to the multimedia environment, while learning how to publish an online newspaper. Students write newspaper-style articles and opinion pieces, and examine careers in multimedia communication. They also consider the historical effects of "yellow" journalism, freedom of the press, and journalism's contributions to today's world, with an emphasis on the mutual influence of media and policy.

Course length: Two semesters
Materials: *Associated Press Stylebook*
Prerequisites: Success in previous English/language arts course and a teacher/school counselor recommendation

Mathematics

MTH102: Math Foundations

Students assess their mastery and focus on skills that need reinforcement. They practice skills of mathematical reading, writing, and reasoning. Topics include number sense; statistics, data analysis, and probability; functions; measurement and geometry; and algebraic concepts. Throughout the course, students use Real-World Connection and Geometry Infusion problems to apply mathematical skills to real-life situations.

Course length: Two semesters
Materials: None
Prerequisites: Middle school math, or equivalent (minimum)

MTH112: Pre-Algebra

In this course, students learn computational and problem-solving skills and the language of algebra. Students translate word phrases and sentences into mathematical expressions; analyze geometric figures; solve problems involving percentages, ratios, and proportions; graph different kinds of equations and inequalities; calculate statistical measures and probabilities; apply the Pythagorean theorem; and explain strategies for solving real-world problems. The textbook provides students with a ready reference and explanations that supplement the online material. Online lessons provide demonstrations of concepts, as well as interactive problems with contextual feedback.

Course length: Two semesters
Materials: *Pre-Algebra: Reference Guide and Problem Sets*
Prerequisite: MTH102: Math Foundations

MTH113: Pre-Algebra

In this course, students take a broader look at computational and problem-solving skills while learning the language of algebra. Students translate word phrases and sentences into mathematical expressions; analyze geometric figures; solve problems involving percentages, ratios, and proportions; graph different kinds of equations and inequalities; calculate statistical measures and probabilities; apply the Pythagorean theorem; and explain strategies for solving real-world problems. Online lessons provide demonstrations of key concepts, as well as interactive problems with contextual feedback. A textbook supplements the online material.

Course length: Two semesters
Materials: *Pre-Algebra: Reference Guide and Problem Sets*
Prerequisites: K[12] Pre-Algebra A, MTH102: Math Foundations, or equivalent

Note: Students who have already succeeded in K[12] middle school Pre-Algebra B should not enroll in this course.

MTH122: Algebra I

In this course, students explore the tools of algebra. Students learn to identify the structure and properties of the real number system; complete operations with integers and other rational numbers; work with square roots and irrational numbers; graph linear equations; solve linear equations and inequalities in one variable; solve systems of linear equations; use ratios, proportions, and percentages to solve problems; use

algebraic applications in geometry including the Pythagorean theorem and formulas for measuring area and volume; complete an introduction to polynomials; and understand logic and reasoning.

Course length: Two semesters
Materials: *Algebra I: Reference Guide and Problem Sets*
Prerequisites: MTH112: Pre-Algebra

MTH123: Algebra I

Students develop algebraic fluency by learning the skills needed to solve equations and perform manipulations with numbers, variables, equations, and inequalities. They also learn concepts central to the abstraction and generalization that algebra makes possible. Students learn to use number properties to simplify expressions or justify statements; describe sets with set notation and find the union and intersection of sets; simplify and evaluate expressions involving variables, fractions, exponents, and radicals; work with integers, rational numbers, and irrational numbers; and graph and solve equations, inequalities, and systems of equations. They learn to determine whether a relation is a function and how to describe its domain and range; use factoring, formulas, and other techniques to solve quadratic and other polynomial equations; formulate and evaluate valid mathematical arguments using various types of reasoning; and translate word problems into mathematical equations and then use the equations to solve the original problems.

Course length: Two semesters
Materials: *Algebra I: Reference Guide and Problem Sets*
Prerequisites: K[12] Pre-Algebra B, MTH113: Pre-Algebra, or equivalent

Note: Students who have already succeeded in K[12] middle school Algebra 1 should not enroll in this course.

MTH124: Honors Algebra I

This course prepares students for more advanced courses while they develop algebraic fluency, learn the skills needed to solve equations, and perform manipulations with numbers, variables, equations, and inequalities. They also learn concepts central to the abstraction and generalization that algebra makes possible. Students learn to use number properties to simplify expressions or justify statements; describe sets with set notation and find the union and intersection of sets; simplify and evaluate expressions involving variables, fractions, exponents, and radicals; work with integers, rational numbers, and irrational numbers; and graph and solve equations, inequalities, and systems of equations.

They learn to determine whether a relation is a function and how to describe its domain and range; use factoring, formulas, and other techniques to solve quadratic and other polynomial equations; formulate and evaluate valid mathematical arguments using various types of reasoning; translate word problems into mathematical equations and then use the equations to solve the original problems. The course is expanded with more challenging assessments, optional exercises, and threaded discussions that allow students to explore and connect algebraic concepts. There is also an independent honors project each semester.

Course length: Two semesters
Materials: *Algebra I: Reference Guide and Problem Sets*
Prerequisites: Success in previous math course and teacher/school counselor recommendation

MTH202: Geometry

Students learn to recognize and work with core geometric concepts in various contexts. They develop sound ideas of inductive and deductive reasoning, logic, concepts, and techniques of Euclidean plane and solid geometry, as well as a solid, basic understanding of mathematical structure, method, and applications of Euclidean plane and solid geometry. Students use visualizations, spatial reasoning, and geometric modeling to solve problems. Topics of study include points, lines, and angles; triangles; right triangles; quadrilaterals and other polygons; circles; coordinate geometry; three-dimensional solids; geometric constructions; symmetry; and the use of transformations.

Course length: Two semesters
Materials: *Geometry: A Reference Guide*; a drawing compass, protractor, and ruler
Prerequisites: MTH122: Algebra I, or equivalent

MTH203: Geometry

In this comprehensive course, students are challenged to recognize and work with geometric concepts in various contexts. They build on ideas of inductive and deductive reasoning, logic, concepts, and techniques of Euclidean plane and solid geometry. They develop deeper understandings of mathematical structure, method, and applications of Euclidean plane and solid geometry. Students use visualizations, spatial

reasoning, and geometric modeling to solve problems. Topics of study include points, lines, and angles; triangles; right triangles; quadrilaterals and other polygons; circles; coordinate geometry; three-dimensional solids; geometric constructions; symmetry; the use of transformations; and non-Euclidean geometries.

Course length: Two semesters
Materials: *Geometry: A Reference Guide*; a drawing compass, protractor, and ruler
Prerequisites: MTH123: Algebra I, or equivalent

MTH204: Honors Geometry

Students work with advanced geometric concepts in various contexts. They build in-depth ideas of inductive and deductive reasoning, logic, concepts, and techniques of Euclidean plane and solid geometry. They also develop a sophisticated understanding of mathematical structure, method, and applications of Euclidean plane and solid geometry. Students use visualizations, spatial reasoning, and geometric modeling to solve problems. Topics of study include points, lines, and angles; triangles; right triangles; quadrilaterals and other polygons; circles; coordinate geometry; three-dimensional solids; geometric constructions; symmetry; the use of transformations; and non-Euclidean geometries. Students work on additional challenging assignments, assessments, and research projects.

Course length: Two semesters
Materials: *Geometry: A Reference Guide*; a drawing compass, protractor, and ruler
Prerequisites: MTH123: Algebra I or MTH124: Honors Algebra I, or equivalent, and teacher/school counselor recommendation

MTH302: Algebra II

This course builds upon algebraic concepts covered in Algebra I. Students solve open-ended problems and learn to think critically. Topics include conic sections; functions and their graphs; quadratic functions; inverse functions; and advanced polynomial functions. Students are introduced to rational, radical, exponential, and logarithmic functions; sequences and series; and data analysis.

Course length: Two semesters
Materials: None
Prerequisites: MTH122: Algebra I

MTH303: Algebra II

This course builds upon algebraic concepts covered in Algebra I and prepares students for advanced-level courses. Students extend their knowledge and understanding by solving open-ended problems and thinking critically. Topics include conic sections; functions and their graphs; quadratic functions; inverse functions; and advanced polynomial functions. Students are introduced to rational, radical, exponential, and logarithmic functions; sequences and series; and data analysis.
Course Length: Two semesters
Materials: None
Prerequisites: MTH123: Algebra I and MTH203: Geometry

MTH304: Honors Algebra II

This course builds upon advanced algebraic concepts covered in Algebra I and prepares students for advanced-level courses. Students extend their knowledge and understanding by solving open-ended problems and thinking critically. Topics include functions and their graphs; quadratic functions; complex numbers, and advanced polynomial functions. Students are introduced to rational, radical, exponential, and logarithmic functions; sequences and series; probability; statistics; and conic sections. Students work on additional challenging assignments, assessments, and research projects.

Course Length: Two semesters
Materials: None
Prerequisites: MTH123: Algebra I or MTH124: Honors Algebra I and MTH203: Geometry or MTH204: Honors Geometry, or equivalents, and teacher/school counselor recommendation

MTH312: Business and Consumer Math

Students learn mathematical skills relevant to everyday life, such as balancing a checkbook, calculating net pay, budgeting expenses, making cost comparisons, buying and renting a home, and finding the cost of operating a motor vehicle. Students also explore business topics, including borrowing money, investing, and calculating business profits and losses. The course guides students toward logical thinking and problem solving, to help them make good decisions about money and finances. Through projects and activities, students apply their skills and knowledge to real-life situations.

Course length: One semester
Materials: None
Prerequisites: MTH112 or MTH113: Pre-Algebra (or equivalent) recommended, but not required

MTH403: Pre-Calculus/Trigonometry

Pre-calculus weaves together previous study of algebra, geometry, and functions into a preparatory course for calculus. The course focuses on the mastery of critical skills and exposure to new skills necessary for success in subsequent math courses. Topics include linear, quadratic, exponential, logarithmic, radical, polynomial, and rational functions; systems of equations; and conic sections in the first semester. The second semester covers trigonometric ratios and functions; inverse trigonometric functions; applications of trigonometry, including vectors and laws of cosine and sine; polar functions and notation; and arithmetic of complex numbers. Cross-curricular connections are made throughout the course to calculus, art, history, and a variety of other fields related to mathematics.

Course length: Two semesters
Materials: Texas Instruments T1-84 Plus graphing calculator
Prerequisites: Success in MTH203: Geometry and MTH303: Algebra II

MTH500: AP® Calculus AB

This course is the equivalent of an introductory college-level calculus course. Calculus helps scientists, engineers, and financial analysts understand the complex relationships behind real-world phenomena. Students learn to evaluate the soundness of proposed solutions and apply mathematical reasoning to real-world models. Students also learn to understand change geometrically and visually (by studying graphs of curves), analytically (by studying and working with mathematical formulas), numerically (by seeing patterns in sets of numbers), and verbally. Students prepare for the AP® exam and further studies in science, engineering, and mathematics.

Course length: Two semesters
Materials: Texas Instruments T1-84 Plus graphing calculator
Prerequisites: Success in MTH203: Geometry, MTH303: Algebra II, MTH403: Pre-Calculus/Trigonometry, and a teacher/school counselor recommendation

MTH510: AP® Statistics

This course is the equivalent of an introductory college-level course. Statistics—the art of drawing conclusions from imperfect data and the science of real-world uncertainties—plays an important role in many fields. Students collect, analyze, graph, and interpret real-world data. They learn to design and analyze research studies by reviewing and evaluating examples from real research. Students prepare for the AP® exam and for further study in science, sociology, medicine, engineering, political science, geography, and business.

Course length: Two semesters
Materials: Texas Instruments T1-84 Plus graphing calculator
Prerequisites: Success in MTH303: Algebra II and a teacher/school counselor recommendation

BUS030: Personal Finance (Elective)

Students learn about different aspects of personal economics and finance in a virtual neighborhood setting. Topics include spending plans and borrowing decisions; career planning; and investing, insurance, and other financial services. Students complete activities and projects to apply the knowledge they gain to their own lives. This course may meet the needs of most students requiring financial skills or economics credit.

Course length: One semester
Materials: None
Prerequisites: MTH112 or MTH113: Pre-Algebra (or equivalent) recommended, but not required

Science

SCI102: Physical Science

Students explore the relationship between matter and energy by investigating force and motion, the structure of atoms, the structure and properties of matter, chemical reactions, and the interactions of energy and matter. Students develop skill in measuring, solving problems, using laboratory apparatuses, following safety procedures, and adhering to experimental procedures. Students focus on inquiry-based learning, with hands-on laboratory investigations making up half of the learning experience. K12 provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Physical Science: A Laboratory Guide*; materials for laboratory experiments
Prerequisites: K12 middle school Physical Science, or equivalent

SCI112: Earth Science

This course provides students with a solid earth science curriculum, focusing on geology, oceanography, astronomy, weather, and climate. The program consists of online lessons, an associated reference book, collaborative activities, and hands-on laboratories students can conduct at home. The course provides a base for further studies in geology, meteorology, oceanography, and astronomy, and gives practical experience in implementing scientific methods. K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Earth Science: A Reference Guide*; materials for laboratory experiments
Prerequisites: K[12] middle school Earth Science, or equivalent

SCI113: Earth Science

This course provides students with a comprehensive earth science curriculum, focusing on geology, oceanography, astronomy, weather, and climate. The program consists of in-depth online lessons, an associated reference book, collaborative activities, and hands-on laboratories students can conduct at home. The course prepares students for further studies in geology, meteorology, oceanography, and astronomy courses, and gives them practical experience in implementing scientific methods. K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Earth Science: A Reference Guide*; materials for laboratory experiments
Prerequisites: K[12] middle school Life Science, or equivalent

SCI114: Honors Earth Science

This challenging course provides students with an honors-level earth science curriculum, focusing on geology, oceanography, astronomy, weather, and climate. The program consists of online lessons, an associated reference book, collaborative activities, and hands-on laboratories students can conduct at home. The course prepares students for advanced studies in geology, meteorology, oceanography, and astronomy courses, and gives them more sophisticated experience in implementing scientific methods. Additional honors assignments include debates, research papers, extended collaborative laboratories, and virtual laboratories. K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Earth Science: A Reference Guide*; materials for laboratory experiments
Prerequisites: K[12] middle school Life Science, or equivalent, success in previous science course, and teacher/school counselor recommendation

SCI202: Biology

In this course, students focus on the chemistry of living things: the cell, genetics, evolution, the structure and function of living things, and ecology. The program consists of online lessons including extensive animations, an associated reference book, collaborative activities, and hands-on laboratory experiments students can conduct at home. K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Biology: A Reference Guide*; materials for laboratory experiments, including a compound microscope
Prerequisites: K[12] middle school Life Science, or equivalent

SCI203: Biology

In this comprehensive course, students investigate the chemistry of living things: the cell, genetics, evolution, the structure and function of living things, and ecology. The program consists of in-depth online lessons including extensive animations, an associated reference book, collaborative explorations, and hands-on laboratory experiments students can conduct at home. K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Biology: A Reference Guide*; materials for laboratory experiments, including a compound microscope
Prerequisites: K[12] middle school Life Science, or equivalent

SCI204: Honors Biology

This course provides students with a challenging honors-level biology curriculum, focusing on the chemistry of living things: the cell, genetics, evolution, the structure and function of living things, and ecology. The program consists of advanced online lessons including extensive animations, an associated reference book, collaborative explorations, and hands-on laboratory experiments students can conduct at home. Honors activities include debates, research papers, extended collaborative laboratories, and virtual laboratories. K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Biology: A Reference Guide*; materials for laboratory experiments, including a compound microscope
Prerequisites: K[12] middle school Life Science, or equivalent, success in previous science course, and teacher/school counselor recommendation

SCI302: Chemistry

This course surveys all key areas of chemistry, including atomic structure, chemical bonding and reactions, solutions, stoichiometry, thermochemistry, organic chemistry, and nuclear chemistry. The course includes direct online instruction and related assessments, used with a problem-solving book. Instructions for hands-on labs are included, for which K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Chemistry: Problems and Solutions; Chemistry: A Laboratory Guide*; K[12]-provided laboratory materials; common household materials for labs
Prerequisites: K[12] middle school Physical Science or SCI102: Physical Science and satisfactory grasp of Algebra basics, evidenced by success in MTH122: Algebra I, or equivalent

SCI303: Chemistry

This comprehensive course gives students a solid basis to move on to future studies. The course provides an in-depth survey of all key areas, including atomic structure, chemical bonding and reactions, solutions, stoichiometry, thermochemistry, organic chemistry, and nuclear chemistry. The course includes direct online instruction and related assessments, used with a problem-solving book. Instructions for hands-on labs are included, for which K[12] provides all lab materials that cannot easily be found in the home.

Course length: Two semesters
Materials: *Chemistry: Problems and Solutions; Chemistry: A Laboratory Guide*; K[12]-provided laboratory materials; common household materials for labs
Prerequisites: Satisfactory completion of either K[12] middle school Physical Science or SCI102: Physical Science and solid grasp of Algebra basics, evidenced by success in MTH122: Algebra I, or equivalent

SCI304: Honors Chemistry

This advanced course gives students a solid basis to move on to more advanced courses. The challenging course surveys all key areas, including atomic structure, chemical bonding and reactions, solutions, stoichiometry, thermochemistry, organic chemistry, and nuclear chemistry, enhanced with challenging model problems and assessments. Students complete community-based written research projects, treat aspects of chemistry that require individual research and reporting, and participate in online threaded discussions. Instructions for hands-on labs are included, for which K[12] provides all lab materials that cannot easily be found in the home.
Course length: Two semesters
Materials: *Chemistry: Problems and Solutions; Chemistry: A Laboratory Guide*; common household materials for labs
Prerequisites: Success in previous science course, success in Algebra I, or equivalent, and teacher/school counselor recommendation

SCI403: Physics

This course provides a comprehensive survey of all key areas: physical systems, measurement, kinematics, dynamics, momentum, energy, thermodynamics, waves, electricity, and magnetism, and introduces students to modern physics topics such as quantum theory and the atomic nucleus. The course gives students a solid basis to move on to more advanced courses later in their academic careers. The program consists of online instruction and related assessments, plus an associated problem-solving book and instructions for conducting hands-on laboratory experiments at home. K[12] provides all lab materials that cannot be found easily in a typical home.

Course length: Two semesters
Materials: *Physics: Problems and Solutions;* Materials for laboratory experiments
Prerequisites: MTH303: Algebra II and MTH403: Pre-Calculus/ Trigonometry

SCI404: Honors Physics

This advanced course surveys all key areas: physical systems, measurement, kinematics, dynamics, momentum, energy, thermodynamics, waves, electricity, and magnetism, and introduces students to modern physics topics such as quantum theory and the atomic nucleus. Additional honors assignments include debates, research papers, extended collaborative laboratories, and virtual laboratories. The course gives a solid basis for moving on to more advanced college physics

courses. The program consists of online instruction and related assessments, plus an associated problem-solving book and instructions for conducting hands-on laboratory experiments at home. K[12] provides all lab materials that cannot be found easily in a typical home.

Course length: Two semesters
Materials: *Physics: Problems and Solutions;* Materials for laboratory experiments
Prerequisites: MTH303: Algebra II or MTH303: Honors Algebra II and MTH403: Pre-Calculus/Trigonometry, and teacher/school counselor recommendation

SCI500: AP® Biology

This course is designed in three modules with correlating laboratory exercises: molecules and cells, heredity and the theory of evolution, and organisms and populations. Within these modules students learn about energy transfer, continuity and change in the biological world, and relations between the structure and function of living things. They also analyze the interdependence of the elements of nature and the ways in which science must seek to preserve a balance between technology and nature. Students prepare for the AP® exam by modeling the thought processes and critical-thinking skills required to answer questions on the exam. The content aligns to the sequence of topics recommended by the College Board.

Course length: Two semesters
Materials: Materials for laboratory experiments
Prerequisites: Success in SCI203: Biology and SCI303: Chemistry, and teacher/school counselor recommendation

SCI510: AP® Chemistry

Students solve chemical problems by using mathematical formulation principles and chemical calculations in addition to laboratory experiments. They build on their general understanding of chemical principles and engage in a more in-depth study of the nature and reactivity of matter. Students first focus on the structure of atoms, molecules, and ions, and then go on to analyze the relationship between molecular structure and chemical and physical properties. To investigate this relationship, students examine the molecular composition of common substances and learn to transform them through chemical reactions with increasingly predictable outcomes. Students prepare for the AP® exam. The course content aligns to the sequence of topics recommended by the College Board and to widely used textbooks.

Course length: Two semesters
Materials: *Inquiries into Chemistry,* by Abraham and Pavelich, 3rd ed.; materials for laboratory experiments; not provided, but a Texas Instruments T1-84 Plus graphing calculator or one of similar capabilities is required
Prerequisites: Success in SCI303: Chemistry or SCI304: Honors Chemistry and MTH303: Algebra II, and a teacher/school counselor recommendation

SCI520: AP® Physics B

This course is the equivalent of an introductory college-level survey course, but does not require proficiency in calculus. Students focus on five general areas: Newtonian mechanics, thermal physics, electricity and magnetism, waves and optics, and atomic and nuclear physics. Students gain an understanding of the core principles of physics and then apply them to problem-solving exercises. They learn how to measure the mass of a planet without weighing it, find out how electricity makes a motor turn, and learn how opticians know how to shape lenses for glasses. Students prepare for the AP® exam and for further study in science and engineering.

Course length: Two semesters
Materials: *Schaum's Outline of College Physics,* by Bueche and Hecht, 10th ed.; materials for laboratory experiments; not provided, but a Texas Instruments T1-84 Plus graphing calculator or one of similar capabilities is required
Prerequisites: Success in MTH303: Algebra II, MTH403: Pre-Calculus/Trigonometry, and teacher/school counselor recommendation

SCI010: Environmental Science (Elective)

This course provides an overview of the nature of ecosystems, energy flow, and the inter-relationships of biology, geology, and chemical cycles. Students explore issues in population studies, environmental pollution, and the organization and dynamics of ecological communities. Specific topics include scientific habits of the mind; the application of scientific knowledge, methodology, and historical context to solve problems; the use of laboratory technologies; earth dynamics; the influence of technology on environmental quality; conservation practices; biodiversity; environmental planning and waste management; environmental monitoring and policy; sustainable use of public land; characteristics of populations; biotic and abiotic environmental factors; and energy production technologies.

Course length: Two semesters
Materials: Common household materials for labs
Prerequisites: Success in previous high school science course and a teacher/school counselor recommendation

SCI020: Life Science: Oceanography (Elective)

In this introductory course, students construct an applied knowledge of the characteristics of aquatic systems. Students study ocean structure and marine ecology through hands-on exploration of coastal waters, open ocean waters, deep ocean waters, coral reefs, kelp forests, deep ocean vents, and tide pools. Through guided practice of the scientific model, using common household materials, students conduct field studies of local aquatic structures.

Course length: One semester
Materials: Common household materials for labs
Prerequisites: SCI202 or SCI203: Biology and SCI102: Physical Science, or equivalents

History and Social Sciences

HST102: World History

This course traces the development of civilizations around the world from prehistory to the present, with a special emphasis on key periods and primary sources. The course covers major events in world history, including the development and influence of human-geographic relationships, political and social structures, economics, science and technology, and the arts. Students investigate the major religions and belief systems throughout history and learn about the importance of trade and cultural exchange. Other topics include the development of agriculture, the spread of democracy, the rise of nation-states, the industrial era, the spread of imperialism, and the issues and conflicts of the twentieth century.

Course length: Two semesters
Materials: None
Prerequisites: K[12] middle school American History Since 1865, World History A or World History B, or equivalent

HST103: World History

In this course, students examine the development of civilizations around the world from prehistory to the present, analyzing human-geographic relationships, political and social structures, economics, science and technology, and the arts. Students investigate major religions and belief systems and explore trade and cultural exchange in relation to the development of civilizations. Studies emphasize major changes in world history, such as the development of agriculture, spread of democracy, rise of nation-states, the Industrial Revolution, the spread of imperialism, and critical issues and conflicts of the twentieth century.

Course length: Two semesters
Materials: None
Prerequisites: K[12] middle school American History Since 1865, World History A or World History B, or equivalent

HST202: Modern World Studies

Students trace the history of the world from approximately 1870 to the present. They begin with a look back at events leading up to 1914, including the Second Industrial Revolution and the imperialism that accompanied it. Their focus then shifts to the contemporary era, including two world wars, the Great Depression, and global Cold War tensions. Students examine both the staggering problems and astounding accomplishments of the twentieth century, with a focus on political and social history. Students also explore topics in physical and human geography, and investigate issues of concern in the contemporary world. Online lessons help students organize study, explore topics, review in preparation for assessments, and practice skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research.

Course length: Two semesters
Materials: *The Human Odyssey, Volume 3*
Prerequisites: HST102: World History, K[12] middle school Intermediate World History A and B, or equivalent

HST203: Modern World Studies

In this comprehensive course, students follow the history of the world from approximately 1870 to the present. They begin with a study of events leading up to 1914, including the Second Industrial Revolution and the imperialism that accompanied it. Their focus then shifts to the contemporary era, including two world wars, the Great Depression, and global Cold War tensions. Students examine both the staggering problems and astounding accomplishments of the twentieth century, with a focus on political and social history. Students also explore

topics in physical and human geography, and investigate issues of concern in the contemporary world. Online lessons help students organize study, explore topics, review in preparation for assessments, and practice sophisticated skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research.

Course length: Two semesters
Materials: *The Human Odyssey, Volume 3*
Prerequisites: HST103: World History, K[12] middle school Intermediate World History A and B, or equivalent

HST204: Honors Modern World Studies

In this advanced course, students investigate the history of the world from approximately 1870 to the present. They begin with an analysis of events leading up to 1914, including the Second Industrial Revolution and the imperialism that accompanied it. Their focus then shifts to the contemporary era, including two world wars, the Great Depression, and global Cold War tensions. Students undertake an in-depth examination of both the staggering problems and astounding accomplishments of the twentieth century, with a focus on political and social history. Students also explore advanced topics in physical and human geography, and investigate issues of concern in the contemporary world. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting research. Students complete independent projects each semester.

Course length: Two semesters
Materials: *The Human Odyssey, Volume 3*
Prerequisites: HST103: World History, K[12] middle school Intermediate World History A and B, or equivalent, success in previous social studies course, and a teacher/school counselor recommendation

HST212: Geography and World Cultures

This one-semester course introduces students to the countless ways in which geography influences human relationships, politics, society, economics, science, technology, and the arts. Special emphasis is placed on the way geographically derived information is expressed in maps, charts, and graphs in order to teach students how to analyze and create such documents.

Course length: One semester
Materials: None
Prerequisites: HST102: World History is recommended, but not required

HST213: Geography and World Cultures

This one-semester course uses geographic features to explore how human relationships, political and social structures, economics, science, technology, and the arts have developed and influenced life in countries around the world. Throughout the course, students learn how to read maps, charts, and graphs rigorously and critically—and how to create them. Examining the intersection of culture and geography, students discover how a mountain in the distance can inspire national policymakers, civil engineers, or poets; how a river triggers the activity of bridge builders, shipbuilders, and merchants alike; and how the sound of a busy Cairo street can inspire sociologists and musicians. Students come to understand how the drama of human history and cultural encounters—affecting land, natural resources, religious dominance, and more—is played out on the geographical stage

Course length: One semester
Materials: None
Prerequisites: HST103: World History is recommended, but not required

HST302: U.S. History

This course is a full-year survey that provides students with a view of American history from the first migrations of nomadic people to North America to recent events. Readings are drawn from K[12]'s *The American Odyssey: A History of the United States*. Online lessons help students organize their study, explore topics, review in preparation for assessments, and practice skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research.

Course length: Two semesters
Materials: *The American Odyssey: A History of the United States*
Prerequisites: K[12] middle school Intermediate World History B or HST102: World History

HST303: U.S. History

This course is a full-year survey that provides students with a comprehensive view of American history from the first migrations of nomadic people to North America to recent events. Readings are drawn from K[12]'s *The American Odyssey: A History of the United States*. Online lessons help students organize their study, explore topics in depth, review in preparation for assessments, and practice skills of historical

thinking and analysis. Activities include analyzing primary sources and maps, creating time lines, completing projects and written assignments, and conducting independent research.

Course length: Two semesters
Materials: *The American Odyssey: A History of the United States*
Prerequisites: HST103: World History or HST203: Modern World Studies

HST304: Honors U.S. History

This course is a challenging full-year survey that provides students with a comprehensive view of American history from the first migrations of nomadic people to North America to recent events. Readings are drawn from K12's *The American Odyssey: A History of the United States*. Online lessons help students organize their study, explore topics in depth, review in preparation for assessments, and practice advanced skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research. Students complete independent projects each semester.

Course length: Two semesters
Materials: *The American Odyssey: A History of the United States*
Prerequisites: HST103: World History or HST203: Modern World Studies, success in previous history course, and a teacher/school counselor recommendation

HST312: Modern U.S. History

This course is a full-year survey that provides students with a view of American history from the industrial revolution of the late nineteenth century to recent events. Readings are drawn from K12's *The American Odyssey: A History of the United States* Online lessons help students organize study, explore topics, review in preparation for assessments, and practice skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research.

Course length: Two semesters
Materials: *The American Odyssey: A History of the United States*
Prerequisites: K12 middle school American History Before 1865 and American History Since 1865, or equivalent

HST313: Modern U.S. History

This course is a full-year survey that provides students with a comprehensive view of American history from the industrial revolution of the late nineteenth century to recent events. Readings are drawn from K12's *The American Odyssey: A History of the United States*. Online lessons help students organize study, explore topics in depth, review in preparation for assessments, and practice skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research.

Course length: Two semesters
Materials: *The American Odyssey: A History of the United States*
Prerequisites: K12 middle school American History Before 1865 and American History Since 1865, or equivalent

HST314: Honors Modern U.S. History

This course is a challenging full-year survey that provides students with a comprehensive view of American history from the industrial revolution of the late nineteenth century to recent events. Readings are drawn from K12's *The American Odyssey: A History of the United States*. Online lessons help students organize study, explore topics in depth, review in preparation for assessments, and practice advanced advanced skills of historical thinking and analysis. Activities include analyzing primary sources and maps, creating timelines, completing projects and written assignments, and conducting independent research. Students complete independent projects each semester.

Course length: Two semesters
Materials: *The American Odyssey: A History of the United States*
Prerequisites: K12 middle school American History Before 1865 and American History Since 1865, or equivalent, and teacher/school counselor recommendation

HST402: U.S. Government and Politics

This course uses the perspective of political institutions to explore government history, organization, and functions. Students encounter the political culture of our country from the Declaration of Independence to the present day, gaining insight into the challenges faced by presidents, members of Congress, and other political participants. The course also covers the roles of political parties, interest groups, the media, and the Supreme Court. Students learn to use primary historical documents as evidence in evaluating past events and government functions.

Course length: One semester
Materials: None
Prerequisites: HST302: U.S. History is recommended, but not required

HST403: U.S. Government and Politics

This course studies the history, organization, and functions of the United States government. Beginning with the Declaration of Independence and continuing through to the present day, students explore the relationship between individual Americans and our governing bodies. Students take a close look at the political culture of our country and gain insight into the challenges faced by citizens, elected government officials, political activists, and others. Students also learn about the roles of political parties, interest groups, the media, and the Supreme Court, and discuss their own views on current political issues.

Course length: One semester
Materials: None
Prerequisites: HST303: U.S. History is recommended, but not required

HST412: U.S. and Global Economics

This course in economic principles uses real-world simulations to teach the issues faced by producers, consumers, investors, and taxpayers in the U.S. and around the world. Topics include markets; supply and demand; theories of early economic thinkers; theories of value; money; the role of banks, investment houses, and the Federal Reserve; and other fundamental features of capitalism. A survey of current issues in American and global markets rounds out the course.

Course length: One semester
Materials: None
Prerequisites: HST402: U.S. Government and Politics is recommended, but not required

HST413: U.S. and Global Economics

In this course on economic principles, students explore choices they face as producers, consumers, investors, and taxpayers. Students apply what they learn to real-world simulation problems. Topics of study include markets from historic and contemporary perspectives; supply and demand; theories of early economic philosophers such as Adam Smith and David Ricardo; theories of value; money (what it is, how it evolved, the role of banks, investment houses, and the Federal Reserve); Keynesian economics; how capitalism functions, focusing on productivity, wages, investment, and growth; issues of capitalism, such as unemployment, inflation, and the national debt; and a survey of markets in such areas as China, Europe, and the Middle East.

Course length: One semester
Materials: None
Prerequisites: HST403: U.S. Government and Politics is recommended, but not required

HST500: AP® U.S. History

Students explore and analyze the economic, political, and social transformation of the United States since the time of the first European encounters. Students are asked to master not only the wide array of factual information necessary to do well on the AP® exam, but also to practice skills of critical analysis of historical information and documents. Students read primary and secondary source materials and analyze problems presented by historians to gain insight into challenges of interpretation and the ways in which historical events have shaped American society and culture. The content aligns to the sequence of topics recommended by the College Board and to widely used textbooks. Students prepare for the AP® exam.

Course length: Two semesters
Materials: *America: A Narrative History*, by Tindall et al., 7th ed.
Prerequisites: Success in previous history course and a teacher/school counselor recommendation

HST510: AP® U.S. Government and Politics

This course is the equivalent of an introductory college-level course. Students explore the operations and structure of the U.S. government and the behavior of the electorate and politicians. Students gain the analytical perspective necessary to evaluate political data, hypotheses, concepts, opinions, and processes and learn how to gather data about political behavior and develop their own theoretical analysis of American politics. Students also build the skills they need to examine general propositions about government and politics, and to analyze specific relationships between political, social, and economic institutions. Students prepare for the AP® exam and for further study in political science, law, education, business, and history.

Course length: One semester
Materials: *The Lanahan Readings in the American Polity,* 4th ed.; *American Government,* by Lowi et al., 9th ed.
Prerequisites: Success in HST303: U.S. History (or equivalent) and a teacher/school counselor recommendation

HST520: AP® Macroeconomics

This course is the equivalent of an introductory college-level course. Students learn why and how the world economy can change from month to month, how to identify trends in our economy, and how to use those trends to develop performance measures and predictors of economic growth or decline. Students also examine how individuals and institutions are influenced by employment rates, government spending, inflation, taxes, and production. Students prepare for the AP® exam and for further study in business, political science, and history.
Course length: One semester
Materials: *Macroeconomics for Today, 4th Ed.,* ISBN: 0-324-30197-9
Prerequisites: Success in MTH303: Algebra II (or equivalent) and a teacher/school counselor recommendation

HST530: AP® Microeconomics

This course is the equivalent of an introductory college-level course. Students explore the behavior of individuals and businesses as they exchange goods and services in the marketplace. Students learn why the same product can cost different amounts at different stores, in different cities, and at different times. Students also learn to spot patterns in economic behavior and learn how to use those patterns to explain buyer and seller behavior under various conditions. Lessons promote an understanding of the nature and function of markets, the role of scarcity and competition, the influence of factors such as interest rates on business decisions, and the role of government in the economy. Students prepare for the AP® exam and for further study in business, history, and political science.

Course length: One semester
Materials: *Microeconomics for Today, 4th Ed.,* ISBN: 0-324-30192-8
Prerequisites: Success in MTH303: Algebra II (or equivalent) and a teacher/school counselor recommendation

HST540: AP® Psychology

This course is the equivalent of an introductory college-level course. Students receive an overview of current psychological research methods and theories. They explore the therapies used by professional counselors and clinical psychologists, and examine the reasons for normal human reactions: how people learn and think, the process of human development and human aggression, altruism, intimacy, and self-reflection. They study core psychological concepts, such as the brain and sensory functions, and learn to gauge human reactions, gather information, and form meaningful syntheses. Students prepare for the AP® Exam and for further studies in psychology and life sciences.

Course length: One semester
Materials: *Psychology,* by David G. Myers, 8th ed.
Prerequisites: Success in SCI203: Biology and a teacher/school counselor recommendation

HST010: Anthropology (Elective)

Anthropology is the study of human beings and their social, environmental, and cultural relationships over time. In this course, students familiarize themselves with their own culture as they explore cultures from around the world and from different periods in history. Students examine each culture through the lens of family, land, death, identity, and power, to explore the similarities and differences of cultural roles in various times and places.

Course length: One semester
Materials: None
Prerequisites: HST102 or HST103: World History (or equivalent) recommended as a prerequisite or co-requisite, but not required

HST020: Psychology (Elective)

Students explore scientific methods of research as well as the major schools of psychology as they relate to issues of aggression, addictive behavior, memory, interpersonal relations, and self-care. Topics include the importance of ethics in scientific study, psychology's application to daily life, the influence of cultural background on perception, and more.

Course length: One semester
Materials: None
Prerequisites: SCI202 or SCI203: Biology or equivalent

HST030: Macroeconomics (Elective)

Students analyze economic data through a variety of learning activities. They learn how macroeconomics differs from microeconomics. They study the measurement of aggregate economic activity and how it relates to employment and inflation. They explore fiscal and monetary policies designed to promote economic stability. Throughout the course, students use Internet resources to access and analyze current economic data.

Course length: One semester
Materials: None
Prerequisites: Success in previous math/social studies course and a teacher/school counselor recommendation

World Languages

WLG100: Spanish I

Students begin their introduction to Spanish with fundamental building blocks in four key areas of foreign language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. Vocabulary and grammar topics are introduced in an ongoing adventure story that prompts students to use skills from all four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. Cultural information covers major Spanish-speaking areas in Europe and the Americas. All-new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Vox Everyday Spanish and English Dictionary*
Prerequisites: None

Note: Students who have already succeeded in middle school Spanish 2 should enroll in Spanish II rather than in Spanish I.

WLG200: Spanish II

In this continuing introduction to Spanish, students deepen their focus on four key skills in foreign language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context, and then to reproduce new vocabulary in real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in Spanish I, students learn grammar through supplemental texts that supply traditional charts, tables, and explanations. Cultural information addresses Spanish as it is used around the globe. All-new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Vox Everyday Spanish and English Dictionary*
Prerequisites: WLG100: Spanish I, middle school Spanish 1 and 2, or equivalent

WLG300: Spanish III

Intermediate Spanish students who have a strong base of vocabulary, speaking, and listening skills reach a new level of mastery and fluency in this course. Through games and compelling stories, students learn advanced grammar and vocabulary, with an emphasis on correct accents and comprehension of real-world native speech. Error-recognition technology helps students eliminate common mistakes from their speaking and writing. All-new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Vox Everyday Spanish and English Dictionary*
Prerequisites: WLG200: Spanish II, or equivalent

WLG500: AP® Spanish Language

In AP® Spanish Language, students perfect their Spanish speaking, listening, reading, and writing skills. They study vocabulary, grammar, and cultural aspects of the language, and apply what they've learned in extensive written and spoken exercises. By the end of the course, students will have an expansive vocabulary and a solid working knowledge of all Spanish verb forms and tenses. The equivalent of a college-level language course, AP® Spanish Language prepares students for the AP® exam and for further study of Spanish language, culture, and literature.

Course length: Two semesters
Materials: *Vox Everyday Spanish and English Dictionary*
Prerequisites: WLG300: Spanish III (or equivalent) and a teacher/school counselor recommendation

WLG110: French I

Students begin their introduction to French with fundamental building blocks in four key areas of foreign-language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training

that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, and prompts students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All- new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Larousse Student French-English/English-French Dictionary*
Prerequisites: None
Note: Students who have already succeeded in middle school French 2 should enroll in French II rather than in French I.

WLG210: French II

In this continuing introduction to French, students deepen their focus on four key skills in foreign language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context, and then to reproduce new vocabulary items in functional real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in French I, students learn grammar through supplemental texts that supply traditional charts, tables, and explanations. All-new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Larousse Student French-English/English-French Dictionary*
Prerequisites: WLG110: French I, middle school French 1 and 2, or equivalent

WLG310: French III

Intermediate French students who have a strong base of vocabulary, speaking, and listening skills reach a new level of mastery and fluency in this course. Through games and compelling stories, students learn advanced grammar and vocabulary, with an emphasis on correct accents and comprehension of real-world native speech. Error-recognition technology helps students eliminate common mistakes from their speaking and writing. All-new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Larousse Student French-English/English-French Dictionary*
Prerequisites: WLG210: French II, or equivalent

WLG510: AP® French Language

In AP® French Language, students apply their French grammar and vocabulary knowledge and their listening, reading, speaking, and writing skills to a wide variety of real-world contexts. Students learn to speak fluently and accurately, write sophisticated compositions, and comprehend native speakers. The equivalent of a college-level language course, AP® French Language prepares students for the AP® exam and for further study of French language, culture, and literature.

Course length: Two semesters
Materials: *Larousse Student French-English/English-French Dictionary*
Prerequisites: WLG310: French III (or equivalent) and teacher/ school counselor recommendation

WLG120: German I

Students begin their introduction to German with fundamental building blocks in four key areas of foreign language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, and prompts students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All-new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Langenscheidt's Standard German Dictionary*
Prerequisites: None

Note: Students who have already succeeded in middle school German 2 should enroll in German II rather than in German I.

WLG220: German II

In this continuing introduction to German, students deepen their focus on four key skills in foreign language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context, and then to reproduce new vocabulary items in functional real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in German I, students learn grammar through supplemental texts supplying traditional charts, tables, and explanations. All-new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Langenscheidt's Standard German Dictionary*
Prerequisites: WLG120: German I, middle school German 1 and 2, or equivalent

WLG130: Latin I

This introduction to Latin clarifies the traditionally difficult aspects of the language through vocabulary that follows all standard Latin rules but allows students to tell modern stories connected to a contemporary adventure. Students study familiar vocabulary so they can bring into focus the special characteristics of Latin, notably noun cases and declensions. They receive ongoing practice in vocabulary and grammar, which leads to the study of post-Classical Latin, both ecclesiastical and secular, as embodied in the Vulgate Bible and medieval Latin texts. All- new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Bantam New College Latin & English Dictionary*
Prerequisites: None

WLG230: Latin II

Students with a foundation in Latin refine their skills through compelling language lessons, as well as historical and cultural studies. They go from the basics of Latin to a higher level of sophistication through a learning methodology that uses games and stories. Students concentrate on fostering their ability to read and understand (without using a dictionary) classical Latin from a variety of authentic sources. All- new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Bantam New College Latin & English Dictionary*
Prerequisites: WLG130: Latin I or equivalent

WLG140: Chinese I

Students use compelling stories, games, videos, and multimedia experiences in this introduction to Mandarin Chinese. They learn the elegant simplicity of Chinese grammar and the subtleties of Chinese pronunciation through entertaining lessons that give a base of conversational ability and listening comprehension. Students build a foundation for reading and writing in the Chinese language through an adaptive technology that lets them choose an approach that works best for them. All- new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Oxford Beginner's Chinese Dictionary*
Prerequisites: None

Note: Students who have already succeeded in middle school Chinese 2 should enroll in Chinese II rather than in Chinese I.

WLG240: Chinese II

Students continue with engaging stories, games, videos, and multimedia experiences in this second level of Mandarin Chinese. Students further their understanding of Chinese grammar and pronunciation through lessons refining previous practice of conversational ability and listening comprehension. Innovative cultural videos and lessons build awareness of the rich legacy of Chinese culture. Students expand their foundation for reading and writing in Chinese through adaptive technology, providing opportunities to generate fun narratives, a range of well-formed sentences reflecting a solid grasp of grammar structures, and a wide vocabulary. All- new graphics, videos, and games keep students engaged, and make learning languages exciting.

Course length: Two semesters
Materials: *Oxford Beginner's Chinese Dictionary*
Prerequisites: WLG140: Chinese I, middle school Chinese 1 and 2, or equivalent

Electives and Additional Courses

ART010: Fine Art (Elective)

This course combines art history, appreciation, and analysis, while engaging students in hands-on creative projects. Lessons introduce major periods and movements in art history while focusing on masterworks and the intellectual, technical, and creative processes behind those works. Studio lessons provide opportunities for drawing, painting, sculpting, and other creative endeavors.

Course length: Two semesters
Materials: One package of white clay; one set of acrylic paint; one set of round paintbrushes ; no other materials provided. It is recommended, but not required, that students have some means of capturing an image of their studio art projects with a digital camera, webcam, or other imaging device.
Prerequisites: A survey course in World History is recommended as a prerequisite or co-requisite, but not required

ART020: Music Appreciation (Elective)

This course introduces students to the history, theory, and genres of music. The course explores the history of music, from the surviving examples of rudimentary musical forms through to contemporary pieces from around the world. The first semester covers early musical forms, classical music, and American jazz. The second semester presents modern traditions, including gospel, folk, soul, blues, Latin rhythms, rock and roll, and hip hop. The course explores the relationship between music and social movements and reveals how the emergent global society and the prominence of the Internet are making musical forms more accessible worldwide.

To comply with certain state standards for the arts, a student "performance practicum" is required for full credit each semester. The performance practicum requirement can be met through participation in supervised instrumental or vocal lessons, church or community choirs, community musical performances, or any other structured program that meets at regular intervals and provides opportunities for students to build vocal and/or instrumental skills. Parents or guardians will be required to present their proposed practicum to the students' teachers for approval, and validate their children's regular participation in the chosen performance practicum.

Course length: Two semesters
Materials: Finale Notepad music notation software
Prerequisites: None

BUS010: Business Communication and Career Exploration (Elective)

In this course, students explore the ways people communicate in today's business environment. They examine technological advances of the contemporary office and consider future developments. Topics include: reviewing communication fundamentals; developing business letters; researching andreporting; and getting a job. Students perfect their written and oral communication skills, evaluate career interests and aptitudes, and learn how to apply for jobs and conduct interviews.

Course length: One semester
Materials: None
Prerequisites: None

BUS020: Business and Personal Relationships (Elective)

Students receive valuable information and guidelines necessary to navigate business and personal relationships in today's global and multiethnic environment. Through a focus on cultural awareness, positive self-concept, leadership, and communication, students examine how public, business, and personal behaviors intersect.

Course length: One semester
Materials: None
Prerequisites: None

BUS030: Personal Finance (Elective)

Students learn about different aspects of personal economics and finance in a virtual neighborhood setting. Topics include spending plans and borrowing decisions; career planning; and investing, insurance, and other financial services. Students complete activities and projects that apply the knowledge they gain to their own lives. This course may meet the needs of most students requiring financial skills or economics credit.

Course length: One semester
Materials: None
Prerequisites: MTH112 or MTH113: Pre-Algebra (or equivalent) recommended, but not required

BUS040: Introduction to Entrepreneurship (Elective)

In this introductory business course, students will learn the basics of planning and launching their own successful business. Whether they want to start their own money-making business or create a non-profit to help others, this course will help students develop the core skills they will need to be successful. They will learn how to come up with new business ideas, attract investors, market their business, and manage expenses. Students will get inspired by stories of teen entrepreneurs who have turned their ideas into reality, and then they will plan and execute their own business.

Course length: One semester
Materials: TBD
Prerequisites: None
Available Winter 2010

ENG010: Journalism (Elective)

Students examine the development of journalism, from print to the multimedia environment, while learning how to publish an online newspaper. Students write newspaper-style articles and opinion pieces, and examine careers in multimedia communication. They also consider the historical effects of "yellow" journalism, freedom of the press, and journalism's contributions to today's world, with an emphasis on the mutual influence of media and policy.

Course length: Two semesters
Materials: *Associated Press Stylebook*
Prerequisites: Success in previous English/language arts course and a teacher/school counselor recommendation

HST010: Anthropology (Elective)

Anthropology is the study of human beings and their social, environmental, and cultural relations over time. In this course, students familiarize themselves with their own culture as they explore cultures from around the world and from different periods in history. Students examine each culture through the lenses of family, land, death, identity, and power, allowing them to explore the similarities and differences in cultural roles in various times and places.

Course length: One semester
Materials: None
Prerequisites: HST102 or HST103: World History (or equivalent) recommended as a prerequisite or co-requisite, but not required

HST020: Psychology (Elective)

Students explore scientific methods of research as well as the major schools of psychology as they relate to issues of aggression, addictive behavior, memory, interpersonal relations, and self-care. Topics include the importance of ethics in scientific study, psychology's application to daily life, the influence of cultural background on perception, and more.

Course length: One semester
Materials: None
Prerequisites: SCI202: Biology or equivalent

HST030: Macroeconomics (Elective)

Students analyze economic data through a variety of learning activities. They learn how macroeconomics differs from microeconomics. They study the measurement of aggregate economic activity and how it relates to employment and inflation. They explore fiscal and monetary policies designed to promote economic stability. Throughout the course, students use Internet resources to access and analyze current economic data.

Course length: One semester
Materials: None
Prerequisites: Success in previous math/social studies course and a teacher/school counselor recommendation

SCI010: Environmental Science (Elective)

This course provides an overview of the nature of ecosystems, energy flow, and the inter-relationships of biology, geology, and chemical cycles. Students explore issues in population studies, environmental pollution, and the organization and dynamics of ecological communities. Specific topics include: scientific habits of the mind; the application of scientific knowledge, methodology, and historical context to solve problems; the use of laboratory technologies; earth dynamics; the influence of technology on environmental quality; conservation practices; biodiversity; environmental planning and waste management; environmental monitoring and policy; sustainable use of public land; characteristics of populations; biotic and abiotic environmental factors; and energy production technologies.

Course length: Two semesters
Materials: Common household materials for labs
Prerequisites: Success in previous high school science course and a teacher/school counselor recommendation

SCI020: Life Science: Oceanography (Elective)

In this introductory course, students construct an applied knowledge of the characteristics of aquatic systems. Students study ocean structure and marine ecology through hands-on exploration of coastal waters, open ocean waters, deep ocean waters, coral reefs, kelp forests, deep ocean vents, and tide pools. Through guided practice of the scientific model, using common household materials, students conduct field studies of local aquatic structures for the final project.

Course length: One semester
Materials: Common household materials for labs
Prerequisites: SCI202: Biology and SCI102: Physical Science, or equivalents

OTH010: Skills for Health

This course focuses on important skills and knowledge in nutrition; physical activity; the dangers of substance use and abuse; injury prevention and safety; growth and development; and personal health, environmental conservation, and community health resources. The curriculum is designed around topics and situations that engage student discussion and motivate students to analyze internal and external influences on their health-related decisions. The course helps students build the skills they need to protect, enhance, and promote their own health and the health of others.

Course length: One semester
Materials: None
Prerequisites: None

OTH020: Physical Education

This pass/fail course combines online instructional guidance with student participation in weekly cardiovascular, aerobic, muscle-toning, and other activities. Students fulfill course requirements by keeping weekly logs of their physical activity. The course promotes the value of lifetime physical activity and includes instruction in injury prevention, nutrition and diet, and stress management. Students may enroll in the course for either one or two semesters, and repeat for further semesters as needed to fulfill state requirements.

Course length: One semester (or more)
Materials: None
Prerequisites: None

OTH030: Career Planning (Elective)

Students plan for a successful career by analyzing their own goals and decision-making processes. Students use various resources to investigate career options, master job-seeking techniques, and learn how to make the transition from school to work.

Course length: One semester
Materials: *Career Assessment*; *You and Your Career*; *Occupation Finder* guides
Prerequisites: None

OTH040: Study Skills and Learning Strategies (Elective)

Students discover their learning style—the way they process information and apply it—and develop study skills to improve academic and work performance. Topics include time management, oral communications, critical thinking, note-taking, test-taking, and researching.

Course length: One semester
Materials: *Flying Your True Colors for True Success*
Prerequisites: None

Technology and Computer Science

TCH010: Computer Literacy I (Elective)

Today's students must be able to effectively use technology to research, organize, create, and evaluate information. This course provides a foundation in the skills and concepts that define computer literacy in the twenty-first century. From the basics of keyboarding to Internet research techniques, document creation, and digital citizenship, students practice essential skills through individual and team projects.

Course length: One semester
Materials: Microsoft Office 2003 and GIMP (free download)
Prerequisites: None

TCH020: Computer Literacy II (Elective)

This course builds on Computer Literacy I to develop the skills and concepts essential for computer literacy in the 21st century. From the basics of keyboarding to Internet research techniques, document creation, and digital citizenship, students practice essential skills through individual and team projects. When taken with Computer Literacy I, this course maps to the National Educational Technology Standards (NETS).

Course length: One semester
Materials: Microsoft Office 2003 and GIMP (free download)
Prerequisites: TCH010: Computer Literacy I

TCH030: Digital Photography and Graphics (Elective)

This course is for anyone who wants to create compelling, professional-looking graphic designs and photos. Students will learn the basics of composition, color, and layout before moving on to technical topics such as working with layers and masks, adding special effects, and effectively using typefaces

to create visual impact. At the end of this course, students will have created a variety of original projects for their graphic design portfolios.

Course length: One semester
Materials: GIMP (free download)
Prerequisites: None

TCH040: Web Design (Elective)

This course provides a comprehensive introduction to the essentials of Web design, from planning page layouts to publishing a complete site to the Web. Through real-world design scenarios and hands-on projects, students create compelling, usable websites using the latest suite of free tools from Microsoft.
Course length: One semester
Materials: : KompoZer (free download) and GIMP (free download)
Prerequisites: None

TCH050: Digital Video Production (Elective)

This course introduces students to all aspects of digital video, from story-boarding scenes and creating shot lists to editing a finished, professional-quality product. Throughout this project-based course, students demonstrate mastery of the key learning objectives by recording, capturing, and editing their own videos. This is a hands-on course that provides a solid foundation for further study in this exciting field, and progresses from the importing of raw footage through editing basics to transitions, text use, and special effects.

Course length: One semester
Materials: Microsoft Windows Movie Maker; student must supply a video camcorder capable of connecting to a computer, either through USB or FireWire
Prerequisites: None

TCH060: C++ Programming (Elective)

In this introductory course, students learn basic programming concepts through a series of hands-on projects. They also learn about software development careers, the software development process, and industry best practices. Using Microsoft Visual C++ 2008, students master the building blocks of programming: functions, variables, loops, arrays, and classes.

Course length: One semester
Materials: Microsoft Visual C++ 2008 Express (free download)
Prerequisites: None

TCH070: Game Design I (Elective)

This course is for anyone who loves gaming and wants to design and build original games from scratch. Students learn how to use popular game-development software to create engaging, interactive games in a variety of styles. After learning about game genres, students learn about all aspects of the game-design process. From there, it's on to a series of increasingly challenging hands-on projects that teach all the elements of successful game development. This course provides a solid foundation in the essentials of game design.

Course length: One semester
Materials: Multimedia Fusion 2.0
Prerequisites: None

TCH080: Game Design II (Elective)

Students expand their knowledge of the game design industry while mastering event-driven game development through a series of interactive projects. By the end of this course, students will have a variety of polished games for their game-development portfolios.

Course length: One semester
Materials: Multimedia Fusion 2.0
Prerequisites: TCH070: Game Design I

TCH090: Online Game Design (Elective)

This course introduces students to the design of online Flash games. They will learn how to develop a variety of games for the Web, using some basic programming concepts and ActionScript—the native scripting language of Flash—to develop games and publish them online. Professional-quality art is included in each project for students' use, or they can make their own. By the end of this course, students will have a fully-functioning multi-level online game.

Course length: One semester
Materials: Flash CS4
Prerequisites: None

TCH016: Flash Animation (Elective)

This course teaches students how to create interactive movies and engaging games with Flash CS4 animation software. Students master the basics of drawing and animating short movies before moving on to more complex challenges such as adding interactivity and script-driven events. By the end of the course, students will have an interactive portfolio to showcase their finished projects.

Course length: One semester
Materials: Flash CS4
Prerequisites: Permission of a teacher/school counselor

TCH017: 3D Art I—Modeling (Elective)

This course introduces students to 3D modeling tools and concepts. Using Blender, the popular open-source 3D modeling package, students will learn the basics of creating shapes, adding textures and lighting, and rendering. By the end of the course, students will have produced a series of increasingly sophisticated projects for their 3D portfolios. This course is suitable for students with no prior experience with 3D game design or digital media authoring tools.

Course length: One semester
Materials: Blender (free download)
Prerequisites: None

TCH018: 3D Art II—Animation (Elective)

In this advanced course, students will build on the skills they developed in 3D Art I to learn 3D animation techniques. Using Blender, a powerful open-source modeling tool, they will master the basics of animation—rigging, bones, and movement—while learning how to apply traditional animation techniques to their 3D models. They will also learn about jobs in the industry.

Course length: One semester
Materials: TBD
Prerequisites: TCH017: 3D Art I—Modeling
Available winter 2010

TCH019: Computer-Aided Design (CAD) (Elective)

Computer-aided design systems are used by designers and manufacturers in virtually every industry. In this course, students will master the basics of CAD software—creating points, lines, and other geometric forms, isometric drawings, and 3D models. They will learn how to translate initial concepts into functional designs and 3D walkthroughs. They will also explore career options for CAD designers in this hands-on introductory level course.

Course length: One semester
Materials: TBD
Prerequisites: None
Available winter 2010

Orientation

ORN010: Online Learning 09-10

The Online Learning course (required for all new and returning $K^{12}9^{12}$ students) explains to students how the program works, and provides tips on successful online learning. Students are introduced to the online tools they will use during their high school experience, including the Learning Management System that delivers course assignments. Students take part in online discussions and practice submitting computer-scored assessments and other assignments to teachers. Lifelong learning skills such as time management and study habits are also covered. By the end of the course, students will be fully prepared to begin their K^{12} high school courses.

Course length: 6-8 hours
Materials: None
Prerequisites: None

ORN020: Finding Your Path – Planning for Career and College

This course is unique for each student. $K^{12}9^{12}$ school counselors, advisors, and other staff guide students through an in-depth exploration of their interests, abilities, and skills. Students explore their education and career interests, define goals, and create a path through high school that will get them there. In addition, this course serves as a "home base" where students and school counselors can address topics that are critical in their success in high school and beyond. Use of the K^{12} online career and college counseling tools are featured in this course. (Students may re-enroll in this course yearly. Many course activities are related to specific grade levels and proximity to graduation.)

Course length: 30-40 hours
Materials: None
Prerequisites: None

Subject: AK school district online course offering information and discussion request

Hi,
Dr. Wagner (FNSBSD Superintendent) asked me to respond to your query.

The Fairbanks district's correspondence school (B.E.S.T. - Building Educational Success Together) contracts with an outside vendor (Advanced Academics) to purchase online courses for students. We use the courses already developed by Advanced Academics (we do not develop our own). These courses are only available to students enrolled in B.E.S.T. (we have one exception this semester, we are piloting the online AP Government class with students from one of our smaller high schools b/c their school does not offer the AP course. We are hopeful that this will work well and will use the information to determine if there are other online courses we can offer to students at schools where they don't have that opportunity). The online portion of the B.E.S.T. program is open only to secondary students (our elementary students are homeschooled). We negotiate a contract with Advanced Academics annually. Any unused courses can be carried over to the following year.

Another possible online option offered by our district is Outside Credit. Students across the district can apply for outside credit if they wish to take a course from an online vendor (or any other educational institution) for high school credit. They choose the vendor, course, etc . . . and are responsible for any costs. These vary a great deal and are approved on an individual basis.

After reading the Arizona article, I'm not sure that B.E.S.T. or our outside credit process are the types of programs that you are asking about -- but wanted to provide the information in case it is helpful. Please let me know if you have any questions.

Respectfully,
Kathy

Kathy Hughes, Executive Director of Alternative Instruction & Accountability
Fairbanks North Star Borough School District

Subject: Re: AK school district online course offering information and discussion request

Hi Louie,
The online courses we can use are from Advanced Academics and can be found in their catalog at the following website:
https://home.advancedacademics.com/uploads/september%20aai%20master%20course%20catalog.pdf

Our cost is $300/class (no charge to students b/c they are full-time students in our program) and that cost is negotiated b/c of the number of courses we contract to purchase each year (someone purchasing fewer, may have a higher per course charge).

Have a good weekend,
Kathy

Louie Flora wrote:
Thank you for the information. Can you provide a list of the courses that are available and the cost?

Louie

2009/2010 Online Course Catalog

Advanced & College Preparatory

AP® Biology – Semester 1
AP Biology A is a one-semester, introductory college-level course. The topics for this course match the rigors of a college biology classroom. The course emphasizes understanding concepts rather than memorizing facts; with this in mind, students will practice scientific inquiry, recognize common themes across several topics of biology, and apply critical thinking to environmental and social concerns.

This semester covers topics relating to molecules and cells, heredity and evolution, and organisms and populations. While studying these topics, students will understand the basic themes of biology; these include science as a process, evolution, energy transfer, continuity and change, relationship of structure to function, regulation, interdependence on nature, and the impacts of science and technology on society. Chapter assignments allow students to practice what they have learned through lab activities and to write question responses in the style of the AP College Board Exam.

Prior to taking this course, students should have successfully completed a first-year high school biology course and one high school chemistry course.
© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® Biology – Semester 2
AP Biology B is a one-semester, introductory college-level course. The topics for this course match the rigors of a college biology classroom. Upon successful completion of this course, students should be prepared to pass the AP Biology B Exam. The course emphasizes understanding concepts rather than memorizing facts; with this in mind, students will practice scientific inquiry, recognize common themes across several topics of biology, and apply critical thinking to environmental and social concerns.

This semester covers topics relating to molecules and cells, heredity and evolution, and organisms and populations. While studying these topics, students will understand the basic themes of biology; these include science as a process, evolution, energy transfer, continuity and change, relationship of structure to function, regulation, interdependence on nature, and the impacts of science and technology on society. Chapter assignments allow students to practice what they have learned through lab activities and to write question responses in the style of the AP College Board Exam.

AP® Calculus BC - Semester 1
This course offers one semester of study that aims to develop students' understanding of calculus concepts and to provide experience with methods and applications of calculus. Students work with functions in a variety of ways, including graphical, numerical, and analytical. Students use derivatives to solve a variety of problems. Students use technology to help solve problems and interpret results, and also learn to rely on paper-and-pencil techniques of calculus. Students also learn to determine how reasonable their solutions are.

Before studying calculus, students should have completed four years of college-preparatory math classes, including algebra, geometry, trigonometry, analytic geometry, and elementary functions.
© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® Calculus BC – Semester 2
This course offers one semester of study that aims to develop students' understanding of calculus concepts and to provide experience with methods and applications of calculus. The topics will extend from the first semester course to include functions, graphs, and limits; derivatives; integrals; and polynomial approximation and series.
© 2007 AP is a registered trademark of collegeboard.com, Inc.

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

AP® ENGLISH LITERATURE A
In AP® ENGLISH LITERATURE students develop research skills as well as reading and critical thinking skills necessary for understanding challenging new material, analyzing that material to deduce meaning, and applying what they have learned to their world. They receive practice in composition skills needed to communicate their understanding effectively to a variety of audiences. Students will read and analyze classic works of literature as well as modern and contemporary works. They examine all genres: plays, short stories, poetry, essays, and novels. The academic objectives of this course adhere to those outlined by the College Board in preparation for the Advanced Placement Exam in English Literature.
Prerequisite: English III
© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® ENGLISH LITERATURE B
In AP® ENGLISH LITERATURE students develop research skills as well as reading and critical thinking skills necessary for understanding challenging new material, analyzing that material to deduce meaning, and applying what they have learned to their world. They receive practice in composition skills needed to communicate their understanding effectively to a variety of audiences. Students will read and analyze classic works of literature as well as modern and contemporary works. They examine all genres: plays, short stories, poetry, essays, and novels. The academic objectives of this course adhere to those outlined by the College Board in preparation for the Advanced Placement Exam in English Literature.
Prerequisite: English III
© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® Environmental Science
The unifying themes in this course include understanding science as a process, energy conversions as the basis for all ecological processes, the earth as an interconnected system made up of natural systems which humans change, and environmental problems and how human survival depends on sustainable systems. This course involves a strong laboratory and field investigation component to reinforce fundamental concepts and principles. Students will have opportunities to develop skills such as critical observation, interpretation and analysis of data, applying solutions to problems, and evaluating the quality and validity of conclusions.

Before taking this course, students should have completed one year of physical science, one year of life science, and a year of algebra. A course in earth science is advantageous but not necessary.
© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® French Language
In AP® French Language, students apply their French grammar and vocabulary knowledge as well as their listening, reading, speaking, and writing skills to a wide variety of real-world contexts. Students learn to speak fluently and accurately, write sophisticated compositions, and comprehend native speakers. The equivalent of a college-level language course, AP® French Language prepares students for the AP® exam and for further study of French language, culture, and literature. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12
© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® Government and Politics
This course teaches students to analyze U.S. government and politics by providing a background of general concepts along with specific examples to study in depth. Students will explore several theoretical perspectives and explanations for outcomes in the U.S. government. Topics include constitutional underpinnings of the U.S. government, political beliefs and behaviors, political parties, interest groups and mass media, institutions of national government, public policy, and civil rights and civil liberties.

AP® LANGUAGE AND COMPOSITION A

AP® LANGUAGE AND COMPOSITION explores the relationship between an author's ideas and how those ideas are expressed. The literary component of the course provides a range of genres, including nonfiction, fiction, drama, and poetry. Students will analyze style, specifically focusing on how elements of language—such as tone, diction, and syntax—influence an author's meaning. Students will also analyze the use of rhetoric in writing, examining various appeals, aspects of writer's credibility, irony, and the overall use of logic to explore how effectively an author presents his or her position. In written assignments, students will evaluate the expository and argumentative aspects of writing. In addition to the exploration of American and global themes of literature, students will discern how composition and rhetoric has developed over the last several centuries. The academic objectives of this course adhere to those outlined by the College Board in preparation for the Advanced Placement Exam in Language and Composition.

Prerequisite: English II

© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® LANGUAGE AND COMPOSITION B

AP® LANGUAGE AND COMPOSITION explores the relationship between an author's ideas and how those ideas are expressed. The literary component of the course provides a range of genres, including nonfiction, fiction, drama, and poetry. Students will analyze style, specifically focusing on how elements of language—such as tone, diction, and syntax—influence an author's meaning. Students will also analyze the use of rhetoric in writing, examining various appeals, aspects of writer's credibility, irony, and the overall use of logic to explore how effectively an author presents his or her position. In written assignments, students will evaluate the expository and argumentative aspects of writing. In addition to the exploration of American and global themes of literature, students will discern how composition and rhetoric has developed over the last several centuries. The academic objectives of this course adhere to those outlined by the College Board in preparation for the Advanced Placement Exam in Language and Composition.

Prerequisite: English II

AP® Physics B – Semester 1

This one-semester course focuses on the basic principles of physics and their applications with an emphasis on problem solving and a deep understanding of physics concepts. Category B physics builds on conceptual understanding learned in a first physics course. Before taking this course, students should be familiar with algebra, trigonometry, and basic concepts of calculus. Laboratory experience will provide students with opportunities to design, observe, measure, critically analyze, draw inferences, and communicate results. This experience is central to students' understanding of topics, which include Newtonian mechanics, fluid mechanics and thermal physics, electricity and magnetism, waves and optics, and atomic and nuclear physics.

© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® Physics B – Semester 2

This one-semester course extends the topics, basic principles of physics and their applications, problem solving, and in-depth discussion of physics concepts which students started learning in AP Physics B – Semester 1.

© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® Spanish Language

In AP® Spanish Language, students perfect their Spanish speaking, listening, reading, and writing skills. Students study vocabulary, grammar, and cultural aspects of the language, and apply what they've learned in extensive written and spoken exercises. By the end of the course, students will have an expansive vocabulary and a solid working knowledge of all Spanish verb forms and tenses. The equivalent of a college-level language course, AP® Spanish Language prepares students for the AP® exam and for further study of Spanish language, culture, and literature. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

Prerequisite: Spanish III (or equivalent) and a teacher/counselor recommendation.

Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

AP® United States History - Semester 1
This one-semester course provides students with a pool of factual knowledge and the skills to interpret, analyze, and critically treat the problems of U.S. history. Students will learn to assess the relevance, reliability, and importance of historical material. The course emphasizes the ability to effectively use reasoned judgment and detailed evidence to construct a persuasive essay. Themes include American diversity and identity, economic transformation, globalization, religion, war, and diplomacy. Students explore several topics within these themes, including pre-Columbian societies, transatlantic encounters, colonial beginnings, colonial North America, the early Republic, antebellum America, the Civil War, and Reconstruction.
© 2007 AP is a registered trademark of collegeboard.com, Inc.

AP® United States History – Semester 2
This one-semester course provides students with a pool of factual knowledge and the skills to interpret, analyze, and critically treat the problems of U.S. history. Students will learn to assess the relevance, reliability, and importance of historical material. The course emphasizes the ability to effectively use reasoned judgment and detailed evidence to construct a persuasive essay. Themes build from the first semester to include culture, demographic changes, environment, politics, and citizenship. The course explores several topics within these themes, including development of the West in the late 19th century, populism and progressivism, the Great Depression, the Second World War, the cold war, politics, and economics at the end of the 20th century.

Electives

Career and Technology Skills A (HS)
Career and Technology A is the first part of a two-semester course that covers skills to prepare students for workplace success. Students will explore their interests, aptitudes, and skills plus their individual learning styles in order to find possible career matches. Students will also consider their values and expectations as they learn and practice the skill of goal setting. Students will apply their knowledge of learning styles and memory techniques to enhance their study skills. The course also presents an overview of basic technology skills, including the use of word processing, spreadsheet, presentation, and database software, that are so vital to success in the workplace. Practice opportunities help students master the use of such software. The course provides open source software programs to the students. Students will explore a variety of career options plus use the steps in the decision-making process to develop their own career plan. To help achieve career goals, students research a variety of post-high school opportunities. Students will create and evaluate job application materials, learn to search for job opportunities, and conduct a successful job interview. Finally, the course presents the role of government in business; global, national, and local economic trends; and how these factors affect working people.

Career and Technology Skills B (HS)
Career and Technology B is the second part of a two-semester course that covers problem-solving, decision-making, and communication skills necessary to succeed in the workplace. Students will learn about workplace policies and procedures, growth and promotion opportunities, and the social and technological systems of any business. They will also understand legal and ethical issues related to their personal rights as workers. Students will prepare presentations and communications scenarios for different purposes and audiences, employing a variety of technology skills. The course explains effective leadership skills and provides examples of critical assessment, evaluation, and negotiation. Students will learn the steps of the problem-solving process to identify causes and seek effective resolutions. Students will also learn to plan a project and respond to problems and risks. Finally, students will learn skills for time management, financial responsibility, and methods to deal with stress.

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

Computer Literacy A (HS/MS)
This one-semester course develops students' overall understanding of computers and enhances technical skills in both basic computer functions and in the use of various types of software. By providing technical instruction and several practice opportunities, this course offers a strong foundation in basic computer literacy. After completing this course, students will be able to recognize computer hardware and use Windows XP and Mac OS operating systems. Students also will learn to use various software applications (word processing, spreadsheet, and presentation software), which are based on OpenOffice.org unless otherwise noted.

Computer Literacy B (HS)
This one-semester course builds on basic computer skills to teach students real-world problem solving methods. The course content includes a review unit from the introductory course before covering advanced features of spreadsheets and databases. The course further develops students' understanding of key issues in computing technology, including additional information about the use of spreadsheets and databases as well as an introduction to HTML. It ends with a unit covering careers in technology.

Current Events (HS)
Current Events is a one-semester, elective course structured to increase students' understanding of current issues in areas of politics, society, and economics. The course emphasizes student research; the topics chosen are broad in nature to allow for fluctuation in media coverage on common topics. Upon completing this course, students will have a greater understanding of some of the political, social, and economic issues that have dominated the news in recent years. Students will be able to find Web sites and other sources that cover these issues, and students will learn to make educated decisions as to whether the Web sites or sources present biased or unbiased coverage. For each content unit, students will write essays that demonstrate their research efforts. Students will complete a research-based essay at the end of the course.

Fundamentals of Art Appreciation (HS)
Fundamentals of Art Appreciation is a one-semester course that explores various aspects of art in an effort to intrigue students and encourage them to develop an understanding of fine art. As students begin to examine the elements and principles of art, they will study important works selected from various types of media, including painting, sculpture, architecture, and photography. Students will explore various types of art media and techniques as they investigate the question of what compels artists to create works of art. This course will provide students with a working knowledge of concepts and an enriched vocabulary so that they can become more critical observers of art.

Fundamentals of Art History (HS)
This one-semester course is designed to develop students' understanding and appreciation for the visual arts. This course explores the arts, artists, and their cultures from prehistoric times through the present. Students will begin to explore important works of art, selected from various types of media, including painting, sculpture, architecture, and photography. As the course presents works of different periods, students will receive the historical and geographic context necessary for gaining a deeper appreciation of the pieces. This course will provide students with a working knowledge of concepts and an enriched vocabulary so that they can become more critical observers of art.

Fundamentals of English Composition (HS)
Fundamentals of English Composition is a one-semester course designed to give beginning writers the tools to write effectively for school and life. Course lessons and activities will engage students in practical and accessible discussions of how to write and why. Throughout the course, emphasis is placed on the principle that effective writing achieves its purpose. Students will identify characteristics of effective writing. Students will identify different purposes for writing and learn strategies to achieve those purposes. The course further addresses the writing process through in-depth instruction on prewriting and revision. Along with this, the course explains writing context and issues of audience and intended audience. Students will learn how to achieve purpose through style, form, and rhetorical mode. In the last part of the course, students will evaluate their own work through the lenses of reader expectations and constructive criticism. Upon completion of this course,

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

students will have demonstrated success at various prewriting activities, outlined their work extensively, and written an analytical essay, a persuasive cover letter, and a personal narrative. Students will also have been exposed to peer review practices as well as guidelines for accepting and offering constructive criticism.

Fundamentals of Web Development (HS)
There's more to creating a Web site than writing HTML code and uploading files. A good Web site must be designed before it's created. This one-semester course introduces students to both Web site design and development. The course introduces students to the basic Web site design principles, which can be used to both design and evaluate their own sites and to evaluate other sites. Students will learn development languages such HTML and CSS. In addition, students will be introduced to two software programs: GIMP, an image-editing program, and Nvu, a Web development program.

Recommended Prerequisites: Computer Literacy A, Computer Literacy B

Introduction to Anthropology (HS)
Anthropology aims to use a broad approach to gain an understanding of our past, present, and future to address the problems humans face in biological, social, and cultural life. This course will explore the evolution, similarities, and diversity of humankind through time. The course will look at how we have evolved from a biologically and culturally weak species to one that has the ability to cause catastrophic change. Exciting, online videos lead students through journeys to different areas of the world throughout the course.

Introduction to Graphic Design (HS)
This one-semester course is designed to develop students' understanding and appreciation for design. By raising students' awareness of design, this course will serve as a strong foundation in the basic principles of graphic design. Students will learn to communicate visually; they will present their own ideas and information graphically by applying graphic design principles in their own work as well as interpret visual representations presented to them. The course will introduce students to problem-solving scenarios that can be solved graphically. Students will apply creativity techniques to create innovative and effective design solutions. Students will also learn about the history of design, how various design movements have contributed to the field of design today, what role design plays in society, and how the field of design relates to other facets of society. Though the course is structured around computer-assisted graphic design, other types of design are discussed as well. Students will learn to use Inkscape, an image-editing program that will be provided for them and will be required to create several design compositions using this program.

Introduction to Online Learning (HS/MS)
Becoming familiar with an online learning environment is essential to your success as a student who takes classes online. Introduction to Online Learning provides information that will ensure your success for navigating the Advanced Academics platform, including how to access your classes, take assessments, submit written assignments, and view your grades. This course will also cover the various ways to communicate with your teachers and the guidelines for effective communication. You will learn how to set up the technical requirements so that you can get the most out of your Advanced Academics learning experience. The course concludes with an overview of test and homework retake policies, ways to cite sources, and avoiding plagiarism. This orientation course introduces students to the online environment, and is not intended to be a full semester course.

Introduction to Sociology (HS)
The world is becoming more complex. How do your beliefs, values, and behavior affect the people around you and the world we live in? In this increasingly connected world, students will examine problems in our society and learn how human relationships can influence the life of the student. This course presents exciting, online video journeys to different areas of the world.

Journalism A (HS)
Journalism A is the first of a two-part series that introduces secondary school students to the world of journalism. They will see how their strengths and interests compare with those associated with careers in journalism.

©2009 Advanced Academics. All Rights Reserved.

In this course, students will gain a basic knowledge of journalism, its early history, and its importance in our culture. Students will be introduced to different types of news stories and learn about the reporting and writing skills involved with each.

Journalism B (HS)
Journalism B is the second of a two-part series that introduces secondary school students to the world of journalism. Students will explore the changing role of journalism in today's society. They will gain a basic knowledge of radio, television, newspaper, and Internet journalism. This knowledge will include how each medium is relevant today, how it may adapt to economic changes and audience preferences, and how writing for each medium has its own characteristics.

Life Skills (HS/MS)
Life Skills, a one-semester course, presents high school students with helpful information in the form of entertaining and interactive games, activities, and quizzes in order to assist them in preparation to exit high school. Whether their choice is college, technical school, the military, or a full-time career, this course teaches basic skills needed in every avenue. In addition to providing strategies for taking the ACT and SAT tests, this course provides an informative timeline to help students stay on schedule with required tasks for graduating from high school and entering the outside world. Consumer protection, establishing credit, managing money, buying a car, and renting an apartment for the first time are a few of the topics covered throughout this course.

Music Theory A (HS) – coming soon
Music provides a way for students to express themselves artistically, but music also enhances intelligence and creativity. Music Theory A is a semester-long, elective course designed to develop students' visual and aural understanding of the structure of music. In this course, students will study the language and symbols of music. Not only will students learn to read various musical elements, such as scales, chords, pitch notations, and time signatures, they will also learn to construct these elements themselves. The course also teaches students to understand basic forms in music compositions, including the skill of notation. As students learn these various aspects of music theory, they will undergo ear training to teach them to recognize these elements aurally as well.

Personal Psychology (HS)
Psychology is the study of human and animal behavior. More than 800,000 high school students take psychology classes each year. Self-discovery is frequently cited among the different reasons for studying psychology. Learning about psychology helps you gain a better understanding of your own behavior. Enrich the quality of your life by learning to understand the actions of others. This course presents interactive personal psychology experiments.

Health Education

Fitness Fundamentals I A (MS/HS)
This one-semester course will teach students how to assess their fitness levels and establish goals for improvement in the five fitness areas: muscular strength, endurance, cardiovascular fitness, flexibility, and body composition. The course provides information so that students establish and maintain good fitness practices well after finishing the course. Students will also learn proper posture and technique, the benefits of fitness, and the prevention of injury. This course covers a minimum of 120 days worth of activities.

Fitness Fundamentals I B (MS/HS) – coming soon
This one-semester course will teach students what makes a person fit plus the basics of figuring heart rate and intensity. Students will also learn ways to use nutrition to manage weight along with information about

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

drug use and its impact on fitness. Coupled with a minimum requirement of physical activity, which includes cardio, strength training, and flexibility, the course provides opportunities for students to complete written assignments, journal entries, and discussions. This course covers a minimum of 120 days worth of activities.

Personal Health and Safety (MS/HS)
Personal Health and Safety is a one-semester course which examines the mental, physical, and social aspects of health for living a healthy, informed, and balanced life. Mental health topics including enhancing self esteem, practicing stress reduction, and identifying depression will be examined. The course covers effective conflict management and communication skills. Students will learn the basics of first aid and how to manage minor medical emergencies. Topics of wellness, exercise, and healthy habits will be introduced. Students will also learn ways to resist peer pressure to engage in unhealthy and destructive behaviors including smoking, drinking alcohol, and drug abuse.

Personal Health and Safety with Sex Education (MS/HS)
Personal Health and Safety is a one-semester course which examines the mental, physical, and social aspects of health for living a healthy, informed, and balanced life. Mental health topics including enhancing self esteem, practicing stress reduction, and identifying depression will be examined. The course covers effective conflict management and communication skills. Students will learn the basics of first aid and how to manage minor medical emergencies. Topics of wellness, exercise, and healthy habits will be introduced. Students will also learn ways to resist peer pressure to engage in unhealthy and destructive behaviors including smoking, drinking alcohol, and drug abuse. In addition, this course conveys the risks of sexual activity, such as unplanned pregnancy and sexually transmitted diseases, and options for eliminating these risks will be presented. Students will also be presented with an overview of infectious and non-infectious diseases, how they affect the body, and how they can be prevented.

Running (MS/HS)
This one-semester course is suitable for beginning, intermediate, and advanced runners and offers a variety of training schedules for each. In addition to reviewing the fundamental principles of fitness, students will learn about goals and motivation, levels of training, running mechanics, safety and injury prevention, appropriate attire, running in the elements, good nutrition and hydration, and effective cross-training. While this course focuses mainly on running for fun and fitness, it also briefly explores the realm of competitive racing. Throughout this course, students will participate in a weekly fitness program involving running. Students will also be expected to record their weekly activities and heart rate. Coupled with a minimum requirement of physical activity which includes cardio, strength training, and flexibility, the course provides opportunities for students to complete written assignments, journal entries, and discussions. This course provides activities to cover a minimum of 120 days.

MS Language Arts

MS Language Arts 6 A
MS Language Arts 6 A is the first in a two-course series. In this course, students will become active participants in analyzing different forms of text. They will gain an understanding of the different types of literature. This course focuses on the narrative and expository forms of writing. Students will gain a better understanding of appropriate grammar, spelling, and vocabulary through instruction in the writing process, responses to literature, and direct instruction. Students will be required to read the novel Hatchet, by Gary Paulson, in addition to several short stories.

MS Language Arts 6 B
MS Language Arts 6 B, the second in a two-course series, emphasizes reading persuasive texts, expository texts, narratives, and poetry. Students will explain the effects of common literary devices in fictional and nonfictional texts. Students will identify and utilize organizational patterns when writing. Students will also improve

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

their abilities to identify main ideas in writing and to achieve consistency of ideas between paragraphs when creating multi-paragraph expository and persuasive compositions. Students will gain a better understanding of appropriate grammar, spelling, and vocabulary through instruction in the writing process, responses to literature, and direct instruction.

MS Language Arts 7 A
MS Language Arts 7 A is the first of a two-course series. In this course, students continue to build on prior knowledge and skills to strengthen reading, writing, speaking, and listening. The student will read literary and informational texts. Students are active participants in comprehending, analyzing, and evaluating different forms of text. For writing, the student will utilize the writing process to compose essays, reports, summaries, a speech, a drama, and responses to literature. Students will practice listening and speaking skills. Students are required to independently read two novels, two magazine articles, and two newspaper articles and complete related assignments.

MS Language Arts 7 B
MS Language Arts 7 B is the second of a two-course series. In this course, students continue to build on prior knowledge and skills to strengthen reading, writing, speaking, and listening. Students are active participants in comprehending, analyzing, and evaluating different forms of text. For writing, the student will utilize the writing process to compose essays, reports, summaries, poetry, and responses to literature. Students conduct research to organize, synthesize, and present information. They will read the novel The Outsiders by S.E. Hinton. Students are required to read independently and to complete assignments related to the independent readings.

MS Language Arts 8 A
The focus in the first part of this two-part course is grammar and reading. Areas of emphasis include sentence structure, word analysis, and review and practice of the eight parts of speech. Students read short stories and myths and practice grammar in context. Students will read the novel The Giver by Lois Lowry. For independent reading, students are required to choose two novels, two magazine articles, and two newspaper articles to read and complete related assignments.

MS Language Arts 8 B
The focus in the second part of this two-part course is writing and reading. Areas of emphasis include clarity of sentences, the writing process, editing, and punctuation. For independent reading, students are required to read Anne Frank: Diary of a Young Girl by Anne Frank and a novel of choice. In addition, students are required to independently read two magazine and two newspaper articles and complete related assignments. The final unit of this course compares and contrasts Anne Frank's diary and the play The Diary of Anne Frank by Frances Goodrich and Albert Hackett. The students research the Holocaust and discuss historical and cultural issues. Students demonstrate their understanding of researched information through written assignments and a slide-show presentation.

MS Mathematics

MS Fundamentals of Math 6 A
MS Fundamentals of Math 6 A, the first course of a two-course series, begins with a review of the four arithmetic operations with whole numbers and introduces students to algebraic concepts such as variables and expressions. Students will understand and apply the order of operations when simplifying expressions. Students will be able to accurately solve problems using decimals, fractions, and integers as well as be able to compare and order positive and negative numbers, fractions, decimals, and mixed numbers. Students will identify variables and begin solving one and two step equations. The course offers students illustrations, examples, and practice exercises before formative assessments.

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

MS Fundamentals of Math 6 B
The second course in the MS Fundamentals of Math 6 series builds upon foundational math skills. Students will develop math skills that are applicable to real life situations including how to calculate tips and discounts, find a test average, and calculate unit cost to determine which product is the better buy. Students will be expanding their geometry and measurement skills by exploring lessons that include learning to classify triangles; finding the sum of the interior angles of a polygon, perimeter, circumference, area, surface area, and volume; as well as converting both customary and metric units of measurement. Next, students will explore the best methods for collecting and displaying data and begin to recognize bias in data samples. The course ends with students solving and graphing inequalities, investigating functions, and learning how to graph functions on the coordinate plane. The course offers students illustrations, examples, and practice exercises before formative assessments.

MS Fundamentals of Math 7 A
MS Fundamentals of Math 7 A is the first course of a two-course series that prepares the student for success in higher level math classes through the study of integers, exponents and factors, operations with fractions, ratios and proportions, and expressions and equations.

MS Fundamentals of Math 7 B
MS Fundamentals of Math 7 B is the second course of a two-course series designed to prepare the student for higher level math classes. Areas of emphasis include functions and inequalities, data, statistics and probability, the basics of geometry, and two- and three-dimensional geometry. Students solve and graph inequalities, linear equations, and linear functions. Students also plot, describe, and find data using several methods to figure outcomes and probabilities. Using basic geometry techniques, students classify and find shapes and angles. Students also find area, understand the Pythagorean Theorem, and find volume and surface area for different shapes. The course offers students illustrations, examples, and practice exercises before formative assessments.

MS Pre-Algebra A
MS Pre-Algebra A is the first of two courses designed to prepare the student for more advanced work in Algebra I. Students learn the basic concepts of arithmetic and the practical applications of mathematics in order to focus on integers, equations and inequalities, factors and exponents, fractions, decimals, ratios, proportions, and percents. The course offers graphics, explanations, and practice exercises before formative assessments.

MS Pre-Algebra B
MS Pre-Algebra B is the second half of a series of two courses that are designed to prepare the student for more advanced work in Algebra I. The course emphasizes concepts in solving linear equations, graphing linear equations, angles, two- and three-dimensional geometry, integrating algebra with geometry, and data, statistics, and probabilities. The course offers graphics, explanations, and practice exercises before formative assessments.

MS Sciences

MS Earth Science A
MS Earth Science A, the first course of a two-semester series, introduces students to scientific investigation and experimentation and describes the methods and tools scientists use to study the earth. Students learn to read geologic maps, topographic maps, and various types of graphs for information. Concepts of density, heat, heat transfer, and types of energy are explored, and students examine the role of these concepts in earth processes. The course concludes by examining earth's layered structure and the transfer of heat from earth's interior through its layers.

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

MS Earth Science B
MS Earth Science B, the second course of a two-semester series, examines how scientists use direct and indirect evidence to learn about earth's structure and function. Students learn the evidence for plate tectonics and relate plate movement to geological events such as earthquakes, mountain building, and volcanic eruptions. The rock cycle is described, and students learn how weathering and erosion shape the earth's surface. Students explore non-renewable and renewable resources and investigate the resources in their state. The geologic time scale is use to describe earth's history. Basic ecological concepts are introduced, including interactions in ecosystems, matter and energy flow, and populations. Earth's biomes are surveyed. The course concludes with an introduction to space science. Students explore the origin and structure of the universe, characteristics of the solar system, and motions of the planets and other celestial objects.

MS Life Science A
MS Life Science A, the first course of a two semester series, introduces students to basic biological concepts and the use of the scientific method in the study of life. Specific topics include characteristics of life; classification of living organisms; characteristics of bacteria, protists, fungi, plants, and animals; evolutionary theory; ecology; and effects of resource use and pollution on ecosystems.

MS Life Science B
MS Life Science B, the second course in a two-semester series, begins by exploring cell structure and function and organization of tissues, organs, and systems. Students then examine the following body systems: muscular, skeletal, digestive, excretory, reproductive, circulatory, respiratory, immune, nervous, and endocrine. For each body system, students explore structure, function, related diseases, and disease prevention factors. The course also includes an introduction to DNA structure, principles of inheritance, and genetic engineering.

MS Physical Science A
MS Physical Science A (Integrated Physics and Chemistry A), the first course of a two-semester series, includes topics focusing on scientific process skills, motion, forces, energy, behavior of matter, waves, machines and work, and electricity and magnetism. Students will also learn the mathematical relationships between physical measurements.

MS Physical Science B
MS Physical Science B (Integrated Physics and Chemistry B), the second of a two-semester series, includes topics focusing on properties of matter, properties of elements, chemical reactions, properties of compounds, nuclear energy, and careers in the physical sciences.

MS Social Studies/Sciences

MS Ancient Civilizations A
MS Ancient Civilizations A examines the significance of geography in the development of ancient civilizations. Students will study the archeological evidence of early human societies then move on to the development of ancient cultures. The course provides a context for the understanding of history through a survey of the geographic, political, economic, religious, and social structures of the early civilizations of Mesopotamia, Egypt and Kush, Ancient Hebrews, and Ancient Greece. Students will analyze the contributions of these early civilizations to the modern world.

MS Ancient Civilizations B
MS Ancient Civilizations B examines the significance of geography in the development of ancient civilizations. The course provides a context for the understanding of history through a survey of the geographic, political, economic, religious, and social structures of the early civilizations of India, the early civilizations of China, and through the development of Rome. Students will analyze the contributions of these early civilizations to the modern world.

Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

MS Social Studies A
MS Social Studies A is the first part of a two-semester course. This course provides students with the knowledge and tools essential to understanding a variety of social studies topics. Students will use visual aids such as charts, graphs, pyramids, and diagrams to understand information-gathering techniques and how to predict future population trends. Students will also apply latitude and longitude concepts to a map to find locations. After reading timelines properly, students will identify causes and effects of historic events. By examining relative and absolute locations on maps, students will examine the different map uses and apply a compass rose and cardinal directions on a map. Students will conclude their work in this course by learning computer- and text-based research techniques that demonstrate evaluation of trustworthy sources; the ability to use all information from a dictionary; and the knowledge of when to use an atlas, gazetteer, index, and almanac.

MS Social Studies B
MS Social Studies B is a general survey course encompassing five different units. These units will hit highlights within the subjects, with an emphasis on holistic education rather than an in-depth examination. This course is an application of the social studies skills that students learn in Middle School Social Studies A.

MS American History A
MS American History A, the first course of a two-semester series, examines American history from its pre-Columbian beginnings to the development of the United States Constitution. This course explores the decline and fall of native cultures, the gradual decline of influence on America by European monarchies, the American rebellion against England, and the formation of a new American government.

MS American History B
MS American History B, the second course of a two-semester series, examines American history from the Federalist era to the American Civil War. This course explores the development of political parties, the Louisiana Purchase and westward expansion, and the issues that divided the country and ultimately led to the Civil War.

MS World Languages

MS French I A
Students begin their introduction to French with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, prompting students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All new graphics, videos, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS French I B
Students continue their introduction to French with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, prompting students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All new graphics, videos, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

MS French II A
In this continuing introduction to French, students deepen their focus on four key skills in world language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context and then reproduce new vocabulary items in real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in French I, students learn grammar through supplemental texts supplying traditional charts, tables, and explanations. All new graphics, videos, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS French II B
MS French II B continues the instruction of the first semester course. In this continuing introduction to French, students deepen their focus on four key skills in world language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context and then reproduce new vocabulary items in real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in French I, students learn grammar through supplemental texts supplying traditional charts, tables, and explanations. All new graphics, video, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS German I A
Students begin their introduction to German with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, prompting students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All new graphics, videos, and games keep students engaged and make learning German exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS German I B
Students continue their introduction to German in this second semester course with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, prompting students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All new graphics, video, and games keep students engaged and make learning German exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS German II A
In this continuing introduction to German, students deepen their focus on four key skills in world language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context and then reproduce new vocabulary items in real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in German I, students learn grammar through supplemental texts supplying traditional charts, tables, and explanations. All new graphics, video, and games keep students engaged and make learning German exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS German II B
In this second semester continuing introduction to German, students deepen their focus on four key skills in world language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context and

then reproduce new vocabulary items in real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. Students learn grammar through supplemental texts supplying traditional charts, tables, and explanations. All new graphics, video, and games keep students engaged and make learning German exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS Mandarin I A
Students use compelling stories, games, videos, and multimedia experiences in this introduction to Chinese. Students learn the elegant simplicity of Chinese grammar and the subtleties of Chinese pronunciation through entertaining lessons that provide a base for conversational ability and listening comprehension. Students build a foundation for reading and writing in the Chinese language through an adaptive technology that lets students choose an approach that works best for them. All new graphics, video, and games keep students engaged and make learning Chinese exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS Mandarin I B
Students use compelling stories, games, videos, and multimedia experiences in this continuing introduction to Chinese. Students learn the elegant simplicity of Chinese grammar and the subtleties of Chinese pronunciation through entertaining lessons that provide a base for conversational ability and listening comprehension. Students build a foundation for reading and writing in the Chinese language through an adaptive technology that lets students choose an approach that works best for them. All new graphics, video, and games keep students engaged and make learning Chinese exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS Mandarin II A
Students continue with engaging stories, games, videos, and multimedia experiences in this second level of Chinese. Students further their understanding of Chinese grammar and pronunciation through lessons that build on previous conversational ability and listening comprehension. Innovative cultural videos and lessons build awareness of the rich legacy of Chinese culture. Students expand their foundation for reading and writing in Chinese through adaptive technology. This practice provides students with opportunities to generate fun narratives, a range of well-formed sentences that reflect a solid grasp of grammar structures, and a wide vocabulary. All new graphics, video, and games keep students engaged, making learning languages exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS Mandarin II B
Building on skills from MS Mandarin II A, students continue with engaging stories, games, videos, and multimedia experiences in this second level of Chinese. Students further their understanding of Chinese grammar and pronunciation through lessons that build on previous conversational ability and listening comprehension. Innovative cultural videos and lessons build awareness of the rich legacy of Chinese culture. Students expand their foundation for reading and writing in Chinese through adaptive technology. This practice provides students with opportunities to generate fun narratives, create well-formed sentences that reflect a solid grasp of grammar structures, and develop a wide vocabulary. All new graphics, videos, and games keep students engaged and make learning Chinese exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

MS Spanish I A
Students begin their introduction to Spanish with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. Vocabulary and grammar topics are introduced in an ongoing adventure story that prompts students to use skills from all four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. Cultural information covers major Spanish-speaking areas in Europe and

HS English

ENGLISH I A
ENGLISH I A is the first semester of an introductory English course that combines the study of literary genre with a focus on composition skills. Students will learn effective communication skills by focusing on the first four of the 6 + 1 Traits of writing developed by the Northwest Regional Education Laboratories: Ideas, Organization, Sentence Fluency, and Conventions. Students will select from a choice of novels in the first semester.

ENGLISH I B
ENGLISH I B is the second semester of an introductory English course that combines the study of literary genre with a focus on composition skills. Students will learn effective communication skills by focusing on the final three of the 6 + 1 Traits of writing developed by the Northwest Regional Education Laboratories: Voice, Word Choice, and Presentation. Students will read The Night Thoreau Spent in Jail. Students will also practice oral communication and learn an introduction to research.

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

ENGLISH II A
ENGLISH II A, the first course of a two-semester series, is an intermediate English course that combines the study of world literature along with a continued focus on composition skills. The course begins with an overview of thinking skills and literary terms. Students will read, reflect, synthesize, and respond to several different types of world literature, including mythology, Antigone, and House on Mango Street.

ENGLISH II B
ENGLISH II B, the second course of a two-semester series, is an intermediate English course that combines the study of world literature along with a continued focus on composition skills. The course begins with a short story unit. Students will read, reflect, synthesize, and respond to several different types of world literature, including Metamorphosis, poetry, and An Enemy of the People. A research paper is a requirement of the course.

ENGLISH III A
ENGLISH III A, the first course in a two-semester series, is a course that explores American literature and the classic American themes and ideals presented in a wide range of both nonfiction and fiction selections. Students will connect their lives to the texts, analyze these texts, and write clearly about them using the writing process. In addition to poetry, short stories, speeches, sermons, and dramas, students will read and analyze John Steinbeck's Of Mice and Men.

ENGLISH III B
ENGLISH III B, the second course in a two-semester series, focuses on the art of communication in a number of situations. Students will practice both written and verbal workplace communication and will study the art of persuasion. Students will evaluate media and its impact on history in addition to contemporary issues in American communication. This study will include independent media projects and an independent research project requiring the use of the writing process.

ENGLISH IV A
ENGLISH IV A is the first of a two-semester course in which students will acquire the reading and critical thinking skills necessary for understanding challenging new material. Students will explore analysis of literature and tools for literary research. The course concentrates on analyzing literature with a focus on Oedipus the King and writing a research paper.

ENGLISH IV B
ENGLISH IV B is the second of a two-semester course with a concentration on literature from medieval, romantic, and realistic time periods. Students will read and analyze classic works of literature, including Hamlet, which contain literary qualities that promote study and analysis.

HS Mathematics

ALGEBRA I A
ALGEBRA I A, the first course in a two-semester series, guides students through units of study that allow them to gain practical mastery in reading, writing, and evaluating mathematical expressions. Students will study topics including numbers, expressions, and equations. In the final first semester unit, students learn to solve functions and linear equations.

ALGEBRA I B
ALGEBRA I B, the second course in a two-semester series, continues to build on students' knowledge as they learn to solve systems of linear equations and inequalities. Assessments include self-check quizzes, audio

©2009 Advanced Academics. All Rights Reserved.

tutorials, and interactive games. Students will study units that allow them to gain practical mastery in reading, writing, and evaluating mathematical expressions. Students will study topics including polynomials, factoring, quadratic functions, and radicals. The course concludes with a study of rational expressions.

GEOMETRY A
GEOMETRY A, the first course in a two-semester series, provides students with the logic and basic elements of geometry to solve geometry problems. The course introduces students to inductive and deductive reasoning and proofs. Students study parallel lines and the coordinate plane plus an exploration of rays, angles, and lines. Students will identify and apply the properties of triangles and study the properties of quadrilaterals and polygons.
Prerequisite: ALGEBRA I

GEOMETRY B
GEOMETRY B, the second course in a two-semester series, builds on the logic and basic elements of geometry to examine ratios and proportions. The course includes studies of circles, geometric formulas, solid geometric figures, coordinate geometry, and transformational geometry. Students will be prepared to advance to special topics like Algebra II and trigonometry.
Prerequisite: ALGEBRA I

ALGEBRA II A
ALGEBRA II A, the first in a two-semester course, begins with a review of algebraic properties. Students will study properties and applications of linear and quadratic functions, radical functions, and rational functions. Students will identify how the major topics in algebra relate to real-world applications. Students will also explore exponential and logarithmic functions and trigonometric functions.
Prerequisite: ALGEBRA I

ALGEBRA II B
ALGEBRA II B, the second in a two-semester course, includes the study of systems of equations and inequalities. Students will apply topics in geometry, conic sections, probability and statistics, and patterns of logic and reasoning to real-world applications. The course provides students the opportunity to synthesize all information learned in previous studies of algebra. After successful completion of ALGEBRA II B, students will have the necessary skills to study topics in advanced algebra and trigonometry.
Prerequisite: ALGEBRA I

Consumer Math (Mathematics of Finance) A
Consumer Math (Mathematics of Finance) A focuses on basic math skills used in everyday life with the goal of developing intelligent consumers. Students study the practical applications of math using real-world situations. The course emphasizes personal finances through the study of personal earnings, which includes the practical knowledge and application of pay rates and other elements. Students also identify and calculate benefits, taxes, and deductions from paychecks. Students manage all components of checking and savings accounts as well as explain the concepts of saving money and setting financial goals. Students have the opportunity to analyze and graph business functions and learn about credit and life insurance. Prerequisites: Algebra I, Geometry

Consumer Math (Mathematics of Finance) B
Consumer Math (Mathematics of Finance) B is an extension of Consumer Math (Mathematics of Finance) A and continues the focus on basic math skills used in everyday life with the goal of developing intelligent consumers. The practical applications of math are studied using real-world situations. The course emphasizes personal finances through the study of personal earnings and the elements of business, credit, and life insurance. Prerequisites: Algebra I, Geometry, Consumer Math (Mathematics of Finance) A

Trigonometry
Trigonometry, a one-semester course, prepares students for further studies of mathematical topics in Calculus and Physics. The course begins by teaching students to measure angles in degrees and radians, arc lengths,

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

and chords. Students then study the basic trigonometric functions, sine, cosine, and tangent, and their inverses as well as the relationships of these functions to chords and right triangles. In addition, students apply their study of trigonometric functions and identities to find angles of elevation and depression and solve right triangles. Prerequisites: Algebra I, Geometry, Algebra II

Pre-Calculus
Pre-Calculus, a one-semester course, covers a variety of topics to prepare students for more advanced calculus courses. The course starts with functions and graphs and moves on to polynomial and rational functions. The course also examines exponential and logarithmic functions, along with trigonometric functions and applications. Students receive introduction to analytic geometry and discrete algebra. The course ends with an introduction to calculus, including lessons on limits, derivatives and integrals. Prerequisites: Algebra I, Geometry, Algebra II, Trigonometry

Calculus A
Calculus A, the first of a two-semester course, centers on limits, differentiation, and applications of differentiation. Topics in this course apply to many problems studied in physics and engineering. Students review algebra concepts and learn fundamental calculus concepts along with working problems for limits and derivatives. Students apply rules for finding different derivatives as well as learn the applications of the derivative. After finding the area under a curve using several different methods, students will complete an essay assignment that applies this to a real-world problem. Students conclude the course by applying theorems and demonstrating knowledge of basic rules for anti-derivatives. After successful completion of this course, students will have a fundamental understanding of the principles of calculus. Prerequisites: Algebra I, Geometry, Algebra II, Trigonometry

Calculus B
Calculus B, the second of a two-semester course, focuses on how to calculate and graph anti-derivatives and integrals as well as how to apply these techniques to real-world problems. In addition, students also study topics in sequences and series. Students find the derivatives of several different functions and apply these derivatives in application problems. They also calculate volume, surface area, and arc length by working with applications of the integral. Finally, students differentiate and integrate multidimensional functions. Prerequisites: Algebra I, Geometry, Algebra II, Trigonometry, Calculus A

HS Sciences

BIOLOGY A
BIOLOGY A, the first course of a two-semester series, introduces students to general biology and the processes of scientific inquiry and thinking. Students will examine the characteristics and organization of life along with the chemical context of living things, basic atomic structure, and the properties of water. An in-depth study of the structure and function of cells and cellular processes leads to an understanding of the fundamentals of genetics, human heredity, and biotechnology.

BIOLOGY B
BIOLOGY B, the second course of a two-semester series, begins with a study of the origins of life and the classification of living things. Students explore microorganisms, including bacteria, viruses, protists, and fungi. An overview of the plant kingdom with a study of plant structure, function, and reproduction is followed by an examination of the animal kingdom. Students will study the major groups of vertebrates and invertebrates. The course concludes with a study of human biology and populations.

PHYSICAL SCIENCE A
PHYSICAL SCIENCE A is first in a series of two courses designed to introduce students to the study of the nature of things. The course introduces students to the scientific method and inquiry processes. The course

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

explains lab and field safety along with methods for conducting scientific experiments and communicating results of experimentation. The course leads students to an understanding of the atomic nature of matter, the elements, and the Periodic Table. Students will examine the properties of matter and explore the composition and the behavior of acids and bases. The course concludes with a description of energy and the properties of matter.

PHYSICAL SCIENCE B
PHYSICAL SCIENCE B, the second course in a two-semester series, continues with a study of energy in motion. Students will describe and calculate force, velocity, acceleration, work, and power. The course leads students to understand Newton's laws of motion and guides them in designing simple machines based on the basic principles of physics. The course continues with a study of the generation of electricity and magnetism. The course goes on to cover the forms and properties of waves and the electromagnetic spectrum. Students will study nuclear reactions and the composition and structure of the universe. The course concludes with an examination of the life cycle of a star plus past achievements and future goals for space exploration.

EARTH SCIENCE A
EARTH SCIENCE A, the first course in a two-semester series, is an intense study of geology as a problem-solving science. The course presents an overview of planet earth with an exploration of the solid as a series of interrelated systems. Students will explore minerals plus rocks and the rock cycle. Students will also examine the driving forces behind plate tectonics, the deformation of earth's crust, earthquakes, and volcanoes. The course presents opportunities to examine forces of weathering, including erosion, deposition, glaciers, and deserts. Students will study geologic time, relative age dating, and isotopic dating.

EARTH SCIENCE B
EARTH SCIENCE B, the second course in a two-semester series, begins with an examination of the major principles of hydrology and oceanography. Students will study earth's water systems, including rivers, streams, groundwater, oceans, and coastal processes. The course continues with a study of meteorology, including an examination of earth's atmosphere, weather, and climate. The course leads students to understand the earth, moon, and sun system. The course concludes with a study of the solar system, stars, galaxies, and the universe.

Environmental Science A
Environmental Science A, the first course of a two-semester series, explores the nature of science and the natural world. Students examine environmental issues and learn to make informed decisions using scientific problem solving. Specific topics include ecological interactions, matter and energy flow in ecosystems, biodiversity, characteristics and growth of populations, evolution, succession, biogeochemical cycles, soil and land resources, agriculture, waste management, and characteristics of terrestrial biomes. Recommend Prerequisites: Biology A, Biology B

Environmental Science B
Environmental Science B, the second course of a two-semester series, continues the study of the natural world. Students explore environmental issues and make informed decisions using scientific problem solving. Specific topics include characteristics of aquatic biomes, management of water resources, use of mineral resources and effects of mining, renewable and non-renewable energy resources, atmospheric cycles, climate change, and sustainability. Recommended Prerequisites: Biology A, Biology B

Chemistry A
Chemistry A, the first of a two-semester course, introduces students to the basic concepts of observation, the history of chemistry, and how to reason and use the scientific method. The course also emphasizes the study of matter and energy with focus on identifying differences between states of matter and physical and chemical properties. Fundamental properties of measurement in chemistry along with how to use scientific notation will be introduced early in the course, and these concepts will be reinforced throughout the remaining units. The relation between atomic models and the Periodic Table will be explained along with ways to use

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

these concepts as tools in the study of chemistry. The remaining units of the course will focus on ions and ionic compounds, molecular compounds, acids and bases, the mole concept, chemical masses, and chemical equations.

Chemistry B
Chemistry B (2007 - 2008) - Chemistry B, the second of a two-semester course, focuses on chemical bonding, molecular geometry and symmetry, Lewis structures, valence shell electron pair repulsion (VSEPR) theory, and resonance structures. In addition, this course introduces thermochemistry, chemical kinetics, and electrochemistry. Along with concepts and definitions, calculation methodology for pH, pOH, and buffering are provided. Key concepts of organic chemistry, nuclear and environmental chemistry, biochemistry, and analytical chemistry are explained. The course ends with a discussion of industrial processes, energy, and careers related to chemistry.

Physics A
The topics covered in this one-semester course include mechanics; oscillatory motion and waves; and electricity, magnetism, and light. Within these topics, students will learn to analyze situations, apply expressions and principles, and understand various concepts and principles.

Physics B
The topics covered in this one-semester course include continued discussion of electricity, magnetism, and light; sound, fluids, gases, and heat; and modern physics, including quantum theory and the Bohr model of the atom. Within these topics, students will learn to analyze situations; write and apply equations; apply situations, principles, and laws; and understand various concepts and principles.

HS Social Studies/Sciences

AMERICAN HISTORY A
AMERICAN HISTORY A is the first course in a two-semester series that surveys the settlement of the continent through the First World War. Students will identify the origins of the United States, analyze significant documents that have impacted the development of the nation, and identify key events and people in the nation's development.

AMERICAN HISTORY B
AMERICAN HISTORY B is the second course in a two-semester series that surveys the history of the United States from the 1920s to the present day. Students will examine issues that have and still affect the nation, both at home and abroad. They will describe the causes and effects of the wars in which the United States has been involved and discuss the United States as a world power.

ALASKA HISTORY
Alaska History is a one-semester survey on Alaska's history and its people. In this course, students will explore geographic, cultural, political, economic, and social influences on Alaska and the impact these have on Alaska's development from pre-European settlement through the beginning of the twenty-first century.

OKLAHOMA HISTORY
Oklahoma History, a one-semester course, provides a rich study of Oklahoma's history. From Oklahoma's prehistory and the time Coronado etched a record on a rock to more recent national tragedies and accomplishments of notable Oklahomans, students will gain a deep understanding of the history of the 46th state.

©2009 Advanced Academics. All Rights Reserved.
Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

WASHINGTON HISTORY
Washington State History, a one-semester course, provides a rich study of Washington's history. From Washington's prehistory and the time Plateau and Northwest Coast tribes ruled the area to the more recent effects of big companies like Boeing and Microsoft have on the state, students will gain a deep understanding of the history of the 42nd state.

WORLD GEOGRAPHY A
WORLD GEOGRAPHY A is the first course in a two-semester series which examines a broad range of geographical perspectives. Students will study each region using a similar structure in order to analyze the similarities and differences between each region. Students will understand the meaning of geography through in-depth exploration of North America, Central America, South America, and Western Europe. The themes of geography will guide the exploration of each region (location, place, human-environmental interaction, movement, and region).

WORLD GEOGRAPHY B
WORLD GEOGRAPHY B is the second course in a two-semester series which examines a broad range of geographical perspectives. Students will study each region using a similar structure in order to analyze the similarities and differences between each region. Students will understand the meaning of geography through in-depth exploration of Eastern Europe and Russia, East Asia, Southeast Asia and the Pacific Cultures, Africa, and India and the Middle East. The themes of geography will guide the exploration of each region (location, place, human-environmental interaction, movement, and region).

WORLD HISTORY A
WORLD HISTORY A, the first course of a two-semester series, surveys world history from prehistoric times through medieval civilizations. Students will examine the beginnings of civilization in the ancient East and Nile civilizations; Greek and Roman societies; the Americas; Muslim, African, and Asian cultures; and the European Middle Ages from socio-economic, political, and ideological perspectives. Students will identify how and why people, goods, and ideas migrated throughout global history. They will be able to explain how the geography of a region affected the cultures that arose from it. Students will identify social, political, economic, and ideological conditions of major eras in world history along with the structure of society and family in historical cultures. Students will interpret and analyze statistics and dates from maps, charts, and graphs. They will identify the scientific, technological, and artistic achievements of civilizations. Students will compare and contrast the development of religious and philosophical beliefs and traditions and how they spread, along with early political systems and their effects on modern-day governments.

WORLD HISTORY B
WORLD HISTORY B is the second course in a two-semester series that examines the European Renaissance, New Asian Empires, absolutism, Enlightenment, nationalism, Reform, both World Wars, and the Contemporary period. Students will discuss the impact of European imperialism and colonization, and they will recognize the connection between revolution and reform. Students will identify the effect of industrialization and urbanization on the global economy. They will be able to articulate the relationship between historical occurrences and contemporary situations, and they will predict how contemporary issues will affect future generations.

U.S. GOVERNMENT
U.S. GOVERNMENT is the study of the historical backgrounds, governing principles, and institutions of the government of the United States. Students will study the roots of our Constitution and the principles of our government, such as popular sovereignty, separation of powers, and checks and balances. Individual rights, civil liberties, and the importance and responsibility of participating in a democracy will be examined. Students will compare the U.S. system of government with other modern systems and assess the strengths and problems associated with the U.S. system.

Course offerings may vary by state and/or school district For more information on courses and their pre-requisites please contact Advanced Academics.

ECONOMICS
ECONOMICS is the study of how societies use limited resources to satisfy unlimited demand. In this one-semester course, students will explore the relationship between suppliers, consumers, governments, and multinational organizations in an effort to better understand how money affects the daily lives of people throughout the world. The course provides students with a clear understanding of how an economy functions at the macro- and micro-levels. A thorough knowledge in these areas will further offer students the tools required to understand how all of this can and will affect their own pocket books. Instrumental to students' understanding will be examination of these key topics: law of supply and demand, saving, borrowing and spending, the Federal Reserve System and money supply, and the role of the government in an open market economy.

HS World Languages

French I A
Students begin their introduction to French with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, prompting students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All new graphics, video, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.
Note: Students who have already succeeded in Middle School French II should enroll in French II rather than French I.

French I B
Students continue their introduction to French in the second part of this course with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, prompting students to use skills from the four language-learning areas. Students learn fundamental grammar as embedded in authentic spoken language. All new graphics, video, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.
Note: Students who have already succeeded in Middle School French II should enroll in French II rather than French I.

French II A
In this continuing introduction to French, students deepen their focus on four key skills in world language acquisition: listening comprehension, speaking, reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context and then reproduce new vocabulary items in real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in French I, students learn grammar through supplemental texts supplying traditional charts, tables, and explanations. All new graphics, video, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.
Prerequisite: French I, or equivalent

French II B
French II B continues the instruction of the first semester course. In this continuing introduction to French, students deepen their focus on four key skills in world language acquisition: listening comprehension, speaking,

reading, and writing. A continuing storyline introduces and reinforces new vocabulary, while activities prompt students to analyze meaning from context and then reproduce new vocabulary items in real-life oral expression. Additional verb tenses and idiomatic expressions are also introduced. As in French I, students learn grammar through supplemental texts supplying traditional charts, tables, and explanations. All new graphics, video, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.
Prerequisite: French I, or equivalent

French III A
Intermediate French students who have a strong base in vocabulary, speaking, and listening skills reach a new level of mastery and fluency in this course. Through games and compelling stories, students learn advanced grammar and vocabulary with an emphasis on correct accents and comprehension of real-world native speech. Error-recognition technology helps students eliminate common mistakes from their speaking and writing. All new graphics, video, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.
Prerequisite: French II, or equivalent

French III B
Intermediate French students who have a strong base in vocabulary, speaking, and listening skills reach a new level of mastery and fluency in this course, which is a continuation of French III A. Through games and compelling stories, students learn advanced grammar and vocabulary with an emphasis on correct accents and comprehension of real-world native speech. Error-recognition technology helps students eliminate common mistakes from their speaking and writing. All new graphics, video, and games keep students engaged and make learning French exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.
Prerequisite: French II, or equivalent

German I A
Students begin their introduction to German with fundamental building blocks in four key areas of world language study: listening comprehension, speaking, reading, and writing. Students are initially trained to recognize key sounds and basic vocabulary, not only in written form but also through ear training that leads quickly to oral production. An ongoing adventure story introduces vocabulary and grammar topics, prompting students to use skills from the four language-learning areas. Latin I A
This introduction to Latin clarifies the traditionally difficult aspects of the language through vocabulary that follows all standard Latin rules but allows students to tell modern stories connected to a contemporary adventure. Students study familiar vocabulary so they can bring into focus the special characteristics of Latin, notably noun cases and declensions. Students receive ongoing practice in vocabulary and grammar, which leads to the study of both ecclesiastical and secular post-Classical Latin as embodied in the Vulgate Bible and Medieval Latin texts. All new graphics, videos, and games keep students engaged and make learning Latin exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

Content provided by powerspeaK12, Inc.

Latin II A
Students with a foundation in Latin refine their skills through compelling language lessons and historical and cultural studies. Students go from the basics of Latin to a higher level of sophistication through a learning methodology that uses games and stories. Students foster their abilities to read and understand classical Latin (without using a dictionary) from a variety of authentic sources. All new graphics, videos, and games keep students engaged and make learning Latin exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Mandarin I A
Students use compelling stories, games, videos, and multimedia experiences in this introduction to Chinese. Students learn the elegant simplicity of Chinese grammar and the subtleties of Chinese pronunciation through entertaining lessons that provide a base for conversational ability and listening comprehension. Students build a foundation for reading and writing in the Chinese language through an adaptive technology that lets students choose an approach that works best for them. All new graphics, videos, and games keep students engaged and make learning Chinese exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Content provided by powerspeaK12, Inc.

Mandarin II A
Students continue with engaging stories, games, videos, and multimedia experiences in this second level of Chinese. Students further their understanding of Chinese grammar and pronunciation through lessons that build on previous conversational ability and listening comprehension. Innovative cultural videos and lessons build awareness of the rich legacy of Chinese culture. Students expand their foundation for reading and writing in Chinese through adaptive technology. This practice provides students with opportunities to generate fun narratives, create well-formed sentences that reflect a solid grasp of grammar structures, and develop a wide vocabulary. All new graphics, videos, and games keep students engaged and make learning Chinese exciting. An integrated, game-based reward system keeps learners motivated and eager to progress. Diagnostic & Intervention

TuneUp Reading ® (MS/HS)
TuneUp Reading ® is a one-semester, customizable program designed to meet the needs of individual students over the full reading spectrum. Each student begins the program by taking a diagnostic prescriptive that places the student at an appropriate starting point in the program. Within the program, each student gains comprehension, vocabulary, and fluency skills by reading age-appropriate stories and performing vocabulary exercises. The design of TuneUp Reading ® specifically helps native Spanish speakers learn to read in English using the program's optional Spanish audio instructions. TuneUp Reading ® not only helps the low-literacy student, it enhances the reading skills of the traditional student and prepares college bound students to succeed on entrance exams.
Content provided by Failure Free Reading®

Mathematics Intervention
Advanced Academics' Mathematics Intervention program for grades 4 through 7 is designed for students in need of an intensive review of critical standards necessary to be proficient at grade level. The AAMI is available online in a customizable format that can be tailored to individual students' needs. The AAMI includes six units of study which address the major mathematical themes found in the elementary grades.

Algebra Readiness
Advanced Academics' Algebra Readiness program is designed for students in need of an intensive review of critical standards necessary to be prepared to enter Algebra I. The AAAR is available online in a customizable format that can be tailored to individual students' needs. The AAAR includes core pre-algebra and algebra topics, as well as topics addressing fundamental mathematical skills.

Test Prep

English Proficiency Exam – OverPass (HS)
The English/Language Arts portion of the OverPass series addresses academic content standards through early high school. Students initially complete a diagnostic test of both multiple-choice questions and a writing task to identify weaknesses. Students are then provided with individual lesson plans to help improve their English/Language Arts skills. Upon completion of the lesson plan, several mastery examinations are available to

reassess and restructure a student's lesson plan for more studying. The reading topics that are covered within this course include word analysis and fluency, vocabulary development, informational reading, and literary response and analysis. The writing portion covers writing strategies, applications, and conventions. Within the writing portion, students must generate a response to literature, an informational passage, or writing prompt. Each of the English/Language Arts exams covers 27 objectives and includes 72 multiple choice items and 1 written response item.

Math Proficiency Exam – OverPass (MS)
The Middle School Mathematics portion of the OverPass series addresses the academic content standards from middle school and basic geometry. Students initially complete a diagnostic test of multiple-choice questions to identify weaknesses. Students are then provided with individual lesson plans to help improve their math skills. Upon completion of the lesson plan, several mastery examinations are available to reassess and restructure a student's lesson plan for more studying.

Math Proficiency Exam – OverPass (HS)
The Mathematics portion of the OverPass series addresses the academic content standards from middle school mathematics through Algebra I and basic geometry. Students initially complete a diagnostic test of multiple-choice questions to identify weaknesses. Students are then provided with individual lesson plans to help improve their math skills. Upon completion of the lesson plan, several mastery examinations are available to reassess and restructure a student's lesson plan for more studying. Some basic topics included within this course are number sense, computational skills with decimals, fractions, percents, basic statistics, data analysis and probability, measurement, mathematical reasoning, and many algebra and geometry applications. The Math exam covers 53 objectives and includes 80 multiple-choice items.

Mastery & Placement

Mastery and Placement
Advanced Academics offers additional flexibility for its core curriculum content through opportunities for Mastery and Placement examinations. Our Mastery Exam program, also known as Credit By Exam, uses the final semester exams from our core content courses to assess students on their mastery of the required content objectives for each semester course. Depending on your local district and/or state policies, students who score high enough on the exams may be granted credits. Our Placement Exam program provides the opportunity to assess a student's readiness or already mastered content prior to taking an online course. The Placement Exam program uses a set of prescriptive diagnostic exams to assess and then provide a prioritized Lesson Plan for each student. The Placement Exam program is available for a number of our core high school courses. For more information about the Mastery and Placement Exam programs, please contact Advanced Academics.

To: Louie Flora

Dear Louie,
Our superintendent asked me to write to you about our online course offerings. Our school is associated with Virtual High School which is based in Massachusetts. We have several students who take online classes through this program. As part of our association, I am an online teacher of AP English lit and comp. I have 25 students who are located all over the world.

VHS classes are very structured and quite rigorous. My students have weekly writing assignments and online discussions about a wide variety of college-level reading. I have one period per work day that is allotted to me for VHS work.

I am not sure what other information you require, but I'm happy to answer any questions you may have.
Yours,
Sue Hardin

Louie Flora
House Education Committee Aide

January 18, 2010

Dear Mr. Flora,

Superintendent Jim Smith asked that I write to you explaining how the Galena City School District addresses online course offerings.

Even though Galena operates the largest correspondence program in the state, we have found that it is not cost effective to develop online classes internally for use within our programs. Presently we have only one class being operated through the UAF Rural Campus that we offer to our students. This is a Private Pilot Ground School class being offered by our aviation instructor on the GILA campus.

Our IDEA program utilizes various commercial and University offered online classes to meet the needs of our students through grades offered by transcript.

By the nature of our operations, we are very interested in your research and findings concerning online class offerings. We are more than happy to offer our experience in any way if we can be of help in your research.

Sincerely,

Steven D. Musser
Assistant Superintendent/GCSD

Importance: Low

Hello,

The House Education Committee will be holding an overview to discuss the current online course offerings in Alaska School Districts on either January 25th, 27th, or 29th depending on the information we receive back from DEED and the districts. We would like to discuss the different non-correspondence online course offerings in the districts and the costs to the districts of these courses.

Again, this is not an overview on correspondence courses, but online courses as described in the article on Arizona schools below.

Please e-mail me with the online course information for your district and I will be in touch with a date for the discussion asap.

Thank you.

To: Louie Flora
Subject: online courses for students

Louie,
First, let me introduce myself. I am the Curriculum Director at Northwest Arctic Borough School District. Your message to the Superintendent was passed on to me about online courses for students.

Secondly- I am the mother of Anahma. I know that you have also been in touch with my husband Lincoln Saito in the past year.

On the subject of online courses for our students- I believe it is vital that we establish some sort of Virtual School for the rural sites. At this time we are talking about providing Virtual classes to several of our sites due to the fact that we must have Highly Qualified teachers for all of the core subjects. As you know, this is a difficult task to undertake, but it is necessary. If it is at all possible, I would love to be involved in your conversations regarding this because it is the direction we must go.

As you gather information from others and go forward with this, please keep me in the loop as much as possible. We can continue on as a single district doing our "own thing", but it would be so much more standardized for us to work together to develop courses of study for the rural districts.

Thank you very much,
Linda Saito

Dear Mr. Flora,

I've attached an article from the National School Boards Association Newsletter that I think presents "virtual schools" discussion nationally at this time. Maybe you folks have seen this and other attention that seems to grow across the country in this regard. Rural states of course are challenged by the potential of lost child count and funding as well as generally high cost for on-line credits. At $300 to $500 a credit it doesn't take many credits to pay for a teacher. We are still trying to sort out a definition for "virtual schools" wondering how our correspondence schools don't fit that bill? Hope you have good discussions.

Sincerely,
Jim Smith

States and schools grapple with online learning

Growth of virtual schools outpaces policy in many areas of the nation

By Naomi Dillon

The world of online learning represents a new era in education, where instruction can be delivered to students no matter where they are, physically or cognitively.

At least that's the idea.

The phenomenal growth and variety of virtual schools, a catch-all term that encompasses many models and is sometimes used interchangeably with online learning, has not only led to confusion, but also to false starts in some areas, reticence in others, and resistance in still other parts.

What started with just a few fledgling start-up programs offering advanced and supplemental courses in the late 1990s has evolved into a wide-ranging slate of state-led, district-launched, or privately managed public entities offering everything from credit recovery to full-time options.

No one denies, however, that virtual schools are here to stay.

The most recent data estimated that roughly a million public school students used some form of online learning in 2007-08, a 47 percent increase from just two years earlier. What's more, 44 states offer substantial supplemental and full-time online learning opportunities. Two states, Alabama and Michigan, now require an online learning component to graduate.

"We're seeing [steady] growth of online learning because it works and it's effective," says Susan Patrick, the president of the International Association for K12 Online Learning (iNACOL). "It keeps students learning, learning better, more productively and graduating on time. With time, you will see more and more districts focusing on what works."

But first, what is it?

"I think most policy discussions around online learning have to do with

Full-time virtual learning

Florida allows students to take all their classes online

By Naomi Dillon.

Florida has led the way in K-12 virtual education, building a franchise model of supplemental high school courses for both advanced and struggling students, modernizing the funding formula, and introducing new practices like blended learning, which marries online learning with traditional classroom time.

But this school year, Florida educators undertook their biggest venture yet: offering full-time virtual learning to any eligible student.

After a decade of increasing its catalog of courses—the inventory includes more than 90 classes covering core subjects, electives, and advanced material—Florida legislators voted last year to require school districts this year to provide a full-time online learning option to any K-12 student previously enrolled in a virtual or traditional school or who is part of a relocated military family.

"The [logic] behind the expansion was Florida Virtual School offers lots of programs but they don't offer everything that everyone needs, and [districts] would say they don't offer a dropout prevention program, or they don't offer this," says Wayne Blanton, executive director of the Florida School Boards Association.

"The mandate just passed last year in legislation, so it was a very short time and intense thing to get this thing off the ground," says Jamie Sachs, associate director of the Southern Regional Education Board's (SREB) Educational Technology Cooperative, a coalition of higher education and K-12 virtual leaders from the 16 states SREB represents, including Florida. "We were all amazed they got it up and going."

But whether it works is another question that won't be answered until more time has passed.

"Call me in a few months," says Donna Nicolodi, principal of Polk Virtual School in Polk County Public Schools. "Right now the program is new and exciting."

And many find it confusing.

Until now, Florida Virtual School (FLVS)—state-led and state-funded—had been the main provider of online high school curriculum to school districts in the state. But the recently passed mandate pushed FLVS to partner with Baltimore-based Connections Academy in order to serve the K-8 students. And if school districts don't like those options, they can choose another state-approved vendor or create their own full-time virtual program.

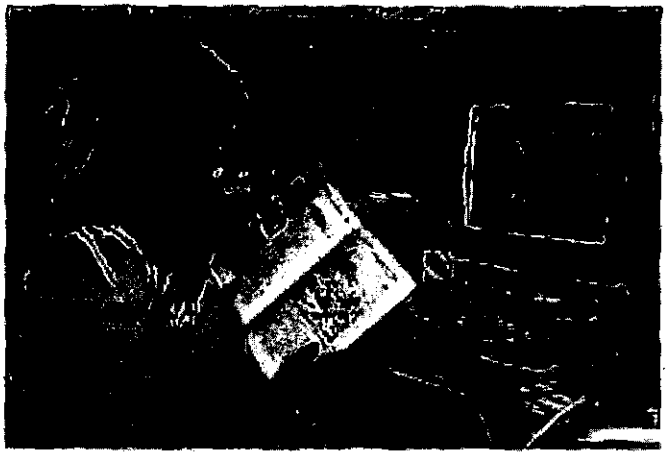
Complicating matters further, the full-time online learning option, as the legislation is interpreted, is not to be confused with the classic supplemental program.

"It's a challenge explaining the difference between the franchise and full-time virtual model because when people think of virtual education they have the concept of anytime, anywhere, any place," Nicolodi says, paraphrasing FLVS's slogan and business model.

In stark contrast, however, students who enroll in the full-time option are required to take a block of six courses, register in person, furnish enrollment criteria such as vaccination records and proof of residence, and follow state mandates like daily attendance.

"In the virtual franchise, if students wanted to do all of their homework on Monday, turn it in and be done, they could do that," Nicolodi says. "But as the legislation [for the full-time online school] is written, there is an attendance component and expectation of regular log-ins and submissions."

Whether enrolled full-time or part-time, Florida public school students and families pay nothing for the online courses. Florida school districts pay nearly $4,000 per student to the provider, though districts only pay if the full-time online student advances to the next grade or completes the required credits. It's a funding model based on FLVS' own pay-for-performance methodology.



Courtesy of K-12 Inc.

Jacqueline Higgins, a ninth-grader at the Idaho Virtual Academy, uses a workbook to complete an online assignment. The charter school's goal is to create a multimedia experience for students using both print and online materials.

"While a traditional school district is funded on student population, FLVS is funded on *successful student completion*," explains Jodie Poco-Olano, FLVS spokeswoman.

As FLVS' popularity grew and the waiting list for courses grew even longer, Poco-Olano said the state moved from treating the unofficial school district as a line item and more as a business opportunity, agreeing to provide FLVS a weighted FTE allocation—to account for reduced costs like facility maintenance and transportation—for every student that achieved a D or better.

FLVS teachers are salaried and operate on annual contracts, though they are part of the state's teacher retirement system. Teachers are designated course quotas, based on the complexity of the course material and the intensity of teacher grading.

In a franchise model, like the one at Polk County, districts provide their own teachers. For the full-time option, at least for now, most districts, including Polk County, are contracting with private companies like Kaplan and K-12 Inc., the latter of which has a network of more than 2,000 accredited teachers to draw from.

Options, the underlying theme and goal of the recent Florida legislation, are certainly not lacking in the state's virtual education landscape, which so far this year has enrolled 250 high school and 1,000 primary grade students into the full-time program. But will too many options only serve to confuse and complicate?

"It's going to stay all over the board, not just with us, but any district that does online learning because there are so many offerings and they are coming online so fast," says Blanton. "Quality assurance is the thing we're wrestling with right now." ■

An Overview of Existing Alaska Distance Education Models

Alaska School Districts currently offer a variety of distance education options. No one school district utilizes all options, but moving toward a networked Virtual School program would capture efficiencies, promote best educational practices, and expand opportunities for all Alaskan students.

Course delivery methods vary widely. Some courses offer a blended approach of more than one method, such as video conference with an online component for additional interaction. Some courses are offered entirely online. In many districts, distance tools are further used to enhance and support regular classroom activities. Finally, districts often use distance delivery methods to provide instructional support and enrichment activities for their students. Utilizing a networked Virtual School structure would help to simplify the options for students and parents.

The proposed Virtual School Project includes taking advantage of empty seats in course offerings in schools, common scheduling, maximizing the reach of highly qualified instructors, and partnering with post-secondary providers for developmental courses, occupational training, dual credit, advanced placement, credit recovery, and other educational services important to Alaskan students and parents.

Aleutians East School District is working with getting highly qualified teachers in the 6 sites. Video-Conferencing (VTC) is used for classes, virtual field trips, in-service training for staff and using technology to broaden the curricular offerings of the school district and to bring remote students and staff opportunities that would not be cost-effective under different circumstances. Teaching AP English, Geometry, and Physical Science sharing teaching resources in-district.

Anchorage School District MyHigh Program currently delivers online classes primarily for students in grades 10-12 and plans to expand to other grade levels soon. A wide range of courses are available, many of which were purchased or licensed from Florida Virtual or Apex. In addition, Alaska Studies was developed exclusively by district staff. In many cases, ASD is working to customize course content to be more culturally responsive and aligned to the district's content and performance standards. All core curriculum areas as well as several electives are currently available, and all courses can be completed entirely online (24/7 access). Currently, courses follow our existing school calendar, but the district's goal is to pursue open entry/open exit as soon as feasible. Enrollment has been growing steadily since a pilot project began in the 2004/2005 academic year and is expected to continue to climb at a rapid rate. All teachers who deliver online courses are highly qualified in their subject areas and have completed a credit course in best practices of online teaching strategies.

Bering Strait School District uses a master classroom teacher as a Distance Learning Facilitator to match student and school site needs with the many existing distance learning programs, courses and opportunities. Some of the courses for the current semester include high school and dual-credit courses from University of Alaska Fairbanks, Northwest Campus, and other universities. AVTEC has offered BSSD courses tailored to their needs, and the district has "swapped" courses with other districts in rural Alaska. This has allowed BSSD students to take

specific courses the district is unable to offer in its rural schools, as well as dual-credit offerings for high achieving students, and pre-vocational offerings for specific trades. Content this year has included such diverse examples as Physics from UAF, Anthropology from Harvard, and Academic Writing from Northwest Campus, and Korean from Yonsei University.

Cordova is in the beginning stages of utilizing online digital learning environments. Currently, a science instructor is scheduled to participate in a virtual autopsy for Human Anatomy class. CSD is attempting to deliver as much curricular online as possible. CSD supports credit recovery courses utilizing PLATO, a commercial courseware program, and other online resources, and encourages teachers to participate in additional online learning environments.

Craig City School District and PACE statewide correspondence, students are currently using purchased curriculum (Odysseyware) courses which are taught by district teachers for all content areas. BYU and North Dakota online curriculum is offered as well. District created courses such as Alaska Native cultural courses, digital photography, technology and graduation requirement specifics such as Alaska History.

Delta Greely School District uses a variety of technology aspects including the Delta Cyber School which runs a mixed program of complete turnkey coursework through BlackBoard as well as advanced Elluminate use for class instruction. Delta Greely has also used VTC to communicate blended classes using "face to face" video instruction to add value to the regular education program in other districts. A majority of coursework has been teacher created by DCS staff but the school also uses third party programs and curriculum (Florida Virtual, APEX, Aventa, Giany Campus, and a number of others at different times) that are adjusted to meet the needs of students. The Cyber School has given the option for students in district to expand out the available course offerings through credit recovery and advanced classes along with students from around the state.

Galena City School District developed two multimedia courses in mathematics and language arts through a $1 million dollar federal grant. Aviation ground school is offered from Galena for dual credit (high school and college) through a distance delivery platform to high school students throughout Alaska using a variety of synchronous and asynchronous platforms. The Interior Distance Education of Alaska (IDEA) program provides a variety of distance delivery courses to over 1,800 home school families in Alaska.

Kenai Peninsula Borough School District offers core classes and some electives which have been purchased from a third party (Apex Learning). Additionally the district offers courses that have been developed in house. All online courses are taught by highly qualified KPBSD employees. Courses are offered to students in brick-and-mortar schools as well as KPBSD home school students. The online program is supplemental and does not issue diplomas. VTC classes are offered on a limited basis.

Ketchikan School District uses third party courses as well as the standards-based curriculum from E2020 and Compass Learning, delivered from their servers. They will be developing courses that will be integrated with their regular student's schedules in an online as well as a blended environment (online learning facilitated by face-to-face teachers) on their course

management system. These courses will be offered to all students (brick and mortar and correspondence students) in various formats depending on student need.

Kodiak Island Borough School District uses the highly-qualified teachers in their town schools to provide classes in the rural schools. Additionally, they are offering enrichment classes in guitar and native language with plans to expand to music appreciation and technical math in the upcoming year. Offering Biology and Math (blended: Moodle, VTC) taught by a Kodiak HS teacher(s) to each of our rural sites. That model is being extended to Music and Journalism with the intention to grow it to other classes as needed.

Kuspuk School District provides live video-conference courses taught by highly qualified teachers to provide more choices for students. Each video-conference course is supported by online resources such as e-mail and Moodle. In the last four years, they have offered Cultural Awareness and Arts, Publications, Service Learning, Advanced English, Algebra 2, Biology, Geometry, Algebra and Pre-Algebra to over fifty students each year. Aviation (ground school) has been taken by twelve students through videoconferencing.

Lower Kuskokwim School District provides live videoconference classes to 26 school sites. This model depends on trained, highly qualified "video conference" teachers as well as on-site teachers trained to help facilitate instruction at each remote site. Each video-conference course is supported by online resources such as email and Moodle. Over 300 students a year are getting instruction in Biology, Earth Science and Ecology and five periods of mathematics including Algebra II. Twelve schools have applied mathematics geared towards career and technical education in their schedule. Two robotics and a visual art courses been added in 2009.

Matanuska Susitna Borough School District is offering rural schools one career technical education class, Customer Service, which is a required course for all their career pathways. Mat-Su uses third party software, Plato and Compass Learning for credit recovery, correspondence, and gifted and talented. Finally, the district uses Moodle for regular classrooms to extend learning beyond the school day.

Petersburg School District has been participating as a member of the Virtual High School consortium (www.govhs.org). This collaborative sharing model allows offers courses for enrollment to students throughout the nation. These online courses use an on-site facilitator and students can take these courses during school hours. Currently, one Petersburg teacher offers an additional Advanced Placement English course during her prep period to students in the consortium. As a result, thirty Petersburg high school and middle school students have access to courses that are not locally available to them. Also all classes are supported by a course management system allowing students while traveling for activities to continue their learning.

Southwest Region School District students have talked live with the astronauts on the International Space Station and received a wide range of other enrichment learning activities via two-way videoconferencing. The district has offered Social Studies district-wide to high school students to provide a highly qualified instructor to small high schools. The district also has a cooperative agreement with the University of Alaska to deliver dual-credit courses in Mathematics and several other academic disciplines to higher level students. Several schools are

also using content from out-of-state providers who are teaming to Alaska certified, highly qualified teachers. In addition to the use of two-way video conferencing to deliver instruction, the district also uses an online content management system to support and enhance face to face instruction in regular classrooms.

Wrangell School District is using a comprehensive turn-key solution, K12 curriculum, to offer a K-8 virtual program available to any student statewide. Additionally, in the fall of 2010 Wrangell Public Schools plans to offer a statewide comprehensive high school program. In the fall of 2010 Wrangell Public Schools, Craig School District, Petersburg City Schools, Haines Borough School District, and Bristol Bay Borough School District will also offer selective virtual classes exclusively between their districts.

Yukon-Koyukuk School District has developed online courses targeting students at-risk. Courses utilize a blend of online and textbook components with online teacher support. Additionally, the district uses video conferencing courses in a variety of academic areas including Science, Mathematics, Native Language, and art instruction. Virtual tours and enrichment opportunities are available K-12th grade. Complete academic schedules are available using curriculum such as OdysseyWare and Success Maker K-12th grade. These programs can be used for individualized instruction, class enrichment and/or remediation. YKSD also utilizes courses through Raven Correspondence School, the districts statewide correspondence program, to provide all district students opportunity for advanced courses, additional course options and credit recovery in all academic and elective areas to meet high school graduation requirements and to assist in passing the HSGQE.

Alaska Vocational Technical Center (AVTEC) teaches a wide range of courses that have previously targeted post-secondary students and teachers. AVTEC provides professional development for teachers on Moodle Course development; Elluminate; VTC; etc. AVTEC plans to offer some CTE courses directly to 9-12 starting in the Fall of 2010. This will begin with a "Math for the Trades/Applied Math" course that will be taught via VTC/Moodle during the school day. In the future AVTEC also would like to offer MS Office Specialist Certification courses as well and students would be able to take the MS Certiport Certification tests online, without having to travel to a testing site.

US News and World Report

Military to Debut Virtual School

A new online curriculum is in the works to ease school transitions for itinerant members' children

By Zach Miners
Posted November 5, 2009

When new assignments force members of the armed forces to move, it often means children need to switch schools. In some military families, children change schools multiple times during the course of their academic lives. The Department of Defense says that the disruptions can produce setbacks in students' schooling, but department officials are working to fix that: They're developing the military's first online virtual high school, to be open in time for the 2010-2011 school year.

The online curriculum is being developed in collaboration with experts at the University of Nevada-Las Vegas under a $6.2 million contract from the Department of Defense Education Activity program. The coursework is meant not to replace or compete with face-to-face schools but to supplement them.

DoDEA, which is responsible for the education of military members' children, has offered distance-learning programs since the early 1980s. Until now, the majority of distance-learning courses offered by the agency have been classes to supplement the core curriculum, such as Advanced Placement courses. The new virtual school is a bit different: It's meant to offer a complete curriculum of courses necessary to graduate from high school.

If a student switches schools midsemester and a certain course is not available at the new school, the student could pick up where he or she left off through a virtual class that is fully compatible with the regular class's subject material. Agency officials also say that

the virtual high school will provide additional resources to fill gaps when face-to-face courses are not offered at a traditional school and increase flexibility in scheduling.

"It can be frustrating when students move from one place to another, and if the class requirements change, that can push a student back in terms of high school graduation timelines," says Patricia Riley, chief of the new school and of DoDEA's distance-learning initiatives.

The online school will be available worldwide, but not all high school-aged children in military families will be allowed to enroll in its courses. Only students who meet certain requirements to attend DoDEA schools—such as being dependent children of service members on overseas orders or of Defense Department contractors—will be eligible. There are currently 1.2 million school-age children in military families, and approximately 85,000 of them attend DoDEA schools, which are funded by the Defense Department and are mostly located overseas.

Most eligible students will be expected to obtain their high school diplomas from a brick-and-mortar campus, but officials say the virtual school can serve students in remote locations in other countries who do not have access to a regular school. If parents don't have Internet access at home, they will be able to work with their local military unit to find access at another location, officials say.

The online curriculum is based on U.S. state learning standards and aligned with the coursework of a typical American high school. Courses will be taught by DoDEA teachers, and many instructors will have either an orientation toward or experience with distance-learning technologies, Riley says. The agency will run training sessions on teaching online, and UNLV also will provide professional development.

"One of the requirements is that these should be very rigorous courses," says Greg Levitt, the subject-matter expert at UNLV who is heading the project to develop 33 new online courses in core subjects. "This should be the equivalent of, or better than, a face-to-face class."

To achieve that equivalency, synchronous communications tools such as Web conferencing will be used. That will allow a teacher to do such things as bring students together to share lab data for a science class or hold a peer review workshop for an English class.

"The classes will be written in a way that's a little different than a textbook," says Levitt, with "more active involvement from the student" and elements such as video and animation.

Those involved in the project hope to create online middle school courses and elementary coursework in the years ahead. However, the program's underlying goal is not just to offer more classes, they say, but to help students learn to use the new technologies so they can keep using them for the rest of their lives.

Says Riley, "What we're teaching is not only academic coursework to meet students' immediate needs but developing lifelong learning skills for the 21st century so they can meet the demands of the future."

Virtual School Initiative

Designed to emulate new learning technologies, the Virtual School Initiative proposes a user-owned consortium that delivers learning 24 hours a day, 7 days a week, 365 days a year as an alternative for all Alaskan students. Through the Virtual School Initiative, students anywhere in Alaska will be able to individualize their educations with flexible scheduling and access to additional virtual courses and learning opportunities. The Virtual School Initiative breaks the affective barrier by providing students peer-to-peer connections both as social beings and learners.

The Virtual School Initiative proposes to offer courses developed by Alaskans as well as access to courses developed by nationally recognized providers of course content. Courses offered through the Virtual School Initiative will taught by highly qualified, effective teachers. Additionally, the Virtual School Initiative would help small schools meet the curricular needs of the Governor's Performance Scholarship and provide rural students with advanced and other specialized courses. The Virtual School Initiative would provide Alaskan students access to college courses as well as technical education courses.

Students will not be the only beneficiaries of the Virtual School Initiative. Teachers will benefit through the expansion of professional development and other learning opportunities delivered through a just-in-time platform. Additionally the Virtual School Initiative expands choice for Alaskan families by providing access to a network of virtual educational options.

Funding for the Virtual School Initiative is through the state's federal Title II-D allocation.

Virtual School Working Group

In December, 2009, Commissioner LeDoux convened Virtual School Working group with the dual purpose of providing recommendations on: 1) standards for the Virtual School Program, and 2) ideas for the design of an Alaska Virtual School program. The working group consists of distance education teachers and practitioners, district distance education and technology coordinators, superintendents, post secondary education institutions as well as consultants from virtual school programs in the nation.

Following are links to the background readings that were provided to the Virtual School working group prior to their meeting in December:

Keeping Pace report – National Snapshot & Key Issues

Online Learning Policy Survey: A Survey of the States

- www.convergemag.com/paper/Online-Learning-2009.html

The working group also examined the following states' virtual school programs:

Maryland Virtual Learning Opportunities Program

http://mdk12online.org/

The Maryland Virtual Learning Opportunities Program (MVLO), an educational service managed by the Maryland State Department of Education, is designed to expand the access of Maryland public school students to challenging curricula aligned to the Maryland Content Standards as well as to other appropriate standards through the delivery of high quality online courses.

MVLO offers online courses for high school credit in collaboration with the local school systems through the Maryland Virtual School (MVS). The teaching is conducted online with the teacher physically separated from the student.

MVS is not a school and does not offer a complete high school diploma program online. The credit earned by taking a MVS course is entered into the student's record by the local public high school or school system. Students may take a course through MVS only with the permission of the local system and the school principal. Credit can only be awarded for MSDE-approved online courses.

Florida Virtual School

http://www.flvs.net/Pages/default.aspx

Florida Virtual School (FLVS) is an established leader in developing and providing virtual K-12 education solutions to students all over Florida, the U.S. and the world. A nationally recognized e-Learning model and recipient of numerous awards, FLVS was founded in 1997 and was the country's first, state-wide Internet-based public high school. Today, FLVS serves students in grades K-12 and provides a variety of custom solutions for schools and districts to meet student needs.

Florida residents take courses for free while non-Florida residents take courses based on tuition rates.

Students in Florida have the right to choose Florida Virtual School as an educational option.

Florida districts have options for setting up FLVS Franchise schools and administrators outside Florida can take advantage of solutions for course licensing to professional development assistance.

Alabama Connecting Classrooms, Educators, Educators & Students Statewide

http://accessdl.state.al.us/

ACCESS Distance Learning (Alabama Connecting Classrooms, Educators, and Student Statewide) is an education initiative of the Alabama Department of Education. It provides opportunities and options for Alabama public high school students to engage in Advanced Placement (AP), elective, and other courses to which they may not otherwise have access.

ACCESS Distance Learning courses are available to students enrolled in Grades 9-12 in an Alabama public high school, or those identified as a special education student in a state correctional facility and registered with an Alabama public high school.

Courses are provided at no cost to students. All courses are offered at school during the regular school day under state rules established to govern the program.

It is the responsibility of local schools/school systems to provide computers, Internet connections, software, and textbooks required for specific courses.

Schools must also develop local policies and provide onsite classroom facilitators to assist students during regular class periods.

Virtual Virginia

http://www.virtualvirginia.org/

Virtual Virginia offers online Advanced Placement, world language, elective, and core academic courses to students across that state, the nation, and throughout the world.

The courses utilize course management software to maximize the interactivity of each class. Each course contains video segments, audio clips, whiteboard interaction, multimedia activities, and online discussions, as well as text. Instructors are available for telephone and online communication with students throughout the day.

Full-time instructors are available from 8:00 am until 4:00 pm three days a week, and from 12:00 pm until 8:00 pm two days a week. Virtual Virginia courses offer a rich, multimedia, learning environment that appeals to a variety of learning styles.

Virtual Virginia courses can be scheduled flexibly throughout the day, as courses do not have to be taken in 'real' time.

Virtual High School (Massachusetts)

http://www.govhs.org/Pages/Welcome-Home

The Virtual High School, a non-profit consortium that offers content-rich, credit-bearing high school courses.

VHS offers full-year and semester-length courses, Gifted & Talented courses for middle school students, Advanced Placement (AP) and Pre-AP courses, is piloting International

Baccalaureate (IB) Diploma Programme courses.

VHS is nationally accredited by the Middle States Commission on Secondary Education.

Schools can join VHS as Individual School Members or Student-Only schools. Individual School Members participate in VHS by freeing a high school teacher one period a day to teach a VHS course online. Student-Only schools do not have a teacher teaching a VHS course, but only have students taking VHS courses. VHS also accepts individual students.

Students are able to attend their classes 24 hours a day, seven days a week, and work cooperatively online with others from a wide variety of ethnicities, backgrounds and geographic locations. Member schools range from 6 students to 4,286, and enrollment for the current year is 11,902. Over 340 courses are offered to 644 schools in 31 states, and 61 international schools in over a dozen foreign countries.

For the People

Governor Sean Parnell
Commander in Chief

Making a Difference at Home and Abroad

This has been another extraordinary year for the Department of Military & Veterans Affairs. Alaska's Soldiers and Airmen, whether deployed overseas or currently at home, have performed remarkably in defending our nation and serving Alaskans in need.

We restructured the Alaska Army and Air National Guard this year in an effort to modernize, expand and reorganize to equip our Soldiers for 21st century missions. These critical improvements sustain our Alaska Guard members with the facility and personnel infrastructure necessary to fulfill state and national requirements. I am extremely proud of the Alaska National Guard's accomplishments in 2009.

Alaska's military is a vital asset to our state, and they are making a difference around the world. Our Guard members have proved their skills on the battlefield and have honed their abilities in the often harsh conditions of our great state. We are profoundly grateful for their assistance in rescue missions, their response to natural disasters, and their efforts in the fight for freedom and democracy. Missions are accomplished and excellence achieved! These feats bear witness to the abilities of the extraordinary men and women who serve in our National Guard.

This year, Alaska faced numerous catastrophes – experiencing extreme flooding along the Yukon and Kuskokwim rivers, in the city of Pelican and in Southeast Alaska. Because of the outstanding preparation of the Division of Homeland Security & Emergency Management, the initial response and recovery efforts for each community was timely and efficient. Emergency managers continue to prove their ability to work collaboratively and effectively to respond and accurately assess the needs of Alaskans. I join all Alaskans in expressing our gratitude for their work.

As 2009 draws to a close, I am extremely thankful for the service provided by Alaska's Soldiers, Airmen and civilian personnel who dedicate their lives to the protection of our homeland. Their dedication in building Alaska's economy, providing local and national defense and delivering humanitarian relief around the world is invaluable. It is an honor to serve as your commander in chief, and I thank each of you for your service to all Alaskans.

Checking on Progress. On the ground in Eagle, Governor Sean Parnell ensures that the community's needs are being met during the rebuilding and cleanup process. From left: Brigadier General Thomas H. Katkus, adjutant general of the Alaska National Guard; John Madden, director of the Division of Homeland Security & Emergency Management; Governor Sean Parnell; and Andy Bassich, Eagle rebuilding and construction team leader. The Adjutant General

Brigadier General Thomas H. Katkus
Adjutant General, Alaska National Guard
& Commissioner, Alaska Department of Military & Veterans Affairs

A Year of Change and Exceptional Success

2009 was an extraordinary year for the Department of Military & Veterans Affairs. Alaska had unprecedented natural disasters that included wildfires, volcanic eruptions, floods and coastal erosion. We continued to support a multitude of deployments for the Air and Army Guard to Iraq, Afghanistan, Kosovo and even Mongolia. We graduated the largest class in the history of the Alaska Military Youth Academy, investigated and recovered one of our Black Hawk helicopters damaged in a major non-injury accident in the mountains of Colorado, transformed and reorganized our entire Army maneuver element and awarded a $20-million contract for construction of a new armory in Bethel.

The Alaska Air National Guard's 176th Wing continued its movement plans to Elmendorf Air Force Base, while the 168th Air Refueling Wing provided extraordinary support to the active-duty Air Force as Guard members responded to the relentless Russian military activity along our western border.

All the while, the Alaska Army National Guard's 49th Missile Defense Battalion stood ready to defend our nation in response to North Korean activity, and the Alaska Army National Guard had its first Soldier cross the Iditarod finish line in Nome. As always, Guardsmen kept our families and loved ones at the forefront in all we accomplished.

As if all this wasn't enough, we experienced a complete change in senior leadership with the resignation of Governor Sarah Palin in July. We conducted all this activity without pause or distraction to our focus. This truly is a tribute to the tremendous professionalism of every member of this organization.

You – the employee, the Soldier, the Airman, the veteran – stepped up to the challenge of completing the mission and did so in an outstanding manner. You confronted multiple tasks and took the time to address the needs of our Alaskan residents. You met their expectations in their time of need. You often risked your lives to save others and sacrificed much of your personal time for the safety and security of our great state. There is no greater sacrifice in life and no greater success.

In the Veterans Affairs lane, we fought a tough fight with the federal government and won for our Alaska Territorial Guard veterans. The governor took the lead and worked with our congressional delegation to make sure the Department of Defense recognized the retirement benefits the ATG earned through their active military service time. Through this legislative victory, 23 elders received their full military benefits and 19 spouses received their federal benefits from their husbands' full service in the U.S. military.

We continued the Operation Santa Claus mission, now in its 53rd year. The Alaska National Guard will sponsor the 2010 Iron Dog snow machine race as part of the National Guard Bureau's effort to raise awareness of our community participation. This provides our Soldiers the opportunity to hone their military skills and exercise their communications, logistics and transportation capabilities, along with their adaptation abilities in the isolated, frigid check points along the trail.

We will long remember 2009 as the culmination of the astonishing effort by an extraordinary group of great men and women that constitute Alaska's Department of Military & Veterans Affairs. I have never been more proud to be a member of such an exceptional organization as we continue to secure the state and defend the nation!

Honoring Those Who Have Served. Brigadier General Thomas H. Katkus, adjutant general of the Alaska National Guard, helps pin an Alaska Territorial Guard service pin on the jacket of Alaska Territorial Guard member Paul Beebe with the help of Beebe's wife, Pauline, during an ATG ceremony in Quinhagak. Sixty-seven Alaska Territorial Guard members from Quinhagak were honored during the ceremony. Photo: Jerry Walton, DMVA

Federally paid but may be called to State Active Duty

Veterans

Serving Those Who Have Served

This was an exciting year for the Office of Veterans Affairs. Along with our new Governor Sean Parnell and Adjutant General Brigadier General Thomas H. Katkus, a new administrator was selected: Verdie Bowen. He was able to help the department meet and exceed all the 2009 goals while providing stellar support to the state's 77,000 veterans and their families.

Recognizing Service. General Gene Renuart, left, commander of the North American Aerospace Defense Command and U.S. Northern Command, congratulates Alaska Territorial Guard member Warren Matumeak in Barrow during an ATG recognition ceremony. Matumeak was given his official U.S. Army discharge certificate in recognition of his service in the ATG. Photo: Captain Uriah Orland, Alaskan Command Public Affairs

Alaska Territorial Guard

The Alaska Territorial Guard Recognition Program is alive and well, and the top priority of the Office of Veterans Affairs. In order to find all 6,600 ATG members and provide them with the recognition they deserve, it takes a community effort.

Not long after World War II was over, these veterans were soon forgotten. But in 2000, Congress passed a law reflecting the true status of our ATG veterans and granted them full military active service for their time. This helped 26 of our retired National Guard members with ATG service to receive additional retirement funds. But like all good intentions, someone looked at the law, thought this was incorrect and froze the payments of these additional retirement funds. Then-Governor Sarah Palin and the state stepped in to fund the removed amounts until this could be corrected by Congress. Our two senators took this to action and corrected the oversight in the 2010 Defense Appropriations Bill.

We currently have two researchers assigned to the ATG project who spend most of their days researching records for information on our 6,600 ATG members. They have performed an outstanding job. To date, more than 900 U.S. Army discharges have been presented to members or their families, and we have 23 ATG members who receive additional entitlements.

The Office of Veterans Affairs has supported several ATG awards presentation programs and has covered numerous locations from Anchorage to Barrow. The record this year for the most ATG members presented with their U.S. Army honorable discharges and who received the Alaska Territorial Guard Service Medal went to Barrow. The highlight of this presentation was the presenter: General Gene Renuart, commander of the North American Aerospace Defense Command and U.S. Northern Command. Since the ATG recognition program started, Renuart is the highest ranking officer to present certificates to our ATG veterans.

We continue to make this program a top priority and have worked closely with several tribal communities and councils to find the remaining members.

Veteran Service Officer Grant Management

This is another success story for the Office of Veterans Affairs. In order to receive the best service for our veterans, we have 12 veteran service officers located across the state. They provide free services to veterans, such as representation of veterans and their families while processing claims to the government for benefits earned while on active duty or in the Guard. They are well trained in these programs and certified through the U.S. Department of Veterans Affairs.

We received the best bang for our buck through this grant process, and this year alone, we were able to add a new agency: The Military Order of the Purple Heart. This brings our veterans service organizations to four certified agencies. The other VSOs are affiliated with the Veterans of Foreign Wars, American Legion and Disabled American Veterans.

These organizations were very successful this year in assisting our veterans. They returned more than $31 million in past payments, while filing more than 10,000 claims for new earned entitlements. The continued success of this program is also measured through state veterans receiving annual compensation and pension payments. This year, the U.S. Department of Veterans Affairs sent $142 million to veterans and their families and provided more than $109 million in medical coverage.

The Alaska State Approving Agency

This year has been a challenging year for our sole Alaska State Approving Agency Officer, Mercedes Angerman. With the introduction of the new Post-9/11 GI Bill, a slowdown in services and payments to our state veterans by the U.S. Department of Veterans Affairs is at an all-time high. To date she has traveled to Oklahoma, met with all the universities located in Alaska and helped our congressional delegation understand the best way to construct a plan to ensure that all veterans were able to attain their educational goals.

This new GI Bill is the largest change to the veteran educational process since the first GI Bill was introduced after World War II. With this in mind, we are looking forward to all Post-9/11 GI Bill-eligible Alaskan veterans to be able to use their benefits under this new program. We currently have more than 800 approved programs of study at more than 60 education and training facilities across Alaska. The overall program has increased more than 5 percent, and we are projecting an increase of 12 percent before the end of FY 2010. Throughout the past year, the U.S. Department of Veterans Affairs provided more than $8 million in education funds to Alaska education programs. We know more growth is projected, and this is wonderful for Alaska and our veterans who live here.

Other Significant Accomplishments

This year we added a new license plate to our veterans plate choices. We added the Gold Star Plate that allows the families of our fallen military members the opportunity to display their family's sacrifice.

The Military Order of the Purple Heart dedicated the new Purple Heart Trail in May. The highway trail runs from the Canadian border to Fairbanks and is marked with a distinctive Purple Heart Medal placard.

This year the Office of Veterans Affairs has introduced the Alaska Warrior Coin. This award is presented by the adjutant general to members of our armed forces who prove to be of warrior quality and are nominated by the Office of Veterans Affairs. We look forward to rewarding several deserving Alaskans this year.

Stand Down this year was outstanding. We were able to meet and speak to more than 700 underprivileged veterans located in Anchorage and Fairbanks. Our veterans were provided with medical and job placement assistance and were introduced to several social program entitlements. Also provided to the veterans were food and clothing.

We helped TriWest Healthcare Alliance, which administers the TRICARE program, understand Alaska's unique circumstances by facilitating a town hall meeting in the Mat-Su Borough. Changes were made to TRICARE allowing beneficiaries to keep their TRICARE prime status in the retiree insurance program regardless of drive time and distance.

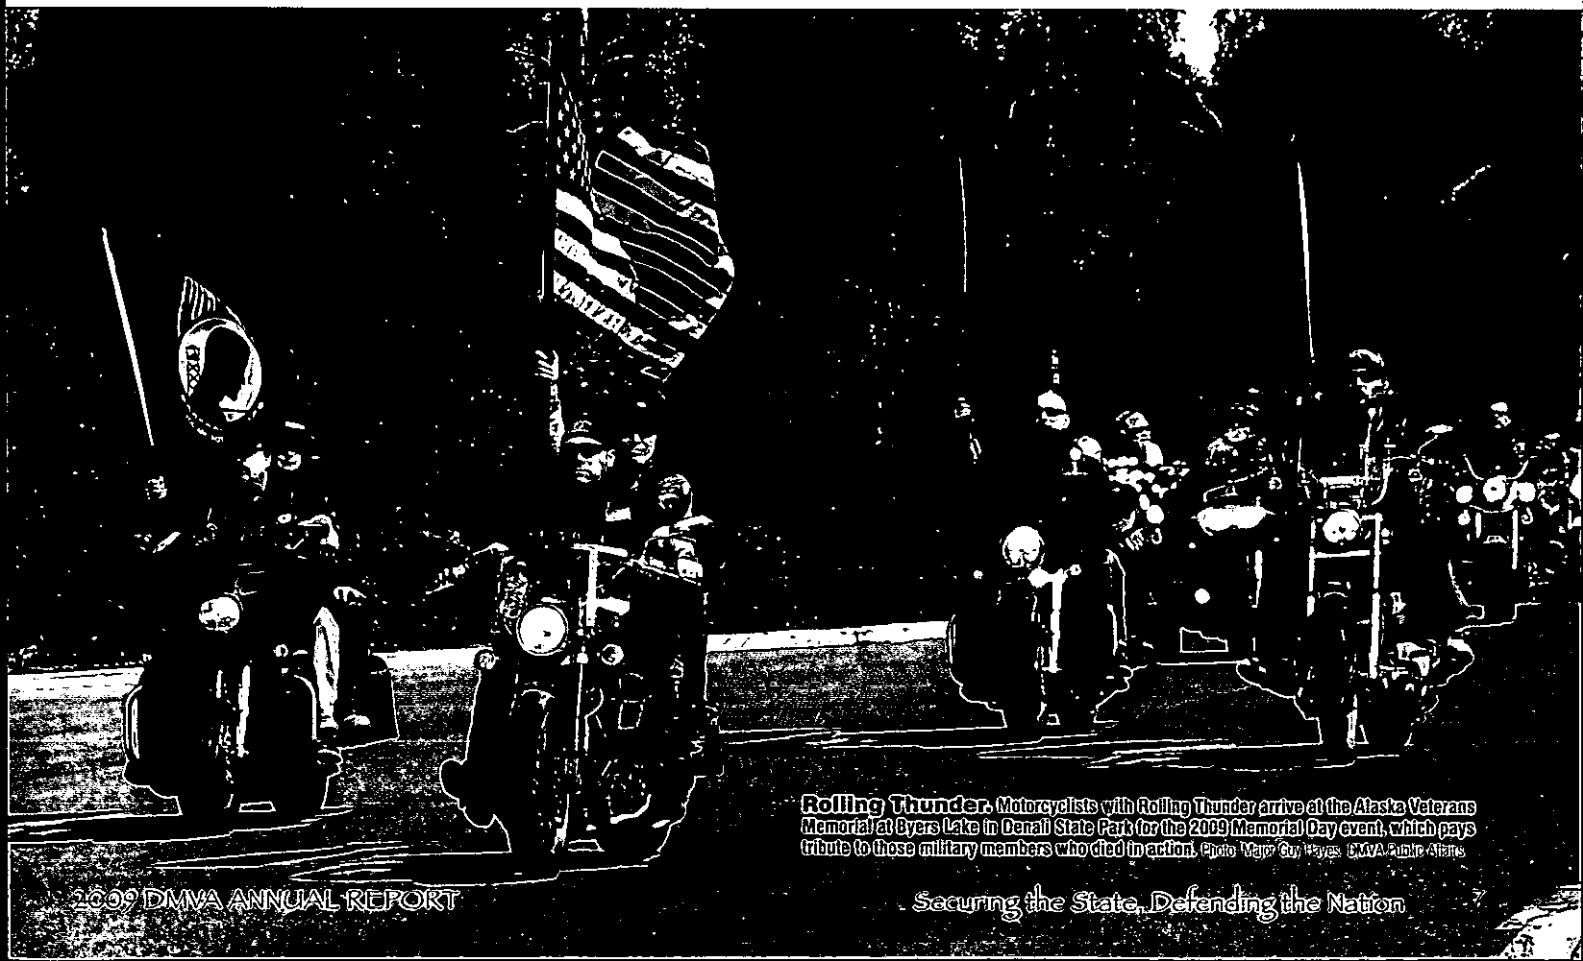
In July, the first statewide veterans summit was held. This was supported by the Alaska Veterans Advisory Council and the newly formed Veterans Caucus. The AVAC held a series of town hall meetings across Alaska, collecting information from veterans on issues they experience in the state. It was attended by more than 200 members of the community and several members of the state Legislature. This summit was so well received that it will become an annual event.

The Blue Star Banner program was a big hit this year, and we provided more than 1,000 Blue Star Banners to families who have members in the military. Key events at which we provided Blue Star Banners were the governor's picnics, veterans summit and the Mat-Su Potato Bowl.

This year, we assisted the U.S. Department of Veterans Affairs in supporting the Rural Health Pilot Project. This program offers medical and mental health services through a contract with the rural Native Health Care through purchased care. This program will continue in the following areas: Bethel Census Area, Dillingham Census Area, Northwest Arctic Borough, City of Cordova, Bristol Bay Borough, Nome Census Area and Wade Hampton Census Area.

Stand Down. U.S. Air Force Technical Sergeant Aisha Abell performs a dental examination on a veteran during Stand Down 2009. Stand Down is a veterans outreach program designed to give a helping hand to veterans in need. Photo: Courtesy of DMVA Public Affairs

Lastly, the Office of Veterans Affairs assisted a team under a charter by the Alaska Legislature to study programs offered to families of our deployed military members stationed here in Alaska. We traveled to Fairbanks, Kodiak and Anchorage to understand all the programs. The programs under study were the Yellow Ribbon program, Family Services and the OneSource program. A report will be presented to the state Legislature in January with a recommendation to continue this study with town hall meetings next year.



Rolling Thunder. Motorcyclists with Rolling Thunder arrive at the Alaska Veterans Memorial at Byers Lake in Denali State Park for the 2009 Memorial Day event, which pays tribute to those military members who died in action. Photo: Major Guy Hayes, DMVA Public Affairs

Alaska Army National Guard

Operation Iraqi Freedom. Alaska Army National Guard members from F Company, 1/207th Aviation proudly display their unit guidon during a nine-month deployment to Balad, Iraq, in support of Operation Iraqi Freedom. They provided logistics support transporting high-priority equipment, supplies and personnel using C-23 Sherpas across Iraq and Kuwait. Photo: Courtesy of F Company, 1/207th Aviation

F Company, 1/207th Aviation

In April, F Company, 1/207th Aviation, mobilized and deployed to Iraq to provide fixed-wing air-movement support to the Multi-National Corps Iraq headquarters. The unit flew eight C-23 Sherpas throughout Iraq and Kuwait. This deployment marked the third time F Company had taken its flag into the combat theater to conduct the "last-tactical-mile" mission, the critical transportation of personnel and equipment on the battlefield. It was also the fourth deployment for several of the unit's Soldiers, who also deployed on earlier Black Hawk missions.

Operation Arctic Care. Pilots with the Alaska Army National Guard's 1/207th Aviation steady a load of supplies headed to one of 11 remote villages in the Yukon-Kuskokwim Delta as a part of Operation Arctic Care 2009. To ensure the success of Operation Arctic Care 2009, pilots, crew chiefs and mechanics put in long hours flying health care professionals and supplies to villages and provided routine maintenance and repairs to the five Black Hawks stationed in Bethel for the exercise. Photo: Courtesy DMVA Public Affairs

Overseas Visitor. Captain Michele Edwards, commander, A Company, 1/207th Aviation, Alaska Army National Guard, is happy to meet Vice President Joe Biden in May 2009 after his address to the troops at Camp Bondsteel, Kosovo. Edwards is from Bethel and deployed with the Alaska Army National Guard's Black Hawk unit. Photo: Courtesy of 1/207th Aviation

Embedded Transition Team

The Alaska Army National Guard sent 15 Soldiers on a year-long deployment to Afghanistan to mentor leaders from both the Afghan National Army and Afghan National Police. During this third deployment of an Alaska Embedded Transition Team, the team trained Afghan leaders on both military and governance skills that promoted both security and peace in the southern regions of Kandahar and Zabul. Furthermore, many humanitarian missions were executed with the assistance of the ETT and its Afghan counterpart that

promoted the government's presence. These Alaska Army National Guard Soldiers often risked their lives traveling in remote parts of Afghanistan to bring comfort and aid to Afghan nationals on the edge of survival.

1st Battalion, 207th Aviation Regiment

The 1st Battalion, 207th Aviation Regiment, left Alaska in November 2008 for a deployment to Kosovo as the aviation element of the Multi-National Task Force-East that worked to maintain peace in that region. This deployment, the first for the battalion headquarters, included 149 Aviation Soldiers who conducted a variety of missions in Kosovo to include air movement operations, aero-medical evacuation and reconnaissance flights. The unit was equipped with eight UH-60L Black Hawk helicopters and was augmented with three UH-60A Black Hawk MEDEVAC helicopters from the Maryland Army National Guard. Together, the Aviation organizations provided "topcover" for the maneuver units working in the fledgling country.

49th Missile Defense Battalion

The 49th Missile Defense Battalion, manned by more than 220 full-time Alaska Army National Guard Soldiers, remained ready, reliable and essential in 2009 in its mission to defend the United States and designated areas from the threat of a rogue nation's intercontinental ballistic missile attack. The Soldiers of the 49th operate the system and secure the Missile Defense Complex, located on Fort Greely, 24 hours a day, seven days a week.

Ballistic Missile Defense remains a topic of national and international interest. A number of media, senior U.S. government officials and military leaders visited the MDC in 2009. In June, Secretary of Defense Robert Gates met with Soldiers of the 49th and got a first-hand look at the Ground-Based Mid-Course Defense capability and facilities.

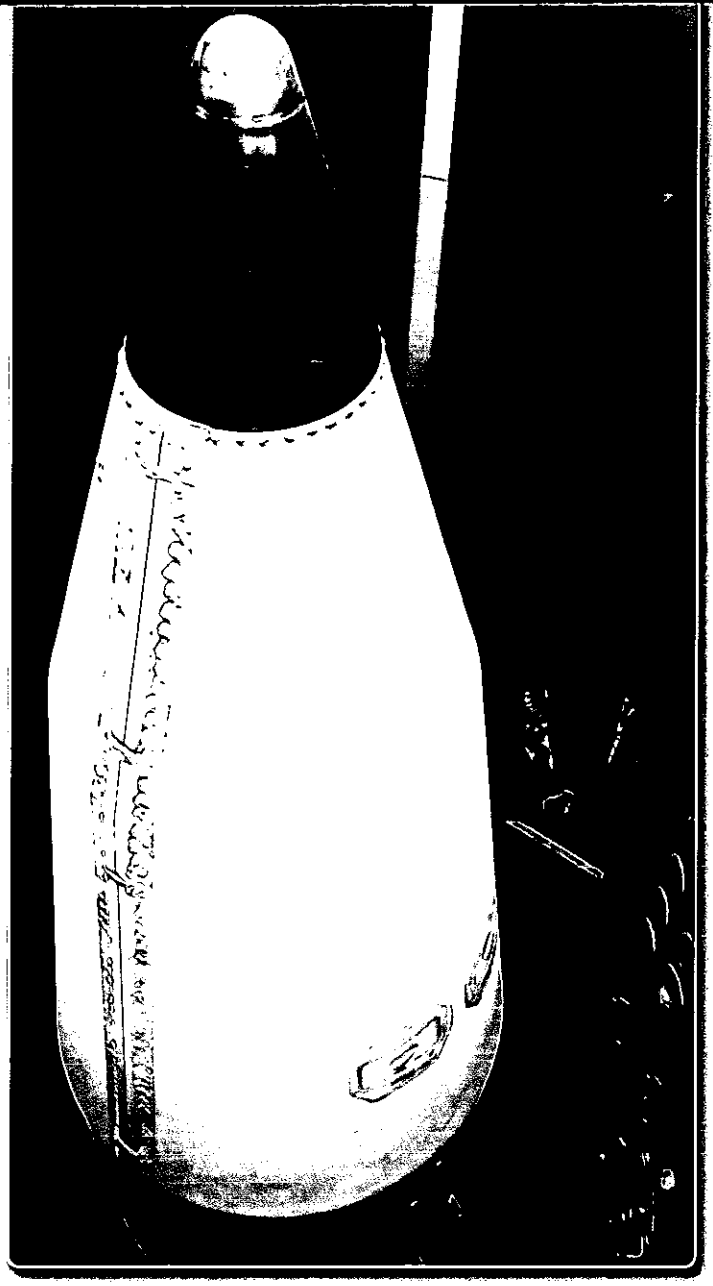
Alaska Army National Guard Soldiers from 41 states continue to make up a majority of the 49th Missile Defense Battalion. Troops and their families from as far away as Puerto Rico and Guam live and work at Fort Greely, where the U.S. Army garrison continues to enhance the quality of life at this far north military installation.

103rd Civil Support Team

This year, members of the 103rd Civil Support Team-Weapons of Mass Destruction provided assessment and advice to first responders and industry members in response to suspicious packages arriving at state government offices, potentially hazardous material releases and disaster relief in American Samoa. Information provided by the 103rd helped prevent costly delays in the function of Alaska's vital infrastructure and industry. Additionally, the team provided subject matter experts for liaison and work with the National Emergency Management Agency of Mongolia in training its first responders.

State Support

The Joint Director of Military Support/J3 Operations supported the Department of Military & Veterans Affairs, Division of Homeland Security & Emergency Management, in response to multiple emergencies this year. They responded to a request for Black Hawk helicopter water bucket drops to contain a dangerous wildfire at Shanta Creek on the Kenai Peninsula. During the Fairbanks-region wildfires, a security element of 100 percent traditional Guardsmen on state active duty orders was dispatched to conduct gate security and provide traffic control at the Division of Forestry's Incident Command Post. During Operation Flood Watch, potable drinking water was provided to the citizens of Eagle when massive ice-jams caused floods along the Yukon River. All the while, the effects of Mount Redoubt's occasional volcanic eruptions had to be monitored.



Missile Defense Up Close. Secretary of Defense Robert Gates peers out of a Silo Interface Vault to view an operational ground-based interceptor during a visit to the Missile Defense Complex on Fort Greely in June 2009. Gates saw the nation's operational arm of its strategic missile defense capability and the Soldiers of the 49th Missile Defense Battalion who are charged with defending the nation.
Photo: Sergeant Jack W. Carlson III, 49th Missile Defense Battalion

Counterdrug Support Program

Throughout FY09, the Counterdrug Support Program's Drug Demand Reduction program continued to provide high-quality drug, alcohol and tobacco awareness presentations and "Stay on Track" academic programs to more than 18,000 participants.

During the summer of 2009, DDR continued to provide experiential education with the use of their high-ropes course that served more than 350 participants, representing 10 community-based organizations. This no-cost summer camp offered a savings of more than $80,000.

Alaskans Finish Strong. Private First Class Justin Sekerak, 1/297th Cavalry Scouts, negotiates the obstacle course during the 2009 Northwest Regional Soldier of the Year competition held in May at Camp Murray and Fort Lewis, Wash. Sekerak and fellow Alaska Army National Guardsman Staff Sergeant Duane Ostrowski, 49th Missile Defense Battalion, who competed in the Noncommissioned Officer of the Year category, made a strong showing in the competition, finishing in second place.
Photo: Sergeant First Class Randall Wong, U.S. Army

In 2009, the DDR Rural Education Program continued to provide drug education programs to students in the village of Metlakatla, as well as all schools in Petersburg. The Mentor on the Trail was expanded with one DDR member escorting the Teacher on the Trail to several communities along the Iditarod Trail during the Iditarod sled-dog race.

During FY09, CDSP continued exceptional support to law enforcement in Alaska. They assisted with the training of more than 300 law enforcement officers with use of military ranges and several training classes. CDSP assisted law enforcement with more than 200 operations across the state resulting in the seizure of drugs, drug proceeds, vehicles and property valued in excess of $9 million.

297th Battlefield Surveillance Brigade

The 297th Battlefield Surveillance Brigade is preparing for mobilization in the summer of 2012. In 2009, these outstanding Soldiers worked both job-skill training and equipment fielding with active-duty Army units. The unit will be working with the 67th BFSB from Nebraska as it conducts its final pre-mobilization exercises, honing its troop-leading skills and equipment lay down procedures at Camp Guernsey, Wyo. The 297th BFSB will also be involved in a state training mission to support civilian authorities in Exercise Vigilant Guard 2010.

38th Troop Command (Provisional)

The 38th Troop Command provides command and control for 14 separate units spanning all areas of Alaska. Units encompass aviation, missile defense, contracting support, administration, training, military police, public affairs, airborne infantry, and chemical, biological, radiological, nuclear and explosive events response. They continue to provide a trained and ready force for the state and nation. In the past year, the unit deployed elements to Mongolia in support of Khaan Quest and aviation assets for Operations Iraqi Freedom and Enduring Freedom.

Alaska-Mongolia State Partnership Program

The Alaska-Mongolia State Partnership Program continues to grow and is recognized as a vital component in U.S. Pacific Command's policy in Northeast Asia. With a focus toward improving Mongolia's disaster-response ability, the State of Alaska and Alaska National Guard provided expert advice in the annual Gobi Wolf Exercise, a hazardous-material, first-responder exchange, medical exercise and health-care-systems model review. The Alaska Army National Guard broadened its international experience during Khaan Quest 2009 and a Soldier-family deployment seminar. Alaska continues to assist with Mongolia's efforts to bring stability to the world, by partnering with their army in Afghanistan. This deployment is the sixth iteration of Alaska Army National Guard Soldiers deploying with Mongolian forces.

Exercise Khaan Quest 2009

The 761st Military Police Battalion participated in Exercise Khaan Quest 2009, a multi-national, peace-supporting operations exercise, at the Five Hills Training Center, Mongolia.
It included several days of professional military education and culminated in a three-day exercise designed to train the Mongolian Armed Forces in U.S. military procedures. The Alaska Medical Detachment provided a team of doctors, nurses and medical support personnel who joined medical professionals from the Mongolian Armed Forces to provide care to more than 4,000 underserved medical and dental patients and conducted more than 5,000 animal examinations.

207th Regional Training Institute

The 207th Regional Training Institute instructed and graduated more than 300 active-duty, Army Reserve and National Guard students from various noncommissioned officer education system courses. Highlights from the past year include hosting visiting Mongolian officers and introducing them to U.S. military training, providing validation support for mobilization and deployment, as well as supporting the reorganization of the Alaska Army National Guard's brigades.

Alaska Army National Guard Aviation

Aviation operational tempo continued at a swift pace for the stay-behind forces as aviators conducted a variety of missions in Alaska. The helicopter crews participated in three innovative readiness training exercises: Arctic Care-Bethel, Chignik Road Survey and Newtok Village Relocation. They also conducted 27 rescue missions, had 26 saves and eight assists and responded to fires on the Kenai Peninsula.

Personnel

The Personnel Office supported the transformation of Alaska Army National Guard units, executing more than 1,900 Soldier moves and loading 11 new unit formations into personnel databases. They ensured that Alaska Guard Soldiers received their pay in their new positions without delay or issue. The promotion of Sergeant Major Lillian Aukongak as the G-1 sergeant major marked the first time that a female Alaska Native has reached the highest noncommissioned officer rank in the Alaska Army National Guard.

The Recruiting & Retention Command brought more than 320 new Soldiers into the Alaska Army National Guard. This success was supported by the new Wasilla recruiting office. Recruiting efforts were boosted by Staff Sergeant Harry Alexie's outstanding 2009 dog sled racing season which culminated in his completion of the Iditarod Trail Sled Dog Race.

Medically, more than 900 physicals and health assessments were conducted for Alaska Guard Soldiers. More than 200 Soldiers were screened for world-wide exercises and deployments.

Finally, $384,000 in state-issued educational benefits were disbursed to the Soldiers and Airmen of the Alaska National Guard. Process improvements now provide online tuition reimbursement application, thereby reducing request and payment times and making it easier for Guard members to continue their higher education.

Chaplain

The Alaska Army National Guard's chaplains had a productive year serving deployed Soldiers, as well as reaching out to service members and families here at home. Strong Bonds is an Army-wide chaplain-led program that focuses on relationship and life skills with the goal of enriching marriages and relationships by providing weekend retreats for couples, families and singles. This past year they increased their offerings having provided Strong Bonds activities for nearly 200 couples and approximately 40 families and 30 singles.

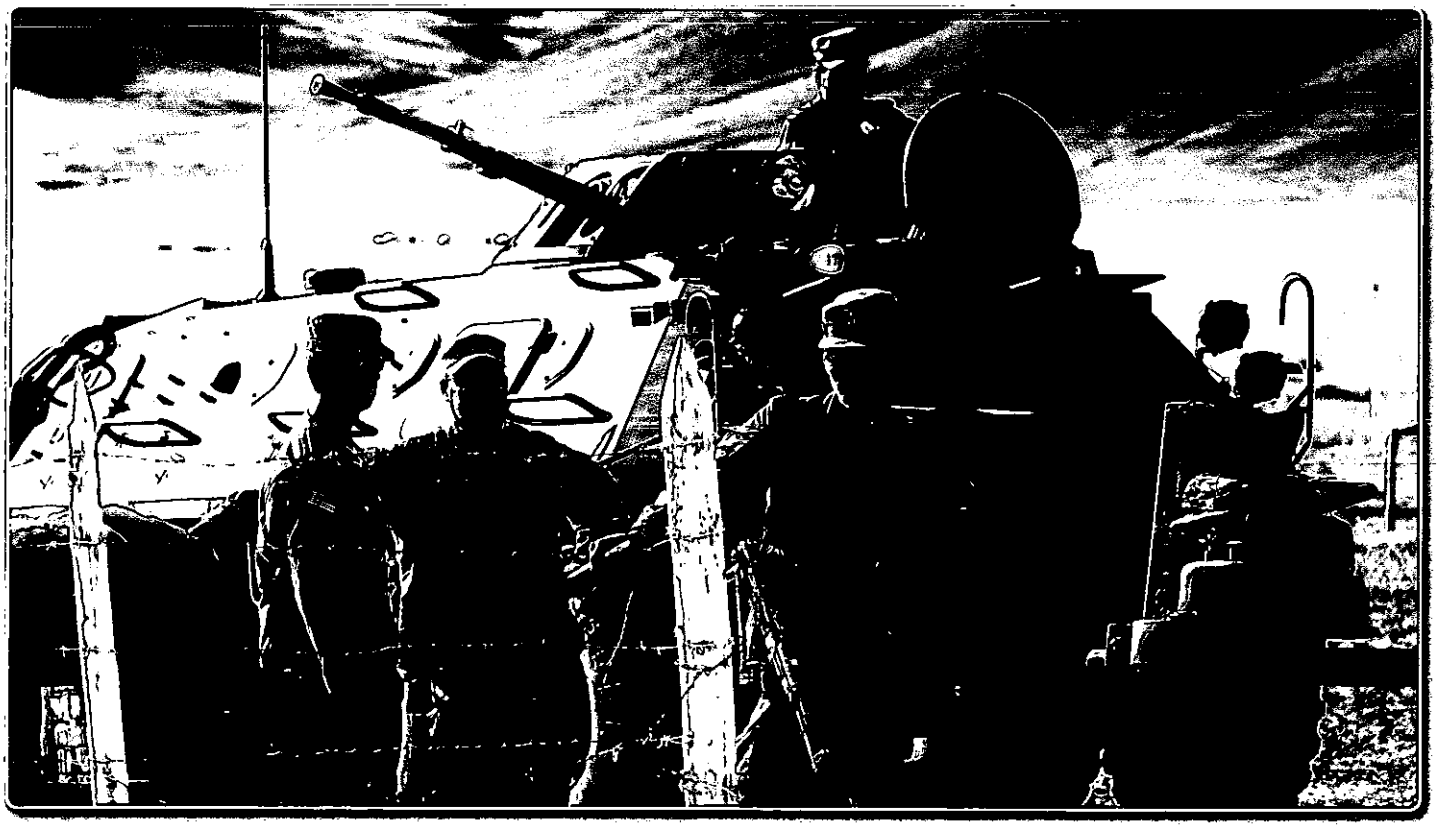
Facilities

A design and construction contract for a new Readiness Center in Bethel was awarded for approximately $20 million, with the intent to begin construction in spring 2010 in order to support the Alaska Army National Guard's airborne infantry, aviation and military police units assigned to the area. In addition, $3.2 million from the American Recovery and Reinvestment Act is being applied to nine energy-saving projects to help conserve natural resources.

Honor Pole. **Members of the Alaska Army National Guard raise the Honor Pole outside Alaska National Guard headquarters at Camp Denali. The Honor Pole was designed by George Bennett Sr. of Sitka and carved by his son James Bennett. The Honor Pole honors the Alaska National Guard's past and present military members for their service to the country and state.** Photo: Major Guy Hayes, DMVA Public Affairs

Other major accomplishments by the Construction and Facilities Office are $1.5 million water/sewer line to the Nome Army Aviation Operations Facility, numerous Bryant Army Airfield life-safety projects completed, and additions completed at both the Kodiak and Kenai Readiness Centers increasing indoor training space.

Our Environmental section received first place nationwide for its Environmental Restoration Program, closed 11 contaminated sites in rural Alaska, acquired Defense Environmental Restoration Program funding for an additional five sites in 2009 and secured a place-holder with Army Environmental Command for 20 remaining sites that are scheduled to be remediated for closure between 2010-2014.



Khaan Quest. **Alaska Army National Guard Master Sergeant Eric Schlemme, left, and Major Wayne Don, center, join Mongolian Armed Forces Senior Sergeant Battulga Baatar to observe the tactics and techniques used by the Mongolian Expeditionary Force at Five Hills Training Area near Ulaanbaatar, Mongolia, during Khaan Quest 2009. Schlemme and Don deployed in September as embedded U.S. liaisons with the Mongolian Expeditionary Force to Afghanistan.** Photo: Captain Amy Slinker, 134th Public Affairs Detachment

Alaska Air National Guard

Supporting Alaska on the Home Front

The mission of the Alaska Air National Guard is to recruit, train, equip and maintain America's finest Airmen. Tasked with this vital mission, we support worldwide contingency operations, State of Alaska emergency operations, and daily homeland security and defense missions. We also provide rescue forces on continual alert to protect life and property for the citizens of Alaska.

In 2009, Alaska Air National Guardsmen serving throughout Alaska met that mission by executing an extremely high operational tempo and deployment pace for yet another year.

Nearly 100 full-time Guardsmen assigned to the 213th Space Warning Squadron performed daily missile warning and space surveillance at Clear Air Force Station, ensuring the safety of our state and nation. The unit tracked more than 1.5 million space objects and maintained a watchful eye over numerous ballistic missile events around the world.

Located on Elmendorf Air Force Base, approximately 150 Alaska Air National Guardsmen assigned to the 176th Air Control Squadron performed a daily air sovereignty mission in support of the Alaskan Regional Air Operations Center. Created to defend against potential bomber attacks from now-former Cold War foes, the Air Control Squadron today keeps tabs not only on continued probing by the Russians, but it also identifies and directs response to incursions of other unknown aircraft into Alaska airspace. In 2009, the Air Control Squadron was credited with 20 Russian Bear intercepts and during a NORAD alert force evaluation, they were given the highest rating achievable: *"NORAD Mission Ready."*

The highest profile of all Alaska Air National Guard missions remains search-and-rescue. The 176th Wing's rescue components consist of three squadrons. The 210th Rescue Squadron flies six HH-60G Pave Hawk helicopters, highly modified search-and-rescue variants of the well-known Black Hawk. The 211th Rescue Squadron flies four HC-130s, a version of the C-130 "Hercules" specially equipped for aerial refueling and search-and-rescue missions. The 212th Rescue Squadron comprises the famed

Search and Rescue. Members of the 210th Rescue Squadron fly an HH-60 Pave Hawk helicopter near Spencer Glacier during a taping of the Discovery Channel show *Man vs. Wild*. The Alaska Air National Guard partnered with the show to highlight the Guard's search and rescue mission.
Photo: Kalei Brooks, DMVA Public Affairs

pararescuemen or "PJs" – elite rescuers trained in combat medicine, marksmanship, SCUBA diving and wilderness survival.

The search-and-rescue missions are coordinated through the 11th Rescue Coordination Center, a high-tech Air Guard facility located on Elmendorf Air Force Base. Together, the rescue package was credited with saving 34 lives from January to November 2009, with another 10 people assisted to safety.

The Alaska Air National Guard also partnered with the Discovery Channel's number one show in the United States – *Man vs. Wild* with Bear Grylls. The show, which promotes survival and search-and-rescue, filmed the opening sequence of its Alaska episode near Spencer Glacier in June with the help of the 210th and 212th Rescue Squadrons.

National and worldwide coverage through shows like *Man vs. Wild* provides the Alaska Air National Guard exceptional coverage and bolsters recruiting efforts. In fact, recruiting efforts throughout the last 18 months have resulted in an overall end-strength growth from 80.2 percent to 91.5 percent. New recruiting campaigns have included the opening of an office in Wasilla, extensive emphasis on unit referrals and individual involvement, additional recruiters, and new partnerships with public and non-public entities to increase rural Alaska recruiting opportunities.

The implementation of the 2005 Base Realignment and Closure law, which dictated the Kulis Air National Guard Base closure and the relocation of the 176th Wing to Elmendorf Air Force Base no later than September 2011, is progressing smoothly. The Air Guard has received and obligated 100 percent of the $135.05 million in federal funding for the BRAC directed facilities projects and will be in the process of moving its units, equipment and aircraft across town to Elmendorf Air Force Base by January 2011. In addition, the Air National Guard's Jewel Lake Armory will be transferred back to the state by March 2010.

In the interior region of the state, the 168th Air Refueling Wing was once again at the tip of the spear in providing support to homeland defense. In 2009, Guardsmen at Eielson Air Force Base performed 49 NORAD Homeland Defense-Air Sovereignty missions and transferred 3.3 million pounds of fuel. They continue their close working relationship with the active duty – nearly all of their "customers" are active-duty aircraft, many of which are on operational missions, and the wing's eight KC-135 Stratotankers transfer more fuel than those of any other Air National Guard tanker wing.

Commando Warrior. Senior Airman Wyatt Derner, 176th Security Forces, takes a knee as members of his team check a house for potential "enemies" during Commando Warrior Urban Operations exercise 2009 at Andersen Air Force Base in Guam. Photo: Airman First Class Courtney Witt, U.S. Air Force

Defending America and Strengthening Relations

Alaska Air National Guardsmen answered the call to defend not only Alaska but the United States in the Global War on Terrorism, while supporting humanitarian and good-will missions around the world.

In 2009, approximately 180 members of the Alaska Air National Guard's 144th Airlift Squadron and 176th Maintenance Group deployed to Bagram Air Base, Afghanistan, in support of Operation Enduring Freedom. Aircrews flew air-land and air-drop missions in support of coalition ground forces across the entire nation of Afghanistan. The Airmen rotated through Bagram Air Base serving approximately 45- to 120-day tours.

Approximately 200 members of the 168th Air Refueling Wing and 176th Wing fulfilled the Air National Guard Air Expeditionary Force commitment to Middle Eastern countries to provide various support in KC-135 air refueling operations, aircraft maintenance, base security, medical care, personnel, and chaplain services to the coalition forces in support of Operation Enduring and Iraqi Freedom.

About 130 members of the Alaska Air National Guard's 176th Wing deployed to Ramstein Air Force Base, Germany, to support military operations throughout Europe. Aircrews flew passengers and cargo on missions in support of Operation Enduring Freedom, U.S. Air Forces in Europe, U.S. Southern Command and U.S. Africa Command.

Members from the 176th Wing took part in Khaan Quest, a multinational peacekeeping operations training exercise held in Ulaanbaatar, Mongolia, each year and driven by the National

Afghanistan Air Drop. Senior Master Sergeant Glen Tillman, center, and Senior Airman Nathan Grilliot perform a combat airdrop mission in Afghanistan with the 176th Wing's 144th Airlift Squadron while deployed in support of Operation Enduring Freedom.

Strategic Airlift. A C-17 Globemaster III from the Alaska Air National Guard's 249th Airlift Squadron sits on the flight line at Elmendorf Air Force Base. The 249th is a classic associate unit with the active duty Air Force's 3rd Wing. Both the Guard and active duty have resources assigned to maintain and fly the aircraft.
Photo: Master Sergeant Rob Trubia, Air National Guard Creative Team

Guard Bureau's State Partnership Program, which pairs the Alaska Guard with Mongolian forces. The 176th Wing deployed medical providers, technicians, and equipment representing optometry, dental, orthopedics, veterinary medicine and nursing services as part of joint/multinational medical teams. The team provided medical care to several underserved villages in central Mongolia, and many residents saw a doctor for the first time in their lives.

Guardsmen from the 176th Wing and 168th Air Refueling Wing assisted multiple Indonesian communities during Operation Pacific Angel 2009. Pacific Angel, a humanitarian assistance mission sponsored by U.S. Pacific Command, is designed to support areas in need in the Pacific region. It is conducted in locations throughout the Pacific theater to support the U.S. military charter of capacity building in partner nations.

Alaska Air National Guardsmen provided air refueling, transportation, engineering and medical support to those in need, while building important civil-military relationships and regional awareness of the personnel involved.

Tanker Maintenance. **Senior Airman Cody Smith, an aircraft mechanic, is one of the proud members of the 168th Maintenance Squadron from the 168th Air Refueling Wing, which specializes in KC-135 refueling tanker missions, based at Eielson Air Force Base. More than 600 members of the Alaska Air National Guard call the 168th Air Refueling Wing home.** Photo: Master Sergeant Rob Trubia, Air National Guard Creative Team

Training Mission. **144th Airlift Squadron members Captain Robert Stratton, right, pilot, and Staff Sergeant Darryl Wilson, flight engineer, fly an airdrop training mission in a C-130 Hercules.** Photo: Master Sergeant Rob Trubia, Air National Guard Creative Team

Homeland Security & Emergency Management

River Watch

Each spring the Division of Homeland Security & Emergency Management partners with the National Weather Service River Forecast Center to conduct aerial observations of ice-jam, flood-prone river systems across Alaska. The River Watch teams consist of a DHS&EM emergency manager and a National Weather Service hydrologist. The River Watch teams are able to fly over the rivers, observe river conditions, compare the information to River Forecast Center data and then issue flood warnings to the communities or assist with flood response efforts.

The River Forecast Center had predicted an above-average flood potential for the 2009 spring breakup. In the weeks before spring breakup, DHS&EM emergency managers coordinated with other state and federal agencies to raise situational awareness and open lines of communication. The updated Spring Flood Guide was distributed to Alaska riverside communities, and vulnerable communities were contacted to see if they needed assistance.

Spring Flooding Response & Recovery

This spring, ice-jam flooding of historic levels affected communities along many Alaska rivers with communities on the Yukon and Kuskokwim most affected. Emergency response activities included providing housing for disaster victims; providing for emergency needs such as food, water, health care, and power needs identified by communities; and supporting local evacuation efforts.

After a complete damage assessment, the most significantly affected areas of the state were declared eligible for federal individual and public assistance. Individual assistance provides grants to individuals and households who sustained damages to their real property, personal property or transportation. Public assistance programs are available for local and tribal governments and certain nonprofit entities with damages to critical public infrastructure. DHS&EM worked as an advocate for individuals, household and local/tribal governments to ensure that federal assistance programs were fully utilized.

Massive Flooding. During the 2009 spring flood season, many communities along the Yukon, Kuskokwim and other river systems were affected by ice-jam flooding. Eagle was the hardest hit when ice jumped the banks and crushed homes, businesses, vehicles and anything else within its reach. Photo: Courtesy of Department of Transportation & Public Facilities

The flood recovery effort was complicated by the wide geographic distance between affected communities; the short summer season and FEMA staff not familiar with Alaska's unique operational challenges. More than 760 Alaska households and renters applied for and were granted more than $6.8 million in disaster-related individual assistance. More than 250 public assistance scope-of-work project worksheets were written with the majority obligated for funding. The State of Alaska activated Public Assistance and Individual Family Grant programs for affected areas not designated for assistance in the federal declaration allowing those communities to receive assistance from the state only.

Rebuilding Mission. Mennonite volunteers finish the final cabin in Eagle 106 days after the housing mission began. The Disaster Housing Task Force played a major role in organizing and supporting more than 500 volunteers who contributed to the rebuilding effort. Photo: Courtesy of Roy Williams

Disaster Housing Task Force

Shortly after the 2009 spring flood response effort was finished, DHS&EM held the first Alaska Disaster Housing Task Force meeting. The task force brought together state, federal, local, nonprofit and tribal organizations with a role in housing in Alaska. Each member organization identified programs that could be used by flood-affected communities. The DHTF provided communities with an interactive forum to articulate their needs to potential sources of assistance.

Skilled volunteer labor was one of the greatest needs identified by the communities. FEMA and Alaska Disaster Housing Task Force member Alaska Voluntary Organization Active in Disasters filled that need by calling upon voluntary organizations such as Samaritan's Purse, Mennonite Disaster Services and Christian Reform World Relief Committee to meet the communities' requests. The Alaska Disaster Housing Task Force supported the transportation, lodging and feeding of the volunteers working in remote communities.

In all, more than 500 volunteers donated more than 17,000 hours of labor with an approximate value of $2 million. The DHTF organized the procurement and delivery of cabin kits and building materials in Eagle, Stevens Village, Tanana and Akiak.

Preparedness

The Biannual Preparedness Conferences brought emergency managers and other responders together to train and discuss current threats. Evacuation workshops were held to help communities prepare for evacuations in their regions. DHS&EM and the National Weather Service certified Yakutat as Alaska's sixth Tsunami-Ready Community. Tsunami sirens were installed in Sand Point, Yakutat, Cordova, Sitka, Valdez, Whittier and the Kenai Peninsula Borough. On March 25, DHS&EM and other partners conducted a successful statewide test of the Tsunami Alert System.

Training

In 2009, Incident Command courses 100, 200, 300, 400, 700 and 800 were given by DHS&EM training staff or a community training partner. During the 2009 spring flooding response, several flooded communities that had just undergone incident command system training utilized that training during the response. This year DHS&EM sponsored the first Alaskan All-Hazards Type III Communications class and offered a Basic Public Information Officer course to statewide participants. DHS&EM also sponsored the first statewide Public Safety Explorer Youth Summit held in Fairbanks, where 40 students and mentors participated.

Planning

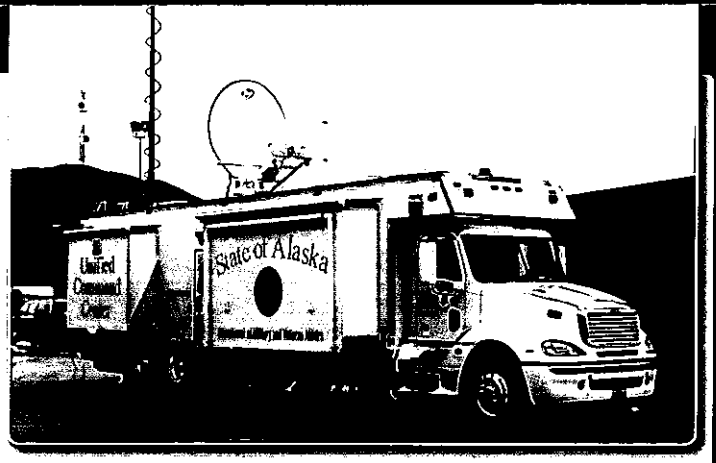
The DHS&EM Planning Section completed the Division's Continuity of Operations plan, which identifies techniques that the state and community emergency response partners can use to deliver critical goods and services during and after a disaster. In addition, DHS&EM updated the State Emergency Operations Plan and is in the process of updating the State Hazard Mitigation Plan.

Mount Redoubt

Beginning in March, Mount Redoubt, located on the west side of Cook Inlet, began a series of eruptions that lasted until early May. Ash fall was reported in Kodiak, Valdez, the Mat-Su Borough and other areas of southcentral Alaska. The State Emergency Coordination Center held daily meetings during the most active time period and other meetings as needed with the Alaska Volcano Observatory, National Weather Service, state agencies and local jurisdictions. The ash fall affected air, ground, and sea transportation options, which threatened the supply of goods and services across the state. DHS&EM coordinated with private sector organizations through the Alaska Partnership for Infrastructure Protection to ensure that critical services like food, water, power and transportation would not be interrupted. A public information campaign was launched to give people volcanic ash safety tips.

H1N1 Influenza Pandemic

In May, DHS&EM established a unified command with the Department of Health and Social Services to monitor the emerging H1N1 emergency and to distribute anti-viral medications and personal protection equipment. The flu fighting supplies were distributed to 39 hub locations as an influenza outbreak precautionary measure. In October, the first H1N1 vaccine doses became available, and DHS&EM supported DHSS distribution of the vaccine and related influenza prevention information.



Communications on Wheels. **The Alaska Mobile Emergency Operation Center can be set up and ready for operation in a matter of minutes. The MEOC is equipped with a full range of communication technologies and can be deployed anywhere along Alaska's road system.** Photo: Jeremy Zidek, DHS&EM Public Affairs

Mobile Emergency Operations Center

In September, DHS&EM took delivery of the Mobile Emergency Operations Center. The MEOC is a 45-foot motor coach equipped with Alaska Land Mobile Radio, disaster response work stations, satellite television, wireless internet, radio dispatch consoles, and satellite enabled phone and internet communication equipment. The MEOC brings robust phone, satellite and radio communication capabilities and can be deployed anywhere along Alaska's main road system. Phone and internet communication lines can be deployed from the vehicle to provide or supplement communication capabilities to any permanent or temporary emergency structure. The MEOC was purchased by the state with funding from the Buffer Zone Protection Grant.

Pelican

In a 48-hour period in August, the city of Pelican received approximately 10 inches of rainfall that destroyed a large section of flume that fed the community's water supply and hydroelectric plant. In response to a city of Pelican request for a disaster declaration, DHS&EM worked with the city, the Department of Environmental Conservation and other organizations to address the situation. Temporary repairs to the flume restored the water supply. DEC and the Alaska Energy Authority are working with a contractor in the city of Pelican to upgrade the water delivery infrastructure and provide a permanent solution to the water supply issue. In September, Governor Sean Parnell issued Administrative Order 251 authorizing up to $100,000 to be dispersed from the State Disaster Relief Fund to pay for the city of Pelican's emergency response cost.

Grants

In 2009, the Homeland Security Grant Program brought $7.3 million to the state under the State Homeland Security Program, Citizen Corps Program and Metropolitan Medical Response System. The HSGP enables the state and local communities to prepare for and mitigate against natural and man-made disasters. An Emergency Management Performance Grant fund of $2.7 million will go to enhance state and local emergency management capabilities for all hazards mitigation, preparedness, response and recovery. An additional $885,162 in grant program awards were received for Buffer Zone Protection Program, Earthquake Hazards Reduction State Program, Emergency Management Performance Grant and Interoperable Emergency Communications Grant. DHS&EM submits grants for federal funding on behalf of Alaska communities and ensures that grant requirements are met.

Alaska Military Youth Academy

The Alaska Military Youth Academy is part of the National Guard's Youth Challe*NG*e Program, which helps high school dropout, at-risk youth focus and get back on track with their lives, and produces program graduates with the values, skills, education and self-discipline necessary to succeed as adults. The Youth Challe*NG*e Program is a 17.5-month program that consists of a 22-week residential phase based on the traditional military training model followed by a year-long post-residential phase. The Alaska Military Youth Academy serves the needs of 16- to 18-year-old Alaskans and is located at Camp Carroll on Fort Richardson.

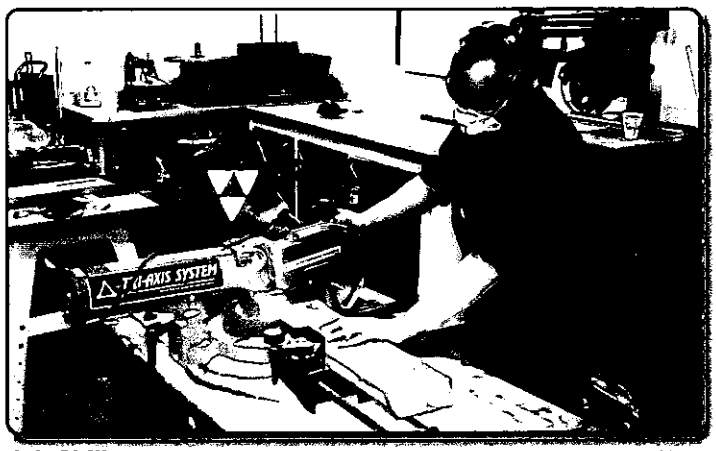
Serving Alaskans and Changing Lives

This year has been another progressive year of change, yielding outstanding results within the Alaska Military Youth Academy.

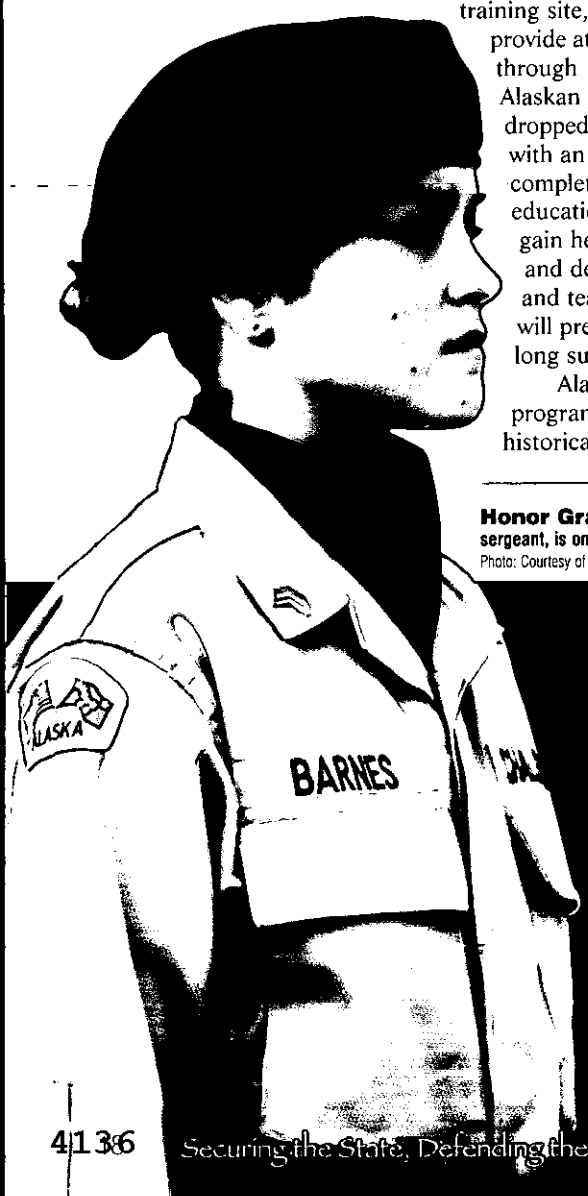
Cumulatively, the Academy exceeded 2,926 graduates who are demonstrating exceptional success in their lives and futures. Without exception, the Academy has a proven track record of success and demonstrates unlimited potential to serve Alaska and Alaska's high school at-risk youth in the future.

The Alaska Military Youth Academy's tuition-free Challe*NG*e program, located on Fort Richardson within the Camp Carroll training site, is designed to provide at-risk 16-year-old through 18-year-old Alaskan youth who have dropped out of high school with an opportunity to complete a high school education or earn a GED, gain healthy life skills, and develop leadership and teamwork skills that will prepare them for life-long success.

Alaska's Challe*NG*e program is based on historically tried and proven U.S. military training methods and structure. The structure and discipline allow cadets to focus on goals and to fully participate and perform during the mentally and physically demanding 22-week residential phase. The Academy is not a military "boot camp." The mission of the Challe*NG*e program is to intervene in and reclaim the lives of at-risk youth.



Job Skills. During an industrial arts woodshop training session, a cadet uses a table saw to start a construction project. Cadets receive hands-on training in many different areas as part of the Challe*NG*e Program before graduation.
Photo: Courtesy of Alaska Military Youth Academy



Honor Graduate. Alaska Military Youth Academy cadet Nichole Barnes, honor graduate for graduating class 2009-2 and corps first sergeant, is one of the Alaska Military Youth Academy's more than 2,926 graduates in its 15-year history.
Photo: Courtesy of Alaska Military Youth Academy

- The Academy ranks #1 in the nation per capita with regard to contacting and recruiting high school dropouts into the program.
- The Academy ranks in the top three academies nationally with regard to the number of cadets graduated above the published target graduation population.
- In January 2009, the Alaska Military Youth Academy received the national USO Challe*NG*e Award for the "Most Progressive Program" in the nation.
- Nationally, the Alaska Military Youth Academy is one of only five Challe*NG*e programs nationally accredited to issue high school diplomas.
- The Academy is producing 118 percent more than its target graduation population per year. The Academy ranks in the top three Challe*NG*e programs nationally in this area.
- In 2009, the Academy celebrated 15 successful years of producing graduates who are leading productive lives.
- Class 2009-01, which graduated 161 cadets in February 2009, was the largest graduating class in the Academy's 15-year history.

To graduate from the residential phase, cadets are required to pass eight core components, which include academic excellence, physical fitness, job skills, service to the community, health and hygiene, responsible citizenship, leadership/followership and life coping skills. The residential phase further prepares cadets to successfully continue in the program's year-long post-residential phase where students pursue their documented future plans.

To provide Alaskan youth and families easier access to Academy information and facilitate the application process, the school maintains two satellite offices – one in the Dimond Center in South Anchorage and another in the National Guard Armory in Fairbanks. Since the opening of the admissions office in Fairbanks, applications from interior and rural Alaska have increased and continue to remain high. The classes that were conducted in 2009 reflect some of the best applicant-to-candidate show rates ever experienced by the Academy.

During the spring and fall of 2009, the Academy achieved maximum use of the Academy's capabilities by seeking the maximum number of applicants per class and ensuring that all candidates capable of participating in each class were invited to attend. The last four classes represent the highest average number of applicants and graduates in the 15-year existence of the Academy. The Alaska Military Youth Academy is ranked #1 in the nation with regard to contacting and recruiting high school dropouts. In 2009, the Academy celebrated its 15th year and was awarded the national USO Challe*NG*e Award as the "Most Progressive Program" in the nation.

Graduation metrics for the spring class of 2009, Class 2009-01, show that the class graduated 161 cadets. This is the largest graduating class in the 15-year history of the Academy. The fall class, Class 2009-02, graduated 136 cadets. These graduation statistics demonstrate that the Academy is producing 118 percent more than its target graduation population. In this area, the Academy ranks in the top three programs among all Challe*NG*e programs.

As of Oct. 1, 2009, the Academy has graduated more than 2,926 Challe*NG*e cadets. The Academy is proud that 100 percent of the cadets graduating from the spring class of 2009-01 were placed for success after completion of the residential phase.

Confidence Builder. Cadet Breanne Tiedeman, Alaska Military Youth Academy class 2010-1, rappels during a confidence training exercise held at Camp Carroll, Fort Richardson. The goal of the training is to instill cadets with confidence and team-building skills to succeed in future events. Photo: Courtesy of Alaska Military Youth Academy

The Academy's main campus located at Camp Carroll provides living facilities, food services, academic classes, vocational training, counseling, medical services and administrative support 24 hours a day, seven days a week for Challe*NG*e cadets. The Alaska Military Youth Academy is accredited by the Northwest Association of Accredited Schools. The Academy is also an Alaska Department of Labor and Workforce Development GED testing site.

Community Participation. Cadets from the Alaska Military Youth Academy's class 2009-2 participate in the Chugiak-Eagle River Bear Paw Parade. This graduating class stood out in the area of community service and learned early on about giving back and self-sacrifice. Photo: Courtesy of Alaska Military Youth Academy

DoD STARBASE Alaska

Nurturing the Next Generation in Math and Science

Department of Defense STARBASE is a partnership between the military, local school systems and communities.

STARBASE is a premier educational program, sponsored by the Office of the Assistant Secretary of Defense for Reserve Affairs. At STARBASE, students participate in challenging "hands-on, mind-on" activities in aviation, science, technology, engineering, math and space exploration. They interact with military personnel to explore careers and make connections with the "real world." Students also learn teamwork, goal setting and the importance of staying off drugs.

STARBASE Alaska's goal is to motivate students to explore science, technology, engineering and math, or STEM, as they continue their education. The program serves students who are historically underrepresented in STEM.

STARBASE is a world leader in introducing the latest STEM curriculum to elementary students. The inquiry-based curriculum, developed on 13 core concepts, engages students in exciting experiments and technology activities. The program is rigorous, relevant and has a "wow" factor to achieve maximum learning.

STARBASE core curriculum concepts are Newton's Laws of Motion, four forces of flight, Bernoulli's Principle, model rocketry, properties of air, development and use of technology, properties and states of matter, flight simulation, space exploration, goal setting, teamwork and substance abuse avoidance.

Each year STARBASE Alaska has grown in size and scope of its original mission. During the 2009 school year and summer sessions, STARBASE Alaska at Fort Richardson reached more than 1,500 students in the Anchorage and Matanuska-Susitna areas. This diverse group of young people came from more than 20 different schools.

In the summer months, we were able to reach out to special groups such as the families of the Department of Military & Veterans Affairs and students from Education Talent Search – UAA. In addition, we offered Level II summer classes in the areas of aviation, technology and space exploration to students who attended STARBASE during the school year.

We also continued Teacher Kits to reach more classrooms and support the Matanuska-Susitna School District. STARBASE Alaska continues to expand its reach into the community through participation in local school science nights, Girl Scouts Technology Day and Department of Military & Veterans Affairs Annual Picnic.

By becoming "Partners in Education" with local school districts, STARBASE Alaska continues the mission of educating and developing responsible, productive, life-long learners and critical thinkers capable of assisting and leading America successfully in the 21st century. Together with the help of parents and teachers – 1,570 chaperone hours and 1,035 teacher hours in 2009 – STARBASE Alaska is making a difference in the lives of its students.

2009 Highlights:

- Held three week-long summer camps with an emphasis on aviation, technology and space exploration
- Hosted an event for 26 Foreign Defense Attaches in October
- Held three off-site STARBASE classes for schools that couldn't raise the transportation funds to get to the STARBASE campus

Reaction Experiment. Sixth graders from Orion Elementary School experiment with mixing baking soda with cola, water, lemon juice and vinegar to determine which ingredients would be best to launch a rocket based on the reaction. Photo: Courtesy of STARBASE

Robot Demonstration. During STARBASE's Technology Summer Camp, Officer Jeff Morton, Anchorage Police Department, gives students a demonstration of the robots the department currently uses. Photo: Courtesy of STARBASE

Molecule Toss. Sixth graders from Orion Elementary School demonstrate the different states of matter: solid – little movement; liquid – more movement; gas – lots of movement, using balls to represent molecules. Photo: Courtesy of STARBASE

ARE YOU STILL CARRYING AN OLD "FLASH LIGHT?" YOU DESERVE BETTER! AND NOW IT'S HERE...

Phantom Warrior TLS™

Tactical Lighting System

It is not JUST a flashlight...it is a FULL SYSTEM that MORPHS as your MISSION CHANGES

There is nothing that this light cannot do.
It goes from dim to super bright with one hand.
It changes intensity in all three colors
(Phantom White, infrared and blue, green or red.)

It Flashes. It Strobes.

It runs on AA batteries.
It is lightweight and compact.
It costs less than other lights that do less.

It is backed by the same Team at Phantom Products that designed the Phantom Map Light™ Phantom Hawk® and the original Phantom Warrior Flashlight.®

And we still do not sell them to the "bad guys."

The Phantom Hawk Light Makes a Great Companion for Your Flashlight!

PHANTOM WHITE, NVIS GREEN AND INFRARED	**FLASH44** PHANTOM WHITE ADJUSTS FROM LOW LEVEL WHITE TO SUPER BRIGHT WHITE, SWITCHES TO DIMMABLE GREEN AND INFRARED. INCLUDES FLASH AND STROBE MODE. THUMB SWITCH, LANYARD/FRICTION CLIP AND STAINLESS STEEL MATTE BLACK POCKET CLIP INCLUDED.
PHANTOM WHITE, COBALT BLUE AND INFRARED	**FLASH45** PHANTOM WHITE ADJUSTS FROM LOW LEVEL WHITE TO SUPER BRIGHT WHITE, SWITCHES TO DIMMABLE BLUE AND INFRARED. INCLUDES FLASH AND STROBE MODE. THUMB SWITCH, LANYARD/FRICTION CLIP AND STAINLESS STEEL MATTE BLACK POCKET CLIP INCLUDED.
PHANTOM WHITE, RED AND INFRARED	**FLASH41** PHANTOM WHITE ADJUSTS FROM LOW LEVEL WHITE TO SUPER BRIGHT WHITE, SWITCHES TO DIMMABLE RED AND INFRARED. INCLUDES FLASH AND STROBE MODE. THUMB SWITCH, LANYARD/FRICTION CLIP AND STAINLESS STEEL STEEL MATTE BLACK POCKET CLIP INCLUDED.

Alaska Military Youth Academy Overview

Training schedules:

2 classes offered each year, consisting of:

- 2 week pre-challenge phase
- 20 week residential course
- 12 month non-residential tracking period

Education options:

A cadet may receive a GED or a high school diploma from the AMYA. The AMYA is an accredited high school, through the Northwest Association of Accredited Schools and offers a maximum of 7 credits during the residential phase of the program.

There are also work place certificate programs offered as well as internship opportunities for the cadets during the residential course to include:

- National Center for Construction Education and Research certificate, foundation training for any student going into vocational trades
- Carpentry proficiency certificate
- UPS store customer service certified training
- Culinary ServeSafe certification (required by the cabaret association that at least one employee on shift must have this certification)
- Emergency Trauma Tech certification
- Emergency Medical Tech certification
- Win and Work Keys, career readiness certificate (national program administered through the Department of Labor that shows baseline employee skill level)
- First aid and CPR certification

Success:
Success is determined by the ChalleNGe program national office located in Washington DC under the control of National Guard Bureau, which oversees all 33 ChalleNGe programs nationwide. A cadet is considered a successful graduate of the ChalleNGe program if at the end of the 12-month non-residential period he or she is:

- Working at least 30 hours per week
- Enrolled in college taking at least 12 semester hour credits
- Enrolled in a vocational training/ apprentice program
- A member of the United State's military

Alaska Military Youth Academy Budget details

Q: Do we expend funds on the mentorship program? If so what are they used for?
A: No funds are given to the mentors or the cadets for being mentored. Funds are used to pay staff to coordinate the mentor program. One staff member is dedicated full-time to running the mentor program and two other staff members spend about half of their time supporting the mentor program.

Q: How will doing away with the stipend affect the mentorship program?
A: There is an indication the stipends were an incentive for cadets to be more responsible in self-reporting. AMYA staff has invested twice as much time to contact Cadets for post-residential information than with previous classes that received the benefit.

Q: How do we plan to use the stipend money if it remains in the budget?
A: The funds will be used to replace educational equipment and material for the cadets. This includes outdated classroom resources, replacing 25% of computers yearly, adding software licenses with the Microsoft programs, replacing barracks furnishings, increasing the enrollment of additional students, and office supplies.

There has **not** been any DEED funding in the past three years that has gone towards capital projects. The only situation where this was possible was with the infrastructure money we received. However, we did not use any DEED funding as match against the infrastructure projects.

In the past three years there **has** been DEED funding that was used to pay for maintenance to the AMYA facilities. The info. is as follows:

SY08 – spent $441.72 in "repair parts & supplies". It was coded against FFY09 DEED allowable.
SY09 – spent $399.00 in "repair guardrail supplies". It was coded to FFY08 DEED allowable.
SY10 – nothing has been spent on maintenance so far.

60/40 maintenance dollars
SY08 - $118,959.25
SY09 - $93,199.28
SY10 - $15,137.88 so far this year

As for the stipends, they weren't clear on whether they were talking about graduation stipends or aftercare stipends so I provided both just in case. It was not possible to break stipends down by class without going through a labor intensive exercise. I summarized the total graduation and aftercare stipends by fund source for each SY, and

also broke out each fund source by FFY (if applicable) and what type of stipend it was. In the past three years we have paid the following in stipends:

SY08 – $79,000 Total graduation stipends paid ($47,400 FED/$31,600 GFM)
$168,600 Total aftercare stipends paid (DEED I/A)
$247,600 Total graduation & aftercare stipends paid in SY08

60/40
FFY07 Graduation Stipend $42,000
FFY08 Graduation Stipend $37,000
Total graduation stipends paid in SY08 $79,000 ($47,400 FED/$31,600 GFM)

I/A (DEED)
Aftercare Stipend $168,600

SY09 – $91,200 Total graduation stipends paid ($54,720 FED/$36,480 GFM)
$120,700 Total aftercare stipends paid (DEED I/A)
$211,900 Total graduation & aftercare stipends paid in SY09

60/40
FFY08 Graduation Stipend $42,900
FFY09 Graduation Stipend $48,300
Total graduation stipends paid in SY09 $91,200 ($54,720 FED/$36,480 GFM)

I/A (DEED)
Aftercare Stipend $120,700

SY10 – $81,600 Total graduation stipends paid ($48,960 FED/$32,640 GFM)
$58,900 Total aftercare stipends paid (DEED I/A)
$140,500 Total graduation & aftercare stipends paid so far in SY10

60/40
FFY09 Graduation Stipend $40,800
FFY10 Graduation Stipend (estimated) $40,800
Total graduation stipends paid so far in SY10 $81,600 ($48,960 FED/$32,640 GFM)

I/A (DEED)
Aftercare Stipend (there should be no more) $58,900

AS 14.30.740. Funding For Alaska Challenge Youth Academy Program.

(a) Each fiscal year, the department shall allocate funding for the Alaska Challenge Youth Academy program in an amount equal to the base student allocation multiplied by seven for each residential student and the base student allocation multiplied by 6/10 for each nonresidential student, minus the amount received by the program in federal matching grant funds. The determination of the number of residential and nonresidential students shall be made by the department on October 1 of the prior year.

(b) In this section,

(1) "base student allocation" means the amount established under AS 14.17.470;

(2) "nonresidential student" means a student who receives services but does not reside at the program site;

(3) "program" means the Alaska Challenge Youth Academy program;

(4) "residential student" means a student who resides at the program site.

ALASKA VIRTUAL ACADEMY℠

powered by K12™

What is AKVA?

- A fully managed K12 school program offered through the Wrangell Public School District
- A public school program delivered in the home
- Open to students statewide
- Comprehensive, all encompassing school
- Fully staffed with Certified teachers
- Large school community

ALASKA VIRTUAL ACADEMY℠

powered by K12™

What Enrollment Includes

- The K12 curriculum
- Books, materials, and manipulatives
- Supplies
- Access to experienced teachers and administration
- **All of this is provided tuition free!**

ALASKA VIRTUAL ACADEMY℠

powered by k12

Enrollment Information

AKVA currently serves:

- Students in Kindergarten through grade 8
- Alaska resident students
- Full time enrollment

ALASKA VIRTUAL ACADEMY℠

powered by K12™

Enrollment Information Cont.

Document Requirements

- Birth Certificate
- Proof of residency
- School Entrance Health Form
- Immunization record
- Statement of Expulsion

ALASKA VIRTUAL ACADEMY℠

powered by K12

What is K12?

- The **largest provider** of online curriculum for public virtual schools. More than 70,000 students are using the K12 academic program in 26 statewide online public schools and other e-learning programs internationally
- **Created by some of the finest minds in education**, including cognitive scientists, reading specialists, biologists, mathematicians, artists and more
- **Designed and developed for online delivery** from the outset
- Committed to providing a **self-paced learning environment** that will help each child reach his/her true, individual potential
- Offers assistance through a **customer care** and technology support line

ALASKA
VIRTUAL ACADEMY℠

powered by K12™

What does AKVA provide to students & families?

- Leadership, support, and guidance from teachers and AKVA staff
- Books, workbooks, hands-on materials, maps, art and science supplies as well as other supplies necessary to complete each lesson
- Interactive and engaging lessons with comprehensive assessments
- Planning and progress tools
- Online community features and events
- Special education services

ALASKA VIRTUAL ACADEMY™

powered by K12

The K12 Curriculum

- **Integrated and planned** out for you and your student to follow. There is no need for you to plan lessons, our tools do that for you and our **assessments** direct you to the next lessons once the prior lessons is mastered.
- Meets or exceeds state standards (including Virginia's Standards of Learning)
- **AdvancED-accredited** (formerly called CITA)
- **97% satisfaction** rating by our users
- Is used by **over 70,000 students** nationwide
- Is **shipped to your door** (books, materials, manipulatives, rocks!) **tuition free with virtual academy enrollment**

ALASKA VIRTUAL ACADEMY℠

powered by K12™

K12 Curriculum

Six Subjects at all grade levels:

Language Arts
Builds important reading and writing skills while inspiring a love of literature.

Math
Mastery of fundamental skills with critical thinking and problem-solving.

Science
Hands-on experience with systematic study of scientific terms and concepts.

History
Emphasizes the story in history by opening young minds and imaginations to far-off lands, distant times, and diverse people.

Art
Following the timeline of history students are introduced to great works of art from different cultures and eras.

Music
Students are instructed in both music theory and music appreciation.

ALASKA VIRTUAL ACADEMY℠

K-8 Program: Overview

- Mastery-based program
- Rich, research based content and "big ideas"
- We encourage families to spend more instructional time on important, difficult objectives
- We recognize that every child is different
- Finding the correct level and pace may vary by child
- To ensure mastery, every objective is assessed

ALASKA
VIRTUAL ACADEMY℠

Our Teachers…

- Are **Alaska certified.**
- Are **highly-qualified**
- Are **assigned to students** and **communicate** through e-mail, telephone, online web meetings, and even face-to-face as needed
- Come from a **variety of teaching backgrounds**; public, private, tutoring
- Assist the learning coach in providing an **individualized education** experience to the K-8 student

ALASKA VIRTUAL ACADEMY™

powered by K12™

Role of the AKVA Teacher

- Certified and experienced partners in education
- First point of contact
- Responsible for checking student progress and attendance
- Leads Elluminate instructional and tutoring sessions
- Resource for curriculum issues, coaching tips, and questions about school policies
- Conducts phone conferences every two weeks
- Provides feedback on submitted work samples

ALASKA VIRTUAL ACADEMY℠

powered by K12™

Role of the Parent

- Fulfill attendance requirements
- Report attendance on a daily basis
- Work with student towards continuous progress with the K12 curriculum
- Prepare for student's school day
- Participate in regular teacher conference calls
- Submit regular work samples as required by the school
- Ensure student participation in state testing program

ALASKA VIRTUAL ACADEMY℠

powered by k12™

Attendance

- Students are expected to login every school day to complete school work
- Parents must notify the teacher when students are absent from school (i.e., the student does not log into the OLS and complete lessons)
- When needed, teachers and parents work together to create flexibility in student schedules
- Students can generally be expected to complete an average of 4-6 hours per day of instructional time

ALASKA
VIRTUAL ACADEMY℠

powered by K12™

Academic Accountability

- Meet and maintain adequate progress
- Students must participate in the state's testing program
- Students must participate in pre- and post- testing
- 100% completion of all course work is encouraged

ALASKA VIRTUAL ACADEMY℠

powered by k12

State Testing & Assessments

- Students in grades K-1 will participate in the Alaska Kindergarten/First Grade development profile
- Students in grades 3-8 will participate in the Alaska Standards Based Assessments
- Students in grades 5, 7 will participate in Terra Nova Norm-Referenced Assessments
- Students in grades 4, 8 will participate in Science Standards-Based Assessments

ALASKA VIRTUAL ACADEMY℠

powered by k12™

Scantron Diagnostic Assessments

- Students in grades 3-8 will take the Performance Series Adaptive Assessment in the first week of school and then again in the spring.
- A computer-adaptive assessment which allows teachers and parents to pinpoint the proficiency level of a student.
- Will guide your teacher in developing an individualized learning plan for you child that addresses specific strengths and weaknesses.

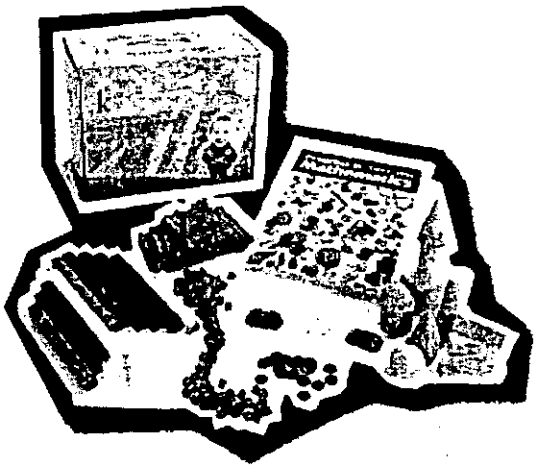
K12 Math

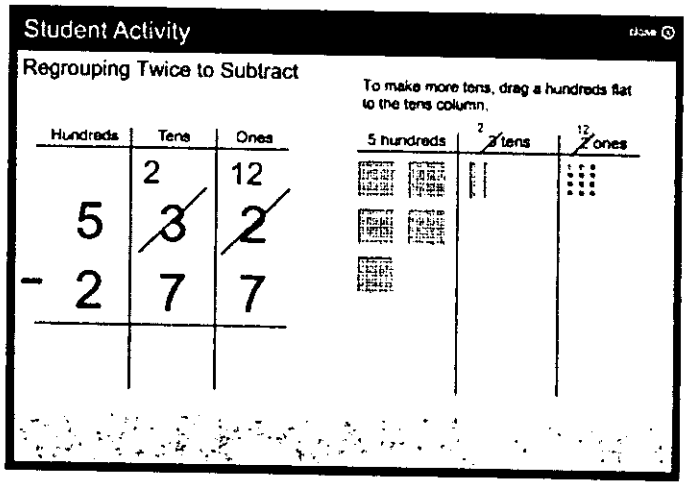
Grades K–5

- Based on Sadlier-Oxford text.
- Uses manipulatives.
- Teach core computational skills.
- Problem-solving skills and geometric reasoning.



Middle School

- Based on *Mathematics, Structure and Method.*
- Covers Pre-Algebra and Algebra.
- Uses distributed (spiral) review.

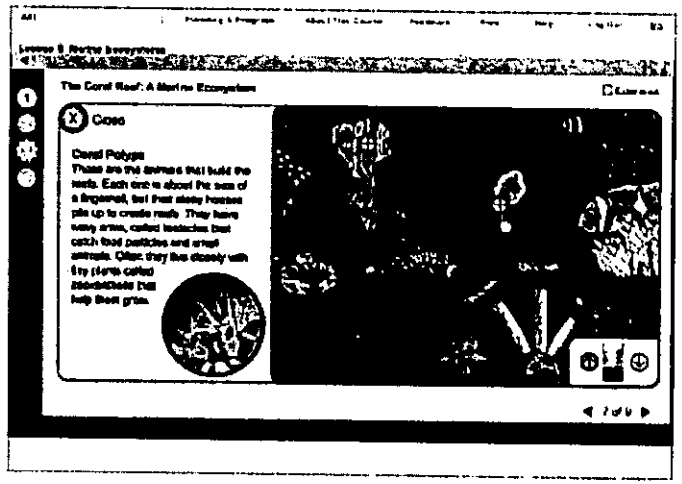


ALASKA VIRTUAL ACADEMY℠

powered by K12™

K12 Science

- Emphasis on the scientific method.
- Hands-on activities and classic experiments.
- Life science, physical science, Earth science, and the human body.
- Chemistry, geology, meteorology, oceanography, and astronomy.
- Digital interactive content.

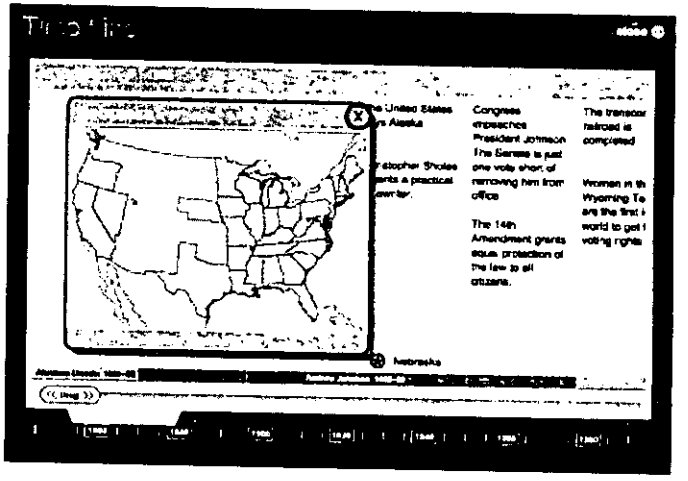


ALASKA VIRTUAL ACADEMY℠

powered by K12™

K12 History

- Uses a chronological approach:
  - Ancient civilizations up to the present
- Emphasizes the "story" of history.
- Provides a global perspective.
- Teaches with maps and globes:
  - Students learn where they live in relation to other countries
- Educates student on cultures, world religions, and enduring ideas from other countries.



ALASKA VIRTUAL ACADEMY℠

powered by K12™

K12 Music

- Teaches student to read and write musical notation.
- Based on the solfege system.
- Introduces famous composers and their compositions.
- Covers beat, rhythm, pitch, melody, and other basic principles of music.
- Uses a tambourine as a teaching aide and student also plays simple music on the recorder and slide whistle.
- Develops a lifelong love and appreciation of music by students.

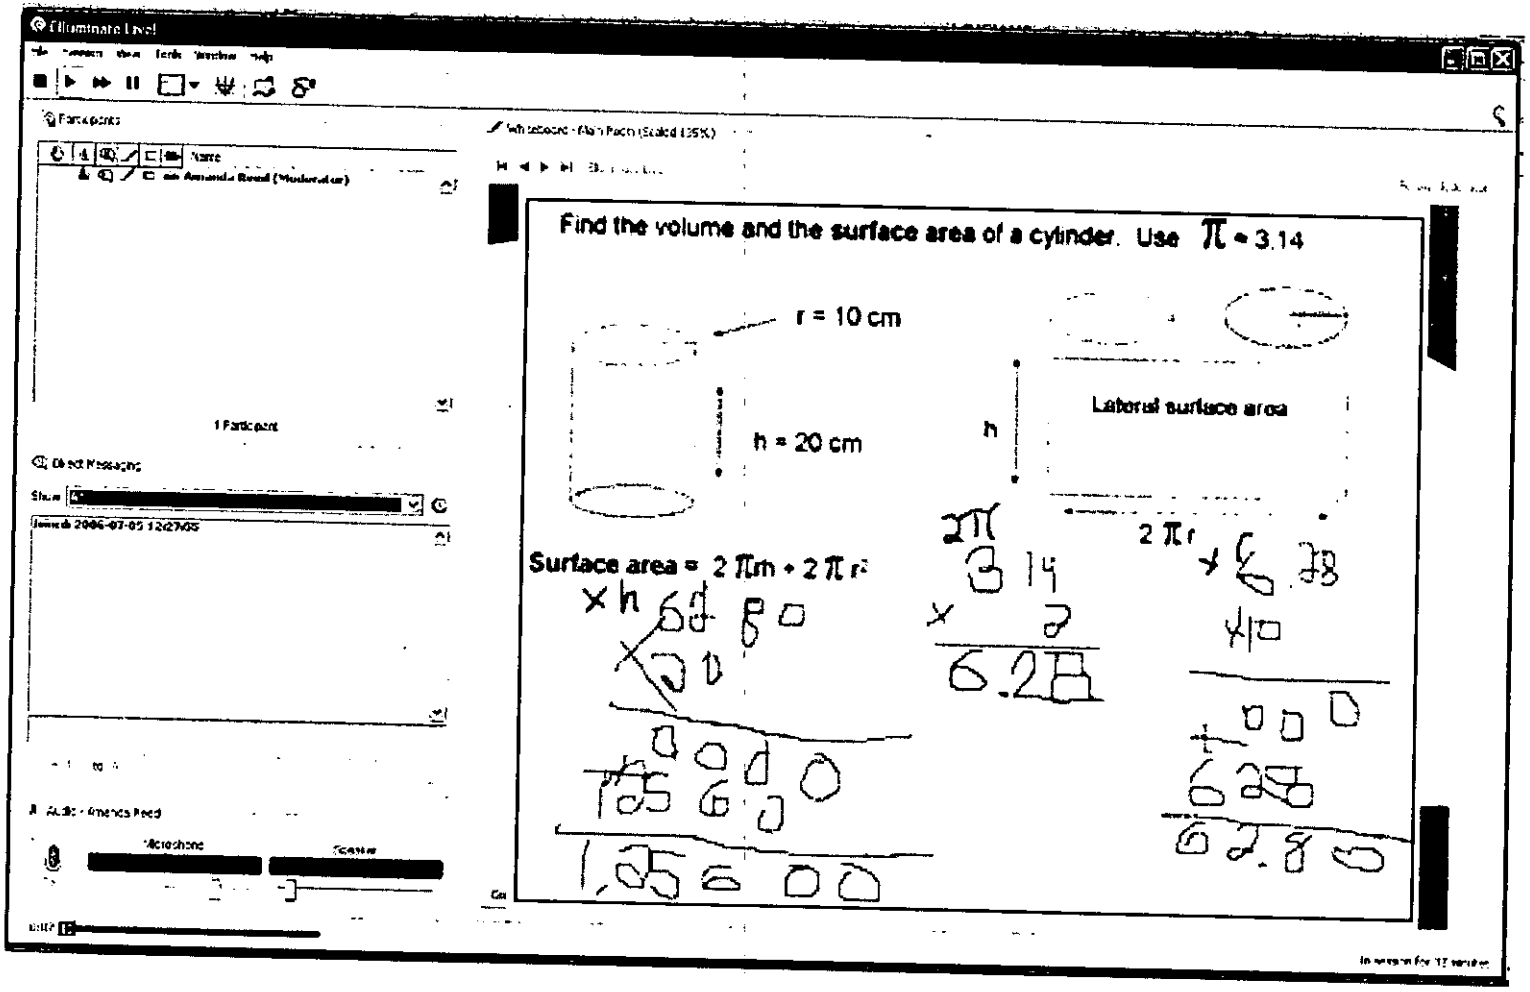
Elluminate Sessions are Fun!



Louie Flora

From: Tim Scott [frontier.ceo@gmail.com]
Sent: Thursday, February 18, 2010 3:41 PM
To: Rep. Berta Gardner; Rep. Bob Buch; Rep. Bryce Edgmon; Rep. Cathy Munoz; Rep. Paul Seaton; Rep. Peggy Wilson; Rep. Wes Keller
Subject: Alaska Virtual Academy

Dear Chair Seaton and House Education Committee members,

My name is Tim Scott. I am the principal at Frontier Charter School, a publicly funded homeschool program in the Anchorage School District. I am writing in regard to the overview you will be listening to tomorrow from the Wrangell School District and the Alaska Virtual Academy (K12). I come at this with no small amount of experience. I have been a teacher, coach, and adminstrator in school districts large and small from Kotzebue to Metlakatla for over 25 years. I served five years on the State Board of Education and I have spent time serving on both the Alaska Workforce Investment Board and the Alaska Post Secondary Commission.

This week all of the families on my list serve received the e-mail below encouraging them to join "happier" ground by enrolling in the Alaska Virtual Academy (ref. Subject Line).

Every year I fight the direct and in-direct negative marketing attacks from statewide correspondence schools. Once again there appears to be a district program starting a statewide correspondence school to boost local enrollment by crossing boundaries to enroll students. Financial incentive for certain for the local district. Money not spent enrolling in the Alaska Virtual School no doubt will be deposited in the general operating budget of the district. In this particular case I am very aware of the dollar amounts involved as many of my students have used K12 since it's inception.

It appears that with the testimony overview tomorrow morning, coupled with this timely email from K12, that the Wrangell School District/Alaska Virtual Academy/K12 is getting not only a hearing but an outstanding commercial to encourage students to leave a school where they already have this and many other choices available to them. As a small in-district program it is difficult to compete. The overview in front of you tomorrow duplicates what is currently already available. It is not new.

I have heard it argued that a program such as K12 will help alleviate some curricular holes that might exist in the Governor's proposed scholarship program. I have appreciated this committee's due diligence in discussing the Governor's proposed scholarship program and the advantage that a virtual consortium might bring to the table in helping carry out a fair and equitable plan. The Commissioner of Education's passion to create success opportunities for students through leveraging and connecting virtual programs and resources throughout the state is to be commended. I do not think that it is necessary for students to enroll outside of their own districts to take advantage of such a plan. In fact, I believe that leaving the choice option up to the locally elected and empowered schools boards potentially will create strong relationships between districts that take part in creating a virtual consortium. A virtual consortium consisting of offerings created by and for Alaskans, particularly online synchronous courses, is a brilliant idea! Currently, many of the nationally marketed programs are cost prohibitive and/or not specifically designed by and for Alaskans.

Thank you for considering my remarks as you listen, discuss, and deliberate on this topic.

Your work is appreciated.

Tim Scott

Looking to make a change in your children's education? Find out more about the tuition-free Alaska Virtual Academy at an upcoming event. Enrollment for the 2010-2011 school year opens in mid-March, so come get the information you need.

Information Sessions
Come out to meet AKVA and K12 representatives and get answers to all of your questions.

Meet-and-Greet Socials
Join AKVA and K12 representatives and other interested families in a casual setting to find out more about this school choice.

Get behind the scenes—see how the K12 curriculum is created.

View it online if you can't read this email.

Give your kids the chance to think big. Join us to find out more!

The Alaska Virtual Academy is a full-time, tuition-free online public school option for students in grades K-8 across the state. With individualized programs that bring learning alive, one child at a time, AKVA gives kids the chance to think big with:

- The exceptional K12 curriculum
- Support from state-certified teachers
- An active, supportive school community
- A nationwide network of other K12 virtual school students
- The accountability of a nationally recognized curriculum provider

Now is the perfect time to think about making a change in your child's education. Enrollment for the 2010-2011 school year opens in mid-March, so join us at an upcoming event to get all the information you need.

In addition to tuition-free public schools, K12 offers these other education options:

- An accredited online private school available worldwide, full- and part-time
- Over 185 courses including foreign languages, AP, and electives available for direct purchase*

WORLD CLASS ONLINE LEARNING OPTIONS FOR MILITARY FAMILIES

K12™

MILITARY LIFE REQUIRES SACRIFICES.

With K12—America's #1 online education provider for grades K-12—your child's education doesn't have to be one of them.

K12 is a favorite among military families for many reasons. We provide a variety of public and private schooling options across the country (and around the world) that families like yours love, because they can finally give a consistent, world-class schooling to their children, no matter where they are or how often they move.

- Depending on where you live, your family can enroll in a free, public virtual school using K12's curriculum —now in over 25 states and D.C., and adding new states each year
- Or, you can enroll in the private, diploma-granting, online K12 International Academy at a significant military discount of 15%
- If you homeschool, you can purchase one or more of our award-winning courses and enjoy the same great savings, as well as our outstanding service and support

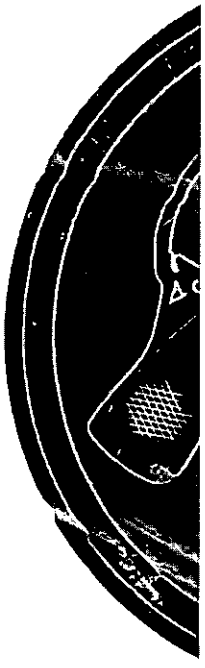
Imagine: your children will never again have to deal with an interruption in their education when they move from one state—or one country—to another.

AS TAMMY AT FORT GILLEM SAYS, "...NOTHING COMPARES TO K12."

Tammy is a military mom of two who "used other curriculums" before she found K12. She's far from alone in her high opinion. The K12 curriculum is widely regarded as the best-in-class online curriculum and a world-class education option. Founded in 2000, we have based our efforts on decades of education research. We employ many renowned educators, mathematicians, linguists, musicians, cognitive scientists, interactive designers, and others who build and continually improve our courses.

Every child with K12 receives a fully individualized, flexible program, custom tailored to his or her level and paced in a way to help that child succeed. A talented corps of certified teachers direct and support each student. By focusing so intensely on bringing out the highest potential for each child, K12 has grown to be the leading provider of full-time and part-time online schooling options with over 56,000 full-time students last year alone. Plus, we regularly earn a 95% parent satisfaction rating.

VISIT WWW.K12.COM/MILITARY OR CALL 866.667.1262 TO LEARN ABOUT MILITARY DISCOUNTS AND TUITION-FREE OPTIONS.



A K-8 EDUCATION THAT GETS KIDS THINKING BIG

K^{12}'s best-in-its-class lessons are delivered via an online school and come with a rich mix of print and hands-on materials delivered right to your family's doorstep, anywhere in the world.

K-8 students work at a pace and learning style that meets their unique needs. Those who are ready to move on to the next lesson or unit can, while those who need just a little more time can take it.

Unlike most other online learning programs that cobble together curriculum from multiple, disconnected outside providers, the K^{12} patented methodology for online learning includes proprietary courses that are integrated across each subject within a grade and across grades.

K-8 students and families enjoy:

- More than 700 lessons per grade in six core subjects, plus foreign language courses
- Hands-on materials, from books to CDs, microscopes, seeds, and magnets
- Engaged, certified teachers
- An active, supportive school community

Think about what your children could do if they had a personalized learning program that allowed them to explore their interests and learn in their own way. Discover K^{12}, and watch them begin to think for themselves—that's thinking big!

HIGH SCHOOL BECOMES MY SCHOOL

Today's traditional high school experience works for many kids, but is problematic for many others. For military families, it may be the challenge of frequent moves. Whatever the issue, the K^{12}9^{12} high school program has helped thousands of kids succeed.

The K^{12}9^{12} program offers over 105 online courses to meet the needs of diverse learners, enabling each student to follow his or her specific path to personal success.

- Up to four levels of core courses, including Honors and Advanced Placement®
- Award-winning foreign language courses (in Spanish, French, German, Latin, and Chinese)
- Electives such as journalism, Web design, personal finance, and anthropology
- The "xTeam," of dedicated education experts—teachers, advisors, guidance counselors—who are there to give students the support they need

The K^{12}9^{12} program was designed to help students find their own path and follow it to post-high school success —whether that's in a top-tier university, a vocational program, or straight to a career. This past spring, K^{12} graduates were accepted at over 150 post-secondary institutes, from Cornell to Middlebury to UC/Berkeley.

WHAT WE OFFER

- The **exceptional**, engaging **K[12] curriculum**, with more than 700 lessons per grade level
- A high-quality, **public school education**
- Passionate, **experienced teachers**
- An **individualized approach** to learning
- An **active**, supportive **school community**

The K[12] curriculum

We use the award-winning curriculum from K[12], the nation's leading online learning provider for grades K-12. The K[12] curriculum and patented methodology are based on decades of education research about how young minds really work. With courses in six core subjects, it was designed to let K-8 kids find the learning style that works best for them.

Bringing lessons to life

K[12] lessons come to life with a rich mixture of online and offline teaching tools, including interactive animations, award-winning printed books, original CDs and videos, and materials for hands-on experiments. Lessons are followed by assessments so you can be sure your child has mastered a particular area before moving on.

Support from passionate, experienced teachers

Support and guidance from engaged, qualified teachers travels with students as easily as the books and lessons. Whether students are stumped on how to solve a math problem, are worried about the results of their latest unit assessment, or just want to ask a question, assistance from their teacher is a mouse click or a phone call away.

The K[12] Online School (OLS)

The K[12] Online School helps families to manage the array of lessons that make up the K[12] curriculum. Through the OLS, parents and students can access lessons, customize their schedule, track student progress, and record attendance. The OLS provides direct access to lessons and tools for each student, as well as announcements from K[12].

The K[12] Online Social Community Site

K[12]'s private, safe online community area is a treasure trove of information for everyone in the K[12] family. It's a place for students and parents to share their thoughts, learn from others, and connect with each other and with the minds at K[12]. You'll find discussion boards, games for students, competitions, and lots more.

K-8 Courses*

The K[12] curriculum for grades K-8 includes six core courses: Math, Science, English/Language Arts, History, Art, and Music. In addition, we offer multiple levels of foreign languages. The curriculum is mastery-based, with assessments built into every lesson to guide and tailor the pace of progress to each child's needs.

> Math

Balancing mastery of fundamental skills with critical thinking and problem-solving, K[12] Math emphasizes an active, multi-sensory approach that ensures students understand the concrete realities that underlie mathematical concepts. Regular practice and review ensures mastery of basic skills.

> Science

K[12] Science balances hands-on experience with systematic study of scientific terms and concepts. Students perform many experiments to help them understand scientific principles through firsthand discovery, as well as receiving guided instruction in important scientific concepts.

> Language Arts/English

K[12] Language Arts/English helps students develop important reading and writing skills, while also inspiring a love of literature. Combining Phonics, Literature, Language Skills, and Spelling lessons, the Language Arts/English program emphasizes classic works, teaches writing as a process, and prepares students for standardized tests in the areas of language skills and reading comprehension.

> History

K[12] History, with integrated topics in Geography and Civics, opens young minds and imaginations to far off-lands, distant times, and diverse peoples. K[12] History emphasizes the *story* in history—beginning with an overview of American history, continuing through the story of civilization—from the Stone Age through Modern World Studies.

> Art

Following the timelines in the History lessons, K[12] Art lessons introduce students to great works of art from different cultures and eras while engaging them in creative activity—painting, drawing, molding with clay, etc. Students are introduced to the elements of art and identify different types of art as they learn about important paintings, sculpture, and architecture.

> Music

K[12] Music teaches basic music concepts at different, age-appropriate levels, so that all students have a consistent understanding of the essential concepts governing Western music. Assuming no prior musical training, the lessons help students learn about and appreciate music, from singing and dancing to rhythm and playing the recorder.

> Foreign Languages

The **powerspeaK[12]** award-winning suite of online foreign language courses offers multiple levels of Spanish, French, Latin, German, and Chinese. Students can begin learning a new language as early as kindergarten. All **powerspeaK[12]** courses are designed just for kids and use a proven, natural-language-learning approach.

Head Start Study Finds Brief Learning Gains

By Mary Ann Zehr

Premium article access courtesy of Edweek.org.

Participation in Head Start has positive effects on children's learning while they are in the program, but most of the advantage they gain disappears by the end of 1st grade, a federal impact study of Head Start programs says.

A large-scale randomized control study of nearly 5,000 children released by the U.S. Department of Health and Human Services this week shows that a group of children who entered Head Start at age 4 benefited from a year in the program, particularly in learning language and literacy. Benefits included learning vocabulary, letter-word recognition, spelling, color identification, and letter naming, compared with children of the same age in a control group who didn't attend Head Start.

Benefits for children who entered Head Start at age 3 were even stronger. By the end of Head Start, the group that had entered at age 3 showed gains in most of the language and learning areas that the 4-year-old group had, but also showed benefits in learning math, pre-writing skills, and perceptual motor skills.

But by the end of the 1st grade, the study found, children who had attended Head Start had an edge in only one aspect of learning in comparison with control groups. Children in the Head Start 4-year-old group did significantly better on vocabulary than children in the control group. And Head Start participants in the 3-year-old group performed better in oral comprehension than children in the study's control group.

In other words, most of the advantages in learning that children gained because of Head Start disappeared by the time they finished 1st grade.

Kathleen Sebelius, the U.S. secretary of health and human services, which oversees the federal preschool program, said in a statement about the study that "for Head Start to achieve its full potential, we must improve its quality and promote high standards across all early-childhood programs."

U.S. Secretary of Education Arne Duncan seconded the need for improvement in the program. "These results make it clear that we need to build a more coordinated system of early care and education, and to focus on key improvements to teaching and learning in the early grades," he said in a statement.

Quality Concerns

The authors of the impact study write that "although the quality is high on average, Head Start programs vary in terms of instruction in the key areas measured as part of this study." They also stressed that children in the control group participated in a mixture of alternative child-care settings, including care by their parents. So the study is reporting only how Head Start children benefited above and beyond children in other kinds of early-childhood settings.

Craig T. Ramey, a professor of health studies and psychiatry at Georgetown University in Washington, said in an interview that researchers in the field of early-childhood education see Head Start as a "great idea," but added that "Head Start must hold its feet to the quality fire."

The Department of Health and Human Services has a working group that should take on the task of establishing national standards for all child-care programs, including Head Start, he said.

Mr. Ramey questioned the quality not only of some Head Start programs, but of the impact study as well. He characterized it as an example of "poor scholarship and reporting of data."

He said, for example, the study reports only effect sizes and doesn't provide information about the performance of children on average. The federal government was supposed to have released data two years ago to scientists so they could analyze the information, he noted, but such data have not been released as part of the impact study. It is not possible to tell by the study whether Head Start students are "humming along at the national average" in terms of their cognitive learning, or if they are "at the 10th percentile" on standardized measures of cognitive learning, he said.

Mr. Ramey and his wife, Sharon Landesman Ramey, a professor of child and family studies at Georgetown University, have written a paper that they expect to present on a panel hosted by the Washington-based Brookings Institution on Jan. 19. They characterize Head Start programs as "unacceptably uneven in their quality."

Exemplary programs should be identified and serve as models, they write, but the Head Start programs that are failing should be "improved or terminated quickly to prevent serious harm to children."

Deborah Lowe Vandell, the chairwoman of the education department at the University of California, Irvine, said in an e-mail that the study's analysis of some subgroups of preschoolers participating in Head Start showed the program was more effective in improving the cognitive and academic performance of children

most at risk of failing academically, those with the lowest academic performance when they entered Head Start and children with limited proficiency in English.

"At the same time," she wrote, "I wish that stronger positive effects had been demonstrated for a broader range of children. A possible explanation for these differential effects is that Head Start was not sufficiently challenging for children with stronger cognitive and language skills."

Investing in Alaska's Young Children

Alaska Early Care and Education: Public Policy Priorities for 2010

A Collaborative Effort

- Abbe Hensley, Executive Director, Best Beginnings
- Melissa Pickle, Director, RurAL CAP Parents as Teachers
- Candace Winkler, CEO, thread
- Joy Lyon, Alaska Association for the Education of Young Children (AK AEYC)
- Other Partners: Alaska Head Start Association (AHSA), Alaska Infant Learning Programs Association (AILPA)

Alaska Facts

- 49,670 children under 5
- 1 out of 5 living below the federal poverty level
- Most likely to be poor – youngest children

Alaska's Early Childhood Legislative Priorities 2010

- Denali Kid Care
- Head Start
- Home Visiting
- Early Childhood Partnerships
- Imagination Library
- Access to Quality Child Care
- Quality Rating and Improvement System
- Professional Development and Retention of Early Educators

Early Childhood System

- Comprehensive early childhood system, not just separate, individual programs
  - Early learning
  - Health, mental health, and nutrition
  - Family support
  - Special needs/early intervention

Legislative Priority

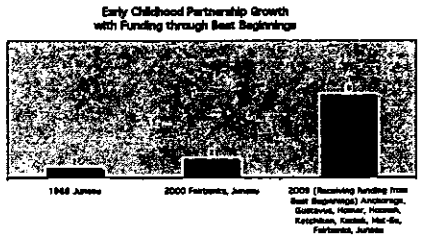
- Early childhood partnerships
  - Move decisions closer to those being served
  - Bring people together to solve problems
  - Pinpoint actual needs
  - Respond to cultural considerations
  - Focus on solutions, not turf
  - Ensure the best outcomes in each community for young children
  - A network of effective community and regional organizations that support comprehensive early childhood services called for by ECCS, Ready to Read, Ready to Learn, and Governor's Summit on Early Learning

Legislative Priority

- Early childhood partnerships 2009-10
  - Nine communities, with about 78% of Alaska children 0-5
  - Conducted needs and assets assessments
  - Identified priorities
  - Developing strategic plans
  - Taking action!

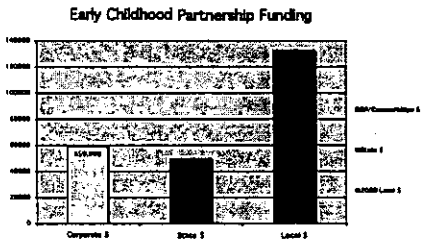
7

Legislative Priority



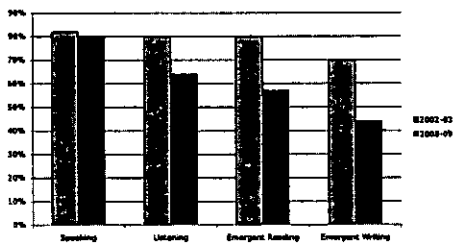
8

Legislative Priority



9

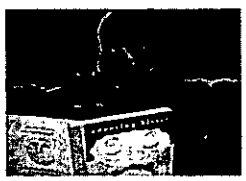
Alaska Kindergarten Developmental Profile Results



10

Legislative Priority

- Dolly Parton's Imagination Library in Alaska



11

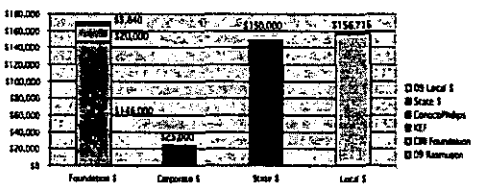
Legislative Priority

- Imagination Library 2009-10
  - 32 communities participating
  - **7,594** children enrolled March 2010
  - Funds allocated for 10,192 children
  - 1,500 children have already "graduated"
  - Kuskokwim Educational Foundation funding books in all 10 villages
  - Funding from Rasmuson Foundation, Dept. of Education & Early Development, ConocoPhillips, The CIRI Foundation, multitude of individuals and local businesses
  - 49,670 Alaska children under 5

12

Legislative Priority

Sources of Imagination Library Funds



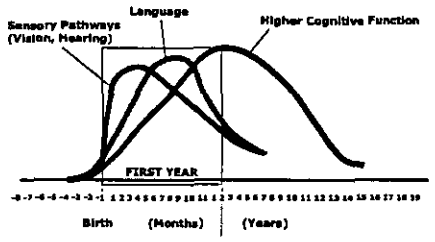
13

Legislative Priority

- Early Childhood Home Visitation Programs
  - Increase parent knowledge of early childhood development beginning at birth
  - Promote early literacy experiences
  - Improve parenting practices
  - Prevent child abuse and neglect
  - Provide early detection of developmental delays and health issues
  - Increase children's readiness to succeed in school
  - Increased parent involvement in school

14

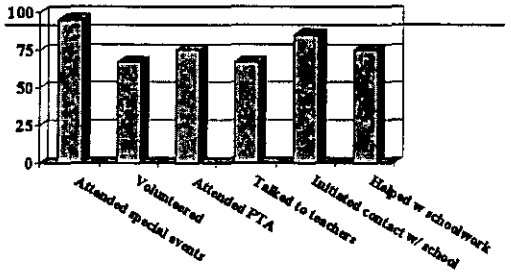
Neural Connections in the Brain



Source: C.A. Nelson (2000)

15

PAT Parent Involvement at School



16

Legislative Priority

- Alaska Parents as Teachers 2008-09
  - 11 programs funded through federal grants
  - 47 communities served
  - 910 families served
  - 1,112 children served
  - 74 prenatal women served
  - 14 homeless families served
  - 762 children received developmental screenings with 162 found to need further evaluation
  - 336 families linked to other services

17

Head Start/Early Head Start

- Comprehensive school readiness program providing educational, health , nutritional social and other support services
- Eligibility criteria based on income level and poverty of access designation
- Models of service include classroom and home visitation
- Parents as partners in program design, implementation and evaluation

Alaska Head Start Association (AHSA)

- An Overview of Head Start in Alaska
  - 16 Head Start Grantees across the state
  - Providing services in over 100 communities
  - Serving over 3,500 children and employing over 950 staff members
  - Funded by Federal and State grants

Support Brings Success!

2008-2009 Alaska Head Start Summary Report

- 276 children identified as needing medical treatment
- 515 children identified as needing dental treatment
- 77 children identified as needing mental health services
- 379 children identified as having special needs
- 781 parents referred for emergency/crisis intervention services
- 1119 parents requested parenting information
- $27,744 – Average pay for a BA degreed Head Start Teacher in Alaska

Alaska Head Start Association (AHSA)
Legislative Priorities: Head Start & DKC

- AHSA Critical Issues 2010
  - Inflation proof current state investment in Head Start to prevent reduction of children served
  - Increase state investment in Head Start to expand services and address critical infrastructure needs such as facilities
  - Develop a comprehensive statewide plan to enhance service delivery and minimize duplication
  - Dedicate workforce development funds
  - Increase income eligibility guidelines for Denali Kid Care

thread, AK early care & ed connection

"the common thread" that ties together statewide support for families, early educators and Alaska communities

- Linked 7,600 families with referrals
- Educated 2,500 professionals
- Guided 200 programs to best practice
- Served 58 communities throughout AK

thread

Alaskan Children With Working Parents

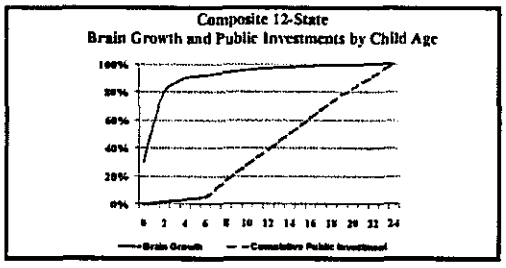
- In AK 60,000 children under age 6
- Of those 40,000 children have all of their parents in the workforce
- In AK less than 24,000 licensed or approved spaces in child care, head start, preschools

Challenges for many families…

- The average rate for Infant and Toddler care between $500- $1000 per month
- Most programs spend 70-80% of their budgets on Personnel Expenses
- Early Educators make an average of $9/hour and turnover is 46%

36% of households with children under age 6 reported work restrictions due to child care issues

Public Investment in Early Education



25

Legislative Priority: Access to Quality Child Care:

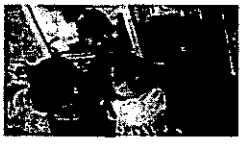
- Goal: Provide lower income children the opportunity to access higher quality child care services through Child Care Assistance
  - Increase the reimbursement rate to the 75th percentile
  - Increase family eligibility to 85% of the state median income.

Family eligibility hasn't been changed since 2002

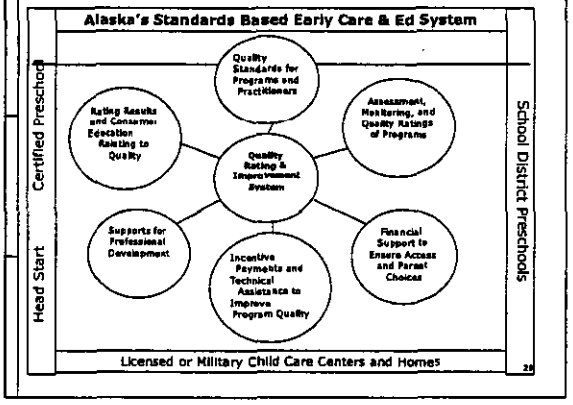
26

Legislative Priority: Quality Rating and Improvement System (QRIS)

- Helps parents make the best choices for their families
- Moves programs towards quality
- Provides outcome information for policy makers to assess different funding strategies



27



28

Legislative Priority: Professional Development & Retention of Workforce

Purpose of Priority:

- Decrease financial barriers to professional development opportunities
- Increase recruitment and retention in the early care and education field

Research indicates the biggest factor in the quality of a program and in improving child outcomes is the teacher education level

29

Alaska's Child Care Workforce

- Less than 10% of the child care workforce has a college degree
- National Accreditation standards and Head Start standards are moving towards a BA teacher in each classroom
- In Child Care with the average wage of $9/hr and a 45% turnover rate additional support is needed to increase the qualifications of teachers

30

Child Care Assistance Position Paper
January 2010
Alaska Association for the Education of Young Children

What is it and why is it important?

Affordability of quality child care is a major issue for many Alaskan working families. The average monthly cost of full-time child care ranges from $400-$900 per month, depending on the age of the child and location of the care. 39,400 children under the age of six live in households where all available parents are in the workforce. Yet only 3,800 children received child care assistance in 2009.

- In Alaska, funds from the Child Care & Development Fund (CCDF) are used to subsidize the cost of child care for low income families to enable them to work.
- Under federal rules, the Child Care Assistance Program can provide financial assistance to help cover child care costs to families whose income is less than 85% of the state's median monthly income.
- Thanks to support from the legislature, child care assistance reimbursement rates were raised to the 50th percentile in 2008. In 2010 the rates will increase for infants and toddlers to the 75th percentile. This will increase options for low income families that can not pay the difference between what programs charge and the state reimburses. The recommendation from the U.S. Health and Social Services is the 75th percentile.
- The family eligibility has not been adjusted since 2002. There are an increasing number of families that do not qualify for assistance, but still can't afford to enroll their child in a legal child care program.
- Economic cost-benefit studies consistently show significant long range benefits when children from low income families receive high quality child care. Due to the financial burden of paying a required co-payment amount, in addition to the difference in what the state will reimburse for child care, families are choosing from lower priced and usually lower quality child care.

Recommendations:

- Complete the child care assistance rate adjustment to include preschool and school age children at the 75% percentile. This will allow low income children the opportunity to access higher quality programs that will lead to outcomes such as increased school readiness, and fewer children left home alone after school.

- Increase family eligibility to 85% of the state median income. This will enable more families to access child care in order to work.

System for Early Education Development

Professional Development and Retention of Early Educators (Public Policy Priority for 2010)

THE ISSUE

- The turnover rate for early care and education teachers in Alaska is approximately 46% (2003, Market Rate Survey). Teacher retention promotes attachment and quality relationships between young children and those who care for them which are crucial to optimal brain development and learning.
- Low wages and lack of financial resources for teacher's professional development impacts recruitment and retention of a qualified and stable workforce.
- Positive child outcomes are increased with higher levels of teacher preparation and formal education.

PROFESSIONAL DEVELOPMENT AND RETENTION OF EARLY EDUCATORS

- Three factors are positively associated with teacher quality: compensation, participation in professional development, and stability. Compensation appears to be the strongest predicator of classroom quality in child care centers (Kagan, et al., 2006). thread, Alaska's Child Care Resource and Referral Network, has the infrastructure to incentivize teachers with current credentials through the ROOTS (Retaining Our Outstanding Teacher) Awards. To impact retention, these awards must be calculated and distributed at significant levels that follow the SEED Professional Framework. Formal evaluation has shown that compensation programs have demonstrated considerable increased retention rates in states where initiatives exist.
- Scholarship type programs can reduce financial barriers to further education and training for teachers. thread provides up to $500 per year for qualified education expenses for early educators working in licensed programs. Increasing these annual awards an additional $500 would facilitate the completion of additional professional development and improve the quality of early care and education for Alaska's children.
- Research has consistently shown that higher levels of provider education and training are associated with more positive and stimulating teacher behavior resulting in more positive child outcomes. Education and training that increase positive interactions between adults and children impacts multiple areas of development (Pianta, 2006; Ramey et al., 2008).

ACTION NEEDED

- $1.5 million to increase professional development opportunities for early educators and to provide financial incentives to increase retention in the early education field

Connected with thread.

Rationale for Alaska SEED ROOTS Awards

The Alaska 2009 Child Care Market Rate Survey with 395 respondents provides data that supports the need for wage increases tied to increased professional development. The majority (81%) of responding programs report needing to hire new staff from once every month to 2-3 times per year and 61% of all providers report hiring and retaining qualified staff as "very difficult." Responses to questions about challenges with staff retention include lack of qualifications/education as the number one factor with lack of ability to offer benefits as second. Center/group home providers reported to hire and retain qualified caregivers requires on average $12.50 per hour.

Other national programs such as WAGE$ has produced the following recent outcomes:

- The annual turnover rate was 15% for WAGE$® Project participants, far less than the pre-program statewide turnover rate of 31% per year and less than the current statewide turnover rate of 24%.
- Sixty percent (64%) of WAGE$® Project participants indicated that they had taken college level coursework since applying to the Child Care WAGE$® Project and 86% plan to do so in the future.
- Eighteen percent (19%) of WAGE$® Project participants moved up a level on the supplement scale due to continued education.

To increase early educators' wages from the statewide average of $ 11 per hour (2008, wage survey, Alaska Department of Labor) to the desired $12 per hour would require the following increases. Each tier is tied to incremental educational attainment with a 60% increase for each one. Calculations are based on the current professional development of the early childhood field to include child care and Head Start.

TIER I: Child Development Associate Level (used SEED level 6& 7) includes CDA and unrelated AA with credits or Occupational Endorsement	223	223 x $2080= $463,840
TIER II: AA/AAS Level (used SEED levels 8 &9) includes related AA and ECE AA and unrelated BA	119	119 x $3328=$396,032
TIER III: BA/BS/MA Level (used SEED levels 9, 10, &11) related BA, unrelated BA with ECE credits, BA in ECE, & MA	129	129x $5324=$686,796

TOTAL: $1,546,668

Investing in Alaska's Young Children

Alaska Early Care and Education: Public Policy Priorities for 2010

Denali Kid Care: Increase the income eligibility guidelines for Denali Kid Care (DKC) from 175% to a minimum of 200% of Alaska's federal poverty level (FPL). This change would restore eligibility to 1,300 children and 225 pregnant women. Children with access to preventative health care and developmental screenings have better outcomes for health and learning abilities throughout their lives.

Head Start: Increase State investment in Head Start to: expand services, address critical infrastructure needs, and keep existing slots from being reduced to due to rising costs. Provide workforce development funds to enable Alaskan Head Start staff to meet federal teacher qualification requirements.

Home Visiting: Establish research-based voluntary early childhood home visiting programs in Alaska, such as *Parents as Teachers*, with universal access for families with children prenatal up to kindergarten entry. Such programs increase parent knowledge of child development, improve parenting practices, promote early literacy experiences, provide early detection of developmental delays and health issues, and increase children's school readiness and school success. Through these preventative programs, future costs such as special education and remedial education have been shown to be reduced.

Best Beginnings: Support community-based **Early Childhood Partnerships** and **Imagination Library**. This leverages funding from the private sector and helps support the public-private partnership working to create and sustain a comprehensive statewide early childhood system. **Early Childhood Partnerships** provide a statewide coordinated network and structure necessary to move decisions closer to those being served, pinpoint actual needs, respond to cultural considerations, and ensure the best outcomes for young children in every community. **Imagination Library** mails a book per month to Alaska children from birth to age 5. Research shows that children who have not developed some basic literacy skills by the time they enter school are three to four times more likely to drop out in later years. Too many Alaska children, about 40%, are entering kindergarten without those skills. This program makes a difference by bringing quality books into the home, engaging young children and their families in early literacy activities.

Access to Quality Child Care: Increase child care reimbursement rates to the 75th percentile. This allows low-income children the opportunity to access higher quality programs, resulting in outcomes such as increased school readiness. Increase family eligibility to 85% of the state median income. This will enable the state to quantify and respond to support for families to enter or remain in the workforce.

Quality Rating and Improvement System (QRIS): Implement phase one of QRIS in Alaska. A QRIS is an organized method to assess, improve, and communicate the level of quality in early care and education settings outside the home. The system would provide a roadmap for individual early learning programs to improve their quality of care, thereby increasing parent access to a larger supply of quality options. The system would provide greater accountability for policy makers who govern public investments in Alaska's early care and education system and would ensure that publicly funded Pre-K services can be delivered through a variety of delivery systems that meet the needs of parents.

Professional Development and Retention of Early Educators: Provide funding to thread, **Alaska's Child Care Resource and Referral Network**, to increase the current Individual Reimbursement Awards (IRF's) for college child development courses, and reinstate the ROOTS (Retaining Our Outstanding Teacher) Awards to recognize and incentivize teachers with credentials in early education. There is a direct relationship between teacher preparation and quality of early care and education for children. It is difficult for individuals working full-time and earning low wages to afford the cost of education. In addition, due to low wages and lack of recognition, the teacher turnover rate in Alaska in early care and education programs is approximately 46%. By providing these incentives, the early care and education field would be able to recruit and retain a more qualified and stable workforce.

These priorities are recommendations articulated in no particular order. The recommendations are meant to assist public policy leaders in developing a system of early learning to promote school readiness, strong families, and a strong workforce. These are advanced by a coalition of early childhood advocates working together to support young children.

thread connecting early care & education to alaska

The Alaska Child Care Resource and Referral Network, thread, has a mission to advance the quality of early education and child development by empowering parents, educating child care professionals and collaborating with our communities.

BEST BEGINNINGS

Alaska's Early Childhood Investment

Early Childhood Partnerships

Request

- $1 million FY11 to support early childhood partnerships
- Funds would pay for grants to partnerships established in FY10, enabling them to begin work on locally identified priorities and their two-year strategic plans. Funding would also support technical assistance and start up of three to four new partnerships.

Rationale

- Current services and programs are like a jigsaw puzzle with mismatched pieces. There are gaps, overlap, and lack of coordination. People at the local level are in the best position to identify problems, design solutions, and improve coordination to meet local needs.
- Effective local organizations have been recognized in state and national studies as essential to building effective statewide systems.

Accomplished to date

- In July 2009, Best Beginnings awarded one-year grants to nine communities to form early childhood partnerships or support partnerships already established.
- Communities represented in the partnerships are home to 39,000 children under age 5. That's about 78% of all children birth to age 5 in Alaska.
- Partnerships create opportunities for local people from varied interests and backgrounds to improve services and resources for young children.
- Core funding from the state and private sector has been leveraged in local communities, resulting in $133,000 in cash and in-kind contributions.
- Partnerships are assessing needs and assets in their communities, developing priorities, and building strategic plans. The results will be improved coordination of services, better access for families, and communities that are very engaged in meeting the needs of young children.

Longer term goals

- Organize and mobilize early childhood partnerships all over Alaska.
- Develop a coordinated system of early childhood programs and services.
- "Delegate" to people in communities responsibility for identifying programs and systems that work well, where gaps exist, and how best to respond to local needs.
- Form a network of effective community and regional organizations that support comprehensive early childhood services. Such networks and a comprehensive systems-wide approach have been strongly recommended by state and national studies as key to meeting the needs of babies and young children.
- Children begin school prepared to succeed.

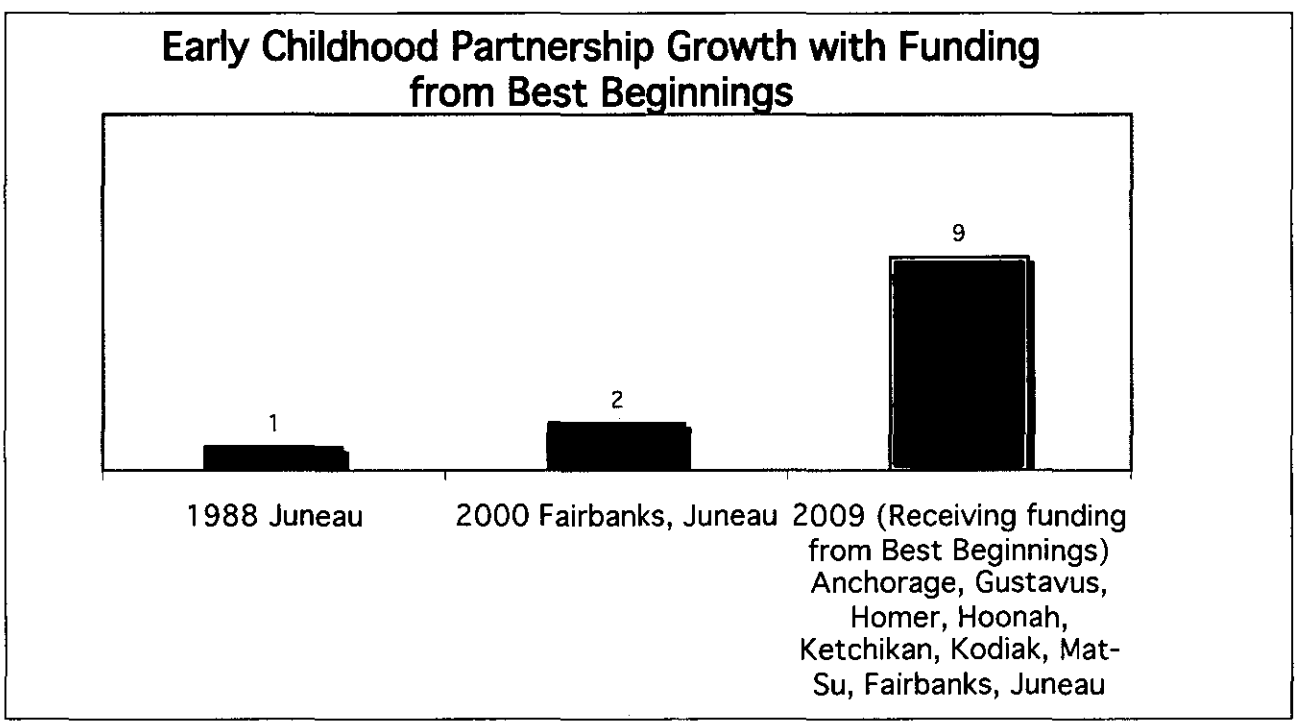
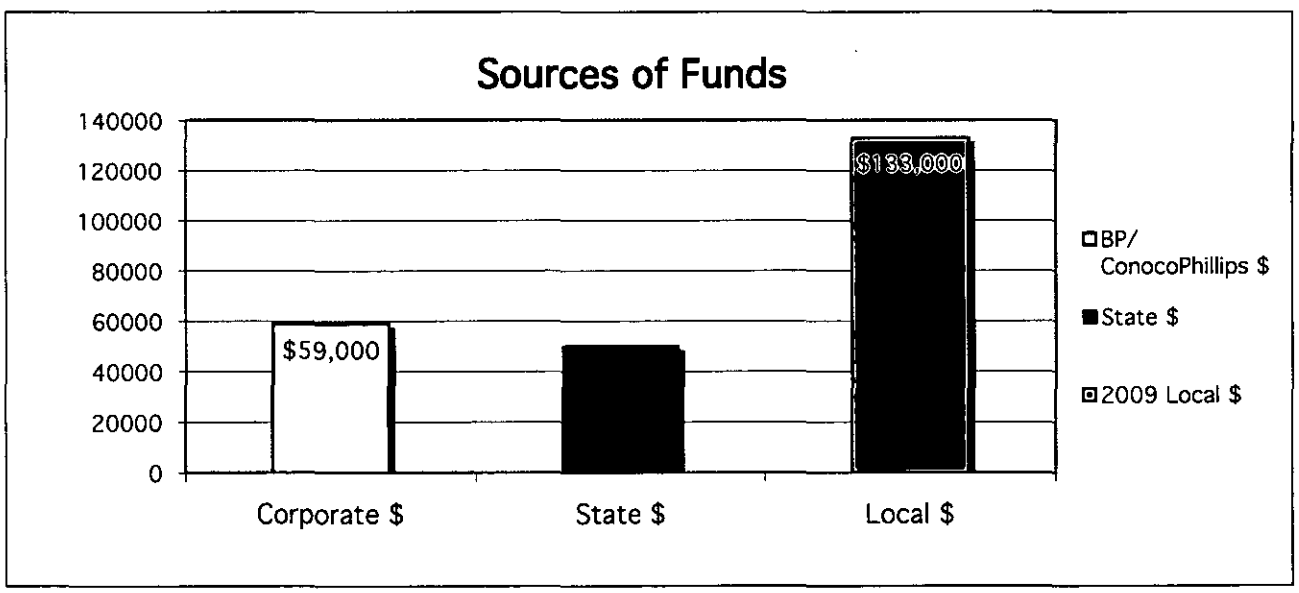
BEST BEGINNINGS EARLY CHILDHOOD PARTNERSHIPS





BEST BEGINNINGS

Alaska's Early Childhood Investment

Imagination Library

Request

- $400,000 for FY11 to expand Imagination Library, which mails a free book every month to enrolled children, birth to age 5.
- Requested funds would expand the program to cover at least 14,000 Alaska children, about 28% of all children under 5. Leveraged local and private funding would increase the number of children served.

Rationale

- About 40% of Alaska children begin school unprepared to succeed. Alaska's dropout rate is among the highest in the nation.
- Early literacy is a key indicator of how a child will fare in school and in life. Children who have not developed some basic literacy skills *by the time they enter school* are three to four times more likely to drop out in later years.
- Imagination Library helps children develop the literacy skills they'll need to succeed … in their own homes, with their families.
- Imagination Library in Alaska has grown by leaps and bounds since Best Beginnings became involved. Best Beginnings provides technical assistance and funds to launch Imagination Library in new communities and to continue and expand the program in communities already participating.

Accomplished to date

- Children impacted: Through the efforts of Best Beginnings and its partners, funds have been allocated to enroll 10,192 children in 32 communities. More than 1,500 additional children have graduated from the program when they turned 5.
- Private and local support: In most communities, volunteers raise funds locally to match grants from Best Beginnings. Best Beginnings has received major grants for Imagination Library from the private sector, foundations, and the Alaska Department of Education & Early Development. To date, $471,130 has been contributed in private and local support. The total will rise further later this year when local contributions begin matching a second Rasmuson Foundation grant (for 2010 and 2011) of $150,000.

Longer term goals

- Fully subsidize Imagination Library in communities with very limited resources.
- Enroll at least 80% of the children under age 5 in the current Imagination Library communities.
- Expand to additional communities so that every Alaska child, birth to age 5, would be eligible for Imagination Library.

Early Childhood Home Visitation Programs

Parents are their children's first and most influential teachers. Voluntary home visiting programs serving families with children prenatal up to kindergarten entry provide the information, support, and encouragement parents need to help their children develop optimally during the crucial early years of life. Such programs increase parent knowledge of early childhood development, improve parenting practices, promote early literacy experiences, provide early detection of developmental delays and health issues, and increase children's school readiness and school success. Through these preventative programs, future costs such as special education and remedial education, have been shown to be reduced.

- In Alaska, many children entering kindergarten are underprepared for school. Children who begin school behind rarely catch up later on and are less likely to graduate from high school, attend college, or acquire the skills necessary to obtain a job that pays a living wage.
- Alaska's graduation rate according to the Alaska Department of Education and Early Development is around 65%. The lack of school readiness at kindergarten has been linked with low graduation rates.
- Research has shown that children experience the best outcomes when quality pre-kindergarten experiences include research based home visiting programs that involve parents. Often cited research concerning the High/Scope Perry Preschool Project and the Chicago Child Parent Centers preschools both included strong home visitation components. A recent study of Parents as Teachers, a voluntary research based home visiting program for families with children prenatal up to kindergarten entry, showed when preschool programs are coupled with Parents as Teachers participation, children are more prepared for kindergarten with those gains sustained at third grade. Furthermore, the achievement gap between children from low income families and those from middle class families was eliminated.
- Research has also indicated families involved with home visitation programs such as Parents as Teachers are more involved in their children's later school experiences, leading to more positive outcomes for their children's education.

Recommendations:

Establish research based voluntary early childhood home visiting programs in Alaska, such as Parents as Teachers, open to interested families with young children prenatal up to kindergarten entry. Establishment of such programs is an investment in the young children of Alaska and their families, with a wide range of positive outcomes for years to come.

For more information on Parents as Teachers, contact Lisa Danielson, Parents as Teachers Alaska State Coordinator at ldanielson@ruralcap.com or 907-865-7334.

What is Parents as Teachers?

Parents as Teachers is:

- A parent education and family support program serving families through out pregnancy until their child enters kindergarten. Services to families include personal visits, group socialization opportunities with other families, developmental screenings to ensure a child's development is on track, and referrals to other services as appropriate.
- Designed to enhance child development and school achievement through parent education.
- A free voluntary program for families.

Why Parents as Teachers?

- Research has clearly shown that the early years are critical in a child's development and lay the foundation for success in school and in life.
- Parents are the most influential people in their children's lives; they are their children's first teachers. If we want to make a positive difference in the lives of children, we must make an impact with their parents.
- Extensive analysis by economists has shown that investing in effective early childhood programs, such as Parents as Teachers, produces great returns. These returns benefit the community through reduced crime, welfare and educational remediation.

Why Focus on the Years Before School Starts?

- Brain development that takes place before age 1 is rapid and extensive; the influence of the early environment on brain development is long lasting.
- Developmental "windows of opportunity" are periods of time when children are especially adept at learning specific skills including:
    - Motor skills such as turning over, walking, drawing;
    - Sensory skills such as seeing and hearing;
    - Communication skills including language; and
    - Social skills such as playing and interacting with other children.
- During these windows of opportunity, it is important to provide positive experiences for young children at the appropriate times to ensure optimal development.

Why Focus on the Parent?

- Parent education helps parents to understand what to expect during each stage of development and how to promote the best development in their child.
- Research shows that parental involvement in their child's learning is linked to the development of the child's academic skills, including reading and writing.

How is Parents as Teachers Adapted for Alaska?

- The majority of Parents as Teachers programs in Alaska hire people from within the communities being served to be trained as Parent Educators. This helps to ensure the people presenting the curriculum have a solid understanding of the community and the local culture.
- Alaska has its own Nationally Certified Parents as Teachers Curriculum Training Team. These trainers reside in Alaska and are experienced in providing Parents as Teachers services to families from a wide range of cultural backgrounds.
- Parent Educators are trained to adapt activities from the Parents as Teachers Curriculum to reflect the local community and culture of the family.
- Visits are provided in the family's home language.

What Outcomes has Parents as Teachers Achieved?

- At age 3, children who have been enrolled in Parents as Teachers are more advanced in language, social development, problem solving and other cognitive abilities.
- Children enrolled in Parents as Teachers score higher on kindergarten readiness tests.
- Children who participate in Parents as Teachers score higher standardized measures of reading, math and language in grades first through fourth.
- Parents who participate in Parents as Teachers are more confident about their parenting skills.
- Parents who participate in Parents as Teachers are involved in their child's education beginning at birth and they maintain this involvement in their child's schooling. Parent involvement has been shown to be a key component of a child's success in school.

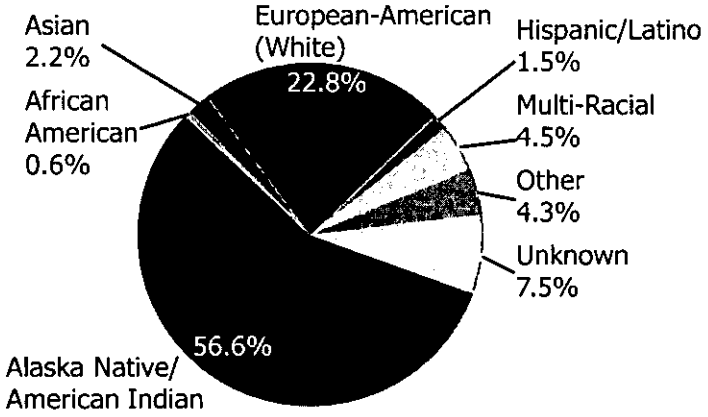
For more information on Parents as Teachers, contact Lisa Danielson, Parents as Teachers Alaska State Coordinator at ldanielson@ruralcap.com or 907-865-7334.

PARENTS AS TEACHERS ALASKA

2009 FACT SHEET

Parents as Teachers (PAT) is an evidence based international home visitation program dedicated to providing parent education services to families with children prenatal to five years of age through home visits and group meetings.

ETHNICITY OF CHILDREN SERVED



2009 HIGHLIGHTS

Services for Children and Families 2008-2009:

- 47 communities served
- 910 families served
- 1,112 children served
- 74 prenatal women served
- 14 homeless families were served
- 629 Alaska Native/American Indian children served
- 762 children received developmental screenings with 162 found to need further evaluation
- 336 families linked to other services

Percentages of Enrolled Children by Agency/Organization:

- 21% school districts
- 71% non-profit organizations
- 7% military programs

Professional Development:

- Trained and certified 43 Parent Educators and 9 supervisors in the Prenatal to 3 Years Curriculum
- Certified and trained 37 Parent Educators in the 3 Years to Kindergarten Curriculum
- 419 participants from 60 Communities attended PAT workshops/training institutes

Parents as Teachers State Office:

ALASKA HEAD START ASSOCIATION
Critical Issues
2010

- **INCREASE STATE OF ALASKA INVESTMENT IN HEAD START BY $3,500,000**

During the summer of 2008 the Alaska Head Start Association worked to put together a comprehensive two-year Head Start expansion plan to present to the Department of Education and Early Development. This plan called for $2.5 million in new funding from the state of Alaska in FY 2010 and FY 2011 to enroll approximately 275 new children. Another $1.6 million was included for deferred maintenance and to assist grantees to maintain existing slots that would otherwise be eliminated due to increased operating costs. While AHSA appreciates the Legislature's appropriation of $600,000 for Head Start expansion in FY 2010, this amount allowed grantees to enroll only 59 new children in three communities. In addition, programs across the state have struggled to maintain the same quality and quantity of services because appropriations have failed to keep pace with rising costs. Increased energy costs continue to be a serious concern for programs.

ACTION NEEDED: ***Increase Head Start funding by a total of $3,500,000. This amount allows approximately 220 additional children to receive Head Start services, addresses critical infrastructure needs and prevents any reduction in the number of Head Start slots available in Alaska.***

- **SUPPORT A COMPREHENSIVE STATE-WIDE PLAN TO ENSURE THAT ALL EARLY CHILDHOOD EDUCATIONAL SYSTEMS AND SERVICES ARE COORDINATED AND COMPLEMENTARY**

The Alaska Head Start Association supports continuation and expansion of a Pilot Preschool Program. AHSA believes that the need for Early Childhood Education in our state far exceeds what our existing systems can provide. However, the association also believes that the state has a responsibility to ensure that all publicly funded systems, existing and new, are working together to provide services in a coordinated and complementary manner. Written agreements addressing eligibility, enrollment, and recruitment need to be in place between all early childhood systems that are providing services in a common area.

ACTION NEEDED: ***Ensure that a comprehensive state-wide plan addressing how early childhood services will be delivered is developed and implemented. Any new legislation should require written coordination agreements between early childhood systems to eliminate duplication or competition in early childhood service delivery.***

• DEDICATE WORKFORCE DEVELOPMENT FUNDS TO SUPPORT HEAD START TEACHER QUALIFICATIONS

The "Improving Head Start for School Readiness Act of 2007" has established the following professional development requirements for Head Start:

- By September 30, 2011 100% of Head Start teachers must have an associates degree in early childhood education
- By September 30, 2013 50% of Head Start teachers nationwide must have a bachelor's degree in early childhood or a bachelor's degree and course work equivalent to major in early childhood education.
- By September 30, 2013 100% of Head Start Education Coordinators and Curriculum Specialists must have a bachelor's degree.
- By September 30, 2013 100% of Head Start teaching assistants must have a CDA and be enrolled in a degree program.

Alaskan Head Start grantees have made significant progress over the past five years to try and meet the existing professional development requirements. However to meet these new requirements by the timeframes outlined we will need to have a coordinated statewide response. Obtaining degrees takes time, especially when staff are taking classes via distance delivery and working full time jobs. Often this means that early childhood educators are only able to take classes in the evenings and during the summer.

ACTION NEEDED: ***The Department of Labor and Workforce Development should designate workforce development funds for early childhood education because it is an under-developed profession.***

• SUPPORT INCREASED HEALTH CARE ACCESS FOR ALASKAN FAMILIES WITH YOUNG CHILDREN

The Alaska Head Start Association strongly supports an increase in funding for the Denali KidCare Program. By taking this action our state will restore and expand eligibility criteria for health care coverage for the children of Alaska's working families. The primary goal of Head Start is to make sure children are prepared for success as they enter their school years. A vital piece of this preparation is insuring that families have affordable, adequate health insurance coverage for their children, which Denali KidCare provides.

ACTION NEEDED: ***Increase the income eligibility guidelines for Denali KidCare to at least 200% of Alaska's federal poverty level.***

Support Brings Success!

Alaska Head Start Association

Why Head Start Matters

Alaska's Head Start programs prepare young children for success in school and life.

1. **Head Start children are healthier than their peers from similar socio-economic backgrounds who are not enrolled in Head Start. Healthy children learn better.**

FACTS*
(The following figures refer to Head Start only. Early Head Start is not included.)

- 78% of Alaska's Head Start children received health screenings that meet Early Periodic Screening, Diagnosis and Treatment (EPSDT) standards. (EPSDT is Medicaid's well child check up program.) This compares to a 50% EPSDT medical screening rate for eligible 2-5 year olds statewide**.

- Of the 2,152 Head Start children who received health screenings, 356 were diagnosed as needing treatment for a variety of potentially serious conditions, including hearing & vision problems, anemia and asthma.

CONCLUSION
Without Head Start, we estimate that 100 or more children would enter kindergarten by 2009 with significant undiagnosed and untreated health problems.

**Based on federal 2007 Program Information Reports (PIR) for Alaska grantees.*
***For 2003, reported in the National Health Policy Forum issue brief #819, 11/20/2006.*

FACTS*
(The following figures refer to Head Start only. Early Head Start children are not included.)

- 88% of Alaska's Head Start children received dental exams. This compares to a 25% EPSDT dental screening rate for eligible 3-5 year olds statewide**.

- Of the 2,425 Head Start children who received dental exams, 586 were diagnosed as needing dental treatment. 376 of these children (64%) received treatment.

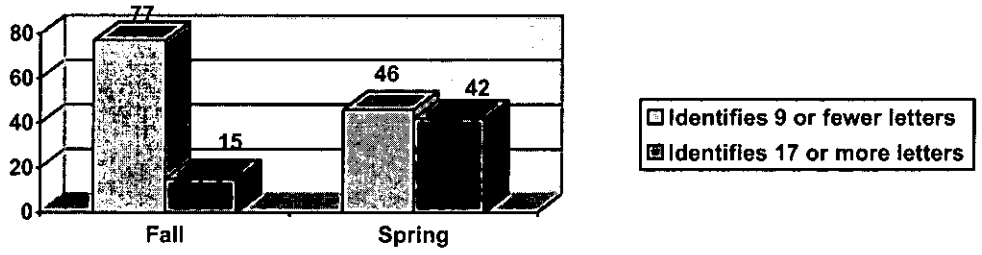
CONCLUSION
Without Head Start, we estimate that 270 or more children every year would live with untreated oral health needs. These conditions place a child's speech development, nutritional well-being, overall health and future oral health at risk.

**Based on federal 2007 Program Information Reports (PIR) for Alaska grantees.*
***For 2003, reported in the National Health Policy Forum issue brief #819, 11/20/2006.*

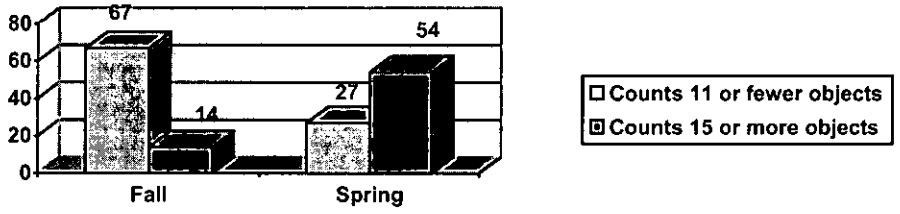
2. **Participation in Head Start improves literacy and math skills for many children who are at risk of starting kindergarten behind their better off peers in these areas.**

The following graphs are based on information taken from the National Head Start Reporting System (NRS) results of 11 Alaska grantees during the 2006-2007 program year. The NRS assesses only children who were going to kindergarten in 2007. The graphs include only those children assessed in both fall and spring— a total of 352 children in Region X programs and 329 children in AIAN programs.

Letter Recognition
(Percentages)



Early Math Skills
(Percentages)



Alaska's Head Start programs achieved results that approach national norms even though program characteristics differ from national averages in several significant ways.

- Alaska has fewer full day programs
- Alaska has fewer teachers with a Bachelor's degree

Program Characteristic	Alaska Program Averages	National Head Start Averages
Percentage of teachers with Bachelor's degree or higher	20%	44%
Percentage of children enrolled in full day programs	10%	53%

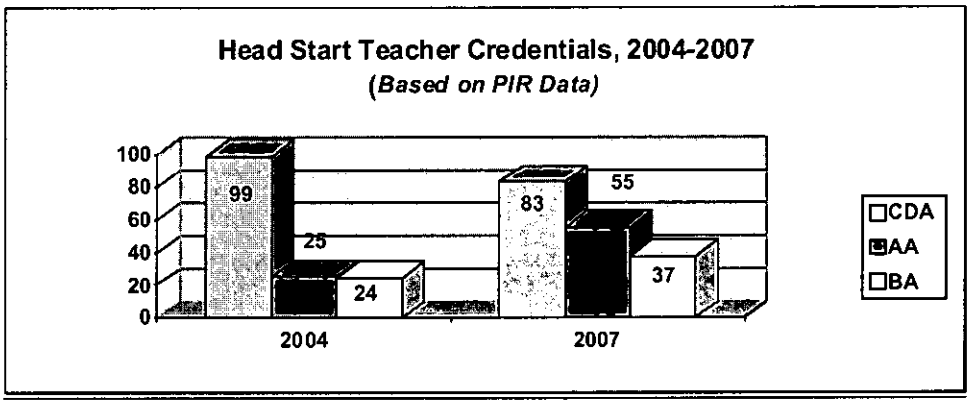
3. **Participation in Head Start increases the likelihood that children with previously undiagnosed disabilities will receive diagnosis and therapy for their disability before they enter kindergarten.**

FACTS*
(The following figures from the federal 2007 Program Information Report for Alaska grantees refer to Head Start only. Early Head Start children are not included.)

- 95% of Alaska's Head Start children received developmental screenings exams.
- Of the 2,600 Head Start children who received developmental screenings, 276 were eventually diagnosed with a disability.

CONCLUSION
Without Head Start, hundreds of Alaska's children would enter kindergarten every year with undiagnosed disabilities.

4. **The quality of Head Start teachers continues to improve in spite of funding and distance learning challenges.**



5. **Head Start provides economic benefits for all of Alaska.**

Federal Head Start grants injected over 27 million dollars into Alaska's economy in FY 2007. This sum does not include the many other sources of federal revenue, such as Child and Adult Care Food Program (CACFP) reimbursements, which Head Start programs attract. This investment provides an important source of economic activity and employment in many of the rural communities listed on page one. For example, Head Start programs employed 927 people in 2006.

The Future of Head Start in Alaska

Many studies link high quality early child development programs to large and long term economic savings. We believe that the early intervention, health, and school readiness results described above testify to the high quality of Alaska's Head Start programs.

2/24/10 REPORT: U OF AK BOARD OF REGENTS

Alaska's University for Alaska's Schools

UNIVERSITY
of ALASKA

Many Traditions One Alaska

Alaska's University for Alaska's Schools

Prepared for the State of Alaska

In Accordance with:
Senate Bill 241 (2008) 25th Legislative Session
Source Chapter No. HCS CSSB 241 (HES)

AN ACT
A report to the legislature on teacher preparation, retention, and recruitment by the Board of Regents of the University of Alaska

Prepared by:
Melissa Hill, Director of Operation for K-12 Outreach, Office for Academic Affairs, UA
Alexandra Hill, UAA Research Analyst, Institute of Social and Economic Research, UAA
Diane Hirshberg, Assoc. Professor of Education Policy Institute of Social and Economic Research, UAA
Gwen White, Assoc. Vice President Planning and Institutional Research, UA

In collaboration with:
John Pugh, Chancellor of UAS
Larry Harris, Dean of the School of Education UAS
Eric Madsen, Dean of the School of Education UAF
Mary Snyder, Dean of College of Education UAA

Under the direction of:
Daniel J. Julius, Vice President Office of Academic Affairs

Presented by:
The University of Alaska Board of Regents
Regent Cynthia Henry, Chair of the Board
Regent Patricia "Pat" Jacobson, Chair of the Academic & Student Affairs Committee

On February 24, 2010

Alaska's University for Alaska's Schools

PURPOSE STATEMENT

In 2008, the 25th Alaska State Legislature passed Senate Bill 241. This legislation required the University of Alaska Board of Regents to deliver a report titled "Alaska's University for Alaska's Schools" no later than the 30th legislative day of the session of each legislature, which for the 27th Legislature is on or before February 17, 2010.

OVERVIEW

The report describes the efforts the university has made to attract, prepare, and retain qualified public school teachers for Alaska's schools. This report includes information on teacher graduation and enrollment data; a gap analysis that documents the shortage areas in the teaching workforce; and recommendation for the State of Alaska as it seeks to improve educational opportunities for all students.

ADDENDA

- University of Alaska Teacher Education Plan
- Graduate Data Report by Major Academic Units
- University of Alaska FY11 Budget Priorities for Teacher Education

TABLE OF CONTENTS

TEACHER EDUCATION GRADUATION DATA **p. 2**
This section of the report includes aggregate data on University of Alaska graduates eligible to enter the K-12 education workforce as licensed educators. The data reflects four-year trends in graduate rates reported by Academic Year (AY) starting in 2006 and ending in 2009.

SHORTAGES IN THE TEACHING WORKFORCE **p. 6**
The content areas for the gap analysis on the teacher workforce are based on survey data collected from K-12 school administrators. These data have not changed from last year. The report also analyzes hiring data for the K-12 education system made available through collaboration between the University of Alaska Anchorage Institute of Social and Economic Research (ISER), the Alaska Department of Labor (DOL), the Alaska Department of Education & Early Development (EED), and Alaska Teacher Placement (ATP). The hiring data have been updated to include AY09. This section provides a general overview of the K-12 education workforce and highlights turnover data in specific shortage areas.

EFFORTS TO ATTRACT, TRAIN, AND RETAIN QUALIFIED TEACHERS **p. 11**
This section includes selected programs and activities that directly serve K-12 educators employed in Alaska. Examples include partnerships with the Alaska Department of Education and Early Development, professional development, curriculum and resources, and research efforts sponsored through the University of Alaska system.

THREE TO FIVE YEAR PLAN FOR TEACHER PREPARATION **p. 14**
This three-year plan builds on the efforts of the University of Alaska education units (UAS School of Education, UAF School of Education, UAA College of Education) to place more Alaskans into education positions.

RECOMMENDATIONS AND FISCAL NOTE REQUEST **p. 15**
In accordance with SB241, "*The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[1]

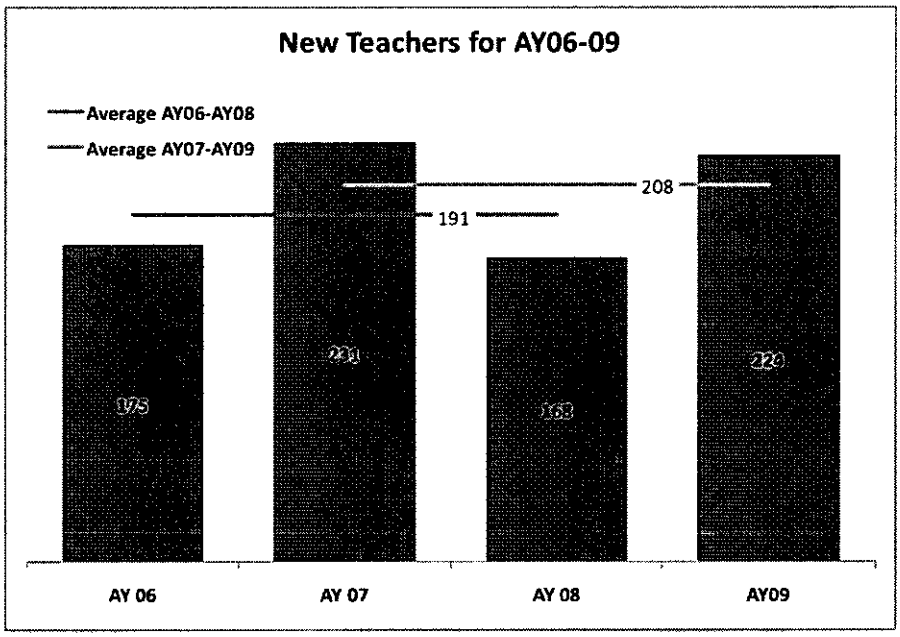
4242

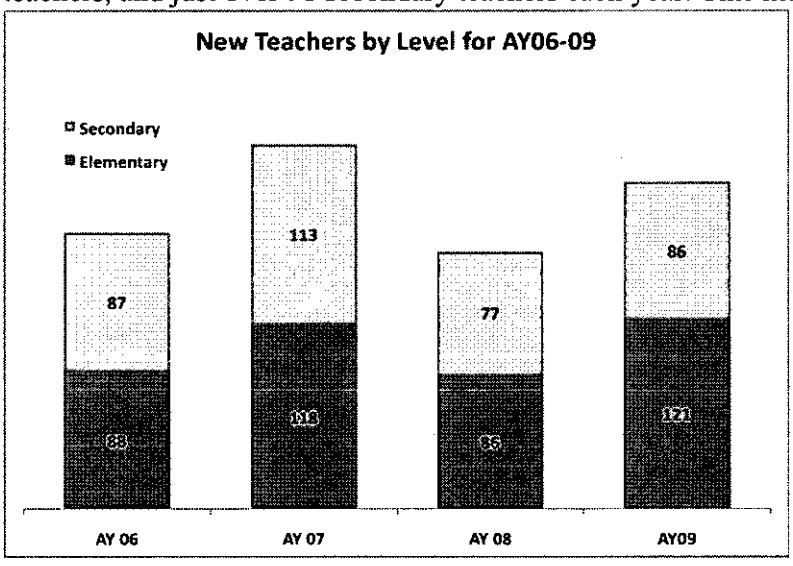
TEACHER EDUCATION GRADUATION DATA

New Teachers for Alaska

The University of Alaska graduated 175 new teachers in Academic Year (AY) 2006, 231 in AY07, 168 in AY08 and 224 in AY09. These numbers reflect bachelor degrees, master degrees, and licensure degrees awarded in elementary and secondary education for the three universities: University of Alaska Anchorage, University of Alaska Fairbanks, and University of Alaska Southeast. The three-year moving average increases from 191 graduates per year (AY2006 to 2008) to 208 graduates (AY2007 to 2009).



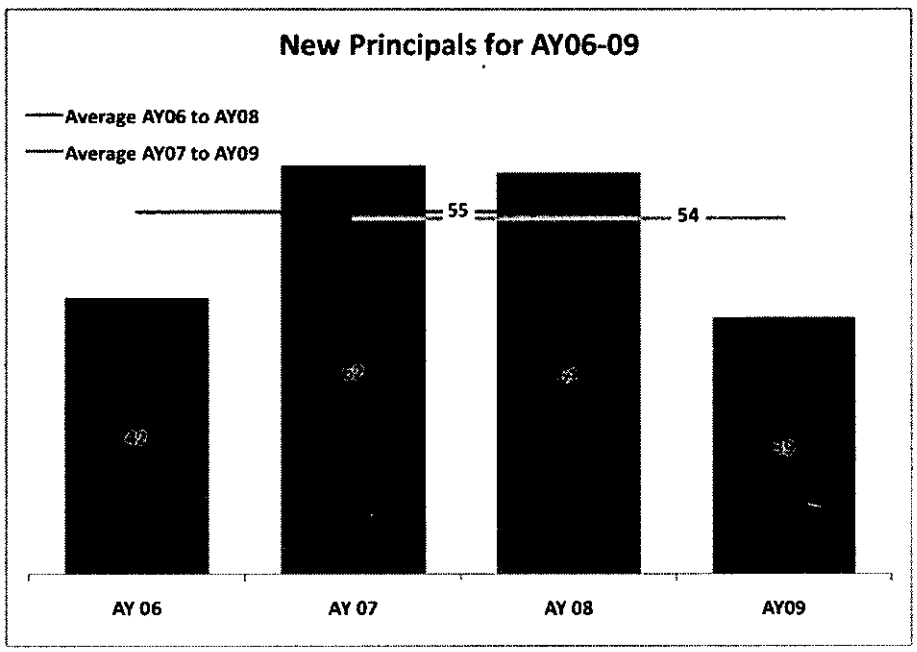
The University of Alaska graduates slightly more elementary teachers than secondary teachers each year. When averaged over four years, the university produces just over 100 elementary teachers, and just over 91 secondary teachers each year. This may be the result of several factors, such as, students can earn a bachelor degree in elementary education in four years, while secondary teachers must earn a subject-matter bachelor degree and then complete either a master or post-baccalaureate program. Students with degrees in mathematics and science in Alaska have more employment opportunities in the state when compared with students who graduate with a degree in elementary education.



4243

New Principals for Alaska

The University of Alaska graduated 42 new principals in Academic Year (AY) 2006, 62 in AY07, 61 in AY08, and 39 in AY09. The average number of graduates that complete a licensure program for administration is roughly 55. However, not all graduates seek an administrative position following graduation; some continue as classroom teachers, mentors, or pursue district office positions.



The University of Alaska Southeast in Juneau launched a new principal endorsement program in 2009. The summer cohort has 20 new applicants, some of whom are former and current teachers in the Alaska Statewide Mentor Project. The University of Alaska Anchorage offers a principal endorsement program and continues to produce school administrators for Alaska schools.

Other Endorsements & Degree Programs

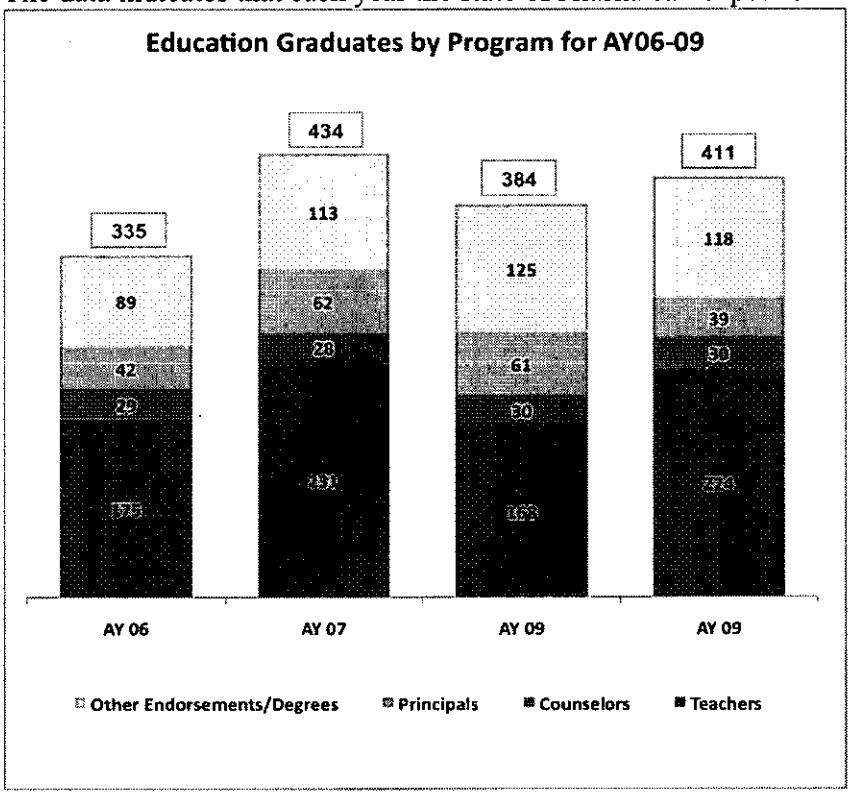
Each campus offers a variety of endorsement programs that lead to an advanced degree or, in some cases, a certificate of completion. Some of these programs are designed for current teachers who seek to add an endorsement and/or complete a master degree while also fulfilling requirements for state certification.

The University of Alaska Anchorage offers degree programs in special education, reading, and the state's only superintendent degree program. UAA also has an affiliated speech and language pathology program with East Carolina University (ECU). UAA provides the preparatory coursework via distance delivery along with in-state internships to candidates who apply to the ECU graduate program to become speech and language pathologists.

The University of Alaska Southeast Master of Arts in Teaching prepares teachers statewide, and enrollment in that program has increased to 36% from 2006 to 2009. UAS offers a total of six M.Ed. programs that can be accessed via distance and face-to-face; it is not uncommon for UAS to serve students throughout rural Alaska who seek to pursue a degree in education. UAS provides the necessary faculty supervision and support to students so they do not have to leave their communities to earn an education degree. UAS also successfully launched a school administrator program last year and has retained all 20 students enrolled in the program.

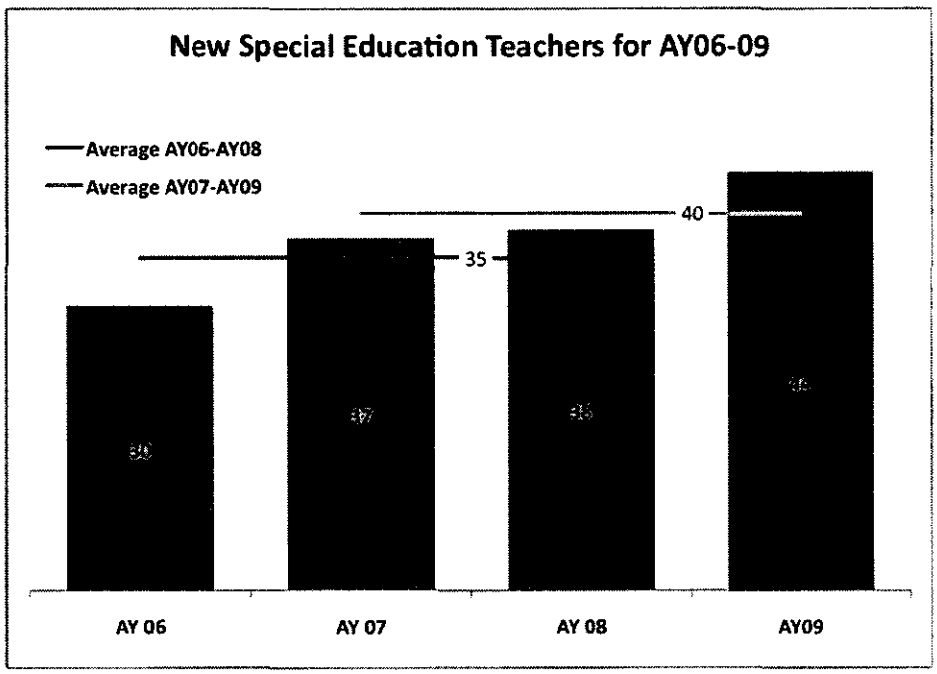
The University of Alaska Fairbanks offers the only terminal degree for educators through the Interdisciplinary Studies Ph.D. program. The UAF Elementary Department offers initial licensure programs at the baccalaureate and post-baccalaureate levels. The program leading to secondary licensure is post-baccalaureate. Both elementary and secondary licensure programs lead directly into optional M.Ed. degree programs if students so choose. UAF also offers Master of Education degrees in curriculum and instruction, cross-cultural education, language and literacy, and counseling. In the Fall of 2009, UAF enrolled its first students in the newly approved special education certificate and master degree programs.

The data indicates that each year the state of Alaska can expect on average 200 new teachers prepared to enter the K-12 education teacher workforce. However, not all students who enroll in education select high demand teacher certification areas, nor do all graduates go on to teach after they graduate with a degree in education. Further, graduates from the University of Alaska (like graduates elsewhere) are most likely to teach in the districts where they completed their internship, and much less likely to teach in the rural regions where they are needed most.



New Special Education Teachers

The University of Alaska produced 44 special education teachers in AY09. Of those prepared, 22 graduated from UAA and 22 from UAS. The UAF program has 19 special education students enrolled as of Fall 2009, this data includes four BAE students who will complete the special education certificate program along with their elementary degree program. UAF expects 10 students to complete special education certificates or master degrees by 2011.



Special education teachers have a higher rate of turnover compared to other teaching positions; thus, administrators must both replace teachers who leave a district or the teaching profession and replace vacant positions in special education when teachers move from a special education position to a regular classroom position within their district. As a result, special education teachers are in high demand each year. The Alaska Department of Education and Early Development reports that special education is also a federally designated teacher shortage area. Additional information is provided in the next section on special education teacher turnover rates in Alaska. UA is proud to report increases in enrollment, growth at UAA is up 27%, and at UAS up 36% from AY06 to AY09.

New Math, Science, and Special Education Teachers

Secondary teaching degrees awarded by the University of Alaska in math and science over the three-year period averages out to 12 mathematics certificates and 23 science certificates per year. For special education the average is 40 between AY07-AY09.

Number of UA Graduates in Mathematics and Science
UA AY2006-09

	AY06	AY07	AY08	AY09	3 Year (AY07-09) Average
Mathematics	9	14	9	14	12
Science (includes all sciences)	23	35	13	21	23
Special Education	30	37	38	44	40

SHORTAGES IN THE TEACHING WORKFORCE

Alaska Teaching Workforce

- 9,047 public school classroom teachers currently work in Alaska.
- Teacher shortage areas in Alaska include special education, mathematics, and science.
- Teacher recruitment and retention is more of a challenge for rural school districts in Alaska.
- Alaska school districts hire roughly 900 to 1,100 teachers annually.
- Roughly 800 to 900 vacant positions annually are attributed to teachers who exit the system.
- The average teacher salary in Alaska is $58,395, up from $56,757 in 2007-08.
- This year roughly thirty-four percent (34%) of current teachers are eligible for retirement.
- Sixty-five percent (65%) of Alaska's teachers are currently over the age of 40.
- Alaska Native teachers make up less than five percent (5%) of the teaching workforce, less than three (3%) of the principals, and less than two (2%) of the superintendents.

Gap Analysis for Special Education, Mathematics, and Science

Special education vacancies are unquestionably the hardest positions to fill. This challenge is equally common on a national level. While the need for special education teachers is not unique to Alaska, teaching in Alaska, especially rural Alaska is unique compared to the rest of the United States. Alaska districts, rural districts in particular, have the hardest time when it comes to the recruitment of special education teachers. Special education teachers have higher rates of turnover and this could be attributed to the work related demands required to teach special education. In a recent survey conducted by Alaska Teacher Placement (M. Hill, 2008) school administrators reported the hardest K-12 education positions to fill include special education and related services at forty-two percent (42%) of the total responses, followed by mathematics (22%) and science (15%). Additional studies need to be conducted to better understand the complexities of these trends.

Special Education Teacher Assignments in Alaska

	FY07	FY08	FY09
Total FTE of Special Education Assignments*	**1,087**	**1,040**	**1,111**
Stayers: Already in district and teaching	**920**	**906**	**1,007**

% of total assignments that districts need to fill	12%	13%	9%
% of total assignments filled by someone new to Alaska, teaching, or both	7%	10%	6%
Number of UA Science Endorsement graduates	35	13	21

Numbers may not add due to rounding for all above tables
Stayers are teachers already employed by the district, although not necessarily in the content area above

Between 2007 and 2009 the number of teachers needed to fill vacancies across special education, science and math declined. This indicates that retention rates may have increased. Still, the supply of teachers from the university, while slightly higher, does not close the demand gap. Additional research is needed on teacher turnover trends to help policymakers and school districts target resources and shape policy to promote retention, and in turn decrease the need to hire more teachers. The state, in collaboration with school districts, should look for strategies to reduce teacher turnover, especially in rural school districts.

Special Education Trends

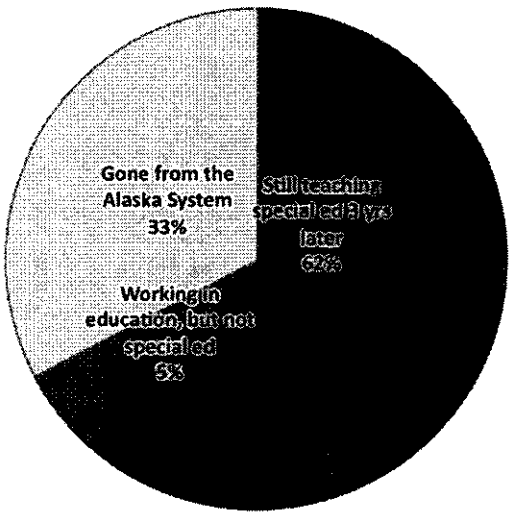
A recent report by the Institute of Social and Economic Research at UAA, (A. Hill & Hirshberg, 2008) found special education teacher turnover is higher compared to statewide turnover. Four years after a teacher enters into a teaching position, forty-nine percent (49%) of special education teachers were no longer teaching special education, and of those, only eight percent (8%) remained in the Alaska system, but teaching outside of special education. However, to simply produce more teachers in these areas may not address the issue of retention. In 2008, the Alaska Statewide Mentor Project (ASMP) reported, "*Through grant funding, ASMP has been able to*

increase focus on mentoring special education teachers by pairing mentors with special education certifications to work with early career special education teachers. Working with a sub-sample of about a third of all new special education teachers, ASMP has retained over 80% each year."[2]

Still, recent analyses of experienced special education teachers recruited from outside found that 52% leave the system within three years. Such high turnover of teachers is disruptive to student learning and is undoubtedly a drain on school resources.

In contrast, new special education teachers already employed in Alaska, plus those prepared in Alaska by the university system to teach special education, appear to stay longer over a three-year period. While the number in this group is small (n=55) the data is positive in that it does demonstrate higher retention rates for those teachers already living in Alaska who enroll in a special education program.

New Special Education Teachers Already in Alaska from AY06 to AY09



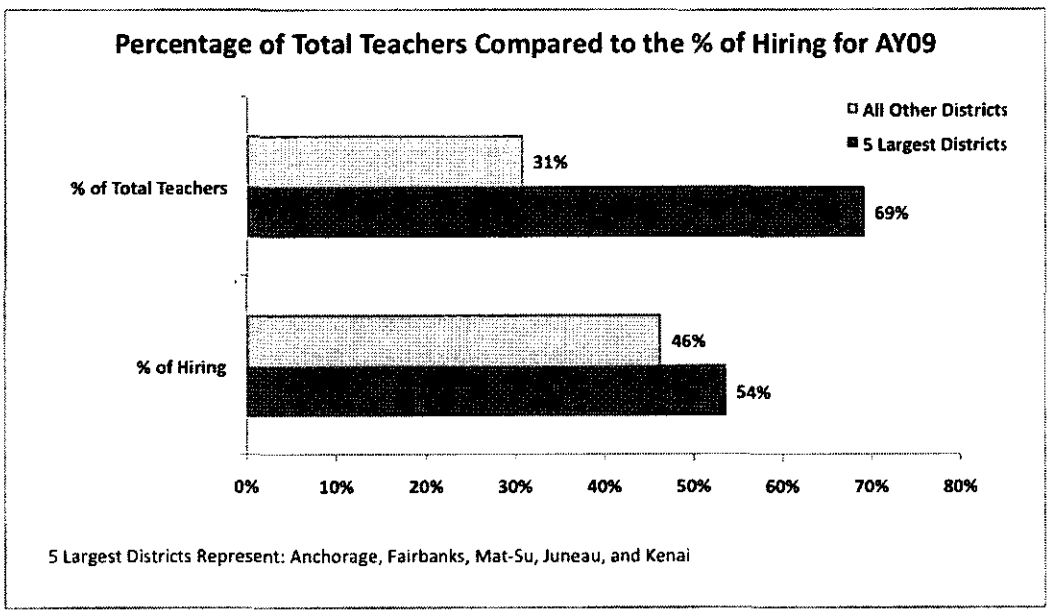
Experienced Special Education Teachers New to Alaska from AY06 to AY09

Source: Alaska EED Certified Staff Accounting Database

[2] Source: Alaska Statewide Mentor Project Research Summary 2004-08, Barbara L. Adams, Ph.D. Fall 2008

Hiring of Teachers Throughout Alaska

Annually, Alaska districts hire roughly 900 to 1,100 teachers for vacant positions in every teaching subject. However, special education and secondary content areas are in disproportionately high-demand. Of the estimated 1,000 new positions, roughly 150-200 are *movers*, defined as teachers who leave one school district for another, rather than exit the system. Movers are common in Alaska as teachers migrate from district to district. While the majority of teachers (69%) are employed in one of the five largest school districts in Alaska, only 54% of the teachers hired can be attributed to them. All other school districts made up 46% of the new teachers hired in AY09. More than likely the majority of the 46% represents small rural schools located off the road system and serve predominantly Alaska Native communities. This attests to the challenges rural schools face in recruitment and retention of qualified teachers. A large percent of those hired to work in rural Alaska are often from the Lower 48.



Elementary Teacher Assignments in Alaska

Even for elementary-level teachers, which are not considered a 'shortage' area, there are too few Alaska program graduates to fill the positions, and especially in rural areas where the majority of new hires are from outside the state. The table shows how Alaskan districts, especially rural districts need to import teachers from outside the state even for elementary classrooms. One in ten elementary teachers in rural Alaska were new to the state.

Elementary Teacher Assignments in Alaska – AY09	Total	Urban**	Rural
Total FTE of Elementary Assignments*	**3,160**	**2,221**	**938**
Stayers: Already in district and teaching	**2,938**	**2,154**	**785**
New hires: Assignments districts need to fill	**222**	**68**	**154**
% of total assignments that districts need to fill	7%	3%	16%
% of total assignments filled by:			
an experienced teacher from within Alaska***	95%	98%	89%
a new teacher from within Alaska	1%	1%	1%
a teacher new to Alaska	4%	2%	10%
Number of UA Elementary program graduates, AY09 = 85			

*Elementary assignments are non-special education assignments where the highest grade taught is 6th or lower
**Urban districts are Anchorage, Mat-Su, Kenai, Fairbanks and Juneau
***Alaska teachers who stay in their assignments and those who change districts
Numbers may not add due to rounding for all above tables
Stayers are teachers already employed by the district, although not necessarily in the content area above.

The Economics of Education in Alaska

In 1998 the Alaska Department of Labor Economic Trends reported, "*Jobs with local school districts in kindergarten through 12th grade number over 20,000— nearly seven percent of all wage and salary jobs in Alaska. No other industry in Alaska is more ubiquitous than education. Often local education is the single largest employer in a community. In fact, two of the state's 10 largest employers are school districts. In many communities, one of the few employers is the local school district.*"[3]

Further, the report finds that education dollars represent economic activity in the state and in all of the communities education is present. Financial support to local education in Alaska is not only an investment in education but also has immediate economic impacts statewide. Ten years later, the report's findings still hold true, however the analysis needs to be updated to reflect the current economic impact of education accurately.

[3] Alaska Economic Trends (1998) Kelm, Diana, Editor Alaska Dept. of Labor. February 1998, Volume 18, Number 2

EFFORTS TO ATTRACT, TRAIN, AND RETAIN QUALIFIED SCHOOL TEACHERS

To increase the number of teachers prepared in Alaska, more Alaska students will need to enroll and complete degree programs in education. The University of Alaska has an array of programs and activities designed to support teacher recruitment and retention of K-12 educators. In addition, the university continues to make K-12 outreach and bridging programs a priority in the operating budget and for federal grant requests.

Programs Designed to Support the Education Workforce Needs & Prepare More Teachers for Alaska

Future Educators of Alaska: Growing Our Own – Statewide

The Future Educators of Alaska program is a federally funded program made possible through the U.S. Department of Education. FEA is a statewide collaborative effort to inspire and support Alaska Native K-12 students to go into the education profession. The fostering of prospective Alaska Native teachers and administrators involves a partnership among teachers, communities, school districts, University of Alaska campuses and Alaskan Native leaders.

Preparing Indigenous Teachers and Administrators for Alaska Schools – UAS

PITAAS is a teacher preparation program for Alaska Natives at the University of Alaska Southeast. PITAAS is funded by a grant from the U.S. Department of Education. PITAAS scholarship award levels vary from year to year based on availability of funds.

Alaska Native Teacher Preparation Project: Growing Native Teachers – UAF

ANTPP seeks to graduate 27 Alaska Native or American Indian teachers by May 2011. They recruit college students in their junior or senior year or post-baccalaureate students to apply to one of the many education majors offered at UAF. ANTPP is funded through the U.S. Department of Education and is a partnership with the Alaska Native Education Association, Association of Interior Native Educators and the UAF College of Rural and Community Development.

Rural Alaska Principal Preparation and Support (RAPPS) Project – UAA

RAPPS at UAA receives federal pass through funding to recruit and train new principals for Alaska from Alaska. The program aims to prepare new principals to lead rural, high-poverty, and academically struggling schools.

Alaska Teacher Placement: Workforce Partnerships in Education – Statewide

The University of Alaska, in collaboration with the Alaska Association of School Administrators and partner school districts, established the Alaska Teacher Placement program in 1978. Funding from the University of Alaska and partner school districts allow ATP to support school districts with the recruitment of educators.

Alaska Statewide Mentor Project – Statewide

In 2005, the Alaska Department of Education and Early Development, in collaboration with the University of Alaska launched the Alaska Statewide Mentorship Project. ASMP is designed to provide individualized support to first- and second-year teachers thereby developing an effective teaching force that is responsive to the diverse academic needs and cultural backgrounds of all students. The project goals are to improved teacher retention and increase student achievement.

Programs Designed to Develop Curriculum and Resource in Collaboration with K-12

Math in a Cultural Context – UAF

MCC is a supplemental elementary school math series curriculum. The math modules that compose MCC are the result of a rather extraordinary collaboration of educators, Yup'ik elders, teachers, mathematicians, math educators, and Alaska school districts. This collaboration spans nearly two decades of work, which has formed meaningful relationships between the parties of this work to produce culturally relevant materials that connect local knowledge to school knowledge. Research studies found MCC to be effective based on rigorous experimental and quasi-experimental designs.

University of Alaska Geography for K-12 Programs – UAF (works Statewide)

UAGP for K-12 provides programs and resources for students and teachers in Alaska. The MapTEACH program is a hands-on education program for middle and high school students in Alaska focused on helping students understand the local landscape from multiple perspectives. The Stories of Culture and Place component helps teachers and students blend oral, written, and digital storytelling in a unique approach to art, literacy and content exploration. UAGP for K-12 is responsible for the organization of the National Geographic traveling map to schools across Alaska. This event was coordinated with Geography Awareness week.

The Alaska Arts Education Consortium – UAS

AAEC is an affiliation of school districts, organizations and individuals committed to prepare and support educators so that they can teach the arts across the curriculum. The purpose of AAEC is to promote high achievement for all Alaskan students in and through the arts to create and sustain communication networks, initiate and strengthen community partnerships, and prepare and support educators through professional development.

Alaska Educational Innovations Network – UAA

AEIN at the University of Alaska Anchorage is supported through a Title II grant from the U.S. Department of Education to support school-university collaborations. AEIN uses the expertise of the partners to enhance teacher quality and student learning. AEIN is responsive to the needs of partner districts, seeks to make teacher education a university-wide mission, and promotes effective, inclusive, and responsive governance. AEIN works with both rural and urban school districts across Alaska

Early Childhood Education "Continuing Our Growth" - UAF

The Continuing Our Growth project provides training and support for Head Start programs throughout Alaska. The program uses distance learning to assist a cadre of 10 staff in the use of Early Childhood Environment, as well as provides mentoring services through a partnership with the Alaska Statewide Mentor Project to the students while serving in their home rural Head Start locations. At least 20 classroom teaching staff are the recipients of scholarships to complete their AAS and BA degrees within the area of Early Childhood Education and Development.

Alaska Tech Prep Consortium – UAA and Statewide

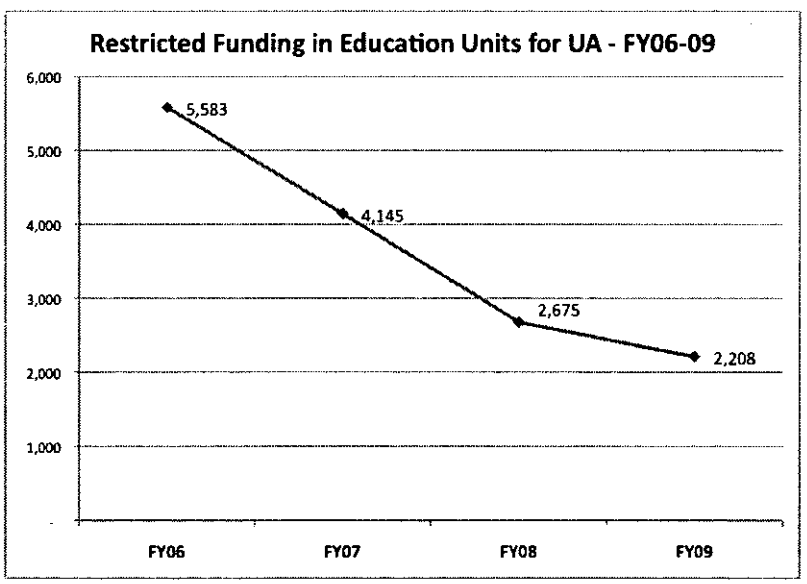
Alaska Tech Prep links secondary and postsecondary career and technical education, CTE programs into an integrated program. In a Tech Prep program, the student begins courses of study in high school and continues in postsecondary, apprenticeship or workforce training

programs. Students can earn college credit for courses they take in high school, enabling students to transition smoothly, avoid duplication, and successfully attain an industry recognized certificate or degree. Alaska Tech Prep is designed to prepare students to enter and succeed in postsecondary institutions or careers.

The programs and initiatives listed above are those most directly focused on initial preparation and professional learning for teachers. Other programs may not have education as their main emphasis, but still provide opportunities for teachers to expand their content knowledge; and in still other cases, the university contributes to programs led by other institutions by providing professional learning opportunities for teachers. Thus, this only represents a fraction of what the university offers under the efforts to "attract, train, and retain qualified school teachers" per SB241.

Alaska Department of Education and Early Development Education Plan for Alaska
Staff members at the University of Alaska are actively engaged in planning meetings to look at teacher quality, increasing graduation rates, career and technical education, teacher certification, and development of a virtual school as part of the development of the Alaska Education Plan initiated by Commissioner LeDoux. In addition, University of Alaska staff work closely with EED to administer the Alaska Statewide Mentor project. The Vice President for Academic Affairs has set up regular meetings with the Commissioner of Education to work on other items of interest under a P-20 agenda.

Federal Funding
Over the past four years restricted funds have decreased, challenging the education units' ability to grow in response to demand. Even with decreases in funding of up to 40%, University of Alaska has been able to provide services and support, mostly through sponsored programs and activities. Sustaining these programs, however, has become increasingly difficult.



THREE TO FIVE YEAR PLAN FOR TEACHER PREPARATION

Senate Bill 241 (2008) reads, "*The report must include an outline of the university's current and future plans to close the gap between known teacher employment vacancies in the state and the number of state residents who complete teacher training. The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[4]

The Teacher Education Planning Group of the University of Alaska has developed a three-year plan to address the workforce gap in K-12 education. The plan, attached to this report as an addendum, builds on the efforts of the University of Alaska Education Units (UAS School of Education, UAF School of Education, UAA College of Education) to place more Alaskans into education positions. To effectively address this challenge, we must continue to engage Alaskans in the process. This includes policymakers, the current administration, state leaders, teachers, school boards, superintendents, university faculty, parents, community members, and our students. The Teacher Education Planning Group will expand its collaboration with K-12 education leaders to develop a workforce that accurately reflects the diverse student populations they serve. In developing of this plan, we have been guided by a statement of shared commitment adopted in spring 2008 when the University of Alaska Education deans became part of the statewide Educator Preparation Planning Group established by President Hamilton:

The University of Alaska is committed to meeting the workforce needs of Alaska public schools. Producing quality teachers and administrators for Alaska who are likely to remain teaching in Alaska is the primary concern for the Teacher Education Planning Group. Additionally, the Teacher Education Planning Group is tasked with development and implementation of a three-year plan to address the workforce gap in Alaska. Attached as an addendum to the report is the Teacher Education Planning Document outlining strategies to address Alaska's education workforce challenges.

RECOMMENDATIONS AND FISCAL NOTE REQUEST

In accordance with SB241, "*The information reported under this subsection may also include short-term and five-year strategies with accompanying fiscal notes and outcome measures.*"[5] The invitational language is an opportunity to encourage the State of Alaska Joint Committee on Education to fully support the University of Alaska FY11 Budget Request.

The Board of Regents has taken great care in the development of the budget priorities for the University of Alaska since the passage of SB241. The priorities outlined in the University of Alaska Red Book demonstrate a commitment to address the educational needs of the state.

Requests for Additional Information

For additional information on specific items, questions or copies of the report, please contact Melissa Hill at the University of Alaska at (907) 450-8400.

ADDENDUM

to

Alaska's University for Alaska's Schools
Prepared for the State of Alaska

Graduate Data Report by Major Academic Units

February 17, 2010

This addendum to the Alaska's University for Alaska's Schools report provides detailed graduate data for each of the Major Academic Units within the University of Alaska system. Table 1. Education Degrees and Endorsements by MAU AY06 to AY09 include the data used to generate the subsequent graphs. University of Alaska Anchorage, University of Alaska Fairbanks, and University of Alaska Southeast are all separately accredited colleges/schools.

		Graduate Certificate, Elementary Education
		Graduate Certificate, Early Childhood Education
		Master of Education, Reading
		Master of Education, Mathematics K-8
		Master of Education, Education Technology*
		Master of Education, Early Childhood Education

*Program can be completed by distance education (requires no on campus visits)

The data in Table 2 only reflect degree programs compiled for the report. The list does not include all degree programs offered by the education units. For example, associates, early childhood, and paraprofessional certificate programs are not listed. New programs that have not resulted in graduates for AY09, such as: UAF Special Education and UAS Education Leadership are also not listed.

Good morning,

I am Pat Jacobson, chair of the Academic and Student Affairs Committee of the University Board of Regents. I would like to introduce Cynthia Henry, Chair of the Regents; Melissa Hill, Director of Operations for K-12 Outreach,; John Pugh, chancellor of UAS and Dan Julius, VP of Academic Affairs for the UA system. I would also like to acknowledge the efforts of the 3 education deans, along with Chancellor Pugh in collaborating on the Teacher Education Plan and would like to thank Melissa Hill, Alex Hill (who is in the Audience), Diane Hirschberg and Gwen White for the preparation of the UA report before you.

Late last night and early this morning I cut my 20 minute narrative of the report in 1/2, so as to allow more time for questions/comments. With the permission of the chair, I'd like to deliver the report and then revisit and answer questions, but, will, of course, abide by your desires.

PURPOSE STATEMENT

This is our second annual report, regarding Senate Bill 241, which passed 2 years ago, requiring regents to deliver a report titled "Alaska's University for Alaska's Schools". We've always supported this bill. It was emailed and you should also have hard copies before you.

Much of this year's report is similar to last year's – there are some improvements, albeit slight ones, and there are some signs of encouragement with things to come. The gaps between need and actual graduates remain significant, no question and the University continues to work on them. However, as we all recognize, it is a multi-faceted issue and some areas are simply beyond the control of the University.

The report describes the efforts the university has made in the areas of attracting, preparing and retaining qualified public school teachers for Alaska's schools. Information on teacher graduation and enrollment data are included, as well as a gap analysis documenting the shortage areas in the teaching workforce. The report also includes a recommendation for the State of Alaska as it seeks to improve educational opportunities for all students.

In addition, this year's report has the:

- University of Alaska Teacher Education Plan
- Graduate Data Report by Major Academic Units
- University of Alaska FY11 Proposed/Approved Budget Priorities for Teacher Education

Page 2-3: There IS a small increase in the # of NEW teachers graduated from UA in 2009 including BAs, MAs and licensure degrees. There is a slight **decrease** in New Principal graduates, with an average of roughly 55 per year. Administration graduates, as well as secondary math and science graduates often have many more options for careers

4263

in the state, thus a teaching career has stiff competition in the recruitment of those graduates.

UAA was joined by UAS in 09 in offering a principal endorsement program and UAS had a summer cohort of 20 new applicants, some coming from the Statewide Mentor Project.

Endorsement programs for advanced degrees or certificates of completion or recertification courses are offered at each campus. UAA offers Special Ed, Reading and the only Superintendent degree program in the state, as well as a speech/language pathologist program partnered with East Carolina U. UAS offers a Masters of Arts in Teaching. UAS has 6 M.ED programs that can be accessed via distance statewide or, of course, in person on campus.

Page 4: The only terminal degree for educators is offered at UAF, through the Interdisciplinary Studies Ph.D. program. UAF's elementary department offers initial licensure programs at bachelor's and post-bac levels. They also offer Masters of Ed degrees. 44 new Special ed teachers were graduated in 09, half from UAS and half from UAA and UAF began offering Spec. Ed certificate and master's programs last fall, expecting 10 to earn their certificates or masters by 2011. (The three campuses worked together to develop a single program that is offered at all three campuses. The increases are a direct result of this collaboration. This model, hopefully, can be utilized to attack the math/'science shortage.)

Roughly 200 new teachers are graduated from UA each year (there is high demand for these graduates and some don't end up teaching or, if so, don't go to rural areas, but, tend to stay where they have done their internships.)

Page 5-8: Teaching in Alaska is unique, particularly, in rural sites and the rural sites have the most difficulty in recruiting special education teachers. 4 years after entering a teaching position, 49% of special ed teachers are no longer teaching special ed. Simply producing more teachers in these areas doesn't address the issue of retention. An Alaska Statewide Mentor Project report indicates that, through grants special ed mentoring partnerships have had great success at **80% retention**, working with a sample of about 1/3 new sped teachers. **52%** of **experienced** special education teachers recruited from **outside**, leave the system within three years. New special education teachers, already employed in Alaska, AND those from UA's system seem to be **staying longer** over a three- year period. There was a small increase (101) in Sped teachers who stayed in 09; there were fewer assignments filled by new hires and a slight increase of 6 UA Special Education graduates. **(Page 7):** There were also fewer new math teacher hires and Math Endorsement graduates. We see similar percentages with Science teachers. These figures are a possible indication that retention rates **may** have increased. Nonetheless, a slightly higher production of UA trained teachers does not mean that the gap in demand is closed. More **research is needed** regarding teacher turnover trends in order to assist policymakers and school districts target resources and shape policy to promote retention and, in turn, decrease the need to hire more teachers. The state and school districts,

collaboratively need to look for strategies to reduce teacher turnover, especially in rural school districts.

(Page 6:)Along with shortages of math, science and special ed teachers are recruitments for teachers in general for rural districts in the state. Roughly 900-1100 teachers are hired each year in Ak, with 800-900 vacancies resulting from teachers leaving the system. 65% of Alaska's teacher workforce is over age 40. This year about 34% of current teachers **could** retire. Alaska Native teachers comprise less than 5% of the workforce, less than 3% of the principal positions and less than 2% of all superintendents in the state.

Page 10: The 1998 Alaska DOL Economic Trends indicated that there were over 20,000 jobs with schools K-12, which was nearly 7% of all wage and salary jobs in the state. Quote: "*No other industry in Alaska is more ubiquitous than education. Often local education is* ***the single largest employer in a community.*****" End quote**

Page 11-13: The University has a number of programs and activities for supporting teacher recruitment and retention of K-12 educators. Also, K-12 Outreach and Bridging Programs continue to be a priority in the University's operating budget and for federal grant requests. And there are numerous other programs which may not have direct relevancy, but, certainly do provide opportunities in the area of attraction and training of qualified school teachers. The University has a primary role of teacher attraction and training and the K-12 arena has a role, retention. (There **are** ways that the UA can help with retention, such as offering continuing ed courses and the Mentorship Program.) It is most heartening to see collaboration between EED and UA and others, as I've never seen prior to the past few years. I commend Commissioner LeDoux, President Hamilton, VP Julius, Chancellor Pugh and others for these efforts and successes.

Page 13: Over the past 4 years restricted funds have decreased, making the education units' ability to grow in response to demand more difficult. Still, UA has continued to provide services and support, primarily through sponsored programs and activities. Sustaining these programs, however, has become increasingly problematic.

Still on Page 13: EED
UA Staff are actively engaged in planning meetings to look at teacher quality, increasing graduation rates, career and technical education, teacher certification, and development of a virtual school as part of the development of the Alaska Education Plan initiated by Commissioner LeDoux. Moreover, UA and EED partner in administering the Alaska Statewide Mentor project. The VP for Academic Affairs is involved in regular meetings with the Commissioner of Education to work on other items of interest under a P-20 agenda.

Page 14: At this time I would like us to focus on the Teacher Ed Planning Group. I will turn to Chancellor Pugh to speak with you about this, since he has been the head of the committee and then I will wrap up, if I might, after his report. Chancellor Pugh -

Thank you, Chancellor Pugh.

The Board of Regents annually spends months on the budget and support **this** budget and encourage the State of Alaska Joint Committee on Education to fully support it, as well. The Board of Regents has also taken care in the development of the budget priorities for the University of Alaska as it relates to SB241. The priorities outlined in the University of Alaska budget Book demonstrate a commitment to address the educational needs of the state.

Summary:

We know that some things are working and progress is being shown, as this report has indicated, backed up by facts and figures.

Nursing and engineering graduation numbers are real success stories. We would like to see the same happen with teacher education, but, there are VERY significant dissimilaritie between them and teachers. I won't take the time to elaborate on that right now, but, will include it in my written narrative. There are other issues, such as teacher Housing conditions in some locations about which the University cannot do anything to help. If all Alaska-educated graduates were also teaching in the state, would there be a shortage? This question definitely needs more study. I truly believe that an Alaska Education Policy Research Center is needed badly to help address the innumerable problems and potential solutions in the realm of education. Information resulting from such a center could go a long way in assisting the University, DEED, DOL and other agencies and entities in coming to grips with and working on solutions to the many obstacles and problems associated with teacher attraction, education and retention in this state.

I want to assure you that the Board of Regents is paying attention to what campuses are doing in education as well as focusing on what the roles of the University and of K12 are and on working together. We are seeing slight increases, but, they are not nearly enough, at this point.

With that we'd be happy to discuss the report further or answer questions you might have. And, thank you very much for this opportunity this morning.

Gwen White, Director of Institutional Research and Planning

I. OVERVIEW

Commitment and Purpose

This three-year plan builds on the ongoing efforts of the UA Education Units (UAS School of Education, UAF School of Education, UAA College of Education) to place more Alaskans into education positions. To effectively address this challenge, we must continue to engage Alaskans in the process. This includes policymakers, the current administration, state leaders, teachers, school boards, superintendents, university faculty, parents, community members, and our students. The Teacher Education Planning Group will expand its collaboration with K-12 education leaders to develop a workforce that accurately reflects the diverse student populations they serve. In developing this plan, we have been guided by a statement of shared commitment adopted in spring 2008 when the UA Education deans became part of the SW Educator Preparation Planning Group established by President Hamilton:

> ***Teacher Education and Commitment to the State of Alaska***
> *The University of Alaska is committed to meeting the workforce needs of Alaska; producing the best teachers and administrators for Alaska is the primary concern for the Teacher Education Planning Group. Meeting the needs of both rural and urban school districts is complex and lends itself to examination of the status of the teaching profession. The current situation is ominous and complicates the recruitment and retention of high quality teachers; low salaries, the high cost of living, schools in corrective action, new policies related to teacher certification, the retirement system, and more lucrative career opportunities elsewhere are all variables outside of the immediate control of teacher preparation. Yet these variables have profound impacts on recruitment of students into the profession of education. We are committed to continuing to meet the needs of Alaska's schools and communities, while at the same time ensuring quality is not compromised by the quest for quantity. Innovative approaches and flexible programming will increase the supply of quality teachers for Alaska. These efforts will require alternative and additional resources, and ongoing collaboration.*

The Need: More Alaska Prepared Teachers

Public education is the foundation of all other workforce concerns. In an effort to address them, the University has prioritized teacher preparation, educational research, and K-12 partnerships. However, with the boom of other industry sectors that offer higher salaries and enticing benefits, recruiting students to teach in areas they are needed most, both in terms of region and content area, has become increasingly difficult. In order to increase the supply of teachers, particularly in schools that require the most attention, Alaska will need to invest in educational research that informs policy; examine the working conditions of educators, including compensation, housing and regulations; and work collaboratively to elevate the status of the profession. The Teacher Education Planning Group commits to increasing recruitment and retention efforts, maintaining a high level of quality, and

exploring more effective ways to provide broadly accessible, high quality educator preparation programs via flexible delivery methods.

The Context

The UA Education deans have been meeting several times each year for the past half dozen years to coordinate the planning and implementation of UA educator preparation programs. In the spring of 2008, this informal workgroup was formalized as the Teacher Education Planning Group in connection with the University of Alaska system-wide budget and planning process. Because teacher education was identified as a top priority for state leaders both within and outside the University system, this group, from its inception, embraced the following guiding principles:

- Continue to improve our understanding of the needs in and around the P-12 education system by systematically collecting and analyzing data.
- Through analysis of data and development of the plan, understand and address the concerns of state and local policymakers, including the Board of Regents, the State Legislature through SB241, "Alaska's University for Alaska's Schools",[1] and the State Department of Education & Early Development
- Work collaboratively UA system-wide and with external groups to implement strategies that address workforce needs in K-12 education for Alaska's schools.

Over the past eighteen months, group members have invited colleagues to a series of meetings and have themselves participated in other groups' professional meetings, such as the Alaska Association of School Administrators, to gather input for this plan.

Intent

The University of Alaska Teacher Education Plan will produce more Alaska-prepared educators through increased awareness of the profession; expanded access to educator preparation programs; and academic and professional support to retain students as they move toward successful program completion. We must also increase the diversity of the teaching workforce by making teacher education more attractive to underrepresented populations. The Planning Group identified four goals, along with appropriate objectives and actions, to guide this work over the next several years.

4269

II. Goals

The Education Planning Group has set four goals for the University of Alaska System:

1. Recruit and Retain more students in Education, particularly Alaska residents.
2. Increase program access through multiple delivery methods.
3. Enhance educator preparation programs in Special Education and in math and science teaching.
4. Conduct research to identify causes and propose solutions for education challenges in Alaska.[2]

For each of these goals, the Group has identified a series of actions and assessments.

1. Recruit and Retain more students in Education, particularly Alaska residents.

Rationale

The future of Alaska requires that every child has access to quality educators dedicated to individual student success. The education profession offers rewarding career opportunities, however the general public, policy makers, parents and students are not always fully aware of these opportunities and the rewards of the profession. Recruiting top students into the teaching profession is paramount to improving the Alaska education system.

Actions

1. Establish a formal Teacher Education Consortium that includes representatives from the Department of Education & Early Development, school districts, and industry that meets on a regular basis to improve the recruitment & retention of educators.

2. Conduct a multi-faceted public awareness campaign to market the education profession as a rewarding career.

3. Work with existing enrollment services staff to develop more effective strategies to recruit qualified candidates for Alaska teacher preparation programs, particularly rural and Alaska Native students and students from underrepresented populations.

4. Hire outreach and retention coordinators at each of the Education Units to work with school district and communities to recruit future teachers and support students during university transition points (program application, Praxis preparation, etc.) to increase student success and retention.

5. Coordinate with Future Educators of Alaska and other support clubs in the schools to develop a strong pipeline into Alaska teacher preparation programs.

Assessment

1. Meet with appropriate stakeholder groups at least twice annually.

2. Implement a statewide public awareness campaign that engages appropriate partners and includes specific steps to recruit educators from underrepresented populations.

3. Increase enrollment in UA system educator preparation programs by 5% in each of the next three years.

4. Increase number of certificates and degrees in Education awarded by UA. Because of the time required to earn Education degrees, most of the increase in awards will occur four or more years after increased enrollments are achieved.

5. Employ outreach and retention coordinators at each UA Education Unit to implement effective recruitment strategies and coordinate with partners. (See University of Alaska FY11 Budget Priorities for Teacher Education).

6. Each year, enroll at least 15% of high school students who participated in Future Educators of Alaska college readiness activities.

2. Improve Program Access Through Multiple Delivery Methods

Rationale

In an effort to create additional access to education programs, the Education Units will seek to meet the needs of traditional and non-traditional students, and students in rural areas with distance and online learning options. Partnerships with school districts need to be expanded to offer cohort-specific training as another form of program delivery that allows for more customized, service-oriented approaches to education.

Actions

1. Work with UA Distance Education committees to inventory current and emerging mediated teaching and learning strategies and to understand potential and limitations of each in Alaskan communities.

2. Improve program access for students in Alaska's diverse settings by:
   - further developing existing successful access methods such as distance delivery, intensives, summer programs, cohort models, and site-based faculty; and

4271

- further developing existing faculty expertise to support expanded program access.

3. Expand partnerships with school districts to offer training to cohorts to allow customized, service-oriented approaches to education.

Assessment

1. Number of education programs offered using modified delivery methods with the capacity to reach students in rural areas.

2. Number of cohort programs, intensives, and other appropriate delivery methods expanded or implemented over three years.

3. Offer professional development opportunities relevant to expanding program access to 100% of UA Education faculty.

4. Increase enrollment in UA distanced delivered education programs by 5% in each of the next three years.

3. Enhance educator preparation programs in Special Education and in math and science.

The number of applicants for Alaska's teaching and counseling positions has steadily declined over the past decade, even as business and industry have called for more highly skilled high school graduates. At the same time, districts have sought larger pools of teacher applicants with the necessary professional expertise to produce such graduates. Many educator preparation programs--private, public, for-profit, non-profit, campus-based, distance-delivered, and virtual—are answering the call to prepare these educators; some have a demonstrated history of academic quality, some do not. UA educator preparation programs strive to maintain high program quality while responding to Alaska's workforce needs and the changing context of public education and teacher preparation.

A. Special Education

Rationale

According to data collected through statewide Supply and Demand studies and from partner districts directly, school administrators rank special education positions as their hardest to fill[3]. The Teacher Education Planning Group has worked collaboratively to implement a system-wide, cross-MAU endorsement and degree program in special education.

Actions

1. Fill a tenure-track special education faculty position at UAF. (See University of Alaska FY11 Budget Priorities for Teacher Education.)

2. Collaborate across the three UA Education Units to offer the widest array of faculty expertise and special education emphasis areas consistent with State needs and current resources.

3. Develop a coordinated statewide campaign to recruit, prepare, and graduate special educators for Alaska's schools.

4. Increase the number of educators who complete programs at UA Education units and earn degrees and/or Alaska endorsements in special education.

B. Math and Science

Rationale

Science and mathematics are core areas under No Child Left Behind (NCLB). In Alaska, math and science positions are the second "hardest to fill" positions identified by school districts[4] Meeting the needs in these endorsement areas will require innovative recruitment strategies and engagement with colleagues in industry and Schools and Colleges of Math, Engineering, and Arts and Sciences to produce more science and math teachers.

Actions

1. Work with Arts and Sciences and Engineering colleagues to recruit undergraduates in math and science content areas into teacher preparation programs.

2. Establish innovative University faculty and business and industry partnerships to create teacher preparation pathways that will attract career changers and others with math and science expertise.

3. Assess, and if necessary strengthen, science and math preparation in elementary education programs to ensure program completers have the necessary content and pedagogical skills to meet district needs.

4. Increase the number of educators who complete programs at UA Education Units and earn degrees and/or Alaska endorsements in math and in science.

C. Ongoing educator program enhancement.

Rationale

As specific areas of educator shortages in Alaska change, as the education knowledge base grows, and as technological developments permit new modes of effective teaching and learning, UA education programs need to continue to adapt and grow to meet these demands. UAA education staff and faculty are skilled and dedicated, but most programs operate at or near capacity.

4273

SB241 and the University of Alaska's commitment to emphasizing educator preparation over the next few years provides UA Education Units with an opportunity to demonstrate that academic rigor and program quality can—and do—go hand-in-hand with creativity, innovation, and responsiveness to change at UA.

Actions

1. Continue and strengthen ongoing UA long-range planning process for Teacher Education with and across UA Education units, based on the priorities identified above.

2. Support UA Education faculty in their research on effective teaching practice and current and emerging innovations in education as applied to the Alaskan context.

3. Increase awareness of and access to career opportunities in education.

Assessment

1. Increase in number of educators who complete programs at UA Education Units and earn degrees and/or Alaska endorsements in special education.

2. Increase in number of educators who complete programs at UA Education Units and earn degrees and/or Alaska endorsements in math and in science.

3. Number of creative partnerships to enhance educator preparation programs between UA Education Units and UA schools/colleges that prepare math and science students, Alaska school districts, and private sector entities

4. Math and science competency of Elementary Education graduates.

4. Conduct research to identify causes and propose solutions for education challenges in Alaska.

Rationale

By establishing the Senate and House Education Committees, Alaska has taken an important step toward better understanding the the issues that impact both K-12 and Higher Education. However, Alaska has a significant need for more policy research, focused both on policy making and on the links between policy and practice. In particular, research will help Alaska address the numerous challenges related to teacher recruitment, retention, high dropout rates, finance, and access to education in rural areas. An increased emphasis on education research will provide valuable information to guide policymakers and will also serve internal university

departments and programs, the Alaska Department of Education & Early Development, the K-12 community, and the general public.

Actions

1. Create an Alaska Education Policy Research Center at the University of Alaska Institute of Social and Economic Research (See University of Alaska FY11 Budget Priorities for Teacher Education).

2. Increase UA Education faculty research on topics related to public education policy and practice in Alaska.

Assessment

1. Number and quality (as evaluated by peer and end user review) of data reports and publications addressing Alaska education challenges, policymaking, and the links between policy and practice.

III. Partners and Potential Partners

- Alaska Association of School Boards
- Alaska businesses and industries
- Alaska Commission on Postsecondary Education
- Alaska Department of Education & Early Development
- Alaska Department of Labor
- Alaska School Districts
- Alaska Teacher Placement
- Education Northwest
- Foundations and Grant Agencies
- Future Educators of Alaska
- NEA Alaska
- University of Alaska Schools and Colleges of Arts & Sciences, Math, Engineering
- University of Alaska Public Relations
- University of Alaska Office of Information Technology
- Western Interstate Commission for Higher Education

PHYLLIS CARLSON

DIRECTOR OF RURAL ED.

Louie Flora

From: Louie Flora
Sent: Thursday, April 01, 2010 12:21 PM
To: 'phyllis.carlson@alaska.gov'; 'john.moller@alaska.gov'
Cc: 'Herman, Marcy J (EED)'
Subject: FW: Update on Education in Rural Alaska tomorrow - Any questions from members?

One member of House Education has expressed that they are particularly interested in your take on the applicability of GPS (HB 297/SB 224) for rural Alaskan students.

From: Louie Flora
Sent: Thursday, April 01, 2010 11:17 AM
To: lhsclaf+houseeducationcommittee@legis.state.ak.us
Subject: Update on Education in Rural Alaska tomorrow - Any questions from members?

I have spoken to Phyllis Carlson, the Director of Rural Education in the Dept. of Education and Early Development and she told me that it would be beneficial to her presentation tomorrow if she could receive questions from the committee in advance of the hearing. Please e-mail me if you have any questions on the subject of Education in Rural Alaska or the position of Director of Rural Education so that I can forward these along to the Director.

Thanks!

Louie Flora
House Education Committee Aide,
Representative Paul Seaton, Chairman
(907) 465-3923

Focus of Office for the Rural Education is to:

- Work with the State System of Support Teams,
- Work with EED and school districts to implement the State Cultural Standard,
- Identify organizations and individuals to make up a Rural Education Advisory Board/Commission,
- Serve on the Suicide Prevention Council on behalf of EED.

Visited the following rural school districts to date:

- **Yukon Flats**: Ft Yukon in conjunction with regional school board meeting;
- **Yupiit District**: Akiachak, Akiak, and Tuluksak, with SSOS;
- **Lower Kuskokwim**: Qipnuk, Napaskiak; **Lower Yukon**: Alakanuk with Governor and Legislative facility visit;
- **Yukon/Kuskokwim**: In-Service at Fairbanks with all their schools;
- **North Slope**: Barrow to attend community meeting (Tumitchiat) exploring ideas for preparing locals to meet the workforce needs of the region.

Attended the:

- Alaska Federation of Natives Convention Oct. 2009; Announcement of Hiring
- State Board of Education meetings Dec. 2009, March 2010
- Suicide Prevention Summit held in Anchorage in January, 2010.
- Suicide Prevention Council meetings in Dillingham/Nov.'09; Anchorage/Jan.'10
- EED Winter Conference where I facilitated a Round Table discussion regarding the Cultural Standands: how schools are using them, barriers to using them.
- EED Principal Coaching Project in Anchorage
- Avant Garde Reception in Anchorage on behalf of EED
- Meeting with Alaska Educational Innovations Network/UAA
- Meeting with the Legislative Rural Caucus
- UAA showing of "For the Rights of All: Ending of Jim Crow in Alaska"
- Rural Sub-Cabinet meetings with the Commissioner
- Teleconference with the Superintendents and EED leadership
- Middle School Partnership Meeting in Anchorage, March 2010

Coming Events:

- Suicide Prevention Council in Tooksok on May 3-5 -7th for community meetings
- Meeting with the Commissioner after the session for Advisory Board
- Attending BMEEC in April 20-24th in Anchorage/meeting with ANEA re: cultural standards
- Continued work with SSOS teams and other EED divisions
- Working with AASB and Norm Wooton re: community leadership in the schools
- Working with DJJ in Health and Social Services, Ak Mental Health Trust Authority, Community, Family and Integrated Service, and Office of Children Services to form a team that will build around the work of one community;

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

THIRD JUDICIAL DISTRICT AT ANCHORAGE

KRISTINE MOORE, et al.,

Plaintiffs,

vs.

STATE OF ALASKA,

Defendant.

Case No. 3AN-04-9756 CI

JDO

MAR 31 2010

ORDER ON REVIEW OF 2009 SUBMISSIONS

The Education Clause of the Alaska Constitution provides that "the legislature shall by general law establish and maintain a system of public schools open to all children of the State."[1] On June 21, 2007 – nearly three years ago – this Court issued a Decision and Order that concluded that while the State may delegate its responsibility to maintain public schools to local school districts, as it had done, it had failed to exercise adequate supervision and oversight of chronically underperforming schools within the state. Specifically, this Court held in June 2007 that the State "has failed to identify those schools within the state that are not according to children a meaningful opportunity to acquire proficiency in the subject areas tested by the State and meaningful exposure to the other content areas in the State's education standards. And as to those schools that are deficient in that regard, the State has failed to provide

[1] Alaska Constitution, Article VII, Section 1.

adequate supervision and oversight in a concerted effort to remedy that situation."[2] This Court also held in June 2007 that the due process rights of children in underperforming school districts is violated when the State conditions the receipt of a high school diploma on the successful passage of the High School Graduation Qualifying Exam, when the students in such districts "have not been accorded a meaningful opportunity to learn the material on the exam – an opportunity that the State is constitutionally obligated to provide to them."[3]

Thereafter, evidentiary hearings were held before this Court in 2008 to assess the adequacy of the State's efforts to remedy the deficiencies this Court had identified in the June 2007 Order. On February 4, 2009, this Court issued its Findings of Fact, Conclusion of Law and Order. This Court concluded then as follows:

> Based upon all the evidence presented, this Court finds that the Department [of Education and Early Development], through delegation from the Legislature, is not currently meeting the State's constitutional responsibility to "maintain a system of public schools open to all children of the State." The schools in the chronically underperforming school districts are not constitutionally adequate; the Education Clause requires considerably more from the State in the way of oversight and assistance to those districts.[4]

The February 2009 Order directed the State to file with the Court each of the following: (1) a draft of standards that address the State's constitutional responsibility to insure that chronically underperforming school districts are providing students in those districts with meaningful exposure to the State's content standards; (2) a plan of action that demonstrated adequate remediation plans for students in the intervention districts

[2] Decision and Order of June 21, 2007 at 194.

[3] *Id.* at 195.

[4] February 4, 2009 Findings at 56-57.

for the High School Graduation Qualifying Exam; and (3) revised district intervention plans that address and incorporate as appropriate remedial measures that relate to each of the problem areas that the Court had identified in the Findings. The areas that the Decision identified as problematic included the lack of curriculum alignment, a lack of attention to content areas not covered by the State's standardized testing, a lack of attention to each of the specific strengths and weaknesses of each chronically underperforming district, a lack of consideration of pre-Kindergarten and other intensive early learning initiatives, a lack of attention to addressing teaching capacity deficiencies, and the Department's own capacity deficiencies to assist the chronically underperforming school districts.

Both parties have since filed considerable documentation with the Court. In 2009, the State was intervening in five school districts that the State had identified as chronically underperforming: Yupiit, Lower Yukon, Yukon Flats, Yukon-Koyukuk, and Northwest Arctic Borough School District. The parties' 2009 submissions to this Court, consistent with this Court's prior orders, were focused on the State's efforts in those five school districts. The Plaintiffs are not asserting that the State should be intervening in fewer or other school districts, or that the State's method for identifying those districts and schools in which it will intervene is constitutionally infirm.

The State asserts that "[s]ince 2005, the school improvement process in Alaska has been moving forward by leaps and bounds."[5] It maintains that it has demonstrated that it has fully complied with this Court's February 2009 Order, and now has in place a

---

[5] State's Memo. in Support of Filings Required by the February 4, 2009 Decision at 1.

system of accountability and oversight that meets its constitutional obligations. Accordingly, it asks this Court "to find the State in compliance with Section 1 of Article VII of the Alaska Constitution, and dismiss this case."[6] The Plaintiffs disagree. They "urge the Court to find the State in continued noncompliance" with the Education Clause. And the Plaintiffs urge this Court "to appoint a Special Master to determine the specific, targeted educational resources necessary to bring the State into compliance with its constitutional obligations."[7] In response, the State asserts that continuing this litigation is unnecessary because "the State has more than met this Court's specifications for state oversight of education."[8] And it asserts that "if further proceedings are necessary, they should be in front of this Court," and not before a special master.[9]

Discussion

This Court has carefully reviewed all of the parties' submissions from 2009. Based upon that review, this Court finds that the State has not demonstrated to this Court that the State is in full compliance with its constitutional obligations under the Education Clause. This Court finds that the State has not demonstrated that children in chronically underperforming school districts in this state are being accorded a

[6] *Id.* at 40.

[7] Plaintiffs' Response to State's Memorandum in Support of Filings Required by the February 4, 2009 Decision at 39.

[8] *Id.* at 53.

[9] *Id.* at 49.

"meaningful opportunity to acquire proficiency in the subject areas tested by the State and meaningful exposure to other content areas in the State's education standards."[10]

The lack of an aligned curriculum persists in the intervention districts.

The State has been administering statewide assessments of student achievement for over 20 years. Five years ago – in 2005 – the State began administering Standards-Based Assessments (SBAs) in grades three through ten. The SBAs are a comprehensive testing system to assess student proficiency in reading, writing and math, and most recently, in science. The SBAs are fully aligned with the State's instructional content standards in each of those subject areas. The parties in this case have agreed that the State has adopted constitutionally sound instructional content standards and testing criteria.[11]

This Court's June 2007 Decision held that the State must accord to each child a meaningful opportunity to achieve proficiency in the subject areas tested by the State, and that it had failed to do so in certain chronically underperforming school districts. One critical component that this Court found was lacking at that time was an alignment between the curriculum being taught to the students in certain districts and the State's instructional content standards. This Court first made clear the State's constitutional obligation in this regard nearly three years ago:

> If generations of children within a school district are failing to achieve proficiency, if a school or a district has not adopted an appropriate curriculum to teach language arts and math that is aligned to the State's performance standards, if basic learning is not taking place for a

[10] Decision and Order of June 21, 2007 at 194.

[11] *Id.* at 27.

> substantial majority of school's children, then the Constitution places the obligation upon the Legislature to insure that the State is directing its best efforts to remedy the situation.[12]

To date, the State has not demonstrated that the students in the chronically underperforming school districts in which the State has intervened are being given instruction on the material that is being tested on the State's SBAs. Indeed, in its 2009 filings with this Court, the State acknowledges "at this time, we cannot say that each intervention district has a curriculum fully aligned with the content standards."[13]

The State has elected to place the responsibility for curriculum selection and alignment on each of the underperforming school districts in which it has intervened. The State has concluded that "having each district be responsible for its own alignment is a good thing for education and this is the direction that the Department has chosen to go."[14] The State asserts that having each district develop its own aligned curriculum "is at the heart of the creative, 'brainstorming' process that excites and energizes a teacher" and that if the State were to provide an aligned curriculum to a district it would lead "to a sterile, bureaucratized education program that would increase teacher dissatisfaction and accelerate turnover."[15]

The State's delegation of curriculum alignment to chronically underperforming school districts is not constitutionally precluded, so long as the State is making its best efforts to insure that each such district is receiving the support and oversight it needs to

[13] State's Memorandum in Support of Filings Required by the February 4, 2009 Decision at 13.

[14] State's Reply in Support of Filings Required by the February 4, 2009 Decision at 41.

[15] *Id.* at 43. *But cf.* June 2007 Decision and Order at 118.

promptly complete this task. But the SBAs have now been administered since 2005, and yet the State has indicated that the curriculum alignment process in the intervention districts is far from complete and that it intends to allow the intervention districts an unspecified amount of additional time "to complete the alignment task in increments and on an expanded timeline."[16]

The State's continued delay in achieving curriculum alignment in the chronically underperforming school districts is not constitutionally acceptable. The Plaintiffs have persuasively argued that if each small school district is expected to select its own curriculum and align that curriculum to the State's standards, then there needs to be considerably greater technical support provided to each district to enable that district to promptly complete this task. Further, this Court finds that unless and until a chronically underperforming school district can fully complete those tasks, during the interim the State must immediately provide that district with access to a fully aligned curriculum together with adequate professional training so that that curriculum can effectively be used in the district's classrooms.[17] The materials submitted to this Court in 2009 demonstrate that the intervention districts have been requesting considerably more help from the State in order to fully align their curriculum, but for whatever reason, that additional assistance has not been provided to them. For example, the Lower Yukon School District's draft District Improvement Plan (DIP) for 2009-2010 repeatedly states in bold, "LYSD requests that EED make available to districts a clearinghouse of

[16] *Id.* at 41, n.121.

[17] *See* June 2007 Decision and Order at 16, ¶22.

resources and instructional practices that are not only research-based but aligned to Grade Level Expectations, as well."[18]

In light of the foregoing, this Court finds that the State is failing to meet its constitutional obligation to maintain schools in the chronically underperforming school districts because the State has failed to date to insure that those districts have teachers that are trained to teach a curriculum that is aligned to the State's standards in math, reading, writing and science. As this Court stated in June 2007, the State "must insure that its educational standards are being implemented at the local level so that all children within this state receive their constitutional entitlement to the opportunity for an adequate education."[19] To date, nearly three years later, this has not yet been achieved.

The State's efforts to insure meaningful exposure to the other content standards in the intervention districts has been inadequate.

Each of the many educators who have testified in this case have acknowledged that a student that receives instruction solely in math, reading, writing and science is not receiving an adequate education. To this end, the State developed content standards in several other subject areas apart from those tested on the SBAs, which include geography, government and citizenship, history, skills for a healthy life, arts, technology, employability, library/information literacy and world languages.[20] In the June 2007 decision, this Court recognized that to be constitutionally adequate, a public school

[18] Ex. 2609 at 63691, 63693, 63695.

[19] June 2007 Decision and Order at 186.

[20] *Id.* at 13.

education should address these other subjects, and held that "the State must insure that each school district has a demonstrated plan to provide children ... meaningful exposure on the remaining content standards."[21]

The State asserts that it has taken appropriate action to address this portion of the June 2007 Decision because it has adopted a draft of standards concerning meaningful exposure to the other content standards and it has informed the intervention districts that they needed to address these other content standards in their DIPs.[22]

Although the State has taken some action with respect to this issue, the State has not yet demonstrated adequate compliance with this portion of the Court's June 2007 decision. The State's 2009 submissions to this Court do not demonstrate that each of the intervention school districts has a demonstrated plan to provide children with meaningful exposure to the remaining content standards. With the exception of the draft DIP from Northwest Arctic Borough School District, each of the other plans submitted from the intervention districts falls far short of demonstrating a plan to provide the children within the district with meaningful exposure to the remaining content standards. The draft DIP for Yupiit was left completely blank in the space for the district to describe the means by which it will ensure students receive meaningful exposure to content areas not tested by the State.[23] And the Yukon Flats School District's draft plan

---

[21] *Id.* at 189.

[22] State's Reply in Support of Filings Required by the February 4, 2009 Decision at 39.

[23] Ex. 2608 at 63757.

simply states that the district action to address the other content standards consists of a "district-wide curriculum cycle" with "instruction and collaborative meetings."[24]

The State's 2009 briefing asserts that "in the future, the Department will monitor intervention districts regarding meaningful exposure for these content areas."[25] To date, the State has drafted standards that define meaningful exposure and it has sent a directive to the intervention districts to include meaningful exposure to the additional content areas in their DIPs. This Court's February 2009 decision required that the State draft standards that "address the State's constitutional responsibility to insure that chronically underperforming school districts are providing students in those districts with meaningful exposure to the State's content standards."[26] The State's submissions on this issue since that date are inadequate to demonstrate compliance with this component of that decision. This Court's February 2009 decision can not reasonably be interpreted to require only the drafting of an operational definition of meaningful exposure, together with the provision of a list of resources to school districts for content areas that are not tested by the State.[27] Rather, this Court intended by that order that the State direct its best efforts to insure that students in chronically underperforming school districts are actually being accorded meaningful exposure to the State's other instructional content areas.

---

[24] Ex. 2610 at 63419.

[25] State's Memorandum at 37.

[26] February 2009 Decision at 57-58.

[27] *See* Ex. 2637.

The State's submissions regarding the HSGQE Remediation Plans are inadequate.

The February 2009 Decision directed the State to "file with this Court a plan of action that addresses the concerns identified in these Findings with respect to the adequacy of the remediation plans in the intervention districts for the High School Graduation Qualifying Exam."[28] The State's 2009 submissions demonstrate that the State made some effort to address this topic with the intervention districts. *See* Exhibit 2641 at 63820-63821. But the Department has not demonstrated that it is providing adequate oversight and support to each of the intervention districts on this issue.

The Court does find that the draft DIP submitted from Northwest Arctic Borough School District demonstrates appropriate attention to this issue by that school district. *See* Ex. 2612 at 63620-63645. But even with that district, the record is silent as to the support and oversight, if any, that the Department is according to that district to insure that the plans the district submitted are being effectively implemented and that the State is providing that district with appropriate technical assistance to that end. In the other four intervention districts, the State has not adequately demonstrated that individual remediation plans are in place for each of the district's students who are not proficient in one or more of the subjects tested on the HSGQE. Indeed, the State's submissions indicate that while each district is expected to develop an individual remediation plan for each student, "details of each plan must be complete, and submitted to EED upon request, before December 15 each year for all students not proficient in all three sections of the fall exam." It is unclear from this language – in which only some of the

[28] February 2009 Decision at 58.

plans will be sent to the Department, and then only at the Department's request -- whether the Department has made any effort to actually review the HSGQE remediation plans of the intervention districts. In short, the State has failed to demonstrate that individual remediation plans have been developed for each student who has not achieved proficiency in each of the intervention districts and that those plans are actually being effectively implemented. Given that these districts are in intervention status due to chronic underperformance, the Department must provide considerably more in the way of technical support and guidance to each such district so as to insure that this component of the Court's February 2009 order is fully effectuated. For example, this might include the designation of one or more individuals at EED with the responsibility of overseeing all of the remediation plans in the intervention districts, who would also be available to provide technical assistance and guidance to each of the designated professionals for the students with respect to those remediation plans.

The State has failed to adequately address teacher retention and capacity.

It is undisputed that teacher turnover and teacher capacity are significant problems in the chronically underperforming school districts. Clearly, the constitutional requirement to "maintain a system of public schools" requires that there be a capable teaching staff in those schools. The State's 2009 submissions do not demonstrate that it has adequately addressed this concern.

In this Court's view, it could be very helpful to the intervention districts and the State if the State were to provide the resources to interview each of the teachers in the intervention districts at the end of each school year as to that teacher's reasons for

staying or leaving the district, and also asked each teacher to identify any specific additional resources or support that he or she seeks – be it in the classroom, with housing, with the district office, with EED, or in the community. To be most useful, the intervention districts would be closely involved in both the development of the interview questions and the analysis of the interview results. With this information in hand each year, the State would be in a better position to more effectively assist each of the intervention districts in addressing teacher turnover and teacher capacity in that district.

Further, as noted above, the State needs to insure not only that curriculum materials aligned with the State's standards are available to the teaching staff at each intervention districts, but also that the teachers are provided adequate instructional support and technical assistance so as to insure that that curriculum will actually be effectively taught in the classrooms. The State's 2009 filings indicate that the State has been making efforts to address teacher capacity, through Leadership Institutes as well as with technical assistance coaches, content support specialists, and teacher mentors in the intervention districts. And yet until the State insures that an aligned curriculum is available for all of the teaching staff in the intervention districts to effectively use, it would seem that these other efforts would be considerably less likely to significantly impact student achievement.

The Draft DIPs that were submitted do not comply with this Court's February 2009 Order.

In May 2009, the Department submitted draft DIPs prepared by each of the five intervention districts. As the Department itself acknowledged, "several districts' plans

required considerable additional work."[29] With the exception of the Northwest Arctic Borough School District's draft DIP, the draft DIPs do not adequately address the concerns identified by this Court in the February 2009 Decision. In short, four of the draft DIPs filed by the Department are not "revised district intervention plans that address and incorporate as appropriate remedial measures related to each of the problem areas identified in these Findings."[30] Considerably more work is needed for these plans to demonstrate compliance with this Court's February 2009 Order than what was submitted to the Court. Perhaps this work has now been completed, and the Court-ordered plans can be promptly filed. In its May 2009 filing with this Court, the Department indicated that it would be working with the intervention districts "over the next several weeks regarding the content of the final I-DIP's." Given that the State has elected to delegate the drafting of the DIPs to each intervention district, it would appear that the intervention districts could each benefit from considerably more technical assistance from the State in completing those plans. As of yet, the State has not demonstrated that the intervention districts each have appropriate DIPs actually in place that address the constitutional deficiencies set forth in this Court's February 2009 decision.

Conclusion

Based on the current record before this Court, the State has failed to demonstrate that it has complied in full with its constitutional obligation to "maintain a

[29] State's Memorandum in Support of Filings at 7.

[30] February 2009 Decision at 58. *See supra* pps. 2-3.

system of public schools open to all children of the State."[31] The State has not demonstrated that children in the chronically underperforming districts in this state are being according a meaningful opportunity to learn the material that is being tested on the State's assessments for reading, writing, math and science. Nor has the State demonstrated that children in those districts are being according meaningful exposure to the State's other content standards. And the State has not demonstrated that individual remediation plans are in place in each of the intervention districts to assist each of those students who have not achieved proficiency on the HSGQE. Dismissal of this action at this time is not warranted.

This Court rejects the Plaintiffs' proposal to appoint a special master at this time. The Court remains hopeful that the inadequacies identified in this decision can be promptly remedied by the State without extensive further hearings. However, in the event that these continuing constitutional violations cannot be promptly remedied after this Order, then the Plaintiffs may renew their request for a special master.

In evaluating the State's responses at this time, this Court returns once again to the language of the Alaska Constitution, which places the responsibility "to maintain a system of public schools open to all children of the State" squarely upon the Legislature – not upon the Department of Education and Early Development and not upon local school districts. To date, the State has not demonstrated that the delegation of this responsibility to school districts that have been identified as chronically underperforming, but which do not appear to have been accorded adequate assistance and oversight, will result in compliance with this constitutional responsibility.

---

[31] Alaska Constitution, Article VII, Section 1.

In light of the foregoing, IT IS ORDERED as follows:

Within 60 days of the date of this Order's distribution, the State shall file and serve each of the following:

1. A detailed plan as to how an aligned curriculum in each of the SBA-tested subject areas – math, writing, reading, and science – shall be taught in each of the intervention districts beginning in the fall of 2010. This plan will include a provision for adequate professional development to each of the teaching staff with respect to that curriculum.

2. A comprehensive review of the meaningful exposure to each of the other content areas that is currently offered to school children in each of the intervention districts, an identification of any deficiencies in that regard, and a detailed plan for each district as to how to address those deficiencies.

3. Detailed individual remediation plans for each junior and senior high school student in each of the intervention districts who has not yet achieved proficiency on one or more sections of the HSGQE. These plans shall be filed in a manner that protects student confidentiality.

4. District Improvement Plans for each of the intervention districts that adequately address the problem areas identified in this Court's February 2009 decision: curriculum alignment, content areas not covered by the State's standardized testing, ascertainment of the specific strengths and weaknesses of each chronically underperforming district, attention to pre-Kindergarten and other intensive early learning initiatives, and attention to teaching capacity deficiencies.

5. An update on the status of any specific efforts at the Yupiit School District. In its September 2009 filing, the Department indicated its intent to take additional steps to strengthen and expand its intervention in Yupiit.[32]

The Plaintiffs are accorded 30 days from the date of the State's submissions within which to file their response.

DATED this 31st day of March, 2010.

—Christopher Powers/Education Week

Some high schools are fighting the odds by employing research-based strategies.

By Mary Ann Zehr

Back to Story

Salem, S.C.

In the foothills of the Appalachian Mountains here in the northwest corner of South Carolina, high schools' attempts to curb student dropouts may not match what many people picture when they hear talk of the nation's "dropout factories." Yet one-fifth of the 2,000 high schools nationwide categorized that way by researchers at Johns Hopkins University are in rural areas, some of them small schools where students get a lot of personal attention.

With 50 such schools, South Carolina tops all other states in the number of rural schools on the dropout-factory list, with Georgia and North Carolina not far behind. Nearly half of those South Carolina schools have fewer than 500 students.

Tamassee-Salem Middle and High School here in Oconee County is among them. It has 154 students in grades 9-12 and is located in a town with fewer than 150 people whose commercial area consists of a convenience store, a dollar store, three churches, and a gas station. The school's challenge of graduating students illustrates that it's no simple endeavor to help them see the relevance of an education.

"We have generational poverty, a lack of aspirations," said Michael Lucas, the superintendent of the 10,400-student Oconee County school district.

Besides Tamassee-Salem, the county's West-Oak Senior High School, which enrolls about 1,000 students, is also on the rural dropout-factory list. The district's two other high schools are rural but didn't make the cutoff point for the list. The lion's share of students in all four schools are white, many of them poor. Mr. Lucas said the parents and grandparents of some children in Oconee County didn't finish high school so many of the current crop of students think, "Why should I?"

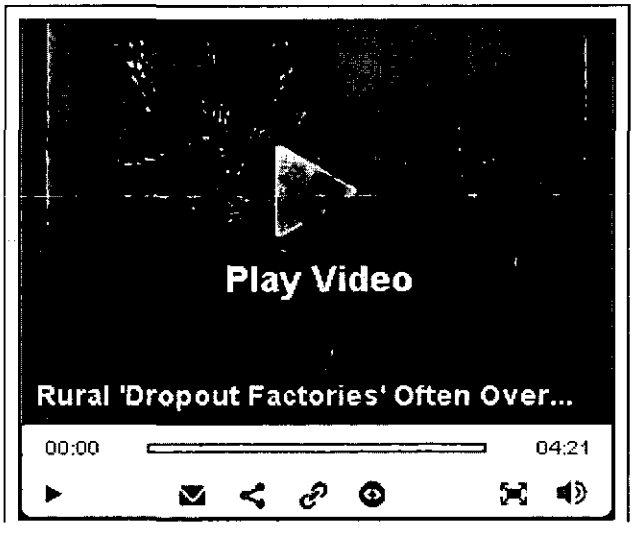
Despite such sentiments, the district is working to ensure that children read by 3rd grade to help them be successful over the long term, he said. The district also spent federal economic-stimulus aid this school year on hiring "adequate-yearly-progress coaches" who monitor struggling students and track them down if they miss school. If students fail a class, they can make it up online as part of a credit-recovery program.

In an area with a lot of youths who prefer to work with their hands rather than read books, the county has strong career and technical institutions. The district also runs an alternative school, charged with helping students at risk of dropping out get back on track.

The 2004 report **"Locating the Dropout Crisis"** first drew attention to a list of about 2,000 high schools that researchers considered to be dropout factories—"an institution that does a good job of systematically producing dropouts," said Thomas C. West, a University of Chicago researcher who is affiliated with the Everyone Graduates Center at Johns Hopkins University, which put out the report.

Since the inception of the list, most of the attention to the nation's dropout problem has been on urban schools, where the average graduation rate for the class of 2006 was 58.7 percent, compared with 73.1 percent in rural schools, according to ***Diplomas Count 2009***.

Mr. West says the high number of rural dropout factories in South Carolina, likely results from the lack of jobs and persistent poverty. Still, he sees an advantage to working on the dropout crisis in rural vs. urban areas: Schools have fewer students, and "you can put more emphasis on what's going on in their lives."



While most of the attention is on urban high schools with low graduation rates, rural schools also struggle to retain at-risk students.

Different Measures

Historically, the inhabitants of Tamassee and Salem could drop out of high school and get jobs in textile mills. But those mills have closed, and the region's manufacturers of electronic components, fiberglass insulation, and the like want students to earn at least a high school diploma or General Educational Development—GED—certificate, educators here say.

Steve M.R. Moore, the principal of Tamassee-Salem, is not happy with his school's rate for students graduating in four years, which was 75 percent in 2009. But he implores people to understand what is behind the statistic and to acknowledge steps he and his staff members are taking to increase the rate. They've seen some success: In 2007, the rate was 66.7 percent.

"The key is about building relationships and making sure the students can see they can be successful," Mr. Moore said.

While the Johns Hopkins researchers have highlighted a problem at Tamassee-Salem, others have lauded the school's accomplishments. In 2007, *U.S. News & World Report* gave it a bronze award for being one of South Carolina's best high schools. In 2008, the school was one of 25 in the South to receive a Pacesetter award from the High Schools That Work initiative of the Southern Regional Education Board.

"Unfortunately, people take the dropout-factory label as a stigmatizing term rather than a helpful term," said Mr. West, noting that the point of the label is to get policymakers to focus on the problem.

"Some schools need total reform; some may just need a lot of help. Some are doing well, but a couple of kids [in them] need extra help," he said.

The opportunity to learn welding at Hamilton Career Center helps motivate Tyler Galloway to stay in school. The junior considered dropping out because he finds school boring. —Christopher Powers/Education Week

Actually, the dropout-factory classification isn't based on schools' official dropout rates. At both Tamassee-Salem and West-Oak, the rate reported to the state in 2008 was 5.4 percent.

Mr. West and Robert Balfanz, the co-director of the Everyone Graduates Center, put a school on the dropout-factory list when, on average over three school years, the number of seniors is 60 percent or less than the number of freshmen at that school three years earlier.

By contrast, the graduation rate that schools report to South Carolina officials according to federal guidelines is the percentage of 9th graders at a school who earn regular high school diplomas and graduate in four years or less. It also includes students who enrolled in 9th grade for the first time elsewhere and then transferred to that school. Special education students who get certificates rather than high school diplomas count against the graduation rate. So do students who left school and then got a GED certificate, or who took more than four years to earn a diploma.

The dropout rate reported to the state applies to a single school year. It refers to students who leave school during that year and don't transfer to another school.

Future Paths

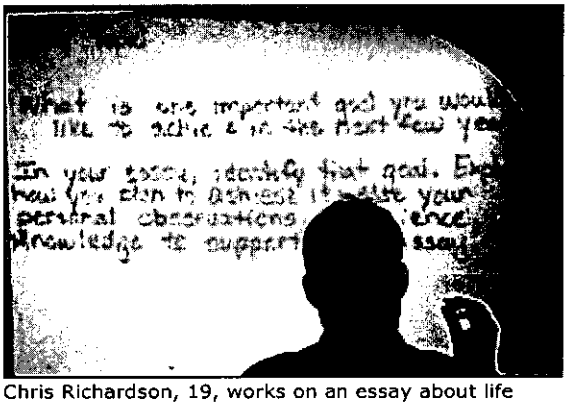
It's possible to find dropouts in the district's adult education program in Seneca trying to get a GED.

One of them is Allen R. Ellis, 17, who attended both West-Oak and Tamassee-Salem high schools. He was expelled from West-Oak Senior High. Later, he attended Tamassee-Salem High but dropped out after a couple of weeks because, he said, the school didn't recognize how smart he was and told him he'd be able to get only a certificate, not a regular diploma. Because of his lack of high school credits, Mr. Ellis said, it would have taken him until he was 21 to get a diploma, which he found discouraging.

He said he had often moved from school to school because his father was in the military and had failed classes because he didn't do his homework.

With a GED, he said, "I can join the military or go to college a whole lot sooner." He now works part time in construction.

Another young adult working on a GED, Holly Galbreath, 19, says she doesn't think administrators and teachers at West-Oak, where she dropped out halfway through her junior year, could have done much to keep her in school.



Chris Richardson, 19, works on an essay about life goals in a class to earn his GED. He says he left school in part because of poor relationships with teachers. —Christopher Powers/Education Week

"I got in with the wrong crowd," she said. "I started caring more about myself and my having a good time than my education."

In middle school, she said, she was motivated to keep at least a C average, in order to participate in extracurricular activities, such as cheerleading. But in 10th grade, she said, she dropped extracurricular activities, skipped school, and did drugs. "I was so far behind that it was going to be impossible to catch up," she said.

But Ms. Galbreath said she now wants to go to college so she can work in a field she enjoys, such as photography. She doesn't want to work in a factory.

Right now, the adult education program has 59 students who are ages 17 to 19. Steve Willis, its director, said the program serves about 130 students in that age bracket and gives out about 75 GED certificates and 10 high school diplomas to that group each year.

Matt Hunter is not among them. A dropout from West-Oak, he's not working on a GED and doesn't expect to return to the classroom. The 22-year-old lives with his girlfriend at his grandparents' house in Westminster. He's worked in landscaping before, and from time to time his neighbor pays him cash for helping him repair cars.

His girlfriend, Hali Cannon, 18, graduated from Seneca High School, also in Oconee County, and recently brought in some money working at a doughnut shop.

"I've been happy lately," Mr. Hunter said. "Every time we need money, it pops up."

Mr. Hunter said he liked math and Junior Reserve Officers' Training Corps because the teachers of that class had a sense of humor. But he disliked English class. Back in 5th grade, he had been diagnosed with dyslexia and repeated that grade. While he can read if he has to, he avoids it. As a 10th grader, he was badly injured when a car hit him while he rode a bike. He had to get around West-Oak in a wheelchair, which was difficult.

"Mom said if I wanted to quit, I could," he said, and he did.

'Whatever It Takes'

Tamassee-Salem High has a slogan this year of "whatever it takes," which Candice Brucke, the assistant principal, said means the school's educators aim to do whatever it takes to ensure each student gets a diploma.

Tamassee-Salem, she noted, is already implementing the six dropout-prevention strategies recommended in a **practice guide** published by the U.S. Department of Education's Institute of Education Sciences.

One of those strategies is assigning advocates to at-risk students.

The school is in its third year of running a program in which well-educated retirees from an affluent community nearby mentor students one on one.

Jane Brosnan, a retired software engineer who designed the program with the principal, said she believes that by providing a listening ear and encouragement, the mentors have helped some students pass their classes.

Tamassee-Salem High is deemed a dropout factory.
—Christopher Powers/Education Week

Tyler Galloway, a student at Tamassee-Salem, thought about leaving school because "I just get bored." Principal Moore talked with him about sticking it out, he said, and he thinks he will "because I'm so close now." A junior, Mr. Galloway has passed the state's high school exit exam and is on track with his classes. He said he's had some unexcused absences and plans to make them up, a state requirement.

The 17-year-old said the chance to take welding courses at Hamilton Career Center, the district's career and technical school, has also helped him stay in school. His goal is to get a welding job at Duke Energy, which runs a nuclear-power plant close to Salem.

Mr. Moore said that in his eight years as principal, he's tried to improve the quality of education at his school. Though the school is too small to offer Advanced Placement classes, he said, students can take such courses at other high schools in the county. Last year, he said, one student took advantage of that option. This year, no one has.

He's pushed for 8th graders to take algebra, and the school is now offering calculus for the first time in a decade.

An audit last year by a High Schools That Work team found many promising practices at the school. For instance, it had implemented up-to-date technology and ensured that all teachers are certified. The team, however, said it saw a lack of consistency in the use of innovative teaching strategies to engage students.

Maureese Robinson, the director of academic assistance at Tamassee-Salem for middle and high schoolers, works from lists of students who have failed classes or haven't passed the state's exit exam to identify those who need extra help. He runs an after-school homework center and Saturday school and stays in touch by phone with parents of struggling students.

"Whether they dropped out or not [themselves], I don't think any parent wants their kid to drop out of school," Mr. Robinson said. "I can't see that in any town. Some have more control over their kids than others."

Coverage of efforts to promote new routes to college and career success is supported by a grant from the Carnegie Corporation of New York.

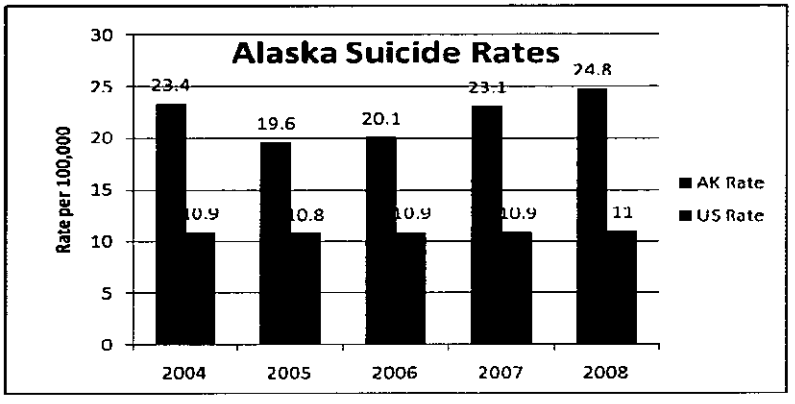
Alaska Suicide Prevention FY 2010

Statewide Suicide Prevention Council

According to a 2006 national study of suicides in the United States, Alaska ranks second among states with the highest suicide rate in the country. Alaska had approximately 167 suicides in 2008. Suicide is the second leading cause of death among Alaskans under age 50. According to the 2009 Youth Risk Behavior Survey, approximately 9 percent of high school students had attempted suicide in the past 12 months. Historically, the majority of suicides are occurring among our young people ages 20-29 years and are equally represented among both rural and urban communities. During 2008, there were also a high number of suicides among veterans, accounting for 27 deaths.



The Alaska Bureau of Vital Statistics, Last updated Nov. 17th, 2009 *2008 rates are preliminary.

Since 2005, Alaska has seen an increase in suicides.

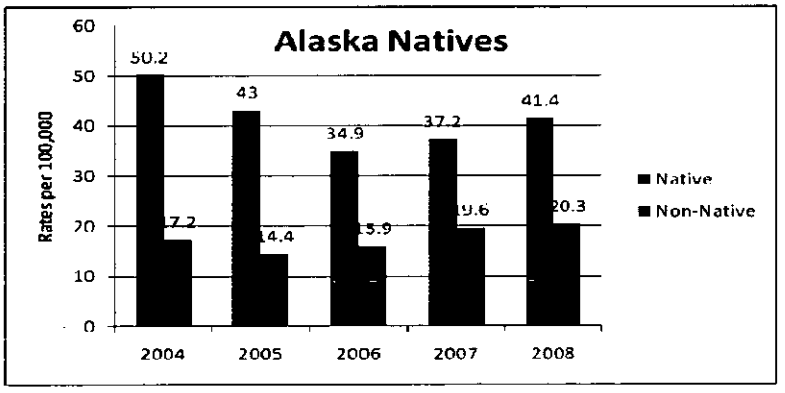
In 2008, there were 167 reported suicides in Alaska

Alaska
Bureau of Vital Statistics

The distribution of suicide by ethnicity shows Alaska Natives comprise 16% of the population, however they account for 39% of the suicides. The highest rate of suicide in Alaska is among Alaska Native male teens and young adults between 15 – 29 years of age. Older adults and gay, lesbian and transgender youth are also at an increased risk as well as those with chronic medical illness, trauma, past sexual abuse, substance abuse and mental illness most commonly, depression.

Alaska Natives have rates more than double that of non-Natives in Alaska. Non-Natives have a rate of 1 ½ - 2 times the U.S. rate.

Alaska Bureau
of Vital Statistics



Alaska Bureau of Vital Statistics, Last updated Nov. 17th, 2009 *2008 rates are preliminary.

Recent Accomplishments

Statewide Suicide Prevention Summit, "Mending the Net" January 11-13, 2010
Approximately 70 people from all over Alaska gathered in Anchorage in order to network and align resources to build and strengthen local, regional and statewide capacity for suicide prevention. Future meeting are planned for further integration between State and Tribal health systems including leveraging of partnerships and resources to support communities.

DHSS, Div. of Behavioral Health, Prevention & Early Intervention Services, Diane Casto, Manager, (907) 465-3370, James Gallanos, Program Coordinator (907) 465-8536

On May 16th, 2009, hundreds of people gathered for the "Walk For Life" to end Inupiat suicide in Kotzebue and Bering Straits Region

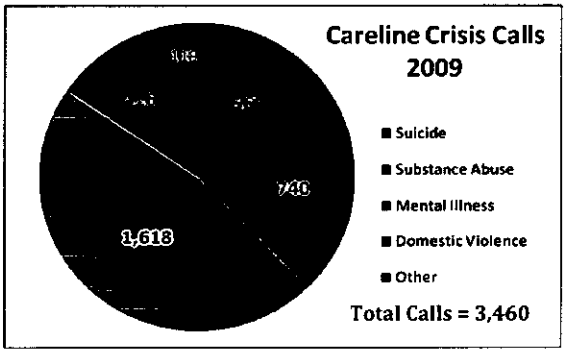
The Rural Suicide Prevention Planning Grant Project and the **Alaska Youth Suicide Prevention Project** are two projects coordinated by the Division of Behavioral Health, Prevention and Early Intervention Services section. The State awarded $550,000 for the development of Regional Suicide Prevention Teams that will create and develop strategic plans including the **Alaska Gatekeeper Suicide Prevention Training Program** which trains instructors in the delivery of suicide prevention awareness, education and intervention approaches to a wide variety of both professional and community based health providers. Regions awarded include Nome, Kotzebue, Dillingham and Akiachak and surrounding Bethel area villages, Southeast Alaska, Fairbanks and surrounding communities. These regions are continuing to plan and implement key strategies including use of evidence-based and other best practices to address suicide in their villages, communities and regions.

Comprehensive Behavioral Health Prevention and Early Intervention Services Grant. The Division of Behavioral Health, Prevention and Early Intervention Services section also is coordinating the program which includes **Alaska Careline**, www.carelinealaska.com, 24/7 crisis hotline and community-based suicide prevention projects and grant programs throughout the state in both urban rural/remote communities throughout the state.

Over 500 people were trained as Gatekeepers in 2009

Recent Challenges:

- Socio-Economic Impact in Alaska causing financial stress, unemployment and loss of productivity.
- Alaska Military Veterans and their families have an even greater risk due to depression, PTSD and other suicide risk factors.
- Need for accurate surveillance and suicide data collection for state, regional and local communities continues to be a key challenge (Alaska Follow Back Study Report 2007)



Local and community data help us understand community based processes may rely on informal supports or services that often bridge the gap between medical models based on disease prevention and community public health models. We must also recognize the value Alaska Native traditional healing and meaningful alternative strategies which increase protective factors and promote health, wellness, connectedness and resiliency among all Alaskans.

Next Steps:

Alaska Division of Behavioral Health is working to strengthen partnerships with the Statewide Suicide Prevention Council, the Alaska Mental Health Trust and partner boards, Alaska schools, Alaska Native groups and organizations, as well Alaska's Veterans organizations. Doing a better job of monitoring higher risk populations and developing proper and adequate early identification, screening and referral resources including gatekeeper training are necessary to avert suicide crises. These initiatives and strategies are aimed at balancing identified needs and resources with the understanding that:

1.) *Suicide prevention requires a multi-faceted approach, integrated into Alaska's continuum of care*
2.) *Efforts must be targeted simultaneously at the community, family and individual level*
3.) *For any of these efforts to be successful, there must be community involvement. That may require an assessment of readiness to address suicide prevention at the community level.*

Through capacity development at both the community and regional level, we can expect suicide prevention strategies that utilize effective practices that will be both culturally responsive and sustainable in the long-term thereby reducing suicide in Alaska

DHSS, Div. of Behavioral Health, Prevention & Early Intervention Services, Diane Casto, Manager, (907) 465-3370, James Gallanos, Program Coordinator (907) 465-8536

Focus of Office for the Rural Education is to:

- Work with the State System of Support Teams,
- Work with EED and school districts to implement the State Cultural Standard,
- Identify organizations and individuals to make up a Rural Education Advisory Board/Commission,
- Serve on the Suicide Prevention Council on behalf of EED.

Visited the following rural school districts to date:

- **Yukon Flats**: Ft Yukon in conjunction with regional school board meeting;
- **Yupiit District**: Akiachak, Akiak, and Tuluksak, with SSOS;
- **Lower Kuskokwim**: Qipnuk, Napaskiak; **Lower Yukon**: Alakanuk with Governor and Legislative facility visit;
- **Yukon/Kuskokwim**: In-Service at Fairbanks with all their schools;
- **North Slope**: Barrow to attend community meeting (Tumitchiat) exploring ideas for preparing locals to meet the workforce needs of the region.

Attended the:

- Alaska Federation of Natives Convention Oct. 2009; Announcement of Hiring
- State Board of Education meetings Dec. 2009, March 2010
- Suicide Prevention Summit held in Anchorage in January, 2010.
- Suicide Prevention Council meetings in Dillingham/Nov.'09; Anchorage/Jan.'10
- EED Winter Conference where I facilitated a Round Table discussion regarding the Cultural Standands: how schools are using them, barriers to using them.
- EED Principal Coaching Project in Anchorage
- Avant Garde Reception in Anchorage on behalf of EED
- Meeting with Alaska Educational Innovations Network/UAA
- Meeting with the Legislative Rural Caucus
- UAA showing of "For the Rights of All: Ending of Jim Crow in Alaska"
- Rural Sub-Cabinet meetings with the Commissioner

STATE OF ALASKA

Department of Education & Early Development

Office of the Commissioner

SEAN PARNELL, GOVERNOR

Goldbelt Place
801 West Tenth Street, Suite 200
P.O. Box 110500
Juneau, Alaska 99811-0500
(907) 465-2800
(907) 465-4156 Fax

March 29, 2010

The Honorable Paul Seaton
Chair, House Education Committee
Alaska House of Representatives
Capitol, Room 102
Juneau, AK 99801

Dear Chair Seaton,

As required by Sec 14.33.210 **Reporting of incidents of harassment, intimidation, or bullying,** The Department of Education and Early Development (EED) has compiled the following data on all incidents of school-based harassment, intimidation, or bullying for annual legislative review.

The enclosed data reflects all incidents of harassment, intimidation, or bullying severe enough in nature to result in student suspension or expulsion in the 2008-2009 school year as reported to EED by Alaska school districts. This data reflects all school districts as 100% of Alaska's school districts did submit suspensions and expulsions data to the EED for the 2008-2009 school year.

If you have any questions or would like additional information related to this report, please contact me at 465-2803 or at marcy.herman@alaska.gov.

Sincerely,

Marcy Herman

Marcy Herman
Legislative Liaison

Draft Blueprint for Constitutional Compliance:
Moore v. State

Introduction

Judge Gleason's three detailed orders have made clear that children in some of Alaska's schools are not being provided with a constitutionally adequate education. The Court has also made clear that the Alaska Constitution requires the State to provide districts and schools with the assistance and support necessary to provide each child with access to an adequate education.

In its February 2009 Order, the Court found "strong and persuasive evidence" that DEED's response to the crisis in Alaska's chronically low performing schools and districts has ignored both known causes of poor educational performance and known educational solutions to these problems. A full year later, the Court found that DEED is still failing to provide struggling schools and districts with a constitutionally adequate level of support and assistance.

The Court's latest order calls for the State to "promptly" remedy the inadequacies identified and detailed in the February 2009 and March 2010 Orders. The Court also emphasizes that, fundamentally, the constitutional obligation here is an obligation that rests with the Legislature itself. Accordingly, and given the Department's repeated failure to respond to the Court's concerns, the Legislature must take action to remedy the State's significant and ongoing constitutional violations.

Consistent with the testimony and evidence presented to the Court, the Court's findings to date, and widely-accepted research on educational reform and successful interventions for at-risk students, such a response should, at a minimum, address the following:

- Providing targeted educational resources to low performing schools and districts;
- Addressing teacher quality – including recruitment, retention and professional development – in low performing schools and districts;
- Access to high quality pre-kindergarten with parental involvement;
- Ensuring curriculum alignment – including adequate materials, research-based instructional strategies and professional development;
- Building DEED'S capacity to adequately assist and support struggling schools and districts;
- Ensuring community participation and engagement in education reform efforts; and
- Providing meaningful remediation efforts for students in intervention districts and chronically low performing schools who have been unable to pass the HSGQE.

Components for Constitutional Compliance

1) Provision of Targeted Educational Resources to Schools/Districts

Among the "array of promising, research-backed remedial measures to address the educational needs of students in these districts," the Court's February 2009 Order identified the provision of "targeted educational resources" to intervention districts. [2/09 Order, pp. 53-54]

Considerable evidence has been presented to the Court on specific, targeted resources necessary for chronically low performing schools and districts to meet the unique needs of students in those districts. These could include access to resources for specialized professional development, specialized curriculum for particular high-needs students (for example, students whose first language is not English), access to experienced and knowledgeable teaching mentors, content specialists, language development specialists, or social services. Additionally, the availability of targeted educational resources could assist intervention districts and low performing schools in ensuring that students in those districts receive the constitutionally required "meaningful exposure" to the areas covered by the State's content standards.

The State's efforts at constitutional compliance should include a mechanism to make targeted educational resources available to intervention districts and low performing schools. Because **instructional methodology**, **community engagement** and **adequate social services** have all been repeatedly identified as key to improving student achievement of at-risk students, plaintiffs recommend and support a formula-based program to provide schools and/or districts with targeted resources in these areas.

2) Addressing Teacher Quality – Including Recruitment, Professional Development, and Retention – in Struggling Schools and Districts

In order to meet its constitutional obligation, the State needs to provide sustained, high quality, relevant professional development to teachers in high needs schools and districts. Current teacher training programs do not adequately prepare teachers for the instructional challenges of teaching in remote areas of Alaska or in chronically low performing schools. Nor are today's teachers sufficiently prepared to implement intensive intervention strategies without significant additional training. If instructionally-focused interventions are to be successful in these districts, the State must provide teachers with the intensive training and ongoing professional development necessary to participate meaningfully in those interventions.

The importance of strong teachers is particularly vital in chronically struggling schools and districts, and for at-risk students. During the 2008 remedy phase hearing, education reform expert Dr. Linda Darling-Hammond described research showing that the combined effect of teacher characteristics, such as their qualifications, certifications and training, "more than offset the effects of race and socioeconomic status on students' achievement at the school level." This research shows that teacher qualifications and training "can compensate for" these other factors outside of schools' control and can "provide the instructional supports that can help schools be much more powerful in their effects on student achievement." [10/9/08 hearing testimony, p. 71]

In its February 2009 Order, the Court noted that DEED's interventions to-date had failed to "address teaching capacity due to high turnover, teacher inexperience and unique educational challenges in Alaska's chronically underperforming schools." [2/09 Order, p. 35] The Court described extensive evidence presented on the need to address these issues. [2/09 Order, pp. 35-36] Among other issues, the Court described high rates of teacher turnover in intervention districts, as well as a lack of an existing knowledge base amongst most teachers as to how to address the specific educational needs to students in these districts. [2/09 Order, pp. 35-39] The Court also explained the ongoing problem of attempting to build teacher capacity when such a large portion of a district's teaching staff turns over each year. [2/09 Order, p. 49-40]

In its March 2010 Order, the Court repeatedly notes the need for the State's interventions to include professional development to enable the teaching staff in intervention districts to effectively incorporate and implement the interventions. [*See* 3/10 Order, p. 7 (State must provide districts "with adequate professional training so that that curriculum can effectively be used in the district's classrooms.")]

As the Court described in the February 2009 Order, witnesses from multiple districts and the State testified about the need for "experienced master teachers and specialists" to provide ongoing, in depth training to teachers in struggling schools. [2/09 Order, pp. 37-40] And the Court quoted both former Commissioner Roger Sampson and current Commissioner Larry LeDoux describing the critical importance of "intensive, well-targeted professional development for teachers." [2/09 Order, pp. 37-38]

Accordingly, **the State's plan for constitutional compliance must include a plan to work with intervention districts to provide significant, in-depth professional development, including intensive hands-on support from experienced master teachers, to teachers in those districts.**

Also critical to addressing the teacher quality issues raised by the Court is the issue of recruitment and retention of high quality teachers. The Court addressed these issues in depth in its February 2009 Order, finding that DEED had "made no effort to address turnover problems in the intervention districts or to address the need for the considerable additional professional development necessitated by those turnover problems." [2/09 Order, pp. 39, 58] Despite having expressly ordered the State to address these issues, the Court in March 2010 found that "the State has failed to adequately address teacher retention and capacity." [3/10 Order, pp. 12-13]

Given the unquestioned effect of instructional quality on student success, and the significant and pervasive achievement gaps, particularly in remote areas of the State, the State needs to create "meaningful incentives" to allow rural schools to recruit and retain the highest quality teachers. [*See* 2/09 Order, p. 54] Such incentives could include a loan forgiveness program, or a grants-based program to assist individual districts in addressing specific turnover-related concerns in their district. [3/10 Order, p. 13]

The State's plan for constitutional compliance must include the direction of support and resources to issues of teacher retention. The State should collaborate with intervention districts in an individualized study of recruitment and retention needs, and should develop a plan to address those needs on an effective, individualized basis.

3) Access to High Quality Pre-Kindergarten with Parent Involvement

The Court has repeatedly criticized DEED for its refusal to consider and address "intensive early learning initiatives" as part of its interventions in chronically underperforming schools and districts. [2/09 Order, p. 33; 3/10 Order, p. 16] DEED's refusal to address these issues – and, in particular, the issue of access to high quality pre-kindergarten – is puzzling given the wealth of knowledge regarding the long term academic and socioeconomic benefits of access to high quality pre-kindergarten for at-risk students.

As explained by Professor Linda Darling-Hammond, access to quality early childhood education is critically important to academic success:

> Particularly for low-income kids or students who are coming into school non-Native English speakers, students who are coming from a different cultural context without the elements of language development that schools expect, preschool education has a large, well-documented effects on later success. [Dr. Darling-Hammond's Expert Report, pp. 9-10]

Indeed, during the 2008 remedy phase hearing in the *Moore* case, one issue on which the State's witnesses and plaintiffs' witnesses consistently agreed was the importance of early childhood education. According to John Holst, the State's very first witness, many students in remote and underperforming Alaska schools arrive to kindergarten several years behind their same-age peers in academic readiness. As a result, struggling schools are asked not only to provide these students with access to the skills and experiences covered in a kindergarten curriculum, but also to help them make years of academic progress during a single school year. Far more often than not, the result is that the students are unable to ever catch up.

In her testimony, Dr. Darling-Hammond explained that high-quality early childhood education is particularly important to meeting the needs of students in chronically struggling schools and districts:

> High quality early childhood education can expand the amount of influence that schools have on student achievement. Because by closing the achievement gap substantially before students start school, they put the students who would normally be lower achieving on a more successful school trajectory. [10/29/08 hearing testimony, p. 72]

Witness after witness in the *Moore* case has testified that if one thing could improve education for at-risk Alaskan students, it would be access to high-quality pre-kindergarten. The reason for this is simple. Across settings – rural schools, urban schools, small schools, large

schools – access to high-quality pre-kindergarten improves short-term and long-term academic success, and pays great economic returns.

Given this evidence, the Court criticized the State for failing to "address the significant language development gap known to exist in the intervention districts, despite its well-documented connection to student achievement." [2/09 Order, p. 35] The Court found that DEED's interventions in chronically underperforming schools had "accord[ed] inadequate consideration of pre-kindergarten and other intensive early learning initiatives designed to address the unique educational challenges faced by students in Alaska's chronically underperforming school districts." [2/09 Order, p. 33] Likewise, the Court's March 2010 Order directed the State to adequately address "attention to pre-kindergarten and other intensive early learning initiatives." [3/10 Order, p. 16]

In light of the importance of intensive early learning opportunities, the State should make high quality early childhood education available to all students in at least the intervention districts and chronically low performing schools, if not to a wider selection of districts with at-risk students.

While DEED recently implemented a pre-k "pilot program" in a few locations, much more is needed. Given the extent of the available research showing the significant academic benefits of pre-kindergarten, the State should not limit access to high quality pre-K to only a few schools being served by a "pilot." Likewise, the narrow choice of a "pilot," which does not even serve all of the schools currently under DEED's "intervention," is questionable given that Judge Gleason has now twice found that the State is violating its constitutional obligation to provide meaningful support, assistance and educational resources to chronically underperforming schools and districts.

As a matter of constitutional compliance, the State must consider and address the early learning needs of students in struggling school districts. As a matter of education policy, the achievement gap in Alaska will continue to persist as long as the State continues to ignore the need for high quality pre-kindergarten education with a strong parental involvement component.

4) Ensuring Curriculum Alignment – Including Adequate Materials, Research-Based Instructional Strategies, Support and Professional Development

Judge Gleason has repeatedly criticized the Department for failing to ensure that an aligned curriculum is in place in chronically low performing districts. [6/07 Order, p. 15; 2/09 Order, pp. 28-30; 3/10 Order, pp. 5-8]

After the Court's 2009 Order expressly criticized the State's failure to make "any concerted effort to insure that curriculum in each intervention district is aligned with the [GLEs] for the State's performance standards" (2/09 Order, p. 29), DEED responded by telling the Districts to each undertake the complex and time-consuming task of curriculum alignment. In her most recent order, the Court found DEED's response "not constitutionally acceptable," and

specifically instructed that DEED must insure that an aligned curriculum is available for use in each district by Fall 2010. [3/10 Order, p. 7]

Judge Gleason has made it clear that the State is constitutionally required to take whatever steps are necessary to enable chronically low performing districts and schools to offer a fully-aligned curriculum in each of the state performance standards. Further, Judge Gleason has agreed with the intervention districts that fully aligning the curriculum to the standards is a task well beyond the means of most small districts. State assistance and support to districts must include making available a standardized curriculum and related assessment materials from which districts and schools could draw.

Under the terms of the March 2010 Order, **the State must provide districts with access to an aligned curriculum for each grade level for each subject tested on the SBAs.** This curriculum should include sample lesson plans, research-based instructional strategies and formative assessments to support each subject tested on the SBAs for all grade levels. Plaintiffs further believe the State should likewise provide aligned curricula designed to provide meaningful exposure to each of the State content standards. And, as emphasized throughout Judge Gleason's March 2010 Order, **the State must provide sufficiently detailed professional development to ensure that teachers in the intervention districts are able to utilize the curriculum provided by the State.**

5) Technical Assistance and Enhancement of Educational Resources Within DEED

In order for the State's interventions to be effective and in order to bring the State into constitutional compliance, **the Legislature must take steps to enhance DEED's ability to effectively support and assist Districts.** These steps should include both the creation and funding of additional content specialist positions within the Department, and an organizational audit to determine how best to enhance DEED's ability to meaningfully support districts.

If DEED is going to provide meaningful technical assistance and support to Districts, **the Legislature must create and fund significant additional content specialist positions within DEED**. DEED currently lacks sufficient subject-matter expertise to offer in-depth technical support to districts and schools. DEED cannot meet its mandate to provide such technical support until it increases its staff to add that expertise. Significant additional content specialists in math, reading, language development, early childhood education, instructional interventions and other areas are necessary to enable DEED to provide much-needed technical support to chronically low performing schools and districts.

In addition, **the Legislature should authorize an organizational audit** to identify and address the systemic barriers to District-Department collaboration and the ways in which DEED can more effectively support the Districts and schools it oversees. The evidence presented in the *Moore* case indicates that the Department's capacity to effectively support Districts is hampered by a lack of staff within DEED to provide effective technical assistance. An organizational audit would assist to identify the specific areas in which the Department's capacity is lacking, and the remedies to those deficiencies.

6) Ensuring Community Participation and Engagement in Education Reform Efforts

The State's plan for constitutional compliance must include measures reasonably calculated to ensure community participation and engagement in education reform efforts. The February 2009 Order notes the Department's failure to consider or attempt measures "directed at improving student attendance and the school's interface with the local community." [2/09 Order, p. 54]

The State's efforts to comply with the Court's Order must include meaningful efforts to gain community buy-in and engagement in intervention districts and chronically low performing schools.

7) Providing Meaningful Remediation Efforts for Students in Intervention Districts and Chronically Low Performing Schools Who Have Been Unable to Pass the HSGQE

In 2007, the Court held that, where students have not been accorded a meaningful opportunity to achieve academic proficiency, it violated students' due process rights to condition receipt of a high school diploma on passage of the HSGQE. [6/07 Order, pp. 191-195] In its 2009 Order, the Court Ordered the State to develop "a plan of action" addressing whether adequate individualized HSGQE remediation plans were in place and being implemented for intervention district students who had not been able to pass the HSGQE. [2/09 Order, pp. 56, 58] The Court explained that such remediation plans should be individualized to focus on each student's particular areas of deficiency, and should include for each student an assigned professional to monitor the student's progress towards proficiency. [2/09 Order, p. 12]

The Court's 2010 Order finds that the State has still not demonstrated that such plans are in place or that the Department is providing adequate support to intervention districts on this issue. [3/10 Order, pp. 11, 16] The Court stated that "the Department must provide considerably more in the way of technical support and guidance to each such district." [3/10 Order, p. 12]

The State's HSGQE remediation efforts must include **working with intervention districts and other chronically underperforming schools to develop and implement individualized remediation plans** to insure that each student is being provided with a meaningful opportunity to learn the material covered by the test. The State's efforts must include **sufficient assistance, support, educational resources and professional development to insure that such plans are able to be effectively implemented.**

Implementation

Judge Gleason's February 2009 and March 2010 Orders state that time is of the essence in curing the State's ongoing constitutional violations. Additionally, it is the Legislature which is ultimately responsible for curing these violations.

Pre-Kindergarten

In its February 2009 Conclusions of Law, the Court held that the evidence presented "establishes that there is an array of promising, research-backed remedial measures to address the educational needs of students," including implementation of high-quality pre-kindergarten. [2/09 Order, p. 54] Indeed, a wealth of research establishes the link between early literacy and long-term educational achievement, and establishes that access to high-quality pre-kindergarten services is a proven way of improving long-term educational achievement for at-risk students. Accordingly, Plaintiffs have prepared draft legislation intended to provide access to high quality pre-kindergarten to students in chronically underperforming schools and districts. The draft legislation is based on the available research identifying what components are necessary to constitute "high quality" pre-k known to achieve long term benefits. The draft legislation also includes assistance to districts to address barriers to establishing a pre-k program, such as teacher housing and classroom facilities.

Immediate Assistance through Targeted Educational Resources

Plaintiffs have also prepared draft legislation intended to provide immediate assistance to districts in order to provide meaningful educational opportunities for at-risk students, including students in poverty, students who are English Language Learners, students attending schools in which the Department has intervened, and students attending schools in which a significant percentage of students score Far Below Proficient on the Standards Based Assessment.

The bill provides a mechanism to address the various causes of low academic performance in chronically underperforming schools and school districts. These causes include students' difficulties in English language development; districts' difficulties in recruiting and retaining high quality teachers; and the lack of access to in-depth professional development related to instructional methodology and intensive interventions for struggling students in these districts.

The bill also provides for loan forgiveness and other incentives for teacher recruitment to struggling remote schools. Some remote districts faced teacher turnover of more than fifty percent at the end of the last school year. Losing half the teaching staff each year makes it virtually impossible for districts to provide staff with in-depth training and professional development, and creates turmoil and uncertainty within the school setting. The bill provides research-based recruitment and retention efforts focusing on financial incentives, as well as access to high quality professional development.

Because of the Departmental capacity issues addressed in the Court's February 2009 Order, the draft bill also provides for an organizational audit of DEED, to assess and improve its ability to assist districts and chronically underperforming schools through meaningful educational content and assistance.

Other Immediate Relief Required by the Court's Order

In addition to the two pieces of legislation already in draft form, the State will need to address as to each intervention district the following specific issues identified in the March 2010 Order:

- Curriculum alignment, including research-based instructional strategies and adequate professional development;
- Meaningful access to the content standards, including individualized assessment of such access in each intervention district, and a plan for ensuring meaningful exposure;
- Individualized inquiry into teacher capacity needs; and
- HSGQE remediation, including technical support and assistance to effectively design and implement intensive individualized remediation plans.

Long-Term Analysis and Strategic Planning

In addition to the foregoing immediate remedial measures necessary to bring the State into basic constitutional compliance, the plaintiffs believe that the long term interests of the state educational system will be best served by the creation of a task force to study and recommend long-term solutions addressing, but not limited to, the following:

- Involvement of the university system to address teacher training and capacity issues;
- Design of long-term strategies for professional development statewide;
- Design of long-term strategies for teacher retention;
- Building and maintaining capacity within DEED;
- Development of professional standards boards and review of teacher certification requirements; and
- State development of research center/clearinghouse on curriculum and instructional strategies for use in Alaska's schools.

Testimony to the House Education Committee

April 9, 2010

Respectfully Submitted by Norman Eck, Ph.D.

Thank you for allowing me the opportunity to testify this morning. For the record, I am Dr. Norman Eck, Superintendent of Northwest Arctic Borough School District. I have been employed as an administrator in this District for 12 years and this is my 5th year as superintendent. Last year I was the Alaska State Superintendent of the Year.

On a personal note, I have 2 adopted children, both born in Calcutta, India. My son is 16 and my daughter is 14. Both have had their entire school experience in the Northwest Arctic Borough Schools. Both have scored highly on the State's required tests. My wife is a teacher in Kotzebue High School and she dearly loves her students.

At this time it will do us little good to review the difficult history of intervention that the Department of Education has put upon these five Districts. We have learned from the mistakes made, and we can move forward in a collaborative manner with solid solutions to the problems that we have to address. I think that this can all be done in discussions over the next couple months.

While it is true that our system of public education has it shortcomings, it will do us no good to lament about what is wrong. Doing so will weaken and divide us. What we need to do now is join in our efforts and our actions to provide strength to our classroom teachers and power to the lessons they teach to our students.

Some blame the poor test scores of past years on poverty. Some blame it on teachers, administrators, the school boards, parents, the local community, and even the ability of our children.

I do not buy any of that. The truth is blame accomplishes nothing.

When I take an honest look at my own school district I see many things that we do quite well and some things that leave substantial room for improvement. Over the years many educational programs have been implemented and perpetrated upon our students. Many educational experiments have been done in the name of educational improvement. These programs were, perhaps, well-intended but all too often poorly executed. Let us agree that there are no silver bullets.

Producing better results requires informed decision-making, appropriate training, levels of commitment, support, persistence, and accountability that, until now, have been difficult to achieve or sustain. We know that students living in poverty can achieve at high levels and be successful in school. There is ample research to document not only that it happens, but there are successful strategies we can employ. We have seen this in Northwest Arctic in the past few years where several schools that were poor performers have had increased test scores that we are very proud of.

In order to move us forward, I would like to comment on 4 issues of importance. These are issues that you, as legislators, can address and your actions in the legislature will bring the educational futures of our students to the higher level of success that is needed.

First, I would like to say that the single most important element in improving educational scores in Northwest Arctic is not anything in the school: It is to provide Public Safety to the families and, especially, the children in our villages. I commend the Governor's initiative to increase the ranks of Village Police Safety Officers. This needs to be complimented with an equal number of additional State Troopers. No one in Juneau or Anchorage would feel safe if the streets were patrolled by unarmed VPSO's. We expect to have State Troopers and City Police on duty to keep us safe. This factor cannot be overlooked in improving children's educations in rural Alaska.

Secondly, Early Childhood Education must be in place to insure the success of our students by the third grade. For we know, that if a child is not reading at grade level by the third grade, he or she has a 50% likelihood of dropping out of school. We need at minimum, a two year Kindergarten program, where 4 year olds can come to school and be counted at full FTE's. That would fund the additional teachers required for the program. Parental involvement has to be a major element included in the program, as well. Early Childhood programs must be intentional learning environments, academically based, taught by certified teachers, and they must adopt the 9 standards that are nationally recognized as components of quality early childhood programs.

Let me illustrate, our Kindergarten children come to school and take a test called the Kindergarten Developmental Profile. In the areas of Socialization and Kinesthetic abilities, our children are on par with the average students across Alaska. However, in the areas of pre-cognitive abilities and pre-reading they are, on average, 2 to 3 years behind. That is for students who are five years old. How can you expect students to not only gain a year's growth in a year's span of time, but by 3rd grade, just within 4 years, expect them to make up an additional 2 to 3 years of development?

These children do not come to school impaired but they simply have lacked the language and cognitive developmental experiences that most children across America have received. They need language and numerical cognitive experience to be built into the Early Learning and Kindergarten programs. Much research, evidence, and documentation is available to substantiate this.

Third, let me address teaching capacity. The department this past year has done a lot to improve its ability to provide support to teachers. However, it is not sufficient to the need of the teachers that this is directed at. For teachers new to rural Alaska there should be a two-week to a four-week pre-service program that would provide orientation to the cultural setting the teacher is going to, the curriculum to be taught, and the lifeways of the people the teacher is going to serve. Districts cannot afford this out of their regular operating budget.

Another needed program is for teaching certification programs to be offered by our universities in the State that provide an emphasis and specialty in teaching in rural Alaska.

A much overlooked answer in this area is the development of specific teacher training programs to be offered to rural Alaskan students where they can have a direct pathway from high school graduation to a BA degree and certification as a teacher. Magnet-type school opportunities should exist. Smaller regional boarding facilities in rural hub cities can provide the specialization for our students who have high level of abilities but cannot go to Mt. Edgecombe. We have 70 high schools in rural Alaska with 10 or fewer high school students. Strategically placed smaller Mt. Edgecombe-type boarding facilities is an idea whose time has come.

Fourth, targeted assistance programs for rural schools need to be in place. A model for this is one that the Anchorage School District has provided. Examine the history of Mountain View Elementary School. Eight years ago it was considered a school that was failing its students. With specific targeted assistance programs and personnel, it was restructured into being a beacon of success for its community and the children who go there. This school has consistently, over the past 5 years, had high levels of academic achievement by its students. It has made Adequate Yearly Progress as measured by NCLB.

The targeted assistance at Mountain View included additional staffing comprised of a school psychologist, community liaison, English as a Second Language Specialist, a reading specialist, and a speech pathologist, all for this 300 to 400 student school.

In summation, we can do much to bring our students in rural Alaska to high academic achievement. This effort will require our determination and commitment but the pathway is clear. Research has shown that to adopt and fund, and properly implement the four issues I have discussed here this morning will bring success to our students. Thank you.

PERFORMANCE INCENTIVE PROGRAM

THREE YEAR SUMMARY (2007 – 2009)

PROGRAM INCEPTION AND RESULTS

In January 2006, former Governor Frank Murkowski submitted to the legislature a bill to authorize incentive payments to certified and non-certified personnel in schools where individual student achievement showed significant growth from the prior school year. This differed from other accountability programs including No Child Left Behind which created comparisons of dissimilar groups of students (e.g., comparing the current year's 6th grade class to the previous year's 6th grade class).

The legislation was designed to create an environment in Alaska's schools where all staff would have a vested interest in the performance of each student and the school as a whole, and to tie the incentive awards to annual individual student growth so all schools – regardless of past performance – would have an opportunity to achieve the goal. The bill proposed the creation of a three-year pilot program called the Alaska School Performance Incentive Program (PIP) to be administered by the Alaska Department of Education & Early Development (EED).

House Bill 13 was passed during the 2006 legislative session and signed into law as AS 14.03.126 with initial funding of $5.8 million for the 2006-2007 school year. A methodology was created which analyzed individual student assessment results to the same student's previous year performance and assigned a point value to each of three subject areas (reading, writing, and math) based on what degree the student's scores had increased or decreased compared to the prior year. Student scores were aggregated and averaged to create a school-wide "index score." The index score provided a relative measure of academic growth across the student body.

In August 2007, EED issued the first incentive payments under PIP, distributing $1,888,187 across 42 schools and 15 school districts. After year one, changes were made to the values table and student score calculations in response to criticism that demographic factors were favoring schools with a smaller percentage of low income and minority students. After these changes were implemented, the average school PIP index value increased in 2008 and 2009; however, fewer schools attained an index score of 107, the minimum cut for PIP awards (Figure 1). In 2008, incentive payments totaling $1,061,944 were distributed to staff across 32 schools and 14 school districts. In 2009, incentive payments totaling $305,875 were distributed to staff across 11 schools and 9 school districts.

Figure 1. - Index Scores vs. Incentive Awards

Year	Average Index Score	Number of Schools Awarded	Amount Awarded
2007	91.7	42	$1,888,187
2008	94.6	32	$1,061,944
2009	92.9	11	$305,875

JANUARY 2010

AWARD RECIPIENT FEEDBACK

In 2007 and 2009, all PIP award recipients were mailed a survey requesting feedback on PIP. A similar ratio of award recipients responded to the 2007 survey (49%) as to the 2009 survey (47%).

A far higher percentage of 2009 survey respondents (78%) were aware of PIP prior to receiving the incentive payment than 2007 survey respondents (53%). Most respondents (85% in 2009, 79% in 2007) stated the award appropriately rewarded the school in which he or she worked. The amount of the award was also viewed by most respondents (88% in 2009, 75% in 2007) as appropriate in size.

Two-thirds (69%) of 2009 respondents felt PIP had an effect on test scores and encouraged staff collaboration. Only half (52%) of 2007 respondents believed PIP had this effect.

Three-quarters of 2009 respondents had a positive perception of PIP (78%) and supported its continuance (74%). 2007 respondents were not as supportive, as only 62% of respondents had a positive perception of PIP and supported its continuance.

DRAFT

Forty-four percent of all 2007 respondents and 58% of 2009 respondents stated a reason for having a positive perception of PIP. The most cited benefits included monetary rewards (15% of all respondents in 2007 and 2009), positive recognition and reinforcement (11% in 2007, 19% in 2009), and staff motivation (6% in 2007, 7% in 2009). Interestingly, 12% of respondents in the 2009 survey cited improved collaboration, compared to 1% of 2007 respondents.

Thirty-one percent of all 2007 respondents and 19% of 2009 respondents provided a reason for having a negative perception of PIP. The primary criticisms included the program's inability to address demographic and other non-academic factors (9% in 2007, 8% in 2009), the belief that incentive pay was unnecessary or insulting (8% in 2007, 6% in 2009), and that PIP created a divisive atmosphere (4% in 2007, 2% in 2009). In the 2007 survey, 4% of respondents indicated staff at non-recipient schools also deserved awards; however, this criticism was not cited by any respondents in 2009.

Notably, survey respondents in 2009 indicated more support for PIP and were more likely to list non-monetary benefits of the program when stating the reasons for their support. While EED made significant efforts to correct perceived demographic imbalances following the results of the 2007 survey, 2009 respondents were almost as likely to state that the annual list of PIP award winners was strongly influenced by non-academic factors.

ANALYSIS

ERIC CALDWELL, RESEARCH ANALYST AND ERIK MCCORMICK, DIRECTOR
ASSESSMENTS & ACCOUNTABILITY UNIT
DIVISION OF TEACHING & LEARNING SUPPORT (TLS)
ALASKA DEPARTMENT OF EDUCATION & EARLY DEVELOPMENT

JANUARY 2010

The Performance Incentive Program (PIP), signed into law in 2006 and executed as a three-year pilot program from 2007 to 2009, was created to provide a means to reward teachers and support staff for growth in student achievement. During its three-year existence, PIP awarded $3,271,300 in direct payments to teachers, school staff, and district support staff.

By the end of the pilot, PIP was credited by nearly two of five award recipients as recognizing and reinforcing a positive learning environment, helping foster collaborations, and motivating staff to perform at a higher level. Although PIP has not been renewed, this feedback indicates a need for EED to continue finding ways to recognize schools, teachers, and support staff for exceptional performance.

A broader knowledge of the program and its goals may have garnered support for program goals, motivated a greater number of teachers and staff to create unique means to improve student performance, generated collaborative and cooperative environments at additional schools, and provided a greater sense of recognition and professional pride for those who received awards.

EED gained valuable information about individual schools by piloting this program. PIP's methodology for comparing students' performance from one year to the next has provided more useful information than previous accountability systems. PIP has provided clear information about the academic growth of students on an individual and school-wide basis by comparing student performance from one year to the next, creating a more accurate picture of a school's effectiveness than comparing one year's student body with the previous year's student body. This information will continue to help EED evaluate whether schools are chronically underperforming and need assistance in improving student achievement.

Moore v. State, Core Rulings
June 2007 Order

Held that the Education Clause of the Alaska Constitution requires the State to:
(1) **Adopt standards** to define what children should be expected to learn;
(2) **Establish methods** to **assess** children's progress in learning;
(3) **Provide adequate funding** to enable schools to meet the performance standards; and
(4) **Maintain adequate accountability and oversight** to ensure that local schools comply with the standards set by the State and the Constitution. [p. 174]

Defined a **constitutionally adequate education** as including
(1) "A meaningful opportunity to become proficient" in the areas covered by the SBAs, and
(2) "Meaningful access" to areas covered by the State's content standards. [p. 176]

Held that, "the Plaintiffs have failed to demonstrate that the State is constitutionally obligated to appropriate more money to local school districts at this time." [p. 183]
However, this "conclusion does not imply that spending more money at this time would not have an effect on specific educational outcomes, or for specific schools, classrooms, or students. There may be, in particular, a benefit in **specifically-targeted spending** for incentives for education that **could be beneficial.**" [p. 183]
Also, "**it may be that the Legislature will need to accord to EED additional funding to insure that school districts are meeting the State's duty to provide a constitutionally adequate education to Alaska's school children.**" [fn. 42]

Held that the State was failing to provide sufficient support and assistance to chronically underperforming schools and school districts. [p. 184-190]
"There are schools in which children are not being accorded an adequate opportunity to learn the very basic fundamentals as tested by the State." [p. 142]

The State must, at a minimum "... provide considerably more assistance and direction to those schools that are identified as failing to meet the State's constitutional obligation, in a concerted effort to remedy the situation." [p. 189]
"The State must insure that each school District has a demonstrated plan to provide children a meaningful opportunity to achieve proficiency in the State's performance standards, and meaningful exposure on the remaining content standards," and "that the District's plan is fully implemented and actually in use in the District classrooms." [p. 189]

"Given the state's constitutional shortcomings in addressing the educational needs of children at all schools in the state ... it is fundamentally unfair to those children to condition the receipt of a high school diploma on the [HSGQE] at this time." [p. 193]

The Court stayed its Order for one year to allow the State the first opportunity to remedy these constitutional deficiencies. [p. 191]

February 2009 Order

Overview: "The Department was ordered to take concerted remedial action because it had violated its constitutional oversight duty by failing to meaningfully intervene before the problems became chronic." [p. 53] The June 2007 Order "required the State to provide 'considerably more' 'oversight,' 'assistance' and direction' in 'a concerted effort to remedy the situation." [p. 50 (quoting 6/07 Order, p. 189)] DEED's "**incremental, minimalist initial approach ... is constitutionally inadequate.**" [p. 52]

Court found: "**strong and persuasive evidence**" that DEED's interventions "have fallen far short of complying" with the State's oversight requirement (1) because they were "**not effectively implemented** and have not adequately met the needs they were meant to serve" and (2) "because the interventions **target an unjustifiably narrow set of problems**, while ignoring many other educational problems that these local districts have not adequately addressed on their own." [pp. 50-51]

As to the **design and implementation** of the interventions – the Court found that DEED had:

- "Underestimated the complexity" of the intervention components [pp. 14-28];
- Failed to provide sufficient training, technical support, follow-up and on-site assistance to make these components work [p. 14-28];
- Failed to tailor interventions to specific districts' individual strengths and weaknesses [pp. 31-33]; and
- Failed to include "any attention to those content areas not covered by the State's standardized testing." [pp. 30-31]

As to the actual content of the interventions, DEED's interventions were inadequate because of their failure to address multiple known causes of underachievement, including:

- Failing to ensure **curriculum alignment.** [pp. 28-30]
  - "All public schools in this state should be teaching a curriculum that includes (yet certainly should not be limited to) materials aligned with the State's performance standards." [p. 52]
  - "The State's interventions to date have not included any concerted effort to insure that the curriculum in each intervention district is aligned with the [GLEs] for the State's performance standards." [p. 29]

- Failing to adequately consider "**intensive early learning initiatives designed to address the unique education challenges faced by students in Alaska's chronically underperforming schools.**" [pp. 33-35]
  - "The State's interventions do not address the significant language development gap known to exist in the intervention districts, despite its well-documented connection to student achievement." [p. 35]
  - Multiple witnesses "testified about the link between early literacy and later academic achievement." [p. 34]
  - The State's own expert views preschool as "a highly cost effective way to increase student achievement." [p. 34]

- Failing to address teacher inexperience, teacher turnover and "the need for the considerable additional professional development necessitated by those turnover problems" as well as by "the unique educational challenges in Alaska's chronically underperforming schools." [pp. 35-40]
    - "The State's intervention plans assume that the existing staff in chronically underperforming districts already possess adequate instructional experience and knowledge to determine appropriate instruction strategies for all students. But [DEED's own] instructional audits of these districts demonstrate that is clearly not the case." [p. 37]

Court: DEED's interventions ignored **"promising, research-backed remedial measures"** known to address root causes of chronic educational underachievement:

> *"Such measures could include efforts: to build in-house expertise, to increase the level of available teaching capacity, to create meaningful incentives to promote the recruitment and retention of high quality teachers, to provide content specialists, on-site coaches and mentors, targeted educational resources, and more extensive professional development focused on the particularized needs of the intervention districts. They could also include pre-k, curriculum development and alignment, and resources directed at improving student attendance and the school's interface with the local community." [p. 54]*

"Conditions within a community do not diminish the State's constitutional duty to maintain a system of public schools open to all children of the State."

Additionally: "**Many of the problems encountered** by the Department in attempting to design and implement effective and adequate interventions **appear to stem from limitations in the Department's own capacity to implement successful reforms.**" [p. 44]

ORDER: The State was given 60 days to "review, reconsider, and – after consulting with the districts and giving due consideration to their views" – file new district intervention plans addressing and incorporating as appropriate remedial measures related to the interventions'

- Failure to address curriculum alignment [pp. 28-30, 58];
- Failure to address lack of meaningful exposure to content areas not tested on SBAs [pp. 30-31, 58];
- Failure to address the specific strengths and weaknesses of each intervention district [pp. 31-33, 58];
- Failure to address pre-k and other early learning initiatives [pp. 33-35, 58];
- Failure to "address teaching capacity issues caused by high turnover, teacher inexperience and intervention districts' unique education challenges" [pp. 35-40, 58]; and
- Failure to assess DEED's own capacity to assist districts [pp. 44-46, 58].

March 2010 Order

> *"The State has failed to demonstrate that it has complied in full with its constitutional obligation to 'maintain a system of public schools open to all children of the State.' ... Dismissal of this action at this time is not warranted." [pp. 14-15]*

"The lack of an aligned curriculum persists in the intervention districts." [pp. 5-8]

- "The plaintiffs have persuasively argued that if each small school district is expected to select its own curriculum and align that curriculum to the state standards, then **there needs to be considerably greater technical support provided to each district** to enable that district to promptly complete this task." [p. 7]

- "Further[,] unless and until a chronically underperforming district can fully complete those tasks, during the interim **the State must immediately provide that district with access to a fully aligned curriculum** together with **adequate professional training** so that that curriculum can effectively be used in the district's classrooms." [p. 7]

"The State's effort to insure meaningful exposure to the other content standards in the intervention districts has been inadequate." [pp. 8-10]

- DEED has failed to sufficiently address the June 2007 holding that an adequate education must include "meaningful exposure" to the areas of the State's content standards.
- The Court's February 2009 order "**cannot reasonably be interpreted to mean**" that all DEED needed to do was provide an operational definition of "meaningful exposure" and a list of resources. [p. 10]
- "Rather, this Court intended by that order that the State **direct its best efforts** to insure that students in chronically underperforming school districts are actually being accorded meaningful exposure to the State's other instructional content areas." [p. 10]

"The State's submissions regarding the HSGQE Remediation Plans are inadequate." [pp. 11-12]

- "The Department has failed to demonstrate that individual plans are being developed for each student and that those plans are being effectively implemented." [p. 12]
- "The record is silent as to the support and oversight, if any, that the Department is according" to districts to insure that plans are in place and "are being effectively implemented." [p. 11]
- "The record is silent" as to whether the Department is providing "appropriate technical assistance." [p. 11]
- "Given that these districts are in intervention status due to chronic underperformance, **the Department must provide considerably more in the way of technical assistance and guidance to each such district**...." [p. 12]

"The State has failed to adequately address teacher retention and capacity." [pp. 12-13]

- "Clearly, the constitutional requirement to 'maintain a system of public schools' requires that there be a capable teaching staff in those schools." [p. 12]

- The State should "provide the resources" to interview all intervention district teachers at the end of the year as to why they are staying or leaving, "and also asked each teacher to identify any specific or additional resources or support that he or she seeks." [pp. 12-13]

"The Draft [District Improvement Plans] that were submitted do not comply with this Court's February 2009 Order." [pp. 13-14]

- "Given that the State has elected to delegate the drafting of the [improvement plans] to each intervention district, it would appear that the intervention districts could each benefit from considerably more technical assistance from the State in completing those plans." [p. 14]

"The State has not demonstrated that children in the chronically underperforming districts in this state are being accorded a meaningful opportunity to learn the material that is being tested on the State's assessments for reading, writing, math and science. Nor has the State demonstrated that children in those districts are being accorded meaningful exposure to the State's other content standards. ... In the event that these continuing constitutional violations cannot be promptly remedied after this Order, then the Plaintiffs may renew their request for a special master." [p. 15]

*"[T]he Alaska Constitution ... **places the responsibility** 'to maintain a system of public schools open to all children of the State' **squarely upon the Legislature** – not upon the Department of Education and Early Development and not upon local school districts."*

ORDER: Within **60 days** the State must prepare, file and serve:

1. A "**detailed plan**" as to how an aligned curriculum in each of the SBA-tested areas shall be taught in each of the intervention districts beginning in fall 2010, including "a provision for **adequate professional development** to each of the teaching staff with respect to that curriculum."

2. A **comprehensive review** of the meaningful exposure to each of the other content areas that is currently in place in each of the districts, identifying any deficiencies and providing "**a detailed plan for each district** as to how to address those deficiencies."

3. "Detailed **individual remediation plans** for each junior and senior high school student in each of the intervention districts who has not yet achieved proficiency on one or more sections of the HSGQE."

4. **District improvement plans** for each intervention district that adequately address the following problem areas identified in the February 2009 order:

"Curriculum alignment, content areas not covered by the State's standardized testing, ascertainment of the specific strengths and weaknesses of each chronically underperforming district, attention to pre-Kindergarten and other intensive learning initiatives, and attention to teaching capacity deficiencies."

5. An update on the status of any specific efforts in the Yupiit School District.

Neil Slotnick
Attorney General's Office

Excerpts from the Moore Decision, June 2007

1. "Alaska's Constitution makes the Legislature – not the local school districts – ultimately responsible for maintaining Alaska's schools."[1]

2. "Here, the evidence has persuasively demonstrated that more funding is not the answer."[2]

3. "There are at least some schools in the Plaintiff school districts in which the available resources have not been adequately or effectively directed to the classroom."[3]

4. "If a school, despite adequate funding, is failing to accord a child with a constitutionally adequate education – such as failing to give that child a meaningful opportunity to acquire proficiency in the State's own performance standards – then the concept of local control must give way because that school is not being maintained as required by the Education Clause."[4]

5. "[T]he State has failed to take meaningful action to maximize the likelihood that children at these troubled schools are accorded an adequate opportunity to acquire proficiency in the State's standards when a school has demonstrated an unwillingness or inability to correct this situation on its own."[5]

Moore vs. State

Brief Synopsis

Three Rulings

- June 2007
- February 2009
- March 2010

June 2007

The plaintiffs' claims of inadequate funding were dismissed, but the State was found to be delinquent in the constitutional duty of maintaining a system of education for all children in the State. The court ruled that the due process of the students in underperforming districts in the State was denied in respect to the High School Graduation Qualifying Exams (HSGQE).

February 2009

Conclusions

1) In 2007 the department was ordered to take measures to bring the schools into compliance. The State argued those measures had been taken. The plaintiffs argued that the efforts failed to comply with the requirements of the 2007 order.

2) The question the court chooses to ask the question, "Is the State fulfilling its constitution responsibility to 'maintain a system of public schools'?"

3) The first "prong": The court required the State to set "clear standards" for the local districts, so they can know what would have to happen for them to maintain local control.
    a) The Department has set standards
    b) But the Department has not provided "clear guidance" as to how those standards will insure that students receive an adequate education.
    c) The State has not met the responsibility to "maintain a system of public schools" with respect to this.

4) The second "prong" was oversight of chronically underperforming districts. The court ruled that the State has fallen "considerably short" of complying with the oversight requirement in two areas.

a. Remedial measures were not effectively implemented, nor did they meet the needs they were intended to serve.
b. The interventions targeted "an unjustifiably narrow range of problems" while ignoring other problems the local districts have not addressed.

5) The State provided tools, however those tools were not supported vigorously, nor were the districts able to utilize the tools effectively.

6) The State did not tailor the tools to the specific needs of the districts, nor did they adjust the use of the tools when specific conditions seemed to warrant changes.

7) The State set up intervention components which could take up to seven years to reach fruition, which the court held to be insufficient.

8) The state is not actively pursuing an aligned curriculum, which standardizes required learning for the state.
   a. The State has chosen to focus the intervention on "changing the delivery of instruction" and then dealing with curriculum issues.
   b. The court held that all schools should teach a curriculum aligned with the State's standards. "...[A]n incremental, minimalist initial approach that is only now beginning to address the curriculum is constitutionally inadequate."

9) The court acknowledged that geographic, cultural, environment and cultural influences were a factor in the interventions, however the court also held that:
   a. "a array of promising, researched back remedial measures" were not successfully implemented, including a pre-K program, and
   b. "Conditions within a community do not diminish the State's constitutional duty to 'maintain a system of public schools open to all children in the state.'"

10) It was noted that especially the department has "categorically declined" to consider a Pre-K program as an intervention.

11) As to the High School Graduate Qualifying Exam, the court ruled that:
   a. Due process is denied if children in underperforming areas are not given diplomas because they have not passed the exam; and
   b. The interventions designed to help children in the underperforming areas have not been implemented.

Essentially the court found that, "the Department, through delegation from the Legislature, is not currently meeting the State's constitutional responsibility to 'maintain a system of public schools open to all children of the State.'"

The court concluded that the Department has acted in good faith, and the deficiencies may stem from "uncertainty about the extent of the requirements." The dedication of the Department to presenting meaningful change was also noted, and the Department was accorded additional opportunities to comply.

The Department was ordered to:

1) Prepare and file with the court a draft of standards that address the State's responsibility to insure that chronically performing school districts have "meaningful exposure to the State's content standards."
2) Review and reconsider district intervention plans that address the particularities of the various districts.
3) File with the court a plan of action that addresses the concerns identified with respect to the adequacy of the remediation plans in the intervention districts for the HSGQE.

The State was given sixty days to comply with the above three items.

March 2010

1) Five districts were identified as underperforming: Yupiit, Lower Yukon, Yukon Flats, Yukon Koyukuk, and Northwest Arctic Borough School District. The court noted that the interventions were all performed in the proper districts.
2) The State asserted that significant progress had taken place, and it had fully complied with the 2009 order. The plaintiffs urged the court to find the state in "continued noncompliance" and requested a Special Master to bring the State into compliance.
3) The court ruled that:
    a. The State has not demonstrated it is in full compliance; and
    b. A Special Master was not appointed in the hopes that the inadequacies can be addressed by the State.
4) The court noted the continued lack of an aligned curriculum
    a. The State has adopted Standards-Based Assessments, which are noted to be constitutionally sound.
    b. In 2007 the court found that the State's instructional standards were not in alignment with the curriculums in the underperforming areas.
    c. The court noted that currently the students in the underperforming areas are not being given instructional material that is fully aligned with the Standards-Based Assessments.

d. The State has elected to place the responsibility for curriculum selection on the underperforming districts. The State indicated, according to the court, that the alignment is far from complete, and has not specified a deadline for completion.
e. The court ruled that the State's "continued delay" in achieving curriculum alignment is "not constitutionally acceptable."
f. The State is ordered to provide the districts with "access to a fully aligned curriculum together with adequate professional training." The lack of teachers trained to teach curriculum that meets State standards is a failure to meet the constitutional obligation to maintain schools.

5) The court was also concerned with content in areas apart from the Standards-Based Assessment areas, such as geography, government and citizenship, history, healthy life skills, technology or world languages.
   a. In 2007 the court ruled that the districts must address these areas for the schools to be "constitutionally adequate."
   b. The court ruled that the recent submissions of the State do not demonstrate a workable plan for the districts to meet this standard of performance.
6) The 2009 decision required the State to file a plan to deal with the remediation issues surrounding students who fail the High School Graduation Qualifying Exam.
   a. The court ruled that the plan submitted for the Northwest Arctic Borough School District was adequate, but did not provide plans for support and oversight, to assure the plan is being carried out.
   b. In the other four districts the court ruled that an appropriate remediation plan was not in place.
   c. The Department is ordered to provide "considerably more in the way of technical support and guidance" to the districts.
7) Teacher turnover was identified as a major issue by the court.
   a. The court found the State has not adequately met this concern
   b. The court suggests that the State provide resources to conduct exit interviews of teachers to determine why they are leaving.
   c. The districts should be involved in designing the exit interviews.
   d. The court found that the State has been active in addressing teacher capacity.
8) District Improvement Plans submitted by the districts were inadequate, and that the districts might benefit from technical assistance by the State.

Conclusions

According the court, the State has failed to demonstrate that it is in compliance with the constitutional obligation to provide and maintain an education for all children of the State.

"In evaluating the State's response at this time, this court returns once again to the language of the Alaska Constitution which places the responsibility 'to maintain a system

of public schools open to all children of the state' squarely upon the Legislature—not upon the Department of Education and Early Development and not upon local school districts."

The court ordered that five areas be addressed:

1) A detailed plan to have a curriculum aligned with the Standards-Based Assessments subject areas—math, writing, reading and science, to be taught beginning Fall, 2010.
2) A review of "meaningful exposure" to other content areas that fall outside of the SBAs, but which are important to the education of the child, and a detailed plan as to how to address the deficiencies.
3) Detailed remediation plans for junior and senior high students who have not achieved proficiency as measured by the HSGQE.
4) District Improvement Plans for each of the intervention districts which address the problems identified in the 2009 decision, that address curriculum alignment, content areas not covered by the State's standardized testing, ascertainment of specific strengths and weaknesses of the underperforming districts, attention to Pre-Kindergarten or other intensive early learning initiatives, and attention to teaching capacity deficiencies.
5) The current status of the Yupiit District.

Subject: Moore hearings
Attachments: Moore vs State 2010.pdf; Moore vs State 2009.pdf; Moore vs State 2007.pdf

Attached you will find the recent documents from the Moore case, which is the subject of Wednesday's joint meeting. The most recent and relevant document is the document labeled *Moore vs. State 2010*, which is also the shortest. *Moore vs State 2009*, weighing in 58 pages is the second most recent. The first ruling by the judge is *Moore vs State 2007*, which is by far the longest. Because of the length of these documents we are sending them by email.

The intent of Wednesday's hearing is to ask how the legislation should respond to the third ruling. In that ruling the judge states, "...this court returns once again to the language of the Alaska Constitution which places the responsibility 'to maintain a system of public schools open to all children of the state' squarely upon the Legislature—not upon the Department of Education and Early Development and not upon local school districts."

The intent of this hearing is NOT to reargue the case. We have invited the State's attorney, Neil Slotnick to be with us, as well as Howard Trickey, the attorney for the plaintiffs. The question before them is "What does this ruling require from the Legislature?"

A memo detailing the rulings is forthcoming.

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

THIRD JUDICIAL DISTRICT AT ANCHORAGE

KRISTINE MOORE, et al.,

Plaintiffs,

vs.

STATE OF ALASKA,

Defendant.

Case No. 3AN-04-9756 CI

JDO

MAR 3 1 2010

ORDER ON REVIEW OF 2009 SUBMISSIONS

The Education Clause of the Alaska Constitution provides that "the legislature shall by general law establish and maintain a system of public schools open to all children of the State."[1] On June 21, 2007 – nearly three years ago – this Court issued a Decision and Order that concluded that while the State may delegate its responsibility to maintain public schools to local school districts, as it had done, it had failed to exercise adequate supervision and oversight of chronically underperforming schools within the state. Specifically, this Court held in June 2007 that the State "has failed to identify those schools within the state that are not according to children a meaningful opportunity to acquire proficiency in the subject areas tested by the State and meaningful exposure to the other content areas in the State's education standards. And as to those schools that are deficient in that regard, the State has failed to provide

[1] Alaska Constitution, Article VII, Section 1.

adequate supervision and oversight in a concerted effort to remedy that situation."[2] This Court also held in June 2007 that the due process rights of children in underperforming school districts is violated when the State conditions the receipt of a high school diploma on the successful passage of the High School Graduation Qualifying Exam, when the students in such districts "have not been accorded a meaningful opportunity to learn the material on the exam – an opportunity that the State is constitutionally obligated to provide to them."[3]

Thereafter, evidentiary hearings were held before this Court in 2008 to assess the adequacy of the State's efforts to remedy the deficiencies this Court had identified in the June 2007 Order. On February 4, 2009, this Court issued its Findings of Fact, Conclusion of Law and Order. This Court concluded then as follows:

> Based upon all the evidence presented, this Court finds that the Department [of Education and Early Development], through delegation from the Legislature, is not currently meeting the State's constitutional responsibility to "maintain a system of public schools open to all children of the State." The schools in the chronically underperforming school districts are not constitutionally adequate; the Education Clause requires considerably more from the State in the way of oversight and assistance to those districts.[4]

The February 2009 Order directed the State to file with the Court each of the following: (1) a draft of standards that address the State's constitutional responsibility to insure that chronically underperforming school districts are providing students in those districts with meaningful exposure to the State's content standards; (2) a plan of action that demonstrated adequate remediation plans for students in the intervention districts

---

[2] Decision and Order of June 21, 2007 at 194.

[3] *Id.* at 195.

[4] February 4, 2009 Findings at 56-57.

for the High School Graduation Qualifying Exam; and (3) revised district intervention plans that address and incorporate as appropriate remedial measures that relate to each of the problem areas that the Court had identified in the Findings. The areas that the Decision identified as problematic included the lack of curriculum alignment, a lack of attention to content areas not covered by the State's standardized testing, a lack of attention to each of the specific strengths and weaknesses of each chronically underperforming district, a lack of consideration of pre-Kindergarten and other intensive early learning initiatives, a lack of attention to addressing teaching capacity deficiencies, and the Department's own capacity deficiencies to assist the chronically underperforming school districts.

Both parties have since filed considerable documentation with the Court. In 2009, the State was intervening in five school districts that the State had identified as chronically underperforming: Yupiit, Lower Yukon, Yukon Flats, Yukon-Koyukuk, and Northwest Arctic Borough School District. The parties' 2009 submissions to this Court, consistent with this Court's prior orders, were focused on the State's efforts in those five school districts. The Plaintiffs are not asserting that the State should be intervening in fewer or other school districts, or that the State's method for identifying those districts and schools in which it will intervene is constitutionally infirm.

The State asserts that "[s]ince 2005, the school improvement process in Alaska has been moving forward by leaps and bounds."[5] It maintains that it has demonstrated that it has fully complied with this Court's February 2009 Order, and now has in place a

---

[5] State's Memo. in Support of Filings Required by the February 4, 2009 Decision at 1.

system of accountability and oversight that meets its constitutional obligations. Accordingly, it asks this Court "to find the State in compliance with Section 1 of Article VII of the Alaska Constitution, and dismiss this case."[6] The Plaintiffs disagree. They "urge the Court to find the State in continued noncompliance" with the Education Clause. And the Plaintiffs urge this Court "to appoint a Special Master to determine the specific, targeted educational resources necessary to bring the State into compliance with its constitutional obligations."[7] In response, the State asserts that continuing this litigation is unnecessary because "the State has more than met this Court's specifications for state oversight of education."[8] And it asserts that "if further proceedings are necessary, they should be in front of this Court," and not before a special master.[9]

Discussion

This Court has carefully reviewed all of the parties' submissions from 2009. Based upon that review, this Court finds that the State has not demonstrated to this Court that the State is in full compliance with its constitutional obligations under the Education Clause. This Court finds that the State has not demonstrated that children in chronically underperforming school districts in this state are being accorded a

[8] *Id.* at 53.

[9] *Id.* at 49.

"meaningful opportunity to acquire proficiency in the subject areas tested by the State and meaningful exposure to other content areas in the State's education standards."[10]

The lack of an aligned curriculum persists in the intervention districts.

The State has been administering statewide assessments of student achievement for over 20 years. Five years ago – in 2005 – the State began administering Standards-Based Assessments (SBAs) in grades three through ten. The SBAs are a comprehensive testing system to assess student proficiency in reading, writing and math, and most recently, in science. The SBAs are fully aligned with the State's instructional content standards in each of those subject areas. The parties in this case have agreed that the State has adopted constitutionally sound instructional content standards and testing criteria.[11]

This Court's June 2007 Decision held that the State must accord to each child a meaningful opportunity to achieve proficiency in the subject areas tested by the State, and that it had failed to do so in certain chronically underperforming school districts. One critical component that this Court found was lacking at that time was an alignment between the curriculum being taught to the students in certain districts and the State's instructional content standards. This Court first made clear the State's constitutional obligation in this regard nearly three years ago:

> If generations of children within a school district are failing to achieve proficiency, if a school or a district has not adopted an appropriate curriculum to teach language arts and math that is aligned to the State's performance standards, if basic learning is not taking place for a

[10] Decision and Order of June 21, 2007 at 194.

[11] *Id.* at 27.

> substantial majority of school's children, then the Constitution places the obligation upon the Legislature to insure that the State is directing its best efforts to remedy the situation.[12]

To date, the State has not demonstrated that the students in the chronically underperforming school districts in which the State has intervened are being given instruction on the material that is being tested on the State's SBAs. Indeed, in its 2009 filings with this Court, the State acknowledges "at this time, we cannot say that each intervention district has a curriculum fully aligned with the content standards."[13]

The State has elected to place the responsibility for curriculum selection and alignment on each of the underperforming school districts in which it has intervened. The State has concluded that "having each district be responsible for its own alignment is a good thing for education and this is the direction that the Department has chosen to go."[14] The State asserts that having each district develop its own aligned curriculum "is at the heart of the creative, 'brainstorming' process that excites and energizes a teacher" and that if the State were to provide an aligned curriculum to a district it would lead "to a sterile, bureaucratized education program that would increase teacher dissatisfaction and accelerate turnover."[15]

The State's delegation of curriculum alignment to chronically underperforming school districts is not constitutionally precluded, so long as the State is making its best efforts to insure that each such district is receiving the support and oversight it needs to

---

[12] June 2007 Decision and Order at 188.

[13] State's Memorandum in Support of Filings Required by the February 4, 2009 Decision at 13.

[14] State's Reply in Support of Filings Required by the February 4, 2009 Decision at 41.

[15] *Id.* at 43. *But cf.* June 2007 Decision and Order at 118.

promptly complete this task. But the SBAs have now been administered since 2005, and yet the State has indicated that the curriculum alignment process in the intervention districts is far from complete and that it intends to allow the intervention districts an unspecified amount of additional time "to complete the alignment task in increments and on an expanded timeline."[16]

The State's continued delay in achieving curriculum alignment in the chronically underperforming school districts is not constitutionally acceptable. The Plaintiffs have persuasively argued that if each small school district is expected to select its own curriculum and align that curriculum to the State's standards, then there needs to be considerably greater technical support provided to each district to enable that district to promptly complete this task. Further, this Court finds that unless and until a chronically underperforming school district can fully complete those tasks, during the interim the State must immediately provide that district with access to a fully aligned curriculum together with adequate professional training so that that curriculum can effectively be used in the district's classrooms.[17] The materials submitted to this Court in 2009 demonstrate that the intervention districts have been requesting considerably more help from the State in order to fully align their curriculum, but for whatever reason, that additional assistance has not been provided to them. For example, the Lower Yukon School District's draft District Improvement Plan (DIP) for 2009-2010 repeatedly states in bold, "LYSD requests that EED make available to districts a clearinghouse of

[16] *Id.* at 41, n.121.

[17] *See* June 2007 Decision and Order at 16, ¶22.

resources and instructional practices that are not only research-based but aligned to Grade Level Expectations, as well."[18]

In light of the foregoing, this Court finds that the State is failing to meet its constitutional obligation to maintain schools in the chronically underperforming school districts because the State has failed to date to insure that those districts have teachers that are trained to teach a curriculum that is aligned to the State's standards in math, reading, writing and science. As this Court stated in June 2007, the State "must insure that its educational standards are being implemented at the local level so that all children within this state receive their constitutional entitlement to the opportunity for an adequate education."[19] To date, nearly three years later, this has not yet been achieved.

The State's efforts to insure meaningful exposure to the other content standards in the intervention districts has been inadequate.

Each of the many educators who have testified in this case have acknowledged that a student that receives instruction solely in math, reading, writing and science is not receiving an adequate education. To this end, the State developed content standards in several other subject areas apart from those tested on the SBAs, which include geography, government and citizenship, history, skills for a healthy life, arts, technology, employability, library/information literacy and world languages.[20] In the June 2007 decision, this Court recognized that to be constitutionally adequate, a public school

[18] Ex. 2609 at 63691, 63693, 63695.

[19] June 2007 Decision and Order at 186.

[20] *Id.* at 13.

education should address these other subjects, and held that "the State must insure that each school district has a demonstrated plan to provide children ... meaningful exposure on the remaining content standards."[21]

The State asserts that it has taken appropriate action to address this portion of the June 2007 Decision because it has adopted a draft of standards concerning meaningful exposure to the other content standards and it has informed the intervention districts that they needed to address these other content standards in their DIPs.[22]

Although the State has taken some action with respect to this issue, the State has not yet demonstrated adequate compliance with this portion of the Court's June 2007 decision. The State's 2009 submissions to this Court do not demonstrate that each of the intervention school districts has a demonstrated plan to provide children with meaningful exposure to the remaining content standards. With the exception of the draft DIP from Northwest Arctic Borough School District, each of the other plans submitted from the intervention districts falls far short of demonstrating a plan to provide the children within the district with meaningful exposure to the remaining content standards. The draft DIP for Yupiit was left completely blank in the space for the district to describe the means by which it will ensure students receive meaningful exposure to content areas not tested by the State.[23] And the Yukon Flats School District's draft plan

---

[21] *Id.* at 189.

[22] State's Reply in Support of Filings Required by the February 4, 2009 Decision at 39.

[23] Ex. 2608 at 63757.

simply states that the district action to address the other content standards consists of a "district-wide curriculum cycle" with "instruction and collaborative meetings."[24]

The State's 2009 briefing asserts that "in the future, the Department will monitor intervention districts regarding meaningful exposure for these content areas."[25] To date, the State has drafted standards that define meaningful exposure and it has sent a directive to the intervention districts to include meaningful exposure to the additional content areas in their DIPs. This Court's February 2009 decision required that the State draft standards that "address the State's constitutional responsibility to insure that chronically underperforming school districts are providing students in those districts with meaningful exposure to the State's content standards."[26] The State's submissions on this issue since that date are inadequate to demonstrate compliance with this component of that decision. This Court's February 2009 decision can not reasonably be interpreted to require only the drafting of an operational definition of meaningful exposure, together with the provision of a list of resources to school districts for content areas that are not tested by the State.[27] Rather, this Court intended by that order that the State direct its best efforts to insure that students in chronically underperforming school districts are actually being accorded meaningful exposure to the State's other instructional content areas.

---

[24] Ex. 2610 at 63419.

[25] State's Memorandum at 37.

[26] February 2009 Decision at 57-58.

[27] See Ex. 2637.

The State's submissions regarding the HSGQE Remediation Plans are inadequate.

The February 2009 Decision directed the State to "file with this Court a plan of action that addresses the concerns identified in these Findings with respect to the adequacy of the remediation plans in the intervention districts for the High School Graduation Qualifying Exam."[28] The State's 2009 submissions demonstrate that the State made some effort to address this topic with the intervention districts. *See* Exhibit 2641 at 63820-63821. But the Department has not demonstrated that it is providing adequate oversight and support to each of the intervention districts on this issue.

The Court does find that the draft DIP submitted from Northwest Arctic Borough School District demonstrates appropriate attention to this issue by that school district. *See* Ex. 2612 at 63620-63645. But even with that district, the record is silent as to the support and oversight, if any, that the Department is according to that district to insure that the plans the district submitted are being effectively implemented and that the State is providing that district with appropriate technical assistance to that end. In the other four intervention districts, the State has not adequately demonstrated that individual remediation plans are in place for each of the district's students who are not proficient in one or more of the subjects tested on the HSGQE. Indeed, the State's submissions indicate that while each district is expected to develop an individual remediation plan for each student, "details of each plan must be complete, and submitted to EED upon request, before December 15 each year for all students not proficient in all three sections of the fall exam." It is unclear from this language – in which only some of the

[28] February 2009 Decision at 58.

plans will be sent to the Department, and then only at the Department's request -- whether the Department has made any effort to actually review the HSGQE remediation plans of the intervention districts. In short, the State has failed to demonstrate that individual remediation plans have been developed for each student who has not achieved proficiency in each of the intervention districts and that those plans are actually being effectively implemented. Given that these districts are in intervention status due to chronic underperformance, the Department must provide considerably more in the way of technical support and guidance to each such district so as to insure that this component of the Court's February 2009 order is fully effectuated. For example, this might include the designation of one or more individuals at EED with the responsibility of overseeing all of the remediation plans in the intervention districts, who would also be available to provide technical assistance and guidance to each of the designated professionals for the students with respect to those remediation plans.

The State has failed to adequately address teacher retention and capacity.

It is undisputed that teacher turnover and teacher capacity are significant problems in the chronically underperforming school districts. Clearly, the constitutional requirement to "maintain a system of public schools" requires that there be a capable teaching staff in those schools. The State's 2009 submissions do not demonstrate that it has adequately addressed this concern.

In this Court's view, it could be very helpful to the intervention districts and the State if the State were to provide the resources to interview each of the teachers in the intervention districts at the end of each school year as to that teacher's reasons for

staying or leaving the district, and also asked each teacher to identify any specific additional resources or support that he or she seeks – be it in the classroom, with housing, with the district office, with EED, or in the community. To be most useful, the intervention districts would be closely involved in both the development of the interview questions and the analysis of the interview results. With this information in hand each year, the State would be in a better position to more effectively assist each of the intervention districts in addressing teacher turnover and teacher capacity in that district.

Further, as noted above, the State needs to insure not only that curriculum materials aligned with the State's standards are available to the teaching staff at each intervention districts, but also that the teachers are provided adequate instructional support and technical assistance so as to insure that that curriculum will actually be effectively taught in the classrooms. The State's 2009 filings indicate that the State has been making efforts to address teacher capacity, through Leadership Institutes as well as with technical assistance coaches, content support specialists, and teacher mentors in the intervention districts. And yet until the State insures that an aligned curriculum is available for all of the teaching staff in the intervention districts to effectively use, it would seem that these other efforts would be considerably less likely to significantly impact student achievement.

The Draft DIPs that were submitted do not comply with this Court's February 2009 Order.

In May 2009, the Department submitted draft DIPs prepared by each of the five intervention districts. As the Department itself acknowledged, "several districts' plans

required considerable additional work."[29] With the exception of the Northwest Arctic Borough School District's draft DIP, the draft DIPs do not adequately address the concerns identified by this Court in the February 2009 Decision. In short, four of the draft DIPs filed by the Department are not "revised district intervention plans that address and incorporate as appropriate remedial measures related to each of the problem areas identified in these Findings."[30] Considerably more work is needed for these plans to demonstrate compliance with this Court's February 2009 Order than what was submitted to the Court. Perhaps this work has now been completed, and the Court-ordered plans can be promptly filed. In its May 2009 filing with this Court, the Department indicated that it would be working with the intervention districts "over the next several weeks regarding the content of the final I-DIP's." Given that the State has elected to delegate the drafting of the DIPs to each intervention district, it would appear that the intervention districts could each benefit from considerably more technical assistance from the State in completing those plans. As of yet, the State has not demonstrated that the intervention districts each have appropriate DIPs actually in place that address the constitutional deficiencies set forth in this Court's February 2009 decision.

Conclusion

Based on the current record before this Court, the State has failed to demonstrate that it has complied in full with its constitutional obligation to "maintain a

[29] State's Memorandum in Support of Filings at 7.

[30] February 2009 Decision at 58. *See supra* pps. 2-3.

system of public schools open to all children of the State."[31] The State has not demonstrated that children in the chronically underperforming districts in this state are being according a meaningful opportunity to learn the material that is being tested on the State's assessments for reading, writing, math and science. Nor has the State demonstrated that children in those districts are being according meaningful exposure to the State's other content standards. And the State has not demonstrated that individual remediation plans are in place in each of the intervention districts to assist each of those students who have not achieved proficiency on the HSGQE. Dismissal of this action at this time is not warranted.

This Court rejects the Plaintiffs' proposal to appoint a special master at this time. The Court remains hopeful that the inadequacies identified in this decision can be promptly remedied by the State without extensive further hearings. However, in the event that these continuing constitutional violations cannot be promptly remedied after this Order, then the Plaintiffs may renew their request for a special master.

In evaluating the State's responses at this time, this Court returns once again to the language of the Alaska Constitution, which places the responsibility "to maintain a system of public schools open to all children of the State" squarely upon the Legislature – not upon the Department of Education and Early Development and not upon local school districts. To date, the State has not demonstrated that the delegation of this responsibility to school districts that have been identified as chronically underperforming, but which do not appear to have been accorded adequate assistance and oversight, will result in compliance with this constitutional responsibility.

---

[31] Alaska Constitution, Article VII, Section 1.

In light of the foregoing, IT IS ORDERED as follows:

Within 60 days of the date of this Order's distribution, the State shall file and serve each of the following:

1. A detailed plan as to how an aligned curriculum in each of the SBA-tested subject areas – math, writing, reading, and science – shall be taught in each of the intervention districts beginning in the fall of 2010. This plan will include a provision for adequate professional development to each of the teaching staff with respect to that curriculum.

2. A comprehensive review of the meaningful exposure to each of the other content areas that is currently offered to school children in each of the intervention districts, an identification of any deficiencies in that regard, and a detailed plan for each district as to how to address those deficiencies.

3. Detailed individual remediation plans for each junior and senior high school student in each of the intervention districts who has not yet achieved proficiency on one or more sections of the HSGQE. These plans shall be filed in a manner that protects student confidentiality.

4. District Improvement Plans for each of the intervention districts that adequately address the problem areas identified in this Court's February 2009 decision: curriculum alignment, content areas not covered by the State's standardized testing, ascertainment of the specific strengths and weaknesses of each chronically underperforming district, attention to pre-Kindergarten and other intensive early learning initiatives, and attention to teaching capacity deficiencies.

5. An update on the status of any specific efforts at the Yupiit School District.

In its September 2009 filing, the Department indicated its intent to take additional steps to strengthen and expand its intervention in Yupiit.[32]

The Plaintiffs are accorded 30 days from the date of the State's submissions within which to file their response.

DATED this 31st day of March, 2010.

4/14/10 OVERVIEW: STUDENT ADVISORY PROGRAM

Louie Flora

Subject: FW: student/teacher advisory programs

From: Louie Flora
Sent: Wednesday, June 10, 2009 10:29 AM
To: Rep. Paul Seaton;
Subject: student/teacher advisory programs in KPBSD

Hi,

I left a phone message with this information this morning. Spoke to the School District and they provided the following regarding your question to Steve Atwater:

Schools in Kenai Peninsula Borough School District with advisory programs:

Homer High School
Skyview High School
Soldotna High School
Kenai Central High School
Nikiski High School
Seward High School

Three of these schools have adopted a student driven advisory program where students meet with a faculty member a few times per week and the students discuss their interests with the teacher, both in school and career related and work on goals pertinent to the student's interests. Students are surveyed at the beginning of the year to determine their interests

Student Driven Advisory schools:

Homer High School
Skyview High School
Nikiski High School

Three of the schools have adopted a more formal curriculum driven program where a student and teacher get together for 15 minutes per day and do various activities focusing on postsecondary planning, and meeting high school curriculum goals.

Curriculum Driven Advisory schools:

Soldotna High School
Kenai Central High School
Seward High School

For the smaller schools in the district the thought is that the teachers are able to have relationships and do outreach with individual students more easily, and do not need the advisory program setting.

In some of the advisory program schools the faculty generates a list of all students to determine which are known and which are not known by teachers. Then a second list of students that are not well known by any of the teachers is formed and individual faculty members will do outreach with these individual students. This is known as the "Adopt a Star" program and the teachers hold themselves accountable for the success of the "adopted" not well known student.

These Advisory programs have been in place for the past five years. Before the implementation of the program KPBSD was sitting at about 65% graduation rate and has increased its graduation rate since then to about 73%.

This year KPBSD will be engaged in a focus group on why kids drop out and attempting to get some profiles of drop-outs by interviewing the former students.

Subject: EHS-student/teacher advisory program

Louie,
Sorry this is a little late.
Mike Henry

This is the 5th year of the Advisory program at East. The mission is to personalize education by fostering a one-to-one relationship between every
student and advisor. It is our feeling that the advisory program helps to
build community and encourage a sense of belonging and respect as well as promote academic growth and success. Our students meet for a minimum of 30
minutes weekly with their advisor to discuss academics as well as social issues and planning for their educational future. Advisory classes are kept
at approximately 15 students to allow for more individual contact with the advisor. The Advisory program is an integral part of the community and culture at East High School.

Subject: RE: House Education Committee meeting reminder - Wednesday, January 20th 8:00 to 10:00 a.m.

Dear Mr. Flora,
I am part of Cynthia Curran's Graduation rate group as well as the Virtual School Group. Just a friendly reminder that all advisory programs are not created equal, as the students on the committee pointed out to us. Kodiak High School seemed to have one of the best working models as well as well as Mrs. Huggins school in the Mat-Su.

Thank you for this update. PJ Superintendent of Delta/Greely School District

MEMORANDUM

Date: 2009

To: All Committees

From: Suzi Lowell
Chief Clerk

Subject: Confirmation Committee Report (Signature Page) for Governor's Appointments

The attached Confirmation Committee Report (signature page) should be used in conjunction with the Referral for Confirmation form for the Governor's appointments to boards and commissions requiring legislative confirmation. After a committee has reviewed the qualifications of the appointee(s), the Referral for Confirmation form(s) should be dated and attached to a signature page. Have members sign the signature page and return the confirmation packet to the Chief Clerk's office.

Please use a single signature page for multiple appointees if the names of all members signing the report are the same for each attached referral. This change allows members to sign once for multiple appointments.

Attached are several signature pages for your use. We used colored paper to make them easier to identify. If you anticipate needing more forms or need assistance, please call Nancy McMullen at 6809.

Note: A separate report, including the signatures, will be used for department commissioners.

BOARDS & COMMISSIONS
JUN 2 2002

MARY K. HUGHES
1592 Coffey Lane
Anchorage, Alaska 99501
mkhughes@acsalaska.net
(907) 274-6290 (voice and fax)

Ms. Hughes served as the Municipal Attorney for the Municipality of Anchorage from January 3, 1995 to June 30, 2000. Prior to her appointment, Ms. Hughes was a partner in the Alaska firm of Hughes, Thorsness, Gantz, Powell & Brundin. Ms. Hughes joined the firm in 1974. She served one term on the firm's Management Committee and was the Hiring Partner for ten years. Her practice included a wide variety of commercial transactional and litigation matters. She had particular strengths in administrative law, public utility law (telecommunications), eminent domain and employment law. She was also experienced in the acquisitions and mergers of Alaska businesses as well as purchases of Alaskan real estate. Drawing on her experience as a lawyer and public policy maker, Ms. Hughes is now advising businesses in Alaska on organizational and management issues as well as government relations.

Ms. Hughes served as a hearing officer for the State of Alaska, Department of Education; the Alaska Public Utilities Commission; the State of Alaska, Department of Law; and the Alaska Bar Association. She has also mediated many disputes.

Ms. Hughes was born in Kodiak and grew up in Anchorage.

SENIOR GOVERNMENT MANAGEMENT

Summary - Broad federal, state, tribal, and international background with 25 years of professional engineering, national program management, and senior legislative experience.

Key Management Strengths

- National Leadership and Management Capabilities
- National Intergovernmental Cooperation
- National and State legislative experience
- Scientific Background

Career Progression

2003 *Senior Representative to the State of Alaska,* **Environmental Protection Agency**
present **USEPA Region 10, Alaska Operations Office, Juneau, Alaska**

Coordinate program implementation for all EPA issues with the State of Alaska and other Juneau based state and federal agencies, including the Alaska State Legislature and the State of Alaska's Governor's Office. As acting Office Director, July 2008, provided leadership of the Alaska Operations Office. Agency representative on several regional and national workgroups. Provided agency leadership for the Alaska/ EPA strategic planning process that focused resources on agreed upon priorities and took advantage of unique capacities of each partner.

2003 *Professional Staff Member,* **Oversight and Investigations**
Transportation and Infrastructure Committee, U.S. House of Representatives, Washington, D.C.
Responsibilities included all aspects of oversight and legislative development, including engaging in a wide array of studies and investigations of activities bearing upon the formulation of national policy and legislation for the matters within the Committee's jurisdiction. Performed at the highest levels of professional government interaction with contacts, briefings, and meeting attended by Members of Congress, Congressional Committee Chairmen, and senior staff. Work with the Committee required the analysis of complex information and the ability to balance and sort through competing requirements and make cogent and workable suggestions. Analyzed programs under the Committee's jurisdiction to meet the 2003 Budget Resolution and provided recommendations on ways the Congress could reduce the waste, fraud and abuse problems in Federal Agencies.

2001 *Professional Staff Member,* **Water Resources and Environment Subcommittee**
2003 **Transportation and Infrastructure Committee, U.S. House of Representatives, Washington, D.C.**
Legislation and Executive oversight. Responsible for all aspects of legislative development, as well as review of scientific and engineering studies and investigations, reviewing and analyzing studies on water and environmental issues within the Committee's jurisdiction. Advise the Chairman and staff on legislative matters within the Committee's jurisdiction. Develop national legislative and policy alternatives and analyzing agency budgets. The jurisdiction of the Subcommittee deals with water resource development including: conservation, pollution control, national infrastructure security, infrastructure construction, and hazardous waste cleanup.

2001 *Environmental Protection Specialist,* **Environmental Protection Agency,**
1999 **Office of Solid Waste and Emergency Response, Superfund, Washington, D.C.**
Government Performance and Results Act program expert. Provided program budget, planning, and analysis functions. Developed the Superfund Strategic and Annual Performance Plans and Performance Report.
Workplanning. Led national program headquarters workplanning efforts assigning resources (FTEs and extramural dollars) based on requirements in law and priorities provided by elected officials.
National Response Team Planning and Performance Measurement Ad Hoc Committee. The NRT consists of 16 federal agencies responsible for various aspects of emergency response to pollution incidents. I managed and implemented activities enabling the Committee to improve their long-range planning process.

Career Progression - continued

1998 *Brookings Institution Legislative Fellow,* **Water and Power Subcommittee, Resources Committee, U.S. House of Representatives, Washington, D.C.**

Legislation. Responsible for all aspects of legislative development. Represented the Committee with Majority and Minority Members and staff within the House, in Senate conferences, with the Administration, with State governments and political subdivisions, and with a wide variety of constituent parties. Responsible for Subcommittee legislative hearing and markup preparations, as well as full Committee markup preparations. Responsible for House Floor preparations, including Rules Committee activities and writing Committee Reports. Mediated and procured a strategic constitutional law decision from CRS. Successfully negotiated the referral process in part by writing for the Parliamentarian. Served as the Subcommittee staff representative at the counsel table during Full Committee markups. Developed and advanced major long-term policy positions.

1997 *Environmental Engineer,* **Environmental Protection Agency,**
1994 **Office of Solid Waste and Emergency Response, SUPERFUND, Washington, D.C.**

Legislation. Coordinated analysis of proposed legislation. Provided assessment and proposal development for one of the major titles - the State Involvement Title. All issues relating to State qualifications, delegation of Federal authority, funding and cost-share, Federal oversight and corrective actions were within my purview.

State/Federal government relations. Provided national leadership of intergovernmental workgroups (Federal and State government Superfund managers) to improve State and Tribal involvement in Superfund.

Design, construction, and contracting. Provided national technical oversight of design, construction, and contracting activities for the USEPA's Superfund program cleaning our nation's worst hazardous waste sites.

1994 *Senior Environmental Engineer*, **Phoenix Area Indian Health Service,**
1990 **Office of Environmental Health & Engineering, Kingman, Arizona**

Provided environmental engineering direction and guidance required to implement the Indian Health Service's Sanitation Facilities Construction Program on four Indian reservations. Managed and administered environmental health field office, supervised technical and clerical staff, provided environmental engineering analysis and design, administered and inspected contracts, prepared contract specifications, and engineering reports, drafted legal agreements.

1990 *Design Engineer,* **Alaska Area Indian Health Service**
1988 **Environmental Health and Engineering Branch, Anchorage, Alaska**

Provided the engineering services for planning and design of Indian Health Service constructed facilities throughout the State of Alaska. Designed water supply and treatment systems, designed wastewater and sewer systems, designed central water facilities, including complex mechanical and control systems, and prepared comprehensive public works feasibility reports. Conducted public meetings in order to develop cooperative sanitation projects between native villages and the IHS. Rated superior in ability to work with Native Leaders.

1988 *Operation and Maintenance Consultant,* **Alaska Area Indian Health Service**
1985 **Environmental Health and Engineering Branch, Anchorage, Alaska**

Developed operation and maintenance programs for facilities located in isolated native villages and cities throughout Alaska. Inspected and evaluated facilities, identified existing or potential facility deficiencies and made recommendations for modernization, alteration, and repair, provided recommendations regarding the feasibility and economy of design, adequacy of type, size, and capacity of components, prepared detailed operation and maintenance manuals, developed and provided management and administrative training for community officials, provided local operator training.

1985 *Water Engineer,* **U.S. Peace Corps, Government of Kenya**
1983 **Ministry of Water Development (MOWD), Kitui District, Kenya**

Developed and managed rural water projects from conception to completion. Supervised MOWD technical and construction staff responsible for producing engineering studies, designs, cost estimates, and construction inspection, as well as directly supervising large groups of construction personnel. Provided technical assistance to a USAID-financed water development program, as well as to several NGOs.

Professional Awards and Commendations

USPHS Citation Nominated October 2008, for exemplary service with the EPA Alaska Operations Office in Region 10.
USPHS Commendation Medal August 2005, for meritorious service with the Environmental Protection Agency, Alaska Operations Office.
USPHS Commendation Medal June 2003, for meritorious service for the Water Resources and Environment SubCommittee, Transportation and Infrastructure Committee, U.S. House of Representatives.
USPHS Commendation Medal January 2002, for excellence in leading the Office of Emergency and Remedial Response's workplanning effort, cultivating a high degree of understanding of mission and resource allocation for the Senior Management Team, and facilitating successful resource allocation.
USPHS Special Assignment Award November 2001, for detail to the U.S. House of Representatives Transportation and Infrastructure Committee pursuant to Personnel Orders and MOU.
USPHS Commendation Medal February 2000, for professional dedication managing and implementing the Planning and Performance Ad Hoc Committee activities, resulting in the Committee's successful accomplishment of its mission.
USPHS Commendation Medal, December 1998, for sustained high quality work performance for the Water and Power Subcommittee, Resources Committee, US House of Representatives, the 2nd Session of the 105th Congress.
Letter of Appreciation, July 1998, Majority Whip Tom DeLay, U.S. House of Representatives
Congressional Record, July 1998, Appreciation, Congresswoman Mary Bono (CA)
Letter of Appreciation, July 1998, Congressman John Shadegg (AZ), Colorado River Water Rights Amendment
USPHS Commendation Medal, October 1997, for sustained high quality work providing exceptional national leadership of the Agency's Administrative Block Funding Reform.
USPHS Unit Commendation, October 1996, for exceptional service and performance of duties while serving on the Superfund Reauthorization Team analyzing and developing legislation to reauthorize the national Superfund law.
USPHS Achievement Medal, February 1996, for superior professional performance toward the accomplishment of achieving the nationally significant Agency goal of attaining Superfund Construction Completion Targets.
USPHS Unit Commendation, November 1995, for outstanding performance and professional achievement in the development, management, and delivery of the EPA national SUPERFUND contract training conference.
Phoenix Area IHS Fluoridation Team Award, 1995, for continuous excellence in community water fluoridation.
Phoenix Area IHS Director's Award for Excellence, September 1991, for outstanding emergency service support of the Havasupai Tribe during a flash flood.
USPHS Citation December 1989, for professionalism, dedication and technical contributions to the Alaska Area Environmental Health and Engineering Branch.
USPHS Hazardous Duty Award, January 1987, for regularly undertaking the hazards of travel in rural Alaska in unscheduled fixed wing aircraft to remote locations with marginal uncontrolled airstrips.

FISHER

Biographical Sketch
Kenneth J. Fisher, P.E.

Kenneth Fisher is an Engineer Officer with the U.S. Public Health Service; he currently is assigned to the U.S. Environmental Protection Agency Region 10 office in Juneau, Alaska, where he serves as the Senior Representative to the State of Alaska. His responsibilities include coordination of program implementation for all EPA issues with the State of Alaska and other Juneau based federal agencies.

Prior to his current assignment Mr. Fisher served as a Professional Staff Member on the U.S. House of Representatives Transportation and Infrastructure Committee working on Oversight and Investigations and on the Water Resources and Environment Subcommittee. Mr. Fisher served with the U.S. Environmental Protection Agency=s Superfund headquarters program office. While at EPA headquarters he provided budget and work planning functions and served as the Government Performance and Result Act program expert. He coordinated legislation analysis and assessment of the State Involvement title, advanced state/federal relations leading intergovernmental state/federal workgroups to improve state and tribal involvement, and provided national oversight of program design, construction and contracting activities.

In 1998 Mr. Fisher was competitively selected for the Brookings Institution=s Legis Fellows executive development program. As part of this program Mr. Fisher served as a Professional Staff Member for the Water and Power Subcommittee with the U.S. House of Representatives Resources Committee. Water and Power Subcommittee issues include: federal Power Marketing Administration management; proper maintenance of the underlying power generating facilities; water management and facility maintenance issues in the Bureau of Reclamation; and research and management in the USGS Water Resources Division.

Mr. Fisher has 25 years of professional engineering, program management, and legislative experience with a broad federal, state, tribal, and international background. His diverse work experiences have taken him from Michigan to Africa, throughout Alaska, Arizona, California, Nevada, Washington DC, and now back to Alaska. He has worked within both the legislative and executive branches of the government.

Mr. Fisher graduated from Michigan Technological University in 1982. He lives in Juneau, Alaska, with his wife and four children. He is active in local and community activities, supporting children and family activities. His hobbies include skiing, boating, fishing, hunting, reading with his family and studying American History.

MEMORANDUM

Date: 2009

To: All Committees

From: Suzi Lowell
Chief Clerk

Subject: Confirmation Committee Report (Signature Page) for Governor's Appointments

The attached Confirmation Committee Report (signature page) should be used in conjunction with the Referral for Confirmation form for the Governor's appointments to boards and commissions requiring legislative confirmation. After a committee has reviewed the qualifications of the appointee(s), the Referral for Confirmation form(s) should be dated and attached to a signature page. Have members sign the signature page and return the confirmation packet to the Chief Clerk's office.

Please use a single signature page for multiple appointees if the names of all members signing the report are the same for each attached referral. This change allows members to sign once for multiple appointments.

Attached are several signature pages for your use. We used colored paper to make them easier to identify. If you anticipate needing more forms or need assistance, please call Nancy McMullen at 6809.

Note: A separate report, including the signatures, will be used for department commissioners.

Attachments

CONFIRMATION COMMITTEE REPORT

Action date: 3/18/09

The **Education Committee** has reviewed the qualifications of the following Governor's appointee(s) as shown on the attached Referral for Confirmation forms(s) and recommends that the name(s) be forwarded to a joint session for consideration:

This does not reflect intent by any of the members to vote for or against this individual during any further sessions for the purposes of confirmation.

Keplinger
EED

Janel Keplinger
Box 4024 Kodiak, AK 99615
[redacted]
Work (907)-481-2009

Throughout my life I have been an educator; being the oldest of five children in a Coast Guard family, a mother of 3 children who found learning a challenge and a teacher of 26 years. The methods may change but the core of my abilities is seeking knowledge, problem-solving and helping others to see their potential.

Areas of Proficiency

- Assessment Tools
- Literature Circles
- Interdisciplinary Reading
- Data Analysis
- Leadership and Team Building
- Behavior Modification
- Technology Integration
- Multidisciplinary Lesson Plans
- Guided Reading
- Student Motivation
- Individual Education Plans
- Collaboration with Staff
- Mission Statement and School Vision
- Curriculum Development
- Student-Led conferences

Professional Experience

Main Elementary -- Kodiak, Alaska 1982-1987

Resource Teacher

I developed and implemented Individual Educations programs for each of the students in my program. There was a variety of student needs and abilities but my goal and purpose was to work collaboratively with teachers on staff to provide a program that assisted them in being successful in the least restrictive environment. I consulted with teachers regarding modifications and accommodations for instructional materials and behavior management. My time was spent in small group instruction in the resource room or team teaching within the class setting.

East Elementary-- Kodiak, Alaska 1988-1994

Kindergarten and 1st grade teacher

I created lesson plans and instruction for primary students; their academic, social and behavioral needs. Assessed student performance through, tests, observations, anecdotal records, and student portfolios which were presented at student-led conferences three times a year.

(North Star School was being built and I was asked to transfer so I could teach one of the three K-1-2 multi-age classes. It was a great opportunity to be part of a team that would be creating new curriculum, school policy and student expectation in academics and behavior.)

Professional Experience Continued

North Star Elementary-- Kodiak, Alaska 1995- present

Parents, staff and students worked very hard to establish a community that would embrace academic success and establish an environment of respect responsibility, and cooperation. Our team developed lesson plans to help students recognize the desired behaviors. Programs and materials needed to be modified for multiple ages. I implemented a reading intervention program for the building, which included teaching at-risk students and training staff in the areas of evaluations, interventions, and accommodations.

Achievements:

- Developed thematic units to facilitate interest and motivation in the areas of reading, writing, math, social studies and science.
- Integrated technology into daily lessons for computer literacy skills and adaptive activities.
- Enhanced student achievement through the use of cooperative learning, whole group, small group and individual instruction.
- Evaluated academic and behavioral growth through the use of authentic assessment that guided daily instruction.
- Researched assessments and programs that could be utilized to assist at-risk readers in the improvement of decoding, fluency, comprehension, and vocabulary.
- Implemented DIBELS, READWELL, Read Naturally, and Treasures programs within our building as a Reading Specialist.
- Trained staff and parents to use intervention programs and assessments in the area of reading.
- Reviewed and evaluated reading programs nationwide as part of the curriculum development committee.
- Disseminated consequences, behavioral expectations and interventions of students when our building principal was not in the building.
- Maintained building schedules, staff meetings, and staff development as directed by principal.

Additional Employment

My husband and I owned and operated a commercial salmon seiner from 1980 through 2005. I have worked as a crewman during those summers, some years full-time and others on a temporary basis.

Education and Training

Bachelor of Science in Elementary Education Oregon College of Education	1981 Monmouth, OR
Master of Arts in Special Education University of Northern Colorado	1989-1990 Greeley, CO
Continued Education in Reading University of Alaska	1990-present Kodiak, AK

Representative Harry Crawford
District 21

House Bill No. 23: Voluntary Class Size Reduction Sectional Summary

Sec. 1 Short Title. This Act may be known as Time to Teach Act

Sec. 2 Adds a new section to (AS 14.17) to include funding for reducing class sizes. Schools would receive a class size reduction grant that would increase the base student allocation to $8,000 for each student in grades kindergarten through three.

Only schools maintaining a class size of no more than 15 in grades kindergarten through three would be eligible for grants.

Schools must maintain this class level for a minimum of five years and academic progress and achievement must be studied by the school in comparison with classrooms that have not adopted the 15 student maximum.

Teachers placed in these classrooms must have a valid teaching certificate and at least one special education aide must be placed in a classroom with a student with a disability.

A student with a disability will count as two students.

A parent of a child may file a complaint in court to require a district to comply with and enforce the class size requirements of this Act.

Funding for reduction shall be treated the same as the states share of public school funding.

The location of the definition of "child with a disability" may be found in AS 14.30.350

The definition of "class size" is defined.

ASD MEMORANDUM #120 (2007-2008) December 3, 2007

TO: SCHOOL BOARD

FROM OFFICE OF THE SUPERINTENDENT

SUBJECT: CLASS SIZE REPORT 2007-2008

ASD Goal: *Establish and maintain a supportive and effective learning environment by providing safe, caring, barrier-free schools.*

PERTINENT FACTS:

This report for the 2007-2008 school year is divided into the following categories: Elementary Education, Middle School Education, High School Education, Special Education, Bilingual Education, and Charter Schools. In addition, the administration has compiled information on class sizes in the alternative programs and the student-to-counselor ratio at the eight major high schools.

Each major department in the Instructional Division has provided detailed information on class sizes and, at the high school level, the counselor-to-student ratio.

ELEMENTARY EDUCATION

Class size information for the elementary schools is summarized in Attachment A. This information is based on enrollment data on September 28, 2007. Overall, class sizes in the various categories are within one percent of last year's percentages, with the exception of the 27-30 category, which decreased by two percent (from 14 percent in 2006-2007 to 12 percent in 2007-2008).

A comparison chart of the last eight years for classes of 30 and higher is displayed in Attachment B. This number increased slightly in 2007-08. Teacher assistant time has been allocated to assist in large classes.

Attachment C compares kindergarten through third grade and fourth through eighth grade class sizes for the past three years, 2005-2006, 2006-2007 and 2007-

ANALYSIS: *(Attach a separate page if necessary)*

This bill establishes an $8,000 grant applied to the base student allocation in the foundation formula; for those District's schools that can reduce the class size of their Kindergarten through 3rd grade to a ratio of 15 students to one certified teacher. A student with special needs as established in AS14.30.350, would count as two students. Annual increases to this grant will be base on the Consumer Price Index for all urban consumers for the Anchorage metropolitan area. January 2003 represents the base of the index. The department used a five year CPI-U average to project out the increases to this grant, at 3.14.

To qualify, the district enters into an agreement with the school on a form that has been pre-approved by the Department of Education & Early Development. This agreement would cover a minimum of five years and would track the academic progress of those students.

Representative Harry Crawford
District 21

SPONSOR STATEMENT: HOUSE BILL 23

House Bill No. 23 would establish a grant program to support the voluntary participation of schools to reduce their classes to 15 students per teacher for the grades of kindergarten through third. This act may be known as the Time to Teach Act and has benefits for children, schools, teachers, and society as a whole.

Research conducted by Project STAR, a Tennessee based study, and the SAGE Program in Wisconsin both used the class size of 15 students and mapped those students' achievements using standard tests over five year periods starting in kindergarten and continuing through fourth grade. Students test scores rose in nearly every area compared to students in larger classroom settings. Teachers had an easier time teaching students, and maintained more control which led to less disciplinary action and disruption.

Class size reduction in the two studies mentioned above also led to higher test scores later in school and much higher rates of high school completion and a greater likelihood to pursue collegiate careers. The trends exposed by these studies had a greater impact on minority students as they benefitted greatly from the increased teacher availability and more direct student-teacher interaction.

The Time to Teach Act would provide the opportunity for schools to decide for themselves how, and when, they would implement the changes in class sizes. The flexibility allowed under this act will encourage strong local community support and involvement and will encourage custom tailored plans for each school. In addition to the class size reductions the Time to Teach Act will require schools to study the program over a five year period in order to determine its effectiveness and practicality both for the schools themselves and for the state of Alaska.

ANCHORAGE SCHOOL DISTRICT
ANCHORAGE, ALASKA

ASD MEMORANDUM #120 (2007-2008) December 3, 2007

TO: SCHOOL BOARD

FROM OFFICE OF THE SUPERINTENDENT

SUBJECT: CLASS SIZE REPORT 2007-2008

ASD Goal: *Establish and maintain a supportive and effective learning environment by providing safe, caring, barrier-free schools.*

PERTINENT FACTS:

This report for the 2007-2008 school year is divided into the following categories: Elementary Education, Middle School Education, High School Education, Special Education, Bilingual Education, and Charter Schools. In addition, the administration has compiled information on class sizes in the alternative programs and the student-to-counselor ratio at the eight major high schools.

Each major department in the Instructional Division has provided detailed information on class sizes and, at the high school level, the counselor-to-student ratio.

ELEMENTARY EDUCATION

Class size information for the elementary schools is summarized in Attachment A. This information is based on enrollment data on September 28, 2007. Overall, class sizes in the various categories are within one percent of last year's percentages, with the exception of the 27-30 category, which decreased by two percent (from 14 percent in 2006-2007 to 12 percent in 2007-2008).

A comparison chart of the last eight years for classes of 30 and higher is displayed in Attachment B. This number increased slightly in 2007-08. Teacher assistant time has been allocated to assist in large classes.

Attachment C compares kindergarten through third grade and fourth through eighth grade class sizes for the past three years, 2005-2006, 2006-2007 and 2007-

08. In kindergarten through third grade, class sizes increased in the under 18 and 18-20 categories, decreased in the 21-23 category and remained stable in the 24-26 and 27-30 categories. In the fourth through eighth grades, the number of classes in the under 18 category decreased slightly, the percentage of classes in the 18-20 category decreased, the number of classes in the 21-23 category increased by 2 percent and in the 24-26 category there was an increase of 6 percent. Concurrently, the percentage of classes in the 27-30 category decreased by 6 percent. Classes in the 31-32 range increased slightly.

The staffing divisors are 20.50 in kindergarten, 21 in first grade, 24 in second and third grades and 27 in fourth, fifth and sixth grades. The targeted ratio is 18:1 in kindergarten and first grades with class size reduction positions.

Attachment D is a summary of the information presented in Attachment C. Attachment E contains part-time student data.

Attachment F illustrates the positive effect of class size reduction positions in kindergarten and first grades across the elementary division.

Overall in the elementary division class sizes are very close to optimal in terms of budgeted staffing ratios. The forty-five class size reduction positions funded through Title IIA of the NCLB grant have provided significantly lower class sizes in many kindergarten and first grade classrooms across the elementary schools. Additionally, many Title I schools utilize Title I funds to lower class size.

MIDDLE SCHOOL EDUCATION

On September 28, 2007, the middle school division noted slight changes across all class size reporting categories. Percentage changes fell between 0.14 percent and 2.81percent with the greatest changes reported for class sizes of 21-25 and 31-35. A four-year comparison of class sizes across the mid-level division is attached. The average core class size remains constant from last year to this year at 26 students. Attachment G shows a class size analysis for each of the middle schools.

Across the division, schools reported a total of 114 classes with 36 or more students. The majority of these classes are physical education and music/art showing 73 and 25 classes respectively.

Since September 28, three of the nine core classes with over 36 students have been decreased to below 35 students and 22 of the 256 core classes with 31-35 have been reduced to below thirty. .

MIDDLE LEVEL CLASS SIZE FREQUENCY

PART I – 2004-2005 Class Size Frequency					
Class Size	1-20	21-25	26-30	31-35	36+
Number of All Classes	179	287	546	393	114
Percentage of All Classes	11.80%	18.90%	35.90%	25.90%	7.50%

PART II – 2005-2006 Class Size Frequency					
Class Size	1-20	21-25	26-30	31-35	36+

PART-TIME STUDENTS:

Currently, there are two part-time students attending one class each in the nine standard middle schools. There are no part-time students enrolled at Polaris K-12 this school year.

HIGH SCHOOL EDUCATION

In general, utilization of allocated teachers and the development of the master class schedules are local school decisions. Some items, such as holding ninth and tenth grade core classes to a smaller size and providing immediate remediation for struggling students are directives, which all schools are expected to follow. Additionally, schools are instructed to minimize the number of classes under 20 students and those over 35 students. Attachment H shows a class size analysis for each of the high schools and alternative schools.

On September 28, 2007, the high schools reported 564 classes under 20, a decrease of 21 from last school year; and 126 classes over 36 students, an increase of seven sections as compared to the 2006 total. The majority of the sections below 20 students are in math and language arts classes, a direct result of the prescriptive remediation efforts. Classes of 36 or more are generally physical education (77 percent), with a lesser number in music (15 percent). Attachment X contains District wide high school average class size as reported by content area. School-to-school variations are due to student interest and school-based scheduling decisions.

Alternative Schools

Class sizes at AVAIL, Benny Benson, COHO Continuation, Crossroads, King Career Center, MYC and SAVE are all under 30. Steller Secondary has three sections above 30 all others are below 30. Polaris K-12 class sizes are provided in the middle school section.

High School Counselors

Every high school student has been assigned a certificated counselor according to his or her alpha group or according to their academic house. Indian Education community counselors (non-certificated), career guides (non-certificated), and career resource counselors (non-certificated), continue to support qualified students and families as they interact with alpha counselors. Certificated bilingual counselors are assigned to four of the high schools, based upon their specific populations. The Partners for Success program, funded by the Cook Inlet Tribal Council, provides a counselor (non-certificated), and a family advocate (non-certificated), at East and Bartlett High schools.

Average and Range of Counselor Loads by School

School	Average Number of Counselees	Range	Number of Counselors
Bartlett	211	190-298	8.0**
Chugiak	270	240-301	5.0
Dimond	260	240-300	7.0
East	274	248-340	8.0**
Eagle River	432	432	2.0
Service	269	225-311	7.0*
South	354	308-380	5.0
West	264	232-353	7.0**

* Department heads and bilingual counselors are often assigned fewer counselees.

** Number may include certificated bilingual, Partners for Success and gifted counselors.

High School Part-time Students

Seventeen part-time students are currently enrolled in the high schools while also attending a private or correspondence school, UAA, or being home-schooled. Part-time students requested placement in fine arts, some upper level math and science classes, the vocational programs at KCC, and JROTC. No part-time student was refused placement and all received full consideration in selection of classes.

SPECIAL EDUCATION

The Anchorage School District provides comprehensive educational services through the Special Education Department to all children who experience disabilities and have additional needs beyond those which can generally be met by the regular classroom program. Special education services are provided in all Anchorage School District schools, including alternative schools, optional schools, charter schools and special school programs. Services are designed by an IEP team in the least restrictive environment, including the parent as a contributing member. IDEA requires that a continuum of special education placements is available which includes: support in the regular classroom supervised by special education personnel, direct service by special education personnel in the regular classroom, pull-out time from the regular classroom with service from special education personnel self-contained special education classrooms, a special school, home or hospital instruction or instruction in an institution. Since all components of the continuum cannot be provided in every neighborhood school, the IEP teams make every effort to provide the appropriate services for a student in a setting as close to his/her normal classroom as

possible. In addition to providing the necessary special education services, the IEP team may determine a need for related services. Related services may include speech therapy, occupational therapy, physical therapy, counseling, specialized nursing services, audiology services and transportation.

Early Childhood Special Education (Preschool)

Preschool SpEd Program	**Teacher/Student Staffing Ratio**	**Range of Current Enrollment**	**Average PTR**	**Number of Classes**
Itinerant Preschool (CARE)	1 Teacher: 25 L1	5–17 per team	10.75:1	4 Teams
Communication Classes (2-Day)	1 Teacher: 8 L1 x 4 sessions = 32 students	4-5 students - per session	18.5:1	8 sessions
Self-Contained Classes (4-Day)	1 Teacher: 8 L2/L3 x 2 sessions = 16 students	5-7 students per session	10:1	26.5 teachers/ 53 sessions
Autism (Pre-K/K)	1 Teacher: 6 L3 (Pre-K & K) (full day)	3-6 students per class (Pre-K/K)	4.3:1 (Pre-K/K)	6 full day classes (Pre-K/K)

Key Points:

- Staffing ratio for preschool is based on am/pm sessions unless otherwise noted as full day i.e. one teacher for two sessions of eight students each
- CARE teams provide special education services in community settings
- Preschool autism classes provide services for preschool and kindergarten students; kindergarten students are included in above numbers to accurately reflect teacher caseloads
- Preschool special education services begin at age three rather than by school year; eligible students are enrolled throughout the school year
- Ninety-two students are scheduled for preschool assessments are scheduled between October 26 and December 20, 2007

Elementary Special Education

Elementary SpEd Programs	**Teacher/Student Staffing Ratio**	**Range of Current Enrollment**	**Average PTR**	**Number of Classes**
Resource *(K-6)*	1 Teacher:20 L1 1 Teacher:12 L2 1 Teacher: 8 L3		17.4:1	136 teachers: (11 gen. ed, 125 special ed)
Extended	1 Teacher: 10	4 - 9 students	7.6:1	10 classes

Resource (K – 6)	L2/L3			
Intensive Needs	1 Teacher: 8 L3	4 - 7 students	6.1:1	20 classes
Autism *(grades 1-6)*	1 Teacher: 6 L3	3 - 6 students	4.2:1	13 classes

Key Points:

- The number of students requiring special education services and supports for more than 50% of the school day continues to increase.
- Extended Resource, Autism, and Intensive Needs Classes are designed to provide full-day support required by a student's IEP.
- The number of students needing specialized autism classes continues to increase.

Mt. Iliamna School

Mt. Iliamna Program Pre-K – 4th Grade	**Teacher/Student Staffing Ratio**	**Range of Current Enrollment**	**Average PTR**	**Number of Classes**
Behavioral Support Classes K - 4	1 Teacher: 10 L3 students	5 – 9 per class	6.7:1	7
Learning Centers K - 4	1 Teacher: 6 L3 students	6 – 7 per class	6.2:1	4

Key Points:

- Behavioral support classes provide small group instruction; while learning center classes provide highly individualized support to assist students in development of social and behavioral skills.
- Mt. Iliamna supports children with social/behavioral needs from Kindergarten through fourth grade (preschool services have been relocated)
- As of October 26, 2007, the distribution by grade for the 72 elementary students was: K = 7; First = 14; Second = 15; Third = 18; Fourth = 18.
- Estimated enrollment by end of second quarter is 84 which is an increase of 31 percent over last fall
- On count date, Mt. Iliamna enrollment was 10 students above projections.
- Classes above represent scope of behavioral support program at Mt. Iliamna; specialized settings within Mt. Iliamna have different staffing ratios

Middle School Special Education

Middle School SpEd Programs	Range of Caseloads	Average PTR	Number of Classes
Resource	12-18 students	14:1	61 teachers
Life Skills 1	7-13 students	10:1	4.5 classes
Life Skills 2	4-8 students	6:1	5 classes
Autism	5-9 students	8:1	2 classes

High School Special Education

High School Special Ed Programs	Range of Caseloads	Average PTR	Number of Classes
Resource	15-25 students	17:1	80.5 teachers
Life Skills 1	9-15 students	11:1	10 classes
Life Skills 2	4-9 students	6:1	7 classes
Autism	6-11 students	8:1	2 classes

Alternative Special Ed Programs 7-12	Range of Enrollment	Average PTR	Number of Classes
Resource	12-27 students	17:1	11 teachers

Continuation/ COHO/Outreach	Range of Enrollment	Average PTR	Number of Classes
Resource	5-13 students	10:1	2 teachers

ACE/ACT

ACE/ACT Programs	Range of Enrollment	Average PTR	Number of Classes
ACE	15-25 students	20:1	3 teachers
ACT	10-17 students	11:1	6 teachers

Special Schools Program

Special Schools Program	Range of Enrollment	Average PTR	Number of Classes
Residential	9-18 students	13:1	15.5 teachers

Whaley School

Whaley School/ABA	Range of Enrollment	Average Class Size/CaseLoad	Number of Classes
Intensive Behavior Classes	4-8 students	6 students	24 teachers

Key Points:
3 elementary classes
21 secondary classes, including elective teachers

Related Services

Class size information across all related services programs is based on enrollment data from October 17, 2007. The total number of students receiving a related service is 4,587, representing an overall decrease of 103 students from the same time last year.

Speech-Language Services
The total number of students receiving IEP speech-language services is 2806, representing an increase of 55 students from last year, of which 846 students receive speech-only services and 1960 are special education students with speech. The number of students requiring assistive technology to support communication continues to increase, with at least 60 students using dedicated devices as stipulated by their IEPs.

School Psychology Services
Caseloads for school psychologists are determined by multiple issues other than school enrollment, i.e. the number of evaluations typical to a school, the number of functional behavioral assessments and manifestation determinations, and other special factors. Typically a school psychologist may be assigned to one secondary school and one elementary school while others are assigned to two elementary schools. The total number of students receiving IEP psychology services is 121, representing a decrease of 23 students from last year. The overall demand for psychology services in the schools increases yearly in response to discipline situations and crisis response.

Occupational Therapy/ Physical Therapy/ Adapted Physical Education
The number of students receiving OT (750), PT (216) and/or Adapted PE (459) is 1425, representing an increase of 31 students from last year. Average caseloads are 30 students for PT, 32 students for OT and 60 students for APE. Providers are highly itinerant, serving students in 4 to 12 sites each.

Hard of Hearing and Audiology Services
Thirty-five students receive services as hearing impaired, and/or 132 receive audiology services, totaling 167 which is a decrease of 55 students from last year. This decrease is likely due to a continued staff shortage for audiology. Most students receive itinerant services in their neighborhood schools, with the exception of students with cochlear implants who receive services in special classes at Williwaw Elementary.

Blind/Visually Impaired Services
Sixty-eight students receive BVI services, representing an increase of two students from last year. Average caseload size per specialist is 13 students. While the total number of students remains fairly consistent, there are increasing numbers of young Braille readers and students requiring advanced technology in order to access curriculum.

Alaska State School for Deaf and Hard of Hearing
The Alaska State School for Deaf and Hard of Hearing (ASSDHH) serves students of the state of Alaska through a program of comprehensive services supported by the District and the Department of Education and Early Development. Services for students ages three through 22 are provided in coordination with special education services of the District at Russian Jack Elementary School, Hanshew Middle School, East High School, and the ACE/ACT program. Students receive specialized instruction by ASSDHH staff and support in order to access general education at each of these sites. Enrollment in the Alaska State School for Deaf and Hard of Hearing generally fluctuates between 50 and 60 students. Enrollment as of October 27, 2006 is 56.

- Class sizes range from four to seven students at Russian Jack.
- Class size at Hanshew is seven.
- Teachers at the secondary level of ASSDHH are case managers for five to seven students each at the following locations; EHS, ACE, ACT, KCC.

BILINGUAL/MULTICULTURAL EDUCATION PROGRAM

Historically, enrollment of limited-English-proficient (LEP) students in the Bilingual/Multicultural Education Program (BMEP) has steadily increased; however, there was a decrease in enrollment this year because of state regulations regarding exiting students for progress. Attachment 1 (10-Year Historical Enrollment Chart) provides the total number of students receiving service during each designated school year. As of October 25, 2007, the 4,672 students identified and placed to receive services (Attachment 2) is much lower than the count last year in October 2005 of 6,625. There are 2,755 students in

grades K-6, and 1,917 students in grades 7-12 (also including sixth graders at Mirror Lake and Begich middle schools). Eight hundred and four students are new-to-the-district (NTD), which is slightly lower than the number of NTD in 2005-2006. Students receiving service from the BMEP speak 95 different languages. Table I shows the Enrollment of LEP Students by language spoken. As indicated in Language Charts 1 and 2, the top five languages are Spanish (1,294 or 27 percent), Samoan (754 or 16 percent), Hmong (657 or 14 percent), Tagalog (605 or 13 percent), and Yupik (222 or 5 percent).

An intensive articulation process from elementary to middle school and from middle school to high school has continued to gauge staffing decisions. In past years, students were exited from the program (if that were the need) and others were more closely monitored to make sure they were assessed and properly placed on the next level. Currently, students are being exited according to state requirements based on student proficiency for one year on the English Language Proficiency Assessment in the areas of listening, speaking, reading, and writing.

Elementary Bilingual Education students of limited-English-proficiency are enrolled at all schools, and bilingual staff members are assigned to all elementary schools in the district. The existing staffing standard attempts to provide a student/staff ratio (SSR) of 30:1, albeit, relatively high in comparison to the overall district SSR. The primary modes of delivery, as articulated in the board and state approved Plan of Service, consist of both individual or small group (two to eight students) tutorial, and in-class delivery. The current data reflect inequities in SSR in some schools. This is due to the fact that the assessment and placement of students is still in progress with a high number of students on the pending list. Once all assessment is complete, students will be transferred from the pending list, assigned to the appropriate language proficiency designation, and placed in appropriate service. The final reporting in November will reflect a more accurate picture of actual students scheduled for services. Upon receiving this information, decisions will be made to shift staff, if at all possible, from schools with low enrollments to schools with increased enrollments.

Due to the variables in enrollment districtwide of LEP students and changes made in the assessment of LEP students, there is a significant impact on the staffing at all schools.

Students in Eagle River receive service on a weekly basis by the resource teacher assigned to the school. These schools are Alpenglow (four students), Birchwood (five students), Eagle River (thirteen students), Homestead (four students), and Ravenwood (eight students).

On the elementary level, Bilingual Learning Centers are located at schools with a high concentration of LEP students (generally 90 or greater). Fourteen sites on the elementary level have been identified, including Rogers Park which was added this year: Creekside Park (54), Fairview (117), Government Hill (153), Klatt (68), Lake Hood (96), North Star (103), Mountain View (115), Muldoon (91), Rogers Park (65), Tudor (73), William Tyson (169), Williwaw (131), Willow Crest (94), and Wonder Park (68). Due to the number of students who exited due to progress and because of boundary changes, some of these schools are down in enrollment, so the assignments of teachers will need to be monitored for possible changes in the coming school year. There are 14 full-time teachers assigned to these schools, with one half-time teacher assigned to Eagle River schools as an itinerant teacher.

Each elementary learning center is staffed with one certificated teacher, as well as tutors who are non-certificated. They provide service to students with low English-language-proficiency. Tutors who work under the supervision of school principals and the bilingual supervisor staff the remaining elementary schools. Resource teachers visit these schools as well and work directly with non-English proficient (NEP) students in those schools to provide technical assistance to tutors and regular classroom teachers on an ongoing basis. There are 86.5 elementary tutor positions currently filled, with 2 positions unfilled, making the count 88.5 to be fully staffed.

Middle school bilingual education staffing consists of 2.0 FTE bilingual/ESL certificated counselors, 12.8 FTE certificated teachers, and 15.25 FTE tutors. Staffing for the middle school is a challenge because of the need to avoid homogenous grouping on teams. Challenges faced by the BMEP on the middle school level are reconfiguration of space and reallocation of staff resources to support the curriculum philosophy, which is so closely tied to curriculum strategies, appropriate forms of collaborative teaching, and coordination of services necessary to meet the unique needs of LEP students. Hence, staffing remains a major concern and issue at all middle schools. Clark Middle School students are attending Begich Middle School during construction of the new Clark Middle School with the largest concentration of LEP students, 154 (down from 316 last year), which is similar to Romig, with 151 students (down from 194 last year). Mears at 52 (down from 146 last year) and Hanshew at 57 (down from 151 last year) have significantly lower enrollments as well. Wendler, from 121 last year to 115 this year, and Goldenview, from 37 to 26, experienced little change, while Central increased slightly from 71 to 77. The middle schools in the Eagle River area show decreases, and they continue to have relatively low enrollments; Gruening (eight) and Mirror Lake (three). These two schools share a 1.0 FTE bilingual tutor.

The difficulty in staffing on the middle school level is providing a teacher or tutor for each of the teams, since LEP students are spread over all teams. The issue of obtaining ESL teachers who are highly qualified in several content areas is also a challenge.

High school bilingual education staffing consists of 8.0 FTE bilingual/ESL certificated counselors, 16.0 FTE certificated teachers, and 16 FTE filled positions of high school tutors. All high schools provide ESL courses and tutorial assistance for students, depending upon their level of English language proficiency. Due to student's limited English proficiency skills, ideally, class size should be capped at fifteen students maximum. Historically, East has the largest number of LEP students on this level, but has experienced from 521 students last year to 388 at the present time. Enrollment of LEP students at West has decreased from 384 last year to 261 this year. Currently, Bartlett has 176 LEP students, and Dimond has 117 LEP students. Service numbers have been growing for the last couple of years and BMEP will be taking a closer look at the needs of that school for the next school year. Staffing at Service should be similar to other high schools with similar needs; however, it is not. These schools have decreased in numbers of LEP students due to exiting for progress.

The changing demographics in ASD have brought the challenge of addressing the needs of low-literacy immigrant students. The Newcomers' Center (NC) was developed for students who are new to the country and need more intensive language and cultural assistance, and is in the eleventh year of existence. Students enroll in a combination of social studies and English language arts classes. Cognitively, students at the NC are generally three years or more below their age-appropriate grade level. Many factors contribute to this: students come from poor rural areas where education is not readily available; some have not used print in their native language; some are victims of war and postwar poverty which bars many from formal education. Currently, there are students in two separate sessions (42 in the morning and 42 in the afternoon session). There are three students on the wait list for the AM session and five on the wait list for the PM session. All of the students are monolingual speakers of another language. They have no school experience in US schools and limited, if any, schooling at all in their native countries. Students enrolled in the NC attend the center for half day and the other half-day attend classes at the area middle and high schools.

With bilingual/ESL counselors in five of the high schools and one at the Newcomers' Center, LEP students receive comprehensive support services that address the affective as well as intellectual aspects of their overall development. In addition to promoting linguistic and cognitive growth, LEP students receive exposure to occupational, career awareness, and vocational components that

offer functional, hands-on experience, and job readiness skills at the secondary level.

CHARTER SCHOOLS

As of September 28, 2007, there are seven charter schools approved by the School Board and in operation in the Anchorage School District. Lower class sizes and more personalized instruction characterize each of the programs.

Aquarian Charter School had an enrollment of 352 students in grades K-6 as of September 28, 2007. Aquarian is in its eleventh year of operation and is currently housed at 1705 West 32 Avenue.

Aquarian is designed as a rigorous academic program that integrates the arts, gifted services, science and foreign language into all curriculum areas. Community service projects are an integral part of this school's social learning projects, assisting many local agencies. A cap of 24 students per classroom is part of this school's charter, with a part-time teaching assistant at every grade level.

Grades			
Kindergarten	60	Fourth Grade	49
First Grade	54	Fifth Grade	43
Second Grade	58	Sixth Grade	36
Third Grade	52		

Total Aquarian Charter School Students Enrolled **352**

Eagle Academy Charter School opened in September 2005 and is located at 10901 Mausel St., Suite 101, in Eagle River. In its third year of operation, it leases classroom and office facilities in a non-District facility. Eagle Academy offers an academically challenging program requiring mastery of performance standards before students progress to the next level of curriculum. Math and language arts instruction groups students by achievement level rather than by grade level. Eagle Academy's curriculum meets or exceeds Alaska's State standards. The students by grade level as of September 28, 2007 are as follows:

Grade	# of Students		
Kindergarten	25	4th grade	25
1st grade	25	5th grade	23
2nd grade	25	6th grade	19
3rd grade	25		

Total Eagle Academy Charter School Students Enrolled **167**

Family Partnership Charter School's office is located at 401 East Fireweed Lane, Suite 100. The enrollment as of September 28, 2007, was 522 students: 174 for kindergarten through sixth grades and 348 for grades seven through twelve. This charter school has an individualized program, and class sizes vary from one to small groups of students working with one teacher as part of their contract with the ASD certificated teacher. In its 11th year of operation, the Family Partnership Charter School leases office facilities in a non-District facility in order to accommodate parents and students in a more centralized location. The students by grade level are as follows:

Elementary	
Kindergarten	14
First	18
Second	26
Third	22
Fourth	28
Fifth	27
Sixth	39
Total	174

Secondary	
Seventh	45
Eighth	50
Ninth	50
Tenth	67
Eleventh	59
Twelfth	77
Total	348

Total Family Partnership Charter School Students Enrolled 522

Frontier Charter School has an office at 400 West Northern Lights Blvd. The enrollment as of September 28, 2007, was 334 students; 150 for K-6 and 203 for grades seven-twelve. This charter school has an individualized program. The focus is helping parents understand how their children learn as assessed through the Frontier Learning Profile. Frontier class sizes vary from one student to small groups of students working with one teacher as part of their contact with the school. In its third year of operation, the Frontier Charter School leases office facilities in a non-District facility in order to accommodate parents and students in a more centralized location. Students by grade level are listed below:

Elementary	
Kindergarten	16
Grade 1	21
Grade 2	16
Grade 3	22
Grade 4	29
Grade 5	18
Grade 6	21
Total	143

Secondary	
Grade 7	12
Grade 8	37
Grade 9	33
Grade 10	30
Grade 11	26
Grade 12	53
Total	191

Total Frontier Charter School Students Enrolled 334

Highland Tech Charter School had an enrollment of 244 students in grades seven through twelve as of September 28, 2007. The school is in its fifth year of operation and is currently leasing space at the ASD Education Center. The school is a standards-based program and promotes a project-based learning environment, which integrates technology, connectivity and student-centered content into the classroom. The students by grade level are as follows:

Grade 7	32	Grade 11	37
Grade 8	33	Grade 12	50
Grade 9	50	**Total**	**244**
Grade 10	42		

Total Highland Tech Charter School Students Enrolled **244**

Rilke Schule German School of Arts and Sciences is a K through 8 school that focuses on high academic achievement by engaging each child through an enriched language curriculum taught primarily in German. The school is in its first year of operation and is temporarily located in the Change Point Church facility at 6689 Seafood Drive. Their new building at 650 International Airport Road is scheduled for completion in late December or early January. The enrollment as of September 28, 2007 was 177 students in kindergarten through eighth grade.

Kindergarten	38	Fifth Grade	12
First Grade	28	Sixth Grade	16
Second Grade	23	Seventh Grade	11
Third Grade	25	Eighth Grade	2
Fourth Grade	22		

Total Rilke Schule Charter School Students Enrolled **177**

Winterberry Charter School is located at 508 W Second Avenue on the corner of Second Avenue and E Street. The enrollment as of September 28, 2007, was 171 students in kindergarten through seventh grade. The school has two half-day kindergarten classes, two grade four classes, one combined grade six and seven class, and one of each of the remaining grades. This year is Winterberry's third year of operation.

Kindergarten	32	Grade Four	29
Grade One	27	Grade Five	18
Grade Two	25	Grade Six	11
Grade Three	24	Grade Seven	4

Total Winterberry Charter School Students Enrolled **171**

The Tennessee Study of Class Size in the Early School Grades

Frederick Mosteller

Abstract

The Tennessee class size project is a three-phase study designed to determine the effect of smaller class size in the earliest grades on short-term and long-term pupil performance. The first phase of this project, termed Project STAR (for Student-Teacher Achievement Ratio), was begun in 1985, when Lamar Alexander was governor of Tennessee. Governor Alexander, who later served as secretary of education in the cabinet of President George Bush, had made education a top priority for his second term. The legislature and the educational community of Tennessee were mindful of a promising study of the benefits of small class size carried out in nearby Indiana, but were also aware of the costs associated with additional classrooms and teachers. Wishing to obtain data on the effectiveness of reduced class size before committing additional funds, the Tennessee legislature authorized this four-year study in which results obtained in kindergarten, first, second, and third grade classrooms of 13 to 17 pupils were compared with those obtained in classrooms of 22 to 25 pupils and in classrooms of this larger size where the teacher was assisted by a paid aide. Both standardized and curriculum-based tests were used to assess and compare the performance of some 6,500 pupils in about 330 classrooms at approximately 80 schools in the areas of reading, mathematics, and basic study skills. After four years, it was clear that smaller classes did produce substantial improvement in early learning and cognitive studies and that the effect of small class size on the achievement of minority children was initially about double that observed for majority children, but in later years, it was about the same.

The second phase of the project, called the Lasting Benefits Study, was begun in 1989 to determine whether these perceived benefits persisted. Observations made as a part of this phase confirmed that the children who were originally enrolled in smaller classes continued to perform better than their grade-mates (whose school experience had begun in larger classes) when they were returned to regular-sized classes in later grades. Under the third phase, Project Challenge, the 17 economically poorest school districts were given small classes in kindergarten, first, second, and third grades. These districts improved their end-of-year standing in rank among the 139 districts from well below average to above average in reading and mathematics. This article briefly summarizes the Tennessee class size project, a controlled experiment which is one of the most important educational investigations ever carried out and illustrates the kind and magnitude of research needed in the field of education to strengthen schools.

Frederick Mosteller, Ph.D., is a professor emeritus of mathematical statistics at the departments of Statistics and of Health Policy and Management at Harvard University.

4459

Because we have all gone to school, we each have ideas about how to improve the system. For example, James Garfield once said that a pine log with a student on one end and Mark Hopkins, a beloved president of Williams College, on the other would be an ideal university. But if we want to improve school systems, we need to consider what changes may be practical and effective. Setting aside the discomfort of outdoor logs during New England winters, would Garfield's design have made effective use of President Hopkins's time? Aristotle, even when tutoring the young Alexander before he was called "the Great," is believed to have had more than one student per class.

The size of the class is largely under control of the school system, and its choice influences the size and number of classrooms and the number of teachers required, and so class size is naturally a concern of parents, teachers, and school administrators. Everyone is concerned that the pupils receive adequate attention and that the teachers are able to control their classes. Some courses seem to need more teachers per student than others. For example, classes in carpentry or cooking, in which hazardous tools and equipment are used, may require closer supervision than a class in arithmetic.

The effects of class size on children's learning have been studied, usually without reaching definitive conclusions. Most research on class size has compared the performance of pupils in classes of different sizes in such cognitive subjects as reading, mathematics, or social studies. Designing and executing these studies is difficult not only because parents may object to variation in the treatment of children but also because of the constraints that must be imposed if anything of value is to be learned from the investigation. Groups to be compared following different treatments need to be equivalent at the start. The treatments must be carefully described and delivered. Suitable measures of performance must be chosen. Beyond all this, a healthy atmosphere toward the investigation must be created; otherwise, the study can be easily sabotaged. It does not take many unwilling workers or full-time grumblers to spoil a research program.

In the 1980s, conditions favorable for a study of class size evolved in the state of Tennessee. Governor Lamar Alexander had established education as a top priority for his second term. Members of both the state legislature and the educational community in Tennessee had been intrigued by a modest-sized study in the state of Indiana, called Project Prime Time, which investigated the effect of reduced class sizes in kindergarten and first and second grades. For example, Bain and Achilles[1] report that, in Project Prime Time, (1) students in smaller classes scored higher on standardized tests than did those in larger classes, (2) the smaller classes had fewer behavioral problems, and (3) teachers of smaller classes reported themselves as more productive and efficient than they were when they taught larger classes.

The Tennessee legislators and teachers were also aware of an investigation by Glass and colleagues[2] which reviewed the vast literature on the effects of class size on learning using a special quantitative method called

meta-analysis. The results of this investigation suggested that a class size of 15 or fewer would be needed to make a noticeable improvement in classroom performance. At the time of the Glass study, the effect of class size on performance was controversial because many studies in the literature differed in their outcomes. The new methods used by Glass and his colleagues were not accepted by all professional groups. At the same time, there were ongoing discussions about the lesser cost and possibly equal effectiveness of placing paid teachers' aides in elementary classrooms. Because of the additional expense associated with a reduction in class size for early grades, members of the Tennessee legislature decided that any proposed innovation should be based on solid information and, therefore, authorized a four-year study of class size which would also examine the cost-effectiveness of teachers' aides. The legislature appropriated $3 million in the first year for a study of pupils in kindergarten and then appropriated similar amounts in subsequent years for the project, which carried the acronym STAR (for Student-Teacher Achievement Ratio).[3]

The study was carried out in three kinds of groups: (1) classes one-third smaller than regular-sized classes, (2) regular-sized classes without a teacher's aide, and (3) regular-sized classes with a teacher's aide. By comparing average pupil performance in the different kinds of classes, researchers were able to assess the relative benefits of small class size and the presence of a teacher's aide. The experiment involved many schools and classes from inner-city, urban, suburban, and rural areas so that the progress of children from different backgrounds could be evaluated.

Study Design and Execution

Personnel from four Tennessee universities helped design and execute the Tennessee study, which was carried out in three phases (see Box 1). Each year, $2.5 million was spent on additional teachers and teachers' aides. The remaining funds were used to gather and analyze the data and to carry out other obligations imposed by the enabling legislation.

Legislation for the STAR experiment required that studies be made of classes in inner-city, suburban, urban, and rural schools. Because the legislators did not define these types of residential areas, the study makers had to invent categories appropriate for Tennessee and their experiment. To do so, they placed inner-city and suburban schools in the category of *metropolitan* areas. Inner-city schools were defined as those in which more than half of the students received free or reduced-price lunches. Schools in outlying areas of metropolitan cities were called *suburban*. In nonmetropolitan areas, schools in towns of more than 2,500 serving primarily an "urban" population were called *urban*, and the rest were classified as *rural*.

To be eligible to participate in the experiment, a school was required to sign up for four years and to have at least 57 children for any given grade (to comprise a small class of 13 and two classes of 22). This constraint assured the ability to make comparisons among the three kinds of classes within a single school. Participating schools received no extra support other than funds for additional teachers and aides and had to supply the extra classrooms. In any given calendar year, the experiment was carried out in one grade only, and this minimized the number of new classrooms needed. No new textbooks or curricula were to be introduced. Although 180 schools offered to participate, only 100 were large enough to qualify, and 79 actually participated in the kindergarten year.

The treatments planned for the program were started in 1985, beginning with

Box 1

The Tennessee Class Size Project

The Tennessee project on the effectiveness of small classes and of teachers' aides has had three phases:

Phase 1

1985–1989. The educational system of Tennessee carried out a four-year experiment, called Project STAR (for Student-Teacher Achievement Ratio), to assess the effectiveness of small classes compared with regular-sized classes and of teachers' aides in regular-sized classes on improving cognitive achievement in kindergarten and in the first, second, and third grades.

Phase 2

1989– . The Lasting Benefits Study (LBS) was an observational study of the consequences of the experimental program on children when they returned to regular-sized classes in the fourth, fifth, and sixth grades and beyond. This research phase asked whether the children who started in the smaller classes performed better in later grades. Only students who had been in the experiment (Phase 1) could contribute data to this second phase.

Phase 3

1989– . Project Challenge implemented the small classes in kindergarten and in the first, second, and third grades in the 17 districts of Tennessee where children are highly at risk of dropping out early. These districts have the lowest average incomes in the state.

kindergarten and continuing each year through first, second, and third grades. The classes were of three types: (1) small, 13 to 17 pupils; (2) regular size, 22 to 25 pupils; and (3) regular size with a teacher's aide. The small classes averaged 15 pupils, down about 35% from the average regular size of about 22 or 23. During the first year, the study involved about 6,400 pupils in 108 small classes, 101 regular-sized classes, and 99 regular-sized classes with teachers' aides.

The study findings apply to poor and well-to-do, farm and city, minority and majority children.

Within a school, pupils and teachers were assigned to classes at random each year to ensure that classes came from equivalent populations and that teachers did not choose their classes. In a study of this kind, randomization protects against all variables that might matter, whether they have been identified or not.

A teacher's aide had no specific duties but helped each teacher of a regular-sized class in whatever way the teacher wished. Some aides participated in teaching, others prepared materials and kept records, and some carried out all of these duties. Teachers' aides were paid.

Analysts report that attendance was about 95%, independent of school location, type of class, or minority or nonminority status.

Table 1 indicates the composition of the experimental groups by giving a breakdown of schools by city type and of classes by city type and ethnicity at the end of the first grade (second year of the experiment). This table shows participation by 6,572 pupils in 331 classes at 76 schools and is important because it indicates that enough pupils were studied to enable researchers to reach a conclusion. Ultimately, the findings from the investigations repeated themselves at least qualitatively in nearly every large cell of Table 1, suggesting that the study findings apply to poor and well-to-do, farm and city, minority and majority children. The magnitude,

control, and duration of the experiment illustrate the sort of investigations that are needed to improve education in the schools.

Examining and Interpreting the Findings

In assessing student performance, two types of tests were used: (1) standardized tests, which have the advantage of being used nationally but the disadvantage of not being directly related to any particular curriculum or course of study; and (2) curriculum-based tests, which reverse the advantages and disadvantages of standardized tests. Curriculum-based tests measure more directly the student's increased knowledge of what was actually taught, but they give little indication of where local results stand in the national picture.

The first graders took two standardized tests in reading: (1) the Stanford Achievement Test (SAT) for word study skills and reading, and (2) the Tennessee Basic Skills First (BSF) test for reading, a curriculum-based measure. In mathematics, first graders took one SAT (standardized) and one BSF (curriculum-based) test.

When an experiment applies a new treatment or employs a new method, one way of comparing the effects of this new approach with those previously achieved using old treatments or methods is by expressing individual test scores in terms of standard deviation (see Box 2) and then expressing group differences as effect sizes (see Box 3). Here, *effect size* is defined as the difference between means divided by the standard deviation for individuals in the regular classes without aides. Thus Table 2 shows the effect sizes for small classes compared with the average of the

Both math and reading scores show a benefit of about one-fourth of a standard deviation.

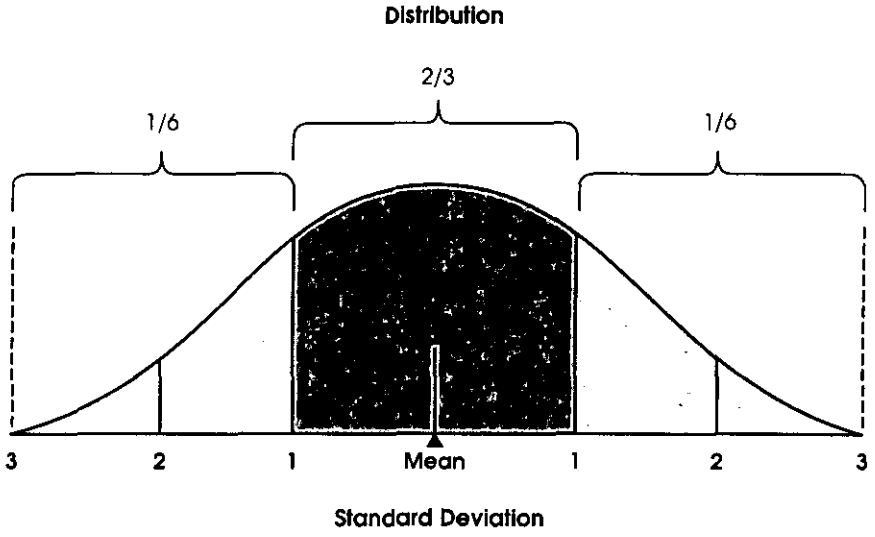
performance of the regular-sized classes with and without aides for the standardized tests. Both math and reading scores show a benefit of about one-fourth of a standard deviation. On the curriculum-based tests (BSF), reading scores improve by about one-fifth of a standard deviation and math scores by only one-twelfth.

To interpret the gains represented by these effects, it is useful to consider a pupil who, without a special treatment such as attending small classes, would achieve about the average score, say at the midpoint or 50th percentile, of all students.

Box 2

Standard Deviation

When considering distributions of quantities such as heights of people, family incomes, and scores on standardized tests, it is often useful to think first of the typical person, family, or score and then to represent that typical one by either the *mean* (average) of the numbers or the *median* (value of the middle measurement).



This drawing is of a distribution about the mean. The total area between the curve and the horizontal axis is one (or 100% of the measurements, incomes, or scores). For distributions that are approximately symmetrical, about half of the measurements lie to the right of the mean and half to the left. The slightly asymmetrical mountain-shaped (or bell-shaped) curve indicates roughly the way that many types of measurements distribute themselves in large populations, with the height of the curve representing the density of the scores at various positions. Typically, the distributions are dense in the middle and are less dense as one moves farther from the middle in either direction.

For many common distributions of everyday quantities, it is convenient to relate the mean and a measure of variability called the *standard deviation* to the fraction of measurements falling within a symmetrical interval about the mean. For example, this drawing indicates that the proportion of measurements falling in the interval that goes from one standard deviation to the left of the mean to one standard deviation to its right is about two-thirds. This number is not exact but is a rough approximation for distributions that are shaped generally like the one pictured.

What about the interval that includes the mean plus or minus two standard deviations? In the same approximate sense, this interval contains about 95% of the measurements for many distributions occurring in practice. If the interval is extended to three standard deviations each way from the mean, it will include nearly all—almost 100%—of the measurements.

4464

What would a gain of one-fourth of a standard deviation do for such a pupil? That pupil would move from the 50th percentile of all pupils up to the 60th percentile, thus surpassing an additional 10% of the population beyond the 50% that were exceeded originally. Thus, an increase of one-fourth of a standard deviation can amount to considerable gain in performance.

In the study report, the average performance of small classes was compared with the average for all regular-sized classes with or without an aide. The resulting gain is shown in the first line of Table 2. The second line of that table shows the effect size of the gain from having an aide in the regular-sized class compared with the performance in the regular-sized class without an aide. When the effect of the small class is compared with that of the regular-sized class without an aide, the numbers in the first row of Table 2 increase to 0.30, 0.25, 0.32, and 0.15, respectively.

When performance of classes with an aide is compared with that of regular-sized classes without an aide, the gain averages about one-twelfth of a standard deviation. In other words, the average gain associated with an aide is about 35% of the gain achieved by reducing class size from regular to small.

Of special interest is the effect of class size on minority students. At the end of the second year of the experiment, in small classes compared with regular-sized classes and regular-sized classes with an aide, the effect size for minorities was about double that for majorities, averaged over the four tests. This extra gain occurred only in the first two years of the experiment; thereafter, the gains of both groups were about the same.

The original plan of the study was that all students would remain in their class types for all four years of the experiment. But after the first year, parents of students in regular classes objected to the continuation of the assignments. As a result of discussions with parents and with the people guiding the experiment, in the second year, students in the regular-sized classes with and without the teacher's aide were randomly reassigned half to classes with a teacher's aide and half to ones without, but the assignments to small classes remained unchanged. Such changes were not allowed in later years. It was the view of the advisory group from the four universities that continued changes would make it impossible to interpret the results of the experiment. As a result of the changes that had been allowed, at the end of the second year, there were four situations in the regular classes for those who had attended kindergarten and first grade: (1) two years without an aide, (2) two years with an aide, (3) first year without an aide and second year with an aide, and (4) first year with an aide and second year without.

Schools had an influx of children in first grade who had not attended kindergarten the first year of the experiment. (Subsequently, kindergarten became required in Tennessee.) These children had to be assigned to the experiment in participating schools. This led to some separate analyses of results from kindergarten and first grade (for years one and two of the experiment) and of results from first, second, and third grades (for years two, three, and four of the experiment) to increase the numbers of students who experienced the same circumstances. (The rerandomization before the second year of the experiment shuffled some people between regular-sized classes with an aide and those without. Consequently, starting in the second year of the experiment, pupils could be classified according to their having experienced regular-sized classes with and without an aide.)

Of special interest is the effect of class size on minority students. The effect size for minorities was about double that for majorities.

One way of summarizing results gives the percentile ranks for the average score based on national norms for the test. Table 3 shows the results for small classes, regular-sized classes, and regular-sized classes with a teacher's aide for both Total Reading SAT and Total Math SAT. Averaged over the four grades, the small classes gained a little more than eight percentiles over the regular-sized classes

Box 3

Effect Size

When an experiment applies a new treatment whose consequences are to be compared with those of the old or standard treatment, the difference in their consequences is often called the *size of effect* of the new treatment. For standardized tests, information is usually available which gives the distribution of scores for members of large populations who take the tests. Frequently, these distributions look like the common distributions described in Box 2. They are shaped approximately like distributions called Gaussian, or normal, in English-speaking countries. (When used in this way, the term *normal* means "usual, customary, or related to the norm" and does not connote an ideal situation or a desirable state of being.) The shapes of these curves are often well described by a formula that requires knowing only their mean and standard deviation.

Suppose that the national mean of a certain test is 500 and that its standard deviation is 100. Suppose as well that a new method of teaching produces higher test scores in an experimental group than would have been achieved without it, say a distribution with a mean of 550 instead of the usual 500. One way of thinking about this situation is to view the effect as shifting the original distribution to the right by 50 points—essentially adding 50 points to everyone's score.

To interpret the value of this gain requires knowing how variable the scores are. If, for example, the standard deviation is 1,000 instead of 100, then 50 points does not look like much of a gain; but if the standard deviation is 10, a gain of 50 points is astounding because it represents a gain of five standard deviations, when a gain of only three standard deviations would take a student from an average score to one of the best scores that had ever been made.

One interpretable quantity is the gain represented as a fraction of the standard deviation of the original distribution. In this example, the fractional gain would be 50/100 = 0.5, or half a standard deviation. An improvement of half a standard deviation would move people who were originally at the mean, which is also about the 50% point on these distributions, up to about the 69% point. Thus, a person who originally scored higher than half the population would now score higher than 69%.

This particular ratio of gain to the standard deviation is often called the *effect size*, a technical term that has a more specific meaning for such tests than the general notion of *size of effect*, which refers to any method of describing changes. In practice, effect sizes of half a standard deviation are rare.

Although effect sizes of the magnitude of 0.1, 0.2, or 0.3 may not seem to be impressive gains for a single individual, for a population they can be quite substantial. For example, a 0.2 effect size corresponds in the United States to the difference between the average heights of 15-year-old versus 16-year-old girls. For large numbers of girls of each age, this average difference may seem small, but most people notice it.[a] An effect size of 0.3 corresponds to about 30 points on a SAT verbal or mathematics standardized test.

How much does computer-based instruction help students learn when it is offered as an adjunct to traditional teaching in certain settings? A review of 59 studies finds a mean effect size of 0.25 for computer-based instruction.[b] And, as a result of this finding, computer-based instruction is viewed as an extraordinarily promising innovation—one that might revolutionize education.

without aides in reading and a little less than eight percentiles in mathematics. The addition of an aide to a regular-sized class results in a slight gain in both reading and math over the regular-sized class without an aide.

In the third year of the four-year study, questions were raised about the persistence of effects when children returned to regular-sized classes, as they would in fourth grade, and so an additional sum was appropriated for a three-year follow-up observation called the Lasting Benefits Study (LBS). As a part of this study, researchers observed the performance of children who had been in the three types of experimental classes during kindergarten and the first, second, and third grades after they returned to regular-sized classes in the fourth, fifth, sixth, and later grades.

In a paper presented at a meeting of the North Carolina Association for Research in Education at Greensboro, North Carolina, Achilles and colleagues reported on the Lasting Benefits Study.[4] These authors found that, in the fourth and fifth grades, the children who had originally been in small classes scored higher than those who had been in regular-sized classes or in regular-sized classes with a teacher's aide. In the fourth grade—the first year after return to regular-sized classes—the effect size was about one-eighth of a standard deviation, averaged across six different cognitive subjects studied, and in the fifth grade, it was nearly two-tenths of a standard deviation, again averaged across six subjects. Within each grade, the different subjects produced almost the same effect size, though the observed gain was somewhat larger for the fifth grade. Curiously, in both of these years, the effect size systematically favored the regular-sized classes previously without a teacher's aide over those previously with an aide, though the difference was small, averaging about 0.03 over all subjects in both grades. The encouraging finding is that early experience with the smaller class size seems to have had a continued effect beyond the moment when the children returned to regular-sized classes.

In the fourth and fifth grades, the children who had originally been in small classes scored higher than those who had been in regular-sized classes.

Table 3

Summary of Project STAR Results in Terms of the Percentile Ranks of Average Scores Based on National Test Norms

	Percentile[a]			
Grade level	K	1	2	3
Total reading SAT				
Small	59	64	61	62
Regular without an aide	53	53	52	55
Regular with an aide	54	58	54	54
Total math SAT				
Small	66	59	76	76
Regular without an aide	61	48	68	69
Regular with an aide	61	51	69	68

[a] Percentile ranks are based on Stanford's multilevel norms.

Source: Word, E., Johnston, J., Bain, H.P., et al. *Student/Teacher Achievement Ratio (STAR): Tennessee's K-3 class size study.* Nashville: Tennessee Department of Education, Figures 1 and 2.

As a consequence of the systematic findings of improvement in performance of pupils in small classes over those in regular-sized classes, Tennessee implemented reduced class sizes for beginning students in kindergarten and first, second, and third grades in a program called Project Challenge (refer to the description of Phase 3 in Box 1) in the 17 school districts with the lowest per capita income and the highest percent of free or reduced-price lunch participation among students.

Belief in the continuing benefits of the program is based on the uniform improvement found in the experiment for all types of classes in all types of cities.

In the summary report for Project Challenge, Nye and colleagues observe that, in the school districts where small classes were installed in kindergarten, first, second, and third grades, both the reading scores and the math scores improved, compared with previous performance by children in these districts and with other schools in the state.[5] The gains in effect sizes were 0.4 for reading and 0.6 for mathematics. Before the small classes were introduced, these districts had been performing well below the average for the state in mathematics; after the intervention, they moved above the average.

It should be noted that the gains recorded here are not part of a carefully controlled experiment; they are consequences of installing the program. For this reason, the comparisons are not as well equated as they were in the original investigation. To measure experiment gains would require carrying out new class size experiments in the districts where the program is being implemented. Belief in the continuing benefits of the program is based on the uniform improvement found in the experiment for all types of classes in all types of cities. The additional evidence based on norms during the implementation phase, while reassuring, must be regarded as weaker because this new investigation is less well controlled.

An additional way to report the progress gives the average rank of the test scores of the 17 Tennessee districts in Project Challenge (among the 139 districts) for the years reported so far (1989–1993) in reading and mathematics. The results reported by Achilles, Nye, and Zaharias[6] for the second grade are shown in Table 4.

4468

Table 4

Average Second Grade Ranks for the 17 Districts Among the 139 School Districts for Early Years of Project Challenge

Subject	Year			
	1989–90	1990–91	1991–92	1992–93
Reading	99	94	87	78
Mathematics	85	79	60	56

Source: Achilles, C.M., Nye, B.A., and Zaharias, J.B. Policy use of research results: Tennessee's Project Challenge. Paper presented at the Annual Convention of the American Educational Research Association, San Francisco, April 1995. Available from the Center of Excellence for Research in Basic Skills, College of Education, Tennessee State University.

When these districts are ranked from 1 to 139, where 1 indicates best academic performance and 139 indicates the worst, the average rank for all districts is 70. Note that in mathematics, the average rank for 1991–92 and for 1992–93 is below 60 (and so above the median) so that the 17 districts have shown a startling improvement as well as a gain of 20 ranks in reading for second grade. The same report mentions that the corresponding analysis of first grade shows that the 17 districts were better than average in both reading and mathematics in 1992.[7]

In summary, the evidence is strong that smaller class size at the beginning of the school experience does improve the performance of children on cognitive tests. Observations from the Lasting Benefits Study confirm that the effect continues into later grades when children are returned to regular-sized classes. In addition, the implementation of the program for the economically poorest districts seems to be improving the performance of children in these districts by noticeable amounts. In regular-sized classes, an aide produced some gain in kindergarten and in the first, second, and third grades; but when students returned to regular-sized classes, the gain from aides did not persist. After the small classes were implemented in all 17 school districts, no further observations were made about the in-classroom value of paid teachers' aides.

Special Concerns

During the course of the experiment, researchers made two substantial departures from the basic plan: they rerandomized regular-sized classes during the second year and moved incompatible children. In addition, researchers instituted a teacher training program between the second and third year.

Second-Year Rerandomization in Regular-Sized Classes

As reported earlier, one departure from the original plan occurred in the second year, when the children in regular-sized classes were rerandomized to regular-sized classes with an aide and regular-sized classes without an aide. Such a change applied to all who had entered the experiment in kindergarten. From the point of view of those beginning in kindergarten, it created four rather than two regular-sized groups of classes for analysis and comparison, as described above. After the second year, the children in regular-sized classes continued with their second-year assignment. This change complicates the analysis for all children except those whose assignments remained unchanged and makes it difficult to assess accurately the effectiveness of having or not having a teacher's aide.

The evidence is strong that smaller class size at the beginning of the school experience does improve the performance of children on cognitive tests.

Moving Incompatible Children

One benefit reported from the Indiana study was that behavioral problems were reduced in the smaller classes. Nevertheless, in Project STAR at the end of the first year, 48 students moved from small kindergarten classes to regular classes with an aide, and 60 moved to regular classes without an aide.[8] Thus, the number of students moved from small classes was 108 of 1,678 students.[9] This move was intended to separate incompatible children and "to achieve sexual and racial balance,"[10] the latter a puzzling remark in view of the purported emphasis on randomization. No mention is made of what was done about incompatible students who were already in regular-sized classes. Perhaps there was nowhere to move them if there was only one small class or perhaps children seem more incompatible in small classes. A school administration planning to reduce class sizes might want to keep this potential difficulty in mind.

Having fewer children in class reduces the distractions in the room and gives the teacher more time to devote to each child.

It is impossible to assess the impact of this reassignment on the experiment; and, in fact, it may have had little impact because the affected students may have been removed from the analysis altogether.

The Teacher Training Program

The added feature in Project STAR came between the second and third years, when it was decided to give a special training course to 57 teachers. The enabling legislation had specified teacher training. Essentially, all teachers were getting some additional training as a routine matter in Tennessee, but apparently it was felt that the legislation called for something special. The participating teachers in 15 selected Project STAR schools were all given a total of three days of special training. The training was the same for all teachers selected; their assignment to small or regular-sized classes had not yet been made.[8] When one considers that 30% of these teachers already had 20 years of teaching experience and only four had fewer than 3 years of experience, a three-day training program seems modest. As it turned out after the training, the classes with trained teachers performed the same as did the classes with untrained teachers.

Class Size Drift

In addition, the sizes of the classes drifted a bit as time went on. Some small classes

became larger than their intended upper bound, and some regular-sized classes became smaller then their intended lower bound. The overall outcome of these violations of the original distributions should be to underestimate the effectiveness of the small classes compared with that of the regular-sized classes.

Assessing the Implications of the Study

Smaller Class Size

Why does smaller class size help teaching and learning? Reducing a class from 23 to 15 reduces the number of children in the room by about one-third. Having fewer children in class reduces the distractions in the room and gives the teacher more time to devote to each child. However, the impression one gets from reading papers emerging from Project STAR is that at least some teachers and administrators engaged in the study think of themselves as dealing with a start-up phenomenon. When children first come to school, they are confronted with many changes and much confusion. They come into this new setting from a variety of homes and circumstances. Many need training in paying attention, carrying out tasks, and interacting with others in a working situation. In other words, when children start school, they need to learn to cooperate with others, to learn to learn, and generally to get oriented to being students. These observations fit neatly with several current theories of education, including the idea of frames and scripts.[11–16]

The experiment showed that the minority groups gained more than others in the first two years of the experiment; and although the last two years showed benefits comparable with those of the majority, there was a falling off of benefit. Some statements in the report by Word and colleagues[3] suggest that much of the gain from the small classes was achieved in the first two years. The data presented in Table 3 do not show the falling off, but other summary tables from the study might.

Optimum Class Size

The idea of an ideal, or optimum, class size is open to question. This investigation did not provide information about a variety of class sizes. Within the ranges of what is affordable, it is reasonable to suppose that smaller classes are preferable for beginners. But some desired training probably could not be accomplished in classes of such small sizes as one or two pupils even if they were affordable. Learning to work in a group is important and requires the presence of others.

Persistence of Beneficial Effects

In the Lasting Benefits Study,[4] a continuation of studies evaluated the performance of students from small classes as compared with the performance of students from regular-sized classes or regular-sized classes with an aide after all students had returned to regular-sized classes. The results always favored the students from smaller classes. One year later (1989–90), the effect sizes ranged from 0.11 to 0.16 (n = 4, 230) in the fourth grade, and then, in subsequent years, from 0.17 to 0.34 (n = 4, 639) in the fifth grade, from 0.14 to 0.26 (n = 4, 333) in the sixth grade, and from 0.08 to 0.16 (n = 4, 944) in the seventh grade. Data from the eighth grade have been gathered and are being analyzed. Thus, year after year, the students who were originally in smaller classes continued to perform better than the students from regular-sized classes with or without a teacher's aide.[17]

The students who were originally in smaller classes continued to perform better than the students from regular-sized classes with or without a teacher's aide.

Conclusion

Compelling evidence that smaller classes help, at least in early grades, and that the benefits derived from these smaller classes persist leaves open the possibility that additional or different educational devices could lead to still further gains. For example, applying to small classes the technique of within-class grouping in which the teacher handles each small group separately for short periods could strengthen

the educational process (essentially a second-order use of small class size). The point is that small classes can be used jointly with other teaching techniques which may add further gains.

Because a controlled education experiment (as distinct from a sample survey) of this quality, magnitude, and duration is a rarity, it is important that both educators and policymakers have access to its statistical information and understand its implications. Thought should be given by both public and private organizations to making sure that this information is preserved and well documented and that access to it is encouraged. The Tennessee three-phase study calls attention to the statewide controlled experiment as a valuable device for assessing educational interventions and, thereby, improving school systems.

The preparation of this material was supported in part by a grant from the Andrew W. Mellon Foundation to the American Academy of Arts and Sciences in support of the Center for Evaluation of its Initiatives for Children program. The author's efforts have been helped by the kind responses of people who worked on the Tennessee class size project and have kept him in touch with project publications as they have appeared. Professors C.M. Achilles and J.D. Finn have given helpful advice and information. In addition, suggestions from John Emerson, Richard Light, Marjorie Olson, Jori Raymond, Jason Sachs, and Cleo Youtz improved early versions of the manuscript.

ANSWERS TO THE ARGUMENT THAT CLASS SIZE REDUCTION COSTS TOO MUCH

Reducing class size is a long term investment which pays substantial returns.

Class Size vs. Pupil Teacher Ratio

When answering the argument that class size reduction costs too much, you must first explain the difference between Class Size and Pupil Teacher Ratio (PTR). **Class Size** is the number of students who regularly appear in a teacher's classroom and for whom that teacher is primarily responsible and accountable. **PTR** is a derived estimate commonly computed by dividing the number of students in a school by the number of professionals who work at or serve that school (e.g., counselors, special teachers, administrators, librarians, etc.). The difference between Class Size and PTR is about 9 or 10 students. In a school with a PTR of 16:1 you will find class sizes of about 25 or 26. (For additional information read the structured abstract of Mark Sharp's dissertation. The abstract can be found on the Reduce Class Size Now web site- http://www.reduceclasssizenow.org/sa_articles/SA9.pdf.)

Collect the Following Data to Make Your Case

- Number of Students
- Number of Schools
- Number of Title I schools
- Number of Welfare Families
- Per Pupil Expenditure
- Number of Retainees for each Grade Level
- Number of Dropouts for each Grade Level
- Annual Cost of State Incarceration
- Amount of Federal, State, and Local Education Funding

Class Size Reduction Should be Implemented in Phases

- During the first year of implementation reduce class sizes in kindergarten, first grade, and second grade.
- The second year of implementation, reduce class sizes in third grade and fourth grade.

Initial Costs

- Teacher Salaries
- Classroom Space

Return on the Investment

Krueger's (2002) analysis of STAR's class size experiment "suggest[s] that the internal real rate of return from a seven-student reduction [from 22 students to 15 students] in class size in the first four years of primary school is about 6%. At a 4% discount rate, every dollar invested in small classes yields about $2 in benefits." (For additional information read the structured abstract of Alan Krueger's analysis. The abstract can be found on the Reduce Class Size Now web site- http://www.reduceclasssizenow.org/sa_articles/SA13.pdf.)

- *Teacher Morale-* increased attendance; reduced substitute costs; reduced "burnout"
- *Teacher Incentive-* attract and retain quality teachers
- *Parent and Community Involvement-* attract parents and volunteers; better communication between teachers and parents; field trips (etc.) less congested and require fewer volunteers (1 teacher and 2 volunteers can take a class on a field trip)
- *Improved Academic Achievement-* better test scores; helps close the racial achievement gap
- *Fewer Retentions-* number of students "held back" decreases; schools pay double for every grade a student repeats
- *Fewer Dropouts-* unemployment rate for dropouts is 4 times greater than for high school graduates
- *Improved Student Behavior-* vandalism costs decrease; expulsions and suspensions decrease; fewer discipline problems; fewer classroom disruptions
- *Early Identification of Learning Disabilities-* special education programs reduced in later years; programs accurately "targeted" to most needy students
- *Improved High School Graduation Rates-* adults without high school diplomas earn 42% less than high school graduates
- *Increased College Entrance Test-taking Rates*

Sample Plan for Implementation of Class Size Reduction in SMART District

- Year 1 implementation: reduce class sizes in kindergarten, first grade, second grade
- Year 2 implementation: add third grade and fourth grade

Example of Class Size Reduction in SMART District

Number of Students in District: 3,487 — Total Number of Classroom Teachers: 206
Number of Students in K-4: 1,358 — Number of Classroom Teachers K-4: 62
Per Pupil Expenditure (PPE): $7,985 — Beginning Teacher Salary: $30,964

Revenue: Local- $7,575,308 State- $17,801,278 Federal- $2,483,260

Costs

Additional Classrooms- Additional space not needed. Classroom space was found by reorganizing existing classroom and building space and in some cases by using two teachers per room.

Additional Teachers- Year 1: Kindergarten – Grade 2: 9 teachers added to reduce classes from 22 to 18
9 teachers added at $30,964 each = $278,676 in costs
Year 2: Grades 3 – 4: 5 teachers added to reduce classes from 22 to 18
5 teachers added at $30,964 each = $154,820 in costs
Total Cost for Additional Teachers: $433,496

Estimated Savings from Decreased Retentions

38 K-2 Students Retained (Year 1:Pre-Implementation) — 27 K-2 Students Retained (Year 1:Post-Implementation)
48 K-4 Students Retained (Year 2:Pre-Implementation) — 34 K-4 Students Retained (Year 2:Post-Implementation)
86 K-4 =$686,710 ($7,985 PPE X 86) — 61 K-4 =$487,085 ($7,985 PPE X 61)
$686,710 - $487,085 = $199,625 Saved Due to 30% Decrease of Retainees

Payment for Implementation

Savings $199,625 + Federal $233,871 = $433,496

Note: Costs of teachers can be reduced by reassigning support teachers (e.g., reading, math, special, etc.) to a small class of their own. With classes of 18 it is possible for one paraprofessional to assist two teachers.

Additional Educational and Economic Benefits

- High school graduation rates for lower socioeconomic (SES) students improved from 70.2% (no small classes) to 88.2% if students had small classes in grades K-3; graduation rates for higher SES students improved, but less dramatically (83.7% to 87%). *Finn, Gerber, and Boyd-Zaharias, 2004*
- College test-taking rates for African-American students who had been in a small class in K-3 were statistically significant, reducing the gap between the rates of African-American and white students in taking the ACT or SAT college-entrance tests by 54%. If taking college-entrance exams equates with the person's actually attending college, then the large gains for minority students can have economic benefit from earnings and reduced need for social services. *Krueger and Whitmore, 2000*
- If all students were in a small class in grades K-3 for one to four years . . . the black-white test-score gap would fall by 38% in grades K-3, and by 15% thereafter. *Krueger and Whitmore, 2001*

Nationwide Costs of NOT Reducing Class Size

- Each year's dropouts will cost the country over $200 billion during their lifetimes in lost earnings and unrealized tax revenues (Catterall, 1985).
- High school graduates, on the average earn $9,245 more per year than high school dropouts (Employment Policy Foundation, 2002).
- In today's workplace, only 40% of adults who dropped out of high school are employed (Alliance for Excellent Education, 2003).
- 75% of America's state and 59% of America's federal prison inmates are high school dropouts (Harlow, 2003).
- A 1% increase in high school graduation rates would save approximately $1.4 billion in incarceration costs, or about $2,100 per each male high school graduate (Alliance for Excellent Education, 2003).
- The estimated tax revenue loss from males ages 25 – 34 who did not complete high school would be approximately $944 billion, with cost increases to public welfare and crime at $24 billion.
- A National Center for Education Statistics study found high school dropouts were more than twice as likely to receive public assistance as high school graduates who did not go on to college (Smith et al., 1996).

Subject: RE: Article on Step-Up program in relation to raising the compusory school attendance age

I'm very concerned about raising the compulsory age - we have no controls over the existing compulsory age. Students who are motivated and/or see the connection between a "school" education and their future will attend. It is our job to make these opportunities available - this is why we work so hard to create so many alternative choices. Education can occur in a variety of places . . . . what do we do with the students who are homeschooled or more importantly the students who claim to be homeschooled?

Another idea? What if we continued to offer a variety of programs (like we currently do) but allowed students 14 years to earn their diploma instead of 12. Students who finish all high school requirements in 10 years can begin working on their college coursework or other postsecondary courses to prepare them for the career of their choice and have an opportunity to earn an associates degree or certificate while still attending highschool. Schools would no longer be punished for their efforts to help students who need more than 12 years to graduate. (Not all college students earn their BS in 4 years - and colleges are not punished for those students who need more time - in fact they prosper off the ones who take longer to graduate.)

Just a thought - but I do disagree with raising the compulsory school attendance age - just another law that our court system can't handle and our youth will find ways to break.

Thanks for sharing,

Bill Watkins

Subject: Article on Step-Up program in relation to raising the compusory school attendance age

Representative Seaton posed the following questions based on the ADN article below in relation to raising the compulsory school attendance age and asked me to pass along the article to the Graduation Rate Working Group.

1. How would a compulsory age statute affect the "several hundred" long term "kick-out" in Anchorage alone?

AMENDMENT

OFFERED IN THE HOUSE

TO: HB 33

Page 1, line 1, following "**attendance;**":

Insert "**relating to truancy;**"

Page 1, following line 9:

Insert new bill sections to read:

"*** Sec. 2.** AS 14.30.030 is amended to read:

Sec. 14.30.030. Prevention and reduction of truancy. The governing body of a school district, including a regional educational attendance area, shall establish procedures to prevent and reduce truancy. **The procedures must include an enforcement mechanism to ensure that all students who are not enrolled in a school in a correctional facility or otherwise exempt from compulsory school attendance in the district comply with truancy laws and procedures.**

*** Sec. 3.** AS 14.30.030 is amended by adding a new subsection to read:

(b) A school district shall enforce truancy laws and provide an education to all students who are required under AS 14.30.010 to attend a school located in the district."

Renumber the following bill sections accordingly.

Page 1, line 15:

Insert "2010"

AMENDMENT

OFFERED IN THE SENATE

TO: CSSB 102(JUD)

Page 1, line 1, following "**attendance;**":

Insert "**relating to truancy;**"

Page 4, following line 2:

Insert new bill sections to read:

"*** Sec. 4.** AS 14.30.030 is amended to read:

Sec. 14.30.030. Prevention and reduction of truancy. The governing body of a school district, including a regional educational attendance area, shall establish procedures to prevent and reduce truancy. **The procedures must include an enforcement mechanism to ensure that all students who are not enrolled in a school in a correctional facility or otherwise exempt from compulsory school attendance in the district comply with truancy laws and procedures.**

*** Sec. 5.** AS 14.30.030 is amended by adding a new subsection to read:

(b) A school district shall enforce truancy laws in order to provide an education to all students who are required under AS 14.30.010 to attend a school located in the district.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

APPLICABILITY. The changes made to AS 14.30.010(a) by sec. 2 of this Act do not apply to children who are 16 or 17 years of age who have been officially dropped from public school enrollment in the state on or before the effective date of this Act."

FYI

HAINES BOROUGH

RESOLUTION 09-03-159

Adopted

A JOINT RESOLUTION OF THE HAINES BOROUGH ASSEMBLY AND HAINES BOROUGH SCHOOL BOARD SUPPORTING AN INCREASE OF THE COMPULSORY SCHOOL ATTENDANCE AGE FROM 16 TO 18 YEARS OF AGE.

WHEREAS, Alaska's drop-out rate is double the national average based on statistics from the U.S. Department of Education; and

WHEREAS, sixteen-year-olds are not ready to make the enormous decision to give up a high school education at a critical age for their development and future success; and

WHEREAS, when the drop-out rate of Alaskan students increase, the direct and indirect costs to the State of Alaska also increase including unemployment, criminal behavior, and dependence on the State's social services; and

WHEREAS, it has been established through extensive research that the more education a person receives the more earning potential one gains; and

WHEREAS, Federal and State legislation holds districts and schools to the high standard of graduating all students; and

WHEREAS, parents and schools need all the tools they can to set a standard of expected attendance,

NOW THEREFORE BE IT RESOLVED THAT the Haines Borough Assembly and Haines Borough School Board jointly support the increase in the compulsory attendance age for the State of Alaska from 16 to 18 years of age unless the School District's graduation requirements have been met.

ADOPTED BY DULY CONSTITUTED QUORUMS OF THE BOROUGH ASSEMBLY AND THE SCHOOL BOARD OF THE HAINES BOROUGH, ALASKA, THIS 31ST DAY OF MARCH, 2009.

Janice Hill

Janice Hill, Mayor

Carol Kelly

Carol Kelly, Board President

Subject: Please oppose HB 33
Attachments: Comparison of Compulsory School Ages and Dropout Rates.pdf

Dear Chair Seaton,

I am opposed to any legislation to increase the compulsory school age.

There is no solid evidence for expanding the compulsory school age. I have compiled a table comparing the compulsory school ages of all the states and their graduation and dropout rates. The information was obtained from the Education Commission of the States website (www.ecs.org/clearinghouse/64/07/6407.htm) and The National Center for Education Statistics website (nces.ed.gov/pubs2008/dropout06/figures/figure_04.asp). The average dropout rate for states with compulsory attendance until 16 is 23.4% and for states requiring attendance until 18 it is 23.9%. Is this small difference worth the increase in government spending and increase in taxation?

While a state or a parent might be able to force 17- and 18-year-olds to attend classes in a school, neither the state nor parent can force them to learn their academic subjects or have better attitudes toward academic learning.

Please oppose this legislation.

Thank you,
Kelly Foreman

Subject: HB33

Representative Seaton –

In your discussion on raising the mandatory school attendance age, please ensure that your decision does not increase class size, reduce teacher attention, or redirect resources from students who wish to remain in school. A diploma is unquestionably the best choice for every student, but forcing that to happen through a legal requirement rather than providing other options isn't necessarily the best choice for all students as far as I can tell.

I am not an educational expert. I am an economist considering optimal outcomes and least harm policies. I will try to listen to the hearing. I will be interested to hear why experts believe increasing the mandatory age is the best choice to produce better classroom environments. How does this benefit the vast majority of students who voluntarily want to be in school?

Subject: House Bill 33
Attachments: Compulsory_Comparison.pdf

Honorable Chairman Seaton,

A bill to raise the compulsory education law in Alaska has been introduced...again. HB 33 has nothing to do with helping kids learn more. Seems the better alternative would be to find ways to motivate, not mandate, them to stay in school. As to the dropout rate reductions that these types of bills invoke, statistics show that it has the opposite effect (see attached chart). Students, parents, and teachers lose with this scenario.
Negative results. The attached chart, compiled by a parent of school-age children, shows the average dropout rate increases by .4% when laws mandate compulsory attendance until 18 years of age.
Disruption in the classroom. I don't know of any parents who have experienced good results when they force their children to do something they don't want to do. Mandating seat-time for dissatisfied, disruptive 17- and 18-year olds creates a non-productive environment for teachers and fellow students.
Are they really going to learn more? While legislation may mandate 17 & 18 year old physical bodies be in a seat in the room, teachers can't force a closed-mind to learn more. A wise parent recently said, "you can lead 'em to learning, but you can't make 'em think."
What about enticing kids to stay in school? Rather than mandating more warm bodies to (supposedly) boost statistics, we should instead be asking schools why these kids don't want to stay willingly. According to a recent study, the reasons most kids drop out is not because they are failing, but because they are "bored" and "unmotivated". Source: (http://www.edweek.org/ew/articles/2006/03/08/26dropout.h25.html)

Enjoyment and creativity in teaching produces amazing results in kids; forcing them to continue doing something they hate will turn them not into valedictorians and model students but make them even more bitter toward the system and society that forces them to "sit still and be quiet" for two...more...years.
Please help to defeat the misguided attempt of HB 33.

Sincerely,
Lisa Torkelson
Chugiak, Alaska

"Compulsory education is the chink in the armor of capitalist societies: they try to teach children the values of contract and initiative, but base their educational system on compulsion and conformity. Communist societies suffer from no such inconsistency: they try to teach their children command and obedience, and their educational system is consistent with inculcating this ethic."
-Szasz, T.S. (1973). The second sin. Garden City, NY: Anchor Press. (p.19)

Policy Brief: A Case Against Compulsion
by Mary K. Novello, Ed.D, Adjunct Fellow, Washington Institute; March 1998
Source:
http://www.washingtonpolicy.org/Centers/Miscelaneous/policybriefs/98_novello_compulsion.html
Foreword
Mary Novello's brief is that compulsory school attendance serves no clear educational purpose while costing untold amounts in dollars and psychic energy. She argues convincingly in fact that while it serves a schooling purpose, the link between education and schooling is tenuous at best. She implies that government intrusion with its attendant regulations and certifications creates a dependency cycle that leaves it unclear as to who really needs whom. Do children need school or does the school bureaucracy need children in order to justify its existence? The continuously changing goal structure of public schooling suggests she may be on to something. Having come up somewhat short in their academic mission the schools have more recently taken on such responsibilities as self-esteem training, safe sex education, anger management as well as refusal skills and a host of other social programs. The agenda widens, encroaching upon territory previously thought to be within the spheres of home and church influence. She raises the trust issue in this context, more accurately the lack thereof, citing Horace Mann's characterization of parents as "ignorant and vicious," hardly the qualities one seeks in the upbringing of the young. A benign bureaucratic influence, of course, is the answer Mann and his spiritual descendants would apply. A common complaint leveled at critics like Mary Novello is that they identify the illness without suggesting a cure. What on earth would young people do if they did not go to school? I would only say to her critics that the first step in solving a problem is to identify clearly what the problem is. And this is exactly what she has done.

Effective Strategies for Dropout Prevention
Source: http://www.dropoutprevention.org/effstrat/default.htm
"Š15 effective strategies that have the most positive impact on the dropout rate. These strategies have been implemented successfully at all education levels and environments throughout the nation.
You'll notice that none of the dropout prevention ideas include raising the compulsory education laws...

Rhode Island attempted the same bill in 2005:
1. Proponents of raising the compulsory attendance age claim it will lead to a higher graduation rate. But the state with the highest graduation rate in the country, New Jersey, at 89%, only requires attendance to age 16. And Florida, which requires attendance to age 18, has one of the nation's

lowest graduation rates, at 59%.

The facts demonstrate that forcing unwilling students to stay in school longer does not increase graduation rates. And it does not reduce juvenile crime.

In addition, it is certain that your tax bill will increase. When California raised its compulsory attendance age, taxpayers were forced to pay for a whole new school system to handle the numerous problems these unruly, unwilling students caused.

The statistics in the first paragraph come from the February, 2005, publication of the Manhattan Institute's Center for Civic Innovation, "Public High School Graduation and College-Readiness Rates: 1991-2002," by Dr. Jay P. Greene.

2. Rhode Island students who are enrolled in school must attend until age 18 unless parents give written consent to leave at age 16.

3. States which compel attendance only to age 16 have better high school completion rates than states that compel attendance to 17 or 18, on average. (Source: "Dropout Rates in the United States: 2000", pp. 9-10, 40-41; National Center for Education Statistics, U.S. Department of Education, Office of educational Research and Improvement, Doc. No. NCES 2002-114.)

4. States which compel attendance only to age 16 also have lower dropout rates than states that compel attendance to 17 or 18, on average. (Source: same as above.)

5. According to statistics published by the federal Office of Juvenile Justice and Dropout Prevention, a higher compulsory attendance age is not correlated to a reduction in juvenile crime. (Source: "Juvenile Arrests 1999." Washington, D.C.: Office of Juvenile Justice and Delinquency Prevention, 2000.)

Source: Senate Bill 169: Raising the Compulsory Attendance Age
Sponsors: Senators Pichardo, Connors, Issa, Perry, and C. Levesque.

Summary: This bill would have raised compulsory attendance to age 17 from its current age of 16. Currently, children between 16 and 18 who are "enrolled in school" need written permission from their parents before they can be exempted from compulsory attendance. This bill would have required children to stay in school until age 17 before their parents could authorize the exemption. The bill was not taken up by the Committee before the legislature adjourned, thus the bill died in Committee.

Status:
02/02/2005 (Senate): Introduced, Referred To Senate Education.
03/17/2005 (Senate): Education Committee Hearing at 4:15 PM in Room 313 of the Rhode Island State House.
03/17/2005 (Senate): Committee Recommended Measure Be Held For Further Study

RE: HB 33 Compulsory Education

January 29, 2009

RE: HB33 Compulsory Education

Honorable Representative Seaton:

I am writing to you requesting that you consider rejection of HB33 that would raise the age of compulsory attendance for students.

There is no evidence, through research or history, that forcing students to remain in school longer will reduce the dropout rate. In fact, the state with the highest graduation rate in the country, New Jersey at 89%, only requires students to remain in school until age 16. On the other hand, Florida, who requires students to remain in school until age 18, has the lowest graduation rate in the country at 59%.

This bill proposes a very costly option to taxpayers. Strategies that would be far more effective and less costly include: encouraging family involvement; intensive reading and writing programs; community collaboration; learning style/multiple intelligences strategies; alternative schooling; and individualized instruction such as tutoring. Forcing students to sit in desks like buckets on a bench will not improve their learning nor their career opportunities and, I would even suggest, you will likely just end up with them breaking the law by not being there anyway. All in all, further cost to taxpayers via law enforcement needs or more truant officers.

During the 75 years after we became a nation, our government had no role in education. At the time of the drafting of the Declaration of Independence, the rate of literacy was at 97%. As long as we've had compulsory education, which began in the mid-late 1800's, the rate has never been that high. The original reasons for the beginning of compulsory education no longer exist. Children are no longer being forced into labor as there are strong laws in place disallowing that. There are also a myriad of child protection laws. Society as a whole also deeply values education. There is ample research to even suggest that compulsory education overall is pretty redundant and really does not improve our educational system. I would say the far greater influence to keep it has more to do with money, and control by an overbearing and out of control union.

As for the lowering of the age of compulsory education, this completely undermines the integrity of the home by taking away the autonomy and authority of parents to make educational decisions for their children. Put the power and decision making back into the hands of parents and let them decide when to begin formal education and allow young children to enjoy the short years of childhood without government meddling.

Generations of families have been charmed into believing that "government knows best" in education, thus, too much power and monopoly has been allowed to government in this area. It is time for increased educational choice and a little "competition" that will result in far greater success. There are a myriad of ways to do this. Compulsory education has resulted in excessive government control and expanding it will not lower the drop out rate but only be more costly to taxpayers. I am vehemently against HB33 and am asking you to please vote against it.

Respectfully,

Rhonda L. Stark

Dear Alaska State Representative,

RE: HR 33, HR 59, and HR 69.

As a 10+ year home school family, I feel that government intervention in parental responsibilities should be avoided. The Home School Legal Defense Association has written an excellent article (Why Government Should Stay Out of Pre-K) outlining parents' concerns, and legal concerns, about HR 59 and 69. Please read their article in its' entirety.

As quoted from the article located at this link -
http://www.hslda.org/docs/news/200809080.asp

Conclusion - ***"In the realm of pre-K, there is neither compelling evidence nor constitutional justification for government involvement. Institutionalized early education programs are an assault on parental rights and limited government. It is parents, not the government, who know what is best for their children. Many pre-K bills, such as H.R. 2343 and H.R. 3289 are geared toward military families; it is especially outrageous to use the families who have sacrificed so much for our country as proverbial guinea pigs for government experimentation. Given institutionalized early education's appalling track record in regard to its effectiveness and expense, and the high probability that such programs will be ripe for government mandated morality, pre-K legislation ought to be strongly and unequivocally opposed."***

HR 33 - It is not at all uncommon for home schooled students to finish high school level learning earlier than age 18. As a public schooled student, I graduated from high school at age 17. It is ludicrous to assume that a student should remain in school only because they do not meet the state set age for completion. This would hinder a graduate of home schooled high school from moving on with his/her life, getting a full-time job, etc. if he/she were required to be in school until age 18. Please visit this link http://www.hslda.org/hs/state/ak/2007009120.asp for clarification on compulsory age attendance from a home school perspective.

House Bill 33 States that -
Section 1.
AS 14.30.010(a) is amended to read:
a) ***Every child*** between seven and **18** [16] years of age ***shall attend school at the public school*** in the district in which the child resides during each school term. ***Every parent, guardian or other person having the responsibility for or control of a child between seven and 18 [16] years of age shall maintain the child in attendance at a public school*** in the district in which the child resides during the entire school term, except as provided in (b) of this section.
What is 'provided in (b) of this section' makes no mention of those who choose to home school their children.
I look forward to hearing from you on these issues. Thank you for taking the time to listen to those who elected you to the public service seat in which you hold.
Sincerely and Respectfully,
Lisa K. Hydock

Honorable Representative Seaton,
As a concerned Alaskan resident I am writing to you requesting that you consider rejection of House Bill 33 which seeks to raise the compulsory attendance age to 18 from 16 years of age. There is no research that suggests raising the age of attendance will ensure reduced drop out rates here in Alaska. Raising the age of compulsory attendance will not enable our young people to learn when they do not desire to be stifled by our current system of education which does not allow them to pursue their own interests at a rate that is in accordance to their skill and ability. More profitable usages of our tax dollars would be to encourage more parental participation, community cooperation, and instruction in learning styles, tutoring or a mentoring approach in areas of the student's interests. Raising the compulsory attendance age will benefit truancy officers more than encourage the absorption of knowledge by reluctant students. Compulsory education has resulted in excessive government control and expanding it will not lower the drop out rate but only be more costly to taxpayers. I am strongly opposed to House Bill 33 and respectfully request that you vote against it.
Respectfully
Pauline LaForest
Palmer, Alaska

Alaska State Legislature

Please enter into the record my testimony to the House Education Committee
(committee name)

committee on HB 33 (bill# / subject), dated 3/12/09.

We would like the bill to read 6-16.

Schools cannot, unfortunately, be all things to all people. Until there is access to multiple vocational programs, special programs for different learning styles, etc. within the public schools there will be students who are better served by getting their GED and proceeding to learning in a different context. For some this may be the local community college, for some on-the-job training, for some online learning parttime while they pursue other endeavors. We should be working on the carrot, not the stick - school programs and personnel to engage kids rather than forcing kids who don't want to be there to take up seats in classrooms without any motivation.

The Valdez School Board is on record as strongly advocating for starting compulsory education at age 6, instead of 7. The Alaska State Literacy Association stated most of our arguments. With home schooling exemptions, we find no downside to changing the lower age for school attendance. (We are advocating for 6, not 5, and part day homeschool is allowed.) Kids deserve to start school on time.

Alaska State Literacy Association Testimony HB33

March 13, 2009

My name is Patricia George and I represent the Alaska State Literacy Association along with my co-chair Brett Dillingham. The Alaska State Literacy Association is the largest professional education association in Alaska with over 500 members from across the state.

The Alaska State Literacy Association strongly believes that mandatory school attendance age should be lowered from age seven to age six. There are several house and senate bills currently under consideration that would provide quality pre-school and kindergarten programs. There is growing awareness of the importance of preparing children for school at an earlier age. The Alaska State Literacy Association feels that children should be required to attend school at an earlier age.

We have provided the committee with a chart and summary showing that 32 states require students attend school by age six. From my personal experience as a first grade teacher, I found that there were no ways to compel parents to have their children attend school regularly and on time. I know that there are parents who feel that changing the statute would infringe on their rights as parents, but it is my understanding that the change in mandatory school attendance age does not change any of the waivers that are already built into the law. It is important to have children who attend public school come to school regularly so that they don't miss critical steps in the learning process.

House Bill 33 is an appropriate vehicle to make this change in state statute. We urge you to amend House Bill 33 to lower the mandatory school age from seven to six.

We provided the staff and you should have in your packet a proposed amendment. Thank you and I would be happy to answer any questions.

TESTIMONY - HB 33

Good Morning, Chairman Seaton and members of the House Education committee. For the record my name is Lydia Garcia and I serve as the Executive Director for NEA-Alaska representing almost 13,000 public school employee members throughout the State.

I'm here today to testify in support of House Bill 33. This bi-partisan legislation is an attempt to address the problem of, quite frankly, children not remaining in school.

The reasons teenagers decide to drop out of school are many and varied, but certainly there are times when it is just the fact that legally they do not have to attend school which helps them out the door.

House Bill 33 will raise the upper end of mandatory attendance in Alaska's schools to the age of 18. While this is certainly not a silver bullet, it is a good ingredient in any recipe for success in life. As the sponsor has stated, the more education one receives the better earning potential one acquires and a better chance of personal success ensues.

About six weeks ago, 450 public school employee delegates, elected by their peers met at the Anchorage Hilton and set the policy for the coming year for NEA-Alaska. One of the resolutions passed by the 2009 NEA-Alaska Delegate Assembly stated "***NEA-Alaska believes the legislature should establish policies for non-compliance with Alaska's compulsory attendance laws.***"

This legislation takes those laws a step further. It is the belief, however, of NEA-Alaska that a law with no teeth would serve little purpose.

Alaska's school employees work hard to offer our children opportunities that prepare them for life. We cannot fulfill the promise of a high quality education for Alaska's children if they are not in our classrooms.

We applaud the efforts and direction of House Bill 33 and ask that you move this legislation from committee.

Thank you for your time!

Lydia Garcia
Executive Director
NEA-Alaska

Alaska State Literacy Association
Patricia George, Advocacy Committee Co-Chair

Juneau, AK 99801

March 13, 2009

The Honorable Paul Seaton
House Education Committee
Alaska State Capitol
Juneau, Alaska 99811

Dear Representative Seaton,

The Alaska State Literacy Association would like to propose an amendment to **HB 33** that would lower the compulsory attendance age to six.

The Alaska State Literacy Association is the largest professional education association in Alaska with a growing membership of over 500 members. The mission of the Alaska State Literacy Association is to promote lifelong literacy for all Alaskans by advancing the quality of literacy instruction.

At present, the state of Alaska funds but does not mandate kindergarten. AS 14.03.070 mandates compulsory attendance from age 7 to 16. School age is further defined as 6 to 18 with 5 year olds allowed to attend kindergarten where it is available. The federal No Child Left Behind law stipulates that all children should be reading at grade level by the end of third grade. If Alaska's children are not required to attend school until the age of seven, many will not be reading at third grade level by the age of eight or nine. Young children will meet this requirement easier when they are provided the rich kindergarten experiences where they learn that text carries meaning, readers process print from left to right, top to bottom, and that real life involves using reading and writing for practical purposes.

The ASLA believes that compulsory school attendance by age six is an important component in providing quality educational opportunities to the children of Alaska. The ASLA encourages the Education Committee to amend HB33 to lower the compulsory school attendance age from seven to six years of age.

We have attached a proposed amendment to HB33 for your consideration.

Sincerely,

Patricia R. George
ASLA Advocacy Committee Co-Chair

Literacy Development of Alaskan Children Ages Three to Five

A Position Statement of the Alaska State Literacy Association

The Importance of Preschool and Kindergarten

The Alaska State Literacy Association believes that every child in Alaska should attend kindergarten and that 3 and 4 year olds should have access to free, high quality public preschool. The high-quality preschool and kindergarten experiences that successfully foster early language and literacy skills lay a critical foundation for children's successful future. Children who attend high-quality preschools and kindergarten are less likely to be retained in the primary grades, have higher graduation rates from high school, and have fewer behavior problems (Barnett, 1995; Campbell & Raney, 1995; Cunningham & Stanovich, 1997; Huttenlocher, Vasilyeva, Cymerman, & Levine, 2002; Peisner-Feinberg & Burchinal, 1997).

The Need For Free, High-Quality, Public Kindergarten and Preschools

At present, the state of Alaska funds but does not mandate kindergarten. AS 14.03.070 mandates compulsory attendance from age 7 to 16 years. School age is further defined as ages 6 to 18 with 5 year olds allowed to attend kindergarten where it is available. The federal No Child Left Behind law stipulates that all children should be reading at grade level by the end of third grade. If Alaska's children are not required to attend school until the age of seven, many will not be reading at third grade level by age eight or *nine*. Young children will meet this requirement easier when they are provided the rich kindergarten experiences where they learn that text carries meaning, readers process print from left to right, top to bottom, and that real life involves using reading and writing for practical purposes.

Alaska is one of a few states not fully or partially funding public preschools. Preschool is only available to a limited number of children based on the ability to pay. Yet children learn through assimilation of concrete "hands on" type of activities in the early years. They need rich experiences in preschool and kindergarten where children can engage and construct their theories about print (e.g., what are words – how do they work). Experience that builds background knowledge is essential to becoming a knowledgeable reader. High-quality preschools and kindergarten provide appropriate early literacy experiences delivered by well-prepared, knowledgeable, caring teachers. Teachers who enhance the early literacy of children from diverse cultural and language groups use culturally appropriate instruction that is congruent with the children's home and community language and literacies. (Heath, 1983; Hohepa & McNaughton, 2002; McNaughton, 2001).

Alaskan children's development can be positively affected by high-quality preschool and kindergarten experiences that improve later academic and social competence (Barnett, 1995; Morrow, 2004; Neuman & Dickinson, 2001). It is the position of the Alaska State Literacy Association that every child in Alaska should have access to free, high-quality, public preschools and mandated kindergarten.

Alaska State Literacy Council

Nature and Purpose

The Alaska State Literacy Council (ASLA) is the largest professional education association in Alaska with a growing membership of over 400 members. ASLA is affiliated with the International Reading Association (IRA) and hosts the largest, highest attended annual education conference in the state.

Members rely on ASLA for the professional development resources they need to reach our shared goal: Teaching Alaskans to read. ASLA supports literacy for all, lifetime learning and informed decision making. The state association in partnership with IRA and local councils recognizes and supports quality literacy programs and opportunities through awards, grants, council programs, workshops and annual conferences. ASLA provides educators, at all levels, access to research, materials and methodologies to promote and teach lifetime literacy and learning. ASLA provides a network for communication, exchange of information, leadership, professional development and involvement of Alaska's diverse community of educators.

Summary of Table National Center for Education Statistics (NCES) Table 157

Table 157. Age range for compulsory school attendance and special education services, and policies on year-round schools and kindergarten programs, by state: Selected years, 1997 through 2006.

There are **9** states that have a compulsory school attendance age of **5**, all of which require school districts provide either half or full day kindergartens. **23** states have age **6** as the compulsory school attendance age, **20** require school districts provide kindergarten.
Alaska is one of **17** states which have **7** as the compulsory school attendance age, however, **Alaska** is **not** one of the **14** included states that require half or full day kindergarten be offered by school districts.

X State has policy.
— Not available.

[1] Most states have a provision whereby education is provided up to a certain age or completion of secondary school, whichever comes first.

[2] Child may be exempted from compulsory attendance if he/she meets state requirements for early withdrawal without meeting conditions for a diploma or equivalency.

[3] State requires either half-day or full-day program.

[4] Parent/guardian may request a waiver to delay entry to a later age per state law/regulation.

[5] Under 21 or until child graduates from high school.

[6] State did not participate in the 2006 online survey.

[7] Compulsory school age for all Manatee County students who turned 16 on or after October 1, 1999, is 18, except for students who earned a high school diploma prior to reaching their 18th birthday.

[8] To be determined by rules and regulations adopted by the state board.

[9] Must be 5 before October 1, and not 20 before start of school year.

[10] Abbott districts only (31). These are districts covered by a New Jersey Supreme Court ruling that found that the education provided to urban school children was inadequate and unconstitutional. The Court ordered the state to implement comprehensive programs and reforms, including standards-based education supported by parity funding; supplemental programs; preschool education; and school facilities improvements.

[11] School-age unless otherwise provided by law.

[12] New York City and Buffalo require school attendance until age 17 unless employed.

[13] Must not be 21 by September 1.

[14] Children from birth through age 2 are eligible for additional services. Eligibility for special education services ceases upon completion of a secondary education program; no age limit.

[15] Student may complete school year if 21st birthday occurs while attending school.

NOTE: The Education of the Handicapped Act (EHA) Amendments of 1986 make it mandatory for all states receiving EHA funds to serve all 3- to 18-year-old disabled children.

The Honorable Paul Seaton
House of Representatives
House Education Committee Chair
State Capitol, Terry Miller Bldg
Juneau, Alaska 99801-1182

The Honorable Paul Seaton;

My name is Jacqueline [Jackie] Martin, Executive Committee Member of the Alaska Native Sisterhood (ANS) Grand Camp and Council member of ANS Camp 70 Local Camp. All our members are strong advocates for all Alaska Natives.

We support HB-33; to encourage and give young people a chance to return to school to complete their education. We can read negative into House Bill 33 and say that 50% of our students are [commonly called] "Drop outs", but we say we have 50% graduates and the rest are "Push out"

Please accept these comments as encouragement to pass HB-33. I offer these answers to the questions put forth by your Education Committee.

1. What are the basis of a high school diploma

Basis for a high school diploma comes easily with a positive family and community; even then, sometimes this isn't enough, they need a second chance once obstacles have been identified. The second chance is HB-33.

A high school diploma is hard to come by, rules and laws change not quickly but fast enough to see a difference in graduates. "No Child Left Behind" "Qualifying exam", and other obstacles such as drugs and alcohol are made available to the children. There are many social issues in large and small communities. Please don't misinterpret me, I believe in some of the new laws and changes.

2. Is there an inherent problem with the design of graduation requirements that produce drop outs?

The Tlingit tribe in this area can take up hours of your time telling you sorrowful stories in our own Juneau school district. Some inherent problems are discrimination, social issues, and poverty.

Yes, it is an inherent problem, not only in Alaska but, it is a national problem.

There are many beautiful teachers that give more then themselves; they also use their own funds, and I offer these teachers kudos.

How does a community instill zero dropout tolerance of its community? Pass this Bill and let's get our communities back on track. I believe in the old saying "it takes a community to raise a child".

3. Is the high school qualifying exam a positive or a negative as relates to student performance and graduation?

I spoke about the percent success rate among the Alaska Natives, so now let's address the negative. According to newspapers we [Alaska Native and American Indians] have the highest rate of drunks, the most suicides, the most thieves, the most sex abuser, and we have the highest percentage of drop outs. I would like to see solution to these statistics; it is tiresome to read statistics without solutions.

I heard a speaker talk about herself as an Alaska Native [she is a successful person today and was perhaps taking about the natives as a whole] as being invisible in the school system. Time is changing relationships among the Natives and Governments and local residents. I do see many good changes, I see Alaska Native gaining respect in our community, and I'm 66 years old and have seen more natives and non natives working together, there is hope for change among our students. I believe with the passage of this bill, change will begin and the drop out rate will lessen, not immediately, but it will begin soon.

Is the qualifying exam a good thing? Yes, it helps our successful natives' offers an equal chance in the national population.

Then on the other hand this is a difficult exam for many and many oppose this exam, I believe also that this is one of many reasons why many drop out of school today, they can't pass the exam.

Conclusion

Thank you for your time, we realize that there is much opposition to this House Bill; we heard many statistics about the Native Peoples' problems. Today we the ANS Grand Camp and ANS Camp 70 stand in support of HB-33 as a beginning of many solutions to come for our students.

Sincerely,

Jacqueline Martin

Jacqueline [Jackie] Martin

HB 33 Compulsory School Age Attendance

(H) Education Committee 3-13-09

REPRESENTATIVE CATHY MUNOZ

SPONSOR STATEMENT
HB33

Alaska currently faces one of the highest declining graduation rates in the country. According to recent statistics from the Alaska Commission on Post Secondary Education, thirty-eight percent of students in the ninth grade will not have a diploma in ten years. Alaska Department of Labor estimates that four-thousand Alaskans ages 16-19 are unemployed and not in school; and 57,000 Alaskans across Alaska do not have a diploma. Alaska's drop-out rate is double the national average based on statistics from the U.S. Department of Education.

HB33 changes the compulsory school attendance age so that a student is compelled to stay in school until the age of eighteen. Current law requires compulsory school attendance from the age of seven to sixteen. All exemptions from compulsory attendance currently in Alaska statute, including homeschoolers, would remain exempt from this change. This bill will not affect any current statute that allows for early graduation, and relieves the requirement of compulsory attendance to the age of eighteen if those requirements are met.

Students at risk should not have the option of leaving school at a critical age when judgment and maturation development is most critical to their personal success. It has been established through extensive research that the more education a person receives, the more earning potential one gains. As the drop out rate of Alaskan students increase, so does the direct and indirect cost to the State of Alaska. Unemployment, criminal behavior, and dependence on the State's social services are examples of this increased cost.

HB33 is designed to improve Alaska's public education system. The intent of this legislation is to be one of several important first steps toward a long term solution. The young people of Alaska deserve our very best effort. Elevating the age of compulsory attendance in our education system will become an important new commitment we can make on behalf of all of our young citizens at a crucial time in their education and lives.

Contact: Terry Harvey 907 465 5392

ASSOCIATION OF ALASKA SCHOOL BOARDS

ADVOCATES FOR ALASKA'S YOUTH

Position Statement on HB 33
Compulsory School Attendance

School boards believe that 16-year-olds are not ready to make the enormous decision to give up a high school education. Increasing the mandatory attendance age from 16 to 18 helps ensure that students who have not yet graduated from high school and are too young to make the life-changing decision to forego basic education will stay in school and have more opportunities to meet performance standards and pass the High School Graduation Qualifying Exam. AASB believes that the best way to keep students in school is to fund and provide education programs that engage students.

February 27, 2009

Dear Representative Cathy Muñoz:

I am writing this in strong support for HB 33 that recommends increasing the age of compulsory education to age 18. Our School Board and the majority of our staff and community strongly believe it is time for this change. The rationale in your sponsor's statement makes the case very clearly.

Our graduation rate is only 64 % and we are striving to increase that number with many new initiatives that support students. Our drop out rate has dropped from 6.48% in the 2004-2005 school year to 4.16% during the 2007-2008 school year. One of the identified causes of students dropping out if they are disengaged in high school is "they can". We try many different strategies to encourage young people to stay in school and we believe that if they knew they had to stay in school until age 18 or passing all the graduation requirements to qualify for a diploma, they would do so. Too many of our students, particularly those from immigrant families and families on the edge of economic survival, are pressured to go to work to help support their family. We believe that young people should know how important a high school diploma is to their future success. Our new graduation coaches are connecting with students and families in an effort to re-engage them in their education; this effort is often hampered by the fact that Alaskan students can drop out at age 16.

We strongly support your legislation and will be happy to testify in favor of the legislation when it is ready for a hearing. Thank you for your leadership on this important issue.

Sincerely yours,

Carol

February 25, 2009

Dear Representative Munoz,

Please know how appreciative our district is for your attention to the urgent issue of dropping out of high school in Alaska.

In the past, such legislation has been miscast as a threat to parental rights. It is, in fact, the opposite of that: it is a parent empowerment bill. As a former high school administrator, I have witnessed the anguish of parents when their minor child dropped out and the parent had no authority to stop it. In Alaska, parents have control over their minor's drivers license until age 18; why not their child's education?

Alaska Department of Education and Early Development 2007 statistics tell us that 1 in 3 Alaskan youth are not getting a high school diploma. The data are even more startling for special education students (60 percent not graduating) and students of Alaska Native heritage (37 percent not graduating).

These data are significant because of the irrefutable correlation between dropping out of high school and several other factors which ultimately translate into a drag on the economy: incarceration (80 percent of inmates are high school drop outs); poverty and, thus, the need for public assistance (and, poverty has a direct correlation to multiple health issues which, in turn, drain state coffers of public health dollars); and the attainment of a diploma by the next generation (mother's education has direct bearing on whether a child will graduate). So, under-education has systemic, persistent, generational negative effect on public revenues.

Alaska is not the only state to recognize the significant impact of the diploma. According to the Education Commission of the States, more than half of all states require that students be 17 or 18 to graduate or to have completed all necessary credits.

How disingenuous is it for our leaders to decry the drop out rate and not take the sensible and simple step of telling minors: finish school or wait until you're of the age of majority to make that momentous and life-altering decision to not finish?

Drop outs cost the State of Alaska real public dollars. This bill is a cost-savings measure, as well as an accountability measure. If federal and state laws hold schools accountable for educating and graduating our youth, then please hold youth accountable for staying in school.

Thank you for your consideration and support of this important measure.

Sincerely,

Laury Scandling

February 11, 2009

Dear Representative Munoz,

I am writing this letter in support of HB 33. As Superintendent of Schools, I struggle with the staggering statistics proving that nearly 40% of Alaskan youth will not graduate from high school this coming year. Current statute (allowing students to drop out at age 16) is outdated and opens the door for youth that are still in need of structure and direction that our public schools offer in Alaska. With Alaska's drop out rate double the national average HB 33 will be a huge step in the right direction for this great state!

Unemployment, criminal behavior, and increased taxing on Alaska's social services are directly related to the exodus of youth choosing not to attend schools. Unfortunately many of those that drop out are bright students simply lacking good judgment and critical maturation necessary in such decision-making efforts.

Finally, with the quality of life exponentially better in today's world with a high school diploma, this legislation is one of several important steps towards the long-term solution of our lacking graduation success.

I look forward to its successful passage!

Sincerely,

Jim Hoppard

Superintendent of Schools
Cordova School District

Grand Camp
Alaska Native Brotherhood

RESOLUTION NO. #23-08

TITLE: EXTENSION OF THE ALASKAN COMPULSORY SCHOOL ATTENDANCE LAW

WHEREAS, Over 3000 Alaskan students drop out each year representing the highest drop out rate in the United States; and

WHEREAS, Alaskan minority students experience the highest percentage of drop out amongst all students with Alaskan Native students double the rate of others at 14%; and

WHEREAS, To compete in the 21st century all students need at a minimum to stay in school long enough to finish a high school diploma; and

WHEREAS, Studies show that students without a high school diploma earn less than 75% of those with a diploma and are more likely to live in poverty over the course of their lifetimes; and

WHEREAS, Alaska's mandatory compulsory school attendance is from 7 to 16 years of age; and

WHEREAS, Only 27 states allow students to drop out at the age of 16; and

WHEREAS, The national trend is moving toward extension of the mandatory school age to 18 years of age; and

WHEREAS, The National Education Association as a top priority is recommending high school graduation or the equivalency as compulsory for everyone below the age of 21 years of age; and

WHEREAS, Raising the high school drop out age from 16 to 18 will reduce the drop out rate.

NOW THEREFORE BE IT RESOLVED, that the Alaska Native Brotherhood and the Alaska Native Sisterhood Grand Camp in convention at Ketchikan, Alaska during the week of October 7-11, 2008 hereby urges the Alaska Legislature to adopt legislation that would extend the mandatory attendance age for all Alaskan students to the age of 18 years.

ANB Grand President

ANS Grand President

ATTEST: I certify that this resolution was adopted by the ANB/ANS Grand Camp in convention at Ketchikan, Alaska during the week of October 7-11, 2008.

ANB Grand Secretary

NEA-ALASKA

Affiliated with the National Education Association

February 23, 2009

Rep. Cathy Munoz
State of Alaska
State Capital
Juneau, AK 99801-1182

Dear Rep Munoz:

NEA-Alaska supports HB 33, a raise in the age of compulsory school attendance to eighteen for Alaska's children. Truancy and dropout rates are too high and we believe every effort should be made to encourage our youth to become as fully educated as possible. Raising the age of mandatory school attendance may serve to keep students in school longer than they now stay. If this bill causes even one child to complete their education it will be worthwhile.

Further, the annual Delegate Assembly of members in January 2009 passed a resolution which states:

> NEA-Alaska believes the Legislature should establish penalties for non-compliance with Alaska's compulsory attendance laws.

It is our belief that a law with no teeth serves little purpose. Alaska's school employees work hard to offer our children opportunities which prepare them for life. We cannot fulfill the promise of a high quality education for Alaska's children if they are not in our classrooms.

Thank you for sponsoring this piece of legislation and the work you do on behalf of Alaska's future.

Respectfully,

Barb Angaiak

Barb Angaiak
President

Subject: Testimonial for HB33

Terry Harvey,
I would be honored to testify in support of the compulsory attendance bill HB33. I feel that Alaska's drop out rate needs to be addressed and this would be the perfect opportunity to help solve the problem. I also want to thank you again for allowing the Unalaska School Board to meet with Representative Cathy Muñoz. Our meeting with her went very well, and on behalf of my school board I would like to thank you for listening to our comments and inputs. In the mean time feel free to contact me about any questions or needed information that you will need to know for me to testify. Also just to let you know I will be out of town till the 23rd of February.

Sincerely,
Kelsey Clark

A Joint Resolution between
Anchorage Faith & Action – Congregations Together
and
Anchorage Chamber of Commerce
Resolution 2006/07-06

WHEREAS, more than 6,000 students were suspended in the 2005-06 school year in the Anchorage School District; and

WHEREAS, more than 90 students were expelled during the 2005-06 school year in the Anchorage School District, and

WHEREAS, the dropout rate in grades 7-12 during the 2005-06 school year was 6.3% in the Anchorage School District, and

WHEREAS, a high school dropout is likely to earn one-half as much as a high school graduate; and

WHEREAS, a high school dropout is three times more likely to live in poverty than a high school graduate;

WHEREAS, the Municipality of Anchorage Community Youth Violence Gang Response Team named the lack of supervision of students who are expelled from school as a critical issue in the community; and

WHEREAS, unsupervised youth and rising youth violence in Anchorage are critical concerns of the both the faith and business communities; and

WHEREAS, current Alaska law (AS 14.30.10) makes school attendance compulsory only until the age of 16; and

WHEREAS, current Alaska law exempts students who have been suspended or expelled from compulsory education; and

WHEREAS, programs for long-term suspended and expelled students are voluntary in Anchorage; and

WHEREAS, on November 27, 2006, School Superintendent Carol Comeau and Mayor Mark Begich committed to AFACT before more than 400 people that they would include in their 2007 Legislative Agenda a request that the compulsory education age be raised to 18, or receiving a high school diploma, and education be made compulsory for long-term suspended and expelled students,

NOW THEREFORE BE IT RESOLVED that the Alaska State Legislature and Governor Palin are encouraged to amend Alaska law by raising the compulsory education age to 18 or the achievement of a high school diploma; and

BE IT FURTHER RESOLVED that State and Local entities are encouraged to consider the implications of this resolution and to provide separate facilities and funding from local, state and federal sources for compulsory education for long-term suspended and expelled students; and

BE IT FURTHER RESOLVED that the Alaska State Legislature and Governor Palin are encouraged to amend Alaska law by making education compulsory for long-term suspended and expelled students and to provide adequate funding to establish appropriate programs.

DATED this 3 day of March 2007.

- The difference in incarceration rates between high school graduates and dropouts, and associated costs.

COMPULSORY SCHOOL ATTENDANCE AGE IN THE UNITED STATES

Compulsory school attendance refers to the ages through which children are required to attend school. For this report, we focus on the maximum compulsory school attendance age requirements. Alaska Statute 14.30.010 mandates that, "Every child between seven and 16 years of age shall attend school . . ." According to a report by the Education Commission of the States (ECS), as of July 2007, 23 other states had a maximum compulsory age of 16.[1] In eight states, the maximum compulsory age is 17, while the 18 remaining states require students to attend school until they are 18 years of age.[2] In the table below, we display the maximum age requirements for compulsory school attendance across the nation.

Table 1: Compulsory School Attendance Age in the United States

Students Required to Attend School Until 16 (24 states)
Alabama, Alaska, Arizona,[1] Delaware, Florida, Georgia, Idaho, Indiana, Iowa, Kentucky, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, New Jersey, New York, North Carolina, North Dakota, Rhode Island, Vermont,[1] West
Students Required to Attend School Until 17 (8 states)
Arkansas, Colorado, Illinois, Maine, Mississippi, Pennsylvania, South Carolina, Tennessee
Students Required to Attend School Until 18 (18 states and D.C.)
California, Connecticut, District of Columia, Hawaii, Kansas, Louisiana, Nebraska, Nevada, New Hampshire, New Mexico, Ohio, Oklahoma, Oregon, South Dakota, Texas, Utah, Virginia, Washington, Wisconsin
Notes: (1) Students are exempted from compulsory attendance requirements upon completion of 10th grade. **Source:** Education Commission of the States, *www.ecs.org*.

[1] We include ECS's, "Compulsory School Age Requirements," as Attachment A.

[2] Most states allow parents to petition their local school board or principal for a waiver of these requirements under certain circumstances, such as enrollment in a vocational education program or an institution of higher education or early completion of required coursework. The great majority of states waive compulsory attendance requirements for high school graduates regardless of their age. In Alaska, and many states, youth who are homeschooled by their parents or guardians are not subject to compulsory education statutes.

ARGUMENTS SURROUNDING RAISING COMPULSORY SCHOOL ATTENDANCE AGES

When compulsory schooling laws were originally enacted around the country—for the majority of states this occurred between 1870-1910—policy makers assumed that finishing high school was not a necessity. In the primarily agrarian economy of that time period, a high school diploma was not a prerequisite to achieving a good job and having a successful and productive life. Times have changed radically since these laws were initially enacted and now four times more Americans live in urban settings than reside in rural environs.[3] With the urbanization of our country, non-agricultural jobs have become much more prevalent. By and large, these are jobs that require more education than those of the 19th century. The importance of higher education has only increased as we have moved into the increasingly high tech environment of the 21rst century.

The discrepancy between the earnings for high school dropouts and those with diplomas is pronounced. Well paying employment opportunities are not readily available to high school dropouts. Those in favor of raising the compulsory school attendance age argue that when most high-wage, high-growth jobs require a *college* degree, it does not make sense for states to make it easier for students to dropout prior to getting a *high school* degree.

Many of the sources we consulted for this report stress that allowing 16 years olds the choice to opt out of school is poor educational and social policy. It is argued that teenagers are not usually equipped to make informed decisions that will potentially affect their whole lives. Not only does this critical decision affect the youth involved, it also has significant impact on society at large. Along with weaker earning potential, dropouts also become incarcerated at a significantly higher rate. We compare the earning potential and incarceration rates of dropouts and graduates later in this report.

A 2007 report funded by Gates Foundation, entitled, "Raising the Compulsory School Attendance Age: The Case for Reform," argues that that raising the compulsory attendance age can benefit graduation rates.[4] The report concludes this should be done in conjunction with providing alternative learning opportunities and other educational reforms. Mary McNaught, chief of staff at Civic Enterprises, the entity that produced the study, maintains that allowing teenagers to leave school at 16 sends a dangerous message to youth.[5] She contends that permitting this option statutorily is unwise given all we know about the rough road dropouts face. Ms. McNaught acknowledges that there is currently a scarcity of data linking raising the compulsory age limit and increased graduation rates. Nonetheless, she believes common sense dictates that raising the compulsory school age is a prudent step in the right direction.

Opponents of raising compulsory attendance ages hold that requiring all young people under the age of 18 to attend school can marginalize those who fare least well in traditional high school. Additionally, some argue that forcing young people to attend school when they are unwilling disrupts the learning opportunities for others. The Home School Legal Defense Association (HSLDA) is staunchly against raising mandatory age limits. The HSLDA argue in a November

[5] Mary McNaught can be reached at (202) 467-8908.

2007 issue analysis, "Raising the Compulsory Attendance Age Fails to Achieve Significant Results," that such legislation results in an increase in government spending and taxation, as well as a removal of parent's rights to make educational choices for their children. The document also asserts that there is no evidence that increasing the mandatory age limit will increase graduation rates.[6]

Dr. Jay Smink, executive director of the National Dropout Center, believes that raising the compulsory school age *might* be a good idea. He cautions, however, that raising the compulsory age without identifying struggling students and providing them with alternative learning opportunities, would result in no benefit.[7] He strongly cautions against viewing raising the compulsory age as a "silver bullet."

It is difficult to ascertain whether raising the compulsory school attendance age makes a clear difference in dropout and graduation rates. One of the primary difficulties in discerning a connection is that states collect and report dropout and graduation data in different ways. A national movement aims to eventually standardize graduation and dropout data, and this will likely make comparisons useful. At this point, however, it is virtually impossible to make accurate and reliable comparisons, according to all the sources we reviewed.

The only study we found that that examines the impact of measures raising the required school age was produced by Canada's C.D. Howe Institute.[8] This December 2005 study entitled, "Stay in School: New Lessons on the Benefits of Raising the Legal School Leaving Age," looked at youth in both New Brunswick, Canada (which had raised its required school age to 18 in 2000), and in the United States. The main objective of the study was to ascertain whether New Brunswick's policy was proving effective and whether the other provinces in Canada should enact similar laws. While the study found no change in the relative dropout rate in New Brunswick, it did find small positive effects in the United States. The study estimates that raising the mandatory maximum school age above 16 would:

- increase, on average, an individual's length of schooling by between 0.12 and 0.16 years;
- decrease the dropout rate by between 1.2 and 2.1 percentage points; and
- increase the percentage of young adults with at least some college or university by between 1.5 and 2.1 percentage points.

While these gains are modest, they do indicate that raising the age of maximum compulsory school attendance may be of value. We include the paper as Attachment C.

[8] The study claims to be the first of its kind in the last 20 to 30 years in North America. The C.D. Howe Institute describes itself as a nonpartisan, nonprofit research organization that aims to improve Canadians' standard of living by fostering sound economic and social policy. More information on the entity can be found at *http://www.cdhowe.org/.* The author of the study, Philip Oreopoulos, is an assistant professor of economics at the University of Toronto.

ALASKA'S COMPULSORY SCHOOL AGE LAW AND RECENT LEGISLATIVE EFFORTS TO CHANGE THE LAW

Even during territorial days—in fact since 1929—the maximum compulsory school age in Alaska has always been 16.[9] While there have been a few changes to AS 14.30.010 in the ensuing years, no changes have been made to the maximum age requirement.

There have been a few efforts in the recent past to raise the maximum mandatory school age. In 2006, House Bill (HB) 345, which would have raised the compulsory age to 17, did not make it out of the House education committee. Senate Bill (SB) 14, which would have raised the compulsory attendance age to 18, suffered a similar fate in the Senate in 2008. As you know, there are currently bills in both the Senate (SB 102) and House (HB 33) that would also raise the compulsory school attendance age to 18.

EARNING POTENTIAL BY EDUCATION LEVEL

According to U.S Census Bureau figures, there is nearly a $10,000 difference between the annual income of a high school graduate (or equivalent) and a dropout. This difference increases the farther along in college an individual progresses. Table 2 shows estimated annual average incomes by educational attainment in 2007.

Table 2: Estimated Annual Earnings by Educational Attainment, 2007

High School Dropout	High School Graduate (or Equivalent)	Some College or Associate's Degree	Bachelor's Degree	Graduate or Professional Degree
$19,089	$26,712	$32,793	$46,277	$61,014

Source: U.S. Census Bureau, 2005-2007 American Community Survey, found through *http://www.factfinder.census.gov.*

While the economic benefit of staying in school is obvious from the table above, the impact on the nation at large is also noteworthy. According to the Alliance for Excellent Education, if all the students who dropped out of the class of 2008 had graduated, the nation's economy would have benefitted from an additional $319 billion in income over the graduates' lifetimes.[10] The Alliance estimates that in Alaska alone, if the projected number of nongraduates for the class of 2008 (3,865) had, in fact, not dropped out, their lifetime additional income would be over a billion dollars. We include, as Attachment D, "The High Cost of High School Dropouts, What the Nation Pays for Inadequate High Schools." The article also explains how high school graduates benefit the nation socially as well as economically. Lower teen pregnancies and a higher likelihood of raising healthier, better educated children themselves are among the benefits discussed.

[9] Chapter 97, Article 12, Laws of Alaska, 1929.

[10] The Alliance for Excellent Education is a Washington-based policy, research, and advocacy organization concerned with improving graduation rates and preparing youth for postsecondary education. More information is available at *http://www.all4ed.org.*

INCARCERATION RATES AND ASSOCIATED COSTS FOR HIGH SCHOOL GRADUATES AND DROPOUTS

According to the organization Fight Crime: Invest in Kids, high school dropouts are three and one-half times more likely to be arrested, and more than eight times more likely to be incarcerated, than high school graduates.[11] "School or the Streets, Crime and America's Dropout Crisis," Fight Crime contends that across the country, 68 percent of state prison inmates have not received a high school diploma.[12] According to this report, if graduation rates improved by 10 percent, murder and assault rates would be reduced by about 20 percent. Increasing the nation's graduation rate from an estimated 71 percent to 81 percent, therefore, would yield 400,000 more graduates annually and avert more than 3,000 murders and almost 175,000 aggravated assaults each year. In Alaska, a ten percent increase in the graduation rate would prevent an estimated seven murders and 692 assaults each year, according to this study.

Crime is costly, certainly to the victims, but also economically to society at large. The Alliance for Excellent Education reported in 2006 that a modest five percent increase in the *male* high school graduation rate would produce an annual savings of nearly $5 billion in crime-related expenses. Coupled with the increased annual earnings of those who graduated, the U.S. would realize around $7.7 billion in benefits. California alone would realize over a billion dollars in benefits if graduation rates went up five percent for males. Alaska's estimated total benefits would be over $18 million.[13]

A University of California Berkeley study from 2004, also speaks to the enormous savings that would be reaped by increasing graduation rates.[14] According to the report, a mere *one percent* increase in the high school completion rate of all men ages 20-60 in our country would save the United States as much as $1.4 billion per year in reduced costs from crime incurred by victims and society at large. All the sources we reviewed concur that improving graduation rates will lower crime rates and improve the economic prospects for individuals, states, and our nation.

We hope you find this information to be useful. Please let us know if you have questions or need additional information.

Appendix E: New Hampshire Legislation 25

Since the publication of *The Silent Epidemic: Perspectives of High School Dropouts,* governors and state legislators have requested more information about one of our policy recommendations – to consider raising the compulsory school attendance age under state law from 16 or 17 to the age of 18, coupled with support for struggling students. In recent years, more and more states have been passing or introducing legislation to raise the compulsory school age. Many states have recognized that the original laws were passed 100 years ago or more when we had a very different economy. Today's globally competitive economy requires at least a high school diploma and often additional education and training to provide the knowledge and skills needed for the 21st century. Good research also supports the view that increasing the compulsory school age can help decrease the dropout rate in schools. Notwithstanding the evidence, a majority of states still permit students to drop out before the age of 18.

"Every student in America should graduate from high school ready for college, career and life. Every child. No exceptions. Whether they are going off to college or into the work force or a combination of the two, it is the responsibility of public education to give our young people the skills, knowledge and preparation for life they need and deserve."

– Bill Gates, testimony before Senate Health, Education, Labor, and Pensions Committee, March 7, 2007

We have published this report to provide to state and local leaders more information about the merits of raising the compulsory school age – including the latest research, compelling arguments, and examples of how other states are making progress – in order to strengthen the arsenal of tools states and communities have to combat the dropout epidemic.

The Dropout Problem

The United States has a dropout epidemic. Almost one-third of all public high school students – and one-half of African Americans, Hispanics, and Native Americans – fail to graduate from high school with their class. Most students drop out within just a few years of finishing school and often enter a life of poverty, crime, prison, and broken homes. Society also suffers from the loss of productivity and the higher costs of increased incarceration, health care and social services.

In our 2006 report, *The Silent Epidemic,* we shared the results of focus groups and a national survey of former students who had dropped out of high school. We also recommended concrete steps at the local, state and federal levels to address the dropout problem. While we face an epidemic in which the number of dropouts is unacceptably high, we also face an opportunity. Namely, the problem is not insurmountable, and we can make positive progress against it. One of the top reasons students gave for dropping out was that they had "too much freedom," and many wished that their schools and parents had had higher expectations for them and had done more to keep them in classes each day. Another top reason was that they spent too much time with others who were not interested in school. Too much freedom combined with apathy about

"Raising the minimum age for school attendance, if accompanied by real support for the wavering students, would do a lot to end the silent epidemic."

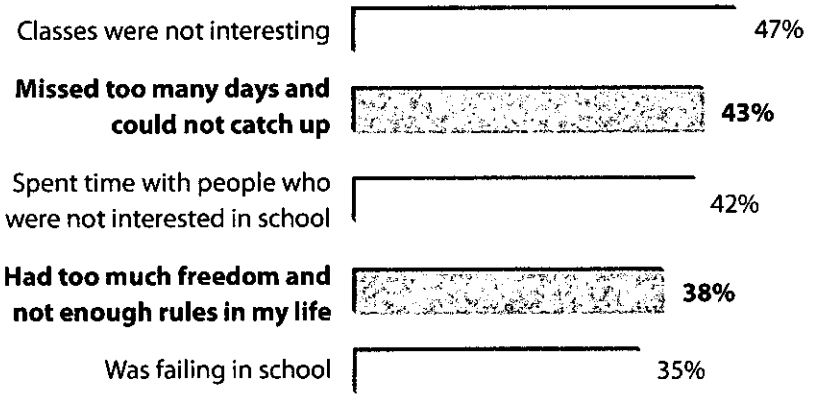
– David Broder, The Washington Post, February 26, 2006 (See Appendix A)

4531

school creates a potent mixture, increasing the chances that students will drop out. Nearly all of the dropouts we surveyed regretted the decision.

Our report recommended that states could help reduce the dropout rate by raising the compulsory school age under state law, coupled with more supports for struggling students. While this step alone will not solve the dropout epidemic, we believe based on best evidence that it can help.

Top Five Reasons Dropouts Identify as Major Factors For Leaving School



A Policy for a Bygone Era

The majority of states allow students to drop out of high school when they are 16 or 17, before they have reached graduation age (see Appendix B). Most states enacted these compulsory school attendance laws between 1870-1910, a time when fewer than 10 percent of 17 year olds graduated from high school. In fact, fewer than 15 percent of 14-17 year olds were even enrolled in high school in any given year before 1910.[1] In an economy that was still significantly agrarian, a high school education was not a prerequisite to participating in the mainstream workforce. Fifty-two percent more Americans lived in rural than in urban areas in 1900. One hundred years later, the situation had changed entirely, and nearly four times more Americans live in urban than in rural areas.[2] And non-farm employment has increasingly required education over the past one hundred years as we have shifted from an economy in which the largest share of jobs has moved from the manufacturing to the services sector.[3] Clearly, times have changed, though state laws have not always kept up. It is common knowledge that the U.S. economy needs college graduates. At a time when two-thirds of high-growth, high-wage jobs require a college degree and only one-third of Americans have college degrees, it makes little sense to us that

"I believe for me, like most people I know, most of them didn't graduate high school and whatever, and they was like you'd be talking like I can't wait until my 16th birthday so I didn't have to come back here no more. I mean I can't wait to drop out kind of thing."

Male focus group participant, Baltimore, 2006

4532

state laws would continue to make it easy for students to avoid the prerequisite to college: a high school diploma.

The Unhappy Consequences of the Status Quo

Detractors might argue that students prone to dropping out of school will not go to college anyway, and therefore raising the compulsory school age will have little effect. Research indicates, however, that approximately one-quarter of potential dropouts remain in school because of compulsory school laws.[4] In addition, overall enrollment rates among 16 year olds are lower in states that allow them to drop out when they turn 16.[5] While it may be difficult to ascertain how many of those would choose to pursue a college education, it is more difficult to argue that they should be allowed to give up on school so easily before they are faced with that choice, especially in light of the fact that the vast majority of students who exercise the freedom to drop out of school later regret the decision and wish that their states and schools had had higher expectations of them. Faced with the reality of trying to get a job and raise a family, most students who dropped out wished they had remained in school.

Their concerns are merited – the economic consequences of dropping out are dramatic. In the United States, high school graduates earn 43 percent more than individuals without a high school diploma, and college graduates earn more than 150 percent – one and a half times – more. Median earnings for people who have not graduated from high school are currently a mere $415 per week.[6] Research has shown a 10 percent rise in earnings for people who simply stay in school one year longer.[7] Over their lifetimes, female high school dropouts earn between $120,000 and $244,000 less than female graduates, and males $117,000 to $322,000 less than male graduates. College graduates earn between $800,000 and $1,387,000 more over their lifetimes than high school dropouts.[8]

Not only are earnings prospects bleak for dropouts who have jobs, but the prospect of having a job at all is not guaranteed: dropouts are much more likely to be unemployed. The unemployment rate among individuals who have not graduated from high school is 65 percent higher than it is for graduates and 3 times higher than it is for college graduates.[9] Clearly, dropping out of high school is often equivalent to choosing a life of financial hardship. It also places a burden upon society as a whole. Annual public health costs for dropouts have been estimated at $58 billion, and approximately $10 billion could be saved each year in public assistance if all our students graduated from high school. A

What States Are Doing

"Our first step is to define more clearly an adequate education – what our students will need to know to succeed as citizens and to compete in today's economy.... In 1903, the New Hampshire legislature passed a law requiring young people to stay in school until age 16. Their goal was to make sure children didn't leave school without the basic education they needed to get good jobs and live better lives. The world today is very different than it was in 1903. Today a high school diploma is the minimum price of admission for most jobs. Yet 20 percent of our young people are dropping out of high school. These young people will not have the opportunities they deserve. Half a high school education is no longer enough. That is why we must increase our compulsory attendance age from 16 to 18."

– New Hampshire Governor John Lynch, Inaugural Address, January 4, 2007

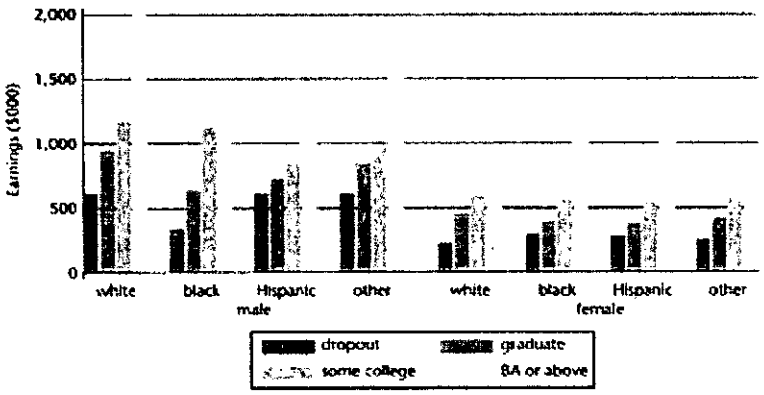
4533

"Today, we require young people to remain in school only until they're 16. That's a system that made sense 100 years ago, when there were no calculators let alone computers; when doctors had no x-rays let alone genetic tests; when there was no national phone system let alone an Internet. In those days, a high school graduate could expect to find a decent job. Those days are gone. Of jobs that pay a realistic livable wage in Maricopa County, less than two percent are available to those with only a high school diploma. Less than two percent. My One Arizona Education Initiative would raise the dropout age from 16 to 18, and make funds available for tutoring, mentoring and special services to get these at-risk students back on track. The work force demands better graduates, and more of them."

– Arizona Governor Janet Napolitano, State of the State Address, January 8, 2007

10 percent increase in the high school completion rate would reduce the cost of crime by $14 billion.[10] One recent study has shown that cutting the current cohort of 20 year old dropouts in half would result in $45 billion in added tax revenues and reduced public health, crime and welfare costs over the life of the cohort.[11]

Lifetime Earnings by Education Level



Source: Current Population Survey (March 2003 and 2004).
Notes: Earnings figures include all persons, i.e., persons with positive or zero income. Figures are adjusted for differences in incarceration rates by education level (but not GED status). Productivity growth is assumed at 1.5% per year. Discount rate is 3.5%.

Important Research and Reports Related to Compulsory School Attendance

In addition to what the data tell us about the social and economic prospects for dropouts, important research suggests that raising the compulsory school age curtails dropout rates and produces other positive outcomes. The following studies are useful resources:

- Joshua Angrist and Alan Krueger find in their study, "Does Compulsory School Attendance Affect Schooling and Earnings?" that approximately one out of every four potential dropouts remains in school because of compulsory schooling laws. In addition, the study shows that states allowing students to drop out of school at 16 also have lower enrollment rates among 16 year olds. The authors also find support in their research for the view that students who attend school longer because of compulsory laws earn higher wages in

the future. The study can be found at: Joshua Angrist and Alan Krueger. "Does Compulsory School Attendance Affect Schooling and Earnings?" *The Quarterly Journal of Economics.* V. CVI:4 (November 1991), 979-1014.[12]

- Philip Oreopoulos finds in his study, "Do Dropouts Drop Out Too Soon?" that students required to attend an extra year of schooling experience a 12 percent increase in earnings. In addition to increased earnings, the students are less likely to report being unemployed, having health problems, being depressed, and working in lower-skilled jobs. Oreopoulos shows that people with more schooling report higher levels of satisfaction with their lives overall, even when he controls for factors such as income. This study can be found at: Philip Oreopoulos. "Do Dropouts Drop Out Too Soon?" NBER Working Paper W10155 (December 2003). An updated working draft of the paper is available at http://www.economics.utoronto.ca/oreo/research/dropouts/details.htm.

- In their overview and survey of research on the importance of compulsory school ages, Hoor Bhanpuri and Ginger Reynolds find that raising the age is an important component of confronting the dropout problem. In their study, "Understanding and Addressing the Issue of the High School Dropout Age," the authors find evidence that raising the compulsory school age is gaining support across the United States in part because doing so helps reduce dropout numbers. The paper also provides a sampling of evidence-based interventions that help reduce the dropout rate. This study can be found at: Hoor Bhanpuri and Ginger Reynolds. "Understanding and Addressing the Issue of the High School Dropout Age." Learning Point Associates (2003).

Our 21st century realities cannot be sustained by 19th century policies, and for this reason, governors and state legislators across the United States are beginning to call for more rigorous standards and supports for students in an effort to graduate more young people from high school. Since the publication of *The Silent Epidemic* report, Civic Enterprises has been contacted by numerous state leaders seeking to do something about the dropout problem in their states. While they all understand that raising graduation rates requires a multi-pronged approach, they also understand that it is more difficult to address the problem if state law permits students to drop out of school before they reach graduation age and sends the message that they can do so.

"I am also introducing, once again, a bill so that a student may not leave school until they graduate or reach the age of 18. Students need to graduate in order to get better jobs and have a better quality of life for the rest of their lives. This change will also motivate the state and schools to provide better alternative schools and more educational opportunities for those young people who are now dropping out of school."

– South Dakota Governor Mike Rounds, State of the State Address, January 9, 2007

"Education is the single most important factor in the future prosperity of our state. . . Since 2003, we have seen vast improvements in education. Some of the most important gains have been in our students' graduation rate – which has increased seven and a half percent over the last four years. . . But today I make the same challenge as before: While we've seen terrific progress, we must do better."

– Georgia Governor Sonny Perdue, State of the State Address, January 10, 2007

4535

"When one in four Hoosier kids drops out . . . we are not getting the job done. Formal education begins in kindergarten, but for successful lives today and tomorrow, it never ends. Family supporting jobs from now on will almost always require not merely a quality high school learning experience but continuing education beyond."

– Indiana Governor Mitch Daniels, State of the State Address, January 11, 2007

"The best economic development tool is an educated workforce. But too many of our kids are dropping out of high school. Our achievement gap is too wide, and we aren't doing enough to partner with teachers to help them improve student learning. My goal: to start us down a 10-year path of progress. Right now, about 30 percent of Colorado high school students don't graduate. Less than half of the black, Latino and American Indian students who start high school in Colorado actually finish. Less than half. Our goal: cut the drop-out rate in half within 10 years."

– Colorado Governor Bill Ritter, State of the State Address, January 11, 2007

A Growing Trend

As much as the nation should be alarmed by the scope and gravity of America's dropout problem, we should also be encouraged by the leadership that states across the country are demonstrating to address it. Only 17 states and the District of Columbia require students to be in school until they are 18. We are witnessing a movement, however, among states to raise their compulsory school attendance ages and provide more supports to struggling students.

Governors and state policymakers understand that their states' economic future and the dropout problem are related, and they are taking action. Many current state efforts to keep young people in school are dealing with the compulsory school age, because there is a growing, shared understanding that raising the age requirement is also a way to raise expectations among students, their parents, school authorities, and the general public. These efforts also demonstrate an understanding that raising the school age must be supplemented by additional measures and supports.

Today, in addition to the 17 states and the District of Columbia that require students to remain in school until they graduate or are 18, 14 states have either introduced or passed legislation in the current session raising their compulsory school age to 18 (See Appendix C). Another 7 states have introduced legislation raising the age from 16 to 17. We are witnessing a moral seriousness about enriching school attendance requirements that is unprecedented perhaps since the movement to establish a compulsory school attendance age more than 100 years ago. Not all legislative efforts emerge victorious, but our hope is that state leaders will act upon their shared obligation to make sure that no student fails to graduate who otherwise could have succeeded.

Each state's legislative initiative moves according to its unique needs, interests, and history. Some of the states' bills under consideration merely raise the age to 18, while others provide additional provisions. Elements of more comprehensive legislative approaches include:

- An increase in the compulsory school age to 18
- Exceptions "with teeth," namely express permission from school authorities and parents to be exempted from the legal age requirement
- Alternative schooling options for students needing extra help
- Sanctions or penalties for failing to attend classes

4536

Not everyone, of course, supports raising the compulsory school age. Some have argued that students inclined to drop out will do so anyway, regardless of what the legal age is. In addition, some say, forcing likely dropouts to stay in school will lead to greater classroom disruptions and an overall negative influence on the remaining students. Others have opposed raising the legal age because it interferes with parents' rights to make educational choices for their children, while still others argue that it raises the burden on taxpayers and gives more control to an already intrusive government.

While each of the arguments against raising the compulsory age merits consideration, many of the current state efforts can be regarded as efforts to respond to and accommodate them. There appears to be a growing consensus among governors and state officials that the long-term costs associated with the dropout problem warrant additional measures to help students stay in school and receive the support they need to graduate. Seen within the context of state economic development, earlier investments in young people are more likely to result in future economic benefit and lower social costs. Since there is a high probability that the government will be assuming responsibility for some aspect of a dropout's life through welfare, healthcare, and the criminal justice system, increased attention by the public school system in an early effort to help students graduate seems a preferable and preemptive intervention. And because there is evidence that an increase in the legal age increases graduation rates, it does not seem like sound policy to assume that all potential dropouts will in fact drop out. For these reasons, states such as Arizona, Georgia, Indiana, and New Hampshire – to name only a representative sample – are doing more than addressing the dropout problem by raising the legal age. Rather, they are providing supplemental supports, alternative education, and additional instruction to help students stay in school until they graduate.

As state leaders consider the best approach to boost graduation rates and cut dropout rates, they are also faced with the question of how effective their anti-truancy laws and programs are. For students who do slip through the cracks, it is imperative to have an effective system in place that helps reunite students with school and, ultimately, a path to graduation. There is evidence that anti-truancy programs work best when students receive strong personal attention from an adult, their parents are involved early, and schools provide intensive interventions. State laws can build upon what research tells us works.[13] Some states define truancy too broadly and without enough clarity such that officials are not compelled to intervene early and effectively. There are good anti-truancy statutes, however, that recognize what students need to be reengaged in school. For example, Virginia's anti-truancy law requires an intervention

"Our future and our way forward — is always education. Education is our obligation and our path to expanding opportunity for all... You can't encourage success if you make it easy to drop out of school. Let's raise the drop out age from 17 to 18 years old, increase graduation requirements, and fund schools based on the time students are in class."

– New Mexico Governor Bill Richardson, State of the State Address, January 16, 2007

"It's not the amount of money we pour into each child, but how we spend the money that counts. We'll look at successful education programs statewide and outside that can be replicated, and we'll look at new approaches! We've got to do something different. Our high school graduation rate is 61%. That's unacceptable!... We shouldn't have to import our workforce when it's growing up before us. And so a centerpiece of my administration IS our commitment to a "world class education" system."

– Alaska Governor Sarah Palin, State of the State Address, January 17, 2007

4537

"I'd also like you to fix another absurd law by requiring all students to attend school until they are 18. A law enacted in 1895 says it's okay to drop out when you turn 16. Maybe it was okay then, but it is not okay now, and we all know it. We need to keep at-risk kids in school, but we also need to do more to help them succeed. This fall, we will open the first of a series of revolutionary new high schools. They will allow students to earn in five years both a high school diploma and a community college degree that will prepare them to fill job vacancies in our health care industry. . . Even with the best of schools, some of our children lack the kind of personal attention they need to get on track or to reach for a big goal like college. Mentor Michigan continues to help fill that void. Between September of 2004 and 2006, we increased the number of youth being mentored by nearly 12,000."

– Michigan Governor Jennifer Granholm, State of the State Address, February 6, 2007]

after five unexcused absences in which parents are notified and the situation is discussed. If a sixth unexcused absence follows, a conference between parents, school officials, and additional community service providers is held to develop the appropriate ongoing intervention to help the student. One additional unexcused absence is grounds for referral to the courts.[14] The Virginia statute is designed to promote an early school-based intervention that is both compassionate and compulsory that involves parents and provides necessary community supports outside of school to help keep the student engaged in school.

SPOTLIGHT – Indiana & New Hampshire

INDIANA

In an effort to address lagging graduation rates, the State of Indiana passed legislation in 2005 and 2006 that raises the compulsory school age to 18 and allows limited exceptions only after a formal withdrawal process involving the parents and principal that explicitly makes clear to the student the likely consequences of dropping out.

The Indiana law recognizes that raising the age will keep some but not all potential dropouts in school. Because many students at risk of dropping out start exhibiting "dropout-like behavior" before they actually leave school, Indiana's law places early warning requirements on the state's high schools. Report cards must show suspensions, absences, whether work or drivers licenses have been revoked on account of unexcused absences, and whether the student is earning enough credits to move to the next grade level. Counseling for students who fall behind on their career plans is required by law so that credit recovery options are available soon enough to make a difference in a student's life.

In addition, Indiana law has provided for alternate education for 11th and 12th grade students who need a different learning environment to graduate. The alternate program allows students to enroll in a vocational education program or to seek employment, provided they maintain a 95 percent attendance rate in a school program requiring at least 3 hours of classes per day leading to a timely graduation with the appropriate credits.

Taken as a whole, the Indiana law addresses many of the key reasons students have cited for dropping out of high school that we highlighted in *The Silent Epidemic.* A copy of the Indiana legislation is provided in Appendix D.

4538

Indiana State Representative Luke Messer

Luke Messer, a former state representative in Indiana, successfully sponsored the Indiana school age legislation. His innovative work has received national recognition and was featured in TIME magazine's cover story "Dropout Nation" and on the Oprah Winfrey Show.

Mr. Messer has said: "I sincerely believe that this is one of the most important civil rights issues of our generation. In a society that promises an inalienable right to life, liberty and the pursuit of happiness, one can't meaningfully pursue happiness without an education that provides an opportunity at a living wage. For too long, we have sent too many young people into schools where they don't have a very good shot at success."

The following are excerpts from an interview with Mr. Messer.

How did you first get interested in the dropout issue?

A few years ago, Stan Jones, the Commissioner of the Indiana Higher Education Commission brought it to my attention that following the federal model and the model of nearly every state in the Union, Indiana computed high school completion rates in a way that did not track individual students and did not account for those who simply didn't show up for school the next year or other students who "disappeared" from the school system's enrollment. As a result, Indiana's more accurate statewide graduation rate was closer to 70%, not the 90+% that had been reported for years. Some urban schools had graduation rates below 30%.

What prompted you to introduce legislation?

First, I began to learn more about the devastating economic consequences of dropping out of school – both for an individual and society as a whole. Unfortunately, in our society it is remarkably hard to recover from the decision to drop out of school. Second, given those consequences, it simply does not seem just that we are sending our young people into schools where they have a 1/3rd chance of failure, and in many urban and remote rural schools the likelihood of failure is as high at 50% to 80%. That is just not good enough. We have to do better.

What were the greatest challenges to moving the bill?

Overcoming the myths surrounding this issue. The first myth was that we actually had a 90% graduation rate. The old way of counting led to a result where almost every school in the state had a better than 85% graduation rate.

The second large myth was the "bad apple or bad egg" myth. Early on in this debate, I would have well meaning educators tell me, you just don't understand, if you keep these bad kids in class, you are just going to ruin school for the rest of the good kids. When you believe the true graduation rate is 90+%, you might believe that 10% of the kids are bad apples or bad eggs. However, when you begin to understand that true dropout rates are as high as 30, 50 to 80 percent in some schools, no one believes that 30, 50, 80 percent of kids are bad apples or bad eggs that can't make it. When folks see the real data, they begin to understand that something has to be done.

The third major myth was the "some kids move" myth. Again, well meaning educators would tell me that some of these kids just move. But, when you see the real data, you realize that no school has a 110% graduation rate graduating more seniors than they had as freshmen. The best schools in our state are in the 90+% graduation range. These kids are simply not moving to the suburbs, they are falling through the cracks of our system.

What do you think the impact of the legislation will be?

My biggest hope is that we started the process toward reform. Surely, there are better ideas out there for reform than the ones we came up with, but we did get started. And, I hope public policy leaders all across the country begin to address this crisis. We just cannot continue to allow a third to a half to in some places 80% of our young people be set up for failure.

4539

NEW HAMPSHIRE

Current research suggests that one in five students in New Hampshire drops out of high school. The New Hampshire legislature is currently considering a bill strongly backed by Governor John Lynch that aims to confront the problem. The bill raises the compulsory school age from 16 to 18 and provides alternative education for students at risk of dropping out.

Current New Hampshire law allows for standard exceptions to compulsory school attendance, such as physical or mental inability, and requires the agreement of parents and school authorities. The proposed legislation would allow a superintendent to waive attendance requirements in favor of an alternative learning plan for a student over the age of 16, so long as the plan is sufficiently rigorous and approved by the student's principal and parent or guardian. The law defines alternative learning plans broadly to include internships, technical education, community service, and online courses. The goal is to keep students engaged in learning so that they are sufficiently equipped to take the next steps in life after high school and participate fully in the economy.

A copy of the New Hampshire legislation is provided in Appendix E.

New Hampshire Governor John Lynch

John Lynch began a second term as New Hampshire's Governor in January 2007. Governor Lynch has made improving education and increasing the state's graduation rate a major priority of his second term and highlighted the issues in his recent inaugural address.

The following are excerpts from an interview with Governor Lynch.

How did you first get interested in the dropout issue?

Right now, 20 percent of our students are dropping out of high school. That is simply unacceptable.

What prompted you to feature this in your State of the State and to introduce legislation?

If our broad goal for education is opportunity, we should ensure we give our children the opportunity to get better jobs and live better lives. That opportunity begins with more New Hampshire young people graduating from high school. As a state we cannot continue to send a mixed message to New Hampshire's children that they will have the opportunities they deserve if they leave school at 16. As a state, we established a compulsory attendance age in 1903 because lawmakers realized students needed a certain level of education to get good jobs. But what made sense in 1903, doesn't make sense in 2007. In 1903, students could leave school at 16 and get good jobs at mills or farms. That's just not true any longer. Half a high school education is no longer enough.

What are the greatest challenges to moving the bill?

Some believe that additional resources are needed to support alternative education programs for at-risk youth. In order to support and expand these types of programs in New Hampshire, I included an additional $4 million in state funds. For example, my budget will double the dropout prevention program and, as a result, serve an additional 1,350 students. The funding increases the capacity of adult high schools to serve nearly 8,800 students at 53 locations; it allows the state apprenticeship program to serve 880 students across the State of New Hampshire; and will allow nearly 500 more students, for a total of 3,000, to attend the career and technical educational centers. In total, we will spend $54 million in state and federal funds this biennium to help young people graduate from high school. And in the capital budget, I have included nearly $14 million to begin renovations to two regional career and technical education centers in Exeter and Manchester. We are providing significant resources to help our young people stay in school.

What are the arguments that opponents summoned against it?

Aside from a claim of a lack of funding for alternative education programs, critics claim the legislation would cause the "warehousing" of students who do not want to be in school, which would lead to significant disruptions in the classroom. This bill does not force students to stay in classroom environments that are not working for them. Instead, it gives school districts and students the flexibility to create alternative learning plans, including vocational education, night school or internships that will engage students and make them want to complete their education. The funding for expanding these existing alternative programs has been included in my budget.

Expense has been cited as another concern. However letting these young people drop out of school has proven to be a great expense. Nationally, 80 percent of prison inmates are high school dropouts. Dropouts are twice as likely to be on welfare. Rates of teen pregnancy, substance abuse and crime are significantly higher among dropouts. A recent study by Polecon Research of Dover concluded that the cost to the state's Medicaid program alone of high school dropouts, who have fewer opportunities to get jobs that offer health insurance, is nearly $45 million a year. And students who drop out of high school will earn significantly less than their peers throughout their lives.

Also, a report by the Alliance for Excellent Education recently found if all households in New Hampshire were headed by high school graduates, the state would increase household wealth by more than $216 million; New Hampshire could save more than $13 million a year in remedial education costs at the state's community technical colleges if high schools eliminate the need for remediation; New Hampshire could save almost $64 million in health care costs over the respective lifetimes of each class of dropouts; if New Hampshire's male high school graduation rate increases by 5 percent, it could lead to combined savings and revenue of more than $15 million per year; and the lost lifetime earnings for each class of dropouts in New Hampshire are more than $1 billion.

There is also the claim those wishing to leave school no longer have the desire or ability to learn. The majority of dropouts nationwide had grades of C or better when they left school and were confident they could have met graduation requirements. In fact, according to Civic Enterprises' report commissioned by the Bill & Melinda Gates Foundation, two-thirds of those surveyed said they would have stayed in school if more were demanded of them.

How does the public, and particularly students, in the state feel about this legislation? Any grassroots opposition to it?

I spend a lot of time in schools and I have spoken to many of these young people who either dropped out and are back in alternative programs, or were at-risk of dropping out. They all tell me the same thing - raising the compulsory attendance age to 18 and expanding alternative programs is the right thing to do. When I speak to these kids, they said if they had dropped out they would just be hanging around street corners. Now, most of them I talk to want to go on to college, and all of them said they will get their diploma.

Parents of home-schooled children have opposed the legislation, however the bill does not apply to their children.

What about parents, business leaders, others?

Many parents I have spoken with feel that this legislation sends a positive message to our students - that education is vitally important, and that we care enough about New Hampshire's youth that we are not going to give up on them and we are going to require them to work toward a high school diploma. Talking to business leaders across New Hampshire, they tell me they have the products, they have the customers, but they need the skilled workers to allow their companies to grow. These jobs are not open to those without a high school diploma.

What do you think the impact of the legislation will be?

This legislation is about making it clear to New Hampshire young people that we are not going to give up on them or let them give up on themselves. It will further our goal of making sure every New Hampshire child receives a high school diploma. It will provide the skilled workers our companies need and help strengthen our economy.

4541

Conclusion

The dropout epidemic in the United States requires the ongoing vigilance of our educators, policymakers, business and civic leaders, parents, students and the public. As states address the problem by raising the compulsory school attendance age, providing alternative learning opportunities, and making other reforms, we believe graduation rates will improve. Our hope is that the current momentum at the local, state and federal levels to do more to provide accurate information, improve accountability, raise expectations, and provide needed supports for students will go a long way toward addressing the silent epidemic of high school dropout.

[12]It is worth noting that not all analysts agree that compulsory schooling laws are the main reason for the higher earnings that Angrist and Krueger describe. For example, John Bound and David Jaeger have argued that additional variables besides compulsory schooling laws also explain the earnings outcomes Angrist and Krueger attribute to compulsory schooling laws only. Bound and Jaeger's analysis, however, does not directly call into question Angrist and Krueger's finding that compulsory schooling laws play a significant role in preventing dropout from occurring. See Bound, John & David Jaeger (1996). On the validity of season of birth as an instrument in wage equations: A comment on Angrist &Krueger's "Does Compulsory School Attendance Affect Schooling and Earnings?" NBER Working Paper No. W5835. The Washington Post

The Dropout Challenge

By David S. Broder
Sunday, February 26, 2006; B07

They number in the millions — 3.5 million Americans between the ages of 16 and 25 who have dropped out of high school and were not enrolled in school in 2003, the most recent year for which an estimate is available. Of every three young men and women entering high school, only two will emerge with a diploma. For minority students, the odds are worse. And the losers pay a price all their lives.

They are the subject of "The Silent Epidemic," a study that will be released Thursday. It was conducted for the Bill and Melinda Gates Foundation by a private research firm called Civic Enterprises. I was given a preview of the report by John Bridgeland, a former Bush administration domestic policy adviser who is one of its authors.

The dropout problem has been researched extensively. But this study is unusual in two respects. Peter Hart's polling firm was commissioned to do focus groups and surveys of people between 16 and 25 who had quit school without diplomas. They were interviewed in 25 locations ranging from big cities and suburbs to small towns, all with unusually high dropout rates.

And these young people offered solid reasons to believe this is a solvable problem.

For one thing, they recognize that they made a mistake in quitting school. Eight out of 10 said they now know that having a diploma is important to success in life. And national data back them up. Dropouts earn an average $9,200 a year less than high school graduates and have far greater likelihood of winding up on welfare, in prison or on drugs.

Three out of four of those interviewed said that, if they could do it over, they would choose to stay in school. Even more said they would re-enroll now to get their degrees, if they could do it with people their own age.

And most are confident they could make it. The big news out of the study — a surprise to many, I expect— is that most of these dropouts are not "hopeless losers."

One-third of the 467 surveyed said they were failing in school. But more than six out of 10 were maintaining averages of C or better when they quit.

As many complained that classes were not challenging or interesting as found the academic requirements daunting. I believe it. A year ago, I visited — and wrote about — the Gateway to College program run by Portland (Ore.) Community College (and also funded by the Gates Foundation). There, I saw 14 teenage dropouts discussing the writings of Plato and Malcolm X — college-level work.

I quoted the leaders of the voluntary program, in which students accepted strict discipline barring absences or blown assignments, as believing it demonstrates that "even for the hardest cases — teenagers with few credits, low grade-point averages and a host of personal problems — the challenge of a tough curriculum, backed by skillful teaching in small classes and plenty of personal counseling, can be a path to success."

That is also the essence of what the dropouts in this report suggest would rescue and reward them — and their millions of counterparts.

The authors of the study make a couple of other important points. They note that dropouts typically show many signs of disaffection before they quit school. One of the most common is frequent absences — skipping school entirely, cutting classes or leaving early in the afternoon. Better monitoring of attendance — and follow-ups with students and families when the pattern first appears — could do a lot to avert the ultimate act of dropping out.

And, the authors note, almost no one drops out of school before the 10th grade — or age 16. The fact that 16 is the last year of compulsory school attendance in most states is not irrelevant. Only one state — New Mexico — makes enrollment mandatory for most students until they obtain high school diplomas.

Raising the minimum age for school attendance, if accompanied by real support for the wavering students, would do a lot to end "the silent epidemic."

Appendix B – Compulsory School Attendance Laws by State

State	Age of Required School Attendance		Exemptions [1]/ Employed	
	from	to	Age	Completion of Grade
Alabama	7	16	legally and regularly employed under child labor law.	---
	3	21	for special education students.	---
Alaska	7	16	---	---
Arizona	6	16	14 with parental consent and gainfully employed.	---
Arkansas	5	17 must complete school year	---	---
California	6	18	---	---
Colorado	7	16	has current age and school certificate or work permit.	---
Connecticut	5	18	16 with parental consent.	---
Delaware	5	16	---	---
District of Columbia	5	18	---	---
Florida	6	17	may terminate attended at 16 with parental consent.	---
Georgia	6	16	---	---
Hawaii	6	18	15	---
Idaho	7	16	---	---
Illinois	7	17	employed and excused by school official.	---
Indiana	7	18	16 with consent of parent and principal 14 if a parent agrees and State Labor bureau issues a certificate. Must go back to school within 5 days of termination of employment for which certificate issued.	---
Iowa	6	16	---	---
Kansas	7	18	17 or 16 with parental consent	---
Kentucky	6	16	---	---

4545

State	Age of Required School Attendance		Exemptions [1]/ Employed	
	from	to	Age	Completion of Grade
Louisiana	7	18 or 17 with parental consent	---	---
Maine	7	17	15 or	9
Maryland	5	16	---	---
Massachusetts	6	16	14	---
Michigan	6	16	---	---
Minnesota	7	16	---	---
Mississippi	6	17	5 years of age if in public kindergarten.	---
Missouri	7	16	14	---
Montana	7	16 or completion of 8th grade, whichever is later	---	---
Nebraska	7	18	14 and 16 with parental consent; special legislation for home schooling.	8 ---
Nevada	7	17	14 and excused by board of trustees. 14 if work is necessary for own or parents' support.	8 ---
New Hampshire	6	16	---	---
New Jersey	6	16	---	---
New Mexico	5, or 8 if parents and school board agree	high school graduate or 17 if excused by school board and employed in a gainful trade or occupation or child is in alternative schooling with parental consent.	---	---
New York	6	17 in cities with 4,500 or more population and union-free school districts, otherwise 16 if approved by local school board	---	---
North Carolina	7	16	---	---
North Dakota	7	16	necessary to support of family.	---
Ohio	6	18	16 with parents' and superintendents permission.	---

4546

State	Age of Required School Attendance		Exemptions 1/ Employed	
	from	to	Age	Completion of Grade
Oklahoma	5	18 or 16 if excused by written joint agreement	---	---
Oregon	7	18 or excused by district school board; 16 with consent of school administration and parent; 21 for a child with a disability	16	---
Pennsylvania	8	17	16 if regularly engaged in employment with a certificate. 15 in farm work or domestic service in private home with permit. Or, 14 employed as above if completed elementary school with permit recommended by district superintendent of schools or principal of private school.	---
Rhode Island	6	18	16 with written parental consent.	---
South Carolina	5	17	16 further attendance is determined by court to be disruptive, unproductive or not in best interest of child.	8th grade completed and employment is necessary for maintenance of home
South Dakota	6	16 or completion of 8th grade if member of certain religious organizations	---	---
Tennessee	6	18th birthday	---	local exemptions at 17th birthday for discipline problems
Texas	6	18	---	---
Utah	6	18	16 and 8th grade completed. home schooled minors has exempt from attendance	8th for employment purposes
Vermont	6	16	15 and completed 6th grade and services needed for support of family.	---

4547

State	Age of Required School Attendance		Exemptions [1]/ Employed	
	from	to	Age	Completion of Grade
Virginia	5	18	exempt any pupil with parent's consent along with that of principal or superintendent or a court which believes the minor cannot benefit from education at school.	---
Washington	8	18 or 16 and parent agrees that child should not be required to attend, or child is emancipated, or child has received certificate of competence.	16	---
West Virginia	6	16	---	---
Wisconsin	6	18	---	---
Wyoming	7	16	---	---

[1]Nearly all States exempt those whose physical or mental condition precludes attendance. Other exemptions not directly related to employment include those because of distance from school or school transportation; expulsion, suspension or determined to be disruptive; marriage; excused by court or judge; and receiving religious education.

Appendix C – Current Legislation

Alaska	"An Act raising the compulsory school attendance age; relating to the crime of contributing to the delinquency of a minor; relating to duties of the Department of Education and Early Development; relating to truancy; and relating to employment of a minor." (http://aksenate.org/index.php?bill=SB14)
Florida	"An act relating to mandatory school attendance; amending ss. 1002.20, 1003.21, and 1003.51, F.S.; changing the ending age for mandatory school attendance from 16 years to 18 years; providing an effective date." (http://www.flsenate.gov/data/session/2007/Senate/bills/billtext/pdf/s0360.pdf)
Iowa	"This bill raises the compulsory school attendance age from 16 to 18 years of age for students other than those receiving competent private instruction. The bill includes technical amendments to eliminate a reference to the compulsory attendance age for purposes of dual enrollment and to exempt children who meet conditions existing in Code section 299.2. The bill also directs the department of education to convene a compulsory attendance working group. The working group is to review supports for affected students and to consider the necessity of expanding support programs and services, online at-risk academy courses, career academies, current at-risk allowable growth provisions, and full funding of the instructional support levy. The working group must submit a report to the general assembly and the department of education by January 15, 2008. The bill may include a state mandate as defined in Code section 25B.3. The bill requires that the state cost of any state mandate included in the bill be paid by a school district from state school foundation aid received by the school district under Code section 257.16. The specification is deemed to constitute state compliance with any state mandate funding-related requirements of Code section 25B.2. The inclusion of this specification is intended to reinstate the requirement of political subdivisions to comply with any state mandates included in the bill. The provision relating to the working group takes effect July 1, 2007, while the remainder of the bill takes effect July 1, 2008." Appendix D

INDIANA

Select Provisions from Indiana House Enrolled Act No. 1347, which was signed into law in March 2006

A complete copy of the act can be accessed at http://www.in.gov/legislative/bills/2006/HE/HE1347.1.html

SECTION 12. IC 20-33-2-9, AS ADDED BY P.L.1-2005, SECTION 17, IS AMENDED TO READ AS FOLLOWS [JULY 1, 2006]: Sec. 9.

(a) The governing body of each school corporation shall designate the appropriate employees of the school corporation to conduct the exit interviews for students described in section 6(a)(3) of this chapter. Each exit interview must be personally attended by:

(1) the student's parent;

(2) the student;

(3) each designated appropriate school employee; and

(4) the student's principal.

(b) A student who is at least sixteen (16) years of age but less than eighteen (18) years of age is bound by the requirements of compulsory school attendance and may not withdraw from school before graduation unless:

(1) the student, the student's parent, and the principal agree to the withdrawal; and

(2) at the exit interview, the student provides written acknowledgment of the withdrawal that meets the requirements of subsection (c) and the:

(A) student's parent; and

(B) school principal;

each provide written consent for the student to withdraw from school; and

(3) the withdrawal is due to:

(A) financial hardship and the individual must be employed to support the individual's family or a dependent;

(B) illness; or

(C) an order by a court that has jurisdiction over the student.

(c) A written acknowledgment of withdrawal under subsection (b) must include a statement that the student and the student's parent understand that withdrawing from school is likely to:

(1) reduce the student's future earnings; and

(2) increase the student's likelihood of being unemployed in the future.

4551

SECTION 13. IC 20-33-2-14, AS ADDED BY P.L.1-2005, SECTION 17, IS AMENDED TO READ AS FOLLOWS [EFFECTIVE JULY 1, 2006]: Sec. 14.

(a) This section and sections 15 through ~~17~~ 17.5 of this chapter apply to a student who attends either a public school or a nonpublic school.

(b) Service as a page for or as an honoree of the general assembly is a lawful excuse for a student to be absent from school, when verified by a certificate of the secretary of the senate or the chief clerk of the house of representtives. A student excused from school attendance under this section may not be recorded as being absent on any date for which the excuse is operative and may not be penalized by the school in any manner.

SECTION 14. IC 20-33-2-17.5 IS ADDED TO THE INDIANA CODE AS A NEW SECTION TO READ AS FOLLOWS [EFFECTIVE JULY 1, 2006]: Sec. 17.5. The governing body of a school corporation may authorize the absence and excuse of a student who attends any educationally related nonclassroom activity. Any educationally related nonclassroom activity and nonclassroom activity must meet all the following conditions:

(1) Is consistent with and promotes the educational philosophy and goals of the school corporation and the state board.

(2) Facilitates the attainment of specific educational objectives.

(3) Is a part of the goals and objectives of an approved course or curriculum.

(4) Represents a unique educational opportunity.

(5) Cannot reasonably occur without interrupting the school day.

(6) Is approved in writing by the school principal.

SECTION 15. IC 20-33-2-28.5, AS ADDED BY P.L.242-2005, SECTION 19, IS AMENDED TO READ AS FOLLOWS [EFFECTIVE JULY 1, 2006]: Sec. 28.5.

(a) This section applies to an individual:

(1) who:

(A) attends or last attended a public school;

(B) is at least sixteen (16) years of age but less than eighteen (18) years of age; and

(C) has not completed the requirements for graduation;

(2) who:

(A) wishes to withdraw from school before graduation;

(B) fails to return at the beginning of a semester; or

(C) stops attending school during a semester; and

(3) who has no record of transfer to another school.

(b) An individual to whom this section applies may withdraw from school only if all of the following conditions are met:

(1) An exit interview is conducted.

(2) The individual's parent consents to the withdrawal.

(3) The school principal approves of the withdrawal.

(4) The withdrawal is due to:

(A) financial hardship and the individual must be employed to support the individual's family or a dependent;

(B) illness; or

(C) an order by a court that has jurisdiction over the child.

During the exit interview, the school principal shall provide to the student and the student's parent a copy of statistics compiled by the department concerning the likely consequences of life without a high school diploma. The school principal shall advise the student and the student's parent that the student's withdrawal from school may prevent the student from receiving or result in the revocation of the student's employment certificate and driver's license or learner's permit.

(c) For purposes of this section, the following must be in written form:

(1) An individual's request to withdraw from school.

(2) A parent's consent to a withdrawal.

(3) A principal's consent to a withdrawal.

(d) If the individual's principal does not consent to the individual's withdrawal under this section, the individual's parent may appeal the denial of consent to the governing body of the public school that the individual last attended.

(e) Each public school, including each school corporation and each charter school (as defined in IC 20-24-1-4), shall provide an annual report to the department setting forth the following information:

(1) The total number of individuals:

(A) who withdrew from school under this section; and

(B) who either:

(i) failed to return to school at the beginning of a semester; or

(ii) stopped attending school during a semester;

and for whom there is no record of transfer to another school.

(2) The number of individuals who withdrew from school following an exit interview.

(f) If an individual to which this section applies:

(1) has not received consent to withdraw from school under this section; and

(2) fails to return to school at the beginning of a semester or during the semester;

the principal of the school that the individual last attended shall deliver by certified mail or personal delivery to the bureau of child labor a record of the individual's failure to return to school so that the bureau of child labor revokes any employment certificates issued to the individual and does not issue any additional employment certificates to the individual. For purposes of IC 20-33-3-13, the individual shall be considered a dropout.

(g) At the same time that a school principal delivers the record under subsection (f), the principal shall deliver by certified mail or personal delivery to the bureau of motor vehicles a record of the individual's failure to return to school so that the bureau of motor vehicles revokes any driver's license or learner's permit issued to the individual

and does not issue any additional driver's licenses or learner's permits to the individual before the individual is at least eighteen (18) years of age. For purposes of IC 9-24-2-1, the individual shall be considered a dropout.

(h) If:

(1) a principal has delivered the record required under subsection (f) or (g), or both; and

(2) the school subsequently gives consent to the individual to withdraw from school under this section;

the principal of the school shall send a notice of withdrawal to the bureau of child labor and the bureau of motor vehicles by certified mail or personal delivery and, for purposes of IC 20-33-3-13 and IC 9-24-2-1, the individual shall no longer be considered a dropout.

04/10

STATE OF NEW HAMPSHIRE

In the Year of Our Lord Two Thousand Seven

AN ACT raising the age of required attendance of children in school.

Be it Enacted by the Senate and House of Representatives in General Court convened:

1 School Attendance; Compulsory Attendance by Pupil. Amend RSA 193:1, I to read as follows:

I. A parent of any child at least 6 years of age and under [16] 18 years of age shall cause such child to attend the public school to which the child is assigned in the child's resident district. Such child shall attend full time when such school is in session unless:

(a) The child is attending a public school outside the district to which the child is assigned or an approved private school for the same time;

(b) The child is receiving home education and is therefore exempt from this requirement; [or]

(c) The relevant school district superintendent has excused a child from attendance because the child is physically or mentally unable to attend school, or has been temporarily excused upon the request of the parent for purposes agreed upon by the school authorities and the parent. Such excused absences shall not be permitted if they cause a serious adverse effect upon the student's educational progress. Students excused for such temporary absences may be claimed as full-time pupils for purposes of calculating state aid under RSA 186-C:18 and equitable education grants under RSA 198:41;

(d) The pupil has been exempted from attendance pursuant to RSA 193:5;

(e) The pupil has successfully completed all requirements for graduation and the school district is prepared to issue a diploma or the pupil has successfully achieved the equivalent of a high school diploma by either:

(1) Obtaining a GED certificate; or

(2) Documenting the completion of a home school program at the high school level by submitting a certificate or letter to the department of education.

(f) The pupil has been accepted into an accredited postsecondary education program; or

(g) The pupil obtains a waiver from the superintendent, which shall only be granted upon proof that the pupil is 16 years of age or older and has an alternative learning plan for obtaining either a high school diploma or its equivalent.

(1) Alternative learning plans shall include age-appropriate academic rigor and the flexibility to incorporate the pupil's interests and manner of learning. These plans may include, but are not limited to, such components or combination of components of extended learning opportunities as independent study, private instruction, performing groups, internships, community service, apprenticeships, and on-line courses.

(2) Alternative learning plans shall be developed, and amended if necessary, in consultation with the pupil, a school guidance counselor, the school principal and at least one parent or guardian of the pupil, and submitted to the school district superintendent for approval.

(3) If the superintendent does not approve the alternative learning plan, the parent or guardian of the pupil may appeal such decision to the local school board. A parent or guardian may appeal the decision of the local school board to the state board of education consistent with the provisions of RSA 21-N:11, III.

2 School Attendance; Bylaws as to Nonattendance. Amend RSA 193:16 to read as follows:

193:16 Bylaws as to Nonattendance. Districts may make bylaws, not repugnant to law, concerning habitual truants and children between the ages of 6 and ~~[16]~~ 18 years not attending school ~~[and not having a regular and lawful occupation;]~~ ***or who are not participating in an alternative learning plan under RSA 193:1, I(g),*** and to compel the attendance of such children at school; failure to comply with such bylaws shall constitute a violation for each offense.

3 Truant Officers; Duties. Amend RSA 189:36 to read as follows:

189:36 Duties. Truant officers shall, when directed by the school board, enforce the laws and regulations relating to truants and children between the ages of 8 and [16] 18 years not attending school ~~[and without any regular and lawful occupation]~~ ***or who are not participating in an alternative learning plan under RSA 193:1, I(g);*** and the laws relating to the attendance at school of children between the ages of 8 and 18 years; and shall have authority without a warrant to take and place in school any children found employed contrary to the laws relating to the employment of children, or violating the laws relating to the compulsory attendance at school of children under the age of 18 years, and the laws relating to child labor. ***No home school pupil nor any person between the ages of 6 and 18 who meets any of the requirements of RSA 193:1, I(c)–(g) shall be deemed a truant.***

4 Home Education; Definitions. Amend RSA 193-A:1, I to read as follows:

I. "Child" means a child or children at least 6 years of age and under [16] 18 years of age who is a resident of New Hampshire.

5 Repeal. RSA 193:1, IV, relative to withdrawal from school for children who are at least 16 years of age but under 18 years of age, is repealed.

6 Effective Date. This act shall take effect July 1, 2009.

01/23/07

SB 18-FN - FISCAL NOTE

AN ACT raising the age of required attendance of children in school.

FISCAL IMPACT:

The Department of Education states this bill may increase local expenditures by an indeterminable amount in FY 2010 and each fiscal year thereafter. There will be no fiscal impact on state and county expenditures or state, county, and local revenue.

METHODOLOGY:

The Department indicated that raising the compulsory age of attendance to 18 years of age would increase the high school population by less than 1,100 students in FY 2010 and each fiscal year thereafter. Based on dropout data from the 2005-2006 school year, approximately 1,300 students who dropped out of school were under the age of

18; had these students stayed in school until age 18, average daily membership (ADM) would have been higher by approximately 1,200. The Department further indicated that based on anticipated declines in the dropout rate and student enrollment, increased ADM in FY 2010 will be approximately 1,100, and such an increase should not require additional facilities or teachers. The Department assumes students covered by catastrophic aid do not drop out of school before the age of 18. With an effective date of July 1, 2009, the first year in which enrollment will be impacted is FY 2010; enrollment from FY 2011 will be used to calculate FY 2014 equitable education aid. Only the limited English proficient and transportation portions of the targeted aid component will be impacted by an increased ADM. In FY 2005, 28 dropouts received three or more hours per week of limited English proficiency services, 20 of which were under the age of 18. It is assumed this number will remain constant. Total impact on targeted aid beginning in FY 2014 would be $229,000 [(1,100 x $190 transportation aid) + (20 limited English proficient x $1,000)].

The Department states this bill may increase local school district expenditures in FY 2010 and each fiscal year thereafter to provide appropriate programs for potential dropouts between the ages of 16 and 18.

Stay in School:

New Lessons on the Benefits of Raising the Legal School-Leaving Age

Philip Oreopoulos

In this issue...

High-school dropout rates remain disturbingly high in Canada. But is raising the minimum age for leaving school part of the solution? New evidence suggests that it is.

The Study in Brief

Too many, too soon: that is the common lament over Canada's disturbing high-school dropout rate. With one in five young adults lacking a high-school diploma, politicians and educators are looking for solutions. This paper examines one possible answer: raising the minimum school-leaving age above 16.

The paper presents new evidence from the United States and New Brunswick, which raised the age to 18 in 2000, for considering whether the other provinces should support and enforce an increase in the school-leaving age. First, the study examines broad data on school enrolment and attainment in these jurisdictions. The finding: partly as a result of weak enforcement, recent changes in the school-leaving age had only a small — but still significant — impact on school completion rates.

The study then delves deeper with a more systematic analysis, which isolates those students specifically affected by changes to the school-leaving age. Based on the results, the study estimates that raising the school-leaving age above 16:

- increases, on average, an individual's length of schooling by between 0.12 and 0.16 years;
- decreases the dropout rate by between 1.2 and 2.1 percentage points; and
- increases the fraction of young adults with at least some college or university by between 1.5 and 2.1 percentage points.

Raising school attainment alone, however, does not indicate successful policy. More important are the effects of raising the school-leaving age above 16 on early unemployment and earnings outcomes for those forced to stay in school longer. The results show that an additional year of compulsory schooling not only lowers the probability of being unemployed but also boosts weekly earnings.

This is the first study to look at the impact of measures raising the school-leaving age over the last 20- to 30-year period in North America. Its findings are in line with those of previous studies, which have dealt with increases in the minimum age that occurred in the early half of the 20th century.

The C.D. Howe Institute

The C.D. Howe Institute is a national, nonpartisan, nonprofit research organization that aims to improve Canadians' standard of living by fostering sound economic and social policy.

The Institute promotes the application of independent research and analysis to major economic and social issues affecting the quality of life of Canadians in all regions of the country. It takes a global perspective by considering the impact of international factors on Canada and bringing insights from other jurisdictions to the discussion of Canadian public policy. Policy recommendations in the Institute's publications are founded on quality research conducted by leading experts and subject to rigorous peer review. The Institute communicates clearly the analysis and recommendations arising from its work to the general public, the media, academia, experts, and policymakers.

The Chairman of the Institute is Tim Hearn; Jack M. Mintz is President and Chief Executive Officer.

The Education Papers Series

The Education Papers Series' overall goal is to provide guidance to education-policy decision makers and attract the attention of the media and the general public by producing a series of high-quality analyses relevant to current and emergent education-policy issues. The project is funded by the Max Bell Foundation.

The high-school dropout rate in Canada remains uncomfortably high. About 20 percent of Canadians in their twenties — one in five — have no secondary-school certificate and no postsecondary education of any kind.[1] The figure is disturbing because high-school dropouts fare much worse later in life compared to those who obtain more education. They earn, on average, less than high-school graduates and are more likely to be unemployed, draw on social assistance and other welfare programs, end up in jail and be in poorer health. If dropping out causes these bad outcomes, students that drift towards early exit in school stand much to gain from staying on instead.

Provincial education ministries have grappled with finding ways to reduce the number of dropouts. Some suggest lowering class size, others suggest making the curriculum easier, or trying to target at-risk students earlier. An additional possibility, also considered recently by several provinces, is to raise the minimum school-leaving age. This specifies the length of time students must spend in school before having the legal option to leave. Except for New Brunswick, all provinces mandate a minimum school-leaving age of 16. In Alberta, a private member's bill proposing to raise the age to 17 was legislated in 2003, but was never proclaimed (Red Deer Public Schools 2005). The Ontario government said in 2002 it planned to raise the age to 18. It reiterated that commitment in the fall 2005 Throne Speech and a policy announcement is expected very soon.

Support for increasing the school-leaving age often rests on paternalistic hunches that students wishing to leave school early are, in fact, better off if they decide to stay on. In 1998, for example, the Deputy Minister of Education for New Brunswick provided this explanation for the province's decision to raise the minimum school-leaving age to 18:

> "[E]ducators must help students fulfill the Mission of Public Education in New Brunswick to acquire the necessary skills, knowledge, and attributes needed to be a life-long learner, to achieve personal fulfillment and to contribute to a productive just and democratic society." (School-leaving Age Task Force 1998.)

And in Ontario, Premier Dalton McGuinty stated:

> "We've got a law on the books now that says that you can quit school when you're 16. Think about it. This is the knowledge economy — that no longer makes sense. So we're going to require that young people be in school or learning outside of school ... until they reach the age of 18." (National Post, September 28, 2002.)

---

1 Twenty-seven percent of 22- to 24-year-olds in the 2001 Canadian Census had no secondary school certificate, down slightly from 29 percent in 1996 and 30 percent in 1991. Only 19 percent of these individuals take additional postsecondary schooling. There are several other ways to gauge high-school completion (see Kaufman, Alt and Chapman 2001). For example, event dropout rates indicate the percentage of students who dropped out of school over a relatively short period of time, often between one year and the next. The less time-sensitive status dropout rate measures the percentage of individuals who are not enroled in high school and who lack a high-school credential. Completion rates measure the percentage of a given population that has a high-school credential, regardless of when the credential was earned. Measures of completion vary depending on what age groups are included, since some individuals return later to complete a degree. Data on completion rates from the census and labour force survey seem most reliable to me, but most other measures produce similar trends and measures. Mainly for exposition, I shall refer to students who do not complete their secondary degree as dropouts. These figures are similar, whether looking at all 22- to 24-year-olds, or only Canadian-born.

But hunches aside, what do the lessons of experience have to say? The purpose of this paper is to present new evidence from New Brunswick and the United States for considering whether the provinces should support and enforce an increase in the legal school-leaving age.

The first part of the paper focuses on whether recent changes in laws to increase the minimum age in Canada and the U.S. had any impact on increasing school enrolment and attainment. Many of the revised laws included exceptions, were poorly enforced, or had little punishment for non-compliance. Partly as a result of weak enforcement, I find that recent increases in the school-leaving age had only a small — but still significant — impact on school completion rates.

Then I apply a more systematic analysis, with findings that lend further support to increasing the school-leaving age. Most interestingly, even though compulsory schooling laws do not mandate any postsecondary education, I find that raising the school-leaving age above 16 increases the fraction of youths with at least some college or university. One notion consistent with this finding is that some individuals compelled to stay longer in high school become more interested in postsecondary education, or view higher education as less daunting than when they were younger. The paper finally considers the employment benefits for students who extend their schooling under compulsion. I estimate the subsequent impact on earnings and employment for the small fraction of students specifically affected by increases in the school-leaving age and who stay in school longer as a result.

A word on methodology: My methodology (see Appendix B) takes into account changes in compulsory school laws in different states at different times. It allows us to estimate not only the overall impact of compulsory school-leaving laws, but also their impact on students specifically affected by them and who would have otherwise left school.

Without this methodology, it is hard to distinguish between the effect of staying in school beyond 16 and the effect of the underlying factors, such as motivation, that lead some teenagers to remain in school longer than others. For example, if we observe that someone who finished high school earns more than someone who didn't, is it because the individual stayed in school longer or is it because the individual is generally more motivated, which led him/her to stay in school longer, and work harder to earn more? If we don't take care to distinguish between the two possibilities, we might assign to extra schooling an advantage that really comes from individual characteristics that are independent of school policies.

The results of my analysis are very similar to older studies. I estimate that individuals compelled to stay in school beyond 16 experience significantly higher earnings and higher opportunities for employment in their early careers. Finding large labour-market gains for individuals forced to stay in school raises the question of why dropouts drop out in the first place. Why do young persons in Canada leave school early if staying on generates attractive gains, on average, to their careers and overall well-being? For dropouts to know what they are doing, they must really hate school to forgo the large expected returns from staying on. Alternatively, perhaps the reasons behind wanting to introduce compulsory schooling laws in the first place are correct: perhaps dropouts are myopic, or

underestimate the gains from school, or perhaps social pressures dominate their concerns. Whatever the reasons, one clear recommendation of this paper is that if provinces are serious about raising the school-leaving age, they need to effectively enforce these laws and promote their potential benefits to administrators, parents, and students.

Previous Studies

Previous studies have dealt with increases in the minimum school-leaving age that occurred in the early half of the 20th century. They have consistently found large gains to adult social-economic outcomes. For the United States, Angrist and Krueger (1991) and Acemoglu and Angrist (2001) estimated (using very different methodologies) that annual adult earnings are about 10 percent higher for students compelled to stay a year longer in school. For the United Kingdom, Harmon and Walker (1995) found about 14 percent higher earnings from such compulsory measures. And for Canada, I found similar gains, using provincial law changes between 1915 and 1970, for would-be-dropouts compelled to stay in school.

Other studies have examined the impact of compulsory schooling on non-pecuniary outcomes. Lochner and Moretti (2004) estimated that compulsory schooling lowers the likelihood of committing crime or ending up in jail. Lleras-Muney (2005) estimated an additional year of compulsory schooling substantially lowers the probability of dying sooner among elderly people. Black, Devereux, and Salvanes (2005) found compulsory schooling reduces the chances of teen pregnancy in the United States and Norway. And Oreopoulos, Page and Stevens (2003) conclude that parents with more compulsory schooling are also less likely to have children who have to repeat a grade or drop out themselves.

However, these earlier reports examine effects from raising the minimum school-leaving age to 14, 15, or 16 many decades ago, often before the 1950s. The circumstances behind dropout decisions back then were quite different than the circumstances behind dropout decisions today. The demand for skilled workers has increased, and the gains from additional education attainment may also have increased. On the other hand, more students today graduate from high school and obtain postsecondary education. Today's dropouts come from relatively poorer families. Based on the 2001 Census, 73 percent of dropouts under 20 and living at home have parents with household income below the 25th percentile, compared to 61 percent of dropouts from the 1981 census. It is not clear whether compelling these individuals to remain in school beyond 16 would generate the same effects found in earlier studies.

Ideally, we need to explore more recent changes. New Brunswick's change in the school-leaving age, from 16 to 18 in 2000, is almost too recent, since not enough time has elapsed to examine subsequent outcomes. Consequently, I look to the United States. Like provinces in Canada, many states in the U.S. have discussed raising the school-leaving age to 17 or 18, almost making high-school graduation compulsory. As of today, 29 states have already increased the minimum age above 16. Below, I use these recent changes to examine the potential for compulsory schooling to: 1. serve as an effective policy for reducing dropout

rates; and 2. improve subsequent social-economic outcomes. While using the same methodology as the earlier studies, this is the first study to look at measures over the last 20- to 30-year period that raised the minimum school-leaving age above 16.

Recent Changes to Compulsory Schooling Laws in the U.S. and Canada

As a first step, this section provides an overview of compulsory schooling laws in U.S. states, then in New Brunswick. It considers the extent to which the laws are enforced, and their impact, based on broad data on high-school enrolment and educational attainment for the relevant age groups.

The U.S. Experience

Many states in the U.S. have a minimum school-leaving age of 17 or 18. The National Center for Education Statistics' annual Education Digest lists these laws. Figure 1A shows the minimum school-leaving age between 1970 and 2003 for states that set the age above 16 at least once during this period (and for the District of Columbia). Figure 1B shows the other states.[2] Several, like Rhode Island, Florida, and Nebraska, upgraded their compulsory school laws only in the last few years. Others, like Oklahoma, Oregon, and Utah, however, have had a minimum-leaving age set above 16 for more than two decades.

The strange pattern shown by a few states, where the leaving age has been raised, then lowered, hints that more is going on. A closer look at the legislation reveals that there is much more to compulsory school laws than a specific age range within which individuals must remain in school. In several states, students can leave earlier than the legal minimum age if they work instead. In other cases, students can leave with parental consent. Kansas allows dropping out before the recorded minimum age if, after a counselling session, both student and parents sign a disclaimer. In doing so, they acknowledge a list of academic skills the student may not yet have acquired, and statistics on differences in average earnings and unemployment rates between dropouts and graduates.[3]

Some students disengage and drop out illegally because compulsory schooling policies are not well-enforced, or punishment for habitual truancy is not severe enough to deter them. Administrators may be reluctant to pursue court action, especially in cases where students are disruptive in class and do not appear interested in school. In virtually every state, the primary action when a student begins to disengage from school (through absenteeism) is to notify a parent or guardian and counsel him or her to encourage the child to attend. Some states require parents to pay fines or even face imprisonment for a child that regularly skips school. Children themselves can face termination of driving privileges (see Burke 2005), community service, or be forced to attend a juvenile detention facility.

2 Hawaii and Alaska are left out of this paper's analysis because student dropout trends in these states are less likely to follow trends in the rest of the country.

3 See Kansas State Department of Education (2005).

Figure 1A: *States with Minimum School-Leaving Age Greater than 16 At Least Once, 1970 – 2003*

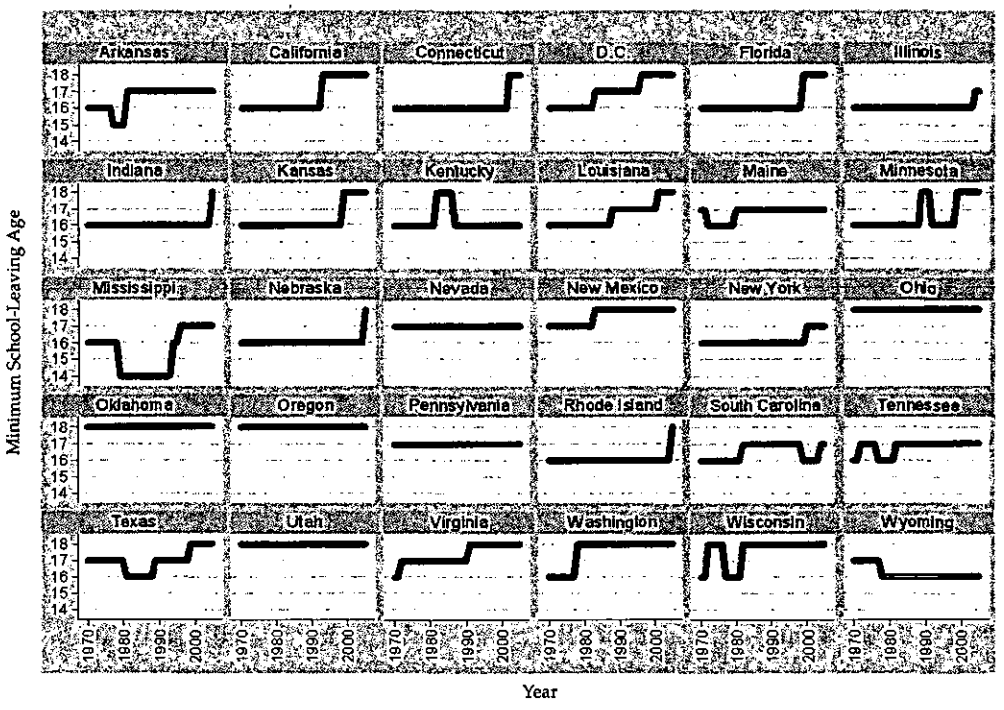

Figure 1B: *States with Minimum School-Leaving Age 16 or Less, 1970 – 2003*

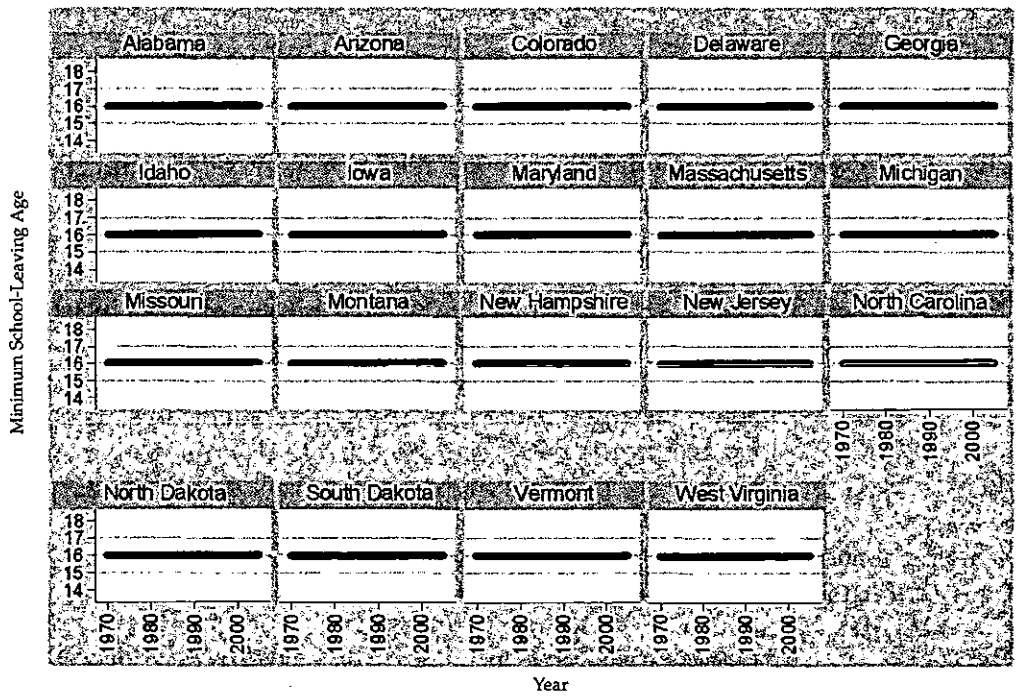

Table 1: *School Attainment by School-Leaving Age Faced at Age 16, 2000 – 2003*

	Legal School-Leaving Age Faced at Age 16		
	16	17	18
		%	
Fraction of 16-Year-Olds In School During School Year	96.20	95.65	96.63
Fraction of 17-Year-Olds In School During School Year	91.68	91.66	93.22
Fraction of 18-Year-Olds In School During School Year	73.42	73.64	74.73
Fraction of 20- to 24-Year-Olds with High School Degree or some Postsecondary	85.56	83.38	85.24
Fraction of 20- to 24-Year-Olds with some Postsecondary	51.55	48.55	52.14

Notes: Data are from the NBER's extracts of the Merged Outgoing Rotation Files of the Current Population Survey. The years included for this table are 2000 to 2003. The "in school" variable is coded as one if an individual is enrolled part-time or full-time in school the week of the survey.

In practice, only a fraction of habitually truant students are disciplined by the state. In Tennessee, for example, most attendance officers believe that their caseload is too large and that they face difficulty contacting the families of truant students (Palmisano and Potts 2004). Only general guidelines are provided by the state to determine habitual truancy, and schools have little financial incentive to improve attendance.

If the minimum school-leaving age affects at least some would-be dropouts, we might expect to observe more 16- and 17-year-olds in school in states that have legal leaving ages of 17 or 18, respectively, compared to states with a leaving age of 16. We also might expect that in states that provide no exceptions to a leaving age of 18, we should observe virtually all 16- and 17-year-olds in school.

To check these expectations, Table 1 presents the fraction of 16-, 17-, and 18-year-olds in school during the 2000 to 2003 school years. Results for each age group are categorized under the minimum-leaving age faced at age 16,[4] whether that be 16, 17 or 18.

Consider, first, the case of 16-year-old students. Most 16-year-olds are in school regardless of the minimum school-leaving age that exists, which might be expected. But contrary to expectations, students in states with a school-leaving age of 17 are slightly less likely to be enroled at 16, compared to students in states with a leaving age of 16 (95.7 percent versus 96.2 percent respectively). Yet, 16-year-olds in states with a school-leaving age of 18 are slightly more likely to be in school (96.6 percent).

The fraction of 17-year-olds in school by no means spikes up for youths in states with a school-leaving age of 18, as we might expect to see. Fully 6.8 percent

4 These proportions are calculated from responses in the 2000 to 2003 outgoing rotation files of the Current Population Survey, excluding the months of June, July and August and using population weights. I matched the state school leaving ages to the year in which an individual was 16 in their current state of residence. The data appendix provides additional details.

of 17-year-olds in states with a leaving age of 18 have left, which is comparable to 8.3 percent in states with a leaving age of 16.

Table 1 also presents education attainment measures for 20- to 24-year-olds. There are surprisingly no major differences in the dropout rate or postsecondary attainment rate across states with different leaving ages. One reason for this is that states that tend to have more restrictive compulsory schooling laws also perennially tend to have more students that drop out, regardless of legal stipulations. This limits our ability to observe the effects of these age limits. I address this in the next section. At the very least, the finding that many students leave before the legally mandated age suggests that exceptions, exemptions, and lack of enforcement of these laws weaken their effectiveness in keeping youths in school.

The New Brunswick Experience

The province of New Brunswick increased the school-leaving age to 18 in 2000. This was the first (and, so far, only) time any province raised the school-leaving age above 16. A task force in 1999 recommended the change, provided that programs were set up to address needs for students who would struggle to cope staying longer.[5] New services, including apprenticeships and tutoring programs, were introduced along with the new law.

The school-leaving age of 18, however, is not enforced. The Education Act of New Brunswick (2005) indicates that a parent who fails to 'cause' a frequently truant child to go back to school is subject to a misdemeanour charge, but only until that child is 16. There is no consequence listed in the Act associated with habitual truancy of children 16 years old or older.[6]

To examine whether the new law affected school enrolment, Figures 2A, 2B, and 2C plot the portion of teenagers in school full-time in New Brunswick and in the other Maritime Provinces (which have minimum school-leaving ages of 16) between 1995 and 2004. These data come from the monthly Labour Force Surveys.[7] Under the law change, we might expect to observe a jump in school enrolment among late teens in New Brunswick after 2000, but no such jump for late teens in the other provinces (Nova Scotia, Prince Edward Island, and Newfoundland). As with the U.S. comparison above, however, there is little difference between enrolment rates across the Maritimes. The fraction of 16-year-

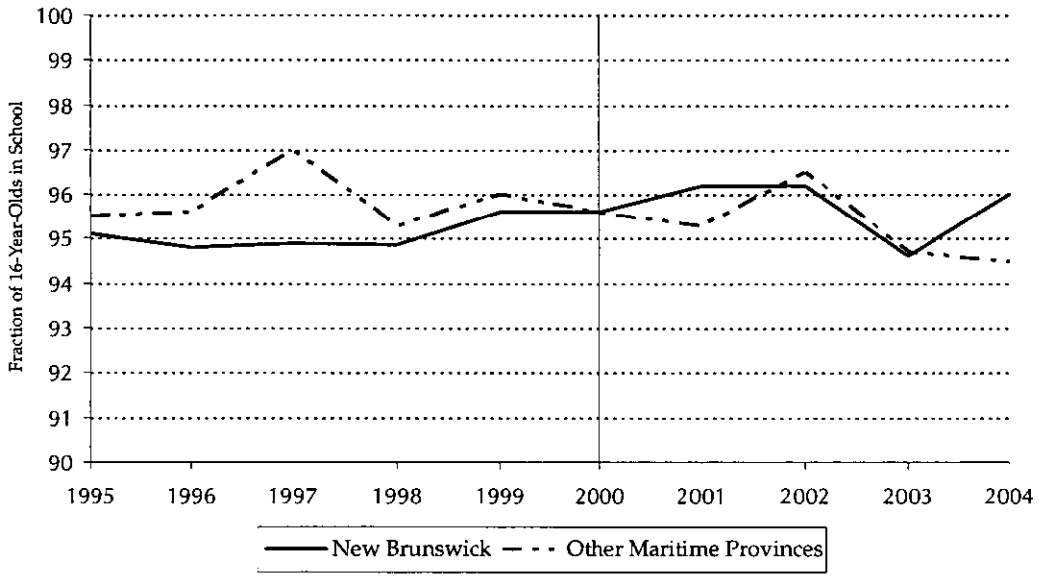
5 See School Leaving Age Task Force (1998).

6 An article by Davis (2004) in the *New Brunswick Telegraph-Journal* notes: "A five-year-old law designed to keep New Brunswick teens in school until age 18 has never been enforced." She cites Robert Gerard, director of student services with the Department of Education as saying the law wasn't put in place to prosecute offenders or their parents. "It was part of a proactive approach the department took to ensure the needs of all students are met. Psychologically, it has made a difference for educators, parents and students. The mindset had to be changed of educators to recognize that the Department of Education and society was serious about the need to keep our children in school and make sure they have a sound education."

7 I use Statistics Canada's more detailed version that includes an individual's age, rather than age in the Public Use files. I combined the monthly surveys between 1995 and 2004, excluding the months between June and August. I use population weights to calculate the fraction of full-time students at different ages.

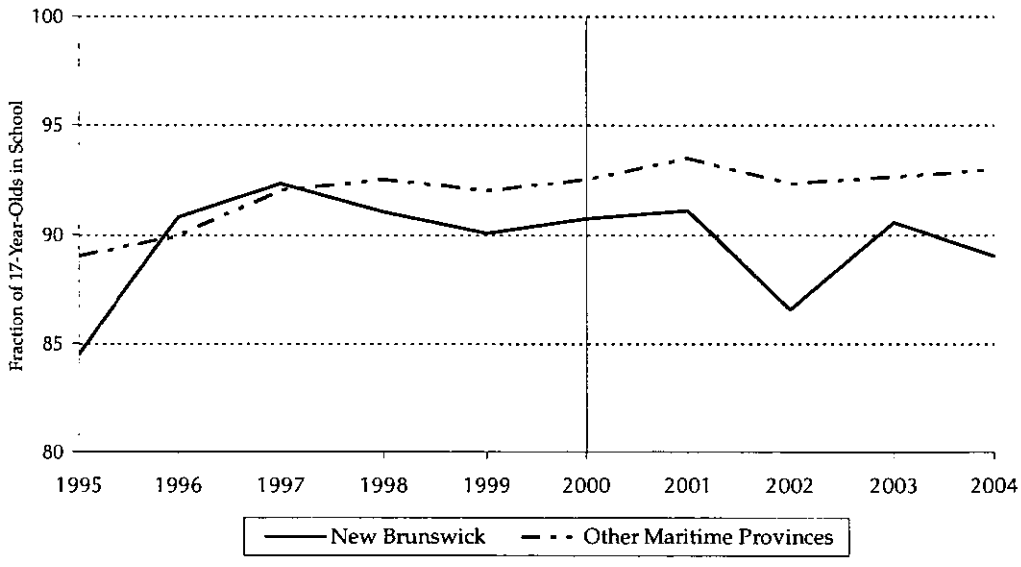
4571

Figure 2A: *Fraction of Maritime 16-Year-Olds in School Full-Time, 1995 – 2004*



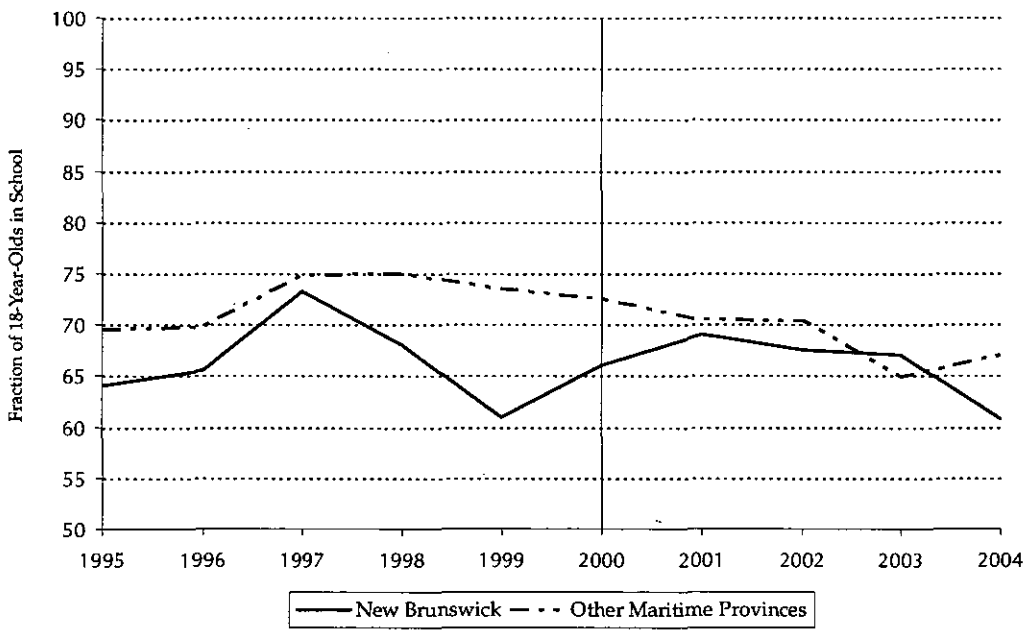
Note: Data are from the combined monthly Labour Force Surveys at Statistics Canada. Each plot indicates the fraction reported in school full-time for each survey year, excluding those in months June, July, and August. The vertical line in 2000 indicates the year in which New Brunswick raised the school-leaving age to 18.

Figure 2B: *Fraction of Maritime 17-Year-Olds in School Full-Time, 1995 – 2004*



Note: Data are from the combined monthly Labour Force Surveys at Statistics Canada. Each plot indicates the fraction reported in school full-time for each survey year, excluding those in months June, July, and August. The vertical line in 2000 indicates the year in which New Brunswick raised the school-leaving age to 18.

Figure 2C: *Fraction of Maritime 18-Year-Olds in School Full-Time, 1995 – 2004*



Note: Data are from the combined monthly Labour Force Surveys at Statistics Canada. Each plot indicates the fraction reported in school full-time for each survey year, excluding those in months June, July, and August. The vertical line in 2000 indicates the year in which New Brunswick raised the school-leaving age to 18.

olds in school stays relatively flat for all provinces, at about 96 percent. The fraction of 17-year-olds in school is also flat after 1998, at about 90 percent. The 17-year-old enrolment rate is slightly lower for New Brunswick, even though that province's law implies enrolment should be closer to 100 percent after 2000. We see no noticeable change at that time.[8]

A similar pattern holds when we look at educational attainment. The law change in New Brunswick is too recent to observe individuals older than 19 and exposed to the new law. But among 19-year-olds in 2004, 18.6 percent did not complete high school and did not take any postsecondary education. This compares to 19.7 percent for the other Maritime Provinces. In 2000, New Brunswick's dropout rate among 19-year-olds was also slightly smaller than for the other Maritime Provinces (22.6 percent versus 23.2 percent, respectively). Neither difference is statistically significant. In short, the increase in New Brunswick's school-leaving age appears to serve more as a signal by the province of its desire to encourage high-school graduation, but without a serious commitment to keeping every 16- and 17-year-old in school with appropriate enforcement.

8 The discrepancy in the difference between New Brunswick and other Maritime Provinces before and after 2000 is small and not statistically significant.

Delving Deeper: The Results of a More Systematic Analysis

The last section discussed how exceptions to, or weak enforcement of, the minimum school-leaving age can diminish its effectiveness in compelling students to stay. States with more restrictive laws do not have noticeably lower dropout rates or early exit rates than other states. These simple comparisons, however, may belie the true impact of compulsory measures if the same states with more restrictive laws also tend to have more students that leave school early for other reasons.

This section describes the results of a more systematic analysis of the effects of recent U.S. changes in school-leaving ages on school enrolment and attainment. I estimate that raising the school-leaving age above 16 is, in fact, associated with an increase in school attainment, albeit a small one.

The main analysis combines the monthly outgoing rotation files of the Current Population Survey (CPS) between 1979 and 2003. (Appendix A describes the data I use in more detail.) The Bureau of Labor Statistics uses the CPS to calculate unemployment rates in the United States. Each monthly survey includes about 30,000 nationally representative individuals, with information about their state of residence, labour force participation, weekly or hourly earnings, and educational attainment. To focus the analysis on the effects of recent changes to compulsory school laws, I limit the sample to individuals aged 20 to 24 between 1975 and 2003, matched to the school-leaving ages shown in Figures 1A and 1B for the years 1970 to 1995. Individuals are matched to the school-leaving age of their state of residence when they were 16 years old.[9]

Using regression analysis (see Appendix B), the first question I ask is: what is the effect on length of schooling when the minimum-leaving age is raised above 16? The analysis uses control variables for the effects of an individual's state of residence, birth cohort, and survey year. These variables control for perennial differences in state education attainment that do not vary over time, as well as national trends in education attainment that do vary over time. Controlling for such outside influences allows for a more precise estimation of the effects we are really interested in; that is, the effects of facing a minimum school-leaving age above 16 on different measures of educational attainment.

I estimate that, on average, raising the school-leaving age above 16 increases an individual's length of schooling by between 0.12 and 0.16 years, depending on what control variables are included in the analysis (detailed results are in Table B1 in Appendix B).

Next, I ask whether raising the school-leaving age influences high-school completion and postsecondary enrolment. This is a similar analysis, but I use high-school completion and postsecondary school enrolment as outcome variables instead of years of schooling. The results indicate that raising the school-leaving age above 16 decreases the dropout rate and increases college or university entrance.

9 In this analysis, I include immigrants, since most 20-to 24-year-old immigrants likely faced compulsory schooling laws in the U.S. The results are similar excluding them, and available on request.

4574

Again, depending on the specific set of control variables included in the analysis, raising the school-leaving age above 16 lowers the fraction of 20- to 24-year-olds who have never completed high school by between 1.2 and 2.1 percentage points. Even though compulsory schooling laws do not mandate any postsecondary education, I also find that raising the minimum age above 16 increases the fraction of young adults with at least some college or university by between 1.5 and 2.1 percentage points. One explanation consistent with this finding is that some individuals compelled to stay longer in high school become more interested in postsecondary education or view higher education as less daunting an obstacle than when they were younger.

As a check on these results, I perform the same analysis, but this time using the actual school-leaving age (16, 17, or 18) to categorize the results instead of the legal school-leaving age. The results are similar.

The evidence from the most recent cohorts

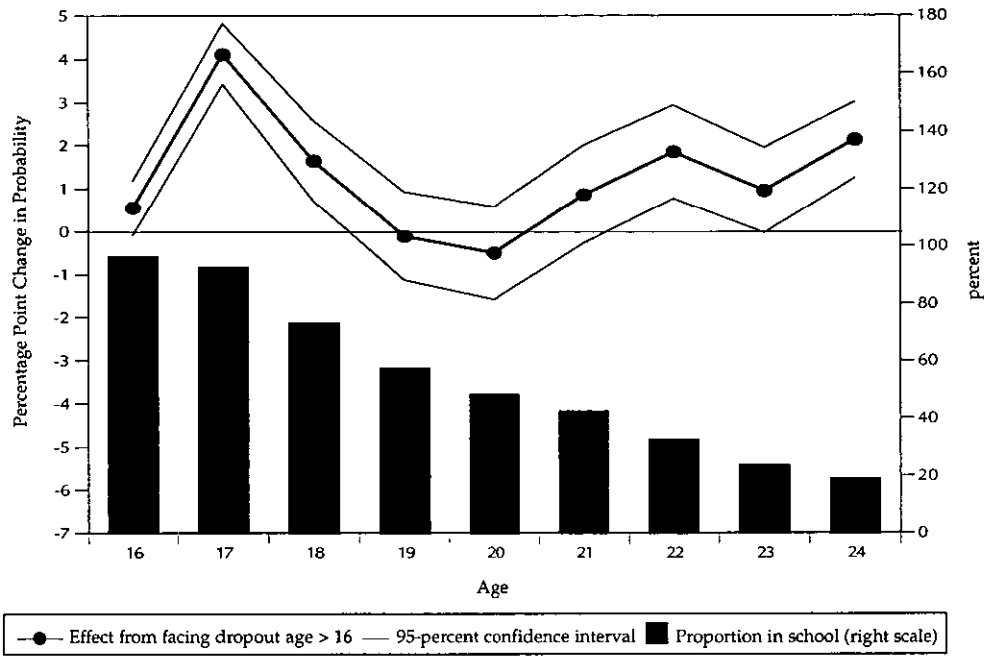
Some of the changes to compulsory schooling laws included so far in the sample occurred in the 1970s and 1980s. Because the effects of these laws may have changed with time, it is useful to restrict the above analysis to the most recent cohorts.

For the most recent cohorts, Figure 3 shows the estimated effect of raising the legal leaving age above 16 on the probability of being enroled in school at different ages. The sample used to construct this figure includes only individuals from the 2000 to 2003 CPS. Each dot in the figure shows the estimated increase in the likelihood of being in school (full-time or part-time) for the corresponding age group. The two thinner lines trace out the 95-percent confidence interval around this estimate. The bars at the bottom of the figure show the average school enrolment in each age group for comparison.

The first dot indicates that an increase in the school-leaving age to above 16 raises the probability of attending school at age 16 by 0.6 percentage points. A stronger influence occurs on the likelihood of attending at age 17 and 18. The attendance rate is 4.1 percentage points higher among 17-year-olds under a school-leaving age above 16, compared to one that is lower. I also estimate some effect on school enrolment in the early twenties, although the large confidence region indicates some uncertainly about the size of these later effects. The evidence lines up with the previous findings above that some individuals may be influenced by high school compulsion to also obtain postsecondary education.

Figure 4 shows the estimated effects from raising the school-leaving age above 16 on specific education-attainment levels. The sample includes only 20- to 24-year-olds in the CPS between 2000 and 2003. The findings are consistent with what effects we might expect the legal leaving age to have on the distribution of education attainment. Within U.S. regions, states with minimum-leaving ages above 16 have fewer individuals whose highest grade attainment lies below Grade 11, and more individuals with Grade 12 and some college education. The compulsory school laws do not influence university graduation, graduate school or professional degree attainment, but this may be because the sample mostly

Figure 3: *Estimated Effects of Minimum School-Leaving Age Above 16 on School Enrolment, 2000 – 2003 Current Population Surveys, Excluding June, July, and August*



Note: Each black dot in the top half of the figure represents a separate regression by age category. An indicator variable for whether an individual is in school was regressed on whether the individual faced a dropout age above 16 in his state of residence when he was 16 years old, plus nine region-fixed effects. The estimated coefficients for the effects of facing a higher dropout age are reported here for each age group. The thinner lines outline the 95-percent confidence interval. The bars in the bottom half of the figure indicate the fraction of sample in each age group in school (right scale).

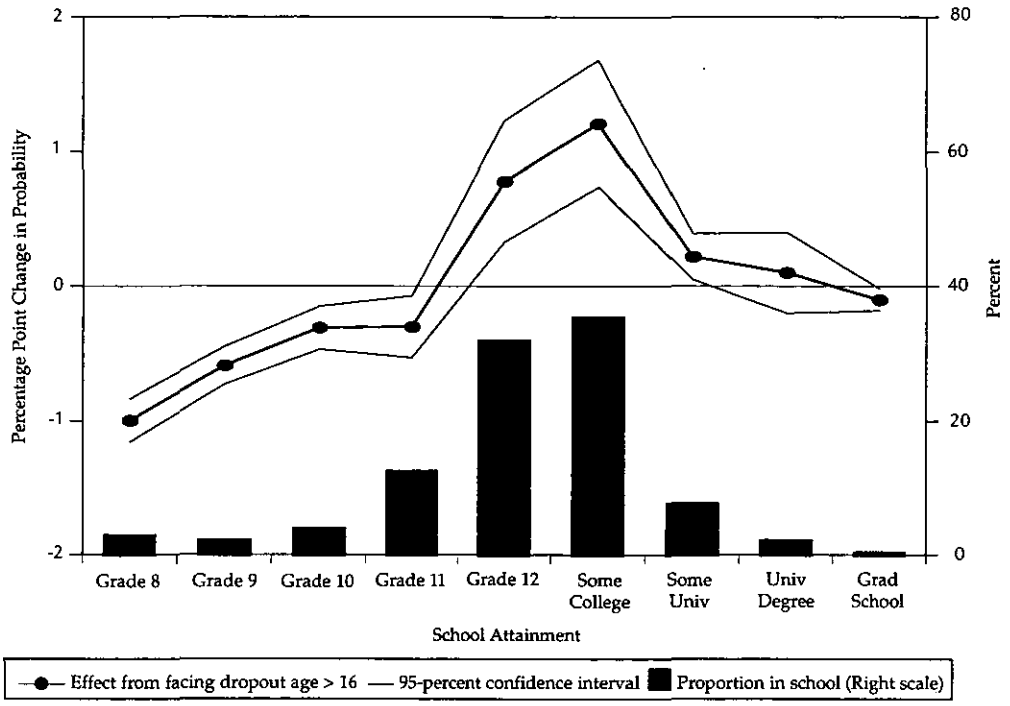
includes individuals in their early twenties who have not yet completed their schooling.

It may not seem surprising that compulsory schooling beyond age 16 increases educational attainment. After all, that is what the policy is meant to do. What's interesting about these findings is that the effects are small, especially considering that a strict interpretation of the law would imply that virtually no teenager would be allowed to leave before age 16. Clearly, this is not the case. The other interesting finding is that the more restrictive compulsory schooling laws also seem to lead to more postsecondary schooling. This effect was not observed in earlier studies (e.g. Acemoglu and Angrist 2001). Postsecondary schooling may seem more achievable from the standpoint of a high-school graduate compared to a high-school dropout.

The Effect of Compulsory Schooling on Subsequent Employment and Wages

Raising school attainment alone, however, does not indicate successful policy. A more important question is what happens to those compelled to stay in school. To answer it, the next section estimates the effects of raising the school-leaving age above 16 on early unemployment and earnings outcomes for 20- to 24-year-olds. I

Figure 4: *Estimated Effects of Minimum School-Leaving Age Above 16 on Grade Attainment, 2000 – 2003 Current Population Surveys, 20- to 24-Year-Olds*



Note: An indicator variable for the school attainment indicated along the x-axis was regressed on whether an individual 20 to 24 years old in the 2000 to 2003 CPS faced a dropout age above 16 in their state of residence when they were 16, plus nine region fixed effects. The estimated coefficients for the effects of facing a higher dropout age are reported here for school attainment level. The thinner lines outline the 95-percent confidence interval. The bars in the bottom half of the figure indicate the fraction of sample in each education level (right scale).

estimate the effects only among those impacted by the changes to law; that is, I estimate whether teenagers compelled to stay in school longer benefit from facing a more restrictive leaving age and, if so, by how much. (The methodology for producing these estimates, as well as detailed results, are found in Appendix B.)

The sample I use here includes all 20- to 24-year-olds in the CPS who were 16 years old between 1970 and 1995. I estimate the effect of compulsory schooling on employment status for everyone in this sample. Because some individuals affected by the law changes may still be in school (at the postsecondary level), I measure the effect of compulsory schooling on weekly earnings only for those in the sample working at least 25 hours per week.

Depending on the specific set of control variables included in the statistical analysis, the results indicate that an additional year of compulsory schooling beyond age 16 has the following effects: it lowers the probability of being unemployed by between 2.5 and 5.6 percentage points (unemployment is defined as not working but looking for work); lowers the probability of not working (irrespective of whether one is looking for work or not) by between 2.7 and 13.3 percentage points; and boosts weekly earnings among those working more than 25

hours per week by between 9.9 and 25.8 percent (detailed results are in Table B2 in Appendix B).

Again, as in the analysis on the effects of school-leaving age laws on education attainment, I repeat the same calculations using the actual dropout age faced by individuals at age 16 as the variable of interest instead of the categorical variable.

The similarities between this second set of estimates and the previous one are striking. They suggest that the impact of a year of compulsory schooling above the age of 16 in the last 30 years is similar to the impact from raising the school-leaving age to 14, 15 or 16 in the earlier part of the 20th century.

Why Not Stay in School?

Finding large gains to individuals from compelling them to stay in school raises the question of why dropouts drop out in the first place. Why do young persons in Canada leave school early if staying on generates attractive gains, on average, to their careers? The possibility that students cannot afford to stay in high school seems unlikely. Many dropouts do not work. Among 16- and 17-year-olds recorded in the 2001 Census as not in school, only 55 percent are in the labour force, and 90 percent still live at home with parents.

Several alternative explanations for dropout behaviour exist. First, dropouts may simply abhor school. Poor classroom performance and condescending attitudes from other students and teachers may make students want to leave as soon as possible, even at the expense of forgoing large returns (Lee and Burkam 2003). Removing reasons for school distaste, in this case, could go a long way in reducing dropout rates. Second, dropouts may be myopic. Myopic students that temporarily downplay or ignore future consequences of their decisions — as considered by Laibson (1997) and O'Donoghue and Rabin (1999) — may prefer dropping out to staying on but later prefer staying on to dropping out. A third alternative is that cultural or peer pressures might dominate adolescent decision making and lead to dropout behaviour. Cultural norms that devalue schooling, a lack of emotional support, or low acceptance for higher education among peers may exacerbate students' distaste for school beyond the minimum (e.g. Akerlof and Kranton 2002; and Coleman 1961). A final consideration is that students may simply mis-predict, underestimating the real expected benefit from staying in school longer. Students' guesses about gains from schooling are often wildly off the mark from those estimated by social scientists (e.g. Dominitz and Manski 2000; and Usher 2005). Teenagers from more disadvantaged family backgrounds are more likely to predict lower gains from additional schooling than those from more affluent families — not just for high school, but higher education as well. Perhaps the main reason why students from low-income households more often dropout or fail to continue on to university is not poverty per se, or debt aversion, but a systematic tendency among this group to overestimate the costs and underestimate the benefits of education.[10]

10 For a more detailed discussion about the implications of these results for explaining dropout behaviour, see Oreopoulos (2005).

Conclusion

This Commentary looks at recent experiences with raising the school-leaving age to 17 and 18 in order to assess the potential benefits for other provinces besides New Brunswick that might do the same. Do such measures serve to decrease high-school dropout rates and improve career outcomes among disadvantaged youths?

I find no change in the relative dropout rate of New Brunswick after it increased the school-leaving age to 18, compared with other Maritime Provinces. I do find small, but significant effects of raising the dropout age in the U.S. An increase in the school-leaving age above 16 increases the total number of years in school by 0.13 years, on average, and decreases high-school dropout rates by about 1.2 percent. I also find that raising the age limit increased postsecondary school attendance by 1.5 percent, even though postsecondary school is not compulsory. Perhaps this finding indicates that would-be dropouts reconsider postsecondary options after getting close to, or completing, a high-school degree.

Exceptions to the law, weak consequences for truancy, or lack of enforcement limit the effectiveness of raising the school-leaving age. But perhaps exceptions are desirable because some students clearly would not benefit from staying on. The results in this paper do not capture whether those students for whom exceptions were made would have gained from being forced to stay. But among students affected, I estimate that additional compulsory schooling significantly improves their early career outcomes by lowering the likelihood of being unemployed and increasing earnings, on average. While the estimates obtained are based on data with a degree of imprecision, which warrants some caution, they are entirely consistent with earlier studies that find significant gains to wealth, health, and other social-economic outcomes from raising the minimum age for leaving school.

If the provinces are serious about making would-be dropouts stay in school longer, they need to effectively enforce these laws while promoting their potential benefits to administrators, parents, and students. While flexibility is prudent to deal with special circumstances, the results here point to a need for more resolve in cases where students begin to disengage from high school. Ideally, compulsory schooling laws would exist in the backdrop, where students don't consider leaving school before the minimum possible age simply because virtually no one does. A temporary increase in enforcement of existing laws might lead to this shift in attitude towards leaving early.

Overall, the results presented here speak favourably to supporting an increase in the school-leaving age to 17 or 18. Raising this age may offer an effective and affordable means to increase education attainment among the least educated and improve their subsequent employment circumstances and earnings potential.

4579

Appendix A: Data

The data for this paper come mostly from the National Bureau of Economic Research's extracts of the Current Population Survey (CPS) outgoing rotation files between 1979 and 2003. The CPS, administered by the U.S. Bureau of Labor Statistics, collects monthly household data about employment and labour markets for about 30,000 nationally representative individuals aged 16. It is the source of the data used to calculate the unemployment rate in the United States. The extract contains variables related to employment, such as hours worked, earnings, industry, occupation, education, and unionization. The extracts also contain many background variables: age, sex, race, ethnicity, and geographic location.

Every household that enters the CPS is interviewed each month for four months, then ignored for eight months, then interviewed again for four more months. In a given month, there are about 120,000 individuals sampled, but only one-fourth of the sample exit the survey and are not interviewed the following month. Usual weekly hours/earning questions are asked only to households in their fourth and eighth interview. Data from these outgoing interviews are combined for every year between 1979 and 2003 to create the extract, for a total sample size over 8.1 million.[11] To examine recent compulsory school-law changes, the base dataset includes only 16- to 24-year olds, who were aged 16 between 1970 and 1995. This restriction cuts the sample down to about 1.2 million.

Some of the variable definitions change from survey to survey and had to be adjusted to make year-to-year comparisons consistent. The years of schooling variable is the highest grade completed plus the number of years of postsecondary school. This variable is recorded in every CPS survey from 1979 to 1992 (the gradeat variable), and is capped at 17. Following Acemoglu and Angrist (2001), I combine this variable with the education categorical variable from the 1992 survey onwards (variable name grade92) by assigning imputed years of schooling to each category for males and females using the imputation method in Park (1994). A high-school dropout is defined as an individual with less than 12 years of schooling. A high-school graduate is defined as an individual with 12 or more years of schooling. An individual in school is defined as an individual reporting in the CPS as being enroled in high school or college in the previous week, excluding surveys taken in the months between June and August. This variable is only available from the CPS since 1984 and for individuals aged 24 or less.

I use the NBER extract's imputed weekly earnings (earnwke), which essentially is actual weekly earnings among those who report it, and reported hourly earnings, times hours worked per week, for individuals who report earnings in hours. Definitions of unemployment (not working but looking for work) and not working come directly from the imputed labour force participation measures of the CPS (ftpt79, ftpt89, ftpt94).

11 Individuals in these files are interviewed twice, so the combined dataset contains two observations for almost all individuals one year apart. The analysis adjusts for heteroskedasticity from having the same individual in the dataset twice by first aggregating the entire dataset into cells by survey year, birth cohort, gender, and region, and uses Huber-White standard errors clustered at the cohort-region level.

The minimum school-leaving age data come from various years of the National Center for Education Statistics Education Digest. Individuals in the CPS were matched according to the minimum school-leaving age they would have faced at age 16 and assuming an individual's high-school state was the same as her current state of residence. The CPS does not record state of birth.

Much of the main analysis in the paper uses the data collapsed into cell means, aggregated by survey year, birth cohort, state of residence, gender, and race. All regressions and tabulations use either non-institutional population weights or earnings weights, depending on whether the dependent variable uses earnings.

Appendix B: Methodology

Effect of Compulsory Schooling Laws on Educational Attainment

The main regression model to estimate the effects of raising the school-leaving age above 16 is the following:

(1) $EDUC_{iscy} = \lambda\,(DROPAGE_{sc} > 16) + u_s + u_c + u_y + e_{iscy}$,

where $EDUC_{iscy}$ is a measure of education attainment for individual i, living in state s, born in year c, surveyed in year y. The variable $DROPAGE_{sc} > 16$ is equal to one if the individual faced a school-leaving age above 16 when he, or she, was 16 years old in state s. The variable equals zero otherwise, and e_{iscy} is the error term. The regression includes fixed effects for state of residence, birth cohort, and survey year. These variables control for perennial differences in state education attainment that do not vary over time, as well as for national trends in education attainment that do vary over time. I also examine the results with linear birth cohort trends for each state.[12]

The variable of interest, λ , is the average effect of facing a school-leaving age above 16 on educational attainment. Table B1 shows estimates of λ under alternative specifications using the CPS sample of 20- to 24-year-olds who were 16 years old between 1970 and 1995. The first column replaces the state-fixed effects in equation (1) with nine region-fixed effects. The identification of the compulsory schooling effects in this case comes not only from changes in the school-leaving laws, but also from state-to-state variation in the leaving age, within a region. I estimate that, on average, raising the school-leaving age above 16 increases an individual's years of schooling by 0.12 years. Replacing region- with state-fixed effects in column 2 controls for average differences in attainment across states over the entire period. This specification (equation 1) does not significantly change the point estimate, now at 0.13 years. Finally, in column 3, I add state-specific linear cohort trends to examine the possibility the results are driven by state differences in overall education-attainment trends. This cautious specification makes estimation of the compulsory schooling law effect more difficult, since some of the trends may absorb some of the effects. Under this specification, however, we still identify a small effect — 0.16 more years of schooling — from higher school leaving laws.

The second and third rows show the same results, but with high-school completion and postsecondary school enrolment as outcome variables. The results also indicate that raising the school-leaving age above 16 decreases the dropout rate and increases college or university entrance. From the main specification in column 2, raising the school-leaving age above 16 decreases the fraction of 20- to 24-year-olds with less education than a high-school degree by 1.2 percentage points.

12 The data are first aggregated into cell means at the state, cohort, survey year, gender, and race level, and weighted by cell sample size. The standard-errors reported cluster for state-specific heteroskedasticity using the Huber-White methodology.

Table B1: *The Effects of the Minimum School-Leaving Age on School Attainment for Individuals Aged 20 to 24 Who Were Aged 16 Between 1970 and 1995 — Regression Estimates*

	Faced Dropout Age > 16 at Age 16			Dropout Age Faced at Age 16

Region Fixed Effects	Yes	No	No	Yes	No	No
State Fixed Effects	No	Yes	Yes	No	Yes	Yes
Cohort Fixed Effects	Yes	Yes	No	Yes	Yes	No
Survey Year Fixed Effects	Yes	Yes	Yes	Yes	Yes	Yes
Cohort* State Linear Trend	No	No	Yes	No	No	Yes

Notes: Data are from the NBER's extracts of the Merged Outgoing Rotation Files of the Current Population Survey. The first three columns show results from regressing school attainment on a dummy for whether an individual faced a dropout age greater than 16, plus control variables indicated in the bottom rows. Columns 4 to 6 show results from regressing school attainment on the minimum school-leaving age (16, 17, or 18), plus the control variables. Standard errors are in brackets. The *, ** and *** indicate that an estimate is statistically significant at the 10-, 5- and 1-percent level, respectively. See text for further details.

The second set of results uses the actual school-leaving age as the dependent variable (16, 17, or 18) instead of the dummy variable indicating a school-leaving age above 16 for the main specification. The results are similar.

Some of the compulsory schooling law changes used in the above analysis occurred in the 1970s and 1980s. We can examine the effects of facing a school-leaving age above 16 among the most recent cohorts if we use region-fixed effects instead of state-fixed effects, as we did in column 1 of Table B1. This requires a more restrictive assumption: that within a region (e.g. Pacific, New England), any relationship between the states' education-attainment differences and compulsory schooling-law differences are not driven by other institutional differences related to both. The finding in Table B1 that the estimated effect is very similar, whether we include region- or state-fixed effects, suggests this assumption is reasonable.

Figure 3 (in the main text) shows the estimates of λ for school enrolment status, but using region-fixed effects in equation (1) in place of state-fixed effects. The sample includes only individuals in the 2000 to 2003 CPS. Each dot in the figure shows the estimated increase in the likelihood of being in school (full-time or part-time) for the corresponding age group. The thinner lines trace out the 95-percent confidence interval around this estimate. The bars at the bottom of the figure show the average school enrolment in each age group for comparison.

Figure 4 (in the main text) shows the estimated effects from raising the school-leaving age above 16 on specific levels of educational attainment. The sample

includes only 20- to 24-year-olds in the CPS between 2000 and 2003. The x-axis values correspond roughly to an individual's cumulative years of education. The variable, 'highest education level obtained' was recoded as 8 for eighth grade, 9 for ninth grade, etc. Some college was recoded as 13, a professional degree was recoded as 14, a university degree was recoded as 16, and a graduate degree as 17.

Effect of Compulsory Schooling Laws on Unemployment Rates

To estimate the impact of compulsory schooling for those influenced by these laws (those that would have dropped out sooner), consider the same regression model in equation (1), but using unemployment status as the dependent variable:

$$(2)\ UNEMP_{iscy} = \lambda\,(DROPAGE_{sc} > 16) + u_s + u_c + u_y + e_{iscy},$$

where $UNEMP_{iscy}$ is equal to one if individual i (now older), living in state s, born in year c, surveyed in year y is unemployed, zero otherwise. Equation (2) is known as the reduced-form equation. The coefficient λ captures the average effect of raising the school-leaving age above 16 on the unemployment rate for everyone in the sample. Of course, not everyone is affected by the change in law. What we want to estimate instead is the impact from an increase in the dropout age for those that end up taking one more year of school. For example, suppose the increase in the dropout age makes 50 percent of the population take one more year of school ($\gamma = 0.50$). We can estimate the impact of raising the school-leaving age on those 50 percent by dividing λ by 0.50. If an increase in the dropout age increases total number of school years by 0.50 and an increase in the dropout age decreases average unemployment by 0.02, then we can deduce the effect from taking one more year of compulsory schooling decreases average unemployment by 0.04 (0.02 / 0.50), or λ / γ.

Thus, to estimate the effect of one more year of compulsory schooling (from raising the school-leaving age above 16), we simply rescale our estimate in (2) by the estimated increase in school years in (1). Another way of looking at this is to suppose raising the school-leaving age caused everyone to take one more year of school. Then our estimate in (2) would give us exactly the effect of one more year of school on the likelihood of being unemployed ($\lambda/1$).

For this approach to work, changes in the school-leaving age must be unrelated to changes in state demographic or institutional characteristics that also affect school attainment. Also, if raising the school-leaving age does not affect an individual's education attainment (e.g. whether facing a dropout age of 16 or 18, she intends to graduate), raising it also does not affect her unemployment rate. Another way to describe this instrumental variables method is in two stages. In the first stage, we estimate education attainment differences caused only by changes in the school-leaving age (the first stage is equation (1)). In the second stage, we estimate:

$$(3)\ UNEMP_{iscy} = \beta\, EDUC_HAT_{iscy} + v_s + v_c + v_y + e_{iscy},$$

Table B2: *The Effects of Compulsory Schooling on Unemployment and Earnings for Individuals Aged 20 to 24 Who Were Aged 16 Between 1970 and 1995 – Second-Stage IV-Regression Estimates*

	Faced Dropout Age > 16 at Age 16			Dropout Age Faced at Age 16

Cohort* State Linear Trend	No	No	Yes	No	No	Yes

Notes: Data are from the NBER's extracts of the Merged Outgoing Rotation Files of the Current Population Survey. Standard errors are in brackets. The *, ** and *** indicate that an estimate is statistically significant at the 10-, 5- and 1-percent level respectively. See text for further details.

where $EDUC_HAT_{iscy}$ is an individual's predicted education based on the first stage. The coefficient β is the average effect from one year of education, caused from a change in the compulsory school-leaving age. It is equivalent to λ / γ.

Table B2 shows estimates of the effects of a year of compulsory schooling on early career outcomes. The first three columns look at the effects of compulsory schooling when the school-leaving age is raised above 16. The last three columns use the actual dropout age faced as the independent variable of interest. The sample includes all 20- to 24-year olds in the CPS that were 16 years old between 1970 and 1995. I estimate the effect of compulsory schooling on unemployment and employment status for everyone in this sample. Because some individuals affected by the law changes may still be in school (at the postsecondary level), I measure the effect of compulsory schooling on weekly earnings only for those in the sample working at least 25 hours per week.

Column 1 shows the results using region-fixed effects instead of state-fixed effects. This specification lets us estimate the effects of compulsory schooling using cross-section variation in state laws, but requires the assumption that this within-region variation is not related to other factors that could explain education or labour market outcome differences. The table indicates that an additional year of compulsory schooling, caused from increasing the school-leaving age above 16, lowers the likelihood of unemployment by 2.5 percentage points (unemployment is defined as not working but looking for work). The confidence interval around this estimate is wide, but the estimate is statistically significant at the 10-percent level. The effect on the likelihood of working at all for this age group is quite

large, but imprecisely estimated. Perhaps most interestingly, the return to compulsory schooling on weekly earnings is 9.9 percent, an estimate not much different from earlier studies that use older birth cohorts. An additional year of compulsory schooling is associated with about 10-percent higher weekly earnings among those working more than 25 hours per week.

Column 2 shows the main results that include state-fixed effects, so that identification of the effects of compulsory schooling comes only from changes in the minimum school-leaving age. I estimate that a year of compulsory schooling from these law changes decreases the probability of being unemployed by 3.8 percentage points and decreases the probability of not working by 4.4 percentage points. The extra year also increases weekly earnings by an average of 13.3 percent.

Column 3 shows results from estimating the model that allows for underlying linear birth-cohort trends for each state. This specification makes the assumption required for causal interpretation of the results more likely, but at the expense of possibly absorbing variation driven by the school-leaving ages and making the estimates less precise. Nevertheless, with this model, the estimates for the effects of compulsory schooling on unemployment and not working are similar to those in column 2, and the effects on weekly earnings are greater.

Columns 4 to 6 show the same estimates but using the actual dropout age faced by individuals at age 16 as the instrumental variable in equation (1).

ISER Publication –Kids Count Alaska Education Summary

ISER Publication-Kids Count Alaska Education Summary Excerpts 2006-2007

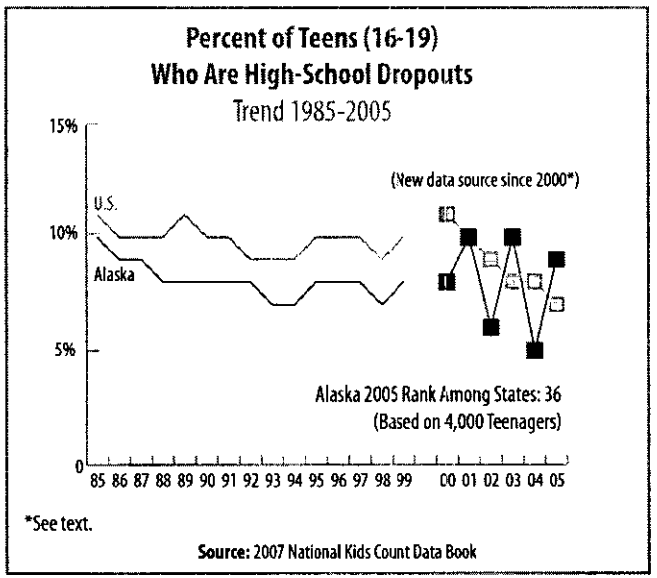
Kids Count Alaska is part of a nationwide program, sponsored by the Annie E. Casey Foundation, to collect and publicize information about children's health, safety, and economic status. We pull together information from many sources and present it all in one place. We hope this book gives Alaskans a broad picture of how the state's children are doing and provides parents, policymakers, and others interested in the welfare of children with information they need to improve life for children and families.

More than 206,000 children ages 18 or younger live in Alaska—just under a third of Alaska's 2006 population of about 671,000.

That's an increase of about 15% in the number of children since 1990. During the past 15 years the age structure of Alaska children has also changed, with younger children making up a declining share and teenagers a growing share. In 1990, children ages 4 or younger made up 31% of all children; by 2006 that share had dropped to 26%. Among those 15 to 18, the 1990 share was about 16%, but it had risen to 22% by 2006.

Boys outnumber girls in Alaska by close to 6%. There are more boys than girls in every age group. Even among infants, boys outnumbered girls by 8% in 2006.

Alaska's children have also grown more racially diverse in the past two decades, as illustrated by the figure showing Alaska's school children by race. In 1988, 68% of school children were White and 32% were from minorities—primarily Alaska Natives.



Definitions

Methods for measuring both the share of teenagers who drop out of school and the share who graduate have proliferated recently. Here we report data from two sources that define "dropouts" differently and two sources that measure high-school graduation rates differently. We use those various sources to help us better understand why so many teenagers don't finish high school—and to help identify possible ways of keeping more in school.

The American Community Survey, published by the U.S. Census Bureau, tabulates dropouts as the percentage of teenagers 16 through 19 who are not enrolled in high school and have not graduated. Those who have earned general equivalency diplomas (GEDs) are considered graduates and are not counted as dropouts. This is the source the national Kids Count Data Book uses, and the data are shown in the trend graph at the top of this page. This is also known as a "status" drop-out rate and is the measure used by the U.S. Department of Education.[1] It is a consistent measure, comparable across states and over time.

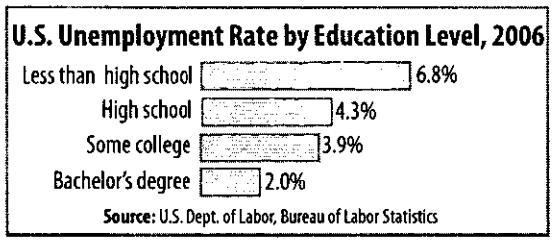
The Alaska Department of Education and Early Development (DEED) uses a different definition of dropout: "A student who was enrolled in the district at some time during the school year whose enrollment terminated. Dropouts do not include graduates, transfers to public or private schools, or transfers to state- or district-approved education programs. Students who are absent due to suspension, illness, or medical conditions are not reported as dropouts." DEED's calculations include students who are enrolled in grades 7 through 12 in October of a given school year but who drop out before the end of the year.

Looking at graduation rates, we use measurements from the National Center for Education Statistics (NCES) and DEED. NCES uses the "averaged freshman graduation rate," based on the percentage of freshmen in a given class who graduate four years later. DEED calculates the share of students graduating in a given class by incorporating the number of dropouts each year from grades 9 through 12.[2]

Significance

Completing high school is a necessary step toward becoming a self-sufficient adult—and those who don't graduate face serious financial and social consequences. The U.S. Census Bureau reports that the median yearly income of high-school dropouts in the U.S. was about $20,200 in 2006. Those with even slightly more education (a high-school diploma or a GED) earned nearly one-third more, or about $30,200 a year.[3] Those who go on to college can potentially earn several times what dropouts earn.

Besides a staggering loss in wages, Americans who fail to finish high school are also likely to experience poorer health, higher unemployment, greater need for public assistance, and an increased likelihood of going to jail.[4] The bar chart demonstrates that for every additional level of schooling, Americans have a lower unemployment rate. In 2006, the unemployment rate for Americans without high-school diplomas was 6.8%.[5] Those who finished high school but didn't go to college had an unemployment rate of 4.3% in 2006, while about 3.9% of those with some college were unemployed. Only 2% of those with bachelor's degrees were out of work.



Drop-out Measures

As the trend graph to the left shows, the percentage of Alaska teens (16-19) who dropped out of high school varied considerably between 2000 and 2005. In 2005, Alaska's drop-out rate of 9% was higher than the national rate of 7% and ranked Alaska 36th among the states. We expect the fluctuations in this drop-out rate to become less dramatic as the American Community Survey increases its sample size in rural Alaska.

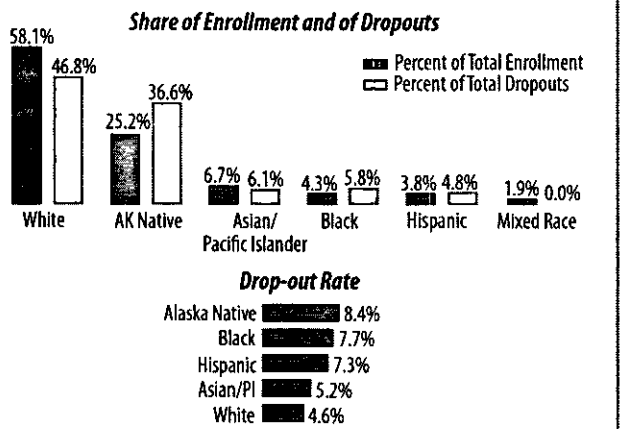
Alaska's DEED reports drop-out rates for a larger age range of teens than the American Community Survey does. This indicator is based on the number of students enrolled in grades 7 through 12 in the public schools. A total of 63,132 students were enrolled in those grades during the 2005-2006 school year in Alaska, and 3,642—or 5.8%—dropped out.

The bar chart on the next page shows the share of enrollment and the share of dropouts by race in grades 7 through 12 in the 2005-2006 school year, as well as the drop-out rates by race. Alaska Natives made up about 25% of students but nearly 37% of those who dropped out. Black and Hispanic students made up much smaller shares of enrollment (about 4% to 5%) but about 5% to 6% of dropouts. On the other hand, White, Asian and Pacific Island, and mixed-race students made up smaller shares of dropouts than of enrollment.

The map showing drop-out rates by region of Alaska in the 2005-2006 year is also based on information from DEED. Rates were lowest in the Gulf Coast and Southeast regions and highest in the Northern, Southwest, and Interior regions.

Teens Who Drop Out (continued)

Share of Enrollment and of Dropouts (Grades 7-12) by Race
(2005-2006)



Source: Alaska Department of Education and Early Development

Drop-out rates in the Southwest, Gulf Coast, and Anchorage regions changed little from those in the previous school year. The Northern region saw an increase from 6.5% to 7.5%. Rates decreased in the Interior (from 7.8% to 6.7%), the Mat-Su Borough (from 6.1% to 5.2%), and Southeast (from 5.4% to 4.1%). Alaska's overall drop-out rate declined slightly between 2004-2005 and 2005-2006, from 6% to 5.8%.

High-School Graduation Measures

The only measure of high-school graduation rates that is comparable across states is from the National Center for Education Statistics, which uses the "averaged freshman graduation rate" described earlier. This is the measure the U.S. Department of Education uses. The line graph shows that in the 2003-2004 school year, the averaged graduation rate among public high-school students was 74% nationwide and just over 67% in Alaska. These are the most recent figures available from NCES.

Sixteen states had graduation rates above 80% in the 2003-2004 year, and Nebraska had the highest rate, at 87.6%. Nine states had rates lower than Alaska's. Over the period from the 2000-2001 to 2003-2004, the graduation rate increased in 44 states and decreased in 5—including Alaska.[6]

More recent graduation figures are available from Alaska's Department of Education and Early Development—but remember that DEED calculates graduation rates differently. DEED's figures show that 7,361 (or 60%) of Alaska's high-school seniors graduated with a regular high-school diploma during 2005-2006. That figure incorporates the number of dropouts each year from grades 9 though 12.

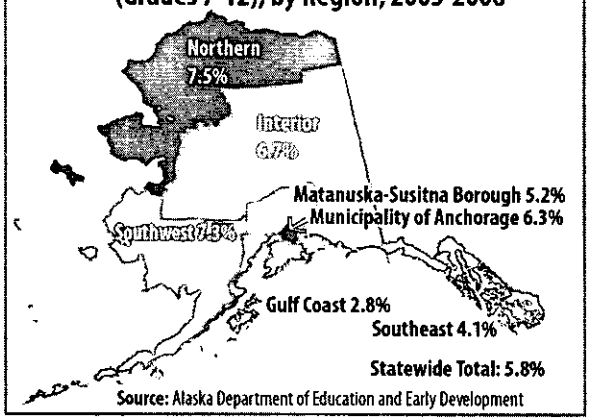
The first figure on the facing page shows 2006 graduation rates among Alaska students by race, sex, and other characteristics, while the figure below it compares shares of enrollment and shares of graduates by race.

There is a large gap in graduation rates among students of different races, with about 68% of White students graduating in 2006, compared with 45% among Alaska Native students. But the rates among Alaska Native, Black, and Hispanic students all increased 2 percentage points over rates in the previous school year. And while the graduation rate among Asian and Pacific Islander students remained the same, the rate among Whites declined by 3 percentage points, from 71% to 68%.

Alaska girls are more likely to graduate from high school than boys—63% compared with 57% in 2006. Students who have disabilities, speak limited English, or are from low-income families graduate at rates substantially below the statewide average of 60%. Fewer than half the students from low-income families graduated in 2006, and only around 40% of those with disabilities or limited ability to speak English got their diplomas.

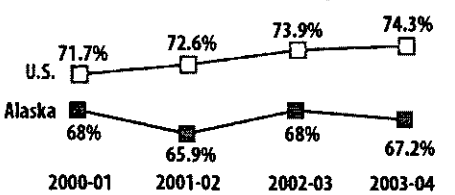
The second bar chart on the facing page shows the racial and ethnic differences between enrollment and graduation among 12th-graders in 2005-2006. Ideally, the proportion of enrollment would be the same as the proportion of graduates—in other words, all the students who enrolled would actually graduate.

Percentage of Dropouts (Grades 7-12), by Region, 2005-2006



Source: Alaska Department of Education and Early Development

High-School Graduation Rates,* Alaska and U.S. Average

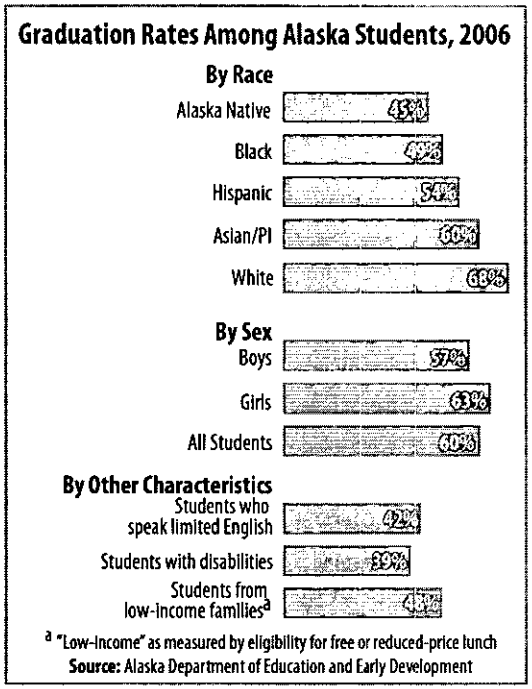


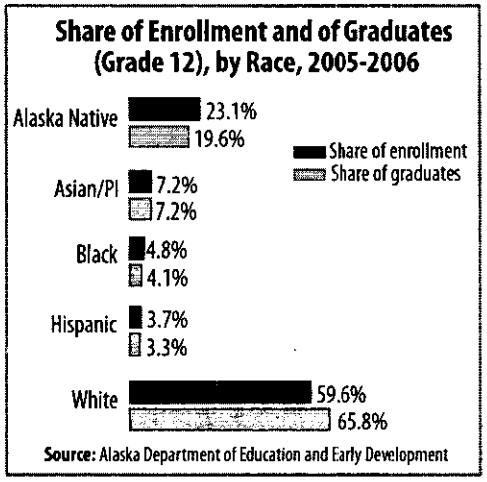
*The number of graduates divided by the estimated count of freshmen four years earlier.

Source: National Center for Education Statistics

But we can see that White students made up a considerably larger share of graduates than of enrollment—about 60% of enrollment but 66% of graduates. Among Asian and Pacific Island students, the shares of enrollment and graduates were in fact the same—7.2%. Among other groups, the share of graduates fell short of their share of enrollment.

Teens Not in School and Not Working





Definition

This indicator monitors teenagers 16 through 19 who are not in school (either part- or full-time), not in the military, and not working (either part- or full-time). Both high-school dropouts and those with general equivalency diplomas who are not working or on active military duty are included. The data since 2000 are from the American Community Survey.

Significance

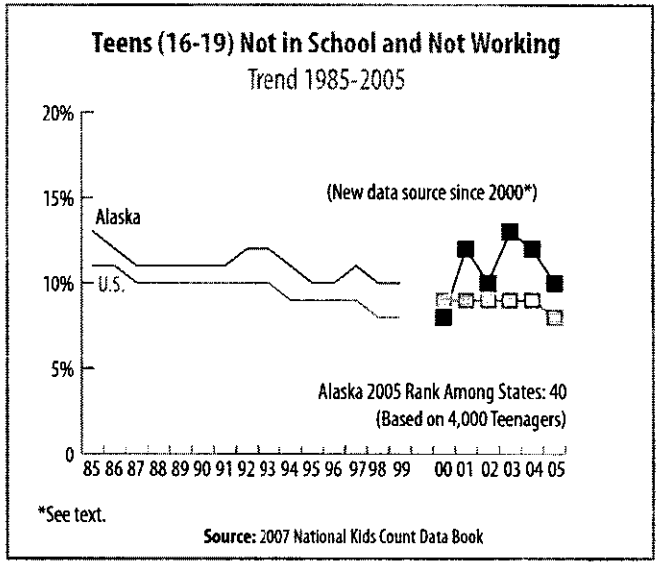
This is an important time in adolescent life: the start of the transition to adult life. It can be a difficult process even for those adolescents who have lots of support and resources available to them. But for teenagers who don't have the skills and the support they need, the prospect can be daunting.

Teenagers who are not attending school nor working are sometimes referred to as "idle" or "disconnected," because they aren't spending their days in activities that will help them become productive adults—they are disconnected from adults and community networks. They are also more likely to be from families living in poverty. A recent study found that 31% of all children in Alaska lived in low-income families, while 44% of disconnected teens came from such families. About 1 in 5 teens from families in the lowest income bracket are not enrolled in school or working, compared with just 1 in 33 teens from families in the highest income bracket.[7]

A Hewlett Foundation report identified those least likely to make a successful transition to adulthood: (1) high-school dropouts; (2) those who have been in the juvenile justice system or foster care; and (3) teenage parents, especially mothers.[8] These teenagers don't have—and face major challenges trying to get—the educational and vocational skills and social support they need.

Data

In 2005 the share of Alaska's teens 16 to 19 who were not employed or attending school declined to 10%, down from 13% in 2003. Still, Alaska has more idle teens than the 2005 national average of 8% and ranks 40th among the states on this indicator.



We don't have reliable breakdowns of disconnected teens by sex and race for Alaska, but the table below shows these breakdowns for the nation as a whole in 1996 and 2005. The Federal Interagency Forum on Child and Family Statistics found that the share of disconnected teens in all groups declined during this ten-year period. The largest decline (27%) was among teenage girls; this may reflect the increasing rate of girls graduating from high school and college. Among Hispanic teenagers the disconnected share dropped 25% and among Black teenagers 20%. Still, both Hispanic and Black teenagers remain more than twice as likely as White teens to be disconnected.

Percentages of U.S. Teenagers (16-19) Not in School and Not Working, 1996 and 2005

	1996	2005	Change
All 16-19	9%	8%	-11%
Teenage Girls	11%	8%	-27%
Teenage Boys	8%	7%	-13%
White Teenagers	7%	6%	-14%
Black Teenagers	15%	12%	-20%
Hispanic Teenagers	16%	12%	-25%

NEA's 12 Point Plan for Reducing the School Dropout Rate

NEA's 12-Point Action Plan for Reducing the School Dropout Rate

To address the nation's school dropout crisis, NEA has developed a 12-point action plan that includes the most promising actions supported by experience and data.

1. Mandate high school graduation or equivalency as compulsory for everyone below the age of 21. Just as we established compulsory attendance to the age of 16 or 17 in the beginning of the 20th century, it is appropriate and critical to eradicate the idea of "dropping out" before achieving a diploma. To compete in the 21st century, all of our citizens, at minimum, need a high school education.

2. Establish high school graduation centers for students 19-21 years old to provide specialized instruction and counseling to all students in this older age group who would be more effectively addressed in classes apart from younger students.

3. Make sure students receive individual attention in safe schools, in smaller learning communities within large schools, in small classes (18 or fewer students), and in programs during the summer, weekends, and before and after school that provide tutoring and build on what students learn during the school day.

4. Expand students' graduation options through creative partnerships with community colleges in career and technical fields and with alternative schools so that students have another way to earn a high school diploma. For students who are incarcerated, tie their release to high school graduation at the end of their sentences.

5. Increase career education and workforce readiness programs in schools so that students see the connection between school and careers after graduation. To ensure that students have the skills they need for these careers, integrate 21st century skills into the curriculum and provide all students with access to 21st century technology.

6. Act early so students do not drop out with high-quality, universal preschool and full-day kindergarten; strong elementary programs that ensure students are doing grade-level work when they enter middle school; and middle school programs that address causes of dropping out that appear in these grades and ensure that students have access to algebra, science, and other courses that serve as the foundation for success in high school and beyond.

7. Involve families in students' learning at school and at home in new and creative ways so that all families-single-parent families, families in poverty, and families in minority communities-can support their children's academic achievement, help their children engage in healthy behaviors, and stay actively involved in their children's education from preschool through high school

graduation.

8. Monitor students' academic progress in school through a variety of measures during the school year that provide a full picture of students' learning and help teachers make sure students do not fall behind academically.

9. Monitor, accurately report, and work to reduce dropout rates by gathering accurate data for key student groups (such as racial, ethnic, and economic), establishing benchmarks in each state for eliminating dropouts, and adopting the standardized reporting method developed by the National Governors Association.

10. Involve the entire community in dropout prevention through family-friendly policies that provide release time for employees to attend parent-teacher conferences; work schedules for high school students that enable them to attend classes on time and be ready to learn; "adopt a school" programs that encourage volunteerism and community-led projects in school; and community-based, real-world learning experiences for students.

11. Make sure educators have the training and resources they need to prevent students from dropping out including professional development focused on the needs of diverse students and students who are at risk of dropping out; up-to-date textbooks and materials, computers, and information technology; and safe modern schools.

12. Make high school graduation a federal priority by calling on Congress and the president to invest $10 billion over the next 10 years to support dropout prevention programs and states who make high school graduation compulsory.

For the Spanish version of this plan, see El Plan de la NEA para Reducir el Abandono de los Estudios.

"Understanding the Issue of the High school Dropout Age"

Educational Policy

Understanding and Addressing the Issue of the High School Dropout Age

Benefits to Increasing the Compulsory Attendance Age

States have realized the increased importance of completing a high school education for entry into postsecondary education and the labor market, but the high school completion rate has only shown minimal gains over the last three decades and has shown no increase throughout the 1990s (Kaufmann et al., 2000). Changing the compulsory attendance age from 16 to 18 is one strategy states are employing in an attempt to reduce dropout rates. Within the last four years, numerous states have considered legislation to increase the compulsory attendance age. New Mexico, Connecticut, Louisiana, New York, Texas, and Vermont have recently passed such legislation. The following table ranks high school dropouts in 2000 from Midwestern states that have compulsory attendance age regulated at 18.

Percent of Teens Who Are High School Dropouts (Ages 16-19) in 2000		
State	**National Rank**	**Dropout Rate Percentage**
Minnesota	2	5%
Wisconsin	7	7%
Ohio	13	8%
(Annie E. Casey Foundation, 2003)		

The Pasadena Independent School District in Texas has seen positive results in decreasing its dropout rate by raising the compulsory attendance age. The state allowed school districts to raise the dropout age from 16 to 17, and this provided districts with "some teeth" to their anti-dropout plans (Schneider, 2000). In addition to raising the age limit, districts—through attendance clerks and counselors—kept excellent tracking records of students who left school and encouraged them to enroll into a GED program or re-enroll back into the school district. For example, in 1998–99, a report from the Texas Education Agency commended Pasadena's intermediate school district (Grades 7–12) for achieving a record low annual dropout rate of 1.6 percent.

The next table presents the compulsory attendance ages for other states in the Midwest, along with the year the attendance laws were established.

Compulsory Attendance Laws		
State	**Enactment**	**Age Limits**
Illinois	1883	6 - 16*

Indiana	1897	7 - 16
Iowa	1902	6 - 16
Michigan	1871	6 - 16**
Minnesota	1885	7 - 18
Ohio	1877	6 - 18
Wisconsin	1879	6 - 18

(Infoplease.com, 2003)

*Illinois: 2003 Legislature introduced House Bill 2584, which would increase the legal dropout age to 18.

**Michigan: 2003 Legislature introduced House Bill 4128, which would increase the legal dropout age to 18.

Increasing the attendance age is an issue that has garnered support across the country, and in 2002 six states made the push to amend their laws. In states with successful legal passage of new compulsory attendance laws, such as Louisiana and Connecticut, similar language and processes were implemented. In all cases, parents or other persons having control of a child under the age of 18 can withdraw the child from school but must do so with legal written consent. The consent makes clear the decision of the parent to remove the child from school and that the school has offered to provide additional resources to keep the student in school.

Funding for an increase in the compulsory attendance age is difficult to assess and varies widely across states. States such as Louisiana and Montana have outlined fiscal policy analysis that details each state's estimated expenditures for increasing the compulsory attendance age. An explanation of fiscal spending, as well as additional examples of what other states have done to implement laws in support of increasing the compulsory attendance age, can be found in Appendix A.

Alaska's dropout rate double US average

'THIS IS A SOCIAL ISSUE': Educators brainstorm how to keep our kids in school.

By MEGAN HOLLAND
mholland@adn.com
(11/16/08 00:11:59)

Failure can start early.

Some educators say they can see which kids aren't going to make it on the first day of kindergarten. Some children show up knowing how to read, while others come not even knowing what the colors are.

Battling one of the worst dropout rates in the country, Alaska educators gathered for a third day on Saturday to brainstorm how to stop the epidemic of kids quitting school before earning their diplomas. They called dropping out a result of an accumulative failure, which can start before kids even enter school.

"This is a social issue, one we all own," said Association of Alaska School Boards executive director Carl Rose. "We all need to take some responsibility in this."

Among the grim statistics:

• Alaska's dropout rate, at 8 percent, was double the national average in the 2005-2006 school year, according to the latest figures available from the U.S. Department of Education.

• 38 percent of today's ninth-graders will have no high school diploma 10 years from now, according to the Alaska Commission on Postsecondary Education.

• Alaska ranks 50th, or last, in the number of ninth-graders who will likely have a bachelor's degree in 10 years, according to the commission.

Republican U.S. Sen. Lisa Murkowski convened the Saturday hearing. She asked state and national education experts what the federal government could do to help fix the problem, even though the federal government has little input into public education, an arena largely left to the states, and, in Alaska, mostly to local school districts. (The big exception to this is the controversial federal No Child Left Behind law, which went into effect in 2002 and was meant to raise educational attainment for all students through testing.)

Among the suggestions for federal help was to fund more pre-kindergarten programs; to support more vocational and technical classes in high schools; and to continue to provide special grants for the education of Alaska Natives, who have among the highest dropout rates.

"We are failing our kids and we should be ashamed of ourselves," said Tina Michels-Hansen, of Cook Inlet Tribal Council, which offers tutoring and other schooling help for Anchorage School District Alaska Natives.

"Schools have become factories that communities passively accept," she said.

Part of the issue, according to University of Alaska president Mark Hamilton, is cultural. Parents and families are not valuing education. They need to realize even skilled labor fields, like plumbing or construction, require training that depends on knowledge, such as math, learned in high school.

"We have to stop saying, 'College isn't for everyone,' " he said. "Post-secondary education is for nearly everyone unless your goal is to be the head fry guy at McDonald's."

Not college bound

For every 100 ninth graders in Alaska today, 72 percent will not go to college within 10 years – and slightly more than half of those will have dropped out of high school.

Chugach program boasts 98 percent graduation

By JULIA O'MALLEY
jomalley@adn.com
(03/01/09 19:41:01)

Around a South Anchorage dinner table on a recent night, a group of students takes a moment before eating.

Girls in ponytails and boys in baseball caps who come from points all over the Alaska map -- Crooked Creek, Pilot Point, Teller and Chignik Lagoon -- go around the table, saying what they're thankful for.

One by one, each says, "Opportunities."

The students were in Anchorage as part of the Chugach School District's Voyage to Excellence program, which brings rural, primarily Alaska Native students from across the state, to Anchorage for weeks at a time to learn firsthand about big-city life, plan their futures and prepare for the high school graduation qualifying exam.

The program, in its 10th year, has a striking success rate: 98 percent of its students graduate from high school.

Compare that to 45 percent, the 2006 statewide graduation rate for Alaska Native students -- the lowest of any minority here, according to the state Department of Education. Or Alaska's overall graduation rate, which is 60 percent.

The secret: teaching social skills and tying what happens in the classroom to the work world.

THE REAL WORLD

VTE's recipe is a little bit like the old MTV reality show "Real World": take a group of kids from all over the state, put them together in a fashionable house, give them a set of rules and watch what happens.

On a recent night, seven students filled the five-bedroom house in a subdivision off Elmore, lounging on couches, clicking away at laptops before dinner. The house is fashionably decorated with contemporary paint colors, overstuffed furniture, and a big kitchen with marble counter-tops and commercial appliances. They sleep in bedrooms, dormitory-style. The girls have the upstairs, the boys the basement.

The program is run by the Prince William Sound-based Chugach district, but it accepts students from the Lake and Peninsula, Kuspuk and Bering Strait districts, as well as Nome's Northwestern Alaska Career and Technical Center.

About 150 participate each year. There's a waiting list and other rural districts would like to take part, but right now the program -- which is funded with a combination of state money and grants -

- can't handle any more.

Students begin as early as junior high school. The program works in phases -- most last a week or two though some can be longer.

The kids learn things they don't learn in the village, like how to talk to strangers, how to find an address they've never been to, how to dress for a job interview. They look at different career possibilities and make a plan for after high school. There's also lots of prep for the high school graduation qualifying exam.

In the village, students are used to knowing everyone, to having a network of support. Coming to Anchorage for training or school can be very frightening.

"You don't have the bus system, even the amount of people is intimidating," said Billijo Mills, one of the directors.

Working from their family-like home base, students learn the basics of setting up a life: renting an apartment, opening a bank account, looking for a job, being interviewed by a prospective employer.

"We set them up with a network of resources," Mills said.

Studies show that the more practical daily-living skills students have, the better their performance in school, she said.

"That's why we start in junior high. We start working on handshakes, eye contact, communication," she said.

Sometimes in tiny villages where there are only a handful of students in each class, isolation can make it hard for children to imagine a career, said Carol Wilson, the program's other director. VTE is focused on future employment, taking students to visit workplaces so they can see what happens on the job and what employers expect.

The program is an alternative to a boarding school. It doesn't take students out of their community for long. The idea is to broaden their horizons and give them skills they can use both in the city and back at home.

Once students pick a career field, teachers construct lessons to demonstrate how writing or math gets used in the commercial kitchen, or construction job site, or office.

"What makes it so successful is we are able to take what kids learn in a classroom and apply it to real life," Wilson said.

FUTURE

The Carrs at Abbott Loop is mostly quiet at 8 p.m. as Gwen Vlasoff, 17, studies her grocery list. Half a dozen others buzz about, carrying items from the aisles. The students are in "Phase 3." In that phase, they function mostly independently, setting up job shadows with people in fields they are interested in and visiting vocational programs and UAA.

One of their tasks is to develop a menu for the week, shop using a budget, and then cook for each other. The selections aren't complicated. There's frozen pizza, chicken nuggets, fried rice and lasagna.

But in the vast grocery store, the questions stack up. One pizza seems cheaper than the other, but it's also slightly smaller. Which is the best deal? How many "servings" does a normal person eat? Less than $3 a pound seems good for oranges compared to village prices but eight pounds of them still aren't cheap. Should they buy them?

Vlasoff, from the Prince William Sound village of Tatitlek, is one of the most focused and outgoing in the group. Kids commonly drop out of her high school, she said. Her sister just left school because she's having a baby. VTE keeps her thinking about graduating, she said. After several years in the program, she's decided she wants to be an elementary school teacher. She plans to go back to her village to teach.

VTE helps students get used to the city's sprawling stores and traffic and lines of strangers, said Jamie Ablowaluk, 16, who lives in the Bering Sea village of Teller. She spent a little time in Anchorage a few years ago, attending East High. The school is four times the size of her whole village, she said and she never settled in. It was too "rushy."

The program introduced her to vocational education classes. She discovered welding and is building up hours for a certification. Some kids in her village end up living with their parents practically forever, not ever building a life of their own. She doesn't want to be that way, she said.

"I'm thinking about the North Slope."

PASSING THE EXAM

Lewis Phillips, 18, is from Crooked Creek, a village of 140 or so on the Kuskokwim River. He plans to be a heavy-equipment operator, but first he's got to pass the high school graduation qualifying exam to get his diploma. He already took it, and he's studying to take it again.

"I got to pass the writing," he said.

The exam can be a major hurdle for some students, Mills said. Students who complete all four years of high school but fail the exam get a certificate, but not a diploma. Last year, only one of 40 seniors in the state's five largest districts got a certificate instead of a diploma, while in the smaller districts one in 16 students did, according to state numbers.

"(It's) a high-stakes exam; there's always going to be issues with it," Mills said.

After they're done with high school, the students can come for test prep if they don't have a diploma, either staying for a session in the house or coming for a month for a test-prep summer camp, she said.

Sometimes students have to take the test several times, she said. But, they always take it again.

"We had one student take it, the math, six times. He stayed until he was 21," she said. But, in the end he finally passed. Now he has a job in the mining industry.

"He sent us a picture of him in his cap and gown," she said. "It was huge."

Because students in the program have plans for the future, they're motivated both to finish high school and to pass the test.

"We hear from teachers and parents," she said. "We get notes: 'What did you do to our son? He's getting up and going to school.' "

MEMORANDUM February 26, 2009

SUBJECT: Compulsory School Age (HB 33)

TO: Representative Cathy Muñoz
Attn: Terry Harvey

FROM: Jean M. Mischel
Legislative Counsel

You have asked whether a school district is prohibited from establishing a compulsory school age that is different from the compulsory age set by the legislature in AS 14.30.010. The answer is yes. While a school district may adjust the school age for purposes of enrolling a student as many districts have done for kindergartners, a school district may not compel a student's attendance if the student is beyond the compulsory age of seven to 16 years of age.

AS 14.30.010 provides

> (a) Every child between seven and 16 years of age shall attend school at the public school in the district in which the child resides during each school term. Every parent, guardian or other person having the responsibility for or control of a child between seven and 16 years of age shall maintain the child in attendance at a public school in the district in which the child resides during the entire school term, except as provided in (b) of this section.
>
> (b) This section does not apply if a child
>
> (1) is provided an academic education comparable to that offered by the public schools in the area, either by
>
> (A) attendance at a private school in which the teachers are certificated according to AS 14.20.020;
>
> (B) tutoring by personnel certificated according to AS 14.20.020; or
>
> (C) attendance at an educational program operated in compliance with AS 14.45.100 - 14.45.200 by a religious or other private school;
>
> (2) attends a school operated by the federal government;
>
> (3) has a physical or mental condition that a competent medical authority determines will make attendance impractical;
>
> (4) is in the custody of a court or law enforcement authorities;
>
> (5) is temporarily ill or injured;

(6) has been suspended or expelled under AS 14.03.160 or suspended or denied admittance under AS 14.30.045;

(7) resides more than two miles from either a public school or a route on which transportation is provided by the school authorities, except that this paragraph does not apply if the child resides within two miles of a federal or private school that the child is eligible and able to attend;

(8) is excused by action of the school board of the district at a regular meeting or by the district superintendent subject to approval by the school board of the district at the next regular meeting;

(9) has completed the 12th grade;

(10) is enrolled in

(A) a state boarding school established under AS 14.16; or

(B) a full-time program of correspondence study approved by the department; in those school districts providing an approved correspondence study program, a student may be enrolled either in the district correspondence program or in the centralized correspondence study program;

(11) is equally well-served by an educational experience approved by the school board as serving the child's educational interests despite an absence from school, and the request for excuse is made in writing by the child's parents or guardian and approved by the principal or administrator of the school that the child attends;

(12) is being educated in the child's home by a parent or legal guardian.

(c) If a parent, legal guardian, or other person having the responsibility for or control of the child elects to enroll a child who is six years of age in first grade at a public school, after enrollment, the child is subject to the provisions of (a) and (b) of this section. If the parent or guardian of a child who is six years of age and is enrolled in first grade at a public school determines, within 60 days after the child is enrolled, that the best interests of the child are not being served by enrollment in the first grade, the child may be withdrawn from school, and the provisions of (a) and (b) of this section do not apply to the child until the child is seven years of age.

By its plain meaning, nothing in this section exempts school districts or authorizes a modification to the age for *compulsory* attendance at a school in this state.

A school district may, however, establish a school age for purposes of *allowing* a child to attend a school in the district under AS 14.03.070 and 14.03.080. Those sections provide

Sec. 14.03.070. School age. A child who is six years of age on or before September 1 following the beginning of the school year, and who is under the age of 20 and has not completed the 12th grade, is of school age.

Sec. 14.03.080. Right to attend school. (a) A child of school age is entitled to attend public school without payment of tuition during the school term in the school district in which the child is a resident subject to the provisions of AS 14.14.110 and 14.14.120.

(b) A person over school age may be admitted to the public school in the school district in which the person is a resident at the discretion of the governing body of the school district. A person over school age may be charged tuition by the governing body of the school district.

(c) A child under school age may be admitted to a public school in the school district of which the child is a resident at the discretion of the governing body of the school district if the child meets minimum standards prescribed by the board evidencing that the child has the mental, physical, and emotional capacity to perform satisfactorily for the educational program being offered. A district's educational program must prescribe that under school age students advance through the curriculum or grade level by the following school year. A governing body may delegate the authority granted under this subsection to the chief school administrator of the school district.

(d) A child who is five years of age on or before September 1 following the beginning of the school year, and who is under school age, may enter a public school kindergarten.

(e) A child under school age shall be admitted to school in the district of which the child is a resident if immediately before the child became a resident of the district, the child was legally enrolled in the public schools of another district or state.

(f) This section does not require a school district to admit a child or person currently under suspension or expulsion under AS 14.03.160 in that or another school district.

Under AS 14.14.090(2) a school board is required to provide for an educational program for each school age child who is enrolled in or a resident of the district.

The statutes establishing school age do not contradict or supersede the compulsory attendance requirement. A district is obligated to provide an education for a student of school age but the student is not compelled to take advantage of it, or forced to stay at the school after age 16 under the compulsory attendance statute.

If I may be of further assistance, please advise.

Notes on Juneau School District at Risk Programs

Juneau School District – Programs for At-Risk Students (some)

Alternative High School-no more than 150 students, separate campus,

CHOICE Program-for students who are academically at risk-retreat model involving parent & teacher support

Learning Communities- for all students, more choices for grades 10-12, voc ed, construction, engineering, native culture, college bound, arts & humanities, science & technology, new-health, recreation & fitness

Truancy- Juneau has a full time truant tracker. As required in statute, Juneau presents to all students at the start of the year a handbook that must be shared with parents and signed; it explains the truancy policy in detail.

Enforcement-Juneau (and Anchorage too) have worked with the municipality to pass a local ordinance allowing the school to issue tickets directly to parents, $100 fine. After home visits, after calls, they do issue the tickets when warranted.

Subject: RE: info

Hi Terry,

It was good to talk to you yesterday. I really cannot speak with any authority as to how districts are enforcing compulsory attendance and responding to attendance violations across Alaska. As we talked about, some districts have shared that they employ truancy officers who actively work with students who are or who have been challenged by truancy, but EED does not formally collect information on what truancy procedures districts develop, or on any enforcement measures they are implementing. Districts anecdotally report broadly varying interpretations of what constitutes truancy, as well as report tremendous variability in the resources they have available to dedicate to enforcement/encourage compliance with compulsory attendance. I can confirm that there is no uniform or standardized response to truancy in Alaska's public schools. Alaska's truancy laws explicitly give districts local authority to establish their procedures.

My involvement with truancy has very formal parameters. First, I provide technical assistance to districts to ensure they are cognizant of the existing state laws requiring them to have procedures to reduce and to prevent truancy. Second I ensure districts understand their state and federal statutory reporting requirements-- they are required to collect and report truancy data on all full-day unexcused absences to EED for each school year by June 30th. (EED provides several statewide audio conferences to districts each fall to inform them of all state and federal laws pertaining to truancy, suspensions, and expulsions. EED highlights reporting requirements under No Child Left Behind Title IV Part A Safe and Drug-Free Schools Community Act, Alaska statutes Sec 14.30.010-14.30.030, and Regulation 4 AAC 06.250 during these training events. We also respond to many individual district inquires each year.) Third, I am responsible for ensuring the EED statewide suspensions, expulsions, and truancy data collection system is working and that it is collecting the information Alaska is required to collect. Finally, I do have an enforcement role with districts in that I review the data base each year to ensure all districts have submitted their data as required, and have the authority to withhold NCLB reimbursements for any district that might fail to comply. (In my 8 years of involvement, no district has failed to ultimately submit data)
I hope this information is helpful.

Respectfully, Todd

Todd, appreciate your comments regarding truancy enforcement in Alaska. Possible for a brief overview of your working knowledge of how enforcement is applied in Alaska? Also confirmation of your understanding that each district enforces in their own way, there is no standard enforcement

ANALYSIS: *(Attach a separate page if necessary)*

As currently drafted, this bill provides for education loan repayment benefits to individuals who are hired on or after 7/1/09 in any one of nine professions in Alaska. The qualifying debt is incurred by the individual from a lending institution in the state for the purpose of pursuing the credential required for the qualifying education.

In estimating potential costs of this program, AK Department of Labor projected numbers of annual job openings in the following occupational catagories were used: biological sciences, zooligists, wildlife biologists, environmental scientists, foresters, teachers and allied education professions, dentist, and registered nurses (no separate catagory for pracitcal nurse was noted). The aggregate number of annual openings was 8,360. Because no degree-specific
